*Baptiſm*, or *Chriſtening*, in the Sea-language, a Ceremony in long Voyages aboard Merchant-Ships; practis'd both on Perſons and Veſſels which paſs the Tropick, or Line, for the firſt time. The *Baptiſm of Veſſels* is ſimple, and conſiſts only in the waſhing them throughout with Sea Water; that *of Paſſengers* is more myſterious: but neither the one nor the other without making the Crew drunk; the Seamen, on Chriſtening the Ship, pretending to a Right of cutting off the Beak-Head, unleſs redeem'd by the Maſter or Captain. The *Chriſtening of a Seaman*, or *Paſſenger*, is as follows: The oldeſt of the Crew who has paſs'd the Line, or Tropick, comes, whimſically dreſt, his Face black'd, a Groteſque Cap on his Head, a Waggoner or other Sea-Book in his Hand, follow'd by the reſt of the Seamen maſqu'd like himſelf, each having ſome Kitchen Utenſil in his Hand, with Drums beating: he places himſelf gravely on a Seat prepar'd on the Deck, at the Foot of the Main-Maſt. At the Tribunal of this pleaſant Magiſtrate, each Paſſenger not yet initiated, ſwears, he will take care the ſame Ceremony be obſerv'd, whenever he is in the ſame Circumſtance: by giving a little Money, by way of Gratification, he is diſcharg'd with a little *ſprinkling* of Water; otherwiſe, as is uſually the Caſe with the Seamen, he is heartily *drench'd* with Streams of Water pour'd on him: Ship-Boys are inclos'd in a Cage, and *drench'd* at Diſcretion; and beſides, in Memory of the Ceremony, are oblig'd to whip each other, which they never ſpare.

BAPTISTERY, the Place where Perſons are *baptiz'd*, or the Font in which 'tis done. Antiently in the Churches which *baptiz'd* by Immerſion, the *Baptiſtery* was a kind of *Pond* where the *Catechumens* were *plunged*. In the firſt Times the *Baptiſtery* was a little Church adjoining to a greater, purpoſely appointed for the Adminiſtration of this Ceremony. There were ſeveral Fonts and Altars in each *Baptiſtery*, becauſe then they *baptized* a Number at once, all of whom received the Euchariſt immediately after. At firſt, theſe *Baptiſteries* were only in the great Cities where Biſhops reſided, who alone had the Right of *baptizing*; but they afterwards allow'd Pariſhes to have Fonts, for the more commodious Adminiſtration of *Baptiſm*. This Right was confin'd to Pariſhes alone; and if any Monaſteries were found with *baptiſmal* Fonts, 'twas becauſe they had *baptiſmal* Churches in another Place: Tho the Biſhops ſometimes granted them to Monks, upon condition that they would have a ſecular Prieſt along with 'em to take care of the People; but they afterwards found means to throw off the Prieſt, and make themſelves Maſters of the Church, and attach it, with its *baptiſmal* Fonts, to their own Monaſtery.

BAR, in Heraldry, one of the honourable Members of a Coat of Arms, which is hereby divided into two equal Parts from Angle to Angle, beginning at the Top on the Left Hand, and running Diagonal-wiſe to the Right. It takes up one Third of the Coat, and is commonly uſed for the Diſtinction of Baſtards.

*Bar*, in Heraldry, is likewiſe a Fiſh, or Barbel, often placed in Coats of Arms, commonly in a bended leaning Poſture.

*Bar*, in Law, is a Deſtruction for ever, or the taking away for a time, the Action of him that hath Right; and it is call'd a *Plea in Bar* when ſuch a *Bar* is pleaded. The Word *Bar* is alſo uſed for a *material Bar*, as the Places where Serjeants or Counſellors ſtand to plead Cauſes in Court, Priſoners to anſwer Indictments, &c. Whence our *Lawyers* who are call'd to the *Bar*, or licenſed to plead, (in other Countries call'd *Licentiati*) are term'd *Barriſters*.

*Bars*, in the Menage, the Ridges or upper Parts of the Gums, between the Under-Tuſhes and the Grinders of a Horſe; the outward Sides whereof are always call'd the *Gums*. Theſe *Bars* ſhould be ſharp-ridg'd and lean; for ſince all the Subjection a Horſe ſuffers, proceeds from thoſe Parts, if they have not theſe, they will be very little or not at all ſenſible, ſo that the Horſe can never have a good Mouth: for, if they be flat, round, and inſenſible, the Bit will not have its Effect; and conſequently, ſuch a Horſe can be no better govern'd by his Bridle, than if one took hold of his Tail.

*Bars*, in Muſick, Strokes drawn perpendicularly a-croſs the Lines of a Piece of Muſick, including between each two, a certain Quantity or Meaſure of Time, which is various as the Time of the Muſick is triple or common. In common Time, between each two *Bars* is included the Meaſure of four Crotchets, in triple Time three Crotchets. Their principal Uſe is to regulate the Beating, or Meaſure of Time in a Conſort. See *Time*.

BARACK, or *Baraque*, a Hutt or little Lodge for Soldiers in a Camp; thoſe for the Horſe were formerly called *Baracks*, and thoſe for the Foot *Hutts*; but *Barack* is now uſed indifferently for both: they are generally made by fixing four forked Poles in the Ground, and laying four others a-croſs them; afterwards they build up the Walls with Sods, Wattles, or what the Place affords: the Top is planked, thatched, or covered with Turf, as they have Convenience. When the Army is in Winter Quarters, the Soldiers uſually build *Baracks*; in the Summer they are content with their Tents. The Word comes from the Spaniſh *Barraca's*, little Cabins which the Fiſhermen make on the Sea-Shore.

BARALIPTON, a Term in Logick; a Syllogiſm in *Baralipton* is, when the two firſt Propoſitions thereof are general, and the third particular; the middle Term being the Subject of the firſt, and the Attribute of the ſecond: For Example,

*Every Evil ought to be fear'd:*
*Every violent Paſſion is an Evil:*
*Therefore ſomething that ought to be fear'd is a violent Paſſion.*

BARALLOT, the Name of a Sect. The *Barallots* were *Hereticks* at *Bologne* in *Italy*, who had all things in common, even their Wives and Children. They gave ſo readily into all manner of Debauchery, that they were alſo term'd *Compliers*.

BARANG, the Name of an Officer among the *Greeks* of the *Lower Empire*, whoſe Buſineſs it was to keep the Keys of the City-Gates where the Emperor reſided. *Codinus* ſays, *Barangs* are thoſe Officers who ſtood at the Door of the Emperor's Bed-Chamber and Dining-Room. Some think they were *Engliſhmen*, and took their Name from the Engliſh *bar*, to ſhut or make faſt. They were arm'd with an Ax.

BARBACAN, in Architecture, a Canal or Opening left in the Walls, for Water to come in and go out at, when Edifices are rais'd in Places liable to be overflow'd; or to drain off the Water from a Terras. The Word comes from the Italian *Barbacane*, which *Spelman* derives from the Arabick.

*Barbacan*, a military Term, ſignifying a Cleft or Aperture made in the Walls of a Caſtle or Fortreſs, to fire thro upon the Enemy. Some think the Word implies a wooden Parapet; others any kind of Defence or Safeguard againſt the Enemy: *Du Cange* calls it the *outer Defence*. 'Twas formerly a Fort at the Entrance of a Bridge, or without the City, having a double Wall, with Towers.

BARBARA, a Logical Term: A Syllogiſm in *Barbara*, is that whereof all the Propoſitions are univerſal and affirmative; the middle Term being the Subject in the firſt Propoſition, and Attribute in the ſecond: For Example,

*Whoever ſuffers a Man to ſtarve, whom he ought to ſuſtain, is a Murderer:*
*Whoever is rich, and refuſes to give Alms, ſuffers thoſe to ſtarve whom he ought to ſuſtain:*
*Therefore, whoever is rich, and refuſes to give Alms, is a Murderer.*

BARBARIAN. The *Greeks* call'd all thoſe *Barbarians* who were not of their Country; as did alſo the *Romans*, generally. This Word ſignified with them no more than Foreigner, and did not carry that Odium with it as it does now. This may appear from thoſe Lines of *Ovid*, who was certainly a well-bred Man.

*Barbarus hic ego ſum, quia non intelligor ulli,*
*Et rident ſtolidi verba Latina Getæ.*

*Strabo* derives the Word βαρβαρος from εβαρβαειζειν, *balbutire*, by reaſon Foreigners coming to *Athens* uſed to ſtammer, or ſpeak coarſely: Others derive it from βαρβαρ, a Word that Foreigners frequently ſtumbled on, which yet had no Meaning; others from the Arabick *Bar*, a Deſart; and *Voſſius* from the Chaldee Adverb ברא, *extra*, *foris*.

BARBARISM, in Grammar, is a hard or coarſe Expreſſion, and ſuch as is not uſed by polite Authors; 'tis a Fault between a Soleciſm and Impropriety, and is committed by uſing any foreign Word or Phraſe, not ſuited to the Genius of the Language; or by the dropping of Particles, Pronouns, or Prepoſitions, where they are neceſſary. *Suidas*, *Heſychius*, &c. confine the *Barbariſm* to a ſingle Word; but *Vaugelas* extends it to Phraſes.

BARBE, in Commerce, a kind of Horſes brought from *Barbary*, much eſteem'd for their Vigour and Swiftneſs: They are uſually of a ſlender Make, and their Legs far apart. 'Tis a Maxim, *that* Barbs *grow ripe but never old*, becauſe they retain their Vigour to the laſt; which makes 'em prized for Stallions. 'Tis ſaid they were antiently wild, and run at large in the Deſarts of *Arabia*; and that it was in the Time of *Chequi Iſmael*, that they firſt began to tame 'em. 'Tis ſaid there are *Barbs* in *Africa* that will outrun Oſtriches, ordinarily ſold, according to *Dapper*, for 1000 Ducats, or 100 Camels. They are fed very ſparingly; *Dapper* ſays with Camel's Milk. 'Tis added, that in *Barbary* they preſerve the Genealogy of their *Barbs*, with as much Care as the *Europeans* do thoſe of their noble Families; and that to ſell 'em, they always produce their Titles of Nobility.

*Barbe*, a military Term. *To fire en Barbe*, is to fire the Cannon over the Parapet inſtead of thro the Embrazures; but in this caſe the Parapet muſt be but three Foot and a half high.

*Barbe*, or *Barde*, is alſo an old Term for the Armour of the Horſes of the antient Knights, and Soldiers, who were accouter'd at all Points. *La Cruſca* ſays, the *Barde* is an Armour of Iron or Leather, wherewith the Neck, Breaſt, and Shoulders of the Horſe are cover'd.

BARBOTINE, a Grain, otherwiſe call'd *Semen Santonicum*, and *Semen contra Vermes*, or *Worm-Seed*; which ſee.

BARDESANITES, an Heretical Sect, the Followers of *Bardeſanes*, of *Meſopotamia*; who as ſoon as he became a Chriſtian, diſtinguiſh'd himſelf by his Knowledge in Philoſophy, but afterwards renouncing the Chriſtian Religion, embraced the Errors of *Valentinus*, and added to them others of his own: He aſſerted the Actions of Mankind to depend on Fate. His Followers invented other Notions.

BARDS, antient Poets among the *Gauls* and *Britons*, who deſcribed and ſung in Verſe the brave Actions of the great Men of their Nation. The Deſign of their Verſes was to paint and recommend Virtue, and ſometimes to put an end to the Difference between Armies at the very point of Engagement. The *Bards* differ'd from the *Druids*, in that the latter were Prieſts and Teachers of the Nation, but the former only Poets and Writers, (See *Druid.*) *Larrey*, *Bodin*, and *Paſquier*, indeed will have the *Bards* to have been Prieſts; *Cluverius* and *Paſquier* Philoſophers; and *Cluverius* Orators too, but without much Foundation in Antiquity. *Strabo* divides the Sects of Philoſophers among the *Gauls* and *Britons* into three, *viz.* the *Druids*, *Bards*, and *Evates*. The *Bards*, adds he, are the Singers and Poets; the *Evates*, the Prieſts and Natural Philoſophers; and the *Druids*, to Natural Philoſophy add alſo the Moral. *Hornius* however reduces 'em to two Sects, *viz.* *Bards* and *Druids*; others to one, and make *Druid* a general Name comprehending all the others: *Cluverius* will have it, that there were *Bards* alſo among the antient *Germans*; becauſe *Tacitus* makes mention of their Songs and Poems which contain'd their Hiſtory. *Bochart* derives the Word from *parat*, *to ſing*. *Camden* agrees with *Feſtus*, that *Barde* properly ſignifies a *Singer*: and adds, that the Word is pure *Britiſh*. Others derive the Name from *Bardus*, a *Druid*, the Son of *Dryis*, and the fifth King of the *Celtæ*.

BAR-FEE, a Fee of 20 Pence, which every Perſon acquitted of Felony pays the Gaoler.

BARGE, a little floating Veſſel uſed in the Navigation of Rivers, &c. *Barges* are of various Kinds, and acquire various Names, according to the Variety of their Uſes and Structures: As,

| | |
|---|---|
| *A Company's Barge*, | *A* Severn-*Trow*, |
| *A Row-Barge*, | *A* Ware-*Barge*, |
| *A Royal-Barge*, | *A Light Horſeman*, |
| *A Sand-Barge*, | *A Weſt-Country-Barge.* |

BARK, the exterior Part of Trees, ſerving 'em for a Skin or Covering, (See *Plant.*) There are a great many kinds of *Barks* in uſe in the ſeveral Arts: Some in Medicine, as the *Quinquina*, or *Jeſuits Bark*, *Macer*, &c. ſee *Cortex*; others in Dying, as the *Bark of the Alder* or *Willow*; others in Spicery, as *Cinnamon*, *Caſſia lignea*, &c. ſee *Cinnamon*, &c. the *Bark of Oak* in Tanning, ſee *Tanning*; others on other Occaſions, as *Cork*; that of the *Linden-Tree* for Cordage for Wells; that of a kind of *Birch* uſed by the *Indians* for Canoos, capable of holding 24 Perſons. The Antients wrote their Books on *Barks*, eſpecially thoſe of the *Aſh* and *Linden*; not on the exterior or outer *Bark*, but the inner and finer.

The *Bark* of Trees in general is of a ſpungy Texture, and by many little Fibres which paſs thro the capillary Tubes whereof the Wood conſiſts, communicates with the Pith; ſo that the proper Nutriment of the Tree being imbibed by the Roots, and carried up thro the fine arterial Veſſels of the Tree by the Warmth of the Soil, &c. to the Top of the Plant, is there condens'd by the cold Air, and returns by its own Gravity down the Veſſels which do the Office of Veins, lying between the Wood and inner *Bark*, leaving as it paſſes by, ſuch Parts of its Juice as the Texture of the *Bark* will receive, and requires for its Support: See *Sap*. That ſoft whitiſh Rind or Subſtance between the inner *Bark* and the Wood, which Mr. *Bradley* thinks to do the Office of Veins, ſome account a *third Bark*, only differing from the others in that its Fibres are cloſer; 'tis this contains the liquid Sap, Gums, &c. found in Plants in the Spring and Summer Months. It hardens by little and little, by means of the Sap it tranſmits, and is converted imperceptibly into the woody Part of the Tree. There are few Trees but what have it; yet 'tis ſtill found in leſs Quantity, as the Tree is more expoſed to the Sun: that of the *Oak* is ordinarily about an Inch Diameter. 'Tis here that the Corruption of Trees generally begins: whence thoſe who fell and cut out Trees, ought always to take care to leave as little of it on, as poſſible. See *Wood*.

In the two *Indies* they manufacture the *Bark* of a certain Tree into a kind of Stuff or Cloth. 'Tis ſpun and dreſs'd much after the manner of Hemp. The long Filaments ſeparated from it, upon beating and ſteeping it in Water, compoſe a Thread, of a middle kind between Silk and common Thread; neither ſo ſoft nor bright as Silk, nor ſo hard or flat as Hemp. Some of theſe Stuffs are pure *Bark*, and are call'd *Penaſſes*, *Beambonnes*, &c. In others they mix Silk with the *Bark*, and call 'em *Guingans* and *Nillas*: the *Foutalongees* too, are part Silk part *Bark*, and are only diſtinguiſh'd by being ſtriped.

*Bark*, a little Veſſel for the Sea, with pointed or triangular Sails, in number two, or three at the moſt. *Menage* derives the Word from the Latin *Barca*; *Fournier* from *Barce*, a City in *Africa*; and *Toletanus* from *Barcelona*; others, among whom *Salmaſius*, from the Greek βαις, a round Building; *Scaliger* from βαγις, *ab Oneribus gerendis*. Some Authors uſe the Word *Bark* for any Veſſel that has no Maſts. Of *Barks* there are various Kinds: As,

| | |
|---|---|
| *A Binlander*, | *A Sknit*, |
| *A Sack*, | *A Snaul*, |
| *A Sattee*, | *A Snouke.* |

BARK-BINDING, a Diſtemper incident to Trees, cured by ſlitting the *Bark*, or cutting it along the Grain of the Tree.

BARK-GALLING, is when Trees are gall'd by Thorns, or by being bound to Stakes, &c. and is cured by Clay laid on the gall'd Place, and bound up with Hay.

BARKING *of Trees*, is the Peeling off or Stripping the *Bark* from the Wood. The Month of *May* is the Seaſon for *Barking of Trees*, becauſe then the Sap looſens the *Bark* from the Wood; which 'tis very hard to effect in any other Time, unleſs the Seaſon be very wet; Heat and Dryneſs being always oppoſite thereto.

BARM-YEAST, the Head or Workings-out of Ale or Beer. See *Leven*, *Paſt*, *Baking*, &c.

BARNABITES, a Set of Religious, or Regular Prieſts, of the Congregation of St. *Paul*. Their Habit is black, and the ſame with that they wore when firſt eſtabliſhed, *Anno Domini* 1533. by the expreſs Bulls of Pope *Clement* VII. Their Office is to inſtruct, catechize, and

ſerve

ſerve in Miſſions. This Order was founded by *Antoine Marie Zacariah*; they were call'd *Barnabites* from the Church of St. *Barnabas*, at *Milan*.

BARNACLE, in Natural Hiſtory, a little Sea-Animal, frequent among the Weſtern Iſles of *Scotland*; the manner of whoſe Production has occaſion'd ſome Speculation among the Learned. The *Barnacle*, at firſt, appears in form of a little Shell-fiſh growing on old weather-beaten Timber, chiefly *Aſh* and *Fir*, driven in great Quantities by the Weſtern Ocean upon the Shores. The Shell, Sir *Robert Murray* tells us, reſembles that of a Muſcle in Colour and Conſiſtence, very thin about the Edges, and about half as thick as broad, croſs'd with Sutures, &c. It hangs to the Wood by a Neck longer than the Shell, of a filmy Subſtance, round and hollow, not unlike the Wind-pipe of a Chicken, by which it ſeems to draw its Nouriſhment from the Wood, both for its own Vegetation and that of the Animal incloſed. The Curioſity is, that inſtead of a Fiſh, which one expects in the Shell, there is found a perfect feather'd Fowl, vulgarly call'd *Solan Gooſe*. In a number which Sir *Robert Murray* open'd, he found the *Sea-Fowl* perfectly form'd; the Bill like that of a Gooſe, the Eyes mark'd, the Neck, Breaſt, Wings, &c. very compleat; the Feathers every where perfect; and the Feet like thoſe of other Water-Fowl. He obſerves, he never ſaw any of 'em alive; nor does he know any body that ever did: But adds, he is credibly inform'd they have been ſeen as big as the Fiſt. The *French* have alſo their *Barnacles*, which they call *Macreuſe*, or *Macroul*, on the Coaſts of *Normandy*, &c. only differing from the *Scotiſh*, in that the one ſeems of the *Gooſe* Kind, the other of the *Duck* Kind. Dr. *Tanc. Robinſon*, rejecting the popular Opinions of their being generated from rotten Woods, Fruits dropp'd into the Sea, and there metamorphos'd into Birds, &c. obſerves, that the *Barnacles* are all oviparous, from the Anatomy of their Parts ſerving to Generation, and that they are both Male and Female. The *French* eat the *Macreuſe* on Fiſh-Days, and throughout all *Lent*, taking it for a kind of Fiſh. Yet Mr. *Ray* obſerves, 'tis a real Fowl; and refers it to the Species of *Sea-Ducks* deſcrib'd by Mr. *Willoughby*.

BARNACLES, Horſe-Twitchers or Brakes, are Inſtruments which Farriers apply to Horſe's Noſes when they will not ſtand quietly to be ſhod, blooded, &c.

BAROCO, a Term in Logick. A Syllogiſm in *Baroco* has the firſt Propoſition univerſal and affirmative, but the ſecond and third particular and negative; and the middle Term the Attribute in the two firſt: For Example,

*Every Virtue is attended with Diſcretion:*
*Some kinds of Zeal are not attended with Diſcretion:*
*Therefore ſome kinds of Zeal are not Virtues.*

BAROMETER, a Machine for meaſuring the Weight of the Atmoſphere, and the Variations therein, in order chiefly to determine the Changes of Weather, from the Greek βαρος, *onus*, and μετρον, *menſura*. The *Barometer* is frequently confounded with the *Baroſcope*, tho ſomewhat improperly; the latter, in ſtrictneſs, being a Machine that barely ſhews an Alteration in the Weight of the *Atmoſphere*: but 'tis one thing to know that the Air is heavier at one time than at another, and another to meaſure how much that Difference is; which is the Buſineſs of the *Barometer*.

The *Barometer* is founded on the *Torricellian* Experiment, as 'tis call'd from its Inventor *Torricelli*: which is no more than a Glaſs Tube fill'd with Mercury, hermetically ſeal'd at one End; the other open, and immerg'd in a Baſon of ſtagnant Mercury. Now, as the Weight of the *Atmoſphere* diminiſhes, the Mercury in the Tube will here deſcend; on the contrary, as it increaſes, the Mercury will again aſcend: the Column of Mercury ſuſpended in the Tube being always equal to the Weight of the incumbent *Atmoſphere*; as is ſhewn under the Word *Torricellian*.

*The Mechaniſm of the* Barometer *is as follows.*

A Glaſs Tube A B, Plate *Pneumaticks*, *Fig.* 1. hermetically ſeal'd in A, having its Diameter about $\frac{1}{10}$ of an Inch, and its Length at leaſt 31 Inches, is fill'd with Mercury ſo juſtly, as not to have any Air over it, nor any Bubbles adhering to the Sides of the Tube; which is beſt done by means of a Glaſs Funnel, with a capillary Tube. The Orifice of the Tube, fill'd after this manner, ſo as to overflow, is cloſely preſs'd by the Finger, ſo as to exclude any Air between it and the Mercury, and thus immerg'd in a wooden Veſſel, of a convenient Diameter; ſo, however, as not to touch the Bottom: At the Diſtance of 28 Inches from the Surface of the Mercury, are fix'd two Plates, C E and D F, divided into two Inches, and theſe again ſubdivided into any Number of ſmaller Parts: Laſtly, the Tube is incloſed in a wooden Frame, to prevent its being broke; and the Baſon, tho open to the Air, ſecured from Duſt; and the *Barometer* is compleat.

Many Attempts have been made to render the Changes in the *Barometer* more ſenſible, and ſo to meaſure the *Atmoſphere* more accurately; which has given Riſe to a great Number of *Barometers* of different Structures. Hence comes the *Wheel Barometer*, *Diagonal Barometer*, *Horizontal Barometer*, *Pendant Barometer*, &c. of each whereof in their turns.

*Des Cartes*, and after him *Huygens*, uſed a Tube A B, *Fig.* 2. having a Cylindrick Veſſel C D; one half of which Veſſel, together with the upper Part of the Tube, were fill'd with Water; the other half of the Veſſel, and the lower Part of the Tube, with Mercury: But here, tho the Column ſuſpended was larger, and conſequently the Variation greater, yet the Air impriſon'd in the Water getting looſe by degrees, fill'd the void Space in the top, and ſo ruin'd the Machine. He then bethought himſelf of placing the Mercury a top, and the Water at bottom, in the manner following: A D G, *Fig.* 3. is a bent Tube hermetically ſeal'd in A, and open in G; the cylindrick Veſſels B C and F E are equal, and about 29 Inches a-part; the Diameter of the Tube is about a Line, that of each Veſſel 15 Lines, and the Depth of the Veſſels about 10; the Tube is fill'd with Mercury (the common *Barometer* ſtanding about 29 Inches) which will be ſuſpended between the middle of the Veſſel F E, and that of the Veſſel B C; the remaining Space to A, being void both of Mercury and Air: Laſtly, common Water, ting'd with a ſixth Part of *Aqua Regis*, to prevent its freezing, is pour'd into the Tube F G, till it riſes a Foot above the Mercury in D F. When, then, the Mercury riſing above the Level of that contain'd in F E, through the Tube A D, becomes a Balance to the Weight of the *Atmoſphere*; as the *Atmoſphere* increaſes, the Column of Mercury will increaſe, conſequently the Water will deſcend; as the *Atmoſphere* again grows lighter, the Column of Mercury will deſcend, and the Water aſcend. This *Barometer* therefore, which is the ſame with that of Dr. *Hook*, will diſcover much minuter Alterations in the Air than the common one: for, inſtead of two Inches, the Fluid will here vary two Foot; and by enlarging the Diameters of the Cylinders, that Variation may be ſtill increas'd; but it has this Inconvenience, that the Water will evaporate, and ſo render the Alterations precarious; tho the Evaporation be, in ſome meaſure, prevented by a Drop of Oil of ſweet Almonds ſwimming a-top. On account of this Defect, others have had recourſe to a

*Horizontal*, or *Rectangular Barometer*, A B C D, *Fig.* 4. the Tube whereof is bent, in form of a Square B C D; a-top of its perpendicular Leg it is join'd to a Veſſel or Ciſtern A B; and its Variation accounted on the Horizontal Leg C D. Now here the Interval, or Space of Variation, may be made of any Extent at pleaſure, and ſo the minuteſt Change in the Air become ſenſible. For the Diameter of the Tube C D being given, 'tis eaſy to find the Diameter of the Veſſel A B, ſo as that the Scale of Deſcent in the Tube D C ſhall have any given Proportion to the Scale of Aſcent in the Veſſel A B; the Rule being, that the Diameter of the Veſſel is to that of the Tube in a ſubduplicate reciprocal Ratio of their Scales. The Diameters then of C D and A B being given, together with the Scale or Aſcent of the Mercury in the Veſſel, the Scale of Mercury in the Tube is found thus; as the Square of the Diameter of the Tube is to the Square of the Diameter of the Veſſel, ſo, reciprocally, is the Scale of Mercury in the Veſſel to the Scale of Mercury in the Tube.

This and the preceding Contrivance of *Huygens*, are founded on a Theorem in Hydroſtaticks, *viz.* that *Fluids having the ſame Baſe, gravitate according to their perpendicular Altitude, not according to the Quantity of their Matter*; whence the ſame Weight of the *Atmoſphere* ſupports the Quickſilver that fills the Tube A D and the Ciſtern B, as would ſupport the Mercury in the Tube alone. See *Hydroſtaticks*.

This laſt however, with its Virtues, has great Defects; for, by reaſon of the Attraction between the Parts of the Glaſs and of the Mercury, (which Dr. *Jurin* has ſhewn to be conſiderable) the Length of the Scale, (conſequently the Quantity of Motion) and the Attrition againſt its Sides, eſpecially in ſudden Riſes and Deſcents, the Mercury breaks, ſome Parts of it are left behind, and the Equability of its Riſe and Fall ruin'd. Some therefore prefer the

*Diagonal Barometer*, where the Space of Variation is conſiderably larger than in the common one, and yet the Riſe and Fall more regular than in the others. The Foundation of the *Diagonal Barometer* is this; that in a Torricellian Tube A B, *Fig.* 5. inclined at any Angle to the Horizon, the Cylinder of Mercury equivalent to the Weight of the *Atmoſphere*, is to a Cylinder of Mercury, equivalent to the ſame placed in a vertical Tube, as the Length of the Tube A B to the perpendicular Height B C. Hence, if the Height B C be ſubtriple, ſubquadruple, &c. of the Length of the Tube, the Changes in the *Diagonal Barometer* will

be

be double, or triple, &c. of the Changes in the *common Barometer*. This *Barometer* will ſcarce allow its Tube to be inclined to the Horizon at a leſs Angle than 450, without undergoing the Inconveniency of the *Horizontal* one.

*Wheel-Barometer* is a Contrivance of Dr. *Hook*, to make the Alterations in the Air more ſenſible; the Foundation of this is the *common Vertical Barometer*, with the Addition of a couple of Weights A and B, *Fig.* 5. hanging in a Pulley, the one playing at liberty in the Air, the other reſting on the Surface of the Mercury in the Tube, and riſing and falling with it. Thus is the Motion of the Mercury communicated, by means of the Pulley, to an Index which turns round a graduated Circle; and thus the two Inches of vertical Aſcent are here improv'd to 4, 5, or more, at pleaſure. But the Friction of the Parts, in the Pulley, and Index, is ſo conſiderable, that unleſs the Machine be made with a great deal of Accuracy, it does not anſwer.

*Pendant Barometer* is a Machine rather pretty, and curious, than uſeful. It conſiſts of a conical Tube placed vertically, its upper and ſmaller Extreme hermetically ſealed; it has no Veſſel or Ciſtern; its conical Figure ſupplying that Defect: for when fill'd, like the reſt, there will be as much Mercury ſuſtain'd as is equivalent to the Weight of the *Atmoſphere*; and as that varies, the ſame Mercury takes up a different Part of the Tube, and ſo becomes of a different Weight. Thus when the Weight of the *Atmoſphere* is increas'd, the Mercury is driven up into a narrower part of the Tube, by which means its Column is lengthen'd, and, for the Reaſon juſt given, its Weight increas'd. Again, the *Atmoſphere* decreaſing, the Mercury ſinks into a wider Part of the Tube, by which means its Column is ſhorten'd, and its Preſſure accordingly weaken'd. Thus the ſame Mercury is ſtill a Balance to the *Atmoſphere* under all its Variations. The Inconvenience in this *Barometer* is, that to prevent the Mercury and Air from changing Places, the Bore of the Tube muſt be very ſmall; which Smallneſs of the Bore renders the Friction ſo ſenſible, as to impede its playing.

*Marine Barometer* is likewiſe a Contrivance of Dr. *Hook*, to be uſed at Sea, where the Motion of the Waves renders the others impracticable. 'Tis nothing more than a double *Thermometer*, or a Couple of Tubes half fill'd with Spirit of Wine; the one hermetically ſeal'd at both Ends, with a Quantity of common Air incloſed; the other ſeal'd at one End, and open at the other. Now, the Air, we know, is able to act on the Spirit of Wine, and to raiſe it two ways; the one by its Gravity, as in the *Torricellian Tube*; the other by its Heat, as in the *Thermometer*. If then the two Tubes be graduated, ſo as to agree with each other at the time when the Air is incloſed, it will eaſily follow, that, where-ever the two agree afterwards, the Preſſure of the *Atmoſphere* is the ſame, as at the time when the Air was incloſed. If in the *Thermometer* open to the Air the Liquor ſtand higher, conſidering withal how much the other is riſen or fallen from the other Cauſe of Heat or Cold, the Air is heavier; on the contrary, when it is lower, compar'd with the other, the Air is lighter than at the time when the Inſtrument was graduated. Here the Spaces anſwering to an Inch of Mercury will be more or leſs, according to the Quantity of the Air incloſed, and the Smallneſs of the Tubes; and may be increas'd, almoſt in any Proportion.

But it muſt be remember'd, that the Denſity and Rarity of the Air, on which this Machine is founded, don't only depend on the Weight of the *Atmoſphere*, but alſo on the Action of Heat and Cold. This, therefore, can never be a juſt *Barometer*; but may properly enough be call'd a *Menoſcope*, or Inſtrument to ſhew the Denſity of the Air.

*Statical Barometer* or *Baroſcope*, uſed by Mr. *Boyle*, *Otto*, *Guerric*, &c. is fallacious, and liable to be acted on by a double Cauſe: It conſiſts of a large Glaſs Bubble, balanced by a Braſs Weight, in a nice Pair of Scales: for theſe two Bodies being of equal Gravity, but unequal Bulk, if the Medium in which they equiponderate be changed, there will follow a Change of their Weight; ſo that if the Air grows heavier, the greater Body being lighter in Specie, will loſe more of its Weight than the leſſer and more compact; but if the Medium grow lighter, then the bigger Body will outweigh the leſs.

But the moſt accurate *Barometer* ever yet invented, is that of Mr. *Caſwell*; the Structure whereof he deſcribes as follows: Suppoſe A B C D, *Fig.* 6. a Bucket of Water, wherein is the *Barometer x r e z y o s m*, conſiſting of a Body *x r s m*, and a Tube *e z y o*. The Body and Tube are both concave Cylinders, communicating with each other, made of Tin, or rather Glaſs. The Bottom of the Tube, *z y*, has a Lead Weight to ſink it, ſo as the Top of the Body may juſt ſwim even with the Surface of the Water, by the addition of ſome Grain Weights a-top. The Water, when the Inſtrument is forced with its Mouth downwards, gets up into the Tube to the Height *y o*. There is added on the Top a ſmall concave Cylinder, which we call the *Pipe*, to diſtinguiſh it from the other at Bottom, which we call the *Tube*: this Pipe is to ſuſtain the Inſtrument from ſinking to the Bottom. *m d* is a Wire, *m s*, *d e* two Threads oblique to the Surface of the Water, performing the Office of *Diagonals*. Now, while the Inſtrument ſinks more or leſs, by the Alteration of the Gravity of the Air; there, where the Surface of the Water cuts the Thread, is form'd a ſmall Bubble, which aſcends up the Thread, as the Mercury of the *common Barometer* aſcends, & *vice verſa*. This Inſtrument, as appears from a Calculation which he annexes, ſhews the Alterations in the Air more accurately than the *common Barometer*, by 1200 times. He obſerves, that the Bubble is ſeldom known to ſtand ſtill a Minute; that a ſmall Blaſt of Wind, that can't be heard in a Chamber, will make it ſink ſenſibly; that a Cloud always makes it deſcend, &c.

*Phænomena of the* Barometer.

The Phænomena of the *Barometer* are various; the Cauſes aſſign'd for 'em by ſeveral Authors as various; nor is its Uſe in predicting the Weather yet perfectly aſcertain'd.

On the top of *Snowdon Hill*, 1240 Yards high, Dr. *Halley* found the Mercury lower by 3 Inches 8 Tenths than at the Foot thereof; whence it appears, that at every 30 Yards the Mercury ſinks $\frac{1}{10}$ of an Inch. Mr. *Derham*, from ſome Experiments he made at the Top and Bottom of the Monument, allows 32 Feet perpendicular Aſcent to a Fall of the Mercury of $\frac{1}{10}$ of an Inch: Whence we have not only a Foundation for determining the Height of the *Atmoſphere*, which on this Foundation (were it equally denſe every where) would not be found more than 5 Miles and $\frac{1}{10}$; but alſo a very accurate Method of meaſuring the Height of Mountains. Thus, if on the Surface of the Earth the Mercury be at 30 Inches, at 1000 foot high, it will be at 28,91 Inches; at 2000 Foot, 27,86; at 3000, 26,85; at 4000, 25,87; at 5000, 24,93; at 1 Mile, 24,67; at 2 Miles, 20,29; at 5 Miles, 11,28; at 10 Miles, 4,24; at 15 Miles, 1,60; at 20, 0,95; at 30 Miles, 0,08; at 40, 0,012: tho it muſt be obſerv'd, this is on a Suppoſition that the *Atmoſphere* is equally denſe every where.

The greateſt Height the Mercury has been known to ſtand at in the *Barometer*, at *London*, is 30 Inches $\frac{3}{8}$, its leaſt 28 Inches; its greateſt Height at the Obſervatory at *Paris*, has been found 28 Inches $\frac{4}{10}$, and its leaſt 26 $\frac{4}{10}$ of the *Paris* Foot, which exceeds the *London* Foot by $\frac{9}{144}$: and with theſe Obſervations agree others made at *Hall*, in *Saxony*, by *Wolfius*. 'Tis true, there is an Experiment wherein the Height of the Mercury is found ſuprizingly to exceed theſe Numbers; Mercury perfectly purged being ſuſpended in a Tube, in the *Torricellian* way, at the Height of 75 Feet; tho by the leaſt Shake it falls down to the ordinary Height. See the Accounts of this Phænomenon under the Word *Torricellian*.

The Phænomena of the *Barometer*, Mr. *Boyle* obſerves, are ſo very precarious, that 'tis exceedingly difficult to form any general Rules about the Riſe or Fall thereof. Even that which ſeems to hold moſt univerſally, *viz.* That when high Winds blow the Mercury is the lower, ſometimes fails.

*Dr.* Halley *gives us the following Obſervations.*

That in calm Weather, when the Air is inclined to Rain, the Mercury is commonly low; in ſerene good ſettled Weather, high.

That on great Winds, tho unaccompanied with Rain, the Mercury is the loweſt of all, with regard to the Point of the Compaſs the Wind blows on. That, *cæteris paribus*, the greateſt Heights of the Mercury are on Eaſterly and North-Eaſterly Winds. That after great Storms of Wind, when the Mercury has been low, it riſes again very faſt.

That in calm froſty Weather it ſtands high.

That the more Northerly Places find greater Alterations than the more Southern: And that within the Tropicks, and near them, there is little or no Variation of the Height of the Mercury at all.

*Dr.* Beal *obſerves*;

That, *cæteris paribus*, the Mercury is higher in cold Weather than in warm, and uſually in the Morning and Evening higher that at Mid-Day.

That in ſettled and fair Weather, the Mercury is higher than either a little before or after, or in the Rain; and that it generally deſcends lower after Rain than it was before it. If it chance to riſe higher after Rain, is is generally follow'd by a ſettled Serenity.

That there are frequently great Changes in the Air, without any perceptible Alteration in the *Barometer*.

For the *Uſe of Barometers* an ingenious Author obſerves, That by their means we may regain the Knowledge which ſtill reſides in Brutes, and which we forfeited by not continuing in the open Air, as they generally do; and by our Intemperance, corrupting the Craſis of our Senſes.

As to *the Predictions from Barometers*, Dr. *Halley* has found, that the Riſing of the Mercury forebodes fair Weather after foul, and an Eaſterly or North-Eaſterly Wind.

That

That the Falling thereof portends Southerly or Weſterly Winds with Rain, or ſtormy Winds, or both.

That in a Storm, the Mercury beginning to riſe, is a pretty ſure Sign that it begins to abate.

Mr. *Patrick* obſerves, that in hot Weather the Falling of the Mercury preſages Thunder; that when foul Weather happens ſoon after the Fall of the Mercury, it ſeldom holds long; and the ſame is obſerv'd, if fair Weather ſucceed preſently after its Riſe.

Laſtly, Mr. *Derham*, from a long Series of *Barometrical Obſervations* made by Dr. *Scheucher*, at *Zurich*, compar'd with others made at the ſame times by himſelf at *Upminſter*, obſerves that throughout the whole Year the Mercury was lower at the former Place than at the latter, by ſometimes one and ſometimes above two Inches; tho the Difference at a Medium he computes to be about half an Inch; and thence concludes the Situation of *Zurich* to be near $\frac{1}{4}$ of an *Engliſh* Mile higher than that of *Upminſter*. He found, however, a conſiderable Harmony between the two; the one uſually riſing and falling, and that much or little, as the other did; tho this Harmony is not ſo compleat, as has been obſerv'd in *Barometers* nearer home, as at *London*, *Paris*, in *Lancaſhire*, &c.

*Cauſe of the Phænomena of the* Barometer.

Theſe are the Phænomena of the *Barometer*; to account for which, the *Hypotheſes* that have been framed, are almoſt infinite. Indeed, as the Weight of the *Atmoſphere* is generally allow'd to be the Foundation of the *Barometer*, ſo 'tis generally granted, that the Alterations in the Weight of the Air, are the Occaſions of thoſe in the *Barometer*; and yet even this does not obtain univerſally. Dr. *Liſter*, for inſtance, accounts for the Changes of the *Barometer* from the Alterations of Heat and Cold. This, he ſays, he has often obſerv'd, that in Storms, &c. when the Mercury is at the loweſt, it breaks and emits ſmall Particles, which he calls a kind of *fretting*; and argues, that in all times of its Deſcent, it is more or leſs on the Fret. In this Diſorder, he thinks, its Parts are contracted and brought cloſer together, and for that reaſon deſcend: Beſides, in the fretting they let go little Particles of Air, before incloſed in 'em; and theſe riſing into the Top of the Tube, the Mercury muſt ſink, both from the Column's being ſhorten'd by their Eſcape, and by their lying upon it. Mercury therefore, he adds, riſes either in very hot or very cold Weather, between the Tropicks, &c. as being then in its natural State; and again, in the intermediate Degrees of Heat and Cold it falls, as being contracted, and as it were convuls'd and drawn together. But this Account, however ingenious, comes far ſhort of accounting for the Phænomena; nay, in ſome reſpects, contradicts them.

The Changes in the Weight of the *Atmoſphere*, therefore, muſt be laid down as the Cauſe of thoſe in the *Barometer*; but then, for the Cauſe of that Cauſe, or whence thoſe Alterations ariſe in the *Atmoſphere*, will be no eaſy Matter to determine; there being, perhaps, no one Principle in Nature, that will account for ſuch a Variety of Appearances, and thoſe too ſo irregular. 'Tis probable, the Winds, as driven this or that way, have a great Share in 'em; ſome Share too, Vapours and Exhalations riſing from the Earth may have; ſome, the Changes in the Air of the neighbouring Regions; and ſome, the Flux and Reflux occaſion'd in the Air by the Moon.

Dr. *Halley* thinks the Winds and Exhalations ſufficient; and on their footing gives us a very probable Rationale of the *Barometer*: the Subſtance of what may be ſaid on that Head is as follows.

1*ſt*, Then, the Winds muſt neceſſarily alter the Weight of the Air in any particular Country; and that, either by bringing together and accumulating a greater Quantity of Air, and ſo loading the *Atmoſphere* of any Place; which will be the Caſe, as often as two Winds blow at the ſame time from oppoſite Points towards the ſame Point; or, by ſweeping away part of the Air, and removing ſome of the Load, give room for the *Atmoſphere* to expand itſelf; which will be the Caſe, when two Winds blow at the ſame time, and from the ſame Point, oppoſite ways; or, laſtly, by cutting off the perpendicular Preſſure of the *Atmoſphere*, which happens, as often as any ſingle Wind blows briskly any way; it being found by Experiment, that a ſtrong Blaſt of Wind, even made by Art, will render the *Atmoſphere* lighter; and accordingly, the Mercury, in a Tube under which it paſſes, as well as in another at a Diſtance from it, ſubſides conſiderably. See *Philoſ. Tranſact.* N°. 292.

2*dly*, The cold nitrous Particles, and even Air itſelf condens'd in the Northern Parts, and driven elſewhere, muſt load the *Atmoſphere*, and increaſe its Preſſure.

3*dly*, Heavy, dry Exhalations from the Earth, muſt increaſe the Weight of the *Atmoſphere*, and heighten its Elaſtick Force, as we find the ſpecifick Gravity of Menſtruums increas'd by diſſolv'd Salts and Metals.

4*thly*, The Air being render'd heavier from theſe and the like Cauſes, is thereby the more able to ſupport the Vapours; which being likewiſe intimately mix'd with it, and ſwimming every where equably throughout it, make the Weather ſerene and fair: Again, the Air being made lighter from the contrary Cauſes, it becomes unable to ſupport the Vapours wherewith it is replete; theſe therefore precipitating are gathered into Clouds, and thoſe in their Progreſs coaleſce into Drops of Rain.

Theſe things obſerv'd, it appears pretty evident, that the ſame Cauſes which increaſe the Weight of the Air, and make it more able to ſupport the Mercury in the *Barometer*, do likewiſe make a ſerene Sky, and a dry Seaſon; and the ſame Cauſes which render the Air lighter, and leſs able to ſupport the Mercury, do likewiſe generate Clouds and Rain.

Hence, 1*ſt*, When the Air is lighteſt, and the Mercury in the *Barometer* loweſt, the Clouds are very low, and move ſwiftly; and when after Rain the Clouds break, and a calm Sky again ſhines forth, being purg'd of its Vapours, it appears exceedingly bright and tranſparent, and affords an eaſy Proſpect of remote Objects.

2*dly*, When the Air is heavier, and the Mercury ſtands higher in the Tube, the Weather is calm, tho ſomewhat leſs clear, by reaſon the Vapours are diſpers'd every where equally; if any Clouds now appear, they are very high, and move ſlowly. And when the Air is heavieſt of all, the Earth is frequently found envelop'd in pretty thick Clouds, which appear to be form'd out of the groſſer Exhalations, and which the Air is then able to ſuſtain, tho a lighter *Atmoſphere* could not.

3*dly*, Hence it is, that with us the Mercury ſtands higheſt in the coldeſt Seaſons, and when the Wind blows from the North or North-Eaſt Corner: for in that Caſe there are two Winds blowing towards us at the ſame time, and from oppoſite Corners; there being a conſtant Weſt Wind found in the *Atlantick* Ocean, at the Latitude correſponding to ours. To which we may add, that in a North Wind, the cold condens'd Air of the Northern Parts is brought hither.

4*thly*, Hence, in the Northern Regions, the Variation of the Mercury is more ſenſible than in the Southern ones; the Winds being found both more ſtrong, more frequent, more various, and more oppoſite to each other in the former than the latter.

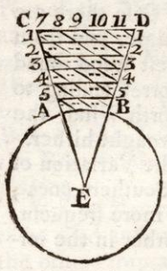
*Laſtly*, Hence it is, that between the Tropicks, the Variation of the Mercury is ſcarce ſenſible; the Winds there being extremely gentle, and uſually blowing the ſame way.

Now, this Account, however well adapted to many of the particular Caſes of the *Barometer*, yet comes ſhort of ſome of the principal and moſt obvious ones; and is, beſides, liable to ſeveral Objections.

For, 1*ſt*, If the Wind were the ſole Agent in effecting theſe Alterations, we ſhould have no Alterations without a ſenſible Wind, nor any Wind without ſome Alteration of the Mercury; both which are contrary to Experience.

2*dly*, If two Winds be ſuppos'd blowing from the ſame Place, *viz.* *London*, oppoſite ways, *viz.* N. E. and S. W. there will be two others, blowing from oppoſite Points, *viz.* N. W. and S. E. to the ſame Place; which two laſt will balance the firſt, and bring as much Air towards the Point, as the others ſwept from it. Or thus, In proportion as the Air is carried off N. E. and S. W. the adjacent Air will croud in from the other Points, and form a couple of new Currents in the Direction N. W. and S. E. to fill up the Vacancy, and reſtore the *Æquilibrium*. This is a neceſſary Conſequence from the Laws of Fluids.

3*dly*, If the Wind were the ſole Agent, the Alterations in the Height of the Mercury wou'd only be relative or topical; there would be ſtill the ſame Quantity ſupported at ſeveral Places taken collectively: Thus what a Tube at *London* loſt, another at *Paris*, or at *Piſa*, or at *Zurich*, &c. wou'd at the ſame time gain. But we find the very contrary true in Fact; for from all the Obſervations hitherto made, the *Barometers* in ſeveral Parts of the Globe riſe and fall together; ſo that it muſt be ſome Alteration in the abſolute Weight of the *Atmoſphere*, that accounts for the Riſe and Fall of the Mercury.



*Laſtly*, Setting aſide all Objections, theſe popular Phænomena, the Mercury's Fall before, and Riſe after Rain, are really inexplicable on the foot of this Hypotheſis: for, ſuppoſe two contrary Winds ſweeping the Air from over *London*: we know that few, if any, of the Winds reach above a Mile high; all therefore they can do, will be to cut off a certain Part of the Column of Air over *London*: If the Conſequence of this be the Fall of the Mercury, yet there is no apparent Reaſon for the Rains following it. The Vapours indeed, may be let lower, but 'twill only be till they come into an Air of the ſame ſpecifick Gravity with themſelves; and there they will ſtick as before.

M. *Leibnitz* endeavours to ſupply the Defects of this Hypotheſis with a new one of his own. He aſſerts, that a Body immers'd in a Fluid, only weighs with that Fluid while it is ſuſtained thereby; ſo that when it ceaſes to be ſuſ-

tain'd, *i. e.* to fall, its Weight ceaſes to make a Part of that of the Fluid; which by this means becomes lighter. Thus, adds he, the watery Vapours, while ſuſtain'd in the Air, increaſe its Weight; but when let fall, ceaſe to weigh along with it. Thus the Weight of the Air is diminiſh'd; and thus the Mercury falls, and Rain enſues.

But M. *Leibnitz*'s Principle, notwithſtanding the Experiment he brings to confirm it, is falſe, as has been made appear by a counter-Experiment of Dr. *Deſaguliers*. For, a Body, whether ſpecifically equal, or lighter, or heavier than a Fluid, while it is immerg'd in it, whether it be at Reſt or in Motion, adds to the Fluid a Weight equivalent to that of an equal Bulk of the Fluid; as follows from that Law in *Hydroſtaticks*, *That Fluids gravitate according to their perpendicular Altitudes*. However, were M. *Leibnitz*'s Principle true, yet 'tis defective; and that in the ſame reſpect with Dr. *Halley*'s: Nor wou'd it account for the Phænomena more than the other. For, ſuppoſing the Vapours, by being condens'd, to be put in a Motion downwards, and ſo ceaſing to gravitate with the *Atmoſphere*; they will therefore fall, till they reach a Part of the *Atmoſphere* of the ſame ſpecifick Gravity with themſelves; and there they will hang as before. If the Mercury fall, 'twill only be during the Time of that Deſcent; for theſe once fix'd, the former Gravity is retriev'd; or, were it not retriev'd, yet no Rain wou'd enſue the Fall of the Mercury.

If it might be allow'd us to add any thing after theſe great Men, it ſhould be as follows: Suppoſe any Number of watery Veſicles, *v. g.* a Million, floating in any Part of the *Atmoſphere*, over any determinate Portion of the Globe; for inſtance, over A B. If the upper Veſicles be condens'd by the Cold of the upper Regions, their ſpecifick Gravity will be increas'd, and they will deſcend; the Horizontal Claſs 1 *v. g.* to 2, 2 to 3, *&c.* where meeting with other Veſicles not yet precipitated, they will coaleſce, or run into larger Veſicles, by the known Laws of Attraction. Or, if we rather chuſe to have the Wind act, let it drive either horizontally, or obliquely: In the former Caſe, the Veſicles, Claſs 8, will be driven againſt 9; that, againſt 10, *&c.* or the oblique Claſs A 7, driven againſt 5, 8 againſt 4, *&c.* By this means likewiſe will the Particles coaleſce, and form new and larger Veſicles, as before; ſo that their Number, which before was a Million, will now be reduced, *v. g.* to a Hundred Thouſand: But by the ſame Coalition whereby their Number is diminiſh'd, their ſpecifick Gravity is increas'd, *i. e.* they come to have more Matter in the ſame Space, or under the ſame Surface; as may be eaſily prov'd from Principles of Geometry: For, in augmenting the Maſs of any homogeneous Body, the Increaſe of Surface does not keep pace with that of the Solidity; but that of the former, is as the Square of the Diameter; and that of the latter, as the Cube of the ſame. If then the Diameter of a Veſicle were 4, and its Surface and Maſs 24; after Coalition, if its Diameter be 6, its Surface or Bulk will be 54, and its ſolid Content 81. But ſince the ſame Quantity of Matter is now in a leſs Space, or under leſs Dimenſions, it will loſe leſs of its Weight by the Reſiſtance of the Medium. This is evident; for, a Body immerg'd in a Fluid, loſes nothing of its Weight, but by the Friction of its Parts againſt thoſe of the Fluid; but the Friction is evidently as the Surface: therefore, where the Surface is leſſen'd, the Reſiſtance muſt be ſo too. Conſequently, the Veſicles, whoſe Gravity before the Coalition was equal to the Reſiſtance of the Medium, now that Reſiſtance is diminiſh'd, will deſcend; and that with a Velocity, in a *Ratio* of the Increaſe of the Maſs to the Increaſe of the Surface. In their Deſcent, as they arrive at denſer Parts of the *Atmoſphere*, *v. g.* at 4, 5, *&c.* their Maſs and Surface again will be increas'd by new Coalitions; and thus, by conſtant freſh Acceſſions, more than equal to the conſtant Reſiſtances, they will be enabled to purſue their Journey thro all the Stages of the Air, till they reach the Earth; their Maſſes exceedingly magnified; and in the form of Rain.

Now that the Vapours are got down, let us conſider how the *Barometer* muſt have been affected in their Paſſage. E'er any of the Veſicles began to ſubſide, either from the Action of the Cold, or of the Wind, they all floated in the Portion of the *Atmoſphere* A B C D, and all gravitated towards the Centre E. Here now, each reſpectively reſiding in a Part of the Medium of the ſame ſpecifick Gravity with it ſelf, will loſe as much of its Weight, as is equal to that of a Part of the Medium of the ſame Bulk with itſelf, *i. e.* each will loſe all its Weight. But then, whatever Weight each loſes, it communicates to the Medium, which now preſſes on the Surface of the Earth A B, with its own Weight, and that of the Veſicles conjointly. Suppoſe then, this united Preſſure keeps up the Mercury in the *Barometer* at 30 Inches: By the Coalition of the Veſicles from the Cauſes aforeſaid, their Surfaces, and conſequently their Friction is leſſen'd: They will therefore communicate leſs of their Weight to the Air, *i. e.* leſs than the whole; and conſequently will deſcend with the Exceſs, *i. e.* with a Velocity equal to the Remainder, as before obſerv'd. Now as the Veſicles can act no otherwiſe on the Surface of the Earth AB, but by the Mediation of the interjacent Air; in proportion as their Action on the Medium is leſs, their Action on the Earth will be leſs. 'Tis alſo evident, that the Surface of the Earth A B, muſt be now leſs preſs'd than before; and that in proportion, as the Veſicles reſerve more of their Weight uncommunicated to the Medium, to promote their own Deſcent, *i. e.* in proportion to the Velocity of the falling Veſicles; which is, again, in proportion to their Bulks. Thus, as the Veſicles deſcend; their Bulks continually increaſing, the Friction, and therefore the Preſſure on the Earth, and laſtly, the Height of the Mercury, will continually decreaſe, during the whole time of the Fall. Hence we ſee, both why the Veſicles, when once beginning to fall, perſevere; why the Mercury begins to fall at the ſame time; and why it continues and ceaſes to fall together with 'em: which were the great Deſiderata in the Philoſophy of the *Barometer*.

I ſee but one Objection that lies againſt this Theory; and 'tis this, That the Veſicles being put in Motion, and ſtriking againſt the Particles of the Medium and one another with ſome Moment, will meet with a conſiderable Reſiſtance from the *Vis Inertiæ* thereof; by which means their Deſcent will be retarded, and the Preſſure of the *Atmoſphere* retriev'd; the *Impetus* of the moving Veſicles being ſuppoſed to compenſate for their Loſs of Surface. Thus a heavy Body, ſuſtain'd in a Fluid by a Hair, and moved up and down therein, preſſes more on the Bottom, than when held at Reſt; which additional Preſſure will be the greater, as the Velocity of the falling Veſicles is the greater; a greater Impulſe being requir'd to break thro the *Vis Inertiæ* of the contiguous Particles, in a leſs time than in a larger. But we have both Reaſon and Experiment againſt this Objection: For, beſides that the Velocity of the Veſicles, in theſe Circumſtances, muſt be very ſmall, and their Impulſe inconſiderable; beſides, that the *Vis Inertiæ* of the Air muſt be exceedingly weak, by reaſon of its extreme Subtility; and that it muſt be a very improper Vehicle to convey an Impulſe to a Diſtance, by reaſon of its Elaſticity: we find, that even in Water, (a groſs un-elaſtick Medium) and a Piece of Lead, (a ponderous Body which falls with a great Moment) that even here the Body, in its Deſcent thro the Fluid, gravitates conſiderably leſs than when ſuſtain'd at Reſt therein: In which the ſeveral Experiments of *Reaumer*, *Ramazzini*, and *Deſaguliers*, all agree.

BARON, a Term uſed in various Senſes: Firſt, as a Degree of Nobility next below a Viſcount, and above a Gentleman; in which Senſe it is the ſame as in other Nations, where *Baroniæ* are *Provinciæ*; and Barons are thoſe who have the Government of Provinces, as their Fee holden of the King, ſome having greater, ſome leſs Authority within their Territories: and, probably, all thoſe were call'd *Barons* that had ſuch Seigniories or Lordſhips, as are now call'd *Court-Barons*; who are the ſame with *Seigneurs* in *France*. Soon after the Conqueſt, all ſuch came to Parliament, and ſat as Peers in the Upper Houſe; but growing very numerous, it was in the Reign of King *John* ordain'd, that none but the *Barones majores* ſhould, for their extraordinary Wiſdom, Intereſt, or Quality, be ſummon'd to Parliament. But this State of the Nobility being very precarious, and depending ſolely on the Prince's Pleaſure, they at length obtain'd of the King Letters-Patent of this Dignity to them and their Heirs Male; and theſe were call'd *Barons by Patent*, or *Creation*, whoſe Poſterity are now by Inheritance Lords of Parliament; of which kind the King may create at his Pleaſure. Nevertheleſs, there are *Barons by Writ*, as well as *Letters-Patent*; thoſe who were firſt *by Writ*, may now juſtly be call'd *Baron by Preſcription*, for that they and their Anceſtors have continued *Barons* beyond the Memory of Man, and by having their *Sirnames* annex'd to the Title of *Lord*; whereas *Barons by Patent* are named by their *Baronies*. The Original of *Barons by Writ*, *Camden* refers to *Henry* III. and *Barons by Patent*, or *Creation*, commenc'd in the time of *Richard* II. To theſe there is a third kind added, call'd *Barons by Tenure*, and ſuch are the Lords the Biſhops, who, by virtue of *Baronies* annex'd to their Biſhopricks, ſit in the Upper Houſe of Parliament, and are call'd *Lords Spiritual*. Formerly all Men were call'd *Barons*, at leaſt all of the King's Family, or that held immediately of him. *Chamberlain* obſerves, that from the Time of the Suppreſſion of the Rebellion of the *Barons* by *Henry* III. only ſuch among 'em as had continued loyal, were call'd *by Writ* to Parliament; and that thoſe only were reputed *Peers of the Realm*, who were thus call'd *by Writ*; and thus the others loſt their *Peerage*. Antiently the *Earls Palatine*, and *Earls Marches of England*

*land* had their *Barons*; and in *Cheſhire* there is one ſtill ſubſiſting, *viz.* the *Barony of Burford*. But as no Biſhop, but thoſe who hold immediately of the King, are *Peers of the Realm*, (for the Biſhop of *Sodor* and *Man*, holding immediately of the Earl of *Derby*, is no *Peer of England*,) ſo no *Baron*, but thoſe who hold immediately of the King, are *Peers of the Realm*. See *Peer*.

*Baron* is alſo us'd for an Officer; as the *Barons of the Exchequer*; of whom the *Lord Chief Baron* is the chief; three others are his Aſſiſtants, in Cauſes of Juſtice between the King and his Subjects, touching Matters belonging to the *Exchequer* and the King's Revenue. They are call'd *Barons*, becauſe *Barons of the Realm* were us'd to be imploy'd in that Office. Their Office is alſo to look to the Accompts of the King; to which end they have *Auditors* under them; as well as to decide Cauſes relating to the Revenue, brought by any means into the *Exchequer*. So that of late they have been conſtantly Perſons learn'd in the Law; whereas formerly they were *Majores & diſcretiores in Regno, ſive de Clero eſſent, ſive de Curia*. Sir *William Temple* ſays, that *Baronies* were originally the larger Shares of the Lands of conquer'd Countries, which the *Northern* Invaders, ſuch as the *Goths*, &c. uſed to divide among their Generals, and chief Commanders; as the ſmaller Shares, divided among the Soldiers, were call'd *Feuda*, or *Fees*.

There are alſo *Barons of the Cinque-Ports*; which are Members of the Houſe of Commons; two ſtand for each Port. (See *Cinque-Port*.) *Baron* is alſo uſed for the Huſband, in relation to the Wife; which two in Law are call'd *Baron and Feme*. The Chief Magiſtrates alſo of the City of *London*, before they had a *Lord-Mayor*, were call'd *Barons*.

*Menage* derives the Word *Baron* from the Latin *Baro*, a ſtrong valiant Man. Others from the German *bawer*, Peaſant. *Iſidore*, and after him *Camden*, take the Word in its original Senſe to ſignify, *a mercenary Soldier*. The Meſſieurs of the *Port Royal* derive it from βαρὺς, *Authority, Power*. *Cicero* uſes the Word *Baro* for a *ſtupid brutal Man*. And the old *Germans* make mention of *buffeting a Baron*, i. e. *a Villain*. The *Italians* uſe the Word *Barone* to ſignify *a Beggar*, and *baronare*, *to beg*. Others, again, derive it from the *old Gauliſh*, *Celtick*, and *Hebrew* Languages: but the moſt probable Opinion is, that it comes from the Spaniſh *Varo*, a ſtout noble Perſon; whence Wives come to call their Huſbands, and Princes their Tenants, *Barons*. In the *Salick* Laws, as well as the Laws of the *Lombards*, the Word *Baron* ſignifies *a Man*. In the general and the old Gloſſary of *Philomenes*, he tranſlates *Baron* by ἀνηρ, *Man*. M. *de Marca* and *Camden*, derive it from the German *Bar*, *Man*, or *Freeman*: Others again from *Banner haires*, Enſign-Bearer.

BARON AND FEME, a Term in Heraldry, when the Coat of Arms of a Man and his Wife are born *per* Pale in the ſame Eſcutcheon, the Man's being always on the Dexter Side, and the Woman's always on the Siniſter: But here the Wife is not an Heireſs; for then her Coat muſt be born by the Husband on an Ineſcutcheon, or Eſcutcheon of Pretence.

BARONET, a Diminutive of *Baron*, a Dignity or Degree of Honour next beneath a *Baron*, and above a *Knight*, having Precedency of all other *Knights*, excepting thoſe of the *Garter*. 'Tis given by Patent, and is the loweſt Degree of Honour that is Hereditary. The Word *Baronet* is uſed in ſome of our old Statutes, &c. for *Banneret*; particularly in a Statute of *Richard* II. The Order of *Baronets* was founded by King *James* I, in 1611, who rais'd 'em in lieu of *Knights Bannerets*; or, as others will have it, in lieu of the antient *Valvaſors*. They had ſeveral conſiderable Privileges given 'em, with an *Habendum* to them and their Heirs Male. They were allow'd to charge their Coat with the Arms of *Ulſter*, which are in a Field Argent a Hand Gules; and that upon condition of their defending the Province of *Ulſter*, in *Ireland*, againſt the Rebels, who then haraſs'd it extremely; and, to that end, were to raiſe and keep up 30 Soldiers, at their own Expence, for three Years together; or, to pay into the *Exchequer*, a Sum ſufficient to do it; which, at 8 *d. per* Day *per* Head, is 1095 *l.* now always remitted 'em. Their Number was at firſt limited to 200, but was afterwards increas'd. The Title *Sir* is granted 'em by a peculiar Clauſe in their Patents, tho they be not dubb'd *Knights*. A *Baronet*, and his eldeſt Son being of full Age, may claim *Knighthood*. To be a *Baron* 'tis requir'd a Perſon have 1000 *l. per Ann.*

BARONY, the Dignity, Territory, and Fee of a *Baron*; under which Notion are not only compriz'd the Fees and Lands of *Temporal Barons*, but alſo of *Biſhops*; who, beſides their Spiritual Eſtates, have alſo Temporal ones given 'em by the King, and call'd *Baronies*; by which they become *Barons*, and are Lords of Parliament. In antient Times, 13 Knights Fees and ¼ made up a *Tenure per Baroniam*, which amounted to 400 Marks *per Ann.*

This *Barony*, according to *Bracton*, is a Right inviſible. Wherefore, if an Inheritance be to be divided among Copartners, tho ſome Capital Meſſuages may be divided, yet, if the Capital Meſſuage be the Head of a *County*, or *Barony*, it may not be parcell'd; and the Reaſon is, leſt by this Diviſion, many of the Rights of *Counties* and *Baronies*, by Degrees, come to nothing, to the Prejudice of the Realm; which is ſaid to be compos'd of *Counties* and *Baronies*. The *Baronies* belonging to Biſhops are, by ſome, call'd *Regalia*, as being held ſolely on the King's Liberality. Theſe don't conſiſt in one *Barony* alone, but in many; for, *tot erant Baroniæ, quot majora prædia*.

BAROSCOPE, a Machine to ſhew the Alterations in the Weight of the *Atmoſphere*, from βαρὺς, *onus*, and σκοπέω, *video*. See *Barometer*.

BARRATRY, in a marine Senſe, is the Maſter of a Ship's cheating the Owners or Inſurers, whether by running away with the Ship, ſinking her, deſerting her, or embezzeling the Cargo.

BARREL, a Veſſel or Meaſure for things liquid. The *Barrel*, Wine Meaſure, contains 42 Gallons, or half of a Hogſhead. Ale or Beer Meaſure, 36 Gallons, or half a Hogſhead. (See *Meaſure.*) The *Barrel* or *Barrille* of *Florence*, is a liquid Meaſure containing 20 Fiaſques, Flasks, or one third of a Star or Staio. The *Barique*, *Barrel* of *Paris*, contains 210 Pints, or 26 Septiers and an half; four *Bariques* make three Muids.

*Barrel* is alſo uſed for a certain Quantity, or Weight, of ſeveral Merchandizes; which is various as the Commodities vary. In this ſenſe we ſay, a *Barrel*, or *Cask*, of Herrings, or Mackerel; 12 whereof make a Laſt. A *Barrel* of Gun-powder for Ships, is ordinarily about 100 Pounds Weight. Authors derive the Word from the Spaniſh *Barril*, an earthen Veſſel with a wide Belly and narrow Neck. The *Roman Barrel*, according to *Vigenere*, contains four Congia, or 76 Pints, and weighs 170 Pounds 10 Ounces.

*Barrel*, in Anatomy, a pretty large Cavity behind the Drum of the Ear. It is lined with a Membrane, in which there are ſeveral Veins and Arteries. It is always full of a purulent Matter in Children; and in its Cavity there are four ſmall Bones, *viz.* the *Malleolus*, the *Incus*, the *Stapes*, and the *Os orbiculare*. See *Ear*.

BARRETOR, in Law, a common Mover or Maintainer of Suits, Quarrels, or Parties, either in Courts or elſewhere; and who is himſelf never quiet; *qui cum Terentiano Davo omnia perturbat*. *Lambard* derives the Word from the Latin *Barathro*, or *Balatro*, a vile Knave or Unthrift. *Skene* ſays, that *Barretors* are *Simoniſts*; and derives the Word from the Italian *Barrataria*, Corruption, or Bribery in a Judge.

BARRICADO, a military Term for a Fortification, or Retrenchment, haſtily made with Veſſels of Earth, Carts, Trees, &c. to preſerve an Army from the Enemy's Shot, or Aſſault. The general Matter of *Barricados* is Trees, which are croſs'd with Battoons as long as an Half-Pike, bound about with Iron at the Feet, and uſually ſet up in Paſſages, or Breaches, to keep back as well the Horſe as Foot.

BARRIER, a kind of Fortification made at a Paſſage, Retrenchment, Gate, &c. to ſtop up the Entry thereof. It is uſually made of great Stakes, about four or five Foot high, placed at the Diſtance of eight or ten Foot one from another, with overthwart Rafters, to ſtop either Horſe or Foot that wou'd ruſh in; in the middle of which is a moveable Bar of Wood, which opens and ſhuts at Pleaſure.

*Barriers* have been likewiſe uſed to ſignify a martial Exerciſe of Men, armed and fighting together with ſhort Swords, within certain Rails or *Bars*, whereby they are incloſed from the Spectators.

BARRISTERS, in Law, Perſons who for their long Study, and Knowledge of the Common Law, are call'd out to the *Bar*, to take on 'em the Protection, and Defence of Clients. Theſe, in other Countries, are call'd *Licentiates*. To paſs *Barriſters* they were formerly oblig'd to ſtudy eight Years, now ſeven. The Exerciſe requir'd, was 12 grand Moots perform'd in the *Inns of Chancery* in time of the grand Readings, and 24 petty Moots at the *Inns of Chancery* in Term-Time, before the Readers of the reſpective *Inns of Chancery*. A *Barriſter* newly called, is to attend the next ſix long Vacations the Exerciſe of the Houſe, *viz.* in Lent and Summer, and is thereupon for theſe three Years call'd a *Vacation Barriſter*. Theſe are call'd *Utter Barriſters*, i. e. Pleaders without the *Bar*, to diſtinguiſh 'em from *Benchers*, or thoſe who have been *Readers*, who are ſometimes admitted to plead within the *Bar*, as the King's, Queen's, or Prince's *Council* are; hence call'd *Inner Barriſters*.

BARRULET, in Heraldry, is the half of the Cloſet, and the quarter of the Bar.

BARRY; when an Eſcutcheon is divided Bar-ways into an even Number of Partitions, it is expreſs'd in Blazon by the Word *Barry*, and the Number of Pieces is to be ſpecified;

cified: But if the Diviſions be odd, then the Field muſt be firſt named, and the Number of Bars expreſſed.

BARRY-BENDY, is when an Eſcutcheon is divided evenly both Bar and Bend-ways, as thus, *Barry-Bendy*, *Or*, and *Sable*.

BARRY-PILY, is when a Coat is thus divided, and it is to be blazon'd *Barry-Pily* of eight Pieces.

BARTER, in Commerce, ſignifies to truck, or exchange one Commodity for another. The Word comes from the Spaniſh *Baratar*, to deceive or cheat in bargaining; perhaps, becauſe thoſe who deal this way, uſually endeavour to over-reach one another.

BARTON, in *Devonſhire*, and the Weſt of *England*, is uſed for the Demeſne Lands of a Mannor, for the Mannor-Houſe, and in ſome Places for Out-Houſes, Fold-Yards, &c.

BASALTES, a kind of Stone, or Marble, deſcribed by the antient Naturaliſts as of the Hardneſs and Colour of Iron. The largeſt Block of it that was ever ſeen, *Pliny* ſays, was placed by *Veſpaſian* in the Temple of *Peace*: In it were repreſented 16 Children playing on the Banks of the *Nile*. He adds, that the Statue of *Memnon*, in the Temple of *Serapis*, at *Thebes*, which neighed at the Riſing of the Sun, was made of this Stone. Moſt of the antique *Egyptian* Figures remaining, are apparently of this Stone. Some of the Antients call it *Lapis Lydius*, from *Lydia*, the Place where it was found in moſt abundance; and the Moderns, the Touch-ſtone, as being uſed to examine Gold and Silver. It was hard, heavy, cloſe, black, and reſiſted the File; and had its Name from *Baſal*, Iron, or βασανιζω, *diligenter examino*. *Dalechampius* ſays, there are Stones of the ſame kind near *Gaillon* in *Normandy*; others are brought from *Ethiopia* and *Germany*.

BASE, in Architecture, from the Greek βασις, *Reſt*, or *Support*, is uſed to ſignify any Body which bears another; but particularly for the lower Parts of a Column and a Pedeſtal. The *Baſe* is ſometimes alſo call'd *Spira*, from *Spiræ*, the Folds of a Serpent laid at Reſt, which make a Figure not unlike it.

The *Baſe of a Column* is that part between the Shaft and the Pedeſtal, if there be any Pedeſtal; or, if there be none, between the Shaft and the Plinth, or Zocle. (See *Column* and *Pedeſtal.*) The *Baſe* is ſuppoſed to be the Foot of the Column; or, as ſome will have it, 'tis that to a Column which a Shoe is to a Man. The Members or Ornaments whereof it is compoſed, are ſuppoſed by others to have been originally intended to repreſent the Iron Circles wherewith the Feet of Trees and Poſts which ſupported the antient Houſes were girt, in order to ſtrengthen them.

*The Baſe is different in the different Orders.*

The *Tuſcan Baſe* is the moſt ſimple of all the Orders; conſiſting only of a ſingle *Tore* beſides the *Plinth*.

The *Dorick Baſe* has an *Aſtragal* more than the *Tuſcan*; tho that was introduced by the Moderns.

The *Ionick Baſe* has a large *Tore* over two ſlender *Scotias*, ſeparated by two *Aſtragals*; tho in the moſt antient Monuments of this Order there are no *Baſes* at all; which the Architects are at a loſs to account for.

The *Corinthian Baſe* has two *Tores*, two *Scotias*, and two *Aſtragals*.

The *Compoſite* has an *Aſtragal* leſs than the *Corinthian*.

The *Attick Baſe*, ſo call'd becauſe firſt uſed by the *Athenians*, has two *Tores* and a *Scotia*, and is very proper for *Ionick* and *Compoſite* Columns.

*Baſe*, or *Baſis*, in Fortification, is the external Side of the *Polygon*; or, the imaginary Line which is drawn from the *flank'd Angle* of a *Baſtion*, to that which is oppoſite thereto.

*Baſe of a Figure*, in Geometry, is the loweſt Part of its *Perimeter*.

*Baſe*, in Muſick, that Part of a Conſort which is the moſt heard, which conſiſts of the graveſt, deepeſt and longeſt Sounds; or, which is play'd on the largeſt Pipes, or Strings, of a common Inſtrument, *viz.* an *Organ*, or *Lute*; or, on Inſtruments larger than ordinary, for that purpoſe, as *Baſs-Viols*, *Baſſons* or *Baſs-Hautboys*, &c. Muſicians hold the *Baſe* the principal Part of a Conſort, and the Foundation of the Compoſition: tho ſome will have the *Treble* the chief Part; which others only make a Circumſtance, or Ornament. *Counter-Baſe*, is a *ſecond Baſe*, where there are ſeveral in the ſame Conſort. *Thorough Baſe*, is the Harmony made by *Baſs-Viols*, or *Theorbos*, continuing to play, both while the Voices ſing, and the other Inſtruments perform their Part; and alſo filling the Intervals when any of thoſe ſtop. M. *Broſſard* obſerves the *Thorough-Baſe* to be a Part of the modern Muſick; firſt invented in 1600, by an *Italian*, call'd *Ludovico Viadana*. 'Tis play'd by Cyphers mark'd over the Notes, on the *Organ*, *Spinette*, *Harpſichord*, *Theorbo*, *Harp*, &c. and frequently, ſimply, and without Cyphers, on the *Baſs-Viol*, *Baſſon*, &c.

*Baſe of a Triangle*; any one Side thereof is occaſionally ſo call'd, tho properly 'tis the loweſt Side, or that which lies parallel to the Horizon. Indeed, in a *rectangled Triangle*, the *Baſe* is properly that Side oppoſite to the *right Angle*, i. e. the *Hypothenuſe*. The *Baſe of a ſolid Figure* is its loweſt Side, or that whereon it ſtands: *Baſe of a Conick Section* is a right Line in the *Hyperbola* and *Parabola*, made by the common Interſection of the *ſecant Plane*, and the *Baſe* of the *Cone*.

BASE-COURT, in Law, is any Court that is not of Record. See *Court*.

BASE-FEE, or *Baſe-Eſtate*, in Law, is a Baſe-Tenure, or Tenure at the Will of the Lord. See *Fee*.

BASE-POINT, in Heraldry. See *Eſcutcheon*.

BASE-RING *of a Cannon*, is the *great Ring* next behind the *Touch-hole*.

BASE-TENURE, is holding by Villanage, or other cuſtomary Service; as diſtinguiſh'd from the *higher Tenure in capite*, or by military Service. See *Tenure*.

BASIL, among Joiners, &c. the Angle to which the Edge of an Iron Tool is ground. To work on ſoft Wood they uſually make their *Baſil* 12 Degrees, for hard Wood 18; it being obſerv'd, that the more acute or thin the *Baſil* is, the better and ſmoother it cuts; and the more obtuſe, the ſtronger and fitter for Service.

*Baſil*, a Monaſtick Order. The Order of St. *Baſil* is the moſt antient of all the religious Orders; it takes its Name from St. *Baſil*, Biſhop of *Ceſarea*, in *Cappadocia*, who was the Author of the Rule obſerv'd by this Order. The Order of St. *Baſil* was antiently very famous in the Eaſt.

BASILARE OS. See *Sphænoides Os*.

BASILIC, or *Baſilica*, in Architecture, from the Greek βασιλικη, *royal Houſe*, or *Palace*; a Term antiently uſed for a large Hall, or publick Place, with Iſles, Porticos, Galleries, &c. where the Princes adminiſter'd Juſtice in Perſon: But the Word has been ſince transfer'd to ſignify any great Church, Court of Juſtice, or Exchange. *Azor* is of opinion, that *Baſilics* were formerly ſuch Churches as were not conſecrated: But *Baronius* ſeems to have more Reaſon, when he ſays the Term was applied to the moſt magnificent Churches; ſuch, which by their Grandeur as far ſurpaſs'd other Churches, as Princes Palaces do private Houſes. Thus we ſtill ſay, the *Baſilic of St. Peter*, for the *Church of St. Peter*, &c. M. *Perrault* ſays, that *Baſilics* differ'd from *Temples*, in that the Columns of *Temples* were without-ſide, and thoſe of *Baſilics* within. There were formerly four kinds of *Churches* at *Rome*, *viz. Patriarchal*, *Titular*, *Diaconial*, and *Oratorial*; whereof the firſt were thoſe particularly call'd *Baſilics*. See *Church* and *Temple*.

BASILICA, in Anatomy, the Name of a Vein, call'd alſo *Hepatica*; ariſing from the Axillary Branch, and running the whole Length of the Arm. It divides it ſelf into two; the one whereof runs down the *Radius*, the other down the *Ulna*; the little Branches whereof extend to the Fingers. There are two Veins of this Name; the one whereof is call'd the *ſuperficial*, or *ſubcutaneous*; the other, the *deeper* or *inner Baſilica*.

BASILICON, in Pharmacy, is an Unguent ſo call'd, compos'd of Roſin, Wax, Pitch, and Oil; which the Surgeons uſe for a *Suppurative*.

BASILICS, a Collection of the *Roman* Laws, tranſlated into Greek by the Order of *Baſilius* and *Leo*, which were of Force in the *Eaſtern* Empire till its Diſſolution. They comprehended the *Inſtitutes*, *Digeſts*, *Code*, and *Novels*, and ſome Edicts of *Juſtinian*, and other Emperors. The Collection conſiſted of 60 Books; for which reaſon it was call'd Ἑξηκονταβιβλος. It is ſuppoſed to be the Work of the Emperor *Leo*, the Philoſopher, who gave it the Name of his Father *Baſil*. Of the 60 Books, there are now remaining 41; the remaining 19 are, in ſome meaſure, ſupplied from the *Synopſis Baſilicon*, &c.

*Baſilics* were Officers in the *Grecian* Empire, who carried the Emperor's Orders. The Word is deriv'd from βασιλικος, *regal*.

BASILICUS, or *Cor Leonis*, is a fix'd Star of the firſt Magnitude, in the Conſtellation *Leo*. Its Longitude, Latitude, &c. ſee among thoſe of the other Stars in the Conſtellation *Leo*.

BASILIDIANS, were Hereticks, the Followers of *Baſilides*, who lived near the Beginning of the ſecond Century: He was educated in the *Gnoſtick* School over which *Simon Magus* preſided; with whom he agreed, that *Chriſt* was only a Man in Appearance, that his Body was a Phantom, and, that he gave his Form to *Simon* the *Cyrenian*, who was crucified in his Stead. He allow'd his Diſciples to renounce the Faith to avoid Martyrdom; becauſe, ſays he,

*Jeſus*

tended to find many Myſteries in the Name of God, by which they impoſed upon the People. They alſo invented certain Amulets, to which they attributed great Virtues. We learn from *Euſebius*, that this Impoſtor wrote 24 Books upon the Goſpels, and that he forged ſeveral Prophets; to two of which he gave the Names *Barcaba* and *Barcoph*: His Diſciples ſuppoſed there were particular Virtues in Names, and thought with *Pythagoras* and *Plato*, that Names were not found by chance, but naturally ſignified ſomething. *Baſilides*, to imitate *Pythagoras*, made his Diſciples keep ſilence for five Years.

BASIOGLOSSUM, or rather *Baſigloſſum*, in Anatomy, is a Pair of Muſcles which ariſe fleſhy from the Baſis of the *Os Hyoides*, and are inſerted into the Root of the Tongue: They ſerve to draw the Tongue towards the Bottom of the Mouth. The Word comes from the *Greek* βασις, Foundation, and γλῶσσα, *lingua*, a Tongue.

BASIS, in Anatomy, is applied to the upper and broader part of the Heart, in oppoſition to the *Mucro*, or Point; becauſe, conſidering it as a Cone, which it reſembles in Shape, this Name is proper to it, altho by its Situation it is uppermoſt. The Root of the *Os Hyoides* hath likewiſe this Name. See *Heart*.

BASON, in Anatomy, is a round Cavity in form of a Tunnel, ſituate between the anterior Ventricles of the Brain, deſcending from its Baſe, and ending in a Point at the *Glandula Pituitaria*; 'tis form'd of the *Pia Mater*, and receives the Seroſity which comes from the Brain, and paſſes thro the Pituitary Gland, and from thence into the Veins. That Capacity alſo is called *Baſon*, which is formed by the *Oſſa Ilia* and *Sacrum*, and contains the Bladder of Urine, the *Matrix*, and the Inteſtines. See *Pelvis*.

*Baſons of a Balance*, two Pieces of Braſs, or other Matter, faſtened to the Extremities of the Strings; the one to hold the Weight, the other the thing to be weigh'd. See *Balance*.

*Baſon*, or *Diſh*, among Glaſs-Grinders. They uſe various kinds of *Baſons*, of Copper, Iron, &c. and of various Forms, ſome deeper, others ſhallower, according to the Focus of the Glaſſes to be ground. In theſe *Baſons* it is, that Convex Glaſſes are form'd, as Concave ones are form'd on Spheres or Bowls. Glaſſes are work'd in Baſons two ways: In the firſt the *Baſon* is fitted to the Arbor, or Tree, of a Lath, and the Glaſs (fix'd with Cement to a Handle of Wood) preſented and held faſt in the Right Hand within the *Baſon*, while the proper Motion is given by the Foot to the *Baſon*: In the other, the *Baſon* is fix'd to a Stand, or Block, and the Glaſs with its wooden Handle moved. The *moveable Baſons* are very ſmall, ſeldom exceeding five or ſix Inches in Diameter; the others are larger, ſometimes above ten Foot Diameter. After the Glaſs has been ground in the *Baſon*, 'tis brought ſmoother with Greaſe and Emery; and poliſh'd firſt with Tripoli, and finiſh'd with Paper cemented to the Bottom of the *Baſon*. See *Glaſs*, *Lens*, *Mirror*.

*Baſon*, among Hatters, a large round Shell, or Caſe, ordinarily of Iron, placed over a Furnace; wherein the Matter of the Hat is moulded into Form. The Hatters have alſo *Baſons* for the Brims of Hats, uſually of Lead, having an Aperture in the middle, of a Diameter ſufficient for the largeſt Block to go through. See *Hat*.

*Baſon* is alſo uſed on various Occaſions for a Reſervatory of Water; as, the *Baſon* of a *Jet d'Eau*, or Fountain; the Baſon of a Port, of a Bath, &c. which laſt *Vitruvius* calls *Labrum*. See *Fountain*.

BASS-VIOL, a Muſical Inſtrument, of the ſame Form with that of the *Violin*, except that 'tis much larger. 'Tis ſtruck like that, with a Bow; but has Strings and eight Stops, divided into Half-Stops, or Semi-Tones. The Sound it yields is much more grave, ſweet, and agreeable, than that of the *Violin*, and of much better effect in a Conſort. See *Violin*.

BASSON, or *Baſſoon*, a Muſical Inſtrument of the Wind Kind, ſerving for the *Baſe* in Conſorts of Muſick, Hautboys, &c. To make it more portable it divides into two Parts: Its Diameter at Bottom is nine Inches, and its Holes are ſtopp'd with Keys, &c. like large Flutes.

BASSO RELIEVO, or *Baſs Relief*, a Piece of Sculpture, the Figures whereof do not project far, or ſtand out from the Ground with their full Proportion. M. *Felibin* diſtinguiſhes three Kinds of *Baſſo Relievo*'s; in the firſt the Front Figures appear almoſt with their full *Relievo*, in the ſecond they do but ſtand out one half, and in the third much leſs, as in Coins, Vaſes, &c. See *Relievo*.

BASTARD, a natural Child, or one born out of lawful Wedlock: differing from one born in Adultery, or Inceſt, in that the Perſons concern'd are free, or allow'd to marry. See *Marriage*, *Adultery*, *Concubines*, &c.

The *Baſtards*, or natural Sons of a King in *France*, are Princes when own'd; thoſe of a Prince, or Nobleman, are Gentlemen; but thoſe of a Gentleman are only Plebeians, and pay Taxes. *Baſtards* cannot ſucceed before they are legitimated; nor have Succeſſors except their own Children begot in Wedlock; otherwiſe their Succeſſion belongs to the King. By the *Roman* Law the Mother ſucceeded her Baſtard-Child, & *vice verſa*: But there was a great Difference between *Baſtards* and thoſe they call'd *Spurious*. The Law did not own the latter, nor allow them Suſtenance, becauſe they were born in common and uncertain Proſtitution. *Is non habet Patrem, cui Pater eſt Populus*. The former ſort, born in Concubinage, which reſembles Marriage, ſucceeded their Mothers, and had a Right to demand Suſtenance of their natural Fathers. They were look'd upon as domeſtick Creditors, that ought to be treated the more favourably, for being the innocent Product of their Parents Crimes. *Solon* would have it, that the Parents ſhould be deprived of their paternal Authority over their *Baſtards*, becauſe, as they were only Parents for Pleaſure, that ought to be their only Reward. Antiently in *Rome*, natural Children were quite excluded from ſucceeding their Father *ab inteſtat.* but they might be appointed Heirs in general. The Emperors *Arcadius* and *Honorius* made a Reſtriction, that when there were legitimate Children, the *Baſtards* ſhould only come in for a Twelfth, to be ſhared with their Mother. *Juſtinian* afterwards ordered, that they might come in for Half; and ſucceed *ab inteſtat.* for a Sixth, when there were Legitimates. *Baſtards* might be legitimated by ſubſequent Marriage, or by the Prince's Letters. Only the King in *France* can give a Right of Legitimacy, and a Power to ſucceed. The Emperor *Anaſtaſius* allow'd Fathers to legitimate their *Baſtards* by Adoption alone: But this was aboliſhed by *Juſtin* and *Juſtinian*, leſt by this Indulgence they ſhould authorize Concubinage. The Pope has ſometimes legitimated *Baſtards*. Nay, the Holy See has ſometimes diſpens'd not only with Illegitimates, but the Offſpring of Adultery, as to Spiritual Conſiderations, in allowing of their Promotion to Epiſcopacy. *Baſtards* not legitimated, may diſpoſe of their Goods by Donation among the Living, or by Will. Thoſe legitimated by ſubſequent Marriage, are in the ſame State, and enjoy the ſame Rights, with thoſe born in Wedlock: But thoſe who are legitimated by the King's Letters, are not eſteemed legitimate, or capable of ſucceeding, but with regard to ſuch of their Parents as have conſented to their Legitimation. Pope *Clement* VII, by his Bull, forbad a Prieſt to reſign his Benefice to his *Baſtard*. A *Baſtard*'s Arms ſhould be croſſed with a Bar, or Fillet, from the Left to the Right. They were not formerly allow'd to carry the Arms of their Father, and therefore they invented Arms for themſelves; and this is ſtill done by the natural Sons of a King. *Baſtards* cannot be admitted to ſimple Benefices, or the loweſt Orders, without a Diſpenſation from the Biſhop; or into Holy Orders, or a more than ſimple Benefice, without one from the Pope: nor are they allow'd to bear Office without the Prince's Letters.

A *Baſtard*, by the Law of *England*, cannot inherit Land as Heir to his Father; nor can any Perſon inherit Land as Heir to him, but one that is Heir of his Body. If a Child be begotten by him, who doth marry the Woman after the Child's Birth, yet is it in Judgment of the Law a *Baſtard*, tho the Church holds it legitimate. If a Man take a Wife who is great with Child by another, not her Husband, it is call'd the Child, and may be the Heir of the Husband, tho it were born but one Day after the Eſpouſals ſolemniz'd. If one marry a Woman and die before Night, and never bed her, and ſhe have a Child after, it is accounted his Child, and legitimate. If a Man or Woman marry again, and have Iſſue by the ſecond Wife or Husband, whilſt the firſt is living, ſuch Iſſue is a *Baſtard*. If a Woman elope with a Stranger, and hath a Child by him, her Husband being within the four Seas, this is legitimate, and ſhall inherit the Husband's Lands. He that gets a *Baſtard* in the Hundred of *Middleton*, in *Kent*, forfeits all his Goods and Chattels to the King.

BASTERNA, a Kind of Vehicle, or Chariot, uſed by the antient *Roman* Ladies. *Salmaſius* obſerves, that the *Baſterna* ſucceeded the *Litter*; from whence it differ'd very little, except that the *Litter* was borne on the Shoulders of Slaves, and the *Baſterna* by Beaſts. *Caſaubon* ſays, it was borne by Mules. *F. Daniel*, *Mabillon*, &c. call it a Kind of Chariot, and ſay it was drawn by Oxen, to go the more gently: And *Gregory de Tours* gives an Inſtance of its being borne by wild Bulls. The Inſide they call'd *Cavea*, Cage; and it had ſoft Cuſhions or Beds, beſides Glaſſes on each Side, like our Chariots. The Mode of *Baſterna's* paſſed from *Italy* into *Gaul*, and thence into other Countries; and to this we owe our Chariots; which, tho we call 'em *Currus*, yet have they no Conformity to the antient *Currus*, but are in effect *Baſterna's* improv'd. *Papias* thinks, that *Baſterna* is wrote for *Veſterna*: *Roſweid* ſays, it ſhould be *Vix Sterna*, which he concludes from *Iſidore*, who ſays, *Baſterna*, *Viæ ſterna*. The Word, however, ſeems derived from βάζω or βάσκω, I carry; or from βάσις, any thing proper for a Carriage. See *Coach*.

BASTILE, is a ſmall antique fortified Caſtle with Turrets, made uſe of, at preſent, for Priſons; as that at *Paris*, built by *Charles* V. 1369. which alone has retained this Name. Originally, it ſignified a Redoubt before a Place beſieg'd.

BASTION, in the Modern Fortification, a huge Maſs of Earth uſually faced with Sods, ſometimes with Brick, rarely with Stone, ſtanding out from a Rampart, whereof it is a principal Part. This is what in the antient Fortification was called *Bulwark*. A *Baſtion* conſiſts of two Faces and two Flanks. The Faces are the Lines B C and C D, (*Tab. Fortification*, *Fig.* 1.) including the Angle of the *Baſtion*: The Flanks are the Lines B A, S D. The Union of the two Faces makes the outmoſt or ſaliant Angle, called alſo the *Angle of the Baſtion*: The Union of the two Faces to the two Flanks, makes the Side Angles, called the *Shoulders* or *Epaules*: And the Union of the two other Ends of the Flanks to the two Curtains, the Angles of the Flanks. *Baſtions* are either ſolid or hollow.

The Foundation of the *Baſtion* is that great Rule in Fortification, *viz.* That every Part of the Works muſt be ſeen and defended, from ſome other Part: Mere Angles therefore are not ſufficient, but Flanks and Faces are indiſpenſably requiſite. If the *Baſtions* E F G and H I K conſiſted of Faces alone, the Angles G and H could not be defended from the Lines F G or I H. But if the *Baſtion* conſiſts of Flanks and Faces, as A B C S D, all the Points may be defended from the Flanks; there being none *v. g.* in the Face B C, but what may be defended from the oppoſite Flank E L, nor any in the Curtain A E, but may be defended from the adjacent Flanks B A and E L; nor any in one Flank B A, but may be defended from the other E L. For the Proportions of the Faces are not to be leſs than 24 *Rhineland* Perches, nor more than 30. The Flanks are better as they are longer, provided they ſtand at the ſame Angle of the Line of Defence: Hence the Flank muſt ſtand at right Angles to the Line of Defence. Indeed, in the antient Fortification, the Flank is made perpendicular to the Courtine, ſo as to have the Angle out of the Enemies Eye; but this is now provided for, by ſinking the lower Part of the Flank two or three Perches, as the Line A S, nearer the Axis of the Baſtion C H: Which Part thus ſunk, is better if made concave, than rectilinear, and if double, with a Ditch between, than if ſingle. The Diſpoſition of the Flanks makes the principal Part of Fortification; 'tis that on which the Defence principally depends, and which has introduced the various Forms and Manners of Fortifying. If the Angle of the *Baſtion* be leſs than 60 Degrees, it will be too ſmall to give Room for Guns; and beſides, ſo acute as to be eaſily beaten down by the Enemies Guns; to which may be added, that it will either render the Line of Defence too long, or the Flanks too ſhort: It muſt therefore be more than 60 Degrees; but whether or no it ſhould be a right Angle, or ſome intermediate Angle between 60 and 90, or even whether or no it ſhould exceed a right Angle, is ſtill diſputed. Hence it follows, that a Triangle can never be fortified, in regard either ſome or all of the Angles will be either 60 Degrees, or leſs than 60. See *Fortification*.

*Solid Baſtions* are thoſe that are fill'd up entirely, and have the Earth equal to the Height of the Rampart, without any void Space towards the Centre. *Void* or *hollow Baſtions* are thoſe that have a Rampart, or Parapet, ranging only round about their Flanks and Faces, ſo that a void Space is left towards the Centre; and the Ground is there ſo low, that if the Rampart be taken, no Retrenchment can be made in the Centre, but what will lie under the Fire of the Beſieged.

A *Flat Baſtion* is a *Baſtion* built in the middle of a Courtain, when it is too long to be defended by the *Baſtion*, at its Extremes: Dr. *Harris* ſays, 'tis a *Baſtion* built on a right Line.

A *Cut Baſtion* is that which has a re-entring Angle at the Point; ſometimes alſo called *Baſtion with a Tenaille*; uſed, when without ſuch a Contrivance the Angle would be too acute. We likewiſe give the Term *Cut Baſtion* to ſuch a one as is cut off from the Place by ſome Ditch, &c. ſome modern Engineers having found the Art of Fortifying by Pieces detach'd from the reſt. Theſe are alſo called *Ravelines*.

A *Compoſed Baſtion* is when the two Sides of the interior Polygon are very unequal, which makes the Gorges alſo unequal.

A *Regular Baſtion* is that which hath its due Proportion of Faces, Flanks, and Gorges.

A *Deformed* or *Irregular Baſtion* is that which wants one of its Demi-Gorges; one Side of the interior Polygon being too ſhort. See *Gorge*.

A *Demi-Baſtion* hath but one Face and Flank. To fortify the Angle of a Place that is too acute, they cut the Point, and place two *Demi-Baſtions*, which make a *Tenaille*, or a re-entring Angle. Their chief Uſe is before a Hornwork or Crownwork. See *Tenaille*.

A *Double Baſtion* is that, which on the Plain of the great *Baſtion* hath another *Baſtion* built higher; leaving 12 or 18 Feet between the Parapet of the lower and the Foot of the higher.

BASTON, in Law, is uſed for one of the Wardens of the Fleet; being Officers who attend the King's Courts with a red Staff, for taking ſuch to Ward as are committed by the Court. See *Warden*.

BATCHELOR, in a College Senſe, a Perſon poſſeſs'd of the *Bacculaureate*, which is the firſt Degree in the Liberal Arts or Sciences. At *Oxford*, e'er a Perſon be entitled to the Degree of *Batchelor of Arts*, he muſt have ſtudied there four Years; three Years more to become *Maſter of Arts*; and ſeven more to commence *Batchelor of Divinity*. At *Cambridge*, to commence *Batchelor of Arts*, he muſt have reſided three Years; three Years more to commence *Maſter*; and ſeven more ſtill to become *Batchelor of Divinity*. He may commence *Batchelor of Law* after having ſtudied it ſix Years. See *Degree*.

In *France*, e'er the Theology-Chairs were founded, they had their *Baccularei Curſores*, and *Baccularei Formati*; the former whereof were yet in their Courſe, or had not yet paſs'd thro their Offices; and the latter had. The *Curſores* were again divided into *Baccularei Biblici*, who explain'd the Scriptures, and *Baccularei Sententiarii*, who explain'd the Maſter of the Sentences.

There is ſcarce any Word whoſe Origin is more controverted among the Criticks than that of *Batchelor*, *Baccularius*. *Martinius* derives the Word from the *Latin Baccalaurea*, *quaſi bacca laurea donatus*; in alluſion to the Cuſtom that antiently obtain'd, of crowning the Poets with Laurel, *baccis lauri*, as *Petrarch* was at *Rome* in 1341; and *Alicatus* and *Vives* are of the ſame Opinion. *Rhenanus* derives it from *Baculus* or *Bacillus*, a Staff, becauſe at their Commencement a Staff was put into their Hands, as a Symbol of their Authority, of their Studies being finiſh'd, and of the Liberty they were reſtored to. Thus the antient Gladiators had a Staff given 'em as a Diſcharge, which *Horace* calls *rude Donatus*. But *Spelman* rejects this Opinion, in regard there is no Appearance, that the Ceremony of putting a Staff in the Hand was ever uſed in the creating of *Batchelors*.

*Batchelor* was alſo a Title given to a young Cavalier, who made his firſt Campaign, and received the military Girdle accordingly. *Cambden* defines a *Batchelor*, a Perſon of a middle Degree between a ſimple Knight and a 'Squire: Or, as ſome will have it, *Batchelor* was a common Name for all the Degrees between a mere Gentleman and a Baron: Thus we find the Lord Admiral ſometimes ſo call'd. See *Knight Batchelor*.

*Knights Batchelors* were antiently ſo call'd, *quaſi Bas Chevaliers*, as being the loweſt Order of Knights, or inferior to Bannerets, &c. See *Knight*. At preſent theſe are call'd *Equites Aurati*, from the gilt Spurs that are put on 'em at the time of their Creation. The Dignity was at firſt confined to the military Men, but afterwards was confer'd on Men of the Robe. The Ceremony is exceedingly ſimple; the Candidate kneeling down, the King touches him lightly with a naked Sword, and ſays, *Sois Chevalier*, *au nom de Dieu*; and afterwards, *Avance Chevalier*. *Loyſeau* derives the Word, in this Senſe, from *Bas Eſchelon*, as being the laſt of the military Orders; *Cujas*, from *Buccellarius*, a kind of Knights antiently in great Eſteem; *Du Cange*, from *Baccalaria*, a kind of Fees, or Farm conſiſting of ſeveral Pieces of Ground, each whereof contain'd 12 Acres, or as much as two Oxen wou'd plough; the Poſſeſſors of which *Baccalaria* were call'd *Batchelors*: He adds, that *Batchelor* ſometimes ſignifies *Labourer*, and ſometimes a *Freeman of a City*. A *Batchelor of Arms* was a Name formerly given to a Perſon who came off Victor in his firſt Engagement. Laſtly, *Caſeneuve* and *Altaterra* derive the Word *Batchelor* from *Baculus*, a Staff, in regard the young Cavaliers exerciſed themſelves in fighting with Staffs and Bucklers: Which Opinion is confirm'd from their being call'd *Baculares* in *Oderic*, and *Bacularii* by *Walſingham* in *Richard* II's Time.

BAT-FOWLING, a Method of catching Birds in the Night, by lighting ſome Straw or Torches near the Place where they are at Rooſt; for, upon beating them up, they fly to the Flames, where, being amaz'd, they are eaſily caught in Nets, or beat down with Buſhes fix'd to the Ends of Poles, &c.

BATH, a convenient Receptacle of Water for Perſons to waſh, or plunge in, either for Health or Pleaſure. See *Water*. *Baths* are either *Natural* or *Artificial*. *Natural* again, are either *Hot* or *Cold*. *Hot Baths*, call'd alſo *Thermæ*, owe their Origin partly to the Admixture of ſulphureous Particles, while the Water is paſſing thro its ſubterranean Canals; or rather, while it creeps thro Beds and Mines of Sulphur, &c. and partly to the Fumes and Vapours exhaling up thro the Pores of the Earth, where Sulphur is, whether pure or impure, as in Coals, Amber, &c. For theſe Sub-

Subſtances continually emit Fumes, which warm the Waters in their Paſſage thro 'em. In moſt *Hot Baths*, however, there are likewiſe mixt Particles of Iron, Allom, Nitre, and other Mineral Bodies, which give 'em an acid aſtringent Taſt. The chief *hot Bath* in our Country, is that near *Wells* in *Somerſetſhire*; another there is of leſſer Note at *Buxton*. Theſe Waters abound with a Mineral Sulphur: They are hot, of a blueiſh Colour, and ſtrong Scent, and ſend forth thin Vapours. In the City of *Bath* are four *hot Baths*; one Triangular, called the *Croſs Bath*, from a Croſs that formerly ſtood in the midſt of it; the Heat of which is more gentle than the others, becauſe it has fewer Springs: The ſecond is the *Hot Bath*, which heretofore was much hotter than the reſt, when it was not ſo large as it now is: The other two are the *King's* and the *Queen's Bath*, divided only by a Wall, the laſt having no Spring, but receiving the Water from the *King's Bath*, which is about 60 Feet ſquare, and has in the middle of it many hot Springs, which render its healing Quality more effectual. Each of theſe hath a Pump to throw out Water upon the Diſeaſed, where 'tis required. The Waters of theſe *Baths* don't paſs thro the Body, like other Mineral Waters; but if Salt be added, they purge preſently. On Settlement, it affords a black Mud, uſed by way of Cataplaſm in Aches; of more Service to ſome than the Waters themſelves: the like it depoſits on Diſtillation, and no other. Dr. *Aſtendoff* found the Colour of the Salt drawn from the *King's* and *Hot Bath*, yellow, and that from the *Croſs Bath* white; whence he concludes, that the *Croſs Bath* has more Allom and Nitre than the *Hotter*, which abound more with Sulphur; and yet the *Croſs Bath* is found to looſen ſhrunk Sinews, by which it ſhould not ſeem to abound much with Allom: 'tis harſher to the Taſt than the others, and ſoaks the Hands more. The *Croſs Bath* preys on Silver, and all of 'em on Iron, but none on Braſs.

The *Bath* is very uſeful in Diſeaſes of the Head, as Palſies, *&c.* in cuticular Diſeaſes, as Leproſies, *&c.* Obſtructions and Hardneſs of the Bowels, the Scurvy and Stone, and in moſt Diſeaſes of Women and Children. Theſe *Baths* have perform'd many Cures, and are commonly uſed as a laſt Remedy in obſtinate Chronick Diſeaſes; where they ſucceed well, if they agree with the Conſtitution of the Patient: but whether they will agree or not, cannot be known without Trial.

*Cold Baths* were long baniſh'd out of Medicine, tho the Antients had them in the greateſt Eſteem: But the Improvements accruing to Phyſick from Geometry and Mechanicks, have brought them into uſe again; and the preſent Age can boaſt abundance of noble Cures perform'd by 'em, and ſuch as were long attempted in vain by the moſt powerful Medicines. The *Cold Bath* is one of the moſt univerſal and innocent Remedies yet diſcover'd. 'Tis ſerviceable in moſt Chronick Diſtempers, and reckon'd ſo ſafe that Phyſicians ſometimes preſcribe it in a beginning Phthiſis, or Conſumption, when the Lungs are but ſlightly affected. The Effect of *Cold-Bathing* is attributed not only to its Chilneſs and conſtringing Power, but in ſome meaſure to the Weight of the Water. For, ſuppoſing a Perſon immerged two Foot, and the Area of his Skin to be 15 Foot, he ſuſtains a Weight of Water, added to that of the Air, = 2280 *l.* for 2, the Number of Cubical Feet of Water preſſing upon a Foot ſquare of the Skin × 76, the Number of Pounds in a Cubical Foot of Water, is = 152; which × 15, the ſuppoſed Number of ſquare Feet on the Surface of the Body, is = 2280 *l. Troy*. Beſides, the Water in *Bathing* enters the Body, and mixes with the Blood. For the Riſe and Progreſs of *Cold-Bathing*, and the Cures effected thereby, ſee *Floyer's* and *Baynard's* Hiſtory of *Cold-Bathing*.

For *Artificial Baths*, they are various, according to the various Occaſions. See *Balneum*. Sometimes they conſiſt of Milk and emollient Herbs, Roſe-Water, *&c.* when the Deſign is to humectate; at other times of Bran and Water, when the Deſign is only to cleanſe: Sometimes again, they are made of a Decoction of Roots and Plants, with an Addition of Spirit of Wine, when a Perſon *bathes* for a great Pain or Tumor, *&c.* To theſe may be added the *Bagnio*, where People are made to ſweat by the Heat of a Room, and pouring on of hot Water; after which they generally go into a *hot Bath*. See *Bagnio*.

*Vapour-Baths* are when the Patient is not plunged into what is prepar'd for the *Bath*, but only receives its Steam or Fume upon thoſe Parts of his Body which require it: Thus, in ſome Diſtempers of the Fundament, and Womb, the Patient ſits and receives the Fumes of a proper Fomentation or Decoction. There is another Species of *Baths*, made by the burning of Spirit of Wine, the Patient being placed in a convenient cloſe Chair for the Reception of the Fume, which riſes and provokes Sweat in a plentiful manner: Care is here taken to keep the Head out, and ſecure Reſpiration. This *Bath* has been found very effectual in removing old obſtinate Pains in the Limbs, and Venereal Complaints; and will often compleat a Cure left unperform'd by Salivation. See *Sudatory*.

*Baths*, in Architecture, were alſo large pompous Buildings among the Antients, erected for the ſake of *Bathing*. On the ſide of each *Bath* were Lavers, which afforded hot Water and cold, to alter its Temperature at Pleaſure. Theſe *Baths* were frequented more for the ſake of Pleaſure than Health. The moſt magnificent were thoſe of *Titus*, *Paulus Emilius*, and *Diocleſian*, of which there are ſome Ruins ſtill remaining. 'Tis ſaid, that at *Rome* there were 856 *Baths*, publick and private. *Fabricius* adds, that the exceſſive Luxury of the *Romans*, appear'd in nothing more viſible, than in their *Baths*. *Pliny* tells us, that Common People, and even Slaves, had the Walls and Grounds beſmear'd with rich Ointments. *Seneca* complains, that the *Baths* of Plebeians were fill'd from Silver Pumps; and that the Freed-men trod on Gems. *Macrobius* tells us of one *Sergius Oratus*, a Voluptuary, who had *pendent Baths*, hanging in the Air. See *Thermæ*.

*Bath*, in Chymiſtry. See *Balneum*, and *Artificial Bath*.

*Knights of the Bath*, a military Order in *England*, inſtituted by *Richard* II, who ordain'd that there ſhould be no more than four; but his Succeſſor *Henry* IV, increas'd them to 46. Their Motto was, *Tres in uno*, ſignifying the three Theological Virtues. 'Twas the Cuſtom to *bathe* before they receiv'd the Golden Spurs; but this was only obſerv'd at firſt, being afterwards gradually dropt: However, this gave them the Name. The Order of *Knights of the Bath* is ſcarce ever confer'd, but at the Coronation of Kings, or the Inauguration of a Prince of *Wales*, or Duke of *York*. They wear a red Ribbon Belt-wiſe. *Camden* and others ſay, *Henry* IV was the Inſtitutor in 1399, and upon this occaſion: That Prince being in the *Bath*, was told by ſome Knight, that two Widows came to demand Juſtice of him; when his Majeſty leaping out of the *Bath*, cryed, he ought to prefer doing Juſtice to his Subjects to the Pleaſure of the *Bath*; and thereupon created *Knights of the Bath*. Some Authors, however, will have the Order of the *Bath* to have been on foot long before *Henry* IV. Be this as it will, 'tis certain the *Bath* had been uſed long before, in the Creation of Knights, in *France*; tho there was no Order for making of Knights.

BATHMUS, in Anatomy, a Bone, the ſame as *Trochlea*. Which ſee.

BATON, in Architecture, is a large Ring, or Moulding, in the Baſe of a Column, otherwiſe call'd *Tore*. See *Tore*.

*Baton*, in Heraldry, a Kind of Bend that has only one third of the uſual Breadth. See *Battoon*.

BATRACHITES, a Stone ſuppoſed to be found in Frogs, to which the antient Phyſicians and Naturaliſts attribute the Virtue of reſiſting Poiſon. The Word is form'd from the *Greek*, βάτραχος, *rana*, a frog.

BATRACHOMYOMACHIA, a War of the Frogs and the Mice; the Title of a fine Burleſque Poem, uſually aſcribed to *Homer*. The Subject of the War is the Death of *Pſycharpax*, a Mouſe, Son of *Troxartes*, who being mounted on the Back of *Phyſignates*, a Frog, on a Voyage to her Palace, to which ſhe had invited him, was ſeiz'd with Fear when he ſaw himſelf in the middle of the Pond, ſo that he tumbled off and was drown'd. *Phyſignates* being ſuſpected to have ſhook him off with Deſign, the Mice required Satisfaction, and unanimouſly declared War againſt the Frogs. *Stephens*, *Nunius*, and other modern Authors, take the Poem not to be *Homer's*; but the Antients ſeem of another Opinion; and *Statius*, who wrote under *Domitian*, makes no doubt of it. The Word comes from the *Greek* βάτραχος, *frog*, μῦς, *mouſe*, and μαχία, *pugna*.

BATABLE *Ground* was Land lying between *England* and *Scotland*, heretofore in queſtion to which it belong'd, when they were diſtinct Kingdoms. It ſignifies the ſame as litigious, or diſputable Ground. From *battre*, to beat.

BATTALION, a little Body of Infantry rang'd in form of Battel and ready to engage. A Battalion uſually contains from 5 to 800 Men, of which one Third are uſually Pikes in the middle, and the other two Thirds are Muſquets poſted on the Wings: But the Number of Men it conſiſts of is not determined. They are uſually drawn up with ſix Men in File, or one before another; thoſe in Length, or Side by Side, being call'd Ranks: Some Regiments conſiſt but of one Battalion, others more numerous are divided into ſeveral. *French* Regiments have 16 Companies to a Battalion. See *Regiment*. The Word *Battalion* comes from *Battel*, an Engagement of two Armies, *&c.* and that from *Battualia*, the Place where two Men fight; or from *Battalia*, the Exerciſe of People who learn to fight.

BATTEN is a Name the Workmen give to a Scantling of wooden Stuff, from two to four Inches broad, and about an Inch thick; the Length is pretty conſiderable, but undetermined. The Term is chiefly uſed in ſpeaking of Doors, *&c.* which are not framed of whole Deal, *&c.* with Stiles, Rails, and Pannels, like Wainſcot, but are made

made to appear as if they were, by means of theſe Pieces, or *Battens*, bradded on the plain Board round the Edges, and ſometimes croſs 'em, and up and down: Hence *Batten Doors* are ſuch as ſeem to be Wainſcot ones, but are not. Theſe are ſaid to be either ſingle or double, as the *Battens* are fitted on to one Side, or to both.

BATTERY, in Law, an Act that tends to the Breach of the Peace of the Realm, by violently ſtriking or beating a Man, who may therefore indict the other Party, or have his Action of Treſpaſs, or Aſſault and Battery, againſt him, (for every Battery implies an Aſſault) and recover ſo much in Coſts and Damages as the Jury will give him. This Action will lie as well before as after the Indictment. But if the Plaintiff made the firſt Aſſault, the Defendant ſhall be quit, and the Plaintiff be amerced to the King for his falſe Suit. In ſome Caſes a Man may juſtify the beating another in a moderate manner, as a Maſter his Servant, *&c.*

*Battery*, in War, the Place where the Cannons are planted to play upon the Enemy. They are uſually placed on a Platform, conſiſting of Planks, that ſupport the Wheels of Carriages, and hinder the Weight of the Cannon from ſinking them into the Ground. The Platform is raiſed a little behind, to check the recoiling of the Pieces. The *Battery* of a Camp is uſually ſurrounded with a Trench and Palliſadoes at the Bottom, as alſo with a Parapet on the Top, having as many Holes as there are Pieces of Artillery, and with two Redoubts on the Wings, or certain Places of Arms capable of covering the Troops which are appointed for their Defence. In all *Batteries*, the open Space left to put the Muzzles of the great Guns out, are called *Embrazures*; and the Diſtances between the Embrazures, *Merlons*. The Guns are generally about 12 Foot diſtant one from another, that the Parapet may be ſtrong, and the Gunners have room to work. A *ſunk* or *buried Battery*, is when its Platform is ſunk or let down into the Ground, with Trenches cut in the Earth againſt the Muzzles of the Guns, to ſerve for Embrazures. This ſort of *Battery*, which the *French* call *En Terre* and *Ruinante*, is generally uſed upon the firſt making Approaches, to beat down the Parapet of any Place.

*Croſs Batteries* are two *Batteries* at a conſiderable Diſtance from each other, which play athwart one another at the ſame time, and upon the ſame Point, forming right Angles; where what one Bullet ſhakes, the other beats down. A *Battery d'Enfilade* is one which ſweeps the whole Length of a ſtrait Line, a Street, *&c.* A *Battery en Echarp* is that which plays obliquely. A *Battery de Revers*, or *Murdering Battery*, is one that bears upon the Back of any Place; and being placed on an Eminence, ſees into it. A *Battery Joint*, or *par Camerade*, is when ſeveral Guns play at the ſame time upon one Place.

*Battery en Rouage* is that uſed to diſmount the Enemy's Pieces.

BATTEURS d'ESTRADE, or *Scouts*, are Horſe ſent out before, and on the Wings of an Army, two or three Miles, to make Diſcoveries; of which they give an Account to the General.

BATTLEMENTS, Indentures or Notches on the top of a Wall, Parapet, or other Building, in form of Embrazures, for the ſake of looking thro 'em, *&c.* Theſe were much affected in the old Fortification.

BATTOLOGY, in Grammar, is a multiplying Words without occaſion, or a needleſs Repetition of the ſame Words over and over in a Diſcourſe; like *Battus*, a ridiculous Poet mentioned by *Ovid*, who introduces him, ſaying,

*Montibus (inquit) erant, & erant ſub montibus illis.*

BATTOON, a Term in Heraldry, ſignifying a fourth part of a Bend-Siniſter: It is the uſual Mark of Illegitimacy, and is always borne couped or cut off after this manner.

*Battoon* alſo ſignifies the Earl-Marſhal's Staff.

BATTUS, a certain Order of Penitents at *Avignon*, and in *Provence*, whoſe Piety carries them to exerciſe ſevere Diſcipline upon themſelves, both in publick and private.

BAVINS, in War, Bruſh-Faggots made with the Bruſh at length.

BAY, in Geography, a little Gulph, or an Arm of the Sea, ſtretching up into the Land, and larger in the middle within, than at its Entrance, which is call'd the *Mouth of the Bay*. *Bay*, or *Pen*, likewiſe ſignifies a Pond-Head made up a great Height, to keep in Store of Water for driving the Wheels of the Furnace, or Hammer, belonging to an Iron Mill, by the Stream that comes thence thro a Paſſage, or Flood-gate, call'd the *Pen-ſtock*. To *bay* is to bark as a Dog does. Among Huntſmen Deer are ſaid to *bay*, when, after being hard run, they turn head againſt the Hounds.

BAYONET, a ſhort-pointed Sword made Lancet-faſhion, and having, inſtead of an Hilt, an hollow Iron Handle to fix it at the end of a Muſket, ſo as not to hinder its Firing or Charging. All the Troops of the Infantry carry them in the Field: They are of great Service to the Dragoons and Fuzileers, after they have ſpent their Powder and Ball. This Inſtrument is alſo uſed in hunting the Boar or Bear; for which purpoſe 'tis made larger.

BAYS, in Commerce, a kind of coarſe Woollen Stuff, very open, and not croſs'd, having a long Nap, ſometimes frized on one Side, and ſometimes not frized, according to the Uſes it is intended for. This Stuff is wrought on a Loom, with two Treddles, like Flannel. The Manufacture of *Bays* is very conſiderable in *England*, particularly at *Colcheſter*; and in *Flanders*, particularly about *Liſle* and *Tournay*, &c. Formerly the *French*, as well as *Italians*, were furniſh'd with *Bays* from *England*; but of late the *French* Workmen have undertaken to counterfeit 'em, and ſet up Manufactures of their own, and that with Succeſs; eſpecially at *Niſmes*, *Montpellier*, &c. The Commerce of *Bays* is very conſiderable to *Spain*, *Portugal*, and *Italy*. Their chief Uſe is for Linings, eſpecially in the Army: The Looking-Glaſs-makers uſe 'em behind their Glaſſes, to preſerve the Tin or Quickſilver; and the Caſe-makers, to line their Caſes.

BDELLIUM, or *Bedellium*, a kind of Gum. The Name is well known among the Learned; but they can't agree what it is. 'Tis mention'd in *Geneſis*, *c.* 2. *v.* 12. and *Joſephus* explains the Paſſage, by ſaying 'tis the Gum of a Tree reſembling the Olive-Tree; and that the Manna wherewith the *Jews* were fed in the Deſert, reſembled this Drug: But *Scaliger* and others ſet aſide this Explication, and own, they don't know what the *Bdellium* mention'd in Scripture is.

The *Bdellium* in uſe among us, ſeems again to have been unknown to the Antients: Some ſay it diſtils from a kind of Thorn; others from a Tree reſembling that which produces the Myrrh. Some ſay it is produced on the Banks of the River *Senegal* in *Africa*; others, near the City *Saraca* in *Arabia Felix*. When good, 'tis in clear tranſparent Pieces, of a reddiſh Grey without; when touch'd with the Tongue, yellow, bitter, ſoft, and odoriferous. It enters the Compoſition of *Mithridate*, and the *Emplaſtrum divinum*.

BEACON, a Signal for the better ſecuring the Kingdom from foreign Invaſions: On certain eminent Places of the Nation are placed long Poles erect, whereon are faſten'd Pitch-Barrels to be fir'd by Night, and Smoke made by Day, to give Notice in a few Hours to the whole Kingdom of an approaching Invaſion. Theſe are commonly call'd *Beacons*; whence comes *Beaconage*, Money paid towards the Maintenance of a *Beacon*. The Word is derived from the *Saxon*, *Beacnian*, to nod, or ſignify: Hence alſo the Word *beckon*.

BEAD, in Architecture, a round Moulding in the *Corinthian* and *Roman* Orders, carved in ſhort Emboſſments, like *Beads* in Necklaces. See *Baguette*. A *Bead* is uſually about $\frac{1}{4}$ of a Circle, and only differs from a *Boultine* in Bigneſs. When large, the Workmen call 'em *Boultines*; tho ſometimes an Aſtragal is thus carved. A *Bead-plain* is alſo frequently ſet on the Edge of each Faſcia of an Architrave. A *Bead* is often placed on the Lining-Board of a Door-Caſe, and on the upper Edges of Skirting-Boards.

*Bead*, among the *Romaniſts*. See *Chaplet*.

BEAD-ROLL, among the *Romiſh* Prieſts, a Liſt or Catalogue of ſuch Perſons, for the Reſt of whoſe Souls they are oblig'd to rehearſe a certain Number of Prayers, *&c.* which was done by their *Beads*.

BEADLE ſignifies a Meſſenger or Apparitor of a Court, who cites Men to the Court to appear and anſwer. It is alſo an Officer under all Pariſhes and Companies. 'Tis moreover, an Officer at the Univerſities, whoſe Place it is to walk before the Maſters. Some ſay they are call'd *Bedelli*, from a Corruption of *Pidelli*, as ſerving and running on foot. Others from *Pedo*, *ſeu Baculo*, *quia Virga utebantur*; forming *Pedellus* from *Pedum*, a kind of Wand, which is their Symbol; and from *Pedellus*, *Bedellus*. Others derive the Word from the *Hebrew* בדל *bedal*, *ordinare*, *to range* or *diſpoſe*. *Spelman*, *Voſſius*, and *Somner*, derive it from the *Saxon*, *Bidel*, *a publick Crier*; in which Senſe Biſhops, in ſome antient *Saxon* Manuſcripts, are call'd *Beadles of God*, *Dei Bedelli*. The Tranſlator of the *Saxon New Teſtament*, renders *Exactor* by *Bydele*; and the Word is uſed in the ſame Senſe in the Laws of *Scotland*.

BEAK, in Architecture, a little Fillet left on the Edge of a Larmier, which forms a Canal, and makes a kind of Pendant. *Chin-Beak* is alſo uſed for a Moulding, the ſame with the Quarter-round, except that its Situation is inverted. We find but few Examples hereof in the antient Buildings; but 'tis very frequent in the modern.

*Beak*, or *Beak-head*, of a Ship, is that Part of it which is faſten'd to the Stern, and is ſupported by a Knee; and is the becoming Part, or Grace of a Ship. See *Stern*.

BEAM, in Building, the largeſt Piece of Wood in a Building, being laid a-croſs the Walls, and ſerving to ſupport

port the principal Rafters of the Roof. No Houſe has leſs than two of theſe *Beams*, *viz.* one at each Head: Into theſe the Girders of the Garret-Floor are alſo framed; and, if the Building be Timber, the Teazle Tenons of the Poſts. The Proportions of Beams near *London*, are fix'd by Statute, as follows: A Beam 15 Foot long, muſt be ſeven Inches on one ſide its Square, and five on the other; If it be 16 Foot long, one ſide muſt be eight Inches, the other ſix: If 17 Foot long, one ſide muſt be 10 Inches, the other ſix: In the Country they uſually make 'em ſtronger. Sir *H. Wotton* adviſes theſe to be of the ſtrongeſt and moſt durable Timber. *Herrera* tells us, that in *Fer. Cortez*'s Palace, in *Mexico*, there were 7000 Beams of Cedar: But he muſt certainly uſe the Word *Beam* in a greater Latitude than what we do. In effect, the *French*, under *Poutre*, *Beam*, take in not only the Pieces which ſupport the Rafters, but alſo thoſe which ſuſtain the Joiſts for the Cielings. Some of their beſt Authors have conſider'd the Force or Strength of *Beams*, and brought their Reſiſtance to a preciſe Calculation; particularly M. *Varignon*, and M. *Parent*; the Syſtem of the latter is as follows.

When, in a *Beam* breaking Parallel to its Baſe, which is ſuppoſed to be a Parallelogram, two Plans of Fibres, which were before contiguous, are ſeparated, there is nothing to be conſider'd in thoſe Fibres, but their Number, Bigneſs, Tenſion before they broke, and the Lever by which they act; all theſe together making the Reſiſtance of the *Beam* to be broke. Suppoſe then another *Beam* of the ſame Wood, where the Baſe is likewiſe a Parallelogram, and of any Bigneſs, with regard to the other, at Pleaſure; the Height of each of theſe, when laid Horizontal, being divided into an indefinite Number of equal Parts, and their Breadth into the ſame Number, in each of their Baſes will be found an equal Number of little quadrangular Cells, proportional to the Baſes whereof they are Parts: Theſe then will repreſent little Baſes, or which is the ſame thing, the Thickneſſes of the Fibres to be ſeparated for the Fracture of each *Beam*; and ſince the Number of Cells is equal in each, the Ratio of the Baſes of both *Beams* will be that of the Reſiſtance of their Fibres, both with regard to Number and Thickneſs. Now, the two *Beams* being ſuppoſed of the ſame Wood, the Fibres, the moſt remote from the Points of Support, which are thoſe which break the firſt, muſt be equally ſtretch'd when they break. Thus the Fibres, *v. g.* of the 10th Diviſion, are equally ſtretch'd in each Caſe, when the firſt breaks; and in whatever Proportion the Tenſion be ſuppoſed, 'twill ſtill be the ſame in both Caſes; ſo that the Doctrine is entirely free, and unimbarraſs'd with any Syſtem of Phyſicks. Laſtly, 'tis evident the Levers whereby the Fibres of the two *Beams* act, are repreſented by the Height of their Baſes; and of Conſequence, the whole Reſiſtance of each *Beam* is the Product of its Baſe by its Height; or, which is the ſame thing, the Square of the Height multiplied by the Breadth: Which holds, not only in caſe of Parallelogrammatick, but alſo of Elliptick Baſes.

Hence, if the Baſes of two *Beams* be equal, tho both their Heights and Breadths be unequal, their Reſiſtance will be as the Heights alone; and by Conſequence, one and the ſame *Beam* laid on the ſmalleſt ſide of its Baſe, will reſiſt more than when laid flat, in proportion as the firſt Situation gives it a greater Height than the ſecond: and thus an Elliptick Baſe will reſiſt more, when laid on its greateſt Axis, than on its ſmalleſt.

Since in *Beams* equally long, 'tis the Baſes that determine the Proportion of their Weights or Solidities; and ſince their Baſes being equal, their Heights may be different, two *Beams* of the ſame Weight may have Reſiſtances differing to Infinity: Thus, if in the one the Height of the Baſe be conceiv'd infinitely great, and the Breadth infinitely ſmall, while in the other the Dimenſions of the Baſe are finite; the Reſiſtance of the firſt will be infinitely greater than that of the ſecond, tho their Solidity and Weight be the ſame. If therefore all required in Architecture were to have *Beams*, capable of ſupporting vaſt Loads, and at the ſame time have the leaſt Weights poſſible, 'tis plain they muſt be cut thin as *Laths*, and laid edge-wiſe.

If the Baſes of the two *Beams* be ſuppos'd unequal, but the Sum of the Sides of the two Baſes equal, *v. g.* if they be either 12 and 12, or 11 and 13, or 10 and 14, *&c.* ſo that they always make 24; and further, if they be ſuppos'd to be laid edge-wiſe; purſuing the Series, it will appear, that in the *Beam* of 12 and 12 the Reſiſtance will be 1728, and the Solidity or Weight 144; and that in the laſt, or 1 and 23, the Reſiſtance will be 529, and the Weight 23: The firſt therefore, which is ſquare, will have leſs than half the Strength of the laſt, with regard to its Weight. Hence M. *Parent* remarks, that the common Practice of cutting the *Beams* out of Trees as ſquare as poſſible, is ill Husbandry: He hence takes occaſion to determine geometrically, what Dimenſions the Baſe of a *Beam*, to be cut out of any Tree propos'd, ſhall have, in order to its having the greateſt poſſible Reſiſtance; or, which is the ſame thing, a Circular Baſe being given, he determines the Rectangle of the greateſt Reſiſtance that can be inſcribed, and finds that the Sides muſt be nearly as 7 to 5, which agrees with Obſervation.

Hitherto the Length of the *Beams* has been ſuppoſed equal; if it be unequal, the Baſes will reſiſt ſo much the leſs, as the *Beams* are longer. To this it may be added, that a *Beam* ſuſtained at each End, breaking by a Weight ſuſpended from its middle, does not only break at the middle, but alſo at each Extreme; or, if it does not actually break there, at leaſt immediately before the Moment of the Fracture, which is that of the Æquilibrium between the Reſiſtance and the Weight, its Fibres are as much ſtretch'd at the Extremes as in the Middle: So that of the Weight ſuſtain'd by the middle there is but one third Part which acts at the middle, to make the Fracture; the other two only acting to induce a Fracture in the two Extremes. A *Beam* may either be ſuppoſed loaden only with its own Weight, or with other foreign Weights applied at any diſtance, or only with thoſe foreign Weights; ſince according to M. *Parent* the Weight of a *Beam* is not ordinarily above $\frac{1}{10}$ part of the Load given it to ſuſtain, 'tis evident that in conſidering ſeveral Weights they muſt be all reduced by the common Rules to one common Centre of Gravity. M. *Parent* has calculated Tables of the Weights that will be ſuſtained by the middle, in *Beams* of various Baſes and Lengths, fitted at each End into Walls, on a Suppoſition that a Piece of Oak of an Inch ſquare and a Foot long, retain'd horizontally by the two Extremes, will ſuſtain 315 *lib.* in its middle before it breaks, which 'tis found by Experience it will. See *Mem. French Academy*, *An.* 1708.

BEAM-COMPASSES, an Inſtrument made in Wood or Braſs, with ſliding Sockets, or Curſors, ſerving to carry ſeveral ſhifting Points, in order to draw and divide Circles with very long Radii. They are of uſe in large Projections for drawing the Furniture, on Wall-Dials, *&c.* See COMPASSES.

BEAM-FILLING in Building, the filling up the vacant Space between the Raiſon and Roof, with Stones, or Bricks, laid between the Rafters on the Raiſon, and plaiſter'd on with Loom; frequent where the Garrets are not pargeted, or plaiſter'd.

BEAM, among Hunters, that Part of the Head of a Deer, which bears the Antlers, Royals, and Tops; the little Streaks wherein are called *Circles*. From the *Saxon Beam*, a Tree; becauſe they grow out of the Head, as Branches out of a Tree.

BEAMS of a Ship are the large, main, croſs Timbers, which hold the Sides of a Ship from falling together, and which alſo ſupport the Decks and Orlops. The *main Beam* is next the Main-Maſt; and from it they are reckoned by *Firſt*, *Second*, and *Third*. The *great Beam* of all is called the *Midſhip-Beam*.

BEAR, in Aſtronomy, a Name given to two Conſtellations; called the *Greater* and the *Leſſer Bear*; or *Urſa Major*, and *Minor*: The Pole-Star is ſaid to be in the Tail of the *Leſſer*; becauſe that Star is never above two Degrees diſtant from the North-Pole of the World. See URSA *Major & Minor*.

BEAR is alſo a Term uſed in Heraldry: Thus, he that hath a Coat of Arms, is ſaid to *bear* in it the ſeveral Charges or Ordinaries which are in his Eſcutcheon; as, if there are three Lions Rampant in it, he is ſaid *to bear three Lions Rampant*. See CHARGE, *&c.*

At Sea, when a Ship ſails towards the Shore, ſhe is ſaid *to bear in with the Land*; when a Ship that was to Windward comes under another Ship's Stern, and ſo gives her the Wind, ſhe is ſaid *to bear under her Lee*; if a Ship ſails into an Harbour with the Wind large, or before the Wind, ſhe is ſaid *to bear in with the Harbour*, &c. In Conding they ſay, *bear up the Helm*, that is, let the Ship go more large before the Wind; and *bear up round*, that is, let the Ship go between her two Sheets, directly before the Wind. There is likewiſe another Uſe of the Word, in reference to the Burden of a Ship, (which Word is derived from hence;) for, they ſay a Ship *bears*, when having too ſlender a Quarter ſhe will ſink too deep into the Water with an over-light Freight, and thereby can carry but a ſmall Quantity of Goods.

BEARD. See HAIR, and TONSURE.

BEARD of a Comet, the Rays which the Comet emits towards that part of the Heavens to which its proper Motion ſeems to direct it; in which the *Beard* of the Comet is diſtinguiſhed from the *Tail*, which is underſtood of the Rays emitted towards that part whence its Motion ſeems to carry it. 'Tis called *Beard*, from ſome fancied Reſemblance it bears to the *Beard* of a Man. See COMET.

BEARER, in Architecture, a Poſt, or Brick-Wall, trimmed up between the two Ends of a Piece of Timber to ſhorten its Bearing, or to prevent its bearing with the whole Weight at the Ends only.

BEARER of a Bill of Exchange, &c. the Perſon in whoſe Hands it is, and in favour of whom the laſt Order or Endorſement was paſſed. When a Bill is ſaid to be *payable to Bearer*, it is underſtood to be payable to him who firſt offers himſelf after it becomes due. To be paid a Bill of this kind, there needs neither Order nor Transfer: yet 'tis good to know to whom 'tis paid. See BILL OF EXCHANGE.

BEARERS, in Heraldry. See SUPPORTERS.

BEARING, in Geography and Navigation, the Situation of one Place from another, with regard to the Points of the Compaſs; or, the Angle, which a Line drawn thro the two Places makes with the Meridians of each. The *Bearings* of Places are uſually determined from the Magnetick Needle: In the managing of theſe lies the principal Part of Surveying; ſince the *Bearing* and *Diſtance* of a ſecond Point from a firſt being found, the Place of that ſecond is found; or the *Bearings* of a third Point from two others, whoſe *Diſtance* from each other is known, the Place of the third is found: Inſtrumentally we mean; for, to calculate Trigonometrically, there muſt be more *Data*. Mr. *Collins* gives the Solution of a Problem in the *Philoſ. Tranſact.* where the *Diſtances* of three Objects in the ſame Plain being given, and the *Bearings* from a fourth Place in the ſame Plain obſerv'd, the *Diſtances* from the Place of Obſervation to the reſpective Objects are requir'd. See SURVEYING.

BEARING *of a Piece of Timber*, in Carpentry, the Space either between the two fix'd Extremes thereof, when it has no other Support; which is called *bearing at length*: or between one Extreme, and a Poſt, Brick-Wall, &c. trimm'd up between the Ends to ſhorten its *Bearing*.

BEASTS *of Chaſe*, in our Statute-Books, are five; the Buck, Doe, Fox, Martin, and Roe. *Beaſts of the Foreſt* are, the Hart, Hind, Hare, Boar, and Wolf. *Beaſts* and *Fowls of the Warren* are, the Hare, Coney, Pheaſant, and Partridge. See GAME.

BEATIFICATION, in the *Romiſh* Church, an Act whereby the Pope declares a Perſon happy, after Death. *Beatification* differs from *Canonization*: in the former the Pope does not act as a Judge in determining the State of the *beatified*, but only grants a Privilege to certain Perſons to honour him by a particular religious Worſhip, without incurring the Penalty of ſuperſtitious Worſhippers; but in *Canonization* the Pope ſpeaks as a Judge, and determines *ex Cathedra* upon the State of the *canoniz'd*. *Beatification* was introduc'd when 'twas thought proper to delay the *Canonization* of Saints, for the greater Aſſurance of the Truth, and Manifeſtation of the rigorous Steps taken in the Procedure. See CANONIZATION.

BEATING, in Medicine, a Term applied to the Agitation or Palpitation of the Pulſe or Heart. Some Phyſicians diſtinguiſh 81 different Kinds of Simple *Beatings*, and 15 Compound ones. They compute about 60 *Beats* in the Space of a Minute in a temperate Man. See PULSE.

BEATING *of Gold and Silver*. See GOLD-BEATING, &c.

BEATS in a Watch, or Clock, are the Strokes made by the Fangs, or Pallets of the Spindle of the Ballance; or of the Pads in a Royal Pendulum. See CLOCK-WORK.

BEAU-PLEADER, a Writ on the Statute of *Marlbridge*, whereby it is provided that no Fine ſhall be taken of any Man in any Court for *fair-pleading*, i. e. for not *pleading* aptly, and to the purpoſe.

BEAUTY, a Term whereby we expreſs a certain relation of ſome Object, either to an agreeable Senſation, or to an Idea of Approbation. When therefore I ſay a thing is *beautiful*, I either mean that I perceive ſomething that I approve, or that ſomething gives me Pleaſure: Whence it appears, that the Idea affix'd to the Word *Beauty* is double; which renders the Word equivocal, and is the Source of all the Diſputes on the Subject of *Beauty*. We muſt therefore diſtinguiſh between Ideas and Senſations. Ideas take up the Mind; Senſations intereſt the Heart. Tho we ſee nothing in an Object to intereſt us, we may yet diſcover ſomething in its Idea to merit our Approbation. Such an Object therefore pleaſes, and does not pleaſe, *i. e.* it pleaſes the Idea, and not the Senſation. On the contrary, there are ſome Objects whoſe Ideas don't offer any thing laudable, which yet excite agreeable Senſations. There is therefore *Beauty* and *Beauty*. 'Tis exceeding hard to fix any general Characteriſticks of *Beauty*: For, as the Ideas and Senſations of different Perſons differ according to the Habitudes of the Body, and the Turn of the Mind; ſo do the relations of Objects to thoſe Ideas and Senſations vary, whence what we call *Beauty* reſults. Hence ariſe thoſe different Opinions of a *beautiful Thought*, a *beautiful Woman*, a *beautiful Painting*, &c. M. *Perrault* diſtinguiſhes two Kinds of *Beauties* in Architecture, which chime in pretty aptly with the two Species of *Beauty* above. The one he calls *poſitive* and *convincing*, ſuch as the Richneſs of the Materials, Grandeur of the Structure, Neatneſs of the Workmanſhip, Symmetry, &c. The others he calls *arbitrary*, which depend on the Will, and might have their Proportion changed without Deformity. Theſe only pleaſe by the Connexion, or Aſſociation of their Ideas with others of a different Kind, and which pleaſe of themſelves; and owe their Beauty to that Prepoſſeſſion of the Mind, whereby a thing whoſe Value we do know, inſinuates an Eſteem for others which we do not. Thus he obſerves, there are many things in Architecture which Reaſon and good Senſe would judge deformed, and which however, Cuſtom has not only made tolerable, but even *beautiful*, by their being always joined with other *Beauties* that are poſitive. Thus, being at firſt pleaſed with viewing 'em in Company, and merely on account of their Company, at length we become pleaſed with 'em alone; and thus we frequently fall in love with Deformities, and grow fond of Faults. Hence the Uſe of Foils appears founded on an ill Philoſophy. If a *Beauty* takes off from a *Deformity*, the *Deformity* in its turn takes off from the *Beauty*: 'Tis the Foil therefore is the Gainer, the Diamond loſes. The Diamond pleaſes, we are pleaſed in ſome meaſure with every thing about it, particularly the Foil; the Foil diſpleaſes, we are in ſome meaſure diſpleaſed with every thing about it, particularly the Diamond: The Mind can't be well pleaſed and diſpleaſed at the ſame time. By viewing the Diamond and Foil together, a Man might in a long Courſe of Time find the one almoſt as *beautiful* as the other. The Diſparity would be always diminiſhing, till they came near a Level: By removing 'em a-part, they would by degrees return to their original State, *i. e.* the Diamond would recover, and the Foil loſe its Luſtre. See LOVE.

BECHICA, Medicines proper for Diſeaſes of the Lungs and Breaſt; frequently alſo call'd *Pectorals*. *Bechick* is alſo uſed for any thing relating to a Cough, &c. The Word comes from the *Greek*, βῆξ, βηχὸς, *Cough*.

BED. The old *Romans* had various kinds of *Beds* for Repoſe; as, their *Lectus cubicularis*, or *Chamber-Bed*, whereon they ſlept; their *Table-Bed*, or *Lectus diſcubitorius*, whereon they eat, (for they always eat lying) there being uſually three Perſons to one *Bed*, whereof the middle Place was accounted the moſt honourable, as well as the *middle Bed*. They had alſo their *Lectus lucubratorius*, whereon they ſtudied; and a *Lectus funebris*, or *emortualis*, whereon the Dead were carried to the Pile.

BED of the Carriage of a great Gun, is that thick Plank which lies immediately under the Piece; being, as it were, the Body of the Carriage.

BED-CHAMBER: with us, the *Gentlemen of the Bed-Chamber* are Perſons of the firſt Rank, 11 in Number; whoſe Office is, each in his turn, to wait a Week in the King's *Bed-Chamber*, lying by the King on a *Pallat-Bed* all Night, and to wait on the King when he eats in private. The firſt of theſe is *Groom of the Stole*, or *Long-Robe*. See STOLE.

BED, in Gardening, a Piece of made Ground, rais'd above the Level of the reſt.

BED, in Maſonry, a Courſe, or Range, of Stones; and the Joint of the *Bed* is the Mortar between two Stones placed over each other.

BED, in ſpeaking of Minerals and Foſſils, ſignifies certain *Strata*, or Thickneſſes of Matter diſpoſed over each other. See STRATA and VEIN.

BED, or BEDDING-MOULDING, in Architecture, a Term uſed by the Workmen for thoſe Members in a Cornice which are placed below the Coronet; and now a *Bed-Moulding* uſually conſiſts of theſe four Members, an O---G, a Liſt, a large Boultine, and another Liſt under the Coronet.

BEECH-OIL, an Oil drawn from the Fruit, or Maſt, of the *Beech-Tree*. The *Beech-Maſt* is a kind of Seed in form of a Nut, or Acorn, containing a whitiſh, oleaginous Pith, of a very agreeable Taſte; whereof is made an Oil much valued in Sallades, &c. 'Tis very common in *Picardy*, and other Places, where the Maſt abounds. They draw it cold, by Expreſſion, after the Maſt has been ſhell'd, and ground, or pounded. An Attempt was made a few Years ago, to introduce the Manufacture of *Beech-Oil* in *England*, and a Patent granted to the Proprietor, but without Succeſs; the Country-People, it ſeems, turning their Maſt to better account in feeding the Hogs with it, than in ſelling it to the Patentee, and his Co-Proprietors, for *Oil*. See OIL.

BEER, a popular Drink, prepared from Malt and Hops. *Mathiolus* takes the *Zythum* and *Curmi* of the Antients, to be the ſame with the *Beer* of our Days; and thinks the only Difference between *Zythum* and *Curmi*, to lie in ſome Circumſtances of the Preparation, which render the one ſtronger than the other. See MALT-LIQUORS.

*Tacitus*, ſpeaking of the antient *Germans*, *Dioſcorides*, *Galen*, &c. condemn *Beer* as prejudicial to the Head, Nerves, and membranous Parts, as occaſioning a more laſting and more uneaſy Drunkenneſs than Wine, and as promoting a Suppreſſion of Urine, and ſometimes a Leproſy.

M. *Per-*

M. *Perrault*, *Rainſſant*, &c. defend the Modern *Beer*; urging, that the Hops uſed with us, and which the Antients were Strangers to, having a Faculty of purifying the Blood, and removing Obſtructions, ſerve as a Corrector, and free the Drink from the Inconveniences laid at the door of that of the Antients. For the Manner of preparing *Beer*, ſee BREWING; for its Qualities, ſee MALT-LIQUOR. The Word comes from the old *German*, *Biere*: *Voſſius* derives it from the *Latin*, *bibere*, to drink; others from the *Hebrew*, *Bar*, Corn; others from *Bion*, a Drink mentioned by *Pliny*.

BEER-MEASURE. See MEASURE.

BEGLERBEG, a *Turkiſh* Title for a Governor of a Province, who has under him ſeveral *Sangiacks*, or Sub-Governors. There are 28 *Beglerbegs* in the *Ottoman* Empire. *Dins-Beglerbeg* is the Baſha of the Sea, or the Admiral of the *Turks*. *Beg*, in the *Turkiſh* Language, ſignifies Lord; and *Beglerbeg*, or *Beglerbeghi*, Lords of Lords.

BEGUARD, or BEGGHARD, the Name of an Heretical Sect in *Germany*, which ſprung up towards the End of the 13th Century. Their Head was one *Dulcinus*. Their principal Tenets were, that Man, in this Life, might be impeccable; and, that he might arrive to a Degree of Perfection not to be exceeded; that this State was as happy as Heaven, which when once obtain'd, they were no longer obliged to obſerve the Faſts of the Church, nor obey their Superiors; that every intellectual Creature is ſelf-happy; that it ſtands in need of nothing but the Light of Glory to raiſe it to the Viſion and Enjoyment of God; that none, but the Imperfect, apply themſelves to practiſe virtuous Actions; that *Jeſus Chriſt* ſhould not be adored in the Elevation of the Hoſt, nor the Myſteries of his Incarnation be regarded: They condemn'd good Works, and ſpread abroad impure Doctrines. Theſe Fanaticks, who wore the Habits of Monks, without paying regard to any Rule, or obſerving Celibacy, were condemn'd under Pope *Clement* V. at the Council of *Vienna*, in 1311.

BEGUINES are devout Societies of young Women, eſtabliſh'd in ſeveral Parts of *Flanders*, *Picardy*, and *Lorrain*. They maintain themſelves by the Work of their own Hands; they lead a middle kind of Life, between the Laick and Religious; but make no Vows. Theſe Societies began at *Nivelle*, in *Flanders*, *A. D.* 1226, and ſoon ſpread into *France*. Their Habit was particular, but modeſt; they lived in common, and had Men of great Piety for their Governors. Some of them giving into abſurd Opinions, Pope *Clement* V. aboliſhed their Inſtitution; upon which they ceas'd in *France*: But, *John* XXII. Succeſſor to *Clement* V. explain'd that Decree, and declar'd only thoſe Societies of the *Beguines* extinct, who had fallen into Hereſy.

BELAY on board a Ship, ſignifies the ſame as *faſten*; thus they ſay, *belay the Sheet*, or *Tack*, that is, faſten it to the Kennel, &c.

BELCHING. See RUCTATION.

BELL, a popular Machine, rank'd by Muſicians among the number of Muſical Inſtruments *of Percuſſion*. Its Form needs no Deſcription; its Parts are the *Body*, or *Barrel*, the *Clapper* with-in-ſide, and the *Ear* or *Cannon*, whereby it is hung to a large Beam of Wood; its Matter is a Metal compounded of twenty Pounds of Pewter to an hundred of Copper, call'd *Bell-Metal*. The Thickneſs of its Edges is uſually $\frac{1}{15}$ of the Diameter, and its Height twelve times its Thickneſs. The *Bell-Founders* have a *Diapaſon*, or *Bell-Scale*, wherewith they meaſure the Size, Thickneſs, Weight, and Tone of their *Bells*. The Uſes of *Bells* are ſumm'd up in the *Latin* Diſtich:

*Laudo Deum verum, Plebem voco, congrego Clerum,*
*Defunctos ploro, Peſtem fugo, Feſta decoro.*

For the *Method of Caſting Bells*, &c. ſee FOUNDERY. Mr. *Hauksbee*, and others, find by Experiment, the Sound of a *Bell* ſtruck under Water, to be a fourth deeper than in the Air: But *Merſenne* ſays, 'tis of the ſame Pitch in either Element. *Bells* are obſerv'd to be heard further, placed on Plains, than on Hills; and ſtill further in Vallies, than on Plains: the Reaſon of which is not difficult to aſſign, if it be conſidered, that the higher the ſonorous Body is, the rarer is its Medium; conſequently, the leſs Impulſe it receives, and the leſs proper Vehicle it is to convey it to a Diſtance.

The firſt *Bells* are ſaid to have been made at *Nola*, in *Campania*, whereof St. *Paulinus* was Biſhop; at leaſt, 'tis ſaid, he was the firſt who brought 'em into the Church. And hence, 'tis added, they had their *Latin* Names, *Nolæ* and *Campanæ*: But others ſay, they take theſe Names, not from their being invented in *Campania*, but becauſe 'twas here the manner of hanging and balancing of 'em, now in Uſe, was firſt practis'd; at leaſt, that they were ballanced and hung on the Model of a Ballance invented or uſed in *Campania*. For, in *Latin* Writers we find *Campana Statera*, for a Counter-poiſe, and in *Greek* καμπανίζειν, for *ponderare*, to load or weigh. *Polydore Virgil* aſcribes the Invention of *Bells* to Pope *Sabinian*, St. *Gregory*'s Succeſſor; but by Miſtake; for St. *Jerome*, Cotemporary with *Paulinus*, makes mention of a *Bell*. In effect, Pope *Sabinian* did not invent *Bells*; but he was the firſt who appointed the Canonical Hours to be diſtinguiſh'd by 'em. We even find mention made of *Bells* in *Ovid*, *Tibullus*, *Martial*, *Statius*, and *Manilius*, and the *Greek* Authors, under the Titles of *Tintinnabula*, and *Sounding Braſs*. *Suetonius*, *Dion*, *Strabo*, *Polybius*, *Joſephus*, and others, mention 'em under the Names of *Petaſus*, *Tintinnabulum*, *Æramentum*, *Crotalum*, *Signum*, &c. But theſe appear to have been little elſe but Baubles, and little like the huge *Bells* in uſe among us.

*Hieronymus Magius*, who has a Treatiſe expreſs on *Bells*, (wrote, when in Chains, in *Turkey*, and which is accounted very remarkable, purely from his Memory, without the Aſſiſtance of any Books) makes large *Bells* a modern Invention. Indeed, we don't hear of any before the ſixth Century: In 610, we are told, *Loup*, Biſhop of *Orleans*, being at *Sens*, then beſieg'd by the Army of *Clotharius*, frighted away the Beſiegers by ringing the *Bells* of St. *Stephen*'s. The firſt large *Bells* in *England* are mention'd by *Bede* towards the latter End of that Century. The *Greeks* are commonly ſaid to have been unacquainted with 'em till the ninth Century, when their Conſtruction was firſt taught them by a *Venetian*. Indeed, 'tis not true that the Uſe of *Bells* was entirely unknown in the antient *Eaſtern* Churches, and that they call'd the People to Church, as at preſent, with wooden Mallets. *Leo Allatius*, in his *Diſſertation of the Greek Temples*, proves the contrary from ſeveral antient Writers. 'Tis his Opinion, that *Bells* firſt began to be diſuſed among 'em, after the taking of *Conſtantinople* by the *Turks*; who, it ſeems, prohibited 'em, leſt their Sounds ſhould diſturb the Repoſe of Souls, which, according to them, wander in the Air. He adds, that they ſtill retain the Uſe of *Bells* in Places remote from the Commerce of the *Turks*; particularly, very antient ones in Mount *Athos*. *F. Simon* thinks the *Turks* rather prohibited the *Chriſtians* the Uſe of *Bells*, out of political, than religious Reaſons; inaſmuch as the Ringing of *Bells* might ſerve as a Signal for the Execution of Revolts, &c. See MINARET. The City *Bourdeaux* was deprived of its *Bells* for Rebellion; and when 'twas offer'd to have 'em reſtored, the People refus'd it, after having taſted the Eaſe and Conveniency of being freed from the conſtant Din and Jangling of *Bells*.

*Matthew Paris* obſerves, that antiently the Uſe of *Bells* was prohibited in Time of Mourning; tho at preſent they make one of the principal Ceremonies of Mourning. *Mabillon* adds, that 'twas an antient Cuſtom to ring the *Bells* for Perſons about to expire, to advertiſe the People to pray for 'em; whence our *Paſſing-Bells*. *Lobineau* obſerves, that the Cuſtom of *ringing Bells*, at the Approach of Thunder, is of ſome Antiquity; but that the Deſign was not ſo much to ſhake the Air, and ſo diſſipate the Thunder, as to call the People to Church, to pray the Pariſh may be preſerved from that terrible Meteor.

The Cuſtom of *baptizing*, or *bleſſing Bells*, is very antient. Some ſay 'twas introduced by Pope *John* XIII. in 972; but 'tis evidently of an older ſtanding; there being an expreſs Prohibition of the Practice in a Capitulary of *John* XIII. *Alcuin* ſays 'twas eſtabliſh'd long before Pope *John* XIII. Yet this is only to be underſtood of an Order of that Pope, for reſtoring the Practice which had been diſuſed. See BAPTISM.

*Nankin*, a City of *China*, was antiently famous for the Largeneſs of its *Bells*; but their enormous Weight having brought down the Steeple, the whole Building fell to Ruin, and the *Bells* have ever ſince lain on the Ground. One of theſe *Bells* is near 12 *Engliſh* Foot high, the Diameter $7\frac{1}{2}$, and the Circumference 23; its Figure almoſt Cylindric, except for a Swelling in the middle; and the Thickneſs of the Metal about the Edges, ſeven Inches. From the Dimenſions of this *Bell*, its Weight is computed at 50000 Pounds, which is more than double the Weight of that of *Erfort*, ſaid by Father *Kircher* to be the greateſt *Bell* in the World. Theſe *Bells* were caſt by the firſt Emperor of the preceding Dynaſty, about 300 Years ago. They have each their Name, the Hanger *Schoui*, the Eater *Che*, the Sleeper *Choui*, the Will *Fi*. Father *le Compte* adds, that there are ſeven other *Bells* in *Pekin*, caſt in the Reign of *Youlo*, each of which weighs 120000 Pounds. But the Sounds even of their biggeſt *Bells*, are very poor; being ſtruck with a Wooden in lieu of an Iron Clapper. The *Ægyptians* have none but wooden Clocks, except one brought by the *Franks* into the Monaſtery of St. *Anthony*.

BELL: The Sound of a *Bell* conſiſts in a vibratory Motion of the Parts thereof, much like that of a Muſical Chord. The Stroke of the Clapper, 'tis evident, muſt change the Figure of the *Bell*, and of round, make it oval: But the Metal having a great degree of Elaſticity, that Part which the Stroke drove furtheſt from the Centre will fly back again, and that even ſomewhat nearer to the Centre than before: So that the two Points which before

were

were the Extremes of the longer Diameter, now become thoſe of the ſhorter. Thus the Circumference of the *Bell* undergoes alternate Changes of Figure, and by means thereof gives that tremulous Motion to the Air wherein Sound conſiſts. See SOUND.

M. *Perrault* maintains, that the Sound of the ſame *Bell*, or *Chord*, is a Compound of the Sounds of the ſeveral Parts thereof; ſo that where the Parts are homogeneous, and the Dimenſions of the Figure uniform, there is ſuch a perfect Mixture of all theſe Sounds, as conſtitutes one uniform, ſmooth, even Sound; and the contrary Circumſtances produce Harſhneſs. This he proves from the *Bell*'s differing in Tune according to the Part you ſtrike; and yet ſtrike it any where, there is a Motion of all the Parts. He therefore conſiders *Bells* as compoſed of an infinite Number of Rings, which, according to their different Dimenſions, have different Tones, as Chords of different Length have: And when ſtruck, the Vibrations of the Parts immediately ſtruck, determine the Tone; being ſupported by a ſufficient Number of conſonant Tones in other Parts. See TUNE.

BELLOWS, a Machine uſed to give a briſk Agitation to the Air, by enlarging and contracting its Capacity by Turns. *Bellows* are of various Kinds, as *Domeſtick Bellows*, *Enamellers Bellows*, *Smiths Bellows*. See FORGE. The *Bellows* of an Organ are ſix Foot long, and four broad; each having an Aperture of four Inches, that the Valve may play eaſily. There ſhould likewiſe be a Valve at the Noſe of the *Bellows*, that one mayn't take the Air from the other. To blow an Organ of 16 Feet there are required four Pair of *Bellows*. There are ſome *Bellows* triangular, which only move on one Side. Others call'd *Lanthorn-Bellows*, from their reſembling a Paper Lanthorn: Theſe move each way, and yet ſtill continue parallel to each other. The *Heſſian Bellows* are a Contrivance for driving Air into a Mine for the Reſpiration of the Miners. This M. *Papin* improved, changing its Cylindrical Form into a Spiral one; and with this, working it only with his Foot, he could make a Wind to raiſe two Pound Weight. See the *Philoſ. Tranſact.*

BELOMANCY, a kind of Divination by Arrows; (from βέλος, *an Arrow*, and μαντία, *Divination*,) practiſed in the *Eaſt*, but chiefly among the *Arabians*. 'Twas performed in different manners: One was to mark a Parcel of Arrows, and put eleven, or more of 'em, into a Sack; theſe were afterwards drawn out, and according as they were mark'd, or not, they judged of future Events. Another way was to have but three Arrows, upon one of which was wrote, *God orders it me*; upon another, *God forbids it me*; and upon the third was wrote nothing at all. Theſe were put into a Quiver, out of which they drew one of the three at random; if it happen'd to be that with the firſt Inſcription, the Thing they conſulted about was done; if it chanced to be that with the ſecond Inſcription, 'twas let alone; but if it proved that without an Inſcription, they draw'd over again. This was an antient Practice, and probably that which *Ezekiel* mentions, *ch.* xxi. 21. At leaſt St. *Jerome* underſtands it ſo, and obſerves that the Practice was frequent among the *Aſſyrians* or *Babylonians*. Something like it is alſo mentioned in *Hoſea*, *ch.* iv. only that *Rods* are there mentioned inſtead of *Arrows*, which is rather *Rhabdomancy* than *Belomancy*. *Grotius*, as well as *Jerome*, confounds the two together, and ſhews that it prevail'd much among the *Magi*, *Chaldeans* and *Scythians*; whence it paſſed to the *Sclavonians*, and thence to the *Germans*, whom *Tacitus* obſerves to make uſe of it. See RHABDOMANCY.

BELTS, in Aſtronomy, two *Faſciæ*, or Girdles, obſerv'd in *Jupiter*'s Body, more lucid than the reſt, and terminated by Parallel Lines, being ſometimes broader and ſometimes narrower; nor do they conſtantly take up the ſame Places in his Diſk. *Huygens* obſerved a *Belt* in *Mars* in 1656, much broader than thoſe of *Jupiter*, and poſſeſſing the middle Part of his Diſk, but very obſcure. See JUPITER, &c.

BEN, or *Behen*, a Name given to a Medicinal Root, rank'd among the Cardiacs and Counter-Poiſons; and to an Oil expreſs'd from this Root, uſed by Perfumers, &c. The Root of *Ben* is divided into white and red: The firſt is inſipid, leaving only a little Bitterneſs behind it on the Tongue; the red is fibrous, brown without, and reddiſh within. They are both brought from *Syria*, and have the ſame Virtues, being ſubſtituted for each other; they muſt be choſen dry, and are of an aromatick, aſtringent Taſte.

BENCHERS in an Inn of Court, the Seniors of the Houſe, who have the Government and Direction thereof; and out of whom is yearly choſen a Treaſurer, &c.

BEND, in Heraldry, one of the eight honourable Ordinaries; containing a fifth when uncharged, but when charged a third part of the Eſcutcheon: It is made by two Lines drawn thwartways from the Dexter-Chief to the Siniſter-Baſe Point; thus he beareth Or, a *Bend* Sable. A *Bend* is ſubdivided into a *Benlet* which is the ſixth part of the Shield, a *Garter* which is the Moiety of a *Bend*, a *Coſt* which is the fourth part of a *Bend*, and a *Ribbon* which is the Moiety of a *Coſt*. There is alſo a *Bend-Siniſter*, which is drawn from the *Siniſter-Chief Point* to the *Dexter-Baſe*, and this is ſubdivided into the *Scrape*, or *Scarp*, and the *Battoon*; which latter is the fourth part of the *Bend*. This *Battoon* is the moſt uſual Mark of Illegitimacy; but then it never extends itſelf quite athwart the Shield, but is cut off a little at each End: When two ſtreight Lines drawn within the *Bend* run nearly parallel to the outward Edges of it, that is called *Voiding*; and he that bears it, is ſaid *to bear a Bend* voided thus: He beareth Ermine, a *Bend* voided Gules.

BEND: At Sea they ſay *bend the Cable*, when it is to be made faſt to the Ring of the Anchor; and to *bend two Cables*, is the ſame as to tie them together. To *unbend the Cable*, is to looſen it from the Ring of the Anchor; which is done when a Ship deſigns to be long at Sea. To *bend a Main-Sail*, is to make it faſt to the Yard in its proper Place. The *Bends* in a Ship are the ſame with the *Wailes*, or *Wales*, which are the outermoſt Timbers of a Ship, on which Men ſet their Feet in climbing up: They are reckoned from the Water the firſt, ſecond, and third *Bend*: They help much to ſtrengthen the Ship, and have the Beams, Knees, and Foot-Hooks bolted into them.

BENDY, the Term in Blazonry for an Eſcutcheon's being divided *Bend-ways* into an even Number of Partitions; but if they are odd, the *Field* muſt firſt be named, and then the Number of the *Bends*.

BENEDICTINES, a Set of Religious, who profeſs to live by the Rule of St. *Benedict*. The *Benedictines* are divided into ſeveral Congregations. They wear a looſe black Gown, with large wide Sleeves, and a Capuche on their Heads, ending in a Point behind. In the Canon Law they are called *Black Friars*, diſtinguiſhing them from the other Orders by their Habit, and not by the Name of their Patriarch St. *Benedict*. There is only this Difference between the antient *Monks* and the *Benedictines*, in that the former were mere *Monks*, without any Attachment to a particular Order. The Liſt of Saints of the *Benedictin* Order is very ample; but they are accuſed by *Baronius*, and many other Writers, of putting thoſe in the Liſt who were never of that Order.

BENEFICE, in an Eccleſiaſtical Senſe, a Church endow'd with a Revenue for the Performance of Divine Service; or, that Revenue itſelf, aſſign'd to an Eccleſiaſtical Perſon for Life, in return for the Service he is to do to that Church. All Church-Preferments, except Biſhopricks, are called *Benefices*; and all *Benefices* are, by the Canoniſts, ſometimes called *Dignities*: But we now ordinarily diſtinguiſh between *Benefice* and *Dignity*, uſing the Word *Dignity* for *Biſhopricks*, *Deanaries*, *Arch-Deaconries*, and *Prebends*; and *Benefices* for PARSONAGES, VICARAGES, or DONATIVES; which ſee.

*Benefices* are divided by the *Canoniſts* into *Simple* and *Sacerdotal*: In the firſt there is no Obligation but to read Prayers, ſing, &c. as Canons, Chaplains, Chantors, &c. The ſecond is charg'd with a Cure of Souls, or the Direction and Guidance of Conſciences, as *Vicarages*, *Rectories*, &c. The *Canoniſts* make three manners of *vacating* a *Benefice*, viz. *de Jure*, *de Facto*, and *by the Sentence of a Judge*. A *Benefice* is vacated *de Jure*, when the Perſon enjoying it is guilty of Crimes expreſs'd in thoſe Laws, as Hereſy, Simony, &c. A *Benefice* is vacated *de Facto*, as well as *de Jure*, by the natural Death, or the Reſignation of the Incumbent; and that Reſignation may be either expreſs, or tacit, as when he engages in a State, &c. inconſiſtent with it; as among the *Romaniſts* by Marrying, Entering a Religious Order, &c. A *Benefice* is vacant by the *Sentence of a Judge*, by way of Puniſhment for certain Crimes, as Concubinage, Perjury, Sorcery, &c. The *Romaniſts*, again, diſtinguiſh *Benefices* into *Regular* and *Secular*. *Regular*, or *Titulary Benefices*, are thoſe held by a *Religious*, or a *Regular*, who has made Profeſſion of ſome Religious Order, as an Abby, Priory, Conventual, &c. Or rather, a *Regular Benefice* is ſuch as can't be conferr'd on any but *Religious*, either by its Foundation, by the Inſtitution of a Superior, or by Preſcription: For Preſcription, 40 Years Poſſeſſion by a *Religious*, without a Diſpenſation, makes the *Benefice Regular*. *Secular Benefices* are thoſe that are only to be given to *Seculars*; of which kind are almoſt all their Cures. All *Benefices* are reputed *Secular*, till the contrary is made appear. They are called *Secular Benefices*, becauſe held by *Secular Prieſts*, i. e. by ſuch as live in the World, and are not engaged in any Monaſtick Order. Some *Benefices*, *Regular* of themſelves, are *ſecularized* by the Pope's Bull. See REGULAR and SECULAR.

A *Benefice in Commendam* is that, the Direction and Management whereof, upon a Vacancy, is given or commended to an Eccleſiaſtick for a certain Time, till it may be conveniently provided for. See COMMENDAM.

The Term *Benefice* comes to us from the old *Romans*, who uſing to diſtribute part of the Lands they had conquered on the Frontiers of the Empire to their Soldiers, thoſe who enjoy'd ſuch Rewards were call'd *Beneficiarii*, and the Lands themſelves *Beneficia*, as being held on the pure Beneficence and Liberality of the Prince. Theſe *Benefices* at firſt were given for Life only, but afterwards became Hereditary and Patrimonial. From the *Romans* both the Name and the Thing paſſed into *France* and *England*, with this Difference, as Mr. *Blount* obſerves, that *Benefices* were not given as mere Gratuities for paſt Services, but as Warrants for future ones, and were accordingly held by the Tenure of ſerving, on occaſion, in the Wars, &c. So that what was before a *Benefice*, became now converted into a *Fee*. Hence, doubtleſs, came the Term *Benefice* to be applied to Church-Livings; for, beſides that the Eccleſiaſticks held for Life, like the Soldiers, the Riches of the Church aroſe from the *Beneficence* of Princes.

As to the Origin of *Eccleſiaſtical Benefices*, 'tis hard to determine when the Effects of the Church were firſt divided; 'tis certain, till the fourth Century all the Revenues were in the Hands of the Biſhops, who diſtributed them by their *Oeconomi*; they conſiſted principally in Alms and voluntary Contributions. As the Church came to have Inheritances, Part thereof was aſſign'd for the Subſiſtance of the Clergy, and call'd a *Benefice*, for which we find ſome footing in the fifth and ſixth Century; but then there does not appear to have been any certain Partition, nor any preciſe Quota allotted to each Particular, but the Allotments were abſolutely diſcretional till about the twelfth Century. At firſt each was contented with a ſingle *Benefice*, but Pluralities were, by degrees, introduced, on pretence of Equity: For, a ſingle *Benefice* being ſometimes ſcarce thought a Competency, the Prieſt was allow'd two: As his Quality, or Occaſions, increas'd, ſo the Number of *Benefices* that were to ſupport 'em were increas'd too. Hence ſome affecting to equal Princes in Quality, pretend to Revenues anſwerable thereto.

*V. Ferrier* obſerv'd, that in his Time there were five *Caſes* by which *Benefices* were acquir'd: By the *Nominative*, as in royal Nominations; by the *Genitive*, as where the Children of Great Men, &c. are provided of *Benefices* by their Birth; by the *Dative*, as when ſpeaking of a *Benefice*, 'tis ſaid, *Date, & dabitur vobis*; by the *Accuſative*, as where by virtue of an Accuſation, either true or falſe, an Incumbent is diſpoſſeſs'd, and another admitted; by the *Ablative*, as when *Benefices* are taken away by Force from the poor and helpleſs: but the *Vocative Caſe*, which is the moſt juſt and legitimate, is out of uſe. The *Nominative* is for the King; the *Genitive* for the Great; the *Dative* for the Rich; the *Accuſative* for the Cunning; and the *Ablative* for the Ambitious; but the *Vocative* is reſerved for the *Holy Ghoſt* alone.

BENEVOLENCE is uſed, both in our Statutes and Chronicles, for a voluntary Gratuity given by the Subjects to their Sovereign. The firſt *Benevolence*, *Stow* obſerves in King *Edward* the IV's Days, was granted that Prince in regard of his great Expences in Wars, &c. There was one given by Act of Parliament to King *Charles* II. In other Nations this is called *Subſidium Charitativum*, given ſometimes by Tenants to their Lords, by the Clergy to their Biſhops, &c.

BENJOYN, or, as 'tis commonly called, *Benjamen*, an excellent kind of Reſin, imported from the Kingdom of *Lao*, and other Parts of the *Eaſt-Indies*. 'Tis procured by a Wound or Inciſion in a Tree, whoſe Leaves reſemble thoſe the Lemmon-Tree. 'Tis of a yellowiſh Colour, of an agreeable Scent, and eaſy to melt. There are three Sorts of it: The firſt is call'd *Amygdaloides*, becauſe of its being interſpers'd with ſeveral white Spots which reſemble broken Almonds: This comes from *Siam*. The ſecond is black and very odoriferous; it drops from young Trees, and comes from *Sumatra*; 'tis call'd *Benzoinum de Boninas*. The third Sort is alſo black, but leſs odoriferous; this is found in the Iſlands of *Java* and *Sumatra*. 'Tis uſed in Phyſick, as a Pectoral and Anti-Aſthmatick; and thrown on live Coals, it ſerves to perfume Houſes, &c.

BERENGARIANS, a Religious Sect who adher'd to the Opinions of *Berenger*, Archdeacon of *Angiers*, who oppos'd the Doctrine of Tranſubſtantiation and the real Preſence, a conſiderable time before *Luther*. He is further charged by the *Romaniſts* with decrying Marriage, and maintaining the common Uſe of all ſorts of Women, and aſſerting Infant-Baptiſm of no effect. His Followers were divided on the Head of the Euchariſt: Tho they all agreed that the Bread and Wine were not eſſentially chang'd, yet ſome allow'd it to be chang'd in effect, tho under an Impanation, which was the Opinion of *Berenger* himſelf: Others denied any Change at all, and reſolved all into Figure; others again allow'd a Change in part; and others an entire Change, with this Reſtriction, that to thoſe who preſented themſelves unworthily it was chang'd back again.

BERENICES *Hair*, or *Coma Berenices*, a Conſtellation in the Northern Hemiſphere, conſiſting of Stars near the *Lion's Tail*.

BERGAMOT is a kind of Eſſence, drawn from a Fruit, produc'd by ingrafting the Lemon-Tree on the *Bergamot-Pear* Stock. 'Tis no more than the oily Fluid of theſe Lemons expreſs'd by the Fingers. There is likewiſe a kind of Snuff of the ſame Name, which is only clean Tobacco, with a little of the Eſſence rubb'd into it.

BERGHMOTH, vulgarly call'd *Barmote*, a Court held on a Hill for deciding Pleas and Controverſies among the *Derbyſhire* Miners. From the *Saxon Berg*, *Mons*, and *Mote*, *Conventus*.

BERLIN, a particular kind of Vehicle of the Chariot-kind, much uſed of late; taking its Name from the City *Berlin* in *Germany*; tho ſome attribute the Invention of it to the *Italians*. 'Tis a very convenient Machine to travel in, being lighter, and leſs apt to be overturn'd, than a Chariot. The Body of it is hung high by Shafts to leathern Braces; there being a kind of Stirrup or Footſtool for the Conveniency of getting into it: Inſtead of Side-Windows, there are Sheds to let down in bad Weather, and draw up in good.

BERME, in Fortification, is a ſmall Space of Ground four or five Foot wide, left without between the Foot of the Rampart and the Side of the Moat, to receive the Earth that rolls down from thence, and to prevent its falling into the Moat. Sometimes, for more Security, the *Berme* is palliſadoed.

BERNARDINE, the Name of a religious Order extended over great part of *Europe*. This Order is an Improvement of that of St. *Benedict*, made by *Robert Abbe de Moleine*; and again by St. *Bernard Abbe de Clervaux*. Their uſual Habi ti sa white Gown, with a black Scapulary; but when they officiate, they put on a large white Coul with great Sleeves, and a Hood of the ſame Colour.

BERIL, or BERYL, a precious Stone, much like Chryſtal, brought from the *Indies*; there are ſome alſo found on the Banks of the *Euphrates*. There are ſeveral Kinds of *Berils*. Lapidaries reckon ten: The moſt eſteemed are the *Beril*, the *Chryſoberil*, and the *Chryſopraſin*. The *Beril* borders much on the Sea-green; whence the *Latins* call it *Aqua Marina*, *Sea-Water*. To give it a Luſtre, it muſt be cut Facet-wiſe: Poliſhing does not give it any Brillant, if cut any other way. The *Chryſoberil* is ſomewhat paler, and partakes more of the yellow. *Chryſopraſin* partakes moſt of the green. Some Authors take the *Beril* to be the Diamond of the Antients: This is certain, the ableſt modern Jewellers ſometimes miſtake the one for the other. The *Beril* is ſometimes found in Pieces large enough to form fine Vaſes. 'Tis ſaid, there are many of 'em at *Cambaye*, *Martaban*, *Pegu*, and *Ceylon*.

The Properties of the *Beril* were very wonderful in the Opinion of the antient Naturaliſts: It kept People from falling into Ambuſcades of Enemies, excited Courage in the fearful, cured Diſeaſes of the Eyes and Stomach. It does none of theſe things now; becauſe People are not ſimple enough to believe it has the Virtue to do 'em.

BERRY, a Grain, Fruit, or Seed, produced by ſeveral Treees and Shrubs for the Conſervation, and Re-production of their Kind. *Berries* are of various Sizes, Forms, Properties, and Uſes, according to the Plants whereon they grow: Some uſed in Medicine, as *Juniper-Berries*, *Buckthorn-Berries*, &c. Others in Dying, as *French* or *Yellow Berries*, &c. See GRAIN and SEED.

BESANT, a ſort of Coin ſtruck at *Conſtantinople*, in the Time of the Emperors, antiently called *Biſance*; 'twas pure Gold, or 24 Carats fine. Its Value is not determin'd. Hence the Gold offer'd by the King at the Altar, and on Feſtivals, is ſtill call'd *Beſant*, or *Biſant*.

BES, or BESSIS, the Mark, or eight Ounces, Part of the *As*; *Bes* for *Bis*, which is two *Triens*, which are each four in Value. See AS.

BESTIARII, among the antient *Romans*, thoſe who combated with Beaſts, or were expos'd to 'em. We uſually diſtinguiſh two Kinds of *Beſtiarii*: The firſt were thoſe condemn'd to the Beaſts, either as being Enemies, taken Priſoners, or as being Slaves, and guilty of ſome enormous Crime. Theſe were all expos'd naked, and without Defence to the Beaſts; nor did it ought avail to conquer and kill the Beaſt, freſh ones being continually let looſe on 'em, till they were dead. The *Chriſtians* were *Beſtiarii* of this Kind, even ſome of 'em who were *Roman* Citizens, tho 'twas the Privilege of ſuch to be exempt from it: But it ſeldom happen'd that two were requir'd for the ſame Man; on the contrary, one Beaſt frequently diſpatch'd ſeveral Men. *Cicero* mentions

a Lion, which alone diſpatch'd 200 *Beſtiarii*. Thoſe who ſucceeded the firſt were call'd ἑφεδροι, and the laſt ἔσχατοι. See MERIDIANI.

The ſecond Kind of *Beſtiarii*, *Seneca* obſerves, conſiſted of young Men, who, to become expert in managing their Arms, fought ſometimes againſt Beaſts, and ſometimes againſt one another; and of Bravo's, who, to ſhew their Courage and Dexterity, expos'd themſelves to this dangerous Combat. *Auguſtus* encourag'd this Practice in young Men of the firſt Rank; *Nero* expoſed himſelf to it; and 'twas for the killing Beaſts in the Amphitheatre, that *Commodus* acquir'd the Title of the *Roman Hercules*. *Vigenere* to theſe adds two Kinds of *Beſtiarii* more: The firſt were thoſe who made a Trade of it, and fought for Money; the ſecond was where ſeveral *Beſtiarii* armed, were let looſe at once againſt a Number of Beaſts.

BEVEL, in Maſonry, and among Joiners, a kind of Square, one Leg whereof is frequently crooked, according to the Sweep of an Arch or Vault. 'Tis moveable on a Point or Centre, and ſo may be ſet to any Angle. Its Make and Uſe are pretty much the ſame as thoſe of the common Square and Mitre, except that thoſe are fix'd; the firſt at an Angle of 90 Degrees, and the ſecond at 45; whereas the *Bevil* being moveable, may, in ſome meaſure, ſupply the Office of both, and yet, which 'tis chiefly intended for, ſupply the Deficiencies of both; ſerving to ſet off, or transfer, Angles either greater or leſs than 90 or 45 Degrees. Hence a *Bevil* Angle is uſed to denote any other Angle but thoſe of 90 or 45 Degrees.

BEVILE, a Term in Heraldry ſignifying Broken, or opening like a Carpenter's Rule. Thus he beareth Argent a chief *Bevile* Vert, by the Name of *Beverlis*.

BEY, a Term uſed for a Governour of a maritime Country or Town in the Turkiſh Empire. The *Turks* write the Word *Begh*, or *Bek*, but pronounce it *Bey*. Properly it ſignifies *Lord*, but is particularly applied to a *Lord of a Banner*, whom in the ſame Language they call *Sangiakbeghi*, or *Bey: Sangiak*, which among them ſignifies *Banner*, or *Standard*, being the Badge of him who commands in a conſiderable Place of ſome Province, having under him a conſiderable Number of *Spahi's*, or Horſe. Each Province in *Turkey* is divided into ſeven of theſe *Sangiacks*, or *Banners*, each of which qualifies a *Bey*; and theſe are all commanded by the Governour of the Province, whom they alſo call *Beghiler-Beghi*, or *Beyler-bey*, i. e. *Lord of the Lords*, or *Beys of the Province*. Theſe *Beys* are in a great meaſure the ſame that *Bannerets* formerly were in *England*.

BEZOAR, or BEZOARD, a Medicinal Stone, eſteem'd a Sovereign Counter-Poiſon, and an excellent Cardiac. 'Tis alſo given in Vertigo's, Epilepſies, Palpitation of the Heart, Jaundice, Cholick, and ſo many other Diſeaſes, that were its real Virtues anſwerable to its reputed ones, it were doubtleſs a *Panacea*. Indeed, its Rarity, and the peculiar Manner of its Formation, have, perhaps, contributed as much to its Reputation, as any intrinſick Worth. At preſent it begins to be prized leſs, and a great many able Phyſicians diſcard it, as of no Uſe or Efficacy at all.

There are ſeveral Kinds of *Bezoar*; the Chief are the *Oriental*, the *Occidental*, and that of *Germany*. The *Oriental* is in the moſt Eſteem, and is brought from ſeveral Parts of the *Eaſt-Indies*, chiefly *Golconda* and *Cananor*: 'Tis there found mingled with the Dung of an Animal of the Goat Kind call'd *Pazan*; in the Belly whereof this Stone is found: The Buds of a certain Shrub which the Animal uſes to brouze, are uſually found in the middle of it, and ſuppoſed to be the Seed whence it ariſes. The *Bezoar* ordinarily grows of the Bigneſs of an Acorn, ſometimes of that of a Pigeon's Egg. It is compoſed of ſeveral ſhining Skins, or Coats, like an Onion, ſometimes of a Blood-Colour, ſometimes a pale yellow, a browniſh red, and Honey-Colour. The Number of *Bezoards* produced by each Animal is various, ſome yielding one, two, &c. to ſix, and others none at all. The larger the Stone the more valuable, its Price increaſing like that of the Diamond. A Stone of one Ounce is ſold in the *Indies* for 100 Franks, and one of four Ounces for 2000 Livres. *Oriental Bezoar* muſt be choſe ſhining, of a Smell like that of Ambergreeſe, ſmooth to the Touch, and in large Pieces; its Figure is indifferent, its Colour uſually Olive. *Bezoar* is eaſily ſophiſticated, and the Deceit as eaſily diſcover'd. The Methods of proving it are, *1ſt*, to ſteep it three or four Hours in lukewarm Water; if the Water ben't ting'd, nor the *Bezoar* loſe of its Weight, 'tis pure. *2dly*, To try it with a ſharp, red hot Iron; if it enters the Stone, and the Heat makes it fry and ſhrivel, 'tis factitious. *3dly*, To rub it over a Paper ſmear'd with Ceruſſe; if it leave a yellow Teint, 'tis good.

*Occidental Bezoar*, or *Bezoar* of *Peru*, is very different from the firſt. 'Tis found in the Belly of ſeveral Animals, peculiar to the Country: In ſome 'tis the Bigneſs of a Nut, in others of a Pullet's Egg; in ſome 'tis oval, in others flat, in others round; 'tis uſually of an Aſh-Colour, ſometimes duſky; and form'd of Scales, like the *Oriental*, but much thicker; 'tis ſmooth and even without-ſide, but when broke, looks as if it had been ſublimated, by reaſon of the little ſhining Needles whereof it appears to be compoſed. The Animals that produce it are the Guanaco's, Jacho's, Vicunna's, and Taragua's; the *Bezoar* of which laſt is the moſt eſteemed, this Animal being much like the Goat that produces the *Oriental*.

The *German Bezoar*, which ſome call *Cow's Eggs*, is found in the Stomach of ſome Cows, but more frequently in that of the Chamois or Iſard. Theſe are ſuppoſed to be nothing elſe bnt the Hair of thoſe Animals, which being occaſionally lick'd off by the Tongue, is ſwallow'd down, and being impregnated with the Saliva, &c. is condens'd into Balls. Some of theſe *Bezoars* weigh 18 Ounces, but they are not much eſteem'd, tho they are uſed in ſome Medicines, and by the Painters in Miniature, to make their yellow Colours.

Beſides theſe three Kinds of *Bezoar* which the Shops afford, there are three other Kinds much rarer, *viz.* the *Stone of the Hog*, that of *Malacca* or *Porcupine*, and that of the *Ape*. The firſt call'd by the *Dutch*, *Pedro de Porco*, and by the *Portugueſe*, who firſt brought it into *Europe*, *Pedro de Vaparis*, found in the Gall-Bladder of a Boar in the *Eaſt-Indies*. In Figure and Size it reſembles a Filbert, tho more irregular; its Colour not fix'd, but moſt commonly white with a Teint of blue; it is ſmooth and ſhining. The *Indians* attribute infinite Virtues to this *Bezoar*: They call it *Maſtica de Soho*, and prefer it to the *Oriental Bezoar*; not ſo much on account of its being ſuppoſed the beſt Preſervative in the World againſt Poiſons, as on account of its being Sovereign in the Cure of the *Mardoxi*, a Diſeaſe they are very liable to, and which is not leſs dangerous than the Plague in *Europe*. The other Properties they aſcribe to it are, that 'tis admirable againſt malignant Fevers, Small-Pox, and moſt Diſeaſes of Women not with Child; Experience ſhewing, that it promotes Abortion in thoſe who uſe it indiſcreetly. To uſe it, they infuſe it in Water, or Wine, till it has communicated a little Bitterneſs to it. To facilitate the Infuſion, and at the ſame time preſerve ſo precious a Stone, they uſually ſet it in a gold Caſe pierced with Holes.

*Bezoars of Porcupines* and *Monkies* only differ from thoſe of the *Hog*, in that they are found in the Gall-Bladders of thoſe Animals; unleſs we ſay with *Tavernier*, that theſe two, which he calls *Malacca-Stones*, are not taken from the Gall-Bladders, but the Head of the Monkey and Porcupine; and that they are held in ſuch Eſteem by the Natives of *Malacca*, that they never part with 'em, unleſs as Preſents to Ambaſſadors, or the greateſt Princes of the Eaſt. Some add, that they are likewiſe found in *Siam*. Indeed, the Form, Colour and Properties of theſe three *Bezoars* are ſo near a-kin, that 'tis more than probable, that 'tis the ſame Stone under three different Names.

*Bezoar* is applied by the Chymiſts, to ſeveral of their Preparations, on account of the *Bezoardick* Qualities they are ſuppos'd to have.

*Animal* BEZOAR is the Heart and Lungs of the Viper pulverized together.

*Mineral* BEZOAR is an Emetick Powder of Antimony corrected with Spirit of Nitre, and ſoftened by repeated Lotions, which carry off the purgative Virtue of the Antimony, and ſubſtitute a Diaphoretick one. It promotes Sweat like the Stone of that Name.

BEZOARDICUM *Joviale*, or *Bezoar of Jupiter*, a Regulus made by melting three Ounces of Regulus of Antimony and two of Block-Tin, which, powder'd and mix'd with ſix Ounces of Corroſive Sublimate, and diſtill'd off in a kind of Butter, and that diſſolv'd in Spirit of Nitre, the Solution is diſtill'd three times; the *Bezoar* remaining at bottom, to be powder'd, waſh'd, and mingled with Spirit of Wine, till it grow inſipid.

BEZOARDICUM *Lunale*, or *of the Moon*, is made by mixing eight Ounces of rectified Butter of Antimony with one of fine Silver. This is diſſolv'd in Spirit of Nitre, by gently pouring it on, freſh and freſh, till the Ebullition ceaſe; when, the Spirit is drawn off by a gentle Heat, and the *Bezoar* manag'd as the former.

BEZOARDICUM *Martiale*, a Diſſolution of *Crocus Martis* by Reverberation in Butter of Antimony, with Spirit of Nitre pour'd on it; the reſt as in the firſt.

BIBITORY *Muſcle*. See ADDUCENS OCULI, which is the ſame.

BIBLE, a *Book* by way of Eminence ſo call'd, containing the Scriptures, *i. e. the Old and New Teſtament*. *Bibles* are diſtinguiſh'd according to their Language, into *Hebrew*, *Greek*, *Latin*, *Chaldee*, *Syriack*, *Arabick*, *Coptick*, &c. an

Acquaintance with which making a conſiderable Article in Theological Criticiſm; we ſhall here ſubjoin ſome Account thereof.

*Hebrew* BIBLES are either Manuſcript or Printed. The beſt Manuſcripts are thoſe copied by the *Jews* of *Spain*. Thoſe copied by the *Jews* of *Germany*, are leſs exact, but more common: The two Kinds are eaſily diſtinguiſh'd from each other; the former being in beautiful Characters, like the *Hebrew Bibles* of *Stephens* and *Plantin*; the latter in Characters like thoſe of *Munſter* and *Gryphæus*. *F. Simon* obſerves, that the oldeſt Manuſcript *Hebrew Bibles* are not above 6 or 700 Years old; nor does Rabbi *Menaham*, who quotes a vaſt Number of 'em, pretend any of 'em exceed 600 Years.

The moſt antient printed *Hebrew Bibles* are thoſe publiſhed by the *Jews* of *Italy*, eſpecially of *Peſaro* and *Breſſe*. Thoſe of *Portugal* alſo printed ſome Parts of the *Bible* at *Lisbon*, before their Expulſion. This may be obſerv'd in the general, that the beſt *Hebrew Bibles* are thoſe printed under the Inſpection of the *Jews*; there being ſo many *Minutiæ* to be obſerv'd, that 'tis ſcarce poſſible for any other to ſucceed in it.

In the beginning of the ſixth Century *Dan. Bombergua* printed ſeveral *Hebrew Bibles* in *Folio* and *4to* at *Venice*, moſt of which are eſteem'd both by the *Jews* and *Chriſtians*: The firſt in 1517, which is the leaſt exact, and generally goes by the Name of *Felix Pratenſis*, the Perſon who reviſed it: The ſecond in 1526, with the Maſſora and the Commentaries of ſeveral Rabbins, and a *Hebrew* Preface by Rabbi *J. Benchajim*. In 1548 the ſame *Bombergua* printed the *Folio Bible* of Rabbi *Benchajim*, which is the beſt and moſt perfect of 'em all: 'Tis diſtinguiſh'd from the firſt of the ſame Rabbi, by the Comment of Rabbi *D. Kimchi* on the *Paralipomena*, which are not in the preceding. From this Edition it was, that *Buxtorf*, the Father, printed his *Hebrew Bible* of the Rabbins at *Baſil*, in 1618; but in this are ſeveral Faults, eſpecially in the *Commentaries* of the Rabbins, where that learned Man corrected ſome places that were againſt the *Chriſtians*. In the ſame Year appear'd at *Venice* a new Edition of the *Bible* of the Rabbins by *Leo de Modena*, a Rabbin of that City, who pretended to have corrected a great Number of Faults in the former Edition; but, beſides that 'tis much inferior to the other *Hebrew Bibles* of *Venice*, with regard to Paper and Print, it has paſs'd thro the Hands of the Inquiſitors, who have alter'd many Paſſages in the *Commentaries* of the Rabbins.

For *Hebrew Bibles* in *4to*, that of *R. Stephens* is eſteem'd for the Beauty of the Characters; but 'tis very incorrect. *Plantin* alſo printed ſeveral beautiful *Hebrew Bibles* at *Antwerp*; the beſt is that of 1566, in *4to*. *Manaſſeh Ben Iſrael*, a learned *Portugueſe Jew*, publiſhed two Editions of the *Hebrew Bible* at *Amſterdam*, the one in *4to*, the other in *8vo*; the firſt has two Columns, and for that reaſon is commodious for the Reader. In 1634, R. *Jac. Lombroſo* publiſh'd a new Edition in *4to* at *Venice*, with ſmall literal Notes at the bottom of each Page, where he explains the *Hebrew* Words by *Spaniſh* Words. This *Bible* is much eſteem'd by the *Jews* at *Conſtantinople*: In the Text they have diſtinguiſh'd between Words where the Point *Camets* is to be read with a *Camets-hatuph*, that is, by an o and not an a.

Of all the Editions of the *Hebrew Bible* in *8vo*, the moſt beautiful and correct are the two of *Jo. Athia*, a *Jew* of *Amſterdam*. The firſt, of 1661, is the beſt Paper; but that of 1667, the moſt exact: That however, publiſh'd ſince at *Amſterdam* by *Vander Hooght* in 1705, is preferable to any of 'em.

After *Athia*, three *Hebraiſing Proteſtants* engaged themſelves in reviſing and publiſhing the *Hebrew Bible*, viz. *Clodius*, *Jablonski*, and *Opitius*. *Clodius*'s Edition was publiſh'd at *Frankfort* in 1677, in *4to*: At the bottom of the Page it has the various Readings of the former Editions; but the Author does not appear ſufficiently vers'd in the Accenting, eſpecially in the Poetical Books; beſides that not being publiſh'd under his Eye, many Faults have crept in. That of *Jablonski* in 1699, in *4to*, at *Berlin*, is very beautiful, as to Letter and Print: but, tho the Editor pretends he made uſe of the Editions of *Athia* and *Clodius*, ſome Criticks find it ſcarce different in any thing from the *4to* Edition of *Bombergua*. That of *Opitius* is alſo in *4to*, at *Keil* in 1709; the Character is large and good, but the Paper bad: 'Tis done with a great deal of Care; but the Editor made uſe of no MSS. but thoſe of the *German* Libraries; neglecting the *French* one, which is an Omiſſion common to all three. They have this Advantage however, that beſides the Diviſions uſed by the *Jews*, both general and particular, into *Paraſches* and *Peſukim*, they have alſo thoſe of the *Chriſtians*, or of the *Latin Bibles*, into Chapters and Verſes; the *Keriketib* or various Readings, *Latin* Summaries, &c. which make 'em of conſiderable Uſe, with regard to the *Latin* Editions and the Concordances.

The little *Bible* of *R. Stephens* in *16to*, is much prized for the Beauty of the Character. Care, however, muſt be taken; there being another Edition of *Geneva* exceedingly like it, excepting, that the Print is worſe, and the Text leſs correct. To theſe may be added ſome other *Hebrew Bibles* without Points, in *8vo* and *24to*, which are much coveted by the *Jews*; not that they are more exact, but more commodious than the reſt, and are uſed in their Synagogues and Schools: of theſe there are two beautiful Editions, the one of *Plantin*, in *8vo*, with two Columns, and the other in *24to*, reprinted by *Raphalenge* at *Leiden*, in 1610. There is alſo an Edition of them by *Laurens* at *Amſterdam*, in 1631, in a larger Character; another in *12mo* at *Frankfort*, in 1694, full of Faults, with a Preface of M. *Leuſden* at the head of it.

*Greek* BIBLES. There are a great Number of Editions of the *Bible* in *Greek*; but they may be all reduced to three or four principal ones, *viz.* that of *Complutum*, or of *Alcala de Henares*, that of *Venice*, that of *Rome*, and that of *Oxford*. The firſt was publiſh'd in 1515 by Cardinal *Ximenes*, and inſerted in the *Polyglot Bible*, uſually call'd the *Complutenſian Bible*. This Edition is not juſt, the *Greek* of the *Seventy* being alter'd in a great many places according to the *Hebrew* Text. This Edition has been reprinted in the *Polyglot Bible* of *Antwerp*, in thoſe of *Paris*, and in the *4to Bible* commonly call'd the *Bible of the Vatable*.

The ſecond *Greek Bible* is that of *Venice* in 1518. Here the *Greek* Text of the *Septuagint* is reprinted juſt as it ſtood in the MS. full of Faults of the Copiſts, but eaſily amended. This Edition has been reprinted at *Strasburg*, *Baſil*, *Frankfort*, and other Places, with ſome Alterations, to bring it nearer the *Hebrew*. The moſt commodious is that of *Frankfort*, there being added to this, little *Scholia* where are ſhewn the different Interpretations of the old *Greek* Tranſlators: The Author of this Collection has not added his Name; but 'tis commonly aſcribed to *Junius*.

The third *Greek Bible* is that of *Rome* in 1587, with *Greek Scholia* collected from the MSS. in the *Roman* Libraries by *Pet. Morin*. This fine Edition has been reprinted at *Paris* in 1628, by *J. Morin*, Prieſt of the Oratory, who has added the *Latin* Tranſlation, which in the *Roman* was printed ſeparately, with *Scholia*. The *Greek* Edition of *Rome* has been reprinted in the *Polyglot Bible* of *London*; to which are added, at bottom, the various Readings of the *Alexandrian* MS. This has been alſo reprinted in *England* in *4to* and *12mo*, with ſome Alterations. It has been again publiſh'd at *Franeker* in 1709, by *Boz*, who has added all the various Readings he cou'd find.

The fourth *Greek Bible* is that done from the *Alexandrian* MS. begun at *Oxford* by Dr. *Grabe* in 1707. In this the *Alexandrian* MS. is not printed ſuch as it is, but ſuch as 'twas thought it ſhould be, *i. e.* 'tis alter'd whereever there appear'd any Fault of the Copiſts, or any Word inſerted from any particular Dialect: This, ſome think a piece of Merit, but others a Fault; urging that the MS. ſhould be given abſolutely and entirely of itſelf, and all Conjectures, as to the Readings, to be thrown into the Notes.

*Latin* BIBLES, how numerous ſoever, may be all reduc'd to three Claſſes, *viz.* the *Antient Vulgate*, made from the *Greek Septuagint*; the *Modern Vulgate*, the greateſt part of which is done from the *Hebrew Text*; and the *New Latin Tranſlations*, done alſo from the *Hebrew Text* in the 16th Century. We have nothing remaining of the *Antient Vulgate* uſed in the Primitive Times in the *Weſtern* Churches, but the *Pſalms*, *Wiſdom*, and *Eccleſiaſtes*. *Nobilius* has endeavour'd to retrieve it from the Works of the antient *Latin* Fathers; but 'twas impoſſible to do it exactly, in regard moſt of the Fathers did not keep cloſe to it in their Citations.

As to the *Modern Vulgate*, there are a vaſt Number of Editions very different from each other. Cardinal *Ximenes* has inſerted one in the *Bible* of *Complutum*, corrected and alter'd in many Places. *R. Stephens*, and the Doctors of *Louvain*, have took a world of Pains in correcting the *Modern Vulgate*. The beſt Edition of *Stephens*'s *Latin Bible* is that of 1540, reprinted in 1545; in which are added, on the Margin, the various Readings of ſeveral *Latin* MSS. which he had conſulted. The Doctors of *Louvain* reviſed the *Modern Vulgate* after *R. Stephens*; and added the various Readings of ſeveral *Latin* MSS. The beſt of the *Louvain* Editions are thoſe, at the End of which are added the Critical Notes of *Francis Luke*, of *Bruges*.

All theſe Reformations of the *Latin Bible* were made before the Time of Pope *Sixtus* V. and *Clement* VIII. Since which, People have not dared to make any Alterations, exceping in Comments, and ſeparate Notes. The Correction of *Clement* VIII. in 1592, is now the Standard throughout all the *Roman* Churches: That Pontiff made two Reformations; but 'tis the firſt of 'em that is follow'd. From this the *Bibles* of *Plantin* were done, and from thoſe

of

of *Plantin* all the reſt; ſo that the common *Bibles* have none of the After-Corrections of the ſame *Clement* VIII. publiſh'd at *Rome* in 1592. 'Tis a heavy Charge that lies on the Editions of Pope *Clement*, *viz.* that they have ſome new Texts added, and many old ones alter'd, to countenance and confirm what they call the *Catholick Doctrine*: Witneſs that celebrated Paſſage of St. *John*, *Tres ſunt in unum*. See VULGATE.

There are a great Number of *Latin Bibles* of the third Claſs, comprehending the Verſions from the Originals of the Sacred Books made within theſe 200 Years: The firſt is that of *Pagninus*, a *Dominican*, printed at *Lions* in 4*to*, much eſteem'd by the *Jews*. This the Author improv'd in a ſecond Edition: In 1542, there was a beautiful Edition of the ſame at *Lions* in *Folio*, with *Scholia*, publiſh'd under the Name of *Michael Villanovanus*, i. e. *Michael Servetus*, Author of the *Scholia*. Thoſe of *Zurich* have likewiſe publiſh'd an Edition of *Pagninus*'s Bible in 4*to*. And *R. Stephens* reprinted it in *Folio*, with the *Vulgate*, in 1557, pretending to give it more correct than in the former Editions. There is alſo another Edition of 1586, with four Columns, bearing the Name of the *Vatable*: And we find it again in the *Hamborough* Edition of the *Bible*, in four Languages. In the Number of *Latin Bibles* is alſo, uſually, rank'd the *Verſion* of the ſame *Pagninus* corrected, or rather render'd literal, by *Arias Montanus*; which Correction being approv'd of by the Doctors of *Louvain*, &c. was inſerted in the *Polyglot Bible* of *Philip* II. and ſince in that of *London*. There have been various Editions of it in *Folio*, 4*to*, and 8*vo*; to which have been added the *Hebrew* Text of the *Old Teſtament*, and the *Greek* of the *New*. The beſt of 'em all is the firſt, which is in *Folio*, 1571.

Since the Reformation, there have been ſeveral *Latin* Verſions of the *Bible* from the Originals by *Proteſtants*. The moſt eſteem'd are thoſe of *Munſter*, *Leo de Juda*, *Caſtalio*, and *Tremellius*: The three laſt whereof have been reprinted various times. *Caſtalio*'s fine *Latin* pleaſes moſt People; but there are ſome who think it too much affected: the beſt Edition thereof is that in 1573. *Leo de Juda*'s Verſion, alter'd a little by the Divines of *Salamanca*, was added to the antient *Latin* Edition, as publiſh'd by *R. Stephens* with Notes, under the Name of *Vatable*. That of *Junius* and *Tremellius* is prefer'd eſpecially by the *Calviniſts*, and has undergone a great Number of Editions.

One may add a fourth Claſs of *Latin Bibles*, compreprehending the *Vulgate* Edition corrected from the Originals. The *Bible* of *Iſidorus Clarius* is of this Number: That Author not being contented with reſtoring the antient *Latin* Copy, has corrected the Tranſlator in a great number of places, which he thought ill render'd. Some *Proteſtants* have follow'd the ſame Method; and among others, *Andrew* and *Luke Oſiander*, who have each publiſh'd a new Edition of the *Vulgate*, corrected from the Originals.

*Oriental* BIBLES. At the head of the *Oriental* Verſions of the *Bible*, muſt be placed that of the *Samaritan*, that being the moſt antient of all, and admitting no more for *Holy Scripture* but the *Pentateuch*, or *Five Books of Moſes*. This Tranſlation is made from the *Samaritan Hebrew* Text, which is a little different from the *Hebrew* Text of the *Jews*. This Verſion has never been printed alone; nor any where but in the *Polyglots* of *London* and *Paris*.

*Chaldee* BIBLES are no more than the Gloſſes made by the *Jews* in the Time when they ſpake the *Chaldee* Tongue. Theſe they call by the Name of *Targumim*, or *Paraphraſes*, as not being any ſtrict Verſion of the Scripture. They have been inſerted entire in the large *Hebrew Bibles* of *Venice* and *Baſil*; but are read more commodiouſly in the *Polyglots*, being there attended with a *Latin* Tranſlation.

*Syriack* BIBLES. In the Year 1562, *Widmanſtadius* printed the whole *New Teſtament* in *Syriac* at *Vienna*, in a beautiful Character: After him there were ſeveral other Editions; and it was inſerted in the *Bible* of *Philip* II. with a *Latin* Tranſlation. *Gabriel Sionita* alſo publiſhed a beautiful *Syriack* Edition of the *Pſalms* at *Paris* in 1525, with a *Latin* Interpretation. The whole *Bible* is printed in *Syriack* in the *Polyglots* of *London* and *Paris*.

*Arabick* BIBLES. In the Year 1516, *Aug. Juſtinian*, Biſhop of *Nebio*, printed at *Genoa* an *Arabick* Verſion of the *Pſalter*, with the *Hebrew* Text and *Chaldee* Paraphraſe, adding *Latin* Interpretations. There are *Arabick* Verſions of the whole *Scriptures* in the *Polyglots* of *London* and *Paris*; and we have an Edition of the *Old Teſtament* entire, printed at *Rome* in 1671, by Order of the Congregation *de propaganda Fide*; but 'tis of little Eſteem, as having been alter'd by the *Vulgate* Edition. The *Arabick Bibles* among us, are not the ſame with thoſe uſed by the *Chriſtians* in the *Eaſt*. Some learned Men take the *Arabick* Verſion of the *Old Teſtament*, printed in the *Polyglots*, to be that of *Saadias*: at leaſt, in the main. Their Reaſon is, that *Aben Ezra*, a great Antagoniſt of *Saadias*, quotes ſome Paſſages of his Verſion, which are the ſame with thoſe in the *Arabick* Verſion of the *Polyglots*; yet others are of opinion, that *Saadias*'s Verſion is not extant. In 1622, *Erpenius* printed an *Arabick Pentateuch*, call'd alſo the *Pentateuch of Mauritania*, as being made by the *Jews* of *Mauritania*, and for their Uſe. This Verſion is very litteral, and eſteem'd very exact. The *four Evangeliſts* have alſo been publiſh'd in *Arabick*, with a *Latin* Verſion, at *Rome* in 1591, *Folio*. Theſe have been ſince reprinted in the *Polyglots* of *London* and *Paris*, with ſome little Alterations of *Gabriel Sionita*. *Erpenius* publiſh'd an *Arabick New Teſtament*, entire, as he found it in his MS. Copy, at *Leyden*, in 1616.

*Coptick* BIBLES. We have no Part of the *Bible* printed in *Coptick*; but there are ſeveral Manuſcript Copies in the good Libraries, eſpecially in that of the *French* King.

*Æthiopick* BIBLES. The *Æthiopians* have alſo tranſlated the *Bible* into their Language. There have been printed ſeparately, the *Pſalms*, *Canticles*, ſome Chapters of *Geneſis*, *Ruth*, *Joel*, *Jonas*, *Sophonias*, *Malachias*, and the *New Teſtament*; all which have been ſince reprinted in the *Polyglot* of *London*. For the *Æthiopick New Teſtament*, which was firſt printed at *Rome* in 1548, 'tis a very unaccurate Piece, and is printed in the *Engliſh Polyglot* with all its Faults.

*Armenian* BIBLES. There is a very antient *Armenian* Verſion of all the *Bible*, done from the *Greek* of the *Seventy*, by ſome of their Doctors, about the Time of St. *Chryſoſtom*. This was firſt printed entire in 1664, by one of their Biſhops at *Amſterdam*, in 4*to*; with the *New Teſtament* in 8*vo*.

*Perſian* BIBLES. Some of the Fathers ſeem to ſay, that all the *Scripture* was formerly tranſlated into the Language of the *Perſians*; but we have nothing now remaining of the antient Verſion, which was, doubtleſs, done from the *Septuagint*. The *Perſian Pentateuch* printed in the *London Polyglot*, is, doubtleſs, the Work of Rabbi *Jacob*, a *Perſian Jew*. In the ſame *Polyglot* we have likewiſe the *four Evangeliſts* in *Perſian*, with a *Latin* Tranſlation; but this appears very modern, incorrect, and of little Uſe.

*Gothick* BIBLES. 'Tis generally ſaid, that *Wlphilas*, a *Gothick* Biſhop, who lived in the fourth Century, made a Verſion of the whole *Bible*, excepting the Book of *Kings*, for the Uſe of his Country-men. That Book he omitted, by reaſon of the frequent Mention of the Wars therein; as fearing to inſpire too much of the military Genius into that People. We have nothing remaining of this Verſion, but the *four Evangeliſts*, printed in 4*to* at *Dort*, in 1665, from a very antient MS.

*Muſcovite* BIBLES. An entire *Bible* in the *Sclavonick* Tongue, was printed at *Oſtravia* in *Volhinia*, in the Year 1581; and this is what we commonly call the *Muſcovite Bible*. 'Twas printed at the Expence of *Con. Baſil*, Duke of *Oſtravia*, for the common Service of all *Chriſtians* who ſpeak the *Sclavonick* Language, whereof the *Muſcovitiſh* is a Dialect.

BIBLES *in Vulgar Tongues* are too numerous to be here rehearſed. See *F. Simon*'s CRITICAL HISTORY. See alſo the Word POLYGLOT, PENTATEUCH, *&c.*

BICEPS, in Anatomy, a Name common to ſeveral Muſcles, from their having two Heads. Such is the

BICEPS *Cubiti*, a Muſcle of the Arm, one of whoſe Heads ariſes from the upper Edge of the Cavity of the Head of the *Scapula*, and is round and tendinous, and incloſ'd in the Channel in the Head of the *Humerus*. The other ariſes from the *Proceſſus Coracoides*; it is broad and tendinous: and both unite about the Middle and Fore-part of the Arm, and make one Belly, which is inſerted by a ſtrong and round Tendon into the Tuberoſity, at the upper end of the *Radius*. Some of the Fibres of this Tendon form a large and thin *Aponeuroſis*, which covers all the Muſcles of the Radius and Fingers externally. Care ought to be taken in *Blood-letting*, not to cut a-croſs, but according to the Length of the Fibres of this *Aponeuroſis*. This, with the *Brachiæus internus*, bend the Arms.

BICEPS *externus*. See GEMELLUS.

BICEPS *Tibiæ*, a Muſcle of the Leg with two Heads; the one coming from the Tuberoſity of the *Iſchium*, and the other from the middle of the *Linea aſpera*; both which join together, and are inſerted by one Tendon into the ſuperior and external Part of the *Perone*. Its Uſe is to help to bend the *Tibia*, and is likewiſe employ'd in turning the Leg, together with the Foot and Toes, outward, when we ſit down.

BIDENTALES, Prieſts among the antient *Roman*, inſtituted for the Performance of certain Ceremonies, on occaſion of a Thunderbolt's falling in any Place. The firſt and principal Part of their Office was, the ſacrificing of a Sheep of two Years old, which in their Language was call'd *Bidens*, as having Teeth on each Side; whence alſo the Place

ſtruck with a Thunderbolt, was call'd *Bidental*. This was not allow'd to be walk'd over; but was encompaſs'd with a Wall, or Palliſade, and an Altar erected over it; whence alſo the Prieſts, who officiated at it to perform the preſcribed Expiation, took the Name *Bidentales*.

BIGA, a Chariot drawn by two Horſes. The *Bigæ* and *Quadrigæ* were the Chariots that run in the Liſt. The *Bigæ* are of a very antient ſtanding: all the Heroes in *Homer*, *Heſiod*, *Virgil*, &c. fought in 'em. Hence *Bigats*, or *Begats*, a kind of Coin whereon was repreſented Victory drawn in a Chariot by two Horſes. Many of the antient Medals call'd *Conſular*, are *Bigats*. The Word comes from the *Latin Bijuga*, of *bis* and *jugum*, double Yoke.

BIGAMY, a double Marriage, or the poſſeſſing of two Wives at the ſame time. Among the antient *Romans*, thoſe convicted of *Bigamy* were branded with a Note of Ignominy; and in *France*, were antiently puniſh'd with Death.

BIGAMY, in the Canon Law, is where a Perſon has eſpous'd two Women ſucceſſively, or ſimply, eſpous'd a Widow: Each of which the *Canoniſts* account Impediments to be a Clerk, or to hold a Biſhoprick without a Diſpenſation. This Point of Diſcipline they found on that of St. *Paul*, *A Biſhop muſt be the Husband of one Wife*. *Bigamy* they make of two Kinds; *Real*, as where the Party actually marries twice; and *Interpretative*, where he marries a Widow, or a Woman debauch'd before, which is eſteem'd a kind of double Marriage. Here *F. Doucin* diſtinguiſhes and obſerves, that *Irenæus* having been married twice, muſt in this Senſe have been guilty of *Bigamy*, and therefore made Biſhop of *Tyre* contrary to the Canons. He therefore thinks with St. *Jerom*, &c. that thoſe only who married two Wives after Baptiſm, came under the Incapacity of *Bigamy*: But St. *Ambroſe*, *Auguſtin*, &c. are expreſs, that 'tis *Bigamy*, whether the firſt Wife were married or contracted before, or after Baptiſm. By a Statute of *Edward* I. thoſe guilty of *Bigamy* were excluded the Benefit of the Clergy; but this is ſince repeal'd. The *Romaniſts* make a third kind of *Bigamy* by *Interpretation*; as, when a Perſon in holy Orders, or that has taken on him ſome Monaſtick Order, marries: This the Biſhop can diſpenſe withal, at leaſt on ſome Occaſions. There is alſo a kind of ſpiritual *Bigamy*; as, when a Perſon holds two incompatible Benefices, *v. g.* two Biſhopricks, two Vicarages, two Canonries, *&c. ſub eodem Tecto*.

BIGNESS. See MAGNITUDE.

BIGOT, a Perſon fooliſhly obſtinate, or perverſely wedded to an Opinion. The Word comes from the *German Bey* and *Gott*, or the *Engliſh by God*. *Camden* relates, that the *Normans* were firſt call'd *Bigots*, on occaſion of their Duke *Rollo*, who receiving *Giſſa*, Daughter of King *Charles*, in Marriage, and with her the Inveſtiture of the Dukedom, refus'd to kiſs the King's Foot in token of Subjection, unleſs he would hold it out for that purpoſe: And being urged to it by thoſe preſent, anſwer'd haſtily, *No by God*; whereupon the King turning about, call'd him *Bigot*; which Name paſs'd from him to his People.

BILARIUS PORUS, or *Hepatick Duct*, a conſiderable Appendage of the Liver, form'd after the manner of a Vein, from the Concurrence of infinite ſmall Ramifications ſpringing from the Glands of the Liver, which unite into ſeveral Trunks, equal in Magnitude to the Branches of the *Hepatick Arteries*, which accompany 'em Branch for Branch thro the whole Subſtance of the Liver, and are wrapp'd up in the ſame *Capſula* with the *Porta*. Theſe Branches are about the Size of a Wheat-Straw, the biggeſt large enough to admit the little Finger; and are diſtinguiſhable from the *Porta* by their Contents, being always full of *Bile*. Beſides the *Capſula* common to this and the *Porta*, it has a thick white Coat proper to itſelf, like the Muſculous Coat of an Artery. On the concave Side of the Liver the ſeveral Ramifications meet, and form one Trunk, or Channel, properly call'd the *Bilary Pore*, about the Bigneſs of a Gooſe-Quill, which deſcending about two Inches, meets with the *Cyſtick Duct*, and together with it forms what we call the *Ductus communis*; which deſcending in a right Line, about four Inches, diſcharges itſelf into the *Duodenum*, by an oblique Inſertion, oftentimes at the ſame Aperture with the *Pancreatick Duct*. The *Porus Bilarius* communicates with the Gall-Bladder, by a *Duct* firſt deſcribed by Dr. *Gliſon*, and afterwards by M. *Perrault*, who gave it the Name of the *Cyſt-Hepatick Duct*. *Verheyen*, in *Oxen*, found two, three, or four of theſe *Cyſt-Hepatick Ducts*; and the like has been obſerv'd in a Dog and a Man. See CYST-HEPATICK DUCT.

BILDGE of a Ship, is the Bottom of her Floor: *Bildge-Water* therefore is that, which by reaſon of the Flatneſs of the Ship's Bottom, lies on her Floor, and cannot go to the Well of the Pump; and conſequently the *Dutch*, whoſe Ships are often of this Form, do much uſe a ſort of Pumps call'd *Bildge-Pumps*; or, as we call them, *Burr-Pumps*, to carry off the *Bildge-Water*. Alſo when a Ship ſtrikes on a Rock, they ſay, ſhe is *bildged*. And *Billage* is the Breadth of her Floor when ſhe lies a-ground.

BILE, a yellow, bitter Juice, ſeparated from the Blood in the Liver, collected in the *Porus Bilarius*, and Gall-Bladder, and thence diſcharged by the Common *Duct* into the *Duodenum*. The *Bile* is of two Kinds, *Hepatick* and *Cyſtick*: The firſt, properly call'd *Bile*, ſeparated immediately from the Glands of the Liver into the *Porus Bilarius*: The ſecond, call'd *Gall*, ſeparated likewiſe from the Glands of the Liver into the Gall-Bladder, by Roots or Ducts proper to itſelf. The *Cyſtick Bile* is thicker, a deeper yellow, and bitterer; is not evacuated continually, but only when its Receptacle is replete; in which Caſe the Contraction of the irritated Fibres propels it into the *Duodenum*. The *Hepatick* is thinner, more mild and pellucid, and is continually oozing out; being expell'd by the ſole Actions of the neighbouring Humours. The *Cyſtick Bile*, or Gall, reſiſts Acids, and, mix'd with other Fluids, gives 'em the like Property: It abſterges like Sope, and renders Oils capable of mixing with Water; it reſolves and attenuates Reſins, Gums, and other tenacious Bodies, rendering 'em homogeneal to itſelf. 'Tis neither alcalious nor acid, but ſeems a Concretion of Oil, Salt, and Spirits diluted with Water. By a Chymical Analyſis Dr. *Drake* obſerves it affords ſome Sulphur, or Oil, ſome volatile Salt, a good deal of fix'd Salt, (in which particularly it differs from all other animal Liquors) and a pretty Quantity of *Caput Mortuum*, or Earth: the Baſis is Phlegm. The Effect of the *Bile* is, by mixing with the Chyle and the Fæces, to attenuate, reſolve, abſterge, and ſtimulate the *Fibræ motrices*, to mix together things very different, to bruiſe and blunt thoſe that are ſharp and ſaline, to divide thoſe that are coagulated, to open the Paſſages for the Chyle, to excite Appetite, to act the Part of a Ferment, and to aſſimilate crude things to things concocted. Theſe Effects the *Cyſtick Bile* has in a greater, the *Hepatick* in a leſs Degree. Dr. *Quincy* thinks their principal Uſe is to ſheath and blunt the Acids of the Chyle, entangling them with its Sulphurs, ſo as to prevent their being ſufficiently diluted in the Pancreatick Juice to enter the Lacteals: Which he thinks confirmed by this, that notwithſtanding the great Quantity of acid Salts in the Aliment in the Stomach, there are never any found in the Chyle after it has paſs'd the *Duodenum*, and been impregnated with the Chyle continually oozing out from the *Porus Bilarius*.

*Borelli* aſſerts, that Part of the *Bile* diſcharged into the Inteſtines, re-enters the *Meſaraick* Veins, and mixing with the Blood of the *Vena Porta*, is again percolated thro the Liver; and *Boerhaave* ſeems of the ſame Opinion. Some will have the *Cyſtick Bile* brought to its Receptacle three different Ways, and that 'tis even compoſed of three different Kinds of *Bile*, whence its new Properties. *Boerhaave* takes thoſe Properties to reſult from its ſtagnating in the Gall-Bladder; and, with *Malpighi*, thinks the bitter Part may probably take that Property in the Glandules between the Coats of the Gall-Bladder, which are furniſh'd from the *Cyſtick* Arteries; whence it proceeds bitter, and mixes with the reſt in the Bladder.

The *Bile* is a Juice of very great Importance, with regard to the good or ill Habitude of the Animal. Dr. *Woodward* has traced its Effects throughout the Body very minutely, and makes no Scruple to aſcribe moſt of the Diſeaſes thereof to ſome Diſorder of the *Bile*. This he takes to be the chief Spring in the Animal Machine, and from this accounts for moſt of the Phœnomena of a Body, whether healthy or diſeas'd: And yet the Antients took it to be no more than an Excrement, for which they could not find any Uſe. Many of the Moderns, from the ſmall Quantity of *Bile* ſecern'd, have been led into a Miſtake, that this Secretion is not the ſole End of ſo conſiderable a Viſcus as the Liver. Dr. *Keil* obſerves, that in a Dog whoſe common *Duct* was near as big as that of a Man, he gather'd at the Rate of about two Drams an Hour; tho in a human Body, there is Reaſon to think the Quantity ſecreted to be greater.

Sometimes the *Bile* from yellow becomes greeniſh, like Verdigreeſe, and frequently pale, like the Yolks of Eggs, and that without any other apparent Cauſe than a little Motion, a Convulſion, or a violent Paſſion of the Mind. This occaſions many and terrible Diſeaſes, as Nauſea's, an Abhorrence of Food, Anxiety, Sighing, Cardialgia's, Wind, Diarrhea's, Dyſenteries,, acute Diſeaſes, Fevers, and Convulſions. Sometimes it becomes black, and takes the Name of *Choler*: In this Caſe it ſometimes taſtes like a very ſharp Vinegar; ſometimes like putrified Blood, gnawing, burning, diſſolving, conſuming, occaſioning Inflammations, Gangrenes, Mortifications, violent Pains, and terrible Fermentations. Of *black Bile*, *Boerhaave* diſtinguiſhes three Kinds: Firſt, the mildeſt, ariſing from the Matter of the Blood, put in too great Motion, which hence takes the Name of *Aduſt*: The ſecond is an Aggravation of the firſt ariſing from the ſame Cauſes, only heighten'd: The third is a cor-

rupt, parch'd *Bile*, which, if it aroſe from a greeniſh, or paliſh *Bile*, is ſtill worſe. Too great an Evacuation of the *Bile*, either upwards or downwards, robs the Chilefaction of its main Inſtrument; hence it prevents Digeſtion, Secretion, Excretion of the Fæces, produces an acid Temperature, Cold, Weakneſs, Paleneſs, Swoonings, &c. If when prepared it be prevented its Diſcharge into the Inteſtines, it produces a Jaundice.

For the Manner in which the Secretion of the *Bile* in the Liver is effected, there are various Opinions. Some maintain, that the Pores of the Secretory Glandules of the Liver, have a certain Configuration and Magnitude, to which the Particles of the *Bile* floating in the Blood being juſt anſwerable, both in Bulk and Figure, are admitted in, and all the reſt excluded. Others, with *Silvius* and *Liſter*, not allowing any Difference in the Configuration, as knowing that the Pores of all the Veſſels are Circular, and that Particles of all Kinds will be admitted, if ſmall enough, have recourſe to a Ferment which they ſuppoſe to reſide in the Liver, by means whereof the Particles of the Blood, in their Paſſage thro the Secretory *Ducts*, aſſume the Form of *Bile*. But as this is little elſe than begging the Queſtion, others have recourſe to another Hypotheſis; maintaining, that the Fluids contain'd in the Blood of the *Vena Porta*, while that enters the Subſtance of the Liver in its way to the Extremities of the *Vena Cava*, indifferently apply to the Apertures of the Secretory Tubules contiguous to the extreme Branches of the *Porta*, which are wide enough, and to the Roots of the *Cava*, which are not wide enough, to receive 'em; by which means being ſeparated from the Society and the inteſtine Motion of the other and the eſſential Parts of the Blood, and being no longer agitated by the Vital Action of the Blood-Veſſels, and expoſed to the Action of the *Bilary* Veſſels, they conſtitute a new Humour diſtinct from the Blood, call'd *Bile*, &c.

*Laſtly*, Dr. *Keill* accounts for this Secretion of the *Bile* from the ſtrong Attraction between the Particles whereof the *Bile* is compoſed. He obſerves, that the Heart and Liver being ſo near each other; were the *Cœliack* Artery to have carried all the Blood to the Liver, conſidering the Velocity of the Blood, ſo viſcid a Secretion as the *Bile* cou'd never have been effected. Nature therefore forms a Vein for the purpoſe, *viz.* the *Porta*, and by it ſends the Blood from the Branches of the *Meſenterick* and *Cœliack* Arteries to the Liver; by which the Blood is brought a great way about, paſſing thro the Inteſtines, Stomach, Spleen, and Pancreas, e'er it arrives at the Liver: Thus its Velocity is exceedingly diminiſh'd, and the Particles that are to form the Gall have a ſufficient time to attract one another, and unite before they come to their ſecerning Veſſels. But, as if this Diminution of Velocity were not ſufficient for the purpoſe, Nature has gone further; having made the Cavities of all the Arteries increaſe as they divide: thus the Sum of the Branches ariſing from the *Aorta*, is to the *Aorta* itſelf as 102740 to 100000. And yet, as if that Proportion were too little for the preſent Purpoſe, Nature has here taken a further Step, and increas'd the Branches ſpringing from the *Meſenterick* Artery in a greater Ratio. Thus, in a Body which he examined, he found the Sum of the Branches more than double that of the Trunk; and therefore the Velocity of the Blood in the former, muſt be leſs than half that of the latter. He further ſhews, from a juſt Calculation, that the Time the Blood now takes in its Paſſage from the *Aorta* to the Liver is at leaſt 26 Minutes: whereas, had an Artery gone directly from the *Aorta* to the Liver, it would have paſſed in little more than half a Second, *viz.* in 2437 times the Space it now takes up in its Paſſage. Whence it appears, that the Blood was not in a State fit to yield *Bile*, had it gone directly from the *Aorta* to the Liver; and that a longer Time, and more languid Motion, was neceſſary to have the *Bilious* Particles in a readineſs to be ſeparated. He adds, that were the Humours ſeparated by the Glands at all Times and Places the ſame in the Blood, and not form'd after this manner, Nature wou'd not have been at ſo much expence to retard the Blood's Velocity: Beſides that, the *Bile* has another Advantage from the Uſe of the *Porta*; for, by running thro ſo many Parts e'er it reach the Liver, it leaves behind it moſt of its Lympha; by which means the Particles being brought nearer each other, are, by their mutual Attraction, ſooner united. For the Parts concern'd in the Secretion of the *Bile*, ſee Liver, Bilary Pore, Gall-Bladder, &c. See alſo Secretion.

The Word *Bile* comes from the *Latin Bilis*, which ſome fetch further from the *Greek* Βία, Violence, becauſe *Bilious* People are inclined to Anger. Others fetch it from the *Latin bullire*, to boil. The *Bile* is a Part found in all Animals: even Pigeons, &c. which have no Gall-Bladder, yet have *Bile*; their Liver being found very bitter. M. *Tauvry* obſerves, that the *Bile* becomes one of the principal Cauſes of Thirſt, by mixing with the Salival Juice.

BILINGUIS, in Law, the Name of the Jury which paſſes in any Caſe betwixt an *Engliſhman* and an *Alien*; whereof one Moiety to be *Natives*, the other *Foreigners*, if required. The Word in the *Latin* ſignifies *double-tongued*.

BILL, an Edge-Tool, fitted to a Handle, uſed to lop Trees, &c. When ſhort, it is call'd an *Hand-Bill*; when long, an *Hedging-Bill*.

Bill is alſo a *Declaration* in Writing, expreſſing the Wrong and Grievance the Complainant hath ſuffer'd by the Party complain'd of; or elſe ſome Fault committed by him againſt ſome Law or Statute of the Realm. This *Bill* is commonly addreſs'd to the *Lord Chancellor*; eſpecially for unconſcionable Wrongs done ſometimes to others having Juriſdiction, according as the Law they are grounded on, directs. It contains the Facts complain'd of, the Damages ſuſtain'd, and the Petition of Proceſs againſt the Defendant for Redreſs.

Bank-Bills: Inſtruments whereby private Perſons become entitled to a Part in the *Bank-Stock*. They are form'd on the Model of the *Lombard-Bills*.

Bill *of Entry*, an Account of Goods enter'd at the *Cuſtom-Houſe*, both Inward and Outward; wherein is expreſs'd, the Merchant importing or exporting, the Quantity of Goods, and the Sorts, and from whence imported, or to what Place exported.

Bill *of Exchange*, a Writing ordering the Payment of a Sum of Money in one Place, to any Perſon aſſign'd by the Remitter, in conſideration of the like Value paid the Drawer in another Place. The whole Eſtate and Effects of Merchants uſually conſiſt in *Bills of Exchange*. There is ſome Diſpute about the Nature and Sanction of a *Bill of Exchange*: Some take it to be the Contract of an Exchange; but the more general Opinion is, that it is a mere Contract of Buying and Selling; that the Money given the Perſon who gives the *Bill*, is the Price of Sale; and that paid at the appointed Place, the Thing bought and ſold.

*Bills of Exchange* were unknown in the antient *Roman Juriſprudence*. According to the common Opinion, they are the Invention of the *Jews*; who being baniſh'd *France*, for ſome enormous Crimes charg'd on 'em, retired into *Lombardy*, about the 12th Century, and found means to withdraw their Effects, which they had lodg'd in the Hands of Friends, by ſecret *Letters* and *Bills*, conceiv'd in ſhort, preciſe Terms, like the modern *Bills of Exchange*; and this by the Aſſiſtance of Merchants and Travellers. The Faction of the *Gibellins*, being expell'd *Italy* by the *Guelphs*, retired to *Amſterdam*, and uſed the ſame Means, for the Recovery of their Effects in *Italy*, as the *Jews* had done: Hence the *Dutch* Merchants took the Hint of negotiating *Bills of Exchange*; and ſoon ſpread the Practice throughout all *Europe*. The ſame *Gibellins* are ſaid to be the Inventors of the *Rechange*, on account of Damages and Intereſts, when *Bills of Exchange*, which they call'd *Polizza di Cambio*, were not paid, but return'd on Proteſt.

That which gives the Eſſence, and Form to a *Bill of Exchange*, is the Ceſſion, or Vendition of a Sum of Money made by the Drawer, to him, on whoſe Account it is drawn, to be receiv'd of his Correſpondent in another Place; which Ceſſion, or Vendition, is made, in the Mercantile Terms, *for Value receiv'd*, i. e. for a like Sum given by the Perſon for whoſe Sake the *Bill* is drawn, to the Drawer, in Money, Merchandize, or other Effects. So that there are three things neceſſary to eſtabliſh the Quality of a *Bill of Exchange*; *1ſt*, That it be drawn by one City to another; *2dly*, That there be three Perſons concern'd, the Drawer, the Perſon for whom 'tis drawn, and he on whom 'tis drawn; *3dly*, That it make mention, that the Value which the Drawer has receiv'd, is in another *Bill of Exchange*, in Money, Merchandize, or other Effects, which are to be expreſs'd; otherwiſe 'tis no *Bill of Exchange*. When a *Bill of Exchange* is conceiv'd for *Value in my ſelf*, 'tis not ſuppoſed the Drawer has receiv'd the Sum; but the Perſon, for whom 'tis drawn, ſtands Debtor to him for it: When a *Bill of Exchange* bears, *for which Sum I promiſe to furniſh Bills of Exchange* to ſuch a Place, the Perſon for whom the *Bill* is drawn, may compel him to give the *Bills*, or to return the Money.

Bill *of Lading*, an Inſtrument ſign'd by the Maſter of a Ship, acknowledging the Receipt of the Merchant's Goods, and obliging himſelf to deliver them, at the Place to which they are conſign'd, in good condition; of which *Bills* there are uſually three: the firſt the Merchant keeps; the ſecond is ſent to the Factor to whom the Goods are conſign'd; and the third is kept by the Maſter of the Ship.

Bill, in Law, a Security for Money under the Hand and Seal of the Debtor, without any Condition, or Forfeiture, in caſe of Non-Performance; in which it is diſtinguiſh'd from a Bond or Obligation.

Bill *of Parcels*, an Account of the particular Sorts and Prices of the Goods bought, given by the Seller to the Buyer.

Bill, in Parliament, a Paper containing Propoſitions offer'd to the Houſes, to be paſs'd by them, and then preſented to the King to paſs into an Act or Law. See Parliament.

Bill *of Sale*, is when a Perſon wanting a Sum of Money, delivers Goods as a Security to the Lender, to whom he gives this *Bill*, impowering him to ſell the ſaid Goods, in caſe the Sum borrow'd is not repaid, with Intereſt, at the Time appointed.

Bill *of Store*, a kind of Licence granted at the *Cuſtom-Houſe* to Merchants, to carry ſuch Stores and Proviſions as are neceſſary for their Voyages, Cuſtom-free.

Bill *of Sufferance*, a Licence granted at the *Cuſtom-Houſe*, to a Merchant, to ſuffer him to trade from one *Engliſh* Port to another, without paying Cuſtom.

Billa Vera, *the Bill is true*. The Grand Inqueſt impannell'd and ſwore before the Juſtices of Eyre, &c. endorſing a *Bill* whereby any Crime puniſhable in that Court is preſented to 'em, with theſe two Words, ſignify thereby, that the Preſenter has furniſhed his Preſentment with probable Evidence, and worthy further Conſideration; whereupon the Party preſented is ſaid to ſtand indicted of the Crime, and bound to make an Anſwer thereto, either by confeſſing or traverſing the Indictment. If the Crime touch his Life, it is yet refer'd to another Inqueſt, call'd the *Inqueſt of Life and Death*, by whom if he be found guilty, he ſtands convict of the Crime, and is condemn'd by the Judge. See Inquest, Indictment, &c.

BILLET, in Heraldry, a Bearing in form of a long Square. *Billets* are ſaid to be couch'd, or inverted, when their longeſt Side is parallel to the Top of the Shield, and the ſhorteſt perpendicular. Theſe were antiently Pieces of Cloth of Gold, or Silver, longer than broad, placed at a diſtance by way of Ornament, on Clothes, and afterwards tranſlated to their Coat-Armour. *Gwillim* miſtakes, when he ſays a *Billet* repreſents a Letter ſeal'd up. A Coat is ſaid to be *billeted*, when it is charg'd with *Billets*. Thus, he bears *Argent-Billette*, a *Croſs engrail'd Gules*, by the Name of *Heath*. *Bloom* ſays, the *Billets* muſt be number'd when they are not above ten.

BILLIARDS, a very ingenious Game play'd on an oblong Table, with little ivory or wooden Balls, which are driven by crooked Sticks, made on purpoſe, into Hazards, or Holes, on the Edge and Corners, according to certain Laws, or Conditions of the Game. The Word comes from the *French Billard*; of *Billa* the *Balls* made uſe of, and that from the *Latin Pila*, a Ball.

BILLON, in Coinage, a kind of baſe Metal, either of Gold or Silver, in whoſe Mixture Copper predominates. According to M. *Boutteroue*, *Billon of Gold* is all Gold beneath Standard, or 21 Carats; and *Billon of Silver*, all below ten Pennyweights. But, according to others, and among the reſt M. *Boizard*, Gold and Silver beneath the Standard, as far as twelve Carats, and ſix Pennyweights, are properly baſe Gold and Silver; and all under thoſe, *Billon of Gold*, and *Billon of Silver*, in regard Copper is the prevailing Metal. The Word is *French*, form'd, according to *Menage*, from the *Latin*, *Binus Denarius*. We don't find 'tis naturaliz'd among us; but the Neceſſity we are frequently under of uſing it in the Courſe of this Work, requir'd its being explain'd.

BIMEDIAL, a Term in Mathematicks: when two Medial Lines, as A B and B C, commenſurable only in Power, and containing a Rational Rectangle, are compounded, the whole A C ſhall be irrational, and is call'd a firſt *Bimedial Line*.

A | ——— B | —— C |

BINARY ARITHMETICK. A kind of *Arithmetick* firſt propos'd by M. *Leibnitz*; wherein, in lieu of the ten Figures in the common *Arithmetick*, and the Progreſſion from 10 to 10, he has only two Figures in all his *Arithmetick*, and uſes a more ſimple Progreſſion from two to two; ſhewing it of conſiderable Advantage in the Sciences. All his Characters are 0 and 1. And the Cypher, here, multiplies every thing by 2, as in the common *Arithmetick* by 10: Thus, 1 is one; 10, two; 11, three; 100, four; 101, five; 110, ſix; 111, ſeven; 1000, eight; 1001, nine; 1010, ten, &c. which is built on the ſame Principles with the common *Arithmetick*.

Hence immediately appears the Reaſon of a celebrated Property of the Duplicate Geometrical Proportion in whole Numbers, *viz.* that one Number of each Degree being had, one may thence compoſe all the other whole Numbers above the double of the higheſt Degree. It being here, *v. g.* as if one ſhould ſay, 111 is the Sum of 4, 2, and 1. Which Property may ſerve Eſſayors to weigh all kinds of Maſſes with a little Weight; and may be uſed in Coins, to give ſeveral Values with little Pieces. This Method of expreſſing Numbers once eſtabliſh'd, all the Operations will be eaſy: In Multiplication particularly, there will be no need for a Table, or getting of any thing by heart.

| | |
|---|---|
| 100 | 4 |
| 10 | 2 |
| 1 | 1 |
| 111 | 7 |

He does not recommend this Method for common Uſe, becauſe of the great Number of Figures uſed to expreſs a Number: Adding, that if the ordinary Progreſſion was from 12 to 12, or from 16 to 16, it would be ſtill the more expeditious; but its Uſe is in diſcovering the Properties of Numbers, in making Tables, &c. What makes the *Binary Arithmetick* the more remarkable is, that it appears to have been the ſame with that uſed 4000 Years ago among the *Chineſe*, and left in Ænigma by *Fohy*, the Founder of their Empire, as well as of their Sciences.

M. *Lagni* has propoſed a new Syſtem of *Logarithms*, on the foot of the *Binary Logarithms*; which he finds ſhorter, more eaſy, and natural, than the common ones.

Binary Number, that compos'd of two Units.

Binary Measure, in Muſick, is that wherein you beat equally, or the Time of Riſing is equal to that of Falling. See Time.

BINDING *of Books*. See Book-Binding.

BINOCLE, or Binocule, in Opticks, a double Teleſcope, *i. e.* conſiſting of two Tubes join'd together, by which a remote Object may be viewed with both Eyes at once. It was invented by *F. Rheita*, a *Capuchin*, who deſcribes it in a Book call'd, *Oculus Henoc & Eliæ*. Since which *F. Cherubin* has wrote a large Volume thereon. See Teleſcope.

BINOMINAL, in Algebra, a Number produced by the Addition of two Numbers of incommenſurable Magnitudes, or a Root conſiſting of two Parts, or Members, connected by the Sign +: Thus $a + e$, or $5 + 3$, is a *Binominal*, conſiſting of the Sum of thoſe two Quantities: if it have three Parts, as $a + b + c$, it is call'd a *Trinominal*; if it have four Members, it is call'd a *Quadrinominal*; if more, a *Multinominal*. See Number.

BIOGRAPHER, an Author who writes the Hiſtory, or Life of any Perſon, or Perſons, as *Plutarch*, *Corn. Nepos*, &c. From the *Greek* βίος, *vita*, and γράφω, *ſcribo*.

BIQUADRATICK, the next Power above the Cube, or the Square of a Cube Root. See Extraction, Power, and Root.

BIQUINTILE, an Aſpect of the Planets, when they are 144 Degrees diſtant from each other.

BIRDLIME, a viſcid Subſtance, prepar'd various Ways, and from various Materials. The beſt uſed among us, is made from Holly-Bark, boil'd 10 or 12 Hours; when, the green Coat being ſeparated from the other, 'tis cover'd up a Fortnight in a moiſt Place, pounded into a tough Paſte, that no Fibres of the Wood be left, and waſh'd in a running Stream till no Motes appear, put up to ferment four or five Days, skimm'd as often as any thing ariſes, and laid up for Uſe. To uſe it, a third part of Nut-Oil is incorporated with it over the Fire. The *Birdlime* brought from *Damaſcus* is ſuppos'd to be made of *Sebaſtens*, their Kernels being frequently found in it; but this does not endure either Froſt or Wet: that brought from *Spain* is of an ill Smell; that of the *Italians* is made of the Berries of Miſleto, heated, mix'd with Oil, as before; to make it bear the Water, they add Turpentine. 'Tis ſaid, the Bark of our Lantone, or way-faring Shrub, makes *Birdlime* as good as the beſt.

BIRDS are diſtinguiſh'd as they belong to Land or Water: Of *Land Fowl*, ſome have crooked Beaks and Talons; and of theſe ſome are carnivorous and rapacious call'd *Birds of Prey*; ſome frugivorous, call'd by the general Name of *Parrots*. Of *Birds of Prey*, ſome prey in the Day-time; and of theſe are reckon'd a greater and leſſer Sort: The greater are either of a more bold and generous Nature, as the *Eagle-kind*; or of a more cowardly and ſluggiſh, as the *Vulture*: The leſſer diurnal *Birds of Prey*, are the *Hawk-kind*, which are wont to be reclaim'd and mann'd, for Fowling, and call'd *Hawks*; and by the Falconers diſtinguiſh'd into *long-winged*, as the *Falcon*, *Lanner*, &c. whoſe Wings reach almoſt as far as the End of their Train; or *ſhort-wing'd*, as the *Goſs-Hawk* and *Sparrow-Hawk*, whoſe Wings, when cloſed, fall much ſhort of the End of their Trains: Thoſe of the *Hawk-kind* which are of a Nature more cowardly, and ſluggiſh, or elſe indocile, are neglected by our Falconers, and ſo live at large; and of theſe alſo there is a greater Sort, as the *Buzzard-kind*; and a leſſer, as the *Butcher-kind*, or *Shrike*, (about the Bigneſs of a *Blackbird*, and found in *England.*) The *Bird of Paradiſe* is Exotick. Of *Birds of Prey* with crooked Beaks and Talons, ſome are Nocturnal, as the *Owl-kind*, which prey by Night; and theſe are either horned, or eared, as the *Eagle-Owl*, *Horn-Owl*, &c. or without Horns, as the *Brown-Owl*, *Grey-Owl*, &c. There is a Sort of *Land Birds* with crooked Beak and Talons, call'd frugivorous, becauſe tho they do ſometimes eat Fleſh, yet they eat Fruits too; and theſe are known by the general Name of *Parrots*, and are diſtinguiſh'd into three Sorts, according to their Bigneſs; the greateſt Size being call'd *Maccaws*; the middle-ſized, and moſt common, *Parrots*,

*rots*, and *Poppinjays*; and the leaſt Sort, *Parrakeets*: and all this Kind make uſe of their Beak in climbing, and move the upper Jaw. *Land Birds* that have their Bill and Claws more ſtreight, are diſtinguiſh'd into three Sizes; the greateſt Kind are, ſuch as by reaſon of the Bulk of their Bodies, and Smallneſs of their Wings, cannot fly at all; theſe are *Exotick Birds* of a ſingular Nature; ſuch as the *Oſtrich*, the *Caſſowary*, and the *Dodo*: The middle-ſized Kind are divided, by their Bills, into ſuch as have large, thick, ſtrong, and long ones; ſome of which feed promiſcuouſly on Fleſh, Inſects, and Fruits, as the *Crow-kind*, which are wholly black; and the *Pie-kind*, which are party-colour'd: Some feed on Fiſh only, as the *Kings-fiſher*; and ſome on Inſects only, as the *Wood-pecker*: And into ſuch as have a ſmaller and ſhorter Bill; whoſe Fleſh is either white, as the *Poultry-kind*; or blackiſh, as the *Pigeon* and *Thruſh-kind*. The leaſt ſized Kind of *Land Birds*, with ſtreight Bills and Claws, are called *Small-Birds*; and theſe are of two Kinds; *ſoft-beaked*, which have ſlender, ſtreight, and pretty longiſh Bills, moſt of them, and feed chiefly upon Inſects; and *hard-beaked*, which have thick and hard Bills, and feed moſtly on Seeds.

*Water-Fowl*, are ſuch as frequent Waters and watry Places to ſeek their Food; and theſe are all cloven-footed, and generally have long Legs, and thoſe naked, or bare of Feathers, a good way above the Knee, that they may the more conveniently wade in Waters. Of theſe they reckon two Kinds; a greater, as the *Crane*, *Jabiru*, &c. and a leſſer, which are either piſcivorous, feeding on Fiſh, as the *Heron*, *Spoon-Bill*, *Stork*, &c. or *Muſduckers*; or inſectivorous, of which ſome have very long Bills, which are ſometimes crooked, as in the *Curlew* and *Whimbrell*; and ſometimes ſtreight, as in the *Woodcock* and *Godwit*: others have middle-ſized Bills, as the *Sea-Pye* and *Red-Shank*, &c. and a third Sort have ſhort Bills, as the *Lapwing* and *Plover*. Thoſe are reckon'd ſhort Bills, which exceed not an Inch and half; middle-ſized Bills, to two Inches and half; and long Bills above two Inches and half. There is another kind of *Water-Fowl*, which ſwim in the Water; ſome of which are cloven-footed, as the *Moor-Hen*, and *Coot*, &c. but moſt are whole footed; and of theſe ſome few have very long Legs, as the *Flammant*, the *Avoſetta*, and *Corrira*; but moſtly they are ſhort-legg'd: Of which ſome few have but three Toes on each Foot, as the *Penguin*, *Razor-Bill*, &c. but generally they have four Toes on each Foot, and theſe either all connected together by intervening Membranes, as in the *Pelican*, *Soland-Gooſe*, &c. or more uſually with the Back-Toe looſe; and this Kind are either *narrow-bill'd*, or *broad-bill'd*: Thoſe with *narrow Bills* have them either blunt, and hooked at the Tip; of which Sort ſome are ſerrate, as in the *Diver-kind*; and ſome not toothed, as in the *Puffin*; or ſharp-pointed and ſtreighter; of which, ſome Sort have long Wings, as the *Gull-kind*; and ſome ſhorter, as thoſe *diving Birds* call'd *Douckers*. Thoſe with broad Bills may be divided into the *Gooſe-kind*, which are larger; and the *Duck kind*, which are ſmaller; and theſe latter into *Sea-Ducks*, or *River* and *Plaſh-Ducks*. Moſt *Water-Fowls* have a ſhort Tail; and none of this Kind have their Feet diſpos'd like *Parrots* and *Wood-peckers*, that have two Toes forward, and two backward, none having more than one Back-Toe, and ſome none at all. See *Willoughby*'s ORNITHOLOGIA.

BIRTH, *of a Fœtus*, its Delivery from the Mother. See FOETUS; for the Number of *Births* ſee MARRIAGE: Under which the Proportion of *Births* to Marriages, of *Births* to Burials, and of *Male-Births* to Females, are computed.

BIRTH, or *Birthing*, a Term among the Seamen for due Diſtance obſerved between Ships lying at an Anchor, or under Sail; and the Raiſing, or Bringing up the Sides of the Ship: Alſo the proper Place a-board to put their Cheſts, &c. is call'd the *Birth*; and a convenient Place to moor a Ship in, is alſo call'd by this Name.

BISHOP, a Prelate, or Perſon conſecrated for the Spiritual Government and Direction of a Dioceſe. See DIOCESE. 'Tis a long Time that *Biſhops* have been diſtinguiſh'd from mere *Prieſts*; but whether that Diſtinction be of divine or human Right, whether it was ſettled in the Apoſtolical Age, or introduced ſince, is much controverted. On the one Side ſtands the *New Teſtament*, wherein 'tis certain the Names *Biſhop* and *Prieſt* are uſed indifferently: On the other Side is *Tradition*, the *Fathers*, and the *Apoſtolical Conſtitutions*. Indeed, there appear no Footſteps of any Inſtitution of *Biſhops*, diſtinct from *Prieſts* in the Scriptures; neither do the Oppoſers thereof pretend to ſhew any Mark of any other Form of Church-Government therein. So that it may ſeem probable, the Apoſtles did not ſettle any thing of this kind at all; but either left the Spiritual Oeconomy in the Hands of the *Prieſts*, or of thoſe together with the People. Accordingly new Occaſions requiring new Meaſures, in a little Time, the Functions of this *Prieſthood* were divided, and the *Prieſts* diſtinguiſh'd into Degrees; the Political Part of Religion being aſſign'd principally to *Biſhops*, and the Evangelical to the *Prieſts*, &c. Or rather, as ſome others will have it, the Functions of *Teaching* and *Preaching* were reſerv'd to the *Biſhop*, and that of *Ordination* ſuperadded; which was their principal Diſtinction, and the Mark of their Sovereignty in their Dioceſe. See EPISCOPACY.

The Word comes from the *Saxon Biſchop*, and that from the *Greek* Ἐπίσκοπος, an Overſeer, or Inſpector; which was the Title the *Athenians* gave thoſe whom they ſent into the Provinces ſubject to 'em, to ſee whether every thing were kept in Order; and the *Romans* gave the ſame Title to thoſe who were Inſpectors and Viſitors of the Bread and Proviſion. It appears from a Letter of *Cicero*, that he himſelf had a *Biſhoprick*, being *Epiſcopus Oræ & Campaniæ*. *Dioceſe* was alſo uſed for the Extent of this Government; and *Cicero* uſes it in this Senſe, Διοίκησις.

*Biſhops* are of various Kinds, *Archbiſhops*, *Biſhops*, and *Suffragan-Biſhops*, which ſee; as alſo *Acephals*, *Metropolitans*, &c.

The Function of a *Biſhop*, in *England*, may be conſider'd as twofold, *viz.* what belongs to his *Order*, and what to his *Juriſdiction*. To the *Order* belong the Ceremonies of Dedication, Confirmation, and Ordination: To his *Juriſdiction*, by the Statute Law, belongs the Licenſing of Phyſicians, Chirurgeons, and School-maſters, the Uniting ſmall Pariſhes, (tho this laſt Privilege is now peculiar to the *Biſhop* of *Norwich*) to aſſiſt the Civil Magiſtrate in the Execution of Statutes relating to Eccleſiaſtical Matters, and to compel the Payment of Tenths, and Subſidies due from the Clergy: by the Common Law, he is to certify the Judges, touching legitimate and illegitimate Births and Marriages; and by that and the Eccleſiaſtical Law, he is to take care of the Probate of Wills, the Granting Adminiſtrations, to collate to Benefices, grant Inſtitutions on the Preſentation of other Patrons, command Induction, order the collecting and preſerving the Profits of vacant Benefices for the Uſe of the Succeſſors, defend the Liberties of the Church, and viſit his Dioceſe once in three Years. To the *Biſhop* belong Suſpenſion, Deprivation, Depoſition, and Degradation; and EXCOMMUNICATION, which ſee.

The *Biſhops* of *England* are all *Barons* and *Peers*. *Barons* in a threefold manner, *viz.* *Feudal*, in regard of Lands and Baronies annex'd to their *Biſhopricks*; by *Writ*, as being ſummon'd by *Writ* to Parliament; and by *Patent*, or *Creation*: Accordingly, they have the Precedence of all other *Barons*, and ſit in the Upper Houſe, both as *Barons* and *Biſhops*. They have two ſpecial Privileges next to Regal: The firſt, that in their Courts they ſit and paſs Sentence, of themſelves, and by their own Authority: The *Biſhops* Courts are not like all other Courts; but, Writs are ſent out in their own Name, *teſte* the *Biſhop*, not the King's Name, as the Kings Courts do. The ſecond, That, like the King, they can depute their Authority to another, as their *Suffragan*, *Chancellor*, *Commiſſary*, &c. They have this Advantage over *Lay-Lords*, that in whatever *Chriſtian* Country they come, their *Epiſcopal* Degree and Dignity is acknowledg'd; and they may, *quatenus Biſhops*, ordain, &c. They have their Vote in the Trial and Arraignment of a *Peer*; but e'er Sentence of Death, &c. they withdraw, and vote by Proxy. They have ſeveral Immunities, as from Arreſts, Outlawries, Diſtreſs, &c. Liberty to hunt in the King's Foreſts, &c. to have certain Tuns of Wine Duty-free, &c. Their Perſons may not be ſeiz'd, as *Lay-Peers* may, upon Contempt, but their Temporalties alone. They may qualify as many Chaplains as a *Duke*, viz. Six. By Law, the Crime of *Epiſcopicide*, which a Clergyman commits by killing his *Biſhop*, is equivalent to *Parricide*, viz. *Petty-Treaſon*. The *Biſhops* in *England* are 24, *Archbiſhops* two, *Suffragans* none.

The Form of Conſecrating a *Biſhop* is different in different Churches. In the *Greek* Church, the *Biſhop* Elect being, by the Aſſiſtant *Biſhops*, preſented for Conſecration, and the Inſtrument of Election put in his Hand, after ſeveral Prayers, the firſt call'd *Diaconique*, the *Biſhop* Elect demanding Conſecration, makes Profeſſion of his Faith; after which he receives a Benediction: He is then interrogated as to his Belief of the *Trinity*; to which he anſwers by a long Profeſſion of Faith, and receives a ſecond Benediction. Laſtly, he is ask'd what he thinks of the Incarnation; to which he anſwers in a third Profeſſion of Faith, with the Paſtoral Staff: after which he is led up to the Altar; where, after certain Prayers, and three Croſſes on his Head, he receives the *Pallium*, if he be an *Archbiſhop*, or *Patriarch*; he then receives the Kiſs of Peace, of his Conſecrator and two Aſſiſtants; and, ſitting down, reads, prays, and gives the Communion to his Conſecrator and others.

In the *Romiſh* Church, the *Biſhop* Elect being preſented by the Elder Aſſiſtant to the Conſecrator, takes the Oath: He is then examin'd as to his Faith; and, after ſeveral Prayers, the *New Teſtament* is drawn open over his Head, and he receives the Unction on his Head by Chriſma. The

*Paſtoral Staff*, *Ring*, and *Goſpel*, are then given him; and, after Communion, the *Mitre* put on his Head: Each Ceremony being accompanied with proper Prayers, &c. the Proceſs ends with *Te Deum*.

In *England*, the King being certify'd of the Death of a *Biſhop* by the Dean and Chapter, and his Leave requeſted to elect another, the *Conge d'Elire* is ſent to 'em, nominating the Perſon he would have choſen. The Election is to be within 20 Days after the Receipt of the *Conge d'Elire*; and the Chapter, in caſe of refuſing the Perſon named by the King, incurs a *Præmunire*. After Election, and its being accepted of by the *Biſhop*, the King grants a Mandate under the Great Seal for Confirmation; which the *Archbiſhop* conſigns to the Vicar-General; conſiſting, moſtly, in a ſolemn Citation of ſuch as have any Objections to the *Biſhop* Elect, a Declaration of their Contumacy in not appearing, and an Adminiſtration of the Oaths of Supremacy, and Canonical Obedience. Sentence being read by the Vicar-General, the Confirmation concludes with a Treat: Then follows the Conſecration, by the *Archbiſhop* and two Aſſiſtant *Biſhops*. The Ceremony is the ſame as in the *Romiſh* Church, ſave that, having put on the *Epiſcopal* Robes, the *Archbiſhop* and *Biſhops* lay their Hands on his Head, and conſecrate him with a certain Form of Words. After Communion they go to a Banquet.

The Tranſlation of a *Biſhop* to another *Biſhoprick*, only differs in this, that there is no Conſecration. *Note*, A *Biſhop* differs from an *Archbiſhop* in this, that an *Archbiſhop* with *Biſhops* conſecrate a *Biſhop*, as a *Biſhop* with Prieſts ordain a *Prieſt*; that the *Archbiſhop* viſits a Province, as the *Biſhop* a Dioceſe; that the *Archbiſhop* convocates a Provincial Synod, as the *Biſhop* a Dioceſan one; and that the *Archbiſhop* has Canonical Authority over all the *Biſhops* of his Province, as the *Biſhop* over the Prieſts in his Dioceſe.

Bishop's-Court, an *Eccleſiaſtical Court* held in the Cathedral of each Dioceſe; the Judge whereof is the *Biſhop's Chancellor*, antiently call'd *Eccleſiaſticus*, and *Eccleſiæ Cauſidicus*, the Church-Lawyer; who judges by the Civil and Canon Law; and, if the Dioceſe be large, has his Commiſſaries in remote Parts, who hold what they call Conſiſtory Courts, for Matters limited to him by his Commiſſion.

BISMUTH, a Mineral Body, half Metallick; compos'd of the firſt Matter of Tin, while yet imperfect; and found in Tin Mines. Its Subſtance is hard, heavy, ſharp, and brittle, of a large Grain, poliſh'd, white, and ſhining. 'Tis alſo call'd *Tin of Glaſs*; becauſe, when broke, it ſhews a vaſt Number of little poliſh'd Subſtances like Glaſs: 'Tis alſo call'd *Marchaſite*, by way of Excellence, becauſe ſurpaſſing all others in Whiteneſs and Beauty. It contains an Arſenical Salt, very dangerous to take inwardly. Its Precipitate is a very white Magiſtery, which is mix'd with Waters and Pomatums to make a Fucus to beautify the Complexion, and preſerve the Skin. There are alſo Flowers prepar'd from it, which take away Spots in the Face; whence 'tis otherwiſe call'd *Blanc de Perle*. See the Proceſs in *Charras*.

*Alonſo Barba* ſays, there has been lately found a Mine of *Biſmuth* in *Bohemia*; and ranks it among the Metals: But *Biſmuth* is properly the Regulus of the Stone call'd *Cobalt*; whence is prepar'd *Arſenick*, *Lapis Lazuli*, and *Biſmuth*. M. *Stahl*, a *German* Phyſician, gives us its Preparation.

There is alſo an *Artificial Biſmuth*, which is that ordinarily uſed, made by reducing Tin into thin *Laminæ*, or Plates, and cementing them by a Mixture of *white Tartar*, *Salt-Petre*, and *Arſenick*, ſtratified in a Crucible over a naked Fire. The ſame is alſo made of a Stone call'd *Zin*, uſing Lead inſtead of Tin, and a little Calamine Stone.

BISQUET, a Confectioner's Preparation of fine Flower, Eggs, and Sugar, with Anniſeeds and Citron Peel, baked in the Oven in Tin or Paper Moulds.

Sea-Bisquet, a *Bread* much dried, by paſſing the Oven twice, to make it keep: For long Voyages they bake it four times, and prepare it ſix Months before the Embarkment. The Word comes from the *Latin bis*, and the *French cuit*, q. d. *twice baked*.

BISSECTION, in Geometry, the Diviſion of any Quantity into two equal Parts; the ſame with *Bipartition*: Thus, to *biſſect* any Line, is to divide it into two equal Parts.

BISSEXTILE, or *Leap-Year*, in Chronology, a Year conſiſting of 366 Days, happening once each four Years, by reaſon of the Addition of a Day in the Month of *February*, to recover the ſix Hours which the Sun ſpends in his Courſe each Year, beyond the 365 Days, ordinarily allow'd for it. The Day thus added, is alſo call'd *Biſſextile*; *Cæſar* having appointed it to be the next after the 25th of *March*, which among them was the 7th of the *Calends* of *April*. Thus the 6th of the *Calends* of *March* is this Year reckon'd twice over; whence the *Intercalary Day*, and the *Year* when it happens, are both call'd by the Name *Biſſextile*.

However, the Aſtronomers concern'd in reforming the *Calendar*, by Order of Pope *Gregory* XIII. obſerving that the *Biſſextile* in four Years added 40 Minutes more than the Sun ſpent in returning to the ſame Point of the *Zodiack*, and computing that theſe ſupernumerary Minutes in 133 Years wou'd form a Day; to prevent any Changes being thus inſenſibly introduc'd in the Seaſons, 'twas appointed, that in the Courſe of 400 Years, there ſhou'd be three *Biſſextiles* retrench'd: Accordingly, in the Year 1700, there was no *Biſſextile*, for that reaſon. By the Statute *de Anno Biſſextili*, 21. *Hen.* III. To prevent Miſunderſtandings, the *Intercalary Day*, and that next before it, are to be accounted as one Day. See Year.

BISTER, or Bistre, among Painters, a Colour made of Chimney-Soot boil'd, and afterwards diluted with Water, ſerving to waſh their Deſigns. Inſtead of this ſome uſe the Strokes of a Pen, ſome *Indian* Ink, others a black Stone, &c.

BIT, an eſſential Part of a *Bridle*; its Form and Uſe well known; its Parts and Kinds various.

For the ſeveral Parts of a *Bit*, thoſe of a *Snaffle* or *Curb-Bit*, are, the *Mouth-Piece*, the *Cheeks* and *Eyes*, *Guard* of the *Cheek*, *Head* of the *Cheeks*, the *Port*, the *Welts*, the *Campanel* or *Curb* and *Hook*, the *Boſſes*, the *Bolſters* and *Rabbets*, the *Water-Chains*, the *Side-Bolts*, *Bolts* and *Rings*, *Kirbles* of the *Bit* or *Curb*, *Trench*, *Top-roll*, *Flap* and *Jeive*.

The Kinds of *Bits* are, 1. The *Muſroll*, *Snaffle*, or *Watering Bit*. 2. The *Cannon Mouth*. 3. The *Cannon* with a faſt Mouth all of a Piece, only knee'd in the middle, to form a Liberty or Space for the Tongue. 4. The *Cannon Mouth*, with the Liberty in form of a Pigeon's Neck. 5. The *Cannon* with a Port Mouth and an Upſet, or mounting Liberty. 6. The *Scotch Mouth* with an Upſet. 7. The *Cannon Mouth* with a Liberty, after M. *Pignatel's* manner. 8. The *Maſticadour*, or *Slavering Bit*. 9. The *Cats Foot Bit*. 10. The *Baſtonet Bit*, &c.

BITE of a mad Dog. See Hydrophobia.

Bite of a Viper. See Viper.

Bite of a Tarantula. See Tarantula.

BITTERNESS, a particular Savour or Senſation, ſuppos'd to reſult from this, that all the Particles of the bitter Body are broken, blunted, and diminiſh'd, ſo as none of 'em remain long and rigid; which is confirm'd from this, that Foods burnt, and their Particles much comminuted and broken by the Fire, become *bitter*.

BITUMEN, an inflammable Matter, fat and unctuous. Naturaliſts diſtinguiſh three Kinds of *Bitumens*, hard, ſoft, and liquid or oily; and each of theſe they ſubdivide into ſeveral others. Among the hard *Bitumens* are rank'd *yellow Amber*, (ſome add *Ambergreeſe*) *Jet*, *Aſphaltum* or *Bitumen of Judea*, *Piſaſphaltum*, *Pit-Coal*, *Black-Stone*, and *Sulphurs*. The ſoft are, *Maltha*, *Bitumen of Colao*, *of Sirnam*, and *Copal*. Laſtly, The *Naphta* of *Italy*, and *Petroleum*, are rank'd among the liquid *Bitumens*.

Of theſe *Bitumens* ſome are foſſil, others are found floating on the Surface of certain Lakes, and others ſpring from the Earth like Fountains. Some *Bitumens* are ſo hard, that they are uſed in Forges, inſtead of Coals; others ſo glutinous, that they ſerve inſtead of Cement, or Mortar in Buildings; of which kind it was, that the famous Walls of *Babylon* were built: and others ſo liquid, that they are burnt in Lamps inſtead of Oil. The *Bitumen* in moſt Eſteem is that of *Judea*. See Asphaltum; and the other *Bitumens* under their proper Heads. *Strabo* derives the Word from Πίσσα, Pitch.

BIVALVE, a Term uſed by the Writers of Natural Hiſtory, for ſuch Shell-Fiſh as have two Shells, as Cockles, Muſcles, Oiſters, &c. which are ſaid to be of the *Bivalve-kind*; and alſo for the *Siliqua*, or Seed-Pods of ſuch Plants as open all their whole Length to diſcharge their Seeds; ſuch as Peaſe, Beans, &c. for thoſe the Botaniſts ſay have a *Bivalve Siliqua*.

BIVENTER, in Anatomy, the ſixth Muſcle of the Jaw, and laſt of thoſe ſerving to open it: 'Tis call'd *Biventer*, or *Digaſtricus*, as having two Bellies for its two Extremities, and a Tendon in the middle. It takes its Origin from a Sciſſure between the *Occipital Bone* and the *Maſtoidal Apophiſes*, whence paſſing its Tendon thro a Hole in the *Stylohyoideus* and an *Annular Ligament* of the *Os Hyoides*, there ariſe ſome Fibres which join its ſecond Belly; whence going fleſhy, and returning upwards, it is inſerted into the middle of the inferiour Part of the lower Jaw. By this Contrivance it is enabled to draw the Jaw downwards.

