TO THE

# KING.

*SIR,*

THE ARTS and SCIENCES humbly crave Audience of Your Majesty. The near Concern they have in the Happiness of a People, assures 'em of the favourable Attention of a Prince who makes that Happiness his own. 'Tis by These, the Parsimony of Nature is supplied, and Life render'd easy and agreeable under its numerous Infirmities. By these the Mind is reclaim'd from its native Wildness; and enrich'd with Sentiments which lead to Virtue and Glory. 'Tis these, in fine, that make the Difference between your Majesty's Subjects, and the Savages of *Canada*, or the *Cape of Good Hope*.

THE Protection of ARTS has ever been esteemed the proper Province of the Great. 'Tis a Branch of the Regal Office; which a Prince, like Your Majesty, equal to the whole Charge of a Crown, will not suffer to be alienated into other Hands. From this, do the first and most distinguish'd Names in the List of Fame, derive a large Share of their Glory: and if there be any Age or Nation more conspicuous than the rest, and which is look'd on with Envy by our own; 'tis that wherein the Sovereigns have signaliz'd themselves most in this Quality.——Indeed, the Time seems at hand, when we are no longer to envy *Rome* her AUGUSTUS and AUGUSTAN AGE, but *Rome* in her turn shall envy ours.

SOMETHING extraordinary is apparently intended by Providence in calling such a Prince, to such a People: A Prince who feels a generous Impulse to devote his Cares and all his Toils to the Welfare of Mankind; and a People conspiring with unexampled Ardor and Unanimity to all his glorious Views. Some of our best Princes have had their Hands ty'd down; check'd by reluctant Factions, who opposed every nobler Design: Your Majesty has found the happy Secret, to make even Contention do you Homage; and turn Opposition itself into Approbation, and Applause.

THERE is a Time reserv'd in Fate for every Nation to arrive at its Height; and the uppermost Place on the Terrestrial Ball is held successively by several States. May not the numerous Presages which usher in Your Majesty's Reign, give us room

to

to expect that our Turn is next; and that what *Greece* was under ALEXANDER, and *Rome* under AUGUSTUS *Cæsar*, *Britain* shall be under GEORGE and CAROLINE?

BUT even this were to under-rate our Hopes, which are rais'd, by Your Majesty, to something still more truly glorious. Greatness, so fondly coveted, has already cost the World very dear; and, tho still pursued by unthinking Men under almost every Shape, is only desirable in a few. Of it self it is rather an Object of Terror and Alarm, than Delight; and at best only pleases, when join'd with something naturally amiable. From the Practice of Your Majesty, Men may correct their Sentiments, and learn, that Greatness has no Charm except when founded in Goodness. To be Great, and a King, is but a small Matter with Your Majesty; 'tis a Quality many others enjoy in common with You, and to which some have even been doom'd, to their Infamy: 'tis what *Herod* was, and *Nebuchadnezzar* was; and *Nero*, and *Domitian* were. But, while other Princes chuse to be great in what is destructive, and others in things wholly indifferent; 'tis Your Majesty's Praise to be great in what is the Perfection of our Nature, and that whereby we approach nearest the Deity. Happy Choice! to use Power only as the Means of rendering your Beneficence more diffusive; and thus make Power and Royalty minister to the Happiness of Mankind, which they have too often invaded.

YOUR Majesty commands a People capable of every thing. Not more fitted to shine in Arms, or maintain an extended Commerce; than to succeed in the stiller Pursuits of Philosophy and Literature. And it will be Your Majesty's Glory, not to let any of their Talents lie unemploy'd.——If Your Majesty gives the Word, while some of 'em are busied in avenging Your Cause, by humbling some turbulent Monarch; some in extending your Dominions by new Settlements, and some in increasing your Peoples Wealth, by new Trades: Others will be employ'd in enlarging our Knowledge, by new Discoveries in Nature, or new Contrivances of Art; others in refining our Language; others in improving our Morals; and others in recording the Glories of your Reign, in immortal Verse.

THE Work I here presume to lay at Your Majesty's Feet, is an Attempt towards a Survey of the Republick of Learning, as it stands at the Beginning of Your Majesty's auspicious Reign. We have here the Boundary that circumscribes our present Prospect; and separates the known, from the unknown Parts of the Intelligible World. Under Your Majesty's Princely Influence and Encouragement, we promise our selves this Boundary will be removed, and the Prospect extended far into the other Hemisphere. Methinks I see Trophies erecting to Your Majesty in the yet undiscover'd Regions of Science; and Your Majesty's Name inscribed to Inventions at present held impossible!

I am, with all Sincerity and Devotion,

*May it please Your* MAJESTY,

*Your Majesty's most Dutiful,*

*and Obedient Subject,*

*and Servant,*

Ephraim Chambers.

# THE PREFACE.

'TIS not without ſome Concern that I put this Work in the Reader's Hands; a Work ſo diſproportionate to a ſingle Perſon's Experience, and which might have employ'd an Academy. What adds to my Jealouſy, is the little meaſure of Time allow'd for a Performance to which a Man's whole Life ſcarce ſeems equal. The bare Vocabulary of the Academy *della Cruſca* was above forty Years in compiling, and the Dictionary of the *French* Academy much longer; and yet the preſent Work is as much more extenſive than either of them in its Nature and Subject, as it falls ſhort of 'em in number of Years, or of Perſons employ'd.

THE Reader might be here led to ſuſpect ſomething of Diſingenuity; and think I firſt put a Book upon him, and then give him Reaſons why I ſhould not have done it.-----But his Suſpicions will ceaſe, when he is appriz'd of the Advantages under which I engaged; which, in one Senſe, are ſuperior to what had been known in any former Work of the Kind; all that had been done in them accruing, of courſe, to the Benefit of this. I come like an Heir to a large Patrimony, gradually rais'd by the Induſtry, and Endeavours of a long Race of Anceſtors. What the *French Academiſts*, the *Jeſuits de Trevoux*, *Daviler*, *Chomel*, *Savary*, *Chauvin*, *Harris*, *Wolfius*, and many more have done, has been ſubſervient to my Purpoſes. To ſay nothing of a numerous Claſs of particular Dictionaries which contributed their Share; Lexicons on almoſt every Subject, from Medicine and Law, down to Heraldry and the Manage.

Yet this is but a Part. I am far from having contented my ſelf to take what was ready procured; but have augmented it with a large Acceſſion from other Quarters. No part of the Commonwealth of Learning, but has been traffick'd to on this Occaſion. Recourſe has been had to the *Originals* themſelves on the ſeveral Arts; and, not to mention what ſmall Matters could be furniſhed *de proprio penu*, the Reader will here have Extracts and Accounts from a great Number of *Authors* of all Kinds, either overlook'd by former Dictionariſts, or not then extant; and a Multitude of Improvements in the ſeveral Parts, eſpecially of Natural Knowledge, made in theſe laſt Years. I ſhould produce Inſtances hereof; but I hope this would be needleſs, as it is endleſs; and that there are few Pages which will not afford ſeveral.

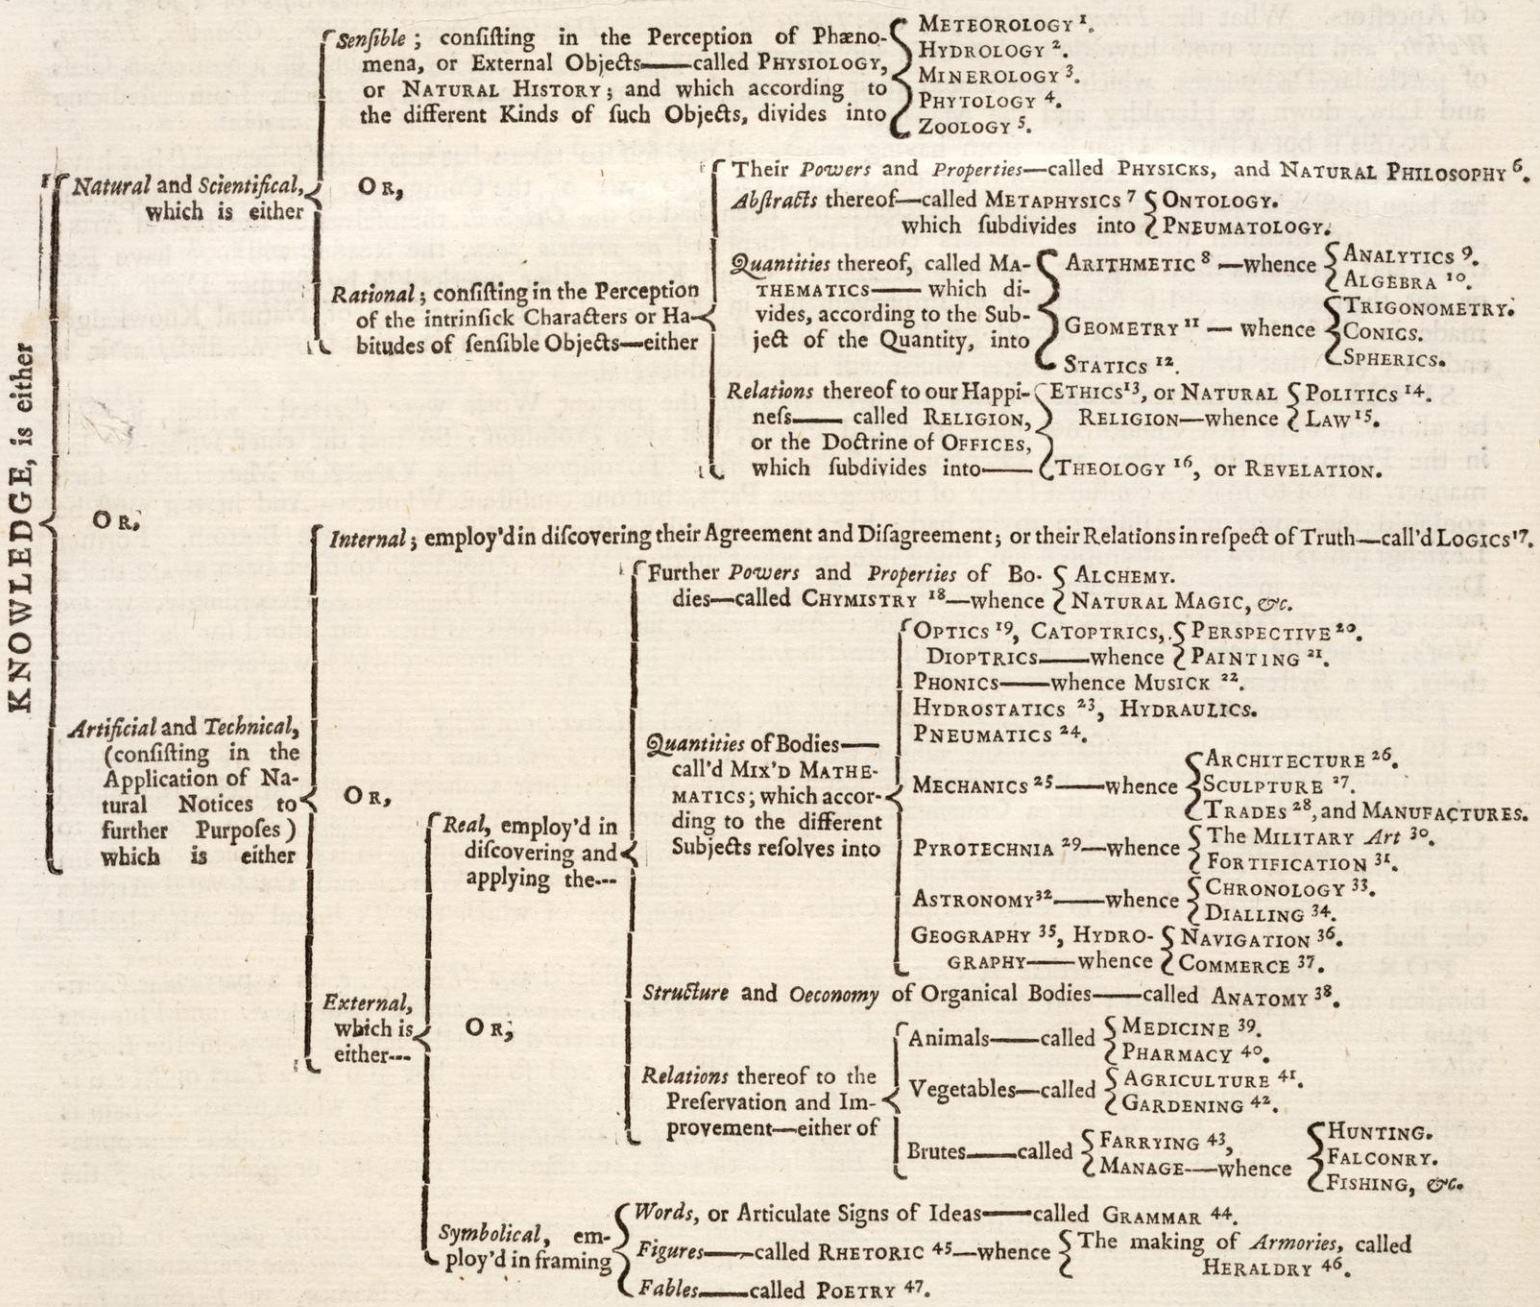
SUCH are the Sources from whence the Materials of the preſent Work were derived; which, it muſt be allowed, were rich enough not only to afford Plenty, but even Profuſion: So that the chief Difficulty lay in the Form; in the Order, and Œconomy of the Work: To diſpoſe ſuch a Variety of Materials in ſuch manner, as not to make a confuſed Heap of incongruous Parts, but one conſiſtent Whole.-----And here it muſt be confeſs'd there was no Aſſiſtance to be had; but I was forced to ſtand wholly on my own Bottom. Former Lexicographers have not attempted any thing like Structure in their Works; nor ſeem to have been aware that a Dictionary was in ſome meaſure capable of the Advantages of a continued Diſcourſe. Accordingly, we ſee nothing like a Whole in what they have done: And hence, ſuch Materials as they did afford for the preſent Work, generally needed further Preparation, ere they became fit for our Purpoſe; which was as different from theirs, as a Syſtem from a Cento.

THIS we endeavoured to attain, by conſidering the ſeveral Matters not only abſolutely and independently, as to what they are in themſelves; but alſo relatively, or as they reſpect each other. They are both treated as ſo many Wholes, and as ſo many Parts of ſome greater Whole; their Connexion with which, is pointed out by a *Reference*. So that by a Courſe of References, from Generals to Particulars; from Premiſes to Concluſions; from Cauſe to Effect; and *vice verſa*, *i. e.* in one word, from more to leſs complex, and from leſs to more: A Communication is opened between the ſeveral Parts of the Work; and the ſeveral Articles are in ſome meaſure replaced in their natural Order of Science, out of which the Technical or Alphabetical one had remov'd them.

FOR an Inſtance----The Article ANATOMY is not only conſider'd as a *Whole*, *i. e.* as a particular Combination or Syſtem of Ideas; and accordingly divided into its Parts, *Humane* and *Comparative*: and Humane again ſubdivided into the Analyſis of *Solids* and *Fluids*, (which are referr'd to in the ſeveral Places in the Book, where they themſelves being treated of, refer to others ſtill lower, and ſo on) but alſo as a *Part* of MEDICINE; which accordingly it refers to, and which it ſelf refers to another higher, *&c.*-----By which means a Chain is carried on from one End of an Art to the other, *i. e.* from the firſt or ſimpleſt Complication of Ideas appropriated to the Art, which we call the *Elements* or Principles thereof; to the moſt complex or general one, the *Name* or Term that denotes the whole Art.

NOR is the Purſuit dropt here: but as the Elements or Data in one Art, are ordinarily *quæſita* in ſome other ſubordinate one, and are furniſhed thereby; (as here for Inſtance, the Elements of *Anatomy* are furniſhed by *Natural Hiſtory*, *Phyſicks*, and *Mechanicks*; and Anatomy may be conſidered as a Datum, or Element furniſhed to Medicine) We carry on the View farther, and refer out of one Art or Province into the adjoining ones, and thus lay the whole Land of Knowledge open: It appears indeed with the Face of a Wilderneſs; but 'tis a Wilderneſs thro' which the Reader may purſue his Journey as ſecurely, tho not ſo expeditiouſly and eaſily, as thro' a regular Parterre.

IT may be even ſaid, that if the Syſtem be an Improvement upon the Dictionary; the Dictionary is ſome Advantage to the Syſtem; and that this is perhaps the only Way wherein the whole Circle or Body of Knowledge can be deliver'd. In any other Form, many thouſand Things muſt neceſſarily be hid and overlook'd: All the Pins, the Joints, the binding of the Fabrick muſt be inviſible of courſe; all the leſſer Parts, one might ſay all the Parts whatſoever, muſt be in ſome meaſure ſwallowed up in the Whole. The Imagination, ſtretch'd



and amplified to take in ſo large a Structure, can have but a very general, indiſtinguiſhing Perception of any of the Parts.-----Whereas the Parts are not leſs Matter of Knowledge when taken ſeparately, than when put together. Nay, and in ſtrictneſs, as our Ideas are all Singulars or Individuals, and as every Thing that exiſts is one; it ſeems more natural to conſider Knowledge in its proper Parts, *i. e.* as divided into ſeparate Articles denoted by different Terms; than to conſider the whole Aſſemblage of it in its utmoſt Compoſition: which is a thing merely artificial and imaginary.

AND yet the latter Way muſt be allow'd to have many and real Advantages over the former; which in truth is only of uſe and ſignificance as it partakes thereof: For this Reaſon, that all Writing is in its own Nature artificial; and that the Imagination is really the Faculty it immediately applies to. Hence it ſhould follow, that the moſt advantageous way, is to make uſe of both Methods: To conſider every Point both as a Part; to help the Imagination to the Whole: and as a Whole, to help it to every Part.-----Which is the View in the preſent Work—ſo far as the many and great Difficulties we had to labour under would allow us to purſue it.

IN this View we have endeavoured to give the Subſtance of what has been hitherto found in the ſeveral Branches of Knowledge both natural and artificial; that is, of Nature, *firſt*, as ſhe appears to our Senſes; either ſpontaneouſly, as in Natural Hiſtory; or with the Aſſiſtance of Art, as in Anatomy, Chymiſtry, Medicine, Agriculture, *&c.* *Secondly*, to our Imagination; as in Grammar, Rhetorick, Poetry, *&c.* *Thirdly*, to our Reaſon; as in Phyſicks, Metaphyſicks, Logicks, and Mathematicks. With the ſeveral ſubordinate Arts ariſing from each; as Architecture, Painting, Sculpture, Trade, Manufactures, Policy, Law, *&c.* and numerous remote Particulars, not immediately reducible to any of theſe Heads; as Heraldry, Philology, Antiquities, Cuſtoms, *&c.*

THE *Plan* of the Work, then, I hope, will be allow'd to be good; whatever Exceptions may be taken to the Execution of it. It wou'd look extravagant to ſay, That half the Men of Letters of an Age might be employ'd in it to advantage; and yet it will appear, that a Work accompliſh'd as it ought to be, on the Footing of this, would anſwer all the Purpoſes of a Library, except Parade and Incumbrance; and contribute more to the propagating of uſeful Knowledge thro' the Body of a People, than any, I had almoſt ſaid all, the Books extant.---After this, let the Reader judge how far I may deſerve Cenſure for engaging in it, even diſadvantageouſly; and whether to have fail'd in ſo noble a Deſign, may not be ſome degree of Praiſe.

BUT, it will be here neceſſary to carry on the Diviſion of Knowledge a little further; and make a preciſe Partition of the Body thereof, in the more formal Way of Analyſis: The rather, as an Analyſis, by ſhewing the Origin and Derivation of the ſeveral Parts, and the Relation in which they ſtand to their common Stock and to each other; will aſſiſt in reſtoring 'em to their proper Places, and connecting 'em together.

THIS is a View of Knowledge, as it were, *in ſemine*; exhibiting only the grand, conſtituent Parts thereof. It would be endleſs to purſue it into all its Members and Ramifications; which is the proper Buſineſs of the Book it ſelf. It might here, therefore, ſeem ſufficient to refer from the ſeveral Heads thus deduced, to the ſame in the Courſe of the Work; where their Diviſion is carried on. And yet this would ſometimes prove inconvenient for the Reader; who to find ſome particular Matter muſt go a long Circuit, and be bandied from one part of the Book to another: To ſay nothing of the Interruptions which may frequently happen in the Series of References. To obviate this we ſhall take a middle Courſe, and carry on the Diſtribution further, in a Note in the Margin;

gin; but this in a looſer manner, to prevent the Embarraſs of an Analyſis ſo complex and diffuſive as this muſt prove. Some of the principal Heads of each Kind will here come in ſight, and ſuch as will naturally ſuggeſt, and lead to the reſt; ſo that this will afford the Reader a ſort of Summary of the Whole: And at the ſame time will diſpenſe a kind of auxiliary or ſuccedaneous Order thro'out the Whole; the numerous Articles omitted, all naturally enough ranging themſelves to their proper Places among theſe. A Detail of this Kind is of the more Conſequence, as it may not only ſupply the Office of a *Table of Contents*, by preſenting the diſperſed Materials of the Book in one View; but alſo that of a *Directory*, by indicating the Order they are moſt advantageouſly read in.-----*Note*, then, That the *initial* Articles here, tally to the *final* ones of the Analyſis; and that the ſeveral *Members* hereof, are ſo many *Heads* in the Book.

I

[1] METEOROLOGY, or the Hiſtory of AIR and ATMOSPHERE: including, 1°, that of its Contents, *Æther, Fire, Vapour, Exhalation*, &c. 2°, Meteors form'd therein, as *Cloud, Rain, Shower, Drop, Snow, Hail, Dew, Damp*, &c. *Rainbow, Parhelion, Halo, Thunder, Water-ſpout*, &c. Winds, *Mon-ſoon, Hurricane*, and the like.

[2] HYDROLOGY, or the Hiſtory of WATER; including that of *Springs, Rivers, Acidulæ*, &c. of *Lake, Sea, Ocean*, &c. of *Tides, Deluge*, and the like.

[3] MINEROLOGY, or the Hiſtory of EARTH; 1°, Its Parts, as *Mountain, Mine, Moſs, Bog, Grotto*; and their Phænomena, as *Earthquake, Volcano, Conflagration*, &c. Its Strata, as *Clay, Bole, Sand*- &c. 2°, Foſſils or Minerals, as *Metals, Gold, Silver, Mercury*, &c. with Operations relating to 'em, as *Fuſion, Refining, Purifying, Parting, Eſſaying*, &c. *Litharge, Lavatory, Pinea*, &c. Salts, as *Nitre, Natron, Gemma, Allum, Armoniac, Borax*, &c. Sulphurs, as *Arſenic, Amber, Ambergreaſe, Coal, Bitumen, Naphtha, Petrol*, &c. Semimetals, as *Antimony, Cinnabar, Marcaſite, Magnet, Biſmuth, Calamine, Cobalt*, &c. Stones, as *Marble, Porphyry, Slate, Asbeſtos*, &c. Gems, as *Diamond, Ruby, Emerald, Opal, Turcoiſe*, &c. *Emery, Lapis*, &c. whence *Ultramarine, Azure*, &c. Petrifactions, as *Cryſtal, Spar, Stalactites, Trochites, Cornu Ammonis*, and the like.

[4] PHYTOLOGY, or the Hiſtory of PLANTS; their Origin, in the *Seed, Fruit*, &c. Their Kinds, as *Tree, Herb*, &c. extraordinary Species, as *Tea, Coffee, Paraguay, Vine, Ginſeng, Cotton, Tobacco*, &c. *Coral, Muſhroom, Truffle, Paraſite, Miſſelto, Moſs*, &c. Parts, as *Root, Stone, Flower*; *Wood*, as *Guaiacum, Saſſafras, Ebony, Aloes*, &c. Leaf, as *Foliation, Roll*, &c. Bark, *Quinquina*, &c. *Piſtil, Farina, Stamina*, &c. Operations thereof, as *Vegetation, Germination, Circulation*, &c. Circumſtances, as *Perpendicularity, Parallelism, Fertility*, &c. Productions, as *Honey, Wax, Balm, Sugar, Manna*, &c. *Gum, Reſin, Camphor*, &c. *Indigo, Opium, Galls*, and the like.

[5] ZOOLOGY, or the Hiſtory of ANIMALS: Their Origin in *Egg, Embryo, Fœtus, Generation, Conception, Geſtation, Hatching, Migration*, &c. Their Kinds, as *Quadruped, Bird, Fiſh, Inſect, Reptile, Ruminant, Carnivorous*, &c. Extraordinary Species, as *Unicorn, Torpedo, Tarantula, Tortoiſe, Cameleon, Salamander*, &c. *Barnacle, Anchovy, Death-Watch*, &c. Monſters, as *Double Animals, Hermaphrodite, Mule, Pigmy, Giant*, &c. Metamorphoſes, as *Aurelia, Metempſychoſis*, &c. Parts, as *Head, Hand, Foot, Finger, Tail, Fin, Wing, Gills*, &c. Covering, as *Hair, Wool, Silk, Feathers*, &c. Armature, as *Nail, Sting, Horn, Tooth, Shell, Proboſcis, Web*, &c. Productions, as *Pearl, Bezoard, Caſtoreum, Civet, Meconium, Mummy, Uſnea*, &c. *Kermes, Cochineal*, &c. Motion, as *Flying, Swimming*, and the like.

[6] PHYSICS, or the Doctrine of CAUSES; as *Nature, Law*, &c. Occaſions or Means, as *Principle, Matter, Form*, &c. Their Compoſition or Conſtitution, in *Element, Atom, Particle, Body. Chaos, World, Univerſe, Space, Vacuum*, &c. Properties of Body, as *Extenſion, Solidity, Figure, Diviſibility*, &c. Powers thereof, as *Attraction, Cohesion, Gravitation, Repulſion. Elaſticity, Electricity, Magnetiſm*, &c. Qualities, as *Fluidity, Firmneſs, Ductility, Hardneſs, Volatility, Denſity, Polarity*, &c. *Light, Heat, Cold*, &c. Operations or Effects thereof, as *Motion, Rarefaction, Dilatation, Condenſation. Diſſolution, Ebullition, Freezing, Evaporation, Fermentation, Digeſtion, Effervescence*, &c. *Viſion, Seeing, Hearing, Feeling, Smelling*, &c. Modifications or Changes, as *Alteration, Corruption, Putrefaction, Generation, Degeneration, Tranſmutation*, &c. Syſtems or Hypotheſes hereof, *Corpuſcular, Epicurean, Ariſtotelian, Peripatetic, Carteſian, Newtonian*, &c.—— Occult and Fictitious Qualities, Powers, and Operations, *Antiperiſtaſis, Sympathy, Antipathy, Archæus*, &c. *Magic, Witchcraft, Virgula Divina, Ligature, Taliſman, Cabbala*, &c. *Druid, Bard, Brachman, Gymnoſophiſt, Magi, Roſicrucian*, and the like.

[7] METAPHYSICS, or the Doctrine of ENS, *Eſſence, Exiſtence, Power, Act, Underſtanding*, &c.——The MIND, Its Faculties, *Apprehenſion, Judgment, Imagination, Reaſon, Wit*, &c. Its Operations, *Retention, Reflection, Aſſociation, Abſtraction*, &c. Its Perceptions, as *Subſtance, Accident, Mode*, &c. Relations, as *Unity, Multitude, Infinity, Univerſal*, &c. *Quantity, Quality, Whole, Part*, &c. *Genus, Species, Difference*, &c. *Proper, Oppoſite, Circumſtance, External*, &c. Effects hereof, *Knowledge, Science, Art, Experience*, &c. Conditions, *Probability, Certainty, Fallacy*, &c. Syſtems hereof, *Nominals, Scotiſts*, &c.

[8] ARITHMETIC, including the Doctrine of DISCRETE or *Diſcontinuous* QUANTITY, viz. *Number, Ratio, Proportion*, &c. Kinds, as *Integer, Fraction, Decimal, Surd*, &c. Relations, as *Root, Power, Square, Cube*, &c. Rules or Operations thereof, as *Notation, Numeration, Addition, Subtraction*, &c. *Reduction, Practice, Poſition*, &c. *Extraction, Approximation*, &c. Inſtruments ſubſervient thereto, as *Logarithms, Nepair's Bones*, &c.

[9] ANALYTICS, or the Reſolution of PROBLEMS by *Species* or Symbolical Expreſſions: Rules or Operations hereof, *Addition, Subtraction, Multiplication*, &c. Application thereof, in *Combinations, Permutations, Magic Squares, Chances, Gaming*, &c. *Series, Progreſſions*, &c. *Methods de Maximis, Fluxions, Exponentials, Tangents*, &c.

[10] ALGEBRA, or the Doctrine of EQUATIONS; *Simple, Quadratic, Cubic*, &c. Operations thereof, as *Reduction, Conſtruction*, &c.

[11] GEOMETRY, or the Doctrine of EXTENDED, or *Continuous* QUANTITY, viz. 1°, Lines, *Right, Perpendicular, Parallel, Oblique*, &c. Angles, *Acute, Scalenous, Vertical, Oppoſite*, &c. 2°, Figures, or Surfaces, *Triangle, Square, Parallelogram, Trapezium, Polygon*, &c. Circumſtances hereof, as *Perimeter, Area*, &c. Operations relating hereto, as *Biſſecting, Dividing, Multiplying, Meaſuring*, &c. Inſtruments uſed therein, as *Compaſſes, Ruler, Square, Parallelism, Scale*, &c. Curves, as *Circle, Cycloid, Ciſſoid, Catenaria, Cauſtic, Evolute, Quadratrix*, &c. Circumſtances thereof, as *Axis, Diameter, Radius, Centre, Circumference, Abſciſs, Ordinate*, &c. *Arch, Chord, Sine, Tangent, Secant*, &c. Inſtruments uſed herein, as *Artificial Lines, Canons*, &c. Operations ariſing herefrom, as Surveying, taking *Angles* or *Bearings*, &c. with *Quadrant, Plain-Table, Semicircle, Circumferentor*, &c. taking *Diſtances*, with *Chain, Perambulator*, &c. *Plotting* into *Draught, Map*, &c. with *Protractor*, &c. 3°, Solids or Bodies, as *Cube, Parallelopiped, Priſm, Pyramid, Cylinder, Polyhedron*, &c. Their *Surface, Solidity*, &c. Operations relating hereto, as *Cubature*, meaſuring of *Timber, Gauging*, &c. Inſtruments uſed herein, as *Carpenters Rule, Sector, Sliding Rule, Gauging Rod*, &c.——The Sphere, its Doctrine, *Projection*, &c. Application thereof, in *Planiſphere, Analemma*, &c.——The Cone, its *Sections, Ellipſis, Parabola, Hyperbola*, &c. Their *Aſymptotes, Foci*, &c. Their *Conſtruction, Quadrature, Rectification*, &c.

[12] STATICS, or the Doctrine of MOTION; Its Laws, *Velocity, Momentum*, &c. Cauſes, as *Gravity, Percuſſion, Communication*, &c. Modifications, as *Compoſition, Acceleration, Retardation, Reflection, Refraction*, &c. Kinds, as *Aſcent, Deſcent, Central, Centripetal*, &c. *Oſcillation, Undulation, Projection*, &c. Powers or Applications thereof, in *Lever, Screw*, &c. *Pendulum, Projectile*, &c. Operations directed hereby, as *Gunnery*, the *Mechanical Arts*, &c. enumerated hereafter.

[13] ETHICS, or the Conſideration of *Natural Inclinations, Paſſions, Taſtes*, &c. Objects thereof, as *Good, Evil, Virtue, Vice, Beauty, Deformity*, &c. *Pleaſure, Pain*, &c. *Rectitude, Equity, Conſcience*, &c. *Law, Obligation*, &c. *Will, Liberty, Action, Aſſent*, &c. *Neceſſity, Premotion, Providence*, &c. Syſtems hereof, *Stoiciſm, Platoniſm, Academy, Cynic*, and the like.

[14] POLICY, or the Conſideration of SOCIETY and COMMONWEAL; Its Origin, in *Contract*, &c. Conſtitutions and Forms thereof, as, 1°, *Monarchy, Deſpotiſm*, &c. Powers thereof, *King, Queen, Prince, Duke. Emperor, Sultan, Sophy, Caliph, Cæſar, Czar, Inca, Ethnarch, Tetrarch, Deſpot*, and the like. Their Titles, *Majeſty, Highneſs, Grace, Excellence*, and the like. Their Regalia, *Crown, Sceptre, Tiara, Faſces*, &c. 2°, Ariſtocracy; its Powers, as *Archon, Dictator, Doge, Senate, Council*, &c. 3°, Democracy; *States-General, Stadtholder, Protector*, &c. Their Succeſſion, *Elective, Hereditary*, by *Primogeniture*, &c. Their Tranſactions, as *Peace, War, Treaty, Union, League, Croiſade*, &c. By *Armies, Fleets, Embaſſies. Secretary, Plenipotentiary, Envoy, Legate, Nuntio*, &c. Their Territories, *Empire, Principality, Signory*, &c. Their Eſtates, *Nobles, Commons, Clergy. Cenſus, Enumeration, Tribe, Quarter*, &c. *Province, Circle, County, City, Town*, &c. Magiſtrature, *Chancellor, Judge, Sheriff, Juſtice, Mayor, Alderman, Bailiff, Conſtable. Inter-Rex, Conſul, Pretor, Cenſor, Vizir. Tribune, Triumvir, Provoſt, Ephori, Ædile, Prefect, Queſtor, Proconſul. Vice-Roy, Lieutenant, Steward, Warden, Keeper. Juriſconſultus, Procurator, Advocate, Barriſter, Prothonotary, Cuſtos, Philazer, Chirographer, Uſher, Clerk*, &c. Their Juriſdiction; Courts, as *Areopagus, Comitia*, &c. *Parliament, Diet, Divan. Chamber, Aſſize, Privy Council*, &c. *Chancery, King's-Bench, Exchequer, Admiralty, Verge, Seſſions, Turn, County Court, Leet, Eyre*, &c. *Terms, Circuits, Commiſſions, Oyer. Convocation, Arches, Prerogative, Faculties, Delegates. Rota, Inquiſition*, &c. Their Revenues, *Treaſury, Fiſc, Exchequer, Tally, Political Arithmetic. Duties, Cuſtoms, Gabel, Exciſe*, &c. *Coinage, Money, Intereſt, Uſury*, &c. Their Houſhold, *Chamber, Green-Cloth, Ward-robe*, &c. Under *Steward, Chamberlain, Comptroller, Cofferer, Aga, Oda*, &c. *Guard, Stables, Ordnance*, &c. directed by *Captain, Maſter, Equerry*, &c. Militia, *Navy, Poſt, Timariot, Arriere-ban*, &c. Dignities, *Dauphin, Elector, Palatine, Grave, Palſgrave. Thane, Earl, Count, Knight, Garter, Baronet, Bath, Teutonic, Malta, Elephant*, &c. *Gentleman, Yeoman*, &c. Their *Names, Sirnames, Titles, Precedence*, &c. Factions, *Patrician, Guelf, Tory*, &c. Corporations, or leſſer *Communities, Univerſity, Academy, Colleges*;

I MIGHT here have ended my Preface; and perhaps the Reader would be willing enough to be thus dismiss'd. But something has been already started which will require a further Disquisition.-----The Distribution we have made of Knowledge is founded on this, That the several Branches thereof commence either *Art* or *Science* according to the Agency or Non-agency of the human Mind in respect thereof: It remains to take the Matter up a little higher; and explain the Reason and Manner of this Operation. To consider Knowledge in its Principles,

*lege, Society, Chapter, School, Hospital, Inn.* Public *Edifices, Guild-hall, Prison, Tower, Arsenal, Library, Musæum, Circus,* &c. Solemn *Ceremonies,* as *Triumph, Tournament, Carrousel, Quadril. Donative, Medal, Trophy, Monument, Funeral, Tomb, Catacomb,* &c.

[15] LAW, or the Rules and Measures of SOCIETY; publish'd in *Act, Statute, Charter, Rescript, Constitution, Decretal, Senatus-consultum, Pragmatic Sanction,* &c. Recorded, in *Institute, Code, Novel, Register, Pandect, Corpus, Domesday,* &c. Kinds, *Civil, Canon, Sumptuary,* &c. Respecting, 1°, Persons, as *the King*; his *Prerogative, Royalties,* &c. *viz.* granting *Dispensation, Pardon, Commendam, Exemption. Dignities, Franchises. Forest, Park, Purlieu, Vert, Chase. Impost, Subsidy, Toll, Tax, Aid, Hidage, Scutage, Prisage. Waif, Estray, Escheat, Treasure Trove,* &c. Officers and Magistrates, created by *Writ, Warrant, Commission,* &c. Their *Oath, Test, Declaration. Visitation, Procuration,* &c. Corporations, *Regular, Secular,* &c. made by *Charter, Patent,* &c. dissolved by *Quo Warranto, Mandamus,* &c. Subjects, as *Denizen, Naturalization. Husband, Wife, Marriage, Concubine, Separation, Alimony, Dower, Affinity, Bastard. Adoption, Emancipation. Lord, Tenant, Villain, Vassal. Client, Patron. Servant, Slave, Retainer. Manumission, Enfranchising,* &c. *Tenure, Service, Homage, Fealty, Serjeanty, Escuage, Relief, Guardian, Wardship, Socage. Heir, Intestate, Ancestor,* &c.——2°, Estates or Things; either Real, as *Tenements, Hereditaments. Freehold, Fee, Customary, Tail, Gavelkind, Courtesy,* &c. In *Reversion, Mortgage, Hypotheca,* &c. *Manor, Demesn, Honours. Common, Glebe, Advowson,* &c. Acquired by *Occupancy, Prescription, Descent, Deed, Feoffment, Fine, Recovery. Defeizance, Lease, Devise, Attournment, Investiture, Livery,* &c. Lost by *Alienation, Mortmain, Disseisin, Abatement. Surrender, Discontinuance, Disclaimer, Forfeiture, Resignation, Deprivation, Lapse,* &c. Or Personal, as *Goods, Chattels, Emblements, Annuity, Debts, Specialty, Recognizance,* &c. Acquired by *Succession, Heriot, Mortuary, Heir Loom. Testament, Executor, Administrator, Ordinary. Judgment, Fieri facias,* &c.——3°, Wrongs or Injuries; either Criminal, and to Persons, as *Treason, Parricide, Murder, Felony, Assault, Rape, Assassin. Adultery, Fornication, Defloration, Polygamy, Heresy,* &c. Prosecuted by *Indictment, Accusation, Actions of Conspiracy,* and *upon the Case, Habeas Corpus,* &c. Punish'd, with *Hanging, Crucifixion, Wheel, Furca, Scala, Pillory, Transportation, Divorce, Scaphism,* &c. Or Civil, and to Things; as *Trespass, Nuisance, Deforcement,* &c. Remedied by Writs of *Quare Impedit, Darrein Presentment, Appeal, Atteint, Error, Right, Disceit, Supersedeas, Audita Querela,* &c. Suit, or Course of Proceedings whereby Redress is procured; including, 1°, *Process,* either by *Bill, Summons, Subpœna, Attachment, Capias, Exigent,* &c. to which belong *Appearance, Attorney, Bail, Essoign, Default, Nonsuit, Arraignment,* &c. 2°, Pleading; whence *Count, Declaration, Aid Praier, Voucher, Age Prier, Bar, Abate, Release, Replication, Outlawry, Sequestration,* &c. 3°, Issue; whence *Demurrer.* 4°, Trial; whence *Proof, Evidence, Presumption, Oath, Affidavit, Affirmation. Jury, Challenge, Array, Verdict. Battel, Duel, Champion, Purgation, Ordeal,* &c. *Paine fort & duret, Rack, Torture,* &c. 5°, Judgment; whence *Arrest,* &c. 6°, Execution; whence *Scire facias, Reprieve,* &c.

[16] THEOLOGY, or the Consideration of GOD: his Nature and *Attributes,* as *Eternity, Ubiquity,* &c. His *Unity, Trinity,* &c. *Persons, Hypostasis,* &c. Our Duty to him, discover'd by *Inspiration, Revelation, Prophecy,* &c. by the *Messiah, Evangelists, Apostles,* &c. In the Bible, *Pentateuch, Hagiographa, Psalter, Gospel, Apocalypse,* &c. *Canon, Deuterocanonical, Apocrypha,* &c. Circumstances thereof, *Style, Allegory, Type, Parable, Mystical,* &c. *Text, Version, Septuagint, Vulgate,* &c. *Paraphrase, Targum,* &c. *Points, Quotations,* &c. Matter thereof; Declarations, of *Incarnation, Passion, Crucifixion, Miracle,* &c. Injunctions, as *Worship, Prayer, Sacrifice,* &c. Sacraments, as *Eucharist, Baptism,* &c. Promises, as *Grace, Justification,* &c. Decrees, as *Predestination, Election, Reprobation,* &c. Breaches on our Part, *Sin, Apostacy, Imputation,* &c. Remedies thereof, by *Repentance, Confession,* &c. Rewards and Punishments allotted thereto, *Heaven, Hell, Resurrection, Immortality,* &c. His Ministers, *Angels, Devil,* &c. His Church, either *Triumphant,* as *Saints, Martyrs, Confessors, Fathers, Doctors,* &c. or *Militant,* &c. Its Offices, *Creed, Liturgy, Decalogue, Doxology, Trisagion,* &c. Discipline, Rites, &c. as *Absolution, Anathema, Excommunication,* &c. *Catechumen, Confirmation, Genuflexion,* &c. Its Priesthood, as *Bishop, Priest, Deacon,* &c. *Patriarch, Archbishop, Primate, Dean, Canon, Prebend, Archdeacon, Chantor,* &c. Their Ensigns, *Mitre, Crozier, Pallium,* &c. Their *Ordination, Consecration, Collation, Imposition,* &c. *Benefices, Revenues, Tithes,* &c. Places set apart, as *Church, Chapel, Oratory,* &c. *Cathedral, Parochial, Cardinal,* &c. *Choir, Nave, Altar, Font,* &c. *Diocese, Province,* &c. Assemblies, as *Synod, Council, Convocation, Consistory, Chapter, Presbytery,* &c. *Feasts, Fasts, Lent, Vigils,* &c. *Easter, Epiphany, Pentecost, Annunciation, Purification, Presentation,* &c.——Particular Systems or Professions thereof, *viz. Reform'd* or Protestant, as the *Church of England, Lutheranism, Calvinism,* &c. Romish or *Latin*; its *Mass, Breviary, Legend,* &c. *Transubstantiation, Extreme Unction, Supererogation, Penance,* &c. *Hierarchy*; *Pope, Cardinal,* &c. *Secular, Regular, Monk, Religious, Abbot, Prior,* &c. *Order, Congregation, Monastery, General,* &c. *Jesuit, Carthusian, Carmelite, Franciscan, Dominican,* &c. *Third* Order, *Cenobite, Anchorite, Hermit, Recluse, Monastery, Cell,* &c. *Rule, Vow, Reform, Noviciate,* &c. *Image, Relicks, Saint, Virgin, Rosary,* &c. *Canonization, Beatification,* &c. *Indulgence, Jubilee, Exorcism,* &c.——Greek, its *Anthologue, Prothesis, Particles,* &c. *Maronite, Jacobite, Thomæan,* &c. *Armenian, Cophti, Solitary,* &c.——Sects, and Heresies; as *Manichees, Gnostics, Arians,* &c. *Ebionites, Nestorians, Millenaries, Quartodecimans,* &c. *Montanists, Socinians, Arminians,* &c. *Presbyterians, Anabaptists, Independents, Quakers,* &c. *Quietists, Servetists, Pre-adamites,* &c. *Deist, Atheist, Spinosism,* &c.——Jewish, its *Talmud, Tradition,* &c. *Temple, Tabernacle, Sanctuary, Ark,* &c. *Pontiff, Levite, Tribe,* &c. *Ephod, Theraphim, Circumcision, Sabbath, Sanhedrim,* &c. *Rabbin, Doctor, Cabbala, Massora,* &c. *Pharisee, Sadducee, Essean, Caraite,* &c. *Nazarite, Therapeuta,* &c. *Samaritan, Dosithean, Hellenist,* &c. *Passover, Scenopegia, Gehenna,* &c.——Mahometan; Their *Alcoran, Mufti, Dervice, Mosque, Mussulman,* &c.——Heathen; Their *Idolatry, Theogony,* &c. Their Gods; *Penates, Lares, Lemures,* &c. *Panes, Sylvans, Nymphs, Tritons,* &c. *Demi-god, Hero, Fortune, Destiny, Dæmon, Genius,* &c. *Apotheosis, Sacrifice,* &c. *Feast, Lustration,* &c. as *Eleusinia, Saturnalia, Cerealia,* &c. Ministers thereof; *Rex, Pontifex, Flamen, Vestal, Corybantes,* &c. Games; *Olympic, Isthmean,* &c. *Divination, Oracle, Pythian, Sibyl,* &c. *Augur, Auspex,* &c. *Temple, Fane, Pagod,* &c. Sects; as *Banians, Bramans, Sabæans,* &c.

[17] LOGICS, or the Consideration of IDEAS or NOTIONS; Their Kinds, *Simple, Complex, Adequate,* &c. Disposition, into *Classes* or *Categories, Predicaments, Predicates,* &c. Their Composition, or Association into *Axioms, Propositions, Problems, Theorems, Theses, Hypotheses.* Arguments, as *Syllogism, Enthymeme, Sorites, Sophism, Dilemma, Crocodilus,* &c. Their Resolution, *Definition, Division,* &c. into *Premisses, Consequences, Terms,* &c. Their *Truth, Falshood, Evidence, Demonstration,* &c. Operations therewith, as *Argumentation, Induction, Discoursing, Philosophizing,* &c. *Disputation, Distinction, Contradiction, Reductio ad absurdum,* &c.

[18] CHYMISTRY, including the Use of FIRE, *Water, Baths, Ferments, Menstruums, Furnaces, Retorts,* and other Instruments; to change *Animal, Vegetable,* and *Fossil* Bodies; by inducing *Fusion, Putrefaction, Fermentation, Dissolution, Exhalation,* &c. and hereby procuring *Spirits, Salts, Oils. Acid, Alcaline, Aromatic, Urinous. Wines, Vinegars, Flowers, Calces, Crystals, Soaps, Tartars. Regulus, Magistery, Extract, Elixir. Cerus, Minium, Litharge. Quintessence, Phosphorus, Alcahest, Philosopher's Stone,* and the like; by the Operations of *Distillation, Expression, Cohobation, Sublimation, Rectification, Crystillization, Calcination, Amalgamation, Digestion, Precipitation, Vitrification, Fixation, Transmutation,* and the like.——*Arbor Dianæ, Aurum Fulminans, Artificial Earthquake, Magic, Divination,* &c.

[19] OPTICS, including the Laws and Consideration of VISION, and *Visible Objects*; effected by means of *Light,* its *Rays.* Their *Refrangibility, Reflexibility,* &c. *Focus, Transparency, Opacity, Shadow,* &c. ——Reflection thereof, in *Mirror, Looking-glass, Catoptric Cistula,* &c.——Refraction, in *Lens, Prism, Glass,* &c. Application, in *Telescope, Microscope, Magic Lanthorn,* &c. *Spectacle, Polemoscope, Polyhedron, Camera Obscura,* &c.

[20] PERSPECTIVE, or the PROJECTION of *Points, Lines, Planes,* &c. in *Scenography, Orthography, Ichnography, Anamorphosis,* &c.

[21] PAINTING, or the DESIGNING of Objects in *Clair-obscure, Proportion,* &c. with *Ordonnance, Expression,* &c. Circumstances hereof, *Attitude, Contrast, Group,* &c. Kinds, *Limning, Miniature, Camieux, Fresco,* &c. *Enamelling, Mosaic,* &c.

[22] PHONICS, or the Doctrine of SOUNDS, *Voice,* &c. Their Modifications in *Echo, Resonance, Whispering-Place, Speaking-Trumpet,* &c.——Their Tune, *Gravity, Interval,* &c. Time, *Triple,* &c. express'd by *Note, Chord,* &c. Comparisons thereof, *Concord,* as *Unison, Octave, Third, Fourth, Discord,* &c. Composition, as *Melody, Harmony, Counter-point. Symphony, Synaulia, Chime, Song, Rhythmus,* &c. Kinds, *Genera, Mode,* &c. Circumstances, *Key, Cleff, Signature, Transposition,* &c. *Staff, Scale, Gammut, Solfaing, Modulation,* &c. Instruments, *Organ, Bell, Trumpet, Lyre, Cymbal, Violin, Harpsichord,* &c.

[23] HYDROSTATICS, or the Consideration of FLUIDS; their *Specific Gravity, Density, Equilibrium,* &c. Instruments to measure the same, as *Areometer, Hydrostatical Balance,* &c. *Syphon, Torricellian,* &c.——Motion thereof, in *Pump, Fountain, Spiral Screw, Hydrocanisterium, Hydromantic,* &c.

[24] PNEUMATICS, or the Consideration of the AIR; its *Weight, Density, Pressure, Elasticity,* &c. *Condensation, Rarefaction, Motion, Wind,* &c. In *Air-pump, Suction, Vacuum,* &c. Measur'd by *Barometer, Thermometer, Hygrometer, Manometer,* &c. *Anemometer, Windmill,* &c.

[25] MECHANICS, including the Structure and Contrivance of MACHINES, as *Balance, Steelyard, Pully, Polyspast,* &c. *Wheel, Clock, Watch, Pendulum, Spring, Fusee,* &c. *Clepsydra, Coach, Rota Aristotelica, Perpetual Motion,* &c. *Mill, Press, Vice, Lath, Loom, Windlass,* &c. Operations of *Swimming, Diving, Flying,* &c.

[26] ARCHI-

ples, antecedent to such Intervention of ours; and even pursue it up to its Cause, and shew how it exists there, before it be Knowledge: And to trace the Progress of the Mind thro' the Whole, and the Order of the Modifications induced by it. This is a Desideratum, hitherto scarce attempted; but which we could not here decline entering upon, on account of its immediate Relation to the present Design. 'Tis the Basis of all Learning in general; the great, but obscure Hinge, on which the whole Encyclopædia turns.

TO

26 ARCHITECTURE, including the Construction of BUILDINGS; as *House, Temple, Church, Hall, Palace, Theatre,* &c. *Ship, Galley, Galleon, Ark, Buccentaur, Boat,* &c. *Pyramid, Mausoleum, Pantheon,* &c. *Capitol, Seraglio, Escurial,* &c. *Arch, Vault, Bridge, Monument, Tomb,* &c. Forms thereof, *Rotondo, Platform, Pinnacle,* &c. Plans, *Design, Ichnography, Profile,* &c. Parts, as *Foundation, Wall, Roof,* &c. *Door, Window, Stairs, Chimney,* &c. Orders, as *Tuscan, Doric, Corinthian,* &c. *Caryatides, Rustic, Gothic,* &c. Column, *Pilaster, Attic,* &c. Parts thereof, *Entablature, Capital, Pedestal,* &c. *Cornice, Frieze, Base,* &c. *Volute, Pediment, Modillion, Console,* &c. Mouldings, *Ogee, Tore, Astragal, Scotia. Abacus, Ovolo,* &c. Materials, as *Brick, Stone, Tyle, Slate, Shingle,* &c. *Timber, Wainscot, Glass, Lead, Plaster,* &c. *Beam, Rafter, Mortar, Nail, Hinge, Key, Lock,* &c. *Quarry, Masonry,* &c.

27 SCULPTURE, or the framing of *Statue, Figure, Ornament,* &c. in *Relievo, Creux,* &c. as *Carving, Pottery, Porcelain,* &c. Engraving, *Seal, Dye,* &c. *Etching, Cutting. Mezzo Tinto,* &c. Foundery, of *Bell, Letter, Ordnance,* &c. Coining, *Money, Medal, Medallion,* &c. *Pile, Legend,* &c. *Lapidary, Turnery, Inlaying, Vaneering, Damasqueening, Enchasing,* &c.

28 TRADES and MANUFACTURES; as *Printing, Paper-making, Book-binding,* &c. *Gilding, Japanning, Glass-making. Grinding,* &c. *Plumbery, Glaziery, Forging, Hammering,* &c. *Weaving, Bleaching, Whitening,* &c. *Fulling, Dying, Pressing, Sheering, Calendring, Tabying, Freezing,* &c. *Woollen, Silk, Linum Incombustibile,* &c. *Cloth, Serge, Taffety, Stocking,* &c. *Velvet, Tapistry, Hat,* &c. *Tanning, Currying, Tawing,* &c. *Chamoising, Chagreen, Marroquin,* &c. Making *Parchment, Glue. Gun-pouder, Smalt, Soap, Starch,* &c. *Candle, Taper, Torch,* &c. *Steel, Button, Pin, Needle, Pipe, Fan, Peruke,* &c.

29 PYROTECHNY, or *Artificial* FIRE-*Work*; including the Consideration and Use of *Gun-pouder, Match, Fusee,* &c. Of *Ordnance, Cannon, Gun, Mortar,* &c. *Carriage, Charge, Projection, Range, Point-blank, Recoil,* &c. *Petard, Carcass, Shot, Bomb, Granado,* &c. *Rocket, Star,* &c.

30 MILITARY *Art,* including the Consideration of ARMIES, *Fleets, Cavalry, Infantry,* &c. Consisting of *Regiments, Troops, Companies, Phalanx, Legion,* &c. Soldiers, *Dragoon, Grenadier, Fusileer, Cuirassier, Archer, Janisary, Spahi, Velites, Argyraspides, Gend'armery,* &c. Divided into *Squadron, Battalion, Brigade,* &c. Commanded by *General, Marshal, Bashaw, Admiral,* &c. *Lieutenant, Brigadier, Colonel, Captain, Serjeant. Major, Adjutant, Ensign, Quarter-Master. Tribune, Centurion, Primipilus,* &c. In *Battle, Siege, March, Camp,* &c. Ranged in *Line, Column,* &c. Motions, *Attack, Retreat, Halt,* &c. Evolutions, *Wheeling, Counter-wheeling,* &c. Signals, *Word, Drum, Chamade,* &c. Guards, *Garison, Piquet, Patroll, Round, Quarter, Place of Arms,* &c. *Standard, Banner, Eagle, Labarum,* &c. Their Arms, *Artillery, Carabine, Musquet,* &c. *Helmet, Buckler, Pelta, Cuirass,* &c. *Aries, Balista, Catapulta, Fundus,* &c.

31 FORTIFICATION, or the Construction of FORTRESSES; as *Citadel, Castle, Tower,* &c. *Fort, Star, Redoubt,* &c. Works, or Parts thereof, *Rampart, Bastion, Ditch, Counterscarp, Curtain,* &c. *Ravelin, Horn-work, Crown-work,* &c. Approaches, *Trench, Sap, Mine,* &c. *Line, Parallel, Circumvallation,* &c. *Battery, Attack,* &c.

32 ASTRONOMY, or the Doctrine of the HEAVENS; Their *Circles, Ecliptic, Zodiack, Meridian, Equator, Vertical, Azimuth. Galaxy,* &c. Points, as *Pole, Zenith, Nadir,* &c. Celestial *Bodies,* viz. *Stars, Sun,* &c. Assemblage thereof, into *Sign, Constellation,* &c. Their Precession, *Culmination, Refraction. Declination, Ascension, Longitude, Latitude. Altitude, Amplitude, Azimuth.* Planets, as *Saturn, Venus, Earth. Moon, Satellite, Comet,* &c. Their *Places, Aspects, Syzygy, Conjunction, Quadrature. Diameter, Distance, Period, Revolution, Orbit, Node,* &c. Their *Station, Retrogradation, Equation,* &c. Their *Phases, Eclipse, Penumbra, Occultation, Parallax, Crepusculum, Maculæ,* &c. Observations thereof, taken with the *Quadrant, Gnomon, Micrometer, Reticula,* &c. Collected in *Catalogue, Tables,* &c. Hypotheses, or Systems thereof, *Copernican, Tychonic, Ptolemaic,* &c. Exhibited in *Sphere, Globe,* &c.

33 CHRONOLOGY, or the Doctrine of TIME; measur'd by *Year, Month, Week, Day, Hour. Age, Period, Cycle,* &c. Commencing from *Epocha, Creation, Hegira,* &c. Laid down in *Fasti, Almanack, Calendar, Julian, Gregorian,* &c. Accommodated to *Feasts, Feriæ, Easter,* &c. by means of *Epact, Golden Number, Dominical,* &c.

34 DIALLING, including the *Furniture* and Projection of DIALS, *Horizontal, Declining, Reclining, Deinclining,* &c. *Moon-Dial, Ring-Dial, Horodictical,* &c. Instruments, as *Declinator, Analemma, Scales,* &c.

35 GEOGRAPHY, including the Doctrine of the EARTH, or GLOBE: its *Circles; Parallel, Tropic, Horizon, Axis, Poles,* &c. Its *Zones, Climates,* &c. Its *Places*; their *Longitude, Latitude, Distance, Elevation,* &c. Inhabitants, *Antipodes, Aborigines, Troglodites, Ascii, Perisci,* &c. Instruments relating thereto, *Globe, Map,* &c.

36 NAVIGATION, or the Consideration of SAILING; in *Ship, Frigate, Bark,* &c. Parts thereof, *Mast, Anchor, Sails, Yards, Cordage, Capstan, Rudder, Deck,* &c. Their *Course, Rhumb,* &c. shewn by *Compass, Needle, Variation,* &c. Directed by *Steerage, Current,* &c. Distance or *Reckoning,* by *Log, Observation, Longitude, Latitude,* &c. Taken by *Fore-staff, Back-staff, Astrolabe, Nocturnal. Sinical Quadrant,* &c. Wrought by *Gunter, Chart, Mercator, Traverse,* &c. The Operations of *Sounding, Weighing, Careening.* Signals, *Buoy,* &c.

37 COMMERCE, or the Affairs of MERCHANDIZE; including, Money, *Coin, Species,* &c. as *Pound, Crown, Shilling, Penny, Sterling. Ducat, Dollar, Piece of Eight. Talent, Sesterce, Shekel,* and the like. Weights, *Libra, Ounce,* &c. Measures, *Foot, Yard, Standard,* &c. Given in *Exchange, Truck, Permutation, Commutation,* &c. for *Manufacture, Spice, Drug, Woollen, Slave, Negro,* &c. *Imported, Exported, Transported, Convoy, Flota,* &c. Conditions thereof, *Tariff, Contraband, Charter-party, Freight, Average,* &c. *Customs, Duty, Tunnage, Poundage,* &c. *Bottomry, Assurance, Pike,* &c. Transacted by *Company*; as *Hans, Steel-yard, East India, Turky, Hamburg, Mississippi, South Sea, Assiento, Register. Colony, Fishery, Factory,* &c. At *Staple, Fair, Market, Bank, Burse,* &c. By *Commission, Factor, Broker,* &c. *Weighing,* paying by *Bill*; at *Usance, Acceptance, Par. Protest, Discount, Rechange,* &c. *Action, Subscription. Book-keeping,* &c.

38 ANATOMY, or the *Analysis* of ANIMAL BODIES, and their PARTS, *viz.* Bones, as *Cranium, Rib, Vertebra, Radius, Femur, Tibia. Sacrum, Pubis, Patella,* &c. Their *Articulation, Apophyses,* &c. Muscles, *Abductor, Adductor, Erector, Depressor, Deltoides, Sartorius, Cucullaris, Orbicularis, Sphincter,* &c. Their *Tendons, Fibres,* &c. Vessels, as *Artery, Aorta, Aspera, Trachea, Pulmonary,* &c. *Veins,* as *Cava, Porta, Jugular, Carotid,* &c. *Glands,* as *Pancreas, Parotides, Prostates,* &c. *Nerves; Optic, Olfactory, Auditory,* &c. *Lymphatic, Lacteal, Mesaraic, Mucilaginous,* &c. Their *Valves, Tunics, Anastomases,* &c. Their Humours, as *Chyle, Blood, Spirit, Seed, Gall, Urine, Milk, Sweat, Marrow,* &c. Membranes; *Pannicle, Cutis, Cuticula, Papilla,* &c. *Venters, Head, Meninges, Brain,* &c. *Eye, Ear, Pupil, Tympanum. Tongue, Teeth, Palate, Larynx, Glottis, Oesophagus,* &c. Viscera, *Stomach, Lungs, Heart,* &c. *Liver, Spleen, Kidney, Intestines, Bladder,* &c. Functions or Operations hereof, *Respiration, Deglutition, Digestion, Chylification, Sanguification, Circulation, Systole, Nutrition. Secretion, Excretion, Perspiration, Vomiting,* &c. Genitals, *Penis, Testicle, Clitoris, Matrix, Nympha, Hymen. Embryo, Zoophyte, Mole,* &c. *Erection, Generation, Conception, Gestation. Delivery, Lochia, Menses,* &c.

39 MEDICINE, including the Consideration of LIFE and HEALTH; Conditions thereof, *Longevity, Strength, Temperament,* &c. Means, as *Food, Drink, Exercise,* &c. Opposites, as *Death, Disease,* &c. Kinds hereof, *Chronic, Epidemic, Contagious,* &c. as *Plague, Fever, Gout, Apoplexy, Epilepsy, Palsy. Pox, Polypus, Palpitation. Madness, Hydrophobia, Spasm, Hypochondriac. Phthisis, Scorbutus, Dropsy, Tympanites. Lepra, Itch, Plica, Ophthalmia, Gutta, Cataract,* and the like. *Wound, Ulcer, Cancer. Fracture, Fissure, Caries,* and the like. Symptoms, *Sign, Diagnostic, Pulse, Urine,* &c. *Prescription, Crisis, Cure,* &c. *Regimen, Diet, Medicine,* &c. Kinds hereof, *Specific, Purgative, Emetic, Diaphoretic, Diuretic, Alterative. Styptic, Astringent, Emollient, Opiate. Absorbent, Caustic, Anodyne, Sympathetic. Cardiac, Cephalic, Febrifuge. Antimonial, Chalybeat, Mercurial,* and the like. Operations, as *Evacuation, Phlebotomy, Suture, Lithotomy, Amputation, Inoculation. Salivation, Couching, Cupping, Trepanning. Touching, Tapping, Stroking, Transfusion, Castration, Circumcision,* and the like.

40 PHARMACY, or the *Preparation* and *Composition* of REMEDIES; as *Mithridate, Treacle, Hiera Picra, Laudanum, Diasenna, Turbith, Calomel,* &c. in the Form of *Electuary, Confection, Extract, Tincture, Syrup. Troche, Pill, Pouder, Lohoc, Potion, Apazem, Drops,* medicated *Ales, Wines, Waters. Unguent, Emplaster, Purge, Clyster, Suppository, Pessary, Collyrium,* &c. From *Drugs,* or *Simples*; as, *Guaiacum, Sassafras, Colocynthis, Crocus, Rhubarb, Cassia, Senna, Cortex, Styrax, Jalap, Scammony, Opium,* &c. *Fats, Claws, Horns,* &c. of *Viper, Crab, Elk,* &c. *Cantharides, Millepedes, Mummy, Usnea, Ichthyocolla,* &c. *Antimony, Orpiment, Asphaltus, Bismuth, Marcasite, Bole, Cinnabar, Mars, Venus,* &c.

41 AGRICULTURE, or the *Tillage* and Improvement of SOILS, *Clay, Sand, Earth,* &c. By the Operations of *Ploughing, Fallowing, Burning, Sembradore, Sowing, Manuring,* &c. To produce, *Corn, Hemp, Flax, Liquorice, Saffron,* &c. For *Malt, Bread,* &c. *Granary, Threshing,* &c. The Culture of *Trees, Timber,* &c. by *Planting, Lopping, Barking,* &c. For *Coppice, Park, Paddock, Hedge, Pasture,* &c.

42 GARDENING, including the *Culture* of HERBS, *Flowers, Fruits,* &c. as *Dwarf, Standard, Stone, Wall, Espalier, Sallad,* &c.

TO be a little more explicit---*Words* are the next Matter of Knowledge; I mean, of Knowledge conſider'd as it now ſtands, communicable, or capable of being tranſmitted from one to another. We ſhould have known many Things without Language; but it would only have been ſuch Things as we had ſeen or perceived our ſelves. The Obſervations of others could no way have been added to our own; but every Individual muſt have gone thro' a Courſe for himſelf, excluſive of all Advantages to, or from, Cotemporaries, Predeceſſors, or Poſterity.-----'Tis evident that, in this Caſe, nothing like an *Art*, or *Science*, could ever have aroſe; not even in the Mind of the moſt ſagacious Obſerver: The little Syſtem of Things which come immediately in one Man's way, wou'd but have afforded a ſlender Stock of Knowledge; eſpecially to a Being whoſe Views were all to terminate in himſelf. Add, that, as the chief Occaſions of his Obſervation would be of the ſame kind with thoſe of other Animals; 'tis probable his Knowledge would not have been very different, whether we conſider its Quantity or Quality. 'Tis confeſs'd that all our Knowledge, in its Origin, is no other than Senſe; whence it ſhould follow, that one Being has no natural Advantage over another in its Diſpoſition for Knowledge, other than what it has in the ſuperior Number, Extent, or Acuteneſs of its Senſes.

'TIS, in effect, to Language that we are chiefly indebted for what we call *Science*. By means hereof our Ideas and Notices, tho things in their own nature merely perſonal, and adapted only to private uſe; are extended to others, to improve their ſtock: and thus, by a kind of ſecond Senſe, we get Perceptions of the Objects that are perceived by all Mankind; and are preſent, as it were by proxy, to things at all Diſtances from us: We hear Sounds made a thouſand Years ago, and ſee Things that paſs a thouſand Miles off. If the Eagle really ſees, the Raven ſmells, and the Hare hears, further and better than Man; their Senſe, at beſt, is but narrow, in compariſon of ours, which is extended, by the Artifice of Language, over the whole Globe. They ſee with their own Eyes only; we with thoſe of the whole Species.---In effect, by Language, we are upon much the ſame footing, in reſpect of Knowledge, as if each individual had the natural Senſe of a thouſand: an Acceſſion which alone muſt have ſet us far above any other Animals. But at the ſame time, this very acceſſion of a multitude of Ideas more than naturally belong'd to us, muſt have been in great meaſure uſeleſs; without certain other Faculties of ordering and arranging 'em; of abſtracting, or making one a Repreſentative of a Number; of comparing 'em together, in order to learn their Relations; and of compounding, combining 'em, *&c.* to make 'em act jointly. The Effect hereof is what we call *Diſcourſing* and *Philoſophizing:* And hence ariſe *Doctrines*, *Theories*, &c.

EVERY Word is ſuppoſed to ſtand for ſome Part, or Point of Knowledge; ſuch as do not, have no buſineſs in the Language, and ought of Conſequence to be thrown out of doors. It follows, that the Vocabulary of any Language, is repreſentative of the ſeveral Notices of the People among whom it obtains: I mean of the primary or abſolute Notices; for by the Conſtruction of theſe Words with one another, a new Set of ſecundary or relative Notices are expreſs'd.---To enter better into this, it is to be obſerv'd, that the ſeveral Objects of our Senſes, with that other Set of Things analogous hereto, the proper Objects of the Imagination, are repreſented by fixed Names *; denoting, ſome of 'em, Individuals †; others, Kinds ‡, *&c.* Now, theſe, which make the firſt or fundamental Part of a Language, 'tis obvious, are no other than a Repreſentation of the Works of Nature, as they exiſt in a kind of ſtill Life, or in a State of Independency one upon another. But in regard we do not conſider the Creation as thus quieſcent, but obſerve a great number of Mutations ariſe in the Things we are converſant among; we are hence put under a neceſſity of framing another Set of Words, to expreſs theſe Variations, and the Actions to which they are owing, with the ſeveral Circumſtances and Modifications thereof ‖. By this means, Nature is remov'd out of her dormant Conſtitution, and ſhewn in Action; and thus may occaſional Deſcriptions be framed, accommodate to the preſent State of Things.

HENCE ariſe two Kinds of Knowledge; the one *abſolute*, including the ſtanding Phænomena: the other *relative*, or *occaſional*, including what is done, or paſſes, with regard to them. The former is in ſome Senſe permanent; the latter merely tranſient, or hiſtorical. The firſt is held forth, as already obſerved, in the Vocabulary: the ſecond vague, and uncircumſcrib'd by any Bounds; being what fills all the other Books extant. In effect, this laſt, being in ſome meaſure caſual, may be ſaid to be infinite: for that every new Caſe, *i. e.* every new Application and Combination of the former, furniſhes a new Acceſſion.

IN the wide Field of Knowledge, appear ſome Parts which have been more cultivated than the reſt; either on account of the Goodneſs of the Soil, and its eaſy Tillage, or by reaſon they have fallen under the Hands of induſtrious and able Husbandmen. Theſe Spots, being regularly laid out and planted, and conveniently circumſcrib'd or fenced round, make what we call the *Arts*, and *Sciences:* And to theſe have the Labours, and Endeavours of the Men of Curioſity and Learning in all Ages, been chiefly confin'd. Their Bounds have been enlarg'd from time to time, and new Acquiſitions made from the adjoining Waſte; but ſtill the Space

of Ground they poſſeſs is but narrow; and there is room either to extend 'em vaſtly, or to lay out new ones. They ſhew like the *Cyclades* at a diſtance: *Apparent rari nantes in Gurgite vaſto.*

THEY were divided, or canton'd out by their firſt Diſcoverers, into a number of Provinces, under diſtinct Names; and have thus remain'd for time immemorial, with little Alteration. And yet this Diſtribution of the Land of Science, like that of the Face of the Earth or Heavens, is wholly arbitrary and occaſional; and might eaſily be broke thro', and alter'd, and perhaps not without advantage. Had not *Alexander* and *Cæſar* liv'd, the Diviſion of the Globe had doubtleſs been very different from what we now find it; and the Caſe would have been the ſame with the World of Learning, had no ſuch Perſon been born as *Ariſtotle*. The firſt Diviſions of Knowledge were as ſcanty and ill concerted as thoſe of the firſt Geographers; and for the like Reaſon: And tho future *Columbus's* and *Bacon's*, by opening new Tracts, have carried our Knowledge a great way further; yet the Regard we bear to the antient Adventurers, and the eſtabliſhed Diviſion, has made us take up with it, under all its Inconveniencies, and ſtrain and ſtretch things, to make our Diſcoveries quadrate thereto. I do not know whether it might not be more for the general Intereſt of Learning, to have all the Incloſures and Partitions thrown down, and the whole laid in common again, under one undiſtinguiſh'd Name. Our Inquiries, in ſuch caſe, would not be confin'd to ſo narrow a Channel; but we ſhould be led to explore, and purſue many a rich Mine and Vein, now doom'd to lie neglected, becauſe out of the way.

*ART* and *Science* are indeed two Words of familiar Uſe, and great importance; but, I doubt little underſtood. The Philoſophers have long labour'd to explain and aſcertain their Notion and Difference; but all their Explanation amounts to little more than the ſubſtituting one obſcure Notion for another. Their Attempts uſually terminate in ſome barren Definition, which rather caſts Obſcurity than Light on the Subject. Nor is the Reaſon far to ſeek, however it may have eſcap'd Notice; but evidently lies in an Abuſe of Language, whereby thoſe different Words come to be applied to Things of the ſame Nature; and each of 'em in their turn to Things wholly different. Whence, any Definition that can hold of 'em univerſally, muſt needs be very abſtracted, and general; and may hold of almoſt any thing elſe; and of conſequence can expreſs very little of the Eſſence, and obvious Phænomena thereof: To come at which, we muſt be at the Pains of a new Inveſtigation.

TO *SCIENCE*, then, belong ſuch Things as Men may diſcover by the uſe of Reaſoning, and Senſe: Whatever the Mind deſcries in virtue of that Faculty whereby we perceive Things, and their Relations, is matter of Science: Such are the Laws of Nature, the Affections of Bodies, the Rules and Canons of Right and Wrong, Truth and Error, the Properties of Lines and Numbers, *&c.* *Science*, in effect, is the Reſult of mere Reaſon and Senſe in their general or natural State, as imparted to all Men; and not modified, or circumſtantiated by any thing peculiar in the Make of a Man's Mind, the Objects he has been converſant among, or the Ideas he has preſent to him. Conſequently, Science is no other than a Series of Deductions, or Concluſions which every Perſon, endued with thoſe Faculties, muſt, with a proper degree of Attention, ſee, nay and draw: And A SCIENCE, *i. e.* a form'd Science, is no more than a Syſtem of ſuch Concluſions, relating to ſome one Subject, orderly and artfully laid down in Words, to ſave Others the Labour and Expence of making 'em at firſt hand. Thus a Perſon who has all the Ideas expreſs'd in *Euclid's* Definitions, and ſees the immediate Connexion of thoſe in his Axioms; which no Man acquainted with the Language can be ſuppoſed without; has it in his Power, with Attention and Induſtry, to form all the Theorems and Problems that follow: He has nothing to do but to range thoſe Ideas orderly in his Mind, compare 'em together, one by one, in all their Changes, and put down the immediate Relations obſerv'd in the Compariſon, *i. e.* their parity, imparity, *&c.* And after the Relations of each to each are thus got; which make a kind of primary Propoſitions; to proceed to combine 'em, and take down the Relations reſulting from a Compariſon of ſeveral Combinations. By ſuch means, without any other Helps than Penetration and Perſeverance, might he make out an infinite Number of Propoſitions: more by half than *Euclid* has done; there being a new Relation, *i. e.* a new Propoſition, reſulting from every new Combination.

TO *ART*, on the other hand, belong ſuch Things as mere general Reaſon would not have attained to: Things which lie out of the direct Path of Deduction, and which required a peculiar Caſt, or Byaſs of Mind to ſee or arrive at. A Man might call theſe the Reſults of particular, or perſonal Reaſon, in oppoſition to the former; but that ſuch a Denomination would be thought unphiloſophical. It may, perhaps, be more juſt to conſider the Reaſon, here, as modified, or tinctured with ſomething in the Complexion, Humour, or Manner of thinking of the Perſon*; or as reſtrain'd or diverted, out of its proper courſe, by ſome Views, or Notices peculiar to him.----The Difference between Art and Science, amounts to much the ſame as between *Wit* and *Humour*; the former whereof is a general Faculty of exciting agreeable and ſurprizing Pictures in the Imagination †, by the aſſociating of Ideas, which at the ſame time have both a notable Diverſity and a Congruity; and the latter, a particular one: The former is pure and abſolute in its kind; the latter tinged with ſomething foreign and complexional.

'TIS eſſential to *Art*, therefore, as to Humour, to partake of the Perſon from whom it proceeded; and conſequently there are as many Arts, as Inventors of Methods of performing, or doing things. Hence, there is no coming at an Art, otherwiſe than by learning it. A Perſon left to his own Thought, will ſcarce ever hit on the ſame thing, unleſs either we ſuppoſe a marvellous Agreement between the Characters and Circumſtances of the Perſons; or that the Art is in great meaſure ſcientifical, and partakes but little of the Genius and Humour of the Inventor.-----There is no ſuch thing, properly ſpeaking, as ſtudying an Art, or learning a Science: The firſt, every Man beſide the Inventor muſt be taught; the latter, every Man muſt find. In effect, to attain to an Art, there is ſome previous Knowledge requir'd, which a Man's own Reaſon would never have ſuggeſted; whereas a Science requires no more than clear Ideas, and cloſe Attention. With theſe Helps a Man may of himſelf go the whole length of a Science, ſo far as it is properly a Science. Indeed if the Improvers, or rather Writers thereof, have gone a jot out of the common way, in compliance with their own perſonal Views; they have ſo far adulterated the Science, and put it on the footing of an Art. And to this very Cauſe are owing a great part of the Difficulties we meet withal in attaining the Sciences: The reſt ariſe from want of Senſe, *i. e.* of Clearneſs and Preciſion in our Perceptions, and want of Perſeverance and Attention to 'em. Theſe render Geometry it-ſelf, little other than an Art: We want Preliminaries to it as to other Arts. And thus every Science is an Art to ſome People, and only to be attained, as we do mechanic Arts, by Habit, and Remembrance; inſtead of Contemplation and Deduction.-----Reaſon, clogg'd and embaraſs'd by Genius and Complexion, can no more riſe to the heights of Science, than when pure and refin'd, it can deſcend to the depths of Art.

* *Vid.* Boſſu, Traité du Poëme Epique, l. i. c. 1.

† Locke, *on Hum. Underſtand.* Lib. ii. c. 11.

AN

AN Art and a Science, therefore, only differ as leſs and more pure: A *Science* is a Syſtem of Deductions made by Reaſon alone, undetermin'd by any thing foreign or extrinſic to it-ſelf: An *Art*, on the contrary, requires a number of Data and Poſtulata to be furniſh'd from without, and never goes any length, but at every turn it needs new ones. 'Tis the Knowledge or Perception of theſe Data that in one Senſe conſtitutes the Art; the reſt, that is, the doctrinal Part, is of the nature of Science; which attentive Reaſon alone will deſcry.

AN Art, in this light, appears to be a Portion of Science, or general Knowledge, conſider'd, not in it-ſelf, as Science, but with relation to its Circumſtances, or Appendages. In a Science, the Mind looks directly backwards and forwards, to the Premiſes and Concluſions: in an Art we alſo look laterally, to the concomitant Circumſtances. A Science, in effect, is that to an Art, which a Stream running in a direct Channel, without regard to any thing but it-ſelf and its own progreſs; is to the ſame Stream turn'd out of its proper Courſe, and running in a different one diſpos'd into Caſcades, Jets, Ciſterns, Ponds, *&c.* and ſerving to water Gardens, turn Mills, and other particular Purpoſes. In which caſe, the Progreſs of the Stream is not conſidered with regard to it-ſelf, but only as it concerns the Circumſtances of the Works: every one of theſe Works, nay each part thereof, are ſo many Data, which modify the Courſe of the Stream, and vary it from its original Habitude. 'Tis eaſy to trace the Progreſs of the former, from its Riſe to its Iſſue; in regard it flows conſequentially: But a Man ever ſo well acquainted with this, will never be able, of himſelf, to diſcover that of the Second, for want of Acquaintance with the Circumſtances, which his Reaſon can never find out, in regard they depend on the Genius, Humour and Caprice of the Engineer who laid the Deſign.

THESE are ſo many different Characters, or Conditions of Art and Science: But there is a Difference between 'em prior to any of theſe, and of which theſe are only Conſequences. The Origin of 'em all lies higher, in the Principle of Action or Operation above ſpecified; namely, as the Mind is either active or paſſive therein. With regard to this; thoſe Things may be ſaid to belong to *Science* which we only ſee, or perceive; which flow from the Nature and Conſtitution of Things, by the ſole Agency of the Author thereof; ſubſervient only to His general Purpoſes, excluſive of any immediate Agency or Intervention of Ours: And, on the contrary, thoſe Things belong to *Art*, wherein ſuch Science or Perception is further modified and circumſtantiated in our Mind, and directed and applied by us, to particular Purpoſes and Occaſions of our own.-----From hence ariſe the ſeveral Differences abovemention'd: For the Matters of Art are only *Perſonal*, as they are according to the Meaſure of the Artiſt's natural Faculties, in reſpect of Quantity and Degree; and to the Complexion and Caſt of his moral Faculties, in reſpect of their Quality. The Perception, even of Matters of Art, is of the Nature of Science: ſo that thus far the two agree: And their Difference only commences from the ſuperinducing a further Modification, in the Matter of ſuch Perception; and the giving it a new Direction to ſome particular End. By means hereof, it becomes inveſted with a new Set of Conditions and Circumſtances, wholly perſonal; as being all framed and adapted to the particular View and Aim of the Artiſt, (which is the mere Reſult of his particular Diſpoſition, Humour, Manner of thinking, Situation, Occaſion, *&c.*) and conducted according to his particular degree of Knowledge, and Addreſs; which is the Effect of a particular Set of Objects, and a particular Organiſm of Body. In a word, in Art there is a moral View or Motive ſuperadded to the natural Science, or Perception; which Motive is the proper Principle, or *primum Mobile* of Art: Perception is its Matter; and ſome Member of the Body its Organ or Inſtrument. And from ſuch new Principle, *&c.* ariſe a new Set of ſecundary Perceptions, analogous to the natural and primary ones. The whole, therefore, ends in this, That Science ariſes from a natural Principle, Art from a moral one; or even, as moral Matters are alſo in one Senſe natural, Science may be ſaid to be of divine Original; Art, of human.

FROM this View may appear the deficiency of that eſtabliſhed Definition of Art; *Ars eſt habitus mentis cum recta ratione operativus*; A habit of the Mind operative according to right Reaſon: which is evidently taken from a partial Conſideration of the Subject. If it be the Character or Condition of Art to proceed according to right Reaſon; then, the more and purer this Reaſon, the more perfect the Art. But, in a great part of the Arts, Reaſon appears to have very little to do; and the leſs, as thoſe Arts are in greater Purity and Perfection.------Thus it is in Poetry; a Man that would undertake an Ode, or an Epic Poem on the ſtrength of his Reaſon, would be miſerably out: All his Efforts would never carry him above the humble Sphere of Verſification, where he muſt be contented to wait for an Impulſe of another kind. So far is Reaſon from leading the way, that it can ſcarce follow at a diſtance, ſo as to keep in ſight. The Principle of Motion is evidently ſomething other than Reaſon; otherwiſe, the greateſt Philoſophers would be the beſt Poets, and *vice verſâ*. On the contrary, moſt of us know of People very weak in Reaſon, who yet are powerful in Poetry: The Poetical Talent we have ſeen follow ſome People to *Bedlam*, others it has conveyed thither; and, which is ſtill more, ſome People have firſt found it there. Poetry is found an Appendage of one kind of Lunacy, and accordingly paſſes among Phyſicians for a Symptom thereof; nor is it to be queſtion'd, but, upon a Computation, *Moorfields* might number double the Poets with any other Spot of the like Dimenſions in the Kingdom.----Let not this paſs as any Reflection upon the Poets: A Spice of Madneſs is not ſo unreputable a thing as ſome imagine; and a Man that is ſeated on that Bench, finds himſelf in the beſt Company in the World. Some of the greateſt Philoſophers, Poets, Prophets, and Legiſlators; I might have ſaid Divines, Fathers, and Aſceticks too, of all Ages, are confeſſedly his Aſſeſſors. 'Tis remarkable with what Reſpect and Awe the Antients treated People ſuſpected to be touch'd: The very Names they call'd 'em by import the utmoſt Veneration, and place 'em, as it were, at the Threſhold of *Jupiter* *. One of their moſt common Appellations, *Numine afflati*, is at the ſame time the moſt juſt and philoſophical that can be thought of. In effect, a Share of Fury and Enthuſiaſm, is held by them a *ſine quâ non*, a Circumſtance abſolutely neceſſary to become any thing extraordinary; and hence ſo many Proverbial Expreſſions to that Purpoſe: " No great Genius *ſine aliqua mixtura* " *dementiæ*; No great Man *ſine aliquo afflatu Divino*, &c."----We may add, that the Poets themſelves have an hundred times expreſly attributed all their greater, and happier Thoughts, to Enthuſiaſm, Extaſy, and Fury; and they do it implicitly almoſt in every Piece they write: it being their ſtanding Practice, to take a formal leave of Reaſon, at firſt ſetting out, and call a Muſe for their future Guide: which, to talk out of the Poetical Style, is as much as to ſay, They reſign themſelves over to the Conduct of Genius and Imagination, which they now find ſtrong and prevalent in 'em. Thus inſpired, a new Scene of Objects ariſes; Caſtles on Caſtles: They ſee things inviſible to other Eyes, that is, the Phænomena of their own Fancy, which exiſt no where elſe. For tho what one Man's Reaſon perceives, all others, equally good and perfect, will perceive; even tho it have no Exiſtence but what that Perception gives it: yet it is not ſo with Imagination, which is a perſonal Thing, ariſing from the particular Diſpoſition or Organiſm, which is different in every two Perſons; whereas Reaſon ſprings from the general one, which is the ſame in the whole Species.----From ſuch prevalency of the Imagination, ariſes what we call Poetry, ΠΟΙΕΣΙΣ, q. d. *making*, *feigning*, *inventing*; which is common

* Θεομάντεις, ἐνθουσιασταὶ, ἐνθεαστικοὶ, θεόληπτοι, ἔνθεοι κάτοχοι, Ecſtatici, Phrenetici, Pythii, Siderii, &c.

to

to all Men in a greater or leſs degree: Philoſophers have a little of it, the Poets a great deal, but the Lunaticks ſcarce any thing elſe.

IT may look ſtrange to ſay that the Principle is preciſely of the ſame kind in 'em all. We are uſed to conſider it, in the two firſt, as Conſtitution; in the latter as Diſeaſe: In the one 'tis perpetual; in the other only occaſional: In the one, arbitrary and uncontroulable; in the other, limited and reſtrained. The Barque, in the one caſe, drives of neceſſity, as wanting Cable and Anchor to hold her; and in the other, ſails out of choice, as finding the Wind favourable and the Voyage deſirable. But all this amounts to little more than a difference in Degree, between the Fictions of the Poet and the Lunatic: The moving Principle is the ſame in both, tho its Effects be various. If the proper Balance and Adjuſtment between the Powers of Reaſon and Imagination be wanting, yet they ſtill retain their Nature; as the Wind is the ſame whether the Pilot direct the Helm or not.-----

SOME People give more ear to Authority than to Reaſon: to ſuch it may not be amiſs to obſerve, that this Doctrine is countenanc'd by the Antients; who, in ſome reſpects, ſeem to have had clearer and juſter Notions than the Moderns; as being leſs embaraſs'd with the Jargon, and Refinements of the ſcholaſtick Learning. Philoſophy, with them, was one degree more ſimple, and obvious than among us. Nature was not yet cover'd and conceal'd under ſo much Elucidation, but afforded more frequent and nearer Views of her-ſelf.----Accordingly, the Divine *Plato*, in his *Phædrus*, aſſerts, "That *Enthuſiaſm* and *Mania* are one and the "ſame thing;" and has a long, and cogent Diſcourſe, to prove that it muſt be ſo: And among the ſeveral Species of Enthuſiaſm, he expreſly ranks Poetry. In effect, Ποιητικὸν and Μαντικὸν, make two of the principal Branches in his Diviſion of Enthuſiaſm, or Inſpiration. And *Plutarch* *, tho he divide Enthuſiaſm ſomewhat differently from *Plato*; yet clearly agrees with him in making Poetry a Species of it. Nay, the moſt reſerved of all the antient Criticks, *Longinus*, declares, that "the Poet is poſſeſs'd with a kind of Enthuſiaſm; that he "believes he really ſees what he ſpeaks; and repreſents it ſo to others that they catch the Enthuſiaſm, and "ſee it likewiſe †." Add, that ſpeaking of the *Orators*, he does not ſcruple to uſe Πνεῦμα ἐνθουσιαστικὸν, as ſynonymous with Μανία.----But this Point will be conſider'd more fully hereafter.

THE Principle then of the Art of Poetry is ſomething other than Reaſon; and I know of no Art that has more of the Nature and Eſſence of an Art, than Poetry: Nothing that can faſhion, build, produce things, *&c.* at that rate: Sculpture, Architecture, Agriculture, *&c.* are Arts, but in a much inferiour Degree.----And yet, turning another ſide of Things forward, Poetry will ſcarce appear to have any thing of an Art in it, but rather to be all the Work of Nature; wherein human Thought and Study have the leaſt hand. It is produced by a Principle ſuperiour to that of Reaſon, *i. e.* a more immediate Action of the Author of Nature.---But the ſame may be ſaid of moſt of the other Arts; and when we ſay that Art produces Effects, we mean Nature does ſo. The Poet's Imagination may be conſidered as a Field, wherein the Author of all Things ſhews his Handy-work, by the Production of a Set of Objects which exiſted not before: New Images ariſe here, like new Plants, according to the ſettled Laws of the Creator; ſo fruitful is the Womb of Nature! New Worlds innumerable ariſe out of a ſingle old one.

THE Factive Arts, as ſome love to call 'em, *i. e.* thoſe from which permanent Effects ariſe, may be conſider'd as ſo many ſecondary or derivative Natures, rais'd by Engraftment from the old Stock, and ſpreading or projecting out from this, or that part thereof.-----Here, at firſt ſight, Man appears ſomewhat in quality of Creator; the Potter's power over his Clay has been made a Shadow or Similitude of that of the Deity over his Works: and yet the Potter, at beſt, is only acceſſary or occaſional to his own Productions. Nature, that is, the Power or Principle of Action and Motion to which we owe this viſible Frame and all the Appearances and Alterations therein, acts by fixed Laws, which neceſſarily produce different Effects, according to the different Circumſtances of Things: Thus a glaſs Globe being ſwiftly revolved about its Axis, and a Hand applied to its Surface; feels hot, emits Light, attracts Bodies, *&c. i. e.* is a hot, luminous, electrical Body, tho without theſe Conditions it has none of thoſe Properties. So Gunpowder, otherwiſe a Maſs of dark, inert, motionleſs Matter; being only touched with a lighted Brand, inſtantly blazes up, and ſmokes, with Noiſe; perhaps burſts a Rock, or drives a Ball, in a parabolic Direction, and levels a Tower, or other Work. Now, nothing ariſes here but in conſequence of pre-eſtabliſh'd Laws, which import that the Globe and the Powder, whenever by any means they come under theſe or t'other Circumſtances, ſhall have theſe or t'other Effects. There are no two Bodies in Nature more different than the ſame is from it-ſelf, under the different Circumſtances of Contiguity or Non-contiguity with this or the other Body, *e. g.* a Spark of Fire. But both States are equally natural; and in effect there muſt be a Law of Nature for the one, as well as the other.----Now the Agency of Man amounts to this, that he has it in his power to put Bodies in ſuch Circumſtances as are neceſſary to bring 'em under this or that Law, or to make this or that reſpective Law take effect. And this we call *Art*; and by this means we can produce a number of things, or bring 'em into act, which otherwiſe would have remained in eternal Non-entity, or barely *in Potentia*. Man may be ſaid to create 'em, but no otherwiſe than the Apothecary creates the Bliſter, or the Gardner the Apple; *i. e.* thoſe Effects would neceſſarily have ariſen, upon the ſame Poſition of the Cantharides and the Cutis, or the Scion and Stock, if there never had been Apothecary or Gardner in the World.

WE may define the Works or Productions of Art, therefore, to be all thoſe Phænomena or Effects which would not have aroſe without the Agency or Intervention of Man. Now Man can only be ſaid to act or intervene, ſo far as what he does is of his own Source or Principle, without being moved or directed by any eſtabliſhed Law of Nature, *i. e.* ſo far as he is exempted from the Influences of any neceſſary Laws of Nature concurring, however remotely, to ſuch Effect. So that if, as ſome Philoſophers have maintained, Man were not really and truly a free Agent; there would be no ſuch thing as Art, in the Senſe here underſtood: but *Art* would only be a name given to that Syſtem or Series of Effects, to which Man is made by Nature, and in her hands, ſubſervient; and might with equal reaſon be attributed to ſuch Effects as any other natural Production, *e. g.* a Plant, or Mineral, is ſubſervient.

HAD it not been for the inſpired Writers, we ſhould not have known but that the whole Syſtem of our World is a Production of Art; the Reſult of a new Application of Things made by ſome created Being, in virtue or conſequence of ſome pre-eſtabliſh'd Laws of the Almighty. Our general Laws of Nature, and Motion, might only be particular Caſes of ſome more univerſal one; ſpecial Inſtances, emerging out of ſome more general one, which it-ſelf was not perhaps the firſt. Thus there might be an infinite Series or Subordination of Syſtems of Nature, each more univerſal, extenſive, and, as we call it, more metaphyſical, *i. e.* nearer the Source of Power and Action, than other.

SOMETHING like this, we actually ſee in our own little Syſtem: The Mineral World is ſubſervient to the Vegetable; and this to the Animal. Mineral Matters, under certain Conditions which bring them under the Laws of Vegetation, paſs into Plants; and from particular Applications of Parcels of Plants, Animal

* In Ἔρωτ.

† Περὶ Ὕψους.

Subſtances ariſe. Under other Circumſtances, the ſame Matters become ſubject to other Laws, (*i. e.* other Actions of the Creator, for Laws are no other) and return the way they came; Animals into Plants, and theſe into Minerals.----Nothing can be more ſimple and uniform than the whole Diſpenſation: A Body is only what it is, in virtue of a Law of Nature, *i. e.* of the Will of the Creator; and conſequently 'tis this alone can alter it. Hence, a piece of Matter, under the different Circumſtances of Motion or Reſt, Contiguity with this or with that Body, falling in with new Laws; by the Concurrence and Activity thereof, becomes a Means of exhibiting different Phænomena: on occaſion whereof we give it a different Denomination, and range it under a different Claſs of natural Things: And to the Means whereby thoſe Circumſtances are determin'd, we give the Names of *Generation*, *Corruption*, *Putrefaction*, *Fermentation*, *Vegetation*, *Animation*, *Aſſimilation*, *Accretion*, &c. which are all accountable for on the ſame Principle. 'Tis no more wonderful, a *Fungus*, with all its Furniture of Flowers, Seed, *&c.* ſhould ariſe from a Mixture of Earth and Dung; than to behold ſo wonderful a Body as *Flame*, ariſe from a caſual Colliſion of Flint and Steel; or *Air* from the mere Diſſolution of a *Metal*.

WE ſee, then, how far Man is concern'd in the Productions of Art. Our Endeavours are contriv'd by Nature to be Means acceſſory to the Law's taking place, from whence the Effects are to ariſe. We are part of the Chain whereby the Effect is connected to the Cauſe. The Circumſtances are in our Power on which ſuch, and ſuch Laws depend; and thus far we may be ſaid to be *Active*, in the Caſe of Art: ſuppoſing that there is nothing higher, or further; and that the Chain ends with us; in a word, that our Agency is not ſubordinate, but collateral to that of the Almighty. But if there be other ſuperior Laws which reſpect thoſe ſame Circumſtances, and which are not in our Power, *i. e.* if the Circumſtances neceſſary to the former Law, be themſelves ſuppoſed neceſſary Laws, and the immediate Work of Nature; our Agency will dwindle into nothing. The utmoſt that can be ſaid of us in ſuch caſe, is, That we are Active in reſpect of the one, and Paſſive in that of the other; which to moſt People may appear a kind of Contradiction.-----The Statue can't be form'd, unleſs our Deſire or Inclination concur thereto; ſo far its Exiſtence depends on us: But are our Deſires and Inclinations with reſpect thereto of our own growth; or do they ariſe naturally, in conſequence of an Apprehenſion of Good, and Advantage in the Subject? That is, does any thing appear good and advantageous to us abſolutely and of it ſelf; or only what the Creator repreſents to us as ſo? And do we deſire or purſue this ſeeming Good, from any Principle or Tendency that is in us, other than what we owe to his Laws? The Difficulty ſeems to amount to this; whether between our Faculties of apprehending and willing, and their reſpective Objects, there be any Relation which he did not create or eſtabliſh?-----If any alledge, that 'tis ſuch Relation conſtitutes the Faculty; and therefore that the Queſtion ends in this, Whether our Faculties are from God or our ſelves: *i. e.* whether they can be the Cauſes of themſelves? I ſhould ſuſpect ſome Sophiſm in the Caſe, which at preſent I have not leiſure to detect.

BUT having traced the Agency of Man thus far, we muſt be obliged here to deſiſt; and from the *Factive Arts* reſume the Conſideration of the *Active* ones; *i. e.* paſs from what Art does out of us, to what it is in us: or rather, from the Arts whoſe Source is ſuppoſed in our ſelves, and which proceed outwards; to thoſe whoſe Source ſeems without us, and tend inwards: That is, from thoſe which ariſe from our Obſervation and Reaſon, directing us how to miniſter Occaſions to the Laws which obtain in the external World; to thoſe which flow into our Imagination, and furniſh Occaſions to the Laws which obtain in the internal World.----An Inquiry which may perhaps carry us where the Reader little imagines; but which will afford an ample Diſcuſſion of the Principle above eſtabliſh'd; and a further Inſight into the Origin and Cauſe of Science and Art; and the Nature and Meaſure of our Agency and Paſſion therein.

WE have already ſpoke ſomething concerning *Poetry*; not for its own ſake, but as a proper Inſtance to illuſtrate the Nature of *Art* in. It makes the loweſt Article in our *Analyſis*; which, in reality, is the higheſt in the Scale of Art; there being a ſort of progreſſive Riſing from the Beginning of the Analyſis to the End. It begins with the firſt Matter of Knowledge, the common Objects of our Senſes; and proceeds thro' the various Modifications they undergo by the other Faculties of Imagination and Reaſon, till thoſe ſenſible Objects become ſo much our own, are ſo aſſimilated to us, and as it were humaniz'd; that they are part of our ſelves, and obey and take Directions from our Will, and miniſter to all our Views and Purpoſes: of which, this of producing Images and making Fables, is in one Senſe the higheſt; inaſmuch as the greateſt Effects here ariſe from the ſlendereſt Means and Endeavours. The Poet ſtirs but little in the Matter; but Nature co-operates ſo ſtrongly with him, that this little ſuffices, even to make new Worlds. In effect, the Poet ſeems, as it were, to ſit nearer the Spring of Action than other Men; and to have only to do with the general and higher Principles thereof, which command and direct a Number of other ſubordinate ones, that he himſelf is not aware of.-----What we ſhall ſay of Poetry, therefore, will hold proportionally of all the other Arts; and we have only kept to that, becauſe the Influence or Inſpiration is here confeſſedly the pureſt, and the neareſt to Heaven of all others *. The Principle or Spirit of Poetry, may be ſaid to be that of Art in general; and hence many † Authors make no ſcruple to make all Arts the Invention of Poets: Thus it is *Homer* is often complimented with being the Father of all Arts.----This has, indeed, an Appearance of Truth; but 'tis only an Appearance: For *Homer*, ſuppoſing him the Inventor of Poetry, or at leaſt the beſt Poet; has no other Title to the Invention of other Arts, than what he derives either from a greater Share of the Spirit whereby they are produc'd, than other People; or from his having communicated that Spirit, by the Force of his Poems, thro' other People, where it has generated, and brought forth other Arts; or from the Seeds and Principles of Arts and Inventions, which his Imagination was ſo pregnant withal, and which he diſſeminated over the World, where many of 'em, by due Cultivation, have ſprung up into the Form and Maturity we now ſee 'em.

THE Mind is allowed to be paſſive in reſpect of the Matter of the Art of *Poetry*. We need not quote the Poets to prove it: No true Poet ever queſtion'd his Inſpiration: Every body knows that their whole Syſtem is built on the Suppoſition. And hence the Stories of *Apollo* and the *Muſes*, of *Helicon* and *Parnaſſus*; the Dreams of *Pindus*, and the *Aonian* Maids: with a thouſand other Reveries ‡. But the Philoſophers, and Criticks alſo, give 'em their Suffrages, and atteſt their Inſpiration, in the ſtrongeſt Terms. *Plato* has already been cited to this Purpoſe: He contends, at large, that all Poetry is "by immediate divine Inſpiration, in the proper, and literal Senſe of the Word ‖." *Ariſtotle* confirms it: "Ἔνθεον ἡ ποίησις, Poetry comes by divine Inſpiration **." And *Plutarch* ſays as much of all the Branches of Enthuſiaſm; Poetical, Divinatory, Bacchical or Corybantical, Martial, and Erotick: to all which, he aſſerts, the Appellation, Ἐνθουσιαστικὸν, or Ἐνθεαστικὸν πάθος †*, equally agrees.----And not only ſo, but they hold the Enthuſiaſm communicable from one to another. It ariſes from the Poet, as its Centre, and is diffus'd, *in Orbem*; in a leſs degree of intenſeneſs, the further it recedes from him. *Plato* aſſerts, that the Ῥαψῳδοὶ, or thoſe who ſung and rehears'd the Poets Works on the publick Theatres; nay, and the Spectators themſelves,

were

were all divinely inſpir'd, in ſome degree: which he illuſtrates in the Caſe of a Needle touch'd by a Magnet, which communicates an attractive Property to another Needle; that, to a third; and ſo on, with a continual Diminution.----Nor does the Effect end here, but the Profeſſors of other Arts, as *Sculpture*, *Criticiſm*, and even *Philoſophy* it ſelf, borrow their Flame and Inſpiration from this Fire. Thus *Phidias* declared he was inſpired to make that wonderful Statue of *Jupiter Olympus*, by the reading of *Homer*: And thus *Ariſtotle* may be ſaid to have been inſpired by the ſame Poet, to compoſe his immortal *Poeticks*: The like is ſaid of *Longinus*; that he was inſpired by the Muſes, or with the Fire of a Poet *.

BUT after Poetry, *Rhetorick* comes neareſt, and ſhares moſt of the Spirit thereof, even more than Criticiſm. Accordingly, *Plato*, in his Dialogue inſcribed *Menon*, allows that "as we ſay Pythians, Prophets, and "Poets are divinely agitated; ſo we do Orators." Elſewhere he adds, "That they are certainly inſpir'd "of God, and plainly poſſeſs'd." So *Dion. Halicarnaſſeus* † relates, that "*Demoſthenes* did plainly ἐνθουσιᾶν." And adds, that the Diſtemper caught ſo among his Audience, that "they were poſſeſs'd at ſecond hand, "and brought to do many things againſt their own Reaſon, and Judgment:" And *Æſchines*, his profeſſed Enemy and Antagoniſt allows as much. I need not ſay that *Plutarch* relates the like of *Cicero*, in the Inſtance of his Oration to *Cæſar*, for *Ligarius*.

SOMETHING like this has been obſerved, even in the Caſe of *Prayer* to God: Several Hereticks are on record for poſſeſſing their Hearers that way. *Hacket*, executed for Blaſphemy under Queen *Elizabeth*, is ſaid, by the Hiſtorian, "to have raviſh'd all that heard him at his Devotions; and converted many in ſpite of their "Teeth:" And *Sarravia* relates, the People were perſuaded that "God directed his Tongue." St. *Baſil* even affirms ‡, "that our Prayers are never right or acceptable, till the Ardor thereof carry us out of our ſelves, ſo "that God poſſeſs us in ſome extraordinary manner." And hence the learned and pious *Caſaubon* eſtabliſhes a new kind of Enthuſiaſm, which he calls *Supplicative*, or *Precatory*; as he does divers others, as Muſical Enthuſiaſm, Mechanical Enthuſiaſm, *&c.* To ſay no more, the Author laſt mentioned makes no ſcruple to make even "the ordinary Delights and Benefits Men receive from the Harangues of Orators, Sophiſts, Preachers, *&c.* "the Effect of Enthuſiaſm and Inſpiration; as being what could never ariſe from mere Reaſon." And *Plutarch*, and others, make that *Ardor* which the Soldier feels in Battle, of the ſame kind with that which inſpir'd the Prophet, Orator, and Poet **.

WE have here little leſs than a Syſtem, ſufficient to account for moſt of the Phænomena in the Animal World, on Principles of *Enthuſiaſm*. Reaſon, it may be obſerv'd, has here little to do; and it ſhould ſeem, that Man ought rather to be defined, *Animal Enthuſiaſticum*, than *Animal Rationale*. And yet this is only a few, out of infinite Inſtances, of the immediate Agency and Inſpiration of the Deity. We find the ſame Principle in every Art, every Invention, every Diſcovery, where no natural and neceſſary Connection is perceiv'd between the Diſcovery, and ſomething known before, *i. e.* where the Reaſon of ſuch Diſcovery, is not apprehended by any intuitive Knowledge. What has no immediate Dependance either on what we perceive by Senſation or Reaſon, comes by the Vehicle of Inſpiration, *i. e.* of Imagination or Invention, for there it ends. The Imagination may be called the Medium of Art, as Senſe is of Science. The Faculty of Reaſon, can make no great Diſcoveries; it can only advance from one Step to another, which muſt be ready laid to its Hand; and if theſe be any where interrupted or diſcontinued, there it is at a Stand. 'Tis, in fine, a limited Principle, ſubject to very narrow Bounds; whereas the Imagination ſeems to be indefinite, and ſtill kept in the Creator's Hand, to be occaſionally made uſe of for the Conduct of Mankind.

THE Truth is, when we ſay, ſuch a Thing is the Effect of Enthuſiaſm, or Inſpiration; ſpeaking, I mean, of profane Matters; (the Inſpiration, for inſtance, of *Scripture*, being Matter of a very different Conſideration, and quite beſide our preſent Purpoſe) this does not remove it out of the ordinary Courſe of Things: It does not put it on any other Principle, different from that whereby Cauſes and Effects ſucceed each other in the phyſical World. We can account for the Phænomena of the Imagination, as well as thoſe of Senſation. They have their reſpective Laws, like other things; which they are ſubject to; and to which we have Arts, and Proceſſes appropriated. In effect, all the Inſpiration here ſpoke of, may be produced without any great Conjuration.----If the Reader will not take Offence at this novel Philoſophy, he may be convinc'd of it. And 1°, in the Inſtance of the *Muſical* Kind.

ENTHUSIASM is defined, in an antient Author ††, to be "when a Perſon engaged in ſome Office of "Religion; and hearing the Sound of Drums, Trumpets, Cymbals, *&c.* becomes alienated, or tranſported out "of himſelf, and ſees Things unſeen to others." And what is here called *Enthuſiaſm*, is more ſignificantly call'd by another *‡, καλκότυπος μανία, Madneſs occaſioned by the Sound of brazen Inſtruments: which coincides with the *Furor Corybanticus*, ſo much ſpoke of among the Antients.

NOW, as we do not know any immediate Correſpondence or Connexion between any one Sound, and any Idea; 'tis no more ſtrange that one Idea ſhould be excited by it, than another. There is a Law of the Creator, whereby a certain Order and Succeſſion of Vibrations of the Air, is arbitrarily made the Occaſion of a certain Perception in our Minds; and as the Circumſtances of this Vibration are alter'd, a different Idea ariſes: *i. e.* to every different Combination of ſuch Circumſtances, a different Idea is attach'd; to uſual and ordinary Combinations, ordinary Ideas; and to unuſual and extraordinary, extraordinary Ideas. And hence there is, perhaps, no Idea, no Image whatever, but may be raiſed by means of Sound. Now, I do not know what *Common Senſe* is, unleſs it be, the having common Ideas. Juſt ſo far as new Perceptions are rais'd in us, in Excluſion of the old ones; we may be ſaid to be removed out of our ſelves, *i. e.* we are ſo far got into another Syſtem; the Phænomena which now preſent themſelves to us, being ſo far different, from what they were before, and even from what they would ſtill be, to another Perſon in the ſame Place, but under other Circumſtances. On this Principle, we ſhall ſcarce find any thing but might be produced by Muſick; eſpecially, when to the Force of well-adjuſted Inſtruments, which the Antients ſeem to have ſtudy'd more, and underſtood better, than we; was added to the Solemnity of a Temple, the ſuppoſed Reſidence of a God, whoſe Statue there ſtood before 'em; with the awful Rites of Invocation; accompanied with furious Geſticulations, Dancings, and all the Devices that could be thought of, to unhinge the natural Senſe, and Reaſon, which we find is but frail and precarious at beſt, and apt to play us falſe when moſt duly looked to. Few People are able to ſtand up againſt mere Muſick; which, unaſſiſted with any thing elſe, has been made to produce, and remove ſettled Madneſs; cure Fevers ‡‡; drive Perſons to kill themſelves, or their Friends. 'Tis not long ſince the *Italian* died, who had reduced the turning of People mad by his Muſick, into a regular Art; which he could depend on at any time ‖.-----The Reader that has a mind to ſee further on this Head, may conſult the Articles, SOUND, MUSICK, TARANTULA, *&c.* in the Body of the Book.

2°, THE Inſpiration of *Poetry* is of a ſtiller, and purer Kind; and needs leſs Artifice and Apparatus to produce it in an Imagination naturally diſpoſed for it. The attentive Conſideration of ſome intereſting Object, uſually ſuffices to ſet it a going. And the Gentlemen of that Faculty have all Nature to chuſe out of: The fineſt Seaſons, the moſt agreeable Scenes, and the moſt moving Objects. Hence it is, that they are continually harping on "Groves, and Shades, and Gods, and Nymphs, and Darts, and Flames."-----How do they riot in "Meadows trim with Daiſies pied; ſhallow Brooks, and Rivers wide: Towers and Battlements they "ſee, boſomed high in tufted Trees." Sometimes, they raiſe up "Knights, and Squires, and Maids "forlorn; or, Lover pendant on a Willow Tree, or Lady wandring by a River's Side." Then, "Tilts "and Tournaments, and Feats of Arms: Pomp, and Feaſt, and Revelry, with Maſque and antique Pageantry: "Stories of *Thebes* or *Pelops* Line; or the Tale of *Troy* divine: Of *Arthur* and *Cambuſcan* bold; of *Cambal* "and of *Algarſife*, and who took *Canace* to Wife."-----If theſe fail, they have all that is gloomy, and ſolemn, and terrible in Nature at their Beck; we may now expect to ſee "the red Bolt, or forked Lightning glare." Earthquakes and Tempeſts ſeldom roar in vain: if by chance they do, the "ill-boding Raven's Croke" is ready at hand; or elſe "the far-off Curfew ſounds, o'er ſome wide watery Shore, ſwinging ſlow with ſolemn roar." And now for "baleful Ebon Shades, and ragged low brow'd Rocks:" Next enter "horrid Shapes, and "Shrieks, and Sights unholy: Gorgons, and Hydra's, and Chimera's dire." Images of things moſt moving to Senſe, readily alarm and raiſe a Commotion in the Imagination. And the new Ideas thus procured, coming to be mixed, and combined in the Imagination, with others there before; new Effects ariſe from 'em, in conſequence of the Laws of the Creator: much as intelligibly as Fire and Flame, upon mixing two chymical Liquors.

*SCALIGER*, in his *Poetics*, makes two Kinds of Θεοπνεύστων, or Poets divinely inſpired. The firſt, thoſe on whom the Inſpiration falls, as it were, from Heaven; without any thought or ſeeking, or at leaſt by means of Prayer and Invocation. The ſecond, thoſe in whom it is procured by the Fumes of Wine.

ALL that is required to the firſt, is only a delicate, pregnant Imagination; ſuſceptible of any feeble Impreſſions that may happen to be made in the Courſe of Things; and ready to take fire at the leaſt Spark. The Surfaces of the finer Fluids, we find, are kept in continual motion by the bare Tremor of the Atmoſphere, tho to us inſenſible: And thus the Air is never ſo ſtill, but that the Aſpin Leaf feels its Impulſe, and bends and trembles to it; when others require a ruder Guſt to move 'em: Yet theſe, too, give way in a general Storm; whole Foreſts then totter indifferently: even the Trunks of ſturdieſt Oaks, now yield like the reſt. -----And, accordingly, we read, in antient Hiſtory, of whole Nations being at once ſeiz'd with the poetical Fury. Few of the Cities of *Greece*, not even *Athens* it ſelf, with all its Philoſophy, but has one time or other labour'd under theſe epidemical Enthuſiaſms.

WE have already obſerv'd, that Invention is the Principle, or Source of Poetry. An excellent modern Poet adds *, that 'tis this which furniſhes Art with all its materials; and that without it, Judgment it ſelf can, at beſt, but ſteal wiſely.-----Now, this Faculty of Invention it ſelf, is uſually no other than a Delicacy, or Readineſs of taking Hints: but even at moſt, what we are ſaid to *invent*, is only what reſults, or ariſes from ſomething already in us. There is no new Matter got by inventing: that can only come by the way of Senſe and Obſervation: All that paſſes in the other Caſe, is, that from the Memory of certain Things, *i. e.* the Compreſence of certain Ideas to the Mind; certain new Ideas ariſe, according to the Order of Things. The ſprightly Imagination is led, on various Occaſions, to compound its Ideas, and many of 'em ſo oddly and boldly, that we take its Productions for new Things; and thus think we invent 'em, becauſe they did not exiſt in us before in that form; tho the Matter or Elements thereof did. There is no more real Invention in the Poet, than in the Tapeſtry or Moſaic Worker, who ranges and combines the various colour'd Materials furniſh'd to his Hand, ſo as to make an Aſſemblage or Picture, which before had no Exiſtence.

THE Reader who has any doubt about this, need only take the firſt piece of Poetry that comes in his way, to be convinced, that all that is new and moving in it, is no other than new Compoſition or Combination of ſenſible Ideas. In the *Il Allegro* and *Il Penſeroſo*, for inſtance, two of the moſt poetical Pieces in our, or perhaps any other Language; how eaſy is it to reſolve all that is ſo magical and raviſhing, to the new, uncouth, and frequently wild and romantick Aſſemblages of Imagery. Indeed, who can contain himſelf at "——Sport which wrinkled Care derides, and Laughter holding both his Sides.——*Cynthia* peeping thro' a "Cloud, while rocking Winds are piping loud.——To hear the Lark begin her Flight, and ſinging ſtartle the "dull Night: Or the Cock with lively Din, ſcatter the Rear of Darkneſs thin: Or liſten how the Hound and "Horn, loudly rouſe the ſlumbering Morn.——Or, ſee glowing Embers thro' the Room, teach Light to "counterfeit a Gloom.——Or ſtoried Windows richly dight, caſting a dim religious Light.——Or hear *Orpheus* "ſing ſuch Notes as warbled to the String, drew Iron Tears down *Pluto*'s Cheek.——Or Verſe with many a "winding Bout, of linked Sweetneſs long drawn out, with wanton Heed and giddy Cunning, the melting Voice "thro' Mazes running; untwiſting all the Chains that tie the hidden Soul of Harmony."

PERSONIFICATION, which is of that Extent and Importance that it is uſually held the Life and Eſſence of Poetry; is a vaſt Source of new Imagery. By this, not only different Objects, but different Syſtems and Worlds, are combined and blended together; and what belongs to one Kind of Beings, Man, is attributed to every other: each Object, either of Senſe or Imagination, being occaſionally inveſted with all the Characters and Properties belonging to the human Kind. Thus, an Arrow grows *impatient*, and *thirſts* to *drink* the Blood of a Foe; or *loiters* and ſtops half way, *loth* to *carry* Death, *&c.* So an Action of the Body, *Laughter*, is above repreſented as it ſelf laughing, ready to burſt its Sides. And in the ſame Piece we have one of the Planets, the Moon, repreſented as *trick'd up* and *frounced*; and again, as *kerchief'd*, and in a decent Undreſs, and thus going a *Hunting*. To tell us, that a fine Spring Morning, attended with a gentle Gale of Wind, is very pleaſant; preſently,—"Zephyr "with Aurora playing, as he met her once a Maying, on a Bed of Violets blue, and freſh blown Roſes dipt "in Dew, fill'd her with a Daughter fair, yclep'd in Heaven *Euphroſyne*, and Mirth on Earth." How conſiſtent with the Nature of Things, that a Breath of Air ſhould lay an early Hour of the Day down; and that from a green Gown thus given, a Paſſion of the Mind ſhould in time be brought forth? In effect, the Inſpiration of the Poet amounts to little more than relating things that are naturally incongruous. He preſents new Objects, new Worlds, but 'tis only by differently combining the Parts of the old one. He does not make any thing, he only patches: He does not invent, he only tranſpoſes: Nor has he the leaſt Power to move, other than what he derives from the Novelty and Strangeneſs of his Combinations; to which nothing exiſts in the ordinary Syſtem, any thing conformable.——To ſay no more, if Invention furniſh Art; Memory furniſhes the Invention; and Senſation the Memory, where all Knowledge originally commences. And the whole Proceſs is nothing but the Action, or Operation of the Deity in a Courſe of Laws.

AS to the ſecond Kind of Poets, in whom the Inſpiration is promoted or excited by means of Wine; *Caſaubon* is perfectly frighted at it; judging it the higheſt Strain of Impiety, to ſuppoſe a Man may be divinely

* Pope *in Pref. to* Homer.

inſpir'd by the Fumes of Liquor.—And yet I don't know whether his Fright be not founded on a Miſapprehenſion. If *Scaliger* or any other Perſon alledge, that the Juice of the Grape may be an Occaſion of ſuch an Effect, *i. e.* a Means or Condition neceſſary to make the Laws that concur to Invention take place; I do not ſee what Religion has to do here, more than in any other Enthuſiaſm. The uſe of ſuch a Means, is no ways derogatory to the Power or Goodneſs of God; who ſtill remains the Author of this, as of any other Inſpiration; whether it be by Viſions, by Voices, Dreams, or the like. What matters it whether the Sound of a Cymbal, or the Sight of an Image, or the Effluvia of a Liquor be the Occaſion? So long as he is the Cauſe, what matters it what Inſtrument he makes uſe of? And of all the Bleſſings this Juice is made the Occaſion of to us; why ſhould it be precluded from that, which none of God's Creatures, not even the vileſt, but occaſionally miniſters? The Antients did not think ſo meanly of it: they ſet up a God on purpoſe to preſide over it; and it even had the largeſt Share in their moſt ſolemn Ceremonies of Religion.