BLACK, ſomething opake and porous, that imbibes all the Light falling on it, reflects none, and therefore exhibits no Colour. See Blackness. There are various Kinds of *Blacks* which paſs in Commerce, *viz. Dyers Black*, *German Black*, *Ivory Black*, *Spaniſh Black*, *Lamp-Black*, &c.

*Dyers* Black, is one of the five Simple and Mother Colours uſed in *Dying*. 'Tis made differently, according to the different Quality and Value of the Stuffs to be *dyed*. For Broad-Cloths, fine Ratines, and Druggets, &c. they uſe Paſtel, or Woad, and Indigo; the Goodneſs of the Colour con-

fiſts in there not being above ſix Pounds of Indigo to a Ball of Paſtel, when the Paſtel begins to caſt its blue Flower; and in its not being heated for Uſe above twice. Thus blued, the Stuff is boil'd with Alum, or Tartar, then madder'd; and, laſtly, the *Black* given with Galls, Copperas, and Sumac: To bind it, and prevent its ſmeering in Uſe, the Stuffs are well ſcower'd in the Fulling Mill, when white, and well waſh'd afterwards. For Stuffs of leſs Value, 'tis ſufficient they be well *blued* with Paſtel, and *black'd* with Galls and Copperas: But no Stuff can be regularly *dyed* from *White* into *Black*, without paſſing thro the intermediate *Blue*. Yet there is a Colour call'd *cold Black*, or *Jeſuits Black*, prepar'd of the ſame Ingredients as the former, but without being firſt *dyed Blue*. Here the Drugs are diſſolv'd in Water that had boil'd four Hours, and ſtood to cool till the Hand wou'd bear it; then the Stuff dipp'd in it, and again taken out ſix or eight times. Some prefer this *Black* to the other, but on weak grounds. This Method of *Dying Black* is ſaid to have been invented by the *Jeſuits*, and to be ſtill practis'd in their Houſes, where they retain Numbers of *Dyers*. See GRAY. See alſo DYING.

*German* or *Frankfort* BLACK is made of the Lees of Wine burnt, then waſh'd in Water, and ground in Mills for that Purpoſe, together with Ivory or Peach-Stones burnt. This *Black* makes the principal Ingredient in the Rolling-Preſs-Printers Ink. It is ordinarily brought from *Frankfort*, *Mentz*, or *Strasbourg*, either in Lumps, or Pouder. That made in *France* is leſs valued than that of *Germany*, by reaſon of the Difference between the Lees of Wine uſed in the one and the other; tho ſome prefer that made at *Paris* to that of *Frankfort*.

*Ivory* or *Velvet* BLACK, is made of *Ivory* burnt, ordinarily, between two Crucibles well luted; which being, thus, render'd perfectly black, and in Scales, is ground in Water, and made into Troches, or little Cakes, us'd by the Painters; as alſo by the Jewellers, to *blacken* the Bottom or Ground of their Collets, wherein they ſet their Diamonds to give 'em their Teint or Colour.

*Spaniſh* BLACK, ſo call'd becauſe firſt invented by the *Spaniards*, and moſt of it brought from them, is no other than burnt Cork; uſed in various Works, particularly among Painters.

*Lamp*-BLACK, or *Smoke*-BLACK, the Smoke of Roſin, prepar'd by melting and purifying the Roſin in Iron Veſſels; then ſetting fire to it under a Chimney, or other Place made for the Purpoſe, and lined a-top with Sheep-Skins, or thick Linen Cloth, to receive the Vapour, or Smoke, which is the *Black*: In this manner they prepare vaſt Quantities of it at *Paris*. In *England* it is, ordinarily, prepar'd from the reſinous Parts of Woods, burnt under a kind of Tent, which receives it: It is uſed on various Occaſions, particularly in the Printers Ink; for which it is mix'd with Oils of Turpentine and Linſeed, all boil'd together. It muſt be obſerv'd, that this *Black* takes fire very readily, and, when on fire, is very difficultly extinguiſh'd: The beſt Method of putting it out is, with wet Linen, Hay, or Straw; for Water alone won't do it.

*Earth*-BLACK is a kind of Coal found in the Ground, which, well pounded, is uſed by the Painters *in Freſco*.

There is alſo a kind of BLACK made of Silver and Lead, uſed to fill up the Strokes and Cavities of Things engrav'd.

BLACKNESS, the Quality of a black Body, or a Colour ariſing from ſuch a Texture and Situation of the Superficial Parts of the Body, as does, as it were, deaden, or rather abſorb, the Light falling on it, without reflecting any, or very little, of it to the Eye. In which Senſe *Blackneſs* ſtands directly oppoſed to *Whiteneſs*; which conſiſts in ſuch a Texture of Parts, as indifferently reflects all the Rays thrown upon it, of what Colour ſoever they be. Sir *Iſaac Newton*, in his *Opticks*, ſhews, that for the Production of *black* Colours, the Corpuſcles muſt be leſs than thoſe which exhibit any other Colours; becauſe, where the Sizes of the component Particles are greater, there is too much Light reflected to conſtitute this Colour; but, if there be a little leſs than is requiſite to reflect the white, and very faint blue of the firſt Order, they will reflect ſo little Light, as to appear intenſely black; and yet may, perhaps, reflect it variouſly to and fro within them ſo long, till it happen to be ſtifled and loſt; by which means they will appear *black*, in all Poſitions of the Eye, without any Tranſparency. And from hence it appears why Fire, and Putrefaction, by dividing the Particles of Subſtances, turn them *black*; why ſmall Quantities of *black* Subſtances impart their Colours very freely, and intenſely, to other Subſtances to which they are applied; the minute Particles of theſe, by reaſon of their very great Number, eaſily over-ſpreading the groſs Particles of others: Hence alſo appears, why Glaſs ground very elaborately with Sand, on a Copper-Plate, till it be well poliſh'd, makes the Sand, together with what by rubbing is worn off from the Glaſs and Copper, become very *black*; and why *black* Subſtances do, ſooneſt of all others, become hot in the Sun's Light, and burn, (which Effect may proceed partly from the Multitude of Refractions in a little room, and partly from the eaſy Commotion of ſo very ſmall Particles;) and alſo why *Blacks* are uſually a little inclined towards a bluiſh Colour: for, that they are ſo, may be ſeen by illuminating white Paper, by Light reflecting from *black* Subſtances, where the Paper will uſually appear of a bluiſh white; and the Reaſon is, that *black* borders on the obſcure blue of the firſt Order of Colours; and therefore, reflects more Rays of that Colour than of any other. It is neceſſary alſo, to the Production of *Blackneſs* in any Bodies, that the Rays be ſtopp'd, retain'd, and loſt in them; and theſe conceive Heat (by means of a Burning-Glaſs, *&c.*) more eaſily than other Bodies; becauſe the Light which falls upon them is not reflected outwards, but enters the Bodies, and is often reflected and refracted in them, till it be ſtifled and loſt. See LIGHT and COLOUR.

BLACK ROD, or Gentleman-Uſher of the *Black Rod*, is Chief Gentleman-Uſher to the King: He is call'd in the *Black* Book, *Lator Virgæ Nigræ & Hoſtiarius*, and elſewhere *Virgi-Bajulus*. His Duty is to bear the *Rod* before the King at the Feaſt of St. *George* at *Windſor*: He has alſo the keeping of the Chapter-Houſe Door, when a Chapter of the Order of the *Garter* is ſitting; and, in time of Parliament, attends the Houſe of Peers. His Badge is a *Black Rod*, with a Lion Gold a-top. This *Rod* has the Authority of a Mace. The Office was formerly held by Patent.

BLACKS, or NEGRO's, a Nation of People, ſo call'd from the Colour of their Skin: For the Reaſon of their Colour, and the Commerce made with 'em, ſee NEGRO.

BLADDER, in Anatomy, a thin expanded membranous Body found in ſeveral Parts of an Animal, ſerving as a Receptacle of ſome Juice, or of ſome liquid Excrement; from whence it takes various Denominations, as *Urinary-Bladder*, *Gall-Bladder*, &c.

BLADDER, by way of Eminence, is a large Veſſel, which ſerves as a Receptacle of the Urine of Animals, after its Secretion from the Blood in the Kidneys. It is ſituated between the Duplicature of the *Peritonæum*, and the lower Part of the *Abdomen*, between the *Os Sacrum* and the *Os Pubis*, above the ſtrait Gut in Men, and in the Neck of the Womb in Women. It is tied to the Navel by the *Urachus* degenerated into a Ligament, its Sides to the *Umbilical Arteries*, and its Neck to the *Inteſtinum Rectum* in Women. It is compos'd of three Coats; the firſt a Covering of the *Peritonæum*; the ſecond is compos'd of Muſcular Fibres, which run irregularly ſeveral ways; and the third, which is full of Wrinkles for facilitating its Dilatation, is both glandulous and nervous. Its Glands ſeparate a viſcous and ſlimy Matter, which defends it from the Acrimony of the Salts in the Urine: Around its Neck there goes a ſmall Muſcle, call'd *Sphincter Veſicæ*, which contracts the Orifice of the *Bladder*, to prevent the Urine from dripping involuntarily, or till it thruſt open the Paſſage, by the Contraction of the ſecond Coat of the Blader, which is therefore call'd *Detruſor Urinæ*. The *Bladder* has Blood-Veſſels from the *Hypogaſtricks*; and Nerves from the *Intercoſtals*. See URINE, *&c.*

BLAIN, a Diſtemper incident to Beaſts, conſiſting in a Bladder growing on the Root of the Tongue againſt the Wind-Pipe, which at length ſwelling, ſtops the Wind. It comes by great chafing, and heating of the Stomach; whereby, as ſome judge, it ſtill grows, and increaſeth by more Heat.

BLANCHING, the Art or Manner of *Bleaching*, or *Whitening*. See BLEACHING.

BLANCHING *of Wax*. See WAX.

BLANCHING, in Coinage; the Preparation of the Pieces, given 'em before the ſtriking, to give 'em the Luſtre and Brillant. The *Blanching*, as now practis'd, is perform'd by heating the Pieces in a kind of Peel, with a Wood Fire, in manner of a Reverberatory, ſo as the Flame paſſes over the Peel. The Pieces being ſufficiently heated, and cooled again, are put ſucceſſively to boil in two other Peels of Copper, wherein are Aqua fortis, common Salt, and Tartar of *Montpellier*; when they have been well drain'd off this firſt Water in a Copper Sieve, they throw Sand and freſh Water over 'em; and when dry, they are well rubb'd.

The antient Method of *Blanching* was, by putting the Pieces, after heating, in a large Veſſel of common Water, and ſome Ounces of Aqua fortis; but in different Proportions for Gold and Silver. This Method is now diſus'd, partly by reaſon of its Expenſiveneſs, and partly becauſe it diminiſhes the Weight of the Metal. See COINING.

BLANK VERSE. See VERSE and RHYME.

BLATA BIZANTIA, or *Unguis Odoratus*, the upper Part of a Shell call'd by the *Latins Conchylium*. Theſe Shells are of different Magnitudes; but the Figure, in all, is that of a Claw of a Wild Beaſt; whence its ſecond Name; the firſt being occaſion'd by its being uſually brought from *Conſtantinople*, the antient *Bizantium*. The *Blata Bizan-*

*tia* is very thin, of a brown Colour, burns readily; and in burning ſmells ill. Its Uſe in Phyſick is the ſame with that of *Caſtoreum*, viz. for Vapours. Inſtead of the *Blata Bizantia*, which is very rare, is frequently ſubſtituted another kind of Shell, of leſs Virtue, call'd *Solen*.

BLAZE, *in the Manege*. See STAR.

BLAZING-STAR. See COMET.

BLAZONING, in Heraldry, the Art of Deciphering the Arms, or Armories of Noble Houſes, &c. or of Naming all the Parts in their proper and particular Terms. There is this Difference between *Arms* and *Blazon*; that the firſt are the Device or Figures bore on the Coat, or Shield; and *Blazon*, the Deſcription thereof in Words. See ARMS and DEVICE. In *Blazoning* a Coat, 'tis a ſpecial Rule, to begin with the *Field* firſt, and then proceed to the *Blazon* of the *Charge*. If the *Field* be taken up with ſeveral things, whether of one or various kinds, that which lies next and immediately on the *Field*, muſt be firſt named; then thoſe more remote. After the Metal-Colour of the *Field* is named, the Manner of the Diviſion of the *Eſcutcheon* by Line, whether downright, or bend-ways, muſt be expreſs'd. After the *Field* in Colour, and the *Line* and *Charge*, if there be more Parts of the *Field* poſſeſs'd by the *Charge* than one, the principal Part of the *Field* muſt be named firſt. The Arms of all Emperors, Kings, and Princes, are *blazon'd* by Planets; thoſe of the Nobility by precious Stones; and Baronets, Knights, Eſquires, and Gentlemens Coats, by Metal and Colour. It muſt farther be obſerv'd, that Metal muſt never be put on Metal, nor Colour on Colour; for, in ſo doing, the Arms are falſe. It may be added, that when Lions ſtand upright in a Coat, they are call'd *Rampant*; when walking forward, *Paſſant*; when they look you in the Face, *Paſſant Guardant*: In other Poſtures they have other Terms, as *Saliant*, *Regardant*, &c. which ſee. Wolves and Bears are term'd after the manner of Lions; Gryphons (inſtead of *Rampant* and *Saliant*) are term'd *Sergreant*; Lions, Gryphons, and Eagles, are alſo *Langued* and *Armed*; Swans, *Membred*; Hawks, *Jeſs'd* and *Bell'd*; Cocks, *Armed*, *Creſs'd*, and *Jowlop'd*. And note, All theſe Things are to be expreſs'd in *Blazon*, when met with, *viz.* when the Tongues, Bills, and Claws, are found of different Colours from the Body: When a living Creature proceeds from the Bottom of the *Ordinary*, 'tis term'd *Iſſuant*; when over two Colours, *Jeſſant*; if it proceed from the middle of any *Ordinary*, or common *Charge*, *Naiſſant*.

There are various Etymologies of the Word *Blazon*: The moſt probable brings it from the *German*, *blaeſen*, to blow a Horn; it being the Cuſtom of thoſe who preſented themſelves at the Liſts in the antient Tournaments, *to blow a Horn*, to notify their coming. After this the Heralds ſounded their Trumpets, and then *blazon'd* the Arms of thoſe who preſented themſelves; deſcribing them aloud, and ſometimes expatiating on the Praiſes and high Exploits of the Perſons who bore them.

BLEACHING, or BLANCHING, the Art and Manner of *Whitening* Linens, Stuffs, and Silks, &c. The Proceſs in each is as follows.

*For bleaching Silk*. While 'tis yet raw, 'tis put in a thin Linen Bag, and thrown into a Veſſel of boiling River-Water, wherein Soap has been diſſolv'd, then boil'd two or three Hours, and the Bag being turn'd ſeveral times, taken out, beaten, and waſh'd in cold Water, ſlightly wrung out, and thrown into a Veſſel of cold Water mix'd with Soap and a little Indigo: The Indigo gives it the bluiſh Caſt always obſerv'd in white Silks. After taking out of the ſecond Veſſel, 'tis wrung out, and all the Water and Soap expreſs'd, ſhook out to untwiſt and ſeparate the Threads, and hung up in the Air, in a kind of Stove made on purpoſe, wherein is burnt Sulphur; the Vapour whereof gives the laſt Degree of *Whiteneſs* to the Silk. See SILK.

*To bleach Woollen Stuffs*. There are three Manners of *Whitening* Stuffs; the firſt with Water and Soap; the ſecond with Vapour of Sulphur; the third with Chalk, Indigo, and Vapour of Sulphur. For the firſt, the Stuffs being taken from the Fulling-Mill, are put into ſoap'd Water, pretty hot, and work'd a-freſh by Force of Arms over a Bench, which finiſhes the *Whitening* the Fulling-Mill had begun; and laſtly, waſh'd out in clear Water and dried: This is call'd the Natural Way of *Bleaching*. In the ſecond Method, they begin with waſhing the Stuff in River-Water; 'tis then laid to dry on Poles, and, when half dry, ſpread out in a kind of Stove well cloſed, wherein is burnt Sulphur; the Vapour whereof diffuſing itſelf, ſticks by little and little over all the Stuff, and gives it a fine *Whitening*: this is commonly call'd *Bleaching* by the Flower. In the third Method, after the Stuffs have been waſh'd, they are thrown into cold Water, impregnated with Chalk and Indigo; after they have been well agitated here, they are waſh'd a-freſh in Eldar Water, half dried on Poles, and ſpread in a Stove to receive the Vapour of the Sulphur; which finiſhes their *Bleaching*. This is not eſteem'd the beſt Method of *Bleaching*, tho agreeable enough to the Sight. It may be here obſerv'd, that when a Stuff has once receiv'd the Steam of Sulphur, 'twill ſcarce receive any beautiful Dye, but *Black* or *Blue*.

*To bleach fine Linens*. After taking 'em from the Loom, while yet raw, they are ſteep'd a Day in clear Water, waſh'd out and clear'd of their Filth, and thrown into a Backing Tub, fill'd with a cold Lixivium, or Lie. When taken out of the Lie, they are waſh'd in clear Water, ſpread in a Meadow and water'd from time to time, with Water from little Dikes, or Canals, along the Ground, by means of Scoops, or hollow Peels of Wood, call'd by the *Dutch*, who pretend to be the Inventors of 'em, *Gieter*. After lying a certain time on the Ground, they are paſs'd thro a new Lie, pour'd on, hot; and again waſh'd in clear Water, and laid a ſecond Time on the Ground, and every thing repeated as before; then paſs'd thro a ſoft gentle Lie, to diſpoſe 'em to reſume the Softneſs which the other harſher Lies had taken from 'em, waſh'd in clear Water, ſoap'd with black Soap, and that Soap again waſh'd out in clear Water: they are then ſteep'd in Cow's Milk, the Cream firſt skimm'd off, which finiſhes their *Whitening*; and Scowering gives 'em a Softneſs, and makes 'em caſt a little Nap: When taken out of the Milk, they are waſh'd in clear Water for the laſt time. After all this Proceſs, they give the Linen its firſt Blue, by paſſing it thro a Water wherein a little Starch, Smalt, and *Dutch* Lapis have been ſteep'd. Laſtly, the proper Stiffneſs and Luſtre is given with Starch, pale Smalt, and other Gums, the Quantity and Quality whereof may be adjuſted according to occaſion. In fine Weather, the whole Proceſs of *Bleaching* is atchiev'd in a Month's Time; in ill Weather, it takes up ſix Weeks, or more.

*To bleach coarſe Linens*. They are taken from the Loom, and laid in wooden Frames, full of cold Water; where, by means of wooden Hammers, work'd by a Water-Mill, they are beat ſo, as inſenſibly to waſh and purge themſelves of their Filth; then ſpread on the Ground, where the Dew which they receive for eight Days, takes off more of their Rawneſs; then put in a kind of wooden Tubs, or Pans, with a hot Lie over 'em. Thus lixiviated, they are again purg'd in the Mill, laid a-freſh on the Ground, and, after eight Days more, paſs'd thro a ſecond Lie, and all things repeated, till ſuch time as they have acquir'd their juſt Degree of *Whiteneſs*. For *Bleaching* of Hair, ſee HAIR. For *Bleaching* of Wax, ſee WAX, &c.

BLEEDING, an Operation in Chirurgery, conſiſting in the Opening of a Vein with a Lancet, for the evacuating of corrupted or redundant *Blood*. *Bleeding* is the ſureſt and moſt efficacious Species of Evacuants. It was very rare among the Antients, but is frequent among the Moderns. *Oſtienſis* obſerves, that at *Rome* Perſons of Quality are not allow'd *to be let blood*, even in their moſt dangerous Diſeaſes, without Leave from the Pope. The *Hippopatamus* is ſaid to have firſt taught Men the Uſe of *Bleeding*: For that Animal being overcharg'd with *Blood*, rubs herſelf againſt a pointed Bulruſh, and opens a Vein; till finding her Plenitude diſcharged, ſhe welters in the Mire to ſtanch the *Blood* again. See STIPTICK: See alſo PHLEBOTOMY.

BLEMISH, a Term in Hunting, when the Hounds, or Beagles, finding where the Chace has been, make a Proffer to enter, but return.

BLEMMYES, People ſuppos'd to be without Heads, and to have their Eyes and Mouth in their Breaſt; mention'd by *P. Mela*, and other antient Authors. They are ſuppos'd to have inhabited Part of *Æthiopia*. Some Authors derive the Fable of the *Blemmyes* from this, that their Heads were hid between their Shoulders, by hoiſting thoſe up to an extravagant Height. *Bochart* derives the Word *Blemmyes* from בלי, which implies a Negation, and מוכו, *Brain*: In which Senſe the *Blemmyes* muſt have been People without Brains.

BLIGHT, or BLAST, a Diſeaſe incident to Plants, and affecting 'em variouſly; the whole Plant ſometimes periſhing of it, and ſometimes only the Leaves, which will be ſcorch'd and ſhrivel'd up, the reſt remaining green and flouriſhing. This Diſeaſe ſeldom happens, but upon the blowing of ſharp Eaſtern Winds, which are moſt frequent with us about *March*; whence that Month proves, of all others, the moſt fatal to Plants: From this Circumſtance, ſome imagine the Colds that then reign being exaſperated by the Eaſtern Winds, effect *Blights*; but Mr. *Bradley* furniſhes us with a better Account: for, on this Principle, it were hard to ſay, why one Plant, or one Part of a Plant, ſhould be *blighted* more than another. He obſerves, then, that Caterpillars generally attend thoſe Winds, and that they infect ſome one kind of Tree more than another, and even ſome particular Branches more than others; and thence infers, either that the Eggs of thoſe Inſects, or the Inſects themſelves, are brought to us by the Eaſterly Winds; or that the Temperature of the Air, when the Eaſtern Winds blow, is neceſſary to hatch thoſe Creatures, ſuppoſing the Eggs to have been already laid on the infected Parts. Now, each of

theſe Cauſes ſeem to have their Effect: Thoſe *Blights* attended with large Worms or Caterpillars, ſeem hatch'd by the Eaſtern Winds; and thoſe others, which only produce the ſmall Inſects, that occaſion the Curling of the Leaves of Trees, may proceed from Swarms of 'em, either ready hatch'd, or in the Egg, brought with the Wind. The Coldneſs of thoſe Winds he ſhews to be no Objection againſt their being fitted to hatch Inſects; different Inſects requiring vaſtly different degrees of Heat. To this he ſhews, that every Inſect has its proper Plant, or Tribe of Plants, which it naturally requires for its Nouriſhment, and will feed on no other; and in which, therefore, it lays its Eggs: 'Tis no wonder then, that one kind of Tree ſhould be infected, and all the reſt eſcape. That Wind, *v. g.* which brings, or hatches, the Caterpillars on the Apple-Tree, will not infect the Pear, Plum, or Cherry; becauſe, were the Shoals of Inſects natural to the Apple, to light on thoſe other Trees mention'd, they would either want their proper Matrix to hatch in; or, were they ready hatch'd, would periſh for want of proper Food. So that 'tis morally impoſſible, all kinds of Plants ſhould be *blighted* at the ſame time, unleſs the Eggs of every kind of Inſect natural to each Tree, could be brought at one time with the Wind; or, that an Eaſterly Wind cou'd contain in it at once, as many different Degrees of Cold, or Heat, as wou'd be requir'd to hatch and maintain each different Claſs of Inſects. Nor is it any Objection, that in *Blights* there are not frequently any Animals immediately perceivable. By the Microſcope, we diſcover Animalcules a Million of times leſs than the ſmalleſt which comes under ordinary Notice: Theſe, the gentleſt Air may be conceiv'd capable of blowing from Place to Place; ſo that 'tis no wonder if they be brought to us from the remoteſt Regions, eſpecially the North-Eaſt Parts of *Great Tartary*, &c. where the Cold is intenſe enough to give 'em Life; and from whence there is not Sea enough, by the Warmth and Saltneſs of whoſe Vapours they may be ſuffocated. Thoſe brought from the North-Eaſt Parts of *America*, may be probably deſtroy'd by paſſing the vaſt *Atlantick* Ocean, which may be the reaſon why the North-Weſt Wind is not ſo infectious.

What confirms this Doctrine of *Blights* is, that the more knowing among Country-People, while the Eaſtern Winds blow, uſe to guard againſt *Blites* by burning Heaps of Weeds, Chaff, and other Combuſtibles, on the Wind-ſide of their Orchards, that the Smoke may either poiſon the Inſects, or their Eggs, as they paſs along. It may be added, that theſe Fires are often made with good Succeſs, to deſtroy the Caterpillars, even after they were hatch'd, and had began to devour the Trees. Another Method of preſerving Trees from *Blights* is, by ſprinkling Pepper-Duſt; which, 'tis ſaid, is preſent Death to all Inſects, and even all Animals. Corn is liable to *Blights* like other ſorts of Grain. The *Blight* of Wheat, call'd *Smut*, is prevented by waſhing the Wheat in three or four Waters, ſtirring it well all the time, and skimming off the light Wheat, then ſteeping it 30 or 40 Hours in Water impregnated with Salt, with the Addition of ſome Alum, till it be capable of ſuſtaining a Body of twice the ſpecifick Gravity of an Egg; when taken out, ſome ſlack'd Lime is ſifted on it, to dry it fit for ſowing the next Day: Such a Proceſs ſecures the Grain from being infeſted with any kind of Vermine.

BLINDNESS, a Privation of the Senſation of Sight, ariſing from a total Depravation of the Organs thereof, or an involuntary Obſtruction of their Functions. The Cauſes of *Blindneſs* are various; proceeding from *Cataracts*, *Gutta Serena's*, &c. which ſee. *Aldrovandus* tells us of a Sculptor, who became *blind* at 20 Years of Age, and yet 10 Years after made a perfect Marble Statue of *Coſmo* II. *de Medicis*; and another of Clay, like *Urban* VIII. *Bartholin* tells us of a *blind* Sculptor in *Denmark*, who diſtinguiſh'd perfectly well, by mere Touch, not only all Kinds of Wood, but all the Colours; and *F. Grimaldi* gives us an Inſtance of the like kind, beſide the *blind* Organiſt lately living in *Paris*, who is ſaid to have done the ſame. *F. Zaha* gives abundance of Inſtances of the amazing Sagacity of *blind* People, in his *Oculus Artificialis*. The Author of the Embaſſy of D. *Garcia de Silva Figueroa* into *Perſia* tells us, that in ſeveral Parts of that Kingdom are found vaſt Numbers of *blind* People of all Ages, Sexes, and Conditions; by reaſon of little Flies which prick the Eyes and Lips, and enter the Noſtrils, carrying certain *Blindneſs* with 'em. See SIGHT.

The Chymiſts ſay their Veſſels are *blind*, which have no Opening but at one Side. See COECUM.

BLINDS, in Fortification, Defences made of Wood, or Branches interwoven and laid a-croſs between two Rows of Stakes about the Height of a Man, and four or five foot a-part. They are uſed particularly at the Heads of Trenches, when they are extended in Front towards the Glacis; ſerving to ſhelter the Workmen.

BLISTER. See VESICATORY.

BLOCK, a Piece of Marble, as it comes out of the Quarry, e'er it has aſſum'd any Form from the Workman's Hand. See MARBLE.

BLOCK, in Falconry, the Perch whereon the Bird of Prey is kept. This is to be cover'd with Cloth.

BLOCKADE, the Siege of a Place, intended to be taken by Famine; wherein all the Paſſages, and Avenues, are ſeiz'd, and ſhut up, ſo as no Supplies of Proviſion can be brought in. A *Blockade*, in ſtrictneſs, is no regular Siege; inaſmuch as there is not any Deſign of an Attack. A *Blockade* is form'd by the Cavalry. The Word is ſometimes alſo uſed at the Beginning of a Siege, when Forces are ſent to ſeize the principal Avenues, where the *Beſiegers* intend to fix their Quarters. It comes from the *German Blochus*, a wooden Houſe; or from the *Gauliſh Blocal*, Barricade: Others derive it from the *Latin buculare*, to ſhut up the Paſſage.

BLOCK-LAND was formerly that which we now call *Freehold Land*, or *Land* held by Charters; and it was by that Name diſtinguiſh'd from *Folk-land*, which was *Copy-hold Land*.

BLOCKS, a-board a Ship, are Pieces of Wood in which the Shivers are placed, and wherein the Running-Ropes go: Of theſe, ſome are ſingle, ſome double; and ſome have three, four, or five Shivers in them. They are named and diſtinguiſh'd by the Ropes they carry, and the Uſes they ſerve for.

BLOMARY, the firſt Forge in an Iron-Mill thro which the Metal paſſes after it is melted out of the Mine. See IRON.

BLOOD, a warm, red Liquor or Humour, circulating, by means of Arteries and Veins, through every Part of the Body. While in its Veſſels, it appears to the naked Eye, uniform and homogeneous; but, when let out and cold, ſeparates ſpontaneouſly into two different Parts; the one red and fibrous, which coheres into a Maſs, and is call'd the *Cruor*; the other thin and tranſparent, which retains its Fluidity when cold, and, being ſuppos'd ſpecifically heavier than the other, ſuſtains and bears it up, and is call'd the *Serum*. The Proportion of the *Serum* to the *Cruor*, Dr. *Drake* makes at a Medium, as one and an half to one: But Mr. *Boyle*, more accurately, makes the *Serum* $\frac{13}{25}$ of the whole *Blood*; and Dr. *Jurin* $\frac{15}{27}$ of the whole Weight, or $\frac{3}{4}$ of the Bulk.

By the Microſcope, the *Blood* appears to conſiſt of little red Globules, ſwimming in an aqueous Liquor, ſuppos'd to be the *Cruor* and *Serum*, that appear ſo diſtinct when let out. M. *Leewenhoeck* computes theſe Globules to be twenty five thouſand times ſmaller than the ſmalleſt Grains of Sand; and Dr. *Jurin* makes 'em ſtill leſs. Upon an accurate Menſuration, he found the Diameter of one, equal to $\frac{1}{3240}$ of an Inch, or $\frac{1}{324}$ of an ordinary Hair of the Head. Dr. *Drake* thinks, that tho the rapid Motion of the *Blood* may make the *Cruor* appear round, and perhaps, by a kind of Whirling, or Rotation, really convolute 'em; yet that their Figure is not naturally Globular, when let out, as appears from their Coheſion, or hanging together in a Lump; which ſpherical Bodies, touching in a very few Points, are not apt to do: But, on the contrary, this Property, he thinks, argues an Implication of their Fibres within one another: Which is confirm'd by what Dr. *Adams* obſerv'd by his Microſcope, *viz.* that immediately after Emiſſion of *Blood*, 'tis ſo far from exhibiting any red Globules, that it appears to conſiſt of infinite Branches, running in no certain Order, and variouſly colour'd.

By a Chymical Analyſis, the *Blood* is found to conſiſt of *Phlegm*, as the Baſis or Vehicle of Volatile Salts; of *Oil*, which, by ſome nice Examiners, has been found of two Kinds; and of *Caput mortuum*, or Earth; which, tho it may conſiſt of divers Subſtances, eſſentially different from each other, yet all we get out of it is a little fix'd Salt. From the beſt Experiments in this kind it appears, that in ſeven Ounces of human Blood, there are five Ounces two Drachms of Phlegm, three Drachms of a ſubtile, ſpirituous Oil, two Grains of a thicker Oil, two Drachms of Salt, and about two of Earth. Dr. *Jurin* adds, that the *Serum*, upon a Chymical Analyſis, exhibits a great deal of Phlegm, and of the other Principles a ſmall Quantity; and, on the contrary, the *Cruor* yields leſs Phlegm, but the other Principles much more copiouſly than the *Serum*. From which Data he concludes, that the Globules conſiſt of ſome Phlegm united with the Oil and Salts, and a ſmall Quantity of Earth; but in what Proportion, and how, and in what Parts they are form'd, &c. is not determin'd. Indeed, it muſt be conſider'd, that the Principles which the Chymiſts thus produce ſeparate, may poſſibly be much alter'd by the Fire. Thus, 'tis paſt doubt, the Oils drawn from the *Blood* by Fire, are vaſtly different from the natural Oil which circulates with the *Blood*. To which may be added, that the *Caput mortuum* remaining after Diſtillation, may, poſſibly, be a new Production, which had no Exiſtence under any Form reſembling that in the *Blood*.

The

The Source, or Origin, of the *Blocd* is the *Chyle*, which paſſing the *Lacteals*, is deliver'd into the *Subclavian*; where, mixing with the *Blood*, they proceed together to the *Right Ventricle* of the Heart; and there, being yet more intimately mix'd, they circulate together thro the whole Body; till after ſeveral Circulations, and Secretions, at the ſeveral Strainers of the Body, they are aſſimilated ſo as to make one uniform compound Maſs, which appears to be nothing elſe but *Chyle*, alter'd by the Artifice of Nature, and exalted into *Blood*; there being no Appearance of any thing extraneous mix'd with the Liquor circulating in the *Blood-Veſſels*, but *Chyle*; excepting what had been before ſeparated from it, for ſome particular Purpoſes, which being once ſerved, it is returned to it again: unleſs, perhaps, it may receive ſome Portion of Air in the Lungs. That there is Air mix'd in the *Blood*, and circulating with it, is paſt doubt; but, whether any more than was at firſt contain'd in the Food whereof the *Chyle* is form'd, is a Queſtion not yet decided. The principal Arguments urg'd for it, are, the Neceſſity of Reſpiration; which is accounted for on another Principle: and the florid Colour the *Blood* receives in the Lungs, and firſt ſhews in the *Vena Pulmonalis*; which is countenanced by an Experiment made with the red grumous Part of the *Blood* after Coagulation on *Blood-letting*; for, upon turning the Under-Surface, which was before black, upwards, and expoſing it to the Air, by its Contact therewith it acquires a florid Colour, like that of the *Blood* in the *Vena Pulmonalis*. But this Effect others account for from the extraordinary Agitation and Comminution of the Blood in the Lungs.

Indeed, Dr. *Keill* and ſome others go further. Mr. *Boyle* having examin'd the Specifick Gravity of *Blood*, and found that of the *Serum* to be greater than that of *Blood*, in the Proportion of 1190 to 1040, *i.e.* nearly as 8 to 7, it follow'd, that the *Cruor*, or *Blood-Globules*, were ſpecifically lighter than the *Serum*, and that in a great degree; which was further confirm'd by the *Globules* being ſuſtain'd in the *Serum*, both while circulating, and when let out. Hence it was conjectur'd, that theſe *Globules* were nothing elſe but thin Veſicles fill'd with a ſubtle aerial Subſtance: And this Opinion was confirm'd from its being obſerv'd, in viewing the Circulation by a Microſcope, that a *Blood-Globule*, in paſſing thro a very narrow Veſſel, wou'd change its Shape from a Globular to an Oval Form, and wou'd again recover its former Figure, as ſoon as it was got thro its narrow Paſſage; which Appearance was naturally enough aſcribed to the Elaſticity of the included Air: And, from this Conjecture, were accounted for a great Number of the Phænomena of the Animal Oeconomy, particularly Dr. *Keill*'s *Theory of Muſcular Motion*. But this Principle Dr. *Jurin* has examin'd, and appears to have overthrown. He made ſeveral Experiments, in ſome of which the *Cruor* before ſuſpended a-top of the *Serum*, by its Adheſion to the Sides of the Porringer being cut off, and put in another Veſſel of *Serum*, immediately ſunk. In others, the *Cruor* buoy'd up in the *Serum*, even without any Adheſion to the Sides of the Glaſs, and merely by the Bubbles of Air adhering to its Surface, upon including it in a Receiver, and exhauſting the Air, the Bubbles burſting, the *Cruor* wou'd ſink; whence he concludes, the *globular* Part of the *Blood* to be heavier than the *ſerous*: And, from other Experiments, he aſcertains the Proportion of the Gravity of *Blood* to that of *Serum*, to be as 1054 to 1030; whence the Quantity of the *Globules* being before fix'd at $\frac{1}{4}$ of the whole, the preciſe Gravity of the *Globules* beyond that of the *Serum* is eaſily determined. The *Blood-Globules*, therefore, are not *Veſicles* fill'd with Air, or any other fluid Subſtance lighter than *Serum*: Which is further confirm'd from this, that *Blood-Globules* are not found to dilate, or undergo any Alteration, in an exhauſted Receiver, when view'd thro a Microſcope; whereas, were they fill'd with any elaſtick Fluid, they would either burſt, or at leaſt dilate into 70 or 80 times the Space.

As to the Heat of the *Blood*, Authors are exceedingly divided about the Cauſe thereof: The Antients aſcrib'd it to a vital Flame, or innate Heat lodg'd in the Heart, and thence communicated to the *Blood*. Dr. *Willis* imagines a kind of Accenſion in the *Blood*; and thinks its Heat reſults from its being, as it were, ſet on fire, and perſevering in that State. Dr. *Henſhaw* ſolves it from an Ebullition conſequent on the Mixture of two Fluids, ſo diſſimilar as the *Chyle* and *Blood*. Others have recourſe to the chymical Principles of Alcali and Acid; others to the mutual Action of the Principles, or component Parts of he *Blood*, by means whereof an inteſtine Motion, and by that means an inteſtine Heat, or Incaleſcence, is effected. Dr. *Drake*, with more Reaſon, attributes the Heat of the *Blood* to the Spring of the Air inclos'd together with it in the Veſſels: For, Air being incloſed in the *Blood-Veſſels*, will endeavour to expand it ſelf, and, conſequently, if it have Force enough, will drive outwards the Parts of the Body that incloſe it; by which means it cauſes the *Blood* to beat againſt the Sides of the Veſſels, which having muſculous, contractile Coats, do in their Turns compreſs it again, and ſo cauſe a reciprocal *Æſtus* in the *Blood*, greater than the mere circulatory Motion cou'd; whence the Parts of the Solids, or containing Veſſels, being put into a conſtant Agitation, a Heat is produced in both, which they mutually impart to each other. *Laſtly*, Dr. *Boerhaave* accounts for it from the Action of the Heart, and the Re-action of the *Aorta*: For, the *Blood*, driven by the Heart obliquely againſt the Sides of the *Aorta*, preſſes them, and ſpends almoſt its whole Momentum againſt the Curvity thereof, and is, by its Figure and Elaſticity, preſs'd back again. Every Moment of Time, therefore, each Particle of *Blood* acquires a new Motion, a new Niſus and Rotation: Hence follows a perpetual Attrition, Attenuation, rubbing off of Angles, and a Similitude and Homogeneity of all the Parts; and hence the *Maſs* derives its Fluidity, Heat, Diviſion into Particles accommodated to all Veſſels, Preſſure into the Lateral Tubes, *&c.*

Nor is the Cauſe of the *Redneſs* of the *Blood* leſs obſcure: The Chymiſts account for it from the Exaltation of its Sulphur; others from the Mixture of ſaline and ſubacid Juices with ſulphureous; and others from the Colour of the Heart. The *French* Philoſophers attribute this *Redneſs* to the Smallneſs of the Size, and Roundneſs of the Figure of the Particles that compoſe the *Cruor*; notwithſtanding, that *red* being the Colour, of all others, leaſt refrangible, and the *Globular* Figure, of all others, moſt refrangible, that Figure ſeems, of all others, leaſt apt to produce this Colour. Others fetch the Colour of the *Blood* from the Impregnation of the Air in the Lungs: For, that Air is diſpos'd to produce ſuch an Effect, appears from the Experiment above. But others, more reſerv'd, extend this Effect of the Air no further, than to account for the Difference of *Redneſs* between the *Venal* and *Arterial Blood*; ſuppoſing, that after its Colour has been heighten'd, and render'd more florid by the Mixture of the Air in the Lungs, it retains it pretty well in the Arteries; but that circulating in the Body, and carried thro the Veins, the Air tranſpires, by degrees, thro the Pores of the Veſſels, and leaves the Liquor of a paler Dye. *Boerhaave* accounts for the Colour of the *Blood* from the ſame Cauſe as for its Heat, *viz.* from the Action of the Heart, and Re-action of the Sides of the *Aorta*. *Borelli*, to aſcertain the Cauſe of the *Redneſs*, took a Parcel of the *Cruor*, after it had ſeparated itſelf as far as ſpontaneouſly it wou'd from the *Serum*, and waſhing it frequently in Water, found it ſeparable into a viſcous, ſlippery Subſtance, conſiſting of white, or colourleſs Fibres, (which roſe to the Surface of the Water, and there gather'd into a Skim, or coherent Pellicle of a reticular Texture) and a deep *red* Pouder, which precipitated pretty plentifully to the Bottom. Hence it appears, that the *red* Colour of the *Blood* is imparted to it by *red* tinging Particles, as in the common Caſe of Dyers. By examining the *red* Precipitate apart, and finding which of the Elements it conſiſted chiefly of, a Man who wou'd reaſon about the Colour of the *Blood* from Principles of the Chymiſts, might carry that Matter nearer an Iſſue.

However, this *red* Colour, tho generally found in all terreſtrial Animals, is not yet abſolutely neceſſary and eſſential; there being whole Species which have their circulating *Liquor*, or *Blood*, white and limpid: To which Dr. *Drake* adds an Inſtance of a pure white *Blood*, like Milk, which he let out of the *Median* Vein of a Man, and which, when cold, did not ſeparate into a Craſſamentum, as the *red* uſually does; nor yield a Skim, or Cream, or turn ſour upon keeping, as Milk does. Dr. *Beal* gives us another Inſtance of the like kind; and Dr. *Lower* adds a third, of a Perſon who bled ſo long at the Noſe, till at laſt the Broth he drank, flow'd, little alter'd, that Way as *Blood*.

From the Principles, or conſtituent Parts of the *Blood* above-recited, variouſly combined and diſtributed by the Circulatory Motion impreſs'd by the Heart, (ſee CIRCULATION,) and by the Oſcillatory, expanſive Motion of the interſpers'd Air, and the Re-action of the Contractile Veſſels, flow all the Properties, and Operations of the *Blood*. From this Mixture of Elements, and their lax Compoſition, it becomes ſuſceptible of various Alterations and Impreſſions; the principal whereof are, *Coagulation*, which uſually attends it out of the Body, ſometimes in it, and ſcarce ever without an artificial Procurement, but always mortal: and *Diſſolution*, which is juſt oppoſite to the former, and conſiſts in ſuch a Comminution of the Fibrous Parts of the *Blood*, as indiſpoſes it for a Separation of the *Cruor* from the *Serum*. This is frequently the Conſequence of Malignant and Peſtilential Fevers, *&c.* and is likewiſe occaſion'd by ſome Kinds of Poiſons. Theſe two contrary Affections of the *Blood*, Dr. *Drake* aſcribes to the oppoſite Kinds of Salts, Acids, and Volatile Alcalies. For tho, adds he, in a human Body no ſincere Acid is found, nor cou'd it, indeed, be conſiſtent with Life; yet it may, and does often enter the *Blood* ſo compounded, as to bridle the Volatile, Alcalious Salt of the *Blood*, and ſo hinder the due Attenuation

and Mixture of the ſeveral Parts; as is the Caſe in a *Diabetes*, and, perhaps, in a *Chloroſis*, where the *Blood* is thick and torpid: On the other hand, where the Alcalious are too redundant, the *Blood* is render'd too thin and fluid, ſo that the Difference of its conſtituent Parts is loſt.

Another Affection frequent in the *Blood* is, a too great abundance of Oils, or ſaline Particles, by means whereof the active Parts of the *Blood* are too much clogg'd, and thoſe Parts which ſhould be ſecreted for peculiar Uſes in the Body, are detain'd; and perhaps the Solids, thro which it paſſes, too much lubricated, their Tone vitiated, ſhrunk, relax'd, *&c.* whence that Sluggiſhneſs and Inactivity of very fat People. The contrary Affection to this is, the defect of Oil in the *Blood*; which being, as it were, its Balſam, lines and preſerves the Parts from being fretted and corroded by the Salts, whoſe Spicula, or Edges, are, as it were, ſheathed in this ſoft Balſamick Matter, and their Attrition againſt the ſolid Parts prevented. This State of the *Blood* is uſually attended with a general Atrophy, and a Fretting and Corroſion, of ſome particular Parts; whence ſerous Defluxions, Apoſthumations, and Ulcers, eſpecially in the Lungs, whoſe tender, veſiculous Subſtance is more eaſily annoy'd than any other, by the Acrimony of the ſaline *Serum*.

There are other leſs conſiderable Affections of the *Blood*, reſulting from its Temperature and Mixture, with regard to the earthy Parts; the Conſequences of which are, the Stone, *&c.* and others that don't originally ſpring from any Dyſcraſy, or undue Mixture of the Elements, but from an Alteration in its Motion; ſuch as an Augmentation, or Diminution, of its progreſſive Motion, or the like Changes in its elaſtick Motion; whence ſupernatural Fermentations are induced: The Occaſions here may be various; ſometimes Fevers, and other Diſorders occaſion'd by Surfeits, Debauches, catching Cold, violent Exerciſe, *&c.* whence Atonias; at other times, ſome latent Malignity of the Air, whence Epidemical Diſeaſes.

The *Blood* thus variouſly compounded and circumſtantiated, viſits even the minuteſt Parts of the Body, by means of its Circulative Motion: The Cauſe and Courſe whereof ſee under CIRCULATION. In this Round, thoſe Particles of the *Blood* which conform beſt to the Figure and Structure of the Parts thro which they paſs, are appoſited to 'em, either for their Accretion, or for the Reparation of ſuch as the conſtant rapid Force of the *Blood* wears off.

About the Matter of Nutrition, or the Source whence the Nouriſhment is deriv'd, great Conteſts have aroſe among the Phyſicians and Anatomiſts; ſome contending for a nutritious Juice convey'd thro the Lungs; ſome ſetting up the *Lymph*, others the *Chyle*, ſome the *Serum* of the *Blood*, ſome the *Cruor*, as the univerſal *Succus alibilis*, &c. However, all theſe, except they who bring the Nutriment thro the Nerves, make the *Blood* the *Vehicle*, that conveys the Alimentary Parts thro the Body, whatſoever they be, and whenceſoever derived: But, perhaps it was on the ſcore of its Heterogeneity, or Compoſition of different Elements, that they did not make it ſelf the Nutritious Fluid, without reſtraining that Faculty to ſome particular Parts thereof. But Dr. *Drake* makes no Scruple to ſay, that the *Blood*, in its largeſt Acceptation, as conſiſting of all the Parts before deſcribed, is ſimple and homogeneous enough for the Purpoſes of Nutrition; and that every Part thereof contributes ſomething, either materially or inſtrumentally, to the Augmentation, or Reparation, of the Parts thro which it paſſes. See NUTRITION.

For the Manner in which the *Blood* is form'd, and how the *Chyle* is aſſimilated into *Blood*, ſee SANGUIFICATION.

The Quantity of *Blood* in a human Body, has been variouſly eſtimated by various Authors. Where note, That in Computations of this Kind, not only the Fluid contain'd in the Veins and Arteries, but alſo that in the Lymphæducts, Nerves, and the other Veſſels ſecreted from it, and return'd to it, are included. This Dr. *Lower* computes, in an ordinary Man, at about 20 Pounds; Dr. *Moulin* at about $\frac{1}{20}$ of the Weight of the whole Man, which may amount to about 8 or 10 Pounds: But Dr. *Keill*, from a more accurate Calculation, built on the Proportion of the Coats to the Veſſels, ſhews, that in a Body weighing 160 Pounds, 100 Pound thereof are *Blood*. Hence he propoſes a Method of determining the Velocity of the *Blood*: For, as each Ventricle of the Heart is capable of receiving an Ounce of *Blood*; being full in their *Diaſtole*, we may ſuppoſe they throw out about an Ounce each *Syſtole*. Now, the Heart beats about 4000 times in an Hour; therefore, every Hour 4000 Ounces, or 250 Pound of *Blood*, paſſes thro the Heart. So that a Quantity of *Blood* equal to the whole Maſs, paſſes in two Hours and a half: but, the Sum of the Sections of the Branches of an Artery being always greater than that of the Trunk, the Velocity of the *Blood* will conſtantly decreaſe as the Artery divides; and the Ratio of its greateſt to its leaſt Velocity in the Arteries may be thus found, as 5223 to 1. Again, the Veins are to the Arteries, as 441 to 324; wherefore, as the *Blood* returns to the Heart by the Veins, its Velocity will be ſtill further diminiſh'd, and may be found to move more ſlowly in the Veins than in the *Aorta*, 7116 times. Again, the farther the *Blood* goes off the Heart, the more ſlowly it returns. The Times of theſe are directly as the Spaces, and reciprocally as the Velocities; conſequently, ſome Parts may be ſome thouſands of times longer in returning to the Heart than others. From the Diameter of the *Aorta*, and the Quantity of *Blood* driven out every Pulſe, the Velocity of the *Blood* in the *Aorta* is eaſily determin'd, and found to be at the rate of 52 Feet in a Minute. But Dr. *Jurin* ſhews, that in any two Arteries tranſmitting equal Quantities of *Blood*, the *Momentum* of the *Blood* is greater in the Artery more remote from the Heart than in that nearer; and that its *Momentum* is greater in all the capillary Arteries together, than in the *Aorta*; and, laſtly, that the *Momentum* of the *Blood* is greater in any of the Veins, than in the Artery correſponding to it; and therefore greater in the *Vena Cava* than the *Aorta*.

Laſtly he ſhews, that the *Momentum* of the *Blood* in the *Vena Cava*, is equal to that of the Quantity of *Blood* thrown out into the *Aorta* at each *Syſtole*, whoſe Velocity is ſuch as wou'd paſs the whole Length of the Arteries and Veins in the Interval of Time between two Pulſes; and that the abſolute *Momentum* of the *Blood* in the *Cava*, without any regard to the Reſiſtance, is equal to the *Momentum* of a Weight of 30 Pounds paſſing over the Space of an Inch in a Second. But note, that the Motion of the *Blood* is here ſuppoſed equable, which in reality it is not. See HEART.

As to the Transfuſion of the *Blood* of one Animal into the Veins of another, firſt ſet on foot by Dr. *Lower*, ſee the Method and Effects thereof under TRANSFUSION.

In the *Philoſophical Tranſactions* we have ſeveral very uncommon Inſtances of ſpontaneous *Bleeding*; particularly of a Child that *bled* at the Noſe, Ears, and hind-part of the Head, for three Days; from that to the ſixth, ſhe ſweat *Blood* from the Head; on the ſixth, *bled* at the Head, Shoulders, and Waſte; and for three Days more continued to *bleed* at the Toes, Bend of the Arms, Joints of the Fingers of each Hand, and at the Fingers Ends till ſhe died: After her Death were found, in the Places whence the *Blood* iſſued, little Holes like the Prickings of a Needle. For the Stanching of *Blood*, ſee STIPTICK.

BLOOD *of Jeſus Chriſt*, a military Order inſtituted at *Mantua* in 1608, by *Vin. Gonzagua* IV. The Deviſe of this Order was, *Domine probaſti me*; or that, *Nihil hoc triſte recepto*. *Hermant* ſpeaks of this Order, and obſerves it took its Name from ſome Drops of the *Blood of Chriſt*, ſaid to have been preſerv'd in the Cathedral Church of *Mantua*. Their Number was reſtrain'd to 20, beſides the Grand Maſter; the Office whereof was attach'd to himſelf and his Succeſſors.

There is alſo a Congregation of Nuns at *Paris* call'd by the ſame Name, reform'd from the *Bernardines*.

BLOOD-LETTING. See PHLEBOTOMY.

BLOOD-SHOTTEN, a Diſtemper of the Eyes, where the *Blood-Veſſels* are greatly diſtended, ſo as to make the Eyes appear red.

BLOODY-HAND, one of the four kinds of Treſpaſſes in the King's Foreſt, by which the Offender being taken with his Hands or other Part *bloody*, is judg'd to have killed the Deer, tho he be not found Hunting or Chaſing.

BLOSSOM. See FLOWER.

BLOWING *of Glaſs*, one of the Methods of forming the divers kinds of Works in the *Glaſs* Manufacture. 'Tis perform'd by dipping the End of an Iron Pipe in the melted *Glaſs*, and *blowing* thro it with the Mouth, according to the Circumſtances of the *Glaſs* to be *blown*. See GLASS.

BLUE, one of the Primitive Colours, otherwiſe call'd *Azure*. See COLOUR.

*The Painters* BLUE is made different, according to the different kinds of *Paintings*. In *Limning*, *Freſco*, and *Miniature*, they uſe indifferently *Ultramarine*, *blue Aſhes*, and *Smalt*; theſe are their natural *Blues*, excepting the laſt, which is partly natural, partly artificial: See each under its proper Head. In *Oil* and *Miniature* they alſo uſe *Indigo prepared*; ſee INDIGO; as alſo a *factitious* ULTRAMARINE, which ſee. Enamellers and Painters on Glaſs have *Blues* proper to themſelves; each preparing 'em after their own manner. See ENAMELLING, and PAINTING *on Glaſs*.

BLUE *of the Dyers*, is one of their ſimple, or Mother-Colours, uſed in the Compoſition of others: 'Tis made of *Woad*, *Indigo*, and a *Paſtel* brought from *Normandy*: Of the three, the *Paſtel* is eſteem'd the beſt, and the moſt neceſſary: *Woad*, tho of leſs Force and Effect, yet makes a tolerable Colour: *Indigo* only makes a ſpurious Colour; yet it may be uſed along with *Paſtel*, if it be well prepar'd, and ben't mix'd in too great a Proportion. *Woad* having but little Subſtance, can neither be uſed alone, nor is it capable of correcting the *Indigo*, without the Aſſiſ-

tance of *Paſtel*. Some *Dyers* heighten their *Blue* by adding Braſil and other Woods. The ways of brightening *Blues* are, by paſſing the Stuff, when dyed and well waſh'd, thro luke-warm Water; or, which is much better, by working and fulling the *dyed* Stuff with melted Soap, and then ſcouring it well. *Blues* are *dyed* immediately from the *Whites*, without any other Preparation than Fulling.

*Turnſol* BLUE, is a *Blue* uſed in Painting on Wood, made of the Seed of that Plant. 'Tis prepar'd by boiling four Ounces of *Turnſol* in a Pint and half of Water wherein Lime has been ſlack'd. See TURNSOL.

*Flanders* BLUE, is a Colour bordering on *Green*, ſeldom uſed but in Landskips.

Antiently, *Blue* was the Symbol of the Sea; for which Reaſon, in the *Circenſian* Games the Combatants who repreſented the Sea were clad in *Blue*; and thoſe who had diſtinguiſh'd themſelves by any notable Exploit at Sea, were rewarded with a *blue Enſign*.

BLUEING *of Metals*, is the heating any Metal till it aſſume a *blue* Colour; particularly practis'd by Gilders, *&c.* who *blue* their Metals e'er they apply the Gold or Silver Leaf. See GILDING.

BLUENESS, the quality of a Body that is *blue*; or, ſuch a Size and Texture of the Parts that compoſe the Surface of a Body, as diſpoſes 'em to reflect the *blue* or *azure* Rays of Light, and thoſe only, to the Eye. See LIGHT and COLOUR. For the *Blueneſs* of the Skies, Sir *Iſaac Newton* obſerves, that all the Vapours, when they begin to condenſe and coaleſce into natural Particles, become firſt of ſuch a Bigneſs as to reflect the *azure* Rays, e'er they can conſtitute Clouds of any other Colour. This, therefore, being the firſt Colour they begin to reflect, muſt be that of the fineſt and moſt tranſparent Skies, in which the Vapours are not arrived to a Groſsneſs ſufficient to reflect other Colours.

M. *de la Hire*, and before him *Leonardo da Vinci*, obſerves, that any *black* Body view'd thro a thin *white* one, gives the Senſation of *blue*; and this he aſſigns as the Reaſon of the *Blueneſs* of the Sky, the immenſe Depth whereof being wholly devoid of Light, is view'd thro the Air illuminated and whitened by the Sun. For the ſame Reaſon, he adds, it is, that Soot mix'd with a *white* makes a *blue*; for *white* Bodies being always a little tranſparent, and mixing themſelves with the *black* behind, give the Perception of *blue*. From the ſame Principle he accounts for the *Blueneſs* of the Veins on the Surface of the Skin, tho the Blood they are fill'd with be a deep red; for red, he obſerves, unleſs view'd in a clear, ſtrong Light, appears a dark brown bordering on black: Being then in a kind of Obſcurity in the Veins, it muſt have the Effect of a black; and this, view'd thro the Membrane of the Vein and the white Skin, will produce the Perception of *Blueneſs*.

BLUSHING, a Phænomenon in the Animal Oeconomy, excited from a Senſe of Shame, *&c.* It is ſuppoſed to be produced from a kind of Conſent, or Sympathy, between ſeveral Parts of the Body, occaſion'd by the ſame Nerve being extended to 'em all. Thus the fifth Pair of Nerves being branch'd from the Brain to the Eye, Ear, Muſcles of the Lips, Cheeks, Palate, Tongue, Noſe, *&c.* hence a thing ſeen, or heard, that is ſhameful, affects the Cheeks with Bluſhes, driving the Blood into the minute Veſſels thereof, at the ſame time that it affects the Eye and Ear. For the ſame Reaſon it is, as Mr. *Derham* obſerves, that a ſavoury Thing ſeen or ſmelt, affects the Glands and Parts of the Mouth: If a Thing heard be pleaſing, it affects the Muſcles of the Face with *Laughter*; if melancholy, it exerts it ſelf on the Glands of the Eyes, and occaſions *Weeping*, &c. And to the ſame Cauſe Dr. *Willis* aſcribes the Pleaſure of *Kiſſing*.

BOAT, a little floating Veſſel, for the Navigation of Rivers, Lakes, *&c.* The *Boat* acquires various Names, according to its various Structure, and the various Uſes it is appointed for, and the Places where it is to be uſed. The ſeveral *Boats*, and their Names, are,

*A Jolly Boat,*
*A Long Boat,*
*A Skiffe,*
*A Pinnace,*
*A Water Boat,*
*A Yaul,*
} Boats for Ships.

*A Canoe,*
*A Cruckle,*
*A Currycurry,*
*A Deal-Hooker,*
*A Felucca,*
*A Ferry-Boat.*

*A Gondola,*
*A Greenland Boat,*
*A Bermudas Boat,*
*A Ballon of Siam,*
*A Horſe Boat,*
*A Periaga,*
*A Pleaſure-Boat,*
*A Ponton,*

*A Praw,*
*A Flying Praw,*
*A Punt,*
*A Tilt-Boat,*
*A Tod-Boat,*
*A Well-Boat,*
*A Wherry.*

*De Chales* propoſes the Conſtruction of a *Boat*, which, what Burden ſoever it bear, ſhall not only ſail againſt the Current without either Sails or Oars, but alſo advance ſo much the faſter, as the Rapidity of the Water is greater. Its Make is the ſame with that of the others, excepting only a Wheel added to its Side, with a Cord, which winds round a Roller as faſt as the Wheel turns. See VESSEL.

M. *de la Hire* has given us an Examen of the Force neceſſary to move *Boats*, both in ſtagnant and running Water, either with Ropes faſten'd to 'em, or with Oars, or with any other Machine: wherein he ſhews, that the larger the Surface of the *Oars* plung'd in the Water, and the ſmaller that of the *Boat* preſented to the Water is; and again, the longer that Part of the *Oar* between the Hand and the Place where the *Oar* reſts on the *Boat*, and the ſhorter that between this laſt Point and the Water; the freer will the *Boat* move, and the greater Effect will the *Oar* have. See ROWING.

Hence 'tis eaſy to calculate the Force of any Machine that ſhall be apply'd to *Rowing*; *v. g.* If we know the Abſolute Force of all the Men who *Row*, it muſt be chang'd into a Relative Force, according to the Proportion of the two Parts of the *Oar*; *i. e.* if the Part out of the *Veſſel* be double the other, and all the Men together can act with the Force of 900 Pounds; we compute firſt, that they will exert 300: Which 300, multiply'd by the Surface the *Veſſel* preſents to the Water, gives a Solid of Water of a certain Weight; whoſe Weight may be found, and of Conſequence the Velocity impreſs'd on the *Veſſel* by the *Oars*. Or the Velocity of the *Oars* may be found in the ſame manner, by multiplying the 300 Pounds, by the Surface of all the Parts of the *Oars* plung'd in the Water. Nor would there be any Difficulty in finding firſt the Relative Forces, then the Abſolute ones; the Velocities either of the *Oars*, or of the *Veſſel* being given, or the Proportion of the two Parts of the *Oar*.

BOAT-SWAIN, is an Officer on Board a Ship, who has Charge of her Rigging, Ropes, Cables, Anchors, Sails, Flags, Colours, Pendants, *&c.* He takes care of the Ship's *Long-Boat*, and its Furniture; and ſteers her, either by himſelf or his *Mate*. He calls out the ſeveral Gangs aboard, to the due Execution of their Watches, Works, *&c.* and he is likewiſe a kind of *Provoſt-Marſhal*, who ſees and puniſhes all Offenders who are ſentenc'd by the Captain, or a Court-Martial of the Fleet.

BOCARDO, in Logick, the fifth Mode and the third Figure. In a Syllogiſm in *Bocardo*, the firſt Propoſition is particular and negative, the ſecond univerſal and affirmative; and the Medium, or middle Term, the Subject in the two Propoſitions. Thus,

*Some Animal is not Man,*
*Every Animal has a Principle of Senſation,*
*Therefore ſomething has a Principle of Senſation beſides Man.*

BODY, in Phyſicks, a ſolid, extended, palpable Subſtance; compoſed, according to the *Peripateticks*, of *Matter*, *Form*, and *Privation*; according to the *Epicureans* and *Corpuſcularians*, of an Aſſemblage of hooked, heavy *Atoms*; according to the *Carteſians*, of a certain Quantity of *Extenſion*; according to the *Newtonians*, of a *Syſtem*, or Aſſociation of ſolid, maſſy, hard, impenetrable, moveable Particles, rang'd or diſpos'd in this or that Manner; whence reſult Bodies of of this or that Form; diſtinguiſh'd by this or that Name. Theſe Elementary or Component Particles of Bodies muſt be infinitely hard; vaſtly harder than the Bodies compounded of 'em; nay, ſo hard as never to wear, or break in pieces. "This Sir *Iſaac Newton* obſerves to be neceſſary, in order "to the *World's* perſiſting in the ſame State, and *Bodies* "continuing of the ſame Nature and Texture in ſeveral "Ages. For ſhould the *Component Particles* break or "wear, the Nature and Frame of Things depending on "them, would be chang'd. *Water* and *Earth* compoſed of "old worn *Particles*, and Fragments of Particles, would not "be of the ſame Nature and Texture now with *Water* and "*Earth* compoſed of *Entire Particles* in the beginning: "And therefore, that Nature may be laſting, the Changes "of *Bodies* are to be placed only in the various Separations, "and new Aſſociations and Motions of theſe *permanent* "*Particles*. *Bodies* don't break in the midſt of *ſolid Par*"*ticles*, but in the joinings of thoſe *Particles*, which only "touch in a few Points. Theſe *Particles* have not only "a *Vis Inertiæ*, accompany'd with ſuch paſſive Laws of "Motion as naturally reſult from that Force; but like"wiſe with certain active Principles, ſuch as that, *v. g.* of "*Gravity*, (See GRAVITY.) And that which occaſions "Fermentation and the Cohesion of *Bodies*. See FERMEN"TATION and COHESION. For the reſt, *Bodies* being on"ly particular *Aſſociations* or *Syſtems* of primitive *Parti*"*cles* of Matter, have the ſame Properties, and follow the "ſame Laws with *Matter*." See MATTER; ſee alſo PARTICLES.

*The Exiſtence of* BODIES, or of external *Objects*, is a Thing not to be demonſtrated in any Manner whatever.

The

The Order in which we arrive at the Knowledge of the Exiſtence of *Bodies*, ſeems to be this; We firſt find we have *Senſations*; then obſerve we have not thoſe Senſations when we pleaſe; and thence conclude, we are not the abſolute Cauſe thereof, but that there is requir'd ſome other Cauſe for their Production. Thus we begin to know, that we don't exiſt alone, but that there are ſeveral other *Things* in the World together with us. But even this Dr. *Clark* owns to fail of a Demonſtration of the Exiſtence of a *corporeal World*: He adds, that all the Proof we have of it is this; That God would not create us ſuch, as that all the Judgments we make about *Things* exiſting without us, muſt neceſſarily be falſe. If there be no External *Bodies*, it follows, that 'tis God who repreſents the Appearances of *Bodies* to us; and that he does it in ſuch a manner as to deceive us. Some think this has the Force of a Demonſtration: 'Tis evident God can't deceive us; 'tis evident he does deceive and delude us every Moment, if there be no *Bodies*; 'tis evident therefore, there muſt be *Bodies*.

Againſt the *Exiſtence of Bodies*, or any External *World*, Mr. *Berkley* argues very ſtrenuouſly, " That neither our " Thoughts, Paſſions, nor Ideas form'd by the Imaginati- " on, exiſt without the *Mind*, he obſerves is allow'd; and " that the various Senſations impreſs'd on the *Mind*, " whatever *Objects* they compoſe, cannot exiſt otherwiſe " than in a *Mind* perceiving them, is not leſs evident: " This appears from the meaning of the Term *Exiſt*, " when apply'd to ſenſible Things. Thus, the Table I write " on exiſts; *i. e.* I ſee and feel it; and were I out of my " Study, I ſhould ſay it exiſted; *i. e.* Were I in my Study, " I ſhould ſee and feel it as before. There was an Odor; " *i. e.* I ſmelt it, *&c.* But the *Exiſtence* of unthinking " *Beings*, without any Relation to their being perceiv'd, is " unintelligible; their *Eſſe* is *Percipi*: Nor is it poſſible " they ſhould have any Exiſtence out of the *Mind* that " perceives them." The Notion of *Bodies*, he endeavours to ſhew founded on the Doctrine of *Abſtract Ideas*: " What are Light and Colours, Heat and " Cold, Extenſion and Figures, in a word, the Things " we ſee and feel, but ſo many Senſations, Notions, Ideas, " or Impreſſions on the *Senſe*? And is it poſſible to ſepa- " rate, even in Thought, any of theſe from Perception? " The ſeveral *Bodies* then, that compoſe the Frame of the " World, have not any Subſiſtence without a *Mind*; their " *Eſſe* is to be perceiv'd or known; and as long as they are " not perceiv'd by Me, nor any other thinking Being, they " have no ſhadow of Exiſtence at all.—— The *Things* we " perceive, are Colour, Figure, Motion, *&c.* that is, the " Ideas of thoſe *Things*: But has an Idea any Exiſtence " out of the Mind? To have an Idea, is the ſame thing " as to perceive: That therefore wherein Colour, Figure, " *&c.* exiſt, muſt perceive them. 'Tis evident, therefore, " there can be no unthinking *Subſtance*, or *Subſtratum* of " thoſe Ideas. But you will argue, If the Ideas themſelves " don't exiſt without the *Mind*, there may be Things like " 'em, whereof they are Copies or Reſemblances, which " exiſt without the *Mind*: 'Tis anſwer'd, an *Idea* can be " like nothing but an *Idea*; a *Colour* or *Figure* can be like " nothing elſe but another *Figure* or *Colour*. It may be " farther ask'd, whether thoſe ſuppoſed *Originals*, or *Ex- " ternal Things* whereof our Ideas are the Pictures, be " themſelves perceiveable or not? If they be, they are " Ideas; if they be not, I appeal to any one whether it be " Senſe to ſay, A *Colour* is like ſomewhat which is Inviſi- " ble; hard or ſoft, like ſomewhat Intangible, *&c.* Some " diſtinguiſh between Primary and Secondary Qualities; " the former, *viz.* Extenſion, Solidity, Figure, Motion, " Reſt and Number, they maintain have a real Exiſtence " out of the *Mind*: For the latter, under which come all " other ſenſible Qualities, as Colours, Sounds, Taſtes, *&c.* " they allow the Ideas we have of 'em, are not Reſem- " blances of any *Things* exiſting without the *Mind*, or " unperceiv'd; but depend on the Size, Texture, Motion, " *&c.* of the minute Particles of Matter: Now 'tis cer- " tain, that thoſe Primary Qualities are inſeparably united " with the other Secondary ones, and cannot even in " Thought be abſtracted from them; and therefore muſt " only exiſt in the *Mind*. Can any Man conceive the Ex- " tenſion and Motion of a *Body*, without all the other ſen- " ſible Qualitys? For my part, I find it impoſſible to " frame an Idea of a *Body* extended and moving, without " giving it ſome Colour, *&c.* In effect, Extenſion, Fi- " gure and Motion, abſtracted from all other Qualities, are " Inconceivable: Where the others, therefore, are, there " theſe too muſt be; *i. e.* in the *Mind*, and no where elſe. " Again, Great and Small, Swift and Slow, are allow'd to " exiſt no where without the *Mind*; being merely relative, " and changing, as the Frame or Poſition of the Organ " changes: The Extenſion therefore that exiſts without the " *Mind*, is neither great nor ſmall, the Motion neither " ſwift nor ſlow; *i. e.* they are nothing.—— That Num- " ber is a Creature of the *Mind*, is plain (even tho the " other Qualities were allow'd to exiſt) from this; that " the ſame thing bears a different Denomination of Num- " ber, as the *Mind* views it with different Reſpects: Thus " the ſame Extenſion is 1, or 3, or 36, as the *Mind* con- " ſiders it, with reference to a Yard, a Foot, or an Inch. " Nay, many of the modern Geometricians hold, that a " finite Line may be divided into an infinite Number of " Parts, and each of thoſe Infiniteſimals into an infinity of " others; and ſo on, *in Infinitum*: So that the ſame " Thing is either Unity or Infinity; either no Number or " all Number. In effect, after the ſame manner as the " modern Philoſophers prove Colours, Taſtes, *&c.* to have " no Exiſtence in Matter, or without the *Mind*; the ſame " thing may be proved of all ſenſible Qualities whatſo- " ever. Thus, they ſay, Heat and Cold are only Affec- " tions of the *Mind*, not at all Patterns of *real Beings* ex- " iſting in *corporeal Subſtances*; for that the ſame *Body* " which ſeems cold to one hand, ſeems warm to another. " Now why may we not as well argue, that Figure and " Extenſion are not Patterns or Reſemblances of Qualities " exiſting in Matter; becauſe to the ſame Eye, at different " Stations, or to Eyes of different Structure at the ſame " Station, they appear various? Again, Sweetneſs, 'tis " proved, does not exiſt in the Thing ſapid; becauſe the " Thing remaining unalter'd, the Sweetneſs is chang'd to " Bitterneſs, as in a Fever, or otherwiſe vitiated Palate. " Is it not as reaſonable to ſay, that Motion does not exiſt " out of the *Mind*? ſince if the Succeſſion of Ideas in the " *Mind* become ſwifter, the Motion, 'tis acknowledg'd, " will appear ſlower, without any external Alteration.— " Again, were it poſſible for ſolid figur'd Bodies to exiſt " out of the *Mind*, yet it were impoſſible for us ever to " know it: Our Senſes, indeed, give us Senſations or " Ideas, but don't tell us that any Thing exiſts without " the *Mind*, or unperceiv'd, like thoſe which are perceiv'd: " This the Materialiſts allow. No other way therefore re- " mains, but that we know 'em by *Reaſon*'s inferring their " Exiſtence from what is immediately perceiv'd by Senſe. " But how ſhould Reaſon do this, when 'tis confeſs'd there " is not any neceſſary Connection between our Senſations " and theſe *Bodies*? 'Tis evident from the *Phænomena* of " Dreams, Phrenſies, *&c.* that we may be affected with " the Ideas we now have, tho there were no *Bodies* exiſ- " ting without them: Nor does the Suppoſition of external " *Bodies* at all forward us, in conceiving how our Ideas " ſhould come to be produc'd. The Materialiſts own " themſelves unable to conceive in what manner *Body* can " act on *Spirit*; or how it ſhould imprint any Idea on the " *Mind*. To ſuppoſe therefore *Bodies* exiſting without " the *Mind*, is little elſe than to ſuppoſe, God has created " innumerable *Beings* entirely uſeleſs, and ſerving to no " Purpoſe at all. On the whole, it appears that the *Exiſ- " tence of Bodies* out of a *Mind* perceiving 'em, is not only " impoſſible, and a Contradiction in Terms; but were it " poſſible, nay real, it were impoſſible we ſhould ever " know it. And again, that ſuppoſing there are no ſuch " Things, yet we ſhould have the very ſame Reaſon to " ſuppoſe there were that we now have: Suppoſe, *v. g.* an " Intelligence affected with the ſame Train of Senſations, " impreſs'd in the ſame Order, and with the ſame Vivid- " neſs; would it not have all the Reaſon to believe the " Exiſtence of *Bodies* repreſented by his Ideas that we " have?——All our Ideas and Senſations are viſibly Inac- " tive; nay, the very Being of an Idea implies Paſſiveneſs " and Inertneſs: So that it is impoſſible for an Idea to do " any thing; or, in ſtrictneſs, be the Cauſe of any thing: " It cannot therefore be the Reſemblance or Pattern of " any active *Being*; unleſs Oppoſites can be ſaid to reſem- " ble one another.

" Now we find a continual Succeſſion of Ideas in the " *Mind*; but theſe, it has been proved, don't depend on " any External *Body* as their Cauſe: It remains therefore, " that their Cauſe is an Incorporeal active *Subſtance* or " *Spirit*. For that I am not the Cauſe of my own Ideas, " is plain from this, that when I open my Eyes in broad " Day-light, I can't help ſeeing various Objects. Now the " fix'd Rules or Methods wherein the *Mind* we depend on " excites in us the Ideas of Senſe, are call'd *Laws of Na- " ture*: Theſe we learn by Experience; which teaches us, " that ſuch and ſuch Ideas are attended with ſuch and " ſuch other Ideas in the ordinary Courſe of Things.—— " Ideas are not any how, and at random produced; there " is a certain Order and Connexion eſtabliſh'd among 'em, " like that of Cauſe and Effect: And there are ſeveral " Combinations of 'em made in a very regular artful Man- " ner, which we call *Bodies*; and the Syſtem of thoſe, *the " World*. In ſtrictneſs, however, the Connexion of Ideas " does not imply the Relation of Cauſe and Effect; but, " only of a Mark or Sign of the Thing ſignify'd: The " Fire I ſee is not the Cauſe of the Pain I feel, but the " Mark that forewarns me of it. The Noiſe I hear, is

" not the Effect of this or that Motion or Colliſion of Na-
" tural *Bodies*, but the Sign thereof. The *Carteſians* own
" ſomewhat like this: The Action of *Bodies* on our
" Organs, ſay they, is not the Efficient Cauſe of our
" Ideas and Perceptions, but only the *Occaſional Cauſe*,
" which determines God to act on the *Mind*, according to
" the Laws of the Union of the *Soul* and *Body*. See
" CAUSE. Mr. *Berkeley*, indeed, taking away *Bodies*, takes
" away what theſe Philoſophers account the Occaſions of
" their Ideas: By an *Occaſion*, he ſays, muſt either be
" meant the Agent that produces an Effect, or ſomething
" obſerv'd to accompany or go before it, in the ordinary
" Courſe of Things: But Matter is allow'd to be paſſive
" and inert, and can't therefore be an Agent or Efficient
" Cauſe; and this Matter primitively and in it ſelf, is al-
" low'd imperceivable, and devoid of all particular ſenſi-
" ble Qualities; *i. e.* it has not this or that particular
" Colour, this or that particular Figure, *&c.* but has Co-
" lour in the General, Figure in the Abſtract, *&c.* but an
" Abſtract is no Object of Senſe: Matter therefore can't
" be the Occaſion of our Ideas in the latter Senſe."

How far the great Argument of the Maintainers of a material World, *from the Impoſſibility of God's deceiving us, and from the Evidence that he does ſo, if there be no ſuch thing*, will go againſt this Reaſoning, we leave to the Reader. See EXTERNAL *World*.

*For the Colours of* BODIES: Sir *Iſaac Newton* ſhews, that *Bodies* appear of this or that Colour, as they are diſpos'd to reflect moſt copiouſly the Rays of Light originally endu'd with thoſe Colours. See LIGHT and COLOUR. But the particular Conſtitutions whereby they reflect ſome Rays more copiouſly than others, remain yet to be diſcover'd. However, ſome of the Laws and Circumſtances thereof, he delivers in the following *Propoſitions*.

1. Thoſe Surfaces of tranſparent *Bodies*, reflect the greateſt Quantity of Light, which have the greateſt Refracting Power; *i. e.* which intercede Mediums, that differ moſt in their refractive Denſities: And in the Confines of equally refracting Mediums, there is no Reflexion. 2. The leaſt Parts of almoſt all Natural *Bodies*, are in ſome meaſure tranſparent; and the Opacity of thoſe *Bodies*, ariſes from the multitude of Reflexions caus'd in their internal Parts. See OPACITY, *&c.* 3. Between the Parts of Opake and Colour'd *Bodies*, are many Spaces, either empty, or replete with Mediums of different Denſities; as Water between the tinging Corpuſcles, wherewith a Liquor is impregnated; Air between the aqueous Globules, that conſtitute Clouds or Miſts: and even Spaces, void both of Air and Water, between the Parts of hard *Bodies*, are not yet perhaps wholly void of all Subſtance. See MEDIUM. 4. The Parts of the *Bodies*, and their Interſtices, muſt be leſs than of ſome definite Bigneſs, to render them opake and colour'd. 5. The tranſparent Parts of *Bodies*, according to their ſeveral Sizes, reflect Rays of one Colour, and tranſmit thoſe of another, on the ſame Grounds that thin Plates or Bubbles do reflect, or tranſmit thoſe Rays: And this appears to be the Ground of all their Colour. See COLOUR. 6. The Parts of *Bodies*, on which their Colours depend, are denſer than the Medium which pervades their Interſtices. 7. The Bigneſs of the component Parts of Natural *Bodies*, may be conjectur'd from their Colours; on this Principle, that tranſparent Corpuſcles, of the ſame Thickneſs and Denſity with a Plate, do exhibit the ſame Colour. 8. The Cauſe of Reflexion, is not the impinging of Light on the ſolid or impervious Parts of *Bodies*, as commonly believ'd. See REFLEXION. 9. *Bodies* reflect and refract Light, by one and the ſame Power variouſly exercis'd, in various Circumſtances. See REFRACTION; ſee alſo LIGHT, RAY, *&c.*

BODIES, are diſtinguiſh'd into *Animate* and *Inanimate*; *i. e.* into thoſe inform'd by a *Soul*, and thoſe which are not; or thoſe that have Life, and thoſe that have none.

Some conſider *Bodies*, either as *Natural* and *Senſible*; *viz.* as form'd by Phyſical Cauſes, and cloth'd with Phyſical Qualities: (In which Senſe, *Body* makes the Object of *Phyſicks*.) See PHYSICKS. Or, as *Intellectual* or *Quantitative*, in the General or Abſtract; and according to the three Dimenſions: In which Senſe, *Body* makes the Subject of *Geometry*. See GEOMETRY.

BODY, with regard to *Animals*, is us'd in oppoſition to the Soul; *viz.* for that Part compos'd of Bones, Muſcles, Canals, Juices, Nerves, *&c.* In which Senſe, *Body* makes the Subject of *Anatomy*. See ANATOMY.

*The human* BODY, conſider'd with regard to the various voluntary Motions it is capable of performing, is an Aſſemblage of an infinite Number of Levers, drawn by Cords: If conſider'd with regard to the Motions of the Fluids it contains, 'tis another Aſſemblage of an Infinity of Tubes and hydraulick Machines. Laſtly, If conſider'd with regard to the Generation of thoſe ſame Fluids, 'tis another infinite Aſſemblage of Chymical Inſtruments and Veſſels; as Philters, Alembics, Recipients, Serpentines, *&c.* and the whole is a Compound which we can only admire, and whereof the greateſt Part eſcapes our Admiration itſelf. The principal Chymical *Apparatus* in the whole *Body*, is that wonderful Laboratory the Brain: 'Tis in this, that precious Extract, call'd *Animal Spirits*, the only material Movers of the whole Fabrick, is ſecreted from the Blood. See BRAIN, SPIRITS, BLOOD, HEART, *&c.*

In the Machine of the *Animal* BODY, the Retainers to the Doctrine of *Trituration* maintain the *Brain* to do the Office of the *Beam* of a Preſs, the *Heart* of a *Piſton*, the *Lungs* of *Bellows*, the *Mouth* of a *Millſtone*, and the *Teeth* of *Peſtles*; the *Stomach* of a *Preſs*, the *Inteſtines* of a *Reſervoir*, the *Veſſels* of *Sieves* or *Strainers*, and the *Air* of a *Pondus*, or Spring that ſets the Machine a going. See TRITURATION.

The *Soul*, *Rohault* well obſerves, is not the Form of the *Human Body*: So far is the Animal Life from depending on the *Soul*, becauſe of its ceaſing when the *Soul* is ſeparated; that on the contrary, the Continuance of the *Soul* depends entirely on the Diſpoſition of the *Body*: the former never quitting the latter, till its Oeconomy or Order is interrupted. The *Carteſians* maintain the *Soul* and *Body* to be too diſproportionate, for Thoughts or Ideas of the *Soul* to be caus'd by the Motions of *Bodies*, and *vice verſa*: Thus, their reciprocal Motions not being able to be the direct Cauſe of the one and the other, are only deem'd the Occaſion, or occaſional Cauſe. God, on occaſion of the Motion of a *Body*, impreſſes an Idea or Senſation on the *Soul*; and again, on occaſion of an Idea of the *Soul*, communicates a Motion to the *Body*: of conſequence, God is, as it were, the Mediator of all the Commerce between *Soul* and *Body*. See CAUSE.

Phyſicians divide the *Body* into three Venters, or Cavities, the *Head*, *Thorax*, and *lower Venter*; which ſee: The reſt of the *Body* they call *Members*. See PARTS.

BODY, *Corpus*, is alſo apply'd by Anatomiſts to ſeveral particular Parts of the Animal Fabrick: As the *Callous Body* of the Brain; the *Cavernous* or *Spongeous Bodies* of the Penis, *&c.* See CORPUS *Calloſum*, CORPORA *Cavernoſa*, &c.

BODY *in Geometry*. The *Regular* or *Platonick Bodies*, are thoſe whoſe Sides and Angles are equal; of theſe there are only Five, *viz.* The *Tetrahedron*, conſiſting of four Angles; the *Octahedron* of eight; the *Icoſihedron* of twenty; the *Dodacahedron* of twelve Pentagons; and the Cube of ſix Squares. See REGULAR *Body*.

BODY *in Law*. A Man is ſaid to be bound, or held, in *Body* and Goods; that is, he is liable to remain in Priſon, in default of Payment. In *France*, by an Ordonnance of 1667, all Reſtraints of *Body*, for Civil Debts, are null after four Months, unleſs they exceed 200 *Livres*. A Woman, tho in other Reſpects ſhe cannot engage her Perſon but to her Husband, may be *taken by the Body*, when ſhe carries on a ſeparate Trade.

BODY *in War*, is an Aſſemblage or Collection of Forces, Horſe and Foot, united and marching under ſome Chief. An Army, rang'd in Form of Battle, is divided into three *Bodies*; the Vant-Guard, the Rear-Guard, and the *Main Body*; which laſt is ordinarily the General's Poſt. See CORPS.

BOGOMILES or BOGARMITES, a Sect of Hereticks, ſprung from the *Manichees*, or rather the *Paulicians* in the 12th Century. The Chief hereof, *Baſil*, was burnt, by Order of the Emperor *Alexander Commenius*. They denied the Trinity; maintain'd, that God had a human Form, that the World was created by evil Angels, and that it was the Archangel *Gabriel* that became incarnate. They rejected the Books of *Moſes*, and only admitted ſeven Books of Scripture: They maintain'd the Lord's Prayer to be the only Euchariſt; that the Baptiſm of the *Catholicks* was that of St. *John*, and theirs that of *Jeſus Chriſt*; and that all thoſe of their Sect conceiv'd the Word, or *Logos*, as much as the Virgin. Laſtly, That there was no other Reſurrection but Repentance. *Du Cange* derives the Name from two Words in the *Bulgarian* Language, *Bog*, *deus*, and *Milia*, *miſerere*, have Mercy.

BOILING, *Ebullition*, in Phyſicks, the Agitation of a fluid Body, ariſing from the Application of Fire, *&c.* The Phænomenon of *Boiling* may be thus accounted for: The minute Particles of the Fuel being detach'd from each other, and impell'd *in Orbem*, with a great Velocity, (*i. e.* being converted into Fire) paſs the Pores of the containing Veſſel, and mix with the Liquid. By the Reſiſtance they here meet withal, their Motion is deſtroy'd; *i. e.* they communicate it wholly to the quieſcent Water; hence ariſes, at firſt, a ſmall inteſtine Motion in the Water, and from the continued Action of the firſt Cauſe, the Effect is increas'd, and the Motion of the Water continually accelerated: So that the Water, by degrees, becomes ſenſibly agitated. But, now, the Particles of the Fire ſtriking on thoſe in the loweſt Surface of the Water, will not only give 'em an Impulſe upwards, contrary to the Laws of Æquilibrium, but will likewiſe render 'em ſpecifically lighter than before, ſo as to determine 'em to aſcend according to the Laws of Æquilibrium: And this, either by inflating 'em into little Veſicles, by the

Attraction of the Particles of Water around 'em; or by breaking and ſeparating the little Spherules of Water, and ſo increaſing the Ratio of their Surface to their ſolid Content. There will therefore be a conſtant Flux of Water from the Bottom of the Veſſel to the Top; and conſequently a reciprocal Flux from the Top to the Bottom: *i. e.* The upper and under Water will change Places; and hence we have the Reaſon of that Phænomenon, of the Water's being hot at Top ſooner than at Bottom. Again, an intenſe Heat will diminiſh the ſpecifick Gravity of Water, ſo as not only to make it mount in Water, but alſo in Air; whence ariſe the Phænomena of *Vapour* and *Smoak*: Tho the Air incloſed in the Interſtices of the Water, muſt be allow'd a good ſhare in this Appearance: for that, Air being dilated, and its Spring ſtrengthned by the Action of the Fire, breaks its Priſon, and aſcends thro the Water into the Air; carrying with it ſome of the contiguous Spherules of Water, ſo many as ſhall hang in its *Villi*, or as can adhere immediately to it. The Particles of Air in the ſeveral Interſtices of the fluid Maſs thus expanded, and moving upwards, will meet and coaleſce in their Paſſage; by which means great Quantities of the Water will be heav'd up, and let fall again alternately; as the Air riſes up, and again paſſes from the Water: For the Air, after Coalition, tho it may buoy up a great heap of Water, by its Elaſticity while in the Water, yet can't carry it up together with itſelf into the Atmoſphere; ſince when once got free from the upper Surface of the Water in the Veſſel, it will unbend itſelf in the Atmoſphere, and ſo its Spring and Force become juſt equal to that of the common unheated Air. Add to this, that were the Spring and Motion of the Air ſufficient to carry up the Water with it, yet it would not have that Effect; but the Water wou'd run off at the Extremities of the Air; all, except ſo much as ſhould be either entangled in its *Villi*, or immediately adhere to its Surface by Attraction: And hence we ſee the Reaſon of the principal Phænomenon of *Boiling*, *viz.* The fluctuating of the Surface of the Water. See EBULLITION, and EFFERVESCENCE.

Water, only lukewarm, *boils* very vehemently in the Recipient of an Air-Pump, when the Air is exhauſted: The Reaſon is obvious; for the Preſſure of the Atmoſphere being taken off from its Surface, the Air included in the Interſtices of the Water, dilated by a feeble Heat, has Spring enough to heave up the Water, and diſengage itſelf.—— When the Water ceaſes *boiling*, it is again excited thereto by pouring cold Water upon the Recipient; and when it *boils* the moſt vehemently, ceaſes by pouring on hot Water: The Reaſon whereof is ſcarce gueſs'd at. See HEAT, FIRE, *&c.*

BOLE, in Medicine, is us'd, in the general, for ſeveral Kinds of Earths that enter *Galenical* Preparations, and are uſed by Painters and other Artiſts. See EARTHS.

BOLE-ARMONIAC, or *Ammoniac*, is a kind of Earth, of conſiderable Medicinal Virtue, brought from *Armenia*. The Phyſicians ſometimes call it *Rubrica Synopica*, from the City of *Synope*, where it is ſuppos'd to be found. 'Tis of a pale red Colour, and partakes much of the Nature of Stone; but ſoft, fat, friable, eaſily pulveriz'd, and ſticks to the Tongue. 'Tis eſteem'd Deſiccative and Stiptic; in which Quality 'tis us'd in ſeveral Diſeaſes, both internal and external. This *Bole* is eaſily falſify'd; and the Merchants frequently ſell *Lemnian-Earth* in lieu thereof. *Matthiolus* ſays, 'tis found in Gold, Silver, and Copper Mines. See AMMONIAC.

BOLE *of the Levant*, is a Medicinal Earth brought from the *Levant*; nearly of the ſame Nature, and having the ſame Uſes with the *Bole-Armoniac*. *Pomet* ſays, there is no ſuch thing among us, as either true *Bole-Armoniac*, or *Bole of the Levant*; and that all the *Boles* now in uſe, are brought either from the Provinces of *France*, or the neighbouring Countries. But this does not ſeem ſufficiently warranted; and the New *Tarifs*, or Duties on Goods imported into *France*, which mention 'em both, make it credible that there are of either kind imported into that Kingdom. Indeed, it appears, that 'tis the *Levant Bole* which paſſes among us for the *Armoniac*: It enters ſeveral Compoſitions, particularly *Diaſcodium*, to give it the Colour, *&c.*

BOLLANDISTS, a modern Term, now become of ſome Conſequence in the Republick of Letters. The *Bollandiſts*, are certain *Jeſuits of Antwerp*, who have been a conſiderable Time, and continue ſtill employ'd in collecting the Lives of the Saints. As we find frequent Occaſion to quote that learned Body in this Work, and are indebted to 'em for ſeveral excellent Obſervations that occur therein; the Reader will not be diſpleas'd to find the Occaſion of their Name.

In the beginning of the XVIIth Century, F. *Heribert Roſweide*, a Jeſuit of *Antwerp*, laid a Deſign of collecting the Lives of the *Saints*, as wrote by the Original Authors, with Notes, like thoſe added to his Lives of the *Fathers*, to clear obſcure Paſſages, and diſtinguiſh the Genuine from the Spurious: He died in 1629, e'er the Work was begun. The Year following, *J. Bollandus*, a Jeſuit of the ſame Houſe, took up the Deſign; and whereas *Roſweide* only propoſed to collect the Lives already compoſed, *Bollandus* undertook, where there was no Life of a Saint extant, to compoſe new ones from the Authors who had mention'd 'em. In 1635, he took in *G. Henſchenius* a Partner with him; and in 1641, publiſh'd the *Saints of the Month of January*, in two large Volumes, Folio. In 1650, *F. Papebroch* became an Aſſociate; and, *Henſchenius* dying, F. *Baert*, *Janning*, *Sollier*, and *Raye* were call'd in, who are ſtill alive, and continue the Work: whereof, in 80 Years, there have appear'd 24 Volumes, for the firſt ſix Months of the *Roman* Calendar.

BOLT-HEAD, the ſame as *Matras*; a Veſſel uſed by the *Chymiſts*, ſee MATRAS.

BOLTING, a Method of Pleading, or Arguing, in uſe in the Inns of Court; inferior to *Mooting*. The Caſe is argued firſt by three *Students*, then by two *Barriſters*; a *Senior* ſitting Judge. The Word came from the *Saxon Bolt*, *an Houſe*, becauſe done privately within Doors for Inſtruction. See BENCHER, and MOOTING.

BOLTS *of Iron*, in Building, are diſtinguiſh'd into three Kinds, *Plate*, *Round*, and *Spring-Bolts*.

BOLTS, or Iron Pins in a Ship are of ſeveral ſorts: As, *Ring-Bolts*, ſerving for the bringing to of the Planks, *&c.* *Drive-Bolts*, uſed to drive out others; *Set-Bolts*, employ'd for forcing the Planks and other Works, and bringing them cloſe to one another; *Rag-Bolts*, on each ſide full of Jags or Barbs, to keep them from flying out of their Holes; *Clench-Bolts*, for the ſame end clench'd, or faſten'd at the Ends where they come thro; *Fore-Bolts*, made like Locks with an Eye at each end, whereinto a Forelock of Iron is driven to prevent ſtarting out; *Fender-Bolts*, made with long and thick Heads, ſtruck into the uttermoſt Bends or Wales of a Ship, to ſave her Sides from Bruiſes and Hurts.

BOLUS or BOLE, in Medicine, an extemporaneous Form of a Medicine, of a ſoft Conſiſtence, ſomewhat exceeding that of an Electuary, and of the Quantity of one Doſe; contrived principally for the ſake of ſuch as have an Averſion to potable Medicines; as alſo for the better Conveyance of certain Preparations of *Mercury*, *Antimony*, &c. which by their Weight would ſink to the bottom of the Glaſs, were they mix'd with Fluids. There are *Bolus's* of various kinds, made with Electuaries, Confections, Conſerves, Pulps, Pouders, Salts, Oils, Eſſences, Extracts, Syrups, *&c.* ſome of which Ingredients muſt always have Solidity or Drineſs enough, to give a Conſiſtence to thoſe that are Liquid.

BOMB, a large *Granada*, or hollow Iron Ball, or Shell fill'd with Gunpouder, and furniſh'd with a *Fuſee*, or wooden Tube full of a Combuſtible Matter; to be thrown out from a Mortar. See MORTAR.

The Method of preparing a *Bomb* is as follows: A hollow Iron Globe A B, (Tab. *Pyrotechnia*, Fig. 1.) is caſt pretty thick, having a round Aperture A, by which it may be fill'd and lighted; and circular Handles C D, for the commodious putting it into the Mortar. To prove whether it be ſtaunch, after heating it red-hot on the Coals, it is expos'd to the Air, ſo as it may cool gently: for ſince Fire dilates Iron, if there be any hidden Chinks or Perforations, they will thus be open'd and enlarg'd; and the rather, becauſe of the Spring of the included Air continually acting from within. This done, the Cavity of the Globe is fill'd with hot Water, and the Aperture well ſtopp'd; and the outer Surface waſh'd with cold Water and Soap: So that if there be the ſmalleſt Leak, the Air, rarefy'd by the Heat, will now perſpire, and form Bubbles on the Surface. If no Defect be thus found in the Globe, its Cavity is fill'd with whole Gunpouder; a little Space, or Liberty is left, that when a wooden Tube A E, of the Figure of a truncated Cone, is driven thro the Aperture, and faſten'd with a Cement made of Quick Lime, Aſhes, Brickduſt, and Steel-filings work'd together in a glutinous Water; or, of four Parts of Pitch, two of Colophony, one of Turpentine, and one of Wax; the Pouder mayn't be bruis'd. This Tube is fill'd with a Combuſtible Matter, made of two Ounces of Nitre, one of Sulphur, and three of Gunpouder-duſt, well ramm'd. This Fuſee ſet on fire, burns ſlowly till it reach the Gunpouder, which goes off at once, burſting the Shell to pieces with incredible Violence: Whence the uſe of *Bombs* in beſieging Towns. Special Care, however, muſt be taken, that the Fuſee be ſo proportion'd, as that the Gunpouder don't take Fire e'er the Shell arrives at the deſtin'd Place; to prevent which, the Fuſee is frequently wound round with a wet clammy Thread.

*Bombs* being made of different Magnitudes, it may be proper to exhibit ſome of their Dimenſions; as in the following Table.

| Diam. of Bomb. | Thickneſs of Bomb | | Diam. of Apert. | Quant. of Gunpoud. | Weight of Bomb. |
|---|---|---|---|---|---|
| 17, In. 10 | 2 In. | 2, 10 | ,20 | 48 lb. | 490 lb. |
| 11, 8 | 1 | ,18 | ,16 | 15 | 130 |
| 8 | 0, 10 | ,13 | ,10 | 4 | 40 |

Others

Others make the Thickneſs of the *Bomb* $\frac{1}{8}$, or $\frac{1}{4}$, or $\frac{1}{10}$ of the whole Diameter; and the Diameter of the Aperture $\frac{1}{9}$ or $\frac{1}{7}$ of the ſame.

*Bombs* only differ from *Hand Granadas*, in that the latter are much leſs, and inſtead of Mortars are thrown out of the Hand; ſee GRANADA. The Word BOMB comes from the Latin, *Bombus*, *crepitus*, or *ſibilus Ani*, by reaſon of the Noiſe it makes. M. *Blondel*, who has wrote the Art of throwing *Bombs*, obſerves, that the firſt *Bombs* were thoſe thrown into the City of *Wachtendouch* in *Guelderland*, in 1588; others pretend they were in uſe a Century before, *viz.* at the Siege of *Naples* by *Charles* VIII. in 1495.

BOMBARD, a Piece of Artillery antiently in uſe, exceedingly ſhort and thick, and with a very large Opening: Some alſo call it *Baſilic*. There were ſome of theſe ſaid to have carry'd Balls of 300 Pound Weight; *Froiſſart* mentions one of 50 Foot long. To load 'em, they made uſe of Cranes, &c. The *Bombard* is ſuppoſed to have been in uſe before the Invention of Cannons, ſee CANNON and ORDNANCE. Some derive the Word, by Corruption, from *Lombard*, as ſuppoſing 'em firſt us'd in *Lombardy*: *Menage*, after *Voſſius*, derives it from the *Greek* Βομβος, or the *Latin bombus*, à *bumbo & ardeo*; others from the *German Bombarden*, the plural of *Bomber*, *Baliſta*.

BOMBARDIER, an Engineer, or Perſon whoſe Buſineſs is to take care of the firing and throwing *Bombs* out of Mortars: He firſt drives the Fuſee, then fixes the Shell, loads, and fires. See BOMB.

BOMB-CHEST, is a kind of *Cheſt* fill'd with Gunpouder, *Bombs*, &c. plac'd under Ground, to tear and blow it up into the Air, with thoſe who ſtand upon it. Theſe *Bomb-Cheſts* are frequently us'd to drive Enemies from a Poſt they have ſeiz'd, or are about to take poſſeſſion of; and are ſet on fire by means of a Saucidge faſten'd at one End. See MINE.

BOMB-KETCH, is a ſmall Veſſel, ſtrengthen'd with large Beams, for the uſe of Mortars at Sea.

BONA NOTABILIA, in Law. Where a Perſon dying has Goods, or good Debts, in another Dioceſe or Juriſdiction within that Province, beſides his Goods in the Dioceſe where he dies, amounting to the Value of 5 *l.* at leaſt, he is ſaid to have *Bona notabilia*; in which Caſe, the Probat of his Will, &c. belongs to the Archbiſhop of that Province.

BONA PATRIA, a Jury or Aſſize of Countreymen, or good Neighbours, ſee JURY.

BONE, in Anatomy, a ſimilar Part of the Body, white, hard and brittle, not diſtendible, and void of Senſation; giving Support, and Form to the whole Fabrick. The *Bones* of the Body are all cover'd with a peculiar Membrane, call'd the *Perioſteum*, which is extremely ſenſible, (ſee its Deſcription and Office in its Place:) They are moſt of 'em likewiſe hollow, and fill'd with an oily Subſtance call'd Marrow; ſee MARROW. Dr. *Havers*, deſcribing the Texture of the *Bones*, obſerves, that they conſiſt of *Lamellæ*, or Plates lying one upon another; and thoſe, again, of Fibres running lengthwiſe, ſome to the Extremities of the *Bones*, others not ſo far; but none of 'em terminating there in diſtinct Ends, as they ſeem to do; but in lieu of that continu'd tranſverſly, and as it were arch'd: The Fibres of one Side, meeting and uniting with thoſe of the other; and this at each Extremity. So that the Fibres are a Continuation of each other; tho not in the ſame uniform Order, but in very long *Ellipſes*; not all of a length, however, but in each Plate, ſhorter and ſhorter than other.

Theſe *Lamellæ*, or Plates, are differently diſpoſed in different *Bones*; *v. g.* In thoſe that have a large Cavity, they are contiguous on each ſide, and very cloſely united; in thoſe again whoſe Cavities are ſmall, or which are altogether ſpongious within, many of the internal *Laminæ* are placed at a diſtance from each other, having betwixt 'em little *bony* Cells; and even in *Bones* that have a larger Cavity, ſome of theſe leſſer Cells are uſually found at each Extremity. In ſuch *Bones* as have their Plates contiguous, there are Pores thro and between the Plates, beſides thoſe made for the Paſſage of the Blood-Veſſels: The firſt penetrate the *Laminæ* tranſverſly, and look from the Cavity to the external Surface of the *Bone*; the ſecond run longitudinally between the Plates: The firſt are found in every *Lamina*; tho the nearer the Cavity, the greater the Number of Pores; but they don't lie directly over one another, ſo as to form any continu'd Paſſage from the Cavity to the Surface. The ſecond are ſeldom found but by good Glaſſes: A Medullary Oil is diffus'd, by theſe, throughout the Plates; and to thoſe, the firſt kind ſeem only ſubordinate; ſerving to bring the Oil into 'em.

The Marrow in the Cavity of the *Bones*, is inveſted with a Membrane, wherein are included little Bags, or *Lobules*; and in theſe Bags are *Veſiculæ*, or glandulous Bladders; ſerving both for the Secretion of the Medullary Oil from the Blood, and for the Reception and Conſervation of the ſame. They ſeem to have Paſſages into each other, as have alſo the Bags; whereby the Oil has a freer Courſe to the Joints and Subſtance of the *Bone*. The uſe of the Marrow, is to oil the Subſtance of the *Bone*, and to prevent its being too dry and brittle; it alſo lubricates the Articulation of the *Bones*, and hinders their Ends from being worn, or overheated with Motion; and it moiſtens the Ligaments by which they are ty'd to each other: in which it is aſſiſted by the Mucilaginous Glands, found in all the Articulations of the *Bones*; ſee MUCILAGINOUS.

The *Bones* are generally bigger at their Extremities than in the Middle; that the Articulations might be firm, and the *Bones* not ſo eaſily diſlocated: But to render the Middle of the *Bone* ſtrong withal, ſo as to ſuſtain its allotted Weight, and reſiſt Accidents, the Fibres are there more cloſely compacted together, and ſupport one another: To which it may be added, that the *Bone* being hollow, is not ſo eaſily broken, as if it had been ſolid and ſmaller: For of two *Bones* of equal Length, and of equal Numbers of Fibres, the Strength of the one to the Strength of the other, will be as their Diameters. See GIANT.

The *Bones* are join'd and connected together various Ways, according to the various Purpoſes they are to ſerve: Some being intended for Motion; others for Reſt, and the Support of the incumbent Parts only. That Jointure intended for Motion, is call'd *Arthroſis*, or *Articulation*; that for Reſt, *Symphiſis*, or *Coalition*. Articulation is divided into two Kinds, *Diarthroſis* and *Synarthroſis*; and each of theſe again ſubdivided into ſeveral others, ſee ARTICULATION, DIARTHROSIS, &c. *Symphiſis* is divided into *Sutura*, *Harmonia*, and *Gomphaſis*; which ſee. Beſides theſe, are five other Kinds of Connexion, *viz.* *Syſſarchoſis*, *Synchondroſis*, *Syneuroſis*, *Syntenoſis*, and *Synymenſis*; which ſee.

The Number of the *Bones* is various in various Subjects; ordinarily 'tis about 250; *viz.* 61 in the Head, 67 in the Trunk, 62 in the Arms and Hands, and 60 in the Legs and Feet: The Variations are in the number of the *Seſamoidea*, the *Teeth*, and the *Sternum*. See the Names of the ſeveral *Bones* in the following Table; their Figures, and Places in the Plate, *Anatomy*; and particular Deſcriptions of each under their proper Heads.

| | | | | | |
|---|---|---|---|---|---|
| *Os Frontis* | 1 | *Vertebræ Cervicis* | 7 | The *Os Femoris* | 2 |
| — *Occipitis* | 1 | — *Dorſi* | 12 | *Rotula* | 2 |
| *Oſſa Parietalia* | 2 | — *Lumborum* | 5 | *Tibia* | 2 |
| — *Temporum* | 2 | — *Oſſis Sacri* | 6 | *Fibula* | 2 |
| *Officula Auditus* | 8 | *Os Coccygis* | 3 | *Oſſa Tarſi* | 14 |
| *Os Ethmoides* | 1 | *Scapulæ* | 2 | — *Metatarſi* | 10 |
| — *Sphænoides* | 1 | *Claviculæ* | 2 | — *Digitorum* | 28 |
| — *Mali* | 2 | *Coſtæ* | 24 | | — |
| — *Maxillare* | 2 | *Sternum* | 1 | | 60 |

| *Vomer* | 1 | The *Humerus* | 2 | | |
| *Maxilla Inferior* | 1 | *Ulna* | 2 | Beſides the *Oſſa Seſamoidea*, which are ſaid to be found to the Number of 48. | |
| *Dentes Inciſivi* | 8 | *Radius* | 2 | | |
| — *Canini* | 4 | *Oſſa Carpi* | 16 | | |
| — *Molares* | 20 | — *Metacarpi* | 8 | | |
| *Os Hyoides* | 1 | — *Digitorum* | 30 | | |
| | — | | — | | |
| | 61 | | 60 | | |

Dr. *Havers* divides the Blood-Veſſels of the *Bones* into Nutritious and Medullary; the one furniſhing Matter for the Nutrition, the other for the Lubrication of the *Bones*. The Chief of the Nutritious enter the Ends of the *Bone*, *viz.* the Arteries at one End, and the Veins at the other. The Medullary commonly enter the Sides of the *Bone*, and that obliquely; but both by the ſame *Foramen*.

The Medullary Oil is diſpens'd from the Cavity where it is depoſited, throughout the whole Subſtance of the *Bone*; paſſing firſt thro the tranſverſe Pores of the firſt internal *Laminæ* into the longitudinal ones; where it proceeds till it finds other tranſverſe Pores, when it alters its Courſe again, and exſudes further: Thus it paſſes alternately thro and between the Plates, till it is diffuſed throughout. This is the Method of its Conveyance in *Bones*, the Plates whereof are contiguous: Where the Plates are at a Diſtance, as in *Bones* that have no great Cavity, the ſmall Caverns abovemention'd contain Medullary Glands; whence the Plates have the Benefit of the Marrow without the former Method of Conveyance.

Thus are all the *Bones* ſtock'd with Pores, &c. excepting the *Teeth*; which have this further Diſtinction, that they have Nerves inſerted into 'em: whereas in all the other *Bones*, the Nerves go no farther than the *Perioſteum*.

Beſides the large Cavities in the Inſide, moſt *Bones* have ſuperficial Cavities, or *Sinus*'s, which may be diſtinguiſh'd into *Sulci*, or Furrows, the longer ſort; and *Pits* the ſhorter ones. On the Outſide are alſo obſerv'd Prominences, whereof there are two Kinds; the one a continu'd Part of the *Bone*, jetting apparently above its plane Surface, for the more commodious Inſertion of the Muſcles, &c. call'd *Apophyſis*;

*phyſis* ; the other an additional *Bone*, growing to another by mere Contiguity, being generally more ſoft and porous than the other, and call'd an *Epiphyſis*, or Appendage. If the Protuberance be round, it is call'd the *Caput*, under which is the *Cervix* ; if flat, *Condylus* ; if ſharp, *Corone*.

The general Uſes of the *Bones*, are to ſupport and ſtrengthen the Body, like Beams and Pillars in Building ; to defend ſome of the more eſſential Parts, as the Brain, *&c.* to give Shape to the Body, and to aſſiſt in Motion.

BONONIAN STONE, a ſmall, gray, weighty, ſoft, ſulphurous *Stone*, about the bigneſs of a large Walnut ; when broken, having a kind of cryſtal or ſparry *Talc* within : found in the Neighbourhood of *Bologne*, or *Bononia* in *Italy*, (whence it takes its Name) and in other Parts of that Country, particularly at the Foot of Mount *Palermo* ; where a *Shoemaker*, one *Vincenzo Caſciarlo*, having gather'd ſome Pieces and carry'd 'em home, in hopes by the Fire to draw Silver out of 'em ; inſtead of what he expected, found that admirable Phænomenon they exhibit, which conſiſts in this, that having been expos'd to the Light, they retain it, and ſhine, for the ſpace of ſix or eight Hours, in the Dark. M. *Homberg* was the Perſon who firſt taught us the manner of preparing and calcining the *Bononian Stone*, having made a Journey to *Italy* on purpoſe to learn it. When prepar'd, 'tis a kind of *Phoſphorus*, under the Appearance of a calcin'd *Stone*. 'Tis ſaid, the Art of preparing and calcining the *Bononian Stone* is loſt ; there having been but one, an Eccleſiaſtick, who had the true Secret, and who is ſince dead, without communicating it to any Perſon ; ſee *Philoſoph. Tranſact.* N° 21. M. *Elpigni* obſerves, that one *Zagonius* had a Method of making Statues and Pictures of the *Bononian Stone*, which would ſhine variouſly in the Dark ; but he adds, The Perſon dy'd without diſcovering his Secret, *Philoſ. Tranſ.* N° 134. See PHOSPHORUS.

BONNET, in Fortification, a Work raiſed beyond the *Counterſcarp*, having two Faces, which form a ſaliant Angle, and as it were a ſmall Ravelin without any Trench : Its Height is about three Foot, and it is environ'd round with a double Row of Palliſadoes, ten or twelve Paces diſtant from each other ; hath a Parapet three Foot high, and is like a little advanced *Corps du Guard*.

BONNET *a Preſtre*, or *Prieſt's-Cap*, is an Outwork, having at the Head three ſaliant Angles, and two inwards : It differs from the *Double Tenaille* only in this, that its Sides, inſtead of being parallel, are made like a Swallow's Tail ; that is, narrowing, or drawing cloſe at the Gorge, and opening at the Head.

BONNETS, in the Sea-Language, ſmall Sails, ſet on upon the Courſes, on the Main-ſail and Fore-ſail of a Ship, when too narrow or ſhallow to clothe the Maſt ; or to make more way in calm Weather. The Words are, *Lace on the Bonnet* ; that is, faſten it to the Courſe : *Shake off the Bonnet* ; that is, take it off the Courſe.

BOOKBINDING, the Art of *binding*, or covering *Books*. No doubt, the Art of *Binding* is almoſt as antient as the Science of Compoſing *Books* ; and that both the one and the other follow'd immediately the firſt Invention of Letters ; ſee LETTER. Whatever the Matter were whereon Men firſt wrote, there was a Neceſſity for uniting the ſeveral Parts together ; as well for the making one Piece, as for the better preſerving 'em : Hence the Origin of *Binding* ; for which, in all appearance, we are indebted to the *Egyptians*, that learned People, among whom the Arts and Sciences began to flouriſh ſo early.

*The Manner of binding* BOOKS *in Volumes, i. e.* of ſewing the Leaves together, to roll 'em on round Pieces or Cylinders of Wood, appears the moſt Antient ; tho that of *binding* 'em ſquare, and of ſewing ſeveral Quires over one another, lays claim to good Antiquity. The firſt of the two, which we may call *Egyptian binding*, held a long time after the Age of *Auguſtus* ; but 'tis now diſus'd, excepting in the *Jewiſh* Synagogues, where they continue to write the *Books* of the Law on Velloms ſew'd together ; making, as it were, only one long Page, with two Rollers, and their Claſps of Gold or Silver at each Extremity. The Form now in uſe, is the *ſquare Binding* ; which is ſaid to have been invented by one of the *Attali*, Kings of *Pergamus* ; to whom we likewiſe owe the manner of preparing *Parchment* ; call'd in *Latin*, from the Name of his Capitol, *Pergamena*, or *Charta Pergamea* : See PARCHMENT.

*Manner of binding Books.* The firſt Operation is to fold the Sheets according to the Form, *viz.* into two for Folio's, four for Quarto's, eight for Octavo's, *&c.* which they do with a ſlip of Ivory or Box, call'd a *Folding-ſtick* : In this the Workman is directed by the Catch-Words and Signatures at the Bottom of the Pages ; ſee PRINTING. The Leaves thus folded, and laid over each other in the Order of the Signatures, are beaten on a Stone with a Hammer, to preſs and flatten 'em, ſo as they may take leſs Room in the *Binding* : They are then ſew'd in the *Sewing-Preſs*, with a long Needle a little crook'd. What they call *ſewing*, is the fixing to the Back certain Cords, call'd *Band*, at a proper Diſtance from each other, and in a convenient Number ; which is done by drawing a Thread thro the Middle of each Sheet, and giving it a turn round each Band, beginning with the firſt and proceeding to the laſt : They ordinarily put ſix Bands in a Folio, and five in the reſt. To cut the Edges of the *Book*, 'tis faſten'd in a *Cutting-Preſs*, between two Boards, ſomewhat longer than the *Book*, and the Knife gradually conducted over the Extremities of the Leaves, by means of a Skrew to which it is faſten'd : Of the two Cutting-Boards, that behind is higher than the other, and ſerves to ſuſtain the Edges of the *Book* ; that before, which is lower, ſerving to direct the Knife, which ſlides underneath. See PRESS.

The Edges finiſh'd, the *Book* is *put into Boards* ; that is, the Paſtboards are fitted to it, whereon the Leather, the *Book* is to be cover'd withal, is afterwards apply'd. The Paſtboard is firſt well beaten on the Stone with a Hammer, and is fitted on by means of the Bands ; the Ends whereof are paſs'd thro three Holes, punch'd on the Edge of the Paſtboard againſt each Band : The Paſtboards are then cut even with the Edges of the *Book*, by means of a long ſharp Inſtrument with a wooden Handle, which the Workman applies to his Shoulder, and conducts the other End with his Hand, by the Edge of a Ruler laid on the Paſtboard. After this, *in the French Binding*, a *Book* is put in Parchment, *i. e.* a ſlip of Parchment, the Length of the *Book*, is apply'd on the Inſide of each Paſtboard ; ſo, however, as that being cut or indented in the Places againſt the Bands, it comes out between the Edge of the Paſtboard and the Leaves of the *Book* to cover the Back : This Preparation, call'd *Indorſing*, ſeems peculiar to the *French Binders* ; who are enjoin'd by Ordonnance to back their *Books* with Parchment, on the Penalty of 30 Livres, and the *Re-binding* of the *Book* : 'Tis done in the Preſs, where the Back being grated with an Iron Inſtrument with Teeth, to make the Paſt take hold, wherewith the Parchment is firſt faſten'd ; they afterwards add ſtrong Glue to fortify it.

The Headband is now added ; which is an Ornament of Silk of ſeveral Colours, or even, ſometimes, of Gold or Silver, plac'd at each Extreme of the Back, acroſs the Leaves ; and wove, or twiſted, ſometimes about a ſingle, and ſometimes a double piece of roll'd Paper. This, beſides its being an Ornament, alſo ſerves to fix the Sheets at Top and Bottom. In this State there remains nothing but to Bevil the inner Edges of the Paſtboards ; take off the four Angles, to facilitate the opening of the *Book* ; and to blacken, gild, or marble the Edges : in order to fit the *Book* for covering. See MARBLING, *&c.*

*Manner of Gilding Books on the Edges.* The *Book* is put between two Boards, and very ſtiffly ſqueez'd in the Preſs ; in which State, the Edge is ſcrap'd with a little crooked Iron Inſtrument, which, being moderately ſharp, takes off any unevenneſs left in the Cutting. On the Edge thus ſcrap'd is laid a Ground for the Gold. This Ground is a Compoſition of the *Armenian* Bole, red Chalk, black Lead, and a little Tallow beaten together, and ſteep'd in hot Size, made of Parchment, much the ſame with that uſed in Gilding in Water ; ſee GILDING. The Ground being well dried, is glazed lightly with the Whites of Eggs beaten ; and over this the Gold is apply'd. The Gold here us'd, is in the Leaf, as prepar'd by the *Gold-beaters*. The Inſtrument wherewith they take it up, conſiſts of two Branches of Iron, moveable on a Rivet in the Middle ; ſomewhat like an X, or a Pair of Sciſſars without Rings. When the Workman has laid the Leaf Gold in fit order, he rubs the Ends of the Branches againſt his Cheek, which gives 'em the degree of Warmth neceſſary to make the Gold ſtick thereto : The Gold thus taken up, is apply'd on the Edge of the *Book*, and ſpread ſmooth with a Hair Bruſh : And the Edge thus cover'd with Gold, is dry'd by the Fire, without taking it out of the Preſs, and afterwards burniſh'd ; ſee BURNISHING. On the Gold thus apply'd, they antiently made Ornaments, with hot Irons of various Forms and Deviſes ; the Practice of which ſeem'd to have been retriev'd in *France* about the beginning of the XVIIIth Century, and carry'd to a good Perfection by the Abbot *de Seuil*, and others ; and call'd by a new-invented Name, *Antiquing* : But as the Modern Taſte ſeems rather inclin'd to Simplicity, 'tis probable theſe *Antiquo*-Modern Ornaments will be dropp'd again.

*For the Covers* ; tho the Skins us'd herein, undergo ſeveral Preparations in the Hands of other Workmen ; yet there are ſome ſtill left for the *Binder*, and peculiar to his Art : Theſe we ſhall explain, in *Calf*, as being the Leather moſt us'd ; and, as being that to which all the reſt, with a little Variation, may be referr'd. The Calfskin, then, being well ſoak'd in Water, is ſcrap'd with a kind of blunt two-handed Knife, and cut into ſquare pieces of the proper Sizes

with Shears, and in this State laid on the Stone, and the Edges pared thin on the Side to be apply'd to the Paſtboard, with a Knife for that purpoſe. It may be eaſily imagin'd, that none of theſe Preparations, except the laſt, are us'd in Morocco, Sheep, or in Vellom, Velvet, &c. wherewith *Books* are ſometimes cover'd; in regard the Water wou'd ſpoil 'em. The Cover is next ſmear'd over with Paſt made of Wheat-Flower; then ſtretch'd over the Paſtboard on the Outſide, and doubled over the Edges within-ſide: after having firſt taken off the four Angles, and indented and plaited it at the Headbands. They then *cord the Book*, or *bind* it firmly between two Boards with a kind of Whip-cord, to make the Cover ſtick the ſtronger to the Paſt-boards and the Back; as alſo to form the Bands or Nerves the more accurately: In this Operation the Workman arms his Hand with Leather, to enable him to pinch it the harder; and uſes a pair of Pinchers to bring the Thread nearer each Band. The *Book* is now ſet to dry; and when dry, uncorded and put in the Preſs between two thicker Boards; then beaten on the Flat with a Hammer; Paper glu'd on the Paſtboards within-ſide; and the Cover marbled or ſprinkled, if requir'd, with a Pencil dipp'd in a black Colour, and ſtruck againſt the Finger or a Stick for the Purpoſe, ſo as to throw off little Specks and Stains of the Colour. Some mark the Covers with Clouds, in Imitation of Marble, by means of Aqua fortis applied thereon. The Cover is now glaz'd twice with the White of an Egg beaten; and at laſt poliſh'd with a Poliſhing-Iron, paſs'd hot over the glaz'd Cover, ſee POLISHING. If the *Book* be requir'd to be Letter'd, they glue a piece of red Morocco on the Back, between the firſt and ſecond Band, to receive the Title in Gold Letters; and ſometimes a ſecond between the next Bands underneath, to receive the N° of the Volume. The *Binding*, properly ſo call'd, is now compleat; and there remains nothing but the Gilding Work on the Back and Cover; which, as it makes a Part of the *Bookbinder's* Buſineſs among us, (tho with the *French*, &c. it is a diſtinct Profeſſion) we ſhall here ſubjoin.

*Manner of Gilding Books on the Backs and Covers.* In ordinary *binding*, they gild little elſe but the Backs, and the outward Edges of the Cover. On the Backs are gilt the Title of the Book, &c. with Flowers, Roſes, Knots, Stars, &c. between the Bands: on the Covers are ſometimes added, Compartiments, Arms, &c. All theſe Ornaments are made with each its ſeveral Gilding-Iron, engraven in Relievo; either on the Points of Punchions, as thoſe of Letters, Roſes, Stars, &c. or around little Cylinders of Steel, as the Lines, Embroideries, &c. The Punchions make their Impreſſion by being preſs'd flat down; and the Cylinders by being roll'd along by an Iron Ruler, by means of a double Branch; in the Middle whereof, they are fitted on an Iron Stay, or Axis, that paſſes the Middle of their Diameters.

To apply the Gold, they glaze thoſe Parts of the Leather whereon the Irons are to be apply'd, lightly over with a Pencil or Sponge; and, when half dry, lay over them pieces of Leaf Gold cut out near the Size; and on theſe Stamp the Punchions, or roll the Cylinders, both the one and the other reaſonably hot. If the Figures be large, and require a great Relievo, as Arms, &c. they are beat down with a Mallet or Hammer. The Gilding thus finiſh'd, they rub off the ſuperfluous Gold with a pretty ſtiff Bruſh; leaving nothing cover'd with Gold, but the Places whereon the hot Irons had left their Impreſſions.

BOOK-KEEPING. *Books* are either kept ſingle, as among Retail Dealers; or double, as among great Merchants: For the firſt, a *Journal* or *Day-book*, and a *Ledger* or *Poſt-book* are ſufficient; for the ſecond, there are ſeveral others requir'd. All Authors agree, that it was the *Italians*, particularly thoſe of *Venice*, *Genoa* and *Florence*, who firſt introduc'd the Method of *keeping Books* double, or in two Parts: Hence, among us, 'tis call'd *The Italian Method*. In this, there are three *Books* indiſpenſibly neceſſary; *viz.* the *Waſt-book*, *Journal*, and *Ledger*: Beſides, there are others, to the Number of thirteen, call'd *Auxiliary Books*, uſed as occaſion requires; *viz.* the *Caſh-book*, *Debt-book*, *Book of Numero's*, *of Invoices*, *of Accompts-Currant*, *of Commiſſions*, *Orders*, *Advices*, *of Acceptances*, *of Remittances*, *of Expences*, *of Copies of Letters*, *of Veſſels*, and *of Workmen*.

1. The *Waſt-book*, or Memorandum-book, is the firſt, and moſt eſſential: In this, all kinds of Matters are, as it were, mix'd and jumbled together; to be afterwards ſeparated and transferr'd into the others: ſo that this may be call'd the Elements of all the reſt. It may be kept two ways; the firſt by entering things down ſimply as they happen, *v. g. Bought of ſuch a one, ſold to ſuch a one, paid ſuch a one, lent ſo much*, &c. the ſecond by entering, at once, each Article, Debtor and Creditor: This laſt is eſteem'd the beſt; in regard, forming a kind of little Journal, it ſaves the keeping any other.

2. *Journal-Book*, or Day-book, wherein the Affairs of each Day are enter'd orderly down, as they happen, from the Waſt-book. Each Article in this *Book* to conſiſt of ſeven Parts; *viz.* the Date, Debtor, Creditor, Sum, Quantity and Quality, how payable, and the Price. By an Ordonnance of the Year 1673, all Traders in *France*, whether by Wholeſale or Retail, are oblig'd to keep a Journal, containing all their Affairs; Debts active and paſſive, Bills of Exchange, &c. For want of keeping this, and ſurrendring it up, on a Failure, they are to be reputed fraudulent Bankrupts, and ſubjected to the Penalties thereof.

*Model of an Article in a* Journal.

3. *Ledger*, or Great *Book*; call'd alſo *Poſt-book*, *Book of Extracts*, &c. is a huge Volume, uſually rul'd into ſix Columns: This is the Waſt-book ſtill further digeſted; and is extracted immediately from the Journal. In this all the Accompts diſpers'd in the Journal, are drawn out and ſtated in *Debtor* and *Creditor*. To form each Accompt, two Pages are requir'd, oppoſite to each other; that on the Left ſerving for Debtor, the other for Creditor: Each Article to conſiſt of five Parts, or Members; the Date, the Perſon whom we credit, or are credited by; the Subject, *i. e.* the thing credited or indebted for; the Page where it is found, and the Sum or Amount of the Article. Two Inſtances, the one of an Article of Credit, the other of Debt; will illuſtrate the Form and Uſe of this *Book*.

To facilitate the Uſe of the *Ledger*, there is an Alphabet, to ſerve as an Index or Repertory; conſiſting of 24 Leaves, each cut on the Edge, and mark'd with one of the 24 Letters; wherein, the initial Letters of the Perſons Names with whom you have Accompts, are inſerted, with the Folio of the Ledger, where the Account is ſtated.

The *Caſh-book* is the moſt important of all the *Auxiliary* ones; 'tis ſo call'd, becauſe it contains, in Debtor and Creditor, all the Caſh that comes in or goes out of the Merchant's Stock. In this are enter'd all the Sums receiv'd and pay'd daily; thoſe receiv'd on the Left hand, with the Perſon's Name, of whom receiv'd, for what, for whom, and in what Species: Thoſe paid, on the ſide of Creditor; mentioning, likewiſe, the Species, the Reaſon why, the Perſon to whom, and for whom the Payment is made. For Inſtance;

*Debt-Book*, or Book of Payments. A *Book* wherein is enter'd the Day whereon all Sums fall due, whether to be paid, or receiv'd by Bills of Exchange, Merchandizes, or otherwiſe: To the end, that by comparing Receipts and Payments, Proviſion may be made in Time for a Fund for Payment; by receiving Bills, &c. due, or taking other Precautions. Two Models will ſuffice for the Uſe and Form of this *Book*: it muſt only be obſerv'd, that like the Ledger it muſt be on two oppoſite Pages; Moneys to be receiv'd on the Left hand, thoſe to be paid on the Right.

| Apr. 10 | *Sent to* Nichols *of* Briſtol. |

*Book of Invoices.* A *Book* to ſave the Journal from the Eraſures inevitable, in taking Accompts or Invoices of the ſeveral Goods receiv'd, ſent, or ſold; where 'tis neceſſary to be very particular. The Invoices here enter'd, are to be thoſe of Goods bought, and ſet to Accompt of ſome other; thoſe of Goods ſold by Commiſſion; of Goods ſent away to be ſold on our Accompt; and thoſe of Goods in Partnerſhip, whereof we have the Direction, or whereof others have the Direction.

*Book of Accompts Currant*, is kept in Debtor and Creditor, like the Ledger; and ſerves for Accompts ſent to Correſpondents, to be regulated in concert with 'em, e'er they are enter'd in the Ledger: And 'tis properly a Duplicate of the Accompts Currant, kept to have recourſe to on occaſion.

*Book of Commiſſions, Orders*, or *Advices*. In this are enter'd all Commiſſions, Orders, &c. receiv'd from Correſpondents. The Margins hereof are to be very large; to give room againſt each Article to inſert the neceſſary Memoirs relating to their Execution. Some content themſelves with cancelling the Articles when executed.

*Book of Acceptances*, is deſtin'd for the regiſtring all Bills of Exchange, notify'd by Letters of Advice from Correſpondents; to be able to know, on the Bill's being preſented, whether they have Orders to accept 'em or not. When they chuſe to decline accepting a Bill, againſt the Article thereof, in the Book they put *P*, *i. e.* Proteſt; that on offering the Bill, the Bearer may be told he may proteſt it: On the contrary, if they accept it, they write againſt it an *A*; adding the Date, or Day of Acceptance. And this, upon being transferr'd to the Debt-Book, is cancell'd.

*Book of Remittances*. A *Book* ſerving to Regiſter Bills of Exchange, as they are remitted by Correſpondents, to require the Payment thereof. If they be proteſted for want of Acceptance, and return'd to thoſe who remitted 'em; mention is made thereof againſt each Article, by adding a *P* in the Margin, and the Date of the Day when they were return'd; then cancell'd. The *Book* of Acceptances and Remittances, have ſo near a Relation to each other, that many Merchants, &c. make but one of the two, which they keep in Debtor and Creditor; putting Acceptances of the Side of Debt, and Remittances to that of Credit.

*Book of Expences*. A Detail of the petty Expences, both Domeſtick and Mercantile; which, at the End of each Month are ſumm'd up, and make an Article for the Journal.

*Book of Veſſels*, is kept in Debtor and Creditor; a particular Accompt being kept for each Veſſel. To the Side of Debtor, are put Victualling, Fitting out, Wages, &c. To the Side of Creditor, are put every thing the Veſſel has produc'd; whether by way of Freight or otherwiſe. Laſtly, the Total of each is enter'd in the Journal; upon balancing the Accompt of each Veſſel.

*Book of Workmen*, is particularly in uſe among Merchants who have Manufactures or Works in their Hands. 'Tis kept Debtor and Creditor for each Workman employ'd. On the Side of Debt is put the Matters given 'em to work; and on that of Credit, the Works they return.

Theſe *Books* are kept the ſame, as to Subſtance, in moſt Trading Cities in *Europe*; but not as to Coin: Each being regulated by that Coin which has Courſe in the State where they are. See COIN.

BOOKS, in Terms of Commerce, the Regiſters wherein Merchants, &c. keep their Accompts. See BOOK-KEEPING.

BOOM, in the Sea-Language, a long Piece of Timber, with which the Clue of the Studding-ſail is ſpread out; called alſo the *Studding-ſail Boom*. It is ſometimes likewiſe uſed to ſpread, or *boom* out the Clue of the Main or Foreſail. They ſay a Ship comes *Booming*, when ſhe makes all the Sail ſhe can.— Alſo thoſe Poles with Buſhes or Baſkets on the Top, which are plac'd to direct how to ſteer into a Channel, are call'd *Booms*, and by ſome *Beacons*.

BOOT, *Brodequin*, a kind of Torture for Criminals; to extort a Confeſſion, by means of a *Boot*, or rather a Stocking, or Buſkin of Parchment; which being put on the Leg moiſt, and brought near the Fire, in ſhrinking, ſqueezes the Leg violently, and occaſions intolerable Pain. There is alſo another kind of *Boot*; conſiſting of four thick ſtrong Boards bound round with Cords: Two of theſe are put between the Criminal's Legs, and the two others plac'd, one on the Side of one Leg, and the other on t'other; then, ſqueezing the Legs againſt the Boards, by the Cords, the Criminal's Bones are broken, &c. The *Boot* is now diſus'd in *England*; but ſubſiſts ſtill in ſome other Countries, particularly *Scotland*.

BOOTES, in Aſtronomy, a Conſtellation of the Northern Hemiſphere near the Pole it ſelf; ſee CONSTELLATION.

The Stars in the Conſtellation *Bootes*, in *Ptolomy*'s Catalogue are 23; in *Tycho*'s 28; and in Mr. *Flamſtead*'s Catalogue 45. Their Longitudes, Latitudes, Magnitudes, &c. are as follow;

*Stars in the Conſtellation* BOOTES.

BORAX, a Mineral Salt, uſed in ſoldering, brazing, and caſting Gold and other Metals; known to the Antients under the Name of *Chryſocolla*. *Pliny* divides *Borax* into Natural and Artificial: The *Natural*, according to him, is only a ſlimy Humor running in Mines of Gold, Silver, Copper, and even Lead; which being congeal'd and harden'd by the Winter's Cold, becomes of the Conſiſtence of Pumice-Stone. For *Artificial Borax*, he ſays, 'tis made by letting Water run in the Veins of the Mine, all the Winter long, till *June*; and letting the Mine dry, the reſt of the Year. So that Artificial *Borax*, according to him, is no more than the Mineral putrify'd and corrupted. The ſame Author diſtinguiſhes *Borax* into Black, Green, Yellow and White; aſſuming their ſeveral Colours, as well as Values, from the ſeveral Mines whereof they are form'd. The Natural, according to him, is heavier than the Factitious.

The Moderns, in like manner, diſtinguiſh two Kinds of *Borax*; *Natural*, call'd Crude; and *Artificial*, which is purify'd and refin'd. The Natural is a Mineral Salt, of the common Form, dug out of the Earth in ſeveral Parts of *Perſia*; and found alſo at the Bottom of a Torrent, running in the Mountains of *Purbeth*, near the *Frontiers* of *White Tartary*: When taken up, 'tis expos'd to the Air; where it acquires a kind of reddiſh Fat, which ſerves to feed it, and prevent its calcining. When in its Perfection, 'tis ſent to *Amadabat*, in the Territories of the Great *Mogol*, where the *European* Merchants buy it. There is another kind of Artificial *Borax*; drier, and of a greyiſh Colour, like *Engliſh* Copperas; only differing from the former, by its being longer expos'd to the Air.

For Artificial *Borax*, it was the *Venetians* who firſt found out the Art of preparing it; or, rather, of purifying the Natural: 'Tis done by diſſolving it in Water; then filtrating and cryſtallizing it: uſing, for that purpoſe, Cotton Matches; about which the *Borax* cryſtallizes, like Sugar candy and Verdigreaſe on Wood. The *Dutch*, after refining it, reduce it into little Pieces, like tagged Points; and 'tis thus commonly us'd.

*Borax*, refin'd, either in the *Dutch* or *Venetian* manner, ſhould be clear and tranſparent, almoſt inſipid to the Taſte; and above all, Care muſt be taken it have no Mixture of *Engliſh* Allom. *Borax* is of ſome uſe in Medicine, as it enters the Compoſition of the Unguent *Citrin*. 'Tis alſo uſed in the Preparation of a *Fucus* for the Ladies.

*Agricola* ſays, there is a foſſile Nitre, as hard as that whereof the *Venetians* make *Borax*: In which he has Reaſon; this Nitre being nothing but the *Perſian Borax* abovemention'd. What he adds, that the *Venetian Borax* is made of the Urine of young People who drink Wine, beat in a Mortar to the Conſiſtence of an Unguent; then mix'd with Iron Ruſt and Nitre: is not only falſe, but is a Miſrepreſentation of a Paſſage in *Pliny*, *Hiſt. Nat.* L. 33. c. 5.

BORDERS, among Floriſts, are ſuch Leaves as ſtand about the middle Thrum of a Flower. See FLOWER.

BORD-HALFPENNY, or *Brod-halfpenny*. Money paid in Markets, and Fairs, for ſetting up Boards, Tables, and Stalls, for the Sale of Wares.

BORD-LANDS, Lands antiently kept by the Lords in their Hands, for the Maintenance of their *Board* or Family. This was alſo antiently call'd *Bordage*.

BORD-*Service*. A Tenure of *Bord-Lands*; where the Tenants are to pay ſo much *per* Acre, in lieu of finding Proviſion for their Lord's *Board*, or Table.

BORDURE, in Heraldry, a kind of Addition on the Limb of a Shield, in Form of a Hem, or Girdle, encompaſſing it all round, and ſerving as a Difference; ſee DIFFERENCE. The *Bordure* muſt be about one ſixth Part of the Breadth of the Shield. A ſimple *Bordure*, is that which is of the ſame Colour or Metal throughout; and is the firſt Addition of younger Brothers: There are others, *Compon'd*, *Counter'd*, *Ingrail'd*, *Indented*, and *Charg'd* with other Pieces; which make different Additions for younger Brothers, in ſeveral Degrees. If the Line which conſtitutes the *Bordure* be ſtreight, and the *Bordure* Plain, as they call it in Blazoning, the Colour of the *Bordure* alone is named; He beareth Gules, a *Bordure* Or. If a *Bordure* be charg'd with any Parts of Plants or Flowers they ſay, *Verdoy* of Trefoils. If it conſiſt of Ermins, Vairy, or any of the Furs, the Term is, *Purfiew* of Ermins. If the *Bordure* be charg'd with Martlets, the Word is: *Charg'd* with an Enaluron of Martlets, *&c.*

BOREAS, a *Greek* Name, now in popular uſe, for the North Wind; tho *Pezron* obſerves, antiently, and with much greater Propriety, it ſignify'd the North-Eaſt Wind, at the Time of the Summer Solſtice: He adds, that the Word comes from the *Celtic* Word *Bore*, *Morning*; in regard their principal Light, in that Seaſon, came from that Quarter, whence alſo thoſe Winds uſually blew. The common Etymologies fetch it either from the *Greek* Βοή, *Clamour* or *Noiſe*; or Βορὰ, *Eſca*, *Food*; becauſe it occaſions an Appetite, or becauſe it is good for the Fruits of the Earth, which yeild us Food: Others from the *Hebrew*, *Birjah*, Food; or *Beri*, Calmneſs; *bor*, Purity; or *bar*, Corn. The Antients ſuppos'd *Boreas* only blew out of *Thrace*.

BOREE, or BOUREE, a kind of Dance, compos'd of three Steps join'd together with two Motions; and begun with a Crotchet, riſing. The firſt Couplet contains twice four Meaſures, and the ſecond twice eight. It conſiſts of a balance Step and a *Coupee*: 'Tis ſuppos'd to come from *Auvergne*.

BOROUGH, or BOROW, or BURGH, is frequently us'd for a Town Corporate; or a Corporation which is not a City. See CITY. In which Senſe, a *Borough* and Corporation are the ſame thing; ſee CORPORATION, *&c.*

*Borough*, in its Original Saxon *Borhoe*, was primarily meant of a Company conſiſting of ten Families, who were bound and combin'd together as each other's Pledge. *Bracton*, L. 3. Tr. 2. c. 19. Afterwards, as *Verſtegan* has it, *Burg*, and *Burgh*, came to ſignify a Town that had ſomething of a Wall or Incloſure about it: But, in later Times, the ſame Appellation was beſtow'd on ſeveral of the *Villæ Inſigniores*, or Country Towns of more than ordinary Note, not wall'd. See TOWN, VILLAGE, *&c.*

BOROUGH, or *Burgh*, is now particularly appropriated to ſuch Towns, and Villages as ſend *Burgeſſes*, or Repreſentatives to Parliament: See BURGESS.

*Boroughs* are equally ſuch, whether they be incorporated or not; there being great Numbers of our *Engliſh Boroughs* not incorporated: And, on the contrary, ſeveral Corporations that are not *Boroughs*; ex. gr. *Kingſton*, *Deal*, *Kendal*, &c.

BOROUGHS, are diſtinguiſh'd into thoſe *by Charter*, or *Statute*; or *by Preſcription*, or *Cuſtom*. See PRESCRIPTION, *&c.*

The Number of *Boroughs* in *England*, is 149; ſome whereof ſend one, ſome two Repreſentatives. See PARLIAMENT.

BOROUGH-ENGLISH, in Law, a Cuſtomary Deſcent of Lands or Tenements in ſome Places, whereby they come to the Youngeſt, inſtead of the Eldeſt Son; or, if the Owner have no Iſſue, to the Youngeſt, inſtead of the Eldeſt Brother: for that the Youngeſt is ſuppoſed, in Law, the leaſt able to ſhift for himſelf.

BOROUGH-HEAD, or *Headborough*, is the Chief Man of the Decury, or Hundred; choſe by the reſt to ſpeak and act in their behalf. In many Pariſhes it ſignifies alſo a kind of Conſtable; where many of them are choſen as his Aſſiſtants, to ſerve Warrants, *&c.*

ROYAL BOROUGHS, in *Scotland*, are Corporations made for the Advantage of Trade, by Charters, granted by ſeveral of their Kings; having the Privilege of ſending Commiſſioners to repreſent 'em in Parliament, beſides other peculiar Privileges. Theſe form a Body of themſelves, and ſend Commiſſioners, each, to an annual Convention at *Innerskeithing*; to conſult the Benefit of Trade, and the general Intereſt of the *Boroughs*.

BOSCAGE, a Place ſet with Trees, a Grove or Thicket. In a Law Sence it ſignifies Maſt, or ſuch Suſtenance as Woods and Trees yeild to Cattel: And, among Painters, a Picture repreſenting much Wood and Trees.

BOSPHORUS, in Geography, a Streight, Channel, or narrow Sea, which, it is ſuppoſed, a Bullock may ſwim over.

This Name is now confin'd to two Streights in the Mediterranean Sea; *viz.* the *Boſphorus* of *Thrace*, commonly call'd, the Streights of *Conſtantinople*, or Channel of the *Black Sea*; and the *Cymmerian Boſphorus*, now more commonly call'd the Streights of *Kaphe*, or *Kiderleri*, from two Cities ſtanding on it.

The Word is originally *Greek*, and is form'd from βὸς, *bos*, and φέρω, *I carry*; or from βὸς and πορ&, *Paſſage*. The Etymology of the Word is pretty well agreed on; but the Reaſon why it was given, is extremely controverted: *Nymphius* tells us, on the Authority of *Accarion*, that the *Phrygians*, deſiring to paſs the *Thracian* Streight, built a Veſſel, on whoſe Prow was the Figure of a Bullock. *Pliny*, *Dionyſius*, *Val. Flaccus*, *Polybius*, *Callimachus*, &c. ſay, that *Io* being transform'd into a Cow by *Juno*, paſs'd this Streight; which hence was call'd *Boſphorus*. *Arrian* tells us, that the *Phrygians* were enjoin'd by the Oracle, to follow the Rout which a Bullock ſhould mark out to 'em; and that upon ſtirring one up, it jump'd into the Sea to avoid their Purſuit, and ſwam over this Streight. Others ſay, that an Ox, tormented by a Gad-fly, threw it ſelf in and ſwam over; and others, that antiently the Inhabitants of theſe Coaſts, when they would paſs over, join'd little Boats together, and had 'em drawn over by Bullocks, &c. The *Cimmerian Boſphorus* ſeems to have been ſo call'd, from its reſemblance to the *Thracian*.

BOSSAGE, or *Boſſage*, in Architecture, is us'd for any Stone that has a Projecture, and is laid in its Place in a Building uncut; to be afterwards carv'd into Mouldings, Capitals, Arms, &c. *Boſſages*, are alſo what we otherwiſe call Ruſtick Work; conſiſting of Stones which ſeem to advance beyond the naked of a Building, by reaſon of Indentures, or Channels left in the Joinings; uſed chiefly in the Corners of Buildings, and thence call'd Ruſtick *Quoins*. The Cavity or Indenture is ſometimes round, ſometimes ſquare, ſometimes cham frain'd, or bevel'd; ſometimes in the Diamond Form: Sometimes it is inclos'd with a Cavetto, ſometimes with a Liſtel.

BOTANY, the Science of Herbs; or that part of Medicine, and Agriculture, which treats of Plants, whether Medicinal or others; their ſeveral Kinds, Forms, Virtues and Uſes. The Word comes from the *Greek* βόλάνη, *Herb*; and that from βοτὸς, *Victuals*; and βοτὸς from βοω, *I feed*; becauſe moſt Animals feed on Herbs. See MEDICINE, and GARDENING.

The moſt eminent *Botaniſts* among the Antients, were *Hippocrates*, *Paracelſus*, *Dioſcorides*, *Pliny*, *Galen*, &c. In the XVIth Century, the antient *Botany*, which had been loſt a great many Ages, was induſtriouſly reviv'd; principally by *Leonicenus*, *Braſavolus*, *Cordus*, *Fuchſius*, *Matthiolus*, *Dalechampius*, &c. In the ſame Century a Number of other Hands were added to the Oar; by whoſe Induſtry, the Art was firſt brought into a Syſtem or Body; as *Geſner*, *Dodoneus*, *Ceſalpinus*, *Cluſius*, *Lobel*, *Columna Proſper Alpinus*, the two *Bauhins*, *Plukenet*, &c. Others have come ſince, and contributed to bring it ſtill nearer Perfection; *viz.* *Moriſon*, *Malpighi*, *Herman*, *Ray*, *Magnol*, *Tournefort*, *Sloan*, &c. See HERB, PLANT, &c.

BOTE, in our old Law-Books, ſignifies Compenſation, Recompence, or Amends: Hence *Man-bote* or *Mon-bote*, amends for a Man ſlain, who was bound to another; hence alſo *Boteleſs*; where no Judgment or Favour will acquit a Man; as, *v. g.* for Sacrilege, &c. Hence alſo our common Phraſe, *To boot*. See HEDG-BOTE, PLOW-BOTE, HOUSE-BOTE, &c.

BOTTOMAGE, or BOTTOMRY, is when the Maſter of a Ship borrows Money upon the *Bottom* or Keil of it; ſo as to forfeit the Ship it ſelf to the Creditor, if the Money be not paid at the Time appointed, with the Intereſt of forty or fifty Pounds *per Cent.* at the Ship's ſafe Return: But if the Ship miſcarry, the Lender loſes his Money, and therefore the Intereſt is uſually ſo great. Others ſtate it thus; one Man lends Money to a Merchant who wants it to traffick, and is to be paid a greater Sum at the Return of the Ship; ſtanding to the Hazard of the Voyage: So that tho the Intereſt be illegal, yet it is not eſteem'd Uſury.

BOTTONY, a Term in Heraldry, for one of their Croſſes, of this Figure; Argent a Croſs *Bottony* Sable, by the Name of *Winwood*.

BOUCHE *of Court*, or vulgarly BUDGE *of Court*, is to have Meat and Drink ſcot-free there: In which Sence the *French* ſay, *Avoir Bouche a la Cour*, to be in Ordinary at Court. This Privilege is ſometimes only extended to Bread, Beer and Wine. 'Twas a Cuſtom antiently in uſe, as well in the Houſes of Noblemen, as in the King's Court. See MOUTH.

BOULDER-WALLS, a kind of *Walls* built of round Flints or Pebbles, laid in a ſtrong Mortar; uſed where the Sea has a Beach caſt up, or where there are plenty of Flints. See WALL.

BOULTINE, in Architecture, the Workman's Term for a Moulding, whoſe Convexity is juſt $\frac{1}{4}$ of a Circle; placed next below the Plinth, in the Tuſcan and Dorick Capital. See QUARTER-ROUND, and ECHINUS.

BOURGERMESTERS, or *Burgmeſters*, the Chief Magiſtrates in the Cities of *Germany*, *Holland* and *Flanders*. To them belongs the giving of Orders for the Government, Adminiſtration of Juſtice, Policy, and Finances of the Place: Tho the Authority and Office of a *Bourgermeſter* is not every where alike; each City having its Particular Laws and Statutes. The Word is form'd from the two *Flemiſh* Words, *Borger*, Burgeſs or Citizen, and *Meeſter*, Maſter. Some expreſs it in *Latin*, by *Conſul*, others by *Senator*. M. *Bruneau* obſerves, that *Bourgermeſter*, in *Holland*, anſwers to what we call Alderman and Sheriff in *England*; Attorney at *Compiegne*, Capitoul at *Tholouſe*, Conſul in *Languedoc*, &c.

BOUTANT, in Architecture. An *Arc-boutant*, is an Arch or Buttreſs, ſerving to ſuſtain a Vault; and which is it ſelf ſuſtained by ſome ſtrong Wall or Maſſive-work. A Pillar *boutant*, is a large Chain or Jaumb of Stone, made to ſupport a Wall, Terraſs, or Vault. The Word is *French*, and comes from the Verb *Bouter*, *to but*, or *a-but*.

BOUTS RIMEZ, a popular Term in the *French* Poetry; ſignifying certain *Rhimes*, diſpos'd in Order, and given to a Poet together with a Subject, to be fill'd up with Verſes ending in the ſame Word, and in the ſame Order. The Invention of the *Bouts Rimez*, is owing to one *Du Lot*, a Poet, in the Year 1649. In fixing the *Bouts*, 'tis uſual to chuſe ſuch as ſeem the wildeſt, and have the leaſt Connexion. Some good Authors fancy, that theſe *Rhimes* are of all others the leaſt perplexing; and furniſh the moſt new Matter of all others. *Sarraſin* has a Poem on the Defeat of the *Bouts Rimez*. The Academy at *Toulouſe* have contributed towards keeping in Countenance the *Bouts Rimez*; by propoſing each Year a Sett of 14, to be fill'd up on the Glories of the *Grand Monarque*: The victorious Sonnet to be rewarded with a fine Medal. An Inſtance hereof is the following one, fill'd up by *P. Commire*.

*Tout eſt grand dans le Roi, l'Aſpect ſeul de ſon* buſte,
*Rend nos fiers Ennemis plus froids que des* Glacons:
*Et Guillaume n'attend que le Tems des* Moiſſons,
*Pour ſe voir Soccomber ſous un bras ſi* robuſte.
*Qu'on ne nous vante plus les Miracles d'* Auguſte;
*Louis de bien regnir lui feroit des* Lecons:
*Horace en vain l'egale aux Dieux dans ſes* Chanſons.
*Moins que mon Heros il etoit ſage &* juſte, &c.

BOW, a Beam of Wood, or Braſs, with three long Screws, that govern or direct a Lath of Wood or Steel to any Arch: Us'd commonly to draw Draughts of Ships, Projections of the Sphere; or, wherever it is requiſite, to draw large Arches.

Bow is alſo an Inſtrument formerly us'd at Sea; conſiſting of a large Arch of 90 Degrees graduated; three Vanes, and a Shank or Staff; a Shade-Vane, a Sight-Vane, and an Horizon-Vane.

Bow *of a Ship*, is that Part of her which begins at the Looſ, and compaſſing Ends at the Stem, and ends at the Sternmoſt Part of the Fore-Caſtle. If a Ship hath a broad *Bow*, they call it *a bold Bow*; if ſhe hath a narrow thin *Bow*, they ſay ſhe hath *a lean Bow*. The Piece of Ordnance that lies in this Place, is call'd the *Bow Piece of Ordnance*; and the Anchors that hang there, are call'd, her *Great* or *Little Bower*.

BOWBEARER, an under Officer of the Foreſt, who is to obſerve and take notice of all manner of Treſpaſs to Vert or Veniſon; and to attach, or cauſe to be attach'd, the Offenders, in the next Court of Attachment.

BOWER, an Anchor carry'd at the Bow of the Ship, is call'd her *Bower*: There are uſually carry'd two there, the firſt and ſecond *Bower*; but the greateſt Anchor is carry'd in the Hold.

BOWLING, or rather BOW-LINE, a Rope faſten'd to the Leach, or middle Part of the Outſide of the Sail in a Ship, fix'd in three or four Parts of the Sail; call'd the *Bowling-bridle*: The Mizen-*Bowling* is faſten'd to the lower End of the Yard. All Sails have the *Bowling*, except the Sprit-ſail, and Sprit-ſail-top-ſail: and therefore thoſe Sails cannot be uſed cloſe by a Wind; the uſe of the *Bowling* being to make the Sails ſtand ſharp, or cloſe, or by a Wind. The Terms are, *Sharp the Bowling*, *Haul up the Bowling*, *Set faſt the Bowling*; that is, Pull it up hard, more forward on: But when they ſay, *Eaſe the Bowling*, *check*, or *run up the Bowling*; they mean, Let it more ſlack. A *Bowling-Knot*, is a Knot that will not ſlip; by which the *Bowling*-Bridle is faſten'd to the Crengles.

BOWSE,

BOWSE, a Sea Term, ſignifying as much as Hale or Pull: Thus haling upon a Tack, is call'd *bowſing* upon a Tack; and when they would have the Men pull all together, they cry, *Bowſe away.*

BOW-SPRIT, or *Bolt-ſprit*, the Maſt of a Veſſel ſtanding foremoſt on the Prow; reſting ſlopeways on the Head of the Main Stern, and having its lower End faſten'd to the Partners of the Fore-maſt, and farther ſupported by the Fore-ſtay: It carries the Sprit-ſail, Top-ſail, and Jack-ſtaff. The *Bow-ſprit* ſhould be two Thirds of the Length of the Main-maſt, and its Thickneſs equal to the Mizen-maſt: When it is twelve Fathoms five Foot long, its Yard muſt be eight Fathoms two Foot long; and the Top-maſt of the *Bow-ſprit*, three Fathoms one Foot.

BOYAR, or BOIAR, a Term us'd for a Lord or Grandee, in *Muſcovy*. According to *Becman*, *Boyars* are what in other Countries are call'd the upper Nobility: He adds, that the Czar of *Muſcovy*, in his Diploma's, names *Boyars* before *Waywodes*.

BOYAU, in Fortification, a Gut, or Branch of the Trenches: Or a Ditch cover'd with a Parapet, ſerving for a Communication between two Trenches. *Boyau* is alſo a Line, drawn winding about, in order to incloſe ſeveral Tracts of Ground, or to attack ſome Works. See DITCH, TRENCH, &c.

BOYLE'S LECTURES, a Courſe of *Sermons* or *Lectures*, ſet on foot by the Honourable *Robert Boyle* Eſq; in 1691. Their Deſign, as expreſs'd by the Inſtitutor, is to prove the Truth of the Chriſtian Religion againſt Infidels, without deſcending to any Controverſies among Chriſtians; and to anſwer new Difficulties, Scruples, &c. For the Support of this *Lecture*, he aſſign'd the Rent of his Houſe in *Crooked-Lane*, to ſome Learned Divine within the Bills of Mortality; to be elected for a Term, not exceeding three Years, by the late Archbiſhop *Tenniſon*, and others. But the Fund proving precarious, the Salary was ill pay'd: To remedy which Inconveniences, the ſaid Archbiſhop procur'd a yearly Stipend of 50 Pound, for ever, to be paid Quarterly; charg'd on a Farm in the Pariſh of *Brill*, in the County of *Bucks*.

BRACE, is commonly taken for a Couple or Pair; and apply'd by Hu[illegible]en to ſeveral Beaſts of Game; as a *Brace* of Bucks, Foxes, Hares, &c. Alſo a *Brace* of Greyhounds, is the proper Term for two.

BRACE, in Architecture, a Piece of Timber, fram'd in with Bevil Joints. Its uſe is to keep the Building from ſwerving either way. When a *Brace* is fram'd into a King-piece, or principal Rafter, it is called by ſome a *Strut*.

BRACE, *Bracchio*, or *Braſſe*, a long Meaſure, anſwering to our *Fathom*; ſee FATHOM.

BRACED, a Term in Heraldry, for the intermingling of three Chevronells, thus; Azure a Chief Or, and three Chevronells *braced* in the Baſe of the Eſcutcheon, by the Name of *Fitz-hugh*.

BRACES, are Ropes belonging to all the Yards of a Ship, except the Mizen, two to each Yard: There is a Pendant ſeized to the Yard-Arms, at whoſe other End there is a Block, through which the *Brace* is reeved. Their uſe is to *ſquare the Yard*; that is, to ſet it ſquare; *To brace the Yard*, that is, to bring it to either Side; *to traverſe the Yard*, that is, to ſet it any way overthwart; and *To right the Yard*, is, to bring it ſo as it ſhall ſtand at Right Angles with the Length of the Ship: All *Braces* come afterward on; the Main-*brace* comes to the Poop, the Main-topſail-*brace* to the Mizen-top, and thence to the Main Shrouds; the Fore and Fore-top-ſail *Braces* come down by the Main, and Main-top-ſail Stays, and ſo of the reſt: But the Mizen Bowling ſerves for a *Brace* to that Yard; and the Croſs-Jack *Braces* are brought forward to the Main Shrouds, whenever a Ship ſails cloſe by a Wind. See YARDS.

BRACHMANS, the Philoſophers, or Sages of the *Eaſt-Indies*. Theſe have been famous in all Antiquity for their Severity of Life. The *Greeks* gave 'em the Name of *Gymnoſophiſts*; tho *Clemens*, *Porphyry*, &c. make the *Brachmans* only a Branch of the *Gymnoſophiſts*; whom they divide into two Sects, the *Brachmans* and *Samanæi*. There are ſome in the *Indies* who ſtill bear the ſame Name, and live in the ſame manner as the Antients. The *Portugueze* call 'em *Brames*; we, uſually, *Bramines*. Some ſay, the *Brachmans* derive their Name from the Patriarch *Abraham*; whom, in their Language, they call *Brachme*: Others borrow it from their God *Brachma*; which ſome take to be the ſame with *Abraham*. Hence *Poſtel* gives 'em the Name of *Abrachmanes*. F. *Thomaſſin* fetches it from the *Hebrew*, *Barach*, *fugit*, *aufugit*, to fly or eſcape; becauſe the *Brachmans* retire into the Country, and live in Deſarts. The ſame Author gives us another Derivation of *Brachmans*, *viz.* from the *Hebrew Barach*, *benedicere*, *orare*, to bleſs, pray; this being their principal Occupation.

*Porphyry* obſerves, that the *Brachmans* ſucceeded into the Order, &c. by Right of Family; whereas the *Samanæans* were elected into it: The former therefore were all of the ſame Family, the latter of various. The *Brachmans* were perfectly at Liberty, paid no Taxes, nor were under the Command of any Perſon: They liv'd on Herbs, Pulſe and Fruits; abſtaining from all Animals, and thinking it an Impiety to touch 'em. The greateſt part of the Day and Night they ſpent, in ſinging Hymns in honour of the Deity; Praying and Faſting continually. The greateſt Part of 'em liv'd in Solitude, without marrying, or poſſeſſing any Eſtates. There was nothing they appear'd to wiſh ſo earneſtly for as Death; looking on Life as a burdenſome thing, and waiting with Impatience for the Separation of their Soul and Body. This is the Idea *Porphyry* gives of 'em. *Kircher* obſerves, that the *Brachmans* held the Opinion of *Pythagoras*, relating to the Soul and its Tranſmigration; and lead a Life in all reſpects agreeable to his: Or rather, 'twas from the *Brachmans* that *Pythagoras* borrow'd his Opinions, his manner of Living, &c. The modern *Brachmans* themſelves, fetch their Origin from the famous Philoſopher *Xaca*.

The Modern *Bramines* are the Prieſts or Divines of the Idolatrous *Indians*: Theſe are much converſant in Aſtrology and Aſtronomy. They have ſo great a Veneration for Cows, that they look on themſelves as bleſs'd, if they can but die with the Tail of one of 'em in their Hand. They ſometimes make Proceſſions of 400 Leagues, drawing after 'em whole Cities and Towns; feeding the People, when ſtopp'd at the Paſſages of Rivers overflow'd, in a manner which they take to be Miraculous; giving 'em every thing they deſire, without making any Proviſion. *A. Rogers* diſtinguiſhes ſix Sorts of 'em; the *Weiſtnorea*, the *Seivia*, the *Smaerta*, the *Schaerwaecka*, the *Paſenda*, and the *Tſectea*.

M. *Marſhall* obſerves, that whenever they write any thing, they put a Figure of one in the firſt Place; to ſhew, as they ſay, that they acknowledge but one God. They account the World the Body of God, the higheſt Heavens his Head, the Fire his Mouth, the Air his Breath, the Water his Seed, and the Earth his Legs and Feet. They maintain a pre-exiſtent State; and from that, account for the Tempers and Manners of Men in this: They alſo maintain the *Metempſychoſis*, but in a groſſer Senſe than *Pythagoras*; believing, that the Souls of all Men paſs into Reptiles, Inſects, and Vegetables, for their Puniſhment and Purgation. They compute the World to be about 3892850 Years old; and ſeem to have ſome obſcure Traditions of the *Moſaic* Paradiſe, *Adam*, *Eve*, and the Deluge. They have alſo a Notion of God's being incarnate, and living ſome time among Men. Their Religion conſiſts in leading a pure Life, waſhing away their Sins in the River *Ganges*, muttering over divers Prayers, and doing ſtrange and incredible Penances. They burn their Dead with much Ceremony; and ſtrewing his Aſhes on the Place where he firſt laid after his Death, they judge, from ſome Impreſſion they imagine made on it, into what Body his Soul was gone; *viz.* if the Impreſſion of the Foot of a Dog or Ox, &c. appear, they give out he is tranſmigrated into one of thoſe Animals; if there be no Impreſſion, he is then gone to the Starry Region. They have abundance of *Cabaliſtic* Notions; *v.g.* ſay they, the Numbers 28,35,2,7,—6,3,32,31,—34,29,8,1—4,5,30,33, written in the ſame Order in the Squares of a ſquare Figure, and your Enemy's Name written under it, while you wear it he can't hurt you, &c. See *Phil. Tranſ.* N° 268. See LIGATURE.

BRACHIÆUS, or *Brachiæi*, a Name given to two Muſcles of the Elbow, the one external, the other internal.

The *Brachiæus Externus* ariſes about the middle and poſterior Part of the *Humerus*. It joins its Fibres with the *Muſculus Longus* and *Brevis*; and being externally Tendinous, they, together, cover all the Elbow, and are inſerted into the *Olecranum*.

*Brachiæus Internus*, lies partly under the *Biceps*; it ariſes by a fleſhy Beginning from the middle and internal Part of the *Humerus*; and is inſerted into the upper and fore-Part of the *Cubitus*, by a very ſhort but ſtrong Tendon: It ſerves to bend the Arm.

BRACHYGRAPHY, from βραχὺς, *brevis*, ſhort, and γεάφω, *ſcribo*, to write; is the Art of Short-hand Writing.

BRADS, a kind of Nails uſed in Building, having no ſpreading Heads as other Nails have: Of theſe ſome are call'd Joiners *Brads*, and are for hard Wainſcot; others *Batten Brads* for ſoft Wainſcot; and ſome *Bill Brads* or *Quarter-Heads*, us'd when a Floor is laid in haſte, or for ſhallow Joiſts ſubject to warp. See NAILS.

BRAILS *in a Ship*, ſmall Ropes reev'd through Blocks, which are ſeized on either ſide the Ties, a little diſtance off upon the Yard, ſo that they come down before the Sails of a Ship, and are faſten'd at the Skirt of the Sail to the Crengles: Their uſe is, when the Sail is furl'd acroſs, to hale up its Bunt, that it may the more readily be taken up or let

fall: Theſe *Brails* belong only to the two Courſes and the Mizen-ſail. The Word is, *Hale up the Brails*; or, which is all one, *Brail up the Sails*; for the Meaning is, that the Sail ſhould be haled up, in order to be furl'd, or bound cloſe to the Yard.

BRAIN, in its general Senſe, that large, ſoft, whitiſh Maſs, inclos'd in the *Cranium* or Skull; wherein all the Organs of Senſe terminate, and the Soul is ſuppoſed principally to reſide. The *Brain* is encompaſs'd with two *Meninges*, or Membranes, call'd *Dura* and *Pia Mater*; ſee MENINGES. Its Figure is the ſame with that of the Bones that contain it; *viz.* roundiſh, oblong, and flat on the Sides: It is divided into three principal Parts, *viz.* the *Cerebrum*, or *Brain* ſtrictly ſo call'd, the *Cerebellum*, and the *Medulla oblongata*: The two latter of which ſee under their proper Heads, CEREBRUM and MEDULLA.

The *Cerebrum*, or *Brain*, properly ſo call'd, is that large globulous Part which fills the fore and upper Part of the Skull: It is divided by a Duplicature of the *Dura Mater*, call'd from its Figure *Falx*, into two equal Parts, call'd *Right* and *Left Hemiſpheres*: Tho the Figure of the *Brain* be pretty far from a Sphere. It is alſo ſeparated from the *Cerebellum* by another Duplicature of the ſame *Dura Mater*. The *Brain* conſiſts of two Kinds of Subſtance, the one Cineritious, or of an Aſh-colour, ſoft and moiſt; which being the Exterior, is call'd the *Cortex*, or Cortical Part of the *Brain*: the Thickneſs of this is about half an Inch, tho by reaſon of the *Sinus*'s and Sutures in the *Brain* it appears more. The other, or inner Subſtance, is white, more ſolid, as well as more dry than the Cortex, and is call'd the *Marrow* or *Medullary*, and ſometimes the *Fibrous* Part, in contra-diſtinction to the other, which is call'd the *Glandulous* Part.

The *Cortex*, according to *Malpighi*, is form'd from the minute Branches of the Carotid and Vertebral Arteries; which being woven together in the *Pia Mater*, ſend from each Point thereof, as from a Baſis, little Branches, which, being twiſted together into the Form of a Gland, incloſe the *Medulla*, ordinarily to the Thickneſs of half an Inch; but in ſome places make deeper *Sinus's* and Furrows within it. Theſe Branches make Circumvolutions like the Inteſtines; each of which may be reſolv'd into others, like, but leſs than the firſt: This Part, therefore, moſt other Authors take to be Glandulous; or, an Aſſemblage of innumerable minute Glands, contiguous to each other, deſtin'd for the Secretion of Animal Spirits from the Blood, brought hither by the Carotids, *&c.* Theſe Glandules, *Malpighi* obſerves, are of themſelves oval, but by the mutual Compreſſure become angular; they run waving within each other: Several of theſe connected, form others ſomewhat larger; and theſe again unite into others, from the Aggregate whereof are form'd Tubes, of which the outer Cortex is compos'd. Theſe little Glands conſiſt of the Branches of the Arteries which bring the Blood; of the Veins ariſing at their Extremities, which carry it back again; of Secretory Tubes ſecerning the Animal Spirits, and of Excretory Ducts for diſcharging 'em into the *Medulla*: Tho theſe are too minute to have ever been ſeen. See CORTEX.

The Inner, or Medullary Part of the *Brain*, conſiſts of infinitely fine Fibres, ariſing from the leaſt and minuteſt Branches or Filaments of the Glands of the Cortex; as is diſtinctly ſeen in the *Cerebellum*, tho ſcarce viſible in the *Cerebrum*: Theſe receive the Fluid ſeparated and ſubtiliz'd, from the Glands of the Cortex; and by means of the Nerves, which are no more than Productions of this Part, diſtribute it all over the Body. Authors, here, however, are divided; the generality, with *Malpighi*, making the Subſtance of the Cortex Glandulous, as above; others, with *Ruyſch* and *Leewenhoeck*, denying any thing like Glands in it; and allowing nothing but little *Cryptæ*, or Sinks, opening laterally to the Arteries; and thence receiving a Juice already ſecern'd from the Blood, and tranſmitting it to the *Medulla*. This Doctrine, it ſeems, is the Reſult of Anatomical Injections and Microſcopical Obſervations; but the other appearing the moſt conſiſtent with the Oeconomy of Nature in other things, is generally adher'd to.

The Cortex covers the whole Medullary Subſtance both of the *Brain* and *Cerebellum*; ſo as wherever the Cortical Subſtance ends, there the Medullary commences; and this in the Appendices, Ventricles, Interſtices, and Sinus's of the *Medulla*, as well as in the External Surface. Something Medullary, therefore, ariſing from every Point of the Cortex; at its firſt riſe, it muſt needs be exceedingly fine and ſlender: But being join'd with other Parts of the ſame kind, it gradually thickens, and at length becoming ſenſible, conſtitutes the *Medulla Cerebri*, the *Corpus Calloſum*, the *Medulla oblongata* and its Legs, the *Thalami* of the Optic Nerves, the *Medulla Cerebelli*, and its Production into the *Medulla oblongata*; which, with theſe Additions, forms the *Corpora Pyramidalia* and *Olivaria*, and is extended into the Spinal Marrow. And from the ſame Medullary Subſtance, both in the *Cranium*, and in the Caſe form'd by the Union of the *Vertebræ*, ariſe all the Nerves. See NERVES; ſee alſo CORPORA *Pyramidalia*.

Tho the primary *Fibrillæ*, or Filaments, when united, ſeem to form one compact Body or Maſs: yet *Boerhaave* ſhews, they are really diſtinct and ſeparate from each other; that thus ariſing from each Part of the Cortex, and tending as it were to the Centre of the Sphere, they firſt form the *Medulla*; that others, reflected hence and collected above, form the *Corpus Calloſum* and *Fornix*; and below, form the *Corpus Calloſum* and Legs of the *Medulla oblongata*; that the like *Fibrillæ* ariſing from the *Cerebellum*, join with 'em: the Reſult of which Juncture, is the *Medulla Spinalis*. And laſtly, that the like *Fibrillæ* ariſing from the Cortex, continued within the Cavities of the *Medulla*, join with 'em, and add freſh Conſiſtence thereto.

Hence we ſee the Reaſon of the Bulk, Figure, and Poſition of the Cortex of the *Brain*, as well as the Uſe and Neceſſity of the Cavities call'd *Ventricles of the Brain*: Of theſe Ventricles there are four, one in each Hemiſphere; ſeparated by a thin tranſparent Subſtance, running all along from the *Fornix* under the *Corpus Calloſum*, and diſtinguiſh'd by the Name of the *Septum Lucidum*: Theſe are call'd the *Lateral Ventricles*. The third is under the *Fornix*, and call'd *Rima*; the fourth between the *Cerebellum* and *Medulla oblongata*: To theſe are owing the *Callus's* or Knots found in various Parts of the *Brain*; as freſh Acceſſions of Fibres arrive from the ſeveral Places to the *Cerebellum*.

From the whole, it appears paſt doubt, that the Fibres of the *Brain* are exceedingly minute Canals; that they receive an Humor, infinitely the moſt ſubtile, fluid, moveable and ſolid of any in the whole Body; prepar'd and ſecreted by the artful Structure of the Cortex, driven into theſe Tubules by the force of the Heart, and from every Part hereof collected into the *Medulla oblongata*: And this is what ſome call *Animal Spirits*, others the *Nervous Juice*; the great Inſtrument of Senſation, muſcular Motion, *&c.* See SPIRITS, MUSCLE, SENSATION, *&c.*

In the Space between the two Hemiſpheres of the *Brain*, under the *Falx*, or rather under the *Longitudinal Sinus* of the *Dura Mater*, is a white Subſtance, of a Texture more compact than the reſt of the *Medulla* of the *Brain*; and for that reaſon call'd *Corpus Calloſum*, which runs along the whole Tract of the *Falx*, and receives from each ſide the Terminations of the *Medulla*, interſpers'd between the ſeveral Windings of the Cortex, and ſuppos'd by ſome to be a kind of Baſe or Support to it: The manner wherein this is form'd, is ſhewn above. We ſhall only add, that on occaſion hereof, ſome Authors, M. *Aſtruc* for Inſtance, inſtead of two Subſtances, *viz.* the *Cortex* and *Medulla*, divide the *Brain* into three; *viz.* the Uppermoſt, or *Cineritious*, which conſtitutes the *Cortex*; the Middle, which is whiter and denſer than the firſt, and therefore call'd the *Callous*; and the Loweſt or Inmoſt, which being intermix'd with *Radii* or *Striæ* of the White and Cineritious Subſtance, he calls the *Striated Part*: He adds, that the Fluid ſecreted in the Cortex, is convey'd into innumerable minute hollow Medullary *Fibrillæ*, of the ſame nature with the Callous Subſtance, and contiguous thereto. This middle, or callous Part, he obſerves, is not diſtinguiſh'd by any appearance of Fibres, but is uniform, homogeneous, elaſtick, and not unlike the Pith of the Eldar Tree: for which Reaſon, he thinks it a probable Conjecture, that it conſiſts of innumerable Cells, communicating with each other, divided by the Interpoſition of membranaceous, flexil, elaſtick, vibratile Parietes or Columns; which being flow'd over by the Spirits, and continually expos'd to the Shakings thereof, conſtitute the Fibres of the *Brain*.

Now the ſecreted Fluid flowing equally from each Point of the Cineritious Subſtance into the Callous, muſt equably fill and diſtend the Cells thereof: And leſt any Place ſhould want its ſhare, Proviſion is made for a ſtrict Communication; not only by the Apertures of the Cells into each other, but alſo by the Structure of the *Brain*; the upper Parts communicating with the under, by the *Septum Lucidum*; the Lateral with the Lateral, by the *Lata Commiſſura*; laſtly, the fore Parts by the hind Parts, by the *Crura*, *Brachia*, and Roots of the *Fornix*. Theſe Cells, he continues, being fill'd, the Spirits will proceed to the contiguous *Striæ* of the Medullary Subſtance; which ariſing from the Cortex, compoſe the Striated Part of the *Brain*: And theſe *Striæ* render'd narrower and ſlenderer, and paſſing without the Surface of the *Brain*, conſtitute the firſt Principles of the Nerves, *&c.*

The other Parts of the *Brain*, are the *Fornix*, a Production of the *Medulla*; which, at its Extremity next the *Cerebellum*, ſends out two Proceſſes or Legs, by whoſe Juncture is form'd a kind of Arch, thence call'd *Fornix*, which ſeparates the third Ventricle from the two upper ones: At the Bottom of the *Fornix* are two Holes, by which the third Ventricle has a Communication with the others; that before is call'd *Vulva*, and that behind *Anus*. The third Ventricle,

Ventricle, or *Rima*, which is in the *Medulla oblongata*, has likewiſe two Apertures; the one the Orifice of the *Infundibulum*, or Funnel, which is a Canal reaching to the *Glandula Pituitaria*: The other is a Duct, whereby the third Ventricle communicates with the fourth in the *Medulla oblongata*, under the *Cerebellum*. That fourth Ventricle is in the form of a Quill, whence it is ſometimes call'd *Calamus*.

In the Lateral Ventricles are found the *Plexus Choroides*, which is an Aſſemblage of minute Veins and Arteries; and four Eminences, the firſt the *Corpora Striata*, the others the *Thalami Nervorum Opticorum*.

At the Entrance of the Canal reaching from the third Ventricle to the fourth, is ſituated the *Pineal Gland*; ſo call'd from the Figure of a Pine-Apple, which it reſembles: This Gland, *Des Cartes* ſuppoſes to be the Seat of the Soul. Behind the Pineal Glands are four Eminences; two upper and greater, call'd *Nates*; and two ſmaller and lower, call'd *Teſtes*. See MEDULLA OBLONGATA, to which all theſe Parts properly belong; ſee alſo each Part under its proper Head, NATES, TESTES, THALAMI, PINEAL, PLEXUS, CALAMUS, *&c.*

The Veſſels of the *Brain*, are Nerves, Arteries, and Veins. By turning up the *Brain*, the Origin or Baſe of the Nerves proceeding from it, are diſtinctly ſeen: Theſe are in Number ten Pair, *viz.* the *Olfactory*, *Optic*, *Movers of the Eyes*, *Pathetic*; the fifth Pair, and ſixth Pair, call'd alſo the *Guſtatories*, the *Auditory Nerves*, *Par vagum*, and the ninth and tenth Pair.

The Blood-Veſſels of the *Brain*, are the two *Internal*, *Carotid*, and the *Vertebral Arteries*. The firſt piercing the *Dura Mater*, communicate with the *Cervicals*; and proceeding thence, ſend a Branch to the *Plexus Choroides*; till arriving at the *Pia Mater*, and making ſeveral Turns and Circumvolutions thereon, they terminate, at laſt, in the little Glands that conſtitute the Cortex. The Vertebral Arteries paſſing the *Dura Mater*, go along the under ſide of the *Medulla oblongata*; till giving Branches to the Spinal Arteries, they join in one Branch call'd the *Cervical Artery*, which communicates with the *Carotides* by two Branches, as before. The Veins of the *Brain* don't run along by the Sides of the Arteries, as in other Parts of the Body, but riſe from their Extremities in the Cortex; whence they diſcharge themſelves into the Sinus of the *Dura Mater*. See CAROTID, CERVICAL, *&c.*

For the great Bulk of the *Brain*, this Reaſon may be aſſign'd; *viz.* that on account of the exceeding Subtility and Fineneſs of the Animal Spirits, and the Slowneſs in which their Secretion muſt be effected; together with the great Quantity of 'em requir'd in diſcharging the animal Functions; there muſt of neceſſity be an infinite Number of Glands to ſeparate and prepare 'em. From the ſame Principle, we ſee why the *Brain* is much bigger in Men than in other Animals; and in other Animals, why, *cæteris paribus*, it is biggeſt in thoſe which diſcover the greateſt ſhare of Sagacity, *v. g.* in Monkeys, *&c.* A conſiderable Stock of Animal Spirits being to be employ'd in the Affairs of Cogitation, Memory, *&c.* Accordingly, Anatomiſts obſerve, that in Fools the *Brain* is ſmaller *(cæteris paribus)* than in Men of Senſe: This, ſome may account for, by ſuppoſing it the Cauſe of the Folly; a ſufficient Stock of Spirits being wanting to reaſon, *&c.* ſtrongly: And others from the Oeconomy of Nature, which proportion'd the Stock of Spirits to the Expence that would be requir'd.

From the Texture, Diſpoſition, and Tone of the Fibres of the *Brain*, Philoſophers ordinarily account for the Phænomena of *Senſation* and *Imagination*; which ſee. Dr. *Aſtruc* goes further, and from the Analogy between the Fibres of the *Brain*, and thoſe of Muſical Inſtruments, ſolves the Phænomena of Judgment and Reaſoning, and the Defects and Perfections of both. He lays it down as an Axiom, that every ſimple Idea is produc'd by the Oſcillation of one determinate Fibre; and every compound Idea from cotemporary Vibrations of ſeveral Fibres: That the greater or leſs degree of Evidence follows the greater or leſs Force wherewith the Fibre oſcillates. He hence proceeds to ſhew, that the Affirmation or Negation of any Propoſition, conſiſts in the equal or unequal Number of Vibrations, which the Moving Fibres, repreſenting the two Parts of the Propoſition, *viz.* the Subject, make in the ſame Time: *i. e.* If the Vibrations of the Fibre that gives the Idea of the Subject, and thoſe of the Fibre which gives the Idea of the Attribute of Propoſition, be *Iſochronal*, or make an equal Number of Vibrations in the ſame Time, we are determin'd to the Affirmation of the Propoſition; if *Eterocronical*, or their Vibrations be unequal, the Soul will be determin'd to a Negation, *&c.* Hence reſult Conſonant, Diſſonant, Harmonical Fibres, *&c.* The Evidence and Certainty of a Judgment, Affirmative or Negative, he deduces from the greater or leſs Conſonance or Diſſonance of the Fibres of the Subject and Attribute; and a right or wrong Judgment in the natural or depraved Tone of the Fibres of the *Brain*.

Hence he takes occaſion to obſerve, that the Fibres of the *Brain*, from their Analogy to thoſe of Muſical Inſtruments, may be perverted ſeveral ways; *viz.* by being render'd too dry or too moiſt, too ſtiff or too lax, *&c.* In a Phrenſy, he thinks the Fibres too dry, and too much diſtended by the Heat of the Blood, *&c.* In a Mania, theſe Fibres he thinks too rigid, as well as too dry and diſtended: In a Lethargy, they are too much ſoften'd by Phlegm; in Idiotiſm, or Fooliſhneſs, they are ſometimes too ſoft, and ſometimes too hard. Laſtly, He thinks that in a Melancholy, by the repeated ſucceſſive Vibrations which the attentive Meditation of a Thing induces, two or more Fibres, which of themſelves exhibit diſſimilar and unequal Ideas, are (the other Parts remaining ſound) ſenſibly brought to an *Iſochroniſm*: So as the Soul judging well in other reſpects, yet in this always makes a falſe Judgment.

The *Brain* does not appear abſolutely neceſſary to animal Life. We have ſeveral Inſtances in Authors, particularly in the *Philoſophical Tranſactions*, of Children brought forth alive, and ſurviving their Birth for ſome time, without any *Brain*: And we have Anatomical Inſtances, of Animals ſurviving the loſs of their *Brain*. Of the firſt kind, we have a Hiſtory from *Paris*, of a Child, deliver'd at Maturity; and living four Days, not only without a *Brain*, but even a *Head*: inſtead of both which, was a Maſs of Fleſh like Liver found. M. *Denys* gives us another Inſtance, of a Child born in 1673, which, ſetting aſide the Head, was well form'd, but without any *Brain*, *Cerebellum*, or *Medulla oblongata*: It had not any Cavity for a *Brain*, the Skull, if ſuch it might be call'd, being ſolid: Nor was this any way connected to the *Vertebræ*; ſo that the Marrow in the *Spine* had no Communication with the Head: The Optic Nerves terminated in the ſolid Bone. M. *le Duc* gives a third Inſtance, in 1695, where there was neither *Cerebrum*, *Cerebellum*, or *Medulla oblongata*, nor even *Spinal Marrow*; the Cavity that ſhould contain them being extremely ſhallow, and full of a black livid Subſtance, like congeal'd Blood: He adds, this was the third Subject of this kind he had met with. Dr. *Preſton*, indeed, tells us, that M. *du Verney* found here a Spinal Marrow, tho of much leſs Conſiſtence than ordinary; in which, however, he could diſtinguiſh all the four Tunics, and the two Subſtances; *viz.* the Cortical and Fibrous Part, as in the *Brain*. In a word, he takes this to be a *Brain* it ſelf, as much as that in the Skull; nay more ſo, being more neceſſary to Life, and more ſenſible, than either the *Brain* or *Cerebellum*: A Wound or Compreſſion in the firſt being always mortal; not ſo in the latter, as appears from the Experiments of M. *du Verney* and M. *Chirac*; the firſt of whom took out the *Brain* and *Cerebellum* of a Pigeon; notwithſtanding which, it liv'd, ſought Food, had Senſe, and perform'd the common Functions of Life: The latter took out the *Brain* from a Dog, yet it liv'd; upon taking out the *Cerebellum* it dy'd; but blowing into the Lungs, he obſerves, he could keep the Animal alive, an Hour after the Loſs of the *Cerebellum*. Upon ſeparating the *Medulla oblongata* of another Dog from the *Spinal Marrow*, and removing it with the *Brain* and *Cerebellum*, he kept the Dog alive by blowing into the Lungs. To which may be added, many Inſtances given by Mr. *Boyle*; not only of Animals living a long time after the Separation of the Head from the Body, but even of the Copulation and Impregnation of ſome Inſects under thoſe Circumſtances: Whence it appears, that the Spinal Marrow is ſufficient, on Occaſion, for the Buſineſs of Senſation, Motion, Secretion of Animal Spirits, *&c.*

BRAN, the Skins or Huſks of Corn ground, ſeparated from the *Farina*, or Flower, by a Sieve. Of *Wheat-Bran* it is the Starch-makers make their Starch; which is nothing elſe but the *Fæcula* remaining at the Bottom of the Veſſels, wherein the *Bran* has been ſteep'd in Water. See STARCH.

BRANCHES, in Architecture, the Arches of Gothic Vaults. Theſe Arches, traverſing from one Angle to another, Diagonal-wiſe; form a Croſs between the other Arches which make the Sides of the Square, whereof the Arches are Diagonals. See VAULT, OGIVE, *&c.*

BRANCHES *of a Bridle*, in the Manage, two crooked Pieces of Iron which ſupport the Mouth-bit, the Chain, and the Curb; and which are faſten'd, on one Side to the Headſtall, on the other to the Reins: ſerving to keep the Horſe's Head under Command. What way ſoever the *Branches* of the Bit incline, the Horſe's Mouth always goes to the contrary. The Duke of *Newcaſtle* is very particular on the Head of *Branches*; explaining their ſeveral Kinds, and their Effects, which are perfectly like thoſe of a *Lever*. The *Branch* is always to be accommodated to the Deſign, either of bringing in, or raiſing a Horſe's Head; and to the Degree: Accordingly, we have *ſtrong* and *hardy Branches*, *gentle Branches*, *rude Branches*, &c.

With

With regard to their Form and Structure, *Branches* are either ſtreight, in form of a Piſtol, for young Horſes, to form their Mouth; or, after the Conſtable of *France*'s Faſhion, for Horſes that already carry the Head well: Others are in form of a Gigot or Leg; others of a bent Knee; others in the *French* Faſhion, &c.

Note, Theſe are *Laws* in the Manage, 1. That the farther the *Branch* is from the Horſe's Neck, the more effect it will have. 2. That ſhort *Branches*, *cæteris paribus*, are ruder, and their Effects more ſudden than thoſe of others. 3. That the *Branch* be proportion'd to the Length of the Horſe's Neck.

BRANCH, or BOUGH, in Botany, a Jet or Arm of a Tree, emitted from its Trunk: *Quintiny* calls it, a Part of a Tree, which coming from the Trunk, helps to form the Head. The Word, according to *Salmaſius*, comes from the *Latin Branca*; in the lower *Latin*, they ſaid *Barga*: Others derive it from *Brachium*, an Arm; and others from *Branchiæ*, the Gills of Fiſhes.

The *Branches* of Trees are obſerv'd, almoſt conſtantly, to ſhoot from the Trunk at an Angle of 45 Degrees: The Reaſon is, that the whole Spreading being generally confin'd within an Angle of 90 Degrees, as the moſt becoming and uſeful Diſpoſition; that ſpace could not be well fill'd up any other way, than by forming all the Interſections which the Shoots and *Branches* make, with Angles of 45 Degrees only. A ſtrong Argument, that the Plaſtick Capacities of Matter, are under the Guidance of a wiſe Being.

*Branches* are diſtinguiſh'd into various Kinds: A *Wood Branch*, *Quintiny* ſays, is ſuch a one, as ſhooting out from a Cut of the preceding Year, is naturally of a conſiderable Thickneſs. A *Fruit Branch*, is that which ſhoots out of a moderate Length and Breadth from the ſame Cut: *Fruit Branches*, he adds, have large Eyes, and are very near each other. A *Branch half Wood*, is that, which being too ſlender for a *Wood Branch*, and too groſs for a *Fruit Branch*, is cut, at the Length of two or three Inches, to make it produce a better Jet, whether Wood or Fruit. Spurious *Wood Branches*, are ſuch as come contrary to the Order of Nature; or otherwiſe than from Cuts of the preceeding Year; or which coming on ſuch Cuts, are big in the Place where they ſhould be ſmall. To underſtand this Order of Nature, it muſt be obſerved, 1. That *Branches* ſhould never come, except on thoſe of the laſt Cut; ſuch, therefore, as ſhoot from other Parts are ſpurious. 2. That the Order of the new *Branches* is, if there be more than one, that the extreme *Branch* is thicker and longer than that immediately under it; and this bigger and longer, again, than the third, &c. Hence, if any be big where it ſhould be ſmall, it is call'd *Spurious*. There are, however, ſome Exceptions: In Trees that are vigorous, and yet bear a handſome Figure, there can't well be too many *Fruit Branches*; provided they make no Confuſion; but for *Wood Branches*, there ſhould not ordinarily be above one ſuffer'd to grow, of the ſeveral which ſhoot from each Cut of the preceeding Year. See PRUNING.

BRANCHIA, a Name given by the *Greek* Naturaliſts to the Gills of Fiſhes; which are Parts compos'd of Cartilages and Membranes, in form of a Leaf, and ſerving inſtead of Lungs to reſpire by. *Galen* obſerves, they are full of little Foramina, big enough to admit Air and Vapours, but too fine to give Paſſage to Water. *Pliny* held, that Fiſhes reſpir'd by their Gills; but obſerves that *Ariſtotle* was of another Opinion: To whom we may add Dr. *Needham*. The Word *Branchia*, comes from the *Greek* βραγχια, which ſignify'd the ſame thing.

BRANDY, a ſpirituous, inflammable Liquor, drawn from Wine, and other Liquors by Diſtillation; ordinarily *in Balneo Mariæ*; ſometimes alſo by the Flame of a Fire. See DISTILLATION. The Veſſels uſed herein, are uſually Copper: and ſome Diſtillers, to cool the Liquor more readily, make the Neck of the Matras, which is very long, and winding like a Serpent, paſs through a Veſſel of cold Water.

*To diſtil* BRANDY, they fill the Cucurbit half full of the Liquor from which it is to be drawn; and raiſe it, with a little Fire, till about one ſixth Part be diſtill'd; or till they perceive that what falls into the Receiver is not at all inflammable. The Liquor thus diſtill'd the firſt time, is call'd *Spirit of Wine* or *Brandy*; which Spirit, purify'd by another, or ſeveral more Diſtillations, is what we call *Spirit of Wine rectify'd*. The ſecond Diſtillation is made in *Balneo Mariæ*, and in a Glaſs Cucurbit; and the Liquor put therein, diſtill'd to about one half the Quantity: Which half is further rectify'd, as long as the Operator thinks fit. To abridge theſe ſeveral Diſtillations, which are long and troubleſome, they have invented a Chymical Inſtrument; whereby the Rectification of Spirit of Wine is perform'd at one ſingle Diſtillation: The Deſcription and Figure of which Inſtrument may be ſeen in *Glaſier's Chymiſtry*.

To try the Goodneſs of Rectify'd Spirit of Wine, it muſt be lighted into a Blaze: if then it conſumes wholly, without leaving any Impurity behind; or, which is ſurer ſtill; if after putting a little Gun-pouder in the Bottom of the Spirit, the Gunpouder take fire when the Spirit is conſum'd, the Liquor is good. Thoſe who deal in *Brandy*, (we ſpeak only of that made with Wine) chuſe it white, clear, of a good Taſte, and ſuch as will bear the Teſt or Proof; *i.e.* ſuch as in pouring into a Glaſs, forms, a-top of it, a little white Lather, which, as it diminiſhes, makes a Circle, call'd by the *French Brandy* Merchants, the *Chapelet*, or *Bead-Roll*: there being no *Brandy* but that well defleg-mated, and wherein there is no Humidity left, wherein the *Chapelet* is entirely form'd.

The chief uſe of *Brandy*, is as a Drink; eſpecially in the cold Northern Countries; among the *Negros* in *Guinea*, who ſell one another for a few Bottles of *Brandy*; and among the Savages of *Canada*, and other Parts of *N. America*, who are infinitely fond of it. It is of ſome uſe too in Medicine; being ſaid to ſtrengthen the Nerves: And in Dying, when rais'd into rectify'd Spirit of Wine; being accounted one of the Dyers Non-colouring Drugs.

Beſides the *Brandy* made of Wine; there is other made of Malt-Liquors, of Cyder, Syrop, Sugar and Moloſſes, of Fruits, Berries, &c.

The greateſt Part of the *Brandies* in uſe, and thoſe too, the beſt, are prepared in *France*: Of the *French Brandies*, thoſe of *Nantes* and *Poitou* are the moſt eſteem'd; as being of a better Taſte, finer and ſtronger, and enduring the Teſt of the *Chapelet* longer than any of the reſt: Thoſe of *Anjou*, *Touraine* and *Orleans*, claim the ſecond Place.

*Brandy* makes a very conſiderable Article in the *French* Commerce: The Number of Foreign Veſſels, wherewith all their Ports are full in Time of Peace, and which are loaden, in good meaſure, with *Brandy*, is incredible. *Nantes* alone furniſhes 174000 Gallons *per Annum*, and *Bourdeaux* above twice as much; the other Places in proportion. The *Dutch* take off their Hands almoſt as much as all the reſt of *Europe*. *Poland* and *Sweden* are the only Nations which are not their Cuſtomers; theſe preferring the *Brandies* of their own Countries, made of Grains, to the Wine-*Brandies* of *France*.

Of *Brandy*, both plain and rectify'd, are prepared various Kinds of ſtrong Liquors, with the Addition of other Ingredients, Sugars, Spices, Flowers, Fruits, &c. which are afterwards clarify'd, by paſſing 'em thro a ſtraining Bag, or filtering 'em thro Brown Paper. See CLARIFICATION. A great part of theſe are brought from *Montpellier*; where they are ſuppos'd to be better prepar'd than any where elſe. See WATER.

BRASIL, or BRAZIL, a Wood ſo call'd, becauſe firſt brought from *Braſil*, a Province of *S. America*: It is denominated variouſly, according to the Places whence it is brought. Thus we have *Braſil* of *Fernambouc*, *Braſil* of *Japon*, of *Lamon*, of St. *Martha*; and laſtly *Braſillet*, brought from the *Antilles*.

The *Braſil-Tree* ordinarily grows in dry barren Places, and in the middle of Rocks; it is very thick and large, uſually crooked and knotty: Its Flowers, which are of a beautiful red, exhale a very agreeable Smell, which ſtrengthens the Brain. Tho the Tree be very thick; it is cover'd with ſo thick a Bark, that when the Savages have taken it off the Wood, a Trunk, which before was the Thickneſs of a Man, is ſcarce left equal to that of his Leg.

*Braſil* Wood is very heavy, dry, crackles much in the Fire, and ſcarce raiſes any Smoak, by reaſon of its extreme Dryneſs. None of the ſeveral Kinds have any Pith, except that of *Japon*: that of *Fernambouc* is eſteem'd the beſt. It muſt be choſen in thick Pieces, cloſe, ſound, without any Bark; and ſuch as, upon ſplitting, of pale becomes reddiſh; and when chew'd has a ſugar Taſte. It is much us'd in Turned Works, and takes a good Poliſh; but its chief uſe is in Dying, where it ſerves for a red Colour: 'Tis a ſpurious Colour, however, it gives; and eaſily evaporates and fades: Nor is the *Wood* to be us'd without Allum and Tartar. From the *Braſil* of *Fernambouc*, is drawn a kind of *Carmine*, by means of Acids. There is alſo a liquid *Lacca* made of it, for Miniature. See RED.

BRASS, *Orichalcum*; or, as the *French* call it, *Yellow Copper*; a factitious Metal, compos'd of Copper, and *Lapis Calaminaris*. The Method of Preparation is as follows. The *Lapis* being calcin'd, and ground fine as Flour, is mix'd with ground Charcoal; and incorporated, by means of Water, into a Maſs: Thus prepar'd, about ſeven Pounds of the *Calamine* is put into a Melting-Pot of about a Gallon; and over it, about five Pounds of *Copper*; which is let down into a Wind-Furnace eight Foot deep, remaining there about 11 Hours; in which Time 'tis converted into *Braſs*. After melting, it is caſt into Plates, or Lumps: 45 Pounds of crude *Calamine*, produces 30 Pounds burnt, or calcin'd. They ſometimes uſe *Braſs-ſhruff* inſtead of

Copper;

Copper; but that is not always to be procur'd in Quantities ſufficient, being no more than a Collection of Pieces of old *Braſs*. Pure *Braſs* is not malleable unleſs hot; when cold it breaks: After melting twice, 'tis no longer in a Condition to bear the Hammer at all: to work it, they put 7 Pounds of Lead to 100 of *Braſs*; which renders it more ſoft and pliable. *Braſs* is us'd in the caſting of Guns: The beſt Proportion for Gun-Metal, 'tis ſaid, is for 11 or 12 thouſand Weight of Metal, to uſe ten thouſand Pound of Copper, nine hundred Pounds of Tin, and ſix hundred Pound of *Braſs*. See COPPER.

The beſt *Braſs* Guns are made of malleable Metal, not of pure Copper and *Calamine* alone; but it is neceſſary to add coarſer Metals, to make it run cloſe and ſounder, ſuch as Lead and Pot-Metal. Bell-Metal is a Compoſition of *Braſs* and Tin: and Pot-Metal of *Braſs* and Lead; 20 Pound of Lead, is uſually put into 100 Pound of Pot-Metal. The Manufacture of *Braſs*, was kept a Secret in *Germany* for many Ages.

BRASS *of Corinth*, has been famous in all Antiquity: *L. Mummius* having ſack'd and burnt that City, 146 Years before our Saviour's Time, 'tis ſaid this precious Metal was form'd from the immenſe Quantities of Gold, Silver and Copper wherewith *Corinth* abounded, thus melted and run together by the Violence of the Conflagration. The Statues, Veſſels, *&c.* form'd of this Metal were ineſtimable. Thoſe who ſpeak of it accurately, diſtinguiſh it into three Kinds; in the firſt, Gold is the prevailing Metal, in the ſecond Silver; in the third, Gold, Silver, and Copper, are equally blended.

BRAZING, the Soldering or joining of two Pieces of Iron by means of thin Plates of *Braſs*, melted between the two Pieces to be join'd. If the Work be very fine, as when the two Leaves of broken Saws are to be join'd, it is cover'd with beaten *Borax*, moiſten'd with Water that it may incorporate with the *Braſs-duſt* which is here added; and the Piece is expos'd to the Fire without touching the Coals, till the *Braſs* be obſerv'd to run. Laſtly, to *braze* with a ſtill greater degree of Delicacy; they uſe a Solder made of *Braſs*, with a tenth Part of *Tin*; or another, one third *Braſs*, and two thirds *Silver*; or *Borax* and *Roſin*: Obſerving, in all theſe manners of *brazing*, that the Pieces be join'd cloſe throughout; the *Solder* only holding in thoſe Places that touch. See SOLDERING.

The Method of *brazing* among *Farriers*, &c. is by beating the two Pieces, when hot, over one another.

BREACH, in Fortification, is the Ruins made in any Part of the Works of a Town, *&c.* either by playing Cannon, or ſpringing Mines; in order to ſtorm the Place, or take it by aſſault. They ſay, *Make good the Breach*, *Fortify the Breach*, *Make a Lodgment on the Breach*, *Clear the Breach*, &c.

BREAK-BULK, is to begin to take the Ship's Lading or Cargo out of the Hold.

BREAK-GROUND, in Fortification, ſignifies to begin Works for carrying on a Siege of a Town or Fort, *&c.*

BREAST, *Mamma*, in Anatomy, a prominent fleſhy Part of the human Body, on the Outſide of the *Thorax*; whoſe uſe is to ſeparate the Milk. The *Breaſts* are much more perfect, more conſpicuous, and of more uſe in Women than in Men: Their Magnitude is various; always biggeſt in Times of Geſtation and Lactation. Their Figure repreſents a large Section of a Globe, having in the middle a Prominence terminating in a blunt Point, call'd the *Papilla*, or Nipple; in the Extremity of which are Perforations, to which reach Lacteal Tubes: About the Nipple is a pale browniſh Circle, call'd the *Areola*.

The internal Subſtance of the BREASTS, is compos'd of a great Number of Glands, of various Sizes, and an oval Figure, intermix'd with Globules and Veſſels of Fat. Their excretory Ducts, as they approach the Nipple, join and unite together, till at laſt they form ſeven, eight, or more ſmall Pipes, called *Tubuli Lactiferi*, which have ſeveral croſs Canals, by which they communicate with one another, to obviate the Inconveniencies that might accrue from the caſual Obſtruction of one or more of 'em. Theſe Tubes are not every where of equal Capacity, but in ſome Places more, in others leſs dilated; ſo as to form Cells, which ſeem contrived to hinder the ſpontaneous Efflux, and to create a Neceſſity of Sucking to fetch out the Contents. The *Breaſts* have Arteries and Veins from the Subclavian and Intercoſtal; and Nerves from the Vertebral Pairs, and from the ſixth Pair of the Brain: Of the Concurrence of theſe *Tubuli* or Pipes, is the Subſtance of the *Papilla* in great meaſure form'd; among which is interſpers'd a glandulous Subſtance, ſerving to keep 'em from preſſing too cloſe on each other; and with it are intermix'd abundance of Fibres drawn from the external Teguments of the *Papillæ*; by means whereof, the Lacteal Tubes are conſtring'd, and the Motion of the Milk modify'd. Beſides theſe Veſſels, are abundance of fatty Globules, called *Ductus Adepoſi*, which ſome would have only to fill up the Interſtices of the Glands: but Dr. *Drake*, after *Malpighi*, thinks they contribute to the Compoſition of the Milk; which ſeems nothing elſe but Water and Oil artfully united. See MILK. In Virgins the Tubes which compoſe the Glands of the *Breaſts*, like a Sphincter-Muſcle, contract ſo cloſely, that no part of the Blood can enter them: But when the Womb grows big with a *Fœtus*, and compreſſes the deſcending Trunk of the great Artery; the Blood flows in a greater Quantity, and with a greater Force thro the Arteries of the *Breaſts*, and forces a Paſſage into their Glands; which being at firſt narrow, admits only of a thin Water: but growing wider by degrees, as the Womb grows bigger, the Glands receive a thicker Serum; and after Birth they run with a thick Milk; becauſe that Blood which before flow'd to the *Fœtus*, and for three or four Days afterwards by the *Uterus*, beginning then to ſtop, does more dilate the Mammillary Glands. In Men, the *Breaſts* are very ſmall, and chiefly for Ornament; tho Phyſical Hiſtories give Inſtances of thoſe who have had Milk in them.

BREATHING. See RESPIRATION.

BREEZE, a ſhifting Wind, blowing from the Sea and Land alternately for ſome certain Hours of the Day or Night; only ſenſible near the Coaſt. The *Sea-Breeze*, *Dampier* obſerves, commonly riſes in the Morning about nine, proceeding ſlowly in a fine ſmall black Curl on the Water towards the Shore: It increaſes gradually till 12, and dies about five. Upon its ceaſing the *Land-Breeze* commences, which increaſes till 12; and is ſucceeded in the Morning by the *Sea-Breeze* again. See WIND.

BREGMA, the ſame as *Parietalia Oſſa*; ſee CRANIUM.

BREST, in Architecture, a Term us'd by ſome, for that Member of a Column, otherwiſe called the *Thorus* or *Tore*. See TORUS.

BREST-SUMMERS, in Timber-Building; are Pieces in the outward Parts of the Building, and in the middle Floors, (not in Garrets or Ground-Floors) into which the Girders are fram'd. In the inner Parts of a Building, the Pieces into which the Girders are fram'd, are call'd *Summers*.

BREVE, in Grammar. Syllables are diſtinguiſh'd into *Longs* and *Breves*, according as they are pronounc'd quicker or more ſlow: The Time of a *Breve* is half that of a *Long*; or, as the Grammarians expreſs it, a *Breve* is one Time, and a *Long* two. See ACCENT.

BREVE, in Muſick, is a Note or Character of Time, form'd like a Square, without any Tail; and equivalent to two *Meaſures*, or *Minims*. See CHARACTERS *of Muſick*.

BREVE VAS. See VAS BREVE.

BREVIARY, an Office perform'd daily in the *Roman* Church, and which the Eccleſiaſticks are to repeat at home, when they can't attend in Publick. The *Breviary* of *Rome* is general, and may be us'd in every Place: but on the Model of this have been built various others, peculiarly appropriated to each Dioceſe, and each Order of Religious.

The *Breviary* is compos'd of Matines, Lauds, prime, third, ſixth, ninth Veſpers, and the *Completa* or *Poſt Communio*; that is, of ſeven different Hours: on account of that ſaying of *David*, *Septies in Die laudem dixi tibi*. The Obligation of reciting the *Breviary* every Day, which was at firſt univerſal, by degrees was reduc'd to the Clergy and Beneficiaries alone, who are bound to do it on Pain of mortal Sin, and of refunding their Revenues, in proportion as they are delinquent herein. In the XIVth Century, there was a particular Reſerve to Biſhops, to paſs on occaſion, three Days without rehearſing the *Breviary*.

The Inſtitution of the *Breviary* not being very antient, the Lives of the Saints were inſerted in it, agreeable to the Opinions of the Times; *i. e.* full of ridiculous ill-atteſted Facts; which gave a handle to ſeveral Reformations thereof by ſeveral of their Councils, particularly thoſe of *Trent* and *Cologne*; ſeveral Popes, as *Pius* V. *Clement* VIII. and *Urban* VIII. as alſo by ſeveral of their Cardinals and Biſhops, each of whom lopp'd off ſome of the Extravagancies, and brought it nearer the Simplicity of the Primitive Offices; as owning that in the antient Church there was nothing read but from the Scriptures. Cardinal *Quignon* carry'd the Reformation the fartheſt; leaving out the Office of the Virgin, the Verſes, Reſponſes, and a great part of the Lives of the Saints.

The *Breviaries* that now obtain, are almoſt infinite: Their difference conſiſts principally in Form and Diſpoſition, and the Number and Order of Pſalms, Hymns, Paternoſters, Ave Maries, Credo's, Magnificats, Cantemus's, Benedictus's, Canticamus's, Nunc Dimittis's, Miſereres, Allelujah's, Gloria Patri's, *&c.*

The moſt Eminent, beſides the *Roman Breviaries*, are, that of the *Benedictines*, that of the *Bernardines*, of the *Chartreux*, of the *Præmonſtrantes*, of the *Dominicans*, the *Carmelites*, the *Franciſcans*, and *Jeſuits*; that of *Cluni*, of the Church of *Lyons*, the Church of *Milan*, and the *Mozarabic Breviary*, us'd in *Spain*. But in effect, there is ſcarce a Church in the Communion of *Rome*, in *France*, *Flanders*,

*Spain*, *Germany*, &c. but what has ſomething particular in the Form and Manner of its *Breviary*: The Differences are generally inconſiderable.

The *Breviary* of the *Greeks*, which they call ὡρολογιον, *Horologium*, Dial, is the ſame, to a Trifle, in almoſt all the Churches and Monaſteries that follow the *Greek* Rites. The *Greeks* divide the Pſalter into 20 Parts, καθισματα; which are a kind of Reſts, Pauſes, or Stations: and each Pauſe is again ſubdivided into three Parts. In the general, the *Greek Breviary* conſiſts of two Parts; the one containing the Office for the Evening, call'd μεσονυκτιον; the other that for the Morning, conſiſting of Matines, Lauds, firſt, third, ſixth, ninth Veſpers, and *Completa*.

The *Breviary* of the *Maronites*, has ſome more conſiderable Differences. Among the People who ſpeak the *Sclavonic* Language, or any of its Dialects, the *Breviary* is rehears'd in the vulgar Tongue; as among the *Maronites* in *Syriac*, among the *Armenians* in *Armenian*. Thoſe who rehearſe the *Breviary* in the *Sclavonic*, are divided as to the Rite: ſome following the *Roman* or *Latin* Rite, as the Inhabitants of *Dalmatia*, and the neighbouring Coaſts: Thoſe who live farther within the Continent, as in *Hungary*, *Boſnia*, *Sclavonia*, &c. and in *Poland*, *Lithuania*, and *Muſcovy*, follow the *Greek* Rite. The *Breviaries* of the *Cophtæ* and *Abyſſinians*, are much alike.

*Menage* derives the Word *Breviary* from this; that the antient Monks, in their Journeys, &c. had little Books, wherein were collected the Pſalms, Leſſons, &c. read in the Choir out of large Volumes: And F. *Mabillon* tells us, he has ſeen two ſuch Books in the Archives of the *Bernardines*; they were not above three Fingers broad: he obſerves, their Letter was exceedingly ſmall, and conſiſted moſtly in Abbreviations; expreſſing a whole Period in a few Syllables: Whence they had a good Title to the Appellation of *Breviaries*, q. d. *Abridgments*.

BREVIATOR, an Officer under the Eaſtern Empire; whoſe Office was to write and tranſcribe *Briefs*. *Calvin* obſerves, that at *Rome* thoſe are ſtill call'd *Breviators*, who dictate and write the Pope's *Briefs*.

BREVIS *Cubiti*, is a Muſcle that riſes from the ſuperior and poſterior Part of the *Humerus*; which joining its fleſhy Fibres with the *Brachiæus Externus* and *Longus*, and becoming Tendinous, covers the Elbow, and is inſerted into the *Olecranium*, to extend the Arm.

BREVIS *Palmaris*, lies under the *Aponeuroſis* of the *Palmaris*, and ariſes from the *Bone* of the *Metacarpus*, that ſuſtains the little Finger; and from that Bone, and that of the *Carpus* which lies above the reſt, it goes tranſverſly, and is inſerted into the eighth Bone of the *Carpus*. It helps in making the Palm of the Hand concave.

BREVIS *Radii*, comes from the External and Upper-part of the *Ulna*; and paſſing round the *Radius*, is inſerted into its upper and fore-part, below the Tendon of the *Biceps*. This, with the *Longus Radii*, are call'd the *Supinatores*: their Office being to turn the Palm upwards.

BREWING, the Preparation of Ale, or Beer from Malt. The Proceſs is as follows: A Quantity of Water being boil'd, is left to cool, till the height of the Steam be over; when, ſo much is pour'd to a Quantity of Malt in the Maſhing-Tub, as makes it of a Conſiſtence ſtiff enough to be juſt well row'd up: After ſtanding thus ¼ of an Hour, a ſecond Quantity of the Water is added, and row'd up as before. Laſtly, the full Quantity of Water is added; and that in proportion as the Liquor is intended to be ſtrong or weak: This part of the Operation is call'd *Maſhing*. The whole ſtands two or three Hours, more or leſs, according to the Strength of the Wort, or the Difference of Weather, and is then drawn off into a Receiver; and the Maſhing repeated for a ſecond Wort, in the ſame manner as for the firſt; only the Water to be cooler than before, and to ſtand only half the Time. The two Worts then mix'd, the intended Quantity of Hops are added, and the Liquor cloſe cover'd up, gently boil'd in a Copper the ſpace of an Hour or two; then let into the Receiver, and the Hops ſtrain'd from it into the Coolers. When cool, the Barm or Yeſt is apply'd; and it is left to work, or ferment, till it be fit to tun up.

For Small Beer there is a third Maſhing, with the Water near cold, and not left to ſtand above ¼ of an Hour, to be hopp'd and boil'd at Diſcretion. For Double Beer or Ale, the two Liquors reſulting from the two firſt Maſhings, muſt be us'd as Liquor for a third Maſhing of freſh Malt for Fine Ale. The Liquor thus *brew'd*, is further prepar'd with Moloſſes.

For Yeſt, ſome uſe Caſtle Soap, others Flour and Eggs, others an eſſential Oil of Barley; others a Quinteſſence of Malt, others of Wine, and others the *Sal Panariſtus*.

For the Preparation of the Matter, and the Properties of the Liquors thus *brew'd*, ſee MALT and MALT-LIQUOR; ſee alſo BEER and ALE. For the *brewing* of Malt Spirits, ſee DISTILLATION.

BRIBERY, in Law, a great Miſpriſion, when any Perſon in Judicial Place, takes any Fee, Penſion, Gift, Reward, or Brocage for doing his Office, but of the King only.

BRICK, a fat reddiſh Earth, form'd into long Squares, 4 Inches in Breadth, and 8 or 9 in Length, by means of a wooden Mould; and then bak'd or burnt in a Kiln, to ſerve for the Uſes of Building.

*Bricks* appear to be of a very antient ſtanding; the Tower of *Babel* being built thereof, as appears both from Sacred Hiſtory, and from the Remains thereof ſtill in being. Under the firſt Kings of *Rome*, they built with maſſive ſquar'd Stones, which they learnt from the *Tuſcans*: Towards the latter Time of the Republick, they began to uſe *Brick*; borrowing the Practice from the *Greeks*: And the greateſt, as well as the moſt durable Buildings of the ſucceeding Emperors, as the *Pantheon*, &c. were built therewith. In the Time of *Gallian*, the Buildings were compos'd of an Order of *Brick* and an Order of *Toſus*, a ſoft gritty Stone, alternately. After him, they laid aſide the uſe of *Bricks*, and reſumed Flints. In the *Eaſt* they bak'd their *Bricks* in the Sun: The *Romans* us'd 'em crude; only leaving 'em to dry in the Air a long ſpace of Time, *viz.* four or five Years. The *Bricks* us'd by the *Greeks* were principally of three Kinds; the firſt call'd διπηχυν, *i. e.* of two Palms: the ſecond τετραπηχυν, of four Palms; and the third πεντεπηχυν, of five Palms. They had other *Bricks*, juſt half each of theſe, which they join'd together to render their Works more ſolid, as well as more agreeable to the Eye, by the diverſity of Figures and Sizes of the *Bricks*.

The *Bricks* among us are various; acquiring various Names, according to their various Forms, Dimenſions, Uſes, Method of making, Place, &c. The principal are, 1. *Compaſs Bricks*, of a circular Form, us'd in ſteyning of Walls. 2. *Concave*, or *hollow Bricks*, on one ſide flat, like a common *Brick*, on the other hollow'd: They are us'd to convey Water. 3. *Cegging Bricks*, are us'd to make the indented Work, under the Coping of Walls built with great *Bricks*. 4. *Coping Bricks*, which are form'd on purpoſe for coping of Walls. 5. *Dutch*, or *Flemiſh Bricks*, us'd to pave Yards and Stables, and for Soapboilers Fatts, and Ciſterns. 6. *Clinkers*, are ſuch *Bricks* as are glazed by the heat of the Fire in making. 7. *Feather-edg'd Bricks*, are like the common *Statute Bricks*, only thinner on one Edge than on the other, and are us'd to pen up the Brick Pannels in Timber Buildings. 8. *Samel* or *Sandal Bricks*, are ſuch as lie outmoſt in a Kiln or Clamp, and conſequently are ſoft and uſeleſs; as not being thoroughly burnt. 9. *Great Bricks*, are 12 Inches long, 6 broad, and 3 thick: The Weight of one is about 15 Pounds; ſo that 100 will weigh 1500, and 1000 of them 15000 Pounds Weight: Their uſe is to build Fence-Walls; together with, 10. *Pilaſter*, or *Buttreſs Bricks*, which are of the ſame Dimenſions with them, only they have a Notch at one End, of half the Breadth of the *Brick*: Their uſe is to bind the Work at the Pilaſter of Fence-Walls, which are built of *Great Bricks*. 11. *Paving Bricks*, or *Tiles*, are of ſeveral Sizes in ſeveral Countys and Places. 12. *Place Bricks*, are ſuch as are made in a Place prepared on purpoſe for them, near the Building they are to be uſed in. 13. *Statute*, or *ſmall Common Bricks*; theſe ought to be 9 Inches long, 4½ broad, and 2½ thick; 100 of theſe uſually weigh about 550 Pounds, and 1000, 5500 Pounds; and about 407 in number, are a Tonn Weight: Theſe are commonly us'd in paving Cellars, Hearths, Sinks, &c. 30 or 32, if true meaſure, will pave a Yard Square, and 330 will pave a Square of 100 Foot, laid flat; but if laid Edg-ways, there muſt be double the Number.

*Barbaro*, in his Comment on *Vitruvius*, recommends another Form of *Bricks*, *viz.* Triangular ones, every Side a Foot long; and ſome an Inch and half thick: Theſe, he obſerves, wou'd have many Conveniencies above the reſt; as being more commodious in the Management, of leſs Expence, and of fairer Shew; adding much Beauty and Strength to the Mural Angles, where they fall gracefully into an indented Work. And Sir *H. Wotton* wonders they have never been taken into uſe; being recommended by ſo great an Authority.

The Earth whereof *Bricks* are made, muſt not be ſandy, which will make 'em both heavy and brittle; nor muſt it be too fat, which will make 'em crack in drying. They ſhould be made either in the Spring or Autumnal Seaſon: when made, they muſt be ſhelter'd from the Sun if it be too hot, and yet be expos'd to the Air to dry. If they be made in froſty Weather, they are to be cover'd with Sand; if in hot Weather, with wet Straw. When they are well dried, they are burnt.

*Bricks* are burnt, either in a *Kiln* or *Clamp*: Thoſe in the firſt, being ſet in it, and the Kiln cover'd with Pieces of Bricks, they put in Wood, to dry them with a gentle Fire; and this they continue till they are pretty dry, which

is

is known, by the Smoak's turning from a whitiſh dark, to a black tranſparent Smoak. They then ceaſe to put in Wood, and proceed to burn with Buſh, Furze, Straw, Heath, Brake, or Fern Faggots; having firſt damm'd up the Mouth of the Kiln with pieces of *Bricks* pil'd upon one another, and clos'd with wet *Brick-Earth*, inſtead of Mortar: They then continue to put in more Faggots, till the Kiln and its Arches look white, and the Fire appear a-top of the Kiln. Then they ſlacken the Fire for an Hour, and let all cool by degrees: 48 Hours burning is generally ſufficient. About *London*, they burn *Bricks* in Clamps, built of the *Bricks* themſelves, after the manner of Arches in Kilns; with a Vacancy between each Brick's Breadth, for the Fire to play thro; but with this Difference, that inſtead of arching, they truſs or ſpan it over, by making the *Bricks* project one over another, on both ſides the Place, for the Wood and Coals to lie in, till they meet, and are bounded by the *Bricks* at the Top, which cloſe all up. The Place for the Fuel is carry'd up ſtraight on both ſides, till about three Foot high; then they fill it almoſt with Wood, and over that lay a covering of Sea-Coal; then over-ſpan the Arch: But they ſtrew Sea-Coal alſo over the Clamp, betwixt all the Rows of *Bricks*; then they fire the Wood, and that fires the Coal: and when all is burnt out, they conclude the *Bricks* burnt enough.

*Goldman* obſerves, that *Bricks* will have double the Strength, if, after one burning, they be ſteep'd in Water, and burnt afreſh. If the Earth be too fat, it muſt be temper'd with Sand; and that trod out again, firſt by Cattle, then Men. *Bricks* made of common Earth, melt, nay vitrify, by too much Heat: For which Reaſon, the Kilns are made of Stones that will themſelves calcine, that the Vehemence of the Fire may be broken by 'em: Beſides which, they uſually place other *Bricks*, made of an argillous Earth which would melt, next the Fire.

*Oil of* BRICKS, is an Oil of Olives, imbib'd by the Subſtance of *Bricks*, and afterwards diſtill'd from it. The Pieces of *Brick* being heated red hot in live Coals, are extinguiſh'd in an Earth half ſaturated with Oil of Olives: Being then ſeparated and pounded groſsly, the *Brick* imbibes the Oil. 'Tis then put in a Retort, and plac'd in a Reverberatory Furnace; and by Fire is drawn an Oil, which the Apothecaries call *Oleum de Lateribus*; and the Chymiſts, *Oil of Philoſophers*, us'd to reſolve Tumors, in the Spleen, in Palſies, and Epilepſies.

BRIDGE, a Work of Maſonry, or Timber, built over a River, Canal, or the like, for the Convenience of croſſing the ſame. Some learned Men make *Janus* to have been the firſt Inventor of *Bridges*, Ships, and Crowns; becauſe in ſeveral *Greek*, *Sicilian*, and *Italian* Coins, there are repreſented on one ſide a *Janus* with two Faces, and on the other a *Bridge*, or a Crown, or a Ship. According to the Teſtimony given thereof by *Athenæus*, Lib. 15. one of the moſt notable Exploits of *Julius Cæſar*, was the expeditious making a *Bridge of Boats* over the *Rhine*. *Xerxes* is ſaid to have made a *Bridge of Ships* over the *Helleſpont*. See PONTON.

BRIDGE *of Communication*, is a *Bridge* made over a River; by which two Armies or Forts, ſeparated by the River, have a free Communication with one another.

*Draw*-BRIDGE, is ſuch a one as may be drawn, or taken up, by means of a Sweep or Counterpoiſe; and which ſhuts up againſt the Gate, *&c.* There are others with Pitfalls, and Beams, ſuſtain'd by two large Stakes 15 Foot high; one Part whereof lowers as the other riſes.

BRIDLE *of an Horſe*, is an Aſſemblage of various Members, or Parts; as the Bit or Snaffle, (ſee BIT;) the Head-ſtall, or Leathers from the Top of the Head to the Rings of the Bit; the Fillet, over the Forehead, and under the Foretop; Throat-band, which buttons from the Head-band under the Throat; Reins, the Part held in the Hand; Noſe-band, going thro Coops at the back of the Head-ſtall, and buckled under the Cheeks; the Trench, the Cavezan, Martingal, and Chaff-halter.

BRIEF, or BREVE, in Law, a Writ whereby a Man is ſummon'd or attach'd to anſwer any Action; or more largely, it is taken for any Writ in Writing, iſſued out of any of the King's Courts of Record at *Weſtminſter*, whereby any thing is commanded to be done in order to Juſtice, or the Execution of the King's Command: and 'tis call'd *Brief*, or *Breve*, *quia breviter intentionem proferentis exponit*; becauſe couch'd in a few plain Words, without Preamble, *&c.*

The Word *Brief* is alſo us'd for Letters Patent, or a Licence granted to a Subject, to make a Collection for any Publick or Private Loſs; ſee WRIT.

*Apoſtolical* BRIEFS, are the Letters which the Pope diſpatches to Princes, and other Magiſtrates, touching any Publick Affairs: They are ſo call'd, as being very conciſe, written on Paper, without Preface or Preamble; in which they arediſtinguiſh'd from *Bulls*, which are more ample, and always wrote on Parchment, and ſeal'd with Lead or green Wax; whereas *Briefs* are ſeal'd with red Wax, and with the Seal of the *Fiſherman*, or St. *Peter* in a Boat, in the Condition of a Fiſherman; a Seal never apply'd but in the Pope's Preſence. The *Brief* is headed with the Name of the Pope apart; and commences with *Dilecto filio ſalutem*, &c. *Apoſtolicam Benedictionem*, &c. and proceeds directly to the Matter in hand, without further Preamble. They are not ſubſcrib'd by the Pope, nor with his Name, but with that of his Secretary. Pope *Alexander* VI. inſtituted a College of Secretaries for *Briefs*; ſince which time, they have been made much longer and more ample than before. Formerly *Briefs* were only diſpatch'd about Affairs of Juſtice, but now they are likewiſe us'd for Graces and Diſpenſations.

BRIGADE, in the Military Art, a Party or Diviſion of a Body of Soldiers, whether Horſe or Foot. There are two ſorts of *Brigades*, according to the *French* way of accounting. A *Brigade* of an Army; which is a Body of Horſe of 10 or 12 Squadrons; Or of Foot, of 5 or 6 Battalions. And this way an Army is ſometimes divided into eight *Brigades*; four of Horſe, and four of Foot. A *Brigade* of a Company of Cavalry is its third Part, when it conſiſts only of 50 Officers; but its ſixth when it conſiſts of 100.

The Word *Brigade* is *French*; ſome derive it from *Brigand* or *Brigue*, a ſecret Intrigue. *Du Cange* fetches it from *Brigand*, an ill-diſciplin'd Soldier, who ſcours the Country, and plunders it of every thing, without waiting for the Enemy; as the Armies of *Arabs*, *Tartars*, &c. The Origin of the Word *Brigand* is, again, deduced from *Brigandine*; a Weapon wherewith the Army rais'd by the *Pariſians*, during the Captivity of their K. *John* in *England*, notorious for their Robberies, were arm'd.

BRIGADIER, an Officer that commands a *Brigade* of Horſe and Foot in an Army: He is very conſiderable, and goes next to the *Mareſchal de Camp*.

BRIGADE-*Major*, is an Officer appointed by the *Brigadier* to aſſiſt him in the Management and ordering his *Brigade*; and he acts there, as a Major-General does in an Army.

BRIGANDINE, a Coat of Mail, or a kind of antient defenſive Armour; conſiſting of thin jointed Scales or Plates, pliant and eaſy to the Body. Some confound it with *Haubergeon*, and ſome with a *Brigantine*, a low long Veſſel.

BRIGANTINE, is a ſmall, flat, open, light Veſſel, which goes both with Sails and Oars, and is either for Fighting or giving Chaſe. It hath uſually 10 or 12 Benches on a ſide for the Rowers, a Man and an Oar to each Bench. They are principally us'd by the *Corſairs*: All the Hands aboard being Soldiers; and each having his Muſket ready under his Oar.

BRINGERS-UP, in a Battalion, are the whole laſt Rank of Men in it, or the laſt in every File.

BROCADE, or BROCARD, in Commerce, a Stuff, or Cloth of Gold, Silver, or Silk, rais'd and enrich'd with Flowers, Foliages, or other Figures, according to the Fancy of the Manufacturer. Formerly, the Term was reſtrain'd to Cloths wove, either wholly of Gold, both Woof and Warp; or of Silver, or of both together: But by degrees, it came likewiſe to paſs for ſuch as had Silk intermix'd, to fill up, and terminate the Flowers of Gold and Silver. At preſent, any Stuff of Silk, Satin, or even ſimple Taffaty, when wrought, and enrich'd with Flowers, *&c.* obtains the Denomination of *Brocade*.

BROKERS, are of two Kinds: The firſt *Exchange-Brokers*, who deal in Matters of Money and Merchandize, between *Engliſhmen* and Strangers; by drawing the Bargain to Particulars, and the Parties to Concluſion: for which they have a Fee or Reward. Theſe, in our old Law-Books, are call'd *Broggers*; and in *Scotland*, *Broccarii*; *i. e.* according to *Skene*, Mediators or Interceſſors in any Contract, *&c.* Theſe make it their Buſineſs to know the Alteration of the Courſe of the Exchange, to inform Merchants how it goes, and to notify to thoſe, who have Money to receive or pay beyond Sea, who are proper Perſons for negotiating the Exchange with; and when the Matter is accompliſh'd, that is, when the Money is paid, thay have for *Brokerige* two Shillings *per* 100 Pounds Sterling.

In *France*, till the Middle of the XVIIth Century, their *Exchange-Brokers* were called *Courtiers de Change*; but by an Arret of Council, in 1639, the Name was chang'd for that more creditable one of *Agents de Change*, *Banque*, & *Finance*: And in the Beginning of the XVIIIth Century, to render the Office ſtill more honourable, the Title of *King's Counſellors* was added. At *Grand-Cairo*, and ſeveral Places of the *Levant*, the *Arabs* who do the Office of *Exchange-Brokers*, are call'd *Conſuls*: The manner of whoſe negotiating with the *European* Merchants, has ſomething in it ſo very particular, that we have referr'd it to a diſtinct Article: See CONSUL. The *Exchange-Brokers* at

*Amſterdam*, call'd *Makclaers*, are of two Kinds; the one like the *Engliſh*, call'd *Sworn Brokers*, becauſe of the Oath they take before the *Bourgermeſters*; the others negotiate without any Commiſſion, and are call'd *Walking Brokers*. The firſt are in Number 395; whereof 375 are Chriſtians, and 20 Jews: The others are near double that Number: So that in *Amſterdam* there are near 1000 *Exchange-Brokers*. The difference between the two conſiſts in this; that the Books and Perſons of the former are believ'd and own'd in the Courts of Juſtice; whereas, in Caſe of Diſpute, the latter are diſown'd, and their Bargains annull'd. The Fee of the ſworn *Exchange-Brokers* of *Amſterdam*, is fix'd by two Regulations, of 1613, and 1623, with regard to Matters of Exchange, to 18 Sols for 100 Livres, or 600 Florins; *i.e.* 3 Sols for 100 Florins, payable, half by the Drawer, and half by the Perſon who pays the Money. But Cuſtom has made conſiderable Alterations herein.

In the Eaſt, all Affairs are tranſacted by *Brokers*, whom the *Perſians* call *Delal*, *i.e.* Great Talkers. The manner of making their Markets is very ſingular: After the *Brokers* have launch'd out into long, and uſually impertinent Diſcourſes; coming towards a Concluſion, they only talk with their Fingers. The Buyer and Seller's *Broker*, each take the other by the Right Hand, which they cover with their Coat, or a Handkerchief: The Finger ſtretch'd out, ſtands for ſix; bent, for five; the Tip of the Finger for one; the whole Hand 100; and the Hand clench'd, 1000. They will expreſs even Pounds, Shillings, and Pence by their Hands. During all this myſtick Commerce, the two *Brokers* appear as cold and compos'd, as if there were nothing paſſing between 'em.

The other kind of *Brokers*, are *Pawn-Brokers*, who let out Money to neceſſitous People upon *Pawns*: Theſe are more properly call'd *Friperers*. The Word comes from the Saxon *Breacan*, to break; whence *Brokos*, a broken Dealer: None but broken Tradeſmen and Freemen of the City, being formerly allow'd to be *Brokers*.

In the Cities of *Italy*, there are Companies eſtabliſh'd by Authority, for the letting out Money on *Pawns*; call'd *Mounts of Piety*: An honourable Title, little becoming ſuch Inſtitutions; inaſmuch as the Loan is not *gratis*. In ſome Parts of *Italy*, they have likewiſe *Mounts of Piety* of another kind, wherein they only receive ready Money, and return it again with Intereſt at ſo much *per Annum*. At *Boulogne* they have ſeveral of theſe *Mounts*; which are diſtinguiſh'd into *Frank* and *Perpetual*. The Intereſt of the former is only four *per Cent.* in the latter at ſeven.

*Stock* BROKERS, are they who buy and ſell Shares in the Joint-Stocks of a Company or Corporation, for any Perſon that ſhall deſire them.

BRONCHIA, in Anatomy, the little Tubes into which the Bottom of the *Trachea* is branch'd, at its Entrance into the Lungs; and which are diſtributed thro every Part thereof, ſerving for the Conveyance of the Air in Reſpiration. The *Bronchia* conſiſts of Cartilages like the *Trachea*; only here the Cartilages are perfectly circular, without any membranous hard Part: They are join'd together by the Membranes that inveſt 'em, and are capable of being ſhot out lengthwiſe in Inſpiration; and of being drawn into each other in Expiration. The Word is *Greek*, where it ſignifies the ſame thing. See LUNGS.

BRONCHIAL, a particular Artery of the Lungs, call'd the *Bronchial Artery*. It ariſes from the deſcending Trunk of the *Aorta*, and diſtributes it; and embracing the *Trachea*, purſues the Courſe of the *Bronchia*, accompanying all their Branches thro their whole Progreſs. There is alſo a *Bronchial Vein*, which accompanies the Artery, and divides into the ſame Number of Branches with it: The Artery brings Blood to the *Bronchia*, for the Nutrition thereof, and of the Veſicles of the Lungs; and the Vein carries it off again to the *Cava*, where it ſoon terminates. The *Bronchial* Artery is ſometimes ſingle; but more frequently double; ſometimes triple.

BRONCHIC-*Muſcles*; ſee STERNOTHYROIDEI.

BRONCHOCELE, a Tumor, with a large round Neck, riſing on the *Bronchial* Part of the *Trachea*, very frequent in the *Alps*: The *Latins* call it *Hernia Gutturis*. The Word is form'd from the *Greek* βρόγχος, *Bronchia*, Windpipe; and κηλη, ſwelling.

BRONCHOTOMY, or *Laryngotomy*, in Chirurgery, the Operation of cutting into the Windpipe to prevent Suffocation, *&c.* in a *Squinancy*. 'Tis thus perform'd; the Body of the Patient being prepar'd, an Inciſion is made between the *Annuli*, or Rings of the *Aſpera Arteria*, an Inch below the Bottom of the *Larynx*; the Skin and Integuments divided, and the Muſcles remov'd; a Silver Tube is apply'd, and the Cauſe of the Diſeaſe remov'd; and the Wound heal'd; nouriſhing Clyſters being apply'd in the mean time, if Deglutition be impracticable. See LARYNGOTOMY. The Word comes from the *Greek* βρογχος, Windpipe; and τεμνω, *ſeco*.

BROOMING, or *Breaming of a Ship*; is burning off the Filth ſhe has contracted on her Sides, with Straw, Reeds, *&c.* when ſhe is on a Careen, or on the Ground; ſo that it is a kind of Graving.

BROTHER, a Term of Relation between two Male Children, ſprung from the ſame Father or Mother. The Antients apply'd the Term *Brother* indifferently to almoſt all who ſtood related in Collateral Lines, as Uncles and Nephews, Couſins German, *&c.* This we learn, not only from a great many Paſſages in the Old Teſtament, but alſo from profane Authors: *Cicero*, in his *Philippicks*, ſays, "*Antonia* was both Wife and Siſter of *Mark Anthony*; "becauſe ſhe was Daughter of his Brother *C. Antonius*." And as to Couſins German, *Tullus Hoſtilius*, in *Dionyſius Halicarnaſſeus*, calls the *Horatii* and *Curatii* BROTHERS; becauſe they were Siſter's Children. Among us, 'tis cuſtomary for Kings to give the Title *Brother* to each other: The Unction in Coronation being eſteem'd to ſettle a kind of *Brotherhood*. Nor is the Cuſtom modern; *Menander* mentions a Letter of *Coſroes*, King of *Perſia*, to the Emperor *Juſtinian*, beginning thus; Coſroes *King of Kings*, &c. *to the Emperor* Juſtinian *My Brother*. Kings now alſo give the ſame Appellation to the Electors of the Empire: And the like was given by the King of *France* to the preſent King of *Sardinia*, while only Duke of *Savoy*.

The *Latin* Word is *Frater*; which *Scaliger* and *Voſſius* derive from φρήτης, for φρήτωρ; which properly ſignifies a Perſon who draws Water in the ſame Well: φρέαρ, in *Greek*, ſignifying *Well*; and φρατεία, a Company of People, who have a Right to draw Water out of the ſame Well. The Word came originally from the City *Argos*, where there were only a few Wells diſtributed in certain Quarters of the City; to which thoſe of the ſame Neighbourhood alone repair'd. In the Civil Law, *Brothers*, *Fratres*, in the plural, comprehends *Siſters*; as, *Lucius & Titia*, *Fratres*, L. 38. de Famil. *Tres Fratres*, *Titius*, *Mævius*, *& Seia*, L. 35. de Pactis.

BROTHER, is particularly us'd between Monks of the ſame Convent; as, *Brother Zachary*, *Brother Bonaventure*, &c. In *Engliſh* we more uſually ſay *Friar Zachary*, &c. from the French *Frere*, *Brother*. This Appellation they borrow from the Primitive Chriſtians, who all call'd each other *Brothers*: But 'tis principally us'd for ſuch of the Religious as are not Prieſts; for thoſe in Orders are generally honour'd with the Title of *Fathers*, *Patres*, *Peres*; whereas the reſt are only ſimply *Brothers*. The Monks of St. *Dominic*, are particularly call'd *Preaching Brothers*; or, *Friars Predicants*: Thoſe of St. *Francis*, *Minor Friars*; thoſe of *Charity*, *Ignorant Friars*, &c. See FRANCISCANS, DOMINICANS, *&c.* In the Military Orders, the Knights are alſo call'd *Brothers*: In the Order of *Malta*, there is a particular Claſs, call'd *Serving Brothers*; conſiſting of ſuch as cannot give Proofs of their Nobility. In *Latin* they are call'd, *Fratres Clientes*. See MALTA.

BROTHERS *by Adoption*, ſee ADOPTION. *Fratres Conſanguinei*, are two *Brothers*, who have only the ſame Father: And *Fratres Uterini*, thoſe who are only deſcended from the ſame Mother.

BROTHERS *of the Roſy-Croſs*; ſee ROSICRUCIAN.

BROWNISTS, a Religious Sect, which ſprung out of the Church of *England*, towards the Cloſe of the XVIth Century; Their Leader, *Robert Brown*, originally of *Northampton*. The Occaſion of their Separation was not any Fault they found with the Faith, but with the Diſcipline and Form of Government of the Eſtabliſh'd Church. They equally charg'd Corruption on the Epiſcopal Form; and on that of the *Presbyterians*, by Conſiſtories, Claſſes, and Synods: Nor would they join with any other Church; becauſe they were not aſſur'd of the Converſion and Piety of the Members that compos'd 'em; on account of the Toleration of Sinners, with whom they maintain'd it an Impiety to communicate. They condemn'd the ſolemn Celebrations of Marriages in the Church; maintaining, that Matrimony being a Political Contract, the Confirmation thereof muſt come from the Civil Magiſtrate. They would not allow any Children to be baptiz'd of ſuch as were not Members of the Church, or of ſuch as did not take ſufficient Care of thoſe baptiz'd before. They rejected all Forms of Prayers; and held that the Lord's Prayer was not to be recited as a Prayer; being only given for a Rule or Model, whereon all our Prayers are to be form'd. See SEPARATIST.

BRUMALIA, a Feaſt of *Bacchus*, celebrated among the antient *Romans* for the ſpace of 30 Days; commencing on the 24th of *November*, and ending the 26th of *December*. The *Brumalia* were inſtituted by *Romulus*; who uſed, during this Time, to entertain the Senate. The Word comes from *Bruma*, Winter; in regard of the Time when the Feaſt was held: Others will have it from *Brumus*, or *Bromius*, Names of *Bacchus*.

BRYONY, the Root of a Plant of the ſame kind with the *Mechoaca*: It was formerly in great Reputation as a Purgative; but has now loſt the greateſt part thereof; yet

it

it evacuates pretty ſtrongly, ſometimes by Vomiting, but more frequently by Urine: Whence ſome Authors recommend it, as excellent for purging Seroſities; and even as a Specifick in the Dropſy. M. *Boulduc* found, by a Chymical Analyſis, that it conſiſted only of ſaline Principles, without any Reſin: Wherein it differs from *Mechoacan*, which, in other reſpects, it much reſembles. He adds, it has more virtue taken in Subſtance than in any other manner; which is common to this and other Purgatives.

BUBBLE, in Commerce, a Cant-Name, lately given to a ſort of Projects, for the raiſing of Money on imaginary Grounds; very frequent in the Years 1720,—21. See STOCKS.

The pretended Deſign of theſe Undertakings, was to raiſe a Stock, for the retrieving, ſetting on foot, or carrying on ſome promiſing and uſeful Branch of Trade, Manufacture, Machinery, or the like. In order to which, Propoſals were given out, ſhewing the Advantages of the Deſign, and inviting Perſons into it. The Sum neceſſary to carry on the Affair, together with the Profits expected from it, were divided into a certain Number of *Shares*, or *Subſcriptions*, to be purchas'd by Perſons diſpos'd to adventure therein. The real Deſign, in ſome, was to raiſe a Sum for the private Advantage of the Projectors; to be laid out by them in the *South-Sea Stock*, &c. in hopes, by the Riſe thereof, to be able to refund the Subſcribers Money, with Profit to themſelves. In others the Deſign was, abſolutely to defraud the Adventurers of their Subſcription-Money, without any View to Reſtitution. There was a third kind ſomewhat different; the Projectors of theſe, to proceed the more ſecurely, propos'd to have Books open'd, and Subſcriptions taken in at ſome time to come; and in the mean time took Money, by way of Premium, to entitle Perſons to be admitted Subſcribers, as ſoon as the Affair ſhould be ripe, for dividing into Shares. Several thouſand Shares were, thus, very frequently beſpoke in one Day; and Premiums, from one Shilling to ſome Pounds, pay'd thereupon, to the Profits of the Projectors. See SUBSCRIPTION.

The number of *Bubbles*, and their Qualities, were very extraordinary: Some of 'em too authoriz'd by Patents; and in others, the Projectors and their Proprietors form'd into Corporations: Some for Fiſheries, ſome for Inſurances, ſome for the digging of Mines, *&c.* Poſterity, doubtleſs, will be ſurpriz'd to hear of others for cleaning the Streets, others for furniſhing Shoes, others for Stockings, others for Phyſick, others for the Maintenance of Baſtard Children, others for the buying bad Titles, others for the lending of Money, *&c.*

BUBBLES, in Phyſicks, little round Drops or Veſicles of any Fluid fill'd with Air, and form'd on its Surface, upon the Addition of more of the Fluid, as in raining; or in its Subſtance, upon a vigorous inteſtine Commotion of its Parts. *Bubbles* are dilatable or compreſſible, *i.e.* take up more or leſs room, as the included Air is more or leſs heated, or more or leſs preſs'd from without; and are round, becauſe the included *Aura* acts equably from within all around. Their Coat or Cover is form'd of the minute Particles of the Fluid, retain'd either by the Velocity of the Air, or by the brisk Attraction between thoſe minute Parts and the Air. 'Tis theſe little *Bubbles*, riſing up from Fluids, or hanging on their Surface, which form the white Skum a-top; and 'tis theſe ſame *Bubbles* which form the Steam or Vapour flying up from Liquors in boiling, *&c.* the manner of which ſee under BOILING, VAPOUR, *&c.*

BUBO, in Medicine, a Tumor ariſing on the Glands of the Groin and Armpits, with Inflammation and Pain; owing to the overflowing of the Blood in thoſe Glands, mix'd with ſome peccant Humour. There are two Kinds of *Bubo*'s, the one call'd *Benign*, or Mild, the other *Malignant*. Malignant, are divided into *Peſtilential* and *Venereal*: Peſtilential ariſe on a Peſtilential Fever, *&c.* Venereal *Bubo*'s are the Product of impure Embraces; and frequently the Forerunner of the Pox. When a *Bubo* is encompaſs'd with a Circle of ſeveral Colours, 'tis a Sign it is Peſtilential, and generally Mortal. The Word comes from the *Greek* βουβών, *Inguen*; the uſual Place of ſuch Tumors.

BUBONOCELE, a Tumor ariſing in the Groin; occaſion'd by the Deſcent of the Epiploon or Inteſtines. 'Tis a Species of *Hernia* or Rupture; tho Chirurgeons call it an Incomplete one; and is common to Women as well as Men. The Word comes from the *Greek* βουβων, *Inguen*, and κήλη, Tumor.

BUCANEERS, or BOUCANEERS, a popular Term in the *Weſt Indies*, us'd properly for a kind of Savages who prepare their Meat on a Grate, or Hurdle made of *Braſil* Wood, plac'd in the Smoak at a good height from the Fire, and call'd *Boucan*: whence alſo the little Lodges rais'd for the Preparation of their Food are call'd *Boucans*; and the Action of dreſſing it *Boucaning*. Meat *boucan'd*, is ſaid to have an excellent Taſte, the vermil Colour of a Roſe, and a charming Smell; all which it retains many Months. *Oexmelin*, from whom we have this, adds, that the neighbouring People ſend their Sick hither, that by eating their *boucan'd* Meat they may be recover'd.

The Origin of the Word is referr'd to the *Caribbee Indians*, who uſing to cut their Priſoners of War in pieces, and lay 'em on Hurdles with Fire underneath; which they call'd *Boucaning*, *i. e.* Roaſting and Smoaking together: hence our *Bucaneers* took both their Name and their Cuſtom; with this Difference, that what the former did to Men, theſe did to Animals caught in Hunting. The *Spaniſh* call thoſe in their Territories *Matadores*; from *Toros*, killers of Bulls, and *Monteros*, runners in the Wood: The *Engliſh* call theirs *Cowlierdiers*, or Cow-killers. The *Bucaneers* are of two diſtinct Profeſſions; the one only hunt Bulls for their Skins, the other Boars for their Fleſh. The Art of *boucaning*, *Oexmelin* deſcribes thus; the Boar being flea'd, and the Bones ſtripp'd out, is cut into Pieces of the Length of the Arm and ſalted, and the next Day laid on the *Boucan*; which conſiſts of 20 or 30 Bars laid acroſs, half a Foot from each other: Under this they raiſe a thick Smoak, adding the Skin and Bones of the Boar to heighten it. This is found vaſtly better than any ſimple Fuel; in regard the Volatile Salts of thoſe Parts, are by this means communicated to the Fleſh, which give it ſuch a Reliſh, as that after a little of this *boucaning*, the niceſt Palate will eat it without further Preparation.

BUCCALES-GLANDULÆ, are Glands diſperſed over the inner Side of the Cheeks and Lips, which ſeparate a Spittle uſeful in Maſtication and Digeſtion. See MOUTH.

BUCCELLARII, a kind of Soldiers kept by the *Greek* Emperors, in the Provinces and Countries; ſo call'd becauſe ſubſiſted by the Emperor, or becauſe he was at the Expence of their eating; from *Buccella*, a Diminutive of *Bucca*, Mouth: Theſe being in that Country, what the *Commenſales*, or Beef-Eaters are at Court. The *Buccellarii*, in the Army where the Emperor commanded, march'd before and behind him, as his Guard. There were alſo another kind of *Buccellarii*, under the *Greek* Emperors; *viz.* the Ελληνογαλατται, *Greeks of Galatia*, who furniſh'd the Soldiery with Bread.

The firſt kind of *Buccellarii*, according to ſome Authors, were Men whom the Emperors employ'd in putting certain Perſons to Death ſecretly. The *Nomic* Gloſſes interpret the Word *Envoy*, as alſo *Stationary Soldier*; or a Perſon retain'd in the Service of any one: And the *Baſilicks* explain it in the ſame Senſe; deriving it from βύκκα, *Mouth*, *Bread*; as ſignifying a Perſon who eat the Bread of another, on account of his Service. Among the *Viſigoths*, *Buccellarius* was a general Name for all Clients or Vaſſals, who liv'd at the Expence of their Lords.

BUCCINA, an antient Military, or rather Muſical Inſtrument, uſed in War. 'Tis uſually taken for a kind of Trumpet; which Opinion *Feſtus* confirms, by defining it a crooked Horn, plaid on like a Trumpet. *Vegetius* alſo obſerves, that the *Buccina* was bent into a Circle; in which it differ'd from a Trumpet, *Tuba*. *Varro* adds, they were call'd Horns, *Cornua*, becauſe originally made of the Horns of Cattel; as is ſtill done among ſome People. *Servius* ſeems to ſay, that they were at firſt made of Goats Horns: And the Scriptures call the Inſtruments us'd, both in War and in the Temple, *Keren Jobel*, Rams Horns; and *Saphoroth Haijobelim*, *Buccinæ*, of Rams. The Muſical Inſtruments us'd in a Military March, are *Buccinæ*, Trumpets, Lituus, Clarions, Cornets, Fifes, Drums, Tymbals, *&c.* which ſee. The Marine *Buccinæ*, given by Poets and Painters to Tritons and Sea-Gods, are Shells twiſted in form of Snails. The Word comes from *Bucca*, Mouth; becauſe plaid on by the Mouth.

BUCCINATOR, or *Trumpeter*, in Anatomy, a Muſcle on each ſide the Face, common to the Lips and Cheeks; making the inner Subſtance of the latter: Its Fibres run from the *Proceſſus Coronæ* of the lower Jaw, to the Angle of the Mouth, and adhere to the upper Part of the Gums of both Jaws: Thro its middle paſs the upper *Ductus Salivales*. By this is contracted the Cavity of the Mouth, and the Meat is thruſt forward to the Teeth in Maſtication. It has its Name from *Buccina*, Trumpet; becauſe, when ſwell'd, it enlarges the Cheeks, as in ſounding a Trumpet.

BUCENTAURE, or BUCCENTAUR, the Name of a large Veſſel, us'd by the *Venetians* in the Ceremony of eſpouſing the Sea, perform'd each *Aſcenſion*-Day with much Pomp. *P. Juſtiniani*, gives a very preciſe Deſcription of the *Buccentaur*; and adds, that its Origin is carry'd up as high as the Year of Chriſt 1311; tho others carry it higher, to the Year 1177, when the Emperor *Frederick Barbaroſa* came to *Venice*, to make Peace with the Republick and the Pope: At which Time the Pope, in Conſideration of the Services the State had done him, in ſheltering him in their City when he had been driven out of his own, granted them ſeveral Privileges; and made a preſent to the *Doge* of a Gold Ring, which is the Origin of that yearly caſt by the *Doge*, from the *Buccentaur*, into the Sea. The Word comes from the *Greek*, βυκεντωρ; com-

pos'd of βοῦς, a Particle of Augmentation, us'd to denote an enormous Greatneſs; and κένταυρος, Centaur. *Juſtiniani* adds two other Etymologies of this: the firſt from *bis*, and *taurus*, or rather *Centaurus*, the name of one of *Æneas*'s Veſſels in *Virgil*: The other from *Bucentaurus*, for *Bucentaurus*, a Word forg'd to ſignify a Veſſel capable of holding 200 Men.

BUCEPHALUS, *Bullock's Head*, from the *Greek* βοῦς, *bos*, and κεφαλη, Head. It was the Cuſtom among the Antients to impreſs ſome Mark on their Horſes; the moſt common were a Σ, *Sigma*, a Κ, *Kappa*, and a *Bullock's Head*. Hence thoſe mark'd with Σ's, were call'd Συμφορεῖς; thoſe with a Κ, Κοππαλίαι; and thoſe with a *Bull's Head*, Βουκεφαλοι, *Bucephali*. This Mark was ſtamp'd on the Horſe's Buttocks, and his Harneſſes; as appears from the Scholiaſt on *Ariſtophanes*'s *Clouds*, *Heſychius*, &c.

BUCKLER, a piece of defenſive Armour, us'd by the Antients to ſkreen their Bodies from the Blows of their Enemies. See the *Buckler* of *Achilles* deſcrib'd in *Homer*, that of *Æneas* in *Virgil*, that of *Hercules* in *Heſiod*: *Ajax*'s *Buckler* was lin'd with ſeven Bulls Hides. The Shield ſucceeded the uſe of the *Buckler*: Yet the *Spaniards* ſtill retain the *Sword and Buckler* in their Night-Walks. The Word comes from *Bucularium*; on account of the Buckles wherewith the Antients adorn'd their *Bucklers*. In the Days of corrupt *Latin*, we frequently find *Buccula Clypei*, the Buckle of the *Buckler*. *Thomaſſin* derives it from *Bucca*, Mouth or Throat; becauſe it was uſual to have Heads, &c. repreſented on *Bucklers*. See SHIELD.

*Bucklers* on Medals, are either us'd to ſignify publick Vows render'd to the Gods for the Safety of a Prince; or that he is eſteem'd the Defender and Protector of his People: Theſe were call'd *Votive Bucklers*, and were hung at Altars, &c.

BUCOLICKS, *Paſtorals*, a Term uſed for a kind of Poems relating to Shepherds, and Flocks. *Bucolick* Poetry is the moſt ancient of all the Kinds of Poetry; and is ſuppos'd to have had its Origin in *Sicily*, amidſt the Mirth and Diverſions of the Shepherds; and to have been inſpir'd by Love and Idleneſs: By degrees, their Rural Gallantries were brought under Rules, and became an Art. The Concerns of the Flocks, the Beauties of Nature, and the Pleaſure of a Country Life, were their principal Subjects. *Moſchus* and *Bion*, were the moſt agreeable among the antient *Bucolick* Poets. *Fontenelle* obſerves, that *Theocritus*'s Stile is ſometimes a little too *Bucolick*. Some Authors attribute the Invention of *Bucolick* Poetry to a Shepherd call'd *Daphnis*; and others to *Bucolius*, Son of *Laomedon*: But this appears all Fiction. The Word is deriv'd from the *Greek* βοῦς, and κολον, *cibus*, Meat; hence βουκολεω, to feed Cattle; and βούκολος, *bubulus*, Herdſman.

BUD, is a weaned Calf of the firſt Year; ſo called, becauſe the Horns are then in the *Bud*.

BUDS, among Gardeners, the firſt Tops of moſt Sallad Plants, &c. which are preferable to all other leſs tender Parts. See CYON.

BUFF, in Commerce, a ſort of Leather prepar'd from the Skin of the *Buffelo*, a wild Beaſt reſembling an Ox, but longer and bigger; having large thick Horns, ſhort black Hair, and a very ſmall Head; common enough in the *Levant*, particularly about *Smyrna*, *Conſtantinople*, &c. where, as well as in *Italy*, they are frequently tam'd, and wrought, as we do Oxen.

The Skin of this Animal being dreſs'd in Oil, after the manner of Shammy, or *Chamois*, makes what we call *Buff*-Skin; antiently much uſed among the Military Men, for a kind of Coats or Doublets; and ſtill retain'd by ſome of our Grenadiers, as well as the *French Gend'armery*, on account of its exceeding Thickneſs and Firmneſs. 'Tis alſo uſed for Waſte-Belts, Pouches, &c. This Skin makes a very conſiderable Article in the *Engliſh*, *French*, and *Dutch* Commerce, at *Conſtantinople*, *Smyrna*, and the Coaſts of *Africa*.

The Skins of Elks, Oxen, and other like Animals, when dreſs'd in Oil, and prepar'd after the ſame manner as that of the *Buffelo*, are likewiſe denominated *Buff*; and us'd for the ſame Purpoſes. In *France*, there are a good number of conſiderable Manufacturies deſtin'd for the Preparation of ſuch Skins; particularly at *Corbeil*, *Paris*, and *Rouen*: Their firſt Inſtitution is owing to the Sieur *Jabac*, a Native of *Cologne*. The manner of Preparation ſee under the Article CHAMOIS.

BUFFET, or BUFET, was antiently a little Apartment, ſeparated from the reſt of a Room, by ſlender Wooden Columns, for the diſpoſing China and Glaſs Ware, &c. call'd a Cabinet: 'Tis now, properly, a large Table in a Dining Room, call'd alſo a Side-Board, for the Plate, Glaſſes, Bottles, Baſons, &c. to be placed, as well for the Service of the Table as for Magnificence. The *Buffet*, among the *Italians*, call'd *Credenza*, is enclos'd within a Baluſtrade, Elbow high.

BUFFOON, an Actor in Farce, or a Mimick, who diverts the Publick by his Pleaſantries and Follies. This is reputed the Talent of the *Italian* Comedians. Some Authors make the Origin of *Buffoonry* very antient, deriving it from a Feaſt inſtituted in *Attica*, by K. *Erictheus*, on occaſion of a Prieſt, call'd *Buphon*: Who after having ſacrific'd the firſt Bullock on the Altar of *Jupiter Polion*, or Guardian of the City, fled haſtily away, without any apparent Reaſon; leaving the Ax and other Inſtruments of Sacrifice on the Ground, nor cou'd either be ſtopp'd, or ever found afterwards. The Inſtruments were hereupon deliver'd up to the Judges, and ſolemnly try'd; the Ax found Guilty, and the reſt acquitted. This Sacrifice was kept up in the ſame manner the following Years: The Prieſt fled, as the firſt; and the Ax condemn'd. As the whole Ceremony was perfectly Burleſque, the Words *Buffoons* and *Buffoonries* have been ſince apply'd to all ridiculous Mummeries and Farces: This Hiſtory is related by *Rhodoginus*. *Menage*, after *Salmaſius*, derives the Word from *Buffo*; a Name given to thoſe who appear'd on the *Roman* Theater with their Cheeks blow'd up; that receiving Blows thereon, they might make the greater Noiſe, and ſet the People a laughing.

BUGGERY, Sir *Edward Coke* defines, *Carnalis Copula contra Naturam, & hoc vel per confuſionem Specierum; viz.* a Man or Woman with a brute Beaſt: *vel Sexuum*, a Man with a Man, or a Woman with a Woman: each kind is Felony, without Benefit of Clergy. In antient Times, ſuch Offenders were burnt by the Common Law. *Buggery* is generally excepted out of a General Pardon. The Practice is ſaid to have been introduc'd into *England* by the *Lombards*: It is ſuppoſed to take its Name from the antient *Bulgarians*.

BUILDING, *D'aviler* defines, any Place erected by Art, whether for Convenience, for Religion, or Magnificence. See HOUSE, TEMPLE, THEATER.

A *Regular Building*, is that whoſe Plan is Square, its oppoſite Sides equal, and the Parts diſpos'd with Symmetry. An *Irregular Building*, is that, on the contrary, whoſe Plan is not contain'd within equal or parallel Lines, either by the Nature of its Situation, or the Artifice of the *Builder*; and whoſe Parts have not any juſt Relation to one another in the Elevation. An *Inſolated Building*, is that which is not attach'd, join'd, or contiguous to any other; or is encompaſs'd with Streets, or any open Square, or the like; as St. *Paul*'s, the *Monument*, &c. A *Building* is ſaid to be *engag'd*, when it is encompaſs'd with others, and has no Front towards any Street or publick Place, nor any Communication without, but by a back Paſſage. An *interr'd*, or *ſunk Building*, is that whoſe Area is below the Level of the adjacent Street, Court, or Garden, &c. and whoſe loweſt Courſes of Stone are hid.

*Felibien* conſiders three Kinds of *Buildings* in Architecture; 1. *Sacred Buildings*; as the Temples of the Antients, and our Churches and Chappels. 2. *Publick Buildings*; as Baſilicks, or Courts of Juſtice, Tombs, Theaters, Amphitheaters, Triumphal Arches, Gates, Bridges, Aqueducts, &c. 3. Palaces, and private Houſes: Each of which ſee under their proper Heads, BASILIC, CHURCH, AMPHITHEATER, &c.

BUILDING is alſo us'd for the conſtructing or raiſing of an Edifice; in which Senſe it comprehends, as well the Expenſes, as the Invention and Execution of the Deſign thereof. See ARCHITECTURE.

In *Building* there are three Things in view, *viz.* Commodity, Firmneſs, and Delight: To attain theſe Ends, Sir *Henry Wotton* conſiders the whole Subject under two Heads, *viz.* the Seat or *Situation*, and the *Work*. For the Situation, either that of the *Whole* is to be conſider'd, or that of its *Parts*.

For the firſt, regard muſt be had to the Quality, Temperature, and Salubrity of the Air; the Conveniency of Water, Fuel, Carriage, &c. and the Agreeableneſs of the Proſpect. For the ſecond, the chief Rooms, Studies, Libraries, &c. to lie towards the Eaſt; Offices that require Heat, as Kitchens, Diſtillatories, Brew-houſes, &c. to the South: Thoſe that require a cool freſh Air, as Cellars, Pantries, Granaries, &c. to the North: As alſo Galleries for Painting, Muſeums, &c. which require a ſteady Light. He adds, that the antient *Greeks* and *Romans*, generally ſituated the Front of their Houſes to the South: But the modern *Italians* vary from this Rule. Indeed, in this Matter, regard muſt ſtill be had to the Country; each being oblig'd to provide againſt its reſpective Inconveniences: So that a good Parlour in *Egypt*, might make a good Cellar in *England*. See SITUATION.

For the ſecond Head, the Situation being fix'd on, the next thing to be conſider'd is the *Work*: Under this come, firſt the principal Parts, then the Acceſſories, or Ornaments.

Under the Principals, are, firſt, the *Materials*; then the *Form* or Diſpoſition. The Materials are either Stone, as

Marble, Free-ſtone, Brick, for the Walls, &c. or of Wood, as Firr, Cypreſs, Cedar, for Poſts and Pillars of upright uſe; Oak, for Beams, Summers, Crop-work, or for Joining and Connection. See STONE, BRICK, WOOD, TIMBER, &c.

For the Form or Diſpoſition of a *Building*, it muſt either be Simple or Mix'd: The ſimple Forms are either Circular or Angular; and the Circular ones either compleat, as juſt Spheres, or deficient, as Ovals.

The circular *Form* is very commodious, of the greateſt Capacity of any; ſtrong, durable beyond the reſt, and very beautiful: but then it is found of all others the moſt chargeable; much room is loſt in the bending of the Walls, when it comes to be divided; beſides an ill Diſtribution of Light, except from the Centre of the Roof: On theſe Conſiderations it was, that the Antients only us'd it in Temples and Amphitheaters, which needed no Compartition. Oval Forms have the ſame Inconveniences, without the ſame Conveniences; being of leſs Capacity.

For Angular Figures, Sir *H. Wotton* obſerves, that *Building* neither loves many nor few Angles: The Triangle, *v. g.* is condemn'd above all others, as wanting Capacity and Firmneſs; as alſo, being irreſolvable into any other Regular Figure in the inward Partitions, beſides its own. For Figures of 5, 6, 7, or more Angles, they are fitter for Fortifications than Civil Buildings. There is, indeed, a celebrated *Building* of *Vignola*, at *Caprarole*, in Form of a Pentagon; but the Architect had prodigious Difficulties to grapple with, in diſpoſing the Lights, and ſaving the Vacuities. Such *Buildings* then, ſeem rather for Curioſity than Conveniency: and for this Reaſon, Rectangles are pitch'd on, as being a Medium between the two Extremes. But again, whether the Rectangle is to be a juſt Square or an Oblong, is diſputed. Sir *Henry Wotton* prefers the latter, provided the Length don't exceed the Breadth by above one third.

Mix'd Figures, partly Circular and partly Angular, may be judg'd of from the Rules of the Simple ones; only they have this particular Defect, that they offend againſt Uniformity. Indeed Uniformity and Variety may ſeem to be oppoſite to each other: but Sir *H. Wotton* obſerves, they may be reconcil'd; and for an Inſtance, mentions the Structure of the Human Body where both meet. Thus much for the firſt grand Diviſion, *viz.* the *Whole* of a *Building*.

For the ſecond Diviſion, or the *Parts* of a Fabrick, *Baptiſta Alberti* compriſes 'em under five Heads; *viz.* the Foundation, Walls, Apertures, Compartitions, and Cover.