THE Inſpiration of *Orators*, bears a near Relation to that of the Poets; tho being ſomewhat groſſer, it becomes more technical, and demands more Induſtry, and Art.——*Quintilian* tells us how a Rhetor is to get inſpir'd *; "not by ſupinely lolling and gazing at the next moveable, and careleſly turning things over in his Mind; but by "imagining the Judge and the Audience preſent, and ſtrongly repreſenting to himſelf the Time, the Occaſion," &c. He adds, that no body ought to pretend to be an Orator, unleſs he have this Art of Inſpiration at command; ſo that he can raiſe it at pleaſure.

WHAT has been ſaid above, contains ſome of the general Principles of Enthuſiaſm, and their Connection with other phyſical Effects: and 'twill be eaſy to trace and purſue the ſame, where they appear in other Caſes, and with other Circumſtances. Thus the Inſpiration excited by the Orator in his Audience, is reſolved, by *Caſaubon*, into the Muſick of the Speaker, *i. e.* the Tone and Cadence of his Voice; and the Συνθεσις, or order and placing of his Words: In which laſt, how ſimple and trivial ſoever it may ſeem, all the great Maſters on the Subject allow ſomewhat myſterious and unaccountably forcible; and accordingly make it the principal Part of Rhetorick. And yet there is nothing in the Whole, but what reſults from the Powers, Properties, &c. of the ſeveral Letters, conſider'd as ſo many Sounds, artfully combin'd. In effect, there is ſome Ρυθμὸς, or Dimenſion, and ſome Μετρον, or Numbers in all Diction; much more in that of Oratory: And Muſick it ſelf has no Charm in it, but what it derives from thoſe very Sources.

NOR muſt it be omitted, that the uſe of *Metaphors* contributes its ſhare to the Effect. The Secret whereof conſiſts in this, that they are, as it were, accommodated to the Senſes; and preſent ſuch Images to the Imagination, as move us moſt when perceived in the Way of Senſation †.

AS to that Enthuſiaſm felt in *Prayer*, its Cauſe is not far to ſeek. The Powers of Rhetorick, and Muſick; and of a peculiar Fervour of Imagination, rais'd by an Apprehenſion of the Preſence of God, &c. will go a great way. We may add, that the antient Heathens made uſe of Dithyrambics in all their moſt ſolemn Prayers; which *Proclus* obſerves, are peculiarly fit to ſtir up enthuſiaſtical Diſpoſitions. A Man that rides *Pindar*'s Horſe, cannot well fail of going at a great rate.

BUT the moſt extraordinary and unaccountable kind of Inſpiration is ſtill behind, *viz.* that of *Prophecy*, *Divination*, *diſcovering of Cures by Dreams*, &c. which yet may all be produced by Art; and accordingly, have all been taught and ſtudied like other Arts: not to ſay, alſo, practiſed like them, for a Livelihood. Schools and Colleges of Prophets, Divines, Augurs, &c. were numerous both among Jews and Gentiles; and there was little in their Diſcipline, but what may be reſolved into what has been already ſaid. Here, all the Means above mentioned, all the Springs of Enthuſiaſm, were uſed; and frequently combin'd together, to make the more compound and extraordinary Effect. The Sight of vaſt Objects, as Rocks and Mountains, wild Proſpects, ſolitary Groves, gloomy Caves, furious Rivers, Seas, &c. which we find to work ſo ſtrongly on the Mind, were indulged; and ‡ frequent Changes, and ſudden Tranſitions made from one to another **. Such unuſual Objects neceſſarily ſuggeſted unuſual Ideas; which were heighten'd by proper Applications to all the other Senſes. And when the Man was at length got out of the ordinary Syſtem of Thinking, into another more unuſual and extraordinary, tho equally phyſical, or if you will, mechanical one; what he utter'd was judged all oracular: It was not his Senſe, or Reaſon that ſpoke; and therefore it muſt be that of God himſelf. And among a large Train of Objects which preſented themſelves to him, ſome of 'em could not want an Analogy to Things that were really to come; at leaſt, in the Opinion of a Perſon already poſſeſſed with the Notion thereof. It may be added, that the Propheſies themſelves, had their Share in producing Futurity; the Events whereof partook of the Predictions, ſome more, others leſs, according to the degree of Poſſeſſion of the Parties concerned in them. In effect, the Revelations ſtill retain'd ſomething of the Means made uſe of to raiſe 'em. Thus, if the one were either agreeable or diſpleaſing, the other would be of the ſame Kind: And hence a Revelation was artificially produceable of the Complexion required: which was the very Apex of the Art. So that the Divination, when moſt perfect, really ſuppoſed a natural Knowledge of the Thing demanded, and was built on it.

AS to *Dreams*, &c. there was a Formula for 'em; the Circumſtances whereof might be appropriated to raiſe in the Imagination an Idea of the Thing required.——After a number of Ceremonies, the Party was to ſleep in the Temple: *Pellibus incubuit ſtratis, ſomnumque petivit.* And the Prieſts had not only the placing of his Body, and the ſtrewing of his Bed; but alſo the Management of Odours, Sounds, &c. in the Night-time. So that if any natural Means were known for the Cure, here was room enough to ſuggeſt it to the Patient's Imagination, which was made acceſſible to 'em, and as it were put into their Hands. But, if no proper Remedy were known; as, 'tis probable, they hardly enter'd ſo far into the Part: yet, what was thus ſuggeſted, perhaps at random, how ſtrongly muſt it operate, when inforced by the Opinion of its coming by Miracle and Inſpiration? We ſee what the bare Preſence and Aſſurance of a Phyſician will frequently do; even cure Diſorders far out of the Reach of his Skill: and what an Improvement would it not be to the Faculty, to have the further Aſſiſtance of a little Shew of Religion and Ceremony?-----A deal more might be ſaid on this Head, from the Practice of EXORCISMS, AMULETS, PHYLACTERIES, &c. to which the Reader may turn in the Book; as alſo to the Articles WITCHCRAFT, EPHIALTES, &c.

IT appears then, that 'tis in vain that we pretend to pervert the Order of Nature. Senſation does and muſt inevitably precede Imagination; which cannot by any human Means come at the ſmalleſt Grain of any thing, but what paſſes thro' that Canal. There is no harm in ſaying, that ſuch Things are of Divine Inſpiration; the Miſchief lies in ſuppoſing, that theſe are more ſo than others; that what appears only to the Imagination, is more of God than what appears to Senſation: which is, in effect, to ſay, that we have ſome Knowledge which we do not receive from God.

* Inſtit. Lib. v.

† Cicero 3. de Orat.

‡ Multos Nemora Sylvæque, multos Amnes aut Maria commovent, quorum furibunda mens, &c. *Cic. de Divin.*

** Livy, *relating the horrible Rites of the* Saturnalia, *ſays*, "*Men* "*would hereupon be taken as if mad, fall into ſtrange fanatical Agi-* "*tations of Body, and break out into Propheſies:*" Velut mente capti, cum agitatione fanatica corporis vaticinari. Dec. iv. l. 9.

NO body can imagine, that what we have ſaid tends to exclude God, and Providence out of the World; but rather to eſtabliſh, and confirm 'em in it. So far is it from ſhewing, that the Deity has no hand in the Production of ſuch and ſuch Effects; that it ſhews, nothing elſe has any. The Whole is His; and the Agency of Man is only circumſtantial. For, what neceſſary Connexion between any of the Means here uſed, and the Effect? And in whoſe Hand but God's, could ſuch incompetent Inſtruments produce ſuch Ends? In reality, we not only confeſs his Preſence and Agency in the great and extraordinary Phænomena; but ſee and admire it every where, in the moſt ordinary ones. Nor does this imply any thing to the Diſadvantage of Reveal'd Religion; which is a Point quite foreign to the preſent Purpoſe. The Inſpiration and Prophecy we have ſpoke of is all natural, and ordinary; and does not any way preclude *the Deity* from more extraordinary, and miraculous Manifeſtations of his Will. On the contrary, if weak Man can do ſo much, acting ſubordinately to certain Laws of Nature, and by means of others; what may we not conceive of the Author of thoſe Laws, whenever in the Wiſdom of his Councils, he ſhall think fit to interpoſe: as, in the two great Diſpenſations whereof the ſacred Writings ſpeak?

BUT, if we have not made Philoſophy encroach too far on Religion; it may, perhaps, be objected, that we have made Religion of too much Concern in Philoſophy; in that we are continually recurring to the dernier Reſort, the Deity; which is held unphiloſophical.——But let it be conſider'd what it is to *philoſophize*; and whether our *Theories* amount to any thing more, than Enumerations of Laws, *i. e.* Actions, of the Creator? 'Tis certain, all the Structure and Œconomy diſcover'd by Diſſection, Microſcopes, Injection, *&c.* furniſh no more ſcientifical Account of the Origin of an Animal, than of a Spark of Fire. The uſual Syſtem of Generation amounts to no more than Augmentation; as it ſuppoſes the Animal already form'd, and only undertakes to enlarge, and ſhow how it arrives at its Bulk. An Animalcule is to be given us, either *in ſemine*, or *in ovo*, or we labour in vain; Aſſimilation being all the Generation we have any Idea of. We find our ſelves loſt and bewilder'd, when we come to think "How the dim Speck of Entity began," and here begin to confeſs, and mourn the Imperfection of our Knowledge. As if there were any Difficulty here, which did not equally obtain in every Step of the Proceſs. All the difference is, in the one Caſe we are ſenſible we only know the *What*, and in the other we alſo think we know the *How:* Which is a Deluſion: And were it not for the Paradox, one might almoſt affirm, that we know thoſe Things beſt, which we think we know the leaſt. For that here we more immediately ſee the real Cauſe, without the Cloud and Embaraſs of Occaſions, which at other times confound us. Occaſions, are Cauſes, with reſpect to us, who only act at ſecond hand; and the great Source of our Error, is, that we can't eaſily ſee thro' 'em to the real Cauſe. Whence, the greater number of Means and Occaſions we perceive; the further is the Cauſe apt to be involved, and the more Attention is required to extricate it. And by this way alone can Philoſophy lead to Atheiſm.——Our Knowledge, in effect, is all relative; it reſpects our ſelves, and our uſes, either more or leſs immediately; and is chiefly applied in the Arts, and Affairs of Life, where Occaſions are Cauſes: And hence we take a Tincture, which we carry with us thro'out; and apply, unawares, the ſame Notion when we come to philoſophize, where we are leſs intereſted, and conſequently our Knowledge purer and more abſolute. And thus we are betrayed fatally to confound *Art* with *Nature*; *Firſt Cauſe* with *Second*; *God* with *our ſelves:* all which muſt be done, ere the Philoſopher can commence Atheiſt.

THIS not diſtinguiſhing between Cauſes and Occaſions, has produced an infinite deal of falſe Refinement; to the great detriment of our moſt obvious and palpable Knowledge. We continually over-ſhoot the Mark; and looking too far, miſs ſeeing what is cloſe to us. We are willing to leave God out of the Affair as far as we can, and only have recourſe to him when we are at a pinch. He is rarely wanted, unleſs now and then, for a Miracle, or ſo. The Deity is not to interpoſe, *niſi dignus vindice Nodus*, till we have occaſion for him; *i. e.* till the Caſe becomes ſo obvious and glaring, that the Charm is broke, and we are forced to ſee him in ſpite of all our Prejudice. The Occaſions are ſo viſibly inadequate, that our Conſcience cries out, and neceſſitates us to look to and confeſs a Cauſe.——But, tho we be well enough contented to find him at the End of the Chain; alas he muſt be alſo preſent at every Link, or the Whole will fall to pieces. He is not more concern'd in forming the original *Stamen* of a Fœtus, than in nouriſhing, aſſimilating, or bringing it at length to Light. We can as eaſily conceive the firſt Formation of a piece of unorganiz'd Matter into an Animal, as any other Production of Nature; or even, as we call it, of Art. Generation is effected after the ſame manner as other Arts; and the ſame Principles that will account for the making of a *Statue*, will account for that of a Child. If the Figure of a Man ariſe out of a Maſs of Clay; is it by any other Operation than that of Nature, which according to the Poſition of the Hand, determines the Parts of the Clay to move in this Direction, or that; according to certain Laws of Motion, and Percuſſion? And if the ſame be afterwards harden'd, upon ſtanding to the Fire; is it not by the ſame Nature acting by certain other Laws, the Set or Collection whereof makes the phyſical Proceſs called *Exhalation?* The Hand, you'll ſay, was the Occaſion. But what is an Occaſion? I doubt we have no juſt Idea to that Word; and that it implies ſomewhat of a Contradiction; at leaſt, if any thing of Cauſalty be denoted by it. Conſidering that we ſay, Light is the Occaſion of Shadow, Joy of Sorrow, and every thing of its Contrary. If a piece of Phoſphorus, upon becoming contiguous to Air, immediately begin to ſmoke, and produce Fire and Light, with all the wonderful Phænomena thereof, as Colour, Refrangibility, Reflexibility, alternate Fits of eaſy Refraction and eaſy Tranſmiſſion, have different Powers inherent in the different Sides of its Corpuſcles, be reſoluble by a Priſm into all the Appearances of a Rainbow, exhibit the Species of Objects, act on and conſume Bodies, give Senſations of Heat, Pain, *&c.* and all theſe Properties permanent, and immutable for ever; What a Syſtem of Laws, what an infinity of Springs muſt be play'd for all this? No Circumſtance whereof is in our hand, beſide that of Contiguity or Non-contiguity with the Air: which, for our own Glory, we dignify by the Name *Occaſion*, and ſuppoſe ſomething in it analogous to *Cauſe*; and thus put our ſelves in ſome meaſure on a footing with the Almighty.——We know, without Light the viſible Univerſe would ceaſe to be; and without Heat, all Motion and Action muſt be at an End: So that it may even be ſaid to be owing to Fire, that there is a World. And yet how eaſy is it to produce what thus contains in it all Things! In effect, Fire is an *Occaſion*; and contributes juſt as much to the Exiſtence of the World, as we do to that of Fire. When we are doing, we might as well go on, and make our ſelves the Cauſes or Occaſions of the Univerſe; which we are, in the very ſame Senſe, as of any one Phænomenon in it. And thus, the ſame Principle which appear'd ſo deſtructive to Religion, is found equally ſo to Philoſophy. So conſiſtent is the Nature of Things! one Error is ſubverſive of almoſt all Truth: One Wheel amiſs in the Machine of Knowledge, makes the whole a Lye.

OF this, many of the Antients ſeem to have had a juſter Notion than we; as, in effect, they may be ſaid to have had more Religion than we.——Their Mythology, which is ſuppoſed to be their Phyſics, ſpeaks of nothing elſe but God, under various Forms and Shapes, *i. e.* in various Views and Relations. The Poets, from whom it was taken, firſt perſonified God, or the firſt Cauſe; and then his Attributes. His *Power* they called *Jupiter*, which they conceiv'd as his reigning Attribute; his *Juſtice* was *Juno*, the Conſort of Power; his *Wiſdom*, *Minerva*, the Offspring of *Jove*'s Brain*, *&c.* And thus it is they are to be underſtood, when they

* *Vid.* Boſſu, Traité du Poëme Epique, L. i. c. 2.

ſay

ſay *Jupiter* did ſo, and ſo; *Juno* perſecuted the *Trojans*; *Minerva* inſtructed *Telemachus*, &c. which ſeems to be all the Polytheiſm the Inventors were guilty of; tho after-Ages, not perceiving that this was the Work of Poetry and Fiction, abſurdly took it in another Senſe.

IN effect, the whole Phyſics of the Antients, was no other than a Theology; as all juſt Phyſics ought to be. I may even add, that the making a Difference between the two Sciences, and erecting 'em into Provinces independent of, and oppoſite to each other, has proved moſt pernicious to both; and been the great Source both of Irreligion and Ignorance; which will never be dry'd up, till the two be reſtored to each other, and laid together again. To run any length in either of 'em, without having recourſe to the other; as the generality of Authors affect to do, is downright inconſiſtency. Some of our Syſtems of Theology, one would take for pure Inſpiration thro'out; as if the Authors ſuppoſed they could know any thing of God, otherwiſe than by means of Senſe, and Phænomena: or as if Enthuſiaſm it ſelf did not pre-ſuppoſe Senſe, or could ariſe without it.——And, on the other hand, ſome Treatiſes of Philoſophy ſeem to have refined God out of the World, by whom all things in it ſubſiſt; and which, in *Seneca*'s Philoſophy, was no other than God himſelf *. They have made us an Univerſe ſo fine, that it may ſtand of it ſelf, withoutany God, *i. e.* without any Cauſe, at all: Occaſion is the higheſt Cauſation they require. This is to abſtract with a witneſs; to diſtinguiſh the Knowledge of the Cauſe from that of the Effect, and *vice verſâ*: whereas there is no knowing any thing of either, other than by their Relations to each other.

I MAY add, that the further either of theſe Sciences is carried, on this footing, the more idle and extravagant it will become; and that the one tends to downright Madneſs, and the other to downright Atheiſm. On the one hand, to make a Syſtem without a God, is nothing leſs than to be a God one's ſelf: The Author's Imagination muſt ſupply the Place of a Deity, by animating the Maſs, and giving Connexion to the ſeveral Parts and Members, *i. e.* by eſtabliſhing the Relation of Cauſe and Effect, which is the very thing that denominates God. Yet even ſuch imaginary Syſtem it ſelf, cannot ariſe without God, acting by his Laws upon the Imagination, in the Courſe of Things; ſo as to produce ſuch Effect: And thus what tends moſt directly to exclude God, does at the ſame time ſuppoſe him.-----And, on the other hand, to make a God without a Syſtem; that is, to give a Theology or Doctrine of God, without a Phyſiology, or that of the World, is directly to make a God, not to find one. 'Tis to make an Effect antecedent to its Cauſe: Tis to do, I am aſham'd to ſay what!

I AM afraid I may ſeem to have been too long abſent from my Subject; but it has been all along in my Eye, and a little Recapitulation will convince the Reader, that we have not wander'd far out of the way.——We have ſhewn whence all our Knowledge originally riſes: that Senſation is its only Source; that what comes this way, comes by the Agency of the Divine Being: that it is further modified in the Memory or Imagination, where new Aſſemblages are frequently made, which is called *Invention*; that it is continually altering, by the Admiſſion of new Ideas from without; but ſtill remains ſubject to the Laws impoſed by the Creator, ſo that nothing happens therein, but in conſequence of ſuch Laws.——Thus far the Mind appears merely paſſive: And thus it ſtands with reſpect to the *Matter* of all Knowledge and Art.——It remains, now, to conſider its *Form*, or that whereby ſuch Knowledge becomes *Art*, *i. e.* becomes ſubſervient to human Purpoſes, and under the Direction of human Reaſon.

HERE, therefore, a new State of the Mind, *Agency*, and a new Faculty thereof, *Reaſon*, come in play: the Foundation and Office whereof, will be aſcertain'd, by inquiring, What there is in the Artiſt's, *e. g. Homer*'s, Mind, that concur'd with his Inſpiration or Invention, to the Production of his Poem? This will be found to reſolve into, *firſt*, an Inclination, or Deſire to produce ſome Piece, in the way of a Fable, that ſhall ſtrongly repreſent the Miſchiefs of Diſcord among Confederates; and, *ſecondly*, a Knowledge of the Means neceſſary to that End, or an Acquaintance with certain Rules and Meaſures which tend to produce ſuch Effect.

THE firſt is a *Moral View* or *Motive*, which has already been laid down as the Spring or Principle of all human Action, and which is founded on the Apprehenſion of Good or Advantage to ariſe from ſuch Poem. The ſecond, *viz.* the Knowledge of the *Means*, ſtands on the common Footing of the Knowledge hitherto diſcours'd of.

THE *Means* and Meaſures of an Art, make a kind of preliminary Doctrine, neceſſary or conducive thereto, called the *Theory of the Art*; which, alſo, in one Senſe, may be conſider'd as another *Art*, diſtinct from the former: At leaſt, to come at it is the Buſineſs of another Art.——If, for inſtance, a certain Poſition, or Set of Motions of the Body, be conſtituted by Nature the Occaſion of a poetick Inſpiration; and ſuch and ſuch Images and Ideas ariſing herefrom, be conſtituted the Occaſions of ſuch and ſuch Paſſions in the Mind of a Reader, and ſuch and ſuch Views conſequent thereon, *viz.* an Averſion to Enmity, and Contention: To form an Art productive of theſe Effects, we muſt firſt ſee and obſerve ſuch or the like Effects, to ariſe from ſuch or the like Cauſes; and argue or infer, that 'tis probable theſe Motions, or theſe Images, are the Occaſions thereof: and conſider and collect the Order, Manner, and Circumſtances thereof, to form the *Art*, or *Method*.——So that we have here, as before, 1°, *Matter*, *viz.* Phænomena, firſt furniſhed by Senſation, and preſerv'd in the Memory; 2°, *Form*, ariſing from the Moral View, which led us to frame an Art, and in order thereto, to conſider and dwell on the Phænomena, compare 'em together, and infer ſomething from 'em.—It appears, therefore, that we have two Arts of Poetry, very different from each other; coming from different Cauſes, tending to different Purpoſes, and rarely found, in any degree, in the ſame Perſon. The firſt Art *Homer* has in perfection, the ſecond, *Ariſtotle*.

BUT for all their difference, the two are really of the ſame general Nature, and Kind; and only differ in point of Degree, and Subordination; as they are nearer to, or further from, the Principle of all Knowledge and Art, Senſation.——*Homer*, we have ſhewn, was inſpired: He derived his Art only from Nature acting on him in the ordinary Courſe of Things, and firſt preſenting Objects to his Senſe, then to his Imagination: And others are inſpired from him, *i. e.* derive the Inſpiration from Nature thro' his means: among whom is *Ariſtotle*. Nature, as ſhe appears to the Senſes, is *Homer*'s Subject: as ſhe ſhews her ſelf in *Homer*, is *Ariſtotle*'s; by which time the Inſpiration is grown a degree cooler, and leſs forcible, and the Ideas thus excited at ſecond hand moving the Mind leſs, it can attend more ſteadily to 'em, and perceive their Relations better. In the firſt it falls like Lightning, immediately from Heaven; the ſecond may be compared to the Reflexion of the ſame in a Mirror. The reading of *Homer*, *i. e.* the exciting and calling up his Ideas and Images, does, as it were, impregnate *Ariſtotle*'s Imagination; and tranſplant the Poet's whole Nurſery into the Philoſopher's Garden, to be further cultivated. Accordingly, *Ariſtotle* applying his Apprehenſion and Reaſon to 'em, and examining 'em cloſely on all Sides, perceives divers Relations and Analogies between 'em, which *Homer* was not aware of; and which the Warmth of his Imagination, and the quick Succeſſion of new Ideas, would not give him room to attend to. Theſe Analogies he calls *Rules*, or *Laws*; the Aſſemblage or Syſtem whereof, make what we call *Ariſtotle*'s *Art of Poetry*.

* Totum hoc quo continemur & unum eſt & Deus; & ſocii ejus ſumus & membra. Epiſt. 92.

THE like Proceſs might be obſerv'd in the ſeveral other Arts. Thoſe we have hitherto chiefly kept to, have been of the ſymbolical Kind: we ſhall here give an Inſtance in what we call the real Kind, viz. *Architecture*. ——An *Athenian* Sculptor, then, obſerving an Acanthus ſhooting up under a Baſket; is pleas'd with the Figure it preſents, and taking the Hint, invents the Capital of a Column on the Model thereof: And by a number of like Steps, an entire Order gradually aroſe; and, in time, a whole Art.-----Things thus advanced; and another Perſon ſeeing a Building framed after ſuch manner; he attentively examines the ſeveral Members, their Forms, Proportions, *&c.* and puts 'em down in writing: And thus does another poſterior Art ariſe. And between the two, there ſtill remains the Subordination already obſerved between the Means, or Occaſions of producing 'em; *i. e.* the Rules thus formed being couched in Words, or Language, ſupply the Office of the external Objects they were originally deriv'd from, and prove Occaſions of raiſing Ideas or Images in the Imagination of future Artiſts, to be imitated in the proper Materials.

THE Arts, then, of Poetry and Architecture, come firſt in at *Homer*'s, and *Callimachus*'s Senſe, in the ſimple Quality of natural Phænomena, or Objects; which meeting with other Ideas in the Memory, or Imagination, and coming to be compared and combined therewith, by the Agency of the Moral View or Principle which ſuggeſted the making of a Poem, *&c.* as advantageous and deſirable; new Productions ariſe, *e. g.* a Poem, or a Building: which coming at length under the Cognizance and Conſideration of Reaſon, certain Relations or Analogies are diſcovered therein, which tend to propagate, and produce the like at any time.-----Reaſon returns Rules for Matter; which Rules, prove like the Philoſopher's Stone, which tends to turn all Materials it is applied to, into Gold; and the Materials thus tranſmuted, like the pretended multiplicative Virtue of the ſame Gold, from every thing they are applied to, produce Rules again.

REASON, in effect, which is the laſt Faculty the Matter of Art arrives at, is the firſt from which the Form or Rules thereof, which are to propagate it, ariſe. In which view, Reaſon may be laid down as the Principle of this ſecondary Art, or Theory; as Imagination of the primary one, or of the Matter. We ſtill ſee the Effect of the firſt Laws, even in the latter Art: External Objects ſtrike the Senſe and Imagination ſo ſtrongly; that they reach to Reaſon; which, like an infinitely elaſtick Subſtance, reflects 'em back again; and thus they again grow into Objects of Senſe: and ſo in a Circle.

THIS ſeems to make the two Arts differ very widely: And as Reaſon appears our higheſt Faculty, (inaſmuch as 'tis this alone that tends to produce, and multiply) and accordingly, all our Knowledge appears proportionably higher and purer, as Reaſon is more concern'd therein: the Rules or Theory of an Art, appears of infinitely nearer Conſequence than the Matter thereof. The former is in ſome Senſe active, and, like the Almighty Mind, tends to produce new Things, new Worlds, new Syſtems without end; the latter is mere Paſſion, and ends in bare Brute Perception.

YET, *Ariſtotle*'s Rules, it muſt be obſerv'd, do not tend to produce Poetry; I mean, not the Matter of Poetry; but only the Form. *Ariſtotle*'s Art is not the Art of Poetry in that Senſe; as its Rules don't tend to produce the Enthuſiaſm. They only give the human Part, and relate what Reaſon obſerves in the Productions of the Imagination, *i. e.* what there is in 'em that is a proper Object of this laſt Faculty, and comes under its Notice. In effect, Poetry is only ſubject to *Ariſtotle*'s Rules, as there is Reaſon, not as there is Inſpiration or Invention in it.

THE Source of Poetry, we have obſerved, lies out of Poetry, in a higher Ground; and to turn the Stream upon us, is the Buſineſs of this other Art of Inſpiration. The immediate Inſpiration, is not ſo immediate as we might imagine. It is not the ultimate Principle of Art, but is it ſelf ſubordinate to another further, or purer Art; ſo that we muſt not have only Art and Rules to produce Poetry, but alſo to produce the Principle thereof, Inſpiration, or Invention. And the ſame will hold of the Rules of this laſt Art, themſelves, which will require others; and ſo *in infinitum*. At leaſt, the Series will be infinite, if we only take our ſelves, and our own Agency into the Account.-----

TO clear up this a little farther; it is to be obſerved, that the Art, *e. g.* of Poetry, is not only the Reſult of another higher Art, as above laid down; but, as it conſiſts of Matter and Form; theſe are each of 'em the Subject of a particular Art, and each of 'em require another higher Art to produce 'em.-----The Means, for inſtance, neceſſary to Inſpiration, or the Invention of Images, make one Art; and thoſe for their Application to the preſent Purpoſe, another. So that the Art of Poetry reſolves it ſelf into two ſubordinate ones; the firſt of which may be called *the Art of Invention*, the other *the Art of Judgment*, or Criticiſm: each of which has all the Characters of the general Art; is come at like it, produces new Objects like it, and reſolves like it into Matter and Form.-----Nor does the Matter end here: For as each of theſe ſubordinate Arts, conſiſts, again, of Matter and Form; each of 'em reſolves lower into two other Arts: and the ſame may be ſaid of each of theſe; and ſo on. So that there is really an infinite Series of Arts, previous to any one, and acceſſory thereto; all diſtinct from each other, tho all of the ſame general Nature and Kind, and only differing in Point of Order, or Subordinacy. They ariſe ſubordinately from the ſame Cauſe, and tend ſubordinately to the ſame End: Which Difference, or Subordination, as already noted, ariſes only from their greater, or leſs diſtance from the Principle of all Knowledge, Senſation.

UPON the whole, ſenſible Nature furniſhes the Matter of them all, by means of the Imagination; and moral Nature the Form, by means, or light of Reaſon.-----The former Propoſition has been ſufficiently diſcuſs'd. It remains to inquire a little further into the latter: For, *that Reaſon furniſhes the Means*, &c. muſt be further qualified, ere it be receiv'd.-----Our Reaſon, it is to be obſerv'd, does not perceive any neceſſary and immediate Connexion between the Means, and the Effect: for there really is none. Conſequently Reaſon cannot be the Author of 'em; in regard, the Medium is wanting whereby it could poſſibly attain 'em. So that they muſt be procured by ſome other Canal; which will at length be found to end in Senſation. In effect, ere we know that ſuch Means conduce to ſuch End, we muſt firſt have obſerved, or found it ſo by Experience. Our Memory ſuggeſts to us, that ſuch or the like Cauſes, have been follow'd by ſuch or the like Effects; which is the only Foundation we have to expect any thing from 'em on the preſent Occaſion.----Thus, if *Homer*'s Reaſon direct him to retire into a Place free of Noiſe and Diſturbance, at a time when his Mind is clear and in due Temper; and there to apply himſelf with Attention and Earneſtneſs, to think on his Subject: In conſequence of which Means, new Ideas and Images preſent themſelves; ſome more immediately relative to the preſent Purpoſe, others leſs: Whence comes all this, but that *Homer* remembers, ſuch or the like Ideas as are now wanted, to have aroſe upon the uſe of ſuch or the like Means? And if, among the Crowd of Images, he chuſes only ſuch as are moſt proper, and immediately conducive to his End, and throw aſide or expunge the reſt; whence is this, but that he remembers ſuch, on former Occaſions, to have contributed more fully to Ends like his own; than ſuch others? So that the whole Proceſs appears to be little other than *Remembrance*; which, we know, reſolves into Senſe.

BUT,

BUT, Memory, it is to be here noted, deals only in *paſt* Things. It informs us, that on ſuch an Occaſion, ſuch Means, under ſuch Circumſtances, produced ſuch Effects: But its Notices are merely narrative, or hiſtorical; and relate only to thoſe numerical Means, Occaſion, Circumſtances, *&c.* which can never happen again. So that Memory ſpeaks nothing to the preſent Caſe; nor gives any Directions how the particular Purpoſe now in view is to be attain'd. Its Language is only this, "Such Means did produce ſuch and ſuch "Effects."----To make the Application of paſt Things to preſent, is the Office of Reaſon; which comes in where Memory ends; and ſubjoins, That "if ſuch Means have done ſo, ſuch others will now do ſo." And conſequently 'tis Reaſon that, in ſtrictneſs, preſcribes the preſent Meaſures.

OUR Inquiry now draws towards an Iſſue; and it only remains to ſhew, in what manner Reaſon attains this End, *i. e.* what farther or higher Means there are, whereby it is enabled to furniſh Meaſures for the preſent Exigent, from the Circumſtances of paſt ones?——This it effects by certain Perceptions of *Similitude* and *Diſſimilitude*, *Parity* and *Imparity*, *Congruity* and *Incongruity*, between former and preſent Means, Occaſions, *&c.* By virtue of theſe, the Mind infers, argues, or preſumes, That "inaſmuch as ſuch Means were followed by ſuch "Effect; ſuch others, by parity of Reaſon, will be followed by ſuch others:" And that "as there are ſuch "and ſuch Differences between former and preſent Occaſions and Circumſtances; there muſt be ſuch and ſuch "other correſpondent Variations in the preſent Meaſures, to keep up the Congruity." All which reſolves into that comprehenſive Word, *Analogy*.----Thus it is found, that every *Means*, every Step of an Art, includes what has been already ſhewn of the whole Art; and conſiſts of *Matter*, furniſh'd by Memory, from Senſe and Obſervation; and *Form*, furniſh'd by Reaſon, from Compariſon, and Analogy.

AND thus it is Reaſon that makes all our hiſtorical Knowledge of any ſignificancy to us. 'Tis this that makes former Caſes ſubſervient to the preſent Occaſion. We may look upon this, as the Inſtrument or Faculty of transferring; whereby the Effects of former Times and Places, are brought over to the preſent ones. Without this, Senſe would loſe its chief uſe; and Memory, with all its Copia, be no other than uſeleſs Lumber.----'Tis this Faculty alone that arranges our ſenſible Ideas into any thing of Subordinacy. Memory only preſents 'em ſuch as they firſt appear'd; wholly diſtinct all, and independent of each other; being connected by nothing but their Compreſence, or Co-exiſtence in point of Time and Place. The Eſtabliſhment of all other Relations is the Work of Reaſon; which, from theſe few ſenſible Relations, infers numerous others, *e. g.* from the Compreſence of two Things, in reſpect of Time, Place, *&c.* it concludes that ſome new Appearance perceiv'd in the one, was occaſioned by the other; and therefore, that there was ſome Power in the latter, by which this was effected, *&c.* And thus it is we come by the Relations or Perceptions of *Cauſe*, *Effect*; *Action*, *Paſſion*; *Property*, *Quality*, &c. So that, to this Faculty of Reaſon, we owe the whole Science of *Phyſicks*; which is no other than the Doctrine of Cauſes: At leaſt, the Form thereof. The Matter, *i. e.* the Senſations themſelves, being furniſhed by Senſe, conſtitute *Natural Hiſtory*, the Baſis of all Knowledge whatever.

WE are now got to the Top of all our *Natural* Faculties, *Reaſon*; and the moſt refined of all our Science, *Analogy*.----It remains to obſerve, that with this Natural Reaſon, is connected Moral Inclination. In the Caſe, for inſtance, of *Good*; to the Voice of Reaſon repreſenting a Thing as ſuch, is connected a *Deſire* or *Inclination* towards the ſame; which is the Spring or Principle of all human Action, or Operation; and commands a number of ſubordinate ones, the application of all which conſtitutes what we call the *Purſuit* of ſuch Good.

AND thus we are got to the bottom of all our moral Faculties, Deſire or *Inclination*.----Hence, as Reaſon is the End of Paſſion, or Perception; Inclination is the Beginning of Action: The one terminating in the Apprehenſion of Good, where the other commences. And again, as the Perception of Analogy is the ultimate Effect of Science; the Inclination ariſing by means hereof, is the Beginning of Art: the two being join'd, and as it were, inoſculated in ſome middle Point. And thus external or phyſical Things, come to influence or produce internal, or moral ones; thus the whole Effect of ſenſible Nature is applied to moral Nature. And thus do *Phyſics* take hold of *Ethics*; God, of Man.----Hence, moral Knowledge may be conſider'd as a kind of Medium between Perception, and Inclination; Action, and Paſſion; Science, and Art: Accordingly, it poſſeſſes a middle Region in the Orb of Knowledge; as being that by whoſe Mediation, a Communication is made between the two; and the Effects of the one imparted, or handed over to the other.

BUT, to determine the Nature and Origin of *Analogy*; and ſhew how theſe Notices or Perceptions of *Similitude*, *Parity*, &c. by means whereof Reaſon makes her Concluſions, are arrived at; and whether they ariſe in the ſame general manner as other Ideas, by the Agency of the divine Being, (the human Mind remaining wholly paſſive therein) or whether we perceive or diſcern 'em immediately, by ſome intuitive Power inherent in the Nature of the Mind; and ſo are active therein----will need a little farther Attention.

IT muſt be allow'd, then, that theſe Perceptions, Similitude, *&c.* are no proper Objects of Senſe: They do not come from without, as any part of the Matter of our Senſations: they are of no Colour, Figure, Solidity, or the like. Nor do they ſeem to ariſe immediately, and neceſſarily, upon any Objects being preſented; but rather to require ſome Action, or Operation of the Mind, to produce and give 'em being. The Truth is, they are not any immediate Objects, but reſult from a Compariſon between ſeveral; which Compariſon ſeems to be the Work of the Mind, bringing one to the other, and conſidering their Agreement and Diſagreement.

BUT, tho this bids much faireſt for Action of any thing yet alledg'd; yet will the whole hereof be found to reſolve into Senſe, and Memory.----If, ſeeing a Sword run thro' a Perſon, I find he dies upon it; and ſeeing afterwards a Spear run in like manner thro' another, I conclude he will likewiſe die: Whence is this, but that in the latter Caſe, ſome of the Circumſtances of the preſent Tranſaction, do neceſſarily recal the Memory of the former ones: Since, ſo far as they were alike, they were really the ſame? Conſequently, as the Idea of Death was connected to the former; it belongs equally to the latter. In effect, in two ſimilar things, ſo far as I ſee a Similitude, ſo far I ſee the ſame thing in both. Similitude is only a Repetition: and therefore what agrees to the one, muſt, ſo far as their Similitude goes, agree to the other, for the ſame Reaſon that it does to either. Hence, if I am paſſive in *remembering* the Sword, and paſſive likewiſe in *ſeeing* the Spear; and the one be in ſome reſpects the ſame with the other: I am not active in perceiving that Sameneſs: ſince 'tis only the Perception of one thing twice over. And my knowing it to be the ſame now, is only my remembring it to be what I had ſeen before; with this difference, that the Power which firſt repreſented it to me abſolutely; does now repreſent it with this additional Circumſtance, that I had ſeen it before.

AGAIN, if I argue or conclude that what agrees to, or ariſes from one thing; will do ſo in another thing ſimilar only in ſome Circumſtances: This is founded wholly on a Preſumption, that the Agreement reaches to thoſe Points upon which the former Effect depended. So that all phyſical Cauſation, in reſpect of us, is mere Preſumption. Accordingly, the great *Regulæ philoſophandi* eſtabliſhed by Sir *I. Newton*, that "Effects of the "ſame kind, ariſe from the ſame Cauſe:" and that "Qualities which agree to all the Bodies hitherto known, "agree univerſally to all;" are at bottom only Preſumptions. Yet are they juſt phyſical Laws; and the beſt the Subject will allow of.

THUS far, therefore, we ſee but little that looks like Activity, even in the Faculty of Reaſon. But Reaſon has not been yet ſhewn in its Height. Tho it have its Origin in phyſical Matters; and ſhew it ſelf firſt in the Eſtabliſhment of Cauſes, Properties, &c. it reaches much higher, and is ſeen in its Perfection in Metaphyſicks; where, making its own Productions its Object, it proceeds to examine the Nature and Eſſence of ſuch Cauſe, Property, &c. And hence the Doctrine of Quality, Quantity, &c. in the General or Abſtract.——Nor does the Matter ſtop here; but the Mind ſtill proceeds to erect a new and moſt magnificent Science of Quantities, Analogies, Proportions, &c. hereupon: founded on this Principle, that "ſo far as a thing unknown, agrees or is like "to another thing known; ſo far is ſuch former thing, its Nature, Effects, &c. known:" A Science infinitely extenſive, and productive of infinite Uſes; as being that whereby Knowledge is applied, or transferr'd from one thing to another: And of infinite Certainty, as being founded on a ſelf-evident Propoſition.——It proceeds by Definitions, Axioms, &c. But as the Things themſelves which are its Subject, are only Abſtracts, which are but a kind of Shadows of real and ſenſible things; ſo are its Definitions, which cannot be ſaid to be Definitions in the ſame Senſe as thoſe of a Concrete, *e. g.* a Plant, an Inſtrument, or the like; inaſmuch as they do not excite any Image or Idea in the Mind. And hence that Difficulty under which the Writers of the Principles of Mathematicks labour, to give intelligible Definitions of *Unity*, *Multitude*, *Number*, *Part*, *Whole*, &c.

ITS *Axioms* are only Duplicates of ſome Propoſition, or the ſame thing expreſs'd in two manners; the one direct, the other implicit; properly call'd *Identical Propoſitions*.——Thus that Axiom, "The Whole is equal to its "Parts;" eaſily reſolves into this other, "The Whole has the Nature and Characters of a Whole:" which amounts to this, "A Whole is a Whole."

TO illuſtrate the Progreſs of the Mind in this new Scene: Suppoſe, for inſtance, a Ball, or Sphere; and let it be divided into two Parts.——Our Senſes do not inform us that the two Segments thereof are equal to the whole one: On the contrary, they repreſent them as very unequal; and 'tis Reaſon alone that finds their Equality. The Cauſe hereof, is, that the Figure, &c. of the divided Sphere, which are the things the Eye takes cognizance of, are very different from thoſe of the whole one; and that the Quantity or Subſtance, in which alone the Equality conſiſts, is no Object of Sight, but only of Reaſon; which informs us that the two Segments are ſtill really the whole Sphere, only exiſting with ſome variety in reſpect of Figure, Place, &c. Hence we find it neceſſary, *i. e.* included in the Nature and Notion of a Whole, that the Sphere be equal to its Parts; and thus, by analogy, pronounce the ſame Ratio univerſally between every Whole and its Parts, and ſo make an Axiom which is the Foundation of a new kind of univerſal Knowledge. In effect, to ſay that the whole Sphere is equal to its Parts, is no more than to ſay, the Quantity or Subſtance is not altered by any Alterations made in its Figure, Place, Number, &c. which is as much as to ſay, that the Subſtance is the Subſtance, the Sphere, the Sphere.

FROM ſuch Axioms it proceeds to *Theorems* and *Problems*; every one whereof is reſolvable into Theſis and Hypotheſis; each of which may be again reſolved into Axioms or Identical Propoſitions, which is called *Demonſtrating*. In fine, all Demonſtration ſuppoſes Identical Propoſitions, and turns on 'em; and its Certainty ariſes from no other Principle, but the Identity or Sameneſs of the Thing implied in ſuch Propoſitions, with the Thing expreſs'd.

IT appears then, that the whole Proceſs conſiſts in abſtracting, or ſetting aſide the ſenſible Idea that gave the firſt Occaſion, and conſidering the Relations thereof by themſelves, as if they had diſtinct, independent Exiſtences. By thus excluding the Conſideration of the phyſical *Ens*, Senſation and Imagination are of courſe excluded, with all the Action and Inſpiration annex'd to 'em; and thus is Reaſon left in full play, without any thing to ſuperſede, or divert it.——Thus we may be ſaid to make a new World, and furniſh it with a new Set of Creatures; and a new Doctrine, which is, as it were, the Shadow of the former. Metaphyſicks, and Mathematicks, in effect, are the Science of *Entia humana*, or *rationis*, as Phyſics of *Entia naturæ*, or *ſenſus*.

BUT ſuch Abſtracts, *e. g.* Quantity, Meaſure, Weight, &c. tho no immediate Objects of Senſe, have yet a Connexion with things which have, whereby they become of the utmoſt import in the World. There is that Relation eſtabliſhed between the Faculties of Senſe and Reaſon, that tho the Objects of the one be not cognizable by the other, yet the Communication between 'em is by the all-wiſe Creator made very near and intimate: Such Dimenſions, Weight, &c. are combined by him with ſuch Effects, Motions, Reſiſtances, &c. and prove the Occaſion of ſuch and ſuch Effects: which is the great Principle of all human Action, and all truly artificial Production in the World.

BY means of this Communication, the firſt Impulſe is brought back again from the higheſt pitch of abſtracted Mathematicks, to the firſt Objects of Senſe; from Fluxions and Differences, the fartheſt Parts of the *Pais d' infini* Reaſon has ever travell'd to, to the groſſeſt and moſt palpable Objects that ſtrike every Senſe. And thus are Action and Paſſion, Senſation and Reaſon, Art and Science, found to reciprocate, and produce each other.

HAVING thus diſcuſs'd the Nature, and Characters of *Art* and *Science*; it remains to ſettle the Notion of *a TERM of Art*; a Diction as little underſtood as any thing in Language.——Art and Science, we have obſerved, are Denominations of Knowledge under this or that Habitude; and Words are Repreſentatives of the ſeveral Parts thereof. The whole Compaſs of Words, in all their Caſes, is ſuppos'd equivalent to the whole Syſtem of poſſible Science; tho 'tis only a ſmall Part thereof that is actual, *i. e.* only a few of the poſſible Combinations are, or ever will be, made.

THE Buſineſs of Knowledge, then, is canton'd out among the Body of Words: but they don't bear equal Shares thereof. Being Creatures of our own, we have dealt with 'em accordingly; and made ſome more, others leſs ſignificant, at pleaſure: ſome ſtand for large Tracts, or Provinces; others for little Spots, or petty Diſtricts thereof. In effect, the Order wherein we attain our Knowledge, has occaſion'd us to make a kind of Sortment and Package, if I may uſe the Word, in the Matter thereof. Tho the Mind only ſees and perceives Individuals, which alone are the proper Objects thereof; yet it has a Power of combining and complicating theſe together, for its own conveniency: And hence its progreſs from Particulars to Generals; from Simple, to Complex.-----Hence we come to have Words of all Orders, and Degrees; from the Simplicity of an Atom, to the Complexneſs of the Univerſe. 'Tis pleaſant to trace the Mind bundling up its Ideas, and giving Names to the ſeveral Parcels; to obſerve, for inſtance, how it proceeds from the ſimple Idea, *Thinking*, to the more complex one, *Knowledge*, thence to the more complex, *a Science*, thence farther to *Scientifical*, &c.

INDEED 'tis very few of our Words that expreſs ſingle, or ſimple Ideas. The Reaſon is, that obſerving certain Relations to obtain between the ſeveral Ideas; as, of Cauſe and Effect, Subject and Attribute, &c. we don't ſo much conſider them abſolutely and independently, as under ſuch Circumſtances and Relations to each other. The great Readineſs and Propenſity of the Mind to combine, and bundle up its Ideas, and thus pay, or receive 'em in Parcels, has left us very few ſimple ones; I mean, very few Names which denote only one Idea. The Words *Atom*, or *Mathematical Point*, uſually imply ſeveral Ideas; in regard, we are led to take their Attributes, and Relations, into the Conſideration of the Subject: Thus we conſider the *Atom* as hard, heavy, and inviſible; as the Principle of phyſical Magnitude; as contributing to the Conſtitution of Bodies, &c. Even the primary Qualities themſelves, as *hardneſs*, *heavineſs*, &c. ſimple as they are in their own Nature;

Nature; are ſo far combined with particular Circumſtances, *e. g.* their Cauſe, Effects, *&c.* that their Names become none of the leaſt complex.

NOW, what we call *a Term*, conſider'd as to its Nature and Origin, is no other than "a Word which "denotes an Aſſemblage, or Syſtem of Ideas relating to ſome one Point, which the Mind artfully complicates "or aſſociates together, for the conveniency of its own Operations." Or, "a Word which comprehends ſeveral "Ideas under a certain Relation to each other, whereby they repreſent ſome complex piece of Knowledge to "the Mind for the conveniency," *&c.* Or, "it is a Word, which holds ſeveral different Ideas combin'd toge-"ther in a Relation ſuch as they appear'd under when the Mind firſt conſider'd 'em as a ſtanding Phæno-"menon, and took Meaſures to have 'em fix'd or retain'd in that Quality."

THE Effect of *Terms* is, that by virtue thereof, we are enabled to receive, or communicate Knowledge with more eaſe and diſpatch; foraſmuch as having proper Combinations thereof always ready made, we are ſaved the Neceſſity of beginning *de novo*, and detailing it in Individuals: much as in Arithmetick, to avoid the Embarraſs of a large Number of Units, we tell by Tens, or Sixties, or Hundreds: With the like View, on ſome occaſions, we make up certain Sums of Money in Rouleaus, or in Purſes; and thus pay and receive 'em, without the Trouble of telling or enumerating the Contents.

IN this Senſe of Term, we ſhall find little elſe but Terms in Language: Among *Nouns*, little beſide proper Names, which indeed are out of the ordinary Caſe of Language, as ſerving occaſionally to denote an hundred different Subjects. Yet even theſe ſometimes become *Terms*; as, when any particular Ideas become conſtantly attach'd to 'em, *e. g.* In *Mæcenas*, *Machiavel*, *Auguſtus*, *Atlas*, *Bucephalus*, *Buccentaur*, *Royal Oak*, *Argo*, &c. And among Verbs, very few but are Terms, except the general ones, *to be*, *to do*, and *to ſuffer*. As all the others ſuppoſe theſe, and modify or ſuperadd ſome farther Circumſtance thereto; they commence Terms of courſe: ſuch, for inſtance, is the Word *to moiſten*; which, as it carries a farther meaning than the bare Act of applying a Fluid to a dry Body; and denotes, *e. g.* the *Modus* of its Effect, and the Alteration ſuperinduced by it, *viz.* the ſoftening, lubricating, *&c.* is a good Term. So, *to ſtrike*, as it not only implies a certain Motion of the Arm, but this Motion, effected by the ſucceſſive Contraction and Dilatation of certain Muſcles, *&c.* has every thing that is eſſential to a Term. In the ſame Senſe, a *Staff* is a Term as much as a *Lever*; and a *Pin*, as an *Axis in peritrochio*.

THIS may look like ſtretching a Point, eſpecially to thoſe who are uſed to conſider Terms as Things, I know not how, quaint, and myſterious; and make a Term and a hard Word the ſame thing. But there is no Remedy: Complexneſs is the only Characteriſtic that will be found to hold good of 'em all; and if there be any other more ſpecifick and diſtinguiſhing Properties in moſt of 'em, as we ſhall have occaſion hereafter to ſhew there are, yet theſe, not being univerſal, cannot be made the Foundation of a juſt Philoſophical Definition. They may perhaps be introduced, to good purpoſe, into a popular one; as they afford a more uſeful and adequate Knowledge of the Subject ſo far as they do obtain.

THUS much relates to what we may call *Terms of Knowledge*, which are one degree more ſimple than the Terms of an Art, or Science; and were, for that Reaſon, pitch'd upon to exhibit the common Nature, and Origin of both. Theſe latter ariſe out of the former, by the Superaddition of ſome new Character, or Condition. They were before Members of the Commonwealth of Knowledge; but are now incorporated into ſome certain Province, or City thereof; where they become of farther Significance and Conſideration than before: that is, ſome new Ideas and Circumſtances are now taken into the Combination, which before did not belong to it.----A Term of Art, then, "is a Word that has a Meaning beyond its general, or ſcien-"tifical one; and this Meaning reſtrain'd to ſome one Art." Or, it is "a Word uſed to denote a certain "Combination of Ideas, under ſome peculiar Relation; retained arbitrarily in ſome Art, and either not uſed "in any other Art, or for a different Combination, or with other Relations and Circumſtances."

TO make the way a little clearer to the Philoſophy of a Term of Art, it is to be obſerv'd, that from the primary or literal Senſe of Words, we frequently, by Abſtraction, form a ſecondary, general, or philoſophical one, expreſſing only the Quality moſt predominant in the former, excluſive of the particular Circumſtances of the Concrete. Thus the Word *Spirit*, literally and primarily ſignifying *Breath*; we thence frame a more ſimple general meaning, and uſe the Word for any thin, ſubtil Matter whatever.----Now, Terms of Art are not immediately formed from the literal, or grammatical, but from the general, or philoſophical, Acceptations of Words; which are their proper Baſis, or the Ground-work they are erected on. The general or abſtract Senſe of ſome Word already eſtabliſhed, being found to agree to ſomething which we have occaſion to give a Name to; we take the Word in that Senſe, and ſuperadd the other Incidents and Circumſtances which the preſent Occaſions furniſh, thereto: which being different according to the different Matter and Subject of the Art, ſpecify the meaning of the Term in this, or that Art. So that the Word which, to raiſe it to a philoſophical or ſcientifical Senſe, was generaliz'd; to form a Technical one is again particulariz'd, or appropriated, and inveſted with new Accidents. Which falls in with the Difference above laid down between *Art* and *Science*.

THUS, the ſame Word *Spirit*, which literally ſignifies *Breath*, and philoſophically any ſubtil Subſtance, is technically brought to denote diverſe other things; as, in Anatomy, a thin animal Juice ſecreted in the Brain, and detach'd thence thro' the Nerves for the Uſes of Senſation and muſcular Motion: in Chymiſtry, the Exhalations of Bodies expos'd to the Fire: in Theology, the third Perſon of the Trinity: in Metaphyſicks, any incorporeal Agent, or Intelligence, *&c.* In all which, we ſee the ſame *Subſtratum*, *viz.* a fine ſubtil Subſtance; but this modified a great diverſity of ways: each of which is ſuſceptible, by farther Super-additions, of infinite more. And hence Legions of ſorts of Spirits, both in the human Body, the Chymiſts Laboratories, the Hierarchy, *&c.*

THE Notion of a Term will receive ſome farther Light from that of a *DEFINITION*; which is, as it were, the Analyſis thereof.----By *Definition* we undo, what was done in the *Term*; that is, we reſolve the complex Ideas into ſimple ones, or reſtore the Ideas from their new and artificial State, to their primitive and vague one. A *Definition*, then, may be defined, "an Enumeration of the ſeveral ſimple Ideas couched under "any Term, in the Relation wherein they ſtand to one another."-----We have already ſhewn, that Terms are Words which have peculiar and determinate Meanings, reſulting from a certain Combination of Ideas; in which view, a Term may be ſaid to be, "a Word that is capable of Definition;" *i. e.* of having its Senſe explain'd, and aſcertained by an Enumeration of its Properties, and Relations: by which it is diſtinguiſh'd from other Words merely grammatical, whoſe Meanings are general and indeterminate, and may be uſed with equal propriety in a thouſand Caſes. We can explain a Term: A Word is inexplicable: all we can do towards this, amounts not to Definition, but only to *Subſtitution*.

THUS the Idea attached, for inſtance, to the Word *Force*, is abſolutely incommunicable by means of any Language; we can only try whether the Party have it not already, under another Name; to which end we may tell him 'tis *Power*, or *Energy*, or *Vigour*; if he have Ideas for any of theſe, he'll take in that of *Force*, by its Relation thereto; if he have not, we muſt proceed to try him with more, and tell him 'tis *Forza*, or

*Vis*,

*Vis*, or *Efficacia*, or *Potentia*, &c. or 'tis βία, or ἰσχὺς, *&c.* If none of theſe will do, it remains to try, whether he may not have it, without any Name to it; and ſay, 'tis "That whereby one thing, coming in "contact with another, moves, or ſhakes, or breaks it," *&c.*----If by any of theſe means he learns what *Force* is, he does not form any new Idea: he only learns a new Name; and finds that what he calls by one Name, others call by another; or that what he had never taken the Pains to diſtinguiſh by any Name, ſome others have. To get the Idea, he muſt have recourſe to Senſation, not to Language; it being a phyſical *Ens*, and only to be attain'd that way.

BUT the ſimple Idea called *Force*, being given; and coming to be afterwards modified or circumſtantiated by new Accidents added thereto, and thus form'd into Terms, in this or that Art; 'tis here in the Power of Language, alone, to excite 'em; by reſolving ſuch compound Idea into its ingredient ones, which being recompounded or put together again in the manner aſſign'd by the Definition, gives the full adequate Import thereof.----Thus the Idea of *Force* being variouſly modified, and combined with other Ideas of *Centre*, *Attraction*, *Repulſion*, *Will*, *Machine*, &c. in the Words, *Central Force*, *Centripetal Force*, *Centrifugal Force*, *Neceſſity* or *Moral Force*, *Mechanick Power*, &c. we can, by Definition, arrive at the Meaning thereof; by having thoſe Circumſtances ſpecified, or ſuperadded to the Idea of Force.----In this caſe, there is no coming at the Idea by Senſation; in regard 'tis a Creature of our own, and does not exiſt any where without us, to make an Object of Senſe.

HENCE appears all the diverſity of Definitions; *Technical* ones, comporting only to Terms, as to *Central Force*; *Scientifical* or *Philoſophical*, to Qualities, as *Forcibleneſs*; and *Nominal* or *Succedaneous*, belonging to ſimple Ideas, as *Force*.

'TIS the various Aſſemblage of ſimple Ideas denoted by common Words, that makes all the Variety of Terms; as 'tis of Simples in an Apothecary's Shop, that makes the Variety of his Medicines.----The Analogy goes farther; and it may be ſaid that Terms, like Medicines, only differ from each other as their ingredient Ideas, and the Relations thereof do differ.----If theſe be not all rehearſed in the Definition, the Term or Medicine is not ſpecified, or diſtinguiſhed from ſome other, which may have all except that one or two omitted. Conſequently, ſuch one or two are the Characteriſticks of that Term; which may be explain'd in ſome ſort, by only enumerating thoſe Characteriſticks, and couching all the reſt under that other Term. This amounts to little more than the *Subſtitution* abovementioned; and yet to this is reducible all that the Schoolmen teach of *Genus*, *Species*, and *Difference*.

BESIDE ſimple Words, which we have obſerved are, in their own Nature, inexplicable; there are divers others that become accidentally ſo: And ſuch are all the Data, or preliminary Principles of any Art, with reſpect to thoſe who confine themſelves to the Bounds of that Art. Thus, if it be demanded of an Apothecary, to define one of his Simples, e. g. *Mercury*; he muſt needs be at a ſtand, unleſs he be likewiſe verſed in Minerology; by reaſon it is putting him to explain a Datum, which his Art does not explain, but aſſume; the Explication thereof lying in another Province. For the Data or Principles of any Art, are only explicable from another, *e. g.* thoſe of *Chymiſtry*, *Pharmacy*, &c. from *Phyſicks*; *Phyſicks*, from *Phyſiology* and *Mechanicks*; *Mechanicks* from *Geometry*, &c. So that to explain *Mercury*, would to him be, in ſome meaſure, to explain a ſimple Idea. But aſk him to define *Calomel*, and he is prepared for you; and will readily enumerate the ſeveral Ingredients, and the manner of preparing it: which is the proper pharmaceutical Definition of Calomel.

HERE it may be obſerved, that the Words uſed in the Definition of a Term, do many of 'em repreſent complex Ideas; and conſequently ought themſelves to be defin'd, if we would have the Definition compleat. The Term has uſually divers ſubaltern ones; all which are reſolvable into it, and make part and parcel of the Knowledge held forth by it. Thus, if Calomel be defined, "A medicinal Pouder precipitated from "a Solution of crude Mercury in Aqua fortis, by adding thereto a Lixivium of Sea Salt; and then purified "by repeated Ablutions in a Filtre," *&c.* The Ideas, *Pouder*, *Precipitated*, *Solution*, *Mercury*, *Aqua fortis*, *Ablution*, *Filtre*, &c. remain to be explain'd, to furniſh the compleat Notion of Calomel.----But as this would be endleſs, and would defeat the Intention of a Definition; the Practice obtains, to ſuppoſe all other Terms known, except that particular one under Definition. By this means, we avoid the Embarraſs of bringing down every Word to its Principles, or ſimple Ideas; and acquit our ſelves by bringing it to the next complex ones: Since the bringing an unknown Term to ſeveral known ones, is a kind of indirect Definition.

SUCH is the Nature of a Technical Definition, which holds good or valid for thoſe of that Art, or Craft; who are to be ſuppoſed furniſhed with the neceſſary Data, or preliminary Notices. But to make a ſcientifical Definition, we muſt go ſtill lower; and bring down the Words, if not to their ſimple Ideas, yet to general or common ones. For it is to be obſerved, there are great numbers of complex Ideas current among moſt People, which therefore may be conſider'd as Data, and uſed as ſimple ones, for more conveniency ſake. All technical Apparatus, then, is to be here thrown by; and inſtead of giving five or ſix hard Words for one, the general Effect, and Meanings thereof are to be made uſe of. Thus, Calomel may be defined "a "white Pouder, which falls down from Quickſilver diſſolved in Spirit of Salt-petre, upon caſting Salt therein; "and is afterwards waſhed, again and again, by paſſing fair Water thro' it," *&c.* Where, tho ſeveral of the Words be complex; yet moſt People, in the ordinary Courſe of Life, have framed the complex Ideas belonging to 'em: ſo that they may be conſider'd as ſimple ones.----Yet the Definition can ſcarce be ſaid to be complete, even here: The general or philoſophical Senſe of Words, we have obſerved, is form'd from the grammatical one; and conſequently the Definition ought in ſtrictneſs to extend thither: The Solution, to be adequate, ſhould go as far as the Knot; the Analyſis as the Syntheſis.

THE Reader already begins to feel this Preface grow tireſom; and yet half the Buſineſs is ſtill behind. When ſo large a Work was to follow, he perhaps imagines he ſhould have been excuſed from a long Preface: and the like, probably, may the Author ſay; who, after ſo tedious a Work, cou'd not be over-fond of any ſupernumerary Fatigue. But, the Expediency of the Caſe, which ſway'd and determin'd the one; may ſuffice to ſatisfy the other. Several Matters were purpoſely waved in the Courſe of the BOOK, to be treated of in the PREFACE; which appear'd the propereſt Place for ſuch Things as have a regard to the whole Work. What has been hitherto inſiſted on, as well as what remains, immediately affects every Article in the Book; and tends, withal, to let a little needful Light into certain Points hitherto involved in great Obſcurity. I conſider a *Preface*, as a kind of Vehicle, wherewithal to convey the Reader commodiouſly from the *Title* into the *Book*. The Preface is a kind of Comment on the Title, the Book a Paraphraſe on it: Or, if you had rather, the Book is the Title *executed*, the Preface the Title *explain'd*.

HAVING, therefore, diſpatched the leading Words ART, SCIENCE, TERM, and DEFINITION; we proceed to conſider the Nature of a *DICTIONARY*.-----It were to be wiſhed that the many Adventurers in Print, who publiſh their Thoughts under this or that Form and Denomination, would frame themſelves a preciſe Notion of the Character and Laws thereof. There is ſomething arbitrary, and artificial in all Writings: They are a kind of Draughts or Pictures, where the Aſpect, Attitude, and Light, which the Objects are taken in, tho merely arbitrary, yet ſway and direct the whole Repreſentation. Books are, as it were,

Plans

Plans or Proſpects of Ideas, artfully arranged, and exhibited, not to the Eye, but to the Mind; and there is a kind of analogous Perſpective which obtains in 'em, wherein we have ſomething not much unlike Points of Sight, and of Diſtance. An Author, in effect, has ſome particular View or Deſign in drawing out his Ideas; either, nakedly to repreſent ſomething, or diſtort and ridicule it, or amplify, or extenuate, or diſcover, or teach, or prove, *&c.* whence ariſe divers kinds of Pieces, under the Names of *Hiſtories*, *Diſcourſes*, *Treatiſes*, *Eſſays*, *Inquiries*, *Examinations*, *Paraphraſes*, *Courſes*, *Memoirs*, *Burleſques*, &c. In all which, tho the Matter or Subject may be the ſame, the Conduct or artificial Part is very different; as much as a Still-Life from a Hiſtory, or a Groteſque, or a Nudity, or a Caricatour, or a Scene-work, or a Miniature, or a Profile, *&c.* Each of theſe Methods of Compoſition has its particular Characters, and Laws; and to form a Judgment of the Things repreſented, from the Pictures made of them, 'tis neceſſary we be able to unravel, or undo what is artificial in 'em, reſolve 'em into their former State, and extricate what has been added to 'em in the Repreſentation: That is, we ſhould know the manner thereof; whether, *e. g.* they be mere Nature, thro' this or that Medium, in a fore, or ſide-View, withinſide or without, to be ſeen from above or below; or Nature rais'd and improv'd, for the better, or the worſe.-----The Caſe amounts to the ſame as the viewing of Objects in a Mirror; where, unleſs the form of the Mirror be known, *viz.* whether it be plain, concave, convex, cylindrick, or conick, *&c.* we can make no Judgment of the Magnitude, Figure, *&c.* of the Objects.

'TIS beyond my Purpoſe to enter into the Nature of the ſeveral Methods of Compoſition abovemention'd. I ſhall only note, by the way, that the firſt Writers in each, mark'd and chalked out the Meaſures for all that came after them. The ſeveral Manners of compoſing amount to ſo many *Arts*; which, we have already ſhewn, are things in great meaſure perſonal, and depend on the Genius or Humour of the Inventors.

WERE we to inquire who firſt led up the way of *Dictionaries*, of late ſo much frequented; ſome little Grammarian, would, probably, be found at the head thereof: And from his particular Views, Deſigns, *&c.* if known, one might probably deduce, not only the general Form, but even the particular Circumſtances of the modern Productions under that Name. The Relation, however, extends both ways; and if we can't deduce the Nature of a Dictionary from the Condition of the Author; we may the Conditions of the Author from the Nature of the Dictionary. Thus much, at leaſt, we may ſay, that he was an Analyſt; that his View was not to improve or advance Knowledge, but to teach, or convey it; and that he was hence led to unty the Complexions or Bundles of Ideas his Predeceſſors had made, and reduce 'em to their natural parity; which is all that is eſſential to a Dictionariſt. Probably this was in the early Days of the *Phœnician* or *Egyptian* Sages, when Words were more complex and obſcure than now; and myſtic Symbols and Hieroglyphics obtain'd; ſo that an Explication of their Marks or Words, might amount to a Revelation of their whole inner Philoſophy: In which Caſe, inſtead of a Grammarian, we muſt put perhaps a *Magus*, a *Myſtes*, or *Brachman* at the head of Dictionaries. Indeed this ſeems the more probable; for that a grammatical Dictionary could only have place, where a Language was already become very copious, and many Synonyma's got into it; or where the People of one Language were deſirous to learn that of another: which we have no reaſon to think could be very early, till much Commerce and Communication had made it neceſſary.

WHEN a Path is once made, Men are naturally diſpoſed to follow it; even tho it be not the moſt convenient: Numbers will enlarge, and widen, or even make it ſtraighter and eaſier; but 'tis odds they don't alter its Courſe. To deviate from it, is only for the Ignorant and Irregular; Perſons who don't well know it, or are too licentious to keep it. And hence the Alterations and Improvements made in the ſeveral Arts, are chiefly owing to People of thoſe Characters. There is ſcarce a more powerful Principle in Nature than that of Imitation, which not only leads us to do *what* we ſee others do, but *as* they do it. 'Tis true there are Exceptions from every Rule: there are Heteroclites, Perſons in good meaſure exempted from the Influence of this Principle; and 'tis happy there are; witneſs ſuch as *Paracelſus*, *Hobbes*, *Leibnitz*, &c. In effect, If an Art were firſt broached by an happy Genius, it is afterwards cultivated, on his Principles, to advantage; otherwiſe not: and it may wait long for the anomalous Hand of ſome Reformer, to ſet it to rights. Some of our Arts have met with ſuch Hands, others ſtill want 'em.

WERE we, now, to give an abſolute and conſiſtent Definition of a *Dictionary*; we ſhould ſay, "It is a "Collection of Definitions of the Words of a Language."-----Whence, according to the different kinds of Words and Definitions above laid down, *i. e.* according to the different Matter, and the different View wherein ſuch Matter is conſidered, will ariſe different ſorts of Dictionaries: *Grammatical*, as the common Dictionaries of Languages, which for one Word ſubſtitute another of equal import, but more obvious ſenſe: *Philoſophical*, which give the general Force or Effect of the Words, or what is common to 'em in all the Occaſions where they occur: and *Technical*, which give the particular Senſe attach'd to 'em in ſome one or more Arts.

BUT, in truth, this is a little chimerical; and is to forget what has been already ſaid. Tho we have *Dictionaries* under all theſe Titles; it would perhaps be hard to find any conformable to this Partition; which is not ſo much taken from what really is, as what might, or ſhould be. Dictionariſts are far from conſidering their Subject ſo cloſely, or confining themſelves to ſo narrow, tho direct, a Channel: They muſt have more room; and think themſelves privileg'd by the general Quality of Lexicographers, to uſe all kinds of Definitions promiſcuouſly. 'Tis no wonder they ſhould not keep to Views which they had not, and which could only ariſe from Reſearches they never made. While the Notions of *Term* and *Art*, remain'd yet in the Rubbiſh they were left by the Schoolmen; thoſe of *Definition* and *Dictionary* muſt needs be vague and arbitrary enough; and the Dictionariſts and Expoſitors, profited by an Embarraſs it was their Buſineſs to have remov'd. They have not only built on it, but improv'd it, by a continual varying and confounding of Views, imperfect Enumerations, *&c.*

'TIS not to be imagin'd, the Miſchiefs, and Inconveniences that have aroſe from this ſingle Head; the great Uncertainty it has introduc'd into Language; and the Obſtacle it has been to the Improvement thereof. 'Tis certain it has, in great meaſure, defeated the Intention of Speech; and turn'd Knowledge which that was to be the Medium of, into Jargon and Controverſy. All the Confuſion of *Babel* is brought upon us hereby; and People of the ſame Country, nay the ſame Profeſſion, no longer underſtand one another.----The Effect is, that our Knowledge is grown into little other, than that of Peoples Miſunderſtandings or Miſapprehenſions of one another; which is the only kind of Knowledge that grows; and which will for ever grow: there being the Seeds already laid of ſuch Diſputes, as, according to the ordinary ſpreading of ſuch things, muſt overſhadow, and ſtarve every thing elſe. If all Men meant preciſely the ſame thing by the ſame Name; there would be no room for their differing, upon any Point, either in Philoſophy or any thing elſe: There is no more poſſibility of ſeeing the Relations of Things to each other, differently; than of altering their Nature, and overturning the Syſtem. Relations of Ideas are as immutable as the Creator's Will.-----Error, in effect, is no natural Production; nor is there any direct way of coming at it: We muſt go about for it; and find ſome Law of Nature, to put it in our Power. So that Error is in one ſenſe Truth ere it takes place; only 'tis not the Truth it is taken for.

THE Weakneſs of our Reaſon, which we complain ſo much of, is in great meaſure idle; the Fault is foreign, and lies wholly in the Confuſion of Language; which would not only puzzle us, but the very Angels in Heaven, to make any thing of: Witneſs abundance of our Explications of *Trinity*, *Hypoſtaſis*, *Subſtance*, *Accident*, *Faculty*, *Liberty*, *Cauſe*, *Nature*, *Attraction*, &c. which Divines and Philoſophers fatigue themſelves ſo much about. I am confident, that were the Almighty to inſpire us with a new Language, agreeable to Things themſelves; it would amount to a Revelation; and all our Duties, and Relations would be viſible therein.----The Diſeaſe, in effect, has ſpread ſo far, that there is little hopes of ſeeing it remov'd, or even alleviated, without a new Language, formed *ex poſt facto*, from what we now perceive.-----But ſomething of this will come under Conſideration hereafter; in the mean time we venture to pronounce, that "The Reforma-" tion of Science, amounts to little more than the Reformation of Language."

THERE are two Manners of writing: In the one, which we may call *Scientifical*, we proceed from Ideas and Things, to Words; that is, firſt lay down the Thing, then the Name it is called by.-----This is the way of Diſcovery, or Invention; for that the Thing ought to be firſt found before it be named. In this way, we come from Ignorance to Knowledge; from ſimple and common Ideas, to complex ones.

THE other, *Didactic*, juſt the Converſe of the former; in which we go from Words, and Sounds, to Ideas, and Things; that is, begin with the Term, end with the Explanation.----This is the hiſtorical Way, or the way of Teaching and Narration; of reſolving the extraordinary Knowledge of one Perſon, into the ordinary of another; of diſtributing artificial Complications, into their ſimple Ideas: and thus razing and levelling again what Art had erected.

THE *Dictionary* comes under the latter Kind. It ſuppoſes the Advances and Diſcoveries made, and comes to explain or relate 'em. The Dictionariſt, like an Hiſtorian, comes after the Affair; and gives a Deſcription of what paſs'd. The ſeveral *Terms*, are ſo many Subjects, ſuppoſed to be known to him; and which he imparts to others, by a Detail of the Particulars thereof.----Indeed, the Analogy between a *Dictionary* and a *Hiſtory*, is cloſer than People at firſt ſight may imagine: The Dictionariſt relates what has paſs'd with regard to each of our Ideas, in the Coalitions, or Combinations that have been made thereof: His Buſineſs is to deliver the Progreſſes made in the ſeveral Parts of Knowledge under his Conſideration, by an orderly Retroſpect and Deduction of the Terms, from their preſent complex, to their original ſimple State. The Dictionary of an Art, is the proper Hiſtory of ſuch Art: The Dictionary of a Language, the Hiſtory of that Language. The one relates that ſuch an Art, or ſuch and ſuch Parts thereof, ſtand ſo and ſo; are managed ſo and ſo; and the reſult ſo and ſo: The other, that ſuch and ſuch a Word is uſed as ſynonymous to ſuch and ſuch others. The Dictionariſt is not ſuppoſed to have any hand in the Things he relates; he is no more concerned to make the Improvements, or eſtabliſh the Significations, than the Hiſtorian to atchieve the Tranſactions he relates.

THE difference between what we commonly call the *Hiſtory* of an Art, and a *Dictionary* thereof, is only circumſtantial; ariſing from the different Views of the two Authors: The one chiefly regards the Time and Order *when* each Step, each Advance, was firſt made, *i. e.* how it ſtood with reſpect to ſuch and ſuch Æras, or Periods of Time; and might more properly be called the *Chronology* of the Art: the other regarding chiefly the Object or Intention of the Art, relates its preſent Conſtitution, and *how* it proceeds to attain the End propoſed. You may add, that the former primarily conſiders what is paſt, or already advanced; the other alſo what is preſent, or remains to be done: The one tells, *e. g.* how *Mercury* finding a dead Tortoiſe on the Shore, took its Shell, added Strings to it, and made it into a Lyre: The other, how a Lyre is, or may be made. And if you will likewiſe add this, that the Hiſtory intermixes divers foreign, and accidental Circumſtances with the Diſcovery; which the Dictionary abſtracts and ſets aſide, and ſo reduces it nearer to Science: you will have the full and adequate Difference between 'em. Thus the making of the firſt Lyre is related with ſome Circumſtances which have no place in the proper Structure of the Inſtrument, and are therefore to be omitted in the Dictionary, which only takes in what belongs to the Art, or Artiſts in general; not what belongs to ſome one of 'em.

THE whole, in effect, amounts to this, that the firſt time of doing a thing, is related by the Hiſtorian with the ſeveral Particulars which in any wiſe, tho occaſionally only and remotely, affected it: Whereas the Dictionariſt, coming afterward, keeps more cloſely and ſeverely to the Point, and relates nothing but what is eſſential; that is, the firſt time, the thing is conſider'd as now ariſing; a new Production or Phænomenon, from ſome analogous Principle; and therefore we attend to the foreign Cauſes that brought it forth: whereas afterwards, we conſider it as ariſing from the pre-exiſting Theory, or Preſcriptions of Artiſts, and thus reſolve the Cauſe into the Art it ſelf.

ANY other difference which there may ſeem to be between the two; is only as to more or leſs particular; which, indeed, is a thing that embarraſſes and amuſes us on many other occaſions: Thus in mere civil Hiſtories, if one relates the Series of a Campaign, another the Bombardment of a Town, and a third the Wounding and Death of a general Officer; tho the two latter Subjects be only Parts of the former, yet the firſt will be ſaid to have compoſed a Piece of *Hiſtory*, the ſecond a Piece of *Fortification*, and the third a Piece of *Chirurgery*. And yet there is no other difference between them, than between the Geography of a Country, and the Topography of a Village, or a Hillock; the Hiſtory of a Nation, and the Biography of a ſingle Perſon.

TO ſay no more, the Dictionary of an Art ſtands in much the ſame Relation to the Hiſtory thereof; that the Hiſtory of a People, does to the Lives of all the conſiderable and active Perſons therein. Their difference is only as to the Point of Sight; the Eye being ſuppoſed ſo near in the one Caſe, as to ſee the Parts diſtinctly, and in the other ſo far off, as to take in the Whole completely: whence the one gives you all the Incidents; the other only the greater. In effect, the one is all concerted to one point of view, moſt favourable to the Whole, and the great Parts; the other to many; the Eye being ſhifted for each Part, to furniſh an adequate Repreſentation thereof. In the one Caſe, it is ſuppoſed within the Work; ſo as only to ſee thoſe Parts next it, which neceſſarily hide the reſt; in the other, 'tis without, and can only take cogniſance of thoſe which lie outwards: So that the one chiefly diſcovers how things ſtand within; the other how they ſtand with regard to the adjacent ones.

I AM afraid to keep the Reader any longer in this painful way of Diſquiſition, wherein we are obliged to dig for every ſtep we take. It would doubtleſs ſeem a more agreeable, as well as more reputable Employment, to be raiſing things on high; than thus engaged in ſinking, and working under ground: A Caſtle in the Air is an Object of Pleaſure to every body, while it laſts; and withal is eaſily rais'd, and at ſmall Expences. Your Mines and ſubterranean Matters are mere drudgery, and Pioneers work; difficult to carry on, dubious of Succeſs, and overlook'd when done. Being therefore arrived near the Surface, we take this Opportunity to quit the Courſe, and emerge to open Air.

AFTER ſo ſevere an Inquiry into the Reaſon, Nature, and Perfections of a *Dictionary*; it may prove dangerous and impolitick to ſpeak any thing about the preſent one. From the Deſign of a Dictionary in general, to the actual Performance of any particular one, the Language muſt be much altered. A Man would make fine work

work, that ſhould examine the ſeveral Dictionaries extant, by the Standard here laid down: None of them could abide ſuch a Trial; even that here offered muſt go to wrack, like the reſt.——It may be remember'd, that the Thing executed is allowed to come ſhort of the Idea conceived: The former is only a Copy of the latter, and liable to all the Imperfections incident to other Copies. A thouſand things interfere: Lexicography, being of the Nature of an Art, deviates of courſe from what pure Reaſon would preſcribe; and its Productions come to degenerate ſtill farther, by the Accidents that attend their bringing forth. The Tools, the Materials, and forty things come into the Account: the former prove out of order; the latter obſtinate, and untractable, or perhaps not eaſy to be had. In effect, the Author's Situation, his want of Leiſure or Perſeverance, his Frailties and Foibles, nay his very Perfections and all, conſpire againſt it.

INDEED, a too ſervile Attachment to the Rules and Methods of an Art, in many Caſes proves incommodious and impertinent. We know that the Rules of an Art are poſterior to the Art it ſelf; and were taken from it or adjuſted to it, after the thing it ſelf was done. An Author, therefore, is ſtill in ſome meaſure left to his own Conduct, and may conſider himſelf as inveſted with a ſort of diſcretionary Power, whereby he can diſpenſe with ſome of 'em, and go by others of his own ſuggeſting, where he apprehends it for the general advantage of the Work. The Heights of Art are never to be reach'd by the Rules, but by Genius; by reaſon the Rules were accommodated to a certain Concourſe of Circumſtances, which rarely happens twice; ſo that Laws ſhould be made *de novo* for every new Caſe, or Condition of things. While a Perſon conſiders himſelf as following at ſecond hand, the Meaſures pointed out or preſcribed by others; he will not go on with that Spirit and Alacrity, as when he follows his own Bent. He ſhould therefore conſider himſelf in the Place of the firſt Inventor, or as his Repreſentative, or Succeſſor; and therefore qualified to enact with the ſame Authority for the preſent occaſion, as he did for another.

WHEN a Law is not founded on mere Reaſon, as we have ſhewn is the Caſe in Art; the Obſervation of ſuch Law cannot be enjoined on others. It may well obtain with reſpect to the Perſon that firſt eſtabliſh'd it, as being agreeable to his perſonal Reaſon, *i. e.* accommodated to his particular Combination of Genius, Situation, and other Circumſtances; but can't extend to thoſe in whom this Combination is different. Accordingly, few Laws of Art are univerſal. Small matter by what Laws and Preſcripts a People is guided, provided they be led on to Happineſs; or by what Courſe a Veſſel ſteers, if ſhe do but make a proſperous Voyage.

WITH this View, in the preſent Work, we have taken all the Advantages the nature of the Thing would afford us; and have frequently made our ſelves Delinquents againſt ſtrict Rule, for our Reader's good.----A Dictionary, by our own Confeſſion, is to be a Hiſtory; and yet we have not kept ſo cloſe to that Form, as to abandon the Benefit of all others. In the buſineſs of Mathematicks, for inſtance, the regular way is to relate, or enumerate the ſeveral Matters belonging thereto, without inveſtigating or demonſtrating their truth: Demonſtrations, ſtrictly ſpeaking, have nothing to do in a Dictionary, no more than anthentick Inſtruments, Declarations, *&c.* in a Hiſtory. To pretend to demonſtrate the ſeveral Properties and Relations, *e. g.* of *Lines*, *Angles*, *Numbers*, &c. in a Dictionary, were an Indiſcretion as great, as for an Hiſtorian to produce Certificates, and Copies of Pariſh Regiſters, of the *Births*, *Burials*, *Marriages*, &c. of the ſeveral Perſons whoſe Actions he relates.----And yet, on ſome extraordinary Occaſions, we have not forbore to give Demonſtrations; where, for inſtance, there was any thing very intereſting, or important in 'em: A Practice which Hiſtorians themſelves frequently give into; tho it be a confeſſed Irregularity, as it breaks in upon the Unity of the Narration, and accordingly gives their Work the Denomination of *Mix'd Hiſtory*.

BUT we are far from the Views of ſome Dictionariſts, who think it incumbent on 'em to demonſtrate every thing that is capable thereof. This is directly to forget their Quality; to corrupt the Integrity of the Work *mal à propos*; 'tis being licentious, and impertinent at the ſame time, and diſpenſing with the Rules to their own coſt. How dear, *e. g.* muſt a competent Demonſtration of moſt of *Euclid*'s Propoſitions be here purchaſed? Either the Reader muſt be at the Pains of picking it piecemeal from out of twenty ſeveral parts of the Book, where the Alphabet has happen'd to caſt it; or the Author muſt relinquiſh the Advantages of a Dictionary, and deliver things together, that properly belong to ſo many ſeveral places; or there muſt be a Repetition of the ſame thing a dozen times over. And for what? why, to make the *Dictionary* do the Buſineſs of an *Euclid*'s *Elements*; which it is the unfitteſt in the World for. You might with equal propriety make an ozier Baſket ſupply the Office of a Pleaſure-Boat; or a Sword-pummel that of a Portmanteau, as *Paracelſus* is ſaid to have done.

WHEN a thing has been once regularly demonſtrated, it may be aſſumed, or taken for granted: every body perhaps may be concerned in the Truth of it, but not to ſee the Truth of it. To make it a Principle to take nothing upon truſt, would be as troubleſome in the Sciences, as in Life; and we muſt remain for ever, both wretched, and ignorant. Not only Suppoſitions, but even Errors, frequently lead us to Knowledge otherwiſe inacceſſible. Mathematicians themſelves, who of all others keep moſt to Demonſtration, yet find themſelves under a frequent Neceſſity of admitting and making uſe of things as true, which they do not ſee to be ſo; and thus are ſway'd, like other People, by Authority. A Perſon who makes uſe of the Equality of the Square of the Hypothenuſe, to the Squares of the two Sides; upon the Credit of *Pythagoras*, or *Euclid*'s having demonſtrated it; does little more than what they themſelves do on many Occaſions, who aſſume and make uſe of Propoſitions they have no other evidence of, but the knowledge or remembrance of their having been demonſtrated.

THE Caſe is much the ſame with *experimenting*; which ſtands on the like footing as demonſtrating. They are both neceſſary in their kind; the latter, as it leads on our Knowledge, the former as it follows, and ſecures the Rear: But their uſe is to be reſtrained to theſe Purpoſes; and may be diſpens'd withal in Caſes where neither of theſe are concerned. A Perſon who would diſcover any Point in Phyſicks, or broach and eſtabliſh any Point in Mathematicks, muſt uſe 'em: But the Occaſion is in great meaſure private, and perſonal; and does not extend to the Publick in the ſame degree as the Knowledge of the Doctrines themſelves. That is, the particular means by which a thing was firſt come at, or is ſhewn to be true, do not intereſt us ſo immediately as the Knowledge of the thing it ſelf, which might have aroſe from various other means, and in other manners: A Man may know a thing in the way of *Preſumption*, of *Opinion*, of *Surmiſe*, of *Authority*, and forty other ways; which, tho all much inferior and leſs excellent than the way of *Demonſtration*, and *Certainty*; yet we are glad of 'em on many occaſions, and uſe 'em to good purpoſe. Every degree of Knowledge is valuable. It would be an unreaſonable, as well as an incommodious Sullenneſs in us, to refuſe all Light, except that of Noon-day. We find our Eaſe and Happineſs frequently depend on the doing of things by Twilight, or even Moon-light, or the ſtill more dubious Light of, perhaps, a Ruſh or a Glow-worm.

*PYTHAGORAS*, in all probability, was not ignorant of the Equality of the Square of the Hypothenuſe, *&c.* before he demonſtrated it; elſe, what ſhould have led him to look for the Demonſtration? And the like may be ſaid of many of Mr. *Boyle*'s Experiments. *Plato* even obſerves, that "the very putting a Queſ-"tion, implies ſome Knowledge of the thing demanded; ſince without this we ſhould not know that what is "returned is an Anſwer."

LESS

LESS might have ſufficed, to ſhew why in the Courſe of this Work we have uſually omitted the Apparatus of Demonſtrations, and Experiments; and given the Doctrines pure and uncumbred by any thing not eſſential to 'em. The Experiments, for inſtance, which led to the Theory of Light, and Colours, what would they be, but like the Scaffolding before a fine Building, which break and interrupt the Sight, and hide moſt of the Beauties of the Work? Such Scaffolding, 'tis true, would be of uſe to the Connoiſſeurs; who might have a mind to examine the Work, to meaſure the Proportions of the ſeveral Parts, and inquire whether every Stone were juſtly laid. But to the generality it would rather be an Incumbrance, much to the diſadvantage of the Work.—— Yet, in the Caſe of Experiments, as of Demonſtrations, we have receded a little from ſtrict Method, in favour of ſuch as have any thing very remarkable or beautiful in 'em. For the reſt, the Reader, if his Curioſity ſerve him, is told where to have 'em at firſt hand.

IN the Caſe of Definitions, too, we do not keep inviolably to what has been above laid down; but reſerve to our ſelves the diſcretionary Right above ſpecified.——We make uſe occaſionally of all ſorts of Definitions, as they beſt ſuit our Deſign, the conveying of Knowledge. In effect, we have uſually a Regard to the degree of notoriety, importance, *&c.* of the Term, tho a Point arbitrary, and indefinite enough; and endeavour to accommodate the Explication thereto. 'Tis a Rule with us, to ſay, *Communia proprie, propria communiter*; to expreſs common Things ſo as that even the Learned may be the better for 'em; and the more abſtract and difficult, ſo as even the Ignorant may enter into 'em. Accordingly, in popular Terms we endeavour to give a technical Definition, *i. e.* to wave the general and obvious Meaning, which is ſuppoſed to be known; and enter farther into the nature of the Thing, not known: As in defining of *Milk*, &c. But in the more remote Terms, the popular and nominal Definition is alſo given, as being ſuppoſed to be here wanted.

THE literal and technical Definitions of a Term, are lame and imperfect without each other; the firſt gives its Uſe and Effect, as part of general or abſtracted Science; the ſecond, as applied to ſome particular Subject. ——The literal Notion, *e. g.* of *Relation*, is that of "conformity, dependence, or compariſon of one thing to "another:" Thus much is common to *Relation*, both in Grammar, Logick, Geometry, *&c. i. e.* it expreſſes this, both when applied to *Words*, to *Propoſitions*, to *Quantities*, &c.——The technical Notion of Relation in Grammar, is "the dependence of Words in Conſtruction:" This makes the grammatical Notion of Relation, *i. e.* it limits or ties down the general abſtract Idea of *Relation*, to the particular Subject of Grammar, Words. Again, the technical Notion of *Relation*, with regard to Arithmetick, Geometry, *&c.* is "the conformity, or "dependence between two or more Lines or Numbers;" *i. e.* the Mathematicians adopting the Word into their Art, reſtrain its literal or general Meaning, to ſome particular Purpoſes of their own, *i. e.* to Quantities.

FROM the whole, it follows, that the two Kinds of Definitions differ as an Art and a Science; as general and particular Reaſon; and again, as abſtract, and concrete. And hence, from the ſeveral technical or particular Meanings, one might of themſelves run back to the general, or literal Meaning, by abſtracting; but not contrariwiſe, from the general or abſtract to the particular ones; in regard thoſe other are arbitrary, and depend on the good pleaſure of the Artiſt who firſt introduc'd them.

ACCORDING to ſtrictneſs, every Term ſhould be firſt given in its literal, or grammatical Meaning; eſpecially when the ſame is a Term in ſeveral Arts; as this helps to fill up the Series, and ſhew the orderly Derivation of the Word, *à primis naturalibus*, from the firſt ſimple Ideas that gave riſe to it, to its laſt, and utmoſt Compoſition. This is like giving the *Root* of the Family; which is certainly neceſſary to its Genealogy.—Yet we have not always kept to this Method. In ſome Words, there is a deal of the literal import of the Word preſerv'd in the Term or the technical one; as in the word *Free*, or *Freedom:* A Man who has a Notion of *Freedom* in its common or literal Senſe, will eaſily paſs on to all the particular ones, as *Free City*, *Free Port*, *Freedom of Speech*, *of Behaviour*, &c. So that in this Caſe, a literal Definition might almoſt alone ſuffice; the Word having ſuffer'd very little at the hands of Artiſts.——In other Words, the literal or primary import of the Word, is almoſt loſt in the Term: for inſtance, in the Term *Power*, in Arithmetick; which will ſcarce bear any tolerable Definition at all. Literally, the Word implies a Relation of Superiority or Aſcendency over ſomething, which in reſpect hereof is conceiv'd as weak, *&c.* According to the analogy of Language, therefore, the Arithmetical Power ſhould have ſomewhat of this relation of ſuperiority over the Root: But the Root it ſelf is alſo a *Power:* So that the Definition of Power muſt take in two oppoſite Relations, *viz.* Power and Subjection.

PERHAPS, to go in the moſt regular manner, and take up things from their Source; one ſhould begin with ſettling their Etymologies: but the great alterations Words undergo, and the great length they are run from their original Meanings, in being borrowed from one Language or Age to another, would frequently make this not only a tedious, but an uſeleſs Labour: ſo that here, too, we have uſed a diſcretionary Power, and only meddled with Etymologies where they appear'd of any ſignificance.

TO explain a Term as a Term, we uſually expreſs the Circumſtances wherewith it is attended in the Art to which it belongs, in their artful Names. This is agreeable to the manner of Artiſts, who writing of their reſpective Arts, uſe Terms as common Words, and ſuppoſe 'em to be known: and 'tis this that conſtitutes a technical Explanation; not the giving the general Effect or Force, in ſuch Words as may equally agree to all other Arts.——And yet in ſome Caſes we recede from this Rule, particularly in divers of the lower Claſs of Manual Arts, and the Structure of ſome Machines: Thus, *e. g.* in Turnery, we make no difficulty, for inſtance, inſtead of *Chuck*, to ſay a round piece of Wood, *&c.* The reaſon is, that where the ſeveral ſubordinate Terms of a Definition are themſelves explain'd in their places, we may ſuppoſe 'em underſtood; but where the Term defined is it ſelf ſo low, that we do not go lower to define the Parts couched under it; there we chuſe, as more ſcientifical, to ſubſtitute ſome more obvious Name, or the general Meaning of the Word for the Term it ſelf; and thus prefer the general or popular, to the technical Definition.

FOR it is to be obſerved, that the Dictionary has its Limits; it only carries Matters ſo low; to a certain pitch of Simplicity, where we ſuppoſe People may take 'em up, and carry 'em farther as they pleaſe. We bring 'em into their Sphere, and ſo leave 'em. So much Knowledge, *i. e.* ſuch a number of complex Ideas, as we may preſume 'em uſually to have got in the common Occurrences of Life, we are willing to ſuppoſe, as a Footing: where theſe end, our Dictionary is to begin, which is to take in the reſt.

IF at any time we explain a complex Idea, which it may be ſuppoſed moſt People have form'd; 'tis becauſe we think they don't take in all the ſimple Ideas that go to conſtitute it: as in the Caſe of *Milk*, *Blood*, or the like; where People are contented with two or three of the more obvious Properties and Phænomena, and ſlur over the reſt.——Thus in Milk, *Whiteneſs* and *Fluidity* are almoſt alone conſidered; and theſe, in the common Opinion, conſtitute *Milk*; ſo that whatever has theſe two Attributes, comes in for the denomination *Milky*. The Texture and component Parts of this Milk, the manner of that Fluid's being ſecreted, collected, *&c.* with the peculiar Properties, and Virtues reſulting from all theſe are left behind. So in Blood, 'tis enough it be *a reddiſh, pretty compact, animal Juice, when warm fluid and homogeneous*, &c. This is going a great way, and even the Dictionaries ſeldom go farther: But, for the component Parts, the *Cruor* and *Serum*; with the component Principles of theſe, *viz.* the *Oil*, *Phlegm*, &c. their Form, Properties, *&c.*

whence ariſe the Craſis, Colour, Heat, Specific Gravity, *&c.* of Blood; Writers don't ordinarily trouble themſelves.

IF, by the Artifice abovementioned, we get free of a vaſt load of plebeian Words, which muſt have greatly incumber'd us; the Grammar and Analogy of Language diſengages us from a ſtill greater number of all kinds. The various States of the ſame Word, conſider'd as it comes under different Parts of Speech, and accordingly aſſumes different Terminations, increaſes the Liſt of Terms immenſely: as, in *Dark*, *Darkneſs*, *Darkning*; *Project*, *Projection*, *Projectile*, *Projective*, &c. which may either be conſider'd as one and the ſame Word under different Habitudes; in regard there is a common Subſtratum of them all: or, as ſo many different Terms; in regard every one takes in ſomething not contained in the other.------This Latitude we make uſe of occaſionally; and either conſider the Words this way or that, as ſeems moſt advantageous to our purpoſe. In ſome Caſes, where the Alteration is merely grammatical, we content our ſelves to explain 'em in one ſtate, *e. g. Shearing*; and ſuppoſe the Reader able, by Grammar to form the reſt, as *Shorn*, &c. In others, where ſeveral particular Ideas are arbitrarily ſuperadded to the Word in one Part of Speech, which do not belong to it in another, we there explain it in all: as, *Precipitate*, *Precipitant*, *Precipitation*, &c.

THIS gives an occaſion to mention a ſtrange kind of Licenſe frequently practis'd in our Language. Tho there be ordinarily a great deal of difference between the ſeveral States or Modifications of the ſame Word, *e. g. Reflecting*, *Reflexion*, *Reflexible*, &c. the ſame as between the Action and Quality, the Power and the Exerciſe of it in this or that Caſe, the Cauſe and the Effect; yet Authors make no difficulty of uſing 'em promiſcuouſly: which would make downright Nonſenſe, were the Readers to keep to the ſtrict import of the Words. But the Truth is, we are not ſo critical about the Matter; if the Meaning come within our reach we jump at it, and are glad to take it; without waiting to ſee whether it would reach us in its preſent Direction, or whether it might not rather fall ſhort, or fly by us. What Confuſion ſhould we make, even in our beſt and cleareſt Writers, were we reſolved not to underſtand 'em but according to the ſtrict Rules of Grammar, and not indulge 'em the petty liberty of uſing *quid pro quo*, one part of Speech for another? In a thouſand Caſes, the ſame Idea is denoted by oppoſite Terms: Thus, we ſay, ſuch a Medicine is good *for*, or *againſt* the Worms, Plague, *&c.*

IT may be urged, that as Cuſtom has authoriz'd this latitudinarian Practice, it is become of grammatical Authority; and that as the Licenſe is known, it can't deceive us; ſince the Readers are led on ſuch occaſions to relax the Bands of Grammar, and annul the difference between the Parts of Speech, in order to admit one a ſubſtitute for another.——But I am afraid this expedient ſcarce indemnifies us from the Abuſe. Beſides the extraordinary embarraſs of reading what is thus promiſcuouſly wrote, 'tis not always we know when and how to ſuperſede the ſtrict import of an Author's Words, and make him ſpeak Senſe in his own deſpite. This I take to be none of the leaſt occaſions of Controverſy and Diſpute owing to Language, and which we may almoſt deſpair of ſeeing rectified, unleſs in a new one.

I SHALL not here enter upon the Merits and Defects of the *Engliſh Tongue*, conſidered as a Language: A great deal has been ſaid on that Head by others, for which the Reader may turn to the proper Article in the Dictionary it ſelf. This Place we reſerve, not for other Peoples Notions, but our own; and what we have to add, will be chiefly as it ſtands with regard to *Art*, and more particularly to a *Dictionary of Arts.*

I BELIEVE none will queſtion but we met with Difficulties enough in the Courſe of this Work. The very Bulk and Dimenſions of it confeſs as much, and the Variety and Uncertainty of its Matter ſtill more. But theſe were in ſome ſort natural Difficulties, and ought to be conſider'd as neceſſarily appendent to the very Eſſence of the Deſign; and therefore did not afflict us ſo much as thoſe that roſe from it at ſecond hand, or were ſuperadded to it, as it were, by Accident. And ſuch was the preſent wild State of our Language, which alone were ſufficient to have baffled the beſt Scheme, and broke thro' the beſt Meaſures that could be form'd.

WE have already repreſented *Language* as ſomething very important; and as having a near and neceſſary intereſt in Knowledge. *Names*, we here add, are ſolemn things, as they are Repreſentatives of Ideas themſelves, and uſed on moſt occaſions in their ſtead: and *Terms*, or Combinations of Ideas, are ſtill more ſo; as much as complex Engines, are of farther and nicer Conſideration than the ſimple mechanic Powers. But who would imagine this, to conſider the wanton uſe we make of 'em; and with how little Fear, or Diſcretion, Words are treated among us? Every body think themſelves privileg'd to alter, or ſet aſide the old, and introduce new ones at pleaſure. *England* is open to all Nations, at leaſt in this reſpect; and our Traders in this Commodity, import their Wares from every Country in all ſecurity. The mercantile Humour ſeems to have poſſeſſed every Part of us, ſo that we are not only unwilling to be without the natural Produce of our Neighbours Countries, but we even envy 'em their Faſhions, their Follies, and their Words. Scarce a petty Author that appears, but makes his Innovations: But when a Dictionary comes out, 'tis like an *Eaſt India* Fleet, and you are ſure of a huge Cargo. The Effect is, that our Language is, and will continue in a perpetual flux; and no body knows whether he is maſter of it or no. The utmoſt he can ſay, is, that he had it for ſuch a Day, excluſive of what has happen'd ſince.

A MAN never knows when he is at the end of the Terms, *e. g.* in Architecture. When he has got two or three Names, for ſome one Member, and thinks himſelf overſtock'd, 'tis odds he has not half. 'Tis not enough he knows what it is named in the *Engliſh*; but he muſt likewiſe learn what the *French*, *Italians*, *Latins*, and *Greeks*, likewiſe call it, or frequently find himſelf at a ſtand. Thus it is in the Caſe of *Fillets*, *Liſts*, *Liſtels*, *Reglets*, *Platbands*, *Bandeletts*, *Tænias*, and *Baguettes*; of *Chaplets*, *Aſtragals*, *Batoons*, and *Tores*; of *Gulas*, *Gueules*, *Doucines*, *Cimas*, *Cymatiums*, *Ogees*, and *Talons*; *Ovums*, *Ovolos*, *Echinus's*, *Quarter-rounds*, *Boultins*, &c. between which, there is no known, allowed differences; but they are either uſed indiſcriminately, or diſtinguiſh'd arbitrarily; one Perſon making this diſtinction, and the next another, or perhaps none at all. So that if we come ſtrictly to Dictionaries, we ſhould have a different one for every Author.

BUT the Miſchief does not end here: for as the antient Arts are in many reſpects different from the modern; the uſe of their Terms neceſſarily involves us in a new Confuſion, and makes the ſame Word ſtand in an ancient Author for one thing, and in a modern for another. Thus it is in *Paraſtata*, *Orthoſtata*, *Anta*, &c. In effect, there is that Alteration continually making in the Language of Architecture, that there ought, in Propriety, to be a different Dictionary of it for every different Age.

THE Truth is, a fourth part of the Words in ſome of our popular Dictionaries, ſtand on no better Authority, than the ſingle Practice of ſome one fanciful Author; who having an intemperate Deſire to ſhew either his Learning or Breeding, has met with Dictionary-Writers fond enough to take his Fripperies off his hands, and expoſe 'em to the Publick for legitimate Goods. By ſuch means, theſe Exotics have obtain'd a kind of Currency; ſo that a Dictionary would be thought defective without 'em. To omit even our Fopperies would be thought a Failing; and might even be eſteemed by many as the moſt unpardonable of all.——On theſe accounts we have been oblig'd to temporiſe a little, how much ſoever againſt our Will; and thus perhaps have contributed

contributed to the ſtill farther Eſtabliſhment of a number of Words, which we had much rather have ſeen proſcribed, or baniſh'd the Land.

UPON the whole, nothing could be more deſirable than an *Index expurgatorius*, to clear the Language of our ſuperfluous Words, and Equivocals; all the modern *French* and *Italian* Terms in the ſeveral Arts, where we have *Latin* and *Greek* ones; and even all the *Latin* and *Greek* ones, where we have *Engliſh* or *Saxon* ones, equal in Sound and Significancy. I think the learned Languages ought to have the preference to the modern, becauſe every Perſon may be ſuppoſed to have read, but not to have travelled; and our Country Words I would prefer to any others, becauſe there is the moſt analogy between 'em, and they uſually retain more of the Origin and Etymology than thoſe tranſplanted from other Languages.——Such a Reform would reduce our Dictionaries to more reaſonable Dimenſions; and diſincumber the Arts from half the difficulty now to be ſurmounted in attaining 'em.

BUT, there is another Spring of Words no leſs prolifick than that hitherto ſpoke of, and which has produced a Swarm of ſpurious, miſhapen Words, which no Nation but our own would ever have own'd: I mean the Itch of coining or making *Engliſh* Words, by a ſort of analogy, from the *Latin* and *Greek* ones. This Fault the Tribe of Lexicographers have carried to a ſtrange exceſs. How muſt a Man ſtare, to ſee what deteſtable Stuff ſome late Writers of that Claſs have complimented us with: Words of their own manufacture, ſcarce fit to do any thing with, except cure Agues! Witneſs ſuch as *Scopuloſity*, *Siticulous*, *Scatebroſity*, *Sicciſic*, *Pugnacity*, *Segnity*, *Sputative*, *Mulieroſity*, *Mugient*, *Gracility*, *Faſtuouſneſs*, *Exuccous*; and many thouſand more, at the Reader's ſervice, to be met withal in a Dictionary which few People are without. One would almoſt wiſh the Mold deſtroyed that ſuch Groteſques were caſt in, for fear of new Impreſſions. We are already overrun with this Author's Scarecrows: but what ſhall we be when, having thus anglicis'd all the *Greek* and *Latin* Words, he proceeds to do the ſame with the *Dutch*, *Iriſh*, *Welſh*, &c. Indeed, I am the leſs angry with him, for that he has carried the Abuſe ſo far, as muſt not only ſave People from being ſeduc'd, but bring the Practice into Contempt. Such Monſters can't poſſibly live long: if they have eſcap'd the Midwife, who ought to have ſtrangled 'em ere they came to light, yet if ever they ſtir abroad they muſt infallibly be knock'd o' the head.

HOW oddly will our Practice in this reſpect look, when confronted with that of our Neighbours? One of the moſt learned Men and greateſt Critics of the laſt Age, M. *Menage*, incurr'd an infinite deal of Cenſure, for only endeavouring to introduce the ſingle word *Proſateur*: and could not ſucceed in it, notwithſtanding that a Word of that import was confeſſedly wanting in the *French*; and both the Sound and Analogy of the new Word were unexceptionable.

TO return. The different ſtate of different Arts is very remarkable. Some of 'em are refined to a degree of ſubtilty that deſtroys 'em; as Metaphyſics, and Logics: others have had no refinement or poliſhing at all, but lie waſte and over-run for want of it; as Agriculture, Heraldry, *&c.* The groſſneſs of ſome is their fault; it being ſuch as diſguſts, and forbids a delicate Mind from purſuing them: in others, their ſubtilty and nicety is their bane, as leaving nothing for a hearty Appetite to feed on. What meagre fare, for inſtance, are the School Rules, and Doctrines of *Mediums*, *Extremes?* &c. They do indeed furniſh us with Relations, and true Relations too; but theſe ſo remote from all Purpoſes of Life, that they are in great meaſure inſignificant.

'TIS certain all our Knowledge and Arts ultimately refer to the great End of Preſervation. The Faculties of the Mind, like thoſe of the Body, were not given us for the mere Exerciſe, or Gratification of 'em; but in ſubſerviency to farther purpoſes. Our Knowledge is all of the Nature of Revelation; and the divine Being reveals nothing to us for the mere vague ſake of our knowing it, but that it may miniſter to his Ends, the being and well-being of his Creatures. Our Perceptions and Notices are all Inſtruments in his hands, which he has appointed to do his work, and bring about the wonderful and adorable Ends of the Creation. They are ſecond Cauſes, or at leaſt Occaſions of what we do; and no doubt are under the Direction of him for whom we do; whoſe Glory is ſerved thereby. Tho they extend to abundance of things, yet they all centre and terminate at laſt in our Preſervation; and accordingly, as they are farther from, or nearer to this Point, they are found fainter or ſtronger: very near they are palpable and cogent; as they recede, they continually abate of their clearneſs, and evidence; and when arrived at a certain diſtance, dwindle to nothing, and are loſt. At a great height from this Centre, the Nexus or Chain whereby things are held together, and in virtue whereof we proceed from things known to things unknown, becomes inſenſible; ſo that we loſe our hold, and wander on we don't know where. Our Faculties here faulter; the Objects they meet with are inadequate to 'em; the Air grows too thin for Reſpiration. But, where we leave off, there poſſibly ſome ſuperior Order of Beings may take it up.-----We have, indeed, a kind of *Comets* in the Affair of Learning, which ſeem to be got far out of the Orb; ſo that one would wonder how they came there, or what ſuſtains 'em; as alſo what they do there. Such are, mere Antiquaries, Etymologiſts, Microſcopiſts, Alchymiſts, Phyſiognomiſts, and other Searchers of Futurity: But theſe, for all their ſeeming diſtance and irregularity, do all reſpect the ſame central Point, and move by the ſame Law with others; and even anſwer very good Purpoſes to the whole.

IN effect, the ſeveral Arts have been cultivated to more or leſs purpoſe, as our Preſervation is more or leſs immediately intereſted in 'em; and by this Key one might almoſt venture to judge which Arts are capable of being carried ſtill farther, and which not.——Our Knowledge of very great and of very little things, is very imperfect, *e. g.* of very great and little Objects, Diſtances, Sounds, *&c.* And the reaſon, no doubt, is, that there is but little Relation between us and them; ſo that we are but little intereſted in the Knowledge of them. Thoſe things we have neceſſarily and immediately to do withal, are made to our reach: for the reſt, no matter, to the Creator's chief Purpoſe, what they are.

AND yet our Leiſure and Curioſity have found means of making even theſe more cognizable than otherwiſe they are: we can, in ſome meaſure, alter the eſtabliſhed Relation between our Faculties and their Objects; and make uſe of one Law of Nature, to undo or ſuperſede another.——Thus we can magnify a little Sound or little Body, or a little Diſtance, *&c.* or we can diminiſh large ones; and thus make things in ſome meaſure adequate Objects, that naturally are not ſo.

BUT there is no great advantage in this: We only, by theſe means, come at a better apprehenſion of things which Nature ſeem'd to put out of our way for no other reaſon but becauſe they did not concern us; leſt we ſhould be engaged to miſtake, and run after things that had no relation to us, to the neglect of thoſe which have.-----Thus, Anatomy is really found of much leſs uſe than at firſt ſight one would imagine; as being employ'd in taking things aſunder and conſidering their Parts, which Nature chiefly intended to be conſidered and dealt with together. There is I know not what ſecret Law, whereby the Effect of a thing is, as it were, attach'd to its integral State; ſo that in proportion as you either diminiſh it, by taking from it, or enlarge it by adding to it, its Effect is alter'd, in a manner beyond what we can well account for from the bare Conſideration of Magnitude.

ABUN-

ABUNDANCE of the leſs uſeful Notices, we find, were kept back, and left to be accidentally turned up in courſe of time: ſuch as the Knowledge of Glaſſes, and their Effects. 'Twas no very important matter whether they were known or not; their uſes were not immediate. If they had, the things themſelves would have been palpable, and neceſſarily diſcovered long ago. Men lived tolerably well without knowing how many Feet a Louſe had, or how many Years a Cannon Ball would be in travelling to the Sun. The *Refrangibility* of the Rays of Light in paſſing different Mediums, which is the great Foundation of all our optic Glaſſes; ſeems only a ſecondary Property or Effect ariſing from another Power, or property of *Attraction* between the Light and the Medium; which it ſelf probably ariſes from ſome other. And there ſeems nothing abſurd in imagining that Nature did not immediately intend ſuch Refrangibility; but that it follow'd accidentally, from ſome Principle which ſhe did intend: So that the great modern Invention of Glaſſes, might be an accidental Derivation, from ſome of Nature's Redundancies. In effect, the only things left to Study and Art, may be theſe very Redundancies; the other Matters, which primarily concern us, being learnt in a more immediate manner.

NO body will take this for a Reflection on Art: 'Tis only a Panegyrick on Nature: an Illuſtration of her Goodneſs in contriving that things moſt neceſſary and uſeful, ſhould be moſt obvious, ſo as to be almoſt diſcoverable by a ſort of Inſtinct; and the other leſs immediately uſeful ones, left to be accidentally turned up in the Courſe of Experiment and Diſquiſition. We may admire her Wiſdom ſtill farther in this, that ſhe ſhou'd as it were go out of her way, and annex a ſort of Pleaſure, beyond her main Purpoſe, to the Knowledge even of things not immediately uſeful; in order to engage us to Induſtry and Activity. This ſhews that ſhe has Ends to ſerve by that very Activity; and perhaps is the beſt Demonſtration in the World of the Neceſſity we are under to purſue Knowledge; and may raiſe a Suſpicion, that this very Purſuit may poſſibly contribute to our Preſervation in ſome farther manner not yet attended to.

'TIS no wonder the School Philoſophy ſhould be carried ſuch a length; conſidering the narrowneſs of its Subject, and the great number of hands to cultivate it for ſo long a time. Its chief Employment is in aſſigning, and enumerating the Characters and Differences of our Perceptions, or internal Objects, taken as they are excited in us in the natural Courſe of things; by which it is diſtinguiſhed from the Modern, which is chiefly imployed in means to vary and modify theſe Perceptions; and thus find out farther Relations and Differences than would otherwiſe have appear'd.——The Philoſophers of the former kind are contented to take Nature as ſhe comes home to 'em; and apply their Reaſonings thereto without more ado: Thoſe of the latter, go out in queſt of her, to have more Matter to reaſon upon. The former are more contemplative, the latter more active; the former, in fine, reaſon, abſtract, and diſcourſe more; the latter obſerve, try, and relate more.

HENCE we diſcover why the Old is much more perfect in its kind than the New. The former has little to do but compare, order, methodize, *&c.* what is ready at hand; the latter has likewiſe to find; after which all the labour of the other ſtill remains. The former takes Nature in all her Simplicity; the latter adds Art to her, and thus brings Nature into conſideration in all her diverſity: the former chiefly conſiders natural Bodies in their integral State; the latter divides, and analyſes 'em: So that the former finds moſt of the principal Relations, the latter many more curious, and amuſing ones. Hence, the former haſtes to its Perfection, and can't long hold out; for that its Matter is limited: the latter can ſcarce ever arrive at it, ſince Experiments are endleſs. To ſay no more, to have Philoſophy in its perfection, we ſhould have the Order, Preciſion, and Diſtinctneſs of the Old; and the Matter, the Copia of the New.

THE modern is yet wild and unaſcertain'd. 'Tis not arrived at the Maturity of Method; the Mine is but juſt open'd, and the Adventurers are yet only ſollicitous about the Matter to ſee what it affords. Circumſtances do not yet come in courſe; and 'twill be long ere it arrive at a juſt extent to give room and leiſure for reducing it to regularity. True, the Rules and Methods of the antient, are in ſome meaſure applicable to the new, and will go a good way towards the ordering and aſcertaining of it; but the preſent Philoſophers ſeem yet too warm and ſanguine for ſuch a Buſineſs; which muſt be left to the ſucceeding Age to think about. Add, that the farther they go on to dig Materials, ſtill the more difficult will the ranging of 'em be; inaſmuch as there is but one true and juſt Order to lay them in; and the more of 'em, the more intricate that Order, and the harder to find. This a Man may be poſitive of, he never will ſee half the Experiments and Obſervations already made, laid up or uſed in a Syſtem of Phyſics.

BUT when that is done, a deal will ſtill remain, ere we have the chief uſes of it. For phyſical Knowledge, ſtrictly conſider'd, is only a Step, a Means of arriving at a higher and farther kind. Hiſtories, Obſervations, and Experiments of the Kinds, Order, Strata, *&c.* for inſtance of Foſſils, are very uſeful and laudable things, as they tend to lay in a Stock of ſenſible Phænomena, for the Mind to work upon, digeſt, and draw new Notices from, for the Improvement of our own Faculties, and the better Conduct of Life: But 'tis a Shortſightedneſs to forget this farther View, and look only to the Things themſelves. The bare Acquiſition of new Ideas is no real advantage, unleſs they be ſuch as have ſome relation to our ſelves, and are in ſome ſenſe adequate, and adapted to the Circumſtances of our Wants, and Occaſions, or capable of being made ſo. Knowledge, in the firſt State, is like Food in the Stomach, which may pleaſe and ſatisfy us, but is of no uſe to the Body till farther prepared. It muſt be brought nearer us, and made more our own, more homogeneous to our ſelves, ere it feeds us.——The modern Philoſophy is not ſo properly a Philoſophy, as the Adit or Opening of one. Its Matter has yet only undergone the firſt Concoction: we are yet only converſant about new phyſical Relations, learnt by Senſation; whereas to bring it to the Perfection requir'd, it muſt have undergone the farther Operations of Imagination, and Reaſon. Mere Phyſics, as ſuch, do not make a Philoſophy; thoſe Phyſics muſt firſt be carried up to Metaphyſics and Ethics, ere we can ſafely ſtop. So far as it is Phyſics, it is foreign to the Mind, and its Occaſions; before it affect and influence our Reaſon and Judgment, it muſt be ſubtiliz'd vaſtly, and made more ſimilar to the Metaphyſical Nature of the Mind. While Phyſics, it remains under the Direction of the Author of Nature; and proceeds wholly by his Laws, and to execute his Purpoſes: ere it come under our Direction, and become ſubſervient to our Will, it muſt have laid aſide what was active, and neceſſary in it, and become paſſive to our Reaſon, *i. e.* it muſt have been tranſfer'd from the Dominion of the Almighty's Will, or Reaſon, and brought under ours; if that do not imply a Contradiction.

TO return. Senſible Phænomena, we have already ſhewn, are the Foundation of Philoſophy: but your Edifice will neither make any Figure, nor afford any Convenience, till you have carried it one or two Stories higher. 'Tis but, as it were, the Cellaring, or Ground-work; which one would think were no very comfortable place to live and ſpend all one's time in. 'Tis one extreme, to take our Lodging as ſome of the modern Virtuoſos are contented to do, under ground; and another to reſide altogether in Garrets, as the Schoolmen may be ſaid to have done.

THE School Philoſophy, however, is of ſome farther uſe, as Matter of Hiſtory: We learn by it how People have thought, what Views have obtain'd, and in what various Manners the ſame thing has been conceiv'd; which, tho it be Knowledge as it were once removed, yet is not intirely uſeleſs. The Hiſtory of human

human Thoughts is no doubt the moſt valuable of all others; it being this alone that can make the Baſis of a juſt Logic, as Phyſiology of a juſt Phyſics. We muſt know wherein People have fail'd, or fallen ſhort, or been deceiv'd, to learn the Reaſons thereof, or be able to form Rules for avoiding the like. The ſeveral Opinions that have obtain'd, may be conſider'd as ſo many Phænomena of the human Mind, which muſt be conſider'd and inquir'd into to find its Nature.——This alone were enough to have engaged us not to omit that part of Learning, in the preſent Work: tho there were not wanting other circumſtantial Reaſons which had alſo their ſhare; as, the neceſſity hereof to the underſtanding not only of the antient Writers, but even of the modern ones, who frequently combat, remark, *&c.* upon the antient Notions. To which it may be added, that abundance of our Terms and Dictions are derived from them, and therefore could not be ſo compleatly underſtood without 'em. The Language of the antient and modern Philoſophy is not very different: the chief Diverſity is in the different Ideas affixed to the ſame Words, and the different Applications of 'em. And happy had it been for the Moderns, had they form'd a new Set of Terms adapted to their new Notions: By adopting the old ones, they have not only introduced a world of Ambiguity and Confuſion; but have even loſt the Credit of many of their own Diſcoveries, which now lie blended and buried among thoſe of the Antients. One is at a loſs to think what could induce the great Philoſopher of our Age, to uſe the word *Attraction*, in the Senſe he has done. No doubt it was originally as pertinent as any other; but the Stamp and Impreſſion it had already taken from the Antients, made it leſs fit to receive a new one. It could at beſt but take it imperfectly; and the reſult was, a promiſcuous Image, wherein we neither ſee the one nor the other, diſtinctly. 'Tis ſcarce in the Power of Imagination, totally to diveſt a Sound of its received Meaning, and conſider it as indifferent to all things; any more than to annihilate the Characters on a piece of Paper, and conſider it as a mere Blank. Accordingly, tho the great Author abovementioned explain'd over and over, in the cleareſt Terms, the Senſe he fixed to his *Attraction*; yet Experience verifies how much he was overſeen; the chief Objections againſt his whole Syſtem being drawn from a Miſapprehenſion of this very Word, which keeps half the Philoſophers in *Europe* ſtill at a diſtance, afraid to admit a moſt excellent Doctrine, merely out of diſtruſt of the Vehicle that conveys it. But this *en paſſant:* The Reader who deſires to ſee farther, may turn to the Articles ATTRACTION, NEWTONIAN PHILOSOPHY, GRAVITATION, *&c.*

WHAT has been ſpoke of the *School Philoſophy*, reminds us of *Aſtrology*; the Terms whereof have not been omitted in this Work.----Were it only that it has once obtain'd, is ſtill extant in Books, and has given occaſion to abundance of Terms and Phraſes, adopted into other Arts; it would have a Title to be remember'd. "The Hiſtory of Mens Follies, *ſays the inimitable* Fontenelle, makes no ſmall part of Learning; and "unhappily for us, much of our Knowledge terminates there *." But this is not all; and they who abſolutely reject all Aſtrology as frivolous, don't know it. Every Art and Science has its Vanities, and Foibles; even Philoſophy, and Theology: and every one its good Senſe, even Aſtrology. The heavenly Bodies have their Influences: The Foundation, therefore, of Aſtrology is good: but thoſe Influences are not directed by the Rules commonly laid down, nor produce the Effects attributed to 'em: ſo that the Superſtructure is falſe. Aſtrology, therefore, ought not to be exploded, but reformed. Indeed a Reformation would reduce it into a little compaſs; but this little is too much to be loſt, as it now is, among that heap of Trumpery mixed with it.------We have even been careful to preſerve what is juſt and rational, in Phyſiognomy, Witchcraft, and many other fanciful Arts. The time was, when Phyſics was not much more worthy the Study of a Man of Senſe, than Aſtrology now is; ſo that one might propoſe an *Introductio ad ſanam Aſtrologiam*, as a Deſideratum.

THE *Preface* is now degenerated into a *Diſſertation* in good earneſt: at leaſt, it has got the Length and Formality thereof, and wants only the Accuracy and Preciſion.-----Enough has been diſcourſed of the general Nature, and Subject of the Work: You muſt now allow me to deſcend a little more to particular, and perſonal Matters; and thus end my Preface, where I might have had Precedents enough for beginning it.

I WILL at leaſt deal honeſtly with my Reader, and not be caught faulty in point of Morality, whatever I may be in any thing elſe.——What has been ſaid hitherto, has been on the advantageous ſide of my Work; and I ſhould not have acquitted my ſelf, ſhould I not likewiſe mention what may be alledg'd on the contrary Part.——The curious Reader, then, may expect, he will here meet with Omiſſions, and there with Redundancies: here the Method and Œconomy are not kept to; there an Article is imperfectly treated: here, a Paſſage from ſome other Language is not ſufficiently naturalized; there a Sentiment of ſome other Author is not ſufficiently digeſted: There, in fine, the Author was aſleep, and here the Printer.

ONE might palliate theſe Objections, by alledging, that "they are things not peculiar to this Work, but "extend to all of the Kind; that moſt of 'em are things not foreign and acccidental to it, but ariſe of neceſ-"ſity, from the very Nature and form of a Dictionary; and that many of 'em, are not peculiar even to a "Dictionary, but agree to all extenſive Undertakings, and are appendant to the very beſt Part of the Deſign, "its Univerſality:" but inſtead of extenuating, I had rather be guilty of inflaming, and aggravating 'em.

FOR *Errors*, they cannot be very few, conſidering the Hands thro' which moſt Parts of our Knowledge have paſſed, and from whom we are obliged to take our Accounts. What one Author, upon the moſt particular Subject, will you produce, that has not his ſhare of 'em? and what *Argus* could poſſibly ſee, and correct the Errors in all the Authors he had to do with? *Scaliger*, in his Exercitations againſt *Cardan*, has ſhewn ſome twenty thouſand, in one ſmall Work; and no body imagines he has pick'd it perfectly clean. Yet *Cardan* was no ill Author. *Bayle*'s Dictionary has been called the Errata of *Morreri*; yet is not *Bayle* himſelf without his Errors.------The moſt we can ſay, is, that we hope there will be few found in the preſent Work, in compariſon of others of the like kind. Many thouſands we have corrected, both in the Dictionaries and other Writings we have collected from, by means of the Light which other Parts of Knowledge afforded: But after ſo large a Harveſt, no doubt there remains a tolerable Gleaning. We flatter our ſelves, however, that what we have overlook'd, the Reader will frequently be enabled to correct, by the Means here afforded; and that there will be few Errors found in the Book, which the Book it ſelf will not help to rectify.

AS to *Omiſſions*, there is ſcarce any avoiding 'em; and the more intelligent the Reader is, the more of this kind he will neceſſarily meet withal: they being only ſuch in relation to his fulneſs. Indeed, I muſt own my ſelf greatly a Debtor on this ſcore; and tho at preſent inſolvent, yet if the Reader will give me Credit, it ſhall be my endeavour to ſee all I owe diſcharged; if not in a Lump, yet by a Courſe of Payments.

FOR *Redundancies*, you know there cannot well be richneſs without 'em. After you have picked what you think fit of this kind, and laid it by; 'tis ten to one but the next Perſon that comes, will reſtore half of 'em to their places; and tax your Temerity, and want of Taſte: and the next after him will go near to replace the other half.

AS to *Irregularities*, and breaches of Method, I will not claim Impunity on the Score of being the firſt that introduced any certain Rules, or Method into this way of writing at all: But there will be at leaſt this Satisfaction attending my Caſe, that I cannot be indicted for the Breach of any Laws but my own.-----Nor

* Hiſt. de l' Acad. R. An. 1708. p. 135.

muſt

muſt it be forgot, that I pretend to have carried the *Dictionary-Way* to a pitch hitherto little thought of: So that if I have fallen ſhort of the Mark on one ſide; it may be ſome Atonement that I have gone beyond it in another. I am ſenſible, however, there is no Point I have been more delinquent in than this one of Method; and that I am at every turn forgetting my own View. The References, and neceſſary Connexions between the Parts, which ſhould ſhew their Relation, and help the Imagination to put 'em together, are but too frequently dropt, and the Reader left without his Clue.

AS to *Jejuneneſs*, and Crudity; no doubt there muſt be a deal of that kind, conſidering the Time ſo great a Load of Fruit had to hang and ripen. Much of it was gathered ere it could poſſibly be matured; ſo that 'tis no wonder it now and then taſtes of the Wood. But ſetting aſide this; if a Man may not be allow'd to ſay a good number of indifferent things, in the Compaſs of five hundred Sheets, I know not who would be an Author.

LASTLY, as to there being little in it *new*, and of my own growth; I muſt here change my Style; and from Confeſſion, turn to Vindication.-----The Work is, what it ought to be, a *Collection*; not the Produce of a ſingle Brain, for that would go but a little way; but of a whole Commonwealth. If any Perſon will undertake to write a Dictionary, even of ſome one particular Art, from his own Fund, alone; a Man may ſafely undertake to prove it good for nothing. I do not pretend to entertain my Gueſts at this rate, with juſt what my own ſcanty Barns afford: The whole Country is ranſack'd to make 'em the fuller Banquet. Call me what you will; a *Daw*, and ſay I am ſtuck over with other Peoples Feathers: with all my Heart; but it would be altogether as juſt to compare me to the *Bee*, the Symbol of Induſtry, as that of Pride. For tho I pick up my Matters in a thouſand Places; 'tis not to look gay my ſelf, but to furniſh you with Honey. I have rifled a thouſand Flowers; prickly ones many of 'em, to load your Hive. No body that fell in my way, has been ſpared; Antient nor Modern, Foreign nor Domeſtick, Chriſtian, nor Jew, nor Heathen: Philoſophers, Divines, Mathematicians, Critics, Caſuiſts, Grammarians, Phyſicians, Antiquaries, Mechanics, all are ſerved alike. The Book is not mine, 'tis every body's; the mix'd Iſſue of a thouſand Loins. The Prince of modern Authors, is pillaged to ſome purpoſe; and what Quarter then can any body elſe expect? If ever you wrote any thing your ſelf; 'tis poſſible there is ſomething in it of yours: ſo that you will at leaſt allow ſomething in it good.

NONE of our Predeceſſors can blame us for the uſe we have made of them; ſince it is their own Practice. It is a kind of Privilege attached to the Office of Lexicographer, if not by any formal Grant, yet by Connivance at leaſt. We have already aſſumed the *Bee* for our Device; and who ever brought an Action of Trover or Treſpaſs againſt that avowed Free-booter? If any body blames us, 'twill ten to one be ſome of thoſe very Drones, who are ſuſtained by our means.

'TIS idle to pretend any thing of Property in things of this Nature. To offer a thing to the Publick, and yet pretend a Right reſerved therein to one's ſelf, if it be not abſurd, yet it is ſordid. The Words we ſpeak; nay, the Breath we emit, are not more vague and common than our Thoughts, when divulged in print. You may as well prohibit People to uſe the Light that ſhines in their Eyes, becauſe it comes from your Candle: E'en clap it in a dark Lanthorn, and let us not be amuſed, and dazzled by it; if we may not be the better for good things, let's not be the worſe for the ill and indifferent ones mix'd with 'em.

WE ſee the ſame Thought, which was firſt ſtarted in one Author under a world of Crudity, borrow'd by another become farther improv'd and ripen'd; and at length tranſmitted to a third, yield Fruit in abundance. All Plants will not thrive in all Soils that will produce 'em; ſome languiſh in their Mother-Beds: whence the Gardner is under a frequent neceſſity of Replanting, Engrafting, *&c.*

TO do juſtice to a *Collection*, I mean a general and promiſcuous one; it has its Advantages. Where numbers of things are thrown precariouſly together, we ſometimes diſcover Relations among 'em, we ſhould never have thought of looking for: As, the Painter's and Sculptor's Fancy, is frequently led on to the boldeſt and moſt maſterly Deſigns, by ſomething they ſpy in the fortuitous Sketches of Chance, or Nature: inſomuch that a celebrated Author * makes no ſcruple to lay this down as the firſt Origin and Occaſion of all theſe Arts. 'Tis certain moſt of our Knowledge is empirical, the Reſult of Accident, Occaſion, and caſual Experiment: 'Tis but very little we owe to Dogmatizing and Method; which, as already obſerv'd, are poſterior Matters, and only come in play after the Game is ſtarted. 'Twas, in all probability, the hand of Chance that firſt threw Sulphur, Charcoal, and Salt-petre together; and what ſurprizing Effects have not aroſe from it; what Handle has it given to Art and Contrivance, to direct and apply this fortuitous Production?

'TIS indeed ſurprizing to conſider, what ſlender Experiments and Obſervations many of the capital Doctrines have aroſe from: The Blows of a Smith's Hammer on his Anvil, ſtruck out the Principles of Muſic; which *Guido*, a poor Friar, perfected by what he obſerved in conning over his Beads. The Inventions of *Printing*, of *Glaſs*, of the *Dipping Needle*, of *Phoſphorus*, of *Teleſcopes*, of *Taffata*, of *Antimony*, &c. are ſuppoſed to have aroſe in the like manner; as the Reader may find under their proper Articles: And how many more we know not, by reaſon the great Obſcurity of their firſt Riſe, ere they attain'd a degree of Uſefulneſs and Perfection ſufficient to be taken notice of, has buried the particular Circumſtances thereof. If we will hear the antient *Phœnicians*, and *Egyptians*, amongſt whom moſt of the Arts are ſuppoſed to aroſe; they all came from caſual Obſervations: Geometry from the Inundations of the *Nile*; the Flight of the Crane, gave occaſion to the Invention of the Rudder; the Ibis taught to adminiſter a Clyſter, *&c.* In effect, a new Obſervation in ſome Peoples Minds prepared for it, is like a Spark in a heap of Gun-pouder, which may blow a whole Mine.

WHAT Advantages may not Philoſophy derive from ſuch a Collection, or Farrago of Arts; when 'tis conſidered, that every Circumſtance, every Article of an Art, ought to be look'd upon as a Datum, a Phænomenon, or Experiment in Philoſophy; and that the leaſt of 'em may poſſibly be the Foundation of a new Syſtem?— To conſider only the *Tanning*, or *Currying* of Leather: what is the whole Proceſs, but a Series of phyſical Effects, ariſing from new applications of Body to Body? And how many Lectures will the Philoſopher have from Painting, Gardening, Agriculture, *&c.* touching *Planting*, *Engrafting*, *Pruning*, *Expoſure*, *Expreſſion*, *Walls*, &c. which might never have come in his way, but by ſuch a chance? When a thing is once ſtarted, it may be applied infinite ways, and no body knows where it will ſtop.

THRO'OUT the Whole, we have had a particular regard, both in the Choice of the ſeveral Heads, and in dwelling or amplifying upon 'em; to the extending our Views, dilating our Knowledge, opening new Tracks, new Scents, new Viſtas. We have endeavour'd not only to furniſh the Mind; but to inlarge it, and make it in ſome meaſure co-extend with the Dimenſions of all Minds, in all Ages and Places, and under all Situations and Circumſtances: as Language, in ſome meaſure, makes our Senſes do. With which view, we have given the Sentiments, Notions, Manners, Cuſtoms, *&c.* of moſt People, that have any thing new, unuſual, or hardy in 'em.

SUCH a Variety of Views, Principles, and Manners of thinking, is a ſure Remedy againſt being too violently attached to any one; and is the beſt way of preventing the making of Pedants, Bigots, *&c.* of any

* Leon Battiſta Alberti, della Statua.

kind. It may be ſaid, that every Art tends to give the Mind a particular Turn; and that the only way of maintaining it in its natural Rectitude, is by calling in other oppoſite ones, by way of Counter-ballance. Thus we find nothing more perverſe and unſufferable than a mere Mathematician, mere Critic, Grammarian, Chymiſt, Poet, Herald, or the like; and the proper Diſpoſition is only to be had from a juſt Temperament or Mixture of 'em all.

I OWN this is not the way to make a very great progreſs in any Art; but at the ſame time it is the only way to hinder our being ſpoil'd by any; and becoming Creatures rather of *Homer* or *Ariſtotle*'s making, than God's: and receiving our Taſtes, Views, Reliſhes, at ſecond hand, rather than from Nature her ſelf. This, however, is only to be underſtood with regard to perſonal Benefit. For no doubt the Publick is better provided for, by the mere Purſuers of particular Arts, than the general Appliers to all: ſince each is hereby brought to greater Perfection; and the Mixture and Temperament, wanting in the Individuals, is found in the Whole.

TO conclude, the ultimate View of a Work of this, or any other kind, ſhould be, the forming a ſound Mind, *i. e.* a Syſtem of Perceptions, and Notions agreeing to the Syſtem of Things, or in the Relation thereto, intended by its Author. The End of Learning and Study, is not the filling our Heads with other Mens Ideas; that is an Inrichment which may prove for the worſe, if it carry any ill Quality with it: Richneſs is not the chief thing aim'd at; 'tis only a Circumſtance, or Matter of a ſecondary Conſideration: Soundneſs is the firſt. There are many Manures which the Huſbandman dares not uſe, by reaſon they would corrupt the Land, at the ſame time they enriched it; and lay the Foundation of a Diſeaſe, which would in the End impoveriſh, and make it ſpend it ſelf in unprofitable Weeds. A little pure Logic, or Theology, or Chymiſtry, in ſome Peoples Heads, what Miſchief have they not produced?-----But it muſt be owned, Mens Heads are not ſo ſoon fill'd: the Memory is not ſo tenacious as we imagine; Ideas are tranſient things, and ſeldom ſtay long enough with us to do us either much good, or harm: Ten to one but what we read to-day, is forgot again to-morrow. And what chiefly makes new Ideas of any ſignificancy, is their extending and enlarging the Mind, and making it more capacious and ſuſceptible.-----But neither is this Enlargement the laſt Aim; but is chiefly of uſe, as it contributes to the increaſing our Senſibility, to the making our Faculties more ſubtil, and adequate, and giving us a more exquiſite Perception of things that occur; and thus enabling us to judge clearly, pronounce boldly, conclude readily, diſtinguiſh accurately, and to apprehend the manner and Reaſons of our Deciſions. In which view, ſeveral things may be uſeful, that are not ſo much direct Matters of Knowledge, as ſubſervient to the ſame End; for inſtance, much of the School Philoſophy, which by exerciſing and exciting the Mind, has a kind of collateral tendency to ſharpen its Faculties; and needs only be read, not retain'd, to produce its Effect.-----But neither does the Matter end here: Even this does not amount to the full and adequate End of Knowledge: This is only improving the Organ; and there muſt be ſome farther End in ſuch Improvement. No Man ſharpens his Weapon on the ſole Conſideration of having it ſharp, but to be the fitter for uſe. Briefly, then, our Faculties being only ſo many Inlets, whereby, and according to the Meaſure whereof, we receive the Intimations of the Creator's Will, or rather, the Effects of his Power and Action; all the Improvements made in 'em, have a tendency to ſubject us more entirely to his Influence and Direction; and thus make us conſpire, and move more in concert with the reſt of his Works, to accompliſh the great End of all things. In which our Happineſs and Perfection conſiſts; the Perfection of a ſingle Nature, ariſing in proportion as it contributes to that of the TO' ΠA^N.

---

THIS Dictionary making 512 Sheets and an half, is reckon'd to the Subſcribers at *Four Guineas*, tho it comes to ſomething more at 2 *d. per* Sheet, according to the Propoſals; without computing the Cuts, which are all given in.

# CYCLOPÆDIA:

## OR AN

# UNIVERSAL DICTIONARY

## OF

# ARTS and SCIENCES.

A, A Vowel, and the first Letter of the *Engliſh* Alphabet. See LETTER, VOWEL, and ALPHABET; *where what relates to A, conſider'd in each of thoſe Capacities, is deliver'd.*

The Grammarians will needs have *A* the firſt Letter in all Languages; and ſome of 'em aſſign a natural Reaſon for it, *viz.* that it is the moſt ſimple, and the eaſieſt pronounc'd of all articulate Sounds. To confirm this, *Jul. Scaliger* obſerves, that *A* is the firſt Sound Nature puts forth at the crying or ſmiling of Infants; and that it needs no other Motion to form it, but a bare opening of the Lips. See VOICE.

*Covarruvias*, refining on this Sentiment of *Scaliger*, obſerves, very gravely, that the firſt Sound put forth by Boys is *A*; but that Girls firſt put forth E; each pronouncing the initial Letter of the Name of the firſt Parent of its reſpective Sex. Dr. *Littleton*, ſetting *Adam* aſide, makes the one ſpeak the final, and the other the initial Letter of the Name of the Mother of Mankind, *EvA*.

But 'tis in vain that Authors compare the *A* of the *Engliſh*, *Latin*, *French*, &c. with the *Aleph* of the *Hebrews*, or the *Eliph* of the *Arabs*. Thoſe two Letters have no Conformity with our *A*, except in this, that they are the firſt of their ſeveral Alphabets. What ſets 'em far aſunder, is, that theſe Oriental *A*'s are not Vowels. See VOWEL.

Some Criticks take the Hebrew *Aleph* to be neither Vowel, nor Conſonant, but what the Grammarians call an *Aſpirate*, or *pneumatic* Letter; like the H in the *Latin* and our Language: adding, that S. *Jerom* appears to have had the ſame Thought, who probably learnt it from the *Jews* of the School of *Tiberias*. But the Jeſuits *de Trevoux* give the thing another Turn: Thoſe Fathers have prov'd that the Hebrew *Aleph*, Arabic *Eliph*, and Syriac *Oleph*, are real Conſonants; and that the ſame holds of all the other Aſpirates. This is a Paradox in Grammar; but 'tis not the leſs true for being a Paradox. See ASPIRATE, and CONSONANT.

Of all the Letters, *A* is obſerv'd to be that which dumb Perſons are ſooneſt taught to pronounce. The Reaſon is, that it does not depend on the Muſcles, and other Organs of the Mouth, and Tongue, which are generally wanting in Mutes; but on thoſe of the Throat and Noſe, which they commonly have. See DUMBNESS.

This firſt, ſimpleſt Sound, yet ſerves us to expreſs moſt of the Movements of the Soul. 'Tis ſo much the Language of Nature, that upon all ſudden and extraordinary Occaſions, we are neceſſarily led to it, as the Inſtrument readieſt at hand. With this we ſpeak our Admiration, Joy, Anguiſh, Averſion, Apprehenſion of Danger, &c. Where the Paſſion is very ſtrong, we frequently heighten the *A*, by adding an Aſpirate, *Ah*. See INTERJECTION.

'Tis obſerv'd of the *Engliſh* Pronunciation, that we ſpeak the *a* with a ſlenderer, and more puny Sound than any of our Neighbours: Ordinarily, 'tis ſcarce broad enough for a French *e* Neuter; and comes far ſhort of the groſs *a* of the *Germans*, which wou'd make our *au*, or *aw*, or *o*. In ſome Words, however, as *talk*, *wall*, *ſtall*, &c. the *a* is broad, and deep enough. But this, 'tis obſerv'd, may not be the mere Sound of *a*; but the Effect of the antient Orthography, which, as low as Q. *Elizabeth*, added an *u* to the *a*, and wrote *taulk*, &c.

The *Romans* laid a mighty Streſs on their *a*; and diſtinguiſh'd exactly, both in writing and ſpeaking, when it was long, and when ſhort. To denote it long, they firſt wrote it double, *Aala*, for *Ala*; which not being enough, they inſerted an *h* between 'em, *Ahala*: At length they fell to the common long Accent *āla*, or *Āla*. See ACCENT.

A was one of the Numeral Letters among the Antients, and ſignify'd 500. With a Daſh atop, $\bar{A}$, it ſtood for 5000. See CHARACTER.

*Baronius* gives us a Set of antient Technical Verſes, wherein the Numeral Value of each Letter of the Alphabet is expreſs'd; whereof this is the firſt.

*Poſſidet A numeros quingentos, ordine recto.*

But we ſhall here obſerve, once for all, that it was not ſtrictly among the Antients that this Uſe of Numeral Letters had place, as is commonly ſuppos'd. *Iſidore Hiſpalenſis*, an Author of the VIIth Century, affirms it expreſly: *Latini autem Numeros ad Litteras non computant.* The Uſage was really introduc'd in the Days of Barbariſm. M. *du Cange*, explaining what that Uſage was, at the beginning of each Letter of his *Gloſſary*, the generality of Dictionary-Writers, who take it from him, miſtake him. The account, they all ſay, is found in *Valerius Probus*: whereas *du Cange* ſays no ſuch thing; but only that it is found in a Collection of Grammarians, among whom are *Valerius Probus*, and *Petrus Diaconus*. *Habetur verò illud cum Valerio Probo, Paulo Diacono,* (it ſhould rather have been *Petro*) *& aliis qui de numeris ſcripſerunt, editum inter Grammaticos antiquos.* See NUMERAL.

A is alſo us'd in the *Julian* Calendar, as the firſt of the ſeven Dominical Letters. See DOMINICAL.

It had been in uſe among the *Romans* long before the Eſtabliſhment of Chriſtianity, as the firſt of the eight *Nundinales Litteræ*; in imitation whereof it was, that the Dominical Letters were firſt introduc'd. See NUNDINAL.

A is alſo an Abbreviature, us'd in divers Arts, and with divers Intentions. See ABBREVIATURE. Thus,

Among *Logicians*, *A* is us'd to denote an univerſal Affirmative Propoſition; according to the Verſe,

*Aſſerit A, negat E, verùm generaliter Ambæ.*

Thus, in the firſt Mood, a Syllogiſm conſiſting of three univerſal Affirmative Propoſitions, is ſaid to be in *Bar-ba-ra*; the *A* thrice repeated, denoting ſo many of the Propoſitions to be univerſal, &c. See MOOD, BARBARA, &c.

Among the *Romans*, *A* was us'd in the giving of Votes, or Suffrages. When a new Law was propos'd, each Voter had two wooden Ballots put in his Hand; the one mark'd with a Capital *A*, ſignifying *Antiquo*, q. d. *Antiquam volo*; and the other with *V.R.* for *Uti rogas*. Such as were againſt the Law paſſing, caſt the firſt into the Urn, as who ſhould ſay, *I refuſe it*, *I antiquate it*; or I like the antient Law, and deſire no Innovation. See SUFFRAGE, CENTURY, &c.

In the Trials of Criminal Cauſes, the ſame Letter *A* denoted *Abſolution*: whence *Cicero*, *pro Milone*, calls *A*, *Littera ſalutaris*, a Saving Letter. Three Ballots were diſtributed to each Judge, mark'd with the Letters, *A* for *Abſolvo*, *C* for *Condemno*, and *N. L.* for *Non Liquet*, It is not clear. From the Number of each caſt into the Urn, the Prætor pronounc'd the Priſoner's Fate. If they were in equal number, he was abſolv'd. See ABSOLUTION, CONDEMNATION, &c.

In the antient *Inſcriptions* of Marbles, &c. *A* occaſionally ſtands for *Auguſtus*, *Ager*, *Aiunt*, &c. When double, it denotes *Auguſti*: and when triple *Auro*, *Argento*, *Ære*. *Iſidore* adds, that when it occurs after the Word *Miles*, it denotes him young. See INSCRIPTION.

On the Reverſe of antient *Medals*, *A* denotes 'em ſtruck by the City *Argos*. And among the later Coins, the ſame Letter is the Mark of *Paris*. See MEDAL, COIN, MONEY, &c.

Among *Engliſh* Writers, *A* is ordinarily us'd for *Anno*, as *A.D. Anno Domini*; for *Artium*, as *A.M. A.B.* &c. See CHARACTER.

Among Phyſicians, $\bar{a}$ or $\overline{aa}$, is us'd in Preſcription for *Ana*; to denote an equal Portion of divers Ingredients, whether in reſpect of Meaſure or Weight. See ANA.

Thus, ℞ *Sal. Volat. Oleoſ. Tinct. Croc.* $\overline{aa}$ ℥ſs. expreſſes *Sal Volatile Oleoſum, and Tincture of Saffron, of each half an Ounce.*

The ſame $\bar{a}$ or $\overline{aa}$ is alſo us'd in the like Senſe, without expreſſing any limited Quantity or Weight: Thus, $\bar{a}$ or $\overline{aa}$ *P. Æ.* denotes ſimply, *equal Parts* of the Ingredients there mention'd.

Laſtly, among Chymiſts, *A A A* ſignify an *Amalgama*, or the Operation of *Amalgamating*. See AMALGAMATION.

ABACTOR, a barbarous *Latin* Word, retain'd in our Dictionaries as a Law-Term, tho never yet naturaliz'd, nor its Idea agreed on.

Literally, it imports the ſame with *Abigeus*, or as others write it, *Abigevus*, or *Abigens*; form'd of *Abigo*, I drive away, *q. d. a Driver of Cattle.*

Technically, it is us'd to denote a *Thief*; but with ſomething particular in the manner of his Crime, to diſtinguiſh it from *Furtum*, or common Theft. 'Tis generally ſuppos'd to be one who ſteals, or drives off Cattel by Herds, or great Numbers: Thus *Bracton*, L. iii. c. 6. *Si quis ſuem ſurripuit, fur erit*; *& ſi quis gregem, Abigevus.* See THEFT.

Others will have *Abactors* to be ſtrictly thoſe who drive off Cattel openly, and by main Force. In the former Senſe, the Act of *Abaction* amounts to the *Abigeat*, and in the latter to the *Rapina* of the Civilians.

But the Diſtinction between *Fur* and *Abactor* has now no place among us.

So, among the antient Phyſicians, *Abactus* was us'd for a Miſcarriage procur'd by Art, or force of Medicines; in contradiſtinction to *Aborſus*, which is Natural. But the Moderns know no ſuch diſtinction. See ABORTION.

ABACUS, among the Antients, was a kind of Cupboard, or Buffet. See BUFFET.

In this Senſe *Livy*, deſcribing the Luxury into which the *Romans* degenerated after the Conqueſt of *Aſia*, ſays, They had their *Abaci*, Beds, &c. plated over with Gold. *Dec.* IV. *Lib.* ix.

The Word is *Latin*, but form'd from the *Greek*, ἄβαξ; which among that People ſignify'd the ſame thing. *Guichart* goes higher: He derives ἄβαξ, from the *Hebrew* אבך, *extolli*, to be elevated, rais'd; and ſuppoſes its primary Signification to be a *high Shelf*, or other Convenience for things to be laid upon out of the way.

ABACUS was particularly us'd among the Mathematicians, for a little Table ſtrew'd o'er with Duſt, on which they drew their Schemes and Figures. And hence the

ABACUS *Pythagoricus*, a Table of Numbers, contriv'd for the ready learning of the Principles of Arithmetic; denominated from its Inventor *Pythagoras*.

Hence alſo, from an Agreement in point of Uſe, the Names *Abacus* and *Abaco*, are us'd among the *Engliſh* and *Italians* for an *Alphabet*, or A B C, &c.

The *Abacus Pythagoricus* was, in all probability, no other than what we call *Multiplication-Table*. See TABLE.

*Ludolfus* and *Wolfius* give us Methods of performing Multiplication without the help of the *Abacus*; but they are too operoſe in ordinary Caſes for Practice. See MULTIPLICATION.

ABACUS, in Architecture, is the uppermoſt Member of the Capital of a Column; ſerving as a kind of Crowning, both to the Capital and the whole Column. See COLUMN.

Dr. *Harris*, and the reſt of the Dictionary-Writers, make the *Abacus* to be the Capital it ſelf; which is altogether as juſt, as to make the Crown of the Head the whole Head. See CAPITAL, and CROWNING.

*Vitruvius*, and others after him, who give the Hiſtory of the Orders, tell us, the *Abacus* was originally intended to repreſent a ſquare Tile laid over an Urn, or rather over a Baſket. An *Athenian* old Woman happening to place a Baſket thus cover'd over the Root of an Acanthus; that Plant ſhooting up the following Spring, encompaſs'd the Baſket all around, till meeting with the Tile, it curl'd back in a kind of Scrolls. An ingenious Sculptor paſſing by, took the Hint, and immediately executed a Capital on this Plan; repreſenting the Brick by the *Abacus*, the Leaves by the Volutes, and the Baſket by the Vaſe, or Body of the Capital. Such was the Riſe of the firſt regular Order. See ORDER, ACANTHUS, VOLUTE, CORINTHIAN, &c.

There is ſome difference in the Form of the *Abacus* in different Orders. In the *Tuſcan*, *Doric*, and antient *Ionic*, it is a flat, ſquare Member, well enough repreſenting its original Tile; whence the *French* call it *Tailloir*, Trencher. See TUSCAN, DORIC, and IONIC.

In the richer Orders it has loſt its native Form; its four Sides, or Faces, being arch'd, or cut inwards; with ſome Ornament, as a Roſe, or other Flower, or Fiſhes Tail in the middle of each Arch. See CORINTHIAN, and COMPOSITE; ſee alſo FLOWER, &c.

But ſome Architects take other Liberties in the *Abacus*, both in reſpect of its Name, Place, and Office. Thus, in the *Tuſcan* Order, where it is the largeſt and moſt maſſive, as taking up one third of the height of the whole Capital, it is ſometimes call'd the *Die* of the Capital.——In the *Doric* 'tis not always the uppermoſt Member of the Capital; a Cymatium being frequently placed over it.—In the *Ionic*, ſome make it a perfect Ogee, and crown it with a Fillet. See DIE, CYMATIUM, OGEE, &c.

Add, that the *Abacus* is not conſtantly reſtrain'd to the Capital of the Column; *Scamozzi* uſing the Name for a concave Moulding in the Capital of the *Tuſcan* Pedeſtal. See PEDESTAL.

ABAFT, in the Sea Language, denotes the *Stern*, or Hind-part of a Veſſel; call'd alſo *Aft*. See AFT.

The Stern, ſtrictly ſpeaking, is only the Outſide; *Abaft* includes both inſide and out. See STERN.

ABALIENATIO, in the *Roman* Law, is a Term ſcarce us'd in any *Engliſh* Writer; tho our Dictionaries would paſs it for *Engliſh*. Indeed, it is not very common among the *Latins*. The uſual Term among them was *Alienatio*; and in our Language *Alienation*. See ALIENATION.

ABAPTISTON, or ANABAPTISTON, a Name antiently given to an Inſtrument in Chirurgery, by the modern Writers call'd *Trepan*, *Modiolus*, *Terebra*, *Terebellum*, and *Trafine*. See TREPAN, MODIOLUS, &c.

The Word is a mere Stranger in our Language. It ſeems to be one of thoſe Exoticks imported by the Dictionaries; and never taken notice of but by themſelves.

ABARTICULATION, in Anatomy, is repreſented by *Blanchard*, and other Lexicographers after him, as ſynonymous with *Diarthroſis*: but the Definition they give of it, does not quadrate with that Notion.

'*Abarticulation*, or *Dearticulation*, ſay they, is a good 'Conſtitution of the Bones, whereby they become diſpos'd 'to move ſtrongly and readily.' But what this ſhould mean, it were hard preciſely to ſay. See DIARTHROSIS.

ABASING, literally denotes the taking a thing down, or bringing it lower.

In this Senſe the Word is us'd at Sea; where, *to abaſe* a Flag, is to lower, or take it in, as a Token of Submiſſion and Inferiority. See FLAG.

By an Ordonnance of *Philip* II. King of *Spain*, the Captains are peremptorily enjoin'd, rather to periſh than *abaſe* the Royal Flag.

ABASED, *Abaiſſe*, in Heraldry, is applied to the Vol, or Wings of Eagles, &c. when the Tip, or Angle looks downward toward the Point of the Shield; or when the Wings are ſhut: The natural way of bearing 'em being ſpread, with the Tip pointing to the Chief, or the Angles. See VOL.

A Chevron, a Pale, Bend, &c. are alſo ſaid to be *abaſed*, when their Points terminate in, or below the Centre of the Shield. See CHEVRON, PALE, &c.

Again, an Ordinary is ſaid to be *abaſed*, when below its due Situation. Thus, the Commanders of the Order of *Malta*, who have Chiefs in their own Arms, are oblig'd to *abaſe* 'em under thoſe of the Religion.

ABATEMENT,

ABATEMENT, in Heraldry, ſomething added to a Coat-Armour, to diminiſh its proper Value and Dignity, and note ſome diſhonourable Action, or Stain in the Character of the Perſon who bears it. See ARMS.

'Tis a little controverted among Authors, whether Heraldry allows of any ſuch thing as regular *Abatements*. *Leigh* and *Guillim*, without any Scruple as to their Reality, give us ſeveral Kinds.

*Abatements*, according to the laſt of thoſe Writers, are either made by Reverſion or Diminution.

*Reverſion* is either turning the whole Eſcutcheon upſide-down; or the adding another Eſcutcheon, inverted, in the former.

*Diminution*, is the blemiſhing any part by adding a Stain, or Mark of Diminution: Such are a *Delf*, a *Point Dexter*, a *Point Champaign*, a *Plain Point*, a *Goar Sinister*, and a *Guſſet*. See each under its proper Article, DELF, *Point* DEXTER, GOAR, GUSSET, *&c.*

It may be added, that theſe Marks muſt always be either Tawny, or Murrey; otherwiſe, inſtead of Diminutions, they become Additions of Honour. See TAWNY, MURREY, *&c.*

The laſt Editor of *Guillim* diſcards the whole Notion of *Abatements*, as a Chimera. He alledges, that no one Inſtance is to be met withal of ſuch Bearing; and that it implies a Contradiction to ſuppoſe it. Arms, being *Inſignia Nobilitatis & Honoris*, cannot admit of any Mark of Infamy, without ceaſing to be Arms, and becoming Badges of Diſgrace; which all would covet to lay aſide. Add, that as no hereditary Honour can be actually diminiſh'd; ſo neither can the Marks thereof. Both, indeed, may be forfeited; as in the Caſe of Treaſon, where the Eſcutcheon is totally revers'd, to intimate a total Suppreſſion of the Honour.

Some Inſtances, however, are produc'd to the contrary by *Colombiere*, and others. But theſe, tho they may ſhew ſome extraordinary Reſentments of Princes for Offences committed in their Preſence, do not amount to a Proof of ſuch Cuſtom or Practice; much leſs authorize the Being of particular Badges in the Hands of inferior Officers, as Kings at Arms.

ABATEMENT, in Law, is us'd for the defeating or overthrowing of a thing, as a Writ, Appeal, or the like.

Thus, the *Abatement of a Writ*, is the fruſtrating, or ſetting it aſide, by ſome Exception alledg'd and made good againſt it. Such Exception may be taken either to the Matter, as inſufficient; or to the Allegations, as uncertain, *e. g.* where one of the Parties or a Place are miſnam'd; or to ſome Variation between the Writ and Record; or to the Uncertainty of the Writ, Count, or Declaration; or to divers other Particulars. Upon any of which, the Defendant may pray that the Writ, or Plaint, may *abate*; *i. e.* that the Plaintiff's Suit may ceaſe for that time. See WRIT.

So we read in *Staundford*, 'The Appeal *abates* by Covin: that is, the Accuſation is defeated by Deceit.——In the old *Nat. Brev.* To *abate* a Caſtle, or Fortlet, is interpreted, to beat it down.

ABATEMENT is alſo an irregular Entry upon Lands, or Tenements, left vacant by their former Poſſeſſor, and not yet laid hold of by the next Heir.

As he that puts out the Poſſeſſor is ſaid to *diſſeize*; ſo he that interpoſes, or ſteps in between the former Poſſeſſor and his Heir, is ſaid to *abate*. See DISSEISIN.

*Coke on Littleton* diſtinguiſhes between *Abatement* and *Intruſion*; but the new Book of Entries renders *Abatement* by *Intruſio*. See INTRUSION.

ABBESS, the Superior of an *Abbey*, or Convent of Nuns. See ABBEY, and CONVENT.

The *Abbeſs* has the ſame Rights, and Authority over her Nuns, that the Abbots regular have over their Monks. See ABBOT.

The Sex indeed does not allow her to perform the Spiritual Functions annex'd to the Prieſthood, wherewith the Abbot is uſually inveſted; but there are Inſtances of ſome *Abbeſſes*, who have a Right, or rather a Privilege, to commiſſion a Prieſt to act for 'em. They have even a kind of Epiſcopal Juriſdiction, as well as ſome Abbots, who are exempted from the Viſitation of their Dioceſans. See EXEMPTION.

F. *Martene*, in his Treatiſe of the *Rites of the Church*, obſerves, that ſome *Abbeſſes* have formerly confeſs'd their Nuns. He adds, that their exceſſive Curioſity carry'd 'em ſuch lengths, that there aroſe a neceſſity of checking it.

S. *Baſil*, in his Rule, allows the *Abbeſs* to be preſent with the Prieſt at the Confeſſions of her Nuns. See CONFESSION.

ABBEY, or ABBY, a Monaſtery, or Religious Houſe, govern'd by an Abbot, or Abbeſs. See ABBOT, *&c.*

*Abbies* differ from *Priories*, in that the one are under the Direction of an Abbot, and the other of a Prior: but Abbot and Prior (we mean a *Prior Conventual*) are the ſame thing; and only differ in Name. See PRIOR.

*Fauchet* obſerves, that in the early Days of the *French* Monarchy, Dukes and Counts were call'd *Abbots*, and Duchies and Counties *Abbies*. Many Perſons of the prime Quality, without any Concern in the Monaſtic Life, took the ſame Quality; even ſome of their Kings are mention'd in Hiſtory under the Title of *Abbots*. *Philip* I. *Louis* VI. and afterwards the Dukes of *Orleans*, are call'd *Abbots* of the Monaſtery of S. *Agnan*. The Dukes of *Aquitain* were call'd *Abbots* of the Monaſtery of S. *Hilary*, at *Poictiers*; and the Earls of *Anjou* of S. *Aubin*, &c.

One third of the beſt Benefices in *England* were antiently, by the Pope's Grant, appropriated to *Abbies*, and other Religious Houſes; which, upon their Diſſolution under King *Henry* VIII. became Lay-Fees: 190 ſuch were diſſolv'd of between 200 *l.* and 35000 *l.* yearly Revenue, which at a Medium amounted to 2853000 *l. per Annum.*

ABBOT, or ABBAT, the Chief, or Superior of an *Abbey*, of the Male Kind. See ABBEY, and ABBESS.

The Name *Abbot* is originally *Hebrew*, where it ſignifies *Father*. The *Jews* call Father in their Language *Ab*; whence the *Chaldees* and *Syrians* form'd *Abba*; and thence the *Greeks* ἄββας, which the *Latins* retain'd, *Abbas*; and hence our *Abbot*, the French *Abbe*, &c.

St. *Mark* and St. *Paul* uſe the Syriac *Abba* in their *Greek*; by reaſon it was then commonly known in the Synagogues, and the primitive Aſſemblies of the Chriſtians; adding to it, by way of Interpretation, the Word *Father*, Ἀββα ὁ πατὴρ, *Abba*, *Father*, q. d. *Abba*, *that is to ſay*, *Father*.

The Name *Ab* and *Abba*, which at firſt was a Term of Tenderneſs and Affection, in the *Hebrew* and *Chaldee*, became at length a Title of Dignity and Honour. The *Jewiſh* Doctors affected it; and one of their moſt antient Books, containing the Sayings, or Apothegms of divers of 'em, is entitled, *Pirke Abbot*, or *Avoth*, i. e. Chapter of the Fathers.

'Twas in alluſion to this Affectation, that Jeſus Chriſt forbad his Diſciples to call any *Man* their *Father on Earth*: which Words S. *Jerom* turns againſt the Superiors of the Monaſteries of his Time, for aſſuming the Title of *Abbots*, or Fathers.

The Name *Abbot*, then, appears as old as the Inſtitution of Monks it ſelf. See MONK.

The Governors of the primitive Monaſteries aſſum'd indifferently the Names *Abbots* and *Archimandrites*. See ARCHIMANDRITES.

They were really diſtinguiſh'd from the Clergy, tho frequently confounded with 'em, becauſe a Degree above Laymen. S. *Jerom*, writing to *Heliodorus*, ſays expreſly, *Alia Monachorum eſt Cauſa, alia Clericorum.* See CLERGY, PRIEST, *&c.*

In thoſe early Days, the *Abbots* were ſubject to the Biſhops, and the ordinary Paſtors. Their Monaſteries being remote from Cities, built in the fartheſt Solitudes, they had no ſhare in Eccleſiaſtical Affairs. They went on Sundays to the Pariſh-Church with the reſt of the People: or, if they were too remote, a Prieſt was ſent 'em to adminiſter the Sacraments; till at length they were allow'd to have Prieſts of their own Body.

The *Abbot*, or Archimandrite himſelf was uſually the Prieſt: but his Function extended no farther than to the Spiritual Aſſiſtances of his Monaſtery; and he remain'd ſtill in obedience to the Biſhop.

There being among the *Abbots* ſeveral Perſons of Learning, they made a vigorous Oppoſition to the riſing Hereſies of thoſe Times; which firſt occaſion'd the Biſhops to call 'em out of their Deſarts, and fix 'em about the Suburbs of Cities; and at length in the Cities themſelves: from which Æra their Degeneracy is to be dated.

The *Abbots*, now, ſoon wore off their former Plainneſs and Simplicity, and began to be look'd on as a ſort of little Prelates. In time they would be Independent of the Biſhop; and became ſo inſupportable, that ſome ſevere Laws were made againſt 'em at the Council of *Chalcedon*: This notwithſtanding, in time, many of 'em carry'd the Point of Independency; and got the Appellation of *Lord*, with other Badges of the Epiſcopate, particularly the *Mitre*.

Hence aroſe new Species and Diſtinctions of *Abbots*, *Mitred*, and *not Mitred*; *Crozier'd*, and *not Crozier'd*, *Oecumenical*, *Cardinal*, &c.

*Mitred* ABBOTS, were thoſe privileg'd to wear the Mitre; and having, withal, a full Epiſcopal Authority within their ſeveral Precincts. Among us, theſe were alſo call'd *Abbots ſovereign*, and *Abbots general*; and were Lords of Parliament. Of theſe Sir *Edward Coke*, *de Jur. Eccleſ.* reckons 27 in *England*, beſide two Mitred Priors. See PRIOR.

The reſt, who were *not mitred*, were ſubject to the Dioceſan.

*Peré Hay*, a *Benedictine* Monk, in his Book entitled *Aſtrum Inextinctum*, maintains, that the *Abbots* of his Order have not only an Epiſcopal, but even a Papal Juriſdiction; *Poteſtatem quaſi Epiſcopalem, imo quaſi Papalem*; and as ſuch can confer the lower Orders of Deacon and Subdeacon. See ORDER.

When the *Abbots* firſt aſſum'd the Mitre, the Biſhops made heavy Complaints of their Privileges being invaded by the

the Monks; and were particularly offended, that in Synods and Councils there was no Diſtinction between 'em. On this Occaſion, Pope *Clement* IV. order'd, that the *Abbots* ſhould only wear their Mitres embroider'd with Gold, and leave Jewels to the Biſhops. See MITRE.

*Crozier'd* ABBOTS, are thoſe who bear the *Crozier*, or Paſtoral Staff. See CROZIER.

There are ſome *Crozier'd* and not *Mitred*; as the *Abbot* of the *Benedictine* Abbey at *Bourges*: and others, both the one and the other.

Among the *Greeks*, ſome even took the Quality of *Oecumenical Abbots*, or *Univerſal Abbots*, in Imitation of the Patriarch of *Conſtantinople*. See OECUMENICAL.

Nor have the *Latins* been much behind 'em in that reſpect: The *Abbot* of *Cluny*, in a Council held at *Rome*, aſſum'd the Title of *Abbas Abbatum*, *Abbot of Abbots*; and Pope *Calixtus*, gave the ſame *Abbot* the Title of *Cardinal Abbot*. See CLUNY.

To ſay nothing of other *Cardinal Abbots*, thus denominated from their being the principal *Abbots* of Monaſteries, which came to be ſeparated.

*Abbots*, again, are now chiefly diſtinguiſh'd into *Regular*, and *Commendatory*.

ABBOTS *Regular*, are real Monks, or Religious, who have taken the Vows, and wear the Habit of the Order. See REGULAR, RELIGIOUS, VOW, &c.

Such are all *Abbots* preſum'd to be; it being expreſly provided by the Canons, that none but a Monk have the Command over Monks.

ABBOTS *in Commendam*, are Seculars; tho they have undergone the Tonſure, and are oblig'd by their Bulls to take Orders when they come of Age. See SECULAR, TONSURE, &c.

Tho the Term *Commendam* inſinuates, that they have only the Adminiſtration of their Abbies for a Time; yet do they hold, and reap the Fruits of 'em for ever; as well as the *Regular Abbots*.

Their Bulls give 'em a full Power *tam in Spiritualibus*, *quam in Temporalibus*. And yet, 'tis true, that the *Commendatory Abbots* do not perform any Spiritual Offices; nor have they any Spiritual Juriſdiction over their Monks. So that the Phraſe *in Spiritualibus*, is rather ſomething of the *Roman* Stile, than a Reality.

Some of their beſt Canoniſts rank the *Commendam* in the Number of Benefices, *inter titulos Beneficiorum*. 'Tis no more than a Canonical Title, or Proviſion to enjoy the Fruits of a Benefice: But as ſuch Proviſions are contrary to the antient Canons, none but the Pope, by diſpenſing with the old Law, can grant 'em. See COMMENDAM, BENEFICE, &c.

Our own Hiſtory ſpeaks very little of theſe *Commendatory Abbots*; and 'tis probable the Practice never prevail'd much among us. Hence, many of our Writers have been led into the Miſtake, of ſuppoſing that all *Abbots* are Monks. Of this we have a remarkable Inſtance, at which many of our Countrymen have ſtumbled, in that Diſpute about the Inventor of the Lines for transforming of Geometrical Figures, call'd by the *French* the *Robervallian Lines*. Dr. *Gregory*, in the *Philoſophical Tranſactions*, *Anno* 1694. rallies the *Abbot Galloys*, who held the Abbey of S. *Martin de Cores*, *in Commendam*, with being a Monk: 'The good Father, ſays 'he, imagines we are return'd into that fabulous Age where-'in a Monk might be allow'd to ſay what he pleas'd.' Which Paſſage the *Abbot* takes hold of, and returns the Raillery, with Intereſt, on the Doctor, in the *Memoirs de l'Academ. Anno* 1703.

The Ceremony whereby *Abbots* are created, is properly call'd *Benediction*; or ſometimes, tho abuſively, *Conſecration*. See BENEDICTION, and CONSECRATION.

It antiently conſiſted in cloathing him with the Habit call'd *Cuculla*, Cowl; putting the Paſtoral Staff in his Hand, and the Shoes call'd *Pedales*, or *Pedules*, on his Feet. Theſe Particularities we learn from the *Ordo Romanus* of *Theodore* Archbiſhop of *Canterbury*.

The Title *Abbot* has alſo been given to certain Biſhops, by reaſon their Sees had originally been Abbeys; and that they were even elected by the Monks: Such are thoſe of *Catanea* and *Montreal*, in *Sicily*. See BISHOP.

The ſame Appellation is extended to the Superiors or Generals of ſome Congregations of Regular Canons; as that of S. *Genevieve* at *Paris*. See CANON, GENEVIEVE, &c.

ABBOT is alſo a Title bore by ſeveral Magiſtrates, and other Lay-Perſons. Among the *Genoeſe*, one of their principal Magiſtrates was call'd the *Abbot of the People*.

In *France*, particularly about the Time of *Charlemaign*, there were ſeveral Lords and Courtiers, who having the Inſpection of certain Abbeys committed to them, were ſtyl'd *Abba-Comites*, or Abbey-Counts. See ABBEY, COUNT, &c.

ABBREVIATURE, or ABBREVIATION, a Contraction of a Word, or Paſſage; made by dropping ſome of the Letters, and ſubſtituting certain Marks, or Characters in their Place. See SYMBOL.

Lawyers, Phyſicians, &c. uſe abundance of *Abbreviatures*; partly for the ſake of Expedition, and partly for that of Myſtery. A *Liſt of the principal Abbreviatures in the ſeveral Arts and Faculties, ſee under the Article* CHARACTER.

Of all People, the Rabbins are the greateſt Dealers in this way; their Writings are unintelligible, without an Explication of the *Hebrew Abbreviatures*. The *Jewiſh* Authors and Copiſts don't content themſelves to *abbreviate* Words, like the *Greeks* and *Latins*, by retrenching ſome of the Letters, or Syllables thereof; but they frequently take away all but the initial Letter. Thus, ר ſtands for *Rabbi*, and א ſtands for אל, ארזכי or אמר according to the Place it is found in.

But what is more, they frequently take the initial Letters of ſeveral ſucceeding Words, join 'em together, and adding Vowels to 'em, make a barbarous ſort of Word, repreſentative of all the Words thus abridg'd. Thus, *Rabbi Schelemoh Jarrhi*, in the Jargon of the *Hebrew Abbreviature*, is call'd *Raſi*; and *Rabbi Moſes ben Maiemon*, *Rambam*. And thus again, מבוא is put for מתן בסתר יכפה אף *Donum in abdito evertit Iram*.

*Mercerus*, *David de Pomis*, *Schindler*, *Buxtorf*, &c. have given Explications of this ſort of Ciphers. The moſt copious Collection of *Roman Abbreviations*, is that of *Sertorius Urſatus*, at the End of the *Marmora Arundelia*; *Sertorii Urſati Equitis de Notis Romanorum Commentarius*.

The Word is deriv'd from the Latin *brevis*, of the *Greek* βραχὺς, *Short*.

ABBREUVOIR, or ABREVOIR, in Maſonry, the Joint, or Jonćture of two Stones; or the Interſtice, or Space left between 'em to be fill'd up with Mortar. See STONE, MORTAR, MASONRY, &c.

The Word is *French*, and literally denotes *a Watering-place*.

ABBROACHMENT, an obſolete Term in ſome of our antient Law-Books, for the Act of ingroſſing, or buying up a Commodity by Wholeſale, in order to ſell it off by Retail. See FORESTALLING.

ABBUTALS, among Law-Writers, denote the Buttings or Boundings of a piece of Land; expreſſing on what other Lands, Highways, or the like, the ſeveral Extremes thereof do *abut*, or terminate. Thus, in *Croke*, the Plaintiff is ſaid to fail in his *Abbutals*, *i. e.* in ſetting forth how the Land is bounded.

In ſtrictneſs, 'tis only the extreme Corners are ſaid to *abut*; the Sides are ſaid to be *adjacent*. *Latera autem nunquam aiunt* Abuttare; *ſed terram proximam adjacere*. Camden.

The Word is apparently form'd of the French *abouter*, to terminate upon. Tho *Camden* advances another Etymology. —— 'They who have wrote of Limits, ſay, that certain 'Hillocks of Earth, term'd *Botentines*, were placed there-'in, by way of Marks: whence, perhaps, our *Buttings*, and 'Boundings.

ABDICATION, the Act whereby a Magiſtrate, or Perſon in Office renounces and gives up the ſame, for himſelf, and his Heirs. See RENUNCIATION.

*Abdication* is frequently confounded with *Reſignation*; but, ſtrictly ſpeaking, there is a difference: *Abdication* being done purely and ſimply; whereas Reſignation is done in favour of ſome third Perſon. See RESIGNATION.

In this Senſe, *Diocletian*, and *Charles* V. are ſaid to have *abdicated* the Crown; *Philip* IV. of *Spain reſign'd* it. The Parliament voted King *James*'s Violation of the Laws, and his quitting the Kingdom, without providing for the due Adminiſtration of Affairs in his abſence, to import an *Abdication* of the Crown.

Among the *Romans*, *Abdication* was alſo us'd in oppoſition to Adoption: Thus, a Father was ſaid to *abdicate* his diſobedient Son. See ADOPTION.

It differ'd from *Exheredation*, Diſinheriting, in this Circumſtance, that the *abdicated* Son was baniſh'd his Father's Family, and cut off from the Succeſſion by a ſolemn Act, during the Father's Life: whereas Exheredation only took place in virtue of his Teſtament. See EXHEREDATION.

ABDOMEN, in Anatomy, the *lower Belly*; or that Part of the Body between the Hips and the Diaphragm. See BODY.

Anatomiſts divide the Body into three Regions, or Venters; the Head; the Thorax, or Breaſt; and the *Abdomen*, or Belly, abſolutely ſo call'd; being the loweſt Part of the Trunk. 'Tis ſeparated from the Thorax by the Diaphragm, and reaches to the *Oſſa pubis*. See VENTER.

It is called *Abdomen*, from the Latin *abdo*, I hide; by reaſon that in its Cavity are wrapp'd up and conceal'd many of the principal *Viſcera*, *viz.* the *Stomach*, *Omentum*, *Inteſtines*, *Liver*, *Spleen*, *Bladder*, &c. See STOMACH, OMENTUM, INTESTINES, &c.

The *Abdomen* is lined internally with a thin, ſoft Membrane; which inveſting all the *Viſcera* abovemention'd, contains and keeps 'em in their Place, call'd the *Peritonæum*: upon a Rupture or Dilatation whereof, they are apt to fall, and form thoſe Tumors call'd *Hernias*. See PERITONÆUM, and HERNIA.

It is cover'd and defended with five Pair of Muſcles; which not only defend the *Viſcera*, but by their alternate Relaxations, and Contractions in Reſpiration, promote the Action of Digeſtion, and the Extruſion of the *Fæces* and Urine. By their Contraction, the Cavity of the *Abdomen* is ſtraighten'd, and promotes the deſcent of the Contents of the *Viſcera* thro' the Inteſtines. They are the proper Antagoniſts to the Sphincters of the *Anus* and Bladder, and forcibly expel the Excrements of thoſe Parts, as alſo the *Fætus* in Parturition. See RESPIRATION, DIGESTION, EXCRETION, DELIVERY, &c.

Theſe Muſcles are the *Obliqui Deſcendentes*, and *Aſcendentes*, *Linea alba*, *Recti*, and *Pyramidales*; ſee each under its proper Article, OBLIQUUS, RECTUS, PYRAMIDALIS, &c.

The *Abdomen* is ſubdivided into three leſſer Regions, or Cavities: the uppermoſt, call'd the *Epigaſtric*, commences from the Diaphragm and *Cartilago Enſiformis*, and terminates two Fingers breadth above the Navel: The ſecond, call'd the *Umbilical*, begins where the former ends, and terminates two Fingers breadth below the Navel: The third, call'd the *Hypogaſtric*, deſcends as low as the *Os Pubis*. See EPIGASTRIC, UMBILICAL, and HYPOGASTRIC.

Each of theſe Subdiviſions, the more accurate Writers divide further into three Parts; a middle, and two lateral ones, the *Hypochondriums*. The middle part of the Umbilical, is call'd the *Umbilicus*, or Navel; and its lateral Parts the *Lumbi*, Loins: The Middle of the Hypogaſtric, is call'd the *Hypogaſtrium*; and its Sides the *Ilia*, or Flanks. See each under its proper Place, EPIGASTRIUM, HYPOCHONDRIUM, UMBILICUS, LUMBI, &c.

ABDUCTION, in Logick, a kind of Argumentation, by the *Greeks* call'd *Apogoge*; wherein, the greater Extreme is evidently contain'd in the Medium, but the Medium not ſo evidently in the leſſer Extreme as not to require ſome further Medium, or Proof to make it appear.

Thus, in the Syllogiſm, *All whom God abſolves are free of Sin; but God abſolves all who are in Chriſt: Therefore, all who are in Chriſt are free of Sin.* The Major is evident; but the Minor, or Aſſumption is not ſo, without ſome other Propoſition to prove it; as, *God took Satisfaction for Sin in the Suffering of Jeſus Chriſt.*

It is call'd *Abduction*; becauſe, from the Concluſion, it *draws us on* to prove the Propoſition aſſumed.

ABDUCTOR, or ABDUCENT, in Anatomy, a Name common to ſeveral Muſcles, whoſe Action is the withdrawing, opening, or pulling back the Parts they are fix'd to. See MUSCLE.

The Name is *Latin*, compounded of *ab*, from, and *duco*, I draw: Their Antagoniſts are call'd *Adductores*. See ADDUCTOR.

ABDUCTOR *Auricularis*, or *of the little Finger*, ariſes from the Annular Ligament, and the third and fourth Bones of the *Carpus* in the ſecond Rank; and is inſerted externally into the firſt Bone of the little Finger: it ſerves to draw that Finger from the reſt. See FINGER.

In ſome Subjects it appears divided into two or three Muſcles, conſiſting of ſo many different Series of Fibres.

ABDUCTOR *Indicis*, or *of the fore Finger*, ariſes from the inſide of the Bone of the Thumb, and is inſerted into the firſt Bone of the fore Finger, which it draws from the reſt towards the Thumb.

ABDUCTOR *minimi digiti manus*. See ABDUCTOR *Auricularis*.

ABDUCTOR *minimi digiti pedis*, or *of the little Toe*, ariſes from the outſide of the *Os Calcis*, near the exterior Bone of the *Metatarſus*, and is inſerted laterally into the outſide of the ſecond Bone of that Toe, which it pulls from the reſt.

ABDUCTOR *Pollicis*, call'd alſo *Thenar*, ſprings from the Annular Ligament, and firſt Bone of the *Carpus*; from whence paſſing to the Thumb, it makes that fleſhy Body called *Mons Lunæ*: It draws the Thumb from the Fingers.

ABDUCTOR *Pollicis pedis*, or *of the great Toe*, ſprings from the inſide of the *Os Calcis*, and the greater *Os Cuneiforme*; and is inſerted into the outſide of the exterior *Os Seſamoideum pollicis*: It ſerves to draw the great Toe from the reſt. See TOE.

ABDUCTOR *Oculi*, or *of the Eye*, is one of the four *Recti*, or ſtrait Muſcles, ariſing from the bottom of the Orbit, and ſpread over the firſt proper Tunic; ſerving to draw the Eye towards the outer Canthus. See EYE, and RECTI.

ABECEDARY, ABCEDARY, or ABECEDARIAN, ſomething Alphabetical, or belonging to the Alphabet. See ALPHABET.

Among the Antients, the Term *Abecedarius* was peculiarly applied to thoſe Compoſitions wherein the initial Letters of each Strophe, or ſometimes even of each Verſe, follow'd the Order of the Alphabet.

Such, in Holy Scripture, are the CXVIIIth Pſalm, and the Lamentations of *Jeremy*: from which it ſhould ſeem, as if the *Hebrews* had been the Inventors of this Kind of Poetry; contrived, no doubt, to aſſiſt the Memory.

ABELIANS, ABELONIANS, ABELOITES, a Sect of Hereticks in *Africa*, not far from *Hippo*, cotemporary with S. *Auguſtin*. See HERETICK.

What diſtinguiſh'd 'em, was, that they made it a Duty to marry, and yet liv'd with their Wives in a profeſs'd Continence, without having any commerce together.

Theſe Hereticks, inconſiderable in themſelves, (for they were confin'd to a little compaſs, and laſted not long;) are become conſiderable, by the great Pains the Learned have taken to aſcertain the Principle they went upon, and the Reaſon of the Denomination.

Some will have 'em to have built on that Text of St. *Paul*, 1 *Cor.* vii. 29. *Let they that have Wives be as though they had none.* A late Writer concludes, that they regulated their Marriage on the Foot of the terreſtrial Paradiſe; alledging, that there was no other Union between *Adam* and *Eve*, but that of Hearts. He adds, they had likewiſe an Eye to the Practice of *Abel*, whom they held to have been married, but never to have known his Wife: and from him they deriv'd their Name.

Another Author obſerves, that it was a Tradition current throughout the Eaſt, That *Adam* conceiv'd ſo much Sorrow for the Death of *Abel*, that he was 130 Years without having to do with *Eve*. This, he ſhews, was the Sentiment of the *Jewiſh* Doctors; from whom the Fable was tranſmitted to the *Arabs*: And hence it was, according to *Gigeus*, that תאבל *Thabala*, in *Arabic*, came to ſignify, to *abſtain from one's Wife*. He concludes, that he is the moſt miſtaken Perſon in the World, or the Story had reach'd *Africa*, and given occaſion both to the Sect, and the Name.

'Tis true, the Rabbins do hold, that *Adam*, after the Death of *Abel*, remain'd a long time without any uſe of Marriage; and till the Time when he begot *Seth*: but to ſay that this was 130 Years is a manifeſt Error, and contrary to their own Chronologies, which place *Seth*'s Birth in the 130th Year of the World, or of *Adam*'s Life; as may be ſeen in their two *Seder Olams*.

*Abarbanel* ſays, it was 130 Years after *Adam*'s Fall; as believing, with the other Rabbins, that *Cain* and *Abel* were conceiv'd immediately after *Adam*'s Tranſgreſſion. But, ſay others, be this as it will, whether a Continence on occaſion of the Fall, or of *Abel*'s Death; 'twas the Continence of *Adam*, not of *Abel*, that theſe Hereticks imitated; who, on this footing, ſhould have been call'd *Adamites*, rather than *Abelians*.

In effect, 'tis more than probable, they took their Name from *Abel*, for no other Reaſon, but becauſe they had no Iſſue more than *Abel*: Not that he lived in Continence after Marriage; but becauſe he was kill'd before he had married.

ABETTER, or ABETTOR, in Law, one who incites, incourages, or ſets another on to perform ſomething criminal; or ſome way ſeconds and aſſiſts him in the Performance it ſelf.

Thus, they who procure others to ſue out falſe Appeals of Felony, or Murder againſt Men, to render 'em infamous, are particularly denominated *Abettors*.

So, *Abettors in Murder*, are ſuch as adviſe or procure a Murder to be committed, or are acceſſory thereto. See MURDER.

There are *Abettors* in Felony, but not in Treaſon: the Law looking on all thoſe concern'd in Treaſon as Principals. See TREASON.

ABEYANCE, or ABBAYANCE, an obſolete Law-Term, whoſe preciſe Signification is not eaſily gather'd; having been out of date as long ago as *Littleton*'s Days.

That Author gives it, as his Senſe of the Word, that to be *in Abeyance* is to be in the *Entendement*, *Remembrance*, & *Conſideration de la Loy*: In which Senſe, ſays he, the Right of Fee-ſimple is ſaid to be *in Abeyance*.

He adds, *Tiel Choſe & Tiel Droit qui eſt dit en divers Livres etre en* Abeyance *eſt a tant a dire en latine, Talis res vel tale rectum quæ vel quod non eſt in homine ad tunc ſuperſtite, ſed tantummodo eſt, & conſiſtit* in Conſideratione & Intelligentia Legis; & *quod alii dixerunt, talem rem, aut tale rectum fore* in Nubibus.

Sir *Edward Coke* obſerves, that among the antient Lawyers, things that are *in poſſe* only, and not *in eſſe*, are ſaid to be *in Abeyance*; q. d. *yet undetermin'd, and only in Expectation.—Quæ nondum ſunt definitæ, aut ſententiâ comprobatæ ſed ſunt adhuc in expectatione.*

This he confirms from the Etymology of the Word, from the *French* or *Flemiſh Bayer*, or *Beer*, to gape or wait for any thing with a longing Deſire.

Dr. *Harris*, improving ſomewhat on his Authorities, ſays, *Abeyance* ſignifies a Thing's being only *in poſſe*, and not *in actu*. Thus, adds he, when the Parſon of a Church dies, and the Church becomes void, the Fee is *in Abeyance*; becauſe it is not determin'd who ſhall ſucceed him.

In this Senſe, our *Abeyance* may be compar'd to the *Hæreditas Jacens* of the Civilians. 'Tis a Principle in Law, That of every Land there is a Fee-ſimple, or it is *in Abeyance*. See FEE-*Simple*.

AB-INTESTATE, in Law, the Heir of a Perſon who died inteſtate, and yet had the Power of making a Teſtament. See INTESTATE, and HEIR.

ABISHERSING, an antient Law-Term, denoting a being free, or exempt, from all Amerciaments for Tranſgreſſions of any kind. See AMERCIAMENT.

This Word, in a Charter or Grant, gives the Proprietor not only the Forfeitures, and Amerciaments of all others for Tranſgreſſions committed within his Fee; but alſo exempts him from all ſuch controul by any within that Compaſs.

According to *Spelman*, it originally ſignifies a Forfeiture, or Amerciament; and ſhould rather be wrote *Miſherſing*, *Miſhering*, or *Miskerring*.

ABJURATION, a ſolemn Renunciation, or Recantation of an Error, Hereſy, or falſe Doctrine. See RECANTATION.

The Word is form'd of the Latin *Abjurare*; which in *Cicero*, and other *Roman* Writers, ſignifies the denying a thing upon Oath. Thus, *Abjurare creditum*, was to forſwear a Debt, or to deny the owing it upon Oath, *&c.*

So, in our own Laws, *To* abjure *a Perſon*, is to renounce all Authority or Dominion of ſuch a Perſon. Thus, by the Oath of *Abjuration*, a Perſon binds himſelf not to own any Regal Authority in the Perſon call'd the Pretender, nor ever to pay him the Obedience of a Subject. See OATH, ALLEGIANCE, *&c.*

ABJURATION is alſo us'd in our antient Cuſtoms, for a ſworn Baniſhment for Life; or an Oath taken, to forſake the Realm for ever. See BANISHMENT.

This, in ſome Caſes, was admitted from Criminals in lieu of Death. The Devotion for the Church was ſo warm, from the Time of *Edward* the Confeſſor to the Reformation, that if a Man having committed Felony, could recover a Church or Church-yard before he were apprehended, it was an Aſylum from which he could not be brought to take his Trial at Law; but confeſſing his Crime to the Juſtices, or Coroner, and *abjuring* the Kingdom, he was at liberty. See ASYLUM.

After *Abjuration*, a Croſs was given him, which he was to carry in his Hand thro' the Highways, till he was got out of the King's Dominion; which was call'd the *Banner of Mother-Church*. *Plac. Hil. 26. Edw.* III.

In time, *Abjuration* dwindled into a perpetual Confinement of the Priſoner to the Sanctuary; wherein, after *abjuring* his Liberty and free Habitation, he was allow'd to ſpend his Life. By Stat. 21 *Jac.* I. all uſe of Sanctuaries, and conſequently of *Abjuration* is taken away. See SANCTUARY.

ABLACTATION, in Gardening, a Method of Engrafting, more uſually call'd *Inarching*, or *Grafting by approach*. See GRAFTING.

*Ablactation* is only practicable where the Stock to be grafted on, and the Tree from which the Graft is to be taken, ſtand ſo near, that the Branch or Cyon may be applied, without cutting off. Hence, 'tis chiefly uſed on Plants that grow in Caſes; as Orange, Lemon, Pomgranate, Vines, Jeſſamins, *&c.* The Seaſon is *April*. To perform it, the uſual Method is to take the Branch intended for the Graft, and pare it away, both the Rind and Wood, the length of three Inches; then, paring likewiſe the Stock, ſo that they may join cloſely to each other, they bind 'em together, and cover 'em over with Clay, or Grafting-Wax. As ſoon as they are found well incorporated together, the Head of the Stock is to be cut off four Inches above the Binding; and the Spring following, the Graft: leaving the Stock to ſubſiſt by it ſelf.

Or, the Operation may be done, by cutting off the Head of the Stock at firſt, and leaving the Top a little ſloped, and applying the Graft thereto, as in Shoulder-Grafting. But this Method is not found equally ſucceſsful.

The Word originally ſignifies the *weaning* a Child from the Breaſt; being form'd of *ab*, from, and *lac*, Milk.

ABLAQUEATION, a Name uſed by the antient Writers of Agriculture, for an Operation in Gardening, whereby Earth is dug from about a Vine, or other Fruit-Tree, and its Roots laid bare, to expoſe 'em more to the Sun, Rain, and Air, in order to promote its Fecundity. See FRUIT-*Tree*.

ABLATIVE, in Grammar, the ſixth Caſe of Nouns. See CASE.

The *Ablative* is oppoſite to the Dative; the firſt expreſſing the Action of taking away, and the latter that of giving. See DATIVE.

The Word is *Latin*, form'd *ab auferendo*, taking away. *Priſcian* alſo calls it the *Comparative* Caſe; as ſerving, among the *Latins*, for comparing, as well as taking away.

The *Ablative* ſcarce anſwers to the juſt Idea of a Caſe; at leaſt, it is the moſt vague of all others. 'Twill be ſhewn in its Place, that the *Engliſh*, and other modern Tongues, have properly no ſuch thing as *Caſes*: but even in the antient Languages, from which the Notion of Caſes is borrow'd, the *Ablative* is only a ſort of Supernumerary, or Supplement to the Caſes.

The five proper Caſes not being found ſufficient to expreſs all the Relations of Things to each other recourſe was had to an expedient; *viz.* the putting a Prepoſition before ſome of the other Caſes; and this made the *Ablative*. See PREPOSITION.

It may be added, that in the plural Number, the *Ablative* is ſtill more obſcure; as being only the Dative repeated.

In *Engliſh*, we have no preciſe Mark whereby to diſtinguiſh the *Ablative* from other Caſes; and we only uſe the Term in analogy to the *Latin*. Thus, in the two Phraſes, *The Magnificence of the City*, and *He ſpoke much of the City*; we ſay, that *of the City* in the firſt is Genitive, and in the latter *Ablative*: by reaſon it would be ſo, if the two Phraſes were expreſs'd in *Latin*.

ABLUENTS, *Abluentia*, in Medicine, a Name ſome Authors give to thoſe Remedies, better known under the Name of *Diluters*, and *Abſtergents*. See DILUTER, and ABSTERGENT.

ABLUTION, in Antiquity, a Religious Ceremony, in uſe among the *Romans*; being a ſort of purifying, perform'd by waſhing the Body, ere they enter'd on Sacrifice. See SACRIFICE.

Sometimes they waſh'd their Hands and Feet, ſometimes the Head, and oftentimes the whole Body: For which purpoſe, at the Entrance into their Temples were plac'd Veſſels made of Marble Triumphant (as *Du Choul* calls it) fill'd with Water.

This Cuſtom, without doubt, they learnt from the *Jews*; ſince we read in Scripture, that *Solomon* plac'd at the Entry into the Temple which he erected to the true God, a great Laver, which the Holy Text calls a Sea of Braſs, where the Prieſts waſh'd themſelves before they offer'd Sacrifice; having beforehand ſanctify'd the Water, by throwing into it the Aſhes of the Victim that was ſlain in Sacrifice.

ABLUTION, among the modern *Romaniſts*, is underſtood of the little Drop of Water and Wine, which they take after the Communion, to waſh down and facilitate the Digeſtion of the Hoſt.

The ſame Term alſo ſignifies that which ſerves to waſh the Hands of the Prieſt who conſecrated it.

ABLUTION, in Pharmacy, is a Preparation divers Remedies undergo, by waſhing 'em in Water, or ſome other Fluid, proper to cleanſe and free 'em of their Impurities. See LOTION.

The Word is ſometimes alſo uſed, tho with leſs Propriety, for the waſhing, or infuſing of certain Medicines in Water, to freſhen 'em, and diſſolve their Salts; call'd *Dulcifying*. See DULCIFYING.

ABOLITION, the Act of undoing, deſtroying, or throwing a Thing out of uſe.

Thus, in our Laws, the *Abolition* of a Law, Statute, or Cuſtom, is the abrogating or repealing it. See ABROGATION, REPEALING, STATUTE, *&c.*

So, the Leave given by the King or Judge, to a criminal Accuſer, to deſiſt from further Proſecution of the Accuſed, is peculiarly called *Abolition*.

The Word is form'd of the *Latin* Abolere, *ita extinguere & delere, ut ne* oleat *quidem*.

ABOMASUS, ABOMASUM, or ABOMASIUM, in Comparative Anatomy, one of the Stomachs, or Ventricles of Animals of the ruminating Kind. See RUMINATING.

Beaſts that chew the Cud are found to have four Stomachs; *viz.* the *Rumen*, or *Magnus Venter* or *Stomach*, properly ſo call'd, the *Reticulum*, *Omaſus*, and Abomaſus. See RUMINATION, *&c.*

The *Abomaſus*, popularly call'd the *Maw*, is the laſt; being the Place wherein the Chyle is form'd, and from which the Food deſcends immediately into the Inteſtines.

It is full of Leaves like the *Omaſus*; but its Leaves have this particular to 'em, that beſide the Membranes they conſiſt of, they contain a great number of Glands not found in any of the reſt. See OMASUS, *&c.*

'Tis in the *Abomaſus* of Calves and Lambs, that the Rennet or Earning is form'd, wherewith Houſwifes turn or curdle their Milk. See RENNET.

ABORIGINES, or ABORIGENES, in Geography, a Name ſometimes given to the primitive Inhabitants of a Country, or thoſe who had their original therein; in contradiſtinction to Colonies, or new Races of Inhabitants, deriv'd from elſewhere. See COLONY.

The Term *Aborigines* is famous in Antiquity: Tho now an Appellative, 'twas originally a proper Name, given only to certain People of *Italy*; and both the Reaſon and Origin of it are greatly diſputed among the Learned: The principal Opinions with regard thereto may be reduc'd to four.

The firſt is that of *Aurelius Victor*, who will have 'em called *Aborigines*, q. d. *Abeorigines*, Vagabonds; of *ab*, and *erro*, I wander here and there; and maintains, that they

they were the *Scythians* who came and ſettled in *Italy*. To this Sentiment *Feſtus* adheres.

2d, S. *Jerom* ſays, they were called *Aborigines*, as having no beginning; of *ab*, and *origo*, original; *i. e.* as being originally of that Country, and not a Colony deriv'd from elſewhere: or, as *Halicarnaſſæus* explains it, διὰ τὸ γενέσεις τοῖς μετ' αὐτὰς ἄρξαι as being Chiefs, or Leaders of the Race that inhabited that Country. Of this Opinion *Virgil* ſeems to be *Æneid.* L. VII. ver. 177.

*Saturnuſque Senex Janique bifrontis imago*
*Veſtibulo adſtabant, aliique* ab origine *Reges.*

For, according to the Remark of *Servius*, *ab origine Reges*, here ſtands for *Aboriginum Reges*. To which it may be added, that *Pliny*, L. IV. calls the *Tyrians*, *Aborigines Gadium*, the *Aborigines of Cadix*; as being the Founders thereof.

3dly, *Dion. Halicarnaſſæus* takes 'em to have been called *Aborigines*, Ἀβοριγῖνες, from their inhabiting the Mountains; as who ſhould ſay, Ἀπὸ ὄρεσι, *à Montibus*: Which Notion ſeems favour'd by *Virgil*, *Æneid.* L. VIII. ver. 321.

*Is genus indocile ac diſperſum montibus altis*
*Compoſuit, Legeſque dedit.*

Laſtly, Others hold, that *Cham*, the *Saturn* of the *Egyptians*, having gather'd together divers wandring Nations, conducted 'em into *Italy*, and that theſe were the *Aborigines*. *Livy* affirms, they came from *Arcadia*, under the Conduct of *Oenotrus* Son of *Lycaon*. *Genebrard* will have 'em the *Phænicians*, or *Canaanites* expell'd by *Joſhua*.

ABORTION, in Medicine, an immature Excluſion of the *Fœtus*; or the Delivery of a Woman with Child, before the legitimate Term; popularly call'd *Miſcarriage*. See DELIVERY, *&c.*

This may happen at any time of Pregnancy; but if before the ſecond Month after Conception, it is properly call'd a *falſe Conception*. See CONCEPTION.

We have Inſtances of *Abortions* by the way of the Mouth, the *Anus*, the Navel, *&c.* See FOETUS, EMBRYO, *&c.*

The uſual Cauſes of *Abortion*, are immoderate Evacuations, violent Motions, ſudden Paſſions, Frights, *&c.* Other Cauſes are the largeneſs and heavineſs of the *Fœtus*, Irritations of the Womb, Relaxation of the Ligaments of the *Placenta*, Weakneſs, and want of Nouriſhment in the *Fœtus*; exceſs of eating, long faſting or waking, the uſe of Buſks for the Shape, offenſive Smells, violent Purgatives; and, in the general, any thing that tends to promote the Menſes.

The Symptoms uſually preceding, are a Fever, either continual or intermitting; Pain in the Loins and Head, heavineſs in the Eyes, a bearing down and Conſtriction of the Abdomen. When the Time of Miſcarriage is juſt at hand, the Pains are much the ſame as thoſe in Labour. See DELIVERY.

*Abortion* is dangerous where the Time of Pregnancy is far advanc'd ſo that the *Fœtus* muſt be large, where the Cauſe is very violent, the Patient ſtrongly convulſed, a large Hemorrhage precedes or enſues, the *Fœtus* is putrify'd, *&c.* Under other Circumſtances it rarely proves mortal.

The Treatment is to be adapted to the particular Symptoms and Circumſtances: If the Patient be Plethoric, as ſoon as the firſt Symptoms diſcover themſelves, a Vein is to be open'd: In caſe of Flooding, recourſe is to be had to proper Aſtringents; or if thoſe fail, to Fomentations, Injections, and Suffumigations: If a *Teneſmus* attend, Rhubarb is to be us'd; and if there be an habitual Laxity of the Uterine Veſſels, Guaiacum.

ABORTION is alſo uſed where the Child dies in the Womb; tho it remain there many Years, or even as long as the Mother lives.

ABORTIVE, ſomething come before its due time, or before it has arriv'd at its Maturity and Perfection. See ABORTION.

F. *Jerom Florentius* has an expreſs Treatiſe of the Baptiſm of *Abortives*, or *abortive* Children. His Aim is to ſhew that an *Abortive* may, and ought to be baptiz'd, at what Time or Term ſoever it come into the World; by reaſon the preciſe Time when the *Fœtus* begins to be animated is not known. There are ſeveral curious and uncommon Things in this Work, which is intitled *Homo dubius, ſive de baptiſmo Abortivorum*. Lugd. 1674. 4to.

ABORTIVE *Velom*, is that made of the Skin of an *abortive* Calf. See VELOM.

ABRACADABRA, an Inſcription, antiently uſed as a Charm or Spell, for the curing of ſeveral Diſeaſes, and driving out Devils. See CHARM, PHYLACTERY, *&c.*

The Author of this piece of Superſtition, who is ſaid to have lived under the Emperor *Adrian*, form'd the Name from that of the Deity he adored, *Abraſax*, or *Abraxas*; whom he made God-paramount; having ſeveral petty Divinities under him, and particularly ſeven Angels who preſided over the ſeven Heavens; and to whom he attributed 365 Virtues or Powers, the Number of Days in the Year; with other idle Reveries.

This ΑΒΡΑΞΑΣ S. *Jerom* will have to be the ſame God whom the *Perſians* and other Heathens worſhip'd under the Name *Mitra*; which is warranted by ſome antient Grave-ſtones. 'Tis added, that moſt of the Fathers aſcribe the Fable of the God Αβρασάξ, to *Baſilides* and his Followers, a Branch of *Gnoſtics*. See BASILIDIANS.

The *Gnoſtics*, 'tis known, ſuppoſed wonderful Virtues in Numbers; and accordingly, this ſame *Abraxas*, or rather *Abraſax*, was thus denominated, as including or comprehending the Power or Virtue of 365 dependent Intelligences: which Number is expreſs'd by the *Greek* Letters of the Word; it being the Cuſtom of the *Greeks* to expreſs their Numbers by the Letters of their Alphabet: The Value of thoſe in the preſent Word are thus;

Α Β Ρ Α Ξ Α Σ
1. 2. 100. 1. 60. 1. 200.

which added together make the Number 365.

*Abracadabra* ſtill continues in uſe and eſteem among ſome ſuperſtitious People, who pretend to do Wonders hereby in the Cure of Agues and Fevers. The manner of preparing this extraordinary Medicine, they have been at the Pains to deſcribe in the following Verſes.

*Inſcribas chartæ quod dicitur* Abracadabra
*Sæpius & ſubter repetas, mirabile dictu;*
*Donec in anguſtum redigatur littera conum.*

That is, 'The Word is firſt to be wrote at length, *Abra-*
'*cadabra*; then, under that *Abracadabr*; and in the third
'Line *Abracadab*, &c.

ABRASION, is ſometimes uſed among Medical Writers for the Act of wearing away the natural *Mucus* which covers the Membranes, and particularly thoſe of the Stomach and Inteſtines, by ſharp corroſive Medicines, or Humors. See STOMACH, and INTESTINES.

The Word is compounded of the Latin *ab*, and *rado*, I ſhave, or ſcrape off.

ABRENUNCIATION. See RENUNCIATION.

ABRIDGMENT, a Summary, or Contraction of a Diſcourſe; wherein, the leſs material Things being more briefly inſiſted on, the whole is brought into a leſſer Compaſs. See EPITOME.

The *Abridgments* of the *Philoſophical Tranſactions*, of *Mr.* Boyle's *Philoſophical Works*, &c. are Works very uſeful in their kind: Tho there is a very great Fault in the former of theſe; the Authors having taken upon 'em entirely to omit a vaſt Number of ſuch Papers and Diſcourſes as were not ſo much to their own Taſte; which is not the Nature of an *Abridgment*, but of a Florilege, Analecta, or Excerpta.

ABRIDGMENT *of a Count*, or *Declaration*, in Law, is particularly uſed for the making it ſhorter, by ſubtracting ſome of its Subſtance. See DECLARATION.

Thus, a Man is ſaid to *abridge his Plaint*, in Aſſize, or a Woman her Demand in an Action of Dower, when, having put any Lands therein which are not in the Tenure of the Tenant or Defendant; and Non-Tenure, or the like, is pleaded to that Land in Abatement of the Writ; they are brought to *abridge*, *i. e.* to deſiſt from and leave that Parcel out of the Demand; and pray that the Tenant may anſwer to the reſt, to which he has not yet pleaded any thing.

Tho the Demandant hath *abridg'd* his Plaint or Demand; yet the Writ ſtill remains good for the reſt. The Reaſon is, that ſuch Writs run in general, and do not ſpecify Particulars.

ABROGATION, the Act of annulling or repealing a Law, or of aboliſhing or ſetting aſide the Authority thereof. See LAW, REPEAL, *&c.*

The Word, in this Senſe, is borrow'd from the Civil Practice of the *Romans*. Among that People, to propoſe a Law to the People for their Approbation, was call'd *Rogare Legem*: hence, to aboliſh it was call'd *Abrogare*; to take ſomething from it, *Derogare*; to add a Clauſe to it, *Subrogare*; and to limit or reſtrain it, *Obrogare*.

ABSCESS, in Medicine and Chirurgery, a Tumor ariſing on divers Parts of the Body, and tending to Suppuration. See TUMOR, SUPPURATION, *&c.*

*Abſceſſes* ariſe from Collections of peccant Humours in the internal Parts of the Body; and are alſo called *Impoſthumes*. See IMPOSTHUME.

Their Name *Abſceſs* comes from the *Latin* Verb *abſcedere*, to depart, or remove to another Place; in alluſion to the morbid Humors being deriv'd from elſewhere.

*Abſceſſes* ariſe oftener in Women after Delivery; and tho dangerous in themſelves, yet appear to be the Criſis of the Diſeaſe that gave riſe thereto. For the Cure, if they cannot be *diſcuſs'd*, *i. e.* be carried off by proper artificial Evacuations, as Phlebotomy, Purging, *&c.* with the uſe of Calomel between whiles, and gentle perſpirative Fotus's, Liniments and Cataplaſms; recourſe is to be had to the contrary Method, and they muſt be brought to Suppuration. When

When the Matter is fully ripen'd, they are to be open'd with a Lancet or Cauſtick, and their Cure attempted by Digeſtives and Incarnatives. See RIPENER, DIGESTIVE, INCARNATIVE, &c.

ABSCISSE, ABSCISSA, in Conics, a Part of the Diameter, or tranſverſe Axis of a Conic Section, intercepted between the Vertex or ſome other fix'd Point, and a Semiordinate. See CONIC *Section*.

Such are the Lines AP, AP, &c. (Tab. *Conics*, Fig. 20.) intercepted between the Vertex A and the Semiordinates PM, PM, &c.

They are called *Abſciſſes* of the Latin *Abſcindo*, I cut off; as being Parts cut off from the Axis. Others call 'em *Sagittæ*, Arrows. See SAGITTA.

In the Parabola, the *Abſciſs* is a third Proportional to the Parameter and Semiordinate; and the Parameter a third Proportional to the *Abſciſs* and Semiordinate. See PARABOLA, SEMIORDINATE, &c.

In the Ellipſis, the Square of the Semiordinate is equal to the Rectangle of the Parameter into the *Abſciſſe*, ſubtracting another Rectangle of the ſame *Abſciſſe*, into a fourth Proportional to the Axis, Parameter, and *Abſciſſe*. See ELLIPSIS.

In the Hyperbola, the Squares of the Semiordinates are to each other as the Rectangles of the *Abſciſſe* into another Line, compos'd of the *Abſciſſe* and the tranſverſe Axis. See HYPERBOLA.

ABSENT. See PRESENT.

ABSOLUTE, is underſtood of ſomething that is free, or independent of another. Hence, as there are various ways wherein one thing may be conſider'd as *free* in reſpect of another, there ariſe divers ſorts of *Abſolutes*.

*Abſolute*, *e. g.* ſometimes imports a Thing which does not include the Idea of Relation to another; in which Senſe it ſtands oppos'd to *Relative*.

Thus, *Man* is an *abſolute* Term; and, on the contrary, *Creature* and *Father* are Relatives, the one referring to Creator, the other to Children. See RELATIVE.

In the like Senſe, the Schoolmen hold *Abſolute* to imply a Thing's not being *in ordine ad*, in order to any other Thing. Thus, Man, Tree, &c. are *Abſolutes*; and every other Thing which has any real Exiſtence which it does not owe to another.

In this Senſe too, the Terms of a Propoſition are ſaid to be taken *abſolutely*; that is, without Relation to each other.

Thus, Man, conſider'd *abſolutely*, and in himſelf, is an *Abſolute* Reaſonable Creature.

Sometimes, *Abſolute* denotes a being free from Reſtriction, Limitation, or Modifications; in which Senſe, ſay the Schoolmen, it ſtands oppos'd to a τὸ *ſecundum quid*. Thus, a Prince is ſaid to be *Abſolute*, when his Will is his Law; or when he is no way reſtrain'd or tied down by any Laws of his Country. And thus a Thing is ſaid to be *abſolutely* and ſimply good.

Sometimes, again, *Abſolute* denotes a Thing's being free from Conditions: In which Senſe it ſtands oppos'd to Conditional. See CONDITIONAL.

Thus, the Decrees of God are ſaid to be *Abſolute* with reſpect to Men. The rigid *Calviniſts* maintain *abſolute* unconditional Predeſtination and Reprobation. A Prieſt does not forgive Men's Sins *abſolutely*, but on Condition of Repentance and Amendment. In this Senſe alſo, we ſay, an *Abſolute* Promiſe, an *Abſolute* Propoſition, &c.

The Divines frequently uſe *Abſolute* in a ſtill further Senſe, *viz.* in oppoſition to Declaratory: Thus, the Church of *Rome* holds that the Prieſt can forgive Sins *abſolutely*; the Proteſtants ſay, only declaratively and miniſterially. See DECREE, ABSOLUTION, &c.

Again, *Abſolute* is ſometimes uſed in reſpect of *Cauſe*; and denotes a Thing's being without any Cauſe. In which Senſe, God alone is *abſolute*.

ABSOLUTE *Number*, in Algebra, is the known Quantity which poſſeſſes one entire Side or Part of an Equation; being the Rectangle, or Solid whoſe Root or Value is to be found. See EQUATION, and ROOT.

Thus, in the Equation $a\,a + 16\,a = 36$, the *Abſolute Number* is 36; which is equal to *a* multiplied by it ſelf, added to 16 times *a*.

This is what *Vieta* calls *Homogeneum Comparationis*.

ABSOLUTE *Equation*, in Aſtronomy, is the Sum of the Optic and Eccentric Equations. See EQUATION.

*Ablative* ABSOLUTE, is a Diction detach'd, and independent of the reſt of the Diſcourſe; neither governing, nor being governed of any other Thing. See ABLATIVE.

This is frequent among the *Latins*; in Imitation of whom, the modern Languages have likewiſe adopted it: *Deleto exercitu*: The Army being cut to pieces. *All things conſider'd*, Reaſon will appear the beſt Guide in Matters of Religion.

ABSOLUTE *Place*. } See { PLACE.
ABSOLUTE *Space*. } See { SPACE.
ABSOLUTE *Motion*. } See { MOTION.

ABSOLUTELY, ABSOLUTE, in Philoſophy, and Theology. See ABSOLUTE.

In Grammar, we ſay, A Word is taken *abſolutely*, *Abſolute ſumptus*, when it has no Regimen, or Government. Thus, in the Phraſe *We ſhou'd pray without ceaſing*; the Word *pray* is taken *abſolutely*, as it governs nothing.

In Geometry, *Abſolutely* is taken for entirely, compleatly. Thus, we ſay, ſuch a thing is *abſolutely* round; in contradiſtinction from what is only partly ſo, as a Spheroid, Cycloid, &c.

ABSOLUTION, ABSOLUTIO, in the Civil Law, &c. a definitive Sentence, whereby a Perſon accuſed of any Crime, &c. is acquitted, and declared Innocent.

Among the *Romans*, the ordinary Method of pronouncing Judgment was this: After the Cauſe had been pleaded on both ſides, the Pretor uſed the Word *Dixerunt*, *q. d.* they have ſaid what they had to ſay. Then, three Ballots were diſtributed to each Judge; one mark'd with the Letter *A.* for *Abſolution*; another with *C.* for Condemnation; and a third with *N. L. non liquet*, it is not clear, to require reſpite of Judgment: and according as the Majority fell of this or that Mark, the Accuſed was *abſolved* or condemn'd, &c. If he were *abſolved*, the Pretor diſmiſs'd him with *Videtur non feciſſe*, or *nihil in eo damnationis dignum invenio*.

When the Votes are equally divided on the Sides of *Abſolution* and Condemnation, the Accuſed is *abſolved*: This Procedure is ſuppoſed to be founded on the Law of Nature. Such is the Sentiment of *Faber* on the 125th Law. *de Div. Reg. Jur.* of *Cicero*, *pro Cluentio*; of *Quintilian*, *Declam.* 254; of *Stralo*, Lib. IX.

ABSOLUTION, in the Canon Law, is a Juridical Act, whereby a Prieſt, as a Judge, and in virtue of a Power given him by Jeſus Chriſt, remits the Sins of ſuch as appear to have the Conditions requiſite thereto.

The *Romaniſts* hold *Abſolution* a Part of the Sacrament of Penance: The Council of *Trent*, Seſſ. XIV. cap. iii. and that of *Florence*, in the Decree *ad Arminos*, declare the Form or Eſſence of the Sacrament to lie in the Words of *Abſolution*, *I abſolve thee of thy Sins*.

This *Formula* of *Abſolution* in the *Romiſh* Church is Abſolute; in the *Greek* Church, Deprecatory; and in the Churches of the Reformed, Declarative. *Arcuvius*, indeed, contends that the *Greek Formula* is abſolute; and that it conſiſts in theſe Words, *Mea mediocritas habet te venia donatum*. But the Inſtances he produces are either no *Formula's* of *Abſolution*, or only of *Abſolution* from Excommunication.

ABSOLUTION is chiefly uſed in the Reformed Churches for a Sentence whereby a Perſon who ſtands excommunicated, is releas'd or freed from the ſame. See EXCOMMUNICATION.

In the Church of *Scotland*, if the Excommunicated ſhew real Signs of godly Sorrow, and if upon Application to the Presbytery a Warrant be granted for his *Abſolution*, he is brought before the Congregation to confeſs his Sin, and expreſs his Sorrow, as often as the Presbytery ſhall think meet: When the Congregation is ſatisfy'd of his Penitence, the Miniſter puts up a Prayer, deſiring Jeſus Chriſt who has inſtituted the Ordinance of Excommunication, (*i. e.* of binding and looſing the Sins of Men on Earth) with a Promiſe of ratifying the righteous Sentence above, to accept of this Man, to forgive his Diſobedience, &c. This done, he pronounces the Sentence of *Abſolution*; by which his former Sentence is taken off, and the Sinner is again receiv'd into Communion.

In the Church of *Rome* there are divers other Political *Abſolutions*; as *Abſolutio à fœvis*, which is neceſſary where a Perſon has been concern'd in ſeeing Sentence of Death executed on a Criminal, or has any other way diſqualify'd himſelf for the holding of a Benefice.

*Abſolutio ad Cautelam*, is that granted to a Perſon who has lodg'd an Appeal againſt a Sentence of Excommunication. It being a Maxim in the Papal Juriſprudence, that the Sentence ſtands good notwithſtanding any Appeal; this ſort of *Abſolution* is ſometimes granted till the Iſſue of his Appeal be known: by means hereof, ſome Articles, at leaſt, of his Excommunication are taken off; inſomuch that Perſons may converſe with him without danger: And beſide, in Caſe of Death, this Sentence is ſuppoſed to ſtand him in ſome ſtead.

ABSORBENTS, in Medicine, Remedies which by the Softneſs or Poroſity of their component Parts, become proper to ſheath the Aſperities of ſharp pungent Humors; or to imbibe or dry away, as with a Sponge, ſuperfluous Moiſtures.

Such are the Teſtaceous Pouders, Hartſhorn, Coral, Crabs Eyes and Claws, calcin'd Bones, burnt Ivory, &c.

*Abſorbents* are the ſame with what we otherwiſe call *Driers* and *Sweetners*.

The Term *Abſorbent* is frequently confounded with *Alcaly*; Alcalies having, really, the Effect of *Abſorbents* with reſpect to Acids. See ACID, and ALCALY.

ABSTEMIOUS, is properly underſtood of ſuch Perſons as refrain abſolutely from Wine. *Pliny* more expreſly ſays, *Vini abſtemius*; and *Apuleius*, *Invinius*.

In the Religious Senſe of the Word, they are ſaid to be *Abſtemious*, who in the Sacrament of the Supper cannot partake of the Cup, by reaſon of ſome natural Averſion to the Liquor. The Biſhop of *Meaux* pleads the Example of the *Abſtemious*, in behalf of excluding the Laity from Communion under that Kind.

The *Roman* Ladies, in the firſt Ages of the Republick, were all enjoin'd to be *Abſtemious*; and that it might appear whether or no they kept up to the Injunction, it was one of the Laws of the *Roman* Civility, that they ſhould kiſs their Freinds and Relations whenever they accoſted them.

The Word ſeems form'd of *abs* and *temetum*, an old Word ſignifying *Wine*.

ABSTERGENTS, or Abstersive *Medicines*, a Claſs of Remedies, whoſe Effect is to abrade and wipe away ſuch mucous Particles as they meet in their Paſſage; and thus cleanſe the Parts of viſcid or impure Adheſions, and carry off the morbid Matter of Wounds, Ulcers, &c. See Medicine, Mundificative, &c.

*Abſtergents* are more uſually call'd among Phyſicians *Detergents*. See Detergent.

*Abſtergents* are of the Genus of Balſamicks; and only differ in their degree of Subtilty and Efficacy, from Vulneraries. See Balsamick, and Vulnerary.

The principal Simples in the Claſs of Detergents, are the Leaves of *Wormwood*, *Garlick*, *Leeks*, *Capers*, *Scurvygraſs*, *Fumitory*, *Liverwort*, *Tanſy*, and *Vervain*; *Bitter Almonds*, *Figs*, *Jujebs*, *Raiſins*, *Dates*, *Juniper-Berries*; *Gum Ammoniac*, *Balſam of Capivi*, *Balm of Gilead*, *Tacamahaca*, *Sapo*; *Turpentines*; *Barberries*, *Liquorice*, *Turmeric*, *Madder*, *Parmaſitty*, *Mummy*, *Sulphur*, *Salt*, *Mercury*, and *Native Cinnabar*.——Moſt of which the Reader will find particularly deſcrib'd under their proper Articles.

The Word *Abſtergent* is compounded of the Latin *abs*, from; and *tergo*, I wipe.—Whence, alſo, *Abſterſion* is ſometimes uſed for the mechanical Act of *Terſion*, or Wiping. See Tersion.

ABSTINENCE, *Abſtinentia*, the Habit of reſtraining or containing one's ſelf from ſome Pleaſure, or Enjoyment. See Pleasure.

The Word is compounded of the Latin *abs*, from; and *teneo*, I hold.

The *Jews* were oblig'd to *abſtain* from their Wives at certain Seaſons.—The ſame is enjoin'd in the Apoſtolical Conſtitutions, on all faſt and meagre Days; and the Church of *England* recommends certain Days of Faſting and *Abſtinence*.—The Great Faſt, ſays St. *Auguſtin*, is to *abſtain* from Sin. See Fast.

The antient *Athletæ* liv'd in a perpetual *Abſtinence* from all kind of ſenſible Pleaſure, to render their Bodies more robuſt and hardy. See Athleta.

Abstinence is particularly uſed for a ſpare Diet, or a ſlender parſimonious uſe of Food. See Food, and Diet.

The Phyſicians relate Wonders of the Effects of *Abſtinence* in the Cure of many Diſorders, and the protracting the Term of Life.—The Noble *Venetian*, *Cornaro*, after all imaginable means had proved vain, ſo that his Life was deſpair'd of at 40; recover'd and liv'd to near 100, by mere dint of *Abſtinence*: as he himſelf gives the Account.

'Tis indeed ſurprizing to what a great Age the primitive Chriſtians of the Eaſt, who retir'd from the Perſecutions into the Deſarts of *Arabia* and *Egypt*, lived, healthful and chearful, on a very little Food: *Caſſian* aſſures us, that the common Rate for twenty four Hours was twelve Ounces of Bread, and mere Water: with this St. *Anthony* lived 105 Years; *James* the Hermit, 104; *Arſenius*, Tutor of the Emperor *Arcadius*, 120; St. *Epiphanius* 115; *Simeon Stylites* 112; and *Romualdus* 120.

Indeed, we can match, nay out-do theſe Inſtances of Longævity, at home: *Buchanan* writes, that one *Lawrence* preſerv'd himſelf to 140 by force of Temperance and Labour; and *Spotſwood* mentions one *Kentigorn*, afterwards call'd St. *Mougah* or *Mungo*, who lived to 185 by the ſame means.—Other Inſtances ſee under the Article Longævity.

In effect, moſt of the Chronical Diſeaſes, the Infirmities of old Age, and the ſhort Lives of *Engliſhmen*, are owing, according to Dr. *Cheyne*, to Repletion; and may be either cured, prevented, or remedied, by *Abſtinence*. See Repletion, Evacuation, &c.

Among the Brute Creation, we ſee extraordinary Inſtances of long *Abſtinence*.—'Tis the natural Courſe for divers Species to paſs four, five, or ſix Months every Year without either eating or drinking: Accordingly, the Tortoiſe, Bear, Dormouſe, Serpent, Swallow, Fly, &c. are obſerv'd regularly to retire, at thoſe Seaſons, to their reſpective Cells and hide themſelves, ſome in the Caverns of Rocks, or Ruins; others dig Holes under Ground; others get into the Woods, and lay themſelves up in the Clefts of Trees; others bury themſelves under Water, &c. See Migration, Passage, &c.

In effect, ſeveral Species of Birds, the whole Tribe almoſt of Inſects, and many among the other Tribes, are able to ſubſiſt all Winter, not only without Food, but many of 'em without Reſpiration too.—This furniſhes an admirable Inſtance of the Wiſdom of the Creator. The proper Food of theſe Creatures, eſpecially the Inſect-Tribe, being now wanting; there is a Proviſion for 'em to live without it. When the Fields are diveſted of their flowery Furniture, when the Trees and Plants are ſtripp'd of their Fruits; what would become of ſuch Animals as are ſubſiſted by the Produce of the Spring, and Summer? And when the Air is grown rigid and chilly with Froſt, what would become of thoſe many tender Species which are impatient of Cold? To prevent the total Deſtruction and Extirpation of many Species of Animals; the Author of Nature has provided, that Creatures thus bereav'd of their Food, ſhould be likewiſe impatient of Cold; to lead 'em thus to ſhelter themſelves out of the way of Danger; and that when there arrived, the natural Texture and Viſcidity of the Blood, ſhould diſpoſe it, by a further degree of Cold, to lag and ſtagnate in the Veſſels: ſo that the Circulation ſtopping, and the Animal Functions being in great meaſure ſuſpended; there is no ſenſible Waſte or Conſumption of Parts, but they remain in a kind of drouſy neutral State, between Life and Death; till the warm Sun revive both them and their Food together, by thawing the congealed Juices both of ſuch Animals and Vegetables. See Heat.

'Tis more than probable, that all Motion of the Animal Juices is extinct in Flies and other Inſects, when thus aſleep; in that, tho cut in pieces they do not awake, nor does any Fluid ooze out at the Wound; unleſs ſome extraordinary degree of Warmth have been firſt applied to unbind the Ice.—The Sleep of ſuch Animals is little elſe than a real Death; and their Waking, a Reſurrection.—For if Life do not conſiſt in a Circulation of the Blood, we don't know what it conſiſts in.——Animals thus aſleep, therefore, are rather ſaid to be alive potentially than actually; much as an Embryo is before Conception, or Incubation. See Life, Sleep, Blood, Circulation, Foetus, &c.

Hence 'tis no wonder that Tortoiſes, Dormice, Bears, &c. are found as fat and fleſhy after ſome Months *Abſtinence* as before.—Sir *G. Ent* weigh'd his Tortoiſe ſeveral Years ſucceſſively, at his going to Earth in *October*, and his coming out again in *March*; and found that of 4 Pounds 4 Ounces, he only uſed to loſe about 1 Ounce. *Philoſoph. Tranſact.* N° 194.

Indeed, we have Inſtances of Men paſſing ſeveral Months as ſtrictly *abſtinent* as other Creatures.—The Records of the *Tower* mention a *Scotchman* impriſon'd for Felony, and ſtrictly watch'd in that Fortreſs for ſix Weeks; in all which time he took not the leaſt Suſtenance: for which he had his Pardon. The *Ephem. German.* ſpeak of one *Martha Taylor*, who by a Blow on the Back fell into ſuch a Proſtration of Appetite, that ſhe took no Suſtenance beſide a few Drops with a Feather for thirteen Months: But this was a morbid and unnatural Caſe, for ſhe ſlept but little all the Time.—We may add the Inſtance of *S. Chilton* of *Tinsbury* near *Bath*, who in the Years 1693, 1694, 1695, ſlept ſometimes four Months, and ſometimes above ſix together, with very little Food; and ſix Weeks without any more than a little Tent, convey'd with a Quill into his Mouth thro' a hole in his Teeth. *Philoſoph. Tranſact.* N° 304.

It is to be added, that in moſt Inſtances of long *Abſtinence* related by Naturaliſts, there were apparent Evidences of a Texture of Blood and Humours, much like that of Summer-Beaſts, and Inſects.—Tho it is no improbable Opinion, that the Air it ſelf may furniſh ſomething for Nutrition. 'Tis certain, there are Subſtances of all Kinds, Animal, Vegetable, &c. floating in the Atmoſphere; which muſt be continually taken in by Reſpiration. And that an animal Body may be nouriſh'd thereby, is evident in the Inſtance of Vipers, which if taken when firſt brought forth, and kept from every thing but Air, will yet grow very conſiderably in a few Days. So the Eggs of Lizards are obſerved to increaſe in Bulk, after they are produced, tho there be nothing to furniſh the Increment but Air alone; after the like manner, as the Eggs or Spawn of Fiſhes grow, and are nouriſh'd with the Water. See Air, and Water.——And hence, ſay ſome, it is, that Cooks, Turn-ſpit Dogs, &c. tho they eat but little, yet are uſually fat. See Nutrition, Perspiration, &c.

ABSTRACT, Abstractum, in Philoſophy, that which is ſeparated from ſome other thing, by an Operation of the Mind called *Abſtraction*. See Abstraction.

*An* Abstract *Idea*, is ſome ſimple Idea, detach'd and ſeparated from any particular Subject, or Complex Idea; for the ſake of viewing and conſidering it more diſtinctly, as it is in it ſelf, its own Nature, &c. See Idea, Simple, Complex, &c.

Thus, Magnitude and Humanity are *Abſtracts* when conſider'd in themſelves, and without being attach'd to any par-

ticular Body, or Perſon; tho they cannot have any real Subſiſtence without ſuch Subjects, nor the Subjects without them.

Thus, alſo, *Whiteneſs* is an *Abſtract*, or *abſtract* Term; inaſmuch as it does not denote any one white Object, but that Colour or Idea in the general, wherever found. See GENERAL.

From the Knowledge of *Abſtracts* we arrive at that of *Concretes*, which is the oppoſite Term; Concrete denoting a General or *Abſtract* Idea's being attach'd to ſome particular Subject, or conſider'd as combin'd with ſome other Ideas; as, *great* Houſe, *white* Wall. See CONCRETE.

The School Philoſophers define an *Abſtract Term* from the Simplicity of its Signification.—*Abſtracts*, according to them, expreſs only the Forms of Things, or Attributes of Things, diſtinct from the Subjects whereof they are Forms or Attributes: as, *Juſtice*, *Crookedneſs*, &c.—They diſtinguiſh 'em into divers Kinds; *Metaphyſical*, as Humanity; *Logical*, as Whiteneſs; and *Phyſical*, as Life, in reſpect of an Animal.

All our ſimple Ideas, ſays Mr. *Locke*, have *abſtract*, as well as concrete Names; as, *Whiteneſs*, *white*; *Sweetneſs*, *ſweet*, &c.

The like alſo holds in our Idea of Modes, and Relations; as, *Juſtice*, *juſt*; *Equality*, *equal*; &c.

But as to our Ideas of Subſtances, we have very few *abſtract* Names at all—Thoſe few that the Schools have forged, as *Animalitas*, *Humanitas*, &c. hold no Proportion with the infinite Number of Names of Subſtances; and could never get admittance into common Uſe, or obtain the Licence of publick Approbation: which ſeems to intimate a Confeſſion of Mankind, that they have no Ideas of the real Eſſences of Subſtances; ſince they have not Names for ſuch Ideas.

It was only the Doctrine of Subſtantial Forms, and the Confidence of miſtaken Pretenders to a Knowledge they had not, which firſt coined, and then introduced *Animalitas*, *Humanitas*, and the like; which yet went very little farther than their own Schools, and could never get to be current among underſtanding Men. See SUBSTANCE.

But the Reality and Exiſtence of all *Abſtract* Ideas, and of any ſuch Faculty in the Mind as *Abſtraction*, has of late been controverted. See the Article ABSTRACTION.

In effect, if there were any ſuch Things as *Abſtracts*, *Abſtract Qualities*, &c. we don't ſee how they could be deſtroy'd; they muſt be permanent and immutable: For that which deſtroys the white warm Flame, cou'd not reach the Whiteneſs or the Warmth: That which deſtroys the figured, moving, ſolid Ball, could not hurt the Figure, Motion, Solidity, &c.—*Abſtract Ideas*, in fine, ſeem to tend to Subſtantial Forms. See *Subſtantial* FORM.

ABSTRACT is alſo extended to divers other Things, in reſpect of their Purity, Simplicity, Subtility, &c.——In this Senſe, we ſay,

ABSTRACT *Mathematicks*, are thoſe Branches of Mathematical Learning, which conſider Quantity and its Affections, ſimply, and abſolutely. See QUANTITY, and MATHEMATICKS.

Such are *Arithmetic*, *Algebra*, *Geometry*, *Trigonometry*, and *Analyticks*. See ARITHMETIC, ALGEBRA, GEOMETRY, &c.

They are thus denominated, in oppoſition to *Mixt* Mathematicks; where the ſimple and abſtracted Properties and Relations of Quantity deliver'd in the former, are applied to ſenſible Objects; and by that means become intermix'd with Phyſical Conſiderations——Such are *Hydroſtatics*, *Optics*, *Navigation*, &c. where Water, Light, &c. are concern'd.

In the like Senſe ſome Authors ſpeak of *Abſtract Numbers*; meaning no more thereby than Numbers, or Aſſemblages of Unities, conſider'd in themſelves, and not applied to denote any Collections of particular ſorts of Things. See NUMBER.

ABSTRACT is alſo uſed in Matters of Literature, for a compendious View, or Epitome of a larger Work. See EPITOME.

An *Abſtract* is ſuppoſed to be a degree ſhorter, and more ſuperficial than an Abridgment. See ABRIDGMENT.

ABSTRACTION, an Operation of the Mind, whereby we ſeparate Things naturally conjunct, or exiſting together; and form and conſider Ideas of Things thus ſeparated. See ABSTRACT.

The Faculty of *Abſtracting*, ſtands directly oppoſite to that of Compounding—By Compoſition we conſider thoſe Things together, which in reality are not join'd together in one Exiſtence. And by *Abſtraction*, we conſider thoſe Things ſeparately and apart, which in reality do not exiſt apart. See COMPOSITION.

*Abſtraction* is chiefly employ'd theſe three ways—Firſt, when the Mind conſiders any one Part of a Thing, in ſome reſpects diſtinct from the Whole; as a Man's Arm, without the Conſideration of the reſt of his Body.

Secondly, when we conſider the Mode of any Subſtance, omitting the Subſtance it ſelf; or when we ſeparately conſider ſeveral Modes which ſubſiſt together in one Subject. See MODE.

This *Abſtraction* the Geometricians make uſe of, when they conſider the Length of a Body ſeparately, which they call a Line; omitting the Conſideration of its Breadth and Depth.

Thirdly, it is by *Abſtraction* that the Mind frames general or univerſal Ideas; omitting the Modes and Relations of the particular Objects whence they are form'd.—Thus, when we would underſtand a thinking Being in general, we gather from our Self-conſciouſneſs what it is to Think; and omitting the Conſideration of thoſe Things which have a peculiar Relation to our own Mind, or to the human Mind, we think of a thinking Being in general.

Ideas fram'd thus, which are what we properly call *Abſtract Ideas*, become general Repreſentatives of all Objects of the ſame Kind; and their Names applicable to whatever exiſts conformable to ſuch Ideas.—Thus, the Colour that we receive from Chalk, Snow, Milk, &c. is a Repreſentative of all of that Kind; and has a Name given it, *Whiteneſs*, which ſignifies the ſame Quality, wherever found or imagin'd. See GENERAL.

'Tis this laſt Faculty, or Power of *Abſtracting*, according to Mr. *Locke*, that makes the great Difference between Man and Brutes; even thoſe latter muſt be allowed to have ſome ſhare of Reaſon: That they really reaſon in ſome Caſes, ſeems almoſt as evident as that they have Senſe; but 'tis only in particular Ideas. They are tyed up to thoſe narrow Bounds; and do not ſeem to have any Faculty of enlarging them by *Abſtraction*. *Eſſay on Human Underſtanding*, L. III. c. 3.

Such is the Doctrine of *Abſtract Ideas*, under the Improvements of that excellent Author.——In effect, 'tis the ſtanding Opinion, that the Mind has ſuch a Power or Faculty of framing *Abſtract Ideas* or *Notions* of Things; and on ſuch very Ideas do a great part of the Writings of Philoſophers turn. Theſe are ſuppoſed in all their Syſtems; and without them there would be nothing done.—They are more eſpecially reputed the Object of Logick and Metaphyſicks, and all that paſſes under the Notion of the moſt *abſtracted* and *ſublime* Learning.

Yet has a late eminent and ingenious Author, Dean *Berkeley*, conteſted the Reality of any ſuch Ideas; and gone a good way towards overturning the whole Syſtem, and conſequently towards ſetting our Philoſophy on a new footing.

The Qualities or Modes of Things, 'tis on all hands agreed, do never really exiſt apart, and ſeparated from all others; but are conſtantly mix'd and combin'd together, ſeveral in the ſame Object.—But, ſay the Philoſophers, the Mind being able to conſider each Quality ſingly, or *abſtracted* from other Qualities with which it is united, does by that means frame to it ſelf *Abſtract Ideas*, of a different Nature and Kind from the ſenſible ones.

For an Example hereof, The Eye perceiving an Object extended, coloured, and moved, reſolves this Compound Idea, into its ſimple, conſtituent ones; and viewing each by it ſelf, excluſive of the reſt, frames *Abſtract Ideas* of *Extenſion*, *Colour*, and *Motion* themſelves, or in their own Nature.—Not that it is poſſible for ſuch Colour and Motion to exiſt without Extenſion; but only that the Mind can frame to it ſelf, by *Abſtraction*, the Idea of Colour excluſive of Extenſion; and of Motion, excluſive both of Colour and Extenſion.

Again, ſay the ſame Philoſophers, the Mind having obſerv'd that in the particular Extenſions perceived by Senſe, there is ſomething common, and alike in all; and ſome other things peculiar; as this, or that Figure or Magnitude, which diſtinguiſh them one from another; it can conſider apart, or ſingle out by it ſelf, what is common; making thereof a general abſtract Idea of Extenſion, which is neither *Line*, *Surface*, nor *Solid*, nor has any *Figure* or *Magnitude*, but is an Idea entirely preſcinded from 'em all.——So, likewiſe, by leaving out of the ſeveral Colours perceived by Senſe, that which diſtinguiſhes them from one another, and only retaining what is common to all, it makes an Idea of Colour in the *Abſtract*, which is neither *red*, nor *blue*, nor *white*, &c.—After the ſame manner, by conſidering Motion abſtractedly, both from the Body moved, and from the Figure it deſcribes, and all particular Directions, and Velocities; an *Abſtract* Idea of Motion is framed, which equally correſponds to all Motions whatever.