For the *Foundation*, to examine its Firmneſs, *Vitruvius* orders the Ground to be dug up; an apparent Solidity not to be truſted to, unleſs the whole Mold cut thro be found ſolid: He does not indeed limit the Depth of the Digging; *Palladio* limits it to a ſixth Part of the Height of the *Building*: This Sir *Henry Wotton* calls the Natural Foundation, whereon is to ſtand the Subſtruction, or Ground-work, to ſupport the Walls, which he calls the Artificial Foundation: This then is to be level; its loweſt Ledge, or Row of Stone only, cloſe laid with Mortar, and the broader the better; at the leaſt, twice as broad as the Wall: Laſtly, ſome add, that the Materials below ſhould be laid juſt as they grew in the Quarry; as ſuppoſing 'em to have the greateſt Strength in their natural Poſture. *De Lorme* enforces this, by obſerving, that the breaking or yeilding of a Stone in this Part, but the Breadth of the Back of a Knife, will make a Cleft of above half a Foot in the Fabrick above. For *Pallification*, or piling the Ground-Plot, ſo much commended by *Vitruvius*, we ſay nothing; that being requir'd only in a moiſt marſhy Ground, which ſhould never be choſen: Nor perhaps are there any Inſtances of this kind, where it was not Neceſſity that drove 'em to it. See FOUNDATION.

For the *Walls*, they are either entire and continued, or intermitted; and the Intermiſſions are either Columns or Pilaſters. Entire, or continu'd Walls, are variouſly diſtinguiſh'd; by ſome, according to the Quality of the Materials, as they are either Stone, Brick, &c. others only conſider the Poſition of the Materials; as when Brick, or ſquare Stones are laid in their Lengths, with Sides and Heads together, or their Points conjoin'd, like a Network, &c. See MASONRY. The great Laws of Muring, are, that the Walls ſtand perpendicular to the Ground-work; the Right Angle being the Cauſe of all Stability: that the maſſieſt and heavieſt Materials be loweſt, as fitter to bear than be born; that the Work diminiſh in Thickneſs, as it riſes; both for eaſe of Weight and Expence: that certain Courſes, or Ledges of more ſtrength than the reſt, be interlaid, like Bones, to ſuſtain the Fabrick from total Ruin, if the Under-parts chance to decay: And laſtly, that the Angles be firmly bound; theſe being the Nerves of the whole Fabrick, and commonly fortify'd, by the *Italians*, on each ſide the Corners, even in Brick *Buildings*, with ſquar'd Stones; which add both Beauty and Strength. See WALL.

The Intermiſſions, as before obſerv'd, are either Columns or Pilaſters; whereof there are five Orders, *viz.* *Tuſcan*, *Doric*, *Ionic*, *Corinthian*, *Compoſite*; each of which ſee diſtinctly conſider'd under its reſpective Head. Columns and Pilaſters are frequently, both for Beauty and Majeſty, form'd Archwiſe; the Doctrine of which, ſee under ARCH.

For the *Apertures*, they are either Doors, Windows, Staircaſes, Chimneys, or Conduits for the Suillage, &c. which ſee under their Heads, DOOR, WINDOW, &c. Only with regard to the laſt, it may be obſerved, that Art ſhould imitate Nature in theſe ignoble Conveyances, and ſeparate them from Sight, where a running Water is wanting, into the moſt remote, loweſt, and thickeſt Part of the Foundation; with ſecret Vents, paſſing up thro the Walls, like a Tunnel, to the open Air; which the *Italians* all commend for the Diſcharge of noiſom Vapors.

For the *Compartition*, or Diſtribution of the Groundplot into Apartments, &c. Sir *H. Wotton* lays down theſe Preliminaries; That the Architect never fix his Fancy on a Paper Draught, how exactly ſoever ſet off in Perſpective; much leſs on a mere Plan, without a Model, or Type of the whole Structure, and every Part thereof, in Paſtboard or Wood; that this Model be as plain and unadorn'd as poſſible, to prevent the Eye's being impos'd on, and that the bigger this Model, the better. In the Compartition it ſelf, there are two general Views, *viz.* the Gracefulneſs, and Uſefulneſs of the Diſtribution, for Rooms of Office and Entertainment; as far as the Capacity thereof, and the Nature of the Country will allow. The Gracefulneſs will conſiſt in a double Analogy or Correſpondency; firſt, between the Parts and the Whole, whereby a large Fabrick ſhould have large Partitions, Entrances, Doors, Columns, and, in brief, all the Members large: The ſecond, between the Parts themſelves, with regard to Length, Breadth, and Height. The Antients determin'd the Length of their Rooms, that were to be Oblongs, by double their Breadth; and their Height by half their Breadth and Length added together. When the Room was to be preciſely Square, they made the Height half as much more as the Breadth: which Rules, the Moderns take occaſion to diſpenſe with; ſometimes ſquaring the Breadth, and making the Diagonal thereof the Meaſure of the Height; and ſometimes more. This deviating from the Rules of the Antients, is aſcrib'd to *M. Angelo*.

The ſecond Conſideration in the Compartition, is the Uſefulneſs; which conſiſts in the having a ſufficient number of Rooms of all Kinds, with their proper Communications, and without Diſtraction. Here the chief Difficulty will lie in the Lights and Staircaſes. The Antients were pretty eaſy on both thoſe Heads, having generally two cloiſter'd open Courts, one for the Women's Side, the other for the Men: Thus the Reception of Light into the Body of the *Building* was eaſy; which among us muſt be ſupply'd, either by the open Form of the *Building*, or by graceful Refuges or Breaks, by terraſſing a Story in danger of Darkneſs, and by Abajours, or Sky-Lights. For caſting the Staircaſes, it may be obſerv'd, that the *Italians* frequently diſtribute the Kitchen, Bake-houſe, Buttery, &c. under Ground, next above the Foundation, and ſometimes level with the Floor of the Cellar; raiſing the firſt aſcent into the Houſe 15 Foot, or more: which, beſide the removing of Annoyances out of the Sight, and gaining ſo much room above, does, by elevating the Front, add a Majeſty to the whole. Indeed, Sir *H. Wotton* obſerves, that in *England* the natural Hoſpitality thereof, won't allow the Buttery to be ſo far out of ſight; beſides that, a more luminous Kitchen, and a ſhorter Diſtance between that and the Dining-Room, are requir'd, than that Compartition will well bear. In the Diſtribution of Lodging Rooms, 'tis a popular and antient Fault, eſpecially among the *Italians*, to caſt the Partitions ſo, as when the Doors are all open, a Man may ſee through the whole Houſe; grounded on the Ambition of ſhewing a Stranger all the Furniture at once: an intolerable Hardſhip on all the Chambers, except the Inmoſt, where none can arrive but thro all the reſt, unleſs the Walls be extreme thick for ſecret Paſſages: nor will this ſerve the Turn, without at leaſt three Doors to each Chamber; a thing inexcuſable, except in hot Countries: Beſides its being a weakning to the *Building*, and the Neceſſity it occaſions of making as many common great Rooms as there are Stories, which devours a great deal of room, better employ'd in Places of Retreat; and muſt likewiſe be dark, as running thro the Middle of the Houſe. In the Compartition, the Architect will have occaſion for frequent Shifts; thro which his own Sagacity, more than any Rules muſt conduct him. Thus he will be frequently put to ſtruggle with Scarcity of Ground; ſometimes to damn one room for the Benefit of the reſt, as to hide a Buttery under a Staircaſe, &c. at other times, to make thoſe the moſt beautiful which are moſt in Sight; and to leave the reſt, like a Painter, in the Shadow, &c.

For the *Covering* of the *Building*; this is the laſt in the Execution, but the firſt in the Intention: for who would

*build*,

*build*, but to ſhelter? In the Covering, or Roof, there are two extremes to be avoided, the making it too heavy or too light: The firſt will preſs too much on the Underwork; the latter has a more ſecret Inconvenience; for the Cover is not only a bare Defence, but a Band or Ligature to the whole *Building*; and there requires a reaſonable Weight. Indeed, of the two Extremes, a Houſe top-heavy is the worſt. Care is likewiſe to be taken, the Preſſure be equal on each Side; and *Palladio* wiſhes, that the whole Burden might not be laid on the outward Walls, but that the Inner likewiſe bear their Share. The *Italians* are very curious in the Proportion and Gracefulneſs of the Pent or Slopeneſs; dividing the whole Breadth into nine Parts, whereof two ſerve for the height of the higheſt Top or Ridge from the loweſt: But in this Point, regard muſt be had to the Quality of the Region; for, as *Palladio* inſinuates, thoſe Climates which fear the falling of much Snow, ought to have more inclining Pentices than others. See COVERING.

Thus much for the principal or eſſential Parts of a *Building*: For the Acceſſories, or Ornaments, they are fetch'd from Painting and Sculpture. The chief things to be regarded in the firſt, are, that no Room have too much, which will occaſion a Surfeit; except in Galleries, &c. that the beſt Pieces be placed where there are the feweſt Lights: Rooms with ſeveral Windows are Enemies to Painters, nor can any Pictures be ſeen in Perfection, unleſs illumin'd, like Nature, with a ſingle Light: That in the Diſpoſition regard be had to the Poſture of the Painter in working, which is the moſt natural for the Poſture of the Spectator; and that they be accommodated to the Intentions of the Room they are us'd in: See PAINTING. For Sculpture, it muſt be obſerv'd, that it ben't too abundant; eſpecially at the firſt approach of a *Building*, or at the Entrance; where a *Dorick* Ornament, is much preferable to a *Corinthian* one; that the Niches, if they contain Figures of white Stone, be not colour'd in their Concavity too black, but rather duſky; the Sight being diſpleas'd with too ſudden Departments from one extreme to another. That fine Sculptures have the Advantage of nearneſs, and coarſer of Diſtance; and that in placing of Figures aloft, they be reclin'd a little forwards: Becauſe, the viſual Ray extended to the Head of the Figure, is longer than that reaching to its Feet, which will of neceſſity make that Part appear further off; ſo that to reduce it to an erect Poſture, it muſt be made to ſtoop a little forwards. M. *le Clerc*, however, won't allow of this Reſupination, but will have every Part in its juſt Perpendicular. See STATUE.

To judge of a *Building*, Sir *H. Wotton* lays down the following Rules: 1. That before fixing any Judgment, a Perſon be inform'd of its Age; that, if the apparent Decays be found to exceed the Proportion of Time, it may be concluded, without further Inquiſition, either that the Situation is naught, or the Materials or Workmanſhip too ſlight. If it be found to bear its Years well, let him run back, from the Ornaments and Things which ſtrike the Eye firſt, to the more eſſential Members; till he be able to form a Concluſion, that the Work is commodious, firm, and delightful; the three Conditions, in a good *Building*, laid down at firſt, and agreed on by all Authors. This, he eſteems the moſt Scientifical Way of judging. *Vaſſari* propoſes another, *viz.* by paſſing a running Examination over the whole Edifice, according to the Structure of a well-made Man; as, whether the Walls ſtand upright on a clean Footing and Foundation; whether the *Building* be of a beautiful Stature; whether, for the Breadth, it appear well burniſh'd; whether the principal Entrance be on the middle Line of the Front, or Face, like our Mouths; the Windows, as our Eyes, ſet in equal Number and Diſtance on both Sides; the Offices, like the Veins, uſefully diſtributed, &c. Laſtly, *Vitruvius* gives a third Method of judging; ſumming up the whole Art under theſe ſix Heads: Ordination, or the ſettling the Model and Scale of the Work; Diſpoſition, the juſt Expreſſion of the firſt Deſign thereof; (which two, Sir *H. Wotton* thinks he might have ſpar'd, as belonging rather to the Artificer than the Cenſurer:) Eurithmy, the agreeable Harmony between the Length, Breadth, and Height of the ſeveral Rooms, &c. Symmetry, or the Agreement between the Parts and the Whole; Decor, the due Relation between the *Building* and the Inhabitant: Whence *Palladio* concludes, the principal Entrance ought never to be limited by any Rule, but the Dignity and Generoſity of the Maſter. And laſtly, Diſtribution, the uſeful caſting of the ſeveral Rooms, for Office, Entertainment, or Pleaſure. Theſe laſt four are ever to be run over, e'er a Man paſs any determinate Cenſure: And theſe alone, Sir *Henry* obſerves, are ſufficient to condemn or acquit any *Building* whatever. See EURITHMY, SYMMETRY, &c.

Dr. *Fuller* gives us two or three good Aphoriſms in *Building*; as,

1ſt, *Let not the common Rooms be ſeveral, nor the ſeveral Rooms common: i. e.* The common Rooms not to be private or retir'd, as the Hall, Galleries, &c. which are to be open, and the Chambers, &c. retir'd.

2d, *A Houſe had better be too little for a Day, than too big for a Year.* Houſes therefore to be proportion'd to ordinary Occaſions, not extraordinary.

3d, *Country Houſes muſt be Subſtantives, able to ſtand of themſelves.* Not like City *Buildings*, ſupported and ſhelter'd on each Side by their Neighbours.

4th, *Let not the Front look aſquint on a Stranger; but accoſt him right, at his Entrance.*

5th, *Let the Offices keep their due Diſtance from the Manſion Houſe; thoſe are too familiar, which are of the ſame Pile with it.*

BULB, in Botany, an oblong Root, nearly round, compoſed of ſeveral Skins, or Coats, laid one over another; and caſed, as it were, within one another; ſending forth from its lower Part a great number of Fibres. The Roots of the common Onion, the Daffodil, the Hyacinth, are of the *bulbous* Kind. The Name is alſo given to tuberous Roots, compos'd of a ſolid continued Subſtance, without any Skins laid over one another: Thus, the Roots of Saffron and Colchique are call'd *bulbous* Roots. See ROOT.

Dr. *Grew* obſerves, that in *bulbous* Plants, as well as many Perennial ones, the Root is annually renew'd, or repair'd, out of the Trunk or Stalk it ſelf: That is, the Baſis of the Stalk, continually and inſenſibly deſcends below the Surface of the Earth; and hiding it ſelf therein, is, both in Nature, Place, and Office, chang'd into a true Root. Thus, in Brownwort, the Baſe, ſinking by degrees, becomes the upper Part of the Root; the next Year the lower Part; and the next another rots away; a freſh ſupply coming.

BULIMY, or BOULIMIA, a Diſeaſe, occaſioning a diſorderly and ravenous Appetite; call'd alſo *Appetitus Caninus*. In the *Philoſophical Tranſactions*, we have an Account of a Perſon affected with a *Bulimy*, inſomuch that he wou'd eat up an ordinary Leg of Veal at a common Meal, and feed on Sow-thiſtles, &c. cur'd by giving up ſeveral Worms, of the Length and Thickneſs of a Tobacco-Pipe. The Word comes from the *Greek* βοῦς, *bos*, and λιμὸς, *Hunger*; as if the Patient had an Appetite ſufficient to eat an Ox.

BULK *of a Ship*, is her whole Content in the Hold, for ſtowage of Goods. See BREAK-BULK.

*Bulk-Heads*, are Partitions made acroſs a Ship, with Boards of Timber, whereby one Part is divided from another. The *Bulk-Head afore*, is the Partition between the Fore-Caſtle, and Graling in the Head, and in which are the Chaſe-Ports.

BULL, a Letter diſpatch'd from the *Roman* Chancery, ſeal'd with Lead; anſwering to the Edicts, Letters Patents, and Proviſions, of ſecular Princes. If the *Bulls* be Letters of Grace, the Lead is hung on Silk Threads; if they be Letters of Juſtice, and Executory, the Lead is hung by a Hempen Cord.

The *Bull* is the third kind of *Apoſtolical Reſcript*, and the moſt in uſe, both in Affairs of Juſtice and Grace. It is wrote on Parchment; by which it is diſtinguiſh'd from a ſimple *Signature*, which is on Paper. A *Bull* is properly a *Signature* enlarg'd: What the latter comprehends in a few Words, the former dilates and amplifies. Yet the *Bull* is not to take in more Matter than the *Signature*; being only to amplify the Stile in Clauſes of Ceremony. The *Bull*, in the Form wherein it is to be diſpatch'd, is divided into five Parts; *viz.* the Narrative of the Fact; the Conception; the Clauſe; the Date; and the Salutation, in which the Pope takes on himſelf the Quality of *Servant of Servants*, *Servus Servorum Dei*. Properly ſpeaking, 'tis the Seal, or pendant Lead alone that is the *Bull*; it being that which gives it the Title and Authority. The Seal preſents, on one Side, the Heads of St. *Peter* and St. *Paul*; on the other, the Name of the Pope, and the Year of his Pontificat. *Bulls* are wrote in an old round *Gothic* Letter.

By *Bulls*, Jubilees are granted; without 'em no Biſhops, in the *Romiſh* Church, are allow'd to be conſecrated. In *Spain*, *Bulls* are requir'd for all kinds of Benefices; but in *France*, &c. ſimple *Signatures* are ſufficient; excepting for Biſhopricks, Abbeys, Dignities, and Priories Conventual. According to the Laws of the *Roman* Chancery, no Benefice exceeding 24 Ducats *per Annum*, ſhould be conferr'd but by *Bulls*: But the *French* would never ſubmit to this Rule, except for ſuch Benefices as are tax'd in the Apoſtolical Chamber; for the reſt, they reſerve the Right of diſſembling the Value, expreſſing it in general Terms; *Cujus & illi forſan annexorum fructus 24 Ducatorum Auri, de camera ſecundum communem eſtimationem, Valorem Annuum non excedunt.* The *Bulls* brought into *France*, are limited and moderated by the Laws and Cuſtoms of the Land, before they are regiſter'd; nor is any thing admitted till it have been well examin'd, and found to contain nothing contrary to the Liberties of the *Gallican* Church: Thoſe Words, *proprio motu*, in a *Bull*, are ſufficient to make the whole be rejected. Nor do the *Spaniards* admit 'em implicitly; but, having been examin'd by the

King's Council; if there appear any Reaſons for not executing 'em, notice thereof is given to the Pope by a Supplication; and the *Bull*, by this means, remains without Effect: And the like Method of proceeding with the Court of *Rome*, is obſerv'd by the reſt of the Courts of *Europe*.

To *fulminate Bulls*, is to make the Publication thereof, by one of the three Commiſſaries to whom they are directed; whether he be Biſhop or Official. This Publication is ſometimes oppos'd; but when it is, the Fault is not charg'd on the Pope who iſſu'd it, but an Appeal is brought to him againſt the Perſon who is ſuppos'd to make it: Thus the Fault is laid, where 'tis known not to be juſt, to evade affronting the Pontiff.

The *Bull in Cæna Domini*, is a *Bull* read every Year, on *Maunday-Thurſday*, in the Pope's Preſence; containing various Excommunications and Execrations, againſt Hereticks, thoſe who diſobey the See, who diſturb or oppoſe the Exerciſe of Eccleſiaſtical Juriſdiction, &c.

After the Death of a Pope, no *Bulls* are diſpatch'd during the Vacancy of the See: To prevent any Abuſes therefore, as ſoon as the Pope is dead, the Vice-Chancellor of the *Roman* Church takes the Seal of the *Bulls*; and, in the Preſence of ſeveral Perſons, orders the Name of the deceas'd Pope to be eras'd; and covers the other Side, on which are the Faces of St. *Peter* and *Paul*, with a Linen Cloth; ſealing it up with his own Seal, and giving it thus cover'd to the Chamberlain, to be preſerv'd, ſo as no *Bulls* may be ſeal'd with it in the mean time.

The Word *Bull*, is deriv'd from *bullare*, to ſeal Letters; or from *bulla*, a Drop or Bubble: Others derive it from the *Greek* βυλὴ, Council; *Pezron* from the Celtic *Buil*, and *bul*, Bubble.

*Golden* BULL, is an Ordonnance, or Statute, made by the Emperor *Charles* IV. in 1356. ſaid to have been drawn up by that celebrated Lawyer *Bartoli*: This is the Fundamental Law of the Empire. Till this time, the Form and Ceremony of the Election of an Emperor, were dubious and undetermin'd; and the Number of Electors not fix'd. This ſolemn Edict regulated the Functions, Rights, Privileges, and Preeminences of the Electors. The Original, which is in *Latin*, on Vellom, is kept at *Frankfort*. On the Backſide are ſeveral Knots of black and yellow Silk; to which hangs a Seal of Gold.

'Tis call'd the *Golden Bull*, becauſe the Emperors of the Eaſt uſed, antiently, to ſeal their Edicts with a Golden Seal, call'd *Bulla*. This Ordonnance, containing 30 Articles, was approv'd of by all the Princes of the Empire, and remains ſtill in force. The Election of the Emperor was to be in the Hands of ſeven Electors; three of 'em Eccleſiaſticks, *viz.* the Archbiſhops of *Mentz*, *Treves*, and *Cologne*; and four Seculars, *viz.* the King of *Bohemia*, Prince *Palatine*, Duke of *Saxony*, and Marquis of *Brandenburg*. See ELECTOR.

*Golden Bulls* were in uſe among the Eaſtern Emperors for a conſiderable Time; Leaden ones being confin'd to Matters of ſmaller moment. *Spelman* mentions a *Golden Bull*, in a Treaty of Alliance between our *Henry* VIII. and *Francis* I. of *France*; and there are other Inſtances in *Du Cange* and *Altaſerra*.

BULLET, an Iron or Leaden Ball, or Shot, wherewith Fire-Arms are loaded. *Bullets* are of various Kinds, *viz.* *Red Bullets*, made hot in a Forge; intended to ſet Fire to Places where combuſtible Matters are found. *Hollow Bullets*, or Shells, made Cylindrical, with an Aperture and a Fuſee at one End, which giving Fire to the Inſide, when in the Ground it burſts, and has the ſame Effect with a Mine. *Chain Bullets*, which conſiſt of two Balls, join'd by a Chain three or four Foot apart. *Branch Bullets*, two Balls join'd by a Bar of Iron 5 or 6 Inches apart. *Two-headed Bullets*, call'd alſo *Angels*, two halves of a *Bullet* join'd by a Bar, or Chain: Theſe are chiefly us'd at Sea, for cutting of Cords, Cables, Sails, &c. Some derive the Word from the Latin *Botellus*, others from the *Greek* βάλλειν, to throw. According to *Merſenne*, a *Bullet* ſhot out of a great Gun, flies 92 Fathom in a Second of Time, which is equal to 589½ *Engliſh* Feet; and, according to *Huygens*, would be 25 Years in paſſing from the Earth to the Sun: But according to ſome very accurate Experiments of Mr. *Derham*, it flies, at its firſt Diſcharge, 510 Yards in five half Seconds; which is a Mile in a little above 17 half Seconds: Allowing therefore the Sun's Diſtance 86051398 *Engliſh* Miles, a *Bullet* would be 32 Years and a half in its Paſſage. See SOUND.

BULLION, Gold and Silver in the Maſs or Billet. It is alſo the Place where Gold and Silver is brought to be try'd and exchang'd.

BULWARK, the ſame, in the antient Fortification, with a *Baſtion* in the Modern; ſee BASTION.

BUMICILLI, a Sect of Mahometans in *Africa*. Theſe are ſaid to be great Sorcerers; they fight againſt the Devils, as they ſay; and frequently run about cover'd with Blood and Bruiſes, in a terrible Fright: They ſometimes counterfeit a Combat with 'em at noon Day; and, in the Preſence of Numbers of People, for the Space of two or three Hours, with Darts, Javelins, Scimiters, &c. laying deſperately about them, till they fall down on the Ground oppreſs'd with Blows: After reſting a Moment, they recover their Spirits and walk off. What their Rule is, is not well known; but they are ſaid to be an Order of Religious.

BUNT *of a Sail*, is the middle Part of it, which is purpoſely form'd into a kind of Bag, or Cavity, that the Sail might receive the more Wind: It is chiefly us'd in Top-ſails; for Courſes are for the moſt part cut ſquare, or at leaſt with a ſmall Allowance, for *Bunt* or Compaſs. They ſay, *the Bunt holds much Leeward Wind*; that is, the *Bunt* hangs too much to Leeward. The *Bunt-lines* are ſmall Lines made faſt to the Bottom of the Sails, in the middle Part of the Bolt-Rope, to the Crengle; and ſo are reeved thro a ſmall Block, ſeized to the Yard: Their uſe is to trice up the *Bunt* of the Sail, for the better furling it up.

BUOY, at Sea, a piece of Wood or Cork, ſometimes an empty Caſk well clos'd, ſwimming on the Water, and faſten'd by a Chain or Cord to a large Stone, piece of broken Cannon, &c. thrown into the Sea, to mark the dangerous Places near a Coaſt, as Rocks, Sholes, Wrecks of Veſſels, Anchors, &c. In lieu of theſe *Buoys*, are ſometimes placed pieces of Wood, in form of Maſts, in the conſpicuous Places. Sometimes large Trees are planted in a particular manner; in number, two at the leaſt, to be taken in a right Line, the one hiding the other; ſo as the two may appear to the Eye no more than one.

*Buoy* is alſo a piece of Wood, or a Barrel, at Sea, faſten'd ſo as to float directly over the Anchor; that the Men who go in the Boat to weigh the Anchor, may certainly know where it lies.

BURDEN, the Drone or Baſe in ſome Muſical Inſtruments, and the Pipe or Part that plays it; as in an Organ, a Bagpipe, &c. See DRONE. Hence the *Burden* of a Song, &c. is that Part repeated at the End of each Stanza. The Word comes from the French *Bourdon*, a Staff; or a Pipe made in form of a Staff, imitating the groſs murmurs of Bees or Drones. This is what the Antients call'd, *Proſlambanomenos*.

BURDEN *of a Ship*, is its Content, or the Number of Tonns it will carry. To determine the *Burden* of a Ship, multiply the Length of the Keel, taken within Board, by the Breadth of the Ship, within Board, taken from the Midſhip Beam from Plank to Plank, and the Product by the Depth of the Hold, taken from the Plank below the Keelſey, to the under Part of the upper Deck Plank; and divide the laſt Product by 94, and the Quotient is the Content of the Tonnage requir'd. See SHIP.

BURGAGE, is a Tenure proper to Cities, Boroughs, and Towns, whereby the Burghers, Citizens, or Townſmen, hold their Lands or Tenements of the King, or other Lords, for a certain yearly Rent. *Swinburn* ſays, it is a kind of Soccage.

BURGESSES, the Inhabitants of a Borough, or wall'd Town: tho the Word is alſo apply'd to the Magiſtrates of ſuch Towns; as the Bailiff and *Burgeſſes* of *Leominſter*. The Word *Burgeſſes* is now ordinarily us'd for the Repreſentatives of ſuch Borough-Towns in Parliament: *Filius vero* Burgenſis, *Ætatem habere tunc intelligitur cum diſerte ſciverit denarios numerare & pannos ulnare*, &c. In other Countries, *Burgeſs* and Citizen are confounded together, but with us they are diſtinguiſh'd. See BOROUGH.

BURG-GRAVE, a Judge or Governor in ſeveral Cities and Caſtles of *Germany*: The *Burg-gravate* is perpetual. The Word is form'd from *Burg*, City, and *Grave*, Judge or Count.

BURGLARY, ſignifies the robbing of an Houſe; but, in a legal Senſe, is a Felonious entering into another Man's Dwelling, wherein ſome Perſon is, or into a Church in the Night time; to the end to commit ſome Felony, or to kill ſome Perſon, or to ſteal ſomething thence, or to do ſome other felonious Act, altho he executes it not. The ſame Offence by Day, we call Houſe-breaking, &c. It ſhall not have Benefit of Clergy.

BURGMOTE, a Court of a City or Borough; ſee MOTE.

BURLESQUE, a kind of Poetry, merry, jocular, and bordering on the Ridicule. The Word, and the Thing too, ſeem to be both Modern. F. *Kavaſſor* maintains, in his Book *De ludicra Dictione*, that it was abſolutely unknown to the Antients; againſt the Opinion of others, that one *Raintovius*, in the Time of *Ptolomy Lagus*, turn'd the ſerious Subjects of Tragedy into Ridicule; which, perhaps, is a better Plea for the Antiquity of Farce than *Burleſque*. The *Italians* ſeem to have the juſteſt Claim to the Invention of *Burleſque*. The firſt in this kind was *Bernica*; he was follow'd by *Lalli*, *Caparali*, &c. From *Italy* it paſs'd into *France*, and became there ſo much the Mode, that in 1649 appear'd a Book under the Title of, *The Paſſion of our Saviour in burleſque Verſe*. Thence it came to *England*; but the good Senſe of the *Engliſh* never adopted or own'd it, notwithſtanding one or two have excell'd in it.

BURN, in a Medicinal Senſe, a Solution of the Continuity of a Part of the Body, by the Impreſſion of Fire: or a Mark remaining on the Thing *burnt*. Of *Burns*, Phyſicians make ſeveral Degrees: The firſt, when there are only a few Puſtules rais'd on the Skin, with a Redneſs, and a Separation of the *Epiderma* from the genuine Skin. The ſecond when the Skin is burnt, dried, and ſhrunk, but without any Cruſt or Scab. The third is, when the Fleſh, Veins, Nerves, *&c.* are ſhrunk, and form a Scab. *Luſitanus* recommends an Unguent, made of the Aſhes of Lawrel Leaves burnt, with Hog's Fat dropp'd on 'em, for a *Burn*; or, on occaſion, the Unguent *Populeum*, with Vine Leaves laid over it. *Panarole* obſerves, that Clay laid on a *Burn* abates the Pain; and the Brewers in *Holland*, uſe a Decoction of Ivy for the Cure of *Burns*.

*Burns*, however, are not only Diſeaſes, but in ſome Caſes Remedies. M. *Homberg* obſerves, that in the Iſle of *Java*, the Natives cure themſelves of a Cholick, otherwiſe Mortal, by *burning* the Soles of their Feet; and cure themſelves of a *Panaris*, by dipping their Finger in boiling Water ſeveral times. Travellers relate many other Caſes of other Diſeaſes cur'd by *burning*: And we ſee the Effects of it our ſelves, in Horſes, Hounds, Birds of Prey, *&c.* A kind of Moſs, brought from the *Indies*, has been likewiſe us'd for the Gout; apply'd, by *burning* it on the Part affected: and M. *Homberg* gives us Inſtances of two Women cur'd, the one of a violent Diſeaſe in the Head and Eyes, and the other of a Diſeaſe in the Legs and Thighs, by the accidental *burning* of thoſe Parts. He adds, that *burning* may cure in three manners; either by putting the peccant Humors into a greater Motion, and making 'em take new Routs; or by diſſolving and breaking their Viſcidity, or by deſtroying the Canals which brought them in too great Quantities. See CAUSTIC, and CAUTERY.

BURNING, the Action of Fire on ſome *Pabulum* or Fuel, whereby the minute Parts thereof are torn from each other, put into a violent Motion; and, aſſuming the Nature of Fire themſelves, fly off *in Orbem*. See FIRE.

BURNING, or BRENNING, in our antient Cuſtoms, was an infectious Diſeaſe, got in the Stews, by converſing with leud Women; ſuppos'd to be the ſame that we now call the *Venereal Diſeaſe*: Whence that Diſeaſe is argu'd to be much more antient than the common Epocha of the Siege of *Naples*. See VENEREAL DISEASE, and CLAP.

The chief Objection againſt *Burning* being the ſame with the *Venereal* Diſeaſe, is, that the Remedies preſcrib'd againſt the former, would be ineffectual in the latter: But, beſide that it is not to be expected, the Meaſures of the antient Phyſicians ſhould be calculated for the removing of any Malignity in the Maſs of Blood or other Juices, as in the Modern Practice; inaſmuch as they look'd on the Diſeaſe as merely local, and the whole of the Cure to depend on the Removal of the Symptoms: Beſides this, it is matter of frequent Obſervation, that ſome Diſeaſes grow more violent, and others more remiſs in courſe of Time: So that the Remedies which might have avail'd for the antient *Brenning*, may now fail as to the modern *Pox*.

The Proceſs for the Cure, as deliver'd by *J. Arden*, Chirurgeon to K. *Henry* IV. is thus——*Contra* Incendium *Virgæ Virilis interius ex calore & excoriatione fiat talis ſyringa* (i. e. *injectio*) *lenitiva. Accipe lac Mulieris maſculum nutrientis & parum zacarium, Oleum Violæ & Ptiſanæ: quibus commixtis per Syringam infundatur.*

In an antient MS. written about the Year 1300, is a Receipt for *Brenning of the Pyntyl yat Men clepe the Apegalle*; *Galle* being an old Word for a running Sore. And in another MS. written 50 Years after, is a Receipt for *Burning in that Part by a Woman*. *Simon Fiſh*, a zealous Promoter of the Reformation, in his *Supplication of Beggars*, preſented to K. *Henry* VIII. 1530, ſpeaking of the *Romiſh* Prieſts, ſays, *They catch the* Pocks *of one Woman, and bare 'em to another; they be* burnt *with one Woman, and bare it to another: They catch the* Lepry *of one Woman, and bare it to another.* And *Boord*, a Prieſt and Phyſician in the ſame Reign, begins one of his Chapters of his *Breviary of Health*, thus: *The 19th Chapter doth ſhew of the* burning *of an Harlotte.* The ſame Author adds, that if a Man be *burnt* with an Harlot, and do meddle with another Woman within a Day, he ſhall *burn* the Woman he ſhall meddle withal: And as an immediate Remedy againſt the *Burning*, he recommends the waſhing the *Pudenda* two or three times with Whitewine, or elſe with Sack and Water.— In another MS. of the Vocation of *John Bale* to the Biſhoprick of *Oſſory*, written by himſelf, he ſpeaks of Dr. *Hugh Weſton* (who was Dean of *Windſor* in 1556, but deprived by Cardinal *Pole* for Adultery) thus: "At this Day is leacherous *Weſton*, who is "more practis'd in the Art of *Breech-burning* than all the "Whores of the Stews.——*He not long ago* brent *a Beg-*"*gar of St.* Botolph's *Pariſh.*——" See STEWS.

BURNING-GLASS, or *Burning Mirror*, a Machine, whereby the Sun's Rays are collected into a Point; and by that means their Force and Effect extremely heighten'd, ſo as to burn Objects placed therein. *Burning Glaſſes* are of two Kinds, the firſt Convex, which tranſmit the Rays of Light, and in their Paſſage refract or incline them towards its Axis; having the Property of *Lens's*, and acting according to the Laws of Refraction: See LENS, and REFRACTION. The ſecond, which is the more uſual, are Concave; very improperly call'd *Burning Glaſſes*, being uſually made of Metal: Theſe reflect the Rays of Light, and in that Reflexion, incline them to a Point in their Axes; having the Properties of *Mirrors*, and acting according to the Laws of Reflexion: which ſee under MIRROR and REFLECTION.

The firſt, or Convex kind, Authors ſuppoſe to have been unknown to the Antients; but the latter are generally allow'd. Hiſtorians tell us, that *Archimedes*, by means hereof, burnt a whole Fleet. Now tho the Effect related be very improbable, yet does it ſufficiently prove ſuch things were then known. The Machines here us'd, no body doubts, were Metallick and Concave; and had their *Focus* by Reflexion: It being agreed, that the Antients were unacquainted with the Refracted *Foci* of Convex Glaſſes. Yet, M. *de la Hire* has diſcover'd even thoſe, in the *Clouds* of *Ariſtophanes*; where *Strepſiades* tells *Socrates*, of an Expedient he had to pay his Debts, by means of a round tranſparent Stone or Glaſs, us'd in lighting of Fires; by which he intended to melt the Obligation: which in thoſe Days was written on Wax. The Glaſs here us'd to light the Fire, and melt the Wax, M. *de la Hire* obſerves, could not be Concave; ſince a reflected *Focus* coming from below upwards, would have been exceedingly improper for that Purpoſe: And the old Scholiaſt of *Ariſtophanes*, confirms the Sentiment. *Pliny* makes mention of Globes of Glaſs and Cryſtal, which being expos'd to the Sun, burnt the Clothes and Fleſh on Peoples Backs; and *Lactantius* adds, that a glaſs Sphere, full of Water, and held in the Sun, lighted the Fire even in the coldeſt Weather: which inconteſtably proves the Effects of Convex Glaſſes. Indeed, there is ſome Difficulty in conceiving how they ſhould know they *burnt*, without knowing they *magnify'd*; which 'tis granted they did not, till towards the Cloſe of the XIIIth Century, when Spectacles and Teleſcopes were firſt thought on. For as to thoſe Paſſages in *Plautus* which ſeem to intimate the Knowledge of Spectacles, M. *de la Hire* obſerves, they don't prove any ſuch thing: And he ſolves this, by obſerving, that their *Burning Glaſſes* being Spheres, either ſolid, or full of Water, their *Foci* would be one fourth of their Diameter diſtant from 'em: If then their Diameter were ſuppos'd half a Foot, which is the moſt we can allow, an Object muſt be at an Inch and a half's Diſtance to perceive it magnify'd: Thoſe at greater Diſtances do not appear greater, but only more confus'd, thro the Glaſs than out of it. 'Tis no wonder, therefore, the magnifying Property of Convex Glaſſes was unknown, and their *burning* one known: 'Tis more wonderful there ſhould be 300 Years between the Invention of Spectacles and Teleſcopes.

Every Concave Mirror, or *Speculum*, collects the Rays diſpers'd thro its whole Concavity, after Reflexion, into a Point or *Focus*, and is therefore a *burning Mirror*.

Hence, as the *Focus* is there where the Rays are the moſt cloſely contracted, if it be a Segment of a large Sphere, its Breadth muſt not ſubtend an Arch above 18 Degrees; if it be a Segment of a ſmaller Sphere, its Breadth may be 30 Degrees. Indeed, *Kircher* obſerves, that of all *Burning* Mirrors, thoſe are the beſt, whoſe Breadth does not ſubtend an Arch of 18 Degrees; ſo that Experience and Demonſtration go together.

As the Surface of a Mirror, which is a Segment of a larger, receives more Rays than another of a leſs, if the Latitude of each ſubtend an Arch of 18 Degrees; or even more, or leſs, provided it be equal: the Effects of the greater Mirror will be greater than thoſe of the leſs.

And, as the *Focus* is contain'd between the fourth and fifth Part of the Diameter, Mirrors that are Segments of greater Spheres, burn at a greater Diſtance than thoſe which are Segments of a ſmaller.

Since, laſtly, the *Burning* depends on the Union of the Rays, and the Union of the Rays on the Concave Spherical Figure; 'tis no wonder, that even wooden Mirrors, gilt, or thoſe prepared of Alabaſter, *&c.* cover'd with Gold; nay, even that thoſe made of Paper, and cover'd with Straw, ſhould be found to *burn*.

Among the Antients, the *Burning Mirrors* of *Archimedes* and *Proculus* are eminent; by one of which, the *Roman* Ships beſieging *Syracuſe*, under the Command of *Marcellus*, according to the Relations of *Zonaras*, *Tzetzes*, *Galen*, &c. and by the other, the Navy of *Vitellian* beſieging *Byzantium*, according to *Tzetzes*, were burnt. Among the Moderns, the moſt remarkable *Burning Mirrors*, are thoſe of *Settala*, of *Villette*, and *Tſchirnhaus*. *Settala*, Canon of *Padua*, made a Parabolical Mirror, which according

cording to *Schottus*, burnt Pieces of Wood, at the Diſtance of 15 or 16 Paces.

M. *Tſchirnhaus*'s Mirror, at leaſt, equals the former, both in Bigneſs and Effect: The following Things are noted of it in the *Acta Eruditorum*. 1. Green Wood takes fire inſtantaneouſly, ſo as a ſtrong Wind can't extinguiſh it. 2. Water boils immediately, and Eggs in it are preſently edible. 3. A Mixture of Tin and Lead, three Inches thick, drops preſently: An Iron or Steel Plate becomes red-hot preſently, and a little after burns into Holes. 4. Things not capable of melting, as Stones, Bricks, &c. become ſoon red-hot, like Iron. 5. Slate becomes firſt white, then a black Glaſs. 6. Tiles are converted into a yellow Glaſs, and Shells into a blackiſh yellow one. 7. A Pumice Stone emitted from a *Volcano*, melts into a white Glaſs: And, 8. A piece of a Crucible alſo vitrifies in eight Minutes. 9. Bones are ſoon turn'd into an opake Glaſs, and Earth into a black one. The Breadth of this Mirror is near three *Leipſick* Ells, its *Focus* two Ells diſtant from it: It is made of Copper, and its Subſtance is not above double the Thickneſs of the Back of a Knife.

*Villette*, a *French* Artiſt of *Lyons*, made a large Mirror, bought by *Tavernier*, and preſented to the King of *Perſia*; a ſecond, bought by the King of *Denmark*; a third preſented by the *French* King to the *Royal Academy*; a fourth has been in *England*, where it was publickly expos'd. The Effects hereof, as found by Dr. *Harris* and Dr. *Deſaguliers*, are, that a Silver Sixpence is melted in 7″ and ½; a King *George*'s Halfpenny in 16″, and runs with a Hole in 34. Tin melts in 3″, Caſt Iron in 16″, Slate in 3″; a foſſile Shilling calcines in 7″; a piece of *Pompey*'s Pillar at *Alexandria*, vitrifies in the black Part in 50″, in the white in 54; Copper Ore in 8″: Bone calcines in 4″, vitrifies in 33. An Emerald melts into a Subſtance like a Turquois Stone; a Diamond weighing 4 Gr. loſes ⅞ of its Weight: The Asbeſtos vitrifies; as all other Bodies will do, if kept long enough in the *Focus*: When once vitrify'd, the Mirror can go no further with them. This Mirror is 47 Inches wide; and is ground to a Sphere of 76 Inches Radius: ſo that its *Focus* is about 38 Inches from the Vertex. Its Subſtance is a Compoſition of Tin, Copper, and Tin-Glaſs.

Every *Lens*, whether Convex, Plano Convex, or Convexo Convex, collects the Sun's Rays, diſpers'd o'er its Convexity, into a Point, by Refraction; and is therefore a *Burning Glaſs*. The moſt conſiderable of this kind known, is that made by M. *de Tſchirnhauſen*: The Diameters of his *Lenſes* are three and four Feet; the *Focus* at the Diſtance of 12 Feet, and its Diameter an Inch and half. To make the *Focus* the more vivid, 'tis collected a ſecond time by a ſecond *Lens* parallel to the firſt; and plac'd in that Place where the Diameter of the Cone of Rays form'd by the firſt *Lens*, is equal to the Diameter of the ſecond: So that it receives 'em all; and the *Focus* from an Inch and a half, is contracted into the Space of eight Lines, and its Force increas'd proportionably. Its Effects, among others, as related in the *Acta Erudit. Lipſii*, are, That it lights hard Wood, even moiſten'd with Water, into a Flame, inſtantly; that Water, in a little Veſſel, begins to boil preſently; all Metals are melted; Brick, Pumice Stone, *Delpht* Wares, and the Asbeſtos Stone, are turn'd into Glaſs; Sulphur, Pitch, &c. melted under Water: The Aſhes of Vegetables, Woods, and other Matters, tranſmuted into Glaſs. In a word, every thing apply'd to its *Focus*, is either melted, turn'd into Calx, or into Smoak; and the Colours of Jewels, and all other Bodies, Metals alone excepted, are chang'd by it. He obſerves, that it ſucceeds beſt when the Matter apply'd is laid on a hard Coal well burnt.

Tho the Force of the Solar Rays be here found ſo ſtupendous; yet the Rays of the Full Moon, collected by the ſame *Burning Glaſs*, don't exhibit the leaſt Increaſe of Heat.

Further, as the Effects of a *Burning Lens* depend wholly on its Convexity, 'tis no wonder that even thoſe prepar'd of Ice produce Fire, &c. A *Lens* of that kind is eaſily prepar'd, by putting a piece of Ice into a Skuttle, or hollow Segment of a Sphere, and melting it over the Fire, till it accommodate it ſelf to the Figure thereof.

Nor will thoſe ignorant of Dioptrics, be leſs ſurpriz'd to ſee Flame, and the Effects thereof, produced by means of the Refraction of Light in a Glaſs Bubble fill'd with Water. See LENS.

*Wolfius* tells us, that an Artiſt of *Dreſden* made *burning Mirrors* of Wood, bigger than thoſe of M. *Tſchirnhaus* or *Villette*, which had Effects at leaſt equal to any of 'em. *Traberus* teaches how to make *burning Mirrors* of Leaf Gold; *viz.* by turning a Concave, laying its Inſide equally with Pitch, and covering that with ſquare Pieces of the Gold, two or three Fingers broad, faſtening 'em on, if need be, by Fire. He adds, that very large Mirrors may be made, of 30, 40, or more Concave Pieces, artfully join'd in a turn'd wooden Diſh or Skuttle; the Effects of which will not be much leſs, than if the Surface was continuous.

*Zahnius* adds, further, that *Newman*, an Engineer at *Vienna*, in 1699, made a Mirror of Paſtboard, cover'd within ſide with Straw glu'd to it; by which all kind of Metals, &c. were melted. See MIRROR.

BURNING *of Land*, call'd alſo vulgarly *Denſhiring*, *quaſi Devonſhiring*, or *Denbyſhiring*, as being moſt uſed there: A Method of preparing and fertilizing Lands barren, ſour, heathy and ruſhy, for Corn; by paring off the Turf, and drying, and *burning* it on the Ground. The ſame Method alſo obtains for Meadows and Paſture Ground, moiſt, claiey, or ruſhy.

BURNING *Mountains*. See VULCANO, EARTHQUAKE, MOUNTAIN, &c.

BURNISHING, the Action of ſmoothening or poliſhing a Body, by a violent rubbing it with any thing. Thus Bookbinders *burniſh* the Edges of their Books, by rubbing 'em with a Dog's Tooth. Gold and Silver are *burniſh'd* with a Wolf's Tooth, a Dog's Tooth, or the bloody Stone, Tripoli, a piece of white Wood and Emery. Hence *Burniſher*, is a round poliſh'd piece of Steel, ſerving to ſmooth and give a Luſtre to Metals: Of theſe there are various Kinds, of various Figures; ſtrait, crooked, &c. Half *Burniſhers*, are us'd to ſolder Silver, as well as to give it a Luſtre.

Deer are ſaid to *burniſh* their Heads, when rubbing off a white downy Skin from their Horns againſt a Tree, they thruſt 'em into a reddiſh Earth, to give 'em a new Colour and Luſtre.

BURR, or BURR-DOCK, is an Herb, whoſe broad Leaves, Roots, and Seeds, are ſometimes us'd in Phyſick.

BURR-PUMP, or *Bildge Pump*, a kind of Pump ſo call'd, becauſe it holds much Water; ſee PUMP.

BURSARS, in *Scotland*, are Youths choſen, and ſent as Exhibitioners to the Univerſities, one each Year, by each Presbytery; by whom they are to be ſubſiſted for the Space of four Years, at the Rate of 100 *l. per Annum*, Scots.

BUSHEL, a Meaſure of Capacity for things Dry; as Grains, Pulſe, dry Fruits, &c. The *Engliſh Buſhel* contains 4 Pecks, or 8 Gallons, or ⅛ of a Quarter. See MEASURE.

At *Paris*, the *Buſhel* is divided into two *half Buſhels*; the *half Buſhel* into two Quarts; the Quart into two half Quarts; the half Quart into two Litrons; and the Litron into two half Litrons. By a Sentence of the *Provoſt* of the Merchants of *Paris*, the *Buſhel* is to be eight Inches, two Lines and a half high, and ten Inches in Diameter; the Quart four Inches nine Lines high, and ſix Inches nine Lines wide; the half Quart four Inches three Lines high, and five Inches Diameter; the Litron three Inches and a half high, and three Inches ten Lines in Diameter. Three *Buſhels* make a Minot, ſix a Mine, 12 a Septier, and 144 a Muid: See MUID. In other Parts of *France* the *Buſhel* varies: 14 ⅛ *Buſhels* of *Amboiſe* and *Tours*, make the *Paris* Septier. 20 *Buſhels* of *Avignon*, make three *Paris* Septiers; 20 *Buſhels* of *Blois*, make one *Paris* Septier; 2 *Buſhels* of *Bourdeaux*, make one *Paris* Septier; 32 *Buſhels* of *Rochel*, make 19 *Paris* Septiers. *Note*, Oats are meaſur'd in a double Proportion to other Grains; ſo that 24 *Buſhels* of Oats make a Septier, and 248 a Muid. The *Buſhel* of Oats is divided into four Picotins, the Picotin into two half Quarts, or four Litrons. For Salt, four *Buſhels* make one Minot, and ſix a Septier. For Coals, eight *Buſhels* make one Minot, 16 a Mine, and 320 a Muid. For Lime, 3 *Buſhels* make a Minot, and 48 Minots a Muid.

*Du Cange* derives the Word from *Buſellus*, or *Buſtellus*, or *Biſellus*, a diminutive of *Buz*, or *Buza*, us'd in the corrupt *Latin* for the ſame thing. Others derive it from *Buſſulus*, an Urn wherein Lots are caſt.

BUSKIN, *Cothurnus*, a kind of Stocking among the Antients, in manner of a little Boot, covering the Foot and Mid-leg, and ty'd beneath the Knee; very rich and fine, and us'd principally on the Stage by the Actors in Tragedy. The *Buskin* is ſaid to have been firſt introduc'd by *Sophocles*: It was of a Quadrangular Form, and might be wore indifferently on either Leg. It was ſo thick, as by means hereof, Men of ordinary Stature might be rais'd to the Pitch and Elevation of the Heroes they perſonated: In which it was diſtinguiſh'd from the *Sock*, wore in Comedy; which was a low, popular Dreſs. *Dempſter* obſerves, that it was not Actors alone who wore the *Buskin*, but Girls likewiſe us'd 'em to raiſe their Height; Travellers and Hunters to defend themſelves from the Mire, &c. As the *Buskin* was the diſtinguiſhing Mark of Tragedy on the Stage, we find it in Claſſick Authors frequently us'd to ſignify Tragedy it ſelf.

BUST, or BUSTO, in Sculpture, &c. a Term us'd for the Figure, or Portrait of a Perſon *in Relievo*; ſhewing only the Head, Shoulders, and Stomach; the Arms being lopp'd off: ordinarily placed on a Pedeſtal, or *Conſole*. *Felibien* obſerves, that tho in Painting one may ſay a Figure appears

*in*

*in Buſto*; yet it is not properly call'd a *Buſt*, that Word being confined to things *in Relievo*. The *Buſt* is the ſame with what the *Latins* call'd *Herma*, from the Greek *Hermes*, *Mercury*; the Image of that God being frequently repreſented in this manner among the *Athenians*.

Bust, is alſo us'd, eſpecially by the *Italians*, for the Trunk of an human Body, from the Neck to the Hips. Some derive the Word from the German *Bruſt*, Stomach: *Menage* fetches it from *Buſque*, a piece of Wood, Ivory, Whalebone, or the like, which the Women apply to that Part of the Body; call'd by the *Italians Buſto* to keep themſelves ſtreight.

Bust, or Bustum, in Antiquity, a Pyramid or Pile of Wood, whereon were antiently plac'd the Bodies of the Deceas'd, in order to be burnt. The *Romans* borrow'd the Cuſtom of burning their Dead from the *Greeks*. The Deceas'd, crown'd with Flowers, and dreſs'd in his richeſt Habits, was laid on the *Buſtum*. The neareſt Relations lighted it with Torches; turning their Faces from it, to ſhew that it was with Reluctance that they did this laſt Office. After the *Buſtum* was conſum'd, the Women appointed to collect the Aſhes, enclos'd 'em in an Urn, which was depoſited in the Tomb. Some Authors ſay, it was only call'd *Buſtum* after the burning, *quaſi Bene uſtum*: before the Burning it was call'd *Pyra*; during it, *Rogus*; and afterwards *Buſtum*.

BUSTUARII, a kind of Gladiators, among the antient *Romans*, who fought about the *Buſtum*, or Pile of a deceas'd Perſon, in the Ceremony of his Obſequies. The Practice at firſt was, to ſacrifice Captives on the Tomb, or at the *Buſtum* of their Warriors: Inſtances of which we have in *Homer*, at the Obſequies of *Petroclus*, and among the *Greek* Tragedians. Their Blood was ſuppos'd to appeaſe the Infernal Gods; and render 'em propitious to the *Manes* of the Deceas'd. In after Ages, this Cuſtom appear'd too barbarous; and in lieu of theſe Victims, they appointed Gladiators to fight; whoſe Blood, 'twas ſuppos'd, might have the ſame Effect. According to *Val. Maximus* and *Florus*, *Marcus* and *Decius*, Sons of *Brutus*, were the firſt, at *Rome*, who honour'd the Funerals of their Father with theſe kind of Spectacles, in the Year of *Rome* 489. Some ſay, the *Romans* borrow'd this Cuſtom from the *Hetrurians*; and they from the *Greeks*. The Word comes from *Buſtum*, which ſee.

BUTCHERY, a Place ſet apart, either for the Slaughter of Cattel, or for the expoſing their Fleſh to ſale; otherwiſe call'd *Shambles*. *Nero* built a noble one at *Rome*; on which Occaſion was ſtruck that Medal, whoſe Reverſe is a Building ſupported by Columns, and enter'd by a Perron of four Steps; the Legend, MAC. AUG. S. C. *Macellum Auguſti Senatus-Conſulto*.

Among the antient *Romans* there were three Kinds of Eſtabliſh'd *Butchers*; *viz.* two Colleges, or Companies, compos'd each of a certain number of Citizens, whoſe Office was to furniſh the City with the neceſſary Cattel, and to take care of preparing and vending the Fleſh. One of theſe Communities, was at firſt confin'd to the providing of Hogs, whence they were call'd *Suarii*; and the other were charg'd with Cattel, eſpecially Oxen; whence they were call *Pecuarii*, or *Boarii*. Under each of theſe was a ſubordinate Claſs, whoſe Office was to kill, prepare, &c. call'd *Lanii*, and ſometimes *Carnifices*. *Briſſon*, *Modius*, and others, mention a pleaſant way of ſelling Meat, us'd for ſome Ages among this People: The Buyer was to ſhut his Eyes, and the Seller to hold up ſome of his Fingers; if the Buyer gueſs'd aright, how many it was the other held up, he was to fix the Price; if he miſtook, the Seller to fix it. This Cuſtom was aboliſh'd by *Apronius*, Prefect of *Rome*; who in lieu thereof introduc'd the Method of ſelling by Weight.

*Menage*, after *Turnebius*, derives the Word from *Buccarius*, of *Bucca*; becauſe the *Butcher* cuts Meat for the *Mouth*: Thus alſo we find, *beccarius* from *beccus*. *Lancelot* derives it from the Word βεβύτης, *Killer of Cattel*; *Labbe*, *a Bovina ſeu Bubula carne*.

BUTLERAGE *of Wines*, the Impoſition upon Sale Wine, brought into the Land; which the King's *Butler*, by virtue of his Office, may take of every Ship, *viz.* two Shillings of every Tonn imported by Strangers.

BUTMENTS, in Architecture, thoſe Supporters or Props, on, or againſt which the Feet of Arches reſt: Alſo little Places taken out of the Yard, or the Ground-plot of an Houſe, for a Buttery, Scullery, &c. are ſometimes called *Butments*. The Word comes from the French *Bouter*, to abut or terminate on any thing.

BUTT, in the Sea Language, the End of any Plank, which joins to another on the Outſide of a Ship, under Water: Hence when a Plank is looſe at one end, they call it *ſpringing a Butt*; to prevent which, Ships are uſually bolted at the *Butt-Heads*, that is, at the Plank's End.

Butt, or *Pipe of Wine*; a Meaſure containing two Hogſheads, or one hundred twenty ſix Gallons.

A *Butt* of Currants, is from fifteen to twenty two hundred Weight.

BUTTER, a fat, unctuous Subſtance, prepared, or ſeparated from Milk; which is an Aſſemblage of three different Subſtances, *Butter*, *Cheeſe*, and a *Serum*, or Whey. See Milk. The Word comes from the *Greek* βούτυρον; as ſuppoſing it prepar'd only from Cow's Milk. It was late e'er the *Greeks* appear to have had any Notion of *Butter*; *Homer*, *Theocritus*, *Euripides*, and the other Poets, make no mention of it; and yet are frequently ſpeaking of Milk and Cheeſe: And *Ariſtotle*, who has collected abundance of Curioſities relating to the other two, is perfectly ſilent on this. *Pliny* tells us, that *Butter* was a delicate Diſh among the barbarous Nations; and was that which diſtinguiſh'd the Rich from the Poor: The *Romans* us'd *Butter* no otherwiſe than as a Medicine, never as a Food. *Schookius* obſerves, that 'tis owing to the Induſtry of the *Dutch*, that there is any ſuch thing as *Butter* in the *Eaſt Indies*: that, in *Spain*, *Butter* is only us'd Medicinally, for Ulcers; and adds, that the beſt Opiate for making the Teeth white, is the rubbing 'em with *Butter*. *Cl. Alexandrinus* obſerves, that the antient Chriſtians of *Egypt* burnt *Butter* in the Lamps at their Altars, inſtead of Oil; and the *Abyſſians*, according to *Godignus*, ſtill retain a Practice much like it: *Clemens* finds a Religious Myſtery in it. In the *Roman* Churches, it was antiently allow'd, during *Chriſtmaſs* time, to uſe *Butter* inſtead of Oil; by reaſon of the great Conſumption thereof other ways. *Schookius* has a juſt Volume, *De Butyro & Averſione Caſei*; where the Origin and Phænomena of *Butter* are handled in form: He enquires whether *Butter* was known in *Abraham*'s Days, and whether it was the Diſh he entertain'd the Angels withal: He examines how it was prepar'd among the *Scythians*; whence ariſe its different Colours; teaches how to give it its natural Colour; how to churn it, ſalt it, keep it, &c.

Butter, in Chymiſtry, is us'd to expreſs ſeveral Preparations in Chymiſtry, as *Butter* of Antimony, of Arſenic, of Wax, of *Saturn*, &c. ſo call'd from their Form, Conſiſtence, &c. See Antimony, Arsenic, Wax, &c.

BUTTOCK *of a Ship*, is her full Breadth right aſtern from the Jack upwards. According as a Ship is built, broad or narrow at the Tranſom, ſhe is ſaid to have a broad or narrow *Buttock*.

BUTTONS, an Article in Dreſs, whoſe Form, and Uſe is too familiar to need a Deſcription. The Matter whereof *Buttons* are made is various; as Metal, Silk, Mohair, &c. *Metal Buttons*, again, are various; both with regard to the Matter, and Manner of making: Beſides thoſe caſt in Moulds, much in the manner of other ſmall Works, (ſee Foundery) there are now made great Quantities, with thin Plates, or Leaves of Gold, Silver, and Braſs; eſpecially of the two laſt. The Invention of theſe *Buttons* being very late, as not having been ſet on foot before the Beginning of the XVIIIth Century; and their Structure very Ingenious, tho of ill uſe, we ſhall here ſubjoin it.

*Manner of making plated* Buttons. The Metal to be us'd being reduc'd into thin Plates, or Leaves, of the Thickneſs intended, (either by the Goldſmith or Braſier) is cut into little round Pieces, of a Diameter proportionable to the wooden Mould they are to cover: This cutting is perform'd with a ſharp Punch, on a leaden Block or Table. Each piece of Metal thus cut, and taken off from the Plate, is reduc'd to the Form of a *Button*, by beating it ſucceſſively in ſeveral ſpherical Cavities, with a round Piece of Iron in form of a Punchion; ſtill beginning with the flatteſt Cavity, and proceeding to the more Spherical, till the Plate have got all the Relievo requir'd: And the better to manage ſo thin a Plate, they form 10 or 12 to the Cavities at once; and alſo boil the Metal to make it more ductile. The Inſide thus form'd, they give an Impreſſion to the Outſide, by working it with the ſame Iron Punchion, in a kind of Mould, like the Minter's Coins, engraven *en creux*, or indentedly; and faſten'd to a Block or Bench. The Cavity of this Mould, wherein the Impreſſion is to be made, is of a Diameter and Depth ſuitable to the ſort of *Button* to be ſtruck in it; each Kind requiring a particular Mould. Between the Punchion and the Plate is plac'd ſome Lead, which contributes to the better taking off all the Stroaks of the Graving; the Lead, by reaſon of its Softneſs, eaſily giving way to the Parts that have Relievo; and as eaſily inſinuating it ſelf into the Trace, or Engraving of the Dentures: The Plate thus prepared, makes the Upper-part, or Shell of the *Button*. The lower Part is form'd of another Plate, made after the ſame manner, but flatter, and without any Impreſſion. To this laſt, is ſolder'd a little Eye made of Wire of the ſame Metal; for the *Button* to be faſten'd by. The two Plates are ſolder'd together, with a wooden Mold, cover'd with Wax, or other Cement, between; in order to render the *Button* firm and ſolid: For the Wax entering all the Cavities form'd by the Relievo of the other ſide, ſuſtains it, pre-

vents

vents its flattening, and preſerves its Boſſe or Deſign. Ordinarily, indeed, they content themſelves to cover the naked Mould with the Shell; and in this Caſe, for the faſtening, paſs a Thread or Gut acroſs thro the middle of the Mould.

BUTTRESS, a kind of Butment built archwiſe; or a Maſs of Stone or Brick, ſerving to prop or ſupport the Sides of a Building, Wall, &c. on the Outſide, where it is either very high, or has any conſiderable Load to ſuſtain on the other ſide, as a Bank of Earth, &c. The Theory and Rules of *Buttreſſes*, are one of the *Deſiderata* in Architecture.

BUTTRESS, or BUTTRICE, is likewiſe a Tool, that Farriers make uſe of to pierce the Sole of an Horſe's Foot, which is overgrown; to pare the Hoof; to fit the Shoe, and to cut off the Skirts of the ſaid Sole, that overcaſt the Shoe.

BY-LAWS, or BILAWS, Orders made in Court-Leets, Court-Barons, &c. by common Conſent, for the Good of thoſe who preſcribe them; and which extend further than the Publick Law binds. In *Scotland*, they are call'd *Laws of Burlaw*, or *Birlaw*; which are made and determin'd by Conſent of Neighbours, elected by common Conſent in *Burlaw*-Courts; wherein Cognizance is taken of Complaints 'twixt Neighbour and Neighbour. The Men thus choſen are Judges or Arbitrators, and call'd *Burlaw-Men*.

# CAB

C, THE third Letter of the Alphabet; form'd, according to *Scaliger*, from the κ of the *Greeks*, by retrenching the Stem or right Line: Others derive it from the כ *Caph* of the *Hebrews*, which has, in effect, the ſame Form; allowing only for this, that the *Hebrews*, reading backwards, and the *Latins*, &c. forwards, each have turn'd the Letter their own way. However, the *c* not being the ſame as to Sound with the Hebrew *Caph*; and it being certain the *Romans* did not borrow their Letters immediately from the *Hebrews*, or other Orientals, but from the *Greeks*; the Derivation from the *Greek* Κ is the more probable. F. *Montfaucon*, in his *Palæographia*, gives us ſome Forms of the *Greek* Κ, which come very near that of our *C*; this, for Inſtance, ☾: And *Suidas* calls the *C*, the Roman *Kappa*. All Grammarians agree, that the *Romans* pronounc'd *q* like our *c*, and *c* like our *k*. F. *Mabillon* adds, that *Charles* the Great was the firſt who wrote his Name with a *C*; whereas, all his Predeceſſors of the ſame Name wrote it with a *K*: The ſame Difference is obſerv'd in their Coins.

C was a Numeral Letter among the *Romans*, ſignifying an hundred: according to the Verſe,

*Non plus quam centum* C *litera fertur habere.*

Some add, that a Daſh over it, made it ſignify an hundred thouſand; but it wou'd be hard to find an Inſtance hereof among the Antients. In proper Names, *C.* was us'd for *Caius*; as, *C. Cæſar*, &c. Their Lawyers us'd it ſingle for *Codice* and *Conſule*, &c. double, *CC*, for *Conſulibus*. *C* was alſo us'd in their Courts, as a Letter of Condemnation, and ſtood for *condemno*; in oppoſition to *A*, which ſignify'd *abſolvo*. See A.

In Muſick, a Capital *C* denotes the higheſt Part in a thorough Baſs.

CABBALA, or CABALA, or KABBALA, a Term us'd in various Senſes, which Authors generally confound. It is originally *Hebrew*, קבלה *Kabbalah*; and, properly, ſignifies *Tradition*: whence the Verb קבל *Kibbel*, to receive by Tradition, or from Father to Son; eſpecially in the *Chaldee* and *Rabbinical Hebrew*. Hence *Cabbala* is primarily uſed for a Sentiment, Opinion, or Explication of Scripture; or a Cuſtom or Practice tranſmitted from Father to Son.

As to the Origin of the *Cabbala*: The *Jews* believe, that God gave to *Moſes* on Mount *Sinai*, not only the Law, but alſo the Explication of that Law; and that *Moſes*, after his coming down, retiring to his Tent, rehears'd to *Aaron* both the one and the other. When he had done, *Aaron* ſtanding on the Right Hand, his Sons, *Eleazer* and *Ithamar*, were introduc'd to a ſecond Rehearſal: This over, the 70 Elders that compos'd the *Sanhedrim* were admitted; and laſtly the People, as many as pleas'd: To all which, *Moſes* again repeated both the Law and Explanation, as he receiv'd 'em from God. So that *Aaron* heard it four times, his Sons thrice, the Elders twice, and the People once. Now, of the two Things which *Moſes* taught 'em, the *Laws*, and the *Explanation*, only the firſt was committed to Writing; which is what we have in *Exodus*, *Leviticus*, and *Numbers*: As to the ſecond, or the Explication of thoſe Laws, they were contented to impreſs it well in their Memory, to teach it their Children; they, to theirs, &c. Hence, the firſt Part they call ſimply the *Law*, or the *Written Law*; the ſecond, the *Oral Law*, or *Cabbala*. Such is the original Notion of the *Cabbala*.

Some Rabbins, however, pretend their Fathers receiv'd the *Cabbala* from the Prophets, who receiv'd it from the Angels. R. *Abr. ben Dior* ſays expreſsly, that the Angel *Raziel* was *Adam*'s Maſter, and taught him the *Cabbala*;

# CAC

that *Japhiel* was *Shem*'s Maſter; *Tſedekiel*, *Abraham*'s; *Raphael*, *Iſaac*'s; *Peliel*, *Jacob*'s; *Gabriel*, *Joſeph*'s; *Meratron*, *Moſes*'s; *Malathiel*, *Elias*'s, &c.

Among theſe Explications of the Law, which, in reality, are little elſe but the ſeveral Interpretations and Deciſions of the Rabbins on the Laws of *Moſes*, ſome are *Myſtical*; conſiſting of odd abſtruſe Significations given to a Word, or even to the Letters whereof it is compos'd: whence, by different Combinations, they draw Meanings from Scripture, very different from thoſe it ſeems naturally to import. The Art of interpreting Scripture, after this manner, is call'd more particularly *Cabbala*: And 'tis in this laſt Senſe the Word is more ordinarily us'd among us.

This *Cabbala*, call'd alſo *Artificial Cabbala*, (to diſtinguiſh it from the firſt Kind, or ſimple Tradition) is diſtinguiſh'd into three Sorts: The firſt, call'd *Gematria*, conſiſts in the taking Letters as Figures, or Arithmetical Numbers, and in explaining each Word by the Arithmetical Value of the Letters whereof it is compos'd; which is done various ways. See GEMATRIA.

The ſecond is call'd *Notaricon*; and conſiſts either in the taking each Letter of a Word for an entire Diction; *v. g.* בראשית the firſt Word of *Geneſis*, for תכי הומזת כרקיע שרצ שמים: Or in making one entire Diction out of the Initial Letters of many; as out of theſe, גבכזר לעולכם ארני אתה: *Thou art great in Eternity, Lord*; by only taking the Initial Letters, they form the *Cabbaliſtic* Name of God, אגלא *Agla*, mention'd by *Galatine*. See NOTARICON.

The third kind, call'd *Themura*, q. d. *changing*, conſiſts in the changing and tranſpoſing the Letters of a Word; which is done various Ways: 1. By ſeparating 'em; and thus, *v. g.* from *Breſchit*, i. e. *in Principio*, they make *Bres-chit*, i. e. *poſuit Fundamentum*; juſt as in playing with Words, we ſometimes ſeparate *Sum-mus*, *Ter-minus*, *Sus-tinea-mus*. 2. By tranſpoſing the Letters, and ranging 'em in a different manner: thus, from the ſame Word *Breſchit*, they make another Signification, 1ª *in Thiſri*; and becauſe this is taken from the firſt Word in the Hiſtory of the Creation of the World, they thence conclude, the World was created on the firſt Days of the Month of *Thiſri*. 3. By taking one Letter for another, with reſpect to the different Relations they acquire, in conſidering the Alphabet different Ways: thus, by dividing the *Hebrew* Alphabet of 22 Letters, into two Parts, and taking the firſt of either of theſe for the firſt of the other, the ſecond for the ſecond, &c. by this means, of *Tabeel*, an unknown Name mention'd in *Iſaiah*, they form *Remla*, the Name of a King of *Iſrael*. Another manner of changing the Letters, is by taking the Alphabet two ways, firſt in the common way, then backwards, and changing mutually the two firſt Letters, then the two ſecond, &c. By this means, of קכוי *the Hearts of thoſe who riſe againſt me*, they make שדים *the Chaldeans*; and thence conclude, that thoſe God here ſpake of are *Chaldeans*. Theſe two laſt Kinds are alſo call'd צירוף *Aſſociation, Combination*.

The *Cabbala* hitherto ſpoke of, may be call'd *Speculative Cabbala*; in oppoſition to the following, which may be call'd *Practical Cabbala*.

CABBALA, is alſo taken for the Uſe, or rather Abuſe, which Magicians make of ſome Paſſages of Scripture. All the Words, Terms, Magic Figures, Numbers, Letters, Charms, &c. uſed in Magic, as alſo in the Hermetical Science, are compriz'd under this Species of *Cabbala*. But 'tis only the Chriſtians that call it by this Name, on account of the Reſemblance this Art bears to the Explications of the *Jewiſh Cabbala*: For the *Jews* never uſe the Word *Cabbala*

*bala* in any ſuch Senſe, but ever with the utmoſt Reſpect and Veneration. 'Tis not, however, the Magic of the *Jews* alone which we call *Cabbala*, but the Word is alſo us'd for any kind of Magic: in which Senſe it is, that the Abbe *de Villars* takes it, in his *Comte de Gabalis*; where he expoſes the ridiculous Secrets of the *Sacred Cabbala*, as the *Cabaliſts* call it. Theſe ſuppoſe there are elementary People, under the Names of *Sylphs*, *Gnomes*, *Salamanders*, &c. and hold, that this Science introduces People into the *Sanctuary of Nature*. They pretend, the *Hebrews* knew theſe aerial Subſtances; that they borrow'd their *Cabaliſtic* Knowledge from the *Egyptians*; and have not yet forgot the Art of converſing with the Inhabitants of the Air. See SYMBOL.

CABBALLA, or CABBALLISTS, is alſo us'd to expreſs that Sect among the *Jews*, which follows and practiſes the *Cabballa*; or interpret Scripture according to the Art of *Cabballa*, taken in the ſecond Senſe above laid down. The *Jews* are divided into two general Sects; the *Karaites*, who refuſe to receive either Tradition, or the Thalmud, or any thing but the pure Text of Scripture. See CARAITES. And the *Rabbiniſts* or *Thalmudiſts*; who, beſide this, receive the Traditions, and follow the *Thalmud*; ſee THALMUD. And theſe latter are again divided into two other Sects; pure *Rabbiniſts*, who explain the Scripture in its natural Senſe, by Grammar, Hiſtory, and Tradition; and *Cabbaliſts*, who to diſcover hidden myſtical Senſes, which they ſuppoſe God to have couch'd therein, make uſe of the *Cabbala*, and the myſtical Rules and Methods abovemention'd. There are Viſionaries among the *Jews*, who believe that Jeſus Chriſt wrought his Miracles by virtue of the Myſteries of the *Cabbala*. Some learned Men are of Opinion, that *Pythagoras* and *Plato* learn'd the *Cabbaliſtic* Art of the *Jews* in *Egypt*; and fancy they ſee evident Footſteps thereof in their Philoſophy: Others, on the contrary, ſay, it was the Philoſophy of *Pythagoras* and *Plato*, that firſt furniſh'd the *Jews* with the *Cabbala*. Be this as it will, 'tis certain that in the firſt Ages of the Church, moſt of the Hereticks gave into the vain Notions of the *Cabbala*: Particularly the *Gnoſtics*, *Valentinians*, and *Baſilidians*. Hence aroſe the ABPAΞAΣ, and the multitude of Taliſmans, wherewith the Cabinets of the Virtuoſi are ſtock'd. See TALISMAN, &c.

The Word *Cabballa* is not only apply'd to the whole Art; but alſo to each Operation perform'd according to the Rules of that Art. R. *Jac. ben Aſcher*, ſirnam'd *Baal Hatturim*, has compil'd moſt of the *Cabbala's* invented on the Books of *Moſes* before his Time.

CABINET, the moſt retir'd Place in the fineſt Apartment of a Building; ſet apart for Writing, Studying, or preſerving any thing very precious. A compleat Apartment conſiſts of an Hall, Antichamber, Chamber, and Cabinet; with a Gallery on one ſide. See APARTMENT. Hence a *Cabinet* of Paintings, of Curioſities, Moſaic *Cabinet*, *Cabinet* of a Garden, &c.

CABINS, or CABANES, in a Ship, are little Lodges and Apartments for the Pilots and other Officers of the Ship to lie in; very narrow, and in form of Armories or Preſſes; us'd in ſeveral Parts of the Ship, particularly the Poop and the Sides. The Word comes from the *Italian Capanna*, a little Straw Hut; and that from the *Greek* καπάνη, a Stall or Manger.

CABIRIA, or CABBIRES, were Feaſts held by the antient *Greeks* of *Lemnos* and *Thebes*, in honour of ſome *Samothracian* Deities, call'd *Cabires*. Theſe Gods, according to the Scholiaſt of *Apollonius*, were four; *Axierus*, who was *Ceres*; *Axiocerſa*, *Proſerpine*; *Axiocerſus*, *Pluto*; and *Caſinilus*, *Mercury*: The Feaſt was very antient, and prior even to the Time of *Jupiter*; who is ſaid to have reſtor'd it: It was held by Night. Children above a certain Age were here conſecrated; which Conſecration was ſuppos'd to be a Preſervative againſt all Dangers of the Sea, &c. The Ceremony of Conſecration, conſiſted in placing the initiated Youth on a Throne, the Prieſts dancing round him: The Badge of the Initiated was a Girdle or Scarf. When a Perſon had committed any Murder, the *Cabiria* gave him an Aſylum. *Meurſius* is very particular in the Proof of each of theſe Points.

CABLE, a thick long Rope, ordinarily of Hemp, ſerving to hold Ships firm at Anchor, to tow Veſſels in large Rivers, &c. The Term is ſometimes alſo apply'd to the Cordage us'd to raiſe maſſy Loads, by means of Cranes, Wheels, and other like Engines: Tho, in ſtrictneſs, *Cable* is not apply'd to Ropes of leſs than three Inches Circumference. See CORDAGE, ROPE, &c.

Every *Cable*, of whatever Thickneſs it be, is compos'd of three *Hawſers*; each Hawſer of three *Strands*; each Strand of three *Twiſts*; each Twiſt of a certain Number of *Caburns*, or Threads of Rope-Yarn, more or leſs, as the Cable is to be thicker or ſmaller.

To make a *Cable*: after forming the Strands, as in the Article of ROPEMAKING, they uſe Staves; which they firſt paſs between the Strands whereof the Hawſers are compos'd; and afterwards between the Hawſers whereof the *Cable* is compos'd: that the one and the other may turn the better, and be intertwiſted the more regularly together. And to prevent any entangling, a Weight is hung at the End of each Hawſer and Strand. The *Cable* being twiſted as much as needs, is untwiſted again three or four Turns, that the reſt may the better retain its State.

The number of Threads each kind of *Cable* is to be compos'd of, is ever proportion'd to its Length and Thickneſs; and 'tis by this Number of Threads, that its Weight and Value are aſcertain'd. A *Cable* of 3 Inches Circumference, or 1 Inch Diameter, conſiſts of 48 ordinary Threads, and weighs 192 Pounds; one of 10 Inches Circumference, of 485 Threads, and weighs 1940 Pounds; a *Cable* of 20 Inches, of 1943 Threads, and weighs 7772 Pounds.

The Seamen ſay, *The Cable is well laid*, when it is well wrought, or made. *Serve the Cable*, or *plat the Cable*, *i. e.* bind it about with Ropes, Clouts, &c. to keep it from galling in the Hawſe. *To ſplice a Cable*, is to make two Pieces faſt together, by working the ſeveral Strands of the Rope one into another. *To coil the Cable*, is to roll it up round in a Ring; of which, the ſeveral Rolls one upon another are call'd *Cable Tire*. They ſay, *Pay more Cable*, that is, let it more out from the Ship; that the Boat which carries the Anchor may the more eaſily drop it into the Sea: And ſometimes they ſay, *Pay cheap the Cable*, that is, put or hand it out apace. In the ſame Senſe they ſay alſo, *Veer more Cable*; that is, let more out. When two *Cables* are ſplic'd together, it is call'd *a Shott of a Cable*.

Every Merchant Veſſel, how ſmall ſoever, has three *Cables*, *viz.* the *Main* or *Maſter Cable*, which is that of the chief Anchor; the *Common Cable*, and the *ſmall one*. The ordinary Length of theſe *Cables*, is 110 or 120 Fathoms, or Braces. Hence, at Sea,

CABLE, or CABLE's-LENGTH, is alſo us'd for a Meaſure of 120 Fathom. See FATHOM.

The Word *Cable*, comes from the Hebrew *Chebel*, Cord. *Du Cange* derives it from the Arabic, *Habl*, Cord, or *habala*, *vincire*. *Menage*, from *Capulum*, or *Cabulum*; and that from the *Greek* καμηλ☪, or the *Latin*, *Camellus*.

CABLED-FLUTES, in Architecture, ſuch *Flutes* as are fill'd up with Pieces in form of *Cables*. See FLUTING.

CABLED, in Heraldry, is when a Croſs is form'd or cover'd with Ropes, or twiſted *Cables*. See CROSS.

CABOSSED, or CABOCHED, in Heraldry, a term originally *Spaniſh*; us'd where the Head of a Beaſt is cut off behind the Ears, by a Section parallel to the Face; or by a perpendicular Section: in contra-diſtinction to *Couping*; which is done by a horizontal Line; beſides that, 'tis farther from the Ears than *Caboſing*. See COUPING.

CACAO, or COCOA, in Natural Hiſtory and Commerce, a kind of Nut, about the Size of a moderate Almond; the Seed or Fruit of a Tree of the ſame Name, growing in ſeveral Parts of the *Weſt-Indies*; chiefly in the Provinces of *Guatimala* and *Nicaragua*, and the *Antilles* Iſlands. The native *Mexicans* call the *Cacao* Tree, *Cucuhua guahuitl*; and the *Spaniards*, *Cacaotal*. It reſembles our Cherry-Tree; but is ſo very delicate, and the Soil it grows in ſo hot, that to guard it from the Sun, they always plant it in the Shade of another Tree, call'd *Mother of Cocoa*. The Fruit is enclos'd in a kind of Pod, of the Size and Figure of a Cucumber; except that it begins and ends in a Point. Within the Pod, which is half a Finger thick, is form'd a Tiſſue of white Fibres, very ſucculent, a little acid, and proper to appeaſe Thirſt. In the middle of theſe Fibres are contain'd 10, ſometimes 12, and ſometimes more, as far as forty, Grains or Seeds, of a Violet Colour, and dry as Acorns. Each Grain, which is cover'd with a little Bark or Rind, when ſtripp'd thereof, ſeparates into five or ſix unequal Pieces, in the middle whereof is a Kernel or Pippin, having a tender Bud, very difficult to preſerve. Of this Seed, with the Addition of *Vanille*, and ſome other Ingredients, the *Spaniards*, and, after their Example, the reſt of *Europe*, prepare a Kind of Conſerve, or Cake; which, diluted in hot Water, makes that delicious, wholeſom Drink, call'd *Chocolate*: *For the Preparation*, &c. *whereof*, *ſee* CHOCOLATE.

This precious Almond, the *Spaniards* make ſo conſiderable a Trade of, that there are ſome make 5000 *l.* Sterling, *per Annum*, from a ſingle Garden of *Cacoa's*. There are two Kinds of *Cacoa's*; the moſt common, which is likewiſe the beſt, is of a dark Colour, bordering on red, and round: The other, call'd *Patlaxe*, is white, larger, thicker, and flatter; its Quality is Deſiccative. Some Druggiſts, however, ſell four Kinds; *viz.* the *great* and *little Caragua*, and the *great* and *little Cacoa of the Iſlands*: which, however, may be probably reduc'd to the two Kinds above mention'd: It being only the Greatneſs and Smallneſs that multiplies the Names and Kinds.

The *Cacao* Nuts, are eſteem'd by the *Mexicans* as Anodine; and us'd, eaten raw, to aſſuage Pains of the Bowels. They alſo procure a kind of Butter or Oil from 'em, as ſweet

ſweet as that of Almonds, and drawn in the ſame manner; excellent for Burns.

In ſome Parts of *America*, the *Cacoa* Grains are us'd by the *Indians* as Money; 12 or 14, are eſteem'd equivalent to a *Spaniſh Real*, or 6$\frac{3}{4}$ Sterling. See COINS.

CACHEXIA, or CACHEXY, in Medicine, an ill Habit or Diſpoſition of Body; wherein, the Nutrition is deprav'd throughout the whole Habit, at once: frequently leading towards a Dropſy; and accompany'd with a Swelling, or Bloating of the fleſhy Parts; a paleneſs or lividneſs of Complexion, &c. It ordinarily ariſes from a Debility, or Foulneſs of the *Ventricle* or *Viſcera*; ſometimes from an Ulcer in the Reins, in Perſons that have the Stone. The external Cauſes are unwholeſom Food, frequent Drunkenneſs, exceſſive Study, much waking, ſuppreſſion of the Menſes, immoderate Loſs of Blood, Chronic Fevers, Obſtructions, &c.

*Boerhaave* aſcribes the Diſorder, either to the vitiated State of the nutritious Juice, to ſome Diſorder of the Veſſels that are to receive it, or to the Defect of the Faculty that ſhou'd apply it. The Juice, he obſerves, may be deprav'd, either from the Quality of the Food; as if it be farinaceous, leguminous, fat, fibrous, ſharp, aqueous, or viſcous; from the want of Motion; from the Organs vitiated by too much Weakneſs, or too much Strength: And theſe, again, may be occaſion'd by immoderate Secretions and Evacuations of any kind, the Schirroſity of ſome of the Viſcera, or the Retention of ſomething that ſhould be ſecern'd: And hence, a Diminution of the Solids, or a Repletion of the Liquids with things that can't paſs: Whence two notable ill Effects of this Evil; *viz.* a Leucophlegmatia, and an Anaſarcous Dropſy. Now, according to the various Colour, Quantity, Tenacity, Acrimony, and Fluidity of the nutritious Liquor, ariſe various Diſorders, as the Effects of the *Cachexia*; *v. g.* paleneſs, yellowneſs, lividneſs, greenneſs, blackneſs, or redneſs of the Skin; heavineſs, windineſs, palpitation of the Heart and Arteries, increas'd with the leaſt Motion; crude thin Urine; ſpontaneous watry Sweats; and, at length, a Leucophlegmatia and Dropſy. For the Veſſels that receive the nutritious Juice, there can't well be aſſign'd any univerſal Fault; unleſs their too great Contractility and Laxity, and the Diſorders accruing from 'em, may be admitted as ſuch. Laſtly, Nutrition is impeded and perverted, by a Defect in the Faculty that ſhould apply it; as when the circulating Force is either too languid or too violent. The Word comes from the *Greek* καχεξια; form'd from the *Greek* κακη, *ill*, and εξις, *Diſpoſition*. The *Cachexia* is more frequently call'd *Cacochymia*, which ſee.

CACHOU, a medicinal Aromatic Drug, rank'd among the Number of Perfumes; call'd alſo *Terra Japonica*. Notwithſtanding the great uſe of *Cachou*, before that of Coffee and Tea; and its being ſtill frequently us'd by many People, eſpecially in *France*, its Nature and Origin is yet but little known; even among the ableſt Phyſicians: Some from its being call'd *Japon Earth*, rank it among the medicinal Earths, and pretend 'tis found on the Tops of Mountains, cover'd with the Roots of Cedars, whoſe Food it is: and that being waſh'd in the River, and dry'd in the Sun, 'tis form'd into a kind of Paſte; which brought into *Europe*, ſerves as the Baſis of ſeveral Paſtels, or Fucus's, call'd *Cachou*. Others, with more Probability, range it among the Gums; and maintain it to be form'd of the inſpiſſated Decoction of a Tree in the *Eaſt Indies*, call'd *Cachous*; growing chiefly in the Kingdom of *Cochinchina*. Laſtly, others, to whoſe Opinion we rather incline, take it to be a factitious Compoſition of ſeveral other Drugs; eſpecially the Juice of Areca, Extract of Liquorice, and *Calamus Aromaticus*, and the Bark of a Tree, call'd by the *Indians Catechu*; which may probably be the ſame with that above mention'd.

Be it Earth, Gum, or Compoſition, *Cachou* is of much eſteem in Medicine: Among other Effects attributed to it, 'tis ſuppos'd to ſtop a Cough, and fortify the Stomach; beſides its ſweetening and perfuming the Breath, when taken in an impalpable Pouder, mix'd with Gum Tragacanth.

CACOCHYMIA, a deprav'd Habit of Body, conſiſting in its being replete with ill Humors, from various Cauſes; ſee CACHEXIA. When the Repletion is merely with Blood, 'tis call'd a *Plethora*; ſee PLETHORA. *Gorræus* gives the Name *Cacochymia* to the Abundance and Exceſs of any ill Humor; whether it be Bile, Pituita, &c. provided there be only one that thus offends in Quantity: *Plethora* he calls the Abundance or Exceſs of all the Humors together. The Word comes from the *Greek* κακος, *ill*, and χυμος, Juice. See PLETHORA.

CACOPHONIA, or CACOPHONY, in Grammar, the meeting of two Letters, or two Syllables, that make a harſh diſagreeable Sound. The Word is ſometimes alſo us'd in Singing; it comes from the *Greek* κακος, and φωνη, Voice.

CADARIANS, a Sect of *Mahometans*, who attribute the Actions of Men to Men alone, and not to any ſecret Power determining the Will; contrary to the reſt of the *Muſſulmen*, who are ſtrict *Predeſtinarians*. The Author of this Sect, was *Maabed ben Kalid-Al Giohni*. The Word comes from the *Arabic* קדר, *Kadara*, Power. *Ben Aun* calls the *Cadarians*, the *Magi*, or *Manichees* of the *Muſſulmen*.

CADE, a Cag, Caſk, or Barrel; us'd in the *Book of Rates* for a determinate Number of ſome ſorts of Fiſh; as a *Cade* of Herrings, is a Veſſel containing the Quantity of 500 Herrings, and of Sprats 1000. See MEASURE.

CADENCE, according to the antient Muſicians, is a Series of a certain Number of Muſical Notes, in a certain Interval, which ſtrikes the Ear agreeably; and eſpecially at the Cloſe of a Song, Stanza, &c. A *Cadence* ordinarily conſiſts of three Notes. There are three Kinds of *Cadences*: The principal, or final *Cadence*; uſually conſiſting of a fourth and a fifth to make an *Octave*, as being the moſt excellent of Conſonances: The Entry, or mediate, ſometimes call'd the attendant *Cadence*; in regard the final one is always expected: and the dominant, or prevailing *Cadence*; ſo call'd, as being higher than either of the other: as the Mediate has its Name from its being in the middle, between the Dominant and Final. The modern Muſicians make *Cadence* the Relation of two Notes ſung together, as *ut* and *re*; and when the laſt of theſe Notes is follow'd with two Crotchets, the *Cadence* is ſaid to be double.

CADENCE, in the modern Muſick, may be defin'd, a certain Concluſion of a Song, or of the Parts thereof in divers Places of a Piece; which divide it, as it were, into ſo many Members or Periods. The *Cadence* is, when the Parts fall and terminate on a Chord or Note; the Ear ſeeming naturally to expect it. A *Cadence* is either perfect or imperfect: A perfect *Cadence*, is that which conſiſts in two Notes, ſung after each other, or by Degrees conjoin'd in each of the two Parts; 'tis call'd perfect, becauſe it ſatisfies the Ear better than the other. The *Cadence* is imperfect, when its laſt Meaſure is not in Octave, nor in Uniſon, but in a Sixth or Third: As when the Baſs, in lieu of deſcending a Fifth, only deſcends a Third; or when deſcending a Fifth, or, which is the ſame thing, aſcending a Fourth, it makes an Octave with the Treble, in the firſt Meaſure, and a third Major with the Second: 'Tis call'd Imperfect, becauſe the Ear does not acquieſce in this Concluſion, but expects the Continuation of the Song. The *Cadence* is ſaid to be broke, when the Baſs, in lieu of falling a Fifth, which the Ear expects, riſes a Second, either Major or Minor. Every *Cadence* is in two Meaſures: Sometimes it is ſuſpended; in which Caſe 'tis call'd a Repoſe, and only conſiſts of one Meaſure: as when the two Parts ſtop at the Fifth, without finiſhing the *Cadence*.

M. *Rouſſeau* diſtinguiſhes two Kinds of *Cadence*, with regard to the Baſs Viol: A *Cadence* with, and without a Reſt. The *Cadence* with a Reſt, is when the Finger that ſhould ſhake the *Cadence*, ſtops a little before it ſhakes, on the Note immediately above that which requires the *Cadence*: The *Cadence* without a Reſt, is when that ſtop is omitted. There are alſo ſimple *Cadences*, and double ones; the Double ones are various: The more Double are thoſe made on a long Note; the leſs Double, thoſe on a Short Note. The final *Cadence*, ſhould always be preceded by a double one. The *Cadences* are always to be accommodated to the Character of the Air. The Word comes from *Cadencia*, fall; a *Cadence* being the Fall or Concluſion of a piece of Harmony; proper to terminate either the Whole, or a Part. Some Muſicians call a *Shake* a *Cadence*; but that is to confound Terms. From this Muſical *Cadence* ariſes,

CADENCES, in Singing, are the ſame with Points and Virgula's in Diſcourſe. The Singing-Maſters ſay, the *Cadence* is a Gift of a Maſter, proper for making the Shakes delicate. When the Voice is harſh, the two Notes whereof the *Cadence* conſiſts, muſt be ſtruck in the Throat, the one after the other; as alſo on the Harpſicol, in ſtriking the two Fingers on the two Stops that make the Shake.

CADENCE *in Dancing*, when the Steps follow the Notes and Meaſures of the Muſic.

CADENCE, in the Manage, the equal Meaſure and Time a Horſe is to keep in his Motions, Airs, &c.

CADENCE, in Oratory, when the Sounds end agreeable to the Ear.

CADENCE, in Poetry, a certain Meaſure of Verſe, varying as the Kinds of Verſe vary; differing, *v. g.* in Sapphics, from what it is in Heroics or Iambics. See METRE, QUANTITY, &c.

CADETS, the younger Brothers of a Family: a Term naturaliz'd in our Language from the *French*. At *Paris*, among the Citizens, the *Cadets* have an equal Portion with the Eldeſt: In other Places, the Eldeſt has all. According to the Cuſtom of *Spain*, one of the *Cadets*, in great Families, takes the Mother's Name. See BROTHER.

CADETS, are alſo a kind of young Volunteers, who enter into the Army without being put on the Liſt, or receiving Pay; only to learn the Art of War, and fit themſelves for Employments. Formerly there were only allow'd two

*Cadets* in each Company. In 1682, the King of *France* eſtabliſh'd Companies of *Cadets*, wherein the young Gentry were train'd up to War.

CADI, or KADHI, a Name given to the Judges of Civil Cauſes, among the *Turks* and *Saracens*. The Term, however, is ordinarily reſtrain'd to the Judges of Cities; thoſe in Provinces being call'd *Mollas*.

CADIL ESCHER, or CADILESCHER, a Chief Juſtice among the *Turks*. Each *Cadileſcher* has his particular Diſtrict: *Ricaut* makes but three in the Empire; that of *Europe*, *Natolia*, and *Cairo*. The Word comes from the Arabic *Kadi*, Judge; the Particle *Al*; and *Aſchar*, Army; as being at their firſt Inſtitution, Judges of the Soldiery.

CADIZADELITES, a Sect among the *Muſſulmen*. The *Cadizadelites* are a kind of *Stoic Mahometans*, who avoid all Feaſting and Diverſion, and affect an uncommon Gravity in all they do or ſay: Thoſe of 'em who inhabit the Frontiers of *Hungary*, &c. agree in many Things with the Chriſtians; and drink Wine, even in the Faſt of *Ramazan*. They read the *Sclavonic* Tranſlation of the Bible, as well as the Alcoran. *Mahomet*, according to them, is the H. S. who deſcended on the Apoſtles in the Day of Pentecoſt.

CADMIA, in Pharmacy, a Mineral, whereof there are two Kinds, *viz. Natural* and *Artificial*: the *Natural Cadmia*, again, is of two Kinds; the one containing Metallic Parts, and call'd *Cobalt*; which ſee: The other containing none, call'd *Calamine*, or *Lapis Calaminaris*; which ſee. The *Artificial Cadmia* is prepar'd from Copper, in Furnaces; of this there are five Kinds; the firſt call'd *Botrytis*, as being in form of a Bunch of Grapes; the ſecond, *Oſtracitis*, as reſembling a Sea-ſhell; the third, *Placitis*, becauſe reſembling a Cruſt; the fourth, *Capnitis*; and the fifth, *Calamitis*, which hangs round certain Iron Rods, wherewith the Matter of the Copper is ſtirr'd in the Furnace; which being ſhaken off, bears the Figure of a Quill, call'd in Latin, *Calamus*. The *Cadmia Botrytis* is found in the Middle of the Furnace; the *Oſtrytis* at the Bottom; the *Placitis* at the Top; and the *Capnitis* at the Mouth of the Furnace.

*Cadmia* is deſiccative and deterſive, us'd in moiſt ſtinking Ulcers; which by means hereof are brought to *cicatrize*. The *Botrytis* and *Placitis*, are alſo very good in Diſeaſes of the Eyes.

CADRITES, a kind of Religious among the *Mahometans*. Their Founder was *Abdul Cadri*, a great Philoſopher and Lawyer; whence they fetch their Name, *Cadrites*. They live in Common, and in a kind of Monaſteries; which, however, they are allow'd to quit, if they requeſt it, and to marry; on condition of their wearing black Buttons on their Garments, to diſtinguiſh 'em from the reſt of the People. In their Monaſteries, each *Friday*, they paſs the greateſt Part of the Night in running round, holding each others Hand, and crying inceſſantly *Hhai*, *living*, one of the Names of God: One of their Number plays all the Time on a Flute, to animate 'em in this extravagant Dance.

CADUCEUS, *Mercury*'s Rod; or a Wand, twiſted with two Serpents. The Poets attribute wondrous Virtues to the *Caduceus*; as that of throwing People into a Sleep, raiſing the Dead, *&c.* It was alſo us'd by the Antients as a Symbol of Peace and Concord: Thus, we read, the *Romans* ſent the *Carthaginians* a *Javelin* and a *Caduceus*, offering 'em their Choice, whether of War or Peace. The Word is deriv'd *a Cadendo*, becauſe it *laid* Contentions and Wars. Among the *Romans*, thoſe who denounc'd War were call'd *Feciales*; and thoſe who went to demand Peace, *Caduceatores*; becauſe they bore a *Caduceus* in their Hand. The *Caduceus* found on Medals, is a common Symbol, ſignifying good Conduct, Peace, and Proſperity. The Rod expreſſes Power, the two Serpents Prudence, and the two Wings Diligence.

CADUCUS MORBUS, in Medicine; ſee EPILEPSY.

CÆCUM, or rather COECUM, *Inteſtinum*, or *Blind-Gut*, is the firſt of the great Guts. It is four or five Fingers breadth long, and about the Bigneſs of a Swan's Quill; call'd *Cæcum*, becauſe only open at one end, where it is ty'd to the Beginning of the Colon, as an Appendage thereto; ſo that the Excrements come and go out at the ſame Orifice. Its other End is not tied to the Meſentery, but to the right Kidney, by means of the *Peritonæum*. The true uſe of this Part is not yet determin'd. Some account it as a ſecond Stomach; wherein the Food, after having detach'd all its Chyle thro the Lacteals, undergoes a further Digeſtion, ſo as to part with more Chyle through the Lacteals below it. Dr. *Liſter* aſſigns the uſe of the *Cæcum* to be, to keep the Excrements which paſs into its Cavity, (as moſt of thoſe of ſound Animals he thinks do) till they are ſufficiently drain'd, bak'd, and harden'd, to receive the Figure to be given 'em by the *Colon* and *Rectum*. He adds, to confirm this, that wherever there are elegantly figur'd Excrements of the firſt kind, there is a capacious *Cæcum*; and *vice verſa*. This indeed is true, that ſome Animals, which are naturally looſe, have either no *Cæcum* at all, or very little; as the *Talpa*, *Echinus Terreſtris*, *Gula*, &c. Nature's End, in thus providing for the Figuration of the Excrements, he takes to be, firſt, to prevent Diarrheas; ſecondly, to abide Hunger the better; (thus it is that Snails, in Winter, reſt with full Inteſtines:) Laſtly, to heighten the Digeſtion and Fermentation in the Stomach and ſmall Guts.

Dr. *Muſgrave* gives us an Account, in the *Philoſophical Tranſactions*, of the *Cæcum* of a Dog being cut out, without any Prejudice to the Animal. M. *Giles* gives us another, of the *Cæcum* of a Lady being diſtended ſo as to form a Tumor, that held almoſt three Chopines of a thin, greyiſh, almoſt liquid Subſtance, whereof ſhe dy'd. And Mr. *Knowles*, a third, of a Boy's *Cæcum* being vaſtly extended and ſtuff'd with Cherry-ſtones, which likewiſe prov'd Mortal.

Some ſay, the Name, *Cæcum*, is miſtaken; not allowing this to be the *Cæcum* of the Antients, which they imagine to be the thick globous Part, of the *Colon*, immediately appended to the *Ileum*; and therefore give this Part the Name of *Appendicula Vermiformis*. See INTESTINES.

CAG, or KEG, is a Barrel, or Veſſel, containing from four to five Gallons. See MEASURE.

CAIMACAM, *Lieutenant*, a Dignity in the *Ottoman* Empire. There are ordinarily three *Caimacams*; one conſtantly attending the Grand Signior, another the Grand Vizier, and a third reſiding conſtantly at *Conſtantinople*, in quality of Governor; who examines Affairs of Policy, and regulates 'em in great meaſure. The *Caimacam* that attends the Vizier, only officiates when at a diſtance from the Grand Signior; his Function ceaſing, when the Vizier is with the Sultan. The *Caimacam* of the Vizier is his Secretary of State, and the firſt Miniſter of his Council. The Word is compos'd of the two *Arabic* Words, *Caim machum*, he who holds the Place, or diſcharges the Function of another.

CAINITES, or CAINIANS, a Sect of antient Hereticks, ſo call'd from *Cain*; whom they eſteem'd as their Father. The *Cainites* were a Branch of the *Gnoſtics*: They held, that *Cain* and *Eſau*, *Lot*, and thoſe of *Sodom*, were born of a moſt eminent Celeſtial Virtue; that *Abel*, on the contrary, was born of a Virtue much leſs eminent: To *Cain*, and others of the ſame Order, who, according to them, had a mighty Knowledge of all Things, they aſſociated *Judas*; whom they held in ſo much eſteem, that they had a Book among 'em call'd the Goſpel of *Judas*. S. *Epiphanius* relates, and at the ſame time refutes their Errors.

CALAMINARIS LAPIS, *Calamine Stone*, *Calamite*, or *Cadmia*, a kind of foſſile bituminous Earth, of ſome uſe in Medicine, but of more in Foundery; being us'd to dye Copper yellow, *i. e.* to convert it into Braſs. It is either of a greyiſh Colour, as that of *Germany* and *England*; or reddiſh, as that about *Liege*, and in ſome Parts of *France*; accounted the beſt, becauſe yellow by Calcination. It is dug out of Mines, uſually in ſmall Pieces; having always Eyes, ſometimes Veins, of Lead uſually; tho not always found in Lead-Mines. We have Mines of *Calamine* at *Wrington* in *Somerſetſhire*. It is generally dug in barren rocky Ground; its Courſes running, uſually, at 6 a-Clock, as they call it, *i. e.* from Eaſt to Weſt; ſometimes at 9, and ſometimes at 12; or perpendicular, which is accounted the beſt. When dug, it is waſh'd, or *buddled*, as they call it, in a running Water, which carries off the impure and earthy Parts; leaving the Lead, *Calamine*, and other ſparry Parts at bottom: They then put it in a Sieve, and ſhaking it well in Water, the Lead mix'd with it ſinks to the bottom, the ſparry Parts get to the top, and the *Calamine* lies in the middle: Thus prepar'd, they bake it in an Oven four or five Hours; the Flame being ſo contriv'd as to paſs over, and ſo to heat and bake the *Calamine*; ſtirring and turning it all the while with Iron Rakes. This done, they beat it to Pouder; picking out of it what Stones they find; and thus it is fit for uſe. For the manner of applying it in the Preparation of Braſs. See BRASS.

Beſides the two *Natural Calamines*, there are *Artificial* ones: The beſt is that call'd *Pompholix*; which ſee.

*Calamine* is of ſome medicinal Virtue, being aſtringent, deſiccative, and deterſive; much us'd for taking off Films from the Eyes of Horſes, *&c.*

CALAMITA, in Pharmacy, a Term ſometimes us'd for *Styrax*, becauſe frequently put up in Quills. See STYRAX.

CALAMITES. See CADMIA, and CALAMINARIS.

CALAMUS *Aromaticus*, call'd alſo *Calamus Verus*, and *Calamus Amarus*, and *Acorus*; a kind of Ruſh, of the Thickneſs of a Gooſe's Quill, two or three Foot high, growing in the *Levant*. Its chief, and almoſt only uſe, is for Treacle: It muſt be choſen grey-whitiſh without, and reddiſh within; its Pulp white, and its Taſte inſupportably bitter.

CALAMUS *Scriptorius*, in Anatomy, is a Dilatation of the fourth Ventricle of the Brain; ſo called from its Figure, which reſembles that of a Quill.

CALATRAVA, a Military Order, inſtituted in 1158, by *Sancho* III. King of *Caſtile*, on the following Occaſion: The *Moors* going to attack the little City *Calatrava*, and the Templers, who held it, ſurrendering it up to the King, on a Suſpicion of their Inability to defend it, *Diego Velaſquez*, a *Ciſtercian* Monk, but a Man of Quality, perſuaded *Raimond* Abbat of *Fitera*, a Monaſtery of *Ciſtercians*, to beg *Calatrava* of the King. He obtain'd it; and *Raimond* and *Diego* put themſelves in it; being follow'd by a great number of People, who join'd 'em out of Zeal, for the Defence of *Calatrava*. The *Moors* abandoning the Enterprize, many of thoſe who came to the Defence of the City, enter'd the Order of the *Ciſtercians*; and that under a Habit more fit for Military than Monaſtic Exerciſes. Accordingly, they began to make Excurſions on the *Moors*; which was the Riſe of the Order of *Calatrava*. The firſt Grand Maſter was *Garcias*; under whoſe Government the Order was confirm'd by *Alexander* III. in 1164. In 1489, *Ferdinand* and *Iſabella*, with the Conſent of Pope *Innocent* VIII. remitted the Grand-Maſterſhip of *Calatrava* to the *Spaniſh* Crown: So that the Kings of *Spain* are now become perpetual Adminiſtrators thereof. The Knights bear a Croſs Gules, fleurdeliz'd with Green, *&c.* Their Rule and Habit was originally that of the *Ciſtercians*; but their Dreſs was a little ſhorten'd on account of their Exerciſes; and in proceſs of Time they were permitted a ſecular Habit.

CALCANEUS, in Anatomy, the ſame as *Os Calcis*, or the *Heel-Bone*: It lies under the *Aſtragalus*, to which it is articulated by *Ginglimus*; behind it is a large Protuberance, which makes the Heel, and into which the *Tendo Achillis* is inſerted.

CALCANTHUM, is Vitriol Rubify'd. Some maintain *Calcanthum* and *Colcothar* to be the ſame Thing: but *Pomet* is of another Sentiment, and takes *Calcanthum* to be nothing elſe but Vitriol. See VITRIOL, and CHALCITIS.

CALCINATION, the Action of *calcining* any Matter; *i. e.* of reducing it into a *Calx*, or a very ſubtile Pouder, or even only into Aſhes, by Fire; ſometimes alſo termed *Chymical Pulveriſation*. *Calcination* is the next degree of the Power of Fire beyond that of *Fuſion*: For when Fuſion is longer continu'd, not only the more ſubtile Particles of the Body it ſelf fly off, but the Particles of Fire likewiſe do inſinuate themſelves in ſuch Multitude, and are ſo diſperſed and blended throughout its whole Subſtance, that the Fluidity which was firſt caus'd by the Fire, can no longer ſubſiſt: From this Union ariſes a third kind of Body, which being very porous and brittle, is eaſily reduc'd to Pouder. For the Fire having penetrated every where into the Pores of the Body, the Particles are both hinder'd from mutual contact, and divided into minute Atoms; ſo that they are eaſily reducible into the fineſt Pouder.

Chymiſts, Goldſmiths, and Founders, diſtinguiſh two Kinds of *Calcination*; the one call'd *Actual*, the other *Potential*. Actual *Calcination*, is that effected by actual Fire, of Wood, Coals, or other Fuel, rais'd to a certain Heat, according to the Nature of the Subſtance to be *calcin'd*. Potential *Calcination*, is that procur'd by potential Fire, *viz.* by Waters, Drugs, *&c.* which have, as it were, the Force of Fire; as Strong Waters, Corroſive Spirits, *&c.* Gold is *calcin'd* in the Fire of a Reverberatory, with Mercury, and Sal Ammoniac. See GOLD. Silver with common Salt and Alkali Salt. See SILVER. Copper with Salt and Sulphur; Iron with Sal Ammoniac and Vinegar; Tin with Antimony, Lead and Sulphur; Mercury with Aqua fortis: This laſt, alſo, with moſt other Minerals, *calcines* with Fire alone, without any other Ingredient.

CALCINATION *Philoſophical*, is when Horns, Hoofs, *&c.* are hung over boiling Water, or other Liquor, till they have loſt their Mucilage, and are eaſily reducible into Pouder.

CALCULATION, the Act of computing ſeveral Sums, by adding, ſubtracting, multiplying, or dividing. See ARITHMETIC. An Error in *Calculation* is never protected or ſecur'd by any Sentence, Decree, *&c.* In ſtating Accompts there is always underſtood, *ſalvo errore calculi*. The Word *Calculus* is us'd in this Senſe, in alluſion to the Practice of the Antients, who us'd *Calculi*, or little Stones, in making Computations, in taking Suffrages, and in keeping Accompts, *&c.* as we now uſe Counters, Figures, *&c.*

CALCULATION is particularly us'd to ſignify the Computations in Aſtronomy and Geometry; for making Tables of Logarithms, Eclipſes, Ephemerides, *&c.* See ECLIPSE, *&c.*

CALCULATION *of Clock and Watch-Work*. See CLOCK and WATCH-WORK.

CALCULUS, in Medicine, the Diſeaſe of the Stone in the Bladder, or Kidneys; See STONE, LITHOTOMY, *&c.* In the Bladder 'tis uſually call'd *Lithiaſis*; and in the Kidneys *Nephritis*; which ſee. The Term is pure *Latin*, and ſignifies, literally, a little Pebble, or Flint. Whence alſo, the Term *Calculation*. See CALCULATION.

CALCULUS, or *Methodus Differentialis*, in Mathematicks, is a Method of differencing Quantities; or of finding an infinitely ſmall Quantity, which being taken infinite times, ſhall be equal to a given Quantity: or, as others define it, the Arithmetic of infinitely ſmall Differences between variable Quantities.

The Foundation, then, of this *Calculus*, is an infinitely ſmall Quantity, or an Infiniteſimal, which is a Portion of a Quantity, incomparable to that Quantity; or that is leſs than any aſſignable one, and therefore accounted as nothing: the Error accruing by omitting it being leſs than any aſſignable one, *i. e.* leſs than nothing. Hence two Quantities, only differing by an Infiniteſimal, are equal. The better to conceive the Nature of an Infiniteſimal, ſuppoſe, that in meaſuring the Height of a Mountain, while you are looking thro the Sights, the Wind blows off the ſmalleſt Grain of Duſt; the Height of the Mountain is, then, leſs by the Diameter of the Duſt than before: But as the Mountain is ſtill found the ſame Height, whether the Duſt be there or not, its Diameter has nothing to do in the preſent Caſe, and paſſes for nothing, *i. e.* is infinitely ſmall. Thus, in Aſtronomy, the Diameter of the Earth is an Infiniteſimal, in reſpect of the Diſtance of the Fix'd Stars: And the ſame holds in abſtract Quantities. The Name *Infiniteſimal*, therefore, is merely reſpective, and involves a Relation to another Quantity; not any real *Ens* or Being.

Now Infiniteſimals are call'd *Differentials*, or differential Quantities, when they are conſider'd as the Differences of two Quantities. Sir *Iſaac Newton* calls 'em *Fluxions*; conſidering them as the momentary Increments of Quantities; *v. g.* of a Line generated by the Flux of a Point; or of a Surface by the Flux of a Line, *&c.* The *differential Calculus*, therefore, and the Doctrine of *Fluxions* are the ſame thing under different Names: The former, given by M. *Leibnitz*, and the latter by Sir *Iſaac Newton*; each of whom lay claim to the Diſcovery. See FLUXIONS. There is, indeed, a Difference in the manner of expreſſing the Quantities, reſulting from the different Views wherein the two Authors conſider the Infiniteſimals; the one as Increments, the other as Differences: *Leibnitz*, and moſt Foreigners, expreſs the Differentials of Quantities by the ſame Letter as variable ones, only prefixing the Letter $d$; thus the Differential of $x$ is call'd $dx$; and that of $y$, $dy$: Now $dx$ is a poſitive Quantity, if $x$ continually increaſe; negative if it decreaſe.

The *Engliſh*, with Sir *Iſaac Newton*, inſtead of $dx$, write $\dot{x}$ (with a Dot over it) for $dy$, $\dot{y}$, &c. which Foreigners object againſt, on account of that Confuſion of Points, which they imagine ariſes, when Differentials are again differenc'd; beſides, that the Printers are more apt to overlook a Point than a Letter.

Stable Quantities being always expreſs'd by the firſt Letters of the Alphabet $da = o$, $db = o$, $dc = o$; wherefore $d(x + y - a) = dx + dy$, and $d(x - y + a) dx - dy$. So that the Differencing of Quantities is eaſily perform'd, by the Addition or Subtraction of their Compounds.

*To difference Quantities that mutually multiply each other*; The Rule is, firſt, Multiply the Differential of one Factor into the other Factor, the Sum of the two Factors is the Differential ſought: thus, the Quantities being $xy$, the Differential will be $x dy + y dx$, i. e. $d(xy) = x dy + y dx$. Secondly, if there be three Quantities mutually multiplying each other, the Factum of the two muſt then be multiply'd into the Differential of the third: thus, ſuppoſe $vxy$, let $vx = t$, then $vxy = ty$; conſequently $d(vxy) = tdy + ydt$: But $dt = vdx + xdv$. Theſe Values, therefore, being ſubſtituted in the antecedent Differential, $tdy + ydt$, the Reſult is $d(vxy) = vxdy + vydx + xydv$. Hence 'tis eaſy to apprehend how to proceed, where the Quantities are more than three.

If one variable Quantity increaſe, while the other $y$ decreaſes, 'tis evident $y dx - x dy$ will be the Differential of $xy$.

*To difference Quantities that mutually divide each other*: The Rule is, firſt, multiply the Differential of the Diviſor into the Dividend, and, on the contrary, the Differential of the Dividend into the Diviſor; ſubtract the laſt Product from the firſt, and divide the Remainder by the Square of the Diviſor; the Quotient is the Differential of the Quantities mutually dividing each other. See FLUXION.

CALCULUS *Exponentialis*, is a Method of differencing exponential Quantities, and ſumming up the Differentials or Fluxions of *Exponentials*. By *exponential Quantity*, is here underſtood a Power, whoſe Exponent is variable; *v. g.* $x^x$ $a^x$.

*To difference an exponential Quantity*: There is nothing requir'd but to reduce the exponential Quantities to Logarithmic ones; which done, the differencing is manag'd as in Logarithmic Quantities: Thus, ſuppoſe the Differential of the Exponential Quantity $xy$ requir'd, let

$$x^y = 3$$

Then will $y\,lx = l\,3$

$$l\,x\,y\,dx : x = d\,3 : 3$$

$$3\,l\,x\,dy + 3\,y\,dx : x = d\,3$$

$$y - 1$$

That is, $x^y\,l\,x\,dy + y\,x\,dx = d\,3$. See EXPONENTIAL.

CALCULUS *Integralis*, is a Method of integrating, or ſumming up Fluxions or Differential Quantities; *i. e.* from a Differential Quantity given, of finding the Quantity from whoſe differencing the given Differential reſults. The *Integral Calculus* therefore, is the Inverſe of the Differential one: whence the *Engliſh*, who uſually call *Differentials*, *Fluxions*, give this *Calculus*, which aſcends from the Fluxions, to the flowing or variable Quantities; or, as Foreigners expreſs it, from the Differences to the Sums; by the Name of the *Inverſe Method of Fluxions*. See FLUXIONS. Hence, the Integration is known to be juſtly perform'd, if the Quantity found according to the Rules of the *Differential Calculus*, being differenc'd, produce that propos'd to be ſumm'd. See SUMMATORY *Calculus*.

Suppoſe $\int$ the Sign of the Sum, or Integral Quantity; then $\int y\,dx$ will denote the Sum, or Integral of the Differential $y\,dx$.

*To integrate, or ſum up a Differential Quantity.* 'Tis demonſtrated, firſt, that $\int dx = x$: ſecondly, $\int (dx + dy) = x + y$; thirdly, $\int (x\,dy + y\,dx) = x\,y$; fourthly, $\int (m\,x^{m-1}\,dx) = x^m$; fifthly, $\int (n : m)\,x^{(n-m)} : m\,dx = x^n : m$; ſixthly, $\int (y\,dx - x\,dy) : y^2 = x.y$. Of theſe the fourth and fifth Caſes are the moſt frequent; wherein the differential Quantity is integrated, by adding a variable Unity to the Exponent, and dividing the Sum by the new Exponent multiply'd into the Differential of the Root; *v. g.* in the fourth Caſe, by $m - 1 + 1)\,dx$, i. e. by $m\,dx$.

If the Differential Quantity to be integrated, don't come under any of theſe Formula's, it muſt either be reduc'd to an integrable Finite; or an infinite Series, each of whoſe Terms may be ſumm'd.

It may be here obſerv'd, that, as in the Analyſis of Finites, any Quantity may be rais'd to any degree of Power; but, *vice verſa*, the Root can't be extracted out of any requir'd: So in the Analyſis of Infinites, any variable or flowing Quantity may be differenc'd; but, *vice verſa*, any Differential can't be integrated. And as in the Analyſis of Finites, we are not yet arriv'd at a Method of extracting the Roots of all Equations; ſo neither has the *Integral Calculus* arriv'd at its Perfection: And as in the former we are oblig'd to have recourſe to Approximation; ſo in the latter we have recourſe to infinite Series, where we can't attain to a perfect Integration.

CALCULUS *Literalis*, or *Literal Calculus*, is the ſame with *Specious Arithmetic*; ſo call'd, from its uſing the Letters of the Alphabet, in contra-diſtinction to *Numeral Arithmetic*, which uſes Figures. In the Literal *Calculus*, given Quantities are expreſs'd by the firſt Letters, *a b c d*; and Quantities ſought by the laſt *z y x*, &c. Equal Quantities are denoted by the ſame Letters.

CALCULUS *Situs*, is a new kind of *Calculus*, propos'd by M. *Leibnitz*, built on the Conſideration of the Situation of Quantities; not of their Magnitudes, as in the reſt. This *Calculus* he makes the Foundation of a new Analyſis, which he calls *Analyſis Situs*.

CALEFACTION, a School Term for the Action of Fire in heating a Body: 'tis us'd particularly in Philoſophy and Pharmacy; where *Calefaction* is diſtinguiſh'd from *Coction*; the firſt being apply'd, where the thing is only heated without boiling. See COCTION.

CALENDAR, a Diſtribution of Time, accommodated to the Uſes of Life; or a Table, or Almanack, containing the Order of Days, Weeks, Months, Feaſts, &c. happening throughout the Year. See TIME, YEAR, MONTH, FEAST, &c.

The *Roman Calendar*, which continues ſtill in uſe, owes its Origin to *Romulus*; but has undergone various Reformations ſince his Time. That Legiſlator diſtributed Time into ſeveral Periods, for the uſe of the People under his Command: But as he was much better vers'd in Matters of War than of Aſtronomy, he only divided the Year into ten Months; making it begin in the Spring, on the firſt of *March*: imagining, the Sun made his Courſe thro all the Seaſons in 304 Days. His *Calendar* was reform'd by *Numa*, who added two more Months, *January* and *February*, placing 'em before *March*: So that his Year conſiſted of 355 Days, and begun on the firſt of *January*. He choſe, however, in Imitation of the *Greeks*, to make an Intercalation of 45 Days, which he divided into two; intercalating a Month of 22 Days at the end of each two Years; and at the end of each two Years more, another Month of 23 Days: which Month, thus interpos'd, he call'd *Mercedonius*, or the intercalary *February*. But theſe Intercalations being ill obſerv'd by the Pontiffs, to whom *Numa* committed 'em, occaſion'd great Diſorders in the Conſtitution of the Year; which *Cæſar*, as Sovereign Pontiff, endeavour'd to remedy: To this End he made choice of *Soſigenes*, a celebrated Aſtronomer of thoſe Times; who found, that the Diſpenſation of Time in the *Calendar*, could never be ſettled on any ſure footing, without having regard to the annual Courſe of the Sun. Accordingly, as the Sun's yearly Courſe is perform'd in 365 Days ſix Hours, he reduc'd the Year to an equal number of Days: The Year of this Correction of the *Calendar*, was a Year of Confuſion; they being oblig'd, in order to ſwallow up the 65 Days that had been imprudently added, and which occaſion'd the Confuſion, to add two Months beſides the *Mercedonius*, which chanc'd to fall out that Year; ſo that it conſiſted of 15 Months, or 445 Days. This Reformation was made in the Year of *Rome* 708; 42 or 43 Years before Chriſt.

The *Roman*, call'd alſo the *Julian Calendar*, from its Reformer *Julius*, is diſpos'd into Quadriennial Periods; whereof the three firſt Years, which he call'd *Communes*, conſiſt of 365 Days; and the fourth, *Biſſextile*, of 366; by reaſon of the ſix Hours, which in four Years make a Day, or ſomewhat leſs: for in 134 Years, an Intercalary Day is to be retrench'd. On this account it was, that Pope *Gregory* XIII. with the Advice of *Clavius* and *Ciaconius*, appointed that the hundredth Year of each Century ſhould have no *Biſſextile*, excepting each IVth Century: that is, a Subtraction is made of three Biſſextile Days in the Space of four Centuries; by reaſon of the 11 Minutes wanting in the ſix Hours whereof the Biſſextile conſiſts. See BISSEXTILE.

This Reformation of the *Gregorian Calendar*, or the *New Stile*, as we call it, commenc'd on the 4th of *October*, 1582, when ten Days were thrown out at once; ſo many having crept into the Computation ſince the Time of the Council of *Nice*, in 325; by the Defect of 11 Minutes.

*Julian Chriſtian* CALENDAR, is that wherein the Days of the Week are determin'd by the Letters A, B, C, D, E, F, G; by means of the Solar Cycle, and the New and Full Moons, eſpecially the Paſchal Full Moon, with the Feaſt of Eaſter, and the other Moveable Feaſts depending thereon; by means of Golden Numbers, rightly diſpos'd thro the *Julian* Year. See GOLDEN *Number*.

In this *Calendar*, the Autumnal Equinox is ſuppos'd to be fix'd to the 21ſt Day of *March*; (ſee EQUINOX:) and the Cycle of 19 Years, or the Golden Numbers, conſtantly to indicate the Places of the New and Full Moons: yet both are erroneous. See CYCLE. And hence aroſe a very great Irregularity in the Time of Eaſter; See EASTER. To ſhew this Error the more apparently, let us apply it to the preſent Year: In this Year, then, the Vernal Equinox falls on the 10th of *March*; and therefore comes too early by 11 Days. The Paſchal Full Moon falls on the 7th of *April*; and therefore too late, with regard to the Cycle, by three Days: *Eaſter*, therefore, which ſhould be on the 10th of *April*, will be on the 17th. The Error, here, lies only in the poſt-Poſition of the Moon, thro the Defect of the Lunar Cycle. If the Full Moon had fell on the 11th of *March*, *Eaſter* wou'd have fallen on the 13th of *March*: and therefore the Error ariſing from the Anticipation of the Equinox, would have exceedingly augmented that ariſing from the poſt-Poſition.

Theſe Errors, in Courſe of Time, were ſo multiply'd, that the *Calendar* no longer exhibited any regular *Eaſter*. Pope *Gregory* XIII. therefore, by the Advice of *Aloyſius Lilius*, in 1582, threw 10 Days out of the Month of *October*, to reſtore the Equinox to its Place, *viz.* the 21ſt of *March*; and thus introduc'd the Form of the *Gregorian* Year, with ſuch a Proviſion, as that the Equinox ſhould be conſtantly kept to the 21ſt of *March*. The New Moons and Full Moons, by Advice of the ſame *Lilius*, were not to be indicated by Golden Numbers, but by Epacts. See EPACT. The *Calendar*, however, is ſtill retain'd in *England*, and the other Proteſtant States of the North; without this *Correction*.

*Gregorian* CALENDAR, is that, which by means of Epacts rightly diſpos'd thro the ſeveral Months, determines the New and Full Moons, and the Time of *Eaſter*; with the Moveable Feaſts depending thereon, in the *Gregorian* Year. The *Gregorian Calendar* therefore differs from the *Julian*, both in the Form of the Year, (ſee YEAR;) and in that Epacts are ſubſtituted in lieu of Golden Numbers: For the Uſe and Diſpoſition whereof, ſee EPACT.

Tho the *Gregorian Calendar* be preferable to the *Julian*, yet is it not without its Defects: (perhaps, as *Tycho Brahe* and *Caſſini* imagine, 'tis impoſſible ever to bring the thing to a perfect Juſtneſs.) For, firſt, the *Gregorian* Intercalation does not hinder, but that the Equinox ſometimes lags behind the 21ſt of *March*, as far as the 23d, and ſometimes anticipates it, falling on the 19th: And the Full Moon, which falls on the 20th of *March*, is ſometimes the Paſchal;

Paſchal; yet not ſo accounted by the *Gregorians*. On the other hand, the *Gregorians* account the Full Moon of the 22d of *March*, the Paſchal; which yet, falling before the Equinox, is not Paſchal. In the firſt Caſe therefore, *Eaſter* is celebrated in an Irregular Month; in the latter, there are two *Eaſters* in the ſame Eccleſiaſtical Year. In like manner, the Cyclical Computation is founded on mean Full Moons; which yet may precede or follow the true ones by ſome Hours. The Paſchal Full Moon may, alſo, fall on *Saturday*, which is yet referr'd by the Cycle to *Sunday*: Whence, in the firſt Caſe, *Eaſter* is celebrated eight Days later than it ſhould be; in the other it is celebrated on the very Day of the Full Moon, with the *Jews* and *Quartadeciman* Hereticks; contrary to the Decree of the Council of *Nice*. *Scaliger*, and *Calviſius*, ſhew other Faults in the *Gregorian Calendar*; ariſing from the Negligence and Inadvertency of the Authors. This *Calendar* is adher'd to by the *Romaniſts*, throughout *Europe*, &c. and us'd wherever the *Roman* Breviary is us'd. The Proteſtant States of *Germany* and *Holland* have likewiſe come into it. See *Reformed* CALENDAR.

*Reformed*, or *Corrected* CALENDAR; that which ſetting aſide all Apparatus of Golden Numbers, Epacts, and Dominical Letters, determines the Equinox, with the Paſchal Full Moon, and the Moveable Feaſts depending thereon, by Aſtronomical Computation, according to the *Rudolphine* Tables.

This *Calendar* was introduc'd among the Proteſtant States of *Germany*, in the Year 1700; when 11 Days were at once thrown out of the Month of *February*: So that in 1700, *February* had but 18 Days: By this means, the *Corrected Stile* agrees with the *Gregorian*. This Alteration in the Form of the Year they admitted for a Time; in expectation that the real Quantity of the Tropical Year being at length more accurately determin'd by Obſervation, the *Romaniſts* wou'd agree with 'em, on ſome more convenient Intercalation.

*Conſtruction of a* CALENDAR, or *Almanack*.

1. Compute the Sun's and Moon's place for each Day of the Year; or take 'em from *Ephemerides*. See SUN, and MOON. 2. Find the Dominical Letter, and by means thereof, diſtribute the *Calendar* into Weeks. See DOMINICAL LETTER. 3. Compute the Time of *Eaſter*, and thence fix the other Moveable Feaſts. See EASTER. 4. Add the Immoveable Feaſts, with the Names of the Martyrs. 5. To every Day add the Sun's and Moon's Place, with the Riſing and Setting of each Luminary; the Length of Day and Night; the *Crepuſcula*, and the Aſpects of the Planets. 6. Add, in the proper Places, the chief Phaſes of the Moon. See PHASES. The Sun's Entrance into the Cardinal Points; *i. e.* the Solſtices and Equinoxes: together with the Riſing and the Setting, eſpecially Heliacal, of the Planets and chief Fix'd Stars. Means for each whereof, will be found under the proper Heads in this Dictionary.

The Duration of the *Crepuſcula*, or the End of the Evening, or Beginning of the Morning Twilight; together with the Sun's Riſing and Setting, and the Length of Days, may be transferr'd from the *Calendars* of one Year, into thoſe of another: the Differences in the ſeveral Years being too ſmall to be of any Conſideration in Civil Life.

Hence it appears, that the Conſtruction of a *Calendar* has nothing in it of Myſtery or Difficulty; if Tables of the heavenly Motions be but at hand.

The *Gelalean* CALENDAR, is a Correction of the *Perſian Calendar*, made by Order of Sultan *Gelaleddan*, in the 467th Year of the Hegyra; of Chriſt 1089.

The Name *Calendar* is here given, from the Word *Calendæ*, wrote antiently in large Characters at the Head of each Month.

CALENDAR, is alſo us'd for the Catalogue, or *Faſti*, antiently kept in each Church, of the Saints; both univerſal, and thoſe particularly honour'd in each Church; with their Biſhops, Martyrs, &c.

There are ſtill ſome of theſe *Calendars* extant; particularly a very antient one of the Church of *Rome*, made about the middle of the IVth Century: comprehending alſo the Feſtivals both of the Heathens and Chriſtians, which were then very few in number. F. *Mabillon* has alſo printed the *Calendar* of the Church of *Carthage*; made about the Year 483. The *Calendar* of the Church of *Ethiopia*; and that of the *Cophtæ*, publiſh'd by *Ludolphus*, ſeem to have been made after the Year 760. The *Calendar* of the *Syrians*, printed by *Genebrard*, is very imperfect: That of the *Muſcovites*, publiſh'd by F. *Papebroch*, in moſt reſpects agrees with that of the *Greeks*, publiſh'd by *Genebrard*. The *Calendar* publiſh'd by *Dom. d'Acherry*, under the Title of *The Solar Year*, is no more than the *Calendar* of the Church of *Arras*. The *Calendar* publiſh'd in 1687, at *Ausburg*, by *Beckius*, is apparently that of the antient Church of *Ausburg*, or rather *Strasbourg*, wrote towards the Cloſe of the 10th Century. The *Moſarabique Calendar*, ſtill us'd in the five Churches of *Toledo*; the *Ambroſian* of *Milan*; and thoſe of *England*, before the Reformation; have nothing in 'em but what is found in thoſe of the other *Weſtern* Churches; *viz.* the Saints honour'd throughout, and thoſe peculiar to the Church where they are us'd.

Theſe antient *Calendars* are not to be confounded with the antient Martyrologies: For each Church had its peculiar *Calendar*; whereas the Martyrologies regarded the whole Church in general: containing the Martyrs and Confeſſors of all the Churches. From all the ſeveral *Calendars* was form'd one Martyrology: ſo that Martyrologies are poſterior to *Calendars*. See MARTYROLOGY.

CALENDS, CALENDÆ, in the *Roman* Chronology, the firſt Day of each Month. See MONTH. The *Calends* were reckon'd backwards, or in a retrograde Order: Thus, *v. g.* the firſt of *May* being the *Calends* of *May*, the laſt, or 30th of *April*, was the *Pridie Calendarum*, or ſecond of the *Calends* of *May*; the 29th of *April*, the third of the *Calends*, or before the *Calends*: and ſo back to the 13th, where the Ides commence; which are, likewiſe, number'd invertedly to the fifth, where the Nones begin; which are number'd after the ſame manner to the firſt Day of the Month, which is the *Calends* of *April*. See NONES, and IDES. The Rules of Computation by *Calends*, are included in the following Verſes.

*Prima Dies Menſis cujuſque eſt dicta* Calendæ:
*Sex Majus* Nonas, *October*, *Julius*, & *Mars*;
*Quatuor at reliqui*: *Dabit* Idus *quilibet Octo*.
*Inde Dies reliquos omnes dic eſſe* Calendas;
*Quas retro numerans dices a Menſe ſequente*.

To find the Day of the *Calends* we are in, ſee how many Days there are yet remaining of the Month, and to that Number add two: For Example; ſuppoſe it the 22d of *April*; 'tis then the 10th of the *Calends* of *May*. For *April* contains 30 Days; and 22 taken from 30, there remains 8; to which two being added, the Sum is 10.

The Word comes from the Latin *Calare*, to call, proclaim; becauſe on the Day of the *Calends*, or firſt of the Month, the Pontiff, with a loud Voice, proclaim'd the Day whereon the Nones were to be; whether on the fifth or ſeventh Day of the Month: Or rather, becauſe originally the inferior Pontiff had it in charge to watch when the New Moon ſhould firſt appear, in order to declare it to the People; which they call'd *Calare*, apparently from the *Greek* καλεω, *voco*. The *Calends*, according to *Varro*, were dedicated to *Juno*. On the *Calends* of *March*, the *Romans* us'd to take their Leaſes, &c. in regard the Year, as fix'd by *Romulus*, commenc'd on that Day. The *Calends* of *March* was a fatal Day to Debtors, becauſe then their Leaſes expir'd; which occaſion'd *Horace* to call them *Triſtes*.

The *Roman* Writers themſelves are at a loſs for the Reaſon of this abſurd and whimſical manner of computing the Days of the Month: yet is it ſtill kept up in the *Roman* Chancery; and by ſome Authors, out of a vain Affectation of Learning, preferr'd to the common, more natural, and eaſy manner. See YEAR, DAY, NONES, IDES.

CALENTURE, is an inflammatory Fever, frequent at Sea, attended with a Delirium; wherein the Patients imagine the Sea to be green Fields; and, if not prevented, will leap over-board: which way they are frequently loſt.

CALIDUCTS, a kind of Pipes, or Canals, diſpos'd along the Walls of Houſes and Apartments; us'd by the Antients for the Conveyance of Heat to ſeveral remote Parts of the Houſe, from one common Furnace. See STOVE, FIRE, &c.

CALIDUM *Innatum*, or Innate Heat; a Term the Antients had many vague Notions about: but Geometrical Reaſoning has taught us to affix a more diſtinct Idea hereto: For 'tis hence we know, that this *innate Heat* is no more than the Attrition of the Parts of the Blood; occaſion'd by its circulatory Motion, eſpecially in the Arteries; wherein, being propell'd from a circular Baſe, towards the Apex of an hollow Cone, with a Force begun in the Heart, it meets with a double Reſiſtance; *viz.* againſt the Sides of the Arteries, and againſt the preceding Blood. For whereas the Blood contains in it Parts that are fitted to excite Heat, whenever they can get at liberty; that is, if the Parts incloſing them can be got aſunder: and whereas the Parts incloſing ſuch Corpuſcles cannot be got aſunder, unleſs by ſome Niſus of the Parts of Blood with one another, whereby the Attrition and Abraſion of the cohering Particles is produc'd; it follows, that the Heat will be ſo much the greater, by how much ſuch a Niſus, and Attrition of the Parts among one another is increas'd. And with the ſame Reſiſtances, (that is, the Sections of the Arteries, and the Quantity of Blood remaining the ſame) and an increas'd Force of the Heart, and circular Motion of the Blood, the Niſus and Attrition of the Parts of Blood amongſt one another, muſt neceſſarily be increas'd; both by the preceding Blood being ſtruck harder upon, by the Protruſion of a ſucceeding Blood, coming on with an increas'd Velocity; and the occaſioning thereby alſo more frequent

Strokes againſt the Sides of the Arteries; by which means, an increas'd Velocity of Blood increaſes the Heat: and conſequently does its Heat depend upon its Circulation. From hence it appears, that at the ſame Diſtances from the Heart, the Heat of equal Quantities of Blood will be as their Velocities: and, that in the ſame Velocities of Blood, the Heat will be reciprocally as the Diſtances from the Heart. For ſince, in homogeneal and ſimple Bodies, nothing elſe is requir'd to diſengage the Particles exciting Heat, but a Niſus and Attrition of Parts, produc'd by the Force of the Heart; to which is always proportional the Velocity of the Blood; and the Re-action, or Reſiſtance of the Arteries and the antecedent Blood; it follows, that if the Reſiſtance or Re-action is not alter'd, which it will not be at the ſame diſtance from the Heart; then the Heat of the Blood will not be alter'd, unleſs by an Alteration of the Impetus, or Velocity impreſs'd upon the Blood from the Heart: That is, as Effects are proportional to their Cauſes, the Heat of the Blood, at the ſame Diſtances from the Heart, will be proportional to its Velocity. In the ſame manner it appears, that if the Velocities impreſs'd by the Heart be equal, there can be no change in the Heat of the Blood, but from a diverſify'd Reſiſtance, or Re-action of the Arteries and antecedent Blood. But the Reſiſtance of the preceding Blood is proportional to its Quantity; and its Quantity is reciprocally proportional to the Diſtance from the Heart; (for the nearer the Blood is to the Heart, ſo much the greater will be its Quantity between any given Place and the Extremity of the Artery.) And therefore the Reſiſtance of the Arteries will alſo be ſo much the greater, by how much nearer they are to the Heart: For in this caſe, the Reſiſtance is proportional to the Velocity; and the Velocity of the Blood is greateſt at the leaſt Diſtances from the Heart. Hence the Heat of the Blood may be conſider'd as a Rectangle, under the Velocity and the Diſtance: that is, if in two Perſons the Velocity be as three, and the Diſtances wherein we would determine the Heat, be as much more in one as in another; that is, as two to one; the Heat of one will be ſix, and the other three: that is, the Heat of the firſt will be double that of the ſecond. If the Diſtance of the firſt be as two, and the Velocity as four; but the Diſtance of the ſecond as three, and the Velocity as one; the Heat of the firſt will be as eight, and of the ſecond as three: and ſo the Heat of the firſt, will be more than double the Heat of the ſecond.

CALIPPIC PERIOD, in Chronology, a Series of 76 Years, returning perpetually round; which elapſed, the Middle of the New and Full Moons, as its Inventor *Calippus*, an *Athenian*, imagin'd, return'd to the ſame Day of the Solar Year. *Meton*, 100 Years before, had invented the Period or Cycle of 19 Years; (ſee METONIC CYCLE.) aſſuming the Quantity of the Solar Year, $365\ d.\ 6\ h.\ 18'\ 56''\ 50'''\ 31''''\ 34'''''$; and the Lunar Month $29\ d.\ 12\ h.\ 45'.\ 47''\ 26'''\ 48''''\ 30'''''$. But *Calippus* conſidering that the *Metonic* Quantity of the Solar Year was not exact, multiply'd *Meton*'s Period by 4, and thence aroſe a Period of 76 Years, call'd the *Calippic*. The *Calippic Period* therefore contains 27759 Days: And ſince the Lunar Cycle contains 235 Lunations, and the *Calippic Period* is quadruple of this, it contains 940 Lunations. See PERIOD.

It is demonſtrated, however, that the *Calippic Period* it ſelf is not accurate; that it does not bring the New and Full Moons preciſely to their Places, but brings 'em too late by a whole Day in 553 Years.

CALIPH, or CALYPH, or KALIPH, the firſt Eccleſiaſtical Dignity among the *Saracens*: or, as *d'Herbelot* defines it, the Name of a Sovereign Dignity among the *Mahometans*, veſted with abſolute Power over every thing, relating both to Religion and Policy. The Word is *Arabic*, and ſignifies Succeſſor, or Heir: And, in effect, *Abubeker*, the firſt *Caliph*, was *Mahomet*'s Succeſſor; whoſe Succeſſors, again, aſſum'd the Title of *Caliphs* of *Syria*. In a little time, however, there aroſe ſeveral other *Caliphs*, who uſurp'd the Supreme Power in *Perſia*, *Egypt*, and *Africa*. *Piſaſire*, who reign'd in 958, was the laſt *Caliph* of *Syria*: after whom, the *Turks* becoming Maſters thereof, the *Caliph* ſunk into *Sovereign Pontiff*. And the ſame happen'd in *Egypt*, where the *Caliph* has only left the Title of *Grand Prieſt of* Mahomet. *Vatier* obſerves, that they call'd themſelves *Vicars of God*; and that the Mahometan Sultans and Kings fell down before 'em, and kiſs'd their Feet: For which Reaſon, *V. de Beauvais*, calls 'em their *Popes*. The *Caliph* of *Bagdad*, tho otherwiſe little more than a Name, ſtill retains the antient Right of adopting and confirming the Kings of *Arabia* and *Syria*. *Nicod* obſerves, that the Governors of *Cairo* had formerly the Title of *Caliph*. There were alſo *Caliphs* of *Carvan*, in *Tunis*; and of *Spain*; who alſo bore the Title of King.

The Word comes from the *Arabic*, *Hhalapha*, which ſignifies not only to *ſucceed*, but alſo to be in the Place of another; not only as *Heir*, but as *Vicar*. In which Senſe, *Erpenſius* obſerves, it is, that the Emperors and Sovereign Pontiffs were call'd *Caliphs*, as being God's Vicars and Lieutenants: contrary to the more popular Opinion, that they take the Name *Caliph*, as being *Mahomet*'s Succeſſors.

CALIX, CHALICE, or CALICE, the *Cup*, or Veſſel us'd to adminiſter the Wine in, in the Euchariſt; and, by the *Romaniſts*, in the Maſs. *Bede* affirms, that the *Chalice*, us'd by Jeſus Chriſt at the Supper, had two handles, and held juſt half a Pint; which the Antients imitated. In the primitive Times the *Chalices* were of Wood: Pope *Zephyrine* firſt appointed 'em to be of Silver and Gold. Others ſay, *Urban* I. and *Leo* IV. forbad Tin and Glaſs; as did likewiſe the Council of *Calcuth* in *England*: *Horn*, *Lindanus*, and *Beatus Rhenanus*, who had ſeen ſome of the antient *Chalices* in *Germany*, obſerve, that they had a Pipe, or Tube, fitted artfully to 'em, thro which the People ſuck'd, inſtead of drinking. The Word comes from the *Greek* κύλιξ.

CALIX, in Botany, is apply'd to a Flower, whoſe Body, or even a Part of it, is form'd in manner of a Cup or *Chalice*; as the Cup or Body of a Tulip, &c.

CALIX is more particularly us'd for that outward greeniſh Cover which encompaſſes and defends the Foliage, or Leaves of a Flower. See FLOWER. The *Calix* is ſometimes of one entire Piece; as in Pinks, &c. and in ſome broke into ſeveral, as in Roſes, &c. The *Calix* is alſo call'd *Perianthium*. See PERIANTHIUM.

Saffron has no *Calix*; its Flower comes out of the Earth before its Leaves. See SAFFRON.

CALIXTINS, a Name given to thoſe among the *Lutherans*, who follow the Sentiments of *George Calixtus*, a celebrated Divine, who oppos'd the Opinions of St. *Auguſtin*, on Predeſtination, Grace, and Free Will: So that the *Calixtins* are eſteem'd a kind of *Semi-Pelagians*. *Calixtus* maintain'd, that there is in all Men a certain Power of Underſtanding and Willing; with Natural Knowledge ſufficient: And that a good uſe being made of theſe, God will give us all the Means neceſſary to arrive at the Perfection to which Revelation directs 'em.

CALIXTINS, is alſo a Term, apply'd by the *Romaniſts* to ſuch as communicate in both Kinds; as the People of *Bohemia*, &c. tho, in other Reſpects, of the ſame Faith with themſelves: Theſe they don't make Hereticks, but only Schiſmaticks: The Word is deriv'd from *Calix*, Cup.

CALKING, or CAUKING *of a Ship*, implies the driving in Oakam, or ſomewhat of that kind into the Seams, or Commiſſures of the Planks, to prevent the Ship's leaking.

CALL, (in Hunting) is a Leſſon blown upon the Horn, to comfort the Hounds. Amongſt Fowlers, *Calls* are artificial Pipes, made to catch ſeveral ſorts of Birds, by imitating their Notes.

CALLENDER, or CALANDER, a Machine us'd in the Manufactures, for preſſing certain Cloths, Stuffs of Silk or Woollen, and even Linens; and to make 'em ſmooth, even, and gloſſy: 'Tis alſo us'd for watering, or giving the Waves to Tabbies and Mohairs. It conſiſts of two large wooden Rollers, round which the Pieces of Stuff are wound: theſe are put between two large cloſe-poliſh'd Planks of Wood; the lower ſerving as a fix'd Baſe; and the upper moveable, by means of a Skrew like that of a Crane; with a Rope, faſten'd to a Spindle which makes its Axis: This upper Part is of a prodigious Weight, ſometimes 50 or 60 thouſand Pound. 'Tis this Weight that gives the Poliſh, and that makes the Waves on the Stuffs about the Rollers, by means of a ſhallow Indenture or Engraving cut in it. The Rollers are taken off, and put on again, by inclining the Machine. The Word comes from the Latin *Cylindrus*; in regard the whole Effect of the Machine depends on a Cylinder. *Borel*, indeed, derives the Name of it from that of a little Bird, of the Swallow Kind; in regard of the Agreement between the Feathers of the Bird, and the Impreſſion of the Machine.

CALLIGRAPHUS, was antiently a Copiſt or Scrivener, who tranſcrib'd fair, and at length what the Notaries had taken down in Notes, or Minutes; which comes pretty near to what we call *Ingroſſing*. The Minutes of Acts, &c. were always taken in a kind of Cypher, or Short-Hand; ſuch as the Notes of *Tiro* in *Gruter*: by which means the Notaries, as the *Latins* call'd 'em, or the Σημειόγραφοι and Ταχύγραφοι, as the *Greeks* call'd 'em, were inabled to keep pace with a Speaker, or Perſon who dictated. Theſe Notes being underſtood by few, were copy'd over fair, and at length by Perſons who had a good Hand, for ſale, &c. and theſe were call'd *Calligraphi*; a Name frequently met with in the Primitive Writers. It comes from the *Greek* κάλλος, *beauty*, and γράφω, *I write*; *q. d.* εἷς κάλλος γράφων, *who writes for Beauty or Ornament ſake.*

CALLIPER, or rather CALIBRE, the Aperture of a Piece of Artillery, or any other Fire-Arm; or the Diameter of the Mouth of a Cannon, &c. or of the Ball it carries. Hence,

CALLIPERS,

CALLIPER, or CALIBRE-*Compaſſes*, is a Rule or Inſtrument, wherein a Right Line is ſo divided, as that the firſt Part being equal to the Diameter of an Iron or Leaden Ball of one Pound Weight, the other Parts are to the firſt, as the Diameters of Balls of two, three, four, *&c.* Pounds, are to the Diameter of a Ball of one Pound. The *Calliper* is us'd by Engineers, from the Weight of the Ball given, to determine its Diameter, or *Calliper*; or *vice verſa*.

The *Calliper*, (Tab. Fortification, Fig. 2.) conſiſts of two thin pieces of Braſs, ſix Inches long; join'd by a Rivet, ſo as to move quite round each other: The Head, or one End of the Piece is cut circular; and one half of its Circumference divided into every 2d Deg. On the other Half are Diviſions from 1 to 10; each, again, ſubdivided into 4: The uſe of which Diviſions and Subdiviſions, is, that when the Diameter of a Bullet, *&c.* not exceeding 10 Inches, is taken, the Diameter of the Semicircle, will, among the Diviſions, give the Length of that Diameter taken between the Points of the *Callipers*, in Inches and fourth Parts.

The Degrees on the Head, ſerve to take the Quantity of an Angle; the Method of which is obvious. If the Angle be inward, apply the outward Edges to the Planes that form the Angle; the Degree cut by the Diameter of the Semicircle, ſhews the Quantity of the Angle ſought. For an outward Angle, open the Branches till the Points be outwards, and applying the ſtreight Edges to the Planes that form the Angle, the Degrees cut by the Diameter of the Semicircle ſhew the Angle requir'd; reckoning from 180, towards the Right Hand.

On one Branch of the *Callipers*, on the ſame Side, are, firſt, 6 Inches; and each of theſe ſubdivided into ten Parts. Secondly, a Scale of unequal Diviſions, beginning at two, and ending at 10; each ſubdivided into four Parts. Thirdly, two other Scales of Lines, ſhewing, when the Diameter of the Bore of a Piece is taken with the Points of the *Callipers* outwards, the Name of the Piece, whether Iron or Braſs; *i.e.* the Weight of the Bullet it carries; or that 'tis ſuch or ſuch a Pounder, from 1 to 42 Pounds.

On the other Branch of the *Callipers*, on the ſame Side, is a Line of Chords to about 3 Inches Radius; and a Line of Lines on both Branches, as on the Sector; with a Table of the Names of the ſeveral Pieces of Ordnance. On the ſame Face is a Hand grav'd, and a Right Line drawn from the Finger towards the Centre of the Rivet; ſhewing, by its cutting certain Diviſions made on the Circle, the Weight of Iron Shot, when the Diameter is taken with the Points of the *Callipers*. Laſtly, on the Circle, or Head, on the ſame Side, are graved ſeveral Geometrical Figures inſcrib'd in each other, with Numbers; as a Cube, whoſe Side is ſuppoſed one Foot; a Pyramid on the ſame Baſe and Altitude, and the Proportions of their Weight, *&c.* a Sphere, inſcrib'd in a Cube; a Cylinder, Cone, Circle, Square, *&c.*

In Architecture, CALLIPER, or CALIBRE, is us'd for the Bulk, Thickneſs, Volume, or Diameter of any round thing, *&c.* Thus, they ſay, theſe two Columns are of the ſame *Callibre*, *i. e.* the ſame Diameter.

The Gagers alſo ſometimes uſe *Callipers*, to embrace the two Heads of any Caſk, in order to find its Length.

CALLOSITY, a little *Callus* form'd in any part of the Skin; or a white, ſolid, dry, inſenſible Fleſh; generated by the Congeſtion of a dry, pituitous Excrement, covering the Circumference of an Ulcer, Wound, *&c.* and in the Place where good Fleſh ſhould grow. The Chirurgeon is always to take care that Ulcers cloſe without *Calloſities*. See CALLUS.

CALLUS, a kind of Nodus, or Ligature, which joins the Extremities of a fractur'd Bone. The Formation of a *Callus* may be as follows. The Juice that feeds the Bone, running along its Fibres, becomes extravaſated in the Place where thoſe Fibres are broke: So that ſtopping, and gathering together round the Extremities of the Fracture, it there dries, knits, and hardens, to a Conſiſtence like a ſtrong Glue; leaving only a little Inequality in the Place where it is form'd.

*Callus's* frequently grow ſo firm as to ſupply the Place of Bones. In the *Phil. Tranſact.* we have an Inſtance of a *Callus* ſupplying the Place of the *Os Humeri*; taken out, upon its being Carious, by Mr. *Fowler*; and another of a *Callus*'s ſupplying the Place of the *Os Femoris*; and the Perſon as ſtrong as ever, and walking without any Lameneſs, by Mr. *Sherman*.

CALLUS, is alſo a hard denſe Knob, or Subſtance, riſing on the Hands, Feet, *&c.* by much Friction and Preſſure againſt hard Bodies.

CALOGERI, CALOGERS, or CALOYERS, Monks, or Religious, in *Greece*, both Male and Female; inhabiting, particularly, Mount *Athos*, but diſſeminated throughout all the Churches of the Eaſt. They follow the Rule of St. *Baſil*, and make Vows like the Weſtern Religious. There has never been any Reform among 'em, but they ſtill retain their original Inſtitution, keep their former Habit, *&c.* to a Tittle. *Tavernier* obſerves, they live a very retir'd auſtere Life, eating no Fleſh; and keeping four Lents, beſides a great Number of Faſts, with great Strictneſs. They eat no Bread till they have earn'd it by the Labour of their Hands. During their Lents, ſome don't eat above once in three Days, others but twice in ſeven. Moſt of the Night they ſpend in Weeping, *&c.* Some Authors obſerve, that the Word *Caloger* is apply'd particularly to ſuch, among their Religious, as are become Venerable by Age, and the Auſterity of their Life. It may be added, that tho *Calogers*, among us, be a general Name, and comprehend all the *Greek* Monks; yet, in *Greece* it ſelf, their Prieſts, or Regulars, are call'd *Icromonaches*.

The *Turks* uſe the Word *Calogers* for their Dervices, or Religious Muſſulmen. The Word comes from the *Greek* καλόγερος; which is form'd from καλὸς and γερων, i.e. *a good old Man*.

CALOMEL, in Pharmacy, the Name ordinarily given to *Mercurius Dulcis*. It rather ſeems to have firſt belonged to the Æthiops Mineral; from καλὸς, *pulcher*, fair; and μέλας, *niger*, black: for that white or pale Bodies rubb'd herewith, become black. But ſome will have it given to *Mercurius Dulcis*, from the Authority of a whimſical Chymiſt, who employ'd a Black in his Laboratory; whoſe Complexion, as well as that of the Mercury, he alluded to in the Term: the Medicine being *fair*, and the Operator *black*. See MERCURIUS DULCIS.

CALOTTE, in Architecture, a round Cavity or Depreſſure, in form of a Cup, or Cap, lathed and plaiſter'd; us'd to diminiſh the Riſe or Elevation of a moderate Chapel, Cabinet, Alcove, *&c.* which, without ſuch an Expedient, wou'd be too high for other pieces of the Apartment. It takes its Name from

CALOTTE, a Cap or Coif of Hair, Satin, or other Stuff; uſed firſt for Neceſſity, but now become an Eccleſiaſtical Ornament, in *France*, &c. It was firſt wore by Cardinal *Richlieu*: The red *Calotte* is the Badge of a Cardinal.

CALQUING, or CALKING, a Term in Painting, *&c.* us'd where the Backſide of any Deſign is cover'd with a black or red Colour; and the Strokes or Lines trac'd thro on a wax'd Plate, Wall, or other Matter; by paſſing lightly over each Stroak of the Deſign with a Point, which leaves an Impreſſion of the Colour on the Plate or Wall.

CALTROP, *Chauſſe-trape*, an Inſtrument with four Iron Points, diſpos'd Triangular-wiſe; ſo as there are always three Points bearing on the Earth, the fourth being in the Air: *Budeus* calls it *Calciatrappa*. Several of theſe are fix'd in the Ground where the Cavalry is to paſs, to ſtick into the Horſes Feet, and embarraſs 'em.

CALVA, or CALVARIA, the Scalp, or upper Part of the Head; ſo call'd from its growing bald firſt. See HEAD.

CALVARY, a Term us'd in Catholic Countries for a kind of Chapel of Devotion, rais'd on a Hillock near a City; in Memory of the Place where Jeſus Chriſt was crucify'd near *Jeruſalem*. Such is the Church of St. *Valerian*, near *Paris*; which is accompany'd with ſeveral Chapels, in each whereof is repreſented in Sculpture one of the Myſteries of the Paſſion. The Word comes from the Latin *Calvarium*, and that from *Calvus*; in regard the Top of that Hillock was bare, and deſtitute of Verdure: which is alſo ſignify'd by the *Hebrew* Word *Golgotha*.

CALVINISM, the Doctrine and Sentiments of *Calvin* and his Followers, with regard to Matters of Religion. *Calviniſm* ſubſiſts in its greateſt Purity, in the City of *Geneva*; whence it was firſt propagated over *France*, the *United Provinces*, and *England*. In *France* it was aboliſh'd by the Revocation of the Edict of *Nants*, in 1685. It has been the prevailing Religion in the *United Provinces*, ever ſince the Year 1572. In *England* it has dwindled ſince the Time of Queen *Elizabeth*; and is now confin'd among the Diſſenters: Tho it ſtill ſubſiſts, a little allay'd, in the Articles of the Eſtabliſh'd Church; and in its Rigour in *Scotland*. Of the thirteen *Swiſs Cantons*, there are ſix who profeſs *Calviniſm*; which likewiſe obtains in the *Palatinate*. The diſtinguiſhing Tenets of *Calviniſm*, are, *1ſt*, That Predeſtination and Reprobation are prior to the Preſcience of good or evil Works. *2dly*, That Predeſtination and Reprobation depend on the mere Will of God; without any regard to the Merits or Demerits of Mankind. *3dly*, That God gives thoſe whom he has predeſtinated a Faith which they cannot loſe; a neceſſitating Grace, which takes away the Freedom of Will; and that he imputes no Sin to 'em. *4thly*, That the Righteous cannot do any good Work, by reaſon of Original Sin, which cleaves to 'em. *5thly*, That Men are juſtify'd by Faith only. The modern *Calviniſts* reject or palliate ſome of theſe Articles.

In *France*, the *Calviniſts* are diſtinguiſh'd by the Name of *Huguenots*; and, among the common People, by *Parpaillots*. In *Germany* they are confounded with the *Lutherans*, under the general Title *Proteſtants*; only ſometimes diſtinguiſh'd by the Name *Reformed*. F. *Gaultier* attributes an hundred Hereſies to 'em; but F. *Francis Feu-*

*Ardent* improves vaſtly on the Liſt; making 'em no leſs than one thouſand four hundred.

CALVITIES, in Medicine, Baldneſs, or a falling off of the Hair, without being able to grow again; the Moiſture of the Head, which ſhould feed it, being dry'd up by ſome Diſeaſe, by old Age, or by immoderate uſe of Pouder. See HAIR.

CALX, literally ſignifies, *Lime*; or a Stone burnt, or calcin'd in a Kiln for that Purpoſe, to be us'd in the making of Mortar, &c. See LIME, MORTAR, &c.

CALX, in Chymiſtry, is a kind of Aſhes, or fine friable Pouder, which remains of Metals, Minerals, &c. after they have undergone the Violence of a Fire for a long time; and by that means have loſt all their humid Parts. Or, CALX, is what remains of a Body after Calcination. See CALCINATION. Gold and Silver, after they have been reduc'd to a *Calx*, may be again recover'd to their former Form and Nature. *Calx of Tin*, is call'd *Putty*; of conſiderable uſe in poliſhing Steel Mirrors, &c. *Calx of Braſs*, is call'd *Æs uſtum*. See Æs USTUM. *Calx of Lead*, is call'd *Ceruſs*. See CERUSS. For *Calx of Antimony*, ſee ANTIMONIUM *Diaphoreticum*.

CALX, in Anatomy; See CALCANEUS.

CAMAIEU, a Stone, whereon are found various Figures, and Repreſentations of Landſkips, &c. form'd by a kind of *Luſus Naturæ*; ſo as to exhibit Pictures without Painting. The Word is us'd alſo for thoſe precious Stones, as Onyx's, Sardoins, and Agats, whereon the Lapidaries employ their Art to aid Nature, and perfect thoſe Repreſentations. The Word comes from *Camechuia*, a Name the Orientals give to the Onyx, when they find, in preparing it, another Colour; as who ſhould ſay, *a ſecond Stone*.

CAMAIEU is alſo us'd for a Painting, wherein there is only one Colour; and where the Lights and Shadows are manag'd on a Gold or Azure Ground: When the Ground is yellow, the *French* call it *Cirage*; when grey, *Griſaille*. This kind of Work is chiefly us'd to repreſent Baſſo Relievo's: The *Greeks* call Pieces of this Kind μονοχρώματα; the Word is borrow'd from the Stone, call'd by the Latins *Cameus*, and by us *Camayeu*; which ſee. Some derive it from the *Greek* καμαι, *low*; becauſe Bas-Relievo's are uſually expreſs'd herein.

CAMALDOLI, an Order of Religious, founded by St. *Romuald*, in 1009, in the horrible Deſart of *Camaldoli*; ſituate in the State of *Florence*, on the *Apennines*. Their Rule is that of St. *Benedict*; and their Houſes, by the Statutes, are never to be leſs than five Leagues from Cities. The *Camaldolites* han't bore that Title from the Beginning of the Order: Till the Cloſe of the XIth Century they were call'd *Romualdins*, from the Name of their Founder. Till that Time, *Camaldolite* was a particular Name for thoſe of the Deſart of *Camaldoli*; and *D. Grandis* obſerves, was not given to the whole Order, in regard it was in this Monaſtery that the Order commenc'd; but becauſe the Regulation was beſt maintain'd here.

CAMBER-BEAM, in Building, a piece of Timber cut Archwiſe, or with an Obtuſe Angle in the Middle, commonly us'd in Platforms; as Church Leads, and other Occaſions, where long and ſtrong Beams are requir'd. A *Camber-Beam* is much ſtronger than another of the ſame Size; ſince being laid with the hollow Side downwards, as they uſually are, they repreſent a kind of Arch.

CAMBRING: The Seamen ſay, *a Deck lies Cambring*, when it doth not lie level, but higher in the Middle than at either End: Alſo, if the Ship's Keel is bent in the Middle upwards, (which may happen from her lying aground on a place, where neither her Aft nor Fore-part do touch it; and from many other Reaſons taken from her Make) they ſay, *She is Camber-keeled*.

CAMELEON, in Natural Hiſtory, a little Animal, famous among Antient and Modern Writers, for a Faculty, it is ſuppos'd to have, of changing its Colour, and aſſuming thoſe of the Objects near it.

The *Cameleon*, or *Chameleon*, is of the Lizzard Kind; only its Head is ſomewhat bigger than the common Lizzard. It has four Feet, and a long flat Tail; whereby it can hang to the Branches of Trees, as well as with its Feet. In *Egypt* there are ſome a Foot long, including the Tail; but thoſe of *Arabia* ſcarce exceed half that Length. Its Snout is long, its Back ſharp; its Skin, from the Head to the laſt Joint of the Tail plaited, and rough, ſay ſome, like a Saw: Dr. *Goddard* ſays, 'tis grain'd, like a Shagreen; the biggeſt Grains, or globular Inequalities, being about the Head; the next on the Ridge of the Back. Its Head is without any Neck, as in Fiſhes: It has two little Apertures in the Head, that ſerve for Noſtrils; it has no Ears, nor does it either make or receive any Sound. Its Eyes are big, and verſatile this or that way, without moving the Head: ordinarily, it turns one of 'em quite the contrary way to the other. The Tongue is half the Length of the Animal; conſiſting of a white Fleſh, round as far as the Tip, which is flat and hollow; ſomewhat like an Elephant's Proboſcis, or Trunk; and accordingly, ſome call it *a Trunk*. This it can dart out very nimbly, and draw back again, over a Bone which reaches from the Root, half its Length; much as a Silk Stocking is drawn off and on the Leg.

'Tis a common Tradition, that the *Cameleon* lives on Air; but Experience ſhews the contrary. The great Uſe of its Tongue is to catch Flies, by ſhooting it briſkly upon 'em, and entangling 'em in its Proboſcis: Some ſay, the Tongue is tipp'd with a glutinous Matter, which the Flies ſtick to; that at the *Academy of Sciences*, they frequently obſerv'd to catch and ſwallow Flies: They found alſo the Signs of 'em in its Excrements; and, when it was diſſected, the Stomach and Inteſtines were found full of 'em. M. *Perrault* aſſures us, when at Reſt, and in the Shade, its Colour is ſomewhat various: That at *Paris*, was of a blueiſh grey; but, when expos'd to the Sun, this grey chang'd into a browner or darker grey: and its leſs illumin'd Parts into divers Colours; forming Spots, half the bigneſs of a Finger's End, ſome of 'em of an Iſabella Colour: The Grains of the Skin, not illumin'd at all, reſembled a Cloth, mix'd of divers Colours. That at *London*, deſcrib'd in the *Philoſophical Tranſactions*, by Dr. *Goddard*, was mix'd of ſeveral Colours, like a medley Cloth: The Colours diſcernable, were a Green, a ſandy Yellow, and a deeper Yellow, or Liver Colour; but one might eaſily imagine ſome Mixture of moſt, or all Colours. He adds, that upon Excitation, or Warming, it ſuddenly became full of black Spots, of the bigneſs of a great Pin's Head, equally diſpers'd on the Sides, &c. all which afterwards would vaniſh. M. *Perrault* obſerves ſomewhat like this of the *Paris Cameleon*; *viz.* that upon handling and ſtirring it, it wou'd appear ſpeckled, or ſtain'd with dark Spots, bordering on green. He adds, that wrapping it up in a Linen Cloth, for two or three Minutes, it wou'd be taken out whitiſh; tho not conſtantly ſo: Nor did it take the Colour of any other Stuff it was wrapp'd in. So that what *Theophraſtus* and *Plutarch* wrote, that it aſſumes all the Colours it comes near, excepting white, is contrary to Experience. *Monconys* aſſures us, that the *Cameleon*, when plac'd in the Sun, appears green; tho in a Place where there is no Graſs, or other green Object: that by the Candle it appears black, tho plac'd on white Paper; and that, when ſhut up in a Box, it becomes yellow and green: and he aſſerts, it never takes any other than theſe four Colours.

Naturaliſts are very little agreed, as to the Reaſon or Manner of the Change of Colour: Some, as *Seneca*, maintain 'tis done by Suffuſion; others, as *Solinus*, by Reflexion; others, as the *Carteſians*, by the different Diſpoſition of the Parts that compoſe the Skin, which give a different Modification to the Rays of Light: Others, as Dr. *Goddard*, aſcribe the Change to the Grains of the Skin; which, in the ſeveral Poſtures, he thinks, may ſhew ſeveral Colours; and, when the Creature is in full Vigour, may have, as he terms it, *rationem Speculi*; that is, the Effect of Mirrors, and reflect the Colours of Bodies adjacent.

Theſe Hypotheſes are all deficient enough, and there is ſtill room for a new one of our own: The *Cameleon*, then, is repreſented to us as an exceedingly lean ſkinny Animal; inſomuch that the *Italians* call it *a living Skin*. M. *Perrault* obſerves, of that which he diſſected in the King's Library, that one Hour it appear'd to be a mere Skin, and nothing elſe; and yet the next it would appear fat and plump. Hence we gather, that it muſt have an extraordinary Command over the Skin, as to Tenſion or Laxneſs; ſince by ſwelling its Bulk its Skin will be fill'd, the Fibres thereof ſtretch'd, and the Pores leſſen'd: and again, by withdrawing its groſſneſs, the Skin will be left lank and ſhrivell'd, one Part wrapping over another: Which is confirm'd by what we have already obſerv'd, that its Skin is uſually ſeen to be full of *Rugæ*, or little Plaits. Now, the Animal having it in its Power to fill the Skin more or leſs, has it in its Power not only to alter the Tone and Texture of the Fibres, upon which their reflexive Quality, in a great meaſure depends; but alſo to bring Parts into ſight which before lay conceal'd, or to conceal ſuch as before lay open: and 'tis more than probable, that the Parts which are ordinarily cover'd, are of a ſomewhat different Colour from thoſe conſtantly open to the Air.

On theſe Principles, we believe, all the Phænomena in the *Cameleon*'s Colour may be ſolv'd. The Animal, 'tis evident, has a Power to reflect different colour'd Rays from the ſame Parts; alſo to make certain Parts reflect, and to prevent others reflecting: and hence that variety, that medley of Colours. See RAY, COLOUR, REFLEXION, &c.

*Matthiolus* relates ſeveral ſuperſtitious Notions of the Antients touching the *Cameleon*; as that its Tongue torn out, while alive, help'd the Bearer to gain his Law-Suit; that burning its Head and Throat with Oaken Wood, or roaſting its Liver on a red Tile, made it thunder and rain. That its Right Eye, torn out while living, and ſteep'd in Goat's Milk, took away Pearls in the Eye; that its Tongue

ty'd about a Woman with Child, made her Delivery ſafe. That its right Jaw remov'd all Fear; that its Tail ſtopp'd the Courſe of Rivers: *Pliny* aſſures us, *Democritus* had compos'd a whole Book of ſuch Follies.

CAMELEON, in Aſtronomy, is one of the Conſtellations of the Southern Hemiſphere, added by the Moderns. See CONSTELLATION.

CAMELOT, or CAMLET, a Stuff, ſometimes of Wool, ſometimes Silk, and ſometimes Hair, eſpecially that of Goats, with Wool or Silk; in ſome, the Warp is Silk and Wool twiſted together, and the Woof Hair. *England*, *France*, *Holland*, and *Flanders*, are the chief Places of this Manufacture; *Bruxels* exceeds 'em all in the Beauty and Quality of its *Camelots*: Thoſe of *England* are reputed the ſecond.

*Figured* CAMELOTS, are thoſe of one Colour, whereon are ſtamp'd various Figures, Flowers, Foliages, *&c.* by means of hot Irons, which are a kind of Moulds, paſs'd, together with the Stuff, under a Preſs. Theſe are chiefly brought from *Amiens* and *Flanders*: the Commerce of theſe, was antiently much more conſiderable than at preſent.

*Water* CAMELOTS, thoſe which, after weaving, receive a certain Preparation with Water; and are afterwards paſs'd under a hot Preſs, which gives 'em a Smoothneſs and Luſtre.

*Waved* CAMELOTS, are thoſe whereon Waves are impreſs'd, as on Tabbies, by means of a *Callendar*, under which they are paſs'd and repaſs'd ſeveral times. See CALLENDAR.

The Manufacturers, *&c.* of *Camelots*, are to take care they don't acquire any falſe or needleſs Plaits; it being almoſt impoſſible to get 'em out again: This is notorious, even to a Proverb; thus we ſay, a Perſon *is like Camlet, he has taken his Plait.*

*Menage* derives the Word from *Zambelot*, a *Levantine* Term for Stuffs, made with a fine Hair of a *Turkiſh* Goat: whence the Word *Turkiſh Camelot*. Others call it *Capellote*, from *Capelle*, She-Goat. *Bochart* makes *Zambelot*, a Corruption of the Arabic *Giamel*, or *Camel*. Others fetch *Camelot* from the bare Latin *Camelus*: So that *Camelot* ſhould properly ſignify, a Stuff made of Camels Hair.

CAMERA OBSCURA, *Dark Chamber*, in Opticks, a Machine or Apparatus, repreſenting an Artificial Eye; whereon the Images of External Objects are exhibited diſtinctly, and in their native Colours; either inverredly or erect. See *Artificial* EYE.

The firſt Invention of the *Camera Obſcura*, is aſcrib'd to *Bap. Porta*.

*The Uſe of the* CAMERA OBSCURA is manifold: It ſerves to very good Purpoſes in explaining the Nature of Viſion; and hence it is that ſome call it *the Artificial Eye*. It affords very diverting Spectacles; both by exhibiting Images perfectly like their Objects, and each cloth'd with their native Colours; and by expreſſing, at the ſame time all, their Motions: which latter, no other Art can imitate. By means of this Inſtrument, eſpecially the third Contrivance under mention'd, a Perſon unacquainted with Deſigning, will be able to delineate Objects to the laſt accuracy and juſtneſs; and another well vers'd in Painting, will find many Things herein to perfect his Art.

*The Theory of the* CAMERA OBSCURA, is contain'd in the following Propoſition.

If an Object A B, (Tab. *Opticks*, Fig. 16.) radiate thro a ſmall Aperture C, upon a white Wall oppoſite thereto; and the Place of Radiation behind the Aperture b C a be dark: the Image of the Object will be painted on the Wall, in an inverted Situation.

*Demonſt.* For the Aperture C being very ſmall, the Rays iſſuing from the Point B, will fall on b; thoſe from the Points A and D, will fall on *a* and *d*: wherefore, ſince the Rays iſſuing from the ſeveral Points are not confounded; when reflected from the Wall, they will carry with 'em a certain Species of the Object, and exhibit its Appearance on the Wall. But ſince the Rays A C and B C interſect each other in the Aperture, and the Rays from the loweſt Points fall on the higheſt; the Situation of the Object will of neceſſity be inverted.

*Corollary.* Since the Angles at D and *d* are Right, and the Vertical ones at C are Equal; B and *b*, and A and *a*, will be alſo Equal; conſequently, if the Wall, whereon the Object is delineated, be parallel to it, *a b* : AB : : *d* C : DC. That is, the Height of the Image will be to the Height of the Object; as the Diſtance of the Object from the Aperture, is to the Diſtance of the Image from the ſame.

*Conſtruction of a* CAMERA OBSCURA, wherein the Images of External Objects ſhall be repreſented diſtinctly, and in their genuine Colours, either in an inverted, or an erect Situation. 1. Darken a Chamber, one of whoſe Windows looks into a Place ſet with various Objects; leaving only one little Aperture open in the Window. 2. In this Aperture fit a Lens, either Plano-convex, or Convex on both Sides; to be a Portion of a large Sphere. 3. At a due Diſtance, to be determin'd by Experience, ſpread a Paper, or a white Cloth, unleſs there be a white Wall for the Purpoſe; for on this, the Images of the deſir'd Objects will be delineated invertedly. 4. If 'tis rather deſir'd to have 'em appear erect, 'tis done either by means of a concave Lens, placed between the Centre and the Focus of the firſt Lens; or by receiving the Image on a Plane *Speculum*, inclin'd to the Horizon, under an Angle of 45°; or by means of two Lens's included in a Draw-Tube, in lieu of one. *Note*, If the Aperture don't exceed the Bigneſs of a Pea, the Objects will be repreſented, even tho there be no Lens at all us'd.

To render the Images clear and diſtinct, 'tis neceſſary the Objects be illumin'd by the Sun's Light: They will be ſtill brighter, if the Spectator firſt ſtay a quarter of an Hour in the Dark. Care muſt be likewiſe taken, that no Light eſcape thro any Chinks; and that the Wall ben't too much illumin'd. Farther, the greater Diſtance there is between the Aperture and the Wall; the larger and more diſtinct will the Images be: but the Rays becoming, thus, too much dilated, the Brightneſs of the Image is weakned, till at length it becomes inviſible.

*Conſtruction of a portable* CAMERA OBSCURA. 1. Provide a little Cheſt, or Box of dry Wood, (Tab. *Opticks*, Fig. 17.) of the Figure of a Parallelolipiped; its Breadth about 10 Inches, and its length two or more Feet; according to the different Magnitude of the Diameter of the Lens's. 2. In the Plane B D fit a ſliding Tube E F with two Lens's; or, to ſet the Image at a leſs Diſtance from the Tube, with three Lens's convex on both Sides: The Diameter of the two outer, or forwarder, to be $\frac{60}{100}$ of a Foot; that of the Inner leſs, *v. g.* $\frac{40}{100}$. 3. Within the Cheſt, at a proper diſtance from the Tube, ſet up an oil'd Paper, perpendicularly, G H, ſo as Images thrown upon ſo may be ſeen thro. 4. Laſtly, in I make a round Hole, it as a Perſon may look conveniently thro it with both Eyes.

If then the Tube be turn'd towards the Objects, (the Lens's being at their proper Diſtance, to be determin'd by Experiment) the Objects will be delineated on the Paper G H, erect, as before.

*Another Portable* CAMERA OBSCURA.

1. In the middle of a *Ciſtula*, or Cheſt, (Tab. *Opticks*, Fig. 18.) raiſe a little Turret, either round or ſquare H I, open towards the Object A B. 2. Behind the Aperture, incline a little plain Mirror *a b*, to an Angle of 45°, which may reflect the Rays, A *a* and B *b*, upon a Lens convex on both Sides G, included in a Tube G L. 3. At the Diſtance of the Focus thereof, place a Table cover'd with a white Paper E F, to receive the Image *α β*. 4. Laſtly, in N M make an oblong Aperture to look through.

CAMISADE, in the Art of War, an Attack, by ſurprize, in the Night, or at the Point of Day; when the Enemy are ſuppos'd a-bed. The Word is ſaid to have took its riſe from an Attack of this Kind; wherein, as a Badg, or Signal to know one another by, they bore a Shift, *Chemiſe*, or *Camiſe*, over their Arms.

CAMISARD, a Term whereby the *French* diſtinguiſh the *Calviniſts* of the *Cevennes*; from a League or Faction form'd by 'em againſt the *French*, in 1688, and the following Years; wherein either their Attacks were ſo ſudden, and had ſo much of the *Camiſade* in 'em; or they plunder'd Linen for Shifts, or wore Clothes that reſembled Shifts, ſo as to occaſion the Name; for Authors give all theſe Derivations: to which may be added another more probable than any, *viz.* from *Camis*, a high, or beaten Road; the Roads being infeſted by the *Camiſards*.

CAMP, a Spot of Ground, where an Army reſts, intrenches it ſelf, or plants a Piquet-Watch, to lodge ſecure in Tents or Barracks. The *Camp* is ſometimes cover'd by an Intrenchment; ſometimes only by the advantage of its Poſt: Sometimes 'tis inclos'd with *Chevaux de Friſe*, laid acroſs each other; the ordinary Practice of the old Prince of *Orange*. The chief Skill of a General lies in the Art of *Incamping* well: This the *Romans* were unacquainted with, till the War with *Pyrrhus*; from whoſe *Camp* they learn'd to model their own. Till then, they knew not how to poſt themſelves to advantage, nor with any Order in their *Camp*.

An *Incampment*, or *ſtanding Camp*, is always to have the Advantage of Water and Forrage, and the means of covering and retrenching it ſelf. *Rhoe*, deſcribing the great *Mogul's Camp*, ſays, 'tis 20 *Engliſh* Miles round, and contains more Space than the largeſt City in *Europe*: that 'tis compos'd of 800000 Men, and 40000 Elephants.

*Flying*-CAMP, is a ſtrong Body of Horſe or Dragoons, to which are ſometimes added Foot; commanded uſually by a Lieutenant-General. This is always in Motion; both to cover the Gariſons in Poſſeſſion, and to keep the Adverſary in continual Alarm.

CAMPAIGN, a Military Term, ſignifying the Space of Time during which Armies are maintain'd every Year in the Field. The *Germans* begin their *Campaign* very late; uſually waiting for Harveſt: The *French* are always early, and begin ſometimes in Winter.

CAMPANULOUS, or CAMPANIFORMIS, thoſe Plants whoſe Flowers reſemble the Shape of a Bell; from *Campana*, a Bell. See FLOWER, and PLANT.

CAMPECHE, a kind of Wood brought from *America*, us'd in Dying. The Heart of the Tree, which alone is us'd, is at firſt red; after it has been fell'd ſome time, it becomes black; and, if ſteep'd in Water, gives a black Tincture, ſuch as may be wrote withal. 'Tis very heavy, burns admirably, and gives a clear laſting Flame.

CAMPHOR, or CAMPHIRE, a white, ſhining, tranſparent, odoriferous, volatile Gum, or Reſin, of a bitteriſh Taſte, and very hot in the Mouth; flowing from a Tree frequent in the Iſland of *Borneo*, and the neighbouring mountainous Coaſts of *India*, reſembling a Walnut Tree. It diſtils from the Tree in manner of a Gum; and, 'tis ſaid, moſt plentifully in the Time of Earthquakes and Storms. M. *Lemery* ſays, the *Camphor* is found at the Foot of the Tree; where it thickens into little Grains of different Figures and Sizes; very dry, friable, light, of a bitteriſh Taſte, *&c.* Theſe little Grains falling on one another, adhere lightly together, and form Maſſes; which being ſqueez'd a little by the Fingers, granulate again into ſmall Corpuſcles, like Salt.

Some Authors make two different Kinds of *Camphor*, according to the different Parts of the Tree where they are found: That in the Veins of the Wood, is ſaid to be different from that which oozes out upon breaking the Bark. The *Camphor*, as is ſaid, being at firſt red, is whiten'd either by the Sun or the Fire. In effect, we have but little of the Raw Natural *Camphor* among us; the *Dutch* take care that it comes all refin'd by Sublimation; and prepar'd to our Hands.

*Manner of Refining crude* CAMPHOR.

The Method us'd to refine it, is to lay it to ſublime in ſubliming Pots: when the Veſſel is half full, it is ſtopp'd, and plac'd over a gentle Fire; where only the pureſt Part riſes at firſt; but, by degrees, the whole is ſublim'd, except a *Caput Mortuum*, or earthy Part ſticking at Bottom: They then melt it with a gentle Heat, and run it into Moulds to give it what Figure they pleaſe. 'Tis ſo volatile, and apt to evaporate in Smoke, that the Merchants ordinarily incloſe it in Line-ſeed, that the Viſcoſity of that Grain may keep its Particles together.

*Camphor* has various Uſes; as in Fireworks, in making Verniſh, *&c.* In the Courts of the Eaſtern Princes, 'tis burnt, together with Wax, to illumine the Night. 'Tis exceedingly inflameable, ſo as to burn and preſerve its Flame in Water; and in burning it conſumes wholly, leaving no Scorium behind: But its principal uſe is in Medicine. 'Tis the moſt efficacious Diaphoretic known; its great Subtilty diffuſing it ſelf thro the Subſtance of the Parts, almoſt as ſoon as the warmth of the Stomach has ſet it in Motion. 'Tis us'd in a Caries of the Bones, as a Detergent in Wounds, to reſiſt a Gangreen, *&c.* When mix'd with the ſubtile Salts of Cantharides, it prevents their injuring the Bladder; its exquiſite Fineneſs inabling it to follow them into the fine Meanders thereof, and to ſheath their Aſperities. Dr. *Quincy* obſerves, that *Camphor* begins to be mix'd, and that to good purpoſe, with Mercurials, to guard againſt their ſtimulating Properties, and to ſend 'em into the fineſt Paſſages, to operate by Fuſion, and the bare Force of Impulſe. For not only *Mercurius Dulcis* or *Calomel*, may be hereby reſtrain'd from manifeſt Operation in the Glands about the Mouth; but alſo the Mineral *Turbith*, which of it ſelf acts very ſtrongly by Stool and Vomit, when mix'd with *Camphor*, will be much leſs felt in thoſe Reſpects; and will go into the fartheſt Circuit of Motion, and promote the cutaneous Diſcharge, in a more efficacious manner than any Medicine of leſs ſpecifick Gravity.

M. *Lemery* endeavour'd at a Chymical Analyſis of *Camphor*; but either its Parts were too fine and volatile to be carry'd to any greater degree of Purity or Subtilty by any Chymical Proceſs; or it was owing to the cloſe Union of its Principles, which, in all appearance, muſt be an Oil and a volatile Salt; that they could not be ſeparated.

*Camphor*, he obſerves, does not diſſolve in aqueous or phlegmatic Liquors; but in ſulphurous ones it does: not in Alcalines, nor even in ſome Acids: But in Spirit of Nitre it diſſolves perfectly; and is the ſole Reſin that does ſo. This Diſſolution is ordinarily called *Oil of Camphor*; and 'tis to this the medicinal Virtue of *Camphor* in Wounds, Gangreens, and Caries are aſcrib'd. They uſe not to take it internally, for fear of its ſharpneſs and corroſiveneſs: tho M. *Lemery* has found good Effects from two or three Drops by the Mouth, in Obſtructions and Fits of the Mother: indeed, he generally mix'd it with as much Oil of Amber.

There is a common Verſe to the Diſcredit of *Camphor*, as if its Smell emaſculated:

Camphora *per Nares caſtrat odore Mares.*

But the Proverb, according to *Scaliger* and *Tulpius*, is falſe. *Camphor*, being boil'd in Aqua vitæ, in a cloſe Place, till the whole be evaporated; if a lighted Torch or Candle be introduc'd, the Air in the whole Place will immediately catch Fire, and appear in a Flame, without doing any Damage to the Place or the Spectators.

It has been found, in *Ceylon*, that the Root of the Tree which yields Cinnamon, yields, by Inciſion, a Liquor that has a ſtrong ſmell of *Camphor*, and many of its Virtues: whence Naturaliſts, by miſtake, have ſuppos'd that all *Camphor* came from that Tree. There is a ſmell of *Camphor* in ſeveral Plants, as in *Camphoreta*, *Abrotonum*, *Roſemary*, &c.

*Artificial* CAMPHOR, is prepar'd with Sandarach, and white Vinegar diſtill'd, kept 20 Days in Horſe-dung, and afterwards expos'd a Month to the Sun to dry; at the End of which, the *Camphor* is found, in form of the Cruſt of a white Loaf: This is alſo call'd *Juniper Gum*, *white Verniſh*, and *Maſtic*.

The Word *Camphor* comes from the Arabic *Capur*, or *Caphur*; which ſignify the ſame thing.

CAMPUS MARTII, or MAII, in our antient Cuſtoms, an anniverſary Aſſembly of our Anceſtors, on *May*-Day; where they confederated together to defend the Kingdom againſt Foreigners and all Enemies. *Leg.* Edw. Confeſſ. *Denuo in* Campo Martio *convenere*, *ubi illi qui Sacramentis inter illos pacem confirmavere*, *Regi omnem culpam impoſuere ſeni*. Dunelm.

CAMUS, a Perſon with a low, flat Noſe, hollow'd or ſunk in the Middle. The *Tartars* are great Admirers of *Camus* Beauties. *Rubruguis* obſerves, that the Wife of the great *Cinghis Kam*, a celebrated Beauty, had only two Holes for a Noſe.

CANAL, in Anatomy, a Conduit or Paſſage, through which any Juices or Fluids of the Body flow. See DUCT, and CHANNEL.

CANAL *of a Larmier*, the hollow'd Plafond or Soffit of a Cornice; which makes the Pendant Mouchette. See LARMIER and SOFFIT.

CANAL *of the Volute*, in the *Ionic* Capital, is the Face of the Circumvolutions, enclos'd by a Liſtel.

CANALES *Semicirculares*, in Anatomy, are three *Canals*, in the Labyrinth of the Ear: See EAR. They are of three different Sizes, *Major*, *Minor*, and *Minimus*. In different Subjects, they are frequently different; but are always alike in the ſame: The Reaſon, *Valſalva* ingeniouſly conjectures to be, that as a Part of the tender Auditory Nerve is lodg'd in theſe *Canals*, ſo they are of three ſeveral Sizes, the better to ſuit all the Variety of Tones; ſome of the *Canals* ſuiting ſome Tones, and others others. And tho there be ſome difference in the Form and Size of theſe *Canals* in different Perſons; yet leſt there ſhould be any Diſcord in the Auditory Organs of the ſame Man, theſe *Canals* are always in exact Conformity to one another, in the ſame Man.

CANALIS, or CANALICULUS *Arterioſus*, in Anatomy, a Veſſel, obſerv'd in *Fœtus's*, but which after Delivery, grows uſeleſs, and diſappears. It is a little Tube, which joining the Pulmonary Artery and *Aorta*, ſerves to convey the Blood out of one into t'other, without paſſing thro the Lungs. See FOETUS, and CIRCULATION.

CANCELIER, in Falconry, is when a light flown Hawk, in her ſtooping, turns two or three times upon the Wing, to recover her ſelf before ſhe ſeizes.

CANCELLING, in the Civil Law, an Act whereby a Perſon conſents, that ſome former Act be render'd null and void; this is otherwiſe call'd Reſciſſion. In the proper Senſe of the Word, *to cancel*, is to bar an Obligation, by paſſing the Pen from top to bottom, or acroſs it; which makes a kind of Chequer or Lattice, which the *Latins* call *Cancelli*. The Word comes originally from the *Greek* κίγκλιζω, to incompaſs, or pale a thing round.

CANCER, in Aſtronomy, one of the 12 Signs of the Zodiack; ordinarily repreſented on the Globe in form of a Crab, and thus mark'd, ♋. See SIGN, and CONSTELLATION.

The Stars in the Conſtellation of *Cancer*, *Ptolomy* makes 13; *Tycho* 15; but Mr. *Flamſtead* no leſs than 71. Their Order, Names, Places, Longitude, Latitude, Magnitude, *&c.* he lays down in the *Britannick Catalogue*, as follows.

*Stars in the Conſtellation* CANCER.

*Tropic of* CANCER, in Astronomy, a lesser Circle of the Sphere, parallel to the Equator; and passing through the beginning of the Sign *Cancer*. See TROPICK; see also SPHERE.

CANCER, in Medicine, a hard, rugged, round, immoveable Tumor, of an Ash, Livid, or Lead Colour; incompass'd round with branch'd turgid Veins, full of black muddy Blood: so call'd, as some will have it, from the Resemblance it bears to the Crab-fish, call'd *Cancer*; or, as others say, because, like that Fish, when once it has got hold, 'tis scarce possible to drive it off. It begins without any Pain, and appears, at first, like a Chicory Pea; but grows apace, and becomes very painful. The *Cancer* arises principally on the lax glandulous Parts, as the Breasts and Emunctories: 'Tis most frequent in Women, especially such, says *Stolterfoth*, as are barren, or live in Celibacy. The Reason of its appearing in the Breast more than other Parts, is, that being full of Glands, with Lymphaticks and Blood-Vessels among 'em, the smallest Contusion, Compression, or Punction, extravasates those Liquors; which growing, by degrees, acrimonious, form the *Cancer*. Hence, the Masters of the Art say, that a *Cancer* is that in the Glands, which a Caries is in the Bones, and a Gangreen in the fleshy Parts. The *Cancer*, however, is sometimes found in other soft, spongy Parts of the Body; and there have been some found in the Teeth, Belly, Neck of the Matrix, Ureter, Lips, Nose, Cheeks, Abdomen, Thighs, and even the Shoulders, as *Stolterfoth* shews.

*Cancers* are divided, according to their several Stages, into Occult and Ulcerated; the first is form'd as above. Ulcerated *Cancers*, are known by their roughness and fullness of Holes, thro which oozes a filthy, stinking, glutinous Matter, frequently yellowish; by their pungent Pain, which resembles the pricking with a thousand Pins; by their blackness; the swelling of the Lips of the Ulcer; and the Veins about it, which are blackish, swell'd, various, resembling, as above, the Foot of a Cray-fish. Sometimes the Extremities of the Blood-Vessels are gnaw'd off, and the Blood issues out. In a *Cancer* of the Breast, the adjacent Flesh is sometimes so consum'd, that one may see into the Cavity of the Thorax. It occasions a slow Fever, a Loathing, oftentimes Faintings, sometimes a Dropsy, and lastly Death. The immediate Cause of a *Cancer*, seems to be a too corrosive volatile Salt, approaching to the Nature of Arsenic, form'd by the Stagnation of Humours, &c. *Stolterfoth* observes, that it has been frequently cur'd by Mercury and Salivation. A *Cancer* arising on the Legs, is call'd a *Lupus*; on the Face, or Nose, a *Noli me tangere*: Some take the ulcerous *Cancer* to be nothing else but an infinite Number of little Worms, which devour the Flesh by degrees. The *Cancer* is allow'd the most horrible Evil that befals the Body: 'Tis usually cur'd while yet a small Tumor, of the bigness of a Nut, or at most of a small Egg, by Extirpation: When it seizes the Breast, or is burst into an Ulcer, Amputation takes place.

CANDIDATE, a Person who stands for some Post, or aspires to enter any Body, or Society. The Word comes from the Latin *Candidatus*, of *Candidus*, white: Those who aspir'd to Offices in antient *Rome*, being call'd *Candidati*, from their wearing a very white shining Habit at the Assemblies, in order to distinguish themselves from the Croud. In the Time of *Gordian*, and afterwards, the Term *Candidati* was likewise given to the Soldiers who compos'd the Emperor's Guard; who were chosen out of all the Legions, and much consider'd at Court. *Cedrenus* observes, that it was the younger *Gordian* who instituted these, as also the *Protectores* and *Scholares*. The *Scholares* were chose out of the Troops, and consisted of Persons who best understood the Art of War: Out of these *Scholares* were chose the *Candidati*, who were such as appear'd the most vigorous, and had most of the Martial Air; proper to inspire Terror, says the Chronicon of *Alexandria*. The *Protectores* were a middle Order, and were properly the Emperor's Body Guards.

CANDLE, a Composition of Tallow, or Wax, around a Wick; us'd for the giving of Light. A Tallow *Candle*, to be good, must be half Sheep's Tallow, half Cows; that of Hogs making 'em gutter, give an ill smell, and a thick black Smoak. See TALLOW.

Tallow *Candles* are of two Kinds; the one *dipp'd*, the other *moulded*: The first, which are those in ordinary use, are of an old standing; the latter are said to be the Invention of the Sieur *le Brez*, at *Paris*. The Manufacture of the two Kinds is very different, excepting in what relates to the melting of the Tallow, and making the Wick, which is the same in each.

*Method of making* CANDLES.

The Tallows being weigh'd and mix'd in their due Proportion, are cut or hack'd into Pieces, to facilitate their melting, and thrown into a Peel or Boiler, having a Cavity of some depth running round the Top, to prevent its boiling over. Being, thus, perfectly melted, and skimm'd, a certain Quantity of Water is thrown in, proportion'd to the Quantity of Tallow, which serves to precipitate the Impurities of the Tallow, which had escap'd the Skimmer, to the Bottom of the Vessel. The Tallow, however, intended for the three first Dips, must have no Water; in regard, the dry Wick, imbibing the Water readily, makes the *Candles* spit and crackle in the burning. The melted Tallow is now empty'd thro a Sierce into a Tub, having a Tap for letting it out, as occasion requires. The Tallow thus prepar'd, may be us'd after having stood three Hours; and will continue fit for use 24 Hours in Summer, and 15 in Winter.

*For the Wicks*, they are made of spun Cotton, which the Chandlers buy in Skeins; and wind off three or four together, according to the intended Thickness of the Wick, into Pelotons, or Clues, whence they are cut out with an In-

ſtrument contriv'd for that Purpoſe, into Pieces of the Length of the *Candle* requir'd; then put on the Rods, or Broches, or elſe plac'd in the Moulds, as the *Candles* are intended to be dipp'd or moulded.

*Making of dipp'd* CANDLES.

The liquid Tallow being drawn off from the Tub abovemention'd, into a Veſſel call'd the Mould, Sink, Abyſs, *&c.* of an angular Form, perfectly like a Priſm, except that it is not equilateral; the Side on which it opens being only ten Inches high; and the others, which make its height, 15. On the Angle, form'd by the two great Sides, it is ſupported by two Feet, and is plac'd on a kind of Bench, in form of a Trough, to catch the Droppings, as the *Candles* are taken out, each Dip. At a convenient Diſtance from this, is ſeated the Workman, who takes two Rods, or Broches, at a time, ſtrung with the proper Number of Wicks; *viz.* ſixteen, if the *Candles* are to be of eight in the Pound; twelve if of ſix in the Pound, *&c.* and holding 'em equidiſtant, by means of the ſecond and third Finger of each Hand, which he puts between 'em, he immerges the Wicks two or three times for their firſt Lay; and, holding 'em ſome time over the opening of the Veſſel to let 'em drain, hangs 'em on a Rack, where they continue to drain and grow dry. When dry, they are dipp'd a ſecond time, then a third, as before; only for the third Lay they are but immerg'd twice, in all the reſt thrice. This Operation is repeated more or leſs, according to the intended Thickneſs of the *Candle*. With the laſt Dip they Neck 'em; *i. e.* plunge 'em below that part of the Wick where the other Lays ended.

It muſt be obſerv'd, that during the Operation, the Tallow is ſtirr'd from time to time, and the Stock ſupplied with freſh Tallow. When the *Candles* are finiſh'd, their piqu'd Ends, or Bottoms, are taken off; not with any cutting Inſtrument, but by paſſing them over a kind of flat brazen Plate, heated to a proper pitch by a Fire underneath; which melts down as much as is requiſite.

*Method of making Mould* CANDLES.

Theſe *Candles* are made in Moulds, of different Matters: Braſs, Tin, and Lead are the moſt ordinary. Tin is the beſt, and Lead the worſt. Each *Candle* has its Mold, conſiſting of three Pieces, the Neck, Shaft, and Foot: the Shaft is a hollow Metal Cylinder, of the Diameter and Length of the *Candle* propos'd: At the Extremity of this is the Neck; which is a little Metallic Cavity, in form of a Dome; having a Molding within-ſide, and pierc'd in the Middle with a Hole big enough for the Wick to paſs through. At the other Extremity is the Foot, in form of a little Tunnel, thro which the Liquid Tallow runs into the Mold. The Neck is ſolder'd to the Shaft, but the Foot is moveable, being apply'd when the Wick is to be put in, and taken off again when the *Candle* is cold. A little beneath the Place where the Foot is apply'd to the Shaft, is a kind of String of Metal, which ſerves to ſupport that part of the Mold, and to prevent the Shaft from entering too deep in the Table to be mention'd hereafter. Laſtly, in the Hook of the Foot, is a Leaf of the ſame Metal, ſolder'd within-ſide, which advancing into the Centre, ſerves to keep up the Wick; which is here hook'd on, preciſely in the Middle of the Mould. The Wick is introduc'd into the Shaft of the Mould, by a piece of Wire, which being thruſt thro the Aperture of the Hook, till it come out at the Neck, the Wick is ty'd to it; ſo that in drawing it back, the Wick comes along with it, leaving only enough a-top for the Neck; the other End is faſten'd to the Hook, which thus keeps it perpendicular. The Moulds, in this Condition, are diſpos'd in a Table pierc'd full of Holes, the Diameter of each being about an Inch: theſe Holes receive the Moulds inverted, as far as the String in the Foot. Being thus placed perpendicularly, they are fill'd with melted Tallow, (prepar'd as before) drawn out of the Tap into a Tin Pot; and thence pour'd into the Foot. After the Moulds have ſtood long enough to cool, for the Tallow to have come at its Conſiſtence, the *Candle* is taken out, by taking off the Foot, which brings the *Candle* along with it. Thoſe who aim at Perfection in their Work, bleach or whiten their *Candles*, by faſtening them on Rods or Broches, and hanging them out to the Dew, and earlieſt Rays of the Sun, for eight or ten Days: Care being taken to ſkreen 'em in the Day-time from the too intenſe Heat of the Sun; and in the Night from Rain, by wax'd Cloths.

*Wax* CANDLES are made of a Cotton or Flaxen Wick, ſlightly twiſted, and cover'd with white or yellow Wax: Of theſe there are ſeveral Kinds; ſome call'd *Tapers*, us'd to illumine Churches, Proceſſions, Funeral Ceremonies, *&c.* See TAPER; and others us'd on ordinary Occaſions. For the firſt Kind, their Figure is Conical, ſtill diminiſhing from the Bottom, which has a Hole to receive the Hook of the Candleſtick, to the Top which ends in a Point: The latter are Cylindrical. The firſt are either made with a Ladle, or with the Hand.

*Manner of making* Wax CANDLES *with the Ladle.*

The Wicks being twiſted, and cut, of the proper Length, a Dozen of 'em are ty'd by the Neck, at equal Diſtances, round an Iron Circle, ſuſpended directly over a large Baſon of Copper, tinn'd, and full of melted Wax: a large Ladle full of this Wax, is pour'd gently, by Inclination, on the Tops of the Wicks, one after another; ſo that running down, the whole Wick is thus cover'd: the Surplus returning into the Baſon; where 'tis kept warm by a Pan of Coals underneath it. They thus continue to pour on the Wax, till the *Candle* arrive at its deſtin'd Bigneſs. It muſt be obſerv'd, that the three firſt Ladles are pour'd on at the Top of the Wick, the fourth at the Height of $\frac{3}{4}$, the fifth at $\frac{1}{2}$, and the ſixth at $\frac{1}{4}$; by which means the *Candle* arrives at its pyramidal Form. The *Candles* are then taken down hot, and laid aſide of each other, in a Feather-Bed folded in two, to preſerve their Warmth, and keep the Wax ſoft: They are then taken and roll'd, one by one, on an even Table, uſually of Wallnut-tree, with a long ſquare Inſtrument of Box, ſmooth at Bottom. The *Candle* being thus roll'd and ſmooth'd, its big End is cut off, and a conical Hole made in it.

*Manner of making* Wax CANDLES *by the Hand.*

The Wick being diſpos'd, as in the former, they begin to ſoften the Wax, by working it ſeveral times in hot Water, contain'd in a Braſs Caldron, tinn'd, very narrow and deep. A piece of the Wax is then taken out, and diſpos'd, by little and little, around the Wick, which is hung on a Hook in the Wall, by the Extremity oppoſite to the Neck: ſo that they begin with the big End, diminiſhing ſtill, as they deſcend towards the Neck. In other reſpects, the Method is the ſame here, as in the former Caſe; only that they are not laid in the Bed, but are roll'd on the Table, juſt as they are form'd. It muſt be obſerv'd, however, that in the former Caſe, Water is always us'd to moiſten the ſeveral Inſtruments, to prevent the Wax from ſticking; and in the latter, Lard, or Oil of Olives, for the Hands, Table, *&c.*

*Cylindrical Wax* CANDLES, are either *for the Table*, or *Drawn*. The firſt kind are made of ſeveral Threads of Cotton, looſely ſpun, and twiſted together, cover'd with the Ladle, and roll'd, as the Conical ones, but not pierc'd.

*Wax* CANDLES *drawn*, are ſo call'd, becauſe actually drawn, in the Manner of Wire, by means of two large Rollers, or Cylinders of Wood, turn'd by Handles, which turning backwards and forwards ſeveral times, paſs the Wick thro melted Wax, contain'd in a Braſs Baſon; and at the ſame time thro the Holes of an Inſtrument, like that us'd for drawing Wire, faſten'd at one Side of the Baſon: ſo that, by little and little, the *Candle* acquires any Bulk, at pleaſure, according to the different Holes of the Inſtrument thro which it paſſes: By this Method, may four or five hundred Ells length be drawn, running. The Invention of this, we owe to *Pierre Bleſimare*, of *Paris*, about the Middle of the laſt Century.

The Word *Candle* comes from the Latin *Candor*, of *Candeo*; whence, the *Greek* καυδήλα. Sale, or Auction by *Inch of Candle*; is, when a Piece of *Candle* being lighted, People are allow'd to bid while it burns, but as ſoon as extinct, the Commodity is adjudg'd to the laſt Bidder. There is alſo a kind of *Excommunication by Inch of Candle*; wherein, the Time a lighted *Candle* continues burning, is allow'd the Sinner to come to Repentance, but after which, he remains excommunicated to all Intents and Purpoſes.

CANDLEMAS, a Feaſt of the Church, held on the ſecond of *February*, in honour of the Purification of the Holy Virgin. *Bede* ſays, "'Tis happy for the Church to "have chang'd the Luſtrations of the Heathens, held in "the Month of *February*, around the Fields, for the Pro-"ceſſions with *Candles*, &c." This Cuſtom was inſtituted by Pope *Gelaſius*, who abrogated the *Lupercalia*. The Feaſt takes its Name from the Number of lighted *Candles*, at the Proceſſion; antiently us'd among us, and ſtill among the *Romaniſts*.

CANDYING, properly ſignifies the turning of any thing *white*: 'Tis particularly us'd by the Confectioners, where white Sugar, us'd in their Preparations, is thicken'd and criſtalliz'd on the Surface of the Veſſel, in manner of Ice.

*Sugar*-CANDY, or *candied*, is a Preparation of Sugar, criſtalliz'd by melting ſix, or ſeven times. See SUGAR.

CANE, or CANNA, a Meaſure of Length, frequent in *Italy*, and the South Parts of *France*; more or leſs long, according to the Places where it is us'd. At *Naples*, the *Canna* is equal to 7 Foot $3\frac{1}{2}$ Inches, *Engliſh* Meaſure: The *Canna* of *Tholouſe*, and the upper *Languedoc*, is equal to the Varre of *Arragon*, and contains 5 Feet $8\frac{1}{3}$ Inches; at *Montpellier*, in *Provence*, *Dauphine*, and the lower *Languedoc*, to 6 *Engliſh* Feet $5\frac{1}{2}$ Inches. See MEASURE.

CANEPHORA, a young Girl, who in the antient Sacrifices bore a Baſket, wherein every thing neceſſary for the Sacrifice was contain'd. The Baſkets were uſually

crown'd

crown'd with Flowers, Myrtles, &c. The *Canephora*, in theſe Ceremonies, always march'd the firſt; the Philoſopher or Prieſt next, and the Choir of Muſic follow'd. The *Canephoræ* were always Girls of Condition; and were attended by an old Woman who carry'd 'em a Seat.

CANÉPHORIA, was a Ceremony, which made Part of a Feaſt, celebrated by the Maids the Eve of their Marriage-Day; call'd alſo *Proſelia*; which ſee. The *Canephoria*, as practis'd at *Athens*, conſiſted in this; that the Maid conducted by her Father and Mother, went to the Temple of *Minerva*; carrying with her a Baſket full of Preſents, to engage the Goddeſs to make the Marriage happy; or rather, as the Scholiaſt of *Theocritus* has it, the Baſket was intended as a kind of honourable Amends made to that Goddeſs, the Protectreſs of Virginity, for abandoning her Party; or a Ceremony to appeaſe her Wrath.

CANICULA, a Name proper to one of the Stars of the Conſtellation *Canis Minor*; call'd alſo ſimply the *Dog-ſtar*: by the *Greeks*, *Procyon*. *Canicula* is the 10th in Order in the *Britannic Catalogue*, in *Tycho*'s and *Ptolomy*'s 'tis the 2d. 'Tis ſituate in the Thigh of the Conſtellation; its Magnitude between a firſt and ſecond: Its Longitude, Latitude, &c. ſee among thoſe of the other Stars of that Conſtellation. *Canicula* riſes on the 16th of *July*: Its riſing and ſetting with the Sun, occaſions what we call

CANICULAR, or *Dog-Days*, the Time during which the Sun riſes and ſets with *Canicula*, which it does from the 24th of *July* to the 28th of *Auguſt*. Some Authors tell us from *Hippocrates* and *Pliny*, that the Day *Canicula* riſes, the Sea boils, Wine turns, Dogs begin to grow mad, the Bile increaſes and irritates, and all Animals grow languid; and that the Diſeaſes ordinarily occaſion'd in Men, are burning Fevers, Dyſenteries, and Phrenſies. The *Romans* ſacrific'd a brown Dog every Year to *Canicula* at its riſing, to appeaſe its Rage. They ſuppos'd *Canicula* to be the Occaſion of ſultry Weather, uſually felt in the Dog-Days; but by Miſtake: in five or ſix thouſand Years more, *Canicula* may chance to be charg'd with bringing Froſt and Snow; for it will riſe in *November* or *December*. The *Egyptians* and *Ethiopians* began their Year at the riſing of *Canicula*; reckoning to its riſe again the next Year, which is call'd the *Annus Canarius*.

CANINE *Appetite*, an inordinate Hunger, to the Degree of a Diſeaſe. See BULIMIA.

CANINI DENTES, in Anatomy, are two Teeth in each Jaw; one on each ſide the *Inciſores* and *Molares*. They are pretty thick and round, and end in a ſharp Point; have each one Root, which is longer than the Roots of the *Inciſores*. Their proper uſe is to pierce the Aliment; becauſe the Fore-Teeth are not only apt to be pulled outwards by the Things we hold and break with them, but likewiſe becauſe they are leſs ſubject to Blows than the *Molares*: therefore above two thirds of them are bury'd in their *Alveoli*, or Sockets; by which their Reſiſtance of all lateral Preſſures, is much greater than that of the *Molares*.

CANINUS *Muſculus*, the ſame as *Elevator Labii Superioris*; ſee ELEVATOR.

CANIS MAJOR, *the Great Dog*, in Aſtronomy, a Conſtellation of the Southern Hemiſphere. See CONSTELLATION.

The Stars in the Conſtellation *Canis Major*, *Ptolomy* makes 28; *Tycho* obſerv'd only 13; in the *Britannic Catalogue* they are 32. Their Order, Names, Places, Longitude, Latitude, Magnitude, &c. are as follows.

*Stars in the Conſtellation* CANIS MAJOR, *or* Great Dog.

CANIS MINOR, *Caniculus*, or the *Little Dog*, in Aſtronomy, a Conſtellation of the Southern Hemiſphere; call'd by the *Greeks*, *Procyon*. See CONSTELLATION.

The Stars in the Conſtellation *Canis Minor*, in *Ptolomy*'s Catalogue are 2; in that of *Tycho Brahe* 5; in the *Britannic Catalogue* 15. Their Order, Names, Places, Longitude, Latitude, Magnitude, &c. are as follows.

*Stars in the Conſtellation* CANIS MINOR.

CANKER, is a Speck made by a ſharp Humour, which gnaws the Fleſh almoſt like a Cauſtic; very common to Children, in their Mouth eſpecially. It is alſo a Diſeaſe incident to Trees; proceeding chiefly from the Nature of the Soil. See DISEASES *of Plants*.

CANNON, in War, a Piece of Artillery; or a Military Machine for throwing Iron, Lead, or Stone Bullets, by force of Gun-pouder, to a Place directly oppoſite to the Axis of the Cylinder, whereof it conſiſts. See GUN, and ORDNANCE.

The Parts and Proportions of a *Cannon* about 11 Foot long, are, its Barrel, or Cavity, 9 Foot; its Fulcrum, or Support, 14; and its Axis 7; the Bore, or Diameter of the Mouth 6 Inches, and two Lines the play of the Ball: The Diameter of the Ball therefore 6 Inches; and its Weight 33 Pounds $\frac{1}{3}$. The Metal thick about the Mouth, 2 Inches; and at the Breech 6. It weighs about 5600 Pounds: Its Charge is from 18 to 20 Pounds. It carries, Point-blank, 600 Paces; and loads ten times in an Hour, ſometimes fifteen; in a Day 120. Its Bed 15 Foot broad, and 20 long, for the Rebound. It requires 20 Horſes to draw it.

For a *Battering-Piece*, whoſe Ball is 36 Pounds, there muſt be two Cannoneers, three Chargers, and 30 Pioneers.

*Cannons* are diſtinguiſh'd from the Diameters of the Balls they carry; but this Diſtinction is different in different Nations. The Proportion of their Length to their Diameter, depends rather on Experience, than any Reaſoning *à priori*; and has been accordingly various, in various Times and Places: The Rule is, that the Gun be of ſuch a Length, as that the whole Charge of Pouder be on Fire e'er the Ball quit the Piece. If it be made too long, the Quantity of Air to be driven out before the Ball, will give too much Reſiſtance to the Impulſe; and that Impulſe ceaſing, the Friction of the Ball againſt the Surface of the Piece, will take off ſome of its Motion. Formerly, *Cannons* were made much longer than at preſent; till ſome made by chance $2\frac{1}{2}$ Foot ſhorter than ordinary, taught 'em that the Ball moves with a greater Impetus through a leſs Space than a larger. This *Guſtavus* K. of *Sweden* prov'd by Experience in 1624: An Iron Ball, 48 Pounds Weight, being found to go farther from a new ſhort *Cannon*, than another Ball of 96 Pounds out of an old, longer Piece; whereas, in other reſpects, 'tis certain the larger the Bore and Ball, the greater the Range.

The

The Names of the ſeveral *Cannons*, their Length, their Weight, and that of their Balls, as they obtain among us, are as in the following Table.

| NAMES of CANNON. | Weight of an Iron Ball. | Weight of the *Cannon*. | Length of the *Cannon*. |
|---|---|---|---|
| *Cannon Royal* | 48 *lib.* | 8000 *lib.* | 12 *Feet* |
| *Demi-Cannon large* | 36 | 6000 | 12 |
| *Demi-Cannon ordinary* | 32 | 5600 | 12 |
| *Demi-Cannon leaſt* | 30 | 5400 | 11 |
| *Culverin largeſt* | 20 | 4800 | 12 |
| *Culverin ordinary* | 17 *lib.* 5 *oz.* | 4500 | 12 |
| *Culverin leaſt* | 15 | 4000 | 11 |
| *Demi-Culverin ordinary* | 10 11 | 2700 | 11 |
| *Demi-Culverin leaſt* | 9 | 2000 | 10 |
| *Saker ordinary* | 6 | 1500 | 10 |
| *Saker leaſt* | 4 12 | 1400 | 8 |
| *Minion largeſt* | 3 12 | 1000 | 8 |
| *Minion ordinary* | 3 4 | 800 | 7 |
| *Falcon* | 2 8 | 750 | 7 |
| *Falconet* | 1 5 | 400 | 6 |
| *Rabinet* | 8 | 300 | 5. 6 *Dig.* |
| *Baſe* | 5 | 200 | 4. 6 |

The greateſt Range of a *Cannon*, is ordinarily fix'd at an Elevation of 45°. Dr. *Halley* ſhews it to be at 44½. See PROJECT. M. *S. Julien* adjuſts the Ranges of the ſeveral Pieces of *Cannon*, from the Weight of the Ball they bear: the Charge of Gun-pouder being always ſuppoſed in a ſubduple Ratio of the Weight of the Ball: Thus,

| Weight of a leaden Ball. | Horizontal Range. | Greateſt Range. | Weight of a leaden Ball. | Horizontal Range. | Greateſt Range. |
|---|---|---|---|---|---|
| 33 *lib.* | 600 *Paces.* | 6000 | 12 | 450 | 5000 |
| 24 | 700 | 6000 | 8 | 400 | 1500 |
| 16 | 800 | 8000 | 12 | 150 | 1500 |

The ſame Author adds, that a Ball thrown to the Diſtance of 600 Paces, ſinks 9, 10, 11, 12, nay, 13 Foot within Ground. For the *Method of caſting Cannons*, ſee FOUNDRY.

For the *Metal* of *Cannons*, 'tis either Iron, or, which is more uſual, a Mixture of Copper, Tin, and Braſs: the Tin is added to the Copper, to make the Metal more denſe and compact: So that the better or heavier the Copper is, the leſs Tin is requir'd. Some to 100 Pounds of Copper, add 10 of Tin, and 8 of Braſs: Others, 10 of Tin, 5 of Braſs, and 10 of Lead. *Braumius* deſcribes a Method of making *Cannon* of Leather, on occaſion: And 'tis certain the *Sweeds* made uſe of ſuch in the long War of the laſt Century; but theſe burſt too eaſily to have much effect. 'Tis found by Experience, that of two *Cannon* of equal Bore, but different Lengths; the longer requires a greater Charge of Pouder than the ſhorter, in order to reach the ſame Range. The ordinary Charge of *a Cannon*, is to have the Weight of its Gun-pouder half that of its Ball. After each thirty Diſcharges, the *Cannon* is to be cool'd, with two Pints of Vinegar, mix'd with four of Water, pour'd into the Barrel; the Touch-hole being firſt ſtopp'd.

*Cannons* are made Cylindrical, that the Motion of the Ball might not be retarded in its Paſſage; and that the Pouder, when on Fire, might not ſlip between the Ball and the Surface of the *Cannon*, which wou'd hinder its effect. *Wolfius* would have the *Cannon* always decreaſe, as it goes towards the Mouth or Orifice: in regard, the Force of the Pouder always decreaſes, in proportion to the Space thro which it is expanded. The new *Cannons*, after the *Spaniſh* manner, have a Cavity, or Chamber at bottom of the Barrel, which helps their Effect. A *Cannon* is found to recoil two or three Paces after Exploſion; which ſome account for from the Air's ruſhing violently into the Cavity, as ſoon as it is diſcharg'd of the Ball: but the real Cauſe, is, the Pouder's acting equally on the Breech of the *Cannon*, and the Ball. See MORTAR, GUN, BOMB-PROJECT, GUN-POUDER, &c.

*Larrey* makes Braſs *Cannon* the Invention of *J. Owen*; and ſays, the firſt known were in *England*, in 1335. *Cannons*, however, he owns, were known before; and obſerves, that at the Battel of *Creſſi*, in 1346, there were five Pieces of *Cannon* in the *Engliſh* Army; which were the firſt that had been ſeen in *France*: And *Mezeray* adds, that King *Edward* ſtruck Terror into the *French* Army, by five or ſix Pieces of *Cannon*; it being the firſt time they had ſeen ſuch thundering Machines. The firſt *Cannons* were call'd *Bombards*, from the Latin *bombus*; by reaſon of the Noiſe. The Word *Cannon*, *Menage* derives from the Italian *Canone*, an Augmentative of *Canna*; in regard, a *Cannon* is long, ſtreight, and hollow, like a *Cane*.

CANOE, a little Veſſel, or Boat, us'd by the *Indians*, made all of one Piece, of the Trunk of a Tree hollow'd. The Savages frequently make 'em of Bark, chiefly that of the Birch-Tree; yet big enough to hold four or five Perſons. See BOAT.

CANON, a Perſon who poſſeſſes a Prebend, or Revenue allotted for the Performance of Divine Service, in a Cathedral, or Collegiate Church. *Canons* are of no great Antiquity: *Paſquier* obſerves, that the Name *Canon* was not known before *Charlemaign*: at leaſt, the firſt we hear of, are in *Gregory de Tours*, who mentions a College of *Canons*, inſtituted by *Baudiin* XVI. Archbiſhop of that City, in the Time of *Clotharius* I. For, antiently, *Canons* were only Prieſts, or inferior Eccleſiaſticks, who liv'd in Community; reſiding by the Cathedral Church, to aſſiſt the Biſhops; depending entirely on their Will, ſupported by the Revenues of the Biſhoprick; and living in the ſame Houſe, as his Domeſticks, or Counſellors, &c. They even inherited his Moveables, till the Year 816; when this was prohibited by the Council of *Aix la Chapelle*. By degrees, theſe Communities of Prieſts, ſhaking off their Dependance, form'd ſeparate Bodies; whereof the Biſhops, however, were ſtill Heads. In the Xth Century, there were Communities or Congregations of the ſame kind, eſtabliſh'd even in Cities, where there were no Biſhops: Theſe were call'd *Collegiates*; in regard, they uſed the Terms *Congregation* or *College* indifferently: The Name *Chapter*, now given to theſe Bodies, is much more modern. Under the ſecond Race of the *French* Kings, the *Canon* or Collegiate Life, had ſpread it ſelf all over the Country; and each Cathedral had its Chapter, diſtinct from the reſt of the Clergy. But they were not yet deſtin'd to a Life ſo eaſy as now-a-days. They had the Name *Canon*, from the *Greek* κανὼν, which ſignifies three different things, *a Rule*; *a Penſion*, or *fix'd Revenue to live on*; and *a Catalogue*, or *Matricula*. Hence, ſome ſay, they were call'd *Canons*, by reaſon of the *Penſion* or Prebend; (whence ſome alſo call 'em *Sportulantes Fratres*:) Others ſay, they were call'd *Canons*, becauſe oblig'd to live according to Canonical *Rules* and Inſtitutions, which were given 'em; and others, as M. *de Marca*, becauſe their Names were inſerted in the *Matricula*, or Catalogue of the Cathedral. In time, the *Canons* freed themſelves from their Rules, the Obſervance relax'd, and, at length, they ceas'd to live in Community, yet ſtill form'd Bodies; pretending to other Functions beſides the Celebration of the Common Office in the Church, yet aſſuming the Rights of the reſt of the Clergy; making themſelves a neceſſary Council of the Biſhop; taking upon them the Adminiſtration of the See during a Vacancy, and the Election of a Biſhop to ſupply it. There are even ſome *Chapters* exempt from the Juriſdiction of the Biſhop, and owning no Head but their Dean. After the Example of Cathedral *Chapters*, Collegiate ones alſo continu'd to form Bodies, after they had abandon'd living in Community.

*Antient* CANONS, and thoſe ſtill ſubſiſting in the *Romiſh* Church, are of various Kinds; as, *Cardinal Canons*, which are thoſe attach'd, and, as the *Latins* call it, *Incardinati* to a Church, as a Prieſt is to a Pariſh. *Domicellary Canons*, were young *Canons*, who not being in Orders, had no Right in any particular Chapters. *Expectative Canons*, were ſuch as without having any Revenue or Prebend, had the Titles and Dignities of *Canons*, a Voice in the Chapter, and a Place in the Choir; till ſuch time as a Prebend ſhould fall. *Foreign Canons*, were ſuch as did not officiate in the *Canonries* to which they belong'd: To theſe were oppos'd *Manſionary Canons*, or *Canons Reſidentiary*. *Honorary Canons*, are the ſame with *Lay Canons*: In a Manuſcript Ordinary, at *Rouen*, is mention made of *Canons of thirteen Marks*; which, perhaps, was the Revenue of their *Canonate*. In the Church at *London*, were *Canons Minor*, or *little Canons*, who officiated for the *great* ones. At *Lucca* there are *Mitred Canons*. There were alſo *Canons of Poverty*; *Canons ad Succurrendum*, who were made *Canons* at the Point of Death, to partake of the Prayers of the Chapter. *Tertiary Canons*, or thoſe who had only the third Part of the Revenues of the *Canonate*.

*Charlemaign* ordain'd, that thoſe who were admitted into the Cleric, that is, into the *Canonic* Life, ſhould be oblig'd to live Canonically, and according to the Rule preſcrib'd 'em; obeying their Biſhops as Monks do their Abbat: By this Means it was, that the Spirit of Monachiſm became introduc'd into Cathedrals; for the Clerks being ty'd to certain Rules, became half Monks; and inſtead of applying themſelves to the Function of the Prieſthood, ſhut themſelves up in Cloiſters: whence the Houſes where they reſided took the Name of *Monaſteries*, and were to be kept incloſed; as appears by the Synodical Statutes of *Hincmar*, in 874. So that there were two kinds of Monaſteries; the one for Monks, the other for *Canons*. Singing, in a little time, became their chief employ; and 'tis now almoſt the whole Buſineſs they have left: the Biſhops looking on 'em as little elſe but their Chaplains.

In the VIIIth Century, S. *Chrodegand* made a Rule for the *Canons*, which was receiv'd by 'em all, and is ſtill ex-

tant, in 34 Articles, drawn chiefly from that of St. *Benedict*, but accommodated to the Cleric Life. In this were preſcrib'd their Penances, Habits, &c. There was a ſecond Rule made in 816, at the Requeſt of *Charlemaigne*, by the Biſhops then conven'd at *Aix la Chapelle*, on account of the *Roman* Indiction; compos'd of Extracts from the Fathers and Councils.

CANONS *Regular*, are *Canons* that ſtill live in Community; and who, like *Religious*, have, in proceſs of Time, to the Practice of their Rules, added the ſolemn Profeſſion of Vows: They are called *Regulars*, to diſtinguiſh them from thoſe *Canons* who abandon living in Community; and at the ſame time, the Obſervance of the *Canons* made as the Rule of the Clergy, for the Maintenance of the antient Diſcipline. See REGULAR.

*Canons* ſubſiſted in their Simplicity till the XIth Century, when ſome of them ſeparating from the Community, took with them the Name of *Canons*, or *acephalous Prieſts*, becauſe they declin'd to live in Community with the Biſhop; and thoſe who were left, thenceforth acquir'd the Denomination of *Canons Regular*. The *Regulars* have adopted moſt of the Profeſſions of the Rule of St. *Auguſtin*. 'Tis diſputed to which Claſs the *Canons Regular* belong, whether to the Clergy or the Religious; both the Cleric and Monaſtic State being united in 'em. The Point of Priority and Precedence is hotly conteſted, both between the *Regular Canons* and the Prieſts; and the *Regular Canons*, and ſimple Monks: The double Capacity of the *Canons*, is the Foundation of this Controverſy.

CANONS *Secular*, or *Lay Canons*, are ſuch among the Laity, as have been admitted, out of Honour and Reſpect, into ſome Chapters of *Canons*; ſuch are the Counts of *Anjou*, in the Church of St. *Martin de Tours*; the Kings of *France*, of St. *Hilary* in *Poictiers*, &c. the Emperor, of St. *Peters*, &c.

CANONESS, in the *Romiſh* Church, a Maid who enjoys a Prebend, affected, by the Foundation, to Maids; without being oblig'd to renounce the World, or make any Vows: There are few of theſe, except in *Flanders* and *Germany*: They are rather look'd upon as a Seminary and Retreat of Girls for Marriage, than an Engagement for the Service of God.

CANONESSES *of St.* Auguſtin, are a kind of Religious, who follow the Rules of St. *Auguſtin*; of which there are various Congregations. See AUGUSTINS.

CANONRY, or CANONATE, the Benefice fill'd by a *Canon*. The *Canonate* is diſtinguiſh'd from Prebend, in that the Prebend may ſubſiſt without the *Canonate*, whereas the *Canonate* is inſeparable from the Prebend: 'Tis to the *Canonate*, not the Prebend, that the Right of Suffrages and other Privileges are annex'd. See PREBEND.

CANON, in its more proper Senſe, is a Law, or Rule of Eccleſiaſtical Diſcipline; and particularly, a Decree of a Council. *Canons* are Deciſions of Matters of Religion; or Regulations of the Polity and Diſcipline of a Church, made by Councils, either General, National, or Provincial; as, the *Canons* of the Council of *Nice*, of *Trent*, &c. See COUNCIL, and CANON *Law*.

There have been various Collections of the *Canons* of the Eaſtern Councils; but four principal ones, each ampler than the preceding ones. The firſt, according to *Uſher*, *A.D.* 380, containing only thoſe of the firſt Oecumenical Council, and the five Provincial ones: They were but 164 in number. To theſe, *Dionyſius Exiguus*, in the Year 520, added the 50 *Canons* of the Apoſtles, and thoſe of the other General Councils. The *Greek Canons*, in this ſecond Collection, end with thoſe of the Council of *Calcedon*; to which are ſubjoin'd, thoſe of the Council of *Sardica*, and the *African* Councils. The fourth and laſt Collection, comes down as low as the ſecond Council of *Nice*; and 'tis on this that *Balſamon* and *Zonaras* have commented.

There is a great Diſpute about the Apoſtolical *Canons*, uſually aſcrib'd to St. *Clement*. *Bellarmin*, *Baronius*, &c. will have them to be genuine *Canons* of the Apoſtles: *Hincmar*, *de Marca*, *Beveridge*, &c. take them to be fram'd by the Biſhops, who were the Apoſtles Diſciples in the IId or IIId Century. *Daille*, &c. maintain them to have been forg'd by ſome Heretick in the VIth Century. The *Greek* Church allow 85 of them, and the *Latins* only 50.

CANON is alſo uſed for the authoriz'd Catalogue of the Sacred Writings; See SCRIPTURE, BIBLE, TESTAMENT. The antient *Canon*, or *Catalogue of the Books* of the Old Teſtament, was made by the *Jews*, and is ordinarily attributed to *Eſdras*. This is the *Canon* allow'd to have been follow'd by the Primitive Church, till the Council of *Trent*; and, according to St. *Jerom*, conſiſted of no more than 22 Books; but that Council enlarg'd the *Canon* very conſiderably, taking into it the Books which we call *Apocryphal*; and enjoining all theſe to be receiv'd as Books of Holy Scripture, upon Pain of Anathema, and being attainted of Hereſy. The *Romaniſts*, in defence of this *Canon*, ſay, that 'tis the ſame with that of the Council of *Hyppo*, held in 393, and with that of the third Council, at which were preſent 47 Biſhops, and among the reſt, St. *Auguſtin*; who declar'd they receiv'd it from their Fathers. Some of the Fathers diſtinguiſh the inſpir'd Writings into three Claſſes, *Proto-Canonical*, *Deutero-Canonical*, and *Apocryphal*. See DEUTERO-CANONICAL, and APOCRYPHAL.

*Paſchal* CANON, a Table of the Moveable Feaſts, ſhewing the Day of Eaſter, and the other Feaſts depending on it, for a Cycle of 19 Years. The *Paſchal Canon* is ſuppos'd to be the Calculation of *Euſebius* of *Ceſarea*, and to have been done by Order of the Council of *Nice*. See EASTER, FEAST, CYCLE, &c.

CANON is alſo us'd in ſome Orders of Religious, for the Book that contains their Rules, Conſtitutions, &c. *Canon*, again, is us'd for the Catalogue of Saints acknowledg'd and canoniz'd in the *Romiſh* Church. See SAINT, and CANONIZATION.

CANON is alſo uſed, by way of Excellence, in the *Romiſh* Church, for the ſecret Words of the Maſs, from the Preface to the *Pater*; in the Middle of which the Prieſt makes the Conſecration: The common Opinion is, that the *Canon* commences with *Te igitur*, &c. The People are to be on their Knees, hearing the *Canon*; and are to rehearſe it to themſelves, ſo as not to be heard. The *Canon* is pretended to have been put into its preſent Form by St. *Jerom*, by Order of Pope *Siricius*. The Council of *Trent* declare the *Canon of the Maſs* to have been fram'd by the Church; and to be compos'd of the Words of Jeſus Chriſt, his Apoſtles, and the firſt Popes: Some call it *Action*.

CANON, in Muſick, is a Rule, or Method of determining the Intervals of Notes. See INTERVAL.

*Ptolemy*, rejecting the *Ariſtoxenian* Way of meaſuring the Intervals in Muſick, by the Magnitude of a Tone, (which was ſuppos'd to be form'd by the Difference between a *Diapente* and a *Diateſſeron*) thought that muſical Intervals ſhould be diſtinguiſh'd, according to the Ratio's or Proportions which the Sounds terminating thoſe Intervals bear to one another, when conſider'd according to their degree of Acuteneſs or Gravity; which, before *Ariſtoxenus*, was the old *Pythagorean* Way. He therefore made the *Diapaſon* conſiſt in a double Ratio; the *Diapente* in a Seſquialteral; the *Diateſſaron*, in a Seſquitertian, and the Tone it ſelf in a Seſquioctave; and all the other Intervals, according to the Proportion of the Sounds that terminate them: Wherefore, taking the *Canon*, (as 'tis call'd) for a determinate Line of any length, he ſhews how this *Canon* is to be cut accordingly, ſo that it may repreſent the reſpective Intervals: and this Method anſwers exactly to Experiment, in the different Lengths of muſical Chords. From this *Canon*, *Ptolemy* and his Followers, have been call'd *Canonici*; as thoſe of *Ariſtoxenus*, were call'd *Muſici*. See MUSICK.

CANON *in Trigonometry*, and *Algebra*, a general Rule for the Solution of all Caſes, of a like Nature with the preſent Inquiry: Thus, every laſt Step of an Equation is a *Canon*; and, if turn'd into Words, becomes a Rule to ſolve all Queſtions of the ſame Nature with that propos'd. For the *Conſtruction of the Canon of Sines*; ſee SINES. For Tangents, ſee TANGENT. For Logarithms, ſee LOGARITHM, &c.

*Natural* CANON *of Triangles*, is the *Canon* of Sines, Tangents, and Secants taken together: So called, becauſe ſerving principally for the Solution of Triangles. See TRIANGLE.

*Artificial* CANON, is the *Canon* of Artificial Sines, Tangents, &c. i. e. of Coſines, Cotangents, &c. See COSINE, COTANGENT, &c.

CANON *Law*, a Collection of Eccleſiaſtical Statutes, Conſtitutions, Deciſions, and Maxims, taken from the antient Councils, the Decrees of Popes, and the Reports and Reſolutions of the Primitive Fathers. See LAW.

The *Canon Law* that obtain'd throughout the Weſt, till the XIth Century, was the Collection of *Canons* made by *Dionyſius Exiguus*, in 520; the *Capitularies* of *Charlemaigne*, and the Decrees of the Popes, from *Siricius* to *Anaſtaſius*. No regard was had to any thing not compris'd in theſe; and the *French* ſtill maintain the Rights of the *Gallican* Church, to conſiſt in their not being oblig'd to admit any thing elſe, but to be at Liberty to reject all Innovations made in the *Canonical Juriſprudence* ſince that Compilation; as well as all Papal Decrees before *Siricius*. Indeed, between the VIIIth and XIth Centuries, the *Canon Law* was mix'd and confounded with the Papal Decrees, from St. *Clement* to *Siricius*; which till then had been unknown: This gave occaſion to a new Reform, or Body of the *Canon Law*; which is the Collection ſtill extant, under the Title of *The Concordance of the diſcording Canons*, made in 1151, by *Gratian*, a Benedictin Monk, from Texts of Scripture, Councils, and Sentiments of the Fathers, in the ſeveral Points of Eccleſiaſtical Polity. This Work he divided according to the Order of Matters,

not of Times and Councils, as had been done before: So that upon the Appearance of this, all the antient Collections immediately ſunk. It is divided into three Parts: the firſt into 108 Diſtinctions; the ſecond into 36 Cauſes, and the third into five diſtinct Parts: The ſecond Part of the *Canon Law*, conſiſts of the Decrees of the Popes, from 1150, to Pope *Gregory* IX. in 1229. In 1297, Pope *Boniface* continu'd the Papal Decrees as far as his Time: This Part the *French* make particular Exception to, by reaſon of that Pope's Differences with their K. *Philip* the Fair. To theſe, Pope *John* XXII. added the *Clementines*, or the five Books of the Conſtitutions of his Predeceſſor *Clement* V. And to all theſe were after added, 20 Conſtitutions of the ſaid Pope *John*, call'd the *Extravagants*; and ſome other Conſtitutions of his Succeſſors. All theſe compoſe the *Body*, or *Corpus of the Canon Law*; which, including the *Comments*, makes three Volumes in Folio; the Rule and Meaſure of Church Government: Indeed, with us, ſince the Reformation, the *Canon Law* has been much abridg'd and reſtrain'd; only ſo much of it obtaining, as is conſiſtent with the Common and Statute Laws of the Realm, and the Doctrine of the Eſtabliſh'd Church. See COMMON LAW, STATUTE, *&c.*

CANONIZATION, a Declaration of the Pope, whereby, after a great deal of Solemnity, he enters into the Liſt of Saints, ſome Perſon who has liv'd an exemplary Life, and ſuppos'd to have wrought Miracles. See SAINT, and MIRACLES.

F. *Mabillon* obſerves, that the Term *Canonization* is not of ſo much Antiquity as the Thing: The Word being never met with before the XIIth Century; tho St. *Uldric*, Biſhop of *Ausburg*, was *canoniz'd* in 983. *Du Cange* adds, that *Canonization* was, at firſt, no more than a bare Order of the Pope, whereby thoſe who had diſtinguiſh'd themſelves by their Piety, *&c.* were appointed to be inſerted in the *Canon* of the Maſs. *Mabillon* diſtinguiſhes two Kinds of *Canonization*; a General, and Particular: The firſt made by a General Council, or a Pope; the ſecond, by a Biſhop, a particular Church, or a particular Council: And there are Inſtances likewiſe of *Canonizations*, at leaſt of ſomething very like them, by Abbots. At firſt, only Martyrs were *canoniz'd*; by degrees they came to Confeſſors. See MARTYR, *&c.*

*Canonization* antiently conſiſted in inſerting the Saint's Name in the Sacred *Dyptiques*, or *Canon* of Saints; in appointing a proper Office for invoking him, and erecting Churches under his Invocation, with Altars for Maſs to be celebrated on; taking up the Body from the Place of its firſt Burial, and the like Ceremonies: By degrees, other Ceremonies were added; Proceſſions made, with the Saint's Image carry'd in triumph; the Day of his Death declar'd a Feaſt. And to render the Thing ſtill more ſolemn, *Honorius* III. in 1225, added ſeveral Days Indulgence.

'Tis a great Diſpute among the Learned, when the Right of *Canonization*, which 'tis own'd was antiently common to Ordinaries, eſpecially Metropolitans and Princes, with the Pope, became firſt peculiar to the Pope: Some ſay, *Alexander* III. made this Reſerve to the Holy See. The Jeſuits of *Antwerp*, in their *Propylæum*, ſay, 'twas not eſtabliſh'd till two or three Ages ago; and then by a mere Cuſtom, which paſs'd tacitly into a Law; which appears not to have been generally receiv'd in the Xth and XIth Centuries. This, however, is pretty certain, that it was generally allow'd before Pope *Alexander* III. the Archbiſhop of *Vienne* in *France*, and his Suffragans, acknowledge it in an authentic manner in the Year 1231, by a Letter written to *Gregory* IX. deſiring him to canonize *Stephen*, Biſhop of *Die*, who dy'd in 1208. *Quia nemo*, ſay they, *quantalibet Meritorum prerogativa polleat, ab Eccleſia Dei pro ſancto habendus, aut venerandus eſt, niſi prius per ſedem Apoſtolicam ejus ſanctitas fuerit approbata.* The Term *Canonization* takes its riſe from the Cuſtom of inſerting the Names of the Saints in the Canon of the Maſs, as aboveſaid, before there were any Martyrologies in the Church. See MARTYROLOGY.

CANTALIVERS, in Building, Pieces of Wood fram'd into the Front, or other Sides of a Houſe, to ſuſtain the Moulding and Eves over it: Theſe ſeem, in effect, to be the ſame with Modillions, except that the former are plain, and the latter carv'd. They are both a kind of Cartouſes, ſet at equal Diſtances under the Corona of the Cornice of a Building. See MODILLION; ſee alſo CORNICE, and CORONA.

CANTALIVER-*Cornice*, is a *Cornice* with *Cantalivers* or Modillions under it; ſee CANTALIVERS.

CANTATA, in Muſick, a Song, or Compoſition, intermix'd with Recitatives, little Airs, and different Motions: ordinarily intended for a ſingle Voice, with a thorough Baſs; ſometimes for two Violins, or other Inſtruments. See SONG.

The *Cantata* paſſed from *Italy* into *France*, and thence to us: It has ſomething in it extremely fantaſtical and capricious, and ſeems only to pleaſe by its Novelty. The Word is *Italian*, where it ſignifies the ſame thing.

CANTHARIDES, in Medicine, a Drug much us'd for the raiſing of Bliſters. See BLISTER. *Cantharides* are the Principal of the Tribe of Epiſpaſticks, or Veſicatories. See EPISPASTIC, *&c.*

*Cantharides* are a kind of venomous Inſects, with Feet and Wings, like little Flies; hence alſo call'd *Spaniſh Flies*. They are form'd of a kind of little Worms, hatch'd on Wheat, the Leaves of the Poplar, *&c.* There are various Kinds of *Cantharides*: the beſt are thoſe which appear with different Colours, having yellow Lines running acroſs their Wings; thick, and freſh. They are kill'd by laying them over a very ſtrong Vinegar, which is made to boil for that purpoſe; after which they are dry'd, and may be preſerv'd two Years. *Cantharides* are very ſharp and corroſive, abounding with a ſubtile, cauſtick, volatile Salt; whereby they become exceedingly injurious to the Bladder, ſo as to ulcerate it, even when apply'd externally, if ſuffer'd to lye on too long. They are much commended in Fevers; as they raiſe and ſtrengthen a low trembling Pulſe, give Relief in delirious Ravings, ſoporiferous Stupors, Loſs of Reaſon, *&c.* (the common Symptoms of high and dangerous Fevers) reduce continual Fevers to regular and diſtinct Remiſſions; and ſo make way for the Bark: cleanſe and open the obſtructed Glands, and Lymphaticks; bring on critical Sweats, *&c.* Dr. *Morgan* accounts for theſe Effects of *Cantharides* thus: 'The ſubtile and volatile pungent 'Parts of which the *Cantharides* conſiſt, being carry'd in'to the Blood, and paſſing with the Lymph or Serum into 'the glandular Pipes, act there by diſſolving, attenuating, 'and rarifying the viſcid Coheſions of the Lymph; and 'by ſtimulating the nervous Coats of the Veſſels throw off 'their ſtagnant Viſcidities, and thus reſtore the Circulation 'and free Drain of Lymph from the Arteries to the Veins; 'cleanſe the Expurgatory Glands, and bring on critical 'Sweats, and Urines. Thus, the extremely ſubtile, ac'tive, and pungent volatile Salts, deriv'd from the *Cantha'rides*, purge the Glands and Lymphaticks univerſally; 'much after the ſame manner as common Catharticks do 'the Guts.' *Philoſop. Princip. of Medicine*, p. 304.

*Cantharides* are ſeldom, if ever, to be us'd internally: In the *Philoſoph. Tranſact.* indeed, we have Inſtances of their internal Application, and that with ſucceſs, by Mr. *Yonge*, in Dropſical and other Caſes; ſometimes mix'd with Camphor, and ſometimes without; only well waſh'd down with large Draughts of Poſſet, Ptiſan, Emulſions, or the like. The form wherein he tells us he uſes to adminiſter this fiery Inſect, is that of a ſoft Pill, or Bolus, compos'd of *three Cantharides præpar. Troch. e Myrrha* ʒſs. *Sem. Amei.* gr. vi. *Rob. Cynosb.* q. ſ. This, in ſtubborn Suppreſſions of the *Menſes* and *Lochia*, in difficult Childbirth, and Retention of the *Secundine*, he finds does Wonders: He adds, that the Heat or Pain it occaſions in the Neck of the Bladder, is much ſhort of what he has an hundred times ſeen, and ſometimes felt, from the Application of an Epiſpaſtick to the Back. But their principal uſe is in Veſicatories, to raiſe Bliſters on the Skin; and by that means to turn off and diſcharge ſome Flux of ill Humours. See VESICATORY.

*Cantharides* take their Name from *Cantharus*, an Animal, otherwiſe call'd *Scarabæus venenoſus*. *Cantharides* are ſometimes apply'd to the Temples for the Tooth-ach: The Farriers uſe them in ſeveral Diſeaſes of Horſes. They muſt be choſen new, dry, and whole: they won't keep above two Years, without mouldering into a Duſt, of no uſe.

CANTHUS, in Anatomy, the Corner, or Angle of the Eye; ſee EYE. That Corner next the Noſe, is called the *great*, *inner*, and *domeſtick Canthus*; and by ſome Phyſicians the *Fountain*: The other, towards the Temples, is call'd the *little*, or *external Canthus*. *Du Laurens* derives the Word from the *Greek* κνηθᾶσθαι, to itch.

CANTHUS, in Chymiſtry, the Lip of a Veſſel; or that Part of the Mouth of a Veſſel, which is a little hollow'd, or depreſs'd, for the eaſy pouring off a Liquor: Hence to pour by Decantation, is to pour thro that place. See DECANTATION.

CANTON, a Quarter of a City, or Country, conſider'd as ſeparated and detach'd from the reſt of that City, *&c.* Hence the *Swiſs Cantons*, or the Diviſions of *Switzerland*, thirteen in number; each a Republick in it ſelf, and together forming the *Helvetic* Body. The Word, probably, comes from the Italian *Canton*, a large Part of an angular Stone.

CANTON, in Heraldry, one of the nine honourable Ordinaries. See ORDINARY. The *Canton* is a ſquare Portion of the Eſcutcheon parted from the reſt: It has not any fix'd Proportion; tho regularly it ſhould be leſs than a Quarter: 'tis often only a ninth Part, and us'd as an Addition, or Difference, frequently, to expreſs Baſtardy. 'Tis ſometimes plac'd at the right Corner, and ſometimes at the left; in which latter Caſe, it is call'd a *Canton ſiniſter*. Its form is expreſs'd in the

the adjoining Figure: Thus, he bears *Ermin, a Canton Argent, charged with a Cheveron Gules.*

CANTON, is alſo us'd for the Spaces left between the Branches of a Croſs or Saltier.

CANTONED is us'd in Architecture, when the Corner of a Building is adorn'd with a Pilaſter, an angular Column, ruſtick Quoins, or any thing that projects beyond the naked of the Wall.

CANTONED, in Heraldry, is when the four *Cantons*, or Spaces round a Croſs, or Saltier, are filled up with any Pieces. He bears *Gules, a Croſs Argent, canton'd with four Scollop Shells.* The Word is alſo us'd when there are little Pieces in the *Cantons*, or Spaces of any principal Figure of an Eſcutcheon.

CANVAS, or CANEVAS, properly, a coarſe Cloth, uſually very open, and wove regularly in little Squares; us'd for the Ground of Tapeſtry Work, Painting, *&c.* Hence *Canvas* is us'd, eſpecially among the *French*, for the Model, or firſt Words whereon an Air, or Piece of Muſick is compos'd, and given to a Poet to regulate and finiſh. The *Canvas* of a Song, is certain Notes of the Compoſer, which ſhew the Poet the Meaſure of Verſes he is to make. Thus, *Du Lot* ſays, he has *Canvas* for ten Sonnets againſt the Muſes.

CANULA, or CANNULA, in Chirurgery, a little Tube, or Pipe, which the Chirurgeons leave in Wounds and Ulcers, that they dare not, or chuſe not to heal up; becauſe ſtill ſuppurating. The *Canula* is of Gold, Silver, or Lead; and is perforated, that the *Pus* entering within it, may fall upon a Sponge, dipp'd in Spirit of Wine, and plac'd at the Orifice, to keep the Ulcer warm, and to prevent the external Air from entering: Some of theſe *Cannulæ* have Rings, whereby to keep them faſt in the Wound; and others have Holes with Ribbons thro 'em, to bind 'em down. Some are round, others oval, others crooked.

There is a particular kind of theſe *Cannulæ*, form'd taperwiſe, with a Skrew faſten'd to one End, in manner of a Cock: Its uſe is, for the Diſcharge of the Water out of the Abdomen, after Tapping, in an *Aſcites*, or Dropſy. To this End it is inſerted into the Body, thro a Hole near the Navel; made with a pointed Inſtrument, and ſometimes a Punch; and is faſten'd in its Place by a Bandage, and guarded from any Injury of the Clothes, *&c.* by a Caſe, or Cover. It has this advantage over the common Tapping; that by means thereof, the Water is drawn out when, and in what meaſure the Patient pleaſes. See TAPPING, and DROPSY.

There are likewiſe a kind of *Cannulæ* for the Application of actual Cauteries; they are made very ſhallow, and are, in effect, little more than Hoops; thro the Aperture whereof, the actual Cautery is convey'd; which, by this means, is kept from damaging the adjacent Parts. See CAUTERY, and CAUSTIC.

CAP, a Garment ſerving to cover the Head, and made nearly of the Figure thereof: The Æra of Caps and Hats, is referr'd to the Year 1449; the firſt ſeen in theſe Parts of the World being at the Entry of *Charles* VII. into *Rouen:* From that time they began, by little and little, to take place of the Hoods, or Chaperons, that had been us'd till then. M. *le Gendre*, indeed, goes further back; they began, ſays he, under *Charles* V. to let fall the Angles of the Hood upon the Shoulders, and to cover the Head with a Cap, or Bonnet: When this Cap was of Velvet, they call'd it *Mortier*; when of Wool, ſimply *Bonnet:* the firſt was lac'd, the latter had no Ornament beſides two Horns, rais'd a moderate Height, one of which ſerv'd in covering and uncovering. None but Kings, Princes, and Knights, were allow'd the Uſe of the Mortier. See MORTIER.

The *Cap* was the Head-dreſs of the Clergy and Graduates. *Paſquier* ſays, 'that it was antiently a part of the Hood wore by the People of the Robe; the Skirts whereof being cut off, as an Incumbrance, left the round *Cap* an eaſy commodious Cover for the Head; which round *Cap* being afterwards aſſum'd by the People, thoſe of the Gown chang'd it for a ſquare one, firſt invented by a *Frenchman*, call'd *Patrouillet:* He adds, that the giving of the *Cap* to the Students in the Univerſities, was to denote that they had acquir'd full Liberty, and were no longer ſubject to the Rod of their Superiors; in Imitation of the antient *Romans*, who gave a *Pileus*, or *Cap*, to their Slaves, in the Ceremony of making them free: whence the Proverb, *Vocare ſervos ad Pileum.* Hence, alſo, on Medals, the *Cap* is the Symbol of Liberty, whom they repreſent holding a *Cap* in her right Hand, by the Point.

The *Chineſe* have not the uſe of the *Hat*, like us; but wear a *Cap* of a peculiar Structure, which the Laws of Civility will not allow them to put off; 'tis different for the different Seaſons of the Year: That us'd in Summer, is in form of a Cone, ending at top in a Point. 'Tis made of a very beautiful kind of Mat, much valu'd in that Country, and lin'd with Sattin; to this is added, at top, a large Lock of red Silk, which falls all around as low as the Bottom: ſo that, in walking, the Silk fluctuating regularly on all Sides, makes a graceful Appearance: Sometimes, inſtead of Silk, they uſe a kind of bright red Hair, the Luſtre whereof no Weather effaces. In Winter they wear a Pluſh *Cap*, bord'er'd with Martlet's or Fox's Skin; the reſt like thoſe for the Summer. Nothing can be neater than theſe *Caps*; they are frequently ſold for eight or ten Crowns: but they are ſo ſhort that the Ears are expos'd. See TURBANS; ſee alſo HATS.

*Square*-CAP. The *Cap*, or *Bonnet*, is a Mark, or Ornament of certain Characters: Thus Churchmen, and the Members of Univerſities, Students in Law, Phyſick, *&c.* as well as Graduates, wear *ſquare Caps.* In moſt Univerſities, Doctors are diſtinguiſh'd by peculiar *Caps*, given them in aſſuming the Doctorate. *Wickliff* calls the Canons of his Time *Biſurcati*, from their *ſquare Caps. Paſquier* obſerves, that in his Time, the *Caps* wore by the Churchmen, *&c.* were call'd *ſquare Caps*; tho, in effect, they were round, yellow *Caps.*

The *Cap* is ſometimes alſo us'd as a Mark of Infamy: In *Italy*, the *Jews* are diſtinguiſh'd by a *yellow Cap*; at *Lucca* by an *orange* one. In *France*, thoſe who had been Bankrupts, were oblig'd ever after to wear a *green Cap*; to prevent People from being impos'd on in any future Commerce. By ſeveral Arrets in 1584, 1622, 1628, 1688, it was decreed, that if they were at any time found without their *green Cap*, their Protection ſhould be null, and their Creditors impower'd to caſt them into Priſon: but the Thing is not now executed. See BANKRUPT.

CAP, in a Ship, is a ſquare Piece of Timber, put over the Head, or upper End of a Maſt, having a round Hole to receive the Maſt. By theſe *Caps*, the Top-maſts, and Top-gallant-maſts, are kept ſteady and firm in the Treſſel-trees, where their Feet ſtand; as thoſe of the lower Maſts do in the Steps. See MAST.

*Prieſt's*-CAP, in Fortification. See BONNET *à Pretre.*

CAPACITY, in a Logical Senſe, an Aptitude, Faculty, or Diſpoſition to retain, or hold any thing. Our Law allows the King two *Capacities*, a *Natural*, and a *Political*; in the firſt he may purchaſe Lands to him and his Heirs; in the latter to him and his Succeſſors. The Clergy have the like.

CAPARASON, or CAPARISON, the Covering, or Clothing laid over an Horſe; eſpecially a Sumpter, or Horſe of State. Antiently, *Caparaſons* were a kind of Iron Armour, wherewith Horſes were cover'd in Battel. The Word is *Spaniſh*, being an Augmentative of *Cape*, *Caput*, Head.

CAPE, or *Promontory*, in Geography, a *Head-Land*; or a piece of Land running out beyond the reſt, into the Sea. *Sicily* was call'd by the Antients *Trinacria*, by reaſon of its three *Capes*, or Promontories; repreſented on Medals, by three Mens Legs join'd together at the head of the Thigh, and bent in the Knee; which pretty nearly reſembles the Triangular Figure of that Iſland. See PROMONTORY, CHERSONESUS, *&c.*

CAPE, in Law, a Writ touching Plea of Lands and Tenements; ſo term'd, (as moſt other Writs are) from the Word which carries the chief Intention or End of it. The Writ is divided into *Cape Magnum*, and *Cape Parvum*; which in their Effect or Conſequence are alike, as to the taking hold of Things immoveable: in the following Circumſtances they differ; 1ſt, In that the *Cape Magnum*, or *grand Cape* lies before; and the *Cape Parvum*, or *petit Cape*, after. *Cape Magnum* ſummons the Defendant to anſwer to the Default; and beſides to the Demandant: *Cape Parvum* only to the Default. *Ingham* ſays, 'tis call'd *petit Cape*, not becauſe of ſmall force; but becauſe contain'd in few Words.

*Cape Magnum* is thus defin'd in the old *Nat. Brev.* 'Where a Man hath brought a *Precipe quod reddet* of a 'Thing that touches Plea of Land, and the Tenant makes 'default at the Day to him given in the original Writ; 'then this Writ ſhall be for the King to take the Land 'into his Hands: and if the Tenant come not at the Day 'given him by the Writ, he loſes his Land.'

*Cape Parvum*, or *petit Cape* is thus defin'd, *Ibid.* 'Where 'the Tenant is ſummon'd in Plea of Land, and comes at 'the Summons, and his Appearance is recorded; and at 'the Day given him, prays the View; and having it 'granted, makes default: then ſhall this Writ iſſue for the 'King, *&c.*

CAPE *ad Valentiam*, a Species of *Cape Magnum*, ſo call'd from the End to which it tends: It is thus deſcrib'd, 'Where I am impleaded of Lands, and I vouch to warrant 'another, againſt whom the Summons *ad Warrantandum* 'hath been awarded, and the Sheriff comes not at the Day 'given; then, if the Defendant recover againſt me, I ſhall 'have a Writ againſt the Vouchee; and ſhall recover ſo 'much in value of the Lands of the Vouchee, if he has 'ſo much: otherwiſe, I ſhall have Execution of ſuch 'Lands and Tenements as deſcend to him in Fee; or, if 'he purchaſe afterwards, I ſhall have a Re-ſummons

'againſt him: And if he can ſay nothing, I ſhall recover 'the Value.'

CAPELLA, in Aſtronomy, a Star of the firſt Magnitude in the preceding Shoulder of *Auriga*. In *Ptolemy*'s and *Tycho*'s Catalogues, 'tis the third in order of that Conſtellation. In the *Britannic Catalogue*, the fourteenth: Its Longitude is 17°, 31', 41"; its Latitude 22°, 51', 47". See AURIGA.

CAPER. See CAPRE.

CAPHAR, a Toll or Duty, impos'd by the *Turks* on the Chriſtian Merchants, who carry or ſend Merchandiſes from *Aleppo* to *Jeruſalem*. The Toll of *Caphar* was firſt ſettled by the Chriſtians themſelves when Maſters of the Holy Land, for the Support of Troops and Forces, poſted in the more difficult paſſes, to watch the *Arabs*, and prevent their Pillages. But the *Turks*, who have continu'd, and even rais'd the Toll, abuſe it; exacting arbitrary Sums of the Chriſtian Merchants and Travellers, on pretence of guarding them from the *Arabs*; with whom they yet frequently keep an Underſtanding, and even favour their Robberies.

CAPHORA. See CAMPHOR.

CAPI-AGA, or CAPI-AGASSI, a *Turkiſh* Officer. The *Capi-Aga* is Governor of the Gates of the Seraglio; or grand Maſter of the Seraglio: This is the firſt Dignity among the white Eunuchs. The *Capi-Aga* is always near the Perſon of the Grand Signior: He introduces Ambaſſadors to their Audience: No body enters, or goes out of the Grand Signior's Apartment but by his means. His Office gives him the Privilege of wearing the Turban in the Seraglio, and to go every where on Horſeback. He accompanies the Grand Signior to the Apartment of the Sultana's, but ſtops at the Door without entering. His Appointment is very moderate; the Grand Signior bears the Expence of his Table, and allows him at the Rate of about 60 *French* Livres *per* Day: But his Office brings him in abundance of Preſents; no Affair of Conſequence coming to the Emperor's Knowledge, without paſſing thro his Hand. The *Capi-Aga* cannot be *Baſhaw* when he quits his Poſt. See AGA.

CAPIAS, a Writ, of two ſorts; one before Judgment, call'd *Capias ad Reſpondendum*; in an Action Perſonal, when the Sheriff, upon the firſt Writ of Diſtreſs, returns, *Nihil habeat in balliva noſtra*. The other is a Writ of Execution after Judgment, which is alſo of various Kinds; as, *Capias ad ſatisfaciendum*, *Capias pro Fine*, *Capias Utlagatum*, after Judgment, &c.

CAPIAS *ad ſatisfaciendum*, is a Writ of Execution after Judgment; lying where a Man recovers in an Action Perſonal, as for Debt, Damage, &c. in which Caſes, this Writ iſſues to the Sheriff, commanding him to take the Body of him againſt whom the Debt is recover'd; who is to be kept in Priſon till he make Satisfaction.

CAPIAS *conductos ad proficiſcendum*, an original Writ, which lies, by the Common Law, againſt any Soldier who has covenanted to ſerve the King in War, and appears not at the Time and Place appointed. It is directed to two of the King's Serjeants at Arms, to arreſt and take him where-ever he may be found; and to bring him *Coram Concilio noſtro*, with a Clauſe of Aſſiſtance.

CAPIAS *pro Fine*, is where one being by Judgment fin'd to the King, upon ſome Offence againſt a Statute, does not diſcharge it according to the Judgment: By this Writ, therefore, his Body is to be taken, and committed to Priſon till he pay the Fine.

CAPIAS *Utlagatum*, a Writ which lies againſt one outlaw'd, upon any Action, Perſonal or Criminal; by which the Sheriff apprehends the Party outlaw'd, for not appearing on the Exigent, and keeps him in ſafe Cuſtody till the Day of Return; when he preſents him to the Court, to be there further order'd for his Contempt. See OUTLAWRY.

CAPIGI, a Porter, or Doorkeeper of the *Turkiſh* Seraglio. There are about 500 *Capigis*, or Porters in the Seraglio, divided into two Companies; one conſiſting of 300, under a Chief called *Capigi-Baſſa*: who has a Stipend of three Ducats *per* Day: The other conſiſts of 200, diſtinguiſh'd by the Name of *Cuccicapigi*; and their Chief *Cuccicapigi-Baſſa*, who has two Ducats. The *Capigis* have from ſeven to fifteen Aſpers *per* Day; ſome more, others leſs. Their Buſineſs is to aſſiſt the Janizaries in the Guard of the firſt and ſecond Gates of the Seraglio: Sometimes all together; as when the Turk holds a General Council, receives an Embaſſador, or goes to the Moſque: and ſometimes only in part; being rang'd on either ſide, to prevent People entering with Arms, any Tumults being made, &c. The Word, in its Original, ſignifies Gate. See SERAGLIO.

CAPILLAMENT, literally ſignifies *Hair*; being form'd of the Latin *Capillus*, of *Caput*; q. d. *Hair of the Head*. Hence the Word is figuratively apply'd to ſeveral things, which, on account of their Length and Fineneſs, reſemble Hairs: As,

CAPILLAMENTS *of the Nerves*, are the fine Fibres, or Filaments, whereof the Nerves are compos'd. 'Is not 'Viſion perform'd chiefly by the Vibrations of this Me-'dium, excited in the Bottom of the Eye by the Rays of 'Light; and propagated thro the ſolid, pellucid, and uni-'form *Capillaments* of the Optic Nerves, to the *Senſorium*?' *Newt. Opt.* p. 328. See FIBRE, and NERVE.

CAPILLAMENTS, in Botany, more uſually call'd *Stamina*, are thoſe ſmall Threads, or Hairs, which grow up in the Middle of the Flower; and are headed with little Knobs, call'd *Apices*. See STAMINA, and APICES.

CAPILLARY, of the Latin *Capillus*, a Hair; is apply'd to ſeveral Things, to intimate their exceeding Smallneſs, Fineneſs, &c. reſembling that of a Hair: As *Capillary* Veſſels, *Capillary* Fracture, &c.

CAPILLARY *Veſſels*, in Anatomy, are the leaſt, minuteſt, inſenſible Ramifications of the Veins and Arteries; which, when cut, or broke, yield but very little Blood. See VEIN, and ARTERY. The *Capillary* Veſſels ſhou'd be conceiv'd as vaſtly finer than Hairs. See INOSCULATION, CIRCULATION, &c.

CAPILLARY, or CAPILLACEOUS *Plants*, are a Species of Plants, thus denominated from their Form, and manner of growing. The *Capillaries* have no principal Stalk, or Stem, with Branches, &c. ſhooting out of the ſame; but grow from the Ground, like Hairs from the Head: They bear their Seed in little Tufts, or Prominencies, on the backſide of their Leaves. The principal of theſe, is the *Capillus Veneris*, or *Adianthum*; from which the reſt take their Name. See PLANT.

The *Capillaries* are diſtinguiſh'd into thoſe with an undivided Leaf, as the *Hæmionitis*, and the *Phyllitis*; or with a ſingly divided Leaf: and theſe have the Leaf either cut, or jagged in, but not divided into *Pinnæ*, clear home to the main Rib; as, *Polipodium*, *Lonchitis*, *Scolopendria*, *Adianthum*, *Aeroſtichon Thal.* Or elſe divided quite home to the Rib, and hanging like *Pinnæ*; as the *Chama felix Marina*, and the *Trichomanes*: Others have the Leaf doubly divided, or at leaſt once ſubdivided, the firſt Diviſion being into Branches, and the ſecond into *Pinnæ*; as the *Hemionitis Multifida*, the *Filex Mas*, *Filex Paluſtris*, *Filex Saxatilis*. The *Adianthum album*, and *nigrum*, and others, have the Leaf trebly divided, or thrice ſubdivided; firſt into Branches, then into little Twigs, and after this into *Pinnæ*; theſe are, the *Felix Scandens* of *Braſil*, the *Felix Florida*, or *Oſmunda Regalis*; the *Felix mas Ramoſa*, the *Felix Fœminæ Vulgaris*, the *Adianthum album Floridum*, and the *Dryopteſis nigra*.

All the *Capillaries* are reputed of uſe in Medicine, eſpecially in the making of Syrops; to which, wonderful Virtues are attributed. But, in effect, only the *Capillary* of *Montpellier*, *Adianthum album Monſpelienſe*, and that of *Canada*, *Adianthum album Canadenſe*, are regularly us'd for that Purpoſe: The reſt only ſerve to counterfeit 'em.

The Antients thought that the *Capillaries* were all without Seed; and ſome of the Moderns, particularly *Dodonæus*, have given into the Opinion. But *Bauhinus*, and other of the more accurate Obſervers, maintain they have all their Seed. *Cæſius* ſays, he has ſeen them with a Microſcope: Since him, Mr. *W. Cole* has obſerv'd 'em with ſtill more Curioſity; he tells us, the *Capſulæ*, or Seed Veſſels, are in ſome leſs by half than a ſmall grain of common Sand, in others much leſs; yet ſome of them contain about 100 Seeds. See SEED.