They add, that as the Mind frames *Abſtract* Ideas of Qualities or Modes; ſo does it, by the ſame Faculty, attain *Abſtract* Ideas of the more compound Beings, which include many coexiſtent Qualities.——For an Example—Having obſerv'd that *Peter*, *James*, *John*, &c. reſemble each other in Shape, and other Qualities; we can leave out of the Complex Idea we had of *Peter*, *James*, &c. that which is peculiar to each, retaining only what is common to all, and ſo make an *Abſtract* Idea, wherein all the Particulars equally partake.

partake.—And thus it is we are ſuppoſed to come by the *Abſtract* Idea of *Man*, or of *Humanity*, or *Human Nature*; wherein there is indeed included Colour, becauſe no Man but has ſome Colour, but it is neither *white*, nor *black*, nor *brown*; becauſe there is no one particular Colour wherein all Men partake. So likewiſe there is included Stature, but then it is neither *tall*, nor *low*, nor yet *middle Stature*, but ſomething *abſtracted* from all theſe: And ſo of the reſt.

Farther yet, there being a general Variety of other Creatures, which partake in ſome Parts, but not all, of the Complex Idea of Man; the Mind leaving out thoſe Parts which are peculiar to Men, and retaining thoſe only which are common to all living Creatures, frames the Idea of *Animal*; which *abſtracts* or participates not only of all Men, but all Birds, Beaſts, Fiſhes, and Inſects.

The conſtituent Parts of ſuch *Abſtract Idea* of Animal, are Body, Life, Senſe, and ſpontaneous Motion.—By *Body*, is meant, Body without any particular Shape, or Figure; there being no one common to all Animals; without Covering, either of Hair, of Feathers, or Scales: nor yet naked; Hair, Feathers, Scales, and Nakedneſs, being the diſtinguiſhing Properties of particular Animals, and for that Reaſon left out of the *Abſtract* Idea. Upon the ſame Account, the ſpontaneous Motion muſt be neither walking, nor flying, nor creeping; it is nevertheleſs a Motion—But what that Motion is, it is not eaſy to conceive.

'I will not affirm, *ſays Dr.* Berkeley, that other People 'have not this wonderful Faculty of *abſtracting* their Ideas; 'but I am confident I have it not my ſelf.—I have, in- 'deed, a Faculty of imagining, or repreſenting to my ſelf 'the Ideas of Things I have perceived, and of variouſly 'compounding or dividing them: I can imagine a Man with 'two Heads, or the upper Parts of a Man join'd to the Bo- 'dy of a Horſe. I can conſider the Hand, the Eye, the 'Noſe, each by it ſelf, *abſtracted* or ſeparated from the reſt 'of the Body—But then, whatever Hand or Eye I ima- 'gine, it muſt have ſome particular Shape and Colour.—So, 'again, the Idea of a Man I frame to my ſelf, muſt be 'either of a white, or a black, or a tawny, a ſtrait or a 'crooked, a tall, or a low, or a middle-ſiz'd Man.

'I cannot by any Effort of Thought conceive the *Ab- 'ſtract* Idea above deſcribed; and it is equally impoſſible 'for me to form the *Abſtract Idea* of Motion, diſtinct from 'the Body moving, and which is neither ſwift nor ſlow, 'curvilinear, nor rectilinear.—And the like may be ſaid of 'all other *abſtract* general Ideas whatever.'

Since all things that exiſt are only Particulars, 'Whence, 'ſays *Mr.* Locke, is it, that we come by general Words, 'expreſſive of a thouſand Individuals?' His Anſwer is, 'Terms only become general, by being made the Signs of '*abſtract* and general Ideas;' ſo that the Reality of *Ab- ſtract* Ideas, ſhould follow from the Reality of General Words.——But this is a Deception.—A Word becomes General, by being made the Sign, not of an *abſtract* general Idea, but of ſeveral particular ones; any one of which it indifferently ſuggeſts to the Mind.—For an Example, when I ſay that *Whatever has Extenſion is diviſible*; the Propoſition is to be underſtood of Extenſion in general: not that I muſt conceive any *abſtract* general Idea of Extenſion; which is neither Line, Surface, nor Solid, neither great nor ſmall, *&c.*

To make this more evident, Suppoſe a Geometrician to be demonſtrating a Method of dividing a Line in two equal Parts: In order hereto, he draws, for inſtance, a black Line, an Inch long; and this, which in it ſelf is a particular Line, is nevertheleſs, with reſpect to its Signification, general; ſince it repreſents all Lines whatever: So that what is demonſtrated of this one, will hold of all others—And as that particular Line becomes general by being made a Sign; ſo does the Name *Line*: And as the former owes its Generality, not to its being the Sign of an *abſtract* or general Line, but of any or all particular right Lines that may poſſibly exiſt; ſo muſt the latter derive its Generality from the ſame Cauſe. See GENERAL *Term.*

Mr. *Locke*, ſpeaking of the Difficulty of forming *Abſtract Ideas*, ſays; 'And does it not require ſome Pains 'and Skill to form the general Idea of a Triangle, which 'yet is none of the moſt *abſtract* and comprehenſive; for 'it muſt be neither Oblique, nor Rectangular; neither E- 'quilateral, Iſoſceles, nor Scalenous; but all, and none of 'theſe, at once.'——'Now, let any Man look into his 'Thoughts, and try whether he has, or can attain to an 'Idea of a Triangle, correſpondent to this Deſcription.'

From the Notion of *Abſtract Ideas*, Dr. *Berkeley* endeavours to ſhew, it was, that Bodies firſt came to be ſuppoſed to have an Exiſtence of their own, out and independent of the Mind perceiving 'em.—Can there be a greater Strain of *Abſtraction*, ſays he, than to diſtinguiſh the Exiſtence of ſenſible Objects from their being perceiv'd, ſo as to conceive them exiſting unperceiv'd. See BODY, and EXTERNAL *World.*

We ſhall only add, that *abſtracting*, on the common Syſtem, is no more than generalizing: 'tis making one thing ſtand for an hundred, by omitting the Conſideration of the Differences between 'em: It is taking ſeveral Differents, *i. e.* different Combinations, ſetting aſide the Peculiarities in each, and conſidering only what is found alike in all.—— Thus it is that I ſay, *I love my Friend, love my Miſtreſs, love my ſelf, my Bottle, my Book, my Eaſe*, &c.—Not that it is poſſible I ſhould have the ſame Senſation with reſpect to ſo many different ſorts of things, things that ſtand in ſuch different Relations to me; but only that there appearing ſomething in them all that bears a reſemblance to the reſt, in ſome Circumſtances or other, I chuſe to call 'em all by one Name, *Love*. For if I conſider the Tendency of the Effects of them all, I ſhall find they lead me very different ways to very different Actions: and there is not more reſemblance between the Cauſes than between the Effects: All the Analogy there is between them, is a ſort of Pleaſure or Satisfaction, ariſing upon the Application of the particular Object to its proper Organ, or Senſe.——The *Abſtract Idea* of Love, then, will terminate in the Idea of Pleaſure: But, 'tis certain, there can be no Idea of Pleaſure, without a thing pleaſant to excite it. Any other *Abſtract Idea* of Pleaſure, will amount to no more than a View or Perception of the Circumſtances wherewith our Pleaſures have been attended: But theſe are mere Externals, foreign to the pleaſurable Senſation it ſelf; which nothing but an Object applied in ſuch and ſuch a manner, can excite.—To ſuppoſe an Idea of Pleaſure produced obliquely, by any other than the proper Cauſe, is as abſurd as to ſuppoſe an Idea of Sound, produced without a ſonorous Object. The Mind has no Power of making any Ideas, call 'em what you will, whether *Abſtract*, or Concrete; or General, or Particular: Its Activity goes no farther than to the perceiving of ſuch as are preſented to it: So that its Action is really no other than a degree of Paſſion. See SENSE.

ABSTRUSE, denotes ſomething to be deep-hidden, or far-removed from the common Apprehenſions, and ways of conceiving; in oppoſition to what is obvious and palpable.

In this Senſe, Metaphyſicks is an *abſtruſe* Science; the new Doctrine of Infinites is an *abſtruſe* Point of Knowledge; that few People attain to.—The Word is of *Latin* Original, *Abſtruſus*; form'd of *abs*, from, and *trudo*, I thruſt; *q. d.* being far off, and out of reach.

ABSURD, ABSURDUM, a thing that thwarts, or goes contrary to our common Notions and Apprehenſions. See ABSURDITY.

Thus, a Propoſition would be *abſurd*, that ſhould affirm, that two and two make five; or that ſhould deny 'em to make four. See PROPOSITION.

The Logicians have a way of proving the Truth of a Propoſition, by ſhewing the contrary is *abſurd*. See TRUTH.—This they call

*Reductio ad* ABSURDUM, or *arguing ex Abſurdo*. See REDUCTION.

ABSURDITY, ABSURDITIES, is a kind of Error, or Offence againſt ſome evident, and generally allowed Truth, or Principle. See ERROR, MAXIM, *&c.*

The greateſt of all *Abſurdities* is the *Contradiction*. See CONTRADICTION.

The Schoolmen make two Species of *Abſurdities*—The one, απλῶς, which contradicts the common Senſe of Mankind; the other τινὶ, which gives the Lye to ſome one or more Philoſophers; *e. g. Ariſtotle*.—The latter ſort may be a real Truth.

ABSYNTHIUM, *Wormwood*, a Medicinal Plant, of conſiderable Efficacy in quality of a Bitter and Stomachic. See STOMACHIC, *&c.*

There are divers Kinds hereof enumerated by Botaniſts, at leaſt 30. Thoſe which obtain in Medicine, are, 1°, the *Roman* or ſmall, call'd alſo *Pontic*; uſed as a Stomachic, Aſtringent, Diſcutient, and to prevent Putrefaction.—*Etmuller* ſays, there is not a chronic Diſtemper in which it is not ſerviceable.—A Conſerve of the *Roman Abſynthium* is now alſo much uſed.

2°, The *common* or large *Wormwood*, bitterer much than the former, and antiently uſed not only as a Stomachic and a Deſtroyer of Worms, but alſo a Detergent; and preſcrib'd againſt the Jaundice and Dropſy: But it is now grown into diſuſe in thoſe Intentions, as being prejudicial to the Eyes; and is now chiefly retain'd as an Ingredient in ſome of the Officinal Compoſitions; and particularly ſome cephalick diſtill'd Waters. See WATER.

Its Infuſion in Wine, makes what they call *Vinum Abſynthites*. See WINE.—The Pharmacopeias alſo mention an Extract of *Abſynthium*, *Extractum Abſynthii*; and a Syrup of *Abſynthium*, *Syropus de Abſynthio*.

Some will have this to yield the *Semen Sanctum*, or *Santonicum*, i. e. *Wormſeed*; but *Matthiolus* affirms the contrary. See SANTONICUM.

The

The Word is compounded of the Privative Particle α, and πινθιον, *potable*; *q. d.* not potable.

ABUNDANCE, *Copia*, *Plenty*. See FERTILITY, CORNUCOPIA, &c.

*Abundance*, when carried to an Exceſs, is a Fault, call'd *Redundance*, *Exuberance*, &c. See REDUNDANCE, EXUBERANCE, &c.

The Author of the *Dictionaire Oeconomique* gives divers Manners or Secrets of producing *Abundance*; an *abundant* Crop of Wheat, Pears, Apples, Peaches, &c. See FOECUNDITY.

ABUNDANT *Numbers*, are thoſe whoſe Quota-Parts added together, exceed the Number it ſelf whereof they are Parts. See NUMBER.

Thus, the Number 12 is *abundant*, its Quota-Parts 1, 2, 3, 4, and 6, amounting to 16.—In oppoſition to *Abundant Numbers* ſtand *Defective* ones. See DEFECTIVE.

ABUSE, an irregular Uſe of a thing; or ſomething introduced contrary to the proper Order, and Intention thereof.

The Buſineſs of Reformations, Viſitations, &c. is to correct *Abuſes* ſecretly kept into Diſcipline, &c.—*Conſtantine* the Great, by introducing Riches into the Church, laid the Foundation for thoſe numerous *Abuſes* which the ſucceeding Ages groaned under.

*Self*-ABUSE, is a Phraſe uſed by ſome late Writers for the Crime of Self-Pollution. See POLLUTION.——*Nero* is ſaid to have frequently *abuſed Britannicus*.

In Grammar, to apply a Word *abuſively*, or in an *abuſive* Senſe, is to miſapply or pervert its meaning. See CATACHRESIS.

A Permutation of Benefices, without the Conſent of the Biſhop, is deem'd *abuſive*, and conſequently null.

ABUTALLS, or ABBUTALS. See ABBUTTALS.

ABYSS, ABYSSUS, a profound, and as it were, bottomleſs Gulph, or Cavern. See GULF.

The Word is *Greek*, αβυσσος; compounded of the Privative α, and βυω, *I enter*, *reach*; *q. d.* ſomething impenetrable, or not to be fathom'd.

In Scripture, the Word *Abyſs*, αβυσσος, is uſed by the Septuagint, for the Waters which God created at the Beginning with the Earth, which encompaſs'd it round; and which our Tranſlators render the *Deep*. Thus it is that Darkneſs is ſaid to have been on the Face of the *Abyſs*.—The ſame Word is alſo uſed for that immenſe Cavern in the Earth where God collected all theſe Waters on the third Day; which in our Verſion is render'd the *Sea*; and elſewhere the *Great Deep*.

Dr. *Woodward* has let ſome Light into this great *Abyſs*, in his *Natural Hiſtory of the Earth*.——He aſſerts, That there is a mighty Collection of Waters incloſed in the Bowels of the Earth; conſtituting a huge Orb in the interior or central Parts of it; and over the Surface of this Water, he ſuppoſes the Terreſtrial *Strata* to be expanded.—This, according to him, is what *Moſes* calls *the great Deep*, and what moſt Authors render *the great Abyſs*.

That there is ſuch an Aſſemblage of Waters lodged in the Depths of the Earth, is confirmed by abundance of Obſervations. See EARTH, DELUGE, &c.

The Water of this vaſt *Abyſs*, he aſſerts, does communicate with that of the Ocean, by means of certain *Hiatus's*, or Chaſms paſſing betwixt it and the bottom of the Ocean: And this and the *Abyſs* he ſuppoſes to have one common Centre, around which the Water of both is placed; but ſo, that the ordinary Surface of the *Abyſs* is not level with that of the Ocean, nor at ſo great a diſtance from the Centre as the other, it being for the moſt part reſtrained and depreſſed by the *Strata* of Earth lying upon it; but wherever thoſe *Strata* are broken, or ſo lax and porous that Water can pervade them, there the Water of the *Abyſs* doth aſcend, fills up all the Cleſts and Fiſſures into which it can get admittance; and ſaturates all the Interſtices and Pores of the Earth, Stone, or other Matter all around the Globe, quite up to the Level of the Ocean. See STRATA, FOSSIL, &c.

ACACIA, in Medicine, an inſpiſſated Juice, of a Shrub of the Thorn kind; uſed as an Aſtringent. See ASTRINGENT.

There are two Kinds, the *Vera* and *Germanica*.

The *Acacia Vera*, is brought from the *Levant*; and ſuppoſed to be the Juice of the Pods of a large thorny Tree, growing in *Egypt* and *Arabia*.—Some Naturaliſts will have it the ſame Plant that yields the Gum Arabick.

It is very auſtere and binding; and on that account good againſt Fluxes.—Chuſe that of a tan-colour, ſmooth, and ſhining; and an aſtringent diſagreeable Taſte.—It is, or ſhould be, an Ingredient in the *Theriaca Andromachi*.

The *German Acacia* is a Counterfeit of the former; being made of the Juice of unripe Sloes, boil'd to the Conſiſtence of a ſolid Extract; and put up in Bladders, like the former.—It is diſtinguiſh'd from it chiefly by its Colour, which is as black as that of *Spaniſh* Liquorice.—It is uſed as a Subſtitute to the true *Acacia*.

ACACIA, among Antiquaries, is a kind of Roll, reſembling a Bag; ſeen on Medals in the Hands of ſeveral of the Conſuls and Emperors, from the Time of *Anaſtaſius*.

Authors are not agreed either about the Uſe of this Roll, or about the Subſtance whereof it conſiſts; ſome taking it for a plaited Handkerchief, which the Perſon who preſided at the Games threw out as a Signal for their beginning; whilſt others rather imagine it intended to repreſent a Roll of Memoirs, or Petitions. See further under the Article ROLL.

ACADEMICKS, ACADEMICI, ACADEMISTS, a Sect of antient Philoſophers, founded by *Plato*; and called, alſo, the *Academy*. See ACADEMY.

The *Academicks*, in the later Ages, have taken the Name of *Platoniſts*. See PLATONIST.

The great Dogma of the *Academicks* was this: *Unum ſcio, quod nihil ſcio*; 'I know this one thing, that I know 'nothing.'——Accordingly, they pleaded, that the Mind ought always to remain undetermin'd and in Suſpence; as having nothing to determine on but bare Probability or Veriſimilitude, which is as likely to lead into Error as Truth. See PROBABILITY, TRUTH, ERROR, &c.

It muſt be added, that *Plato*, in thus recommending it to his Diſciples to diſtruſt and doubt of every thing; had it not ſo immediately in View to leave 'em fluctuating, and in continual Suſpence between Truth and Error; as to guard againſt thoſe raſh precipitate Deciſions which young Minds are ſo liable to, and put 'em in a Diſpoſition to enable 'em the better to ſecure themſelves from Error, by examining every thing without Prejudice.

M. *des Cartes*, has adopted this ſame *Acatalepſia*, or Principle of Doubting; but, it muſt be allow'd, he makes a very different uſe of it.—The *Academicks* doubted of every thing, and were reſolved ſtill to doubt: *Des Cartes*, on the contrary, ſets out with doubting of every thing; but declares he will not always doubt; and that he only doubts at firſt, that his Determinations afterwards may be the ſurer. See CARTESIANISM.

'In *Ariſtotle*'s Philoſophy, ſay the Followers of *Des Cartes*, there is nothing doubted of; every thing is accounted 'for, and yet nothing is explain'd, otherwiſe than by barbarous unmeaning Terms, and dark confuſed Ideas: 'Whereas *Des Cartes* makes you even forget what you 'knew before: but from your new affected Ignorance, leads 'you gradually into the ſublimeſt Knowledge.'——Hence they apply to him what *Horace* ſays of *Homer*.

*Non Fumum ex Fulgore, ſed ex fumo dare Lucem*
*Cogitat, ut ſpecioſa dehinc miracula prodat*
*Antiphatem, Scyllamque & cum Cyclope Charybdim.*

'Tis thus the *Carteſians* talk: But we may add, that long before their Maſter, *Ariſtotle* himſelf had ſaid, that to know a thing well, a Man muſt firſt have doubted of it; and that 'tis with doubting all our Knowledge muſt begin. See PERIPATETIC, PYRRHONIAN, SCEPTIC, &c.

ACADEMICS, or rather ACADEMISTS, is alſo uſed among us for the Members of the modern *Academies*, or inſtituted Societies of learned Perſons. See ACADEMY.

ACADEMY, ACADEMIA, in Antiquity, a fine Villa, or Pleaſure-Houſe, ſituate in one of the Suburbs of *Athens*, about a Mile from the City; which gave the Denomination to the Sect of *Academiſts*. See ACADEMICK.

It took its Name, *Academy*, from one *Academus* or *Ecademus*, a Citizen of *Athens*, to whom it originally belong'd; and who uſed to have Lectures, and Aſſemblies of learned Men therein.—He lived in the Time of *Theſeus*.

Some, miſtakenly, derive its Name and Origin from *Cadmus* the *Phœnician*, as being the firſt who introduc'd Learning, and the uſe of Letters among the *Greeks*.

The *Academy* was further improved and adorn'd by *Cymon*, with Fountains, Trees, ſhady Walks, &c. for the Convenience of the Philoſophers and Men of Learning, who here met to confer, diſpute, &c.—It was alſo the Burying-Place of illuſtrious Perſons, who had deſerv'd well of the Republick.

Here it was that *Plato* taught his Philoſophy; and from him, all publick Places deſtin'd for Aſſemblies of the Learned and Ingenious, have been ſince call'd *Academies*.

*Sylla* ſacrific'd the delicious Groves and Walks of the *Academy*, planted by *Cymon* to the Laws of War; and employ'd thoſe very Trees to make Machines wherewith to batter the City.

*Cicero* had a Villa, or Country Retirement near *Puzzuoli*, which he call'd by the Name *Academia*; where he uſed to entertain his Philoſophical Friends.—'Twas here, ſays Dr. *Harris*, he compos'd his *Academical Queſtions*, and his Books *de Officiis*, *de Amicitia*, and *de Natura Deorum*.

ACADEMY is alſo uſed for a Sect of Philoſophers, called the *Academicks*. See PHILOSOPHER, and ACADEMICK.

We uſually reckon three *Academies*, or Sects of *Academicks*; tho ſome make five.—The *Antient Academy*, was that whereof *Plato* was the Chief. See PLATONISM.

*Arceſi-*

*Arceſilaus*, one of his Succeſſors, introducing ſome Alterations into the Philoſophy of this Sect, founded what they call the *Second Academy*.

The Eſtabliſhment of the *third*, call'd alſo the *New Academy*, is attributed to *Lacides*, or *Carneades*.

Some Authors add a fourth, founded by *Philo* and *Carmides*; and a fifth by *Antiochus*, called the *Antiochan*, which temper'd the *Antient Academy* with Stoiciſm. See STOICISM.

The *Antient Academy* doubted of every thing; and went ſo far as to make it a Doubt, whether or no they ought to doubt.—'Twas a ſort of Principle with them, never to be ſure or ſatisfy'd of any thing; never to affirm or deny any thing either for true or falſe.—In effect, they aſſerted an abſolute *Acatalepſia*. See ACATALEPSIA.

The *New Academy* was ſomewhat more reaſonable; they own'd ſeveral things for Truths, but without attaching themſelves to any with entire Aſſurance.——Theſe Philoſophers had found, that the ordinary Commerce of Life and Society was inconſiſtent with the abſolute and univerſal Doubtfulneſs of the *Antient Academy*: and yet, 'tis evident, they themſelves looked upon things rather as probable, than as true and certain; by this Amendment, thinking to ſecure themſelves from thoſe Abſurdities into which the *Antient Academy* had fallen. See DOUBTING, *&c.*

See alſo further in the *Academical Queſtions* of *Cicero*; where that Philoſopher explains and unravels the Sentiments of thoſe who in his Days call'd themſelves Followers of the *new* and *old Academy*, with great Clearneſs and Addreſs.

ACADEMY is particularly uſed among the Moderns, for a regular Society or Company of learned Perſons; inſtituted under the Protection of a Prince, for the Cultivation and Improvement of Arts, or Sciences. See SOCIETY.

Some Authors confound *Academy* with Univerſity; but, tho much the ſame in *Latin*, they are very different things in *Engliſh*.—An Univerſity is, properly, a Body compoſed of Graduates in the ſeveral Faculties; of Profeſſors, who teach in the publick Schools; of Regents or Tutors, and Students who learn under them, and aſpire likewiſe to Degrees. See UNIVERSITY.

Whereas an *Academy* is not intended to teach, or profeſs any Art, ſuch as it is, but to improve it: 'Tis not for Novices to be inſtructed in, by thoſe that are more knowing; but for Perſons of diſtinguiſh'd Abilities to confer in, and communicate their Lights and Diſcoveries to each other for their mutual Benefit.

The firſt *Academy* we read of, was eſtabliſh'd by *Charlemaign* at the Motion of *Alcuin*: It was compoſed of the chief Wits of the Court, the Emperor himſelf being a Member.—In their *Academical* Conferences, every Perſon was to give an account of what antient Authors he had read; and each even aſſumed the Name of ſome antient Author whom he affected moſt, or ſome celebrated Perſon of Antiquity. *Alcuin*, from whoſe Letters we learn theſe Particulars, took that of *Flaccus*, the Sirname of *Horace*: a young Lord, named *Augilbert*, took that of *Homer*: *Adelard*, Biſhop of *Corbie*, was called *Auguſtin*: *Riculfe*, Biſhop of *Mentz*, was *Dametas*; and the King himſelf, *David*. See SCHOOL.

This lets us ſee a Miſtake in ſome modern Writers, who relate, that it was in Conformity with the Genius of the learned Men of thoſe Times, who were great Admirers of *Roman* Names, that *Alcuin* took the Name of *Flaccus Albinus*.

Moſt Nations have now their *Academies*, *Ruſſia* not excepted: But, of all Countries, *Italy* bears the Bell in this reſpect.——We have but few in *England*.—The only one of Eminence is called by another Name, *viz.* the *Royal Society*: An Account whereof, ſee under the Article ROYAL *Society*.

Beſide this, however, we have a *Royal Academy* of Muſick; and another of Painting; eſtabliſh'd by Letters Patent, and govern'd by their reſpective Directors.

The *French* have flouriſhing *Academies* of all Kinds, eſtabliſh'd at *Paris*; moſtly by the late King.

*Royal* ACADEMY *of Sciences*, for the Improvement of Phyſicks, Mathematicks, and Chymiſtry; was firſt ſet on foot in *1666*, by Order of the King, tho without any Act of Royal Authority iſſued for that End.—In the Year *1699*, it had as it were a ſecond Birth; the ſame Prince, by a Regulation dated the *26th* of *January*, giving it a new form, and putting it on a new and more ſolemn Footing.

In Virtue of that Regulation, the *Academy* was to be compoſed of four Kinds of Members, *viz. Honorary*, *Penſionary*, *Aſſociates*, and *Eleves*.—The firſt Claſs to conſiſt of ten Perſons; and the reſt of twenty each.—The *Honorary Academiſts* to be all Inhabitants of *France*; the *Penſionaries* all to reſide at *Paris*; eight of the *Aſſociates* allowed to conſiſt of Foreigners; and the *Eleves* all to live at *Paris*.—The Officers, to be a *Preſident*, named every Year by the King, out of the Claſs of Honorary *Academiſts*; and a *Secretary* and *Treaſurer*, to be perpetual.

Of the Penſionaries, three to be Geometricians, three Aſtronomers, three Mechanicks, three Anatomiſts, three Chymiſts, three Botaniſts; the remaining two, Secretary and Treaſurer.——Of the twelve Aſſociates, two to apply themſelves to Geometry, two to Aſtronomy, two to Mechanicks, two to Anatomy, two to Botany, and two to Chymiſtry.—The Eleves to apply themſelves to the ſame kind of Science with the Penſionaries they are attach'd to; and not to ſpeak, except when called thereto by the Preſident.—No Regular or Religious to be admitted, except into the Claſs of Honorary *Academiſts*: Nor any Perſon to be admitted, either for Aſſociate or Penſionary, unleſs known by ſome conſiderable printed Work, ſome Machine, or other Diſcovery.—Further, no Perſon to be allowed to make uſe of his Quality of *Academiſt*, in the Title of any of his Books, unleſs ſuch Book have been read to, and approved by the *Academy*.

The Meetings of the *Academy* were appointed to be held twice a-week, on *Wedneſdays* and *Saturdays*, in the King's Library: (Tho ſoon after, they were removed to a more commodious Apartment in the *Louvre*) And to laſt, at leaſt, two Hours, *viz.* from Three to Five. At the Beginning of every new Year, each Penſionary to be oblig'd to declare in Writing what Work he intends chiefly to proſecute that Year; and the reſt to be invited to do the ſame. All the Obſervations the *Academiſts* bring to the Meeting to be left in Writing, in the Hands of the Secretary; who is to enter the Subſtance of what paſſes at each Aſſembly in a Regiſter: and at the End of every Year, to publiſh the Hiſtory, or Tranſactions of the *Academy* for that Year.

No Perſon, not a Member, to be preſent at their ordinary Meetings; unleſs ſuch as are introduced by the Secretary, to propoſe ſome new Machine or Diſcovery; tho their publick Meetings, twice a-year, ſhall be open to every body.

To encourage the Members to continue their Labours, the King engages not only to pay the ordinary Penſions; but even to give extraordinary Gratifications, according to the Merit of their reſpective Performances: furniſhing, withal, the Expence of the Experiments, and other Inquiries neceſſary to be made.—Their Motto, *Invenit & perfecit*.

In the Year *1716*, the Duke of *Orleans*, then Regent, made an Alteration in their Conſtitution; augmenting the Number of Honoraries, and of Aſſociates capable of being Foreigners, to twelve; admitting Regulars among ſuch Aſſociates; ſuppreſſing the Claſs of Eleves, and eſtabliſhing, in lieu thereof, a new Claſs of twelve *Adjuncts*, to the ſix ſeveral Kinds of Sciences cultivated by the *Academy*: and, laſtly, appointing a Vice-Preſident, to be choſe yearly by the King, out of the Honorary Members; and a Director and Sub-director out of the Penſionaries.

Their Secretary, M. *de Fontenelle*, has oblig'd the Publick with 28 elegant Volumes of the Productions of this illuſtrious Body; under the Title of *Hiſtoire de l'Academe Royale*, &c. *avec les Memoires de Mathematique & de Phyſique tirez des Regiſtres*, &c.

ACADEMY *of Painting*, was eſtabliſh'd fifty Years ago, under the Cardinal *Mazarin*, firſt Protector thereof; and the Chancellor *Seguier*, Vice-Protector.

It conſiſts of a Director, a Chancellor, four Rectors, a Treaſurer, twelve Profeſſors; Adjuncts to the Rectors and Profeſſors; Counſellors; a Secretary; a Profeſſor for Anatomy, and another for Geometry, and Perſpective.

Perſons are here admitted either in Quality of Painters or Sculptors.—The Painters are admitted according to their reſpective Talents; there being a Diſtinction made between thoſe who work in Hiſtory, and thoſe who only paint Portraits, or Landſkips, or Beaſts, or Fruits, or Flowers, or paint in Mignature; or only Deſign; or Engrave; or Carve, *&c.*

ACADEMY *of Medals and Inſcriptions*, was erected for the Study and Explanation of antient Monuments; and to conſecrate great and memorable Events to Poſterity, by ſimilar Monuments; as Medals, Relievo's, Inſcriptions, *&c.*

ACADEMY *of Politicks*, is compoſed of ſix Perſons, who meet on certain Days each Week at the *Louvre*, in the Chamber where the Papers relating to foreign Affairs are lodg'd.—Here they peruſe ſuch Papers as are put in their Hands, by order of the Secretary for foreign Affairs, who acquaints the King with the Progreſſes they make, and the Capacities of each, that his Majeſty may employ them accordingly.

*French* ACADEMY, eſtabliſh'd for the Improvement and Refining of the Language. See FRENCH, and LANGUAGE.

ACADEMY *of Muſick*, is no other than the Managers and Directors of the Opera. See OPERA.

The *French* have alſo conſiderable *Academies* in moſt of their great Cities; as, at *Montpelier*, a *Royal Academy of Sciences*, on the like Footing as that at *Paris*; being as it were a Counterpart thereof: At *Tholouſe*, an *Academy* under the Denomination of *Lanterniſts*: Others at *Niſmes*, *Arles*, &c.

*The Royal* Spaniſh ACADEMY, is an *Academy* eſtabliſh'd at *Madrid*, on the Model of the *French Academy*.——

The Deſign was laid by the Duke *d'Eſcalona*; and approv'd of by the King in 1714, who declar'd himſelf Protector thereof.—It conſiſts of 24 *Academiſts*; including the Director and Secretary.

Its Device is a Crucible on the Fire, with this Motto, *Limpia, fija, y da eſplendor.*

ACADEMY *of the Naturæ Curioſi*, in *Germany*, was firſt founded in 1652, by M. *Bauch* a Phyſician; and taken in 1670 under the Protection of the Emperor *Leopold.*

There are other *Academical* Inſtitutions at *Berlin*, and other Parts of the North; ſeveral of which having diſtinguiſh'd themſelves by their Journals, Ephemerides, *&c.* the Reader will find an Account of 'em under the Article JOURNAL.

*Italy*, alone, has more *Academies* of note than all the reſt of the World; not a City but furniſhes a Set of learned Perſons for an *Academy*, which to them ſeems an eſſential Part of a regular Conſtitution.—*Jarckius* has given us a Specimen of their Hiſtory, printed at *Leipſic*, in 1725; and gives us, withal, to expect a fuller and more perfect Account from ſeveral learned Perſons, who have been long 'employ'd about the ſame; as *Krauſius*, Profeſſor of Eloquence at *Leipſic*; *Hyacinth. Gimma*, and *Mich. Richeyus.*

*Jarckius*'s Account goes no further than thoſe of *Piedmont*, *Ferrara*, and *Milan*; in which laſt City he reckons 25: But he adds a Liſt of all the reſt, to the Number of 550.—The Names of moſt of 'em are very curious.

The *Academiſts*, *e.g.* of Boulogne, are called *Abandonati*, *Anſioſi*, *Otioſi*, *Arcadi*, *Confuſi*, *Difettuoſi*, *Dubbioſi*, *Impatienti*, *Inabili*, *Indifferenti*, *Indomiti*, *Inquieti*, *Inſtabili*, *Della notte*, *Piacere*, *Sitienti*, *Sonnolenti*, *Torbidi*, *Veſpertini.*——Thoſe of Genoa, *Accordati*, *Sopiti*, *Reſuegliati*: Of Gubio, *Addormentati*: Of Venice, *Acuti*, *Allettati*, *Diſcordanti*, *Diſgiunti*, *Diſingannati*, *Dodonei*, *Filadelfici*, *Incruſcabili*, *Inſtancabili*: Of Rimini, *Adagiati*, *Eutrapeli*: Of Pavia, *Affidati*, *Della Chiave*: Of Fermo, *Raffrontati*: Of Moliſa, *Agitati*: Of Florence, *Alterati*, *Humidi*, *Furfurati*, *Della Cruſca*, *Del Cimento*, *Infocati*: Of Cremona, *Animoſi*: Of Naples, *Arditi*, *Infernati*, *Intronati*, *Lunatici*, *Segreti*, *Sirenes*, *Sicuri*, *Volanti*: Of Ancona, *Argonauti*, *Caliginoſi*: Of Urbino, *Affarditi*: Of Perugia, *Atomi*, *Eccentrici*, *Inſenſati*, *Inſipidi*, *Uniſoni*: Of Tarentum, *Audaci*: Of Macerata, *Catenati*, *Imperfetti*: Of—— *Chimærici*: Of Sienna, *Corteſi*, *Gioviali*, *Trapaſſati*: Of Rome *Delfici*, *Humoriſti*, *Lyncei*, *Fantaſtici*, *Illuminati*, *Incitati*, *Indiſpoſiti*, *Infeccondi*, *Malencolici*, *Negletti*, *Notti Vaticane*, *Notturni*, *Ombroſi*, *Pellegrini*, *Sterili*, *Vigilanti*: Of Padua, *Delii*, *Immaturi*, *Ordati*: Of Trepano, *Difficili*: Of Breſſe, *Diſperſi*, *Erranti*: Of Mutina, *Diſſonanti*: Of Recanatum, *Diſuguali*: Of Syracuſe, *Ebrii*: Of Milan, *Eliconii*, *Faticoſi*, *Fenici*, *Incerti*, *Naſcoſti*: Of Candia, *Extravaganti*: Of Peſaro, *Eterocliti*: Of Comachio, *Fluttuanti*: Of Arezzo, *Forzati*: Of Turin, *Fulminales*: Of Reggio, *Fumoſi*, *Muti*: Of Cortona, *Humoroſi*: Of Bari, *Incogniti*: Of Roſſano, *Incurioſi*: Of Brada, *Innominati*, *Pigri*: Of Acis, *Intricati*: Of Mantua, *Invaghiti*: Of Agrigento, *Mutabili*, *Offuſcati*: Of Verona, *Olympici*, *Uranii*: Of Viterbo, *Oſtinati*: Of —— *Vagabondi.*

ACADEMY, is alſo uſed among us for a kind of Collegiate School, or Seminary; where Youth are inſtructed in the Liberal Arts, and Sciences; in a private way. See SCHOOL, SEMINARY, COLLEGE, *&c.*

The Nonconformiſt Miniſters, *&c.* are many of them bred up in ſuch private *Academies*; as not reliſhing the common Univerſity-Education.

ACADEMY is alſo uſed in ſpeaking of the Schools of the *Jews*: *i. e.* thoſe where the Rabbins or Doctors inſtruct the Youth of their Nation in the *Hebrew* Tongue; explain to 'em the Talmud; teach 'em the Cabbala, *&c.* See RABBIN, CABBALA, *&c.*

The *Jews* have had of theſe *Academies*, ever ſince their Return from the *Babyloniſh* Captivity.

The *Academies* of *Tiberias* and *Babylon* are celebrated. See TIBERIAS, MASSORETES, TALMUD, *&c.*

ACADEMY is particularly underſtood of a *Riding-School*; or a Place where young Gentlemen are taught to ride the great Horſe, with other ſuitable Exerciſes; as Fencing, *&c.* See EXERCISE.

This is what *Vitruvius* calls *Ephebeum.* See GYMNASIUM, GYMASTIC, *&c.*

The Duke of *Newcaſtle* will have the Art of Riding to have had its Origin in *Italy*; and the firſt *Academy* of this ſort to have been eſtabliſh'd at *Naples*, by *Frederic Griſon*; who, he adds, was the firſt that wrote on the Subject; which he did like a true Cavalier, and a great Maſter.—*Henry* VIII. ſays the ſame Author, call'd over two *Italians*, Diſciples of *Griſon*, into *England*; who ſoon ſtock'd the Nation with *Ecuyers*, or Riding-Maſters.

He adds, that the greateſt Maſter *Italy* ever produc'd, was a *Neapolitan*, *Pignatelli* by Name; that *La Broue* rid under him five Years; *Pluvinel* nine; and *S. Anthoine* many Years: and that theſe three *Frenchmen* fill'd *France* with *French* Maſters; which till then had known none but *Italians.*

The Ground ſet apart in an *Academy*, for riding, is call'd the *Manage*; having uſually a Pillar in the Centre, and other Pillars, placed two by two, at the Sides. See MANAGE, and PILLAR.

ACADEMY, or ACADEMY-*Figure*, in Painting, is a Drawing or Deſign made after a Model, with a Crayon or Pencil. —Or the Copy of ſuch a Draught. See DESIGN.

ACANACEOUS, among Botaniſts, a Term applied to a Claſs of Plants, popularly known under the Name of the *Thiſtle Kind.* See THISTLE, and CARDUUS.

The Word is form'd of the *Greek* ακαζω, *Acuo*, I ſharpen; in regard of the Prickles they are beſet withal.

ACANTABOLUS, or ACANTHABOLUS, a Surgeon's Inſtrument; called alſo *Volſella.*

'Tis ſhaped like a Pair of Pincers; and is uſed to take out any prickly Subſtance that ſhall chance to ſtick to the Oeſophagus or Gullet; or the Fragments of corrupted Bones, Hair; or any thing that by chance remains in a Wound.

The ſame Term, *Acantabolus*, is alſo uſed for an Inſtrument wherewith People pull out the Hairs from their Eyebrows, *&c.*

It is form'd from the *Greek* ακανθα, *Spina*, and βαλλω, *jacio*, I throw away.

ACANTHA, among ſome Anatomiſts, is applied to the hind, or poſterior Protuberances of the *Vertebræ* of the Back; forming what we call the *Spina Dorſi.* See VERTEBRA, and SPINA.

ACANTHUS, in Architecture, an Ornament in the *Corinthian* and *Compoſite* Orders; being the Repreſentation of the Leaves of an Acanaceous Plant, in the Capitals thereof. See CAPITAL, and LEAVES.

It takes its Name from ακανθος, the Name given the Plant among the *Greeks*, as being prickly, or of the Thiſtle Kind. The *Latin* Botaniſts call it *Brancha Urſina*, Bears-foot, from ſome ſuppoſed reſemblance it bears thereto; or *Brancha Hircina*, by reaſon its Leaves bend and twiſt ſomewhat like a Goat's Horns.

There are two Kinds of the Plant *Acanthus*, one whereof grows wild, and is full of Prickles; the other grows in Gardens, and is by *Virgil* called *Mollis*, in regard it is ſoft, and without any Prickles.—The *Greek* Sculptors adorn'd their Works with the Figure of the latter; as the *Gothic* did with that of the former, which they repreſented not only in their Capitals, but alſo in other Ornaments.

The Garden *Acanthus*, is the moſt dented; bearing a good deal of reſemblance to Parſley, or Smallage: And thus it is we find it repreſented in the *Compoſite* Capitals of *Titus*, and *Septimius Severus* at *Rome.*

Theſe Leaves make the principal Character and Diſtinction of the two rich Orders from the reſt: and their different Number and Arrangement does alſo diſtinguiſh the two Orders from each other. See ORDER; ſee alſo CORINTHIAN, and COMPOSITE.

The Origin and Occaſion of the Ornament, ſee under the Article ABACUS.

ACATALECTIC, ACATALECTUS, in the antient Poetry, a Term applicable to ſuch Verſes as have all their Feet and Syllables; and are in no wiſe defective at the End. See VERSE, and FOOT.

As, on the contrary, *Catalectic* Verſes are thoſe which end too haſtily, and with a Syllable ſhort. See CATALECTIC.

The Words come from λήγω, *deſino*; whence καταληκτικος, *which wants ſomething at the End*; and the Privative α being prefix'd ακαταληκτικος, *which wants nothing at the End.*

In the following Strophe of *Horace*, the two firſt Verſes are *Acatalectic*, and the laſt Catalectic.

*Solvitur acris hyems, grata vice*
*Veris & Favoni:*
*Trahuntque ſiccas machinæ carinas——*

ACATERY, in the King's Houſhold, a kind of Check betwixt the Clerks of the Kitchen and the Purveyors. See PURVEYOR, CLERK, HOUSHOLD, *&c.*

The Officers of the *Acatery*, are a Sergeant, two Joint-Clerks, and a Yeoman of the Salt-Stores.

ACATALEPSIA, ACATALEPSY, in Philoſophy, *Incomprehenſibleneſs*; or the Impoſſibility of comprehending or conceiving a thing. See COMPREHENSION.

The *Pyrrhonians* and *Scepticks*, and even the Antient Academy, aſſerted an abſolute *Acatalepſia*: All human Science or Knowledge, according to them, went no further than to Appearances and Veriſimilitude. See PYRRHONIAN, SCEPTIC, and ACADEMY.

They

They declaimed much againſt the Senſes; and charg'd them with a principal Hand in ſeducing and leading us into Error. See SENSE, ERROR, TRUTH, FALSHOOD, DOUBTING, &c.

The Word is a Compound of the Privative *α*, and *καταλαμβανω*, *deprehendo*, I find out; of *κατα*, and *λαμβανω*, *Capio*, I take. See CATALEPSIS.

ACCAPITUM, in our antient Law-Books, ſignifies Relief to the Chief Lord.—Hence alſo,

ACCAPITARE, to pay Relief to the Chief Lord. See RELIEF.

ACCEDAS *ad Curiam*, is a Writ which lies for him who has received falſe Judgment, or fears Partiality, in a Court-Baron, or Hundred Court; being directed to the Sheriff.—The like Writ lies alſo for him that has received ſuch Judgment in the County-Court; and is called *de Falſo Judicio*.

The *Accedas ad Curiam* lies alſo for Juſtice delayed, as well as falſly given; and is a Species of the Writ *Recordari*. See RECORDARI.

ACCEDAS *ad Vice-comitem*, is a Writ directed to the Coroner, commanding him to deliver a Writ to the Sheriff; who having a Pone deliver'd to him, ſuppreſſes it. See PONE.

ACCELERATED *Motion*, in Mechanicks, is a Motion which receives continual Increments, or Acceſſions of Velocity. See MOTION.

If the Acceſſions of Velocity be equal in equal Times; the Motion is ſaid to be *uniformly accelerated*. See ACCELERATION.

The Motion of falling Bodies is an *accelerated Motion*: And ſuppoſing the Medium they fall thro', *i. e.* the Air, void of Reſiſtance; the ſame Motion may be alſo conſider'd as *uniformly accelerated*. See DESCENT, &c.

*For the Laws of* ACCELERATED Motion, ſee MOTION.

ACCELERATION, in Mechanicks, the Increaſe of Velocity in a moving Body. See VELOCITY, and ACCELERATED *Motion*.

*Acceleration* ſtands directly oppoſed to *Retardation*, which denotes a Diminution of Velocity. See RETARDATION.

ACCELERATION is chiefly uſed in Phyſicks, in reſpect of falling Bodies, *i. e.* of heavy Bodies tending towards the Centre of the Earth by the Force of Gravity. See GRAVITY, and CENTRE.

That Natural Bodies are *accelerated* in their Deſcent, is evident from various Conſiderations, both *à priori* and *poſteriori*.—Thus, we actually find, that the greater Height a Body falls from, the greater Impreſſion it makes, and the more vehemently does it ſtrike the ſubject Plane, or other Obſtacle.

*Cauſe of the* Acceleration *of Falling Bodies.*

Various are the Syſtems and Opinions which Philoſophers have produced to account for this *Acceleration*.—Some attribute it to the Preſſure of the Air: The farther, ſay they, a Body falls, the greater Load of Atmoſphere is of conſequence incumbent on it: and the Preſſure of a Fluid, is in proportion to the perpendicular Altitude of the Column thereof.—Add, that the whole Body of the Fluid preſſing in innumerable right Lines, which all meet in a Point, *viz.* the Centre; that Point, by the meeting of thoſe Lines, ſuſtains, as it were, the Preſſion of the whole Maſs: Conſequently, the nearer a Body approaches thereto, the Effect or Preſſure of more united Lines muſt it ſuſtain. See AIR, and ATMOSPHERE.

But what overturns this Account, is, that as the Preſſure of the Air downwards increaſes; ſo, by the known Laws of Staticks, does the Reſiſtance, or the Force wherewith the ſame Fluid tends to repel, or drive the Body upwards again. See FLUID.

Others inſiſt, that the incumbent Air is the groſſer and more vaporous, the nearer the Earth; and fill'd with more heterogeneous Particles, which are not true elaſtick Air: and hence, ſay they, a deſcending Body, meeting continually with leſs Reſiſtance from the Elaſticity of the Air, and having the ſame Force of Gravity ſtill acting on it, muſt neceſſarily be *accelerated*. See ELASTICITY.

But what overturns all Accounts where the Air or Atmoſphere are concern'd, is, that the *Acceleration* holds *in Vacuo*, and even more regularly than in Air. See VACUUM.

The *Peripatetic* Account is worſe than this: The Motion of heavy Bodies downwards, ſay they, ariſes from an intrinſick Principle, which makes 'em tend to the Centre, as their proper Seat, or Element, where they would be at reſt: Hence, add they, the nearer Bodies approach thereto, the more is their Motion intended. See ELEMENT, QUALITY, &c.

The *Gaſſendiſts*, on the other hand, hold that the Earth emits a ſort of attractive Effluvia, innumerable Threads whereof continually aſcend and deſcend; which Threads, proceeding like Radii from a common Centre, divaricate the more, the further they go: So that the nearer a heavy Body is to the Centre, the more of theſe magnetic Threads it receives; and hence the more is its Motion *accelerated*. See EFFLUVIA, and MAGNETISM.

But this is refell'd by an eaſy Experiment: for if a Ball be let fall out of the loweſt Window of a high Tower, and alſo out of the higheſt; the *Acceleration* will be the ſame in both Caſes, notwithſtanding the greater Vicinity to the Centre in the one, than in the other Caſe.

The *Carteſians* account for the *Acceleration*, from the repeated Pulſes of a ſubtil etherial Matter, which is continually acting on the falling Body, and impelling it downwards. See CARTESIANISM, ÆTHER, ELEMENT, MATTER, SUBTILE, &c.

After all, the Cauſe of *Acceleration* is nothing myſterious; the Principle of Gravitation, which determines the Body to deſcend, determining it to be *accelerated* by a neceſſary Conſequence. See GRAVITATION.

For, ſuppoſe a Body let fall from on high: the primary Cauſe of its beginning to deſcend, is, doubtleſs, the Power of Gravity; but when once the Deſcent is commenced, that State becomes in ſome meaſure natural to the Body; ſo that if left to it ſelf, it would perſevere in it for ever, even tho the firſt Cauſe ſhould ceaſe; as we ſee in a Stone caſt with the Hand, which continues to move, after it is left by the Cauſe that gave it Motion. See *Law of* NATURE.

But, beſide the Propenſity to deſcend impreſs'd by the firſt Cauſe, and which of it ſelf were ſufficient to continue the ſame degree of Motion once begun, *in infinitum*; there is a conſtant Acceſſion of ſubſequent Efforts of the ſame Principle, Gravity, which continues to act on the Body already in Motion, in the ſame manner as if it were at reſt.

Here, then, being a double Cauſe of Motion, and both acting in the ſame Direction, *viz.* directly towards the Centre of the Earth; the Motion they jointly produce muſt neceſſarily be greater than that of one of 'em.—And the Velocity thus increas'd, having the ſame Cauſe of Increaſe ſtill perſiſting, the Deſcent muſt neceſſarily be continually *accelerated*.

For, ſuppoſing Gravity, whatever it be, to act uniformly on all Bodies, at equal Diſtances from the Earth's Centre; and that the Time in which a heavy Body falls to the Earth, be divided into equal Parts infinitely ſmall: let this Gravity incline the Body towards the Earth's Centre, while it moves, in the firſt infinitely ſmall Part of the Time of its Deſcent; if after this, the Action of Gravity be ſuppos'd to ceaſe, the Body would proceed uniformly on towards the Earth's Centre, with a Velocity equal to the Force of the firſt Impreſſion.

But, now, ſince the Action of Gravity is here ſuppoſed ſtill to continue; in the ſecond Moment of Time, the Body will receive a new Impulſe downwards, equal to what it received at firſt; and thus its Velocity will be double of what it was in the firſt Moment: in the third Moment it will be triple; in the fourth quadruple, and ſo on continually: For the Impreſſion made in one Moment, is not at all alter'd by what is made in another; but the two are, as it were, aggregated, or brought into one Sum.

Wherefore, ſince the Particles of Time are ſuppoſed infinitely ſmall, and all equal to one another; the Impetus acquir'd by the falling Body, will be every where as the Times from the Beginning of the Deſcent.—And hence, ſince the Quantity of Matter in the Body given, continues the ſame; the Velocity will be as the Time in which it is acquir'd.

Further, the Space paſs'd over by a moving Body in a given Time, and with a given Velocity, may be conſider'd as a Rectangle made by the Time and the Velocity.—— Suppoſe A, (Tab. *Mechanicks*, Fig. 62.) a heavy Body deſcending, and let A B repreſent the Time of its Deſcent; which Line ſuppoſe divided into any Number of equal Parts, A C, C E, E G, &c. repreſentative of the Intervals, or Moments of the given Time.—Let the Body deſcend thro' the firſt of thoſe Diviſions, A C, with a certain equable Velocity ariſing from the propoſed Degree of Gravity: this Velocity will be repreſented by A D; and the Space paſs'd over, by the Rectangle C A D.

Now, as the Action of Gravity in the firſt Moment produced the Velocity A D, in the Body before at reſt; in the ſecond Moment, the ſame will produce in the Body ſo moving, a double Velocity, C F; in the third Moment, to the Velocity C F will be added a further degree, which together therewith, will make the Velocity E H, which is triple of the firſt, and ſo of the reſt. So that in the whole Time A B, the Body will have acquir'd a Velocity B K.—Again, taking the Diviſions of the Line, *e. g.* A C, C E, &c. for the Times, the Spaces gone thro' will be the Areas or Rectangles, C D, E F, &c. So that in the whole Time A B, the Space deſcribed by the Moveable, will be equal to all the Rectangles, *i. e.* to the dented Figure A B K.

Such would be the Caſe, if the Acceſſions of Velocity only happen'd in certain given Points of Time, *e. g.* in C, in E, &c. So that the Degree of Motion ſhould continue the ſame till the next Period of *Acceleration* come up.—— If the Diviſions or Intervals of Time were ſuppoſed leſs,

*e. g.*

*e. g.* by half; then the Dentures of the Figure would be proportionably ſmaller; and it would approach ſo much the nearer to a Triangle.—If they were infinitely ſmall, *i. e.* if the Acceſſions of Velocity were ſuppoſed to be made continually, and in every Point of Time, as is really the Caſe; the Rectangles thus ſucceſſively produced will make a juſt Triangle, *e. g.* A B E, (Fig. 63.)——Here, the whole Time A B, conſiſting of the little Portions of Time A 1, A 2, *&c.* and the Area of the Triangle A B E, of the Sum of all the little triangular Surfaces anſwering to the Diviſions of the Time: The whole Area or Triangle expreſſes the Space moved thro' in the whole Time A B; and the little Triangles A *i f*, &c. the Spaces gone thro' in the Diviſions of Time *a* 1, *&c.*

But theſe Triangles being ſimilar, their Areas are to one another, as the Squares of their homologous Sides A B, A 1, *&c.* and conſequently, the Spaces moved, are to each other as the Squares of the Times.

*Laws of* Acceleration.

Hence we eaſily infer the great Law of *Acceleration*, *viz.* "That a deſcending Body uniformly *accelerated*, deſcribes, "in the whole Time of its Deſcent, a Space which is juſt "half of what it would have deſcribed in the ſame Time, "with the *accelerated* Velocity it has acquir'd at the End "of its Fall."

For, the whole Space the falling Body has moved thro' in the Time A B, we have already ſhewn, will be repreſented by the Triangle A B E; and the Space the ſame Body would move thro' in the ſame Time, with the Velocity B E, will be repreſented by the Rectangle A B E F.—But the Triangle is known to be equal to juſt half the Rectangle.—Therefore, the Space moved, is juſt half of what the Body would have moved with the Velocity acquir'd at the End of the Fall.

*Coroll.*——Hence, 1°, we gather, that the Space moved with the laſt acquired Velocity B E, in half the Time A B; is equal to that really moved by the falling Body in the whole Time A B.

2°, If a falling Body deſcribe any given Length in a given Time, in double that Time it will deſcribe four times that Length; in thrice the Time, nine times, *&c.* and univerſally, if the Times be in Arithmetical Proportion, 1, 2, 3, 4, *&c.* the Spaces deſcribed will be 1, 4, 9, 16, *&c.*

3°, The Spaces deſcribed by a falling Body, in a Series of equal Moments or Intervals of Time, will be as the unequal Numbers 1, 3, 5, 7, 9, *&c.*—And ſince the Velocities acquir'd in falling are as the Times; the Spaces will alſo be as the Squares of the Velocities; and both Times and Velocities in a ſubduplicate Ratio of the Spaces.

The Motion of a Body aſcending, or impell'd upwards, is diminiſh'd or retarded from the ſame Principle of Gravity acting in a contrary Direction, in the ſame manner as a falling Body is *accelerated*. See RETARDATION.

A Body thus projected upwards, riſes till it has loſt all its Motion; which it does in the ſame Time that a Body falling would have acquir'd a Velocity equal to that wherewith the Body was thrown up.

And hence, the ſame Body thrown up, will riſe to the ſame height, from which, falling, it would have acquir'd the Velocity wherewith it was thrown up.

And hence, the Height which Bodies thrown up with different Velocities do aſcend to, are to one another as the Squares of thoſe Velocities.

ACCELERATION *of Bodies on inclined Planes*.—The ſame general Law obtains here, as in Bodies falling perpendicularly: The Effect of the Plane is, to make the Motion ſlower; but the Inclination being every where equal, the Retardation riſing therefrom will proceed equally in all Parts, at the Beginning and the Ending of the Motion.—The particular Laws, ſee under the Article *Inclined* PLANE.

ACCELERATION *of the Motion of Pendulums*.—The Motion of pendulous Bodies is *accelerated* in their Deſcent; but in a leſs Ratio than that of Bodies falling perpendicularly. *See the Laws thereof under the Article* PENDULUM.

ACCELERATION *of the Motion of Projectiles*. See PROJECTILE.

ACCELERATION *of the Motion of compreſſed Bodies*, in expanding or reſtoring themſelves. See COMPRESSION, DILATATION, TENSION, FIBRE, *&c.*

That the Motion of compreſs'd Air, expanding it ſelf by its Elaſticity to its former Dimenſions, is *accelerated*, is evident from various Conſiderations. See AIR, ELASTICITY, *&c.*

ACCELERATION is alſo applied in the antient Aſtronomy, in reſpect of the Fixed Stars.—This *Acceleration* was the Difference between the Revolution of the *Primum Mobile*, and the Solar Revolution; which was computed at 3 Minutes, and 56 Seconds. See STAR, PRIMUM *Mobile*, &c.

ACCELERATOR *Urinæ*, a Muſcle of the Penis, by ſome made a Pair of Muſcles; thus call'd from its Office in expediting the Diſcharge of the Urine and Semen. See MUSCLE, PENIS, *&c.*

It ariſes tendinous from the upper and fore-Part of the Urethra; but ſoon grows fleſhy, paſſes under the *Os Pubis*, and incompaſſes the Bulb of the cavernous Body of the Urethra.—Both ſides of this Muſcle meet in a middle Line, correſponding to the Seam in the Skin over it; and continue ſo united, the ſpace of two Inches; after which, it detaches two fleſhy Elongations, which become thin Tendons at their Terminations on the cavernous Bodies of the Penis.

Its upper Part covering the Bulb, when in Action, ſtreightens the Veins which paſs thro' it from the *Corpus Cavernoſum* of the Urethra; and hinder the Reflux of the Blood in an Erection; and by the repeated Contractions of this upper Part, drives the Blood in the Bulb towards the Glans. See ERECTION.

The two Elongations compreſs the Channel of the Urethra, and ſo force out the contain'd Seed, or Urine; whence the Muſcle takes its Name. See URINE, and SEED.

ACCENSION, ACCENSIO, in Phyſicks, the Act of *Kindling*, or ſetting a Body on Fire. See FIRE, FUEL, HEAT, *&c.*

*Accenſion*, on other Occaſions, is called *Inflammation*, *Ignition*, *Conflagration*, &c. See IGNITION, INFLAMMATION, CONFLAGRATION, *&c.*

*Accenſion* ſtands oppoſed to *Extinction*. See EXTINCTION.

The Word is form'd of the Latin *Accendo*, I kindle.

ACCENSUS, a *Roman* Officer, whereof there were two Kinds.

The firſt, were Officers of the Magiſtrates; that is, of the Conſuls, Pretors, Proconſuls, *&c.* who had their Name, *Accenſi*, *ab acciendo*; their principal Employment being to call Aſſemblies of the People, and ſummon People to appear in Court.

The other Order of *Accenſi*, were a kind of ſupernumerary Soldiers, kept on foot, to be ready to ſupply the Place of thoſe who were kill'd or wounded in Battel.—And theſe, according to *Aſconius Pedianus*, becauſe they were added to the proper Number, were called *Accenſi*, *quia adcenſebantur*, or *accenſebantur*, i. e. *ad cenſum adjiciebantur*.

ACCENT, ACCENTUS, a certain Inflection of Voice; or a peculiar Tone and manner of Pronunciation, contracted from the Country or Province where a Perſon was bred. See VOICE, and PRONUNCIATION.

In this Senſe, we ſay, the *Welch* Tone or *Accent*, the Northern *Accent*, the *Gaſcoign Accent*, *Norman Accent*, &c. See TONE, *&c.*

The Word is form'd of the Latin *Accentus*; compounded of *ad*, and *cano*, I ſing.

ACCENT is alſo a Tone or Modulation of the Voice, frequently uſed as a Mark of the Intention of the Speaker; and giving a good or an evil Signification to his Words.

One may give Offence with the ſofteſt and moſt ſoothing Words imaginable, by a proper Management of the *Accent*, and manner of rehearſing them.—The *Accent* frequently gives a contrary Senſe to what the Words themſelves naturally imported. See WORD, FIGURE, *&c.*

The *Accent*, properly, has only to do with high and low.—Tho the modern Grammarians frequently alſo uſe it in reſpect of loud and ſoft, long and ſhort; which confounds *Accent* with *Quantity*. See QUANTITY.

The Difference between the two may be conceiv'd from that which we obſerve between the Beat of a Drum, and the Sound of a Trumpet: the former expreſſes every thing belonging to loud and ſoft, and long and ſhort; but, ſo long as there is a μονοτονία in the Sound, there is nothing like *Accent*.

ACCENT is alſo uſed in Grammar, for a Character placed over a Syllable, to mark the Accent, *i. e.* to ſhew it is to be pronounced in a higher or a lower Tone, and regulate the Inflexions of the Voice in reading. See CHARACTER, TONE, VOICE, *&c.*

We uſually reckon three grammatical *Accents* in ordinary uſe, all borrow'd from the *Greeks*, *viz.* the *Acute Accent*, which ſhews when the Tone of the Voice is to be raiſed; and is expreſſed thus (′). See ACUTE.

The *Grave Accent*, when the Note or Tone of the Voice is to be depreſſed; and is figur'd thus (‵). See GRAVE.

The *Circumflex Accent* is compoſed of both the Acute and the Grave; it points out a kind of Undulation of the Voice, and is expreſſed thus ( ∧ ). See CIRCUMFLEX.

The Word *Accent* is alſo applied, ſomewhat abuſively, to the Characters which mark the Quantities of Syllables; or the Time the Voice is to dwell on them. See TIME.

The ſpurious Accents anſwer to the Characters of Time in Muſick; as *Crotchets*, *Quavers*, &c.—The genuine *Accents* anſwer to the muſical Notes, *Sol*, *fa*, &c. See NOTE, *&c.*

Such are, the *long Accent*, which ſhews that the Voice is to ſtop on the Vowel, and is expreſſed thus ( ¯ ).

The

The *ſhort Accent* ſhews that the Time of Pronunciation ought to be ſhort, and is marked thus ( ˘ ).

Some even rank the *Hyphen*, *Diaſtole*, and *Apoſtrophe*, among *Accents*. See HYPHEN, DIASTOLE, and APOSTROPHE.

The *Hebrews* have a Grammatical, a Rhetorical, and a Muſical *Accent*; tho the firſt and laſt ſeem, in effect, to be the ſame; both being comprized under the general Name of *Tonic Accents*, becauſe they give the proper Tone to Syllables: as the Rhetorical *Accents* are ſaid to be *Euphonic*; inaſmuch as they tend to make the Pronunciation more ſweet and agreeable.

There are four *Euphonic Accents*, and twenty five *Tonic*, of which ſome are placed above, and others below the Syllables; the *Hebrew Accents* ſerving not only to regulate the Riſings and Fallings of the Voice, but alſo to diſtinguiſh the Sections, Periods, and Members of Periods in a Diſcourſe; and to anſwer the ſame Purpoſes with the Points in other Languages. See POINT.

Their *Accents* are divided into *Emperors*, *Kings*, *Dukes*, &c. each bearing a Title anſwerable to the Importance of the Diſtinction it makes.—Their Emperor rules over a whole Phraſe, and terminates the Senſe compleatly; anſwering to our Point.—Their King anſwers to our Colon; and their Duke to our Comma.—The King, however, occaſionally becomes a Duke, and the Duke a King, as the Phraſes are more or leſs ſhort.——It muſt be noted, by the way, that the Management and Combination of theſe *Accents* differs in *Hebrew* Poetry from what it is in Proſe.

The Uſe of theſe Tonic or Grammatical *Accents* has been much controverted; ſome holding that they diſtinguiſh the Senſe, while others maintain that they are only intended to regulate the Muſick or Singing; alledging, that the *Jews* ſing rather than read the Scriptures in their Synagogues.

The Truth ſeems here to be between the two Opinions; for tho we are inclined to think, that the primary Intention of theſe *Accents* was to direct the Singing; yet the Singing ſeems to have been regulated according to the Senſe; ſo that the *Accents* ſeem not only to guide the Singing, but alſo to point out the Diſtinctions.—Tho it muſt be confeſs'd, that many of theſe Diſtinctions are too ſubtil and inconſiderable; nor can the modern Writers, or the Editors of old ones, agree in the Matter; ſome of them making twice as many of theſe Diſtinctions as others.

The *Hebrew Accents*, in effect, have ſomething common with thoſe of the *Greeks* and *Latins*; and ſomething peculiar to the *Hebrew*.—What they have in common, is, that they mark the Tones; ſhewing how the Voice is to be rais'd and ſunk on certain Syllables. What they have peculiar, is, that they do the Office of the Points in other Languages. See POINTING.

Be this as it will, 'tis certain the antient *Hebrews* were not acquainted with theſe *Accents*; ſo that, at beſt, they are not *Jure divino*.—The Opinion which prevails among the Learned, is, that they were invented about the VIth Century, by the *Jewiſh* Doctors of the School of *Tiberias*, called the *Maſſoretes*. See MASSORETES.

The learned *Hennin*, affirms 'em to be of *Arabic* Invention; and to have been adopted and transfer'd thence into the *Hebrew* by the *Maſſoretes*: He adds, that they were firſt brought to their degree of Perfection, by Rabbi *Juda Ben David Chiug*, a Native of *Fez*, in the XIth Century.—'Tis indeed poſſible, the *Jews* might borrow their Points from the *Arabs*; but how they ſhould have their *Accents* from 'em is hard to conceive, the *Arabic* Language having no ſuch thing as *Accents*, either in Proſe or Verſe.

The ſame *Hennin* makes the Arab *Alchabil Ebn Ahmed*, who lived about the Time of *Mahomet*, the great Improver of the *Arabic Accents*.—The chief ground of the Opinion, is, that this Writer is ſaid to have been the firſt who reduced Poetry into an Art; marking the Meaſures and Quantities of the Verſes, by the *Latins* call'd *Pedes*, and by us, *Feet*.—Add, that the Share *Hennin* gives Rabbi *Juda* of *Fez*, in compleating the *Hebrew Accents*, is chiefly founded on the common Opinion, that this Rabbin was the firſt Grammarian among the *Jews*. But the Opinion is erroneous; there having been a *Hebrew* Grammar compos'd by R. *Saadias Gaon*, many Years before R. *Juda*. In M. *Simon*'s Critical Hiſtory of the Old Teſtament, we have a Catalogue of *Hebrew* Grammars; at the Head of which is this of R. *Saadias*: M. *Simon*, on this Occaſion, obſerves, "That "after the *Jews* of *Tiberias* had added Points and *Accents* "to the Text of the Old Teſtament, the Doctors of the "other Schools began to do the like in their Copies, which "were afterwards imitated by the reſt."

As to the *Greek Accents*, now ſeen both in the manuſcript and printed Books, there has been no leſs Diſpute about their Antiquity and Uſe, than about thoſe of the *Hebrews*.—*Iſaac Voſſius*, in an expreſs Treatiſe *de Accentibus Græcanicis*, endeavours to prove them of modern Invention; aſſerting, that antiently they had nothing of this Kind but a few Notes in their Poetry, which were invented by *Ariſtophanes* the Grammarian, about the Time of *Ptolemy Philopater*; and that theſe were of muſical, rather than grammatical Uſe, ſerving as Aids in the ſinging of their Poems; and very different from thoſe introduced afterwards.

He adds, that *Ariſtarchus*, a Diſciple of *Ariſtophanes*, improved on his Maſter's Art; but that all they both did only tended to facilitate Youth in the making of Verſes.—— The ſame *Voſſius* ſhews from ſeveral antient Grammarians, that the manner of writing the *Greek Accents* in thoſe Days, was quite different from thoſe uſed in our Books.

*Hen. Chriſt. Hennin*, in a Diſſertation publiſhed to ſhew that the *Greek* Tongue ought not to be pronounced according to the *Accents*, eſpouſes the Opinion of *Voſſius*, and even carries the Matter ſtill further.—He thinks that *Accents* were the Invention of the *Arabians*, about nine hundred Years ago; and that they were only uſed in Poetry; that they were intended to aſcertain the Pronunciation of the *Greek*, and to keep out that Barbariſm which was then breaking in upon them; that the antient *Accents* of *Ariſtophanes* were perfectly agreeable to the genuine *Greek* Pronunciation, but that the modern ones of the *Arabs* deſtroy it.

*Wetſtein*, *Greek* Profeſſor at *Baſil*, in a learned Diſſertation, endeavours to prove the *Greek Accents* of an older ſtanding.—He owns that they were not always form'd in the ſame manner by the Antients; but thinks that Difference owing to the different Pronunciation which obtain'd in the ſeveral Parts of *Greece*.

He brings ſeveral Reaſons *à priori* for the Uſe of *Accents*, even in the earlieſt Days; as that they then wrote all in capital Letters, equidiſtant from each other, without any Diſtinction either of Words or Phraſes; which without *Accents* could ſcarce be intelligible: and that *Accents* were neceſſary to diſtinguiſh ambiguous Words, and to point out their proper meaning; which he confirms from a Diſpute on a Paſſage in *Homer*, mention'd by *Ariſtotle* in his *Poeticks*, Chap. V. Accordingly, he obſerves, that the *Syrians*, who have tonic, but no diſtinctive *Accents*, have yet invented certain Points, placed either below or above the Words, to ſhew their Mood, Tenſe, Perſon, or Senſe. See further in his *Diſſertatio Epiſtolica de Accentuum Græcorum Antiquitate & Uſu*. Baſil, 1686.

ACCENT, in Muſick, is a Modulation of the Voice, to expreſs a Paſſion. See PASSION.

Every Bar or Meaſure is divided into *accented* and *unaccented* Parts. See MEASURE.

The *Accented* Parts are the Principal; being thoſe intended chiefly to move and affect: 'Tis on theſe the Spirit of the Muſick depends. See BAR, and MUSICK.

The Beginning and Middle; or the beginning of the firſt half of the Baſs, and the beginning of the latter half thereof, in common Time; and the beginning, or firſt of the three Notes in triple Time; are always the *accented* Parts of the Meaſure. See TIME.

In Common Time, the firſt and third Crotchet of the Bar are on the *accented* Part of the Meaſure.—In Triple Time, where the Notes always go by three and three, that which is in the middle of every three is always *unaccented*; the firſt and laſt *accented*. But the *Accent* in the firſt is ſo much ſtronger, that in many Caſes the laſt is accounted as if it had no *Accent*. See COMPOSITION.

The Harmony is always to be full, and void of Diſcords in the *accented* Parts of the Meaſure. See HARMONY.—— In the *unaccented* Parts this is not ſo neceſſary; Diſcords here paſſing without any great Offence to the Ear. See DISCORD, COUNTERPOINT, &c.

ACCEPT. See ACCEPTANCE, and ACCEPTATION.

ACCEPTANCE, ACCEPTIO, ACCEPTATIO, in Matters of Law, an agreeing or conſenting to ſome Act already done; which, without ſuch Conſent, might have been undone, or render'd invalid.

The *Acceptance* of a Donation, is neceſſary to its Validity; is a Solemnity eſſential thereto.—*Acceptance*, ſay the Civilians, is the Concurrence of the Will or Choice of the Donee, which renders the Act compleat; and without which the Donor may revoke his Gift at pleaſure. See DONATION, &c.

In Beneficiary Matters, the Canoniſts hold, that the *Acceptance* ſhould be ſignify'd at the ſame time with the Reſignation; & *non ex intervallo*. See RESIGNATION.

In Common Law, *Acceptance* is particularly uſed for a tacit kind of Agreement to what has been done by another.—If Baron and Feme, ſeiz'd of Land in Right of the Feme, make a joint Leaſe, or Feoffment by Deed; reſerving Rent: The Baron dying, and the Feme receiving the Rent; ſuch Receipt is deemed an *Acceptance*, and ſhall make the Leaſe good: So that ſhe ſhall be barr'd from bringing the Writ *Cui in Vita*. See CUI *in Vita*.

In the *Romiſh* Theology, the manner of receiving or admitting the Pope's Conſtitutions; or the Act whereby they are receiv'd, is alſo call'd *Acceptance*. See CONSTITUTION, BULL, &c.

There are two Kinds of *Acceptances*; the one ſolemn, the other tacit.

The *Solemn Acceptance* is a formal Act, whereby ſome Error or Scandal which the Pope condemns, is expreſly condemn'd by the Acceptor.—Infinite Diſputes and Diſſentions have been rais'd in the Catholick World, eſpecially in *France*, on occaſion of the *Acceptance* of the Conſtitution *Unigenitus*: Many of the *French* Prelates ſtill refuſe to *accept* it.

When a Conſtitution has been ſolemnly *accepted* by thoſe it more immediately relates to; it is ſuppoſed to be tacitly *accepted* by all the other Prelates in the Chriſtian World, who have cognizance thereof: and this Acquieſcence is what they call *Tacit Acceptance*.

In this Senſe, *France*, *Poland*, &c. tacitly *accepted* the Conſtitution againſt the Doctrine of *Molinos*, and the *Quietiſts*.—And *Germany*, *Poland*, &c. tacitly *accepted* the Conſtitution againſt *Janſenius*. See MOLINIST, JANSENIST, &c.

ACCEPTANCE, in Commerce, is particularly underſtood in reſpect of Bills of Exchange.—To *accept a Bill* of Exchange, is to ſign, or ſubſcribe it; and thereby become principal Debtor of the Sum contain'd therein; with an Obligation to pay, or diſcharge it at a Time prefix'd. See BILL *of Exchange*.

The *Acceptance* is uſually perform'd by him on whom the Bill is drawn; upon its being preſented to him by the Perſon in whoſe behalf it was drawn, or his Order.—While the Acceptor is Maſter of his Signature, *i. e.* ere he have return'd the *accepted* Bill to the Bearer, he may eraſe his *Acceptance*: But not after he has once deliver'd it. See EXCHANGE.

Bills payable at Sight are not to be *accepted*; as being to be acquitted at their firſt preſenting; or, in defect of Payment, to be proteſted.—In Bills drawn for a certain Number of Days after ſight, the *Acceptance* muſt be dated; in regard the Time is to be accounted therefrom.—The Form of this *Acceptance*, is, *Accepted ſuch a Day*, and then the Signature.

Bills drawn payable on a Day named, or at Uſance, or double Uſance, need not be dated; Uſance being reckon'd from the Date of the Bill it ſelf. See USANCE.—On theſe 'tis ſufficient to write, *Accepted*, and the Signature.

If the Bearer of a Bill be contented with an *Acceptance* to be paid in twenty Days after Sight, where in the Bill it ſelf only eight Days are expreſs'd; he runs the Riſque of the twelve additional Days: So that if the Acceptor fail, he has no Remedy againſt the Drawer. And if the Bearer content himſelf to receive a leſs Sum than is expreſs'd, in part; he is to ſtand the Chance of the reſt. See PROTEST, ENDORSEMENT, &c.

ACCEPTATION, or ACCEPTION, in Grammar, the *Signification* of a Word; or the Senſe wherein it is taken and receiv'd. See WORD, &c.

Such a Word has ſeveral *Acceptations*.—In its firſt and moſt natural *Acceptation*, it denotes, &c.

ACCEPTILATION, in the Civil Law, an Acquittance given without receiving any Money: or a Declaration of the Creditor, in favour of the Debtor, ſignifying, that he is ſatisfy'd for his Debt, or that he forgives it him, and will make no further Demands.

ACCEPTION, or ACCEPTATION. See ACCEPTATION.

ACCEPTOR, *of a Bill of Exchange*, the Perſon who *accepts* the Bill. See ACCEPTANCE.

The *Acceptor* becomes perſonal Debtor by the Acceptance; and is obliged to pay it, tho the Drawer fail before it become due. See EXCHANGE.

ACCESS, literally ſignifies, Eaſineſs of Approach, or Entrance. See ACCESSIBLE.

Such a Perſon has *Acceſs* to the Prince: A Man of eaſy *Acceſs*: The *Acceſs* on that ſide was very difficult, by reaſon of Rocks, &c.

The Word is of *Latin* Original, *Acceſſus*, or *Acceſſio*; form'd of *Accedo*, I come to.

ACCESS, in Medicine, a Fit, or Return of ſome periodical Diſeaſe. See DISEASE, and PERIODICAL.

Thus, we ſay, an *Acceſs* of the Gout, an Ague, or an Intermitting Fever, &c. See GOUT, AGUE, *Intermitting* FEVER, &c.

Authors frequently confound *Acceſs* with *Paroxyſm*; but they are different things. See PAROXYSM.

ACCESSIBLE, ſomething that may be approached; or, that *Acceſs* may be had to. See ACCESS, and APPROACH.

Such a Place, a Fortreſs, is *Acceſſible* from the Sea-ward, *i. e.* the Paſſage to it is practicable. See FORTIFICATION, and FORTIFIED *Place*.

ACCESSIBLE *Height*, or *Diſtance*, in Geometry, &c. is either that which may be mechanically meaſur'd by the Application of a Meaſure to it; or it is a Height whoſe Baſe and Foot may be approach'd to; and a Diſtance meaſured thence on the Ground. See HEIGHT, DISTANCE, &c.

With the Quadrant, &c. we can take Altitudes both *Acceſſible* and Inacceſſible. See ALTITUDE, QUADRANT, &c.

Surveying, includes the Meaſuring, Plotting, &c. both of *Acceſſible* and Inacceſſible Diſtances. See SURVEYING.

ACCESSION, is particularly uſed for the Act whereby a thing *accedes*, *i. e.* joins or unites it ſelf to ſomething exiſting before. See ACCESSORY.

Thus, we ſay, the *Acceſſion* of a Governour to a Government, &c.—The firſt of *Auguſt* is obſerv'd in Memory of the King's *Acceſſion* to the Crown of *Great Britain*.—This Senſe of the Word coincides with INAUGURATION.

The Term is alſo uſed for the Act of engaging, and becoming a Party in a Treaty before concluded between other Powers; on the ſame Footing and Conditions as if originally comprehended in the Treaty it ſelf.—The *Acceſſion* of the States General to the Treaty of *Hanover*; of the Czarina to the Treaty of *Vienna*, &c. See TREATY.

ACCESSORY, or ACCESSARY, ſomething that *accedes*, or is added to another more conſiderable thing, or ariſes as a natural Conſequence therefrom. See ACCESSION.

In this Senſe, the Word ſtands oppoſed to *Principal*. See PRINCIPAL.

ACCESSORY, or ACCESSARY, in Common Law, is chiefly uſed for a Perſon guilty of a felonious Offence; not principally, but by Participation; as, by Advice, Command, or Concealment. See FELONY.

There are two Kinds of *Acceſſories*; *before the Fact*, and *after* it.—The firſt is he who commands or procures another to commit Felony, and is not preſent himſelf; for if he be preſent, he is a Principal. See PRINCIPAL.

The ſecond, is he who receives, aſſiſts, or comforts any Man that has done Murder or Felony, whereof he has Knowledge.

A Man may alſo be *acceſſory* to an *Acceſſory*, by aiding, receiving, &c. an *Acceſſory* to Felony.

An *Acceſſory* in Felony ſhall have Judgment of Life and Member as well as the Principal, who did the Felony; but not till the Principal be firſt attainted and convict, or outlaw'd thereon.——Where the Principal is pardoned without Attainder, the *Acceſſory* cannot be arraigned; it being a Maxim in Law, *Ubi non eſt principalis, non poteſt eſſe Acceſſorius*. But if the Principal be pardoned, or have his Clergy after Attainder, the *Acceſſory* ſhall be arraign'd.

In the loweſt and higheſt Offences there are no *Acceſſories*; but all are Principals: as in *Riots*, *Routs*, *Forcible Entries*, and other Treſpaſſes, which are the loweſt Offences.—So alſo in the higheſt Offence, which is High Treaſon, there are no *Acceſſories*. See TREASON.

*Acceſſories* in Petty Treaſon, Murder, and Felony, are not to have their Clergy.—There can be no *Acceſſory* before the Fact in Manſlaughter; becauſe that is ſudden and unprepenſed. See MANSLAUGHTER.

*Acceſſory by Statute*, is ſuch a one as abets, adviſes, aids, or receives one that commits an Offence made Felony by Statute. See STATUTE.

ACCESSORY *Nerves*, or ACCESSORIUS *Williſii*, or *Par acceſſorium*, in Anatomy, a Pair of Nerves, which ariſing from the Medulla in the *Vertebræ* of the Neck, aſcends and enters the Skull, and paſſes out of it again, with the *Par vagum*, wrap'd up in the ſame common Integument therewith; and after quitting the ſame, is diſtributed into the Muſcles of the Neck, and Shoulders. See NERVE, PAR *Vagum*, &c.

In its Aſcent towards the Head, it receives Branches from each of the firſt five Pair of Cervical Nerves, near their riſe from the Medulla; and ſends forth Twigs to the Muſcles of the Larynx, Gula, &c.—Uniting with a Branch of the Intercoſtal, it forms the *Plexus Ganglioformis*. See PLEXUS.

ACCIDENCE, ACCIDENTIA, a Name uſed for a little Book, containing the firſt Elements or Rudiments of the *Latin* Tongue. See GRAMMAR.

ACCIDENT, ACCIDENS, in Philoſophy, ſomething additional, or ſuperadded, to Subſtance; or not eſſentially belonging thereto, but capable, indifferently, either of being or not being in it, without the Deſtruction thereof. See SUBSTANCE.

Some will have the Word compounded of *ad aliud cadens*, *q. d.* falling or belonging to another; others ſuppoſe it form'd *ab accidendo*, happening caſually.

The Schoolmen diſtinguiſh three Kinds of *Accidents*; *Verbal*, *Predicable*, and *Predicamental*.

*Verbal* ACCIDENT, *Accidens Verbale*, ſtands oppoſed to *Eſſence*; and in this Senſe, the Adjuncts to a thing, tho Subſtances themſelves, are denominated *Accidents* thereof. See ADJUNCT.

Thus, the Clothes a Man has on, tho real Subſtances, yet, as they are not eſſential, but adventitious, or acceſſory to his Exiſtence, are *Accidents*. See ESSENCE.

*Pre-*

*Predicable* ACCIDENT, *Accidens Prædicabile*, is uſed in oppoſition to *Proper*.—Such is any common Quality; as, Whiteneſs, Heat, Learning, or the like. See QUALITY.

Thus, a Man may be ſick or well; and a Wall white or black; yet the one be ſtill a Man, and the other a Wall.

Theſe are call'd in the Schools *Predicable Accidents*; becauſe uſually laid down and explain'd in the Doctrine of *Predicables*. See PREDICABLE.

*Predicable Accidents* may either be taken in the Abſtract, as *Whiteneſs*, *Learning*; or in the Concrete, *White*, *Learned*. See ABSTRACT, and CONCRETE.

If taken in the Abſtract, as is done by *Porphyry*; the *Accident* is defined as above, that which may either be preſent or abſent, without the Deſtruction of its Subject.

If it be taken in the Concrete; *Accident* is uſually defin'd by the Schoolmen, to be ſomething capable of being *predicated* contingently, of many, in reſpect of Quality.—— As *Learning*, which may probably be *predicated* of You, He, &c.

*Predicamental* ACCIDENT, *Accidens Prædicamentale*; which alone properly anſwers to the Idea of an *Accident*; is a *Mode*, or Modification of ſome created Subſtance, inhering or depending thereon, ſo as not to be capable of ſubſiſting without the ſame. See MODE.

In this Senſe, *Accident* is oppoſed to *Subſtance*.—Whence, as Subſtance is defined a thing that ſubſiſts of it ſelf, and the Subſtratum of *Accidents*; ſo an *Accident* is ſaid to be that *cujus eſſe eſt ineſſe*: And therefore *Ariſtotle*, who uſually calls Subſtances ſimply ὄντα, *Entities*, *Beings*; commonly calls *Accidents*, ὄντῳ ὄντα, *Entities of Entity*; as requiring ſome Subſtance wherein to reſide, as their Subject of Inheſion.

An *Accident*, then, has an immediate and eſſential Dependence on its Subſtance; both as to its Production, its Continuation, and its Effects: It ariſes or is deduced from its Subject, is preſerved or ſubſiſted by it; and can only be affected by what alters or affects the Subject.

The Schoolmen, however, will not have *Accidents* to be mere Modes of Matter, but Entities really diſtinct from it; and, in ſome Caſes, ſeparable from all Matter.——But the Notion of real *Accidents* and Qualities is now exploded. See QUALITY.

*Ariſtotle* and the Peripateticks make nine Kinds or Claſſes of *Predicamental Accidents*; others contract 'em into a leſs Number. See PREDICAMENT, and CATEGORY.

*Abſolute* ACCIDENT, is a Term uſed in the *Romiſh* Theology, for an *Accident* which ſubſiſts, or may poſſibly ſubſiſt, at leaſt miraculouſly, and by ſome ſupernatural Power, without a Subject.

Such, they contend, are the *Accidents* of the Bread and Wine in the Euchariſt; *e. g.* the Colour, Flavour, Figure, &c. thereof, which remain after the Subſtances they belong'd to are changed into other Subſtances of Fleſh, &c. See EUCHARIST, SPECIES, TRANSUBSTANTIATION, &c.

This Abſurdity has been very ſtifly maintain'd by many of their Caſuiſts; and even decreed by ſome of their Councils.—The Euchariſt, ſay they, being a Sacrament, *i. e.* a Viſible Sign of an Inviſible Grace; 'tis neceſſary there be ſomething ſenſible therein: Now, this cannot be the Subſtance, that being deſtroy'd or tranſubſtantiated; and therefore muſt be *Accidents*.—Add, that in every Converſion there muſt be ſomething of the former Nature remaining after the Change; otherwiſe it would be no more than a ſimple Subſtitution of one thing for another: As, then, nothing of the Subſtance remains, it muſt be *Accidents*.—— Hence, the Council of *Conſtans* condemns the following Propoſition, which is the ſecond of *Wickliff*, as Heretical: *The* Accidents *of Bread do not remain without a Subject in the Sacrament*. Seſſ. VIII.

Some of the Fathers ſeem to give Countenance to the ſame Opinion.—S. *Baſil*, in his VIth Homily on the Creation, obſerves that Light, or rather Brightneſs, the Splendor of Light, τὸ φωτῳ ἡ λαμπρότης, is a thing diſtinct from its Subject, as Whiteneſs is from a white Body; and that it exiſted in the Beginning, without this Subject; having been created four Days before.

The *Carteſians*, to a Man, combat the Notion of *Abſolute Accidents*, it being their Doctrine, that the Eſſence of Matter conſiſts in Extenſion; and that *Accidents* are only Modifications thereof, in no wiſe diſtinct from it: An *Accident* without a Subject muſt be a Contradiction.—And hence, *Carteſianiſm* is branded as contrary to the Faith. See CARTESIANISM.

Various Expedients have been invented by the *Carteſians*, to account for Tranſubſtantiation, &c. without the Hypotheſis of *Abſolute Accidents*.—Some hold, that the uſual Impreſſions are made on the Senſe by the immediate Agency of God; and without any thing remaining of the former Nature. Others aſcribe the whole to heterogeneous Matters contain'd in the Pores of the Bread, &c. which remaining unalter'd by the Tranſubſtantiation, produce the ſame Senſations as the Bread produced.

ACCIDENT is alſo popularly uſed for a Contingent Effect; or ſomething produced caſually, and without any Foreknowledge or Deſtination thereof in the Agent that produced it. See CHANCE, FORTUNE, &c.

*Per* ACCIDENS, is frequently uſed among Philoſophers to denote what does not follow from the Nature of a Thing, but from ſome *accidental* Quality thereof: In which Senſe, it ſtands oppoſed to *per ſe*, which denotes the Nature and Eſſence of a Thing. See PER *ſe*.

Thus, Fire is ſaid to burn *per ſe*, or conſider'd as Fire, and not *per accidens*: But a piece of Iron, tho red hot, only burns *per accidens*, by a Quality *accidental* to it, and not conſider'd as Iron.

ACCIDENT, in Heraldry, is an additional Note, or Mark in a Coat-Armour, not neceſſarily belonging thereto, but capable either of being retain'd or omitted, without altering the Eſſence of the Armour.—Such are *Abatements*, *Differences*, and *Tincture*. See ABATEMENT, TINCTURE, and DIFFERENCE.

ACCIDENTAL, ſomething of the Nature of an *Accident*; or, that is not eſſential to its Subject, but indifferent thereto. See ACCIDENT, and ESSENTIAL.

Thus, Whiteneſs is *Accidental* to Marble; and Heat, to Iron.

ACCIDENTAL *Point*, in Perſpective, is a Point in the horizontal Line, where Lines parallel to one another, tho not perpendicular to the Picture or Repreſentation, meet. See POINT, PERSPECTIVE, &c.

ACCIDENTAL *Dignities*, and *Debilities*, in Aſtrology, are certain caſual Diſpoſitions and Affections of the Planets, whereby they are ſuppoſed to be either ſtrengthen'd or weaken'd, by their being in ſuch a Houſe of the Figure, &c.

ACCLAMATION, a confuſed Noiſe, or Shout of Joy, by which the Publick expreſs their Applauſe, Eſteem, or Approbation of any thing.

Theſe were formerly uſed in Churches, as well as Theatres; and the Biſhops and other Eccleſiaſtical Officers, were elected by the *Acclamations* of the People.—But their principal Uſe has always been at the ſolemn Entries of Princes and Heroes; where they are uſually attended with good Wiſhes, Prayers, Vows, &c. See VOW.

Antiquity has handed down to us ſeveral Forms of *Acclamations*; as, *Dii te nobis ſervent*, *veſtra ſalus*, *noſtra ſalus*: 'The Gods preſerve you for us; your Safety, our 'Safety.'——*In te omnia*, *per te omnia habemus*, *Antonine*. 'In you, *Antoninus*, and by you, we have every thing.' ——*Lampridius* relates, that at the Entry of *Severus*, the People cried out, *Salve Roma*, *quia ſalvus Alexander*. 'Oh 'Rome, be ſafe; ſince *Alexander* is ſafe.'——M. *Briſſon*, in his Treatiſe of *Formula's*, enumerates various ſorts of *Acclamations*, uſed by the Senate, the Army, &c.

The *Hebrews* uſed to cry *Hoſanna*.—The *Greeks*, *Aga the Tuche*, that is, Good Fortune. See HOSANNA.

ACCLIVIS, in Anatomy, a Muſcle, otherwiſe called *Obliquus Aſcendens*. See OBLIQUUS *Aſcendens*.

ACCLIVITY, the Steepneſs, or Slope of a Line or Plane inclined to the Horizon; reckon'd upwards. See *Inclined* PLANE.

The Aſcent of a Hill is an *Acclivity*; the Deſcent of the ſame a *Declivity*. See DECLIVITY.

Some Writers of Fortification, uſe *Acclivity* for *Talus*. See TALUS.

The Word is compounded of the Latin *ad*, and *clivus*, Hill, Eminence.

ACCOLA, properly denotes an Husbandman who came from other Parts to till the Land, *Eo quod adveniens terram colat*; by which he is diſtinguiſh'd from *Incola*. *ff.* Accola *non propriam*, *propriam colit incola terram*. Du Freſne.

ACCOLADE, a Ceremony antiently uſed in the conferring of Knighthood. See KNIGHT.

The *Accolade* conſiſted in the King's laying his Arms about the young Knight's Neck, and embracing him; in token of Friendſhip.—After the *Accolade*, the Prince giving him a little Blow on the Shoulder with the Flat of a Sword, he forthwith enter'd into the Profeſſion of Arms.

The Word is *French*, and literally denotes an Embrace, or Hugging; being form'd of *ad*, and *col*, Neck.

ACCOMMODATION, in Philoſophy, the Application of one thing, by Analogy, to another. See ANALOGY.

Thus, to know a thing by *Accommodation*, is to know it by the Idea of a ſimilar thing refer'd thereto.

A Prophecy of Scripture is ſaid to be fulfill'd various ways; *Properly*, as when a thing foretold comes to paſs; and *Improperly*, or *by way of Accommodation*, when an Event happens to any Place or People, like to what fell out ſome time before to another.——Thus, the Words of *Iſaiah*, ſpoke to thoſe of his own Time, are ſaid to be fulfill'd in thoſe who liv'd in our Saviour's; and are *accommodated* to them: *Ye Hypocrites*, *well did* Iſaias *propheſy of you*, &c. which ſame Words, St. *Paul* afterwards *accommodates* to the *Jews* of his Time.—This Method of explaining Scripture by *Accommodation*, ſerves as a Key for ſolving ſome of the Difficulties relating

relating to the Prophecies. See TYPE, PROPHECY, &c.

On many Occaſions, a Man finds it expedient to tranſlate by *Accommodation*: Thus, the Word *Librarius*, Scrivener, may be tranſlated, by *Accommodation*, a *Printer*; as it originally ſignifies thoſe who made it their Buſineſs to furniſh Copies of Books, before the Invention of Printing.

ACCOMMODATION, is alſo uſed for an amicable Agreement, or Compoſition between the two contending Parties.——The Proceſs is grown ſo intricate and perplex'd, that there is no Hopes of getting out of it but by an *Accommodation*.

*Accommodations* are frequently effected by means of Compromiſe and Arbitration. See COMPROMISE, and ARBITRATION.

ACCOMPANYMENT, ſomething attending, or added as a Circumſtance to, another; either by way of Ornament, or for the ſake of Symmetry, or the like. See CIRCUMSTANCE.

The Muſick, in Dramatic Performances, ſhould only be a ſimple *Accompanyment*.—The Organiſts ſometimes apply the Word to ſeveral Pipes which they occaſionally touch to *accompany* the Treble; as the Drone, Flute, &c.

In Heraldry, the *Accompanyments* are all ſuch things as are applied about the Shield, by way of Ornament; as the *Belt*, *Mantling*, *Supporters*, &c. See ESCUTCHEON, SHIELD, &c.

A Thing is alſo ſaid to be *accompanied*, *acompagne*, when there are ſeveral Bearings or Figures about ſome one principal one; as a Salteer, Bend, Feſs, Chevron, or the like.

ACCOMPLICE, *Complice*, one that has a hand in a Buſineſs; or is privy in the ſame Deſign or Crime with another. See ACCESSORY, PRIVY, &c.

ACCOMPLISHMENT, the entire Execution, Atchievement, or fulfilling of ſomething propos'd, or undertaken.

The *Accompliſhment* of the Prophecies of the Old Teſtament, in the Perſon of our Saviour, is the great Mark of his being the Meſſiah. See PROPHECY.

There are two ways of *accompliſhing* a Prophecy; *directly*, and by *Accommodation*. See ACCOMMODATION.

The Reverend Mr. *Sykes* has a particular Inquiry into the Meaning of thoſe Words us'd by the Evangeliſt, *That it might be fulfill'd*, or accompliſhed, *which was ſpoke by the Prophets*: where he ſhews, that the Word πληρωθῇ, *fulfill'd*, does not neceſſarily refer to a Prediction of a future Event *accompliſh'd*; but frequently a mere Accommodation of Words, borrow'd from ſome other Author, and accommodated to the preſent Occaſion. See TYPE.

ACCORD, in Muſick, is more uſually call'd *Concord*. See CONCORD.

The Word *Accord* is *French*, form'd, according to ſome, from the Latin *ad cor*; but others, with more probability, derive it from the French *Corde*, a String, or Cord; on account of the agreeable Union between the Sounds of two Strings ſtruck at the ſame time. See CHORD.

Whence alſo ſome of the Conſonances in Muſick come to be called *Tetrachord*, *Hexachord*, &c. which are a *fourth*, and a *ſixth*. See TETRACHORD, &c.

M. *Carre*, in the Memoirs of the Royal Academy of Sciences, lays down a new general Propoſition, of the Proportion which Cylinders are to have, in order to form the *Accords* or Conſonances of Muſick. And it is this—That the ſolid Cylinders, whoſe Sounds yield thoſe *Accords*, are in a triplicate and inverſe Ratio of that of the Numbers which expreſs the ſame *Accords*.

Suppoſe, *e. g.* two Cylinders, the Diameters of whoſe Baſes and Lengths, are as 3 to 2; 'Tis evident their Solidities will be in the Ratio of 27 to 8, which is the triplicate Ratio of 3 to 2: We ſay, that the Sounds of thoſe two Cylinders will produce a Fifth, which is expreſs'd by thoſe Numbers; and that the biggeſt and longeſt will yield the grave Sound, and the ſmalleſt the acute one.—And the like of all others. See SOUND, GRAVITY, and ACUTENESS.

ACCORD, in Law, is an Agreement between two, at the leaſt, to ſatisfy an Offence that the one hath committed againſt the other; whether it be a Treſpaſs, or ſuch like thing, for which he hath agreed to ſatisfy him.—This, if executed, becomes a good Bar in Law to any Suit to be brought for the ſame Matter.

ACCOUNT, or ACCOMPT, a *Calculus*, or Computation of the Number of certain things. See CALCULUS, and NUMBER.

There are various Ways of *accounting*; as, by Enumeration, or ſetting one by one; and by the Rules of Arithmetick, Addition, Subtraction, &c. See ARITHMETIC, ADDITION, SUBTRACTION, &c.

We *account* Time by Years, Months, &c. The *Greeks accounted* it by Olympiads; the *Romans* by Indictions, Luſtres, &c. See TIME, YEAR, OLYMPIAD, &c.——We *account* Diſtances by Miles, Leagues, &c. See MILE, LEAGUE, DISTANCE, &c. ſee alſo COMPUTATION.

*Money of* ACCOUNT, is an imaginary ſort of Species, contrived for the facilitating and expediting the taking and keeping of *Accounts*.—Such are *Pounds*, *Angels*, &c. See MONEY *of Account*; ſee alſo POUND, &c.

ACCOUNT is alſo a Relative Term, uſed in reſpect of a Company, or Society, when two or more Perſons have receiv'd, or diſburs'd for each other; or when this has been done by their Order or Commiſſion. See COMPANY, COMMISSION, FACTORAGE, &c.

ACCOUNT, or ACCOUNTS, is alſo uſed collectively, for the ſeveral Books or Regiſters which Merchants keep of their Affairs, and Negotiations. See BOOK-KEEPING, &c.

Hence, to make out an *Account*; to paſs one's *Accounts*, &c.——Bankrupts are oblig'd to ſurrender their *Accounts*. See BANKRUPT, &c.

ACCOUNT, or ACCOMPT, in a Legal Senſe, is a particular Detail, or Enumeration deliver'd to a Court, a Judge, or other proper Officer or Perſon, of what a Man has receiv'd or expended on the Behalf of another, whoſe Affairs he has had the Management of———.

In the Remembrancer's Office in the Exchequer, are enter'd the States of all the *Accounts* concerning the King's Revenue, for Cuſtoms, Exciſe, Subſidies, &c. See REMEMBRANCER; ſee alſo REVENUE, CUSTOM, EXCISE, &c.

The great *Accounts*, as thoſe of the Mint, Wardrobe, Army, Navy, Tenths, &c. are called *Impreſt Accounts*. See IMPREST.

All *Accounts* which paſs the Remembrancer's Office, are brought to the Office of the Clerk of the Pipe. See PIPE; ſee alſo TALLY, CLERK, AUDITOR, &c.

ACCOUNT, in LAW, is particularly uſed for a Writ which lies where an Agent, Steward, or other Perſon, who ought to render an *Account*, refuſes to give his *Account*. See STEWARD.

*Chamber of* ACCOUNTS, in the *French* Polity, is a ſovereign Court, of great Antiquity, wherein the *Accounts* relating to the King's Revenue are deliver'd in, and regiſter'd. See CHAMBER.

This anſwers pretty nearly to the Court of Exchequer in *England*. See EXCHEQUER.

There are Preſidents of *Accounts*, Maſters of *Accounts*, Correctors of *Accounts*, &c.

ACCOUNTANT, or ACCOMPTANT, a Perſon, or Officer appointed to keep or make up the *Accounts* of a Company, Office, Court, or the like. See ACCOUNT.

There are *Accountants* in the Cuſtomhouſe, the Exciſe, &c. See EXCISE, and CUSTOMHOUSE.

*The* ACCOUNTANT-*General of the Court of Chancery*. See CHANCERY.

ACCOUNTING- or ACCOMPTING- or COUNTING-*Houſe*. See COUNTING-*Houſe*, GREEN-*Cloth*, &c.

ACCOUTREMENT, an antient Term, uſed for an *Habillement*; or a part of the Apparatus, and Furniture of Soldier, Knight, or even a Gentleman. See HABILLEMENT.

The Word is *French*; form'd from the antient *German*, *Kuſter*.——In ſome Cathedrals in *France*, *e. g.* at *Bayeux*, the Name *Coutre* is given to the Sacriſtan, or Officer who has the Care of furniſhing and ſetting out the Altar, in the Church; call'd in *German Kuſter*, νεώκορος.

ACCRETION, the Growth or Increaſe of an organical Body, by the Acceſſion of new Parts. See NUTRITION.

*Accretion* is of two Kinds; the one, conſiſting in an external Appoſition of new Matter.

This is what we otherwiſe call, *Juxtapoſition*; and 'tis thus, Stones, Shells, &c. are ſuppoſed to grow. See STONE, and SHELL.

The other is by ſome fluid Matter received into proper Veſſels, and gradually brought to adhere or grow to the Sides thereof.

This is what we call, *Introſuſception*; and 'tis thus Plants and Animals are nouriſh'd. See PLANT, and ANIMAL; ſee alſo NUTRITION.

ACCRETION, ACCREMENT, in the Civil Law, a vague or vacant Portion of Ground, join'd or united with Grounds held or poſſeſs'd by another.—A Legacy given to two Perſons jointly, *tam re quam verbis*, falls wholly to him that ſurvives the Teſtator, by Right of *Accretion*.

*Alluvion* is another Species of *Accretion*. See ALLUVION.

ACCRUE, or ACCREW, denotes ſomething to fall by way of Acceſſion, or Accretion, to another. See ACCRETION, and ACCESSION.

ACCUBITOR, an antient Officer of the Emperors of *Conſtantinople*; whoſe Buſineſs was to lie near the Emperor.

The Word is *Latin*, form'd of the Verb *Accumbo*, I lie by; whence *Accubatio*, that State or Poſture of the Body when we ſit, and at the ſame time lean backwards.

ACCUMULATION, the Act of *heaping*, or amaſſing ſeveral things together.—The Word is compounded of *ad*, and *cumulus*, heap.

The Lawyers ſpeak of an *Accumulation* of Titles; as, when a Perſon claims Lands, a Benefice, or the like, in Virtue of ſeveral Titles, or Pretenſions of different Kinds; *e. g.* by Death, by Reſignation, &c.

In a like Senſe, we read of *Accumulative* Treaſon, &c. See TREASON.

ACCURSED, ſomething that lies under a Curſe, or under a Sentence of Excommunication. See ANATHEMA, EXCOMMUNICATION, &c.

ACCUSATION, ACCUSATIO, in the Civil Law, the intenting a criminal Action againſt any one, either in one's own Name, or that of the Publick. See ACTION, and CRIMINAL.

By the *Roman* Law, there was no publick *Accuſer*, for publick Crimes; every private Perſon, whether intereſted in the Crime or not, might *accuſe*, and proſecute the *Accuſed* to Puniſhment or Abſolution.

But the *Accuſation* of private Crimes was never received, excepting from the Mouths of thoſe who were immediately intereſted in them.—None but the Husband could *accuſe* his Wife of Adultery. See ADULTERY.

Indeed, it was not properly an *Accuſation* except in publick Crimes; in private ones it was call'd ſimply *Action*, or intenting an Action, *intendere Actionem*, or *litem*. See ACTION.

*Cato*, the moſt innocent Perſon of his Age, had been *accuſed* 42 times; and abſolved 42 times. See ABSOLUTION.

When the Accuſed *accuſes* the Accuſer, it is called *Recrimination*; which is not admitted till the *Accuſed* has been firſt purg'd. See RECRIMINATION.

By the cruel Laws of the Inquiſition, the Accuſed is forced to accuſe himſelf of the Crime objected to him. See INQUISITION.

It has formerly been the Cuſtom in ſome Parts of *Europe*, where the *Accuſation* was very heavy, either to decide it by Combat, or at leaſt to make the Accuſed purge himſelf by Oath; which, however, was not admitted, excepting a certain Number of his Neighbours and Acquaintance ſwore together with him. See DUEL, COMBAT, OATH, PURGATION, &c.

ACCUSATIVE, in Grammar, the fourth *Caſe* of Nouns that are declined. See CASE, and NOUN.

Its Uſe may be conceived from this, That all Verbs which expreſs Actions that paſs from the Agent, as, to *beat*, to *break*, &c. muſt have Subjects to receive thoſe Actions: for, if I beat, I muſt beat ſomething; ſo that a Verb evidently requires after it a Noun, or Name, to be the Subject or Object of the Action expreſs'd. See VERB.

Hence, in all Languages which have Caſes, the Nouns have a Termination which they call *Accuſative*; as, *amo Deum*, I love God; *Cæſar vicit Pompeium*, *Cæſar* overcame *Pompey*.

In *Engliſh*, we have nothing to diſtinguiſh this Caſe from the Nominative, but as we ordinarily place Words in their natural Order, it is eaſily diſcover'd, the Nominative conſtantly preceding, and the *Accuſative* following the Verb.—Thus, when we ſay, the Prince loves the Princeſs, and the Princeſs loves the Prince: The Prince is the Nominative in the firſt, and the *Accuſative* in the laſt; and the Princeſs the *Accuſative* in the firſt, and the Nominative in the ſecond. See NOMINATIVE.

ACEPHALUS, or ACEPHALOUS, ſomething without a Head. See HEAD.

The Word is compoſed of the Privative α, and κεφαλη, *Caput*, Head.

*Pliny* repreſents the *Blemmyes* as a Headleſs or *Acephalous* Nation. See BLEMMYES.——*Acephalous* Worms are frequent. See WORM, and VERMES.

ACEPHALUS is more frequently applied, in a figurative Senſe, to thoſe deſtitute of a Leader, or Chief.

Thus, the Name *Acephali* is ſometimes applied to ſuch Prieſts or Biſhops, as are exempted from the Diſcipline and Juriſdiction of their ordinary Biſhop or Patriarch. See EXEMPTION, PRIVILEGE, PECULIAR.

*Anaſtaſius* the Library-Keeper, calls this Exemption from the Juriſdiction of a Patriarch, *Autocephalia*. See PATRIARCH.

We find a great Number of Canons of Councils, Capitulars of Princes, &c. againſt *Acephalous Clerks*, &c.

In our antient Law-Books, the Term is alſo uſed for thoſe poor People who had no proper Lord; as holding nothing in Fee, either of King, Biſhop, Baron, or other Feudal Lord. *L. Hen.* I.

In Eccleſiaſtical Hiſtory, *Acephali* frequently occurs as the Denomination of divers Sects: Particularly, — 1°, Of thoſe who in the Affair of the Council of *Epheſus*, refuſed to follow either St. *Cyril*, or *John* of *Antioch*.—2°, Of certain Hereticks of the Vth Century, who at firſt follow'd *Peter Mongus*; but afterwards abandon'd him, upon his ſubſcribing to the Council of *Chalcedon*; they themſelves ſticking to the Errors of *Eutyches*.—3°, Of the Adherents of *Severus* of *Antioch*; and of all in general who refuſed to admit the Council of *Chalcedon*.

Some will have the Word properly to denote *Heſitator*; and ſuppoſe it applied on this Occaſion, by reaſon they ſtood neuter, or dubious, heſitating about coming into the Council: But the former Opinion is the more probable; *Acephalous* being never uſed in the latter Senſe.

In ſome Writers, the *Acephalous* Hereticks are called *Acepalites*, *Accphalitæ*.

ACERB, ACERBUS, a compound Taſte, conſiſting of ſour, with the Addition of a degree of Roughneſs. See TASTE.

Such is the Taſte of all Fruits before they are ripe. See FRUIT, MATURITY, &c.

The Phyſicians uſually make *Acerb* an intermediate Savour between Acid, Auſtere, and Bitter. See ACID, &c.

All Matters which come under this Denomination are Aſtringent. See ASTRINGENT.

ACERRA, in Antiquity, a kind of Altar, erected near the Gate of a Perſon defunct, among the *Romans*; whereon his Friends and Familiars daily offer'd Incenſe, till the time of his Burial. See ALTAR, FUNERAL, &c.

ACETABULUM, in Antiquity, a little Vaſe or Cup, uſed at Table; to ſerve up things proper for Sauce, or Seaſoning: much after the manner of our Salts, and Vinegar-Cruets. See VASE, and VESSEL.

Hence, *Agricola*, in his Treatiſe of *Roman* Meaſures, L. I. takes the Name to have been form'd from *Acetum*, Vinegar; as ſuppoſing it principally deſtin'd to ſerve Vinegar on.

ACETABULUM is alſo uſed for a *Roman* Meaſure, in uſe chiefly in Medicine, for liquid Matters. See MEASURE.

The *Acetabulum* contain'd a Cyathus and a half, as is proved by *Agricola*, from two Verſes of *Fannius*; who ſpeaking of the Cyathus, ſays, it weighs ten Drachms; and the *Oxubaphus* or *Acetabulum*, 15.

*Bis quinque hunc faciunt Drachmæ, ſi appendere tentes,*
*Oxybaphus fiet ſi quinque addantur ad illas.*

*Binet*, in his Treatiſe of Weights and Meaſures prefix'd to his Tranſlation of *Pliny*, makes the *Acetabulum* of Oil weigh two Ounces and two Scruples; the *Acetabulum* of Wine, two Ounces, two Drachms, a Grain, and a third of a Grain; and the *Acetabulum* of Honey, three Ounces, three Drachms, a Scruple, and two Siliquæ. See CYATHUS, COTYLE, &c.

ACETABULUM, is alſo uſed in Anatomy, for a deep Cavity, in certain Bones, appointed for the Reception of the large Heads of other Bones, in order to their Articulation. See BONE, and ARTICULATION.

Thus, the Cavity of the *Iſchium*, or Huckle-Bone, which receives the Head of the Thigh-Bone, is called *Acetabulum*, *Cotyla*, or *Cotyloides*. See ISCHIUM, FEMUR, COTYLE, &c.

The *Acetabulum* is lined and tipp'd round with a Cartilage, whoſe circular Margin is called *Supercilium*.—In its bottom lies a large mucilaginous Gland. See MUCILAGINOUS, &c.

ACETABULUM is alſo uſed by Anatomiſts in the ſame Senſe with *Cotyledon*. See COTYLEDONES.

ACETARIA, a Salade. See SALADE.

The Word is form'd of *Acetum*, Vinegar; in regard that Fluid is commonly uſed for the Seaſoning thereof.

ACETOUS, ſomething relating to *Acetum*, or Vinegar. See ACETUM, and VINEGAR.

Thus, we ſay, an *Acetous* Taſte; *Acetous* Qualities, &c. Wine, and all vinous Liquors, are render'd *Acetous* by exciting their Salts, and tempering or abating their Sulphurs. See WINE, and VINOUS.

The Chymiſts mention divers *Aceta*, or *Acetous* Liquors; as, *Acetum Alcalizatum*; made of diſtill'd Vinegar, with the Addition of ſome Alkaline, or Volatile Salt. See ALKALI.——*Acetum Philoſophorum*, a ſour kind of Liquor; made by diſſolving a little Butter of Antimony in a great deal of Water. *Boyle*.

ACETUM, in Medicine, &c. the ſame with *Vinegar*; the Properties, Uſes, and Preparation whereof, ſee under the Article VINEGAR.

The Word is pure *Latin*; form'd of *Aceo*, I am ſharp. See ACID.

There are ſeveral Medicines in the Shops, whereof this Liquor is the Baſis; as, *Acetum Diſtillatum*, diſtill'd Vinegar; chiefly uſed in other Preparations for Diſſolution, and Precipitation. See DISTILLATION, DISSOLUTION, PRECIPITATION, &c.

*Spiritus Aceti*, Spirit of Vinegar; made by drenching Copper Filings or Spittle Duſt with diſtill'd Vinegar, then evaporating it till the Fumes of the Vinegar cannot be ſmelt; the Saturation and Evaporation to be again repeated, till the Metal be ſatiated; which being then diſtill'd, the Spirit comes over.——Its Qualities and Uſes are much the ſame with thoſe of the former, only more powerful.

*Acetum Roſarum*, Vinegar of Roſes; made of Roſe-buds infuſed in Vinegar 40 or 50 Days; the Roſes then preſs'd out, and the Vinegar preſerv'd.—It is chiefly uſed by way of Embrocation on the Head and Temples, in the Head-ach.

After the ſame manner is made *Acetum Sambucinum*, Vinegar of Elders; *Acetum Anthoſatum*, Vinegar of Roſemaries, &c.

The *German* Diſpenſatories abound with medicated Vinegars, chiefly aim'd againſt peſtilential Diſeaſes: but they are not uſed among us.—The College retains ſome of 'em, as the *Acetum Theriacale Norimbergenſe*, but it is never preſcrib'd.

ACHAT, in our Law-*French*, ſignifies a Contract, or Bargain.

Purveyors were by Act of Parliament 36 *Ed.* III. ordained to be thenceforth called *Achators*. See PURVEYORS.

ACHE, or ACH, a painful Ailment in any part of the Body. See PAIN, and DISEASE.

*Aches* are either Scorbutick, Rheumatick, owing to violent Strains, or the like.

*Head*-ACH. See HEAD-*Ach*, and CEPHALALGY.

ACHERNER, or ACHARNER, in Aſtronomy, a Conſtellation of the firſt Magnitude in the Sign *Piſces*.—Its Longitude, Latitude, &c. See under the Article PISCES.

ACHILLES, a Name which the Schools give to the principal Argument alledg'd by each Sect of Philoſophers in their behalf. See SECT.

In this Senſe, we ſay, this is his *Achilles*; that is, his Maſter-Proof: Alluding to the Strength and Importance of *Achilles* among the *Greeks*.

*Zeno*'s Argument againſt Motion, is peculiarly term'd an *Achilles*.—That Philoſopher made a Compariſon between the Swiftneſs of *Achilles*, and the Slowneſs of a Tortoiſe; whence he argu'd, that a ſlow Moveable that precedes a ſwift one by ever ſo ſmall Diſtance, will never be outrun by it. See MOTION.

The antient Botaniſts gave the Name *Achillæa* to ſeveral Plants; one of which is ſaid to be the ſame with our Milefolium; and took its Name from *Achilles*, who, having been the Diſciple of *Chiron*, firſt brought it into uſe for the Cure of Wounds and Ulcers.

*The Tendon of* ACHILLES, *Corda Achillis*, is a large Tendon, form'd by the Union of the Tendons of the four Muſcles of the Foot, called *Extenſores*. See TENDON, and FOOT.

It is ſo called, becauſe the fatal Wound whereby *Achilles* is ſaid to have been ſlain, was given there.

ACHILLEIS, or ACHILLEID, a celebrated Poem of *Statius*, wherein he propoſed to deliver the whole Life and Actions of that Hero. See POEM.

It only takes in his Infancy, the Poet being prevented from proceeding, by Death.

The *Achilleid* is of the Heroic or Epic Kind; but extremely faulty in the Plan, or Fable. See FABLE, &c.

'Tis a Point controverted among the Criticks, whether the whole Life of a Hero, *e. g.* of *Achilles*, be a proper ſubject Matter of an Epic Poem. See EPIC, and HEROIC.

ACHOR, ACHORES, in Medicine, the third Species or Degree of a *Tinea*, or Scald Head. See TINEA.

*Achores* are a ſort of ſpreading Ulcers, which break the Skin into a Number of little Holes, out of which oozes a viſcid Humour.—*Achores* only differ from *Favi* in this, that their Holes are ſmaller.

ACHRONICAL, in Aſtronomy, is applied to the *Riſing* of a Star when the Sun ſets; or the *Setting* of a Star when the Sun riſes. See RISING, and SETTING.

The *Achronical Riſing* of *Mars*, who is then found to be nearer the Earth than the Sun, has been one great Occaſion of exploding the antient *Ptolemaic* Syſtem, which places the Sun in the Centre of the World, and *Mars* beyond the Sun. See EARTH, MARS, &c.

The *Achronical* is one of the three Poetical Riſings and Settings of the Stars. See POETICAL.

The Word comes from the *Greek* α and χρόνος, Time.

ACID, ACIDUM, any thing which affects the Tongue with a Senſe of Sharpneſs, and Sourneſs. See TASTE.

*Acids* are uſually divided into *manifeſt* and *dubious*.

The *Manifeſt Acids*, are thoſe above defined, which impreſs the Idea ſenſibly.—Such are *Vinegar*, and its Spirit; the Juices of *Citrons*, *Oranges*; Spirit of *Nitre*, Spirit of *Alumn*, Spirit of *Vitriol*, Spirit of *Sulphur per Campanam*, Spirit of *Sea Salt*, &c. See VINEGAR, NITRE, VITRIOL, ALUMN, SULPHUR, &c.

*Dubious Acids*, are thoſe which do not retain enough of the *Acid* Nature to give ſenſible Marks thereof on the Taſte, but agree with the *Manifeſt Acids* in ſome other Properties, ſufficient to refer 'em to the ſame Claſs.—Hence it appears that there are ſome Characters of *Acidity* more general than that of the ſharp Taſte; tho 'tis that Taſte is chiefly regarded in the Denomination.

The great and general Criterion, then, of *Acids*, is, that they make a violent Effervescence, when mix'd with another ſort of Bodies, called *Alkalies*. See EFFERVESCENCE.

Yet is not this Property alone univerſally to be depended on, to determine a Body an *Acid*, without the joint Conſideration of the Taſte, and the Changes of Colour producible in other Bodies thereby. — To diſtinguiſh *dubious Acids* from Alcalies, mix 'em with a blue Tincture of Violets: If they turn it red, they are of the *Acid* Tribe; if green, Alkaline. See ALKALY.

*Acids* are all of the Tribe of Salts; and compoſe a particular Species thereof, called *Acid Salts*. See SALT.

Add, that the *Acid* Salts are all found to be volatile; by which they are diſtinguiſh'd from the reſt, which are either fix'd, or at leaſt have a urinous, inſtead of an *acid* Taſte. See VOLATILE, FIX'D, and URINOUS.

Some late Chymical Philoſophers have even made it very probable, that 'tis the *Acid* is the ſaline Part or Principle in all Salts.—They conſider it as a ſubtile, penetrating Subſtance, diffuſed thro' the ſeveral Parts of the Globe; which, according to the different Matters it happens to be united withal, produces different Kinds of Bodies: If it meets a foſſil Oil, it converts it into Sulphur; if it be received into the *Lapis Calcarius*, it coagulates with it, and becomes Alumn; with Iron it grows into green Vitriol; with Copper, into blue Vitriol, &c.

Of this Sentiment is Sir *I. Newton*.—'In decompounding 'Sulphur, *ſays that Author*, we get an *Acid* Salt, of the 'ſame Nature with Oil of Sulphur *per Campanam*; which 'ſame *Acid* abounding in the Bowels of the Earth, unites 'ſometimes with Earth, and thus makes Alumn; ſometimes 'with Earth and Metal, and makes Vitriol; and ſometimes 'with Earth and Bitumen, and thus compounds Sulphur.' *Opticks*.

In effect, all our native Salts, tho without any Mixture from Art, are yet found to be real Mixtures; and their Compoſition and Decompoſition is eaſily made.—'As many as they 'are, they may be all reduced, according to M. *Homberg*, 'to three Kinds, *viz. Salt-petre*, *Sea-Salt*, and *Vitriol*; 'each whereof has its ſeveral Species. Of the Combination of theſe with different oily Matters, are all the other 'Salts produced. By the Analyſes we have made of 'em, 'they all appear to be compoſed of an aqueous, an earthy, a ſulphurous, and an *acid* Part; but the *Acid* we 'hold the pure Salt: This makes our Chymical Principle 'Salt, the common Baſis of all Salts; and which, antecedent to its Determination to any particular Species, appears 'to be one ſimilar, uniform Matter, tho never found alone, 'but always accompany'd with ſome ſulphureous Mixture or 'other; which determines it to ſome one of the three ſorts 'of Foſſil Salts abovemention'd.' *Mem. de l'Acad. R. des Sciences*. An. 1708. See PRINCIPLE.

The *Acid*, accompany'd with its determining Sulphur, never becomes ſenſible to us, except when lodg'd either naturally in ſome earthy Matter, or artificially in an aqueous one.—In the firſt Caſe, it appears under the Form of a cryſtalliz'd Salt; as Salt-petre, Sea Salt, &c. In the ſecond, it appears in form of an *Acid* Spirit; which, according to the Determination of the Sulphur accompanying it, is either Spirit of Nitre, or Spirit of Salt, or Spirit of Vitriol.

What is here ſpoke of the three ſimple foſſil Salts, may be equally applied to all the compound Salts of Vegetables and Animals, with this difference, that the latter have always a larger Proportion of the earthy Matter than the ſimple ones, when in form of a concrete Salt; and a larger Proportion of the aqueous Matter, when in form of an *acid* Spirit.—And hence we account for two important Phænomena; 1°, That the *acid* Spirits of Animal and Foſſil Salts, are always weaker, and leſs penetrating, as well as lighter in Weight, than thoſe of the Foſſil Salts: 2°, That after a vehement Diſtillation, they leave a larger quantity of earthy Matter behind them than the Foſſil do.

The Salt naturally contain'd in Plants, may be conſider'd as a Mixture of Earth, Oil, a little Water, and an *acid* Salt: This laſt Ingredient being ſeparated from the Plant with a vehement Fire, ſhoots into a new Salt, which ſometimes retains an *acid* Taſte, as in the Tartar of Wine; ſometimes it aſſumes a Sweetneſs, as in Sugar; ſometimes is bitter, as in Quinquina; and ſometimes almoſt inſipid, as in Sage. This, M. *Homberg* calls the eſſential Salt of the Plant; which, by a gentle Diſtillation, reſolves into an inſipid Water, an *acid* Liquor, and a ruddy fetid one; containing part of the *acid* Salt, and part of the fetid Oil of the Plant: of the Combination of which, is compoſed a particular Kind of fetid Salt, ſmelling like Urine, called the Volatile Salt or Volatile Alcaly Salt of the Plant: And the Caput Mortuum remaining, being reduc'd into Aſhes, is ſeparated by Lixiviation into one Part of fix'd Alcaly Salt, and another of inſipid Alcaline Earth.—Add, that the eſſential Salt always diſſolves entirely in Water, even the earthy Part join'd with it. But if the ſame Salt have been robb'd, by means of Fire, of a great part of its *Acid*; the earthy Part will not wholly diſſolve, but a Sediment of inſipid Earth, indiſſoluble in Water, will be found at bottom; to which, if an *acid* Spirit be added, it then becomes entirely diſſoluble in Water: Whence it may be fairly concluded, that the other Part of the Aſhes, before diſſolved in the Water, and which after Evaporation appears in form of a fix'd lixivial Salt, was only diſſolved by Virtue of the *Acid* it contain'd; or as having retain'd enough of the *Acid* to effect a Diſſolution.

Again, when the Earth of the Plant, ſatiated with its *Acid*, becomes a cryſtalliz'd Salt; no more of the ſame *Acid* can be introduc'd into it: whereas the lixivious Salt drawn from

from the Aſhes, does not cryſtallize, but ſtill greedily imbibes the *Acid* Spirits.

Hence it may be probably concluded, that the Lixivious, or fix'd Alcaly Salt, is no other than the Earth of the Plant, which, notwithſtanding the Violence of the Fire, has retain'd a little Portion of its *acid* Salt, ſufficient to diſſolve it in Water; ſtill reſerving a ſufficient Number of *Loculi* or Pores, to lodge the firſt *Acid* that ſhall offer it ſelf, in lieu of that driven out of it by the Fire.——And as the Name *Alcaly* is only given to a Salt, in reſpect of its imbibing and retaining an *Acid* preſented to it, in order to the producing a cryſtalliz'd Salt; the Lixivious Salts of Plants may be ſaid to be more or leſs Alcaline, as they abſorb more or leſs of the *Acid*; or, which amounts to the ſame, as they contain more or fewer Vacuities to be fill'd with *Acids*.

An Alcaly, after it has been fully ſatiated with one ſort of *Acid*, will yet ſometimes admit and retain part of another *Acid*: This is chiefly obſerved where a Vegetable *Acid* has been received firſt, and a Foſſil one is offer'd after. And it ſeems owing to this, That the Vegetable *Acid* having undergone a greater degree of Fermentation in the Body of the Plant, is become rare and pervious, in reſpect of the more ſolid and weighty Particles of the Mineral *Acid*; which therefore force a way in.

The ſame is always the Caſe, where an *Acid* appears an Alcaly with reſpect to another *Acid*; that is, where, of two *Acid* Spirits, one whereof has a Mixture of ſome Alcaly; the rarer of the two having poſſeſs'd the Pores of the Alkaly, is compreſs'd by the other denſer *Acid*.——Thus, a Pin-cuſhion, tho ever ſo full of Cotton, will admit a good Number of Pins.

Now, urinous Salts are Alkalies as well as the Lixivious Kind, *i. e.* they greedily imbibe *Acids*, retain 'em, and together with 'em compoſe Salts which cryſtallize.—But their Volatility ſeems to make it plain, that they are not, like the former, a Compoſition of a mere earthy Matter, with a little *Acid*; in regard a mere Earth can never become Volatile by ſuch Admixture. Yet is there a great deal of Reaſon to imagine, that their Compoſition is no other than a Part of the ſame Matter, which would have produced the Lixivious Salt, intimately mix'd with a deal of the fetid Oil of the Plant; and that the Oil is the ſole Cauſe of the Volatility of theſe Salts.

M. *Homberg*, in his *Eſſai du Sel principe*, makes three Claſſes of *Acid* Salts, correſponding to the three Species of Sulphurs wherewith the primitive *Acids* may be combined.

The firſt Claſs conſiſts of ſuch as contain an Animal, or a Vegetable Sulphur, which amount nearly to the ſame.—To this Claſs belong all the diſtill'd *Acids* of Plants, Fruits, Woods, *&c.* which muſt neceſſarily retain part of the Oil of the Plant, which is their Sulphur. To this Claſs alſo belongs Spirit of Nitre; as being a Subſtance procur'd from the Excrements of Animals, *&c.*

The ſecond Claſs is of thoſe which contain a bituminous Sulphur.—Such are Vitriol, common Sulphur, and Alumn; which are all uſually procur'd from a Mineral Stone, wherein Bitumen is the prevailing Ingredient.

The third is of ſuch as contain a more fix'd Mineral Sulphur, approaching the Nature of a metalline one.—Such are the *Acids* drawn from Sea Salts and Sal Gemma's; the latter of which is chiefly found in Places near Mines of Metals, and the former probably ariſes from Rocks, or Veins of Sal Gemmæ running into the Sea, and there diſſolved.

From the peculiar Nature and Properties of the Sulphur thus accompanying the ſeveral Kinds of *Acid* Salts, their different Phænomena and Effects are to be accounted for.—*See the Article* SALT.

The *Acids* of Animals are doubtleſs chiefly derived from Plants, in the ordinary way of Food, and Nutrition; and thoſe of Plants, again, from thoſe of Minerals. So that there ſhould ſeem to be but one Spring of *Acidity*: The Diverſities ariſe from what happens to 'em in paſſing thro' the organiz'd Bodies of Plants and Animals. Hence it is, that Plants and Animals eſpecially, yield a very volatile Alkaly Salt; whereas, the Salts of Minerals are found altogether *acid*, and much more fix'd and concrete; tho 'tis the ſame Matter in both Caſes, under different aſſumed Forms.

Thus, the younger *Lemery* argues, that as Animals feed on Plants, and reciprocally, in the Inſtance of Salt-petre, *&c.* Plants feed on Animals; inaſmuch as their Vegetation is excited by Manure; it happens, that what was real Salt-petre in Plants, becomes only a nitrous Sal Ammoniac in Animals, and *vice verſa*.—The ſame Author accounts for this double Metamorphoſis, by ſuppoſing that the nitrous Principle remains the ſame in both Caſes, and in both Caſes is attach'd to the ſame Matrix, with this only difference, that the Matrix becomes more earthy in Plants, and by that means, fix'd; and in Animals, loſes its earthy Parts, and aſſumes other oily ones, which render it volatile. *Mem. de l'Acad.* An. 1717.

*As to the Manner wherein* Acids *act on Alcalies, the great Number of little Bubbles produced during their Action*, and the *Heat ariſing thereupon*.——M. *Homberg* explains it thus.—The Matter of Light, which he ſuppoſes to be the chymical Principle, Sulphur, and to poſſeſs the whole Extent of the Univerſe; is kept in a perpetual Motion by the continual Impulſes which the Sun and Fix'd Stars give it: But this Motion, happening on ſome Occaſions to be ſlacken'd, may be retriev'd again, and augmented by the near Approach of Flame, which that Author ſuppoſes the only Matter capable of giving Motion to Light.—This Motion of Light cannot proceed, without continually ſtriking againſt the ſolid Bodies, and even paſſing thro' all the porous ones, it meets in its way. See SULPHUR, and FIRE.

Suppoſe, now, *Acids* to be little, ſolid, pointed Bodies, ſwimming at liberty in an aqueous Fluid, and kept in continual Motion, by the repeated Impulſes of the Matter of Light; and Alcalies, to be ſpongious Bodies, whoſe Pores have formerly been fill'd with the Points of *Acids*, and which ſtill retain the Dents or Impreſſions thereof, and are ready to receive the like Points when driven within 'em. 'Tis eaſy to conceive, that if ſome of thoſe porous Alcalies float in the ſame Liquor wherein the ſolid *Acids* float; theſe latter, being impell'd by the Matter of Light, will enter the Cavities of the former, which are framed as it were on purpoſe for their Reception; and that they will do it the more readily, if the Motion of the Matter of Light, wherewith they are impell'd, have been accelerated by external Heat.

This Introduction of *Acids* into the Body of Alcalies, is, in all appearance, effected with a great Velocity and a deal of Friction; inaſmuch as it produces ſo conſiderable a degree of Heat: And as the Pores of the Alcalies were before fill'd with an aerial Matter, which is now expell'd by the Points of the *Acids*; that Air is put in Motion, and produces the Bubbles, which are ſo much the more ſenſible, as the Heat accompanying the Action is the greater. See AIR, and HEAT.

Sir *I. Newton* accounts for the Effects of *Acids* in a different manner, *viz.* from the great Principle of Attraction. See ATTRACTION.

'The Particles of *Acids*, he obſerves, are of a ſize 'groſſer than thoſe of Water, and therefore leſs volatile; 'but much ſmaller than thoſe of Earth, and therefore much 'leſs fix'd than they.—They are endu'd with a very great 'attractive Force, wherein their Activity conſiſts; it being 'by this that they affect and ſtimulate the Organ of Taſte; 'and by this alſo, that they get about the Particles of Bodies, either of a metalline or ſtony Nature, and adhere 'cloſely to 'em on all ſides; ſo as ſcarce to be ſeparable 'from them by Diſtillation or Sublimation: and when thus 'gather'd about the Particles of Bodies, by the ſame Power 'they raiſe, disjoin, and ſhake them one from another; 'that is, diſſolve 'em.' See DISSOLUTION.

'By their attractive Force, alſo, wherewith they ruſh towards the Particles of Bodies, they move fluid ones, and 'excite Heat; ſhaking aſunder ſome Particles, ſo as to turn 'them into Air, and generate Bubbles: and hence all violent Fermentation; there being in all Fermentation a latent *Acid*, which coagulates in Precipitation.' See FERMENTATION.

'*Acids*, alſo, by attracting Water as much as they do the 'Particles of other Bodies, occaſion the diſſolv'd Particles 'readily to mingle with Water, or ſwim or float in it; after 'the manner of Salts: And as this Globe of Earth, by the 'Force of Gravity, attracting Water more ſtrongly than it 'does lighter Bodies, cauſes thoſe Bodies to aſcend in Water, and go upwards from the Earth; ſo, the Particles of 'Salts, by attracting the Water, mutually avoid and recede 'from one another as far as they can; and are thus diffus'd 'throughout the whole Water.

'The Particles of Alcalies conſiſt of earthy and *acid* 'Parts united together; but theſe *Acids* have ſo great an 'attractive Force, that they can't be ſeparated therefrom by 'Fire; and that they even precipitate the Particles of diſſolv'd Metals, by attracting from them the *acid* Particles, 'which before had diſſolv'd, and kept them in Solution.' See PRECIPITATION.

'If theſe *acid* Particles be join'd with earthy ones, in a 'ſmall Quantity; they are ſo cloſely retain'd by the latter, as 'to be quite ſuppreſs'd and loſt, as it were, in them; ſo that 'they neither ſtimulate the Organ of Senſe, nor attract Water; but compoſe Bodies which are not *acid*, *i. e.* fatty and 'ſweet Bodies; as Mercurius Dulcis, Brimſtone, Luna Cornea, *&c.*—From the ſame attractive Force in theſe *acid* 'Particles thus ſuppreſs'd, ariſes that Property of fat Bodies, 'that they ſtick or adhere to almoſt all Bodies, and are eaſily inflammable.—Thus, the *Acid* that lies ſuppreſs'd in 'ſulphureous Bodies, by more ſtrongly attracting the Particles 'of other Bodies (earthy ones for inſtance) than its own; 'promotes a gentle Fermentation, produces and cheriſhes 'natural Heat, and carries it on ſo far ſometimes, as to the 'Putrefaction of the Compound; Putrefaction ariſing hence, 'that the *acid* Particles which have long kept up the Fermentation, at length inſinuate into the little Interſtices that

'lie

'lie between the Particles of the firſt Compoſition; and 'ſo intimately uniting with thoſe Particles, produce a new 'Mixture or Compound, which cannot be return'd into its 'original form.' See PUTREFACTION.

'Water has no great diſſolving Force, becauſe there is 'but a ſmall Quantity of *Acid* in it; for whatever ſtrongly 'attracts, and is ſtrongly attracted, may be reputed an *A-'cid*: But in ſuch things as are diſſolved in Water, the Diſ-'ſolution is ſlowly perform'd, and without any Efferveſcence.' See WATER, and MENSTRUUM.

'When theſe *Acids* are applied to the Tongue, or any 'excoriated Part of the Body; leaving the ſubtile Earth 'wherewith they were before united, they ruſh into the 'Senſory, act there as Menſtruums, and disjoin its Parts; 'thus cauſing a painful Senſation.'

The illuſtrious Author, it muſt be own'd, here carries the Notion of *Acidity* a great length: Diſſolution, according to him, is only effected by Attraction, and is proportional to the degree of attractive Power in the Diſſolvent; but all Bodies which attract much are *Acids*, on his Principle; and conſequently all powerful Menſtruums muſt belong to that Claſs.—And yet Spirit of Urine, which readily diſſolves Iron or Copper, even in the Cold, is allow'd an Alcaly; and accordingly makes a vehement Conflict with Aqua fortis. Boyle's *Imperfect. of Chym. Doct. of Qual.*

Some chymical Philoſophers, in the laſt Century, endeavour'd to derive the Qualities of Bodies, and the other Phænomena of Nature, from the Conſideration of *Alcaly and Acid*. See ALKALY.

It has been a Point much controverted among the Phyſicians, whether or no there be any ſincere *Acid* in human Blood? The generality ſtand for the Negative; and all Mr. *Boyle*'s Experiments, in his *Hiſtory of Blood*, ſeem to give the thing on that ſide.——But the accurate M. *Homberg* has at laſt turn'd the Scale the other way; and ſhewn, by repeated Experiments, that an *Acid*, or what is commonly call'd ſo, and judg'd ſuch by the Change of Colour it cauſes in a Tincture of Violets, may be drawn from the Blood of all Animals in general, and human Blood in particular. *Mem. de l'Acad. Roy. des Sciences.* An. 1712.

Hence, and from the careful Analyſes that Author has made of the Fleſh and Excrements of divers Animals, particularly Man; he infers, that the *Acid*, or Sea Salt of the Aliment taken into the Bodies of Animals; is not deſtroy'd therein, but paſſes into the Subſtance of 'em: the ſuperfluous Portion being return'd unalter'd along with the Excrements. See BLOOD, DIGESTION, *&c.*

*Acids* are preſcrib'd in Medicine, as Coolers, Antifebrificks, Antiſcorbuticks, Diaphoreticks, Alexipharmicks, *&c.* See SCURVY, PLAGUE, *&c.*

'*Acids*,' Mr. *Boyle* obſerves, 'not only diſturb the Body 'while they continue ſenſibly *acid*; but in many Caſes cre-'ate Diſtempers, whereof they ſhould ſeem the Remedies. '—Tho they be reputed to have an inciſive and reſolutive 'Virtue, and accordingly are preſcribed to cut tough 'Phlegm, and diſſolve coagulated Blood: yet there are 'ſome *Acids* which muſt evidently coagulate the animal 'Fluids, and produce Obſtructions, with all their Train of 'Conſequences.—Thus, it is known, that Milk readily cur-'dles with Spirit of Sea Salt, *&c.*' See COAGULATION.

ACID *Salts.* } See ACID.—See alſo SALT, and SPI-
ACID *Spirits.* } RIT.—See alſo PRINCIPLE.

ACIDITY, ACIDITAS, ACOR, the Quality which conſtitutes, or denominates, a Body, *Acid*; or that Senſation of Sharpneſs and Acrimony which *Acids* excite upon the Taſte. See ACID, QUALITY, TASTE, *&c.*

A little Vitriol leaves an agreeable *Acidity* in Water.—Vinegar and Verjuice have different ſorts of *Acidity*.

The Predominancy of *Acidities* in the Body, and their ill Effects, in coagulating the Blood, *&c.* is prevented by either repelling and mortifying them with Lixivious or Urinous Salts; or ſheathing and abſorbing 'em, with Alcalious Bodies.—Thus, Minium deſtroys the *Acidity* of Spirit of Vinegar; Lapis Calaminaris that of Sea Salt, *&c.* See ABSORBENT, *&c.*

ACIDULÆ, in Natural Hiſtory, a Species of Mineral Waters, which diſcover a degree of *Acidity* to the Taſte. See WATER.

*Acidulæ* are native Waters, impregnated with Particles of ſome acid Mineral; as Vitriol, Alumn, Nitre, or Salt. See WATER.

Sometimes there is alſo a vinous Flavour join'd with the Acid; by which they become peculiarly denominated *Vinous Waters*. See VINOUS.

The Claſs of *Acidulæ* are uſually very cold; whence ſome Authors define *Acidulæ* to be all ſuch Mineral or Medicinal Waters as are not hot. See BATH, *&c.*

The Phyſicians alſo frequently include Chalybeat or Ferruginous Waters, under the Claſs of *Acidulæ*. See CHALYBEAT, and FERRUGINOUS.

The Word is a Diminutive of *Acidum*; which is form'd from the *Greek* ακις, *Point, Edge*; in regard the Points of acid Subſtances prick and vellicate the Tongue.

We ſometimes alſo meet with *Acidulated, q. d.* ſomething wherein acid Juices have been put, in order to give it a Coolneſs, and Briſkneſs.

ACINI, in Botany, ſmall Grains, growing in Bunches; after the manner of Grape-ſtones.

The Word is *Latin*, and literally ſignifies *Grape-ſtone*.

Hence, Anatomiſts have called ſome Glands of a ſimilar Formation, *Acini Glanduloſi*. See GLAND.

ACINIFORMIS *Tunica*, the ſame with the *Tunica Uvea* of the Eye. See UVEA.

ACME, the *Height*, or Top of any thing.

The Word is *Greek*, ακμη, *Point, Tip*; of ακμαζω, *vigeo*, I flouriſh.

*Acme* is more eſpecially us'd to denote the Height of a Diſtemper; which is divided into four Periods by ſome Inſtitution-Writers.

1°, The *Arche*, the Beginning, or firſt Attack.—2°, *Anabaſis*, the Growth.—3°, *Acme*, the Height.—And, 4°, *Paracme*, which is the Declenſion of the Diſtemper. See DISEASE.

ACOEMETES, ACOEMETI, a Name given to certain Monks in the antient Church, who flouriſh'd particularly in the Eaſt; and who were thus called, becauſe they had Divine Service continually, and without Interruption, perform'd in their Churches.

The Word is *Greek*, ακοιμητ⊙, form'd of the Privative α, and κοιμαω, *I lay down*, or *ſleep in Bed*.

The *Acoemetes* divided themſelves into three Bodies, each of which officiated in their Turn, and reliev'd the others: So that their Churches were never ſilent, Night nor Day.

*Nicephorus* mentions one *Marcellus* as the Founder of the *Acoemetes*; whom ſome modern Writers call, *Marcellus* of *Apamea*.—In *Bollandus* we have "the Life of St. *Alexan-*"*der*, Inſtitutor of the *Acoemetes*, who were unknown before "him," ſays the Author of the Life, a Diſciple of St. *Alexander*. This Saint, according to *Bollandus*, lived about the Year 430. He was ſucceeded by *Marcellus*.

The *Stylites* were alſo called *Acoemetes*. See STYLITES.

There are a kind of *Acoemetes* ſtill ſubſiſting in the *Romiſh* Church; the Religious *of the Holy Sacrament*, coming properly enough under that Denomination; in regard they keep up a perpetual Adoration, ſome or other of them praying before the Sacrament, Day and Night. See SACRAMENT.

ACOLYTHES, ACOLYTHI, in Antiquity, a Term applied to ſuch Perſons as were *ſteady and immoveable in their Reſolutions*.

For this Reaſon, the Stoicks were called *Acolythes*; in regard, nothing could ſhake or alter their Reſolves. See STOICK.

Among Eccleſiaſtical Writers, the Term *Acolythes* is peculiarly applied to thoſe young People, who, in the primitive Times, aſpir'd to the Miniſtry; and for that Purpoſe, continually attended the Biſhops: Which Aſſiduity occaſion'd their being called *Acolythes*.

In the *Romiſh* Church, there are a ſort of *Acolythi* yet in being; but their Functions are different from thoſe of their firſt Inſtitution. They are ſuch as have only receiv'd the firſt of the four leſs Orders, whoſe Buſineſs is to light the Tapers, carry the Candleſticks and the Incenſe-Pot, to prepare the Wine and Water, *&c.* See ORDER, *&c.*

At *Rome* there were three Kinds of *Acolythes*, viz. *Palatini*, who waited on the Pope; *Stationarii*, who ſerved in Churches; and *Regionarii*, who, together with the Deacons, officiated in other Parts of the City. See STATIONARII, DEACONS, *&c.*

The Word is derived from the *Greek* ακολυθεῖν, *to follow*.

ACONITE, ACONITUM, a Plant, famous among the Antients, both in quality of a Poiſon, and a Remedy. See POISON.

The antient Botaniſts give the Name *Aconite* to ſeveral Plants of different Kinds.—One Species they called *Lycoctonum*, Λυκοκτόνον, *Wolfs-bane*; or Κυνοκτόνον, *Dogs-bane*; from its Effects: Of this they had likewiſe their Diviſions; as the *Napellus*, thus called *à Napo*, becauſe its Root reſembled the Turnip-Kind: another called *Anthora*, *Anti-Thora*, *q. d.* good againſt Diſorders of the *Thora*.

The whole Claſs of *Aconites* is held extreamly cauſtick and acrimonious, in Virtue whereof they produce mortal Convulſions, or Inflammations which end in Mortification; with which the Antients were ſo ſurprized, that they were afraid to touch 'em: And hence a thouſand ſuperſtitious Precautions about the manner of gathering them.—Their Roots are held of ſervice in Malignant Fevers; and accordingly make an Ingredient in ſome Orvietans, and other Alexipharmic Compoſitions.

*Aconite* is ſaid to take its Name from *Acona*, a City in *Bithynia*, where it grows in great abundance: tho it is alſo found

found in other Places, particularly the Mountains about *Trent*. Some derive its Name from ακρον, *a Rock naked or bare of Earth*, whereon the Plant readily thrives.—— It was alſo called μυοκτόνον; as killing Mice with its bare ſmell, according to *Pliny*.—The Poets feign it to have aroſe from the Foam of the Dog *Cerberus*, when *Hercules* drag'd him out of Hell.

The Antients uſed this Plant againſt the Sting of the Scorpion, which is ſaid to be deaden'd by the Touch of the *Aconite*, and reſtor'd to its Vigour by that of Hellebore.——*Theophraſtus* relates, that they had a way of preparing it in thoſe Days, ſo as it ſhould only deſtroy at the End of one or two Years.—Arrows dipt in its Juice prove mortal wherever they wound.—The *Indians* uſe *Aconite*, corrected in Cows Urine, with good ſucceſs againſt Fevers. *Letr. Edif. & Cur.*

ACONTIAS, a Name uſed by ſome Authors, for a ſort of Comet, or Meteor, whoſe Head appears round or oblong, and its Tail very long and ſlender, reſembling a Javelin. See COMET, and METEOR.

It takes its Denomination from a Serpent thus call'd, frequent in *Calabria* and *Sicily*; where it is alſo named *Saetrone*, by reaſon of its flying at Paſſengers like an Arrow; in order to which, it winds it ſelf up a Tree, to ſpring thence with the greater Violence. For the like Reaſon, the *Greeks* call it *Acontias*, of ακοντιον, *a Dart*, or *Arrow*.

ACOPUM, a Fomentation, of warm and emollient things, to allay the Senſe of Wearineſs, occaſion'd by too violent Labour or Exerciſe. See FOMENTATION, BATHING, &c.

The Word is compounded of the Privative α, and κοπος, *labor*.

ACORN, *Glans*. See FRUIT, SEED, SOWING, &c.

ACORUS, a Medicinal Plant, of the Ruſh or Flag Kind; frequently confounded by the Antients, and alſo by the modern Apothecaries, with the *Calamus Odoratus*. See CALAMUS.

There are two Species of *Acorus*; the *Verus*, or *true*, and the *falſe*.—They are diſtinguiſh'd by this, that from the middle of ſome of the Leaves of the former, there ariſes a longiſh Cluſter of an Infinity of little Flowers, the Thickneſs of the little Finger, and reſembling Macropiper, or Long Pepper.—The *falſe Acorus* is the common Sword-graſs.

'Tis only the Root of the *Acorus* that is uſed in Phyſick; and 'tis this we uſually call *Acorus*.—The *true* is brought from *Lithuania* and *Tartary*: It is knotty, reddiſh without, and white within; as thick as the little Finger, and half a Foot long.

It is ſpicy and bitteriſh; and uſed in Cephalic and Stomachic Compoſitions.—It is alſo an Ingredient in the *Theriaca Andromachi*.

Some rank Galangals as a Species of *Acorus*. See GALANGALS.

ACOUSTICKS, ACOUSTICA, the Doctrine or Theory of Sounds. See SOUND.

*Acouſticks* is what we otherwiſe call *Phonicks*. See PHONICKS.

ACOUSTICKS, or ACOUSTICA, or ACOUSTIC *Medicines*, are Remedies againſt the Imperfections and Diſorders of the Ear; or of the Senſe of Hearing. See EAR, and HEARING.

The Word is form'd of the *Greek* Ακοη, *Hearing*.

ACOUSTIC is particularly applied to *Inſtruments* uſed by thoſe who are ſlow of Hearing; to ſupply that Defect.

Dr. *Hook* ſays, it is by no means impoſſible to hear the loweſt Whiſper that can be made, to the Diſtance of a Furlong; and that he knows a way of hearing any Perſon ſpeak thro' a Stone-Wall three Foot thick. See WHISPERING-*Place*, and ECHO.

ACOUSTIC *Nerve*. See AUDITORY *Nerve*.

ACQUEST, or ACQUIST, is underſtood, in a legal Senſe, of Goods, or Effects, immoveable, not deſcended or held by Inheritance; but acquired, either by Purchaſe or Donation. See GOODS.

The Word is *French*; form'd of the Verb *Acquerir*, to acquire.—The *French* Laws make a deal of difference between *Acqueſts*, and hereditary Effects. The Civil Law allows none. See HEIR, HEREDITARY, &c.

The Word is alſo popularly uſed for Conqueſt, or Places acquired by the Sword.

ACQUIETANDIS *Plegiis*, a Writ lying for a Surety againſt the Creditor that refuſes to acquit him after the Debt is paid. See SURETY.

ACQUIETARE, in our antient Law-Books, ſignifies to pay the Debts of a Perſon deceas'd; as the Heir thoſe of his Father, &c.

ACQUISITION, properly ſignifies an *Acqueſt*. See ACQUEST.

ACQUITTAL, a Diſcharge, Deliverance, or ſetting free of a Perſon from the Guilt or Suſpicion of an Offence.—— The like Diſcharge in Civil Concerns, is called an *Acquittance*. See ACQUITTANCE.

*Acquittal* is of two Kinds; *in Law*, and *in Fact*.—When two are appealed or indicted of Felony, one as Principal the other as Acceſſory; the Principal being diſcharg'd, the Acceſſory is by Conſequence alſo freed: In which Caſe, as the Acceſſory is acquitted *by Law*, ſo is the Principal *in Fact*. See ACCESSORY.

ACQUITTAL is alſo uſed, where there is a Lord Meſn, and Tenant, and the Tenant holds Lands of the Meſn, and the Meſn holds over of the Lord Paramount: Here, the Meſn ought to *acquit* the Tenant of all Services claimed by any other for the ſame Lands; the Tenant being to do Service to the Meſn only, and not to divers Lords for one Parcel of Land. See MESN, and SERVICE.

ACQUITTANCE, or QUITTANCE, a Releaſe, or Diſcharge in Writing, of a Sum of Money, or other Duty which ought to be paid or done. See RECEIPT.

The Verb *Acquit*, the Participle *Acquitted*, and the Noun *Acquittal*, do alſo ſignify a Diſcharge from an Offence objected.—In this Senſe, we meet with *Acquitted* by Proclamation. See ACQUITTAL.

ACRASIA, ακρασια, is uſed by ſome Writers in Phyſick, for the Exceſs or Predominancy of one Quality above another; either in a Mixture, or in the Conſtitution of a human Body. See CRASIS, TEMPERAMENT, CONSTITUTION, &c.

ACRE, a Quantity of Land, containing four ſquare Roods, or 160 ſquare Poles. See MEASURE; ſee alſo ROOD, and PERCH.

By a Statute of 31 *Eliz.* it is ordain'd, That if any Man erect a new Cottage, he ſhall add four *Acres* of Land to it. See COTTAGE.

*To find the Quantity of* Acres *in a Piece of Ground*, &c. See SURVEYING.

The Word is form'd from the Saxon *Acher*, or *Acker*, Field; of the Latin *Ager*. Tho *Salmaſius* derives it from *Acra*, uſed for *Akena*, a Land-Meaſure among the Antients, containing 10 Feet.

The Kingdom of *England* contains by Computation 39038500 *Acres*: The United Provinces 4382000, &c. See POLITICAL *Arithmetick*.

ACREME, a Term ſometimes uſed in antient Law-Books, for ten Acres. See ACRE.

ACRIBEIA, a Term purely *Greek*, Ακριβεια, literally denoting an exquiſite or delicate Accuracy; ſometimes uſed in our Language for want of a Word of equal Significancy.

ACRIDOPHAGI, in the antient Geography, a Nation of People ſaid to feed on Locuſts.—The Word is compounded of the *Greek* ακρις, *Locuſt*, and φαγω, *I eat*.

The *Acridophagi* are repreſented as a People of *Ethiopia*, inhabiting near the Deſarts.—In the Spring they made Proviſion of a large kind of Locuſts, which they ſalted, and kept for their ſtanding Food all the Year: They lived to forty Years of Age, then died of a ſort of winged Worms generated in their Bodies. See St. *Jerom* againſt *Jovinian*, L. II. and on St. *John*, C. 4. *Diodor. Sicul.* L. III. c. 3. and 29; and *Strabo*, L. XVI.—*Pliny* alſo ſpeaks of *Acridophagi* in *Parthia*; and St. *Jerom* in *Libya*.

Tho the Circumſtances of theſe People be fabulous; yet may the *Acridophagia* be true; and to this Day they eat Locuſts in ſome Parts of the Eaſt.—And hence, St. *John* the Baptiſt is ſaid to have lived on Locuſts, ακριδες, and wild Honey, *Matt.* c. 3. v. 4. See HONEY.

Yet is the rendering of ακριδες by *Locuſts*, as the *Engliſh* Tranſlators have done, much controverted.—*Iſidore* of *Peluſium*, in his 132d Epiſtle, ſpeaking of this Food of St. *John*, ſays, They were not Animals, but the Tops of Herbs; and even charges thoſe who underſtood 'em otherwiſe of Ignorance: But St. *Auguſtin*, *Beda*, *Ludolphus*, and others, are of a different Sentiment. Accordingly, the Jeſuits of *Antwerp* reject with Contempt the Opinion of the *Ebionites*, who for ακριδες put εγκριδες, *a delicious Diet prepared of Honey and Oil*; that of ſome other Innovators, who read ἀχαριδες, or χαριδες, *Sea-Crabs*; and that of *Beza*, who reads ἀχραδες, *wild Pears*.

ACRIMONY, *Aſperity* or *Sharpneſs*, expreſſes a Quality in Bodies, by which they corrode, deſtroy, or diſſolve others. See CORROSION, &c.

Salts are only cauſtick in Virtue of their *Acrimony*. See SALT, CAUSTIC, &c.——The *Acrimony* of the Bile is ſuppoſed the Cauſe of divers Diſorders. See BILE.—A Catarrh is a Defluxion of *Acrimonious* Humour. See CATARRH, DEFLUXION, RHUME, &c.

ACROATICKS, a Name given to *Ariſtotle*'s Lectures in the more difficult and nice Parts of Philoſophy; to which none but Scholars and Friends were admitted. See ARISTOTELIAN, &c.

ACROMION, ACROMIUM, in Anatomy, the upper Proceſs of the *Omoplata*, or Shoulder-Bone. See OMOPLATA.

The Word is derived from ακρος, *ſummus*, and ωμος, *Humerus*, *q.d.* the Extremity of the Shoulder; and not from Anchor, on account of any reſemblance in Figure which the *Acro-*

*mion* bears to an Anchor, as *Dionis* has imagin'd.

Some have thought the *Acromion* to be of a Nature different from that of other Bones; in regard, during Infancy, it appears to be no more than a Cartilage, which offifies by little and little, and about the Age of twenty Years becomes hard and firm, like a common Bone. See BONE, and OSSIFYING.

ACROSPIRE, in Natural Hiſtory, *&c.* the ſame with *Plumule*. See PLUMULE; ſee alſo ACROSPIRED.

ACROSPIRED, is uſed in reſpect of Barley; which, in the Operation of making Malt, is apt, after *coming*, or ſprouting at the lower, or Root-End, to become *Acroſpired*, *i.e.* to ſprout alſo at the upper, or Blade-End. See MALT.

ACROSTICK, a kind of Poetical Compoſition, the Verſes whereof are diſpoſed in ſuch manner, as that the initial Letters make up ſome Perſon's Name, Title, or a particular Motto. See POEM, and POETRY.

The Word is derived from the *Greek* ἄκρος, *ſummus*, that which is at one of the Extremes, and στίχος, *Verſus*.

There are alſo *Acroſticks*, where the Name or Title is in the middle, or ſome other Part of the Verſe.—And others which go backwards; beginning with the firſt Letter of the laſt Verſe, and proceeding upwards.

Some Refiners in this trifling way, have even gone to *Pentacroſticks*; where the Name is to be repeated five times. See PENTACROSTICK.

The Name *Acroſticks* is alſo applied by ſome Authors to two antient Epigrams in the firſt Book of the *Anthology*; the one in honour of *Bacchus*, the other of *Apollo*: each conſiſts of 25 Verſes; the firſt whereof is the Propoſition or Argument of the whole, and the other 24 compoſed of four Epithets, beginning each with the ſame Letter; and thus following in the Order of the 24 Verſes of the *Greek* Alphabet: So that the firſt of the 24 Letters comprehends four Epithets beginning with α; the ſecond as many, with β; and ſo of the reſt, to ω; which makes 96 Epithets for each God. See EPIGRAM.

ACROTERIA, or ACROTERS, in Architecture, little Pedeſtals, uſually without Baſes, placed at the Middle, and at the two Extremes of Frontiſpieces, or Pediments; and ſerving to ſupport Statues. See PEDESTAL, and STATUE.

Thoſe at the Extremes ought to be half the Height of the Tympanum; and that in the Middle, according to *Vitruvius*, one eighth Part more. See PEDIMENT, *&c.*

ACROTERIA ſometimes alſo ſignify Figures, whether of Stone or Metal, placed as Ornaments, or Crownings, on the Tops of Temples, or other Buildings. See CROWNING.

Sometimes it alſo denotes thoſe ſharp Pinacles, or ſpiry Battlements, which ſtand in ranges about flat Buildings, with Rails and Balluſters. See PINNACLE, and BATTLEMENT.

The Word, in its original *Greek*, ſignifies the Extremity of any Body; as the Tip of a Rock, *&c.*

ACT, ACTUS, in Phyſicks, an effective Exerciſe or Application of ſome Power, or Faculty. See ACTION.

In this Senſe, the Word *Act*, ſtands oppoſed to *Power*, *Potentia*, which is the Capacity of *acting*. See POWER, and POTENTIA.

Tho the Word *Act*, properly and primarily, be only applicable where the Power might exiſt without being drawn forth into *Act*; yet the Schoolmen extend it further; defining it by the Preſence of any Power or Perfection, even tho it could not be abſent.—In this Senſe, God himſelf is ſaid to be a moſt pure *Act*; in regard his Perfections are always and neceſſarily preſent. And thus, Form is call'd an *Act*; inaſmuch as the Preſence hereof compleats the Power and Perfection of Matter.—Form, ſay ſome, is Matter reduced into *Act*. See MATTER, and FORM.

Even Exiſtence is termed an *Act*; by reaſon when this is given a Being, nothing further is wanted. See PERFECTION, and EXISTENCE.

In this Senſe, the *Greeks* call *Act*, ἐντελέχεια, a Term denoting an actual Poſſeſſion of Perfection, by the *Latins* render'd *Perfectihabia*. See ENTELECHEIA.

Metaphyſicians give various Diviſions of *Act*, *viz.* into *Infinite*, as the *Act* of Creating; and *Finite*, as the *Act* of Moving.—*Tranſient*, or thoſe exercis'd in other Beings, as Heating; and *Immanent*, which remain in their own Subject, as Thinking.—*Elicit*, and *Commanded*, &c. See ELICIT, *&c.*

ACT, in Logick, is particularly underſtood of an Operation of the Mind. See OPERATION.

Thus, to Diſcern and Examine, are *Acts* of the Underſtanding: To Judge and Affirm, are *Acts* of the Will. See UNDERSTANDING, WILL, LIBERTY, JUDGMENT, *&c.*

There are Voluntary *Acts*, and Spontaneous ones which ſeem produced without the Privity or Participation of the Soul. See VOLUNTARY, and SPONTANEOUS.

ACT, in a Legal Senſe, is an Inſtrument, or other Matter in Writing; of uſe to declare or juſtify the Truth of a thing.——In this Senſe, Records, Decrees, Sentences, Reports, Certificates, *&c.* are call'd *Acts*.—Authentick *Acts*; Solemn *Acts*, &c.

ACTS, in the Plural, denote the publick Deliberations, and Reſolutions of an Aſſembly, Senate, Council, Convocation, or the like; enter'd in a Regiſter. See REGISTER, *&c.*

*Acts* of Parliament are particularly denominated *Statutes*. See PARLIAMENT, and STATUTE.

The *Acts* of the Royal Society are called *Tranſactions*; thoſe of the Royal Academy of Sciences at *Paris*, *Memoires*: Thoſe of the Societies of *Berlin*, *Leipſic*, &c. ſimply *Acts*, *Acta Eruditorum*, &c. See SOCIETY, ACADEMY, TRANSACTION, JOURNAL, *&c.*

The *Acts* of the antient Councils were called *Canons*. See CANON.

The Edicts and Declarations of the Council of the *Roman* Emperors, were called *Conſiſtory Acts*, *Acta Conſiſtorii*.

*Clerk of the* ACTS, is an Officer of the Navy. See CLERK, and NAVY.

ACTS are alſo Matters of Fact tranſmitted to Poſterity in certain authentick Books, and Memoirs.—In this Senſe, we ſay, the *Acts of the Apoſtles*, *Acts of the Martyrs*, &c.

The *Acts of* Pilate *relating to* Jeſus, is a falſe and ſuppoſititious Relation of our Saviour's Trial before *Pilate*; impiouſly fram'd by the Enemies of Chriſtianity; and fill'd with the blackeſt Blaſphemy.——The Emperor *Maximin*, by a ſolemn Edict, order'd it to be ſent into all the Provinces of the Empire; and enjoin'd the Schoolmaſters to teach and explain it to their Scholars, and make 'em learn it by heart.

The Piece was wrote with ſo much Careleſſneſs or Ignorance, that our Saviour's Death was therein referred to the IVth Conſulate of *Tiberius*, that is, to the VIIth of his Empire; which is eleven Years before our Saviour's Paſſion, and five before *Pilate* was made Governor of *Judea*. See *Euſebius*, L. IX. c. 4. and 6. *Ruffin.* L. I. c. 5, *&c.*

The true and genuine *Acts* of *Pilate*, were ſent by him to *Tiberius*, who reported 'em to the Senate; but were rejected by that Aſſembly, becauſe not immediately addreſs'd to them: as is teſtified by *Tertullian*, in his *Apol.* C. 5, and 20, 21. *Euſeb. Hiſt.* L. II. c. 2. *Juſtin Martyr*, &c.

There are alſo ſpurious *Acts of the Apoſtles* compoſed in *Hebrew* by one *Abdias*; tranſlated into *Greek* by his Diſciple *Eutropius*; and thence into *Latin*, by *Julius Africanus*. *Wolffgang Lazius* publiſh'd the Piece in 1551, from a Manuſcript near 700 Years old; ſuppoſing it an authentick Work.—A Diſciple of *Manes*, named *Leucius*, or *Seleucus*, is alſo ſaid to have compoſed *Acts of the Apoſtles*, towards the Cloſe of the IIId Century.

There have formerly appear'd numerous other Pieces in this Way; as, the *Acts of St.* Thomas, the *Acts of St.* Andrew, the *Acts of St.* Paul *and* Thecla, the *Acts of St.* Matthew, *Acts of St.* Peter, *Acts of St.* John, *Acts of St.* Philip; all which have been declared Apocryphal.—The laſt were the Production of the Heretick *Leucius*: Thoſe of St. *Thecla* were the Work of a Prieſt in *Aſia Minor*, whom St. *John* degraded for his Offence.

ACT, in the Univerſities, is a Theſis maintain'd in publick, by a Candidate for a Degree; or, to ſhew the Capacity and Proficiency of a Student. See THESIS, DEGREE, *&c.*

The Candidates for the Degree of Batchelor and Maſter of Arts, are to hold *Philoſophy Acts*; thoſe for Batchelor of Divinity are to keep *Divinity Acts*, &c. See UNIVERSITY, DOCTOR, BATCHELOR, *&c.*

At *Oxford*, the Time when the Maſters or Doctors compleat their Degrees, is alſo called the *Act*; which is held with great Solemnity: At *Cambridge* they call it *Commencement*. See COMMENCEMENT.

ACT *of Faith*, or AUTO *de Fe*, is a ſolemn Day held by the Inquiſition, for the Puniſhment of Hereticks, and the Abſolution of the Innocent Accuſed. See INQUISITION.

They uſually contrive the *Auto* to fall on ſome great Feſtival; that the Execution may paſs with the more Awe and Regard.

The Criminals are firſt led to Church; where their Sentence is read to 'em, either of Condemnation or Abſolution. —Thoſe condemned to Death, are here ſurrender'd up by the Inquiſitors to the Secular Power, with an earneſt Intreaty that no Blood may be ſhed.—If they perſiſt in their ſuppoſed Errors, they are burnt alive.

ACTS, in Poetry, are certain Diviſions, or principal Parts in a Dramatic Poem, contrived to give a Reſpite or Breathing-time, both to the Actors and Spectators. See DRAMA, TRAGEDY, and COMEDY.

In the Interval between the *Acts*, the Theatre remains empty, and without any Action viſible to the Spectators; tho 'tis ſuppoſed all the while there is one paſſing out of ſight. See ACTION.

'Tis not however, purely for the ſake of the Reſpite, that theſe *Acts* are obſerv'd; but to give Affairs a greater degree of Probability, and render the Intrigue more affecting. For the Spectator who ſees the Action prepared that is to paſs in the Interval, cannot forbear acting, in his Imagination,

the Part of the abſent Actors; by which means, he is the more agreeably ſurprized, when a new *Act* coming upon the Stage, he ſees the Effects of that Action, which before he could but gueſs at. See PROBABILITY, *&c.*

To this it may be added, that Authors contrive to have the moſt dry and difficult Parts of the Drama tranſacted between the *Acts*; that the Spectators may have no Notion of theſe, excepting what their Fancy preſents them with at a diſtance; and that nothing may appear upon the Stage, but what is natural, probable, and entertaining.

The antient *Greek* Poets were unacquainted with this Diviſion of a Play into *Acts*; tho their Epiſodes or Chorus's ſerv'd almoſt the ſame Purpoſe. See EPISODE, and CHORUS.

'Tis true, they conſider'd their Pieces as conſiſting of certain Parts or Diviſions, which they called *Protaſis*, *Epitaſis*, *Cataſtaſis*, and *Cataſtrophe*: But there were no real Diviſions or Interruptions anſwering to 'em in the Repreſentation. See PROTASIS, EPITASIS, *&c.*

'Twas the *Romans* who firſt introduced *Acts* into the Drama; and in *Horace*'s Time, the Five *Acts* were grown into a Law, as appears by the Verſe,

*Neu brevior quinto, neu ſit productior*, actu.

This Law ſtands unrepeal'd to this Day; tho it ſeems to draw its Force from the Authority of *Horace*, rather than that of Reaſon or Nature.—All Plays are held irregular that have either more or fewer. See FARCE.

Some indeed have aſſerted, that every juſt Action conſiſts of five diſtinct Parts; and have undertaken to mark out the preciſe Share of the Action, which each of the five *Acts* ought to bear.

The firſt, ſay they, is to propoſe the Matter or Argument of the Fable, and to ſhew the principal Characters.—The ſecond to bring the Affair or Buſineſs upon the Carpet.—The third to furniſh Obſtacles and Difficulties.—The fourth either points a Remedy for thoſe Difficulties, or finds new in the Attempt.—The fifth puts an end to all by a Diſcovery.

Be this as it will, 'tis certain, on the Principles of that great Maſter of the Drama, *Ariſtotle*, we may have a juſt and regular Play, tho only divided into three *Acts*.

The *Acts* are ſubdivided into *Scenes*. See SCENE.

ACTIA, in Antiquity, ACTIAN *Games*, *Ludi* ACTIACI, ſolemn Games, inſtituted, or according to ſome only reſtored, by *Auguſtus*, in memory of the Victory over *Anthony* at *Actium*. See GAME.

Some will have 'em held every third Year; but the more common Opinion, is that they only return'd every fifth, and were celebrated in honour of *Apollo*.

By the way, it is a groſs Overſight in ſome Authors, to imagine that *Virgil* inſinuates 'em to have been inſtituted by *Æneas*; from that Paſſage *Æn.* III. v. 280.

*Actiaque Iliacis celebramus littora Ludis.*

'Tis true, the Poet there alludes to the *Actian* Games; but he only does it by way of Compliment to *Auguſtus*, to attribute that to the Hero from whom he deſcended, which was done by the Emperor himſelf: As is obſerved by *Servius*.

ACTIAN *Years*, *Anni* ACTIACI, were a Series of Years, commencing from the Æra of the Battle of *Actium*; called the Æra of *Auguſtus*. See YEAR, and EPOCHA.

ACTION, ACTIO, in Phyſicks, the Production of an *Act*, or the manner of an *active* Cauſe. See ACT, and ACTIVE.

The Idea of *Action* is ſo familiar to us, that a Definition may as eaſily obſcure as explain it.——Some Schoolmen, however, attempt to expreſs its Nature by "A Manifeſta-"tion of the Power or Energy of a Subſtance; made either "within, or without it."——Thus, ſay they, when the Mind *acts*, what does it more, than perceive a vital Power exerting it ſelf; as, in reality, the ſeveral *Actions* of the Mind, are no other than ſo many Indications of its Vitality.

'Tis a Point controverted among the Schoolmen, whether or no *Action*, thus taken, be a thing diſtinct both from the Agent, and the Term or Effect.—The Modiſts ſtand for the Affirmative, and the Nominaliſts aſſert the Negative.

Theſe latter obſerve, that the *Action* may be conſider'd two ways, Entitatively and Connotatively.—*Action Entitatively* taken, is what we call a Cauſe, or what may act: *Action Connotatively* conſider'd, is the ſame Cauſe, only conſider'd as acting, or connoting the Effect it produces. Now, ſay they, a Cauſe may be without an *Action*, connotatively taken, *i. e.* may be conſider'd as not producing an Effect; but cannot be without it entitatively, for that would be to be without it ſelf. Hence they conclude, that the Cauſe differs from the *Action* connotatively, not entitatively taken; and the Agent is the Cauſe of the *Action*, conſider'd connotatively, not entitatively.

*Actions* are divided, with reſpect to their Principle, into *Univocal*, where the Effect is of the ſame Kind with the Cauſe; as the Production of Man by Man: and *Equivocal*, where it is different; as the Production of Frogs by the Sun. See UNIVOCAL, and EQUIVOCAL; ſee alſo GENERATION, *&c.*——And again, into *Vital*; as Nutrition, Reſpiration, the *Action* of the Heart, *&c.* See NUTRITION, RESPIRATION, HEART, *&c.*——And *not Vital*; as Heating. See VITAL, HEAT, *&c.*

With reſpect to their Subject, *Actions* are divided into *Immanent*; which are receiv'd within the Agent that produced them: as are all vital Actions, Cogitation, *&c.* See THINKING, WILLING, *&c.*——And *Tranſient*, which paſs into another. See TRANSIENT, *&c.*

In reſpect of Duration, *Actions* are again divided into *Inſtantaneous*, where the whole Effect is produced in the ſame Moment; as the Creation of Light: And *Succeſſive*, where the Effect is produced by degrees; as Corruption, Fermentation, Putrefaction, Diſſolution, *&c.* See FERMENTATION, PUTREFACTION, DISSOLUTION, *&c.*

The *Carteſians* reſolve all Phyſical *Action* into Metaphyſical: Bodies, according to them, do not *act* on one another; the *Action* all comes immediately from the Deity: The Motions of Bodies, which ſeem to be the Cauſe, being only the Occaſions, thereof. See OCCASIONAL *Cauſe*.

'Tis one of the Laws of Nature, that *Action* and *Reaction* are always equal, and contrary to each other. See REACTION, and NATURE.

*For the Actions of Powers*, &c. See POWER, WEIGHT, MOTION, RESISTANCE, FRICTION, *&c.*

*For the Laws of the Action of Fluids*, &c. See FLUID, SPECIFIC *Gravity*, &c.

ACTION, in Ethicks, or *Moral* ACTION, is a Voluntary Motion, of a Creature capable of diſtinguiſhing Good and Evil; whoſe Effect, therefore, may be juſtly imputed to the Agent. See MORAL.

A Moral *Action* may be more fully defined to be whatever a Man, conſider'd as endued with the Powers of Underſtanding and Willing, and with reſpect to the End he ought to aim at, and the Rule he is to regard in acting; reſolves, thinks, does, or even omits to do; in ſuch manner as to become accountable for what is thus done or omitted, and the Conſequences thereof. See OFFICE.

The Foundation, then, of the Morality of *Actions*, is, that they are done Knowingly and Voluntarily. See UNDERSTANDING, and WILL.

All Moral *Actions* may be divided, with reſpect to the Rule, into *Good* and *Evil*. See GOOD, and EVIL.

ACTION, in Oratory, is an Accommodation of the Perſon of the Orator to his Subject; or, a Management of the Voice and Geſture, ſuited to the Matter ſpoken or deliver'd. See ORATORY.

*Action* makes one of the great Branches or Diviſions of Rhetorick, as uſually taught. See RHETORICK.

The Antients uſually call it *Pronunciation*. See PRONUNCIATION.

*Action* is a collateral or ſecondary Method of expreſſing our Ideas; and is ſuſceptible of a kind of Eloquence as well as the primary.—It is an Addreſs to our external Senſes; which it endeavours to move, and bring into its Party, by a well-concerted Motion and Modulation, at the ſame time that the Reaſon and Underſtanding are attack'd by force of Argument. Accordingly, *Tully* very pertinently calls it *Sermo Corporis*, the Diſcourſe of the Body; and *Corporis Eloquentia*, the Eloquence of the Body.—The *Roman* Mimes and Pantomimes, we read, had ſuch a Copia in this kind, ſuch a Compaſs even of mute *Action*, that Voice and Language ſeem'd uſeleſs to 'em: They could make themſelves underſtood to People of all Nations; and *Roſcius*, the Comedian, is particularly fam'd, as being able to expreſs any Sentence by his Geſtures, as ſignificantly and variouſly as *Cicero* with all his Oratory. See MIME, PANTOMIME, *&c.*

*Quintilian* gives us a Syſtem of the Rules of *Action*; taken not only from the Writings of the antient Orators, but from the beſt Examples of the *Forum*. See his *Inſtitut. Orat.* L. XI. c. 3. *de Pronuntiatione*.

The Force and Effect of *Action*, at leaſt as practis'd among the Antients, appears to be very great; ſcarce any thing was able to withſtand it. What we uſually attribute to Eloquence, was really the Effect of the *Action* only, as ſome of the greateſt Maſters in that way have frankly acknowledg'd.—*Demoſthenes* expreſly calls it, "the Begin-"ning, the Middle, and the End of the Orator's Office;" and *Cicero* profeſſes, that "it does not ſo much matter "what the Orator ſays, as how he ſays it." *Neque tantum refert qualia ſunt quæ dicas, quam quomodo dicantur.* De Orat.—Hence, the great *Greek* Orator is repreſented as practiſing and adjuſting his *Action* in the Glaſs: *Demoſthenes grande quoddam intuens ſpeculum componere* Actionem *ſolebat. Quintil.*

Every Part of the Body is by them liſted into the Service, and marſhall'd in its proper Place: The Hand, the Eye, Head, Neck, Sides, Cheeks, Noſtrils, Lips, Arms, Shoulders, *&c.*——*Præcipuum in Actione*, Caput *eſt.*——*Cum geſtu concordet*, & Lateribus *obſequatur.* Oculi, Lachrymæ, Super-

Supercilium, Genæ, Rubor.—*Non Manus ſolum ſed &* Nutus.—*Dominetur autem maxime* Vultus.—*Quin & in Vultu* Pallor.—Nares, Labia—Dentes, Cervix, Humeri, Brachia. ——Manus *vero, ſine quibus trunca eſſet Actio.*—Quintil. *ubi ſupra.*

The Hand is Maſter of a whole Language, or ſet of Signs, it ſelf.—Even every Finger is laid down by the Antients as having its diſtinct Office; and hence the different Names they ſtill bear, *Pollex*, *Index*, &c. See FINGER, *&c.*

By ſuch a Multitude of Rules and Obſervances, 'tis no wonder ſome of the Orators of thoſe, as of our Days, were perverted more than profited.—Rules only tend to perfect the *Action*, which muſt have its Origin from another Source, *viz.* Nature, and good Senſe: Where thoſe are deficient, Rules will ſooner make an Ape than an Actor. *Eloquentiæ*, ſays *Cicero*, *ſicut & reliquarum rerum fundamentum, ſapientia.*—And hence we find the great Maſters abovemention'd continually ſoftning, and even unſaying, and calling People off from the intemperate uſe of their own Rules.—*Nullæ argutiæ Digitorum, Non ad numerum Articulum Cadens.* *Cicero* even aſſures us, he was a whole Year in learning to keep his Hand within his Gown. *Pro Cæl.*—The ſame Author, recommending a Motion of the whole Body, ſays, the Orator ſhould make more uſe of his Trunk than of his Hand; *Trunco magis toto ſe ipſe moderans, & virili laterum flexione.* Brut.

Walking, *inceſſus*, is ſometimes recommended as highly deſerving to be cultivated; but *Cicero* will ſcarce allow it to be uſed at all. It ſeems, ſome of the active Orators of that Time had render'd it ridiculous; one of whom was pleaſantly aſk'd by *Flavius Virginius*, *How many Miles he had declamed?* *Caſſius Severus*, when he perceiv'd an Orator given to walking, uſed to cry out for a Line to be drawn round him, to keep him within Bounds.—The Orator *Tityus* improved Walking into a ſort of Dancing; and 'tis hence, as we are told by *Quintilian*, that the Dance *Tityus* took its Name.——*Junius* rallied his Father *Curio*'s inceſſant Libration, or toſſing from one ſide to another, by aſking *who that was, haranguing in a Ferry-boat?* And to the like Effect was that of *C. Sicinius*, when *Curio* having ſpoke with his uſual Buſtle near *Octavius*, who by reaſon of his Infirmities, had divers Liniments and Plaiſters on his Limbs; *You can never be enough thankful*, Octavius, *to your good Collegue, who has ſaved you this Day from being eaten by the Flies.*——*Demoſthenes*, being naturally apt to be too buſy, and eſpecially with his Shoulders, is ſaid to have reform'd himſelf by ſpeaking in a narrow Pulpitum, and hanging a Spear pointed juſt over his Shoulders; that if in the Heat of his Diſcourſe he ſhould forget himſelf, the Puncture might remind him.

After all, 'tis a Point will bear being controverted, Whether *Action* ought to be practis'd and encourag'd at all? A thing that has ſo much command over Mankind, 'tis certain, muſt be very dangerous; ſince it is as capable of being turn'd to our Diſadvantage, as our Advantage. 'Tis putting a Weapon in the Hands of another, which, if he pleaſes, he may make uſe of to ſubdue and enſlave us: And accordingly, Hiſtory is full of the pernicious Uſes made thereof.—For this Reaſon, Eloquence and *Action* are generally diſcourag'd in the modern Policy; and both the Bar and the Pulpit, are brought to a more frigid way of Delivery.

Perhaps the Foundation of all *Action* may be vicious, and immoral.—Voice and Geſture, we know, will affect Brutes; not as they have Reaſon, but as they have Paſſions: So far as theſe are uſed in a Diſcourſe, therefore, it does not regard an Aſſembly of Men, more than it would a Herd of Quadrupeds: That is, their whole Effort is ſpent not on the Rational Faculties, which are out of the Queſtion, but on the Animal ones, which alone they endeavour to poſſeſs and actuate, independent of Reaſon.—Nay more, our Reaſon and Judgment it ſelf is intended to be byaſs'd and inclined by them; *Action* being only uſed as an indirect way of coming at the Reaſon, where a direct and immediate one was wanting, *i. e.* where the Judgment cannot be taken by the proper means, Argument; it is to be taken indirectly, by Circuition, and Stratagem.

The natural Order of things, then, is here inverted: Our Reaſon, which ſhould go before, and direct our Paſſions, is drag'd after 'em: Inſtead of coolly conſidering, and taking cognizance of things; and according to what we perceive therein, raiſing our ſelves to the Paſſions of Grief, Indignation, or the like: We are attack'd the other way; the Impreſſion is to be carried backwards, by Virtue of the natural Connection there is between the Reaſon and the Paſſions: And thus the Helm, the Principle of our Actions, is taken out of our own Hand, and given to another.

The Caſe is much the ſame here, as in Senſation and Imagination: The natural and regular way of arriving at the Knowledge of Objects, is by Senſe; an Impreſſion begun there is propagated forward to the Imagination, where an Image is produced, ſimilar to that which firſt ſtruck on the Organ.—But the Proceſs is ſometimes inverted; in Hypochondriack, Lunatick, and other delirious Caſes; the Image is firſt excited in the Imagination; and the Impreſſion thereof communicated back to the Organs of Senſe: By which means, Objects are ſeen, which have no Exiſtence. See IMAGINATION.

To ſay no more, *Action* does not tend to give the Mind any Information about the Caſe in hand; is not pretended to convey any Arguments or Ideas which the ſimple Uſe of Language would not convey. But is it not that we ſhould form our Judgments upon? And can any think help us to make a juſt Judgment, beſide what ſome way enlarges our Underſtanding? When *Cicero* made *Cæſar* tremble, turn pale, and let fall his Papers; he did not apprize him of any new Guilt which *Cæſar* did not know of: The Effect had no Dependance on *Cæſar*'s Underſtanding; nor was it any thing more than might have been produced by the unmeaning Sounds of a muſical Inſtrument duly applied. Logs of Timber and Stone have often trembled on the like Occaſions. See PASSION, MUSICK, *&c.*

ACTION, in Poetry, is an Event, either real or imaginary, which makes the Subject of an Epick or Dramatick Poem. See EPIC, TRAGEDY, *&c.*

The *Action* of a Poem coincides with the *Fable* thereof; it being the uſual Practice, not to take any real Tranſaction of Hiſtory, but to feign or invent one; or at leaſt, to alter the Hiſtorical Fact, ſo as to render it in good meaſure fictitious. See FABLE.

F. *Boſſu* has two Chapters, *Of Real Action*, the Recitals whereof are Fables: and of *Feign'd Action* the Recitals whereof are Hiſtorical.

The Criticks lay down four Qualifications, as neceſſary to the Epick and the Tragick *Action*: The firſt, *Unity*; the ſecond, *Integrity*; the third, *Importance*; and the fourth, *Duration.*

For the *Unity* of the *Epic Action*. See UNITY, *&c.*

This Unity is not only to exiſt in the firſt Draught, or Model of the Fable, but in the whole epiſodiz'd *Action*. See EPISODE.

In order to the *Integrity* of the *Action*, 'tis neceſſary, according to *Ariſtotle*, that it have a Beginning, Middle, and End.—If the three Parts of a Whole, ſeem too generally denoted by the Words, Beginning, Middle, and End; *Boſſu* interprets 'em more expreſly, thus; The Cauſes and Deſigns of a Man's doing an *Action*, are the *Beginning*; the Effects of theſe Cauſes, and the Difficulties met withal in the Execution of thoſe Deſigns, are the *Middle* of it; and the unravelling and extricating of thoſe Difficulties, the *End* of the *Action.*

The Poet, ſays *Boſſu*, ſhould ſo begin his *Action*, that, on one hand, nothing ſhould be farther wanting for the Underſtanding of what he afterwards delivers; and, on the other, that what thus begins require after it a neceſſary Conſequence. The End is to be conducted after the like manner, only with the two Conditions tranſpos'd; ſo that nothing be expected after it, and that what ends the Poem be a neceſſary Conſequence of ſomething that went before it. Laſtly, the Beginning is to be join'd to the End by a Middle; which is the Effect of ſomething that went before it, and the Cauſe of what follows.

In the Cauſes of an *Action*, one may obſerve two oppoſite Deſigns; the firſt, and principal, is that of the Hero: The ſecond comprehends all their Deſigns, who oppoſe the Pretenſions of the Hero. Theſe oppoſite Cauſes do alſo produce oppoſite Effects, *viz.* the Endeavours of the Hero to accompliſh his Deſign, and the Endeavours of thoſe who are againſt it.—As the Cauſes and Deſigns are the Beginning of the *Action*; ſo thoſe contrary endeavours are the Middle of it, and form a Difficulty, Plot, or Intrigue, which makes the greateſt Part of the Poem. See INTRIGUE, KNOT, PLOT, *&c.*

The Solution or clearing up of this Difficulty, makes the Unravelling. See UNRAVELLING.

The Unravelling of the Plot or Intrigue, may happen two ways; either with a Diſcovery, or without. See DISCOVERY.

The ſeveral Effects which the Unravelling produces, and the different States to which it reduces the Perſons, divides the *Action* into ſo many Kinds.—If it change the Fortune of the principal Perſon; it is ſaid to be with a *Peripetia*; and the *Action* is denominated *Implex*, or *Mix'd*: If there be no Peripetia, but the Unravelling be a mere paſſing from Trouble to Repoſe; the *Action* is *Simple*. See PERIPETIA; ſee alſo CATASTROPHE.

For the *Duration* of the Epic *Action*, *Ariſtotle* obſerves, it is not ſo limited as that of the Tragic *Action*; the latter is confined to a natural Day; but the Epopea, according to that Critick, has no fix'd Time.—In effect, Tragedy being full of Paſſions, and conſequently of Violence, which cannot be ſuppoſed to laſt long, requires a ſhorter time: and the Epic Poem, being for the Habits which proceed more ſlowly, requires a longer time either for 'em to take hold, or to be rooted up: And hence the Difference between the Epic and Dramatic *Action*, in point of Duration.

*Boſſu*

*Boſſu* lays it down as a Rule, that the more vehement the Manners of the principal Perſonages are, the leſs Time ought the *Action* to laſt: Accordingly, the *Action* of the *Iliad*, containing the Anger and Paſſion of *Achilles*, &c. holds but 47 Days; whereas that of the *Odyſſee*, where Prudence is the reigning Quality, laſts eight Years and a half: and that of the *Æneid*, where the prevailing Character of the Hero is Piety and Mildneſs, nearly ſeven Years. See ILIAD, ÆNEID, and ODYSSEE; ſee alſo MANNERS, PASSIONS, &c.

As to the *Importance* of the Epic *Action*, there are two ways of providing for it: The firſt, by the Dignity and Importance of the Perſons. This way alone *Homer* makes uſe of; there being, otherwiſe, nothing great and important in his Models, but what might have happen'd to ordinary Perſons. The ſecond, by the Importance of the *Action* it ſelf; ſuch as the Eſtabliſhment, or Downfal of a Religion, or a State; which is *Virgil*'s *Action*, and in which he has much the Advantage of *Homer*.

*Boſſu* mentions a third way of making the *Action* important, *viz.* by giving a higher Idea of the Perſonages, than what the Readers conceive of all that is great among Men.—This is done by comparing the Men of the Poem with the Men of the preſent Time. See HERO; ſee alſo CHARACTER, &c.

ACTION is alſo uſed in Painting and Sculpture, for the Poſture of a Figure; or the *Action* it is ſuppoſed to be in; expreſs'd by the Diſpoſition of its Parts, or the Paſſion appearing in its Face. See ATTITUDE, EXPRESSION, &c.

In the Manage, *the* ACTION *of the Mouth*, denotes the Agitation of the Horſe's Tongue and Mandible, or his Champing on the Bit; diſcoverable by a white ropy Foam thereon.——This, with the Maſters, paſſes for a Sign of Health, Vigour, and Mettle.

ACTION, in Law, is defined a Right of demanding, and purſuing in a Court of Judicature, what is any Man's due. See RIGHT, COURT, JUSTICE, &c.

Or, *Action* is any kind of Proceſs which a Perſon enters for the Recovery of his Right. See CAUSE, and PROCESS.

*Actions* are divided, by *Juſtinian*, into two general Kinds; *Real*, or thoſe againſt the *Thing*; and *Perſonal*, or thoſe againſt the *Perſon*.—For whoever brings an *Action*, either does it againſt one obnoxious to him, in reſpect either of Contract, or of Offence: in which Caſe ariſe *Actions* againſt the Perſon, which require the Party to do, or give ſomething: Or, he does it againſt one not obnoxious, yet with whom a Controverſy is riſen touching ſome Matter; as, if *Caius* hold a Field, which *Julius* claims as his Property, and brings his *Action* for the ſame. See the *Inſtit.* L. IV. Tit. 4. where the principal *Actions* introduc'd by the *Roman* Law, are ſummarily explain'd.

In Common Law, from the two Claſſes of Real and Perſonal *Actions*, ariſes a third, called a *Mix'd Action*; which regards both the Perſon and Thing.

*Perſonal* ACTION, is that which one Man hath againſt another, on account of a Contract for Money or Goods; or of an Offence done by him, or ſome other Perſon, for whoſe Fact he is anſwerable. See PERSONAL.

*Real* ACTION, is that whereby the Demandant claims Title to Lands or Tenements, Rents or Commons, in Fee-ſimple, Fee-tail, or for Life. See REAL.

*Real Actions* are ſubdivided into *Poſſeſſory*, which lie for Lands, &c. of his own Poſſeſſion, or Seiſin; and *Anceſtrel*, of the Seiſin or Poſſeſſion of his Anceſtor. See ANCESTREL.

But *Real Actions*, formerly ſo numerous and conſiderable, as Writs of Rights, of Entry, &c. with their Appendixes, as Grand Cape, Petit Cape, Receipt, View, Aid-Prayer, Voucher, Counter-plea of Voucher, Counter-plea of Warranty, and Recovery of Value, are now much out of uſe; by reaſon of the uſual Admixture of perſonal Matters therewith, which change 'em into *Mix'd Actions*.

*Mixed* ACTION, is that laid indifferently for the Thing detained, or againſt the Perſon of the Detainer; being thus called, becauſe it has a mixed Reſpect, both to the Thing, and to the Perſon. See MIX'D.

Others better define it, a Suit given by Law to recover the Thing demanded, and Damages for the Wrong done.

Such is Aſſize of Novel Diſſeiſin, which, if the Diſſeiſor make a Feoffment to another, the Diſſeiſee ſhall have againſt the Diſſeiſor, and the Feoffee, or other Ter-tenant; to recover not only the Land, but Damages alſo.—And the like in *Action* of Waſte, *Quare impedit*, &c. See ASSIZE, &c.

ACTIONS are alſo divided into *Civil* and *Penal*.—*Civil Action*, is that which only tends to the Recovery of what, by reaſon of a Contract, or other like Cauſe, is a Man's due.—As, if a Man by *Action* ſeek to recover a Sum of Money formerly lent, &c. See CIVIL.

*Penal Action*, aims at ſome Penalty upon the Party ſued; either corporal or pecuniary. See PUNISHMENT, MULCT, &c.

Such is the *Action* of *Legis Aquiliæ*, in the Civil Law: And with us, the next Friends of a Man felonioufly ſlain, or wounded, ſhall purſue the Law againſt the Offender, and bring him to condign Puniſhment. See APPEAL.

ACTION is alſo diſtinguiſh'd, as it lies for the Recovery either of the ſimple Value of the Thing challeng'd; or of the double, triple, quadruple, &c.

Thus, a *Decies tantum* lies againſt Embracers; and againſt Jurors that take Money for their Verdict, of either, or both Parties. See DECIES *tantum*, EMBRACERS, &c.

To this Claſs alſo belong all *Actions* on a Statute, that puniſhes an Offence by Reſtitution, or Fine proportionable to the Tranſgreſſion.

ACTION, again, is divided into *Prejudicial*, called alſo *Preparatory*; and *Principal*.

*Prejudicial Action*, is that which ariſes from ſome Queſtion, or doubtful Point in the Principal one.

As, if a Man ſue his younger Brother, for Land deſcended from his Father; and it be objected, he is a Baſtard: This Point of Baſtardy muſt be tried, before the Cauſe can proceed: Whence the *Action* is termed *Prejudicialis*, *quia prius judicanda*.

ACTION, again, is either *Anceſtrel*, or *Perſonal*.—*Anceſtrel Action*, is that which we have by ſome Right deſcending from our Anceſtor.—*Perſonal Action*, in this Senſe, is that which has its Beginning in and from our ſelves.

There is alſo *Action Anceſtrel Droitural*, and *Action Anceſtrel Poſſeſſory*. Coke's *Inſt.*

ACTION *upon the Caſe*, *Actio ſuper Caſum*, is a general *Action*, given for the Redreſs of a Wrong done any Man without force, and not eſpecially provided for by Law. See CASE.

This, of all others, is now moſt in uſe.—Where there ariſes an Occaſion of Suit, that neither has a fit Name, nor certain Form already preſcrib'd; the Clerks of the Chancery, anciently, conceived a proper Form of *Action* for the thing in queſtion; which the Civilians call *Actionem in factum*, and we, *Action upon the Caſe*.

ACTION *upon the Statute*, *Actio ſuper Statutum*, is an *Action* brought againſt a Man, upon an Offence againſt a Statute whereby an *Action* is given that did not lay before. See STATUTE.

Thus, where one commits Perjury to the Prejudice of another, he who is damaged ſhall have a Writ *upon the Statute*, and a Cauſe accordingly.

ACTION *Popular*, only differs from an *Action upon the Statute*, in that, where the Statute gives the Suit or *Action* to the Party griev'd, or otherwiſe to one ſingle Perſon certain, it is called *Action upon the Statute*; and where the Authority is given by the Statute to every one that will ſo ſue, it is an *Action Popular*. See ACCUSATION.

ACTION is alſo divided into *Perpetual* and *Temporal*.

*Perpetual Action*, is that whoſe Force is not determin'd by any Period of Time.

Of this Kind were all Civil *Actions* among the antient *Romans*, *viz.* ſuch as aroſe from Laws, Decrees of the Senate, and Conſtitutions of the Emperors; whereas *Actions* granted by the Prætor died within the Year.

We have alſo *Perpetual* and *Temporary Actions* in *England*; all being perpetual, which are not expreſly limited.

So alſo divers Statutes give *Actions*, on Condition they be purſued within the Time preſcribed.—Thus, the Statute of 1 *Edw.* VI. gives *Action* for three Years after the Offences committed, and no longer; and the Statute of 7 *Hen.* VIII. *c.* 3. does the like for four Years; and that of 31 *Eliz. c.* 5. for one Year, and no more.

But, as by the Civil Law no *Actions* were ſo perpetual, but that by Time they might be preſcrib'd againſt; ſo, in our Law, tho *Actions* be called Perpetual, in Compariſon of thoſe that are expreſly limited by Statute; yet is there a Means to preſcribe againſt *Real Actions*, after five Years, by a Fine levied, or a Recovery ſuffer'd. See PRESCRIPTION; ſee alſo FINE, RECOVERY, and LIMITATION *of Aſſize*.

ACTION *of a Writ*, is when a Perſon pleads ſome Matter, whereby he ſhews, that the Plaintiff had no juſt Cauſe to have the Writ he brought, tho it be poſſible he might have another Writ or *Action* for the ſame Matter.—Such Plea is called, *a Plea to the Action of the Writ*.

When by the Plea it appears, that the Plaintiff has no Cauſe of any *Action* for the thing demanded; it is called, *a Plea to the Action*.

ACTION, in Affairs of Commerce, or ACTION *of a Company*, is a Part or Share in the Company's Stock, or Capital, which conſiſts of a Number of ſuch *Actions*. See COMPANY, and CAPITAL.

Thus, the Capital of a Company, which has three hundred *Actions* of a thouſand Livres each; conſiſts of three hundred thouſand Livres.

Hence, a Perſon is ſaid to have *four* or *ſix Actions* in ſuch Company, if he have contributed to the Capital, and be intereſted therein, for four or ſix thouſand Livres.

*Actions*, in *France* and *Holland*, amount to the ſame with *Shares*, or *Subſcriptions* in *England*. See SUBSCRIPTION, BUBBLE, &c.

ACTION is alſo an Obligation or Inſtrument, which the Directors of ſuch Companies deliver to thoſe who pay Money into their Stock. See ACTIONARY, BANK, &c.

The *Actions* are always riſing, and falling; according as the Company's Credit gains or loſes. The ſmalleſt Whiſper of an approaching War or Peace, true or falſe, ſhall frequently occaſion a conſiderable Alteration therein. In the Year 1719, the *French* Company of the Weſt, ſince called the *India Company*, arrived at ſuch an immenſe degree of Credit; that in ſix Months time, its *Actions* roſe to eighteen hundred *per Cent.* a pitch no other Company ever came near.

In 1672, the *Actions* of the *Dutch Eaſt-India* Company were at ſix hundred and fifty *per Cent.* which was the higheſt they were ever known at.—But the War with *France* then coming on; they fell 250 *per Cent.* in a few Months. After the Peace of *Nimeguen*, they roſe again; and in 1718 were almoſt 600 *per Cent.*

The *French* have three Kinds of *Actions*.—*Simple*, which are entitled to a Share in all, both the Profits and Loſſes of the Company.—*Rentieres*, entitled only to a Profit of two *per Cent.* ſure; for which the King is Security.—And *Intereſted Actions*, which claim the two *per Cent.* ſecur'd by the King; and are alſo to ſhare the Exceſs of the Dividend with the ſimple *Actions*.

There were ſeveral other Kinds of *Actions* introduc'd by the Brokers, in the buſy Days of the *Ruë Quinquempoix*, which have ſince dropt into Oblivion; as *Mother Actions*, *Daughters*, *Grand-mothers*, *Grand-daughters*, &c.

To *Melt or Liquidate an Action*, is to ſell, or turn it into Money, &c.

ACTIONARY, or ACTIONIST, a Term frequent in our News-Papers; denoting the Proprietor of an *Action*, or Share in a Companies Stock. See ACTION.

ACTIVE, ACTIVUS, ſomething that communicates Motion, or Action to another. See ACTION.

In this Senſe, the Word ſtands oppoſed to *Paſſive*. See PASSIVE.

Thus, we ſay, an *Active* Cauſe, *Active* Principles, &c. See CAUSE.

The Quantity of Motion in the World, Sir *I. Newton* ſhews, muſt be always decreaſing, in Virtue of the *Vis Inertiæ*, &c. So that there is a neceſſity for certain *Active Principles* to recruit it: Such he takes the Cauſe of Gravity to be, and the Cauſe of Fermentation. Adding, that we ſee but little Motion in the Univerſe, except what is owing to theſe *active* Principles. See MOTION, GRAVITATION, FERMENTATION, &c.

ACTIVE *Principles*, in Chymiſtry, are thoſe which are ſuppoſed to *act* of themſelves, and do not need to be put in action by others. See PRINCIPLE.

Salt, Sulphur, and Mercury, are uſually conſider'd by the Chymiſts as *Active* Principles; and Phlegm and Earth, as Paſſive ones. See SALT, &c.

M. *Homberg*, and ſome late Chymiſts after him, only make one *Active* Principle, *viz. Sulphur*, or Fire; which they take to be the Source or Principle of all the Motion and *Action* of the Univerſe. See SULPHUR, and FIRE.

The Term *Active Principles*, ſays Dr. *Quincy*, has been uſed to expreſs ſome Diviſions of Matter, that are, by ſome particular Modifications, comparatively *active*, in reſpect of others; as, *Spirit*, *Oil*, and *Salt*, whoſe Parts are better fitted for Motion, than thoſe of Earth and Water; but with how much Impropriety, will eaſily appear.

For, in a ſtrict Senſe, all Motion in Matter is rather Paſſion; and there is no *Active* Principle, unleſs we call ſo that known Property of Gravitation, on which the *Newtonian* Philoſophy is founded; which is a mutual Inclination of Bodies towards one another, in proportion to the Quantity of Matter, in all Bodies: ſo that let them exiſt under what Modifications ſoever, there can be no Alteration made of this univerſal Property.—Hence, the Diviſion of Matter into what, for Diſtinction-ſake, may be called *Spirit*, does not give it any Properties inconſiſtent with this general Law. See MATTER, MOTION, &c.

ACTIVE, in Grammar, is ſomewhat that has an *active* Signification, and ſerves to explain, or denote an Action. A *Verb Active*, a *Conjugation Active*, &c. an *Active Participle*, &c. See PARTICIPLE, CONJUGATION, &c.

*Verbs* ACTIVE, are ſuch as do not only ſignify Doing or Acting, but have alſo Nouns following 'em, to be the Subject of the Action or Impreſſion. See VERB.

Thus, *to love*, *to teach*, are *Verbs Active*; becauſe we can ſay, *to love a thing*, *to teach a Man*.

Verbs Neuter alſo ſignify an Action; but are diſtinguiſh'd from *Verbs Active*, in that they cannot have a Noun following 'em.—Such are, *to ſleep*, *to go*, &c. See NEUTER.

Some Grammarians, however, make three Kinds of Verbs *Active*: The *Tranſitive*, where the Action paſſes into a Subject different from the Agent; *Reflected*, where the Action returns upon the Agent; and *Reciprocal*, where the Action returns mutually upon the two Agents who produced it. See TRANSITIVE, &c.

ACTIVITY, the Power of *Acting*, or the *Active* Faculty. See FACULTY, &c.

The *Activity* of Fire exceeds all Imagination.—The *Activity* of an Acid, a Poiſon, &c.—Bodies, according to Sir *I. Newton*, derive their *Activity* from the Principle of Attraction.

The *Sphere of Activity* of a Body, is the Space which ſurrounds it, ſo far as its Efficacy or Virtue extends to produce any ſenſible Effect. See SPHERE, EFFLUVIA, &c.

ACTOR, in Dramatic Poetry, one who repreſents ſome Perſon or Character upon the Theatre. See PERSON, and CHARACTER.

Tragedy, in its Original, only conſiſted of a ſimple Chorus, who ſung Hymns in honour of *Bacchus*. See TRAGEDY, and CHORUS.

*Theſpis* was the firſt who took upon him to introduce a *Perſona*, or *Actor*; who was to eaſe the Chorus, by reciting the Adventures of ſome of their Heroes.

*Æſchylus* finding a ſingle Perſon tireſome, thought to entertain the Audience more agreeably by the Introduction of a ſecond Perſon, who ſhould converſe and make Dialogue with the firſt. He likewiſe dreſs'd his *Actors* a little more decently than they had been before; and put them on the Buſkin. See BUSKIN.

*Sophocles* finding the two Perſons of *Æſchylus* too few for the Variety of Incidents, added a third; and here the *Greeks* ſtopp'd; at leaſt, we don't find in any of their Tragedies, above three Perſons in the ſame Scene: tho in their Comedies, they took a further Liberty.

The Moderns have brought a much greater Number of *Actors* upon the Stage.—This heightens the Trouble, and Diſtreſs that ſhould reign there; and makes a Diverſity, in which the Spectator is ſure to be intereſted.

*Horace* ſpeaks of a kind of ſecondary *Actors* in his Time, whoſe Buſineſs was to imitate the firſt; and leſſen themſelves, to become better foils to their Principals. We have little Notion how theſe ſubaltern *Actors* behaved. See MIME, PANTOMIME, &c.

ACTUAL, ſomething real, and effective; or that exiſts truly and abſolutely. See REAL, EXISTENCE, &c.

In Philoſophy, we ſay, *Actual Heat*, or *Cold*; in oppoſition to Virtual or Potential. See POTENTIAL, &c.

*Actual Heat*, conſider'd actively, is the Act of producing Heat: Paſſively taken, it is the Quality whereby a Body is denominated *Hot*.—Virtual or Potential Heat, actively taken, is the Power or Faculty of producing Heat; paſſively taken, it ſhould be the Power or Faculty of being heated, or of receiving *Actual Heat*. See HEAT, COLD, &c.

In Theology, we ſay, *Actual Grace*; in oppoſition to *Habitual Grace*. See HABITUAL.

*Actual Grace*, is that which God gives us, to make or enable us to act, to do ſome Action.—*Habitual Grace* is ſanctifying Grace, a Habit of Charity, or a Habit inherent in the Soul, which renders us agreeable to God, and Objects of eternal Recompence. See GRACE.

So, *Actual Sin* is uſed in Oppoſition to *Original Sin*. See SIN.

*Actual Sin* is that committed knowingly, by a Perſon arrived at Years of Diſcretion. Original Sin is that we contract by Deſcent, as being Children of *Adam*. See ORIGINAL.

ACTUATE, to bring into Act; or put a thing in Action. See ACT, aad ACTION.

Thus, an Agent is ſaid by the Schoolmen to *actuate* a Power, when it produces an Act in a Subject.—And thus the Mind may be ſaid to *actuate* the Body.

ACUTE, *Sharp*, ſomething that terminates in a Point, or an Edge; diſpoſed either for piercing, or cutting. See POINT, EDGE, &c.

In this Senſe, the Word uſually ſtands oppoſed to Obtuſe. See OBTUSE.

ACUTE *Angle*, is that which is leſs than a right Angle; or which does not ſubtend 90 Degrees. See ANGLE.

Such is the Angle A E C, (Tab. *Geometry*, Fig. 86.)

ACUTE-*Angle Triangle*, is that whoſe three Angles are all *acute*, called alſo an *Oxygonous Triangle*. See TRIANGLE.

Such is the Triangle A C B, (Tab. *Geometry*, Fig. 68.)

ACUTE-*Angular Section*, of a Cone, was uſed by the antient Geometricians for the Ellipſis. See ELLIPSIS, and CONE.

ACUTE, in Muſick, is underſtood of a Sound, or Tone which is ſharp, or ſhrill, or high, in reſpect of ſome other. See SOUND.

In this Senſe, the Word ſtands oppoſed to *Grave*. See GRAVE.

Sounds conſider'd as *Acute* and Grave, that is, in the Relation of Gravity and *Acuteneſs*, conſtitute what we call *Tune*,

*Tune*, the Foundation of all Harmony. See TUNE, CONCORD, and HARMONY.

ACUTE *Accent*, in Grammar, is that which denotes a Syllable to be pronounced with a high or *acute* Tone of Voice. See ACCENT.

The *Acute Accent*, is a little Line, or Virgula, placed over the Vowel, a little ſloping or inclined in its Deſcent from right to left; as, ′.—It is not uſed either in *Engliſh* or *Latin*: the *French* indeed retain it; but 'tis only to mark the Cloſe or Maſculine *é*.

In the antient *Greek* Manuſcripts, the *Acute Accent* ſtoops a great deal more, than in the modern Writings or Editions.

ACUTE *Diſeaſe*, is that which terminates, or comes to its Period, in a few Days; or, as the Phyſicians expreſs it, *cito & cum periculo terminatur*. See DISEASE.

In this Senſe, the Word ſtands oppoſed to *Chronical*.—All Diſeaſes which hold above forty Days, are reputed Chronical. See CHRONICAL.

Dr. *Quincy* thinks an *Acute Diſeaſe* may be defined, that which is attended with an increaſed Velocity of Blood. See BLOOD, CIRCULATION, HEART, PULSE, *&c.*

*Acute Diſeaſes* are the more dangerous, in that, beſide the Violence of the Symptoms, if there be not time to empty the *Primæ Viæ*, 'tis very difficult to ſtop their Progreſs, and ſave the Patient. *Trev.*

*Acute Diſeaſes* are uſually divided into thoſe properly called *Acute*; and thoſe, which by reaſon of the Vehemence of the Symptoms, are called *Moſt Acute*.

ACUTENESS, in Muſick, *&c.* that which conſtitutes or denominates a Sound, *&c. acute*. See ACUTE.

There is no ſuch thing as *Acuteneſs* and *Gravity*, abſolutely ſo called; they are only Relations; ſo that the ſame Sound may be either *Acute* or *Grave*, according to that other Sound they refer or are compared to. See RELATION.

The Degrees of Gravity and *Acuteneſs*, make ſo many Tones, or Tunes of a Voice, or Sound. See TONE, TUNE, VOICE, *&c.*

*For the Cauſe and Meaſure of Gravity and* Acuteneſs, ſee GRAVITY, INTERVAL, *&c.*

ADAGE, ADAGIUM, a Proverb, or popular Saying. See PROVERB, *&c.*

*Eraſmus* has made a large and valuable Collection of *Greek* and *Roman Adages*, from their Poets, Orators, Philoſophers, *&c.*

*Adage*, Proverb, and Parœmia are the ſame thing; but differ from Gnomes, Sentences, and Apothegms. See GNOME, SENTENCE, APOTHEGM, *&c.*

The Word is compounded of *ad*, and *agor*, according to *Scaliger*, *Quod agatur ad aliud ſignificandum*, becauſe made to ſignify ſome other thing.

ADAGIO, in Muſick, one of the Words uſed by the *Italians*, to denote a Degree or Diſtinction of Time. See TIME.

The *Adagio* expreſſes a ſlow Time; the ſloweſt of any, except *Grave*. See ALLEGRO.

The Triple $\frac{3}{2}$ is ordinarily *Adagio*. See TRIPLE.

ADALIDES, in the *Spaniſh* Policy, are Officers of Juſtice, for Matters touching the Military Forces.

In the Laws of King *Alphonſus*, the *Adalides* are ſpoke of, as Officers appointed to guide and direct the Marching of the Forces in time of War.—*Lopez* repreſents 'em as a ſort of Judges, who take Cognizance of the Differences ariſing upon Excurſions, the Diſtribution of the Plunder, *&c.*

ADAMANT, ADAMAS, in Natural Hiſtory, *&c.* an antient Name for a Precious Stone, by us called a *Diamond*. See DIAMOND.

ADAMI *Pomum*, ADAM's *Apple*, in Anatomy, a little Prominence in the middle of the *Cartilago Scutiformis*. See POMUM *Adami*.

ADAMITES, ADAMITÆ, a Sect of antient Hereticks, who took upon them to imitate the Nakedneſs of *Adam*; as if Man had been reinſtated in his original Innocence.

They aſſiſted in the Temples naked, and had to do with Women in publick.

*Prodicus* was their Author, according to the Account given by *Theodoret*.—They were, in reality, a Branch ſprung out of the *Carpocratians* and *Baſilidians*. See CARPOCRATIAN, and BASILIDIAN.

This Sect is ſaid to have ſtarted up a-freſh in the XVth Century, under *Picard*, their Leader; who pretended to re-eſtabliſh the Laws of Nature, which, according to him, conſiſted in two things, *viz.* Community of Women, and Nakedneſs.—Theſe laſt walked naked in the publick Places; whereas the former only put off their Clothes in their Aſſemblies.—*Jovet* ſpeaks of *Adamites* in *England*.

*Præ* ADAMITES. See PRÆ *Adamites*.

The Criticks explain the Name *Adam*, אדם from whence theſe Terms ariſe, variouſly; ſome by *Earth*, others by *Red*, others by *Acquieſcence*.——Some of the *Greek* Interpreters explain it Cabaliſtically: According to them, the *A* ſignifies ἀνατολὴ, *Eaſt*; *D*, δυσις, *Weſt*; *A*, ἄρκτος, *North*; and *M*, μεσημβρία, *South*; as being King of the four Quarters of the World: or, in that he was to people it; or that he was a little World, μικρόκοσμος.

ADAPTING. See ACCOMMODATION.

We ſay, to *adapt*, or fit a Recipient to the Capital, *&c.* See RECIPIENT, ALEMBIC, *&c.*

ADDER-*Stung*, is uſed in reſpect of Cattel, when ſtung with any kind of venomous Reptiles; as Adders, Scorpions, *&c.* or bit by a Hedg-hog, or Shrew.

ADDICE, or ADZE, a ſharp Tool, of the Ax-kind, but different from the common Ax.—It is made crooked, and by that means more convenient for cutting the hollow ſide of any Board, or Timber; being what the Coopers generally make uſe of for that Purpoſe.

ADDICTIO, ADDICTION, in the *Roman* Law, a Tranſferring, or paſſing over Goods to another; whether by Sentence of a Court, or in the way of Sale, to him that bids moſt for 'em. See ALIENATION.

The Word ſtands oppoſed to *Abdictio*, or *Abdication*. See ABDICATION, *&c.*

It is form'd of *Addico*, one of the ſtated Words uſed by the *Roman* Judges, when they allow'd the Delivery of the Thing or Perſon on whom Judgment had paſs'd.

Hence, Goods thus adjudg'd by the Prætor, to the right Owner, were called *Bona addicta*; and Debtors deliver'd up in like manner to their Creditors, to work out their Debt, were called, *Servi Addicti*.

ADDICTIO *in Diem*, denoted the adjudging of a thing to a Perſon for a certain Price; unleſs by ſuch a Day the Owner, or ſome other Perſon gave more for it.

The Word is alſo uſed for taking an Adminiſtration, and paying the Debts of the Deceaſed. See ADMINISTRATION.

ADDITAMENT, ADDITAMENTUM, a thing added to another. See ADDITION.

*Additaments*, in Phyſick and Chymiſtry, are Things ſuperadded to the ordinary Ingredients of any Compoſition.

ADDITION, the Act of joining one thing to another; or of augmenting a thing, by the Acceſſion of others thereto. See AUGMENTATION, and ACCESSION.

In Matters of Holy Scripture, 'tis forbid to make any *Addition* to the Text, for fear of corrupting and altering the Senſe.—In Phyſicks, we ſay, that Natural Bodies are form'd by the *Addition* or Aggregation of Parts. See AGGREGATION, ACCRETION, *&c.*

ADDITION, is alſo uſed for the *Additament*, or the thing added it ſelf.—In the new Editions of Books, Authors uſe to make *Additions*; they frequently make needleſs *Additions*, in lieu of retrenching Superfluities and Impertinencies.

'Tis an Axiom, that if to equal Quantities you add unequal ones; the Exceſs of the Wholes, will be the ſame as the Exceſs of the *additional* Parts.

ADDITION, in Arithmetick, is the firſt of the four fundamental Rules, or Operations of that Art. See RULE, and ARITHMETICK.

*Addition* conſiſts in finding the Amount of ſeveral Numbers, or Quantities ſeverally added one to another.——Or, *Addition* is the Invention of a Number, from two or more homogeneous ones given, which is equal to the given Numbers taken jointly or together. See NUMBER.

This Number, thus found, is called the *Sum*, or Aggregate of the Numbers given. See SUM.

The Character of *Addition* is +, which we uſually expreſs by *Plus*. Thus 3+4 denotes the Sum of 3 and 4; and is read 3 *plus* 4. See CHARACTER.

*To add any given Numbers together.*

The *Addition* of ſimple Numbers is eaſy. Thus it is readily perceiv'd that 7 and 9, or 7+9 make 16, and 11+15 make 26.

In longer, or compounded Numbers, the Buſineſs is perform'd by writing the given Numbers in a Row, downwards; Homogeneous under Homogeneous, *i.e.* Units under Units, Tens under Tens, *&c.* and ſingly collecting the Sums of the reſpective Columns.

To do this, we begin at the bottom of the outmoſt Row or Column, to the right; and if the Amount of this Column do not exceed 9, we write it down at the Foot of the ſame Column: If it do exceed 9, the Exceſs is only to be wrote down, and the reſt reſerv'd to be carried to the next Row, and added thereto; as being of the ſame Kind, or Denomination.

Suppoſe, *e. g.* the Numbers 1357 and 172, were given to be added; write either of them, *v. gr.* 172, under the other, 1357; ſo, as the Units of the one, *viz.* 2, ſtand under the Units of the other, *viz.* 7, and the other Numbers of the one, under the correſpondent ones of the other, *viz.* the Place of Tens under Tens, as 7 under 5; and that of Hundreds, *viz.* 1, under the Place of Hundreds of the other, 3.—Then, beginning, ſay, 2 and 7 make 9; which write underneath; alſo 7 and 5 make 12; the laſt of which two Numbers, *viz.*

| | |
|---|---|
| | 1357 |
| | 172 |
| | —— |
| | 1529 |

*viz.* 2. is to be written, and the other 1, reserved in your Mind to be added to the next Row, 1 and 3: then say, 1 and 1 makes 2, which added to 3 make 5; this write underneath, and there will remain only 1, the first Figure of the upper Row of Numbers, which also must be writ underneath; and thus you have the whole Sum, *viz.* 1529.

So, to add the Numbers 87899+13403+885+1920 into one Sum, write them one under another, so as all the Units make one Column, the Tens another, the Hundreds a third, and the Places of Thousands a fourth, and so on.—Then say, 5 and 3 make 8, and 8+9 make 17; write 7 underneath, and the 1 add to the next Rank; saying, 1 and 8 make 9, 9+2 make 11, and 11+9 make 20; and having writ the 0 underneath, say again, 2 and 8 make 10, and 10+9 make 19, and 19+4 make 23, and 23+8 make 31; then, reserving 3, write down 1 as before, and say again, 3+1 make 4, 4+3 make 7, and 7+7 make 14, wherefore write 4 underneath; and lastly, say 1+1 make 2, and 2+8 make 10, which in the last Place write down, and you will have the Sum of them all.

| 885 |
| 104107 |

Addition *of Numbers of different Denominations*, for instance, of Pounds, Shillings, and Pence, is perform'd by adding or summing up each Denomination by it self, always beginning with the lowest; and if after the *Addition*, there be enough to make one of the next higher Denomination, for instance, Pence enough to make one or more Shillings; they must be added to the Figures of that Denomination, that is, to the Shillings; only reserving the odd remaining Pence to be put down in the Place of Pence.—And the same Rule is to be observ'd in Shillings, with regard to Pounds.

For an instance, 5 Pence and 9 Pence make 14 Pence; now in 14 there is once 12, or a Shilling, and two remaining Pence; the Pence, set down; and reserve 1 Shilling to be added to the next Column, which consists of Shillings. Then 1 and 8 and 2 and 5 make 16: the 6 put down, and carry the 1 to the Column of Tens; 1 and 1 and 1 make three Tens of Shillings, or 30 Shillings; in 30 Shillings there is once 20 Shillings, or a Pound, and 10 over: write one in the Column of Tens of Shillings, and carry 1 to the Column of Pounds; and continue the *Addition* of Pounds, according to the former Rules.

Addition *of Decimals*, is perform'd after the same manner as that of Whole Numbers; as may be seen in the following Example. See also Decimal.

630.953
51.0807
305.27

987.3037

Addition *of Vulgar Fractions*, see under the Article Fraction.

Addition, in Algebra, or the Addition *of Species*, is perform'd by connecting the Quantities to be added, by their proper Signs; and also by uniting into one Sum, those that can be so united. See Quantity, Species, &c.

Thus, $a$ and $b$ make $a+b$; $a$ and $-b$ make $a-b$; $-a$ and $-b$ make $-a-b$; $7a$ and $9a$ make $7a+9a$; $-a\sqrt{ac}$ and $b\sqrt{ac}$ make $-a\sqrt{ac}+b\sqrt{ac}$, or $b\sqrt{ac}-a\sqrt{ac}$; for it is all one in whatever Order they be written.

But, particularly, 1°, *Affirmative Quantities of the same Species or Kind, are united by adding the prefix'd Numbers whereby the Species are multiplied.* See Positive.

Thus, $7a+9a$ make $16a$. And $11bc+15bc$ make $26bc$. Also $3\frac{a}{c}+5\frac{a}{c}$ make $8\frac{a}{c}$; and $2\sqrt{ac}+7\sqrt{ac}$ make $9\sqrt{ac}$; $6\sqrt{ab-xx}+7\sqrt{ab-xx}$ make $13\sqrt{ab-xx}$. And in like manner $6\sqrt{3}+7\sqrt{3}$ make $13\sqrt{3}$. Again, $a\sqrt{ac}+b\sqrt{ac}$ make $\overline{a+b}\sqrt{ac}$, by adding together $a$ and $b$, as Numbers multiplying $\sqrt{ac}$. And so $\frac{2a+3c\sqrt{3axx-x^3}}{a+x}+\frac{3a\sqrt{3axx-x^3}}{a+x}$ make $\frac{5a+3c\sqrt{3axx-x^3}}{a+x}$ since $2a+3c$ and $3a$ make $5a+3c$.

2°, *Affirmative Fractions, which have the same Denominator, are added together by adding their Numerators.*

Thus, $\frac{2}{5}+\frac{2}{5}$ make $\frac{4}{5}$, and $\frac{2ax}{b}+\frac{3ax}{b}$ make $\frac{5ax}{b}$; and thus $\frac{8a\sqrt{cx}}{2a+\sqrt{cx}}+\frac{17a\sqrt{cx}}{2a+\sqrt{cx}}$ make $\frac{25a\sqrt{cx}}{2a+\sqrt{cx}}$, and $\frac{aa}{c}+\frac{bx}{c}$ make $\frac{aa+bx}{c}$. See Fraction.

3°, *Negative Quantities are added after the same manner as Affirmative.* See Negative.

Thus, $-2$ and $-3$ make $-5$; $-\frac{4ax}{b}$ and $-\frac{11ax}{b}$ make $-\frac{15ax}{b}$; $-a\sqrt{ax}$ and $-b\sqrt{ax}$ make $-\overline{a-b}\sqrt{ax}$.

*When a Negative Quantity is to be added to an affirmative one; the Affirmative must be diminish'd by a Negative one.*

Thus, 3 and $-2$ make 1; $\frac{11ax}{b}$ and $-\frac{4ax}{b}$ make $\frac{7ax}{b}$; $-a\sqrt{ac}$ and $b\sqrt{ac}$ make $\overline{b-a}\sqrt{ac}$.

And note, that when the negative Quantity is greater than the Affirmative, the Aggregate or Sum will be Negative. Thus, 2 and $-3$ make $-1$; $-\frac{11ax}{b}$ and $\frac{4ax}{b}$ make $-\frac{7ax}{b}$; and $2\sqrt{ac}$ and $-7\sqrt{ac}$ make $-5\sqrt{ac}$.

Addition *of Irrational Quantities.*—If they be of different Denominations, reduce 'em to the same Denomination; and if they be then commensurable, add the Rational Quantities without the Vinculum; and to their Sum prefix the Radical Sign.—The rest as in the *Addition* of Rationals.

Thus, we shall find $\sqrt{8}+\sqrt{18}=2\sqrt{}+3\sqrt{2}=5\sqrt{2}=50$. On the contrary, $\sqrt{7}$ and $\sqrt{5}$ being incommensurable, their Sum will be $\sqrt{7}+\sqrt{5}$.

Addition, in Law, is that Name, or Title which is given to a Man, over and above his proper Name and Sirname; to shew of what Estate, Degree, or Mystery he is; and of what Town, Village, or Country.

*Additions of Estate*, or Quality, are Yeoman, Gentleman, Esquire, and such like. See Yeoman, Gentleman, Esquire, &c.

*Additions of Degree*, are those we call Names of Dignity; as, *Knight*, *Lord*, *Earl*, *Marquiss*, and *Duke*. See Knight, Lord, Duke, &c.

*Additions of Mystery*, are such as *Scrivener*, *Painter*, *Mason*, &c.

*Additions of Place*, are, of *Thorp*, of *Dale*, of *Woodstock*.—Where a Man hath Houshold in two Places, he shall be said to dwell in both; so that his *Addition* in either may suffice.

*Knave* was antiently a regular *Addition*. See Knave.

By Stat. 1 *Hen.* V. it was ordained, that in Suits or Actions where Process of Outlawry lies; such *Additions* should be made to the Name of the Defendant, to shew his Estate, Mystery, and Place where he dwells; and that the Writs, not having such *Additions*, shall abate, if the Defendant take Exception thereto; but not by the Office of the Court.—The Reason of this Ordinance was, that one Man might not be troubled by the Outlawry of another; but by reason of the certain *Addition*, every Person may bear his own Burden. See Chop-*Church*.

ADDOUBORS, in Law. See Redubbors.

ADDUCENT *Muscles*, or Adductors, are those which bring forward, close, or draw together, the Parts of the Body whereto they are annexed. See Muscle.

The Word is compounded of *ad*, to, and *duco*, I draw, or bring to.

*Adducents*, or *Adductors*, stand opposed to *Abducents* or *Abductors*. See Abducent, and Abductor.

ADDUCTION, in Anatomy, the Motion or Action of the *Adducent* Muscles. See Adducent, and Adductor.

ADDUCTOR *Oculi*, a Muscle of the Eye; so called, because it inclines its Pupil toward the Nose. See Eye.

It is also called *Bibitorius*; because it directs the Eye toward the Cup in drinking. See Bibitory.

Adductor *Pollicis*, is a Muscle of the Thumb, which arises tendinous, and ascends obliquely towards a broad Termination, at the superior Part of the first Bone of the Thumb.—Its Office is to bring the Thumb near the Fore-finger. See Finger.

Adductor *Pollicis Pedis*, called also *Antithenar*, is a Muscle of the great Toe, which arises from the inferior Part of the *Os Cuneiforme tertium*, and is inserted into the internal Part of the *Ossa Sessamoidea* of the great Toe; which it draws nearer the rest.

Adductor *Indicis*, is a Muscle of the Fore-finger, arising from the inside of the Bone of the Thumb, and inserted into the first Bone of the Fore-finger, which it draws towards the Thumb.

Adductor *minimi digiti Pedis*. See Transversalis *Pedis*.

ADELING, or Ethling, from the Saxon *Ædelan*, *q. d. Nobilis*; a Title of Honour among the *English Saxons*, properly belonging to the Successor, or Heir Apparent of the Crown. See Prince, &c.

King *Edward* the Confessor being without Issue, and intending to make *Edgar*, to whom he was great Uncle by the Mother's side, his Heir; first called him his *Adeling*.

Now, Antiquaries observe, that it was usual for the *Saxons* to join the Word *Ling* to the Christian Name, which signify'd a Son, or the Younger; as *Edmundling* for the Son of *Edmund*: so that *Adeling* signify'd the *Son of a King*. See King.

ADEMPTION, Ademptio, in the Civil Law, the Revocation of a Grant, Donation, or the like.

The *Ademption* of a Legacy, may be either *Expreſs*; as when the Teſtator declares in form, that he revokes what he had bequeathed: Or *Tacit*, as when he only revokes it indirectly, or implicitly.

ADEPS, in Anatomy, a Species of *Fat*, found in the Cavities of the Abdomen. See Fat.

The *Adeps* differs from the common *Fat*, called *Pinguedo*; in that it is thicker, harder, and of a more earthy Subſtance. See Pinguedo.

The *Adeps* is much the ſame with what we call *Sevum*, *Suet*, or *Leaf*. See Sevum.

Adeps is alſo uſed by the Phyſicians, as a general Name for Fat of either Kind.

The *Adeps Anſeris*, Gooſe's Fat; *Adeps Canis*, Fat of a Dog; *Adeps Hominis*, Fat of a Man; *Adeps Viperæ*, Vipers Fat; and *Adeps Urſi*, Bears Fat, are all uſed in Medicine, in quality of Ripeners, or Drawers; as being of a penetrating Nature, and thereby ſuited to diſſolve and rarify the Tumors, and bring 'em as it were to Maturity. See Ripener.

The ſpecific Virtues aſcribed to certain of 'em, do not ſeem well warranted. See Fat, Viper, &c.

ADEPTS, Adepti, a Denomination given to the Proficients in Alchymy; particularly thoſe who pretend to the Secrets of the Philoſopher's Stone, and the Univerſal Medicine. See Alchymy, Philosopher's *Stone*, Transmutation, Elixir, &c.

*Ripley*, *Lully*, *Paracelſus*, *Helmont*, *Hollandus*, *Centivoglio*, &c. are the Principal among the *Adepti*. See Chymistry.

The Word is Latin, *Adeptus*, form'd of the Verb *adipiſcor*, I obtain.

'Tis a ſort of Tradition among the Alchymiſts, that there are always twelve *Adepti*; and that their Places are immediately ſupplied by others, whenever it pleaſes any of the Fraternity to die, or tranſmigrate into ſome other Place, where he may make uſe of his Gold; for that in this wicked World it will ſcarce purchaſe 'em a Shirt.——*Harris*.

ADEQUATE, Adæquatum, ſomething equal to, or co-extended with, another; and filling the whole Meaſure and Capacity thereof. See Equality.

In this Senſe, the Word ſtands oppoſed to *Inadequate*. See Inadequate.

Adequate *Ideas*, or *Notions*, are ſuch Images or Conceptions of an Object, as perfectly repreſent it, or anſwer to all the Parts and Properties of it. See Idea.

M. *Leibnitz* defines an *Adequate Notion*, to be that of whoſe ſeveral Characters we have diſtinct Ideas.—Thus, a Circle being defined a Figure bounded by a Curve Line which returns into it ſelf, and whoſe Points are all equally diſtant from a certain intermediate Point therein: Our Notion of a Circle is *adequate*, if we have diſtinct Ideas of all theſe Circumſtances, *viz.* a Curve returning upon it ſelf, a middle Point, an Equality of Diſtance, &c. See Notion, Definition, &c.

All Simple Ideas are *adequate* and perfect; and the Faculty, be it what it will, that excites them, repreſents them entire. See Simple *Idea*.

The Ideas of Modes are likewiſe *adequate*, or perfect; except of thoſe Modes which occaſionally become Subſtances: for when we ſpeak of Modes ſeparately exiſting, we only conſider them ſeparate from the Subſtance by way of Abſtraction. See Mode, Accident, &c.

All Abſtract Ideas are alſo *adequate* and perfect; ſince they repreſent all that Part of the Subject which we then conſider.—Thus, the Idea of Roundneſs is perfect, or *adequate*, becauſe it offers to the Mind all that is in Roundneſs, in general. See Abstract.

Of the ſame Kind are all Ideas, of which we know no Original or external Object really exiſting out of them; by occaſion of which they were excited in us, and of which we think them the Images.—Thus, when a Dog is before us, it is the external Object without us which raiſes the Idea in our Mind; but the Idea of an Animal in general, has no external Object to excite it: 'tis created by the Mind it ſelf, and muſt of Neceſſity be *adequate*, or perfect. See Abstraction.

On the contrary, the Ideas of all Subſtances are inadequate and imperfect, which are not form'd at the Pleaſure of the Mind, but gather'd from certain Properties, which Experience diſcovers in them. See Substance.

This is evident, in regard our Knowledge of Subſtances is very defective; and that we are only acquainted with ſome of their Properties: Thus, we know that Silver is white, that it is malleable, that it melts, &c. but we do not know what further Properties it may have; and are wholly ignorant of the inward Texture of the Particles whereof it conſiſts.—Our Idea of Silver therefore, not repreſenting to the Mind all the Properties of Silver, is *inadequate* and imperfect.

ADESSENARII, a Sect in Religion, who hold that Jeſus Chriſt is really preſent in the Euchariſt; but in a manner different from what the *Romaniſts* hold. See Eucharist, &c.

The *Adeſſenarii*, call'd alſo *Impanatores*, are divided into four different Opinions touching the Point.—Some hold that the Body of Jeſus Chriſt is in the Bread; others, that it is about the Bread; others, that it is with the Bread; and laſtly, others, that it is under the Bread. See Impanation.

The Name *Adeſſenarii* was firſt framed by *Prateolus*, from the Latin Verb *adeſſe*, to be preſent.

ADFECTED *Equation*. See Equation.

ADHESION, Adherence, in Phyſicks, the State of two Bodies which are join'd or faſten'd to each other, either by the mutual Interpoſition of their own Parts; or the Compreſſion of external Bodies. See Cohesion, and Nexus.

The Word is compounded of the Latin *ad*, and *hæreo*, I ſtick or cleave to.

Anatomiſts ſometimes obſerve *Adheſions* of the Lungs to the Sides of the Thorax, the Pleura, and Diaphragma, which give occaſion to various Diſorders. See Lungs, Pleura, Pleurisy, Phthisis, Peripneumony, &c.

The *Adheſion* of two poliſh'd Planes, or two Hemiſpheres, is a Phænomenon urg'd in behalf of the Weight and Preſſure of the Atmoſphere. See Atmosphere.

The Schoolmen diſtinguiſh two Kinds of Certitude: the one of Speculation, which ariſes from the Evidence of the Thing; and the other of *Adheſion*, which has nothing to do with Evidence, but ariſes purely from the Importance of the Matter, and the Intereſt we have in its Truth. See Certitude, Testimony, Truth, Evidence, &c.

ADJACENT, or Adjoining, ſomething contiguous, or ſituate near another. See Contiguous.

The Word is compounded of *ad*, to, and *jacere*, to lie.

Adjacent *Angle*. See Angle.

ADIAPHORISTS, Adiaphoristæ, Adiaphorites, a Name given in the XVIth Century to the moderate *Lutherans*, who adher'd to the Sentiments of *Melancton*; and afterwards to thoſe who ſubſcrib'd the Interim of *Charles* V. See Lutheran.

The ſame Name might alſo be applied to thoſe now called *Indifferentiſts*. See Indifferentist.

The Word is originally *Greek*, ἀδιάφορος, *indifferent*.

ADIAPHOROUS, Adiaphorus, *q. d. Indifferent*, or *Neutral*; a Name given by Mr. *Boyle* to a Kind of Spirit diſtill'd from Tartar and ſome other Vegetable Bodies; and which is neither Acid, Vinous, nor Urinous; but in many reſpects different from any other ſort of Spirit. See Spirit; ſee alſo Neutral.

ADJECTIVE, *Noun* Adjective, or Adnoun, in Grammar, a Kind of Noun joined with a Noun Subſtantive either expreſs'd or underſtood, to ſhew its manner of being, that is, its Qualities or Accidents. See Noun, &c.

The Word is form'd of the Latin *adjicere*, to add to; as being to be added to a Subſtantive, without which it has no preciſe Signification at all.

Father *Buffier* defines *Adjective* in a new manner, and ſets it in a Light different from that of other Grammarians.——Nouns, according to him, are Subſtantives, when the Objects which they repreſent are conſider'd ſimply, and in themſelves, without any regard to their Qualities: On the contrary, they are *Adjectives*, when they expreſs the Quality of an Object. See Quality.

Thus, when I ſay ſimply, a Heart; the Word *Heart* is a Subſtantive, becauſe none of its Qualities are expreſs'd; but when I ſay a generous Heart, the Word *generous* is an *Adjective*; becauſe it adds a Quality or Attribute to the Heart.

*Adjectives*, then, ſeem to be nothing elſe but Modificatives.—In effect, the End of an *Adjective* being only to expreſs the Qualities of an Object; if that Quality be the Object it ſelf whereof we ſpeak, it becomes a Subſtantive; *e.g.* If I ſay, *this Book is good*; *good*, here, is an *Adjective*: But if I ſay, *Good is always to be choſen*, 'tis evident *Good* is the Subject I ſpeak of; and conſequently, *Good* there is a Subſtantive.