CAPILLARY *Tubes*, in Phyſicks, are little Pipes, whoſe Canals are the narroweſt poſſible; not ſuch, whoſe Diameters do not exceed that of a common *Hair*; for none ſuch can be made: The Diameter of *Capillary Tubes*, is a half, third, or fourth of a Line. See TUBE.

*The Aſcent of Water*, &c. *in* CAPILLARY *Tubes*, is a famous Phænomenon which has long embaraſs'd the Philoſophers: Let one End of a ſmall Tube, open at both Ends, be immerg'd in Water, and the Liquor within the Tube will riſe to ſome ſenſible Height above the external Surface: or, immerge two or more Tubes in the ſame Fluid, one of them a *Capillary* one, and the other conſiderably larger; the Water will aſcend conſiderably higher in the *Capillary Tube* than the other; and this in the reciprocal Ratio of the Diameters of the Tubes. This Effect, Authors have commonly imputed to the unequal Preſſure of the Air in unequal Tubes: The Air, ſay they, conſiſts of ramoſe, ſpongy Parts, intermingled and embaraſs'd among each other: now, a Column of ſuch Air being ſuppos'd perpendicularly incumbent on the Canal of a ſmall *Capillary Tube*; part of the Preſſure of the Column will be ſpent on the Sides, or Surface of the Tube; ſo that the Column will not act with its whole Weight on the ſubjacent Fluid, but will loſe a greater or leſs proportion of its Weight, as the Diameter of the Tube is the ſmaller. But this Solution is deſtroy'd, by the Experiment's ſucceeding *in Vacuo*, as well as in open Air.

Others, as Mr. *Hauksbee*, &c. have recourſe to the Attraction of the *Annuli* of the concave Surface of the Tube; to which Opinion the ingenious Dr. *Morgan* ſubſcribes: 'Part of the Gravity of the Water in the Tube, ſays that 'Author, being taken off, by the attractive Power of the 'internal concave Surface of the Glaſs; the Fluid within 'the Tube, by the external greater Weight or Preſſure, 'muſt aſcend ſo far, as to compenſate for this Diminution 'of Gravity by the Attraction of the Glaſs. He adds, 'that as the Power of Attraction in Tubes, is in a recipro-'cal Ratio of the Diameters; by leſſening the ſaid Dia-'meter, or by ſuppoſing the Tubes ſtill ſmaller and ſmaller, 'Water, or any other Fluid, may be thus rais'd to any aſ-'ſignable Height.' *Phil. Princ. of Medicine*, p. 88, *&c.*

But this Author is ſomewhat overſeen: For ſince in every *Capillary Tube*, the Height to which the Water will ſpontaneouſly aſcend, is reciprocally as the Diameter of the Tube; it follows, that the Surface containing the ſuſpended Water is always a given Quantity. But the Column of Water ſuſpended in every Tube, is as the Diameter of the Tube: Therefore, if the Attraction of the containing Surface be the Cauſe of the Water's Suſpenſion; it will follow, that equal Cauſes produce unequal Effects; which is abſurd. And, again, not only his Solution, but his Phænomenon alſo is ſtretch'd too far: For 'tis not in all Fluids the Phænomenon obtains; but in Mercury the very contrary is found: the Fluid in a Tube, not riſing ſo high as the Level of that in the Veſſel; and the Defect being found the greater as the Tube is ſmaller.

We muſt, therefore, recur to Dr. *Jurin*'s Solution of this Phænomenon, which is well ſupported by Experiments: 'The Suſpenſion of the Water, on that Gentleman's Syſtem, 'is owing to the Attraction of the Periphery of the concave 'Surface of the Tube, to which the upper Surface of the 'Water is contiguous and adheres:' This being the only Part of the Tube, from which the Water muſt recede upon its ſubſiding; and conſequently the only one which, by the Force of its Coheſion and Attraction, oppoſes the Deſcent of the Water. This he ſhews to be a Cauſe proportional to the Effect; in regard, the Periphery, and the ſuſpended Column, are both in the ſame Proportion as the Diameter of the Tube. The Suſpenſion thus accounted for, the ſeemingly ſpontaneous Aſcent will eaſily be ſolv'd: For ſince the Water that enters a *Capillary Tube* as ſoon as its Orifice is dipp'd therein, has its Gravity taken off by the Attraction of the Periphery, with which its upper Surface is in Contact, it muſt neceſſarily riſe higher; partly by the Preſſure of the ſtagnant Water, and partly by the Attraction of the Periphery, immediately above that which is already contiguous to it. See ASCENT.

CAPILLARY *Fracture*. See CAPILLATION.

CAPILLATION, or *Capillary Fracture*, according to ſome Writers, is a Fracture in the Skull, ſo ſmall that it can ſcarce be perceiv'd; but yet often proves mortal. See FISSURE.

CAPISTRUM, in Surgery, a Bandage for the Head. See BANDAGE.

CAPITAL, of the Latin *Caput*, is us'd on various Occaſions, to expreſs the Relation of a *Head*, Chief, or Principal: Thus,

CAPITAL *City*, intimates the principal City of a Kingdom, Province, or State: as *London* is the *Capital*, or *Capital City* of *England*; *Moſcow* of *Ruſſia*; *Conſtantinople* of the *Ottoman* Empire; *Rouen* of *Normandy*, &c. See METROPOLIS, and CITY.

CAPITAL, or CAPITAL *Stock*, in Commerce, is the Fund, or Stock of a trading Company or Corporation; or the Sum of Money they jointly furniſh, or contribute to be employ'd in Trade. See STOCK, and FUND. The *Capital* of the *Eaſt India* Company, at its firſt Erection, was 36989 *l.* Sterling, which was afterwards doubled; and is now computed at 739782 *l.* 500 Pounds in the *Capital Stock* of the Company, entitles the Perſon to a Vote in the General Courts thereof. The Power given by Parliament to the *South Sea* Company, to increaſe their *Capital*, was the Source of all the Miſchief which enſu'd. See COMPANY.

CAPITAL *Crime*, is that which ſubjects the Criminal to a *Capital* Puniſhment; *i.e.* to the Loſs of his Head, or his Life. See CRIME, and PUNISHMENT.

CAPITAL *Medicines*, in Pharmacy, are the great, or principal Preparations of the Shops; remarkable for the number of Ingredients, extraordinary Virtues, *&c.* ſuch as *Venice Treacle*, *Mithridate*, &c. See MITHRIDATE, *&c.*

CAPITAL *Lees*, are the ſtrong Lees made by the Soap-boilers, from Pot-Aſhes. See SOAP. They are alſo us'd in Surgery, as a Cauſtic; and to make the *Lapis Infernalis*.

CAPITAL *Letters*. See CAPITALS.

CAPITAL, in Architecture, the uppermoſt Part of a Column or Pilaſter, ſerving as the *Head* or Crowning thereof; plac'd immediately over the Shaft, and under the Entablature. See SHAFT, and ENTABLATURE.

CAPITAL *of a Column*, properly, is that whoſe Plan is round. See COLUMN.

CAPITAL *of a Pilaſter*, is that whoſe Plan is ſquare; or at leaſt rectilineal. See PILASTER.

The *Capital* is a principal, and eſſential Part of an Order, of Column or Pilaſter: It is made different in the different Orders; and is that which chiefly diſtinguiſhes and characterizes the Orders. See ORDER.

*The Tuſcan* CAPITAL, is the moſt ſimple and unadorn'd: Its Members, or Parts, are but three, *viz.* an *Abacus*; under this an *Ovolo*, or quarter Round; and under that, a *Neck*, or *Colarino*. The Neck terminates in an *Aſtragal*, or Fillet, belonging to the *Fuſt*, or Shaft.

The Character of this *Capital*, whereby it is diſtinguiſh'd from the *Doric*, &c. is that the *Abacus* is ſquare, and quite plain, and has no Ogee or other Moulding; and that there are no Annulets under the *Ovolo*. Indeed, Authors vary a little as to the Character of the *Tuſcan Capital*. *Vignola* gives the *Abacus* a Fillet, in lieu of an *Ovolo*. *Vitruvius* and *Scamozzi*, add an *Aſtragal* and Fillet, between the *Ovolo* and Neck: *Serlio* only a Fillet; *Philander* rounds the Corners of the *Abacus*. In the *Trajan* Column there is no Neck; but the *Aſtragal* of the Shaft, is confounded with that of the *Capital*. The Height of this *Capital* is the ſame with that of the Baſe, *viz.* one Module, or Semidiameter. Its Projecture is equal to that of the Cincture at the Bottom of the Column; *viz.* $\frac{8}{5}$ of the Module. See TUSCAN.

*The Doric* CAPITAL, beſide an Abacus, an Ovolo, and a Neck, in common with the *Tuſcan*, has three Annulets, or little ſquare Members, underneath the Ovolo, in lieu of the Aſtragal in the *Tuſcan*; and a Talon, Cima, or Ogee, with a Fillet over the Abacus. Authors vary, too, as to the Characters of this *Capital*: *Palladio*, *Vignola*, &c. put Roſes under the Corners of the *Abacus*, and in the Neck of the *Capital*. The Height of this *Capital*, *Vitruvius*, &c. makes one Module; and its Projecture 37 Minutes and an half. See DORIC.

*The Ionic* CAPITAL is compos'd of three Parts; an Abacus, conſiſting of an Ogee and a Fillet; under this a Rind, which produces the Volutes, or Scrolls, the moſt eſſential Part of this *Capital*; and at the Bottom, an Ovolo, or quarter Round: The Aſtragal, under that Ovolo, belongs to the Shaft; the middle Part is called a Rind, or Bark, from its ſuppos'd Reſemblance to the Bark of a Tree laid on a Vaſe, whoſe Brim is repreſented by the Ovolo; and ſeeming to have been ſhrunk up in drying, and to have twiſted into the Volutes. See VOLUTE, and SCROLL. The Ovolo is adorn'd with *Eggs*, as they are ſometimes call'd, from their oval Form: The *Greeks* call it the *Echinos*. See ECHINOS, EGG, *&c.* The Height of this *Capital*, M. *Perrault* makes 18 Minutes; its Projecture one Module, ſeven Tenths.

The Differences in the Character of this *Capital*, flow moſtly from the different Managements of the Volutes; and conſiſt in this: That in the Antique, and ſome of the Modern, the Eye of the Volute anſwers not the Aſtragal of the Top of the Shaft, as *Vitruvius*, and moſt of the Moderns make it: That the Face of the Volutes, which uſually makes a Flat, is ſometimes curv'd and convex'd, ſo as the Circumvolutions go advancing outwards; as is frequent in the Antique. That the Border, or Rim of the Scroll in the Volute, is ſometimes not only a plain Sweep, as ordinarily; but the Sweep is accompany'd with a Fillet. That the Leaves which inveſt the Balluſter, are ſometimes long and narrow; ſometimes larger and broader: That the two Faces of the Volutes, are ſometimes join'd at the outer Corner; the Balluſters meeting in the inner, to make a Regularity between the Faces on the Front and Back of the Building, with thoſe of the Sides. That among the Moderns, ſince *Scamozzi*, the *Ionic Capital* has been alter'd, and the four Faces made alike; by taking away the Balluſter, and hollowing all the Faces of the Volutes inwards, as in the *Compoſite*. That *Scamozzi*, and ſome others, make the Volutes to ſpring out from the Ovolo, as from a Vaſe; after the manner of the modern *Compoſite*: whereas, in the Antique, the Bark paſſes between the Ovolo and Abacus, quite ſtraight, only twiſting at its Extremities to form the Volute. And laſtly, that of late Years, the Sculptors have added a kind of little Feſtoons, ſpringing from the Flower, whoſe Stalk lies on the firſt Circumvolution of the Volute; and ſuppos'd to repreſent the Locks of Hair, hanging down on both ſides of the Face. See IONIC.

*The Corinthian* CAPITAL is much the richeſt: It has no Ovolo; and its Abacus is very different from thoſe of the *Tuſcan*, *Doric*, or *Ionic*; as having its Faces circular, hollow'd inward, with a Roſe in the middle of each Sweep. Inſtead of an Ovolo, and Annulets, here is only a Brim of a Vaſe; and the Neck is much lengthen'd and enrich'd with a double Row, of eight Leaves in each, bending their Heads downwards; and between them, ſmall Stalks ariſing: whence ſpring the Volutes; which don't reſemble thoſe of the *Ionic Capital*; and which, inſtead of the four in the

*Ionic*, are here 16; four on each ſide, under the four Horns of the Abacus, where the Volutes meet in a ſmall Leaf, which turns back towards the Corner of the Abacus. The Leaves are divided, each making three Ranges of leſſer Leaves, whereof they are compos'd; each leſſer Leaf is, again, generally parted into five, call'd *Olive Leaves*; ſometimes into three, and call'd *Laurel Leaves*. The middle Leaf, which bends down, is parted into Eleven. In the Middle, over the Leaves, is a Flower, ſhooting out between the Stems and Volutes, like the Roſe in the Abacus. The Height of this *Capital* is two Modules $\frac{1}{3}$, and its Projecture one $\frac{2}{3}$.

The Differences in the Character of this *Capital*, are, that in *Vitruvius*, &c. the Leaves are in form of the *Acanthus*; whereas in the Antique, they are more ordinarily Olive Leaves: That their Leaves are uſually unequal, the undermoſt being made commonly talleſt, ſometimes ſhorteſt; tho ſometimes they are all equal. Sometimes the Leaves are raffled; ſometimes quite plain: The firſt Row generally belly out towards the Bottom, but are ſometimes ſtraight: ſometimes the Horns of the Abacus are ſharp at the Corners, which ſeems agreeable to the Rules of *Vitruvius*; but they are more commonly cut off. There is ſome difference too in the Form and Size of the Roſe. Again, the Volutes are ſometimes join'd to each other; ſometimes wholly ſeparate: Sometimes the Spires of the Volutes continue twiſting even to the End in the ſame Courſe; and ſometimes turn back again near the Centre, in the form of an S. See CORINTHIAN.

*The Compoſite* CAPITAL, is ſo called, becauſe compos'd of Members borrow'd from the *Capitals* of other Columns. It takes a quarter Round, or Ovolo, from the *Doric*; an Aſtragal under this, together with Volutes, or Scrolls, from the *Ionic*; and a double Row of Leaves from the *Corinthian*, which it reſembles in moſt other things; conſiſting, generally, of the ſame Members and the ſame Proportions. In the Middle of the Abacus is a Flower; and under the Horns, Leaves which return upward; as in the *Corinthian*. Indeed, inſtead of Stalks in the *Corinthian*, the *Compoſite* has ſmall Flowers, lying cloſe to the Vaſe or Bell; twiſting round towards the middle of the Face of the *Capital*, and terminating in the Roſe. The Height of the *Compoſite Capital*, is two Modules $\frac{1}{3}$, and its Projecture one Module $\frac{2}{3}$, as in the *Corinthian*.

The Differences of the Character of this *Capital*, conſiſt in this; that the Volutes, which ordinarily deſcend, and touch the Leaves, are in ſome Works of the Antique ſeparated from them: That the Leaves, which are generally unequal in Height, the lower Rank being talleſt, are ſometimes equal: That the Volutes of the Moderns generally ſpring out of the Vaſe; whereas, in the Antique, they ordinarily run ſtraight the Length of the Abacus, over the Ovolo, without ſtriking into the Vaſe: That the Volutes, whoſe Thickneſs is contracted in the Middle, and enlarg'd above and below in the Antique, have their Sides parallel in the Works of the Moderns: And laſtly, that the Volutes, which have been hitherto, both by the Antients and Moderns, made as if ſolid, are now made much lighter and more airy; the Folds ſtanding hollow, and at a diſtance from each other. See COMPOSITE.

*For the Proportions of the ſeveral Members of the* Capitals *of Columns*, ſee COLUMN. See alſo *each Member* under its proper Head; as, ABACUS, ACANTHUS, VOLUTE, ECHINUS, &c.

Some Architects diſtinguiſh the *Tuſcan* and *Doric Capitals*, which have no Ornaments, by the Title of *Capitals of Mouldings*; and the three others, which have Leaves and Ornaments, they call *Capitals of Sculpture*.

*Angular* CAPITAL, is that which bears the Return of an Entablature, at the Corner of the Projecture of a Frontiſpiece.

CAPITAL *of a Balluſter*, is that Part which crowns the *Balluſter*; which ſometimes bears a Reſemblance to the *Capitals* of ſome Columns; particularly the *Ionic*. See BALUSTER.

CAPITAL *of a Triglyph*, is the Flat-band over the *Triglyph*; called by *Vitruvius Tænia*. See TRIGLYPH. 'Tis ſometimes alſo a *Triglyph* which does the Office of a *Capital* to a *Doric* Pilaſter.

CAPITAL *of a Niche*, is a kind of little Canopy over a ſhallow Niche, covering or crowning a Statue. See NICHE.

CAPITAL *of a Baſtion*, in Fortification, is a Line drawn from the Angle of the Polygon, to the Point of the Baſtion; or from the Point of the Baſtion to the Middle of the Gorge. The *Capitals* are from 35 to 40 Fathom long, from the Point of the Baſtion to the Point where the two Demigorges meet. See BASTION.

CAPITALS, in Printing, are the *Majuſculæ*, or initial Letters, wherein Titles, &c. are compos'd, and all Periods, Verſes, &c. commence; call'd alſo *uncial* Letters. See UNCIAL. All proper Names of Men, Countries, Kingdoms, Terms of Arts, Sciences, and Dignities, are to begin with *Capitals*. The *Engliſh* Printers have carried *Capitals* to a pitch of Extravagance; making it a Rule, to begin almoſt every Subſtantive with a *Capital*; which is a manifeſt Perverſion of the Deſign of *Capitals*, as well as an Offence againſt Beauty and Diſtinctneſs. Some of 'em begin now to retrench their ſuperfluous *Capitals*, and to fall into the Meaſures of the Printers of other Nations. See LETTERS, CHARACTERS, and PRINTING.

CAPITATÆ *Plantæ*, in Botany, are ſuch Plants whoſe Flowers are compos'd of many edg'd and hollow little Flowers; thus call'd by Mr. *Ray*, becauſe their ſcaly Calyx (or Cup of the Flower) moſt uſually ſwells out into a large and round Belly, containing within it the pappous Seed; as in *Carduus*, *Centaury*, *Knapweed*, *Cinera*, *Cirſium*, *Lappamai*, *Cijanus*, &c.

CAPITATION, or *Poll-Money*, a Tax, or Impoſition rais'd on each Perſon, in conſideration of his Labour, Induſtry, Office, Rank, &c. This kind of Tribute is very antient, and anſwers to what the *Greeks* call'd κεφαλιτιον. The *Latins* call it *Tributum*; by which Taxes on the Perſon, are diſtinguiſh'd from Taxes on Merchandiſe; which were called *Vectigalia*, *quia vehebantur*. *Capitations* are never practis'd amongſt us, but in Exigencies of State. See POLL, FUAGE, &c.

CAPITE, in Law, a Tenure, whereby a Perſon held of the King, immediately, as of his Crown; either by Knight's-Service, or Soccage. See TENURE, and SERVICE. But by a Statute, 12 *Car.* II. all ſuch Tenures by Knight's-Service of the King, or of any other Perſon, Knights Services *in Capite*, or Soccage, with all Rights, &c. are annull'd. See SOCCAGE, and FEE.

CAPITOL, in Antiquity, a famous Fort, or Caſtle, on the *Tarpeian* Mount at *Rome*, wherein was a Temple dedicated to *Jupiter*, thence denominated *Capitolinus*, in which the Senate antiently aſſembled; and which ſtill ſerves as the City Hall, or Town-houſe, for the meeting of the Conſervators of the *Roman* People. The firſt Foundations of the *Capitol* were laid by *Tarquin* the Elder, in the Year of *Rome* 139. His Succeſſor, *Servius*, rais'd the Walls; and *Tarquin* the Proud finiſh'd it, in the Year 221. But it was not conſecrated, till the third Year after the Expulſion of the Kings, and Eſtabliſhment of the Conſulate. The Ceremony of the Dedication of the Temple, was perform'd by the Conſul *Horatius*, in 246. The *Capitol* conſiſted of three Parts; a *Nave*, ſacred to *Jupiter*; and two Wings, or Iſles, to *Juno* and *Minerva*: It was aſcended to by Stairs; *Lipſius* reckons 100 in number, by reaſon there were ſo many in the Aſcent of the *Tarpeian* Rock. The Frontiſpiece and Sides were incompaſs'd with Galleries, wherein thoſe who had the Honour of a Triumph, entertain'd the Senate at a magnificent Banquet, after the Performance of Sacrifice to the Gods. Both inſide and outſide were inrich'd with infinite Ornaments; the Statue of *Jupiter*, with his golden Thunderbolt, his Scepter and Crown, were the moſt diſtinguiſh'd. In the ſame *Capitol* there were likewiſe a Temple to *Jupiter* the Guardian, and another to *Juno*; with the Mint: and on the Deſcent of the Hill, the Temple of *Concord*. The *Capitol* was burnt under *Vitellius*; and rebuilt under *Veſpaſian*. It was burnt a ſecond time by Lightning, under *Titus*, and reſtor'd by *Domitian*. It had its Name *Capitol*, from a Man's Head found freſh, and yet bleeding, upon digging the Foundation of the Temple, built in honour of *Jupiter*. *Arnobius* adds, that the Man's Name was *Tolus*, whence *Caput-tolium*.

Antiently, the Name *Capitol* was likewiſe affected to all the principal Temples, in moſt of the Colonies throughout the *Roman* Empire; as, at *Conſtantinople*, *Jeruſalem*, *Carthage*, *Ravenna*, *Capua*, &c. That of *Tholouſe*, has given the Name of *Capitouls* to its *Echevins*, or Sheriffs.

CAPITOLINI *Ludi*, were annual Games, or Combats inſtituted by *Camillus*, in honour of *Jupiter Capitolinus*, and in Commemoration of the *Capitol*'s not being ſurpriz'd by the *Gauls*. *Plutarch* tells us, that a part of the Ceremony conſiſted in the Publick Cryers putting up the *Hetrurians* to Sale by Auction. They alſo took an old Man, tying a Golden *Bulla* to his Neck, ſuch as were wore by their Children, and expos'd him to the publick Deriſion. *Feſtus* ſays, they dreſs'd him in a *Prætexta*, and hung a Bull at his Neck; not as accounting him a Child, but becauſe this was an Ornament of the Kings of *Hetruria*.

There was alſo another kind of *Capitoline* Games, inſtituted by *Domitian*, and celebrated each five Years; wherein there were Rewards and Crowns beſtow'd on the Poets, and put on their Heads by the Emperor himſelf. Theſe Games became ſo celebrated, that the manner of accounting Time by *Luſtres*, which had obtain'd till then, was chang'd; and they began to count by *Capitoline* Games, as the *Greeks* by *Olympiads*. The Feaſt was not for Poets alone, but alſo for Champions, Orators, Hiſtorians, Comedians, Magicians, &c.

CAPITULAR, or CAPITULARY, an Act paſs'd in a Chapter, either of Knights, Canons, or Religious. See CHAPTER.

The *Capitulars* of *Charlemaign*, *Charles* the Bald, &c. are the Laws, both Eccleſiaſtical and Civil, made by thoſe Emperors, &c. in the General Councils, or Aſſemblies of the People: which was the way the Conſtitutions of moſt of the ancient Princes, &c. were made; each Perſon preſent, tho a Plebeian, ſetting his Hand to 'em. Some diſtinguiſh theſe from Laws; and ſay, they were only Supplements to Laws. They had their Name, *Capitularies*, becauſe divided into Chapters or Sections. In theſe *Capitularies* did the whole *French Juriſprudence* antiently conſiſt. In proceſs of Time, the Name was chang'd for that of *Ordonnances*.

Some diſtinguiſh three kinds of *Capitularies*, according to the Difference of their ſubject Matter: Thoſe on Eccleſiaſtical Affairs, are real Canons, extracted from Councils; thoſe on Secular Affairs, real Laws; thoſe relating to particular Perſons, or Occaſions, private Regulations.

CAPITULATION, a Treaty made with the Gariſon, or Inhabitants of a Place beſieg'd; whereby they ſurrender themſelves up, on certain Articles, and Conditions ſtipulated between 'em. See SIEGE.

CAPITULATION, is alſo one of the Treaties of the *Pacta Conventa*, or the Contract drawn up by the Electors, before the Election of an Emperor; which the Emperor is to ratify before his Coronation, and to obſerve inviolable in the Courſe of his Reign. Theſe *Capitulations* of the Empire, have only been in uſe ſince the Time of *Charles* V. and were occaſion'd, by the Jealouſy the *German* Princes entertain'd of the too great Power of the Emperor. *Frederic*, Duke of *Saxony*, ſirnam'd *the Wiſe*, paſſes for the Author of the Imperial *Capitulations*; he declining the Empire, which was offer'd him after the Death of *Maximilian*, and adviſing the Electors to chuſe *Charles* V. under ſuch Conditions as might ſecure the Liberty of the Empire. The *Leopoldin Capitulation* contains 47 Articles.

CAPITULUM, in Botany, the Head, or flowering Top of any Plant; being compos'd of many Leaves and Threads, or *Stamina*, cloſely connected in a globous, circular, or diſcous Figure; as the Flowers of Bluebottles, Scabious, Carduus, &c. See FLOWER.

CAPNOMANCY, or CAPNOMANTIA, a kind of Divination, us'd by the Antients in their Sacrifices: the Rule was, when the Smoak was thin, and light, and roſe ſtraight up, 'twas a good Omen; if the contrary, 'twas an ill one.

There was another Species of *Capnomancy*, conſiſting in the Obſervation of the Smoak riſing from Poppy and Jeſſamin Seed, caſt upon lighted Coals. The Word comes from the *Greek* καπνὸς, Smoak; and μαντια, Divination.

CAPONNIERE, in Fortification, a cover'd Lodgment, four or five Foot broad, encompaſs'd with a little Parapet about two Foot high, ſerving to ſupport ſeveral Planks laden with Earth. The *Caponniere* is large enough to maintain 15 or 20 Soldiers; and is uſually plac'd on the Extremity of the Counterſcarp, having little Embraſures frequently made therein.

CAPRA, *She-Goat*, a Conſtellation in the Northern Hemiſphere, conſiſting of three Stars, compriz'd between the 45th and 55th Degree of Latitude. The Poets ſay, 'tis *Amalthea*'s Goat, which ſuckled *Jupiter* in his Infancy. *Horace* making mention of it, calls it, *Infana ſydera Capræ*.

CAPRE, or CAPER, the Bud, or Bloſſom of a Shrub of the ſame Name, gather'd green, e'er it expand into a Flower; dry'd in a dark Place, till wither'd, then infus'd in Vinegar; to which, at laſt, Salt is added; after which, it is put up in Barrels to be us'd as a Pickle, chiefly in Sauces; and ſometimes alſo in Medicine, as being very Apertive, and entering ſeveral Compoſitions in Pharmacy. All the *Capers* throughout *Europe*, are brought from about *Toulon*, in *France*; except ſome ſmall ſalt *Capers* from *Majorca*, and a few flat ones from about *Lyons*. The Bark of the *Caper*-Tree, when dry'd, is preſcrib'd by the *French* Phyſicians in Oppilations of the Spleen.

CAPRÆ *Saltantes*, in Meteorology, a fiery Meteor, or Exhalation, which ſometimes appears in the Atmoſphere, and is not fir'd in a ſtraight Line, but with Inflexions, and windings in and out. See METEOR.

CAPREOLUS, in Botany, the Claſper, or Tendril, by which the Vines, and ſuch-like creeping Plants, faſten themſelves to thoſe things which are deſign'd to ſupport them. See CLASPER.

CAPREOLATÆ *Plantæ*, are ſuch Plants as turn, wind, and climb along the Surface of the Earth, by means of their *Capreoli*, or Tendrils; as Gourds, Melons, Cucumbers, &c. See CLASPERS.

CAPRICORN, in Aſtronomy, one of the Signs of the Zodiack, mark'd thus ♑. See SIGN.

The Antients accounted *Capricorn* the 10th Sign; and when the Sun arriv'd thereat, it made the Winter Solſtice, with regard to our Hemiſphere: But the Stars having advanc'd a whole Sign towards the Eaſt, *Capricorn* is now the 11th Sign; and 'tis at the Sun's Entry into Sagittary, that the Solſtice happens: tho the antient manner of ſpeaking is ſtill retain'd. See SOLSTICE, and PRECESSION. This Sign is repreſented on antient Monuments, Medals, &c. as having the Fore-part of a *Goat*, and the Hind-part of a *Fiſh*; which is the Form of an *Ægypan*: ſometimes, ſimply under the Form of a *Goat*.

The Stars in the Conſtellation *Capricorn*, in *Ptolomy*'s and *Tycho*'s Catalogues, are 28; Mr. *Flamſtead*, in the *Britannic Catalogue*, makes near double that Number, *viz.* 51. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

*Stars in the Conſtellation* CAPRICORN.

| | *Names and Situation of the Stars.* | Signs. | Longitude. ° ′ ″ | Latitude. ° ′ ″ | | Magn. |
|---|---|---|---|---|---|---|
| | | ♑ | 28 6 58 | 7 27 4 | B | 7 |
| | In the Extrem. of the preced. Horn | | 28 10 28 | 7 13 18 | B | 6 |

*Tropic of* CAPRICORN, a leſſer Circle of the Sphere, parallel to the Equator; paſſing thro the Beginning of *Capricorn*. See TROPIC.

CAPRIOLE, in Horſemanſhip, the *Goat-leap*; is when an Horſe, at the full Height of his Leap, jerks or ſtrikes out with his hind Legs as near and even together, and as far out as he can ſtretch them; in which Action, he clacks, or makes a noiſe with them. The *Capriole* is the moſt difficult of all the high Airs: There are ſeveral kinds of *Caprioles*; as, a *right Capriole*, *back Capriole*, *ſide Capriole*, *broke Capriole*, *open Capriole*, &c. The Word comes from *Capreolus*.

CAPSQUARES, in Gunnery, are thoſe ſtrong Plates of Iron, which come over the Trunnions of a Gun, and keep her in the Carriage: They are faſtned by hinges to the Paizeplate, that it may lift up and down. They form a part of an Arch in the Middle, to receive a third Part of the Thickneſs of the Trunnions; for two thirds of them are let into the Carriage, and the other End is faſten'd by two Iron Wedges, which are call'd the Forelocks, and Keys.

CAPSTAN,

CAPSTAN, or CAPSTAND *of a Ship*, a large Cylinder, or Barrel, plac'd perpendicularly on the Deck of a Ship, and turn'd by four Levers, or Bars, which croſs it; and by means of a Cable, which winds round the Cylinder, ſerves to draw up vaſt Burdens, faſtned to the End of the Cable. By the *Capſtan* it is, that Veſſels are drawn aſhoar, and hoiſted up to be refitted; the heavieſt Goods are unloaded; Anchors weigh'd, Sails hoiſted, &c. There are two *Capſtans* in a Veſſel; the *Main* plac'd behind the Mainmaſt, ſtanding on the firſt Deck, and reaching four or five Feet above the ſecond: 'Tis alſo call'd *double Capſtan*, becauſe ſerving two Decks for drawing of Anchors; and becauſe its Force may be doubled by applying Hands on each Deck. It has Bars, Whelps, a Panel, &c. for turning and ſtopping it.

The *Jeer Capſtan*, or *little Capſtan*, ſtands on the ſecond Deck, between the Mainmaſt and the Mizzen: Its uſe is, chiefly, to heave upon the jeer Rope, or to heave upon the Viol, to hold off by when the Anchor is weighing; and other Occaſions, where a leſs Force is requir'd, than to weigh the Anchors, &c. The Terms belonging to the uſe of the *Capſtans*, are, *Come up Capſtan*; that is, ſlack the Cable which you heave by; in which Senſe alſo they ſay, *Launch out the Capſtan*: *Pawl the Capſtan*, is, ſtop it from going back.

The *French* call that an *Engliſh Capſtan*, where there are only half Bars us'd; and which, for that Reaſon, is only half perforated: This is thicker than the others. There is alſo a *flying Capſtan*, which may be mov'd from place to place.

CAPSULA, a Diminutive of the Latin *Capſa*, literally ſignifying a little Box, or Caſe; particularly a Bag, or Sachel, wherein Boys carry their Books, &c. to School: Whence *Capſarius*, or *Capſularius*, among the *Romans*, was a Servant who attended the Youth of Condition to the School or Academy, and carry'd their Bag, &c.

CAPSULA, among the Botaniſts, is that part of a Fruit wherein the Seed is contain'd; as in Pears, Apples, &c. which have a little Coat, in form of a Purſe, wherein the Kernels, or Pippins are incloſ'd. See FRUIT.

CAPSULATE *Plants*, *Capſulatæ Plantæ*, are ſuch as have a tetrapetalous regular Flower, conſiſting of four diſtinct Petala in each Flower, and which bear their Seeds in ſhort *Capſulæ*; by which they are diſtinguiſh'd from the *Siliquoſæ*, which have their Seed in long Caſes, or *Capſulæ ſeminales*; and all the other Branches of this Genus of Plants.

CAPSULÆ *Atrabilares*, in Anatomy, call'd alſo *Renes ſuccenturiati*, and *Glandulæ Renales*; are two Glands ſituate near the Reins, call'd *Atrabilares* from a black Liquor found in their Cavity; and *Succenturiati* and *Renales*, from their Poſition. See SUCCENTURIATI, BILARES, and RENALES.

They are about the bigneſs of a *Nux Vomica*; their Figures are ſomewhat various; in ſome round, in others triangular, ſquare, &c. The Membrane wherewith they are cover'd is very fine: Their Cavity is pretty large for their bulk. Their uſe is very obſcure; probably 'tis to ſecrete the black Humour found in their Cavity; which being afterwards diſcharg'd by their Duct into the Emulgent, mixes with the Blood; and ſerves, according to ſome, as a Ferment; according to others, only to dilute its Thickneſs: In a *Fœtus*, they are almoſt as big as the Kidneys. See BILE.

CAPSULA *Communis*, or *of the Porta*, is a Membrane ariſing from the *Peritonæum*, and incloſing the Trunk of the *Vena Porta*, after its Entrance into the Liver, as a Caſe, or Cover; dividing it ſelf into the ſame Number of Branches; and accompanying all, even its ſmalleſt Ramifications. See PORTA. The ſame *Capſula*, or Membrane, likewiſe incloſes the *Porus Bilarius*; whence it takes the Name of *Capſula Communis*. See PORUS BILARIUS.

CAPSULA *Cordis*, a Membrane inveſting the Heart; more uſually call'd the *Pericardium*. See PERICARDIUM.

CAPSULÆ *Seminales*, are the ſame with *Veſiculæ Seminales*. See VESICULÆ *Seminales*.

CAPSULA, in Chymiſtry, is an Earthen Veſſel, in form of a Pan; wherein things are frequently plac'd, that are to undergo very violent Operations of the Fire.

CAPTAIN, a Military Officer, whereof there are various Kinds and Degrees, diſtinguiſh'd by their various Commands: As,

CAPTAIN *of a Company*, or *Troop*; the Officer who commands a Company of Foot, or Troop of Horſe, under the Colonel. See COMPANY, and TROOP.

In the like Senſe, we ſay, *A Captain of Dragoons*, of *Grenadiers*, of *Marines*, of *Invalids*, &c. See DRAGOON, GRENADIER, &c.

In the Horſe and Foot Guards, the *Captains* are ſtyl'd *Colonels*; being uſually Perſons of the prime Nobility, and General Officers of the Army. See COLONEL, and GUARDS.

In the Colonel's Company of a Regiment, *i. e.* the firſt Company, or that whereof he himſelf is *Captain*, the commanding Officer is call'd *Captain Lieutenant*. See CAPTAIN *Lieutenant*.

*Lieutenant* CAPTAIN, is the *Captain*'s Second; or the Officer who commands the Company under the *Captain*, and in his abſence. See LIEUTENANT. In ſome Companies, &c. he is call'd *Captain Lieutenant*.

CAPTAIN *Lieutenant*, is he who commands a Troop, or Company, in the Name and Place of ſome other Perſon, who has the Commiſſion, with the Title, Honour, and Pay thereof; but is diſpens'd withal, on account of his Quality, from performing the Functions of his Poſt. Thus, the Colonel, being uſually likewiſe *Captain* of the firſt Company of his Regiment; that Company is commanded by his Deputy, under the Title of *Captain Lieutenant*. So alſo in *England*, *France*, &c. the King, Queen, Prince, Dauphine, &c. have uſually the Titles, Dignities, &c. of *Captains of the Guard*, *Gens d'Armes*, &c. the real Duty of which Offices, is perform'd by *Captains Lieutenant*.

*Reformed* CAPTAIN, is one, who, upon a Reduction of the Forces, has his Commiſſion and Company ſuppreſs'd; yet is continu'd *Captain*, either as Second to another, or without any Poſt or Command at all. See REFORMED.

CAPTAIN *General*, of an Army, is the General, or Commander in chief. See GENERAL.

CAPTAIN *of Militia*, is he who commands a Company of Train'd-Bands, or Light-Horſe. See MILITIA.

CAPTAIN, in the *Turkiſh* Empire, and Army. See CAPITAN.

CAPTAIN *of a Ship*, is a Sea Officer; whereof there are two Kinds; the one of a Ship of War, the other of a trading Veſſel.

CAPTAIN *of a Man of War*, is the commanding Officer of a Ship, Galley, Fireſhip, or the like: In ſuch Veſſels, the Pilot commands the Seamen, and the *Captain* the Soldiers, or Marines. See MARINES.

CAPTAIN *of a Merchant Ship*, is the Maſter thereof; or he who has the Command or Direction of the Ship, her Crew, Lading, &c. This Officer is more ordinarily call'd the *Maſter*; eſpecially in ordinary Voyages. See MASTER *of a Ship*.

On the *Mediterranean*, he is call'd the *Patron* or *Patroon*; and in great Voyages, as to the *Eaſt Indies*, *South Sea*, &c. the *Captain*.

The Proprietor of the Veſſel appoints the *Captain*, or *Maſter*; and the *Captain* is to form the Crew, chuſe and hire the Pilots, Mates, Seamen, &c. tho when the Proprietor and Maſter reſide on the ſame Spot, this is uſually done in Concert with the Proprietor. See SHIP.

CAPTION, in Law: When a Commiſſion is executed, and the Commiſſioners Names ſubſcrib'd to a Certificate, declaring when and where the Commiſſion was executed, this is call'd *Caption*. The *Caption* uſually commences with theſe Words, *Virtute iſtius commiſſionis nos*, &c. or, *Executio iſtius commiſſionis patet in quadam ſchedula annexata*, &c.

CAPTIVE, a Slave, or Perſon taken by the Enemy; particularly the Pyrates, and *Corſairs*. See SLAVE, PYRATE, &c.

CAPTURE, a Prize, or Prey; particularly that of a Ship taken at Sea: Thus we ſay, The French *Captures*, to the Number of 25, were brought into Port; ſee PRIZE. It is alſo an Arreſt, or Seizure of a Criminal, Debtor, &c. at Land. See SEIZURE, and ARREST.

CAPUCHINS, Religious of the Order of St. *Francis*, in its ſtricteſt Obſervance. See FRANCISCAN. The *Capuchins* are thus call'd, from *Capuce*, or *Capuchon*, a ſtuff Cap, or Cope, wherewith they cover their Head. They are clothed with Brown, or Gray; always bare-footed; are never to go in a Coach, nor ever ſhave the Beard. The *Capuchins* are a Reform made from the Order of *Minors*, commonly call'd *Cordeliers*, ſet on foot in the XVIth Century, by *Matthew Baſchi*, a religious Obſervant of the Monaſtery of *Monteſiaſerne*; who, being at *Rome*, was adverti's'd ſeveral times from Heaven, to practiſe the Rule of St. *Francis* to the Letter. Upon this, he made Application to Pope *Clement*, in 1525, who gave him Permiſſion to retire into a Solitude; and not only him, but as many others as wou'd embrace the ſtrict Obſervance: which ſome did, in effect. In 1528 they obtain'd the Pope's Bull. In 1529, the Order was brought into compleat form; *Matthew* was elected General, and the Chapter made Conſtitutions. In 1543, the Right of Preaching was taken from the *Capuchins* by the Pope: but in 1545, 'twas reſtor'd to them again with Honour. In 1578, there were already 17 General Chapters in the Order of *Capuchins*.

CAPUT, a *Latin* Term, literally ſignifying *Head*; retain'd in its primitive Form and Uſe in divers Arts: As,

CAPUT *Baroniæ*, the Head of the Barony; in our Cuſtoms, is the antient, or chief Seat or Caſtle of a Nobleman: which is not to be divided among the Daughters, in caſe there be no Son to inherit; but is to deſcend entire

to the Eldeſt Daughter, *cæteris filiabus aliunde ſatisfactis.* See BARONY.

CAPUT *Draconis*, or the *Dragon's Head*, in Aſtronomy, the Name of the Moon's aſcending Node. See DRAGON's-*Head*; ſee alſo NODE.

CAPUT *Gallinaginis*, or *Galli Gallinacei*, Cock's Head, is a kind of *Septum*, or ſpongeous Border, at the Extremities or Apertures of each of the *Veſiculæ Seminales*; ſerving to prevent the Seed coming from one ſide, from ruſhing upon, and ſo ſtopping the Diſcharge of the other. Some will have its uſe to be, to prevent the Impulſe of the Seed from dilating the Orifices of the *Veſiculæ*, and ſo oozing out, except when aſſiſted by the Compreſſion of the ſurrounding Parts; as in Copulation: But this, according to Dr. *Drake*, is rather the Office of a diſtinct Caruncle plac'd at each Orifice, and acting as a Valve. See VESICULÆ *Seminales*, SEED, and GENERATION.

CAPUT *Mortuum*, in Chymiſtry, the *Fæces* remaining of any Body, after all the volatile and humid Parts, as the Phlegm, Spirit, Salt, &c. have been extracted therefrom, by Force of Fire. What remains after Diſtillation, is only properly call'd *Fæces*. See FÆCES. E'er it be *Caput Mortuum*, it muſt likewiſe have paſs'd the Retort. See DISTILLATION, and RETORT.

The *Caput Mortuum*, call'd alſo *Terra damnata*, is found in form of a friable, porous Matter, without Taſte or Smell: 'Tis rank'd among the Chymical Elements; and ſuppos'd to conſtitute the dry, fix'd, earthy, and ſolid Part of all mix'd Bodies. As an Element, it is more commonly expreſs'd by the Name *Earth*. See EARTH.

'Tis what the Chymiſts call *a paſſive Element*, or *Principle*; ſerving as the Baſis or Support of the active ones. See PRINCIPLE.

The Term is ſometimes more immediately reſtrain'd to the Remains of Vitriol, after Diſtillation; otherwiſe call'd *Calcothar Vitrioli*. See CALCOTHAR.

The *Caput Mortuum* is never pure, but there is ſtill ſome active Principle remaining in it, and particularly a fix'd Salt. See SALT. Thus the *Calcothar Vitrioli*, expos'd to the Air, is re-converted into Vitriol. See VITRIOL; ſee alſo ELEMENT.

CAR, CARR, or CARRE, a kind of rolling Throne, us'd in Triumphs, and at the ſplendid Entries of Princes. See CHARIOT.

*Plutarch* relates, that *Camillus* having enter'd *Rome* in Triumph, mounted on a *Car* drawn by four white Horſes, it was look'd on as too haughty an Innovation. See TRIUMPH.

CAR, is alſo us'd for a kind of light open *Chariot*. *Pontanus*, L. III. *de Stellis*, obſerves, that *Erichthonius* was the firſt that harneſs'd Horſes, and join'd 'em in a *Car*, or Chariot. See CHARIOT.

The Word is from the antient *Gauliſh*, or *Celtic*, *Carr*; mention'd by *Cæſar*, in his Commentaries, under the Name *Carrus*.

The *Car*, on Medals, drawn either by Horſes, Lions, or Elephants, uſually ſignifies, either a *Triumph*, or an *Apotheoſis*: Sometimes a Proceſſion of the Images of the Gods, at a ſolemn Supplication; and ſometimes of thoſe of ſome illuſtrious Family at a Funeral. The *Car* cover'd, and drawn by Mules, only ſignifies a *Conſecration*, and the Honour done any one of having his Image carry'd at the Games of the *Circus*. See CONSECRATION, &c.

The *Car* us'd by the Ladies, was call'd *Pilentum*, *Carpentum*, and *Baſterna*. See BASTERNA.

CARABE, or KARABE, yellow Amber reduc'd to Pouder. See AMBER.

CARABINE, a Fire-Arm, or little Harquebuſs, with a Lock; antiently us'd in the Army, but now diſus'd, by reaſon of the Time loſt in cocking it. There are ſome of theſe *Carabines* ſtill in uſe, having the inſide of the Barrel furrow'd ſpirally, which carry the Ball to a very great diſtance. The *Carabine* was formerly the Arms of the Light Horſe, who were hence alſo call'd *Carabineers*: Theſe made ſeparate Companies, and ſometimes Regiments in an Army; ſerving to guard the Officers, to ſeize Poſts, and to do other Offices requiring Expedition. There are ſtill ſome of thoſe *Carabineers* in the *French* Horſe; two in each Company.

*Gaja* derives the Word from the Spaniſh *Cara-* and the Latin *binus*: Intimating the *Carabineers* to be People with two Faces, from their manner of Fighting; ſometimes advancing, and ſometimes retiring.

CARACOL, in the Manage, a Motion which the Cavalier makes half round; or a half turn from Left to Right; changing Hands; that his Enemy may be uncertain on which ſide he intends to attack: whether in Front, or Flank.

CARACOL, is alſo the half turn each Horſeman in an Army makes after his Diſcharge, to paſs from the Front of the Squadron to the Rear. The Word comes from the *Arabic*, and that from the *Hebrew*, *Carac*, *involvere*. But we have it immediately from the *Spaniſh*; where it ſignifies properly *a Snail*, and figuratively the Evolution deſcrib'd above.

CARACOL is ſometimes alſo us'd in Architecture, for a Staircaſe in a Helix, or ſpiral Form. See STAIRCASE.

CARACT, CARAT, or KARAT, is properly the Name of the Weight, which expreſſes the degree of Goodneſs, Title, Perfection, or Imperfection of Gold. See GOLD.

The Coiners fix the higheſt Purity and Perfection of Gold at 24 *Carats*; and the ſeveral Degrees are eſtimated from the Diviſions hereof, which are call'd *Grains*: But 'tis obſerv'd, that what care ſoever is taken in purifying Gold, to clear it from Droſs, it can never be brought to 24 *Carats*; but ſtill comes ſhort $\frac{1}{4}$ of a *Carat*, or a Grain: this Grain they call a *Sixteenth*; and this ſixteenth they ſubdivide into two *Eighths*; and each of thoſe eighths into two *Sixteenths*: On which Calculation, they ſay, Gold may be purify'd as far as the firſt Sixteenth of the ſecond Eighth, but no further. See GRAIN.

Gold of 22 *Carats*, is that which has 22 Parts of fine Gold, and two of Silver, or other Metal; or that which in refining loſes 2 Parts in 24 of its Weight. The Goldſmiths generally work on Gold of 22 *Carats*.

The *Carat Fine*, as above, is the 24th Part of the Goodneſs of a Piece of Gold; the *Carat Price*, is the 24th Part of the Value of a Piece of Gold: as, if the Piece be 384, the *Carat Price* is 16 Pounds. We alſo ſometimes ſay, the *Carat Weight*, which is the 24th Part of the Weight of the Piece, or 192 Grains.

*Menage*, from *Alciat*, derives the Word *Carat* from the *Greek* κεραιον, which was a kind of ſmall Weight: But *Savot*, with more probability, from χαραγμα, a Tribute-Penny, or ſmall Coin ſtruck for that purpoſe. Others derive it ſimply from the Latin *Character*.

CARACT is alſo the Weight us'd in weighing Diamonds and precious Stones; and conſiſts of four Grains. See DIAMOND, and GRAIN.

Thus, the Great *Mogol*'s Diamond is ſaid to weigh 279 *Caracts*. Theſe Grains are ſomewhat leſs heavy than thoſe us'd in Gold, &c. In this Senſe, the Word is ſuppos'd to be deriv'd from the *Greek* κερατιον, a Fruit which the *Latins* call *Siliqua*, and we *Carab-bean*; each of which may weigh about four Grains of Wheat: whence the Latin *Siliqua* has alſo been us'd for a Weight of four Grains.

CARAITES, a Sect among the antient *Jews*; whereof there are ſtill ſome ſubſiſting in *Poland*, *Ruſſia*, *Conſtantinople*, *Cairo*, and other Places of the *Levant*: Some call them *Carraini*; others *Carræi*, and *Caraitæ*.

*Leon de Modena*, a Rabbin of *Venice*, obſerves, that of all the Hereſies among that People, before the Deſtruction of the Temple, there is none now left but that of the *Carraini*; a Name deriv'd from *Micra*, which ſignifies the pure Text of the Bible; becauſe of their keeping to the *Pentateuch*, obſerving it to the Letter, and rejecting all Interpretation, Paraphraſe, and Conſtitution of the Rabbins. *Aben Eſra*, and ſome other Rabbins, treat the *Caraites* as Sadducees; but *Leon de Juda* calls them, more accurately, *Sadducees reform'd*; in regard they believe the Immortality of the Soul, Paradiſe, Hell, Reſurrection, &c. which the antient Sadducees deny'd. He adds, however, that they were doubtleſs originally real Sadducees, and ſprung from among them: But M. *Simon*, with more probability, ſuppoſes them to have riſen hence, That the more knowing among the *Jews*, oppoſing the Dreams and Reveries of the Rabbins, and uſing the pure Text of Scripture to refute their groundleſs Traditions, they had the Name *Carraim* given them; which ſignifies as much as the barbarous Latin, *Scriptuarii*, *i. e.* People attach'd to the Text of Scripture. The other *Jews* give them the odious Name *Sadducees*, from their Agreement with thoſe Sectaries on the Head of Traditions. See SADDUCEES.

*Scaliger*, *Voſſius*, and *Spanheim*, rank the *Caraites* among the *Sabeans*, *Magi*, *Manichees*, and *Muſſulmen*, but by miſtake: *Wolfgang*, *Fabricius*, &c. ſay, the Sadducees and *Eſſeni* were call'd *Caraites*, in oppoſition to the Phariſees: others take them for the Doctors of the Law, ſo often mention'd in the Goſpel: But theſe are all Conjectures. *Joſephus* and *Philo* make no mention of them; which ſhews 'em to be more modern than either of thoſe Authors. In all probability, this Sect was not form'd till after the Collection of the ſecond Part of the Talmud, or the *Gemara*; perhaps not till after the compiling of the *Miſchna* in the IIId Century. The *Caraites* themſelves, pretend to be the Remains of the ten Tribes led captive by *Salmanaſſar*. *Wolfius*, from the *Memoirs of Mardocheus*, a *Caraite*, refers their Origin to a Maſſacre among the *Jewiſh* Doctors, under *Alexander Jannæus*, their King, about 100 Years before Chriſt: For *Simeon*, Son of *Schetach*, and the Queen's Brother, making his Eſcape into *Egypt*, there forg'd his pretended Traditions; and at his Return to *Jeruſalem*, publiſh'd his Viſions; interſperſing the Law

after his own Fancy, and ſupporting his Novelties on the Notices which God, he ſaid, had communicated by the Mouth of *Moſes*, whoſe Depoſitory he was: He gain'd many Followers; and was oppos'd by others, who maintain'd, that all which God had reveal'd to *Moſes* was written. Hence the *Jews* became divided into two Sects, the *Caraites*, and *Traditionaries*: Among the firſt, *Juda*, Son of *Tabbai*, diſtinguiſh'd himſelf; among the latter, *Hillel*. *Wolfius* reckons not only the Sadducees, but alſo the Scribes, in the Number of *Caraites*. But the Addreſs of the Phariſees prevail'd againſt 'em all; and the Number of *Caraites* decreas'd: *Anan* indeed, in the VIIIth Century, retriev'd their Credit a little; and Rabbi *Schalomon* in the IXth. Matters went pretty well with them till the XIVth, but ſince that Time they have been on the declining hand.

The *Caraites* are but little known; their Works coming only into very few Hands, even among the greateſt *Hebraiſts*. *Buxtorf* never ſaw more than one; *Selden* two; M. *Trigland* ſays, he has recover'd enough to ſpeak of them with aſſurance. He aſſerts, that ſoon after the Prophets had ceas'd, the *Jews* became divided on the Subject of Works, and Supererogation: ſome maintaining their Neceſſity from Tradition; whilſt others, keeping cloſe to the written Law, ſet 'em aſide; and it was from theſe laſt that *Caraitiſm* commenc'd. He adds, again, that after the Return from the *Babyloniſh* Captivity, the Obſervation of the Law being to be re-eſtabliſh'd, there were ſeveral Practices found proper for that End; and theſe once introduc'd, were look'd upon as eſſential, and appointed by *Moſes*; which was the Origin of *Phariſaiſm*; as a contrary Party, continuing to keep cloſe to the Letter, founded *Caraitiſm*. See PHARISEES.

The modern *Caraites*, *Leon de Modena* obſerves, have their Synagogues, and Ceremonies; pretending to be the ſole proper *Jews*, or Obſervers of the Laws of *Moſes*; calling the reſt by the Term *Rabbanim*, or *Followers of the Rabbins*: Theſe hate the *Caraites* mortally; refuſing to ally, or even converſe with them, and treating them as *Mamzerim*, or Baſtards; becauſe of their rejecting the Conſtitutions of the Rabbins in Marriages, Repudiations, Purifications of Women, &c. This Averſion is ſo great, that if a *Caraite* would become a *Rabbiniſt*, he would never be receiv'd by the other *Jews*. See RABBINS.

The *Caraites*, however, don't abſolutely reject all kind of Traditions; but only ſuch as don't appear well grounded. *Selden*, who is very expreſs on this Point, in his *Uxor Hebraica*, obſerves, that beſides the mere Text, they have certain Interpretations, which they call *Hereditary*, and which are proper Traditions. Their Theology only ſeems to differ from that of the other *Jews*, in that it is purer, and clearer of Superſtition: They give no credit to the Explications of the *Cabbaliſts*, chimerical Allegories, nor to any Conſtitutions of the Talmud, but what are conformable to the Scripture, and may be drawn from it by juſt and neceſſary Conſequences: Of theſe we ſhall give three notable Inſtances.

The firſt relating to the *Mezouzot*, or Parchments which the *Jews* tie at all the Gates thro which they uſe to paſs. The ſecond regarding the *Thephillin* or *Philacteries*, mention'd in the New Teſtament: And the third, the Prohibition of eating Milk, with Fleſh. The two firſt, the *Jews* pretend, are formally ordain'd in *Deuteronomy*, where 'tis ſaid, "Thou ſhalt bind them as a Sign on thy Hands, "and they ſhall ſerve thee as Frontlets (Headſtalls) be-"tween thy Eyes; thou ſhalt write them on the Poſts of "thy Houſe." The *Caraite Aaron*, in his Comment on theſe Words, maintains, they are not to be taken literally, as the Rabbins do, but figuratively; as intimating, that the *Jews*, whether entering or going out, ſhould be always mindful of them. For the *Thephillin*, the *Caraites* rally the *Rabbiniſts* on their praying with their *Phylacteries*, or Thongs of Leather faſten'd to their Forehead; comparing them to bridled Aſſes. This Paſſage the *Caraites* interpret figuratively; and in their Interpretation agree with S. *Jerom*, who takes notice of the Deluſion of the *Phariſees*, "in writing the Decalogue on Parchment, rolling it up, "and tying it to their Forehead with Thongs, to have it "always before their Eyes." For the third Point, the Rabbins ſay, 'tis commanded in that Text, "Thou ſhalt "not ſeeth a Kid in his Mother's Milk;" but the *Caraites* get clear of it by explaining the Paſſage by another, "Thou ſhalt not take the Mother when with young," which is natural. Nor have the *Jews* any thing to object in behalf of their Interpretation, but its being that of their Doctors. Thus the *Caraites* exempt themſelves from an infinite Number of Ceremonies and Superſtitions, which the Rabbins have eſtabliſh'd among the other *Jews*. See TRADITION.

Yet, in many Things, they retain all the Superſtition of the Rabbins. *Schupart*, in his Treatiſe *de Secta Karræorum*, treating of their *Dogmata*, obſerves, that they are in all reſpects as preciſe and ceremonious as the moſt rigid Traditionary, in what relates to the Obſervation of the Sabbath, Paſſover, Feaſt of Atonement, of Tabernacles, &c. That they obſerve Prayers and Faſtings; and wear the *Zitzit*, or pieces of Fringe, on the Corners of their Garments. They hold, that all Sin is effac'd by Repentance; in which they differ from the Rabbins, who hold, that ſome are only effac'd by Death. As for Circumciſion, they don't believe it neceſſary, with the Traditionaries, that there be Blood ſhed: Add, that when a Child dies before it be eight Days old, the *Rabbiniſts* circumciſe it after 'tis dead, that it mayn't appear uncircumcis'd at the Reſurrection; whereas the *Caraites*, when they perceive the Child in danger, chuſe rather to circumciſe it e'er the eighth Day. In Matters of Divorce, the *Caraites* agree with the other *Jews*; and obſerve the ſame Rules and Reſtrictions in the killing and dreſſing of Beaſts; but differ from 'em in the Kinds of legal Impurities and Pollutions.

*Peringer* obſerves of the *Caraites* in *Lithuania*, that they are very different, both in Aſpect, Language, and Manners, from the *Rabbiniſts*, wherewith that Country abounds. Their Mother Tongue is the *Turkiſh*; and this they uſe in their Schools and Synagogues. In Viſage they reſemble the Mahometan *Tartars*. Their Synagogues are poſited North and South; and the Reaſon they give for it, is, that *Salmanaſſar* brought them from the Northward: So that, in Praying, to look to *Jeruſalem*, they muſt turn to the South. He adds, that they admit all the Books of the Old Teſtament; contrary to the Opinion of many of the Learned, who hold that they reject all but the *Pentateuch*.

*Caleb*, a *Caraite*, reduces the Difference between them and the *Rabbiniſts* to three Points: 1ſt, In that they deny the Oral Law to come from *Moſes*, and reject the *Cabbala*. 2d, In that they abhor the *Talmud*. 3d, In that they obſerve the Feaſts, as the Sabbaths, &c. much more rigorouſly than the Rabbins do. To this may be added, that they extend the Degrees of Affinity, wherein Marriage is prohibited, almoſt to Infinity. See CABALLA.

CARANNA, is a hard, brittle, reſinous Gum, brought from ſome Parts of the *Weſt Indies*, as *Carthagena* and *New Spain*; of an aromatick Flavour, and us'd in Medicine.

CARAVAN, or CARAVANNE, in the Eaſt, is a Troop, or Company of Travellers, Merchants, and Pilgrims, who for the greater Security march in a Body, thro the Deſarts, and other dangerous Places, infeſted with *Arabs* and Robbers. See CARAVANSERA.

There is a Chief, or *Aga*, who commands each *Caravan*, and has under him a Number of Janizaries, or other Forces, ſufficient for their Defence. The *Caravans* incamp every Night near Wells or Rivulets, known to the Guides; and obſerve a Diſcipline as regular as in War. They chiefly uſe Camels for their Vehicles, by reaſon of their enduring a world of fatigue, eating little, and paſſing three or four Days without drinking.

The Grand Signior gives one fourth Part of the Revenues of *Egypt*, to defray the Expence of the *Caravan* that goes yearly to *Mecca*, to viſit *Mahomet*'s Tomb: The Devotees, in this *Caravan*, are about 40000; accompany'd with Soldiers to protect them from the Pillage of the *Arabs*, and follow'd with eight or nine thouſand Camels, laden with all neceſſary Proviſions for ſo long a Paſſage acroſs Deſarts. Days Journeys are diſtinguiſh'd in the Eaſt, into Journeys of *Horſe-Caravans*, and *Caravans of Camels*: thoſe of Horſes are equal to two of Camels. There are ſeveral *Caravans* go yearly from *Aleppo*, *Cairo*, and other Places, to *Perſia*, *Mecca*, *Thebes*, &c.

There are alſo *Sea Caravans* eſtabliſh'd on the ſame Footing, and for the ſame Purpoſes: Such is the *Caravan of Veſſels*, from *Conſtantinople* to *Alexandria*.

The Word comes from the Arabic *Cairaran*, or *Cairaan*; and that from the Perſian *Kerran*, which ſignifies the ſame thing.

The Term *Caravan* is alſo us'd for the Voyages or Campaigns, which the Knights of *Malta* are oblig'd to make at Sea, againſt the *Turks* and *Corſairs*; in order to arrive at the Commandries and Dignities of the Order. They are thus call'd, becauſe the Knights have frequently ſeiz'd the *Caravan* going from *Alexandria* to *Conſtantinople*.

CARAVANSERA, a large publick Building, or Inn, deſtin'd to receive and lodge the *Caravans*: ſee CARAVAN.

Of theſe *Caravanſera's*, or, as *Chardin* calls 'em, *Caravanſerai*, there are a great Number throughout the Eaſt; erected out of the Charity and Magnificence of the Princes, &c. of the ſeveral Countries.

Thoſe of *Schira* and *Casbin*, in *Perſia*, are ſaid to have coſt 60000 Crowns: They are open to People of all Religions and Countries, without any Queſtions aſk'd, or any Money requir'd.

The *Caravanſerai* are uſually huge ſquare Buildings, with a ſpacious Court in the middle thereof. They are encompaſs'd with Galleries and Arches, under which runs a

kind of *Banquette*, or Elevation, ſome Feet high, where Travellers reſt themſelves, and make their Lodging as well as they can; their Baggage, and the Beaſts that carry 'em, being faſten'd at the Foot of the *Banquette*. Over the Gate, there are frequently a ſort of little Chambers; which the *Caravanſerakier* lets out, at a very dear rate, to ſuch as have a mind to be to themſelves.

Tho the *Caravanſera's* ſerve in lieu of Inns; yet there is this eſſential Difference between them and our Inns, that the Traveller finds nothing at all in the *Caravanſera*, neither for himſelf nor his Cattle; but muſt carry all his Proviſions and Neceſſaries with him. They are chiefly built in dry, barren, deſart Places; and are generally furniſh'd with Water from a great Diſtance, and at a vaſt Expence: There being no *Caravanſera* without its Well of Water. There are ſeveral of 'em in Cities; where they ſerve not only as Inns, but as Shops and Warehouſes. There are few Cities in the Eaſt without their *Caravanſerai*; eſpecially within the Dominions of *Turky*, *Perſia*, and the Great *Mogul*. Thoſe of *Iſpahan* and *Agra*, *Schiras* and *Casbin*, are diſtinguiſh'd for their Magnificence and Commodiouſneſs.

In *Turky*, none but the Grand Signior's Mother and Siſter, with the Viſiers and Baſhaws who have been in three Battles againſt the Chriſtians, are allow'd to build a *Caravanſera*. The Word comes from the Turkiſh *Karwan*, or *Kerwan*, *Caravan*; and *Sarai*, Houſe, Palace, Inn.

CARAVANSERAKIER, the Director, Steward, or Intendant of a *Caravanſera*. At *Iſpahan*, there are *Caravanſera's* in manner of Halls, or Exchanges, where Goods are laid up, and expos'd to view; for which the *Caravanſerakier* is accountable, in conſideration of a certain Fee. See CARAVANSERA.

CARAWAY, or CARWAY, a Medicinal Seed, produc'd from a Plant of the ſame Name, by Botaniſts call'd *Carvi Officinarum*, or *Cuminum Pratenſe*. See SEED.

The Seed or Grain of the *Carvi* or *Caraway*, is narrow, longiſh, furrow'd on the Back, and of a briſk aromatic Taſte. It is eſteem'd Stomachic, and Diuretic; diſpels Wind, ſtrengthens Digeſtion, &c. The *Engliſh* and *Germans* make great uſe of it; particularly in Biſkets, Comfits, and other Foods and Confections.

CARBUNCLE, in Medicine, a Malignant Tumor, ariſing ſometimes on one Part, and ſometimes another; accompany'd with a painful Heat, Mortification, Lividneſs, and at laſt a Blackneſs: It begins with one or more Puſtles, under which is form'd a putrid Ulcer; ſometimes with a Scab, without any Puſtle; the Ulcer being form'd under the Scab. Round the Tumor is a Kernel, very painful; ſometimes red, and ſometimes livid, or blackiſh. The *Carbuncle* is owing to a ſharp, cauſtic, malignant, ſaline Humor, which gnaws and corrupts the Part whereon it is diſcharg'd.

The *Greeks* call it *Anthrax*, the French *Charbon*, Coal, from the Reſemblance of its Scab to a Coal. It is ſometimes peſtilential, and ſometimes not. When it ariſes without Puſtles, it is properly call'd *Pruna*; when with, *Ignis Perſicus*.

CARBUNCLE, in Natural Hiſtory, a fabulous Kind of precious Stone, whereof *Pliny* and the Antients relate Wonders. The *Carbuncle*, in reality, is only a large *Ruby*, of a deep red Colour: the Term being never apply'd, but when the Stone exceeds 20 Carats Weight. See RUBY.

The Antients, and moſt of the Moderns after them, have all along ſuppos'd the *Carbuncle* to be taken from the Dragon's Head: And we read of many a Cavalier, who went to combat with Dragons, on purpoſe to gain this invaluable Jewel. *Vartoman* aſſures us, that the King of *Pegu* us'd no other Light in the Night time, but that of his Carbuncle, which caſt a blaze like that of the Sun.

The Name is form'd of the Latin *Carbunculus*, q. d. a burning Coal: For which Reaſon the *Greeks* call it ἀνθραξ, Coal. *Pliny*, treating of the *Carbuncle*, Lib. XXXVII. cap. 7. diſtinguiſhes twelve Sorts thereof.

CARBUNCLE, in Heraldry, a Charge, or Bearing, conſiſting of eight Radii, or Spokes; four whereof make a common Croſs, and the other four a Salteer; as in the adjoining Figure. Some call theſe Radii *Battons*, or *Staves*; becauſe round, and enrich'd with Buttons, or pearl'd, like Pilgrims Staves; and frequently tipp'd, or terminated with Flower-de-Luces. Others blazon 'em, Royal Scepters, plac'd in Salteer, Pale and Feſſe.

CARBUNCULATION, is the blaſting of the new-ſprouted Buds of Trees or Plants, either by exceſſive Heat, or exceſſive Cold. See BLIGHT.

CARCASE, or CARCASS, the Corpſe, or Body of a dead Animal, whoſe Fleſh is, moſt of it, cut off, conſum'd, or dry'd. See SKELETON.

Thus, we ſay, The *Carcaſſes* of the Soldiers, Horſes, &c. were ſeen long afterwards on the Field of Battel.——The *Carcaſs* of a Fowl, Capon, Partridge, Leveret, Rabbit, &c. is what remains thereof, after the four Members, or Limbs, have been cut off, *viz.* the Legs and Wings.

CARCASE, in Architecture, is the Shell, or Ribbs of a Houſe; containing the Partitions, Floors, Rafters, &c. made by the Carpenter, &c. See HOUSE, BUILDING, and TIMBER. The *Carcaſe* is otherwiſe call'd the *Framing*, ſee FRAMING.

CARCASS, or CARCUS, in War, a kind of *Bomb*, uſually oblong, or oval, rarely circular; conſiſting of a Shell, or Caſe, ſometimes of Iron, with Holes; more commonly of a coarſe ſtrong Stuff, pitch'd over, and girt with Iron Hoops; fill'd with combuſtible Matters, as Hand Granades, Ends of Muſkets, loaden Piſtols, and Preparations of Gunpouder, &c. Its uſe is to be thrown out of a Mortar, to ſet Houſes on Fire, and do other Execution. See BOMB, and MORTAR.

*For the Compoſition of a Carcaſs*, to burn, *Wolfius* preſcribes ten Parts of Gunpouder pounded; two of Nitre; one of Sulphur, and one of Colophony: Or ſix of Gunpouder; four of Nitre; four of Sulphur; one of beaten Glaſs; ½ one of Antimony; ½ one of Camphor; one of Sal Armoniac; and ¼ of common Salt. For the Shell, or Caſe, he takes two Iron Rings, ſome chuſe Plates; fitting one at one Extreme, near the Aperture at which the *Carcaſs* is to be fir'd, and the other at the other: others make the Aperture in one of the Plates. Theſe he braces with Cords drawn lengthwiſe; and acroſs theſe, at right Angles, laces others; making a Knot in each Interſection: Between the Folds of the Cords, he makes Holes, and into theſe fits Copper Tubes, filling 'em half full of Pouder and leaden Bullets, ramming the whole with Tow, &c. The Shell thus prepar'd, he immerges it, the Aperture firſt ſtopt, in a liquid Matter; conſiſting of four Parts of melted Pitch, 20 of Colophony, one of Oil of Turpentine, and as much ground Gunpouder as will reduce it to the Conſiſtence of a Paſt. After Immerſion, 'tis to be cover'd over with Tow, and immerg'd afreſh, till it become of the Bigneſs proper for the Mortar.

It has the Name *Carcaſs*, becauſe the Circles which paſs from one Ring, or Plate, to the other, ſeem to repreſent the Ribs of a human *Carcaſs*.

CARCINOMA, in Medicine, a Tumor, more uſually call'd a *Cancer*. See CANCER.

The Word comes from καρκινος, *Cancer*, and νεμω, *depaſco*, to feed upon.

CARCUSS, in War, the ſame as *Carcaſs*; ſee CARCASS.

CARDAMOMUM, or CARDAMUMS, a Medicinal Seed, of the Aromatic kind, contain'd in *Capſulæ*, or Pods, brought from the *Eaſt Indies*.

This Seed is diſtinguiſh'd into three Kinds, according to the ſeveral Sizes of the Pods; *viz.* great, middle, and ſmall: but the Taſte, Smell, Colour, and Form of the Grain, is the ſame in all; being of a purple Colour, angular, of a ſharp biting Taſte, and a ſtrong penetrating Smell. The firſt kind is alſo call'd *Grains of Paradiſe*; but the laſt excells the reſt, both in Smell, Taſte, and Virtue: 'Tis this that enters the Compoſition of Venice Treacle. The *Cardamums* do warm, and deterge; they ſtrengthen the nobler Parts, diſſipate Wind, and help Digeſtion; and are us'd in Diſeaſes of the Brain, Stomach, and Womb.

The Plants of the *Cardamum* Family, afford ſomething very remarkable, as to the manner of their Propagation: When ripe, their Pods fly open, and dart out their Seed upon a ſlight touch of the Hand. Nay, what is more, Mr. *Ray* tells us, the *Cardamum Impatiens* breaks its Pod, and emits its Seed not only if touch'd, but if only the Hand be ſtretch'd out, as if about to touch it: and *Johnſton* and *Gerrard* affirm it to be true. See SEED, and SEMINATION.

CARDIAC, in Medicine, vulgarly call'd *Cordial*, a Remedy antiently ſuppos'd to exert it ſelf immediately in comforting and ſtrengthning the Heart: but the modern Phyſicians rather ſuppoſe it to produce its Effect, by putting the Blood into a gentle Fermentation, whereby the Springs, before decay'd, are repair'd and invigorated; and the Tone and Elaſticity of the Fibres of the Veſſels reſtor'd: the Conſequence of which, is a more eaſy and briſk Circulation. See CORDIAL, STRENGTHNER, &c.

The Word comes from the *Greek* καρδια, *Cor*; the Heart being reputed the immediate Seat of its Operation.

CARDIACUS *Plexus*, in Anatomy, a *Plexus*, or piece of Network, form'd of a Ramification of the *Par vagum*, or eighth Pair of Nerves. See PLEXUS *Cardiacus*, NERVE, and PAR *vagum*.

CARDIALGIA, CARDIALGY, or CARDIACUS *Dolor*, in Medicine, a violent Pain, felt towards the upper Orifice of the Stomach, accompany'd with a Palpitation of the Heart, Fainting, and a Propenſion to Vomit; better known by the Name of *Cardiac Paſſion*, or *Heart-burn*. See HEART.

'Tis

'Tis occaſion'd by ſharp Humours, which prick and vellicate that Orifice, and the adjoining Parts. The Word comes from the *Greek* καρδια, *Heart*, and αλγ, *Pain*.

*Blanchard* makes the Diſeaſe conſiſt in a Gnawing, and Contraction of the *Par vagum*, and the intercoſtal Nerves implanted in the Stomach; proceeding from a pungent vellicating Matter in the Stomach it ſelf: which, by reaſon of the Conſent of Parts, affects the Heart; ſtraitning and contracting it ſo, as ſometimes to occaſion ſwooning. See CONSENT *of Parts*.

CARDINAL, a Term ſerving to expreſs the Relation, or Quality of Prime, Principal, moſt Conſiderable; or, the Foundation of any thing. Thus, we ſay, the four *Cardinal* Virtues, *viz.* Prudence, Juſtice, Fortitude, and Temperance; which are the Baſis of all others. So, the *Cardinal* Points, *Cardinal* Winds, *&c.*

The Word is form'd of the Latin *Cardo*, a Hinge; it being on theſe Fundamental Points, that all the reſt of the ſame kind ſeem to turn.

CARDINAL *Points*, in Coſmography, are the four Interſections of the Horizon, with the Meridian, and the prime vertical Circle. See POINT.

Of theſe, two, *viz.* the Interſection of the Horizon and Meridian, are called *North* and *South*, with regard to the Poles they are directed to. See NORTH, and SOUTH.

To determine the Places of thoſe Points, ſee MERIDIAN *Line*. The other two, *viz.* the Interſection of the Horizon and firſt Vertical, are call'd *Eaſt* and *Weſt*. See EAST, and WEST.

The *Cardinal Points*, therefore, coincide with the four *Cardinal* Regions of the Heavens; and are 90° diſtant from each other. The intermediate Points are call'd *Collateral Points*; ſee COLLATERAL *Points*.

CARDINAL *Points of the Heaven*, or, *of a Nativity*, are the Riſing and Setting of the Sun; the Zenith and Nadir. See RISING, SETTING, ZENITH, and NADIR.

CARDINAL *Winds*, are thoſe that blow from the *Cardinal* Points. See WIND.

CARDINAL *Numbers*, in Grammar, are the Numbers one, two, three, *&c.* which are indeclinable; in oppoſition to the *Ordinal Numbers*, ſecond, third, fourth, *&c.* See NUMBER.

CARDINAL, is particularly us'd for an Eccleſiaſtick Prince, or one who has a Voice, both active and paſſive, in the *Romiſh* Conclave, at the Election of a Pope. See CONCLAVE.

The *Cardinals* compoſe the Pope's Council, or Senate: In the *Vatican* is a Conſtitution of Pope *John*, which regulates the Rights and Titles of the *Cardinals*; and which declares, that as the Pope repreſents *Moſes*, ſo the *Cardinals* repreſent the 70 Diſciples, who, under the Pontifical Authority, decide private and particular Differences.

*Cardinals*, in their firſt Inſtitution, were only the principal Prieſts, or Incumbents of the Pariſhes of *Rome*. In the primitive Church, the chief Prieſt of a Pariſh, who immediately follow'd the Biſhop, was call'd *Presbyter Cardinalis*; to diſtinguiſh him from the other petty Prieſts, who had no Church, nor Preferment: The Term was firſt apply'd to them in the Year 150; others ſay, under Pope *Silveſter*, in the Year 300. Theſe *Cardinal* Prieſts were alone allow'd to baptize, and adminiſter the Euchariſt. When the *Cardinal* Prieſts became Biſhops, their *Cardinalate* became vacant; they being then ſuppos'd to be rais'd to a higher Dignity. Under Pope *Gregory*, *Cardinal* Prieſts, and *Cardinal* Deacons, were only ſuch Prieſts or Deacons, as had a Church or Chapel under their Cure: And this was the original uſe of the Word. *Leo* IV. in the Council of *Rome* held in 853, calls them *Presbyteros ſui Cardinis*; and their Churches, *Parochias Cardinales*.

The *Cardinals* continu'd on this footing till the XIth Century: But as the Grandeur and State of his Holineſs became exceedingly augmented, he would have his Council of *Cardinals* make a better figure than the antient Prieſts had done. 'Tis true, they ſtill preſerv'd their antient Title; but the Thing expreſs'd by it was no more. 'Twas a good while, however, e'er they had the Precedence over Biſhops, or got the Election of the Pope into their Hands: but when they were once poſſeſs'd of thoſe Privileges, they ſoon had the red Hat and Purple; and growing ſtill in Authority, became at length ſuperior to the Biſhops, by the ſole Quality of being *Cardinals*.

*Du Cange* obſerves, that originally there were three Kinds of Churches: The genuine Churches were properly call'd *Pariſhes*; the ſecond *Deaconries*, which were Chapels join'd to Hoſpitals, and ſerv'd by Deacons; the third were ſimple *Oratories*, where particular Maſſes were held, and were diſcharg'd by local and reſident Chaplains. He adds, that to diſtinguiſh the Principal, or Pariſh Churches from the Chapels, and Oratories, the Name *Cardinales* was given them. Accordingly, Pariſh-Churches gave Titles to *Cardinal* Prieſts; and ſome Chapels alſo, at length, gave the Title of *Cardinal Deacons*. Others obſerve, that the Term *Cardinal* was given not only to Prieſts, but alſo to Biſhops and Deacons, who were attach'd to certain Churches; to diſtinguiſh 'em from thoſe who only ſerv'd 'em *en paſſant*, and by Commiſſion. Titulary Churches, or Benefices, were a kind of Pariſhes, *i. e.* of Churches aſſign'd each to a *Cardinal* Prieſt; with ſome ſtated Diſtrict depending on it, and a Font for adminiſtring of Baptiſm, in Caſes where the Biſhop himſelf could not adminiſter it. Theſe *Cardinals* were ſubordinate to the Biſhops; and accordingly, in Councils, particularly that held at *Rome* in 868, ſubſcrib'd after them. It was not, however, only at *Rome*, that Prieſts bore this Name; for we find there were *Cardinal* Prieſts in *France*: Thus, the Curate of the Pariſh of St. *John de Vignes*, is call'd in old Charters the *Cardinal* Prieſt of that Pariſh. The Title of *Cardinal* is alſo given to ſome Biſhops, *quatenus* Biſhops; *e. gr.* to thoſe of *Mentz* and *Milan*: The Archbiſhop of *Bourges* is alſo, in antient Writings, call'd *Cardinal*; and the Church of *Bourges* a *Cardinal* Church. The Abbot of *Vendome* calls himſelf *Cardinalis Natus*.

The *Cardinals* are divided into three Claſſes, or Orders; containing 6 Biſhops, 50 Prieſts, and 14 Deacons; making, in all, 70: which conſtitute what they call the *Sacred College*. See COLLEGE. The *Cardinal Biſhops*, who are, as it were, the Pope's Vicars, bear the Titles of the Biſhopricks affected to 'em; the reſt take ſuch Titles as are aſſign'd 'em: The Number of *Cardinal* Biſhops has been fix'd; but that of *Cardinal* Prieſts and Deacons, and conſequently the Sacred College it ſelf, is always fluctuating. Till the Yeat 1125, the College only conſiſted of 52, or 53: The Council of *Conſtance* reduc'd them to 24; but *Sixtus* IV. without any regard to that Reſtriction, rais'd them again to 53, and *Leo* to 65. Thus, as the Number of *Cardinal* Prieſts was antiently fix'd to 28, new Titles were to be eſtabliſh'd, in proportion as new *Cardinals* were created. For the *Cardinal Deacons*, they were originally no more than ſeven, for the 14 Quarters of *Rome*; but they were afterwards increas'd to 18, and again diminiſh'd.

Some ſay, the *Cardinals* were ſo call'd from the Latin *Incardinatio*, the Adoption any Church made of a Prieſt of a foreign Church, driven thence by Misfortune; and add, that the uſe of the Word commenc'd at *Rome* and *Ravenna*; the Revenues of the Churches of which Cities being very great, they became the common Refuge of the unhappy Prieſts of all other Churches. According to *Onuphrius*, it was Pope *Pius* IV. who firſt enacted, in 1562, that the Pope ſhould be choſen only by the Senate of *Cardinals*: whereas, till that Time, the Election was by all the Clergy of *Rome*. Some ſay, the Election of the Pope reſted in the *Cardinals*, excluſive of the Clergy, in the Time of *Alexander* III. in 1160. Others go higher ſtill, and ſay, that *Nicholas* II. having been elected at *Sienna*, in 1058, by the *Cardinals* alone, occaſion'd the Right of Election to be taken from the Clergy, and People of *Rome*; only leaving 'em that of confirming him by their Conſent; which was at length, however, taken from them. *P. Papebroch* conjectures, that it was *Honorius* IV. who firſt introduc'd Biſhops into the Sacred College; by admitting the Biſhops Suffragans of the Pope, to whom, of right, it belong'd to name him; and of theſe conſtituting the firſt Claſs of *Cardinals*.

The *Cardinals* began to wear the red Hat at the Council of *Lyons*, in 1243. The Decree of Pope *Urban* VII. whereby 'tis appointed that the *Cardinals* be addreſs'd under the Title of *Eminence*, is of the Year 1630: till then they were call'd *Illuſtriſſimi*. See EMINENCE.

The Term *Cardinal* has alſo been apply'd to Secular Officers: thus, the Prime Miniſters in the Court of the Emperor *Theodoſius*, are call'd *Cardinales*. And *Caſſiodorus*, L. VII. *Formul.* makes mention of the *Cardinal Prince* of the City of *Rome*. And in the Liſt of Officers of the Duke of *Bretagne*, in 1447, we meet with one *Raoul de Thorel*, *Cardinal* of *Quillart*, Chancellor, and Servant of the Vicount *de Rohan*: which ſhews it to have been an inferior Quality.

CARDING, in the Manufacturies, a Preparation of Wool, Cotton, Hair or Line, by paſſing it between the Iron Points, or Teeth, of two Inſtruments, call'd *Cards*, to comb, diſintangle, and range the Hairs or Fibres thereof; and to diſpoſe it for ſpinning, *&c.* See SPINNING, and WOOL.

Before the Wool be *carded*, 'tis oil'd, or greas'd with Oil; whereof, one fourth of the Weight of the Wool is requir'd, for Wool deſtin'd for the Woof of Stuffs; and one eighth for that of the Warp. See CLOTH, WOOF, WARP, *&c.*

CARDO, in Anatomy, the ſecond Vertebra of the Neck; ſo call'd becauſe the Head turns upon it. See EPISTROPHEUS, and VERTEBRA.

CARDS, or *Playing* CARDS, are little Pieces of fine thin Paſtboard, whereon are printed divers Points and Figures; a certain Number, or Aſſemblage of which, ſerve for the Performance of divers Games; as *Baſſet*, *Ombre*, *Picquet*, *Whisk*, &c.

The Method of making playing *Cards*, ſeems to have given the firſt Hint to the Invention of Printing; as appears from the firſt Specimens of Printing at *Haerlem*, and thoſe in the *Bodleian* Library, &c. See PRINTING; ſee alſo PASTBOARD.

The cutting of the Moulds, or Blocks, for theſe *Cards*, is preciſely the ſame as that us'd for the firſt Books; *viz.* a Sheet of wet or moiſt Paper is laid on the Form or Block, which is firſt lightly bruſh'd over with Ink, made of Lampblack mix'd with Starch and Water; and then rubb'd off with a round Liſt, in the Hand. The Court-*Cards* they colour by help of ſeveral Patterns, call'd *Stanefiles*; conſiſting of Papers cut thro with a Penknife; within the Apertures, or Inciſions of which, the ſeveral Colours, as red, &c. are ſeverally apply'd; (for at the firſt Printing, the *Card* has only a mere Out-line.) Theſe Patterns are painted with Oil Colours, to keep them from wearing out by the Bruſhes: Being laid on the Paſtboard, they ſlide a Bruſh full of Colour looſe over the Pattern; which leaving the Colour within the Apertures, forms the Face or Figure of the *Card*. This, very probably, was the way of their firſt Printing at *Haerlem*; as might have been diſcover'd long ago, if it had been conſider'd, that the great Letters in our old Manuſcripts of 900 Years ago, are apparently done by the Illuminers, after this Method of *Card-making*.

CARDS, in Commerce, and the Manufactures; ſee CARDING.

CARDUUS, in Natural Hiſtory and Botany, a Name common to divers Species of Plants, in *Engliſh* call'd *Thiſtles*. See THISTLE.

The Plants of this Claſs moſt in uſe, are the *Carduus Benedictus*, and *Carduus Fullonum*.

CARDUUS *Benedictus*, is a Medicinal Plant, of the Thiſtle kind, chiefly us'd in Infuſion, as a gentle Emetic in Fevers, and certain Nauſeas. Antiently it was much in vogue, as a Cardiac, Sudorific, and Alexipharmic; and in thoſe Qualities, was preſcrib'd in Stomachic Caſes: but it is now ſucceeded by others, leſs nauſeous, and more effectual; tho ſtill retain'd in ſome of the officinal Compoſitions, with thoſe Intentions. Some diſtil a Water from it, which they uſe in cordial and ſudorific Potions. Its Salt has much the ſame Virtues.

CARDUUS *Fullonum*, is alſo call'd the *Fuller's Weed*, or *Teazle*. See TEAZLE.

CAREENING, a Term, in the Sea Language, us'd for the laying a Veſſel on one ſide, to caulk, ſtop up Leeks, or refit her. The Word is form'd of the Latin *Carina*, the Bulk or Body of a Ship.

A Ship is ſaid to be brought to a *Careen*, when the greateſt Part of her Lading, &c. being taken out, and another Veſſel lower than her ſelf laid by her ſide, ſhe is haled down to it as low as occaſion requires, *v. g.* a fourth or fifth Strake; and there kept, by the Weight of Ballaſt, Ordnance, &c. as well as by Ropes, leſt it ſhould ſtrain her Maſts too much. This is done with deſign to trim her Sides, or Bottom, to caulk her Seams, or to mend any Fault ſhe has under the Water: Hence, if a Ship lie on one Side in ſailing, ſhe is ſaid to *ſail on the Careen*. Ships of War are generally *careen'd* every three Years.

The *Half Careen*, is when they can only *careen* half the Ship; not being able to reach ſo low as the bottom of the Keel.

CARET, in Grammar, a Character of this Form, ( ∧ ) denoting that there is ſomething inſerted, or interlin'd, which ſhould regularly have come in where the Character is plac'd. See CHARACTER.

CARGO, the Lading or Freight of a Ship: See FREIGHT, and LADING.

The *Cargo* of this Veſſel is of ſuch or ſuch a Commodity. This is the proper Seaſon for a *Cargo* of Codfiſh, of Wines, &c.

*Cargo* is ſometimes alſo us'd for an Invoice of the Goods wherewith a Ship is laden. See INVOICE.

CARIATIDES, or CARIATES, in Architecture; ſee CARYATIDES.

CARICOUS *Tumor*, is a Swelling reſembling the Figure of a Fig; ſuch, frequently, are the *Piles*. See FICUS, and HEMORRHOIDS.

The Word comes from *Carica*, a Fig; or from *Caria*, a Country where they are frequent, or from whence they are ſometimes ſaid to be brought.

CARIES, in Chirurgery, &c. a kind of Rottenneſs, peculiar to a Bone; ariſing, either from a conſtant Afflux of vicious Humours, or from their Acrimony; or from a Bruiſe, Compound Fracture, Luxation, Venereal Diſorders, corroſive Medicines, being ſtripp'd, or laid bare of their Fleſh, and long expos'd to the Air, &c. 'Tis a common Obſervation, that nothing is more difficult to cure than an Ulcer, when the adjacent Bone is become *carious*. See ULCER.

The Word in the original *Latin*, ſignifies *Rottenneſs*.

The uſual Medicines in a *Caries*, are Tinctures of Euphorbium, Myrrh, and Aloes; or Pouders of the ſame, with the Addition of Iris, Birthwort of either kind, Gentian, &c. and particularly the Pouder of Diapente. After uſing the Tinctures, the Pouders are apply'd on Lint, in form of a Pledget. An Actual Cautery, apply'd to the *carious* Part through a Canula, &c. is frequently found ſucceſsful. See CAUTERY.

Anatomiſts, in diſſecting of Bodies, ſometimes find *carious* Bones; particularly thoſe of the Jaws, Legs, &c. where nothing of that Kind was ſuſpected during the Perſon's Life-time; nor any Diſorder felt therefrom: Whence Mr. *Cheſelden* conjectures, that the Cure of a *carious* Bone might be directly attempted, without waiting, as our Chirurgeons uſually do, for an *Exfoliation*.

CARINA, a *Latin* Term, properly ſignifying the *Keel* of a Ship; or the long piece of Timber running along the Bottom of the Ship, from Head to Stern; upon which the whole Structure is built, or fram'd. See KEEL.

CARINA, is alſo frequently us'd for the whole Capacity or Bulk of a Ship; containing the *Hull*, or all the Space below the Deck. See HULL. Hence, the Word is alſo us'd, by a Figure, for the whole Ship. See SHIP.

CARINA, among Anatomiſts, is us'd for the firſt Rudiments, or Embryo of a Chick, when in the Shell; ſee EMBRYO.

The *Carina* conſiſts of the entire *Vertebræ*, as they appear after ten or twelve Days Incubation. See EGG.

'Tis thus call'd, becauſe crooked, in form of the *Keel* of a Ship. See GENERATION. Botaniſts, for the ſame Reaſon, uſe the Word *Carina*, to expreſs the lower *Petalum* of a papillinaceous Flower. The Leaves alſo of the *Aſphadelus*, they ſay, are *carinated*.

CARINA, is alſo us'd in the antient Architecture. The *Romans* gave the Name *Carina* to all Buildings in form of a *Ship*; as we ſtill call *Nave*, from *Navis* Ship, the middle or principal Vault of our *Gothic* Churches; becauſe it has that Figure.

CARINÆ, were alſo Weepers; or Women hir'd, among the antient *Romans*, to weep at Funerals: They were thus call'd from *Caria*, the Country whence moſt of 'em came. See FUNERAL.

CARIPI, a kind of Horſe-Guards among the *Turks*. The *Caripi*, to the Number of about 1000, are not Slaves, nor bred up in Seraglios or Seminaries, like the reſt; but are generally Moors, or renegado Chriſtians, who having follow'd Adventures, and being poor, and their Fortune to ſeek, by their Dexterity and Courage have arriv'd at the Rank of Horſe Guards to the Grand Signior. They march with the *Uluſagi* on the Left hand, behind him; their pay 12 Aſpers *per* Day.

The Word *Caripi* ſignifies *Poor*, and *Stranger*.

CARISTIA, or rather CHARISTIA, a kind of Feaſt, among the old *Romans*, held on the 19th of *February*, in honour of the Goddeſs *Concord*. The *Cariſtia* were inſtituted to re-eſtabliſh Peace and Amity, in Families embroil'd, or at variance in themſelves. It conſiſted in a great Entertainment made in each Family, to which no Strangers were admitted, but only Relations and Kindred. The Joy and Freedom inſpir'd by the Repaſt, was look'd upon as a proper means to reunite divided Minds; to which the good Offices of ſo many Friends wou'd greatly contribute. The Word comes from the *Greek* χαρις, Grace, Union, Peace. This Feaſt was alſo called *Dies Caræ Cognationis*. *Vigenere* calls it the *Good Cheer*.

CARLINE, or CAROLINE, a Plant, of the Thiſtle kind, ſaid to have been diſcover'd by an Angel to *Charlemaign*, to cure his Army of the Plague: whence its Denomination. Its Root is of ſervice as a Diuretic and Sudorific, in all peſtilential Diſorders.

CARLINGS, in a Ship, two pieces of Timber lying fore and aft, along from one Beam to another, directly over the Keel; ſerving as a Foundation for the whole Body of a Ship: on theſe the Ledges reſt, whereon the Planks of the Deck, and other Matters of Carpentry are made faſt. The *Carlings* have their Ends let into the Beams call'd *Culvertail*. The *great Carlings*, is that whereon the Mainmaſt ſtands: we alſo ſay, *Carling of the Capſtan*, *Botts*, &c.

CARLING *Knees*, are Timbers going athwart the Ship, from the Sides to the Hatch-way, ſerving to ſuſtain the Deck on both Sides.

CARMELITES, an Order of Religious, making one of the four Orders of *Mendicants*, or begging Friars; and taking both its Name, and Origin from *Carmel*, a Mountain of *Syria*, formerly inhabited by the Prophets *Elias* and *Eliſha*, and by the Children of the Prophets; from whom this Order pretends to deſcend in an uninterrupted Succeſſion. The manner in which they make out their Antiquity, has ſomething in it too ridiculous to be rehears'd. Some among 'em pretend they are Nephews to J. C. Others go further, and make *Pythagoras* a *Carmelite*, and the antient *Druids* regular Branches of their Order.

*Phocas*, a *Greek* Monk, ſpeaks the moſt reaſonably; he ſays, that in his Time, *viz.* in 1185, *Elias*'s Cave was ſtill extant on the Mountain; near which were the Remains of

a Building, which intimated there had been antiently a Monaſtery; that ſome Years before, an old Monk, a Prieſt of *Calabria*, by Revelation, as he pretended, from the Prophet *Elias*, fix'd there, and aſſembled ten Brothers. In 1209, *Albert*, Patriarch of *Jeruſalem*, gave the Solitaries a rigid Rule; which *Papebroch* has ſince printed. In 1217, or, according to others, 1226, Pope *Honorius* III. approv'd and confirm'd it; tho it was after mitigated by *Innocent* IV. S. *Louis* brought ſome of theſe *Carmelites* with him from the Holy Land into *France*. Many of the *Popes* give them the Titles of *Brothers of the Bleſſed Virgin*. This Order is eminent for the Devotion of the *Scapulary*, for its Miſſions, and for the great Number of Saints it has ſtock'd the *Romiſh* Church withal. In the laſt Century, there were four Canonizations in this Order, *viz.* of S. *Thereſa*, S. *Andrew Corſin*, S. *Mag. de Pazzi*, and S. *J. de le Croix*.

The Order of the *Carmelites* is divided into two Branches, *viz. Carmelites of the antient Obſervance*, call'd the *mitigated*, or *moderate*; and thoſe of the *ſtrict Obſervance*, call'd *Bare-footed Carmelites*. The antient Obſervance has only one General, under whom are 40 Provinces; and the Congregation of *Mantua*, which has a Vicar-General. The ſtrict Obſervance has two Generals; one in *Spain*, having ſix Provinces under his Command; and another in *Italy*, with 12 in ſeveral Parts of *Europe*.

*Bare-footed* CARMELITES, are a Reform of the antient *Carmelites*, ſet on foot in 1540, by S. *Thereſa*; ſo call'd from their going *barefooted*. She began with the Convents of Nuns, whom ſhe reſtor'd to the primitive Auſterity of the Order, which had been mitigated by *Innocent* IV. in 1245; and at length carry'd the ſame Reform among the Friars. *Pius* V. approv'd the Deſign, and *Gregory* III. confirm'd the Reform in 1580. There are two Congregations of *bare-footed Carmelites*, which have each their General, and their ſeveral Conſtitutions: The one the Congregation of *Spain*, divided into ſix Provinces; the other call'd the Congregation of *Italy*, comprehending all the reſt, not depending on *Spain*.

*Knights of Mount* CARMEL, are a Military Order of Knights *Hoſpitallers*, inſtituted in 1607, by *Henry* IV. of *France*, under the Title, Habit, and Rule of our Lady of *Mount Carmel*; and in conſequence of the Bull of Pope *Paul* V. in 1608, united to the Order of St. *Lazarus* of *Jeruſalem*, with all its Commandaries, Priories, and other Goods, for its Endowment.

The Founder propos'd it to conſiſt of 100 *French* Gentlemen, who ſhould be oblig'd, in Times of War, to march cloſe to the Kings of *France*, as their Guard. Authors are much divided, whether to call this a new Inſtitution, or a Reſtauration of that of S. *Lazarus*; tho 'tis generally carry'd from the former. See LAZARUS.

CARMEN, an antient Term among the *Latins*, us'd, in its general Senſe, to ſignify a *Verſe*; but in its proper Senſe a *Spell*, or *Charm*, form of Expiation, Execration, *&c.* couch'd in a few Words, plac'd in a myſtic Order, on which its efficacy depended. See VERSE, CHARM, *&c.*

Some fetch the Origin of the poetical *Carmina* hence; and ſay, they took that Name from their Reſemblance to theſe Spells: Others, on the contrary, ſay, that the Spells had their Origin from the Poetical Verſes, and took their Name from their reſemblance thereto.

*Vigenere* derives *Carmen* from *Carmenta*, becauſe that Propheteſs couch'd her Predictions in Verſes, or ſhort Periods: but others ſay, the Propheteſs took the Name *Carmenta*, from *Carmen*, on the ſame account. See CARMENTALIA.

*Pezron* fetches the Original of *Carmen*, from the Celtic *Carm*, the Shout of Joy, or the Verſes which the antient Bards ſung, to encourage the Soldiers before the Combat: adding, that the *Greek* χαρμη, ſignifies *Combat* and *Joy*, which is true; but then it does not come from the Celtic *Carm*, but from χαιρω, *gaudeo*.

CARMENTALIA, a Feaſt among the old *Romans*, celebrated annually on the 15th of *January*, in honour of *Carmenta*, or *Carmentis*, a Propheteſs of *Arcadia*, Mother of *Evander*, with whom ſhe came into *Italy* 60 Years before the *Trojan* War. This Feaſt was eſtabliſh'd on occaſion of a great Fecundity among the *Roman* Dames, after a general Reconciliation with their Husbands, with whom they had been at variance, in regard of the uſe of Coaches being prohibited them by an Edict of the Senate. 'Twas the Women who celebrated this Feaſt: He who offer'd the Sacrifices, was call'd *Sacerdos Carmentalis*.

Authors are divided about the Origin of the Word *Carmenta*; *Vigenere* ſays, the Propheteſs was ſo call'd *Quaſi Carens Mente*, out of her Senſes, or out of her ſelf; by reaſon of the Enthuſiaſm ſhe frequently fell into. Others ſay, ſhe took her Name from *Carmen*, Verſe; becauſe her Propheſies were couch'd in Verſes: but *Vigenere*, on the contrary, maintains *Carmen* to be deriv'd from *Carmenta*. See CARMEN.

CARMINATIVES, in Medicine, are Remedies, whether Simple or Compound, us'd in a Cholic, or other flatulent Diſtemper; to diſpel the Wind.

The four *Carminative Flowers*, are thoſe of Camomile, Melilot, Motherwort, and Dill.

The Word comes from the Latin *Carminare*, to card, cleanſe, purge; tho Dr. *Quincy* makes its Origin more myſterious: he ſays, it comes from the Word *Carmen*, taking it in the Senſe of an Invocation, or Charm; and makes it to have been a general Name for all Medicines which operated like Charms, *i. e.* in an extraordinary manner. Hence, as the moſt violent Pains were frequently thoſe ariſing from pent-up Wind, which immediately ceaſe upon Diſperſion; the Term *Carminative* became in a peculiar Senſe apply'd to Medicines which gave Relief in windy Caſes, as if they cur'd by Inchantment. But this Derivation appears a little too much ſtrain'd.

CARMINE, a red Colour, very vivid, bordering ſomewhat on the Purple, us'd by Painters in Miniature; and ſometimes Painters in Oil, tho rarely, by reaſon of its exceſſive Price. *Carmine* is the moſt valuable Product of the Cochineal Meſtique; which is a Fecula or Sediment, reſiding at the botom of the Water, wherein is ſteep'd Cochineal Couan, and Autour: Some add Rocou, but this gives the *Carmine* too much of the Orange caſt. To be good, it muſt be almoſt in an impalpable Pouder. See RED, MINIATURE, *&c.*

Some make *Carmine* with Braſile Wood, Fernambouc, and Gold Leaf, beat in a Mortar, and ſteep'd in Whitewine Vinegar; the Scum ariſing from this Mixture, upon boiling, when dry'd, makes *Carmine*: But this Kind is vaſtly inferior to the former.

CARNATION, *Fleſh-Colour*, in Painting, is underſtood of all the Parts of a Picture in general which repreſent Fleſh; or which are naked and without Drapery. *Titian* and *Corregio*, in *Italy*, and *Rubens* and *Van Dyke* in *Flanders*, excell'd in *Carnations*. See COLOURING.

It muſt be here obſerv'd, that the Word *Carnation* is not properly us'd for any particular Part of the Perſon painted; but for the whole Nudity of the Piece.

CARNAVAL, or CARNIVAL, a Seaſon of Mirth and Rejoicing, obſerv'd with great Solemnity by the *Italians*, and particularly at *Venice*. The *Carnaval* Time commences from Twelfth Day, and holds till Lent.

Feaſts, Balls, Operas, Concerts of Muſic, Intrigues, Marriages, *&c.* are chiefly held in *Carnaval* Time. The Word is form'd of the Italian *Carnavale*; which M. *Du Cange* derives from *Carn-a-val*, by reaſon the Fleſh then goes to Pot, to make amends for the Seaſon of Abſtinence enſuing. Accordingly, in the corrupt *Latin*, he obſerves, it was call'd *Carnelævamen*, and *Carniſprivium*; as the *Spaniards* ſtill denominate it *Carnes tollendas*.

CARNEL. The building of Ships firſt with their Timber and Beams, and after bringing on their Planks, is call'd *Carnel*-work, to diſtinguiſh it from *Clinch*-work.

Thoſe Veſſels alſo which go with Mizen-ſails inſtead of Main-ſails, are by ſome call'd *Carnels*.

CARNIVOROUS, an Epithet apply'd to thoſe Animals which naturally ſeek, and feed on Fleſh. See ANIMAL, and FOOD.

'Tis a Diſpute among Naturaliſts, whether or no Man be naturally *Carnivorous*; ſome contending that the Fruits of the Earth were intended as his ſole Food, and that 'twas Neceſſity in ſome Places, and Luxury in others, that firſt prompted them to feed upon their Fellow-Animals. *Pythagoras* and his Followers look'd on it as a great Impiety; and ſtrictly abſtain'd from all Fleſh, from the Notion of a *Metempſychoſis*: and their Succeſſors, the *Brachmans*, continue the ſame to this Day. See PYTHAGORIANS, and BRACHMANS.

The Conſideration *Gaſſendus* chiefly inſiſts on, why Man ſhould not be *Carnivorous*, is the Structure and Conformation of our Teeth; moſt of 'em being either *Inciſores* or *Molitores*; not ſuch as *Carnivorous* Animals are furniſh'd withal, proper to tear Fleſh; except the four *Canini*: As if Nature had rather prepar'd us for cutting Herbs, Roots, *&c.* than for tearing Fleſh. See TEETH. To which may be added, that when we do feed on Fleſh, 'tis not without a preparatory Coction, by boiling, roaſting, *&c.* And even then, as Dr. *Drake* obſerves, they are the hardeſt of Digeſtion of all other Foods, and are prohibited in Fevers, and many other Diſtempers: And laſtly, that Children are rather averſe to all Animal Foods, till their Palates become vitiated by Cuſtom; and the breeding of Worms in them, is generally aſcrib'd to the too haſty eating of Fleſh.

To theſe Arguments Dr. *Wallis*, in the *Philoſophical Tranſactions*, ſubjoins another; which is, that all Quadrupeds which feed on Herbs or Plants, have a long *Colon*, with a *Cæcum* at the upper End of it, or ſomewhat equivalent, which conveys the Food, by a long and large Progreſs, from the Stomach downwards, in order to a ſlower Paſſage and

longer

nger Stay in the Inteſtines; but that in *Carnivorous* Animals ſuch *Cæcum* is wanting, and inſtead thereof there is a more ſhort and ſlender Gut, and a quicker Paſſage thro the Inteſtines. Now, in Man, the *Cæcum* is very viſible; a ſtrong Preſumption that Nature, who is ſtill conſiſtent with her ſelf, did not intend him for a *Carnivorous* Animal: 'Tis true, the *Cæcum* is but ſmall in Adults, and ſeems of little or no uſe; but in a *Fœtus* 'tis much larger in Proportion: and 'tis probable, our cuſtomary Change of Diet, as we grow up, may occaſion this ſhrinking. See Cæcum, and Colon.

CARNOSA *Membrana*, CARNOSUS *Panniculus*, } in Anatomy; ſee Panniculus *Carnoſus*.

CARNOSITY, is us'd by ſome Authors for a little *fleſhy* Excreſcence, Tubercle, or Wen, form'd in the Urethra, Neck of the Bladder, or Yard, which ſtops the Paſſage of the Urine. *Carnoſities* are very difficult of cure: They are not eaſily known, but by introducing a Probe into the Paſſage, which there meets with reſiſtance. They uſually ariſe from ſome Venereal Malady ill manag'd.

CARO, *Fleſh*, in Anatomy, *&c.* is properly underſtood of ſuch Parts of the Body, where the Blood-Veſſels are ſo ſmall, as only to retain Blood enough to preſerve their Colour red. Anatomiſts uſually define *Fleſh*, a ſimilar, fibrous, and thick Part; and diſtinguiſh it into five Kinds, *viz.* 1. *Muſcular*, *Similar*, or *Fibrous*; ſuch as is the Subſtance of the Heart, and other Muſcles. See Muscle. 2. *Parenchymous*, as the Lungs, Liver, and Spleen were antiently ſuppos'd to be; but ſince the uſe of Glaſſes, it's now known, that all the Viſcera and other Parts are Vaſcular, and nothing but a Plexus, or Congeries of ſmall Veſſels and Canals. 3. *Viſcerous*, as that of the Stomach and Guts. 4. *Glandulous*, as that of the Pancreas, Breaſts, Tonſils, *&c.* 5. *Spurious*, as the Fleſh of the Lips, Gums, Glands of the Penis, *&c.*

Caro, is alſo us'd, in Botany, for the Pulp, Fleſh, or ſoft Subſtance contain'd within any Plant, or its Fruit; ſuch as the Pulp of Caſſia, Tamarinds, Prunes, *&c.*

Caro *Muſculoſa quadrata*, in Anatomy, a Muſcle ſo call'd by *Fallopius* and *Spigelius*, but more popularly *Palmaris brevis*. See Palmaris.

CAROLINES, an Epithet given to the four Books compos'd by Order of *Charlemaign*, to refute the IId Council of *Nice*.

The *Carolines* contain 120 Heads of Accuſation againſt that Council, and are couch'd in very harſh, reproachful Terms. Some Authors doubt of the Antiquity and Genuineneſs of theſe Books: They are attributed by ſome to *Angibran*, Biſhop of *Metz*; by others to *Alcuin*: but others, with more Reaſon, aſcribe 'em to the Biſhops of *France*; alledging, that Pope *Adrian* having ſent *Charlemaign* the Acts of the Council in 790, he gave them to be examin'd by the *French* Biſhops; and that the *Carolines* was the Anſwer they return'd. The *Carolines* were ſent to the Pope about the Time of the Council of *Frankfort*; and were firſt printed in 1549, by M. *Du Tillet*, Biſhop of *Meaux*, under the Name of *Eriphele*.

CAROLUS, an antient Gold Coin, ſtruck in the Reign of K. *Charles* I. Its Value, *&c.* ſee under Coin.

CAROTIDS, in Anatomy, two Arteries of the Neck, one on each Side, ſerving to convey the Blood from the Aorta, to the Brain. See Artery, Blood, and Brain.

The *right Carotid* ariſes from the Subclavian, juſt where that ſprings out of the Porta; but the *left* immediately out of the Aorta. They both lie pretty deep, and being defended by the *Aſpera Arteria*, paſs free from any Compreſſure, and without ſending out almoſt any Branches, ſtraight to the *Cranium*. Juſt before their Arrival there, they ſend forth the *external Carotid*; and paſſing the *Os Petroſum*, proceed on with ſome Circumvolutions; till laying aſide their muſcular Membrane, and giving Branches to the *Dura Mater*, they paſs along the *Cranium*, defended by the Sides of the *Sella Turcica*, and *Dura Mater*: and ſending Branches to the outer Parts of the *Pia Mater*, and the Nerves, they at laſt reach the *Cerebrum*; where dividing into infinite Ramifications, they are loſt in the cortical Part; or perhaps proceed even into the medullary Part thereof. See Cortex, Medulla, *&c.*

The Antients plac'd the Seat of Drouſineſs in theſe Arteries, whence they had the Name *Carotids*, καρῶ ſignifying Drouſineſs: for the ſame Reaſon they were call'd *Lethargic* and *Apoplectic*.

CARP-*Fiſhing*. See *Carp*-Fishing.

CARPÆA, a kind of Dance, or Military Exerciſe, in uſe among the *Athenians* and *Magneſians*, perform'd by two Perſons; the one acting a Labourer, the other a Robber. The Labourer, laying by his Arms, goes to ſowing and ploughing; ſtill looking warily about him, as if afraid of being ſurpriz'd: The Robber at length appears, and the Labourer, quitting his Plough, betakes himſelf to his Arms, and fights in defence of his Oxen. The Whole perform'd to the Sound of Flutes, and in Cadence.

Sometimes the Robber was overcome, and ſometimes the Labourer; the Victor's Reward being the Oxen and Plough. The Deſign of the Exerciſe, was to teach and accuſtom the Peaſants, to defend themſelves againſt the Attacks of Ruffians.

CARPENTERS-*Work*, in a Building, includes the *Framing*, *Flooring*, *Roofing*; the *Foundation*, *Carcaſs*, *Doors*, *Windows*, &c. See Framing, Flooring, Roofing, Foundation, Carcass, Door, Window, *&c.*

Carpenter's *Joint-Rule*. See Rule.

CARPENTRY, the Art of cutting, framing, and joining large Pieces of Wood, for the Uſes of Building; ſee Building.

*Carpentry* is one of the Arts ſubſervient to Architecture, and is divided into two Branches, *Houſe Carpentry*, and *Ship Carpentry*: The firſt employ'd in Raiſing, Roofing, Flooring, *&c.* of Houſes, *&c.* See House.

The ſecond in the Conſtruction of Veſſels for Sea; as Ships, Barks, Barges, Boats, *&c.* See Ship, *&c.*

The Rules and Practices in *Carpentry*, as to *Planing*, *Sawing*, *Morteſſing*, *Tenanting*, *Scribing*, *Paring*, *Moulding*, &c. are much the ſame as thoſe in Joinery; ſo likewiſe are the *Tools*, or Inſtruments, and the *Stuff*, the ſame in both: All the Difference between the two Arts conſiſting in this, that Joinery is us'd in the ſmaller and more curious Works; ſee Joinery: and *Carpentry* in the larger, ſtronger, and coarſer. See Sawing, Scribing, Moulding, Planing, *&c.* ſee alſo Saw, Chissel, Plane, *&c.*

*Fr. Pyrard* aſſures us, that the Art of *Carpentry* is in its greateſt Perfection in the *Maldives* Iſlands: Their Works, there, he obſerves, are ſo artfully manag'd, that they will hold tight and firm without either Nails or Pins. He adds, they are ſo curiouſly put together, that no body can take 'em aſunder, but thoſe acquainted with the Myſtery.

The Word is deriv'd from the Latin *Carpentum*, a Car, or Cart.

CARPET *Tapis*, a ſort of Covering, work'd either with the Needle, or on a Loom; to be ſpread on a Table, Trunk, an Eſtrade, or even a Paſſage, or Floor. *Perſian* and *Turky Carpets* are thoſe moſt priz'd; eſpecially the former. *Carpets* that had a Hair or Shag on one ſide only, were call'd by the Antients *Tapetes*; ſuch as had a Shag on both ſides, were call'd *Amphitapetes*.

Among Jockeys, to *ſhave the Carpet*, is to Gallop very cloſe, or near the Ground; a Fault Foreigners charge on the *Engliſh* Horſes. See Gallop.

An Affair, Propoſal, *&c.* are ſaid to be brought on the *Carpet*, when they are under Conſideration, *&c.*

CARPOBALSAM, or CARPOBALSAMUM, is the Fruit of the Balm, or Balſam Tree; very much reſembling, both in Figure, Size, and Colour, that of Turpentine. See Balm.

'Tis much doubted, whether the *Carpobalſam* ſold in the Shops be the ſame with that of the Antients; as not having the ſame Marks. The Apothecaries uſe to ſubſtitute *Cubebes* in lieu of it, as having the ſame Qualities. The Word comes from the *Greek* καρπῶ, *Fruit*, and βαλσαμῶ, *Balm*.

CARPOCRATIANS, a Branch of the antient *Gnoſtics*, ſo call'd from *Carpocras*, who in the IId Century reviv'd, and improv'd upon the Errors of *Simon Magus*, *Menander*, *Saturnine*, and other *Gnoſtics*. He own'd, with them, one ſole Principle and Father of all Things, whoſe Name, as well as Nature, was unknown. The World, he taught, was created by Angels, vaſtly inferior to the firſt Principle. He oppos'd the Divinity of Jeſus Chriſt; making him a mere Man, tho poſſeſs'd of uncommon Gifts, which ſet him above other Creatures. He inculcated a Community of Women; and taught, that the Soul could not be purify'd, till it had committed all kinds of Abominations; making that a neceſſary Condition of Perfection. See Gnostics, and Cerinthians.

CARPUS, in Anatomy, the *Wriſt*; or that Part between the Palm of the Hand, and the Arm. See Hand.

The Wriſt conſiſts of eight Bones of different Figures and Bulks, plac'd in two Ranks, four in each: The firſt Rank is articulated with the two *Foſſils*; the ſecond with the Bones of the *Metacarpus*. They are ſtrongly ty'd together by the Ligaments which come from the Radius, and by the annular Ligament, through which the Tendons which move the Fingers paſs: Altho this Ligament be thought but one, yet it gives a particular Caſe to every Tendon which paſſes through it. The Word comes from the *Greek* καρπῶ. The *Arabians* call it *Raſetta*; the *Latins Carpiſmus*.

CARRIAGE, a Vehicle for the Conveyance of Perſons, Baggage, Merchandizes, *&c.* from one Place to another. See Vehicle.

Carriage *of a Cannon*, is the Frame, or Timber-work whereon it is mounted; ſerving to point and direct it for ſhooting, and to convey it from place to place. See Cannon.

*The* CARRIAGE *of a Ship Gun*, consists of two Wheels, without Spokes.

*The* CARRIAGE *of a Field-Piece*, consists of two Wheels, which carry long and strong wooden Beams, or Cheeks, between which the Cannon is as it were fram'd, moving on its Trunnions as on a Center: When 'tis requir'd to move them, they add a Vant-Train, compos'd of two smaller Wheels.

The ordinary Proportion, is for the *Carriage* to have $1\frac{1}{2}$ of the Length of the Gun; the Wheels to be half the Length of the Piece in height: four times the Diameter, or Calliber, gives the Depth of the Planks at the fore End; in the Middle $3\frac{1}{2}$.

In Agriculture, *Carriage* is a Furrow cut for the Conveyance of Water, or the Draining of the plow'd Ground, &c.

CARRIERE, or CARRIER, or CAREER, in the Manage, a Place inclos'd with a Barrier, wherein they run the Ring. See BARRIER.

The Word is also us'd for the Horse-course it self, provided it don't exceed 200 Paces.

In the antient *Circus*, the *Carrier* was the Space the *Bigæ*, or *Quadrigæ*, were to run at full speed, to gain the Prize. See CIRCUS.

CARRIER, in Falconry, is a flight or tour of the Bird, about 120 Yards: If it mount more, it's call'd a *double Carrier*; if less, a *semi-Carrier*.

CARROUSAL, or CAROUSAL, a Course, or Contest of Chariots and Horses: or a magnificent Entertainment, on occasion of some publick Rejoicing: consisting in a Cavalcade of several Persons, richly dress'd, and equipp'd after the manner of the antient Cavaliers, divided into Squadrons, meeting in some publick Place, and practising Justs, Tournaments, and other noble Exercises. See JUST, and TOURNAMENT.

The *Moors* introduc'd Cyphers, Liveries, and other Ornaments of their Arms, with Trappings, &c. for their Horses. The *Goths* added Crests, Plumes, &c.

The Word comes from the Italian *Carosello*, a Diminutive of *Carro*, Chariot. *Tertullian* ascribes the Invention of *Carrousals* to *Circe*; and will have 'em instituted in honour of the Sun, her Father: whence some derive the Word from *Carrus*, or *Currus Solis*.

CARR-TAKERS, are Officers of the King's Houshold, who, when the Court travels, have charge to provide Waggons, Carts, &c. to transport the King's Furniture and Baggage.

CARTE BLANCHE, a *French* Term, seldom us'd but in this Phrase, To give, or send any one the *Carte blanche*; *i. e.* to send him a *blank Paper*, sign'd, for him to fill up with what Conditions he pleases.

CARTESIAN *Philosophy*, or CARTESIANISM, the System of Philosophy advanc'd by *Des Cartes*, and maintain'd by his Followers, the *Cartesians*. See PHILOSOPHY; see also CARTESIANS.

The *Cartesian Philosophy* is founded on two great Principles, the one *Metaphysical*, the other *Physical*. His Metaphysical Principle is this, *I think, therefore I am*. This Principle has been attack'd and defended, with a world of Spirit; and a world of Zeal and Partiality on either side: For, tho it be true, that we are as sure by an inward Perception or Consciousness that we exist, as that we think; yet 'tis true, too, that the Conclusion of this Reasoning *I am*, is drawn from the Antecedent *I think*: since *to think*, supposes *to be*, or *exist*; and the Mind sees clearly, the necessary Connection between *thinking* and *being*.

But this Principle *Des Cartes* should not have propos'd as a new Discovery: The World knew e'er he taught it, that in order to *think*, 'tis requir'd to *be*; and that he who actually *thinks*, actually *exists*. See EXISTENCE, and THINKING.

The Physical Principle of *Cartesianism* is this, that *there is nothing but Substances*: which appears a dangerous Principle to the Divines; and is accordingly controverted every Day in the Schools of the Catholicks; who undertake to prove, that there are absolute Accidents. See ACCIDENT.

*Substance* he makes of two Kinds; the one a Substance that thinks; the other, a Substance extended. Actual Thought, therefore, and actual Extension, are the Essences of Substance: So that the thinking Substance cannot be without some actual Thought; nor can any thing be retrench'd from the Extension of a Thing, without taking away so much of its Substance.

The first Article of this is refuted by Mr. *Locke*, who shews, that *thinking* is not essential to the Soul, or that its Essence does not consist in Thought; but that there are various Occasions wherein it does not think at all. See IDEA. The latter is stiffly oppos'd by the Jesuits, &c. as inconsistent with the Doctrine of Transubstantiation; but is much better confuted by the modern Writers, from the Principles of the *Newtonian* Philosophy. See MATTER, EXTENSION, &c.

The Essence of Matter thus fix'd in Extension, *Des Cartes* naturally concludes there is no Vacuum, nor any possibility thereof in Nature; but that the World is absolutely full: For mere Space is precluded, by his Principle; in regard, Extension being imply'd in the Idea of Space, Matter is so too. If there were any such thing as a Vacuum, says he, it might be measur'd: The Vacuum, therefore, is extended, and of consequence is Matter; every thing extended being Matter. See VACUUM, and PLENUM.

These Principles of Physicks once suppos'd, *Des Cartes* explains mechanically, and according to the Laws of Motion, how the World was form'd; and whence the present Appearances of Nature. He supposes, that God created Matter of an indefinite Extension; that he divided this Matter into little square Portions, or Masses full of Angles; that he impress'd two Motions on this Matter; one, whereby each Part revolv'd round its Centre; another, whereby an Assemblage, or System of 'em, turn'd round a common Centre: Whence arose as many different Vortices, or Eddies, as there were different Masses of Matter, thus moving round common Centers.

These things, thus set a-going, the Consequences, according to *Des Cartes*, in each Vortex, will be as follows: The Parts of Matter cou'd not move and revolve among each other, without having their Angles gradually broke; and this continual Friction of Parts and Angles, must produce three Elements: the first, an infinitely fine Dust, form'd of the Angles broke off; the second, the Spheres remaining, after all the angular Irregularities are thus remov'd: these two make the Matter of his *first* and *second Element*. And those Particles not yet render'd smooth and spherical, and which still retain some of their Angles and hamous Parts, make the *third Element*. See ELEMENT.

Now the first, or *subtilest* Element, according to the Laws of Motion, must take up the Center of each System, or Vortex, by reason of the Smallness of its Parts: And this is the Matter which constitutes the *Sun*, and the *Fix'd Stars* above, and the *Fire* below. See SUN, FIRE, &c. The second Element, compos'd of Spheres, makes the Atmosphere, and all the Matter between the Earth and the Fix'd Stars; in such manner, as that the largest Spheres are always next the Circumference of the Vortex, and the smallest next its Center. See AIR, and ÆTHER. The third Element, or the hooked Particles, is the Matter that composes the Earth, all terrestrial Bodies, Comets, Spots in the Sun, &c. See EARTH, COMET, SPOTS, &c.

This System, tho very artfully concerted, yet carries with it more of the Air of a Romance, than of a just Philosophy. Accordingly, both Divines and Philosophers cry out on it: the first, that it leads to Atheism, by furnishing the Maintainers of an Eternal Matter, with means how, from the Laws of Motion, to account for the Production of the World: Tho, 'tis certain, *Des Cartes* suppos'd a Deity; and so must all who admit his Philosophy; else whence will they derive that Motion of Matter, which of it self is destitute of any such Principle?

But the Philosophers have much better Pleas against it; and the Elements, subtile Matter, hooked Atoms, Vortices, and other Machines, are now nearly on the same footing with the *occult Qualities* of the antient *Peripateticks*. See SUBTILE *Matter*, VORTICES, HOOKED *Particles*, &c.

Indeed, *Des Cartes*, by introducing Geometry into Physicks, and accounting for Natural Phænomena from the Laws of Mechanicks, did infinite service to Philosophy; and contributed, both by his Practice and Example, to purge it from that venerable Rust, which in a long Succession of Ages it had contracted: Accordingly, to him, in some measure, is owing the present System of Mechanical, or *Newtonian* Philosophy; see NEWTONIAN *Philosophy*.

*Cartesianism* was ready to be prohibited by an Arret of the Parliament of *Paris*; and had been so, in effect, but for a Burlesque Address presented to the First President.

CARTESIANS, a Sect of Philosophers, who hold or assert *Cartesian* Principles. See CARTESIAN *Philosophy*.

Monsieur *Rene des Cartes*, the noble Founder of this Sect, was of *Bretagne*, born in the Year 1596. His Monument informs us, "That having master'd all the Learning "of the Schools, which prov'd short of his Expectation, "he betook himself to the Army, in *Germany* and *Hun-* "*gary*; and there spent his vacant Winter Hours, in com- "paring the Mysteries and Phænomena of Nature, with "the Laws of Mathematicks; daring to hope, that these "might unlock the other. Quitting, therefore, all other "Pursuits, he retir'd to a little Village near *Egmond*, in "*Holland*; where spending 25 Years in continual Read- "ing and Meditation, he effected his Design."

He was a Person of the greatest Genius, Penetration, and Judgment, both as to the Invention, and orderly ranging and disposing of Things. He begun a new Method of Philosophy, and finish'd it, on his own Foundation. The History of his Life, is best learnt from his own incomparable

Treatiſe *de Methodo*. His Reputation in Foreign Nations, appears from his Monument; which conſiſts of four Faces, inſcrib'd with ſo many Encomiums. It was erected in *Sweden*, where he dy'd, in the Year 1650, by Monſieur *Chamont*, the King of *France*'s Reſident in that Court. But his Bones were afterwards remov'd to *Paris*, by Order of *Louis* XIV. and a ſtately Mauſoleum built over 'em, in the Church of St. *Genevieve*.

CARTHUSIANS, an Order of Religious inſtituted by S. *Bruno*, about the Year 1086. The Rule given them by their Founder is exceedingly rigorous; their Houſes were uſually built in Deſarts, their Fare coarſe, and their Diſcipline ſevere. 'Tis obſerv'd, that the monaſtical Piety is better preſerv'd in this, than in any of the other Orders. M. *l'Abbe de la Trape* endeavours to ſhew, that the *Carthuſians* don't live up to the Auſterity enjoin'd by the antient Statutes of *Guigues* their fifth General. M. *Maſſon*, at preſent General of the Order, anſwers the Abbat; and ſhews, that what he calls the Statutes, or Conſtitutions of *Guigues*, are, in reality, only Cuſtoms compil'd by Father *Guigues*; and that they did not become Laws till long after. The *French* call the *Carthuſians*, *Chartreux*; and their Houſes *Chartreuſe*. See CHARTREUX.

CARTILAGE, in Anatomy, a ſmooth, ſolid, uniform, elaſtic Part of an Animal; ſofter than a Bone, but harder than any other Part.

*Cartilages* ſeem to be nearly of the ſame Nature with Bones, and only to differ as more or leſs hard. See BONE. There are ſome very hard, and which even become bony with Time; as thoſe, *v. g.* which form the *Sternum*; ſee STERNUM. Others are ſofter, and ſerve to compoſe entire Parts; as thoſe of the Noſe, Ears, *&c.* where an eaſy gentle Motion is requir'd; their natural Elaſticity ſerving them for Antagoniſt Muſcles. See NOSE, *&c.* There are others ſofter ſtill, partaking of the Nature of Ligaments, and thence call'd *Ligamentous Cartilages*. See LIGAMENT.

There are *Cartilages* of various Figures, acquiring various Names from the Things they reſemble: One is call'd *Annularis*, becauſe it reſembles a Ring; another *Xyphoides*, from its reſembling the Point of a Dagger; a third *Scutiformis*, becauſe made like a Buckler; and ſo of the reſt. See each under its proper Head, ANNULAR, SCUTIFORM, *&c.*

*Cartilages* have no Cavities for Marrow; nor any Membranes, or Nerves, for Senſation. Their Uſes are to prevent the Bones from being damag'd or wounded by a continual Friction; to join 'em together by a *Synchondroſis*; and to contribute, in great meaſure, to the well forming of ſeveral Parts; as the *Noſe*, *Ears*, *Trachea*, *Eyelids*, &c.

CARTON, or, as we pronounce it, CARTOON, in Painting, a Deſign, made on ſtrong Paper, to be afterwards calqued thro, and transferr'd on the freſh Plaiſter of a Wall, to be painted *in Freſco*. See DESIGN, CALQUING, and FRESCO.

CARTON is alſo us'd for a Deſign colour'd, for working in Moſaic, Tapeſtry, *&c.* The *Cartoons* preſerv'd at *Hampton-Court*, are Deſigns of *Raphael Urbin*; intended for Tapeſtry, but uncolour'd. The Word, in the original *French*, ſignifies *thick Paper*, or *Paſtboard*.

CARTOUCH, an Ornament in Architecture, Sculpture, *&c.* repreſenting a Scroll of Paper. It is uſually a Table, or flat Member, with Wavings; whereon is ſome Inſcription, or Deviſe, Ornament of Armory, Cypher, or the like.

*Cartouches* are ſometimes drawn on Paper, as in the Titles of Maps, *&c.* and ſometimes made of Stone, Brick, Plaiſter, Wood, *&c.* for Buildings. The Word comes from the Italian *Cartoccio*, which ſignifies the ſame thing.

CARTOUCHE, or CARTRIDGE, in War, the Charge or Load of a Fire-Arm, wrapp'd up in a thick Paper, Paſtboard, or Parchment; to be the more readily charg'd, or convey'd into the Piece.

Thoſe of Cannon, or Mortars, are uſually in Caſes of Paſtboard, or Tin, ſometimes of Wood, half a Foot long; taking up the Place of the Bullet in the Piece, to whoſe Calliber the Diameter is proportion'd. Theſe *Cartouches* are fill'd occaſionally with Muſket-Balls, Nails, Chains, *&c.* which, upon Exploſion, ſpread far and wide. The Cannon hid in the retir'd Flanks, is uſually charg'd with theſe *Cartouches*, to make the greater havock among the Beſiegers. Thoſe of Muſkets, Piſtols, and ſmall Arms, only contain the Charge of Pouder, with a Ball wrapp'd up in thick Paper.

CARVING. See SCULPTURE.

CARUNCULA, a Term in Anatomy, properly ſignifying a little piece of *Fleſh*; being a Diminutive of the Latin *Caro*, Fleſh. The Name *Caruncula*, is apply'd to ſeveral different Parts of the Body: As,

CARUNCULÆ *Cuticulares*, a Name which ſome Anatomiſts give the *Nymphæ*. See NYMPHÆ.

CARUNCULÆ *Lacrymales*, are two little Eminences, one on each great *Canthus*, or corner of the Eyes; ſeparating the two *Puncta Lacrymalia*. See CANTHUS.

*Bartholine*, and ſome other Anatomiſts, miſtake the *Carunculæ* for Lacrymal Glands; which they ſuppoſe plac'd on the *Punctum Lacrymale*, to prevent the continual ſhedding of Tears. But *Dionis* ſhews the Miſtake, and maintains 'em to be no Glands, but only the Reunion or Duplicature of the inner Membrane of the Eyelids. Some Anatomiſts ſay, they help to keep the two *Puncta* open, when the Eyes are ſhut. See LACRYMALIA *Puncta*.

CARUNCULÆ *Myrtiformes*, in Anatomy, are four little *Caruncles*, or fleſhy Knobs, about the ſize of Mulberries, whence their Name; found adjoining to, or rather in the Place of the *Hymen*, in the Parts of Generation in Women. Some ſuppoſe 'em to be largeſt in Maids, and to grow leſs and leſs by the uſe of Venery; but others, with more probability, make them the Conſequences of Venery in the firſt Copulation; deriving 'em from the broken Membrane of the *Hymen*, whoſe Fragments ſhrunk up they appear to be. See HYMEN.

CARUNCULÆ *Papillares*, or *Mamillares*, are little Protuberances on the inſide of the Pelvis of the Kidneys, made by the Extremities of the Tubes which bring the Serum from the Glands in the exterior Parts, to the Pelvis. They were firſt diſcover'd by *Carpus*; and thus call'd, from their reſembling a little Teat, or Pap. They are in form of Acorns heads, and leſs red than the Fleſh: They are about the bigneſs of a Pea, but larger at top than at bottom; ending as it were in a Point, in the Place where they are perforated, to let the Urine fall into the Baſon. See KIDNEYS, PELVIS, *&c.*

CARUS, in Medicine, a Species of an Apoplexy, conſiſting in a profound Sleep, with a ſudden Deprivation of Senſation, and Motion, and an acute Fever.

The *Carus* differs from a *Coma* in this, that the Patient, in the latter, anſwers when interrogated; but not in the former; See COMA: From a Lethargy it is diſtinguiſh'd by the Fever which attends it, which the Lethargy is free from; and by the return of Senſation, which the lethargic Perſon finds when agitated or prick'd; See LETHARGY: From a proper Apoplexy, by the freedom of Reſpiration, which is always hurt in an Apoplexy; ſee APOPLEXY: From an Epilepſy, in that there is no Motion or Froth at the Mouth in the *Carus*: From a Syncope, by the Pulſe, which is high, and the Face ruddy; whereas the Pulſe is low, and the Face cadaverous in the Syncope: From an hyſteric Suffocation, in that the Patient hears and remembers things in the latter, not in the former. See SYNCOPE, EPILEPSY, *&c.*

The Cauſe of the *Carus* is uſually referr'd to an Interruption of the Motion of the Animal Spirits; occaſion'd either by their being exhauſted, or obſtructed by ſome cold, heavy, pituitous Humour; or by a Contuſion, from ſome external Force. The Word comes from the *Greek* κάρος, Drouſineſs, heavineſs of the Head.

CARYATIDES, or CARIATES, in Architecture, a kind of Order of Columns, or Pilaſters, under the Figures of Women, dreſs'd in long Robes. See ORDER *of Columns*.

The Origin of the *Caryatides* is related by *Vitruvius*: The *Greeks*, he obſerves, having taken the City of *Caria*, led away their Women Captives; and to perpetuate their Servitude, repreſented them in their Buildings, as charg'd with Burdens, ſuch as thoſe ſupported by Columns.

The *Caryatides*, M. *le Clerc* obſerves, are not now repreſented as among the Antients, *viz.* as Symbols of Slavery, with Hands ty'd before and behind; thoſe Characters being ſuppos'd injurious to the Fair Sex. Among us, they are repreſented as Images of Juſtice, Prudence, Temperance, *&c.* Their Legs are always to be cloſe to each other, and even acroſs; their Arms laid flat to the Body, or to the Head, or at leaſt as little ſpread as poſſible; that as they do the Office of Columns, they may have, as near as poſſible, the Figure thereof. Sometimes their Arms are cut off, for the greater Delicacy; as in the Hall of the *Swiſs* Guards in the *Louvre*: but M. *le Clerc* does not approve of ſuch Mutilations.

When inſulated, they ſhould never have any great Weight to ſupport; and their Entablature and Pedeſtal are ordinarily to be *Ionic*.—— When they join to a Wall, *&c.* 'tis adviſable to put a Conſole over them, which may appear to ſuſtain the Weight of their Entablature; otherwiſe, as they repreſent Women, they don't ſeem ſo proper to ſuſtain great Loads.—— When they are made in form of Angels, he would have them ſupport the Entablature, which in that Caſe is to be *Corinthian*, with their Hands.

The Antients made the *Caryatides* frequently to ſupport Baſkets, or Corbels of Flowers; and theſe they call'd *Caniferæ*, or *Ciſtiferæ*.

CASCADE, a Cataract, or Fall of Water; either natural, as that of *Tivoli*, &c. or artificial, as thoſe of *Verſailles*, &c. and that, either falling with a gentle Deſcent, as thoſe of the *Sceaux*; in form of a Buffet, as at *Trianon*; or by degrees, in form of a Perron, as at *St. Clou*; or from Baſon to Baſon, *&c.* The Word comes from the Italian

*Caſcata*, of *Caſcare*; and that of *Cado*, to fall. See CATARACT.

CASCANS, or CASCANES, in Fortification, are Holes or Cavities in form of Wells, made in the Terreplein, near a Rampart; from whence a Gallery, dug in like manner under Ground, is convey'd, to give Air to the Enemy's Mine.

CASE, in Grammar, is underſtood of the different Inflections, or Terminations of Nouns; ſerving to expreſs the different States, or Relations they bear to each other, and to the things they repreſent. See NOUN.

There is a great Diverſity in Grammarians, with regard to the Nature and Number of *Caſes*: They generally find ſix *Caſes*, even in moſt of the modern Languages, which they call the *Nominative*, *Genitive*, *Dative*, *Accuſative*, *Vocative*, and *Ablative*: But this ſeems only in compliance with their own Ideas, which are form'd on the *Greek* or *Latin*, and which they transfer to other Languages.

The Truth is, if by *Caſe* be only meant an occaſional Change in the Termination of a Noun, or Name, which ſeems to be the juſt Idea of *Caſe*, (regard being had either to the Reaſon of the Thing, or the Sound of the Word *Caſus*, from *Cadere*, to *fall*; and πτωσις, *Caſus*, Fall) there will in this Senſe be juſt as many *Caſes* as there are different Terminations of Nouns in the ſame Number, *i. e.* in ſome Languages more, in others leſs, and in others none at all. Indeed, Authors either han't any preciſe Notion of *Caſes* at all, or they wander ſtrangely from that Notion: for they always reckon five *Caſes* of Nouns in the *Greek*, and ſix in the *Latin*: Tho ſeveral of theſe *Caſes* be frequently alike, as the *Genitive* and *Dative ſingular*, of the firſt Declenſion of the *Latin*; the *Dative* and *Ablative plural* of the ſecond, &c. the *Genitive* and *Dative dual* of the *Greek*, &c. So that the Termination is not the ſole Meaſure of the *Caſe*.

'Tis, however, much more agreeable to the Principles of Grammar, which only conſiders Words materially, to make as many different *Caſes*, as there are Changes in the Terminations of a Name; which wou'd free the *Engliſh*, and other modern Tongues, from the Embaraſs of *Caſes*; moſt of 'em expreſſing the various Relations, not by Changes in Termination, as the Antients, but by the Appoſition of Articles. 'Tis certainly wrong to ſay, *v. g.* that *of a Father*, is the Genitive *Caſe of Father*; and *to a Father* the Dative; for *of* and *to* are no part of the Name *Father*: They are no Cloſes or Terminations, but Articles, or Modificatives, which ſhew the different Relation of the Word *Father*. And the ſame may be ſaid of the *Caſes* of Nouns, in the *French*, *Italian*, *Spaniſh*, *Portugueſe* Tongues, &c.

But the Caſe is otherwiſe in the *Greek* Name πατρὸς, or the *Latin Patris*; which are real *Caſes* of the Words πατὴρ, and *Pater*, and different from them: And ſomewhat like this may be ſaid of the *Hebrew*, *Arabic*, *Armenian*, *Poliſh*, and *German* Languages; which in the ſame Number admit of Changes in the Terminations of Words: And yet in theſe Languages, *Caſes* are pretty different from what they are in the *Greek* and *Latin*. The *Hebrew* Names, for Inſtance, are not properly declin'd by *Caſes*: The Relation expreſs'd by the Genitive *Caſe*, 'tis true, occaſions an Alteration in them; but then this Alteration, inſtead of being in the Noun governed, as in the *Latin*, in the *Hebrew* is in that which governs; as דְּבַר שֶׁקֶר *Verbum falſitatis*; where the Change is not in שֶׁקֶר *falſitas*, but in דְּבַר for דָּבָר *Verbum*.

F. *Galanus* makes ten *Caſes* in the *Armenian*; obſerving, that beſides the ſix ordinary *Caſes*, there is one ſerving to expreſs the *Inſtrument* wherewith any thing is done; another for *Narration*, to expreſs the Subject; a third to ſhew that one thing is in another; and a fourth, to ſhew a Relation between one thing and another. Authors make but three Caſes in the *Arabic*, as having only three Terminations, *en*, *in*, and *an*.

It muſt be obſerv'd, however, that tho many of the Languages have not properly any Caſes of Nouns, yet moſt, if not all of them, have a kind of *Caſes* in their Pronouns, without which, it wou'd be hard to conceive the Connection, or Syntax of a Diſcourſe; and which, therefore, makes a neceſſary part of Grammar. See the Relations expreſs'd by each *Caſe* under its proper Head, NOMINATIVE, GENITIVE, DATIVE, &c.

CASE-HARDENING, a Method of preparing Iron, ſo as to render its outer Surface hard, and capable of reſiſting the File, or any edg'd Tool. It is us'd by File-cutters for coarſe Files; by Gunſmiths, to harden the Barrels of Guns; and by others, on other Occaſions. See IRON; ſee alſo FILE, &c.

The Proceſs of *Caſe-hardening* is thus: They take Hoofs, or Horns of Kine, dry them in an Oven, and pouder 'em; then put an equal Quantity of Bay Salt to it, and mingle both together with ſtale Urine, or Whitewine Vinegar: Some of this Mixture they lay upon Loam, and wrap it about the Iron, putting alſo more Loam over all. Then they lay it on the Hearth of a Forge to dry and harden; and when it's dry and hard, they put it into the Fire, and blow till they give the Lump a blood red Heat, but no greater: Then it is taken out and quench'd, and the *Caſe-harden'd* Iron is taken out of the *Caſe*. See STEEL, and HARDENING.

CASEMATE, or CASEMENT, in Building, is a hollow Moulding, which ſome Architects make ⅝ of a Circle; and others ¾. See MOULDING.

CASEMATE, or CASEMENT *of a Window*. See WINDOW.

CASEMATE, in Fortification, a kind of Vault of Maſonswork, in that part of the Flank of a Baſtion next the Curtain; ſerving as a Battery, to defend the Face of the oppoſite Baſtion, and the Moat, or Ditch. See BASTION.

The *Caſemate*, ſometimes, conſiſts of three Platforms, one above another; the higheſt being on the Rampart: But they commonly content themſelves to withdraw the higheſt within the Baſtion. The *Caſemate* is alſo call'd the *low Place*, *low Flank*, and ſometimes *retir'd Flank*; as being that Part of the Flank neareſt the Courtine, and the Centre of the Baſtion: It was formerly cover'd with an Epaulement, or a maſſive Body of round or ſquare Stone, which prevented thoſe without from ſeeing within the Batteries. 'Tis now rarely us'd, by reaſon the Enemy's Batteries are apt to bury the Artillery of the *Caſemate*, in the Ruins of the Vault.

The Name comes from a Vault, formerly made to ſeparate the Platforms of the upper and lower Batteries; each of which was call'd in Italian *Caſa Armata*, and in the Spaniſh *Caſamata*. Tho others derive the Word from *Caſa à Matti*, Houſe of Tools: *Covarruvias*, from *Caſa*, and *mata*, low Houſe.

CASEMATE, is alſo us'd for a Well, with ſeveral ſubterraneous Branches, dug in the Paſſage of the Baſtion, till the Miner is heard at work, and the Air given to the Mine.

CASE, in Printing, a Frame, plac'd aſlope, divided into ſeveral Compartments, or little ſquare Cells, in each of which are lodg'd a number of Types, or Letters of the ſame Kind; whence the Compoſitor takes them out, each as he needs it, to compoſe, and make a Page, or Form. See PRINTING, LETTER, &c.

Thus, they ſay, *a Caſe*, or rather *Pair of Caſes*, of *Greek*, of *Hebrew*, of *Pica*, &c. *Menage*, after *Salmaſius*, derives the Word from *Caſſa*, or *Capſa*; and that from the *Greek* καλὰ, which ſignifies the ſame thing.

CASE-SHOT, are Muſket-Bullets, Stones, old pieces of Iron, or the like, put up into *Caſes*, and ſo ſhot out of great Guns. See SHOT.

*Caſe-ſhot* is chiefly us'd at Sea, to clear the Enemies Decks when they are full of Men.

CASERNS, or CAZERNS, in Fortification, little Rooms, Lodgments, or Apartments, erected between the Ramparts, and the Houſes of fortify'd Towns, or even on the Ramparts themſelves; to ſerve as Lodgings for the Soldiers of the Gariſon, to eaſe the Gariſon. See GARISON.

There are uſually two Beds in each *Caſern*, for ſix Soldiers to ly, who mount the Guard alternately; the third Part being always on Duty.

CASES *Reſerv'd*, in the *Romiſh* Polity, are conſiderable Sins, the Abſolution of which is *reſerv'd* by the Superiors to themſelves, or their Vicars. There are ſome *Caſes reſerv'd* by the Pope, and others by the Biſhops: In Convents, ſome are *reſerv'd* by the Chapter, &c. None but theſe, or their Vicars, can abſolve in theſe *Caſes*; except at the Article of Death, when all *reſerv'd Caſes* are abſolvable by the Ordinary. See ABSOLUTION.

CASH, in Commerce, the Stock of Money, which a Merchant, or other Perſon has in his Diſpoſal, to negotiate; ſo call'd from the *French* Term *Caiſſe*, i. e. *Cheſt*, or *Cofer*, for the keeping of Money. M. *Savery* ſhews, that the Management of the *Caſh* of a Company, is the moſt conſiderable Article; and that whereon its good or ill Succeſs chiefly depends. See COMPANY.

CASHIER, the *Caſh-keeper*, is he who is charg'd with the receiving and paying of the Debts of a Society: See CASH.

In the generality of Foundations, the *Caſhier* is call'd *Treaſurer*; ſee TREASURER.

CASING *of Timber-work*, is the Plaiſtering a Houſe all over on the Outſide with Mortar; and ſtriking it, yet wet, by a Ruler, with the Corner of a Trowel, or the like Inſtrument, to make it reſemble the Joints of Free-ſtone; by which means, the whole Houſe appears as if built thereof.

CASK, or CASQUE, a piece of defenſive Armour, to cover the Cavalier's Head and Neck; otherwiſe call'd *Helmet*. See HELMET.

*Le Gendre* obſerves, that antiently, in *France*, the *Gens d'Armes* all wore *Casks*. The King wore a *Cask*, gilt; the Dukes and Counts, ſilver'd; Gentlemen of Extraction, poliſh'd Steel; and the reſt plain Iron. The Word comes from *Caſſicum*, or *Caſſicus*, a Diminutive of *Caſſis*, Shield.

The *Cask* is frequently ſeen on antient Medals; where we may obſerve great Varieties in the Form and Faſhion thereof:

thereof: As the *Greek* Faſhion, the *Roman* Faſhion, &c. F. *Joubert* makes it the moſt antient of all Coverings of the Head, as well as the moſt univerſal. Kings, Emperors, and even Gods themſelves are ſeen therein. That which covers the Head of *Rome*, has uſually two Wings, like thoſe of *Mercury*: And that of ſome Kings, is furniſh'd with Horns, like thoſe of *Jupiter Ammon*; and ſometimes barely Bulls, or Rams Horns, to expreſs uncommon Force.

CASK, in Heraldry. See HELMET.

CASK, is alſo us'd as a common Name for Veſſels of divers Kinds, in contra-diſtinction from the Liquor, or other Matter contain'd therein. Thus, a Hogſhead of Spirits, &c. is ſaid to weigh 4 *C.* ½ and 22 *L. Cask* and Liquor; a Punchion, 6 *C.* ¼ and 2 *L. Cask* and Liquor.

*A* CASK *of Sugar*, is a Barrel of that Commodity, containing from 8 to 11 Hundred; a *Cask* of Almonds, is about 3 Hundred weight.

CASSATION, in the Civil Law, the Abrogation, or annulling of any Act or Proceedure. The Occaſions of *Caſſation* are, 1ſt, When a Decree is directly contrary to another Decree; and both againſt the ſame Party. 2dly, When Decrees are directly contrary to the expreſs Deciſion of Statutes, or Cuſtoms. 3dly, When the Formalities preſcrib'd by the Laws have not been follow'd. The Word comes from the Latin *Quaſſare*.

CASSIA, a medicinal Drug, in frequent uſe as a gentle Purgative. There are four Kinds of *Caſſia*, alike in Properties, and nearly in Figure; being all in long black Pods; but very different, if conſider'd with regard to the Trees that produce them. Theſe *Caſſias* are, *Caſſia of the Levant*, that *of Egypt*, that *of Braſil*, and of the *Antilles* Iſlands.

*Caſſia of the Levant*, is the Fruit of a very high Tree, whoſe Bark is Aſh-colour'd, its Wood very ſolid, and its Grain cloſe; towards the Center, the Wood is of an Ebony black, towards the Circumference yelloviſh: Its Flowers are yelloviſh, and produce a Fruit in form of a long Pod, round and maſſive; of a reddiſh Colour, bordering on black. When ripe, it is full of a black, ſweetiſh Pulp, divided by little woody Cells: In this Pulp are found little hard Grains, in manner of Stones, ſhap'd like Hearts, which are the Seed of the Tree. This *Caſſia* muſt be choſe new, in large Pods, heavy, and of a tan Colour; the Bark, when broke, fine and white within, full of a black ſoft Pulp of a ſweetiſh Taſte.

*Caſſia of Egypt*, is like that of the *Levant*, except that the Tree is higher, and the Leaves narrower; the Fruit ſmaller, and the Bark ſofter.

*Caſſia of Braſil*, is the largeſt of all: Some of the Pods are found four or five Inches in Circumference. This Kind is not very common in the Shops.

*Caſſia of the Iſlands*, is that now chiefly us'd; tho heretofore the popular *Caſſia* was the *Levantine*. It is ſent from the *Antilles*; where 'tis produc'd in ſuch abundance, that the Veſſels, in their home Voyages, uſe it as Ballaſt: whence it is, that we find it ſo often foul and dirty: The Tree that yields it reſembles a Peach-Tree. Its Flowers, which are yellow, grow in Cluſters; and, as they decay, leave behind them a Fruit or Pod an Inch thick, and a Foot (ſometimes two) long. The Fruit, while in its growth, is green; when ripe, it becomes a dark Violet. 'Tis choſen in the ſame manner as that of the *Levant*.

When the Pod is entire, and the Pulp not yet taken out, 'tis called *Caſſia Fiſtula*, or *Caſſia in the Cane*. For uſe, the Pulp is taken out, and pulp'd thro a Hair Sieve. The Apothecaries put off little of this better Kind, but what is old, and boil'd up with Sugar to make it keep.

*Caſſia*, when green, as alſo the Flowers of the *Caſſia* Tree, are comfited in the *Levant* and the *Iſlands*; and have almoſt the ſame Effects with the common *Caſſia*, the Baſis of moſt purgative Electuaries.

The *Tincture of* CASSIA, is a ſlight Infuſion of the Pulp with the Seed.

The *Extract of* CASSIA, is nothing but the Pulp ſeparated from the Shell and the Seeds; with the Addition of a certain Quantity of Sugar to preſerve it from turning ſour.

CASSIA *Lignea*, is the Bark of a Tree much like that which bears the Cinnamon; growing promiſcuouſly with it in the Iſland of *Ceylon*. The two Barks are gather'd and dry'd in the ſame manner; their Smell and Taſte are nearly alike; they are equally ſweet, poignant and agreeable; and their Colour, Form, and Thickneſs ſcarce differ at all. But the *Caſſia* is the fatter, and more mucilaginous; and in chewing diſſolves in the Mouth, without leaving any thing woody behind; whereas the woody Part of Cinnamon ſtill ſticks, tho ever ſo well chew'd. Some Authors will have the Tree which bears Cinnamon bear the *Caſſia* too; and make the only Difference between them to conſiſt in this, that the firſt comes from *Ceylon*, and the latter from the Coaſt of *Coromandel*. See CINNAMON.

CASSIOPEIA, in Aſtronomy, one of the Conſtellations of the Northern Hemiſphere. See CONSTELLATION.

In 1572, there appear'd a new Star in this Conſtellation, which at firſt ſurpaſs'd in Magnitude and Brightneſs *Jupiter* himſelf; but it diminiſh'd by degrees, and at laſt diſappear'd, at the End of 18 Months. It alarm'd all the Aſtronomers of that Age, many of whom wrote Diſſertations on it; among the reſt, *Tycho Brahe*, *Kepler*, *Maurolycus*, *Licetus*, *Gramineus*, &c. *Beza* the Landgrave of *Heſſe*, *Roſa*, &c. wrote to prove it the ſame Star which appear'd to the *Magi* at the Birth of Jeſus Chriſt, and that it came to declare his ſecond coming: They were anſwer'd by *Tycho*. See STAR.

The Stars in the Conſtellation *Caſſiopeia*, in *Ptolomy*'s Catalogue, are 13; in *Tycho*'s 28; in the *Britannic Catalogue*, Mr. *Flamſtead* makes them 56. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

*Stars in the Conſtellation* CASSIOPEIA.

CASSOCK, or CASULA, a kind of Gown, or Robe, wore over the reſt of the Habit; particularly by the Clergy. The Word *Caſſock* comes from the French *Caſſaque*, a Horſeman's Coat; ſome derive that again, by Corruption, from a Garment of the *Coſſaques*: *Covarruvia*, from the Hebrew *Caſah*, to cover; whence the Latin *Caſa*, Cottage; and *Caſula*, a Diminutive of *Caſa*, another Name of the *Caſſock*.

CASTANETS, CASTAGNETTES, or CASTANETTAS, a kind of Muſical Inſtrument, wherewith the *Moors*, *Spaniards*,

*Spaniards*, and *Bohemians*, accompany their Dances, Sarrabands, and Guittarres. It conſiſts of two little round Pieces of Wood dried, and hollow'd in manner of a Spoon, the Concavities whereof are placed on one another faſtned to the Thumb, and beat from to time with the Middle Finger, to direct their Motions and Cadences. The *Caſtagnettes* may beat eight or nine times in the Space of one Meaſure, or Second of a Minute.

CASTALDUS, } See GASTALDUS.
CASTALDY. }

CASTELLAN, the Name of a Dignity or Charge in *Poland*: The *Caſtellans* are Senators of the Kingdom, but Senators of the lower Claſs, and, in Diets, ſit on low Seats, behind the Palatines or great Senators. They are a kind of Lieutenants of Provinces, and command a Part of a Palatinate under the Palatine. See PALATINE.

CASTING, in Foundery, is the running of a melted Metal into a Mould prepar'd for that Purpoſe. See FOUNDERY, and MOULD.

CASTING *of Gold, Silver*, or *Copper in Plates*. See COINING.

CASTING *of Lead on Cloth*, is the uſing a Frame or Mould cover'd with Woollen-Cloth and Linen over it, to caſt the Lead into very fine Sheets. See PLUMBERY.

CASTING *of Metals*, of Letters, *&c.* See FOUNDERY.

CASTING *in Sand* or *Earth*, is the Running of a Metal between two Frames or Moulds fill'd with Sand or Earth, wherein the Figure the Metal is to take, has been impreſs'd, *in creux*, by means of the Pattern. See FOUNDERY.

The Goldſmiths alſo uſe the Bone of the *Cuttle-Fiſh*, to mould and caſt their leſſer Works of Gold and Silver; that Bone, when dried, being reducible to a kind of a fine Pumice, very ſuſceptible of all Impreſſions. See CUTTLE-FISH.

CASTING *in Stone* or *Plaiſter*, is the filling a Mould with fine liquid Plaiſter, that had been taken in pieces from off a Statue or other Piece of Sculpture, and run together again. There are two Things to be obſerv'd with regard to the Mould: The firſt, that it be well ſoak'd with Oil before the Plaiſter be run, to prevent its ſticking: The ſecond, that each Piece whereof it conſiſts, have a Pack-thread, to draw it off the more eaſily when the Work is dry. See STATUE, and FOUNDERY.

CASTING *of Candles*, is the filling the Moulds with Tallow; ſee CANDLES.

CASTING, in Falconry, is any thing given an Hawk to purge and cleanſe his Gorge: Of theſe there are two Kinds, *viz.* Plumage, *i. e.* Feathers; and Cotton: the latter whereof is generally in Pellets about the bigneſs of Hazel-Nuts, made of ſoft fine Cotton, and convey'd into her Gorge after Supper. In the Mo ning ſhe will have *caſt* them out; at which time they are to be obſerv'd, and from the Colour and Condition they are found in, the State of its Body is conjectured. If they be *caſt* out round, white, not ſtinking, nor very moiſt, 'tis an Indication all is well; if otherwiſe, particularly if black, green, ſlimy, or the like, 'tis otherwiſe. The *Caſting* of Plumage is obſerv'd after the ſame manner as the former.

CASTING, in Joinery, *&c.* Wood is ſaid to *caſt* or *warp*, when, either by its own Drought or Moiſture, or the Drought or Moiſture of the Air, or other Accident, it ſhoots or ſhrinks; in prejudice to its Flatneſs and Straightneſs. See WARPING.

CASTLE, a Place fortified by Nature or Art, either in City or Country, to keep the People in their Duty, or reſiſt an Enemy. See FORTRESS, and FORTIFIED *Place*.

A CASTLE, is a little *Cittadel*; ſee CITTADEL.

CASTLE is alſo uſed, in the Sea-Language, for a part in large Veſſels.

The *Fore-Caſtle*, or *Prow-Caſtle*, is the Riſe or Elevation at the Prow, over the uppermoſt Deck, towards the Mizzen; the Place where the Kitchens are.

The *Hind-Caſtle*, or *Stern-Caſtle*, is the whole Elevation which reigns on the Stern over the laſt Deck; where the Officers Cabbins, and Places of Aſſembly are. See FORE-*Caſtle*, *&c.*

CASTLE-*Ward*, or *Caſtle-Guard*, an Impoſition laid on ſuch as dwell within a certain Compaſs about any *Caſtle*, towards the Maintenance of ſuch as watch and ward the *Caſtle*. The Word is alſo ſometimes us'd for the Circuit it ſelf, inhabited by ſuch as are ſubject to this Service.

CASTOR, in *Aſtronomy*, a Moiety of the Conſtellation *Gemini*. See GEMINI.

CASTOR and *Pollux*, in *Meteorology*, a Meteor; which in Storms at Sea appears ſometimes ſticking to part of the Ship, in form of one, two, or even three or four Fire-Balls: When one is ſeen alone, 'tis call'd *Helena*; two are call'd *Caſtor* and *Pollux*, and ſometimes *Tyndarides*. See METEOR.

*Caſtor* and *Pollux*, are commonly judg'd to portend a Ceſſation of the Storm, and a future Calm; being rarely ſeen till the Tempeſt is nigh ſpent. *Helena* portends ill, and witneſſes the ſevereſt part of the Storm yet behind.

CASTOREUM, in *Pharmacy*, a liquid Matter, incloſ'd in Bags or Purſes near the *Anus* of the *Caſtor* or *Bever*; falſly taken for that Animal's Stones.

Theſe Purſes are about the bigneſs of a Gooſe-Egg, and found indifferently in Males and Females; the Liquor incloſed, ſerves to give the *Caſtor* an Appetite, being preſs'd out of its Receptacles, on occaſion, by the Foot: When taken off, the Matter dries and condenſes, ſo as it may be reduced to a Pouder; by hanging in the Chimney it becomes of the Conſiſtence of Wax. 'Tis oily, of a ſharp, bitter Taſte, and a ſtrong diſagreeable ſmell. 'Tis us'd to fortify the Head and nervous Parts, it excites the languiſhing Spirits, reſiſts Poiſons, and provokes the *Menſes* in Women. 'Tis uſed in *Lethargies*, *Apoplexies*, *Vertigo's*, *Tremblings*, *Suffocations of Women*, and other Occaſions. *Bartholine*, and other Authors, aſcribe to it a wonderful Property of precipitating things to the bottom of the Water.

For the Choice of *Caſtoreum*; the beſt is that of *Dantzic*, that of *Canada* is much inferior; the largeſt Lumps, and thoſe that ſmell ſtrongeſt, are the moſt eſteem'd, eſpecially when heavy and well fleſhed. Care is to be taken that it han't been adulterated with Honey or other Drugs, to increaſe its weight, which is known by ſqueezing it; the ſophiſticated being ſoftiſh, and yielding a liquid, ſtinking Honey; and the natural, hard and heavy, of a briſk Smell, and full of Filaments.

*Caſtoreum* is uſed in the Compoſition of *Venice* Treacle and Mithridate, beſides various other Hyſterick and Cephalick Medicines. They draw an Oil from it call'd *Oil of Caſtor*; and it is alſo uſed, while in its liquid State, to make ſeveral Kinds of Unguents.

The *Ruſſian* Way of curing *Caſtoreum*, is deſcrib'd in the *Philoſophical Tranſactions* thus: 'To get the Milk out of 'the Bever's *Stones*, (the *Bags* it ſhou'd be) put a proper 'Quantity of Water, with half a Shovel full of Wood-'Aſhes, tie the Bags in Couples, and put them in the 'boiling Water for half a quarter of an Hour. Lay Birch-'Bark on the Fire, and ſmoke the Bags well over it for 'an Hour, till they be well dried; hang them up for a 'Week or more, till perfectly dry and hard, they may then 'be pack'd up for Uſe or Exportation.'

CASTOR *Skin*, the Fur or Skin of an amphibious Animal called *Caſtor* or Bever, ſometimes found in *England*, *France*, *Germany*, and *Poland*, but moſt abundantly in the Province of *Canada* in *North-America*. See FUR, SKIN, *&c.*

Its chief Uſe is in the Compoſition of Hats, and Furs. See HAT, *&c.* Beſide this, in 1669, an Attempt was made to employ it in other Merchandizes; accordingly a Manufactury was ſettled in the *Fauxbourg S. Antoine* near *Paris*, where they made Cloths, Flannels, Stockings, *&c.* of *Caſtor*, with a mixture of Wool. The Manufacture flouriſh'd for awhile, but ſoon decay'd, it being found by Experience that the Stuffs loſt their Dye when wet, and that when dry again they were harſh, and ſtiff as Felts.

The Merchants diſtinguiſh three Kinds of *Caſtor*, tho all equally the Spoils of the ſame Animal; theſe are *New Caſtor*, *Dry Caſtor*, and *Fat Caſtor*: *New Caſtor*, called alſo *Winter Caſtor*, and *Muſcovite Caſtor*, becauſe ordinarily reſerv'd to ſend into *Muſcovy*, is that taken in the Winter-Huntings. This is the beſt, and moſt eſteem'd for rich Furs, as having loſt none of its Hair by Moulting. *Dry Caſtor* or *lean Caſtor*, is the Reſult of the Summer-Huntings; when the Beaſt is moulted, and has loſt part of its Hair: This being much inferior to the former, is little uſed in Furs; but moſtly in Hats. *Fat Caſtor*, is that which has contracted a certain fat, unctuous Humour, by Sweat exhaled from the Bodies of the Savages, who have wore it for ſome time: This, tho better than the *dry*, is yet only uſed for Hats.

After the Hair is cut off the Skin to be uſed in Hats, the Pelt or Skin it ſelf, is us'd in various Works, *viz.* in the covering of Mails and Trunks, in Slippers, *&c.* See COMPANY *of Canada*.

CASTRAMETATION, the Art of Incamping, *i. e.* of placing and diſpoſing a Camp or Army. See CAMP.

The Word is more us'd for the Incampments of the Antients, than thoſe of the Moderns. It comes from the *Latin Caſtrum*, Camp; and *Metire*, to meaſure.

CASTRATION, in Chirurgery, the Operation of Gelding, *i. e.* of cutting off the Teſticles, and of putting an Animal out of a Capacity of Generation. See TESTICLES.

*Caſtration* is much in Uſe in *Aſia*, eſpecially among the *Turks*, who practiſe it on their Slaves, to prevent any commerce with their Women. The *Turks caſtrate* to the Purpoſe, making a general Amputation both of Teſticles and Yard. *Caſtration* alſo obtains in *Italy*, where 'tis us'd with a View to preſerve the Voice for ſinging. See EUNUCH.

*Caſtration* is ſometimes found neceſſary on medicinal Conſiderations, as in Diſeaſes of the Teſticles, eſpecially the *Sarcocele* and *Varicocele*. See SARCOCELE, *&c.*

*Caſtration* is alſo practis'd on Women: *Athenæus* mentions, that King *Andramaris* was the firſt who *caſtrated*

Women. *Heſychius* and *Suidas* ſay, *Gyges* did the ſame Thing. *Galen* obſerves, that Women may be *caſtrated* without Danger of Life. *Dalechampius*, on the forementioned Paſſage of *Athenæus*, holds, that it is only to be underſtood of ſimple Pad-locking.

*Caſtration* is alſo us'd, tho figuratively, for the Retrenching any part of a Thing: Thus we ſay, a *caſtrated* Book, *i. e.* an imperfect Book, *&c.*

CASU *conſimili*, a Writ of Entry, where a Tenant by Courteſy, or for Life, aliens in Fee or in Tail, or for another's Life: It takes its Name hence, That Authority being given by Stat. *Weſt.* 2. to the Clerks in *Chancery*, to make new Forms, as often as any new Caſe ſhould ſtart up, not under any of the old Forms; they fram'd this Writ to the likeneſs of the other call'd *Caſu proviſo*; which ſee.

CASU *Proviſo*, a Writ of Entry, given by the Statute of *Gloceſter*, in Caſe where a Tenant in Dower aliens in Fee, or for Term of Life; or in Tail: and lies for him in Reverſion againſt the Alien.

CATABAPTIST, a Perſon averſe from Baptiſm; particularly from that of Infants. See BAPTISM.

The Word is compounded of the Prepoſition κατα, which, in Compoſition, ſignifies *againſt*, *contrary*, *thro*, *of*, *in*; alſo *according to*, *towards*, *for*, *with*, &c. and βαπλω, *I waſh*.

CATABIBAZON, in Aſtronomy, the Moon's deſcending Node; call'd alſo *Dragon's Tail*. See DRAGON'S TAIL.

CATACAUSTIC *Curves*, in the higher Geometry, the Species of *Cauſtic Curves* form'd by Reflection; ſee CAUSTIC *Curve*.

CATACHRESIS, in Grammar, a kind of Figure, making the firſt Species of *Metaphora*. See METAPHORA.

The *Catachreſis* is, when for want of a Word proper to expreſs a Thought, we uſe, or rather abuſe a Word that comes ſomewhat near it; as when we call a Perſon who has kill'd his Mother, Maſter, or Prince, *Parricide*; which Word, in Propriety, is only applicable to him who has murther'd his Father. See PARRICIDE. Thus, *to ride on Horſeback on a Switch*, contains a *Catachreſis*; ſo, *a Silver Inkhorn*, &c. There are *Catachreſes* allow'd in all Styles, and all Manners of Writing. The Word comes from the *Greek* καταχεαωμαι, *Abutor*, I abuſe.

CATACLYSMUS, a *Greek* Name for a Deluge, or Inundation of Waters; ſee DELUGE, and INUNDATION.

CATACOMBS, Grottos, or ſubterraneous Places for the Burial of the Dead.

The Term is particularly us'd in *Italy*, for a vaſt Aſſemblage of ſubterraneous Sepulchres, three Leagues from *Rome*, in the *Via Appia*; ſuppos'd to be the Sepulchres of the Martyrs: Accordingly, they are viſited out of Devotion, and Reliques thence taken, and diſpers'd throughout the Catholick Countries; after having been firſt baptiz'd by the Pope, under the Name of ſome Saint. See RELICKS.

Theſe *Catacombs*, are ſaid by many to be Caves, or Cells, wherein the Primitive Chriſtians hid, and aſſembled themſelves together; and where they interr'd ſuch among them as were martyr'd. Each *Catacomb* is three Foot broad, and eight or ten high; running in form of an Alley, or Gallery, and communicating with each other: In many Places, they extend within a League of *Rome*. There is no Maſonry or Vaulting therein, but each ſupports it ſelf: The two Sides, which we may look on as the *Parietes*, or Walls, were the Places where the Dead were depoſited; which were laid lengthwiſe, three or four Rows over one another, in the ſame *Catacomb*, parallel to the Alley. They were commonly clos'd with large thick Tiles, and ſometimes pieces of Marble, cemented in a manner inimitable by the Moderns. Sometimes, tho very rarely, the Name of the Deceaſed is found on the Tile: Frequently, a Palm is ſeen, painted, or engraven; or the Cypher Xp, which is commonly read *pro Chriſto*. See SAINTS.

Some Authors will have the *Catacombs* to be the ſame with the *Puticuli* mention'd by *Feſtus Pompeius*; maintaining, that whereas it was the Practice of the antient *Romans* to burn their Dead, the Cuſtom was, to avoid Expence, to throw the Bodies of their Slaves to rot in Holes of the Ground: and that the *Roman* Chriſtians, obſerving, at length, the great Veneration paid to Reliques, reſolv'd to have a Stock of their own: Entering, therefore, the *Catacombs*, they added what Cyphers and Inſcriptions they pleas'd, and then ſhut them up again, to be open'd on a favourable Occaſion. Thoſe in the Secret, add they, dying, or removing, the Contrivance was forgot, till Chance open'd them at laſt. But this Opinion has even leſs of probability than the former. Mr. *Monro*, in the *Philoſophical Tranſactions*, gives it as his Opinion, that the *Catacombs* were the Burial Places of the firſt *Romans*, and dug in conſequence of theſe two Opinions; that Shades hate the Light; and that they love to hover about the Places where the Bodies are laid.

Laying up the Bodies in Caves, is certainly the original way of diſpoſing of the Dead; and appears to have been propagated by the *Phœnicians*, throughout the Countries to which they ſent Colonies: The interring as we now do, in the open Air, or in Temples, was firſt introduc'd by the Chriſtians. When an antient Hero dy'd, or was kill'd in a Foreign Expedition, as his Body was liable to Corruption, and for that Reaſon unfit to be tranſported intire, they fell on the Expedient of burning, in order to bring home the Aſhes, to oblige the Manes to follow; that ſo his Country might not be deſtitute of the Benefit of his Tutelage. 'Twas thus Burning ſeems to have had its original; and by degrees it became common to all who could bear the Expences of it, and took place of the antient Burying: Thus *Catacombs* became diſus'd among the *Romans*, after they had borrow'd the manner of Burning from the *Greeks*; and now, none but Slaves were laid in the Ground. See BURIAL.

Places thus prepar'd, might afford convenient Reſortments for the primitive Chriſtians; but could never be built by them. When the Empire became Chriſtian, they were again diſus'd; till the reading of I know not what Author, who mentions them, occaſion'd 'em to be again look'd into. As to the fam'd Cypher Xp, 'tis obſerv'd to have been in uſe among the Antients, long before Chriſtianity aroſe. The Abbot *Bencini* ſays, it was compos'd of the two *Greek* Letters X P, under which ſomething myſtical was comprehended; but no Author gives any account what that Myſtery was.

Antiently, the Word *Catacomb* was only underſtood of the Tomb of St. *Peter* and St. *Paul*; and M. *Chaſtellan* obſerves, that among the more knowing of the People of *Rome*, the Word *Catacomb* is never apply'd to the ſubterraneous Burying-Places abovemention'd, but only to a Chapel in St. *Sebaſtian*, one of the ſeven ſtational Churches; where the antient *Roman* Calendars ſay, the Body of St. *Peter* was depoſited, under the Conſulate of *Tuſcus* and *Baſſus*, in 258.

Some derive the Word *Catacomb* from the Places where Ships are laid up; which the modern *Latins* and *Greeks* call *Combes*. Others ſay, that *Cata* was us'd for *ad*, and *Catacumbas* for *ad-tumbas*: Accordingly, *Dadin* ſays, they antiently wrote *Catatumbas*. Others fetch it from the *Greek* κατα, and κυμβ&, *Cavus*, *Receſſus*.

CATACOUSTICS, call'd alſo *Cataphonics*, the Science of reflected Sounds; or that Part of Acouſtics which conſiders the Properties of *Echoes*. See ACOUSTICS; ſee alſo ECHO, and SOUND.

CATADIOPTRIC. See CATOPTRIC.

CATADUPA, a Cataract, or Water-fall; ſee CATARACT.

Hence the Antients gave the Term *Catadupæ*, to People inhabiting near Cataracts; and theſe they ſuppos'd to be deaf with the conſtant Din. The Word comes from the *Greek* καταδυπέω, of the Prepoſition κατα, which in Compoſition ſignifies tendency, or inclintaion downwards; and δυπεω, to make a Noiſe.

CATAFALCO, an *Italian* Term, literally ſignifying *Scaffold*. It is chiefly us'd for a Decoration of Architecture, Sculpture, and Painting; rais'd on a Timber Scaffold, to ſhew a Coffin, or Tomb, in a Funeral Solemnity.

CATAGMATICS, Medicines proper to ſolder, and unite broken Bones, by promoting the Formation of a *Callus*; ſee CALLUS, and BONE.

The principal *Catagmatics*, are the *Armenian* Bole, Gum Tragacanth, Oſteocolla, *Cyprus* Nuts, Frankincenſe, Aloes, and Acacia. The Word comes from the *Greek* καταγμα, *Fracture*.

CATALECTIC, a Term in Poetry. The Antients call'd *Catalectic Verſes*, thoſe which wanted either Feet or Syllables; in oppoſition to *Acatalectics*, which are compleat Verſes, wanting nothing. The Word comes from the *Greek* κατα, and λεγω, *deſino*, I end.

CATALEPSIS, CATOCHE, or CATOCHIS, in Medicine, a kind of Apoplexy; or a Diſeaſe, wherein the Patient is taken ſpeechleſs, ſenſeleſs, and fix'd in the ſame Poſture wherein the Diſeaſe firſt ſeiz'd him; his Eyes open, without ſeeing, or underſtanding. See APOPLEXY.

This Diſeaſe is very rare, nor is its Cauſe eaſy to aſſign. *Boerhaave* takes the immediate Cauſe to be an Immobility of the common Senſory, in the Situation of the firſt Acceſs; whence an abſolute Reſt of the Blood in the Brain, and a Ceſſation of all the Functions of the Brain, as well as thoſe depending thereon; the Muſcles alone remaining in their firſt Tenſion; and Reſpiration, and the Pulſe preſerv'd, tho generally weak. It is uſually preceded by a long intermitting Fever, a melancholic dry Temperature, a Suppreſſion of the Menſes, or Hemorrhoids, great Frights, and intenſe, continu'd Meditation on one Object. Upon Diſſection, the Arteries and Veins of the *Cerebrum* are found very turgid, and the Blood cloſe ramm'd in them: 'Tis frequently cur'd by copious Hemorrhages of the Noſe; Sternutatories, Vomitives, and Veſicatories, are likewiſe apply'd to good purpoſe. It ſeldom paſſes into any other Diſeaſe; ſometimes indeed into an Epilepſy, Convulſions, Madneſs, or Atrophy; but it commonly ends in Death. The Word is *Greek*, καταλεψις, which ſignifies the ſame thing.

CATALOGUE, a Liſt, or Enumeration of the proper Names of ſeveral Books, Men, or other Things; diſpos'd according to a certain Order. The Jeſuits of *Antwerp* have given us a *Catalogue* of the Popes; which makes what they call their *Propylæum*, &c. See PROPYLÆUM.

CATALOGUE *of the Stars*, is a Liſt of the Fix'd Stars, diſpos'd in their ſeveral Conſtellations; with the Longitudes, Latitudes, &c. of each. See STAR.

The firſt who undertook to reduce the Fix'd Stars into a *Catalogue*, was *Hipparchus Rhodius*, about 120 Years before Chriſt; in which he made uſe of the Obſervations of *Tymocharis* and *Ariſtyllus*, for about 180 Years before him. *Ptolemy* retain'd *Hipparchus*'s *Catalogue*; tho he himſelf made abundance of Obſervations, with a View to a new *Catalogue*, about the Year of Chriſt 880. *Albategnius*, a *Syrian*, brought down the ſame to his Time. *Anno* 1437, *Ulugh Beigh*, King of *Parthia* and *India*, made a new *Catalogue* of the Fix'd Stars; ſince tranſlated out of *Arabic* into *Latin*, by Dr. *Hyde*. The third who made a *Catalogue* from his own Obſervations, was *Tycho Brahe*; who determin'd the Places of 777 Stars, for the Year 1600: which *Kepler*, from other Obſervations of *Tycho*, afterwards increas'd to the Number of 1000, in the *Rudolphine* Tables. At the ſame time, *William*, Landgrave of *Heſſe*, with his Mathematicians, *Chriſtopher Rothmannus*, and *Juſtus Byrgius*, determin'd the Places of 400 Fix'd Stars, by his own Obſervations; which *Hevelius* prefers to thoſe of *Tycho*'s. *Ricciolus*, in his *Aſtronomia reformata*, determin'd the Places of 101 Stars, for the Year 1700; from his own Obſervations: for the reſt, he follow'd *Tycho*'s *Catalogue*; altering it where he thought fit. *Anno* 1677, Dr. *Halley*, in the Iſland of *St. Helena*, obſerv'd 350 Southern Stars, not viſible in our Horizon. The ſame Work was repeated by F. *Noel*, in 1710, who publiſh'd a new *Catalogue* of the ſame Stars conſtructed for the Year 1687. The next was *J. Hevelius*, who made a *Catalogue* of 1888 Fix'd Stars: whereof 950 had likewiſe been obſerv'd by the Antients; 355 by Dr. *Halley*; and only 603 by himſelf.

The laſt, and greateſt, is the *Britannic Catalogue*, compil'd from the Obſervations of the accurate Mr. *Flamſtead*; who for a long Series of Years devoted himſelf wholly thereto. As there was nothing wanting either in the Obſerver, or Apparatus, we may look on this as a perfect Work, ſo far as it goes 'Tis pity the Impreſſion had not paſs'd thro his own Hands: That now extant, was publiſh'd by Authority, but without the Author's Conſent: it contains 2734 Stars. There is another publiſh'd this preſent Year, 1725, purſuant to his Teſtament: And Dr. *Halley*, his Succeſſor in the *Obſervatory Royal*, is now engag'd in ſupplying the Omiſſions of either, by his own Obſervations. See OBSERVATORY.

CATAMENIA. See MENSES.

CATAMITE, a *Ganymede*, or Boy kept for Sodomy; ſee SODOMY. The Word is form'd of κατα, and μισθος, *hir'd*.

CATAPAN, or CATIPAN, a Name the later *Greeks*, about the XIIth Century, gave the Governor of their Dominions in *Italy*. *Ughel*, and others, ſay, *Catipan* was the ſame with *Capitaneus*; form'd therefrom by *Metatheſis*, or Tranſpoſition. Others derive it from κατα, *juxta*, and παν, *omne*: In which Senſe, *Catapan* was Governor General, or Magiſtrate, who had the Direction of all: Others will have it deriv'd from κατα παντοκρατορα, after the Emperor. In which Senſe, *Catapan* was a ſecond Maſter, *Secundus Dominus*. *Du Cange* derives it from καταπαυω; which the *Greeks* apply'd to every Governor, and even every Man of Quality.

CATAPASM, a Mixture of Pouders, either Odoriferous, as for the perfuming of Clothes; or Fortifying, and apply'd to the Stomach, Heart, or Head; or Eſcharrotic, for eating off dead Fleſh. The Word comes from the *Greek* καταπασσειν, *to water*.

CATAPELTA, an Inſtrument of Puniſhment, in uſe among the Antients. It conſiſted in a kind of Preſs, compos'd of Planks, between which the Criminal was cruſh'd.

CATAPHORA, in Medicine, a Diſeaſe, the ſame with *Coma*. See COMA.

According to *Blanchard*, there is this Difference between the two, that *Cataphora* is the Genus to all Kinds of Stupors, unattended with Fevers. See LETHARGY, and CARUS.

CATAPHRYGIANS, antient Hereticks; ſo call'd, as being *Phrygians*. They were Orthodox in every thing, ſetting aſide this, that they took *Montanus* for a Prophet, and *Priſcilla* and *Maximilla* for true Propheteſſes, to be conſulted on every thing relating to Religion; as ſuppoſing the Holy Spirit had abandon'd the Church.

CATAPLASM, popularly call'd *Poultice*, an external Medicine, in form of a Pulp; of a ſoft Conſiſtence, like an Unguent, or Cerat; compos'd of various Liquors, Parts of Plants, Oils, Unguents, &c. according to the Variety of Intentions. Its ordinary Effects are, to aſſuage Pain, ſofter, reſolve, diſcuſs, or ſuppurate Matter collected in the external Parts of the Body. The ordinary *Cataplaſm* for theſe Intentions, is compos'd of white Bread, Milk, Yolks of Eggs, Saffron, and Oil of Roſes. The Word comes from the *Greek* καταπλασσω, *illino*, I ſmear, or apply outwardly.

CATAPULTA, a Military Machine, us'd among the Antients for the throwing large Darts and Javelins, 12 or 15 Foot long, on the Enemy. The *Catapulta* is ſaid to be the Invention of the *Syrians*. Some Authors make it the ſame with the *Baliſta*; others different. The firſt derive it απο της παλης, a Shaft, or Dart; the laſt from καταπαλτης. See BALISTA.

CATAPUTIA, a Medicinal Plant, commonly call'd the *leſſer Spurge*. It purges with ſuch a Violence, both upwards and downwards, that few Perſons of any Credit venture to preſcribe it.

CATARACT *of Water*, a Fall, or Precipice, in the Channel, or Bed of a River; caus'd by Rocks, or other Obſtacles, ſtopping the Courſe of its Stream; from whence the Water falls with a great Noiſe and Impetuoſity: Such are the *Cataracts* of *Nile*, the *Danube*, *Rhine*, &c. *Strabo* calls that a *Cataract*, which we call a *Caſcade*; and what we call a *Cataract*, the Antients uſually call'd a *Catadupa*.

*Herminius* has an expreſs Diſſertation, *De admirandis Mundi Cataractis ſupra & ſubterraneis*; where he uſes the Word in a new Senſe; ſignifying, by *Cataract*, any violent Motion of the Elements. The Word comes from the *Greek* καταῤῥεγνυω, *cum impetu decido*.

CATARACT, in Medicine, a *Suffuſion* of Sight, ariſing from a little Film, or Speck, which ſwimming in the aqueous Humour of the Eye, and getting before the Pupil, intercepts the Rays of Light. See SIGHT.

The *Cataract* is ſuppos'd to be form'd from a Condenſation of the more viſcous Parts of the aqueous Humour, between the Uvea and the Cryſtalline: tho ſome take it to be a Pellicle, detach'd from the Cryſtalline it ſelf; which is only an Aſſemblage of ſeveral little Pellicles, laid over one another. See CRYSTALLINE.

There are two Kinds of *Cataracts*, the *Genuine* and *Spurious*; the firſt owing to a Humour amaſs'd in the Eye, coagulated and fix'd therein, and deſtroying its uſe: the latter ariſes from Fumes or Vapours, carry'd to the Eye by ſome Accident; as by a Fever, &c. The Genuine *Cataract* has ſeveral Degrees and ſeveral Names: At firſt the Patient ſees, as it were, Clouds, Motes, Flies, &c. diffus'd over the Objects in view: Thus far the *Cataract* is call'd *Imaginary*; there being nothing yet appearing to the Eye of another Perſon. As the *Suffuſion* increaſes, the Pupil begins to appear of a Sea-green Colour; ſometimes like the Air, full of Clouds; and then the *Cataract* is call'd *Water*, or *Water-fall*. When the Evil is arriv'd at its height, and the Matter ſufficiently coagulated, the Patient loſes all Sight; the Pupil ceaſes to be tranſparent, but becomes white, or brown, or ſome other Colour; which laſt is what we properly denominate a *Cataract*.

*Couching of* CATARACTS. For the Cure of a *Cataract*, recourſe is had to the Operation of *Couching*; which is perform'd by running a Steel Needle into the Eye, thro the *Adnata*, by the Edge of the *Cornea*, on the Side of the little *Canthus*, till it arrive at the Middle of the *Cataract*; then, turning the Needle round, they twiſt the *Cataract* about its Point, till being thus reduc'd into a little compaſs, 'tis brought down beneath the Pupil, and *couch'd*, or lodg'd in the Bottom of the Eye, and there left: Thus, the Impediment being remov'd, the Light gets admiſſion. To render the Operation effectual, care muſt be taken, that the Pellicle or *Cataract* be ripe, or arriv'd at its Conſiſtence, ſo as it may be eaſily roll'd up; that its Parts be cruſh'd, or broke in rolling up, and lodg'd ſo ſecure, as not to riſe up again by its Elaſticity; and perhaps alſo, that it diſſolve and conſume at the Bottom of the Eye.

This is the popular Theory of *Cataracts*, which ſome modern Phyſicians oppoſe, and ſubſtitute a new one in its place: Their Opinion is, that inſtead of *Couching*, or laying a little Membrane, or Pellicle, 'tis the Cryſtalline it ſelf that is thus *couch'd*, and lodg'd in the Bottom of the vitreous Humour. This they ſuppoſe to have been condens'd, and to have loſt its Tranſparence; whence, inſtead of being an Inſtrument of Viſion, it proves an Obſtacle to it, by ſhutting out the Rays from the *Retina*. This Alteration of its Tranſparence, is accompany'd with a Change of Colour; it becomes greeniſh; and on this account is call'd by the Greeks *Glaucoma*. The *Glaucoma* and *Cataract* therefore, in their Opinion, are the ſame Things: tho in the other Hypotheſis they are very different; the firſt being reputed incurable, but not the latter. See GLAUCOMA.

The chief Reaſon urg'd in behalf of this latter Hypotheſis, in the *French* Academy Royal, where it was propos'd, is, that after the Operation of *Couching*, the Perſon can't ſee without a convex Lens. Now if no more were done, than the taking away a Pellicle from before the Cryſtalline, it wou'd be in the ſame Condition as before, and wou'd make the ſame Refractions; nor wou'd any Lens be neceſſary: Whereas, ſuppoſing the Cryſtalline *couch'd*, 'tis evident the

Lens will be requir'd to ſupply its Place. To this it is anſwer'd, that there have been Inſtances of Perſons who have ſeen, after *Couching*, without any Lens; at leaſt, 'tis granted, that immediately after the Operation, ſeveral Perſons have ſeen very diſtinctly: And tho Lens's ſoon become neceſſary, yet the firſt Moment wherein they ſaw without, ſeems to be a Proof that the Cryſtalline was not *couch'd*.

M. *de la Hire*, in Confirmation of the antient Syſtem, aſſigns this Reaſon for the Neceſſity of a Lens, after the Operation, *viz.* that the Vice which produc'd the *Cataract* is ſtill ſubſiſting in the aqueous Humour; which being too thick and muddy, lets too few Rays paſs: a Failing to be repair'd by a Lens, which throws a greater Quantity of Rays on the Retina. He adds ſome Experiments made on the Eyes of Oxen; the Reſult of which was, that the Cryſtalline could never be laid perfectly in the Bottom of the Eye, but there ſtill ſtuck up, ſo as to ſtop up part of the Paſſage of the Rays; partly on account of its Bulk, and partly on that of its being ſuſtain'd by the aqueous and vitreous Humour: He adds, that in the Operation of Couching, the Needle is apt to ſcratch the anterior Surface of the Cryſtalline, and open the Membrane wherewith it is involop'd; the Conſequence of which will be Wrinkles, which will render the Refractions irregular, and change the Direction of the Rays which ſhould all meet in the ſame Point; ſo as to ſpoil the Repreſentation of Objects. Laſtly, 'tis inſiſted, that if the Cryſtalline be couch'd, the Patient wou'd not ſee at all, for want of the neceſſary Refractions. See CRYSTALLINE.

M. *Antoine*, on the other hand, relates, that upon opening a Perſon whom he had *couch'd* on both Eyes, he found the two Cryſtallines actually *couch'd*, and lodg'd at the Bottom, between the vitreous Humour and the Uvea, where they were left by the Needle; and yet the Perſon ſaw without either: which ſhews, both that the Operation of *Couching* the Cryſtalline is practicable, and that Viſion may be perform'd without it. In effect, the vitreous and aqueous Humour, upon removing the Cryſtalline, may be ſuppos'd to run into the Cavity, to aſſume the Figure of its Mould, and perform the Refractions and Offices of the Cryſtalline; it being found, by Experiment, that the Refraction is the ſame in each Humour. See EYE.

To ſhew, however, that there are *Cataracts* diſtinct from *Glaucomas*, M. *Litire* produc'd before the Society an Eye of a Man blind 22 Years; wherein was a diſtinct *Cataract*, or Pellicle, which clos'd the Aperture of the Pupil. See PUPIL, VISION, *&c.*

CATARRH, in Medicine, a Flux, or Defluxion of a ſharp ſerous Humour from the Glands about the Head and Throat, upon the Parts adjacent. See FLUXION.

*Catarrhs* are, generally, occaſion'd by a Diminution of inſenſible Perſpiration on taking cold; the Effect whereof is, that the Lymph, that ſhould paſs by the Skin, ouzes out upon thoſe Glands; and being thus extravaſated, occaſions Iritations, Coughs, and all the uſual Symptoms. See TUSSIS. *Degory* deduces all Diſeaſes from *Catarrhs*; which he looks upon as the Seminary of moſt Diſorders of the Body. *Etmuller* diſtinguiſhes a *hot* and a *cold Catarrh*; the firſt attended with an unnatural Heat and Pain, and a Phlogoſis of the whole Body; the excreted Lymph being exceeding thin and ſharp: In the *cold*, all the Symptoms are more remiſs.

There is alſo a *ſuffocative Catarrh*, ſeated in the Larynx, and Epiglottis, which it conſtringes; and thus, obſtructing Reſpiration, endangers Strangling.

*Catarrhs* are cured by ſoftning the Seroſities, and augmenting Tranſpiration, by means of Diaphoreticks, ſoporiferous Medicines, and Diureticks. Smoaking of Tobacco is recommended as excellent in all *catarrhal* Affections: In *obſtinate Catarrhs*, recourſe is ſometimes had to Iſſues and Bliſters.

*Catarrhs* don't ariſe from the Head only, but ſometimes alſo from other Parts of the Body; the lymphatic Veſſels, wherein the Seroſities are contain'd, as well as the Glands that ſeparate them, being diſtibuted all over the Body.

The Word comes from the *Greek* Καταῤῥεω, *defluo*, I flow down.

CATASTASIS, in Poetry, the third part of the antient Drama; being that wherein the Intrigue, or Action ſet on foot in the Epitaſis, is ſupported, carried on, and heightned, till it be ripe for the unravelling in the Cataſtrophe. See EPITASIS and CATASTROPHE.

The Word comes from the *Greek* Κατασασις, *Conſtitution*, this being as it were, the Mean, Tenor, State, or Conſtitution of the Piece. See DRAMA and TRAGEDY.

CATASTROPHE, in Poetry, the Change or Revolution of a dramatic Poem, or the Turn which unravels the Intrigue, and terminates the Piece. See DRAMA, TRAGEDY, *&c.*

The *Cataſtrophe* is either Simple or Implex; whence alſo the Fable and Action are denominated. See FABLE.

In the firſt there is no change in the State of the principal Perſons, nor any diſcovery or unravelling; the Plot being only a mere Paſſage out of Agitation, to Quiet and Repoſe. This *Cataſtrophe* is rather accommodated to the Nature of the Epopea, than of Tragedy. Indeed we meet with it in ſome of the Antients, but it is out of doors among the Moderns. In the ſecond, the principal Perſon undergoes a Change of Fortune; ſometimes by means of a Diſcovery, and ſometimes without.

The Qualifications of this Change are, that it be probable, and neceſſary: in order to be probable 'tis requir'd it be the natural Reſult or Effect of the foregoing Actions, *i. e.* it muſt ſpring from the Subject it ſelf, or take its Riſe from the Incidents; and not be introduc'd merely to ſerve a Turn. The Diſcovery in the *Cataſtrophe*, muſt have the ſame Qualifications as the Cataſtrophe it ſelf, whereof it is a principal Part: It muſt be both probable and neceſſary. To be probable, it muſt ſpring out of the Subject it ſelf; not effected by means of Marks or Tokens, Rings, Bracelets, or by a mere Recollection, as is frequently done both by the Antients and Moderns. To be neceſſary, it muſt never leave the Perſons it concerns in the ſame Sentiments they had before, but ſtill produce either Love or Hatred, *&c.* Sometimes the Change conſiſts in the Diſcovery; ſometimes it follows at a diſtance, and ſometimes reſults immediately from it, which is the moſt beautiful Kind: and thus it is in *OEdipus*. See DISCOVERY.

Mr. *Dryden* thinks a *Cataſtrophe* reſulting from a mere Change in the Sentiments and Reſolutions of a Perſon, without any further Machinery, may be ſo manag'd as to become exceedingly beautiful, nay preferable to any other. 'Tis a Diſpute among the Criticks, Whether the *Cataſtrophe* ſhould always fall out happily, and favourably on the ſide of Virtue, or not? *i. e.* Whether Virtue is always to be rewarded, and Vice puniſh'd, in the *Cataſtrophe*: But the Reaſons on the Negative ſide ſeem the ſtrongeſt. *Ariſtotle* prefers a ſhocking *Cataſtrophe*, to a happy one; in regard, the moving of Terror and Pity, which is the Aim of Tragedy, is better effected by the former than the latter.

*Boſſu* divides the *Cataſtrophe*, at leaſt, with regard to the *Epopea*, into the Unravelling, or *Denouément*, and the *Achevement*, or Finiſhing; the laſt of which he makes the Reſult of the firſt, and to conſiſt in the Hero's Paſſage out of a State of Trouble and Agitation, to Reſt and Quiet. This Period is but a Point, without Extent, or Duration; in which it differs from the firſt, which comprehends every thing after the Knot, or Plot laid. He adds, that there are ſeveral Unravellings in the Piece, in regard there are ſeveral Knots, which beget one another: The *Finiſhing*, is the End of the laſt Unravelling. See KNOT, TRAGEDY, COMEDY, FABLE, *&c.*

The *Cataſtrophe* made the fourth and laſt Part in the antient *Drama*; or that immediately ſucceeding the *Cataſtaſis*. See CATASTASIS.

CATCH-*Land*, is ſuch *Land*, particularly in *Norfolk*, which is not certainly known to what Pariſh it belongs; ſo that the Parſon who firſt gets the Tithes there, enjoys it for that Year.

CATCH-POL, a Term now us'd, by way of Reproach, for a Bailiff's Follower, or Aſſiſtant; ſee BAILIFF. Antiently, it was a Term of Credit, apply'd to thoſe we now call *Serjeants of the Mace*, *Bailiffs*, or any other that uſe to arreſt Men on any Action. See SERGEANT, *&c.*

CATECHU, in Medicine, a ſort of medicinal Earth, call'd alſo *Cachou*, and *Japan Earth*. See CACHOU, and JAPAN *Earth*.

CATECHUMEN, a Candidate of Baptiſm; or a Perſon who prepares himſelf for the receiving thereof: See BAPTISM.

Authors diſtinguiſh three Kinds of *Catechumens*, among the Antients, *viz.* thoſe who were only Hearers, diſtinguiſh'd by the Name *Audientes*; thoſe who bowed, *Genu flectentes*; and thoſe qualify'd for Baptiſm, call'd *Competentes*; who were alſo *Genu flectentes*, becauſe of their bowing at the Rehearſal of certain Prayers over them. Others make but two Orders, *viz.* the *Genu flectentes* as the firſt; and the *Audientes*, or Hearers, call'd *Imperfecti*: The *Imperfecti* were thoſe of the Heathens, who preſented themſelves for Baptiſm. *Perfecti*, were thoſe ſufficiently inſtructed in the Faith. Some add another Kind of *Catechumens*, call'd *Electi*; as being choſen and nominated for that End: Others, laſtly, diſtinguiſh the three Orders into *Audientes*, or thoſe admitted to the hearing the Catechiſm, and other Inſtructions; the *Electi*, thoſe ſufficiently inſtructed, and choſen to receive Baptiſm; and *Competentes*, who were in a State and Diſpoſition for its Reception.

The *Catechumens* were not only diſtinguiſh'd by Name, but alſo by Place: They were diſpos'd, with the Penitents, in the *Portico*, at the Extremity of the Church, oppoſite to the Choir. They were not allow'd to aſſiſt at the Celebration of the Euchariſt; but after Sermon, the Deacon diſmiſs'd them with this Form, *Ite Catechumeni, miſſa eſt.*

The

The Word comes from the *Greek* κατηχέωμαι, *I am inſtructed*: Whence, *Catechumenium*, the Gallery, or upper Part of the Church; which was thus call'd, either becauſe the *Catechumens* ſat here, or were here inſtructed.

CATEGOREMA, in Logic, *&c.* the ſame with *Category*, or *Predicament*. See CATEGORY.

CATEGORY, or *Predicament*, in Logic, a Syſtem, or Aſſemblage, of all the Beings contain'd under any Genus, or Kind; rang'd in order: See GENUS. The School Philoſophers diſtribute all Beings, all the Objects of our Thoughts or Ideas into certain *Genera*, or Claſſes, in order to get a more diſtinct and preciſe Notion thereof; which Claſſes they call *Categories*, or *Predicaments*. See PREDICAMENT.

The Antients, after *Ariſtotle*, generally make ten *Categories*: Under the firſt, all Subſtances are compris'd; and all Accidents under the nine laſt, *viz.* Quantity, Quality, Relation, Action, Paſſion, Time, Place, Situation, and Habitude; which are uſually expreſs'd, or ſignify'd, by the following Technical Diſtich.

*Arbor, Sex, Servos, Ardore, refrigerat, uſtos*
*Ruri, cras, ſtabo, nec tunicatus Ero.*

Theſe ten *Categories* of *Ariſtotle*, which Logicians make ſuch Myſteries of, are now almoſt out of Doors; and, in effect, are of little uſe: the leſs, as being Things purely arbitrary, without any Foundation, but in the Imagination of a Man, who had no Authority to preſcribe Laws for ranging the Objects of other Peoples Ideas. Accordingly, Some Philoſophers think all Nature may be better conſider'd under theſe ſeven Things, Spirit, Matter, Quantity, Subſtance, Figure, Motion, and Reſt: And others make but two *Categories*, Subſtance and Accident.

The Word *Category*, was borrow'd by the Schools from the *Forum*, or Courts of Juſtice: For as, in a Trial, the Plaintiff, or Proſecutor, in accuſing the Criminal, or Priſoner, muſt charge him expreſsly, or affirm that he did this or that, in poſitive Terms; whence the Word *Category*, viz. κατηγορεῖσθαι, *to aver*, or *declare*: So in the Doctrine of *Categories*, every higher may be expreſsly, and abſolutely predicated, or affirm'd of every lower.

CATENA, in Anatomy, a Muſcle, otherwiſe call'd *Tibialis Anticus*; which ſee.

CATENARIA, in the higher Geometry, a Curve Line which a *Chain*, or Rope forms it ſelf into, when hung freely between two Points of Suſpenſion. See CURVE.

To conceive the general Nature or Character of this Curve, ſuppoſe, 1ſt, a Line heavy and flexible, (ſee Tab. *Geom.* Fig. 25.) the two Extremes of which, F and D, are firmly fix'd in thoſe Points; by its weight it is bent into a certain Curve F A D, which is call'd the *Catenaria*. 2dly, Let B D and *b d* be parallel to the Horizon, A B perpendicular to B D, and D ♪ parallel to A B; and the Points B *b* infinitely near to each other. From the Laws of Mechanicks, any three Powers, *in Æquilibrio*, are to one another, as the Lines parallel to the Lines of their Direction, (or inclin'd in any given Angle) and terminated by their mutual Concourſes: Hence, if D *d* expreſſes the abſolute Gravity of the Particle D *d*, (as it will, if we allow the *Chain* to be every way uniform) then D ♪ will expreſs that Part of the Gravity, that acts perpendicularly upon D *d*; and by the means of which, this Particle endeavours to reduce it ſelf to a vertical Poſition: So that if this Lineola *d* ♪ be conſtant, the perpendicular Action of Gravity upon the Parts of the *Chain* will be conſtant too; and may therefore be expreſs'd by any given right Line *a*. Farther, the Lineola D ♪, will expreſs the Force which acts againſt that Conatus of the Particle D *d* (by which it endeavours to reſtore it ſelf into a Poſition perpendicular to the Horizon) and hinders it from doing ſo. This Force proceeds from the ponderous Line D A, drawing according to the Direction D *d*; and is, *cæteris paribus*, proportional to the Line D A, which is the Cauſe of it. Suppoſing the Curve FAD, therefore, as before, whoſe Vertex (the loweſt Point of the *Catena*) is A, Axis A B, Ordinate B D; Fluxion of the Axis D ♪ = B *b*, Fluxion of the Ordinate *d* ♪; the Relation of theſe two Fluxions is thus, *viz.* *d* ♪ : D *d* :: *a* : D A Curve; which is the fundamental Property of the Curve, and may be thus expreſs'd (putting A B = *x*, and BD = *y*, and A D = *c*) $y = \frac{ax}{c}$. For more on this Subject, ſee *Philoſophical Tranſactions*, N° 231, where it is enlarg'd upon by Dr. *Gregory*.

CATERER. See PURVEYOR.

CATHARTICS, *Purgative Medicines*, or Remedies that promote Evacuation by Stool; ſee PURGATIVES.

Some uſe the Word *Cathartic* in a more general Senſe, comprehending under it Emetics, or Vomitives; but this ſeems an Abuſe: See EMETICS.

*Cathartics*, in the proper Senſe of the Word, are of ſeveral Kinds, *mild*, *moderate*, and *violent*. The firſt purge gently, as *Caſſia*, *Manna*, *Tamarinds*, *Rhubarb*, *Sena*, &c. the ſecond pretty briſkly, as *Jallop*, and *Scamony*, &c. the third ſeverely, as *Colacinth*, *Hellebore*, *Laureola*, &c. See each under its proper Article, CASSIA, MANNA, RHUBARB, *&c.*

*Cathartics* are likewiſe divided into *Chologogues*, *Phlegmagogues*, *Melanogogues*, and *Hydrogogues*; the firſt ſuppos'd to purge the Bile, the ſecond Pituita, the third Melancholy, and the fourth Seroſities. See CHOLOGOGUES, PHLEGMAGOGUES, *&c.* The Word comes from the *Greek* καθαίρω, *purgo*, I purge.

For the Theory of *Cathartics*, and the manner wherein they operate, ſee PURGATIVES.

CATHEDRAL, a Church wherein is a Biſhop's See, or Seat; ſee BISHOP.

The Word ſeems to take its riſe from the manner of ſitting in the antient Churches, or Aſſemblies of primitive Chriſtians: In theſe, the Council, *i. e.* the Elders and Prieſts, was call'd *Presbyterium*; at their head was the *Biſhop*, who held the Place of Chairman, *Cathedralis*; and the *Presbyters*, who ſate on either ſide, were alſo call'd by the antient Fathers, *Aſſeſſores Epiſcoporum*. The Epiſcopal Authority did not reſide in the Biſhop alone, but in all the Presbyters, whereof the Biſhop was Preſident. See PRESBYTER.

A *Cathedral* therefore, originally, was different from what it is now; the Chriſtians, till the Time of *Conſtantine*, having no liberty to build any Temple: by their Churches they only meant their Aſſemblies; and by *Cathedrals*, nothing more than *Conſiſtories*. Whence appears the Vanity of ſome Authors, eſpecially the *Spaniards*, who pretend their *Cathedrals* to have been built in the Times of the Apoſtles. The Word comes from the *Greek* καθέδρα, *Chair*, of καθίζω, *ſedeo*.

CATHERETIC *Medicines*, ſuch as conſume and carry off Carnoſities, proud Fleſh, and Excreſcences ariſing in Wounds, *&c.* ſuch are the *red Precipitate*, *burnt Alom*, *blue Vitriol*, *Stone*, &c.

The Word is form'd from the *Greek* κατα, and αἴρω, *I take away*, *carry off*.

Some call theſe Medicines *Sarcophages*, Fleſh-eaters. See CAUSTIC.

S. CATHERINE *of Mount* Sinai, a Military Order, inſtituted in 1603, on occaſion of finding the Body of *S. Catherine* on *Mount Sinai*; which drawing a great Concourſe of Pilgrims from all Quarters, an Order of Knights was eſtabliſh'd, on the Foot of that of the *Holy Sepulchre*, to render the Journey more ſafe among the *Arabs*. See SEPULCHRE.

They receiv'd the Rule of St. *Baſil*, and own'd *St. Catherine* for their Patroneſs: Their Vows were, to follow their Rule, guard the Body of their Patroneſs, ſecure the Roads in favour of Pilgrims, defend the Catholick Church, and obey their Grand Maſter. The Order is now extinct, as well as that of the *Holy Sepulchre*.

CATHETER, among Chirurgeons, a hollow Probe, or Inſtrument, ſomewhat crooked, to thruſt up the Yard into the Bladder; in order to aſſiſt in making Urine, when the Paſſage is ſtopp'd by the Stone, Gravel, Caruncles, *&c.*

The Word comes from the *Greek* καθημι, *immitto*, to ſend in.

Hence, *Catheteriſm* is the Operation of drawing the Urine out of the Bladder with a *Catheter*.

CATHETUS, in Geometry, a Perpendicular; or a Line, or Radius, falling perpendicularly on another Line, or Surface: See PERPENDICULAR.

Thus, the *Catheti of a rectangled Triangle*, are the two Sides that include the right Angle. See RECTANGLE.

CATHETUS *of Incidence*, in Catoptrics, is a right Line drawn from a radiant Point, perpendicular to the Plane of the *Speculum*, or Mirror. See INCIDENCE.

CATHETUS *of Reflection*, or *of the Eye*, a right Line drawn from any Point of a reflected Ray, perpendicular to the Plane of Reflection, or of the *Speculum*. See REFLECTION.

CATHETUS *of Obliquation*, a right Line, drawn perpendicular to the *Speculum*, in the Point of Incidence or Reflection.

CATHETUS, in Architecture, is a perpendicular Line, paſſing along thro the middle of a Column: or that thro the Eye of the Volute, in the *Ionic* Capital; call'd alſo *Axis*. See AXIS, and VOLUTE.

CATHOLICK, is us'd in the Senſe of *Univerſal*, or *General*; ſee GENERAL, *&c.*

*Theodoſius* the Great, firſt introduc'd the Term *Catholick* into the Church; appointing by an Edict, that the Title ſhould be apply'd, by way of Pre-eminence, to thoſe Churches who adher'd to the Council of *Nice*, in Excluſion of the *Arians*, &c. *Catholiciſm*, however, ſoon chang'd Hands; for under the Emperor *Conſtantius*, *Arianiſm* became ſo predominant, that the *Arians* were call'd the *Catholicks*. See ARIAN, *&c.*

The Title of *Catholick King*, has been hereditary to the King of *Spain*, ever ſince the Time of *Ferdinand* and *Iſabella*. *Colombiere* ſays, it was given on occaſion of the

Expulsion of the *Moors*. The *Bollandists* pretend, the Title was bore by their Predecessors, the *Visigoth* Kings of *Spain*; and that *Alexander* VI. only renew'd it to *Ferdinand* and *Isabella*. Others say, that *Philip de Valois* first bore the Title; which was given him after his Death by the Ecclesiasticks, on account of his favouring their Interests.

In some Epistles of the antient Popes, the Title *Catholick* is given to the Kings of *France*, and of *Jerusalem*, as well as to several Patriarchs and Primates. The Word is form'd from the *Greek* καθ' ὅλε, *universally*; whence καθολικὸς, *universal*.

Catholic *Furnace*, is a little Furnace, so contriv'd, as to be fit for all kinds of Operations, which do not require an intense Fire. See Furnace.

CATHOLICON *of Spain*. See Menippean *Satyr*.

Catholicon, in Pharmacy, a kind of soft Electuary; so call'd, as being suppos'd *universal*; or a Purger of all Humours. See Electuary.

Different Authors give different Recipes for it: That call'd *Catholicon Nicholai* is most in use; it consists of 16 Ingredients, the chief whereof are Tamarinds, Cassia, Sena, and Rhubarb. It is said to be *double*, when there is a double Portion of Sena and Rhubarb.

The *Catholicon for Clysters*, only differs from this, in that it has no Rhubarb, and that Honey is us'd instead of Sugar. See Clyster.

CATKINS, in Natural History, a Substance growing on Nut-Trees, Birch-Trees, &c. in Winter time. See Plants.

CATLIN, among Surgeons, is a Dismembring Knife, for cutting off any corrupted Part of a Body.

CATOPSIS, in Medicine, a Disorder of the Sight; more usually call'd *Myopia*. See Myopia.

CATOPTRICS, the Science of *Reflex Vision*; or that Branch of Optics, which delivers the Laws of Light, reflected from Mirrors, or *Specula*. See Mirror, and Reflection; see also Vision, Light, and Optics. Under which Heads, the Doctrine and Laws of *Catoptrics* are laid down.

The Word comes from the *Greek* κατοπτρον, *Speculum*; of κατα, and οφθαμαι, *video*, I see.

Catoptrical *Dial*, a Dial which exhibits Objects by reflected Rays. See Reflecting *Dial*.

Catoptric *Telescope*, a Telescope that exhibits Objects by Reflection; see Reflecting *Telescope*.

Catoptric *Cistula*, a Machine, or Apparatus, whereby little Bodies are represented extremely large; and near ones extreamly wide, and diffus'd thro a vast Space; and other agreeable Phænomena, by means of Mirrors, dispos'd by the Laws of *Catoptrics*, in the Concavity of a kind of Chest.

Of these there are various Kinds, accommodated to the various Intentions of the Artificer: Some multiply the Objects; some deform 'em; some magnify, &c. The Structure of one or two of 'em, will suffice to shew how infinite more may be made.

*To make a* Catoptric *Cistula, to represent several distinct Scenes of Objects, when look'd in at several* Foramina, *or Holes.*

Provide a polygonous *Cistula*, or Chest, of the Figure of the Multilateral Prism A B C D E F, (Plate *Optics*, Fig. 19.) and divide its Cavity by Diagonal Planes E B, F C, D A, intersecting each other in the Centre G, into as many triangular Locules, or Cells, as the Chest has Sides. Line the Diagonal Planes with plane Mirrors: In the lateral Planes make round Holes, thro which the Eye may peep within the Locules of the Chest. The Holes are to be cover'd with plain Glasses, ground within-side, but not polish'd, to prevent the Objects in the Locules from appearing too distinctly. In each Locule are plac'd the different Objects, whose Images are to be exhibited; then covering up the Top of the Chest with a thin transparent Membrane, or Parchment, to admit the Light, the Machine is compleat.

For, from the Laws of Reflection, it follows, that the Images of Objects, plac'd within the Angles of Mirrors, are multiply'd, and appear some more remote than others; whence the Objects in one Locule, will appear to take up more room than is contain'd in the whole Chest. By looking, therefore, thro one Hole only, the Objects in one Locule will be seen; but those multiply'd, and diffus'd thro a Space much larger than the whole Chest: thus every new Hole will afford a new Scene: According to the different Angles the Mirrors make with each other, the Representations will be different; if they be at an Angle greater than a right one, the Images will be monstrous, &c. See Anamorphosis.

The Parchment that covers the Machine, may be made pellucid, by washing it several times in a very clear Lye, then in fair Water, and bracing it tight, and exposing it to the Air to dry. If 'tis desir'd to throw any Colour on the Objects, it may be done by colouring the Parchment. *Zahnius* recommends Verdigrease, ground in Vinegar, for green; Decoction of *Brasil* Wood, for red, &c. He adds, it ought to be varnish'd, to make it shine.

*To make a* Catoptric *Cistula, to represent the Objects within it prodigiously multiply'd, and diffus'd thro a vast Space.*

Make a polygonous *Cistula*, or Chest, as before, but without dividing the inner Cavity into any Apartments or Locules; (Plate *Optics*, Fig. 20.) line the lateral Planes C B H I, B H L A, A L M F, &c. with plane Mirrors, and at the *Foramina*, or Apertures, pare off the Tin and Quicksilver, that the Eye may see thro: Place any Objects in the Bottom M I, *v. g.* a Bird in a Cage, &c.

Here, the Eye looking thro the Aperture *h i*, will see each Object plac'd at bottom, vastly multiply'd, and the Images remov'd at equal Distances from one another. Hence, were a large multangular Room, in a Prince's Palace, lin'd with large Mirrors, over which were plain pellucid Glasses to admit the Light; 'tis evident the Effects would be very surprising and magnificent. See Mirror, Reflection, &c.

CATOPTROMANCY, a kind of Divination, among the Antients; so called, because consisting in the Application of a *Mirror*; from κατοπτρον, *Speculum*, and μαντεια, *Divinatio*. See Divination.

*Pausanias* says, it was in use among the *Achaians*, where those who were sick, and in danger of Death, let down a Mirror, fasten'd by a Thread, into a Fountain before the Temple of *Ceres*; then, looking in the Glass, if they saw a gastly disfigur'd Face, they took it as a sure Sign of Death: on the contrary, if the Face appear'd fresh and healthy, 'twas a Sign of Recovery.

CAVA, in Anatomy, the Name of a Vein, the largest in the Body, terminating in the right Ventricle of the Heart; where it opens with a large Mouth, to convey to it the Blood brought from all the Parts of the Body, by the Branches of the other Veins, which all terminate in the *Cava*. See Vein.

At its Entrance into the right Ventricle, it has three membranous Valves, call'd *Tricuspides*, or *Triglochines*, from their triangular Figure; so accommodated, as to allow the Blood's passage from the *Cava* to the Heart, and to prevent its return. See Heart, and Valves.

The *Cava* is divided into the *ascending* and *descending* Parts: The *ascending Cava*, is that which arises from the lower Parts; so call'd, because the Blood hereby convey'd to the Heart, mounts, or *ascends*. The *descending Cava* comes from the upper Parts, and is so called, because the Blood hereby brought from the Brain, and other Parts, *descends*. See Blood, and Circulation.

CAVALCADE, a formal, pompous March, or Procession of Horsemen, Carriages, &c. by way of Parade, or Ceremony. See Carrousal, Tilt, Quadril, &c.

CAVALEER, or CAVALIER, a Horseman, or Person mounted on Horseback. Antiently, the Word was restrain'd to a *Knight*, or *Miles*. See Knight, and Miles. The *French* still use *Chevalier* in the same Sense. See Chevalier.

Cavalier, in Fortification, a Terrace, or Platform, commanding all around the Place. 'Tis rais'd 18, or 29 Foot high, atop of a Rampart, for placing the Cannon on, and securing the Country about. 'Tis sometimes also made in the Country, to play in upon the Town; and as much above the other Works, as a Man *on Horseback* is above a Footman; whence the Denomination.

In form, the *Cavalier* is sometimes round, and sometimes square; having always a Parapet to cover the Cannon: Its Breadth depends on the Number of Pieces to be lodg'd on it; there being always allow'd an Interval of 10 or 12 Foot between each two, for the Conveniency of loading and firing.

The *Cavalier* is also sometimes call'd a *double Bastion*.

Cavaliers, or Cavaleers, consider'd as a Faction; see Tory.

CAVALRY, a Body of Soldiers, who fight, or march on Horseback. See Soldiers; see also Guards.

The English *Cavalry* is divided into *Horse*, and *Dragoons*; the *French* into *Companies of Ordnance*, as the *Gardes du Corps*, *Gens d'Armes*, *Light-Horse*, &c. and into *Regiments*, commanded by *Mestres de Camp*. The Dragoons, among the *English*, and the Regiments among the *French*, form what they call the *light Cavalry*. When an Army is rang'd in order of Battel, the *Cavalry* is posted on the Wings.

Bodies of *Cavalry*, rang'd in form of Battel, are call'd *Squadrons*. See Squadron.

The *Romans*, in their first Wars, were unacquainted with the use of *Cavalry*, and made their whole Force consist in *Infantry*; insomuch, that even in the Engagement they made their Horse dismount, and fight on Foot; never resuming their Horses, but to pursue the Enemy the better when routed. It was the *Cavalry* of *Pyrrhus*, that first occasion'd them to alter their Sentiments; but especially that of *Hannibal*, which struck them with such a Terror, that the invincible *Roman* Legions durst not attack them on even Ground.

The Word comes from the corrupt Latin *Caballus*, a Horſe; whence *Caballarius*, and *Cavallarius*, in the later *Latin*, and καβαλλαρ, in the *Greek*.

CAUDA *Draconis*, the *Dragon's Tail*, in Aſtronomy, the Name of the Moon's deſcending Node; ſee NODE.

CAVEAT, in Law, a Bill enter'd, in the Eccleſiaſtical Court, to ſtop the Proceedings of one who would prove a Will to the Prejudice of another.

CAVERNOSA *Corpora*, in Anatomy, call'd alſo *Corpora nervoſa*, and *ſpongioſa*, are two cavernous Bodies, of an indeterminate Length and Thickneſs, whereof the *Penis* is principally compos'd. See PENIS.

Their internal Subſtance is rare, and ſpongy; and when fill'd with Blood and Spirits, dilates and ſwells: in which, the Tenſion, or Erection of the Yard conſiſts. See ERECTION.

They have two diſtinct Beginnings from the lower Side of the *Oſſa Pubis*; whence they increaſe in bulk, till their meeting with the *Corpus Cavernoſum Urethræ*, where they join into one, and are retain'd by means of a *Septum* compos'd of their outer Tunics: Their other Extremities are capp'd with the Glans; ſee GLANS.

CAVERNOSUM *Corpus Urethræ*, a third ſpongious Body of the Penis; ſo called, becauſe the *Urethra*, or urinary Paſſage of the Penis is inclos'd therewith. See URETHRA.

Its Figure, contrary to that of the two *Corpora Cavernoſa*, is largeſt at its Extremities, and leaſt in the Middle; its upper Part is in the *Perinæum*, and is call'd its *Bulb*, from its Figure. Its external Membrane is thin, and divided lengthwiſe by a *Septum*. The middle Part of the *Corpus* is nearly cylindrical; but the Paſſage for the Urine is not along the Centre, but inclines to its upper Part, next the Body of the Penis; its lower Extremity dilating it ſelf, forms the *Glans*. See GLANS.

CAVERNOSA *Corpora of the Clitoris*, are two nervous or ſpongy Bodies, like thoſe of the Penis; having their Origin from the lower Part of the *Os Pubis*, on each ſide; and uniting together, conſtitute the Body of the *Clitoris*, as thoſe do that of the Penis. See CLITORIS.

Indeed, they have no Perforation analogous to that of the Penis; but they have a *Septum*, or membranous Partition, running all along between 'em, and dividing 'em from the *Glans*, to its Devarication at the *Os Pubis*, where they are call'd *Crura Clitoridis*: See CRURA *Clitoridis*.

CAVERNOSUM *Corpus of the Pudendum*. See RETICULARE *Corpus*.

CAVESON, in the Manage, a kind of Bridle, or Muſroll, put on the Horſe's Noſe, which binds or locks him in, and ſerves in breaking, managing, and tutoring him.

The *Caveſons* for breaking young Horſes, are uſually of Iron, made ſemicircularly, of two or three Pieces turning on Joints; others are twiſted, others flat, others hollow in the Middle, and indented like Saws, call'd *Mordants*: tho theſe laſt are now baniſh'd the Academies. The Rope and Leathern *Caveſons*, ſerve for paſſing the Horſe between two Pillars. The Word comes from the Spaniſh *Caveſa*, Head.

CAVETTO, in Architecture, a hollow Member, or Moulding, containing a Quadrant of a Circle, and having an Effect juſt contrary to that of a Quarter-round: It is us'd as an Ornament in Cornices.

M. *Felibien* obſerves, that the Workmen confound the *Cavetto* with a *Scotia*, but to ill Purpoſe; the *Cavetto* being in effect only half a *Scotia*: yet he himſelf is chargeable with the ſame Overſight. See SCOTIA.

When in its natural Situation, the Workmen frequently call it *Gula*, or *Gueule*; and when inverted, *Gorge*. See GULA, and GORGE.

The Word is *Italian*, and no more than a Diminutive of *Cavus*, hollow.

CAVIA, or KAVIA, call'd alſo *Cavial*, *Caviac*, and *Caviar*, a kind of Food, or Ragout, in mighty uſe and repute throughout *Muſcovy*; and lately introduc'd upon the *Engliſh* Table.

The *Cavia*, or *Kavia*, is the Roe, or Eggs of the Fiſh Sturgeon, taken out, ſalted, and dry'd at the Sun, or by the Fire. The *Italian* Merchants ſettled at *Moſcow*, drive an incredible Trade with *Cavia*; the Fiſh being caught in prodigious Quantities at the Mouth of the *Volga*, and other Rivers which empty themſelves into the *Caſpian Sea*. They cure, or prepare the Roes on the Spot, and thence ſend it up the *Volga* to *Moſcow*, to be there diſtributed throughout that vaſt Empire; where it is of wonderful ſervice to the People, on account of the three Lents there obſerv'd with great Severity. See *Sturgeon* FISHERY.

The *Engliſh* import conſiderable Quantities of this Commodity from *Archangel*; tho not ſo much for home Conſumption, as to ſupply the *French* and *Italians*. To be good, it ſhould be of a reddiſh brown Colour, and very dry. 'Tis eat with Oil and Lemon; ſometimes with Vinegar: Some eat it alone with Bread; and others only as a Sauce, or Pickle, like Anchovies.

CAVIN, in Fortification, is a hollow Place, proper to favour the Approaches to a Fortreſs; ſo that one may advance therein, under Covert, towards the Enemy, as it were in a Trench. If it be within Muſket-ſhot, 'tis a Place of Arms, ready made to hand; and a Convenience for opening the Trenches, out of fear of the Enemy's Shot.

CAVITIES, among Anatomiſts. See VENTER, and REGION.

CAUL, in Anatomy, a Membrane in the Abdomen, covering the greateſt part of the Guts; called, from its Structure, *Reticulum*, but moſt popularly *Omentum*. See OMENTUM.

CAUL is likewiſe a little Membrane, found on ſome Children encompaſſing the Head, when born.

*Drelincourt* takes the *Caul* to be only a Fragment of the Membranes of the *Fœtus*; which ordinarily break at the Birth of the Child: See FOETUS.

*Lampridius* tells us, that the Midwiſes ſold this *Caul* at a good price to the Advocates and Pleaders of his Time; it being an Opinion, that while they had this about them, they ſhou'd carry with 'em a Force of Perſuaſion which no Judge could withſtand: The Canons forbid the Uſe of it; becauſe ſome Witches and Sorcerers, it ſeems, had abus'd it.

CAULICOLES, CAULICULI, in Architecture, are eight leſſer Branches, or Stalks, in the *Corinthian* Capital, ſpringing out from the four greater or principal *Caules*, or Stalks. See *Corinthian* CAPITAL.

The eight Volutes of this Order, are ſuſtain'd by four *Caules*, or primary Branches of Leaves; and from which ariſe theſe *Caulicoles*, or leſſer Foliages. See VOLUTE, and LEAVES.

Some Authors confound theſe with the *Volutes* themſelves; ſome with the *Helices* in the Middle, and ſome with the principal *Stalks* whence they ariſe.

The Word comes from the Latin *Caulis*, the Stalk, or Stem of a Plant, whence the Leaves and Branches ariſe.

CAULIFEROUS *Herbs*, are ſuch as have a true *Caulis*, Stalk, or Trunk, which a great many have not; as the *Capillaries*, &c. See STEM, STOCK, CAPILLARIES, *&c.*

CAUSALITY, in Metaphyſics, is the Power, or Action of a Cauſe in producing its Effect. See CAUSE.

'Tis a Diſpute, among the School Philoſophers, whether, and how the *Cauſality* is diſtinguiſh'd from the *Cauſe* and *Effect*: Some hold it a Mode, or Modal Entity, ſuperadded to the Cauſe, *&c.* others contend for its being the Cauſe it ſelf, only conſider'd *principiativè* and *terminativè*, &c.

CAUSE, that whence any thing is; or by virtue whereof a thing is done: Thus a Wound is the *Cauſe* of Death, Crudity of a Diſeaſe, *&c.* *Cauſe* is a Term of a Relation to *Effect*; ſee EFFECT.

*Firſt* CAUSE, is that which acts of it ſelf, and from its own proper Force, or Virtue; in which Senſe, God is the only *Firſt Cauſe*. See GOD.

*Second* CAUSES, are thoſe which derive the Power, and Faculty of acting, from a Firſt *Cauſe*. Such *Cauſes* don't properly act at all; but are acted on: and therefore are improperly call'd *Cauſes*: of which Kind are all thoſe that we call *Natural Cauſes*. See NATURE.

F. *Malebranch* denies *Second*, or *Natural Cauſes*, to have any Force, Power, or Efficacy to produce any Effect; and thinks the Notion in it ſelf inconceivable. 'Tis certain the Philoſophers are ſtrangely puzzled, and divided about the manner of their Agency: Some maintain 'em to act by their *Matter*, *Figure*, and *Motion*; ſee CORPUSCULAR: others by a *ſubſtantial Form*; ſee *Subſtantial* FORM: many by *Accidents*, or *Qualities*; ſome by *Matter* and *Form*; others by certain *Faculties* different from all theſe: See FACULTY, FORM, QUALITY, *&c.*

Some maintain, that the ſubſtantial Form produces Forms; and the accidental, Accidents; others, that Forms produce other Forms and Accidents; others, laſtly, that Accidents alone are capable of producing Accidents, and even Forms. Again, thoſe, for Inſtance, who ſay that Accidents may produce Forms, by the Virtue they have receiv'd from the Form to which they are join'd, don't all mean the ſame thing: Some will have it, that theſe Accidents are only the Force or Virtue of the ſubſtantial Form; others, that they receive the Influence of the Form, and only act by virtue thereof: others, laſtly, that they are only *Inſtrumental Cauſes*.

Again, the Philoſophers are divided as to the Action whereby *Second Cauſes* produce their Effects: Some maintain, that the *Cauſality* cannot be produc'd, ſince 'tis that produces; others will have 'em to act truly by their Action; but they are ſtill at a loſs about that Action.

Such Variety is there in the Sentiments even of modern Philoſophers; and thoſe too our Neighbours: nor are the Antients, and thoſe at a Diſtance from us, better agreed: *Avicenna*, *v. g.* does not allow that corporeal Subſtances can produce any thing but Accidents. His Syſtem, according to *Ruvio*, is this: God produces, immediately, a moſt perfect ſpiritual Subſtance; this produces another leſs perfect;

fect; that a third: and thus to the laſt; which laſt produces all the corporeal Subſtances; and thoſe corporeal Subſtances Accidents. But *Avicenna*, not being able to conceive how corporeal Subſtances, which cannot penetrate one another, ſhould be capable of altering one another, will have it, that only Spirits are capable of acting on Bodies; becauſe nothing elſe can penetrate 'em. See *Occaſional* CAUSE.

CAUSES, in the School Philoſophy, are diſtinguiſh'd into, *Efficient* CAUSES, which are the Agents that produce any thing. See EFFICIENT *Cauſe*.

*Material* CAUSES, the Subjects whereon the Agent works, or whereof the Thing is form'd: thus, Marble is the *Matter* or *Material Cauſe* of the Statue. See MATERIAL *Cauſe*.

*Formal* CAUSES, the Changes reſulting from the Action, or that which determines a Thing to be this, and diſtinguiſhes it from every thing elſe: Thus, the Soul is the *Form*, or *Formal Cauſe* of Man, &c. See FORMAL *Cauſe*.

*Final* CAUSES, the Motives which induc'd a Man to act; or the End for which the Thing is done: thus, Victory and Peace are the *Final Cauſes* of War. See FINAL *Cauſe*.

Some add the *Exemplary* CAUSE, which is the Model the Agent forms, or propoſes, and by which he conducts himſelf in the Action; but this is not properly any *Cauſe* at all. See EXEMPLARY *Cauſe*.

CAUSES, again, are diſtinguiſh'd into *Phyſical*, or *Natural*, and *Moral*.

A *Phyſical* CAUSE, is that which produces a ſenſible corporeal Effect: thus, the Sun is the *Phyſical Cauſe* of Heat.

A *Moral Cauſe*, is that which produces a real Effect, but in Things immaterial: thus, Repentance is the *Cauſe* of Forgiveneſs.

Others define a *Phyſical Cauſe* to be that which produces its Effect by a *Phyſical* Virtue; and a *Moral Cauſe*, that which determines the *Phyſical Cauſe*, tho not neceſſarily, to produce the Effect: in which Senſe, 'tis alſo call'd a *Diſpoſitive*, *Excitative*, and *Imputative Cauſe*.

Thus, the Sun is the *Phyſical Cauſe* of Light; a Stone that breaks the Skull, a *Phyſical Cauſe* of Death: and thus the Advice, Intreaty, Commands, or Menaces which determine us, tho not neceſſarily, to do, or not to do any thing, are *Moral Cauſes*.

In this Senſe, a *Moral Cauſe* is only applicable to a free intelligent Agent; and 'tis this Notion of a *Moral* or *Phyſical Cauſe*, that is the moſt juſt, clear, and diſtinct. See MORAL *Cauſe*.

CAUSES, again, are conſider'd, either as *Univerſal*, or *Particular*; *Principal*, or *Inſtrumental*; *Total*, or *Partial*; *Univocal*, *Equivocal*, &c.

An *Univerſal* CAUSE, is that which by the Extent of its Power may produce all Effects. See UNIVERSAL.

A *Particular* CAUSE, is that which can only produce a ſingle Effect, or a certain kind of Effects.

A *Principal* CAUSE, is that which gives Motion to the Inſtrument, or which does not operate beyond its own natural Efficacy.

An *Inſtrumental* CAUSE, is that us'd by the Principal to produce its Effect; or which is excited to produce an Effect, beyond the Meaſure of its own Perfection.

A *Total* CAUSE, is that which produces the whole Effect.

A *Partial* CAUSE, that which concurs with ſome other in producing the Effect.

An *Univocal* CAUSE, is that which is of the ſame Kind and Denomination with its Effect; as a Man the *Cauſe* of a Man. See UNIVOCAL.

An *Equivocal* CAUSE, is that which is of a different Kind and Denomination from its Effect; as the Sun is the *Cauſe* of the Animals it produces. See EQUIVOCAL.

The *Carteſians* reſolve all *Phyſical Cauſes* into *Occaſional* ones.

*Occaſional* CAUSES, are only the *Occaſions*, not the direct *Cauſes* of their Effects. See OCCASION.

The Soul, ſay thoſe Philoſophers, is not able to act on the Body; nor the Body reciprocally on the Soul: to keep up an Intercourſe between 'em, God, on *occaſion* of the Motion of the Body, impreſſes a Senſation on the Soul; and, on *occaſion* of a Sentiment of the Soul, impreſſes a Motion on the Body. The Motions, therefore, of the Soul and Body, are only *Occaſional Cauſes* of what paſſes in the one or the other: thus, ſay they, the Stroke or Percuſſion, is only the *Occaſional Cauſe* of the Motion produc'd in the Body ſtruck: 'Tis God is the direct *Efficient Cauſe*. And thus the Action of Objects on our Organs, is not the *Efficient Cauſe* of our Ideas and Perceptions, but merely the *Occaſional Cauſe*, which determines God to act on the Mind, according to the Laws of the Union of Soul and Body. But the Conſequences that follow from this fine Reaſoning are very unlucky, not to ſay ridiculous: Thus, 'tis not the Cannon-Ball that kills the Man, or beats down the Wall, but 'tis God that does it: the Motion of the Cannoneer, whoſe Arm, mov'd by the Power of God, apply'd Fire to the Pouder, determin'd God to inflame that Pouder; the Pouder inflam'd, determin'd God to drive out the Ball; and the Ball driven, with an incon[illegible] exterior Surface of the Body of a [illegible] mines God to break the Bones of [illegible] the Wall, &c. A Coward, who r[illegible] away at all; but the Motion of his [illegible] by the Impreſſion of a Squadron of [illegible] him, with Bayonets at the Ends of t[illegible] mines God to move the Coward's L[illegible] from them.

It has been often ſaid, in a moral Senſe, [illegible] the World is a Comedy, and that each Man only acts h[illegible] Part; but it may be here ſaid, in a ſtrict Phyſical one, that the Univerſe is a Puppet-Show, and each Man a Punchinello, making a great deal of Noiſe without ſpeaking, and buſtling without moving.

CAUSTICS, in Medicine, &c. are ſuch Things as have the Virtue of *Burning*, or are *Corroſive*; particularly thoſe Medicines which by their violent Activity, and the Heat thence occaſion'd, deſtroy the Texture of the Parts to which they are apply'd.

*Cauſtics* are us'd to eat off proud fungous Fleſh; they alſo penetrate within hard callous Bodies, and liquefy the Humours; and are particularly apply'd in Abſceſſes and Impoſthumations, to eat thro to the ſuppurated Matter, and give it vent.

The principal Medicines of this Claſs, are *burnt Alum*, *Sponge*, *Cantharides*, and other *Veſicatories*; as alſo *Orpiment*, *Calx viva*, *Vitriol*, *Aſhes of the Fig-Tree*, *the Aſh*, and *Wine Lees*; the *Salt* of the *Lixivium*, whereof Soap is made; *Sublimate*, *Mercury*, *red Precipitate*, &c. See each deſcrib'd under its proper Article, ALUM, VITRIOL, CANTHARIDES, ORPIMENT, MERCURY, SUBLIMATE, PRECIPITATE, &c.

*Cryſtals of the Moon*, and *Lapis Infernalis*, made of Silver and Spirit of Nitre, become *Cauſtics* by that Mixture. See CRYSTALS, &c.

Thoſe *Cauſtics* which burn thro the Part, and leave a Scar, are particularly call'd *Cauteries*; tho Dr. *Quincy* confounds the two together. See CAUTERY.

The Word comes from καυστικὸς, *urens*; of καιω, *uro*, I burn.

CAUSTIC-*Glaſſes*. See BURNING-*Glaſſes*.

CAUSTIC *Curve*, in the higher Geometry, a *Curve* form'd by the Concourſe, or Coincidence of the Rays of Light reflected, or refracted from ſome other Curve. See CURVE.

Accordingly, *Cauſtics* are divided into *Catacauſtic*, and *Diacauſtic*; the one form'd by Reflection, the other by Refraction. See CATACAUSTIC, and DIACAUSTIC.

*Cauſtic Curves*, are the Invention of M. *Tſchirnhauſen*, who firſt propos'd 'em to the Academy of Sciences, in 1682. They have this remarkable Property, that when the Curves that produce them are Geometrical, they are equal to known right Lines.

Thus, the *Cauſtic* form'd in a Quadrant of a Circle by reflected Rays, which came at firſt parallel to the Diameter, is equal to $\frac{3}{4}$ of the Diameter: which is a ſort of Rectification of Curves that preceded the Invention of the new Doctrine of Infinites; on which moſt of our other Rectifications are built. See RECTIFICATION.

The Academy appointed a Committee to examine the new Curves, *viz.* Meſſ. *Caſſini*, *Mariotte*, and *de la Hire*, which laſt doubted much of the Deſcription, or Generation, M. *de Tſchirnhauſen* gave of the *Cauſtic* by Reflection, from a Quadrant of a Circle. The Author refus'd to diſcover all his Method; and M. *de la Hire* perſiſted in holding the Generation ſuſpicious. M. *Tſchirnhauſen*, however, was ſo confident of it, that he ſent it to the *Leipſic* Journaliſts, tho without any Demonſtration.

CAUTERY, in Chirurgery, a burning Medicine, or a Compoſition of ſeveral Things, which gnaw, burn off, eat thro, and ſear the Parts; us'd, principally, in Abſceſſes, Impoſthumations, Ulcers, and Caries of the Bones, to open a Paſſage for the Diſcharge of ill Humours, &c.

*Cauteries* are of two Kinds, *Actual*, and *Potential*.

*Actual* CAUTERIES, are thoſe which produce an inſtantaneous Effect, as *Fire*, or *a red-hot Iron*, which are apply'd in the *Fiſtula Lachrymalis*, after Extirpations of Cancers, Amputations of Legs, or Arms, &c. in order to ſtop the Hemorrhages, and produce a laudable Suppuration. The Irons us'd on theſe Occaſions, are ſometimes crooked at the Extremity, and that variouſly, according to the various Occaſions: Whence ſome are called *Cultellary*, others *Punctual*, others *Olivary*, &c.

M. *Homberg* aſſures us, that a great Part of the Medicine of the People of *Java*, and other Parts of the *Eaſt Indies*, conſiſts in *Burning*, or the Application of actual *Cauteries*; and that there is ſcarce any Diſeaſe but they will happily cure thereby. See BURNING.

*Potential* CAUTERIES, are Compoſitions of *Cauſtic* Medicines, uſually of Quick-lime, Soap, and Chimney Soot. See CAUSTICS.

The *Actual Cautery*, or hot Iron, is frequently apply'd for the making of Iſſues, in Parts where cutting is difficult

…kes a little round Hole, which is …an Ivy Berry, to keep it open for …ro. See ISSUE. *Pareus* deſcribes …*Velvet Cauteries*; ſo call'd becauſe …

…ly apply'd to the Nape of the Neck, betw… …nd ſecond Vertebra, the exterior Part of th…

The … …es from the *Greek* καίω, *uro*.

CAUS… , a maſſive Conſtruction of Stone, Stakes, Faſcines; or … an Elevation of fat, viſcous Earth, well beaten; ſerving either as a *Road*, in wet marſhy Places, or as a Mole to retain the Waters of a Pond, or prevent a River from overflowing the lower Grounds. See ROAD.

The Word comes from the French *Chauſſee*, antiently wrote *Chaulſee*; and that from the Latin *Calcata*; according to *Somner* and *Spelman*, *à calceando, aut a calce quia hujuſmodi viæ calce muniuntur*. *Berger* rather takes the Word to have its Riſe *à peditum calceis, quibus teruntur*.

CAXA, a little leaden Coin, mix'd with a little Copper Skum, ſtruck in *China*, but current chiefly at *Bantam*, in the reſt of the Iſland of *Java*, and in ſome of the neighbouring Iſlands. See C…N.

'Tis ſomewhat ſmaller than the French *Double*, and has a ſquare Hole through the Middle; by means whereof, ſeveral of 'em are hung on the ſame String: This String, which they call *Santa*, contains 200 *Caxas*, equivalent to nine French *Deniers*, or ſomewhat leſs than three Farthings Sterling. Five *Santas* ty'd together, *i. e.* a thouſand *Caxas*, make a *Sapacou*. Nothing can exceed the Brittleneſs of the *Caxa*; a String never falls to the Ground, without breaking at leaſt 10 or 12 Pieces. Leaving 'em a Night ſteep'd in ſalt Water, they cling ſo firm to one another, that they are not to be ſeparated without breaking one half of 'em. The *Malais* call 'em *Cas*, and the *Javeſe*, *Pitis*.

The *Caxas* are of two Kinds, *great* and *ſmall*: The *ſmall* are thoſe we have been ſpeaking of; 300000 whereof, are equal to 56 Livres 5 Sols, *Dutch* Money. The *large* are old *Caxas*; 6000 whereof are equal to the Piece of Eight, or 4*s*. 6*d*. Sterling. Theſe are nearly the ſame with the *Caches* of *China*, and the *Caſſies* of *Japan*.

CEILING, in Architecture, the upper Part, or Roof of a lower Room; or a Lay, or Covering of Plaiſter over Laths, nail'd on the Bottom of the Joiſts that bear the Floor of the upper Room; or on Joiſts for that purpoſe. See HOUSE, and ROOF.

The Word *Ceiling*, anſwers pretty accurately to the Latin *Lacunar*, every thing over Head.

Plaiſter'd *Ceilings* are much us'd in *England*, more than any other Country: Nor are they without their Advantages, as they make the Room lightſome; are good in Caſe of Fire; ſtop the Paſſage of the Duſt; leſſen the Noiſe over Head; and, in Summer, make the Air cooler. See

CELANDINE. See CHELIDONIA.

CELARENT, in Logic, a Syllogiſm whoſe ſecond Propoſition is an univerſal Affirmative; and the reſt univerſal Negatives. See SYLLOGISM.

CELATURA, the Art of *Engraving*. See ENGRAVING.

CELERES, in Antiquity, a Body, or Regiment of Guards of the antient *Roman* Kings, eſtabliſh'd by *Romulus*; conſiſting of 300 Youths choſen from the beſt Families of *Rome*, and approv'd by the Suffrages of the *Curiæ* of the People, each of which furniſh'd ten. See CURIÆ.

The *Celeres* always attended near the King's Perſon, to guard him, and to be ready to carry his Orders, and execute them. In War, they made the Vant-Guard in the Engagement, which they always begun firſt: In Retreats, they made the Rear-Guard.

Tho the *Celeres* were a Body of Horſe, yet they uſually diſmounted, and fought on Foot: Their Commander was call'd *Tribune of the Celeres*. They were divided into three Troops, of 100 each, commanded by a Captain call'd *Centurio*. Their Tribune was the ſecond Perſon in the Kingdom. See TRIBUNE, CENTURIO, *&c.*

*Plutarch* ſays, *Numa* broke the *Celeres*: If this be true, they were ſoon re-eſtabliſh'd; for we find them under moſt of the ſucceeding Kings: Witneſs the great *Brutus*, who expell'd the *Tarquins*, and who was *Tribune of the Celeres*.

The Word comes from *Celer*, *quick*, *ready*; and was given them, becauſe of their promptneſs to obey the King; or, as ſome will have it, from the Name of their firſt Tribune: Others ſay, from one *Celer*, a Comerade of *Romulus*, who aſſiſted him in the Combat with his Brother *Remus*, and is ſaid to have ſlain that Prince.

Some ſay, the *Celeres* were the ſame with thoſe afterwards call'd *Troſſuli*, on account of their taking the City *Troſſulum* in *Hetruria*, alone, without the Aſſiſtance of any Infantry.

CELERITY, in Mechanicks, is the *Velocity* of a moving Body; or that Affection of a Body in Motion, whereby it is enabled to paſs over a certain Space, in a certain Time. See VELOCITY; ſee alſo MOTION.

CELESTINS, an Order of Religious, reform'd from the *Bernardines*, in 1224, by Pope *Celeſtin* V. then only *Peter de Mourchon*, or *Morron*, of *Iſernia* in *Naples*; and eſtabliſh'd in 1264, by Pope *Urban* IV. and confirm'd by *Gregory* X. in 1274.

They were introduc'd into *France*, by *Philip* the Fair, who requeſted a Dozen of them from the General of their Order, by his Ambaſſador at *Naples*, in 1300. 'Tis a kind of Proverb with them, *Voila un plaiſant Celeſtin*.

CELIAC *Paſſion*, or CÆLIACA *Paſſio*, in Medicine, a kind of Flux of the Belly, wherein the Food does not indeed paſs perfectly crude, as in the *Lientery*, but half digeſted; ſo that the two only differ from each other, as more or leſs. See LIENTERY.

In the *Celiac* the Food is ſometimes digeſted, without the Chyle's being ſeparated from the Excrements.

The Cauſes of the *Celiac* are either the Weakneſs of the Ferment of the Stomach, the ſhort ſtay the Food there makes, the Obſtruction of the Lacteals, or the want of Acrity in the Bile. See FLUX.

The Word comes from the *Greek* κοιλία, *Venter*; whence κοιλιακός, a Perſon ſubject to ſuch Inconveniences. See COLIC.

CELIBATE, or CELIBACY, the State of a Perſon who lives out of Marriage. See MARRIAGE.

The *Celibate* of the Clergy, which is ſtill rigorouſly kept up among the *Romaniſts*, is of a pretty antient ſtanding: It was firſt propos'd by the Council of *Nice*, but without paſſing; it was, however, in ſome meaſure admitted by the Weſtern Councils of *Elvira*, *Arles*, *Tours*, &c. Such among the Prieſts as piqu'd themſelves on the Faculty of Continence, took the Hint; inſomuch, as towards the Cloſe of the IVth Century, there were few but made a Profeſſion of a voluntary *Celibate*. In 441, the Council of *Orange* order'd thoſe to be depos'd who did not abſtain from their Wives: But it was *Gregory* VII. who firſt brought Eccleſiaſticks to admit the *Celibate* as a Law. In the Council of *Trent*, it was propos'd, to ſet the Clergy at liberty again from the Yoke of *Celibate*; and this was even made an Article of the Interim of *Charles* V. but the Pope could not be brought into it.

St. *Jerom*, and *Epiphanius* obſerve, that in their Time none were admitted into the Prieſthood, but thoſe who were unmarry'd, or who abſtain'd from their Wives. See PRIEST, and CLERGY.

*Scaliger* derives the Word from the *Greek* κοίτη, *Bed*, and λείπω, *linquo*, I leave: Others ſay, it is form'd from *Cæli beatitudo*.

CELLITES, an Order of Religious, founded by *Alexius*, a *Roman*: In *Italy* they are call'd *Alexians*; but in *Germany* and the Low-Countries, where they have Monaſteries, *Cellites*, *i. e.* People inhabiting in Cells.

CELLS, *Cellæ*, *Cellulæ*, are little Houſes, Apartments, or Chambers; particularly thoſe wherein the antient Monks, Solitaries, and Hermits liv'd in Retirement. See MONK, SOLITARY, HERMIT, *&c.*

The ſame Name is ſtill retain'd in divers Monaſteries. The Dormitory is frequently divided into ſo many *Cells*, or Lodges. See DORMITORY.

The *Carthuſians* have each a ſeveral Houſe, which ſerves 'em as *Cells*. See CARTHUSIANS.

The Hall wherein the *Roman* Conclave is held, is divided by Partitions into divers *Cells*, for the ſeveral Cardinals to lodge in. See CONCLAVE.

Some derive the Word from the *Hebrew* בלא, *i. e.* a Priſon, or Place where any thing is ſhut up.

CELLS, in Anatomy, are little Bags, or Bladders, where Fluids or other Matters are lodg'd; call'd alſo *Loculi*, *Cellulæ*, &c. See CELLULÆ.

The Name is alſo given by Botaniſts to the Partitions in the Huſks, or Pods where the Seed lies.

CELLS, are alſo the little Diviſions, or Apartments in Honey-Combs, where the Honey, young Bees, *&c.* are diſtributed: theſe are always regular Hexagons. See HIVE, HONEY, COMB, *&c.*

CELLULÆ *Adepoſæ*, in Anatomy, the *Loculi*, or little Cells wherein the Fat of Bodies in good habit is contain'd. See ADEPS.

Theſe are co-extended with the Skin it ſelf, except on the Forehead, the Eyelids, Penis, and *Scrotum*. In emaciated Bodies, theſe *Cells* being unfurniſh'd of their Fat, appear like a kind of flaccid, tranſparent Membrane. See FAT.

CEMENT, CÆMENT, or CIMENT, in the general Senſe of the Word, is any Compoſition of a glutinous or tenacious Nature, proper to bind, unite, or keep things in Coheſion.

In this Senſe, Mortar, Solder, Glue, *&c.* are *Cements*. See MORTAR, SOLDER, GLUE, *&c.*

The Bitumen brought from the *Levant*, is ſaid to have been the *Cement* us'd in the Walls of *Babylon*. See BITUMEN.

The Word is form'd of the Latin *Cæmentum*, of *cædo*, I beat. Tho M. *Felibien* obſerves, that what the antient Architects call'd *Cæmentum*, was a very different thing from our *Cement:* The Name *Cement*, with them, ſtood for a kind of Maſonry, or manner of laying the Stones; and even for the Quality of the Stones; as when the Walls were fill'd up with little Pebbles, Rubbiſh, &c. See MASONRY.

CEMENT, is particularly us'd in Architecture, for a ſtrong, binding ſort of Mortar, us'd to bind, or unite Bricks or Stones together, for ſome kinds of Mouldings; or to make a block of Bricks, for the Carving of Scrolls, Capitals, &c.

It is of two Sorts: The *hot Cement*, which is the moſt common, is made of Roſin, Bees-Wax, Brickduſt, and Chalk, boil'd together. The Bricks to be *cemented* are heated, and rubb'd one upon another, with *Cement* between.

The *cold Cement* is leſs us'd: 'tis made of Cheſhire Cheeſe, Milk, Quick-lime, and Whites of Eggs.

CEMENT, is alſo us'd among Goldſmiths, Engravers, Jewellers, &c. for a Compoſition of fine Brickduſt, well ſifted, Roſin, and Bees-Wax, in uſe among thoſe Artificers to keep the Metals to be engraven, or wrought on, firm to the Block, &c. as alſo to fill up what is to be chiſſel'd.

CEMENT, in Chymiſtry, is a Compound, us'd for the purifying of Gold; ſee GOLD, and PURIFICATION.

There are two Kinds of this *Cement*, *Common*, and *Royal*. The firſt made of Brickduſt, Nitre, and Verdigreaſe; the ſecond of Sal Gemmæ, and Armoniac, each one Part; two Parts of common Salt, and four of Bole: the whole reduc'd into a Paſte with Urine. Hence,

CEMENTATION, or CÆMENTATION; a manner of purifying Gold, by means of *Cement*.

'Tis perform'd thus: Thin Plates, or *Laminæ*, are ſtratify'd in a Crucible with *Royal Cement*; the Crucible is cover'd up, and encompaſs'd with Fire for 10 or 12 Hours, till being thus calcin'd, the Salts have imbib'd and conſum'd the Impurities of the Gold.

This Method of *Refining*, is much inferior to that by means of Antimony; in regard, the Salts ſometimes leave other Metals remaining with the Gold; and beſides, frequently eat away the Gold it ſelf. See REFINING.

CENOBITE, or COENOBITE, a Religious who lives in a Convent, or in Community, under a certain Rule; in oppoſition to *Anchorite*, or *Hermit*, who lives in Solitude. See HERMIT, &c.

*Caſſian* makes this Difference between a *Convent* and a *Monaſtery*, that the latter may be apply'd to a ſingle Religious, or Recluſe; whereas the *Convent* implies *Cenobites*, or Numbers of Religious living in common. See CONVENT, and MONASTERY.

*Fleury* ſpeaks of three Kinds of Monks in *Egypt*; *Anchorites*, who live in Solitude; *Cenobites*, who continue to live in Community; and *Sarabaites*, who are a kind of Monks Errant, that ſtroll from Place to Place.

He refers the Inſtitution of *Cenobites* to the Times of the Apoſtles; and makes it a kind of Imitation of the ordinary Life of the Faithful at *Jeruſalem*. Tho St. *Pacome* is ordinarily own'd the Inſtitutor of the *Cenobitic* Life; as being the firſt who gave a Rule to any Community.

The Word comes from the *Greek* κοινὸς, *communis*, and βιῶ, *Vita*, Life.

CENSOR, in Antiquity, one of the prime Magiſtrates in antient *Rome*; ſo call'd *à cenſendo*, becauſe he aſſeſs'd and valu'd every Man's Eſtate, regiſtring their Names, and placing 'em in a proper Century; that the *Romans* might know their own ſtrength. See CENSUS.

Others ſay, the *Cenſors* were ſo call'd, as being Controllers, or Correctors of Manners and Policy.

They were firſt created in the Year of *Rome* 311, upon the Senate's obſerving, that the Conſuls were too much taken up with Matters of War, to be at leiſure for looking near enough into private Affairs. The two firſt were *Papirius* and *Sempronius:* Their Authority extended over every Perſon; and they had a Right to reprehend the higheſt. At firſt they were taken out of the Senate; but after the Plebeians had got the Conſulate open to 'em, they ſoon arriv'd at the *Cenſorſhip: M. Rutilius* was the firſt; who having been twice Conſul, and Dictator, in the Year 402 demanded the Office of *Cenſor*. The Cuſtom was, to elect two; the one of a Patrician Family, the other a Plebeian: and upon the Death of either, the other was diſcharg'd from his Office, and two new ones elected. In the Year 414, a Law was made, appointing one of the *Cenſors* to be always elected out of the Plebeians; which held in force till the Year 622, when both *Cenſors* were choſen from among the People: after which time, it was ſhar'd between the Senate and People.

This Office was ſo conſiderable, that none aſpir'd to it till they had paſs'd all the reſt: So that it was look'd on as ſurpriſing, that *Craſſus* ſhould be admitted *Cenſor*, without having been either Conſul or Pretor. The Term of this Office was at firſt eſtabliſh'd for five Years; but that Inſtitution only laſted nine: *Mamercinus* the Dictator, made a Law, reſtraining the *Cenſure* to a Year and an half; which was afterwards obſerv'd very ſtrictly.

The Buſineſs of the *Cenſors*, was to regiſter the Effects, &c. of the *Roman* Citizens; to impoſe Taxes, in proportion to what each Perſon poſſeſs'd. *Cicero* reduces their Functions to, the numbering of the People; the correction and reformation of Manners; the eſtimating the Effects of each Citizen; the proportioning of Taxes; the ſuperintendance of Tribute; the excluſion from the Temples; and the Care of the publick Places. They had alſo a Right to exclude from the Senate, ſuch of the Senators as they judg'd unworthy of the Dignity; as well as to break and caſhier the Knights who fail'd in their Duty, by taking from 'em the publick Horſe. See SENATOR, KNIGHT, &c.

The Republic of *Venice*, has at this Day a *Cenſor* of the Manners of their People, whoſe Office laſts ſix Months.

CENSORS *of Books*, are a Body of Doctors, or other Officers, eſtabliſh'd in divers Countries, to examine and give their Judgment of all Books, e'er they go to the Preſs; and to ſee they contain nothing contrary to the Faith, and good Manners. In *England* we had formerly an Officer of this kind, under the Title of *Licenſer of the Preſs*; but ſince the Revolution the Preſs has been open.

M. *Bayle* compares Authors ſolliciting the Approbation of *Cenſors*, or Licenſers, to thoſe Shades wandering on the Banks of *Styx*, and waiting with Impatience for a Paſſage to the other Shore. He applies to 'em theſe two Verſes of *Virgil:*

*Tendenteſque Manus, Ripæ ulterioris amore:*
*Navita ſed triſtis nunc hos nunc accipit illos.*

At *Paris*, the *Faculty of Theology* claim the Privilege of *Cenſors*, as granted to them by the Pope; and 'tis certain they had been in poſſeſſion of it for many Ages: but in the Year 1624, a new Commiſſion of four Doctors were created, by Letters Patent, the ſole *Cenſors* and Examiners of all Books; and anſwerable for every thing contain'd therein. The Faculty, however, ſtill maintain their Claim, by taking occaſion, now and then, to give their Approbations to Books.

CENSURE, *Cenſura*, is popularly us'd for a Judgment, whereby any Action, Book, or other thing is condemn'd; or a Correction, or Reprimand made by a Superior, or Perſon in Authority. Hence,

*Eccleſiaſtical* CENSURES, are the publick Menaces which the Church makes, of the Pains and Penalties incurr'd by diſobeying what ſhe enjoins; or rather, the Pains and Puniſhments themſelves; as *Interdiction*, *Excommunication*, &c. See INTERDICTION, SUSPENSION, DEGRADATION, &c.

Till the Time of the Reformation, the Kings of *England* were ſubject to the *Cenſures* of the Church of *Rome*; but the Kings of *France* have always maintain'd themſelves exempt from them. In effect, there is no Inſtance of Excommunication of any of their firſt Race of Kings, till *Lotharius*'s Excommunication by Pope *Nicholas* I. for putting away his Wife *Tetberge*; which is reckon'd the firſt Breach of the Liberties of the *Gallican* Church: Yet the Pope durſt not hazard his Excommunication on his own Authority, but took care to have it confirm'd by the Aſſembly of the Biſhops of *France*; and the ſame Precaution was afterwards obſerv'd by the other Popes. But in after Times the *French* Kings aſſerted their Rights to better purpoſe; for Pope *Benedict* XIII. having *cenſur'd Charles* VI. laid the Nation under an Interdict: upon which, the Parliament of *Paris*, by an Arret, order'd the Bull to be torn: And *Julius* II. having excommunicated *Louis* XII. the Aſſembly General at *Tours cenſur'd* the Pope's *Cenſure*.

The Canoniſts diſtinguiſh two Kinds of *Cenſures*; the one *de Jure*, the other *de Facto*, or by Sentence.

CENSURE, is alſo a Cuſtom in ſeveral Manors in *Cornwal* and *Devon*, whereby all the Reſiants above the Age of 16, are call'd to ſwear Fealty to the Lord, to pay two Pence *per* Poll, and a Penny *per Annum*, ever after, as *Cert-Money*, or common Fine. See CERT-*Money*.

CENSUS, among the *Romans*, was an authentic Declaration made by the ſeveral Subjects of the Empire, of their reſpective Names, and Places of abode, before proper Magiſtrates, in the City of *Rome*, call'd *Cenſors*; and in the Provinces *Cenſitors*, by whom the ſame were regiſter'd. See CENSOR.

This Declaration was accompany'd with a Catalogue, or Enumeration in writing, of all the Eſtates, Lands, and Heritages they poſſeſs'd; their Quantity, Quality, Place, Tenants, Domeſticks, Slaves, &c.

Hence, alſo, *Cenſus* came to ſignify a Perſon who had made ſuch a Declaration: In which Senſe it was oppos'd to *Incenſus*, a Perſon who had not render'd his Eſtate or Name to be regiſter'd.

The *Cenſus* was inſtituted by King *Servius*; and was held every five Years. It went thro all the Ranks of

People, tho under different Names: that of the common People was call'd *Census*, or *Lustrum*; that of the Knights *Census*, *Recensio*, *Recognitio*; that of the Senators, *Lectio*, *Relectio*.

In the *Voconian* Law, *Census* is us'd for a Man, whose Estate, in the *Censor*'s Books, is valu'd at 100000 *Sesterces*.

CENTAUR, in Astronomy, a Part, or Moiety of a Southern Constellation, in form, half Man, half Horse, usually join'd with the *Wolf*. See CENTAURUS *cum Lupo*.

The Word comes from the *Greek* κεντευς; form'd of κεντεω, *pungo*, and ταυρος, *taurus*.

CENTAURUS *cum Lupo*, *Centaur with the Wolf*, in Astronomy, a Constellation of the Southern Hemisphere. See CONSTELLATION.

The Stars in the Constellation *Centaurus cum Lupo*, in *Ptolomy*'s Catalogue, are 19; in *Tycho*'s 4; in the *Britannic Catalogue*, they are 13. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

*Stars in the Constellation* CENTAURUS cum LUPO.

| *Names and Situation of the Stars.* | Signs. | Longitude. ° | ′ | ″ | Latitude. ° | ′ | ″ | Magn. |

CENTRE, or CENTER, *Centrum*, in Geometry, or CENTRE *of a Circle*, is a Point in the Middle of a Circle, or circular Figure, from which all Lines drawn to the Circumference are equal. See CIRCLE.

*Euclid* demonstrates, that the Angle at the *Centre* is double to that of the Circumference; *i. e.* the Angle made by two Lines drawn from the Extremes of an Arch to the *Centre*, is double that made by two Lines drawn from these Extremes to a Point in the Circumference. See CIRCUMFERENCE, and ANGLE.

CENTRE *of a Parallelogram*, or *Polygon*, the Point wherein its Diagonals intersect. See PARALLELOGRAM, and POLYGON.

CENTRE *of Magnitude*, is a Point equally remote from the extreme Parts of a Line, Figure, or Body; or the Middle of a Line, or Plane, by which a Figure or Body is divided into two equal Parts. See MAGNITUDE.

CENTRE *of a Sphere*, is a Point from which all the Lines drawn to the Surface, are equal. See SPHERE.

The *Centre of the Semicircle*, by whose Revolution the Sphere is generated, is also that of the Sphere. See SEMICIRCLE.

CENTRE *of a Bastion*, is a Point in the middle of the Gorge of the Bastion, whence the Capital Line commences; and which is ordinarily at the Angle of the inner Polygon of the Figure. See BASTION, &c.

CENTRE *of a Battalion*, the Middle of a Battalion; where is usually left a large square Space, for lodging the Clothes and Baggage. See BATTALION.

CENTRE *of a Dial*, is that Point where its Gnomen or Style, which is plac'd parallel to the Axis of the Earth, intersects the Plane of the Dial; and from thence, in those Dials which have *Centres*, all the Hour-Lines are drawn. If the Plane of the Dial be parallel to the Axis of the Earth, it can have no *Centre* at all, but all the Hour-Lines will be parallel to the Style, and to one another. See DIAL.

CENTRE *of a Conic Section*, is the Point wherein all the Diameters concur. See DIAMETER; see also CONIC *Section*.

This Point, in the *Ellipsis*, is within the Figure; and, in the *Hyperbola*, without. See CENTRE *of an Ellipsis*, &c.

CENTRE *of an Ellipsis*, is that Point where the two Diameters, the Transverse and the Conjugate, intersect each other. See ELLIPSIS.

CENTRE *of an Hyperbola*, is a Point in the Middle of the Transverse Axis. See HYPERBOLA; and TRANSVERSE *Axis*.

CENTRE *of a Curve*, of the higher Kind, is the Point where two Diameters concur. See DIAMETER.

Where all the Diameters concur in the same Point, Sir *Isaac Newton* calls it, the *general Centre*. See CURVE.

CENTRE *of Gravitation*, or *Attraction*, in Physicks, is that Point to which a revolving Planet, or Comet, is impell'd, or attracted by the Force, or Impetus of Gravity. See GRAVITATION, and ATTRACTION.

CENTRE *of Gravity*, in Mechanicks, is a Point within a Body, thro which if a Plane pass, the Segments on each side will equi-ponderate, *i. e.* neither of them can move the other. See GRAVITY.

Hence, if the Descent of the *Centre* of Gravity be prevented, or if the Body be suspended by its *Centre* of Gravity, it will continue at rest. See MOTION, and REST.

The whole Gravity of a Body may be conceiv'd united in its *Centre*; and therefore, in Demonstrations, 'tis usual, for the Body, to substitute the *Centre*.

Thro the *Centre* of Gravity passes a right Line, call'd *the Diameter of Gravity*: the Intersection, therefore, of two such Diameters, determines the *Centre*.

The Plane whereon the *Centre* of Gravity is plac'd, is call'd *the Plane of Gravity*: so that the common Intersection of two such Planes, determines the Diameter of Gravity.

In homogeneal Bodies, which may be divided lengthwise into similar and equal Parts, the *Centre* of Gravity is the same with the *Centre* of Magnitude. If, therefore, a Line, *v. g.* or a Cylinder be bissected, the Point of Section will be the *Centre* of Gravity.

*Common* CENTRE *of Gravity of two Bodies*, is a Point so situated, in the right Line, joining the *Centres* of the two Bodies, as that, if the Point be suspended, the two Bodies will equi-ponderate, and rest in any Situation: Thus, the Point of Suspension in a common Balance, or in a *Roman* Steelyard, where the two Weights equi-ponderate, is the common *Centre* of Gravity of the two Weights.

*Laws of the* CENTRE *of Gravity.*

1. *If the* Centres *of Gravity of two Bodies* A *and* B, (Tab. *Mechanicks*, Fig. 13.) *be join'd by the right Line* AB, *the Distances* BC *and* CA, *of the common* Centre *of Gravity* C, *from the particular* Centres *of Gravity* B *and* A, *are reciprocally as the Weights* A *and* B: See this demonstrated under BALANCE.

Hence, if the Gravities of the Bodies A and B be equal, the common *Centre* of Gravity C, will be in the Middle of the right Line AB. Again, since A : B :: BC : AC; A will be to AC :: B : BC; whence, it appears, that the Powers of equi-ponderating Bodies, are to be estimated by the *Factum* of the Mass, multiply'd into its Distance from the *Centre* of Gravity; which *Factum* is usually call'd the *Momentum* of the Weights. See MOMENT.

Further, since A : B :: BC : AC, A + B : A :: BC + AC : BC.

The common *Centre* of Gravity, therefore C, of two Bodies, will be found, if the *Factum* of one Weight A, into the Distance of the separate *Centres* of Gravity AB, be divided by the Sum of the Weights A and B. Suppose, *v.g.* A = 12, B = 4, AB = 24; therefore, BC = 24, 12 : 16 = 18. If the Weight A be given, and the Distance of the particular *Centres* of Gravity AB, together with the common *Centre* of Gravity C; the Weight of B will be found = to A. AC : BC; that is, dividing the *Moment* of the given Weight, by the Distance of the Weight requir'd. Suppose, A = 12, BC = 18, AC = 6; then B = 6. 12 : 18 :: 12 : 3 = 4.

2. *To determine the common* Centre *of Gravity of several given Bodies a, b, c, d,* (Fig. 13.) in the right Line AB. Find the common *Centre* of Gravity of the two Bodies *a* and *b*, which suppose in F; conceive a Weight *a* + *b*, apply'd in F; and in the Line FE, find the common *Centre* of the Weights *a* + *b* and *c*; which suppose in G. Lastly, in BG, suppose a Weight *a* + *b* + *c* apply'd, equal to the two *a* + *b* and *c*; and find the common *Centre* of Gravity between this and the Weight *d*, which suppose in H; this H will be the common *Centre* of Gravity of the Bodies *a*, *b*, *c*, *d*. And in the same manner might the common *Centre* of Gravity of any greater number of Bodies be found.

3. *Two Weights* D *and* E, (Fig. 14.) *being suspended without their common* Centre *of Gravity in* C, *to determine which of them preponderates, and how much.* Multiply each into its Distances, from the *Centre* of Suspension; that Side on which the *Factum* is greatest, will preponderate; and the Difference between the two, will be the Weight wherewith it preponderates.

Hence, the *Momentum* of the Weights D and E, suspended without the *Centre* of Gravity, are in a Ratio compounded of the Weights D and E, and the Distances from the Point of Suspension. Hence also the *Momentum* of a Weight suspended in the very Point C, will have no effect at all in respect of the rest DE.

4. *To determine the Preponderation where several Bodies a, b, c, d,* (Fig. 15.) *are suspended without the common* Centre *of Gravity in* C. Multiply the Weights *c* and *d* into their Distances from the Point of Suspension CE and EB; the Sum will be the *Momentum* of their Weights, or their Ponderation towards the right: Then multiply the Weights *a* and *b* into their Distances, AC and CD, the Sum will be the Ponderation towards the left: Subtracting, therefore, the one from the other, the Remainder will be the Preponderation requir'd.

5. *Any Number of Weights a, b, c, d, being suspended without the common* Centre *of Gravity in* C, *and preponderating*

*derating towards the right; to determine the Point* F, *from whence the Sum of all the Weights being ſuſpended, the Preponderation ſhall continue the ſame as in their former Situation.*

Find the *Momentum* wherewith the Weights *c* and *d* preponderate towards the right; ſince the *Momentum* of the Sum of the Weights to be ſuſpended in F, is to be equal to it, the *Momentum* now found, will be the *Factum* of C F into the Sum of the Weights: This, therefore, being divided by the Sum of the Weights, the Quotient will be the Diſtance C F, at which the Sum of the Weights is to be ſuſpended, that the Preponderation may continue the ſame as before.

6. *To find the* Centre *of Gravity in a Parallelogram and Parallelepiped.* Draw the Diagonals A D and E G, (Fig. 16.) likewiſe C B and H E; ſince each Diagonal, A B and C B, divides the Parallelogram into two equal Parts, each paſſes thro the *Centre* of Gravity; conſequently, the Point of Interſection I, is the *Centre* of Gravity of the Parallelogram. In like manner, ſince both the Plane C B F H and A D G E, divide the Parallelepiped into two equal Parts, each paſſes thro its *Centre* of Gravity; ſo that the common Interſection I K, is the Diameter of Gravity, the Middle whereof is the *Centre*.

After the ſame manner may the *Centre* of Gravity be found in Priſms and Cylinders; it being the middle Point of the right Line that joins the *Centres* of Gravity of their oppoſite Baſes.

7. In *regular Polygons*, the *Centre* of Gravity is the ſame with the *Centre* of the circumſcrib'd Parallelogram.

8. *To find the* Centre *of Gravity of a Cone and a Pyramid.* The *Centre* of Gravity of a Cone, is in its Axis A C, (Fig. 17.) If then A P $= x$, P $p = dx$, the Weight in the ſame Cone is $prx^2\,dx : 2a^2$; and therefore its *Momentum* $prx^3\,dx . 2a^2$. Hence the Sum of the *Momenta* $prx^4 : 8a^2$; which divided by the Sum of the Weights $prx^3 : 6a^2$, gives the Diſtance of the *Centre* of Gravity of the Portion A M N, from the Vertex A $= 6a^2\,prx^4 : 8a^2\,prx^3 = \frac{3}{4}x = \frac{3}{4}$ A $p$: wherefore, the *Centre* of Gravity of the entire Cone, is diſtant from the Vertex, $\frac{1}{4}$ of A C. And in the ſame manner is found the Diſtance of the *Centre* of Gravity from the Vertex of the Pyramid $\frac{3}{4}$ A C.

9. *To determine the* Centre *of Gravity in a Triangle* B A C, (Fig. 18.) Draw the right Line A D, biſſecting the Baſe B C in D; ſince $\triangle$ B A D $=\triangle$ D A C, each may be divided into the ſame Number of Weights, apply'd in the ſame manner on each ſide to the common Axis A D: So that the *Centre* of Gravity of the $\triangle$ B A C, will be in A D. To determine the preciſe Point in that, let A D $= a$, B C $= b$, P $= x$, M N $= y$; then will

A P : M N = A D : B C

$x : y = a : b$.

Hence, $y = bx : a$. Draw A E $= c$ perpendicular to B C; then A D : A E = A P : A Q; and therefore, A Q $= cx : a$, and Q $q = c\,dx : a$. Whence, the *Momentum* $yx\,dx = cbx^2\,dx : a^2$, and $\int yx\,dx = cbx^3 : 3a^2$; which Sum divided by the Area of the Triangle A M N $= cbx^2 : 2a^2$, gives the Diſtance of the *Centre* of Gravity from the Vertex $= 2abx^3 : 3abx^2 = \frac{2}{3}x$. If then for $x$, be ſubſtituted $a$, the Diſtance of the *Centre* of Gravity of the $\triangle$, from the Vertex, will be found $\frac{2}{3}a$.

10. *For the* Centre *of Gravity in a Parabola*, (Fig. 19.) Its Diſtance from the Vertex A, is found the Space A F. In a cubical Paraboloid, the Diſtance of the *Centre* from the Vertex, is $= \frac{4}{5}$ A P. In a Biquadratic Paraboloid, $\frac{5}{9}$ A P. In a Surdeſolid Paraboloid, $\frac{6}{11}$ A P. In the Exterior Parabola A S T, the *Centre* of Gravity is at the Diſtance A L. In the Cubical Paraboloid, 4 A Q. In a Biquadratic Paraboloid, $\frac{5}{8}$ A Q. In a Surdeſolidal Paraboloid, $\frac{6}{7}$ A Q.

11. *The* Centre *of Gravity in the Arch of a Circle*, is diſtant from the *Centre* of the Arch by a Line, which is a third Proportional to the Quadrant and the Radius. In a Sector of a Circle, the Diſtance of the *Centre* of Gravity from the *Centre* of the Circle, is to the Diſtance of the *Centre* of Gravity of the Arch, as 2 to 3.

*For the* Centre *of Gravity of Segments, Lines, Parabolic Conoids, Spheroids, truncated Cones*, &c. as being Caſes more operoſe, and at the ſame time more out of the way; we refer to *Wolfius*'s *Elem. Matheſ.* Tom. I.

12. *To determine the* Centre *of Gravity in any Body mechanically.* Lay the given Body H I, (Fig. 20.) on an extended Rope, or the Edge of a triangular Priſm F G, bringing it this and that way, till the Parts on either Side are *in Æquilibrio*; the Plane whoſe Side is K L, paſſes thro the *Centre* of Gravity. Balance it again on the ſame, only changing its Situation: then will the Cord M N, paſs thro the *Centre* of Gravity; ſo that the Interſection of the two Lines M N and K L, determines the Point O in the Surface of the Body requir'd.

The ſame may be done by laying the Body on a horizontal Table, (as near the Edge as is poſſible, without its falling) in two Poſitions, lengthwiſe and breadthwiſe: the common Interſection of the two Lines contiguous to the Edge, will be its *Centre* of Gravity. Or, it may be done by laying the Body on the Point of a Style, &c. till it reſt *in Æquilibrio*. 'Twas by this Method, *Borelli* found the *Centre* of Gravity in an human Body, to be between the *Nates* and *Pubis*; ſo that the whole Gravity of the Body is there collected, where Nature has plac'd the Genitals: An Inſtance of the Wiſdom of the Creator, in placing the *Membrum Virile* in that Place, which of all others is the moſt convenient for the Affair of Copulation.

13. 'Every Figure, whether ſuperficial or ſolid, generated 'by the Motion of a Line, or Figure, is equal to the *Fac*-'*tum* of the generating Magnitude, multiply'd into the 'Way of its *Centre* of Gravity, or the Line its *Centre* of 'Gravity deſcribes.' See the Demonſtration hereof, under the Article Centro *Baric Method.*

The preceding elegant Theorem, is look'd on as one of the nobleſt Geometrical Diſcoveries made in the laſt Age; and is the Foundation of the *Methodus Centro-barica. Pappus*, indeed, gave the firſt Hint long ago; but it was the Jeſuit *Guldinus* that brought it to Maturity. *Leibnitz* ſhews it will hold, if the Axis, or *Centre*, be continually chang'd during the generating Motion: The Corollaries are too numerous to be here detail'd.

Centre *of Motion*, is a Point round which one or more heavy Bodies, that have one common *Centre* of Gravity, revolve. *v. g.* If the Weights P and Q (Tab. *Mechanicks*, Fig. 21.) revolve about the Point N, ſo as when P deſcends, Q aſcends, N is ſaid to be the *Centre of Motion.* See Motion.

'Tis demonſtrated in Mechanicks, that the Diſtance I N, of the *Centre* of Gravity of any particular Weight, from the common *Centre* of Gravity, or the *Centre* of Motion N, is perpendicular to the Line of Direction I *p*.

Centre *of Oſcillation*, a Point wherein, if the whole Gravity of a compound Pendulum be collected, the ſeveral Oſcillations will be perform'd in the ſame Time as before: See Oscillation.

Hence, its Diſtance from the Point of Suſpenſion, is equal to the Length of a ſimple Pendulum, whoſe Oſcillations are Iſochronal with thoſe of the compound one. See Pendulum.

*Laws of the* Centre *of Oſcillation.*

1. *If ſeveral Weights* D F H B, (Tab. *Mechanicks*, Fig. 22.) *whoſe Gravity is ſuppos'd collected in the Points* DEHB, *conſtantly retain the ſame Diſtance between themſelves and the Point of Suſpenſion* A; *and the Pendulum thus compounded, perform its Oſcillations about* A; *the Diſtance of the* Centre *of Oſcillation* O, *from the Point of Suſpenſion* O A, *will be had by multiplying the ſeveral Weights into the Squares of the Diſtances, and dividing the Aggregate by the Sum of the* Momenta *of their Weight.*

2. *To determine the* Centre *of Oſcillation in a right Line* A B, (Fig. 23.) Let A B $= a$, A D $= x$, then will the infinitely ſmall Particle D P $= dx$, the *Momentum* of its Weight $x\,dx$; conſequently the Diſtance of the *Centre* of Oſcillation in the Part A D, from the Point of Suſpenſion A $= \int x^2\,dx : \int x\,dx = \frac{1}{3}x^3 : \frac{1}{2}x^2 = \frac{2}{3}x$. If then for $x$ be ſubſtituted $a$, the Diſtance of the *Centre* of Oſcillation in the right Line A B $= \frac{2}{3}a$. In this manner is found the *Centre* of Oſcillation of a Wire, oſcillating about one of its Extremes.

3. *To determine the* Centre *of Oſcillation of the Rectangle* R I H S, (Fig. 24.) *ſuſpended in the middle Point* A, *of the Side* R I, *and oſcillating about its Axis* R I. Let R I $=$ S H $= a$, A P, then will P $p = dx$, and the Element of the Area; conſequently one Weight $= a\,dx$, and its *Momentum* $a\,x\,dx$. Wherefore, $\int ax^2\,dx : \int ax\,dx = \frac{1}{3}ax^3 : \frac{1}{2}ax^2 = \frac{2}{3}x$, indefinitely expreſſes the Diſtance of the *Centre* of Oſcillation, from the Axis of Oſcillation in the Segment R C D I. If then for $x$ be ſubſtituted the Altitude of the whole Rectangle R S $= b$, we ſhall have the Diſtance of the *Centre* of Oſcillation from the Axis $= \frac{2}{3}b$.

*For the* Centre *of Oſcillation in an Equicrural Triangle*, oſcillating about its Axis, parallel to its Baſe, its Diſtance from the Vertex, is found $= \frac{3}{4}$ of the Altitude of the Triangle.

*Of an Equicrural Triangle* oſcillating about its Baſe, its Diſtance from the Vertex is found $= \frac{1}{2}$ the Altitude of the Triangle.

*For the* Centre *of Oſcillation in an Equicrural Triangle, ſuſpended by an inflexible Thread*, void of Gravity, and oſcillating about its Axis parallel to its Baſe; its Diſtance from the Vertex, is found $= \frac{1}{2}$ the Altitude of the Triangle.

*For the* Centres *of Oſcillation of Parabolas, and Curves of the like kind*, oſcillating about their Axis, parallel to their Baſes, they are found as follows.

In the *Apollonian* Parabola, the Diſtance of the *Centre* from the Axis, $= \frac{5}{7}$ of its Diameter.

In a *Cubical* Paraboloid, the Diſtance of the *Centre* of Oſcillation from the Axis, $= \frac{7}{10}$ of the Diameter.

In a *Biquadratic* Paraboloid, the Diſtance of the *Centre* from the Axis, $= \frac{9}{13}$ of the Diameter.

In

In ſolid and plane Figures agitated laterally, *i. e.* about the Axis of Oſcillation, perpendicular to the Plane of the Figure, the Inveſtigation of the *Centre* of Oſcillation is ſomewhat difficult; in regard, all the Parts of the Weight, by reaſon of their unequal Diſtance from the Point of Suſpenſion, don't move with the ſame Velocity; as is ſhewn by *Huygens*, in his *Horol. Oſcill.* He found, in this Caſe, the Diſtance of the *Centre* of Oſcillation, from the Axis in a Circle, to be $\frac{3}{4}$ of the Diameter: In a Rectangle, ſuſpended by one of its Angles, $\frac{2}{3}$ of the Diagonal: In a Parabola, ſuſpended by its Vertex, $\frac{5}{7}$ of its Axis, and $\frac{1}{3}$ of the Parameter; ſuſpended from a Point in the Middle of the Baſis, $\frac{4}{7}$ of the Axis, and $\frac{1}{2}$ the Parameter: In the Sector of a Circle, $\frac{3}{4}$ of a right Line; which is to the Radius, as the Arch to the Subtenſe: In a Cone, $\frac{4}{5}$ of the Axis, and $\frac{1}{5}$ of the third proportional to the Axis, and the Semidiameter of the Baſe: In a Sphere, ſuſpended from a Point in the Surface, $\frac{7}{10}$ of the Diameter: in the ſame, ſuſpended from a Point without the Sphere, (as is uſually the Caſe in Pendulums) $\frac{2}{5}$ of a third proportional to that compos'd of the Semidiameter and length of the Thread, and the Semidiameter it ſelf: In a Cylinder, $\frac{2}{3}$ of the Altitude, and $\frac{1}{2}$ the Line, which is to the Semidiameter of the Baſe, as that is to the Altitude.

CENTRE *of Percuſſion*, in a moving Body, is that Point wherein the Percuſſion is the greateſt, wherein the whole percutient Force of the Body is ſuppos'd to be collected; or about which the Impetus of the Parts is balanc'd on every ſide. See PERCUSSION.

*Laws of the* CENTRE *of Percuſſion.*

1. The *Centre of Percuſſion, is the ſame with the Centre of Oſcillation*, where the percutient Body revolves round a fix'd Point; and is determin'd in the ſame manner, *viz.* by conſidering the Impetus of the Parts, as ſo many Weights apply'd to an inflexible right Line, void of Gravity; *i. e.* by dividing the Sum of the *Factums* of the Impetus's of the Parts, multiply'd by their Diſtances from the Point of Suſpenſion, by the Sum of the Impetus's. What, therefore, has been above ſhewn of the *Centre of Oſcillation*, will hold of the *Centre of Percuſſion*, where the percutient Body moves round a fix'd Point. See CENTRE *of Oſcillation.*

2. *The* Centre *of Percuſſion is the ſame with the* Centre *of Gravity*, if all the Parts of the percutient Body be carry'd with a parallel Motion, or with the ſame Celerity: for the *Momenta* are the *Facta* of the Weights into the Celerities. Wherefore, to multiply equi-ponderating Bodies by the ſame Velocity, is the ſame thing as to take equi-multiples: But the equi-multiples of equi-ponderating Bodies, themſelves equi-ponderate; therefore, equivalent *Momenta* are diſpos'd about the *Centre* of Gravity: conſequently the *Centre* of Percuſſion in this Caſe, coincides with that of Gravity; and what is ſhewn of the one, will hold of the other. See CENTRE *of Gravity.*

CENTRE *of Converſion*, in Mechanicks, a Term firſt us'd by M. *Parent*. Its Signification is thus conceiv'd: If a Stick be laid on a ſtagnant Water, and drawn by a Thread faſten'd to it, ſo that the Thread always makes the ſame Angle with the Stick; always, *v. g.* a right Angle; the Stick will be found to turn on one of its Points, which will be immoveable; which Point is term'd the *Centre of Converſion*. For the greater eaſe, the Thread may be conceiv'd faſten'd to one End of the Stick.

This Effect ariſes from the Reſiſtance of the Fluid, and the manner wherein it divides: for, imagine the firſt Moment of Traction; 'tis certain, here, the Reſiſtance of the Parts of the Fluid to be diſplac'd, tends to turn the Stick around the Point to which the Thread is faſten'd, as on a *Centre*: So that in the preſent Inſtance, the Staff wou'd deſcribe preciſely the Quadrant of a Circle: after which, the Fluid wou'd no longer bear the Stick lengthwiſe; but in a circular Motion, in ſuch manner, as that the free End of the Stick, and the Parts neareſt it, wou'd deſcribe larger Arches of Circles than the reſt, and have a greater Velocity. The Reſiſtance, therefore, of the Fluid, which tends to impreſs a circular Motion on the Stick, around the Point to which the Thread is faſten'd, tends to impreſs a greater Velocity on the Parts next the other Extremity; or, which is the ſame thing, thoſe Parts require a greater Velocity to ſurmount the Reſiſtance of the Fluid: So that the Stick will not have that circular Motion around the Point to which the Thread is faſten'd; or, the Reſiſtance of the Fluid is greater towards the free Extreme of the Stick, and ſtill leſſens towards the other Extreme. Now, all the Columns, or Threads of Water which reſiſt the Stick, muſt be ſuppos'd of the ſame Length, or the ſame Maſs. One may therefore find on the Stick ſuch a Point, as that taking a great number of thoſe Threads on that Side which reſiſts the leaſt, and a leſs number on that Side where they reſiſt the moſt; there will be an exact Compenſation, and the Forces be equal on each Side: 'Tis this Point is the *Centre of Converſion*. And as the ſame Reaſoning has place in all Motions of Traction made in the ſame manner, this *Centre* is always the ſame Point.

The grand Queſtion here ariſing, is to know preciſely in what Point the *Centre* of Converſion is found: This M. *Parent* has determin'd by an infinite deal of Calculation. If the Stick drawn by one Extremity be a ſtrait Line divided into 20 Parts, reckoning from the Thread, the *Centre* of Converſion, he finds, will be nearly on the 13th. If it ben't a Line, but a Surface or a Solid, there will be ſome change in the Situation of the *Centre* of Converſion, according to the Surface or the Solid.

If in lieu of a Body ſwimming in a Fluid, we ſuppoſe it laid on a rough uneven Plane; the Reſiſtance of this Plane to the Motion of the Body, will always be divided in the ſame manner, and determine the ſame *Centre* of Converſion. This Reſiſtance is, preciſely, what we call Friction, ſo prejudicial to the Effects of Machines. See FRICTION.

CENTO, in Poetry, a Work wholly compos'd of Verſes, or Paſſages promiſcuouſly taken from other Authors; only diſpos'd in a new Form, or Order. *Proba Falconia* has wrote the Life of Jeſus Chriſt, in *Centos* taken from *Virgil*. *Alex. Roſſe* has done the like in his *Chriſtiados*; and *Stephen de Pleurre* the ſame: An Inſtance of whoſe *Centos* on the Adoration of the *Magi*, is as follows.

Adoratio Magorum, *Matt.* 2.

| | | |
|---|---|---|
| 6, &c. Æn. 255. | *Ecce autem primi ſub lumina ſolis, & ortus,* | |
| 2, Æ. 694. | *Stella facem ducens multa cum luce cucurrit:* | |
| 5, Æ. 526. | *Signavitque Viam * cœli in regione ſerena.* | 8, Æ. 528. |
| 8, Æ. 330. | *Tum Reges * (credo quia ſit divinitus illis* | 1, 9, 415. |
| 1, 91, 416. | *Ingenium, & rerum fato prudentia major)* | |
| 7, Æ. 98. | *Externi veniunt * qua cuique eſt copia lati* | 5, Æ. 100. |
| 11, Æ. 333. | *Munera portantes: * molles ſua thura Sabæi* | 1, 9, 57. |
| 3, Æ. 464. | *Dona dehinc auro gravia, * myrrhaque madentes* | 12, Æ. 100. |
| 9, Æ. 659. | *Agnovere Deum Regem, * Regumque Parentem.* | 6, Æ. 548. |
| 1, 9. 418. | *Mutavere vias, * perfectis ordine votis:* | 10, Æ. 548. |
| 6, Æ. 16. | *Inſuetum per iter, * ſpatia in ſua quiſq; receſſit.* | 12, Æ. 126. |

*Auſonius* has laid down the Rules to be obſerv'd in compoſing *Centos*. The Pieces, he ſays, may be taken either from the ſame Poet, or from ſeveral; and the Verſes may be either taken entire, or divided into two; one half to be connected, with another half taken elſewhere: but two Verſes never to be us'd running, nor much leſs than half a Verſe to be taken. Agreeable to theſe Rules, he has made a pleaſant *Cento* from *Virgil*.

The *Politicks of Lipſius* are only *Centos*; there being nothing of his own but Conjunctions and Particles.

The Word comes from the Latin *Cento*, a Cloak made of Patches; and that from the *Greek* κεντλιον. The *Roman* Soldiers us'd theſe *Centos*, or old Stuffs patch'd over each other, to guard themſelves from the Strokes of their Enemies.

Others ſay, that *Centos* were properly us'd for the patches of Leather, *&c.* wherewith their Galleries or Skreens, called *Vineæ*, were cover'd; under which the Beſiegers made their Approaches towards any Place.

Hence *Centonarii*, the Perſons whoſe Buſineſs was to prepare theſe *Centos*.

CENTRAL, ſomething relating to a *Centre*; ſee CENTRE.

Thus, we ſay, *Central Eclipſe*, *Central Fire*, *Central Forces*, *Central Rule*, &c. See CENTRAL *Forces*, CENTRAL *Rule*, &c. See alſo FIRE, ECLIPSE, *&c.*

CENTRAL *Forces*, the *Vires*, or Powers whereby a moving Body either tends towards the Centre of Motion, or recedes from it. See CENTRE *of Motion*; ſee alſo FORCE, and VIS.

*Central Forces* are divided into two Kinds, with regard to their different Relations to the Centre, *viz. Centripetal*, and *Centrifugal*.

CENTRIFUGAL *Force*, is that whereby a Body revolving round a Centre, endeavours to recede from it.

'Tis one of the eſtabliſh'd Laws of Nature, That all Motion is of it ſelf rectilinear; (ſee MOTION) and that the moving Body never recedes from its firſt right Line, till ſome new Impulſe be ſuperadded in a different Direction: After that new Impulſe, the Motion becomes compounded, but continues ſtill rectilinear; tho the Direction of the Line be alter'd. See COMPOUND *Motion*. To move in a Curve, it muſt receive a new Impulſe, and that in a different Direction, every Moment; a Curve not being reducible to right Lines, unleſs infinitely ſmall ones. If then a Body continually driven towards a Centre, be projected in a Line that does not go thro that Centre, it will deſcribe a Curve; in each Point whereof, A (Tab. *Mechanicks*, Fig. 25.) it will endeavour to recede from the Curve, and proceed in the Tangent A D: and, if nothing hinder'd, wou'd actually proceed; ſo as in the ſame Time wherein it deſcribes the Arch A E, it wou'd recede the length of the Line D E, perpendicular to A D, by its *Centrifugal Force*. The *Centrifugal Force*, therefore, is as the right Line D E, perpendicular to A D; ſuppoſing the Arch A E infinitely ſmall. See INFINITE.

The Effect of the *Centrifugal Force* is ſuch, that a Body, oblig'd to deſcribe a Circle, deſcribes the largeſt it poſſibly can: a greater Circle being as it were leſs circular, and leſs diſtant from a right Line than a ſmall one. A Body therefore ſuffers more violence, and exerts its *Centrifugal Force* more when it deſcribes a little Circle, than when a large one.

'Tis the ſame in other Curves as in Circles; for a Curve, whatever it be, may be eſteem'd as compos'd of an infinity of Arches of infinitely ſmall Circles, all deſcrib'd on different Radii; ſo that 'tis thoſe Places where the Curve has the greateſt Curvity, that the little Arches are moſt circular: Thus, in the ſame Curve, the *Centrifugal* Force of the Body that deſcribes it, varies according to the ſeveral Points wherein it is found.

CENTRIPETAL *Force*, is that Power whereby a moveable Body, impell'd in the right Line A G, (Fig. 24.) is drawn out of its rectilinear Motion, to proceed in a Curve: The *Centripetal Force*, therefore, is as the right Line D E to A B; ſuppoſing the Arch A E infinitely ſmall. Hence, the *Centripetal* and *Centrifugal Forces* are equal.

*Laws of* CENTRAL *Forces.*

1. The following Rule, for which we are oblig'd to the Marquis *de l' Hôpital*, opens at once all the Myſteries of *Central Forces:* Suppoſe a Body of any determinate Weight to move uniformly round a *Centre* with any certain Velocity; find from what height it muſt have fallen to acquire that Velocity: then, as the Radius of the Circle it deſcribes, is to double that Height, ſo is its Weight to its *Centrifugal* Force. Hence, 'tis eaſy to infer, that,

2. If two Bodies, equal in weight, deſcribe Peripheries of unequal Circles in equal Times, their *Central* Forces are as their Diameters AB, and HL. And hence, if the *Central* Forces of two Bodies, deſcribing Peripheries of two unequal Circles, be as their Diameters, they paſs over the ſame in equal Times.

3. The *Central Force* of a Body moving in the Periphery of a Circle, is as the Square of the infinitely ſmall Arch A E, divided by the Diameter A B. Since then a Body, by an equable Motion in equal Times, deſcribes equal Arches A E; the *Central* Force wherewith the Body is impell'd in the Periphery of the Circle, is conſtantly the ſame.

4. If two Bodies deſcribe different Peripheries by an equable Motion, their *Central* Forces are in a Ratio, compounded of the duplicate Ratio of their Celerities, and the reciprocal one of their Diameters. Hence, if the Celerities be equal, the *Central* Forces will be reciprocally as their Diameters; and if the Diameters A B and H L be equal, *i. e.* if each Moveable proceed in the ſame Periphery, but with unequal Celerities, the *Central* Forces will be in a duplicate Ratio of the Velocities.

If the *Central* Forces of the two Bodies moving in different Peripheries be equal, the Diameters of the Circle A B, and H L, will be in a duplicate Ratio of the Celerities.

5. If two Bodies, moving in unequal Peripheries, be acted on by the ſame *Central* Force, the Time in the larger is to that in the ſmaller, in a ſubduplicate Ratio of the greater Diameter A B, to the leſs H L; wherefore, $T^2 : t^2 = D : d$: That is, the Diameters of the Circles in whoſe Peripheries thoſe Bodies are acted on by the ſame *Central* Force, are in a duplicate Ratio of the Times. Hence alſo the Times wherein like Peripheries or Arches are run over by Bodies impell'd by the ſame *Central* Force, are in proportion to their Velocities.

The *Central* Forces are in a Ratio, compounded of the direct Ratio of the Diameters, and the reciprocal one of the Squares of the Times, by the entire Peripheries.

6. If the Times wherein the Bodies are carry'd thro the ſame entire Peripheries, or ſimilar Arches, be as the Diameters of the Circles, the *Central* Forces are reciprocally as the ſame Diameters.

7. If a Body move uniformly in the Periphery of a Circle, with the Velocity it acquires by falling the Height A L; the *Central* Force will be to the Gravity, as double the Altitude A L, to the Radius C A. If therefore the Gravity of the Body be call'd G, the *Centrifugal Force* will be 2 A L. G : C A.

8. If a heavy Body move equably in the Periphery of a Circle, and with the Velocity which it acquires by falling the height A L, equal to half the Radius; the *Central* Force will be equal to the Gravity. And again, if the *Central* Force be equal to the Gravity, 'tis carry'd in the Periphery of the Circle, with the ſame Gravity which it acquires in falling a height equal to half the Radius.

9. If the *Central* Force be equal to the Gravity, the Time it takes up in the entire Periphery, is to the Time of the Deſcent thro half the Radius, as the Periphery to the Radius.

10. If two Bodies move in unequal Peripheries, and with an unequal Velocity, which is reciprocally in a ſubduplicate Ratio of the Diameters; the *Central* Forces are in a Duplicate Ratio of the Diſtances from the Centre of the Forces, taken reciprocally.

11. If two Bodies move in unequal Peripheries, with Celerities that are reciprocally as the Diameters; their *Central* Forces will be reciprocally as the Cubes of their Diſtances from the *Centre* of the Forces.

12. If the Velocities of two Bodies moving in unequal Peripheries, be reciprocally in a ſubduplicate Ratio of the Diameters; the Times wherein they paſs the whole Periphery, or ſimilar Arches, are reciprocally in a triplicate Ratio of the Diſtances from the Centre of the Forces: Wherefore, if the *Central* Forces be reciprocally in a duplicate Ratio of the Diſtances from the *Centre*, the Times wherein the entire Peripheries, or ſimilar Arches, are paſs'd over, are reciprocally in a triplicate Ratio of the Diſtances.

13. If a Body move in a Curve Line, in ſuch manner as that the Radius C B, *Fig.* drawn from it to the fix'd Point C, plac'd in the ſame Plane, deſcribes Areas B A C, B C E, *&c.* proportional to the Times, or equal in any given Time, it is ſollicited towards the Point C by a *Centripetal* Force.

14. If a Body proceed according to the Direction of the right Line A D, and be ſollicited by a *Centripetal* Force towards a fix'd Point C, plac'd in the ſame Plane; it deſcribes a Curve, whoſe Cavity is towards C, and whoſe ſeveral Areæ, thoſe comprehended between the two Radii A B and C B, are proportional to the Times.

15. However the *Central* Forces differ from one another, they may be compar'd together; for they are always in a Ratio compounded of the Ratio of the Quantities of Matter in the revolving Bodies, and the Ratio of the Diſtances from the Centre; and alſo in an inverſe Ratio of the Squares of the periodical Times. If then you multiply the Quantity of Matter in each Body by its Diſtance from the Centre, and divide the Product by the Square of the periodical Time, the Quotients of the Diviſion will be to one another in the ſaid compound Ratio, that is, as the *Central* Forces.

16. When the Quantities of Matter are equal, the Diſtances themſelves muſt be divided by the Squares of the periodical Times, to determine the Proportion of the *Central* Forces: In that Caſe, if the Squares of the periodical Times are to one another, as the Cubes of the Diſtances, the Quotients of the Diviſions, as well as the *Central* Forces, will be in an inverſe Ratio of the Squares of the Diſtances.

17. When the Force by which a Body is carry'd towards a Point is not every where the ſame, but is either increas'd or diminiſh'd, in proportion to the Diſtance from the Centre; ſeveral Curves will thence ariſe in a certain proportion. If the Force decreaſes, in an inverſe Ratio of the Squares of the Diſtances from that Point, the Body will deſcribe an *Ellipſis*; which is an oval Curve, in which there are two Points call'd the *Foci*, and the Point towards which the Force is directed falls into one of them: So that in every Revolution, the Body once approaches to, and once recedes from it. The Circle alſo belongs to that ſort of Curves, and ſo in that Caſe the Body may alſo deſcribe a Circle. The Body may alſo (by ſuppoſing a greater Celerity in it) deſcribe the two remaining Conic Sections, *viz.* the *Parabola* and *Hyperbola-Curves*, which do not return into themſelves: On the contrary, if the Force increaſes with the Diſtance, and that in a Ratio of the Diſtance it ſelf, the Body will again deſcribe an *Ellipſis*; but the Point to which the Force is directed is the Centre of the Ellipſe; and the Body, in each Revolution, will twice approach to, and again twice recede from that Point. In this Caſe alſo, a Body may move in a Circle, for the Reaſon abovemention'd. See ORBIT, PLANET, and PROJECTILE.

CENTRAL *Rule*, is a Rule, or Method diſcover'd by our Countryman, Mr. *Thomas Baker*, Rector of *Nympton* in *Devon*, whereby to find the *Centre* of a Circle; deſign'd to cut the Parabola in as many Points, as an Equation to be conſtructed hath real Roots.

Its principal Uſe is in the Conſtruction of Equations; and he has apply'd it with good Succeſs as far as Biquadratics. See CONSTRUCTION, and EQUATION.

The Rules are theſe,

1. $\frac{L}{2} + \frac{q}{8L} = b = CD.$

2. $\frac{p}{4} + \frac{ppp}{6LL} \pm \frac{pq}{4LL} \pm \frac{r}{2LL} = d = DE.$

Or by Contraction, becauſe L = 1, as is ſuppoſed, to avoid Fractions.

1. $\frac{1}{2} + \frac{pp}{8} \pm \frac{q}{2} = b = CD.$

2. $\frac{1}{2}p + \frac{1}{8}ppp \pm \frac{1}{4}pq \pm \frac{1}{4}r = d = ED.$

CENTRO-*Baryc Method of* Guldinus, in Mechanicks, is a Method of meaſuring, or determining the Quantity

of a Surface, or a Solid, by means of its Centre of Gravity.

The Doctrine is compris'd in the following Theorem, with its *Corollaries*.

*Every Figure, whether ſuperficial or ſolid, generated by the Motion of a Line or a Figure, is equal to the* Factum *of the generating Magnitude into the way of its Centre of Gravity, or the Line which its Centre of Gravity deſcribes.* See *Centre of* Gravity.

*Demonſt.* For ſuppoſe the Weight of the whole generating Magnitude collected in the Centre of Gravity; the whole Weight produc'd by its Motion, will be equal to the *Factum*, of the Weight mov'd, into the Centre of Gravity. But when Lines and Figures are conſider'd like homogeneous heavy Bodies, their Weights are as their Bulks: and therefore, the Weight mov'd is the generating Magnitude; and the Weight produced, that generated. The Figure generated, therefore, is equal to the *Factum* of the Magnitude, into the Way of its Centre of Gravity. *Q. E. D.*

*Corol.* I. Since a Parallelogram A B C D (Tab. *Mechanicks*, Fig. 26.) is deſcrib'd, if the right Line A B, proceed according to the Direction of another A C, with a Motion ſtill parallel to it ſelf; and the Way of the Centre of Gravity E, is equal to the right Line E F, perpendicular to C D; that is, to the Altitude of the Parallelogram: Its Area is equal to the *Factum* of the Baſe C D, or the deſcribent Line into the Altitude E F. See Parallelogram.

*Corol.* II. In the ſame manner it appears, that the Solidity of all Bodies, which proceed according to the Direction of any right Line A C, is had by multiplying the deſcribing Plane by the Altitude. See Prism, and Cylinder.

*Corol.* III. Since a Circle is deſcrib'd, if the Radius C L (Fig. 27.) revolve round a Centre C, and the Centre of Gravity of the Radius C L, be in the Middle F; the Way of the Centre of Gravity is a Periphery of a Circle $x$, deſcrib'd by a ſubduple Radius: Conſequently the Area of the Circle, is equal to the *Factum* of the Radius C L, into the Periphery deſcrib'd by the ſubduple Radius C F. See Circle.

*Corol.* IV. If a Rectangle A B C D, (Tab. *Mechanicks*, Fig. 28.) revolve about its Axis A D; the Rectangle will deſcribe a Cylinder, and the Side B C the Superficies of a Cylinder. But the Centre of Gravity of the right Line B C, is in the Middle F; and the Centre of Gravity of the generating Plane in the Middle G, of the right Line E G F. The way of this latter, therefore, is the Periphery of a Circle deſcrib'd by the Radius E G; that of the former, the Periphery of a Circle deſcrib'd by the Radius E F. Wherefore, the Superficies of the Cylinder is the *Factum* of the Altitude B C, into the Periphery of a Circle deſcrib'd by the Radius E F, or the Baſe. But the Solidity of the Cylinder, is the *Factum* of the generating Rectangle A B C D, into the Periphery of a Circle deſcrib'd by the Radius E G, which is ſubduple of E F, or of the Semidiameter of the Cylinder.

Suppoſe, *v. g.* the Altitude of the deſcribing Plane, and therefore of the Cylinder B C $= a$; the Semidiameter of the Baſe D C $= r$; then will E G $= \frac{1}{2} r$: And ſuppoſing the Ratio of the Semidiameter to the Periphery $= 1 : m$, the Periphery deſcrib'd by the Radius of $\frac{1}{2} r = \frac{1}{2} mar$. therefore, multiplying $\frac{1}{2} mr$ by the Area of the Rectangle A C $= ar$; the Solidity of the Cylinder will be $= \frac{1}{2} mar^2$. But $\frac{1}{2} mar^2 = \frac{1}{2} r . mr$ the Area of the Circle deſcrib'd by the Radius D G. 'Tis evident, therefore, the Cylinder is equal to the *Factum* of the Baſe into the Altitude. See Cylinder.

*Corol.* V. In like manner, ſince the Centre of Gravity of the right Line A B, (Tab. *Mechanicks*, Fig. 17.) is in the middle M, and the Surface of a Cone is deſcrib'd, if the Triangle A B C revolve about its Axis; if P M $= \frac{1}{2}$ C; the Superficies of the Cone will be equal to the *Factum* of its Side A B, into the Periphery deſcrib'd by the Radius P M; or the Subduple of the Semidiameter of the Baſe B C.

Suppoſe *v. g.* B C $= r$, A B $= a$; the Ratio of the Radius to the Periphery $1 : m$; then will P M $= \frac{1}{2} r$, and the Periphery deſcrib'd by this Radius $= \frac{1}{2} mr$. Therefore, multiplying $\frac{1}{2} mr$ into the Side of the Cone A B, the Product is the Superficies of $\frac{1}{2} amr$. But $\frac{1}{2} amr$ is alſo the *Factum* of $\frac{1}{2} a$ and $mr$: therefore, the Surface of the Cone is the Product of the Periphery, into half the Side. See Cone.

*Corol.* VI. If the Triangle A C B (Tab. *Mechanicks*, Fig. 29.) revolve about an Axis; it deſcribes a Cone; but if C B divided into two M D, and the right Line A D be drawn, and A O $= \frac{2}{3}$ A D; the Centre of Gravity will be $m$O. The Solidity of the Cone, therefore, is equal to the *Factum* of the Triangle C A B, into the Periphery deſcrib'd by the Radius P O; but A D : A O :: B D : O P. and A O $= \frac{2}{3}$ A D and D B $= \frac{1}{2}$ C B. Therefore, O P $= \frac{2}{3}$ D B $= \frac{1}{3}$ C B.

Suppoſe *v. g.* C B $= r$, A B $= a$; the Ratio of the Radius to the Periphery $= 1 : m$. Then will O P $= \frac{1}{3} r$ the Periphery deſcrib'd by this Radius $\frac{1}{3} mr$; the Triangle A C B $= \frac{1}{2} r$; and therefore, the Solidity of the Cone $\frac{1}{3} mr \frac{1}{2}$ A $r = \frac{1}{6} amr^2$. But $\frac{1}{6} amr^2 = \frac{1}{2} r . mr . \frac{1}{3}$ a. Or, the *Factum* of the Baſe of the Cone into the third Part of the Altitude. See Triangle.

This elegant Theorem, which may be rank'd among the chief Inventions in Geometry of the laſt Age, was taken notice of long ago by *Pappus*; but the Jeſuit *Guldinus* was the firſt who ſet it in its full Light, and exhibited its Uſe in a variety of Examples. Several other Geometers, after *Guldinus* and *Pappus*, alſo us'd it in meaſuring Solids, and Surfaces generated by a Rotation round a fix'd Axis; eſpecially before the late Invention of the *Calculus Summatorius*: and it may ſtill take place in ſome Caſes, where the ſummatory *Calculus* wou'd be more difficult. M. *Leibnitz* has obſerv'd, that the Method will hold, tho the Axis or Centre be continually chang'd during the generative Motion.

CENTRUM, in Geometry, Mechanicks, *&c.* See Centre.

Centrum *Phonicum*, in Acouſtics, is the Place where the Speaker ſtands in the Polyſyllabical and articulate Echoes. See Echo.

Centrum *Phonocampticum*, is the Place, or Object that returns the Voice in an Echo. See Echo.

Centrum *Tendinoſum*, in Anatomy, a Point, or Centre, wherein the Tails of the Muſcles of the Diaphragm meet. This *Centre* is perforated towards the right Side, for the *Vena Cava*; towards the left backward: Its fleſhy Part gives way to the Gula. The deſcending Trunk of the great Artery, Thoracic Duct, and *Vena Azygos*, paſs between its two inferior Proceſſes. See Diaphragm.

CENTRY *Box*, a wooden Cell, or Lodge, made to ſhelter the *Centry*, or *Sentry*, from the Injuries of the Weather.

In a Fortification, they are uſually plac'd on the flanked Angles of the Baſtions, on thoſe of the Shoulder, and ſometimes in the middle of the Curtain.

CENTUMVIRI, among the *Romans*, a Court compos'd of 100 Magiſtrates, or Judges, appointed to decide Differences between the People. See Decemviri, Quindecemviri, *&c.*

CENTURION, *Centurio*, among the *Romans*, an Officer in the Infantry, who commanded a *Century*, or an hundred Men. See Century.

The *Centurion* of the firſt Cohort of each Legion, was call'd *Primipilus*: he was not under the Command of any Tribune, as all the reſt were; and had four *Centuries* under his Direction. He guarded the Standard, and the Eagle of the Legion. See Primipilus.

CENTURY, a thing divided, or rang'd into an hundred Parts.

At the Time when the *Roman* People were aſſembled for creating of Magiſtrates, eſtabliſhing of Laws, or deliberating of publick Affairs, they were divided into *Centuries*; and to the end their Suffrages might be more eaſily collected, they voted by *Centuries*: This was done in the *Campus Martius*; and theſe Aſſemblies were hence call'd *Comitia Centuriata*.

The *Roman* Cohorts were diſtributed into Decus, commanded by Decurions; and *Centuries*, by *Centurions*. Each Cohort conſiſted of ſix *Centuries*, and a Legion of ſixty. See Cohort.

Century, in Chronology, is the Space of 100 Years. Church Hiſtory is computed chiefly by *Centuries*, commencing from our Saviour's Incarnation: In this Senſe, we ſay, The firſt *Century*; the Fathers of the ſecond *Century*; the Councils of the third *Century*, &c. See Council, Fathers, *&c.*

Centuries *of Madgeburg*, a celebrated Eccleſiaſtical Hiſtory, divided into thirteen *Centuries*, containing thirteen hundred Years, ending at 1298; compil'd by ſeveral learned Proteſtants of *Magdeburg*. The chief of the *Centuriators*, was *Matthias Flacius Illyricus*. 'Tis ſaid *Baronius* undertook his Annals, purely to oppoſe the *Madgeburg Centuriators*.

Century, or Centaury *the leſſer*, in Medicine, an Herb, chiefly noted for a Stomachic, and reſtoring decay'd Appetites: It is ſeldom preſcrib'd otherwiſe than by Infuſion or Decoction; it is an Ingredient in the Venice Treacle; and, as a Stomachic, it enters as one of the Ingredients in the Officinal Bitter Draught; and is for the ſame Purpoſe order'd in extemporaneous Preſcriptions, with others of the ſame Nature, for the making of bitter Wines, *&c.*

A ſtrong Decoction hereof is ſaid to be of ſervice, drank for ſome time, in Obſtructions of the Menſes, and alſo to deſtroy Worms; a Property attributed to moſt Bitters. It is often preſcrib'd externally in diſcutient Fomentations. The Tops, or Flowers, are only us'd.

The *greater Century* is never preſcrib'd.

CEPHALIC, in Medicine, is apply'd to any thing belonging to the Head, or its Parts. See Head. The Word is form'd of the *Greek* κηφαλε, *Caput*.

CEPHALICS, or CEPHALIC *Medicines*, are ſuch as are proper for Diſorders of the Head: Theſe are generally of a volatile, ſpirituous, or aromatic Nature, or at leaſt join'd with ſuch; and are ſuppos'd to be of ſervice, by the Volatility of their Particles, inſinuating into the Nerves, and mixing with the Animal Spirits directly, as well as by the common Circulation.

Thus, Spirit of Lavender is ſuppos'd directly to act upon the Nerves of the Palate, *&c.* upon which account, it's frequently taken dropp'd on Sugar, or Bread: and Sal Volatile, by ſmelling to, is ſuppos'd to be aſſiſtant to the Head, by its volatile Particles entering the Olfactory Nerves. As to Aromatic *Cephalics*, as the Species of Diambra, Pouder of Degutetu, Nutmeg, *&c.* they act chiefly by their aromatic Parts warming the nervous Syſtem, and increaſing their Vibrations, by which the nervous Fluid circulates more freely.

CEPHALIC *Vein*, in Anatomy, is a Vein of the Arm between the Skin and the Muſcles, divided into two Branches, *External* and *Internal*. The *External* goes down to the Wriſt, where it joins the *Baſilica*, and turns up to the Back of the Hand: The *Internal* Branch, together with a Sprig of the *Baſilica*, makes the *Mediana*. See VEIN.

'Tis thus call'd, in regard the Antients us'd to open it in Diſorders of the Head.

CEPHALOPHARINGÆI, in Anatomy, two Muſcles of the Orifice of the *Oeſophagus*, call'd the *Pharynx*. See PHARYNX.

They have their Orifice in the Articulation of the Head with the firſt Vertebra; and are inſerted into the upper Part of the Pharynx, ſerving to draw it upwards and backwards.

CEPHALALGIA, in Medicine, is underſtood, in the general, of any *Head-ach*; but properly ſignifies, only a freſh one: When it becomes inveterate, 'tis call'd *Cephalia*; and, when it only poſſeſſes half the Head, *Megrim*.

CEPHEUS, in Aſtronomy, a Conſtellation of the Northern Hemiſphere. See CONSTELLATION.

The Stars in the Conſtellation *Cepheus*, in *Ptolemy*'s Catalogue are 13; in *Tycho*'s 11; in the *Britannic Catalogue* 35. The Order, Names, Longitudes, Latitudes, Magnitudes, *&c.* whereof, are as follow.

*Stars in the Conſtellation* CEPHEUS.

| *Names and Situation of the Stars.* | Sign. | Longitude. ° | ′ | ″ | Latitude. ° | ′ | ″ | Magnit. |
|---|---|---|---|---|---|---|---|---|
| In the preced. Foot | ♉ | 28 | 50 | 35 | 75 | 27 | 46 | 4 5 |

CEPI *Corpus*, in Law, a Return made by the Sheriff, upon a *Capias*, or other Proceſs to the like purpoſe; ſignifying, that he hath taken the Body of the Party.

CERATE, in Medicine, a kind of Unguent, or Liniment, made of Oil and Wax; us'd in ſeveral Diſeaſes, eſpecially thoſe of the Skin. It takes its Name from its capital Ingredient, Wax, call'd in Latin *Cera*.

Its Conſiſtence is thicker than that of a Liniment; the laſt having uſually two Ounces of Wax to two of Oil; but the firſt four of Wax to two of Oil; ſee LINIMENT: yet 'tis thinner than a Plaſter. See EMPLASTER.

There are *Cerates* of various kinds, Refrigerative, Stomachic, *&c.* *Cerate of Sulphur*, *of Santal*, reſtringent *Cerate of Bricks*, *Divine Cerate*, &c.

There is a particular one, call'd the *refrigerative Cerate of* Galen, made of white Wax and Oil of Roſes Omphacin.

CERATION, in Chymiſtry, the Preparation of any Matter, to render it fit and diſpos'd to liquify, or melt, which of it ſelf it was not.

This is frequently done, to enable things to penetrate into Metals, or other ſolid Bodies. The Word comes from *Cera*, Wax.

CERATOGLOSSUM, in Anatomy, a Pair of Muſcles of the Tongue, thus deſcrib'd by Mr. *Cowper*: 'The *Ceratogloſſum* has a broad fleſhy Origination, at the ſuperior Part of the *Os Hyoides*, laterally; whence it aſcends to its Inſertion at the Root of the Tongue. This, with its Partner, acting, draw the Tongue into the Mouth directly: If only one of them act, it moves the Tongue on one ſide.

The Word is deriv'd from the *Greek* κερας *Cornu*, and γλοσσα, *Lingua*; its Form bearing ſome reſemblance to a Horn.

CERCELEE', in Heraldry. A *Croſs Cercelée*, is a Croſs which, opening at the Ends, turns round both ways, like a Ram's Horns. See CROSS.

CERDONIANS, antient Hereticks, who maintain'd moſt of the Errors of *Simon Magus*, *Saturnil*, and other *Gnoſtics*. See GNOSTICS.

They took their Name from their Leader *Cerdon*, a *Syrian*, who came to *Rome* in the Time of Pope *Hyginus*; and there abjur'd his Errors: but in appearance only; for he was afterwards convicted of perſiſting in them, and accordingly caſt out of the Church again.

*Cerdon* aſſerted two Principles, the one Good, and the other Evil: This laſt, according to him, was Creator of the World, and the God that appear'd under the old Law. The firſt, whom he call'd *unknown*, was the Father of Jeſus Chriſt; who, he taught, was only Incarnate in appearance, and was not born of a Virgin; nor did he ſuffer Death but in appearance. He deny'd the Reſurrection, and rejected all the Books of the Old Teſtament, as coming from an evil Principle. *Marcion*, his Diſciple, ſucceeded him in his Errors. See MARCIONITES.

CEREALIA, in Antiquity, Feaſts of *Ceres*, inſtituted by *Triptolemus*, of *Eleuſis* in *Attica*, Son of *Celeus* King of that Place, in gratitude for his having been inſtructed by *Ceres*, who was ſuppos'd to have been his Nurſe, in the Art of cultivating Corn, and making Bread: ſo that the *Cerealia* took their Riſe from *Greece*.

There were two Feaſts of this Kind at *Athens*; the one call'd *Eleuſinia*, the other *Theſmophoria*. See ELEUSINIA, and THESMOPHORIA.

What both agreed in, and was common to all the *Cerealia*, was, that they were celebrated with a world of Religion and Purity; ſo that it was eſteem'd a great Pollution to meddle, on thoſe Days, in conjugal Matters.

'Twas not *Ceres* alone that was honour'd here, but alſo *Bacchus*. The Victims offer'd were Hogs, by reaſon of the waſte they make in the Products of the Earth: whether there was any Wine offer'd, or not, is Matter of much debate among the Criticks. *Plautus* and *Macrobius* ſeem to countenance the negative ſide; *Cato* and *Virgil* the poſitive. *Macrobius* ſays, indeed, they did not offer Wine to *Ceres*; but *Mulſum*, ſweet Wine: and that the Sacrifices made the 21ſt of *September* to that Goddeſs and *Hercules*, was a Sow full of Cakes and ſweet Wine; and that this is what *Virgil* means by *Miti Baccho*. Vid. *Salmaſius*, *Lambin*, &c.

The *Cerealia* paſs'd from the *Greeks* to the *Romans*, who held 'em for eight Days ſucceſſively; commencing on the 12th of *April*. It was the Women alone who were concern'd in the Celebration, all dreſs'd in white: the Men, likewiſe in white, were only Spectators. They eat nothing till after Sun-ſet; in memory of *Ceres*, who in her ſearch after her Daughter, took no repaſt but in the Evening.

There were alſo exhibited Combats on Horſeback; tho theſe were afterwards chang'd into Combats of Gladiators: which was look'd on as an ill Omen for the Republic. The People became Sharers in this Feaſt, by the Largeſſes, Pears, Nuts, *&c.* diſtributed among them. The *Ædiles* ordinarily preſided over the *Cerealia*; yet ſometimes the *Dictator*, and ſometimes the *Maſter of the Horſe* were by a *Senatus-Conſultum* appointed to preſide. It was held in the *Circus*, and began on the Day whereon the *Ludi Circenſes* ended.

After

After the Battle of *Cannæ*, the Deſolation was ſo great at *Rome*, that there were no Women to celebrate the Feaſt, by reaſon they were all in mourning; ſo that it was omitted that Year.

In the *Cerealia* they exhibited the Grief of *Ceres* for the Loſs of her Daughter *Proſerpine*; bearing the Statues of the Gods in Proceſſion. 'Tis ſaid, they likewiſe carry'd an Egg in pomp; apparently, ſay ſome, as being the Figure of the World, which, like the Egg, contains a vital Power, which it communicates to Seeds: tho others will have it done as a Repreſentation of the Egg whereof *Caſtor* and *Pollux* were born.

CEREBRUM, in Anatomy, the *Brain*, properly ſo call'd; in contra-diſtinction from the *Cerebellum*. See BRAIN.

CEREBELLUM, or CEREBEL, in Anatomy, the hind Part of the *Brain*. See BRAIN.

The *Cerebellum* is eſteem'd a kind of little *Brain* by it ſelf, as the Word it ſelf imports. It is plac'd in the hinder and lower Part of the Skull, underneath the hind Part of the Brain, or *Cerebrum*: It lies open to the *Cerebrum* at bottom; but at top is ſeparated from it by a Duplicature of the *Dura Mater*. Its Figure ſomewhat reſembles a flat Bowl, broader than long.

Its Subſtance is harder and more ſolid than that of the Brain, but of the ſame Nature and Kind; being compos'd like it, of a *Cortical*, or *Glandulous*; and a *Medullary* Part: the Branches of which laſt, when open'd, reſemble thoſe of a Tree, meeting in the Middle, and forming a kind of Stem, which runs quite thro it.

Its Surface is unequal, and furrow'd, but not ſo much as that of the *Cerebrum*; appearing rather as if laminated, like ſome Shell; the middle Circles being the largeſt and deepeſt: between the *Laminæ* are Duplicatures of the *Pia Mater*. The fore and hind Parts of the *Cerebellum* are terminated by *Apophyſes*; call'd *Vermiformes*, from the reſemblance they bear to Worms: it is join'd to the *Medulla oblongata* by two Proceſſes, call'd by *Willis Pedunculi*. See PEDUNCULI.

Beſides theſe, are two or three other medullary Proceſſes, which paſſing acroſs the *Medulla Oblongata*, form an Arch; from the Diſcoverer call'd *Pons Varolii*. See VAROLII.

The Blood-Veſſels of the *Cerebellum* are the ſame with thoſe of the *Cerebrum*; and its uſe the ſame, *viz.* to ſeparate the nervous Juice from the Blood, and convey it thro the ſeveral Parts of the Body.

Dr. *Willis*, however, diſtinguiſhes between the Functions of the *Cerebrum*, and *Cerebellum*; making the firſt the Principle of voluntary Motions, and Actions; and the laſt the Principle of involuntary ones, *viz.* that of Reſpiration, the Motion of the Heart, &c.

'Tis commonly aſſerted, that a Wound either in the *Cortex*, or *Medulla* of the *Cerebellum*, is mortal; which it is not in the *Brain*, from which there have been entire Parts taken away without harm. The truth is, we have Inſtances of People living, not only without any *Cerebrum*, but alſo without any *Cerebellum*. See BRAIN.

CEREMONY, an Aſſemblage of ſeveral Actions, Forms, and Circumſtances, ſerving to render a thing more magnificent and ſolemn.

The Word comes from the Latin *Ceremonia*, quaſi *Cereris munia*, on account of the great Number of Ceremonies us'd in making the Offerings to *Ceres*.

*Valerius Maximus* derives it *à Cere* and *Munia*: *Cere* was a little Town near *Rome*, where the *Romans* made Offerings unto the Gods, with uncommon Ardor and Officiouſneſs, on occaſion of the Fear they were in of the *Gauls*, who then lay before *Rome*.

CERINTHIANS, antient Hereticks, who took their Name from *Cerinthus*, Cotemporary with St. *John*.

*Cerinthus* was a zealous Defender of the Circumciſion, as well as the *Nazareans* and *Ebionites*. St. *Epiphanius* ſays, he was the Head of a Faction which roſe at *Jeruſalem* againſt St. *Peter*, on account of ſome uncircumcis'd Perſons with whom that Apoſtle had eat. He believ'd that Jeſus Chriſt was a mere Man, born of *Joſeph* and *Mary*; but that in his Baptiſm, a celeſtial Virtue deſcended on him in form of a Dove; by means whereof he was conſecrated by the Holy Spirit, and made Chriſt. 'Twas by means of this celeſtial Virtue, therefore, that he wrought ſo many Miracles; which, as he receiv'd it from Heaven, quitted him after his Paſſion, and return'd to the Place whence it came: So that Jeſus, whom he call'd *a pure Man*, really dy'd and roſe again; but that Chriſt, who was diſtinguiſh'd from Jeſus, did not ſuffer at all.

Some Authors aſcribe the Book of the *Apocalypſe* to *Cerinthus*; adding, that he put it off under the Name of St. *John*, the better to authorize his Reveries touching Chriſt's Reign in the Fleſh: And 'tis even certain he publiſh'd ſome Works of this kind, under the Title of *Apocalypſes*. See APOCALYPSE.

St. *Epiphanius* obſerves, that when a *Cerinthian* dy'd without Baptiſm, another Perſon was baptiz'd in his ſtead. They receiv'd the Goſpel of St. *Matthew*, to countenance their Doctrine of Circumciſion, from Chriſt's being circumcis'd; but they omitted the Genealogy. They diſcarded the Epiſtles of St. *Paul*, becauſe that Apoſtle held Circumciſion aboliſh'd.

CEROMA, a Mixture of Oil and Wax; or, a *Searcloth* with which the Wreſtlers rubb'd themſelves, not only to make their Limbs more ſleek, and leſs capable of being laid hold of, but more pliable and fit for Exerciſe. See SEARCLOTH.

CERTIFICATE, a Teſtimony given in Writing, to aſſure and notify the Truth of any thing to a Court of Juſtice, &c.

CERTITUDE, is properly a Quality of the Judgment of the Mind, importing an Adheſion of the Mind to the Propoſition we affirm; or the Strength wherewith we adhere to it.

*Certitude* is of the ſame Nature with the Evidence that produces it: the Evidence is in the Things that the Mind ſees and conſiders, *i. e.* in the *Ideas*: *Certitude* is in the Judgment the Mind makes of thoſe Ideas. See EVIDENCE.

The Schoolmen diſtinguiſh two Kinds of *Certitude*: the one of *Speculation*, ariſing from the Evidence of the Thing; the other of *Adheſion*, which ariſes from the Importance thereof: This laſt they apply to Matters of Faith.

Further, the Schools diſtinguiſh three other Kinds of *Certitude*, with regard to the three different Kinds of Evidence whence they ariſe.

*Metaphyſical Certitude*, is that ariſing from a Metaphyſical Evidence: ſuch is that a Geometrician has of the Truth of this Propoſition, 'That the three Angles of a 'Triangle are equal to two right ones.'

*Phyſical Certitude*, is that ariſing from Phyſical Evidence: ſuch is that a Man has that there is Fire on his Hand, when he ſees it blaze, and feels it burn.

*Moral Certitude*, is that founded on Moral Evidence; ſuch is that a Perſon has, that he has got, or loſt a Cauſe, when his Attorney and Friends ſend him expreſs Notice of it, or a Copy of the Judgment, &c. with regard to which, it may be obſerv'd, that Moral *Certitude* is frequenly equivalent to Metaphyſical *Certitude*. Thus, a Criminal who hears the Sentence read, frequently makes no doubt either of his Condemnation or Execution; and yet has nothing, here, beyond a Moral *Certitude*; the Phyſical *Certitude* only relating to the reading of the Sentence, and the Actions of the Executioner when he takes him into his Poſſeſſion.

In the *Philoſophical Tranſactions*, we have an Algebraic Calculation of the Degrees of *Moral Certainty*, ariſing from human Teſtimony in all its Caſes; whether Immediate, Mediate, Concurring, Oral, or Written.

The Author thereof ſhews, that if the Report paſs thro ſeveral Reporters Hands e'er it arrive, each conveying $\frac{5}{6}$ of *Certitude*; after 12 Tranſmiſſions, it will only be as $\frac{1}{2}$, or an equal Lay whether it be true or not: If the Proportion of *Certitude* be fix'd at $\frac{100}{108}$, it will come to half from the 70th Hand; if at $\frac{1000}{1001}$, from the 695th Hand.

For concurring Evidences, if two Reporters have each $\frac{5}{6}$ of *Certainty*, they will both give an Aſſurance of $\frac{35}{36}$, or 35 to 1; if three, of $\frac{215}{216}$: and the Co-atteſtation of 10 would give $\frac{1023}{1024}$ of *Certainty*; that of a 20th, $\frac{2999999}{3000000}$. He ſhews, farther, that if there be ſix Particulars in a Narrative, all equally remarkable; and that he to whom the Report is given has $\frac{5}{6}$ of *Certitude* for the whole; there is 35 to 1 againſt the Failure in any one certain particular.

He proceeds to compute the *Certainty* of Tradition, both Oral and Written, in Whole and in Part; ſucceſſively tranſmitted, and alſo co-atteſted by ſeveral Succeſſions of Tranſmittents. See TRADITION.

CERT-MONEY, *Head-Money*, or a common Fine, paid yearly by the Reſiants of ſeveral Manors to the Lords thereof; and ſometimes to the Hundred; *pro Certo Letæ*, for the certain keeping of the Leet. This, in antient Records, is call'd *Certum Letæ*.

CERVICAL *Veſſels*, among Anatomiſts, are the Arteries, Veins, &c. which paſs thro the *Vertebræ* and Muſcles of the Neck, up to the Skull.

They are thus call'd from the Latin *Cervix*, Neck. See CERVIX.

CERVICAL *Nerves*, are ſeven Pair of Nerves, ſo call'd, as having their Origin in the *Cervix*, or Neck. See NERVE.

The firſt Pair ariſes between the firſt and ſecond *Vertebræ* of the Neck; and contrary to the reſt, come out before and behind: whereas the other ſix Pair come out laterally from the Jointures of the *Vertebræ*, thro particular Perforations: This firſt Pair goes to the Muſcles of the Head and Ear. The ſecond Pair, according to Dr. *Willis*, contributes the main Branch towards the Formation of the *Diaphragmatic* Nerves; which, according to *Vieuſſens*, ſpring only from the fourth and ſixth Pair. The three

laſt Pair, joining with the two firſt of the *Dorſum*, or Thorax, make the *Brachial* Nerves. All the *Cervical Nerves* ſend innumerable Branches to the Muſcles, and other parts of the Head, Neck, and Shoulders.

CERVICALES *Deſcendentes*, a Pair of Muſcles, Antagoniſts to the *Sacro-Lumbares*; coming from the third, fourth, fifth, and ſixth *Vertebra* of the Neck.

Moſt Authors reckon theſe, tho improperly, a Production and Part of the *Sacro-lumbus*.

CERVIX, in Anatomy, the hind Part of the Neck; the fore Part being diſtinguiſh'd by the Name of *Collum*. See NECK.

CERVIX *of the Uterus*, the Neck of the *Uterus*, or Womb. See UTERUS.

The *Cervix*, in Maids, is very narrow, except in the Time of the *Menſes*; ſcarce wide enough to admit a Gooſe's Quill: Its Extremity is call'd the *Oſculum Internum*, which is kept ſeal'd up with a kind of glutinous Matter, iſſuing from the Glands about it. See MATRIX.

CERUMEN *Aurium*, Ear-Wax; a thick, viſcous, bitter Matter, or Humor, ſeparated from the Blood by proper Glands, plac'd in the outer Paſſages of the Ear. See EAR-*Wax*.

CERUSSE, a Preparation of Lead, popularly call'd *White Lead*; and, by the Chymiſts, *Calx of Lead*. See LEAD.

*Ceruſſe* is made of very thin *Laminæ*, or Plates of Lead, ſo laid, as to receive and imbibe the Fumes of Vinegar, plac'd in a Veſſel over a moderate Fire. The *Laminæ* are, by means hereof, converted into a white Ruſt; which they gather together, and grinding it up with Water, form into little Cakes. *Cardan* ſhews how to make it of Urine.

*Ceruſſe* makes a beautiful white Colour, and is much us'd by the Painters, both in Oil and Water Colours. It makes the principal Ingredient in the Fucus us'd by the Ladies for the Complexion. Taken inwardly, it is a dangerous Poiſon; and ſoon ſhews its Malignity on the Outſide; ſpoiling the Breath and Teeth, and haſtning Wrinkles, and the Symptoms of old Age.

The beſt *Ceruſſe*, is that of *Venice*; but this is rare: that chiefly us'd, is either *Engliſh* or *Dutch*, both of which have more Marl in 'em than White Lead; the latter, however, is the better of the two. *Fallopius* ſpeaks of a Mineral *Ceruſſe*, but every body elſe takes it to be factitious.

The Word comes from the *Greek* κηρὸς, *Wax*; *Ceruſſe* bearing a reſemblance to Wax.

CESAR, or CÆSAR, among the *Romans*, was a long time us'd for the Heir intended, or preſumptive of the Empire; as *King of the Romans* is now us'd for that of the *German* Empire.

From the Time of *Marcus Aurelius*, to that of the Emperor *Valens*, none had the Title of *Auguſti* given them, till they had been firſt created *Ceſars*. *Spartian* ſays, *Lucius Verus* was the firſt that was called *Ceſar*, before he was made Emperor. The *Ceſars* were a kind of Adjuncts to the Empire, *Principes Imperii*: See AUGUSTUS.

*Ceſar* was the ſecond Dignity, till the Time of *Alexis Comnenius*: that Emperor created a new Dignity, in favour of his Brother *Iſaac Comnenius*, which he call'd *Leboſtocrator*, and to which he gave the Precedence over the *Ceſars*. *Codin* deſcribes the Creation of a *Ceſar*, his Crown, Rights, Habit, &c.

The Term took its riſe from the Names of the firſt *Roman* Emperors; and that ſome derive from *Cæſaries*, Head of Hair; urging, that the firſt who bore it, *viz. Caius Julius Ceſar*, was diſtinguiſh'd by his fine Head of Hair, which occaſion'd the Title. The more common Opinion is, that the Word *Ceſar* comes *à cæſo matris Utero*; becauſe his Mother's Womb was cut open to give him paſſage.

*J. Bircherodius* ſays, it comes from this, that the firſt who bore the Name kill'd an Elephant in Battel; *à Cæſo Elephante*: This Opinion he ſupports on the Credit of a Medal, on which is an Elephant with the Word CÆSAR.

CESAREAN *Section*, or *Cæſareus Partus*, an Operation whereby the Child is drawn from the Mother by violent means, with Inciſion. See BIRTH.

It appears from Experience, that Wounds in the Muſcles of the *Epigaſtrium*, or *Peritonæum*, and thoſe in the Matrix, are not mortal; ſo that the Belly of the Mother may be ſometimes open'd to give paſſage for the Child; but then 'tis not without great Danger; on which account, this Operation is very rarely practis'd: Thoſe brought into the World in this manner, are call'd *Cæſars*, and *Cæſones*, *à cæſo matris Utero*; as was *C. Julius Cæſar*, *Scipio Africanus*, and *Manlius*. See CESAR.

F. *Rouſſel* has a Treatiſe expreſsly on the Subject of the *Ceſarean Section*.

CESSAVIT, a Writ that lies in divers Caſes; upon this general Ground, that he againſt whom it is brought, has for two Years neglected to perform ſuch Service, or pay ſuch Rent, as he is oblig'd to by his Tenure; and has not upon his Lands or Tenements ſufficient Goods or Chattels to be diſtrain'd. It only lies for annual Service, Rent, and ſuch-like, not for Homage or Fealty. The Forms and Species of this Writ are various; as, *Ceſſavit de Cantaria*, *Ceſſavit de Feodifirma*, *Ceſſavit per Biennium*.

CESSION, in a Legal Senſe, an Act whereby a Perſon ſurrenders up, and tranſmits to another Perſon, a Right which belong'd to himſelf.

*Ceſſion* is a general Term, the Species whereof are, a *Surrender*, *Relinquiſhment*, *Tranſfer*, and *Subrogation*; which ſee.

CESSION is particularly us'd in the Civil Law, for a voluntary and legal Surrender of a Perſon's Effects to his Creditors, to avoid Impriſonment.

This Practice ſtill obtains in *France*, and other Countries; and is done by virtue of Letters Patent granted in favour of the Poor and Honeſt. The *Ceſſion* carry'd with it a Mark of Infamy, and oblig'd the Perſon to wear a green Cap, or Bonnet; at *Lucca* an orange one: to neglect this, was to forfeit the Privileges of the *Ceſſion*. This was originally intended to ſignify, that the *Ceſſionary* was become poor thro his own Folly.

The *Italian* Lawyers deſcribe the Ceremony of *Ceſſion* to conſiſt in ſtriking the bare Breech three times againſt a Stone, call'd *Lapis Vituperii*, in the Preſence of the Judge. Formerly it conſiſted in giving up the Girdles and Keys in Court; the Antients uſing to carry at their Girdles the chief Utenſils wherewith they got their living; as the Scrivener his Eſcritoire, the Merchant his Bag, &c.

The Form of *Ceſſion* among the antient *Romans* and *Gauls* was as follows. The *Ceſſionary* gather'd up Duſt in his left Hand, from the four Corners of the Houſe, and ſtanding on the Threſhold, holding up the Door-Poſt in his right Hand, threw the Duſt back over his Shoulders: then ſtripping into his Shirt, and quitting his Girdle and Sacks, he jump'd with a Pole over a Hedge; hereby letting the World know, that he had nothing left, and that when he jump'd, all he was worth was in the Air with him.

This was the *Ceſſion* in Criminal Matters: In Civil Caſes, it was ſufficient to lay a Switch, Fetch, or broken Straw on the Threſhold. This was called *Chrenecruda per Durpillum & Feſtucam*. See INVESTITURE.

CESSION, in the Eccleſiaſtical Law, is one manner of vacating or voiding an Eccleſiaſtical Benefice. See VACATION, and BENEFICE.

By the Canon Law, if a Clerk has one Living, of 8 *l. per Annum* Value, or upwards, and takes a ſecond, of what Value ſoever, the former is void without a Diſpenſation: that is, it is void *de Jure*, but not *de Facto*.

By the Statute, if a Clerk have one Benefice of 18 *l. per Annum*, or upwards, and takes another, of what Value ſoever, with Cure of Souls, and without Diſpenſation, the former Living is, *ipſo facto*, void: And this kind of Voidance of a Living is call'd *Ceſſion*.

What is call'd *Ceſſion* in other Benefices, is call'd *Creation* in relation to a Biſhoprick; for if an Incumbent be made a Biſhop, his Benefice is ſaid to be *void by Creation*. See BISHOP.

CESSIONARY, a *Bankrupt*. See BANKRUPT, and CESSION.

CESSOR, in Law, one dilatory, negligent, and delinquent in his Duty or Service, and who thereby incurs the Danger of the Law, and is liable to have the Writ *Ceſſavit* brought againſt him. See CESSAVIT.

Where 'tis ſaid *the Tenant ceſſeth*, 'tis meant he ceaſeth to do his Duty, or Service to which he is bound.

CESTUI, a *French* Term, literally ſignifying *He*, or *Him*; frequently us'd in our old Law-Writings. Thus,

CESTUI *qui Truſt*, is he who has Lands in Truſt, &c. committed to him for the Benefit of another.

CESTUI *qui Vie*, one for whoſe Life any Lands or Tenements are granted.

CESTUI *qui Uſe*, he to whoſe Uſe another Man is infeoffed in Lands or Tenements.

CESTUS, a Term us'd by Poets and Painters, for the Girdle which they attribute to *Venus* and *Juno*.

Among the Antients, *Ceſtus* properly ſignify'd the Maid's Girdle, which the Bridegroom unty'd when he led her into the Houſe.

The Word comes from the *Greek* κεστὸς, *Girdle*: whence alſo *Inceſtus*; a Term us'd at firſt for any Naughtineſs by undoing the Girdle, &c. but now reſtrain'd to that between Perſons near akin. See INCEST.

CESTUS was alſo a large Leathern Gantlet, garniſh'd with Lead, us'd in the Combats or Exerciſes of the antient *Athletæ*. See ATHLETÆ.

*Calepin* ſays, it was a kind of a Club with leaden Balls hanging from it, ſuſpended by Leathern Thongs: but he was miſtaken, it being only a Leathern Thong ſtudded with Nails of Lead, or Iron; part of it twiſted round the Hand and part of the Arm, to prevent their being broke or diſlocated.

It was called *Ceſtus*, *à cedendo*, to ſtrike, or beat.

CESURE, or CÆSURA, in the *Latin* Poetry, a Syllable remaining at the End of a Foot, and seeming as it were detach'd from it, to begin the following Foot; as in this Verse,

*Arma Virumque cano Trojæ qui primus ab oris :*

where the Syllables *no* and *jæ* are *Ceſures*.

In the modern Poetry, *Ceſure* is properly a Reſt, form'd in the middle of long Verſes. In *Alexandrine* Verſes, of 12 or 13 Syllables, the *Ceſure* muſt always be the ſixth; in Verſes of 10 on the fourth; and in thoſe of 12 on the ſixth : Verſes of eight Syllables muſt not have any *Ceſure*. See VERSE.

The *Ceſure*, by affording a Reſt in the middle of a long Verſe, to aid the Voice and Pronunciation, divides the Verſe, as it were, into two Hemiſticks. See REST, and PAUSE.

CETACEOUS, in Natural Hiſtory, a Term apply'd to all large Fiſhes, and Sea Monſters, which bear a reſemblance to the *Whale*. See WHALE.

The Word is form'd of the Latin *Cetus*, Whale. See FISH.

The Horn uſually call'd the *Unicorn's Horn*, is found to be the Tooth of a *Cetaceous* Fiſh in the Icy Sea, call'd *Narval*. See UNICORN.

CETERIS, or CÆTERIS *Paribus*, a *Latin* Term, or Phraſe, in frequent uſe among Mathematical and Phyſical Writers.

The Words literally ſignify, *the reſt*, or *the other things being alike, or equal*; which expreſſes pretty nearly their Meaning as a Term.

Thus, we ſay, *The heavier the Bullet*, ceteris paribus, *the greater the Range*; *i. e.* by how much the Bullet is heavier, if the Length and Diameter of the Piece, and the Quantity and Strength of the Pouder be the ſame, by ſo much will the utmoſt Range or Diſtance of a Piece of Ordnance be.

Thus alſo, in a Phyſical way, we ſay, *The Velocity and Quantity of Blood circulating in a given Time, thro any Section of an Artery, will*, ceteris paribus, *be according to its Diameter, and nearneſs to, or diſtance from the Heart.*

CETUS, in Aſtronomy, the *Whale*; a Conſtellation of the Southern Hemiſphere. See CONSTELLATION.

The Stars in the Conſtellation *Cetus*, in *Ptolemy*'s Catalogue are 22; in *Tycho*'s 21; in the *Britannic Catalogue* 78. The Order, Names, Longitudes, Latitudes Magnitudes, &c. whereof, are as follow.

*Stars in the Conſtellation* CETUS.

CHACE, CHACING, See CHASE. CHASING.

CHACE *of a Gun*, is the whole Bore, or Length of a Piece of Ordnance on the Inſide. See GUN, CANNON, ORDNANCE, &c.

CHACE, in the Sea Language, ſignifies *Purſuit* : Thus, *to give Chace to a Ship*, is to follow, and fetch her up.

CHACE-*Guns*, or CHACE-*Pieces*, are thoſe lying in the Head and Stern of the Ship.

CHACOON, or CHACONDE, a kind of Dance, in the Air of a Saraband, deriv'd from the *Moors*. The Baſs always conſiſts of four Notes, which proceed in conjunct Degrees; and whereon they make divers Concords and Couplets with the ſame Burden.

The Word is form'd of the Italian *Ciacona*, of *Cecone*, a blind Man; this Air being ſaid to be the Invention of a blind Man.

CHAFE-*Wax*, or CHAUFFE-*Wax*, an Officer in Chancery, whoſe Buſineſs is to fit the Wax for the ſealing of Writs, Patents, and other Inſtruments iſſu'd thence. See CHANCERY.

CHAGRIN, CHAGRAIN, or, as it's vulgarly call'd, SHAGREEN; a kind of grain'd Leather, chiefly us'd in the Covers of Caſes, Books, &c. It is very cloſe and ſolid, and cover'd over with little roundiſh Grains, or *Papillæ*. It is brought from *Conſtantinople*, *Tauris*, *Tripoli*, *Algiers*, and ſome Parts of *Poland*.

There is a Diſpute among Authors what the Animal is whence the *Chagrin* is prepar'd : Some ſay 'tis a Horſe, others a Mule, and ſome an Aſs; and that only the hard Part of the Skin is us'd for this purpoſe. *Borel* ſays 'tis a *Sea-Calf*; others a kind of Fiſh, call'd by the Turks *Chagrain*, whoſe Skin is cover'd with Grains; and thoſe ſo hard that they will raſp and poliſh Wood.

*The manner of preparing the* CHAGRIN.

The Skin being juſt flea'd off, is ſtretch'd out, cover'd over with Muſtard-ſeed, and the Seed bruis'd on it; and thus expos'd to the Weather for ſome Days; then tann'd.

The beſt is that brought from *Conſtantinople*, of a greyiſh Colour; the white is the worſt. 'Tis extremely hard, yet, when ſteep'd in Water, becomes very ſoft and pliable; whence it becomes of great Uſe among Caſemakers. It takes any Colour that is given it; red, green, yellow, black. It is frequently counterfeited by Maroquin form'd like *Chagrin*;

*Chagrin*; but this laſt is diſtinguiſh'd by its peeling off, which the firſt does not.

CHAIN, *Catena*, a Series of ſeveral Rings, or *Links*, fitted into one another. See LINK.

There are *Chains* of divers Matters, Sizes, Forms, and for divers Uſes. Ports, Rivers, Streets, &c. are clos'd with Iron *Chains*: Rebellious Cities are puniſh'd by taking away their *Chains* and Barriers.

The Arms of the Kingdom of *Navarre* are *Chains Or, in a Field Gules*. The Occaſion hereof is referr'd to the Kings of *Spain* leagu'd againſt the *Moors*; who having gain'd a celebrated Victory againſt 'em in 1212, in the Diſtribution of the Spoils, the magnificent Tent of *Miralmumin* fell to the King of *Navarre*; as being the firſt that broke and forc'd the *Chains* thereof.

*A Gold* CHAIN, is one of the Ornaments or Badges of the Dignity of a Lord-Mayor of *London*; and remains to the Perſon, after his being diveſted of that Magiſtrature, as a Mark he has paſs'd the Chair. See MAYOR, and ALDERMAN.

Something like this, *Chorier* obſerves, obtain'd among the antient *Gauls*: The principal Ornament of their Perſons in Power and Authority was a *Gold Chain*, which they wore on all Occaſions; and even in Battel, to diſtinguiſh 'em from the common Soldiers. *Hiſt. de Dauph.* Lib. III. p. 130.

CHAIN is alſo a kind of little Tiſſue, ſerving to hang Watches, Tweezer-Caſes, and other valuable Toys upon. See WATCH.

The Invention of this piece of curious Work is owing to the *Engliſh*; whence, in foreign Countries, it is denominated the *Engliſh Chain*. 'Tis but of very late Years that Foreigners have undertook to imitate 'em, and yet with no extraordinary Succeſs: thoſe of *Paris* have come neareſt. Theſe *Chains* are uſually either of Silver or Gold, ſome of gilt Copper; the Thread or Wire of each Kind to be very fine.

*For the Fabrick, or Making of theſe* CHAINS; a Part of the Wire is folded into little Links of an oval Form; the longeſt Diameter about three Lines, the ſhorteſt one. Theſe, after they have been exactly ſolder'd, are again folded into two; and then bound together, or interwove, by means of ſeveral other little Threads of the ſame thickneſs; ſome whereof, which paſs from one end to the other, imitate the Warp of a Stuff; and the others, which paſs tranſverſe, the Woof. There are at leaſt four thouſand little Links in a *Chain* of four Pendants; which are, by this means, bound ſo equally, and withal ſo firmly together, that the Eye is deceiv'd, and takes the whole to conſiſt of one entire Piece.

CHAIN-*Shot*, in War, two Bullets, or rather half-Bullets, link'd together by a Chain: their uſe at Sea is to ſhoot down Yards, or Maſts; or to cut the Shrouds, or any other Rigging of a Ship.

CHAIN-*Pump*. See PUMP, and BUR-*Pump*.

CHAIN, in Surveying, is a Meaſure conſiſting of a certain Number of Links of Iron Wire, uſually 100; ſerving to take the Dimenſions of Fields, &c. by: See MEASURE, and SURVEYING.

This F. *Merſenne* takes to be the *Arvipendium* of the Antients. See ACRE.

The *Chain* is of various Dimenſions, as the Length or Number of Links varies: That commonly us'd in meaſuring Land, call'd *Gunter's Chain*, is in Length four Poles, or Perches; or 66 Yards, or 100 Links; each Link being ſeven Inches $\frac{72}{100}$. See PERCH, LINK, YARD, &c.

That ordinarily us'd for large Diſtances, is in length 100 Feet; each Link one Foot.

For ſmall Parcels, as Gardens, &c. is ſometimes us'd a ſmall *Chain* of one Pole, or 16 Foot and a half length; each Link one Inch $\frac{98}{100}$.

Some, in lieu of *Chains*, uſe Ropes; but theſe are liable to ſeveral Irregularities; both from the different Degrees of Moiſture, and of the Force which ſtretches them. *Schwenterus*, in his Practical Geometry, tells us, he has obſerv'd a Rope 16 Foot long, reduc'd to 15 in an Hour's time, by the mere falling of a Hoar Froſt. To obviate theſe Inconveniencies, *Wolfius* directs, that the little Twiſts whereof the Rope conſiſts, be twiſted contrary ways, and the Rope dipp'd in boiling hot Oil, and when dry, drawn thro melted Wax. A Rope thus prepar'd, will not get or loſe any thing in Length, even tho kept under Water all Day.

*Uſe of the* CHAIN *in Surveying.*

The manner of applying the *Chain* in meaſuring Lengths is too popular to need Deſcription. In entering down the Dimenſions taken by the *Chain*, the *Chains* and *Links* are ſeparated by a Dot: Thus a Line 63 *Chains* 55 Links long, is wrote 63.55. If the Links be ſhort of 10, a Cypher is prefix'd; thus 10 *Chains*, 8 Links, are wrote 10.08.

*To find the Area of a Field*, &c. *the Dimenſions whereof are given in* Chains *and Links*. 1ſt, Multiply the Lines by one another, according to the Rules given under AREA; and from the Product cut off five Figures towards the Right: ſo thoſe remaining on the Left will be *Acres*. See ACRE. 2dly, Multiply the five Figures cut off by 4; and cutting off five again from the Product on the Right, thoſe remaining on the Left will be *Roods*. See ROOD. Laſtly, Multiply the five thus cut off by 40; and cutting off five, as before, on the Right, thoſe remaining on the Left are ſquare *Perches*. See PERCH.

*To take an Angle* DAE, (Tab. *Surveying*, Fig. 1.) *by the* Chain: Meaſure a ſmall Diſtance from the Vertex A along each Leg, *v. g.* to *d* and *c*; then meaſure the Diſtance *d c*: To lay this down, draw AE at pleaſure, and from your Scale ſet off the Diſtance meaſur'd on it. See SCALE.

Then, taking in your Compaſſes the Length meaſur'd on the other Side, on the Vertex A, as a Centre, deſcribe an Arch *d c*; and on the Point *c*, as a Centre, with the meaſur'd Diſtance of *c d*, deſcribe another Arch *a b*. Thro the Point where this interſects the former Arch, draw a Line AD. So is the Angle plotted; and its Quantity, if requir'd, may be meaſur'd on a Line of Chords. See CHORD.

*To take the Plan or Plot of any Place, as* ABCDE, (Fig. 2.) *by the* Chain. Draw a rough Sketch of the Place by Eye; and meaſuring the ſeveral Sides AB, BC, CD, DE, enter down the Length on the reſpective Lines: then if the Plan be to be taken within ſide of the Place, inſtead of meaſuring the Angles, as before, meaſure the Diagonals AB, BD. Thus will the Figure be reduc'd into three Triangles, whoſe Sides are all known, as in the former Caſe; and may be laid down on Paper, according to the Method above.

If the Plan be to be taken without ſide the Place, the Angles muſt be taken thus; *v. g.* for the Angle BCD, produce the Lines BC and CD to any certain equal Diſtance, *v. g.* to *a* and *b*, five *Chains* meaſure the Diſtance of *a b*. Thus have you an Iſoſceles Triangle C *a b*, wherein the Angle *a* C *b* = BCD its oppoſite one is had: thus is the Quantity of BCD found, and the Angle laid down as before.

*By the* Chain *to find the Diſtance between two Objects inacceſſible* in reſpect of each other. From ſome Place, as C, (Fig. 3.) whence the common Diſtance to each Object A and B, is acceſſible in a right Line; meaſure the Diſtance CA, which ſuppoſe 50 *Chains*; and continue the Line to D, *viz.* 50 more: Meaſure alſo BC, which ſuppoſe 30 *Chains*; and produce the Line to E, *viz.* 30 more. Thus will be form'd the Triangle CDE, equal and ſimilar to the Triangle ABC; conſequently the Diſtance DE, being meaſur'd, will give the inacceſſible Diſtance requir'd.

*By the* Chain *to find the Diſtance of an inacceſſible Object, v. g.* the Breadth of a River. On one ſide place a Pole, four or five Foot high, perpendicularly, having a Slit a-top, with a ſtrait Piece of Wire, or the like, two or three Inches long, put thro the ſame. This is to be ſlipp'd up or down, till, looking along it, you find it point full on the other Side of the River; then turning the Pole with the Wire in the ſame Direction, obſerve the Point on the dry Land, to which it points when look'd along as before: meaſure the Diſtance from the Pole to this laſt Point; 'tis the ſame with that of the firſt requir'd. See SURVEYING, PROTRACTING, PLOTTING, THEODOLITE, &c.

CHAIR, *Cathedra*, was antiently us'd for the Pulpit, or *Suggeſtum*, whence the Prieſt ſpoke to the People. See PULPIT, and CATHEDRA.

It is ſtill apply'd to the Place whence Profeſſors and Regents in Univerſities deliver their Lectures, and teach the Sciences to their Pupils: Thus, we ſay, *The Profeſſor's Chair, the Doctor's Chair*, &c. See PROFESSOR, &c.

*Curule* CHAIR, was an Ivory Seat plac'd on a Car, wherein were ſeated the firſt Magiſtrates of *Rome*, and thoſe to whom the Honour of a Triumph was granted. See CURULE.

CHAIR is alſo us'd among the *Romaniſts* for ſome Feaſts, held antiently in Commemoration of the Tranſlation of the See or Seat of the Church, by St. *Peter*.

The *perforated* CHAIR, wherein the new-elected Pope is plac'd, F. *Mabillon* obſerves, is ſtill to be ſeen at *Rome*: but the Origin thereof he does not attribute, as is commonly done, to the Adventure of Pope *Joan*; but ſays there is a Myſtery in it; and 'tis intended, forſooth, to explain to the Pope thoſe Words of Scripture, that *God draws the Poor from out of the Duſt and Mire*.

CHAIR-*Man*, the Preſident, or Speaker of an Aſſembly, Company, &c. See PRESIDENT, &c.

The CHAIR-*Man of a Committee*, &c. See COMMITTEE, &c.

CHAISE, a ſort of light open *Chariot*, or *Calaſh*. See COACH, and CHARIOT.

CHALASTIC *Medicines*, are ſuch as have the Faculty of ſoftening, and relaxing the Parts; when, on account of their extraor-

extraordinary Tenſion, or Swelling, they occaſion Pain.

Of this Kind are Butter, and many Oils, &c. See EMOLLIENT.

The Word comes from the *Greek* χαλάω, *I ſoften.*

CHALAZA, among Naturaliſts, the *Treddle* of an Egg, or that flat, dented Part at each End; ſo call'd, as being antiently ſuppos'd to be the Sperm of the Cock. See EGG.

Its Uſe, according to *Harvey*, is to be as it were the Poles of this Microcoſm, and the Connections of all the Membranes twiſted and knit together; whereby the Liquors are not only conſerv'd, each in its Place, but alſo in its due Poſition to the reſt.

Mr. *Derham* adds, that they alſo ſerve to keep one and the ſame Part of the Yolk uppermoſt, let the Egg be turn'd which way it will; which is done by the following Mechaniſm: The *Chalazæ* are ſpecifically heavier than the Whites wherein they ſwim; and being brac'd to the Membrane of the Yolk, a little out of the Axis, cauſe one ſide of the Yolk to be heavier than the other. The Yolk being thus by the *Chalazæ* made buoyant, and kept ſwimming in the midſt of two Whites, is by its own heavy ſide kept with the ſame Side always uppermoſt: which uppermoſt ſide he imagines to be that whereon the *Cicatricula* lies. See CICATRICULA.

CHALCANTHUM. See CALCANTHUM.

CHALCEDONY, or CALCEDONY, a precious Stone of a blueiſh or yellowiſh Colour, rank'd among the Kinds of *Agate*. 'Tis ſuppos'd to be the *white Agate* of the Antients; tho we ſometimes find Pieces of it blackiſh. See AGATE.

It is very fit for the Graver; and much us'd, either to engrave Arms, &c. upon, as being harder and preferable to Cryſtal, if good; or to paint them on the backſide. In ſome Parts, Vaſes, Cups, Religious Beads, &c. are made thereof. The cleareſt and beſt is that with a pale caſt of blue.

*Belon* ſays, 'tis ſo common among the *Turks*, that it ſerves them for threſhing their Corn: but he miſtakes. Hence,

CHALCEDONIUS is a Term us'd by the Jewellers, for a Defect found in ſome precious Stones; when, in turning them, they find white Spots, or Stains, like thoſe of the *Chalcedony*: This Defect is frequent in *Grenates* and *Rubies*. The Lapidaries remedy it by hollowing the Bottom of the Stone. See GRENATE, and RUBY.

CHALCIDIC, CHALDICUS, CHALCIDICUM, or, as *Feſtus* calls it CHALCEDONIUM, in the antient Architecture, a large magnificent Hall belonging to a Tribunal, or Court of Juſtice.

In *Vitruvius*, it is us'd for the Auditory of a *Baſilica*: In other of the antient Writers, for a Hall, or Apartment, where the Heathens imagin'd their Gods to eat.

*Feſtus* ſays, it took its Name from the City *Chalcis*; but does not give the Reaſon. *Philander* will have it to be the Court, or Tribunal, where Affairs of Money and Coinage were regulated; from χαλκὸς, *Braſs*, and δίκη, *Juſtice*. Others ſay, the Money was ſtruck in it; and derive the Word from χαλκὸς, and οἶκος, *Houſe*.

CHALCITIS, ſometimes call'd *Colcothar*, is a kind of Mineral; or, as ſome call it, a Vitriol; reddiſh, like Copper; friable, not very hard, and having yellow ſhining Veins within. See COLCOTHAR.

It has the Taſte of a Vitriol, melts alone in a Crucible, and diſſolves very eaſily in watry Liquors. There are two other Minerals, call'd *Miſi*, and *Sory*, very much like the *Chalcitis*. In effect, the Antients confounded them together; and not only the *Miſi* and *Sory*, but alſo the *Melanteria*; or rather, they imagin'd a ſucceſſive Tranſmutation of the four Minerals, which began with *Chalcitis*, became *Miſi*, then *Melanteria*, and laſtly *Sory*, where it fix'd.

The Moderns make theſe four diſtinct Matters; tho the chief Difference between them, is ſuppos'd to lie in the different Tenuity or Groſſneſs of their Subſtance.

Some ſay, the *Miſi* is form'd on the *Chalcitis*, as Verdegreaſe on Copper, being properly its Ruſt; and that *Chalcitis* is form'd in the ſame manner on the *Sory*.

This is certain, they are all found in Copper Mines: But the modern Druggiſts know little of any of them but *Chalcitis*.

This is brought from *Germany*: It is very Cauſtic and Eſcharotic. Its chief uſe is in the Compoſition of Venice-Treacle: in lieu of it are frequently ſubſtituted *Calcanthum* rubefy'd, or *Copperas*, or *Calamites*.

CHALCOGRAPHY, the Art of Engraving on Copper and Braſs. See ENGRAVING.

CHALDEE, or CALDEE *Language*, that ſpoke by the *Chaldæans*, or People of *Chaldea*. See LANGUAGE.

The *Chaldee* is a Dialect of the *Hebrew*. See HEBREW.

CHALDEE *Paraphraſe*, in the Rabbinical Style, is call'd *Targum*. See TARGUM.

There are three *Chaldee* Paraphraſes in *Walton*'s Polyglot; *viz.* that of *Onkelos*, that of *Jonathan* Son of *Uziel*, and that of *Jeruſalem*. See PARAPHRASE, and POLYGLOT.

CHALDEE *Paraphraſt*. See PENTATEUCH.

CHALDRON, CHALDER, or CHAWDREN *of Coals*, a dry *Engliſh* Meaſure, conſiſting of 36 Buſhels heap'd up, according to the ſealed Buſhel kept at *Guildhall, London*. See MEASURE.

The *Chaldron* ſhould weigh 2000 Pounds. On Shipboard, 21 *Chaldrons of Coals* are allow'd to the Score. See COALS.

CHALICE, or *Cup*. See CALIX.

CHALK, a white Subſtance uſually reckon'd as a Stone; but Dr. *Slare* thinks, without Reaſon; ſince, when examin'd by the Hydroſtatical Ballance, it is found to want much of the Weight and Conſiſtence of a real Stone: ſo that he thinks it more juſtly rank'd among the *Boles* than Stones. See BOLE.

This he obſerves to be the Caſe, not only in *Chalk*, but various other Bodies, taken for granted to be Stones; ſome whereof are nearer Earth than Stones; others nothing but Earth, Sulphur, Metal, &c. See STONE, EARTH, &c.

*Chalk* is of two ſorts; the hard, dry, ſtrong *Chalk*, us'd for making of *Lime*: See LIME. The other a ſoft, unctuous *Chalk*, us'd to manure Lands; as eaſily diſſolving with Rain and Froſt: It is beſt for cold, ſour Lands, and promotes the yielding of Corn; it ſweetens Graſs ſo as to cauſe Cattel to fatten ſpeedily, and Cows to give thick Milk. See MANURE, and SOIL.

*Chalk* is us'd in Medicine, as an Aſtringent, an Abſorbent, and a Sweetner; and is celebrated for curing the Heartburn, beyond any thing whatſoever.

CHALLENGE, a Cartel, Defiance, or Invitation to Duel, or other Combat. See CARTEL, DUEL, and COMBAT.

CHALLENGE, in Law, is an Exception taken either againſt *Perſons*, or *Things*: Againſt Perſons; as in an Aſſize, to the Jurors, when any one, or more of them are excepted againſt, in Caſe of Felony, by the Priſoner at the Bar.

Againſt Things, as a Declaration. See DECLARATION.

*Challenge to the Jurors*, is either made to the *Array*, or to the *Polls*: To the Array, as when the whole Number is excepted againſt, as partially empanell'd. To the Poll, as when Particulars are excepted againſt, as not indifferent.

*Challenge to the Jurors*, is alſo divided into *Challenge Principal*, and *Challenge per Cauſe*; *i. e.* upon Cauſe or Reaſon alledg'd.

*Challenge Principal*, otherwiſe called *Challenge Peremptory*, is what the Law allows without Cauſe alledg'd, or further Examination; as a Priſoner at the Bar, arraign'd on Felony, may peremptorily challenge twenty, one after another, alledging no Cauſe but his own Diſlike; and they ſhall be ſet aſide, and new ones choſen in their room. In Caſe of High-Treaſon, no *Challenge Peremptory* was formerly allow'd; but by *Stat.* 7. *Gul.* III. liberty is given *peremptorily* to *challenge* 35.

Yet there ſeems to be a Difference between *Challenge Principal* and *Challenge Peremptory*; the latter being only in Matters Criminal, and without any Cauſe alledg'd; the former moſtly in Civil Caſes, and with aſſigning ſome ſuch Cauſe, as being found true, the Law allows; *v. g.* if either Party alledges, that one of the Jurors is the Son, Brother, Couſin, or Tenant of the other, the Exception is good. Alſo in the Plea of the Death of a Man, or in any Action Real or Perſonal, where the Debt or Damages amount to 40 Shillings; It is a good *Challenge* to a Juror, that he cannot diſpend 40 Shillings *per Annum* of Freehold.

*Challenge upon Reaſon or Cauſe*, is when the Party does alledge ſome ſuch Exception as is ſufficient upon acknowledgment of the Truth of it; *v. g.* If the Son of the Juror have marry'd the Daughter of the other Party.

The Word *Challenge* was antiently latin'd *Calumnia*.

CHALLENGE is alſo a Hunting Term: for when Hounds at firſt finding the Scent of their Game, preſently open, and cry, the Huntſmen ſay, *they Challenge*.

CHALYBEAT, in Medicine, ſomething that partakes of the Nature of *Steel*, or *Iron*; or that is impregnated with Particles of thoſe Metals. See IRON; ſee alſo MARS, and STEEL.

*Chalybeats* act chiefly as Abſorbents, and Deobſtruents. Iron, M. *Lemery* obſerves, is a Mixture of an oily Subſtance with a metallic Matter; but the Oil is the Predominant in the Mixture: and between the Parts mix'd are large Pores. Hence, Iron becomes eaſily diſſolvable; and its Oil eaſily diſengages it ſelf: But when once decompounded, *i. e.* when once the Oil is ſeparated from the pure, ferruginous, or metallic Part, no Diſſolvent has any Effect on that *Caput Mortuum*. Hence appears the Abſurdity of that common Practice, of calcining Iron to ſuch a degree, as to convert it into what the Chymiſts call a *Crocus*, or Saffron. This Operation muſt of neceſſity take away all, or moſt of the oily Subſtance, and have left nothing but the indiſſoluble *Caput Mortuum*. Which Oil here ſeparated, ſhould properly have been ſeparated by the

Heat of the Stomach; whence, according to M. *Lemery*, it wou'd have carry'd into the Blood a new ſpirituous, ſalutary Juice: He obſerves alſo, that Iron acts as an Abſorbent, from the Largeneſs of its Pores; and the Eaſe wherewith all Kinds of Salts, even groſs ones, inſinuate themſelves therein: even ſcorbutic Acids are abſorb'd thereby.

Further, 'tis not enough that peccant Acids enter Iron; but in entering they alſo expel and expreſs that ſalutary Juice, which is alſo put in Motion, and diſpos'd to be evacuated by the natural Heat. Thus is Iron doubly advantageous, both by the Oil it furniſhes the Blood withal, and by the Salts it frees it from. The Action of the Particles of a *Chalybeat*, by their Elaſticity, together with the *Momentum* they give the Blood by their Ponderoſity, makes them not only preferable to moſt other Deobſtruents, but alſo proper in other Caſes; eſpecially where there is a Viſcidity of the Juices, the Blood depauperated, and where the Circulation is languid; as in moſt Hyſteric and Hypochondriac Caſes, &c.

CHAM, or KAN, the Title given to the ſovereign Princes of *Tartary*.

The Word, in the *Sclavonic* Language, ſignifies *Emperor*.

*Sperlingius*, in his Diſſertation on the *Daniſh* Term of Majeſty, *Koning*, King, thinks the Tartarian *Cham* may be well deriv'd from it; adding, that in the North they ſay *Kan*, *Konnen*, *Konge*, *Kenning*.

The Term *Cham* is us'd among the *Perſians*, for the great Lords of the Court, and the Governors of Provinces.

CHAMADE, in War, a certain Beat of a Drum, or Sound of a Trumpet, which is given the Enemy as a kind of Signal, to inform them of ſome Propoſition to be made to the Commander; either to capitulate, to have leave to bury their Dead, make a Truce, or the like.

*Menage* derives the Word from the Italian *Chiamate*, of *Clamare*, to cry.

CHAMBER, in Building, a Member of a Lodging, or Piece of an Apartment, ordinarily intended for ſleeping in; and call'd by the Latins *Cubiculum*.

A compleat Apartment is to conſiſt of a *Hall*, *Antichamber*, *Chamber*, and *Cabinet*. See APARTMENT, &c.

The Word comes from the Latin *Camera*; and that, according to *Nicod*, from the *Greek* καμάρα, *Vault*, or *Curve*; the Term *Chamber* being originally confin'd to Places arch'd over. The *Spaniards* call it *Camera*; whence *Camerade*.

*Bed*-CHAMBER. See BED-*Chamber*.

*Privy*-CHAMBER. The Gentlemen of the *Privy-Chamber* are Servants of the King, who are to wait and attend on him and the Queen at Court, in their Diverſions, Progreſſes, &c.

Six of theſe are appointed by the Lord Chamberlain, together with a Peer, and the Maſter of the Ceremonies, to attend all Ambaſſadors from crown'd Heads in their publick Entries. Their Number is 48.

Their Inſtitution is owing to King *Henry* VII. As a ſingular Mark of Favour, they are impower'd to execute the King's verbal Command, and without producing any written Order; their Perſon and Character being deem'd ſufficient Authority.

*Preſence* CHAMBER, *Council* CHAMBER, See PRESENCE *Chamber*. COUNCIL *Chamber*.

CHAMBER *in Policy*, is us'd for the Places where certain Aſſemblies are held, as alſo for the Aſſemblies themſelves.

Of theſe there are various Kinds; ſome eſtabliſh'd for the Adminiſtration of Juſtice, others for Matters of Commerce, &c. Of the firſt Kind among us are the

*Star*-CHAMBER, *Camera Stellata*, or *Chamber de Eſtoiels*; ſo called, becauſe the Roof was originally painted with Stars. It is of an antient ſtanding, but its Authority was very much heightned by *Henry* VII. and *Henry* VIII. who appointed, by two ſeveral Statutes, that the Chancellor, aſſiſted by others there nam'd, ſhould have Power to hear Complaints againſt Retainers, Embracers, Miſdemeanors of Officers, and other like Offences; which thro the Power and Authority of thoſe who committed them, did lift up the Head above other Faults; and for which inferior Judges were not ſo meet to give Correction, and the common Law had not ſufficiently provided.

By the Statute 17 *Car.* I. the Court call'd *Star Chamber*, and all Juriſdiction, Power, and Authority thereto belonging, are, from *Auguſt* the firſt, 1641, abſolutely diſſolv'd.

*Painted* CHAMBER. See PAINTED *Chamber*.

*Imperial* CHAMBER, is a Juriſdiction held antiently at *Spires*, but ſince transferr'd to *Veſlar*. In this are determin'd the Differences among the Princes and Cities of the Empire. See EMPIRE.

It was at firſt ambulatory: In 1473 it was fix'd to *Augſburg*, then remov'd to *Frankfort*; and thence to *Worms*, in 1497: afterwards it was remov'd to *Nuremberg* and *Ratisbon*; again to *Worms* and *Nuremberg*; and from this laſt to *Eſſengen*; thence, in 1527, to *Spires*; where *Charles* V. render'd it ſedentary, in 1530.

At its firſt Inſtitution it conſiſted of 16 Aſſeſſors; but the Reformation enſuing, occaſion'd the Number to be increas'd: By the Treaty of *Oſnaburg*, in 1648, there were appointed 50 Aſſeſſors; whereof 24 to be Proteſtants, and 26 Catholicks; beſides five Preſidents, two of 'em Proteſtants, the reſt Catholicks.

As the Princes, or Circles of the Empire are not always exact in filling up the Vacancies in this *Chamber*, the Number of Aſſeſſors is now reduc'd to 16. See IMPERIAL.

This *Chamber* has a Right of judging by Appeal, and the laſt Reſort, of all Civil Affairs of all the Subjects of the Empire, in the ſame manner as the *Aulic* Council reſiding at *Vienna*. See AULIC.

Proceſſes are here almoſt Immortal, by reaſon of the infinite number of Ceremonies and Formalities wherewith they are embaraſs'd.

The *Imperial Chamber* is frequently afraid to pronounce Sentence, for fear of expoſing its Awards to ſome Diſgrace; the Princes ſometimes not permitting ſuch to be executed as diſpleaſe them.

*Apoſtolical* CHAMBER, at *Rome*, is that wherein Affairs relating to the Revenues and Domains of the Church and the Pope are tranſacted. See APOSTOLICAL.

CHAMBER *of Audiences*, or *grand* CHAMBER; a Juriſdiction in each Parliament of *France*. See PARLIAMENT.

At the firſt Inſtitution of their Parliaments, there were two *Chambers*, and two Kinds of Counſellors; the one the *grand Chamber* for Audiences, the Counſellors whereof were call'd *Iugeurs*, who only judg'd: the other the *Chamber of Inqueſts*; the Counſellors whereof were called *Rapporteurs*; who only reported Proceſſes by writing.

CHAMBER *of the Edict*, or *Mi-partre*, was a Court eſtabliſh'd by virtue of the Edicts of Pacification, in favour of thoſe of the Reform'd Religion: wherein the Number of Judges of either Religion were the ſame; and to which recourſe was had in all Affairs wherein any of the Proteſtants were concern'd. This *Chamber* is now ſuppreſs'd.

CHAMBER *of Accompts*, is a ſovereign Court, where Accompts are render'd of all the *Deniers Royaux*; Inventories, and Avenues given to the King, Oaths of Fidelity taken, and other Things relating to the Finances tranſacted. The *French* have alſo,

*Eccleſiaſtical* CHAMBERS, which judge, by Appeal, of Differences ariſing on the raiſing of Tithes: Of theſe *Eccleſiaſtical Chambers* there are nine; *viz.* at *Paris*, *Bourdeaux*, *Rouen*, *Lyons*, *Tours*, *Toulouſe*, *Bourges*, *Pau*, and *Aix*: they uſually conſiſt of the Archbiſhop of the Place, as Preſident; other Archbiſhops and Biſhops, a Deputy of each of the Dioceſſes, and three Counſellors of Parliament. The *Chamber* chuſes as many Counſellors out of the Clergy as it thinks proper; as alſo a Promoter.

CHAMBER *of London*. See CHAMBERLAIN.

CHAMBERS *of Commerce*, are Aſſemblies of Merchants and Dealers, where they treat about Matters relating to Commerce: Of theſe there are ſeveral, eſtabliſh'd in moſt of the chief Cities of *France*, by Virtue of an Arret of the 30th of *Auguſt* 1701. Indeed there were ſome before this general Eſtabliſhment, particularly one at *Marſeilles*, and another at *Dunkirk*.

CHAMBER *in War*, is us'd for the Place where the Pouder of a Mine is lodg'd. See MINE.

The *Chamber of a Mine* is a Cavity of five or ſix cubick Feet.

CHAMBER *of a Mortar*, or *Cannon* of the new Make, is a Cell, or Cavity at the bottom of the Barrel, or Chaſe, where the Charge of Pouder is lodg'd. See MORTAR.

The different Form of the *Chamber*, is found by Experiment to have an Influence on the Range of the Piece. A Cubical *Chamber* carries the Ball a leſs Diſtance than a Circular one; and that leſs than a Cylindrical one.

CHAMBERLAIN, an Officer who has the Management, or Direction of a *Chamber*. See CHAMBER.

The Word *Chamberlain*, according to *Ragueau*, originally ſignify'd, a Gentleman who was to ſleep in the King's Bed-Chamber, at his Bed's Feet, in the Abſence of the Queen.

There are almoſt as many Kinds of *Chamberlains* as *Chambers*: The principal are as follow.

*Lord Great* CHAMBERLAIN *of England*; an Officer of great Antiquity and Honour; being rank'd the ſixth great Officer of the Crown: A conſiderable part of his Function is at the Coronation of a King; when he dreſſes him, carries the Coif, Sword, and Gloves to be us'd on that Occaſion; the Gold Sword and Scabbard to be offer'd by the King; the Robe Royal and Crown: He alſo undreſſes him, and waits on him at Dinner; having for his Fee the King's Bed, and all the Furniture of his Chamber, the Night-Apparel, and the Silver Baſon wherein the King waſhes, with the Towels. See CORONATION.

To him likewiſe belongs the Proviſion of every thing in the Houſe of Lords, in time of Parliament; to which End he has an Apartment near the Lords Houſe. He has the Government of the Palace of *Weſtminſter*; iſſues out War-

rants for preparing, fitting out, and furniſhing *Weſtminſter-Hall*, againſt Coronations, Trials of Peers, &c.

He diſpoſes of the Sword of State, to be carry'd by whom he pleaſes; and when he goes to Parliament, is on the right Hand of the Sword, the Lord Marſhal being on the left. On all ſolemn Occaſions, the Keys of *Weſtminſter-Hall*, of the *Court of Wards*, and *Court of Requeſts*, are deliver'd him.

To him belong Livery and Lodging in the King's Court; and he has certain Fees from every Biſhop at his doing Homage to the King, and from every Peer at his Creation. Under his Command are, the *Gentleman-Uſher of the Black Rod*, the *Yeoman-Uſher*, and *Door-keepers*.

This Honour was long held by the Earls of *Oxford*; *viz.* from the Time of *Henry* I. by an Eſtate Tail, or Inheritance; but in the three laſt Coronations by the Marquis of *Lindſey*, now Duke of *Ancaſter*, by an Eſtate or Inheritance from a Daughter and Heir General, claim'd, but controverted.

*Lord* CHAMBERLAIN *of the Houſhold*, an Officer who has the Overſight and Direction of all Officers belonging to the King's *Chamber*, except the Precinct of the *Bed-Chamber*; which is abſolutely under the *Groom of the Stole*. See BED-*Chamber*.

He has the Overſight of the Officers of the Wardrobe, of the removing of Wardrobes, Beds, Tents, Revels, Muſick, Comedians, Hunting, Meſſengers, Trumpeters, Drummers, Handicrafts, and other Tradeſmen retain'd in the King's Service: As alſo of all Serjeants at Arms, Phyſicians, Apothecaries, Surgeons, Barbers, the King's Chaplains, &c. and adminiſters the Oath to all Officers above Stairs, &c.

There are alſo CHAMBERLAINS of the King's Courts, of the *Exchequer*, of *North Wales*, of *Cheſter*, of the City of *London*, &c. in all which Caſes, this Officer is commonly the Receiver of all Rents and Revenues belonging to the Place whereof he is *Chamberlain*.

When there is no Prince of *Wales*, and Earl of *Cheſter*, the *Chamberlain* of *Cheſter* hath the Receipt and Return of all Writs coming thither out of any of the King's Courts.

In the *Exchequer*, there are two Officers of this Name, who were wont to keep a Controulment of the Pells of Receipt and Exitus; and kept certain Keys of the Treaſury and Records: They kept alſo the Keys of that Treaſury where the Leagues of the King's Predeceſſors, and divers antient Books, as Dooms-day Book, and the Black-Book of the Exchequer remain. See EXCHEQUER.

The CHAMBERLAIN of *London* keeps the City Money, which is laid up in the *Chamber of London*, an Apartment in *Guild-Hall*: He alſo preſides over the Affairs of Maſters and Apprentices; and makes free of the City, &c.

His Office laſts but for a Year, being choſen annually on *Midſummer*-Day: but the Cuſtom uſually obtains, to rechuſe the ſame Perſon; unleſs he have been chargeable with any Miſdemeanor in his Office.

*Vice*-CHAMBEERLAIN. See VICE-*Chamberlain*.

CHAMBRANLE, in Architecture and Joinery, the Border, Frame, or Ornament of Stone or Wood, us'd in the three Sides round Chamber-Doors, large Windows, and Chimneys.

The *Chambranle* is different in the different Orders: when 'tis plain and without Mouldings, 'tis call'd ſimply and properly, *Band*, *Caſe*, or *Frame*.

The *Chambranle* conſiſts of three Parts; the two Sides, called *Montants*, or *Ports*; and the Top, called the *Traverſe*, or *Supercilium*.

The *Chambranle* of an ordinary Door, is frequently call'd *Door-Caſe*; of a Window, *Window-Frame*; of a Chimney, *Mantle-Tree*. See DOOR, WINDOW, MANTLE.

CHAMFER, or CHAMFRET, in Architecture, an Ornament conſiſting of half a *Scotia*; being a kind of ſmall Furrow, or Gutter on a Column, call'd alſo *Scapus*, *Stria*, &c. See STRIA.

*Chamfering*, or *Chamfraining*, is particularly us'd for the cutting of the Edge, or End of any thing a-ſlope, or bevel. See BEVEL.

CHAMELOT, in Commerce. See CAMELOT.

CHAMPAIN. See CAMPAIGN, and CHAMPION.

*A Point* CHAMPAIN, in Heraldry, is a Mark of Diſhonour in the Coat of Arms of him who kills a Priſoner of War after he has cry'd Quarter. See POINT.

CHAMPARTORS, in the Words of the Statute 33 *Edw.* I. are 'They who move Pleas or Suits, or cauſe 'them to be moved, either by their own Procurement 'or others; and ſue them at their proper Coſts, to have 'part of the Land in Variance, or part of the Gains; 'againſt whom lies a Writ of *Champarty*.

CHAMPARTY, or CHAMPERTY, in Law, a Maintenance of any Man in his Suit, upon Condition of having part of the Thing, be it Lands or Goods; in caſe it be recover'd. See MAINTENANCE.

The Word comes from the French *Champ*, Field, and *parti*, divided; the Field, or Thing conteſted for, being ſuppos'd to be divided between the *Champartor*, or Maintainer, and the Perſon in whoſe Right he ſues.

This ſeems to have been an antient Grievance; for notwithſtanding ſeveral Statutes againſt it, and a Form of Writ accommodated to 'em, in the Time of *Edward* I. yet in that of *Edward* III. it was enacted, That whereas redreſs on the former Statute was only to be had in the King's-Bench, which then follow'd the Court; for the future it ſhould likewiſe be cognizable by the Juſtices of the *Common Pleas*, and *Judges of Aſſize*.

CHAMPION, properly ſignifies, a Perſon who undertakes a Combat, in the Place or Quarrel of another: tho the Word is alſo ſometimes us'd for him who fights in his own Cauſe. See COMBAT.

*Hottoman* defines *Champion*, *Certator pro Alio datus in Duello, à Campo dictus, qui Circus erat decertantibus definitus*: Hence it is alſo called *Camfight*.

*Du Cange* obſerves, that *Champions*, in the juſt Senſe of the Word, were Perſons who fought in lieu of thoſe who were oblig'd by Cuſtom to accept the Duel; but had yet a juſt Excuſe for diſpenſing with it, as being too old, infirm, Eccleſiaſticks, &c. He adds, that the *Champions* were uſually retain'd or hir'd for ſo much Money, and were held infamous.

There were alſo ſome Vaſſals, who by the Faith and Homage ſwore to their Lords, were oblig'd to fight for 'em in caſe of need.

Some Authors hold, any Perſon was allow'd the Benefit of a *Champion*, excepting Parricides, and thoſe accus'd of very heinous Offences.

This Cuſtom of deciding Differences by Combat, was deriv'd from the North; whence it paſs'd into *Germany*, and, with the *Saxons*, into *England*, and inſenſibly thro the reſt of *Europe*.

When two *Champions* were choſe to maintain the Pro and the Con, 'twas always requir'd there ſhould be a Sentence of the Judge to authorize the Combat: When the Judge had pronounc'd Sentence, the Accuſed threw a Gage, or Pledge, ordinarily a Glove, or Gantlet; which being taken up by the Accuſer, they were both taken into ſafe Cuſtody till the Day of Battel, appointed by the Judge. See GAGE.

If either of them fled after this, he was declar'd infamous, and deem'd to have committed the Crime imputed to him. Nor were the Accuſer and Accuſed now allow'd to make up the Matter; at leaſt, not without the Conſent of the Judge; which was never granted, without making the Lord Satisfaction for the Right of Succeſſion to the Effects of the Vanquiſhed.

Before the *Champions* took the Field, their Heads were ſhav'd, and they made Oath, 'They believ'd the Perſon 'who retain'd them was in the right; and that they 'wou'd defend his Cauſe to the utmoſt of their Power.' The Weapons they us'd when the Combat was on Foot, were a Sword and Buckler; ſome ſay, in *England*, only a Club and Buckler: when on Horſeback, they were arm'd at all Points. Their Weapons were bleſſed in the Field by the Prieſt, with a world of Ceremony; and each took an Oath he had no Charm upon him.

The Action began with railing, and giving each other ill Language; at the Sound of a Trumpet they were to go to Blows: After the Number of Blows or Rencounters expreſs'd in the *Cartel*, the Judges of the Combat threw a Rod into the Air, to advertiſe the *Champions* that the Combat was ended. If it laſted till Night, or ended with equal Advantage on either ſide, the Accus'd was reputed Victor.

The Puniſhment of the Vanquiſh'd, was that which the Crime merited whereof he was accus'd: If it were a Capital Crime, the Vanquiſh'd was diſarm'd, led out of the Field, and immediately executed, together with the Party whoſe Cauſe he maintain'd. If the conquer'd *Champion* fought in the Cauſe of a Woman, ſhe was burnt. See DUEL.

CHAMPION *of the King*, is an Officer whoſe Buſineſs is, at the Coronation of a King of *England*, to ride into *Weſtminſter-Hall*, arm'd Cap-a-pe, when the King is at Dinner, and throw down his Gantlet by way of Challenge; pronouncing, by a Herald, 'That if any Man ſhall deny, or 'gainſay the King's Title to the Crown, he is there 'ready to defend it in ſingle Combat, &c.' Which done, the King drinks to him, ſending him a gilt Cup with a Cover, full of Wine; which the *Champion* drinks, and has the Cup for his Fee.

This Office, ever ſince the Coronation of *Richard* II. has been continu'd in the Family of *Dymocke*, who held the Mannor of *Scrivelsby* in *Lincolnſhire*, Hereditary from the Family of the *Marmions*, who had it before, by grand Serjeanty; *i. e.* that the Lord thereof ſhall be the King's *Champion*. See SERJEANTY.

CHAMPION- or rather CHAMPAIN-*Lands*, are Lands not inclos'd; or large Fields, Downs, or Places, without Woods or Hedges. See DOWNS.

CHAMOIS *Leather*, popularly call'd SHAMMY, or CHAMMY; a kind of Leather, either dreſs'd in Oil, or tann'd; much eſteem'd for its ſoftneſs, pliancy, &c. See LEATHER.

It is prepar'd from the Skin of the *Chamois*, a kind of *Rupi-Capra*, or wild Goat, called alſo *Iſard*; inhabiting the Mountains of *Dauphine*, *Savoy*, *Piemont*, and the *Pyreneans*.

Beſides the Softneſs and Warmneſs of the Leather, it has the Faculty of bearing Soap without damage, which renders it very uſeful on many Accounts.

In *France*, &c. ſome wear the Skin crude, without any Preparation: It is alſo us'd for the purifying of Mercury; which is done by paſſing it thro the Pores of this Skin, which are very cloſe. See MERCURY.

The true *Chamoiſe Leather* is counterfeited with common Goat, Kid, and even Sheep Skin; the Practice of which makes a particular Profeſſion, call'd by the French *Chamoiſure*. The laſt, tho the leaſt eſteem'd, is yet ſo popular, and ſuch vaſt Quantities prepar'd, eſpecially about *Orleans*, *Marſeilles*, and *Tholouſe*, that it may not be amiſs to give the Method of Preparation.

*The manner of* CHAMOISING, or *of preparing Sheep, Goat, or Kid-skins in Oil, in Imitation of* CHAMOIS.

The Skins being waſh'd, drain'd, and ſmear'd over with Quick-lime on the fleſhy ſide, are folded in two, lengthwiſe, the Wool outwards, and laid on Heaps, and ſo left to ferment eight Days; or, if they had been left to dry after fleaing, 15 Days.

Then they are waſh'd out, drain'd, and half-dry'd; laid on a wooden Leg, or Horſe, the Wool ſtripp'd off with a round Staff for the Purpoſe, and laid in a weak Pit, the Lime whereof had been us'd before, and had loſt the greateſt Part of its force.

After 24 Hours they are taken out, and left to drain 24 more; then put in another ſtronger Pit. This done, they are taken out, drain'd, and put in again, by turns; which begins to diſpoſe them to take Oil: And this Practice they continue for 6 Weeks in Summer, or three Months in Winter; at the end whereof they are waſh'd out, laid on the wooden Leg, and the Surface of the Skin on the Wool ſide peel'd off, to render them the ſofter; then, made into Parcels, ſteep'd a Night in the River, in Winter more; ſtretch'd, ſix or ſeven over one another, on the wooden Leg; and the Knife paſs'd ſtrongly on the Fleſh ſide, to take off any thing ſuperfluous, and render the Skin ſmooth.

Then they are ſtretch'd, as before, in the River; and the ſame Operation repeated on the Wool ſide; then thrown into a Tub of Water with Bran in it, which is brew'd among the Skins till the greateſt Part ſtick to them; and then ſeparated into diſtinct Tubs, till they ſwell, and riſe of themſelves above the Water.

By this means, the Remains of the Lime are clear'd out: They are then wrung out, hung up to dry on Ropes, and ſent to the Mill, with the Quantity of Oil neceſſary to full them: The beſt Oil is that of Stock-Fiſh.

Here, they are firſt thrown in Bundles into the River for 12 Hours, then laid in the Mill-Trough and full'd without Oil till they be well ſoftned; then oil'd with the hand, one by one, and thus form'd into Parcels of four Skins each, which are mill'd and dry'd on Cords a ſecond time, then a third; then oil'd again and dry'd.

This Proceſs is repeated as often as Neceſſity requires: when done, if there be any Moiſture remaining, they are dry'd in a Stove, and made up into Parcels wrapp'd up in Wool: after ſome time they are open'd to the Air, but wrapp'd up again as before, till ſuch time as the Oil ſeems to have loſt all its force, which it ordinarily does in 24 Hours.

The Skins are then return'd from the Mill to the *Chamoiſer*, to be ſcour'd; which is done by putting them in a Lixivium of Wood-Aſhes, working and beating them in it with Poles, and leaving 'em to ſteep till the Lye have had its Effect; then wrung out, ſteep'd in another Lixivium, wrung again, and this repeated till all the Greaſe and Oil be purg'd out. They are then half dry'd, and paſs'd over a ſharp-edg'd Iron Inſtrument, plac'd perpendicular in a Block, which opens, ſoftens, and makes them gentle: laſtly, they are thoroughly dry'd, and paſs'd over the ſame Inſtrument again, which finiſhes the Preparation, and leaves em in form of *Chamois*.

Kid, and Goat-ſkins are *chamois'd* in the ſame manner as thoſe of *Sheep*; excepting that the Hair is taken off, without the uſe of any Lime; and that when brought from the Mill, they undergo a particular Preparation, call'd *Ramalling*; the moſt delicate and difficult of all the others.

It conſiſts in this, that as ſoon as brought from the Mill, they are ſteep'd in a fit Lixivium; taken out, ſtretch'd on a round wooden Leg, and the Hair ſcrap'd off with the Knife; this makes them ſmooth, and, in working, caſt a kind of fine Nap. The Difficulty is in ſcraping them evenly.

CHANCE, a Term we apply to Events, to denote that they happen without any neceſſary Cauſe. See CAUSE.

Our Aim is, to aſcribe thoſe Things to *Chance*, which are not neceſſarily produc'd as the Natural Effects of any proper Cauſe: but our Ignorance and Precipitancy lead us to attribute Effects to *Chance*, which have a neceſſary and determinate Cauſe.

When we ſay a Thing happens *by Chance*, we really mean no more, than that its Cauſe is unknown to us: not, as ſome vainly imagine, that *Chance* it ſelf can be the Cauſe of any Thing. From this Conſideration, Dr. *Bentley* takes occaſion to expoſe the Folly of that old Tenet, *The World was made by Chance*.

The Caſe of the Painter, who unable to expreſs the Foam at the Mouth of a Horſe he had painted, threw his Sponge in Deſpair at the Piece, and, *by Chance*, did that which he could not before do by Deſign, is an eminent Inſtance of the Force of *Chance*: Yet, 'tis obvious, all we here mean by *Chance*, is, that the Painter was not aware of the Effect; or that he did not throw the Sponge with ſuch a View: not but that he actually did every thing neceſſary to produce the Effect; inſomuch, that conſidering the Direction wherein he threw the Sponge, together with its Form, ſpecifick Gravity, the Colours wherewith it was ſmeer'd, and the Diſtance of the Hand from the Piece, it was impoſſible, on the preſent Syſtem of Things, the Effect ſhould not follow.

*Chance* is frequently perſonify'd, and erected into a chimerical Being, whom we conceive as acting arbitrarily, and producing all the Effects, whoſe real Cauſes do not appear to us; in which Senſe, the Word coincides with the מזל, *Fortuna* of the Antients. See FORTUNE.

CHANCE is alſo confounded with *Fate*, and *Deſtiny*. See FATE, and DESTINY; ſee alſo NATURE, GOD, &c.

CHANCE is alſo us'd for the manner of deciding Things, the Conduct or Direction whereof, is left at large, and not reducible to any determinate Rules or Meaſures; or where there is no ground for preference, as at Cards, Dice, Lotteries, &c.

*For the Laws of* CHANCE, *or the Proportion of Hazard in Gaming*; ſee GAME.

The antient *Sors*, or *Chance*, M. *Placette* obſerves, was inſtituted by God himſelf; and in the Old Teſtament, we find ſeveral ſtanding Laws and expreſs Commands which preſcrib'd its uſe on certain Occaſions: Hence, the Scripture ſays, *The Lot*, or Chance, *fell on St.* Matthias; when it was in queſtion who ſhould fill *Judas*'s Place in the Apoſtolate.

Hence alſo aroſe the *ſortes Sanctorum*; or Method of determining Things among the antient Chriſtians, by opening ſome of the Sacred Books, and pitching on the firſt Verſe they caſt their Eye on, as a ſure Prognoſtick of what was to befall them. The *ſortes Homericæ*, *Virgilianæ*, *Præneſtinæ*, &c. us'd by the Heathens, were with the ſame View, and in the ſame manner. See SORTES.

St. *Auguſtin* ſeems to approve of this Method of determining Things future, and owns that he had practis'd it himſelf; grounded on this Suppoſition, that God preſides over *Chance*, and on *Proverbs* 16. *v.* 33.

Many among the modern Divines, hold *Chance* to be conducted in a particular manner by Providence, and eſteem it an extraordinary Way which God uſes to declare his Will, and a kind of immediate Revelation. See PURGATION, *Judicium Dei*, COMBAT, CHAMPION, &c.

CHANCE-MEDLEY, in Law, the accidental killing of a Man, not altogether without the Killer's Fault, tho without any evil Intent.

*Staumford* calls it, *Homicide by Miſadventure*: *Weſt* calls it *Homicide mix'd*; and ſays, it is when the Killer's Ignorance or Negligence is join'd with the *Chance*: as ſuppoſing a Man lopping Trees by the Highway, and a Bough falling chance to kill a Paſſenger; the Party here offends in not having given warning, whereby the Slain might have been induc'd to take more heed. See HOMICIDE.

CHANCEL, part of the Choir of a Church, between the Altar, or Communion Table, and the Baluſtrade, or Rails that incloſe it; where the Miniſter is plac'd at the Celebration of the Communion. See CHURCH, COMMUNION, ALTAR, &c.

The Right of a Seat and a Sepulchre in the *Chancel*, is eſteem'd very honourable. See SEPULCHRE.

The Word comes from the Latin *Cancellum*, which in the lower *Latin* is us'd in the ſame Senſe, from *Cancelli Latices*, or Croſs Bars, wherewith the *Chancels* were antiently incompaſs'd, as they now are with Rails.

CHANCELLOR, an Officer, ſuppos'd originally to have been a *Notary*, or *Scribe*, under the Emperors, and named *Cancellarius*, becauſe he ſat behind a Lattice, call'd by the Latins *Cancelli*, to avoid being crouded by the People. See NOTARY, &c.

*Naudæ*

*Nauda* says, it was the Emperor himself who sat and render'd Justice within the Lattice; the *Chancellor* attending at the Door thereof, whence he took his Title.

Others say, he had it from this, that all Letters, Addresses, Petitions, *&c.* to the King, being first examin'd by him, were *cancell'd* where amiss: Others, because all Patents, Commissions, and Warrants coming from the King, were examin'd and *cancell'd* by him. Others, because he *cancell'd* and annull'd the Sentences of other Courts.

*Du Cange*, from *Joannes de Janua*, fetches the Original of *Chancellor* from *Palestine*, where the Houses being flat, and made in form of a Terrace, with Parapets or Pallisadoes call'd *Cancelli*; those who mounted these Houses to rehearse any Harangue, were call'd *Cancellarii*: whence the Name pass'd to those who pleaded at the Bar, whom he calls *Cancelli forenses*, and at length to the Judge who presided; and lastly to the King's Secretaries.

This Officer is now in great Authority in all Countries: the Person who bears it with us, is the

*Lord High* CHANCELLOR *of England*, the first Person of the Realm, next after the King and Princes of the Blood, in all Civil Affairs. He is the chief Administrator of Justice next the Sovereign; being the Judge of the Court of Chancery. See CHANCERY.

All other Justices are ty'd to the strict Law, but the *Chancellor* has the King's absolute Power to moderate the Rigour of the Written Law, to govern his Judgment by the Law of Nature and Conscience, and to order all things *secundum æquum & bonum*. Accordingly, *Staumford* says, the *Chancellor* has two Powers, the one Absolute, the other ordinary; meaning, that tho by his ordinary Power he must observe the same Form of Procedure as other Judges, yet in his absolute Power he is not limited by any written Law, but by Conscience and Equity. See EQUITY.

The Offices of *Lord Chancellor* and *Lord Keeper*, are by the Statute 5 *Eliz.* made the same thing; till that time they were different; and frequently subsisted at the same Time in different Persons: Sometimes the Lord *Chancellor* had a *Vice-Chancellor*, who was Keeper of the Seal. See KEEPER.

The Keeper was created *per traditionem magni Sigilli*, but the Lord *Chancellor* by Patent; tho now that he has the Keeper's Office, he is created in like manner by giving him the Seal. The *Chancellor* is likewise Speaker of the House of Lords. See PARLIAMENT.

Tho he be sole Judge of the Court of Chancery, yet in Matters of much difficulty he sometimes consults the other Judges; so that this Office may be discharg'd by one who is no profess'd Lawyer, as antiently it commonly was. He has twelve Assistants, or Coadjutors, antiently call'd *Clerici*, as being in Holy Orders, now *Masters in Chancery*, the first whereof is the *Master of the Rolls*. See MASTER *of the Rolls*, MASTERS *in Chancery*, &c.

CHANCELLOR *of a Cathedral*, is the Judge of the Bishop's Court, held in the Cathedral of each Dioceſs. See BISHOP'S *Court*, and CATHEDRAL.

He was antiently call'd *Eccleſiaſticus*, and *Epiſcopi Ecdicus*, the Church-Lawyer. See ECCLESIASTICUS, ADVOCATE, *&c.*

In the *Monaſticon* his Office is thus deſcrib'd, *viz.* to hear the Leſſons and Lectures read in the Church, either by himself or his Vicar; to correct and set right the Reader when he reads amiss; to inspect Schools, to hear Causes, apply the Seal, write and dispatch the Letters of the Chapter, keep the Books, to take care there be frequent Preachings, both in the Church and out of it, and to assign the Office of Preaching to whom he lists.

CHANCELLOR *of the Dutchy of Lancaster*, is an Officer, the Head of that Court; his Business is to judge and determine all Controversies between the King, and his Tenants of the Dutchy Land; and otherwise to direct all the King's Affairs relating to that Court. See DUTCHY *Court*.

CHANCELLOR *of the Exchequer*, is an Officer, suppos'd by some to have been created for qualifying Extremities in the Exchequer. See EXCHEQUER.

He sits in that Court and the Exchequer Chamber, and, with the rest of the Court, orders Things to the King's best benefit. He is always in Commission with the Lord Treasurer for letting Lands accruing to the Crown by Dissolution of Abbeys, and otherwise: He has Power, with others, to compound for Forfeitures on Penal Statutes, Bonds, and Recognizances enter'd into by the King.

He has a great Authority in managing the Royal Revenue, and in Matters of First-Fruits. See REVENUES.

The Court of Equity, in the Exchequer Chamber, is held before the Lord Treasurer, *Chancellor*, and Barons, as that of Common Law before the Barons only. See BARON, *&c.*

CHANCELLOR *of an University*, is he who Seals the *Diplomas* or Letters of Degrees, Provision, *&c.* given in the University. See UNIVERSITY.

The *Chancellor* of *Oxford* is their Chief Magistrate, elected by the Students themselves: His Office is *durante Vita*, to govern the University, preserve and defend its Rights and Privileges, convoke Assemblies, and do Justice among the Members under his Jurisdiction.

Under the *Chancellor* is the *Vice-Chancellor*, who is chosen annually; being nominated by the *Chancellor*, and elected by the University in Convocation. His Business is to supply the *Chancellor*'s Absence.

At his Entrance upon his Office, he chuses four *pro Vice-Chancellors*, out of the Heads of Colleges, to one of whom he deputes his Power in his absence.

The *Chancellor* of *Cambridge*, is in most respects the same with that of *Oxford*, only he does not hold his Office *durante Vita*, but may be elected every three Years.

He has under him a Commissary, who holds a Court of Record of Civil Causes, for all Persons of the University under the Degree of Masters of Arts.

The *Vice-Chancellor* of *Cambridge* is chosen annually by the Senate, out of two Persons nominated by the Heads of the several Colleges and Halls.

CHANCELLOR *of the Order of the Garter*, and other Military Orders, is an Officer who seals the Commissions, and Mandates of the Chapter and Assembly of the Knights, keeps the Register of their Deliberations, and delivers Acts thereof under the Seal of the Order. See GARTER, *&c.*

CHANCERY, the grand Court of Equity and Conscience, instituted to moderate the Rigour of the other Courts, that are ty'd to the strict Letter of the Law. See COURT, LAW, and EQUITY.

The Judge of this Court is the Lord High *Chancellor*, whose Function see under CHANCELLOR.

The Proceedings of this Court are either *Ordinary*, like other Courts, according to the Laws, Statutes, and Customs of the Nation, and in *Latin*, by granting out Writs Remedial and Mandatory, Writs of Grace, *&c.* see WRIT, *&c.* Or *Extraordinary*, according to Equity and Conscience, and in *English*, by Bills, Answers, and Decrees, to examine Frauds, Combinations, Trusts, secret Uses, *&c.* to soften the Severity of Common Law, and rescue Men from Oppression; to relieve 'em against Cheats, unfortunate Accidents, Breaches of Trust, *&c.*

Out of the Court of *Chancery*, are issu'd Writs or Summons's for Parliaments and Convocations, Edicts, Proclamations, Charters, Protections, Patents, Safe Conducts, Writs of *Moderata*, *Miſericordia*, &c. See WRIT, SUMMONS, CONVOCATION, EDICT, PROCLAMAION, CHARTER, *&c.*

Here are also seal'd and enroll'd Letters Patent, Treaties and Leagues, Deeds, Writs, Commissions, *&c.* See PATENT, DEED, *&c.*

The Officers of this Court, beside the Lord *Chancellor*, who is supreme Judge, are, the *Master of the Rolls*, who, in the *Chancellor*'s Absence, hears Causes and gives Orders; and twelve *Masters of Chancery*, who are Assistants, and sit by turns on the Bench; see MASTERS, *&c.*

For the *English* Part of this Court are *Six Clerks*, who have each under him about fifteen more, in the Nature of Attorneys of the Court: Two chief *Examiners*, for examining Witnesses, who have each five or six Clerks apiece: One principal *Register*, who has four or five Deputies: *Clerk of the Crown*, who makes Writs, Commissions, *&c.* *Warden of the Fleet*: *Serjeant at Arms*, who bears the Mace before the *Chancellor*; and the *Usher* and *Crier* of the Court. See SIX CLERKS, REGISTER, WARDEN, SERJEANT, *&c.*

To the *Latin* Part belong the twenty four *Curſitors*, and their Clerks, who make out original Writs; *Clerks of the petty Bag*; *Clerks of the Hanaper*; *Controller of the Hanaper*; *Clerk of Appeal*; *Clerk of the Faculties*; *Sealer Chafe Wax*; *Clerk of the Patents*, *of Preſentations*, *Diſmiſſions*, *Licences to alienate*, *Enrollments*, *Protections*, *Subpœnas*, *Affidavits*, &c. See each under its proper Article, CURSITOR, CLERK, CHAFE-*Wax*, &c.

CHANDELIERS, in Fortification, are wooden Stakes six Foot high, and six or seven apart, between which are plac'd Fascines, to cover the Workmen on Approaches. See FASCINES.

These are sometimes made to prevent the Enemy from seeing what passes within.

The Difference between *Chandeliers* and *Blinds* consists in this, that the former serve to cover the Pioneers before, and the latter also cover them over Head. See BLINDS.

CHANGE, in Commerce, *&c.* See EXCHANGE.

CHANGER, an Officer belonging to the Mint, who changes Money for Gold or Silver Bullion. See MINT.

*Money*-CHANGER, is a Banker, who deals in the Exchange, Receipt, and Payment of Monies. See BANK.

CHANGES, in Arithmetic, *&c.* the Permutations or Variations of any Number of Quantities; with regard to their Position, Order, *&c.* See COMBINATION.

*To find all the poſſible Changes of any Number of Quantities, or how oft their Order may be vary'd.*

Suppoſe

Suppoſe two Quantities *a* and *b*. Since they may be either wrote *a b* or *b a*; 'tis evident their *Changes* are 2 = 2. 1. Suppoſe the Quantities *a b c*: their *Changes* will be as in the Margin; as is evident by combining *c* firſt with *a b*, then with *b a*; and hence the Number of *Changes* ariſes 3. 2. 1 = 6. If the Quantities be 4, each may be combin'd four ways with each Order of three; whence their Number of *Changes* ariſes 6. 4 = 4. 3 2 1. = 24. Wherefore, the Number of Quantities ſuppos'd in the Number of *Changes*, will be *n n*—1. 12—2. *n*—3. *n*—4 &c.

| | |
|---|---|
| *c a b* | |
| *a c b* | |
| *a b c* | |
| —— | |
| *c b a* | |
| *b c a* | |
| *a c* | |

If the ſame Quantity occur twice, the *Change* of 2 will be found *b b*, of 3 *b a b*, *a b b*, *b b c*; of 4 *c b a b*, *b c a b*, *b a b c*. And thus the Number of *Changes* in the firſt Caſe will be 1 =, 2. 1, : 2. 1. in the ſecond, 3 =, 3. 2. 1, : 2. 1 ; in the third 1 2 =, 4. 3. 2. 1 : 2. 1.

If a fifth Letter be added, in each Series of four Quantities, it will beget five Changes, whence the Number of all the *Changes* will be 60 =, 5. 4, 3. 2. 1, : 2. 1. Hence *Changes* will be *n*. *n*—1. *n*—2. *n*—3. *n*—4 &c.

From theſe ſpecial *Formulæ* may be collected a general one, *viz.* if *n* be the Number of Quantities, and *m* the Number which ſhews how oft the ſame Quantity occurs; we ſhall have (*n*, *n*—1. *n*—2. *n*—3. *n*—4. *n*—5. *n*—6. *n*—7. *n*—8. *n*—9. &c.) : *m*—1. *m*—2. *m*—3. *m*—4. &c.) The Series being to be continu'd, till the continual Subſtraction of Unity from *n* and *m* leave 0. After the ſame manner we may proceed further, till putting *n* for the Number of Quantities, and *l*, *m*, *r*, &c. for the Number that ſhews how oft any of them is repeated, we arrive at an univerſal Form, (*n.n*—1. *n*—2. *n*—3. *n*—4. *n*—5. *n*—6. *n*—7. *n*—8. &c.) : *l*. *l*—1. *l*—2. *l*—3. *l*—4. *l*—5. &c.

Suppoſe, for Inſtance, *n* = 6, *l* = 3, *r* = 0. The Number of *Changes* will be (6. 5. 4. 3. 2. 1) : 3. 2. 1. 3 2 1) = (6. 5. 4) : 3. 2 (= 2. 5. 2 = 20.

Hence, ſuppoſe thirteen Perſons at a Table, if it be requir'd how oft they may *change* Places, we ſhall find the Number 13.12.11.10.9.8.7.6.5.4.3.2.1. = 6227020800.

*In this manner may all the poſſible Anagrams of any Word be found* in all Languages, and that without any Study: ſuppoſe, *v. g.* it were requir'd to find the Anagrams of the Word *Amor*, the Number of *Changes* will be

| | | | | |
|---|---|---|---|---|
| *a* | *o a m* | *r m o a* | *m a r o* | *a r o m* |

| *o m a* | *o r m a* | *r m a o* | *o a r m* | *a r m o* |
| *m o a* | *o m r a* | *m r a o* | *o a m r* | *a m r o* |
| *m a o* | *o m a r* | | —— | *a m o r* |
| | | | *r a o m* | |

The Anagrams therefore of the Word *Amor*, in the *Latin* Tongue, are *Roma*, *Mora*, *Maro*, *Ramo*, *Armo*.

Whether this new Method of Anagrammatizing be like to prove of much ſervice to that Art, is left to the Poets.

CHANNEL, in Anatomy, Chirurgery, &c. See CANAL.

CHANNEL, or *Bed of a River*. See RIVER.

CHANNEL is alſo us'd for divers Arms of the Sea, where the Water runs within the Land; as alſo for certain narrow Seas, confin'd between two adjacent Continents, or an Iſland and Continent, &c. See SEA.

In this Senſe, we ſay, *St.* George's *Channel*; *the* Britiſh *Channel*; *the Channel of the Black Sea*, *of* Conſtantinople, &c.

CHANNEL, in Building. See GUTTER, PIPE, PLUMBERY, &c.

CHANNEL is particularly us'd in Architecture, for a Part of the *Ionic* Capital, a little hollow'd, in form of a *Canal*; lying under the Abacus, and running the whole length of the Circumvolution of the Volute; inclos'd by a Liſtel. See *Ionic* CAPITAL.

CHANNEL *of the Larmier*, is the Soffit of a Cornice; which makes the pendant *Mouchette*. See LARMIER, and SOFFIT.

CHANNEL *of the Volute*, in the *Ionic* Capital, is the Face of its Circumvolution; inclos'd by a Liſtel. See VOLUTE.

CHANNELINGS. See FLUTINGS.

CHANT, or CHAUNT. See SONG.

CHANT, *Cantus*, is particularly us'd for the Vocal Muſick of Churches.

In Church Hiſtory we meet with divers Kinds of *Chant*, or *Song*: The firſt is the *Ambroſian*, eſtabliſh'd by St. *Ambroſe*. See AMBROSIAN *Chant*.

The ſecond the *Gregorian Chant*, introduc'd by Pope *Gregory* the Great, who eſtabliſh'd Schools of *Chantors*, and corrected the Church Song.

This is ſtill retain'd in the Church under the Name of *Plain Song*: At firſt it was call'd the *Roman Song*.

The *Plain*, or *Gregorian Chant*, is where the Choir and the People ſing in Uniſon, or all together in the ſame manner. See GREGORIAN *Chant*.

CHANT-*Royal*. See COMEDY.

CHANTLATE, in Building, a piece of Wood faſten'd near the Ends of the Rafters, and projecting beyond the Wall, to ſupport two or three Rows of Tiles, ſo plac'd to prevent the Rain-Water from trickling down the Sides of the Wall.

CHANTER, or CHAUNTOR, a Perſon who ſings in the Choir of a Cathedral. See CHOIR, &c.

All great Chapters have *Chantors* and Chaplains to eaſe and aſſiſt the Canons, and officiate in their Abſence. See CHAPTER, CANON, &c.

St. *Gregory* firſt inſtituted the Office of *Chantors*, erecting them into a Body, call'd *Schola Cantorum*: tho *Anaſtaſius* ſeems to attribute their Riſe to Pope *Hilary*, who liv'd an hundred Years before *Gregory*.

But the Word grows obſolete in this Senſe, and inſtead thereof we uſe the Word *Choriſter*, or Singing-Man. See CHORISTER.

CHANTOR is us'd, by way of Excellence, for the *Præcentor*, or Maſter of the Choir; which is one of the firſt Dignities of the Chapter.

The *Chantor* bears the Cope and the Staff at ſolemn Feſtivals; and gives Tune to the reſt at the beginning of Pſalms and Anthems. See PRÆCENTOR.

The Antients call'd the *Chantor Primicerius*. See PRIMICERIUS.

To him formerly belong'd the Direction of the Deacons, and other inferior Miniſters.

CHANTRY, a Chapel endow'd for the maintaining a Prieſt, or Prieſts, to ſing Maſs for the Souls of the Founders.

CHAOLOGY, the Hiſtory or Deſcription of the *Chaos*. See CHAOS.

*Orpheus*, in his *Chaology*, ſets forth the different Alterations, Secretions, and divers Forms Matter went thro till it became inhabitable; which amounts to the ſame with what we otherwiſe call *Coſmogony*. See COSMOGONY.

Dr. *Burnet* likewiſe gives us a *Chaology*, in his Theory of the Earth. He repreſents the *Chaos*, as it was at firſt, entire, undivided, and univerſally rude, and deform'd; or the *Tohu Bohu*: then ſhews how it came divided into its reſpective Regions; how the homogeneous Matter gather'd it ſelf apart from all of a contrary Principle; and laſtly, how it harden'd and became a ſolid habitable Globe. See ELEMENT.

CHAOS, among the antient Philoſophers, was deſcrib'd a dark, turbulent Atmoſphere; or a diſorderly Syſtem, or Mixture of all ſorts of Particles together, without any Form or Regularity: out of which the World was form'd See WORLD.

*Chaos* is every where repreſented as the firſt Principle, Ovum, or Seed of Nature and the World. All the antient Sophiſts, Sages, Naturaliſts, Philoſophers, Theologues, and Poets, hold that *Chaos* was the Eldeſt and Firſt Principle, τὸ Αρχαῖον χάος.

The *Barbarians*, *Phenicians*, *Egyptians*, *Perſians*, &c. all refer the Origin of the World to a rude, mix'd, confus'd Maſs of Matter. The *Greeks*, *Orpheus*, *Heſiod*, *Menander*, *Ariſtophanes*, *Euripides*, and the Writers of Cyclic Poems, ſpeak of the firſt *Chaos*: The *Ionic*, and *Platonic* Philoſophers build the World out of it. The *Stoics* hold, that as the World was firſt made of a *Chaos*, it ſhall at laſt be reduc'd to a *Chaos*; and that all its Periods and Revolutions in the mean time, are only Tranſitions from one *Chaos* to another. Laſtly, the *Latins*, as *Ennius*, *Varro*, *Ovid*, *Lucretius*, *Statius*, &c. are all of the ſame Opinion. Nor is there any Sect or Nation whatever, that does not derive their Διακόσμεσιν, the Structure of their World, from a *Chaos*.

The Opinion aroſe among the *Barbarians*, whence it ſpread to the *Greeks*, and from the *Greeks* to the *Romans* and other Nations.

Dr. *Burnet* obſerves, that beſides *Ariſtotle* and a few other *pſeudo-Pythagoreans*, no body ever aſſerted, that our World was always, from Eternity, of the ſame Nature, Form, and Structure as at preſent: but that it had been the ſtanding Opinion of the wiſe Men of all Ages, that what we now call the Terreſtrial Globe, was an uninform'd, indigeſted Maſs of heterogeneous Matter, call'd *Chaos*; and no more than the Rudiments and Materials of the preſent World.

It does not appear who firſt broach'd the Notion of a *Chaos*. *Moſes*, the Eldeſt of all Writers, derives the Origin of his World, from a Confuſion of Matter, dark, void, deep, without form, which he calls *Tohu Bohu*; which is preciſely the *Chaos* of the *Greek* and *Barbarian* Philoſophers. And hence, poſſibly, might thoſe Philoſophers derive their *Chaos*, with ſome Alteration and Interpolation.

*Moſes* goes no further than the *Chaos*; nor tells us whence it took its Origin, or whence its confus'd State; and where *Moſes* ſtops, there, preciſely, do all the reſt. See ABYSS.

Dr. *Burnet* endeavours to ſhew, that as the antient Philoſophers, &c. who wrote of the Coſmogony, acknowledg'd a *Chaos* for the Principle of their World; ſo do the Divines, or Writers of the Theogony derive the Origin or Generation of their Gods from the ſame Principle. See COSMOGONY, and THEOGONY; ſee alſo GOD.

Mr. *Whiſton* ſuppoſes the antient *Chaos*, the Origin of our Earth, to have been the Atmoſphere of a Comet; which, tho new, yet, all things conſider'd, is not an improbable Aſſertion. He endeavours to make it out by many Arguments, drawn from the Agreement which appears to be between them.

So that, according to him, every Planet is a Comet, form'd into a regular and laſting Conſtitution; and plac'd at a proper Diſtance from the Sun, revolving in a nearly circular Orbit: and a Comet is a Planet either beginning to be deſtroy'd, or re-made; that is, a *Chaos* or Planet unform'd, or in its primæval State, and plac'd, as yet, in an Orbit very eccentrical. See COMET.

CHAPEAU, or CHAPPEAU, *Hat*, in Heraldry, is us'd as a Mark of Eccleſiaſtical Dignity, eſpecially of that of Cardinals, which is call'd abſolutely the *red Chapeau*.

It is flat, and very narrow atop, but broad-brim'd, adorn'd with long ſilken Strings interlac'd; ſuſpended from within with five Rows of Taſſels, call'd by the Italians *Fiocci*, increaſing in Number as they come lower. The Hat was given them by *Innocent* IV. in 1250, but was not us'd in Arms till the Year 1300. See CARDINAL.

Till that time, the Cardinals were repreſented with Mitres. See MITRE.

Archbiſhops and Patriarchs bear the green Hat, with four Rows of Taſſels; Biſhops wear it of the ſame Colour with three; Abbots and Apoſtolical Protonotaries with two.

The *Chapeau* is wore over the Shield by way of Creſt, as Mitres and Coronets are. See CREST.

CHAPEAU is ſometimes alſo us'd as a Mark of Secular Dignity, particularly for the Cap, or Coronet arm'd with Ermin, born by Dukes, *&c.* See CORONET.

The Creſt is born on the *Chapeau*; and by the *Chapeau* the Creſt and Coat are ſeparated; it being a Rule, that no Creſt muſt touch the Shield immediately. See CREST, *&c.*

CHAPEL, or CHAPPEL, a kind of little Church, ſerv'd by an Incumbent under the Denomination of a *Chaplain*. See CHURCH, CHAPLAIN, *&c.*

There are two Kinds of *Chapels*, the one *Conſecrated*, and held as *Benefices*; ſee BENEFICE: the other *Secular*, being of the Nature of *Oratories*. See ORATORY.

The firſt are built apart and at a diſtance from the Pariſh-Church; being neither Pariſhes, Cathedrals, nor Priories, but ſubſiſting of themſelves.

Theſe are call'd by the Canoniſts *Sub-Dio*, and by us *Chapels of Eaſe*; as being erected at a diſtance from the Mother Church, where the Pariſh is large and wide, for the Eaſe and Conveniency of ſome of the Pariſhioners who reſide far off.

They are ſerv'd by ſome inferior Curate, provided either by the Rector of the Pariſh, or by thoſe for whoſe Eaſe and Benefit they are intended.

The ſecond Kind are frequently built in, or adjoining to a Church, as a Part thereof; having only a Deſk, *&c.* to read Prayers in; and, in the *Romiſh* Churches, an Altar, *&c.* to celebrate Maſs on: but without any Baptiſtery, or Font.

Theſe the Canoniſts call *Sub Tecto*. They are generally erected by ſome conſiderable Perſon, for the Uſe of their own Families; *Ut ibidem Familiaria Sepulchra ſibi conſtituant.*

The twenty firſt Canon of the Council of *Agda*, held in 506, allows private Perſons the uſe of *Chapels*; but with Prohibition to all Clerks to officiate in them without leave from the Biſhop.

*Free* CHAPELS, are thoſe *Chapels of Eaſe* which have a ſettled Revenue for perpetual Maintenance of the Curate, *&c.* by charitable Donatives of Lands, or Rents beſtow'd on 'em; ſo as not to be any Charge either to the Rector, or the Pariſhioners.

There are ſeveral Collegiate Churches in *France*, which they call *Saintes Chapelles*, Holy Chapels; as thoſe of *Paris*, *Dijon*, *Bourges*, *Bourbon*, &c. ſo call'd, by reaſon there are Relicks in them. See CHAPLAIN.

The Word *Chapel*, according to ſome, comes from the *Greek* καπελα, little Tents, or Booths, ſet up by Traders in Fairs to ſhelter them from the Weather. *Papias* fetches it both from the *Greek* and *Latin*, *quaſi capiens* λαον, or, *populum* vel *laudem*: Others derive it from the *Chape*, or Cope which ſerv'd to cover the Body: Others, *à pellibus Caprarum*; becauſe theſe Places were antiently cover'd with Goatſkins. *Rebuff* derives it *de Cappa*, St. *Martin*'s *Cope*, which the Kings of *France* carry'd to War with them as their Standard, and preſerv'd very carefully in particular Tents, thence call'd *Chapels*.

Hence, all thoſe Places where Relicks were preſerv'd came to be call'd *Chapels*; and the Perſons who had the Care of them, *Chaplains*. See RELICKS.

CHAPEL is alſo a Name given to a Printing Workhouſe; by reaſon, ſay ſome Authors, Printing was firſt actually perform'd in *Chapels*.

In this Senſe, we ſay, *The Orders*, or Laws *of the Chapel*, *the Secrets of the Chapel*, &c. See PRINTING.

*Knights of the* CHAPEL, was an Order of Knights inſtituted by King *Henry* VIII. in his Teſtament, to the Number of 13; tho theſe have been ſince increas'd to the Number of 26, call'd alſo *Poor Knights*.

They are not really Knights of the Order of the Garter; but are, as it were, their Aſſiſtants or Deputies, ſerving to diſcharge all their Offices in the Funeral Services of the Kings of *England*. See GARTER.

They are ſubject to the Office of the *Canons of Windſor*, and live on Penſions which the Order aſſigns them.

They bear the blue or red Cloke, with the Arms of St. *George* on the left Shoulder; but the Cloke is only Cloth, and they wear no Garter: which diſtinguiſhes them from the Knights of the Garter.

CHAPERON, CHAPERONNE, or CHAPEROON, properly ſignifies a ſort of Hood, or Covering of the Head, antiently wore both by Men and Women, the Nobles, and the Populace, and afterwards particularly affected to the Doctors and Licentiates in Colleges, *&c.*

Hence, the Name paſs'd to certain little Shields, and other Funeral Devices, plac'd on the Foreheads of the Horſes that drew the Hearſes to pompous Funerals, and which are ſtill call'd *Chaperoons*, or *Shafferoons*; by reaſon ſuch Devices were originally faſten'd on the *Chaperonnes*, or Hoods, wore by thoſe Horſes with their other Coverings of State.

CHAPITERS, in Law, were antiently a Summary, or Content of ſuch Matters as are to be inquir'd of, or preſented before Juſtices in Eyre, Juſtices of Aſſize, or of Peace, in their Seſſions.

*Chapiters* are now more uſually taken for Articles deliver'd by the Mouth of the Juſtice in his Charge to the Inqueſt: Tho it appears from *Bracton* and *Briton*, they were formerly Exhortations given by the Juſtices, for the good Obſervation of the Laws, and the King's Peace; firſt read in open Court, then deliver'd in Writing to the Grand Inqueſt: which the Grand Jury, or Inqueſt, were likewiſe to anſwer upon their Oaths, either affirmatively or negatively.

CHAPLAIN, properly ſignifies, a Perſon provided of a *Chapel*; or who diſcharges the Offices thereof. See CHAPEL.

CHAPLAIN is alſo us'd for an Eccleſiaſtical Perſon, in the Houſe of a Prince, or a Perſon of Quality, who officiates in their *Chapels*, &c.

There are 48 *Chaplains* to the King, who wait four each Month, preach in the Chapel, read the Service to the Family, and to the King in his private Oratory, and ſay Grace in the Abſence of the Clerk of the Cloſet.

While in waiting, they have a Table and Attendance, but no Salary.

The firſt *Chaplains* are ſaid to have been thoſe inſtituted by the former Kings of *France*, for preſerving the *Chape*, or *Cape*, with the other Relicks of St. *Martin*, which the Kings kept in their Palace, and carry'd out with them to War. The firſt *Chaplain* is ſaid to be *Gul. de Meſmes*, *Chaplain* to S. *Louis*.

Antiently, the King's Almoners were call'd *Chaplains*. See ALMONER.

CHAPLAIN *in the Order of Malta*, is us'd for the ſecond Rank, or Claſs, in that Order; otherwiſe call'd *Diaco*.

The *Knights* make the firſt Claſs, and the *Chaplains* the ſecond. See MALTA.

CHAPLAINS *of the Pope*, are the Auditors, or Judges of Cauſes in the ſacred Palace; ſo call'd, becauſe the Pope antiently gave Audience in his *Chapel*, to judge of Caſes ſent from the ſeveral Parts of Chriſtendom.

He hither ſummon'd, as Aſſeſſors, the moſt known Lawyers of his Time, who hence acquir'd the Appellation of *Capellani*, *Chaplains*.

'Tis from the Decrees formerly given by theſe, that the Body of *Decretals* is compos'd: Their Number Pope *Sixtus* IV. reduc'd to twelve. See DECRETAL.

If it be true, that the Word *Chaplain* was firſt apply'd to thoſe who preſerv'd St. *Martin*'s *Chape*, as above, the Word muſt be deriv'd from *Capa*, *Chape*; not *Capella*, of *Capſula*, or *Capſa*, a Caſe, as others imagine.

Some ſay, the Shrines of Relicks were cover'd with a kind of *Tent*, *Cape*, or *Capella*, *i. e.* little Cape; and that hence the Prieſts who had the Care of them, were call'd *Chapelains*. In time, theſe Relicks were repoſited in a little Church, either contiguous to a larger, or ſeparate from it; and the ſame Name, *Capella*, which was given the Cover, was alſo given to the Place where it was lodg'd: and hence, the Prieſt who look'd to it came to be call'd *Chaplain*. See COPE.

CHAPLET, a String of Beads, us'd in the *Romiſh* Church, to keep account of the Number of *Pater-Noſters*, and *Ave-Marys* to be rehears'd in Honour of God and the Holy Virgin.

*Chaplets* are otherwiſe call'd *Pater-Noſters*. There are *Chaplets* of Coral, of Diamonds, of *Callumbou*, of Wood from St. *Lucia*, &c.

A *Roſary* is a *Chaplet* of fifteen Decads of *Ave-Marys*. See ROSARY.

*Menage* derives the Origin of the Word from the Reſemblance the Thing bears to a Hat, *Chapeau*; which is call'd by the *Italians* and modern *Latins*, *Capellina*; the firſt more frequently call it *Corona*.

*Larrey* and *P. Viret* aſcribe the firſt Invention of the *Chaplet* to *Peter* the Hermit, well known in the Hiſtory of the *Croiſades*.

There is a *Chaplet* of our Saviour, conſiſting of 33 Beads, in honour of his 33 Years living on Earth, inſtituted by F. *Michael*, the *Camaldulan*.

The Orientals have a kind of *Chapelets*, which they call *Chains*, and which they uſe in their Prayers, rehearſing one of the Perfections of God on each Link, or Bead. The Great *Mogul* is ſaid to have eighteen of theſe Chains, all precious Stones; ſome Diamonds, others Rubies, Pearls, *&c.*

The *Turks* have likewiſe *Chaplets*, which they bear in the Hand, or hang at the Girdle: But, F. *Dandini* obſerves, they differ from thoſe us'd by the *Romaniſts*, in that they are all of the ſame Bigneſs, and have not that Diſtinction into Decads; tho they conſiſt of ſix Decads, or 60 Beads. He adds, that they have preſently run over the *Chapelet*, the Prayers being extremely ſhort; having only theſe Words, *Praiſe to God*; or theſe, *Glory to God*, for each Bead.

Beſides the common *Chapelet*, they have likewiſe a larger one, conſiſting of 100 Beads, which has ſome Diſtinction, being divided by little Threads into three Parts, on one of which they repeat thirty times *Soubhan lallah*, i.e. *God is to be praiſed*; on another, *Ellamd lallah*, *Glory to God*; and on the third, *Alla echer*, *God is Great*. Theſe thrice 30 times making only 90; to complete the Number 100, they add a Number of other Prayers for the Beginning of the *Chaplet*.

He adds, that the *Mahometan Chapelet* appears to have had its riſe from the *Mea beracoth*, or *hundred Benedictions*; which the *Jews* are oblig'd to repeat daily, and which we find in their Prayer-Books: The *Jews* and *Mahometans* having this in common, that they ſcarce do any thing without pronouncing ſome Laud, or Benediction.

CHAPLET, in Architecture, is a little Ornament cut or carv'd into round Beads, Pearls, Olives, and Pater-Noſters; as is frequently done in *Baguettes*.

A *Chaplet*, in effect, is little elſe but a *Baguette* enrich'd with Sculpture. See BAGUETTE.

CHAPPAR, a Courier of the King of *Perſia*, who carries Diſpatches from Court to the Provinces, and from the Provinces to Court. See COURIER.

The Poſts, M. *Tavernier* tells us, are not eſtabliſh'd and regulated in *Perſia* as among us: When the Court ſends out a *Chappar*, the Sophi's Maſter of the Horſe furniſhes him with a ſingle Horſe, how long ſoever his Journey be, and a Man to run after him: when his Horſe is weary, he takes that of the firſt Horſeman he meets with, who dares not make the leaſt Refuſal, and ſends his own home by the Man who follows him.

For the Maſter of the new Horſe he has taken, he muſt run, or at leaſt ſend after the *Chappar* to re-take him, when the *Chappar* diſmounts ſome other Horſeman to change him.

The Word, in the original *Perſian*, ſignifies *Courier*.

CHAPPE, in Heraldry, the Partition of an Eſcutcheon, by Lines drawn from the Centre of the upper Edge to the Angles below, as in the Figure adjoining, which they blazon, *Chappe Or, and Vert.*

The Sections of the Sides are to be of a different Colour from the reſt. *Mackenzy* calls it, *A Chief Party per bend dexter*, or *ſiniſter*, or both. See CHAPPEAU, or CHAPEAU.

CHAPPEL, or CHAPEL. See CHAPEL.

CHAPTER, *Capitulum*, a Community of Eccleſiaſticks, who ſerve a Cathedral or Collegiate Church. See CATHEDRAL, and COLLEGIATE.

The Chief, or Head of the *Chapter*, is the *Dean*: The Body conſiſts of *Canons*, or *Prebendaries*, &c. See DEAN; ſee alſo CANON, and PREBENDARY.

The *Chapter* has now no longer any Share in the Adminiſtration of the Dioceſs, during the Life of the Biſhop; but ſucceeds to the whole Epiſcopal Juriſdiction during the Vacancy of the See.

The Origin of *Chapters* is deriv'd from hence, that antiently the Biſhops had their Clergy reſiding with them in their Cathedrals, to aſſiſt them in the Performance of Sacred Offices, and in the Government of the Church; and even after Parochial Settlements were made, there were ſtill a Body of Clerks who continu'd with the Biſhop, and were indeed his Family, maintain'd out of his Income.

After the Monaſtick Life grew into requeſt, many Biſhops choſe Monks rather than Seculars.

Theſe Bodies, either of Monaſticks or Seculars, had the ſame Privilege of chuſing the Biſhop, and being his Council; which the whole Clergy of the Dioceſs had before: But, by degrees, their Dependance on the Biſhop grew leſs and leſs; and then they had diſtinct Parcels of the Biſhop's Eſtate aſſign'd them for their Maintenance; till at laſt, the Biſhop had little more left than the Power of viſiting them. See BISHOP.

On the other hand, theſe *Capitular* Bodies by degrees alſo loſt their Privileges; particularly that of chuſing the Biſhop, for which the Kings of *England* had a long ſtruggle with the Pope: but at laſt, *Henry* VIII. got this Power veſted in the Crown; and now the Deans and *Chapters* have only the Shadow of it.

The ſame Prince likewiſe expell'd the Monks from the Cathedrals, and plac'd Secular Canons in their room; thoſe he thus regulated, are call'd *Deans and Chapters of the new Foundation*; ſuch are *Canterbury*, *Wincheſter*, *Worceſter*, *Ely*, *Carliſle*, *Durham*, *Rocheſter*, and *Norwich*: ſuch alſo are the *Chapters* of the four new Sees, of *Peterborough*, *Oxford*, *Gloceſter*, and *Briſtol*. See DEAN.

CHAPTER, is alſo us'd for the Aſſemblies held by Religious and Military Orders, for deliberating on their Affairs, and regulating their Diſcipline.

*Papias* ſays, they are ſo call'd, *quod Capitula ibi legantur*.

The Eſtabliſhment of General *Chapters* of Religious Orders, is owing to the *Ciſtercians*, who held the firſt in 1116, and were ſoon follow'd by the other Orders.

CHAPTER is alſo us'd for a Diviſion of a Book; contriv'd for keeping Matters more clear and diſtinct.

The Antients were unacquainted with the Diviſion of Books into *Chapters* and *Articles*. *Papias* ſays, the Name was given it, *quod ſit alterius ſententiæ* Caput, or *quod* Capiat *totam ſummam*. St. *Auguſtine* compares *Chapters* to Inns; which refreſh the Reader, as thoſe the Traveller.

*The three* CHAPTERS, is a Phraſe famous in Eccleſiaſtical Hiſtory, ſignifying a Volume publiſh'd by *Theodoret*, an Adherent of *Neſtorius*, againſt St. *Cyril*; conſiſting of a Letter of *Ibas*, Prieſt of *Edeſſa*, to *Marius*, a Biſhop in *Perſia*; of Extracts from the Works of *Diodorus* of *Tarſus*, and *Theodorus* of *Mopſueſtis*, wherein the ſame Doctrines were taught, that were contended for by *Neſtorius*: and of two Pieces of *Theodoret*, the one againſt the Council of *Epheſus*, the other againſt the Anathemas of St. *Cyril*.

Theſe make the *three Chapters*; which have been, ſince, condemn'd by various Councils and many Popes.

CHAPTREL. See IMPOST.

CHARACTER, or CARACTER, in its general Senſe, ſignifies a Mark, or Figure drawn on Paper, Metal, Stone, or other Matter, with a Pen, Graver, Chiſſel, or other inſtrument, to ſignify, or denote any thing.

The Word is *Greek*, χαρακτὴρ, form'd from the Verb χαράσσειν, *inſculpere*, *to ingrave*, *impreſs*, &c.

The various Kinds of *Characters* may be reduc'd to three Heads, *viz. Literal Characters*, *Numeral Characters*, and *Abbreviations*.

LITERAL CHARACTER, is a Letter of the Alphabet, ſerving to indicate ſome articulate Sound, expreſſive of ſome Idea, or Conception of the Mind. See ALPHABET.

Theſe may be divided, with regard to their Nature and Uſe, into *Nominal*, *Real*, and *Emblematical*.

*Nominal* CHARACTERS are thoſe we properly call *Letters*; which ſerve to expreſs the Names of Things. See LETTER.

*Real* CHARACTERS, are thoſe that inſtead of Names, expreſs Things, and Ideas. See IDEA, *&c.*

*Emblematical*, or *ſymbolical* CHARACTERS, have this in common with *real* ones, that they expreſs the Things themſelves; but have this further, that they in ſome meaſure perſonate them, and exhibit their Form: Such are the Hieroglyphics of the antient *Egyptians*. See HIEROGLYPHIC.

*Literal Characters* may be again divided, with regard to their Invention and Uſe, into *Particular* and *General*.

*Particular* CHARACTERS, are thoſe peculiar to this, or that Nation; or that have been ſo: Such are *Roman*, *Italic*, *Greek*, *Hebrew*, *Arabic*, *Gothic*, *Chineſe*, &c. *Characters*. See ROMAN, ITALIC, GREEK, HEBREW, GOTHIC, CHINESE, *&c.*

*Univerſal* CHARACTERS, are alſo *real Characters*, and make what ſome Authors call a Philoſophical Language.

That Diverſity of *Characters* us'd by the ſeveral Nations to expreſs the ſame Idea, is found the chief Obſtacle to the Advancement of Learning; to remove this, ſeveral Authors have taken occaſion to propoſe Plans of *Characters* that ſhould be Univerſal, and which each People ſhould read in its own Language. The *Character* here to be Real, not Nominal: to expreſs Things, and Notions; not, as the common ones, Letters, or Sounds: yet to be mute, like Letters, and Arbitrary; not Emblematical, like Hieroglyphics.

Thus, every one ſhould retain their own Language, yet every one underſtand that of each other, without learning it; only by ſeeing a Real or Univerſal *Character*, which ſhould ſignify the ſame to all People; by what Sounds ſoever each expreſs it in his particular Idiom. For Inſtance, by ſeeing the

the *Character* deſtin'd to ſignify *to drink*, an *Engliſhman* ſhould read *to drink*; a Frenchman *boire*; a Latin *bibere*; a *Greek* πινειν, a *Jew* שְׁתֹה; a German *trincken*; and ſo of the reſt: In the ſame manner as ſeeing a Horſe, each People expreſſes it after their own manner; but all mean the ſame Animal.

This Real *Character* is no Chimera; the *Chineſe* and *Japoneſe* have already ſomewhat like it. They have a common *Character*, which each of thoſe Nations underſtand alike in their ſeveral Languages; though they pronounce them with ſuch different Sounds, that they don't underſtand a Tittle of one another in ſpeaking.

The firſt, and moſt conſiderable Attempts for a Real *Character*, or Philoſophical Language in *Europe*, are thoſe of Biſhop *Wilkins*, and *Dalgarme*: But theſe, with how much Art ſoever they were contriv'd, have yet prov'd ineffectual.

M. *Leibnitz* had ſome Thoughts the ſame way; he thinks thoſe great Men did not hit the right Method. 'Twas probable, indeed, that by their means, People, who don't underſtand one another, might eaſily have a Commerce together; but they han't hit on true, *Real Characters*.

According to him, the *Characters* ſhould reſemble thoſe us'd in Algebra; which, in effect, are very ſimple, yet very expreſſive; without any thing ſuperfluous or equivocal; and contain all the Varieties reaſonable.

The Real *Character* of Biſhop *Wilkins* has its real Applauſe: Dr. *Hook* recommends it on his own Knowledge and Experience, as a moſt excellent Scheme; and to engage the World to the Study thereof, publiſhes ſome fine Inventions of his own therein.

M. *Leibnitz* tells us, he had under Conſideration an *Alphabet of Human Thoughts*; in order to a new Philoſophical Language, on his own Scheme: but his Death prevented its being brought to Maturity.

M. *Lodwic*, in the *Philoſophical Tranſactions*, gives us a Plan of *an Univerſal Alphabet*, or CHARACTER of another Kind: This was to contain an Enumeration of all ſuch ſingle Sounds, or Letters, as are us'd in any Language; by means whereof, People ſhould be enabled to pronounce truly and readily any Language; to deſcribe the Pronunciation of any Language that ſhall be pronounc'd in their hearing; ſo, as others accuſtom'd to this Language, tho they had never heard the Language pronounc'd, ſhall at firſt be able truly to pronounce it: And, laſtly, this *Character* to ſerve as a Standard to perpetuate the Sounds of any Language.

In the *Journal Literaire*, *Anno* 1720, we have a very ingenious Project for an Univerſal *Character*: The Author, after obviating the Objections that might be made againſt the Feaſibleneſs of ſuch Schemes in the general, propoſes his own: His *Characters* are to be the common *Arabic*, or numeral Figures. The Combinations of theſe nine are ſufficient to expreſs diſtinctly an incredible Quantity of Numbers, much more than we ſhall need Terms to ſignify our Actions, Goods, Evils, Duties, Paſſions, &c. Thus is all the Trouble of framing and learning any new *Character* at once ſav'd: the *Arabic* Figures having already all the Univerſality requir'd.

The Advantages are immenſe: for 1°, We have here a ſtable, faithful Interpreter; never to be corrupted or chang'd, as the popular Languages continually are. 2°, Whereas the Difficulty of pronouncing a foreign Language, is ſuch as uſually gives the Learner the greateſt Trouble, and there are even ſome Sounds which Foreigners never attain to; in the *Character* here propos'd this Difficulty has no place: Every Nation is to pronounce them according to the particular Pronunciation that already obtains among them. All the Difficulty is, the accuſtoming the Pen and the Eye to affix certain Notions to *Characters*, that don't, at firſt ſight, exhibit 'em. But this Trouble is no more than we find in the Study of any Language whatever.

The Inflections of Words, to be expreſs'd by the common Letters: for Inſtance, the ſame *Character* ſhall expreſs a *Filly*, or a *Colt*, a *Horſe* or a *Mare*, an *old Horſe*, or an *old Mare*, as accompany'd with this or that diſtinctive Letter, which ſhall ſhew the Sex, Youth, Maturity, or old Age: a Letter alſo to expreſs the Bigneſs or Size of Things; thus, *v. g.* a Man with this or that Letter, to ſignify a *great Man*, or a *little Man*, &c.

The Effect of theſe Letters belongs to the Grammar which once well underſtood, would abridge the Vocabulary exceedingly. An Advantage of this Grammar, is, that it would only have one Declenſion and one Conjugation: Thoſe numerous Anomalies of Grammarians are exceeding troubleſome, and ariſe hence, That the common Languages are conducted by the People, who never reaſon on what is beſt: but in the *Character* here propos'd, Men of Reaſon having the Introduction of it, would have a new ground, whereon to build regularly.

But the Difficulty is not in inventing the moſt ſimple, eaſy, and commodious *Character*, but in engaging the ſeveral Nations to uſe it; there being nothing they agree leſs in, than the underſtanding and purſuing their common Intereſt.

*Literal Characters*, again, may be divided with reſpect to the Nations among whom they have been invented and us'd, into *Greek Characters*, *Roman Characters*, *Hebrew Characters*, &c.

The *Character* now ordinarily us'd throughout *Europe*, is the *Latin Character* of the Antients.

The *Latin Character* was form'd from the *Greek*, and that from the *Phenician*, which *Cadmus* brought into *Greece*.

The *Phenician Character* was the ſame with that of the antient *Hebrew*, which ſubſiſted to the Time of the *Babyloniſh* Captivity; after which they us'd that of the *Aſſyrians*, which is the ſquare *Hebrew*, now in uſe; the antient being only found on ſome *Hebrew* Medals, commonly call'd *Samaritan Medals*. See SAMARITAN.

*Poſtellus* and others ſhew, that beſide the *Phenician*; the *Chaldee*, *Syriac*, and *Arabic Characters* were likewiſe form'd from the antient *Hebrew*.

The *French* were the firſt who, with the *Latin* Office of St. *Gregory*, admitted the Form of the *Latin Characters*. In a Provincial Synod, held in 1091, at *Leon* in *Spain*, the uſe of the *Gothic Characters* invented by *Ulfilas*, was aboliſh'd, and the *Latin* ones eſtabliſh'd.

Medalliſts obſerve, that the *Greek Character*, conſiſting only of majuſcule Letters, has preſerv'd its Uniformity on all Medals, as low as the Time of *Gallian*; there being no Alteration found in the Turn of the *Character*, notwithſtanding the many conſiderable ones both in the Uſe and Pronunciation. From the Time of *Gallian*, it appears ſomewhat weaker and rounder: From the Time of *Conſtantine* to *Michael*, the ſpace of 500 Years, we find only *Latin Characters*; and after *Michael*, the *Greek Characters* re-commence: but from that Time they begin to alter with the Language, which was then a Mixture of *Greek* and *Latin*. See GREEK.

The *Latin* Medals preſerve both their *Character* and Language, as low as the Tranſlation of the Seat of the Empire to *Conſtantinople*. Towards the Time of *Decius* the *Character* began to alter, and to loſe of its Roundneſs and Beauty: Some time after it retriev'd it ſelf, and ſubſiſted tolerably to the Time of *Juſtin*; when it fell into the laſt Barbarity mention'd, under *Michael*; tho it afterwards grew worſe, and degenerated into the *Gothic*: So that the rounder and better form'd the *Character*, the greater Pretence it has to Antiquity.

NUMERAL CHARACTERS, are thoſe us'd to expreſs Numbers. See NUMBER.

There are two Kinds of Figures, or *Numeral Characters*, chiefly in uſe; the common *Characters*, and the *Roman*; to which may be added a third, call'd the *French Characters*.

The *common* CHARACTER is that ordinarily call'd the *Arabic*, as ſuppos'd to have been invented by the *Arab* Aſtronomers: tho the *Arabs* themſelves call it the *Indian Character*; as if they had borrow'd it from the People of *India*. This indeed is pretty certain, that the Orientals are the Authors of it: which is confirm'd, as by other Circumſtances, ſo from the manner of writing them, from left to right; which has been confeſſedly the manner of writing in all Ages in the Eaſt.

The *Arabic Characters* are ten, *viz.* 1,2,3,4,5,6,7,8,9,0; the laſt call'd *Cypher*. See CYPHER.

The *Arabic Character* is us'd almoſt throughout *Europe*, and that on almoſt all Occaſions; in Commerce, in Meaſuring, in Aſtronomical Calculations, &c.

*Roman* CHARACTERS conſiſt of the Uncial or Majuſcule Letters of the *Roman* Alphabet; whence probably its Name: or, perhaps, from its being us'd by the antient *Romans* on their Coins, and in the Inſcriptions of their publick Monuments, erected in honour of their Gods and great Men; on their Sepulchres, &c.

The Numeral Letters that compoſe the *Roman Character* are in Number ſeven, *viz.* I,V,X,L,C,D,M.

The I denotes one, V five, X ten, L fifty, C a hundred, D five hundred, and M a thouſand.

The I repeated twice, makes two, II; thrice, three, III; four is expreſs'd thus, IV. I before V or X, taking an Unit from the Number expreſs'd by each of thoſe Letters.

To expreſs ſix, an I is added to a V, VI; for ſeven, two, VII; and for eight, three VIII: nine is expreſs'd by an I before X, IX. agreeable to the preceding Remark.

The like Remark may be made of the X before L or C, except that the Diminution is by Tens, not Units: thus, XL ſignifies forty, and XC ninety; an L follow'd with an X ſixty, LX, &c. The C before D or M, diminiſhes each by a hundred.

Beſides the Letter D, which expreſſes five hundred, the Number may alſo be expreſs'd by an I before a C inverted, thus IↃ; and thus, in lieu of the M, which ſignifies a thouſand,

thouſand, is ſometimes us'd an I between two C's, the one erect, the other inverted, thus, CIↃ: Agreeable to this, ſix hundred may be expreſs'd IↃC; and ſeven hundred, IↃCC, *&c.*

The *Roman Character* is now ſeldom us'd, but in Inſcriptions of publick Monuments, on Medals, Coins, *&c.* in the Dates, Chapters, *&c.* of Books, *&c.*

The *French Character*, ſo call'd, becauſe invented and chiefly us'd by the *French*, is more uſually denoted, *Character of Accompt, or Finance.*

It conſiſts of ſix Figures; part taken from the Letters of the uſual current Hand, and partly imagin'd by the Inventor: The ſix *Characters* are *j*, *b*, *x*, L, C, *y*. The *j* conſonant ſtanding for one, the *b* for five, the *x* for ten, the L for fifty, the C for an hundred, and the laſt *Character y* for a thouſand.

This *Character* is only an Imitation of the *Roman Character*; and its uſe is in moſt reſpects the ſame, particularly in what relates to the Combination of certain Letters, which plac'd before or after others, diminiſh or increaſe their Value. Indeed it has theſe Things peculiar in it, that when ſeveral Units occur ſucceſſively, only the laſt is expreſs'd: 2dly, That ninety, and the following Numbers to one hundred, are expreſs'd thus, $jjjj^{xxx}$ ninety; $jjjj^{xxxj}$ ninety one; $jjjj^{xxxjj}$, &c.

It is principally us'd in the Chambers of Accompts; in the Accompts given in by Treaſurers, Receivers, Farmers, and other Perſons concern'd in the Management of the Revenue.

A Specimen of each of theſe *Characters* follows.

| | *Arabic Characters.* | *Roman Characters.* | *French Characters.* |
|---|---|---|---|
| Ninety | 90 | LXXXX, or XC | $jjjj^{xxx}$ |
| Ninety one | 91 | LXXXXI, or XCI | $jjjj^{xxxj}$ |
| Ninety two | 92 | LXXXXII, or XCII | $jjjj^{xxxjj}$ |
| Ninety three | 93 | LXXXXIII, or XCIII | $jjjj^{xxxjjj}$ |
| Ninety four | 94 | LXXXXIV, or XCIV | $jjjj^{xxxjjjj}$ |
| Ninety five | 95 | LXXXXV, or XCV | $jjjj^{xxxb}$ |
| Ninety ſix | 96 | LXXXXVI, or XCVI | $jjjj^{xxxbj}$ |
| Ninety ſeven | 97 | LXXXXVII, or XCVII | $jjjj^{xxxbjj}$ |
| Ninety eight | 98 | LXXXXVIII, or XCVIII | $jjjj^{xxxbjjj}$ |
| Ninety nine | 99 | LXXXXIX, or XCIX | $jjjj^{xxxjx}$ |
| One hundred | 100 | C | $c$ |
| Two hundred | 200 | CC | $jj^{c}$ |
| Three hundred | 300 | CCC | $jjj^{c}$ |
| Four hundred | 400 | CCCC, or CD | $jjjj^{c}$ |
| Five hundred | 500 | D, or IↃ | $b^{c}$ |
| Six hundred | 600 | DC, or IↃC | $bj^{c}$ |
| Seven hundred | 700 | DCC, or IↃCC | $bjj^{c}$ |
| Eight hundred | 800 | DCCC, or IↃCCC | $bjjj^{c}$ |
| Nine hundred | 900 | DCCCC or IↃCCCC, or CM | $jx^{c}$ |
| One thouſand | 1000 | M, or CIↃ | $y$. |

CHARACTERS, in Printing, are the Letters or Types, by the various Arrangement whereof, are compos'd Forms; whence Impreſſions are taken, by means of a Preſs, on Paper. See LETTER, TYPE; ſee alſo FORM, PRINTING, *&c.*

For *the Method of caſting theſe Characters*, ſee *Letter*-FOUNDERY.

CHARACTER is alſo us'd in ſeveral of the Arts, for Abbreviatures, and Symbols, contriv'd for the more conciſe, immediate, and artful conveyance of the Knowledge of Things. See ABBREVIATURE, and SYMBOL.

In this Senſe of the Word, *Paulus Diaconus* refers the Invention of *Characters* to *Ennius*; who, he ſays, contriv'd the firſt eleven hundred. To theſe were many more added, by *Tullius Tyro*, *Cicero*'s freed Man; and *Philargyrus*, *Fannius*, and *Aquila*, Freedmen of *Mecænas*.

Laſtly, *L. Annæus Seneca* made a Collection of them, reduc'd them into order, and increas'd their Number to five thouſand. *Tyro*'s Notes may be ſeen at the End of *Gruter*'s Inſcriptions.

*Valerius Probus*, a Grammarian, in the Time of *Nero*, labour'd to good purpoſe in explaining the Notes of the Antients. *Diaconus* wrote an ample Treatiſe of the Explication of the *Characters* in Law, under the Reign of the Emperor *Conrad* I. and *Goltzius* another for thoſe of Medals.

*Characters*, or *Symbols*, are now chiefly affected in the ſeveral Parts of Mathematicks; particularly Algebra, Geometry, Trigonometry, and Aſtronomy: as alſo in Medicine, Chymiſtry, Muſick, *&c.* The principal of each Kind we ſhall here ſubjoin.

CHARACTERS *us'd in Arithmetic and Algebra.*

*a*, *b*, *c*, and *d*, the firſt Letters of the Alphabet, are the Signs or *Characters* that denote the *given* Quantities; and *z*, *y*, *x*, &c. the laſt Letters, are the *Characters* of the Quantities *ſought*. See QUANTITY.

*Note*, Equal Quantities are denoted by the ſame *Character*.

*m*, *n*, *r*, *s*, *t*, &c. are *Characters* of *indeterminate* Exponents, both of Ratios and Powers; thus $x^m$, $y^m$, $z^r$, &c. denote indeterminate Powers of different Kinds; $m\,x$, $n\,y$, $r\,z$, different *Multiples*, or *Submultiples* of the Quantities *x*, *y*, *z*, according as *m*, *n*, *r*, are either whole Numbers or Fractions.

$+$ Is the Sign of real Exiſtence, and is call'd the *affirmative* or *poſitive* Sign; importing the Quantities to which it is prefix'd, to be of a real and poſitive Nature. See POSITIVE.

It is alſo the Sign of Addition, and is read *Plus*, or *more*; thus $9 + 3$, is read 9 *plus* 3; or 9 more 3: that is, nine added to 3, or the Sum of 9 and 3, equal to 12. See ADDITION.

$-$ Before a ſingle Quantity, is the Sign of *Negation*, or *negative* Exiſtence; ſhewing the Quantity to which it is prefix'd to be leſs than Nothing. See NEGATIVE.

Between Quantities, it is alſo the Sign of Subtraction, and is read *Minus*, or *leſs*; thus, $14 - 2$, is read, 14 *minus*, or abating 2: that is, the Remainder of 14, 2 after has been ſubtracted, *viz.* 12. See SUBTRACTION.

$=$ Is the Sign of *Equality*: thus, $9 + 3 = 14 - 2$; ſignifies, 9 *plus* 3, to be *equal* to 14, *minus* 2. See EQUALITY.

This *Character* was firſt introduc'd by *Harriot*: *Des Cartes* in lieu of it uſes $\infty$. Before *Harriot* there was no Sign of Equality at all.

*Wolfius*, and ſome other Authors, uſe the *Character* $=$ for the Identity of Ratios; or to ſhew the Terms to be in a Geometrical Proportion; which moſt Authors expreſs thus :: See *that Character*.

$\times$ Is the Sign of *Multiplication*, denoting the Quantities on either ſide to be multiply'd into one another: thus, $4 \times 6$, is read 4 multiply'd by 6; or the *Factum*, or Product of 4 and $6 = 24$; or the Rectangle between 4 and 6.

Ordinarily, however, in Algebra, the Sign is omitted, and the two Quantities put together: Thus, *b d* expreſſes the Product of the two Numbers denoted by *b* and *d*, which ſuppoſe 2 and 4, the Product whereof is 8, ſignify'd by *b d*.

*Wolfius* and others, make the Sign of Multiplication a Dot (.) between the two Factors: Thus 6.2 ſignifies, the Product of 6 and $2 = 12$. See MULTIPLICATION.

Where one or both the Factors are compounded of ſeveral Letters, they are diſtinguiſh'd by a Line drawn over 'em: thus, the *Factum* of $a + b - c$ into *d*, is wrote $d \times \overline{a + b - c}$.

*Guido Grandio*, and after him *Leibnitz*, *Wolfius*, and others, to avoid the Perplexity of Lines, in lieu thereof diſtinguiſh the Compound Factors, by including 'em in a Parentheſis, thus $(a + b - c)\,d$.

$\div$ Is the *Character* of *Diviſion*: thus $a \div$ denotes the Quantity *a* to be divided by *b*.

Indeed, ordinarily in Algebra, the Quotient is expreſs'd Fraction-wiſe; thus $\frac{a}{b}$ denotes the Quotient of *a* divided by *b*.

*Wolfius*, &c. make the Sign of Diviſion (:) thus, 8:4 denotes the Quotient of 8 divided by $4 = 2$.

If either the Diviſor or Dividend, or both, be compos'd of ſeveral Letters; *v. g.* $a+b$, divided by *c*; inſtead of writing the Quotient Fraction-wiſe thus $\frac{a+b}{c}$ *Wolfius*, &c. include the compound Quantities in a Parentheſis; thus, $(a + b) : c$. See DIVISION.

$\circledcirc$ Is the *Character* of *Involution*, or of producing the Square of any Quantity by multiplying it by it ſelf. See INVOLUTION.

$\omega$ The *Character* of *Evolution*; or of extracting the Roots out of the ſeveral Powers; the Reverſe of $\circledcirc$. See EVOLUTION.

$\succ$ Is the Sign of *Majority*, or of the Exceſs of one Quantity beyond another: Some uſe this $\sqsubset$, or this $\urcorner$.

$\prec$ Is the Sign of *Minority*: theſe two *Characters* were firſt introduc'd by *Harriot*, and us'd ſince by *Wallis* and *Lamy*.

Other Authors uſe others; ſome this, $\sqsupset$; but the generality none at all. See MINORITY.

$\backsim$ The Sign of *Similitude*, commended in the *Miſcellanea Berolinenſia*, and us'd by *Leibnitz*, *Wolfius*, and others; tho the generality of Authors uſe none. See SIMILITUDE.

The ſame *Character* is us'd in other Authors for the *Difference* between two Quantities, while 'tis yet unknown which is the greater. See DIFFERENCE.

$\surd$ Is the *Character* of *Radicality*, and ſhews the Root of the Quantity, to which it is prefix'd, is extracted, or to be extracted: Thus, $\surd$ 25, or $\surd^{2}$ 25, denotes the Square Root of 25, *viz.* 5. and $\surd^{3}$ 25, the Cube Root of 25. See ROOT.

This *Character* ſometimes affects ſeveral Quantities diſtinguiſh'd by a Line drawn over them, thus $\sqrt{b+d}$, denotes the Sum of the Square Roots of $b$ and $d$.

*Wolfius*, &c. in lieu hereof, include the Roots compos'd of ſeveral Quantities in a Parentheſis, adding its Index: thus $(a+b-c)^2$ denotes the Square of $a+b-c$, ordinarily written $\overline{a+b-c}^2$.

: The *Character* of Arithmetical Proportion disjunct; thus 7.3:13.9. intimates 3 to be exceeded by 7, as much as 13 by 9; *viz.* by 4. See PROGRESSION.

:: This is the *Character* of Identity of Ratio, and Geometrical Proportion disjunct; thus, 8:4::30:15. expreſſes the Ratio of 30 to 15, to be the ſame with that of 8 to 4; or that the four Terms are in Geometrical Proportion, *viz.* 8 to 4 as 30 to 15. See PROPORTION.

*Wolfius*, in lieu hereof, uſes the *Character* of Equality =; which he prefers to the former, as more ſcientifical and expreſſive.

÷ The *Character* of Geometrical Proportion continu'd implying the Ratio to be carry'd on without Interruption: Thus, 2, 4, 8, 16, 32, ÷ are in the ſame uninterrupted Proportion.

### CHARACTERS *in Geometry and Trigonometry.*

‖ Is the *Character* of *Parallelism*; implying two Lines or Planes to be equi-diſtant from each other. See PARALLEL.

△ *Character* of a *Triangle*. See TRIANGLE, &c.

□ *Character* of a *Square*.

▯ *Character* of a *Rectangle*.

⊙ *Character* of a *Circle*.

$\overset{v}{=}$ *Character* of *Equality of Angles*.

$\overset{s}{=}$ *Character* of *Equality of Sides*.

∠ *Character* of an *Angle*.

∟ *Character* of a *right Angle*.

⊥ *Character* of a *Perpendicular*.

° The *Character* of a *Degree*; thus, 75° implies 75 Degrees.

′ The *Character* of a *Minute*, or *Prime*; thus, 50′ implies 50 Minutes.

″ ‴ ⁗, &c. The *Characters* of *Seconds*, *Thirds*, *Fourths*, &c. of a Degree: thus, 5″, 6‴, 18⁗, 20⁗′, denotes 5 Seconds, 6 Thirds, 18 Fourths, and 20 Fifths.

Note, The ſame *Characters* are ſometimes us'd, where the Progreſſion is by Tens; as 'tis here by Sixties. See DECIMAL, SEXAGESIMAL, &c.

### CHARACTERS *us'd in the Arithmetic of Infinites.*

· The *Character* of an *Infiniteſimal*, or *Fluxion*: thus, $\dot{x}$, $\dot{y}$, &c. expreſs the Fluxions, or Differentials of the variable Quantities $x$ and $y$; two, three, or more Dots, denote ſecond, third, or higher Fluxions.

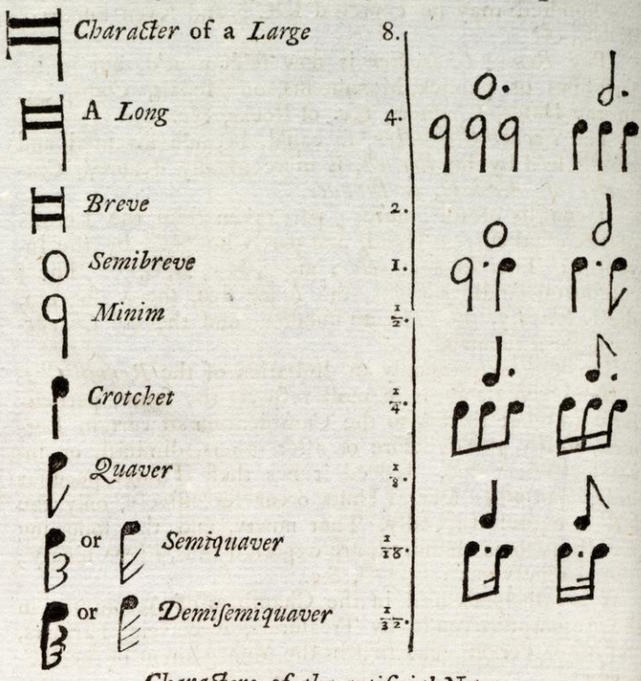
This Method of denoting the Fluxions, we owe to Sir *Iſaac Newton*, the Inventor of Fluxions: 'tis adher'd to by the *Engliſh*; but Foreigners generally follow M. *Leibnitz*, and in lieu of a Dot prefix the Letter *d* to the variable Quantity; on pretence of avoiding the Confuſion ariſing from the multiplication of Dots, in the differencing of Differentials. See FLUXIONS.

*d* The *Character* of a *Differential* of a variable Quantity; thus, $d\,x$ is the Differential of $x$; $d\,y$ the Differential of $y$.

The *Character* was firſt introduc'd by M. *Leibnitz*; and is follow'd by all but the *Engliſh*, who, after Sir *Iſaac Newton*, expreſs the Differential by a Dot over the Quantity. See CALCULUS *Differentialis*.

### CHARACTERS *us'd in Aſtronomy.*

*Characters of the* Planets; ſee PLANET.



♄ *Character* of *Saturn*.
♃ *Character* of *Jupiter*.
♂ *Character* of *Mars*.
♀ *Character* of *Venus*.
☿ *Character* of *Mercury*.
☉ *Character* of the *Sun*.
☽ *Character* of the *Moon*.
♁ *Character* of the *Earth*.

*Characters of the* Signs; ſee SIGN.

♈ *Character* of *Aries*.
♉ *Character* of *Taurus*.
♊ *Character* of *Gemini*.
♋ *Character* of *Cancer*.
♌ *Character* of *Leo*.
♍ *Character* of *Virgo*.
♎ *Character* of *Libra*.
♏ *Character* of *Scorpio*.
♐ *Character* of *Sagittarius*.
♑ *Character* of *Capricornus*.
♒ *Character* of *Aquarius*.
♓ *Character* of *Piſces*.

### CHARACTERS *us'd in Muſick.*

*Characters of the Muſical Notes, with their Proportions.*

*Characters of the artificial Notes.*

♯ *Character* of a *ſharp Note*: This *Character* at the beginning of a Line, or Space, denotes all the Notes in that Line, or Space, to be taken a Semitone higher than in the natural Series. And the ſame affects all their Octaves, above and below, tho not mark'd. See SHARP.

When the *Character* is prefix'd to any particular Note, it ſhews that Note alone to be a Semitone higher than it would be without ſuch *Character*.

♭ *Character* of a *flat Note*: This *Character*, at the beginning of a Line, or Space, ſhews, that all the Notes in that Line, or Space, are to be taken a Semitone lower than in the natural Series; affecting, in like manner, all the Octaves, both above and below. See FLAT.

When prefix'd to any Note, it ſhews that Note alone to be a Semitone lower than it wou'd otherwiſe be.

♮ *Character* of a *natural Note*. Where, in a Line or Series of artificial Notes, mark'd at the Beginning for either Sharps or Flats, the natural Note happens to be required, it is denoted by this *Character*.

*Characters of Sign'd Clefs.*

*Character* of *Treble Clef*.

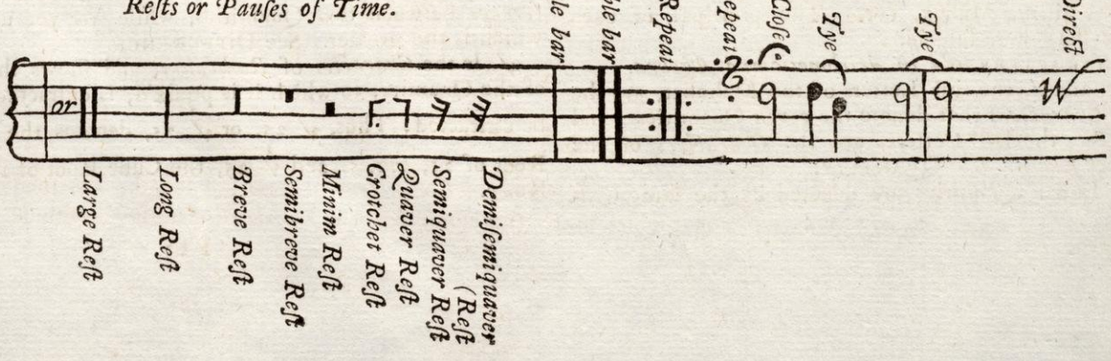
*Mean Clef*.

*Baſs Clef*.

*Characters of Time.* See TIME.

2, or $\frac{2}{4}$, or $\frac{4}{8}$; *Characters* of *Common*, or *Duple Time*; ſignifying the Meaſure of two Crotchets to be equal to two Notes, whereof four make a Semibreve.

C ¢ ⌽ *Characters* that diſtinguiſh the Movements in *Common Time*: The firſt implying *ſlow*; the ſecond *brisk*; the third *very quick*.



$\frac{2}{1}$, $\frac{3}{2}$, $\frac{3}{4}$, $\frac{3}{8}$, $\frac{3}{16}$; *Characters* of the *ſimple Triple Time*; whoſe Meaſure is equal either to three Semibreves, or to three Minims, &c. See TRIPLE.

$\frac{6}{4}$, or $\frac{6}{8}$, or $\frac{6}{16}$; *Characters* of *mix'd Triple Time*; where the meaſure is equal to ſix Crotchets, or ſix Quavers, &c.

$\frac{9}{4}$, or $\frac{9}{8}$, or $\frac{9}{16}$; or $\frac{9}{1}$, or $\frac{9}{2}$; *Characters* of *compound Triple Time*.

$\frac{12}{4}$, or $\frac{12}{8}$, or $\frac{12}{16}$; or $\frac{12}{1}$, or $\frac{12}{2}$; *Characters* of the fourth Species of *Triple Time*; call'd, *The Meaſure of twelve Times*.

*Reſts or Pauſes of Time.*

CHARACTERS *us'd in Medicine, Pharmacy, and Chymiſtry.*

Authors are very redundant, and even fanciful in Pharmaceutical *Characters*: the moſt uſual are theſe that follow.

℞ Recipe.

CHARACTER is alſo us'd for a certain Manner, Air, or Aſſemblage of Qualities, reſulting from ſeveral particular Marks, which diſtinguiſh a Thing from any other, ſo as it may be known thereby. See MANNER, &c.

Thus, we ſay, *The* Character *of* Achilles; *Generoſity and greatneſs of Mind was the* Character *of the* Romans; Cicero *had a* Character *of Politeneſs, which is wanting in* Demoſthenes; *Every Paſſion has its peculiar* Character.

The Writers of *Characters* are *Theophraſtus*, whoſe Fragments are ſtill extant; *Du Moulin*, in his *Exemplar Morum*; *Paſchal*, in *Characteres Virtutum & Vitiorum*; M. *de la Chambre*, in his *Characters of the Paſſions*; and *de la Bruyere*, in his *Characters and Manners of the Age.*

CHARACTER, in Poetry, eſpecially the Epopea and Drama, is the Reſult of the Manners, or that which each Perſon has proper, and ſingular in his Manners, whereby he is diſtinguiſh'd from others. See MANNERS.

The Poetical *Character*, *Boſſu* obſerves, is not properly any Virtue or Quality in particular; but a Compoſition of ſeveral, mix'd, and combin'd in various Degrees, according to the Occaſions of the Fable, and the Unity of the Action. All the ſimple Qualities that enter this Compound, muſt not have the ſame Rank, nor be equal to each other: ſince, in that Caſe, one prevailing on one Occaſion, and another on another, the *Character* will appear changing; and the Poem, as well as the Hero, animated with ſeveral Souls.

There muſt, therefore, be one to reign over all the reſt; and this muſt be found in every Part: juſt as the ſame Hero, in ſeveral Paintings, ſhould have the ſame Lines and Features, how different ſoever his Poſtures and Paſſions may be. See HERO.

This firſt Quality, in *Homer*'s *Achilles*, is Wrath; in *Ulyſſes*, Diſſimulation; and in *Virgil*'s *Æneas*, Mildneſs: Each of which may, by way of eminence, be call'd the *Character* of thoſe Heroes.

Theſe are never to go alone, but always to be accompany'd with others, to give them the greater Luſtre; either by hiding their Defects, as in *Achilles*, whoſe Anger is palliated by a world of Courage: or by making them centre in ſome ſolid Virtue, as in *Ulyſſes*, whoſe Diſſimulation makes a Part of his Prudence; and *Æneas*, whoſe Mildneſs is chiefly employ'd in a Submiſſion to the Will of the Gods.

Theſe ſecondary Qualities of Courage, Prudence, and Submiſſion, make the goodneſs of the *Characters* of thoſe Heroes, and even of the Poems.

*Boſſu* adds, that the Quality of Courage muſt always have a ſhare in the *Character* of a Hero, to ſerve as a Support to the reſt: The *Heroic Character*, therefore, he makes a Compound of three Kinds of Qualities. Thoſe of the firſt kind are neceſſary and eſſential to the Fable; thoſe of the ſecond are the Supplements, or Embelliſhments of the firſt; and Courage, which ſuſtains the other two, make the third.

The firſt, which is the chief, is to be ſome univerſal Quality, to have place on all Occcaſions, and to diſtinguiſh the Hero wherever he is found.

For *the Unity of Character*, we have *Horace*'s expreſs Command, *Sit quodvis ſimplex duntaxat & unum. Boſſu* adds, that the *Character* is not leſs the Soul of the Hero and the whole Action, than the Fable is of the Poem; and of conſequence the Unity muſt be as exact in the one as the other: which accordingly we find obſerv'd both by *Homer* and *Virgil.*

The Unity of *Character* is ſomewhat different from that of the *Manners*: in the latter, the Unity or Equality conſiſts in the not giving contrary Sentiments to the ſame Perſon, which is not ſufficient to the Unity of *Character*; but to this muſt be added, that the ſame Spirit muſt always appear on all Occaſions, whether contrary or otherwiſe: Thus, *Æneas*, ſhewing a deal of Goodneſs in the firſt Part of the Poem, and a world of Valour in the ſecond, but without diſcovering any of his former Piety and Gentleneſs; there had been no Offence againſt the Evenneſs of the Manners, but to the Unity of the *Character* there had.

So that beſides the Qualities which have their particular Place on different Occaſions, there muſt be one to have place throughout, and to reign over all the others. Without this there is no *Character*: as would be the Caſe, ſhould a Poet give his Hero the Piety of *Æneas*, and the Courage of *Achilles*, without conſidering the Severity of the one, and the Mildneſs of the other.

A Hero, 'tis true, may be made as brave as *Achilles*, as mild or pious as *Æneas*, and, if one will, as prudent as *Ulyſſes*; but 'twould be a mere Chimera to imagine a Hero with the particular Courage of *Achilles*, the Piety of *Æneas*, and the Prudence of *Ulyſſes* at the ſame time. See UNITY.

The Unity of *Character* is not only to be kept in the Hero, and the ſeveral other Perſons of the Piece; but alſo in that of the Poem it ſelf: that is, all the *Characters*, how oppoſite ſoever, muſt center and re-unite in that of the Hero; and be ſo ſway'd by it, as that this alone may ſeem to govern throughout the whole. Thus *Homer* makes Wrath prevail throughout the whole *Iliad*; and Artifice and Diſſimulation throughout the *Odyſſee*: The Hero's *Character* is perceiv'd every where, has its full ſwing, and is favour'd by the Similitude of the *Characters* of ſome of the other Perſons. *Virgil* had a great Difficulty to grapple with to preſerve this Unity; in regard of the direct Oppoſition between the Humours of his Hero, and thoſe of ſome other of his Perſons, as *Turnus*, *Mezentius*, *Dido*, &c. He therefore takes care not to carry thoſe oppoſite *Characters* to their full length, but moderates and reſtrains 'em: And as that Moderation could not flow naturally

turally from the Perſons themſelves; 'tis produc'd either by ſome Paſſion, as in *Dido*, or ſome Dependance, as in *Turnus* and *Mezentius*. To this Artifice he adds Epiſodes, accommodated to the general *Character*, by which he interrupts the particular Actions which require an oppoſite *Character*.

*Claudian*'s Conduct, in this reſpect, is unpardonable; from the horrible *Characters* of *Pluto* and the Furies, with all the Terrors of Hell, he paſſes to the Gaiety and Pleaſures of the Graces, gilded Palaces, flowery Fields, &c. He has as many different prevailing *Characters* in his three Books, as *Homer* and *Virgil* in their ſixty. See EPIC, &c.

CHARACTER is alſo us'd for certain viſible Qualities, which claim Reſpect, or Reverence to thoſe veſted therewith.

The Majeſty of Kings gives 'em a *Character*, which procures Reſpect from the People. A Biſhop ſhould ſuſtain his *Character* by Learning and ſolid Piety, rather than by worldly Luſtre, &c. The Law of Nations ſecures the *Character* of an Embaſſador from all Inſults.

CHARACTER is alſo us'd, among Divines, eſpecially thoſe of the *Romiſh* Church, for a certain indelible Mark, or Impreſſion, which certain Sacraments leave behind 'em in thoſe who receive 'em. See SACRAMENT.

The Sacraments that leave this *Character*, are incapable of being repeated. The *Character* is generally ſuppos'd to be ſomething Phyſical.

'Tis the Sacraments of Baptiſm, Confirmation, and Ordination, which leave ſuch indelible *Character*.

CHARACTER *of a Plant*. See GENUS, CHARACTERISTIC, &c.

CHARACTERISTIC, in the general, is that which *characterizes* a Thing, or Perſon, *i.e.* conſtitutes its *Character*, whereby it is diſtinguiſh'd. See CHARACTER.

CHARACTERISTIC, is peculiarly us'd in Grammar, for the principal Letter of a Word; which is preſerv'd in moſt of its Tenſes and Moods, its Derivatives and Compounds.

The *Characteriſtic* frequently ſhews its Etymology; and ought conſtantly to be retain'd in its Orthography: Such is the Letter *r* in *Courſe*, *Fort*, &c.

The *Characteriſtics* are of great uſe in the *Greek* Grammar, eſpecially in the Formation of the Tenſes; as being the ſame, in the ſame Tenſes of all Verbs of the ſame Conjugation, excepting in the Preſent Tenſe, which has ſeveral *Characteriſtics*; and the Future, the *Aoriſtus primus*, the *Preterit perfect*, and the *Pluſquam perfect* Tenſe of the fourth Conjugation, which have two *Characteriſtics*. See TENSE, VERB, MOOD, &c.

CHARACTERISTIC *of a Logarithm*, is its *Index*, or *Exponent*. See INDEX, &c.

CHARACTERISTIC *Triangle of a Curve*, in the higher Geometry, is a rectilinear right-angled Triangle, whoſe Hypothenuſe is a part of the Curve, not ſenſibly different from a right Line. 'Tis ſo call'd, becauſe Curve Lines are us'd to be diſtinguiſh'd hereby. See CURVE.

Suppoſe, *e. gr.* the Semiordinate *p m*, (Tab. *Analyſis*, Fig. 7.) infinitely near another P M; then will P *p* be the Differential of the Abſciſſe: and letting fall a Perpendicular, M R = P *p*, R *m* will be the Differential of the Semiordinate. Draw, therefore, a Tangent T M; and the infinitely ſmall Arch M *m*, will not differ from a right Line: conſequently M *m* R is a rectilinear right-angled Triangle; and conſtitutes the *Characteriſtic Triangle of that Curve*. See TRIANGLE.

CHARAG, the Tribute which Chriſtians and Jews pay to the Grand Signior.

It conſiſts of 10, 12, or 15 Francs *per Ann.* according to the Eſtate of the Party. Men begin to pay it at 9 or 16 Years old; Women are diſpens'd with, as alſo Prieſts, Rabbins, and Religious.

CHARCOAL, a ſort of artificial *Coal*, or Fuel, conſiſting of Wood half burnt; chiefly us'd where a clear ſtrong Fire, without Smoke, is requir'd; the Humidity of the Wood being here moſtly diſſipated, and exhal'd in the Fire wherein it is prepar'd. See FUEL, and COAL.

The Microſcope diſcovers a ſurpriſing Number of Pores in *Charcoal*: They are diſpos'd in order, and traverſe it lengthwiſe; ſo that there's no piece of *Charcoal*, how long ſoever, but may be eaſily blown thorow. If a Piece be broke pretty ſhort, it may be ſeen thro' with a Microſcope. In a Range, the 18th Part of an Inch long, Dr. *Hook* reckon'd 150 Pores; whence he concludes, that in a *Charcoal* of an Inch Diameter, there are not leſs than 5 Millions, 7 hundred 24 thouſand Pores.

'Tis to this prodigious Number of Pores, that the Blackneſs of *Charcoal* is owing: for the Rays of Light ſtriking on the *Charcoal*, are receiv'd and abſorb'd in its Pores, inſtead of being reflected; whence the Body muſt of neceſſity appear black: blackneſs in a Body being no more than a want of Reflexion.

*Charcoal* was antiently us'd to diſtinguiſh the Bounds of Eſtates and Inheritances; as being incorruptible, when let very deep within Ground. In effect, it preſerves it ſelf ſo long, that there are many Pieces found entire in the antient Tombs of the Northern Nations.

M. *Dodart* ſays, there is *Charcoal* made of Corn, probably as old as the Days of *Cæſar*: he adds, that it has kept ſo well, that the Wheat may be ſtill diſtinguiſh'd from the Rye; which he looks on as a Proof of its Incorruptibility.

*The Method of making* CHARCOAL.

The beſt is that made of Oak, cut into Lengths of about three Foot. The Ground whereon the Operation is to be perform'd, is bar'd of all the Turf, and other combuſtible Matter; and is in form Circular, a Stake being driven in the Centre. This Area is fill'd up with Wood, eight Foot high, plac'd alternately lengthwiſe, and perpendicularly; then cop'd atop into the Form of a Sugarloaf, and all Inequalities fill'd up with ſmall Wood, till it lie very cloſe: the whole to be cover'd over moderately thick with Turf, and other Rubbiſh.

A moveable Skreen being then ſet up againſt the Wind; the Stake is pull'd up, and Fire ſet to the Pile, by pouring into the Cavity ſome *Charcoal* and other Coal fully kindled; the Vent, or Tunnel a-top, is then cover'd with Turf, and Vent-Holes made thro' the Stuff that covers the Pile, two or three Foot apart, quite round, a Foot from the Top. The next Day a new Range of Holes is made, a Foot and a half below the firſt; and thus on to the Bottom: obſerving, that as the Pile cools, and ſinks to the Centre, it muſt be continually fed with ſhort Wood, that no Part remain unfir'd; and that if any Part *chars* faſter than other, the Vent-Holes there are to be ſtopp'd up.

A Pit is thus burnt in five or ſix Days: As it cools, the Smoke grows thinner and bluer. The Heap requires two or three Days to cool; which is promoted by ſtopping the Vents, and ſtripping off the Covering by degrees, about a Yard at a time: at firſt only taking off the coarſeſt Part and leaving the reſt; that the Pile may neither cool too faſt, nor endanger the Reduction of the whole into Aſhes. Laſtly, the Coals are taken out from around the Bottom, by which means the whole Maſs, Coals and Rubbiſh, ſinks down, and extinguiſhes the Fire at once.

*Charcoal* for Pouder-Mills, is uſually made of Eldar-Wood; the Proceſs the ſame, but finiſh'd in two Days.

CHARDS, in Gardening. The *Chards* of Artichokes, are the Leaves of fair Artichoke Plants, ty'd and wrapp'd up, all over but the Top in Straw, during the Autumn and Winter: this makes 'em grow white, and loſe ſome of their Bitterneſs.

CHARDS *of Beets*, are white Beets, cover'd with dry Dung, during the Winter Seaſon, when they produce large Tops, with a downy Cotton Shoot; which is the true *Chard*, to be us'd in Pottages, Intermeſſes, &c.

CHARGE, in Gunnery, the Load of a Piece; or the Quantity of Pouder and Ball, or Shot, wherewith it is prepar'd for Execution. See GUNPOUDER, BALL, SHOT, &c.

The Rules for *charging* large Pieces in War, are, That the Piece be firſt clean'd or ſcour'd within ſide; that the proper Quantity of Gunpouder be next driven in and ramm'd down; care, however, being taken, that the Pouder ben't bruis'd in ramming, which weakens its Effect; that a little Quantity of Paper, Hay, or the like, be ramm'd over it, and that then the Ball, or Shot be intruded.

If the Ball be redhot, a Tampion, or Trencher of green Wood, to be driven in before it.

The Weight of Gunpouder neceſſary for a *Charge*, is commonly in a ſubduple proportion to that of the Ball. See CANNON, and BULLET.

CHARGE, in Heraldry, is apply'd to any Figure, or Thing, bore, or repreſented in an Eſcutcheon, or Coat of Arms; whether it be Animal, Vegetable, or other Matter. See BEARING, ESCUTCHEON, &c.

Too many *Charges* are not deem'd ſo honourable as fewer. See CHARGED.

*Charges* peculiar to the Art and Uſage of Armory, as the *Croſs*, *Chief*, *Pale Feſſe*, &c. are call'd *proper Charges*; and frequently *Ordinaries*. See ORDINARY.

*Bloom* reſtrains the Term *Charges* to thoſe Additions, or Rewards of Honours frequently plac'd on Eſcutcheons; as *Cantons*, *Quarters*, *Gyrons*, *Flaſques*, &c.

CHARGE, in the Manage, a Cataplaſm, Apparatus, or Unguent, made of Oil, Honey, Greaſe, Turpentine, and ſometimes of Lees of Wine, and other Matters, apply'd externally to a Horſe, &c. for the cure of Strains, Bruiſes, Swellings, &c.

CHARGE, or *Overcharge*, in Painting, is an exaggerated Repreſentation of any Perſon; wherein the Likeneſs is preſerv'd, but, withal, ridicul'd.

Few Painters have the Genius neceſſary to ſucceed in theſe *Charges*: The Method is, to pick out and heighten ſomething already amiſs in the Face, whether by way of Defect

Defect, or Redundancy: thus, *v. g.* if Nature have given a Man a Nose a little larger than ordinary, the Painter falls in with her, and makes the Nose extravagantly long; or if the Nose be naturally too short, in the Painting it shall be a mere Stump; and thus of the other Parts.

CHARGED, in Heraldry, a Shield, carrying on it some Figure or Impress, is said to be *charged* therewith.

So, also, when one Bearing, or *Charge*, has some other Figure added upon, it is properly said to be *charged*.

CHARGE *of Lead*, is 36 Pigs; See LEAD, *&c.*

CHARIENTISMUS, in Rhetoric, a Figure wherein a taunting Expression is soften'd by a Jest. See SARCASM.

CHAR. } See { CAR.
CHARIOT. } See { COACH.

CHARISTIA, a Feast celebrated by the *Romans*, on the 11th of the Calends of *March*; *i.e.* on the 19th of *February*.

On this Day each Family made a Feast, to which none were admitted but those of the Family, and Relations: Its Design was, to put an end to all Differences, or Broils, if there were any, among Friends.

The Word comes from the *Greek* χαρις, *Grace*, *Favour*; *q. d.* a Day of Reconciliation, or of restoring into Favour.

It was also call'd *Dies charæ cognationis*. *Vigenere*, on *Livy*, calls it the *Day of good Cheer*.

CHARISTICARY, *Commendatory*, or *Donatory*, a Person to whom is given the Enjoyment of the Revenues of a Monastery, Hospital, or Benefice.

The *Charisticarics* among the *Greeks*, were a kind of Donatories, or Commendatories, who enjoy'd all the Revenues of Hospitals and Monasteries, without giving an Account thereof to any Person. The original of this Abuse is referr'd to the *Iconoclastes*, particularly *Constantine Copronimus*, the avow'd Enemy of the Monks, whose Monasteries he gave away to Strangers.

In after Times, the Emperors and Patriarchs gave many to People of Quality, not by way of Gift, to reap any Temporal Advantage from; but to repair, beautify, and patronize 'em.

At length Avarice crept in, and those in good Condition were given, especially such as were rich; and at last they were all given away, rich and poor, those of Men and of Women; and that to Laymen and marry'd Men.

M. *Coutelier*, in his *Ecclesiæ Græcæ Monumenta*, gives us the form of these Donations: they were given for Life, sometimes for two Lives.

CHARITATIVE, in the Canon Law, a *charitative Aid*, or *Subsidy*, is a moderate Allowance which a Council grants a Bishop upon any urgent Occasion; *e. gr.* when his Revenues will not bear his Expences to a Council, *&c.*

CHARITY, one of the three grand Theological Virtues, consisting in the Love of God, and our Neighbour. See VIRTUE.

*Charity* is the Habit, or Disposition of loving God with all our Heart, and our Neighbour as our selves. It has two material Objects, therefore, as the Schools express it, *viz.* God, and our Neighbour.

*Charity* is peculiarly us'd for the Effect of a Moral Virtue, which consists in supplying the Necessities of others, whether with Money, Counsel, Assistance, or the like. See BENEVOLENCE.

CHARITY *Schools*, are Schools erected and maintain'd in various Parishes, by the voluntary Contributions of the Inhabitants, for teaching poor Children to read, write, and other necessary Parts of Education. See SCHOOL.

In most *Charity Schools*, the Children are likewise cloth'd and put out to Trades, Services, *&c.* on the same *charitable* Foundation.

*Charity Schools* are but of a few Years standing: They were began in *London*; and have since spread throughout most of the considerable Towns of *England* and *Wales*. In the Year 1710, the Account of the *Charity Schools* in and about *London* stood thus.

Number of Schools 88. of Boys taught therein 2181. of Girls 1221.

| | | | |
|---|---|---|---|
| Boys cloth'd | 1863. | In all | 2977. |
| Girls | 1114. | | |
| Boys not cloth'd | 373. | In all | 501. |
| Girls | 128. | | |

*Note*, Out of the whole, 967 Boys, and 407 Girls, had been put out Apprentices.

In *London* we have likewise a CHARITABLE *Corporation* for the Relief of the industrious Poor, erected by the late Queen; for enabling indigent Manufacturers and Traders to take up Money at common and legal Interest; there being a Fund of 30000 *l.* rais'd for that End.

*Order of* CHARITY. There are several Religious Orders which bear this Title: one instituted by S. *John de Dieu*, for the Assistance of the Sick: This Institute was approv'd of in 1520, by *Leo* X. and confirm'd by *Paul* V. in 1617. The Religious of this Order apply themselves wholly to the Service of the Diseas'd.

CHARITY *of the Holy Virgin*, is a Religious Order established in the Dioceses of *Chalons*, by *Guy* Lord *Joinville*, &c. towards the Close of the XIIIth Century, approv'd under the Rule of St. *Augustin*, by the Popes *Boniface* VIII. and *Clement* VI.

In each Parish of *Paris*, is a Society of Women, who apply themselves to find out and relieve the Wants of the Poor of the Parish; and on this Account call'd, *Dames de la Charite*, and *Sœurs de la Charite*.

CHARKING, or CHARRING, the burning of Wood to make Charcoal. See CHARCOAL.

CHARKS, Pit-Coal *charked*, or *charr'd*. See COAL.

CHARLES'S-WAIN, in Astronomy, seven Stars in the Constellation *Ursa Major*; call'd also *Pleiades*. See PLEIADES; see also URSA *Major*.

CHARLATAN, or CHARLETAN, an Empiric, or Quack, who retails his Medicines on a publick Stage, and draws the People about him with his Buffooneries, Feats of Activity, *&c.* See EMPIRIC.

The Word, according to *Calepine*, comes from the Italian *Ceretano*; of *Ceretum*, a Town near *Spoletto* in *Italy*, where these Impostors are said to have first risen. *Menage* derives it from *Circulatarius*, of *Circulator*.

CHARM, a Magic Power, or Spell, by which, with the Assistance of the Devil, Sorcerers and Witches are suppos'd to do wondrous Things, far surpassing the Powers of Nature. See MAGIC.

Phylacteries, Ligatures, *&c.* are kinds of *Charms*. See PHYLACTERY, LIGATURE, *&c.*

The Word comes from the Latin *Carmen*, Verse. See CARMEN.

We have the History of a notable *Charm*, wherewith great Things are pretended to have been done in the way of Poisoning, and Tormenting; describ'd by a famous Sorcerer, one *Bras de Forthen*, under Sentence of Death in *France*, as follows.

It consists of a new Earthen Pot, varnish'd, not bought nor bargain'd for; wherein is put Sheep's Blood, Wool, Hair of several Beasts, with poisonous Herbs, mix'd together with a great deal of Grimace, and superstitious Ceremonies, uttering certain Words, and invoking Devils. This Pot is laid in a secret Place in the Neighbourhood where the Mischief is to be done, and sprinkled with Vinegar, according to the Effect it is to produce. The *Charm* holds a certain time, and cannot be taken away, but either by the Party that lodg'd it, or some superior Power which overcomes it.

CHARNEL, a Portico, or Gallery, ordinarily about the Church-Yard; over which were antiently dispos'd the Bones of the Dead, when the Flesh was consum'd.

The *Charnels*, or *Charnel*-Houses, are now usually contiguous to the Church.

CHART, or *Sea*-CHART, a Hydrographical *Map*; or a Projection of some Part of the Sea, *in Plano*; for the Use of Navigation. See MAP, and PROJECTION.

The Invention of *Sea Charts*, *Fournier* refers to *Henry* Son of *John* King of *Lusitania*. They differ very considerably from Geographical, or Land Maps, which are of no use in Navigation. Nor are *Sea Charts* all of the same Kind; some being what we call *Plain Charts*, others *Reduced*, or *Mercator's Chart*, and others *Globular Charts*.

*Plain* CHARTS, are those wherein the Meridians and Parallels, are exhibited by right Lines parallel to each other.

These *Ptolemy*, in his Geography, rejects for the following Faults; tho their Inventor judg'd 'em of good use, and Experience has confirm'd his Judgment; especially in short Voyages.

Their Defects are, 1. That since in reality all the Meridians meet in the Poles; 'tis absurd to represent 'em, especially in large *Charts*, by parallel right Lines. 2. That *Plain Charts* exhibit the Degrees of the several Parallels, equal to those of the Equator; and of consequence the Distances of Places lying East and West, much larger than they should be. And, 3. In a *Plain Chart*, while the same Rhumb is kept, the Vessel appears to be carry'd in a great Circle; which yet is false.

But notwithstanding these Defects in the *Plain Chart*, yet the Easiness of its Application has so reconcil'd it to the Mariners, that 'tis us'd almost alone; in exclusion of the more accurate ones.

*Construction of a Plain* CHART.

1. Draw a right Line, as A B, (Tab. *Hydrography*, Fig. 9.) and divide it into as many equal Parts, as there are Degrees of Latitude in the Portion of the Sea to be represented. 2. Add another to it at right Angles B C, divided into as many Parts, and those equal to one another and to the former, as there are Degrees of Longitude in the Portion of the Sea to be represented. 3. Compleat the Parallelogram A B C D, and resolve its Area into little Squares; then right Lines, parallel to A B and C D, will be Meridians; and those parallel to A D and B C Parallels. 4. The Coasts, Islands, Bays, Sands, Rocks, *&c.* insert from a Ta-

ble of Longitudes and Latitudes, in the ſame manner as is laid down under MAP.

Hence, 1. the Latitude and Longitude of a Ship being given, her Place is eaſily exhibited in the *Chart*. 2. The Places F and G, to and from which the Ship ſails, being given in a Map, the right Line F G, drawn from the one to the other, makes, with the Meridian A B, an Angle A F G, equal to the Inclination of the Rhumb: And ſince the Parts F 1, 1 2, 2 G, intercepted between equidiſtant Parallels, are equal; and the Inclination of the right Line F G, to all the Meridians or right Lines parallel to A B, is the ſame; the right Line F G truly repreſents the Rhumb. After the ſame manner it may be ſhewn, that they exhibit the *Latus Mecodynamicum*, or Miles of Longitude truly.

*Coroll. Plain Charts*, therefore, may be us'd to very good purpoſe in directing a Ship; provided care be taken there eſcape no Error in the Diſtance of the Places F and G.

*Conſtruction of a Scale to correct the Errors of the Diſtances in Plain* CHARTS.

1. Upon the right Line A B, (Tab. Fig. 10.) from the Map transfer five Degrees, and divide 'em into 300 equal Parts, or Geographical Miles. 2. On this deſcribe a ſmall Circle A C B, to be divided into 90 equal Parts: If then 'tis deſir'd to know how many Miles make five Degrees in the Parallel 50; in the Compaſſes take the Interval 50, and transfer it on to the Diameter A B; the number of Miles requir'd will here be ſhewn.

*Coroll.* If then a Ship ſail on an Eaſtern or Weſtern Rhumb, out of the Equator; the Miles anſwering to the Degrees of Longitude, will be found as in the preceding Article. If it ſail on any Collateral Rhumb, ſtill the ſailing is ſuppos'd to be an Eaſtern or Weſtern Rhumb, in an intermediate Parallel, between the Parallel of the Place whence the Ship proceeds, and the Parallel of the Place at which ſhe arrives.

'Tis true, this Reduction, by an arithmetically mean Parallel, is not accurate; yet is it frequently us'd in Practice, as being accommodated to the Apprehenſions of the generality of Mariners. In effect, it does not err any thing conſiderable, if the whole Courſe be divided into Parts, whereof each does not exceed one Degree; whence it appears adviſable, not to take the Diameter of the Semicircle A B above one Degree, and to divide it almoſt into Geographical Miles.

*For the Application of the Plain* CHART *in ſailing*. See *Plain* SAILING.

*Reduced* CHART, or CHART *of Reduction*, is that wherein the Meridians are repreſented by right Lines converging towards the Poles; and the Parallels by right Lines parallel to one another, but unequal.

Theſe, therefore, it appears by their Conſtruction, muſt correct the Errors of the *Plain Charts*.

But ſince the Parallels ſhould cut the Meridians at right Angles; theſe *Charts* are defective, inaſmuch as they exhibit the Parallels inclin'd to the Meridians.

Hence another kind of *Reduced Charts* has been invented, wherein the Meridians are parallel, but the Degrees thereof unequal; call'd *Mercator's Charts*.

*Mercator's* CHART, is that wherein the Meridians and Parallels are repreſented by parallel right Lines; but the Degrees on the Meridians are unequal; ſtill increaſing, as they approach the Pole, in the ſame proportion as thoſe of the Parallels decreaſe: by means whereof, the ſame Proportion is preſerv'd between 'em as on the Globe.

This *Chart* has its Name from that of the Author who firſt propos'd it for uſe, and made the firſt *Chart* of this Projection, *N. Mercator*: but neither was the Thought originally his own, as having been hinted by *Ptolemy* near 2000 Years ago: Nor is the Perfection of it owing to him; our Countryman Mr. *Wright* being the firſt who demonſtrated it, and ſhew'd a ready way of conſtructing it, by enlarging the Meridian Line by the continual Addition of Secants.

*Conſtruction of* Mercator's CHART.

1. Draw a right Line, and divide it into equal Parts, repreſenting Degrees of Longitude either in the Equator, or in the Parallel wherein the *Chart* is to terminate. From the ſeveral Points of Diviſion erect Perpendiculars to repreſent Meridians; ſo as right Lines may cut 'em all under the ſame Angle, and therefore repreſent Rhumbs: Thus far as in the *Plain Chart*.

That the Degrees of the Meridians may have their juſt proportion to thoſe of the Parallels, the former are to be increas'd; in regard the latter continue the ſame, by reaſon of the Parallelism of the Meridians. See DEGREE.

With the Interval therefore of one Degree in the Equator C D, (Tab. *Hydrog.* Fig. 11.) deſcribe the Quadrant C D E, and in D erect a Perpendicular D G; make the Arch D L equal to the Parallel of Latitude, and thro' L draw C G: this C G will be the enlarg'd Degree of the Meridian, to be transferr'd to the Meridian of the *Chart*: The reſt as in *Plain Charts*.

In Practice, ſuppoſe it requir'd to draw a *Mercator's Chart* from the 40th Degree of North Latitude to the 50th, and from the 6th Degree of Longitude to the 18th. Firſt draw a right Line repreſenting the 40th Parallel of the Equator; which divide into 12 equal Parts, for the 12 Degrees of Longitude the *Chart* is to contain. Then take a Line of equal Parts, on a Scale whereof 100 Parts are equal to each of theſe Degrees of Longitude; and at each extreme of the Line raiſe two Perpendiculars, to repreſent two parallel Meridians to be divided, by the continual Addition of Secants, which are prov'd to increaſe in the ſame Proportion, as the Degrees of Longitude ſhould decreaſe. See SECANT.

Thus, for the Diſtance from 40 Deg. of Latitude, take 131½ equal Parts, from the Scale which is the Secant of 40 Deg. 30 Min. For the Diſtance from 41 Deg. to 42 Deg. take 133½ equal Parts, from the Scale which is the Secant of 41 Deg. 30 Min. and ſo on to the laſt Degree of your *Chart*, which will be 154 equal Parts, *viz.* the Secant of 49 Deg. 30 Min. and will give the Diſtance from 49 Deg. of Latitude to 50 Deg. By this means, the Degrees of Latitude will be augmented, in the ſame Proportion as the Degrees of Longitude on the Globe decreaſe.

The Meridians being divided, add the Card, or Compaſs; chuſing ſome convenient Place near the Middle thereof: From this draw a Line parallel to the divided Meridians, which will be the North Rhumb; and from this the other 31 Points of the Compaſs are to be ſet off. See COMPASS.

Laſtly, lay down the Towns, Ports, Iſlands, Coaſts, *&c.* from a Table of Longitudes and Latitudes; and the *Chart* is compleat.

In *Mercator's Charts*, the Scale changes as the Latitude is chang'd: If then, *v. g.* a Ship ſails between the 40th and 50th Parallels of Latitude, the Degrees of the Meridians between thoſe two Parallels, are to be the Scale for meaſuring the Ship's Way: Whence it follows, that tho the Degrees of Longitude be equal in extent on the *Chart*, yet they muſt contain unequal Numbers of Miles, or Leagues; and that they will decreaſe as they approach nearer the Pole, becauſe meaſur'd by a Magnitude continually increaſing.]

This *Chart* is demonſtratively true; tho to appearance falſe: it is found by Experience very accurate, and withal eaſy of Application. In effect, it has all the Qualifications requir'd to render it of ſervice in Navigation; yet do the generality of Mariners decline the uſe of it, and rather chuſe to keep the old erroneous *Plain Chart*.

For *the Uſe of* Mercator's CHART *in ſailing*. See *Mercator's* SAILING.

*Globular* CHART, is a Projection ſo call'd, from the Conformity it bears to the *Globe* it ſelf; lately propos'd to the World by Meſſrs. *Senex*, *Wilſon*, and *Harris*; wherein the Meridians are inclin'd; the Parallels equidiſtant both, and curvelinear; and the Rhumbs real Spirals, as on the Surface of the Globe.

This Projection is yet in its Infancy; and the Secret thereof in a few Hands: We have but little to ſay therefore as to its Merits or Failings; e'er long its Conſtruction and Uſe will be made publick. In the mean time, we may be allow'd to expect great Matters from it, as it comes out under the Protection of his Majeſty's Patent, and with the Recommendations of ſeveral able Navigators, and among others that of Dr. *Halley*; and as it has already ſtood the Teſt of a pretty ſevere Inquiſition. The Cavillings of Mr. *Haſleden*, who has thought fit to cenſure it e'er he knows what it is, will weigh but little; and the leſs, as 'tis no longer a Secret what are the Motives that have inflam'd his Zeal. We ſhall only add, that the Projection is perfectly agreeable to Nature, and therefore eaſily conceivable; and that it has been found to anſwer very exactly, even in very large Diſtances; where its failure, if it have any, muſt needs be moſt conſpicuous. See GLOBULAR *Sailing*.

CHARTS *compos'd by Rhumbs and Diſtances*, are thoſe wherein there are no Meridians or Parallels; but all is effected by the Rhumbs, and the Scale of Miles.

Theſe are chiefly us'd by the *French*, eſpecially in the *Mediterranean*.

They are patch'd up, without any great Art, from the Obſervations of the Mariners; any regular Account therefore how to make them would be needleſs. They are only us'd in ſhort Voyages.

CHARTA primarily ſignifies a ſort of thick Paper, not unlike our Cap-Paper. See PAPER; ſee alſo CHARTER.

CHARTA *Emporetica*, in Pharmacy, *&c.* a kind of Paper made very ſoft and porous, us'd to filtre withal. See EMPORETICA, FILTER, *&c.*

CHARTA is alſo us'd in our antient Cuſtoms for a *Charter*, or Deed in Writing. See CHARTER.

CHARTA *Magna*, the Great *Charter*, is an antient Inſtrument, containing ſeveral Privileges and Liberties granted to the Church and State, by *Edward* the Confeſſor; together

ther with others relating to the Feudal Laws of *William* the Conqueror, granted by *Henry* I. all confirm'd by the ſucceeding Princes above thirty times. See MAGNA *Charta*.

CHARTA *de Foreſta*. See CHARTER *of the Foreſt*.

CHARTA *Simplex*, is a ſingle Deed, or Deed-Poll. See DEED.

CHARTA *Pardonationis ſe defendendo*, is the form of a Pardon for killing another Man in his own defence. See MANSLAUGHTER.

CHARTA *Pardonationis Utlagariæ*, is the form of Pardon of a Man who is outlaw'd. See OUTLAWRY.

CHARTEL, or CARTEL, a Letter of Defiance, or a Challenge to ſingle Combat; much in uſe when thoſe Combats were practis'd, for the deciding of difficult, and not otherwiſe to be determin'd Controverſies at Law. See COMBAT, DUEL, CHAMPION, &c.

CHARTER, or CHARTA, an Inſtrument, or written Evidence of a thing under the Seal of a Prince, Lord, Church, Chapter, or Community.

*Bracton* ſays, Donations are ſometimes made in *Charters*, *in perpetuam rei Memoriam*. He adds, that of *Charters* ſome are *Royal*, others of private Perſons.

Of *Royal*, ſome are Private, ſome Common, ſome Univerſal.

Of *private Charters*, ſome are *de puro Feoffamento*, others *de conditionali Feoffamento*, others of *Recognition*, *pure* or *conditional*, others of *Confirmation*, &c.

CHARTERS *of the King*, are thoſe whereby a King makes a Grant to a Perſon, or Community; *v. g.* a *Charter of Exemption*, that a Perſon ſhall not be impanell'd on a Jury, &c.

CHARTER *of Pardon*, is that whereby a Perſon is forgiven a Felony, or other Offence againſt the King's Crown and Dignity. See PARDON.

CHARTER *of the Foreſt*, is that wherein the Laws of the Foreſt are compriz'd and eſtabliſh'd, together with the *Magna Charta*, or *Great Charter*. See FOREST.

*Great* CHARTER, or *Magna Charta*. See MAGNA *Charta*.

The Word *Charter* comes from the Latin *Charta*, antiently us'd for a publick or authentick Act, a Donation, Contract, &c. from the *Greek* χάρτης, *thick Paper*, or *Paſtboard*, whereon publick Acts were uſed to be wrote.

CHARTER-*Houſe*. See CHARTREUSE.

CHARTER-*Land*, in Law, is ſuch as a Man holds by *Charter*, that is, by Evidence in writing; otherwiſe call'd *Freehold*. See FREEHOLD.

This the *Saxons* call'd *Bockland*: which *Lambard* renders, *Terra ex ſcripto*. See BOCKLAND.

It was held on more eaſy Conditions than the *Folkland*; or *Terra ſine ſcripto*, held without writing: the former being *hæreditaria*, *libera & immunis*; whereas the latter *cenſum penſitabat annuum atque officiorum quadam ſervitute erat obligatus*. See FOLKLAND.

CHARTERPARTY, in Commerce, the Inſtrument of Freightage; or Articles of Agreement for the Hire of a Veſſel; or the Invoice or Cargo of a Veſſel. See FREIGHT, &c.

The *Charterparty* is to be in writing; and to be ſign'd both by the Proprietor, or the Maſter of the Ship; and the Merchant who freights it.

The *Charterparty* is to contain the Name and the Burden of the Veſſel; thoſe of the Maſter and the Freighter; the Price or Rate of Freight; the Time of loading and unloading; and the other Conditions agreed on.

'Tis properly a Deed, or Policy, whereby the Maſter or Proprietor of the Veſſel engages to furniſh immediately a tight ſound Veſſel, well equipp'd, caulk'd and ſtopp'd, provided with Anchors, Sails, Cordage, and all other Furniture to make the Voyage requir'd, as Equipage, Hands, Victuals, and other Munitions; in conſideration of a certain Sum to be paid by the Merchant for the Freight. Laſtly, the Ship, with all its Furniture, and the Cargo, are reſpectively ſubjected to the Conditions of the *Charterparty*.

The *Charterparty* differs from a *Bill of Lading*, in that the firſt is for the entire Freight, or Lading, and that both for going and returning; whereas the latter is only for a Part of the Freight, or at moſt only for the Voyage one way.

The Preſident *Boyer* ſays, the Word comes from hence, that *per medium Charta incidebatur*, *& ſic fiebat Charta partita*; becauſe in the Time when Notaries were leſs common, there was only an *Act of Convention* for both Parties: this they cut in two, and gave each his Portion, and join'd them together at their Return, to know if each had done his Part. This he obſerves to have ſeen practis'd in his Time; agreeable to the Method of the *Romans*, who, in their Stipulations, us'd to break a Staff, each Party retaining a Moiety thereof as a Mark.

CHARTIS *Reddendis*, a Writ which lies againſt him that has *Charters* of Feoffment intruſted to his keeping, and refuſeth to deliver them to the Owner.

CHARTOPHYLAX, an Officer in the Church of *Conſtantinople*.

*Codin* calls the *grand Chartophylax* the Judge of all Cauſes, and the right Arm of the Patriarch. He adds, that he was the Depoſitory or Keeper of all the *Charters* relating to the Eccleſiaſtical Rights; that he preſided over Matrimonial Cauſes, and was Judge of all the Clergy. He drew up all Sentences and Deciſions of the Patriarch, who ſign'd and ſeal'd them; preſided in the grand Council of the Patriarch, took cognizance of all Matters and Cauſes Eccleſiaſtical and Civil, whether among the Clergy, the Monks, or the People.

He took place of all the Biſhops; tho himſelf only a Deacon; and, on occaſion, diſcharg'd the Functions of the Prieſts: He had twelve Notaries under him.

The *Chartophylax* was the ſame at *Conſtantinople* with the *Chartulary* at *Rome*. See CHARTULARY.

There were, in reality, two Officers who bore this Title; the one for the Court, the other for the Patriarch; the firſt call'd alſo *Regiſtrator*, and the latter *Scrinarius*: tho the two are uſually confounded together. *Leunclavius*, and others, confound *Chartophylax* with *Chartulary*.

The Word is form'd from χάρτα, and φυλατ∫ω, *Cuſtodio*; and ſignifies *Charter-keeper*.

CHARTREUSE, a Monaſtery of *Carthuſians*; ſo call'd from the Name of a ſteep rocky Place, in a frightful Deſart five Leagues from *Grenoble* in *France*; where S. *Bruno* retir'd from the World, and firſt inſtituted the Order of *Carthuſians*. See CARTHUSIAN.

The Name has ſince paſs'd to all Houſes of *Carthuſians*; and that near *Grenoble*, is now diſtinguiſh'd by the Name of the *great Chartreuſe*.

That of *London*, corruptly call'd *Charterhouſe*, is now converted into a College, call'd from its Founder *Sutton*'s *Hoſpital*; firſt endow'd, with 4000 *l. per Annum*, ſince improv'd to 6000.

It is to conſiſt of decay'd Gentlemen, Soldiers, and Merchants; eighty of whom have a plentiful Maintenance of Diet, Lodging, Clothes, Phyſick, &c. living together in a Collegiate manner; and of Scholars, or Youths, 44 of whom are taught, and ſupply'd with Neceſſaries, and ſuch of them as are fit for the Univerſity ſent thither, with an Exhibition of 20 *l. per Annum*, for eight Years; the reſt put to Trades.

For the Superintendency of this Hoſpital, there are 13 Overſeers, or Regulators, appointed by the King's Letters Patent under the Great Seal; and thoſe of the prime Quality. The ordinary Officers are, a Maſter, Preacher, Regiſter, Treaſurer, School-Maſter, &c.

CHARTREUX, Religious of the Order of S. *Bruno*, call'd alſo *Carthuſians*. See CARTHUSIANS.

CHARTULARY, CHARTULARIUS, a Title given to an antient Officer in the *Latin* Church, who had the Care of *Charters* and Papers relating to publick Affairs.

The *Chartulary* preſided in Eccleſiaſtical Judgments, in lieu of the Pope.

In the *Greek* Church, the *Chartulary* was call'd *Chartophylax*; but his Office was there much more conſiderable; and ſome even diſtinguiſh the *Chartulary* from the *Chartophylax* in the *Greek* Church. See CHARTOPHYLAX.

CHASE, in Law, is us'd for a driving of Cattel to or from any Place; as to a Diſtreſs, a Fortlet, &c.

CHASE, or CHACE, is alſo a Place of Retreat for Deer and wild Beaſts; of a middle kind, between a *Foreſt* and a *Park*; being uſually leſs than a Foreſt, and not poſſeſs'd of ſo many Privileges; but wanting, *v.g.* Courts of *Attachment*, *Swanimote*, and *Juſtice Seat*. See FOREST.

Yet is it of a larger Extent, and ſtock'd both with a greater Diverſity of wild Beaſts, or Game, and more Keepers than a Park. See PARK.

*Crompton* obſerves, that a Foreſt cannot be in the Hands of a Subject, but it forthwith loſes its Name, and becomes a *Chaſe*; in regard, all thoſe Courts loſe their Nature when they come into the Hands of a Subject; and that none but the King can make a Lord Chief Juſtice in Eyre of the Foreſt. See JUSTICE *in Eyre*.

Yet the ſame Author adds, that a Foreſt may be granted by the King to a Subject, in ſo ample a manner, as that there may be a Court of *Attachment*, *Swanimote*, and a Court equivalent to a *Juſtice Seat*.

CHASE, in the Sea Language, is to purſue a Ship; which is call'd alſo *giving Chaſe*.

A *ſtern* CHASE, is when the *Chaſer* follows the *Chaſed* a-ſtern, directly upon the ſame Point of the Compaſs. To lie with a Ship's Fore-foot *in a Chaſe*, is to ſail, and meet with her by the neareſt Diſtance, and ſo to croſs her in her Way, or to come a-croſs her Fore-foot.

A Ship is ſaid to have *a good Chaſe*, when ſhe is ſo built forward on, or a-ſtern, that ſhe can carry many Guns to ſhoot forwards or backwards; and ſo hath either *a good forward*, or *good ſtern Chaſe*.

CHASE-*Guns*, are ſuch whoſe Ports are either in the Head (and then they are uſed in *chaſing* of others) or in the Stern, which are only uſeful when they are purſu'd or *chas'd* by any other Ship. See GUN.

CHASE *of a Gun*, is the whole Bore, or Length of a Piece taken within ſide. See GUN.

CHASING, a Method of working, or enriching Gold, Silver, &c. properly call'd *Enchaſing*. See ENCHASING.

CHASM. See HIATUS.

CHATELET, antiently ſignify'd a little Caſtle, or Fortreſs, wherein the *Chatelain*, or Governour lodg'd. See CASTLE.

At preſent, the Term is us'd for certain Courts of Juſtice eſtabliſh'd in ſeveral Cities in *France*: The *grand Chatelet* in *Paris*, *v. g.* is the Place where the Preſidial, or ordinary Court of Juſtice of the Prevot of *Paris* is kept; conſiſting of a Preſidial, a Civil Chamber, criminal Chamber, and a Chamber of Policy. The Term ſignifies the ſame at *Montpelier*, *Orleans*, &c.

The little *Chatelet* at *Paris*, is an antient Fort, now ſerving as a Priſon.

The Word is a Diminutive of *Chateau*, form'd from *Caſtellum*, a Diminutive of *Caſtrum*; or from *Caſtelletum*, a Diminutive of *Caſtellum*.

CHATTELS, *Catals*, *Catalla*, a *Norman* Term, under which were antiently comprehended all moveable Goods; thoſe immoveable being term'd *Fief*, or, as we now ſay, *Fee*.

But in the modern Senſe of the Word, *Chattels* are all ſorts of Goods, moveable or immoveable, except ſuch as are in the Nature of Freehold, or Parcel thereof.

*Chattels* are either *Perſonal*, or *Real*.

CHATTELS *Perſonal*, are ſuch as do either belong immediately to the Perſon of a Man, as his Horſe, Sword, &c. or ſuch Things as being injuriouſly with-held from him, a Man has no way to recover but by Perſonal Action.

CHATTELS *Real*, are either ſuch as do not appertain immediately to the Perſon, but to ſome other thing, by way of Dependance; as Charters of Land, Apples upon a Tree, &c. or ſuch as neceſſarily iſſue out of ſome immoveable Thing to a Perſon; as a Leaſe, or Rent for Years.

*Spelman* defines *Chattels* to be *Bona quæcunque mobilia & immobilia; propriè tamen ea bonorum pars, quæ in animalibus conſiſtat, à quorum* capitibus *res ipſæ*, *alias* capita, *alias* capitalia *dictæ ſunt*.

CHAUNTRY, or CHANTRY, was antiently a Church, or Chapel endow'd with Lands, or other yearly Revenue, for the Maintenance, formerly, of one or more Prieſts, daily ſaying or ſinging Maſs for the Souls of the Donors, and ſuch others as they appointed.

Hence, CHAUNTRY *Rents*, are Rents paid to the Crown by the Servants, or Purchaſers of *Chauntry Lands*.

CHAUF-WAX. } See { CHAFE-WAX.
CHAUSSE-TRAPE. } { CALTROP.

CHAZINZARIANS, a Sect of Hereticks, who roſe in *Armenia* in the VIIth Century.

They are alſo call'd *Staurolatræ*, which, in *Greek*, ſignifies the ſame as *Chazinzarian* in *Armenian*, viz. *Adorer of the Croſs*; they being charg'd with adoring the Croſs alone.

In other Reſpects they were *Neſtorians*; and admitted two Perſons in Jeſus Chriſt. Tho they had further Singularities, recounted by *Nicephorus*, L. xviii. c. 54. particularly their holding an annual Feaſt, in Memory of the Dog of their falſe Prophet *Sergius*; which they call'd *Artzibartzes*.

The Word is form'd of the *Armenian Chazus*, Croſs. In the *Greek* Text of *Nicephorus*, they are call'd *Chatzintzarians*, χατζιντζάριοι.

CHECK *Roll*, a Book containing the Names of ſuch as are Attendants, and in pay to the King, or other great Perſons; as their Houſhold Servants.

It is otherwiſe call'd the *Chequer Roll*. See ROLL.

*Clerk of the* CHECK, is an Officer in the King's Houſhold, who has the *Check* and Controulment of the Yeomen of the Guard, and all the Uſhers belonging to the Royal Family. See YEOMAN, &c.

CHECK, in Falconry, is where a Hawk forſakes her natural Flight, to follow Rooks, Pies, or other Birds that come in ſight.

CHECKER. See EXCHEQUER.

CHECKY, in Heraldry, is where the Shield, or a part thereof, as a *Bordure*, &c. is *checquer'd*, or divided into *Checquers*, or Squares.

Where there is but one Row of Squares, it is not properly call'd *Checky*, but *Countercomponed*. See COUNTER-COMPONED.

*Checky*, according to *Colombiere*, is one of the moſt noble and antient Figures in all Armory; and ought never to be given, but to Perſons who have diſtinguiſh'd themſelves in War: for it repreſents a Cheſs-Board, which it ſelf is a Repreſentation of a Field of Battel. The Pawns and Men, plac'd on both Sides, repreſent the Soldiers of the two Armies; which move, attack, advance, or retire, according to the Will of the two Gameſters, who are the Generals. See CHESS.

*Checky* is always compos'd of Metal, and Colour. Some Authors would have it rank'd among the Sorts of Furs.

When the whole Eſcutcheon is *chequer'd*, it ſhould ordinarily contain ſix Ranges: There is no need of blazoning to expreſs 'em; only it muſt be obſerv'd, to begin to blazon by the firſt Square, which is in Chief on the Dexter ſide. So that if that be *Or*, and the next *Gules*, the Houſe or Family is ſaid to bear *Checky Or and Gules*. When the whole Shield is not *checquer'd*, but only the Chief, a Bend, Croſs, or the like, the Number of Ranges ſhould be expreſs'd.

CHEEKS, a general Name, among Mechanicks, for almoſt all thoſe Pieces of their Machines and Inſtruments, that are double, and perfectly alike.

The *Cheeks* of a Printing Preſs, are its two principal Pieces: they are plac'd perpendicular and parallel to each other; ſerving to ſuſtain the three Sommers, *viz.* the Head, Till, and Winter, which bear the Nut, Spindle, and other Pieces of the Machine. See PRINTING *Preſs*.

The *Cheeks of a Lathe*, are two long pieces of Wood, between which are plac'd the *Puppets*, which are either pointed, or otherwiſe; ſerving to ſupport the Work, and the Mandrils of the Workman. Theſe two Pieces are plac'd parallel to the Horizon, ſeparated from one another by the Thickneſs of the Tail of the Puppets, and join'd with Tenons to two other Pieces of Wood, plac'd perpendicularly; call'd the *Legs of the Lathe*. See LATHE.

*Cheeks of the Glaſier's Vice*, are two pieces of Iron, join'd parallel at top and bottom; in which are the Axis, or Spindles, little Wheel, Cuſhions, &c. whereof the Machine is compos'd. See VICE.

CHEESE, a popular Food; being a Preparation of Milk curdled by means of Rennet, dry'd, and harden'd. See MILK, RENNET, &c.

*Cheeſe* is nothing but Milk purg'd of its Serum, or Whey; and ſometimes too of the Cream, or butyrous Part of the Milk. See BUTTER.

*Cheeſe*, when new, is found to load the Stomach, by reaſon of its Moiſture and Viſcidity; and when too old, heats and inflames it by its Salts. The Phyſicians adviſe it to be eat in ſmall Quantities; hence that *Latin* Verſe,

*Caſeus ille bonus quem dat avara manus.*

Dr. *Quincy* ſays, it cannot be too old: 'Tis certain, the more it abounds with Salts, the more will it contribute to Digeſtion, and the clearing of the Stomach of other Food.

Indeed ſome condemn all uſe of *Cheeſe*; ſheltering themſelves under that antient Maxim, *Caſeus eſt nequam quod omnia concoquit ſe-quam*.

CHEF. See CHIEF.

CHEF *d'Oeuvre*. See MASTERPIECE.

CHEG, CHERIF, the Prince, or High-Prieſt of *Mecca*, and the ſovereign Pontiff of all the Muſſulmans; being own'd as ſuch by all the ſeveral Sects into which they are divided.

The Grand Signior, Sophies, Mogols, Kans of *Tartary*, &c. ſend him yearly Preſents; eſpecially Tapeſtry, to cover *Mahomet*'s Tomb withal, and Tents for himſelf: for the *Cheg* has a Tent near the Moſque of *Mecca*, wherein he lives during the 17 Days of Devotion in the Pilgrimage to *Mecca*. The Tapeſtry and Tent are chang'd each Year, and Pieces thereof ſent to the Princes who furniſh new ones.

His Revenue is very conſiderable, conſiſting of Preſents made by the *Mahometan* Princes, and Pilgrims, to the Moſque of *Mecca* and *Medina*.

The *Cheg* ſubſiſts all the Pilgrims during the 17 Days of Devotion; on which account, he is every Year furniſh'd with a very conſiderable Sum of Money from the Grand Signior: The better to obtain this, he makes him believe, that there are conſtantly, during this Time, 70 thouſand Pilgrims; and that ſhould the Number fall ſhort, the Angels, in form of Men, would make it up.

CHELONITES, in Natural Hiſtory, a Stone found in the Bellies of young Swallows; much eſteem'd by ſome for the falling Sickneſs.

There is alſo a Stone bearing the ſame Name found in the *Indian* Tortoiſes, which is ſaid to have the Faculty of reſiſting Poiſon. Some confound it with the *Crapaudin*, or *Toadſtone*.

The Stone takes its Name from χελιδὼν, a *Swallow*.

CHELSEY-*College*, or *Hoſpital*. See HOSPITAL.

CHEMISE, in Fortification, is a Wall wherewith a Baſtion, or any other Bulwark of Earth, is lin'd; for its greater Support and Strength.

Or it is the Solidity of the Wall, from the *Talus* to the Row. See WALL, &c.

*Fire* CHEMISE, is a piece of Linen Cloth, ſteep'd in a Compoſition of Oil of Petreola, Camphor, and other combuſtible Matters; us'd at Sea, to ſet fire to the Enemy's Veſſel.

CHERRY *Brandy*, a Drink made of Plain *Brandy*, with the Addition of *Cherries*. See BRANDY.

The *Cherries* commonly us'd therein are of the black Kind; with theſe, a Bottle being half fill'd, is fill'd up with *Brandy*, or Spirits. The whole to be ſhaken up now and

and then; and in a Month's time it becomes fit for uſe.

To ſweeten it, and improve the Flavour, ſome chuſe to put in Sugar, with a Quantity of Rasberries.

CHERSONESUS, in Geography, a *Peninſula*; or a Continent almoſt incompaſs'd round with the Sea, only joining to the main Land by a narrow Neck, or *Iſthmus*. See PENINSULA.

This Term is us'd by the Moderns, in Complaiſance to the Antients, who call'd all their Peninſulas by this Name: Accordingly, ſuch Places as were hereby diſtinguiſh'd among them, retain the Name among us; as the *Cherſoneſus of Peloponneſus*, *of Thrace*, *Cherſoneſus Cimbrica*, *Aurea*, &c.

The Word is *Greek*, χερσονεσος, which ſignifies the ſame thing.

CHERUB, or CHERUBIN, a Celeſtial Spirit, which, in the Hierarchy, is plac'd next in order to the *Seraphim*. See HIERARCHY.

They are painted red, to ſignify that they are inflam'd with the Love of God.

The Word is form'd of the *Hebrew* כרוב *Cherub*; the Plural whereof is *Cherubim*.