On the contrary, it often happens in other Languages, and ſometimes in our own, that a Subſtantive becomes an *Adjective*; as for inſtance, in theſe Words, *the King*, *Hero as he is*, *remembers he is a Man*: Where the Word *Hero*, tho ordinarily a Subſtantive, is yet apparently an *Adjective*.

From this new Idea of an *Adjective*, it appears that many of the Nouns which, in the common Grammars, are accounted Subſtantives are really *Adjectives*, and *vice verſa*; Grammar, in this and a thouſand other Inſtances depending upon Cuſtom. See Substantive.

AD *Inquirendum*, a Writ Judicial, commanding Inquiry to be made of any thing touching a Cauſe depending in the King's Court, for the better Execution of Juſtice; as of Baſtardy, and ſuch like. See Writ.

ADJOINING, Adjunctio, in Philoſophy, &c. See Adjunct, and Adjunctio.

ADJOINING is particularly us'd for the Aſſociating of a Perſon to another; or appointing him a Collegue, or *Adjunct*. See ADJUNCT, &c.

ADJOURNMENT, the putting off a Court, or Meeting; and appointing it to be kept at another Time, or Place. See COURT, &c.

In this Senſe, we meet with the Phraſe *Adjournment in Eyre*, for an Appointment of a Day when the Juſtices in Eyre intend to ſit again. See JUSTICE, EYRE, &c.

*Adjournments* of Parliament differ from Prorogations. See PROROGATION.

Each Houſe has the Privilege of *adjourning* it ſelf. See PARLIAMENT.

The Word is form'd of the Latin *ad*, to, and the French *jour*, Day; *q. d. to another Day*.

ADIPOSA, or ADEPOSA *Membrana*, in Anatomy, is a Membrane inveſting the Body, immediately under the Cutis; ſuppoſed to be the Baſis of the Fat, which is lodg'd in the Spaces between its Fibres, and in peculiar Cells form'd herein. See FAT, CUTIS, CELL, &c.

Anatomiſts are divided as to the Reality of this Membrane; moſt of the later Writers taking it to be no other than the exterior Membrane of the *Membrana Carnoſa*, or *Muſculorum Communis*. See MEMBRANE, CARNOSA, &c.

*Vaſa* ADIPOSA, *Fat-Veſſels*, make a Part of the Subſtance of the Omentum, or Caul. See OMENTUM.

ADIPOSE *Cells*, *Cellulæ* ADIPOSÆ, or *Loculi* ADIPOSI. See CELLULÆ *Adipoſæ*.

ADIPOSE *Ducts*, *Ductus* ADIPOSI. See DUCTUS *Adipoſi*.

*Malpighi* ſtarts a Doubt whether the *Adipoſe Ducts* may not be propagated from the Fibres which abound in the Spleen; or thoſe Fibres from them?——As alſo, whether there be not a yet undiſcover'd Communication between the Omentum and the *Membrana Adipoſa*.

ADIT, ADITUS, the Shaft, or Entrance into a Mine, Quarry, or the like. See MINE, QUARRY, &c.

ADJUDGE, in Law.—When a determinate Sentence is paſs'd in the Behalf of any one, the Caſe is ſaid to be *adjudged* for him. See SENTENCE.

We have various Collections of Decrees, Reports, *Adjudg'd* Caſes, &c. See COMMON *Law*.

ADJUDICATION, the Act of *adjudging*; or of giving any thing by Sentence, Decree, or Judgment. See ADJUDGED, and JUDGMENT.

The Word is particularly uſed for the Addiction or Conſigning a thing ſold by Cant, Auction, or the like, to the higheſt Bidder. See ADDICTIO.

ADJUNCTIO, a mere external joining, or adding of one thing to another. See ADDITION.

All *Adjunction* implies a Subordination.—The *Adjunct* is for the ſake of the Thing it is join'd to, not contrarywiſe; as, the Clothes for the Man; not the Man for the Clothes.—Whatever is a Part of a thing, cannot be called an *Adjunct* of it. See ADJUNCTS.

There are various Species of *Adjunction*; viz. *Adheſion*, *Appoſition*, *Adjacency*, *Accubation*, *Incubation*, *Impoſition*, *Aſſeſſion*, &c. See ADHESION, APPOSITION, &c.

ADJUNCT, ADJUNCTUM, in Philoſophy, ſomething added to a Being from without. See ADJUNCTIO.

Or, an *Adjunct* is an Additament or Acceſſion to a thing, not eſſentially belonging to it, but only accidental thereto. See ACCIDENT.

There are two Kinds of *Adjuncts*; the one, a Subſtance (whether Spirit or Body) accidentally ſuperadded to another, as its Subject.—Such is Water in a Spunge, or Veſſel, and the Soul in the Body. See SUBSTANCE.

The ſecond an Attribute, or Mode, accidentally likewiſe ſuperadded to a Subſtance; whether Body or Spirit.—Such is Figure in a Body, Knowledge in the Mind, &c. See MODE.

Some divide *Adjuncts* into *Abſolute*; which agree to the whole thing, without any Limitation: Thus, Paſſions are *Abſolute Adjuncts* of a Man.—And *Limited*; which only agree to their Subject, in reſpect of ſome certain Part thereof: Thus, Man only thinks, conſider'd as to his Mind; only grows, as to his Body, &c.

In Ethicks, we uſually reckon ſeven *Adjuncts*, popularly call'd *Circumſtances*; *Quis*, *quid*, *ubi*, *quibus auxiliis*, *cur*, *quomodo*, *quando*. See CIRCUMSTANCE.

ADJUNCTS, in Rhetorick and Grammar, are certain Words or Things added to others; to amplify the Diſcourſe, or augment its Force. See AMPLIFICATION, &c.

Such are Adjectives, Attributes, and Epithets, which are added to Subſtantives, Subjects, &c. to expreſs their Nature, Qualities, Accidents, &c. See ADJECTIVE, ATTRIBUTE, EPITHET, &c.

Arguments drawn from *Adjuncts*, are Supplements or Inforcements of the Proof ariſing from the Circumſtances of the Fact. See CIRCUMSTANCE, &c.

ADJUNCT, is alſo uſed in Civil Concerns, for a Collegue, or Fellow-Officer, aſſociated to another, to aſſiſt him in his Miniſtry, to ſhare the Functions thereof, or even have an Eye to his Actions. See COLLEGUE.

AD *Jura Regis*, is a Writ that lies for the King's Clerk, againſt him that ſought to eject him, to the Prejudice of the King's Title in right of his Crown. See WRIT.

ADJURATION, a Part of Exorciſm, wherein the Devil is commanded, in the Name of God, to depart out of the Body of the Poſſeſſed, or to declare ſomething. See EXORCISM, POSSESSION, &c.

The Word is *Latin*, form'd of *adjurare*, to adjure; of *ad*, and *juro*, I ſwear. See CONJURATION.

ADJUTANT, an Officer in the Army, whoſe Buſineſs is to *aid* or aſſiſt the Major. See MAJOR.

*Adjutant* is the ſame that we otherwiſe call *Aid Major*. See AID *Major*.

The Term is ſometimes alſo uſed for an *Aid de Camp*. See AID *de Camp*.

The Word is form'd of the Latin *adjutare*, to help, aſſiſt.

ADJUTORIUM, in Anatomy, a Bone of the Arm; ſo called, as being uſeful in lifting it up. See BONE, and ARM.

ADMEASUREMENT, ADMENSURATIO, a Writ which lies for the bringing thoſe to Reaſon, or Mediocrity, that uſurp more than their Share. See WRIT.

This Writ lies in two Caſes; the one termed *Admeaſurement of Dower*, *Admenſuratio Dotis*, where the Widow of the Deceaſed holds more from the Heir or his Guardian, on account of her Dower, than of right belongs to her. See DOWER.

The other *Admeaſurement of Paſture*, *Admenſuratio Paſturæ*, which lies between thoſe who have common of Paſture appendant to their Freehold, or common by Vicinage, in caſe any of them ſurcharge the Common with more Cattle than they ought. See COMMON.

ADMINICLE, ADMINICULE, ADMINICULUM, a Term uſed in ſome antient Statutes, for Aid, Help, or Support. See AID, &c.

In the Civil Juriſprudence, *Adminiculum* ſignifies the Beginning of a Proof; an imperfect Proof; a Circumſtance or Conjecture, tending to form or fortify a Proof.

Among Antiquaries, the Term *Adminicules* is applied to the Attributes, or Ornaments wherewith *Juno* is repreſented on Medals. See ATTRIBUTE.

ADMINISTRATION, the Government, or Direction of Affairs; particularly the Exerciſe of diſtributive Juſtice. See GOVERNMENT, and JUSTICE.

Indolent Princes confide the *Adminiſtration* of publick Affairs to their Miniſters. See MINISTER.

Civil Wars are uſually rais'd on Pretence of *Male-Adminiſtration*; or of Abuſes committed in the Exerciſe of Juſtice. See WAR.

ADMINISTRATION, in Law, ſignifies the diſpoſing of a Man's Goods, or Eſtate, that died inteſtate, or without any Will; with an Intent to give an Account thereof. See ADMINISTRATOR, INTESTATE, &c.

Inſtruments, or Powers of *Adminiſtration*, are taken out in the Prerogative Court. See PREROGATIVE.

ADMINISTRATION is ſometimes alſo uſed for the Direction of the Affairs of a Minor, a Pupil, a Lunatick, or the like. See MINOR, PUPIL, TUTOR, &c. ſee alſo GUARDIAN.

ADMINISTRATION is alſo uſed in reſpect of Eccleſiaſtical Functions.—The Parſon has the *Adminiſtration* of the Sacraments in his Pariſh. See PARSON, PARISH, &c.—The *Adminiſtration* of the Sacrament is prohibited to Perſons excommunicate. See EXCOMMUNICATION.

In Beneficiary Matters, they diſtinguiſh two Kinds of *Adminiſtration*; *Temporal*, which relates to the Temporalties of a Benefice, Dioceſe, &c. and *Spiritual*, to which belong the Power of excommunicating, &c. See TEMPORALTY, &c.

ADMINISTRATOR, in Law, he to whom the Ordinary commits the *Adminiſtration* of the Goods of a dead Man, in default of an Executor. See ADMINISTRATION, WILL, EXECUTOR, &c.

An Action lies for or againſt an *Adminiſtrator*, as for an Executor; and he ſhall be accountable to the Value of the Goods of the Deceas'd, and no further.——Unleſs there be Waſte or other Abuſe chargeable on him.

If the *Adminiſtrator* die, his Executors are not *Adminiſtrators*; but the Court is to grant a new Adminiſtration.—If a Stranger, who is neither *Adminiſtrator* nor Executor, take the Goods of the Deceaſed, and *adminiſter*; he ſhall be charged and ſued as an Executor, not as an *Adminiſtrator*.

If a Woman have Goods thus committed to her Charge, or Adminiſtration, ſhe is called *Adminiſtratrix*.

ADMIRAL, ADMIRALIUS, ADMIRALLUS, a great Officer, who commands the Naval Forces of a Kingdom or State; and before whom all Cauſes are cognizable, relating to the Sea. See NAVY, SEA, &c.

Authors are divided about the Origin and Denomination of this important Officer, whom we find eſtabliſh'd, with ſome Variation, in moſt Kingdoms that border on the Sea.——Some borrow it from the *Greeks*; the Captain of the Seas, under the Emperors of *Conſtantinople*, being called *Amiralius* or *Almiralis*, of αλμυρ&, *Saline*; or αλμη, *Salt Water*, and αρχ&, *princeps*; in regard his Juriſdiction lay on the Sea, which the *Latins* call *Salum*.—But it is to be obſerv'd, that this Officer had not the ſupreme Adminiſtration of Naval Affairs; that immediately belong'd to the *Dux Magnus*, or grand General; to whom the *Amiralius* was ſubordinate, in Quality of *Protocomes*, firſt Count, or Aſſociate. See COMES.

Others derive the Name from the Arabic *Amir* or *Emir*, Lord; and the *Greek* αλιος, *Marine*: and accordingly, we frequently find *Emir* in *Zonaras*, *Cedrenus*, *Nicetas*, and other *Greeks* of that Time, uſed in the Senſe of a Commander.—Add, that in the Life of St. *Peter Thomaſius*, we meet with *Admiratus Jeruſalem*, for the Governor of *Jeruſalem*, under the Soldan of *Egypt*. And hence, ſome will have both the Name and the Dignity of Oriental, and even *Sarazen* Extraction: As, in effect, there are no Inſtances of *Admirals* in this Part of *Europe*, before the Year 1284; when *Philip* of *France*, who had attended St. *Louis* to the Wars againſt the *Sarazens*, created an *Admiral*.

To ſay no more, *Du Cange* aſſures us, that the *Sicilians* were the firſt, and the *Genoeſe* the next after 'em, who gave the Denomination *Admiral* to the Commanders of their Naval Armaments; and that they took it from the Sarazen or Arabic *Amir*, a general Name for any commanding Officer.—The firſt *Admiral* we read of in our *Engliſh* Affairs, was under *Edward* I.

The *Lord High* ADMIRAL *of England*, in ſome antient Records called *Capitaneus Mariniorum*, is Judge or Preſident of the *Court of Admiralty*. See ADMIRAL's *Court*.

He takes Cognizance, by himſelf, his Lieutenant, or Deputies, of all Crimes committed on the Sea, or the Coaſts thereof; and all the Civil and Marine Tranſactions relating thereto: As alſo of what is done in all great Ships, riding in any great River, beneath the Bridges thereof next the Sea.

Antiently, the *Admiral* had alſo Juriſdiction in all Cauſes of Merchants and Mariners; not only on the Sea, but in all foreign Parts.——We have had no *High Admiral* for ſome Years; the Office being put in Commiſſion, or under the Adminiſtration of the Lords *Commiſſioners of the Admiralty*. See COMMISSION.

ADMIRAL is alſo uſed for the Commander in Chief of a ſingle Fleet, or Squadron. See FLEET.

Thus, we ſay, the *Admiral* of the Red; *Admiral* of the White; and *Admiral* of the Blue. See SQUADRON, NAVY, &c.

The Term is alſo applied to all Flag-Officers: In which Senſe it includes *Vice-Admirals* and *Rear-Admirals*. See FLAG-*Officer*.

*Rear*-ADMIRAL. } See { REAR-*Admiral*.
*Vice*-ADMIRAL. } See { VICE-*Admiral*.

*Vice*-ADMIRAL, is alſo an Officer appointed by the Lord High *Admiral*, in divers Parts of the Kingdom, with Judges and Marſhals ſubordinate to him; for the exerciſing of Juriſdiction in Maritime Affairs, within their reſpective Limits.

There are upwards of twenty *Vice-Admirals*.—From their Deciſions and Sentences, Appeal lies to the *Court of Admiralty* in *London*.

There are alſo *Admirals of the Galleys*. See GALLEY.

*Monſtrelet* makes mention of an *Admiral of the Archers*, or *Croſs-bow-Men*.

ADMIRAL, is likewiſe the Name of the principal Veſſel of a Fleet, which carries the *Admiral* on board. See FLEET, NAVY, &c.

When two Ships of War, bearing the ſame Colours, meet in the ſame Port; that which arrived firſt, has the Title and Prerogative of *Admiral*; and the other, tho of greater Strength and Rate, ſhall only be accounted *Vice-Admiral*.—'Tis pretty much the ſame with the Veſſels that go to *Newfoundland*: that which arrives there the firſt, taking the Title and Quality of *Admiral*, which it retains during the whole fiſhing Seaſon. See FISHERY.

ADMIRAL's *Court*, or the *High Court of* ADMIRALTY, is a Court held by the High *Admiral*; to which belongs the Deciſion of all Maritime Controverſies, Trials of Malefactors, and the like. See COURT, and ADMIRAL.

The Proceedings in this Court, in all Civil Matters, are according to the Civil Law; becauſe the Sea is without the Limits of the Common Law, and under the *Admiral*'s Juriſdiction. See CIVIL *Law*.

In Criminal Affairs, which ordinarily relate to Piracy, the Proceedings in this Court were antiently likewiſe by Information and Accuſation, according to the Civil Law; but that being found inconvenient, in regard no Perſon could be convicted without either their own Confeſſion, or an Eye-witneſs of the Fact, ſo that the greateſt Offenders often eſcap'd with Impunity: there were two Statutes made by *Henry* VIII. enacting, That Criminals ſhould henceforth be here tried by Witneſſes and a Jury; and this by ſpecial Commiſſion from the King to the Lord *Admiral*: wherein ſome of the Judges of the Realm are always to be Commiſſioners; and the Trial according to the Laws of *England*, directed by thoſe Statutes. See JURY, TRIAL, &c.

The *Court of Admiralty*, is ſaid to have been firſt erected in 1357, by King *Edward* III.——To the Civil Law, firſt introduc'd by the Founder, were afterwards added, by his Succeſſors, particularly *Richard* I. the Laws of *Oleron*; and the Marine Uſes and Conſtitutions of ſeveral People; as thoſe of *Genoa*, *Piſa*, *Marſeilles*, *Meſſina*, &c. See OLERON, and USES.

Under this Court is alſo a Court-Merchant, or Court of Equity; wherein all Differences between Merchants are decided, according to the Rules of the Civil Law. See MERCHANT.

Between the Courts of Admiralty and Common Law, there ſeems to be *diviſum imperium*; for in the Sea, ſo far as the Low-Water Mark, is accounted *infra corpus comitatus adjacentis*; and the Cauſes thence ariſing are determinable by the Common Law: yet when the Sea is full, the Admiral has Juriſdiction there alſo ſo long as the Sea flows, over Matters done between the Low-Water Mark and the Shore. See COMMON-*Law*.

ADMIRALTY.——*Court of* ADMIRALTY, *Commiſſioners of the* ADMIRALTY, &c. See ADMIRAL, ADMIRAL's *Court*, &c.

Among the *Hollanders*, the *Five Admiralties*, are ſo many Chambers, compoſed of the Deputies of the Nobles, the Provinces, and the Towns; to whom belong the equipping out of Fleets, and the furniſhing Proviſions for 'em.

ADMIRATION, in Grammar, a Point or Character, intimating ſomething worthy to be admired or wonder'd at.—It is expreſſed thus (!). See CHARACTER.

ADMISSION, ADMISSIO, in the Eccleſiaſtical Law, the Act whereby the Biſhop, upon Examination, admits or allows a Clerk to be able, or competently qualify'd for the Office; which is done by the Formula *Admitto te habilem*. See PRESENTATION, INDUCTION, INSTITUTION, &c.

ADMITTENDO *Clerico*, is a Writ granted to him who hath recover'd his Right of Preſentation againſt the Biſhop in the Common Pleas. See PATRON.

ADMITTENDO *in Socium*, is a Writ for the Aſſociation of certain Perſons to Juſtices of Aſſize formerly appointed. See JUSTICE, and ASSIZE.

ADNATA, in Anatomy, a pretty thick white Membrane, inveſting the Ball of the Eye; called alſo *Conjunctiva*. See TUNIC, and CONJUNCTIVA.

The *Adnata* makes what we commonly call the *White of the Eye*; whence it is alſo called the *Albuginea*. See EYE, &c.

AD *Octo*, *q. d.* to the eighth Number; a Term uſed by ſome antient Philoſophers, to denote the higheſt or ſuperlative Degree; becauſe in their way of diſtinguiſhing Qualities, they reckon'd no Degree above the Eighth. See DEGREE, HUMOUR, QUALITY, &c.

ADOLESCENCE, ADOLESCENTIA, the State of Youth; or that Period of a Perſon's Age commencing from his Infancy, and terminating at his full Growth. See AGE.

The State of *Adoleſcence* laſts ſo long as the Fibres continue to grow, either in Magnitude or Firmneſs. See FIBRE, NUTRITION, &c.

It is commonly computed to be between 15 and 25, or even 30 Years of Age; tho, in different Conſtitutions its Terms are very different.—The *Romans* uſually reckon'd it from 12 to 25 in Boys; and to 21 in Girls. See PUBERTY, &c.—And yet, among their Writers, *Juvenis* and *Adoleſcens* are frequently uſed indifferently, for any Perſon under 45 Years.

The Word is form'd of the Latin *adoleſco*, I grow.——The Fibres being arrived at the degree of Firmneſs, and Tenſion ſufficient to ſuſtain the Parts, no longer yield and give way to the Efforts of the Nutritious Matter, to extend 'em: So that their farther Accretion is ſtopp'd from the very Law of their Nutrition. See SOLID, DEATH, &c.

ADONIA, or ADONIC *Feaſts*, were antient Feaſts, inſtituted in honour of *Adonis*; and obſerved with great Solemnity among the *Greeks*, *Egyptians*, &c. See FEAST.

They were begun by the Women; who imitated the Cries and Lamentations of *Venus*, for the Death of her Paramour.—When they were well weary of this, they changed their Notes, and ſung his Praiſes; and made Rejoicings, as if he were raiſed to Life again: or rather, according to *Meurſius*, theſe two Offices made two diſtinct Feaſts, which were held at different times of the Year, the one ſix Months after the other; *Adonis* being ſuppoſed to paſs half the Year with *Proſerpine*, and half with *Venus*.——The Feaſt was alſo called *Salambon*.

ADONIC, in the antient Poetry, was a ſort of ſhort Verſe, conſiſting of a Dactyl and a Spondee; as, *Rara juventus*. See VERSE.

It is uſually placed at the End of each Stanza of Sapphic Verſes; and is ſo called from *Adonis*, in whoſe Praiſe it was firſt made. See SAPPHIC.

ADOPTION, ADOPTIO, an Act by which any one takes another into his Family, owns him for his Son, and appoints him his Heir. See FATHER, SON, &c.

The Word is derived from *adoptare*; whence came *adobare*, to make a Knight: whence alſo *Miles adobatus*, a a Knight newly made or dubb'd; he who knighted him, being ſaid in ſome Senſe to *adopt* him. See KNIGHT.

The Cuſtom of *adopting* was very familiar among the antient *Romans*, who had an expreſs Formula for it.—They firſt learnt it from the *Greeks*, among whom it was called υἱωσις, *Filiation*. See ADOPTIVE.

As *Adoption* was a ſort of Imitation of Nature, intended for the Comfort of thoſe who had no Children; Eunuchs were not allowed to *adopt*; as being under an actual Impotency of begetting Children. See EUNUCH.

Neither was it lawful for a young Man to *adopt* an elder; becauſe that had been contrary to the Order of Nature: but it was even requir'd, that the Perſon who *adopted*, ſhould be eighteen Years elder than his *adoptive* Son; that there might at leaſt appear a Probability of his being the natural Father.

The *Romans* had two Forms of *Adoption*; the one before the Prætor: the other at an Aſſembly of the People, in the Times of the Commonwealth, and afterwards by a Reſcript of the Emperor.

In the firſt, the Natural Father addreſs'd himſelf to the Prætor, declaring, that he emancipated his Son, reſign'd all his Authority over him, and conſented he ſhould be tranſlated into the Family of the *Adopter*. See EMANCIPATION.

The latter manner of *Adoption* was practis'd, where the Party to be adopted was already free; and was called *Adrogation*. See ADROGATION.

The Perſon adopted chang'd all his Names; aſſuming the Prename, Name, and Sirname of the Perſon who adopted him. See NAME.

They had likewiſe their *Teſtamentary Adoptions*, wherein Perſons were *adopted* by the Laſt Will of the Deceas'd; but theſe were never eſteem'd valid, till they had been confirm'd by the People. See TESTAMENT.

Of late Years, another Form of *Adoption* has taken place; and this is, by cutting off the Hair of a Perſon, and delivering it to the Father that is to adopt him. See HAIR, and TONSURE.

'Twas this way that Pope *John* VIII. adopted *Boſon* King of *Arles*; which perhaps is the only Inſtance in Hiſtory of *Adoption* in the Order of Eccleſiaſticks; a Law that profeſſes to imitate Nature, not daring to give Children to thoſe in whom it would be thought a Crime to beget any.

M. *Bouſſac*, in his *Noctes Theologicæ*, gives us divers modern Forms of *Adoption*; ſome perform'd at Baptiſm; others by the Sword, &c. See BAPTISM.

ADOPTIVE, ADOPTIVUS, or ADOPTITIUS, a Perſon *adopted* by another. See ADOPTION.

The Emperor *Adrian* preferr'd *Adoptive* Children to Natural ones; by reaſon we chuſe the former, but are oblig'd to take the latter at random.—*Adoptive* Children, among the *Romans*, were on the ſame Footing with Natural ones; for which Reaſon, they were either to be inſtituted Heirs, or expreſly diſinherited; otherwiſe the Teſtament was null.

M. *Menage* has publiſh'd a Book of Eloges, or Verſes addreſs'd to him; which he calls *Liber Adoptivus*, an *Adoptive* Book; and adds it to his other Works.—*Heinſius* and *Furſtemberg* of *Munſter*, have likewiſe publiſhed *Adoptive* Books.

ADOPTIVI, or ADOPTIANI, was an antient Sect in Religion; thus called, from the manner wherein they conceived our Saviour to be the Son of God.

They took their Riſe from *Felix* of *Urgel*, and *Elipand* of *Toledo*; the latter of whom writing to the former, for an Account of his Faith in that Point; was anſwer'd, that according to the Uſe of the Language which obtains in reſpect of Human Nature, Jeſus was not the Natural, but only the *Adoptive* Son of God.

This Opinion they both afterwards propagated, towards the Cloſe of the VIIIth Century.—And both were convicted and condemn'd; and both abjur'd their Error.

ADORATION, the Act of rendering divine Worſhip or Honours, to a Being. See GOD, and WORSHIP.

The *Adoration* of Idols is called *Idolatry*. See IDOLATRY.

The *Romaniſts* profeſs a ſubordinate *Adoration* to Saints, Images, Relicks, the Croſs, &c. See SAINT, IMAGE, RELICK, CROSS, &c.

The Word literally ſignifies, *to apply the Hand to the Mouth*; *Manum ad Os admovere*, *q. d.* to kiſs the Hand; this being, in the Eaſtern Countries, one of the great Marks of Reſpect and Submiſſion.

The Election of Popes is performed two ways, by *Adoration* and by Scrutiny.—In the Election by *Adoration*, the Cardinals ruſh haſtily, as if agitated by ſome Spirit, and fall without more ado to the *Adoration* of ſome one among them, and proclaim him Pope. See CARDINAL, POPE, &c.

In the Election by Scrutiny, *Adoration* is the laſt thing, and follows the Election; as in the other it is the Election it ſelf, or rather ſuperſedes the Election. See ELECTION, and SCRUTINY.

AD *Pondus Omnium*, the Weight of the Whole; an Abbreviation among Phyſicians, &c. ſignifying, that the laſt preſcrib'd Ingredient is to weigh as much as all the others before. See ABBREVIATURE.

AD *Quod Damnum*, a Writ directed to the Sheriff, commanding him to inquire what hurt may befal the King by granting a Fair or Market in any Town, or Place. See FAIR, MARKET, &c.

The ſame Writ alſo iſſues for an Inquiry to be made of what the King or other Perſon may ſuffer, by granting Lands in Fee-ſimple to a Convent, Chapter, or other Body Politick; by reaſon ſuch Land falls into Mortmain, or a dead hand: that is, into ſuch Condition, that the chief Lord loſes all Hope of Heriots, Service of Court, and Eſcheats, upon any traiterous or felonious Offence committed by the Tenant: For that a Body Politick dies not, nor can perform perſonal Service to the King, or their Meſn Lords; as ſingle Perſons may do. See MORTMAIN.

ADRAGANT, or TRAGACANTH, a ſort of Gum. See TRAGACANTH.

ADRESS, or ADDRESS, a Diſcourſe preſented to the King, in the Name of a conſiderable Body of his People; to expreſs, or notify their Sentiments of Joy, Satisfaction, or the like, on ſome extraordinary Occaſion.

Thus, we ſay, the Lords *Adreſs*, the Commons *Adreſs*.—*Adreſſes* were firſt ſet on foot under the Adminiſtration of *Oliver Cromwel*.

The Word is French, *Adreſſe*, form'd of the Verb *Adreſſer*, to ſend or direct any thing to a Perſon.—At *Paris*, their Office of Intelligence is called *Bureau d'Adreſſe*.

ADRESS, is alſo uſed for Dexterity. See DEXTERITY.

ADROGATION, among the *Romans*, was a kind of Adoption, only differing from it in this; That the Perſon here adopted was free, and conſented to be adopted by another; and that it was done at the Aſſembly of the People, while the Commonwealth ſubſiſted; and afterwards by a Reſcript of the Emperors. See ADOPTION.

AD *Terminum qui præteriit*, is a Writ of Entry, which lies where a Man, having leaſed Lands or Tenements for term of Life, or Years, is, after the Term expir'd, held from them by the Tenant, or other Stranger who enjoys the ſame, and deforceth the Leſſor.—The ſame Writ alſo lies for the Leſſor's Heir.

ADVANCE-*Foſſe*, or *Ditch*, is a Ditch of Water round the Eſplanade, or Glacis of a Place; to prevent its being ſurprized by the Beſiegers. See FOSSE, and GLACIS.

ADVANCE-*Guard*, or VAN-*Guard*, is the firſt Line or Diviſion of an Army ranged or marching in Battle-array; or that Part which is next the Enemy, or which marches firſt toward them. See LINE.

The whole Body of an Army is divided into *Advance-Guard*, Arrear-Guard, and Main Body. See ARMY, &c.

The Word is ſometimes alſo applied to a ſmall Party of Horſe, as 15 or 20, commanded by a Lieutenant, beyond and in ſight of, the Main Guard.

ADVANCER, among Hunters, is one of the Starts, or Branches of a Buck's Attire, between the back Antler and the Palm. See ATTIRE, HEAD, &c.

ADVENT, ADVENTUS, in the Calendar, the Time immediately preceding Chriſtmas; antiently employ'd in pious Preparation for the *Adventus*, or coming on, of the Feaſt of the Nativity. See NATIVITY, &c.

*Advent* includes four Sundays, or Weeks; commencing either from the Sunday which falls on St. *Andrew*'s Day, or that next after it.—But, it is to be noted, this Rule has not always obtain'd. In the *Ambroſian* Office, there are ſix Weeks mark'd for *Advent*; and St. *Gregory*, in his Sacramentary, allows five.

The firſt Week of *Advent*, in our way of reckoning, is that wherein it begins; but it was antiently otherwiſe, the Week next Chriſtmas being reputed the firſt; and the Numeration carried backwards.

Great Auſterity was practis'd in the antient Church during this Seaſon.—At firſt they faſted three Days a-week; but were afterwards obliged to faſt every Day: Whence the Seaſon is frequently called in antient Writers, *Lent*, and *Quadrageſima*. See LENT, and FAST.

The Courts of Juſtice were all ſhut.—Under King *John*, it was expreſly declared, that *in Adventu Domini nulla Aſſiſa capi debet*: But this was afterwards alter'd; and it was made lawful, in reſpect of Juſtice and Charity which ought at all Times to be regarded, to take Aſſizes of Novel Diſſeiſin, Mort d'Anceſter, and Darrein Preſentment, in the Time of *Advent*, Septuageſima, and Lent. See ASSIZE.

This

This is also one of the Times, from the Beginning whereof, to the End of the Octaves of the *Epiphany*, the solemnizing of Marriage is forbid, without express Licence. See MARRIAGE; see also ROGATION.

ADVENTITIOUS, something accruing, or befalling a Person or Thing, from without. See ACCESSION, *&c.*

Thus, *Adventitious* Matter, is such Matter as doth not properly belong to any Body, but is casually joined to it. See ACCRETION, ADJUNCTIO, *&c.*

ADVENTITIOUS, in the Civil Law, is applied to such Goods as fall to a Man, either by mere Fortune, or by the Liberality of a Stranger, or by Collateral Succession. See GOODS.

The Word is used in opposition to *Profectitious*; by which are signified such Goods as descend in a direct Line, from Father to Son. See PROFECTITIOUS.

AD *Ventrem inspiciendum*, in Law. See VENTRE *inspiciendo*.

ADVENTURE, an extraordinary, and surprizing Enterprize, or Accident, either real or fictitious. See FABLE.

Novels, Romances, *&c.* are chiefly taken up in relating the *Adventures* of Cavaliers, Lovers, *&c.* See NOVEL, and ROMANCE.

The Word is *French*, and literally denotes an Event, or Accident.

*Company of Merchant* ADVENTURERS, was an antient Denomination of the *Hamburgh* Company. See *Hamburgh* COMPANY.

ADVERB, ADVERBIUM, in Grammar, a Particle join'd to a Verb, Adjective, or Participle, to explain their manner of acting or suffering; or to mark some Circumstance or Quality signified by them. See PARTICLE, VERB, *&c.*

The Word is formed from the Preposition *ad*, and *verbum*; and signifies literally a Diction *join'd to a Verb*, to show *how*, or *when*, or *where*, one is, does, or suffers: As, the Boy paints *neatly*, writes *ill*; the Book is *there*, &c.

Not that the *Adverb* is confin'd purely to Verbs; but because that is its most ordinary use.—We frequently find it join'd to Adjectives, and sometimes even to Substantives, particularly where those Substantives signify an Attribute, or Quality of the Thing spoken of, *v. g.* He is *very* sick; he acts *prudently*; he is *truly* King.

An *Adverb* is likewise join'd, sometimes to another *Adverb*, to modify its meaning, *v.g. very devoutly*, &c. Whence some Grammarians chuse rather to call them *Modificatives*; comprizing under this one general Term, both *Adverbs*, Conjunctions, Prepositions, and even Adjectives. See MODIFICATIVE.

*Adverbs* are very numerous, but may be reduced under the general Classes of *Adverbs of Time*, of *Place*, of *Order*, of *Quantity*, of *Quality*, of *Manner*, of *Affirmation*, of *Doubting*, and of *Comparison*.

ADVERSARIA, among the Antients, was used for a Book of Accounts, like our Journal or Day-Book; thus called, *quod adversa parte etiam scriptis impleretur*, because wrote even on the Backside.

Hence, *Adversaria* is sometimes also used among us for a *Common-place-Book*. See COMMON-*Place*.

ADVERSARY. See ANTAGONIST, OPPONENT, COMBAT, DUEL, *&c.*

The Word is form'd of the *Latin* Preposition *Adversus*, against; from *ad*, and *verto*, I turn to.

ADVERSATIVE, in Grammar.—A *Particle*, or *Conjunction Adversative*, is that which expresses some Difference, or Opposition between what goes before, and what follows. See CONJUNCTION.

Thus, *or* is an *Adversative*, v. g. Yes, *or* no.

ADVERTISEMENT, an Intelligence, or Information, given to Persons interested in an Affair.

The Word is form'd of the French *Avertissement*, from the Latin *Advertere*, to advert, consider, regard.

ADULT, ADULTUS, one who is come to Years of Discretion; who is enter'd upon Manhood, or the Age of Adolescence; and is old and big enough to have Understanding, and Discernment. See AGE.

The Word is formed from the Participle of the Verb *adolesco*, I grow up. See ADOLESCENCE.

The Anabaptists confer the Sacrament of Baptism upon none but *Adults*. See BAPTISM, and ANABAPTIST.

There is a notable Difference between the Proportions of Infants and *Adults*.—A Man, M. *Dodart* observes, form'd like a Fœtus, would be a Monster, and wou'd scarce be acknowledg'd for one of the Species. See FOETUS, and EMBRYO.

ADULTERATION, ADULTERATIO, the Act of debasing a Medicine or other thing, with bad Ingredients; or the putting one thing for, and into another. See SOPHISTICATION.

To *adulterate* the current Coin, is a Capital Crime in all Nations. See MONEY, and COIN.

The Word is *Latin*; form'd of the Verb *Adulterare*, to corrupt by mingling something foreign to any Substance.

ADULTERINE, in the Civil Law, a Child issued from an *adulterous* Amour, or Commerce. See ADULTERY.

*Adulterine* Children are more odious than the illegitimate Offspring of single Persons.—The *Roman* Law even refuses 'em the Title of Natural Children; as if Nature disown'd 'em. See BASTARD.

ADULTERY, ADULTERIUM, in our antient Law Books call'd ADVOWTRY, a Crime committed by married Persons, against the Faith pledged to each other in Marriage; by having carnal Commerce with some other: or even by a Person not married; by having to do with another that is. See FORNICATION, MARRIAGE, *&c.*

The antient *Romans* had no formal Law against *Adultery*; but both Accusation and Punishment were arbitrary.—The Emperor *Augustus* was the first who brought them into a Law; which he had the Misfortune to see executed in the Persons of his own Children.——This was the *Julian* Law.

But, tho this Law left the Accusation of *Adultery* open to every body, yet 'tis certain, *Adultery* has been always look'd upon as a private and domestick Crime, rather than a publick one; so that Strangers were seldom suffer'd to prosecute, especially where the Marriage was peaceable, and the Husband made no Complaint.

Some of the succeeding Emperors abrogated this Law, which left the Accusation of *Adultery* open to Strangers; in regard such an Accusation could not be enter'd, without setting the Husband and Wife at Variance, throwing the Children into a State of Uncertainty, and bringing Contempt and Derision upon the Husband; for as the Husband is the nearliest interested in the Matter, 'tis supposed he will examine the Wife's Actions with more Circumspection than any other: So that where he is silent, 'tis not fair any body else should speak for him. See ACCUSATION.

For this reason, the Law, in some Cases, has made the Husband both Judge and Executioner in his own Cause; and has allow'd him to revenge himself of the Injury, by taking away the Lives of the *Adulterers* whom he should apprehend in the Act.—'Tis true, where the Husband made a Trade of his Wife's Infamy, or where having seen her Shame with his own Eyes, he yet suffer'd patiently, and dissembled the Affront; in these Cases, *Adultery* became a Crime of publick Concern: and the *Julian* Law provides Punishments for such Husbands, as well as their Wives.

In most *European* Countries, at this Day, *Adultery* is not a publick Crime; and none but the Husband is suffered to intermeddle, excepting where the Scandal is very notorious. —Even the King's Advocates, Attorney, or the like, may not intermeddle.

Add, that tho the Husband who violates the Conjugal Bond be guilty of *Adultery* as well as the Wife; yet is not the Wife allow'd to accuse, or prosecute him for the same. See WIFE, HUSBAND, *&c.*

*Socrates* relates, L. V. c. 8. that under the Emperor *Theodosius*, in the Year 380, Women convicted of *Adultery* were punish'd by a publick Constupration.

*Lycurgus* punish'd the *Adulterer* as a Parricide.—The *Locrians* tore out his Eyes; and most of the Orientals punish him very severely.

The *Saxons* formerly burnt the *Adulteress*, and over her Ashes erected a Gibbet, whereon the *Adulterer* was hang'd. —In *England*, King *Edmond* punish'd *Adultery* as Homicide; but *Canutus* ordained the Man to be banish'd, and the Woman to have her Nose and Ears cut off.——*Qui uxoratus faciet* Adulterium, *habet Rex vel dominus superiorem*; *Episcopus inferiorem*. *L.* Hen. I. *c.* 12. *De* Adulterio *per totam Client. habet Rex hominem*, *Episcopus mulierem*. Domesday, tit. Cestre Civit.

In *Spain*, they punish'd *Adultery* by cutting off that Part which had been the Instrument of the Crime.—In *Poland*, before Christianity was establish'd, they punish'd *Adultery* and Fornication in a very particular manner: The Criminal they carried into the Market-Place, and there fasten'd him by the Testicles with a Nail; laying a Razor within his reach, and leaving him under a Necessity, either of doing Justice upon himself, or of perishing in that Condition.

At present, the Laws are much more favourable: — To Divorce, and strip the *Adulteress* of her Dower, is all her Punishment among us: In the *Romish* Countries, they also shut 'em up in Nunneries.

The *Lacedæmonians*, instead of punishing *Adultery*, permitted it, or at least tolerated it; as we are told by *Plutarch*. See CONCUBINE.

According to some of the Papal Decisions, *Adultery* renders Marriage between the two Criminals unlawful; this making what the Schools call *Impedimentum Criminis*.

The *Greeks*, and other Christians throughout the East, adhere to the Opinion that *Adultery* dissolves the Band of Marriage: So that the Husband, without more ado, may marry another.—The Council of *Trent* condemns that Opinion; and even in some measure anathematizes those who hold it. *Sess.* XXIV. *Can.* 7.

ADULTERY is alſo uſed by ſome fanciful Aſtronomers and Aſtrologers, for an Eclipſe of the Sun, or Moon; happening in an unuſual, and as they ſuppoſe, irregular manner: as in the Caſe of horizontal Eclipſes; where, tho the Sun and Moon be diametrically oppoſite, yet they appear as if above the Horizon, by reaſon of the Refraction. See ECLIPSE, REFRACTION, &c.

ADVOCATE, ADVOCATUS, among the *Romans*, a Perſon ſkill'd in their Law, and who undertook the Defence of Cauſes at the Bar. See LAW.

The Word is compounded of *ad*, and *voco*, *q. d.* I call to my aid, or defence.

The *Roman Advocates* anſwer'd to one Part of the Office of a Lawyer among us, *viz.* the Pleading Part; for as to the giving Counſel, they never meddled with it: that being the Buſineſs of the Juris-conſulti. See JURISCONSULTUS.

The *Romans*, in the firſt Ages of their State, held the Profeſſion of an *Advocate* in great honour; and the Seats of their Bar were crouded with Senators and Conſuls; they, whoſe Voices commanded the People, thinking it an Honour to be employ'd in defending them.

They were ſtyled *Comites*, *Honorati*, *Clariſſimi*, and even *Patroni*; as if their Clients were not leſs oblig'd to them, than Freedmen to their Maſters. See PATRON, and CLIENT.

But the Bar was not then venal.—Thoſe who aſpired to Honours and Offices, took this way of gaining an Intereſt in the People, and always pleaded *gratis*.

But no ſooner was Luxury and Corruption brought into the Commonwealth, than the Bar became a Sharer in them.—Then it was that the Senators let out their Voices for pay, and Zeal and Eloquence were ſold to the higheſt Bidder.——To put a Stop to this Abuſe, the Tribune *Cincius* procured a Law to be paſſed, called from him, *Lex Cincia*; where the *Advocates* were forbid to take any Money of their Clients.—*Fred. Brummerus* has publiſh'd an ample Comment upon this Law.

It had before been prohibited the *Advocates* to take any Preſents or Gratuities for their Pleading.—The Emperor *Auguſtus* added a Penalty to it: notwithſtanding which, the *Advocates* play'd their Parts ſo well, that the Emperor *Claudius* thought he did a great thing, when he oblig'd 'em not to take above eight great Seſterces, which are equivalent to 35 Pounds Sterling, for pleading each Cauſe.

ADVOCATE is ſtill uſed in Countries where the Civil Law obtains, for thoſe who plead and defend the Cauſes of Clients truſted to them. See CIVIL *Law*.

In *Scotland* they have a College, or *Faculty of Advocates*, 180 in number; appointed to plead in all Actions before the Lords of Seſſion.——They have a Dean, Treaſurer, Clerks, Examinators, and a Curator of their Library.

By the Articles of the Union, none are to be named ordinary Lords of Seſſion, except thoſe who have been *Advocates*, or principal Clerks of Seſſion for five Years, &c.

In Doctors Commons, the *Advocates* are uſually called *Proctors*, or *Procurators*. See PROCTOR, and PROCURATOR.

In *France*, they have two Kinds of *Advocates*, viz. *Pleading Advocates*, *Avocats Plaidants*; and *Counſel Advocates*, *Avocats Conſultants*.

This Diſtinction was form'd with a View to the two Branches among the *Romans*, *Advocati*, and *Juriſconſulti*.—Yet there is this difference, that the Function of the Juriſconſulti, who only gave their bare Advice, was of a different Kind from that of the *Advocati*; being a ſort of private and perpetual Magiſtrature, principally under the firſt Emperors; as, on the other hand, the *Advocati* never became *Juriſconſulti*. Whereas in *France*, after the *Advocates* have attain'd to Reputation and Experience enough at the Bar, they quit ſo buſy a Province, and become as it were Chamber Council.

They have alſo their *Advocate General*, and King's *Advocate*, *Avocat du Roy*.

*Lord* ADVOCATE, in *Scotland*, is one of the Officers of State, whoſe Buſineſs is to give his Advice about the making and executing of Laws; to defend the King's Right, and Intereſt in all publick Meetings; to proſecute all Capital Crimes before the Juſticiary; and concur in all Purſuits before Sovereign Courts for Breaches of the Peace; and alſo in all Matters wherein the King, or his Donator, has Intereſt.—He intents no Proceſſes of Treaſon, except by Warrant of Privy Council.

The *Lord Advocate* is ſometimes an ordinary Lord of Seſſion; in which Caſe, he only pleads in the King's Cauſes: otherwiſe, he is at liberty to plead in all Cauſes.

*Fiſcal* ADVOCATE, *Fiſci* ADVOCATUS, was an Officer inſtituted by the Emperor *Adrian*, to defend the Cauſe, and Intereſts of the *Fiſcus*, or private Treaſury; in the ſeveral Tribunals where that might be concern'd. See FISCUS.

*Conſiſtorial* ADVOCATE, is an Officer of the Court of *Rome*, whoſe Office is to plead upon the Oppoſitions made to the Proviſions of Benefices in that Court. See PROVISION.——They are ten in number.

ADVOCATE *of a City*, or *Town*, is a Magiſtrate eſtabliſhed in ſeveral Places of *Germany*, for the Adminiſtration of Juſtice in that City, in the Emperor's Name. See ADVOWEE.

ADVOCATE *of a Church*, or *Eccleſiaſtical* ADVOCATE, a Perſon to whom it antiently belong'd, to defend the Rights and Intereſts of a Church, both in a Legal and a Military Capacity; more uſually called *Advouee*, or *Avowee*. See ADVOWEE.

The Word *Advocatus* or *Advowee* is ſtill retained, for what we uſually call the *Patron*, or he who has the Advowſon, or Right of Preſentation in his own Name. See PATRON, ADVOWSON, PRESENTATION, &c.

The Monaſteries had alſo their *Advocates*, or *Advowees*. See MOMASTERY, &c.

ADVOCATIONE *Decimarum*, a Writ which lies for the Claim of the fourth Part, or upward, of the Tithes that belong to any Church. See TITHE.

ADVOW, or Avow, *Advocare*, in Law, to juſtify or maintain an Act formerly done.

Thus, if one take a Diſtreſs for Rent, or other thing, and he that is diſtrained ſues a Replevin; the Diſtrainer, juſtifying or maintaining the Act, is ſaid to *avow*. See DISTRESS, REPLEVY, &c.

*Bracton* uſes the *Latin* Term *Advocare*, in the ſame Signification; as, *Advocatio diſſeiſinæ*, L. IV. c. 26. And in *Caſſaneus de Conſuet. Bur. Advocare* is uſed in the like Senſe. The Author laſt cited does alſo uſe the Subſtantive *Deſavohamentum*, for a Diſavowing, or refuſing to *avow*.

The original Uſe of the Word was this.—When ſtoln Goods were bought by one, and ſold to another, it was lawful for the right Owner to take them wherever they were found; and he in whoſe Poſſeſſion they were found, was bound, *Advocare*, *i. e.* to produce the Seller to juſtify the Sale, and ſo on till they found the Thief.

Afterwards, the Term was applied to any thing which a Man acknowledg'd to be his own, or done by him; in which Senſe, it is mentioned in *Fleta*, L. I. pars 4. *Si vir ipſum in domo ſua ſuſceperit, nutrierit & advocaverit filium ſuum.*

ADVOWEE, or AVOWEE, or ADVOCATE *of a Church*, was heretofore the Patron, or Defender of the Rights thereof. See ADVOCATE, PATRON, &c.

The Word is French, *Advoué*, or *Avoue*, of the Verb *Avouer*, to avow, own, acknowledge Dependence, Subjection, &c.——Whence alſo *Advowſon*. See Avow, and ADVOWSON.

There were alſo *Advowees* for Cathedrals, Abbies, Monaſteries, &c.—Thus, *Charlemaign* had the Title of *Advocate* of St. *Peter's*; King *Hugh*, of St. *Riquier*; and *Bollandus* mentions ſome Letters of Pope *Nicholas*, by which he conſtituted King *Edward* the Confeſſor, and his Succeſſors, *Advocates* of the Monaſtery at *Weſtminſter*, and of all the Churches in *England*.

Theſe *Advowees* were the Guardians, Protectors, and, as it were, Adminiſtrators of the temporal Concerns of the Churches, &c. and under their Authority, were paſs'd all Contracts which related thereto. See GUARDIAN, &c.

It appears alſo, from the moſt antient Charters, that the Donations made to Churches, were conferr'd on the Perſons of the *Advowees*.—They always pleaded the Cauſes of the Churches in Court, and diſtributed Juſtice for them, in the Places under their Juriſdiction.——They alſo commanded the Forces furniſh'd by their Monaſteries, &c. for the War; and even were their Champions, and ſtood Duels for them. See COMBAT, DUEL, and CHAMPION.

This Office is ſaid to have been firſt introduc'd in the IVth Century, in the Time of *Stilico*; tho the Benedictines don't fix its Origin before the VIIIth Century. *Act. Sanct. Benedict.* S. III. P. 1. Præf. p. 91, &c.

By degrees, Men of the firſt Rank were brought into it, as it was found neceſſary, either to defend with Arms, or to protect with Power and Authority.——In ſome Monaſteries they were called *Conſervators*; but theſe, without the Name, had all the ſame Functions with *Advowees*. See CONSERVATOR.

There were alſo ſometimes ſeveral *Sub-Advowees*, or Sub-Advocates in each Monaſtery, who officiated inſtead of the *Advowees* themſelves; which, however, proved the Ruin of Monaſteries; thoſe inferior Officers running into great Abuſes.

Hence, Husbands, Tutors, and every Perſon in general, who took upon him the Defence of another, were alſo called *Advowees*, or Advocates.—Hence ſeveral Cities, alſo, had their *Advowees*; which were eſtabliſh'd long after the Eccleſiaſtical ones, and doubtleſs from their Example.—Thus, we read in Hiſtory of the *Advowees* of *Augsburg*, of *Arres*, &c.

The Vidames aſſumed the Quality of *Advowees*; and hence it is, that ſeveral Hiſtorians of the VIIIth Century, confound the two Functions together. See VIDAME.

And hence alſo it is, that ſeveral Secular Lords in *Germany* bear Mitres for their Creſts; as having antiently been Advocates of the great Churches. See MITRE, and CREST.

*Spelman* diſtinguiſhes two Kinds of Eccleſiaſtical *Advowees*.—The one, of Cauſes, or Proceſſes, *Advocati Cauſarum*: the other, of Territory, or Lands, *Advocati Soli*.

The former were nominated by the King, and were uſually Lawyers, who undertook to plead the Cauſes of the Monaſteries.

The other, which ſtill ſubſiſt, and are ſometimes called by their primitive Name, *Advowees*, tho more uſually *Patrons*, were hereditary; as being the Founders and Endowers of Churches, &c. or their Heirs. See PATRON.

In this Senſe, Women were ſometimes *Advocateſſes*, *Advocatiſſæ*.—And, in effect, the Canon Law mentions ſome who had this Title, and who had the ſame Right of Preſentation, &c. in their Churches, which the *Advowees* themſelves had.

In a Stat. 25 *Edw.* III. we meet with *Advowee Paramount*, for the Higheſt Patron; that is, the King. See PARAMOUNT.

There were alſo *Advowees of Countries*, and *Provinces*.—In a Charter of the Year 1187, *Berthold* Duke of *Zeringhen*, is called *Advowee* of *Thureg*; and in the *Notitia* of the *Belgic* Churches, publiſh'd by *Mirœus*, the Count of *Lovain* is ſtiled *Count and* Advowee *of* Brabant.——In the XIth and XIIth Centuries, we alſo meet with the *Advowees* of *Alſatia*, of *Suabia*, &c.

*Raymond de Agiles* relates, that after the Recovery of *Jeruſalem* from the *Saracens*, it being propoſed to elect a King thereof; the Biſhops pleaded, *Non debere ibi eligi Regem, ubi Deus paſſus & coronatus eſt*, &c. That "they "ought by no means to appoint a King, in a Place where "God had ſuffer'd and been crown'd; but ſhould content "themſelves with electing an *Advowee*, or *Advocate of the* "*City*, to take Care of the Garriſon, &c."——In effect, *Dodechin*, a *German* Abbot, who wrote a Voyage to the Holy Land in the XIIth Century, calls *Godfrey* of *Bulloign*, *Advowee of the Holy Sepulchre*.

ADVOWSON, or ADVOWZEN, *Advouerie*, *Advocatia*, or *Advocatio*, the Quality, or Office of an *Advowee*, or Advocate, &c. See ADVOWEE, &c.

ADVOWSON, or ADVOUZEN, in Common Law, ſignifies a Right to preſent to a Benefice. See PRESENTATION.

In this Senſe, the Word imports as much as *Jus patronatus* in the Canon Law. See PATRONAGE.

The Reaſon of the Name *Advowſon*, *Advocatio*, is, that antiently, thoſe who had a Right to preſent to a Church, were Maintainers of it, or great Benefactors to it; and were ſometimes called *Patroni*, and ſometimes *Advocati*, or *Advowees*. See ADVOCATE, &c.

In the general, an *Advowſon* is where a Biſhop, Dean, or Chapter, and their Succeſſors, or any Lay Patron, have a Right to preſent whom they pleaſe to any ſpiritual Benefice, when it becomes void. See VACANCY and BENEFICE, &c.

This *Advowſon* is of two Kinds.—*Advowſon in groſs*, that is, not immediately reſtrained, or adhering to any Manor, as Parcel thereof.

And *Advowſon appendant*, which depends on a Manor, as appurtenant to it: This *Kitchin* calls an *Incident*, which may be ſeparated from its Subject.

Add, that as the Builders and Endowers of a Church were the Patrons of it; ſo thoſe who founded any Religious Houſe, had the *Advowſon* or Patronage of it.

Sometimes the Patron had the ſole Nomination of the Prelate, Abbot, or Prior; either by Inveſtiture, (or Delivery of a Paſtoral Staff) or by direct Preſentation to the Dioceſan: And if a free Election was left to the Religious, yet a *Conge d'Elire*, or Licence of Election, was firſt to be obtain'd of the Patron, and the Perſon elected was confirm'd by him.

If the Founder's Family was extinct, the Patronage of the Convent went to the Lord of the Manor.

ADVOWTRY. See ADULTERY.

ADUST, ADUSTUS, is applied, among Phyſicians, &c. to ſuch Humours, as by long Heat become of a hot and fiery Nature. See HUMOUR.

Such is Choler ſuppoſed to be.—Melancholy is uſually conſider'd as black and *aduſt* Bile. See CHOLER, MELANCHOLY, &c.

*Aduſt* Blood, ſays *Blanchard*, is, when by reaſon of extraordinary Heat, its more ſubtile Parts are all evaporated, leaving the groſſer, with all the Impurities therein, half torrify'd, as it were. See BLOOD.

The Word is form'd of the Latin *aduro*, I burn.

ADYTUM, Ἄδυτον, a ſecret or retir'd Place in the Pagan Temples, where Oracles were given, and into which none but the Prieſts were admitted. See TEMPLE, ORACLE, &c.

AE, or Æ, a Dipthong, or double Vowel, borrow'd from the *Greeks* and *Latins*. See DIPTHONG.

Authors are by no means agreed as to the Uſe of the *æ*.—Some, out of regard to Etymology, inſiſt on its being retain'd in all Words, particularly Technical ones, borrowed from thoſe Languages; while others, from a Conſideration that it is no proper Dipthong in our Language, its Sound being no other than that of the ſimple *e*; contend that it ought to be entirely diſuſed, except in Words which retain their *Latin* and *Greek* form in every thing elſe.

For our own part, till the Point is a little better ſettled, we muſt be contented to ſteer a kind of middle, or neutral Courſe; conforming our ſelves to Cuſtom as nearly as may be.—Such Articles, therefore, as are omitted under *Æ*, the Reader will find under *E*.

ÆACEA, in Antiquity, ſolemn Feaſts and Combats, celebrated in *Ægina*, in honour of *Æacus*; who had been their King, and who, on account of his ſingular Juſtice upon Earth, was ſuppoſed to have a Commiſſion given him, to be one of the Judges in Hell. See FEAST, &c.

ÆCHMALOTARCHA, in Antiquity, a *Greek* Term, ſignifying, Chief or Leader of the Captives.

The *Jews* who refuſed to follow *Zorobbabel*, and return with him to *Jeruſalem*, after the *Babyloniſh* Captivity; created an *Æchmalotarcha*, to govern them.—Not that the *Jews* themſelves call'd him by this Name, as ſome Authors have aſſerted; for that People ſpoke *Hebrew*, or *Chaldee*, not *Greek*. But *Origen*, and others, who wrote in the *Greek* Tongue, render'd the *Hebrew* Name ראש גלות *Roſch galuth*, q. d. *Chief of the Captivity*, by a *Greek* Name of the like import, ἀιχμαλωταρχη, form'd from ἀιχμαλωτος, of ἀιχμη, *a Point or Pike*, and ἀρχη, *Command*.

However, the *Jews* muſt have had Officers of this kind before the Return from *Babylon*: Witneſs the Hiſtory of *Suſannah*; the two Elders who condemn'd her, being *Æchmalotarchæ* that Year.—The *Jewiſh* Writers aſſure us, that the *Æchmalotarchæ* were only to be choſen out of the Tribe of *Judah*.

ÆDES, in Antiquity, an inferior kind of Temple, diſtinguiſhed by this, that it was not conſecrated by the Augurs. See TEMPLE, AUGUR, &c.

Such was the *Ærarium*, or Treaſury; called *Ædes Saturni*. See ÆRARIUM.

ÆDILIS, EDILE, in Antiquity. See EDILE.

ÆGILOPS, a Tumor, or rather Ulcer, in the great Canthus or Angle of the Eye, by the Root of the Noſe; either with or without an Inflammation. See EYE, TUMOR, and ULCER.

The Word, in its original *Greek*, ἀιγιλωψ, ſignifies a *Goat's Eye*; in regard, Goats are ſuppoſed extremely liable to this Diſtemper.

If the *Ægilops* be neglected, it burſts, and degenerates into a Fiſtula, which eats into the Bone. See FISTULA.

Authors frequently uſe *Ægylops*, *Anchylops*, and *Fiſtula Lachrymalis* promiſcuouſly: But the more accurate, after *Ægineta*, make a difference.—The Tumor, ere it becomes ulcerous, is properly called *Anchylops*; and after it has render'd the *Os Lachrymale* carious, *Fiſtula Lachrymalis*. See ANCHYLOPS, &c.

If the *Ægilops* be accompanied with an Inflammation; it takes its Riſe from the Abundance of Blood, which the too great Plenitude diſcharges upon the Corner of the Eye.—If it be without an Inflammation, it is ſuppoſed to proceed from a viſcous pituitous Humour, thrown upon this Part.

ÆGIPAN, in Antiquity, a Denomination given to *Pan*, and the *Panes*. See PANES.

The Word is compounded of αιξ, αιγος, *Goat*; as being repreſented with the Horns, Legs, Feet, &c. of that Animal.

The Antients alſo gave the Name *Ægipans* to a ſort of Monſters mention'd by *Pliny*, *Solinus*, and *Pom. Mela*, L. I. c. 8.—*Salmaſius*, in his Notes on *Solinus*, takes *Ægipan* to have ſignified the ſame in *Lybia* with *Sylvanus* among the *Romans*. See SYLVAN.

*Voſſius* rejects the Opinion, and ſhews, that the *Ægipans* had not Faces like Men, as the *Sylvans* had; but like Goats. In effect, the whole upper Part of the Body reſembled that Animal; and as to the lower, they painted it with a Fiſhes Tail. The Monſter repreſented on ſome Medals of *Auguſtus*, by Antiquaries called *Capricornus*; appears to be the true *Ægipan*.

ÆGYPTIACUM, in Pharmacy, a kind of deterſive Unguent; ſo called from its duſky Hue or Colour, which reſembles the ſwarthy Complexion of the *Ægyptians*. See DETERSIVE, and UNGUENT.

It is compoſed of Verdigreaſe, Vinegar, and Honey, boil'd to a Conſiſtence.

The Preſcription is *Meſue*'s.—It is chiefly uſed for eating off rotten Fleſh, and cleanſing foul Ulcers; particularly Venereal ones in the Throat, &c. It alſo deſtroys thoſe cancerous Eroſions apt to grow in Childrens Mouths.

ÆNIGMA. See ENIGMA.

ÆOLIC, or ÆOLIAN, in Grammar, the Name of one of the five Dialects of the *Greek* Tongue. See GREEK, and DIALECT.

It was firſt uſed in *Bœotia*; whence it paſs'd into *Æolia*, and was that which *Sappho* and *Alcæus* wrote in.

The *Æolic* Dialect throws out all the ſharp, harſh Accents; and agrees in ſo many things with the *Doric* Dialect, that the two are uſually confounded together. See DORIC.

ÆOLIC, or ÆOLIAN *Mode*, in Muſick. See MODE.

ÆOLIPILE, ÆOLIPILA, a hydraulick Inſtrument, conſiſting of a hollow metalline Ball, with a ſlender Neck or Pipe ariſing from the ſame; which being filled with Water, and thus expos'd to the Fire, produces a vehement Blaſt of Wind. See WIND.

This Inſtrument, *Des Cartes* and others have made uſe of, to account for the natural Cauſe and Generation of Wind. —And hence its Name, *Æolipila*, q. d. *pila Æoli*, *Æolus*'s Ball; *Æolus* being reputed the God of the Winds. See GOD.

Sometimes the Neck is made to ſcrew into the Ball, which is the moſt commodious way, becauſe then the Cavity may the more readily be filled with Water: If there be no Screw, it may be fill'd thus.—Heat the Ball red hot, and throw it into a Veſſel of Water; the Water will run in at a ſmall Hole, and fill about two thirds of the Cavity.

If, after this, the *Æolipile* be laid on, or before, the Fire; ſo that the Water and Veſſel become very much heated; the Water being rarified into a kind of momentary Air, will be forced out with very great Noiſe and Violence; but it will be by Fits, and not with a conſtant and uniform Blaſt.

Theſe Phænomena, the Reader will be eaſily enabled to ſolve, from what is ſhewn under the Articles, AIR, WATER, RAREFACTION, &c.

The Air or Vapour iſſuing out of the *Æolipile*, is found ſenſibly hot near the Orifice; but at a farther diſtance, cold; like what we obſerve of our own Breath: The Cauſe of which is controverted.—The *Corpuſcularians* account for it hence, that the Fire contain'd in the rarified Vapour, tho ſufficient to be felt near the Orifice, diſengages it ſelf in the Progreſs of the Stream; and becomes inſenſible ere arriv'd at the Journey's End. See FIRE.—The mechanical Philoſophers, on the other hand, hold that the Vapour, at its Exit from the Ball, is endued with that peculiar Species of circular Motion, which conſtitutes the Quality Heat; and that the further it recedes therefrom, the more is this Motion deſtroy'd, by the Reaction of the contiguous Air; till the Heat at length becomes inſenſible. See HEAT.

*Chauvin* ſuggeſts ſome further Uſes of the *Æolipile*.—1°, He thinks it might be applied inſtead of Bellows to blow the Fire, where a very intenſe heat is requir'd. 2°, If a Trumpet, Horn, or other ſonorous Inſtrument were fitted to its Neck, it might be made to yield Muſick. 3°, If the Neck were turn'd perpendicularly upwards, and prolong'd by a Tube or hollow Cylinder fitted to it, and a hollow Ball laid on the Orifice of the Tube; the Ball would be blown up, and kept fluctuating or playing up and down: As in the Stream of a Fountain. See FOUNTAIN.——And, 5°, it might ſerve to ſcent, or perfume a Room, if fill'd with perfum'd, inſtead of common Air.

ÆON, EON, Αἰων, q. d. *Age*; literally ſignifies the Duration of a thing. See AGE, and DURATION.

But ſome antient Hereticks have affix'd another Idea to it; in order to which, they have made uſe of the Philoſophy of *Plato*: giving Reality to the Ideas, which that Philoſopher had imagin'd in God; and even perſonifying them, and feigning them diſtinct from God, and to have been produced by him, ſome Male, others Female. See IDEA, and PLATONISM.

Theſe Ideas they call *Æons*; of an Aſſemblage whereof they compos'd the Deity, calling it πλήρωμα, a *Greek* Word, ſignifying Fulneſs.

*Simon Magus* is ſaid to have been the firſt Inventor of theſe *Æons*; which were afterwards brought to Perfection by *Valentinus*, who acknowledg'd thirty of 'em. See GNOSTICS, VALENTINIANS, &c.

ÆRA, in Matters of Chronology, ſignifies the ſame with *Epocha*; that is, any Point of Time, determin'd at Pleaſure, whence to begin the Computation of the Years elapſed ſince. See EPOCHA.

The generality of Writers agree, that the *Æra* was originally uſed in reſpect of the manner of reckoning Time among the *Spaniards*; whoſe *Æra* was thirty eight Years older than the Chriſtian Epocha, or Year of Grace.—— *Peter* the fourth King of *Arragon*, was the firſt who aboliſh'd the *Spaniſh Æra* in his States, in the Year 1350: As did *John* I. King of *Portugal*, in 1451.

The Origin of the Word is ſomewhat obſcure.—*Favyn* ſays, that in *Cicero* and *Lucilius*, the Word *Æra* is plural, and ſignifies the ſame thing with *Commentaria*, Leaves of a Book of Accounts, or a Merchant's Journal.

Others, according to the ſame Author, are of opinion, that *Æra* was uſed inſtead of *Hera*, for *Herus*, Maſter, Lord; and that it ſignify'd the Dominions of a Prince.

Others, according to *Iſidore*, derive it from *Æs*, *Æris*; on account of the Tax of a Piece of Silver, impos'd by *Auguſtus* on the Heads of all the Subjects of his Empire.

Others ſay, that the Word is form'd from the initial Letters of the three firſt Words in the publick Acts, *Annus* ER*at Auguſti*; but theſe three laſt Etymologies are rejected with good Reaſon.

ÆRARIUM, the publick Treaſury of a State or People. See TREASURY.

The Temple of *Saturn* at *Rome*, being the great Treaſury of the State, was firſt called *Ærarium*; from *Æs*, *Æris*, Braſs; that being the only Money in uſe before the Year of *Rome* 485. *Pliny*, L. III. c. 33.—See MONEY.

The *Ærarium Militare* was a Fund of Money, deſtin'd for the Maintenance of ſeveral Companies of Soldiers, to be in readineſs for the better Defence of the City.—It was firſt erected under *Auguſtus*, and maintained by a yearly voluntary Contribution; but that proving inſufficient, the twentieth Part of all Legacies and Inheritances, except of ſuch as fell to the next of kin or the Poor, were conſign'd to this Treaſury.

For the Cuſtody hereof, three of his Lifeguard were conſtituted *Præfecti Ærarii*. See PRÆFECTUS.

AERIAL, AERIUS, ſomething that conſiſts of Air, or has a relation or reſemblance to Air. See AIR.

The *Eſſeni*, the moſt refined and rational Sect among the *Jews*, held that the human Soul conſiſted of an *Aerial* Matter. See ESSENI.

Angels or Spirits, whether Good or Evil, ſaid ſometimes to appear, are ſuppoſed to aſſume an *aerial* Body, in order to come ſenſibly. See ANGEL.

*Porphyry* and *Jamblicus* admit a ſort of Demons or *aerial* Spirits, to which they give various Names. See DEMON, GENIUS, &c.

The Roſicrucians, and other Viſionaries, fill the Atmoſphere with *aerial* Inhabitants. See ROSICRUCIAN, SYLPH, GNOME, &c.

AERIAL *Perſpective*, is that which repreſents Bodies weaken'd and, diminiſh'd, in proportion to their diſtance from the Eye. See PERSPECTIVE.

*Aerial Perſpective*, has chiefly to do with the Colours of Objects, whoſe force and luſtre it takes off more or leſs, to make 'em appear as if more or leſs remote. See COLOUR, and CLAIR-OBSCURE.

It is founded on this, that the longer Column of Air an Object is ſeen thro'; the weaker do the viſual Rays emitted from it affect the Eye. See VISION.

AERIANS, AERIANI, in Antiquity, a Sect in Religion, denominated from *Aerius*; a Perſon alive in the Time of St. *Epiphanius*.

The *Aerians* had much the ſame Sentiments, in reſpect of the Trinity, as the *Arians*; beſide which, they had ſome Dogmas of their own, and particularly this: That there is no difference between Prieſts and Biſhops; but that the Prieſthood and Epiſcopate are abſolutely one and the ſame Order, or Dignity: An Opinion ſince ſtrenuouſly aſſerted by many modern Divines. See BISHOP, PRIEST, PRESBYTER, &c.

*Aerius* built his Doctrine chiefly on ſome Paſſages in St. *Paul*; and, among others, that in the firſt Epiſtle to *Timothy*, Ch. IV. v. 14. where that Apoſtle exhorts him not to neglect *the Gift he had receiv'd by the laying on of the Hands of the Presbytery*. Here, obſerves *Aerius*, is no mention of Biſhops; but *Timothy* evidently receiv'd his Ordination from the Presbyters or Prieſts.

St. *Epiphanius*, *Hær.* 75. ſtands up briſkly for the Superiority of Biſhops, againſt the *Aerians*.—The Word *Presbytery* in St. *Paul*, he obſerves, includes both Biſhops and Prieſts; the whole Senate, or Aſſembly of the Eccleſiaſticks of the Place: And in ſuch an Aſſembly had *Timothy* been ordain'd. See PRESBYTERY.

AEROMANCY, AEROMANTIA, a Kind of Divination, perform'd by means of the Air. See DIVINATION, and AIR.

The Word is compounded of the *Greek* ἀηρ, *Air*, and μαντεία, *Divination*. See HYDROMANCY.

AEROMETRY, AEROMETRIA, the Art of meaſuring the Air, its Powers and Properties. See AIR.

*Aerometry*

*Aerometry* includes the Laws of the Motion, Gravitation, Preſſion, Elaſticity, Rarefaction, Condenſation, &c. of that Fluid. See ELASTICITY, RAREFACTION, &c.

The Word *Aerometry* is but little uſed: In lieu hereof, we commonly call this Branch of Philoſophy, *Pneumatics*. See PNEUMATICS.

*C. Wolfius*, Profeſſor of Mathematicks at *Hall*, having reduced many of the Affections of this Fluid to geometrical Demonſtration; publiſhed *Elements of Aerometry*, at *Leipſic*, 1709, firſt in *High Dutch* and afterwards in *Latin*.—Thus is the Doctrine of the Air incorporated into the Mathematical Sciences. See MATHEMATICKS.

The Word is compounded of ἀηρ, and μετρεω, *to meaſure*.

ÆRUGO. See RUST.

ÆRUGO *Æris*, in Medicine, &c. See VERDEGREASE.

ÆRY, or AIRY, of Hawks, is what we call a Neſt in other Birds. See HAWK, and HAWKING.

ÆSCHYNOMENOUS *Plants*, among Botaniſts, are thoſe popularly called *Senſitive Plants*. See SENSITIVE.

ÆSNECY, in Law. See ESNECY.

ÆSTIMATIO *Capitis*, in our antient Law-Books. See WERE, WERELADE, WEREGILD, &c.

King *Athelſtan*, in a great Aſſembly held at *Exeter*, declared what Mulcts were to be paid *pro æſtimatione capitis*, for Offences committed againſt ſeveral Perſons according to their degrees; the *Eſtimation* of the King's Head to be 30000 *Thrymſæ*; of an Archbiſhop, or Satrapa, or Prince, 15000; of a Biſhop or a Senator, 8000; of a Prieſt, or a Thane, 2000, &c. Creſſy's *Church Hiſt.* fol. 834. *b.* and L. *Hen.* I.

ÆSTIVAL, or ESTIVAL, of or belonging to Summer. See SUMMER.

Thus, we ſay, the *Æſtival Solſtice*, &c. in oppoſition to *Brumal*. See SOLSTICE.

ÆSTUARY, ÆSTUARIUM, in Geography, an Arm of the Sea; running up a good way into the Land. See SEA.

Such is *Briſtol* Channel, many of the Firths of *Scotland*, &c.

ÆSTUARY, is ſometimes alſo uſed in Pharmacy, for a Vapour-Bath, *Balneum Vaporoſum*, See VAPOUR, and BATH.

ÆS *Uſtum*, called alſo *Crocus Veneris*, a Chymical Preparation, made of Copper cut into thin Plates, put into a Crucible with Sulphur and Salt, *ſtratum ſuper ſtratum*, and thus ſet in a hot Charcoal Fire, till the Sulphur be conſumed. See CROCUS, COPPER, VENUS, &c.

It is very deterſive; and is uſed for eating off dead Fleſh. They who make this uſe of it, are to heat it red hot in the Fire nine times; and quench it as often in Linſeed Oil. See EPULOTIC.

ÆTHER, is uſually underſtood of a thin, ſubtile Matter, or Medium, much finer and rarer than Air; which commencing from the Limits of our Atmoſphere, poſſeſſes the whole heavenly Space. See HEAVEN, WORLD, &c.

The Word is *Greek*, αἰθηρ, ſuppoſed to be form'd from the Verb αἰθειν, *to burn, to flame*; ſome of the Antients, particularly *Anaxagoras*, ſuppoſing it of the Nature of Fire. See FIRE.

The Philoſophers cannot conceive that the largeſt Part of the Creation ſhould be perfectly void; and therefore fill it with a Species of Matter under the Denomination of *Æther*.—But they vary extremely as to the Nature and Characters of this *Æther*.

Some conceive it as a Body *ſui generis*, appointed only to fill up the Vacuities between the heavenly Bodies; and therefore confined to the Regions above our Atmoſphere.—Others ſuppoſe it of ſo ſubtile and penetrating a Nature, as to pervade the Air, and other Bodies; and poſſeſs the Pores and Intervals thereof.—Others deny the Exiſtence of any ſuch ſpecifick Matter; and think the Air it ſelf, by that immenſe Tenuity and Expanſion it is found capable of, may diffuſe it ſelf thro' the interſtellar Spaces, and be the only Matter found therein. See AIR.

In effect, *Æther*, being no Object of our Senſe, but the mere Work of Imagination, brought only upon the Stage for the ſake of Hypotheſis, or to ſolve ſome Phænomenon, real or imaginary; Authors take the Liberty to modify it how they pleaſe.—Some ſuppoſe it of an elementary Nature, like other Bodies, and only diſtinguiſh'd by its Tenuity, and the other Affections conſequent thereon: which is the *Philoſophical Æther*.—Others will have it of another Species, and not Elementary; but rather a ſort of fifth Element, of a purer, more refined, and ſpirituous Nature than the Subſtances about our Earth; and void of the common Affections thereof, as Gravity, &c. The heavenly Spaces, being the ſuppoſed Region or Reſidence of a more exalted Claſs of Beings; the Medium muſt be more exalted in proportion.—Such is the antient and *popular* Idea of *Æther*, or *Æthereal Matter*. See ÆTHEREAL.

The Term *Æther* being thus embarraſs'd with a Variety of Ideas, and arbitrarily applied to ſo many different things; the later and ſeverer Philoſophers chuſe to ſet it aſide: and in lieu thereof, ſubſtitute other more determinate ones.

Thus, the *Carteſians* uſe the Term *Materia Subtilis*; which is their *Æther*: And Sir *I. Newton*, ſometimes, a *Subtile Spirit*, as in the Cloſe of his *Principia*; and ſometimes a *Subtile* or *Æthereal Medium*; as in his *Opticks*.

The Truth is, there are abundance of Conſiderations, which ſeem to evince the Exiſtence of ſome Matter in the Air, much finer than the Air it ſelf.—There is an unknown ſomething, which remains behind when the Air is taken away; as appears from certain Effects which we ſee produced *in Vacuo*.—Heat, Sir *I. Newton* obſerves, is communicated thro' a Vacuum, almoſt as readily as thro' Air: But ſuch Communication cannot be without ſome interjacent Body, to act as a Medium. And ſuch Body muſt be ſubtile enough to penetrate the Pores of Glaſs; and may be very well concluded to permeate thoſe of all other Bodies; and conſequently be diffuſed thro' all the Parts of Space: Which anſwers to the full Character of an *Æther*. See HEAT.

The Exiſtence of ſuch Æthereal Medium being ſettled; that Author proceeds to its Properties; inferring it to be not only rarer and more fluid than Air, but exceedingly more elaſtick, and active: In Virtue of which Properties, he ſhews, that a great part of the Phænomena of Nature may be produced by it.—To the Weight, *e. g.* of this Medium, he attributes Gravitation, or the Weight of all other Bodies; and to its Elaſticity, the elaſtick Force of the Air, and of nervous Fibres, and the Emiſſion, Refraction, Reflection, and other Phænomena of Light; as alſo, Senſation, Muſcular Motion, &c.—In fine, this ſame Matter ſeems the *Primum Mobile*, the firſt Source or Spring of phyſical Action in the modern Syſtem.—*See further under the Article Subtile* MEDIUM, ATTRACTION, GRAVITATION, REFRACTION, REFLECTION, &c. ſee alſo FIBRE, *Muſcular* MOTION, &c. ſee alſo NEWTONIAN *Philoſophy*, &c.

The *Carteſian Æther* is ſuppoſed not only to pervade, but adequately to fill all the Vacuities of Bodies; and thus to make an abſolute Plenum in the Univerſe. See *Materia* SUBTILIS; ſee alſo PLENUM; ſee alſo CARTESIANISM, &c.

But Sir *I. Newton* overturns this Opinion, from divers Conſiderations; by ſhewing, that the Celeſtial Spaces are void of all ſenſible Reſiſtance: For, hence it follows, that the Matter contained therein, muſt be immenſely rare, in regard the Reſiſtance of Bodies is chiefly as their Denſity; ſo that if the Heavens were thus adequately fill'd with a Medium or Matter how ſubtile ſoever, they would reſiſt the Motion of the Planets and Comets much more than Quickſilver, or Gold. See RESISTANCE, VACUUM, PLANET, COMET, &c.

ÆTHEREAL, ÆTHEREUS, ſomething that belongs to *Æther*, or is of the Nature of *Æther*. See ÆTHER.

Thus, we ſay, the *Æthereal* Space; *Æthereal* Regions, &c.—Some of the Antients divided the Univerſe, with reſpect to the Matter contain'd therein, into *Elementary* and *Æthereal*. See UNIVERSE, and ELEMENTARY.——Under *Æther*, or the *Æthereal* World, was included all that Space above the upper Element, *viz.* Fire. This they ſuppoſed to be perfectly, homogeneous, incorruptible, unchangeable, &c. See CORRUPTION, &c.

'Twas a Point controverted among 'em, Whether or no the *Æthereal* Matter had the Property of Gravity?—— Many late Philoſophers, not only at home but abroad, contend for its Gravity; and even for its being the Cauſe of Gravity in all other Bodies.—In effect, ſays *Chauvin*, Bodies do not deſcend by any inherent Principle; but by the Impulſe or Truſion of ſomething external: which can be nothing but Æther; in regard they fall *in Vacuo* as readily, nay more ſo, than in open Air: From the ſame Principle ariſes the Coheſion of Bodies, &c. *Lexic. Philoſoph. Voc. Æther*. See MEDIUM.

ÆTHEREAL *Oil*, is a fine, ſubtile Oil, approaching nearly to the Nature of a Spirit. See OIL.

Thus, the pure Liquor riſing next after the Spirit, in the Diſtillation of Turpentine, is called the *Æthereal Oil* of Turpentine. See TURPENTINE.

Some Chymiſts diſtinguiſh two Principles in Urine; the one a volatile urinous Salt, reſembling Spirit of Nitre; the other an *Æthereal Oil*, or *Sulphur*; partaking of the Nature of Spirit of Wine. *Dionis*. See URINE.

ÆTHEREAL *Heaven*. See *Æthereal* HEAVEN.

ÆTHIOPS *Mineral*, a Preparation of Mercury, made by grinding equal Quantities of crude Quickſilver and Flower of Sulphur, in a Stone or Iron Mortar; till they become incorporated into a black Pouder. See MERCURY.

It is preſcribed for the Worms, and all Crudities and Acrimony of the Humours; and is reputed infallible againſt the Itch, and other cutaneous Diſeaſes.

AETIANS, AETIANI, in Antiquity, a Sect or Branch of *Arians*, the Diſciples of *Aetius* of *Antioch*, ſirnamed the *Impious*; who, according to *Philaſtrius*, was firſt Smith, then Sophiſt, and laſtly Phyſician. See ARIAN.

The *Aetians* had divers other Denominations; as, *Pure Arians*, *Eunomians*, *Heterouſians*, *Troglodytes*. See EUNOMIANS, HETEROUSIAN, &c.

ÆTIOLOGY, Ætiologia, a Rationale, or Diſcourſe of the Cauſe of a Diſeaſe. See Disease.

In this Senſe, we ſay, the *Ætiology* of the Small Pox, of the Hydrophobia, of the Gout, the Dropſy, &c. See Hydrophobia, Pox, Gout, Dropsy, &c.

The Word is compounded of the *Greek* αιτια, *Cauſe*, and λογ☉, *Sermo*, *Diſcourſe*.

ÆTITES, in Natural Hiſtory, the *Eagle-Stone*. See Eagle-*Stone*.

The *Ætites*, or *Lapis Ætites*, is a kind of Stone, vulgarly ſaid to be found in the Eagle's Neſt; but this, as well as many of the Virtues aſcrib'd to it, ſeem to be fabulous. —It is found under ground in ſeveral Parts: Near *Treves* in *France*, one can ſcarce dig a few Feet, without finding conſiderable Strata or Beds hereof.

'Tis uſually hollow, aud has a kind of Core or Kernel in it, which, upon ſhaking, rattles: Some have two, and others three ſuch Cores.

It is found of various Forms, and Sizes; but its Texture or Conſiſtence is pretty uniform; conſiſting of two or three Lays or Coats of a Matter reſembling baked Earth: Eſpecially the innermoſt.—They are originally ſoft, and of the Colour of yellow Oker.

*Dioſcorides* ſays, it is of uſe in diſcovering a Thief; for by mixing it with his Meat, he'll be unable to ſwallow it.—*Matthiolus* informs us, that Birds of Prey never hatch their young without this Stone; and that they ſeek it as far as the *Indies*.

The Uſe now made of the Stone, is to aſſiſt Women in Labour; to which end, they faſten it about the Knee: it being a Tradition, that according as it is applied above or below the Matrix, it has the Faculty of retaining or excluding the Child. See Delivery.

Hence, it is ſometimes directed to be bore about the Arm to prevent *Abortion*. See Abortion.

The Word is form'd of the *Greek* αετος, *Aquila*, Eagle.

AFFECTION, Affectio, in Phyſicks, a Quality or Property of ſome natural Being. See Quality, and Property.

The Schoolmen define *Affection* an Attribute proper to any Being, ariſing from the Eſſence thereof. See Attribute, Proper, &c.

*Affections* are diſtinguiſh'd into thoſe of *Body*, and thoſe of the *Mind*.

Affections *of Body*, are certain Modifications thereof; occaſioned or induced by Motion; in Virtue whereof, the Body comes to be ſo and ſo diſpoſed. See Body, Matter, Motion Modification, &c.

Theſe are ſubdivided into *Primary*; as, *Quantity*, *Figure*, *Motion*, *Place*, *Quality*, and *Time*: and *Secondary*, as *Diviſibility*, *Continuity*, *Impenetrability*, *Regularity*, *Health*, *Strength*, &c. See each under its proper Article.

Affections *of Mind*, are what we more uſually call *Paſſions*. See Passion.

*Mechanical* Affections. See Mechanical *Affection*.

Affection is peculiarly uſed in Medicine, for a morbid or diſorderly State of a Part.—Thus, we ſay, ſuch a Part of the Body is *affected*, *i. e.* indiſpoſed, or ſeized with a Diſeaſe. See Disease.

The Sick are frequently miſtaken as to the Place *affected*, by means of the Conſent between the ſeveral Parts, which makes a Diſorder in one Part be felt in another. See Consent.

*Hypocondriacal* Affection, *Hyſterical* Affection, &c. See Hypocondriacal, Hysteric, &c.

Affection is ſomeimes alſo uſed in a Legal Senſe, for the aſſigning, making over, pawning, or mortgaging a thing, to aſſure the Payment of a Sum of Money, or the Diſcharge of ſome other Duty or Service.—His Effects were all *affected* to his Creditors.—The Revenues of ſuch a Benefice, of ſuch an Hoſpital, are *affected* to the Payment of Penſions, to the Support of Orphans.—There are certain Duties and Privileges *affected* to certain Offices, &c.

AFFEERORS, Afferatores, in Law, are thoſe appointed in Court-Leets, upon Oath, to ſettle and moderate the Fines of ſuch as have committed Faults arbitrarily puniſhable, or which have no expreſs Penalty ſet down by Statute. See Fine, &c.

The Word is form'd of the French *Affier*, to affirm; by reaſon thoſe appointed to this Office, do affirm upon their Oaths, what Penalty they think in Conſcience the Offender hath deſerved.

*Kitchin* joins the three Words as Synonymas; *Affidati*, *Amerciatores*, *Affirares*. *Bracton* has *Affidari Mulierem*, to be betrothed to a Woman.—In the Cuſtomary of *Normandy*, the Word *Affeure*, is render'd by the *Latin* Interpreter *Taxare*, to ſet the Price of a thing; as *Æſtimare*, *Indicare*, &c.

AFFERI, in Law. See Averia.

AFFIANCE, in Law, the plighting of Troth, between a Man and a Woman; upon an Agreement of Marriage to be had between 'em. See Marriage, and Affinity.

AFFIDATIO *Dominorum*, an Oath taken by the Lords in Parliament; thus called in the *Rot. Parl.* Hen. VI. See Oath, and Parliament.

AFFIDATUS, or Affidiatus, in our Law-Books, a Tenant by Fealty: Alſo a Retainer. See Tenant, and Retainer.

——Affidati *non proprie Vaſſali ſunt ſed quaſi Vaſſali, qui in alicujus fidem & clientelam ſunt recepti, recommendati dicti.* Laurentii Amalthæa. *Affidatio accipitur pro mutua fidelitatis connexione, tam in ſponſaliis, quàm inter Dominum & Vaſſallum. Proles de* Affidata *& non Maritata, non eſt hæres.* MS.

AFFIDAVIT, an Oath in Writing, ſworn before ſome Perſon who hath Authority to take ſuch Oath; and made uſe of, and read in Court, upon Motions, but not upon Trials. See Oath, Evidence, Witness, &c.

In the Court of Chancery is an *Affidavit Office*; under the Direction of a *Maſter*. See Chancery, &c.

AFFINAGE, is ſometimes uſed in antient Law-Books, for the Refining of Metals. See Refining.

AFFINITY, Affinitas, an Alliance, or Relation made between two Families, by Marriage. See Alliance, and Marriage.

In this Senſe, the Word ſtands contradiſtinguiſh'd to Conſanguinity; which is a Relation by Blood. See Consanguinity.

In the *Moſaical* Law, there are ſeveral Degrees of *Affinity*, wherein Marriage is expreſly prohibited; which yet ſeem not at all prohibited by the Law of Nature.——Thus, *Levit.* C. XVIII. ver. 16. a Man was forbid to marry his Brother's Widow, unleſs he died without Iſſue; in which Caſe, it became enjoined as a Duty. So it was forbid to marry his Wife's Siſter, while ſhe was living, *v.* 18. which was not forbidden before the Law, as appears from the Inſtance of *Jacob*.

The antient *Roman* Law is ſilent on this Head; and *Papinian* is the firſt who mentions it; on occaſion of the Marriage of *Caracalla*.—The Lawyers who came after him, ſtretch'd the Bonds of *Affinity* ſo far, that they plac'd Adoption on the ſame Foot with Nature. See Adoption.

*Affinity*, according to the modern Canoniſts, renders Marriage unlawful to the fourth Generation, incluſive: But this is to be underſtood of direct *Affinity*; and not of that which is ſecondary, or collateral.—*Affinis mei affinis, non eſt affinis meus.* See Direct, and Collateral.

It is further to be obſerv'd, that this Impediment of Marriage, does not only follow an *Affinity* contracted by lawful Matrimony, but alſo that contracted by a criminal Commerce; with this difference, that this laſt does not extend beyond the ſecond Generation; whereas the other, as has been obſerv'd, reaches to the fourth. See Adultery, Concubine, Fornication, &c.

The Canoniſts diſtinguiſh three Species of *Affinity*.—The firſt, that contracted between the Husband and the Relations by Blood of his Wife; and between the Wife, and the Relations by Blood of her Husband. The ſecond, between the Husband, and thoſe related to his Wife by Marriage; and the Wife, and thoſe ſo related to her Husband. The third, between the Husband, and the Relations of his Wife's Relations; and the Wife, and the Relations of her Husband's Relations.—By the IVth Council of the *Lateran*, held in 1213, it was decreed, That none but the firſt Kind was any real *Affinity*; the reſt being mere Refinements, which ought to be ſet aſide. *Tit. de Conſang. & Affin.*

The Degrees are reckon'd after the ſame manner in *Affinity*, as in Conſanguinity; and therefore differently in the Canon Law from what they are in the Civil Law. See Degree.

The Word is form'd of the Latin *Affinis*, Neighbour; of *ad*, and *finis*, Boundary, Limit.

The *Romaniſts* talk of a ſpiritual *Affinity*, contracted by the Sacrament of Baptiſm and Confirmation.——In that Church, a God-father may not contract Marriage with his God-daughter, without a Diſpenſation. See God-father, Baptism, &c.

AFFIRM, in Law.—To *affirm*, ſignifies to ratify, or confirm a former Law, or Judgment.—In the like Senſe, is the Subſtantive *Affirmance* uſed. See Affirmation.

AFFIRMATION, Affirmatio, a poſitive Propoſition, alledging the Truth of ſomething. See Proposition, and Truth.

*Affirmation* is defined by the Logicians, an Act whereby we attribute one Idea to another; as ſuppoſing it to belong, or agree thereto.—As when, conceiving Perfection to agree to the Deity, we ſay, *God is perfect*. See Attribute.

This, on other Occaſions, is called *Enunciation*, *Compoſition*, *Judging*, &c. See Enunciation, Composition, Judgment, &c.

Affirmation is alſo uſed in Grammar, by ſome late Refiners upon that Art, for what is uſually call'd a Verb; in regard the Office of that Part of Speech, is to expreſs what we *affirm*, or attribute to any Subject. See Verb.

AFFIRMATION, is particularly uſed in a Legal Senſe, for a ſolemn Form of atteſting the Truth; allow'd to be uſed by the Quakers, inſtead of an Oath, which they hold abſolutely unlawful. See QUAKER, and OATH.

This People, by their Refuſal of all Oaths, lay liable to much Trouble; particularly for declining the Oath of Allegiance, in the Time of King *Charles* II.—But by an Act paſs'd *Anno* 1689, it was decreed, That their ſolemn *Declaration* of Allegiance and Fidelity, ſhould be accepted inſtead of an Oath. See DECLARATION, and ALLEGIANCE.

In 1695, they alſo obtained, by a Temporary Act, that their ſolemn *Affirmation* ſhould be accepted in all Caſes where an Oath is by Law requir'd; except in Criminal Caſes, upon Juries, and in Places of Profit and Truſt under the Government.——In this form:

*I*, A. B. *do declare, in the Preſence of Almighty God, the Witneſs of the Truth of what I ſay*, &c.

This Act was afterwards continued; and at laſt made Perpetual.—But this Form not being ſuch as was deſir'd, and having, in reality, all the Eſſentials of an Oath; they applied to the Parliament for an Alteration, which they obtained *Anno* 1721: When the following Form was ſettled to their general Satisfaction, *viz.*

*I*, A. B. *do ſincerely, ſolemnly, and truly declare, and* affirm.

Which is the Form now uſed, in the ſame manner, and under the ſame Limitation with the former.—Any Perſon depoſing, upon his ſolemn *Affirmation*, a known Falſhood, incurs the Penalty of wilful and corrupt Perjury. See PERJURY.

AFFIRMATIVE, in Logick, &c. is underſtood of a Propoſition, or the like, which imports an *Affirmation*; or that ſays, A thing is. See AFFIRMATION.

In this Senſe, the Word ſtands oppoſed to Negative. See NEGATIVE.

There are univerſal *Affirmative* Propoſitions; and ſuch, uſually are the firſt of Syllogiſms. See UNIVERSAL, SYLLOGISM, &c.

In Algebra we have alſo *Affirmative or Poſitive Quantities*. See QUANTITY, and POSITIVE.

AFFIRMATIVE *Sign*, or *Character*. See CHARACTER.

In Grammar, Authors diſtinguiſh *Affirmative Particles*: Such is, *Yes*. See PARTICLE, ADVERB, &c.

The Term is ſometimes alſo uſed Subſtantively.——The *Affirmative* is the more probable ſide of the Queſtion: There were ſo many Votes or Voices for the *Affirmative*. See VOTE.

AFFIRMATIVE is particularly applied in the *Roman* Inquiſition, to ſuch Hereticks as own the Errors and Opinions they are charged withal; and maintain the ſame in their Examination with Firmneſs and Reſolution. See INQUISITION.

AFFORCIAMENTUM, in Law. See EFFORCEMENT.

AFFORESTING, AFFORESTATIO, the turning Ground into Foreſt. See FOREST.

In this Senſe, the Word ſtands oppoſed to *Deafforeſting*. See DEAFFORESTING.

The Conqueror, and his Succeſſors, continued *afforeſting* the Lands of the Subject, for many Reigns; till the Grievance became ſo notorious, that the People, of all Degrees and Denominations, were brought to ſue for Relief; which was at length obtain'd, and Commiſſions granted to ſurvey and perambulate the Foreſt, and ſeparate all the new *afforeſted* Lands; and re-convert them to the Uſes of their Proprietors, under the Name and Quality of *Purlieu*, or *Pourellee Land*. *See further under the Article* PURLIEU.

AFFRAY, or AFFRAYMENT, in Law, an Affright put upon one, or more Perſons.

This, according to the Lawyers, may be done without a Word ſpoke, or a Blow ſtruck.—As, where a Man ſhews himſelf arm'd or brandiſhes a Weapon, it may ſtrike a Fear into others unarm'd.

*Affray* is a common Injury; in which it differs from an *Aſſault*, which is always a particular Injury. See ASSAULT.

AFFREIGHTMENT, or AFFRETAMENT, AFFRETAMENTUM, in Law, ſignifies the Freight of a Ship. See FREIGHT.

The Word is form'd from the French *Fret*, which expreſſes the ſame thing.

AFFRONTE', in Heraldry, is underſtood of Animals bore in an Eſcutcheon, as facing, or with their Heads turn'd toward each other.—This is otherwiſe called *Confronté*.

The Word is *French*; and literally ſignifies the ſame thing.

AFILIATION. See ADOPTION.

Among the antient *Gauls*, *Afiliation* was a ſort of Adoption only practis'd among the Great.—It was perform'd with Military Ceremonies: The Father preſented a Battle-ax to the Perſon he was to adopt for his Son; as an Intimation that he was to preſerve the Effects he thus call'd him to ſucceed to, by Arms.

AFRICAN *Company*. See COMPANY.

AFRICANUS, a Quality or Sirname, given to ſeveral Perſons, in reſpect of the Country of *Africa*. See TITLE, QUALITY, NAME, SIRNAME, &c.

*P. Cornelius Scipio* had the Appellation *Africanus* beſtow'd on him, from his taking and demoliſhing the City of *Carthage*, and thus ridding the *Romans* of ſo formidable an Enemy.—In ſome Medals we find *Scipio*'s Head on one ſide, with the Inſcription, P. SCIPIO AFRIC; and on the other, *Scipio* in a Carr drawn by Horſes; with CART. SUBACT.

*Africanus* is alſo the Sirname of a celebrated Hiſtorian and Chronologiſt of the IIId Century, born in *Paleſtine*; of whom we have nothing extant beſide a few Fragments, preſerv'd in *Euſebius* and *Syncellus*.—His Name was *Julius Africanus*.——Authors frequently confound him with *Sextus*, or *Ceſtus Africanus*.

AFTER-BIRTH, among Midwives, the Coat or Membranes wherein the Fœtus is encloſed, *in Utero*. See FOETUS.

It is thus called, by reaſon it comes away ſome time *after* the Fœtus; by way of a ſecond Birth, or Delivery. See DELIVERY.

Phyſicians uſually call it the *Secundines*. See SECUNDINE.—See alſo HEAM, &c.

AFTER-*Pains*, are Pains felt in the Loins, the Groin, &c. after the Birth is brought away. See DELIVERY.

They ſeem to ariſe from a Diſtention of the Ligaments of the *Uterus* in time of Delivery; and are ſeldom dangerous, unleſs aggravated by a Detention of the Lochia.—To prevent 'em, Oil of ſweet Almonds, Sperma Ceti, Capillus Veneris, &c. are uſually preſcribed.

AFTER-*Math*, among Husbandmen, the *After*-Graſs, or ſecond Mowings of Graſs; or elſe Graſs or Stubble cut after Corn.

AGA, in the Language of the *Mogols*, &c. ſignifies a *powerful Man*, or a *Lord* and *Commander*.

In this laſt Senſe, the Term is alſo uſed among the *Turks*: Thus, the *Aga of the Janizaries*, is their Colonel; and the *Capi-Aga*, the Captain of the Gate of the Seraglio. See JANIZARY, CAPI-AGA, &c.

The Title *Aga* is alſo given by way of Courteſy, to ſeveral Perſons of Diſtinction; tho not in any Office or Command to entitle 'em to it.

On ſome Occaſions, in lieu of *Aga*, we ſay, *Agaſſi*: Thus, the *Aga* or Governour of the Pages, is called *Capi-Agaſſi*; and the *Aga* or General of the Horſe, *Spahilar Agaſſi*. See PAGE, ODA, SPAHI, &c.

AGAI, AGIO, in Matters of Commerce, a Term uſed, chiefly in *Holland*, and at *Venice*, for the Difference between the Value of Bank-Notes, and current Money. See BANK.

The *Agio* in *Holland* is ſometimes 3, or even 4 *per Cent.* in favour of the Bank-Notes. See DISCOUNT.

AGAPÆ, in Church Hiſtory, *Love-Feaſts*; a Name given to certain Feſtivals, celebrated in the antient *Greek* Church, to keep up a Harmony and Concord among its Members. See FEAST.

The Word is form'd of the *Greek* αγαπη, *Dilection*; of αγαπαω, *I love*.

In the primitive Days they were held without Scandal, or Offence; but in after-Times, the Heathens began to tax them with Impurity.—This gave occaſion to a Reformation of theſe *Agapæ*.

The Kiſs of Charity, with which the Ceremony had ended, was no longer given between different Sexes; and it was expreſly forbidden to have any Beds or Couches, for the Conveniency of thoſe who ſhould be diſpos'd to eat more at their Eaſe.

Notwithſtanding theſe Precautions, the Abuſes committed in them became ſo notorious; that they were ſolemnly condemn'd at the Council of *Carthage*.

Some Criticks will have it to be theſe *Agapæ* that St. *Paul* ſpeaks of, 1 *Cor.* ch. XI, under the Name of the *Lord's Supper*; which, they contend, was not the Euchariſt, but a Feaſt accompanying it; held by the Chriſtians of thoſe Times, in commemoration of our Saviour's inſtituting that Sacrament, in his Supper with the Apoſtles.—The Text ſeems to intimate, that the Feaſt was held before the Communion; but by an Ordinance afterwards made, they were oblig'd to communicate faſting; ſo that the *Agapæ* were poſtpon'd till the Sacrament was over.

Some Authors imagin'd this Ceremony to have been, not a Commemoration of our Saviour; but a Cuſtom borrow'd from the Heathens: *Mos vero ille, ut referunt*, ſays *Sedulius* on the XIth Chapter of the Epiſtle to the *Corinth. de Gentili adhuc ſuperſtitione veniebat*. And *Fauſtus* the *Manichee* is repreſented in St. *Auguſtin*, as reproaching the Chriſtians, with converting the Heathen Sacrifices into *Agapæ*: *Chriſtianos ſacrificia Paganorum converteſſe in Agapas*.

AGAPETÆ, in Eccleſiaſtical Hiſtory, *Well-beloved*; a Name given to certain Virgins, who in the antient Church aſſociated themſelves with Eccleſiaſticks, out of a Motive of Piety and Charity.

In the primitive Days, there were Women inſtituted Deaconeſſes; who devoting themſelves to the Service of the Church, took up their abode with the Miniſters, and aſſiſted them in their Functions. See DEACON.

In the Fervour of the primitive Piety, there was nothing ſcandalous in theſe Societies: But they afterwards degenerated into Libertiniſm; inſomuch, that St. *Jerom* aſks, with Indignation, *unde* Agapetarum *peſtis in eccleſias introiit*? This gave occaſion to Councils to ſuppreſs them.——St. *Athanaſius* mentions a Prieſt named *Leontius*, who, to remove all occaſion of Suſpicion, offer'd to mutilate himſelf, to preſerve his Companion.

AGARIC, or *Fungus* AGARICI, in Pharmacy, a kind of fungous Excreſcence growing on the Trunks, and large Branches of ſeveral Trees; but chiefly on the Larch-Tree, and certain Oaks. See FUNGUS.

*Dioſcorides* derives its Name from a Province of *Sarmatia*, called *Agaria*; whence it was firſt brought.—Several Authors, and among the reſt, *Galen*, take it for a Root; but the common Opinion is for its being of the Muſhroom kind.—It is brought from the *Levant*.

It is white, light, tender, brittle, of a bitter Taſte, pungent, and a little Styptic.—This is what the Antients call'd the *Female Agaric*: As for the Male, it is uſually yellowiſh and woody; and is generally excluded out of Phyſick, being only uſed in Dying.

*Agaric* was a Medicine in mighty uſe among the Antients; not only for the purging of Phlegm, but in all Diſtempers proceeding from groſs Humours and Obſtructions; as the Epilepſy, Madneſs, Aſthma, *&c.*—Yet they complain'd, that it weaken'd the Bowels, and purg'd too violently.

They had divers Correctors for it; chiefly of the Aromatic kind: But Dr. *Quincy* ſays, the beſt way is to baniſh it for good, as the preſent Practice has almoſt done: for that it rather makes People ſick, than purges them; being very nauſeous, and but little cathartic. See PURGATIVE.

By a chymical Solution, it paſſes almoſt wholly into Oil: It yields no volatile Salt; but abounds with a ſort of ſcaly Earth, and an acid Phlegm.

We read of *Pillulæ de Agarico*, and *Troches of Agaric*: but they are diſuſed.

Some Authors alſo mention a *Mineral Agaric*; which is a whitiſh Stone, found in the Clefts of Rocks in *Germany*; called alſo *Lac Lunæ*, and by ſome Naturaliſts, *Lithomagra*, and *Stenomagra*. See LAC *Lunæ*.

AGAT, ACHATES, in Natural Hiſtory, a precious Stone, partly tranſparent, and partly opake. See PRECIOUS *Stone*, and GEM.

The firſt *Agats* were ſaid to have been found in *Sicily*, along the Banks of the River *Achates*; whence, ſome will have it, the Name is deriv'd.

There are various Kinds of *Agats*; which, according to their different Colours, degrees of Tranſparency, *&c.* have different Names.—The principal may be reduc'd to theſe four, *viz.* the *Onyx*, the *Chalcedony*, the *Black*, and the *German Agats*. See ONYX, and CHALCEDONY.

The *Agat* has ordinarily a reddiſh Teint; but is finely variegated with Spots and Stains; many of which ſeem very naturally to repreſent Woods, Rivers, Trees, Animals, Fruits, Flowers, *&c.*—*De Boot* mentions one, of the Size of a Nail, wherein a Biſhop, with his Mitre, was very well repreſented: Turning it a little, a Man and Woman's Head were ſeen in its Place.

The *Sardines*, and *Sardonyx Agats*, are very valuable; the latter is of a ſanguine Colour, and is divided into Zones, which ſeem to have been painted by Art.—*Pliny*, *Strabo*, and *Cicero* ſay, that *Polycrates*'s Ring was a Sardonyx. See SARDONYX.

Authors alſo ſpeak of *Roman Agats*, *Egyptian Agats*, *Onyx-ſardonyx Agats*, &c.—The Antients mention a red *Agat*, ſpotted with Points of Gold, found in *Candia*; and called *Sacred*, as being a Preſervative againſt the Poiſon of Vipers, Scorpions, and Spiders.—*Pliny* has a whole Chapter of the Virtues of *Agats*.

*Agat* has always been eſteem'd for Seals; as being a Stone that no Wax will ſtick to. See SEAL, ENGRAVING, *&c.*

The Gold Wire-drawers buriniſh their Gold with an *Agat*; whence the Inſtrument made uſe of on that occaſion, is called *Agat*. See GOLD-*Wire*.

Mr. *Boyle* takes *Agats* to have been form'd of ſeparate Beds, or Strata of fine Clay or Earth, brought by a petrifying Liquor to coagulate into a Stone. See GEM.——The ſame Author obſerves, that the Fire will purge away the Colours of *Agat*. He alſo mentions an *Agat* with a moveable Spot or Cloud in it.

AGE, the natural Duration of any thing; and particularly of the Life of Man. See DURATION, and LIFE.

The ordinary *Age* of Mankind has been occaſionally varied, in ſuch manner as to afford a fine Inſtance of the Wiſdom of Providence. See the Article LONGÆVITY.

AGE is alſo uſed in Chronology, for a *Century*; or a Syſtem or Period of an hundred Years; called alſo *Seculum*. See SECULUM, and CENTURY.

An *Age* differs from a *Generation*. See GENERATION.

AGE is alſo underſtood of a certain State or Portion of the ordinary Life of Man; which is divided into four different *Ages*, viz. *Infancy*, *Youth*, *Manhood*, and *Old Age*.

*Infancy*, or Childhood, *Pueritia*, extends as far as the fourteenth Year. See INFANCY, and CHILDREN.

*Youth*, Adoleſcence, or the Age of Puberty, commences at 14, and ends at about 25. See YOUTH, ADOLESCENCE, PUBERTY, *&c.*

*Manhood*, or the *Virile Age*, terminates at 50. See VIRILE.

*Old Age*, *Senectus*, ſucceeds, which is the laſt: tho ſome divide this into two; reckoning it *decrepit Age* after 75. See OLD *Age*.

AGE, in Horſemanſhip, makes a conſiderable Point of Knowledge; the Horſe being an Animal that remarkably ſhews the Progreſs of his Years, by correſpondent Alterations in his Body. See HORSE.

We have Characteriſticks from his Teeth, Hoofs, Coat, Tail and Eyes. See TEETH, HOOF, *&c.*

The firſt Year he has his *Foal's Teeth*, which are only Grinders and Gatherers: The ſecond, the four foremoſt change, and appear browner and bigger than the reſt: The third, he changes the Teeth next to theſe; leaving no apparent Foal's Teeth, but two on each ſide above, and two below: The fourth Year, the Teeth next to theſe are changed, and no Foal's Teeth are left, but one on each ſide above and below. At five Years, his foremoſt Teeth are all changed; and the Tuſhes on each ſide are compleat: thoſe which come in the Places of the laſt Foal's Teeth, being hollow, and having a little black Speck in the midſt; which is called the *Mark in a Horſe's Mouth*, and continues till eight Years of *Age*. See MARK.——At ſix Years, he puts up new Tuſhes; near which appears a little Circle of young Fleſh, at the bottom of the Tuſh: the Tuſhes withal, being white, ſmall, ſhort, and ſharp.——At ſeven Years, the Teeth are all at their growth, and the Mark in the Mouth appears very plain.—At eight, all his Teeth are full, ſmooth, and plain, and the Mark ſcarce diſcernable; the Tuſhes looking yellowiſh.—At nine, the foremoſt Teeth ſhew longer, yellower, and fouler than before; and the Tuſhes become bluntiſh.—At ten, no Holes are felt on the inſide of the upper Tuſhes; which till then are very ſenſible: Add, that the Temples begin to be crooked, and hollow.—At eleven Years, his Teeth are very long, yellow, black, and foul; but he will cut even, and his Teeth ſtand directly oppoſite to one another.—At twelve, the upper Teeth hang over the nether.—At thirteen, the Tuſhes are worn cloſe to his Chaps, if he have been much ridden; otherwiſe they will be black, foul, and long.

2°, As to the *Hoof*.——If it be ſmooth, moiſt, hollow, and well-ſounding, 'tis a Sign of Youth: On the contrary, if rugged, and as it were ſeamed, one Seam over another, and withal dry, foul, and ruſty, 'tis a Mark of *Old Age*.

3°, For the *Tail*.——Taking him by the Stern thereof, cloſe at the ſetting on to the Buttock, and griping it between the Finger and Thumb; if a Joint be felt to ſtick out more than the reſt, the bigneſs of a Nut, the Horſe is under ten: but if the Joints be all plain, he may be fifteen.

4°, The *Eyes* being round, full, and ſtaring; the Pits that are over 'em filled, ſmooth, and even with his Temples; and no Wrinkles to be ſeen, either under or above: is a Mark of *Youth*.

5°, The Skin being pluck'd up in any Part betwixt the Finger and Thumb, and let go again; if it return ſuddenly to its Place, and remain without Wrinkles, he may be argued to be young.

6°, A dark-colour'd Horſe, growing griſly above the Eyebrows, or under the Main; or a whitiſh Horſe growing meanelled, either white or black, all over; may be infallibly concluded extremely aged.

Laſtly, a Horſe being young, the Bars of his Mouth are ſoft and ſhallow; otherwiſe they are deep, and feel hard and rough.

AGE, in Hunting.—Deer, and other Beaſts of Game, have different Denominations, according to their *Age*; which ſee under the Article HUNTING.

The firſt Head, called in fallow Deer, *Broches*, and in red Deer, *Pricks*, does not come till the ſecond Year of their *Age*: The next Year, they bear four or ſix ſmall Branches: the fourth Year, eight or ten; the fifth, ten or twelve; the ſixth, fourteen or ſixteen; the ſeventh Year, they bear their Heads beam'd, branch'd, and ſum'd, as much as ever they will be.

The

The *Age* of a Hart, *&c.* is chiefly judg'd of by the Furniture of his Head. See HEAD.

The Huntſmen have ſeveral other Marks, whereby to know an old Hart without ſeeing him; as, the Slot, Entries, Abatures, Foils, Fewmets, Gate, and Fraying Poſt. See HUNTING.

AGE *of the Moon*, in Aſtronomy, is underſtood of the Number of Days elapſed ſince the laſt Conjunction, or New Moon; called alſo her *Quarter*. See CONJUNCTION, QUARTER, *&c.*

*To find the Moon's* AGE. See MOON.

AGE, in Chronology.——The *Age* of the World, is the Time paſs'd ſince the Creation. See CREATION.

The ſeveral *Ages* of the World, may be reduc'd to theſe three grand Epocha's, *viz.* the *Age* of the Law of Nature, from *Adam* to *Moſes*.—The *Age* of the *Jewiſh* Law, from *Moſes* to Chriſt.—And the *Age* of Grace, from Chriſt to the preſent Year.

The firſt *Age*, according to the *Jews*, conſiſted of 2447 Years; according to *Scaliger*, of 2452; and according to *Uſher*, of 2513.—The ſecond *Age*, according to the *Jews*, conſiſted of 1312 Years; according to *Scaliger*. of 1508; and according to *Uſher*, of 1491.—Of the third *Age*, there have elapſed 1726 Years; tho this, too, is controverted by Chronologers.

*Petavius* will have our Saviour to have been born four Years before the vulgar Epocha; on which footing, the current Year ſhould be 1730; according to *Capella*, 1731; according to *Baronius* and *Scaliger*, 1728. See NATIVITY.

The *Romans* diſtinguiſh'd the Time that preceded them into three *Ages*: The *obſcure* or *uncertain Age*, which reach'd down as low as *Ogyges* King of *Attica*; in whoſe Reign the Deluge happen'd in *Greece*.—The *fabulous*, or *heroic Age*, which ended at the firſt Olympiad: And the *hiſtorical Age*, which commenc'd at the Building of *Rome*. See FABULOUS, HEROIC, HISTORICAL, *&c.*

Among the Poets, the four *Ages* of the World, are the *Golden*, the *Silver*, the *Brazen*, and the *Iron Age*. See the *Metamorphoſis* of *Ovid*, Lib. I. or rather, *Heſiod* in his Poem Ἔργα καὶ ἡμέραι, *Opera & Dies*, ver. 108, *&c.* He is the firſt that has deſcribed the four *Ages*, and the beſt.

The *Eaſt Indians* alſo reckon four *Ages* ſince the Beginning.—The firſt, which they repreſent as a ſort of Golden *Age*, laſted, according to them 1728000 Years: In this the God *Brahma* was born; and the Men were all Giants; their Manners innocent: They were exempt from Diſeaſes, and lived 400 Years.—In the ſecond *Age*, which laſted 1296000, their *Rajas* were born: Vice now crept into the World; Mens Lives were fallen to 300 Years, and their Size retrench'd proportionally.—Under the third *Age*, which laſted 8064000 Years, Vice being increas'd, Men only attain'd to 200 Years.—The laſt *Age* is that wherein we now live, of which 4027195 Years are already gone; and the Life of Man ſunk to one fourth of its original Duration.

AGE, in Law, is particularly underſtood of a certain State or Time of Life, wherein a Perſon is qualified to do ſomething, which before, for want of Years, and conſequently Diſcretion, they could not. See MAJOR, MINOR, *&c.*

There are two principal *Ages* in a Man: At fourteen, he is at the *Age of Diſcretion*; at twenty one Years, at *full Age*.

In a Woman, there were antiently ſix *Ages* obſerv'd: At ſeven Years, her Father might diſtrain the Tenants of his Manor for aid to marry her; for at thoſe Years ſhe may conſent to Matrimony. *Bracton*.——At nine Years old ſhe is dowable; for then, or within half a Year after, ſhe is ſaid to be able *promereri dotem & virum ſuſtinere*. *Fleta*.——At twelve Years, ſhe is able finally to ratify and confirm her former Conſent to Matrimony.—At fourteen, ſhe may take her Lands into her own Hands; and ſhould be out of Ward, if ſhe were at this *Age* at her Anceſtor's Death.—At ſixteen, ſhe ſhould be out of Ward; tho at the Death of her Anceſtor ſhe was under fourteen: The Reaſon is, that then ſhe might take a Husband able to perform Knight's-Service.—At twenty one Years, ſhe may alienate Lands and Tenements.

For a Man; at the *Age* of fourteen he may chuſe his own Guardian, and claim his Lands held in Soccage. *Dyer*, fol. 162. tho *Bracton*, Lib. II. limits this to fifteen Years; with whom *Glanville* agrees.—At fourteen, a Man may conſent to Marriage, as a Woman at twelve.—At fifteen he ought to be ſworn to the Peace, *An.* 24 *Edw.* I. Stat. 3.——At the *Age* of twenty one, a Man was oblig'd to be a Knight, if he had twenty Pounds Land *per Annum* in Fee, or for Term of Life, *Anno* 1 *Edw.* II. Stat. 1. But this Statute is repealed, 17 *Car.* I. cap. 10.——The ſame *Age* alſo enables him to make Contracts, and manage his own Eſtate; which, till that time, he cannot do with Security of thoſe that deal with him.

The *Age* of twelve Years, binds to Appearance before the Sheriff and Coroner, for Inquiry after Robberies, *Anno* 52 *Hen.* III. cap. 14.—The *Age* of twenty four Years enabled a Man to enter an Order of Religion, without Conſent of Parents, *Anno* 4 *Hen.* IV. cap. 17.

AGE *Prier*, a Petition, or Motion made in Court, by one in his Minority; having an Action brought againſt him for Lands coming to him by Deſcent; requeſting, that the Action may reſt till he come to full *Age*.—This, the Court, in moſt Caſes, ought to grant.

It is otherwiſe in the Civil Law; which obliges Children in their Minority to anſwer by their Tutors, or Curators. See TUTOR, CURATOR, MINORITY, PUPIL, *&c.*

AGEMOGLANS, or AZAMOGLANS, Children of *Tribute* rais'd every three Years by the grand Seignior, among the Chriſtians whom he tolerates in his Dominions.

The Commiſſioners appointed for this Levy, take them by force, even out of the Houſes of Chriſtians; always claiming one in three, and pitching upon ſuch as ſeem the handſomeſt, and promiſe to be the moſt handy.