CHERUB is alſo the Name of an antient Military Order in *Sweden*, otherwiſe call'd the Order of *Seraphim*. It was inſtituted by *Magnus* IV. in 1334; and aboliſh'd by *Charles* IX. It took its Denomination from the golden Figures of *Cherubim*, whereof the Collar of the Order was compos'd.

CHESS, a faſhionable Game, perform'd with little round Pieces of Wood, on a Board divided into 64 Squares; where Art and Addreſs are ſo indiſpenſibly requiſite, that Chance ſeems to have no place; and a Perſon never loſes but by his own Fault.

On each ſide are eight Men, and as many Pawns, which are to be mov'd and ſhifted, according to certain Rules and Laws of the Game.

*Donatus*, on *Terence*'s *Eunuch*, obſerves, that *Pyrrhus*, the moſt knowing and expert Prince of his Age, ranging a Battle, made uſe of the Men at *Cheſs* to form his Deſigns; and to ſhew the Secrets thereof to others. *Vopiſcus*, in his Life of *Proculus*, informs us, that one of the *Roman* Emperors had the Title *Auguſtus* given him, becauſe of his gaining ten Games at *Cheſs* ſucceſſively. *Tamerlane* is recorded as a very expert Gameſter at *Cheſs*.

*Cheſs* is doubtleſs a moſt antient and univerſal Game: The common Opinion is, that it was invented by *Palamedes* at the Siege of *Troy*. Others attribute the Invention to *Diomedes*, who liv'd in the Time of *Alexander*: The Romance of the Roſe aſcribes it to one *Attalus*; but the Truth is, the Game is ſo very antient, there is no traceing its Author.

In *China* it makes a conſiderable Part of the Education of their Maids, and ſeems to take the Place of the Dancing among us. In *Spain*, whole Cities challenge each other at *Cheſs*.

*John* of *Salisbury* relates, that in a Battel between the *French* and *Engliſh*, in 1117, an *Engliſh* Knight ſeizing the Bridle of *Louis le Gros*, and crying to his Comrades *The King is taken*, that Prince ſtruck him to the Ground with his Sword, ſaying, *Ne ſcais tu pas qu aux echecs on ne prend pas le Roy*?

Cardinal *Cajetan*, and other Caſuiſts, rank *Cheſs* in the Number of prohibited Games; as requiring too much Application: And *Montaign* blames it as too ſerious for a Game.

*Sarraſin* has a preciſe Treatiſe on the different Opinions of the Origin of the Latin *Schacchi*; whence the French *Echecs*, and our *Cheſs*, is form'd. *Menage* is alſo very full on the ſame Head. *Leunclavius* takes it to come from *Uſcoques*, a famous *Turkiſh* Robber: *P. Sirmond* from the German *Schach*, Thief; and that from *Calculus*. He takes *Cheſs* to be the ſame with the *Ludus Latrunculorum* of the *Romans*, but miſtakenly. This Opinion is countenanc'd by *Voſſius* and *Salmaſius*, who derive the Word from *Calculus*, as us'd for *Latrunculus*. *G. Toloſanus* derives it from the Hebrew *Schach*, *vallavit & mat*, *mortuus*; whence *Cheſs* and *Cheſs-mate*.

*Fabricius* ſays, a celebrated *Perſian* Aſtronomer, one *Scatrenſca*, invented the Game of *Cheſs*; and gave it his own Name, which it ſtill bears in that Country. *Nicod* derives it from *Scheque*, or *Xeque*, a *Mooriſh* Word for Lord, King, and Prince: *Bochart* adds, that *Scach* is originally *Perſian*, and that *Scachmat*, in that Language, ſignifies the King is dead. The Opinion of *Nicod* and *Bochart*, which is likewiſe that of *Scriverius*, appears the moſt probable.

CHEST, in Commerce, a kind of Meaſure, containing an uncertain Quantity of ſeveral Commodities. See MEASURE.

A *Cheſt of Sugar*, *v. g.* contains from 10 to 15 hundred Weight: A *Cheſt of Glaſs*, from 200 to 300 Foot; *of Caſtle Soap*, from 2½ to 3 hundred Weight; *of Indigo*, from 1½ to 2 hundred Weight; five Score to the hundred.

I

CHEVAGE, or CHIEFAGE, according to *Bracton*, ſignifies a Tribute by the Head; or a kind of Poll-Money antiently paid by ſuch as held Lands in Villanage, or otherwiſe, to their Lords, in acknowledgment. See POLL.

The Word ſeems alſo to have been us'd for a Sum of Money yearly given to a Man of Power, for his Patronage and Protection, as to their *Cheif*.

In the firſt Senſe, *Coke* obſerves, there is ſtill a kind of *Chevage* ſubſiſting in *Wales*, call'd *Amabyr*; paid to the Prince of *Wales* for the Marriage of his Daughters; antiently by all, now only by ſome. *Lambard* writes it *Chivage*. The *Jews*, while allow'd to live in *England*, paid *Chevage*, or Poll-Money; *viz.* three Pence *per* Head, paid at *Eaſter*.

The Word is form'd of the French *Chef*, Head.

CHEVAL *de Friſe*, a large piece of Timber pierc'd, and travers'd with wooden Spikes, arm'd or pointed with Iron, five or ſix Foot long.

Its Uſe is to defend a Paſſage, ſtop a Breach, or make a Retrenchment to ſtop the Cavalry.

'Tis ſometimes alſo mounted on Wheels, with Artificial Fires, to roll down in an Aſſault.

*Errard* obſerves, that the Prince of *Orange* us'd to incloſe his Camp with *Chevaux de Friſe*, laying them over one another.

The Term properly ſignifies a *Friſeland Horſe*; as having been firſt invented in that Country.

In a Medal of *Licinius*, is found a kind of *Cheval de Friſe*, made with Spikes interpos'd; ſerving to expreſs a fortify'd Camp.

CHEVALIER, a *French* Term, ordinarily ſignifying a *Knight*. See KNIGHT.

It is us'd, in Heraldry, to ſignify any *Cavalier*, or Horſeman arm'd at all Points; by the *Romans* call'd *Cataphractus Eques*, now out of uſe, and only to be ſeen in Coat-Armour. See EQUES, MILES, CATAPHRACTUS, &c.

The Word is form'd of the French *Cheval*, Horſe; and that of the Latin *Cavallus*.

CHEVELEE, a Term us'd by the *French* Heralds, to expreſs what we commonly call *Streaming*; *i.e.* the Stream of Light darting from a Comet, by Aſtronomers call'd its *Beard*.

CHEVERON, or CHEVRON, in Heraldry, one of the honourable Ordinaries of a Shield; repreſenting two Rafters of a Houſe join'd together, without any Diviſion. See ORDINARY, &c.

It deſcends from the *Chief* towards the Extremities of the Coat, in form of a Pair of Compaſſes half open: Thus, he bears *Gules*, *a Chevron Argent*.

The *Cheveron* is the Symbol of Protection, ſay ſome, or of Conſtancy, according to others: Some ſay it repreſents the Knight's Spurs; others the Head-Attire of Prieſteſſes; others a piece of the Liſt, or the Barrier or Fence of a Park.

When it is alone, it ſhould take up the third Part of the Coat: When 'tis accompany'd with any other Bearings, its Breadth muſt be adjuſted thereby.

It is bore divers ways; ſometimes in *Chief*, ſometimes in *Baſe*, ſometimes *enarch'd*, ſometimes *revers'd*, &c.

The *Cheveron* is ſometimes charg'd with another *Cheveron*, ⅓ of its Height.

Two *Cheverons* are allow'd in the ſame Field, but not more; when they exceed that Number, they are call'd *Cheveronwiſe*, or *Cheveronels*. There are *Cheverons* of ſeveral Pieces.

A *Cheveron* is ſaid to be *abaiſs'd*, when its Point does not approach the Head of the Chief, nor reach farther than the Middle of the Coat; *mutilated*, when it does not touch the Extremes of the Coat; or *cloven*, when the upper Point is taken off, ſo that the Pieces only touch at one of the Angles; *broke*, when one Branch is ſeparated into two Pieces; *couched*, when the Point is turn'd towards one ſide of the Eſcutcheon; *divided*, when the Branches are of ſeveral Metals, or when Metal is oppos'd to Colour; *inverted*, when the Point is towards the Point of the Coat, and its Branches towards the Chief.

A Coat is ſaid to be *Cheveroned*, when it is fill'd with an equal Number of *Cheverons*, of Colour and Metal.

*Countercheveron'd*, is when it is ſo divided, as that Colour is oppos'd to Metal, and *vice verſa*.

*Per* CHEVERON, or *Party per* CHEVERON, is when the Field is divided by only two ſingle Lines, riſing from the two Baſe Points, and meeting in a Point above, as the *Cheveron* does.

CHEVERONEL, is a Diminutive of *Cheveron*; and as ſuch only contains half a *Cheveron*.

CHEVRONEE, or CHEVRONNY, ſignifies the Parting of the Shield ſeveral times *Cheveronwiſe*. *Gibbon* ſays, *Cheveronne of ſix*.

CHIAOUS, an Officer in the Grand Signior's Court, doing the Buſineſs of an Uſher.

He bears Arms offenſive and defenſive; and has the Care of Priſoners of Diſtinction. His Badge is a Staff cover'd with Silver, and he is arm'd with a Scimiter, Bow, and Arrow.

The Emperor uſually chuſes one of this Rank to ſend as Embaſſador to other Princes.

The Word, in the original *Turkiſh*, ſignifies Envoy.

The *Chiaous* are under the Direction of the *Chiaous-Baſchi*, an Officer who aſſiſts at the *Divan*, and introduces thoſe who have Buſineſs there.

CHICANE, or *Chicanry*, in Law, an Abuſe of Judiciary Proceeding, tending to delay the Cauſe, and deceive or impoſe on the Judge or the Parties.

The *French* call Sollicitors, Attornies, &c. the *Gens de Chicane*.

CHICANE is alſo us'd in the Schools, for vain Sophiſms, Diſtinctions, and Subtilties, which immortalize Diſputes, and obſcure the Truth; as the *Chicane* of Courts does Juſtice.

*Menage* derives the Word from *Cicum*, the Skin of a Pomegranate; whence the *Spaniards* have form'd their *Chico*, little, ſlender; *Chicane* being converſant about Trifles.

CHIEF, a Term denoting Head; or a principal Thing, or Perſon.

The Word is form'd of the French *Chef*, Head; of the *Greek* κεφαλὴ, *Caput*, Head: tho *Menage* derives it of *Capo*, form'd of the Latin *Caput*.

Thus, we ſay, the *Chief of a Party*; the *Chief of a Family*, &c. Agamemnon *was the Chief of the* Greeks *who beſieg'd* Troy: *The* Romans *ſometimes refus'd Triumphs to their victorious Generals; by reaſon the Conduct of the* Chief *was not anſwerable to his Succeſs*. See TRIUMPH. *The Abbeys that are* Chiefs *of their Order are all Regular; and 'tis here the general Chapters are held*. See ABBEY.

CHIEF-*Juſtice*. See JUSTICE.

CHIEF *Lord*, is the Feudal Lord, or Lord of an Honour, on whom others depend. See LORD; ſee alſo HONOUR.

*Holding in* CHIEF. See CAPITE.

CHIEF, *Chef*, in Heraldry, is the upper Part of the Eſcutcheon, reaching quite acroſs from ſide to ſide. See ESCUTCHEON.

Thus, we ſay, *The Arms of* France *are* three golden Flower de Lys's, in a Field Azure; two in *Chief*, and one in Point.

*Chief* is more particularly us'd for one of the honourable Ordinaries, bore in the Coat. See ORDINARY.

'Tis plac'd athwart the Top of the Coat, and is to contain one third Part of its Height. When the Eſcutcheon is cut in Stone, or in Relievo, the *Chief* ſtands out prominent beyond the reſt; and is ſuppos'd to repreſent the Diadem of the antient Kings and Prelates; or the Caſk of the Knights.

It is frequently without any Ornament: ſometimes 'tis charg'd with other Bearings; ſometimes 'tis of a Colour or Metal different from that of the Coat.

The Line that bounds it at Bottom is ſometimes *ſtrait*, ſometimes *indented*, *engrail'd*, *embattel'd*, *lozenged*, &c. Thus, ſay they, *The Field is Gules, a* Chief *Argent*, &c. again, *He bears Gules, a* Chief *Crencle, or embattel'd Argent*.

Sometimes one *Chief* is born on another; expreſs'd by a Line drawn along the upper Part of the *Chief*: When the Line is along the under Part, 'tis call'd a *Fillet*. The firſt is an Addition of Honour, the ſecond a Diminution. See DIFFERENCE, &c.

The *Chief* is ſaid to be *abaiſs'd*, when 'tis detach'd from the upper Edge of the Coat, by the Colour of the Field which is over it; and which retrenches from it one third of its Height. We alſo ſay, *a Chief is cheveron'd, paled*, or *bended*, when it has a Cheveron, Pale, or Bend contiguous to it, and of the ſame Colour with it ſelf. A *Chief* is ſaid to be *ſupported*, when the two thirds at top are of the Colour of the Field, and that at bottom of a different Colour.

*In* CHIEF. By this is underſtood any thing born in the *Chief part*, or top of the Eſcutcheon.

CHIEF-*Pledge*, the ſame as *Headborough*. See HEADBOROUGH.

CHIEF-*Point*. See POINT.

CHIEFTAIN, the *Chief*, Leader, or General of an Army, &c. See CHIEF, and GENERAL.

CHILBLAIN, in Medicine, a Tumor afflicting the Feet and Hands; accompany'd with an Inflammation, Pain, and ſometimes an Ulcer, or Solution of Continuity. See TUMOR.

*Chilblains*, by Phyſicians call'd *Perniones*, are occaſion'd by exceſſive Cold ſtopping the Motion of the Blood in the Capillary Arteries. See PERNIO.

The Tumor, from white, generally inclines to blueneſs. Petroleum laid on the Part, either prevents *Chilblains*, or cures 'em.

CHILD, a Term of Relation to *Parent*. See PARENT; ſee alſo MALE, and FEMALE.

We ſay, *Natural Child*, *Legitimate Child*, *Putative Child*, *Baſtard Child*, *Adoptive Child*, *Poſthumous Child*. See NATURAL, PUTATIVE, BASTARD, ADOPTIVE, POSTHUMOUS, &c.

Mr. *Derham* computes, that Marriages, one with another, produce four *Children*; not only in *England*, but in other Parts alſo. See MARRIAGE.

In the Genealogical Hiſtory of *Tuſcany*, wrote by *Gamarini*, mention is made of a Nobleman of *Sienna*, named *Pichi*, who of three Wives had 150 *Children*; and that, being ſent Embaſſador to the Pope and the Emperor, he had 48 of his Sons in his Retinue.

In a Monument in the Church-yard of St. *Innocent*, at *Paris*, erected to a Woman who dy'd at 88 Years of Age, it is recorded, that ſhe might have ſeen 288 *Children* directly iſſu'd from her. But this is far ſhort of what *Hakewill* relates of Mrs. *Honeywood*, a Gentlewoman of *Kent*, born in the Year 1527, and marry'd at 16 to her only Huſband *R. Honeywood* of *Charing*, Eſq; and dy'd in her 93d Year.

She had 16 *Children* of her own Body; of which three dy'd young, and a fourth had no Iſſue: yet her *Grandchildren*, in the ſecond Generation, amounted to 114; in the third to 228, and in the fourth to 900, all in her Lifetime: So that ſhe could ſay the ſame as the Diſtich does of one of the *Dalburg*'s Family at *Baſil*.

*Mater*[1] *ait Natæ*[2] *dic Natæ*[3] *filia Natam*[4],
*Ut moneat, Natæ*[5], *plangere filiolam*[6].

Dr. *Harris* has an expreſs Treatiſe *of the Diſeaſes of Children*, *De Morbis acutis Infantum*. He takes 'em all to ariſe from the Humours in the *primæ Viæ* growing ſour, and degenerating into Acidities: which is confirm'd from their ſour Belches and Dejections. All that is requir'd to cure them, is to combat this Acidity; which is to be effected two ways; by diſpoſing it to be evacuated, and by actual Evacuation by Rhubarb, and other gentle Purgatives.

To diſpoſe the peccant Acid for Evacuation, no Sudorificks or Cordials to be us'd, thoſe Remedies being too violent; but Crabs Eyes and Claws, Oyſter-ſhells, Cuttlefiſh-bones, Egg-ſhells, Chalk, Coral, Pearls, Bezoar, burnt Ivory, Scrapings of the Unicorn's Horn, *Armenian* Bole, *Terra Sigillata*, and *Lapis Hæmatites*; the Goa Stone, and a ſort of Confection of Hyacinth. But of all theſe, he prefers old Shells that have lain long on the Edge of the Sea, expos'd to the Sun; which is better than any Chymical Furnace.

CHILD-*Bed*. } See PARTURITION, and DELIVERY.
CHILD-*Birth*. }

CHILD-*Wit*, a Power to take a Fine of a Bond-Woman unlawfully gotten with *Child*.

Every reputed Father of a baſe *Child*, got within the Mannor of *Writtel* in *Eſſex*, pays to the Lord for a Fine 3 *s.* 4 *d.* where, it ſeems, *Child-wit* extends to Free, as well as Bond-Women; *Quicunque fecerit* Child-wit, *Archiepiſcopus aut totam, aut dimidiam Emendationis partem habebit, quietum eſſe de* Child-wit. *Du Cange*.

CHILDERMASS-*Day*, call'd alſo *Innocents Day*, an anniverſary Feaſt of the Church, held on the 28th of *December*, in memory of the *Children* of *Bethlehem*, maſſacred by order of *Herod*. See FEAST.

*Charity*-CHILDREN. See CHARITY-*School*, HOSPITAL, &c.

CHILIAD, an Aſſemblage of ſeveral Things rang'd by *thouſands*.

The Word is form'd of the *Greek* χίλιος, *Mille*, a thouſand.

CHILIARCUS, an Officer in the Armies of the Antients, who had the Command of a thouſand Men.

The Word comes from the *Greek* χίλιος, *thouſand*, and ἀρχὴ, *command*.

CHILIASTS, a Sect of Religious. See MILLENARIES.

CHILMINAR, CHELMINAR, or *Tchelminar*, the nobleſt and moſt beautiful Piece of Architecture remaining of all Antiquity; being the Ruins of the famous Palace of *Perſepolis*, to which *Alexander* the Great, being drunk, ſet fire, at the Perſuaſion of the Courteſan *Thais*. See RUINS.

Authors and Travellers are exceedingly minute in their Deſcriptions of the *Chilminar*; particularly *Garcios de Silva Figueroa*, *Pietro de la Valle*, *Chardin*, and *Le Brun*.

A general Idea thereof, may be conceiv'd as follows.

There appear the Remains of near fourſcore Columns; the Fragments whereof are at leaſt ſix Foot high: but there are only nineteen that can be call'd entire; with a twentieth all alone, 150 Paces from the reſt.

A Rock of black hard Marble, ſerves for the Foundation of the Edifice.

The firſt Plan of the Building is aſcended to by fourſcore and fifteen Steps cut in the Rock. The Gate of the Palace is twenty Foot wide; on one ſide is the Figure of an Elephant, and on the other of a Rhinoceros, each thirty

Foot high, and of ſhining Marble. Near theſe Animals are two Columns; and not far off the Figure of a Pegaſus.

After this Gate is paſs'd, are found a great Number of Columns of white Marble; the Remains whereof ſhew the Magnificence of the Work: the ſmalleſt of theſe Columns is fifteen Cubits high, the largeſt eighteen; each has forty Flutings, three large Inches broad; whence the highneſs of the whole may be gueſs'd at, with the other Proportions. Near the Gate is an Inſcription on a ſquare piece of Marble, ſmooth as Glaſs, containing about twelve Lines: The Characters are of a very extraordinary Figure, reſembling Triangles and Pyramids.

Theſe noble Ruins are now the Shelter of Beaſts and Birds of Prey. Beſides the Inſcription abovemention'd, there are others in *Arabic*, *Perſian*, and *Greek*. Dr. *Hide* obſerves, that the Inſcriptions are very rude and unartful; and that ſome, if not all of them, are in praiſe of *Alexander* the Great, and therefore later than that Conqueror.

M. *Le Brun* tells us, that he took his Voyage to the *Eaſt-Indies* merely for the ſake of viewing the *Chilminar*.

The Word comes from the Perſian *Tchehelminar*, forty Towers, or Columns; on account of the forty Columns of an enormous ſize ſeen there.

CHIMERA, a fabulous Monſter, which the Poets feign'd to have the Head of a Lion, the Belly of a Goat, and the Tail of a Serpent; and to have been kill'd by *Bellerophon*, mounted on the Horſe *Pegaſus*.

The Foundation of the Fable is this; that antiently in *Lycia* there was a *Vulcano*, or burning Mountain of this Name; the top whereof, which was deſart, only inhabited by Lions; the middle, having good Paſtures, by Goats; and the foot, being marſhy, by Serpents. Thus *Ovid*,

*——Mediis in partibus Hircum*
*Pectus, & ora Leæ, caudam Serpentis habebit.*

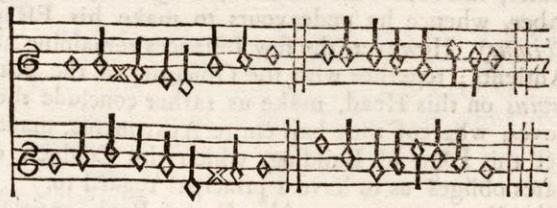
*Bellerophon* being the firſt who caus'd this Mountain to be inhabited, 'twas feign'd he ſlew the *Chimera*. *Pliny* ſays, the Fire thereof would kindle with Water, and extinguiſh with nothing but Earth or Dung.

CHIMES *of a Clock*, a kind of periodical Muſick, produc'd at certain Seaſons of the Day, by a particular Apparatus added to a *Clock*. See CLOCK.

To calculate Numbers for the *Chimes*, and to fit and divide the *Chime*-Barrel, it muſt be obſerv'd, That the Barrel muſt be as long in turning round, as you are in ſinging the Tune it is to play.

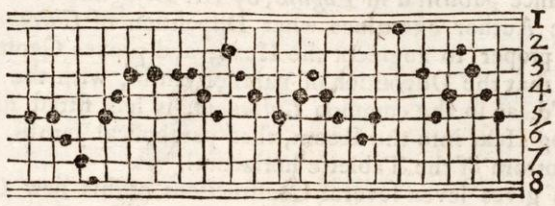
As for the *Chime*-Barrel, it may be made up of certain Bars which run athwart it, with a convenient Number of Holes punch'd in them, to put in the Pins that are to draw each Hammer: by this means, the Tune may be chang'd, without changing the Barrel: Such is the *Royal Exchange* Clock in *London*, and others. In this caſe, the Pins, or Nuts, which draw the Hammers, muſt hang down from the Bar, ſome more, ſome leſs; and ſome ſtanding upright in the Bar: The reaſon whereof is to play the Time of the Tune rightly: for the Diſtance of each of theſe Bars may be a Semibreve; but the uſual way, is to have the Pins which draw the Hammers fix'd on the Barrel.

For the placing of theſe Pins, you may proceed by the way of Changes on Bells, *viz.* 1, 2, 3, 4, *&c.* or rather, make uſe of the Muſical Notes: where it muſt be obſerv'd, what is the Compaſs of the Tune, or how many Notes, or Bells, there are from the higheſt to the loweſt; and accordingly, the Barrel muſt be divided from end to end.



Thus, in the following Examples, each of thoſe Tunes are eight Notes in compaſs; and accordingly, the Barrel is divided into eight Parts. Theſe Diviſions are ſtruck round the Barrel; oppoſite to which are the Hammer-Tails.

We ſpeak here as if there was only one Hammer to each Bell, that it may be more clearly apprehended: but when two Notes of the ſame Sound come together in a Tune, there muſt be two Hammers to the Bell to ſtrike it: So that if in all the Tunes you intend to *chime* of eight Notes compaſs, there ſhould happen to be ſuch double Notes on every Bell; inſtead of eight you muſt have ſixteen Hammers; and accordingly you muſt divide the Barrel, and ſtrike ſixteen Strokes round it, oppoſite to each Hammer-Tail: Then you are to divide it round about, into as many Diviſions as there are Muſical Bars, Semibreves, Minims, *&c.* in the Tune.



Thus, the hundredth Pſalm-Tune has twenty Semibreves, and each Diviſion of it is a Semibreve: the firſt Note of it alſo is a Semibreve; and therefore on the *Chime*-Barrel muſt be a whole Diviſion, from 5 to 5; as you may underſtand plainly, if you conceive the Surface of a *Chime*-Barrel to be repreſented by the following Tables; as if the cylindrical Superficies of the Barrel were ſtretch'd out at length, or extended on a Plane: and then ſuch a Table, ſo divided, if it were to be wrapp'd round the Barrel, would ſhew the Places where all the Pins are to ſtand in the Barrel: For the Dots running about the Table, are the Places of the Pins that play the Tune.

Indeed, if the *Chimes* are to be compleat, you ought to have a ſet of Bells to the Gamut Notes; ſo as that each Bell having the true Sound of *ſol*, *la*, *mi*, *fa*, you may play any Tune with its Flats and Sharps; nay, you may by this means play both the Baſs and Treble with one Barrel: and by ſetting the Names of your Bells at the head of any Tune, that Tune may eaſily be transferr'd to the *Chime*-Barrel, without any Skill in Muſick: But it muſt be obſerv'd, that each Line in the Muſick is three Notes diſtant; that is, there is a Note between each Line, as well as upon it.

*The Notes of the* 100 *Pſalm.*

*A Table for dividing the* Chime-*Barrel of the* 100 *Pſalm.*

CHIMIN, or CHEMIN, in Law, a Road, or Way. See ROAD. Hence,

CHIMINAGE, a Toll for Wayfarage thro' a Foreſt. The Feudiſts call it *Pedagium*. See PEDAGE.

CHIMNEY, in Architecture, a part of an Apartment, wherein the Fire is made. See FIRE.

The Parts of a *Chimney* are the *Jambs*, or Sides, coming out perpendicularly, ſometimes circularly, *&c.* from the Back; the *Mantle-Tree* reſts on the Jambs: The *Tube*, or *Funnel*, which conveys away the Smoke; the *Chimney-piece*, or Moulding, on the foreſide of the Jambs over the Mantle-Tree; and the *Hearth*, or Fireplace.

*Palladio* ſettles the Proportions of a Chamber *Chimney* thus; Breadth on the Inſide, $5\frac{1}{2}$, 6, or 7 Foot; Height to the Mantle-Tree, 4 or $4\frac{1}{2}$; Depth, 2 or $2\frac{1}{2}$ Foot.

According to *Wolfius*, the Breadth of the Aperture at bottom to be to the Height, as 3 to 2, to the Depth as 4 to 2. In ſmall Apartments the Breadth is 3 Foot, in larger 5; in Bed-Chambers 4; in ſmall Banquetting Rooms $5\frac{1}{2}$, in large 6. But the Height never to exceed $2\frac{1}{2}$, leſt there being too much room for the Air and Wind, the Smoke be driven down into the Room. Nor muſt the Height be too little, leſt the Smoke miſs its way, and be check'd at firſt ſetting out. The ſame Author adviſes to have an Aperture, thro' which the external Air may, on occaſion, be let into the Flame, to drive up the Smoke; which the internal Air would otherwiſe be unable to do. See STOVE.

The Mouth of the Tube, or that part join'd to the *Chimney*-Back, *Felibien* orders to be a little narrower than the reſt; that the Smoke coming to be repell'd downwards, meeting with this Obſtacle, may be prevented from getting into the Room.

Some make the Funnel twiſted, to prevent the Smoke's deſcending too eaſily: but the better Expedient is to make the Funnel narrower at bottom than at top; the Fire impelling it upward more eaſily when contracted at bottom; and in mounting, it finds more ſpace to diſengage it ſelf, and therefore has leſs occaſion to return into the Chamber.

*To prevent ſmoaking* CHIMNEYS, M. *Lucar* adviſes two Holes, or two Pipes, one over the other, to be left in each ſide of the *Chimney*; one ſloping upwards, the other downwards: thro' one of theſe, ſays he, the Smoke will paſs in any poſition.

*De l'Orme* orders a Braſs Ball full of Water, with one ſmall Aperture, to be hung up in the *Chimney*, at a Height a little above the greateſt Flame: here, as the Water grows hot, 'twill rarefy and drive thro' the Aperture in a vapoury Stream, which will drive up the Smoke that wou'd otherwiſe linger in the Funnel.

Others place a kind of moveable Vane, or Weathercock a-top of the *Chimney*: ſo that what way ſoever the Wind comes, the Aperture of the *Chimney* will be ſkreen'd, and the Smoke have free egreſs. Indeed, the beſt prevention of a ſmoking *Chimney*, ſeems to lie in the proper Situation of the Doors of the Room, and the apt falling back of the Back, and convenient gathering of the Wings and Breaſt of the *Chimney*.

'Tis a Rule, in Building, that no Timber be laid within 12 Inches of the Foreſide of the *Chimney* Jambs; that all Joiſts on the Back of the *Chimney* be laid with a Trimmer,

mer, at 6 Inches distance from the Back; and that no Timber be laid within the Funnel.

*Chimneys* are usually suppos'd a modern Invention; the Antients only making use of Stoves: But *Octavius Ferrareus* endeavours to prove *Chimneys* in use among the Antients. To this End he cites the Authority of *Virgil*: *Et jam summa procul villarum culmina fumant.* And that of *Appian*, who says, 'That of those Persons proscrib'd by 'the Triumvirate, some hid themselves in Wells, and *Clo-* 'aca, *Common-Shores*; some in the Tops of Houses, and 'Chimneys:' for so he understands καπνωδείς ὑποσφίας, *Fumaria sub tecto posita.* Add, that *Aristophanes*, in one of his Comedies, introduces his old Man, *Polycleon*, shut up in a Chamber, whence he endeavours to make his Escape by the *Chimney*. However, the few Instances remaining among the Antients; together with the Obscurity of the Rules of *Vitruvius* on this Head, make us rather conclude the Use of Stoves, whereof they had entire Apartments, made 'em neglect this Point of Building, which the Coldness of our Climates obliges us to have a principal regard to.

In the Year 1713, appear'd a *French* Book, entitled, *La Mechanique du Feu*, or The Art of augmenting the Effects, and diminishing the Expence of Fire, by M. *Gauger*; since publish'd in *English*, by Dr. *Desaguliers*: wherein the Author examines what Disposition of *Chimneys* is most proper to augment the Heat; and proves Geometrically, that the Disposition of parallel Jambs, with the Back inclin'd, as in the common *Chimneys*, is less fitted for reflecting Heat into the Room, than parabolical Jambs, with the bottom of the Tablette horizontal.

He gives seven several Constructions of his new *Chimneys*, and the manner of executing them. See FIRE.

M. *Gauger*, however, does not appear to be the first Inventor of the *Chimney* he describes; the Description of a like Kind being found in a *German* Book, printed at *Leipsick*, in 1699.

The Word *Chimney* comes from the French *Cheminee*; and that from the Latin *Caminata*, a Chamber wherein is a *Chimney*: *Caminata*, again, comes from *Caminus*, and that from the *Greek* καμινος, *a Chimney*; of καιω, *uro*, I burn.

CHIMNEY-*Jambs*, are the Sides of a *Chimney*, usually standing out perpendicularly, sometimes circularly, from the Back; on the Extremities whereof the Mantle-Tree rests. See JAMB.

CHIMNEY-*Piece*, in Building, a Composition of certain Mouldings, of Wood or Stone, standing on the Foreside of the Jambs, and coming over the Mantle-Tree. See MANTLE-*Tree*.

CHIMNEY-*Money*, or *Hearth-Money*, a Tax impos'd by a Stat. 24 *Car.* II. expressing, that every Fire-Hearth and Stove of every Dwelling, and other Houses within *England* and *Wales*, except such as pay not to Church and Poor, shall be chargeable with two Shillings *per Annum*, payable at *Michaelmas* and *Lady-Day*, to the King and his Heirs. See SMOAK, CHIMNEY, and FUAGE.

CHINA, or CHINA-*Ware*, a fine sort of Earthen Ware, properly call'd *Porcelain*. See PORCELAIN.

CHINA-CHINA, a Name sometimes given to the *Quinquina*, or *Peruvian Bark*. See QUINQUINA.

CHINA-*Root*, a Medicinal Root, brought from the *East-Indies*.

It is of a ruddy brown Colour, bordering on black, without side; and white, or reddish, within. It grows chiefly in fenny Places, usually cover'd with the Sea; which, upon its withdrawing, leaves great Quantities thereof on the Shore: the best is that which is firm, ruddy, and fresh.

It is esteem'd a sweetner of the Blood; and us'd as such in Decoction, in Venereal and Scorbutick Cases.

CHINESE, or *Chinese Tongue*, the Language of the People of *China*. See LANGUAGE.

F. *le Comte* observes, that the *Chinese* has no analogy with any other Language in the World: It only contains 330 Words, which are all Monosyllables; at least, they are pronounc'd so close, that there is no distinguishing above one Syllable, or Sound, in them. But the same Word, as pronounc'd with a stronger or weaker Tone, has different Significations: Accordingly, when 'tis accurately spoke, it makes a sort of Musick, which has a real Melody, that constitutes the Essence and distinguishing Character of that Language.

As to *Chinese Characters*, they are as singular as the Language: the *Chinese* have not, like us, any Alphabet, containing the Elements, or as it were the Principles of their Words: In lieu of an Alphabet, they use a kind of Hieroglyphicks; whereof they have above 8000. See LETTER.

CHIN-COUGH, a Disease Children are chiefly subject to. It consists in a violent and immoderate *coughing*, to a Danger of Suffocation. Letting of Blood, and Balsamicks, are the usual Cure.

CHIRAGRA, in Medicine, the Gout in the Hands. See GOUT.

The *Chiragra* has its Seat in the *Carpus*, or extreme Part of the Hand, or the Ligaments and Junctures of the Fingers.

The Word comes from the *Greek* χειρ, *manus*, Hand, and ἄγρα.

CHIROGRAPH, was antiently a Deed, which requiring a counterpart, was engross'd twice on the same piece of Parchment, counterwise; leaving a Space between, wherein was wrote *CHIROGRAPH*; thro' the middle whereof the Parchment was cut, sometimes strait, sometimes indentedly; and a Moiety given to each of the Parties.

This was afterwards call'd *Dividenda*, and *Chartæ divisæ*; and was the same with what we now call *Charter-Party*. See CHARTER-*Party*.

The first use of these *Chirographs* with us, was in the Time of K. *Henry* III. See INDENTURE.

According to some, a Deed was properly a *Chirograph*, when it was subscrib'd by the Hand-writing of the Vender, or Debtor, and deliver'd to the Buyer, or Creditor. These Authors make the *Chirograph* differ from a *Syngraph*, in this; that in the latter the Word *Syngraph* was wrote in the middle, and cut thro', in the manner just observ'd of *Chirograph*. These Authors therefore make the *Syngraph* the *Chirograph*; and the *Chirograph* a different thing.

The Word is compounded of the *Greek* χειρ, Hand; and γραφω, *scribo*, I write.

*Chirograph* was also antiently us'd for a Fine; and the manner of engrossing the Fines, and cutting the Parchment in two pieces, is still retain'd in the Office, call'd the *Chirographer's Office*. See CHIROGRAPHER.

CHIROGRAPHER *of Fines*, an Officer in the Common Pleas, who engrosses Fines in that Court, acknowledg'd into a perpetual Record (after they have been examin'd and pass'd by other Officers;) and who writes and delivers the Indentures thereof to the Party. He makes two Indentures, one for the Buyer, the other for the Seller; and a third indented Piece, containing the Effect of the Fine, and call'd *the Foot of the Fine*; and delivers it to the *Custos Brevium*. The same Officer also, or his Deputy, proclaims all Fines in Court every Term, and endorses the Proclamations on the backside of the Foot; keeping, withal, the Writ of Covenant and the Note of the Fine. See TABLING *of Fines*.

CHIROMANCY, the Art of divining the Fate, Temperament, and Disposition of a Person, by the Lines and Lineaments of the Hand; otherwise call'd *Palmistry*.

We have a Number of Authors on this vain and trifling Art; as *Artemidorus*, *Fludd*, and *John de Indagine*: *Taisnerus*, and M. *de le Chambre* have done the best.

This last insists on it, that the Inclinations may be known from inspecting the Hand; there being a very near Relation between the Parts of the Hand, and the internal Parts of the Body, the Heart, Liver, &c. whereon the Passions and Inclinations much depend. He adds, however, that the Rules and Precepts of *Chiromancy* are not sufficiently warranted, the Experiments whereon they stand not being well verify'd. He concludes, that there must be a new Set of Observations, made with Justness and Exactitude; in order to give *Chiromancy* the Form and Solidity which an Art or Science demands.

The Word comes from the *Greek* χειρ, *Hand*, and μαντεία, *Divination*.

CHIROTONIA, the Imposition of Hands, in conferring any Priestly Orders. See IMPOSITION.

The Word comes from the *Greek* χειροτονια, the Action of stretching out the Hands. And because the Antients gave their Suffrages by stretching out the Hands, they gave the Name *Chirotonia* to the Election of Magistrates. See PLEBISCITA, ORDINANCES, &c.

This Custom was first establish'd in *Greece*; as appears from an Oration of *Demosthenes* against *Neæra*, and that of *Æschines* against *Ctesiphon*: thence it pass'd to the *Romans*. From profane Authors it pass'd to Ecclesiastical ones; and was us'd by them, not only in Elections, but also in Ordinations.

CHIRURGERY, popularly call'd *Surgery*, the third Branch of Medicine; consisting in Operations perform'd by the Hand, for the Cure of Wounds, and other Disorders. See MEDICINE.

*Chirurgery* is the Art of curing Wounds, and various Diseases, by the opening of Veins, application of Topics, Incisions, and Amputations of several Parts of the Body, &c. See OPERATION.

*Chirurgery* is divided into *Speculative*, and *Practical*; one whereof does that in effect, which the other teaches to do.

All the Operations of *Chirurgery* are reduc'd under four Kinds: the first whereof re-joins what has been separated; and is call'd *Synthesis*.

The second divides, with Discernment, those Parts whose Union is prejudicial to Health; and is call'd *Diæresis*.

The third extracts with Art foreign Bodies; call'd *Exeresis*.

And the fourth, call'd *Prothesis*, adds and applies what is wanting. See each Branch under its proper Head.

The

The principal Things that come under the Conſideration of *Chirurgery*, are *Tumors*, *Ulcers*, *Wounds*, *Diſlocations*, and *Fractures*. See WOUND, ULCER, TUMOR, DISLOCATION, and FRACTURE.

*Chirurgery* has the advantage of Medicine in the Solidity of its Foundation, the Certainty of its Operations, and the Senſibleneſs of its Effects; inſomuch, that thoſe who deny Medicine to be of any ſignificancy, yet allow the Uſefulneſs of *Chirurgery*.

*Chirurgery* is very antient; and even much more ſo than Medicine, whereof it now makes a Branch. It was, in effect, the ſole Medicine of the firſt Ages: they betaking themſelves to the Cure of external Diſorders, e'er they came to examine or diſcover what related to the Cure of internal ones.

*Apis*, King of *Egypt*, is ſaid to be the firſt Inventor of *Chirurgery*; after him, *Æſculapius* compos'd a Treatiſe of Wounds and Ulcers. He was ſucceeded by the Philoſophers of the following Ages, in whoſe Hands *Chirurgery* wholly lay; *Pythagoras*, *Empedocles*, *Parmenides*, *Democritus*, *Chiron*, *Peon*, *Cleobruntus*, who cur'd K. *Antiochus*'s Eye, *&c.*

*Chirurgery* was cultivated with much more Earneſtneſs by *Hippocrates*, than by any of the preceding Phyſicians: It is ſaid to have been perfected in *Egypt*, by *Phyloxenus*, who wrote ſeveral Volumes on that ſubject. Among the *Greeks*, *Gorgias*, *Soſtrates*, *Heron*, the two *Apollonius*'s, *Ammonius* of *Alexandria*; and at *Rome*, *Trypho* the Father, *Evelpiſtus*, and *Meges*, made it flouriſh, each in their Time.

*Arcabuto* was the firſt *Chirurgeon* the *Romans* receiv'd into their Commonalty; but him they ſoon after ſton'd to Death in the *Campus Martius*, on account of his Cruelty in cutting off Limbs.

The more modern Authors, who have contributed moſt to the Perfection of *Chirurgery*, are *Paræus*, *Fab. ab Aquipendente*, *Harvey*, *Wharton*, *Gliſſon*, *Du Laurents*, *Diemerbroeck*, *Vieuſſens*, *Barbett*, *Dionis*, *Charriere*, &c.

*Sculterus* has publiſh'd a Deſcription of all the Inſtruments us'd in *Chirurgery*, under the Title of *Armamenterium Chirurgicum*; and our Countryman, Mr. *Wiſeman*, Serjeant-*Chirurgeon* to King *Charles* II. a Folio Volume of *Chirurgical* Treatiſes, containing practical Obſervations, both in reſpect to the Internals and Externals, of a Number of Caſes in each Branch of the Art, from his own Experience; under the Title of *Several Chirurgical Treatiſes*. This Work has been made uſe of ever ſince, by the moſt knowing of our *Engliſh Chirurgeons*; and has been the Foundation of moſt *Chirurgical* Treatiſes ſince its Publication, *Anno* 1676.

The *French Chirurgeons* being refus'd to be admitted into the Univerſities, notwithſtanding that their Art makes a Branch of Medicine, one of the four Faculties; on pretence of its bordering a little on Butchery, or Cruelty; aſſociated themſelves into a Brotherhood, under the Protection of S. *Coſmus* and S. *Damian*: on which account, according to the Laws of their Inſtitution, they are oblig'd to dreſs and look to Wounds *gratis*, the firſt Monday of each Month.

They diſtinguiſh between a *Chirurgeon of the long Robe*, and a *Barber Chirurgeon*: The firſt has ſtudy'd Phyſick, and is allow'd to wear a Gown.

The Skill of the other, beſide what relates to the Management of the Beard, is ſuppos'd to be confin'd to the more ſimple and eaſy Operations in *Chirurgery*; as Bleeding, Toothdrawing, *&c.* They were formerly diſtinguiſh'd by Badges; thoſe of the Gown bore a Caſe of Inſtruments; the Barber a Baſon.

The Word *Chirurgery* is form'd from the *Greek* χὲὶς, *manus*, Hand; and ἔϱϝον, *opus*, Operation.

CHISSEL, an Inſtrument much us'd in Sculpture, Maſonry, Joinery, Carpentry, *&c.*

There are *Chiſſels* of different Kinds; tho their chief difference lies in their different Size and Strength, as being all made of Steel well ſharpen'd and temper'd: but they have different Names, according to the different uſes to which they are apply'd.

The *Chiſſels* us'd in Carpentry and Joinery, are, 1. The *Former*, which is us'd firſt of all before the Paring-*Chiſſel*, and juſt after the Work is ſcrib'd. 2. The *Paring-Chiſſel*, which has a fine ſmooth Edge, and is us'd to pare off, or ſmooth the Irregularities which the former makes. This is not ſtruck with a Mallet, as the former is, but preſs'd with the Shoulder of the Workman. 3. *Skew-former*, us'd for cleanſing acute Angles with the Point, or Corner of its narrow Edge. 4. The *Mortice-Chiſſel*, which is narrow, but very thick and ſtrong, to endure hard Blows; and 'tis cut to a very broad Baſil: its uſe is to cut deep ſquare Holes in the Wood, for Mortices. 5. The *Gouge*, which is a *Chiſſel* with a round Edge; one ſide whereof ſerves to prepare the way for an Augre, and the other to cut ſuch Wood as is to be rounded, hollow'd, *&c.* 6. *Socket-Chiſſels*, which are chiefly us'd by Carpenters, *&c.* have their Shank made with a hollow Socket at top, to receive a ſtrong wooden Sprig, fitted into it with a Shoulder. Theſe *Chiſſels* are diſtinguiſh'd, according to the Breadth of the Blade, into half Inch *Chiſſels*, three quarters of an Inch *Chiſſels*, &c. 7. *Ripping Chiſſel*, which is a Socket *Chiſſel* an Inch broad; having a blunt Edge, with no Baſil to it: Its uſe is to rip, or tear two pieces of Wood aſunder, by forcing in the blunt Edge between 'em.

CHITTING, in Gardening. A Seed is ſaid to *chit*, when it firſt ſhoots its ſmall Roots into the Earth. See ROOT.

CHIVALRY, or CHEVALRY, in Law, a Tenure of Land by Knight-Service; whereby the Tenant was antiently bound to perform a Service in War; to the King, or the meſn Lord of whom he held by that Tenure. See SERVICE.

By a Statute of 12 *Car.* II. all Tenures by *Chivalry*, *in Capite*, &c. are aboliſh'd. See TENURE, KNIGHT, and KNIGHTHOOD.

CHIVES, or CHIEVES, a Term in Botany, which Mr. *Ray* renders in Latin *Apices*, *i. e.* the ſmall Knobs growing on the Ends of the fine Threads, or *Stamina* of Flowers. See APICES.

But Dr. *Grew* calls the *Stamina*, or Threads themſelves, on which the *Apices* are fix'd, the *Chives*. See STAMINA.

CHLAMYS, or CLAMYS, in Antiquity, a Military Habit, worn by the Antients over the *Tunica*. See TUNICA.

*Chlamys* was the ſame, in Time of War, that the *Toga* was in Time of Peace: Each belong'd to the Patricians. See TOGA.

There were four or five kinds of *Chlamys*; that of Children, of Women, and that of Men; which was divided into that of the People, and that of the Emperor.

CHLOROSIS, in Medicine, a Diſeaſe vulgarly call'd the *Green-Sickneſs*, *White-Jaundice*, &c.

Its uſual Subjects are Girls, Maids, and Widows; or even Wives, whoſe Husbands are deficient, *&c.* It gives a pale, ſallow, or livid Tincture to the Complexion, with a Circle of Violet under the Eyes. The Patient is melancholy and uneaſy; has frequently a low wandring Fever, with an unequal Pulſe, Vomiting, Heavineſs, Liſtleſſneſs, Drouſineſs, Difficulty of Breathing, Longing for abſurd Foods, *&c.*

It comes on, commonly, antecedent to, or about the Time of the Eruption of the Menſes.

The Stoppage of the Menſes is not always the Cauſe of this Diſtemper; for they ſometimes flow regularly, tho but ſeldom, in the Progreſs thereof.

According to *Etmuller*, the Suppreſſion of the Menſes is rather the Effect than the Cauſe.

The Cure is chiefly to be attempted by Chalybeats and Bitters. In the colder Conſtitutions, Decoctions of *Guaiacum* are found of uſe.

The Word *Chloroſis* ſignifies *Greenneſs*, *Verdure*; from χλοη, *Herba*, Graſs.

CHOCOLATE, a Confection, or Paſte, prepar'd of certain Drugs; the Baſis, or Principal whereof, is the *Cacao* Nut. See CACAO.

The Name *Chocolate* is alſo given to a drink, prepar'd from this Paſte, of a duſky Colour, ſoft, and oily; uſually drank hot: and eſteem'd not only an excellent Food, as being very nouriſhing, but alſo a good Medicine; at leaſt a Diet, for keeping up the warmth of the Stomach, and aſſiſting Digeſtion.

The *Spaniards* were the firſt who brought *Chocolate* into uſe in *Europe*; and that, perhaps, as much out of Intereſt, to have the better Market for their *Cacao* Nuts, *Achiott*, *Vanilla*, and other Drugs which their *Weſt-Indies* furniſh, and which enter the Compoſition of *Chocolate*; as out of regard to thoſe extraordinary Virtues, which their Authors ſo amply enumerate. The Qualities above mention'd, are what the generality of Phyſicians and others allow of it.

*The Manner of making* CHOCOLATE.

The Method firſt us'd by the *Spaniards* was very ſimple, and the ſame with that us'd by the *Indians*: They only us'd *Cacao*-Nut, Maiſe, and raw Sugar, as expreſs'd from the Canes, with a little *Achiott*, or *Rocou*, to give it a Colour. Of theſe four Drugs, ground between two Stones, and mix'd together in a certain Proportion, thoſe Barbarians made a kind of Bread, which ſerv'd 'em equally for ſolid Food and for Drink: eating it dry when hungry, and ſteeping it in hot Water when a-thirſt.

This Drink the *Mexicans* call'd *Chocolate*, from *Chocao*, Sound, and *alte*, or *atte*, Water; *q. d.* Water that makes a noiſe: from the Noiſe the Inſtrument us'd to agitate and prepare the Liquor, made in the Water.

But the *Spaniards*, and other Nations, have ſince added a great Number of other Ingredients to the Compoſition of *Chocolate*; all of which, *Vanilla* alone excepted, ſpoil, rather than mend it.

*Method of making* CHOCOLATE, *now in uſe among the* Spaniards *of* Mexico.

The Fruit being gather'd from the *Cacao* Tree, is dry'd in the Sun, and the Kernel taken out, and roaſted at the Fire, in Iron Peels pierc'd full of Holes; then pounded in a Mortar; then ground on a Marble Stone, with a Grinder of the ſame Matter, till it be brought into the Conſiſtence of a Paſte; mixing with it more or leſs Sugar, as it is to be more or leſs ſweet. In proportion as the Paſte advances, they add ſome long Pepper, a little *Achiot*, and laſtly *Vanilla*: Some add Cinnamon, Cloves, and Anis; and thoſe who love Perfumes, Muſk and Ambergris.

There is alſo a kind of *Mexican Chocolate* in the Compoſition whereof there enter Almonds and Filberts; but 'tis rather to ſpare the *Cacao*, than to render the *Chocolate* better: and accordingly, this is look'd on as ſophiſticated *Chocolate*.

*The* CHOCOLATE *made in Spain*, differs ſomewhat from that made in *Mexico*: For beſides the Drugs us'd in this laſt, they add two or three Kinds of Flowers, Pods of Campeche, and generally Almonds and Hazle Nuts. The uſual proportion, at *Madrid*, is to a hundred Kernels of *Cacao*, to add two Grains of *Chilé*, or *Mexican* Pepper, or in lieu thereof *Indian* Pepper; a handful of *Anis*; as many Flowers, call'd by the Natives *Vinacaxtlides*, or little Ears; ſix white Roſes in pouder; a little *Machuſia*; a Pod of Campeche; two Drachms of Cinnamon; a dozen Almonds, and as many Hazle Nuts; with *Achiott* enough to give it a reddiſh Tincture. The Sugar and *Vanilla* are mix'd at Diſcretion; as alſo the Muſk and Ambergrieſe. They frequently work their Paſte with Orange-Water, which they think gives it a greater conſiſtence and firmneſs.

The Paſte is uſually made up into Cakes, ſometimes into large Rolls.

Sometimes the Cakes are made up of pure *Chocolate*, without any Admixture; thoſe who uſe it being to add what Quantity they pleaſe of Sugar, Cinnamon, and *Vanilla*, when in the Water.

Among us, in *England*, the *Chocolate* is chiefly made thus ſimple and unmix'd, (tho perhaps not unadulterated) of the Kernel of the *Cacao*; excepting that ſometimes Sugar, and ſometimes *Vanilla* is added: any other Ingredients are ſcarce known among us.

The neweſt *Chocolate* is eſteem'd the beſt; the Drug never keeping well above two Years; but uſually degenerating much before that time.

'Tis kept in brown Paper, diſpos'd in a Box; and that in another, in a dry Place.

*The Manner of preparing the Maſs into a Liquor*, with the Proportions, are various: Ordinarily, the *Chocolate* is boil'd in Water, ſometimes in Milk; and ſometimes, by good Oeconomiſts, in Water-Gruel: when boil'd, 'tis mill'd, or agitated with a wooden Machine for the purpoſe, and boil'd again, till it be of the proper Conſiſtence for drinking; then ſugar'd, if the Maſs were pure; mill'd afreſh; and pour'd off.

Note, the beſt *Chocolate* is that which diſſolves entirely in the Water, leaving no Grounds, or Sediment at the bottom of the Pot.

There is a Diſpute among the Caſuiſts, whether or no *Chocolate* break the Faſt? The Negative is very ſtiffly aſſerted by *Car. Brancaccio*, who has wrote expreſsly on the Subject: tho *Stabe*, an *Engliſh* Phyſician, has endeavour'd to ſhew, that there is more nutritious Juice in an Ounce of *Cacao*, than in a Pound of Beef or Mutton.

The Quantity of *Chocolate* made in *New Spain* is ſuch, that there are annually us'd twelve Millions of Pounds of Sugar in the Preparation thereof. The *Spaniards* eſteem it the laſt Misfortune that can befall a Man, to be reduc'd to want *Chocolate*: They are never known to quit it, excepting for ſome other Liquor that will fuddle.

CHOIR, that part of a Church, Cathedral, *&c.* where the Prieſts, and *Choriſters*, or Singers, are diſpos'd. See CHURCH.

The *Choir* is diſtinguiſh'd from the *Chancel*, or *Sanctuary*, where the Communion is celebrated; as alſo from the *Nave*, or Body of the Church, where the People aſſiſt.

The Patron is ſaid to be oblig'd to repair the *Choir* of a Church; and the Pariſhioners the Nave.

The *Choir* was not ſeparated from the Nave, till the Time of *Conſtantine*: From that Time the *Choir* was rail'd in with a Balluſtrade, with Curtains drawn over; not to be open'd till after the Conſecration.

In the XIIth Century they began to encloſe the *Choir* with Walls: But the antient Balluſtrades have been ſince reſtor'd; out of a View to the Beauty of the Architecture. The Chantor is Maſter of the *Choir*. See CHANTOR.

In Nunneries, the *Choir* is a large Hall, adjoining to the Body of the Church; ſeparated by a Grate, where the Religious ſing the Office.

The Word, according to *Iſidore*, is derived *à Coronis circumſtantium*; becauſe, antiently, the *Choriſters* were diſpos'd round the Altar to ſing: which is ſtill the manner of building Altars among the *Greeks*.

CHOLAGOGUE, a Medicine which purges the Bile downward. See BILE, PURGATIVE, *&c.*

Of theſe ſome are *ſimple*, others *compound*; and both the one and the other diſtinguiſh'd into three Kinds, with regard to their Activity; the benign, the moderate, and the violent.

Of the firſt kind are Manna, Caſſia, Roſes, Tamarinds, *&c.*

Of the ſecond, Sena, Rhubarb, Aloes, *&c.*

Of the third, Jalop, Scammony, *&c.* See each under its Article, MANNA, CASSIA, SENA, *&c.*

The Word comes from χολὴ, *Bile*, and ἀγειν, *to lead*.

CHOLER. See BILE.

CHOLERA-*Morbus*, a ſudden overflowing of the Bile, both upwards and downwards. See BILE.

It is ſuppos'd to have its riſe from the great Abundance of bilious Humours, which being very acrimonious, vellicate the Membranes of the Stomach and Inteſtines; and by that means occaſion unuſual and violent Contractions.

'Tis very dangerous: Whence the *French* antiently call'd it *Trouſſe-Galand*.

It has its Name, either from the great Quantity of *Choler* it evacuates; or becauſe the Matter is inceſſantly expell'd at the Inteſtines, which they antiently call'd *Cholades*.

Dr. *Sydenham* obſerves, it generally attacks about the latter end of Summer; and proceeds, not unfrequently, from Surfeits: That the Cure depends upon large Quantities of Chicken-Broth, drank ſo as to excite Vomiting plentifully; and that the Broth is alſo to be injected Clyſterwiſe: after which, he ſays, the Cure is to be compleated by *Laudanum*, given at proper Intervals, and in proper Doſes.

The Remedy in the *Indies* for the *Cholera Morbus*, or *Mandechin*, is to keep the Patient from drinking; and to burn the Soals of his Feet.

CHOLIDOCHUS, in Anatomy, a Term apply'd to a Canal, or Duct, called alſo *Ductus Communis*; form'd of the Union of the *Porus Bilarius*, and *Ductus Cyſticus*. See DUCT.

The *Cholidocus Ductus*, paſſing obliquely to the lower End of the *Duodenum*, ſerves to convey the Bile from the Liver to the Inteſtines.

Some have imagin'd, that it convey'd the Bile from the Liver to the Gall-Bladder: but it being obſerv'd, that 'tis the *Duodenum*, not the Gall-Bladder, that ſwells upon blowing thro' this Duct; 'tis evident the Bile contain'd therein, is convey'd no where elſe but to the *Duodenum*. See BILE, LIVER, GALL-*Bladder*, &c.

The Word comes from the *Greek* χολὴ, and the Latin *Duco*, I draw, lead, *&c.*

CHONDROGLOSSUM, in Anatomy, a very ſmall Pair of Muſcles of the Tongue, mention'd by *Verheyen*, and ſeveral other Authors, exceedingly ſhort and narrow; ariſing from the cartilaginous Proceſſes of the *Os Hyoides*, and meeting in the Middle of the Baſis of the Tongue, where they are inſerted, forming an Arch under it.

This Pair of Muſcles is not found in all Subjects; whence ſome have queſtion'd its Exiſtence: but Nature takes ſo many Liberties, in Matters even of greater moment than a Pair of Muſcles; that we need not on that ſcore diſpute the Veracity of ſo many Authors as profeſs to have ſeen it.

CHOP-CHURCH, or *Church-Chopper*, a Name, or rather Nickname given to Parſons who make a Practice of exchanging Benefices.

*Chop-Church* is us'd in an antient Statute as a lawful Trade, or Occupation; and ſome of the Judges ſay it was a good Addition. *Brook* holds, that it was no Occupation, but a thing permiſſible by Law.

CHOPIN, or CHOPINE, a *French* liquid Meaſure; containing half their *Pint*. See MEASURE.

The *Paris Chopin* is nearly equal to the *Engliſh* Pint. A *Chopin* of common Water weighs a *Paris* Pound.

CHORD, or CORD, primarily denotes a ſlender Rope, or Cordage. See CORDAGE.

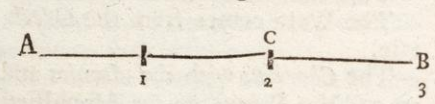
The Word is form'd of the Latin *Chorda*, and that from the *Greek* χορδὴ, *a great Gut*, whereof Strings may be made.

CHORDS, or CORDS, in Muſick, are the Strings, or Lines, by whoſe Vibrations the Senſation of Sound is excited; and by whoſe Diviſions the ſeveral Degrees of Tune are determin'd. See SOUND, and TUNE.

Some ſay, they are called *Cords*, or *Chords*, from the *Greek* χορδαὶ, a Name the Phyſicians give to the Inteſtines; in regard, the Strings of Muſical Inſtruments are ordinarily made of Guts: Others are made of Braſs or Iron Wire; as thoſe of Spinets, Harpſichords, *&c.*

*Chords* of Gold Wire, in Harpſichords, yield a Sound almoſt twice as ſtrong as thoſe of Braſs: *Chords*, or Strings of Steel, yield a feebler Sound than thoſe of Braſs; as being both leſs heavy, and leſs ductile.

M.



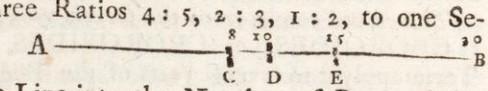
M. *Perrault* obſerves, that of late they have invented a way of changing the *Chords*, to render their Sound more ſtrong, without altering the Tone.

The ſixth *Chord* of Baſs-Viols, and the tenth of large Theorbos, conſiſt of 50 Threads, or Guts: There are ſome of them 100 Foot long, twiſted and poliſh'd with *Equiſetum*, or Horſe-Tail.

*For the Diviſion of* CHORDS, *ſo as to conſtitute any given Interval*, the Rules are as follow.

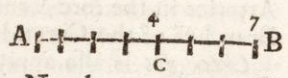
1. *To aſſign ſuch a Part of a* Chord A B, *as ſhall conſtitute any Concord, v. g.* a Fifth, or any other Interval, with the whole.

Divide A B into as many Parts, as the greateſt Number of the Interval has Units; *v.g.* the Fifth being 2 : 3, the Line is divided into 3. Of



theſe I take as many as the Leſſer Number, *v.g.* 2 = A C; A C is the Part ſought: That is, two Lines, whoſe Lengths are to each other as A B to A C, make a Fifth.

Hence, if it be requir'd to find ſeveral different Sections of the Line A B, *v.g.* ſuch as ſhall be 8ve 5th and 3d *g.* I reduce the given Ratios 1 : 2, 2. 3, and 4 : 5, to one Fundamental; the Series becomes 30 : 24, 20 = 15. The Fundamental is 30; and the Sections ſought are 24; the Third *g*; 20, the Fifth; and 15, the Octave.



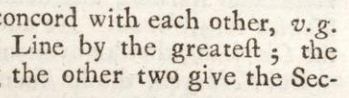
2. *To find ſeveral Sections of a Line* A B, *that from the leaſt, gradually to the whole, ſhall contain a given Series of Intervals in any given Order, viz.* ſo as the leaſt to the next greater contain a Third *g*; that to the next greater, a Fifth; and that to the whole an Octave.

Reduce the three Ratios 4 : 5, 2 : 3, 1 : 2, to one Series; hence we have 8 : 10 : 15 : 30. Divide the Line into the Number of Parts of the greateſt Extreme of the Series, *viz.* 30; we have the Sections ſought at the Points of Diviſion, anſwering the ſeveral Numbers of the Series, *viz.* at the Points, C, D, and E; ſo as A C to A D is a Third, A D to A E a Fifth, to A B Octave.

3. *To divide a Line* A B *into two Parts, to contain betwixt them any Interval, v. g.* a Fourth.

Add together the Numbers containing the Ratio of the Interval, *v.g.* 3 : 4; and the Line into as many Parts as the Sum, *v.g.* 7; the Point of Diviſion anſwering to any of the given Numbers, *v.g.* 4 or C, gives the thing ſought.

4. *For the harmonical Diviſion of* CHORDS. *To find two Sections of a Line, which with the whole ſhall be in harmonical Proportion, with regard to their Quantity.*



Take any three Numbers in harmonical Proportion, as 3 — 4 — 6; and divide the whole Lines into as many Parts as the greateſt of theſe three Numbers, *v.g.* 6; and at the Points of Diviſion anſwering the other two Numbers, *v.g.* 3 and 4, you have the Sections ſought.

5. *To find two Sections of a Line, which together with the whole ſhall be harmonical, with reſpect to Quantity or Tune.*

Take any three Numbers concord with each other, *v.g.* 2. 3. and 8, and divide the Line by the greateſt; the Points of Diviſion anſwering the other two give the Sections ſought.

6. *To divide a* Chord A B, *in the moſt ſimple manner, ſo as to exhibit all the original Concords.*

Divide the Line into two equal Parts at C, and ſubdivide the Part C B into equal Parts at D; and again, the Part C D into two equal Parts at E. Here A C to A B is an Octave; A C to A D a Fifth; A D to A B a Fourth; A C to A E a Third; A E to A D a Third; D C A E to E B a Sixth 9; A E to A B a Sixth C. See MONOCHORD; ſee alſo TUNE, CONCORD, HARMONY, *&c.*

*Chord* is alſo us'd in Muſick, for the Note, or Tone to be touch'd, or ſounded; in which Senſe, it is applicable to all the Intervals of Muſick. See CONCORD.

In this Senſe, the Fifth is ſaid to conſiſt of five *Chords*, or Tones. See FIFTH, *&c.*

CHORD, CHORDA, in Geometry, a right Line connecting the two Extremes of an Arch. See ARCH.

Or, it is a right Line, terminated at each Extreme in the Circumference of a Circle, without paſſing thro' the Centre; and dividing the Circle into two unequal Parts, call'd *Segments*: ſuch is the Line A B, Plate *Geometry*, Fig. 6.

The *Chord of an Arch*, is a right Line drawn from one Extremity of an Arch to the other; call'd alſo the *Subtenſe*.

The *Chord of the Complement of an Arch*, is the *Chord* that ſubtends the reſt of the Arch; or ſo much as makes up the Arch a Semicircle. See COMPLEMENT.

The *Chord* is perpendicular to a Line drawn from the Centre of the Circle to the Middle of the Arch, as C E; and has the ſame Diſpoſition thereto, as the *Chord*, or String of a Bow, has to the Arrow: which occaſion'd the antient Geometricians to call this Line the *Chord* of the Arch, and the other the *Sagitta*, or Arrow; the former of which Names is ſtill continu'd, tho the latter is diſus'd. What the Antients call'd *Sagitta*, is now term'd the *Sine of the Complement*. See SAGITTA.

Half the *Chord* of the double Arch B *o*, is what we now call the *Right Sine*; and the Exceſs of the Radii beyond the *Sagitta o* E, the *Verſed Sine*. See SINE.

The *Chord* of an Angle, and the *Chord* of its Complement to a Semicircle, are the ſame thing. The *Chord* of 50 Degrees is alſo the *Chord* of 130.

'Tis demonſtrated, in Geometry, that the Radius C E, biſſecting the *Chord* B A in D, does alſo biſſect the Arch in E, and is perpendicular to the *Chord* A B; and *vice verſa*. And again, if the right Line N E biſſect the *Chord* A B, and be perpendicular thereto; that it paſſes thro' the Centre, and does biſſect both the Arch A E B, and the Circle A N B.

Hence we derive ſeveral uſeful Corollaries: as, 1. To divide a given Arch A B into two equal Parts. Draw a Perpendicular to the middle Point D E of the *Chord* A B; this biſſects the given Arch A B.

2. To deſcribe a Circle, that ſhall paſs thro' any three Points A, B, C, Fig. 7. From A and C deſcribe Arches interſecting in D and E; and alſo others, G and H, from C and B: draw the right Lines D E and H G. The Point of Interſection I, is the Centre of the Circle to be deſcrib'd thro' A, B, and C.

*Demonſt.* For the Points A C and C B are in the Periphery of ſome Circle; and therefore, the Lines A C and C B are *Chords*. But E D is perpendicular to A C, and G H to B C; E D biſſects A C, and G H biſſects B C; wherefore each paſſes thro' the Centre. Now as D E and G H only interſect in I; I will be the Centre of a Circle, paſſing thro' the given Points A, C, and B.

Hence, aſſuming three Points in the Periphery or Arch of any Circle, the Centre may be found, and the given Arch compleated.

Hence alſo, if three Points of one Periphery do agree or coincide with three Points of another; the whole Peripheries agree, and therefore the Circles are equal.

Hence, laſtly, every Triangle may be inſcrib'd in a Circle.

*The* Chord *of an Arch* A B, (Fig. 7.) *and the Radius* C E *being given; to find the* Chord *of the half Arch* A E. From the Square of the Radius C E, ſubtract the Square of half the given *Chord* A D, the Remainder is the Square of *o* C; from which extract the ſquare Root = D C: This ſubtracted from the Radius E C, leaves *o* E. Add the Squares of A E and E *o*; the Sum is the Square of A E: whence, the reſt being extracted, we have the *Chord* of half the Arch A E.

*Line of* CHORDS, is one of the Lines of the Sector and Plain Scale. See its Deſcription and Uſe under the Words SECTOR, and PLAIN SCALE.

CHORD, CHORDA, in Anatomy, a little Nerve extended over the *Membrana Tympani*, or Drum of the Ear. See TYMPANUM.

Anatomiſts are not agreed about the Uſe of the *Chorda Tympani*: Some ſay, it ſerves to vary and modify the Sound of the *Tympanum*, in the ſame manner as the Strings, or Braces, ſtretch'd over the War-Drum. Others will have it to be no more than a Branch of the fifth Pair. See EAR.

CHORDAPSUS, in Medicine, a Diſeaſe of the Inteſtines, otherwiſe call'd *Miſerere mei*: Tho ſome ſay 'tis only a Species of the *Miſerere*. See MISERERE.

*Galen* defines it, a Humour or Inflation of the ſmall Inteſtines, which makes them appear fill'd, and ſtretch'd like a *Chord*. *Archigenes* makes it a kind of *Miſerere*; conſiſting in a Tumor in a certain Place of the ſmall Inteſtines, which ſinks in, and gives way to the Hand when preſs'd: He adds, that it's exceeding dangerous, and ordinarily kills in three or four Hours, unleſs it come to Suppuration; which, however, does not take away all Danger.

'Tis probable, however, that the *Chordapſus* is in reality nothing elſe but the *Miſerere*. *Celſus* informs us, that in his Time they were the ſame thing.

The Word comes from the *Greek* χορδη, *Chord*, and απτεσθαι, *to touch*.

CHORDEE, in Medicine, an Inflammation and Contraction of the *Frænum*, and under Part of the *Penis*; ſo as to render Erection painful. See ERECTION.

It happens in Gonorrhæas, and is generally proportional to the Degree of the *Virus* receiv'd; ſo that in virulent Gonorrhæas, it is uſually a very troubleſome Symptom. See GONORRHÆA.

It proceeds from the Acrimony of the Matter which runs from the Urethra, irritating the under Part of the Yard; by which it is, as it were, ty'd or held forcibly downward in Erection, eſpecially its *Frænum*. When the

Acri-

Acrimony is considerable, it sometimes gives rise to unnatural Erections, or the Symptom call'd a Priapism. See PRIAPISM.

If the *Chordee* be violent, or does not decrease proportionally to the other Symptoms in Gonorrhæas, an Emetic of Turpeth Mineral is usually given with success; it causing a Revulsion from the Part. See VENEREAL *Disease*.

CHOREA *Sancti Viti*, in Medicine, a Distemper which some Authors reckon as an hysterical Case; and others a Species of a *Furor Uterinus*.

It is suppos'd to proceed from a Turgency and Repletion of hot Juices, especially in the Uterine Vessels, which raises violent Motions; and that only Females are affected by it: But Dr. *Sydenham* more properly observes it to be an universal Convulsion, which sometimes continues several Weeks, nay Months, without intermission.

Those affected with this Disease, are continually in strange Motions with their Head, Legs, and Arms; so that they are unfit to feed themselves. It differs from other Convulsions, in that the Motions are not painful, nor any of the Extremities or Parts forcibly contracted, or extended for any time. Boys and Girls are most subject to this Disease, and that from ten Years of Age to Puberty; tho the latter oftner than the former.

It sometimes precedes the first Eruption of the Menses; in which Case, proper Cathartics, with Calomel and Deobstruents, are generally us'd; otherwise, Evacuations and Antiepileptics, as in other nervous Distempers.

It takes the Name of *Chorea Sancti Viti*, or Saint *Vitus*'s Dance, from the Chapel of S. *Vitus*; because it was suppos'd to seize Persons about *May*, which was the Time of the Year they visited that Chapel, and to make them leap and dance about in a strange manner.

CHOREPISCOPUS, an Episcopal Officer in the antient Church, about whose Function the Learned are extremely divided. See BISHOP.

M. *de la Roque* thinks, that the *Chorepiscopi* were the Country Bishops, and had the same Authority in Villages, that the Bishops had in Cities; but that, by degrees, as the Church flourish'd, the Country Bishops grew too proud for the Country Life; and imagin'd the Episcopal Honour debas'd, and render'd contemptible in a Rural Retreat. Accordingly, the *Sardic* Council prohibited the Consecration of Bishops in the Country, or in little Towns; that the Episcopal Character might always be sustain'd by the Splendor of great Cities.

M. *du Bois* adds, that tho the *Chorepiscopi* exercis'd most of the Episcopal Functions in Country Towns, &c. yet they were not ordain'd like Bishops, nor vested with their whole Authority, but were only a step above mere Priests.

M. *le Maitre* is of Opinion, that the Office of a *Chorepiscopus*, which is that now discharg'd by the Rural Deans, was to overlook, under the Bishops, those Parishes that were at a distance from the See in the Country. He adds, they were abolish'd, by reason they usurp'd the Authority of the Bishops. See RURAL *Dean*.

Others, again, say, the *Chorepiscopi* were properly what we now call Bishops *in partibus*; to whom, in quality of Suffragans, were committed the Administration of Dioceses, during the Bishop's absence. See SUFFRAGAN.

Others rather think, the Institution of *Chorepiscopi* gave occasion to that of the *Episcopi in partibus*; which last, however, have Privileges the others had not.

Lastly, others take the *Chorepiscopi* to be no more than Priests, vested by the Bishops with most of their Authority in Country Places.

The Council of *Antioch*, held in 342, appoints, 'That 'those in Burghs and Villages, call'd *Chorepiscopi*, know 'the Bounds prescrib'd them: They may ordain Readers, 'Subdeacons, and Exorcists, but not Priests or Deacons, 'without the Bishop whereon they depend. The *Chorepis-* 'copus shall be ordain'd by the Bishop of the City.

Pope *Leo*, in 936, says, the *Chorepiscopi* mayn't ordain Priests, or consecrate Churches: yet Pope *Nicholas*, in a Letter to *Raoul*, in the IXth Century, declares that the *Chorepiscopi* shall have the Episcopal Functions; and that the Ordinations of Priests and Deacons perform'd by them are valid.

The first time we read of *Chorepiscopi* in the East, is in the Beginning of the IVth Century; and in the West, about the Year 439. They ceas'd, both in the East and West, in the Xth Century.

The Word comes from the *Greek* χωρα, *a Region*, or little Country, and Επισκοπος, *Bishop*.

CHOREPISCOPUS is also the Name of a Dignity still subsisting in some Cathedrals, particularly in *Germany*; signifying the same with *Chori Episcopus*, or Bishop of the Choir.

In the Church of *Cologne*, &c. the first Chantor is call'd *Chorepiscopus*.

The Word, in this Sense, does not come from χωρα, but χορος, *Choir*, &c.

CHOREUS, CHORÆUS, a Foot in the *Latin* Poetry, more commonly call'd *Trochæus*. See TROCHÆUS.

CHORIAMBUS, in the *Latin* Poetry, a Foot compounded of a *Choræus*, or *Trochæus*; and an *Iambus*.

It consists of four Syllables; of which the first and last are long, the middle ones short.

CHORION, the exterior Membrane that invests the *Fœtus* in the Womb. See FOETUS.

'Tis very thick and strong; on the inside, where it joins another Membrane, call'd *Amnios*, very smooth; but rough and uneven without side; interspers'd with a great number of Vessels, and fasten'd to the Matrix, or Womb, by means of the *Placenta*, which adheres very closely to it. See PLACENTA.

This Membrane is found in all Animals.

The Word comes from the *Greek* χωριον, *capere*, to contain.

The *Chorion*, with the *Amnios* and *Placenta*, make what we call the *Secundine*, or After-Birth. See SECUNDINE.

CHORIST, or CHORISTER, a Chantor, or Singer in the Choir. See CHOIR.

CHOROBATES, a kind of Level us'd among the Antients; compos'd of a double Square, made in form of a T, describ'd by *Vitruvius*, Lib. viii. See LEVEL.

The Word comes from the *Greek* χωροβατην, to over-run a Country.

CHOROGRAPHY, the Art of making a Map, or Description of some Country, or Province.

*Chorography* is distinguish'd from Geography, as the Description of a particular Country is from that of the whole Earth. See GEOGRAPHY.

From *Topography* it is distinguish'd, as the Description of the same Country, is from that of a single Place in it.

The Word comes from the *Greek* χωρα, *Region*.

CHOROIDES, or CHOROEIDES, in Anatomy, a Term apply'd to several Parts of the Body; bearing some resemblance to the *Chorion*.

The Word is form'd from the *Greek* χοριον, *Chorion*, and ειδαι, *to resemble*; or ειδος, *Image*, *Likeness*.

Thus, *Choroides* is us'd for the inner Membrane that immediately invests the Brain; so called as being intermingled with a great Number of Blood-Vessels, like the *Chorion*; but more usually call'd the *Pia Mater*, or *Meninx tenuis*. See MENINX, and MATER.

*Plexus*, or *Lacis* CHOROIDES, is a Knot of Veins and Arteries in the fore Ventricles of the Brain, wove out of the Branches of the Carotid. See PLEXUS, and BRAIN.

*Choroides* is also apply'd to the inner and posterior Tunic of the Eye, contiguous to the *Sclerotica*. See EYE.

It is soft, thin, and black; and its inner, or concave Surface, very smooth and polite. It has its Name from its being interspers'd with Vessels.

To the *Choroides* is fix'd the *Uvea*. See UVEA.

M. *Mariotte* maintains, that Vision is perform'd rather in the *Choroides* than the *Retina*: in which he agrees with *Bar. Torinus*, and is seconded by M. *Mery*; but most other Authors are of a different Sentiment. See VISION, RETINA, &c.

Next under the *Choroides* is the *Retina*. *Ruysch*, indeed, says, he has found another Tunic between the *Choroides* and *Retina*; and denominates it from himself, the *Tunica Ruyschiana*. He adds, that it grows so firmly to the *Choroides*, that 'tis overlook'd in the common Dissections.

But *Verheyen*, tho he found the *Choroides* of a Bird divisible into two Membranes, could never separate those of the human Eyes; and therefore thinks they needed not any new Name.

The *Choroides* is black in Men; in Lions, Camels, Bears, Sheep, Cattle, Dogs, Cats, and most Fishes, of a shining Colour, like the Brilliant of Silver, or the Lustre of Oriental Pearl; and makes what Naturalists call the *Tapis*, or Colour of the Eye. See TAPIS.

CHORUS, in Dramatic Poetry, one, or more Persons, present on the Stage during the Representation, and suppos'd to be By-standers thereto, without any particular Share or Interest in the Action. See DRAMA.

Tragedy in its Origin, M. *Dacier* observes, was no more than a single *Chorus*, who trod the Stage alone, and without any other Actors; singing Dithrambics, or Hymns in honour of *Bacchus*.

*Thespis*, to relieve the *Chorus*, added an Actor, who rehears'd the Adventures of some of their Heroes. *Æschylus*, finding a single Person too dry an Entertainment, added a second; and at the same time reduc'd the singing of the *Chorus*, to make more room for the Recitation.

Every thing introduc'd between the four Songs of the *Chorus*, they call'd by the Term *Episode*; and those four Songs made the four Intervals, or Acts of the Piece. See EPISODE, ACT, &c.

But when once Tragedy began to be form'd, those Recitatives, or Episodes, which at first were only intended as accessory Parts, to give the *Chorus* a breathing Time, became now the principal Part of the Tragedy: And where-

as,

as, before, they were taken from various Subjects, they were now all drawn from one and the same.

The *Chorus*, by degrees, became inserted and incorporated into the Action, to which it was only intended as an Addition or Ornament. Sometimes the *Chorus* was to speak, and then their Chief, whom they call'd *Coryphæus*, spoke in behalf of all the rest: The singing was perform'd by the whole Company; so that when the *Coryphæus* struck into a Song, the *Chorus* immediately join'd him. See CORYPHÆUS.

Besides the four Songs, which made the Division of the Piece, and which were manag'd by the *Chorus*, the *Chorus* sometimes, also, join'd the Actors in the Course of the Representation, with their Plaints and Lamentations; on occasion of any unhappy Accidents that befel 'em.

But the proper Function of the *Chorus*, now that Tragedy was form'd, and that for which it seem'd chiefly retain'd, was to shew the Intervals of the Acts: While the Actors were behind the Scenes, the *Chorus* engag'd the Spectators; their Songs usually turn'd on what was just exhibited; and were not to contain any thing but what was suited to the Subject, and had a natural Connection with it: so that the *Chorus* concurr'd with the Actors for advancing the Action.

'Tis a Fault observ'd in *Euripides*'s Tragedies, that his *Chorus*'s are detach'd from the Action, and not taken from the same Subject. There were some other Poets, who to save the Pains of composing *Chorus*'s, and adapting them to the Piece, contented themselves with invented Songs, which had no relation to the Action. These Foreign *Chorus*'s were the less pardonable, as the *Chorus* was esteem'd to act a Part in the Piece; and to represent the Spectators, who were look'd on as interested therein; insomuch that the *Chorus* was not always to be mute, even in the Course of the Acts.

In the modern Tragedies, the *Chorus* is laid aside; and the Fiddles supply its Place. M. *Dacier* looks on this Retrenchment as of ill consequence; and thinks it robs Tragedy of a great part of its Lustre. He adds, that 'tis ridiculous to have a Tragic Action broke, and interrupted by impertinent Flourishes from the Musick Box: and to have the Spectators, who are suppos'd to be mov'd by the Representation, become all of a sudden calm and easy, break off at the height of a Passion, and amuse themselves peaceably with a Foreign Entertainment. The Re-establishment of the *Chorus* he judges necessary, not only for the Embellishment and Regularity of the Piece; but also, in regard it was one of its principal Functions, to redress and correct any Extravagancies that might fall from the Mouths of the Actors, when under any violent Passion, by prudent, and virtuous Reflections.

That which occasion'd the Suppression of the *Chorus*, was its being incompatible with certain Complots, and secret Deliberations of the Actors. For 'tis in no wise probable, that such Machinations should be carry'd on in the Eyes of Persons interested in the Action. As the *Chorus*, therefore, never went off the Stage, there seem'd a Necessity of laying it aside, to give the greater Probability to these kind of Intrigues, which require Secrecy. See TRAGEDY.

M. *Dacier* observes, there was a *Chorus*, or *Grex*, also in the antient Comedy; but that too is suppress'd in the new: chiefly because made use of to reprove Vices, by attacking Persons. See COMEDY.

The *Chorus* in Comedy was at first no more than a single Person, who spoke in the antient Compositures for the Stage: The Poets, by degrees, added to him another; then two, afterwards three, and at last more: so that the most antient Comedies had nothing but the *Chorus*, and were only so many Lectures of Virtue.

*To give the* CHORUS, among the *Greeks*, was to purchase a Dramatic Piece of the Poet, and defray the Expences of its Representation.

The Person who did this was call'd *Choragus*. At *Athens*, the Charge of *Choragus* was laid on the Archon; at *Rome* on the Ædiles. See CHORAGUS.

CHORUS is likewise us'd in Musick, where, at certain Periods of a Song, the whole Company are to join the Singer, in repeating certain Couplets, or Verses.

CHOSE, i.e. *thing*, in Law, is us'd in various Circumstances, and with various Epithets; as,

CHOSE *Local*, something annex'd to a Place, *v.g.* a Mill.

CHOSE *Transitory*, something movable, and which may be transported from place to place.

CHOSE *in Action*, is not any thing Corporeal, but only a Right, *v. g.* an Annuity, Obligation, Covenant, *&c.*

*Chose in Action* may also be called *Chose in Suspence*, as having no real Existence, and not being properly in Possession.

CHRISM, Oil consecrated by the Bishop, and us'd in the *Romish* and *Greek* Churches, in the Administration of Baptism, Confirmation, Ordination, and Extreme Unction. See OIL, ORDINATION, EXTREME UNCTION, *&c.*

The *Chrism* is prepar'd on *Holy Thursday* with a world of Ceremony. In *Spain*, 'twas antiently the Custom for the Bishop to take one third of a *Sol* for the *Chrism* distributed to each Church; on account of the Balsam that enter'd its Composition.

In *England* we had likewise CHRISM *Pence*, *Chrismatis Denarii*, or *Chrismales Denarii*; which was a Tribute paid to the Bishop by the Parish Clergy, for their *Chrism*, consecrated at *Easter* for the ensuing Year: but this was afterwards condemn'd as Simoniacal.

The Word comes from the *Greek* χρισμα, which signifies the same thing.

*Du Cange* observes, there are two Kinds of *Chrism*; the one prepar'd of Oil and Balsam, us'd in Baptism, Confirmation, and Ordination; the other of Oil alone, consecrated by the Bishop, us'd antiently for the Catechumens, and still in Extreme Unction.

The *Maronites*, before the Time of their Reformation, besides Oil and Balsam, us'd Musk, Saffron, Cinnamon, Roses, white Incense, and several other Drugs mention'd by *Reynoldus*, in 1541, with the Doses of each. The Jesuit *Dandini*, who went to Mount *Libanus* in quality of the Pope's Nuntio, ordained, in a Synod held there in 1596, that *Chrism*, for the future, should be made only of two Ingredients, Oil and Balsam; the one representing the human Nature of Jesus Christ, the other his Divine Nature.

The Action of imposing the *Chrism*, is call'd CHRISMATION: This the generality of the *Romish* Divines hold to be the next Matter of the Sacrament of Confirmation.

The *Chrismation* in Baptism, is perform'd by the Priest; that in Confirmation by the Bishop: That in Ordination, *&c.* is more usually styl'd *Unction*. See UNCTION.

CHRISOM, CHRISMALE, was antiently the Face-cloth, or piece of Linen laid over the Child's Head when he was baptiz'd.

Whence, in our Bills of Mortality, such Children which die in the Month are call'd *Chrisoms*; and the Time between the Child's Birth and Baptism, was call'd *Chrisomus*.

CHRIST, an Appellation usually added to *Jesus*; and, together therewith, denominating the *Messiah*, or Saviour of the World. See JESUS, and MESSIAH.

The Word in the original *Greek* χριστὸς, signifies *Anointed*, of χρίω, *Inungo*, I anoint.

Sometimes the Word *Christ* is us'd singly, by way of *Antonomasis*, to denote *a Person sent from God*, an anointed Prophet, or Priest, *&c.*

*Order of* CHRIST, a Military Order, founded in 1318, by *Denis* I. King of *Portugal*, to animate his Nobles against the *Moors*.

Pope *John* confirm'd it in 1320, and appointed the Knights the Rule of S. *Bennet*. *Alexander* VI. permitted them to marry.

The Order became afterwards insensibly reunited to the Crown of *Portugal*; and the King took upon him the Administration thereof.

The Arms of the Order are, Gules, a Patriarchal Cross, charg'd with another Cross Argent. They had their Residence, at first, at *Castromarin*; afterwards they remov'd to the City of *Thomar*, as being nearer the *Moors* of *Andalusia*, and *Estramadura*.

*Christ* is also the Name of a Military Order in *Livonia*, instituted in 1205, by *Albert* Bishop of *Riga*. The End of their Institution was to defend the new Christians who were converted every Day in *Livonia*, but persecuted by the Heathens.

They wore on their Clokes a Sword with a Cross over it; whence they were also denominated *Brothers of the Sword*.

CHRISTENING. See BAPTISM.

CHRISTIAN, something that relates to *Christ*. See CHRIST.

The King of *France* bears the Title, or Sirname of the *Most Christian King*, *Rex Christianissimus*. The *French* Antiquaries trace the Origin of the Appellation up to *Gregory* the Great; who writing a Letter to *Charles Martel*, occasionally gave him that Title, which his Successors have since retain'd. See TITLE.

*Lambecius*, a *German*, in the IIId Tome of the *Emperor's Library*, holds, that the Quality of *Most Christian* was not ascrib'd to the antient *French* Kings, *Louis le Debonair*, &c. as Kings of *France*, but as Emperors of *Germany*; but the *French* Historians have refuted this Plea.

CHRISTIAN *Religion*, that instituted by *Jesus Christ*. See RELIGION, and REVELATION.

CHRISTIAN *Name*, that given at Baptism. See NAME.

CHRISTIAN *Church*. See CHURCH.

CHRISTIAN *Court*, or *Curia Christianitatis*, is the Ecclesiastical Jurisdiction; in contradistinction to Civil Courts, which are call'd King's Courts, *Curiæ Domini Regis*. See COURT.

CHRISTIAN is peculiarly and absolutely us'd for a Person who believes in Christ, and is baptiz'd in his Name.

The Name *Chriſtian* was firſt given at *Antioch*, to ſuch as believ'd in Chriſt, as we read in the *Acts*: Till that time they were call'd *Diſciples*.

CHRISTIANS *of St.* John, a Sect of *Chriſtians*, very numerous in *Balſara* and the neighbouring Towns.

They formerly inhabited along the River *Jordan*, where St. *John* baptiz'd; and 'twas thence they had their Name. But after the *Mahometans* became Maſters of *Paleſtine*, they retir'd into *Meſopotamia* and *Chaldea*.

They hold an Anniverſary Feaſt of five Days; during which, they all go to their Biſhops, who baptize them with the Baptiſm of St. *John*: Their Baptiſm is alſo perform'd in Rivers, and that only on Sundays.

They have no Notion of the third Perſon in the Trinity; nor have they any Canonical Books, but abundance full of Charms, *&c.* Their Biſhopricks deſcend by Inheritance, as our Eſtates do; tho they have the Ceremony of an Election.

CHRISTIANS *of S.* Thomas, or *San Thomas*, a Sect of antient *Chriſtians*, found in the *Eaſt-Indies*; when the *Europeans* touch'd at the Port of *Calecut*; who pretend to be deſcended from thoſe S. *Thomas* converted in the *Indies*: whence the Name.

The Natives call 'em, by way of Contempt, *Nazareans*; their more honourable Appellation is *Mappuley*.

Some learned Men in *Europe* ſay, 'twas not St. *Thomas* the Apoſtle that converted that Country, but another St. *Thomas*: others ſay, 'twas a *Neſtorian* Merchant, call'd *Thomas*. 'Tis certain they are *Neſtorians*, and have been ſo a long time; inſomuch, that Chriſtians of *St. Thomas*, is now eſteem'd by many a Name of a Sect.

They have a Patriarch, who reſides at *Moſoul*.

The Pope has made ſeveral Attempts to reduce 'em under his Obedience, but to no purpoſe.

CHRISTMAS, the Feaſt of the Nativity of Jeſus Chriſt. See FEAST, NATIVITY, *&c.*

It appears from S. *Chryſoſtom*, that in the primitive Times, *Chriſtmas* and Epiphany were celebrated as one and the ſame Feaſt: That Father obſerves, it was but a little while that *Chriſtmas* had been celebrated at *Antioch* on the 25th of *December*, as a diſtinct Feaſt; and that the Uſe thereof came from the Weſt. He adds, that the *Armenians* made but one Feaſt of them, as low as the XIIth Century. See EPIPHANY.

CHRISTOLYTES, a Sect of Hereticks mention'd by *Damaſcenus*; ſo call'd, becauſe they deſtroy'd *Chriſt*: maintaining, that he deſcended into Hell, Body and Soul; and that he left both there; aſcending to Heaven with his Divinity alone.

The Word comes from the *Greek* χριὼ, and λυω, *I reſolve*.

CHROMA, in Rhetoric, a *Colour*, or fair Pretence. See COLOUR.

The Word is *Greek* χρῶμα, which literally denotes *Colour*.

CHROMA, in Muſick. See CHROMATIC.

CHROMATIC, in the antient Muſick, the ſecond of the *Genera*, or Kinds, into which the Conſonant Intervals were ſubdivided into their concinnous Parts. See GENUS.

The other two Kinds were, the *Enharmonic*, and the *Diatonic*. See ENHARMONIC, and DIATONIC.

The *Chromatic* abounds in Semitones: It had its Name, either by reaſon the *Greeks* mark'd it with the Character of Colour, which they call χρῶμα; or, as *P. Parran* ſays, becauſe the *Chromatic* Kind is a Medium between the other two, as Colour is between black and white: or becauſe the *Chromatic* Kind varies and embelliſhes the *Diatonic* Kind, by its Semitones; which have the ſame Effect in Muſick, with the Variety of Colours in Painting.

*Ariſtoxenus* divides the *Chromatic* Genus into three Species; the *Molle*, *Hemiolion*, and *Tonicum*. *Ptolemy* into *Molle* or *Antiquum*, and *Intenſum*. See SPECIES.

Theſe Species were alſo call'd *Chroai*, or Colours of the Genera: the *Molle* expreſſes a Progreſſion by ſmall Intervals, the *Intenſum* by greater.

The *Chromatic* and *Enharmonic* Kinds, only contain the ſmalleſt of the *Diatonic* Degrees; ſo as they have the ſame proportion to the *Diatonic*, as Fractions have to Integers.

*Boetius*, and after him *Zarlin*, attribute the Invention of the *Chromatic* Genus to *Timotheus* a *Mileſian*, in the Time of *Alexander* the Great. The *Spartans* baniſh'd it their City, by reaſon of its ſoftneſs.

Mr. *Malcolm* obſerves, that we are at a loſs for what uſe the Antients could make of theſe Diviſions, and Subdiviſions into *Genera* and *Species*. All acknowledg'd the *Diatonic* to be the true Melody; the others ſeem only humorous Irregularities, calculated to pleaſe the Fancy by their novelty and oddneſs; and were beſides ſo very difficult, that few, if any, are ſaid to have ever practis'd them accurately. See MUSICK.

CHROMATIC is us'd, in Painting, for the Colouring; which makes the third Part of the Art of Painting. See COLOURINGS.

CHRONIC, CHRONICAL, in Medicine, is apply'd to a ſlow, or inveterate Diſeaſe, which laſts a long time; as the *Gout*, *Hæmorrhoids*, *Fiſtula*, *Dropſy*, *Aſthma*, &c. See DISEASE.

*Chronic* Diſeaſes ſtand in oppoſition to *acute* Diſeaſes, which are ſpeedy, and haſten to a Criſis; as *Fevers*, *Small-Pox*, &c. See ACUTE.

*Chronic* Diſeaſes are uſually owing either to ſome natural Defect in the Conſtitution; or to an irregular manner of living. The Word comes from the *Greek* χρόνος, *Time*.

Moſt of the *Chronical* Diſeaſes, ſays Dr. *Cheyne*, the Infirmities of old Age, and the ſhort Periods of the Lives of *Engliſhmen*, are owing to Repletion: This is evident hence, that Evacuation of one kind or another, is nine Parts in ten of their Remedy. See REPLETION, and EVACUATION.

The Sources of *Chronical* Diſtempers, ſays the ſame Author, are, 1. Viſcidity in the Juices, or the overlargeneſs of their conſtituent Particles; which not being ſufficiently broken by the concoctive Powers, ſtop, or retard the Circulation. Or, 2. Too great abundance of ſharp acrimonious Salts; whereby the Juices themſelves are render'd ſo corroſive, as to burſt or wear out the Solids. Or, 3. A Relaxation, or want of a due Force and Springineſs of the Solids themſelves.

An Exceſs in the Quantity of our Meat and Drink begets the firſt; the bad Condition of the ſame Foods the ſecond; and both together, with want of due Exerciſe, the third. See FOOD, EXERCISE, *&c.*

CHRONICLE, CHRONICON, a Hiſtory digeſted in order of Time; tho the Term is ſeldom us'd but for old Hiſtories, as *Hollinſhed's Chronicle*, *Stow's Chronicle*, &c. See HISTORY, *&c.*

CHRONOGRAM, a kind of Verſe, the figurative, or numeral Letters thereof, being join'd together, make up the Year of our Lord, *&c.*

The Word is compos'd of χρόνος, *Time*, and γραμμα, *Letter*.

CHRONOLOGY, the Art of meaſuring and diſtinguiſhing Time; or the Doctrine of Epochas, *&c.* See TIME, EPOCHA, *&c.*

*Sturmius* divides *Chronology* into five diſtinct Branches, *viz.* Metaphyſical, Phyſical, Political, Hiſtorical, and Eccleſiaſtical; according to the various Relations, or Habitudes wherein Time is conſider'd; *viz.* as in it ſelf, as connected and ſubjected to the Affections, States, and Alterations of natural Things; as accommodated to Civil Uſes; as match'd with Events that paſs in the World; and particularly, as it relates to the Celebration of *Eaſter*. See HOUR, DAY, WEEK, MONTH, YEAR, CALENDAR, CYCLE, PERIOD, EPACT, EASTER, *&c.*

There is more difficulty in *Chronology* than every one is aware of: It requires not only the Knowledge of Aſtronomy and Geography, and conſequently that of Arithmetic, Geometry, and Trigonometry, both plain and ſpherical; but alſo a world of Application to the antient Monuments. Its uſe is very great: 'tis call'd one of the Eyes of Hiſtory; and ſerves good Purpoſes in Theology.

The Word is compounded of the *Greek* χρόνος, *Time*, and λογος, *Diſcourſe*.

The more eminent Writers on *Chronology*, among the Antients, are *Julius Africanus* in the IIId Century; *Dionyſius Exiguus*, *Euſebius*, and *Cyril*.

Among the Moderns, *Bede*, *Funccius*, *Mercator*, *Lilius*, *Clavius*, *Scaliger*, *Vieta*, *Petavius*, *Caſſini*, *Munſter*, *Calviſius*, *Hardouin*, *Capellus*, *Uſher*, *Marſham*, *Helvicus*, *Strauchius*, *I. Voſſius*, and *Beveridge*.

CHRONOMETER, a general Name for any Inſtrument us'd in the meaſuring of Time: In this Senſe, Clocks, Watches, Dials, *&c.* are *Chronometers*.

Tho there are ſome Inſtruments peculiarly call'd by the Name *Chronometer*; particularly one deſcrib'd by M. *Sauveur*, in his *Principles of Acouſtics*.

The Word is compos'd of χρονος, *Time*, and μετρον, *menſura*, Meaſure.

CHRYSALIS, a Term us'd by the modern Writers of Natural Hiſtory of Inſects, in the ſame Senſe with *Nympha*. See NYMPHA.

The Word ſeems to imply a peculiar yellow, or golden Colour, uſual in the *Nympha*; from the *Greek* χρυσος, *Gold*: but this is purely accidental, and is not found in all *Nymphæ*.

Some confine the Word to the *Nympha* of Butterflies and Moths.

CHRYSARGYRUM, a Tribute formerly levy'd on Courteſans, and other Perſons of evil Life.

*Zozimus* ſays, that *Conſtantine* firſt ſet it on foot; tho there appear ſome Traces of it in the Life of *Caligula* by *Suetonius*; and that of *Alexander* by *Lampridius*. *Evagrius* ſays, *Conſtantine* found it eſtabliſh'd, and had ſome Thoughts of aboliſhing it.

It was paid every four Years: Some ſay, all petty Traders were liable to it. It was aboliſh'd by *Anaſtaſius*.

M. *Godeau* thinks, the *Chryſargyrum* was a general Tribute, levied every four Years, on Perſons of all Conditions, Rich and Poor, Slaves and Freemen: nay, even on all Animals, as low as Dogs; for each whereof they paid ſix *Oboli*.

*Hoffman* ſays, it was paid in Gold and Silver; whence its Name χρυσὸς, *Gold*, and ἀργυρὸς, *Silver*.

CHRYSOBERIL, a precious Stone; being a kind of pale Beril, with a Tincture of yellow. See BERIL.

CHRYSOCOLLA, a Mineral us'd in the ſoldering of Gold, &c. whence its Name. See GOLD, SOLDERING, &c.

It is found in Mines of Gold, Silver, Copper, and Lead: Its Colour is various, according to that of the Matter in which it is found; yellow if among Gold, white in Silver, green in Copper, and black in Lead. The *Arabs*, and Inhabitants of *Guzuratte*, call it *Tincar*, or *Tincal*: In *Europe*, where 'tis found in various Places, 'tis confounded with the common Borax.

The beſt is that which is green, like an Emerald, found among Copper: that found among the other Metals is too much waſh'd.

Some reckon the *Chryſocolla* a Species of Nitre.

The Phyſicians uſe it in the Cure of Wounds: Some make an Artificial *Chryſocolla*, by mixing a little of the Natural, ſteep'd in Water, with Wood.

The Term is form'd of the *Greek* χρυσὸς, *Gold*, and κόλλα, *Glue*. See BORAX.

CHRYSOCOLLA is alſo the Name of a ſort of precious Stone, mention'd by *Pliny*, L. xxxvii. cap. 10. who alſo calls it *Amphitanus*: He deſcribes it as of a Gold Colour, and the Figure of a Square; adding, that it has the Virtue of attracting Iron, and even Gold.

But this, in all probability, is fabulous; and the Stone he ſpeaks of is apparently no other than the *Chryſolite*.

CHRYSOLITE, a precious Stone of a yellow Colour. See PRECIOUS *Stone*.

The *Chryſolite* is the Topaz of the Moderns. See TOPAZ.

CHRYSOLITE is alſo a generical Name which the Antients gave to all precious Stones, wherein the yellow, or gold, was the prevailing Colour.

When the Stone was green, they call'd it *Chryſopraſin*: the red and blue too had their particular Denominations, which expreſs'd their Colour; the Gold being ſignify'd by *Chryſo*; which ſtill began the Name.

We know but few of theſe *Chryſolites* now; or rather, they are referr'd to the Species of Stones which they approach the neareſt: the green to the Emerald, the red to the Ruby; and ſo of the reſt.

CHRYSTAL. } See { CRYSTAL.
CHRYSTALLINE. } { CRYSTALLINE.
CHRSTALLIZATION. } { CRYSTALLIZATION.

CHRYSTAL *Mineral*, the ſame as *Sal Prunella*. See PRUNELLA.

CHUPMESSAHITES, a Sect among the *Mahometans*, who believe that Jeſus Chriſt is God, and the true Meſſiah, the Redeemer of the World; but without rendring him any publick or declar'd Worſhip.

*Ricaut* ſays, there are abundance of theſe *Chupmeſſahites* among the People of faſhion in *Turky*, and ſome even in the Seraglio.

The Word, in the *Turkiſh* Language, ſignifies Protector of the Chriſtians.

CHURCH, the Aſſembly of Perſons united by the Profeſſion of the ſame Chriſtian Faith, and the Participation of the ſame Sacraments.

*Bellarmin*, and the *Romiſh* Divines, to this Definition add, *Under the ſame Pope, ſovereign Pontiff, and Vicar of Jeſus Chriſt on Earth*: in which Circumſtance it is that the *Romiſh* and Reformed Notion of *Church* differ.

*Amelotte*, and others, make a viſible Head, or Chief, eſſential to a *Church*: Accordingly, among the Catholics, the Pope; in *England* the King, are reſpectively allow'd Heads of the *Church*. The Biſhop of *Salisbury* ſets aſide the Notion of a viſible Head: Chriſt alone, according to him, is Head of the Church; which Poſition he has maintain'd with infinite Addreſs, in a celebrated Sermon before the King on thoſe Words of our Saviour, *My Kingdom is not of this World*; and in the ſeveral Vindications thereof.

Sometimes, we conſider *Church* in a more extenſive Senſe, and divide it into ſeveral Branches.

The *Church Militant* is the Aſſembly of Faithful on Earth; *Church Triumphant*, that of the Faithful already in Glory: to which the Catholics add the *Church Patient*, that of the Faithful in Purgatory.

The Term *Eccleſia*, ἐκκλησία, ſynonymous with our Church, is us'd in the *Greek* and *Latin* profane Authors for any kind of publick Aſſembly; and even for the Place where the Aſſembly is held.

The Sacred and Eccleſiaſtical Writers ſometimes alſo uſe it in the ſame Senſe; but ordinarily reſtrain the Term to the *Chriſtians*; as the Term *Synagogue*, which originally ſignifies nearly the ſame thing, is in like manner reſtrain'd to the *Jews*. See SYNAGOGUE.

Thus, in the New Teſtament, the *Greek* ἐκκλησία, ſignifies almoſt always, either the Place deſtin'd for Prayer, as 1 *Cor.* xi. 14. or the Aſſembly of the Faithful diffus'd over the whole Earth, as *Epheſ.* v. or the Faithful of a particular City, or Province, as 1 *Cor.* viii. 1,2. or even of a ſingle Family, as *Rom.* xvi. or the Paſtors or Miniſters of a *Church*, as *Matt.* xviii. 17.

The Chriſtian *Church* is frequently divided into *Greek* and *Latin*.

*Greek, or Eaſtern* CHURCH, comprehends the *Churches* of all the Countries antiently ſubject to the *Greek*, or Eaſtern Empire; and thro' which their Language was carry'd, *i.e.* all the Space extended from *Greece* to *Meſopotamia* and *Perſia*, and thence into *Egypt*; which has been divided ever ſince the Time of the Emperor *Photius*, from the *Roman Church*. See GREEK *Church*.

*Latin, or Weſtern* CHURCH, comprehends all the *Churches* of *Italy*, *France*, *Spain*, *Africa*, the North, and all other Countries whither the *Romans* carry'd their Language.

*Great Britain*, part of the *Netherlands*, of *Germany*, and of the North, have been ſeparated hence ever ſince the Time of *Henry* VIII. and conſtitute what we call the *Reform'd Church*, and what the *Romaniſts* call the *Weſtern Schiſm*; as the *Greek Church* does the *Eaſtern* one.

The *Reformed* CHURCH is again divided into the *Lutheran Church*, the *Calviniſt Church*, the *Church of England*, &c. See LUTHERANISM, CALVINISM, &c.

CHURCH is alſo us'd for a Temple, built and conſecrated to the Honour of God; and, antiently, under the Invocation of ſome particular Saint, whoſe Name it aſſum'd. See TEMPLE; ſee alſo CONSECRATION, &c.

In this Senſe, *Churches* are variouſly denominated, according to their Rank, Degree, Diſcipline, &c. as *Metropolitan Church*, *Patriarchal Church*, *Cathedral Church*, *Parochial Church*, *Cardinal Church*, &c. See each under its proper Article, METROPOLIS, PATRIARCH, CATHEDRAL, PAROCHIAL, CARDINAL, &c.

In Eccleſiaſtical Writers, we meet with *Grand Church*, for the chief Church of a Place; particularly in the *Greek* Liturgy, for the *Church* S. *Sophia* at *Conſtantinople*, the See of the Patriarch, founded by *Conſtantine*, and conſecrated under *Juſtinian*: It was at that time ſo magnificent, that *Juſtinian* is ſaid to have cry'd out in the Conſecration thereof ἐνίκησάσε Σολομὼν, *I have out-done thee*, Solomon. The Dome, which is ſaid to have been the firſt that was built, is 330 Foot Diameter. See DOME.

The firſt *Church* publickly built by the Chriſtians, ſome Authors maintain to be that of S. *Saviour* at *Rome*; founded by *Conſtantine*: others contend, that ſeveral *Churches* abroad, call'd by the Name of S. *Peter Vivus*, were built in honour of that Apoſtle during his Lifetime.

*Mother* CHURCH, *Matrix Eccleſia*. See MATRIX, and MOTHER.

CHURCH, with regard to Architecture, *Daviler* defines a large Veſſel extended in length, with Nave, Choir, Iſles, Chapel, Belfry, &c. See each Part under its proper Head, NAVE, CHOIR, CHAPEL, &c.

A *ſimple Church*, he calls that which has only a Nave and a Choir; a *Church with Iſles*, that which has a row of Porticos, in form of vaulted Galleries with Chapels in its Pourtour.

*Church in a Greek Croſs*, that where the Length of the Croſs is equal to that of the Nave; ſo called, becauſe moſt of the *Greek* Croſſes are built in this form. *Church in a Latin Croſs*, that whoſe Nave is longer than the Croſs, as moſt of the *Gothic Churches*. *Church in Rotondo*, that whoſe Plan is a perfect Circle, in Imitation of the Pantheon. See ROTONDO, &c.

For the Form of the antient *Greek Churches*, when they had all their Parts, it was as follows: Firſt was a Porch, or Portico, call'd the *vaunt Nave*, πρόναος, adorn'd with Columns on the outſide, and on the inſide ſurrounded with a Wall; in the middle whereof was a Door, thro' which they paſs'd into a ſecond Portico. The firſt of theſe Porticos was deſtin'd for the *Energumenes*, and Penitents in the firſt Stage of their Repentance; the ſecond was much longer, deſtin'd for Penitents of the ſecond Claſs, and the *Catechumens*, and hence call'd ναρθηξ, *Ferula*; becauſe thoſe plac'd in it began to be ſubject to the Diſcipline of the *Church*. Theſe two Porticos took up about one third of the ſpace of the whole *Church*.

From the ſecond Portico, they paſs'd into the *Nave*, ναὸς, which took up near another third of the *Church*. In the middle, or at one ſide of the Nave, was the *Ambo*, where the Deacons and Prieſts read the Goſpel and preach'd. See AMBO. The Nave was deſtin'd for the Reception of the People, who here aſſiſted at Prayers.

Near the Entrance of this was the *Baptiſtery*, or Font. See BAPTISTERY.

Beyond

Beyond the Nave was the *Choir*, χορος, ſet with Seats, and round: the firſt Seat on the right, next the Sanctuary, being for the Chantor, or *Choragus*. See CHANTOR, &c.

From the Choir, they aſcended by Steps to the *Sanctuary*, which was enter'd at three Doors. The Sanctuary had three *Apſides* in its length; a great one in the middle; under which was the *Altar*, crown'd with a *Baldaquin*, ſupported by four Columns: See SANCTUARY, BALDAQUIN, &c. Under each of the ſmall *Apſides*, was a kind of a Table, or Cupboard, in manner of a Buffet. See APSIDES, &c.

Tho, of the *Greek Churches* now remaining, few have all the Parts above deſcrib'd; moſt of 'em having been reduc'd to Ruins. or converted into Moſques.

M. *Frezier*, Engineer to the *French* King, and F. *Cordemoy*, a Regular Canon, have diſputed the Form of the antient and modern *Churches*, and the beſt manner of building them, with a good deal of Learning, in the *Journals de Trevoux*.

For the Form of the *Latin Churches*, tho it be various, yet may all the Variety be reduc'd to two Heads; *viz.* thoſe in form of a Ship, and thoſe of a Croſs.

CHURCH-*Yard*, a ſacred Place, deſtin'd for the Interment of the Deceas'd. See BURIAL, FUNERAL, &c.

In the primitive Times, the Chriſtians held their Meetings in *Church-yards*, as we are inform'd by *Euſebius*, Lib. vii. and *Tertullian*, who calls thoſe *Church-yards* where the People us'd to meet to pray, *Areas*. *Euſebius* adds, that *Valerian* having confiſcated the *Church-yards*, and Places deſtin'd for the Worſhip of God; *Gallian* reſtor'd 'em by a publick Reſcript, rehears'd by the ſame Author. From theſe Paſſages, it ſeems as if *Church-yards*, and Places of Worſhip, were us'd indifferently for the ſame thing.

The Heathen Writers frequently upbraid the primitive Chriſtians for their meeting in *Church-yards*; as if they ſerv'd other Purpoſes beſides thoſe of Religion. The Council of *Elvira* prohibits the keeping of Tapers lighted in *Church-yards*, during the Day-time; and by another Canon, the Women from paſſing the Night watching in *Church-yards*.

The Cuſtom of bleſſing *Church-yards* is of an old ſtanding: the Method was, for the Biſhop to go round it with his Croſier, or paſtoral Staff, and to ſprinkle it with ſome conſecrated Fluid. *Lobineau* ſays, the Holy Water-Pot was carry'd before him.

Antiently, all were bury'd in *Church-yards*; none in *Churches*. From the Bodies of Martyrs, &c. being depoſited here, the Chriſtians choſe particularly to build their *Churches* in them, when *Conſtantine* gave them the liberty: and hence *Tillemont* derives that Cuſtom which ſtill obtains in the *Romiſh Church*, never to conſecrate any Altar, without depoſiting in it the Relicks of ſome Martyr.

*Chorier* obſerves, that under *Church-yard*, *Cœmeterium*, κοιμητηριον, was antiently comprehended, not only the ſtrict Dormitory, or Place where the Dead were diſpos'd; but all the Lands which encompaſs'd the Pariſh-*Churches*, and were contiguous to the real *Churches*. Perhaps it might be added, that all the *Church* Domains were compriz'd under *Church-yard*. This will beſt account for that Confiſcation of the *Church-yards*, charg'd on *Valerian*.

CHURCH-SCOT, or CHURCHESSET, a Payment, or Contribution, by the *Latin* Writers frequently call'd *Primitiæ ſeminum*; being, at firſt, a Quantity of Corn, paid to the Prieſt on St. *Martin*'s Day, as the Firſt-Fruits of Harveſt. See PRIMITIÆ, and FIRST-*Fruits*.

This was enjoin'd by the Laws of King *Malcolm* IV. and *Canut*. c. 10. But after this *Church-Scot* came to ſignify a Reſerve of Corn-Rent paid to the Secular Prieſts, or to the Religious; and ſometimes was taken in ſo general a Senſe as to include Poultry, or any other Proviſion that was paid in kind to the Religious. See TITHES.

CHURCH-*Government*, *Diſcipline*, &c. See ECCLESIASTICAL *Government*, &c.

CHURCH-*Reves*. See CHURCH-*Wardens*.

CHURCH-*Wardens*, antiently call'd CHURCH-*Reves*, are Officers choſen yearly by the Parſon and his Pariſhioners, according to the Cuſtom of the Place.

Their Buſineſs is to look to the *Church*, *Church-yard*, *Church-Revenues*, &c. to obſerve the Behaviour of the Pariſhioners with regard to Faults that come under the Juriſdiction of the Eccleſiaſtical Court; to preſent ſcandalous Livers to the Biſhop; take care none preach without Licence, &c.

The *Church-Wardens* are a kind of Corporation; and are enabled by Law to ſue and be ſued for any thing belonging to the *Church*, or the Poor of the Pariſh. See PARISH.

CHYLE, or CHYME, in the Animal Oeconomy, a whitiſh Juice, into which the Food is immediately converted by Digeſtion, or, more properly, by that Branch thereof call'd *Chylification*. See CHYLIFICATION, DIGESTION, &c.

The *Chyle*, Dr. *Drake* obſerves, is nothing but a Mixture of the oily and aqueous Parts of the Food, incorporated with the ſaline ones; which, while they yet remain mix'd with the groſſer Parts in the Stomach, make a thick, whitiſh, partly fluid Maſs, called *Chyme*: which, as ſoon as it is reduc'd to a Conſiſtence looſe enough to be obedient to the Preſſure and periſtaltic Motion of the Stomach, is gradually thruſt out at the *Pylorus* into the *Duodenum*, and denominated *Chyle*.

Thus is the *Chyle* begun to be form'd in the Stomach; it is perfected in the Inteſtines by the Mixture of the Bile and the pancreatic Juice; and is thence receiv'd into the Lacteal Veins, which carry it to the *Receptaculum Chyli*, or *Pecquets* Reſervatory: thence it paſſes into the Thoracic Duct, which terminates in the left Subclavian Vein: In this Vein, the *Chyle* firſt begins to mix with the Blood; into which it is afterwards converted by the Action called *Sanguification*. See BLOOD.

The Antients ſuppos'd the *Chyle* was chang'd into Blood in the Liver; others of 'em in the Heart: but the Moderns, with more reaſon, take the Change to be effected by the Blood it ſelf, in all the Parts of the Body. See SANGUIFICATION.

Some take *Chyle* to be the immediate Matter of Nutrition; others the Blood. See NUTRITION.

The Word comes from the *Greek* χυλος, *Juice*.

Dr. *Liſter* is of Opinion, that in the Digeſtion of Meat in the Stomach, there is made a Separation, or Solution of urinous Salts, no otherwiſe than in the rotting of Plants, or Animals: that the *Chyle* is highly impregnated with this urinous Salt; that it owes its whiteneſs to the Fermentation it acquires from that Mixture: That the ſalt *Chyle* is convey'd into the venal Blood, and with it enters the Heart; and is thence thrown out *Chyle*, as it comes in, by a continual Pulſation, into the Arteries: that as oft as it enters the Emulgent Arteries, it leaves behind part of its ſaline Liquor, or Urine, and conſequently abates of its Colour: That when ſufficiently freed of its Salts, it becomes a *Lympha*; which ſeems to be nothing elſe but the Reſidue of the *Chyle* not yet converted into Blood; as not yet ſufficiently depurated of its ſaline Particles. See LYMPHA.

CHYLIFICATION, the Formation of the *Chyle*; or the Act whereby the Food is chang'd into *Chyle*. See FOOD, and CHYLE.

*Chylification* is begun by comminuting, or breaking the Aliment in the Mouth, mixing it with *Saliva*, and chewing it with the Teeth. See MASTICATION.

By ſuch means, the Food is reduc'd into a kind of Pulp, which falling thro' the *Oeſophagus* into the warm Stomach, mixes with the Juices thereof; and is thus diluted, begins to ferment, or putrefy, and aſſumes a very different form from what it had before; growing either acid or rancid.

Here it mixes with a Juice ſeparated from the Blood by the Glands of that Part, whoſe Excretory Ducts open into the Stomach; as alſo with the Remains of the former Aliment: and thus it becomes better macerated, diluted, diſſolv'd, and acquires ſtill a greater likeneſs to the Animal Fluids, and is called *Chyme*. See CONCOCTION.

Add to this, that the fleſhy Membrane of the Stomach continually contracting and preſſing its Contents by its periſtaltic Motion, occaſions a more intimate Mixture, and by degrees works out the more fluid Parts thro' the *Pylorus* into the *Duodenum*; along the Sides whereof, and the reſt of the *Inteſtina Tenuia*, the Lacteals are planted; into the minute Orifices whereof, the finer Parts of the Maſs is receiv'd. See PERISTALTIC *Motion*, INTESTINES, and LACTEALS.

The Fabrick of the Stomach being conſider'd, the Heat of the circumambient Parts, the Pulſations of innumerable Arteries, the great Stroaks of the *Aorta* underneath, the conſtant Compreſſion of the *Diaphragma* and Abdominal Muſcles; it muſt neceſſarily follow, that the finer Parts of the Aliment will be firſt expell'd the Stomach; and that the groſſer will remain; till, by the repeated Action of the Fluids, and the Contraction and Pulſation of the Solids, they alſo become fine enough to go off: thus is the Stomach left empty; and by means of its muſcular Coat, reduc'd to a State of Contraction, and Appetite renew'd. See HUNGER.

Thus will even the fleſhy Membranes, Cartilages, &c. of Animals fed on, be ſqueez'd, and oblig'd to give out their Juices; and thus is a Fluid obtain'd, that ſhall have in ſome meaſure the ſame Properties with thoſe of our Bodies.

The Juice being got thro' the *Pylorus* into the Inteſtines, its Liquefaction is ſtill promoted by its mixture with two other Diſſolvents, the pancreatic Juice and the Bile; which divide and ſubtilize thoſe Parts that were left too groſs: and by the periſtaltic Motion of the Guts it is protruded forwards. In the Paſſage thro' the ſmall Inteſtines, the finer Part of the Maſs, which we call the *Chyle*, enters the Orifices of the Lacteal Veins of the firſt Kind, wherewith the whole Meſentery is intermix'd; which either alone, or together with the Meſaraic Veins, diſcharge themſelves into the Glands at the Baſis of the Meſentery.

Then the *Chyle* is taken up by the Lacteals of the ſecond Kind, and convey'd into Glands between the two Tendons of the Diaphragma, known heretofore under the Name of the *Lumbary* Glands, now call'd *Pecquet*'s Reſervatory; whence it is carry'd to the Heart by the Thoracic Duct and the Subclavian Vein; wherein it begins to be mix'd with the Blood, and to circulate, and in time become aſſimilated thereto. See CIRCULATION, ASSIMILATION, &c.

CHYLOSIS, in Medicine, the Action whereby the Aliment is converted into *Chyle*, or *Chyme*, in the Stomach, &c. whether it be by a Ferment in the Stomach, or the contractile Force of the Stomach, or both. See CHYLIFICATION, and DIGESTION.

CHYME, an Animal Juice, the ſame with that commonly call'd *Chyle*. See CHYLE.

Some, however, diſtinguiſh between *Chyme* and *Chyle*; reſtraining the Word *Chyme* to the Maſs of Food, &c. while in the Stomach, e'er it be ſufficiently comminuted and liquefy'd to paſs the *Pylorus* into the *Duodenum*, and thence into the Lacteals, to be further diluted and impregnated with the pancreatic Juice; where it commences *Chyle*.

CHYMISTRY, or more properly CHEMISTRY, the Art of ſeparating the ſeveral Subſtances whereof mix'd Bodies are compos'd, by means of Fire; and of compoſing new Bodies in the Fire, by the Mixture of different Subſtances or Ingredients. See FIRE.

The great Object of *Chymiſtry*, is to analyſe, or decompound natural Bodies; reduce them to their firſt Principles; diſcover their hidden Virtues, and demonſtrate their inner Contexture, or the Centre, as they call it, wherein natural Subſtances concur. In a word, *Chymiſtry* is the Anatomy of natural Bodies, by means of Fire; which is the Definition *Hanneman* gives us of the Art.

The very learned *Boerhaave* defines *Chymiſtry* very ſcientifically: 'An Art whereby ſenſible Bodies contain'd in 'Veſſels, or capable of being contain'd therein, are ſo 'chang'd, by means of certain Inſtruments, and principally 'Fire, that their ſeveral Powers and Virtues are thereby 'diſcover'd, with a View to Philoſophy, Medicine, &c.

This Definition appears very prolix and circumſtantial, and more like a Deſcription than a Definition; but with all his Endeavours, he aſſures us, he could not frame a ſhorter, that would expreſs the full Scope, Object, and Inſtruments of *Chymiſtry*, ſo as to diſtinguiſh it from every other Art: which is a Point all the Writers of *Chymiſtry* have ſtumbled at.

For *Chymiſtry* cannot juſtly be call'd the Art *of reſolving Bodies*, as *Regius*, *Paracelſus*, &c. define it; ſince Mechanicks will alſo do that: Nor is the Matter mended, by ſaying, It is the Art *of analyſing Bodies by Fire*; as *Helmont* has done: nor *by Salt*, as others would have it. Theſe Definitions include only a Part, inſtead of the whole. And with as little Propriety is it term'd, The Art of *ſeparating the Pure from the Impure*; inaſmuch as it compounds as well as ſeparates, and frequently mixes the Pure with the Impure.

*Chymiſtry*, on this footing, appears a very extenſive Art: Its Object, or the *Materia Chymica*, is all ſenſible Bodies, capable of being contain'd in Veſſels; and is accordingly divided into three Kingdoms, *Foſſil*, *Vegetable*, and *Animal*. See BODY, FOSSIL, VEGETABLE, &c.

The Operations of *Chymiſtry*, include all the Changes produc'd in Bodies by natural Agents or Inſtruments, *viz. Decoction*, *Infuſion*, *Exhalation*, *Calcination*, *Extraction*, *Diſtillation*, *Cryſtallization*, &c. See OPERATION, and ELEMENT; ſee alſo DECOCTION, INFUSION, EXHALATION, DISTILLATION, CALCINATION, EXTRACTION, &c.

The Effects, or Productions of *Chymiſtry*, may be reduc'd to *Magiſteries*, *Extracts*, *Tinctures*, *Elixirs*, and *Clyſſus's*. See MAGISTERY, EXTRACT, TINCTURE, ELIXIR, &c.

The *Inſtruments, or Agents of Chymiſtry*, whereby its Operations are perform'd, are *Fire*, *Water*, *Air*, *Earth*, *Menſtruums*, and Inſtruments properly ſo call'd, as *Alembics*, *Cucurbits*, *Retorts*, *Pelicans*, *Furnaces*, and *Lutes*. See FIRE, AIR, WATER, EARTH, MENSTRUUM, ALEMBIC, CUCURBIT, RETORT, FURNACE, and LUTE.

*Chymiſtry* is an Art of very great Antiquity, and is held by ſome very learned Perſons to have been practis'd in the Antediluvian World. *Cham*, the Son of *Noah*, is commonly held to have been its Inventor, from whom it is ſuppos'd to have taken its Name. Others refer the Invention to *Tubal Cain*, whom the Scripture records as the Inventor of Inſtruments of Braſs and Iron. This is pretty certain, that ſome of the higheſt and moſt difficult Things in *Chymiſtry*, muſt have been known by him; among which are the ſeparating and purifying of Copper and Iron, the making of Braſs, &c. See COPPER, IRON, &c.

The firſt mention we find made of the Art, is in *Zozimus*, the *Panopolitan*, who lived about the Year of Chriſt 400. 'In the Sacred Writings, ſays that Author, we find 'certain *Genii* ſpoke of, who had commerce with Women. 'Hermes ſays as much in his Books upon Nature; and 'ſcarce any Author but has ſome Footſteps of this Tradition. Theſe *Genii*, intoxicated with the Love of Women, diſcover'd 'em all the Secrets of Nature; and 'taught 'em abundance of Things unfit for 'em to know: 'for which reaſon they were baniſh'd from Heaven. The 'Book wherein their Secrets was contain'd, was call'd *Chema*; and hence the Name *Chemia*, or *Chymia*.'

The Text of Scripture *Zozimus* here refers to, is that Paſſage in *Moſes*, *The Sons of God ſaw the Daughters of Men, and took 'em to Wife.*

This Antediluvian Origin of *Chymiſtry* is confirm'd by *Tertullian*: 'The Angels that fell, ſays that Father, diſcover'd Gold and Silver to Men, with the Arts of working 'em, of dying Wool, &c. for which reaſon they were baniſh'd, as is related by *Enoch*.'

*Borrichius* looks on theſe Paſſages as authentic; but adds, that *Enoch* was miſtaken, for that the Angels he ſpeaks of were not real Angels; but the Deſcendants of *Seth* and *Tubal Cain*, who degenerating from their Fathers, gave themſelves up to criminal Pleaſures with the Women deſcended from *Cain*; and in the Courſe of their Intrigues, divulg'd the Secrets God had truſted 'em withal.

Be this as it will, *Chymiſtry*, no doubt, was firſt practis'd in *Egypt*. According to *Moſes*, *Tubal Cain* ſhould be the firſt Inventor. Profane Authors refer it to *Vulcan*; and ſome of the lateſt and beſt Criticks endeavour to ſhew, that *Tubal Cain* and *Vulcan* were the ſame; as, indeed, there is found a great reſemblance between their Names.

After *Tubal Cain*, the firſt *Chymiſt* we read of is *Moſes*; whoſe Skill in *Chymiſtry* is inconteſtable, from his burning and pulverizing the Golden Calf the *Iſraelites* had ſet up, and giving it the People to drink. There is ſcarce a more difficult Operation in all *Chymiſtry*, than to make Gold potable. See GOLD.

*Chymiſtry* had the common Fate of the other Arts, at the Declenſion of the Eaſtern Empire; and lay bury'd and forgot till the Time of *Roger Bacon*, who retriev'd it. He was follow'd by *Lully*, *Ripley*, *Baſil Valentine*, *Paracelſus*, *Van Helmont*, *Glauber*, *Boyle*, *Lemery*, *Homberg*, &c. by whom the Art has been carry'd to its preſent degree of Perfection.

The firſt *Chymiſts* confin'd themſelves to Metals: In theſe latter Ages, the Bounds of *Chymiſtry* have been greatly enlarg'd; and Plants, Animals, Minerals, &c. have been taken into it.

'Tis but of late that *Chymiſtry* has been apply'd to the Preparation of Medicines: *Baſil Valentine*, and *Arnoldus de Villa Nova*, ſeem to have been the firſt that attempted it. *Paracelſus* and *Van Helmont* carry'd it to ſuch a length, as to render Medicine almoſt wholly *chymical*. See MEDICINE.

*Chymiſtry* is divided into *Metallurgia*, *Alchymia*, *Chymical Pharmacy*, and *Chymical Philoſophy*. See METALLURGIA, ALCHYMIA, &c.

Criticks are divided as to the Etymology of the Name *Chymiſtry*: It is uſually deriv'd from the *Greek* χυμὸς, *Juice*; or from χέειν, *to melt*.

*Boerhaave*, and others, more juſtly derive it from the Egyptian *Chema*, or *Kema*, black; and write it *Chemia*, not *Chymia*.

Others, making *Cham* the Inventor of *Chymiſtry*, derive the Term from his Name; ſupporting their Etymology on the Signification of the Word חם *Cham*, which in the *Hebrew* ſignifies *heat*, *hot*, *black*; all of them bearing ſome relation to the Operation of *Chymiſtry*.

*Chymiſtry* is alſo known under various other Names: It is ſometimes call'd the *Hermetical Art*, from a Suppoſition of its being invented by *Hermes Triſmegiſtus*: See HERMETIC. Others call it, the *Egyptian Art*, from the People among whom it was firſt practis'd: Others the *Sacred, or Divine Art*; *Poieſis*; the Art of *making Gold*, &c. Others call it the *Spagyric* Art; *Paracelſus* the *Hyſſopic* Art: others *Pyrotechnia*, &c. See SPAGYRIC, HYSSOPIC, PYROTECHNIA, &c.

When the *Chymiſts* would expreſs the moſt ſublime Parts of their Art, they prefix the *Arabic* Particle *Al* to the Word *Chymia*, or *Chymiſtry*, and thus form *Alchymy*. See ALCHYMY.

Some Authors obſerve, that *Diocleſian*, after the taking of *Alexandria*, order'd all the Books of *Chymiſtry*, antiently wrote by the *Egyptians*, for making Gold and Silver, to be ſought out and burnt; that they might not have the Power of enriching themſelves by this Art, or of putting themſelves, by this means, into a Condition of revolting.

Authors on the Subject of *Chymiſtry* are very numerous: *Borel* has publiſh'd a Catalogue of moſt of 'em, under the Title of *Bibliotheca Chymica*; containing the Names of above ten thouſand. *Boerhaave* is the lateſt, fulleſt, and infinitely the beſt; he has given both the Hiſtory, Theory, and Practice, in the fineſt, moſt orderly, and ſcientifical Way in the World. Dr. *Friend* has reduc'd *Chy-*

*miſtry* to *Newtonianiſm*, and accounted for the Reaſons of the Operations on Mechanical Principles.

CHYMOSIS, in Medicine, the Act of making or preparing *Chyme*. See CHYME.

*Chymoſis* is particularly us'd for the ſecond of the Concoctions made in the Body; being a repeated Preparation of the moſt impure and groſs Parts of the Chyle, which being turn'd back by the Lacteals, is imbib'd by the Meſeraics, and thence carry'd to the Liver, to be there elaborated, purify'd, and ſubtiliz'd afreſh. See CONCOCTION.

'Tis of this, according to *Rogers*, that the Animal Spirits are form'd.

The Word comes from χυμὸς, *ſuccus*, of χέω, *fundo*, I melt.

CHYMOSIS, or CHEMOSIS, is alſo us'd in Medicine, for an Inflammation of the Eyelids, which turns out their inſide to ſight.

The Word comes from the *Greek* χαίνω, *hiſco*.

CICATRICULA, in Natural Hiſtory, a little whitiſh Speck, in the Coat of the Yolk of an Egg; wherein the firſt Changes appear towards the Formation of the Chick. See YOLK.

The *Cicatricula* is what is commonly call'd the *Treddle* of the Egg. See EGG.

CICATRISIVE, in Medicine, is apply'd to ſuch Medicines as are very Deſiccative; and on that account aid Nature to repair the Skin, and to form a *Cicatrix*, or *Eſchar*. See CICATRIX.

Such are *Armenian* Bole, Pouder of Tutty, the Unguent *Diapompholigus*, *deſiccativum Rubrum*, &c.

*Cicatriſive* Medicines are otherwiſe call'd *Eſcharotics*, *Epuloticks*, *Incarnatives*, *Agglutinants*, &c. See EPULOTIC, ESCHAROTIC, INCARNATIVE, &c.

CICATRIX, in Medicine, &c. a little Seam, or Elevation of callous Fleſh, riſing on the Skin, and remaining there after the healing of a Wound, &c. ordinarily call'd a Scar, or Eſchar. See ESCHAR, WOUND, &c.

The *Cicatrix* is the ſame as to the joining of the fleſhy Parts, as a *Callus* is to the Bones. See CALLUS.

In young Infants, theſe Calloſities, or Scars, ſometimes much diminiſh, and oftentimes quite vaniſh when come to Age, as is particularly obſerv'd in the Pits of the Small-Pox: and, in growing, they are ſometimes obſerv'd to change their Situation.

Some derive the Word from *quaſi circa cutem*: others fetch *Cicatrix* from *quaſi Occæcatrix*, the *Cicatrix* being only *obductio vulneris*, the covering up, or hiding of the Wound: but 'tis better deriv'd from *Cæcatrix*, which has the ſame force; of the Verb *Cæcare*, to blind.

CICUTA, a vegetable Poiſon, celebrated both among Antients and Moderns. See POISON.

The modern *Cicuta* is the Plant *Hemlock*; whereof there are two Kinds: the *Cicuta*, abſolutely ſo call'd, or *Cicuta major*; and *Cicuta minor*.

The firſt grows in Places a little moiſt, in the Shade, among old Ruins, or along Roads.

So many unhappy Effects have been perceiv'd from it, that its Uſe, internally, is by no means to be recommended: And yet ſome Perſons boaſt of it as a powerful Sudorific. Externally it may be apply'd, to reſolve Wens, and Hardneſſes of the Spleen and Liver. It is the Baſe of the Plaiſter which bears its Name.

The Phyſicians have generally rank'd it among the cold Poiſons; but the later Writers, with more juſtneſs, regard it as a Diſſolvent, or hot Poiſon. The Reaſons they give, as related by *Wepfer*, are, that it bites the Tongue; that the Effluvia it yields are hot, and ariſe from a volatile Salt, and an impure Sulphur; that the Madneſs it occaſions, as well as the other Sympoms, ſhew a great activity of Parts; and that if the Blood be found coagulated by it after Death, Spirit of Wine does the ſame.

The *leſſer Cicuta* is not leſs dangerous than the *greater*; it is ever ſuppos'd more violent, as well as more haſty in its Operation.

Several Perſons have been render'd fooliſh, by eating Porridge wherein *Cicuta* has been us'd inſtead of Parſly. It has much ſuch an Enmity to the Brain, as *Cantharides* have to the Bladder; and *Læpus Marinus* to the Lungs.

The *Cicuta* of the Antients, is a Secret which is now ſcarce poſſible to be diſcover'd: it was call'd *Cicuta Aquatica*, and was of the Umbelliferous Tribe. *Wepfer*, in an expreſs Treatiſe on the Subject, will have it the *Sium Erucæ folio C. B.*

CICUTA is alſo us'd, chiefly, among the Antients, for a Juice, or Liquor, expreſs'd from the Plant *Cicuta*. This *Cicuta* was the common Poiſon wherewith their State-Criminals were put to death: *Socrates* drank the *Cicuta*.

*Plato*, in his Dialogue on the Immortality of the Soul, obſerves, that 'The Executioner advis'd *Socrates* not to 'talk, for fear of cauſing the *Cicuta* to operate too ſlowly.' M. *Petit*, in his *Obſervationes Miſcellaneæ*, remarks, that this Advertiſement was not given by the Executioner out of Humanity, but to ſave the *Cicuta*: for he was only allow'd ſo much *per Ann.* which if he exceeded, he was to furniſh at his own Expence. This Conſtruction is confirm'd by a Paſſage in *Plutarch*: The Executioner who adminiſter'd the *Cicuta* to *Phocion*, not having enough, *Phocion* gave him Money to buy more; obſerving, by the way, that it was odd enough, that at *Athens* a Man muſt pay for every thing, even his own Death.

CIDER, a briſk, tart, cool Liquor, prepar'd from Apples.

*The Manner of making* CIDER *is as follows.*

The Fruit is firſt ground, or ſtamp'd, and the Juice ſqueez'd out in a Preſs; then 'tis ſtrain'd thro' a Sieve, or other Filtre, and tunn'd up: the Veſſel not to be full. For two or three Days it is to be ſtopp'd looſely, then quite clos'd with Clay. Henceforward, a ſmall Quantity to be drawn out every Day for ſome Weeks, till ſuch time as it be ſuppos'd pretty clear; then 'tis pierc'd, to ſee how fine it is: the Summer Fruit after a Month; the Gennet-Moil, after the firſt Froſts; the Redſtreak not till after *January*; and the other Winter Fruits about the ſame time.

If it ben't now found fine enough, it ſtands a Month longer; and if even then it be defective, 'tis rack'd off like Wine, ſo as to keep out the Air.

Some, inſtead of racking, fine it with Iſing-glaſs, ſteep'd in Whitewine, and diſſolv'd over the Fire; this they boil in a quantity of the Liquor to be fined, and then mix it with the reſt: and others, inſtead of diſſolving the Iſing-glaſs over the Fire, let it ſteep in the Whitewine for about a Month, in which time it diſſolves into a Gelly of it ſelf: a quantity of this is mix'd with ſome of the Liquor, and the whole beat to a froth; then mingled, together with ſome Broom, with the reſt. The Liquor once fine, 'tis drawn out, or bottled off, as occaſion requires. See CLARIFYING.

'Tis obſerv'd, that a Mixture of Fruits is a great Advantage to *Cider*; the worſt Apples, mix'd together, making as good *Cider* as the beſt alone: always obſerving, however that they be of equal ripeneſs.

The beſt Mixture, according to Mr. *Worlidge*, is that of Redſtreaks with Golden-Rennets: Bitter Apples ſpoil the *Cider*; but the Juice of them and of Crabs, yield as good Spirits as the beſt Apples, when fermented: neither the ſour nor the bitter Taſte ariſing with the Spirit upon Diſtillation.

If the Apples be pounded in a Stone Mortar, which is the Cuſtom of ſome, the Kernels and Stalks are bruis'd with them, which gives the Liquor an ill Savour.

CIDERKIN, or *Purre*, is a Liquor made of the Murk, or groſs Matter remaining after the *Cider* is preſs'd out.

For this purpoſe, the Murk is put up in a large Fat, with a proper Quantity of boil'd Water, which has ſtood till it be cold again: if half the Quantity of Water be us'd that there was of *Cider*, 'twill be good; if the Quantities be equal, the *Ciderkin* will be ſmall. The whole is left to infuſe forty eight Hours, then well preſs'd: What is ſqueez'd out by the Preſs is immediately tunn'd up and ſtopp'd; 'tis fit to drink in a few Days.

It clarifies of it ſelf, and ſerves in Families inſtead of Small Beer. It will keep, if boil'd after preſſure, with a convenient quantity of Hops.

CILIA, in Anatomy, the Hairs wherewith the *Palpebræ*, or Eyelids are fring'd; eſpecially the Upper, which is larger and ſtiffer than that of the Under. See PALPEBRA.

Their Uſe ſeems to be, to break the too fierce Impreſſion of the Rays of Light; as alſo to keep out Flies and Moats, and other Things floating in the Air, which might annoy the Eye.

Theſe *Cilia* ſpring from a ſmall row of Glands, which cover a thin tender Cartilage, edging each Eyelid, and ſerving as a kind of Rod, or Ring to ſtretch 'em upon.

CILIARE, in Anatomy, an Epithet given to a Part of the Eye, call'd *Ligamentum Ciliare*; becauſe of its reſembling the *Cilium*, or Hair of the Eyelids. See LIGAMENT.

The *Ligamentum Ciliare*, call'd alſo *Proceſſus Ciliaris*, conſiſts of a range of black Fibres diſpos'd circularly; having their riſe in the inner Part of the *Uvea*, and terminating in the prominent Part of the Cryſtalline, which they incompaſs round.

Anatomiſts generally imagine their Uſe to be to ſuſpend the Cryſtalline in the Globe of the Eye, to lengthen or ſhorten its Figure, and bring it nearer to or further from the Uvea; and even to open or contract the Pupil as occaſion requires, *i. e.* as near or remote Objects, obſcure or bright Objects are to be view'd. See CRYSTALLINE, and PUPIL.

The Motion of the Pupil, ſome ſay, is effected by the circular and ſtrait Fibres of the Uvea; others attribute it to the *Ciliary* Ligament: yet, I have no great doubt, but they both concur in the ſame Action; and that the *Ligamentum Ciliare* doth, at the ſame time the Pupil opens or ſhuts, dilate or compreſs the Cryſtalline, and bring it nearer, or carry it farther off the *Retina*. *Derham Phyſ. Theol.*

M. *Mariotte* denies the *Ligamentum Ciliare* to have any connection with the Cryſtalline, or to ſerve for any purpoſes thereof. See VISION.

CILIARIS, in Anatomy, a Muſcle, otherwiſe call'd *Orbicularis Palpebrarum*. See ORBICULARIS.

CIMA, or *Sima*, in Architecture, a Member or Moulding, call'd alſo *Gula*, and *Cymatium*. See GULA, and CYMATIUM.

CIMIER, in the *French* Heraldry. See CREST.

CINCTURE, or CEINTURE, in Architecture, a Ring, Liſt, or Orlo, at the top and bottom of the Shaft of a Column; dividing the Shaft, at one end, from the Baſe; and at the other from the Capital. See SHAFT, COLUMN, *&c.*

That at bottom is peculiarly call'd *Apophyges*; as if the Pillar took its height hence: and that at top *Colarin*, or Collar. See APOPHYGES, and COLARIN.

The *Cincture* is ſuppos'd to be an Imitation of the Girts, or Ferrils, antiently us'd to ſtrengthen and preſerve the primitive wooden Columns. See ORDER.

The Word, in its original *French*, ſignifies *Girdle*; of the Latin *cingo*, I gird.

CINERATION, in Chymiſtry, the reduction of Wood, or any other combuſtible Matter into *Aſhes*, by means of Fire. See ASHES, CALCINATION, *&c.*

This, others call *Cinefaction*.

CINERES. See ASHES.

CINERES *Clavellati*, among Chymiſts, are the Aſhes of Tartar, or the Lees of Wine burnt. See TARTAR.

CINERITIOUS, a Term apply'd to Things reſembling Aſhes; particularly in point of Colour and Conſiſtence.

Thus, the Cortical Part of the Brain, is alſo call'd the *Cineritious* Part. See CORTICAL.

CINNABAR, or CINOPER, in Natural Hiſtory, a Mineral Stone, red, heavy, and brillant; found chiefly in the Quickſilver Mines; call'd alſo *Vermilion*. See FOSSIL, and MERCURY.

Many, with good reaſon, eſteem this the *Minium* of the Antients; tho a very different thing from the modern *Minium*. See MINIUM.

The ordinary Vermilion it ſelf, is nothing elſe but *Cinnabar* ground up with Spirit of Wine and Urine. See VERMILION.

Some have imagin'd *Cinnabar* to be Dragons-Blood, gather'd, as *Pliny* and *Solinus* have it, when the Dragon and Elephant fight together: This Fable is refuted by *Dioſcorides* and *Scaliger*. See DRAGONS-BLOOD.

*Cinnabar* is either *Native*, or *Factitious*.

The *Native*, or Mineral *Cinnabar*, or Vermilion, which is that abovemention'd, is found in moſt Places where there are Quickſilver Mines; yet, 'tis true alſo, that it has Mines its own: thoſe in *Spain* are very famous; the *French* too have theirs, in *Normandy*.

It may be eſteem'd as Marcaſſite of Quickſilver, or rather, as Quickſilver petrify'd and fix'd, by means of Sulphur, and a ſubterraneous Heat: Chymiſtry being found to reduce it without much trouble or loſs, to the Nature of Mercury. Each Pound of good *Cinnabar* yields fourteen Ounces of Mercury. Accordingly, the principal Property and Uſe of this Mineral, is to yield a moſt excellent Mercury; and that which the Alchymiſts maintain to be the beſt diſpos'd for attaining to the Tranſmutation of Gold.

The beſt Mineral *Cinnabar* is of a high Colour, brillant, and free from the Stone.

It is us'd by Phyſicians in Venereal Caſes, and others, occaſion'd by ſharp Seroſities. It's alſo eſteem'd a good Cephalic, and accounted of ſervice in Epilepſies, and other nervous Diſtempers: Add, that it is reckon'd of efficacy in cutaneous Caſes, as the Scurvy.

*Factitious*, or Artificial *Cinnabar*, or Vermilion, is form'd of a Mixture of Mercury and Sulphur, ſublimed, and thus reduced into a kind of Stone.

The beſt is of a high Colour, full of Fibres, like Needles.

*The Method of preparing Factitious* CINNABAR is thus.

They take three Ounces of Sulphur, and four of Quickſilver; theſe being well mix'd, are ſet on the Fire, till part of the Sulphur be conſum'd, and the Pouder remain black. 'Tis then ſublim'd once or twice in open Pots; at bottom of which remains the *Cinnabar*, very heavy, and ſtreak'd with Lines, or Needles; ſome red, others brillant, like Silver.

This ſerves for the ſame medicinal Purpoſes with the *Native Cinnabar*: beſides which, 'tis likewiſe us'd by the Farriers, to make Pills for their Horſes; and by Painters, as a Colour: it being a very vivid red; but drying with ſome difficulty.

*Cinnabar*, or Vermilion, is render'd more beautiful by grinding it with Gum-Water and a little Saffron: thoſe two Drugs preventing its growing black. See VERMILION.

There is likewiſe a *blue Cinnabar*, made by mixing two Parts of Sulphur with three of Quickſilver, and one of Sal Ammoniac: theſe being ſublimed, produce a beautiful blue Subſtance; whereas Quickſilver and Sulphur alone produce a red.

The Word comes from the *Greek* κινάβρα, *the ſmell of Goats*; by reaſon, ſays *Matthiolus*, in digging a kind of Mineral *Cinnabar*, it yields ſo ſtrong a Scent, that the Diggers are oblig'd to ſtop their Noſtrils.

The Chymiſts prepare other Kinds of Artificial *Cinnabar*; as,

CINNABAR *of Antimony*, a Compoſition of Mercury, common Sulphur, and crude Antimony ſublimed. See ANTIMONY.

It is held a Diaphoretic, and Alterative; and is us'd in Scrophulous and other chronic Caſes.

CINNAMON, an agreeable aromatic Spice, furniſh'd by the *Eaſt-Indies*. See SPICE.

*Cinnamon* is allow'd to be the Bark of a Tree, growing in the Iſlands of *Ceylon*, *Java*, and in *Malabar*.

The *Cinnamon* Tree, call'd by the Natives *Corunda Gauhah*, grows in Woods, like other Trees; and is but little regarded by 'em. It never grows high: Its Leaves reſemble thoſe of the Laurel, both as to Subſtance, and Colour. When they firſt begin to open, they are red as Scarlet; and if rubb'd between the Hands, yield an Odour more like that of Cloves than of *Cinnamon*. The Fruit reſembles an Acorn, or Olive; and has neither the Smell nor Taſte of the Bark. When boil'd in Water, it yields an Oil, which, as it cools and hardens, becomes as firm and white as Tallow. Its Smell is agreeable, and they make Candles of it, which are only allow'd to be burnt in the King's Palace. The Wood is of no Virtue at all.

The chief Virtue of the *Cinnamon* Tree is in its Bark; which, when green, appears to be double: its exterior Surface being grayiſh, and the inner of the common *Cinnamon* Colour.

'Tis then diviſible into two Barks of different Colours; but theſe drying together, become inſeparable, and paſs for the ſame Bark; the grayiſh Colour changing in proportion as it dries.

When the *Cinnamon* is freſh taken from the Tree, 'tis flat, has little Taſte, Smell, or Colour; but it twiſts or convolves, as it dries, in form of a Stick, or Cane: whence the *French* call it *Cannelle*.

By thus exhaling its ſuperfluous Humidity, it acquires a ſweet briſk Smell, and a ſharp pungent Taſte. 'Tis ſaid, that after the Tree has been ſtripp'd of its Bark, in three Years it forms a new one, which is as good as the firſt: but this is not very probable.

Some hold, that the ſmall Branches of the ſame Tree make the *Caſſia*; but that muſt be a Miſtake. See CASSIA.

The Natives draw from the Roots of the Tree a Liquor, very much reſembling *Camphor*.

*Cinnamon*, to be good, muſt have a briſk agreeable Taſte, and a bright brown Colour. Its Qualities are, to heat and dry; to promote the Menſes, to fortify the Spirits, and to help Digeſtion: but its chief Uſe, in Medicine, is as an Aſtringent; with which Intention it is preſcrib'd in Diarrhæas, and Weakneſſes of the Stomach.

The *Cinnamon* of the Antients was different from that of the Moderns; they diſtinguiſh'd five Kinds of *Cinnamon*: the *Moſylitique*; *Cinnamon of the Mountain*; *black* and *branch'd Cinnamon*; another white and ſpongeous; and a fifth of leſs value, reddiſh, and of a ſtrong ſmell: as alſo a *baſtard Cinnamon*, call'd *Zinziber*: This laſt Species was antiently in very high eſteem, but is now no longer known. See ZINZIBER.

They extract an Oil from *Cinnamon*, call'd its Eſſence, or Quinteſſence, which is an excellent Cardiac: the manner of preparing it, is ſaid to be a Secret known only to the *Dutch*. The common *Cinnamon* is often adulterated with that out of which this Eſſence has been extracted.

*Cinnamon*, by means of Fire, furniſhes Waters, Extracts, and Salts; out of which are compounded Syrups, and Paſtils, call'd *Oleo Sacchara*; together with an Eſſence, that ſerves to turn all manner of Wines, white and red, into *Hypocras*.

CINNAMON-*Water*, is made by diſtilling the Bark, (firſt infus'd in Barley-Water) in Spirit of Wine, or Whitewine. See WATER.

All the *Cinnamon* conſum'd in *Europe*, comes from the *Dutch*; who have got the whole Commerce thereof in their own Hands, by becoming Maſters of the Iſle of *Ceylon*, and deſtroying all the other *Cinnamon* Trees about the Kingdom of *Cochin*.

*Clove* CINNAMON, is alſo the Bark of a Tree growing in *Braſil* and *Madagaſcar*; where it is known under the Name of *Ravendſara*. The *Portugueze* call it *Cravo de Marenhan*.

This Bark, pulveriz'd, is ſometimes ſubſtituted for real *Cloves*, tho far ſhort of 'em in reſpect of Quality. See CLOVES.

Saſſafras, or Saxafras, is ſometimes alſo call'd *Cinnamon-Wood*. See SASSAFRAS.

*White* CINNAMON, which ſome call *Coſtus Corticus*, or *Corticoſus*, or *Cortex Winteri*, *Winter*'s Bark, from the Perſon's

Perſon's Name who firſt brought it into *England*; is the Bark of a Tree reſembling the Olive Tree, frequent in the Iſland of S. *Domingo*, *Guadeloupa*, and *Madagaſcar*; call'd by the Natives *Fimpi*. See CORTEX.

The Bark, which dries like that of *Cinnamon*, is at firſt grayiſh, of a ſharp biting Taſte, like Pepper; and a Smell like Muſk: as it dries it whitens.

Some uſe it in lieu of Nutmeg: In Medicine, it's us'd as a Stomachic, and ſometimes as an Antiſcorbutic.

The ſame Tree yields a Gum, call'd *Alouch*, or *Bdellium*, which is no diſagreeable Perfume.

CINQUE-PORTS, or *Quinque portus*, five Havens that lie on the Eaſt Part of *England*, towards *France*; thus call'd, by way of Eminence, on account of their ſuperior Importance; as having been thought by our Kings to merit a particular regard, for their preſervation againſt Invaſion.

Hence they have a particular Policy, and are govern'd by a Keeper, with the Title of *Lord Warden of the Cinque-Ports*.

They have various Privileges granted 'em, as a particular Juriſdiction; their Warden having the Authority of an Admiral among 'em, and ſending out Writs in his own Name. See WARDEN.

*Camden* tells us, that *William* the Conqueror firſt appointed a Warden of the Cinque-Ports; but King *John* firſt granted them their Privileges; and that upon Condition they ſhould provide 80 Ships at their own Charge, for 40 Days, as often as the King ſhould have occaſion in the Wars: he being then ſtraitned for a Navy to recover *Normandy*.

The five Ports are *Haſtings*, *Romney*, *Hythe*, *Dover*, and *Sandwich*.

*Thorn* tells us, that *Haſtings* provided 21 Veſſels; and in each Veſſel 21 Men. To this Port belong *Seaford*, *Pevenſey*, *Hedney*, *Winchelſea*, *Rye*, *Hamine*, *Wakesbourn*, *Creneth*, and *Fortholipe*.

*Romney* provided 5 Ships, and in each 24 Men. To this belong *Bromhal*, *Lyde* of *Marſtone*, *Dangemures*, and *Romential*.

*Hythe* furniſh'd 5 Ships, and in each 21 Seamen: To this belongs *Weſtmeath*.

*Dover* the ſame Number as *Haſtings*: To this belong *Folkſton*, *Feverſham*, and *Margate*.

Laſtly, *Sandwich* furniſh'd the ſame with *Hythe*: To this belong *Fordivice*, *Reculver*, *Serve*, and *Deal*.

CION, or CYON, or SCION, in Gardening, a young Shoot, Sprout, or Sprig, put forth by a Tree. See SHOOT.

Grafting is perform'd by the Application of the *Cion* of one Plant upon the Stock of another. See GRAFT, and ENGRAFTING.

To produce a Stock of *Cions* for Grafting, Planting, &c. the Gardeners ſometimes cut off the Bodies of Trees, a little above the Ground, and only leave a Stump or Root ſtanding: the redundant Sap will not fail next Spring to put forth a great number of Shoots. See STOCK.

In dreſſing dwarf Trees, a great many *Cions* are to be cut off. See DWARF; ſee alſo PRUNING.

CION, in Anatomy, is ſometimes us'd for the *Uvula*. See UVULA.

CIPHER, or CYPHER, one of the Numeral Characters, or Figures; form'd thus o. See CHARACTER, FIGURE, &c.

The *Cipher* of it ſelf implies a Privation of Value; but when diſpos'd with other Characters on the left thereof, in the common Arithmetic, it ſerves to augment each of their Values by ten; and in Decimal Arithmetic, to leſſen the Value of each Figure to the right thereof, in the ſame proportion. See NOTATION, NUMERATION, and DECIMAL.

CIPHER is alſo a kind of myſtick Character, compos'd of ſeveral Letters interwove together; which are ordinarily the initial Letters of the Perſons Names, for whom the *Cipher* is intended.

Theſe are frequently us'd on Seals, Coaches, and other Moveables.

Antiently, Merchants and Tradeſmen were not allow'd to bear Arms: in lieu thereof they bore their *Ciphers*, or the initial Letters of their Names, artfully interwove about a Croſs; of which we have divers Inſtances on Tombs, &c.

CIPHER is alſo us'd for certain ſecret Characters, diſguis'd and varied; us'd for the writing of Letters that contain Secrets, not to be underſtood by any but thoſe between whom the *Cipher* is agreed on.

This is now reduc'd into a ſeparate Art, call'd *Polygraphia*, and *Steganographia*; but appears to have been little known to the Antients. See STEGANOGRAPHY, &c.

*De la Guilletiere*, in his *Lacædemon Antient and Modern*, endeavours to make the antient *Spartans* the Inventors of the Art of writing in *Cipher*.

Their *Scytala*, according to him, was the firſt Sketch of this myſterious Art: Theſe *Scytalas* were two Rollers of Wood, of equal length and thickneſs; one of them kept by the *Ephori*; the other by the General of the Army, ſent on any Expedition againſt the Enemy.

Whenſoever thoſe Magiſtrates would ſend any ſecret Orders to the General, they took a ſlip of Parchment, and roll'd it very juſtly about the *Scytala* which they had reſerv'd; and in this ſtate wrote their Intentions, which appear'd perfect and conſiſtent while the Parchment continu'd on the Roller: when taken off, the Writing was maim'd, and without connection; but was eaſily retriev'd by the General, upon applying it to his *Scytala*.

*Polybius* ſays, that *Æneas Tacticus*, 2000 Years ago, collected together twenty different Manners of Writing ſo as not to be underſtood by any but thoſe in the Secret; part whereof were invented by himſelf, and part us'd before his Time.

*Trithemius*, *Bap. Porta*, *Vigenere*, and *P. Niceron* have wrote on the Subject of *Ciphers*.

As the writing in *Cipher* is become an Art; ſo is the reading, or unravelling thereof, call'd *Deciphering*. See DECIPHERING.

*A* CIPHER *with a ſingle Key*, is that wherein the ſame Character is conſtantly us'd to expreſs the ſame Word, or Letter: This is eaſily decipher'd with a little Application.

*A* CIPHER *with a double Key*, is that wherein the Alphabet, or Key, is chang'd in each Line, or each Word; and wherein are inſerted Characters of no ſignificancy, to amuſe and perplex the Meaning.

The Word *Cipher* comes from the Hebrew *Sifre*, Number, Enumeration.

CIPHERING, is popularly us'd for the Art of Accompting; properly call'd *Arithmetic*. See ARITHMETIC.

CIPPUS, among Antiquaries, a little low Column, erected in the great Roads, and other Places, with an Inſcription thereon; either to ſhew the Way to Travellers, or to preſerve the Memory of ſomething remarkable.

The *Cippi* plac'd in the Highway, for the Convenience of Travellers, were alſo call'd *Milliary Columns*. See MILLIARY *Column*.

*Hottinger* has an expreſs Treatiſe of the *Cippi* of the *Jews*, *De Cippis Hebræorum*; wherein he takes *Cippus* for the Tomb of a Defunct. See TOMB, and TUMULUS.

CIPPUS was alſo us'd in Antiquity, for a wooden Inſtrument, wherewith Criminals and Slaves were puniſh'd.

CIRCENSES *Ludi*, in Antiquity, *Circenſian Games*, or *Games of the Circus*, a general Term, under which were comprehended all Combats exhibited in the *Roman Circus*, of what Kind ſoever; whether a-foot, or on Horſeback, or in a Car; Wreſtling, or Boxing; with Swords, Pikes, Darts, or Arrows; againſt Men, or againſt Beaſts; on the Ground, or aboard Veſſels. See GAMES, and CIRCUS.

There were few but Slaves that gave the People this cruel Pleaſure: it was an Exerciſe that would have diſgrac'd People of any Account.

Some ſay, the *Circenſian* Games were ſo call'd from the Latin *Circuitus*; becauſe they were held in a Place incompaſs'd round with naked Swords, that the Combatants might not have an opportunity of eſcaping.

At firſt they are ſaid to have been exhibited on the brink of the River *Tyber*, and the Ground incompaſs'd, to the Landward, with naked Swords.

Moſt of the Feaſts of the *Romans* were accompany'd with *Circenſian* Games; and the Magiſtrates, or other Officers of the Republick, frequently preſented the People with them on other Occaſions. See FEAST.

The grand ones were held for five Days, commencing on the 15th of *September*.

CIRCLE, in Geometry, a plane Figure, comprehended under one ſingle Line, which returns into it ſelf; having a Point in the Middle, from which all the Lines drawn to its Circumference are equal. See CENTRE.

Properly ſpeaking, 'tis the Space included within the Circumference, or Periphery, that is the *Circle*: tho in the popular Uſe of the Word, *Circle* is frequently us'd for the Periphery alone. See PERIPHERY.

Every *Circle* is ſuppos'd to be divided into 360 Degrees. See DEGREE; ſee alſo CHORD, TANGENT, DIAMETER, &c.

The Area of a *Circle*, is found by multiplying the Periphery by the fourth Part of the Diameter; or half the Periphery by half the Diameter.

The Area is alſo found by finding a Fourth proportional to 1000,785, and the Square of the Diameter: or, to 452, 355, and the Square of the Diameter. See AREA.

*Circles*, and ſimilar Figures inſcrib'd in 'em, are always as the Squares of the Diameters: So that they are in a duplicate Ratio of their Diameters; and therefore of their Radii.

A *Circle* is equal to a Triangle whoſe Baſe is equal to the Periphery, and its Altitude to the Radius. *Circles*, therefore, are in a Ratio compounded of the Peripheries and the Radii.

*To find the Proportion of the Diameter of a* CIRCLE *to its Periphery.*

Find, by continual Biſſection, the Sides of the inſcrib'd Polygons, till you arrive at a Side ſubtending any Arch, howſoever ſmall: this found, find likewiſe the Side of a ſimilar circumſcrib'd Polygon; multiply each by the Number of Sides of the Polygon; by which you will have the Perimeter of each Polygon. The Ratio of the Diameter to the Periphery of the Circle, will be greater than of the ſame Diameter to the Perimeter of the circumſcrib'd Polygon; but leſs than that to the inſcrib'd Polygon.

The Difference of the two being known, the Ratio of the Diameter to the Periphery, is eaſily had in Numbers very nearly true; tho not juſtly ſo.

Thus, *Wolfius* finds it as 1000000000000000 to 3141592-6535897932. *Archimedes* fix'd the Proportion as 7 to 22. *Ludolphus à Ceulen* carries it to a much greater accuracy; finding, that putting the Diameter for 1, the Periphery is greater than 3. 14159265358979323846264338387950; but, leſs than the ſame Number, changing the laſt Cipher into an Unite. *Metius* gives us the following Proportion, which is the beſt that is expreſs'd by ſmall Numbers: if the Diameter be 113, the Periphery (113. 31415): 10000; that is, 355, nearly.

*To circumſcribe a* CIRCLE *about a given regular Polygon:* biſſect two of the Angles of the Polygon E and D, (Tab. *Geom.* Fig. 28.) by the Lines E F and D E; and on the Point of Concourſe F, as on a Centre, with the Radius E F, deſcribe a *Circle*. See CIRCUMSCRIBING.

*To inſcribe any given regular Polygon in a* CIRCLE: divide 360 by the Number of Sides, to find the Quantity of the Angle E F D; which being made, in the Centre apply the Chord E D to the Periphery, as often as it will go: Thus is the Figure inſcrib'd in the *Circle*. See INSCRIBED.

*Thro' three given Points, not in a right Line*, A, B, C, *to deſcribe a* CIRCLE. On A and C ſtrike Arches interſecting in D and E; and others, G and H; from C and B draw the right Lines D E and H G: The Point of Interſection, I, is the Centre of the *Circle*.

Hence, 1ſt, by aſſuming three Points in the Periphery, or the Arch of any *Circle*, the Centre may be found, and the given Arch be perfected. See CENTRE.

2dly, If three Points of any Periphery agree, or coincide with three Points of another; the whole Peripheries agree, and the *Circles* are equal.

3dly, Every Triangle may be inſcrib'd in a *Circle*. See TRIANGLE.

In Opticks, 'tis ſhewn, that a *Circle* never appears truly ſuch, unleſs either the Eye be directed perpendicularly to its Centre; or the diſtance of the Eye from the Centre, when directed obliquely, be equal to the Semidiameter of the *Circle*: in every other Caſe the *Circle* appears oblong; and to make a *Circle* that ſhall appear ſuch, it muſt be oblong.

*Parallel*, or *Concentric* CIRCLES, are ſuch as are equally diſtant from each other in every Point of their Peripheries; or are deſcrib'd from the ſame Centre: as, on the contrary, thoſe ſtruck from different Centres, are ſaid to be *eccentric*. See CONCENTRIC, and ECCENTRIC.

*The Quadrature of the* CIRCLE, or the manner of making a Square, whoſe Surface is perfectly and geometrically equal to that of a *Circle*, is a Problem that has employ'd the Geometricians of all Ages. See QUADRATURE.

Many maintain it to be impoſſible; *Des Cartes*, in particular, inſiſts on it, that a right Line and a *Circle* being of different Natures, there can be no ſtrict Proportion between 'em: and, in effect, we are likewiſe at a Loſs for the juſt Proportion between the Diameter and Circumference of a *Circle*.

*Archimedes* is the Perſon who has come the neareſt to the Quadrature of the *Circle*: all the reſt have made Paralogiſms.

*Charles* V. offer'd a Reward of 100000 Crowns to the Perſon who ſhould ſolve this celebrated Problem; and the States of *Holland* have propos'd a Reward for the ſame.

CIRCLES *of the higher Kinds*, are Curves wherein $A p^m : p M^m : M : p B$, (Tab. *Analyſis*, Fig. 8.) or $A p^m : p M^m_c :: p M^n : p B^n$.

*Cor.* I. Suppoſe $A p = x$, $p M = y$: $A B = a$; then will $p B = a - x$. Conſequently, $x^n : y^m :: y : a - x$. Hence we have an Equation that defines infinite *Circles*, *viz.* $y m + 1 = a x^m - x m + 1$; and another defining infinite other *Circles*, viz. $y m + n = (a - x) n x^m$.

*Cor.* II. If $m = 1$, then will $y^2 = a x - x^2$; and therefore a *Circle* of the firſt Kind is contain'd under this Equation alone. If $m = 2$, $y^2 = a x^2 - x^3$. which Equation defines a *Circle* of the firſt Kind.

CIRCLES *of the Sphere*, are ſuch as cut the mundane Sphere, and have their Periphery either on its moveable Surface, or in another immoveable, conterminous, and equidiſtant. See SPHERE.

Hence ariſe two Kinds of *Circles*, *moveable*, and *immoveable*.

The firſt, thoſe whoſe Peripheries are in the moveable Surface, and which therefore revolve with its diurnal Motion, as the *Meridians*, &c. See MERIDIAN.

The latter, having their Periphery in the immoveable Surface, don't revolve; as the *Ecliptic*, *Equator*, and its *Parallels*, &c. See ECLIPTIC, *&c.*

If a Sphere be cut in any manner, the Plane of the Section will be a *Circle*, whoſe Centre is in the Diameter of the Sphere. See SPHERICS.

Hence, the Diameter of a *Circle* paſſing thro' the Centre, being equal to that of the *Circle* which generated the Sphere; and that of a *Circle* which does not paſs thro' the Centre, being only equal to ſome Chord of the generating *Circle*; the Diameter being the greateſt of all Chords, there hence ariſes another diviſion of the *Circles* of the Sphere, *viz.* into *great* and *leſs*.

*A great* CIRCLE *of the Sphere*, is that which divides it into two equal Parts, or Hemiſpheres; having its Centre in the Centre thereof. See GREAT.

Hence, all *great Circles* are equal, and cut each other into equal Portions, or Semicircles. See SPHERICS.

The *great Circles* are the *Horizon*, *Meridian*, *Equator*, *Ecliptic*, the *Colures*, and the *Azimuths*; which ſee in their Places, HORIZON, MERIDIAN, ECLIPTIC, *&c.*

*A leſſer* CIRCLE *of a Sphere*, is that which divides the Sphere into equal Parts, and has its Centre in the Axis of the Sphere, but not in the Centre thereof. See LESSER.

They are uſually denominated from the great *Circles* they are parallel to, as *Parallels of the Equator*, &c. See PARALLEL.

CIRCLES *of Altitude*, otherwiſe call'd *Almacantars*, are *Circles* parallel to the Horizon, having their common Pole in the Zenith, and ſtill diminiſhing as they approach the Zenith. See ALMACANTAR.

They have their Names from their Uſe; which is to ſhew the Altitude of a Star above the Horizon. See ALTITUDE.

CIRCLES *of Latitude*, or *Secondaries of the Ecliptic*, are great *Circles* parallel to the Plane of the Ecliptic, paſſing thro' the Poles thereof, and thro' every Star and Planet. See SECONDARY.

They are ſo call'd, becauſe they ſerve to meaſure the Latitude of the Stars, which is nothing but an Arch of one of theſe *Circles*, intercepted between the Star and the Ecliptic. See LATITUDE.

CIRCLES *of Longitude*, are ſeveral leſſer *Circles*, parallel to the Ecliptic; ſtill diminiſhing, in proportion as they recede from it.

On the Arches of theſe *Circles*, the Longitude of the Stars is reckon'd. See LONGITUDE.

CIRCLES *of Declination*, are great *Circles* paſſing thro' the Poles of the World. See DECLINATION.

*Vertical* CIRCLES, or *Azimuths*. See VERTICAL, and AZIMUTH.

*Diurnal* CIRCLES, are immoveable *Circles*, ſuppos'd to be deſcrib'd by the ſeveral Stars, and other Points of the Heavens, in their diurnal Rotation round the Earth; or rather, in the Rotation of the Earth round its Axis. See DIURNAL.

The *Diurnal Circles* are all unequal: the Equator is the biggeſt.

*Polar* CIRCLES, are immoveable *Circles*, parallel to the Equator, and at a diſtance from the Poles, equal to the greateſt Declination of the Ecliptic. See POLAR.

That next the Northern Pole is call'd the *Arctic*; and that next the Southern one the *Antarctic*. See ARCTIC, and ANTARCTIC.

CIRCLES *of Exurſion*, are *Circles* parallel to the Ecliptic, and at ſuch a diſtance from it, as that the Excurſions of the Planets towards the Poles of the Ecliptic, may be included within it; which are uſually fix'd at 10 Degrees. See SPHERE, and SPHERICS.

It may be here added, that all the *Circles* of the Sphere above deſcrib'd, are transferr'd from the Heavens to the Earth; and thence come to have Place in Geography, as well as Aſtronomy: all the Points of each *Circle* being conceiv'd to be let fall perpendicularly on the Surface of the Terreſtrial Globe, and ſo to trace out *Circles* perfectly ſimilar to them.

Thus, the Terreſtrial Equator is a Line, conceiv'd preciſely under the Equinoctial Line, which is in the Heavens; and ſo of the reſt. See EQUATOR, *&c.*

*Horary* CIRCLES, in Dialling, are the Lines which ſhew the Hours on Dials; tho theſe be not drawn circular, but nearly ſtrait. See DIAL.

CIRCLE *Equant*, in the *Ptolemaic* Aſtronomy, is a *Circle* deſcrib'd on the Centre of the Equant. See EQUANT.

Its chief Uſe, is to find the Variation of the firſt Inequality. See VARIATION.

CIRCLE *of perpetual Apparition*, one of the leſſer *Circles*, parallel to the Equator; deſcrib'd by any Point of the Sphere touching the Northern Point of the Horizon; and carry'd about with the diurnal Motion.

All the Stars included within this *Circle* never ſet, but are ever viſible above the Horizon.

The CIRCLE *of perpetual Occultation*, is another *Circle* at a like Diſtance from the Equator; and contains all thoſe Stars which never appear in our Hemiſphere. See OCCULTATION.

The Stars ſituate between theſe *Circles*, alternately riſe and ſet at certain Times. See STAR, RISING, SETTING, &c.

CIRCLES *of Poſition*, are *Circles* paſſing thro' the common Interſections of the Horizon and Meridian, and thro' any Degree of the Ecliptic, or the Centre of any Star, or other Point in the Heavens; us'd for finding out the Situation or Poſition of any Star, &c. See POSITION.

They are uſually made ſix in number; and cut the Equator into twelve equal Parts, which the Aſtrologers call the *Celeſtial Houſes*.

Hence ſome call them *Circles of the Celeſtial Houſes*.

CIRCLE, in Phyſicks, is underſtood, among the Schoolmen, of a Viciſſitude of Generations, ariſing one out of another.

Thus, good Concoction cauſes a good Habit of Body; a good Habit of Body produces Strength and Vigour; theſe occaſion frequent Exerciſes; and theſe a good Concoction.

'Tis a celebrated Dogma of the Scotiſts, 'There is no 'Circle in Cauſes of the ſame Order, or Kind.'

CIRCLE, in Logick, the Fault of an Argument that ſuppoſes the Principle it ſhould prove, and afterwards proves the Principle by the Thing it ſeem'd to have prov'd.

Or, a *Circle* in Logick, call'd alſo *Syllogiſtic Circle*, is when the ſame Terms are proved, *in Orbem*, by the ſame Terms; and the Parts of the Syllogiſm, alternately by each other, both directly and indirectly.

There are two Kinds of *Circles*; the one *Material*, the other *Formal*.

The *Formal* is that which in two reciprocal Syllogiſms begs the *Medium*, which is the next Cauſe of the greater Extreme. This Kind is by no means to be admitted: otherwiſe, the ſame Thing becomes both prior and poſterior; the Cauſe and Effect of it ſelf; which is abſurd.

The *Material Circle*, call'd alſo *Regreſſus*, conſiſts of two Syllogiſms, the former whereof proves the Cauſe by the Effect; and the latter the Effect by the Cauſe: This may be admitted.

CIRCLES *of the Empire*, are ſuch Provinces, and Principalities of the Empire, as have a Right to be preſent at Diets. See EMPIRE, and DIET.

The Diviſion of the Empire into ſix *Circles*, was eſtabliſh'd by *Maximilian* I. in 1500, at *Ausburg*: twelve Years afterwards he divided it afreſh, into ten *Circles*; which Partition was confirm'd by *Charles* V. at the Diet of *Nuremberg*, in 1522.

Tho the Order of theſe *Circles* has never been well regulated; yet, in the Imperial *Matricula*, it is as follows: The *Circle* of *Auſtria*, that of *Burgundy*, of the *Lower Rhine*, of *Bavaria*, *Upper Saxony*, *Franconia*, *Suabia*, *Upper Rhine*, *Weſtphalia*, and the *Lower Saxony*.

CIRCUIT, or CIRCUITY, in Law; a longer Courſe of Proceeding to recover the Thing ſued for, than is needful.

Thus, if a Man grant a Rent-Charge of 10 *l.* out of his Manor, and after, the Grantee diſſeizeth the Grantor of the ſame Manor, who brings an Aſſiſe, and recovers the Land, and 20 *l.* Damages: which being paid, the Grantee brings his Action for 10 *l.* of his Rent, due during the Time of the Diſſeiſin, and which he muſt have had if no Diſſeiſin had been: This is call'd *Circuit of Action*; becauſe, whereas the Grantor was to receive 20 *l.* Damages, and to pay 10 *l.* Rent, he might have receiv'd but 10 *l.* for Damages, and the Grantee have kept the other.

CIRCUIT, is alſo the Journey, or Progreſs the Judges take, twice every Year, thro' the ſeveral Counties of *England* and *Wales*, to hold Courts, and adminiſter Juſtice, where recourſe cannot ſo well be had to the King's Courts at *Weſtminſter*. See JUDGE, and ASSIZE.

CIRCULAR, any thing that is deſcrib'd, or mov'd in a round; as the Circumference of a Circle, or the Surface of a Globe. See CIRCLE.

The *circular* Form is of all others the beſt diſpos'd for Motion; and the moſt capacious.

The modern Aſtronomers ſhew, that the Heavenly Bodies don't move in *Circular*, but in Elliptic Orbits. See ORBIT, PLANET, &c.

CIRCULAR *Lines*, in Mathematicks, are ſuch ſtrait Lines as are divided from the Diviſions made in the Arch of a Circle.

Such are Sines, Tangents, Secants, &c. See SINE, TANGENT, &c.

CIRCULAR *Velocity*, a Term in Aſtronomy, ſignifying that Velocity of a Planet, or revolving Body, which is meaſur'd by the Arch of a Circle: as ſuppoſe by A *b*, (Tab. *Aſtron.* Fig. 10.) deſcrib'd on the Centre of Attraction S.

The *circular* Velocity of a Body moving from B to C, is meaſur'd by the Ark B C.

CIRCULAR *Numbers*, are ſuch whoſe Powers end in the Roots themſelves; as 5, whoſe Square is 25, and Cube 125. See NUMBER.

CIRCULAR *Letter*, a Letter directed to ſeveral Perſons, who have the ſame Intereſt in the ſame Affair; as in the Convocation of Aſſemblies, &c.

CIRCULAR *Sailing*, is that perform'd in the Arch of a great Circle. See SAILING.

*Circular Sailing*, of all others, goes the neareſt or ſhorteſt way: and yet there are ſuch Advantages in ſailing by Rhumbs, that this latter is generally preferr'd.

CIRCULATION, the Act of *circulating*, or moving in a *Circle*. See CIRCLE.

Thus, we ſay, The *Circulation* of the Blood; the *Circulation* of the Sap; of the Spirits, &c. See BLOOD, SAP, SPIRITS.

As in the great World we find a perpetual and orderly *Circulation* of Waters, convey'd from the Sea by ſubterraneous Paſſages, Springs, &c. and return'd thither again by Rivers, &c. ſo in the little World, Man, a like Circuit is obſerv'd; the Blood being continually driven from the Heart, by the Arteries, to all Parts of the Body; and brought back again to the Heart by the Veins. See HEART, VEIN, and ARTERY.

CIRCULATION *of the Blood*, a natural Motion of the Blood in a living Animal; whereby that Humor is alternately convey'd from the Heart to all the Parts of the Body, by the Arteries, and return'd from the ſame Parts to the Heart by the Veins. See BLOOD.

The *Heart*, we have elſewhere ſhewn, is a Muſcle, into the *Ventricles* or Cavities whereof, all the Veins diſcharge themſelves, and from which all the Arteries ariſe; having, withal, a reciprocal Action of Dilatation, or *Diaſtole*; and Conſtriction, or *Syſtole*. See HEART, SYSTOLE, and DIASTOLE.

Now, the neceſſary Effect of ſuch alternate Action, is, that the Heart, by turns, both receives and expels the Blood. The Blood expell'd out of the right Ventricle, muſt be carry'd thro' the *Pulmonary* Artery (which ariſes thence) into the Lungs; from which it muſt be return'd, by the *Pulmonary* Vein, to the left Ventricle, (in which that Vein terminates.) From the left Ventricle, the Blood thus imported, is by the Conſtriction of that Part, again expell'd into the *Aorta*, and by it diſtributed all over the reſt of the Body; and thence return'd again to the right Ventricle by the *Cava*, which compleats the *Circulation*. See PULMONARY *Artery*, and *Vein*; CAVA, and AORTA.

The *Circulation* of the Blood, has been generally allow'd to have been firſt diſcover'd in *England*, in the Year 1628, by *Harvey*, a Phyſician of our own Country; tho there are ſeveral Authors who diſpute it with him.

*Janſen de Almeloveen*, in a Treatiſe of *New Inventions*, printed in 1684, quotes ſeveral Paſſages from *Hippocrates*, to prove that the *Circulation* was known to him.

*Walæus*, (*Ep. ad Barthol.*) and *Carleton*, (*Oecon. Anim.*) pretend, 'twas known not only to *Hippocrates*, but alſo to *Plato* and *Ariſtotle*.

'Tis added, that the *Chineſe* Phyſicians taught it 400 Years, e're it was ſpoke of in *Europe*.

Some go back as far as *Solomon*, and imagine they ſee ſome Traces of it in *Eccleſiaſtes*, Chap. xii.

*Bern. Genga*, in an *Italian* Treatiſe of Anatomy, quotes ſeveral Paſſages from *Realdus Columbus*, and *And. Cæſalpinus*, whereby he endeavours to prove that they admitted a *Circulation*, long enough before *Harvey*.

He adds, that *Fra. Paolo Sarpio* the famous *Venetian*, from a Conſideration of the Structure of the Valves of the Veins, and other Experiments, concluded a *Circulation*. See VALVE.

*Leonicenus* adds, that *F. Paolo* durſt not make known his Diſcovery, for fear of the Inquiſition; that he therefore only communicated the Secret to *Fab. ab Aquapendente*; who, after his Death, depoſited the Book he had compos'd on it in the Library of S. *Mark*; where it lay hid a long time, till *Aquapendente* diſcover'd the Secret to *Harvey*, who then ſtudy'd under him at *Padua*; and who, upon his return to *England*, a Country of Liberty, publiſh'd it as his own.

The *Circulation* of the Blood is evinc'd, from the following Conſiderations.

1. All the Blood of a living Animal, upon wounding any one of the larger Arteries, is, in a little time, evacuated; and that with a conſiderable force: as appears from the Operations of Butchers, &c.

Hence, it follows, that the Blood has a Paſſage from every Part of the Animal Body into every Artery: and if the whole Maſs of Blood be found to move on this occaſion, 'tis evident it muſt have mov'd before.

2. The great Quantity of Blood driven out of the Heart into the Arteries at every Pulſe, makes a *Circulation* neceſſary; ſince, without it, an infinitely greater Stock of Blood muſt be ſuppos'd in the Body of a Man, than any Obſervation or Experiment will allow of.

For tho the Antients, who knew not this *Circulation*, imagin'd that only a Drop or two was expell'd at each Syſtole; which they were neceſſitated to ſuppoſe, to avoid the too great

great Diſtenſion of the Arteries, from a more conſiderable Influx: yet it is certain, and even demonſtrable, that there muſt needs be an Ounce, or more, driven into 'em at each time; and yet ſome compute five or ſix thouſand Pulſations in an Hour.

3. Any of the Arteries, being ty'd with a Thread, ſwell, and beat, between the Bandage and the Heart; but grow flaccid between the Bandage and the Extremities of the Body.

If now the Artery be cut between the Bandage and the Heart, the Blood ſtreams out, even to Death: If it be cut between the Bandage and the Extremities of the Body, the Quantity of Blood it yields is very ſmall.

The vital Blood, therefore, flows thro' the Arteries; and its Courſe is from the Heart towards the Extremes of the Body: and this it does in every Point of the Body, internal and external; ſtill out of a wider Part into a narrower; out of the Trunk into the Branches. 'Tis on this Principle alone, that all the Blood may be deriv'd into any Artery, and evacuated at it. See ARTERY.

4. Any of the larger Veins being bound up with a Thread, ſwell between the Extremes of the Body and the Bandage; but without beating: between the Bandage and the Heart it becomes flaccid.

If open'd in the former Part, it bleeds even to Death; if in the latter, it ſcarce bleeds at all. The Blood, therefore, flows briſkly from every Part of the Body into this Vein; and its Courſe is from the Extremes of the Body towards the Heart; from the narrower Parts of the Vein towards the wider Parts; from the Branches to the Trunk. See VEIN.

From the whole, 'tis evident, that all the Arteries of the Body are continually bringing the Blood from the left Part of the Heart, thro' the Trunks of the Arteries, into the Branches; and from thoſe to all Parts of the Body, internal and external: And on the contrary, that all the Veins, excepting the *Porta*, are perpetually bringing back the Blood from the extreme Parts into the ſmaller Branches; from thoſe it paſſes into the larger, at length into the Trunks, and thence into the *Cava*; and thro' the *Sinus Venoſus*, or Trunk of that Vein (which ends in the Cavity of the right *Auricle*) into the Heart.

The Blood arriv'd here, its Motion, or *Circulation*, is continu'd as follows.

The Auricles of the Heart being large hollow Muſcles, furniſh'd with a double Series of ſtrong Fibres proceeding with a contrary Direction to two oppoſite Tendons, the one adhering to the right Ventricle, the other to the *Sinus Venoſus*, as alſo with innumerable Veins and Arteries; by the contractile Force of theſe Auricles, the Blood will be vigorouſly expreſs'd, and drove into the right Ventricle; which, upon this Contraction, is render'd flaccid, empty, and diſpos'd to admit it. See MUSCLE.

If now the right Ventricle, thus full of Blood, by the Contraction of its Fibres preſs the Blood towards the Aperture again; the venous Blood at the ſame time pouring in, will drive it back again into the Cavity, and mix it more intimately; till riſing up againſt the *Parietes*, it raiſes the *Valvulæ Tricuſpides*, which are ſo connected to the fleſhy Columns extended on the oppoſite ſide, as that when laid quite down they cannot cloſe the *Parietes* of the right Ventricle: theſe it thruſts towards the right Auricle, till being there join'd, they ſtop the Paſſage very cloſely, and prevent any return.

By the ſame means, the ſame Blood riſes up into the three *Semilunar* Valves, plac'd in the Extremity of the other Mouth, and lying open to the Pulmonary Artery: theſe it ſhuts cloſe againſt the Sides of the Artery, and leaves a Paſſage into the Artery alone.

The venous Blood therefore, that is, the Blood of the whole Body, continually moves out of the *Sinus*, or Trunk of the *Vena Cava*, thro' the right Auricle, and right Ventricle, into the Pulmonary Artery, in a continu'd and forcible Stream.

The Blood carry'd by this Artery into the Lungs, and diſtributed by its Branches thro' the whole Subſtance thereof, is firſt admitted into the Extremities of the Pulmonary Vein, call'd *Arteria Venoſa*; whence paſſing into four large Veſſels, which unite together, it is brought to the left *Sinus Venoſus*, or Trunk of the Pulmonary Vein; by the force of whoſe muſculous Structure it is driven into the left Ventricle, which, on this occaſion, is relax'd, and by that means prepar'd to receive it.

Hence, as before, 'tis driven into the left Ventricle, which is relax'd by the ſame means; and the *Valvulæ Mitrales* opening, admit it into the left Ventricle, and hinder its reflux into the Pulmonary Vein.

From hence it is forc'd into the *Aorta*; at whoſe Orifice there are three Semilunar Valves, which alſo prevent a Reflux by cloſing the ſame.

And thus is *Circulation* effected; all the Blood ſent into the Lungs, and receiv'd into the *Arteria Venoſa*, *Sinus Venoſus*, left Auricle and Ventricle, being here continually propell'd into the *Aorta*; whoſe Ramifications are ſpread throughout all the reſt of the Body, with a violent Motion.

This Motion, in living Animals, is attended with the following Phænomena.

1. Both *Venous Sinus's* are fill'd, and grow turgid at the ſame time. 2. Both Auricles grow flaccid at the ſame time; and both are fill'd at the ſame time, with Blood impell'd by the contractile Force of its correſpondent muſcular *Venous Sinus*. 3. Each Ventricle contracts, and empties it ſelf of Blood at the ſame time; and the two great Arteries are fill'd and dilated at the ſame time. 4. As ſoon as the Blood, by this Contraction, is expell'd, both Ventricles being empty, the Heart grows longer and broader; and conſequently more flaccid and capacious. 5. Upon which, the muſcular Fibres of both *Venous Sinus*'s contract, and expreſs the Blood contain'd in 'em into the Ventricles of the Heart. 6. In the mean time, the *Venous Sinus*'s are again fill'd, as before; and the Auricles, *&c.* return into their former habitude. 7. And this Alternation continues till the Animal begins to languiſh, under the Approach of Death; at which time, the Auricles and *Venous Sinus*'s make ſeveral Palpitations, for one Contraction of the Ventricle.

Thus is all the Blood, in its return from every Point of the Body, internal and external, and from every Point of the Heart and its Auricles, impell'd into the right Ventricle; out of that into the Lungs; thence into the left Ventricle; and thence thro' the whole extent of the Body; and thence again brought back to the Heart.

As to the manner of the Blood's paſſing out of the Arteries into the Veins, in order to its being return'd to the Heart; there are two Opinions.

In the firſt, the Veins and Arteries are ſuppos'd to open into each other, or to be continu'd from each other, by *Anaſtomaſes*, or Inoſculations of their Extremities. See INOSCULATION, *&c.*

In the latter the extreme Capillary Arteries are ſuppos'd to let out their Blood into the Pores of the Subſtance of their Parts; on whoſe Nutrition part is ſpent, and the reſt receiv'd in at the Mouths of the Capillary Veins.

Each of theſe manners muſt be allow'd to have its Place: For without the firſt, it were difficult to account for ſo quick a return of the Blood to the Heart, as in effect we find; beſides that, in ſome of the larger Veſſels, there is a confeſs'd *Anaſtomaſis*, *v. g.* in the Splenic Artery with the Splenic Vein, *&c.* whence Authors conclude the ſame Contrivance to hold in the leſſer Veſſels; even in the ſmalleſt Twigs in the extreme Parts of the Body, tho not diſcover'd by the Eye; Nature being ordinarily found very uniform, and conſiſtent with her ſelf.

*Riolanus*, however, who will allow of no *Circulation* but by *Anaſtomaſes*; allows of none, neither, but by the larger Veſſels.

The Reaſon of the latter Opinion is deduc'd hence, that if part of the arterial Blood did not ooze out into the Subſtance of the Parts, they could not be nouriſh'd thereby: For the Blood, while contain'd in the Veſſels, may indeed convey Warmth thereto, but no Nutriment; the very Veſſels themſelves being not nouriſh'd by the Fluid running in their Cavity, but by Capillaries paſſing their Coats. See NUTRITION.

If then the Blood be driven out of the Veſſels in a greater Quantity than is requir'd for Nutrition; the redundancy muſt be imbib'd by the Capillary Veins.

M. *Leewenhoeck* ſeem'd to have put this Matter out of doubt by his Microſcopes, with which he diſcover'd the Inoſculations, or Continuations of the Extremities of the Veins and Arteries in Fiſhes, Frogs, *&c.* But ſome ſtill doubt whether there be ſuch Continuations in the Extremes of the Veins and Arteries in human Bodies and Quadrupeds: thoſe Animals it has been hitherto obſerv'd in, being either Fiſh, or of the amphibious Kind, which have but one Ventricle in the Heart, and their Blood actually cold; to which it may be added, that the Blood in theſe Creatures does not *circulate* with that Rapidity as in thoſe whoſe Hearts have two Ventricles.

This difference in the principal Organs of *Circulation*, occaſion'd Mr. *Cowper* to make Experiments on other Animals, whoſe Parts have the ſame Structure with thoſe of Man. In the *Omentum* of a Cat, he ſaw the Blood move briſkly thro' the Inoſculations; the ſame he found in the *Omentum*, and much clearer in the Meſentery, of a Dog. He adds, that the Extremities of the Veſſels are not equally leſſen'd, in the Inoſculations, in different Animals.

In the Tail of the Tadpole, he frequently obſerv'd ſeveral Communications between the Veins and Arteries; thro' each of which two Globules of Blood might paſs abreaſt. In young Fiſh, particularly Grigs, the communicant Branch is ſo ſmall, that one Globule of Blood can ſcarce paſs in the Space of three Seconds. See VEIN, *&c.*

In a *Fœtus*, the Apparatus for the Circulation is ſomewhat different. from that above deſcrib'd.

The *Septum*, which ſeparates the two Auricles of the Heart, is pierc'd thro' with an Aperture, call'd the *Foramen Ovale*; and the Trunk of the Pulmonary Artery, a little after it has left the Heart, ſends out a Tube into the deſcending *Aorta*, call'd the *Communicating Canal*.

The *Fœtus* being born, the *Foramen Ovale* cloſes, by degrees, and the Canal of Communication dries up, and becomes a ſimple Ligament. See FOETUS.

This Mechaniſm once known, 'twas eaſy to perceive its Uſe.

For while the *Fœtus* is inclos'd in the *Uterus*, it receives no Air, but that little furniſh'd it by the Umbilical Vein: Its Lungs, therefore, can't ſwell and ſubſide as they do after the Birth, and after the free Admiſſion of the Air. They continue almoſt at reſt, and without any Motion; their Veſſels are as it were full of themſelves, and don't allow the Blood to *circulate*, either in abundance, or with Eaſe.

Nature, therefore, has excus'd the Lungs from the Paſſage of the greateſt Part of the Blood; and has contriv'd the *Foramen Ovale*, by which Part of the Blood of the *Vena Cava*, receiv'd into the right Auricle, paſſes into the left Auricle, at the Mouth of the Pulmonary Veins; and by this means is found as far in its Journey as if it had paſs'd the Lungs.

But this is not all, for the Blood of the *Cava*, which, miſſing the *Foramen Ovale*, paſſes from the right Auricle into the right Ventricle; being ſtill in too great Quantity to paſs by the Lungs, whither 'tis driven thro' the Pulmonary Artery; the communicant Canal intercepts part of it in the way, and pours it immediately into the deſcending *Aorta*. See FORAMEN, *&c.*

This is the Doctrine of *Harvey*, *Lower*, and moſt other Anatomiſts; but, M. *Mery*, of the Royal Academy, has made an Innovation in it.

He aſſigns another uſe for the *Foramen Ovale*; and maintains, that the whole Maſs of Blood brought from the *Cava* to the right Ventricle, paſſes, as in Adults, into the Pulmonary Artery, whence Part of it is convey'd by the communicant Canal into the *Aorta*; and the reſt brought from the Lungs by the Pulmonary Veins into the left Auricle, where 'tis divided into two Parts; the one paſſing thro' the *Foramen Ovale* into the right Ventricle, without *circulating* thro' the *Aorta* and the reſt of the Body; the other Part puſh'd, as in Adults, by the Contraction of the left Ventricle, into the *Aorta*, and the whole Body of the *Fœtus*.

The whole Queſtion then turns upon this, *viz.* whether the Blood paſs thro' the *Foramen Ovale* from the right to the left Ventricle, or from the left to the right.

M. *du Verney* aſſerts the antient Opinion, againſt M. *Mery*, and maintains that the *Foramen Ovale* has a Valve ſo diſpos'd as to be open'd by the Blood driving into the right Ventricle, but ſhut the more firmly by its puſhing into the left. M. *Mery* denies the Exiſtence of any ſuch Valve.

Again, in an Adult, the *Aorta* being to receive all the Blood of the Pulmonary Artery, is found of the ſame bigneſs. In a *Fœtus*, the two Arteries are to receive unequal Quantities, which of the two Syſtems ſoever be follow'd.

According to the common Opinion, the *Aorta* receiving more Blood than the Pulmonary, ſhould be bigger: according to the Opinion of M. *Mery*, the Pulmonary Artery ſhould be the bigger, as being eſteem'd to receive a larger Quantity of Blood.

To judge of the two Syſtems therefore; it ſhould ſeem there needed nothing but to determine which of the two Veſſels were biggeſt in a *Fœtus*.

M. *Mery* always found the Pulmonary Artery half as big again as the *Aorta*; and, on the other hand, M. *Tauvry*, who ſeconded M. *du Verney*, produces Caſes where the Pulmonary is leſs than the *Aorta*: the Facts on both Sides being examin'd by the *French* Royal Academy.

M. *Tauvry* adds, that tho the Pulmonary Artery ſhould be greater than the *Aorta*, yet this does not prove that more Blood paſſes the firſt than the ſecond; ſince it may be accounted for from the Blood's preſſing more ſlowly towards the Lungs, which it finds ſome difficulty to penetrate, and accordingly ſwells, and is driven back.

M. *Littre*, upon diſſecting an Adult, in whom the *Foramen Ovale* was ſtill open, and meaſuring the Capacities of the Veſſels on each ſide, declares for M. *Mery*.

For the Source of the *Circulation* in the *Fœtus*, Anatomiſts are again divided.

The popular Opinion is, that during Geſtation, the Arteries of the *Uterus* convey their Blood into the *Placenta*, which is nouriſh'd by it, and the Surplus convey'd into the Roots of the Umbilical Vein, which makes Part of the Navel-ſtring: thence 'tis carry'd to the Liver of the *Fœtus*, where it enters the *Vena Cava*, and is thence convey'd to the right Ventricle of the Heart, and diſtributed as before.

Again, the Blood brought from the Iliac Arteries of the *Fœtus*, enters the Navel-ſtring by the Umbilical Arteries; thence paſſes into the *Placenta*, where it is reſum'd by the Veins of the *Uterus*, which carry it back again to the Mother; and perhaps alſo by the Roots of the Umbilical Vein, which mix it afreſh with the Blood of the Mother.

According to this Syſtem therefore, 'tis the Blood of the Mother that ſupplies the Child; which is here only regarded as a diſtinct Member, or Part of her Frame.

The beating of her Heart ſends it a Portion of her Blood; and ſo much of the Impulſe is preſerv'd, as ſuffices to maintain that languid *Circulation* which a *Fœtus* enjoys; and, in all probability, gives that feeble Pulſation obſerv'd in the Heart.

Other Anatomiſts maintain, that the *Fœtus* is only ſupply'd with Chyle from the Glands of the *Uterus*; which is further elaborated, and turn'd into Blood in the Veſſels of the *Fœtus*; and circulates therein, without any further Communication with the Mother.

They allow of no reciprocal *Circulation*, excepting between the *Placenta* and the *Fœtus*.

But the former Opinion is beſt ſupported: For the *Placenta* being ſeparated from the *Uterus*, during the time of Geſtation, neither yields any Chyle, nor any thing but Blood. Beſides, M. *Mery* has ſhewn, that the *Uterus* has no Glands to furniſh any Chyle.

Two other Obſervations of the ſame Author, confirm the popular Syſtem: The inner Surface of the *Uterus* is lin'd with Veins; and the outer Surface of the *Placenta* is not lin'd with any Membrane. Now as 'tis by theſe two Surfaces that the two ſeem in ſome meaſure glu'd together; it looks as if they were only left without Membranes, for an immediate Communication between their Blood-Veſſels.

Add to theſe a Fact whereof M. *Mery* was an Eye-witneſs: A Woman big with Child was kill'd by a Fall; in the Cavity of her Belly were found ſeven or eight Pints of Blood; all the Blood-Veſſels being empty'd: the Child too was found dead; but without the leaſt Appearance of any Wound or Contuſion: all its Blood-Veſſels being empty of Blood, like thoſe of the Mother. The Body of the *Placenta* ſtill adher'd to the whole inner Surface of the *Uterus*; nor was there any extravaſated Blood.

Now the Blood here had no other way to diſcharge it ſelf, but by the Veins of the *Uterus*: whence it follows, that thoſe Veins bring back to the Mother the Blood of the *Fœtus*; which alone eſtabliſhes the whole Syſtem. If the *Circulation* were only from the *Fœtus* to the *Placenta*, and not alſo to the Mother; the dead Child would have had all its Blood.

Upon the whole, the Blood in the Lungs of the *Fœtus* has none of the Advantages of Air or Reſpiration; which yet being neceſſary, Nature, 'tis ſuppos'd, takes care that it receive a Portion of Air, mix'd together with its Mother's Blood, and tranſmitted to it by the Umbilical Veſſels, to be diffus'd thro' the Body.

This is confirm'd hence, that by conſtringing the Navel-ſtring very tight, the Child dies like a Man ſtrangled: which appears to be owing to nothing but the want of Air. Add to this, that as ſoon as the Mother ceaſes to reſpire, the *Fœtus* expires.

As to the Velocity of the *circulating* Blood, and the Time wherein a *Circulation* is compleated; ſeveral Computations have been made.

By Dr. *Keil*'s Account, the Blood is driven out of the Heart into the *Aorta*, with a Velocity which would carry it 52 Feet in a Minute. But this Velocity is continually abated in the Progreſs of the Blood thro' the numerous Sections, or Branches of the Arteries: ſo that e'er it arrive at the Extremities of the Body, its Motion is infinitely diminiſh'd.

The ſame Author, upon a moderate Ratio of the Branches of the Arteries to the Trunks, ſhews, that the greateſt Velocity of the Blood is to the leaſt, in a greater proportion than of 1000,00000,00000,00000,00000,00000,00000,00000, to 1.

The ſpace of Time wherein the whole Maſs of Blood may ordinarily *circulate*, is variouſly determin'd.

Some of the lateſt Writers ſtate it thus: Suppoſing the Heart to make 2000 Pulſes in an Hour, and that at every Pulſe there is expell'd an Ounce of Blood; as the whole Maſs is not ordinarily computed to exceed 24 Pounds, it muſt be *circulated* 7 or 8 times over in the ſpace of an Hour.

CIRCULATION *of the Spirits*, or the *Nervous Juice*. That the Spirits *circulate*, is evinc'd in the ſame manner as ſome Authors chuſe to prove the *Circulation of the Blood*; *viz.* That as the Heart drives out every Hour three or four thouſand Ounces of Blood, whereas, ordinarily, there is not above two thouſand in the whole Body; there is a Neceſſity for the Blood driven out, to return to the Heart, in order to ſupply a Fund to be expell'd.

In like manner, 'tis ſhewn, that there is form'd each Hour a large quantity of Spirits, which are nothing but the more ſubtil Parts of this Blood driven out from the Heart: whence 'tis inferr'd, that theſe too muſt *circulate*. See SPIRIT.

The Courſe they are ſuppos'd to take is this.

The moſt ſubtil Parts of the Arterial Blood being carry'd from the Heart to the Brain by the Carotid Arteries, are thrown violently into the fine Network, wherewith the Bottom of the Ventricles of the Brain is lin'd; whence the more delicate Parts are driven into the Mouths of the Choroid Arteries, where they continue their rapid Motion, and diſcharge themſelves at the Pores where thoſe Veſſels terminate around the Pineal Gland.

Hence they enter that Gland, and there form a conſtant Spring of Spirits; which being here purify'd, enters the Cavities of the Brain, and inſinuating into the Pores of its Subſtance, flow into the Lymphatics; whence they are carry'd to the Heart by two ways.

Thoſe from the upper Parts by the Subclavian Veins, and the adjacent Veſſels: thoſe from the lower, being diſcharg'd into *Pecquet*'s Reſervoir, proceed by the Thoracic Duct, and at laſt by the deſcending Veins to the Heart. Whence they begin their Courſe afreſh.

CIRCULATION *of the Sap*, is a natural Motion of the nutritious Juice of Plants, from the Root to the extreme Parts, and thence back again to the Root. See SAP, and PLANT.

The Experiments of modern Naturaliſts, and Gardeners ſeem to prove a *Circulation* in the Body of Plants, by Veins and Arteries, analogous to that in Animals.

M. *Perrault* firſt ſtarted the *Circulation* of the Sap in *France*, and propos'd it, in 1667, to the Royal Academy: Tho M. *Major*, a Phyſician of *Hambourg*, had publiſh'd it, unknown to M. *Perrault*, two Years before. A Year and half afterwards, M. *Marriotte* propos'd the ſame to the Academy, as a new thing; not knowing that M. *Perrault* had been beforehand with him: And the great *Malpighi* appears to have entertain'd the ſame Thought about the ſame time.

The Opinion, however, is not univerſally receiv'd: ſome of the ableſt Botaniſts, and particularly M. *Dodart*, proteſting openly againſt it.

That Author allows of a Juice mounting from the Root to the Extremities of the Branches; and of another deſcending from theſe Extremities to the Root: the firſt imbib'd from the Soil, and digeſted in the Root, for the Nouriſhment of the Plant: the ſecond receiv'd from the moiſt Parts of the Air, in at the Extremities of the Branches. The riſing and deſcending Juices, therefore, according to him, are not the ſame; or, that which riſes never deſcends, and reciprocally; *i. e.* there is no *Circulation*.

Dr. *Tong*, in the *Philoſophical Tranſactions*, maintains, that the Sap always riſes, and never properly deſcends; having only a Subſiding, or Recidivation, which he can by no means call a *Circulation*.

M. *Switzer* owns himſelf at a Loſs for the Method wherein a *Circulation* ſhould be effected; as well as for the Parity of Reaſon commonly urg'd for a *Circulation* of the Sap and of the Blood. In Animals, he obſerves, the degree of Growth, or Extenſion, is but very ſmall: ſo that the Blood, not being employ'd in any other ſervice, may be eaſily ſuppos'd to *circulate*: But Trees, growing to an unlimited Tallneſs, 'tis probable the great Effort of Nature is employ'd in extending 'em that way; and that the nutritious Juice only aſcends. He adds, that as to the Swelling or Extenſion of Trees in bulk, it evidently ariſes from the Effuſion of the Sap from the Heart of the Tree thro' the Pores, which dilates the whole inſenſibly, by accumulating Circle on Circle; which are annual Gradations eaſily obſerv'd upon cutting a Branch, or Trunk acroſs.

But ſtill, the Arguments for a *Circulation*, muſt be allow'd of more weight than any thing here urg'd againſt it.

The ſame Experiments of Ligature, and Inciſion, which evince a *Circulation* in Animals, have been made in Plants; particularly in ſuch as abound in Sap, as the Milk-Thiſtle, *&c.* and with the ſame Succeſs; the Part between the Ligature and the Root ſwelling very conſiderably, and the other much leſs.

The Ligatures are to be made with metalline Rings. Dr. *Liſter* gives us an Inſtance in the *Cataputia minor*, where the Ligature being only a ſilken Thread, ty'd as hard as poſſible without breaking the Skin, no greater Swelling aroſe on one ſide the Ligature than the other.

Mr. *Lawrence* gives us a Demonſtration of the *Circulation* of the Sap, from an Experiment on the yellow ſtrip'd Jeſſamine.

Upon a Branch of a plain Jeſſamine, whoſe Stem ſpreads it ſelf in two or three Branches, inoculate a Bud of the yellow ſtrip'd Jeſſamine, in Autumn: As the Tree comes to ſhoot, the following Summer, ſome of the Leaves will be found ting'd here and there with yellow, and this even on the Branches not inoculated; till, by degrees, the whole Tree, even the very Wood of the young Branches, will be all variegated, or ſtrip'd with green and yellow. See VARIEGATION.

Mr. *Fairchild* confirms this Experiment by a ſimilar one of his own: Having inoculated a yellow ſpotted Jeſſamine Tree, into another Jeſſamine Tree; he found, that tho the Bough did not take, yet, in a Fortnight's time, yellow Spots began to appear on a Shoot which came out of the Ground from another Part of the Plant. See MULE.

As to the manner of the *Circulation*; it is not difficult to conceive. *Malpighi*, *Grew*, &c. by means of Microſcopes, have diſcover'd, that the Wood of Plants conſiſts of fine Capillary Tubes, which run parallel from the Root, thro' the Trunk, and may be look'd on as Arteries; and on the outſide of theſe, betwixt the Wood and the inner Bark, are other large Tubes, to do the Office of Veins.

Now, the Root having imbib'd a Stock of Juice from the Earth, that Juice will be put in motion by the Heat; that is, it will be rarefy'd, and made to aſcend in form of a Steam or Vapour. Meeting, therefore, with the patent Mouths of the Arterial Veſſels, it will paſs thro' the ſame to the Top and extreme Parts of the Tree, with a Force anſwerable to the Heat by which it is put in motion: when it is there arriv'd; meeting with the Cold of the external Air, it is condens'd into a Liquor; and in that form returns, by its own weight, towards the Root of the venal Veſſels abovemention'd.

CIRCULATION, in Chymiſtry, is an Operation whereby the ſame Vapour, rais'd by Fire, falls back; to be return'd and diſtill'd ſeveral times, and thus reduc'd into its moſt ſubtil Parts. See DISTILLATION.

*Circulation* is perform'd by diſpoſing the Liquor in a ſingle Veſſel, ſtopp'd at top, call'd a *Pelican*; or in a double Veſſel, conſiſting of two Pieces, luted on each other; the lower to contain the Liquor. See PELICAN, and DOUBLE *Veſſel*.

'Tis perform'd either by the Heat of a Lamp, or that of Aſhes, or of Sand moderately hot, or in Dung, or by the Sun. It uſually demands a continu'd heat of ſeveral Days, ſometimes of ſeveral Weeks, or even ſeveral Months. See FIRE, and HEAT.

By *Circulation*, the fineſt Part of the Fluid mounts to the Top of the Veſſel; and finding no iſſue there, falls back again, and rejoins the Matter left behind at the Bottom, whence it aroſe: and thus, by continuing to riſe, and fall alternately in the Veſſel, there is effected a kind of *Circulation*, or Remixtion of the ſpirituous Parts with the groſs ones; whereby the former are render'd finer and more ſubtil, and better diſpos'd to exert their Activity when ſeparated from the latter. See RECTIFICATION.

CIRCULATORY, CIRCULATORIUM, in Chymiſtry, the Veſſel wherein a Fluid is put, to undergo the Proceſs of *Circulation*. See CIRCULATION.

There are two Kinds of *Circulatories*, the *Diota*, or double Veſſel; and the *Pelican*. See DOUBLE *Veſſel*, and PELICAN.

CIRCULUS, in Geometry Logick, *&c.* See CIRCLE.

CIRCULUS, among Chymiſts, is a round Iron Inſtrument, us'd in cutting off the Necks of glaſs Veſſels: which they effect thus.

The Inſtrument being heated, is apply'd to the glaſs Veſſel, and there kept till it grow hot: then, by a few Drops of cold Water, or a cold Blaſt thereon, it flies aſunder.

Thus they cut off the Necks of Retorts or Cucurbits. See RETORT, *&c.*

There is another Method of doing the ſame, *viz.* by tying a Thread, firſt dipp'd in Oil of Turpentine, round the Place where the Fracture is to be; and then ſetting fire to the Thread.

This done, ſome cold Water being ſprinkled on the Place, the Glaſs will be crack'd thro' preciſely where the Thread was ty'd.

CIRCUMAGENTES *Muſculi*, in Anatomy. See OBLIQUI.

CIRCUMAMBIENT, an Epithet denoting a thing to inveſt, or incompaſs another around. See AMBIENT.

We ſay the *Ambient*, or *Circumambient* Air, *&c.* See AIR, ATMOSPHERE, *&c.*

CIRCUMCISION, the Act of cutting off the Prepuce: or, a Ceremony in the *Jewiſh* and *Mahometan* Religions, wherein they cut away the *Præputium*, or Fore-ſkin of the Males who are to profeſs the one, or the other Law. See PREPUCE, JEW, MAHOMETAN, *&c.*

*Circumciſion* commenc'd in the Time of *Abraham*; and was, as it were, the Seal of a Covenant ſtipulated between God and him: It was in the Year of the World 2178, that *Abraham*, by divine Appointment, *circumcis'd* himſelf, and all the Males of his Family; from which time it became an hereditary Practice among his Deſcendants.

The Ceremony, however, was not confin'd to the *Jews*: *Herodotus* and *Philo Judæus* obſerve, that it obtain'd alſo among the *Egyptians* and *Ethiopians*. *Herodotus* ſays, that the Cuſtom was very antient among each People; ſo that there was no determining which of them borrow'd it from the other. The ſame Hiſtorian relates, that the Inhabitants of the *Colchide* alſo us'd *Circumciſion*; whence he concludes, that they were originally *Egyptians*. He adds, that the *Phœnicians* and *Syrians* were likewiſe *circumcis'd*; but that they borrow'd the Practice from the *Egyptians*. And laſtly,

that a little before the Time when he wrote, *Circumciſion* had paſs'd from the *Colchide*, to the People inhabiting near *Thermodoon* and *Parthenius*.

*Marſham* is of Opinion, that the *Hebrews* borrow'd *Circumciſion* from the *Egyptians*; and that God was not the firſt Author thereof: citing *Diodorus Siculus* and *Herodotus* as Evidences on his ſide. Be this as it will, 'tis certain, the Practice of *Circumciſion* among the *Hebrews*, differ'd very conſiderably from that of the *Egyptians*.

Among the firſt, 'twas a Ceremony of Religion, and was perform'd on the eighth Day after the Birth of the Child. Among the latter, a Point of mere Decency and Cleanlineſs; and, as ſome will have it, of phyſical Neceſſity: and was not perform'd till the thirteenth Year; and then on Girls as well as Boys.

Among the *Jews*, *Circumciſion* was perform'd with a Knife of Stone. They ſet aſide the Practice of *Circumciſion*, during the forty Years of their Paſſage thro' the Wilerneſs; in regard, *Circumciſion* being intended as a Mark of Diſtinction between the *Jews* and *Gentiles*, it was unneceſſary to make any Mark at all, in a Place wherein there was no body to mix with them.

M. *Fleury* obſerves, that the *Jews* were not unanimous as do the Neceſſity of *Circumciſion*; ſome holding it an Eſſential, others as a Circumſtance.

The *Turks*, before the Operation of Circumciſion, ſqueeze the Skin with little Pinchers, to deaden the Senſation: they then cut it off with a Razor, and apply a certain Pouder, which heals the Wound, and abates the Pain. They never *circumciſe* till the ſeventh or eighth Year; as having no Notion of its being neceſſary to Salvation.

The *Perſians* circumciſe their Boys at thirteen Years; and their Girls from nine to fifteen. Thoſe of *Madagaſcar* cut off the Fleſh at three ſeveral times: The moſt zealous of the Relations preſent, catches hold of the *Preputium* and ſwallows it.

*Herrera* tells us, there is a kind of *Circumciſion* among the *Mexicans*, tho they are very remote both from *Judaiſm* and *Mahometaniſm*: they cut off the Foreſkin of the virile Member and the Ears, as ſoon as the Child is born, with a world of Ceremony.

*Circumciſion* is alſo practis'd on Women, by cutting off the Fore-ſkin of the *Clitoris*; which bears a near reſemblance, and analogy to the *Præputium* of the Male Penis. *Strabo* ſays, the *Egyptian* Women were *circumcis'd*; *Belon* ſays the ſame of the *Cophtæ*; and *P. Jovius* and *Munſter* of the Subjects of *Preſter John*. See CLITORIS.

Among the *Jews*, the Father is oblig'd to have his Son *circumcis'd* on the eighth Day; it mayn't be ſooner: but the Child's Weakneſs may allow of its being deferr'd longer. There is a Godfather to hold the Child, and a Godmother to carry it from the Houſe to the Synagogue, and to preſent it there. He who *circumciſes* is call'd in *Hebrew*, *Mohel*: Any Perſon is choſen for the Purpoſe, indifferently; provided he be but capable of the Function; which among the *Jews* is a Title of great Merit.

The Manner of the Ceremony, as related by *Leo de Modena*, is as follows.

Two Seats are prepar'd, in the Morning, with ſilken Cuſhions; the one for the Godfather who holds the Child, the other, as they ſay, for the Prophet *Elias*, whom they ſuppoſe to aſſiſt inviſibly. The Perſon who is to *circumciſe* brings the neceſſary Utenſils, the Razor, Styptic, Linen, Fillet, and Oil of Roſes; to which ſome add a Shell full of Sand to put the *Præputium* in. A Pſalm is ſung till the Godmother brings the Child, attended with a Croud of Women, and delivers it to the Godfather; none of 'em entering the Door. The Godfather being ſeated, ſets the Child on his Lap: then the *Cicumciſer* taking the Razor, and preparing the Child for the Operation, ſays, *Bleſſed be thou, O Lord, who haſt enjoin'd us Circumciſion*; and in ſo ſaying cuts off the thick Skin of the *Præputium*, and with his Finger Nails tears off another finer Skin remaining; ſucking the Blood two or three times as it breaks out, and ſpitting it out into a Glaſs full of Wine: then he lays Dragons-Blood on the Wound, with Pouder of Coral, and other Things to ſtanch the Blood; and laſtly, a Compreſs of Oil of Roſes; and thus binds up the whole. This done, he takes a Glaſs of Wine, and bleſſing it, adds another Benediction for the Child, and impoſes the Name.

The Manner of *Circumciſing* among the *Turks*, differs from that of the *Jews*: for the former, after they have cut off the Skin, meddle no further; but the laſt tear off the Edge of the remaining Skin in ſeveral Places with their Thumb-Nails; which is the Reaſon why the circumcis'd *Jews* are cur'd much ſooner than the *Turks*.

Thoſe among the *Jews* who perform the Operation of *Circumciſion*, are diſtinguiſh'd by the Length of their Thumb-Nails.

CIRCUMCISION is alſo the Name of a Feaſt celebrated on the firſt of *January*, in Commemoration of the *Circumciſion* of our Saviour. See FEAST.

This Day was antiently kept a Faſt; in oppoſition to the Pagan Superſtitions, who feaſted on it in honour of the God *Janus*.

CIRCUMFERENCE, in Geometry, the Curve Line that incloſes a Circle, or circular Space; call'd alſo *Periphery*. See CIRCLE, and PERIPHERY.

All Lines drawn from the Centre of a Circle to the *Circumference*, call'd *Radii*, are equal. See RADIUS.

Any Part of the *Circumference* is called an *Arch*; and a right Line drawn from one Extreme of the Arch to the other, a *Chord*. See ARCH, and CHORD.

The *Circumference* of every Circle is ſuppos'd to be divided into 360 equal Parts, call'd *Degrees*. See DEGREE.

The Angle at the *Circumference*, is double that at the Centre. See ANGLE, and CENTRE.

Every Circle is equal to a Triangle, whoſe Baſe is equal to the *Circumference*, and its Height to the Radius. See TRIANGLE.

Hence, the *Circumferences* of Circles are to each other as their Radii.

Hence, again, ſince the *Circumference* of one Circle is to its Radius, as that of any other Circle to its Radius; the Ratio of the *Circumference* to the Radius is the ſame in all Circles.

The Ratio of the Diameter of a Circle to its *Circumference*, *Archimedes* makes as 7 to 22; others, who bring it nearer the Truth, as 100000000000000 to 314159265358-97932. For Uſe, the Proportion of 100 to 314 in ſmaller Circles; and of 1000 to 3145 in larger Circles, is commended by *Vieta*, *Huygens*, &c. The juſteſt Proportion for ſmall Numbers, is that of *Metius*, who makes it as 113 to 355. See DIAMETER.

The Diameter of a Circle therefore being given, its *Circumference* is had; and that multiply'd by one fourth Part of the Diameter gives the Area of the Circle. See AREA.

The Word is form'd from the Latin *Circum*, about, and *fero*, I carry.

CIRCUMFERENTOR, an Inſtrument us'd in Surveying, to take Angles by. See ANGLE, and SURVEYING.

The *Circumferentor* is very ſimple, yet expeditious in the Practice: It conſiſts of a Braſs Circle and an Index, all of a piece. See its Figure in Tab. *Surveying*, Fig. 19.

On the Circle is a Card, or Compaſs, divided into 360 Degrees; the Meridian Line whereof anſwers to the middle of the Breadth of the Index. On the Limb, or Circumference of the Circle, is ſolder'd a Braſs Ring; which, with another fitted with a Glaſs, make a kind of Box for the Needle, which is ſuſpended on a Rivet in the Centre of the Circle. To each Extreme of the Index is fitted a Sight. See SIGHTS.

The whole is mounted on a Staff; with a Ball and Socket for the Conveniency of its Motion. See BALL and *Socket*.

*Uſe of the* CIRCUMFERENTOR.

*To take an Angle by the* CIRCUMFERENTOR. Suppoſe the Angle requir'd E K G, (Tab. *Surveying*, Fig. 20.) place the Inſtrument, *v. g.* at K, with the Flower-de-luce in the Card towards you. Then direct the Sights, till thro' em you ſpy E; and obſerve what Degree is pointed at by the South End of the Needle, which ſuppoſe 296: then turn the Inſtrument about, the Flower-de-luce ſtill towards you, and direct the Sights to G; noting the Degree at which the South End of the Needle points, which ſuppoſe 182.

This done, ſubtracting the leſſer Number 182, from the greater 296, the Remainder 114, is the Number of Degrees of the Angle E K G.

If the Remainder chance to be more than 180 Degrees, it muſt be again ſubtracted from 360 Degrees; the laſt Remainder is the Quantity of the Angle ſought.

*To take the Plot of a Field, Wood, Park*, &c. *by the* CIRCUMFERENTOR.

Suppoſe A B C D E F G K, (Fig. 21.) an Incloſure to be ſurvey'd with the *Circumferentor*.

1. Placing the Inſtrument at A, the Flower-de-luce towards you, direct the Sights to B; where, ſuppoſe the South End of the Needle to cut 191°; and the Ditch, Wall, or Hedge, meaſur'd with the Chain, to contain 10 Chains, 75 Links; which enter down. See CHAIN.

2. Placing the Inſtrument at B, direct the Sights as before to C; the South End of the Needle, *v. g.* will cut 279°; and the Line B C contain 6 Chains 83 Links, to be noted as before. Then move the Inſtrument to C; turn the Sights to D, and meaſure C D as before.

In the ſame manner, proceed to D, E, F, G, H, and laſtly to K; ſtill noting down the Degrees of every Bearing, or Angle, and the Diſtances of every Side.

Having thus gone round the Field, you will have a Table in the following form.

| Stations. | Degrees. | Min. | Chains. | Links. |
|---|---|---|---|---|
| A | 191. | 00 | 10. | 75 |
| B | 297. | 00 | 6. | 83 |
| C | 216. | 30 | 7. | 82 |
| &c. | | | | |

From

From this Table, the Field is to be *plotted*, or *protracted*; For the Manner whereof, ſee PLOTTING, and PROTRACTION.

*Note*, Where Security is to be conſulted rather than Diſpatch, it may be convenient to take Back-ſights; *i. e.* to place the Inſtrument ſo, at each Station, as that looking backwards thro' the Sights to the laſt Station, the North End of the Needle may point to the ſame Degree as the South End did, in looking forwards from the laſt Station to this. See THEODOLITE, and PLAIN-TABLE: Both which Inſtruments are us'd, on occaſion, as *Circumferentors*.

CIRCUMFLEX, in Grammar, an Accent, ſerving to note, or diſtinguiſh a long Syllable. See ACCENT, LONG, *&c.*

The *Greeks* had three Accents, the *Acute*, the *Grave*, and the *Circumflex*, form'd thus ′, ‵, ~. In *Engliſh*, *French*, &c. the *Circumflex* is made thus ^. See CHARACTER.

The Acute raiſes the Voice, and the Grave falls, or lowers it: the *Circumflex* is a kind of Undulation, or wavering of the Voice, between the two. See ACUTE, GRAVE, *&c.*

'Tis ſeldom us'd unleſs to ſhew the Omiſſion of a Letter which made the Syllable long and open; a thing vaſtly more frequent in the *French* than among us: Thus they write *pâte*, for *paſte*; *tête*, for *teſte*; *fêmes*, for *fuſmes*, &c. They alſo uſe the *Circumflex* in the Participles; ſome of their Authors writing *conneu*, *pee*, others, *connû*, *pû*, &c. Father *Buffier* is at a Loſs for the Reaſon of the *Circumflex* on this occaſion.

The Form of the Greek *Circumflex* was antiently the ſame with that of ours: but the Copiſts changing the Form of the Characters, and introducing the running Hand, chang'd alſo the Form of the *Circumflex* Accent; and inſtead of making a juſt Angle, rounded it off, adding a Daſh thro' too much haſt; and thus form'd an *s*, inverted and laid horizontally, which produc'd this Figure ~, inſtead of this ^.

CIRCUMLOCUTION, a Circuit, or Tour of Words, us'd either when a proper Term is not at hand, to expreſs a thing naturally and immediately by; or when one chuſes not to do it, out of reſpect; or on ſome other occaſions.

The Word comes from the Latin *Circumloquor*, I ſpeak about.

CIRCUMLOCUTION, in Oratory, is the avoiding of ſomething diſagreeable, or inconvenient to be expreſs'd in direct Terms; by intimating the Senſe thereof in a kind of Paraphraſe, ſo conceiv'd as to ſoften, or break the Force thereof.

Thus *Cicero*, unable to deny that *Clodius* was ſlain by *Milo*, owns it, with this *Circumlocution*, 'Milo's Servants 'being prevented from aſſiſting their Maſter, who was re-'ported to be kill'd by *Clodius*; they, in his abſence, and 'without his Privity, or Conſent, did what every body 'would expect from their own Servants on ſuch an occaſion.'

CIRCUMINCESSION, in Theology, a Term whereby the Schoolmen uſe to expreſs the Exiſtence of three divine Perſons in one another, in the Myſtery of the Trinity. See PERSON.

The School-Divines are not the firſt Authors of this Term; *Damaſcenus*, in the VIIIth Century, having us'd the Word περιχώρησις, which ſignifies the ſame thing, in his Explanation of that Text, *I am in my Father, and my Father is in me.*

CIRCUM *Polar Stars*, are ſuch Stars as being pretty near our North-Pole, move around it; and in our Latitude, never ſet, or go below the Horizon. See STAR, POLE, SETTING, *&c.*

CIRCUMSCRIBING, in Geometry, denotes the deſcribing a polygonous Figure about a Circle, in ſuch manner, as that all its Sides are Tangents to the Circumference. See CIRCLE, POLYGON, *&c.*

The Term is ſometimes alſo us'd for the deſcribing of a Circle about a Polygon; ſo, as that each ſide is a Chord. But in this Caſe, we more uſually ſay, the Polygon is *inſcribed*, than the Circle *circumſcribed*. See INSCRIBING.

Any regular Figure A B C D E, (Plate *Geometry*, Fig. 29.) inſcrib'd in a Circle, is reſolv'd into equal and ſimilar Triangles, by Radii drawn from the Centre of the *circumſcribing* Circle F, to the ſeveral Angles of the Figure; and its Area is equal to a rectangled Triangle, whoſe Baſe is equal to the Circumference of the whole Polygon; and its Height a Perpendicular let fall from the Centre F to one ſide A B.

The ſame may be ſaid of the Area of the *circumſcribing* Circle *a b c d e*, excepting that the Height is to be the Radius.

The Area of every Polygon that can be inſcrib'd in a Circle is leſs; and that of every Polygon that can be *circumſcrib'd*, greater than that of the Circle: In like manner, the Perimeter of the firſt is leſs, and that of the ſecond greater than the Circumference of the Circle. See PERIMETER, *&c.*

On this Principle *Archimedes* attempted the Quadrature of the Circle; which is nothing elſe, in effect, but the meaſuring of the Area, or Capacity of a Circle. See QUADRATURE.

The Side of a Hexagon is equal to the Radius of a *circumſcrib'd* Circle. See HEXAGON.

*To Circumſcribe a Circle* about any given regular Polygon, A B C; (Fig. 30.) and *vice verſa*. Biſſect two of the Angles, *v. g.* A and B; and on the Point F, where the two Lines of Biſſection interſect, as on a Centre, deſcribe a Circle with the Radius F A.

*To Circumſcribe a Square about a Circle.* Draw two Diameters, A B and D E, (Fig. 31.) interſecting each other in the Centre C, at right Angles. From A E B D, with the Interval of the Radius, make Interſections in F, G, H, I. Draw the right Lines F G, G H, I H, and I F. Then is F G H I a Square *circumſcrib'd* about the Circle.

*To circumſcribe any regular Polygon, v. g.* a Pentagon, *about a Circle.* Biſſect the Chord A E, (Fig. 32.) by the Perpendicular F G, which continue till it cut the Arch in *g*. Thro' A and E, draw the Radii A F and E F: and thro' *g* draw a Line parallel to A E, meeting the Radii continu'd on each ſide in *a* and *e*: Then is *a e* one ſide of the *circumſcrib'd* Polygon. Produce the Radius F B to *b*, till F *b* = F *a*; and draw *a b*: this is another Side of the Polygon; and in the ſame manner may the reſt of the Sides be drawn.

*To Inſcribe any regular Polygon in a Circle.* Divide 360 by the number of Sides, in order to find the Quantity of the Angle E F D; which make at the Centre, and apply the Chord to the Periphery as often as it will go. Thus will the deſir'd Figure be *inſcrib'd* in the Circle.

CIRCUMSTANCES, the Incidents of an Event, or the Particularities that accompany an Action. See INCIDENT.

Divines ſay, the Converſion of a Sinner depends on a certain Aſſemblage, and a certain Management of external *Circumſtances* in the midſt whereof he is plac'd; which Arrangement of *Circumſtances*, depends on the Providence of God: whence Converſion alſo depends on him. See CONVERSION.

The *Circumſtances* of the Actions of Men, are expreſs'd in this *Latin* Verſe.

*Quis, quid, ubi, quibus auxiliis, cur, quomodo, quando.*

*Quis*, who, denotes the Quality, State, Age, *&c.* of the Perſon. *Quid*, what, the greatneſs, ſmallneſs, multitude, fewneſs, *&c.* of the thing. *Ubi*, where, the Place. *Quibus Auxiliis*, with what Aſſiſtances, the Inſtruments, Means, *&c.* *Cur*, why, on what Account, with what View. *Quomodo*, how, the Quality of the Action, as to Intenſion or Remiſſneſs, Deſignedneſs or Caſualty, Secrecy or Openneſs. *Quando*, when, the Time; as on a Holiday, at the Hour of Prayer, *&c.*

CIRCUMSTANTIBUS, in Law, is us'd for the ſupplying, and making up the Number of Jurors, (in caſe any impanell'd appear not; or appearing, be challeng'd by either Party) by adding to them ſo many of the Perſons preſent, or ſtanding by, as will ſerve the turn. See JURY, and JUROR.

CIRCUMVALLATION, in Fortification, a Line, or large Trench, made around a Camp; in the beſieging of a Town. See LINE, FORTIFICATION, *&c.*

This Trench is to be a Cannon-ſhot diſtant from the Place, ordinarily, about 12 Foot broad, and ſeven deep. It is border'd with a Parapet, and flank'd with Redoubts, or little Forts, erected from Space to Space. It ſerves both to prevent any Succour from being ſent into the Place, to keep in Deſerters, and prevent Incurſions of the Enemy's Gariſon.

Care muſt be taken that the Line of *Circumvallation* never paſs by the Foot of an Eminence; leſt the Enemy ſeizing on the Eminence, lodge his Cannon, and command the Line.

The Word is form'd from the Latin *circum*, about, and *vallum*.

CIRCUMVOLUTIONS, in Architecture, the Turns of the Spiral Line of the *Ionic* Volute. See VOLUTE.

The Word comes from the Latin *Circumvolvere*, to turn around; and is alſo apply'd to the Turns of a wreath'd or twiſted Column. See COLUMN.

CIRCUS, in Antiquity, a large Building, either round, or oval; us'd for the exhibiting of Shews to the People. See SPECTACLES, CIRCENSIAN *Games*, &c.

The *Roman Circus*, was a large Place, or Square, arch'd at one End; incompaſs'd with Porticos, and furniſh'd with Rows of Seats, plac'd aſcending over each other.

In the middle was a kind of *Banquette*, or Eminence, with Obeliſks, Statues, and Poſts at each End. This ſerv'd 'em for the Courſes of their *Bigæ* and *Quadrigæ*. See BIGÆ, *&c.*

There were no leſs than ten *Circus*'s at *Rome*: the largeſt was that built by the Elder *Tarquin*, called *Circus Maximus*; between the *Aventine* and *Palatine* Mounts. *Pliny* ſays, it was enlarg'd by *J. Cæſar*, ſo as to take in no leſs than three *Stadia* in Length, and one in Width.

The moſt magnificent *Circus*'s were thoſe of *Auguſtus* and *Nero*. There are ſtill ſome Remains of the *Circus*'s, both at *Rome*, at *Niſmes*, and other Places.

The *Romans* were exceſſively fond of the Games exhibited in the *Circus*, witneſs that Verſe in *Juvenal*,

*——Atque duas tantum res anxius optat,*
*Panem & Circenſes——*

Some derive the Word from *Circe*, to whom *Tertullian* attributes the Invention. *Caſſiodorus* ſays, *Circus* comes *à circuitu*.

The *Romans*, *Servius* obſerves, at firſt, had no other *Circus* but that made by the *Tiber*, on one ſide, and a Palliſade of naked Swords on the other.

Hence, according to *Iſidore*, came the Term *Ludi Circenſes*, *quaſi Circum-Enſes*. But *Scaliger* laughs at the Etymology.

*The Games of the* CIRCUS, which ſome call *Circenſian Games*, were Combats celebrated in the *Circus*, in honour of *Conſus* the God of Councils; thence alſo call'd *Conſualia*. See CONSUALIA.

They were alſo called *Roman Games*, *Ludi Romani*, either on account of their Antiquity, as being coeval with the *Roman* People, or becauſe eſtabliſh'd by the *Romans*: and the great Games *Ludi Magni*, becauſe celebrated with more Expence and Magnificence than any others; and becauſe held in honour of the great God *Neptune*, who was their *Conſus*.

Thoſe who ſay they were inſtituted in honour of the Sun, confound the *Pompa Circenſis*, or Proceſſion of the *Circus*, with the Games.

The Games of the *Circus* were inſtituted by *Evander*, and re-eſtabliſh'd by *Romulus*: The Proceſſion was only a Part of the Games, making the Prelude thereof; and conſiſting of a ſimple Cavalcade of Chariots.

Till the Time of the Elder *Tarquin*, they were held in an Iſland of the *Tiber*; and were called *Roman Games*: after that Prince had built the *Circus*, they took their Name therefrom; as being conſtantly held there.

There were ſix Kinds of Exerciſes in the *Circus*: the 1ſt Wreſtling, fighting with Swords, with Staves, and with Pikes: the 2d was Racing: the 3d *Saltatio*, Dancing: the 4th *Diſci*, Quoits, Arrows, and *Ceſtus*; all which were all on Foot: the 5th was Horſecourſing: the 6th Courſes of Chariots, whether with two Horſes, or with four. See BIGÆ, and QUADRIGÆ.

In this laſt Exerciſe, the Combatants were at firſt divided into two *Quadrils*, then into four; each bearing the Names of the Colours they wore; *Factio Alba*, *Ruſſea*, &c. See FACTION, QUADRIL, *&c.*

At firſt there was only white and red; then green was added, and blue. *Domitian* added two more Colours, but they did not hold.

It was *Oenomaus* who firſt invented this Method of diſtinguiſhing the *Quadrils* by Colours. The green was for thoſe who repreſented the Earth; the blue for the Sea, *&c.* See COLOUR, *&c.*

CIRRI, in Botany, a Term us'd for thoſe fine Strings, or Hairs, by which ſome Plants faſten themſelves, for their ſupport; as Ivy, and the like. See CLASPERS.

CIRSOCELE, in Medicine, a Dilatation of the Spermatic Veins; occaſion'd by a too thick, grumous Blood; call'd alſo *Hernia Varicoſa*. See HERNIA.

The Word comes from the *Greek* κιρσὸς, *varix*, Vein, and κήλη, *Hernia*. See VARIX.

CISALPINE, any thing on this ſide the *Alps*.

The *Romans* divided *Gaul*, and the Country now call'd *Lombardy*, into *Ciſalpine* and *Tranſalpine*. See TRANSALPINA.

That which was *Ciſalpine* with regard to the *Romans*, is *Tranſalpine* with regard to us.

The Word is form'd from the Prepoſition *Cis*, on this ſide, and *Alpes*; which, tho properly confin'd to the Mountains ſeparating *Italy* and *France*, yet is us'd by Authors for any very high Mountains.

Thus *Auſonius* has the *Alps* of the *Pyreneans*, the *Alps* of the *Apennines*, &c.

CISSOID, in Geometry, an Algebraic Curve, firſt invented by *Diocles*; whence it is peculiarly call'd the *Ciſſoid of Diocles*. See CURVE.

The Geneſis of the *Ciſſoid* may be thus conceiv'd: To the Diameter A B, (Tab. *Analyſis*, Fig. 9.) of the Semicircle A O B, draw an indefinite Line, at right Angles, B C: then, draw the right Line A H, and make A M = I H; or in the other Quadrant, L C = A N. Thus will the Points M and L be in a Curve Line A M O L; which is the *Ciſſoid* of *Diocles*.

*Properties of the* CISSOID.

From the Geneſis it follows, 1ſt, That drawing the right Lines P M and K I, perpendicular to A B; we ſhall have A P : K B :: A M : I H. But A M = I H; conſequently, A P = A B. And therefore, A K = P B; and P N = I K.

2d, After the ſame manner, it appears, that the *Ciſſoid* A M O biſſects the Semicircle A O B.

3d, Again, A K : K I :: K I : K B. That is, A K : P N :: P N : A P. And again, A K : P N :: A P : P M; therefore, P N : A P :: A P : P M. Conſequently, A K, P N, A P, and P M, are four Lines in continual Proportion. And if P N = *v*, A P = *x*, P M = *y*; $x^2 = v\,y$. And after the ſame manner it may be ſhewn, that A P, P N, A K, and K L, are in continual Proportion.

4th, In the *Ciſſoid*, the Cube of the Abſciſſa A P, is equal to a Solid, ariſing of the Square of the Semiordinate P M, multiply'd into the Complement of the Diameter of the generating Circle P B.

Hence, when the Point P falls on B, then $x = a$, and B C $= y$; conſequently, $y^2 = \frac{a^3}{o}$. Wherefore, $o : 1 :: a^3 : y^2$. that is, the Value of $y$ becomes infinite: and therefore the *Ciſſoid* A M O L, tho it continually approach B C yet they will never meet.

5th, B C, therefore, is an *Aſſymptote* of the *Ciſſoid*. See ASSYMPTOTE.

The Antients made uſe both of the *Conchoid* and *Ciſſoid*; for the finding of two mean continual Proportionals between two given right Lines. See PROPORTIONAL.

For *the Quadrature*, *Subnormal*, and *Subtangent of the* CISSOID; ſee QUADRATURE, SUBNORMAL, and SUBTANGENT.

CISTERCIANS, an Order of Religious, call'd by the French *Ciſteaux*; conſiſting of an hundred Monaſteries, and near as many Nunneries. See ORDER, MONK, RELIGIOUS, *&c.*

The Order took its riſe in 1075, from twenty one zealous Monks in the Monaſtery of *Moleſme* in *Burgundy*; who, with their Abbot *Robert*, complaining that the Rule of S. *Benedict* was not ſtrictly enough obſerv'd; obtain'd Permiſſion of *Hugh*, Archbiſhop of *Lyons* and Legate of the Holy See, to ſettle in a Place call'd *Ciſteaux*, five Miles from *Dijon*.

Here *Eudes* Duke of *Burgundy* erected 'em a Building, into which they were admitted in 1098; endowing it with a conſiderable Revenue. The Biſhop of *Chalons* gave *Robert* the Paſtoral Staff, in quality of Abbot; and erected the new Monaſtery into an Abbey. See ABBOT.

Such was the beginning of the *Ciſtercians*, ſo famous in After-times, and now ſo extended throughout all *Europe*.

CISTERN, or CESTERN, is properly us'd for a ſubterraneous Reſervoir of Rain-water. See WELL.

*Ciſterns* muſt be made with good Cement, to retain the Water. See CEMENT.

The Bottom ſhould be cover'd with Sand, to ſweeten and preſerve it. See WATER.

Authors mention a *Ciſtern* at *Conſtantinople*, the Vaults whereof are ſupported by two rows of Pillars, 212 in each Row; each Pillar being two Foot in Diameter. They are planted circularly, and in Radii tending to that in the Centre.

The Word, according to ſome, comes from *Cis*, and *terram*, i. e. *inter terram*; others derive it from *Ciſta*, an Oſier Baſket, a Duct, *&c.*

CISTIC. } See { CYSTIC.
CIST-*Hepatic.* } See { CYST-*Hepatic.*
CISTUS. } See { CYSTUS.

CITADEL, or CITTADEL, a Fort, or Place fortify'd with four, five, or ſix Baſtions; built ſometimes in the moſt eminent Part of a City, and ſometimes only near the City.

In the firſt Caſe, the *Citadel* ſerves to defend the City againſt Enemies. See FORT, FORTIFY'D *Place*, &c.

In the latter it ſerves to command it, and to keep the Inhabitants in their Obedience: for which purpoſe the City is left unfortify'd on the Part toward the *Citadel*, but the *Citadel* fortify'd toward the City.

The moſt uſual Form for *Citadels*, is that of a Pentagon: a Square being too weak, and a Hexagon too big. See FORTIFICATON, PENTAGON, *&c.*

There is always a large Eſplanade between the *City* and *Citadel*. See ESPLANADE.

The Word is a Diminutive of the Italian *Citta*, City, *q.d.* little City.

CITATION, an Aſſignation, or ſummoning of a Perſon before an Eccleſiaſtical Judge, on ſome Affair relating to the Church.

In the Civil, and Ordinary Courts, it is call'd *Summoning*. See SUMMONS.

The Word CITATION is alſo us'd in ſpeaking of Military and Monaſtick, as well as Eccleſiaſtical Courts. Such a Heretick was *cited* to *Rome*; to a General Council, *&c.*

Knights are *cited* to the General Chapters of their Order.

K. *Edward* I. of *England*, was *cited*, by Order of *Philip* IV. of *France*, to a Court of his Peers. The *Citation* was publiſh'd by the Seigneur *d'Arrablay*, Seneſchal of *Perigord* and *Querci*; and was paſted up, by his Order, on the Gates of the City *Libourne*, which then belong'd to K. *Henry*. For Default in not appearing, all his Domains, and Effects in *France* were confiſcated. F. *Daniel*.

CITATION is alſo an Allegation, or Quotation of ſome Law, Authority, ot Paſſage. See QUOTATION.

The Word comes from *cito*, of *cieo*, I ſtir up.

CITRON, an agreeable Fruit, in Colour, Taſte, Smell, *&c.* reſembling a Lemon; and ſerving, like that, to cool, and quench the Thirſt: being produc'd by a Tree of the ſame Name, much reſembling the Lemon Tree. See LEMON.

The *Citron* is diſtinguiſh'd from the Lemon, in that it is bigger, and its Pulp firmer; its Smell briſker, and Colour higher. It is held excellent againſt Poiſons: and *Athenæus*

relates an Inſtance of two Perſons, preſerv'd ſafe from the moſt dangerous Aſpics, by eating a *Citron*.

The Diſtillers, Perfumers, Confectioners, *&c.* procure divers things from *Citrons*; as Eſſences, Oils, Confections, Waters, *&c.*

CITRON-*Water*. See *Citron*-WATER.

CITRON-*Santal*. See SANTAL.

CITY, a large Town, inclos'd with a Wall. See TOWN.

'Tis hard to give any juſt Definition of a *City*; in regard, Cuſtom has reſerv'd the Appellation of *Towns*, to ſo many Places which ſeem to have every thing requiſite to conſtitute a City.

Formerly, *City* was only underſtood of ſuch Towns as were Biſhops Sees: which Diſtinction ſeems ſtill to hold in *England*; tho no where elſe. See SEE.

*City* is particularly us'd to expreſs the Heart of the Place. At *Paris* they have the *City* and the *Univerſity*; at *London* we have the *City* and the *Suburbs*.

The Term *City* had its riſe among us, ſince the Conqueſt; for in the Time of the *Saxons* there were no *Cities*, but all great Towns were called *Burghs*: Thus, *London* was call'd *Lunden Burgh*. See BURGH.

And for a long time after the Conqueſt, *City* and *Burgh* were us'd promiſcuouſly: thus, in the Charter of *Leiceſter*, that Place is called both *Civitas* and *Burgus*; which ſhews a Miſtake in my Lord *Coke*, where he tells us, that every *City* was, or is a Biſhop's See. Nor had *Gloceſter* any Biſhop then; tho 'tis call'd a *City* in *Dome's-Day*. The like may be obſerv'd of *Cambridge*; to which it may be added, that *Crompton*, reckoning up our *Cities*, leaves out *Ely*, tho it had a Biſhop and a Cathedral.

Yet *Caſſanæus*, *de Conſuetud. Burgund.* ſays, *France* has within its Territories 104 *Cities*; and gives his Reaſon, becauſe it has ſo many Archbiſhops and Biſhops.

CITY, *Civitas*, in ſpeaking of Antiquity, ſignifies a State, or People, with all its Dependencies, conſtituting a particular Republic; ſuch as are, ſtill, ſeveral *Cities* of the Empire, and the *Swiſs* Cantons.

Tho the antient *Gauls* were, in effect, only one Nation; they were yet divided into ſeveral Peoples, which form'd as many different States: or, to ſpeak with *Cæſar*, as many different *Civitates*, *Cities*. Beſides that each *City* had its particular Aſſemblies, it ſent Deputies, too, from time to time, to the general Aſſemblies, held on Affairs relating to their common Intereſt.

*Auguſtus*, upon numbring the *Roman Citizens*, found they amounted to 4 Millions, 137000. See ENUMERATION.

To make a good *Roman Citizen*, there were three things requir'd: that he were an Inhabitant of *Rome*; that he were inroll'd in one of the 35 Tribes; and that he were capable of Dignities. Thoſe to whom were granted the Rights and Privileges of *Roman Citizens*, were properly only *Honorary Citizens*.

The ſeventh Law, *de Incolis*, makes a great deal of difference between a *Citizen* and a mere Inhabitant. Birth, alone, made a *Citizen*; and entitled to all the Privileges of Burgeſy: Time could not acquire it; but the Emperor cou'd beſtow it.

The Word comes from the Latin *Civis*; which Authors derive from *Coëo*, by Reaſon the *Citizens* live together: or rather from *Cieo*, I call together.

CIVET, a kind of Perfume, bearing the Name of the Animal whence it is taken. See PERFUME.

The *Civet*, or *Civet-Cat*, is a little Animal, reſembling our Cat; excepting that his Snout is more pointed, his Claws leſs dangerous, and his cry different.

The Perfume this Animal produces, is form'd like a kind of Greaſe, or thick Scum, in an Aperture, or Bag, under his Tail. 'Tis gather'd from time to time; and ſtill abounds, in proportion as the Animal is fed.

There is a very conſiderable Traffic of *Civet*, from *Baſſora*, *Caticut*, and other Places, where the Animal that produces it is found. Tho, part of the *Civet* among us is furniſh'd us by the *Dutch*; who bring up a conſiderable Number of the Animals.

Before any of theſe Animals were ſeen in *Europe*, or it had been obſerv'd how the Perfume had been gather'd; the common Opinion, founded on the Relations of Travellers, was, that it was the Sweat of that Animal, irritated, and kindled into Rage.

To this effect, 'twas ſaid, that the Animal was inclos'd in an Iron Cage; and after having been a long time beaten with Rods, they gather'd with a Spoon, thro' the Bars of the Cage, and between the Thighs of the Animal, the Sweat or Foam, which the Rage and Agitation had produc'd: and that without this Precaution, the Animal would yield no Perfume at all.

But Experience has taught us better; and we now know, that the Perfume *Civet*, is only a thick unctuous Humour, ſecreted by certain Glands between the two Tunics of the Bag wherein it is amaſs'd, under its Tail, beneath the *Anus*.

*Civet* muſt be choſen new, of a good Conſiſtence, a whitiſh Colour, and a ſtrong diſagreeable Smell.

Beſides the *Indian* and *Dutch Civet*, there is alſo a *Civet* from *Braſil*, or *Guinea*, like that of *India*; and an *Occidental Civet*, which bears no reſemblance to it.

*Civet* is little us'd in Medicine, except in a Thickneſs of Hearing, from Cold; where a Grain or two being put in a little Cotton, or Wool, and the Ears ſtopp'd therewith, is ſometimes of ſervice. It is much us'd among Perfumers and Confectioners.

The Word *Civet* comes from the Arabic *Zibet*, or *Zebet*, Scum, Froth.

CIVIC, an Epithet apply'd to a Kind of Crown, made of Oaken Leaves; antiently beſtow'd by the *Romans*, on thoſe who ſav'd the Life of a Fellow-Citizen in a Battle, or an Aſſault. See CROWN.

The *Civic* Crown was exceedingly eſteem'd; and was even given as an Honour, to *Auguſtus*; who on this Occaſion ſtruck Coins with this Device, OB CIVES SERVATOS.

It was alſo given to *Cicero*, after his Diſcovery of *Catiline*'s Conſpiracy.

CIVIL, in its general Senſe, is ſomething that regards the Policy, publick Good, or repoſe of the Citizens, or Subjects of a State. See CITY.

In this Senſe, we ſay, *Civil* Government; *Civil* Law; *Civil* Rights; *Civil* War, *&c.* See GOVERNMENT, *&c.*

CIVIL *Law*, *Lex Civilis*, is defin'd, in the Inſtitutes, to be the Laws peculiar to each City, or each People: but in the modern Uſe, it properly implies the *Roman Law*, contain'd in the Inſtitutes, the Digeſt, and the Code; otherwiſe call'd, the *Lex Scripta*, or *Written Law*. See LAW.

The *Roman* Law, at its Commencement, was very inconſiderable. Under the Kings, the People were govern'd by certain Laws, prepar'd by the Senate, paſs'd by the Kings, and confirm'd in an Aſſembly of the People.

*Papirius* was the firſt who made a Collection of the Regal Laws; which took its Name from its Author, and was call'd *Jus Papirianum*.

The Republic, after aboliſhing the Regal Government, ſtill retain'd the Royal Laws: To theſe they added the Law of the *Twelve Tables*; drawn by the *Decemviri*, from the Laws of twelve of the principal Cities of *Greece*; and the more Equitable among the Laws hitherto practis'd at *Rome*. See DECEMVIRI.

The Law of the *Twelve Tables* was at length found ſo ſevere, and conceiv'd in ſuch obſcure Terms; that it was judg'd proper to moderate, reſtrain, and aſcertain it, by other Laws, propos'd to the Senate by the Conſuls, and paſs'd at general Aſſemblies of the People; according to the Practice that had obtain'd under the Kings themſelves.

In the Year of *Rome* 731, the Republic expir'd; and the whole Power of the People was transferr'd to *Auguſtus*, who was contented to publiſh his new Laws in the Aſſembly of the People; to keep up ſome Image of the Republic by this Formality.

*Tiberius* aboliſh'd theſe occaſional Aſſemblies, on pretence of their being too numerous; and in lieu thereof proffer'd his Laws to the Senate, who never fail'd to confirm 'em: inſomuch that the Laws of *Tiberius*, and his Succeſſors, who kept the ſame Meaſures with the Senate, were eſteem'd *Senatus-Conſulta*.

Thus aroſe two Kinds of *Roman* Law, with regard to the Changes in the Legiſlative Authority: the Law eſtabliſh'd by the People, *Plebiſcita*; and the Laws of the Emperors, or *Imperial Laws*. See PLEBISCITA, and IMPERIAL.

During the Time of the Republic, and even under the Emperors, there were *Juris-Conſulti*; who making publick Profeſſion of the Study of the Law, interpreted, were conſulted on the different Senſes of the Laws, and gave Anſwers to the Queſtions propos'd to 'em hereon; which were call'd *Reſponſa Prudentium*.

*Papirius* was the firſt of theſe *Juris-Conſulti*, after the Expulſion of the Kings; and *Modeſtinus* the laſt. See JURIS-CONSULTI.

After him, *viz.* in 240, theſe Oracles of the *Roman* Juriſprudence ceaſing, out of their Writings, which made no leſs than 2000 Volumes, a Body of the *Roman* Law was afterwards compil'd, by Order of *Juſtinian*.

The Magiſtrates, on their ſide, in adminiſtring Juſtice, interpreted the Laws with more freedom than even the *Juris-Conſulti*; and were, as it were, the living Voice of the Law.

The Emperors too, to render the Interpretations of the Magiſtrates leſs free and frequent, appointed, that they themſelves ſhould be conſulted; and their Anſwers expected, as to Queſtions in Law, as may be obſerv'd from *Pliny*'s Epiſtles to *Trajan*. See RESCRIPT.

In proportion as new Laws were made at *Rome*, care was taken to collect and reduce 'em into *Bodies*. See BODY.

*Papirius*, in the Time of *Tarquinius Superbus*, made a Collection of the Regal Laws. And no ſooner was the Republic eſtabliſh'd, than the Laws of the *Twelve Tables* were drawn.

In the Time of *Julius Cæsar*, *Ofilius*, a Lawyer, began a Collection of the Edicts of the Prætors; which was not finish'd till the Time of *Adrian*, by another Lawyer, *Julianus*.

In the Time of *Conſtantine*, or his Children, two *Juris-Conſulti* compil'd two Codes; from their Authors call'd *Gregorian*, and *Hermogenian Code*. See CODE.

Laſtly, *Juſtinian*, finding the Authority of the *Roman* Law almoſt aboliſh'd in the Weſt, by the Declenſion of the Empire; reſolv'd to make a general Collection, of the whole *Roman* Juriſprudence; and committed the Care thereof to his Chancellor *Tribonianus*.

That Miniſter executed his Commiſſion with a great deal of Diligence, not to ſay Precipitation: a new Code was finiſh'd in 529, and a Digeſt in 533. See DIGEST, and CODE.

The ſame Year he publiſh'd an Abridgment, thereof containing the firſt Principles and Elements of Law, under the Title of *Inſtitutes*. See INSTITUTES.

In the Courſe of this Reign, *Juſtinian* made 168 Conſtitutions, and 13 Edicts; which made a conſiderable Alteration in the antient Law, and were call'd *Novels*. See NOVEL.

All theſe together, make the *Corpus Juris Civilis*, or Body of the *Civil Law*, as reduc'd, by order of *Juſtinian*.

For the Space of 300 Years, this Syſtem of Law obtain'd without any Innovation. But the new Conſtitutions made by the Emperors from time to time, at length occaſioning ſome Alterations; the Emperor *Baſil*, and *Leo* his Son, compos'd a new Body of the *Roman* Law, chiefly from the *Juſtinian*, in the *Greek* Language, dividing it into 7 Volumes, and 60 Books; under the Title of *Baſilica*. From which time, *Juſtinian*'s Body had but little Credit in the Eaſt; the *Baſilica* taking place of it. See BASILICA.

In the Weſt, the *Civil Law* had a different Fortune: 'Tis ordinarily ſuppos'd not to have been there known till the Year 600; when *Lotharius* II. finding the Book at the taking of *Melphi*, a Town in *Naples*, made a preſent of it to the City of *Piſa*: Tho we find it quoted in ſeveral *Latin* Works long before *Lotharius*. 'Tis true, however, it was never taught publickly till the XIIth Century; when *Irnerius* firſt made profeſſion of it at *Bologne*, in 1128; whence it was carry'd by his Diſciples into other Countries; and in a little time was taught in all the Univerſities.

'Tis allow'd that the *Civil Law* contains all the Principles of Natural Equity; and that nothing can be better calculated to form good Senſe, and ſound Judgment. Hence, tho in ſeveral Countries it has no other Authority but that of Reaſon and Juſtice; 'tis yet every where referr'd to for Authority, and is that alone taught in Univerſities.

It is not receiv'd at this Day in any Nation without ſome Alterations: ſometimes the *Feudal* Law is mix'd with it, or general and particular Cuſtoms; and often, Ordinances and Statutes cut off a great part of it.

In *Turkey*, the *Baſilica* are only us'd. In *Italy*, the Canon Law, and Cuſtoms have excluded a good part of it. In *Venice*, Cuſtom hath almoſt an abſolute Government. In the *Milaneſe*, the Feudal Law, and particular Cuſtoms, bear ſway. In *Naples* and *Sicily*, the Conſtitutions and Laws of the *Lombards* are ſaid to prevail. In *Germany* and *Holland*, the *Civil Law* is eſteem'd to be the municipal Law: but yet many Parts of it are there grown obſolete; and others are alter'd, either by the Canon Law, or a different Uſage.

In *Friezeland*, it is obſerv'd with more ſtrictneſs: But in the Northern Parts of *Germany*, the *Jus Saxonicum*, *Lubecenſe*, or *Culmenſe*, is preferr'd before it. In *Denmark* and *Sweden* it hath ſcarce any Authority at all. In *France* only a Part of it is receiv'd; and that Part is in ſome Places as a Cuſtomary Law: And in thoſe Provinces neareſt to *Italy*, the municipal Written Law. In Criminal Cauſes, the *Civil Law* is more regarded in *France*; but the manner of Trial is regulated by Ordonnances and Edicts.

The *Civil Law*, in *Spain* and *Portugal*, is connected with the *Jus Regium*, and Cuſtom. In *Scotland*, the Statutes of the *Sederunt*, part of the *Regiæ Majeſtatis*, and their Cuſtoms, control the *Civil Law*.

In *England*, it is us'd in the Eccleſiaſtical Courts; in the Courts of the Admiralty; and in the two Univerſities: yet in all theſe reſtrain'd and directed by the Common Law. See LAW, COMMON-*Law*, &c.

CIVIL *War*, is a War between People of the ſame State, or Citizens of the ſame City. See WAR.

CIVIL *Death*, any thing that retrenches, or cuts off a Man from *Civil* Society: as a Condemnation to the Gallies, perpetual Baniſhment, Condemnation to Death, and Excommunication: All which make a Man ceaſe to be look'd on as a Citizen.

The Term is likewiſe apply'd to thoſe who are no longer capable of acting in Temporal Concerns; as thoſe who renounce the World, who retire and make Vows in a Monaſtery, &c. See MONK, VOWS, MONASTERY, &c.

CIVIL, in a Legal Senſe, is alſo apply'd to the ordinary Procedure in an Action relating to ſome Pecuniary Matter, or Intereſt; in which Senſe it is oppos'd to *Criminal*. See ACTION, CRIMINAL, &c.

CIVIL *Year*, is the Legal Year, or annual Account of Time, which every Government appoints to be us'd within its own Dominions. See TIME.

It is thus call'd, in contradiſtinction to the *Natural Year*; which is meaſur'd exactly by the Revolution of the Heavenly Bodies. See YEAR.

CIVIL *Month.* } See { MONTH.
CIVIL *Day.* } See { DAY.

CIVILISATION, a Law, Act of Juſtice, or a Judgment which renders a Criminal Proceſs, Civil.

*Civiliſation* is perform'd by turning the Information into an Inqueſt, or *vice verſa*. See INFORMATION, INQUEST, &c.

CLAIM, in Law, a challenge of Intereſt in any thing that is in Poſſeſſion of another; at leaſt, out of his own. See CHALLENGE, POSSESSION, &c.

There are divers Kinds of *Claims*: as,

CLAIM *by Charter*. See CHARTER.

CLAIM *by Deſcent*. See DESCENT.

*Continual* CLAIM, a *Claim* made from time to time, within every Year and Day, to Land, or other Thing, which on ſome accounts cannot be attain'd without danger.

Thus, if I am diſſeis'd of Land, into which, tho I have a Right, I do not enter for fear of beating; I am to hold on my Right of Entry at my beſt opportunity; by approaching as near as I can, once every Year, as long as I live: thus I leave the Right of Entry to my Heir. See ENTRY.

CLAIR-OBSCURE, or CHIARO-SCURO, in Painting, the Art of diſtributing, to advantage, the Lights and Shadows of a Piece; both with regard to the eaſing of the Eye, and the Effect of the whole Piece. See LIGHT, and SHADOW.

Thus, when a Painter gives his Figures a ſtrong Relievo, looſens 'em from the Ground, and ſets 'em free from each other, by the Management of his Lights and Shadows; he is ſaid to underſtand the *Clair-obſcure*.

The *Clair-obſcure* makes one of the great Diviſions, or Branches of Painting; the whole of a Picture being reſolvable into *Light*, and *Shadow*. See PAINTING.

The Doctrine of the *Clair-obſcure*, will come under the following Rules.

Light may be either conſider'd with regard to it ſelf; to its Effects; the Place wherein 'tis diffus'd; or its Uſe.

For the 1ſt, Light is either *Natural*, or *Artifical*.

*Natural*, either comes immediately from the Sun, which is briſk, and its Colour various according to the Time of the Day; or 'tis that of a clear Air thro' which Light is ſpread, and whoſe Colour is a little bluiſh; or a cloudy Air, which is darker, yet repreſents Objects in their genuine Colours with more eaſe to the Eye.

*Artificial* proceeds from Fire, or Flame, and tinges the Object with its own Colour: but the Light it projects, is very narrow and confin'd.

For the 2d, the *Effects* of Light are either *Principal*, as when the Rays fall perpendicularly on the Top of a Body, without any Interruption; or *Glancing*, as when it ſlides along Bodies; or *Secondary*, which is for things at a diſtance.

3. For the *Place*, 'tis either the open Campaign, which makes Objects appear with great Softneſs; or an incloſ'd Place, where the Brightneſs is more vivid, its Diminution more haſty, and its Extremes more abrupt.

4. For the *Uſe*, or Application: The Light of the Sun is always to be ſuppos'd without, and over againſt the Picture; that it may heighten the foremoſt Figures: the Luminaries themſelves never appearing, in regard the beſt Colours can't expreſs 'em. The chief Light to meet on the chief Group, and as much as poſſible on the chief Figure of the Subject. The Light to be purſu'd over the great Parts, without being croſs'd, or interrupted with little Shadows. The full Force of the principal Light to be only in one Part of the Piece: taking care never to make two contrary Lights: Not to be ſcrupulouſly confin'd to one univerſal Light; but to ſuppoſe other acceſſory ones, as the opening of Clouds, &c. to looſen ſome Things, and produce other agreeable Effects. Laſtly, the Light to be different, according to the Quality of Things whence it proceeds, and the Nature of the Subjects which receive it.

For *Shadows*; they are diſtinguiſh'd, 1ſt, into thoſe form'd on the Bodies themſelves, by their proper Relievos. 2d, Thoſe made by adjacent Bodies; thoſe that make Parts of any whole; and the different Effects, according to the difference of Places.

For the firſt, ſince the different Effects of Lights only appear by Shadows, their Degrees muſt be well manag'd. The Place which admits no Light, and where the Colours are loſt, muſt be darker than any Part that has Relievo, and diſpos'd in the Front. The Reflex, or return of the Light, brings with it a Colour borrow'd from the Subject that reflects it; and flies off at a greater or leſs Angle, according to the Situation of the reflecting Body, with regard to the luminous one:

one: Hence, its Effects muſt be different in Colour, and in Force; according to the Diſpoſitions of Bodies. Deepenings, which admit not of any Light, or Reflex, muſt never meet on the Relievo of any Member of any great elevated Part; but in the Cavities or Joints of Bodies, the Folds of Draperies, &c. And to find Occaſions for introducing great Shadows, to ſerve for the Repoſe of the Sight, and the looſening of Things; inſtead of many little Shadows, which have a pittiful Effect.

For the 2d, The Shadows made by Bodies, are either in plain and ſmooth Places, or on the Earth; wherein they are deeper than the Bodies that occaſion 'em, as receiving leſs reflex Light; yet ſtill diminiſh as they depart further from their Cauſe; or on the neighbouring Bodies, where they are to follow the Form of the ſaid Bodies, according to its Magnitude and its Poſition, with regard to the Light.

For the 3d, In Shadows that have Parts, the Painter muſt obſerve to take for a Light in a ſhadow'd Place, the Teint, or Luſtre of the light Part; and, on the contrary, for the Shadow in the lighten'd Part, the Teint, or Luſtre in the Shadow: To make an agreeable Aſſemblage of Colour, Shadow, and Reflex in the ſhadow'd Part; but without interrupting the great Maſſes of Shadows: To avoid forming little Things in the Shadow; as not being perceiv'd, unleſs cloſely look'd at; and to work, as it were, in the general, and at one ſight: Never to ſet the ſtrong Shadows againſt the Lights, without ſoftening the harſh Contraſt by the help of ſome intermediate Colour: tho the Maſs of Light may be plac'd either before or behind that of the Shadow; yet ought it to be ſo diſpos'd, as to illumine the principal Parts of the Subject.

For the 4th, The Effects of Shadows are different, as the Place is either wide and ſpacious; as in thoſe coming immediately from the Sun, which are very ſenſible, and their Extremes pretty abrupt; from the ſerene Air, which are fainter and more ſweet; from the dark Air, which appear more diffus'd, and almoſt imperceptible; and thoſe from an artificial Light, which makes the Shadow deep, and their Edges abrupt: or as it is more narrow and confin'd, where the Lights coming from the ſame Place; make the Shadow more ſtrong, and the reflex leſs ſenſible. See COLOURING.

CLAIR-OBSCURE, CHIARO SCURO, is alſo us'd for a Deſign conſiſting only of two Colours; ordinarily black and white, ſometimes black and yellow. See CAMIEUX.

Or, it is a Deſign only waſh'd with one Colour; the Shadows being of a duſky brown Colour, and the Lights heighten'd up with white.

The Word is alſo apply'd to Prints of two Colours, taken off at twice; whereof there are Volumes in the Cabinets of the Curious in Prints.

The Word *Clair-Obſcure* is a compound of two others. *Clair* is us'd among the *French* for thoſe Parts of a Painting which reflect the moſt Light; and comprehends not only the Lights themſelves, but alſo thoſe Colours that are luminous. By *Obſcure*, is meant not only all the Shades, but alſo all the Colours that are duſky. See COLOUR.

CLAMEA *admittenda in itinere per Atturnatum*, is a Writ whereby the King commands the Juſtice in Eyre to admit ones *Claim* by an Attorney, who being employ'd in the King's Service, cannot come in Perſon.

CLAMOR, or CLAMEUR *de Haro*, a popular Term in the *French* Laws, importing a Complaint, or Cry, whereby any one implores the Aſſiſtance of Juſtice againſt the Oppreſſion of another. See HARO.

*Du Moulin* calls it *Quiritatio Normannorum*. The *Haro* has the ſame Force with the Interdict *Retinendæ poſſeſſionis*. The Perſon on whom the *Haro* is cry'd, is oblig'd to ceaſe his Enterpriſe, and the Crier leads him before the Judge; where each gives Security, the one to purſue the *Haro*, the other to defend it.

In the mean time, the Thing in diſpute is ſequeſter'd into the hands of a third Perſon. Nor can the Judge annul the *Clameur de Haro*, without a Mulct.

This Cuſtom has prevail'd in *Normandy*, ſince the Conqueſt of *Raoul*, or *Rou*. *Du Moulin* ſays, the Word *Haro* is form'd of *Hal Rou*; the Cry whereby they invok'd that Prince.

CLAMP, in a Ship, a piece of Timber apply'd to a Maſt, or Yard, to ſtrengthen it, and prevent the Wood from burſting. See MAST.

CLAMP is alſo a little piece of Wood, in form of a Wheel, us'd inſtead of a Pulley in a Mortice.

CLAMP-*Nails*, are ſuch Nails as are us'd to faſten on *Clamps*, in building and repairing of Ships. See NAILS.

CLAMPING, in Joinery, &c. when a piece of Board is fitted with the Grain to the End of another piece of Board croſs the Grain; the firſt Board is ſaid to be *clamp'd*.

Thus the Ends of Tables are commonly *clamp'd*, to preſerve them from warping.

CLANCULARIES, CLANCULARII, a Sect of Anabaptiſts, who deny'd the Neceſſity of making any open Profeſſion of the Faith; and taught that a private one would be ſufficient. See ANABAPTIST.

Theſe were alſo call'd *Hortularies*, and *Gardners*, from the Places they choſe to aſſemble in, inſtead of Churches.

CLANDESTINE, any thing done ſecretly, and without the Knowledge of ſome of the Parties intereſted in it; or without the proper Solemnities.

Thus, a Marriage is ſaid to be *Clandeſtine*, when perform'd without the Publication of Banns, the Conſent of Parents, or the Knowledge of the Ordinary. See MARRIAGE.

The Council of *Trent*, and the *French* Ordonnances annul all *clandeſtine* Marriages.

The Word comes from the Prepoſition *Clam*, of κλείω, *claudo*, I ſhut, or κλέμμα, *furtum*, theft.

CLAP, in Medicine, the firſt Stage, or State of the Venereal Diſeaſe; call'd alſo a *Gonorrhæa*. See VENEREAL *Diſeaſe*, and GONORRHÆA.

Dr. *Cockburn*, and others after him, will have the *Clap* to conſiſt in an Ulceration of the Mouths of the Glands of the *Urethra* in Men, and of the *Glandula Lacunæ* in Women; occaſion'd by the Inſinuation of an acrimonious, purulent Matter, contracted from an infected Perſon *in Actu Coitus*.

From theſe Glands, iſſues, or gleets a ſharp, corroſive Matter, accompany'd with heat of Urine, Cordee, &c. which makes what is uſually term'd the firſt Stage of the Diſtemper. See CORDEE, &c.

A *Clap* appears ſometimes ſooner, and other times later, tho generally in about three or four Days after the Infection is receiv'd; and diſcovers it ſelf by the running, &c. of the Penis, with Inflammation of the Glans, or Nut of the Yard.

If the Perſon be affected with a *Phymoſis*, or *Paraphymoſis*; if the running be of a thin Conſiſtence, a yellow or green Colour, and in great Quantity, and the Teſticles ſwell'd, 'tis uſually term'd a *Gonorrhæa Virulenta*; and the *Clap* ſuppos'd to be in its ſecond Stage. See PHYMOSIS, &c.

Some Authors think, that in this Degree, or Stage, the Infection has reach'd the Maſs of Blood, and the *Veſiculæ Seminales*: others inſiſt, that the Symptoms may be accounted for from the Running, or *Virus*, being more corroſive; and by that means irritating and inflaming the adjacent Parts.

The Cure of a *Clap* conſiſts in proper Evacuations, as Calomel-Purgatives, Refrigerant-Emulſions, Pouders, &c. Turbeth-Emeticks, and laſtly, proper Terebinths, &c. to which ſome add Decoctions of the *Lignum Vitæ*, &c. As to Externals, they are generally comprehended under the form of Fomentations, Cataplaſms, Liniments, and Lotions.

Late Authors, and eſpecially Dr. *Cockburn*, have inſiſted on the Cure of a *Clap* by a particular Injection, without the uſe of any other Medicine.

This has given a Handle to Quacks, who, by affecting to do the ſame by their Injections, generally check the Running, and make a confirm'd Pox.

Turbeth-Mineral, Calomel, &c. given in ſmall Doſes, and continu'd for ſome time, ſo as to take effect by way of Alteratives, have been lately much commended as to Succeſs. Mercurial Unguents, us'd in ſmall Quantities, ſo as not to raiſe a Salivation, is ſaid to cure all the Stages of the Venereal Diſeaſe: This Practice is uſual in *Montpelier*, &c. See SALIVATION, MERCURY, &c.

Mr. *Becket*, in the *Philoſophical Tranſactions*, attempts to ſhew, that the Diſeaſe we now call a *Clap*, is the ſame with that our Forefathers call'd a *Burning*, or *Brenning*; under which Name it was known ſeveral hundred Years before the commonly ſuppos'd Origin of the Venereal Diſeaſe; and that the Appellation *Brenning*, &c. was only diſcontinu'd as that of *Clap* commenc'd.

In a MS. as old as *Henry* IV. *Arden*, Chirurgeon to that Prince, defines Brenning to be a certain inward Heat and Excoriation of the *Urethra*; which, Mr. *Becket* obſerves, gives us a perfect Idea of what we now call a *Clap*. For frequent Diſſections of ſuch as have labour'd under that Diſeaſe, have made it evident, that the *Urethra* is excoriated by the Virulency of the Matter they receive from the infected Woman: Which Excoriation, or Ulceration, he adds, is not confin'd to the *Oſtiola*, or Mouths of the mucous Glands of the *Urethra*, as has been lately imagin'd; but may equally attack any Part of the *Urethra*.

The heat, or *burning* which ſuch Perſons feel in making water, is a Conſequence of this Excoriation of the *Urethra*; the Salts contain'd in the Urine pricking and irritating the nervous *Fibrillæ* of the Urine, thus diveſted of its natural Membrane. See BURNING.

CLARENCIEUX, the ſecond King at Arms; thus call'd from the Duke of *Clarence*, to whom he firſt belong'd. See KING *at Arms*.

*Lionel*, third Son of *Edward* III. having by his Wife the Honour of *Clare* in the County of *Thomond*, was hereupon created Duke of *Clarence*; which Dukedom afterwards eſcheating to *Edward* IV. he made this Herald, who properly belong'd to the Duke, a King at Arms; naming him *Clarencieux* in *French*, and *Clarencius* in *Latin*. See HERALD.

His

His Office is to marſhal, and diſpoſe of the Funerals of all the lower Nobility; as Baronets, Knights, Eſquires, and Gentlemen on the South ſide of *Trent*: whence he is alſo call'd *Surroy*, or *South-Roy*, in contradiſtinction to *Norroy*. See NORROY.

CLARET, or CLAIRET, *Pale red*, a Name the *French* give to ſuch of their red Wines as are not of a deep, or high Colour. See WINE.

The Word is a Diminutive of *clair*, clear, bright, tranſparent.

CLARET, CLARETA, in the antient Pharmacy, was a kind of Wine impregnated with Aromatics; ſometimes alſo called *Hippocras*, or *Vinum Hippocraticum*; becauſe ſuppos'd to have been firſt preſcrib'd by *Hippocrates*.

It has its Name *Claret*, from its being *clarify'd* by Percolation thro' a Wine-Sack, or Bag, call'd *Hippocrates*'s Sleeve.

CLARICORD, or *Manichord*, a Muſical Inſtrument, in form of a Spinett. See SPINETT.

It has 49 or 50 Stops, and 70 Strings, which bear on five Bridges; the firſt whereof is the higheſt, the reſt diminiſhing in proportion. Some of the Strings are in Uniſon; their Number being greater than that of the Stops.

There are ſeveral little Mortaiſes for paſſing the Jacks, arm'd with little Braſs Hooks, which ſtop and raiſe the Chords in lieu of the Feather us'd in Virginals and Spinetts. But what diſtinguiſhes it moſt, is, that the Chords are cover'd with pieces of Cloth, which render the Sound the ſweeter; and deaden it ſo, as that it can't be heard to any conſiderable diſtance.

Hence ſome call it the *dumb Spinett*; whence it comes to be particularly in uſe among the Nuns, who learn to play, and are unwilling to diſturb the Silence of the Dormitory.

The *Claricord* is more antient than either the Spinett or Harpſicord; as is obſerv'd by *Scaliger*, who only gives it 35 Chords.

CLARIFICATION, in Chymiſtry, the Act of clearing, or fining of Liquors from their groſſer Parts. See REFINING.

*Clarification* is perform'd by Ebullition, Deſpumation, and Colature or Filtration.

The Term is chiefly apply'd to Juices, Decoctions and Syrups, which are *clarify'd* by Filtration, or by paſſing 'em thro' a Strainer, after having beat them up into a Froth with the Whites of Eggs; the viſcous Parts of the Eggs intangling the thick groſs Particles of the Liquor, retain them in the Strainer. See FILTRATION.

Sometimes the Mixture is boil'd; by which means, the Eggs intangle the groſſer Parts, and carry them up to the Top in a tough Scum; which is either taken off with a Spoon, or ſeparated by a Flannel Bag, as before, call'd *Hippocrates*'s Sleeve. See DESPUMATION.

Another Method is, by letting the Liquor ſtand in a convenient Veſſel, till the groſſer Particles ſettle.

In diſtill'd Waters, &c. which have a milky hue, or are turbid, it is generally effected with fine Sugar, mix'd with a ſmall quantity of Allum; which will bear down the oily Parts, and leave the reſt clear. See DEPURATION.

Many Liquors are *clarify'd* by paſſing them thro' a thick brown Paper; among others, Hippocras, Hydromel, &c. See HYDROMEL, &c.

Fine and delicate Wines are uſually *clarify'd* with Fiſh-Glue: The thicker Wines with Omelette, or whites of Eggs diluted in Water. Sometimes with pouring them thro' a heap of little Chips. See WINE.

'Tis an Error to ſuppoſe that Fiſh-Glue, or Omelette, can be prejudicial to the Health; ſince both the one and the other fall down with the Lees, without producing any ill Effect. That which makes Wines unwholeſom, is not the *clarifying* by theſe innocent means, but the Mixtures and Sophiſtications of the Vintners, to make 'em briſk, and bring them to life again after the Fret; which is done with Aqua vitæ, Spices, Pidgeons Dung, &c.

The Antients *clarify'd* their Wines by pouring them from off the Lees, into another Barrel, thro' a Tin Strainer.

Sugar is *clarify'd* with the Whites of Eggs and Sugar beat together. See SUGAR.

CLARIGATIO, or CLARIGATION, in the Law of Nations, a loud, clear Call, or Summons made to an Enemy, to demand Satisfaction for ſome Injury receiv'd; in defect whereof, recourſe will be had to Repriſals.

*Clarigatio* is the ſame with what the *Greeks* call ἀνδροληψία. See ANDROLEPSIA.

*Nauda* uſes the Word in a ſomewhat different manner. 'Repriſals, ſays he, ſignify the ſame as *pignorationes Budæo, aut Clarigationes Hermolao*: For, as to the *Greek* 'Word *Androlepſia*, it is equivalent to the Latin *pignorandi poteſtas*.

CLARION, a kind of Trumpet, whoſe Tube is narrower, and its Tone acuter and ſhriller than the common Trumpet. See TRUMPET.

*Nicod* ſays, the *Clarion*, as now us'd among the *Moors*, and *Portugueze* who borrow'd it from the *Moors*, ſerv'd antiently for a Treble to ſeveral Trumpets, which ſounded Tenor and Baſs. He adds, that it was only us'd among the Cavalry and the Marines.

*Menage* derives the Word from the Italian *Clarion*, of the Latin *Clarus*, by reaſon of the Clearneſs of its Sound.

CLARION, in Heraldry, is a Bearing of this Figure. He bears Ruby three *Clarions* Topaz; being the Arms of the Earl of *Bath*, by the Name of *Greenvile*.

*Guillim* takes theſe *Clarions* to be a kind of old-faſhion'd Trumpet; but others rather think, they repreſent the Rudder of a Ship; others a Reſt for a Lance.

CLARO-OBSCURO. See CLAIR-OBSCURE.

CLASPERS, in Botany, are Tendrels, Threads, or Ligaments of a middle Nature between that of a Root and Trunk; whereby Shrubs, and other Plants, take hold of Trees, or other things near 'em, for their Support, &c.

The Wiſdom of the Creator is very conſpicuous, in this Proviſion for ſome Species of Plants, which need it; as Ivy, Vines, Briony, &c.

The Contrivance is various in various Subjects. *Malpighi* obſerves, that the *Claſpers* of Ivy are roundiſh, and cover'd with Hair; and what is very remarkable, they yield a glutinous Teribinthine Humor, by means whereof they adhere cloſely to Stones, &c. Nature, he adds, uſes no leſs Artifice in the *Vitis Canadenſis*.

*Claſpers* ſerve ſomeſimes for Support only; as thoſe of the Vine, Briony, &c. whoſe Branches being long, ſlender, and brittle, would be weigh'd down by their own load, and that of their Fruit; but for theſe *Claſpers*, which by a natural Spire, or Circumvolution, catch hold of any adjacent body.

*Claſpers* ſometimes alſo ſerve for a Supply of Juice; as in the Trunk-Roots of Ivy, which being a tall Plant, and of a compact Subſtance, the Sap would not be ſufficiently furniſh'd to the upper Sprouts without this Expedient.

*Claſpers* alſo ſometimes ſerve for Stabiliment, as thoſe of Cucumbers; for Propagation, as thoſe of Camomile; and for Shade, Stabiliment, and Propagation all together, as thoſe of Strawberries.

CLASS, or CLASSIS, a diſtribution of Perſons, or Things, arranged them according to their Merit, Value, or Nature.

The Word comes from the Latin *Claſſis*, of the *Greek* καλέω, *congrego*, *convoco*; a *Claſs* being nothing but a multitude, aſſembled apart.

CLASS, CLASSIS, in Antiquity. See CLASSIC.

CLASS is particularly us'd for a Diſtinction among Scholars; who are diſtributed into ſeveral *Claſſes*, or Forms, according to their Capacities and Attainments.

*Quintilian* uſes the Word *Claſſis* in this Senſe in the 1ſt Book of his *Inſtitutiones*.

CLASSIC, CLASSICAL, a Term ſeldom us'd but for Authors read in the *Claſſes*, at Schools, and who are in great Authority there. See SCHOOL.

*Aquinas*, and the *Maſter of the Sentences* are *Claſſic* Authors in the School Divinity; *Ariſtotle*, in Philoſophy; *Cicero* and *Virgil* in the Humanities. *Aulus Gellius* ranks among *Claſſic* Authors, *Cicero*, *Cæſar*, *Saluſt*, *Virgil*, *Horace*, &c.

The Term ſeems properly applicable only to Authors who liv'd in the Time of the Republic and the *Auguſtan* Age, when the *Latin* was in its Perfection. It appears to have taken its riſe hence, that an Eſtimate of every Perſon's Eſtate being appointed by *Servius Tullius*, he divided the *Roman* People into ſix Bands, which he called *Claſſes*.

The Eſtate of thoſe of the firſt *Claſſis* was not to be under 200 Pounds: And theſe, by way of Eminence, were call'd *Claſſics*, *Claſſici*. Hence, Authors of the firſt Rank came to be call'd *Claſſics*: all the reſt were ſaid to be *infra Claſſem*.

The firſt *Claſſis*, again, was ſubdivided into *Centuries*; making fourſcore Centuries of Footmen, and eighteen of Horſemen. See CENTURY.

Each *Claſſis* conſiſted, one half of the younger ſort, who were to make War abroad; and the other of old Men, who ſtaid at home for the Defence of the City.

CLAVICULÆ, *Channel Bones*, in Anatomy, two ſmall Bones, ſituate at the Baſis of the Neck, and atop of the Breaſt. See NECK, THORAX, &c.

They are about half a Foot long, of the thickneſs of a Finger, and a little bent at each end, and that different ways, ſomewhat like the Letter S; and are thus call'd, as being the Keys, or *Claves* of the Thorax.

Their inner Subſtance is ſpongy; whence they are brittle, eaſily broke, and eaſily coaleſcing again.

They are join'd to the *Acromium* of the Scapula *per Synchondroſin*; and on the Forepart, *per Arthrodiam*, to a Sinus on each ſide of the Upper-part of the *Sternum*.

Their Uſe is, to fix the *Scapulæ* with the *Sternum* and the Arms, and to prevent 'em from ſlipping too forward upon the Thorax.

CLAVIS, a *Latin* Word, ſometimes us'd in *Engliſh* Writers for a *Key*. See KEY.

CLAUSE, an Article, or particular Stipulation in a Contract; a Charge, or Condition in a Teſtament, &c.

We ſay, *Derogatory Clauſe*, *Penal Clauſe*, *Codicillary Clauſe*, *Reſolutary Clauſe*. See each of theſe in its Place, DEROGATORY, PENAL, &c.

CLAUSUM *Fregit*, an Action of Treſpaſs; thus call'd, by reaſon the Writ demands the Perſon ſummon'd to anſwer to *quare clauſum fregit*, why he committed ſuch a Treſpaſs. See TRESPASS.

CLAVUS, in Antiquity, a Band or Fillet of Purple, more or leſs broad, according to the Dignity of the Perſon; us'd among the antient *Romans*: whence the Difference of the *Tunica Auguſticlavia*, and *Laticlavia*. See LATICLAVUS, &c.

This Ornament, according to ſome, was call'd *Clavus*, Nail; as being ſet with little round Plates of Gold, or Silver, like the Heads of Nails. *Cantelius* maintains, that the *Clavus* conſiſted of a kind of Purple Flowers, ſewed upon the Stuff.

CLAVUS, in Medicine, a Name Phyſicians give to a ſhooting Pain in the Head, commonly ſituate a little above the Eyes, *viz.* on the *Sinus Frontalis*; and ſuppos'd to reſemble a boring of the Head thro' with an Augre; whence the Name. In ſome 'tis only in one, and in others in both.

'Tis generally allow'd to be a Species of an Ague, or an intermitting Fever; its Periods of coming or going, being uſually regular or ſtated. In ſome 'tis Quotidian, in others Tertian. See FEVER.

The Cure conſiſts in giving an Emetic a little before the Fit, and after, confirming it with a proper Quantity of the Cortex, &c. as in intermitting Fevers: tho Bleeding and Diaphoretics ſometimes effect a Cure without other Aſſiſtants.

A Pain like to this, on the top of the Head, ſometimes attacks hyſterical Perſons; which by Dr. *Sydenham* is term'd *Clavus Hyſtericus*. See HYSTERIC.

CLAVUS is alſo us'd in Medicine, for a Callus form'd on the Toes; popularly call'd a *Corn*. See CALLUS.

*Clavi* ariſe from a too great Compreſſion of the *Cutis*; which by this means hardens, and forms it ſelf into a Knot. The Cure is by firſt ſoftening 'em, as with *Emplaſt. de Ranis cum Mercurio*, or *Mynſicht. Galban. Crocat.* with Sal Ammoniac; and then plucking 'em up. A piece of raw Beef, apply'd in manner of a Plaiſter, and frequently ſhifted, is found to diſſipate 'em in a little time.

CLAY, in Natural Hiſtory, a ſoft viſcous Earth, found in various Places, and us'd for various Purpoſes, of ſeveral Kinds and Properties. See EARTH, SOIL, &c.

Dr. *Liſter*, in the *Philoſophical Tranſactions*, gives us a Table of 22 ſeveral *Clays* found in the ſeveral Counties of *England*; five whereof he calls *pure*, *i. e.* ſuch as are ſoft, like Butter, to the Teeth, with little or no Grittineſs in 'em, *viz.* 1. *Fullers Earth*, which he diſtinguiſhes by its Colour into yellowiſh, brown, and white. See FULLERS *Earth*.

2. *Boles*. See BOLE.

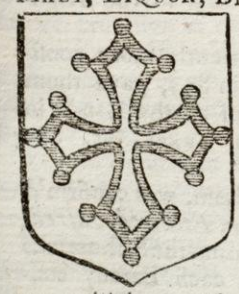
3. *Pale yellow Clay*. 4. *Cowſhot Clay*. 5. *Dark blue Clay*, or Marle.

Seventeen *impure*; whereof eight are harſh and duſty when dry: as, 1, *Creta*, or milk-white *Clay*. 2. *Potters pale yellow Clay*. 3. *Blue Potters Clay*. 4. *Blue Clay*, wherein is found the *Aſtroites*. 5. *Yellow Clay*. 6. Fine *red Clay*. 7. Soft chalky *blue Clay*. 8. Soft chalky *red Clay*.

Three are ſtony when dry, *viz.* 1. A red ſtony *Clay*. 2. A blue ſtony *Clay*. 3. A white ſtony *Clay*.

Three are mix'd with Sand, or Pebbles, *viz.* 1. a yellow *Loam*. 2. A red ſandy *Clay*. 3. A ſecond Species of the ſame Kind.

Laſtly, three are mix'd with flat or thin Sand, glittering with *Mica*: *viz.* 1. *Crouch white Clay*. 2. Grey or bluiſh *Tobacco pipe Clay*. 3. A red *Clay*.



CLAYES, in Fortification, are Wattles made with Stakes, interwove with Oziers, &c. to cover Lodgments. See FASCINES.

CLAYING *of Land*. See MANURE.

CLEAR, in Building, is ſometimes us'd among the Workmen for the inſide Work of a Houſe, &c. See HOUSE, &c.

CLEARING *of Liquors*. See CLARIFICATION.

For Malt Liquors, particularly Beer, there are various Methods of *clearing*; the beſt is by caſting into it fix'd Nitre: ſome add the Quinteſſence of Malt and Wine; whites of Eggs made into Balls with a little Flower and Izing-glaſs: Oil and Quinteſſence of Barley have the ſame Effect. It is exceedingly *clear'd* and ſtrengthen'd, by adding to it, during the time of its Fermentation, ſome ardent Spirit. See MALT, LIQUOR, BEER, &c.

CLECHE', or CLECHE'E, in Heraldry, is uſually underſtood of an Ordinary open to the Light, or pierc'd thro' with another inner one of the ſame Figure; *e. g.* when a Croſs appears as if charg'd with another Croſs of the ſame Colour with the Field; or as if the Field appeared thro' the Apertures thereof.

But *Colombiere*, and ſome other Writers, will have this piercing to be only a Circumſtance of the *Croſs Clechè*, and call it by the Name *Vuidè*, voided. The thing that denominates it *Clechè*, is its ſpreading from the Centre towards the Extremities, which are very wide, and end in an Angle in the middle; as in the Figure adjoining.

The Word is *French*, ſuppos'd to be form'd of *Clef*, Key; the Ends of the Croſs being thought to bear ſome reſemblance to the Bowls of the antient Keys.

CLEDONISM, CLEDONISMUS, a kind of Divination in uſe among the Antients. See DIVINATION.

The Word is form'd from the *Greek* κληδὼν, which ſignifies two things, *Rumor*, a Report, and *Avis*, a Bird: In the firſt Senſe, *Cledoniſm* is a kind of Divination drawn from Words occaſionally utter'd. *Cicero* obſerves, that the *Pythagoreans* made Obſervation not only of the Words of the Gods, but of thoſe of Men; and accordingly believ'd the pronouncing of certain Words, *v. g.* the Word *Incendium*, at a Meal, very unhappy.

Thus, inſtead of Priſon, they us'd the Word *Domicilium*; and to avoid *Erinnies*, ſaid *Eumenides*.

In the ſecond Senſe, *Cledoniſm* ſhould ſeem a Divination drawn from Birds; the ſame with *Ornithomantia*. See ORNITHOMANCY.

CLEF, CLIFF, or *Key*, in Muſick, a Mark at the Beginning of the Lines of a Song, which ſhews the Tone, or Key in which the Piece is to begin. Or, it is a Letter mark'd on any Line, which explains and gives the Name to all the reſt. See KEY.

Antiently, every Line had a Letter mark'd for a *Clef*; now a Letter on one Line ſuffices: ſince by this all the reſt are known; reckoning up or down in the Order of the Letters.

'Tis call'd the *Clef*, or Key, becauſe hereby we know the Names of all the other Lines and Spaces; and conſequently the Quantity of every Degree, or Interval.

But becauſe every Note in the Octave is call'd a *Key*, tho in another Senſe, this Letter mark'd, is call'd in a particular manner the *Sign'd Clef*; becauſe being written on any Line, it not only ſigns and marks that one, but explains all the reſt.

By CLEF, therefore, for diſtinction-ſake, we mean that Letter ſign'd on a Line, which explains the reſt; and by *Key* the principal Note of a Song, in which the Melody cloſes.

There are three of theſe *Sign'd Clefs*, *c*, *f*, *g*. The *Clef* of the higheſt Part in a Song, call'd *Treble*, or *Alt*, is *g* ſet on the ſecond Line counting upwards. The *Clef* of the Baſs, or the loweſt Part, is *f* on the fourth Line upwards: For all the other mean Parts, the *Clef* is *c*, ſometimes on one, ſometimes on another Line. Indeed, ſome that are really mean Parts, are ſometimes ſet with the *g Clef*. See BASS, &c.

It muſt, however, be obſerv'd, that the ordinary Signatures of *Clefs* bear little reſemblance to thoſe Letters. Mr. *Malcolm* thinks it would be well if we us'd the Letters themſelves. *Kepler* takes a world of Pains, to ſhew that the common Signatures are only Corruptions of the Letters they repreſent. See their Figure among the other CHARACTERS *of Muſick*.

The *Clefs* are always taken Fifths to one another: That is, the *Clef f* is loweſt, *c* a Fifth above it, and *g* a Fifth above *c*.

When the Place of the *Clef* is chang'd, which is not frequent in the *mean Clef*, 'tis with Deſign to make the Syſtem comprehend as many Notes of the Song as poſſible, and ſo to have the fewer Notes above or below it. If then there be many Lines above the *Clef*, and few below it, this Purpoſe is anſwer'd by placing the *Clef* in the firſt or ſecond Line: If there be many Notes below the *Clef*, 'tis plac'd higher in the Syſtem. In effect, according to the Relation of the other Notes to the *Clef* Note, the particular Syſtem is taken differently in the Scale; the *Clef* Line making one in all the Variety. See SCALE.

But ſtill, in whatever Line of the particular Syſtem any *Clef* is found, it muſt be underſtood to belong to the ſame of the general Syſtem, and to be the ſame individual Note or Sound in the Scale.

By this conſtant Relation of *Clefs*, we learn how to compare the ſeveral particular Syſtems of the ſeveral Parts; and know how they communicate in the Scale, *i. e.* which Lines are Uniſon, and which not: for 'tis not to be ſuppos'd that each Part has certain Bounds, within which another muſt never come. Some Notes of the Treble, *v. g.* may be lower than ſome of the mean Parts, or even of the Baſs. To put together therefore in one Syſtem all the Parts of a Compoſition written ſeparately, the Notes of each Part muſt be plac'd at the ſame Diſtances above and below the proper *Clef*, as they ſtand in the ſeparate Syſtem; and becauſe all the Notes that are conſonant, (or heard together) muſt ſtand perpendicularly over each other, that the Notes belonging to each Part may be diſtinctly known, they may be made with ſuch Differences as ſhall not confound or alter their Significations with reſpect to Time, but only ſhew that they belong to this or that Part. Thus ſhall we ſee how

the Parts change and pass thro' one another; and which, in every Note is highest, lowest, or unison.

The Use of particular *Sign'd Clefs* then, is an Improvement with respect to the Parts of any Composition; for unless some one Key in the particular Systems were distinguish'd from the rest, and refer'd invariably to one Place in the Scale, the Relations could not be distinctly mark'd.

It must here be observ'd, that for the Performance of any single Piece, the *Clef* only serves for explaining the Intervals in the Lines and Spaces: so that we need not regard what Part of any greater System it is; but the first Note may be taken as high or as low as we please. For the proper Use of the Scale is not to limit the absolute Degree of Tone; so the proper Use of the *Sign'd Clef*, is not to limit the Pitch at which the first Note of any Part is to be taken; but to determine the Tune of the rest with relation to the first: And considering all the Parts together, to determine the Relations of their several Notes by the Relations of their *Clefs* in the Scale: Thus, the pitch of Tune being determin'd in a certain Note of one Part; the other Notes of that Part are determin'd by the constant Relations of the Letters of the Scale, and the Notes of the other Parts by the Relations of their *Clefs*.

In effect, for performing any single Part, the *Clef* Note may be taken in any Octave, *i. e.* at any Note of the same Name, provided we do not go too high or too low for finding the rest of the Notes of a Song. But in a Concert of several Parts, all the *Clefs* must be taken, not only in the Relations, but also in the Places of the System abovemention'd; that every Part may be comprehended in it.

The difference of *Clefs* in particular Systems, makes the Practice of Musick much more difficult and perplex'd than it would otherwise be; both with respect to Instruments, and to the Voice. This occasion'd Mr. *Salmon* to propose a Method of reducing all Musick to one *Clef*; whereby the same Writing of any Piece of Musick, should equally serve to direct the Voice, and all Instruments; which he calls an *Universal Character*.

The Natural and Artificial Note express'd by the same Letter, as *c* and *c* ♯; are both set on the same Line or Space. When there is no Character of Flat or Sharp at the beginning with the *Clef*, all the Notes are Natural: and if in any particular Place the Artificial Note be requir'd, 'tis signify'd by the Sign of a Flat or Sharp set on the Line a Space before that Note.

If a Sharp or Flat be set at the beginning in any Line or Space with the *Clef*, all the Notes on that Line or Space are Artificial ones; *i. e.* are to be taken a Semitone higher or lower than they would be without such Sign. The same affects all their Octaves above and below, tho they ben't mark'd so, In the Course of the Song, if the Natural Note be sometimes requir'd, 'tis signify'd by ♮.

The marking of the System thus by Flats and Sharps, Mr. *Malcolm* calls the *Signature of the Clefs*. See NOTE, TUNE, TRANSPOSITION, FLAT, SHARP, &c.

CLEMENTINE, a Term in use among the *Augustins*, who apply it to a Person, who after having been nine Years a Superior, ceases to be so, and becomes a private Monk, under the Command of a Superior.

The Word has its rise hence, that Pope *Clement*, by a Bull, prohibited any Superior among the *Augustins* from continuing above nine Years in his Office.

CLEMENTINES, in the Canon Law, are the Constitutions of Pope *Clement* V. and the Canons of the Council of *Vienna*. See CANON.

CLEPSYDRA, a kind of Water-Clock, or Hour-Glass, serving to measure Time by the Fall of a certain quantity of Water. See CLOCK, &c.

There have likewise been *Clepsydras* made with Mercury.

The *Egyptians* by this Machine measur'd the Course of the Sun. *Tycho Brahe*, in our Days, made use of it to measure the Motion of the Stars, &c. and *Dudley* us'd the same Contrivance in making all his Maritime Observations.

The Use of *Clepsydras* is very antient: They were invented in *Egypt* under the *Ptolomys*; as were also Sun-Dials. Their Use was chiefly in the Winter; Sun-Dials serv'd in the Summer. They had two great Defects; the one, that the Water run out with a greater or less facility, as the Air was more or less dense: The other, that the Water run out more readily at the Beginning, than towards the Conclusion.

M. *Amontons* has invented a *Clepsydra* free from both these Inconveniencies, and which has the three grand Advantages, of serving the ordinary Purpose of Clocks; of serving in Navigation for the Discovery of the Longitude; and of measuring the Motion of the Arteries.

The Word comes from κλέπτω, *condo*, and ὕδωρ, *aqua*.

The Word *Clepsydra* is also us'd for an Hour-Glass of Sand.

*For the Construction of a* CLEPSYDRA.

Problem. *To divide any cylindric Vessel into Parts, to be empty'd in each Division of Time; the Time wherein the whole, and that wherein any Part is to be evacuated, being given.*

Suppose, *v. g.* a cylindric Vessel, whose Charge of Water flows out in twelve Hours, were required to be divided into Parts to be evacuated each Hour. 1. As the part of Time 1 is to the whole Time 12, so is the same Time 12 to a fourth Proportional, 144. 2. Divide the Altitude of the Vessel into 144 equal Parts: Here, the last will fall to the last Hour; the three next above to the last Part but one; the five next to the tenth Hour, &c. Lastly, the 23 last to the first Hour.

For, since the Times increase in the Series of the Natural Numbers 1 2 3 4 5, &c. and the Altitudes, if the Numeration be in a retrograde Order from the twelfth Hour, increase in the Series of the unequal Numbers 1 3 5 7 9, &c. the Altitudes computed from the twelfth Hour, will be as the Squares of the Times 1 4 9 16 25, &c. Therefore, the Square of the whole Time 144, comprehends all the Parts of the Altitude of the Vessel to be evacuated. But a third Proportional to 1 and 12 is the Square of 12; and consequently it is the Number of equal Parts into which the Altitude is to be divided, to be distributed according to the Series of the unequal Numbers, thro' the equal Intervals of Hours.

Since, in lieu of Parts of the same Vessel, other less Vessels equal thereto may be substituted; the Altitude of a Vessel emptied in a given Space of Time being given, the Altitude of another Vessel to be emptied in a given Time may be found; *viz.* by making the Altitudes as the Squares of the Times.

Hence we see the Method of constructing the *Clepsydras* us'd by the Antients.

CLERGY, *Clerus*, the Assembly or Body of *Clerks*, or Ecclesiasticks. See CLERK.

In the *Romish* Church there are two Kinds of *Clergy*; the one *Regular*, comprehending all the Religious of both Sexes: the other *Secular*, comprehending all the Ecclesiasticks that don't make the Monastic Vows. See REGULAR, &c.

Among the *Reformed*, there are none but Secular *Clergy*. See ECCLESIASTIC.

The *Roman Clergy* forms a Monarchical State, under the Pope, who is the Head thereof. See POPE, HIERARCHY, &c.

The *Clergy* was antiently divided into three Orders, *viz. Priests*, *Deacons*, and *inferior Clerks*; and each Order had its Chief: the Arch-Priest was the Head of the first Order, the Archdeacon of the second, and the Dean of the third. See PRIEST, DEACON, ARCHDEACON, DEAN, ARCH-PRIEST, &c.

Under the Name of *Clergy*, were also formerly compris'd all the Officers of Justice; as being suppos'd to be Men of *Letters*. See CLERK.

Tho the *Clergy* formerly claim'd an Exemption from all Secular Jurisdiction, yet *Matt. Paris* tells us, *William* the Conqueror subjected the Bishops and Abbeys who held *per Baroniam*, and who till then had been exempt from all Secular Service; and order'd they should be no longer free from Mortuary Services. To this purpose he prescrib'd arbitrarily what Number of Soldiers every Abbey and Bishoprick should provide, to serve him and his Successors in War, and laid up these Registers of Ecclesiastical Servitude in his Treasury.

But, in effect, the *Clergy* were not exempt from all Secular Service till then; as being bound by the Laws of King *Edgar* to obey the Secular Magistrate in three Things, *viz.* upon an Expedition to the Wars, and in contributing to the Building and Repairing of Bridges, &c.

The *Privileges of the English* CLERGY are still very considerable: Their Goods pay no Toll in Fairs or Markets; they are exempt from all Offices, but their own; from the King's Carriages, Posts, &c. from appearing at Sheriffs *Tourns*, or Frank-Pledges; and are not to be fin'd or amerc'd according to their Spiritual, but their Temporal Means.

A *Clergyman* acknowledging a Statute, his Body shall not be imprison'd: If he be convict of a Crime, for which the Benefit of the *Clergy* is allow'd, he shall not be burnt in the Hand: and he shall have the Benefit of the Clergy *in infinitum*, which no Layman can have but once.

The *Clergy* are not to be burden'd in the general Charges with the Laity; nor to be troubled or incumber'd, unless expresly nam'd and charg'd by the Statute; for general Words don't affect them. Thus, if a Hundred be sued for a Robbery, the Minister shall not contribute; tho the Words are, *Gentes demorantes*: neither are they assess'd to the Highway, to the Watch, &c.

The *Revenues of the* CLERGY were antiently more considerable then at present: *Ethelwolthus*, in 855, gave them the Tithe of all Goods, and the Tenth of all the Lands in *England*; free from all Secular Services, Taxes, &c. See TITHE.

The Charter whereby this was given them, was confirm'd by several of his Successors, *Edmund*, *Edgar*, *Ethelred*, *Alfred*, and *William* the Conqueror; which last, finding the Bishopricks so rich, erected them all into Baronies; each Barony containing 13 Knights Fees, at least. But since the Reformation

tion the Biſhopricks are much impair'd. See BISHOPRICK, DIOCESS, &c.

The Revenues of the inferior *Clergy*, in the general, are ſmall; a third Part of the beſt Benefices being antiently, by the Pope's Grant, appropriated to Monaſteries; upon the Diſſolution whereof they became Lay-Fees. See ABBEY, FEE, &c.

Indeed, an Addition was made 2° *Annæ*; the whole Revenue of Firſt-Fruits and Tenths being then granted, to raiſe a Fund for the Augmentation of the Maintenance of the Poor *Clergy*: purſuant to which, a Corporation was form'd, by the Name of the *Governours of the Bounty of Queen* Anne, *for the Augmentation of the Maintenance of the Poor Clergy*; to whom the ſaid Revenues were convey'd in Truſt, &c. See AUGMENTATION.

CLERGY is alſo us'd for an antient Liberty of the Church, confirm'd by ſeveral Acts of Parliament; conſiſting in this, that when a Prieſt, or one in Orders, was arraign'd of Felony before a ſecular Judge, he might *pray his Clergy*, *i.e.* he might pray to be deliver'd to his Ordinary, to purge himſelf of the Crime objected againſt him.

This was admitted, even in Caſes of Murder: But ſeveral Statutes made in aftertimes have abridg'd and reſtrain'd this Privilege.

The antient Courſe of the Law is now much alter'd on this Head; for by the Stat. 18 *Eliz.* cap. 7. Clerks are no more committed to their Ordinaries to be purg'd; but every Man to whom the Benefit is granted, tho not in Orders, is put to read at the Bar, after he is found guilty, and convicted of ſuch Felony; and ſo, burnt in the Hand, and ſet free for the firſt time, if the Ordinary's Commiſſioner, or Deputy ſtanding by, do ſay, *Legit ut Clericus*; otherwiſe he ſuffers Death.

CLERICO *Admittendo*, in Law, a Writ directed to the Biſhop, for the admitting a *Clerk* to a Benefice upon a *Ne admittas*, try'd, and found for the Party who procures the Writ.

CLERICO *capto per Statutum Mercatorum*, is a Writ for the Delivery of a *Clerk* out of Priſon, who is impriſon'd upon the Breach of Statute Merchant.

CLERICO *convicto commiſſo Gaolæ in defectu Ordinarii deliberando*, is a Writ for the Delivery of a *Clerk* to his Ordinary, that was formerly convicted of Felony; by reaſon his Ordinary did not challenge him according to the Privilege of *Clerks*.

CLERICO *intra ſacros Ordines conſtituto non eligendo in officium*, is a Writ directed to the Bailiffs, &c. that have thruſt a Bailiwick or Beadleſhip upon one in Holy Orders; charging them to releaſe him.

CLERK, *Clericus*, an antient Word, formerly us'd to ſignify a *learned Man*, or *Man of Letters*.

Thus, *Paſquier* obſerves, the Officers of the Counts, *Comites*, were antiently created under the Title of *Clerks of Accompts*; and Secretaries of State were call'd *Clerks of the Secret*. So, *Clericus Domini Regis*, in the Time of *Edward* I. was engliſh'd, the King's Secretary, or *Clerk* of his Council.

This Term, *Clerk*, was apply'd indifferently to all who made any Profeſſion of Learning; or who knew how to manage the Pen: tho, originally it was appropriated to Eccleſiaſticks.

As the Nobility and Gentry were uſually brought up to the Exerciſe of Arms; there was none but the Clergy left to cultivate the Sciences: Hence, as it was the Clergy alone who made any Profeſſion of Letters, a very learned Man came to be call'd a *great Clerk*; and a ſtupid ignorant Man, a *bad Clerk*.

*Ronſard*, in his old Language, uſes the Word femininely, *Clergeſſe* for a learned Woman.

*Mais trop plus eſt à craindre une femme* Clergeſſe.

The Word *Clerk*, and its Derivatives, come from the *Greek* κλῆρος, us'd for *Clergy*, but more properly ſignifying *Lot*, or *Heritage*; in regard the Lot, and Portion of *Clerks* or Eccleſiaſticks is to ſerve God.

Accordingly, *Clerus* was at firſt us'd to ſignify thoſe who had a particular Attachment to the Service of God.

The Origin of the Expreſſion is deriv'd from the Old Teſtament, where the Tribe of *Levi* is call'd the *Lot*, *Heritage*, κλῆρος; and God is reciprocally call'd their Portion: by reaſon that Tribe was conſecrated to the Service of God, and liv'd on the Offerings made to God, without any other ſettled Proviſion as the reſt had. See CLERGY.

CLERK is alſo us'd in the general for all thoſe of the Eccleſiaſtical State, or who are in Orders, of any Degree, or Kind; from the Deacon to the Prelate. See ORDERS, DEACON, BISHOP, &c.

Yet, in its utmoſt Latitude, the Word alſo includes *Chantors*, *Acolythi*, *Exorciſtæ*, and *Oſtiarii*. See CHANTOR, ACOLYTHI, EXORCIST, &c.

In this Senſe, the Canons excommunicate all thoſe who lay hands on a *Clerk*. See ORDERS, ECCLESIASTIC, PRIEST, &c.

A Council held in *Africa*, prohibited the appointing any *Clerk* to be a Tutor, Guardian, or Curator, by Teſtament. The Council of *Elvira* enjoins Continence on all *Clerks*, Biſhops, Prieſts, and Deacons, on Pain of being ſtripp'd of their *Clericature*. See CELIBATE.

*Acephalus* CLERK, in the VIth Century, was a Name given to thoſe *Clerks* who ſeparated from the Biſhop, and choſe not to live any longer in Community with him; in contradiſtinction to *Canon*-CLERKS, who continu'd to live with the Biſhop, according to the Canons. See CANON.

CLERK, is alſo a Title given to ſeveral Officers in the Royal Palace, the Courts of Juſtice, Revenue, Army, Navy, &c. The principal of theſe are as follow.

CLERK *of the Acts*, is an Officer of the Navy, who receives and enters the Commiſſions and Warrants of the Lord Admiral; and regiſters the Acts and Ordinances of the Commiſſioners of the Navy. See NAVY, ADMIRAL, &c.

CLERK *of Aſſize*, is he that writeth all things judicially done by the Juſtices of Aſſize, in their Circuits. See ASSIZE.

CLERK *of the Check*, is an Officer in Court; ſo call'd, becauſe he hath the Check and Controlement of the Yeomen of the Guard, and all other ordinary Yeomen, or Uſhers, belonging either to the King, Queen, or Prince; giving leave, or allowing their Abſence, or Defects in Attendance; or diminiſhing their Wages for the ſame. See CHECK.

CLERK *of the Crown*, an Officer in the King's-Bench Court, whoſe Buſineſs is to read, frame, and record all Indictments againſt Traytors, Felons, and other Offenders there arraign'd upon any publick Crime. See CROWN.

CLERK *of the Cloſet*, is a Divine; otherwiſe called *Confeſſor to his Majeſty*; whoſe Office is to attend at the King's right Hand during Divine Service, to reſolve all Doubts concerning Spiritual Matters, to wait on the King in his private Oratory, &c. See CLOSET.

CLERK *of the Crown*, in Chancery, an Officer, who by himſelf, or Deputy, is continually to attend the Lord Chancellor, or Lord Keeper, for ſpecial Matters of State, by Commiſſion, or the like either immediately from his Majeſty, or by Order of his Council; as well ordinary as extraordinary: Alſo all general Pardons, upon Grants of them at the King's Coronation or in Parliament, the Writs of Parliament, with the Names of the Knights, Citizens, and Burgeſſes, are return'd into this Office. He hath alſo the making of ſpecial Pardons, and Writs of Execution upon Bonds of Statute Staple forfeited.

CLERK *of the Deliveries*, is an Officer in the Tower, who takes Indentures for all Stores iſſued thence. See TOWER.

CLERK *of the Enrollments of Fines and Recoveries*, is an Officer in the Court of Common Pleas, under the three Elder Judges of that Court, and removable at their Pleaſure. See ENROLLMENT.

CLERK *of the Errors*, in the Court of Common Pleas, tranſcribes and certifies into the King's-Bench the Tenor of the Records of the Cauſe, or Action, upon which the Writ of Error is brought there to be determin'd. See ERRORS.

CLERK *of the Errors*, in the King's-Bench, does likewiſe tranſcribe, and certify the Records of ſuch Cauſes in that Court into the Exchequer; if the Cauſe, or Action, is by Bill. See KING'S-*Bench*.

CLERK *of the Errors*, in the Exchequer, tranſcribes the Records certify'd thither out of the King's-Bench; and prepares them for Judgment in the Court of Exchequer, to be given by the Juſtice of the Common Pleas, and Barons there. See EXCHEQUER.

CLERK *of the Eſſoigns*, is an Officer belonging to the Court of Common Pleas; who keeps the Eſſoign-Roll, or enters Eſſoigns. He alſo provides Parchment, cuts it into Rolls, makes the Number on them; delivers out all the Rolls to every Officer, and receives them again when written. See ESSOIGN.

CLERK *of the Eſtreats*, belongs to the Exchequer; and every Term receiveth the Eſtreats out of the Lord Treaſurer's Remembrancer's Office, and writeth them out to be levy'd for the King. He alſo maketh Schedules of ſuch Sums eſtreated as are to be diſcharg'd. See ESTREAT.

CLERK *of the Hamper*, or *Hanaper*; or *Warden of the Hamper*; is an Officer in Chancery, whoſe Buſineſs is to receive all Money due to the King for the Seals of Charters, Patents, Commiſſions, and Writs: as alſo Fees due to the Officers for enrolling and examining the ſame. He is oblig'd to attend on the Lord Chancellor, or Lord Keeper daily in Term time; and at all Times of Sealing. See HAMPER.

CLERK *of the Juries*, or *Curata Writs*, is an Officer belonging to the Court of Common Pleas; who maketh out the Writs call'd *Habeas Corpus*, and *Diſtringas*, for the Appearance of the Jury, either in Court, or at the Aſſizes; after the Pannel is return'd upon the *Venire Facias*. See JURY.

CLERK *Comptroller of the King's Houſe*, an Officer of the Court, who has Place and Seat in the Compting-Houſe; with Authority to allow or diſallow the Charges and Demands of Purſuivants, and Meſſengers of the green Cloth, Purveyors,

ors, &c. He has also the overſight of all Defaults and Miſcarriages of inferior Officers; and ſits in the Compting-Houſe with the ſuperior Officers, *viz.* the Lord Steward, Treaſurer, Comptroller, and Cofferer, for the correcting and redreſſing things out of order. See HOUSHOLD, and COMPTING-*Houſe*.

CLERK *of the King's great Wardrobe*, is an Officer of the King's Houſe, that keepeth an Accompt, or Inventory in Writing, of all things belonging to the King's Wardrobe. See WARDROBE.

CLERK *of the King's Silver*, is an Officer belonging to the Common Pleas; to whom every Fine is brought, after it has been with the *Cuſtos Brevium*; and by whom the Effect of the Writ of Covenant is enter'd into a Paper Book: and according to that Note, all the Fines of that Term are alſo recorded in the Rolls of the Court. See SILVER-*Office*.

CLERK *of the Market*, is an Officer of the King's Houſe; whoſe Duty is to take charge of the King's Meaſures, and to keep rhe Standards of them: that is, Examples of all the Meaſures that ought to be us'd thro' the Land. See STANDARD.

CLERK-*Marſhal* of the King's Houſe, ſeems to be an Officer that attends the Marſhal in his Court, and recordeth all his Proceedings.

CLERK *of a Merchant Ship*, is an Officer appointed to take care that nothing be ſquander'd, or ſpent needleſly. See SHIP.

He is oblig'd to keep a Regiſter, or Journal, containing an exact Inventory of every thing in the Loading of the Veſſel; as the Rigging, Apparel, Arms, Proviſion, Munition, Merchandiſes: as alſo the Names of the Paſſengers, if there be any; the Freight agreed on; a Liſt of the Crew; their Age, Quality, Wages; the Bargains, Purchaſes, Sales, or Exchanges the Ship makes from its Departure; the Conſumption of Proviſion; and in ſhort, every thing relating to the Expence of the Voyage. He alſo regiſters the Conſultation of the Captains, Pilots, &c.

He alſo does the Office of a Regiſter in all criminal Proceſſes; and of a Notary, to make and keep the Wills of thoſe who die in the Voyage; takes Inventories of their Effects, &c. The *Clerk* is not allow'd to quit the Veſſel during the Voyage, on Forfeiture of all his Wages, &c.

In ſmall Veſſels, the Maſter, or Pilot, does the Office of *Clerk*. See MASTER.

CLERK *of the Nichils*, or *Nihils*, is an Officer in the Exchequer, that maketh a Roll of all ſuch Sums as are *nihiled* by the Sheriffs upon their Eſtreats of green Wax; and delivers the ſame into the Lord Treaſurer's Remembrancer's Office, to have Execution done upon them for the King. See NIHIL.

CLERK *of the Ordnance*, is an Officer in the Tower; who regiſters all Orders relating to the King's Ordnance. See ORDNANCE.

CLERK *of the Outlawries*, is an Officer belonging to the Court of Common Pleas; being a Deputy to the King's Attorney-General, for making out the Writs of *Capias utlegatum*, after Outlawry; and the King's Attorney's Name is to every one of thoſe Writs. See OUTLAWRY.

CLERK *of the Paper-Office*, is an Officer of the King's Bench. See PAPER-*Office*.

CLERK *of the Parcels*, an Officer of the Exchequer. See EXCHEQUER.

CLERK *of the Parliament*, is he that recordeth all Things done in the Parliament; and engroſſeth them fairly into Parchment Rolls, for their better keeping to Poſterity. See PARLIAMENT.

Of theſe there are two, one of the *higher*, or Houſe of Lords; and the other of the *lower*, or Houſe of Commons.

CLERK *of the Patents*, or *Letters Patent* under the Great Seal. See PATENT.

CLERK *of the Peace*, is an Officer belonging to the Seſſion of the Peace; whoſe Duty is at the Seſſion to read the Indictments, to enroll the Acts, and draw the Proceſs; to enroll Proclamations of Rates for Servants Wages; to enroll the Diſcharge of Apprentices; to keep the Counterpart of the Indenture of Armour, &c. Alſo to certify in the King's-Bench Tranſcripts of Indictments, Outlawries, Attainders, and Convictions, had before the Juſtices of the Peace within the Time limited by Statute. See PEACE.

CLERK *of the Pell*, belongs to the Exchequer: His Buſineſs is, to enter the Teller's Bills into a Parchment Roll, call'd *Pellis receptorum*; and alſo to make another Roll of Payment, call'd *Pellis exituum*; wherein he ſets down by what Warrant the Money was paid. See PELL.

CLERKS *of the Petty Bag*, is an Officer in Chancery, whereof there are three; the Maſter of the Rolls being their Chief. See CHANCERY.

Their Office is to record the Return of all Inquiſitions out of every County; all Liveries granted in the Court of Wards; all *Oſter les maines*: to make all Patents of Cuſtomers, Gaugers, Comptrollers, and Aulnagers; Summons's of the Nobility, Clergy, and Burgeſſes to the Parliament; Commiſſions directed to Knights and others, of every Shire, for raiſing of Subſidies; Writs for nomination of Collectors for the Fifteenths; and all Traverſes upon any Office, Bill, or otherwiſe; and to receive the Money due to the King for the ſame. See PETTY-*Bag*.

CLERK *of the Pipe*, belongs to the Exchequer; who having all Accompts and Debts due to the King delivered and drawn out of the Remembrancer's Office, chargeth them down into the great Roll: He alſo writes Summons's to the Sheriff, to levy the ſaid Debts upon the Goods and Chattels of the ſaid Debtors; and if there be no Goods, he draws them down to the Lord Treaſurer's Remembrancer, to write Eſtreats againſt their Lands. See PIPE.

CLERK *of the Pleas*, is an Officer in the Exchequer, in whoſe Office the Officers of the Court, upon ſpecial Privileges belonging to them, ought to ſue, and be ſued upon any Action. See PLEA.

CLERKS *of the Privy-Seal*. There are four of theſe Officers, who attend the Lord Keeper of the Privy-Seal, or, if there be none ſuch, the principal Secretary; and write or make out all Things ſent by warrant from the Signet to the Privy-Seal, and to be paſs'd to the Great Seal: as alſo to make out Privy-Seals upon any ſpecial Occaſion of the King's Affairs; as for Loan of Money, or ſuch-like. See PRIVY-*Seal*.

CLERK *of the Sewers*, is an Officer belonging to the Commiſſioners of the Sewers, who writes down all Things they do by virtue of their Commiſſion. See SEWER.

CLERK *of the Signet*, is an Officer continually attending on the King's principal Secretary; who has cuſtody of the Privy-Signet, as well for ſealing the King's private Letters, as for ſuch Grants as paſs his Majeſty's Hand by Bills ſign'd. Of theſe there are four, who attend in their Turn, and have their Diet at the Secretary's Table. See SIGNET.

CLERK *of the Superſedeas*, is an Officer of the Court of Common Pleas, who makes out Writs of *Superſedeas* (upon the Defendant's appearing to the Exigent) whereby the Sheriff is forbid to return the Exigent. See SUPERSEDEAS.

CLERKS *of the Treaſury*. See TREASURY.

CLERK *of the Treaſury*, is alſo an Officer of the Common Pleas, who has charge of the Records of the *Niſi prius*; the Fees due for all Searches; and hath the certifying of all Records into the King's-Bench, when a Writ of Error is brought: He alſo makes out all Writs of *Superſedeas de non Moleſtanda*, which are granted for the Defendants while the Writ of Error hangeth: he alſo maketh all Exemplifications of Records, being in the Treaſury.

CLERK *of the Warrants*, is an Officer likewiſe belonging to the Court of Common Pleas, who enters all Warrants of Attorney for Plaintiff and Defendant: and enrolls all Deeds of Indentures of Bargain and Sale, which are acknowledg'd in the Court, or before any Judges out of the Court. See WARRANT.

CLEROMANCY, a kind of Divination perform'd by the throwing of Dice, or little Bones; and obſerving the Points, or Marks turn'd up. See DIVINATION.

At *Bura*, a City of *Achaia*, was a Temple, and a celebrated Oracle of *Hercules*; where ſuch as conſulted the Oracle, after praying to the Idol, threw four Dies, the Points whereof being well ſcann'd by the Prieſt, he was ſuppos'd to draw an Anſwer from them. See ORACLE, and SORTES.

The Word comes from the *Greek* κλῆρος, *Lot*, and μαντεία, *Divination*.

CLIENT, *Cliens*, among the *Romans*, was a Citizen who put himſelf under the Protection of ſome great Man, who in that Relation was call'd his *Patron*, *Patronus*. See PATRON.

The Patron aſſiſted his *Client* with his Protection, Intereſt and Eſtate; and the *Client* gave his Vote for his Patron, when he ſought any Office for himſelf, or his Friends. *Clients* ow'd reſpect to their Patrons, as theſe reciprocally ow'd them their Protection.

This Right of Patronage was appointed by *Romulus*, to unite the Rich and Poor together, in ſuch manner, as that one might live without Contempt, and the other without Envy. But the Condition of a *Client*, in courſe of Time, became little elſe but a moderate kind of Slavery.

By degrees, the Cuſtom extended it ſelf beyond *Rome*; and not only Families, but Cities, and entire Provinces, even out of *Italy*, follow'd the Example. Thus, *Sicily*, *v.g.* put it ſelf under the *Clientela*, or Protection of *Marcellus*.

*Lazius* and *Budeus*, refer the Origin of Fiefs and Tenures to the Patrons and *Clients* of antient *Rome*: But the Difference is pretty conſiderable between the Relation of Vaſſals and their Lords, and that of *Clients* and their Patrons. See VASSAL, LORD, &c.

For the *Clients*, beſide the Reſpect they bore their Patrons, and the Vote they gave them, were oblig'd to aſſiſt them in all Affairs; and even to pay their Ranſom, if they ſhould be taken Priſoners in War, in caſe they were not able to do it of themſelves. See FEE, and TENURE.

The Word *Cliens* is form'd of *Colens*, honouring.

CLIENT, is now us'd for a Party in a Law-Suit, who has turn'd over his Cauſe into the Hands of a Counſellor, or Solicitor.

CLIMACTERIC, *Annus Climactericus*, a critical Year, wherein, according to the Aſtrologers, there is ſome very notable Alteration in the Body to ariſe; and a Perſon ſtands in great danger of Death. See CRITICAL.

The firſt *Climacteric* is the ſeventh Year of a Man's Life; the reſt are Multiples of the firſt, as 21, 49, 56, 63, and 81; which two laſt are called the *Grand Climacterics*, and the Dangers here ſuppos'd more imminent.

The Opinion has a great deal of Antiquity on its ſide. *Aulus Gellius* ſays, it was borrow'd from the *Chaldeans*; who might probably receive it from *Pythagoras*, whoſe Philoſophy turn'd much on Numbers; and who imagin'd an extraordinary Virtue in the Number 7.

*Marc. Ficinus* gives us the Foundation of the Opinion: He tells us, there is a Year aſſign'd for each Planet to rule over the Body of Man, each in his turn: now, *Saturn* being the moſt malific Planet of all, every ſeventh Year, which falls to his Lot, becomes very dangerous; eſpecially thoſe of 63 and 81, when the Perſon is already advanc'd in Years.

Some hold, according to this Doctrine, every ſeventh Year an eſtabliſh'd *Climacteric*; but others only allow the Title to thoſe produc'd by the Multiplication of the *climacterical* Space by an odd Number, 3, 5, 7, 9, &c. Others obſerve every ninth Year as a *Climacteric*.

*Hevelius* has a Volume under the Title of *Annus Climactericus*; deſcribing the Loſs he ſuſtain'd in the burning of his Obſervatory, &c. which it ſeems happen'd in his firſt *grand Climacteric*.

*Suetonius* ſays, *Auguſtus* congratulated his Nephew upon his having paſs'd his firſt *grand Climacteric*, whereof he was very apprehenſive.

Some pretend, that the *Climacteric* Years are alſo fatal to political Bodies.

Authors on the Subject, are *Plato*, *Cicero*, *Macrobius*, *Aulus Gellius*, among the Antients; *Argol*, *Maginus*, and *Salmaſius* among the Moderns. S. *Auguſtin*, S. *Ambroſe*, *Beda*, and *Boetius* countenance the Opinion.

The Word *Climacteric* comes from the *Greek* κλίμαξ, κλίμακος, *Scala*; *q. d.* by a Scale, or Degrees.

CLIMATE, in Geography, a part of the Surface of the Earth, bounded by two Circles parallel to the Equator, and of ſuch a Breadth, as that the longeſt Day in the Parallel nearer the Pole, exceeds the longeſt Day in that next the Equator by ſome certain Space, *viz.* half an Hour. See EARTH, PARALLEL, &c.

The *Beginning of the* CLIMATE, is the parallel Circle wherein the Day is the ſhorteſt.

The *End of the* CLIMATE, is that wherein the Day is the longeſt. See DAY.

The *Climates* therefore are reckon'd from the Equator to the Pole; and are ſo many Bands, or Zones, terminated by Lines parallel to the Equator: tho, in ſtrictneſs, there are ſeveral *Climates* in the Breadth of one Zone. See ZONE.

Each *Climate* only differs from its contiguous ones, in that the longeſt Day in Summer is longer or ſhorter by half an Hour in the one Place than in the other.

As the *Climates* commence from the Equator, the firſt *Climate*, at its Beginning, has its longeſt Day preciſely 12 Hours long; at its End, 12 Hours and an half: The ſecond, which begins where the firſt ends, *viz.* at 12 Hours and an half, ends at 13 Hours; and ſo of the reſt, as far as the Polar Circles. See HOUR.

Here, what the Geographers call *Hour-Climates* terminate, and *Month-Climates* commence.

As an *Hour-Climate* is a Space compriz'd between two Parallels of the Equator, in the firſt of which, the longeſt Day exceeds that in the latter by half an Hour; ſo the Month-*Climate* is a Space terminated between two Circles parallel to the Polar Circles whoſe longeſt Day is longer or ſhorter than that of its contiguous one by a Month, or 30 Days. See MONTH.

The Antients, who confin'd the *Climates* to what they imagin'd the habitable Parts of the Earth, only allow'd of ſeven. The firſt they made to paſs thro' *Meroe*; the ſecond thro' *Sienna*; the third thro' *Alexandria*; the fourth thro' *Rhodes*; the fifth thro' *Rome*; the ſixth thro' *Pontus*; and the ſeventh thro' the Mouth of the *Boriſthenes*.

The Moderns, who have ſail'd further toward the Poles, make thirty *Climates* on each ſide: and in regard the Obliquity of the Sphere makes a little difference in the length of the longeſt Day; inſtead of half an Hour, ſome of 'em only make the difference of *Climates* a quarter.

In fixing the *Climates*, there ordinarily is no regard had to the Refraction. See REFRACTION.

Vulgarly, the Term CLIMATE is beſtow'd on any Country or Region differing from another, either in reſpect of the Seaſons, the Quality of the Soil, or even the Manners of the Inhabitants; without any regard to the Length of the longeſt Day.

*Albufeda*, an *Arabic* Author, diſtinguiſhes the firſt kind of *Climates* by the Term *real Climates*; and the latter by that of *apparent Climates*.

The Word comes from the *Greek* κλιμα, *Inclinamentum*, an Inclination.

*Varenius* gives us a Table of thirty *Climates*; but without any regard to the Refraction. *Ricciolus* furniſhes a more accurate one, wherein the Refractions are allow'd for: An Abſtract of which follows.

*A Table of* CLIMATES.

| Middle of *Clim.* | Longeſt Day. | Latit. | *Climates.* | Longeſt Day. | Latit. | Middle of *Clim.* | Latit. | Cont. Lax. | North Night | Cont. Lax. | South. Night. |
|---|---|---|---|---|---|---|---|---|---|---|---|
| I | 12h. 30′ | 7° 1′ | VIII | 16h. 0′ | 48° 15′ | XV | 66° 53′ | 31d. | 27d. | 30d. | 28d. |

CLIMAX, or *Gradation*, in Rhetorick, a Figure, where by we aſcend or deſcend, as it were by degrees.

Such is that of *Cicero* to *Catiline*, *Nihil agis, nihil moliris, nihil cogitas*; *quod ego non audiam, quod etiam non videam, planeque ſentiam*: Thou doſt nothing, moveſt nothing, thinkſt nothing; but I hear it, nay ſee it, and perfectly underſtand it. Thus, the ſame *Cicero* to *Atticus*; *Si dormis expergiſcere*; *ſi ſtas, ingredere*; *ſi ingrederis, curre*; *ſi curris advola*. Thus, *Tertullian de Spac.* 'Who ever found 'the Truth without God? Who ever found God without 'Chriſt? who Chriſt without the Holy Spirit? who the Ho-'ly Spirit without Faith?

CLINIC, CLINICUS, a Term apply'd by ſome Church-Hiſtorians to thoſe among the Antients, who receiv'd Baptiſm on their Death-Bed. See BAPTISM.

It was the Doctrine of many of the Fathers, that Baptiſm abſolutely waſh'd away all previous Sins, and that there was no Attonement for Sins committed after Baptiſm. On this account, many defer'd that Sacrament till they were arriv'd at the laſt Stage of Life, and were pretty ſafe from the danger of ſinning any more; and ſuch were call'd *Clinici*.

*Magnus*, in the IIId Century, made a Doubt whether or no *Clinics* were truly baptiz'd, in regard the Ceremony was only perform'd by Aſperſion, inſtead of Immerſion. He conſulted S. *Chryſoſtom* on the Point, who made him anſwer, that the Sacrament does not waſh away Sin after the manner of a corporal Bath; and ſhews from Scripture that Aſperſion is ſufficient.

The Word comes from the *Greek* κλινὴ, *a Bed*.

CLINIC is alſo us'd in Antiquity in two other Senſes: 1ſt, for a Patient, or Perſon merely ſick, even without keeping his *Bed*; as appears from the Life of *Charlemaigne*, in *Caniſius*.

2dly, For a *Phyſician*; in regard, Phyſicians are much converſant about the *Beds* of the Sick.

It was, however, principally the Phyſicians of Emperors that were call'd by this Title. (*Raderus* on *Martial*, *Roſweid*, and *Hoffman.*)

*Medicina* CLINICA, was particularly us'd for the Method of viſiting and treating ſick Perſons a-bed, for the more exact Diſcovery of all the Symptoms of the Diſeaſe. See MEDICINE.

*Le Clerc* obſerves, that *Æſculapius* was the firſt who exercis'd the *Medicina Clinica*.

CLINIC is now ſeldom us'd but for a *Quack*; or rather for an empyrical Nurſe, who pretends to have learnt the Art of curing Diſeaſes by attending on the Sick. See PHYSICIAN.

CLINOIDES, in Anatomy, an Epithet given to three internal Apophyſes of the *Os Sphenoides*, one of the Bones of the *Cranium*; ſo called, ſay ſome, from their reſembling the Feet of a *Bed*. See SPHENOIDES.

Two of theſe are anterior, or before; the third poſterior, behind: The three together form a little Cavity, from its Shape call'd *Sella Turcica*, or *Equina*; wherein is plac'd the Pituitary Gland. See SELLA, and PITUITARY *Gland*.

The Word is form'd of the *Greek* κλίνη, *a Bed*, and εἶδος, *form*; either from the three Bones which reſemble the Feet of a Bed; or from the Cavity they form, which reſembles a Bed it ſelf.

CLITORIDIS *Muſculi*, in Anatomy. See ERECTOR *Clitoridis*.

CLITORIS, in Anatomy, a long round Body in the Forepart of the *Vulva*, or Natural Parts of a Woman; being one of the principal Organs of Generation in that Sex. See GENERATION.

Its Figure repreſents that of a Gland, or Acorn: ordinarily 'tis pretty ſmall, but in ſome Women thick, and long.

In many reſpects it repreſents the Penis of a Man; whence ſome call it the *Woman's Yard*. See PENIS.

In effect, it is compos'd of the ſame Parts; has, like it, two cavernous, or ſpongious Bodies; and a Glans at the Extremity, cover'd with a *Præputium*; but is not pierced thro' like the Penis. See GLANS, PREPUCE, &c.

It has two Muſcles which erect it in Coition; on which occaſion it ſwells and grows hard. Some Anatomiſts ſay, too, it has two *Muſculi Ejaculatores*. See ERECTOR, &c.

Its Senſation is exquiſite; and 'tis found the chief Seat of Pleaſure: hence ſome Women are apt to abuſe it.

The Extremity of this Part is ſometimes cut off; as in Circumciſion, and where it advances out too far. 'Tis ſometimes ſo large and propendent, that it bears a full reſemblance to the virile Member; whence the Perſons in whom 'tis ſo found, frequently paſs for *Hermaphrodites*. See HERMAPHRODITE.

The ſpongious Bodies of the *Clitoris*, ariſe diſtinctly from the lower Parts of the *Os Pubis*; and approaching one another, unite, and form the Body of the *Clitoris*. Before their Union they are called the *Crura Clitoridis*; and are twice as long as the Body of the *Clitoris*. See CRURA.

Its Muſcles ariſe from the Protuberance of the *Iſchium*, and are inſerted into its ſpongious Bodies. It has Veins and Arteries from the Hemorrhoidal Veſſels, and Pudenda; and Nerves from the Intercoſtals.

CLOACA, among the Antients, was a ſubterraneous Aqueduct; or a Common-ſhore, or Canal, for the Reception and Diſcharge of the Filth of a City, or a Houſe.

*Tarquinius Priſcus* is ſaid to have been the firſt who contrived *Cloaca* in antient *Rome*; to which end, a Canal was firſt dug thro' the Mountains, whereon the City ſtood, and divided into three Branches, call'd the *great Cloaca*.

The Care and Inſpection of the *Cloacæ* belong'd to the Cenſors, till the Time of *Auguſtus*, who appointed *Curatores Cloacarum*, on purpoſe.

They had their *Cloacina*, or Goddeſs who preſided over the *Cloacæ*.

The Word is compounded of the *Greek* κλύζω, *purgo*.

CLOCK, an Automaton, or Machine, ſerving to meaſure and ſtrike Time. See TIME.

The uſual Movements are *Watches*, and *Clocks*: the former, in ſtrictneſs, are ſuch as ſhew the Parts of Time; the latter ſuch as publiſh it by ſtriking: Tho the Name *Watch* is ordinarily appropriated to Pocket-*Clocks*, and that of *Clocks* to larger Machines; whether they ſtrike or no.

The Parts common to both Kinds of Movements, ſee under the Article MOVEMENT.

Thoſe peculiar to Watches and *Clocks*, ſee under WATCH-*Work*, and CLOCK-*Work*.

The Invention of *Clocks* with Wheels, is referr'd to *Pacificus* Archdeacon of *Verona*, who liv'd in the Time of *Lotharius*, Son of *Louis le Debonnaire*; on the Credit of an Epitaph quoted by *Ughelli*, and borrow'd by him from *Panvinius*.

It was at firſt called the *Nocturnal Clock*; to diſtinguiſh it from the Dials, which ſhew'd the Hour by the Sun's Shadow. Others aſcribe it to *Boethius*, about the Year 510.

Mr. *Derham* makes *Clock-work* of a much older ſtanding; and ranks *Archimedes*'s Sphere, mention'd by *Claudian*; and that of *Poſidonius*, mention'd by *Cicero*, among the Machines of this Kind; not that either their form or uſe were the ſame with thoſe of ours: but that they had their Motion from ſome hidden Weights, or Springs, with Wheels or Pullies, or ſome ſuch *Clock-work* Principle. Thus he underſtands the *Incluſus variis famulatur ſpiritus Aſtris; & vivum certis motibus urget opus*.

Be this as they will, 'tis certain the Art of making *Clocks*, ſuch as are now in uſe, was either firſt invented, or at leaſt retriev'd in *Germany*, about 200 Years ago.

The *Water-Clocks*, or *Clepſydræ*, and Sun-Dials, have, both, a much better Claim to Antiquity. See CLEPSYDRA, and DIAL.

The *French* Annals mention one of the former Kind, ſent by *Aaron* King of *Perſia* to *Charlemaign*, about the Year 807, which ſeem'd to bear ſome reſemblance to the modern *Clocks*: It was of Braſs, and ſhew'd the Hours by twelve little Balls of the ſame Metal, which fell at the End of each Hour, and in falling ſtruck a Bell and made it ſound. There were alſo Figures of twelve Cavaliers, which at the End of each Hour came forth at certain Apertures, or Windows in the Side of the *Clock*, ſhut 'em again, &c.

Among the modern *Clocks*, the moſt eminent for their Furniture, and the Variety of their Motions and Figures, are thoſe of *Strasbourg*, of *Lunden*, and of *Lyons*. In the firſt, a Cock claps his Wings, and proclaims the Hour; the Angel opens a Gate and ſalutes the Virgin; the Holy Spirit deſcends on her, &c. In the ſecond, two Horſemen encounter, and beat the Hour on each other; a Door opens, and there appears on a Theater the Virgin, with Jeſus Chriſt in her Arms; the *Magi*, with their Retinue, marching in order, and preſenting their Gifts; two Trumpeters ſounding all the while to adorn the Proceſſion. See *Scottus*; ſee alſo *Salmaſius* on *Solinus*; *Maſius de Tintinnabulis*, and *Kircher* in his *Muſæum Romanum*, and *Ædep. Ægypt.*

The Invention of *Pendulum Clocks* is owing to the happy Induſtry of the laſt Age: The Honour of it is diſputed between *Huygens* and *Galileo*. The former, who has a juſt Volume on the Subject, declares it was firſt put in practiſe in the Year 1657, and the Deſcription thereof printed in 1658. *Becher*, *de nova Temporis dimetiendi Theoria*, *Anno* 1680, ſtickles for *Galileo*; and relates, tho at ſecond hand, the whole Hiſtory of the Invention: adding, that one *Treſſler*, Clock-maker to the Father of the then grand Duke of *Tuſcany*, made the firſt Pendulum-*Clock* at *Florence*, by direction of *Galilæus à Galileo*; a Pattern of which was brought into *Holland*.

The Academy *de l'Cimento* ſay expreſly, that the Application of the Pendulum to the Movement of a *Clock* was firſt propos'd by *Galileo*, and firſt put in practiſe by his Son *Vincenzo Galilei*, in 1649.

Be the Inventor who he will, 'tis certain the Invention never flouriſh'd till it came into *Huygens*'s hands, who inſiſts on it, that if ever *Galileo* thought of ſuch a thing, he never brought it to any degree of Perfection.

The firſt Pendulum-*Clock* made in *England*, was in the Year 1622, by M. *Fromantil* a *Dutchman*. See PENDULUM.

*Pendulum*-CLOCK. See PENDULUM-*Clock*.

*Pocket*-CLOCK. } See WATCH.
*Repeating*-CLOCK. }

CLOCK-*Work*, is that Part of a Movement which ſtrikes the Hour, &c. on a Bell. See MOVEMENT.

The Wheels it conſiſts of are the *great*, or *firſt* Wheel; which is that the Weight, or Spring firſt drives: in ſixteen or twenty hour *Clocks*, this has uſually Pins, called the *Pin-Wheel*; in eight day Pieces, the ſecond Wheel is commonly the Pin-Wheel, or *Striking-Wheel*. Next the Striking-Wheel, is the *Detent-Wheel*, or *Hoop-Wheel*, having a Hoop almoſt round it, wherein is a Vacancy at which the *Clock* locks. The next is the *third*, or *fourth Wheel*, according to its diſtance from the firſt. The laſt is the *flying Pinion*; with a Fly, or Fan to gather Air, and ſo bridle the Rapidity of the *Clock's* Motion. To theſe muſt be added the *Pinion of Report*; which drives round the *Locking-Wheel*, called alſo the *Count-Wheel*; ordinarily with eleven Notches in it, unequally diſtant, to make the *Clock* ſtrike the Hours. See WHEEL.

Beſides the Wheels, to the *Clock*-part belongs the *Raſh*, or *Ratch*; a kind of Wheel of twelve large Fangs, running concentrical to the *Dial-Wheel*, and ſerving to lift up the *Detents* every Hour, and make the *Clock* ſtrike: The *Detents*, or Stops, which being lifted up, and let fall, lock and unlock the *Clock* in ſtriking. The *Hammers* which ſtrike the Bell; the *Hammer-tails*, by which the ſtriking Pins draw back the Hammers; *Latches*, whereby the Work is lifted up and unlocked; and *Lifting-pieces*, which lift up and unlock the Detents.

*Theory and Calculation of* CLOCK-*Work*.

The Method of calculating the Numbers of a piece of *Clock-Work*, having ſomething in it very pretty, and at the ſame time very eaſy and uſeful, we ſhall give the Reader the Rules relating thereto; referring, for the general Rules that obtain in the Calculation of all Movements, of *Watch* as well as *Clock-Work*, to the Article MOVEMENT; and for the particular Rules of *Watch-Work*, to the Article WATCH-*Work*.

For the ſtrict Calculation it ſelf, it bears that affinity to the Calculation of Watch-Work, that to avoid Repetitions we ſhall refer to that Head: what *Clock-Work* has peculiar to it ſelf, will be conceiv'd from what follows.

*Rules for calculating the ſtriking Part of a* CLOCK.

1ſt then, Obſerve that regard, here, needs only to be had to the Count-Wheel, Striking-Wheel, and Detent-Wheel, which move round in this proportion: the Count-Wheel commonly goes round once in 12 or 24 Hours; the Detent-Wheel moves round every ſtroke the *Clock* ſtrikes, or ſometimes but once in two Strokes; wherefore, it follows, that,

2dly, As many Pins as are in the Pin-Wheel, ſo many Turns hath the Detent-Wheel in one Turn of the Pin-Wheel; (or which is the ſame) the Pins of the Pin-Wheel are the Quotients of that Wheel, divided by the Pinion of the Detent-Wheel. But if the Detent-Wheel moveth but once round in two Strokes of the *Clock*, then the ſaid Quotient is but half the number of Pins.

3dly, As many Turns of the Pin-Wheel as are requir'd to perform the Strokes of 12 Hours, (which are 78) ſo many Turns muſt the Pinion of Report have, to turn round the Count-Wheel once: Or thus, the Quotient of 78, divided

vided by the Number of ſtriking Pins, ſhall be the Quotient for the Pinion of Report and the Count-Wheel; and this is in caſe the Pinion of Report be fix'd to the Arbor of the Pin-Wheel, which is commonly done.

An Example will make all plain: The Locking-Wheel being 48, the Pinion of Report 8, the Pin-Wheel 78, the Striking-Pins are 13, and ſo of the reſt. Note alſo, that 78 divided by 13 gives 6, the Quotient of the Pinion of Report. As for the Warning-Wheel and Flying-Wheel, it matters little what Number they have; their uſe being only to bridle the Rapidity of the Motion of the other Wheels.

8) 48 (6.
6) 78 (13.
6) 60 (10.
6) 48 (8.

The following Rules will be of good ſervice in this Calculation.

1. *To find how many Strokes a Clock ſtrikes in one turn of the Fuſy, or Barrel.* As the Turns of the great Wheel, or Fuſy, are to the Days of the *Clock*'s continuance; ſo is the number of Strokes in 24 Hours, *viz.* 156, to the Strokes of one Turn of the Fuſy.

2. *To find how many Days the Clock will go.* As the Strokes in 24 Hours are to thoſe in one turn of the Fuſy; ſo are the Turns of the Fuſy to the Days of the *Clock*'s going.

3. *To find the Number of Turns of the Fuſy, or Barrel.* As the Strokes in one turn of the Fuſy are to thoſe of 24 Hours; ſo is the *Clock*'s continuance to the Turns of the Fuſy, or great Wheel.

4. *To fix the Pin of Report on the Spindle of the great Wheel.* As the Number of Strokes in the *Clock*'s continuance is to the Turns of the Fuſy; ſo are the Strokes in 12 Hours, *viz.* 78, to the Quotient of the Pinion of Report, fix'd on the Arbor of the great Wheel.

5. *To find the Strokes in the Clock's continuance.* As 12 is to 78, ſo are the Hours of the *Clock*'s continuance to the Number of Strokes in that time.

*To add* Chimes *to a piece of* Clock-*Work*, ſee the Article Chimes.

CLOISTER, a Habitation ſurrounded with Walls, and inhabited by Canons and Religious. See Canon, &c.

In a more general Senſe, *Cloiſter* is us'd for a Monaſtery of Religious of either Sex. See Monastery.

In a more reſtrain'd Senſe, *Cloiſter* is us'd for the principal Part of a Regular Monaſtery, conſiſting of a Square built around; ordinarily, between the Church, the Chapter, and the Refectory; and over which is the Dormitory. See Dormitory, &c.

The *Cloiſters* ſerv'd for ſeveral Purpoſes in the antient Monaſteries. 1ſt, *Peter de Blois* obſerves, that it was here the Monks held their Lectures: The Lecture of Morality at the North ſide, next the Church; the School on the Weſt, and the Chapter on the Eaſt; Spiritual Meditation, &c. being reſerv'd for the Church.

*Du Cange* concludes, that all theſe different Exerciſes were perform'd in the *Cloiſter* it ſelf; but by miſtake. The Church, the Chapter, and the School were not Parts of the *Cloiſter*, but Buildings adjoining to it.

*Lanfranc* obſerves, that the proper Uſe of the *Cloiſter* was for the Monks to meet in, and converſe together, at certain Hours of the Day.

The Form of the *Cloiſter* was ſquare; and it had its Name, as being incloſ'd on its four Sides with Buildings.

Hence, in Architecture, a Building is ſtill ſaid to be in form of a *Cloiſter*; when there are Buildings on each of the four Sides of the Court.

CLOSE, in Heraldry, when any Bird, addicted to flight, is drawn in a Coat of Arms with its Wings *cloſe* down about it, and not either flying or diſplay'd, *i. e.* in a ſtanding Poſture, they blazon it by the Word *Cloſe*. See Vol.

If it be flying, they call it *Volant*.

*Cloſe* is not apply'd to the Peacock, Dunghill-Cock, &c. in regard that is their ordinary poſture.

The Term *Cloſe* is likewiſe us'd for the Barnacles, or Bits of a Bridle, when not extended, as they are uſually bore.

It is alſo us'd for the Bearing of a Helmet, with the Vizor down: A Barnacle *Cloſe*, a Helmet *Cloſe*, &c.

Close, in Muſick. See Cadence.

Close-*Fights*, a-board a Ship, are Bulk-heads put up fore and aft in the Ship, for the Men to ſtand behind in a *cloſe* Engagement, and fire on the Enemy; or if the Ship be boarded, to ſcour the Decks.

CLOSET, is a Term in Heraldry, ſignifying the half of a Bar. See Bar.

The Bar ought to contain one fifth Part of the Eſcutcheon, as the Feſſe doth the third.

CLOTH, in Commerce, in its general Senſe, includes all Kinds of Stuff, wove or manufactur'd on the Loom, whether their Threads be of Wool, or Flax. See Stuff, Loom, Weaving, &c.

In its more reſtrain'd Senſe, *Cloth* is peculiarly apply'd to a Web, or Tiſſue of woolen Threads, interwoven; whereof ſome, called the *Warp*, are extended lengthwiſe, from one end of the Piece to the other; the reſt, called *Woof*, diſpos'd a-croſs the firſt, or breadthwiſe of the Piece. See Woof, and Warp.

*Cloths* are wove on the Loom as well as Linens, Druggets, Serges, Camelots, &c. They are of various Qualities, fine, coarſe, ſtrong, &c. ſome made of Wool of different Colours; *i. e.* the Wools being dy'd and dreſs'd, are either ſpun, or wove: others are wrought white, deſtin'd to be dy'd in ſcarlet, black, blue, green, yellow, &c.

Their Widths and Lengths are various, according to the Places where they are manufactur'd. See Spinning, &c.

*The goodneſs of* Cloth conſiſts in the following Circumſtances. 1ſt, In the Wool's being fine and well dreſs'd. See Wool.

2d, In its being ſpun equally; always obſerving, however, that the Thread of the Warp be finer and better twiſted than that of the Woof. 3d, In the *Cloth*'s being well wrought and beaten on the Loom, ſo as to be every where equally cloſe and compact. See Weaving.

4th, In the Wool's not being finer and better at one End of the Piece than in the reſt. 5. In the Liſts being ſufficiently ſtrong, and of the ſame Length with the Stuff; and that they conſiſt of good Matter, as Wool, Oſtrich Feathers, or the Hair of *Daniſh* Dogs; which laſt is the beſt. 6. In the *Cloth*'s being well clear'd of the Knots and other Imperfections. 7. In its being firſt well ſcour'd with good Fullers-Earth, then full'd with the beſt white Soap, and waſh'd out in clear Water. 8. In the Hair, or Nap's being well drawn out with the Teazle, or Thiſtle, on the Pole, without being too much open'd. 9. In its being ſhorn cloſe; yet without laying the Ground or Thread bare. See Sheering.

10. In its being well dy'd. See Dying.

11. In its not being ſtretch'd, or pull'd farther than is neceſſary to ſet it ſquare, and bring it to its juſt Length and Breadth. See Stretching.

12. In its only being preſs'd cold; hot-preſſing being an utter Enemy to *Cloth*. See Pressing.

*Manufacturing of fine* Cloths *in white, for dying.*

The beſt Wools for the Purpoſe are thoſe of *England* and *Spain*; eſpecially thoſe of *Lincolnſhire*, and *Segovia*.

To uſe them to the beſt advantage; when taken out of the Bales, they muſt be ſcour'd, by putting 'em in a Bath ſomewhat more than luke-warm, compos'd of three Parts of fair Water, and one of Urine. After the Wool has continu'd long enough in the Bath to diſſolve and looſen the Greaſe, it is taken out, drain'd, and waſh'd in a running Water: 'Tis known to be well ſcour'd, when it feels dry to the touch, and has no ſmell but the natural Smell of the Sheep.

In this ſtate 'tis hung out to dry in the Shade; the heat of the Sun being apt to make it harſh, and untractable. When dry, 'tis beat with rods on Hurdles of Wood, or on Ropes, to clear out the Duſt and groſſer Filth: The more it is thus beat and clean'd, the more ſoft it becomes, and the better it ſpins.

After beating, it is well pick'd, to clear the reſt of the Filth, that had eſcap'd the Rods.

'Tis now in a State to be oil'd, and carded on large Iron Cards, plac'd a-ſlope. The beſt Oil for the Purpoſe is Oil of Olives; one fifth of which, at leaſt, ſhould be us'd for the Wool deſtin'd for the Woof, and a ninth for that of the Warp.

'Tis now given out to the Spinners; who firſt card it on the Knee, with ſmall fine Cards; then ſpin it on the Wheel: obſerving to make the Thread of the Warp ſmaller by one third than that of the Woof, and much cloſer twiſted; in order to this, the latter muſt be ſpun with the Band, or String open, and the former with it croſs'd.

The Thread thus ſpun, reel'd, and made into Skeins, that deſtin'd for the Woof is wound on Spools, *i. e.* on little Tubes, or pieces of Paper, or Ruſhes, ſo diſpos'd as that they may be eaſily put in the Eye of the Shuttle. That for the Warp is wound on a kind of Rochets, or large wooden Bobbins, to diſpoſe it for warping. See Shuttle, and Warping.

When warp'd, 'tis ſtiffen'd with Size; whereof, that made of ſhreds of Parchment is the beſt; and when dry, is given to the Weavers, who mount it on the Loom.

The Warp being on the Loom, the Weavers, who are two to each Loom, one on each ſide, tread at the ſame time, alternately, on the ſame Treddle; *i. e.* now on the right Step, and now on the left, which raiſes and lowers the Threads of the Warp equally; between which they throw, tranſverſly, the Shuttle from the one to the other. And each time that the Shuttle is thrown, and ſo a Thread of the Woof inſerted within the Warp, they ſtrike it conjointly with the ſame Frame wherein is faſten'd the Comb, or Reed, between whoſe Teeth the Threads of the Warp are paſs'd; repeating the Stroke as often as is neceſſary; in ſome *Cloths* no leſs than 12 or 13 times, *viz.* ſix with the Warp open, and ſeven ſhut.

It

It may be obſerv'd, that the more the Threads of the Woof are ſtruck againſt each other, the cloſer the *Cloth* is: hence it becomes enabled to ſuſtain the Violence of the Fulling-Mill, as well as of the Teazel, or Fulling-Thiſtle, without fretting or opening.

The Weavers having continu'd their Work till the whole Warp is fill'd with Woof, the *Cloth* is finiſh'd: 'Tis taken off the Loom, by unrolling it from the Beam whereon it had been roll'd, in proportion as it was wove; and now given to be clear'd of the Knots, ends of Thread, Straws, and other Filth; which is done with little Iron Pinchers.

In this Condition 'tis carried to the Fullery, to be ſcour'd with Urine, or a kind of glaz'd Earth well clean'd and ſteep'd in Water, put along with the *Cloth* in the Trough, wherein it is fulled.

The *Cloth* being again clear'd from the Earth, or Urine, by waſhing it in Water, is return'd to the former Hands, to have the leſſer Filth, ſmall Straws, and almoſt imperceptible Knots taken off as before: then 'tis return'd to the Fuller, to be beat, and full'd with hot Water, wherein five or ſix Pounds of Soap have been diſſolv'd. The Soap moſt eſteem'd is the white, eſpecially that of *Genoa*. After fulling an Hour and a half, 'tis taken out to be ſmooth'd, *i. e.* to be pull'd by the Liſts lengthwiſe, to take out the Wrinkles and Creaſes occaſion'd by the Force of the Mallets, or Peſtles falling on the *Cloth* when in the Troughs.

The Smoothing is repeated every two Hours, till the Fulling be finiſh'd, and the *Cloth* brought to its proper Breadth: after which, it is waſh'd in clear Water, to purge it of the Soap, and given, all wet, to the Carders, to raiſe the Hair, or Nap, on the right Side, with the Thiſtle, or Weed; wherewith they give it two courſes, the firſt again the Grain, from Tail to Head; the ſecond with the Grain, from Head to Tail.

The *Cloth* being dry'd after this Preparation, the Sheerman takes it, and gives it its firſt cut, or ſheering.

This done, the Carders reſume it, and after wetting it, give it as many more courſes with the Weed as the quality of the Stuff requires: always obſerving to begin againſt the Hair, and to end with it; and to begin with a ſmoother Weed, proceeding ſtill to a ſharper and ſharper, as far as the ſixth degree.

After this, the *Cloth* being dry'd, is return'd to the Sheerman, who ſheers it a ſecond time, and returns it to the Carder; who wetting it, gives it as many courſes as he thinks fit, dries it, and gives it back again to the Sheerman; who after ſheering it the third and laſt time, returns it to the Carders, who repeat their Operation as before, till the Hair, or Nap, be well rang'd on the Surface of the *Cloth*, from one end of the Piece to the other.

It muſt be obſerv'd, that 'tis indifpenſibly neceſſary the *Cloth* be wet, while in the Carders hands; in order to which, 'tis ſprinkled from time to time with Water.

The Nap finiſh'd, and the *Cloth* dry'd, the Sheerman gives it as many cuts as he thinks requiſite for the Perfection of the Stuff. It muſt alſo be obſerv'd, that all the Sheerings muſt be on the right Side, except the two laſt, which muſt be on the other; and that the *Cloth* can't be too dry for Sheering.

The *Cloth* thus *wove*, *fulled*, *nap'd*, and *ſhorn*, is ſent to the Dyer. See DYING.

When dy'd, 'tis waſh'd in fair Water, and the Sheerman takes it again, wet as it is, lays the Hair, or Nap, with a Bruſh on a Table, and hangs it on the Tenters; where it is ſtretch'd both in length and breadth, enough to ſmooth it, ſet it ſquare, and bring it to its proper Dimenſions, without ſtraining it too much; obſerving to bruſh it afreſh, the way of the Hair, while yet a little moiſt on the Tenter.

When quite dry, the *Cloth* is taken off from the Tenter, and bruſh'd again on the Table, to finiſh the laying of the Hair: 'Tis then folded, and laid cold under a Preſs, to make it perfectly ſmooth and even, and to give it a little Luſtre.

The Luſtre is given by laying a Leaf of Vellom, or fine Paſtboard in each Plait of the Piece; and over the whole a ſquare Plank of Wood: on which, by means of a Lever, the Screw of the Preſs is brought down, with the degree of Force judg'd neceſſary, with regard to the Quality of the *Cloth*.

There are none but Scarlets, Greens, Blues, *&c.* which receive this laſt Preparation; Blacks needing it not.

Laſtly, the *Cloth* being taken out of the Preſs, and the Paſtboards remov'd; it is in a condition for Sale or Uſe.

*For the Manufacture of mix'd* CLOTHS, or thoſe wherein the Wools are firſt dy'd, then mix'd, ſpun, and wove of the Colours intended; the Proceſs, except in what relates to the Colour, is moſtly the ſame with that juſt ſpoke of.

The Method of adjuſting the Mixture, is by firſt making a Felt of the Colours of the intended *Cloth*, as a Specimen: The Wool of each Colour is weigh'd, and when the Specimen is to the Manufacturer's Mind, he mixes, for uſe, a Quantity in the ſame proportion; eſtimating each Grain of the Specimen at 20 Pounds weight of the ſame Wool in the *Cloth* to be made.

Thus, if he would mix three Colours, *v. g.* Coffee Colour, Feuillemort, and pale Blue, the firſt to be the prevailing Colour; he weighs a Quantity of each: for inſtance, 70 Grains of the firſt, 25 of the ſecond, and 20 of the third; then multiplies each by 20 Pounds of Wool; and thus gains 1400 Pounds for the Coffee Wool; 500 Pounds for the Feuillemort, and 400 for the pale Blue.

The Wools of the Specimen thus weigh'd, are mix'd, oil'd, carded, moiſten'd with clear Water, rubb'd with black Soap, and in this ſtate wrought a long time in the Hands; till being perfectly full'd, they are reduc'd into a piece of Felt, like that us'd by Hatters.

'Tis then rinſed in Water, to purge out the Oil and Soap; and when dry, the Hair, or Nap is carded out with the Weed; then ſhorn once again, till the Ground appear, and the ſeveral Colours be diſcoverable.

Laſtly, wetting it a little, and preſſing it, he examines it well, and if he be not contented with it, makes another Felt; if he be, he proceeds to mix his Wools: when mix'd, 'tis beat on Hurdles, clean'd, oil'd, carded, ſpun, wove, *&c.* as in white *Cloth*.

*Incombuſtible* CLOTH. See LINUM *Incombuſtibile*.

CLOUD, in Phyſiology, a Collection of condens'd Vapour. See VAPOUR.

A *Cloud* is a Congeries of watery Particles, or *Veſiculæ* rais'd from the Waters or watery parts of the Earth, by the ſolar, or ſubterraneous Heat, or both; which at their firſt riſe from our Globe, are too minute to be perceiv'd; but as they mount, meeting with a greater degree of cold, are condens'd, and render'd opaque by the reunion of their Parts; ſo as to reflect Light, and become viſible. See CONDENSATION.

The manner wherein Vapours are rais'd into *Clouds* may be conceiv'd thus:

Fire being of a light, agil Nature, eaſily breaks looſe from Bodies wherein 'tis detain'd: *For the manner whereof, ſee* BOILING.

Now, by reaſon of the exceeding ſmallneſs of the Particles of Fire, their attractive Force muſt be exceeding great: hence, in their Aſcent thro' fluid Bodies, part of the Fluid will cling around them, and mount up together with them, in form of Veſicles of Water replete with Particles of Fire; which Veſicles are what we call *Vapour*. See FIRE, and VAPOUR.

Further, this Vapour being ſpecifically lighter than Air, mounts in it, till having reach'd ſuch a Region of the Atmoſphere as is of the ſame ſpecific Gravity with themſelves, they will be ſuſpended; till the watery Veſicles, which were at firſt too thin to be perceiv'd, being now condens'd by the Cold of the ſuperior Regions; and their included igneous Particles extinct, or at leaſt driven into a leſs compaſs, and conſequently the Parts ſet cloſer together; their Denſity is firſt augmented ſo as to render 'em opaque enough to reflect the Sun's Light, and become viſible; and their ſpecific Gravity increas'd, ſo as to make 'em deſcend: in the former State they are called *Clouds*; and in the latter, when they arrive at us, *Rain*. See RAIN; ſee alſo BAROMETER.

*Clouds*, beſide their uſe when they deſcend in Rain, are likewiſe of uſe while ſuſpended in the Atmoſphere; as they help to mitigate the exceſſive Heat of the Torrid Zone, and ſcreen it from the Beams of the Sun, eſpecially when in his Zenith.

CLOVE, an aromatic Fruit, bore on a Tree of the ſame Name; by the *Latins* alſo called *Caryophillum*. See SPICE.

This Tree was antiently very common in the *Molucco* Iſlands; where all the *European* Nations, who traffick in Spices to the *Indies*, furniſh'd themſelves with what quantity of *Cloves* they requir'd. At preſent there are ſcarce any found but in the Iſland of *Ternate*: the *Dutch*, in order to render themſelves Maſters of that Merchandiſe, having dug up the *Clove*-Trees of the *Moluccos*, and tranſplanted them to *Ternate*; ſo that there are none now to be had but thro' their Hands.

The Tree is very large; it only bears Fruit once in eight Years, but holds, at this rate, an hundred. Its Bark reſembles that of the Olive-Tree, and its Leaves thoſe of the Laurel: Its Fruit falling, takes root, and thus multiplies of it ſelf without any culture. 'Tis ſaid, it will not allow any other Herb or Tree near it; its exceſſive heat drawing to it all the Humidity of the Soil.

When the *Clove* firſt begins to appear, it is of a greeniſh white; as it ripens it grows brown: Nor is there any Preparation neceſſary in order to render it ſuch as it comes to us, but to dry it in the Sun; whatever ſome Authors talk of firſt ſteeping it in Sea-Water, to preſerve it from Worms.

The Fruit is ſomewhat in form of a Nail; whence the Term *Clove*, from the French *Clou*, Nail.

Towards the Head it ſeparates into four; the four Quarters being made angle-wiſe, and their Apices meeting at the top, form a kind of Crown, ſomewhat in the antique manner.

They muſt be choſen dry, brittle, ſharp to the Touch, well grown, of a duſky red Colour; a hot aromatic Taſte, an agreeable Smell, and, if poſſible, with the Fuſt, or Button.

Their Properties are to warm and dry, to correct a fetid Breath, ſharpen the Sight, diſſipate Films in the Eyes, fortify the Stomach and Liver, and ſtop Vomiting. They are us'd in Apoplexies, Palſies, Lethargies, and other Diſeaſes of the Brain.

Such of the Fruit as eſcape the Gatherers, grow and ſwell on the Tree, and become full of a Gum us'd in Medicine, called *Mother of Cloves*.

There is alſo an Oil drawn from *Cloves* by Diſtillation; which, when new, is of a gilded white Colour, but reddens as it grows old: 'tis us'd in Medicine as a ſovereign Remedy for the Tooth-ach, and in Compoſitions with the ſame View as the Fruit. It is alſo much us'd among the Perfumers.

The Natives call the Tree *Chamque*, the *Perſians* and *Arabs Karumſel*, and the *Turks Kalafour*. They make ſeveral Preparations both of the Flowers and Fruit.

CLOUGH, or *Draught*, in Commerce, an Allowance of two Pounds in every hundred Weight for the turn of the Scale; that the Commodity may hold out weight when ſold out by retail.

CLUNY, or CLUGNY, a celebrated Abbey of *Benedictin* Monks, in a City of that Name; being the Head, or Chief of a Congregation denominated from them. See ABBEY, and BENEDICTINS.

It is ſituate in the *Maſonnois*, a little Province of *France*, on the River *Grône*; and was founded by *William* Duke of *Berry* and *Aquitain*; or, as others ſay, by the Abbot *Bernon*, ſupported by that Duke, in the Year 910.

This Abbey was antiently ſo very ſpacious and magnificent, that in 1245. after the holding of the firſt Council of *Lyons*, Pope *Innocent* IV. went to *Cluny*, accompanied with the two Patriarchs of *Antioch* and *Conſtantinople*, twelve Cardinals, three Archbiſhops, fifteen Biſhops, and a great number of Abbots; who were all entertain'd, without one of the Monks being put out of their place: tho S. *Louis*, Q. *Blanche* his Mother, the Duke of *Artois* his Brother, and his Siſter; the Emperor of *Conſtantinople*, the Sons of the Kings of *Arragon* and *Caſtile*, the Duke of *Burgundy*, ſix Counts, and a great number of Lords, with all their Retinue, were there at the ſame time.

*Cluny*, at its firſt Erection, was put under the immediate Protection of the Apoſtolick See; with expreſs Prohibition to all Secular and Eccleſiaſtick Powers, to diſturb the Monks in the Poſſeſſion of their Effects, or the Election of their Abbot. By this they pretended to be exempted from the Juriſdiction of Biſhops; which, at length, gave the Hint to other Abbies to inſiſt on the ſame. See ABBOT.

*Cluny* is the Head of a very numerous and extenſive Congregation: In effect, it was the firſt Congregation of divers Monaſteries united under one Chief, ſo as only to conſtitute one Body, or, as they call it, one Order, that ever aroſe. See CONGREGATION, and ORDER.

CLYPEUS, CLIPEUS, or CLYPÆUM, a Buckler; a piece of defenſive Armour, which the Antients us'd to carry upon the Arm, to ſecure them from the Blows of their Enemies. See SHIELD, and BUCKLER.

The Figure of it was either round, oval, or ſexangular: in the middle was a Boſs of Iron, or of ſome other Metal, with a ſharp point.

CLYSSUS, in Chymiſtry, is one of the Effects, or Productions of that Art; conſiſting of the moſt efficacious Principles of any Body, extracted, purify'd, and then re-mix'd. See CHYMISTRY.

Or, a *Clyſſus* is when the ſeveral Species, or Ingredients of a Body, are prepar'd and purify'd ſeparately, and then combin'd again. Thus, Salt, Sulphur, Oil, Spirit, and Mercury, reaſſembled into one Body, by long Digeſtion, *&c.* make a *Clyſſus*. Thus,

CLYSSUS *of Antimony*, is an agreeable acid Spirit, drawn by Diſtillation from Antimony, Nitre, and Sulphur mix'd together. See ANTIMONY.

There is alſo a *Clyſſus of Vitriol*, which is a Spirit drawn by Diſtillation from Vitriol diſſolv'd in Vinegar: this is us'd by Phyſicians in various Diſeaſes, and to extract the Tinctures of ſeveral Vegetables.

CLYSSUS is us'd among ſome Authors for a kind of *Sapa*, or Extract, made with eight Parts of the Juice of a Plant, and one of Sugar, ſeeth'd together into the Conſiſtence of Honey.

CLYSTER, in Medicine, a liquid Remedy, or Injection, introduc'd into the Inteſtines by the Fundament; in order to refreſh them, looſen the Belly, moiſten and ſoften the *Fæces*, diſſipate Wind, *&c.*

*Clyſters* are made of Bran-Water, and Milk, but more uſually of Decoctions of certain Herbs; to which are added Honey, brown Sugar, ſometimes Catholicon, and other Drugs.

*Clyſters* are either *Emollient*, *Carminative*, *Lenitive*, *Aſtringent*, *Laxative*, *Anodyne*, *Uterine*, *Antifebrific*, *Nouriſhing*, &c.

*Uterine* CLYSTERS, are Injections into the *Uterus*, or Womb. See PESSARY.

*Nouriſhing* CLYSTERS, are thoſe apply'd with deſign to nouriſh Perſons who cannot take in any Aliment at the Mouth. *Hildanus* tells us, that *Auberi*, a Phyſician, fed a Woman of Quality ſix Weeks by *Clyſters* compos'd of Capons Fleſh, and other Fowls, boil'd to a Pulp, with Yolks of Eggs, applied twice a Day.

'Tis difficult, however, to conceive how *Clyſters* ſhould nouriſh; and the Caſe is briſkly controverted in the Memoirs of the *French* Royal Academy, between M. *Littre*, who maintains the Negative, and M. *Lemery*.

The Arguments urg'd by the firſt, are, that the Materials of the *Clyſter*, for want of the ordinary Paſſage, want the neceſſary Preparations to be converted into Nouriſhment; and beſide that, are out of the Road for getting into the Blood: For in the firſt of the large Inteſtines, call'd the *Cæcum*, is a Valve called *Valvula Bautuni*; to oppoſe the paſſage of any Food into the ſmall Inteſtines: And there are no Lacteal Veins in the large Inteſtines, but abundance in the ſmall ones. But the Lacteals are the only Canals that can carry the Chyle into its Receptacle, and the Chyle the only Subſtance that can nouriſh.

To this M. *Lemery* objects, that very great Anatomiſts have found Lacteals in the large Inteſtines, tho in ſmall number: But tho there were none, adds he, the Meſaraic Veins are indiſputably diſtributed to theſe Inteſtines; and may eaſily be ſuppos'd to pump the moſt ſubtil Part of a Broth, and carry it into the Blood. M. *Mery* has paſs'd a Liquor immediately from the large Inteſtines into theſe Veins; beſides that, the animal Machine is ſo porous thro'-out, that Nature ſeems to have intended an extraordinary way of conveying Fluids into the Blood, to be ready on extraordinary occaſions.

This Notion will appear inconteſtable, if M. *Morin*'s Theory of the Paſſage of the Urine be admitted. See URINE.

*Herodotus* ſays, the *Egyptians* were the firſt who invented *Clyſters*; or rather, who apply'd 'em to uſe. *Galen* and *Pliny* add, that they learnt the thing from a Bird of their Country, call'd *Ibis*; which they frequently obſerv'd to make this kind of Injection with its Beak, and afterwards to diſcharge it ſelf ſeveral times. Others ſay, that the *Ciconea*, or Stork, firſt taught Men the Application of *Clyſters*.

The Word comes from the *Greek* κλύω, *lavo*, *abluo*, I waſh.

CNEMODACTYLIUS, in Anatomy, a Muſcle, otherwiſe called *Extenſor tertii Internodii digitorum*. See EXTENSOR *tertii Internodii*, &c.

COACH, a Vehicle for commodious travelling, ſuſpended on Leathers, and mov'd on Wheels.

In *England*, and throughout *Europe*, the *Coaches* are drawn by Horſes, except in *Spain*, where they uſe Mules. In a part of the Eaſt, eſpecially the Dominions of the great *Mogul*, their *Coaches* are drawn by Oxen. In *Denmark* they ſometimes yoke Rein Deer in their *Coaches*; tho rather for Curioſity than Uſe.

The *Coachman* is ordinarily placed on a Seat rais'd before the Body of the *Coach*. But the *Spaniſh* Policy has diſplac'd him in that Country by a Royal Ordonnance; on occaſion of the Duke *d' Olivares*, who found that a very important Secret whereon he had conferr'd in his *Coach*, had been overheard, and reveal'd by his *Coachman*: Since that time, the Place of the *Spaniſh Coachman*, is the ſame with that of the *French* Stage-*Coachman*, and our Poſtillion, *viz.* on the firſt Horſe on the left.

The Invention of *Coaches* is owing to the *French*: yet are not *Coaches* of any great antiquity, even in *France*; ſcarce reaching beyond the Reign of their *Francis* I.

Their uſe, at their firſt riſe, was only for the Country: and Authors obſerve, as a thing very ſingular, that there were at firſt no more than two *Coaches* in *Paris*; the one that of the Queen, and the other that of *Diana*, natural Daughter of *Henry* II. The firſt Courtier who had one, was *Jean de Laval de Bois Dauphin*; whoſe enormous Bulk diſabled him from travelling on Horſeback.

One may hence judge how much Vanity, Luxury, and Softneſs have grown upon our Hands in later Days; there being now computed in that ſame City no leſs than 15000 *Coaches*.

*Coaches* have had the Fate of all other Inventions to be brought by ſteps and degrees to their Perfection; at preſent they ſeem to want nothing, either with regard to Eaſe or Magnificence. *Louis* XIV. of *France*, made ſeveral ſumptuary Laws for reſtraining the exceſſive Richneſs of *Coaches*, prohibiting the uſe of Gold, Silver, *&c.* therein; but they have had the Fate to be neglected.

*Coaches* may be divided into two Kinds; thoſe that have Iron Bows, and thoſe that have not: Both the one and the other have two principal Parts, the *Body*, and the *Train*, or Carriage.

The *Body* is that part where the Paſſengers are diſpos'd; and the *Carriage* that which ſuſtains the Body, and to which the Wheels are faſten'd, that give Motion to the whole Machine.

*Coaches* are diſtinguiſh'd, with regard to their Structure, into *Coaches*, properly ſo call'd, *Chariots*, *Calaſhes*, and *Berlins*. With regard to the Circumſtances of their

Uſe, &c. we diſtinguiſh *Stage-Coaches*, *Hackney-Coaches*, &c.

*Chariot*, or *Half-Coach*, is a kind of *Coach* that has only a Seat behind; with a Stool, at moſt, before. When theſe are very gay, richly garniſh'd, and have five Glaſſes, they are call'd *Calaſhes*.

*Calaſh* is alſo a kind of light ſmall *Coach*, with very low Wheels, richly adorn'd; us'd on occaſion of Pleaſure; and open on all ſides, to take the Air, and enjoy the Proſpect. There are of theſe *Calaſhes* with one, two, and three Seats; where the Perſons don't ſit facing one another, as in the common *Coaches*, but all forwards, each Seat having its back.

*Hackney* Coaches, thoſe expos'd to hire, in the Streets of *London*, and ſome other Capital Cities, at Rates fix'd by Authority.

Thoſe in *London* are under the Direction of Commiſſioners, who take cognizance of all Cauſes and Diſputes ariſing thereupon. They are diſtinguiſh'd by Numbers affix'd to the *Coach*-Doors; and the Fares, or Rates, fix'd by a Statute 14 *Car.* II. and confirm'd by another in the 5th and 6th of K. *William* III.

For a whole Day of twelve Hours the Fare is 10*s.* for a ſingle Hour 1*s.* 6*d.* for every Hour after the firſt 1*s.* At theſe Rates, they are oblig'd to carry Paſſengers any where within 10 Miles of *London*.

*Stage*-Coaches, are thoſe deſtin'd for the Conveyance of Travellers from one City or Town to another.

COADJUTOR, *q. d. a Fellow-helper*, is properly uſed for a Prelate join'd to another, to aſſiſt him in the Diſcharge of the Functions of his Prelature; and even, in virtue thereof, to ſucceed him.

The *Coadjutor* has the ſame Privileges with the Biſhop himſelf. See Bishop.

*Coadjutors* were appointed by the King, for Archbiſhops and Biſhops grown old, or abſent, and not able to adminiſter in their Dioceſes. But the Right of appointing *Coadjutors* is now reſerv'd to the Pope alone.

*Coadjutors* are called Biſhops *in partibus infidelium*; in regard it is neceſſary the *Coadjutor* of a Biſhop ſhould be a Biſhop himſelf; without which, he can't diſcharge the Offices.

The Uſe of *Coadjutors* in the Church, is borrow'd from the *Roman* Empire. *Symmachus* ſpeaks of Aſſiſtants, or *Coadjutors*, given to Magiſtrates; and calls them *Adjutores publici officii*.

The Popes, formerly, made a ſhameful Abuſe of the *Coadjutories*: Some they granted to Children, and young People, with this Clauſe, *Donec ingreſſus fuerit*; 'Till they were 'capable of entering upon the Adminiſtration of the Office.' Others they granted to Perſons not in Orders, with this Clauſe, *Donec acceſſerit*: and others to Perſons at a great diſtance, with this Clauſe, *Cum regreſſus*: But the Council of *Trent* ty'd down the Pope's Hands, by adding abundance of Reſtrictions upon the Article of *Coadjutors*.

In Nunneries they have *Coadjutrix's*; who are Religious nominated to ſucceed the Abbeſs, under pretence of aiding her in the Diſcharge of her Office. See Abbess.

COAGMENTATION, is uſed among Chymiſts, for the Act of melting down a Matter, by caſting in certain Pouders, and afterwards reducing the whole into a Concrete, or Solid.

COAGULATION, the condenſing or thickning of a fluid Matter, without its loſing any of the ſenſible Parts which occaſion'd its fluidity; as we frequently ſee in Blood, Milk, &c. See Fluid.

We diſtinguiſh between that kind of thickening which is effected by the Evaporation of the fluid Parts of a Body, as in Clay, which condenſes in the Sun, which we properly call *hardening*; and that effected without any loſs of its Subſtance, which we call *coagulating*. Thus, we ſay, that Cold *coagulates* Blood, &c.

There is one general Term, *viz. Concretion*, which includes both *Coagulation*, *Condenſation* and *Hardening*. See Concretion.

*Coagulation* is perform'd by the mixing of Salts of different Natures; as when Spirit of Vitriol is pour'd on Oil of Tartar; or when Oils are mix'd in a Mortar with ſaline, or aqueous Liquors, as in Nutrition.

By injecting an Acid into the Vein of an Animal, the Blood *coagulates*; which ſtops its Circulation, and brings immediate Death. See Blood.

Several Poiſons have their effect by inducing a *Coagulation*. See Poison.

COAL, a black, ſulphurous, inflammable Matter, dug out of the Earth; ſerving in many Countries as the common Fuel. See Fuel.

This we ſometimes call *Pit-Coal*, ſometimes *Sea-Coal*, *Foſſil-Coal*, *Earth-Coal*, and *Natural Coal*; to diſtinguiſh it from an Artificial Fuel made in imitation hereof, by half burning the Branches and Roots of Trees; properly call'd *Charcoal*, and *Smallcoal*. See Charcoal.

*Pit*-Coal is rank'd among the number of Minerals, and the Places it is dug out of are call'd *Coal-Mines*, or *Coal-Pits*. It is common in moſt Countries of *Europe*: tho the *Engliſh Coal* is of moſt repute, even in foreign Countries; notwithſtanding ſome pretend, that of the *Foſſe* in *Auvergne* is not any thing inferior to it.

The Goodneſs of *Coal* conſiſts in its being as free as poſſible from Sulphur, in its heating Iron well, and in its burning a long time in the Smith's Forge. The *Engliſh Coal* has this particular to it; that it never lights ſo perfectly as when Water is thrown on it.

The Commerce of *Coal* is very conſiderable in *England*; great Quantities are exported to *France*, &c. by way of *Rouen*. The Meaſure whereby they are ſold is the *Chaldron*; containing 36 *Buſhels*. See Bushel.

In the Memoirs of the *French* Royal Academy, we have an Account of two Experiments on the common *Pit-Coal*, made by M. *Des Landes* while in *England*, and which he thinks have eſcap'd the *Engliſh* Philoſophers.

1ſt, Pounding ſome *Coal*, and putting half an Ounce of it in a Viol of Water, the Mixture became quite black: but leaving it expos'd to the Air in a Window, during a cold Winter Night; in the Morning 'twas found frozen, and converted into a reddiſh Colour. The Reaſon of the Change muſt be, that the Froſt had diſengag'd the Sulphurs of the *Coal*: tho one would little expect ſuch an Effect from it.

2dly, From an Infuſion of *Cinders* in Brandy, mix'd with Iron Filings, ariſes a black Tincture, which brightens in proportion as it is heated; when arriv'd at the height of boiling, the Colour becomes perfectly fine and ſoft; and gives a Dye to Cloth, which no Workman can imitate.

The *Strata*, or Veins of *Coals* in *Coalpits* are numerous, and their Order, Qualities, &c. different in different Places. See Strata, and Vein.

In thoſe at *Dudley* in *Staffordſhire*, the *Strata*, below the Turf, two or three Clays, a grey Stone, and a hard grey Rock, are expreſs'd in the *Philoſophical Tranſactions* to be 1ſt, *Coal*, called *Bench-Coal*; 2d, *Slipper-Coal*, leſs black and ſhining than the former; 3d, *Spin-Coal*, more black and ſhining; 4th, *Stone-Coal*, much like *Canal-Coal*.

Theſe *Strata* have between each of 'em a *Bat*, or Bed, of a peculiar ſort of Matter, about the thickneſs of a Crown-Piece. Below theſe are divers metalline *Strata*; as a black Subſtance call'd the *Dun-row bat*; a grey Iron Ore, call'd the *Dun-row Iron-ſtone*; a bluiſh Bat, call'd *White-row*; a blackiſh Iron Ore, call'd *White-row grains*, or Iron-ſtone; a grey Iron Ore, call'd *Mid-row grains*; a black foſſil Subſtance, call'd the *Gubling bat*; a black Iron Ore, call'd *Gublin Iron-ſtone*; a dark grey Iron Ore, call'd *Rubble Iron-ſtone*: the *Table Bats*.

Then, 5°, comes a coarſe ſort of *Coal*, call'd *Foot-Coal*; a black brittle Bat: 6th, the *Heathen Coal*; 7th, a Subſtance like coarſe *Coal*; tho call'd a *Bat*, becauſe it does not burn well: And 8th, *Bench-Coal*.

*Small*-Coal is prepar'd from the Spray, and Bruſh Wood, ſtripp'd off from the Branches of Coppice Wood; ſometimes bound in Bavins for that purpoſe, and ſometimes prepar'd without binding.

The Wood they diſpoſe on a level Floor, and ſetting a Portion of it on fire, throw on more and more, as faſt as it kindles; whence ariſes a ſudden blaze, till all be burnt that was near the Place. As ſoon as all the Wood is thrown on, they caſt Water on the Heap, from a large Diſh, or Scoop; and thus keep plying the Heap of glowing *Coals*, which ſtops the Fury of the Fire, while with a Rake they ſpread it open, and turn it with Shovels till no more Fire appears. When cold, they are put up into Sacks for uſe.

*Char*-coal, ſee its Preparation under Charcoal.

COALITION, the reunion, or growing together of Parts before ſeparated. In this Senſe, the Word is us'd both in a Phyſical and a Moral Senſe.

COAST, a Sea-ſhore, or the Country adjoining to the Edge of the Sea. See Sea, &c.

COASTING, that Part of Navigation, wherein the Places aſſign'd are not far diſtant; ſo that a Ship may ſail in ſight of the Land, or within ſounding, between the Places.

Such are the Voyages on the Narrow, or *Britiſh* Seas, between *England*, *Holland*, and *France*; alſo thoſe about the *Britiſh* Seas, and in the *Mediterranean*, &c.

For the Performance hereof, there is only requir'd good knowledge of the Land, the Uſe of the Compaſs, and of the Lead, or Sounding-Line. See Compass, Sounding, &c.

Coasting, in Agriculture, &c. the tranſplanting of a Tree, and placing it in the ſame Situation, with reſpect to Eaſt, Weſt, North, &c. as it ſtood in before. See Planting, and Transplanting.

COAT *of Arms*, in Heraldry, a Cloke, or Habit bore by the antient Knights over their Arms, both in War, and at Tournaments; and ſtill bore by the Heralds at Arms. See Arms, Herald, &c.

It was a kind of Jacket, reaching only as low as the Navel; open at the Sides, with ſhort Sleeves; ſometimes furr'd with Ermins and Vair, whereon were apply'd the Armories of the Knight, embroider'd in Gold and Silver, and enamell'd with Colours of beaten Tin, colour'd black, green, red, and blue: whence the Rule, never to apply Colour on Colour, nor Metal on Metal.

The

The *Coats of Arms* were frequently open, and diverſify'd with Bands and Fillets of ſeveral Colours, alternately plac'd, as we ſtill ſee Cloths ſcarleted, water'd, *&c.* hence they were alſo call'd *Divizes*, or *Diviſes*; as being divided, or compos'd of ſeveral Pieces, ſew'd together; whence the Words, *Feſſe*, *Pale*, *Chevron*, *Bend*, *Croſs*, *Salteer*, *Lozenge*, &c. which have ſince made the honourable Pieces, or Ordinaries of the Shield. *See each in its Place*, FESSE, BEND, CROSS, *&c.*

*Coats of Arms*, and *Banners*, were never allow'd to be wore by any but Knights, and antient Nobles. See ESCUTCHEON, *&c.*

COAT *of Mail*, or *Jacques de Mail*, a kind of Armour made in form of a Shirt; conſiſting of Iron Rings wove together. See MAIL.

COAT, in Anatomy. See TUNIC.

COBALT, in Natural Hiſtory, a kind of Natural Cadmia, out of which is drawn Bizmuth, Arſenic, and Smalt. See CADMIA, BIZMUTH, ARSENIC, *&c.*

*Cobalt* uſually contains a little Silver. There are various Mines of *Cobalt*, eſpecially in *Saxony*; ſome in *France* and *England*.

COCCIFEROUS, in Botany, ſuch Plants, or Trees, as bear Berries. See BERRY.

COCCIGIS, or COCCÆ OS, in Anatomy, a Bone join'd to the Extremity of the *Os Sacrum*; compos'd of three or four Bones, whereof the lower is ſtill leſs than the upper, till the laſt ends in a ſmall Cartilage.

It reſembles a little Tail turned inwards; or rather, as ſome imagine, the Beak of a Cuckow; whence the Name. Its Uſe is to ſuſtain the ſtrait Gut: It yields to the Preſſure of the *Fœtus* in Women in travail; and Midwives uſe to thruſt it backwards; but ſometimes rudely and violently, which is the occaſion of great Pain, and ſeveral bad Effects.

COCCULUS *Indicus*, a poiſonous Narcotick Berry, known moſtly now to Poachers, who have got a trick of intoxicating Fiſh therewith, ſo as to take them out of the Water with their Hands; for which Reaſon they are called *Baccæ Piſcatoriæ*, Fiſhers Berries.

COCHINEAL, or COCHENEAL, a Drug us'd by the Dyers, *&c.* for giving red Colours, eſpecially Crimſons, and Scarlets. See RED, SCARLET, *&c.*

It is brought from the *Weſt Indies*: but Authors are divided as to its Nature; ſome taking it to be a kind of Worm, and others the Grain of a Tree. F. *Plumier*, the Minime, a celebrated Botaniſt, has maintain'd the former Opinion, and *Pomet* the latter.

It may perhaps be ſaid, that they are both equally diſtant from the Truth in the Deſcription they have given of *Cochineal*; and yet that there is both a *Cochineal* which is a Worm, and another a Grain. This Opinion is founded on the Account given by *Dampier*; who gives a preciſe Deſcription of each kind: If it ben't true, 'tis at leaſt more likely than any Opinion yet propos'd. His Deſcription of each is as follows:

'The *Cochineal Worm*, is an Inſect ingender'd in a Fruit 'reſembling a Pear: The Shrub which bears it is five or ſix 'Foot high. A-top of the Fruit grows a red Flower, which 'when mature falls on the Fruit; and that opening, diſco-'vers a Cleft two or three Inches in Diameter. The Fruit 'then appears full of little red Inſects, having Wings of a 'ſurprizing ſmallneſs, and which would die and rot there, if 'not taken out.

'The *Indians*, therefore, ſpreading Cloth under the Tree, 'ſhake it with Poles, till the Inſects are forc'd to quit their 'Lodging, and fly about the Tree; which they cannot do 'many Moments, but tumble down dead into the Cloth; 'where they are left till they be entirely dry: When the 'Inſect flies it is red; when it is fallen, black; and when 'dry, white; tho it afterwards changes Colour.

There are whole Plantations of the *Cochineal* Tree, or *Tonna*, as the Natives call it, about *Guatimala*, *Chepe*, and *Guexaca*, in the Kingdom of *Mexico*.

*Cochineal Grain*, or, as *Dampier* calls it, *Sylveſtris*, is a red Berry, growing in *America*, found in a Fruit reſembling that of the *Cochineal* Tree, or *Tonna*. The firſt Shoots produce a yellow Flower; then comes the Fruit, which is long, and when ripe opens with a Cleft of three or four Inches. The Fruit is full of Pippins, or Grains, which fall on the leaſt Agitation, and which the *Indians* take care to gather. Eight or ten of theſe Fruits may yield about an Ounce of Grain.

This Berry yields a Dye almoſt as beautiful as that of the Inſect; and a Perſon may be eaſily deceiv'd in them: tho the firſt is much leſs eſteem'd. See DYING.

*Cochineal* is us'd in Medicine as an Alexipharmic, tending to promote Sweating, and alſo as a Cordial.

COCHLEA, in Mechanicks, one of the five mechanical Powers; otherwiſe called the Screw. See SCREW.

It is thus call'd, from the reſemblance a Screw bears to the ſpiral Shell of a *Snail*, which the *Latins* call *Cochlea*.

COCHLEA, in Anatomy, is the laſt Canal, or Cavity of the Ear; thus call'd from its helical Form. See EAR.

The *Cochlea* is divided into two Parts, the upper, and lower, by a thin, ſpiral *Lamina*; of which the Part next the Axis is bony, but extremely brittle; and that, next the outer Shell, membranous; appearing to be only made of an Expanſion of the Auditory Nerve. See NERVE.

The upper Canal opens into the *Tympanum*, and the lower into the *Veſtibulum*: this is narrower than that, eſpecially towards the Baſis of the *Cochlea*; where each is about a Line wide; and the Baſis it ſelf is about four Lines in Diameter. See HEARING.

COCK *of a Dial*, the Pin, Style, or Gnomon. See DIAL, STYLE, and GNOMON.

COCKET, a Seal belonging to the King's Cuſtom-houſe. See SEAL, *&c.*

COCKET is alſo a Scroll of Parchment, ſealed and deliver'd by the Officers of the Cuſtom-houſe to the Merchants, upon entering their Goods, certifying that the Goods were cuſtomed. See CUSTOMS.

The ſame Word is alſo uſed in the Statutes of Bread and Ale, 15 *Hen.* III. where there is mentioned *Cocket Bread*, among ſeveral other Kinds: It ſeems to have been hard Sea-Biſket, which perhaps had then ſome *Cocket*, Mark, or Seal; or elſe was ſo called from its being deſign'd for the uſe of the *Cockſwains*, or Seamen.

COCKLE-*Stairs*. See STAIRS.

COCKING-CLOTH, a Deviſe for the catching of Pheaſants withal.

It conſiſts of a piece of coarſe Canvas, about an Ell ſquare, dipp'd in a Tan Pit to colour it; and kept ſtretch'd by two Sticks, placed from corner to corner, diagonal-wiſe: a Hole to be left to peep thro'. The Gameſter, then, being provided of a ſhort Gun; carries the Cloth before him at Arms end; under cover of which, he may approach his Game as near as he pleaſes: when near enough, he puts the Noſel of his Gun thro' the Hole, and ſhoots.

COCKPIT, a ſort of Theatre, whereon Game-Cocks fight their Battels.

The *Cock-Pit* is uſually a Houſe, or Hovel cover'd over: They fight on the Clod, or green Sod; which is generally mark'd out round, and incompaſs'd with Seats, one above another.

*The* COCK-PIT *Laws*, are principally theſe: When Cocks are ſet, none to be on the Sod but the two Setters. When the Cocks are ſet Beak to Beak in the middle of the Clod, and there left by the Setters, if the ſet Cock do not ſtrike in counting twenty, and ſix times ten, and twenty after all, the Battel is loſt: but if he do ſtrike, the Battel is to begin again, and they muſt count again. If any offer a Mark to a Groat, or 40 to 1, and the Wager be taken, the Cock muſt be ſet, and they are to fight it out. Done, and done, is a ſufficient Bet, or Wager, when the Cocks are caſt on the Clod.

COCK-PIT, in a Man of War, is a Place on the lower Floor, or Deck, abaft the main Capſtan, lying between the Platform and the Steward's Room; where are Subdiviſions or Partitions for the Purſer, the Surgeon, and his Mates.

COCK-ROAD, a Contrivance for the taking of Woodcocks.

As that Bird lies cloſe by day, under ſome Hedge, or near the Root of an old Tree, to peck for Worms under dry Leaves, and will ſcarce ſtir out, unleſs diſturb'd, as not ſeeing his way ſo well in the Morning; toward the Evening he takes Wing, to ſeek for Water; flying generally low, and when he finds any thorowfare in a Wood ventures thro' it.

To take 'em, therefore, they plant Nets in ſuch Places; or, for want of ſuch Places ready to their hands, they cut *Roads* thro' Woods, Thickets, Groves, *&c.*

Theſe Roads they uſually make 35 or 40 Foot broad, perfectly ſtrait and clear; and to two oppoſite Trees they tie the Net, which has a Stone faſten'd to each corner. Then, having a Stand, or Place to lie conceal'd in, at a proper diſtance, with a Stake near the ſame, to faſten the Lines of the Net to: when they perceive the Game flying up the *Road*, they unwind the Lines from off the Stake; upon which, the Stones drawing it down, the Birds are intangled in the ſame.

COCK-SWAIN, or COCKSON, is an Officer on board a Man of War, who hath the care of the Barge, or Sloop, and all things belonging to it; to be always ready with his Boat's-Gang, or Crew, and to Man the Boat on all Occaſions.

He ſits in the Stern of the Boat, and ſteers; and hath a Whiſtle to call and encourage his Men.

COCOA, or more juſtly CACAO, the Nut whoſe Kernel yields the Chocolate. See CACAO, and CHOCOLATE.

COCOS, or COCO, is alſo uſed for a Nut, whoſe Shell is much uſed by Turners, Carvers, *&c.* for divers Works.

The *Coco* Tree, which the *Malabars* call *Tenga*, is ſtrait, without any Branches, and ordinarily thirty or forty Foot high: Its Wood is too ſpongious to be uſed in Carpentry. A-top it bears twelve Leaves, ten Foot long, and half a Foot broad,

broad, us'd in the covering of Houſes, making Matts, &c. Above the Leaves is form'd a large Bud, in form of a Cabbage, excellent to eat; but the taking it off is mortal to the Tree.

Between the Leaves and the Top are ſeveral Suckers, of the thickneſs of the Arm; which, when cut, diſtil a white, ſweet, agreeable Liquor, ſerving as a Wine, and intoxicating: It becomes acid if kept a few Hours; and at the end of 24 Hours is converted into a ſtrong Vinegar: and is further prepar'd into Brandy. While this Liquor diſtils, the Tree yields no Fruit; but when the Suckers are let grow, it puts forth a large Cluſter, or Bunch, wherein the *Coco*-Nuts are faſten'd, to the number of ten or twelve.

While they are yet new, and the Bark tender, they yield half a Pint of a clear refreſhing Water: which in a little time becomes firſt a white, ſoft Fleſh, and at length condenſes, and aſſumes the Taſte of the Nut.

It yields Fruit thrice a year; and thoſe ſometimes as big as a Man's Head. Many Travellers aver, that from a ſingle *Coco* Tree, and its Fruit, a Ship might be built, equipp'd, and loaden with Merchandize and Proviſion.

The *Cocos* of the *Antilles*, are not ſo large as thoſe of the *Eaſt-Indies*, *Africa*, and *Arabia*: the Trees ſeldom exceed 25 Foot in height; and the Fruits in proportion: 'Tis theſe are uſed among us.

In the Kingdom of *Siam*, the *Coco*'s Fruit, dried and emptied of its Pulp, ſerves as a Meaſure, both for things liquid and dry. See MEASURE.

As theſe Fruits are not all of the ſame Capacity, but are ſome larger, others leſs; their content is firſt meaſur'd with *Cauris*, thoſe little *Maldives* Shells, which ſerve as ſmall Money in ſeveral States of the *Indies*. Some *Cocos* contain 1000 *Cauris*, others 500, &c.

COCTION, a general Name for all Alterations made in Bodies, by the approach of Fire, or Heat. See HEAT.

The greateſt Secret in Chymiſtry is to manage the *Coction* aright; to give the Fire to advantage.

There are various Species of *Coctions*; as *Maturation*, *Friction*, *Elixation*, *Aſſation*, *Torrefaction*, and *Uſtion*; which ſee in their Places, MATURATION, FRICTION, &c. ſee alſo CONCOCTION.

COD-*Fiſhery*. See *Cod*-FISHERY.

CODE, CODEX, a Collection of the Laws and Conſtitutions of the *Roman* Emperors; made by order of *Juſtinian*.

It is compriz'd in twelve Books, which make the ſecond Part of the Civil, or *Roman* Law. See CIVIL-*Law*.

There were ſeveral other *Codes* before the Time of *Juſtinian*; all of them Collections, or Abridgments of the *Roman* Laws. *Gregory* and *Hermogenes*, two Lawyers, made each a Collection of this kind, called from their Names the *Gregorian Code* and *Hermogenean Code*. Theſe included the Conſtitutions of the Emperors from *Adrian*, to *Dioclesian* and *Maximin*, *A. D.* 306. We have nothing remaining of 'em but a few Fragments: the Work falling to the ground, for want of Authority to put it in Execution.

*Theodoſius* the Younger was the firſt Emperor who made a *Code*, which was compriz'd in ſixteen Books, form'd out of the Conſtitutions of the Emperors from *Conſtantine* the Great to his own Time; abrogating all other Laws not included in it: And this is what we call the *Theodoſian Code*; which was publiſh'd in the Year 438, and receiv'd and obſerv'd, till annulled by the *Code* of *Juſtinian*.

*Theodoſian*'s *Code* has been a long time loſt in the *Weſt*: *Cujas* took a great deal of Pains to retrieve it, and to publiſh it in a better Condition than ever. *Gothefrid* has given us a Comment on the *Theodoſian Code*; a Work which coſt him 30 Years.

In 506, *Alarick* King of the *Goths*, made a new Collection of the *Roman* Laws, taken from the three former *Codes*, the *Gregorian*, *Hermogenian*, and *Theodoſian*, which he likewiſe publiſh'd under the Title of the *Theodoſian Code*. This *Code* of *Alarick* continu'd a long time in force; and was all the *Roman* Law receiv'd into *France*.

Laſtly, the Emperor *Juſtinian*, finding the Authority of the *Roman* Law exceedingly weaken'd in the *Weſt*, upon the Decline of the Empire, reſolved to make a general Collection of the whole *Roman* Juriſprudence. The Management hereof he committed to *Tribonianus*; who choſe out the moſt excellent Conſtitutions of the Emperors, from *Adrian* to his own Time; and publiſh'd his Work in 528, under the Title of the *New Code*.

But becauſe *Juſtinian* had made ſeveral new Deciſions, which made ſome Alteration in the antient Juriſprudence; he retrench'd ſome of the Conſtitutions inſerted by *Tribonianus*, and added his own in their Place: on which account, he publiſh'd a new Edition of the *Code* in 534, and abrogated the former.

This *Code* of *Juſtinian*, as well as the reſt of the *Roman* Law, was a long time loſt in the *Weſt*, till the Time of *Lotharius* II. who found it at the taking of *Melphis*, and gave it to the City of *Piſa*. This was firſt re-publiſh'd by *Irnier*, in 1128.

The Emperor *Frederic*, at the Requeſt of the Univerſities, appointed it to be taught in the Schools; and commanded all his People to obſerve it. Accordingly, it obtain'd in *Italy* and *Germany*; and ſtill obtains in a Part of *France*, particularly the Southern Provinces.

The Word comes from the Latin *Codex*, a paper Book; ſo called *a Codicibus* or *Caudicibus arborum*, the Trunks of Trees; the Bark whereof being ſtripp'd off, ſerv'd the Antients to write their Books on.

There have been various other later *Codes*, particularly of the antient *Gothic*, and ſince of the *French* Kings; as the *Code* of *Euridia*, the *Code Michault*, *Code Louis*, *Code Neron*, *Code Henry*, *Code Marchand*, *Code des Eaux*.

CODE *of Canons*, CODEX *Canonum*. See CANON.

CODIA, in Botany, is uſed for the Top, or Head of any Plant; but, by way of eminence, for that of a ſort of Poppy: whence the Syrup made therewith is called *Diacodium*, from *δια*, *cum*, with, and *κωδια*, *the Poppy head*. See DIACODIUM.

CODICIL, a Schedule, or Supplement to a Will, or other Writing. See SCHEDULE, WILL, &c.

It is us'd as an Addition to a Teſtament, when any thing is omitted which the Teſtator would add, explain, alter or retract; and is of the ſame Nature as a Teſtament, but that it is without an Heir or Executor.

So that a *Codicil* is a leſs ſolemn Will of one that dies either Teſtate or Inteſtate, without the Appointment of an Heir: Teſtate, when he that hath made his *Codicil*, hath either before or afterwards made his Teſtament, on which that *Codicil* depends, or to which it refers. Inteſtate, when one leaves behind him only a *Codicil* without a Teſtament; wherein he gives Legacies only to be paid by the Heir at Law, and not by any Heir inſtituted by Will, or Teſtament.

A *Codicil*, as well as a Will, may be either *Written* or *Nuncupatory*. Some Authors call Teſtament, a *great Will*; and *Codicil*, a *little* one: and compare Teſtament to a Ship, and *Codicil* to the Boat tied to it.

But there is this further difference between a *Codicil* and a Teſtament; that a *Codicil* cannot contain the Inſtitution of an Heir; and that in a *Codicil*, a Man is not oblig'd to obſerve ſtrictly all the Formalities preſcrib'd by Law forſolemn Teſtaments.

In Cuſtomary Countries, Teſtaments, properly ſpeaking, are no more than *Codicils*; in regard, Cuſtom it ſelf names the Heir, and does not allow of Teſtamentory Inheritors.

*Codicils* were firſt brought into uſe in the Time of *Auguſtus*, by *L. Lentulus*: They were originally intended to follow the Teſtament; which was, as it were, their Baſis. In proceſs of time, *Codicils* came to have their effect, even tho made before the Teſtament; provided there was nothing in the Teſtament contrary to the *Codicil*.

People were alſo allow'd to make *Codicils* without Teſtaments.

*Raym. Lully* has a Book which he calls *The Codicil*; wherein he pretends to have left his Readers the Secret of the Philoſopher's Stone; provided they do but underſtand it.

COECUM, or CÆCUM, in Anatomy, the *blind Gut*, the firſt of the thick Inteſtines; ſo called, becauſe made like a Sack, having but one Aperture, which ſerves it both for entrance and exit. See INTESTINES.

It is ſituate on the right Side, below the Kidney. In Children new born, and in Quadrupeds, it is found full of Excrements; but in Adults, &c. it frequently diſappears, and only hangs like a Worm.

Its uſe in Adults is very obſcure: In a *Fœtus*, or Infant newly born, it appears to ſerve as a Receptacle for the *Fæces* during ſuch time as the Animal does not diſcharge by Stool.

Dr. *Gliſſon* imagines it may likewiſe ſerve in ſuch Animals as have it large, as Dogs, Conies, Rats, &c. for a kind of ſecond Ventricle, or Bag, wherein the prepar'd Aliment may be retain'd, while a richer and more nutritious Juice is drawn from the ſame.

Others will have it contain a Ferment; and others the Flatuoſity of the Inteſtines: Laſtly, others fancy it may ſeparate a Humor, by ſome Glands placed therein, wherewith to harden the Excrements as they paſs thro' the Colon. See EXCREMENT, COLON, &c.

CO-EFFICIENTS, in Algebra, are Numbers prefix'd to Letters, or Species, into which they are ſuppos'd to be multiply'd; and therefore, with ſuch Letters, or with the Quantities repreſented by them, they make a Rectangle, or Product, *co-efficiunt Productum*; whence the Name.

Thus, *c b* implies, that the Quantities repreſented by *a b*, are multiply'd into the *co-efficient c*; and that out of theſe two, the Rectangle, or Product *c b* is form'd. If a Letter have no Number prefix'd, it is always ſuppos'd to have a *Co-efficient*; becauſe every thing is once it ſelf.

The *Co-efficient*, in a Quadratic Equation, is according to its Sign, either the Sum, or Difference of the two Roots: And in any Equation of an higher Nature, the *Co-efficient* of the ſecond Term, is always the Aggregate of all the Roots retaining their proper Signs: So that if all the Negatives be equal to all the Affirmatives, the ſecond Term will vaniſh; and

and where the ſecond Term is thus wanting, it is a Sign that the Quantities under contrary Signs were thus equal.

The *Co-efficient* of the third Term is the Aggregate of all the Rectangles ariſing by the Multiplication of every two of the Roots, how many ways ſoever thoſe Combinations of Two's can be had; as three times in a Cubic, ſix in a Biquadratic Equation, *&c.*

The *Co-efficient* of the fourth Term, is the Aggregate of all the Solids, made by the continual Multiplication of every three of the Roots, how often ſoever ſuch a Ternary can be had; as there may be four in a Biquadratic, five in an Equation of five Dimenſions, *&c.* And thus it will go on infinitely.

COELESTIAL *Obſervations*, are Obſervations of the Phænomena of the Heavenly Bodies, made with a proper Apparatus of Aſtronomical Inſtruments, in order to the determining their Places, Motions, Phaſes, *&c.* See OBSERVATION.

The Inſtruments chiefly uſed in *Cæleſtial Obſervations*, are the Aſtronomical Gnomon, Quadrant, Micrometer, and Teleſcope; each of which ſee under its proper Head, QUADRANT, MICROMETER, TELESCOPE, GNOMON, *&c.*

Obſervations in the Day-time are eaſy; in regard the croſs Hairs in the Focus of the Object-Glaſs of the Teleſcope are then diſtinctly perceivable: in the Night, thoſe croſs Hairs are to be illumined to make them viſible.

This Illumination is either perform'd by a Candle, placed obliquely near 'em, ſo as the Smoke don't intercept the Rays; or where this is inconvenient, by making an Aperture in the Tube of the Teleſcope, near the Focus of the Object-Glaſs, thro' which a Candle is apply'd to illumine the croſs Hairs.

M. *de la Hire* has made an Improvement on the firſt Method, which renders it of very good uſe; and it is by covering that end of the Tube next the Object-Glaſs with a piece of Gauſe, or fine white ſilken Crape. For in ſuch caſe, a Link, placed at a good diſtance from the Tube, ſo enlightens the Gauſe, as to render the croſs Hairs very perceivable.

*Obſervations* of the Sun, are not to be made without placing a Glaſs, ſmoked in the Flame of a Lamp or Candle, between the Teleſcope and the Eye; to take off from its Luſtre, which would otherwiſe confound and damage the Eye, were not a good part of its Beams intercepted.

Note, When any of the Heavenly Bodies are obſerv'd thro' a Teleſcope of only two Glaſſes, they appear inverted.

*Cæleſtial Obſervations* are chiefly of two Kinds; the one when the Objects are in the Meridian. See MERIDIAN *Obſervations.*

The other, when in Vertical Circles. See *Vertical* CIRCLES.

COELIAC *Artery*, the firſt Artery, detach'd from the deſcending Trunk of the *Aorta* into the Abdomen. See AORTA, ARTERY, *&c.*

It divides into two Branches, the one on the right ſide, the other on the left; of which the firſt gives the *Gaſtrica dextra*, which goes to the Stomach; the *Ciſtica*, which goes to the Gall-Bladder; the *Epiplois dextra* to the *Omentum*; the *Inteſtinalis* to the *Duodenum*, and to a part of the *Jejunum*; and the *Gaſtro Epiplois* to the Stomach, to the *Omentum*, and ſome Branches to the Liver, which enter the *Capſula Communis*, to accompany the Branches of the *Vena Porta.*

The left Branch of the *Cœliaca* gives the *Gaſtrica dextra*, which is alſo ſpread upon the Stomach; the *Epiplois ſiniſtra* to the *Omentum*; and the *Splenica* to the Subſtance of the Spleen. See each Branch deſcrib'd in its Place.

COELIAC *Vein*, is that which runs thro' the *Inteſtinum Rectum.* See RECTUM.

COELIACA, or COELIAC *Paſſion*, or *Affection*, is a ſort of *Diarrhœa*, or Flux of the Belly; wherein the Chyle, or nutritious part of the Food is evacuated by Stool, inſtead of Excrements. See FLUX, and DIARRHÆA.

Authors frequently confound the *Cœliaca* with the Lientery, but they are different. See LIENTERY.

There is alſo a COELIAC *Diabetes*, call'd *Cœliaca Urinalis*, wherein the Chyle paſſes off along with, or inſtead of Urine. See DIABETES.

COELUM. See HEAVEN.

COELUM is us'd by ſome Anatomiſts for the Cavity of the Eye toward the Angles, or *Canthi.* See EYE, CANTHUS, *&c.*

COENOBITE. See CENOBITE.

COENOTAPHIUM, or rather CENOTAPHIUM, in Antiquity, an empty Tomb, or Monument erected in honour of ſome illuſtrious Defunct; who periſhing by Shipwrack, in Battel, or the like, his Body could not be found, to be interr'd or depoſited in the ſame. See TOMB, and SEPULCHER.

Cardinal *Noris* has ſeveral expreſs Diſſertations on the *Cœnotaphia* of the Cæſars *Caius* and *Lucius*, which ſtill remain at *Piſa.* See FUNERAL.

The Word is *Greek*, compounded of κενὸς, *empty*, and τάφος, *Sepulcher.*

I

COEQUALITY, a Term expreſſing the Relation of Equality between two things. See EQUALITY.

The Retainers to S. *Athanaſius*'s Doctrine of the Trinity, hold the Son and Holy Spirit *coequal* with the Father. The *Arians*, &c. deny the *Coequality.* See ARIAN, *&c.*

COETERNITY, is us'd among Divines, to denote the Eternity of one Being equal to that of another. See ETERNITY.

The Orthodox hold the ſecond and third Perſons in the Trinity *coeternal* with the firſt. See TRINITY.

COEUR, in Heraldry. *Party en* COEUR, ſignifies a ſhort Line of Partition in Pale, in the Centre of the Eſcutcheon, which extends but a little way, much ſhort of Top and Bottom; being met by other Lines, which form an irregular Partition of the Eſcutcheon.

CO-EXISTENCE, a Term of Relation, denoting two, or more Things, to exiſt together at the ſame time, *&c.* See EXISTENCE.

COFFEE, in Natural Hiſtory, a Seed, or Berry, brought from *Arabia felix*; uſed for the making a Drink of the ſame Name.

That from the *Levant* is moſt eſteem'd, being greener, heavier, and appearing riper and plumper than that from *Mocha*; which is larger, lighter, and whiter.

For *Coffee*-Berries, ſome ſubſtitute Peas, Beans, Rye, and Barley; which roaſted, yield an oily Matter, reſembling in Flavour, but leſs agreeable, as well as in much leſs quantity than *Coffee.*

COFFEE is alſo a Kind of Drink, prepared from theſe Berries; very familiar in *Europe* for theſe 60 Years, and among the *Turks* for above an hundred.

Its Original is not well known; ſome aſcribe it to the Prior of a Monaſtery, who being inform'd by a Goatherd, that his Cattel ſometimes browzing on the Tree, would wake and caper all Night; became curious to prove its Virtue: accordingly, he firſt try'd it on his Monks, to prevent their ſleeping at Matins.

Others, from *Sehehabeddin*, refer the Invention of *Coffee* to the *Perſians*; from whom it was learnt in the XVth Century by *Gemalledin*, Mufti of *Aden*, a City near the Mouth of the Red Sea; and who having tried its Virtues himſelf, and found that it diſſipated the Fumes which oppreſs'd the Head, inſpir'd Joy, open'd the Bowels, and prevented Sleep, without being incommoded by it; recommended it firſt to his Derviſes; with whom he us'd to ſpend the Night in prayer.

Their Example brought *Coffee* into vogue at *Aden*: The Profeſſors of the Law, for Study, Artiſans to work, Travellers to walk in the Night; in fine, every body at *Aden* drank *Coffee.*

Hence it paſs'd to *Mecca*, where firſt the Devotees, then the reſt of the People took it. From *Arabia felix* it paſs'd to *Cairo.*

In 1511, *Khaie Beg* prohibited it, from a Perſuaſion that it inebriated, and that it inclin'd to Things forbidden. But Sultan *Cauſou* immediately after took off the Prohibition, and *Coffee* advanced from *Egypt* to *Syria* and *Conſtantinople.*

The Derviſes declaim'd againſt it from the *Alcoran*, which declares that Coal is not of the number of Things created by God for Food. Accordingly, the Mufti order'd the *Coffee*-Houſes to be ſhut; but his Succeſſor, declaring *Coffee* not to be Coal, they were open'd again.

During the War in *Candia*, the Aſſemblies of Newſmongers making too free with State-Affairs, the Grand Vizier *Cuproli* ſuppreſs'd the *Coffee*-Houſes at *Conſtantinople*; which Suppreſſion, tho ſtill on foot, does not yet prevent the publick Uſe of the Liquor there.

*Thevenot*, the Traveller, was the firſt who brought it into *France*; and a *Greek* Servant, called *Paſqua*, brought into *England* by Mr. *Dan. Edwards*, a *Turky* Merchant, in 1652, to make his *Coffee*, firſt ſet up the Profeſſion of *Coffee*-Man, and introduc'd the Drink among us. Tho ſome ſay Dr. *Harvey* had us'd it before.

The Word *Coffee* is originally *Arabic*: the *Turks* pronounce it *Cahueh*, and the *Arabs Cahouah*; which ſome Authors maintain to be a general Name for any thing that takes away the Appetite: others for any thing that promotes Appetite; and others, again, for any thing that gives Strength and Vigour.

The *Mahometans*, 'tis obſerv'd, diſtinguiſh three Kinds of *Cahouah*; the firſt is Wine, or any Liquor that inebriates; the ſecond is made of the Pods that contain the *Coffee*-Berry; this they call the *Sultana*'s *Coffee*, from their having firſt introduc'd it, on account of its heating leſs than the Berry, as well as its keeping the Bowels open: the third is that made with the Berry it ſelf; which alone is us'd in *Europe*, the Pods being found improper for Tranſportation. Some *Europeans* who imported the Pods, call'd them the *Flower of the Coffee* Tree.

The deep brown Colour of the Liquor, occaſion'd its being firſt call'd *Syrup of the Indian Mulberry*; under which ſpecious Name it firſt gain'd ground in *Europe.*

The Preparation of *Coffee* conſiſts in *roaſting*, or giving it a juſt Degree of Torrefaction, on an earthen, or metalline Plate, till it have acquir'd a browniſh hue, equally deep on all Sides: 'Tis then ground in a Mill, as much as ſerves the preſent occaſion. A proper quantity of Water is next boil'd, and the ground *Coffee* put in it. After it has boil'd ſufficiently, 'tis taken from the Fire; and the Decoction having ſtood a while to ſettle and fine, they pour, or decant it into Diſhes.

The Cuſtom is to drink *Coffee* as hot as poſſible, with Sugar; tho the *Turks* don't trouble themſelves to take off its bitterneſs with any Sugar: their Grandees add to each Diſh a drop of Eſſence of Amber; others boil with it a couple of Cloves; others a little *Indian* Aniſe; others *Cacouleh*, or the Grain of the *Cardamum minus*.

*Coffee* is one of the Neceſſaries the *Turks* are oblig'd to furniſh their Wives withal.

The ordinary Method of roaſting *Coffee* among us, is in a Tin cylindrical Box, full of Holes; thro' the middle whereof runs a Spit: under this is a ſemicircular Hearth, wherein is a large Charcoal Fire: By help of a Jack, the Spit turns ſwift, and ſo roaſts; being now and then taken up to be ſhaken. When the Oil riſes, and it's grown of a dark brown Colour, it is emptied into two Receivers, made with large Hoops, whoſe bottoms are Iron Plates, theſe ſhut into: There the *Coffee* is ſhaken, and left till almoſt cold; and if it look bright and oily, 'tis a Sign 'tis well done.

*Coffee* is taken with very different, nay frequently with directly oppoſite Intentions; ſome uſe it to prevent Sleep, others to promote Digeſtion, *&c.*

Its more real Virtues, own'd by the Phyſicians, conſiſt in this; that being an excellent Dryer, it carries off Fumes and Diſorders of the Head ariſing from too much moiſture, diſſipates Megrims, and abſorbs Acrimonies of the Stomach, whence its uſe after a Debauch of ſtrong Liquors; and hence alſo its uſe in promoting watching, by bracing the Fibres, and rendering'em too tenſe for the Relaxation requir'd in Sleep.

It likewiſe promotes Circulation, but ſuch beſt with People of a pretty corpulent Habit; being found hurtful to thoſe who are thin, lean, dry, and of a bilious Temperament; as it dries up the Nerves, and inclines them to Tremors: 'tis ſaid to be prejudicial likewiſe to thoſe who digeſt too faſt, where the Circulation is too quick, or where there is a ſpitting of Blood ariſing from the Mouths of any of the Veins and Arteries being too open, or the Blood too thin and ſharp.

The oily Matter that ſeparates from the *Coffee*, and appears on its ſurface when roaſted, and its particular Smell, which diſtinguiſhes it from Peas, Beans, Rye, *&c.* which ſome ſubſtitute in lieu of *Coffee*, are to be the real Indications of its Effects. If conſider'd with regard to the Oils drawn by the Retort, this, as well as that, contains volatile Principles, both ſaline and ſulphureous.

'Tis to the Diſſolution of its Salts, and the Mixture of its Sulphurs in the Blood, that its chief Faculty of promoting Watchfulneſs is to be attributed: Hence alſo its Property of promoting Digeſtion, of precipitating Foods, of preventing Eructations, and correcting Acrimonies of the Stomach, when taken after Meals.

Hence alſo that Fermentation in the Blood, ſerviceable to corpulent People: hence alſo its diuretick Virtue. By Experience 'tis found of ſervice to drink a Glaſs of Water before *Coffee*, to render it laxative; to mix it with Milk, or Cream, to extinguiſh its Sulphurs, embarraſs its ſaline Principles, and render it nouriſhing.

*S. Pauli*, a *Daniſh* Phyſician, maintains that it enervates Men, and renders them incapable of Generation: And 'tis certain the *Turks* attribute the ſame Effects to it; and from the immoderate uſe hereof, account for that thinneſs of Inhabitants found in Provinces formerly the beſt peopled. But this Opinion is refuted by *Du Four*.

F. *Mallebranch* gave the Royal Academy of Sciences an Account of a Perſon cur'd of an Apoplexy, by giving him ſeveral Clyſters of *Coffee*.

The Tree that produces the *Coffee*, is a Kind of *Arabic* Jaſmin: The Berry, when ripe, is found as hard as Horn; which gave occaſion to an Opinion, that the People of the Kingdom of *Iemen* in *Arabia felix*, where it is cultivated, ſteep'd in boiling Water, or bak'd in a Furnace all the *Coffee* they ſold abroad, to prevent its growing any where elſe.

'Tis ſaid, it yields a Revenue upwards of five Millions *per Annum*. Nor will that appear any wonder, when we conſider that in *London* alone, beſides the Conſumption in private Houſes, ſome have computed three thouſand *Coffee*-Houſes. In the three Kingdoms are yearly expended one hundred Tonn of *Coffee*-Berries; in *England* alone ſeventy: which at 300 *l. per* Tonn, a moderate Price, amounts to 21000 *l.* Sterling.

COFFER, *Capſa*, in Architecture, a ſquare depreſſure, or ſinking, in each Interval between the Modillions of the *Corinthian* Cornice; ordinarily fill'd up with a Roſe, ſometimes a Pomegranate, or other Enrichment. See MODILLION.

Theſe Sinkings, call'd alſo Pannels, are of different Figures in the Compartiments of Vaults and Soffits. See SOFFIT.

COFFER, in Fortification, is an hollow Lodgment, athwart a dry Moat, from ſix to ſeven Foot deep, and from ſixteen to eighteen Foot broad: the upper Part being made of pieces of Timber rais'd two Foot above the Level of the Moat; which little Elevation has Hurdles laden with Earth for its covering; and ſerves as a Parapet, with Embraſures. See DITCH.

The Beſieged generally make uſe of theſe *Coffers* to repulſe the Beſiegers, when they endeavour to paſs the Ditch.

'Tis nearly the ſame thing with a *Caponiere*, abating that this laſt is ſometimes made beyond the Counterſcarp on the Glacis, and the *Coffer* always in the Moat, taking up half its breadth. See CAPONIERE.

It differs from the *Traverſe*, and *Gallery*, in that theſe latter are made by the Beſiegers, and the *Coffer* by the Beſieged. See GALLERY, *&c.*

To ſave themſelves from the Fire of theſe *Coffers*, the Beſiegers throw up the Earth on that ſide towards the *Coffer*.

COFFERER *of the King's Houſhold*, a principal Officer in the Court, next under the Comptroler; who, in the Counting-Houſe, and elſewhere at other times, has a ſpecial Charge and Overſight of other Officers of the Houſe, for their good Demeanor and Carriage in their Offices: to all whom he pays the Wages. See HOUSHOLD, COMPTING-*Houſe*, &c.

COGGESHAL'S *Sliding Rule*, an Inſtrument us'd in Gaging, ſo called from its Inventor: See its Deſcription and Uſe under SLIDING *Rule*.

COGITATION, the Act or Operation of *Thinking*. See THINKING.

COGNATION, in the Civil Law, the Bond of Relation between all the Deſcendents from the ſame Stock, both Males and Females: by which it is diſtinguiſh'd from *Agnation*, which only comprehends the Deſcendents in the Male Sex. See AGNATION.

In *France*, for the Succeſſion to the Crown they follow *Agnation*; in *England*, *Spain*, &c. *Cognation*, Women coming to the Succeſſion, according to the degree of Proximity, in default of Males, or their Deſcendents from Branch to Branch.

In the *Roman* Law, the Words *Cognatio* and *Cognati* are taken in a more limited Senſe; *Cognatio* ſignifying only the Bond of Relation between the Deſcendents from the ſame Stock on the Woman's ſide; and *Cognati* thoſe between whom there was ſuch a Bond of Relation ſubſiſting.

COGNIZANCE, or COGNISANCE, in Heraldry. See CREST.

COGNIZANCE, in Law, is the Acknowledgment of a Fine, or Confeſſion of a thing done. In this Senſe, we ſay, *Cognoſcens latro*.

The Word is alſo uſed for a Power or Juriſdiction: Thus, *Cognizance of Pleas*, is an Ability to call a Plea out of another Court; which no one but the King can do, unleſs he can ſhew a particular Charter for it.

Sometimes it is uſed for an Audience, or hearing of a Matter judicially; as, *to take Cognizance*.

COGNIZANCE, again, is uſed for a Badge on a Waterman, or Servingman's Sleeve, which is commonly the Giver's Creſt, whereby he is diſcern'd to belong to this or that Nobleman, or Gentleman.

COGNISOR, or CONNUSOR, is he that paſſeth, or acknowledgeth a Fine of Lands and Tenements to another. See COGNIZANCE.

COHABITATION, implies a Concubinage, Copulation, or Carnal Knowledge between two Perſons: but 'tis rarely uſed except in a criminal Senſe. See CONCUBINE.

CO-HEIR, a Perſon who ſhares an Inheritance or Eſtate with another. See HEIR.

COHERENCE, a School-Term, applied to Propoſitions, Diſcourſes, *&c.* which have a Connection or Dependence on one another.

COHESION, or COHÆSION, in Phyſicks, the Action whereby the Particles, or primary Corpuſcles whereof natural Bodies conſiſt, are connected, or bound together, ſo as to form Particles; and thoſe, again, kept together, ſo as to form ſenſible *Maſſes*, or Bodies. See PARTICLE, BODY, *&c.*

The Cauſe of this *Coheſion*, or the *Nexus Materiæ*, has extremely perplex'd the Philoſophers of all Ages. In all the Syſtems of Phyſicks, Matter is ſuppos'd originally to be in minute, indiviſible Atoms. See MATTER.

How, and by what Principle theſe ſeveral diſtinct Corpuſcles ſhould come firſt join'd and combin'd into little Syſtems; and how they ſhould come to perſevere in that State of Union; is a Point of the moſt difficulty, and even of the moſt importance of any in Phyſicks.

The moſt popular Opinion, is that ſo ſtrenuouſly defended by *J. Bernoulli*, *de gravitate Ætheris*; who accounts for the *Coheſion* of the Parts of Matter, from the uniform Preſſure of the Atmoſphere: confirming this Doctrine from the known Experiment of two poliſh'd marble Planes; which *cohere* very ſtrongly in the open Air, but eaſily drop aſunder in an exhauſted Receiver.

But tho this Theory might ſerve tolerably well to explain the *Coheſion* of Compoſitions, or greater Collections of Matter;

ter; yet it falls ſhort of accounting for that firſt *Coheſion* of the Atoms, or primitive Corpuſcles, whereof the Corpuſcles of hard Bodies are compos'd.

Sir *Iſaac Newton* delivers his Doctrine of *Coheſion* thus: 'The Particles of all hard, homogeneous Bodies which touch 'one another, *cohere* with a great Force; to account for 'which, ſome Philoſophers have recourſe to a kind of hook-'ed Atoms, which in effect, is nothing elſe but to beg the 'Thing in queſtion. Others imagine, that the Particles of 'Bodies are connected by *Reſt*; *i. e.* in effect, by nothing 'at all; and others by *conſpiring Motions*, *i. e.* by a rela-'tive reſt among themſelves. For my ſelf, it rather appears 'to me, that the Particles of Bodies cohere by an *attractive* 'Force, whereby they tend mutually toward each other: 'which Force, in the very point of Contact, is very great; 'at little Diſtances is leſs; a little farther diſtance is quite 'inſenſible.' See ATTRACTION.

'Now if compound Bodies be ſo hard, as by Experience 'we find ſome of 'em to be, and yet have a great many 'hidden Pores within 'em, and conſiſt of Parts only laid to-'gether; no doubt thoſe ſimple Particles which have no 'Pores within 'em, and which were never divided into Parts, 'muſt be vaſtly harder. See MATTER.

'For ſuch hard Particles gather'd into a Maſs, can't poſſi-'bly touch in more than a few Points: and therefore much 'leſs Force is requir'd to ſever them than to break a ſolid 'Particle, whoſe Parts touch throughout all their Surfaces, 'without any intermediate Pores or Interſtices. But how 'ſuch hard Particles, only laid together, and touching only 'in a few Points, ſhould come to *cohere* ſo firmly as in fact 'we find they do, is inconceivable; unleſs there be ſome 'Cauſe, whereby they are attracted and preſs'd together.

'Now, the ſmalleſt Particles of Matter may *cohere* by the 'ſtrongeſt Attractions, and conſtitute larger; whoſe attract-'ing Force is feebler: And, again, many of theſe larger 'Particles *cohering*, may conſtitute others ſtill larger; whoſe 'attractive Force is ſtill weaker; and ſo on for ſeveral Suc-'ceſſions, till the Progreſſion end in the biggeſt Particles, 'on which the Operations in Chymiſtry, and the Colours of 'Natural Bodies do depend; and which by *cohering* com-'poſe Bodies of a ſenſible Magnitude.' See HARDNESS, FLUIDITY, and FIRMNESS.

The different Degrees of *Coheſion*, conſtitute Bodies of different Forms and Properties.

Thus, the ſame great Author obſerves, that the Particles of Fluids which don't *cohere* too ſtrongly, and are ſmall enough to render 'em ſuſceptible of thoſe Agitations which keep Liquors in a Fluor, are moſt eaſily ſeparated and rarefied into Vapour, and make what the Chymiſts call *Volatile Bodies*; rarefying with an eaſy heat, and again condenſing with a moderate cold. See VOLATILITY.

Thoſe whoſe Particles are groſſer, and ſo leſs ſuſceptible of Agitation, or *cohere* by a ſtronger Attraction, are not ſeparable without a greater degree of Heat; and ſome of 'em not without Fermentation: and theſe make what the Chymiſts call *Fix'd Bodies*. See FIXATION.

COHOBATION, in Chymiſtry, a repeated Diſtillation of the ſame Matter, with the Liquor drawn from it; that Liquor being again and again return'd upon the Matter left at the bottom. See DISTILLATION.

The Deſign of this Operation is to open the Pores, and ſeparate and volatilize the ſpirituous Part.

*Cohobation* is a kind of *Circulation*; only differing from it in this, that the Liquor is drawn off in *Cohobation* as in common Diſtillation, and thrown back again; whereas in Circulation it riſes and falls in the ſame Veſſel, without ever being carried out. See CIRCULATION.

COHORT, *Cohors*, among the *Romans*, a Body of Infantry, conſiſting of five or ſix hundred Men; anſwering in moſt reſpects to our Battalion.

The *Cohort* was divided into three *Maniples*, or Companies; the Maniple into two *Centuries*; and the Century into an hundred Men. See MANIPULUS, CENTURY, *&c.*

The firſt Centurion in a *Cohort* was called *Primipilus*; and bore the Eagle, or Standard of the Legion. See PRIMIPILUS.

A Legion conſiſted of ſix *Cohorts*. See LEGION.

When the Army was rang'd in order of Battel, the *Cohorts* were diſpos'd in the following manner: The firſt *Cohort* took up the right of the firſt Line, as the Companies of Grenadiers do in our Regiments; the reſt follow'd in their natural Order: ſo that the third was in the Centre of the firſt Line of the Legion, and the fifth on the left: the ſecond between the firſt and third; and the fourth between the third and fifth. The five remaining *Cohorts* form'd a ſecond Line in their natural Order: Thus the ſixth was behind the firſt, and ſo of the reſt.

The firſt, third, and fifth *Cohorts* were eſteem'd the beſt; at leaſt it appears ſo from the Poſts they took up, which were look'd on by the *Romans* as the moſt important.

*Marius* was the firſt who divided the *Roman* Forces into *Cohorts*.

The Word properly ſignifies the Area, Yard, or Space before the Door of a Houſe.

COIF, the Badge of a Serjeant at Law; who is hence alſo called *Serjeant of the* COIF. See SERJEANT.

The *Coif* is of Lawn, and wore on the Head, under the Cap when they are created, and ever after.

The Uſe of the *Coif* was to cover the *Tonſuram Clericalem*, otherwiſe called, *Corona Clericalis*; becauſe the Crown of the Head was cloſe ſhav'd, and only a Border of Hair left around the lower Part, which gave it the Appearance of a Crown. See CROWN, TÆNIA, *&c.*

COIN, or *Matrice*, in the Manufactury of Money, Medals, Counters, *&c.* is a piece of Steel well temper'd, four or five Inches high, ſquare at bottom, and round a-top; whereon are engraved, Dent-wiſe, or *En creux*, with Punchions and other Inſtruments, the ſeveral Figures, Marks, *&c.* to be ſtruck on the Monies, *&c.* See MATRICE.

*For the manner of engraving of the* COINS; ſee ENGRAVING *on Steel.*

COIN is more generally us'd for a Piece of Metal, converted into Money, by the impreſſing of certain Marks or Figures thereon. See MONEY.

Or, *Coin* may be defin'd, a Species of Money, ſtruck with a Hammer, or Mill. See COINAGE.

Hence, *Coin* differs from *Money*, as the *Species* does from the *Genus*. Money is any Matter, whether Metal, Wood, Leather, Glaſs, Horn, Paper, Fruits, Shells, Kernels, *&c.* which have courſe as a Medium in Commerce.

*Coins* are a particular Branch of Monies, *viz.* ſuch as are made of Metal, Gold, Silver, or Copper, and ſtruck according to a certain Proceſs, call'd *Coinage*.

It is obſerv'd, under the Article MONEY, that the preciſe *Epocha* of the Invention of Money is not known; 'tis too antient for our Annals: And if we might argue from the Neceſſity and Obviouſneſs of the Thing, muſt be nearly coeval with the World.

Whether *Coins* be of equal Antiquity, may admit of ſome doubt; eſpecially as moſt of the antient Writers are ſo frequent and expreſs in their mention of Leather Monies, Paper Monies, wooden Monies, *&c.* Some, however, maugre all this, are of opinion that the firſt Monies were of Metal: the Reaſons they give, are the Firmneſs, Neatneſs, Cleanlineſs, Durableneſs, and Univerſality of Metals; which, however, do rather conclude, they ought to have been ſo, than that they actually were ſo.

In effect, the very Commodities themſelves were the firſt Monies, *i. e.* had courſe for one another by way of exchange; and it was the difficulty of cutting, or dividing certain Commodities, and the impoſſibility of doing it without great Loſs, that firſt put 'em on the Expedient of a general Medium. See TRUCKING.

Indeed, thus much may be ſaid in behalf of *Coins*, that, on this view, 'twas natural for 'em to have their firſt recourſe to Metals; 'as being almoſt the only things whoſe Goodneſs, and as it were Integrity, is not diminiſh'd by Partition; beſides the Advantages above expreſs'd, and the Conveniencies of melting, and returning 'em again into a Maſs of any ſize or weight. See EXCHANGE.

'Twas probably, then, this Property of Metals which firſt accuſtom'd People, who traffick'd together, to account 'em in lieu of Quantities of other Merchandiſes in their Exchanges; and at length to ſubſtitute 'em wholly in their ſtead: and thus aroſe Money: As it was their other Property to preſerve any Mark or Impreſſion a long time, which confirm'd 'em in the Right; and thus was the firſt riſe of *Coins*.

In the firſt Ages, each Perſon cut his Metal into pieces of different Sizes and Forms, according to the Quantity to be given for any Merchandize, or according to the Demand of the Seller, or the Quantity ſtipulated between them: To this end they went to Market, loaden with Metal, in proportion to the Purchaſe to be made, and furniſh'd with Inſtruments for portioning it, with Scales for dealing it out, according as occaſion requir'd.

By degrees it was found more commodious to have Pieces ready weigh'd; and as there were different Weights requir'd, according to the Value of the different Wares, all thoſe of the ſame Weight began to be diſtinguiſh'd with the ſame Mark, or Figure: Thus were *Coins* carried one ſtep further.

At length, the growing Commerce of Money beginning to be diſturb'd with Frauds, both in the Weights and the Matter, the publick Authority interpos'd; and hence the firſt Stamps or Impreſſions of Money; to which ſucceeded the Names of the Moniers; and at length the Effigies of the Prince, the Date, Legend, and other Precautions to prevent the Alteration of the Species: And thus were *Coins* compleated. See COMMERCE.

On the Foot whereon Money now ſtands, 'tis divided into *real*, or effective Money; and *imaginary* Money, or Money of Accompt.

*Imagi-*

*Imaginary Money*, or *Money of Accompt*, is that which has no Exiſtence in real Species; but is rather a Sum of ſeveral Species, invented or retain'd to facilitate Accompts, by keeping them on a fix'd footing, not to be chang'd like the current *Coins*, which the Sovereign Power either raiſes or lowers at pleaſure, according to the Occaſions of the State.

Of this Kind, among us, are Pounds, Nobles, Marks, *&c.* among the *French*, Livres, *&c.* See POUND, LIVRE, *&c.*

For the ſeveral Imaginary Monies uſed in the ſeveral Parts of *Europe*, &c. with their Proportions and Reductions, ſee MONEY.

*Real*, or *Effective Money*, is that which has an actual Exiſtence, in real Species of Gold, Silver, *&c.* See SPECIES.

Such are, among us, *Shillings*, *Guineas*, &c. the Liſt of which, uſed in the ſeveral Parts of the World, with their Reductions, are as follows.

### *Modern* COINS, *or current Species of* Europe, Aſia, Africa, *and* America.

All the current Species in the four Quarters of the Earth, at this Day, are either made of Metals, or are Shells and Fruits.

The Metals are Gold, Silver, Copper, Tin, and Lead; to which may be added Billon, a mixture of Silver and Copper in a certain proportion.

In *Europe*, none are uſed beſide Gold, Silver, Copper, and Billon. In ſome part of the *Eaſt Indies*, they likewiſe uſe Tin and Lead: As to Shells and Fruits, they are the ſmall Money of ſeveral Nations in *Aſia*, *Africa*, and *America*.

### *Britiſh* COINS.

In *England*, the current Species of *Gold*, are the Guinea, Half Guinea, Jacobus, Laureat, Angel, and Roſe-Noble: the four laſt of which are now ſeldom met with, having been moſt of them converted into Guineas, chiefly during the Reigns of *Charles* II. and *James* II. See GOLD.

The *Silver Coins* are the Crown, Half Crown, Shillings and Sixpences. See SILVER.

*Copper Coins* are Halfpennies and Farthings. See COPPER.

### *Value and Proportions of the* Engliſh COINS.

| Farthing. | | | | | | |
|---|---|---|---|---|---|---|
| 2 | Halfpenny. | | | | | |
| 48 | 24 | Shilling. | | | | |
| 120 | 60 | $2\frac{1}{2}$ | Half Crown. | | | |
| 240 | 120 | 5 | 2 | Crown. | | |
| 960 | 480 | 20 | 8 | 4 | Pound Acc. | |
| 1058 | 504 | 21 | $8\frac{1}{3}$ & $\frac{1}{3}$ | $4\frac{1}{2}$ | $1\frac{1}{20}$ | Guinea, or Piece. |
| The Jacobus | | 25 | 10 | 5 | $1\frac{1}{4}$ | |
| The Carolus, or Laureat | | 23 | $9\frac{1}{5}$ | $4\frac{1}{2}$ & $\frac{1}{10}$ | | |

In *Scotland*, by the Articles of the Union, 'tis appointed, that all the *Coins* be reduced to the *Engliſh*, and the ſame Accompts obſerv'd throughout. Till then, the *Scots* had their Pounds, Shillings, and Pence, as in *England*; but their Pound was but twenty Pence *Engliſh*, and the others in Proportion: Accordingly, their Mark was $13\frac{1}{3}$ *s. Scotch*, current in *England* at $13\frac{1}{2}$ *d.* their Noble in proportion.

Beſide theſe, they had their *Turnoner* Pence and Halfpence; their Penny $\frac{1}{12}$ of that of *England*: beſides baſe Money of Achiſons, Babees, and Placks. The Bodle, $\frac{1}{8}$ of the Pence, $\frac{1}{4}$ of the Achiſon, $\frac{1}{2}$ of the Babee, and $\frac{1}{2}$ of the Plack.

In *Ireland*, the *Coins* are as in *England*, *viz.* Shillings, Pence, *&c.* with this difference, that their Shilling, or Harper, is but equal to nine Pence Sterling; whence their Pound is only $\frac{3}{4}$ of ours, or 15 *s.*

### *French* COINS.

The only *Gold Coin* now current in *France*, is the Lewidore, or Louis d'Or, with its Diviſions, which are $\frac{1}{2}$ and $\frac{1}{4}$; and its Multiples, which are the double and quadruple Louis. See LOUIS.

Till the Year 1700, they had Gold Lys, and Ecus, or Crowns; but they are now no more.

The *Silver Coins* are the Ecus, Crowns, or white Louis's, with their Diminutions, *viz.* $\frac{1}{2}$ and $\frac{1}{4}$; and Pieces of ten Sols, and of ſix. See SOL, and CROWN.

The *Billon Coins* are of two Kinds, each called *Sols*; ſome of 15 Deniers, others 21. To theſe may be added the Deniers current in the *Lionnois*, *Provence*, *Dauphine*, and other Parts.

Laſtly, the *Copper Coin* is the Liard, equal to three Deniers; and is ordinarily called the Double.

Their general Value is as in the following Table: For Particulars, ſee the particular Heads.

Denier, equal to $\frac{1}{4}$ of a Farthing Sterl.

| 2 | Double. | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| 3 | $1\frac{1}{2}$ | Liard. | | | | *l.* | *s.* | *d.* *qrs.* |
| 12 | 6 | 4 | Sol *Paris*, | | is equal to | 0 | : 0 | : 0 : $3\frac{3}{5}$ |
| 240 | 120 | 8 | 20 | Livre, *Acc.* | | 0 | : 1 | : 6 |
| 720 | 360 | 240 | 60 | 3 | Ecus, Crown | 0 | : 4 | : 6 |

*The* Louis d'Or, *or* French Piſtole, *was firſt ſtruck at* 10 Livres, *but has ſince riſen as high as* 30. *With us 'tis valued at* 16 *s. Sterling.*

### *Spaniſh* COINS.

In *Spain*, and the States depending thereon, the *Gold Coin* is the Piſtole; above which is the Double Piſtole, and Piece of four Piſtoles; and under it the Half Piſtole: to which muſt be added the Caſtillans of Gold. See PISTOLE.

The *Silver* Money are the Piaſtre, or Piece of eight Reals, and its Diminutions; as alſo the ſimple Real, with its Diminution. See REAL.

The *Copper Coins* are the Ochavos, or Octavos, which are of two Kinds, the one equal to four Maravedis, and ordinarily call'd Quarta; the other double this, and called double Quarta: laſtly, the Maravedis. See MARAVEDIS.

It muſt be obſerv'd, that in *Spain* they have new Money and old. The old, current in *Sevil*, *Cadix*, *Andaluſia*, and ſome other Places, is worth 25 *per Cent.* more than the New, current at *Madrid*, *Bilboa*, *St. Sebaſtian*, &c. *i. e.* 100 Pounds old, is equal to 125 Pounds new. This difference is owing to their King *Charles* II. who in 1688, to prevent the Export of Money abroad, rais'd it 25 *per Cent.* which, however, he was only able to effect in part; ſeveral Provinces ſtill retaining the antient Rate.

### *Value of the* Spaniſh COINS.

Maravedis old, ſomewhat above $\frac{1}{3}$ of a Farthing Sterling.

| 4 | Quarta. | | | | | *l.* | *s.* | *d.* |
|---|---|---|---|---|---|---|---|---|
| 8 | 2 | Octavo, or double Quarta. | | | | | | |
| 64 | $3\frac{1}{4}$ | $4\frac{1}{2}$ | Real, *old Plata*, | | equal to | 0 | : 0 | : $6\frac{3}{4}$ |
| 512 | 68 | 34 | 8 | Pieces of Eight, or *Piaſtre*, | | 0 | : 4 | : 6 |
| 2048 | 272 | 136 | 32 | 4 | Piſtole, | 0 | : 17 | : 6 |

### *Portugueſe* COINS.

Thoſe of *Gold* are the Milleray, or St. Stephen, and the Moeda d'Oro, or, as we call it, the Moidore; which is properly their Piſtole: above this are Doppio Moedas, or double Piſtoles; and quadruple Species equal to five Piſtoles. See MOIDORE.

Their *Silver Coins* are the Cruzada; Pataca, or Piece of Eight; and the Vintain, whereof they have two ſorts, the one Silver, and the other Billon.

The Res is of *Copper*, which ſerves 'em in Accompts, as the Maravedis does the *Spaniards*.

Res, or Rez, equal to $\frac{3}{5}$ of a Farthing Sterling.

| 20 | Vintain. | | | | | | *l.* | *s.* | *d.* |
|---|---|---|---|---|---|---|---|---|---|
| 400 | 20 | Cruzada. | | | | | | | |
| 1000 | 50 | $2\frac{1}{2}$ | Mi-moeda, | | | or Half Piſtole, equals | 0 | : 13 | : 6 |
| 2000 | 100 | 5 | 2 | Moeda d'Oro, | | or Piſtole, | 1 | : 7 | : 0 |
| 4000 | 200 | 10 | 4 | 2 | Doppio Moeda, | or double Piſt. | 2 | : 14 | : 0 |
| 10000 | 500 | 25 | 10 | 6 | $2\frac{1}{2}$ | Ducat of fine Gold, | | 6 | : 15 : 0 |

### *Dutch* COINS.

Thoſe of *Silver* are Crowns, or Dollars, Ducatoons, Florins, and Eſchalins, each whereof has its Diminution. The Stiver, or common Shilling, is of *Billon*; the Duyt, and Penny of *Copper*.

| Penny. | | | | | | | *l.* | *s.* | *d.* |
|---|---|---|---|---|---|---|---|---|---|
| $1\frac{1}{2}$ | Duyt. | | | | | | | | |
| 6 | 4 | Gros. | | | | | | | |
| 12 | 8 | 2 | Stuyver, | | | or Shilling common | 0 | : 0 | : $1\frac{1}{5}$ |
| 72 | 48 | 12 | 6 | Scalin, | | or Shilling groſs | 0 | : 0 | : 7 |
| 236 | 160 | 40 | 20 | $3\frac{1}{3}$ | Florin, | or Guilder, | 0 | : 2 | : 0 |
| 708 | 480 | 120 | 60 | 10 | 3 | Doller, or Ducatoon, | 0 | : 6 | : 0 |

### *Flemiſh* COINS.

Thoſe of *Gold* are Imperials, Rides, or Philips, Alberts, and Crowns.

Thoſe of *Silver* are Philips, Rixdollars, Patagons, Scalines, and Gulden: And thoſe of *Copper*, Patards.

Patard,

| | | | | | | | l. | s. | d. |
|---|---|---|---|---|---|---|---|---|---|
| Patard, or Penny. | | | | | | | | | |
| 8 | Groat. | | | | | | | | |
| 16 | 2 | Single Stiver, equal to | | | | | 0 | 0 | 1 1/4 |
| 96 | 6 | 6 | Shilling. | | | | 0 | 0 | 7 1/2 |
| 288 | 18 | 20 | 3 | Gulden. | | | 0 | 2 | 0 |
| 720 | 90 | 50 | 2 1/2 | 2 1/2 | Rixdollar, Dollar, Patag. | | 0 | 4 | 6 |
| 2104 | | | 7 1/2 | | 2 1/2 | Imperial. | 0 | 11 | 3 |

Note, *The Rixdollar, Dollar, and Patagon, are nearly on the ſame Foot with the Crown, or Piece of Eight.*

### *German* Coins.

Thoſe of *Gold* are Ducats, which are of various Kinds; Oboli of the *Rhine*, and Florins: of this laſt Kind there are ſome likewiſe of *Silver*; beſide Rixdollars and Izelottes, which are all of that Metal.

Thoſe of *Copper*, are the Creux, or Kreuxer, and Fenin.

Fenin, equal to 1/3 of a Farthing Sterling.

| | | | | | | | l. | s. | d. |
|---|---|---|---|---|---|---|---|---|---|
| 8 | Creux, or Kreuxer. | | | | | | | | |
| 192 | 24 | Dollar. | | | | | | | |
| 348 | 43 1/2 | 1 8/10 | Obolus. | | | | | | |
| 432 | 54 | 2 1/10 | 1 2/10 | Izelotte. | | | 0 | 2 | 9 |
| 480 | 60 | 2 3/10 | 1 3/10 | 1 1/10 | Gulden, or Florin. | | 0 | 3 | 0 |
| 650 | 100 | 3 8/10 | 2 1/10 | 1 9/10 | 1 6/10 | Rixdol. or Dollar. | 0 | 4 | 6 |
| 1068 | 133 | 5 8/10 | 2 8/10 | 1 2/10 | 2 1/10 | 1 3/10 Ducat. | 0 | 7 | 6 |

### *Italian* Coins.

In *Italy*, the Several States have ſeveral current Monies: tho there are ſome common to them all; ſuch as the Piſtole of *Gold*, and the Ducatoon and Florin of *Silver*; which being of various Weights, Firmneſs, and Value, ſee under the Articles Pistole, Ducatoon, &c.

Thoſe peculiar to *Rome*, are the Julios, of *Silver*, the Pignatelle of *Billon*; and the Bayoco, Demi-Bayocos, and Quadrine of *Copper*.——*Venice* has its Sequins of *Gold*; its Juſtins, or Ducatoons, and Derlingues of *Silver*.—— *Naples* its Carlins.—— *Mourgues* its Monacos, or Crowns, and its Louis's of ſix Sols.——*Genoa* its Croiſats.—— *Savoy* and *Piemont*, its Lys; all *Silver*. This laſt State has likewiſe Papiroles, and Cavales of *Billon*.

| | s. | d. Sterl. |
|---|---|---|
| Julio, equal to —— | 0 | 6 7/100 } 8 1/2 make a *French* Crown. |
| Bayoco, 1/10 of the Julio = | 0 | 0 1/2 Penny and 1/5. |
| Pignatelle, 1/50 of the Julio = | 0 | 0 1/2 of 1/4 of a Penny, or near 1/8 a Far. Sterl. |
| Juſtine = —— | 4 | 9 |
| Derlingue, 1/4 of the Juſtine = | 1 | 2 1/4 |
| Carlin = —— —— | 0 | 6 |
| Monaco = —— —— | 4 | 4 |
| Sequin = —— | 9 | 2 |
| Croiſat = —— —— | 4 | 4 |

*Swiſs* Coins, are Ratzes, and Blazes; of *Billon*.

Ratze, equal to 3/4 and 1/8 of a Penny Sterling.

Blaze of *Bern*, nearly on the ſame Footing with the Ratze.

### *Poliſh* Coins.

Beſide the Rixdollars ſtruck here, which are common to other Countries; the *Poles* ſtrike *Silver* Roups, Abras, and Groats.

| | s. | d. Sterl. |
|---|---|---|
| Roup —— —— | 0 | 4 3/4 |
| Abra —— —— | 1 | 0 1/2 |
| Groch —— —— | 0 | 0 1/2 and 1/8 |

*Daniſh* Coins, are the Horſe, the Marcs Lubs, and the Scheſdals of *Silver*.

| | s. | d. |
|---|---|---|
| Horſe —— —— | 1 | 1 1/2 Sterl. |
| Marc Lubs —— —— | 1 | 6 |
| Scheſdal, two Marcs, or Lubs | 3 | 0 |

### *Swediſh* Coins.

Thoſe of *Silver* are the Chriſtines, Carolines, and Cavaliers. Thoſe of *Copper* the Rouſtique, Alleuvre, Mark, and Money.

| | s. | d. Sterl. |
|---|---|---|
| Chriſtine —— —— | 1 | 1 1/2 |
| Caroline —— —— | 1 | 5 1/4 |
| Mark —— —— | 0 | 2 1/8 |
| Rouſtique, 1/8 of the Mark —— | 0 | 0 1/4 and 1/8 of 1/2 |
| Alleuvre, 1/2 of the Rouſtique | 0 | 0 1/8 and 1/16 of 1/2 |

The Swediſh *Money*, properly ſo called, is a kind of *Copper*, very ſoft and malleable, found in little ſquare Pieces, or Plates, about the thickneſs of three *Engliſh* Crowns, and weighing five Pounds and a half; ſtamp'd at the four Corners with the *Swediſh* Arms; and current in *Sweden* for a Rixdollar, or Piece of Eight.

### *Muſcovite* Coins.

There are two Kinds of Copecs in *Muſcovy*, the one of *Gold*, the other of *Silver*; the laſt call'd alſo Denaing, or Pence. Their

| | s. | d. |
|---|---|---|
| Copec, or Kapeke of *Gold*, worth | 1 | 6 1/11 Sterl. but |
| current in the Czar's Territories for | 1 | 9. |
| Copec of *Silver*, or Denaing of an oval form, worth —— | 0 | 1 Sterl. but current for |
| ſomewhat more. | | |
| Poluſk, 1/2 of the Copec —— | 0 | 0 1/2 |
| Muſkoviſke, 1/4 of the Copec —— | 0 | 0 1/4. |

### *Turkiſh* Coins.

The only *Gold* Species ſtruck in the Grand Seignior's Territories, is the Sultanin, called alſo Scherif, or Sequin.

Their ſmall Monies are the Para, Paraſi, called alſo Parat, and Meidein, and the Aſpre both of *Silver*.

| | s. | d. Sterl. |
|---|---|---|
| Sultanin Scherif, or Sequin, equal to the Ducat of *Gold*, or —— —— | 9 | 0 |
| Para Parat, or Paraſi —— | 0 | 1 1/2 |
| Shakee of *Aleppo* and *Scandaroon* — | 0 | 3 1/2 |
| Aſpre —— —— | 0 | 0 2/3 but ordinarily, by reaſon of the baſe Alloy, no more than 1/2. |

### Coins *of the Coaſts of Barbary.*

The current *Coins* ſtruck here are Rubies, Medians, Ziams, and Metecals; all of *Gold*: the laſt of which are ſtruck at *Morocco*, the reſt at *Fez*, *Algiers*, and *Tunis*; which beſide have Doublas of *Silver*, and Burbas of *Copper*.——*Tunis* its Naſaras of *Silver*, its Blanquilles likewiſe of *Silver*, and Felours of *Copper*.

Other *Coins* of *Africa*, are the Merigal of *Gold*, current in *Sofala*, and the Kingdom of *Monopotapa*; and the Pardo of *Silver*, current in *Moſambica*.

| | s. | d. Sterl. |
|---|---|---|
| Rubie, equal to 35 Aſpres, or — | 1 | 9 |
| Median, 50 Aſpres, or —— | 2 | 7 |
| Ziam, Zian, or Dian, 2 Medians, or | 5 | 2 |

Metecal, a Kind of Ducat of different Fineneſs, conſequently of different Value; whence very conſiderable Difficulties in Commerce. The Difference ariſes hence, that there is no Mint fix'd, or regular *Coiners* at *Morocco*, but every *Jew* and Goldſmith ſtrikes Ducats after his own manner in open Shop.

| | s. | d. Sterl. |
|---|---|---|
| Double, equal to 80 Aſpres, or — | 4 | 6 |
| Burba, 1/12 of an Aſpre, or —— | 0 | 0 1/12 |
| Blanquille, —— —— | 0 | 2 1/4 |
| Felours, 1/8 of the Blanquille, or — | 0 | 0 1/4 and 1/32 |
| Merigal, worth about —— | 18 | 0 |
| Pardo, —— —— | 1 | 3 |

### *Perſian* Coins.

Thoſe are either *Silver*, or *Copper*; *Gold* they have none: Of the firſt Kind are the Abaſſi, Mamoudi, Chaye, and Biſti: of the ſecond the Kabeſqui, and Half Kabeſqui; the Tela, or Cherraſis, indeed is *Gold*; but 'tis leſs a Money than a Medal, tho it has ſome courſe in Commerce.

| | s. | d. |
|---|---|---|
| Abaſſi, equal to —— —— | 1 | 4 1/2 Sterl. |
| Mamoudi, Chaye, 1/2 the Abaſſi, —— | 0 | 8 1/4 |
| Chaye, 1/2 the Mamoudi, —— | 0 | 4 and 1/8. |

Biſti, ſome Relations make a *Coin* worth about 1 Penny Halfpenny; but others only a Term of Accompts, ſignifying 10 Dimars, or 1/1000 part of a Toman. See Toman.

Cabequi, or Cabeſque, equals 5/12 of a Penny Sterl.

Tela, or *Cheraſis*, uſually ſtruck at the Acceſſion of a new King, and at the Beginning of each new Year; its Weight and Worth various.

### *Chineſe* Coins.

Throughout the Kingdom of *China* and *Tunquin*, there are not properly any *Coins* ſtruck; inſtead of theſe, they cut their Gold and Silver into little Pieces of different weights: Thoſe of Gold, the *Dutch*, from their Figure, which reſembles a Boat, call Golchuts: thoſe of *Silver*, the Natives call Leam; the *Portugueze*, Taels.

Their ſmall Money is of *Copper*; 10 of theſe make their Shilling, and 10 of thoſe their Crown, or Leam.

Beſide theſe, they have a ſmall Money of *Lead*, mix'd with the Scum of Copper, having Holes in the middle to ſtring 'em on for the eaſe of numbering: this Species is called Caxa, Cas, and Pitis; and the String, which uſually holds 200, is called *Santa*. They are ſo very brittle, that they never fall without breaking into a great number of Pieces; and if left all Night in Salt Water, ſtick ſo cloſe together that they can't be ſeparated.

There are two Kinds, *great* and *ſmall*.

Golchut, an Ingot, which at 3 *l.* 3 *s. per* Ounce, uſually amounts to 101 *l.* 5 *s.* Sterling.

Other Golchuts only weigh half as much; their Value in proportion.

Tael, or Leam, equal to 6 *s.* 8 *d.* Sterling.

Copper Money $\frac{1}{1000}$ part of the Tael, or ſomewhat more than $\frac{1}{4}$ of a Farthing.

Caxa, Cache, or Pitis, $\frac{10}{12}$ or $\frac{5}{6}$ of a Penny Sterl. 300000 of theſe are nearly equal to 56 *Dutch* Pounds.

Caxa larger, $\frac{1}{8000}$ of a Piaſtre, or Piece of Eight.

### Coins *of Japan.*

The *Japoneſe* ſtrike Coupants, both of *Gold* and *Silver*, and Copper Pieces with Holes in the middle, like thoſe of *China*; 600 of theſe make the Tael. Their other Monies, or *quaſi* Monies, are Ingots, which they cut like the *Chineſe* of different Weights, chiefly three; the largeſt, of the weight of ſix Reals, *viz.* 48 Taels, the Tael equivalent to 75 *Dutch* Styvers. The ſecond equal to ſix Taels and an half; and the third to $\frac{5}{8}$ of a Real, or 1 Tael $\frac{1}{16}$.

Beſide theſe, they have a ſmall Silver Money, in form of round Beans, of no determinate weight, uſually weigh'd by Maiſes; the common Payment being by 10 Maiſes, which make one Tael.

| | *l.* | *s.* | *d.* Sterl. |
|---|---|---|---|
| Coupant of *Gold*, weighing 1 Ounce 6 Drachms; its Figure a long Oval, the longeſt Diameter about 4 Inches, and the ſhorteſt half an Inch. | 6 | 12 | 6 |
| Other Coupants of *Gold*, near $\frac{1}{3}$ of the former, amounting to about —— | 2 | 4 | 2 |
| Coupant of *Silver*, current at — | 0 | 4 | 6 |
| *Copper* Money, —— $\frac{7}{15}$ of a Farthing. | | | |

### Coins *of Siam.*

In the Dominions of *Siam* are ſtruck *Gold* Pieces five or ſix Grains heavier than the Half Piſtole of *Spain*; but theſe are rather Pieces of Curioſity, than of Uſe in Commerce.

Their *Silver Coin* is the Tical, or Baat; the Diminutions whereof are the Mayon, or Seling, Foang, and Sompayc. Theſe Pieces are all ſtrangely ſtruck: in form they reſemble Nuts, a little flatted at the Extremities; and are ſome of them cloven like Horſe-ſhoes: On two of the Sides are ſome *Siameſe* Letters.

Their *Copper* Money, called Bia, is round and thick: beneath this is the Cauris.

| | *s.* | *d.* Sterl. |
|---|---|---|
| *Gold* Species of *Siam*, —— | 7 | 0 |
| Tical, or Baat, —— — | 2 | $5\frac{1}{2}$ |
| Mayon, or Seling, $\frac{1}{4}$ of the Tical, — | 0 | $7\frac{1}{4}$ and $\frac{1}{8}$ |
| Foang, $\frac{1}{2}$ the Mayon, —— — | 0 | $3\frac{1}{24}$ |
| Sompayc, $\frac{1}{2}$ the Foang, —— — | 0 | $1\frac{1}{2}$ and $\frac{1}{48}$ |
| *Copper Coin*, or Farthing of *Siam*, | 0 | $0\frac{1}{10}$ |

### Coins *of the Coaſts and Iſlands of the* Indies.

The Principal, and thoſe moſt generally current, are Pagods, Roupies, Larins, Fanos, or Fanons, and Coupans, each whereof are ſtruck both of *Gold* and *Silver*.

Beſide theſe general *Coins*, are particular ones, *viz.* at *Goa*, S. Thomas's of *Gold*.— Along the *Perſian* Gulf, about *Mecca*, and throughout *Arabia*, the Larin. — Along the Coaſts of *Malabar*, and at *Goa*, the Paradao Xeraphin of *Silver*.—At *Bantam*, the Fardos; at *Malabar*, the Tare; at *Siam* the Tical, with its Diminutions the Mayon, Foang, Sompayc, and Demi-Foang: all of *Silver*.—At *Surate*, *Agra*, and the reſt of *Indoſtan*, the Pecha, or Peſſa, and Doudous, all of *Copper*.—The Baſarucos and Chedas, of *Tin*.

| | *l.* | *s.* | *d.* Sterl. |
|---|---|---|---|
| Pagod, *Gold*, denominated from its Impreſſion, an *Indian* Idol, — | 0 | 5 | 0 |
| Pagod, *Silver*, its Value very different; the ſmalleſt 8 Tangas, and the Tanga 90 Baſarucos; equal to | 1 | 2 | 6 |
| Roupia, *Gold*, —— —— | 1 | 11 | 6 |

Roupia, *Silver*, its Fineneſs and Value various: There are three Kinds current, *viz.* the Roupias *Siceas*, the Roupias of *Surat*, and Roupias of *Maderas*.

| | *s.* | *d.* Sterl. |
|---|---|---|
| Roupias *Siceas*, worth at *Bengal* —— | 2 | 11 |
| —— of *Surat* —— — | 2 | $6\frac{1}{2}$ |
| —— of *Madras* —— —— | 2 | $5\frac{1}{2}$ |

*Note*, This is to be underſtood of the *new* Roupias; for as to the *old* ones, of each Kind, their Value is leſs: thoſe of *Maderas*, *v. g.* are but equal to 1 *s.* 11 *d.* Sterl. thoſe of *Surat*, 2 *s.* and the *Siceas* 2 *s.* 4 *d.*

| | *s.* | *d.* Sterl. |
|---|---|---|
| Larin, in form of a round Wire, or Cylinder, equal to the Barrel of a Pen; bent in two and a little flatted at each end, to receive the Impreſſion of ſome *Arabic*, or *Perſian* Characters. —— — | 0 | 11 |
| Fanos, or Fanon, *Gold*, is of different Fineneſs, Weight, and Value; the *largeſt* worth | 0 | 9 |
| The *ſmalleſt* —— —— | 0 | $2\frac{1}{2}$ |
| Fanos, *Silver*, —— — | 0 | $1\frac{1}{4}$ |
| Coupant, ſee Coins *of Japan*. | | |
| S. Thomas, equal to —— | 9 | 0 |
| Pardao Xeraphin —— — | 2 | 1 |
| Fardos —— — —— | 2 | $8\frac{1}{2}$ |
| Tare —— —— —— | 0 | $0\frac{1}{2}$ |

| Pecha, or Peſſa, —— —— | 0 | $0\frac{1}{2}$ |
| Doudou, $\frac{1}{14}$ of Fanos, or ſomewhat leſs than | 0 | $0\frac{1}{4}$ |
| Baſaruco —— $\frac{1}{5}$ of a Farthing. | | |
| Cheda is of two Kinds, the one Octogonal, current at —— —— | 0 | $1\frac{1}{4}$ |
| The other round —— —— | 0 | $0\frac{1}{3}$ |

### *Mogul* Coins.

In the Dominions of the great *Mogul*, are Roupies, Mamoudes, and Pechas; the firſt both of *Gold* and *Silver*; the ſecond of *Silver* alone, and the third of *Copper*.

There are others ſtruck by the Princes tributary to him, and the Powers bordering on him, ſcarce current beyond their reſpective Territories: particularly a ſmall *Silver Coin* ſtruck by the K. of *Matoucha*, whoſe Territories lie to the North of *Agra*, of the Value of the Pecha of *Mogul*, but half as heavy again.—The *Raja* of *Parta-jajamoula*, to the North of *Patua*, likewiſe ſtrikes ſome little Pieces, both of *Silver* and *Copper*, of ſmall Value.—The *Raja* of *Ogden*, who commands between *Brampour*, *Seronge*, and *Amadabath*, a ſmall *Silver Coin*, equal to 6 Pence Sterling; and another of *Copper*, equal to an Halfpenny Sterling.— The King of *Cheda* and *Pera*, a *Tin* Money called *Cheda*.—The King of *Achem*, little ſlight *Gold* Pieces, worth about 15 Pence Sterl. —and *Tin* Pieces, 80 of which are equal to the *Engliſh* Penny, current in the Iſles of *Sumatra*.—The *Gold Coin* of the King of *Macaſſar* and *Celebes*, is taken by the *Dutch* for a Florin.—The King of *Camboya* ſtrikes only Pieces of *Silver* and *Copper*: his Gold, wherein he abounds, is negotiated by weight.— The Kings of *Java* and *Bantam*, in the ſame Iſland, and thoſe of the *Molucca* Iſlands, ſtrike only *Copper Coins*: they allow foreign *Silver* Species to be current in their Territories, but coin none.

| | *s.* | *d.* Sterl. |
|---|---|---|
| Roupia, ſee Coins *of the Coaſts*, &c. *of* India. | | |
| Mamouds, or Mammed, its value is not fix'd: In the Kingdom of *Mazarate*, the great Mamoud is equal to —— | 0 | 11 |
| The ſmall half the great one —— | 0 | $5\frac{1}{2}$ |
| Pecha, ſee Coins *of the Iſles*, &c. *of* India. | | |
| *Silver* Piece of *Matoucha*, —— | 0 | $0\frac{1}{2}$ |
| *Silver* Piece of the K. of *Ogden*, —— | 0 | 6 |
| *Copper* Piece of the ſame —— | 0 | $0\frac{1}{2}$ |
| Cheda, ſee Coins *of the Iſles*, &c. *of* India. | | |
| *Gold* Piece of the King of *Achem*, —— | 1 | 3 |
| *Tin* Piece of the ſame —— | 0 | $0\frac{1}{80}$ |
| *Gold* Piece of the King of *Macaſſar*, taken by the *Dutch* for a Guilder, —— | 1 | $10\frac{1}{2}$ |

To the Number of current *Coins* which have diſtinct Names to ſpecify 'em, may be added many more, both in *Europe* and *Aſia*; only denominated and known from their Value: Such are thoſe called ſimply *Pieces*; with the Addition of their Price: as in *Spain*, the Piece of eight Reals, in *England* the Piece of 21 Shillings, or Guinea; in *France* the Piece of 4 Francs, Piece of 10 Sols, or Shillings; Piece of 4 Sols; Piece of 2 Sols; of 6 Blanks; of 30, 15, 6, 4, *&c.* Deniers, or Pence. See Piece.

### *Shells current in* Aſia.

Theſe ſerve in many Places for Money; and are brought from the *Maldives*, and called in the *Indies* Cauris: On the Coaſts of *Africa* they change their Name, and are called Bouges.

In *America* they take a third Name, *viz.* Porcelains. Indeed theſe laſt don't come from the *Maldives*; there being Shells found in the *Weſt-Indies* much like thoſe of the *Eaſt*.

In the Kingdom of *Congo* is another Kind of Shells, called Zimbi; tho ſome will have them the ſame with the Cauris.

Cauris, Coris, or Bouges, are white Shells, current particularly in the State of the Great *Mogul*; dug out of the Ground by the *Maldivians*: 65 are uſually reckon'd equivalent to the Pecha, a ſmall *Copper Coin*, worth about an Halfpenny Sterling; which brings each Cauris to $\frac{1}{130}$ of a Penny Sterling.

Purcelaines are nearly on the ſame Footing with the Cauris. See Cauris.

Zimbi, current particularly in the Kingdoms of *Angola* and *Congo*. Two thouſand Zimbis make what the *Negroes* call a Macoute; which is no real Money, whereof there is none in this Part of *Africa*, but a manner of reckoning: Thus, two *Flemiſh* Knives they eſteem a Macoute; a Copper Baſon, two Pound weight, and 12 Inches Diameter, three Macoutes; a Fuſil ten, *&c.*

### *Fruits current for* Coins.

There are three Kinds of Fruits uſed for *Coins*; two in *America*, particularly among the *Mexicans*; which are the Cacao and Maiſe: The other in the *Eaſt-Indies*, *viz.* Almonds; brought thither from *Lar*, and growing in the Deſarts of *Arabia*.

Cacao, 15 of theſe are eſteem'd equivalent to a *Spaniſh* Real, or 7 Pence Sterling.

Maiſe has ceas'd to be a common Money ſince the Diſcovery of *America* by the *Europeans*.

Almonds are chiefly uſed where the Cauris are not current. As the Year proves more or leſs favourable to this Fruit, the Value of the Money is higher or lower: In a common Year, 40 Almonds are ſet againſt a Peſcha, or Halfpenny Sterling; which brings each Almond to $\frac{1}{240}$ of a Farthing.

*Thus much for the Modern* Coins, *or* Monies: *Thoſe of the Antients are as follow.*

### *Antient* Coins.

*Value and Proportion of the* Jewiſh Coins.

| | | | | | *l.* | *s.* | *d.* Sterl. |
|---|---|---|---|---|---|---|---|
| Gerah | | | | | 00 | 00 | $1\frac{59}{160}$ |
| 10 | Bekah | | | | 00 | 01 | $1\frac{11}{16}$ |
| 20 | 2 | Shekel | | | 00 | 02 | $3\frac{3}{8}$ |
| 1200 | 120 | 60 | Maneh Minah Hebraica | | 06 | 16 | $10\frac{1}{2}$ |
| 60000 | 6000 | 3000 | 50 | Talent | 342 | 03 | 09 |
| Solidus Aureus, or Sextula, worth | | | | | 00 | 12 | $0\frac{1}{2}$ |
| Siclus Aureus, worth | | | | | 1 | 16 | 6 |
| A Talent of Gold, worth | | | | | 5475 | 00 | 0 |

*Value and Proportion of the antient* Grecian Coins.

| | | | | | | | | *s.* | *d.* | *qrs.* Sterl. |
|---|---|---|---|---|---|---|---|---|---|---|
| Lepton | | | | | | | | 0 | 0 | $0\frac{31}{336}$ |
| 7 | Chalcus | | | | | | | 0 | 0 | $0\frac{31}{48}$ |
| 14 | 2 | Dichalcus | | | | | | 0 | 0 | $1\frac{7}{24}$ |
| 28 | 4 | 2 | Hemiobolium | | | | | 0 | 0 | $2\frac{7}{12}$ |
| 56 | 8 | 4 | 2 | Obolus | | | | 0 | 1 | $1\frac{1}{6}$ |
| 112 | 16 | 8 | 4 | 2 | Diabolum | | | 0 | 2 | $2\frac{1}{3}$ |
| 224 | 32 | 16 | 8 | 4 | 2 | Tetrobolum | | 0 | 5 | $0\frac{2}{3}$ |
| 336 | 48 | 24 | 12 | 6 | 3 | $1\frac{1}{2}$ | Drachma | 0 | 7 | 3 |
| 662 | 96 | 48 | 24 | 12 | 6 | 3 | 2 | Didrachmum | 1 | 3 | 2 |
| 1324 | 112 | 96 | 48 | 24 | 12 | 6 | 4 | 2 | Tetradrachm. Stater | 2 | 7 | 0 |
| 1660 | 384 | 120 | 60 | 30 | 15 | $7\frac{1}{2}$ | 5 | $2\frac{3}{4}$ | $1\frac{1}{4}$ Pentadrachmum | 3 | 2 | 3 |

*Note*, Of theſe the Drachma, Didrachm, *&c.* were of *Silver*, the reſt for the moſt part of *Braſs*. The other Parts, as Tridrachm, Triobolus, *&c.* were ſometimes *coin'd*.

*Note* alſo, the Drachma is here, with the generality of Authors, ſuppos'd equal to the Denarius: tho there's Reaſon to believe, the Drachma was ſomewhat the weightier. See Drachma.

| | *l.* | *s.* | *d.* |
|---|---|---|---|
| The *Grecian Gold Coin* was the Stater Aureus, weighing two *Attick* Drachms, or half of the Stater Argenteus; and exchanging uſually for 25 *Attic* Drachms of *Silver*; in our Money | 0 | 16 | $1\frac{3}{4}$ |
| According to our Proportion of *Gold* to *Silver* | 1 | 00 | 9 |
| There were likewiſe the Stater Cyzicenus, exchanging for 28 *Attick* Drachms, or Stater Philippicus, and Stater Alexandrinus, of the ſame Value. | 0 | 18 | 1 |
| Stater Daricus, according to *Joſephus*, worth 50 *Attick* Drachms, or Stater Cræſius, of the ſame Value. | 1 | 12 | $3\frac{1}{2}$ |

*Value and Proportion of the* Roman Coins.

| | | | | | | *s.* | *d.* | *qrs.* Sterl. |
|---|---|---|---|---|---|---|---|---|
| Teruncius | | | | | | 0 | 0 | $0\frac{775}{1000}$ |
| 2 | Semilibella | | | | | 0 | 0 | $1\frac{55}{100}$ |
| 4 | 2 | Libella As | | | | 0 | 0 | $3\frac{1}{10}$ |
| 10 | 5 | $2\frac{1}{2}$ | Seſtertius | | | 0 | 1 | $3\frac{3}{4}$ |
| 20 | 10 | 5 | 2 | Quinarius Victoriatus | | 0 | 3 | $3\frac{1}{2}$ |
| 40 | 20 | 10 | 4 | 2 | Denarius | 0 | 7 | 3 |

*Note*, Of theſe the Denarius, Victoriatus, Seſtertius, and ſometimes the As, were of *Silver*, the reſt of *Braſs*.

There were ſometimes alſo *coin'd* of *Braſs* the Triens, Sextans, Uncia, Sextula, and Dupondius.

| | *l.* | *s.* | *d.* |
|---|---|---|---|
| The *Roman Gold Coin* was the Aureus, which weigh'd generally double the Denarius; the Value of which, according to the firſt Proportion of *Coinage* mention'd by *Pliny*, was | 1 | 4 | $3\frac{3}{4}$ |
| According to the Proportion that obtains now amongſt us, worth | 1 | 0 | 9 |
| According to the Decuple Proportion, mention'd by *Livy* and *Julius Pollux*, worth | 0 | 12 | 11 |
| According to the Proportion mention'd by *Tacitus*, and which afterwards obtain'd, whereby the Aureus exchang'd for 25 Denarii, its Value | 0 | 16 | $1\frac{3}{4}$ |

Coin, in Architecture, a kind of Die, cut diagonal-wiſe, after the manner of the Flight of a Staircaſe; ſerving at bottom to ſupport Columns in a Level; and at top to correct the Inclination of an Entablature, ſupporting a Vault.

Theſe *Coins* have alſo the ſame effect with round Baluſters, which are not inclined according to any Flight.

Coin is alſo us'd for a *Coiner*, or ſolid Angle, compos'd of two Surfaces inclined towards each other; whether that Angle be exterior, as the *Coin* of a Wall, a Tree, *&c.* or interior, as the *Coin* of a Chamber, or Chimney: from the Word *Cuneus*, Wedge. See Quoin.

COINAGE, or *Coining*, the Art or Act of manufacturing, or making Money. See Money.

COINING, is either performed by the Hammer or the Mill.

The firſt Method is now little uſed in *Europe*, eſpecially in *England*, *France*, *&c.* tho the only one known till the Year 1553, when a new Machine, or *coining* Mill, having been invented by an Engraver, one *Antoine Brucher*, was firſt try'd in the *French* King's Palace at *Paris*, for the *coining* of Counters. Tho ſome attribute the Invention of the Mill to *Varin*, a famous Engraver, who, in reality, was no more than an Improver of it; and others to *Aubry Olivier*, who had only the Inſpection of it.

The Mill has met with various Fate ſince its firſt Invention; being now us'd, and again laid by, and the Hammer reſum'd: but it has at length got that footing, by the Neatneſs and Perfection of the Species ſtruck with it, that there appears no probability of its being again diſus'd. See Mill.

In either kind of *coining*, the pieces of Metal are ſtamp'd, or ſtruck with a kind of Molds, or *Coins*, wherein are engraven the Prince's Effigies, with the Arms, Legend, *&c.* The manner of preparing and cutting of which, ſee under Graving.

The firſt Operations in *coining* are the mixing, and melting of the Metal.

For the 1ſt, it is to be obſerv'd, that there are no Species *coin'd* of pure *Gold* or *Silver*, but always a quantity of Alloy of *Copper* is mix'd with them: The Reaſons are partly the Scarcity of thoſe two Metals, partly the Neceſſity of making them harder by ſome foreign Admixture; and partly to defray the Expences of *coining*. See Alloy.

Now there are two Kinds of alloying, or mixing: the firſt where the Gold or Silver has not been uſed for Money before; the other where ſeveral Kinds of Species, or Ingots of different Titles and Values, are to be melted down into a new Money.

The proportioning of the Alloy with the fine Metal is eaſy in the firſt Caſe, in the other more difficult: The Arithmeticians make a long Doctrine of it, which ſee under Alligation.

Yet is it readily effected by the following Method, taken from the anonymous Author of the Treatiſe at the End of that of Mr. *Boiſard*, *viz.*

Write down the ſeveral Matters to be melted, their Quality, Weight, and Fineneſs, in two diſtinct Articles; the one containing thoſe above the Standard, the other thoſe under it: By calculating the firſt, you ſhall have the Exceſs, by the latter the Defect. Then comparing the two Products, you will find, by Subtraction, how much Alloy muſt be added to bring the ſeveral Matters to the Fineneſs requir'd.

*For the melting*, if the Metal be *Gold*, 'tis done in Earthen Crucibles; if *Silver* or *Copper*, in Iron ones. See Crucible.

There are two Kinds of Furnaces proper for the melting of Metals; thoſe with Wind, and thoſe with Bellows: See each explain'd under the Article Furnace.

When the Gold or Silver are *in Balneo*, *i. e.* are entirely melted, they are ſtirr'd and brew'd together; the Silver and Copper with an Iron Stirrer, the Gold with one of bak'd Earth. In this State they are pour'd into Molds, or Frames, for the caſting 'em into Plates, or Sheets: the Method of doing which, is exactly the ſame with that us'd by the Founders, in Sand; both with regard to the Frames, the manner of working the Earth, and of ranging the Models or Patterns. See Foundry; ſee alſo Frame, and Mould.

The Models are flat Plates of Copper, about 15 Inches long, and nearly of the thickneſs of the Species to be ſtruck. In each Mold are placed eight of theſe to make Plates for Guineas, ten for Half Guineas, five for Crowns, *&c.* and in proportion for Copper. All the difference between caſting the Plates of Gold, and thoſe of other Metals conſiſting in this; that the latter are taken out of the Crucibles with Ladles, and pour'd into the Aperture of the Mold; and that for Gold, the Crucible is taken off the Fire with a kind of Tongs, and thence pour'd into the Mold.

Thus far the Proceſs is the ſame, in *coining* either with the Mill or the Hammer: When the Plates are taken out of the Molds the difference commences: ſo that here the Article of *Coining* divides into two Branches.

#### Coining *by the Mill, or Mill'd Money.*

The Plates being taken out of the Molds, ſcraped, and bruſh'd, are paſs'd ſeveral times thro' the Mill, to flatten 'em,

'em, and bring them to the juſt thickneſs of the Species to be coin'd; with this difference, however, that the Plates of Gold are heated again in a Furnace, and quench'd in Water, before they undergo the Mill; which ſoftens, and renders 'em the more ductile: whereas thoſe of Silver paſs the Mill juſt as they are, without any heating; and when afterwards they are heated, they are left to cool again of themſelves, without Water. See MILL.

The Plates, whether Gold, Silver, or Copper, thus reduc'd as near as poſſible to their thickneſs, are cut into round Pieces, or Planchets, near the Size of the intended Species, with a cutting Inſtrument faſten'd to the lower Extremity of an Arbor, whoſe upper end is form'd into a Screw; which being turn'd by an Iron Handle, turns the Arbor, and lets the Steel, well ſharpen'd, in form of a Punch-cutter, fall on the Plates; and thus is a piece punch'd out. See this Inſtrument repreſented in Tab. *Miſcellany*, Fig. 3.

Theſe Pieces are now given to be adjuſted, and brought by filing, or raſping, to the Weight of the Standard whereby they are to be regulated; and what remains of the Plate between the Circles is melted again.

The Pieces are adjuſted in a fine Balance; and thoſe which prove too light are ſeparated from thoſe too heavy; the firſt to be melted again, and the ſecond to be filed down. For it may be obſerv'd, that the Mill thro' which the Plates are paſs'd can never be ſo juſt, but there will be ſome inequality, whence will ariſe a difference in the Planchets. This inequality, indeed, may be owing to the Quality of the Matter, as well as of the Machine; ſome Parts being more porous than others.

When the Planchets are adjuſted, they are carried to the blanching, or whitening Houſe, *i. e.* the Place where the Gold Planchets have their Colour given them, and the Silver ones are whiten'd; which is done by heating 'em in the Furnace, and when taken out and cool'd, boiling 'em ſucceſſively in two Copper Veſſels, with Water, common Salt, and Tartar; and after ſcowring 'em well with Sand, and waſhing 'em with common Water, drying 'em over a Wood Fire, in a Copper Sieve; wherein they are put when taken out of the Boilers.

The whitening, or blanching was formerly perform'd very differently from what it now is: And as the antient Method is ſtill in uſe among Goldſmiths, and other Workmen who uſe Gold and Silver, we have made a diſtinct Article of it. See BLANCHING.

Formerly, the Planchets, as ſoon as blanch'd, were carry'd to the Preſs, to be ſtruck and receive their Impreſſions; but now they are firſt mark'd with a Legend, or Engine, on the Edges, to prevent the clipping and paring of the Species; which is one of the ways wherein the antient Money us'd to be damag'd.

The Machine uſed to mark the Edges is very ſimple, yet ingenious; it conſiſts of two Plates of Steel, in form of Rulers, about the thickneſs of a Line, on which the Legend or Edging are engraven, half on the one, and half on the other. One of theſe Plates is immoveable, and ſtrongly bound with Screws to a Copper Plate; and that again to a ſtrong Board, or Table: The other is movable, and ſlides on the Copper Plate, by means of a Handle, and a Wheel, or Pinion of Iron; the Teeth whereof catch in a kind of other Teeth, on the Surface of the ſliding Plate. Now, the Planchet being plac'd horizontally between theſe two Plates, is carried along by the Motion of the movable one; ſo, as by that time it has made half a turn, it is found mark'd all round.

This Machine is ſo eaſy, that a ſingle Man is able to mark twenty thouſand Planchets in a Day: It was invented by the Sieur *Caſtaing*, Engineer to the *French* King, and firſt us'd in 1685.

Laſtly, the Planchets being thus edg'd, are ſtamp'd, *i. e.* their Impreſſion given them in a Balancier, or Preſs; which is a Machine invented at the latter end of the XVIth Century: See its Figure in Tab. *Miſcellany*, Fig. 4.

Its chief Parts are a Beam, Screw, Arbor, *&c.* all contain'd in the Body of the Machine, except the firſt, which is a long Iron Bar, with a heavy Ball of Lead at each end, and Rings, to which are faſten'd Cords which give it Motion: it is placed horizontally over the Body of the Machine. In the middle of the Beam is faſten'd a Screw, which by turning the Beam, ſerves to preſs the Arbor underneath it; to the lower Extremity of which Arbor, placed perpendicularly, is faſten'd the Matrice, or *Coin* of the Reverſe, or Arms ſide, in a kind of Box, or Caſe, wherein it is retain'd by Screws: and under this is a Box, or Caſe containing the Matrice of the Image ſide, firmly faſten'd to the lower Part of the Balancier. See MATRICE, *&c.*

Now when a Planchet is to be ſtamp'd, 'tis laid on the Image Matrice, upon which two Men draw, each on his ſide, one of the Ropes of the Beam, and turn the Screw faſten'd in it; which by this Motion lowers the Arbor, to which the Matrice of the Arms is faſten'd: by which means, the Metal being in the middle, at once receives an Impreſſion on each ſide, from either Matrice. As to the Preſs, formerly us'd, it has all the eſſential Parts of a *Balancier*, except the Beam; which is here, as it were, divided, and only drawn one way. See ENGRAVING.

The Planchets having now all their Marks and Impreſſions, both on the Edges and Faces, become Money; but have not currency till they have been weigh'd and examin'd.

*For the* COINING *of Medals*, the Proceſs is the ſame, in effect, with that of Money: The principal difference conſiſts in this, that Money having but a ſmall Relievo, receives its Impreſſion at a ſingle Stroke; whereas, for Medals, the height of their Relievo makes it neceſſary that the Stroke be repeated ſeveral times: To this End, the Piece is taken out from between the *Coins*, heated, and return'd again; which proceſs, in Medallions, and large Medals, is ſometimes repeated 15 or 20 times, ere the full Impreſſion be given; care being taken every time the Planchet is remov'd, to take off the ſuperfluous Metal ſtretch'd beyond the Circumference, with a File. See MEDAL.

Add to this, that Medallions, and Medals of high Relievo, by reaſon of the Difficulty of ſtamping 'em in the Balancier, or Preſs, are uſually firſt caſt or molded in Sand, like other works of that kind, and are only put in the Balancier to perfect them; by reaſon the Sand does not leave 'em clean, ſmooth, and accurate enough. Medals, therefore, receive their Form and Impreſſion by degrees; Money all at once.

The Rule whereby they judge the Medal to be ſufficiently ſtamp'd; is, when feeling it with the Hand, 'tis found firm, and not to be ſhaken, as filling the *Coin* equally every where. See MEDALLION, *&c.*

COINING *with the Hammer, or hammer'd Money.*

In this Method of making Money, the Plates of Gold, Silver, or Copper being taken out of the Molds, or Frames, as above, are heated and ſtretch'd by beating 'em on the Anvil: when ſufficiently beaten, they are cut into Pieces; which being again heated, flatted, and further ſtretch'd with the Hammer, are adjuſted by cutting off the Angles with Sheers: thus by cutting and rounding them, they are reduc'd to the Weight of the Standard; and their roundneſs finiſh'd with another Hammer, which beats down all the Points and Angles ſtill remaining on the Edges. In this manner they are brought to the Size of the Species to be *coin'd*.

In this ſtate the Pieces become Planchets, and are carried to the Blanching-Houſe; where they undergo the ſame Preparation as the *mill'd* Money already deſcrib'd, and are given to the Minter to beat 'em with the Hammer.

For this laſt Operation, which finiſhes the Money, they uſe two Puncheons, or Matrices; the one called the *Pile*, and the other the Truſs, or *Quiver*; each engraven dent-wiſe. The Pile bearing the Arms, and the Truſs the Image, or Croſs; both their Legend, Date, *&c.*

The Pile, which is about eight Inches high, has a kind of Talon, or Heel in the middle, and ends in a Point: Which Figure it had, for the ſake of being more eaſily ſunk, and more firmly faſten'd to the Block whereon the Money is ſtruck. See PILE, *&c.*

The Minter, then, laying the Planchet horizontally on the Pile, and covering it with the Truſs, which he holds ſteadily in his left Hand, gives ſeveral ſmart Blows on the Truſs with an Iron Mallet held in the right; more or leſs, as the Graving of the *Coins* is more or leſs deep. If after theſe firſt Strokes, the Planchet ben't ſufficiently ſtamp'd, 'tis return'd again between the Matrices, exactly in its former Poſition, and the Strokes repeated till the Impreſſion be perfect.

Thus is the *Coinage* finiſh'd, and the Planchets converted into Money; which, after they have been examin'd as to their weight, become current.

*Engliſh* COINAGE.

Since the Invention of *milling* Money in *France*, it has been imitated by ſeveral other Nations; but by none with Succeſs equal to that of the *Engliſh*, who have carried it to the utmoſt Perfection; both by the Beauty of their Graving, and by their inventing the Impreſſions on the Edges, that admirable Expedient for preventing the Alteration of the Species, abovemention'd.

Till that time the *Engliſh* Money was ſtruck with the Hammer, as that of other Nations; and, in effect, 'tis but very late, *viz.* in the Reign of K. *William* III. that the *hammer'd* Species ceas'd to be current. Ere they were put down, the *Engliſh* Money was in a woful Condition; having been filed and clipp'd by Foreigners, eſpecially the *Dutch*, ſo as to be ſcarce left of half its Value: The retrieving of this diſtreſs'd State of the *Engliſh* Money, is look'd on as one of the Glories of King *William*'s Reign; for which we are owing, in good meaſure, to the happy Conduct of the late Earl of *Halliſax*.

The *Coinage* of *England* is now perform'd wholly in the *Tower* of *London*; where there is a Corporation under the Title of the *Mint*. See MINT.

Formerly there were here, as there are ſtill in other Countries, what we call the *Rights of Seignorage and Braſſage*; but ſince the XVIIIth Year of K. *Charles* II. there

is nothing taken, either for the King, or for the Expences of *Coining*; it having been ſettled by Act of Parliament, that all Money ſhould be ſtruck at the publick Expence: ſo that Weight is return'd for Weight, to all Perſons who carry their Gold or Silver to the *Tower*. See SEIGNORAGE.

The Species *coin'd* in *England*, are eſteem'd contraband Goods, and not to be exported: All foreign Species are allow'd by Act of Parliament, made in 1673, to be ſent out of the Realm; as well as Gold and Silver in Bars, Ingots, Duſt, &c. Indeed, in the Seſſion of Parliament in 1718, Endeavours were made to put a ſtop to this Licenſe, which drains *England* of its richeſt Metals; but in vain; the Parliament having ſet aſide the Bill, without coming to any Reſolution.

*The Spaniſh* COINAGE is eſteem'd one of the leaſt perfect in *Europe*: It is ſettled at *Sevil* and *Segovia*, the only Cities where Gold and Silver are ſtruck. 'Tis true, there are brought from *Mexico*, *Peru*, and other Provinces of the *Spaniſh America*, ſuch vaſt Quantities of Pieces of Eight, and other Species, both of Gold and Silver, that, in this reſpect, it muſt be own'd, there is no State in the World where ſo much Money is *coin'd*, as in that of the King of *Spain*.

*Muſcovite* COINAGE. The Czar ſtrikes no Money but *Silver*, and that only in the Cities of *Moſco*, *Novogrod*, *Twere*, and *Pleſcou*; to which may be now added *Petersburg*, the favourite City of his Czarian Majeſty. The *Coinage* of each of theſe Cities is let out to farm, and makes part of the Royal Revenue.

*Perſian* COINAGE. All the Money made in *Perſia*, is ſtruck with the Hammer: and the ſame may be underſtood of the reſt of *Aſia* and *America*, and the Coaſts of *Africa*, and even *Muſcovy*; the Invention of the Mill being not yet got out of *Europe*, nor even eſtabliſh'd in every Part of it. The King's Duty, in *Perſia*, is ſeven and a half *per Cent.* for all the Monies *coin'd*; which are now reduced to *Silver* and *Copper*: there being no *Gold* coin'd there, except a kind of Medals at the Acceſſion of a new Sophi.

*The* COINAGE *of Fez and Tunis* is not under any Diſcipline; each Goldſmith, Jew, and even private Perſon, undertaking it at pleaſure: which renders their Money exceeding bad, and their Commerce very unſafe.

COITION, the Intercourſe between Male and Female in the Act of Generation. See GENERATION.

It is obſerv'd, that Frogs are 40 Days in the Act of *Coition*. *Bartholine*, &c. relate, that Butterflies make 130 Vibrations of the Wings in *Coition*.

COITION is alſo ſometimes uſed for that mutual Attraction, or Tendency toward each other, which is found between Iron and the Magnet. See MAGNET.

COLARBASIANS, a Sect of Hereticks in the IId Century; ſo called from their Leader *Colarbaſus*, a Diſciple of *Valentine*: who, with *Marcus*, another Diſciple of the ſame Maſter, maintain'd the whole Plenitude, and Perfection of Truth and Religion, to be contain'd in the *Greek* Alphabet; and that 'twas upon this account Jeſus Chriſt was called the *Alpha* and *Omega*.

COLARIN, in Architecture, the little Friſe of the Capital of the *Tuſcan* and *Doric* Column; plac'd between the Aſtragal, and the Annulets: called by *Vitruvius*, *Hypotrachelium*. See FRIZE, &c.

COLARIN is alſo uſed for the Orlo, or Ring, a-top of the Shaft of the Column, next the Capital; called alſo *Cincture*. See CINCTURE.

COLATURE, in Pharmacy, the Separation of a Liquor from ſome Mixture, or Impurity, by *percolating*, or ſtraining it thro' the narrow Pores of a Cloth, or other Matter; which will give paſſage to the fine, and pure Part, but intercept the groſſer. See PERCOLATION, and FILTRATION.

COLCOTHAR, in Natural Hiſtory, &c. There are two Kinds of *Colcothar*, *Natural* and *Factitious*.

The *Natural* is otherwiſe called *Chalcitis*; being a red Vitriol, brought from *Germany*; form'd from the common green Vitriol, calcin'd naturally by ſome ſubterraneous Fire. See CHALCITIS.

The *Artificial* is alſo a green Vitriol, calcin'd a long time by an intenſe Fire; and by that means reduc'd to the redneſs of Blood.

COLCOTHAR *Vitrioli*, is particularly us'd for the Dregs, or Remains, left at the Bottom of the Veſſel, after the Diſtillation of Vitriol. See VITRIOL.

COLD, ſomething devoid of Heat, or which contains in it no Particles of Fire. See FIRE.

This Definition is agreeable to the Sentiments of moſt of the modern Philoſophers, who make *Cold* a mere negative Term; and ſuppoſe the Thing to conſiſt in a mere Privation, or Diminution of Heat.

Others define *Cold*, much on the ſame Principle, to be that State of the minute Parts of a Body, wherein they are more ſlowly and faintly agitated than thoſe of the Organs of Feeling: In which Senſe, *Cold* is a mere Term of Relation; and hence the ſame Body becomes liable to be perceiv'd *hot* or *cold*, as its Particles are in a greater or leſs degree of Motion than thoſe of the ſenſible Organs. See SENSE, FEELING, &c.

*Heat* is ſuppos'd to conſiſt in a particular Motion of the Parts of the *hot* Body; and hence the Nature of *Cold*, which is its oppoſite, is eaſily deducible: For *Cold*, we find, extinguiſhes, or rather abates Heat; whence it ſeems to follow, that thoſe Bodies are *cold*, which check and reſtrain the Motion of the Particles wherein Heat conſiſts. See HEAT.

Now, there are three Kinds of Bodies which may do this, *viz.* either thoſe whoſe Particles are perfectly at reſt; or thoſe whoſe Particles are indeed agitated, but leſs violently than thoſe of the hot Body to which they are applied: or, laſtly, thoſe whoſe Particles have a Motion proper for exciting the Senſation of *Heat*, but move with a different Determination; ſo as to retain and change the Motion of the Particles of the Organ.

Hence, there ariſe three different Kinds of *Cold*, or *cold Bodies*: The 1ſt is, that *Cold* common to all hard Bodies, which conſiſts in the Reſt of their Parts. The 2d is that which ariſes on plunging any Part of the Body in Water; which conſiſts in this, that the Parts of our *Præcordia* being more briſkly agitated than thoſe of the Fluid, communicate part of their Motion to it. The 3d, the *Cold* felt on collecting even warm Air with a Fan, or in blowing hot Breath out of our Mouth, with the Lips cloſe ſhut; which conſiſts in this, that the direct Motion of the Particles of Air, do in ſome meaſure change and rebate the Motion and Determination of the Parts of the Body: And hence it is, that a *cold* Body cannot cool another without heating it ſelf. Hence alſo it is, that the more Parts of a frigid Body are at reſt, the more muſt the Particles of a warm Body applied to heat 'em, loſe of their Motion, and by conſequence of their Heat. Thus a Marble having more quieſcent Parts than Wood, which is full of Pores and Interſtices, is felt *colder* than Wood. Hence alſo we ſee why Air, near Marble and other denſe Bodies, feels ſomewhat *colder* than in other Places.

On this Principle, the two latter Kinds of *Cold* appear ſomewhat more than Privations: The Particles inducing the *Cold*, may be eſteem'd real frigorific Corpuſcles; and *Coldneſs* be deem'd a real Quality as well as Hotneſs. See QUALITY, FRIGORIFIC, &c.

Theſe Particles do not only check the Agitation of thoſe continually diffus'd from the inner Parts of the Animal to the outer; but, having an elaſtick Power, bend and hang about the Filaments of the Body, pinch and ſqueeze them; and hence that acute pungent Senſation called *Cold*.

That *Cold* is more than a mere Relation, or Compariſon, is evident from its having real and poſitive Effects; ſuch as Freezing, Congelation, Condenſation, Rarefaction, Burſting, &c. See FREEZING, &c.

Dr. *Clark* takes *Cold* to be owing to certain nitrous, and other ſaline Particles, endued with particular Figures proper to produce ſuch Effects. Hence, Sal Ammoniac, Salt Petre, or Salt of Urine, and many other volatile and alkalizate Salts, mix'd with Water, increaſe its degree of *cold* very ſenſibly. Hence alſo that popular Obſervation, that *Cold* prevents Corruption; which, however, muſt not be admitted without an Exception: ſince, if a hard, porous Body have its Interſtices fill'd with Water, and this be too much dilated by freezing, the including Body will be burſt. And thus it is, that *Cold* proves deſtructive to the Parts of ſome Plants. See ICE, FROST, CONDENSATION, RAREFACTION, &c.

COLIC, in Medicine, a cruel, ſevere, gnawing Pain, felt in the lower Venter; ſo called, becauſe the ordinary Seat of the Diſorder, was antiently ſuppos'd to be in the Inteſtine *Colon*.

Phyſicians uſually diſtinguiſh three Kinds of *Colic*, the *Bilious*, *Windy*, and *Nephritic*.

The *bilious Colic* has its riſe from certain ſharp, bilious, ſtimulating Humours, which being diffus'd thro' the Inteſtines, vellicate their Fibres, and occaſion a Senſation of Pain. Tho *Willis* takes the Part principally affected to be the Meſentery.

Dr. *Sydenham* obſerves, that the *bilious Colic* uſually attacks about the beginning of Summer; that it's generally attended with a Vomiting of bilious green Liquor; that the Patient complains of exceſſive Heat, great Gripings, Faintneſs, &c. and that if it be not ſoon remedy'd, it is apt to turn into the Iliac Paſſion. See ILIAC *Paſſion*.

*Baglivi* notes, that if the Patient ſweat much, and be much enfeebled; the Diſeaſe is apt to degenerate into a Palſy. The Cure, he ſays, depends on Bleeding, gentle Cathartics, and Enemas; and if it ariſe from a *Crapula*, an Emetic is to precede: after which, the Cure is to be compleated with proper Anodynes.

The *Wind Colic* is vagabond, never ſtaying in any fixed Place; being produc'd by windy Vapours, which ſwell and diſtend the Inteſtines they are incloſ'd in.

The *Nephritic Colic* is felt particularly in the Reins, whence it has its Name; the *Greek* νεφρὸς ſignifying *Rein*. See NEPHRITIC.

It uſually has its riſe from ſome Stone, or Gravel detach'd from the Kidnies, and fallen into the Pelvis. The *Pareira Brava* is ſaid to be a Specific for *Nephritic Colics*. See PAREIRA BRAVA.

*S. Manouchi*, a *Venetian* Phyſician at the Court of the Great *Mogul*, gives the following Remedy as infallible in Nephritic Caſes: An Iron Ring, about an Inch and half in Diameter, and thick in proportion, is to be heated red-hot; then, laying the Patient on his Back, the red-hot Ring is to be apply'd to his Navel, ſo, as that the Navel be in the Centre of the Ring: The Patient will preſently feel the Pain, which will occaſion him to ſhrink back very ſuddenly; the ſudden Revulſion thus occaſion'd in the lower Venter, will in a little time diſſipate all his Pains. The ſame Author adds, that he can warrant the Succeſs of the Remedy.

In *Colics* ariſing from Flatulencies, Carminative Waters, Oils, Aromaticks, *&c.* are always to be added to the Compoſitions: And in *Nephritic Colics*, beſides Emollient Clyſters, Solutions of Manna, Cremor Tartari, *&c.* in Whey, *&c.* and proper oleaginous Mixtures, are to be exhibited to relax the Fibres; after which, proper Anodynes take place.

Some, particularly *Sydenham*, mention a *Nervous Colic*, moſtly incident to hyſteric and hypochondriac Perſons; but this appears only a Species of the *Windy Colic*.

*Baglivi* recommends Camomile as an Antidote againſt the *Colic*, from what Cauſe ſoever it ariſe. Where the Diſeaſe is obſtinate, much riding is of eſpecial Service.

COLIR, an Officer in *China*, who has an Eye over what paſſes in every Court, or Tribunal in the Empire; and tho himſelf not of the Number, yet is aſſiſting at all Aſſemblies, the Proceedings whereof are communicated to him.

He is properly what we may call an *Inſpector*: He gives ſecret Intelligences to the Court; and even, on occaſion, accuſes the Mandarins of their Faults openly; and that not only of Faults in their publick Offices, but even in their private Life. To keep him impartial, he is kept independent; by having the Poſt for Life. Theſe *Colirs* make even the Princes of the Blood tremble.

COLLAR, a particular Ornament, wore by the Knights of ſeveral Military Orders, hanging over their Shoulder, on the Mantle; and its Figure drawn around their Armories. See KNIGHT.

The *Collar* ordinarily conſiſts of a Chain of Gold, enamell'd; frequently ſet with Cyphers, or other Deviſes, and having the Badge of the Order ſuſpended at Bottom.

The *Collar* of the Order of the Garter, conſiſts of SS, with Roſes enamell'd red, within a Garter enamell'd blue, the *George* at the Bottom. See GARTER.

*Maximilian* is ſaid to have been the firſt of the Emperors who put the *Collar* of an Order around his Arms, upon his being made Chief of that of the Golden Fleece.

*Knights of the* COLLAR, a Military Order in the Republick of *Venice*; called alſo the *Order of St.* Mark, or *the Medal*.

'Tis the Doge and the Senate that confer this Order: The Knights bear no particular Habit, only the *Collar*, or Chain, which the Doge puts around the Neck; with a Medal, whereon is repreſented the winged Lion of the Republick.

COLLATERAL, in Geography, any Thing, Place, Country, *&c.* ſituate by the Side of another.

The Word is a Compound of *con*, with, and *latus*, ſide; and chiefly applied to the Winds, which blow a-ſide of thoſe in the Cardinal Points of the Horizon; as the North-Eaſt, South-Eaſt, North-Weſt, South-Weſt, and their Subdiviſions.

COLLATERAL *Points*, in Coſmography, the intermediate Points; or thoſe between the Cardinal Points. See CARDINAL *Points*.

The *Collateral Points* are either *Primary*, which are thoſe removed by an equal Angle on each ſide, from two Cardinal Points: or *Secondary*; which, again, are either thoſe of the firſt, or ſecond Order. The firſt, thoſe equally diſtant from a Cardinal and firſt Primary; the latter equally diſtant from ſome Cardinal or Primary, and firſt Secondary. See POINT.

COLLATERAL *Winds*, thoſe blowing from *Collateral* Points. See WIND.

COLLATERAL, in Matters of Genealogy, is underſtood of thoſe Relations which proceed from the ſame Stock, but not in the ſame Line of Aſcendants, or Deſcendants; but being, as it were, aſide of each other.

Thus, Uncles, Aunts, Nephews, Nieces, and Couſins, are *Collaterals*, or in the *Collateral* Line. Thoſe in a higher Degree, and nearer the common Root, repreſent a kind of Paternity with regard to thoſe more remote; but there is a kind of Equality between *Collaterals* in the ſame Degree.

Thus, *collateral* Deſcent ſtands in oppoſition to *direct* Deſcent to Poſterity; the former paſſing to Brothers Children, but the latter only from Father to Son.

COLLATERAL *Aſſurance*, is a Bond, made over, and beyond the Deed it ſelf, for the Performance of Covenants between Man and Man; thus called, as being external, and without the Nature and Eſſence of the Covenant.

*Crompton* ſays, that to be ſubject to the feeding of the King's Deer, is *collateral* to the Soil within the Foreſt. It may be added, that liberty to pitch Booths in a Fair, or another Man's Ground, is *collateral* to the Ground.

COLLATERALIS *Penis*, in Anatomy, a Muſcle, otherwiſe called *Errigens*, or *Erector Penis*. See ERECTOR.

COLLATION, in the Canon Law, the conferring, or beſtowing of a Benefice by a Biſhop, who has it in his own Gift, or Patronage. See BENEFICE, and PATRONAGE.

*Collation* differs from *Inſtitution*, in that the latter is perform'd by the Biſhop, at the Motion or Preſentation of another: (ſee INSTITUTION.) And the former on his own Motion.

*Collation* alſo differs from *Preſentation*, in that the latter is properly the Act of a Patron, offering his Clerk to the Biſhop, to be inſtituted into a Benefice; whereas the former is the Act of the Biſhop himſelf. See PRESENTATION.

The *Collator* can never confer a Benefice on himſelf.

In the *Romiſh* Church, the Pope is the *Collator* of all Benefices, even elective ones, by Prevention; ſetting aſide Conſiſtorial Benefices, and thoſe in the Nomination of Lay-Patrons. Prelates and Biſhops are call'd *Ordinaries*, or ordinary *Collators*. See ORDINARY, *&c.*

If the Ordinary *Collator* neglect to exerciſe his Right for ſix Months, the ſuperior *Collator* may *collate* by Devolution. Thus, if the Biſhop neglect, the Metropolitan may confer; then the Primate; and ſo on from degree to degree.

In *France*, the King is the *Collator* of all Benefices, whereof he is Patron, excepting Conſiſtorial ones; to which he has only the Nomination; and the Pope, by Virtue of the *Concordat*, is oblig'd to confer on whomſoever the King nominates. For the reſt, he is direct and abſolute *Collator*; and may confer 'em, by Virtue of a kind of Prieſthood annex'd to the Royalty.

Other Lay-Patrons have ſeldom more than a mere Preſentation; the *Collation* properly belonging to the Biſhop: yet there are Abbots who have the full Right of *Collation*.

The Canoniſts reckon two Kinds of *Collation*; the one *Free*, and Voluntary, the other *Neceſſary*. The firſt depending on the mere Will of the *Collator*, who may chuſe whom he pleaſes to fill the Vacancy. In the latter, the *Collator* is not at his liberty: which is the Caſe where a Benefice has been reſign'd, or chang'd, and that Reſignation or Permutation allow'd of by the Superior; for here the *Collator* is oblig'd to grant the Proviſion to the Reſignatory, or Compermutant.

'Tis a Maxim in the New Canon Law, *Collationes ſunt in fructibus*; 'Thoſe who have the Fruits of a Benefice have 'the *Collation*.' But in that Caſe, the Word *Collation* is us'd for Preſentation. See PRESENTATION, *&c.*

A *collated* Act is equivalent to an Original; provided all the Parties concern'd were preſent at the *Collation*.

COLLATION, in Common Law, is the Compariſon, or Preſentation of a Copy to its Original, to ſee whether or no it be conformable: or the Report, or Act of the Officer who made the Compariſon.

COLLATION is alſo uſed among the *Romaniſts* for the Meal or Repaſt made on a Faſt-Day, in lieu of a Supper. See FAST.

Fruits are not allow'd in a *Collation*: F. *Lobineau* obſerves, that antiently there was not allow'd, even, bread in the *Collations* in Lent; nor any thing beſide a few Confitures and dried Herbs, and Fruits: which Cuſtom, he adds, obtain'd till the Year 1513.

Cardinal *Humbart* obſerves further, that in the middle of the XIth Century, there were no *Collations* at all allow'd in the *Latin* Church in the time of Lent; and that the Cuſtom of *Collations* was borrow'd from the *Greeks*; who themſelves did not take it up till about the XIth Century. See LENT.

COLLATION is alſo popularly us'd for a Repaſt between Dinner and Supper.

The Word *Collation*, in this Senſe, *Du Cange* derives from *Collocutio*, Conference; and maintains, that originally, *Collation* was only a Conference, or Converſation on Subjects of Piety, held on Faſt-Days in Monaſteries; but that, by degrees, the Cuſtom was introduced of bringing in a few Refreſhments: and that by the Exceſſes to which thoſe ſober Repaſts were at length carried, the Name of the Abuſe was retain'd, but that of the Thing loſt.

COLLEAGUE, a Companion, Partner, or Aſſociate in the ſame Office, or Magiſtrature.

The Word is particularly us'd in ſpeaking of the *Roman* Conſuls, and Emperors.

COLLECT, or COLLECTION, a voluntary gathering of Money, for ſome pious, or charitable Purpoſe.

Some ſay, the Name *Collect*, or *Collection*, was uſed, by reaſon thoſe Gatherings were antiently made on the Days of *Collects*, and in *Collects*, *i. e.* in Aſſemblies of Chriſtians; but, more probably, *quia colligebatur pecunia*.

The Word is ſometimes alſo uſed for a Tax, or Impoſition, rais'd by a Prince for any pious Deſign. Thus, Hiſtories ſay, that in 1166, the King of *England*, coming into *Normandy*, ap-

appointed a *Collect* for the Relief of the Holy Land, at the Desire, and after the Example of the King of *France*.

COLLECT, in the Liturgy of the Church of *England*, and the Mass of the *Romanists*, a Prayer accommodated to any particular Day, Occasion, or the like. See LITURGY, and MASS.

In the general, all the Prayers in each Office are call'd *Collects*; either because the Priest speaks in the Name of the whole Assembly, whose Sentiments and Desires he sums up by the Word *Oremus*, Let us pray; as is observ'd by Pope *Innocent* III. or, because those Prayers are offer'd when the People are assembled together; which is the Opinion of *Pamelius* on *Tertullian*.

The Assembly it self is in some antient Authors called *Collect*. The Popes *Gelasius* and *Gregory* are said to have been the first who establish'd *Collects*. *Despense*, a Doctor of the Faculty of *Paris*, has an express Treatise on *Collects*, their Origin, Antiquity, Authors, *&c.*

COLLECTIVE, in Grammar, a Term applied to a Word that expresses a multitude; tho it self be singular.

Thus, Troop, Company, Army, are Nouns *Collective*.

COLLECTOR, a Person nominated by the Commissioners of any Duty, the Inhabitants of a Parish, or the like, to raise or gather any Tax, *&c.*

COLLEGATARY, in the Civil Law, a Person to whom is left a Legacy in common with one or more other Persons. See LEGACY.

If the Thing be bequeath'd *in solido*, the Portion of the deceased *Collegatory* accrues to the rest.

COLLEGE, an Assemblage of several Bodies, or Societies; or, even of several Persons into one Society. See SOCIETY.

The Term *College*, among the *Romans*, was used for an Assemblage of several Persons employ'd in the same Functions, and as it were bound together to act, or serve in concert. It serv'd indifferently for those employ'd in the Offices of Religion, of Government, the Liberal Arts, and even Mechanical Arts, or Trades: So that the Word properly signified what we call a *Corporation*, or *Company*. See CORPORATION.

In the *Roman* Empire, there were not only the *College of Augurs*, and the *College of Capitolini*, *i. e.* of those who had the Superintendence of the *Capitoline* Games; but also the *College* of Artificers, *Collegium Artificum*; the *College* of Carpenters, *Fabricorum*, or *Fabrorum Tignariorum*; of Potters, *Figulorum*; of Founders, *Ærariorum*; the *College* of Locksmiths, *Fabrorum Serrariorum*; of Engineers, for the Army, *Tignariorum*; of Butchers, *Laniorum*; of Dendrophori, *Dendrophorum*; of Centonaries, *Centonariorum*; of Makers of Military Casaques, *Sagariorum*; of Tent-makers, *Tabernaculariorum*; of Bakers, *Pistorum*; of Musicians, *Tibicinum*, &c.

*Plutarch* observes, that it was *Numa* who first divided the People into *Colleges*; which he did, to the End that each consulting the Interests of their *College*, whereby they were divided from the Citizens of the other *Colleges*, they might not enter into any general Conspiracy against the publick Repose.

*Colleges* were distinguish'd from other Societies, not form'd into *Colleges* by publick Authority, in this, that those who compos'd a *College* were qualify'd to treat of the common Interests of their *College*, which was, as it were, a Member of the State, and had a common Purse, an Agent to negotiate their Affairs, sent Deputies to the Magistrates when they wanted to treat with them; might make Statutes and By-Laws for the Administration of their *College*, &c. (See *Plutarch*, *Pliny*, *Cicero*, *Aul. Gellius*, the *Pandects*, *Code*, &c.)

There are various *Colleges* on foot among the Moderns, built on the Model of those of the Antients; as the *Three Colleges of the Empire*, viz. the *College of Electors*, *College of Princes*, and *College of Cities*, &c.

COLLEGE *of Electors*, is the Body of Electors, or their Deputies, assembled in the Diet at *Ratisbon*. See ELECTOR.

Antiently, the King of *Bohemia* had no Deputy in their *College*; at present he has. See DIET.

*College of Princes*, is the Body of Princes, or their Deputies, at the Diet of *Ratisbon*.

*College of Cities*, is, in like manner, the Body of Deputies which the several Imperial Cities send to the Diet.

COLLEGE *of Cardinals*, or the *Sacred* COLLEGE, is a Body compos'd of the three Orders of Cardinals, *viz.* Cardinal-Bishops, Cardinal-Priests, and Cardinal-Deacons. See CARDINAL.

Each Order has its Dean, or Chief. The Dean of the Cardinal-Bishops is always the Bishop of *Ostia*.

COLLEGE is also us'd for a publick Place, endow'd with certain Revenues; where the several Parts of Learning, both Divine and Human, are taught, in Schools, Halls, or Classes, appointed for that Purpose.

An Assemblage of several of these *Colleges* constitute an University. See UNIVERSITY.

The University of *Oxford* consists of 18 *Colleges*; that of *Cambridge* of 16; that of *Paris* of 50 *Colleges*.

The Erection of *Colleges* is part of the Royal Prerogative, and not to be done without the King's Consent.

Among the *Greeks*, the *Lyceum* and *Academy* were the celebrated *Colleges*; the latter of which has given its Name to our Universities, which in *Latin* are called *Academiæ*. With them, the House, or Apartment of each Philosopher, or Rhetor, might be esteem'd a kind of *College* of it self. See LYCEUM, and ACADEMY.

The *Romans* came late into the Institution of such *Colleges*: They had, however, several, founded by their Emperors; especially in *Gaul*; the chief whereof were those of *Marseilles*, *Lions*, *Besancon*, and *Bourdeaux*.

The *Jews*, and *Egyptians* too, have had their *Colleges*; the Chief of the first were those of *Jerusalem*, *Tiberias*, *Nardea*, *Pompodita*, *Sura*, and *Babylon*: this last is said to have been instituted by *Ezekiel*, and to have subsisted in the Time of *Mahomet*.

*Colleges* of this kind have been generally in the Hands of those consecrated to the Offices of Religion: The *Magi* in *Persia*, the *Gymnosophists* in the *Indies*, the *Druids* in *Gaul* and *Britain*, had the Care of educating Youth in the Sciences. After Christianity became establish'd, there were almost as many *Colleges* as Monasteries; *Charlemaign*, in his *Capitularies*, enjoining the Monks to instruct Youths in Musick, Grammar, and Arithmetick: But, this, calling the Monks from their Solitude, and taking up too much of their time, the Care of the *Colleges* was at length put into the Hands of those who had nothing else to do. See SCHOOL.

In the Canon Law, 'tis said, Three Persons make a *College*, *Tres Collegium faciunt*.

The *Colleges* in *London* are,

*Sion*-COLLEGE, or the *College* of the *London* Clergy; which has been a Religious House time out of Mind: sometimes under the Denomination of a Priory, or *College*; sometimes under that of a Spittal, or Hospital; as, at its Dissolution under 31 *Hen.* VIII. it was called *Elsyn's Spittle*, from the Name of its Founder, a Mercer, in 1329.

At present it is a Composition of both, *viz.* a *College* for the Clergy of *London*, who were incorporated in 1631, at the Request of Dr. *White*, under the Name of the *President and Fellows of* Sion COLLEGE; and an Hospital for ten poor Men, and as many Women. See HOSPITAL.

The Officers of the Corporation are the President, two Deans, and four Assistants; who are annually chosen from among the Rectors and Vicars of *London*; subject to the Visitation of the Bishop. They have a good Library, built and stock'd by Mr. *Simson*, chiefly for the Clergy of the City, without excluding other Students on certain Terms; and a Hall, with Chambers for Students, generally filled with the Ministers of the neighbouring Parishes.

COLLEGE *of Civilians*, commonly call'd *Doctors-Commons*; a *College* founded by Dr. *Harvey*, Dean of the Arches, for the Professors of the Civil Law residing in this City; where usually, likewise reside the Judge of the Arches Court of *Canterbury*, Judge of the Admiralty, of the Prerogative Court, *&c.* with other Civilians; who all live, as to Diet and Lodging, in a *Collegiate* manner, commoning together: whence the Appellation of *Doctors-Commons*.

Their House being consum'd in the great Fire, they all resided at *Exeter-House* in the *Strand*, till 1672; when their former House was rebuilt, at their own Expence, in a very splendid manner. To this *College* belong 34 Proctors; who make themselves Parties for their Clients, manage their Causes, *&c.* See PROCTOR.

COLLEGE *of Physicians*, a Corporation of Physicians, in *London*; who, by several Charters and Acts of Parliament of *Henry* VIII. and his Successors, have certain Privileges, whereby no Man, tho a Graduate in Physick of any University, may, without License under the said *College*-Seal, practise Physick, in, or within seven Miles of *London*; nor even in any other part of *England*, unless he have taken the Degree in one of our own Universities: with Power to administer Oaths, fine and imprison Offenders, in that and several other Particulars: to search the Apothecaries Shops, *&c.* in and about *London*, to see if their Drugs, *&c.* be wholesom, and their Compositions according to the Form prescrib'd by the said *College* in their Dispensatory.

By the said Charter they are also freed from all troublesom Offices; as to serve on Juries, be Constable, keep Watch, provide Arms, *&c.*

This Society had antiently a *College* in *Knightrider-street*, the Gift of Dr. *Linacre*, Physician to King *Henry* VIII. Since that, they have had a House built 'em by the famous Dr. *Harvey*, in 1652, at the end of *Amen-street*, which he endow'd with his whole Inheritance in his Lifetime; but this being burnt in the great Fire in 1666, a new one was erected at the Expence of the Fellows, in *Warwick Lane*; with a noble Library; given partly by the Marquis of *Dorchester*, and partly by Sir *Theodore Mayerne*.

Of this *College* there is a President, four Censors, and 12 Electors: The Censors have, by Charter, Power to survey, govern, and arrest all Physicians, or others practising Physick,

in,

in, or within ſeven Miles of *London*; to fine, amerce, and impriſon them at diſcretion.

The Number of Fellows was antiently 30, till King *Charles* II. increas'd their number to 40; and King *James* II. giving 'em a new Charter, allow'd the Number of Fellows to be enlarg'd, ſo as not to exceed fourſcore; reſerving to himſelf and Succeſſors, the Power of placing and diſplacing any of 'em for the future.

The *College* are not very rigorous in aſſerting their Privileges; there being a great Number of Phyſicians, ſome of very good Abilities, who practiſe in *London*, &c. without their Licenſe; and are conniv'd at by the *College*: yet, by Law, if any Perſon, not expreſly allow'd to practiſe, take on him the Cure of any Diſeaſe, and the Patient die under his hand, 'tis deem'd Felony in the Practicer.

In 1696, the *College* made a Subſcription, to the Number of 42 of their Members, to ſet on foot a Diſpenſatory, for the Relief of the ſick Poor: ſince that, they have erected two other Diſpenſatories. See DISPENSATORY.

*Greſham* COLLEGE, or COLLEGE *of Philoſophy*; a *College* founded by Sir *Tho. Greſham*, and endow'd with the Revenue of the *Royal-Exchange*: One Moiety of this Endowment the Founder bequeath'd to the Mayor, and Aldermen of *London*, and their Succeſſors, in truſt, that they ſhould find four able Perſons to read within the *College*, Divinity, Geometry, Aſtronomy, and Muſick; and to allow each, beſides Lodging, 50 Pounds *per Ann.*

The other Moiety he left to the Company of Mercers, to find three more able Perſons, to read Civil Law, Phyſick, and Rhetorick, on the ſame Terms; with this Limitation, that the ſeveral Lecturers ſhould read in Term-time, every Day in the Week, except Sundays; in the Morning in *Latin*, in the Afternoon the ſame in *Engliſh*: that in Muſick to be only read in *Engliſh*.

In this *College* formerly met the *Royal Society*, that noble Academy, inſtituted by K. *Charles* II. and celebrated thro'-out the World, for their Improvements in Natural Knowledge. *See their Hiſtory and Policy, under* SOCIETY.

COLLEGE *of Heralds*, or COLLEGE *of Arms*, a Corporation founded by Charter of King *Richard* III. who granted 'em ſeveral Privileges; as, to be free from Subſidies, Tolls, Offices, &c. See HERALD.

They had a ſecond Charter from King *Edward* VI. and a Houſe built near *Doctors-Commons*, by the Earl of *Derby*, in the Reign of King *Henry* VII. was given 'em by the Duke of *Norfolk*, in the Reign of Queen *Mary*; which Houſe is now rebuilt.

Of this *Collegiate* Society, are three Officers ſtiled *Kings of Arms*, *Reges Armorum Anglicorum*. See KING *at Arms*. Six Heralds. See HERALD. And four Purſuivants. See PURSUIVANT.

COLLEGES *of Common Law*. See INNS *of Court*, and *Chancery*.

COLLEGES *for diſabled Soldiers*, *Seamen*, &c. See HOSPITALS.

COLLEGIANS, a Religious Sect, form'd among the *Arminians* and *Anabaptiſts* in *Holland*; ſo called, becauſe of their *Colleges*, or Meetings the firſt Sunday in each Month; where every one has the ſame Liberty of expounding the Scripture, Praying, &c.

They are ſaid to be all either *Arians*, or *Socinians*: They never Communicate in the *College*, but meet twice a Year from all Parts of *Holland* at *Rinsbourgh*, a Village two Miles from *Leyden*, where they Communicate together; admitting every one that preſents himſelf, without regard to his Sect or Opinion. They have no particular Miniſters, but each officiates as he is diſpos'd. They never baptize without plunging.

COLLEGIATE, or COLLEGIAL *Churches*, are thoſe which have no Biſhop's See; yet have the antient Retinue of the Biſhop, the Canons and Prebends. See CHURCH, CANON, &c.