Theſe are immediately convey'd to *Gallipoli* or *Conſtantinople*; where they are firſt circumcis'd, then inſtructed in the *Mahometan* Faith, taught the *Turkiſh* Language and the Exerciſes of War, till ſuch time as they become of Age to bear Arms.

Such as are not judged proper for the Army, they employ in the loweſt and moſt ſervile Offices of the Seraglio; as in the Kitchen, Stables, *&c.*

The Word, in its Original, ſignifies a Barbarian's Child; that is, a Child not a *Turk*.—It is compounded of two *Arabic* Words, אגם *Agem*, and עלאם *Child*; which among the *Turks* ſignifies as much as *Barbarous* among the *Greeks*; the former People dividing the World into *Arabs* or *Turks*, and *Agem*; as the latter into *Grecians* and *Barbarians*.

AGENT, AGENS, in Phyſicks, that whereby a thing is done or effected; or that which has a Power whereby it *acts* on another; or by its Action induces ſome Change in another. See ACT, and ACTION.

The Word *Agent* is uſed promiſcuouſly with *Efficient*; and in contradiſtinction to *Patient*. See EFFICIENT, PASSIVE, *&c.*

The Schools divide *Agents* into *Natural* and *Free*.

*Natural* or *Phyſical Agents*, are thoſe immediately determin'd by the Author of Nature, to produce one ſort of Effect; with an Incapacity to produce the contrary thereto.—Such is Fire, which only heats, and does not alſo cool.

*Free* or *Voluntary Agent*, is that which may equally do any thing, or the oppoſite thereof; as acting not from any Pre-determination, but from Choice.—Such is the Mind ſuppoſed to be; which may either will or nill the ſame thing. See PRE-DETERMINATION, LIBERTY, WILL, *&c.*

*Natural Agents*, again, are ſubdivided into *Univocal*; which are ſuch as produce Effects of the ſame Kind and Denomination with the *Agents* themſelves: and *Equivocal*, whoſe Effects are of a different Kind, *&c.* from the *Agents*. See EQUIVOCAL, and UNIVOCAL.

The Schoolmen reckon the following Circumſtances neceſſary to the Being of an *Agent*, *viz.* That it be contiguous to the Object, diſtinct from it, have a Power over it, a Sphere of Activity, and a Proportion or Rate of acting.

AGENT, is alſo uſed for a Perſon entruſted with the Management of the Affairs of a Corporation, or private Perſon: In which Senſe, the Word coincides with *Deputy*, *Procurator*, *Commiſſioner*, *Factor*, &c. See DEPUTY, PROCURATOR, COMMISSIONER, FACTOR, *&c.*

Among the Officers in the Exchequer, are four *Agents for Taxes*. See TAX, EXCHEQUER, *&c.*

AGENTS *of Bank and Exchange*, are publick Officers, eſtabliſh'd in the trading Cities of *France*, to negotiate Matters between Merchants, relating to Bills of Exchange; and the buying and ſelling of Goods. Theſe amount to what, among us, are called *Exchange-Brokers*. See BROKER, and ENCHANGE.

AGENT *and Patient*, in Common Law, is where a Perſon does, or gives ſomething to himſelf; ſo that he is at the ſame time both the Doer or Giver, and the Receiver or Party it is done to.—Such is a Woman, when ſhe endows her ſelf with part of her Husband's Inheritance.

AGEOMETRESIA, a Term purely *Greek*, Ἀγεωμετρησία, ſometimes uſed by *Engliſh* Writers; denoting a *Want or Defect in point of Geometry*.—*Kepler* not having taught any direct and geometrical Methods of finding certain Matters, in his Elliptic Theory; particularly, the true Anomaly, from the mean: has been charged with *Ageometreſia*. See ANOMALY.

AGER *Terræ*, in antient Writers, the ſame with an *Acre of Land*. See ACRE.

AGGLUTINANTS, AGGLUTINANTIA, in Medicine, a Species of ſtrengthning Remedies, whoſe Office and Effect is to adhere to the ſolid Parts of the Body, and thus recruit and ſupply the Place of what is wore off and waſted in the animal Actions. See MEDICINES, NUTRITION, *&c.*

Theſe are moſt of 'em of the glutinous Kind, or ſuch as eaſily form themſelves into Gellies and gummy Conſiſtences; whence the Name *Agglutinant*, which is form'd of *ad*, to, and *gluten*, glue. See GLUE, and AGGLUTINATION.

The Operation and Uſe of *Agglutinants*, ſee under STRENGTHENERS.

The principal Simples which come under this Claſs, are Iſing-glaſs, Olibanum, Gum Arabic, Dragons Blood, Caſſia, Sago, Vermicelli, Pulſe, Comfrey, Plantain, &c. See ISING-GLASS, GUM, OLIBANUM, DRAGON'S *Blood*, CASSIA, PULSE, &c.

AGGLUTINATION, literally, denotes the Act of joining, or cementing two Bodies together, by means of a proper Gluten, or Glue. See CEMENT, GLUE, &c.

In Medicine, the Term is peculiarly uſed for the Addition of new Subſtance; or the giving a greater Conſiſtence to the Animal Fluids, to fit 'em the more for Nouriſhment. See AGGLUTINANTS; ſee alſo ACCRETION, and NUTRITION.

AGGRAVATION, the Act of augmenting a Crime, or the Puniſhment thereof. See CRIME, and PUNISHMENT.

The Word is compounded of *ad*, to, and *gravis*, heavy, grievous.

In the *Romiſh* Canon Law, *Aggravation* is particularly uſed for an Eccleſiaſtical Cenſure, threatening an Excommunication after three Admonitions uſed in vain. See CENSURE.

From *Aggravation*, they proceed to *Re-aggravation*; which is the laſt Excommunication. See EXCOMMUNICATION.

AGGREGATE, the Sum, or Reſult of ſeveral things *aggregated* or added together. See AGGREGATION, and SUM.

Natural Bodies are *Aggregates*, or Aſſemblages of Particles or Corpuſcles, bound together by the Principle of Attraction. See BODY, PARTICLE, &c.

The Word is form'd of *ad*, to, and *grex*, *gregis*, a Flock, Company.

AGGREGATION, AGGREGATIO, in Phyſicks, a Species of Union, whereby ſeveral things which have no natural Dependence or Connection with one another, are collected together, ſo as in ſome Senſe to conſtitute one. See UNION.

Thus, a Heap of Sand, or a Maſs of Ruins, are Bodies by *Aggregation*.

In a like Senſe, they ſometimes ſay, To be of a Company or Community by *Aggregation*.—An *Aggregation* of ſeveral Doctors to the Faculty of Laws.—In *Italy*, *Aggregations* are frequently made of Houſes or Families; by Virtue whereof, they all bear the ſame Name, and Arms.

The Word *Aggregation*, ſtrictly ſpeaking, differs from *Congregation*; in that the former denotes a Coalition of ſeveral things in ſome Senſe equal; and the latter an Acceſſion of a leſs to a more conſiderable. See CONGREGATION.

AGGRESSOR, in Law, he, of two contending Parties, who makes the firſt Aſſault, or Attack; or who began the Quarrel, Encounter, or Difference.—In Criminal Matters, it is firſt enquir'd who was the *Aggreſſor*. See ATTACK, &c.

AGILDE, in our antient Cuſtoms, a Perſon ſo vile, that whoever kill'd him was to pay no Mulct for his Death. See *Æstimatio Capitis*.

The Word comes from the privative *a*, and the Saxon *Gildan*, *ſolvere*. See GILD.

AGILITY, AGILITAS, *Nimbleneſs*; a light and active Habitude, or Diſpoſition of the Members, and Parts deſigned for Motion. See MUSCLE, and MUSCULAR.

AGILLARIUS, in antient Law-Books, a Hayward, or Keeper of a Herd of Cattle in a common Field.

AGIST, in Law.—To *agiſt*, ſignifies to take in, and feed, the Cattle of Strangers, in the King's Foreſt; and gather the Money due for the ſame. See AGISTOR.

The Word is alſo extended to the taking in of other Mens Cattel, in any Man's Ground; at a certain Rate *per* Week.

It is alſo uſed metaphorically for a Charge or Burden on any thing.—In this Senſe, we meet with *Terræ ad Cuſtodiam Maris Agiſtatæ*, *i. e.* charged with a Tribute to keep out the Sea. *Seld. Mare Clauſ.*——So, *Terræ Agiſtatæ*, are Lands whoſe Owners are bound to keep up the Sea-Banks. *Spelman.*

The Word is form'd of the French *Giſte*, a Bed, or Lying-Place.

AGISTOR, an Officer of the Foreſt, who takes in the Cattle of Strangers, to feed therein; and receives for the King's Uſe, all ſuch Tack-Money as becomes due upon that account. See FOREST, and AGIST.

In *Engliſh*, they are otherwiſe called, *Gueſt-takers*, or *Giſt-takers*, and made, by Letters Patent, to the Number of four, in every Foreſt, where his Majeſty has any Pannage. See PANNAGE.

Their Function is term'd *Agiſtment*, and *Agiſtage*.

AGITATION, AGITATIO, properly ſignifies *Shaking*; or a reciprocal Motion of a Body this way and that. See MOTION.

The Prophets, Quakers, Pythian Prieſteſſes, &c. were ſubject to violent *Agitations* of Body, &c. See PROPHET, QUAKER, PYTHIA, &c.

Among Phyſiologiſts, the Term is ſometimes appropriated to that Species of Earthquake, call'd *Tremor*, or Trembling, *Arietatio*. See EARTHQUAKE.

Among Philoſophers, it is chiefly uſed for an inteſtine Commotion of the Parts of any natural Body. See INTESTINE.

Thus, Fire is ſaid to *agitate* the minute Particles of Bodies. See FIRE.—Fermentation, and Effervеſcence, are attended with a briſk *Agitation* of the Particles. See FERMENTATION, EFFERVESCENCE, and PARTICLE.

AGITATION *of Beaſts in the Foreſt*, antiently ſignify'd the Drift of Beaſts in the Foreſt. See DRIFT, and FOREST.

AGITATORS, in our *Engliſh* Affairs, were certain Officers, created by the Army in 1647, to take care of the Intereſts thereof.

*Cromwel* leagued himſelf with the *Agitators*, whom he found to have more Intereſt than the Council of War.—— The *Agitators* undertook to make Propoſals relating to the Reformation of Religion and the State.

AGLECTS, AGLETS, or AGLEEDS, among Floriſts, the Pendants hanging on the Tip-ends of Chives, and Stamina; as in Tulips, Roſes, Spike-graſs, &c. See CHIVE, STAMINA, &c.

AGNATI, in the Civil Law, a Term uſed in reſpect of the Male Deſcendents of the ſame Father, in different Lines. See AGNATION.

In this Senſe, the Word is contradiſtinguiſh'd to *Cognati*. See COGNATI.

AGNATION, AGNATIO, in the Civil Law, the Bond of Conſanguinity or Relation between the Male-Deſcendents of the ſame Father; as Cognation is the Bond of Relation between all the Deſcendents of the ſame Father, both Males and Females. See COGNATION.

The Difference, then, between *Agnation* and Cognation, conſiſts in this, that Cognation is the univerſal Name, under which the whole Family, and even the *Agnati* themſelves are contain'd; and *Agnation* a particular Branch of Cognation, which only includes the Deſcendents in the Male Line. See CONSANGUINITY.

By the Law of the Twelve Tables, Males and Females ſucceeded one another; according to the Order of Proximity, and without any regard to the Sex; but the Laws were afterwards chang'd in this reſpect, by the *Lex Voconia*; and Women were excluded from the Privileges of *Agnation*, excepting ſuch as were within the Degree of Conſanguinity, *i. e.* excepting the Siſters of him who died ab-inteſtate: and it was hence that the Difference between *Agnati* and *Cognati* firſt took its riſe.

But this Difference was again aboliſh'd by *Juſtinian*, and the Females were re-inſtated in the Right of *Agnation*, and all the Deſcendent's on the Father's ſide, whether Males or Females, were appointed to ſucceed each other indiſcriminately, according to the Order of Proximity.

Hence, Cognation came to take in all the Relations of the Father; and *Agnation* to be reſtrained to thoſe of the Mother.

Adoptive Children enjoy'd the Privileges of *Agnation*; which was called *Civil* in their reſpect, in oppoſition to the other, which was *Natural*. See ADOPTION.

AGNOITES, or AGNOETES, a Denomination given to certain antient Hereticks, who denied that Chriſt foreknew the Day of Judgment.

The Word is *Greek*, Ἀγνοῖται; form'd of ἀγνοέω, *Ignoro*, I do not know.

*Eulogius*, Patriarch of *Alexandria*, aſcribes this Hereſy to certain Solitaries in the Neighbourhood of *Jeruſalem*, who in defence hereof, alledg'd divers Texts of the New Teſtament, and among others, this of St. *Mark*, C. XIII. ver. 32. "Of that Day and Hour knoweth no Man; no "not the Angels who are in Heaven, nor the Son, but "the Father only."—The ſame Paſſage was made uſe of by the *Arians*; and hence the Orthodox Divines of thoſe Days were induced to give various Explications thereof: Some alledge, that our Saviour here had no regard to his Divine Nature, but only ſpoke of his Human. Others underſtand it thus, That the Knowledge of the Day of Judgment does not concern our Saviour conſider'd in his Quality of Meſſiah, but God only. Which is the moſt natural Explication.

AGNOMEN, among the *Romans*, a kind of Sirname, uſually given on occaſion of ſome particular Action, Habit, or other Circumſtance of the Bearer. See NAME, and SIRNAME.

Thus, one of the *Scipio's* was named *Africanus*, and the other *Aſiaticus*, from the brave Atchievements which the one did in *Africa*, and the other in *Aſia*.

The *Agnomen* was the third in order of the three *Roman* Names.—Thus, in *Marcus Tullius Cicero*, *Marcus* is the Prænomen, *Tullius* the Nomen, and *Cicero* the *Agnomen*. See NOMEN, PRÆNOMEN, &c.

AGNUS *Caſtus*, a Shrub, famous among the Antients as a Specific for the Preſervation of Chaſtity, and the preventing of all Venereal Deſires, Pollutions, &c.

The *Greeks* call'd it Ἄγνος, *Chaſt*; to which has ſince been added the Reduplicative *Caſtus*, q. d. *Chaſt*, *chaſt*.

The

The *Athenian* Ladies, who made Profeſſion of Chaſtity, lay upon Leaves of *Agnus Caſtus*, during the Feaſts of *Ceres*. See CEREALIA.

It is reputed a Cooler, and particularly of the Genital Parts; and was antiently uſed in Phyſick, to allay thoſe inordinate Motions ariſing from ſeminal Turgeſcences: But it is out of the preſent Practice. See POLLUTION.

AGNUS *Dei*, a piece of conſecrated Paſte, of great ſervice in the Church of *Rome*.

The Name literally ſignifies *Lamb of God*; this being ſuppoſed an Image or Repreſentation of the Lamb of God, &c.

They cover it up with a piece of Stuff, cut in form of a Heart, and carry it very devoutly in their Proceſſions.—The *Romiſh* Prieſts, and Religious, make a good Penny, by ſelling theſe *Agnus Dei's* to ſome, and preſenting them to others.

The Pope conſecrates freſh ones once in ſeven Years, the Diſtribution whereof, belongs to the Maſter of the Wardrobe; and they are receiv'd by the Cardinals with a world of Reverence, in their Mitres.—This Ceremony they pretend to derive from an antient Cuſtom of the Church, wherein part of the Paſchal Taper, conſecrated on Holy Thurſday, was diſtributed among the People, to perfume their Houſes, Fields, &c. in order to drive away Devils, and to preſerve them from Storms and Tempeſts. See PASCHAL *Taper*.

The Name *Agnus Dei*, is alſo popularly given to that Part of the Maſs, wherein the Prieſt, ſtriking his Breaſt three times, rehearſes, with a loud Voice, a Prayer beginning with the Words *Agnus Dei*.

AGON, in Antiquity, Ἀγών, q. d. *Combat*; a Diſpute or Contention for the Maſtery, either in ſome Exerciſes of the Body, or the Mind.

There were of theſe *Agones*, on certain Days, in moſt of their Feaſts, and other Ceremonies, in honour of Gods, or Heroes. See FEAST, and GAME.

There were alſo *Agones* eſtabliſh'd expreſly, and not attach'd to any other Solemnity.—Such was the *Agon Gymnicus*, at *Athens*; the *Agon Nemæus*, inſtituted by the *Argi* in the 53d Olympiad; the *Agon Olympius*, inſtituted by *Hercules*, 430 Years before the firſt Olympiad. See NEMÆAN, OLYMPIC, &c.

The *Romans* had alſo *Agones* inſtituted after the Example of the *Greeks*: The Emperor *Aurelian* eſtabliſh'd the *Agon Solis*, *Agon* of the Sun; and *Diocletian*, the *Agon Capitolinus*, which was held every fourth Year, after the manner of the Olympic Games.—Hence, the Years, inſtead of Luſtra, are ſometimes number'd by *Agones*.

AGON was alſo an Officer of Sacrifice, whoſe Buſineſs was to ſtrike the Victim. See SACRIFICE, and VICTIM.

The Name was derived hence, that ſtanding ready to give the Stroke, he frequently aſk'd *Agon*, or *Agone*? Shall I ſtrike?

The *Agon* was alſo called *Popa*, *Cultrarius*, and *Victimarius*. See POPE.

AGONALES, in Antiquity, an Epithet given to the *Salii*, conſecrated by *Numa Pompilius* to the God *Mars* ſirnamed *Gradivus*. See SALII.

They were alſo called *Quirinales*, aud *Palatini*. See QUIRINALES, and PALATINI.—*Roſinus* calls 'em *Agonenſes Salii*.

AGONALIA, or AGONEA, in Antiquity, Feaſts celebrated by the *Romans*, in honour of *Janus*; or, as ſome will have it, in honour of the God *Agonius*, whom the *Romans* uſed to invoke upon their undertaking any Buſineſs of importance. See FEAST.

Authors vary as to the Etymology of this Solemnity; ſome derive it from the Mount *Agon*, afterwards *Mons Quirinalis*, whereon it was held.—Others ſuppoſe it taken from that Ceremony in the Feaſt, where the Prieſt holding the naked Knife, and ready to ſtrike the Victim, which was a Ram, aſk'd, *Agone*? Shall I do it?—This is *Ovid*'s Opinion. *Faſt.* L. I. v. 319. See SACRIFICE.

AGONISTICI, in Antiquity, a Name given by *Donatus* to thoſe of his Sect, whom he ſent into the neighbouring Places, Fairs, Markets, &c. to preach his Doctrine; for which reaſon they were alſo called *Circuitores*, *Cercelliones*, *Catropitæ*, *Coropitæ*, and at *Rome*, *Montenſes*.

They were called *Agoniſtici*, from the *Greek* ἀγών, *Combat*; in regard they were ſent as it were to fight, and ſubdue the People to their Opinions.

AGONOTHETA, AGONOTHETES, in Antiquity, a Magiſtrate choſe among the *Greeks*, to preſide, and have the Superintendency of their ſacred Games, or Combats; to defray the Expences thereof, and adjudge the Prizes to the Conquerors. See GAME, COMBAT, &c.

The Word is compounded of ἀγών, *Combat*, *ſacred Sport*; and θετὴς, *he who diſpoſes*, *appoints*, *or dains*.——Among the *Romans*, the like Officer was denominated *Athelotheta*. See ATHELOTHETA.

AGONOCLITA, or AGONOCLITES, in Antiquity, a Sect in the VIIth Century; whoſe diſtinguiſhing Principle it was, never to kneel, but to deliver all their Prayers ſtanding. See GENUFLEXION.

The Word is compounded of the Privative Particle α, γόνυ, *Knee*, and κλίνω, *I bend*.

AGONY, AGONIA, the Extremity of Pain, or a Diſeaſe; when Nature makes her laſt Effort, or Struggle, to throw off the Evil that oppreſſes her. See PAIN, DISEASE, and DEATH.

The Word is form'd from the *Greek* ἀγών, *Certamen*, Combat; this being a kind of Strife, between Life and Death.

AGORONOMUS, in Antiquity, a Magiſtrate of *Athens*, eſtabliſh'd for the Maintenance of good Order, and Policy in the Markets; the Inſpection of the Weights, Meaſures, &c.

The *Agoronomus* was much the ſame with the *Curule Ædile* among the *Romans*. See EDILE.

The Word is compounded of the *Greek*, ἀγορὰ, *Market*, and νεμεῖν, *to diſtribute*.—*Ariſtotle* diſtinguiſhes two Kinds of Magiſtrates, the *Agoronomi*, who had the Intendance of the Markets; and the *Aſtynomi*, who inſpected the Buildings.

AGRARIAN, in the *Roman* Juriſprudence, a Denomination given to ſuch Laws as relate to the Partition, or Diſtribution of Lands. See LAW.

The Word is form'd of the Latin *Ager*, Field.

*The* AGRARIAN *Law*, *Lex* AGRARIA, abſolutely, and by way of Eminence ſo call'd, was a celebrated Law, publiſhed by *Spurius Caſſius*, about the Year 268, for the Diviſion of the Lands taken from the Enemy.—Thoſe other two in the *Digeſt*, the one publiſh'd by *Cæſar*, and the other by *Nerva*, only relate to the Limits or Boundaries of Grounds; and have no Relation to that of *Spurius Caſſius*.

There are fifteen or twenty *Agrarian Laws*, whereof, the principal are, The *Lex Apuleia*, made in the Year of *Rome* 653; the *Lex Bæbia*; the *Lex Caſſia*, in the Year 267; the *Lex Cornelia*, in the Year 673.; the *Lex Flaminia*, in the Year 525; the *Lex Flavia*; the *Lex Julia*, in the Year 691; the *Lex Licinia*, in 377; the *Lex Ælia Licinia*; the *Lex Livia*; the *Lex Marcia*; the *Lex Rubria*, made after the taking of *Carthage*; two *Sempronian* Laws, in the Year 620; the *Lex Servilia*, in 690; the *Lex Thoria*; and the *Lex Titia*.

AGREEMENT, AGREAMENTUM, in Law, is defined by *Plowden*, a joining or putting together of two or more Minds in any thing done, or to be done.

Of this there may be three ſorts.—The firſt, an *Agreement* executed at the Beginning; mention'd in the Stat. of 25 *Edw.* III. which ſays, 'That the Goods bought by 'Foreſtallers, being thereof attainted, ſhall be forfeited to 'the King; if the Buyer thereof have made *Gree* with 'the Seller:' Where the Word *Gree*, otherwiſe called *Agreement executed*, ſignifies Payment for the Things, or Satisfaction.

The ſecond is, where one does an Act, and another *agrees* or aſſents thereto, afterwards. See ASSENT.

The third is, when both Parties at one time are *agreed* that ſuch a thing ſhall be done in time to come; which is *Executory*, in regard the thing is to be done afterwards. See CONTRACT.

AGRESSES, or OGRESSES, in Heraldry, the ſame as *Pellets*, or *Balls*. See OGRESSES.

AGRICULTURE, the Art of tilling or cultivating the Earth, in order to render it fertile, and make it bear Plants, Trees, Fruits, &c. See EARTH, SOIL, CULTURE, PLANT, FRUIT, SEED, &c.

The principal and moſt general Operations in *Agriculture*, are *Manuring*, *Ploughing*, *Fallowing*, *Sowing*, *Harrowing*; as alſo, *Reaping*, *Mowing*, &c. See the Articles MANURE, PLOUGHING, FALLOWING, SOWING, &c.

To the Operations of *Agriculture* do alſo belong the Management of the Productions of particular Countries; as *Hops*, *Hemp*, *Vines*, *Tobacco*, *Saffron*, *Liquorice*, *Woad*, &c. See HOPS, HEMP, TOBACCO, SAFFRON, GLYCIRRHIZA, WOAD, &c.

To the ſame Art belong *Planting*, *Tranſplanting*, *Pruning*, *Engrafting*; the Culture of *Foreſts*, *Timber*, *Copſes*, &c. See PLANTING, TRANSPLANTING, PRUNING, ENGRAFTING, TIMBER, TREE, &c.

Even *Gardening*, or Horticulture it ſelf, is only a Branch of *Agriculture*. See GARDEN, and GARDENING.

The Word is form'd of the Latin *Ager*, Field, and *cultura*, of *colo*, I till.—Among the Antients, it is frequently called *Georgica*. See GEORGICKS.

We forbear to ſay any thing about the Antiquity or Uſefulneſs of this Art: Every Reader's Imagination will ſupply that Defect.——It has been cultivated by many of the greateſt Men among the Antients; as Emperors, Dictators, and Conſuls; and has been treated of by ſome of their greateſt

greateſt Authors: *Virgil* for inſtance, *Cato*, *Varro*, and *Columella*.

The later Authors on *Agriculture*, are *Palladius Conſtantinus*, *Cæſar*, *Baptiſta Porta*, *Heresbachius*, and *Agricola*, in *Latin*; *Alphonſo Herrara*, in *Italian*; *Stephens*, *Liebaut*, *de Serrée*, *de Croiſcens*, *Bellon*, and *Chomel*, in *French*; and *Evelyn*, *Mortimer*, *Switzer*, *Bradley*, and *Lawrence*, in *Engliſh*. See GEOPONICK.

AGRIPPA, a Name applied, among the Antients, to Children deliver'd in an unuſual, or irregular manner. See DELIVERY.

They were called *Agrippæ*, quaſi *ægre parti*.

AGRYPNIA, Αγρυπνια, a Watching, or dreaming Slumber. See COMA, WATCHING, SLEEP, &c.

AGUE, a periodical Diſeaſe, conſiſting in a cold ſhivering Fit, ſucceeded by a hot one; and going off in a Diaphoreſis, or Sweating. See DISEASE.

If the Coldneſs and Shivering be inconſiderable, and only the hot Fit felt; the Diſeaſe is called an *Intermitting Fever*. See FEVER.

According to the Periods or Returns of the Fits, the Diſeaſe is either a *Quotidian*, *Tertian*, or *Quartan Ague*, or *Fever*. See QUOTIDIAN, TERTIAN, QUARTAN, &c.

The next Cauſe of Agues, ſeems to be an obſtructed Perſpiration, or whatever by overloading the Juices, retards their Motion, or occaſions a Lentor in the Blood.—The Symptoms are Heavineſs and Reaching; a weak, ſlow Pulſe; Coldneſs, and Shivering, felt firſt in the Joints, thence creeping over the whole Body; Pain in the Loins, and an involuntary Motion of the under Jaw.

A *Vernal Ague* is eaſily cur'd; but an *Autumnal* one is more obſtinate, eſpecially in aged and cachectical Perſons; if complicated with a Dropſy, Peripneumony, &c. dangerous.—When an *Ague* proves fatal, it is uſually in the cold Fit.

The Cure is uſually begun with an Emetic of Ipecacuanha, an Hour before the Acceſs; and compleated with the Cortex Peruvianus, adminiſter'd in the Interval between two Fits; and continued at times, to prevent a Relapſe. See CORTEX.

Dr. *Quincy* endeavours to account for the Effect of the Bark, from the Irregularity, Aſperity, and Solidity of its Particles, which fit it to break thoſe Viſcidities in the Juices whereby the Capillaries were obſtructed, and to draw up the Solids into a Tenſion, ſufficient by the vigorous Vibrations enſuing thereon, to prevent any future Accumulation thereof.—The firſt Intention, he obſerves, is anſwer'd, by giving the Blood a greater Momentum; and the ſecond, by its corrugating the Nerves, and rendering the Contractions of the Veſſels more briſk and forcible.—Hence alſo its Effects upon ſuch as are apt to ſweat immoderately.

AID, or AIDE, *Auxilium*, literally denotes the Help, Succour, or Aſſiſtance, which any Perſon lends another, when too weak to do, or avoid ſomething. See ASSISTANT.

The Word is *French*, form'd, according to M. *Menage*, from the Italian *Aitare*; and that from the Latin *Adjutare*, whence the Spaniſh *Adjutant*.

AID, in Law, is when a Petition is made in Court, for the Calling in of *Help* from another Perſon intereſted in the Matter in Queſtion; who, 'tis probable, may not only ſtrengthen the Party's Cauſe, who thus prays for *Aid*, but alſo prevent a Prejudice ariſing to his own Right.

This is called *Aid Prier*, or *Aid Prayer*: But this Courſe of Proceeding is now much diſuſed.

A City or Corporation, holding a Fee-farm of the King, may *Pray in Aid* of him; if any thing be demanded of them relating thereto.

The *Aid Prier*, is ſometimes alſo uſed in the King's behalf, to prevent any Proceeding againſt him till his Council be call'd, and heard what they have to ſay for avoiding the King's Prejudice, or Loſs.

AID *de Camp*, an Officer in an Army, whoſe Buſineſs is to attend the general Officers, and receive and carry their Orders, as occaſion requires.

When the King is in the Field, he uſually appoints young Volunteers of Quality to carry his Orders, who are called the King's *Aids de Camp*.

AID *Major*, or *Adjutant*, is an Officer, whoſe Buſineſs is to eaſe the *Major* of part of his Duty; and to perform it all in his Abſence. See MAJOR, and ADJUTANT.

Some Majors have ſeveral *Aid-Majors*.—Each Troop of Guards has but one Major, who has two *Aid-Majors* under him; or more, according as the Buſineſs requires. See TROOP, and GUARD.

Every Regiment of Foot hath as many *Aid-Majors* as it contains Battalions.—When the Battalion is drawn up, the *Aid-Major*'s Poſt is on the Left, beyond all the Captains, and behind the Lieutenant-Colonel. See REGIMENT, BATTALION, &c.

AID, *Auxilium*, in our antient Cuſtoms, a Subſidy or Sum of Money due to the Lord, from his Tenants, on certain Occaſions. See SUBSIDY, SERVICE, &c.

It differ'd from a *Tax*, which is impoſed at any time when wanted; whereas the *Aid* could only be levied where it was Cuſtomary, and where the particular Occaſion fell out. See TAX.

Such was the *Aid de Relief*, due from the Tenants in Fee, upon the Death of the Lord Meſn, to his Heir; towards the Charge of a Relief of the Fee, of the ſuperior Lord. See RELIEF, FEE, LORD, &c.

Such alſo was the *Aid Chevel*, or *Capital Aid*, due by Vaſſals, to the chief Lord, or the King, of whom they held *in Capite*. See VASSAL.

Of this there are three Kinds.—The firſt, of Chivalry; or, as they call'd it, *Par fitz Chevalier*, towards making his eldeſt Son a Knight, when arrived at the Age of 15 Years: The ſecond, of Marriage, or *Par fille marier*, towards marrying his eldeſt Daughter.—Both theſe, with all Charges incident thereto, are taken away by Stat. 12 *Car.* II. See TENURE, CAPITE, &c.—Some will have 'em to have been firſt eſtabliſh'd in *England*, by *William* the Conqueror; and afterwards transferr'd to *Normandy*: But the more common Opinion is, that the Conqueror brought 'em with him: The third was of *Ranſom*, due when the Lord was taken Priſoner. See RANSOM.

In ſome Provinces there was a fourth kind of *Aid*; due whenever the Lord ſhould undertake an Expedition to the Holy Land. See CROISADE, &c.

We alſo read of *Aids* paid the Lord, when he was minded to purchaſe any Land or Tenement. Theſe were only granted once in his Life.——*Aids* for the Repairing and Fortifying of Caſtles, Seats, &c.

Theſe *Aids*, or Contributions, were at firſt impoſed by the Lord or King, at what Rate he pleas'd; but by a Stat. 3d *Edw.* I. a Reſtraint was laid on common Perſons being Lords, and they were tied down to a fix'd Proportion: By a ſubſequent Statute, the ſame Rate was extended even to the King.

They ſeem to have been firſt eſtabliſh'd with a View to the Clients and Freedmen of antient *Rome*, who made preſents to their Patrons towards his Daughter's Fortune, as alſo on his Birth-day, and other ſolemn Occaſions. See PATRON, and CLIENT.——Accordingly, *Bouteiller* relates, that in his Time, they depended on the Courteſy and Good-will of the Vaſſals; for which Reaſon they were called, *Droits de Complaiſance*.

The Biſhops alſo received *Aids* from their Eccleſiaſticks, called *Synodales*, and *Pentecoſtals*. They were to be paid at the Time of their Conſecration; or when they had a King to entertain; or when call'd by the Pope to his Court, or to a Council; as alſo when they went to receive the *Pallium*. See SYNODALES, &c.

Add, that the Archdeacons exacted *Aids* from the Clergy of their Juriſdiction. See PROCURATION, &c.

AIDS are alſo uſed in Matters of Polity, for any extraordinary Taxes or Impoſitions occaſionally levied by the King and Parliament, upon the Subjects; to ſupport the Charges of the Government, when the ordinary Revenue proves ſhort. See SUBSIDY.

AIDS, in the Manage, are Helps or Aſſiſtances, which the Horſeman contributes towards the Motion or Action requir'd of the Horſe; by a diſcrete uſe of the Bridle, Caveſon, Spur, Poinſon, Rod, Calf of the Leg, and Voice. See BRIDLE.

Such a Horſe knows his *Aids*, anſwers his *Aids*, takes his *Aids* with Vigour, &c.—The *Aids* are made uſe of, to avoid the Neceſſity of Corrections.—The ſame *Aids*, given in a different manner, become Corrections. See CORRECTION.

The *Aids* uſed to make a Horſe go in Airs, are very different from thoſe requir'd in going upon the Ground. *Newcaſtle*.

The inner Heel, inner Leg, and inner Rein, are called *inner Aids*.—The outer Heel, outer Leg, &c. are *outer Aids*.

AIGLETTE, in Heraldry. See EAGLET.

AIGUE *Marine*, in Natural Hiſtory. See AQUA *Marina*.

AIGUISCE, or AIGUISSEE, or EGUISCE, in Heraldry, a Term applied to a Croſs, when its four Ends are ſharpen'd, ſo however as to terminate in obtuſe Angles. See CROSS.

The Croſs *Aiguiſce* differs from the Croſs Fitchee, in that the latter goes tapering by degrees to a ſharp Point; whereas only the Ends of the former are taper'd. See FITCHEE.

AILE, in Law, a Writ which lies where the Grand-father, or Great Grand-father called *Beſaile*, was ſeized of Lands or Tenements in Fee-ſimple, on the Day he died; and a Stranger abates or enters the ſame Day, and diſpoſſeſſeth the Heir. The Word is form'd of the *French Aieul*, *Avus*, Grand-father.

AIR, Aer, in Phyſicks, a thin, fluid, tranſparent, compreſſible, and dilatable Body; ſurrounding the terraqueous Globe to a conſiderable Height. See Earth, and Terraqueous.

*Air* was conſider'd by ſome of the Antients as an Element; but then, by *Element* they underſtood a different thing from what we do. See Element.

'Tis certain, that *Air*, taken in the popular Senſe, is far from the Simplicity of an Elementary Subſtance; tho there may be ſomething in it, which bids fair for the Appellation. —Hence, *Air* may be diſtinguiſh'd into *Vulgar*, or *Heterogeneous*; and *Proper*, or *Elementary*.

*Vulgar or Heterogeneous* Air, is a Coalition of Corpuſcles of various Kinds, which together conſtitute one fluid Maſs, wherein we live and move, and which we are continually receiving and expelling by Reſpiration.—The whole Aſſemblage of this, makes what we call the *Atmoſphere*. See Atmosphere.

Where this *Air* or Atmoſphere terminates, there Æther is ſuppoſed to commence; which is diſtinguiſh'd from *Air*, in that it does not make any ſenſible Refraction of the Rays of Light, which *Air* does. See Æther, and Refraction.

The Subſtances whereof *Air* conſiſts, may be reduced to two Kinds, *viz.* 1°, The Matter of Light, or Fire, which is continually flowing into it from the heavenly Bodies. See Fire.—To which, probably, may be added the Magnetical Effluvia of the Earth. See Magnetism.

2°, Thoſe numberleſs Particles, which in form either of Vapours, or dry Exhalations, are rais'd from the Earth, Water, Minerals, Vegetables, Animals, *&c.* either by the ſolar, ſubterraneous, or culinary Fire. See Vapour, and Exhalation.

*Elementary* Air, or Air, properly ſo call'd, is a certain ſubtile, homogeneous, elaſtick Matter; the Baſis, or Fundamental Ingredient of the Atmoſpherical *Air*, and that which gives it the Denomination.

### *Nature and Production of* Air.

The peculiar Nature of this *aerial* Matter, we know but little of; what Authors have advanced concerning it being chiefly conjectural. We have no way of examining it apart, or ſeparating it from the other Matters it is mix'd with; and conſequently no way of aſcertaining with Evidence what belongs to it abſtractedly from the reſt.

Dr. *Hook*, and ſome others, will have it to be no other than the *Æther* it ſelf; or that fine, fluid, active Matter, diffuſed thro' the whole Expanſe of the Celeſtial Regions; which coincides with Sir *Iſaac Newton's Subtile Medium*, or *Spirit*. See Æther, Medium, and Spirit.

In this View it is ſuppoſed a Body *ſui generis*, ingenerable, incorruptible, immutable, preſent in all Places, in all Bodies, *&c.*

Others, conſidering only its Property of Elaſticity, which they account its eſſential and conſtituent Character; ſuppoſe it mechanically producible; and to be no other than the Matter of other Bodies alter'd, ſo as to become permanently elaſtick.—Mr. *Boyle* gives us ſeveral Experiments, which he made "for the Production of *Air*; taking Pro- "duction for the obtaining a ſenſible Quantity thereof, from "Bodies wherein it did not appear either at all, or in ſo "great Plenty."——Among the ſeveral Ways of doing this, 'the fitteſt for Practice,' he obſerves, 'are Fermentation, 'Corroſion, Diſſolution, Decompoſition; the boiling of Wa- 'ters and other Fluids; and the mutual Action of Bodies, 'eſpecially ſaline ones, upon each other.' *Hiſt. of Air.*— He adds, 'that various ſolid and mineral Bodies, unſuſpect- 'ed of Elaſticity, being plunged in corroſive unelaſtick 'Menſtrua, will, by a proper Comminution of their Parts 'in the Conflict, afford a conſiderable Quantity of perma- 'nently elaſtick *Air*.' *Ubi ſupra*.

Of the ſame Opinion is Sir *I. Newton*; 'The Particles of 'denſe, compact, and fixed Subſtances, cohering by a ſtrong 'attractive Force, are not ſeparable without a vehement 'Heat, or perhaps not without Fermentation; and ſuch 'Bodies being at length rarified by ſuch Heat or Fermen- 'tation, become true permanent *Air*.' *Opticks*.—'Thus, the ſame Author adds, 'Gunpouder generates *Air* by Ex- 'ploſion.' *Ibid.*

We have here, therefore, not only the Materials whereof *Air* ſhould be made; but the Means of doing it: with regard to which, the *Air* is divided into *Real* or *Permanent*; and *Apparent* or *Tranſient*.—For, that all which appears to be *Air* does not continue ſuch, is evident from the Inſtance of an Æolipile; the Water of which being ſufficiently rarefy'd by the Fire, ruſhes out in a ſharp whiſtling Blaſt, perfectly reſembling *Air*, while the Motion laſts; but ſoon loſes that reſemblance, eſpecially in the Cold, and returns by Condenſation into its original Water: And the ſame may be obſerved of Alcohol of Wine, and other ſubtile and fugitive Spirits, rais'd by Diſtillation.—Whereas *real Air* is not reducible by any Compreſſion, Condenſation, or the like, into any other Subſtance beſide *Air*. See Æolipile.

Water, then, tho it may put on an *aerial* Nature for a-while, yet is not capable of perſiſting therein: And the ſame may be ſaid of other Fluids.—The furtheſt they can go, is to become Vapour; which is the Matter of the Fluid render'd much rarer, and put in a briſk Motion.——For a Subſtance to become *permanent Air*, it muſt be of a fixed Kind: otherwiſe, it is not capable of undergoing the Alteration neceſſary to be induced in it; but gives way and flies off too ſoon. So that the Difference between *Permanent* and *Tranſient Air*, amounts to the ſame as that between Vapour and Exhalation; the one, *e. g.* being dry, the other moiſt, *&c.* See Vapour, and Exhalation.

We can go a little further yet.—This elaſtick Property of *Air*, is ſuppoſed by many Philoſophers, to depend on the Figure of its Corpuſcles, which they ſuppoſe to be ramous: Some will have 'em ſo many minute Floculi, reſembling Fleeces of Wool; others conceive 'em roll'd up like Hoops, and curled like Wires, or Shavings of Wood, or coil'd like the Springs of Watches; and endeavouring to reſtore themſelves in Virtue of their Texture: ſo that to produce *Air*, muſt be to produce ſuch a Figure and Diſpoſition of Parts; and thoſe Bodies only are proper Subjects, which are ſuſceptible of ſuch Diſpoſition; which, Fluids, from the ſmoothneſs, roundneſs, and ſlipperineſs of their Parts, are not. See Fluid.

But Sir *I. Newton* puts the Thing another way; ſuch a Texture he thinks by no means ſufficient to account for that vaſt Power of Elaſticity obſerved in *Air*, which is capable of diffuſing into above a Million of times more Space than it before poſſeſs'd.—But, as all Bodies are ſhewn to have an attractive and a repelling Power; and as both theſe are ſtronger in Bodies, the denſer, more ſolid and compact they are: Hence it follows, that when by Heat, or any other powerful *Agent*, the attractive Force is ſurmounted, and the Particles of the Body ſeparated ſo far as to be out of the Sphere of Attraction; the repelling Power commencing thence, makes 'em recede from each other with a ſtrong Force, proportionable to that wherewith they before coher'd; and thus they become *permanent Air*.—— Hence, ſays the ſame Author, it is, that as the Particles of *permanent Air* are groſſer, and ariſe from denſer Bodies, than thoſe of *Tranſient Air*, or Vapour: true *Air* is more ponderous than Vapour; and a moiſt Atmoſphere lighter than a dry one. *Opticks*, p. 371, *&c.* See Attraction, Repulsion, *&c.*

But, after all, there may ſtill be Reaſon to doubt, whether the Matter thus produced from ſolid Bodies have all the Properties of *Air*; and whether ſuch *Air* be not tranſient, as well as that from humid ones; tho not to that degree.——Mr. *Boyle* argues, from an Experiment made in the *Air*-Pump with lighted Match; that thoſe light and ſubtile Fumes into which the Fire it ſelf ſhatters dry Bodies, have no ſuch Spring as *Air*; ſince they were unable to hinder the Expanſion of a little *Air*, included in a Bladder they ſurrounded. *Phyſ. Mech. Exper.*——Yet, in ſome ſubſequent Experiments, by diſſolving Iron either in Oil of Vitriol and Water, or in Aqua-fortis; a large *aerial* Bubble was produced, which had a real Spring; ſo as to hinder the ſurrounding Liquor from regaining its Place; and which, by the Application of a warm Hand, readily dilated it ſelf like other *Air*, and broke into the Liquor in ſeveral ſucceeding Bubbles; and even thro' the Liquor into the open *Air*. *Ubi ſupra*.

The ſame excellent Perſon further aſſures us, he procured a really elaſtick Subſtance from divers other Matters; as Bread, Grapes, Muſt, Ale, Apples, Peas, Beef, *&c.* and from ſome Bodies by only burning 'em *in Vacuo*, particularly Paper, Hartſhorn, *&c.* which yet, upon further Examination, was ſo far from being pure *Air*, that Animals incloſed in it, not only could not reſpire it without harm; but even died ſooner than *in Vacuo*, where there was nothing like *Air*. *Phyſ. Mechan. Exper.*

We may here add an Obſervation of the Members of the Royal Academy of Sciences at *Paris*; which imports, that the Property of Elaſticity is ſo far from conſtituting *Air*; that *Air* is render'd more elaſtick by the Admixture of ſome other Matters along with it, than it is in its Purity.— Thus, from ſome Experiments of M. *de la Hire* at *Paris*, and of M. *Stancari* at *Boulogne*, M. *Fontenelle* aſſures us, that *Air* moiſten'd with Water, is conſiderably more elaſtick, and expands further, than when pure.—M. *de la Hire* even found the moiſt *Air* eight times more elaſtick than the dry. *Hiſt. de l'Acad.* An. 1708.

But it muſt not be omitted, that Dr. *Jurin* explains the Experiments another way; and endeavours to ſhew, that the Concluſion does not neceſſarily follow from 'em. *Append. ad Varen. Geogr.*

Thus much for *Air* conſider'd in it ſelf.——But ſuch *Air*, we have obſerv'd, no where exiſts in its Purity.—That wherewith we are concern'd, and whoſe Properties and Effects are chiefly conſider'd, is acknowledg'd by Mr. *Boyle* to be the moſt heterogeneous Body in the Univerſe: *Boerhaave* even ſhews it to be an univerſal Chaos, or Colluvies of all the Kinds of created Bodies.—Whatever Fire can volatilize is found in the *Air*; but there is no Body that can withſtand the Force of Fire. See FIRE, VOLATILITY, BURNING-GLASS, &c.

Hence, for inſtance, the whole Foſſil Kingdom muſt neceſſarily be found therein: For all of that Tribe, as Salts, Sulphurs, Stones, Metals, &c. are convertible into Fume, and thus capable of being render'd part of the *Air*.—Gold it ſelf, the moſt fix'd of all natural Bodies, is found to adhere cloſe to the Sulphur in Mines; and thus to be raiſed along with it. See GOLD, &c.

2°, All the Parts of the Animal Kingdom muſt alſo be in the *Air*: For, beſide the copious Effluvia continually emitted from their Bodies, by the vital Heat, in the ordinary Courſe of Perſpiration; by means whereof an Animal, in the Courſe of its Duration, impregnates the *Air* with many times the Quantity of its own Body, (See PERSPIRATION, EFFLUVIA, &c.) Beſide this, we find that any Animal when dead, being expoſed to the *Air*, is in a little time carried wholly off, Bones and all. So that the Whole of what before was an Animal, *e. g.* a Man, an Ox, or the like, is now in the *Air*.

By the way, it may be noted what huge Swarms of the groſſer excrementitious Matters of Animals muſt ſwim in the *Air*: At *Madrid*, we are aſſured, they have no Neceſſary Houſes; and that they always make a Jakes of their Streets overnight: yet does the *Air* imbibe the Filth as faſt as 'tis laid; inſomuch, that there is no increaſe of any fetid ſmell.

3°, As to Vegetables, nothing of that Claſs can be ſuppoſed wanting; ſince we know that all Vegetables by Putrifaction become volatile; even the earthy or vaſcular Part, in time follows the reſt. See VEGETABLE, PLANT, &c.

Of all the Effluvia floating in this grand Ocean the Atmoſphere; one of the principal, are the Saline. Theſe, Authors commonly conceive, as chiefly of the nitrous Kind; but there is no doubt but that there are of all the ſorts, Vitriolick, Aluminous, Sea Salt, &c. See SALT, NITRE, &c.

Mr. *Boyle* even obſerves, that there may be many compounded Kinds of Salts in the *Air*, which we have not on Earth; ariſing from different ſaline Spirits, fortuitouſly meeting and mixing together.—Thus, the glaſs Windows of antient Buildings are ſometimes obſerv'd to be corroded, as if they had been Worm-eaten; tho none of the Salts abovemention'd have the Faculty of corroding Glaſs.

The Sulphurs, too, muſt make a conſiderable Article in the *Air*; on account of thoſe many Volcanoes, Grottos, Caverns, and other Spiracles chiefly affording that Mineral, diſperſed thro' the Globe. See SULPHUR, VOLCANO, &c.

And the Aſſociations, Separations, Attritions, Diſſolutions, and other Operations of one ſort of Matter upon another, may be conſider'd as a Source of numerous other neutral or anonymous Bodies, unknown to us.

*Air*, in this general Senſe, is one of the moſt conſiderable and univerſal *Agents* in all Nature; being concern'd in the Production of moſt of the Phænomena relating to our World.—Its Properties and Effects, including a great Part of the Reſearches and Diſcoveries of the modern Philoſophers, have ſome of 'em been reduced to preciſe Laws and Demonſtrations; in which form they make a Branch of Mathematicks, called *Pneumaticks*, or *Aerometry*. See MATHEMATICKS, PNEUMATICKS, and AEROMETRY.

### *Mechanical Properties and Effects of* AIR.

I°, *Fluidity*.——That the *Air* is a Fluid, is evident from the eaſy Paſſage it affords to Bodies thro' it; as in the Propagation of Sounds, Smells, and other Effluvia: For this argues it a Body whoſe Parts give way to any Force impreſs'd, and in yielding, are eaſily moved among themſelves; which is the Definition of a Fluid. See FLUID.—See alſo SOUND, &c.

They who, with the *Carteſians*, make Fluidity conſiſt in a perpetual inteſtine Motion of the Parts, find *Air* alſo anſwers to that Character: Thus, in a darkned Room, where the Species of external Objects are brought in by a ſingle Ray; they appear in a continual Fluctuation; and thus even the more accurate Weather-Glaſſes are obſerv'd never to remain a moment at reſt. See WEATHER-*Glaſs*.

The Cauſe of this Fluidity of *Air*, is attributed by ſome late Philoſophers to the Fire intermix'd therewith; without which, they imagine, the Atmoſphere would harden into a ſolid, impenetrable Maſs.—And hence, the greater the Degree of Fire therein, the more fluid, moveable and pervious the *Air*: And thus, as the degree of Fire is continually varying; according to the Circumſtances and Poſition of the heavenly Bodies; the *Air* is kept in a continual Reciprocation. See FIRE.

Hence, in good meaſure, it is, that on the Tops of the higher Mountains; the Senſes of Smelling, Hearing, &c. are found very feeble. See MOUNTAIN.

II°, *Weight*, or *Gravity*.——That the *Air* is heavy, follows from its being a Body; Weight being an eſſential Property of Matter. See WEIGHT, and GRAVITY.

But we have infinite Arguments of the ſame from Senſe, and Experiment: Thus, the hand, applied on the Oriſice of a Veſſel empty of *Air*, ſoon feels the Load of the incumbent Atmoſphere.—Thus, glaſs Veſſels, exhauſted of their *Air*, are eaſily cruſh'd to pieces by the Weight of the *Air* without. So, two ſmall hollow Segments of a Sphere, exactly fitting each other, being emptied of *Air*, are preſs'd together with a Force equal to 100 Pound, by the Pondus of the ambient *Air*.

Further, a Tube cloſe at one end, being filled with Mercury, and the other End immerged in a Baſon of the ſame Fluid; and thus erected: The Mercury in the Tube will be ſuſpended to the Height of about 30 Inches above the Surface of that in the Baſon. The Reaſon of which Suſpenſion, is, that the Mercury in the Tube cannot fall lower, without raiſing that in the Baſon; which being preſs'd down with the Weight of the incumbent Atmoſphere, cannot give way, unleſs the Weight of the Mercury in the Tube, exceeds that of the *Air* out of it.—That this is the Caſe, is evident hence; that if the whole Apparatus be included in an Air-Pump; in proportion as the *Air* is exhauſted from the ſame, the Mercury falls: and gradually letting in the *Air* again, the Mercury reaſcends to its former height.—This makes what we call the *Torricellian Experiment*. See TORRICELLIAN.

To ſay no more, we can actually weigh *Air*: For a Veſſel, full even of common *Air*, by a very nice Balance, is found to weigh more than when the *Air* is exhauſted; and the Effect is proportionably more ſenſible, if the ſame Veſſel be weigh'd full of condenſed *Air*, and void of *Air*. See WEIGHING, and HYDROSTATICAL *Balance*.

The Weight of *Air* is continually varying, according to the different degree of Heat, and Cold.—*Ricciolus* eſtimates its weight to that of Water, to be as 1 to 1000; *Merſennus* as 1 to 1300, or 1 to 1356; *Galileo* only makes it as 1 to 400.—Mr. *Boyle*, by a more accurate Experiment, found it about *London*, as 1 to 938; and thinks, all things conſider'd, the Proportion of 1 to 1000 may be taken as a Medium; for there is no fixing any preciſe Ratio, ſince not only the *Air*, but the Water it ſelf, is continually varying. Add, that Experiments made in different Places neceſſarily vary, in regard of the different Heights of the Places, and the different Conſiſtences of *Air* ariſing therefrom. Boyle, *Phyſ. Mechan. Exper.*

It muſt be added, however, that by Experiments made ſince before the Royal Society; the Proportion of *Air* to Water was, firſt, found as 1 to 840; then, as 1 to 852; and a third time, as 1 to 860. *Phil. Tranſ.* N° 181.——And laſtly, by a very ſimple and accurate Experiment of the late Mr. *Hawksbee*; the Proportion was ſettled as 1 to 885. *Phyſ. Mechan. Exper.*——But theſe Experiments being all made in the Summer Months, when the Barometer was 29 Inches $\frac{3}{4}$ high; Dr. *Jurin* thinks, that at a Medium between Heat and Cold, when the Barometer is 30 Inches high; the Proportion between the two Fluids, may be taken as 1 to 800.

*Air*, then, being heavy and fluid; the Laws of its Gravitation, or Preſſure, may be inferr'd to be the ſame as in other Fluids; conſequently, its Preſſure muſt be as its perpendicular Altitude. See FLUID.

This is alſo confirmed by Experiment.—For, removing the Torricellian Tube to a more elevated Place, where the incumbent Column of *Air* is ſhorter; a proportionably ſhorter Column of Mercury is ſuſtained; it being found to deſcend at the Rate of one fourth of an Inch, for every 100 Foot of Aſcent. See LEVELLING.

*On this Principle depends the Structure and Office of the Barometer*. See BAROMETER.

From hence, alſo, it follows, that the *Air*, like all other Fluids, muſt preſs equally every way.—Which is confirm'd by what we obſerve of ſoft Bodies ſuſtaining this Preſſure without any Change of Figure; and brittle Bodies, without their breaking; tho the Preſſure upon 'em be equal to that of a Column of Mercury 30 Inches high, or a Column of Water of 32 Foot.—'Tis obvious, that no other Cauſe can preſerve ſuch Bodies unchanged, but the equable Preſſure on all Sides, which reſiſts as much as it is reſiſted. And hence, upon removing or diminiſhing the Preſſure on one ſide only; the Effect of the Preſſure is ſoon perceiv'd on the other.

*For the Quantity and Effect of this Preſſure of the Atmoſphere on the human Body*. See ATMOSPHERE.

From this Gravity of the *Air*, conſider'd with its Fluidity, ſeveral of its Uſes and Effects are deducible.—And, 1°, by means hereof, it cloſely inveſts the Earth, with all the

Bodies on it; and conſtringes and binds 'em down with a Force amounting, according to the Computation of M. *Paſchal*, to 2232 Pounds weight, upon every ſquare Foot, or upwards of 15 Pounds upon every Inch ſquare.—Hence, it prevents, *e. g.* the Arterial Veſſels of Plants and Animals, from being too much diſtended by the Impetus of the circulating Juices, or by the elaſtick Force of the Air ſo plentifully lodg'd in the Blood.—Thus, we ſee, in the Operation of Cupping, that upon a Diminution of the Preſſure of the *Air*, the Parts of the Body grow tumid; which neceſſarily alters the manner of the Circulation thro' the Capillaries, *&c.*

The ſame Cauſe hinders the Juices from oozing and eſcaping thro' the Pores of their containing Veſſels: This is experienc'd by ſuch as travel up high Mountains, who, in proportion as they aſcend, find themſelves grow more and more relaxed; and at length fall into a ſpitting of Blood, and other Hemorrhages; by reaſon of the *Air* not ſufficiently binding up the Veſſels of the Lungs.—The like is obſerv'd of Animals incloſ'd in the Receiver of an *Air*-Pump, who, as the *Air* is taken from 'em, ſwell, vomit, drivel, dung, urine, ſweat, *&c.* See VACUUM.

2°, The Mixture of contiguous Bodies, eſpecially fluid ones, is chiefly owing hereto.—Hence many Liquids, as Oils and Salts, which readily and ſpontaneouſly mix in *Air*, upon taking that away, remain quietly in their State of Separation.

3°, It determines the Action of one Body upon another.—Thus, the Fire which burns Wood immediately goes out, and its Flame diſſipates upon removing the *Air*; by reaſon ſomething is then wanting to preſs the Corpuſcles of Fire againſt thoſe of the Fuel, and prevent the too ſpeedy Diffuſion of the Flame. The ſame is obſerved of Aqua Regia, and Gold; that Menſtruum ceaſing any longer to operate on the Metal, after the *Air* is taken away. And upon the ſame determining Power of the *Air* it is, that *Papin*'s Digeſtor is built. See DIGESTOR.

Hence alſo it is, that on the Tops of high Mountains, as on the Pike of *Teneriffe*, the moſt ſavoury Bodies, as Pepper, Ginger, Salts, Spirit of Wine, *&c.* have no ſenſible Taſte; for want of their Particles being preſs'd upon the Tongue, ſo as to enter its Pores, but inſtead thereof, being diſſipated and blown away by its heat. The only thing that there retains its Savour, is Canary Wine, which is chiefly owing to its unctuous Quality; in Virtue whereof, it adheres cloſely to the Part, and is not eaſily blown away.

From this Principle of Gravity chiefly ariſe our *Winds*; which are only *Air* put in Motion by ſome Alteration in the Equilibrium thereof. See WIND.

III°, *Elaſticity*,—or a Power of yielding to an Impreſſion by contracting its Dimenſions; and, upon removing or diminiſhing the impreſſive Cauſe, returning to its former Space or Figure.——This elaſtick Force is accounted the diſtinguiſhing Property of *Air*; the other Properties hitherto enumerated being common to it with other Fluids.

Of this Power we have numerous Proofs.—Thus, a blown Bladder being ſqueez'd in the Hand; we find the included *Air* ſenſibly reſiſt; ſo as upon ceaſing to compreſs, the Cavities or Impreſſions made in its Surface, are readily expanded again, and fill'd up.

*On this Property of Elaſticity, the Structure and Office of the* Air-*Pump depends.* See AIR-*Pump*.

This Niſus or Endeavour to expand, every Particle of *Air* always exerts; and thus ſtrives againſt an equal endeavour of the ambient Particles; whoſe Reſiſtance happening by any means to be weaken'd, it ſtrait diffuſes into an immenſe Extent.—Hence it is, that thin glaſs Bubbles, or Bladders, full of *Air*, and exactly cloſed; being included in the exhauſted Receiver of an *Air*-Pump, burſt, by the Force of the included Air. So a Bladder quite flaccid, containing only the ſmalleſt Quantity of Air; ſwells in the Receiver, and appears quite full. And the ſame Effect is found, by carrying the flaccid Bladder to the Top of an high Mountain.

This Power does not ſeem to have any Limits aſſign'd it; nor does it appear capable, by any Means whatever, of being deſtroy'd or diminiſh'd.—Mr. *Boyle* made ſeveral Experiments, with a View to diſcover how long *Air*, brought to the greateſt degree of Expanſion he could reduce it to in his *Air*-Pump, would retain its Spring; and could never obſerve any ſenſible Diminution; even tho this poor thin *Air* was clog'd ſome Months with a Weight which one would wonder how it ſhould ſupport a Moment.

Yet, Mr. *Hawksbee*, by a later Experiment, has ſhewn, that the Spring of the *Air* may be ſo diſturb'd by a violent Preſſion, as to require ſome time to return to its natural Tone.

The Weight or Preſſure of the *Air*, it is obvious, has no dependence on its Elaſticity; but would be the ſame, whether the *Air* had ſuch Property or not.—But the *Air*, in being elaſtick, is neceſſarily affected by the Preſſure, which reduces it into ſuch a Space, as that the Elaſticity which re-acts againſt the compreſſing Weight, is equal to that Weight. See COMPRESSION.

In effect, the Law of this Elaſticity, is, that it increaſes as the Denſity of the *Air* increaſes; and the Denſity increaſes, as the Force increaſes wherewith it is preſs'd. Now, there muſt neceſſarily be a Balance between the Action and Re-action; *i. e.* the Gravity of the *Air*, which tends to compreſs it, and the Elaſticity of the *Air* which endeavours to expand it, muſt be equal. See DENSITY, REACTION, *&c.*

Hence, the Elaſticity increaſing or diminiſhing univerſally as the Denſity increaſes, or diminiſhes, *i. e.* as the Diſtance between the Particles diminiſhes or increaſes; 'tis no matter whether the *Air* be compreſs'd, and retain'd in ſuch Space by the Weight of the Atmoſphere, or by any other means: It muſt endeavour, in either Caſe, to expand with the ſame Force.——And hence, if *Air* near the Earth be pent up in a Veſſel, ſo as to cut off all Communication with the external *Air*; the Preſſure of the incloſed *Air* will be equal to the Weight of the Atmoſphere. Accordingly, we find Mercury ſuſtained to the ſame Height, by the elaſtick Force of *Air* incloſed in a glaſs Veſſel, as by the whole atmoſpherical Preſſure.—See further under the Article ELASTICITY.

On the ſame Principle may *Air* be *artificially condenſed*. See CONDENSATION *of Air*.

And hence *the Structure of the Wind-Gun*. See WIND-*Gun*.

Dr. *Halley* aſſerts, in the *Philoſoph. Tranſactions*, that from the Experiments made at *London*, and by the *Academy del Cimento* at *Florence*, it may be ſafely concluded, that no Force whatever is able to reduce *Air* into eight hundred times leſs Space than what it naturally poſſeſſes on the Surface of our Earth. In anſwer to which, Monſieur *Amontons*, in the Memoirs of the *French* Academy, maintains, that there is no fixing any Bounds to its Condenſation; that greater and greater Weights will ſtill reduce it into leſs and leſs compaſs; that it is only elaſtick in Virtue of the Fire it contains; and that as 'tis impoſſible ever abſolutely to drive all the Fire out of it, 'tis impoſſible ever to make the utmoſt Condenſation.

The *Dilatation* of the *Air*, by Virtue of its elaſtick Force, is found to be very ſurprizing; and yet, Dr. *Wallis* ſuggeſts, that we are far from knowing the utmoſt it is capable of.—In ſeveral Experiments made by Mr. *Boyle*, it dilated firſt into nine times its former Space; then into 31 times; then into 60; then into 150. Afterwards, it was brought to dilate into 8000 times its Space; then into 10000, and even at laſt into 13679 times its Space: and all this by its own expanſive Force, without any help of Fire.

*On this depends the Structure and Uſe of the Manometer*. See MANOMETER.

Hence, it appears, that the *Air* we breathe, near the Surface of the Earth, is compreſs'd by its own Weight into at leaſt the 13679th Part of the Space it would poſſeſs *in Vacuo*.—But if the ſame *Air* be condenſed by *Art*; the Space it will take up when moſt dilated, to that it poſſeſſes when condenſed; will be, according to the ſame Author's Experiments, as 505000 to 1. See DILATATION.

Hence, we ſee how wild and erroneous was that Obſervation of *Ariſtotle*, that *Air*, render'd ten times rarer than before, changes its Nature, and becomes Fire.

M. *Amontons*, and others, we have already obſerved, take the Rarefying of *Air* to ariſe wholly from the Fire contain'd in it; and hence, by increaſing the Degree of Heat, the Degree of Rarefaction may be carried ſtill further than its ſpontaneous Dilatation. See HEAT.

*On this Principle depends the Structure and Office of the Thermometer*. See THERMOMETER.

M. *Amontons* firſt diſcover'd that *Air*, the denſer it is, the more it will expand with the ſame degree of Heat. See DENSITY.

On this Foundation, the ſame ingenious Author has a Diſcourſe, to prove "that the Spring and Weight of the *Air*, "with a moderate degree of warmth, may enable it to "produce even Earthquakes, and other of the moſt ve"hement Commotions in Nature."

According to the Experiments of this Author, and M. *de la Hire*, a Column of *Air* on the Surface of the Earth, 36 Fathoms high, is equal in weight to three Lines Depth of Mercury; and it is found, that equal Quantities of *Air* poſſeſs Spaces reciprocally proportional to the Weights wherewith they are preſſed: The Weight of the *Air*, therefore, which would fill the whole Space poſſeſſed by the terreſtrial Globe, would be equal to a Cylinder of Mercury, whoſe Baſe is equal to the Surface of the Earth, and its Height containing as many times three Lines, as the Atmoſpherical Space contains Orbs equal in weight to that of 36 Fathoms, whereof the Experiment was made.—Hence, taking the denſeſt of all Bodies, *e. g.* Gold, whoſe Gravity is about 14630 times greater than that of *Air* in our Orb, it is eaſy to compute, that this Air would be reduced to the ſame Denſity as Gold, by the Preſſure of a Column of Mercury 14630 times 28 Inches high, *i. e.* 409640 Inches: ſince the Bulks of *Air*, in that Caſe, would be in the reciprocal Ratio of the Weights wherewith they are preſſed. This 409640 Inches, there-

therefore, expreſſes the height at which the Barometer muſt ſtand, where the *Air* would be as heavy as Gold, and the Number $2\frac{1632}{40640}$ Lines, the Thickneſs to which our Column of 36 Fathoms of *Air*, would be reduced in the ſame place.

Now, we know, that 409640 Inches, or 43528 Fathoms, is only the 74th Part of the Semidiameter of the Earth: and when you are paſt that, whatever Matters there be, they muſt be heavier than Gold: 'Tis not improbable, therefore, that the remaining Sphere of 6451538 Fathoms Diameter, may be full of denſe *Air*, heavier, by many degrees, than the heavieſt Bodies among us.—Hence, again, as it is proved, that the more *Air* is compreſſed, the more does the ſame degree of Fire increaſe the Force of its Spring, and render it capable of ſo much the greater Effect; and that, for inſtance, the Heat of boiling Water increaſes the Spring of our *Air*, beyond what it ordinarily is, by a Quantity equal to one third of the Weight wherewith it is preſſed: We may infer, that a degree of Heat, which in our Orb can only produce a moderate Effect, may have a very violent one in ſuch lower Orb; and that as there may be many degrees of heat in Nature, beyond that of boiling Water, 'tis probable there may be ſome, whoſe Violence, thus aſſiſted by weight of the *Air*, may be ſufficient to tear ſunder the ſolid Globe. *Mem. de l'Acad.* An. 1703.

This elaſtick Power of the *Air*, is the ſecond great Source of the Effects of this important Fluid.—In virtue hereof, it inſinuates into the Pores of Bodies, carrying with it this prodigious Faculty of expanding; and that ſo eaſy to be excited: whence it muſt neceſſarily put the Particles of the Bodies it is mix'd withal, into perpetual Oſcillations. In effect, the Degree of Heat, and the *Air*'s Gravity and Denſity, and conſequently its Elaſticity and Expanſion, never remaining the ſame for two Minutes together; there muſt be an inceſſant Vibration, or Dilatation and Contraction, in all Bodies. See VIBRATION.

This Reciprocation we obſerve in ſeveral Inſtances, particularly Plants, the Tracheæ or *Air*-Veſſels whereof, do the Office of Lungs: For the contained *Air* alternately expanding and contracting, as the Heat increaſes or diminiſhes, by turns preſſes the Veſſels, and eaſes 'em again; and thus promotes a Circulation of their Juices. See VEGETABLE, CIRCULATION, &c.

Hence, we find, that no Vegetation or Germination will proceed *in Vacuo*.—Indeed, Beans have been obſerved to grow a little tumid therein; which has led ſome to attribute that to Vegetation, which was really owing to no other than the Dilatation of the *Air* within 'em. See VEGETATION, GERMINATION, &c.

From the ſame Cauſe it is, that the *Air* contain'd in the Bubbles in Ice, by its continual Action, burſts the Ice: And thus Glaſſes and other Veſſels frequently crack, when their contained Liquors are frozen. Thus, alſo, entire Columns of Marble ſometimes cleave in the Winter time, from ſome little Bubble of included *Air*'s acquiring an increaſed Elaſticity.

From the ſame Principle ariſes all Putrefaction and Fermentation; neither of which will proceed, even in the beſt diſpoſed Subjects, *in Vacuo*. See PUTREFACTION, and FERMENTATION.

In this we have a ſingular Inſtance of the wonderful Efficacy of *Air*, that it can change the two Kingdoms, and convert Vegetable Subſtances into Animal, and Animal into Vegetable. See ANIMAL, &c.

In effect, all natural Corruption and Alteration ſeems to depend on *Air*; and Metals, particularly Gold, only ſeem to to be durable and incorruptible, in Virtue of their not being pervious to *Air*.—Accordingly, Names ſlightly wrote in the Sand, or Duſt, on the Tops of high Mountains, have been known to remain 40 Years, without being in the leaſt alter'd or effaced. See CORRUPTION, ALTERATION, &c.

### *Effects of the peculiar Ingredients of the* AIR.

*Air* not only acts by its common Properties of Gravity, and Elaſticity, but there are numerous other Effects, ariſing from the peculiar Ingredients whereof it conſiſts.

Thus, 1°, it not only diſſolves and attenuates Bodies by its Preſſure and Attrition; but as a Chaos, containing all Kinds of Menſtruums, and conſequently having wherewithal to diſſolve all Kinds of Bodies. See DISSOLUTION.

'Tis known, that Iron and Copper readily diſſolve, and become ruſty in *Air*, unleſs well defended with Oil.—*Boerhaave* aſſures us, he has ſeen Pillars of Iron ſo reduced by *Air*, that one might crumble 'em to Duſt between the Fingers; and for Copper, it is converted by the *Air* into a Subſtance much like the Verdegreaſe produced by Vinegar. See IRON, COPPER, VERDEGREASE, &c.

Mr. *Boyle* relates, that in the Southern *Engliſh* Colonies, the great Guns ruſt ſo faſt, that after a few Years lying in the *Air*, large Cakes of Crocus Martis may be eaſily beat off 'em.—*Acoſta* adds, that in *Peru* the *Air* diſſolves Lead, and conſiderably increaſes its weight.—Yet Gold is generally eſteem'd indiſſoluble by *Air*; being never found to contract Ruſt, tho expoſed ever ſo long. The Reaſon hereof is, that Sea Salt, which is the only Menſtruum capable of acting on Gold, being very difficult to volatilize; there is but a ſmall Proportion of it in the Atmoſphere. In the Chymiſts Laboratories, where Aqua Regia is preparing; the *Air* becoming impregnated with an unuſual Quantity of this Salt; Gold contracts a Ruſt like other Bodies. See GOLD, &c.

Stones alſo undergo the common Fate of Metals.—Thus, *Purbeck* Stone, whereof *Salisbury* Cathedral conſiſts, is obſerved gradually to become ſofter, and moulder away in the *Air*; and the like Mr. *Boyle* relates of *Blackington* Stone. See STONE.——He adds, that *Air* may have a notable Operation on Vitriol, even when a ſtrong Fire could act no further on it. The ſame Author has even found the Fumes of a ſharp Liquor to work more ſuddenly and manifeſtly on a certain Metal, when ſuſtained in the *Air*, than the Menſtruum it ſelf did which emitted thoſe Fumes, on thoſe Parts of the Metals it cover'd.

2°, *Air volatilizes* fix'd Bodies.—Thus Sea Salt being firſt calcined, then fuſed by the Fire, and when fuſed expoſed to the *Air* to liquify; when liquified ſet to dry again, then fuſed again; and, the Operation thus repeated: will by degrees be almoſt wholly evaporated; nothing remaining but a little Earth behind. See VOLATILITY, VOLATILIZATION, &c.

*Helmont* mentions it as a mighty Arcanum in Chymiſtry, to render fixed Salt of Tartar volatile: but the thing is eaſily effected by *Air* alone; for if ſome of this Salt be expoſed to the *Air* in a Place replete with acid Vapours, the Salt draws the Acid to it ſelf, and when ſaturated therewith, is volatile. See TARTAR, &c.

3°, *Air* alſo *fixes* volatile Bodies.——Thus, tho Nitre or Aquafortis readily evaporate by the Fire; yet, if there be any putrified Urine near the Place, the volatile Spirit will be fix'd, and fall down in form of Aqua ſecunda. See FIXITY.

4°, Add, that *Air* brings many quieſcent Bodies into Action, *i. e.* excites their latent Powers.—Thus, if an acid Vapour be diffuſed thro' the *Air*, all the Bodies whereof that is a proper Menſtruum, being diſſolved thereby, are brought into a State proper for Action. See SALT, &c.

In Chymiſtry, not only the Preſence or Abſence of the *Air*, but even its being barely open, or incloſed, is of great conſequence.—Thus, Camphire fired in a cloſe Veſſel, runs wholly into Salts; whereas, if during the Proceſs, the Cover be removed, and a Candle applied, the whole flies off in Fume. So to make Sulphur inflammable, it requires a free *Air*: in a cloſe Cucurbit, it may be ſublimed a thouſand times without kindling. Sulphur being put under a glaſs Bell, and a Fire applied, riſes into Spirit of Sulphur *per Campanam*: But if there be the leaſt Chink whereby the included *Air* communicates with the Atmoſphere, it immediately kindles. So an Ounce of Charcoal, incloſed in a Crucible well luted, will remain without loſs for fourteen Days in the intenſeſt Heat of a melting Furnace; tho the thouſandth Part of the Fire in open *Air*, will preſently turn it into Aſhes.—*Helmont* adds, that the Charcoal remains all that while without any Alteration of its black Colour; but that if the minute *Air* is let in, it falls inſtantly into white Aſhes. The ſame holds of the Parts of all Animals and Vegetables; which can only be calcined in open *Air*: In cloſe Veſſels they never become any other than black Coals. See CALCINATION, COAL, &c.

The *Air* is liable to abundance of Alterations, not only in reſpect of its Mechanical Properties, Gravity, Denſity, &c. but alſo in reſpect of the Ingredients it conſiſts of.——Thus, in Places abounding with Marcaſites, a fretting vitriolick Salt is obſerved to predominate in the *Air*, which rots the Hangings, and is often ſeen lying on the Ground in a whitiſh Efflorescence.—At *Faſſblun* in *Sweden*, noted for Copper Mines, the mineral Exhalations affect the *Air* ſo ſenſibly, that their Silver Coin is frequently diſcoloured in their Purſes; and the ſame Effluvia change the Colour of Braſs.—Mr. *Boyle* was aſſured by a Gentleman who poſſeſs'd ſome Ground wherein there were ſeveral Veins of Metals, and other Minerals, that he had frequently ſeen Pillars of Fumes aſcending thence; ſome having no Scent, ſome an ill one, and ſome few a good one.—In *Carniola*, *Campania*, &c. where there are Mines of Sulphur, the *Air* at times becomes very unwholeſom; whence frequent epidemick Diſeaſes, &c.—'Tis added, that the Mines near the Cape of *Good Hope*, emit ſuch horrible Fumes from the Arſenic that abounds there, that no Animal can live near them; ſo that ſuch as have at any time been opened, were obliged to be immediately cloſed again.

The Effluvia of Animals alſo have their Effect in varying the *Air*; as is evident in contagious Diſeaſes, Plagues, Murrains, and other Mortalities which are ſpread by the *Air*. See PLAGUE.

The like is obſerved in Vegetables.——Thus, a good Part of the Clove-Trees which grew ſo plentifully in the Iſland of *Ternate*, being fell'd at the Sollicitations of the *Dutch*, in order to heighten the Value of that Fruit; ſuch a Change enſued in the *Air*, as ſhew'd the ſalutary Effect of the Effluvia of the Clove-Trees, and their Bloſſoms: the whole Iſland, ſoon after they were cut down, becoming exceeding ſickly. This, a Phyſician who had been upon the Spot, and from whom Mr. *Boyle* had the Relation; attributed to the noxious Steams of a Volcano there; the ill Quality whereof, had been corrected by the aromatick Effluvia of thoſe ſpicy Bloſſoms.

The *Air* is alſo liable to Alterations from the Seaſon of the Year.—Thus, few ſubterraneous Effluvia are emitted in the Winter; by reaſon the Pores are lock'd up by the Froſt, or cover'd by Snow; the ſubterraneous Heat being all the while at work, and preparing a Fund, to be diſcharged the enſuing Spring.—Hence it is, that if the ſame Seed be ſown in the ſame Soil, in Autumn and Spring, and the degree of Heat be the ſame, a very different Effect will be found; and for the like Reaſon, Rain-Water gather'd in the Spring, is found to have a peculiar Virtue in reſpect of Corns; which being ſteep'd therein, afford a much larger Quantity of Spirits than otherwiſe.—Hence alſo, we ſee why a very ſevere Winter, is uſually follow'd by a wet Spring and fruitful Summer; and *vice verſa*.

Again, from the Winter's Solſtice to the Summer's, the Sun's Rays growing ſtill more and more perpendicular; their Impulſe on the Earth's Surface becomes more and more powerful; by which the Glebe or Soil is more and more relaxed, ſoften'd and putrified; till he arrives at the Tropic: where, with the Force of a chymical Agent, he reſolves the ſuperficial Parts of the Earth into their Principles, Water, Oil, Salt, *&c.* which are all ſwept into the Atmoſphere.

And hence we conceive the Nature of Meteors, which are either Collections of ſuch Effluvia, or Diſperſions thereof. See METEOR.——Theſe Meteors, too, have conſiderable Effects on the *Air*; and thus Thunder is known to put Liquors upon fermenting afreſh.

In effect, whatever alters the Degree of Heat; will make a proportionable Alteration in the Matter of the *Air*. Mr. *Boyle* ſuggeſts ſomething further on this Head, *viz.* that the Salts, *&c.* which in a warm State of Weather were kept in a Fluor, and mix'd together, ſo as to be in a Condition to act conjunctly; upon a Remiſſion of the Warmth, may loſe their Fluidity and Motion, ſhoot into Cryſtals, and thus ſeparate again.

The Height or Depth of the *Air* makes a further Alteration, the Exhalations being few of 'em able to aſcend above the Tops of high Mountains, as appears from thoſe Plagues, where the Inhabitants of one ſide of a Mountain have all periſh'd, without the leaſt Diſorder on the other ſide.

Nor muſt Drought and Moiſture be denied their Share in varying the State of the Atmoſphere.——At *Guinea*, the Heat with the Moiſture, conduce ſo much to Putrefaction, that the pureſt white Sugars are often full of Maggots; and their Drugs ſoon loſe their Virtue, and many of them grow Verminous. 'Tis added, that in the Iſland of St. *Jago*, they are obliged to expoſe their Sweetmeats daily to the Sun, to exhale the Moiſture they had contracted in the Night, which would otherwiſe occaſion 'em to putrify.

*On this Principle depends the Structure and Office of the Hygrometer.* See HYGROMETER.

Theſe Diverſities in the *Air*, are found to have an Influence on the Operations, Experiments, *&c.* of Philoſophers, Chymiſts, and other Operators.

Thus, 'tis very difficult to procure Oil of Sulphur *per Campanam* in a clear dry Atmoſphere, its Parts being then ſo ready to eſcape into the *Air*: But in a thick, moiſt *Air*, the Oil comes in abundance.—So, all Salts melt eaſieſt in a cloudy *Air*; and when melted, act moſt forcibly. And all Separations ſucceed beſt in ſuch Weather.—If Salt of Tartar be expoſed in a Place where any acid Spirit is floating in the *Air*, it will imbibe the ſame; and of fixed become volatile. Hence, the Experiments made of Salts at *London*, where the *Air* is plentifully impregnated with Sulphur exhaled from Sea-Coal, prove different from thoſe made on the ſame Subjects in other Parts of the Kingdom, where Wood, Turf, *&c.* are the uſual Fuel. Hence alſo, metalline Utenſils, *&c.* ruſt much ſooner at *London*, than in other Parts, where there are fewer acid corroſive Corpuſcles in the *Air*; and Fermentation, which is eaſily raiſed and carried on in a Place free of Sulphur, is impracticable in Places where ſulphurous Exhalations abound.—If pure well-fermented Wine be carried into a Place where the *Air* is repleniſh'd with the Fumes of new Wine then fermenting; it will begin to ferment afreſh. So Salt of Tartar ſwells, and as it were ferments, when carried into a Place where Spirit of Nitre, Vitriol, or Sea Salt is preparing.—'Tis Matter of common Obſervation among Brewers, Diſtillers, Vinegar-makers, *&c.* that at the Time when thoſe ſeveral Plants uſe to be in flower, the reſpective Juices ferment, and the Proceſs ſucceeds the beſt.—Add, that Stains cauſed by vegetable Juices, are obſerved to be beſt taken out of Linen, at the Time when the ſeveral Plants that afford them are in their Prime. This, Mr. *Boyle* obſerves, has been experienc'd in the Stains of Juice of Quinces, Hops, *&c.* which latter, eluding all the endeavours that could be uſed to get it out, has vaniſh'd of it ſelf the next Hop-ſeaſon.

After all, ſome of our more curious and penetrating Naturaliſts, have obſerved certain Effects of *Air*, which do not appear to follow from any of the Properties, or the Materials above recited.—On this View, Mr. *Boyle* has compoſed an expreſs Treatiſe of *Suſpicions about ſome unknown Properties of the* Air.—The Phænomena of Fire and Flame *in Vacuo*, ſeem, according to him, to argue ſome odd unknown vital Subſtance diffuſed thro' the *Air*, on Account whereof that Fluid becomes ſo neceſſary to the Subſiſtence of Flame: but whatever this Subſtance be, it ſhould ſeem by its ſudden waſting or ſpoiling, that the Quantity thereof is very inconſiderable, in proportion to the Bulk of *Air* it impregnates with its Virtue; in regard, when the Flame can no longer ſubſiſt in it, the *Air*, upon Examination, is not found to have undergone any Alteration in any of its Properties. See FLAME.

Other Inſtances to countenance ſuch Suſpicions, are, the Appearance and Growth of Salts in many Bodies; which either afford 'em not at all, or not in that plenty, unleſs expoſed to the *Air*. Mr. *Boyle* mentions ſome Marcaſites dug from under ground, which being kept in a dry Room, were ſoon cover'd over with a vitriolick Efflorеſcence, and in a little time, by the Operation of the *Air* on 'em, were in great part crumbled into a Pouder exceeding rich in Copperas; tho they had probably lain many Ages entire under ground: So, the Earth or Ore of Allom, and many other Minerals, robb'd of their Salt, Metals, or the like, will in tract of time recover 'em; and the like is obſerved of the Cinders of Sea-Coal at the Iron Works. See MINE, METAL, IRON-WORKS, ASHES, *&c.*

Mr. *Boyle* adds, that ſome Lime in old Walls has in time gained a large Efflorеſcence of a nitrous Nature, from which Salt-petre was procurable. Add, that the Colcothar of Vitriol is not naturally corroſive, nor can any Salt be procured from it, even by the Affuſion of Water; but being expoſed a-while to the *Air*, it yields a Salt, plentifully. See COLCOTHAR.

The Exiſtence of ſuch hidden Properties, is alſo argued, from the Acceſs of the *Air* rendering Antimonial Medicines emetick, and diſpoſed to produce Faintings and Heartburnings; and from its ſpeedy corrupting and mouldering of Trees dug from under ground, which had for Ages remain'd firm, and almoſt impervious to the Ax. See ANTIMONY, and SUBTERRANEOUS.

To ſay no more, the Silks in *Jamaica*, if expoſed to the *Air*, ſoon rot; even while they preſerve their Colour: whereas, if kept from the *Air*, they hold both their Firmneſs and Dye: And the ſable Taffety worn at *Braſil*, becomes in a few Days of an iron-grey Colour in the *Air*; but in the Shops preſerves its Hue: And ſome Leagues beyond *Parigua*, white People ſoon grow tawny; but as ſoon recover their native Colour, upon removing out of that Quarter.——Theſe, out of a great Number of Inſtances tending the ſame way, may convince us, that notwithſtanding all the Diſcoveries hitherto made concerning *Air*, there ſtill remains a Field for future Inquiries.

AIR, in Medicine, *&c.* makes one of the ſix Non-Naturals. See NON-*Natural*, HEALTH, DISEASE, *&c.*

From Obſervations on Bleeding in Rheumatiſms, and after taking Cold, 'tis evident, the *Air* can enter with all its Qualities, and vitiate the whole Texture of the Blood, and other Juices. See BLOOD.

From the Palſies, Vertigoes, and other nervous Affections cauſed by Damps, Mines, *&c.* 'tis evident *Air* thus qualified can relax and obſtruct the whole nervous Syſtem. See DAMP, *&c.*——And from the Cholicks, Fluxes, Coughs, and Conſumptions produced by damp, moiſt, and nitrous *Air*, 'tis evident it can corrupt and ſpoil the noble Organs, *&c.*——*See further under the Article* ATMOSPHERE.

*Innate* AIR, is a fine *aerial* Subſtance, ſuppoſed by ſome Anatomiſts to be incloſed in the Labyrinth of the inner Ear, and to miniſter to the due Conveyance of Sounds to the Senſory. See LABYRINTH, SOUND, and HEARING.

But the Exiſtence of ſuch *Innate Air*, has of late been called in queſtion, and even diſproved. See EAR.

AIR, in Muſick, ſignifies the *Melody*, or the Inflection of a Muſical Compoſition. See MELODY.

The Word is alſo uſed for a Song it ſelf. See SONG.

AIRS, in Horſemanſhip, the artificial or practiſed Motions of a manag'd Horſe. See HORSEMANSHIP.

Such are the *Demi-volt*, *Curvet*, *Capriole*, *Croupade*, *Balotade*, and *Step and Leap*. See DEMIVOLT, CURVET, CAPRIOLE, SALT, *&c.*

Some Authors take *Airs* in a more extenſive Senſe; and divide 'em into *low*, and *high*.

The *low Airs* include the Natural Paces, as Trotting, Walking, Galloping, and Terra-a-Terra. See PACE, TROT, GALLOP, &c.

The *high*, or *rais'd Airs*, are all ſuch Motions as riſe higher than the Terra-a-terra; as the *Demivolt*, *Curvet*, &c.

AIR-PUMP, a Machine, by means whereof the *Air* may be exhauſted out of proper Veſſels. See AIR.

The Uſe and Effect of the *Air-Pump*, is to make, what we popularly call, a *Vacuum*; which, in reality, is only a Degree of Rarefaction ſufficient to ſuſpend the ordinary Effects of the Atmoſphere. *See the Article* VACUUM.

By this Machine, therefore, we learn, in ſome meaſure, what our Earth would be without an Atmoſphere; and how much all Vital, Generative, Nutritive, Alterative Power, depend thereon. See ATMOSPHERE.

The Principle on which it is built, is the Elaſticity of the *Air*; as that on which the common or Water-Pump is founded, is the Gravity of the ſame *Air*. See PUMP.

The Structure of the *Air-Pump* is, in it ſelf, more ſimple even than that of the Water-Pump.—The latter ſuppoſes two Principles, Gravity and Elaſticity likewiſe: So that the Water-Pump muſt firſt be an *Air-Pump*, *i. e.* muſt rarify the *Air* ere it raiſe the Water.—In effect, Water being a dormant unelaſtick Fluid, needs ſome external Agent to make it aſcend; whereas *Air* aſcends in Virtue of its own elaſtick Activity: its natural Tendency is, to ſeparate and leave a Vacuum; and all that remains to Art, is to prevent the ambient *Air* from ſupplying the Place of what thus ſpontaneouſly flies away.

To ſay no more, to make Water aſcend, the Force wherewith it is preſs'd downwards, is either to be diminiſh'd or increas'd in one Part, more than another; like a Balance in Equilibrio, one of whoſe Scales may be made to riſe, either by diminiſhing its own weight, or increaſing that of the other: the Water, therefore, recedes from the common Centre of Gravity, by the very Power wherewith it tends towards it, indirectly or ſecondarily applied; for that two ſimilar centripetal Forces being made to act contrary to each other, what the one over-balances the other, muſt have the Effect of a Centrifugal Force.—Whereas, the Principle whereby *Air* rarifies or diminiſhes, does not reſpect the Centre of the Earth, but the Centres of its own Particles; being no other than a certain implanted Power, whereby they immediately tend to recede from each other. See REPELLING *Power*.

The Invention of this noble Inſtrument, to which the preſent Age is indebted for ſo many fine Diſcoveries; is aſcribed to *Otto de Guerick*, the celebrated Conſul of *Magdeboyrg*; who exhibited his firſt publick Experiments therewith, before the Emperor and the States of *Germany*, at the breaking up of the Imperial Diet at *Ratisbon*, in the Year 1654.

Dr. *Hook* and M. *du Hamel*, indeed, aſcribe the Invention to Mr. *Boyle*; but that ingenious Author frankly confeſſes *de Guerick* to have been beforehand with him. Some Attempts, he aſſures us, he had made upon the ſame Foundation, before he knew any thing of what had been done abroad: but the Information he afterwards receiv'd from *Schottus*'s *Mechanica Hydraulico-Pneumatica*, publiſhed in 1657, wherein was an Account of *de Guerick*'s Experiments, firſt enabled him to bring his Deſign to any thing of Maturity.—From hence, with the Aſſiſtance of Dr. *Hook*, after two or three unſucceſsful Trials, aroſe a new *Air-Pump*; more eaſy and manageable than the *German* one: and hence, or rather from the great Variety of Experiments that illuſtrious Author applied it to, the Engine came to be denominated, the *Machina Boyleana*.

### *Structure and Uſe of the* AIR-Pump.

The Baſis or eſſential Part in the *Air-Pump*, is a metalline Tube, anſwering to the Barrel of a common Pump, or Syringe; having a Valve at the bottom, opening upwards: and a moveable Piſton or Embolus, anſwering to the Sucker of a Pump, furniſh'd likewiſe with a Valve opening upwards.—The whole, duely fitted to a Veſſel, as a Recipient. See EMBOLUS, VALVE, and RECIPIENT.—See alſo SYRINGE.

The reſt, being only Circumſtances chiefly reſpecting Conveniency, has been diverſified and improved from time to time, according to the ſeveral Views and Addreſs of the Makers.—That of *Otto de Guerick* being leſs artleſs, laboured under ſeveral Defects, in reſpect of the Force neceſſary to work it, which was very great; and the Progreſs very ſlow: beſide that it was to be kept under Water; and allow'd of no Change of Subjects for Experiments.

Mr. *Boyle*, by degrees, removed ſeveral of theſe Inconveniences; and alleviated others: but ſtill the Working of his Pump was laborious, by reaſon of the Preſſure of the Atmoſphere, a great part of which was to be removed at every Exſuction, after a Vacuum was nearly arrived at.—But this Inconvenience has been ſince removed by Mr. *Hawksbee*, who by adding a ſecond Barrel and Piſton to the former, to riſe as the other fell, and fall as it roſe; made the Preſſure of the Atmoſphere on the deſcending one, of as much ſervice as it was of diſſervice in the aſcending one.

Some of the *Germans* have alſo brought the *Air-Pump* to do the oppoſite Office of a Condenſer: But this is not to make the Inſtrument ſo much better, as more complex. See CONDENSER.

*The Structure of the* Air-Pump, as now made among us, with all its Advantages, is repreſented in Tab. *Pneumaticks*, Fig. 16.

It conſiſts of two brazen Barrels or Cylinders, repreſented by *a a a a*; which communicate with each other by a Canal paſſing between them at *d d*; and with the Receiver *o o o o*, by means of the hollow Wire *h h*, one End whereof opens into the Canal of Communication, and the other into a like Canal *n n*; which penetrating the Plate *i i i i*, opens into the Receiver.

Within the Cylinders are two Emboli, or Suckers made of Braſs, and fitted with Cork and Leather to the Cavities of the Barrels, ſo as exactly to fill the ſame; each being furniſh'd with its Valve, and terminating at top in a Rack *c c*, by which it is to be work'd.

At the bottom of either Barrel is another Valve; by which the *Air* may paſs out of the communicating Canal *d d*, and conſequently out of the hollow Wire and the Receiver it ſelf, into the Cylinder, below the Piſton; from whence by the Valves of the Piſton it may proceed into the upper Space of the Cylinder, and thus into the open *Air*.

*For the Application of this Mechaniſm.*——The Winch *b b* being turn'd upward and downward; its Spindle *f*, catching by its Teeth into the Racks, will raiſe and depreſs the two Piſtons, alternately.—Now, the Conſequence of depreſſing a Piſton, is, that the *Air* before incloſed between it and the bottom of the Cylinder, being thus crowded into a leſs compaſs, will, by its elaſtick Force, which now exceeds the Preſſure of the Atmoſphere, puſh up the Valve of the Piſton, and thus eſcape; till what little remains be of the ſame Denſity with the external *Air* incumbent on the Valve.

This done, and the ſame Piſton being again raiſed in its turn, from the bottom of the Cylinder to the top; the little *Air* before left, will of neceſſity expand it ſelf, ſo as to poſſeſs the whole Space of the Cylinder thus deſerted by the Piſton: Upon which, its Force or Preſſure upon the Valve at the bottom of the Cylinder, being now inconſiderable; the other, denſer *Air* of the Receiver, hollow Wire, and Canal of Commnnication, by their ſuperior elaſtick Force, will lift up the Valve, and thus paſs into the Cylinder of rarified *Air*, till both be of the ſame degree of Denſity.

And thus is the *Air* in the Receiver diminiſh'd at each Elevation of the Piſton, by the Quantity of a Cylinder full; abating for what little remain'd between the depreſs'd Piſton, and the bottom: So that by thus repeating the Operation again and again; the *Air* in the Receiver is at length rarified to ſuch degree, that its Denſity does not exceed the thin *Air* remaining in the Cylinder when the Piſton is raiſed: which done, the Effect of the *Air-Pump* is at an end; the Valve cannot now be open'd, or if it could, no *Air* would paſs it; there being a juſt Equilibrium between the *Air* on each ſide.

To judge of the Degree of Exhauſtion, there is added a Gage, *l l*; conſiſting of a Tube, whoſe upper Orifice communicates with the Receiver; the lower being immerged in a Baſon of Mercury, *m m*.—Hence, the *Air* in the Tube rarifying as faſt as that in the Receiver; in proportion as the Exhauſtion advances, the Mercury will be raiſed by the Preſſure of the Column of external *Air*, prevailing over that of the Column of *Air* included; till the Column of *Air*, and Mercury together, become a Balance to that of the external *Air*. When the Mercury is thus riſen to the ſame Height as it ſtands in the Barometer, which is indicated by the Scale of Inches added to the Gage; the Inſtrument is a juſt Torricellian Tube; and the Vacuum may be concluded to be as perfect as that in the upper End of the Barometer. See BAROMETER, and TORRICELLIAN.

To let *Air* again into the exhauſted Receiver, the Cock *n* is to be turn'd; which makes a Communication with the external *Air*; upon which the *Air* ruſhing impetuouſly in, the Mercury in the Gage immediately ſubſides into the Baſon.

To the *Air-Pump* belongs a large Apparatus of other Veſſels, accommodated to the divers Kinds of Experiments. See APPARATUS.

### *Laws of Rarefaction in the Receiver of an* Air-Pump.

1°, For the Proportion of *Air* remaining at any time in the Receiver, we have the following general Theorem.—

—*In*

'*In a Veſſel exhauſted by the* Air-Pump, *the primitive or natural* Air *contained therein, is to the* Air *remaining, as the Aggregate of the Capacity of the Veſſel and of the Pump*, (*i. e.* the Cylinder left vacant in an Elevation of the Piſton, with the Wire and other Parts between the Cylinder and Receiver) *rais'd to a Power whoſe Exponent is equal to the Number of Strokes of the Piſton, to the Capacity of the Veſſel alone raiſed to the ſame Power.*'

M. *Varignon* gives an Algebraical Demonſtration of this Theorem, in the *Memoires de l'Acad. R.* An. 1705. p. 397, but it may be alſo demonſtrated pneumatically, thus:——Calling the *Air* remaining after the firſt Stroke, the *firſt Reſidual*; that after the ſecond, the *ſecond Reſidual*, &c. and remembering that the *Air* in the Receiver is of the ſame Denſity as that in the Cylinder, when the Piſton is raiſed: it is evident, that the Quantity of *Air* in the Receiver, is to the Quantity of *Air* in the Cylinder, Wire, *&c.* as the Capacity of the Receiver to that of the Cylinder, *&c.* and conſequently, the Aggregate of the *Air* in the Receiver and the Cylinder, *i. e.* the whole primitive *Air*, is to the *Air* in the Veſſel alone, *i. e.* to the firſt Reſidual *Air*, as the Aggregate of the Capacity of the Receiver and the Cylinder, to the Capacity of the Receiver alone.—After the ſame manner may it be proved, that the Quantity of firſt reſidual *Air*, is to the ſecond Reſidual, as the Aggregate of the Capacity of the Receiver and Cylinder to the Capacity of the Veſſel alone. And the ſame Proportion does the ſecond Reſidual bear to the third, and ſo of the reſt.——Hence, the Product of the primitive *Air* into the firſt, ſecond, third, fourth, *&c.* Reſiduals, is to the Product of the firſt Reſidual into the ſecond, third, fourth, fifth, *&c.* as the Product of the Capacity of the Receiver and Cylinder together, multiplied as oft into it ſelf as the Number of Strokes of the Piſton contains Units; to the *Factum* ariſing from the Capacity of the Receiver alone, multiplied ſo often by it ſelf: That is, As the Power of the Aggregate of the Capacity of the Receiver and Cylinder together, whoſe Exponent is the Number of Strokes of the Piſton, to the Capacity of the Veſſel alone, raiſed to the ſame Power.—Conſequently the primitive *Air* is to the laſt Reſidual, in the Ratio of thoſe Powers. *Q. E. D.*

2°, The Number of Strokes of the Piſton, together with the Capacity of the Receiver and Cylinder with the Wire, *&c.* being given; to find the Ratio of the primitive *Air* to the *Air* remaining.

Subtract the Logarithm of the Capacity of the Receiver, from that of the Sum of the Capacity of the Receiver and the Cylinder; then, the Remainder being multiplied by the Number of Strokes of the Piſton, the Product will be a Logarithm, whoſe Natural Number ſhews how oft the primitive *Air* contains the Remainder requir'd.

Thus, if the Capacity of the Receiver be 460, that of the Cylinder 580, and the Number of Strokes of the Piſton 6; the primitive *Air* will be found to the remaining *Air*, as $146\frac{4}{10}$ to 1.

For, ſuppoſe the Capacity of the Veſſel $= v$; that of the Cylinder and Veſſel together, $= a$; the Number of Strokes of the Piſton $= n$; and the remaining *Air* $= 1$. Since the Primitive is to the remaining *Air* as $a^n$ to $v^n$; the primitive *Air* will alſo be to the remaining *Air*, as $a^n : v^n$ to 1. Conſequently, if the remaining *Air* be 1, the Logarithm of the primitive *Air* is $a - v \times n$.

3°, The Capacity of the Receiver and the Barrel being given; to find the Number of Strokes of the Piſton required to rarify the *Air* to a given Degree.

Subtract the Logarithm of the remaining *Air* from the Logarithm of the primitive *Air*; and the Logarithm of the Capacity of the Receiver, from the Logarithm of the Aggregate of the Capacity of the Receiver and Cylinder; then, dividing the former Difference by the latter, the Quotient is the Number of Strokes requir'd.

Thus, if the Capacity of the Cylinder be ſuppoſed 580; that of the Receiver 460; and the primitive *Air* to the remaining *Air*, as 1464 to 10: The Number of Strokes required will be found to be 6.

Beſide the Effects, and Phænomena of the *Air-Pump*, recounted under the Articles VACUUM, AIR, *&c.* we may add ſome others; which, related at large, make the Subſtance of Mr. *Boyle*'s *Phyſ. Mech. Exper.* As,—That the Flame of a Candle uſually goes out in a Minute, tho it ſometimes laſts two, but the Wieck thereof continues ignited after; and even emits a Smoke, which aſcends upwards.—That a kindled Charcoal is totally extinguiſh'd in about five Minutes, tho in open *Air* it remain alive half an Hour; and that it goes out by degrees, beginning from the Top and the Outſides.—That red-hot Iron is not affected by the Abſence of the *Air*; and yet that Sulphur or Gunpouder will not be lighted thereby, but only fuſed.—That a Match, after lying ſeemingly extinct *in Vacuo*, a long time; revives again upon the Re-admiſſion of the *Air*.—That a Flint and Steel ſtrike Sparks of Fire as copiouſly *in Vacuo* as out of it; and that the Sparks move in all Directions, upwards, downwards, *&c.* here,' as in the *Air*.—That Magnets and Magnetick Needles, are the ſame *in Vacuo* as in *Air*.—That Smoke in an exhauſted Receiver, the Luminary being extinct, gradually ſettles to the Bottom in a darkiſh Body, leaving the upper part clear and tranſparent; and that inclining the Veſſel ſometimes on one ſide, and ſometimes on another, the Fume keeps its Surface horizontal, after the Nature of other Fluids.—That the Syphon does not run *in Vacuo*.——That Water freezes *in Vacuo*.—That Heat may be produced by Attrition in the exhauſted Receiver.——That Camphire will not take fire *in Vacuo*; and that Gunpouder, tho ſome Grains of a Heap be kindled by a Burning-glaſs *in Vacuo*, will not give Fire to the contiguous Grains.——That Glow-worms loſe their Light, in proportion as the *Air* is exhauſted; and at length become totally obſcure: but upon the Re-admiſſion of *Air*, preſently recover it all.—That Vipers and Frogs ſwell much *in Vacuo*, but will live an Hour and half, or two Hours; and tho ſeemingly ſtark dead in that time, come to Life again in ſome Hours in the *Air*.—That Snails ſurvive ten Hours; and Efts or Slow-worms, two or three Days; Leaches five or ſix.—That Oyſters will remain alive *in Vacuo* 24 Hours without harm.—That the Heart of an Eel taken out of the Body, continues to beat *in Vacuo*, more nimbly than in *Air*; and this for a good part of an Hour.—That warm Blood, Milk, Gall, *&c.* undergo a conſiderable Intumeſcence, and Ebullition *in Vacuo*.—That a Mouſe, or other Animal, may be brought, by degrees, to ſurvive longer in a rarified *Air*, than naturally it does.—That *Air* may retain its uſual Preſſure, after it is become unfit for Reſpiration.—That Silk-Worms Eggs will hatch *in Vacuo*, &c.

AIRY, or AIRIE, of Hawks. See AERY.

AIRY *Triplicity*, among Aſtrologers, the Signs of *Gemini*, *Libra*, and *Aquarius*. See TRIPLICITY.

AISIAMENTA, in Law. See EASEMENTS.

AJUSTING. See ACCOMMODATION.

AJUTAGE, in Hydraulicks, part of the Apparatus of an artificial Fountain, or *Jet d'Eau*; being a ſort of Tube, fitted to the Mouth or Aperture of the Veſſel; thro' which the Water is to be play'd, and by it determin'd into this or that Figure.

'Tis chiefly the Diverſity in the *Ajutages*, that makes the different Kinds of Fountains.—And hence, by having ſeveral *Ajutages* to be applied occaſionally, one Fountain comes to have the Effect of many.

*The various ſorts of* Ajutages, *their Structure*, *Application*, &c. *ſee under the Article* FOUNTAIN.

The Word is *French*, form'd of the Verb *Ajouter*, to adjuſt.

AKOND, an Officer of Juſtice in *Perſia*, who takes cognizance of the Cauſes of Orphans, and Widows; of Contracts, and other Civil Concerns.—He is Head of the School of Law, and gives Lectures to all the ſubaltern Officers; he has his Deputies in all the Courts of the Kingdom, who, with the ſecond Sadra, make all Contracts.

AL, an *Arabick* Particle, prefix'd to Words to exalt or give them a more emphatical Signification.—As, in *Al*chymy, *Al*gebra, *&c.*

AL, or ALD, in our antient Cuſtoms, ſignifies as much as *old*, *antient*.—This, being prefix'd to the Names of Places, expreſſes their Antiquity; as *Aldborough*, *Aldgate*, &c.

ALA, a *Latin* Term, literally ſignifying *Wing*. See WING.

ALA is alſo uſed in Anatomy, for ſeveral Parts of the Body, which bear ſome reſemblance to the Figure of a Wing.

Thus, the Lobes of the Liver are ſometimes called *Alæ*. See LOBE.

The ſoft, ſpongious Bodies in the *Pudendum Muliebre*, uſually called the *Nymphæ*, are alſo denominated *Alæ*. See NYMPHÆ.

The two Cartilages of the Noſe which form the Noſtrils, are alſo called *Alæ*. See NOSE, and NOSTRIL.

And the ſame Denomination is given to the Top of the Auricle. See AURICLE, and EAR.

ALA is alſo uſed in Botany, for the Angle which the Leaves, or the Stalks or Pedicles of the Leaves, form with the Stem or Branches of a Plant from which they ariſe. See LEAVE, *&c.*

This Angle is uſually acute, and always directed upwards.—The ſame Name is occaſionally applied to the Angle form'd by the Branches themſelves, with the Stem; which is alſo obſerved to be very regular and uniform. See BRANCH.

ALÆ, in the Military Art, are the two Extremes of an Army, ranged in form of Battle. See WING, ARMY, *&c.*

ALABASTER, ALABASTRIDES, in Natural Hiſtory, a kind of Stone, ſofter than Marble, yet harder than Plaiſter of Paris. See STONE.

It is found of all Colours; ſome extremely white and ſhining, which is the moſt common; ſome red, like Coral; and other called *Onyx* from its Colour, which reſembles that of the Onyx, tho very different from it in Nature. See ONYX.

*Alabaſter* cuts very ſmooth and eaſy, and is much us'd among Sculptors for little Statues, Vaſes, Columns, &c. See STATUE, FOUNDERY, &c.

They ſometimes alſo employ it like Plaiſter of Paris: in order to which, they burn and calcine it; after which, mixing it up with Water to a thin Conſiſtence; it is caſt into a Mould, where it readily coagulates into a firm Body. See PLAISTER.

*Alabaſter*, Mr. *Boyle* obſerves, being finely pouder'd, and thus ſet in a Baſon over the Fire; will, when hot, aſſume the Appearance of a Fluid, by rolling in Waves, yielding to the ſmalleſt Touch, and emitting Vapour; all which Properties it loſes again, on the Departure of the Heat, and diſcovers it ſelf a mere incoherent Pouder. See FLUID, and FLUIDITY.

Some derive the Word from the Latin *albus*, becauſe of the Whiteneſs of this Stone.—Others, from the Greek ἀλάβαστον, which they form from the Privative α and λαμβάνω, *capio*; this Stone being too ſmooth and ſlippery for the Hand to faſten hold of it.

The *Alabaſter* Box of precious Ointment, mention'd in St. *Matthew* XXVI. 7. *Mark* XIV. 3. and *Luke* VII. 37. has given the Criticks and Interpreters ſome Pain.—To ſuppoſe it a Vaſe of *Alabaſter*, does not ſeem conſiſtent with its breaking ſo eaſily, as is intimated by St. *Mark*.

F. *Kircher*, in his *Oedip. Ægyp.* notes, that *Alabaſter*, *Alabaſtrum*, was not only uſed for a Vaſe of odoriferous Liquor, but alſo for an *Egyptian* Meaſure, containing nine *Koſti*, or *Egyptian* Pounds; amounting, according to his Computation, to 24 *Roman* Sextaries, or Pounds. See MEASURE, WEIGHT, &c.

ALABASTRA, in a Plant, are thoſe little green Leaves which compaſs in the bottom of the Flower. See CALYX, &c.

ALAISEE, in Heraldry. See HUMETTY.

A-LA-MIRE, in Muſick. See NOTE, and GAMUT.

ALAMODE, a ſort of Silk, or Taffety. See STUFF, SILK, TAFFETY, &c.

ALANORARIUS, in our antient Cuſtoms, a Keeper or Manager of Spaniels, or Setting-Dogs, for the Sport of Hunting, Hawking, &c. See HUNTING, and HAWKING.

The Word is form'd from the Gothic *Alan*, a Greyhound.

ALARES, in Antiquity, are ſuppoſed by ſome Authors to have been a kind of Militia, or Soldiery among the *Romans*; ſo called from *Ala*, a Wing, becauſe of their Lightneſs and Swiftneſs in the Combat.

Others make them a People of *Pannonia*: but others, with more probability, take *Alares* for an Adjective or Epithet; and apply it to the *Roman* Cavalry; becauſe plac'd in the two Wings, or *Alæ* of the Army; for which Reaſon, a Body of Horſe was called *Ala*. See WING, CAVALRY, &c.

ALARES *Muſculi*, in Anatomy. See PTERYGOIDES.

ALARM, a Signal given by Shouts, or by Inſtruments of War, for the Soldiers to take to their Arms, at the unexpected Arrival of an Enemy.

The Word is form'd from the French *à l'arme*, to your Arms.

ALARM-*Poſt*, is the Ground appointed to each Regiment, by the Quarter-Maſter-General, for them to march to, in caſe of an *Alarm*.

In a Gariſon, the *Alarm-Poſt* is the Place where every Regiment is order'd to draw up, on all Occaſions. See PLACE.

ALB, ALBE, ALBA, antiently called *Camiſia*, a Robe or Veſtment of white Linen, hanging down to the Feet; wherein the *Romiſh* Prieſts perform divine Service.

The *Alb* correſponds to the Surplice among us.—It takes its Name from its Colour, *albus*, white.

ALBA *Firma*, or ALBUM, was a yearly Rent, payable to the Chief Lord of a Hundred; ſo called, becauſe paid wholly in white Money, or Silver, and not in Corn, which was called *Black Mail*.

ALBIGENSES, a Sect or Party of Reformers about *Tholouſe*, and the *Albigeois*, in *Languedoc*; who, in the XIIth Century, became remarkable for their oppoſition to the Diſcipline and Ceremonies of the Church of *Rome*. See REFORMATION.

They were alſo known by various other Names; as, the *Petrobruſſians*, *Arnoldiſts*, *Cathares*, *Patarins*, *Publicans*, *Tiſſerans*, *Bons-hommes*, *Paſſagers*, &c.

'Tis pretended, they received their Opinions from *Bulgaria*; which having been infected by the *Paulicians* of *Armenia*, diffuſed the ſame into *Italy*, *Germany*, &c. and that *Peter Bruys* was the firſt that brought 'em into *Languedoc*, about the Year 1126. See PETROBRUSSIAN.

The *Romaniſts* tax them with abundance of heterodox Opinions; as, for inſtance, that there are two Gods, the one infinitely Good, and the other infinitely Evil: That the good God made the inviſible World, and the Evil one that which we live in; and the reſt of the *Manichean* Tenets. See MANICHEE.

But this ſeems rather one of thoſe pious Frauds allowed particularly in that Church, which eſteems it a kind of Merit to blacken Hereticks.

However this be, the *Albigenſes* grew ſo formidable in a little time, that a Holy League or Croizade was agreed upon among the Catholicks; and War denounc'd againſt them, the Pope himſelf raiſing the firſt Standard.—In 1229, a Peace was ſtruck up, and an Inquiſition eſtabliſh'd at *Tholouſe*, from which time they dwindled by little and little, till the Times of the Reformation; when ſuch of them as were left, fell in with the *Vaudois*, and became conformable to the Doctrine of *Zuinglius*, and the Diſcipline of *Geneva*. See VAUDOIS.

ALBUGINEA, in Anatomy, the outermoſt Coat or Tegument of the Eye; called alſo the *Adnata*, *Conjunctiva*, &c. See ADNATA, CONJUNCTIVA, &c.

It takes the Name *Albuginea*, from its Whiteneſs; it being this that forms what we call the *White of the Eye*. See EYE.

The ſame Term is alſo applied to the Membrane immediately encompaſſing the Teſticle. See TESTICLE, and SCROTUM.

ALBUGO, or ALBUM *Oculi*, the ſame with the *Albuginea*, or *White of the Eye*. See EYE, ALBUGINEA, &c.

ALBUGO is alſo a Diſeaſe of the Eye; otherwiſe called *Leucoma*, and popularly, *Pin and Web*. See LEUCOMA, and PIN.

The *Albugo* is a whitiſh Speck or Film, growing, ſay ſome Authors, on the Cornea; and obſtructing the Sight.—Others, more juſtly, place the *Albugo* on the *Albuginea*; by this diſtinguiſhing it from the *Pterygium*, which is a ſimilar Speck on the Cornea. See PTERYGIUM.

It oftenеſt ariſes as a Scar, after an Inflammation or Ulcer in the Part; particularly in the Small Pox.—The Cure is the ſame as in the *Pterygium*.

ALBUM *Græcum*, or *Stercus Canis Officinale*, Dogs white Dung, is a Medicinal Drug, in the preſent Practice, uſed with Honey, to cleanſe and deterge, chiefly in Inflammations of the Throat; and that principally outwardly, as a Plaiſter.

ALBUMEN *Ovi*, the White of an Egg. See EGG.

It is uſed in Medicine, as being of a glutinous or binding Nature, on which Account it is often mixed with Bole Armoniac, &c. to prevent any ſtrained Part from riſing into a Tumor, and reſtore it to its Tone or Elaſticity.—It is alſo an Ingredient in ſome Mixtures for conſolidating freſh Wounds, and preventing too great a Loſs of Blood.

ALBURN *Colour*, Brown. See AUBURN.

ALCADE, or ALCALDE, or ALCAID, in the *Spaniſh* Policy, a ſort of Judge or Miniſter of Juſtice, anſwering to a Provoſt. See PROVOST.

The *Spaniards* borrow their *Alcade* from the Saracen *Alcaid*. See ALCAID.

ALCAICKS, in the antient Poetry, a Name common to ſeveral Kinds of Verſes; thus called from the Poet *Alcæus*, the Inventor thereof. See VERSE.

The firſt Species of *Alcaicks*, conſiſts of two Dactyls and two Trochees: As,

*Exilium impoſitura cymbæ.*

There is another Kind, conſiſting of five Feet, of which the firſt is a Spondee or Iambick; the ſecond an Iambick; the third a long Syllable; the fourth a Dactyl; the fifth a Dactyl or Amphimacer: As theſe of *Horace*,

*Omnes eodem cogimur, omnium*
*Verſatur urna, ſerius, ocius*
*Sors exitura,*———

Beſides theſe two Kinds of Verſes, which are call'd *Alcaick Dactylics*, there is a third ſort, called ſimply *Alcaick*; whereof the firſt is an Epitrite, the ſecond and third Choriambus's, and the fourth a Bacchius; as,

*Cur timet fla|vum Tiberim | tangere? cur | olivum?*

*The* ALCAICK *Ode*, conſiſts of four Strophes, each of which contains four Verſes; the two firſt are *Alcaick* Verſes of the ſecond Kind; the third an Iambick Dimeter Hypercatalectick, *i. e.* of four Feet and a long Syllable: As,

*Sors exitura, & nos in æternum.*

The fourth is an *Alcaick* of the firſt Kind.——The entire *Alcaick* Strophe is as follows:

*Omnes eodem cogimur, omnium*
*Verſatur urna, ſerius, ocius*
*Sors exitura, & nos in æternum*
*Exilium impoſitura cymbæ.*

ALCAID, the Governour of a City in *Barbary*. See ALCADE.

The Juriſdiction of the *Alcaid* is ſovereign, both in Civil and Criminal Concerns; and Fines and Puniſhments lie wholly at his Door.—The Word is form'd of the Particle *Al*, and the Verb אל *kad*, or *akad*, to govern, rule, adminiſter.

ALCALI, ALCALY, or rather ALKALY. See ALKALY.

ALCALIZATION, or ALKALIZATION, *Alcalizatio*, in Chymiſtry, the Act of impregnating a Liquor with an *alcaline* Salt. See ALKALY.

This is done either to make it a better Diſſolvent, for ſome particular Purpoſes; or to load the Phlegm, ſo as it may not riſe in Diſtillation, whereby the ſpirituous Parts may go over more pure. See DISSOLUTION, DISTILLATION, SPIRIT, &c.

ALCANTARA.—*Order of* ALCANTARA, was an antient Military Order, denominated from a City of that Name in the Kingdom of *Spain*. See KNIGHT, ORDER, &c.

*Alphonſus* IX. having recover'd *Alcantara* from the *Moors*, in the Year 1212; committed the Cuſtody and Defence thereof, firſt, to the Knights of *Calatrava*; and, two Years afterwards, to the Knights of the Pear-Tree, another Military Order, inſtituted in 1170, by *Gomez Fernand*, and approved by Pope *Alexander* III. under the Rule of St. *Benedict*: upon which they changed their Name, and took the Denomination of *Knights of Alcantara*.

After the Expulſion of the *Moors*, and the Taking of *Granada*; the Sovereignty of the Order of *Alcantara*, and that of *Calatrava*, were ſettled in the Crown of *Caſtile*, by *Ferdinand* and *Iſabella*. See CALATRAVA.

In 1540, the Knights of *Alcantara* ſued for leave to marry; which was granted 'em.

ALCHYMY, or ALCHEMY, a higher or more refined kind of Chymiſtry, employ'd in the more myſterious Reſearches of the Art. See CHYMISTRY.

The Word is compounded of the *Arabic* Particle of Augmentation, *Al*, and the Latin *Chymia*, Egyptian *Kemia*, or *Greek* χημια, *Chymiſtry*.

The Name *Alchymy* is of no long ſtanding: The firſt time it occurs, is in *Julius Firmicus Maternus*, an Author who lived under *Conſtantine* the Great, and who in his *Matheſis*, C. XV. ſpeaking of the Influences of the Heavenly Bodies, affirms, "that if the Moon be in the Houſe of "*Saturn*, at the Time a Child is born, he ſhall be ſkill'd "in *Alchymy*."

The great Objects or Ends purſued by *Alchymy*, are, 1°, The making of Gold; which is attempted three different ways: by Separation; by Maturation; and by Tranſmutation; which laſt is to be effected by means of what they call the *Philoſopher's Stone*. See GOLD.—See alſo TRANSMUTATION, PHILOSOPHER'S *Stone*, &c.

With a View to this End, *Alchymy*, in ſome antient Writers, is alſo called ποιητικη, *Poetice*, Poetry; and χρυσοποιησις, *Chryſopoetice*, *q. d.* the Art of making Gold.—And hence alſo the Artiſts themſelves are called ποιηται, *Poets*, *Makers*, and χρυσοποιηται, *Gold-makers*.

2°, An Univerſal Medicine, adequate to all Diſeaſes. See ELIXIR.

3°, An Univerſal Diſſolvent, or Alkaheſt. See ALKAHEST.

4°, An Univerſal Ferment; or a Matter which being applied to any Seed, ſhall increaſe its Fecundity to Infinity: If, *e. g.* it be applied to Gold, it changes the Gold into the Philoſopher's Stone of Gold; if to Silver, into the Philoſopher's Stone of Silver, *i. e.* into a Matter which tranſmutes every thing into Silver; if to a Tree, the Reſult is the Philoſopher's Stone of the Tree, which tranſmutes every thing it is applied to into Trees, &c.

The Origin and Antiquity of *Alchymy* are much controverted.—If regard may be had to Legend and Tradition, it muſt be as old as the Flood; nay, *Adam* himſelf is repreſented by the *Alchymiſts* as an Adept. A great part, not only of the Heathen Mythology, but of the *Jewiſh* and Chriſtian Revelations, are ſuppoſed to refer hereto: Thus, *Suidas* will have the Secret of the Philoſopher's Stone couch'd in the Fable of the *Argonauts*; others find it in the Books of *Moſes*, &c.

But, if the Æra of the Art be examin'd by the Monuments of Hiſtory; it will loſe a deal of this fancied Antiquity.—The learned *Dane*, *Ol. Borrichius*, has taken immenſe Pains to prove it known to the antient *Greeks* and *Egyptians*. *Her. Conringius*, on the contrary, with equal Addreſs, undertakes to ſhew its Novelty.

In effect, not one of the antient Poets, Philoſophers, or Phyſicians, from *Homer* till 400 Years after Chriſt, mention any ſuch thing.—The firſt Author who ſpeaks of making Gold, is *Zozimus* the *Panopolitan*, who lived towards the Beginning of the Vth Century, and who has an expreſs Treatiſe, περι της ἱερας τεχνης του χρυσου και του ἀργυρου ποιησεως, *Of the divine Art of making Gold and Silver*, ſtill extant in Manuſcript in the *French* King's Library. The next is *Æneas Garæus*, another *Greek* Writer, towards the Cloſe of the ſame Century, in whom we have the following Paſſage: "Such as are ſkill'd in the Ways of Nature, can take Silver "and Tin, and changing their Nature, turn 'em into Gold." The ſame Writer tells us, he was "wont to ſtyle himſelf "χρυσιχος, *Gold-finder*, and χημευτης, *Chymiſt*."——Hence we may gather, there was ſome ſuch Art in being in that Age; but, as neither of theſe Authors relate how long it had been known before, their Teſtimony will not carry us back beyond the Age wherein they liv'd.

Nor do we find any earlier, plainer Traces of the Univerſal Medicine: not a Syllable of any ſuch thing in all the Phyſicians and Naturaliſts, from *Moſes* to *Geber* the *Arab*, who is ſuppoſed to have lived in the VIIIth Century. In that Author's Work, intitled, *The Philoſopher's Stone*, mention is made of "a Medicine which cures all Lepras:" This Paſſage ſome Authors ſuppoſe to have given the firſt Hint of the Matter; tho *Geber* himſelf, perhaps, meant no ſuch thing: For, by attending to the *Arabick* Stile and Diction of this Author, which abounds in Allegory, it appears highly probable, that by *Man* he means Gold, and by Lepras or Diſeaſes, the other Metals, which are all impure in compariſon of Gold.

*Suidas* accounts for this total Silence of Authors in reſpect of *Alchymy*, by obſerving, that *Diocletian* procured all the Books of the antient *Egyptians* to be burnt; and that it was in theſe the great Myſteries of Chymiſtry were contained. —*Conringius* calls this Hiſtory in queſtion, and aſks how *Suidas*, who lived but 500 Years before us, ſhould know what happen'd 800 Years before him? To which *Borrichius* anſwers, that he had learnt it of *Eudemus*, *Helladius*, *Zozimus*, *Pamphilus*, &c. as *Suidas* himſelf relates.

*Kircher* aſſerts, that the Theory of the Philoſopher's Stone is deliver'd at large in the Fable of *Hermes*; and that the antient *Egyptians* were not ignorant of the Art, but declined to proſecute it. They did not need to tranſmute Gold, they had ways of ſeparating it from all kind of Bodies, from the very Mud of the *Nile*, and Stones of all Kinds. But, he adds, theſe Secrets were never wrote down or made publick, but confined to the Royal Family, and handed down traditionally from Father to Son.

The chief Point advanced by *Borrichius*, and on which he ſeems to lay the greateſt Streſs, is the Attempt of *Caligula*, mention'd by *Pliny*, for procuring Gold by Diſtillation from Orpiment. *Hiſt. Nat.* L. XXXIII. c. 14.—But this, it may be obſerved, makes very little for that Author's Pretenſions; there being no Tranſmutation, no Hint of any Philoſopher's Stone, but only a little Gold extracted or ſeparated from the Mineral. See ORPIMENT.

The principal Authors in *Alchymy*, are *Geber*, Friar *Bacon*, *Ripley*, *Lully*, *John* and *Iſaac Hollandus*, *Baſil Valentine*, *Paracelſus*, *Van Zuchten*, and *Centivoglio*.

ALCMANIAN, the Name of a kind of Verſe, compos'd of three Dactyls and a long Syllable; as,

*Munera, lætitiamque Dei.*

ALCOHOL, or rather ALKOOL, in Chymiſtry, an *Arabic* Term, chiefly underſtood of the pureſt Spirit of Wine, raiſed or rectify'd by repeated Diſtillations to its utmoſt Subtility, and Perfection; ſo that if Fire be ſet thereto, it burns wholly away, without leaving the leaſt Phlegm or Fæces behind. See SPIRIT, DISTILLATION, RECTIFICATION, &c.

The Word *Alcohol* is ſometimes alſo uſed for a very fine, impalpable Pouder. See POWDER.

The Word is form'd from the *Arabic* or *Hebrew* קאל *Kaal*, to leſſen, attenuate, ſubtilize.

ALCORAN, the *Mahometan* Goſpel; or the Revelations, Propheſies, &c. of the Impoſtor *Mahomet*. See MAHOMETANISM.

The Word *Alcoran* is *Arabick*, and literally denotes either Reading, or Collection; but 'tis in the firſt of theſe Senſes that the *Alcoran* of *Mahomet* ſeems beſt underſtood; *Mahomet* purpoſing to have his Book call'd *Reading*, by way of Eminence; in imitation of the *Jews* and Chriſtians, who call the New and the Old Teſtament *Writing*, *Scripture*, הכתוב *Books*, τα βιβλια, on the ſame account. See SCRIPTURE, and BIBLE.

The *Muſſulmen* alſo call it אלפרקאן *Alpharkan*; from the Verb פרק *Pharaca*, to *diſtinguiſh*: either by reaſon it makes the Diſtinction between what is true, and falſe, or between what is lawful to do, and what not; or elſe on account of its containing the Diviſions, or Heads of the Law: in which, again, they imitate the *Hebrews*, who give divers Books the like Name פרקים *Perakim*, q. d. *Capita*, *Capitula*, Chapters, Heads; *e. g.* the פרקו אבות *Capita Patrum*; פרקיר אליעזר *Capitula Rabbi* Eliezer. Laſtly, the *Alcoran* is alſo denominated *Alzechr*, Advertiſement, or Remembrance; as ſerving to retain or retrieve the Knowledge of the Law.

'Tis the common Opinion among us, that *Mahomet*, aſſiſted by one *Sergius*, a Monk, compos'd this Book; but

the *Muſſulmans* believe it as an Article of their Faith, that the Prophet, who they ſay was an illiterate Man, had no hand in it; but that it was given him by God, who, to that end, made uſe of the Miniſtry of the Angel *Gabriel*; that however it was communicated to him by little and little, a Verſe at a time, and in different Places, during the Courſe of 23 Years.—'And hence, *ſay they*, proceeds 'that Diſorder and Confuſion viſible in the Work;' which, in truth, is ſo great, that all their Doctors have never been able to adjuſt it. For *Mahomet*, or rather his Copiſt, having put all theſe looſe Verſes promiſcuouſly in a Book together, it was impoſſible ever to retrieve the Order wherein they were deliver'd.

Theſe 23 Years which the Angel employ'd in conveying the *Alcoran* to *Mahomet*, are of wonderful Service to his Followers; inaſmuch as they furniſh them with an Anſwer to ſuch as tax them with thoſe glaring Contradictions wherewith the Book is full: thoſe Contradictions they piouſly father upon God himſelf; alledging, that in the Courſe of ſo long time, he repeal'd and alter'd ſeveral Doctrines and Precepts, which the Prophet had before receiv'd of him.

M. *d'Herbelot* thinks it probable, that when the Hereſies of the *Neſtorians*, *Eutychians*, &c. had been condemn'd by Oecumenical Councils; many Biſhops, Prieſts, Monks, *&c.* being driven into the Deſarts of *Arabia* and *Egypt*, furniſh'd the Impoſtor with Paſſages, and crude ill-conceiv'd Doctrines out of the Scriptures: And it was hence, that the *Alcoran* became ſo full of the wild and erroneous Opinions of thoſe Hereticks.

The *Jews*, alſo, who were very numerous in *Arabia*, contributed their Quota to the *Alcoran*; nor is it without ſome Reaſon that they boaſt, twelve of their chief Doctors to have been the Authors of this deteſtable Work.

The *Alcoran*, it is to be obſerv'd, while *Mahomet* lived, was only kept in looſe Sheets: His Succeſſor, *Abubeker*, firſt collected 'em into a Volume, and committed the keeping thereof to *Haphſa*, the Widow of *Mahomet*, in order to be conſulted as an Original. And there being a good deal of Diverſity between the ſeveral Copies already diſperſed thro'-out the Provinces; *Ottoman*, Succeſſor of *Abubeker*, procur'd a great Number of Copies to be taken from that of *Haphſa*; at the ſame time ſuppreſſing all the others not conformable thereto.

The chief Differences, then, in the preſent Copies of this Book, conſiſt in the Points; which were not in uſe in the Time of *Mahomet* and his immediate Succeſſors, but were added ſince, to aſcertain the Reading; after the Example of the *Maſſoretes*, who put the like Points to the *Hebrew* Text of Scripture. See POINT.

The Work is divided into *Surates*, or Chapters; and the Surates ſubdivided into little Verſes, which are all compoſed in a broken inerrupted Style, reſembling Proſe rather than Verſe.—The Diviſion into Surates is but of a late ſtanding: The uſual Number of 'em is 60.

There are ſeven principal Editions of the *Alcoran*; two at *Medina*, one at *Mecca*, one at *Coufa*, one at *Barſora*, one in *Syria*, and the Common or Vulgate Edition. The firſt contains 6000 Verſes; the others ſurpaſſing this Number by 200, or 236 Verſes: But the Number of Words and Letters is the ſame in all, *viz.* 77639 Words, and 323015 Letters. See MASSORETES.

The Number of Commentaries on the *Alcoran*, is ſo large, that the bare Titles would make a huge Volume.—*Ben Oſchair* has wrote the Hiſtory thereof, intitled, *Tarikh Ben Oſchair*. The principal among 'em are *Reidhaori Thaalebi*, *Zamalchſchari*, and *Bacai*.

Beſide the *Alcoran*, which is the Baſis of the *Mahometan* Faith, they have alſo a Book containing their Traditions, which they call *Sonna*. See SONNA, TRADITION, MAHOMETANISM, *&c.*

The *Mahometans* have a poſitive Theology, built on the *Alcoran* and Tradition; as well as a Scholaſtical one, built on Reaſon.—They have likewiſe their Caſuiſts, and a kind of Canon Law; wherein they diſtinguiſh between what is of divine, and what of poſitive Right.

They have their Beneficiaries too, Chaplains, Almoners, and Canons, who read a Chapter every Day out of the *Alcoran* in the Moſques; and have Prebends for ſo doing.—The Hatib of the Moſque, is what we call the Parſon of the Pariſh; and the Scheics are the Preachers, who take their Text out of the *Alcoran*.

Among the *Perſians*, *Alcoran* likewiſe ſignifies a kind of Tower, or Steeple; very high and narrow; ſurrounded without by two or three Galleries, one over another; whence their Moravites or Prieſts repeat their Prayers thrice a Day, with a very loud Voice; making the Tour of the Gallery all the while, that they may be the better heard all around.

ALCOVE, in Building, a part of a Chamber, ſeparated by an Eſtrade, or Partition of Columns, and other correſponding Ornaments; in which is placed a Bed of State, and ſometimes Seats, to entertain Company.

The Word is deriv'd from the Spaniſh *Alcoba*; and that from the Arabick *Elcanf*, a Cabinet or ſleeping Place; or from *Elcobat*, a Tent.

ALCYON. See HALCYON.

ALDEBARAN, an *Arabian* Name, for a fixed Star of the firſt Magnitude, in the Head of the Sign or Conſtellation *Taurus*, or the Bull; and hence popularly called *the Bull's Eye*.

Its Longitude, Latitude, *&c. ſee among the reſt of the Conſtellation* TAURUS.

ALDERMAN, an Aſſociate to the Mayor or Civil Magiſtrate of a City or Town, for the better Adminiſtration thereof. See CITY, TOWN, *&c.*

The *Aldermen* are an Order of Magiſtrates, in our Cities, and moſt of the municipal or incorporate Towns; who form a kind of Council, and regulate Things relating to the Policy of the Place.—They ſometimes alſo take Cognizance of Civil and Criminal Matters; but very rarely, and only in certain Caſes.

Their Number is not limited; but in ſome Places more, in ſome leſs, from 6 to 26.

Out of theſe are annually elected the *Mayors* or chief Magiſtrates of Places; who, at the Expiration of their Mayoralty, return again into the Body of the *Aldermen*, whoſe Delegates they were before. See MAYOR.

The 26 *Aldermen* of *London*, preſide over the 26 Wards of the City. See WARD.

When any of 'em die, the Wardmote return two, out of which the Lord Mayor and *Aldermen* chuſe one.

All the *Aldermen* that have been Lord Mayors, and the three eldeſt *Aldermen* who have not yet arriv'd at that Dignity, are by Charter, Juſtices of the Peace.

Formerly, there were alſo *Aldermen* of the Merchants, of Hoſpitals, of Hundreds, *&c.* See SENATOR.

ALDERMAN, among our antient *Saxon* Anceſtors, was one of the three Orders or Degrees of Nobility. See NOBILITY.

*Ætheling* was the firſt, *Alderman* the ſecond, and *Thane* the loweſt. See ÆTHELING, and THANE.

The *Alderman* was the ſame as our Earl or Count; which Appellation, after King *Athelſtane*'s Time, took place in lieu of *Alderman*. See EARL, and COUNT.

In the Time of King *Edgar*, *Alderman* was alſo uſed for a *Judge*, or *Juſtice*.—In this Senſe, *Alwin* Son of *Ethelſtane*, is ſtiled *Aldermannus totius Angliæ*; which *Spelman* interprets, *Juſticiarius Angliæ*.

*Thomas Elienſis*, in the Life of St. *Ethelred*, interprets *Alderman* by Prince, or Count; *Egelwinus qui cognominatus eſt* Alderman, *quod intelligitur princeps ſive comes*.—*Matthew Paris*, in lieu of *Alderman*, uſes the Word *Juſticiarius*; and *Spelman* obſerves, that it was the *Norman* Kings, who, inſtead of the *Saxon Alderman*, introduc'd the Word *Juſtice*.

The Word in its original, is compos'd of *Alder*, Senior or Elder, and *Man*.

ALE, a popular, or *Beverage* Drink, made from Malt. See MALT, and DRINK.

*For the Method of Brewing Ale*, ſee BREWING.

*Ale* is chiefly diſtinguiſh'd from Beer, another potable Liquor made from the ſame Ingredients, by the Quantity of Hops uſed therein; which is greater in Beer, and therefore renders the Liquor bitterer, and fitter to keep. See BEER, HOPS, *&c.*

The Brewers alſo diſtinguiſh *Pale* or *Fine Ale*, *Brown Ale*, &c.——*Their ſeveral Properties, Effects*, &c. *ſee under the Article* MALT-*Liquor*.

The *Zythum* and *Curmi* mentioned by *Tacitus*, as the Beverage of the antient *Germans*, are ſuppoſed by *Matthiolus* to correſpond to our *Ale* and Beer.

ALE, *Cereviſia*, is alſo a Denomination given to divers medicated Liquors, or Diet-Drinks, whereof *Ale* is the Baſis, or Vehicle. See DIET-*Drink*.

The medicated Wines, Waters, and *Ales*, make a large Article in our Diſpenſatories. See WINE, WATER, *&c.*

Such are the *Cereviſia Oxydorica*, for the Eyes; *Cereviſia Anti-Arthritica*, againſt the Gout; *Cereviſia Cephalica*, for the Head; *Cereviſia Epileptica*, &c.

*Gill* ALE, is prepared by infuſing the dry Leaves of *Hedera Terreſtris*, *i. e.* Ground-Ivy, in Malt-Liquor; which hereby becomes impregnated with the Virtues of the Simple; and is therefore reputed Abſterſive, and Vulnerary; good in Diſorders of the Breaſt, and againſt Obſtructions of the Viſcera.

*Dr.* Butler's *Purging* ALE, is prepared of Polypody, Sena, Sarſaparilla, Aniſeeds, Scurvygraſs, Agrimony, and Maiden-hair, put up in a Bag, and hung in a Veſſel of *Ale*.

We alſo meet in ſome Diſpenſatories with *Syrop of Ale*, made by boiling that Liquor to a Conſiſtence; uſed againſt Obſtructions in the Kidneys, *&c.*

ALE-*Berry*, is *Ale* boil'd with Bread and Mace; ſweetned, ſtrain'd, and drank hot.

ALE-*Meaſure*. See MEASURE.

ALE-*Conner*, an Officer in the City of *London*, whoſe Buſineſs is to inſpect the Meaſures of the Publick Houſes.—There are four of them, and they are choſen by the Common-Hall of the City. See MEASURE.

ALE-*Silver*, a Rent or Tribute yearly paid to the Lord Mayor of *London*, by thoſe who ſell *Ale* within the City.

ALE-*Taſter*, is an Officer appointed, and ſworn in every Court-Leet, to look that there be a due Size and Goodneſs of Bread, *Ale*, and Beer, ſold within the Juriſdiction of the Leet. See ASSIZE, &c.

ALECTORIA, in Natural Hiſtory, a Stone ſometimes found in the Stomach, Liver, or rather Gall-Bladder of old Cocks. See STONE.

It is ordinarily of the Figure of a Lupine, and ſeldom exceeds the Bigneſs of a Bean.—It has abundance of Virtues attributed to it, but moſt of them are fabulous.

The Word is deriv'd from ἀλέκτωρ, *a Cock*.

ALECTOROMANTIA, an antient Kind of Divination, perform'd by means of a Cock. See DIVINATION.

This Art was in uſe among the *Greeks*; and the manner of it was this.—A Circle was made on the Ground, and divided into 24 equal Portions, or Spaces; in each of which Spaces was written one of the Letters of the Alphabet, and upon each of theſe Letters was laid a Grain of Wheat.

This done, a Cock was turn'd looſe into the Circle, and careful Obſervation made of the Grains he peck'd.—The Letters correſponding to thoſe Grains, were afterwards form'd into a Word; which Word was to be the Anſwer deſired.

'Twas thus that *Libanius* and *Iamblichus* ſought who ſhould ſucceed the Emperor *Valens*; and the Cock eating the Grains anſwering to the Spaces ΘΕΟΔ, they concluded upon *Theodore*, but by a Miſtake inſtead of *Theodoſius*.

The Word comes from the *Greek* ἀλεκτωρ, *a Cock*, and μαντία, *Divination*.

ALEMBICK, or LIMBECK, a Chymical Veſſel, conſiſting of a Matraſs, fitted with a roundiſh Head, perforated in a ſloping Tube, for the condenſed Vapours to paſs thro' in Diſtillation. See CUCURBIT, and DISTILLATION.

*Alembick* is popularly underſtood of the whole Inſtrument of Diſtillation with all its Apparatus; but in the proper Senſe of the Word, it is only a Part hereof, *viz.* a Veſſel uſually of Copper, whereto a concave, globular, metalline Head is cloſely luted; ſo as to ſtop the riſing Vapours, and direct them into its Roſtrum or Beak.

The Heat of the Fire raiſing the volatile Parts of the Subject, expoſed in the bottom of the Veſſel; they are received into its Head, where they are condens'd, either by the Coldneſs of the ambient Air, or by Water externally apply'd; and become a Liquor, which runs out at the Beak into another Veſſel, called the *Recipient*. See RECIPIENT.

The Head or Capital of the *Alembick*, is ſometimes incompaſſed with a Veſſel full of cold Water, by way of Refrigeratory; tho this Intention is now more commonly anſwered by a *Serpentine*. See REFRIGERATORY, SERPENTINE, &c.

There are divers Kinds of *Alembicks*: An *Open Alembick*, where the Capital and Cucurbit are two ſeparate Parts; a *Blind Alembick*, or Blind Head, where the Capital is ſealed Hermetically upon the Cucurbit, &c.

The Word is form'd of the *Arabick* Particle *Al*, and the *Greek* ἄμβιξ, a ſort of earthen Veſſel, mention'd by *Atheneus*, and *Heſychius*. Tho, *Matthæus Silvaticus*, in his *Pandect Medicinæ*, aſſerts the Word *Alembick* to be *Arabick*, and that it literally denotes the upper Part of a diſtilling Veſſel.

ALEXANDRINE, or ALEXANDRIAN, in Poetry, the Name of a kind of Verſe, which conſiſts of twelve and thirteen Syllables alternately; the reſt or Pauſe being always on the ſixth Syllable. See VERSE.

It is ſaid to have taken its Name from a Poem on the Life of *Alexander*, intitled, the *Alexandriad*; written, or at leaſt tranſlated into this kind of Verſe by ſome *French* Poets: tho others will have it denominated from one of the Tranſlators, *Alexander Paris*.

This Verſe is thought by ſome very proper in the Epopea, and the more ſublime Kinds of Poetry: for which Reaſon it is alſo called *Heroic Verſe*. See HEROIC.

It anſwers in our Language to the *Hexameters* in the *Greek* and *Latin*.—*Chapman*'s Tranſlation of *Homer*, conſiſts wholly of *Alexandrines*.

ALEXIPHARMIC, in Medicine, expreſſes that Property which a Remedy, either ſimple or compound, hath to reſiſt, or deſtroy every thing of a poiſonous Nature: For the Antients had a Notion, that there was Poiſon in all malignant Diſeaſes, and in the generality of thoſe whoſe Cauſe is unknown. See POISON.

*Alexiterial*, *Cardiac*, *Antidote*, *Alexipharmic*, and *Counterpoiſon*, are all Terms of the ſame Signification. See ANTIDOTE, COUNTERPOISON, &c.

*Alexipharmics* are ordinarily divided into ſuch as are general; and thoſe more particular, ſuppoſed only to combat ſome particular Diſeaſe.—But this Diviſion is founded more on Speculation than Experience.

*Alexipharmic* Medicines, contain a great Number of volatile Parts, and ſuch as render fluid the Maſs of Blood. The greateſt part of them are aromatick, and pungent to the Taſte. See AROMATIC.——Among the reſt, it is true, there are ſome acid Plants and Juices; but theſe are only reckon'd in the Number, on account of their Uſe in malignant, colliquative Fevers.

*Alexipharmics* chiefly act by exciting or increaſing a Diaphoreſis, or Perſpiration; by which the noxious Matter is thrown off. See DIAPHORETICKS, PERSPIRATION, &c.

*Alexipharmics*, whether ſimple or compound, are alſo eſteemed Preſervatives againſt malignant, and peſtilential Fevers: But they are to be uſed with Caution; ſome being only proper in Condenſations, and others in Colliquations of the Blood. See PRESERVATIVE, PLAGUE, &c.

The Word is derived from the *Greek* ἀλεξω, *arceo*, to drive out, or expel; and φάρμακον, *Venenum*, Poiſon.

ALEXIPHARMIC *Waters*, &c. See WATER, &c.

ALEXITERIAL, in Medicine, a Term of the ſame import with *Alexipharmic*. See ALEXIPHARMIC.

It is form'd from the *Greek* ἀλεξω, *arceo*, I drive away, or *Opitulor*, I aſſiſt.

ALFET, antiently ſignified the Cauldron in which boiling Water was put, for the Accuſed to plunge his Hand in up to the Elbow, by way of Trial or Purgation. See WATER.

ALGAROT, or ALGAREL, in the *Arabian* Chymiſtry, a Pouder prepared of Butter of Antimony; being in reality no more than the Regulus of that Mineral, diſſolv'd in Acids, and ſeparated again by means of ſeveral Lotions with lukewarm Water, which imbibes thoſe Acids. See REGULUS.

This is alſo called *Mercurius Vitæ*, or ſimply *Emetic Pouder*.—It purges violently both upwards and downwards. See ANTIMONY.

By collecting all the Lotions, and evaporating two third Parts, what remains is a very acid Liquor, called *Spirit of Philoſophical Vitriol*.

ALGEBRA, a Method of reſolving Problems by means of Equations. See PROBLEM, and EQUATION.

Some Authors define *Algebra* the Art of ſolving all Problems capable of being ſolv'd: But this is rather the Idea of *Analyſis*, or the *Analytic Art*. See ANALYSIS.

The *Arabs* call it, the *Art of Reſtitution and Compariſon*; or, the *Art of Reſolution and Equation*.—*Lucas de Burgos*, the firſt *European* who wrote of *Algebra*, calls it, the *Rule of Reſtoration and Oppoſition*.—The *Italians* call it, *Regula Rei & Cenſus*, that is, the Rule of the Root and the Square; the Root with them being called *Res*, and the Square *Cenſus*.—Others call it *Specious Arithmetick*; others *Univerſal Arithmetick*, &c.

*Menage* derives the Word from the *Arabic Algebra*, which ſignifies the ſetting of a broken Bone; ſuppoſing that the principal Part of *Algebra* is the Conſideration of broken Numbers.——Others rather borrow it from the *Spaniſh Algebriſta*, a Perſon who re-places diſlocated Bones; adding, that *Algebra* has nothing to do with Fraction; in that it conſiders broken Numbers as if they were entire, and even expreſſes its Powers by Letters, which are incapable of Fraction.

Some, with M. *d'Herbelot*, are of Opinion, that *Algebra* takes its Name from *Geber*, a celebrated Philoſopher, Chymiſt, and Mathematician, whom the *Arabs* call *Giaber*; and who is ſuppoſed to have been the Inventor.—Others, from *Gefr*, a kind of Parchment, made of the Skin of a Camel, whereon *Ali* and *Giafar Sadek* wrote in myſtick Characters the Fate of *Mahometaniſm*, and the grand Events that were to happen till the End of the World.—But others, with more probability, derive it from *Gebr*, a Word whence, by prefixing the Particle *Al*, we have formed *Algebra*, which is pure *Arabic*, and properly ſignifies the Reduction of broken Numbers to a whole Number.

However, the *Arabs*, it is to be obſerved, never uſe the Word *Algebra* alone, to expreſs what we mean by it; but always add to it the Word *Macabelah*, which ſignifies *Oppoſition and Compariſon*.—Thus, *Algebra-Almocabelah*, is what we properly call *Algebra*.

*Algebra* is a peculiar kind of Arithmetick, which takes the Quantity ſought, whether it be a Number, or a Line, or any other Quantity, as if it were granted; and by means of one or more Quantities given, proceeds by conſequence, till the Quantity at firſt only ſuppos'd to be known, is found to be equal to ſome Quantity or Quantities which are certainly known, and conſequently it ſelf is known. See QUANTITY, and ARITHMETIC.

*Algebra* is of two Kinds, *viz. Numeral*, and *Literal*.

*Numeral*, or *Vulgar* ALGEBRA, is that of the Antients, which only had place in the Reſolution of Arithmetical Queſtions.—In this, the Quantity ſought is repreſented by ſome Letter or Character; but all the given Quantities are expreſs'd by Numbers. See NUMBER, and NUMEROUS.

*Literal*,

*Literal*, or *Specious* ALGEBRA, or the *New* ALGEBRA, is that wherein the given or known Quantities, as well as the unknown, are all expreſſed or repreſented by their Species, or Letters of the Alphabet. See SPECIES, and SPECIOUS.

This eaſes the Memory and Imagination of that vaſt Streſs or Effort, requir'd to keep the ſeveral Matters neceſſary for the Diſcovery of the Truth in hand preſent to the Mind: For which Reaſon this Art may be properly denominated *Metaphyſical Geometry*.

*Specious Algebra*, is not, like the Numeral, confin'd to certain Kinds of Problems; but ſerves univerſally for the Inveſtigation or Invention of Theorems, as well as the Solution and Demonſtration of all kinds of Problems, both *Arithmetical*, and *Geometrical*. See THEOREM, &c.

The Letters uſed in *Algebra*, do each ſeparately repreſent either Lines or Numbers, as the Problem is Arithmetical or Geometrical; and together, they repreſent Planes, Solids and Powers more or leſs high, as the Letters are in a greater or leſs Number.—For inſtance, if there be two Letters, *ab*, they repreſent a Rectangle, whoſe two Sides are expreſſed, one by the Letter *a*, and the other by *b*; ſo that by their mutual Multiplication, they produce the Plane *ab*. Where the ſame Letter is repeated twice, as *aa*, they denote a Square.—Three Letters, *abc*, repreſent a Solid, or a rectangled Parallelopiped, whoſe three Dimenſions are expreſſed by the three Letters *abc*; the Length by *a*, the Breadth by *b*, and the Depth by *c*: ſo that by their mutual Multiplication they produce the Solid *abc*.

As the Multiplication of Dimenſions is expreſſed by the Multiplication of Letters, and as the Number of thoſe may be ſo great as to become incommodious; the Method is, only to write down the Root, and on the right hand to write the Index of the Power, that is, the Number of Letters whereof the Power to be expreſſed does conſiſt; as, $a^2$, $a^3$, $a^4$, $a^5$: the laſt of which ſignifies as much as *a* multiplied five times into it ſelf; and ſo of the reſt. See POWER, ROOT, EXPONENT, &c.

*For the Symbols, Characters*, &c. *uſed in* Algebra, *with their Application*, &c. *ſee the Articles* CHARACTER, QUANTITY, &c.

*For the Method of performing the ſeveral Operations in* Algebra, *ſee* ADDITION, SUBTRACTION, MULTIPLICATION, &c.

As to the Origin of this Art, we are much in the dark.—The Invention is uſually attributed to *Diophantus*, a *Greek* Author, who wrote thirteen Books, tho only ſix of 'em are extant, firſt publiſhed by *Xylander*, in 1575; and ſince commented on and improved by *Gaſper Bachet*, of the *French Academy*; and ſince by M. *Fermat*.

And yet *Algebra* ſeems to have been not wholly unknown to the antient Mathematicians, long before the Age of *Diophantus*: We ſee the Traces, the Effects of it in many Places; tho, it looks as if they had deſignedly concealed it.—Something of it there ſeems to be in *Euclid*, or at leaſt in *Theon* upon *Euclid*, who obſerves that *Plato* had begun to teach it.—And there are other Inſtances of it in *Pappus*, and more in *Archimedes* and *Apollonius*.

But the Truth is, the Analyſis uſed by thoſe Authors is rather Geometrical than *Algebraical*; as appears by the Examples thereof which we find in their Works: So that we make no ſcruple to ſay, that *Diophantus* is the firſt, and only Author among the *Greeks* who has treated of *Algebra* profeſſedly.

This Art, however, was in uſe among the *Arabs* much earlier than among the *Greeks*. And 'tis ſaid the *Arabs* too borrow'd it from the *Perſians*, and the *Perſians* from the *Indians*.—'Tis added, that the *Arabs* carried it into *Spain*; whence, ſome are of opinion, it paſs'd into *England*, before *Diophantus* was known among us.

The firſt who wrote on the Subject in this part of the World, was *Lucas Pacciolus*, or *Lucas de Burgos*, a Cordelier; whoſe Book, in *Italian*, was printed at *Venice* in 1494.—This Author makes mention of one *Leonardus Piſanus*, and ſome others, of whom he had learnt the Art; but we have none of their Writings.—He adds, that *Algebra* came originally from the *Arabs*; and never mentions *Diophantus*: which makes it probable, that that Author was not yet known in *Europe*.—His *Algebra* goes no further than Simple and Quadratick Equations. See QUADRATIC, &c.

After *Pacciolus* appear'd *Stifelius*, a good Author; but neither did he advance any further.

After him, came *Scipio Ferreus*, *Cardan*, *Tartalea*, and ſome others; who reach'd as far as the Solution of ſome Cubick Equations.—*Bombelli* follow'd theſe, and went himſelf a little further.—At laſt came *Nonnius*, *Ramus*, *Schoner*, *Salignac*, *Clavius*, &c. who all of them took different Courſes, but none of them went beyond Quadraticks.

About the ſame time, *Diophantus* was firſt made publick; whoſe Method is very different from that of the *Arabs*, which had been follow'd till then.

In 1590, *Vieta* enter'd on the Stage, and introduc'd what he call'd his *Specious Arithmetick*, which conſiſts in denoting the Quantities, both known and unknown, by Symbols or Letters.—He alſo introduced an ingenious Method of extracting the Roots of Equations, by Approximation; ſince much facilitated by *Raphſon*, in his *Analyſis Æquationum*.

*Vieta* was follow'd by *Oughtred*, who in his *Clavis Mathematica*, printed in 1631, improved *Vieta*'s Method; and invented ſeveral compendious Characters, to ſhew the Sums, Differences, Rectangles, Squares, Cubes, &c.

Mr. *Harriot*, another *Engliſhman*, cotemporary with *Oughtred*, left ſeveral Treatiſes at his Death; and among the reſt, an *Analyſis*, or *Algebra*, which was printed in 1631; where *Vieta*'s Method is brought into a ſtill more commodious form, being that which obtains to this Day.

In 1657, *Des Cartes* publiſh'd his Geometry, wherein he made uſe of the Literal Calculus and the *Algebraick* Rules of *Harriot*; and as *Oughtred* in his *Clavis*, and *Marin. Ghetaldus*, in his Books of Mathematical Compoſition and Reſolution publiſh'd in 1630, applied *Vieta*'s Arithmetick to Elementary Geometry, and gave the Conſtructions of Simple and Quadratick Equations; ſo *Des Cartes* applied *Harriot*'s Method to the Higher Geometry, explaining the Nature of Curves by Equations, and adding the Conſtructions of Cubic, Biquadratic, and other higher Equations.

*Des Cartes*'s Rule for conſtructing Cubic and Biquadratic Equations, was further improved by *Tho. Baker*, in his *Clavis Geometrica Catholica*, publiſh'd in 1684; and the Foundation of ſuch Conſtructions, with the Application of *Algebra* to the Quadratures of Curves, Queſtions *de maximis* and *minimis*, the Centrobaryc Method of *Guldinus*, &c. was given by *R. Sluſius*, in 1668; as alſo by *Fermat*, in his *Opera Mathematica*; *Roberval*, in the *Mem. de Mathem. & de Phyſique*; and *Barrow*, in his *Lect. Geomet.*——In 1708, *Algebra* was applied to the Laws of Chance and Gaming, by *R. de Montmort*; and ſince by *de Moivre*, and *James Bernoulli*.

Thus much for the Progreſs of *Algebra*.—The *Elements of the Art* were compiled and publiſh'd by *Kerſey* in 1671; wherein the Specious Arithmetick, and the Nature of Equations are largely explain'd, and illuſtrated by variety of Examples: The whole Subſtance of *Diophantus* is here deliver'd; and many Things added concerning Mathematical Compoſition and Reſolution, from *Ghetaldus*. The like has been ſince done by *Preſtet* in 1694; and by *Ozanam* in 1703.—But theſe Authors omit the Application of *Algebra* to Geometry; which Defect is ſupplied by *Guiſnee* in a *French* Treatiſe expreſly on the Subject, publiſh'd in 1704; and *l'Hopital* in his Analytical Treatiſe of the Conic Sections, in 1707.—The Rules of *Algebra* are alſo compendiouſly deliver'd by Sir *I. Newton*, in his *Arithmetica Univerſalis*, firſt publiſh'd in 1707; which abounds in choice Examples, and contains ſeveral Rules and Methods invented by the Author.

*Algebra* has been alſo applied to the Conſideration and Calculus of Infinites; from whence a new and very extenſive Branch of Knowledge has aroſe, call'd the *Doctrine of Fluxions*, or *Analyſis of Infinites*, or the *Calculus Differentialis*. See FLUXIONS.——The Authors on this Subject, ſee under the Article ANALYSIS.

ALGEBRAICAL, ſomething that relates to *Algebra*. See ALGEBRA.

In this Senſe, we ſay, *Algebraical* Characters, or Symbols. See CHARACTER.

ALGEBRAICAL *Curve*, is a Curve, wherein the Relation of the Abſciſſes to the Semiordinates, may be defined by an *Algebraical* Equation. See CURVE.

Theſe are alſo called *Geometrical Lines*. See GEOMETRICAL *Lines*.

*Algebraical* Curves ſtand contradiſtinguiſh'd to Mechanical or Tranſcendental ones. See MECHANICAL, and TRANSCENDENTAL.

ALGEBRAICAL *Solution*. See RESOLUTION.

ALGENEB, in Aſtronomy, a Fixed Star of the ſecond Magnitude, on the right ſide of *Perſeus*.—Its Longitude, Latitude, &c. *ſee among the reſt of the Conſtellation* PERSEUS.

ALGOL, or *Meduſa*'s *Head*, a Fixed Star of the third Magnitude, in the Conſtellation *Perſeus*.——Its Longitude, Latitude, &c. *ſee under the Article* PERSEUS.

ALGORISM, a Term uſed by ſome *Arabick* Authors for the practical Operation of the ſeveral Parts of Specious Arithmetick, or Algebra. See ALGEBRA.——Sometimes it is alſo uſed for the Practice of common Arithmetick, by the ten numeral Figures. See ARITHMETICK.

ALGORITHM, an *Arabic* Term, which ſome Authors, and eſpecially the *Spaniards*, make uſe of to ſignify the Doctrine of Numbers. See NUMBER.

*Algorithm* is properly the Art of numbering truly, and readily; and comprehends the ſix Rules of common Arithmetick.—It is ſometimes called *Logiſtica Numeralis*. See ARITHMETICK, RULE, &c.

In this Senſe, we ſay, the *Algorithm* of Integers, the *Algorithm* of Fractions, the *Algorithm* of Surds, &c. See FRACTION, SURD, &c.

ALGUAZIL, in the *Spaniſh* Policy, a Serjeant or Officer, who arreſts People, and executes the Magiſtrate's Orders. See SERJEANT, *&c.*

ALHANDAL, a Term in the *Arabian* Pharmacy.—The Troches of *Alhandal*, *Trochiſci Alhandalæ*, are a kind of Troches, compoſed of Colocynthis, Bdellium, and Gum Tragacanth. See TROCHE.

They are eſteemed good Purgatives, and are uſed on divers Occaſions. See PURGATIVE.

The Word is formed of the Arabic *Handel*, or *Handhal*, a Name for Colocynthis. See COLOCYNTHIS.

ALHIDADE, or ALIDADE, the Index or Label of an Aſtronomical, or Geometrical Inſtrument, for taking of Heights or Diſtances.—The *Alhidade* is a kind of Ruler, moveable on the Centre of the Inſtrument; and carrying the Sights. See INDEX, SIGHTS, *&c.* See alſo ASTROLABE, THEODOLITE, *&c.*

The Word is *Arabic*, where it ſignifies the ſame thing.—In *Greek* and *Latin*, it is called *Διοπτρα*, *Dioptra*, and *Linea Fiduciæ*, Fiducial Line.

ALIEN, in Law, a Perſon born out of the King's Allegiance, and conſequently not capable of inheriting Lands in *England*, till naturaliz'd by Act of Parliament. See NATURALIZATION.

Of theſe there are two Kinds, *viz. Alien-Friends*, who are of thoſe Countries which are at peace and league with us; and *Enemies*, who are of Countries at war with us.

A Man born out of the Land, ſo it be within the Limits of the King's Obedience beyond the Seas; or of *Engliſh* Parents out of the King's Obedience, ſo the Parents at the Time of the Birth be of ſuch Obedience, is no *Alien*, but a Subject of the King: Stat. 2. 25 *Edw.* III. commonly called the Statute *De natis ultra mare.*

Add, that if one born out of the King's Allegiance come and dwell in *England*; his Children begotten here are not *Aliens*, but Denizens. See DENIZEN.

ALIEN *Priories*, were thoſe Cells of Monks, formerly eſtabliſhed in *England*, which belonged to foreign Monaſteries. See PRIORY, ABBY, MONASTERY, *&c.*

ALIENATION, ALIENATIO, in Law, the Act of making a thing another Man's; or the altering, and transferring the Property and Poſſeſſion of Lands, Tenements, or other Things, from one Man to another. See TRANSFERRING, POSSESSION, *&c.*

To *alienate*, or *alien*, *in Mortmain*, is to make over Lands or Tenements to a Religious Community, or other Body Politick. See MORTMAIN.

To *alienate in Fee*, is to ſell the Fee-ſimple of any Land, or other incorporeal Right. See FEE.

Crown-Lands are only *alienable* under a Faculty of perpetual Redemption. See REDEMPTION.

The Council of *Lateran*, held in 1123, forbids any Clerk to *alienate* his Benefice, Prebend, or the like. See PREBEND, *&c.*

ALIENATION-*Office*, is an Office to which all Writs of Covenants and Entry, upon which Fines are levied and Recoveries ſuffer'd, are carried; to have Fines for *Alienation* ſet and paid thereon. See COVENANT, RECOVERY, FINE, *&c.*

ALIFORMES *Proceſſus*, in Anatomy, the Prominences of the *Os Cuneiforme.* See CUNEIFORME.

ALIFORMES *Muſculi*, a Pair of Muſcles, ariſing from the *Pterygoide* Bone, and ending in the Neck of the lower Jaw, towards the internal Seat of the Head. See PTERYGOIDES, *&c.*

They are thus called from the Latin *Ala*, Wing, and *Forma*, Shape; as reſembling Wings.

ALIMENT, ALIMENTUM, *Food*, in a phyſical Senſe, is whatever may be diſſolved and turn'd into Chyle, by the Liquor of the Stomach, or the Natural Heat; ſo as to be afterwards converted into Blood, for augmenting the Body, or repairing the continual Expence of Parts. See FOOD, CHYLE, BLOOD, NUTRITION, *&c.*

The Word is *Latin*, form'd of the Verb *Alere*, to nouriſh.

ALIMENTARY, ALIMENTAL, ſomething that relates to *Aliment*, or Food. See FOOD.

The antient Phyſicians hold that every Humour conſiſts of two Parts; an *Alimentary*, and an Excrementitious one. See HUMOUR, and EXCREMENT.

ALIMENTARY *Duct*, *Ductus Alimentalis*, is a Name given, by Dr. *Tyſon* and ſome others, to that Part of the Body thro' which the Food paſſes, from its Reception into the Mouth, to its Exit at the Anus; including the Gula, Stomach, and Inteſtines. See DUCTUS *Alimentalis*, STOMACH, *&c.*

*Alimentary Duct* is ſometimes alſo underſtood of the Thoracic Duct. See THORACIC *Duct.*

ALIMENTARII *Pueri*, &c. in Antiquity, were certain Children maintained and educated by the Munificence of the Emperors, in a ſort of publick Places, not unlike our Hoſpitals. See HOSPITAL.

*Trajan* was the firſt that brought up of theſe *Alimentary Boys.* He was imitated by *Adrian.* *Antoninus Pius* did the ſame for a Number of Maids, at the Solli-

citation of *Fauſtina*: And hence, in ſome Medals of that Empreſs, we read PUELLÆ FAUSTINIANÆ.—*Alexander Severus* did the like, at the Requeſt of *Mammæa*; and the Maids thus educated were called *Mammeanæ.*

ALIMONY, ALIMONIA, in Law, antiently ſignify'd *Nouriſhment*, or *Maintenance*; but in a more modern Senſe, denotes that Portion, or Allowance which a married Woman ſues for, upon any occaſional Separation from her Husband, wherein ſhe is not charged with Elopement or Adultery. See WIFE, DOWER, *&c.*

This was antiently called *Rationabile Eſtoverium*, Reaſonable Maintenance, and was recoverable in the Spiritual Court; but now only in Chancery.

ALIQUANT *Part*, is that which will not meaſure or divide any Number exactly, but ſome Remainder will ſtill be left.—Or, an *Aliquant* Part, is that which being taken any Number of times, is always either greater or leſſer than the Whole. See PART, MEASURE, *&c.*

*A Table of* Aliquant Parts *of a Pound, ſee under the Article* MULTIPLICATION.

Thus, 5 is an *Aliquant Part* of 12; for being taken twice, it falls ſhort, and when taken three times it exceeds 12.

ALIQUOT *Part*, is ſuch Part of any Number, or Quantity, as will exactly meaſure it, without any Remainder.—Or, it is a Part, which being taken a certain Number of times, becomes equal to the Whole, or Integer. See PART, *&c.*

Thus, 3 is an *Aliquot Part* of 12; becauſe being taken four times, it will juſt meaſure it.

The Word is form'd of the Latin *Aliquoties*, any number of times.

*A Table of* Aliquot Parts *of a Pound, ſee under the Article* MULTIPLICATION.

ALKAHEST, or ALCAHEST, in Chymiſtry, an univerſal Menſtruum or Diſſolvent, wherewith ſome Chymiſts have pretended adequately to reſolve all Bodies into their firſt Matter. See MENSTRUUM, DISSOLVENT, MATTER, *&c.*

Thoſe two eminent Adepts, *Paracelſus* and *Helmont*, expreſly declare, that there is a certain Fluid in Nature, capable of reducing all ſublunary Bodies, as well homogeneous as mixed, into their *Ens primum*, or Original Matter whereof they are compos'd; or into an uniform equable and potable Liquor, that will unite with Water and the Juices of our Bodies, yet retain its ſeminal Virtues; and if mixed with it ſelf again, thereby be converted into pure elementary Water.—Whence they alſo imagin'd, it would at length reduce all Things into Water. See WATER.

This Declaration, ſeconded by the Aſſeveration of *Helmont*, who religiouſly ſwears himſelf poſſeſſed of the Secret, has excited the ſucceeding Chymiſts and Alchymiſts to the Purſuit of ſo noble a Menſtruum. Mr. *Boyle* was ſo fond of it, that he frankly acknowledges he had rather have been Maſter thereof than of the Philoſopher's Stone. See ALCHYMY.

Indeed, 'tis not difficult to conceive, that all Bodies might originally ariſe from ſome firſt Matter, which was once in a fluid Form.—Thus, the primitive Matter of Gold is, perhaps, nothing more than a ponderous Fluid, which from its own Nature or a ſtrong Attraction between its Parts, afterwards acquires a ſolid Form. See GOLD.——And hence, there does not appear any Abſurdity in the Notion of an univerſal *Ens*, that reſolves all Bodies into their *Ens genitale.*

The *Alkaheſt* is a Subject that has been canvaſſed by an infinite Number of Authors; as, *Pantaleon*, *Philalethes*, *Tachenius*, *Ludovicus*, &c.——*Boerhaave* ſays, a Library might be collected out of 'em. *Weidenfelt*, in his Treatiſe *de Secretis Adeptorum*, has given us all the Opinions that have been entertained about it.

The Term *Alkaheſt* is not peculiarly found in any Language: *Helmont* declares he firſt obſerved it in *Paracelſus*, as a Word that was unknown before the Time of that Author, who in his ſecond Book, *De viribus Membrorum*, treating of the Liver, has theſe Words: *Eſt etiam* Alkaheſt *liquor, magnam hepatis conſervandi & confortandi*, &c. "There is alſo the Liquor *Alkaheſt*, of great efficacy in "preſerving the Liver; as alſo in curing hydropical and all "other Diſeaſes ariſing from Diſorders of that Part. If it "have once conquer'd its like, it becomes ſuperior to all "other hepatick Medicines; and tho the Liver it ſelf "were broken and diſſolved, this Medicine ſhould ſupply "its Place."

'Tis this ſingle Paſſage of *Paracelſus*, that excited the ſucceeding Chymiſts to an Inquiry after the *Alkaheſt*; there being but one other indirect Expreſſion about it in all his Works.

Now it being a frequent Practice with this Author to tranſpoſe the Letters of his Words, and to make uſe of Abbreviations, and other ways of Concealment; as in Tartar, which he would write *Sutratar*; for *Nitrum*, *Mutrin*, &c. 'tis ſuppoſed *Alkaheſt* may be a Word thus diſguis'd.—

Hence ſome imagine it formed of *Alkali eſt*; and accordingly, that it was the Alkaline Salt of Tartar volatiliz'd. This ſeems to have been *Glauber*'s Opinion; who indeed performed ſurprizing things with ſuch a Menſtruum upon Subjects of all the three Kingdoms.

Others will have it the *German* Word *Algeiſt*, q. d. wholly ſpirituous, or volatile: Others are of Opinion, that *Alkaheſt* is taken from *Salls-geiſt*, which ſignifies Spirit of Salt; for the Univerſal Menſtruum, 'tis ſaid, is to be wrought from Water; and *Paracelſus* himſelf calls Salt the Centre of Water, wherein Metals ought to die, *&c.*—In effect, Spirit of Salt was the great Menſtruum he uſed on moſt Occaſions.—The Commentator on *Paracelſus*, who gave a *Latin* Edition of his Works at *Delft*, aſſures that the *Alkaheſt* was Mercury, converted into a Spirit.—*Zwelfer* judg'd it to be a Spirit of Vinegar rectify'd from Verdigreaſe.—And *Starkey* thought he diſcover'd it in his Soap.

There have been ſome ſynonymous and more ſignificant Words uſed for the *Alkaheſt*.—The elder *Helmont* mentions the *Alkaheſt* by the compound Name of *Ignis-aqua*, Fire-Water: But he here ſeems to mean the circulated Liquor of *Paracelſus*; which he terms *Fire*, from its Property of conſuming all things; and *Water*, on account of its liquid form.——The ſame Author calls it *Ignis-gehennæ*, infernal Fire; a Word alſo uſed by *Paracelſus*: He alſo intitles it '*Summum & feliciſſimum omnium ſalium*, the principal 'and moſt ſucceſsful among Salts, which having obtained 'the higheſt degree of Simplicity, Purity, and Subtility, 'alone enjoys the Faculty of remaining unchanged and un-'impaired by the Subjects it works on, and of diſſolving 'the moſt ſtubborn and untractable Bodies, as Stones, Gems, 'Glaſs, Earth, Sulphur, Metals, *&c.* into real Salt, equal 'in weight to the Matter diſſolved; and this with as much 'eaſe as hot Water melts down Snow.'—'This Salt, *con-'tinues he*, by being ſeveral times cohobated with *Paracel-'ſus*'s *Sal circulatum*, loſes all its Fixedneſs; and at length 'becomes an inſipid Water, equal in quantity to the Salt 'it was made from.'

*Helmont* is expreſs that this Menſtruum is intirely the Product of Art, and not of Nature.—'Tho, *ſays he*, a ho-'mogeneal Part of elementary Earth may be artificially con-'verted into Water, yet I deny that the ſame can be done 'by Nature alone; for no natural Agent is able to tranſ-'mute one Element into another.' And this he offers as a Reaſon why the Elements always remain the ſame.—It may let ſome light into this Affair, to obſerve that *Helmont*, as well as *Paracelſus*, took Water for the univerſal Inſtrument of Chymiſtry, and Natural Philoſophy; and Earth for the unchangeable Baſis of all Things: That Fire was deſigned as the efficient Cauſe of all Things; that ſeminal Impreſſions were lodged in the Mechaniſm of Earth; and that Water, by diſſolving and fermenting with this Earth, as it does by means of Fire, brings every thing to light; whence originally proceeded the Animal, Vegetable, and Mineral Kingdoms; even Man himſelf being thus at firſt created, agreeably to the account of *Moſes*.

The great Character or Property of the *Alkaheſt*, we have obſerved, is to diſſolve, and change all ſublunary Bodies; Water alone excepted.—The Changes it induces proceed thus: 1°, The Subject expoſed to its Operation, is converted into its three Principles, Salt, Sulphur, and Mercury; afterwards, into Salt alone; which then becomes volatile; and at length is wholly turned into inſipid Water.—The manner of Application is by touching the Body propoſed to be diſſolved, *e. g.* Gold, Mercury, Sand, or the like, once or twice with the pretended *Alkaheſt*; and if the Liquor be genuine, the Body will be converted into its own Quantity of Salt.

2°, It does not deſtroy the ſeminal Virtues of the Bodies diſſolved thereby.—Thus, Gold is, by its Action, reduced to a Salt of Gold; Antimony to a Salt of Antimony; Saffron to a Salt of Saffron, *&c.* of the ſame ſeminal Virtues, or Characters with the original Concrete.—By ſeminal Virtues, *Helmont* underſtands thoſe Virtues which depend upon the Conſtruction or Mechaniſm of a Body, and which make it what it is. Hence, an actual and genuine *Aurum potabile* might readily be gained by the *Alkaheſt*, as converting the whole Body of Gold into a Salt, retaining its ſeminal Virtues, and being withal ſoluble in Water.

3°, Whatever it diſſolves, may be render'd volatile by a Sand-heat; and if after volatilizing the Solvend, it be diſtill'd therefrom, the Body is left pure inſipid Water, equal in quantity to its original ſelf, but deprived of its ſeminal Virtues.—Thus, if Gold be diſſolved by the *Alkaheſt*, the Metal firſt becomes Salt, which is potable Gold; but when the Menſtruum is diſtilled therefrom, 'tis left mere Elementary Water. Whence it appears, that pure Water is the laſt Production or Effect of the *Alkaheſt*.

4°, It ſuffers no Change or Diminution of Force by diſſolving the Bodies it works on, and therefore ſuſtains no Reaction from them; being the only immutable Menſtruum in Nature.

5°, 'Tis incapable of Mixture, and therefore remains free from Fermentation and Putrefaction; coming off as pure from the Body it has diſſolved, as when firſt put thereon; without leaving the leaſt Foulneſs behind.

ALKALY, Alkali, or Alcaly, in Chymiſtry, a Name originally given, by the *Arabians*, to a Salt extracted from the Aſhes of a Plant called *Kali*; and by us Glaſs-wort, becauſe uſed in the making of Glaſs. See Kali, and Glass.

Afterwards, the Term *Alkaly* became a common Name for the lixivious Salts of all Plants; that is, for ſuch Salts as are drawn by Lotion from their Aſhes. See Lixivious, and Ashes.

And hence, again, in regard the original *Alkaly* was found to ferment with *Acids*; the Name has ſince become common to all volatile Salts, and all terreſtrial Subſtances which have that Effect. See Acid.

Alkaly, then, in its modern extenſive Senſe, is any Subſtance, which being mixed with an Acid, an Ebullition and Effervеſcence enſues thereon. See Effervescence, *&c.*

And hence ariſes the grand Diviſion of Natural Bodies into the two oppoſite Claſſes of *Acids* and *Alkalies*. See Acid.

*Boerhaave* ſcarce takes this Circumſtance to be enough to conſtitute any determinate Claſs of Bodies.—In effect, *Alkalies* are not of one ſimilar homogeneous Nature: but there are two ſeveral ſorts.

The firſt obtain'd from Vegetable and Animal Subſtances, by Calcination, Diſtillation, Putrifaction, *&c.* ſuch are Spirit of Urine, Spirit of Hartſhorn, Salt of Tartar, *&c.*—The ſecond are of the terreſtrial Kind; as Shells, Bole, *&c.*

The two Species, *Boerhaave* obſerves, differ widely from each other; having ſcarce any thing in common, but their being effervеſcible with Acids.—The one is a Claſs of native, fixed, ſcentleſs, inſipid, mild, aſtringent, foſſil Bodies: The other a Set of ſuch as are volatile, odorous, ſapid, cauſtick, aperitive, and procured by Art.

Hence, adds the ſame Author, mere Effervеſcence with Acids, muſt be allow'd to be of it ſelf inſufficient to determine the Nature of an *Alkaly*: and that ſuch a Name, which properly denotes a cauſtick fiery Subſtance, ſhould not be affixed to any mild and gentle Body, as Chalk, *&c.* but other Properties and Conſiderations are to be taken in, and particularly their Taſte, manner of procuring, and the Change of Colour they produce in Bodies.

With regard to this laſt Circumſtance, thoſe Liquors which being pour'd on Syrup of Violets, change it of a green Colour, are *Alkalies*; as thoſe which turn it red, Acids.—Thus Oil of Tartar turns it of a kindly green; and Oil of Vitriol of a Carmine red: And if to the Syrup thus made red by Oil of Vitriol, Oil of Tartar be pour'd, it turns that part wherewith it comes in contact, green; leaving the reſt red: and the like holds of Oil of Vitriol, pour'd on Syrup made green by Oil of Tartar.

To the like effect M. *Homberg* obſerves, that 'a mere heat 'and bubbling ariſing upon the Admixture of a Body with 'an Acid, does not ſeem an adequate Criterion of the *Alka-'line* Nature; ſince diſtill'd Oils of all kinds are found to do 'thus much; and many of 'em with more vehemence than '*Alkalies* themſelves, ſo as ſometimes even to take fire, which '*Alkalies* never do.'

To the Definition and Character of an *Alkaly* therefore, M. *Homberg* adds this Circumſtance; 'that after the Action, 'the Mixtures coaleſce and ſhoot into a Salt, or ſaline Mat-'ter.'—This excludes the Oils above mention'd; which do not, after Effervеſcence, unite with the Acids into a ſaline Subſtance, but rather compoſe a reſinous one.

All lixivious Salts have theſe Characters of *Alkaly*.—And not only lixivious, but alſo all urinous Salts; which are conſtantly found to imbibe Acids with great eagerneſs, and after Ebullition, to unite and cryſtallize with 'em. See Urinous *Salt*.

Hence we have two Kinds of *Alkaly Salts*, viz. *Fix'd*, or *Lixivious Alkalies*; and *Volatile*, or *Urinous* ones. See Salt; ſee alſo Fix'd, Volatile, *&c.*

But beſide *Alkaly Salts*, there are an Infinity of other Bodies, not ſaline; which anſwer to the Characters of *Alkaly*, *i. e.* produce much the ſame Effects with Acids, as the *Alkaly Salts* above mention'd.——And theſe *alkaline* Matters are in other reſpects of different Natures.

Some, *e. g.* are merely *Earthy*; as Quick-lime, Marble, Seal'd Earths, *&c.*—Others are *Metalline*; among which, ſome have their peculiar and appropriate Acids to act on 'em, as Gold, Tin, and Antimony, which only diſſolve with Aqua Regia; Silver, Lead, and Mercury, with Aqua fortis; and the others with other ſorts of Acids, as Iron, Copper, Zink, Biſmuth, *&c.*——There are others of the Animal Claſs; conſiſting, 1°, Of ſtony Matters found in the Viſcera of certain Species; as the Calculus humanus, Bezoards, Crabs Eyes, *&c.*——2°, Teſtaceous Matters and Shells; as Pearls, Oyſter-ſhells, Cuttle-fiſh Bones, the Shells or Coats of Lobſters, Crabs, *&c.*—3°, The Parts of Animals,

which

which by length of time, or ſome other Cauſe, are become ſtony, or even earthy; as the foſſil Unicorn's Horn, &c.—Laſtly, almoſt all Stone Marine Plants, as Coral, &c.

After all, the *Alkaline* Property does not appear to be native, but rather producible by Art.—This Opinion ſeems to have been firſt ſtarted by *Helmont*: before him, it was the ſtanding Opinion, that Fix'd *Alkalies* pre-exiſted in mix'd Bodies; and were only ſeparated or extricated from the Parts of the Compound. *Helmont* advanced, that they did not thus pre-exiſt in their *alkaline* Form, but were Productions of the Fire, by whoſe violent Action, part of the Salt which in the Concrete is all volatile, lays hold of ſome part of the Sulphur of the ſame Body; and both melting together, are fixed into an *Alkaly*: which Fixation he exemplifies, by what happens when Salt-petre and Arſenick, tho both volatile, being expoſed to the Fire, are flux'd by the Operation thereof, and made to fix each other.

Some late Chymiſts, and particularly M. *Geoffroy*, carry the Point ſomething further, and aſſert, that all *Alkaly Salts* whatever, both Fix'd and Volatile, are wholly the Effect of Fire; in that before any Action of the Fire, they did not pre-exiſt in the Mixt wherein they afterwards appear'd. See FIRE.

Notwithſtanding all the ſeeming Oppoſition and Hoſtility between Acids and *Alkalies*, they may be converted into one another; at leaſt, Acids are convertible into *Alkalies*; as is ſhewn at large by M. *Geoffroy* in a Diſcourſe expreſs, in the *Mem. de l'Acad.* An. 1717, where the Nature and Origin of *Alkalies* is excellently explain'd.

*Alkaly Salts*, according to this Author, are only Acids concentrated in little Molecules of Earth, and united with certain Particles of Oil, by means of Fire.

When an Acid, which we conceive in the general as a ſmall, ſolid, pointed Spiculum, happens to be abſorb'd or concentrated in a proper Portion of Earth; the whole becomes denominated a *Saline*, *Compound*, *Neutral*, or *Intermediate Salt*; by reaſon the Acid, thus incloſed in a Sheath, cannot excite the ſame Savour as when diſengag'd therefrom; and yet excites a ſaline Taſte: and for this reaſon is compound, &c.

Now, Fire is the only Agent capable of diſengaging the Acid, from the Earth it is thus inveſted withal. Upon this, the Acid being lighter than the Earth, riſes, and evaporates; leaving the Earth at the bottom of the Veſſel; which for this Reaſon is called *Fix'd*, in contradiſtinction to the Acid, which is *Volatile*. This Earth, thus bereav'd of its Acid, is left with its Pores open and empty, which before were fill'd; and withal, in ſuſtaining the Action of Fire, it neceſſarily retains ſome of the Particles thereof, which give it an acrimonious Taſte, that mere Earth could never have.—From this Taſte it is called *Salt*; and from its Pores being open, and thus diſpoſed to admit and imbibe new Acids, it is called *Alkaly Salt*. See EARTH, SALT, &c.

Now, it is not to be imagin'd, that an Earth which has once been impregnated with Acids, can ever be perfectly diveſted thereof; there will ſtill remain ſome, tho much leſs than before. So that an *Alkaly* may be conceived as only a too ſmall Quantity of Acid, incloſed in too large a Quantity of Earth.

The viſible and ſenſible Fire is not the only Agent capable of ſeparating Acids from their Earth; Fermentation has the ſame Effect, in virtue of that pure active Fire produced or concern'd therein. *Alkalies*, therefore, are the Production, either of the one, or the other Fire; and the ſame may be ſaid of the Acids diſengag'd therefrom; it being the Diſ-union of the Parts of the ſame Salt occaſion'd by Fire, that yielded both the Acids as well as the *Alkalies*. All the Difference is, that the *Alkaly* imbibes and retains certain Corpuſcles of the Fire, whereas nothing foreign is ſuperadded to the Acid.

On this Principle every Acid is volatile, and every *Alkaly* ſhould be fix'd, if the *Alkaly* were only Earth: But, in regard the little *Acid* ſtill remaining in the *Alkaly*, may be united with a Portion of Oil, as well as a Portion of Earth; and Oil is known to be volatile; the Compound, that is, the *Alkaly*, muſt be volatile, in caſe the Oil prevail therein.

In this Caſe, the *Alkaly* is found to have a ſtrong, penetrating, urinous Taſte and Smell; and is what we call a *Volatile urinous Alkaly Salt*.

Theſe things well conſider'd; it will be eaſy to aſſign what muſt enſue upon the Separations, or new Unions of the Parts of a Mixt.

An *Acid*, 'tis evident, may become an *Alkaly*, in that after having been ſeparated from its Matrix, it may be reſtored in a ſmall Quantity to another Matrix, either wholly earthy or earthy and oleaginous.—In the firſt Caſe, it will become a *Fix'd Alkaly*; in the ſecond, it may be, a *Volatile Alkaly*, if in the ſuppoſed Matrix the Proportion of Oil prevail over that of Earth; and in this Caſe it will be *urinous*.

Again, what before was a fix'd *Alkaly*, may become Volatile and Urinous, by depoſiting or letting go part of its Earth, and taking Oil in its ſtead.

Theſe Tranſmutations are not found equally eaſy and practicable in the three different Kinds of Mixts, or the three Kingdoms; by reaſon of the Diverſity of Circumſtances that muſt concur thereto.—They are much the moſt rare and difficult in the Mineral Realm; by reaſon, no doubt, that the Parts of Minerals are more cloſely ty'd together, and have, as it were, leſs play. The only inſtance Chymiſtry hath hitherto produced, of a Mineral Acid's being converted into a Fix'd *Alkaly*, is in the Operation of fixing Salt-petre.

The Vegetable Kingdom, it is obſerv'd, furniſhes a large Quantity of fix'd *Alkaly* Salt; and a little volatile *Alkaly*: The Animal Kingdom, on the contrary, affords a deal of volatile *Alkaly* Salt, and but little fix'd. The Foſſil Kingdom affords a very little native fix'd *Alkaly* Salt, as the *Egyptian* Natrum, and the Salts procured by Lotion from ſaline Earth about *Smyrna* and ſome other Places of the Eaſt; and the Chymiſts have alſo found a Method of converting Nitre into a fix'd *Alkaly*: But no body hath hitherto produced a volatile *Alkaly* from the Acids of the Mineral Kingdom.—And yet, if Acid Salts of the Vegetable Kind be convertible either into fixed or volatile *Alkalies*, why may not Mineral Acids be ſuſceptible of the ſame Change? ſince Vegetable Acids are originally no other than Mineral ones: For, from whence but the Earth ſhould Plants derive their acid Juice?

In effect, M. *Geoffroy* has at length ſhewn the Operation feaſable, by an actual Transformation of the ſame Acid, Nitre, into a volatile urinous *Alkaly*. See the *Mem. de l'Acad.* ubi ſupra. See alſo SALT-PETRE, &c.

By the way, it is to be noted, that the Inſtance of *Egyptian Natrum* or Nitre, furniſhes an Objection againſt the general Aſſertion of all *Alkalies* being artificial, or produced by Fire: Mr. *Boyle*, who had ſome of this Salt ſent him by the *Engliſh* Ambaſſador at the *Porte*; found that Vinegar would work briſkly on it, even in the Cold; "Whence, *ſays he*, it appears, that the *Egyptian* Nitre, "acknowledg'd to be a native Salt, and made only by the "Evaporation of the ſuperfluous Water of the *Nile*, is yet "of a lixivious Nature, or at leaſt abounds with Particles "that are ſo, tho produced without any precedent Incineration, and the Matter of it expoſed to no Violence of the "Fire, to make it afford an *Alkaly*." *Producib. of Chym. Princip.*——He adds, "However, he does not know any "other Body in Nature, except this, wherein the *Alkaline* "Properties are not produced." *Ibid.*—And proceeds to give Inſtances of *Alkalies* being made from Sea Salt, and other Acids; and ſhews, "how the ſame Body, without "the Addition of any other Salt, may by varying the manner of the Fire's Application, be made either to afford "little elſe than Acids, or a greater or leſs Quantity of *Alkaly*." *Id. ibid.*

*For the Theory of the Operation of Acids upon* Alkalies. See ACID.

### *Hypotheſis of* ALKALY *and Acid.*

*Tachenius*, and *Sylvius de la Boe*, follow'd by the Tribe of vulgar Chymiſts, ſtrenuouſly aſſert Sal *Alkaly* and Acid to be the only univerſal Principles of all Bodies; and by means hereof, account for the Qualities of Bodies, and the reſt of the Phænomena of Nature; particularly thoſe in the Animal Oeconomy.—In a word, *Alkaly* and Acid are ſubſtituted in the ſtead of Matter, and Motion. See PRINCIPLE, ELEMENT, &c.

Mr. *Boyle* attacks this Hypotheſis with great force of Argument.—In effect, 'tis at beſt but precarious to affirm, that Acid and *Alkaline* Parts are found in all Bodies.

When the Chymiſts ſee Aqua fortis diſſolve Filings of Copper, they conclude, that the acid Spirits of the Menſtruum meet in the Metal with an *Alkaly*, upon which they work; but how unſafe a way of arguing this is, appears hence, that Spirit of Urine, which is allowed a volatile *Alkaly*, and accordingly makes a great Conflict with Aqua fortis, readily diſſolves Filings of Copper, and more genuinely than the acid Liquor.—So, when they ſee the Magiſtery of Pearl or Coral, prepared by dropping Oil of Tartar into the Solution of thoſe Bodies made with Spirit of Vinegar; they aſcribe the Precipitation to the fixed *Alkaly* of the Tartar, which mortifies the Acidity of the Spirit of Vinegar: whereas, the Precipitation would no leſs enſue, if, inſtead of the *alkalizate* Oil of Tartar, that ſtrong Acid, Oil of Sulphur *per Campanam*, were uſed.

It may alſo be doubted, whether it be juſt to ſuppoſe, that when an Acid is diſcover'd in a Body, the Operation of that Body on another, abounding with an *Alkaly*, muſt be the Effect of a Conflict between thoſe two Principles.—For, an acid Body may do many things, not ſimply as an Acid, but on account of a Texture or Modification, which endows it with other Qualities as well as Acidity. Thus, when the Chymiſts ſee an acid Menſtruum, as Aqua fortis, Spirit of Salt, Oil of Vitriol, &c. diſſolve Iron, they preſently aſcribe the Effect to an Acidity in the Liquors; tho well dephlegmed urinous Spirits, which they hold to have a great Anti-

tipathy to Acids, will readily diſſolve crude Iron even in the Cold.

Further, the Patrons of this Hypotheſis, ſeem arbitrarily to have aſſigned Offices to each of their two Principles, as the Chymiſts do to each of their *tria prima*; and the Peripateticks to each of their four Elements.——But 'tis not enough to ſay, that an Acid, for inſtance, performs theſe things, and an *Alkaly* thoſe; and that they divide the Operations and Phænomena of natural Bodies between them: Aſſertions of ſuch moment ought not to be received, without further Proof. Indeed, the very Diſtribution of Salts into Acids and *Alkalies*, has ſomewhat arbitrary in it; there being not only ſeveral things wherein the Acids agree with *Alkalies*, but alſo ſeveral things wherein each differs from it ſelf.—To ſay nothing of the Diverſity of fix'd and volatile *Alkalies* abovemention'd; ſome, as Salt of Tartar, will precipitate the Solution of Sublimate into an Orange-tawny; others, as Spirit of Blood and Hartſhorn, precipitate ſuch a Solution into a milky Subſtance; and Oil of Tartar very ſlowly operates upon Filings of Copper, which Spirits of Urine and Hartſhorn will readily diſſolve in the Fire. And among Acids themſelves the difference is no leſs; for ſome of them will diſſolve Bodies that others will not: and this even where the Menſtruum that will not diſſolve the Body, is reputed much ſtronger than that which does; as dephlegmated Spirit of Vinegar will diſſolve Lead reduced to minute Parts in the cold, which is an Effect that Chymiſts expect not from Spirit of Salt. Nay, one Acid will precipitate what another has diſſolved, and *è contra*; as, Spirit of Salt will precipitate Silver out of Spirit of Nitre. Add, the Properties peculiar to ſome particular Acids, as that Spirit of Nitre or Aqua fortis, diſſolves Camphire into an Oil, and coagulates common Oil into a conſiſtent Subſtance like Tallow; and tho it will both corrode Silver, Copper, Lead, and Mercury, and keep them diſſolved, it quickly lets fall almoſt the whole Body of Tin.

'Tis no wonder that the Definitions given of Acid and *Alkaly* ſhould be inaccurate and ſuperficial; ſince the Chymiſts themſelves do not ſeem to have any determinate Notion of ſure Marks, whereby to know them diſtinctly.—For, to infer, that, becauſe a Body diſſolves another, which is diſſoluble by this or that known Acid, the Solvent muſt alſo be Acid; or to conclude, that, if a Body precipitates a diſſolved Metal out of a confeſſedly acid Menſtruum, the Precipitant muſt be an *Alkaly*, is precarious: ſince Filings of Spelter will be diſſolved by ſome *Alkalies*, *viz.* Spirit of Sal Ammoniack, *&c.* as well as by Acids; and Bodies may be precipitated out of acid Menſtrua, by other Acids, and by Liquors wherein there appears not the leaſt *Alkaly*. Add, that a Solution of Tin-glaſs, made in Aqua fortis, would be precipitated both by Spirit of Salt, and by common Water.—Nor does that other Criterion of Acids and *Alkalies*, *viz.* the Heat, Commotion, and Bubbles excited upon their being put together, appear more determinate; ſince almoſt any thing fitted variouſly and vehemently to agitate the minute Parts of a Body, will produce heat in it.—Thus, tho Water be neither an Acid nor an *Alkaly*, it will quickly grow very hot, not only with the highly acid Oil of Vitriol, but with the *alkalizate* Salt of Tartar. See HEAT.

Neither is the Production of Bubbles, tho accompany'd with a hiſſing Noiſe, a certain Sign; ſuch Production not being a neceſſary Effect of Heat, excited by Conflict, but depending on the peculiar Diſpoſition of the Bodies put together, to extricate, produce, or intercept Particles of Air.—Hence, as Oil of Vitriol, mix'd in a due Proportion with fair Water, may be brought to make the Water very hot, without exciting Bubbles: ſo Mr. *Boyle* has found, that *alkalizate* Spirit of Urine, drawn with ſome kinds of Quick-lime, being mixed with Oil of Vitriol moderately ſtrong, would afford an intenſe heat, whilſt it produced either no manifeſt Bubbles at all, or ſcarce any; tho the urinous Spirit was ſtrong, and in other Trials operated like an *Alkaly*: and tho with the Spirit of Urine made *per ſe*, in the common way, Oil of Vitriol will produce a great hiſſing, and a multitude of conſpicuous Bubbles. On the other ſide, ſome acid Spirits, as of Verdegreaſe, made pure, poured on Salt of Tartar, will frequently make a Conflict, and produce a large froth; tho not accompany'd with any manifeſt heat. See EBULLITION.

Many make the Taſte the Touchſtone whereby to try Acids and *Alkalies*: But there is a multitude of Bodies, wherein we can ſo little diſcern by the Taſte which of the Principles is predominant, that one would not ſuſpect there was a Grain of either of them therein: Such are Diamonds, moſt Gems, and many ignobler Stones; Gold, Silver, Mercury, *&c.* There are alſo Bodies abounding with acid or *alkalizate* Salts; which either have no Taſte, or a quite different one from that of the chymical Principles.—Thus, tho Venice-glaſs be in great part compoſed of a fix'd *Alkaly*, it is inſipid on the Palate: And Cryſtals of Silver and Lead, made with Aqua fortis, and containing numerous acid Particles of the Menſtruum, manifeſt nothing of Acidity in the Mouth; the latter having a ſaccharine Sweetneſs, and the former an extreme Bitterneſs. And even in Vegetable Subſtances of a manifeſt Taſte, 'tis not eaſy to know by that, whether it be the Acid or the *Alkaline* Principle which predominates in 'em: As, in the eſſential Oils of Spices, and the groſs empyreumatical Oils of Wood; and even in Alcohol of Wine, which ſome contend to be an Acid, and others, an *Alkaly*. *Imperfect. of Chym. Doct. of Qual.*

ALKALIZATE, or ALKALINE *Bodies*, among Chymiſts, are ſuch as have their Pores naturally ſo formed, that they are fit to be pierced, and put into Motion by the Points of an Acid poured upon them. See ALKALY.

ALKEKENGI, a Medicinal Fruit, produced by a Plant of the ſame Denomination, and popularly called *Winter-Cherry*.

The Plant bears a near reſemblance to Solanum or Nightſhade; whence it is frequently called in *Latin* by that Name, with the Addition or Epithet of *Veſicarium*.—It is ſometimes alſo called *Halicacabum*.

The Fruit is celebrated for its lithontriptic Quality; and preſcribed to cleanſe the Urinary Paſſages of Gravel, and other Obſtructions. Its deterſive Quality alſo recommends it againſt the Jaundice, and other Diſorders of the Viſcera.

The *Trochiſchi Alkekengi*, prepared from it, are but little preſcrib'd in the modern Practice. See TROCHE.

ALKERMES, in Medicine, *&c.* a Term borrow'd from the *Arabs*.—The *Confection of Alkermes*, is a celebrated Remedy, of the Form and Conſiſtence of a Confection; whereof the Kermes Berries are the Baſis. See CONFECTION, and KERMES.

The other Ingredients, as preſcribed by the College, are Pippin-Cyder, Roſe-Water, Sugar, Ambergreaſe, Muſk, Cinnamon, Aloes Wood, Pearls, and Leaf Gold.—But the Sweets are uſually omitted.

It is much uſed as a Cordial; eſpecially, ſays Dr. *Quincy*, among Female Preſcribers, and in complaiſance to them: But that Author decries its Value in that Intention, and thinks it ought only to be regarded as a Sweetner.

ALLANTOIS, ALLANTOIDES, in Anatomy, a third Coat or Membrane of a Fœtus, inveſting part thereof, in manner of a Scarf, or Collar, extending from the *Cartilago Xiphoides*, to the bottom of the Hips. See FOETUS.

The *Allantois* makes part of the *Secundine*.—It is conceived as an urinary Tunic, placed between the Amnion and Chorion, which by the Navel and Urachus receives the Urine that comes out of the Bladder. See SECUNDINE, and URINE.

'Tis a Point controverted among Anatomiſts, whether the *Allantois* be found in Man.—M. *Drelincourt*, Profeſſor of Anatomy at *Leiden*, in an expreſs Diſſertation on this Membrane, maintains it peculiar to the Ruminating Kind. See RUMINANT.

Dr. *Hale*, on the contrary, has given an accurate Deſcription of the human *Allantois*; and aſſign'd the Reaſon why thoſe who believed its Exiſtence had not before fully found it out; and alſo an anſwer to thoſe who yet deny its reality. See *Philoſoph. Tranſact.* N° 271.

The Word is derived from ἀλλᾶς, *Farcimen*, a Gut, and εἶδος, *Forma*, Shape; becauſe, in many Brutes, it is in the Shape of a Gut-pudding: but in Man, and ſome others, it is round.—It is likewiſe called *Farciminalis*.

ALLEGATION, the Citation, or Quotation of an Authority, Book, Paſſage, *&c.* to make good any Point, or Aſſertion. See QUOTATION, CITATION, AUTHORITY, *&c.*

ALLEGIANCE, the legal Faith and Obedience, which every Subject bears to his Prince. See KING, FEALTY, *&c.*

This was antiently called *Ligence*; from the Latin *Ligare*, and *Alligare*, to bind, *q. d. Ligamen fidei*. See LIEGE.

*Oath of* ALLEGIANCE, is an Oath given in *England* to the King, in quality of a Temporal Prince or Sovereign; to diſtinguiſh it from the Oath given to him as Primate, or ſupreme Head of the Church, which is called the *Oath of Supremacy*. See OATH; ſee alſo KING, and SUPREMACY.

In this Senſe, the Word *Allegiance* comes from the Latin *ad Legem*.—The Quakers are diſpenſed with not taking the Oath of *Allegiance*; and in lieu thereof are only enjoin'd a Declaration. See DECLARATION.

ALLEGORY, ALLEGORIA, a Figure in Rhetorick, whereby we make uſe of Terms which in their proper Signification, mean ſomething elſe than what they are here intended to denote: Or, it is a Figure, whereby we ſay one thing, expecting it ſhall be underſtood of another, to which it alludes. See FIGURE, ALLUSION, *&c.*

An *Allegory* is properly a Series, or Continuation of *Metaphors*. See METAPHOR.

Such is that beautiful *Allegory* in *Horace*, Lib. I. Od. 14.

*O Navis, referent in mare te novi*
*Fluctus*, &c.

Where the *Ship*, ſtands for the *Republick*; *Waves*, for *Civil War*; *Port* for *Peace* and Concord; *Oars* for *Soldiers*; *Mariners* for *Magiſtrates*, &c.

The

The Old Teſtament is ſuppoſed by many to be a perpetual *Allegory*, or typical Repreſentation of the Myſteries of the New. See TYPE.

In effect, *Allegory* has a good Share in moſt Religions.—The *Jews*, we know, abound with 'em: *Philo Judæus* has three Books, *Of the Allegories* in the Hiſtory of the Six Days. See HEXAMERON.

Nor are the Heathens without *Allegories* in their Religion: it may even be ſaid, that the Uſe hereof is of a much earlier ſtanding in the *Gentile*, than in the *Jewiſh* World.—Some of their Philoſophers undertaking to give a Rationale of their Faith, and to ſhew the Reaſon and Scope of their Fables, and the antient Hiſtories of their Gods; found it neceſſary to put another Conſtruction on 'em, and maintain, that they ſignify'd ſomething very different from what they ſeem'd to expreſs.—And hence came the Word *Allegory*: for a Diſcourſe that in its natural Senſe, ἄλλο ἀγορεύει, ſignifies ſomething other than what is intended by it, makes what we properly call an *Allegory*.

This Shift they had recourſe to, in order to prevent People from being ſhock'd with thoſe Abſurdities which the Poets had introduced into their Religion; and to convince the World, that the Gods of *Greece* had not been thoſe vile Perſons which their Hiſtories repreſented them to be. By this means, the Hiſtory, as well as the Religion of *Greece*, was at once converted into *Allegory*; and the World left to ſeek for them both in a Heap of Fables, few of which have been ſolved to any purpoſe to this Day. See MYTHOLOGY.

The *Jews* finding the Advantages of this way of explaining Religion; made uſe of it to interpret the Sacred Writings, ſo as to render 'em more palatable to the Pagans.

The ſame Method was adopted by the primitive Writers of Chriſtianity. See ALLEGORICAL.

ALLEGORICAL, ſomething containing an *Allegory*. See ALLEGORY.

The Divines find divers Senſes in Scripture; a Literal, a Myſtical, and an *Allegorical* Senſe. See MYSTIC, *&c.*

The Prophecies, in particular, deliver'd in the Old Teſtament, are ſaid to be many of 'em accompliſh'd in the New; not in their primary and literal, but in their ſecondary, or *Allegorical* Senſe. See PROPHESY.

The Fathers, and other antient Interpreters of Scripture, are almoſt all *Allegoriſts*; as *Origen*, *Clemens Alexandrinus*, St. *Auguſtin*, *Gregory Nazianzen*, &c. See further under the Article TYPE.

ALLEGRO, in Muſick, a Word uſed by the *Italians* to denote one of the ſix Diſtinctions of Time. See TIME.

*Allegro* expreſſes a very quick Motion, the quickeſt of all excepting *Preſto*.

The uſual ſix Diſtinctions ſucceed each other in the following Order, Grave, Adagio, Largo, Vivace, *Allegro*, and Preſto.

It is to be obſerved, that the Movements of the ſame Name, as *Adagio* or *Allegro*, are ſwifter in Triple than in Common Time.—The Triple $\frac{3}{8}$ is uſually *Allegro*, or *Vivace*; the Triples $\frac{6}{4}$, $\frac{6}{8}$, $\frac{9}{8}$, $\frac{12}{8}$, are moſt commonly *Allegro*. See TRIPLE.

ALLELUJAH. See HALLELUJAH.

ALLEMAND, ALMAIN, a kind of grave, ſolemn Muſick, where the Meaſure is good, and the Movement ſlow. See MUSICK, SONG, MEASURE, *&c.*

ALLER *Good*, in our antient Writers.—The Word *Aller* ſerves to make the Expreſſion of ſuperlative Signification. So, *Aller Good* is the greateſt Good. Sometimes it is wrote *Alder*.

ALLERION, or ALERION, in Heraldry, a ſort of Eaglet, without either Beak, or Wings. See EAGLET.

The *Allerion* appears much the ſame with the *Martlet*, except that the Wings of the former are ſhut, and they are repreſented, as it were, Paſſant; whereas the *Allerion* is ſpread, and is repreſented In pale. Add, that among our Heralds, the Martlet has a Beak. See MARTLET.

The Name is *French*; and is ſaid to have been introduced for the Word *Eaglet*: 'Tis added, that the Practice of calling Eaglets, *Allerions*, and of repreſenting 'em ſpread, without Feet and Beaks, is not above an hundred Years old. Hence, *Menage* derives the Word from *Aquilario*, a Diminutive of *Aquila*.

ALLEU, or ALLODE, in our antient Cuſtoms. See ALLODIAL.

ALLEVIARE, in old Records, to levy or pay an accuſtomed Fine or Compoſition. See LEVY.

ALLEVIATION, the Act of *alleviating*, *i. e.* of allaying, or eaſing any Grievance: as a Pain, Diſeaſe, *&c.* See PALLIATING; ſee alſo PAIN, *&c.*——The Word is compounded of *ad*, and *levis*, Light.

ALLEY, in Gardening, a ſtrait parallel Walk, border'd or bounded on each hand with Trees, Shrubs, or the like. See GARDEN, WALK, EDGING, *&c.*

*Alleys* are uſually laid either with Graſs or Gravel. See GRASS-*Walk*, and GRAVEL-*Walk*.

An *Alley* is diſtinguiſh'd from a *Path*, in this; that in an *Alley* there muſt always be room enough for two Perſons, at leaſt, to walk a-breaſt: So that it muſt never be leſs than five Feet in breadth; and there are ſome who hold that it ought never to have more than fifteen.

*Counter-Alleys*, are the little *Allies* by the Sides of the great ones.—A *Front-Alley*, is that which runs ſtrait in the Face of a Building.—A *Tranſverſe-Alley*, that which cuts the former at right Angles.—A *Diagonal-Alley*, that which cuts a Square, Thicket, Parterre, *&c.* from Angle to Angle.—A *Sloping-Alley*, is that which either by reaſon of the Lowneſs of the Point of Sight, or of the Ground, is neither parallel to the Front, nor to the Tranſverſe *Alleys*.

An *Alley in Ziczac*, is that which has too great a Deſcent, and which, on that account, is liable to be damaged by Floods; to prevent the ill Effects whereof, it has Platbands of Turf running acroſs it from Space to Space, which help to keep up the Gravel. This laſt Name is likewiſe given to an *Alley* in a Labyrinth, or Wilderneſs, form'd by ſeveral returns of Angles, in order to render it the more ſolitary and obſcure, and to hide its Iſſue.

*Alley in Perſpective*, is that which is larger at the Entrance than at the Iſſue; to give it a greater Appearance of length.

*Alley of Compartiment*, is that which ſeparates the Squares of a Parterre.

The Word *Alley* is derived from the *French* Verb *Aller*, to go; the ordinary uſe of an *Alley* being for a Walk, Paſſage, or Thorow-fare from one Place to another.

ALLIANCE, the Union or Connection of two Perſons, or two Families, by means of Marriage; called alſo *Affinity*. See MARRIAGE, and AFFINITY.

The Law of the Twelve Tables forbids all *Alliance* between Perſons of unequal Rank and Condition.—And in *Portugal*, we are told, the Daughters of the Nobility are prohibited to *ally* with ſuch as have never been in the Wars.

The Word is form'd of the Latin *ad ligatio*, *q. d.* a tying together.

ALLIANCE is alſo extended to the Leagues, or Treaties of Peace concluded between ſovereign Princes and States, for their mutual Safety and Defence. See TREATY, LEAGUE, *&c.*

The *Triple Alliance* between *England*, *Holland*, and *Sweden*, is famous.—So is the *Quadruple Alliance*, between *England*, *Holland*, the Emperor, and King of *France*.

In this Senſe, we ſay, *Allies*, for Confederates: The King and his *Allies*; the *Allies* of the Treaty of *Hanover*, &c. See CONFEDERATE.

ALLIGATION, in Arithmetick, a Rule or Operation, whereby Queſtions are reſolved, relating to the Mixture of divers Commodities or Ingredients together, with the Value, Effect, *&c.* thereof. See RULE, MIXTURE, *&c.*

The Word is form'd of the Latin *Alligare*, to tie together; by reaſon, perhaps, of a ſort of Vincula, or circular Ligatures, ordinarily uſed to connect the ſeveral Numbers together.

*Alligation* is of two Kinds, *Medial* and *Alternate*.

ALLIGATION *Medial*, is when from the ſeveral Quantities and Rates of divers Simples given, we diſcover the mean Rate of a Mixture compounded out of 'em.

The ſeveral Caſes hereof, will come under the following Rules.

*The Quantity of the Ingredients, and the Prices of each being given; to find the Price or Value of ſome part of the Mixture.*——Multiply the Ingredients ſeverally by their own Prices, and divide the Sum of thoſe Products by the Sum of the Ingredients; the Quotient anſwers the Queſtion.

*The Prices of the ſeveral Ingredients, and the Sum paid or received for the Mixture being given; to find what quantity of each was bought or ſold.*——Divide the Sum paid or received, by the Sum of the particular Prices; the Quotient is the Anſwer.

*The Ingredients of a Mixture being given, to augment or diminiſh the Mixture proportionally.*—Sum up the Ingredients; then ſay, As that Sum is to the Augmentation or Diminution, ſo is the Quantity of each Parcel of the Mixture, to the Quantity of the Mixture deſired.

*The Nature, Quality, &c. of the ſeveral Ingredients of a Mixture being given, to find the Temperament or Degree of Fineneſs reſulting from the Whole.*—Place the ſeveral Quantities of the Mixture in Rows; againſt which place orderly their ſeveral Qualities of Fineneſs; and multiply each Quantity by its own Quality or Degree of Fineneſs: then, as the Sum of the Quantities is to their Products, ſo is Unity, to the Quality or Fineneſs of the Mixture.

*The Quantities of a Mixture being given; to find the particular Quantities of any Ingredient in any part of the Mixture.*——If the Mixture be of only two Things, ſay, As the Total of the Ingredients in the Compoſition, is to the Part of the Mixture propoſed; ſo is the Quantity of the Ingredient propoſed in the whole Compoſition, to the Quantity of the Ingredient in the Part deſired.—If the Mixture conſiſt of more Ingredients, repeat the Work for each.

*Given the Total of a Mixture, with the whole Value, and the Values of the ſeveral Ingredients; to find the ſeveral*

*Quantities mixed, tho unequally.*——Multiply the Total of the Mixture by the leaſt Value, ſubtract the Product from the total Value; and the Remainder is the firſt Dividend: Then take the ſaid leaſt Value from the greateſt valued Ingredient, and the Remainder is the firſt Diviſor. The Quotient of this Diviſion ſhews the Quantity of the higheſt-pric'd Ingredient, and the other is the Complement to the Whole. And when more Ingredients than two are in the Compoſition, the Diviſors are the ſeveral Remains of the leaſt Value, taken from the other: The Dividends are the Remains left upon the Diviſions, till none remain there; which will be one ſhort of the Number of Ingredients: and this defective Ingredient is to be ſupplied as a Complement; and in Diviſion, no more muſt be taken in every Quotient, than that there may remain enough for the other Diviſors; and the laſt to leave nothing remaining. See DIVISION.

ALLIGATION *Alternate*, is when the Rates or Qualities of divers Simples are given; and the Quantity of each is required neceſſary to make a Mixture of the given Rate or Quality.

*Alligation Alternate*, ſhews the due Proportion of ſeveral Ingredients; and counter-changes the Places of ſuch Exceſſes or Differences as ariſe between the mean Price and the Extremes; aſcribing that to the greater Extreme, which proceeds from the leſſer; and contrarily.

The Rules which obtain in *Alligation Alternate*, are as follow.

Every greater Extreme to be linked with one leſſer.

If either of the Extremes be ſingle, and the other Extremes plural; the ſingle Extreme to be linked to all the reſt.

If both greater and leſſer Extremes be not plural, they may be linked ſo diverſly, that ſeveral Differences may be taken, and a Variety of Anſwers be made to the Queſtion, yet all true: But if one of the Extremes be ſingle, there can be but one Anſwer.

The Numbers being linked, take the Difference of each from the mean or common Price; and place this difference againſt the Number it is linked to, alternately.

Every Number linked with more than one, muſt have all the Differences of the Numbers it is linked to, ſet againſt it.

Thoſe Differences reſolve the Queſtion, when the Price of every of the Ingredients is given without their Quantities; and the Demand is to mix them ſo as to ſell a certain Quantity at a mean Rate.

But when the Quantity of one, with the Price of all the Ingredients is given; and the Demand is to know the Quantities of the other Ingredients; then, the Rule of Three is to be uſed.

And when the Price of every Ingredient is given, without any of their Quantities, and the Demand is to make up a certain Quantity to be ſold at a mean Rate; then all the Differences added together will be the firſt Number in the Rule of Three; the whole Quantity to be mixed the ſecond Number; and each Difference apart the ſeveral third Numbers: And ſo many Sorts mixed, ſo many Operations of the Rule of Three. See RULE *of Three*.

We ſhall add an Example, wherein both the Kinds of *Alligation* have place.——Suppoſe a Mixture of Wine of 119 Quarts, required to be made of Wines of the following Prices 7 *d.* 8 *d.* 14 *d.* and 15 *d. per* Quart; and ſo, as that the Whole may be afforded at 12 *d. per* Quart.

Having linked 8 to 14, and 7 to 15, and counterchang'd their Difference from the common Price, 12 *d.* the Sum of their Difference is found to be 14; by which dividing 119, the Quotient is $8\frac{7}{14}$, or $8\frac{1}{2}$, or for conveniency in Operation, $\frac{17}{2}$.

| | | Quarts. |
|---|---|---|
| 8 2 | $\frac{17}{2} + 2 = \frac{34}{2} =$ | 17 |
| 14 3 | $\frac{17}{2} + 4 = \frac{68}{2} =$ | 34 |
| 7 4 | $\frac{17}{2} + 3 = 5\frac{1}{2} =$ | $25\frac{1}{2}$ |
| 15 5 | $\frac{17}{2} + 5 = 8\frac{5}{2} =$ | $42\frac{1}{2}$ |
| 14 | | 119 |

ALLIOTH, in Aſtronomy, a Star in the Tail of the Great Bear, whoſe Obſervation is much uſed at Sea. See STAR.

Its Longitude, Latitude, &c. ſee among the reſt of URSA *Major*.

*To find the Latitude, or Elevation of the Pole by this Star.* See LATITUDE, and POLE.

ALLOCATION, ALLOCATIO, the admitting, or allowing of an Article in an Account; and paſſing it as ſuch. See ACCOUNT.

The Word is form'd of the Latin *Alloco*.

ALLOCATION is alſo an Allowance made upon an Account; uſed in the Exchequer. See ALLOCATIONE.

ALLOCATIONE *Facienda*, a Writ directed to the Lord Treaſurer and Barons of the Exchequer, upon the Complaint of ſome Accountant; commanding them to allow him ſuch Sums as he hath in execution of his Office lawfully expended.

ALLODIAL, ALLODIAN, in antient Cuſtoms.——*Terra* ALLODIA, or ALLODIAL *Land*, is that whereof a Perſon has the abſolute Property; or which he holds without paying any Service or Acknowledgment to any Superior Lord. See PROPERTY, &c.

Such an Inheritance is *Allodial*, *i. e.* not ſubject to any Charge, Service, &c. See FREE *Land*.

In this Senſe, *Allodial* ſtands oppoſed to *Feudal*, or *Beneficiary*. See FEE, BENEFICE, &c.—See alſo ALLODIUM.

ALLODIUM, ALLODE, ALLODUS, or ALLEUD, Land held of a Man's own Right.—*Bollandus* explains *Allodium*, to be *Prædium, ſeu quævis poſſeſſio libera juriſque proprii, & non in Feudam Clientelari onere accepta*. See ALLODIAL.

After the Conqueſt of the *Gauls*, the Lands were divided in two manners, *viz.* into Benefices, *Beneficia*; and *Allodia*.

Benefices, conſiſted in Lands given by the King to his Officers and Soldiers; either for Life, or for a Time fixed. See BENEFICE.

*Allodes*, or *Alleuds*, were ſuch Lands as were left in Property to the antient Poſſeſſors.—The 62d Title of the *Salic* Law, is, *De Allodis*; where the Word ſignifies Hereditary Lands, or thoſe derived from a Man's Anceſtors. Whence, *Allodium* and *Patrimonium* are frequently uſed indiſcriminately. See PATRIMONY.

In the antient Capitulars of *Charlemaign* and his Succeſſors, we find *Allode* conſtantly oppoſed to Fee; but, toward the Period of the ſecond Race of Kings, it loſt the Prerogative; the Feudal Lords obliging the Proprietors of *Allodial* Lands to hold of them for the future. The ſame Change alſo happened in *Germany*, &c. See TENURE.

The Uſurpation of tke Feudal Lords over the *Allodial* Lands, went ſo far, that they were almoſt all either ſubjected to 'em, or converted into Fees: Whence the Maxim, *Nulla Terra ſine Domino*, No Land without a Lord.

The Origin of the Word is infinitely controverted. *Caſſineuve* ſays, it is almoſt as obſcure as the Head of the *Nile*. Few of the *European* Languages, but one Etymologiſt or other has derived it from.

ALLONGE, in Fencing, a Thruſt, or Paſs at the Enemy. See PASS, GUARD, &c.

The Word is *French*, form'd of the Verb *Allonger*, to lengthen out a thing by piecing another to it.

ALLOTTING, or ALLOTMENT *of Goods*, in Matters of Commerce, is when a Ship's Cargo is divided into ſeveral Parts, to be bought by divers Perſons, whoſe Names are wrote on as many Pieces of Paper, which are apply'd by an indifferent Perſon to the ſeveral *Lots* or Parcels; by which means, the Goods are divided without Partiality; every Man having the Parcel which the *Lot* with his Name on, is appropriated to.

ALLOY, or ALLAY, in Matters of Coinage, &c. a Proportion of a baſer Metal, mingled with a finer, or purer. See METAL, MIXTURE, &c.

Such is the Quantity of Copper mingled with Gold, in the Coining of Species of that Metal. See GOLD, MONEY, &c.

The Intention of *Alloy*, is to give the Gold a due hardneſs, that it may not waſte with wearing; and to increaſe its Weight, ſo as to countervail the Charges of Coinage. See SEIGNEURAGE.

Gold that has more of this, than it ought to have; is ſaid to be of a *coarſer* or *greater Alloy*, or below Standard. See STANDARD.

The Proportion of *Alloy* for Gold uſed in our Mints, is about a 12th Part. See COINING.

The Word ſeems derived from the French, *Loy*, Law; in regard the *Alloy* is fix'd by Law.

ALLUM, or ALUM, *Alumen*, a kind of Mineral Salt, of an acid Taſte, leaving in the Mouth a Senſe of Sweetneſs accompany'd with a conſiderable Degree of Aſtringency. See SALT.

The antient Naturaliſts allow of two ſorts of *Allum*; the one *Native*, the other *Factitious*.—The Natural is found in the Iſland of *Milo*, being a kind of whitiſh Stone, very light, friable and porous; and ſtreak'd with Filaments reſembling Silver.

The Factitious *Allum*, is prepared in different manners, according to the different Materials whereof it is made.

*Allum* is of divers Kinds, *Red*, *Roman*, *Citron*, *Plumoſe*, *Saccharine*, and *Burnt*. The three laſt of which, are not proper native *Allums*.

*England*, *Italy*, and *Flanders*, are the Countries where the *Allum* is principally produced.—The *Engliſh Allum*, called alſo *Roche-Allum*, *Allumen Rupeum*, is made from a bleuiſh mineral Stone, frequent in the Hills in *Yorkſhire* and *Lancaſhire*. This Stone they calcine on a Hearth or Kiln; then ſteep it ſucceſſively in ſeveral Pits of Water: then boil it for about 24 Hours: Laſtly, letting it ſtand for about two Hours; the Impurities ſubſide, and leave a pure Liquor; which, removed into a Cooler, and ſome Urine added to it, begins,

begins, in three or four Days, to gather into a Maſs; which being taken out, waſhed, and melted over again, is fit for uſe.

The Mineral Stone, before it is calcined, being expoſed to the Air, will moulder in pieces, and yield a Liquor whereof Copperas may be made; but being calcined it is fit for *Allum*.—As long as it continues in the Earth, or in Water, it remains a hard Stone.—Sometimes a Liquor will iſſue out of the Side of the Mine, which by the Heat of the Sun is turned into a Natural *Allum*.

In the *Allum*-Works at *Civita Vecchia*, the Proceſs, as deſcribed by M. *Geoffroy*, is ſomewhat different.—The Stone, which is of a ruddy hue, being calcined, they boil and diſſolve the Calx in Water; which imbibing the Salt, *i. e.* the *Allum*, ſeparates it ſelf from the uſeleſs Earth. Laſtly, leaving the Water thus impregnated with Salt to ſtand for ſome Days, it cryſtallizes of it ſelf, like Tartar about a But, and makes what they call *Roche* or *Roman-Allum*.

At *Solfatara*, near *Puzzuoli*, is a conſiderable oval Plain, the Soil whereof is wholly ſaline; and ſo hot, that the Hand cannot long bear it.—From the Surface hereof, in Summer-time, there ariſes a ſort of Flour, or ſaltiſh Duſt; which being ſwept up, and caſt into Pits of Water at the bottom of the Plain; the Heat of the Ground, without any other Fire, evaporates the Water, and leaves an *Allum* behind.

*Allum* diſſolves in Water, and what remains undiſſolved at bottom, is a ſort of Calx, which diſſolves readily enough in Oil, or Spirit of Vitriol.—And hence there ariſes ſome doubt, whether *Allum*, as it does not leave an Earth behind, does properly belong to the Claſs of Salts.—Mr. *Boyle* aſſures us, that *Allum* Ore robb'd of its Salt, does in tract of Time recover it again in the Air. See AIR.

The *Swediſh Allum* is made of a Mineral which contains a great deal of Sulphur and Vitriol, not to be taken away but by Calcination or Diſtillation. The Matter remaining in the Iron Veſſels uſed in ſeparating the Sulphur from the Mineral, being expoſed to the Air for ſome time, becomes a kind of blueiſh Aſhes, which they lixiviate, cryſtallize, and convert into *Allum*.

The Word *Allum* comes from the *Greek* ἅλς, *Salt*; or perhaps from the Latin *Lumen*, Light; becauſe it adds a Luſtre to Colours.

*Allum* is of ſome uſe in Medicine, in quality of an Abſorbent; but being apt to excite Vomiting, is not much uſed inwardly, and rarely without ſome ſmooth Aromatick, as a Corrector.—'Tis uſed outwardly in aſtringent Lotions, and is an Ingredient in ſeveral Dentifrices.

It is a principal Ingredient in Dying and Colouring; neither of which can be well performed without it.— It ſerves to bind the Colour upon the Stuffs, and has the ſame Uſes there, that Gum-water and glutinous Oils have in Painting. It likewiſe diſpoſes Stuffs to take the Colour, and adds a degree of Briſkneſs and Delicacy to it; as we ſee viſibly in Cochineal, and the Grain of Scarlet.

The Effects of *Allum* ſeem owing to its ſtyptick, or aſtringent Quality, by which it binds the finer Parts of Colours together, and prevents their exhaling. Hence alſo it preſerves Paper that has been dipp'd in its Water, from ſinking when wrote upon. See COLOUR, DYING, &c.

*Saccharine* ALLUM, bears a near reſemblance to Sugar.—It is a Compoſition of common *Allum* with Roſe-water, and Whites of Eggs, boil'd together to the Conſiſtence of a Paſte, and thus moulded at pleaſure. As it cools, it grows hard as Stone.

*Burnt* ALLUM, *Alumen Uſtum*, is *Allum* calcined over the Fire, and thus render'd whiter, more light, and eaſily pulveriz'd.

*Plumoſe* ALLUM, *Alumen Plumoſum*, is a ſort of ſaline, mineral Stone, of various Colours, moſt commonly white bordering on green; reſembling *Venetian* Talc, except that inſtead of Scales, it riſes in Threads or Fibres, reſembling thoſe of a Feather; whence its Name, from *Pluma*, Feather.

Some will have this to be the *Lapis Amianthus* of the Antients. See AMIANTHUS.

ALLUMINOR, or ENLUMINOR, or ILLUMINER, one who by Trade coloureth, or paints upon Paper or Parchment. See COLOUR, PAINTING, &c.

ALLUSION, ALLUSIO, in Rhetorick, a Figure whereby ſomething is applied to, or underſtood of, another, by reaſon of ſome Similitude of Name, or Sound.

*Camden* defines *Alluſion* a dalliance, or playing with Words like in Sound, but unlike in Senſe; by changing, adding, or ſubtracting a Letter, or two; whence Words reſembling one another, become applicable to different Subjects.

Thus the Almighty, if we may uſe ſacred Authority, chang'd *Abram*, *i. e.* high Father, into *Abraham*, *i. e.* Father of many.—Thus the *Romans* play'd on their tippling Emperor *Tiberius Nero*, by calling him *Biberius Mero*: and thus in *Quintilian* the four Fellow *Placidus*, is call'd *Acidus*.

*Alluſions* come very near to what we popularly call *Puns*. See PUN.

The Word is form'd of the Latin *ad*, and *ludere*, to play.

ALLUVION, ALLUVIO, in the Civil Law, an Acceſſion or Accretion made along the Sea-ſhore, or the Banks of large Rivers, by means of Tempeſts or Inundations. See ACCRETION, &c.

The Civil Law places *Alluvion* among the lawful means of Acquiſition; and defines it to be a latent imperceptible Accretion.——Hence, where any conſiderable Portion of Ground is torn away at once, by an Inundation; and join'd to ſome neighbouring Eſtate; this is not acquired by right of *Alluvion*, but may be claim'd again by the former Proprietor.

The Word is form'd of the Latin *Adluo*, I waſh to; compounded of *ad*, and *lavo*, I waſh.

ALMACANTARS, ALMACANTARAS, or ALMACANTARATS, in Aſtronomy. See ALMUCANTARS.

ALMACANTARS *Staff*. See ALMUCANTARS *Staff*.

ALMAGEST, the Name of a celebrated Book, compoſed by *Ptolemy*; being a Collection of many of the Obſervations and Problems of the Antients, relating both to Geometry and Aſtronomy.

In the Original *Greek* it was called σύνταξις μεγίστη, q. d. *Greateſt Conſtruction*, or *Collection*: Which laſt Word *Megiſte*, join'd to the Particle *Al*, gave occaſion to its being called *Almageſte* by the *Arabians*, who tranſlated it into their Tongue about the Year 800, by Order of *Maimon*, Caliph of *Babylon*.—The *Arabic* Word is *Almagheſti*.

*Ricciolus* has alſo publiſh'd a Reformed Aſtronomy, which he intitles, after *Ptolemy*, the *New Almageſt*; being a Collection of antient and modern Obſervations in Aſtronomy. See ASTRONOMICAL *Obſervation*.

ALMANACK, or EPHEMERIS, a Calendar or Table, wherein are ſet down the Days, and Feaſts of the Year, the Courſe of the Moon, &c. See CALENDAR, YEAR, DAY, MONTH, MOON, &c.

The Original of the Word is much controverted among Grammarians.—Some derive it from the *Arabick* Particle *Al*, and *Mana*, to count.—Others, and among them *Scaliger*, rather derive it from *Al*, and μηνὰς, the Courſe of the Months: Which is contradicted by *Golius*, who advances another Opinion; He ſays, that throughout the Eaſt, 'tis the Cuſtom for Subjects, at the Beginning of the Year, to make Preſents to their Princes; and among the reſt, the Aſtrologers preſent them with their Ephemerides for the Year enſuing; whence thoſe Ephemerides came to be called *Almanha*, i. e. *Handſels*, or New-Years Gifts. See EPHEMERIDES.

To ſay no more, *Verſtegan* writes the Name *Almon-ac*; and makes it of *Saxon* Original: Our Anceſtors, he obſerves, uſed to carve the Courſes of the Moon of the whole Year upon a ſquare Stick, or Block of Wood, which they called *Al-monaght*, q. d. *Al-moon-heed*.

The modern *Almanack* anſwers to the *Faſti* of the antient *Romans*. See FASTI.

*The Neceſſaries for making an* Almanack, *the Reader will find under the Article* CALENDAR.

*Henry* III. of *France*, very prudently decreed by an Ordonnance of 1579, that 'No *Almanack-Maker* ſhould preſume to give Predictions relating to Civil Affairs, either of States or private Perſons, in Terms either expreſs or covert.' See ASTROLOGY.

In the *Philoſoph. Collect.* we have a perpetual *Almanack*, deſcribed by Mr. *R. Wood*.

ALMANDIN, or ALBANDIN, a Precious Stone, of the Ruby Kind; ſomething lighter and ſofter than the Oriental Ruby: and as to Colour, partaking more of that of the Granat than the Ruby. See RUBY, GRANAT, &c.

It is rank'd among the richeſt of Stones; and takes its Name from *Albana*, a City of *Caria*, whence *Pliny* ſays it is brought. See PRECIOUS *Stone*.

ALMARIA, for *Armaria*, in our antient Records, the Archives of a Church, or the like. See ARCHIVE.

ALMERY. See AMBRY.

ALMOIN, in Law. See FRANK-*Almoin*.

ALMOND, *Amygdala*, a kind of Fruit, incloſed with a thick Stone, and under a thin Skin. See FRUIT.

The *Almond* is the Produce of a pretty tall Tree, reſembling a Peach Tree; frequent in *Germany*, *France*, and the neighbouring Countries; as alſo in *Barbary*, &c.—Its Flowers are pentapetalous, and ranged in the Roſe manner: The Piſtil becomes a fleſhy Fruit, containing a Seed, which is the *Almond*; and which drops out when the Fruit is arrived at Maturity.

*Almonds* are chiefly of two Kinds, *Sweet* and *Bitter*.

The *Sweet Almonds*, *Amygdalæ Dulces*, are of a ſoft, grateful Taſte; and are reputed cooling, healing, emollient, and nutritive: are much preſcribed in Emulſions, and found of good effect in all Diſorders from cholerick and acrimonious Humours.—The *Oil of Sweet Almonds*, drawn without Fire, is a ſafe and uſeful Remedy in nephritick Pains. It is alſo of good repute for Coſtiveneſs and Gripes in Children.

*For the manner of procuring the Oil of* Sweet Almonds, *ſee the Article* OIL.

*Bitter Almonds*, *Amygdalæ Amaræ*, are held aperient, deterſive, and diuretick; and on thoſe Accounts commended in Obſtructions of the Liver, Spleen, Uterus, *&c.*—Some eſteem 'em good to take off the Effects of Drunkenneſs. Accordingly, *Plutarch* relates, that *Druſus*'s Phyſician, a ſtout Drinker, took down at every Cup five *Bitter Almonds*, to allay the Heat and Fumes of the Wine.

The expreſs'd *Oil of Bitter Almonds*, is much uſed to ſoften and deterge the Wax out of the Ear.—Some affirm, that *Bitter Almonds* bruis'd, kill or ſtupify Fowl; ſo that they may be taken with the Hands: which, they ſay, is a Secret practis'd among the *Bohemians:* And that the Huſks remaining after the Oil is expreſs'd, have the ſame Effect.

The Word *Almond* comes from the French *Amande*; which *Menage* derives from the Latin *Amandala*, a Term occurring in the Capitulars of *Charlemaign:* Others rather derive it from the *Greek* ἀμύγδαλον, which ſignifies the ſame thing.

*Almonds* give the Denomination to a great Number of Preparations in Confectionry, Cookery, *&c.* whereof they are the Baſis; as *Almond* Cakes, *Almond* Cream, Criſp'd *Almonds*, *Almond* Milk, *Almond* Paſte, *Almond* Snow, *&c.*

ALMONDS *of the Throat*, called alſo *Tonſillæ*, and improperly *Almonds of the Ears*. See TONSIL.

They are two round Glands, placed on the Sides of the Baſis of the Tongue, under the common Membrane of the *Fauces*, with which they are covered. See GLAND, TONGUE, *&c.*

Each of 'em has a large oval Sinus, which opens into the Fauces; wherein are contain'd a great Number of leſſer ones, which diſcharge thro' the great Sinus a mucous and ſlippery Matter into the Fauces, Larynx, and Oeſophagus, for the moiſtening and lubricating of thoſe Parts. See LARYNX, *&c.*

When the Oeſophagus Muſcle acts, it compreſſes the *Almonds*; and as they are ſubject to Inflammation, they frequently are the Occaſion of what the common People call a *ſore Throat*. See OESOPHAGUS, RAUCEDO, *&c.*

ALMOND, or ALMAN-*Furnace*, is a peculiar kind of Furnace, uſed in Refining; to ſeparate all kinds of Metals from Cinders, parts of Melting-Pots, Teſts, Bricks, *&c.* See FURNACE, and REFINING.

The *Almond-Furnace*, called alſo the *Sweep*, is uſually ſix Foot high, four wide, and two thick; built of Brick, and having a Hole in the middle of the Top, eight Inches over; which grows narrower towards the bottom, where, on the Fore-part it ends in a Point, encompaſs'd with a Semicircle of Iron, to keep the melted Metal.—About the middle of the Back, there is another Hole, to receive the Noſe of a pair of Bellows, which require the continual Strength of two Men to work.

The Matter, then, on which the Operation is to be perform'd, being beat ſmall, they kindle Charcoal in the Furnace, to anneal it; and when hot, they throw in two or three Shovelfuls of Coals to one of the foremention'd Stuff; and ſo proceed during the whole Work, putting Lay upon Lay of one and the other. After eight or ten Hours the Metal begins to run; and when the Receiver below is pretty full, they lade it out with an Iron Ladle, and caſt it in Sows, in Cavities, or Forms made with Aſhes.

ALMONER, antiently alſo wrote ALMNER, or AUMONIER, an Officer in a King's or Prince's Houſhold, whoſe buſineſs is to diſtribute *Alms* to the Poor. See ALMS.

The *Lord Almoner*, or *Lord High Almoner*, is an Eccleſiaſtical Officer, who has the Forfeiture of all Deodands, and the Goods of *Felo's de ſe*, which he is to diſpoſe of to the Poor. See DEODAND.

He had likewiſe, by an antient Cuſtom, a Privilege to give the firſt Diſh from the Royal Table, to whatſoever poor Perſon he pleaſed, or, inſtead thereof, an *Alms*, in Money.

He alſo diſtributes daily to 24 poor Men, nominated by the Pariſhioners of the Pariſh adjacent to the King's Place of Reſidence, to each, 4*d.* in Money, and an Alms of Bread and Small Beer; each Perſon firſt repeating the Creed and the Lord's Prayer, in preſence of one of the King's Chaplains, deputed by the Lord *Almoner* to be his *Sub-Almoner*; who is alſo to ſcatter new-coin'd Two-pences in the Towns and Places thro' which the King paſſes in his Progreſs.

He has alſo the Charge of ſeveral poor Penſioners to the Crown, below Stairs; conſiſting of ſuch as have ſpent their Youth, and become ſuperannuated in the King's Service; or the Widows of ſuch Houſhold Servants as died poor, and were not able to provide for their Wives and Children, whom he duly pays.

Under the Lord *Almoner* is a *Sub-Almoner*, a *Yeoman*, and *two Grooms of the Almonry*, choſen by his Lordſhip.

ALMONRY, or AUMRY, the Office or Lodgings of the *Almoner*; alſo the Place where the *Alms* are given.

ALMS, *Eleemoſyna*, ſomething given out of