Such are, among us, *Weſtminſter*, *Rippon*, *Windſor*, &c.

Of theſe *Collegiate* Churches there are two Kinds; ſome of Royal Foundation, others of Eccleſiaſtical Foundation: each of them, in Matters of Divine Service, are regulated in the ſame manner as the Cathedrals. See CATHEDRAL.

There are even ſome *Collegiate* Churches which have the Epiſcopal Rights. Some of theſe Churches were antiently Abbies; which, in time, were ſeculariz'd. See ABBY.

The Church of *St. Peter's Weſtminſter* was antiently a Cathedral; but the Revenues of the Monaſtery being by Act of Parliament 1° *Eliz.* veſted in the Dean and Chapter, it commenc'd a *Collegiate* Church.

In ſeveral Cauſes, the ſtiling it *Cathedral*, inſtead of *Collegiate Church of Weſtminſter*, has occaſion'd Error in the Pleadings.

COLLETICS, in Medicine, ſuch Remedies as join, and glue together the ſeparated Parts, or Lips of a Wound, or Ulcer; in order to re-eſtabliſh 'em in their natural Union. See AGGLUTINANT, WOUND, &c.

*Colleticks* are more deſiccative than Sarcotics; but leſs ſo than Epulotics. See SARCOTICS, and EPULOTICS.

Among *Colletics* are rank'd Litharge, Aloes, Myrrh, &c.

The Word comes from the *Greek* κολλητικὸς, ſomething that has the Virtue of gluing together.

COLLIQUATION, in Pharmacy, the Action of melting together two, or more ſolid Subſtances; or rendring 'em liquid by Fuſion, or Diſſolution; as Wax, Mucilages, &c. by Heat; Gums, &c. by Moiſture. See FUSION, DISSOLUTION, &c.

COLLIQUATION is alſo us'd to expreſs ſuch a Temperament, and Diſpoſition of the Animal Fluids, as proceeds from a too lax Compages; whereby they flow off thro' the ſeveral Glands, and particularly thro' thoſe of the Skin, faſter than they ought; which occaſions Fluxes of many Kinds, but moſtly, profuſe greaſy, clammy Sweats.

If this *Colliquation* continue, it generally terminates in an Hectic Fever, and is uſually a Concomitant of one. See HECTIC.

The curative Intention in this Caſe, is the giving a better Conſiſtence to the Juices by Balſamicks and Agglutinants; and the hardening of the Solids by Subaſtringents. Hence,

COLLIQUATIVE *Fever*, is a Fever attended with a Diarrhæa, or profuſe Sweats, from too looſe a Contexture of the Fluids. See COLLIQUATION; ſee alſo FEVER.

COLLISEUM, or COLISEUM, in the antient Architecture, an oval Amphitheater, built at *Rome* by *Veſpaſian*, in the Place where ſtood the Pond of *Nero*'s gilded Houſe.

In this were ſeen Statues, repreſenting all the Provinces of the Empire; in the middle whereof ſtood that of *Rome*, holding a golden Apple in her Hand. The ſame Term, *Coliſeum*, is alſo given to another Amphitheatre of the Emperor *Severus*.

In theſe *Coliſea* were repreſented Games, and Combats of Men and wild Beaſts: There is now little remaining of either of them; Time and War having reduc'd 'em to Ruins. See AMPHITHEATRE.

The Word is form'd from *Coloſſæum*, on account of the *Coloſſus* of *Nero*, that ſtood near it: or, according to *Nardini*, from the Italian *Coliſeo*.

COLLISION, the Friction, or Percuſſion of two Bodies moving violently with different Directions, and daſhing againſt each other.

For *the Laws of the Colliſion of Bodies*, ſee PERCUSSION.

COLLUSION, a ſecret Underſtanding between two Parties, who plead, or proceed fraudulently againſt each other, to the prejudice of a third.

In the Canon Law, *Colluſion*, in Matters of Benefices, vacates the Benefice; and incapacitates the Perſon from holding any Benefice at all.

COLLUTHIANS, a Religious Sect, who aroſe about the Beginning of the IVth Century; on occaſion of the Mildneſs and Indulgence ſhewn to *Arius*, by *Alexander* Patriarch of *Alexandria*.

Several People being ſcandaliz'd at ſo much Condeſcenſion; and among the reſt *Colluthus*, a Prieſt of the ſame City; he hence took a Pretence for holding ſeparate Aſſemblies, and by degrees proceeded to the Ordination of Prieſts; as if he had been a Biſhop: pretending a Neceſſity for this Authority, in order to oppoſe *Arius*.

To his Schiſm he added Hereſy; teaching, that God did not create the Wicked; that he was not Author of the Evils that befal Men, &c.

He was condemn'd in a Council held at *Alexandria* by *Oſius*, in the Year 335.

COLLYRIDIANS, antient Hereticks, denominated from a little Cake, call'd by the Greeks *Collyra*, which they offer'd to the Virgin *Mary*.

This Sect, it ſeems, conſiſted chiefly of *Arabian* Women, who, out of an Extravagance of Devotion to the Virgin, met on a certain Day in the Year, to celebrate a ſolemn Feaſt, and to render Divine Honours to *Mary* as to a Goddeſs; eating the Cake which they offer'd in her Name. St. *Epiphanius*, who relates the Hiſtory of this ſuperſtitious Ceremony, laughs at it.

COLLYRIUM, in Medicine, an external Remedy, particularly appropriated to Diſeaſes of the Eyes. See EYE.

There are two Kinds of *Collyriums*; the one *liquid*, the other *dry*.

*Liquid Collyriums* are compos'd of Ophthalmic Pouders, or Waters; as Roſe-Water, Plantain-Water, that of Fennel, Eyebright, &c. wherein they diſſolve Tutty, White Vitriol, or ſome other proper Pouder.

The *Dry*, are Troches of Rhaſis, Sugar-candy, Iris, Tutty prepar'd, &c. blown into the Eye with a little Pipe.

The ſame Name is alſo given to Unguents uſed for the ſame Purpoſe; as Unguent of Tutty, and ſeveral others.

Laſtly, the Name is given, tho improperly, to ſome liquid Medicines uſed againſt Venereal Ulcers.

The Word *Collyrium* comes from the *Greek* κολλύριον; and that, according to *Martinius*, from κολλᾷν τὸν ῥῦν; becauſe it glues up, and prevents Defluxions.

COLON,

COLON, in Grammar, a Point, or Character form'd thus [ : ] ſerving to mark a Pauſe, and to divide the Members of a Period. See POINTING; ſee alſo PERIOD, and COMMA.

Grammarians generally aſſign the Uſe of a *Colon* to be to mark the Middle of a Period; or to conclude a Senſe leſs perfect than the Dot, or Period: But, *a Senſe leſs perfect than the Period*, is an Expreſſion infinitely vague and indeterminate. See PERIOD.

Others ſay, a *Colon* is to be uſed when the Senſe is perfect, but the Sentence not concluded: but neither is this over clear and expreſs. Add to this, that in Practice our beſt Writers confound the *Colon* with the Semicolon.

F. *Buffier*, with his uſual accuracy, attempts to fix the Uſe of the *Colon*; but does not much diſtinguiſh it from the Semicolon: he preſcribes the uſe of either, indifferently; and calls 'em by a common Name, *Intermediate Pointings*; as being Mediums between the Comma and Full-point, or Period. Their Uſe, according to this Author, is to diſtinguiſh the ſupernumerary Members of a Period.

By *ſupernumerary Members*, are meant, ſuch as the precedent ones don't raiſe any Expectation of; *i. e.* ſuch Parts, as have indeed a Dependence on what goes before, even tho what goes before has a compleat Senſe, independent hereon: v. g. *The Auguſtan Age was ſo eminent for good Poets, that they have ſerv'd as Models to all others: yet did it not yield any good Tragic Poets.* Where the ſupernumerary Member, and the Uſe of the *Colon* are obvious.

The moſt obvious and ſenſible Uſe of the *Colon*, he adds, is when the ſupernumerary Member is diſtinguiſh'd by ſome Conjunctions; as notwithſtanding, however, but, except that, unleſs, inaſmuch as, yet, ſince, the rather as, provided that, *&c.*

Some, indeed, uſe the *Colon* in the Middle of long Periods, without any regard to ſupernumerary Members: which Cuſtom was probably introduc'd, to mark that the Breath is here to be taken almoſt as much as in a common Period, in the Place where the ſupernumerary Period commences. But this, at beſt, is arbitrary; and the intermediate Pointings may always be omitted in a Period, if there be no ſupernumerary Member; *i. e.* if there be no ſubſequent Member, but what is expected from the precedent.

As to the Occaſions where the *Colon* is to be uſed, rather than the Semicolon, there is nothing preciſe to be ſaid of it; except that the *Colon* ſhews the ſupernumerary Member more detach'd, and ſets it at a greater diſtance from the reſt; and therefore marks a longer pauſe than the Semicolon.

Accordingly, it ſeems preferable to the Semicolon before Conjunctions Adverſative, Reſtrictive, Conditional, *&c.* as, nevertheleſs, but, excepting that, however, otherwiſe, provided that. Again, where the ſupernumerary Phraſes not only ſuppoſe the precedent, but depend on 'em for their Regimen; and are, as it were, new Parts thereof: there the Semicolon ſeems preferable to the *Colon*. v. g. *You are regardleſs of the Goodneſs of God, who firſt choſe you; a God who is only jealous of your Heart for your own Happineſs; a God who could be equally glorious in deſtroying you by his Juſtice, as in ſaving you by his Mercy.* Or thus: *The Diſcourſe conſiſted of two Parts; in the firſt was ſhewn the Neceſſity of fighting; in the ſecond, the Advantages that wou'd redound from it.*

But this Difference, it muſt be own'd, has a Dependence on ſomething that influences all the Points, and ſways the whole Doctrine of Punctuation; *viz.* the length, or ſhortneſs of the Members and Periods: For when the Phraſes are long, we point higher than when ſhort.

A late Author, in a very ingenious little Diſcourſe, *de Ratione Interpungendi*, marks the Office of the *Colon*, and where in it differs from the Semicolon, *&c.* much more preciſely: A *Colon*, on his Principles, ſerves to diſtinguiſh thoſe conjunct Members of a Sentence, which are capable of being divided into other Members; whereof one, at leaſt, is conjunct. See SENTENCE.

Thus, in the Sentence, *As we cannot diſcern the Shadow moving along the Dial-plate, So the Advances we make in Knowledge are only perceiv'd by the Diſtance gone over*; the two Members being both ſimple, are only ſeparated by a Comma: In this, *As we perceive the Shadow to have moved, but did not perceive it moving; So our Advances in Underſtanding, in that they conſiſt of ſuch minute Steps, are only perceivable by the Diſtance*; the Sentence being divided into two equal Parts, and thoſe conjunct ones, ſince they include others; we ſeparate the former by a Semicolon, and the latter by Commas: But in this, *As we perceive the Shadow to have moved along the Dial, but did not perceive it moving; and it appears the Graſs has grown, tho no body ever ſaw it grow: So the Advances we make in Knowledge, as they conſiſt of ſuch minute Steps, are only perceivable by the Diſtance.* The Advancement in Knowledge is compar'd to the Motion of a Shadow, and the Growth of Graſs; which Compariſon divides the Sentence into two principal Parts: But ſince what is ſaid of the Movement of the Shadow, and likewiſe of the Growth of Graſs, contains two ſimple Members, they are to be ſeparated by a Semicolon; conſequently, a higher Pointing is requir'd to ſeparate 'em from the other Part of the Sentence, which they are oppoſed to: And this is a *Colon*. See PUNCTUATION.

COLON, in Anatomy, is the ſecond of the thick Inteſtines. See INTESTINE.

The *Colon* is placed between the *Cæcum* and *Rectum*; and is wider than either of them: In length it is eight or nine Hands. It begins where the *Ilion* ends, *viz.* in the Cavity of the *Os Ilium*, on the right Side; whence, aſcending by the Kidney on the ſame ſide, it paſſes under the concave Side of the Liver, to which it is ſometimes ty'd, as likewiſe to the Gall-Bladder, which tinges it yellow in that place: Then it runs under the bottom of the Stomach to the Spleen in the left Side, to which it is alſo knit; from thence it turns down to the left Kidney; and thence paſſing in form of an S, it ends at the upper Part of the *Os Sacrum* in the *Rectum*.

At the Beginning of this Gut, there is a Valve form'd by the Production of the inmoſt Coat of the Inteſtines in this place; which hinders the Excrements, when once fallen into the *Colon*, from returning again to the *Ilium*.

It has a ſtrong Ligament, which running along its upper Side, from the *Ilium* to the *Rectum*, ſtrengthens it againſt the Weight of the Excrements, and draws it together into Cells; which, with the *Valvulæ Conniventes*, retard the Paſſages of the Excrements, that we may not be continually oblig'd to be going to Stool. See EXCREMENTS.

The fleſhy Fibres of its ſecond Coat are greater and ſtronger than thoſe of the other Inteſtines; becauſe a greater Strength is requiſite to cauſe the Excrements to aſcend.

The chief Deſign of the *Colon*'s ſurrounding the Abdomen, and, with the *Rectum*, touching all the Parts contain'd in it, ſeems to be, that by immediate Fomentation with Clyſters, they might be eas'd of their Maladies. See CLYSTER.

Some derive the Word from κωλύειν, *to retard*; in regard 'tis in the Folds of this Inteſtine that the Excrements are ſtopp'd and form'd. Others fetch it from κοῖλον, *hollow*; on account of its Capacity: Others again from κολάζεσθαι, *to be tormented*; in regard of the grievous Pain it frequently undergoes.

'Tis from this Part that the Colic takes its Name. See COLIC.

COLONEL, an Officer in the Army, who has the Command of a Regiment, either of Horſe, Foot, or Dragoons. See REGIMENT.

In the *French* Army, *Colonel* is confin'd to the Infantry and Dragoons: the commanding Officer of a Regiment of Horſe, they uſually call *Meſter de Camp*.

*Skinner* derives the Word from *Colony*; being of Opinion, the Chiefs of Colonies might give their Name to the Chief of Forces.

COLONEL *Lieutenant*, is he who commands a Regiment of Guards, whereof the King, Prince, or other Perſon of the firſt Eminence is *Colonel*. See GUARDS.

Theſe *Colonels Lieutenants* have always a *Colonel*'s Commiſſion, and are uſually General Officers.

*Lieutenant* COLONEL, is the ſecond Officer in the Regiment; who is at the Head of the Captains, and commands in the abſence of the *Colonel*. See LIEUTENANT.

*Lieutenant Colonel* of Horſe, or Dragoons, is the firſt Captain of the Regiment. See CAPTAIN.

COLONNADE, a Periſtyle, of a circular Figure; or a Series of Columns, diſpos'd in a Circle, and inſulated within-ſide. See PERISTYLE.

Such is that of the little Park at *Verſailles*, which conſiſts of 32 *Ionic* Columns; all of ſolid Marble, and without Incruſtation.

A *Polyſtyle* COLONNADE, is that whoſe number of Columns is too great to be taken in by the Eye at a ſingle View. Such is the *Colonnade* of the Palace of St. *Peter* at *Rome*; which conſiſts of 284 Columns of the *Doric* Order, each above four Foot and an half Diameter; all in *Tiburtine* Marble.

COLONY, a *Plantation*, or Company of People, of all Sexes and Conditions, tranſported into a remote Province, in order to cultivate and inhabit it. See PLANTATION.

We may diſtinguiſh three Kinds of *Colonies*: The firſt ſerves to eaſe, or diſcharge the Inhabitants of a Country; where the People are become too numerous, ſo that they cannot any longer conveniently ſubſiſt.

The ſecond are thoſe eſtabliſh'd by victorious Princes and People, in the middle of vanquiſh'd Nations, to keep 'em in awe and obedience.

The third may be call'd *Colonies of Commerce*; becauſe, in effect, 'tis Trade is the ſole Occaſion and Object thereof.

'Twas by means of the firſt kind of *Colonies*, that ſome Ages after the Deluge, the Eaſt, firſt, and ſucceſſively all the other Parts of the Earth became inhabited: And without mentioning any thing of the *Phenician* and *Grecian Colonies*, ſo famous in antient Hiſtory, 'tis notorious that it was for the Eſtabliſhment of ſuch *Colonies*, that during the Declenſion of the Empire, thoſe Torrents of barbarous Nations, iſſuing, for the generality, out of the North, overrun the

*Gauls*, *Italy*, and the other Southern Parts of *Europe*; and after ſeveral bloody Battels, divided it with the antient Inhabitants.

For the ſecond kind of *Colonies*, the *Romans* us'd 'em more than any other People; and that to ſecure the Conqueſts they had made from the Weſt to the Eaſt. Every one knows how many Cities in *Gaul*, *Germany*, *Spain*, and even *England*, value themſelves on their having been of the Number of *Roman Colonies*.

Laſtly, the *Colonies of Commerce*, are thoſe eſtabliſh'd by the *Engliſh*, *French*, *Spaniards*, *Portugueſe*, and other Nations within theſe two laſt Centuries, and which they continue ſtill to eſtabliſh, in ſeveral Parts of *Aſia*, *Africa*, and *America*; either to keep up a regular Commerce with the Natives, or to cultivate the Grounds, by planting Sugar-Canes, Indigo, Tobacco, and other Commodities. See COMMERCE.

The principal of this Kind of *Colonies*, are in the one and the other *America*, Northern and Southern; particularly *Peru*, *Mexico*, *Canada*, *Virginia*, *New-England*, *Carolina*, *la Louiſiane*, *l'Acadia*, *Hudſon's Bay*, the *Antilles Iſlands*, *Jamaica*, *Domingo*, and the other Iſlands.

In *Africa*, *Madagaſcar*, *Cape of Good Hope*, *Cape Verd*, and its Iſlands, and all thoſe vaſt Coaſts, extended thence as far as to the Red Sea.

Laſtly, in *Aſia*, the famous *Batavia* of the *Dutch*; *Goa*, *Diu* of the *Portugueſe*; and ſome other leſs conſiderable Places of the *Engliſh*, *French*, and *Danes*.

M. *Vaillant* has fill'd a Volume in Folio with Medals ſtruck by the ſeveral *Colonies*, in honour of the Emperors who founded 'em. The ordinary Symbol they engrav'd on their Medals, was, either an Eagle; as when the Veteran Legions were diſtributed in the *Colonies*: or a Labourer, holding a Plough drawn by a pair of Oxen; as when the *Colony* conſiſted of ordinary Inhabitants. On all the Medals are ſeen the Names of the Decemvirs; who held the ſame Rank, and had the ſame Authority there, as the Conſuls had at *Rome*. See DECEMVIR.

There were two Kinds of *Colonies* among the *Romans*; thoſe ſent by the Senate; and the Military ones, conſiſting of old Soldiers, broken and diſabled with the Fatigues of War, who were thus provided with Lands, as the Reward of their Services. See BENEFICE.

The *Colonies* ſent by the Senate, were either *Roman*, or *Latin*; *i. e.* compos'd either of *Roman* Citizens, or *Latins*.

The *Colonies* of *Roman* Citizens had the Right of Suffrages; but had no part in the Offices or Honours of the Republick. The Inhabitants of *Latin Colonies*, had no Right of Suffrages without an expreſs Permiſſion. See CITIZEN, *&c.*

According to *Ulpian*, *(lib. de Cenſ.)* there were other *Colonies*, which had little more than the Name; only enjoying what they call'd *Jus Italicum*; *i. e.* they were free from the Tributes and Taxes paid by the Provinces: Such were the *Colonies* of *Tyre*, *Berytus*, *Heliopolis*, *Palmyra*, &c.

Originally, the Word *Colony* ſignify'd no more than a Farm; *i. e.* the Habitation of a Peaſant, with the Quantity of Land ſufficient for the Support of his Family; *Quantum Colonus unus arare poterat.*

COLOPHONY, a kind of Gum; being only a finer Turpentine, boil'd in Water till it be reduc'd into a ſolid Conſiſtence. See TURPENTINE.

The chief Uſe of this Drug is in the Cure of Venereal Ailings, Seminal Weakneſſes, the Whites in Women, *&c.* The Apothecaries make it into Pills, which they roll in Liquorice-Powder, or cover over with Gold-Leaf, and call them *Turpentine Pills*.

It is alſo uſed by Muſicians, to rub the Hairs of their Bow withal; the Effect whereof is, that the Gum cleaning the Hairs, and communicating to 'em a tenacious Quality, prevents their ſliding too eaſily over the Strings; and promotes that trembling which forms the Sound.

COLOPHONY is alſo an oleaginous Subſtance, of a yellowiſh Colour, dry, and friable, compos'd of the Remains of Reſins of Fir, and Fir-Apples, condens'd by Coction, and harden'd by Cold.

To be good, it muſt be ſhining and odoriferous; and when thrown on the Fire, render a Smoke like that of Incenſe.

*Pliny* ſays, *Colophony* took its Name from *Colophon*, a City of *Ionia*, whence it was firſt brought.

'Tis now frequently called *Spaniſh Wax*, or *Grecian Reſin*; as it is brought from the one or the other of thoſe Countries. It is found to warm, dry, ſoften, and agglutinate, and uſually enters the Compoſition of Plaiſters and Unguents.

COLOPHONY is alſo uſed for the Remains of Turpentine diſtilled; or the groſs Part reſting at the bottom of the Veſſel. See DISTILLATION.

COLOQUINTIDA, or COLOCYNTHIS, uſually call'd *Bitter Apple*; the Fruit of a Plant of the ſame Name, brought from the *Levant*; about the bigneſs of a large Orange.

Its Colour is that of a golden brown: Its inſide is full of Kernels, which are to be taken out before the *Colocinthis* be us'd. Both the Seed and Pulp are intolerably Bitter.

*Coloquintida* is of conſiderable uſe in Medicine, but moſtly in officinal Compoſitions; the Violence of its Operation rendring it unſafe to be given inwardly in extemporaneous Preſcriptions, except with great Caution.

It enters, as an Ingredient, in the *Confectio Hamec.* and moſt purging Pills; and in ſuch Caſes as require purging, is attended with great ſucceſs. It is one of the moſt violent purgative Drugs known; inſomuch that it excoriates the Paſſages to that degree, as ſometimes to bring away Blood, and induce a Superpurgation. Sometimes it is taken boil'd in Water, or Small Beer, in Obſtruction of the Menſes; which, in ſtrong Conſtitutions, is often attended with Succeſs. Some Women have got a trick of taking it, in the ſame manner, in the beginning of Pregnancy, to procure Abortion; which it often effects by the Violence of its Operation.

The Pouder of *Coloquintida* is ſometimes uſed externally, with Aloes, *&c.* in Unguents, Emplaiſters, *&c.* with remarkable Succeſs againſt Worms; and ſome, for the ſame purpoſe, recommend the Pulp, given Clyſter-wiſe. In the Iliac Paſſion, Clyſters of *Coloquintida* have been found of ſervice, after moſt other Medicines have fail'd.

Troches made of *Colocynth*, are called *Troches of Alhandal*: They are prepared by cutting the *Coloquintida* very ſmall, and reducing it to a fine Pouder in a Mortar, rubb'd with Oil of ſweet Almonds; adding Gum Tragacanth, and Maſtic afterwards. See TROCHES.

The Word comes from the *Greek* κολοκύνθη, which was given it, in regard it κοιλίαν κινει, *agitates the Belly*.

COLORBASIANS, a Branch of *Gnoſticks*; ſo called from *Colorbaſus*, who improv'd on the Viſions of the *Gnoſticks* that had preceeded 'em. St. *Epiphanius* enumerates and confutes their Errors. See GNOSTICS.

COLORISATION, or COLORATION, in Pharmacy, a Term applied to the ſeveral Changes of Colour which Bodies undergo in the various Operations of Nature, or Art; as by Fermentations, Lotions, Coctions, or Calcinations, *&c.* See COLOUR, and COLOURING.

COLOSSAL *Column*. See COLUMN.

COLOSSUS, a Statue of a prodigious Size, repreſenting a Giant. See STATUE.

The moſt eminent of this kind was the *Coloſſus of Rhodes*, a Statue of *Apollo*, ſo high, that Ships paſs'd with full Sails betwixt its Legs. It was the Workmanſhip of *Chares*, a Diſciple of *Lyſippus*; who ſpent twelve Years in making it: 'Twas at length overthrown by an Earthquake, after having ſtood 1360 Years. Its Height was ſixſcore and ſix Foot: There were few People could fathom its Thumb, *&c.*

Some Criticks obſerve, that the *Coloſſus* of *Rhodes* gave its own Name to the People among whom it ſtood; and that many, at leaſt among the antient Poets, call the *Rhodians*, *Coloſſians*: Hence they advance an Opinion, that the *Coloſſians* in Scripture, to whom St. *Paul* directs his Epiſtle, are, in reality, the Inhabitants of *Rhodes*. Of this Sentiment are *Suidas*, *Calepin*, *Munſter*, &c.

When the *Saracens* became poſſeſs'd of the Iſland, the Statue was found laid along the ground: They ſold it to a *Jew*, who loaded 900 Camels with the Braſs.

The Baſis that ſupported it was of a triangular Figure, its Extremities were ſuſtain'd with 60 Pillars of Marble. There was a winding Stair-caſe to go up to the top of it; from whence one might diſcover *Syria*, and the Ships that went into *Egypt*, in a great Looking-Glaſs, that was hung about the Neck of the Statue.

Among the Antiquities of *Rome*, there are ſeven famous *Coloſſus*'s: two of *Jupiter*, as many of *Apollo*; one of *Nero*, one of *Domitian*, and one of the Sun.

The Term *Coloſſus* takes its riſe παρα το κολόειν τα ὄσσα, *quod minuat & retundat oculos*.

COLOSTRUM, or COLOSTRA, in Medicine, Milk coagulated in Womens Breaſts. See MILK.

The Name is alſo given to a Diſeaſe which this coagulated Milk occaſions.

COLOUR, in Philoſophy, a Property inherent in Light, whereby, according to the different Sizes, or Magnitudes of its Parts, it excites different Vibrations in the Fibres of the Optick Nerve; which propagated to the *Senſorium*, affects the Mind with different Senſations.

Or, *Colour* may be defin'd a Senſation of the Soul, excited by the Application of Light to the *Retina* of the Eye; and different, as that Light differs in the degree of its Refrangibility, and the Magnitude of its component Parts. See SENSATION.

In the former View, therefore, Light is the Subject of *Colour*; in the latter it is the Agent. *See its Properties under the Article* LIGHT.

Various are the Opinions of antient and modern Authors, and of the ſeveral Sects of Philoſophers, with regard to the Nature and Origin of the Phænomenon *Colour*: The moſt popular

popular Opinion, is that of the *Ariſtotelians*; who maintain *Colour* to be a Quality reſiding in the *colour'd* Body; and to exiſt, independently of Light. See QUALITY.

The *Carteſians* come nearer the Matter: They own, that as the *colour'd* Body is not immediately applied to the Organ, to occaſion the Senſation, and that as no Body can affect the Senſe but by immediate contact; the *colour'd* Body does not excite the Senſation of it ſelf, or contribute any thing to it, otherwiſe than by moving ſome interpos'd Medium, and by that the Organ of Sight.

They add, that, as we find that Bodies don't affect the Senſe in the dark, Light only occaſions the Senſe of *Colour*, by moving the Organ; and that *colour'd* Bodies are no further concern'd than as they reflect the Light with a certain Modification: the differences in their *Colours* ariſing from a difference in the Texture of their Parts, whereby they are diſpos'd to reflect the Light with this or that Modification.

But 'tis to Sir *Iſaac Newton* we are owing for a ſolid and conſiſtent Theory of *Colours*; built on ſure Experiments, and ſolving all the Phænomena thereof: His Doctrine is as follows.

'Tis found by Experience, that Rays, or Beams of Light, are compos'd of Particles very heterogeneous, or diſſimilar to each other: *i. e.* ſome of them, as 'tis highly probable, are larger, and others leſs. For a Ray of Light, as F E, (Tab. *Optics*, Fig. 5.) being receiv'd on a refracting Surface, as A D, in a dark Place, is not wholly refracted to L; but ſplit, as it were, and diffuſed into ſeveral little Rays, ſome whereof are refracted to L, and others to the other intermediate Points between L and G; *i. e.* thoſe Particles of the Light which are the moſt minute, are of all others the moſt eaſily and moſt conſiderably diverted, by the Action of the refracting Surface, out of their rectilinear Courſe towards L: and the reſt, as each exceeds another in Magnitude, ſo is it with more difficulty, and leſs conſiderably turn'd out of its right Line to the Points between L and G. See REFRANGIBILITY.

Now, each Ray of Light, as it differs from another in its degree of Refrangibility, ſo does it differ from it in *Colour*: this is warranted by numerous Experiments. Thoſe Particles, *v. g.* which are moſt refracted, are found to conſtitute a Ray of a violet *Colour*; *i. e.* in all probability, the moſt minute Particles of Light, thus, ſeparately impell'd, excite the ſhorteſt Vibration in the *Retina*; which are thence propagated by the ſolid Fibres of the Optic Nerves into the Brain, there to excite the Senſation of violet *Colour*; as being the moſt duſky and languid of all *Colours*. See VIOLET.

Again, thoſe Particles which are the leaſt refracted, conſtitute a *Radiolus*, or Ray of a red Colour; *i. e.* the largeſt Particles of Light excite the longeſt Vibrations in the *Retina*; ſo as to excite the Senſation of red *Colour*, the brighteſt and moſt vivid of all others. See RED.

The other Particles being in like manner ſeparated, according to their reſpective Magnitudes, into little Rays; excite the intermediate Vibrations, and thus occaſion the Senſations of the intermediate *Colours*; much in the ſame manner as the ſeveral Vibrations of the Air, according to their reſpective Magnitudes, excite the Senſations of different Sounds. See VIBRATION.

To this it may be added, that not only the more diſtinct and notable *Colours* of red, yellow, blue, *&c.* have thus their riſe from the different Magnitude and Refrangibility of the Rays; but alſo the intermediate Degrees or Teints of the ſame *Colour*; as of yellow up to green, of red down to yellow, *&c.*

Further, the *Colours* of theſe little Rays, not being any adventitious Modifications thereof, but connate, primitive, and neceſſary Properties; as conſiſting, in all probability, in the Magnitudes of their Parts, muſt be perpetual and immutable; *i. e.* cannot be chang'd by any future Refraction or Reflection, or any Modification whatſoever.

This is confirm'd by abundance of Experiments; all endeavours having been us'd, after ſeparating a *colour'd* Ray from thoſe of other Kinds, to change it into ſome other *Colour* by repeated Refractions, but to no effect. Apparent Tranſmutations of *Colours*, indeed, may be effected; *viz.* where there is an Aſſemblage, or Mixture of Rays of different Kinds; the component *Colours* never appearing in their natural Hue in ſuch Mixtures, but always allay'd and temper'd with each other: whence reſults a middling Kind of *Colour*, which, by Refraction, may be ſeparated into the component ones: and thoſe, after Separation, being remix'd, return to their former *Colour*.

Hence, the Tranſmutations of *Colours*, by mixing thoſe of different Kinds, are not real; but mere Appearances or Deceptions of the Sight: For the Rays being again ſevered, exhibit the ſame *Colours* as at firſt. Thus, blue and yellow Pouders, well mix'd, appear to the naked Eye green; yet, without having paſs'd any Alteration, when view'd thro' a Microſcope, the blue and yellow Particles ſtill appear diſtinct.

Hence there ariſe two Kinds of *Colours*; the one *original*, and *ſimple*, produced by homogeneal Light; or by Rays that have the ſame degree of Refrangibility, and the ſame Magnitude of their Parts: Such are red, yellow, green, blue, a violet purple, orange, and indigo; with all their intermediate Teints and Gradations.

The other Kind of *Colour* is *ſecundary*, or *heterogeneous*; compounded of the primary ones, or of a Mixture of Rays differently refrangible, *&c.*

There may alſo be ſecondary *Colours* produced by Compoſition, like the primary ones, or thoſe conſiſting of homogeneal Light, as to the Species or Appearance of the *Colour*; but not as to the Permanency, or Immutability thereof. Thus, yellow and blue make green; red and yellow, orange; orange and yellowiſh green, yellow: And in the general, if any two *Colours* be mix'd, which in the Series of thoſe generated by the Priſm, are not too far apart, from their Mixture reſults that *Colour*, which in the ſaid Series is found in the mid-way between 'em: but thoſe ſituated at too great a diſtance do not ſo.

Indeed, the more any *Colour* is compounded, the leſs perfect and vivid it is: by too much Compoſition they may be diluted and weaken'd till they ceaſe. By Compoſition there may likewiſe be produced *Colours*, not like any of thoſe of homogeneal Light.

The moſt extraordinary Compoſition is that of *Whiteneſs*; for to this, all the primary *Colours* abovementioned are requir'd; and thoſe to be mix'd in a certain degree. Hence it is that White is the ordinary *Colour* of Light; Light being nothing elſe but a confuſed Aſſemblage of Rays of all *Colours*. See WHITENESS.

If the Rays of different *Colours* do thus begin to be ſeparated by one Refraction of one ſingle Surface; that Separation is much promoted, ſo as even to become ſenſible to the Eye by a double Refraction. This is obſerv'd in the two Surfaces of any Glaſs; provided thoſe Surfaces be not parallel: but, of all others, it is moſt ſenſible in the two Faces of a triangular Priſm; the Phænomena whereof, as they are the Touchſtone of all Theories of *Colours*; and as they contain the Foundation of that here deliver'd, we ſhall lay down as follows.

1. The Rays of the Sun, tranſmitted thro' a triangular Priſm, exhibit an Image of various *Colours*, (the chief whereof are red, yellow, green, blue, and violet) on the oppoſite Wall.

The Reaſon is, that the differently *colour'd* Rays are ſeparated by Refraction: For the blue Rays, *v. g.* mark'd with the dotted Line, (Plate *Optics*, Fig. 6.) which begin to be ſeparated from the reſt by the firſt Refraction in *d d*, of the Side *c a* of the Priſm *a b c*, (as alſo in the firſt Surface of the Globe of Water *a b c*, Fig. 7.) are ſtill further ſeparated in the other Side of the Priſm *b c*, (as alſo in their egreſs out of the Globe *a b c*) by a ſecond Refraction in *c e*, in the ſame Direction as the former: whereas, on the contrary, in the plane Glaſs *a b c f*, Fig. 9. (as alſo in the Priſm *g l o*, Fig. 8. now placed in another Situation) thoſe blue Rays which begin to be ſeparated from the reſt in the firſt Surface, in *d d*, by a ſecond Refraction, the contrary way, paſs out parallel, *i. e.* remix'd with all the *Colours* of the other Rays.

2. That Image is not round, but oblong; its length, when the Priſm is an Angle of 60 or 65 Degrees, being five times its breadth.

The Reaſon is, that ſome of the Rays are refracted more than others; and by that means, exhibit ſeveral Images of the Sun, extended lengthwiſe, inſtead of one.

3. Thoſe Rays which exhibit yellow, are turn'd further from the rectilinear Courſe, than thoſe which exhibit red; thoſe which exhibit green, than thoſe which exhibit yellow: but, of all others, thoſe which exhibit violet the moſt: Accordingly, if the Priſm thro' which the Light is tranſmitted be turn'd about its Axis, ſo as the red, yellow, green, *&c.* Rays be projected, in order, thro' a narrow Aperture into another Priſm, placed at the Diſtance of about 12 Feet; the yellow, green, *&c.* Rays, tho falling thro' the ſame Aperture, in the ſame manner, and on the ſame Point of the ſecond Priſm, will not be refracted to the ſame Place as the red, but to a Point at ſome diſtance from it; on that ſide to which the Rotation is made.

This is what Sir *I. Newton* calls the *Experimentum Crucis*: being that which led him out of the Difficulties into which the firſt Phænomenon, *&c.* had thrown him; and plainly ſhew'd a different Degree of Refrangibility, and a different *Colour* correſponding thereto in the Rays of Light: and that yellow Rays, *v. g.* are more refracted than red ones, green ones more than yellow ones; and blue and violet ones moſt of all.

4. The *Colours* of *colour'd* Rays, well ſeparated by the Priſm, are not at all chang'd or deſtroy'd by paſſing an illuminated Medium, nor by their mutual Decuſſation; their bordering on a deep Shadow; nor their being reflected from

any

any natural Body, or refracted thro' any one, in a Place howſoever obſcure.

The reaſon is, that *Colours* are not Modifications ariſing from Refraction, or Reflection, but immutable Properties; and ſuch as belong to the Nature of the Rays.

5. An Aſſemblage of all the Kinds of *colour'd* Rays, collected either by ſeveral Priſms, by a convex Lens, or a concave Mirror, or in any other manner, form what we call *Whiteneſs*; yet each of theſe, after Decuſſation, becoming ſeparated, again exhibits its proper *Colour*: For, as the Ray was white before its Parts were ſeparated by Refraction; ſo, the Parts being remix'd, it becomes white again: And *colour'd* Rays, when they meet together, don't deſtroy one another, but are only interſpers'd.

Hence, a red, green, yellow, blue, and violet *Colour*, being mix'd in a certain Proportion, appear whitiſh; *i. e.* are of ſuch a *Colour* as ariſes from white and black mix'd together: and if there were not ſome Rays abſorb'd and loſt, wou'd be plainly white. In like manner, if a Paper cut into a Circle, be ſtain'd with each of thoſe *Colours*, ſeparately, and in a certain Proportion; then ſwiftly turn'd round its Centre, ſo as the Species of *Colours* be mix'd together in the Eye, by the briſkneſs of the Motion; the ſeveral *Colours* will diſappear, and the whole Paper appear of one continued *Colour*; which will be a Mean between white and black.

6. If the Rays of the Sun fall very obliquely on the inner Surface of a Priſm, thoſe that are reflected will be violet; thoſe tranſmitted, red.

For, the Rays were *colour'd* before any Separation; and by how much they are the more refrangible, by ſo much they are the more eaſily reflected; and by that means are ſeparated.

7. If two hollow Priſms, the one fill'd with a blue Fluid, the other with a red one, be join'd together, they will be opake; tho each, apart, be tranſparent.

For, the one tranſmitting none but blue Rays, and the other none but red ones; the two together will tranſmit none at all.

8. All natural Bodies, eſpecially white ones, view'd thro' a Priſm held to the Eye, appear fimbriated, or border'd, on one ſide with red and yellow, and on the other with blue and violet.

For, thoſe *Fimbriæ* are the Extremes of entire Images, which the Rays of any kind, as they are more or leſs refracted, would exhibit, nearer, or at a greater diſtance from the real Place of the Object.

9. If two Priſms be ſo placed, as that the red of the one, and the purple of the other meet together, in a Paper fit for the purpoſe, incompaſs'd with darkneſs; the Image will appear pale: and if view'd thro' a third Priſm, held to the Eye at a proper diſtance, it will appear double; the one red, the other purple.

In like manner, if two Pouders, the one perfectly red, the other blue, be mix'd; any little Body cover'd pretty deeply with this Mixture, and view'd thro' a Priſm held to the Eye, will exhibit a double Image, the one red, and the other blue: in regard, the red and purple, or blue Rays, are ſeparated by their unequal Refraction.

10. If the Rays tranſmitted thro' a convex Lens, be receiv'd on a Paper ere they meet in a *Focus*; the Confines or Boundary of Light and Shadow will appear ting'd with a red *Colour*: but if they be receiv'd beyond the *Focus*, with a blue one.

Becauſe, in the firſt Caſe, the red Rays, being ſomewhat more refracted, are the higher; but, in the ſecond, after Decuſſation in the *Focus*, the blue ones.

Laſtly, if the Rays about to paſs thro' either ſide of the *Pupilla*, be intercepted by the Interpoſition of any opake Body near the Eye; the Extremes of Bodies, placed as if view'd thro' a Priſm, will appear ting'd with *Colours*; tho thoſe not very vivid.

For then, the Rays tranſmitted thro' the reſt of the Pupil, will be ſeparated by Refraction into *Colours*; without being diluted with the admixture of the intercepted Rays, which would be refracted in a different manner.

And hence it is, that a Body view'd thro' a Paper pierc'd with two Holes, appears double, and alſo tinged with *Colours*.

*Of the* Colours *of thin Plates.* As Rays of different *Colours* are ſeparated by the Refraction of Priſms, and other thick Bodies; ſo are they ſeparated, tho in a different manner, in the thin *Lamellæ*, or Plates of any pellucid Matter, *v. g.* the Bubbles rais'd in Water, thicken'd by Soap, &c. For all *Lamellæ*, under a determinate thickneſs, tranſmit Rays of all *Colours*, without reflecting any at all: but, as they increaſe in thickneſs, in arithmetical Proportion, they begin to reflect, firſt blue Rays; then, in order, green, yellow and red, all pure: then, again, blue, green, yellow, red, more and more mix'd and diluted; till, at length, arriving at a certain thickneſs, they reflect Rays of all *Colours* perfectly intermix'd, *viz.* white.

But, in whatſoever Part a ſlender *Lamella* reflects any one *Colour*, *v. g.* blue; in that Part it always tranſmits the oppoſite *Colour*, *v. g.* red, or yellow.

'Tis found, by Experiment, that the difference of *Colour* of a Plate does not depend on the Medium that incompaſſes it; but the degree of Vividneſs does: *cæteris paribus*, the *Colour* will be more vivid, if the denſer Medium be incompaſs'd with the rarer. A Plate, *cæteris paribus*, reflects more Light as it is thinner; as far as a certain Degree of thinneſs, beyond which it reflects no Light at all.

In Plates whoſe thickneſſes increaſe in an arithmetical Proportion of the natural Numbers 1,2,3,4,5, &c. If the firſt, or thinneſt, reflect any homogeneal Ray, the ſecond will tranſmit it; the third, again, will reflect it: And thus is the ſame Ray alternately reflected and tranſmitted; *i. e.* the Plates correſponding to the odd Numbers, 1, 3, 5, 7, &c. will reflect the ſame Rays that thoſe correſponding to the even ones, 2, 4, 6, 8, &c. tranſmit.

Hence, an homogeneous *Colour* in a Plate, is ſaid to be of the *firſt Order*; if the Plate reflect all the Rays of that *Colour*. In a Plate whoſe thinneſs is triple the firſt, it is ſaid to be of the *ſecond Order*: in another, whoſe thinneſs is five times that of the firſt, it is ſaid to be of the *third Order*, &c.

A *Colour* of the firſt Order is the moſt vivid of any; and, ſucceſſively, the Vividneſs of the *Colour* increaſes, as the Quantity of the Order increaſes: The more the Thickneſs of the Plate is increas'd, the more *Colours* it reflects; and thoſe of more different Orders. In ſome Plates, the *Colour* will vary as the Poſition of the Eye varies; in others it is permanent.

Colours *of Natural Bodies.* Bodies only appear of different *Colours*, as their Surfaces are diſpos'd to reflect Rays of this or that *Colour* alone; or of this or that *Colour* more abundantly than any other: hence Bodies appear of that *Colour* which ariſes from the Mixture of the reflected Rays. See Body.

All Natural Bodies conſiſt of very thin, tranſparent *Lamellæ*; which, if they be ſo diſpos'd, with regard to each other, as that there happen no Reflections or Refractions in their Interſtices, thoſe Bodies become pellucid, or tranſparent: but if their Intervals be ſo large, and thoſe filled with ſuch Matter; or, ſo empty, (with regard to the Denſity of the Parts themſelves) as that there happen a Number of Reflections and Refractions within the Body; the Body, in that Caſe, becomes opake. See Transparency, and Opacity.

The Rays which are not reflected from an opake Body, penetrate into it; and there, ſuffering innumerable Reflections and Refractions, at length, unite themſelves to the Particles of the Body it ſelf.

Hence, an opake Body grows hot the ſooner, as it reflects Light leſs copiouſly: Whence, we ſee why a white Body, which reflects almoſt all the Rays that ſtrike upon it, heats much more ſlowly than a black one, which reflects ſcarce any. See Heat, Blackness, &c.

To determine that Conſtitution of the Surface of Bodies wherein their *Colour* depends; it muſt be obſerv'd, that the ſmalleſt Corpuſcles, or firſt Particles whereof Surfaces are made up, are moſt thin and tranſparent; and ſeparated by a Medium of a different Denſity from the Particles themſelves. In the Surface, then, of every *colour'd* Body, are innumerable ſmaller thin Plates, correſponding to thoſe of Bubbles: wherefore, what has been obſerv'd of thoſe, may be underſtood of theſe.

Hence we gather, that the *Colour* of a Body depends on the Denſity and Thickneſs of the Parts of the Body, between the Pores of the Surface: that the *Colour* is more vivid and homogeneous, as the Parts are thinner; that *cæteris paribus*, the ſaid Parts are the thickeſt when the Body is red; and the thinneſt when violet: That the Parts of Bodies are uſually much denſer, than the Medium contain'd in their Interſtices; but that in the Tails of Peacocks, in ſome Silks, and generally, in all Bodies whoſe *Colour* varies according to the Situation of the Eye, it is leſs: and that the *Colour* of a Body is the leſs vivid to the Eye, as it has a denſer Medium within its Pores.

Now, of the ſeveral opake Bodies, thoſe conſiſting of the thinneſt *Lamellæ* are *black*; thoſe conſiſting either of the thickeſt *Lamellæ*, or of *Lamellæ* very different from each other in thickneſs, and on that account fitted to reflect all *Colours*, as the Froth of Water, &c. are *white*: Thoſe, again, conſiſting of *Lamellæ*, moſt of which are of ſome intermediate thickneſs, are *blue*, *green*, *yellow*, or *red*; inaſmuch as they reflect the Rays of that particular *Colour*, much more copiouſly than that of any other *Colour*; moſt of which laſt they either abſorb and extinguiſh, by intercepting them, or elſe tranſmit.

Hence it is, that ſome Liquors, *v. g.* an Infuſion of Lignum Nephriticum, appear red, or yellow, if view'd by reflected Light; and blue by tranſmitted Light: and gold Leaves yellow in the former Circumſtances, but green or blue in the latter.

To this may be added, that ſome of the Pouders uſed by Painters, have their *Colour* changed by being very finely ground; which muſt be occaſion'd by the Comminution or Breaking of their ſmall Parts into others ſtill ſmaller; juſt as a *Lamella* has its *Colour* alter'd, by altering its Thickneſs.

In fine, thoſe odd Phænomena ariſing from the Mixture of Liquors of different *Colours*, can no way be better accounted for, than from the various Actions of the ſaline, &c. Corpuſcles of one Liquor, with the *colour'd* Corpuſcles of another: if they unite, the Maſs will either ſwell or ſhrink, and thereby its Denſity will be alter'd; if they ferment, the Size of the Particles may be diminiſh'd, and thereby *coloured* Liquors may become tranſparent: If they coagulate, an opake Liquor may be produc'd of two tranſparent ones.

Hence, 'tis eaſy to ſee why a *colour'd* Liquid, in a Glaſs of a conical Figure, placed between the Eye and the Light, appears of a different *Colour* in different Parts of the Veſſel; there being more and more Rays intercepted, as they paſs thro' a longer or a ſhorter Section of the Veſſel: till, at the Baſe, they are all intercepted; and none ſeen but thoſe reflected.

From the various *Colours* of Natural Bodies, Sir *I. Newton* obſerves, the Bigneſs of their component Parts may be eſtimated: For that the Parts of Bodies do properly exhibit the ſame *Colour* with a *Lamella* of equal thickneſs, provided the Denſity in both be the ſame: See BODY, PARTICLE, &c.

*For the diſtinct Properties*, &c. *of the ſeveral* COLOURS. See BLACK, WHITE, BLUE, &c. ſee alſo RAINBOW, &c.

COLOUR, in Painting, is applied both to the Drugs, and to the Teints produced by thoſe Drugs, variouſly mix'd and applied.

The principal *Colours* uſed by Painters, are *red*, and *white Lead* or *Ceruſſe*; *yellow* and *red Ocres*; ſeveral Kinds of Earth, as *Umber*; *Orpiment*, *black Lead*, *Cinnabar* or *Vermillion*, *Gambouche*, *Lacca*, *blue* and *green Aſhes*, *Indigo*, *Verdegreaſe*, *burnt Ivory*, *Biſtre*, *Lampblack*, *Smalt*, *Ultramarine*, and *Carmine*; *each of which, with the manner of preparing them, their Uſes*, &c. ſee under their reſpective Heads, LEAD, CERUSSE, OCRE, &c.

Of theſe *Colours*, ſome are uſed ground in *Oil*, others only in *Freſco*, others in *Water*, and others for *Mignature*. See FRESCO, and MIGNATURE; ſee alſo PAINTING, COLOURING, &c.

*Dark, and Light* COLOURS. Under theſe two Claſſes, the Painters reduce all the *Colours* they uſe: Under *Light Colours* are comprehended *white*, and all thoſe which approach neareſt it; and under *Dark Colours*, *black*, and all thoſe which are obſcure and earthy, as *Umber*, *Biſtre*, &c.

*Simple, and Mineral* COLOURS, is another Diviſion among the Painters: Under *ſimple Colours*, they range all thoſe us'd by Limners, Illuminers, &c. extracted from Vegetables; and which will not bear the Fire: as the yellow made of Saffron, of *French* Berries, &c. Lacca, and other Tinctures extracted from Flowers. The reſt are *Mineral*, drawn from Metals, &c. and able to bear the Fire: theſe alone are us'd in Enamelling. See ENAMELLING.

*Changing and Permanent* COLOURS; another Diviſion of *Colours*: By *changeable*, are meant thoſe which depend on the Situation of Objects with regard to the Eye; as that of Taffetas, of a Pidgeon's Neck, &c. The laſt, however, being attentively view'd with a Microſcope, each Fibre of the Feathers appears compos'd of ſeveral little Squares, alternately red and green; ſo that they are fix'd *Colours*.

*Kircher* ſays, that the *changing Colours* obſerv'd in the Wings of Pidgeons, Peacocks, &c. ariſe from the Feathers being tranſparent, and of a Figure reſembling a Priſm; and conſequently the Light's being differently refracted from 'em. On the contrary, the fix'd and *permanent Colours*, are not exhibited by Refraction but Reflection.

M. *Mariotte* obſerves, that there are two different Gradations, or Series of *Colours*, from white, to black; the one white, yellow, red, and black; the other white, blue, violet, and black. See PAINTING.

COLOUR, in Dying. There are five ſimple, primary, or Mother-*Colours*, uſed by the Dyers; from the Mixture whereof all the other *Colours* are form'd: Theſe are *blue*, *red*, *yellow*, *brown*, and *black*; each of which ſee under their proper Head, BLUE, RED, &c.

Of theſe *Colours*, variouſly mix'd and combin'd, they form the following *Colours*; *panſy*, *blue*, and *red*: from the Mixture of blue and ſcarlet, are form'd *amaranth*, *violet*, and *panſy*: From the ſame Mixture of blue and crimſon-red, are form'd the *colombine* or *dove-colour*, *purple*, *crimſon*, *amaranth*, *panſy*, and *crimſon-violet*.

It may be obſerv'd, that they give the Name *Crimſon*, to all *Colours* made with Cochineal. See CRIMSON, COCHINEAL, &c.

Of blue and red Madder, they likewiſe make *purple*, *pepper-colour*, *tan-colour*, and *dry roſe*: The ſame blue, with red half in grain, makes *amaranth*, *tan-colour*, and *dry roſe*. Blue, and half red crimſon, compoſe *amaranth*, *tan-colour*, *dry roſe*, a *brown panſy*, and *ſur-brun*.

*Blue and Yellow*. Theſe two *Colours*, mix'd together, compoſe a yellow-green, ſpring-green, graſs-green, laurel-green, brown-green, dark-green; as well as ſea-green, parrot-green, and cabbage-green, &c. Theſe three laſt *Colours* are to be leſs boil'd than the firſt.

Note, with regard to *green*, there's no Ingredient or Drug in Nature that will dye it; but the Stuffs are dy'd twice, firſt in blue, then yellow.

*Blue and Brown*. Theſe two *Colours* are never mix'd alone; but with the addition of red, either of Madder or Cochineal, they form ſeveral *Colours*.

*Red and Yellow*. All the Shades compos'd of theſe two *Colours*, as gold-yellow, aurora, marigold, orange, nacarat, granat-flower, flame-*colour*, &c. are made with yellow, and red of Madder; ſcarlet being leſs proper, as well as too dear.

*Red and Brown*. Of theſe two *Colours* are form'd cinnamon-*colour*, cheſnut, muſk, bears-hair, and even purple; if the red be that of Madder.

*Yellow and Brown*. The *Colours* form'd from theſe two are all the Shades of *Feuille-morts*, and Hair-*Colours*.

It may be obſerv'd, that tho we ſay, there are no *Colours*, or Shades, made from ſuch and ſuch Mixtures: 'tis not that none can be made; but only that they are more eaſily form'd from the Mixture of other *Colours*. See DYING.

*For the Method of proving the Goodneſs, or Falſeneſs of* COLOURS, *or Dyes*; ſee DYE.

COLOUR, in Heraldry. The *Colours* generally uſed in Heraldry, are red, blue, black, green, and purple; which, by the Learned in that Science are called *Gules*, *Azure*, *Sable*, *Vert* or *Sinople*, and *Purpure*. *Tenne*, or tawny, and *Sanguin*, are not ſo common. See each *Colour* under its proper Article GULES, AZURE, VERT, &c.

As to yellow and white, call'd *Or* and *Argent*; they are Metals, not *Colours*. See OR, and ARGENT.

Theſe *Colours* and Metals are ſometimes alſo expreſs'd in blazon by the Names of precious Stones; and ſometimes by thoſe of Planets, or Stars. Thus, Or is call'd *Sol*, and *Topaz*; Argent, *Luna*, and *Pearl*; Gules, *Mars*, and *Ruby*; Azure, *Jupiter*, and *Saphir*; Sable, *Saturn*, and *Diamond*; Vert, *Venus*, and *Emerald*; Purpure, *Mercury*, and *Amethiſt*; Tenne, the *Dragon's-Head*, and *Hyacinth*; and *Sanguin*, the *Dragon's-Tail*, and *Sardonix*. See SABLE, SOL, ARGENT, &c.

It is a general and fundamental Rule in Blazon, not to place *Colour* upon *Colour*, nor Metal upon Metal. That is, if the Field be of a *Colour*, the Bearing muſt be of a Metal: tho this Rule, on ſome Occaſions, and in ſome Circumſtances, is diſpens'd withal; as in the Diminutions and Differences which diſtinguiſh the younger from the elder Families; and in the Extremities of Animals Tongues, Claws, Horns, &c. In which Caſes, *Colour* may be on *Colour*, and Metal on Metal, without falſe Heraldry.

*Onomaus* is ſaid to have firſt invented the Diſtinction of *Colours*, to diſtinguiſh the *Quadrillæ* of Combatants at the *Circenſian* Games: the green for thoſe who repreſented the Earth; and the blue for thoſe who repreſented the Sea. See FACTION.

Hence, the antient Cavaliers took occaſion to diſtinguiſh themſelves in their Tournaments, by Habits, Plumes, and Ribbands of different *Colours*; which were ordinarily thoſe of their Miſtreſſes, and were the Symbol of ſome Paſſion, or Quality.

Hence alſo the Origin of *Colours* in Liveries. See LIVERY.

COLOURS, in the Military Art, include the Banners, Flags, Enſigns, &c. of all Kinds, bore in an Army, a Fleet, or the like. See BANNER, FLAG, STANDARD, &c.

COLOURS, are alſo uſed both in the *Latin* and *Greek* Churches, to diſtinguiſh ſeveral Myſteries and Feaſts celebrated therein.

In the *Latin* Church are only regularly admitted five *Colours*, viz. *white*, *red*, *green*, *violet*, and *black*; the *white* for the Myſteries of our Saviour, the Feaſts of the Virgin, thoſe of the Angels, Saints, and Confeſſors; the *red* for the Myſteries and Solemnities of the Holy Sacrament, the Feaſts of the Apoſtles and Martyrs; *green* for the Time between Pentecoſt and Advent, and from Epiphany to Septuageſima; *violet* in Advent, Chriſtmas, in Vigils, Rogations, and in votive Maſſes in time of War: Laſtly, *black* for the Dead, and the Ceremonies thereto belonging. Clothes of Gold and Silver, and Embroideries, ſerv'd indifferently for all Solemnities.

In the *Greek* Church, the uſe of *Colours* is almoſt obliterated, as well as among us: *Red*, among them, was the *Colour* for Chriſtmas and the Dead; as *black* is ſtill in the laſt among us. See MOURNING.

COLOUR, in Law, is a probable, or plauſible Plea; tho in reality falſe at bottom; and only calculated to draw the Trial of the Cauſe from the Jury to the Judge.

Thus, *v. g.* in an Action of Treſpaſs for taking away the Plaintiff's Beaſts, the Defendant urges, That before the Plaintiff had any thing in them, he himſelf was poſſeſs'd of 'em, as his proper Goods; and deliver'd them to *A. B.* to deliver to him again, when &c. and *A. B.* gave them to the

Plaintiff: and the Plaintiff, ſuppoſing the Property to be in *A. B.* at the Time of the Gift, took them; and the Defendant took 'em again from the Plaintiff; whereupon the Plaintiff brings his Action. This is a good *Colour*, and even a good Plea. See *Doct. and Stud.*

COLOUR *of Office*, is when ſome unjuſt Action is done, under countenance of Office, or Authority.

*To Colour Strangers Goods*, is when a Freeman allows a Foreigner to enter Goods at the Cuſtom-houſe in his Name.

COLOURING, in Painting, the manner of applying, and conducting the *Colours* of a Picture: Or, it is the Mixture of Lights and Shadows, form'd by the various *Colours*, employ'd in a Painting. See CLAIR-OBSCURE.

The *Colouring* is one of the principal Branches of Painting. M. *Felibien* divides the Painter's Art into three Parts; the Deſign, the Compoſition, and the *Colouring*. The *Colouring* ſtrikes the moſt; but among Maſters it always gives place to the Exactneſs of the Deſign. See PAINTING.

*De Piles* obſerves, that the Word *Colouring*, in its confined Senſe, is chiefly applicable to a Hiſtory-piece; ſcarce at all to a Landſkip. He adds, that the Term *Colouring* relates more immediately to the Carnations than any thing elſe.

The *Colouring*, in its general Senſe, takes in what relates to the Nature and Union of *Colours*; their Agreement, or Antipathy; how to uſe them to advantage in Light and Shadow, ſo as to ſhew a Relievo in the Figures, and a ſinking of the Ground: What relates to the aerial Perſpective, *i. e.* the Diminution of *Colours*, by means of the Interpoſition of Air; the various Accidents and Circumſtances of the Luminary and the Medium; the different Lights, both of the Bodies illuminating and illuminated; their Reflections, Shadows, different Views, with regard either to the Poſition of the Eye, or the Object: What produces the Strength, Fierceneſs, Sweetneſs, *&c.* in Paintings well *colour'd*: The various Manners of *colouring*, both in Figures, Landſkips. *&c.*

*The Doctrine of* COLOURING *is compriſed under the following Rules.*

*Colours* are conſider'd, either in reſpect of their Uſe, or their Oeconomy and Diſpoſition.

1ſt, With regard to their *Uſe*. They are either in Oil, or Water: Thoſe in Oil, again, are either conſider'd with a View to their Preparation, or Application.

*In the Preparation of Oil Colours*, care muſt be taken that they be ground fine; that in putting them on the Pallet, thoſe which won't dry of themſelves, be mix'd with Oil, or other Dryers; and that the ting'd *Colours* be mix'd in as ſmall Quantities as poſſible.

For their *Application*, it is conſider'd either with regard to the Kinds of Painting in Works of various *Colours*, or in thoſe of one ſingle *Colour*.

For the *firſt*: in the larger Pieces, the *Colours* are either laid on full, ſo as they may be *impaſted*, or incorporated together, which makes them hold the more firmly.

Or elſe we mix thoſe more agreeable ones, which dry too hard, and too haſtily, with a little *Colour*, and the cleareſt of the Oil: But, in both Caſes, the *Colours* are to be laid on ſtrong at firſt; it being eaſy to weaken thoſe that are to be thruſt back, and to heighten the others: The Touches to be bold, by the Conduct of a free and ſteady Pencil; that the Work may appear the moſt finiſh'd at a proper diſtance, and the Figures animated with Life and Spirit.

*For glazed Colours*, care muſt be taken that the Under-*Colour* be painted ſtrong, and that it be a Body-*Colour*, and laid ſmooth.

In finiſh'd Works, which are to be view'd near at hand, they proceed, either by applying each *Colour* in its place; preſerving their Purity, without fretting or tormenting them, but ſweetly ſoftening off their Extremities: Or by filling up all the great Parts with one ſingle *Colour*; and laying the other *Colours*, which are to form the little Things, upon it: which is the more expeditious way, but more apt to decay.

For the *ſecond*: the Kinds of Pictures in one *Colour* are two, *viz. Camieux*, where the Degradations of *Colours* of Objects afar off, are uſually manag'd by Lights, as with Crayons; and *Baſſo-Relievo*, which is an Imitation of Sculpture, of whatſoever Matter and Colour: in both theſe, the *Colours* are wrought dry. See CAMIEUX, *&c.*

*For Water-Colours*, they are wrought various ways; *viz.* in *Diſtemper*, where the *Colours* are prepar'd in Size; which Method is uſed on all kinds of Matter: in *Freſco*, or Painting on freſh Mortar; where the *Colouring* muſt be quick, that the Matter dry not; and with much Care and Neatneſs, laying each Colour in its place, and intermingling them by Parcels: In *Agouache*, where the *Colours* are mix'd with Gum, and the Pencil dragg'd; as in Paint and Waſhings: In *Miniature*, for ſmall and delicate Works; where the *Colours* are to be very fine and clean, mix'd with Gums and wrought in Dots or Points. See DISTEMPER, MINIATURE, *&c.*

But in all the Kinds of Painting, both in Oil and Diſtemper, eſpecially the latter, care muſt be taken that the Deſign be fix'd, and all the Parts mark'd out, ere any *Colours* be applied.

For the 2d Part of *Colouring*, or the *Oeconomy* and diſpenſing thereof in Paintings; regard is either had, firſt, to the Qualities of the *Colours*, to appropriate them according to their Value and Agreement: or, ſecondly, to their Effect, in the Union and Oeconomy of the Work.

For the firſt, it muſt be obſerv'd, that *white* repreſents Light, and gives the briſkneſs and heightening; *black*, on the contrary, like Darkneſs, obſcures and effaces the Objects: again, black ſets off the light Parts; and by that they ſerve each other to looſen the Objects. A proper Choice to be made of *Colours*, and the too much charg'd manner to be avoided; both in *Carnations*, where red *Colours* are not to be affected, as rather reſembling the Fleſh when ſlead than the Skin; and all bright glowing *Colours*: the Skin, how delicate ſoever, being always of a Down-*Colour*. In the *Drapery*, where the Painter has his whole ſtock of *Colours* to chuſe out of, to procure a good effect; and in the *Landskip*, to diſpoſe thoſe *Colours* near one another, which mutually aſſiſt and raiſe each other's Force and Briſkneſs; as red and green, yellow and blue.

To manage 'em ſo, as that they be accommodated to the Effects of the great Parts of Light and Colour: that the ſtrong *Colours* lead to the ſoft ones, and make 'em more look'd at; bringing 'em forwards, or keeping 'em back, according to the Situation, and the degree of Force requir'd.

For the *Effects* of *Colours*, they either regard the Union, or the Oeconomy: With reſpect to the firſt, care muſt be taken that they be laid ſo as to be ſweetly united, under the briſkneſs of ſome principal one; that they participate of the prevailing Light of the Piece; and that they partake of each other by the communication of Light, and the help of Reflection.

For the Oeconomy in managing their degrees, regard is to be had to the *Contraſt*, or Oppoſition intervening in the Union of the *Colours*; that by a ſweet Interruption, the briſkneſs, which otherwiſe fades and palls, may be rais'd to the Harmony which makes the Variety of *Colours* agree; ſupplying and ſuſtaining the Weakneſs of ſome by the Strength of others; neglecting ſome Places, on purpoſe to ſerve as a Baſis or Repoſe to the Sight, and to enhance thoſe which are to prevail thro' the Piece: To the *Degradation*; where, the better to proportion the *Colours* that fall behind, ſome of the ſame Kind are to be preſerv'd in their purity, as a Standard, for thoſe carried afar off to be compar'd by, in order to juſtify the Diminution: regard being always had to the quality of the Air, which, when loaded with Vapours, weakens the *Colours* more than when clear: To the *Situation* of the *Colours*; where care muſt be taken, that the pureſt and the ſtrongeſt be placed before, or in the Front of the Piece; and that by their force, the compound ones, which are to appear at a diſtance, be kept back; particularly, the glazed *Colours* to be uſed in the firſt Rank: Laſtly, to the *Expreſſion* of the Subject, and the Nature of the Matters, or Stuffs; whether ſhining or dull, opake or tranſparent, poliſh'd or rough. See CARNATION, CONTRAST, DEGRADATION, *&c.*

COLOURING *and Non*-COLOURING *Drugs*: Thus the Dyers diſtinguiſh their Drugs: the *firſt* are applicative, and communicate their *Colours* to the Matters boil'd in them, or paſs'd thro' them; as Woods, ſcarlet Grain, Cochineal, Indigo, Madder, Turmeric, *&c.* The *ſecond* ſerve to prepare and diſpoſe the Stuffs, and other Matters; and to extract the Colour out of the *colouring* Ingredients; as Allum, Salt or Cryſtal of Tartar, Arſenic, Realgal, Salt-Petre, common Salt, Sal Armoniac, Sal Gemmæ, Agaric, Spirit of Wine, Bran, Peaſe-flour, Wheat, Starch, Lime, and Aſhes.

COLUMBINE, a kind of Violet-colour, call'd alſo *Dove-colour*. See COLOUR.

S. COLUMBUS, a Congregation of Regular Canons, formerly of great Extent in *Ireland*; having under it an hundred Abbies, or Monaſteries, in the *Britiſh* Iſlands. See CONGREGATION, and CANON.

The principal Monaſtery, or Chief of the Order, according to ſome, was at *Armagh*; according to others, at *Londonderry*: others will have it in the Iſland of *Ha*, or *Hi*, or *Iona*, now called *Ycolmkil*, to the North of *Ireland*, not far from *Scotland*.

There is a Rule in *Iriſh* Verſe, ſuppoſed to have been dictated by S. *Columbus* to his Canons.

COLUMN, in Architecture, a round Pillar, made to ſupport or adorn a Building. See PILLAR, BUILDING, *&c.*

The *Column* is the principal, or reigning Part of an Order. See ORDER.

The principal Laws and Properties of this eminent Member of Architecture are thus deduc'd:

Every *Fulcrum*, or Support, is ſo much the more perfect as it is the firmer, or carries the greater appearance of firmneſs: and hence all *Columns*, or Pillars, ought to have their Baſe, or Foot, broader than themſelves. See BASE.

Again,

Again, as a Cylinder and a quadrangular Prism are more eaſily remov'd out of their place than a truncated Cone, or Pyramid, on the ſame Baſe, and of the ſame Altitude: The Figure of *Columns* ought not to be cylindrical; nor, that of a Pilaſter, pyramidical; but both the one and the other to be contracted or diminiſh'd, *i. e.* to grow leſs and leſs, like a truncated Cone and a truncated Pyramid. See DIMINUTION.

For the ſame Reaſons, the loweſt Parts of the *Columns* to be cylindrical, that of Pilaſters pyramidical: Hence, again, as *Columns* are more firm, if their Diameter bears a greater proportion to their Height, than if it bore a leſs: The greater Ratio is to be choſen, where a large weight is to be ſuſtain'd; and leſs where a leſs.

Further, as the Deſign of a *Column* is to ſupport a weight, it muſt never be ſuppoſed without an Entablature: tho a *Column* rais'd on an eminent Place, ſo as to leave no room to fear its being thruſt out of its place, needs no Pedeſtal. See ENTABLATURE, and PEDESTAL.

The entire *Column*, in each Order, is compos'd of three principal Parts, the *Baſe*, the *Shaft*, and the *Capital*. See the Proportions of each under its reſpective Head, BASE, SHAFT, *&c.*

Each of theſe Parts, again, is ſubdivided into a great Number of leſſer, called *Members*, or *Mouldings*: ſome whereof are eſſential, and found in all *Columns*; others are only accidental, and found in particular Orders. See MOULDING, ORNAMENT, *&c.*

*Columns* are made different, according to the ſeveral *Orders* they are uſed in; and likewiſe, not only with regard to their *Order*, but alſo to the *Matter*, *Conſtruction*, *Form Diſpoſition* and *Uſe*.

COLUMNS, *With regard to* Order.

*Tuſcan* COLUMN, is the ſhorteſt, and moſt ſimple of all the *Columns*. See TUSCAN.

Its height, according to *Vitruvius*, *Palladio*, and *Vignola*, is 7 Diameters, or 14 Modules; according to *Scamozzi*, 15 Modules; to *De Lorme*, 12; to *Trajan's Column*, 16. Its Diminution, according to *Vitruvius*, is one fourth of the Diameter; according to *Vignola*, a fifth; and according to *Trajan's Column*, a ninth.

Its ſeveral Parts, Mouldings, *&c.* ſee under their proper Heads, SHAFT, CAPITAL, *&c.* See it repreſented in Plate *Architecture*, Fig. 6.

*Doric* COLUMN, is ſomewhat more delicate. See DORIC.

Its Shaft is adorn'd with Flutings: its Height, according to *Vitruvius*, is from 14 to 15 Modules; to *Scamozzi*, 17; to *Vignola*, 16; in the *Coliſeum*, 19; in the *Theatre of Marcellus*, $15\frac{2}{3}$. Its Diminution, according to the Theatre of *Marcellus*, 12 Minutes; to the *Coliſeum*, 4 Min. and a half. See Plate *Architecture*, Fig. 7.

*Ionic* COLUMN, is more delicate ſtill. See IONIC.

It is diſtinguiſh'd from the reſt by the Volutes in its Capital; and by its Baſe. See VOLUTE.

Its Height, according to *Palladio*, is 17 Modules $\frac{1}{3}$; according to *Vignola*, 18. Its Diminution, in the Temple of *Concord*, $10\frac{1}{2}$; of *Fortuna Virilis*, $7\frac{1}{2}$; *Coliſeum*, 10 Min. See Plate *Architecture*, Fig. 8.

*Corinthian* COLUMN, is the richeſt and moſt delicate of all the *Columns*. See CORINTHIAN.

Its Capital is adorn'd with two rows of Leaves, and with Caulicoles; whence ſpring out little Volutes. Its Height, according to *Vitruvius*, and many Remains of antique Porticos, Temples, *&c.* is 19 Modules; according to *Serlio*, 18; to the *Coliſeum*, 17.17; to the three *Columns* in the *Campo Vaccino*, 20; the Baſiliſk of *Antoninus*, 20. Its Diminution, according to the Temple of *Peace*, $6\frac{1}{2}$ Minutes; the Pantheon, $6\frac{1}{8}$; Temples of *Sibyl* and *Fauſtina*, 8; *Conſtantine*'s Arch, 7; Portico of *Septimius*, $7\frac{1}{2}$. See Plate *Architecture*, Fig. 9.

*Compoſite* COLUMN, has two rows of Leaves in its Capital, like the *Corinthian*; and angular Volutes, like the *Ionic*. See COMPOSITE.

Its Height, according to *Vignola*, and the Arch of *Titus*, is 20 Modules; to *Scamozzi*, and the Temple of *Bacchus*, $19\frac{1}{2}$; the Arch of *Septimius*, 19.09. Its Diminution, according to *Titus*'s and *Septimius* Arch, 7 Minutes; Baths of *Diocletian*, 11 Min. $\frac{1}{3}$; Temple of *Bacchus*, $6\frac{1}{2}$. See Plate *Architecture*, Fig. 10.

It may be here obſerv'd, that there ſeems more of Caprice than Reaſon in that Diverſity found in the Heights of *Columns* of the ſame Order, in different Authors; each of whom frequently takes the liberty of diſpenſing with his own Rules.

*Vitruvius*, for Inſtance, makes the *Doric Columns* of Temples, ſhorter than thoſe of Porches behind Theaters; *Palladio* gives a greater height to *Columns* ſtanding on Pedeſtals, than to thoſe which have none; and *Serlio* makes his *Column* a third ſhorter, when inſulate, or detach'd, than when contiguous to the Wall.

But notwithſtanding the diverſity of Height in *Columns* of the ſame Order in different Authors; they ſtill bear a true Proportion in the ſeveral Orders compar'd with each other; by which they go increaſing, as the Orders are leſs maſſive.

But this Augmentation is greater in ſome Ordonnances than in others; for in the Antique it is but of 5 Modules, or Semidiameters, for the five Orders: the ſhorteſt *Column*, *viz.* the *Tuſcan*, being 15 Modules; and the longeſt, the *Compoſite*, 20. In *Vitruvius*, this Increaſe is alſo of 5 Modules; but commences from 14 Modules, and ends at 19. The Moderns uſually make it greater: *Scamozzi* makes it 5 Modules and a half; *Palladio* and *Serlio*, 6.

From the ſeveral Proportions of *Columns* aſſign'd by ſeveral Authors, M. *Perrault* has drawn a new one; which is a Mean, between the Extremes of the reſt. Thus, he makes the *Tuſcan Column* 14 Modules $\frac{2}{3}$; which is a Mean between the *Tuſcan* of *Vitruvius*, 14, and that of *Trajan's Columns*, 18: The height of the *Doric Column* he makes 16 Modules; which is a Mean between the 14 of *Vitruvius*, and the 19 of the *Coliſeum*: The *Ionic* he makes 17 Modules $\frac{2}{3}$; which is a Mean between the 16 of *Serlio*, and the 19 of the *Coliſeum*: The *Corinthian Column* he makes 18 Modules $\frac{2}{3}$; as being a Medium between the 16 Modules 6 Minutes of the Temple of the *Sibyl*, and the 20 Modules 6 Minutes of the three *Columns* of the *Roman Forum*: Laſtly, the *Compoſite Column*, by the ſame Rule, he makes 20 Modules; that height being a Mean between the Arch of *Titus*, and the Temple of *Bacchus*.

Indeed, the Rule he proceeds by ſeems very reaſonable; *viz.* that the progreſſional Advance of each *Column* in the different Orders be equal: ſo that having ſettled the whole Progreſſion, from the *Tuſcan* to the *Compoſite*, at 5 Modules 10 Minutes; this being a Mean between the 5 Modules of the Antique, and the $5\frac{1}{2}$ of the Moderns; he divides this Sum, which is 160 Minutes, into four equal Parts, giving 40 Minutes to the Progreſſion of each Order: This makes the *Tuſcan Column* 14 Modules 20 Minutes; the *Doric* becomes 16, the *Ionic* 17, 10 Min. the *Corinthian* 18, 20 Min. and the *Compoſite* 20 Modules. See PROPORTION.

*For the diſtinguiſhing Characters of each Order of* Columns; ſee ORDER.

*For the Matter*; ſee STONE, MARBLE, *&c.*

*For the Uſe and Application*; ſee BUILDING.

*For the ranging of* COLUMNS, *and the Spaces to be obſerv'd between each*; See INTERCOLUMNATION.

COLUMNS, *with regard to their different* Matter.

*Water*-COLUMN, is a *Column* whoſe Shaft is form'd of a large *Jet d'Eau*; which ſpouting out Water violently from the Baſe, drives it within the Tambour of the Capital, which is made hollow; whence falling down again, it has the Effect of a liquid cryſtal *Column*. See FOUNTAIN.

An Inſtance of this we have at *Quinta d'Aveiro* near *Lisbon*.

*Fuſible* COLUMN. Under this Term are comprehended, not only *Columns* of various Metals, and other fuſible Matters, as Glaſs, *&c.* but alſo thoſe of Stone, ſaid to have been caſt; the Secret of which, ſome will have us believe to have been known to the Antients.

*Tranſparent* COLUMN, any *Column* made of tranſparent Matter; as were thoſe of Cryſtal in the Theater of *Scaurus*, mention'd by *Pliny*; and thoſe of tranſparent Alabaſter, in the Church of St. *Mark*, at *Venice*.

*Hydraulic* COLUMN, is that whoſe Shaft appears to be of Cryſtal, being form'd by a number of little Threads of Water, falling from Holes made in Girts of Metal, at equal diſtances, by means of a Pipe mounting thro' the middle thereof; as in the Gardens at *Verſailles*.

*Hydraulic* COLUMN, is alſo a *Column* from whoſe top proceeds a *Jet d'Eau*, to which the Capital ſerves as a Baſon; whence the Water deſcends by a little Pipe, which turns ſpirally around the Shaft.

Such are the *Ionic Columns* of the Caſcade of the *Belvidera* at *Freſcati*; and thoſe of the Vineyard *Mathei* at *Rome*.

*Molded* COLUMN, is that made by Impaſtation, of Gravel and Flints of divers Colours, bound together with a Cement, which grows perfectly hard, and receives a poliſh like Marble.

The Secret of making theſe, it appears the Antients were Maſters of, by the *Columns* lately diſcover'd near *Algiers*; which are doubtleſs the Ruins of the antient *Julia Cæſarea*: on theſe are found the very ſame Inſcription in antique Characters, the Contours, Accents, and even Faults, being repeated in every Shaft: an inconteſtable Proof of their being molded.

COLUMNS *with regard to their* Conſtruction.

COLUMN *of Joinery*, is made of ſtrong timber boards, join'd, glu'd, and pinn'd together; is hollow, turn'd in the Lath, and uſually fluted. Such are the *Columns* in moſt Altar-pieces.

*Incruſtated* COLUMN, is made of ſeveral Ribs, or thin Shells of fine Marble, or other rare Stone, cemented upon a Mold of Stone, Brick, or the like. This is done with deſign both to ſave the precious Matter, as Oriental Jaſper, Lapis, Agat, *&c.* or to repreſent pieces of ſuch Matters of an extraordinary ſize, by the neatneſs and cloſeneſs of the Incruſtation, which renders the Joints imperceptible.

*Gemi-*

*Geminated* COLUMN, that whoſe Shaft is form'd of three ſimilar and equal Sides, or Ribs of Stone, fitted within one another; and faſten'd at bottom with Iron Pins, and a-top with Cramp-Irons. This is to be fluted, that the Joints may be the leſs diſcernible.

COLUMN *of Maſonry*, is made of rough Stone, well laid and cover'd with Plaiſter; or of Bricks molded triangular-wiſe, and cover'd with Stuc.

COLUMN *with Bands, or Tambours*; that whoſe Shaft is form'd of ſeveral Courſes of Stone, or Blocks of Marble; leſs high than the Diameter of the *Column*: This is what *Ulpian* means by *Columna ſtructilis*, or *adpacta*; which is oppoſite to the *Columna ſolida*, or *integra*, *i.e.* of one piece.

COLUMN *in Truncheons*, or *Pieces* conſiſts of three, four, or five pieces of Stone, or Metal; differing from the Tambours, as being higher than the Diameter of the *Column*.

COLUMNS, *with regard to their* Form.

*Fluted* COLUMN, called alſo *channell'd*, and *ſtriated Column*; that whoſe Shaft is adorn'd with Flutes, or Channelings; either from top to bottom, or only two thirds of its height. See FLUTING.

*Cabled*, or *Rudented* COLUMN, is a *Column* having Projectures in form of Cables, or Canes, in the Naked of the Shaft; each Cable having an Effect oppoſite to that of a Fluting; and accompany'd with a little Liſt on each ſide. See CABLING.

*Fluted and Cabled* COLUMN, is that whoſe Flutes are fill'd up with Cables, Reeds, or Staves; beginning from the bottom of the Shaft, and reaching one third of its height.

*Fluted* COLUMN *enrich'd*, is that whoſe Flutings are fill'd up with Ornaments of Foliages, Rinds, Ribbons, *&c.* inſtead of Cables.

*Twiſted* COLUMN, is that whoſe Shaft is twiſted round, in manner of a Screw, with ſix Circumvolutions; being, ordinarily of the *Corinthian* Order: *Vignola* firſt found a Method of drawing it by Rule.

*A twiſted fluted* COLUMN, is that whoſe Flutes follow the Contour of the Shaft, in a ſpiral Line throughout the whole length; whereof there are ſome antique ones of Porphyry, and hard Marble.

COLUMN *twiſted and enrich'd*, is that, one third of whoſe Shaft is fluted, and the reſt adorn'd with Branches and other Enrichments: and which being all of Marble, is enrich'd with Sculpture from bottom to top.

Sometimes, again, the *twiſted Column* is form'd of two or three ſlender Shafts, twiſted round, ſo as to leave a Cavity in the middle. Sometimes the Flutings are Spiral, yet the Shaft ſtrait; which ſucceeds very well in the more delicate Orders.

*Coloſſal* COLUMN, a *Column* of enormous ſize, too large to enter any Ordonnance of Architecture; to be placed ſolitary, in the middle of a Square, *&c.* See COLOSSUS.

Such is the *Trajan Column*, whoſe Proportions are *Doric*, and its Profile *Tuſcan*; 12 Feet and $\frac{3}{8}$ in Diameter, and 100 in Height, including the Baſe and the Capital: The Pedeſtal has 18 Feet, and the Crowning 16 and an half. It ſupports a brazen Statue of St. *Peter*, 13 Foot high: The whole making 147 antient *Roman* Feet.

It was built by *Apollodorus*; and conſiſts of 34 Tambours, or Blocks, or Pieces of white Marble, taking in the Crowning.

The *Antonine Column*, which is alſo of white Marble, is inferior to the *Trajan* in beauty of Sculpture, but exceeds it in height; being 168 Feet to the Capital, beſides the Feet of the Pedeſtal under ground.

Laſtly, the *London Column*, or Monument, is of Stone, 15 Foot in Diameter, and 202 high; taking in the Pedeſtal and Crowning. See MONUMENT.

*Carolitic* COLUMN, that adorn'd with Foliages, or Leaves and Branches turn'd ſpirally around the Shaft; or in Crowns and Feſtoons.

Theſe were uſed by the Antients for raiſing Statues on; which hence took the Denomination of *Carolitic*.

They are very ſuitable in triumphal Arches, and Decorations of Theaters.

*Swell'd* COLUMNS, are thoſe which have a buldging, or ſwelling, in proportion to the height of the Shaft.

Authors are much divided on the Subject of this *Swelling*; Sir *H. Wotton* treats it as a moſt ridiculous Abuſe: yet the Practice obtains among the modern Architects; who generally make their *Columns* a little bigger at one third of their height, than at the Baſe; *i. e.* they diminiſh the *Column* near the Baſe; which makes the Part appear big, and occaſions a Swelling at about one third of the height.

This Swelling appears to have been unknown to the Antients. M. *le Clerc* obſerves, it ought not to exceed one Minute and a half at moſt. He thinks it ought never to be us'd, excepting where there is a particular occaſion for it; as where *Columns* are to be placed over one another.

*Diminiſh'd* COLUMN, is that which has no ſwelling, but begins to taper, or diminiſh, from the Baſe; in imitation of Trees. See DIMINUTION.

Such are moſt of the Antique *Columns* of *Granate*; particularly the *Corinthian* ones in the Porch of the Pantheon.

*Gothic* COLUMN, a round Pillar, either too ſhort for its bulk, or too ſlender for its height; as having, ſometimes, 20 Diameters; and this without either Diminution, or Swelling: yet, its Ornaments, and the Characters of its work, being as far from thoſe of the Antique as its Proportions. See GOTHIC.

*Hermetic* COLUMN, a kind of Pilaſter, in manner of a Terminus; having the Head of a Man, in lieu of a Capital. It had its Name from a Cuſtom among the Antients, of placing *Mercury*'s Head, whom the *Greeks* call *Hermes*, a-top of *Columns*. See HERMES.

*Maſſive* COLUMNS, are thoſe too ſhort for the Order whoſe Capital they bear; as the Pillars in *Gothic* Churches uſually are. See MASSIVE.

Under the Term *Maſſive*, are, likewiſe, frequently comprehended *Ruſtic* and *Tuſcan Columns*. See RUSTIC.

*Cylindrical* COLUMN, is that which has neither Swelling nor Diminution.

*Oval* COLUMN, that whoſe Shaft has a Flatneſs; its Plan being made oval, to reduce the Projecture.

*Polygonous* COLUMN, has ſeveral Sides, or Faces: The moſt Regular of theſe have eight Faces.

Theſe three laſt, *Daviler* regards as Abuſes in Architecture.

*Paſtoral* COLUMN, that whoſe Shaft is form'd in imitation of the Trunk of a Tree, with Bark and Knots.

This Kind of *Column*, in the *Tuſcan* Proportion, may be uſed in the Gates of Parks and Gardens; in the Decoration of Paſtoral Scenes, *&c.*

*Serpentine* COLUMN, a *Column* form'd of three Serpents, twiſted together; the Heads whereof ſerve as a Capital.

An Inſtance of this is at *Conſtantinople*, in the Square called *Atmeidan*, antiently the *Hippodrome*. *P. Gilles* calls this the *Delphic Column*; as imagining it antiently ſerv'd for the Tripod of *Apollo*, in the Temple at *Delphos*. It is now ordinarily called the *Taliſman*, or *Enchanted Column*.

COLUMNS, *with regard to their* Diſpoſition.

*Inſulated* COLUMN, is that ſtanding free, and detach'd, on all Sides, from any other Body.

COLUMN *inſerted*, or *back'd*, is that attach'd to a Wall, by a third or fourth Part of its Diameter.

COLUMN *Nich'd*, is that whoſe Shaft enters, with half its Diameter, into a Wall, which is hollowed for its Recepion; with its Plan parallel to the Projecture of the Tore.

Such is that in the Portal of St. *Peter* at *Rome*.

*Angular* COLUMN, is an inſulated *Column*, placed in the Coin, or Corner of a Portico; or inſerted into the Corner of a Building: Or, even a *Column* that flanks an Angle, either acute or obtuſe, of a Figure of many Sides.

*Attic* COLUMN, according to *Pliny*, is a Pilaſter inſulated; having four equal Faces, or Sides; and of the higheſt Proportion, *v. g. Corinthian*.

*Flank'd* COLUMN, according to M. *Blondel*, is a *Column* engag'd with one half, or at leaſt, one third of its Diameter, between two Demi-Pilaſters.

*Doubled* COLUMN, is an Aſſemblage of two *Columns*; join'd in ſuch a manner, as that the two Shafts penetrate each other with a third of their Diameter. Such are thoſe of the four Angles in the Court of the *Louvre*.

*Coupled* COLUMNS, are thoſe diſpoſed by two and two; ſo as almoſt to touch each other at their Baſes, and Capitals.

*Canton'd* COLUMNS, thoſe engag'd in the four Corners of a ſquare Pillar, to ſupport four Springs of an Arch.

*Grouped* COLUMNS, thoſe placed on the ſame Pedeſtal, or Socle; either by three and three, or by four and four.

*Median* COLUMNS. *Vitruvius* gives the Name *Columnæ Medianæ*, to the two *Columns* in the middle of a Porch, which have their Intercolumniation larger than the reſt: So that if theſe laſt, for inſtance, be *Pycnoſtyles*; the *Medianes* are *Euſtyle*.

The Term may alſo be applied to the middle Row of *Columns*, in a Frontiſpiece adorn'd with three Orders.

COLUMNS, *with regard to their* Uſe.

*Aſtronomical* COLUMN, is a kind of Obſervatory, in form of a very high Tower; built hollow, and with a ſpiral Aſcent to an Armillary Sphere; placed a-top, for obſerving the Courſes of the heavenly Bodies.

Such is that, of the *Doric* Order, erected at the *Hotel de Soiſſons* at *Paris*, by *Catherine de Medicis*, for the Obſervations of *Orontius Fineus*, a celebrated Aſtronomer of that Time.

*Chronological* COLUMN, that which bears ſome hiſtorical Inſcription, digeſted according to the Order of Time: as by Luſtra, Olympiads, Faſti, Epochas, Annals, *&c.*

At *Athens* there were *Columns* of this kind, whereon were inſcrib'd the whole Hiſtory of *Greece*, digeſted into Olympiads.

*Hollow* COLUMN, that which has a ſpiral Stair-caſe within-ſide, for the Convenience of aſcending to the top: As the *Trajan Column*, the Stair-caſe whereof conſiſts of 185 Steps, and is illumin'd by 43 little Windows: The *Antonine Column*,

*lumn* has 198 Steps, with 56 Windows; each of these is cut in Tambours of white Marble. The *Monument*, or *Fire-Column* at *London*, has also a Stair-case; but it does not reach to the top.

These kind of *Columns* are called also *Columnæ Cochlides*, or *Cochlidea*, *q. d.* a Stair-case in form of a Snail.

*Funeral* COLUMN, that which bears an Urn, wherein are supposed to be inclos'd the Ashes of some deceas'd Hero; and whose Shaft is sometimes overspread with Tears, or Flames; which are Symbols of Sorrow, and of Immortality.

*Gnomonic* COLUMN, a Cylinder, whereon the Hour of the Day is represented by the Shadow of a Style.

Of these there are two Kinds: in the one, the Style is fix'd, and the Hour-Lines are no more than the Projection of a vertical Dial, on a cylindrical Surface.

In the other, the Style is movable; and the Hour-Lines are drawn to the different Heights of the Sun, in the different Seasons of the Year.

*Historical* COLUMN, is that whose Shaft is adorn'd with a Basso-Relievo, running in a spiral Line its whole length; and containing the History of some great Personage.

Such are the *Trajan* and *Antonine Columns*, at *Rome*.

*Historical Columns* may likewise be divided by Bands, or Tambours, into separate Basso-Relievos, containing distinct Subjects; by which means, the same *Columns* may likewise be made to answer the End of Chronological ones.

This Manner *Vignola* prefers to the former; which, he thinks, appears too much confused.

*Indicative* COLUMN, that which serves to shew the Tides, *&c.* along the Sea-Coasts. Of this kind, there is one at *Grand Cairo*, of Marble, whereon the Overflowings of the *Nile* are express'd: By this they form a Judgment of the succeeding Season: when the Water, for instance, ascends to 23 Foot, 'tis a Sign of great Fertility in *Egypt*. See NILOMETER.

*Instructive* COLUMN, that rais'd, according to *Josephus*, Lib. I. cap. 3. by the Sons of *Adam*, whereon were engraven the Principles of Arts and Sciences.

*Baudelot* tells us, that the Son of *Pisistratus* rais'd another of this kind, of Stone; containing the Rules and Precepts of Agriculture.

*Itinerary* COLUMN, a *Column* with several Faces, placed in the Cross-ways in large Roads; serving to shew the different Routs, by the Inscriptions thereupon.

*Lactary* COLUMN, at *Rome*, according to *Festus*, was a *Column* erected in the Herb-Market, now the *Platea Montanara*; which had a Cavity in its Pedestal, wherein young Children, abandon'd by their Parents, out of Poverty or Inhumanity, were exposed, to be brought up at the publick Expence.

*Legal* COLUMN. Among the *Lacedemonians*, there were *Columns* rais'd in publick Places, whereon were engraven the fundamental Laws of the State.

*Limitrophous*, or *Boundary* COLUMN, that which shews the Limits of a Kingdom, or Country conquer'd. Such was that, which, *Pliny* says, *Alexander* the Great erected at the Extremities of the *Indies*.

As to those of *Hercules*, ordinarily call'd his *Columns*, or *Pillars*; they are only two very steep Mountains in the Straights of *Gades*, now *Gibraltar*.

*Luminous* COLUMN, a sort of *Column* form'd on a cylindrical Frame, mounted and cover'd over with oil'd Paper, or Gawze; so that Lights being dispos'd in ranks over each other, the whole appears as on fire.

This sort of *Column* is likewise made with rows of Lamps, or Torches, running round its Shaft; either in horizontal Belts, or Bands; or in a spiral Line, continued over a Festoon of Flowers.

*Manubiary* COLUMN, from the Latin *Manubiæ*, Spoils of the Enemy; a *Column* adorn'd with Trophies, built in imitation of Trees, whereon the Spoils of Enemies were antiently hung. See TROPHY.

*Memorial* COLUMN, that rais'd on occasion of any remarkable Event; as the *Monument* in *London*, built to perpetuate the Memory of the Burning of that City, in 1666.

It is of the *Doric* Order, fluted, hollow, with a winding Stair-case; and terminated a-top with waving Flames.

There is, also, another of the like Kind, in form of an Obelisk, on the Banks of the *Rhine* in the *Palatinate*, in memory of the famous Passage of that River, by the great *Gustavus Adolphus* and his Army.

*Menian* COLUMN, any *Column* which supports a Balcony, or Meniane. See MENIANE.

The Origin of this kind of *Column*, *Suetonius* and *Ascanius* refer to one *Menias*; who having sold his House to *Cato* and *Flaccus*, Consuls, to be converted into a publick Edifice; reserv'd to himself the Right of rasing a *Column* without side, to bear a Balcony; whence he might see the Shews.

*Military* COLUMN, among the *Romans*, a *Column* whereon was engraven a List of the Forces in the *Roman* Army, ranged by Legions, in their proper order; with design to preserve the Memory of the Number of Soldiers, and of the Order observ'd in any Military Expedition.

The *Romans* had another kind of *Military Column*, which they called *Columna Bellica*, standing before the Temple of *Janus*; at the Foot whereof the Consul declar'd War, by throwing a Javelin towards the Enemies Countries.

*Miliary* COLUMN, was a *Column* of Marble, rais'd by order of *Augustus*, in the middle of the *Roman Forum*; from whence, as a Centre, the Distances of the several Cities, *&c.* of the Empire were reckon'd, by other *Miliary Columns*; dispos'd at equal distances, on all the grand Roads. See MILIARY.

This *Column* was of white Marble; the same with that which is now seen on the Balustrade of the Perron of the Capital at *Rome*.

Its proportion is massive; being a short Cylinder, with a *Tuscan* Base and Capital, and a Brass Ball for a Crowning, the Symbol of the Globe of the Earth.

It was called *Miliarium Aureum*; as having been gilt, at least the Ball, by order of *Augustus*. It was restor'd by the Emperors *Vespasian* and *Adrian*; as appears by the Inscriptions.

*Phosphorical* COLUMN, a *Lighthouse*; or a hollow *Column*, built on a Rock, or the Tip of a Mole, or other Eminence, to serve as a Lanthorn to a Port.

*Rostral* COLUMN, that adorn'd with the Beaks, or Prows of Ships and Galleys, with Anchors and Grapplers; erected, either in memory of a Naval Victory; as the *Tuscan Column*, in the Capitol: or, in honour of some Admiral; as the *Doric* ones, at the Entrance of the Castle *de Richlieu*.

*Sepulchral* COLUMN, antiently, was a *Column* erected on a Tomb or Sepulchre; with an Inscription on its Base. See TOMB, *&c.*

Those over the Tombs of Persons of Distinction were very large; those for the common People small: these last are called *Stelæ* and *Cippi*. See CIPPUS, *&c.*

*Statuary* COLUMN, that which supports a Statue. Such was that erected by Pope *Paul* V. on a Pedestal before the Church of St. *Maria major* at *Rome*; to support a Statue of the Virgin, which is of gilt Brass. See STATUE.

This *Column* was dug up in the Temple of *Peace*; its Shaft is a single Block of white Marble 49 Foot and an half high, and 5 Foot 8 Inches Diameter; of the *Corinthian* Order, fluted.

The Term *Statuary Column*, may likewise be apply'd to Caryatides, Persians, Termini, and other human Figures, which do the Office of *Columns*; and which *Vitruvius* calls *Telamones*, and *Atlantes*. See CARYATIDES, *&c.*

*Symbolical* COLUMN, is a *Column* representing some particular Country, by the Attributes proper thereto: As that of the *French* Order, set with Flower de Lis's, in the Frontispiece of the Jesuits Church at *Rouen*: or some memorable Action; as the *Corvinian Column*, on which was a Crow; erected to *Valerius Maximus*, Sirnam'd *Corvinus*, in memory of his Defeat of a Giant in the Army of the *Gauls*, by the Assistance of a Crow.

Under the Title of *Symbolic Columns*, may also be comprehended those which serve for Symbols. Such is that in a Medal of *Nero*, which expresses the Stability of the *Roman* Empire. See SYMBOL.

*Triumphal* COLUMN, a *Column* erected among the Antients in honour of an Hero; the Joints of the Stones, or Courses whereof, were cover'd with as many Crowns, as he had made different Military Expeditions. See TRIUMPH.

Each Crown had its particular Name; as *Palissaris*, which was set with Spikes, in memory of having forced a Palisade. *Muralis*, adorned with little Turrets, or Battlements; for having mounted to an Assault. *Navalis*, of Prows and Beaks of Vessels; for having overcome at Sea. *Obsidionalis*, or *Graminalis*, of Grass; for having rais'd a Siege. *Ovans*, of Myrtle; which express'd an Ovation, or little Triumph: And *Triumphalis*, of Laurel; for a grand Triumph. See CROWN.

*Procopius* tells us of a *Column* of this Kind, erected in the place called *Augusteum*, before the Imperial Palace of *Constantinople*, supporting an *Equestrian* Statue of the Emperor *Justinian*.

*Zophoric* COLUMN, a kind of Statuary *Column*, whereon is placed a Figure of some Animal. Such is one of the two *Columns* of the Gate of *Venice*; whereon is the Lion of St. *Mark*, and the Arms of the Republick: or that at *Sienna*, which bears the Wolf that suckled *Romulus* and *Remus*.

COLUMN, in War, a deep File, or Row of Troops; or a Division of an Army, which marches at the same Time, and towards the same Place, at Intervals large enough to avoid Confusion.

An Army marches in one, two, three, or more *Columns*; according as the Ground will allow, and the General sees expedient.

The Word is also used in speaking of Vessels at Sea, following each other in the same Line.

'Tis difficult to form *Columns* at Sea, unless the Wind be in Stern.

COLUMN, among Printers, is half a Page, when the Page is divided into two Parts, from top to bottom See PAGE.

COLUMNA *Naſi*, is uſed by ſome Writers of Anatomy, for the fleſhy Part of the Noſe jutting out over the upper Lip. See NOSE.

COLUMNA *Oris*, is ſometimes uſed for the *Uvula*. See UVULA.

COLUMNÆ *Carneæ*, in Anatomy, called alſo *Lacertuli*, and *Columnæ Cordis*; are ſeveral ſmall Muſcles in the Ventricles of the Heart; derived, and, as it were, detach'd from the Parietes of the Ventricles, and connected by tendinous Extremities to the Valves of the Heart. See HEART.

Theſe little *Columns*, or Pillars, being faſten'd to the Parietes of the Heart on one ſide, and the Tricuſpid and Mitral Valves on the other; do, by their Contraction in the Syſtole of the Heart, draw out the Valves; and by that means, not only ſhut the Orifices of the Veins, but more exactly cloſe the Ventricles in their Syſtole. See SYSTOLE, and DIASTOLE.

COLURES, in Geography and Aſtronomy, two great Circles, imagined to interſect each other at right Angles, in the Poles of the World. See CIRCLE.

The *Colures* paſs, one of 'em thro' the *Solſtitial*, and the other thro' the *Equinoctial* Points of the Ecliptic: whence the firſt is denominated the *Solſtitial* and the ſecond the *Equinoctial Colure*. See SOLSTITIAL, and EQUINOCTIAL.

The Equinoctial *Colure* determines the Equinoxes; and the Solſtitial, the Solſtices. See EQUINOX, and SOLSTICE.

By thus dividing the Ecliptic into four equal Parts, they mark the four Seaſons of the Year. See SEASON.

The Word is deriv'd from the *Greek* κόλος, *mutilus*, or *truncatus*, and οὐρὰ *tail*; as appearing with the *Tail cut off*; becauſe never ſeen entire above the Horizon.

COLYBA, a Term in the *Greek* Liturgy, ſignifying an Offering of Grains, and boil'd Pulſe; made in honour of the Saints, and for the ſake of the Dead.

*Balſamon*, *P. Goar*, *Leo Allatius*, and others, have wrote on the Subject of *Colybas*: the Subſtance of what they have ſaid, is as follows.

The *Greeks* boil a quantity of Wheat, and lay it in little Heaps on a Plate; adding beaten Peas, Nuts cut ſmall, and Grape-ſtones, which they divide into ſeveral Compartments, ſeparated from each other by Leaves of Parſley. A little Heap of Wheat thus ſeaſon'd, they call κολύβα.

They have a particular *Formula* for the Benediction of the *Colybas*; wherein, praying that the Children of *Babylon* may be fed with Pulſe, and that they may be in better Plight than other People, they deſire God to bleſs thoſe Fruits, and thoſe who eat them, becauſe offer'd to his Glory, to the honour of ſuch a Saint, and in memory of the faithful Deceaſed.

*Balſamon* refers the Inſtitution of that Ceremony to S. *Athanaſius*; but the *Greek Synaxary* to the Time of *Julian* the Apoſtate.

Many of the *Latin* Divines having ſpoke injuriouſly of this Ceremony, *Gabriel* Archbiſhop of *Philadelphia*, has wrote a Diſcourſe in its Vindication; wherein he endeavours to ſhew, that the Deſign of the *Colyba* is only to repreſent the Reſurrection of the Dead, and to confirm the Faithful in the Belief thereof.

The *Colybæ*, he ſays, are Symbols of a general Reſurrection; and the ſeveral Ingredients added to the Wheat, ſignify ſo many different Virtues.

COMA, in Medicine, a ſort of a ſleepy Diſeaſe, otherwiſe called *Cataphora*; conſiſting in a violent propenſity to ſleep, whether Sleep enſue, or not. See SLEEP.

If Sleep do enſue, the Diſeaſe is called *Coma Somnolentum*, wherein the Patient continues in a profound Sleep; and when awak'd, immediately relapſes, without being able to keep open his Eyes.

If he do not ſleep, but is continually awak'd with frightful Dreams, 'tis called *Coma Vigil*: and here too his Eyes are ſhut, and he appears aſleep.

The Cauſe of the *Coma Somnolentum*, may be any thing that prevents the Courſe of the Spirits; as a cold, humid temperature of the Brain; hot putrid Vapours aſcending into the Head, and ſtopping the Canals of the Animal Spirits; narcotick Vapours, &c.

The *Coma Vigil* is ſuppoſed to ariſe from the Conflict, or jarring Mixture of Bile with *Pituita*; the one urging to ſleep, the other to waking. Hence, the Patient ſleeps either not at all; or, at moſt, but for a moment; is uneaſy, ſtarts, riſes up, and ſometimes throws himſelf on the Perſons near him; his Eyes, all the time faſt cloſed.

The Remedies for a *Coma*, are thoſe which occaſion great Evacuations; as violent Clyſters, or Vomitives; Medicines that purge, and dry the Brain; and thoſe which occaſion Revulſion of Humours; as Veſicatories, Cauteries, &c. to which may be added volatile Spirits, Salts, and moſt Cephalicks.

COMA, in Grammar. See COMMA.

COMA BERENICES, *Berenice's Hair*, in Aſtronomy, a Conſtellation of the Northern Hemiſphere. See CONSTELLATION.

The Stars in the Conſtellation *Coma Berenices*, in *Ptolomy*'s Catalogue are 3; in *Tycho*'s 13; in the *Britannic Catalogue* 40. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

*Stars in the Conſtellation* COMA BERENICES.

| *Names and Situations of the Stars.* | Signs. | Longitude. ° ′ ″ | Latitude. ° ′ ″ | Magn. |
|---|---|---|---|---|
| | ♍ | 16 53 24 | 20 21 46 | 7 |

All theſe Stars *Ptolomy* ranks among the *Informes* of *Leo*; and the Cluſter of little Stars, in form of a Nebulous one, between the Lion and Bear, he calls ſimply πλόκαμον; as reſembling an Ivy-leaf: the pointed Part whereof is turn'd towards the North, and the Sides, bounded by the 7th and 22d Stars. *Bayer*, inſtead of Hair, gives a Sheaf of Corn.

COMBAT, an *Engagement*; or a Difference decided by way of Arms.

Authors diſtinguiſh in an Army, between a *Combat* and a Battel; the latter expreſſing the general Action of the whole Army: the former a particular Skirmiſh, or Engagement of a ſingle part: ſo that the *Combat* is properly a Part of a Battel. See BATTEL.

COMBAT, in Law; or, *Single*-COMBAT; a formal Trial, between two Champions, of ſome doubtful Cauſe or Quarrel, by the Sword, or Batoons. See TRIAL.

This form of Proceeding was antiently very popular; and obtain'd not only in Criminal, but alſo in Civil Cauſes: being built on a Preſumption, that God would never grant the Victory, but to him who had the beſt right. See DUEL.

We find the *Combat* as early as the Time of *Otho*: The laſt admitted in *England*, was 6 *Car.* I. between *Donald* Lord *Rhee*, or *Rey*, and *David Ramſey* Eſq; in the *Painted Chamber*.

The Form and Ceremony of the *Combat*, is deſcrib'd in the *Grand Coutumier of Normandy*: The Accuſer, firſt, ſwore to the Truth of his Accuſation; the Accuſed gave him the Lye: upon which, each threw down a Gage, or Pledge of Battel; and the Parties were committed Priſoners till the Day of *combat*. See CHAMPION.

Hiſtorians tell us, that *Alphonſo* King of *Caſtile*, deſiring to aboliſh the *Moſarabic* Rite, and to introduce the *Roman* Office: the People oppoſing it, 'twas agreed to terminate the Difference by *Combat*, and to leave the Cauſe to the Deciſion of Heaven.

COMBAT is alſo uſed for the ſolemn Games of the antient *Greeks* and *Romans*, in honour of their Gods; as the *Olympic* Games, *Pythian*, *Iſthmæan*, and *Nemæan* Games; the *Ludi Actiaci*, *Circenſes*, &c. which ſee in their Places, OLYMPIC, ISTHMÆAN, &c.

The *Combats* here celebrated, were *Running*, *Wreſtling*, *Boxing*, *Ceſtus*, &c.

The Combatants, who were called *Athletæ*, prepar'd themſelves for it from their youth, by conſtant Exerciſe, and a very rigid Regimen: they only eat certain Things, and at certain Hours; drank no Wine, had no commerce with Women: both their Labour and their Reſt were regulated. See ATHLETÆ, GLADIATOR, *&c.*

COMBATANT, is the Heralds Word for two Lions, *&c.* born in a Coat of Arms in a fighting poſture, rampant; and their Faces towords each other.

COMBINATION, is properly underſtood of an Aſſemblage of ſeveral Things by two, and two.

COMBINATION is alſo uſed for the Variation, or Alternation of any Number of Quantities, Letters, Sounds, or the like, in all the different Manners poſſible. See CHANGES.

*P. Merſenne* gives us the *Combinations* of all the Notes and Sounds in Muſick, as far as 24; the Sum whereof amounts to 90 Figures, or Places.

The Number of *Combinations* of the 24 Letters of the Alphabet, taken firſt two by two, then three by three, *&c.* M. *Preſtet* has calculated to be 139172428888725299942 5128493402200. See LETTER, and ALPHABET.

The Words in the following Verſe may be *combin'd* a thouſand twenty two ſeveral ways.

*Tot tibi ſunt Dotes, Virgo, quot ſidera Cœlo.*

*Doctrine of* COMBINATIONS.

*Any Number of Quantities being given, together with the Number in each* Combination; *to find the Number of* Combinations.

One Quantity, we obſerve, admits of no *Combination*; two, *a* and *b*, of one; of three *a b c*, there are three *Combinations*, viz. *a b*, *a c*, *b c*; of four, ſix, *a b*, *a c*, *b c*, *a d*, *b d*, *c d*; of five, ten, *a b*, *a c*, *b c*, *a d*, *b d*, *c d*, *a e*, *b e*, *c e*, *d e*.

Whence it appears, that the Numbers of *Combinations* proceed as 1, 3, 6, 10, *&c. i. e.* are triangular Numbers, whoſe Side differs by Unity from the Number of given Quantities: if that, *v. g.* be *q*, the Side of the Number of *Combinations* will be $q-1$; and therefore the Number of *Combinations* $\frac{q-1}{1}\cdot\frac{q+0}{2}$. See TRIANGULAR *Number*.

If three Quantities are to be *combin'd*, and the Number in each *Combination* be three, there will only be one *Combination*, *a b c*; if a fourth be added, the *Combinations* will be found *a b c*, *a b d*, *b c d*, *a c d*; if a fifth, ten, *a b c*, *a b d*, *b c d*, *a c d*, *a b e*, *b d e*, *b c e*, *a c e*, *a d e*; if a ſixth, twenty, *&c.* The Numbers of *Combinations*, therefore, proceed as 1, 4, 10, 20, *i. e.* are the firſt pyramidal triangular Numbers, whoſe Sides differ by two Unites from the Number of given Quantities. See PYRAMIDAL *Number*.

Hence, if the Number of given Quantities be *q*, the Side will be $q-2$; and therefore, the Number of *Combinations* $\frac{q-2}{1}\cdot\frac{q-1}{2}\cdot\frac{q+0}{3}$.

Hence is eaſily deduced a general Rule of determining the Number of *Combinations* in any Caſe: For, ſuppoſe the Number of Quantities to be combined, *q*, the Exponent of the *Combination* will be the Number of *Combinations* $\frac{q-n+1}{1}\cdot\frac{q-n+2}{2}\cdot\frac{q-n+3}{3}\cdot\frac{q-n+4}{4}\cdot\frac{q-n+5}{5}$, *&c.* till the Number to be added be equal to *n*.

Suppoſe, *v. g.* the Number of Quantities to be *combined* $=6$; the Exponent of the *Combination* 4; the Number of *Combinations* will be $\frac{6-4+1}{1}\cdot\frac{6-4+2}{2}\cdot\frac{6-4+3}{3}\cdot\frac{6-4+4}{4}=\frac{6-3}{1}\cdot\frac{6-2}{2}\cdot\frac{6-1}{3}\cdot\frac{6+0}{4}=\frac{3}{1}\cdot\frac{4}{2}\cdot\frac{5}{3}\cdot\frac{6}{4}=15$.

*Coroll.* If it be deſir'd to have all the poſſible *Combinations* of the given Quantities beginning with the *Combinations* of the ſeveral Twos, proceeding to threes, *&c.* there muſt be added $\frac{q-1}{1}\cdot\frac{q+0}{2}\cdot\frac{q-2}{1}\cdot\frac{q-1}{2}\cdot\frac{q+0}{3}\cdot\frac{q-3}{1}\cdot\frac{q-2}{2}\cdot\frac{q-1}{3}\cdot\frac{q+0}{4}$, *&c.* Whence the Number of *Combinations* poſſible will be $\frac{q.q-1.}{1.2}+\frac{q.q-1.q-2}{1.2.3.}+\frac{q.q-1.}{1.2.}\cdot\frac{q-2.q-3}{3.4.}+\frac{q.q-1.q-2.q-3.q-4.}{1.2.3.4.5}$, *&c.* which is the Sum of the *Unciæ* of the Binomial, rais'd to the Power *q*, and abridg'd of the Exponent of the Power increas'd by Unity, $q+1$. Wherefore, ſince thoſe *Unciæ* come out $1+1$, by being rais'd to the Power *q*; and ſince $1+1=2$; $2^q-q-1$ is the Number of all the poſſible *Combinations*, *v. g.* If the Number of Quantities be 5, the Number of poſſible *Combinations* will be $2-6=32-6=26$.

*Any Number of Quantities being given, to find the Number of Changes and Alternations, which thoſe Quantites,* combin'd *in all the Manners poſſible, can undergo.*

Suppoſe two Quantities, *a* and *b*; their Variations will be 2; conſequently, as each of thoſe may be *combined*, even with it ſelf, to theſe there muſt be added two Variations. The whole Number, therefore, will be $2+2=4$. If there were three Quantities, and the Exponent of the Variation 2; the *Combinations* will be 3, and the Changes 9: to which, if the three *Combinations* of each Quantity with it ſelf *a a*, *b b*, *c c*, be added, we ſhall have the Number of Changes, $3+3+3=9$.

In like manner, 'tis evident, if the given Quantities were 4, and the Exponent 2, the Number of Changes would be 16; if 5, 25, *&c.* and, in general, if *n*, $n^2$.

Suppoſe the Quantities 3, and the Exponent of Variation 3; the Number of Changes is found $27=3^3$; *viz. a a a*, *a a b*, *a b a*, *b a a*, *a b b*, *a a c*, *a c a*, *c a a*, *a b c*, *b a c*, *b c a*, *a c b*, *c b a*, *a c c*, *c a c*, *c c a*, *b b a*, *b a b*, *b b b*, *b b c*, *c b b*, *b c b*, *b c c*, *c b c*, *c c c*.

After the ſame manner, it will appear, if the Quantities were 4, and the Exponent 3, the Number of Changes would be $64=4^3$: and, in general, if the Number of Quantities be $=n$, and the Exponent 3, tho Number of Changes will be $n^3$. By thus proceeding, it will be found, that if the Number of Quantities be *n*, and the Exponent *n*, the Number of Changes will be $n^n$: wherefore, if all the Antecedents be added, where the Exponent is leſs, the Number of poſſible Changes will be found $n^n+n^{n-1}+n^{n-2}+n^{n-3}+n^{n-4}+n^{n-5}+n^{n-6}$, *&c.* Till at length, the Number ſubtracted from *n*, leaves 1; becauſe the beginning is from ſingle Quantities taken once.

Since then the Number of poſſible Changes is a geometrical Progreſſion, whoſe firſt or ſmalleſt Term is $n^1$, the greateſt $n^n$, and the Denominator *n*; it will be $=(n^{n+1}-n)\div(n-1)$.

Suppoſe, *v. g.* $n=4$. the Number of poſſible Changes $(4^5-4)\div 4-1=1020\div 3=340$. Suppoſe, again, $n=24$, the Number of poſſible Changes will be $(24^{25}-24)\div(24-1)=$ 32009658644406818986777955348272600 $\div$ 23 $=$ 1391724288887252999425128493402200. In ſo many various manners, therefore, may the 24 Letters of the Alphabet be varied and *combined* among themſelves.

F. *Truchet*, in the *Memoirs of the French Academy*, ſhews, that two ſquare Pieces, each divided diagonally by two Colours, may be arranged and *combin'd* 64 different ways, ſo as to form ſo many different Kinds of Chequer-work; which appears ſurprizing enough, when one conſiders that two Letters, or Figures, can only be *combined* twice.

This Note mayy be of uſe to Maſons, Paviours, *&c.* See PAVEMENT.

COMBING *of Wool*, in Commerce, the drawing, or paſſing it acroſs the Teeth of a kind of Card, called a *Comb*, to diſpoſe it for ſpinning. See WOOL, CLOTH, SPINNING, *&c.*

COMBS. See HONEY-COMBS.

COMBUST, in Aſtronomy. When a Planet is not above 8 Degrees and 30 Minutes diſtant from the Sun, either before or after him, it is ſaid to be *Combuſt*, or in *Combuſtion*.

COME. The ſmall Fibres or Tails of Malt, upon it firſt ſhooting forth is thus called. See MALT.

COMEDY, in its proper Senſe, a Dramatic Piece, repreſenting ſome agreeable and diverting Tranſaction: or, it is an allegorical Repreſentation of ſomething in private Life; for the Amuſement and Inſtruction of the Spectators. See DRAMA.

In this Senſe, *Comedy* is oppos'd to Tragedy; the Subjects whereof are grave, and violent; and the Perſons of the firſt Rank. See TRAGEDY.

*Scaliger* defines *Comedy* a Dramatic Poem, very buſy, pleaſant in the Concluſion, and writ in a popular Style.

*Ariſtotle* calls it an *Imitation of the worſt*, or, rather, *of the loweſt Claſs of Perſons, by way of ridicule*: This Definition *Corneille* finds fault with, and maintains, that the Actions of Kings themſelves may enter *Comedy*; provided they be ſuch as are not very momentous, nor attended with any conſiderable danger. He adds, that a Poem wherein the greateſt Peril is the Loſs of a Miſtreſs, has no right to any higher Appellation than that of *Comedy*: But then he makes a Diſtinction in *Comedies*, and dignifies thoſe where great Perſonages are introduc'd, with the Epithet of *Heroic Comedies*, to diſtinguiſh them from ordinary ones.

Mr. *Congreve* ſeems pretty much of the ſame Sentiment: he underſtands *Ariſtotle*'s Definition of the *worſt* Men; on which bottom, 'tis ſufficient to conſtitute a *Comedy*, that the Action repreſented be that of ſome ill Man brought on the Stage to be expos'd.

M. *Dacier* is of a contrary Opinion: He maintains, that *Comedy* allows of nothing grave, or ſerious, unleſs it be turn'd to ridicule; and that Raillery and Ridicule are its only proper and genuine Characteriſtics: In which Opinion he is warmly ſeconded by Mr. *Dennis*.

Thus different are Critics and Comic Authors on the Nature of *Comedy*: ſome diſtinguiſhing it from Tragedy by the low-

lowneſs of the Subject; others by the ridiculous Light it is ſet in.

The accurate F. *Boſſu* fixes the Notion of *Comedy* much better: according to that excellent Critic, *Comedy* differs from Tragedy in this, that the Comic Writer invents both the Names of his Perſons, and the Actions he preſents; whereas the Tragic Writers only invent the latter; the former they are to take from Hiſtory.

Upon the whole, *Comedy* may be defined an Image, or Repreſentation of the ordinary Life of Men: it exhibits their common Actions and Paſſions; expoſes, and ridicules their Failings, to preſerve the Spectators from 'em, or to correct 'em. *Cicero* defines it the Imitation of Life, the Mirror of Cuſtom, and the Image of Truth.

There is a Diſpute among the Critics, whether *Comedy* be a Poem, or a mere Converſation. They who maintain the latter, do it on the foot of this general Opinion, that a Poem is a Diſcourſe in Verſe: F. *Boſſu* inſiſts on the former, and ſhews, that as *Comedy* has the Fable, or Allegory, it has every thing eſſential to Poetry. See POEM, and FABLE.

*Comedy* and Tragedy were originally one and the ſame Thing: *Their common Origin ſee under* TRAGEDY.

M. *Boileau* ſays, *Comedy* took its riſe at *Athens*, from the happy Iſſues or Concluſions of Tragedies. On this Principle, the Cataſtrophe ſhould have been the proper Criterion, or diſtinguiſhing Mark between Tragedy and *Comedy*; and all other differences only accedental.

*Des ſuccès fortunez du ſpectacle tragique*
*Dans Athènes naquit la* Comédie *antique.*

After the Grave and Serious became ſeparated from the Ridiculous, and Tragedy and *Comedy* became two diſtinct Arts; People applied themſelves to cultivate the former, and neglected the latter: So that *Comedy* continued in its Infancy, with little Improvements, while Tragedy grew up to a perfect Art: this, once arrived at its height, they began to think of cultivating *Comedy*.

With regard to the various Changes and Revolutions *Comedy* has undergone, it is commonly diſtinguiſh'd into three Kinds, *viz.* the *Antient*, wherein there was nothing feign'd; the *Mean*, where the Subject was real, but the Names fictitious; the *New*, where both Names and Things are fictitious.

The *Antient* was that firſt in uſe, when the ſupreme Power was in the Hands of the People; and when, on that account, the Poets were at their full liberty to ſay what they pleas'd, and of whom they pleas'd; by Name to rail at People in Authority, and openly charge Magiſtrates with Crimes; ſparing no Age, Sex, or Quality.

This is very obſervable in the *Frogs*, and the *Clouds* of of *Ariſtophanes*; where it is to be noted, that tho the railing Part was occaſionally diſtributed among all the Actors, yet the chief was laid on the Chorus.

When the *Athenian* Liberties became ſunk up in the Tyranny of a few, it was no longer ſafe for the Poets to uſe their old Licenſe; Men of Office being now to be ſkreen'd from reproach. The Chorus, therefore, became uſeleſs, and was therefore dropp'd; and thus commenc'd what we call *Comœdia media*, μεση, or the *Mean Comedy*. See CHORUS.

Under this, the Poets were not allow'd to name the Perſons; and therefore Names were to be invented: but then the Perſons were ſo well pointed out, that 'twas no difficult matter to know 'em.

At length, however, they were oblig'd to repreſs even this Licenſe: and this Reform gave occaſion to the *New Comedy*; which only brought upon the Stage feign'd Adventures, and imaginary Names.

This laſt Kind alone was receiv'd among the *Romans*; who yet made a new Subdiviſion thereof, into *Antient*, *Mean*, and *New*; according to the various Periods of the Commonwealth. Among the antient *Comedies* were rank'd thoſe of *Livius Andronicus*; among the *Mean*, thoſe of *Pacuvius*; and among the *New* ones thoſe of *Terence*.

*Comedy*, as well as Tragedy, has its *Eſſential*, and its *Integrant* Parts.

Its Eſſential Parts, in the Language of the Antients, are the *Protaſis*, *Epitaſis*, *Cataſtaſis*, and *Cataſtrophe*.

The *Protaſis* is the beginning, or opening; where the Subject is juſt enter'd upon, the Character of the Perſons ſhewn, and the Intereſt, or part, each has in the Action. See PROTASIS.

In the *Epitaſis*, the Intrigues begin: they are carry'd on, and heighten'd in the *Cataſtaſis*; and unravell'd in the *Cataſtrope*. See EPITASIS, CATASTROPHE, &c.

The Integrant Parts are the five *Acts* into which the *Comedy* is divided, agreeable to that Precept of *Horace*;

*Neve minor quinto neu ſit productior Actu.*

The Acts are divided into *Scenes*; the Number whereof is not fix'd, either by Reaſon or Experience, but depends on the Things to be done in each Act, and the Number of Perſons to be employ'd. See ACT, SCENE, &c. ſee alſo MANNERS, HUMOUR, &c.

Among the antient *Romans*, *Comedies* were diſtinguiſh'd according to the Quality of the Perſons repreſented, and the Dreſs they wore, into *Togatæ*, *Prætextæ*, *Trabeatæ*, and *Tabernariæ*; which laſt were thoſe where the Scene lay in Colleges, or among People of the loweſt Rank, agreeing pretty nearly with our Farces.

In the Repreſentation, *Comedy* was diſtinguiſh'd from the Tragedy, by the *Sock* wore in the former, and the *Buskin* in the latter. See SOCK, and BUSKIN.

Among us, *Comedy* is diſtinguiſh'd from Farce, in that the former repreſents Nature as ſhe is; the other diſtorts or overcharges her. They both paint from the Life, but with different Views: the one to make Nature known, the other to make her ridiculous. See FARCE.

*Scaliger* derives the Word *Comedy* from κώμαι, *Villages*, or *Conventicles of Peaſants*; by reaſon, ſays *Varro*, the *Attic* Youth us'd to travel thro' the Country, and pick up Money by their *Comic* Repreſentations; or from ἀπὸ τὸν κωμωδεῖον, *i. e. viculus*; becauſe the Scene was laid in ordinary Houſes: whereas, in Tragedy, it lay in Palaces, and the Houſes of the Great.

COMET, popularly call'd a *blazing Star*, a heavenly Body, riſing ſuddenly, and again diſappearing, and during the Time of its Appearance, moving in its proper Orbit, like a Planet. See STAR, and PLANET.

*Comets* have this to diſtinguiſh them from the other *Stars*, that they are uſually attended with a long Train, or Tail of Light, always oppoſite to the Sun, and which is of the fainter Luſtre, the further it is from the Body. Hence ariſes a popular diviſion of *Comets* into three Kinds, *viz. bearded*, *tail'd*, and *hairy Comets*; tho, in effect, this diviſion rather relates to the ſeveral Circumſtances of the ſame *Comet*, than to the Phænomena of ſeveral.

Thus, when the *Comet* is Eaſtward of the Sun, and moves from it, the *Comet* is ſaid to be *bearded*, *barbatus*; becauſe the Light marches before it, in manner of a Beard.

When the Light is Weſtward of the Sun, and ſets after it, the *Comet* is ſaid to be *tailed*, *caudatus*; becauſe the Train follows it, in manner of a Tail.

Laſtly, when the *Comet* and the Sun are diametrically oppoſite, (the Earth between them) the Train is hid behind the Body of the *Comet*, excepting a little that appears around it, in form of a Border of Hair, hence called *Crinitus*.

*Nature of* COMETS.

As to the Nature of *Comets*, the unfrequency of their appearing, together with the ſeeming Irregularities of their Phænomena, have left Philoſophers much in the dark: Thoſe who liv'd before *Ariſtotle*, accounted for 'em by ſuppoſing the heavenly Spaces full of an infinite Number of Stars; and many of theſe too remote, or too ſmall to have ever come under the Notice of Aſtronomers: Theſe inviſible Stars, they further ſuppos'd to move by their own proper Motion every way; finiſhing their Courſes in very unequal Times. Now, a *Comet*, according to them, was a vaſt heap or aſſemblage of theſe little Stars meeting together, by reaſon of the Inequality of their Motions, and uniting into a viſible Maſs; which muſt again diſappear, as thoſe Stars ſeparate, and each proceed in its Courſe.

But how theſe Stars ſhould thus meet, coaleſce, and form a Body, which in all Poſitions of the Sun ſhould reſemble a Tail, and again ſeparate, is a Myſtery.

This Opinion, therefore, *Ariſtotle* eaſily overturn'd; ſubſtituting another in its ſtead: According to him, *Comets* were only a kind of tranſient Fires, or Meteors, conſiſting of Exhalations rais'd to the upper Region of the Air, and there ſet on fire; far below the Moon's Courſe.

But neither is this Hypotheſis more juſt than the other: For on this Principle, the Light of the *Comet* being independent of the Sun, would be diſpers'd every way alike, without any appearance of a Train, or Tail, which is contrary to the Phænomena. Beſides, that the modern Aſtronomers, who have meaſur'd the diſtance between the *Comets* and the Earth, find that the *Comets* have no ſenſible Parallax; which could not be, were they not much more remote than the Moon, whoſe Parallax is ſenſible. See PARALLAX.

*Hevelius* from a great Number of Obſervations, propoſes it as his Opinion, that the *Comets*, like the Solar *Maculæ* or Spots, which they pretty much reſemble, are form'd and condens'd out of groſſer Exhalations of his Body. In which Notion he agrees nearly with *Kepler*, who maintains, that *Comets* are generated in the Æther in vaſt Numbers, like Fiſhes in the Ocean; tho they don't all become viſible, either becauſe of their ſmallneſs, or becauſe they lay a long time under the Horizon.

But Sir *I. Newton* has ſhewn the Fallacy of this Hypotheſis, by proving that the *Comet* of 1680, in its paſſage thro' the Neighbourhood of the Sun, would have been diſſipated, had it conſiſted of Exhalations of the Sun and Planets:

nets: For the Heat of the Sun, 'tis allow'd, is as the Denſity of his Rays, *i. e.* reciprocally as the Squares of the Diſtances of Places from the Sun: Wherefore, ſince the Diſtance of that *Comet* in its Perihelion, *December* the 8th, was obſerv'd to be to the Diſtance of the Earth from the Sun, nearly as 6 to 1000; the Sun's heat in the *Comet*, at that time, was to his heat with us at *Midſummer*, as 1000000 to 36, or 28000 to 1.

And again, finding by Experiment, that the Heat of boiling Water, is little more than three times the heat of our dry Earth, when expos'd to the *Midſummer's* Sun; and aſſuming the heat of red-hot Iron to be about three or four times as great as that of boiling Water: he concludes, that the heat of the dry'd Earth, or body of the *Comet* in its Perihelion, muſt be near 2000 times as great as that of red-hot Iron.

Such an immenſe heat once acquir'd in its Perihelion, the *Comet* muſt be a long time in cooling again. The ſame Author computes, that a Globe of red-hot Iron, of the Dimenſions of our Earth, would ſcarce be cool in 50000 Years. If then the *Comet* be ſuppos'd to cool 100 times as faſt as red-hot Iron; yet, ſince its Heat was 2000 times greater, ſuppoſing it of the bigneſs of the Earth, it would not be cool in a Million of Years.

*James Bernoulli*, in his *Syſtema Cometarum*, ſuppoſes ſome primary Planet, revolving round the Sun in the Space of four Years and 157 Days; and at the diſtance, from his Body, of 2583 Semidiameters of the *magnus Orbis*: This Planet, he concludes, either from its vaſt diſtance, or ſmallneſs, to be inviſible to us; but, however, to have, at various Diſtances from him, ſeveral Satellites moving round him, and ſometimes deſcending as low as the Orbit of *Saturn*; and that theſe becoming viſible to us, when in their *Perigæum*, are what we call *Comets*.

*Des Cartes* advances another Opinion: He conjectures that *Comets* are only Stars, formerly fix'd, like the reſt, in the Heavens; but which, becoming by degrees cover'd with *Maculæ*, or Spots, and at length wholly robb'd of their Light, cannot keep their place, but are carried off by the Vortices of the circumjacent Stars; and, in proportion to their Magnitude and Solidity, mov'd in ſuch manner, as to be brought nearer the Orb of *Saturn*; and thus coming within reach of the Sun's Light, render'd viſible. See CARTESIANISM.

But the Vanity of all theſe Hypotheſes abundantly appears from the Phænomena of *Comets*; the chief of which we ſhall enumerate: as being the Teſt by which all Theories are to be tried.

Firſt, then, thoſe *Comets* which move according to the Order of the Signs, do all, a little before they diſappear, either advances lowlier than uſual, or elſe go retrograde, if the Earth be between them and the Sun; and more ſwiftly, if the Earth be ſituate in a contrary Part: On the contrary, thoſe which proceed contrary to the Order of the Signs, proceed more ſwiftly than uſual, if the Earth be between them and the Sun; and more ſlowly, or go retrograde, when the Earth is in a contrary Part.

2dly, So long as their Velocity is encreas'd, they move, nearly, in great Circles; but towards the end of their Courſe, deviate from thoſe Circles; and as often as the Earth proceeds one way, they go the contrary way.

3dly, They move in Ellipſis's, having one of their *Foci* in the Centre of the Sun; and by Radii drawn to the Sun, deſcribe Areas proportionable to the Times.

4thly, The Light of their Bodies, or *Nuclei*, increaſes in their Receſs from the Earth towards the Sun; and, on the contrary, decreaſes in their Receſs from the Sun towards the Earth.

5thly, The Tails appear the largeſt and brighteſt, immediately after their Tranſit thro' the Region of the Sun.

6thly, The Tails always decline from a juſt oppoſition to the Sun towards thoſe Parts which the Bodies, or *Nuclei* paſs over, in their progreſs thro' their Orbits.

7thly, This Declination, *cæteris paribus*, is the ſmalleſt, when the Heads, or *Nuclei* approach neareſt the Sun: and leſs, ſtill, near the *Nucleus* of the *Comet* than towards the Extremity of the Tail.

8thly, The Tails are ſomewhat brighter, and more diſtinctly defined in their convex than in their concave Part.

9thly, The Tails always appear broader at their upper Extreme than near the Centre of the *Comet*.

10thly, The Tails are tranſparent, and the ſmalleſt Stars appear thro' 'em.

Theſe are the chief Phænomena of *Comets*; which, how ill they conſiſt with the wild Notions of the Antients, and the weak Conjectures of moſt of the Moderns, is pretty evident. Indeed, there were ſome, *Pliny* tells us, among the Antients, who 'had juſter Notions, who took theſe Stars 'to be perpetual, and believ'd they moved in their proper 'Orbs; but were never ſeen unleſs when left by the Sun:' And more fully *Seneca*, *Quæſt. Nat.* Lib. VII. 'I am not 'of the common Opinion, nor do I take a *Comet* to be a 'ſudden Fire, but eſteem it among the Eternal Works of 'Nature. ——*Quid autem miramur Cometas, tam rarum mundi ſpectaculum nondum teneri legibus certis, nec initia illorum fineſque noteſcere, quorum ex ingentibus intervallis recurſus eſt?——Veniet Tempus quo iſta quæ nunc latent, in lucem dies extrahat & longioris Ævi diligentia. Veniet Tempus quo poſteri noſtri tam aperta nos neſciiſſe mirentur. ——Erit qui demonſtret aliquando, in quibus Cometæ partibus errent; cur tam ſeducti a cæteris eant, quanti qualeſque ſint——*

This Prediction we have ſeen accompliſh'd in our Days, by the great Sir *I. Newton*; whoſe Doctrine is as follows.

The *Comets* are compact, ſolid, fix'd, and durable Bodies; in one word, a kind of Planets; which move in very oblique Orbits, every way with the greateſt freedom; perſevering in their Motions, even againſt the Courſe and Direction of the Planets: And their Tail is a very thin, ſlender Vapour, emitted by the Head, or *Nucleus* of the *Comet*, ignited or heated by the Sun.

This at once ſolves all the Phænomena: For 1ſt, 'Tis evi'dent, that thoſe which proceed according to the Order of the 'Signs, a little before they diſappear, muſt move more ſlowly, 'or appear retrograde, if the Earth be betwixt them and the 'Sun; and ſwifter, if the Earth be in a contrary Part: on the 'contrary, thoſe proceeding againſt the Order of the Signs, '*&c.*' For ſince their Courſe is not among the fix'd Stars, but among the Planets; as the Motion of the Earth either conſpires with 'em, or goes againſt 'em; their Appearance, with regard to the Earth, muſt be changed; and, like the Planets, they muſt ſometimes appear ſwifter, ſometimes ſlower, and ſometimes retrograde. See DIRECTION, RETROGRADATION, *&c.*

2dly, 'When the *Comets* move the ſwifteſt, they muſt 'proceed in ſtrait Lines, but in the end of their Courſe de'cline, *&c.*' Becauſe in the end of their Courſe, when they recede almoſt directly from the Sun, that part of the apparent Motion which ariſes from the Parallax, muſt bear a greater proportion to the whole apparent Motion.

3dly, 'The *Comets* muſt move in Ellipſis's, having one of 'their *Foci* in the Centre of the Sun.' Becauſe they don't wander precariouſly from one fictitious Vortex to another; but, making a part of the ſolar Syſtem, return perpetually, and run a conſtant round. See ORBIT.

Hence, their elliptic Orbits being very long and eccentric, they become inviſible, when in that Part moſt remote from the Sun.

From conſidering the Curvity of the Paths of *Comets*, Sir *I.* concludes, that when they diſappear, they are much beyond the Orb of *Jupiter*; and that in their Perihelion they frequently deſcend below the Orbits of *Mars* and the inferior Planets.

4thly, 'The Light of their *Nuclei* muſt increaſe in their 'Receſs from the Sun, and *vice verſa*:' Becauſe, as they are in the Regions of the Planets, their Acceſs toward the Sun, bears a conſiderable proportion to their whole diſtance.

From Obſervations of the *Comet* of 1680, Sir *I. Newton* found that the Vapour in the Extremity of the Tail, *Jan.* 25. began to aſcend from the Head before *December* the 11th; and had therefore ſpent more than 45 Days in its Aſcent: but that all the Tail which appear'd *December* 10. aſcended in the Space of thoſe two Days, then juſt paſt, ſince its Perihelion. The Vapour, therefore, at the beginning, when the *Comet* was near the Sun, aſcended prodigiouſly ſwift; and afterwards continu'd to aſcend with a Motion retarded by the Gravity of the Particles; and by that Aſcent increas'd the length of the Tails: But the Tail, notwithſtanding its length, conſiſted almoſt wholly of Vapours, which had aſcended from the Time of the Perihelion; and the Vapour which aſcended firſt, and compos'd the Extreme of the Tail, did not vaniſh, till it was too far from the Sun to be illumin'd by him, and off us to be viſible. Hence, alſo, the Tails of *Comets* that are ſhorter, do not aſcend with a quick and continual Motion from the Head, and then preſently diſappear; but are permanent Columns of Vapours and Exhalations, gather'd from the Head by a very gentle Motion, and in a great ſpace of time; which yet, by participating of that Motion of their Heads they had at the beginning, continue eaſily to move along with their Heads thro' the celeſtial Regions: whence alſo the Vacuity of thoſe Regions is argued. See VACUUM.

5thly, 'Their Tails muſt appear the largeſt and brighteſt 'immediately after their Tranſit thro' the Region of the 'Sun:' Becauſe, then, their Heads being the moſt heated, will emit the moſt Vapours.

From the Light of the *Nucleus*, or apparent Star, we infer their Vicinity to the Earth, and that they are by no means in the Region of the Fix'd Stars, as ſome have imagin'd; ſince in that caſe, their Heads would be no more illumin'd by the Sun, than the Planets are by the Fix'd Stars.

6thly, 'The Tails muſt ſtill decline from a ſtrict oppoſi'tion to the Sun, towards thoſe Parts which the Heads paſs 'over, in their progreſs thro' their Orbits:' Becauſe, all Smoke, or Vapour emitted from a Body in Motion, tends up-

wards obliquely, ſtill receding from that Part towards which the ſmoaking Body proceeds.

7thly, 'That Declination will be ſtill the leaſt near the 'Nucleus of the *Comet*; and when the *Comet* is neareſt the 'Sun:' Becauſe the Vapour aſcends more ſwiftly near the Head of the *Comet*, than in the higher Extremity of its Tail; and when the *Comet* is at a leſs diſtance from the Sun, than when at a greater.

8thly, 'The Tail is brighter, and better defin'd in its 'convex Part, than in its concave:' Becauſe the Vapour in the convex Part, which goes firſt, being ſomewhat nearer and denſer, reflects the Light more copiouſly.

9thly, 'The Tail muſt appear broader towards the high-'er Extremity of the *Comet*, than towards the Head:' Becauſe, the Vapour in a free Space perpetually rarefies and dilates.

10thly, 'The Tails muſt be tranſparent:' Becauſe conſiſting of infinitely thin Vapour, *&c.*

Thus accurately does the Hypotheſis tally to the Phænomena.

*Phaſes of* Comets.

The *Nuclei*, which we alſo occaſionally call the *Heads* and *Bodies* of *Comets*, view'd thro' a Teleſcope, ſhew a very different Face from thoſe of the Fix'd Stars, or Planets. *Sturmius* tells us, that obſerving the *Comet* of 1680 with a Teleſcope, it appear'd like a Coal dimly glowing, or a rude Maſs of Matter illumin'd with a duſky fumid Light, leſs ſenſible at the Extremes than in the middle; rather than as a Star which appears with a round Diſk, and a vivid Light.

*Hevelius* obſerv'd of the *Comet* of 1661, that its *Nucleus* was of a yellowiſh Colour, bright and conſpicuous, but without any glittering Light: in the middle was a denſe ruddy *Nucleus*, almoſt equal to *Jupiter*, incompaſs'd with a much fainter thinner Matter. 5 *Feb.* its Head was ſomewhat bigger and brighter, of a gold-colour; but its Light more duſky than the reſt of the Stars: Here, the *Nucleus* appear'd divided into ſeveral Parts. 6 *Feb.* the Diſk was leſſen'd; the *Nuclei* ſtill exiſted, tho leſs than before: one of 'em, on the lower Part of the Diſk, on the left, much denſer and brighter than the reſt; its Body round, and repreſenting a very lucid little Star: The *Nuclei* ſtill incompaſs'd with another kind of Matter. 10 *Feb.* the Head ſomewhat more obſcure, and the *Nuclei* more confuſed, but brighter at top than bottom. 13 *Feb.* the Head diminiſh'd much, both in Magnitude and brightneſs. 2 *March* its roundneſs a little impair'd, its Edges lacerated, *&c.* 28 *March* very pale and exceeding thin; its Matter much diſpers'd; and no diſtinct *Nucleus* at all appearing.

*Weigelius*, who ſaw the *Comet* of 1664, the Moon, and a little Cloud illumin'd by the Sun at the ſame time; obſerv'd, that the Moon, thro' the Teleſcope, appear'd of a continued luminous Surface; but the *Comet* very different; being perfectly like the little Cloud in the Horizon, illumin'd by the Sun. From theſe Obſervations it was, that *Hevelius* concluded *Comets* to be like *Maculæ*, or Spots form'd out of the ſolar Exhalations.

The Length of the Tails of *Comets* is various: That of 1680, according to *Sturmius*, about the 20th of *November*, was but ſmall, at moſt not exceeding 20 Degrees in length: in a little time it grew to a length of 60 Degrees; after which it dwindled very ſenſibly.

*Formation of the Tails of* Comets.

Sir *Iſaac Newton* ſhews, that the Atmoſpheres of *Comets* will furniſh Vapour ſufficient to form their Tails: This he argues from that wonderful Rarefaction obſerv'd in our Air, at a diſtance from the Earth: a Cubic Inch of common Air, at the diſtance of half the Earth's Diameter, or 4000 Miles, would expand it ſelf ſo as to fill a ſpace larger than the whole Region of the Stars. Since then the *Coma*, or Atmoſphere of a *Comet* is ten times higher than the Surface of the *Nucleus*, counting from the Centre thereof; the Tail, aſcending much higher, muſt needs be immenſely rare: ſo that 'tis no wonder the Stars ſhould be viſible thro' it.

Now, the Aſcent of Vapours into the Tail of the *Comet*, he ſuppoſes occaſion'd by the Rarefaction of the Matter of the Atmoſphere at the Time of the Perihelion. Smoke, 'tis obſerv'd, aſcends the Chimney by the Impulſe of the Air wherein it floats; and Air, rarefy'd by heat, aſcends by the Diminution of its ſpecific Gravity, taking up the Smoke along with it: Why then ſhould not the Tail of a *Comet* be ſuppos'd to be rais'd after the ſame manner by the Sun? For the Sun-Beams don't act on the Mediums they paſs thro', any otherwiſe than by Reflection and Refraction.

The reflecting Particles, then, being warm'd by the Action, will again warm the Æther wherewith they are compounded; and this, rarefy'd by the Heat, will have its ſpecific Gravity, whereby it before tended to deſcend, diminiſh'd by the Rarefaction; ſo as to aſcend, and to carry along with it thoſe reflecting Particles, whereof the Tail of the *Comet* is compos'd.

This Aſcent of the Vapours will be promoted by their circular Motion round the Sun; by means whereof, they will endeavour to recede from the Sun, while the Sun's Atmoſphere, and the other Matters in the celeſtial Spaces, are either at reſt, or nearly ſo; as having no Motion but what they receive from the Sun's Circumrotation.

Thus are the Vapours rais'd into the Tails of *Comets* in the neighbourhood of the Sun, where the Orbits are moſt curve; and where the *Comets* being within the denſer Atmoſphere of the Sun, have their Tails of the greateſt length.

The Tails thus produced, by preſerving that Motion, and at the ſame time gravitating towards the Sun, will move round his Body in Ellipſes, in like manner as their Heads; and by this means, will ever accompany, and freely adhere to their Head. In effect, the Gravitation of the Vapours towards the Sun, will no more occaſion the Tails of the *Comets* to forſake their Heads, and fall down towards the Sun, than the Gravitation of their Heads will occaſion them to fall off from their Tails: but by their common Gravitation, they will either fall down together to the Sun, or be together ſuſpended, or retarded. This Gravitation, therefore, does not at all hinder, but that the Heads and Tails of *Comets* may receive and retain any poſition towards each other, which either the abovemention'd Cauſes, or any other, may occaſion.

The Tails, therefore, thus produced in the Perihelion of *Comets*, will go off along with their Head into remote Regions; and either return thence, together with the *Comets*, after a long Series of Years; or, rather, be there loſt, and vaniſh by little and little, and the *Comet* be left bare; till at its return, deſcending towards the Sun, ſome little ſhort Tails be gradually and ſlowly produc'd from the Heads; which afterwards, in the Perihelion, deſcending down into the Sun's Atmoſphere, will be immenſely increas'd.

The Vapours thus dilated, rarefy'd, and diffus'd thro' all the celeſtial Regions, the ſame Author obſerves, may probably, by little and little, by means of their own Gravity, be attracted down to the Planets, and become intermingled with their Atmoſpheres.

He adds, that for the Conſervation of the Water, and Moiſture of the Planets, *Comets* ſeem abſolutely requiſite; from whoſe condens'd Vapours and Exhalations, all that Moiſture which is ſpent in Vegetations and Putrefactions, and turn'd into dry Earth, *&c.* may be reſupply'd and recruited. For all Vegetables grow, and increaſe wholly from Fluids; and, again, as to their greateſt part, turn, by Putrefaction, into Earth again; an earthy Slime being perpetually precipitated to the bottom of putrefying Liquors. Hence, the quantity of dry Earth muſt continually increaſe, and the Moiſture of the Globe decreaſe, and at laſt be quite evaporated; if they have not a continual Supply from ſome part or other of the Univerſe. And I ſuſpect, adds our great Author, that the Spirit, which makes the fineſt, ſubtileſt, and beſt part of our Air, and which is abſolutely requiſite for the Life and Being of all Things, comes principally from the *Comets*.

On this Principle, there ſeems to be ſome Foundation for the popular Opinion of Preſages from *Comets*: ſince the Tail of a *Comet* thus intermingled with our Atmoſphere may produce Changes very ſenſible in Animal and Vegetable Beings.

M. *Facio* has ſuggeſted, that ſome of the *Comets* having their Nodes ſo very near the annual Orbit of the Earth; ſhould the Earth happen to be found in that Part next the Node, at the Time of a *Comet*'s paſſing by; as the apparent Motion of the *Comet*, will be incredibly ſwift, ſo its Parallax will become very ſenſible; and the Proportion thereof to that of the Sun will be given: whence, ſuch Tranſits of *Comets* will afford the beſt Means of determining the diſtance of the Earth and Sun.

The *Comet* of 1472, *v. g.* had a Parallax above twenty times greater than the Sun's: and if that of 1618 had come down in the beginning of *March* to its deſcending Node, it would have been much nearer the Earth, and its Parallax much more notable. But, hitherto, none has threaten'd the Earth with a nearer Appulſe than that of 1680: For, by Calculation, Dr. *Halley* finds, that *November* 11, 1 H. 6 Min. P. M. that *Comet* was not above one Semidiameter of the Earth, to the Northwards of the Way of the Earth; at which time, had the Earth been in that part of its Orbit, the *Comet* would have had a Parallax equal to that of the Moon: What might have been the conſequence of ſo near an Appulſe, a Contact, or laſtly, a Shock of the celeſtial Bodies?

*Motion of* Comets.

If their Paths be ſuppoſed directly parabolic, as ſome have imagin'd, it would follow, that being impell'd towards the Sun by a centripetal Force, they deſcend as from Spaces infinitely diſtant; and by their Falls acquire ſuch a Velocity, as that they may again run off into the remoteſt Regions; ſtill moving upwards, with ſuch a perpetual Tendency as never to return. But the frequency of their Appearance, and their degree of Velocity, which does not exceed what they might acquire by their Gravity towards the Sun; ſeem to put it paſt doubt that they move, Planet-like, in elliptic Orbits, tho thoſe exceedingly eccentric; and ſo return again, tho after very long Periods. See Ellipsis.

*Apollonius Myndianus* was the firſt who took *Comets* for regular Stars; and ventur'd to foretel, that one day the Periods and Laws of their Motion would be diſcover'd.

Aſtronomers, however, are ſtill divided on that Head: *Newton*, *Flamſtead*, *Halley*, and the *Engliſh* Aſtronomers, *&c.* ſeem ſatisfy'd of the Return of *Comets*: *Caſſini*, and others of the *French*, think it highly probable; *de la Hire*, and others, oppoſe it.

Thoſe on the affirmative Side, ſuppoſe the *Comets* to deſcribe Circles prodigiouſly eccentric, inſomuch as we can only ſee 'em in a very ſmall part of their Revolution: Out of this, they are loſt in the immenſe Spaces; hid not only from our Eyes, but our Teleſcopes. That little part of their Circle next us, M. *Caſſini*, &c. have found to paſs between the Orbits of *Venus* and *Mars*.

*For the Reaſons of the Return of* Comets, M. *Caſſini* gives theſe that follow.

1. In conſidering the Courſe of the *Comets*, with regard to the Fix'd Stars, they are found to keep a conſiderable time in the Arch of a great Circle, *i. e.* a Circle whoſe Plane paſſes thro' the Centre of the Earth: Indeed, they deviate a little from it, chiefly towards the end of their Appearance; but this Deviation is common to them with the Planets.

2. *Comets*, as well as Planets, appear to move ſo much the faſter as they are nearer the Earth; and when they are at equal Diſtances from their Perigee, their Velocities are nearly the ſame.

By ſubtracting from their Motion the apparent Inequality of Velocity occaſion'd by their different diſtance from the Earth, their equal Motion might be found; but we ſhould not be certain this Motion were their true one; in regard they might have conſiderable Inequalities, not diſtinguiſhable in that ſmall Part of their Orbit viſible to us. 'Tis, indeed, probable, their real Motion, as well as that of the Planets, is unequal in it ſelf: and hence we have a Reaſon why the Obſervations made during the Appearance of a *Comet* cannot give the juſt Period of their Revolution. See Period.

3. There are no two different Planets whoſe Orbit cuts the Eclyptic in the ſame Angle, whoſe Nodes are in the ſame Points of the Eclyptic, and whoſe apparent Velocity in their Perigee is the ſame: Of conſequence, two *Comets* ſeen at different Times, yet agreeing in all thoſe three Circumſtances, can only be one and the ſame *Comet*.

And this were the *Comets* of 1577 and 1680 obſerv'd to do; and thoſe of 1652, and 1698: Not that this exact agreement in theſe Circumſtances is abſolutely neceſſary to determine 'em the ſame *Comet*. M. *Caſſini* finds the Moon her ſelf irregular in 'em all: Accordingly, he is of Opinion, there are ſeveral which diſagree herein, yet may be accounted the ſame.

*The great Objections againſt the Return of* Comets, are, the rarity of their Appearance, with regard to the number of Revolutions aſſign'd to 'em.

In 1702 was a *Comet*, or rather the Tail of one, ſeen at *Rome*, which M. *Caſſini* takes to be the ſame with that obſerv'd by *Ariſtotle*, and that ſince ſeen in 1668; which would imply its Period to be 34 Years. Now, it may ſeem ſtrange, that a Star which has ſo ſhort a Revolution, and of conſequence ſuch frequent Returns, ſhould be ſo ſeldom ſeen. Again, in *April* of the ſame Year, 1702, a *Comet* was obſerv'd by Meſſ. *Bianchini* and *Maraldi*, ſuppoſed by the latter to be the ſame with that of 1664, both by reaſon of its Motion, Velocity, and Direction. M. *de la Hire* took it to have ſome relation to another he had obſerv'd in 1698; which M. *Caſſini* refers to that of 1652: On this Suppoſition its Period appears to be 43 Months, and the Number of Revolutions between 1652 and 1698, fourteen: But 'tis hard to ſuppoſe, that in this Age, wherein the Heavens are ſo narrowly watch'd, a Star ſhould make 14 Revolutions unperceiv'd: eſpecially ſuch a Star as this, which might appear above a Month together; and of conſequence be frequently diſengag'd from the Crepuſcula.

For this, reaſon M. *Caſſini* is very reſerv'd in maintaining the Hypotheſis of the Return of *Comets*, and only propoſes thoſe for Planets, where the Motions are eaſy and ſimple, and are ſolv'd without ſtraining, or allowing many Irregularities.

M. *de la Hire* propoſes one general Difficulty againſt the whole Syſtem of the Return of *Comets*, which would ſeem to hinder any *Comet* from being a Planet; and 'tis this: that, by the Diſpoſition neceſſarily given to their Courſes, they ſhould appear as ſmall at firſt as at laſt; and always increaſe, till they arrive at their greateſt Proximity to the Earth: or, if they ſhould chance not to be obſerv'd as ſoon as they become viſible, for want of Attention thereto; at leaſt, 'tis impoſſible but they muſt frequently ſhew themſelves ere they have arriv'd at their full Magnitude and Brightneſs: But he adds, that none were ever yet obſerv'd till they had arrived at it.

But the Appearance of a *Comet* in this preſent Month of *October* 1723, while yet at a great diſtance, ſo as to be too ſmall and dim to be view'd without a Teleſcope, may ſerve to remove this Obſtacle, and ſet the *Comets*, ſtill, on the ſame footing with the Planets.

Sir *Iſaac Newton* ſuppoſes, that as thoſe Planets which are neareſt the Sun, and revolve in the leaſt Orbits, are the ſmalleſt; ſo among the *Comets*, ſuch as in their Perihelion come neareſt the Sun, are the ſmalleſt, and revolve in leſſer Orbits.

Dr. *Halley* has given us a Table of the Aſtronomical Elements of all the *Comets* that have been yet obſerv'd with due care; whereby, whenever a new *Comet* ſhall appear, it may be determin'd, by comparing it therewith, whether it be any of thoſe which have yet appear'd; and conſequently its Period, and the Axis of its Orbit determin'd, and its Return foretold.

For there are many things in the *Comet* of 1531, obſerv'd by *Appian*, which intimate its being the ſame with that of 1687, obſerv'd by *Kepler* and *Longomontanus*; and which Dr. *Halley* himſelf again obſerv'd in 1682. All the Elements agree, and there is nothing contradicts the Opinion, but that inequality in the periodic Revolution; which, however, he thinks, is no more than may be accounted for from phyſical Cauſes: no more, in effect, than is obſerv'd in *Saturn*; the Motion of which Planet is ſo diſturb'd by the reſt, eſpecially *Jupiter*, that its Period is uncertain for ſeveral Days together: To what Errors then may not a *Comet* be liable, which riſes almoſt four times the height of *Saturn*; and whoſe Velocity, if but a little increas'd, would change its Elliptic Orb into a parabolic one?

What further confirms the Identity is the Appearance of another *Comet* in the Summer of 1456; which, tho obſerv'd by none with accuracy, yet by its Period, and the manner of its Tranſit, he concludes it to be the ſame: and thence ventures to foretel its return in the Year 1758. See Solar *Syſtem, and the Plate it refers to; where the Orbits of the ſeveral* Comets *are delineated, and their Periods, ſo many of them as are known, expreſs'd.*

*To determine the Place and Courſe of a* Comet.

Obſerve the diſtance of the *Comet* from two Fix'd Stars, whoſe Longitudes and Latitudes are known: from the Diſtances thus found, calculate the Place of the *Comet* by Trigonometry, after the manner deliver'd under Planet.

By repeating the Obſervations and Operations for ſeveral Days ſucceſſively, the Courſe of the *Comet* will be had.

*To determine the Courſe of a* Comet *mechanically, and without any Apparatus of Inſtruments.* The following ingenious Method, by a Thread, we owe to *Longomontanus*: Obſerve four Stars round the *Comet*, ſuch, as that the *Comet* may be in the Interſection of the right Lines that join the two oppoſite Stars; which is eaſily found, by means of a Thread plac'd before the Eye, and extended over againſt the Stars and *Comet*.

Suppoſe, *v. g.* the *Comet*'s place in the Heavens A, (Tab. *Aſtronomy*, Fig. 23.) between the four Stars, B, C, D, E; where the Line joining the Stars B and D, paſſes thro' the Body of the *Comet*; and ſo of the Lines paſſing thro' C and E.

On a Globe, wherein theſe four Stars are found, extend a Thread thro' B and D, and another thro' C and E; the Point of Interſection will give the place of the *Comet*. This Practice being repeated for ſeveral Days, the *Comets* Courſe will be had on the Globe; which Courſe will be found to be a great Circle: from any two Points whereof, it will be eaſy to find its Inclination to the Eclyptic, and the Place of the Nodes; only by obſerving where a Thread ſtretch'd thro' the two Points cuts the Eclyptic.

*To determine the Parallax of a* Comet. See Parallax.

COMITIA, an Aſſembly of the *Roman* People, either in the *Comitium*, or *Campus Martius*; for the Election of Magiſtrates, or for conſulting on the important Affairs of the Republic. See Campus *Martius*, &c.

There were certain Days fix'd for theſe Aſſemblies, call'd *Dies Comitiales*; mark'd with a c in the Calendar of *Julius Cæſar*.

*Comitial* Aſſemblies held for the Election of Conſuls, were called *Conſular Comitia*: in like manner, the other *Comitia* took their Name from the Officer to be created; whether a Tribune, a Pontiff, Ædile, *&c.*

There were three Kinds of *Comitia*, viz. *Curiata*, *Centuriata*, and *Tributa*; ſo diſtinguiſh'd, from the manner wherein the People voted, and gave their Suffrages, *viz.* by *Curiæ* or Pariſhes, Tribes or Centuries. See Curiæ, Tribe, *&c.*

Authors make the difference between *Comitia* and *Concilia* to conſiſt in this; that in the former the *whole* People were call'd together, in the latter only a *part*.

The *Comitium*, or Place where the *Comitia* were ordinarily held, was a large Hall in the *Roman Forum*: It was a long time open at top; on which account, the Aſſemblies were often interrupted by the ill Weather: 'Twas firſt cover'd over in the time of the ſecond *Punic* War. See Forum.

*Roſinus* obſerves, that the Conſuls and Tribunes were not created in the *Comitium*, but the *Campus Martius*.

The Word comes from the Verb *Coeo*, or *Comeo*, to go together.

COMITIALIS *Morbus*, an antient Term for the Epilepſy, or Falling-Sickneſs; ſo call'd, becauſe if any Perſon was ſeiz'd with it in the *Roman Comitia*, the Aſſembly was immediately diſſolv'd: this being eſteem'd an evil Omen. See EPILEPSY.

COMMA, in Grammar, a Virgula, Point, or Character form'd thus [ , ]; ſerving to mark a ſhort Stop, or Pauſe; and to divide the Members of a Period. See POINT, *&c.*

'Tis very difficult to fix the preciſe Uſe of the *Comma*; different Authors define and uſe it differently: The ordinary Doctrine is, that the *Comma* ſerves to diſtinguiſh Nouns, Verbs, Adverbs, and the ſeveral Parts of a Period, that are not neceſſarily join'd together. But this conveys no clear, preciſe Idea; for what is it *to diſtinguiſh the Parts of a Period not neceſſarily join'd together?*

F. *Buffier* has carried the Doctrine of the *Comma* much further: The *Comma* ſerves to diſtinguiſh thoſe Members of a Period, in each whereof is a Verb, and the Nominative Caſe of the Verb. Thus, *That ſo many People are pleas'd with Trifles, is owing to a Weakneſs of Mind, that makes 'em love things eaſy to be comprehended.*

Beſides this, the *Comma* is uſed to diſtinguiſh, in the ſame Member of a Period, ſeveral Nouns Subſtantives, or Nouns Adjectives, or Verbs not united by a Conjunction. Thus, *Virtue, Wit, Knowledge, are the chief Advantages of a Man*: Or, *a Man never becomes learned without ſtudying conſtantly, methodically, with a Guſt, Application*, &c.

If thoſe Words be united in the ſame Phraſe by a Conjunction, the *Comma* is omitted: Thus, *The Imagination and the Judgment don't always agree.* The *Comma* may alſo be omitted between two Phraſes that are very ſhort, eſpecially if they depend on the ſame Regimen, and are united by a Conjunction: Thus, Alexander *conquer'd* Aſia *and eſtabliſh'd the Monarchy of the* Greeks.

The Author of the Treatiſe *de Ratione Interpungendi*, printed with *Voſſius*'s *Element. Rhetor.* Lond. 1724. lays down the Uſe of a *Comma* to be, to *diſtinguiſh the ſimple Members of a Period, or Speech*; *i. e.* ſuch as only conſiſt of one Subject, and one definite Verb. See SENTENCE.

Thus *Cicero*, *Venio nunc ad voluptates agricolarum, quibus ego incredibiliter delector, quæ nec ulla impediuntur ſenectute, & mihi ad ſapientis vitam proxime accedere videntur.*

But this Rule does not go throughout; the ſame Author inſtancing many particular Caſes, not included herein, where yet the *Comma* is adviſable. See POINTING.

Sometimes, *e. gr.* a Propoſition includes another, which may be called *Partitive*, as being only a Part of the entire Phraſe; in which caſe, the two are to be divided from each other by *Commas*. Thus, *He always ſays, as he tells us, the fineſt Things in the World.*

The Points, or Pauſes in Diſcourſe, 'tis obſerv'd, are in a kind of muſical Proportion: The *Comma* ſtops the Reader's Voice while he may privately tell one; the Semicolon, two; the Colon, three; and the Period or Full-ſtop, four.

The Antients only made two Kinds of Points, or Pauſes in a Period; the larger they called *Members*, the Greeks *Cola*, thus [ : ] the ſmaller *Inciſa*, the Greeks *Commata*, thus [ , ].

The Moderns, refining on the Antients, have ſubdivided the firſt into a Colon and Semicolon; ſome ſay, without any good Foundation in Nature; tho others ſtand up for the uſefulneſs of the Diviſion. See COLON.

As the Member, or Colon divides the Period into two Parts, each containing a Senſe, tho that imperfect; thus, *Antequam de Republica, patres conſcripti, dicam ea quæ dicenda hoc tempore arbitror*; where the Senſe does not reſt, nor is the Period or Sentence perfect, without the Addition of, *exponam vobis breviter & profectionis & reverſionis meæ*: The *Comma* ſubdivides each Member into intermediate Diviſions, which, of themſelves, have no preciſe meaning at all; *v. g. Nihil eſt, mihi crede, virtute formoſius, nihil pulchrius, nihil amabilius.*

Frequent *Commas*, as on other occaſions they promote perſpicuity and diſtinctneſs, and eaſe the Reader, both in the Rehearſal and Comprehenſion of his Author; ſo, in Oratory, are they of eſpecial uſe and effect; particularly where an Adverſary is to be cloſely and pointedly attack'd, upbraided, reprehended, wounded, *&c.* witneſs that of *Cicero* againſt *Verres*; *Non enim nos color iſte ſervilis, non piloſæ genæ, non dentes putridi deceperunt: oculi, ſupercilia, frons, vultus denique totus, qui ſermo quidam tacitus mentis eſt, hic in fraudem, homines impulit: hic, eos, quibus eras ignotus, decepit, ſefellit, in fraudem induxit: pauci tua iſta lutulenta vitia novimus; pauci tarditatem ingenii, ſtuporem, debilitatemque linguæ*, &c. See PERIOD.

COMMA, in Muſick, is the ſmalleſt of all the ſenſible Intervals of Tune. See INTERVAL.

The *Comma* is about the tenth Part of a Tone: or, it is the Interval whereby a perfect Semitone ſurpaſſes an imperfect one; or a perfect Tone, an imperfect one. See TONE.

M. *Sauveur* ſays, a *Comma* is the Difference between a Tone-major and minor. It is ſeldom in uſe, except in the Theory of Muſick, to ſhew the Juſtneſs of the Conſonances; for in the Practice, the Diviſion is drown'd and loſt. Each leſſer Tone ordinarily contains ten *Commas*.

*Lancelot* only divides his Tone into nine Parts, or *Commas*; ſo that according to him, a *Comma* is the ninth Part of a Tone.

The proportion of the greater *Comma* in Numbers, is as 80 to 81; that of the ſmaller, as 2025 to 2048. See TUNE.

The Word *Comma* is *Greek* form'd of κόπτω, *ſeco*, I cut.

COMMANDING *Ground*, in Fortification, is ſuch as overlooks any Poſt, or ſtrong Place.

Of this they reckon three ſorts; firſt, *A Front Commanding Ground*; which is an Height oppoſite to the Face of the Poſt, which plays upon its Front. See FRONT.

2d, *A Reverſe Commanding Ground*, which is an Eminence that can play upon the Back of any Place or Poſt.

3d, *An Enfilade Commanding Ground*, or *Curtin Commanding Ground*; which is an high Place, that can with its Shot ſcour all the length of a ſtrait Line. See ENFILADE.

COMMANDMENT, in a Legal Senſe, has various Uſes: as, *Commandment of the King*, when, on his own mere Motion, and from his own Mouth he caſts a Man into Priſon.

*Commandment of the Juſtices*, is either *abſolute*, or *ordinary*: *Abſolute*, as when on their own Authority, and their own Diſcretion, they commit a Man to Priſon for Puniſhment.

*Ordinary*, as when they commit him rather for ſafe Cuſtody than Puniſhment. A Man committed on an ordinary *Commandment* is repleviſable.

*Commandment* is alſo uſed for the Offence of him who directs or wills another to tranſgreſs the Law; as by Murder, Theft, and the like.

COMMANDRY, a kind of Benefice, or certain Revenue belonging to a Military Order, and conferr'd on antient Knights who had done Services to the Order. See KNIGHT.

There are *ſtrict*, or *regular Commandries*, obtain'd in Order, and by Merit: there are others of *grace* or *favour*; conferr'd at the pleaſure of the Grand Maſter.

There are alſo *Commandries* for the Religious in the Orders of S. *Bernard* and S. *Anthony*. The Kings of *France* have converted ſeveral of the Hoſpitals for Lepers into *Commandries* of the Order of S. *Lazarus*. See LEPERS.

*Commandries* may be compar'd to Conventual Priories; which, at firſt, were no more than Adminiſtrations of the Revenue of certain Places at a diſtance from the principal Monaſtery: As there was a neceſſity for having Monks diſpos'd in theſe Houſes to take care of the Effects: ſo there was the like neceſſity for ſending Knights into thoſe Places where the Order had Lands.

*The Commandries of Malta* are of different Kinds; for as the Order conſiſts of Knights, Chaplains, and Brothers Servitors, there are peculiar *Commandries* or Revenues attach'd to each. See MALTA.

The Knight to whom one of theſe Benefices or *Commandries* is given, is call'd *Commander*: which agrees pretty nearly with the *Præpoſitus* ſet over the Monks in Places at a diſtance from the Monaſtery, whoſe Adminiſtration was call'd *Obedientia*; becauſe depending entirely on the Abbot who gave him his Commiſſion. Thus it is with the ſimple *Commanders* of *Malta*, who are rather Farmers of the Order than Beneficiaries; paying a certain Tribute or Rent, called *Reſponſio*, to the common Treaſure of the Order.

COMMEMORATION, the Remembrance of any one; or ſomething done in honour of his Memory.

Among the *Romaniſts*, 'tis a Practice for dying Perſons to leave a Legacy to the Church for the rehearſing ſo many Maſſes in *Commemoration* of them. See OBIT, *&c.*

The Euchariſt is a *Commemoration* of the Sufferings of Jeſus Chriſt; and is not, therefore, Jeſus Chriſt himſelf. See EUCHARIST.

COMMEMORATION is alſo the Name of a Religious Feaſt in the *Romiſh* Church, held on the ſecond of *November*, in memory of all the Faithful deceaſed; inſtituted in the XIth Century, by *Odillon* Abbot of *Clugny*. See FEAST.

The occaſion of its Inſtitution is variouſly related; the moſt plauſible account is this: A Religious Knight returning from a Pilgrimage to the Holy Land, and loſing his Road, met a Hermit; who hearing that he was a *Franc*, aſk'd him if he knew the Monaſtery of *Clugny*, and the Abbot *Odillon*; the Pilgrim profeſſing his Knowledge of both, the Hermit told him, that God had diſcover'd to him, that he was to have the Credit of delivering the Souls from the Pains they ſuffer in the other Life; charging him, at his return, to exhort *Odillon*, and thoſe of his Community, to continue their Prayers and Alms for the Dead. See CLUNY.

COMMENDAM, in the Canon Law, the Charge, Truſt, and Adminiſtration of the Revenues of a Benefice, given to a Layman to enjoy, by way of *Depoſitum*, for the Space of ſix Months; in order to its being repair'd, *&c.* or to another Biſhop, or Eccleſiaſtic to perform the Paſtoral Offices thereof; till ſuch time as the Benefice is provided of a regular Incumbent. See BENEFICE.

Anti-

Antiently, the Adminiſtration of vacant Biſhopricks belong'd to the neareſt neighbouring Biſhop; which is ſtill practis'd between the Archbiſhoprick of *Lyons*, and the Biſhoprick of *Autun*: on this account they were call'd *Commendatory Biſhops*.

This Cuſtom appears to be very antient: S. *Athanaſius* ſays of himſelf, according to *Nicephorus*, that there had been given him *in Commendam*, *i. e.* in Adminiſtration, another Church beſides that of *Alexandria*, whereof he was ſtated Biſhop.

The Care of Churches, it ſeems, which had no Paſtor, was committed to a Biſhop, till they were provided of an Ordinary: The Regiſter of Pope *Gregory* I. is full of theſe Commiſſions, or *Commendams*, granted during the Abſence or Sickneſs of a Biſhop, or the Vacancy of the See.

Some ſay, that Pope *Leo* IV. firſt ſet the modern *Commendams* on foot, in favour of Eccleſiaſtics who had been expell'd their Benefices by the *Saracens*; to whom the Adminiſtration of the vacant Churches was committed for a time, in expectation of their being reſtor'd: tho S. *Gregory* is ſaid to have uſed the ſame, while the *Lombards* deſolated *Italy*.

In a little time, the practice of *Commendams* was exceedingly abus'd; and the Revenues of Monaſteries given to Laymen for their Subſiſtence. The Biſhops alſo procur'd ſeveral Benefices, or even Biſhopricks *in Commendam*; which ſerv'd as a Pretext for holding 'em all; without directly violating the Canons. Part of the Abuſe has been retrench'd; but the Uſe of *Commendams* is ſtill retain'd, as an Expedient to take off the Incompatibility of the Perſon, by the Nature of the Benefice.

When a Parſon is made Biſhop, his Parſonage becomes vacant; but if the King give him Power, he may ſtill hold it *in Commendam*.

COMMENDAM, in many *Romiſh* Countries, is a real Title of a Regular Benefice; as an Abby or Priory given by the Pope to a Secular Clerk, or even to a Layman, with Power to diſpoſe of the Fruits thereof during his Life. See ABBOT.

No Benefice that has a Cure of Souls, *i. e.* no Curacy, or Biſhoprick can be given *in Commendam*. This Practice being entirely contrary to the Canons, none but the Pope, who has a Power of diſpenſing with the Canons, can confer it.

When the *Commendam* becomes vacant by the Death of the *Commendatary*, it is not eſteem'd vacant by his Death; but as it was vacant before the *Commendam* was granted, that making no Alteration in the Thing: Yet the Pope gives the ſame Benefice *in Commendam* again, by a Privilege which he ſtill continues.

By the Pope's Bulls, a *Commendatary* Abbot has the full Authority of the Regular Abbot to whom he is ſubſtituted: This is expreſs'd in plain Terms, *Curam Monaſterii ac regimen & adminiſtrationem tibi in ſpiritualibus & temporalibus plene committendo.* For this reaſon, the Bulls expreſly require, that he be a Prieſt; or, that if he han't yet attain'd the Age of Prieſthood, he ſhall take Orders as ſoon as he has. But this is a mere Formality, or matter of Style; the Thing is never executed.

Indeed, the ſpiritual Direction of the Abby, while in *Commendam*, is lodg'd wholly in the Clauſtral Prior. The *Commendatary* Abbots have not any Authority over the Religious *in ſpiritualibus*: they even cannot either appoint or ſet aſide the Clauſtral Priors, who are nominated in the Bulls the Adminiſtrators of the Spiritualty; in which, however, this Reſtriction is added, *viz.* till the Abbot arrive at the Age of 25 Years, to aſſume the Prieſthood. The Bull given the Prince of *Neubourg* for the Abby of *Feſcamp* runs thus: *Et ne ob defectum Ætatis primo-dictum Monaſterium, aliquod in ſpiritualibus patiatur detrimentum; priorem-Clauſtralem pro tempore exiſtentem, primo-dicti Monaſterii in ſpiritualibus, donec tu 25 tuæ Ætatis annum perveneris, duntaxat conſtituimus ac deputamus.* The Words *Adminiſtration in Spirituals*, are underſtood principally of the Monaſtic Rule, or Diſcipline; from which the Abbots are excluded, even when they are promoted to the Prieſthood, unleſs they become Regulars.

The Popes grant Benefices *in Commendam*, not only to Clerks, by diſpenſing with their Age, and other Qualifications requir'd; but alſo diſpenſe with the Clericate in Children yet in the Cradle, till they become of age to take the Tonſure: It being ſufficient to obtain a Bull, that it be repreſented at *Rome*, that the Child is deſtin'd for the Eccleſiaſtical State.

In this Caſe there is an *Oeconomus*, or Steward, appointed to take care of the temporal Concerns.

COMMENSURABLE *Quantities*, in Geometry, are ſuch as have ſome common aliquot Part, or which may be meaſur'd by ſome common Meaſure, ſo as to leave no Remainder in either. See MEASURE.

Thus, a Foot and a Yard are *Commenſurable*; there being a third Quantity which will meaſure each, *viz.* an *Inch*; which taken 12 times makes a *Foot*, and 36 times a *Yard*. See QUANTITY.

*Commenſurables* are to each other, either as Unites to a Rational Whole Number; or as one Rational Whole Number to another. See NUMBER.

In *Incommenſurables* 'tis otherwiſe. The Ratio of *Commenſurables* therefore is Rational; that of *Incommenſurables* Irrational: Hence, alſo, the Exponent of the Ratio of *Commenſurables* is a Rational Number. See RATIO.

COMMENSURABLE *Numbers*, whether Integers or Fractions, are ſuch as have ſome other Number which will meaſure or divide them without any Remainder. See NUMBER.

Thus, 6 and 8, $\frac{8}{12}$ and $\frac{3}{4}$ are reſpectively *Commenſurable* Numbers.

COMMENSURABLE *in Power*. Right Lines are ſaid to be *Commenſurable in Power*, when their Squares are meaſur'd by one and the ſame Space, or Superficies. See LINE.

COMMENSURABLE *Surds*, are ſuch Surds as being reduc'd to their leaſt Terms, become true figurative Quantities of their Kind; and are therefore as a Rational Quantity to a Rational. See SURD.

COMMENTARY, or COMMENT, an Interpretation, Gloſs, or Addition, made to an antient, obſcure, or difficult Author, to render him more intelligible, or to ſupply what he has left undone.

Sir *Hen. Savil* has wrote a *Commentary* of 300 Pages in Quarto, to explain the firſt eight Propoſitions in *Euclid*.

*S. Evremond* obſerves, that *Commentators* commonly ſpend a great part of their time in finding out Beauties the Author never dreamt of, and in enriching him with their own Thoughts.

COMMENTARY is alſo uſed for a ſort of Hiſtory, written by the Perſon who had the chief hand in the Tranſactions related. See HISTORY.

Such are the *Commentaries* of *Cæſar*, of *Montluc*, &c.

The Word is alſo uſed for certain Books wrote on ſome particular Subject: Thus, *Kepler* has wrote an excellent Book of *Commentaries on Mars*; containing Obſervations on the Motion of that Planet.

COMMERCE, *Trade*, the Exchange of Commodities; or, the buying, ſelling, or trafficking of Merchandiſe, Money, or even Paper; in order to profit by the ſame. See MERCHANDISE.

There is no doubt but *Commerce* is nearly as antient as the World it ſelf: Neceſſity ſet it on foot, the Deſire of Conveniency improv'd it, and Vanity, Luxury, and Avarice, have brought it to its preſent Pitch. At firſt it only conſiſted in the Exchange of Things neceſſary for Life: The Plowman gave his Grain and his Pulſe to the Shepherd, and receiv'd Milk and Wool in exchange: Which Method of *Commerce* by Exchange ſubſiſts ſtill in many Places; as about the Coaſts of *Siberia*, and the *Daniſh* and *Muſcovite Lapland*; among ſeveral Nations on the Coaſts of *Africa*; among moſt of thoſe of *America*, and many of *Aſia*. See EXCHANGE.

'Tis not preciſely known when the Commerce by buying and ſelling firſt began, nor when Coins, and the ſeveral Species of Gold, Silver, and Copper had their riſe. The firſt Monies were Wood, Leather, and Iron; and even at this day, 'tis the Cuſtom in ſome Places of both *Indies*, to give a certain Value in Sea-Shells and Coco-Nuts, for Merchandiſes, Drugs, &c. See MONEY, and COIN.

The firſt Inſtance of this kind of *Commerce* in the *ſacred Writing*, is in the Time of the Patriarch *Abraham*. For profane Authors, they uſually fix its Epocha to the Reign of *Saturn* and *Janus* in *Italy*; and the antient Authors, according to *Cæſar*, attribute its Invention to the God *Mercury*.

The *Egyptians*, *Phœnicians*, and *Carthaginians*, who were a *Tyrian* Colony, were the firſt, the moſt daring and expert Traders of all Antiquity: at leaſt, 'tis evident they were the firſt who run the Hazard of long Voyages; and who ſet on foot a Traffick by Sea between Coaſts very remote. See NAVIGATION.

Among the Antients, *Commerce* did not appear unworthy the Application of Perſons of the firſt Rank: *Solomon*, we are told, frequently join'd his Merchant-Fleets with thoſe of the King of *Tyre*, for their Voyage to *Ophir*; and by this means render'd himſelf, tho in a little Kingdom, the richeſt King in the Univerſe. Under the *Aſiatic* and *Grecian* Empires, antient Hiſtory gives us from time to time the Traces of a Commerce cultivated by ſeveral Nations: but it flouriſh'd more conſiderably under the Dominion of the *Romans*; as appears from that vaſt Number of Colleges and Companies of Merchants in the ſeveral Cities, mention'd in Hiſtorians and antient Inſcriptions. See COLLEGE.

The Deſtruction of the *Roman* Empire by the Irruptions of the Barbarians, brought that of *Commerce* along with it; or at leaſt ſuſpended its ordinary Operation for ſome time: By degrees it began to recover it ſelf, and made a new progreſs; eſpecially in *Italy*.

Hence, the *Piſans*, *Florentines*, *Genoeſe*, and *Venetians*, who abounded in Shipping, took occaſion to ſpread themſelves thro' all the Parts of the *Levant* and *Egypt*; bringing thence Silk, Spices, and other Merchandizes; and furniſhing the greateſt part of *Europe* therewith. And thus was the

modern *Commerce* founded on the Ruins of that of the antient *Greeks* and *Romans* to the ſame Places: And thus did thoſe famous Republics acquire their Luſtre.

The *Germans*, however, had a long time carried on a ſeparate *Commerce*; which was not borrowed from the *Romans*, nor did it fall with theirs. Towards the End of the XIIth Century, the *German* Cities ſituate on the Coaſts of the *Baltic*, and the Rivers that run into it, had a conſiderable Traffick with the neighbouring States.

As their *Commerce* was much interrupted by Pirates, 72 of them united together for their mutual Defence; and were thence called *Hanſeatic*, or *Hans Towns*. See HANS *Town*.

Thus they flouriſh'd till the Beginning of the XVIth or End of the XVth Century; when a Diviſion ariſing among them, and about the ſame time a new Paſſage to the *Indies*, by the Cape of *Good Hope*, being diſcover'd by the *Portugueze*; and Settlements made on the Coaſts of *Africa*, *Arabia*, and the *Indies*; the antient *Italian* and *Hanſeatic Commerce* ſunk; and the chief Trade came into the Hands of the *Portugueze*.

The *Portugueze* had not poſſeſs'd thoſe different Trades above 100 Years, when, about the Beginning of the XVIIth Century, the *Dutch* began to ſhare it with 'em; and in a little time diſpoſſeſs'd 'em of almoſt the whole. The *Engliſh*, *French*, *Danes*, and *Hamburghers*, excited by their Succeſs, have likewiſe made Settlements in the *Indies*, and on the Coaſts of *Africa*; tho much leſs conſiderable ones, excepting thoſe of the *Engliſh*.

Laſtly, *America*, diſcover'd by the *Spaniards* ſoon after the *Portugueze* had diſcover'd the new Way to the *Indies*, likewiſe became the Object of a new, vaſt, and important *Commerce*, for all the Nations of *Europe*; whereof *Cadiz* and *Sevil* were made the Centre.

'Tis true, the firſt Conquerors of this new World ſtill poſſeſs the greateſt and richeſt Part of it; and preſerve the *Commerce* thereof to themſelves with a world of Jealouſy: yet, beſides that, the *Engliſh*, *French*, *Portugueze*, and *Dutch*, have ſeveral rich and flouriſhing Colonies, both in the Iſlands and the Continent; 'tis certain, that 'tis as much for other Nations as themſelves, that the *Spaniards* every Year ſend their Flota's for the Treaſures of *Peru* and *Mexico*. See COLONY, FLOTA, and GALLION.

The Trade of *Europe* was no Sufferer by this new one of *America*; the North and South have ſtill the ſame mutual occaſion for each other as before.

The Navigation from the *Baltic* to the *Mediterranean* was tedious and difficult: The Situation of *Flanders*, and the Manufactures which there flouriſh'd from the Xth Century, together with the free Fairs of that Country, engag'd the Merchants, both of the North and South, to eſtabliſh their Magazines firſt in *Bruges*, and then in *Antwerp*. See FAIR, *&c.*

The Eſtabliſhment of the Republic of *Holland*, the favourable Reception it gave to Strangers, and the Refuge it afforded to Religionaries, drew ſtore of Manufacturers to it, as well as Manufactures; and ſoon ſunk the *Commerce* of *Antwerp*.

And the ſame Reaſons, the Convenience and Multitude of the Ports of *England*, the Goodneſs of the Wools, and the Induſtry of the Workmen, have brought thither a conſiderable Part of the *Commerce* of *Europe*. See WOOLLEN *Manufacture*.

In *France*, the Nobility are allow'd to exerciſe *Commerce*, without derogating from their Nobility: By an Ordonnance of *Louis* XIII. Merchants are allow'd to take on 'em the Quality of Nobles; and by another of *Louis* XIV. are declared capable of being Secretaries of State, without laying aſide their *Commerce*. It may be added, for the honour of *Commerce*, that ſome of the *Italian* Princes, looking on themſelves as the chief Merchants of their States, don't diſdain to make their own Palaces ſerve as Magazines: And there are ſeveral Kings in *Aſia*, as well as moſt of thoſe on the Coaſts of *Africa* and *Guinea*, who negotiate with the *Europeans* by their Factors, and frequently by themſelves. See MERCANTILE *Profeſſion*.

*Commerce*, on the foot it now ſtands, is divided into *Commerce by Land*, and *by Sea*; that by *long Voyages*, and by *ſhort*; *Inland* or *Domeſtick*, and *Foreign*; by *Wholeſale* and *Retail*.

A great part of the Foreign *Commerce* of *England* is now carried on by *Companies*: ſome incorporated by the King's Charters, with an excluſive Privilege, as the *Eaſt-India* and *South-Sea* Companies; others only private Aſſociations, as the *Turky* and *Hamburgh* Companies. See COMPANY.

COMMINATORY, a Clauſe inſerted in a Law, Edict, Patent, *&c.* importing a Puniſhment wherewith Delinquents are menac'd; which, however, is not executed in its rigour. See CLAUSE.

Thus, in ſome Countries, when an Exile is enjoin'd not to return on Pain of Death, it is deem'd a *Comminatory* Penalty; ſince, if he do return, it is not ſtrictly executed; but a ſecond Injunction is laid on him, which is more than *Comminatory*, and from the Day of the Date thereof, imports Death without remedy.

COMMINUTION, the Act of grinding, or breaking any Matter into ſmaller Particles. Thus, we ſay, the Effect of chewing, or maſticating our Food, is the *Comminution* thereof. See MASTICATION, *&c.*

COMMISSARY, an Officer of the Biſhop, who exerciſes Eccleſiaſtical Juriſdiction in thoſe Parts of the Dioceſs which are ſo far remote from the See, that the Chancellor cannot call the Subjects thereof to the Biſhop's principal Conſiſtory, without their too great Moleſtation. See BISHOP's *Court*, CHANCELLOR, *&c.*

This Officer, call'd by the Canoniſts *Commiſſarius*, or *Officialis foraneus*, is appointed to ſupply the Biſhop's Office in the Out-parts of the Dioceſs, and in ſuch Pariſhes as are peculiar to the Biſhop, and exempted from the Juriſdiction of the Archdeacon: for where the Archdeacons have Juriſdiction, as in moſt Places they have, either by Preſcription or Compoſition, the *Commiſſary* is ſuperfluous, and frequently vexatious. See ARCHDEACON.

COMMISSARY, in an Army. There are two ſorts of *Commiſſaries*: The *Commiſſary-General* of the Muſters, or Muſter-Maſter General; who takes an account of the Strength of every Regiment, reviews them, ſees that the Horſe are well mounted, and all the Men well arm'd and accouter'd. See MUSTER.

And the *Commiſſary-General of Proviſions*, who hath the Charge of furniſhing the Army with all Things of that kind.

COMMISSION, in our common Law, is the ſame with *Delegation* among the Civilians; and is taken for the Warrant, or Patent which any Man exerciſing Juriſdiction, either ordinary or extraordinary, hath to authorize him to hear or determine any Cauſe or Action.

The Term, however, is ſometimes extended further than to Matters of Judgment; as in the *Commiſſion of Purveyors and Takers*, which ſeems to be null by the Statute, for taking away Purveyance, 12 *Car.* II. and the *Commiſſion-Court*, which was founded on the Statute 1° *Eliz.* and is alſo aboliſh'd by Act of Parliament 17 *Car.* I.

The Perſons charged with a *Commiſſion* are hence call'd *Commiſſioners*; ſometimes, *Committees*. See COMMISSIONER, and COMMITTEE.

COMMISSION *of Anticipation*, was antiently a *Commiſſion* under the Great Seal, to collect a Subſidy before the Day. See ANTICIPATION.

COMMISSION *of Aſſociation*, is a *Commiſſion* under the Great Seal, to aſſociate two, or more learned Perſons, with the ſeveral Juſtices in the ſeveral Circuits and Counties in *Wales*. See ASSOCIATION.

COMMISSION *of Bankruptcy*, a *Commiſſion* under the Great Seal, directed to five or more *Commiſſioners*, to inquire into the Particulars of a Man's Circumſtances, who hath failed, or broke; and to act according to certain Statutes made in that behalf. See BANKRUPT.

COMMISSION *of Peace*. See JUSTICE *of Peace*.

COMMISSION *of Rebellion*, or *Writ of Rebellion*, is iſſu'd out when a Man, after Proclamation iſſu'd out of the Chancery, or the Exchequer, and made by the Sheriff, to preſent himſelf, under Pain of his Allegiance, to the Court by a certain Day; does not appear. See REBELLION.

This *Commiſſion* is directed, by way of Command, to certain Perſons; three, two, or one of 'em, to apprehend, or cauſe to be apprehended, the Party as a Rebel, and to bring him to the Court on a Day aſſign'd. See OUTLAWRY.

COMMISSION, in Commerce. See FACTORAGE.

COMMISSIONER, he who has a *Commiſſion*, *e. gr.* a Patent, or other legal Warrant, to execute any publick Office.

Such are, *Commiſſioners of the Office of Licences*, *Commiſſioners of Alienation*, &c. See ALIENATION, *&c.*

COMMISSIONERS *of the Cuſtoms.* } See { CUSTOMS.
COMMISSIONERS *of Exciſe.* } See { EXCISE.

*Lords* COMMISSIONERS *of the Treaſury*. See TREASURY, and EXCHEQUER.

COMMISSURE, *Commiſſura*, a Term uſed by Mr. *Boyle*, and ſome other Authors, for the ſmall *Meatus*'s, or Interſtices of Bodies; or the little Clefts between the Particles; eſpecially when thoſe Particles are broadiſh and flat, and lie contiguous to one another, like thin Plates, or *Lamellæ*. See PORE.

The Word literally ſignifies *a joining*.

COMMISSURE, in Architecture, *&c.* the Joint of two Stones; or, the Application of the Surface of the one to that of the other. See MASONRY.

Among Anatomiſts, *Commiſſure* is ſometimes uſed for a *Suture* of the Cranium, or Skull. See SUTURE.

COMMITTEE, in Law, one or more Perſons, to whom the Conſideration of any Matter is referr'd, either by a Court, or by Conſent of the Parties concern'd.

COMMITTEE *of Parliament*, is a Board conſiſting of a certain Number of Members, appointed by the whole Houſe for

for the examining of a Bill, the making Report of an Inquiry, or a Proceſs of the Houſe. See PARLIAMENT, BILL, &c.

Sometimes, the whole Houſe is reſolv'd into a *Committee*; on which Occaſion each Perſon has a right to ſpeak, and reply as much, and as often as he pleaſes: an Expedient they uſually have recourſe to in extraordinary Caſes, and where any thing is to be thoroughly canvaſs'd.

When the Houſe is not in a *Committee*, each gives his Opinion regularly, and is only allow'd to ſpeak once.

COMMITTEE *of the King*, is uſed for a Widow of one of the King's Tenants; thus call'd, as being by the antient Law of the Realm *committed* to the King's Care and Protection.

COMMODATE, *Commodatum*, in the Civil Juriſprudence, the Loan, or free Conceſſion of any thing moveable or immoveable, for a certain time, on condition of reſtoring again the ſame Individual after a certain time.

The *Commodate* is a kind of *Loan*, or Contract: there is this difference, however, between a Loan and a *Commodate*, that the latter is *gratis*, and does not transfer the Property: the thing muſt be return'd in Eſſence, and without Deterioration: So that Things which conſume by Uſe, or Time, can't be Objects of a *Commodate*, but of a Loan; in regard they may be return'd in Kind, tho not in Identity. See LOAN.

COMMODORE, in the Navy, an Under-Admiral, or Perſon commiſſion'd by an Admiral to command a Squadron of Ships in Chief. See ADMIRAL, and SQUADRON.

COMMON, ſomething that belongs to all alike; own'd, or allow'd by all; and not affected to this more than that. In which Senſe *Common* ſtands oppoſed to *proper*, *peculiar*, &c.

Thus, the Earth is ſaid to be our *common* Mother; in the firſt, or golden Age, all things were in *common*, as well as the Sun and Elements: The Name *Animal* is *common* to Man and Beaſt; that of *Subſtance* to Body and Spirit.

Philoſophers diſpute whether there be any ſuch thing as *common* Notions, innate, or impreſs'd on the Mind by Nature her ſelf; or whether our Ideas are all adventitious. See *Innate* IDEA.

COMMON, in Grammar, that Gender of Nouns which is equally applicable to both Sexes, Male and Female. See GENDER.

Such is that of *parens*, Parent; which is either Maſculine, or Feminine, as it is uſed to ſignify either Father or Mother.

The *Latin* Grammarians, beſide this, which they call the *Common of two*, do alſo make a *Common of three*; which extends to Maſculine, Feminine, and Neuter.

COMMON, in Geometry, is applied to an Angle, Line, or the like, which belongs equally to two Figures, or makes a neceſſary Part of both.

COMMON *or Double Time*, in Muſick. See TIME.

COMMON *Diviſor*, is a Quantity, or Number, which exactly divides two, or more other Quantities, or Numbers, without leaving any Remainder. See DIVISOR.

COMMON, in Law, is that Soil, or Water, the uſe whereof lies open to the ſeveral Inhabitants, or Holders of a particular Town, or Lordſhip: In this Senſe, we ſay, *Common* of Paſture, *Common* of Fiſhing, *Common* of Turfery, *Common* of Eſtovers, &c.

*Common* is divided into *Common in groſs*, *Common appendant*, *Common appurtenant*, and *Common by way of neighbourhood*.

COMMON *in groſs*, is a Liberty to have *Common* alone; that is, without any Land or Tenement in another Man's Land; to himſelf for Life, or to him and his Heirs. This is commonly paſſed by Deed, or Grant, or Specialty.

COMMON *Appendant*, and COMMON *Appurtenant*, are in a manner confounded; both being defined to be a Liberty of *Common* appertaining to, or depending on ſuch or ſuch a Freehold; which *Common* muſt be taken with Beaſts *commonable*; as Horſes, Oxen, &c. being accounted fitteſt for the Plowman; and not of Goats, Geeſe, and Hogs.

Others diſtinguiſh between the two, thus; *Common Appurtenant* may be ſevered from the Land whereto it appertains; but not *Common Appendant*; which, according to my Lord *Coke*, had its original in the following manner.

'When a Lord enfeoffed another in Arable Lands to hold 'of him in Soccage; the Feoffee, to maintain the Service 'of his Plow, had at firſt, by Courteſy of his Landlord, '*Common* in his Waſtes, for neceſſary Beaſts, to ear, and 'compoſt his Lands: and that for two Cauſes; 1ſt, becauſe 'it was tacitly implied in the Feoffment; by reaſon the Feoffee could not till, or compoſt his Land, without Cattel; 'and Cattel could not be ſuſtain'd without Paſture: By 'conſequence, therefore, the Feoffee had, as a thing neceſſary, or incident, *Common* in the Waſtes, or Lands of the 'Lord. 2d, For the Maintenance and Advancement of 'Tillage.

COMMON *per Cauſe de Vicinage*, *i. e.* by reaſon of Neighbourhood; is a Liberty that the Tenants of one Lord in one Town, have to a *Common*, with the Tenants of another Lord in another Town.

But it is to be obſerv'd, that thoſe who claim this kind of *Common* (which is uſually call'd *Intercommoning*) may not put their Cattel into the *Common* of the other Town, for then they are diſtrainable; but, turning them into their own Fields, if they ſtray into their neighbour *Common*, they muſt be ſuffered. See INTERCOMMONING.

COMMON *Duct*, in Anatomy. See DUCTUS *Communis*.

COMMON *Fine*, in Law, a certain Sum of Money which the Reſiants within the View of ſome Leets pay to the Lord thereof; call'd, in ſome Places, *Head-ſilver*; in others *Cert-Money*, or *Certum Letæ*, and *Head-pence*. See CERT-*Money*.

It was firſt granted to the Lord towards the Charge of his Purchaſe of the Court-Leet; whereby the Reſiants have now the Conveniency of doing their Suit-Royal near home, without being compell'd to go to the *Sheriff's Turn*.

COMMON *Intendment*, in Law, the *common* Underſtanding, Meaning, or Conſtruction of any thing; without ſtraining it to any foreign, remote, or particular Senſe.

*Bar to Common Intendment*, is an ordinary or general Bar, which commonly diſables the Declaration of the Plaintiff. See BAR, and INTENDMENT.

COMMON LAW, *Lex non ſcripta*, that Body of Rules generally receiv'd, and held as *Law* in this Nation, before any Statute, or *Lex ſcripta* was made to alter the ſame. See LAW.

*Origin of the* COMMON *Law*. After the Decay of the *Roman* Empire, *Britain* became invaded by three Kinds of *German* People, *viz.* the *Saxons*, *Angles*, and *Jutes*. From the *Jutes* deſcended the Men of *Kent*, and thoſe of the *Iſle of Wight*; from the *Saxons* came the People call'd the *Eaſt*, *South*, and *Weſt-Saxons*; and from the *Angles* came the *Eaſt-Angles*, *Mercians*, and *Northumbrians*. See HEPTARCHY.

Now, as each People had its peculiar Cuſtoms, ſo each inclin'd to different Laws; whereof, thoſe of the *Weſt-Saxons*, and *Mercians*, who inhabited the midland Countries, were, upon the Diſſolution of the Heptarchy, and Eſtabliſhment of a Monarchy, preferr'd to the reſt, and acquir'd the common Appellation of *Jus Anglorum*. Their particular Names were *Weſt-Saxonlage*, and *Merchenlage*. See MERCHENLAGE, &c.

By theſe Laws the Nation was govern'd for ſeveral Ages, till being at length ſubdued by the *Danes*, the Cuſtoms of thoſe People were introduced, and incorporated with the reſt; and thus a new form of *Common* Law aroſe, call'd *Danelage*. See DANELAGE.

The *Danes* being, in their turn, overcame by the *Normans*; the Conqueror, on a Review of the ſeveral Laws and Cuſtoms that then obtain'd, abrogated ſome, and abliſh'd others; adding ſome of his own Country Laws: and the Syſtem, or Aſſemblage of theſe, is what we call the *Common Law*.

The *Common Law* of *England*, is properly, the common Cuſtoms of this Kingdom; which, by length of time, have obtain'd the force of Laws. See CUSTOM.

It is call'd the *Unwritten Law*: not but that we have moſt of it written in the old *Norman* Dialect, but becauſe it cannot be made by Charter, or Parliament: for thoſe are always Matters of Record; whereas Cuſtoms are only Matter of Fact, and ſubſiſt no where but in the Memory of the People.

From the common Reaſon of Things, therefore, *Common Law* ſhould appear the beſt, moſt beneficial, and eaſy to the People; in regard it conſiſts of ſuch Rules and Practices as they themſelves ſpontaneouſly, and as it were by the Impulſe and Direction of their own Intereſts, were led to: Whereas, the Written Laws, made in *England* by the King and Parliament, are impoſed on the Subject at once, and without any Trial, or Foreknowledge how they ſhall anſwer; and whether or no they are like to prove beneficial to the Nation, and agreeable to the Nature of the People: Excepting ſuch as are firſt made temporary; and for their approved Utility, afterwards perpetuated.

The firſt *Saxon* Laws publiſh'd in *England*, were thoſe of King *Ethelbert* in the VIth Century. 300 Years after, King *Alfred*, whom our Hiſtorians call *Magnus Juris Anglicani Conditor*, having united the Heptarchy, and render'd himſelf Maſter of the whole Nation; made a Collection from among the ſeveral Laws of the ſeveral Provinces of his Domains; and commanded 'em to be obſerv'd throughout his Kingdom. This Collection was denominated the *Folk-Right*, and ſoon after, the *Common Law*; as being *common* to the whole Nation.

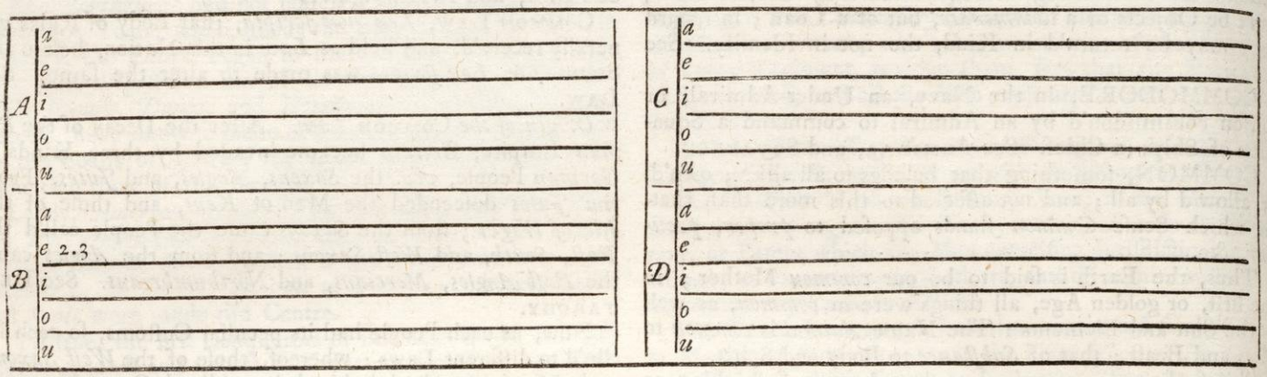
Beſide the *Common Law* of *England* in general; there are in divers Parts of the Nation particular Cuſtoms, and common Uſages, which have the force of *Common Law* among thoſe People who have retain'd 'em: Such as the *Borough-Engliſh*, *Gavel-kind*, &c. See BOROUGH-*Engliſh*, and GAVEL-KIND.

Where the *Common Law* is ſilent, there the Statute Law ſpeaks. See STATUTE *Law*.

All

All Trials of *Common Law* are by a Jury of twelve Men. See JURY.

COMMON-PLACES, *Adverſaria*, among the Learned, are a Regiſter, or orderly Collection of what things occur worthy to be noted, and retain'd in the Courſe of a Man's reading, or Study; ſo diſpos'd, as that among a Multiplicity of Heads, and Things of all Kinds, any one may be found, and turn'd to at pleaſure. See PLACE.



*Common-places* are things of infinite ſervice: they are a Kind of Promptuaries or Storehouſes, wherein to repoſit the choiceſt and moſt valuable Parts of Authors, to be ready at hand when wanted. Several Perſons have their ſeveral Methods of ordering them: but that which comes beſt recommended, and which many learned Men have now given into, is the Method of that great Maſter of Order Mr. *Locke*. He has thought fit to publiſh it in a Letter to M. *Toiſnard*; determin'd thereto, by the great Conveniency and Advantage he had found from it in 20 Years experience; as well as by the Recommendations and Intreaties of many of his Friends, who had likewiſe prov'd it.

The Subſtance of this Method we ſhall here give the Reader; whereby he will be eaſily inabled to execute it himſelf.

The firſt Page of the Book you intend to keep the *Common-places* in, is to ſerve as a kind of Index to the whole; and to contain References to every *Place* or Matter therein: In the commodious Contrivance of which Index, ſo as it may admit of a ſufficient *Copia*, or Variety of Materials, without any Confuſion; all the Secret of the Method conſiſts.

In order to this, the firſt Page, as already mention'd, or, for more room, the two firſt Pages that front each other, are to be divided, by parallel Lines, into 25 equal Parts; whereof, every fifth Line to be diſtinguiſh'd, by its Colour or other Circumſtance. Theſe Lines are to be cut perpendicularly by others, drawn from top to bottom; and in the ſeveral Spaces thereof, the ſeveral Letters of the Alphabet, both Capital and Minuſcule, are to be duly wrote.

The form of the Lines and Diviſions, both horizontal and perpendicular, with the manner of writing the Letters therein, will be conceiv'd from the following Specimen; wherein, what is to be done in the Book for all the Letters of the Alphabet, is here ſhewn in the firſt four *A*, *B*, *C*, and *D*.

The Index of the *Common-place Book* thus form'd, Matters are ready for the taking down any thing therein.

In order to this, conſider to what Head, the thing you would enter is moſt naturally referr'd; and under which, one would be led to look for ſuch a thing: in this Head, or Word, regard is had to the initial Letter, and the firſt Vowel that follows it; which are the characteriſtic Letters whereon all the Uſe of the Index depends.

Suppoſe, *e. g.* I would enter down a Paſſage that refers to the Head *Beauty*; *B*, I conſider, is the initial Letter, and *e* the firſt Vowel: Then, looking upon the Index for the Partition *B*, and therein the Line *e*, (which is the Place for all Words whoſe firſt Letter is *B*, and firſt Vowel *e*; as *Beauty*, *Beneficence*, *Bread*, *Bleeding*, *Blemiſhes*, &c.) and finding no Numbers already down to direct me to any Page of the Book where Words of this Characteriſtic have been enter'd, I turn forward to the firſt blank Page I find, which in a freſh Book, as this is ſuppos'd to be, will be Page 2, and here write what I have occaſion for on the Head *Beauty*; beginning the Head in the Margin, and indenting all the other ſubſervient Lines that the Head may ſtand out and ſhew it ſelf: This done, I enter the Page where 'tis wrote, *viz.* 2, in the Index, in the Space *B e*; from which time, the Claſs *B e* becomes wholly in Poſſeſſion of the 2d and 3d Pages, which are conſign'd to Letters of this Characteriſtic.

Had I found any Page or Number already enter'd in the Space *B e*, I muſt have turn'd to the Page, and have wrote my Matter in what room was left therein: ſo, if after entering the Paſſage on *Beauty*, I ſhould have occaſion for *Benevolence*, or the like, finding the Number 2 already poſſeſs'd of the Space of this Characteriſtic, I begin the Paſſage on *Benevolence* in the Remainder of the Page, which not containing the whole, I carry it on to Page 3, which is alſo for *B e*; and add the Number 3 in the Index.

An *Example* will make the Method of writing down Heads obvious.

BEAUTY. 'The Power of perceiving the Ideas of *Beauty* 'is juſtly call'd a *Senſe*, becauſe of its affinity to 'the other Senſes in this, That the Pleaſure does 'not ariſe from any Knowledge of Principles, Pro'portions, Cauſes, or of the Uſefulneſs of the Ob'ject; but ſtrikes us at firſt with the Idea of *Beau'ty*: nor does the moſt accurate Knowledge increaſe 'this Pleaſure of *Beauty*; however, it may ſu'peradd a diſtinct rational Pleaſure from Proſpects 'of Advantage, or from the Increaſe of Knowledge. 'And further, the Ideas of Beauty, like other ſenſi'ble Ideas, are neceſſarily pleaſant to us, as well as 'immediately ſo; neither can any Reſolution of 'our own, nor any Proſpect of Advantage or Diſad'vantage, vary the Beauty or Deformity of an Ob'ject: For as in the external Senſations, no View 'of Intereſt will make an Object grateful; nor De'triment, diſtinct from immediate Pain in the Per'ception, make it diſagreeable to the Senſe; ſo, 'propoſe the World as a Reward, or threaten the 'greateſt Evil, to make us approve a deformed Ob'ject, or diſapprove a beautiful one; Diſſimulation 'may be procur'd by Rewards, or Threatnings; or 'we may in external Conduct abſtain from any Pur'ſuit of the Beautiful, and purſue the deformed; 'but our Sentiments of the Forms, and our Percep'tions would continue invariably the ſame. Hence, 'it plainly appears, that ſome Objects are immedi'ately the Occaſions of this Pleaſure of *Beauty*; 'and that we have Senſes fitted for perceiving it; 'and that it is diſtinct from that Joy which ariſes 'from Self-love, upon proſpect of Advantage. Nay, 'do not we often ſee Conveniency and Uſe neglect'ed to obtain *Beauty*, without any other Proſpect 'of Advantage in the beautiful Form, than the 'ſuggeſting the pleaſant Ideas of *Beauty*? Now this 'ſhews us, that however we may purſue beautiful 'Objects from Self-love, with a View to obtain the 'Pleaſures of *Beauty*; as in Architecture, Garden'ing, &c. yet there muſt be a Senſe of *Beauty* an'tecedent to Proſpects of even this Advantage: 'without which Senſe, theſe Objects would not be 'thus advantageous; nor excite in us this Pleaſure 'which conſtitutes 'em advantageous. Our Senſe 'of *Beauty*, from Objects by which they are conſti'tuted good to us, is very diſtinct from our Deſire 'of 'em, when they are thus conſtituted: Our De'ſire of *Beauty* may be counterbalanc'd by Re'wards and Puniſhments, but never our Senſe of it. 'Had we no ſuch Senſe of *Beauty*, Houſes, Gardens, 'Dreſs, Equipage, might be recommended to us as 'convenient, fruitful, warm, eaſy; but never as beau'tiful: And in Faces, I ſee nothing that cou'd pleaſe 'us, but Livelineſs of Colour, and Smoothneſs of 'Surface.—*Inquiry into the Original of our Ideas of 'Beauty*, &c. 8*vo*. Lond. 1725. p. 10, 11, 12.

BENEVOLENCE. 'The true Spring of all Actions called '*Virtuous*, is ſome Determination of our Nature to 'ſtudy the Good of others; or ſome Inſtinct, ante'cedent to all Reaſon from Intereſt; which influ'ences us to the Love of others.—The ſame Cauſe 'which determines us to purſue Happineſs for our 'ſelves, determines us to Eſteem and *Benevolence* 'for others: even the very Frame of our Nature, or 'a generous Inſtinct.—This univerſal *Benevolence* 'towards all Men, we may compare to that Princi'ple of Gravitation; which extends to all Bodies in 'the Univerſe, but like the Love of *Benevolence*, 'increaſes as the Diſtance is diminiſh'd; and is 'ſtrongeſt when Bodies come to *touch* each other. '*Id. Ib.* p. 131, 143, 199.—As all Men have Self-love, 'as well as *Benevolence*; thoſe two Principles may 'jointly excite a Man to the ſame Action: and then 'they are to be conſider'd as two Forces impelling 'the ſame Body to Motion: Sometimes they con-

'ſpire; ſometimes are indifferent to each other; 'and ſometimes are oppoſite. Thus, if a Man have 'ſuch ſtrong *Benevolence* as would have produced 'an Action without any Views to Self-Intereſt; that 'ſuch a Man has alſo in view private Advantage, 'does no way diminiſh the *Benevolence* of the Ac'tion. When he would not have produc'd ſo much 'publick Good, had it not been for proſpect of 'Self-Intereſt; then the Effect of Self-Love is to be 'deducted; and his *Benevolence* is proportion'd to 'the Remainder of Good, which pure *Benevolence* 'would have produced. When a Man's *Benevo*'*lence* is hurtful to himſelf, then Self-Love is op'poſite to *Benevolence*; and the *Benevolence* is 'proportion'd to the Sum of the Good produc'd, 'and the Reſiſtance of the Self-Love ſurmounted 'thereby.——The Morality of any Perſon, or the 'Quantity of publick Good produc'd by him, is 'in a compound Ratio of his *Benevolence* and Abi'lities: Or, (by ſubſtituting the initial Letters for 'the Words, as M = Moment of Good, and $\mu$ = 'Moment of Evil) $M = B \times A$. *Idem ib.* p. 130, '131, 143, 199.'

When the two Pages deſtin'd for one Claſs are full, look forwards for the next Backſide that is blank; if it be that which immediately follows, write at the bottom of the Margin of the Page fill'd, the Letter *V.* for *Verte*, turn over; and the ſame at the top of the next Page; and continue from this new Page as before. If the Pages immediately following be already fill'd with other Claſſes; write at the bottom of the Page laſt fill'd the Letter *V.* with the Number of the next blank Page; and at the top of that Page, the Number of the Page laſt fill'd: Then entering that Head in this new Page, proceed as before. By theſe two Numbers of reference, the one at the top, and the other at the bottom of the Page, the diſcontinued Matters are again connected. It may not be amiſs, too, every time you put a Number at the bottom of a Page, to put it likewiſe in the Index. Note, if the Head be a Monoſyllable beginning with a Vowel, the Vowel is at the ſame time both the initial Letter and the characteriſtic Vowel: Thus, the Word *Art* is to be wrote in *A a*.

Mr. *Locke* omits three Letters of the Alphabet in his Index, *viz. K*, *Y*, and *W*; which are ſupplied by *C*, *J*, *U*, equivalent to them: And as for *Q*, ſince it is always follow'd by an *u*, he puts it in the fifth Place of Z; and ſo has no Z *u*, which is a Characteriſtic very rarely occurs. By thus making *Q* the laſt in the Index, its Regularity is preſerv'd, without diminiſhing its Extent.

Others chuſe to retain the Claſs Z *u*, and aſſign a Place for *Q u* below the Index.

If any imagine that thoſe hundred Claſſes are not ſufficient to comprehend all kinds of Subjects without Confuſion, he may follow the ſame Method, and yet augment the Number to 500, by taking in one more Characteriſtic to 'em.

But the Inventor aſſures us, that in all his Collections, for a long Series of Years, he never found any deficiency in the Index as above laid down.

COMMON PLEAS, *Communia Placita*, or *Bancus Communis*, one of the King's Courts, now conſtantly held in *Weſtminſter-Hall*; but antiently moveable. See COURT.

*Gwin* obſerves, that till the granting of *Magna Charta* there were but two Courts called the King's Courts, *viz.* the *Exchequer*, and the *King's-Bench*; and that upon the Grant of that Charter the Court of *Common-Pleas* was erected, and fix'd to a Place certain, *viz. Weſtminſter-Hall*: whence the Writs which before ran *Coram me vel Juſticiariis meis*, ſimply; were now chang'd, and run *Coram Juſticiariis meis apud Weſtmon.* See BENCH.

All Civil Cauſes, both Real and Criminal, are, or were in former Times, tried in this Court, according to the ſtrict Law of the Realm: *Forteſcue* repreſents it as the only Court for Real Cauſes.

The Chief-Juſtice hereof is call'd the *Lord Chief-Juſtice of the Common Pleas*; who is accompanied with three or four his Aſſociates, created by Letters Patent, and as it were in-Judges ſtall'd or placed on the *common Bench* by the Lord Chancellor, and the Lord Chief-Juſtice of the Court. See JUSTICE.

The reſt of the Officers belonging to this Court, are the *Cuſtos Brevium*; three *Prothonotaries*, or Prænotaries; *Chirographer*; 14 *Filazers*; 4 *Exigenters*; *Clerk of the Warrants*; *Clerk of the Juries*, or *Jurata Writs*; *Clerk of the Treaſury*; *Clerk of the King's Silver*; *Clerk of the Eſſoigns*; *Clerk of the Outlawries*; *Clerk of the Errors*; whoſe ſeveral Functions ſee in their Places CUSTOS *Brevium*, PROTHONOTARY, EXIGENTER, CLERK, *&c.*

COMMON *Bench.* } See { COMMON *Pleas.*
COMMON *Council.* } See { *Common* COUNCIL.

COMMON-*Hunt*, the Chief-Huntſman belonging to the Lord Mayor and the City of *London*. See MAYOR.

COMMON *Receptacle.* } See { RECEPTACLE.
COMMON *Senſory.* } See { SENSORY.

COMMONER, is uſed for a Student in an Univerſity, enter'd on the Foundation, and not as a *Servitor*. See UNIVERSITY.

The Word is alſo apply'd to a Member of the Houſe of *Commons*; in contradiſtinction to a *Peer*. See COMMONS.

COMMONS, in Parliament, are the lower Houſe, conſiſting of Knights elected by the Counties, and of Citizens, and Burgeſſes by the Cities and Borough-Towns. See KNIGHT, and BURGESS; ſee alſo COUNTY, BOROUGH, *&c.*

In theſe Elections, antiently, all the People had Votes; but King *Henry* VI. to avoid Tumults, firſt appointed, that none ſhould vote for Knights but ſuch as were Freeholders, did reſide in the County, and had 40*s.* yearly Revenue: The Perſons elected for Counties to be *Milites notabiles*, at leaſt Eſquires, or Gentlemen fit for Knighthood; native *Engliſhmen*, at leaſt naturaliz'd; and 21 Years of Age: No Judge, Sheriff, or Eccleſiaſtical Perſon, to ſit in the Houſe for County, City, or Borough.

All Members of either Houſe, with their menial Servants, and neceſſary Goods brought with 'em, are privileg'd from all Attachments and Impriſonments; except for Treaſon, Felony, or breach of Peace, all the time of the Seſſion, and till they arrive at home, *eundo, morando, ad propria redeundo.*

The *Commons* ſit in their Houſe promiſcuouſly; only the *Speaker* has a Chair, or Seat, fix'd towards the upper End; and the Clerk, with his Aſſiſtant, ſits near him.

The Members have no Robes, as the Lords ever had; excepting the Speaker and Clerks; and ſometimes the Profeſſors of Law in Term-time, and the Members of the City of *London*.

On the firſt Day of the new Parliament, ere any Affair is meddled with, all the Members take the Oaths; uſually, before the Lord Steward, and in the Court of Wards. See OATHS.

They then proceed to the Choice of a *Speaker*. See SPEAKER.

After the Election of a Speaker, they take the Oaths a ſecond time.

*Power and Privileges of the Houſe of* COMMONS. All Bills for levying Money on the Subject, begin in the Houſe of *Commons*; in regard, 'tis from them the greateſt Part of the Monies ariſe: nor will they allow the Lords to make any alteration in a Money-Bill.

They have the Privilege to propoſe Laws; and are, in effect, the grand Inqueſt of the Realm; preſent publick Grievances; impeach publick Delinquents, even the higheſt Officers of the Kingdom; and proſecute 'em before the Houſe of Lords, who are a Court of Judicature, tho the *Commons* are not.

The *Commons* are allow'd their Expences during Parliament-time, *rationabiles expenſas*, as the Words of the Writ are; *i. e.* ſuch Allowance as the King, conſidering the Prices of Things, ſhall think proper to impoſe on the People they repreſent. In 17 *Edw.* II. the Allowance was ten Groats for Knights, and five for Burgeſſes, *per* Day; afterwards it was rais'd to four Shillings a Day for dubbed Knights, and two Shillings for all the reſt: But all Allowance is now grown into diſuſe; and the Courſe of the Money turn'd the other way. See PARLIAMENT.

COMMONS is alſo uſed in oppoſition to *Nobles*, or *Peers*; *viz.* for all ſorts of Perſons under the degree of a Baron; including the Orders of Knights, Eſquires, Gentlemen, the Sons of the Nobility, and Yeomen. *See each under its proper Article* ESQUIRE, GENTLEMAN, YEOMAN, *&c.*

COMMONS is alſo uſed for the ſtated and ordinary Diet, or Eating of a College, Inns of Court, or other Society. See INN, *&c.*

COMMONWEALTH. See REPUBLICK.

COMMOTE, an antient Term in *Wales*, as appears from *Stat. Walliæ*: a *Commote* was half a *Cantred*, or Hundred; containing 50 Villages. See HUNDRED.

*Wales* was antiently divided into three Provinces; each of theſe ſubdivided into *Cantreds*; and every *Cantred* into Hundreds.

*Sylveſter Girald*, however, tells us in his *Itinerary*, that a *Commote* is but a quarter of a Hundred.

COMMOTION, an inteſtine Motion, or Luctation in the Parts of any thing.

In Medicine, the Term is chiefly uſed for a blow, or ſhake of the Brain. Thus, we ſay, a Convulſion is a *Commotion* of the fine medullary Fibres of the Brain. A fall occaſions a *Commotion*, whence frequently ariſes a counter-ſtroke on the oppoſite Part; which occaſions ſometimes a Contrafiſſure, and at other times a Rupture of the Veſſels, and an Apoſthume, by ſhaking the whole Maſs of the Brain.

COMMUNIBUS *Locis*, a *Latin* Term, in frequent uſe among Philoſophical, *&c.* Writers, implying ſome Medium, or mean Relation between ſeveral Places.

Thus, Dr. *Keil* ſuppoſes the Ocean to be one quarter of a Mile deep, *communibus locis*, *q. d.* at a Medium, or taking one place with another.

COMMUNIBUS *Annis*, has the ſame Import with regard to Years, that *Communibus locis* has with regard to Places.

Thus, Mr. *Derham* obſerves, that the Depth of Rain, *communibus annis*, *i. e.* one Year with another, were it to ſtagnate on the Earth, would amount to, at *Townly* in *Lancaſhire*, 42½ Inches; at *Upminſter* in *Eſſex* 19¼; at *Lurick* 32¼; at *Piſa* 43¼; and at *Paris* to 19 Inches.

COMMUNICATING, in Theology, the Act of receiving the Sacrament of the Euchariſt. See EUCHARIST.

Thoſe of the *Reform'd* and of the *Greek* Churches *communicate* under both Kinds; thoſe of the *Romiſh* only under one.

From the ſecond Book of *Tertullian* to his Wife, it appears, that antiently they communicated faſting. S. *Auguſtin* ſays expreſly, that in ſome Churches, in his Time, they *communicated* every Day.

Among the *Greeks*, M. *Fleury* obſerves, the Laity ſtill *communicate* every Sunday; thoſe who omit it three Sundays together are excommunicated.

The Oriental Communicants receive the Species of Wine by a Spoon; antiently, they ſuck'd it thro' a Pipe, as has been obſerv'd by *Beat. Rhenanus* on *Tertullian*.

COMMUNICATION, the Act of imparting a thing to another, or making him a Sharer with us therein.

Thus, God is ſaid to *communicate* his Grace to us by means of his Sacraments. The Uſe of Speech is for the communicating of our Ideas and Sentiments to each other.

Philoſophers are at a Loſs as to the manner of the *Communication*, or Intercourſe between Soul and Body. See SOUL, CAUSE, &c.

COMMUNICATION is alſo uſed for the Connection of one thing with another; or the Paſſage from one Place to another.

Antiently, it was frequent to have ſubterraneous *Communications* between one Place and another. Such a Gallery makes a *Communication* between ſuch two Apartments.

*Lines of* COMMUNICATION, in War, call'd alſo ſimply *Lines*; are Ditches ſix or ſeven Foot deep, and 12 broad, made between one Fort, or Work, and another; in order for a Paſſage between one Quarter and another; eſpecially in Sieges. See LINE, &c.

COMMUNICATION *of Idioms*, in Theology, the *Communication* of the Attributes of one Nature in Jeſus Chriſt to that of the other.

The *Communication of Idioms*, is founded on the Unity of two Perſons in Jeſus Chriſt: By this *Communication of Idioms* it is, that we ſay, God ſuffer'd, died, &c. which is ſtrictly underſtood of the Human Nature; and ſignifies, that God ſuffer'd in his Humanity, that he died as to his Human Nature. For the Denominations which ſignify Natures, or Properties of Nature, the Schoolmen tell us, are Denominations of *Suppoſitums*, or Perſons, and are to be attributed to 'em: Thus, the two Natures only ſubſiſting in Jeſus Chriſt by the ſole Perſon of the Word, to this Perſon muſt be attributed the Denominations of both Natures, and of their Properties. But we may not by *Communication of Idioms* attribute to Jeſus Chriſt what would ſuppoſe him not to be God; ſince that would deſtroy the Hypoſtatical Union, which is the Foundation of the *Communication of Idioms*. Thus, we may not ſay that Jeſus Chriſt is mere Man; that he is fallible, &c.

The *Lutherans* carry the *Communication of Idioms* ſo far, as to ſay, that Jeſus Chriſt is not only in his Divine Nature, and by reaſon of his Divine Perſon, but alſo really and properly in his Humanity, Immortal, Immenſe, &c.

COMMUNICATION *of Motion*, the Action of a moving Body, whereby a Body at reſt is put in Motion, or a Body already in Motion accelerated. See MOTION.

F. *Mallebranch* looks on the *Communication of Motion* as ſomething Metaphyſical; *i. e.* as not neceſſarily ariſing from any phyſical Principles, or any Properties of Bodies, but flowing from the immediate Agency of God: there being, according to him, no more Connection, or Dependence between the Motion or Reſt of one Body, and that of another, than between the Form, Colour, Magnitude, &c. of one Body and thoſe of another. The Motion of one Body, therefore, on his Principle, is not any phyſical Cauſe of that of another. See CAUSE.

*Laws of the* COMMUNICATION *of Motion.*

Action, and Reaction, Sir *Iſaac Newton* demonſtrates, are equal and oppoſite; ſo that one Body ſtriking againſt another, and thereby occaſioning a Change in its Motion, does it ſelf undergo the very ſame Change in its own Motion, the contrary way.

Hence, a moving Body ſtriking directly againſt another at reſt, the one loſes juſt as much of its Motion as it *communicates* to the other; and they will proceed with the ſame Velocity as if grown into one Maſs.

If, therefore, the Body in Motion be triple that at reſt againſt which it ſtrikes, it will loſe a fourth Part of its Motion; and whereas, before, it would have run over (*v. g.*) a Line of 20 Foot, in a given time, it will now only run over 18; *i. e.* it will loſe a fourth part of its Velocity.

If the moving Body ſtrike on another already in Motion, the firſt will augment the Velocity of the latter; but will loſe leſs of its own Motion, than had the latter been abſolutely at reſt.

Thus, *v. g.* if a Body in Motion be triple of another at Reſt, and ſtrike againſt it with 32 degrees of Motion; it will *communicate* eight degrees of its Motion to the other, and retain 24 to it ſelf. If the other Body had already four degrees of Motion, the firſt would only *communicate* five, and retain 27: ſince thoſe five were ſufficient, in regard of the Inequality of the Bodies, to make 'em proceed with equal Velocity.

After the ſame manner may the other Laws of *Communication* of Motion in Bodies perfectly hard, and void of all Elaſticity, be determin'd. But all hard Bodies that we know of have an elaſtick Power; and in elaſtick Bodies, the Laws are different, and much more intricate. See ELASTICITY; and *the Laws of Percuſſion in elaſtick Bodies*, ſee under PERCUSSION.

If a Body, when moved by another, happen to decline out of the way, ſo as to leave a free Paſſage to the Body whereby it was moved; yet, that will only proceed with the Velocity which it had after its *Communication* to the other, not with that it had before: It being a Rule, that every thing endeavours to perſevere; not in the State wherein it was formerly, but in that wherein it is at that Juncture: therefore, a Body which has already loſt part of its Motion, by its meeting with another; may loſe ſtill more by a ſecond and a third; ſo as at length to become perfectly quieſcent.

Hence, 1ſt, if two unequal homogeneous Bodies move in a right Line with the ſame Velocity, the greater muſt perſevere in Motion longer than the ſmaller: for the Motions of Bodies are as their Maſſes; but each *communicates* of its Motion to the circumjacent Bodies which touch its Surface, in proportion to the Magnitude of its Surface; the larger Body, therefore, tho it has more Surface than the ſmaller, yet having leſs, in proportion to its Maſs or Quantity of Matter, than the ſmaller, will loſe a leſs Portion of its Motion every Moment than the ſmaller.

Suppoſe, *e. g.* a Cube, A, to be 2 Foot every way, and another, B, one Foot: the Surfaces here will be as 4 to 1, but their Maſſes as 8 to 1. If therefore thoſe Bodies move with the ſame Velocity, the Cube A will have 8 times as much Motion as the Cube B (the Quantity of Motion being ever as the Quantity of Matter). That each of 'em, therefore, may become quieſcent at the ſame time, the Cube A muſt loſe 8 times as much Motion every Moment as the Cube B: But that is impoſſible, becauſe as their Surfaces are to each other as 4 to 1; the Bodies againſt which they ſtrike, will only be as 4 to 1: Therefore, when the Cube B is become perfectly quieſcent, A will have half its Motion.

Hence, 2dly, we ſee the Reaſon why any long Body, as a Dart, thrown lengthwiſe, continues its Motion longer than when thrown tranſverſly: it meeting fewer Bodies in the way to *communicate* its Motion to in the one Caſe than in the other.

Hence alſo, 3dly, if a Body be moved almoſt wholly within it ſelf, ſo as to *communicate* little of its Motion to the ambient Bodies, it muſt continue its Motion a long time. Thus, a ſmooth braſs Ball of half a foot Diameter, ſupported on a ſlender ſmooth Axis, with a very weak impulſe, is found to revolve, for the Space of three or four Hours. See RESISTANCE, &c.

COMMUNION, in Theology, an uniform Belief in ſeveral Perſons; whereby they are united under one Head, in one Church.

In this Senſe, the *Lutherans*, *Calviniſts*, &c. are ſaid to have been cut off from the *Romiſh Communion*.

This is the primitive uſe of the Word *Communion*, as appears from the Canons of the Council of *Elvira*.

COMMUNION is alſo uſed for the Act of *communicating* in, or participating of the Sacrament of the Euchariſt. See COMMUNICATING.

The fourth Council of the *Lateran*, decrees, that each Believer ſhall receive the *Communion*, at leaſt, at *Eaſter*; which ſeems to import a tacit Deſire that they ſhould do it oftner; as, in effect, they did do it much oftner in the primitive Days. *Gratian*, and the *Maſter of the Sentences*, preſcribe it as a Rule for the Laity, to *Communicate* three times a Year, at *Eaſter*, *Whitſontide*, and *Chriſtmas*. But, in the XIIIth Century, the Practice was got on foot, never to approach the Euchariſt except at *Eaſter*; and the Council thought fit to enjoin it then by a Law, leſt their Coldneſs and Remiſſneſs ſhould go farther ſtill.

COM-

COMMUNION *under both Kinds*; in the XIth Century, the *Communion* was ſtill receiv'd by the Laity in both Kinds; or, rather, the Species of Bread was dipp'd in the Wine, as is own'd by the *Romaniſts* themſelves, *Acta SS. Benedict. Sec.* III.

M. *de Marca* obſerves, that they receiv'd it at firſt in their Hands; *Hiſt. de Bearn.* and believes the *Communion* under one Kind alone, to have had its Riſe in the Weſt under Pope *Urban* II. in 1096, at the Conqueſt of the Holy Land.

The XXVIIIth Canon of the Council of *Clermont*, enjoins the *Communion* to be receiv'd under both Kinds, diſtinctly: adding, however, two Exceptions; the one of Neceſſity, the other of Caution, *niſi per neceſſitatem, & cautelam*; the firſt in favour of the Sick, the ſecond of the Abſtemious, or thoſe who had an Averſion for Wine.

It formerly was a kind of Canonical Puniſhment, for Clerks guilty of any Crime, to be reduc'd to *Lay-Communion*, *i. e.* only to receive it as the Laity did, *viz.* under one Kind.

They had another Puniſhment of the ſame Nature, tho under a different Name, called *Foreign Communion*; to which the Canons frequently condemn'd their Biſhops and other Clerks. This Puniſhment was not any Excommunication, or Depoſition; but a kind of Suſpenſion of the Function of the Order, and a Degradation from the Rank they held in the Church.

It had its Name, becauſe the *Communion* was only granted to the Criminal on the Foot of a Foreign Clerk, *i. e.* being reduc'd to the loweſt of his Order, he took place after all thoſe of his Rank, as all Clerks, *&c.* did in the Churches to which they did not belong. The ſecond Council of *Agda*, orders every Clerk that abſents himſelf from the Church, to be reduc'd to foreign *Communion*.

COMMUNITY, a Society, or Body of Men united together under certain common Laws, agreed on among themſelves, or impos'd by a Superior. See SOCIETY, and CORPORATION.

The *Romans*, who ſeem to have given the firſt hint of *Communities* to the ſeveral Nations into which their Empire was divided, doubtleſs borrow'd it from ſome Rules of their Neighbours: They call'd 'em *Colleges*; which Term, among them, had nearly the ſame Signification with *Community* among us. See COLLEGE.

*Communities* are of two Kinds, *Eccleſiaſtick* and *Laick*: The firſt are either *Secular*, as Chapters of Cathedral and Collegiate Churches; or *Regular*, as Convents, Monaſteries, *&c.* See CHAPTER, CONVENT, *&c.*

*Lay Communities* are of various Kinds; ſome contracted by a fix'd Abode of a Year and a Day in the ſame Place; others form'd by the Diſcharge of the ſame Office, the Profeſſion of the ſame Art, or attending the ſame Place of Worſhip; as thoſe of *Pariſhes*, *Fraternities*, &c. See FRATERNITY, PARISH, *&c.*

Accordingly, the Word is commonly underſtood of pious Foundations for the Support of ſeveral Perſons, either in a Secular or Regular Life; as *Colleges*, *Abbies*, *Convents*, *Priories*, *Conventual Seminaries*, *Hoſpitals*, *Inns*, &c.

COMMUNITY, alſo, is particularly uſed for the joint Property in Effects between Husband and Wife: The Reſult of which *Community* is, that during Marriage they are equally intitled to all Effects, and liable to all Debts, contracted either before or under Marriage.

*Community* is a Species of Succeſſion, and the Acceptation of *Community* reſembles an hereditary Addition.

*Community* was ſet on foot in favour of the Wives, to enter 'em in as Sharers in the Husband's Effects.

In Countries where the Civil Law obtains, this *Community* has no place; nor even in ſeveral Cuſtomary Countries; as being reputed a Burden on the Man.

Antiently, the Woman's Share in the *Community* was only one third: and this appears ſtill the Senſe of the Law among us; the Widow, at the Deceaſe of her Husband, being only intitled to one third Part of the Moveables.

COMMUNITY *continu'd*, is that which ſubſiſts between the Survivor of two Perſons join'd in Marriage, and the minor Children of that Marriage: when the Survivor has not made any Inventory of the Effects in Poſſeſſion during Marriage, the Widow may either renounce *Community* with her Children, or continue it.

COMMUNITY *tacit*, is a *Community* contracted between a Man and Woman, by the mere mingling of their Effects; provided they have liv'd together the Space of a Year and a Day: This *Community* being odious, is now aboliſh'd.

COMMUTATION, in Law, a Change of Penalty, or Puniſhment, *viz.* of a greater for a leſs, *&c.* as when Death is *commuted* for, by perpetual Impriſonment, *&c.* See PUNISHMENT.

Some doubt whether the Word be properly applied to any Change but that of Puniſhment: others will have it indifferently ſerve for the exchanging, or trucking of any thing. See PERMUTATION.

COMMUTATION, in Aſtronomy. The *Angle of Commutation*, is the Diſtance between the Sun's true Place ſeen from the Earth, and the Place of a Planet reduc'd to the Eclyptic. See PLACE.

Thus is the Angle E S R, (Tab. *Aſtronomy*, Fig. 24.) ſubtended between the Sun's true Place E, view'd from the Earth; and that of a Planet reduc'd to the Eclyptic, R, is the *Angle of the Commutation*.

The *Angle of Commutation*, therefore, is found by ſubtracting the Sun's true Place E, from the heliocentrical Place of the Planet R; or contrarily.

COMPACT, in Phyſicks, denotes a Body to be cloſe, denſe, and heavy; having few Pores, and thoſe ſmall ones. See BODY, PORE, *&c.*

The heavieſt Metals, as Gold and Silver, are the moſt *compact*. See WEIGHT.

COMPACT, in a Legal Senſe, ſignifies an Agreement, or Contract ſtipulated between ſeveral Parties. See PACT, CONTRACT, *&c.*

COMPACT is alſo the Name of a celebrated Bull, confirm'd by Pope *Paul* IV. relating to the Cardinals.

In virtue of the Bill of *Compact*, Cardinals can only confer Benefices in their natural State; *i. e.* Regular Benefices on Regulars. See BENEFICE, CARDINAL, REGULAR, *&c.*

COMPANY, a collective Term, underſtood of ſeveral Perſons aſſembled together in the ſame Place, or with the ſame Deſign. See SOCIETY.

The Word is form'd of the French *Compagnie*, and that of *Companio*; and *Companies*, which, *Chifflet* obſerves, are found in the *Salic Law*, Tit. 66. and are properly Military Words, underſtood of Soldiers who, according to the modern Phraſe, are *Comrades*, or Meſs-mates, *i. e.* lodge together, eat together, *&c.* of the Latin *cum*, with, and *panis*, Bread.

It may be added, that in ſome *Greek* Authors under the Weſtern Empire, the Word κομπανια occurs in the Senſe of *Society*: but 'tis more probable, that the *Greeks* borrow'd it from the *French* or *Italians*.

COMPANY, in Commerce, is an Aſſociation of ſeveral Merchants, or others, who unite in one common Intereſt, and contribute by their Stock, their Counſel, and their Cares, to the ſetting on foot, or ſupporting of ſome profitable Eſtabliſhment. See COMMERCE.

Tho *Company* and *Society* be, in effect, the ſame thing, yet Cuſtom has made a difference between 'em: Society being underſtood of two, or three Dealers, or not many more; (ſee SOCIETY:) and *Company* of a greater Number.

A ſecond difference between *Companies* and Societies, is, that the firſt, eſpecially when they have excluſive Privileges, cannot be eſtabliſh'd without the Conceſſion of the Prince; and need Letters Patent, Charters, *&c.* See CHARTER, CORPORATION, PRIVILEGE, *&c.*

Whereas, for the latter, 'tis ſufficient to have the Conſent of the Members, fix'd, and certify'd by Acts and Contracts, and authoriz'd by By-Laws.

Laſtly, the Word *Company* ſeems more peculiarly appropriated to thoſe grand Aſſociations, ſet on foot for the Commerce of the remote Parts of the World; as the *Engliſh* and *Dutch Eaſt-India Company*, *South-Sea Company*, *Miſſiſippi Company*, &c. The Riſe and Eſtabliſhment whereof, we ſhall here ſet before the Reader.

*Engliſh* COMPANIES.

*Eaſt-India* COMPANY, was form'd towards the latter end of the Reign of Queen *Elizabeth*; their Charter being dated in 1599.

Their firſt Fleet, ſent out in 1600, brought back ſo rich a Cargo, that in a few Years they number'd 20 Ships. K. *James* I. to ſhew how much he had its Intereſt at heart, ſent ſeveral Embaſſies to the Great *Mogul*, Kings of *Perſia*, *Japan*, and other Princes, to make Treaties of Commerce in his Name, and that of the *Company*; ſome of which ſubſiſt ſtill: The King of *Perſia*, in particular, granted the *Company* ſeveral extraordinary Favours, in recompence for that Service the *Engliſh* had done him, in aſſiſting him to expel the *Portugueze* from *Ormus*; who by means of their Lodgment there, uſurp'd the whole Commerce of the *Perſian* Gulf.

But its chief Favours the *Company* receiv'd at the hands of King *Charles* II. who, by a Charter in 1669, granted 'em the Port and Iſland of *Bombay*, with all the Rights thereof, as ſurrender'd to him by the *Portugueze*: only reſerving to himſelf the Sovereignty and Homage thereof, with a yearly Acknowledgment of 10 *l. per Annum* in Gold.—By another Charter in 1674, he granted 'em, in like manner, the Iſland of St. *Helena*, belonging to him by Right of Conqueſt, from the *Dutch*, who had before taken it from the *Engliſh*.—By a third Charter, he granted them a Power to erect a Court of Judicature, compos'd of a Legiſt, and two Merchants, in all their Places, Settlements, Factories, *&c.* to judge of Seizures, and all marine Diſputes; as alſo about Bargains, Exchange, *&c.* and even of all Crimes committed on the high Seas, or in the Countries and Territories of the *Company*, in

in *Asia*, *Africa*, and *America*; the whole, however, agreeable to the Usages and Customs of Merchants, and the Laws of *England*. In 1662, the same Prince granted the *Company* a Charter, which contain'd a Confirmation of the antient ones of King *James* I. and Queen *Elizabeth*; or rather, a new Charter, granting 'em abundance of Privileges which they had not before enjoy'd: This Charter is properly the Basis of the Company, and the Foundation, wherein are founded all the Rights, and the Policy of the *New Company*, establish'd in 1698.

This Charter consists of 28 Articles: In the first, the King erects the *Company* into a Corporation, or Body Politick, under the Name of the *Governor and Company of Merchants trading to the* East-Indies. The 3d grants 'em a common Seal: the 4th a Governor, and 24 Directors, or Assistants, chose out of the Proprietors, or Actionaries; the 6th, 7th, 8th, and 9th, regulate the Order and Policy of the *Company*, settle the Officers, manner of Election, Authority, General Meetings, &c. The 10th fixes the Extent of the Grant; permits all those of the Company, their Children if 21 Years of Age, their Apprentices, Factors, and Domesticks, to trade to the *Indies*, and any Part of *Asia*, *Africa*, and *America*, beyond the *Cape of Good Hope*, and the *Straits of Magellan*. The 11th grants 'em Power to make By-Laws, to be observ'd by the Officers, Factors, &c. and to enjoin Penalties; provided those Laws be not contrary to the standing Laws of *England*. By the 12th, the Payment of the Duties, Customs, &c. of Goods imported or exported is delay'd; one half of it for half a Year, the other half a whole one: Providing, withal, that if the Goods thus imported, be exported again in the Space of 13 Months, no Duties shall be paid for such Export, provided it be done aboard *English* Vessels. The 13th Article grants 'em a Power of exporting foreign Gold for their Service abroad, and even *English* Gold coin'd in the Tower; provided the Sum do not exceed 50000 Pounds Sterling at a Voyage. By the 14th and 15th, they are allow'd six large Ships, and six Pinks, to pass freely thro' all the Limits of their Grant, without the King's being able to lay any Imbargo on 'em on any occasion. The 16th grants 'em an exclusive Privilege; to have the sole Right of dealing to the *Indies*: ordering the Seizure and Confiscation of all Vessels, &c. which shall interfere. The 19th obliges 'em to bring, at least, as much Gold and Silver into the Kingdom, as they carry out each Voyage. The 21st fixes the Sum in the Capital Stock necessary to have a Vote in the Meetings, at 500 *l.* Sterling: allowing, however, several of those who have less, to join several together to form a Voice. Lastly, the 26th allows 'em to send Vessels of War, and even to make Peace and War with all the Nations not Christian, in the Extent of their Grant.

All these four Charters of King *Charles* II. were confirm'd by King *James* II. especially the last, which was enforc'd with new Sanctions; particularly the Article of Exclusion; which, in the Time of King *Charles*, had been but little regarded, but was now enforc'd with such rigorous Prohibitions, that all Interlopers seem'd for ever excluded.

The Actions, or Subscriptions of the *Company* were originally only of 50 Pounds Sterling: but the Directors having a considerable Dividend to make in 1676, it was agreed to join the Profit to the Original, instead of withdrawing it; and thus the Actions were doubled, and became of 100 Pounds Sterling.

The first Capital was only 369891 *l.* Sterling, and 5 *s.* which being thus doubled, amounted to 739782 *l.* Sterling, and 10 *s.* to which, if the Profits of the *Company* to the Year 1685, *viz.* 963639 *l.* Sterl. be added, the whole Stock will be 1703422 *l.* Sterling.

The *Company* had from time to time undergone great Losses; first, in 1680, by the Loss of *Bantam*, out of which they were driven, and their Magazines plunder'd by the *Dutch*; under Pretence of assisting Sultan *Agui* against Sultan *Agom*, his Father. 2dly, In 1682, when the great Numbers of Interlopers, to whom King *Charles* II. too easily granted Permissions, lower'd their Actions *Cent. per Cent.* 3dly, By the War which the *Company* maintain'd in the *Indies* against the Great *Mogul*; wherein it was oblig'd to abandon the Factory of *Surat*, and to retire to *Bombay*. But still, she had repair'd her Stock, and supported the Reputation of her Commerce till the Revolution, which happen'd soon after: when the War, and the incredible Losses the *Company* sustain'd by the *French* Privateers, &c. put it into so desperate a Condition, that appearing scarce possible to be supported, a new one was erected: to which, however, the old one was in a little time united.

The Charter of the *New East-India Company* is of the Year 1698: its Stock was so considerable, and the Subscriptions so very ready, that in two Years time, the *Company* had 49 Vessels equipp'd in its Service; which was double of what the old one ever had: and sent to the *Indies (communibus annis)* a Million Sterling in Silver: Whereas the former had never sent above 500000 *l.* This *New Company* stands on the same Footing with the old one; its Charter is the same, in effect: and having enter'd with it, the Propriety of all the Factories and Effects in the *Indies*, has adopted most of its Regulations: So that this is rather to be esteem'd a Continuation of the same *Company*, than a new Corporation.

*For the Policy of the* COMPANY: To be a Member thereof, the Candidate must be an *Englishman*, at least naturaliz'd, and pay 5 Pounds Sterling at his admittance. To be a Director, the Candidate must have 2000 *l.* Sterl. Capital Stock: The Deputy and Sub-Governor not to be continued above two Years successively. Seven of the Directors to be chosen new every Year.

The Court of Directors, which meet twice a Week, is ordinarily divided into several Committees, or Offices; first, for the buying of Goods to be sent to the *Indies*; a second for the freighting of Vessels; a third for the examining of what passes in the *Indies*; a fourth to take Care of the Magazines; and a fifth for the soliciting of Affairs. The *Company* has a Secretary and a Book-keeper; under the first is 12 Clerks, and under the second 6. They have also a Cashier, and Warehouse-keepers; under the first are six Clerks, and under the second several Porters, &c.

The *Company* has, properly, only a few little Vessels of its own, used in the *Indies*: the rest, which make the Commerce, belong to other Persons; ordinarily, to three or four of the richest Directors, or other great Merchants, who build 'em on purpose, to let 'em out, on freight, to the Company for each Voyage, according to a Charter-Party agreed on between 'em.

The Cargo the *Company* sends to the *Indies*, is chiefly Ingots of Gold, Gold-Dust, *French* Louis d'Ors, *Spanish* Pistoles, Pieces of Eight, and even *English* Money, but under certain Restrictions: This Gold and Silver ordinarily makes $\frac{1}{4}$ or $\frac{1}{5}$ of the whole Cargo. The rest is Lead, *Swedish* and *Spanish* Iron, Guns, Pouder, *English* Cloths, Serges, and other Manufactures of the Country; Cochineal, Quicksilver, Vermilion, Coral, Amber, &c.

The Returns from the *Indies* are, Pepper, Drugs, Coffee, Cotton, Saltpeter, Cloths of Gold and Silver, Raw Silks from *Persia* and *China*, *China* and *Japan* Ware, and other Curiosities. These Returns usually amount to 900000 *l.* Sterling *per Annum*.

Tho the whole Commerce of the *Indies* belongs to the *Company*, exclusive of all other Subjects of *England*; yet private Persons are admitted to trade thither in two manners.

1st, By obtaining a Permission of the *Company*, on the Terms of a Charter-Party: *e. gr.* whereof the Principal are, that they shall carry a certain proportion of Silver, Merchandize, and even Recruits of Soldiers, for the *Company*, &c. and that they pay a Consideration to the *Company*, for the Manufactures, Gold, Silver, &c. These Vessels of Allowance are not at liberty to bring home any Kinds of Merchandize at pleasure, but only such as are permitted by the Regulation of 1686: the chief of which is Pepper, and other Commodities, from *China*, *Japan*, and *Tonquin*. At their Return, the Cargo must be consign'd to the *Company*, who sell it by Inch of Candle, at their next general Sale.

The 2d way is by means of Allowances of Luggage, which the *Company* grants to the Proprietors of the Ships it freights to the *Indies*, and the Officers and Crew of the same.

The *Company* has four principal Establishments, or Factories in the *Indies*; *viz.* at *Surat* in the Gulf of *Bengal*, the Coast of *Coromandel*, and in *Persia*: that at *Priaman* in the Island of *Sumatra*, is inconsiderable. See FACTORY.

*Royal African* COMPANY, establish'd for the Commerce of the Coasts of *Guinea*, is govern'd like that of the *East-Indies*.

Its Privilege is exclusive: It sends out, yearly, ten or a Dozen Ships, of about 150 Ton, loaden with Iron-Works, Scissars, Knives, Muskets, Cottons, and other less considerable Merchandizes.

The Returns are in Gold-Dust, Elephants Teeth, Wax, and Leathers: But the best Article of its Commerce is the Negroes, which it sends to *Jamaica*, *Barbadoes*, and other *English* Isles in *America*; frequently, even to the Parts of *New Spain*. See NEGRO, ASSIENTO, &c.

Its publick Sales are five or six times in a Year, in the manner of those of the *East-India Company*.

*The first Establishment of this Company*, was by a Charter granted in 1661, in favour of the Duke of *York*; securing to him the Commerce of all the Country, Coasts, Islands, &c. belonging to the Crown of *England*, or not possess'd by any other Christian Prince; from *Cape Blanc* in 20° Nor. Lat. to the *Cape of Good Hope* in 34°30′ Sou. Lat. The Charter was soon after return'd into the King's Hands by the Duke, and revok'd, by consent of the Parties associated with him in the Enterprize; and a new Charter granted in 1663, with ampler Privileges than the former.

The principal Adventurers here, were Queen *Katherine* of *Portugal*, Queen *Mary* of *France*, the Duke of *York*, *Henrietta Maria* Ducheſs of *Orleans*, Prince *Rupert*; in brief, the whole Court came into it. The other Adventurers, *i. e.* thoſe who were to be charg'd with the Management of Affairs, were choſen from among the wealthieſt and ableſt Merchants; eſpecially thoſe who had already dealt to thoſe Countries. By this Charter the Grant was enlarg'd, and the *Company* put in poſſeſſion of all the Countries, *&c.* between the Port of *Salley* in S. *Barbary* to the *Cape of Good Hope*, for a thouſand Years; only reſerving to the Crown the Homage thereof, with the Acknowledgment of two Elephants to be preſented the King, or his Succeſſors, every time any of 'em ſhould ſet foot within the Countries and Colonies in their Grant.

The Privileges granted by the Charter, are, 1ſt, That the *Company* ſhall be a Corporation, or Body Politick; ſhall have a common Seal, bearing on one ſide an Elephant, ſupported by two Negro's; on the other, the King's Portrait. That the Governor, with his Deputy, with 7 of the 24, or 13 of the 36 Directors, be authoriz'd to take on 'em the Direction of Affairs: That they may hold Courts, make Laws, inflict Puniſhments, *&c.* provided, ſtill, they be equitable, and conſiſtent with the Laws of *England*. That the Adventurers may transfer their Stock at pleaſure; provided the Transfer be made in open Court, and be regiſter'd. That it may equip and ſend out what Veſſels it pleaſes, for Commerce or War; but that it pay the Duties and Cuſtoms. That no Veſſels but thoſe of the *Company*, and thoſe authoriz'd by it, ſhall traffick within the Limits of its Grant; on Pain of Confiſcation. That the *Company* may make War, in defence of its Colonies, againſt Invaders, *&c.* That it have the Benefit of all the Mines in its Territories; the King only reſerving to himſelf two thirds of the Gold Mines, upon bearing two thirds of the Expence. Laſtly, that the King reſerves for himſelf and his Succeſſors, the Right of intervening, and being admitted at any time a Sharer in the Stock, upon contributing a proportionable Sum to the reſt.

This Charter was confirm'd by new Letters Patent in 1673; follow'd by a Proclamation, inforcing the Obſervance of the Article of Excluſion: But neither Charter nor Proclamation being able to ſecure 'em from Interlopers, they had recourſe to the Protection of King *James* II. who had been twice among the number of Merchants Adventurers; of whom they obtain'd a moſt ſevere Declaration on their behalf, in the Year 1685.

On this foot the Company has ſtood ever ſince, till the Year 1720; when a *New African Company* being form'd by the Duke of *Chandois*, and others; and a Charter purchas'd at the Expence of 250000 *l.* Sterling; the two *Companies* ſoon became united.

*Hamburgh* Company, is the oldeſt trading Eſtabliſhment in the Kingdom; tho not always known by that Name, nor reſtrain'd to thoſe narrow Bounds under which it is now confined.

It was, firſt, call'd the *Company of Merchants trading to Calais, Holland, Zealand, Brabant, and Flanders:* Then it acquir'd the general Title of *Merchant-Adventurers of England*; as being compos'd of all the *Engliſh* Merchants who traded to the *Low-Countries*, the *Baltic*, and the *German* Ocean. Laſtly, it was call'd *the Company of Merchant-Adventurers of England trading to Hamburgh.*

This *Company*, as well as ſome others in *England* built on its Model, is very different from thoſe abovemention'd; and differs widely from the ordinary Plan and Syſtem of ſuch Societies. In effect, this is not a Society of Dealers, each furniſhing a part of the Sum to conſtitute the Capital Stock of the *Company*; but a mere Aſſociation, or Body of Merchants, who have nothing in common but the Grant and Privilege of trading to *Hamburgh*, and ſome other Cities of *Germany*; each managing his own Commerce, and on his own Bottom: only obſerving a certain Diſcipline, and ſome Regulations, which none but the *Company* can eſtabliſh or change.

The firſt Charter whereby the *Hamburgh Company* was eſtabliſh'd, was in 1406, under the Reign of K. *Henry* IV. It was afterwards confirm'd, and augmented with divers Privileges by many of his Succeſſors; among the reſt, by *Henry* V. in 1413, *Henry* VI. in 1422, *Henry* VII. in 1493, 1505, and 1506; *Henry* VIII. in 1509, 1517, and 1531; *Edward* VI. in 1547; Queen *Mary* in 1553, *Elizabeth* in 1564 and 1586; *James* I. in 1605, and *Charles* II. in 1661.

But of all theſe Charters, there are, properly, none but thoſe of *Henry* IV. *Henry* VII. *Elizabeth*, *James*, and *Charles*, that are of any importance, or that give the *Company* any thing new; the reſt being only ſimple Confirmations.

Before the Charter of *Henry* IV. all the *Engliſh* Merchants who traffick'd out of the Realm, were left to their own Conduct; and manag'd Affairs with Foreigners, as might be moſt for their reſpective Intereſts; without any regard to the general Commerce of the Nation.

*Henry*, obſerving this Diſorder, endeavour'd to remedy it, by uniting all the Merchants in his Dominions into one Body; wherein, without loſing the liberty of trading each for himſelf, they might be governed by a *Company* ſtill ſubſiſting; and be ſubject to Regulations, which ſhould ſecure the general Intereſt of the National Commerce, without prejudice to the Intereſt of Particulars.

With this View, he granted all the Merchants of his States, particularly thoſe of *Calais*, then in his Hands, a Power of aſſociating themſelves into a Body Politick, with Directors and Governors, both in *England* and abroad; to hold Aſſemblies, both for the Direction of Buſineſs, and the deciding of Controverſies among Merchants; make Laws; puniſh Delinquents; and impoſe moderate Duties and Taxes on Merchandizes, and Merchants, to be employ'd in the Service of the Corporation.

Theſe few Articles of the Charter of *Henry* IV. were much augmented by *Henry* VII. who firſt gave 'em the Title of *Merchant-Adventurers to Calais, Holland*, &c. gave 'em a Power of proclaiming and continuing free Fairs at *Calais*; and order'd, that to be reputed a Member of the Society, each Perſon pay 20 Marks Sterling; and that the ſeveral Members ſhould attend the General Meetings appointed by the Directors, whether at *London*, *Calais*, or elſewhere.

The Inexecution of this laſt Article, and contempt of ſome of the reſt, occaſioning great Inconveniencies to the *Company*'s Affairs, another Charter was procur'd; whereby, the Pain of Impriſonment was menaced, for thoſe who ſhould abſent themſelves from the Aſſemblies without lawful Cauſe, or ſhould diſobey the Laws.

A Requeſt being made to Queen *Elizabeth*, in 1564, for an Explanation of certain Articles in the Charter of *Henry* VII. and a Confirmation of the reſt granted by other Kings; that Princeſs, by a Charter of the ſame Year, declares, That to end all Diſputes, they ſhall be incorporated a-new, under the Title of *the Company of Merchant-Adventurers of England*; that all who were Members of the former *Company*, ſhould, if they deſir'd it, be admitted Members of this: that they ſhould have a common Seal; that they ſhould admit into their Society what other Perſons, and on what Terms they pleas'd; and expel 'em again on misbehaviour: that the City of *Hamburgh*, and neighbouring Cities, ſhould be reputed within their Grant, together with thoſe of the *Low-Countries*, &c. in that of the former *Company*. That no Member ſhould marry out of the Kingdom; nor purchaſe Lands, *&c.* in any City beyond Sea: and that thoſe who do, ſhall be, *ipſo facto*, excluded for ever.

Twenty two Years after this firſt Charter, Queen *Elizabeth* granted 'em a ſecond; confirming the former, and further, granting 'em a Privilege of Excluſion; with a Power of erecting in each City within their Grant a ſtanding Council.

After theſe Privileges, the woollen Manufactures became the principal Object of their Application; wherein they were diſturb'd in the following Reign: King *James* I. having erected a Corporation in 1616, in favour of ſome private Perſons, who offer'd to ſet up a Manufacture for dying and preſſing Cloths, *&c.* under pretence whereof, the *Company* of Merchant-Adventurers were prohibited dealing therein. But that Project not ſucceeding, and the Charter being revok'd two Years afterwards, the Merchant-Adventurers were reſtor'd to their antient Privileges, and a new Charter was given 'em, confirming their excluſive Right; and allowing 'em to have Officers in the ſeveral Cuſtom-houſes, to have an Eye that they were not prejudic'd in their Woollens, under pretence of the like Merchandizes, which others were allow'd to ſend to other Parts. This Charter of King *James*, is the laſt of thoſe confirm'd by *Charles* II. in the Grand Charter of 1661.

The Revolutions which had happen'd in the *Low-Countries* towards the end of the XVIth Century, and which laid the Foundation of the Republick of *Holland*, having hinder'd the *Company* from continuing their Commerce with their antient freedom; it was oblig'd to turn it almoſt wholly to the Side of *Hamburgh*, and the Cities on the *German* Ocean: From which Change, ſome People took occaſion to change its Name to that of the *Hamburgh Company*; tho the antient Title of *Merchant-Adventurers* is ſtill retain'd in all their Writings.

*Muſcovy* Company, was firſt projected towards the End of the Reign of King *Edward* VI. executed in the firſt and ſecond Years of *Philip* and *Mary*; but had not its Perfection, till its Charter was confirm'd by Act of Parliament under Queen *Elizabeth*, in 1566.

It had its riſe from certain Adventurers, who were ſent in three Veſſels on the Diſcovery of new Countries; and to find out a North-Eaſt Paſſage to *China*: Theſe falling into the White Sea, and making up to the Port of *Archangel*, being exceedingly well receiv'd by the *Muſcovites*, at their

return, ſolicited Letters Patent to ſecure to themſelves the Commerce of *Ruſſia*, for which they had form'd an Aſſociation.

The Charter was promis'd 'em by *Edward* VI. but he dying, was firſt diſpatch'd by Queen *Mary*, in 1555. By this Charter, the Aſſociation was declar'd a Body Politick, under the Name of the *Company of Merchants Adventurers of England, for the Diſcovery of Lands, Territories, Iſlands, &c. unknown, or unfrequented.* Their Privileges were, to to have a Governor, 4 Conſuls, and 24 Aſſiſtants, for their Commerce; for their Policy, to make Laws, inflict Penalties, ſend out Ships to make Diſcoveries, take Poſſeſſion of 'em in the King's Name, ſet up the Banner-Royal of *England*, plant them; and, laſtly, the excluſive Privilege of trading to *Archangel*, and other Parts of *Muſcovy*, not yet frequented by the *Engliſh*.

This Charter, not being ſufficiently guarded, was confirm'd by Parliament in the eighth Year of Queen *Elizabeth*; wherein 'twas enacted, that in regard the former Name was too long, they ſhould now be call'd the *Company of Engliſh Merchants for diſcovering new Trades*; under which Name, they ſhould be capable of acquiring and holding all kinds of Lands, Manors, Rents, *&c.* not exceeding 100 Marks *per Annum*, and not held of her Majeſty. That no part of the Continent, Iſland, Harbour, *&c.* not known or frequented before the firſt Enterpriſe of the Merchants of their *Company*, ſituate to the North, or North-Weſt, or North-Eaſt of *London*; nor any part of the Continent, Iſland, *&c.* under the Obedience of the Emperor of *Ruſſia*, or in the Countries of *Armenia*, *Media*, *Hircania*, *Perſia*, or the *Caſpian* Sea; ſhall be viſited by any Subjects of *England*, to exerciſe any Commerce, without the Conſent of the ſaid *Company*, on Pain of Confiſcation. The ſaid *Company* ſhall uſe no Ships in her new Commerce, but thoſe of the Nation; nor tranſport any Cloths, Serges, or other Woollen Stuffs, till they have been dyed and preſs'd. That in caſe the *Company* diſcontinue of it ſelf to unload Commodities in the Road of the Abbey of *S. Nicholas* in *Ruſſia*, or ſome other Port on the North Coaſts of *Ruſſia*, for the Space of three Years; that the other Subjects of *England* ſhall be allow'd to traffick to *Narva*, while the ſaid *Company* diſcontinues its Commerce into *Ruſſia*; only uſing *Engliſh* Veſſels.

This *Company* ſubſiſted with Reputation almoſt a whole Century; till the Time of the Civil Wars. 'Tis ſaid, the Czar hearing of the Murder of King *Charles*, order'd all the *Engliſh* in his States to be expell'd; which the *Dutch* taking the advantage of, ſettled in their room. After the Reſtoration, the Remains of the *Company* re-eſtabliſh'd part of their Commerce at *Archangel*, but never with the ſame Succeſs as before; the *Ruſſians* being now well accuſtom'd to the *Dutch* Merchants and Merchandizes.

This *Company* ſubſiſts ſtill, nearly on the Foot of that of *Hamburgh*, and the Northern and *Turky Companies*, *i. e.* each Member thereof trafficks for himſelf, and on his own bottom; only paying a Duty of 12 or 13 Pounds Sterling, beſide ſome other Dues impos'd from time to time for the Occaſions of the *Company* and the Commerce in general.

*North Sea* Company, or, as ſome, more agreeably to its Charter, call it, *Eaſt-land Country*, is eſtabliſh'd on the Foot of that of *Hamburgh*; from whence it appears to have been diſmember'd.
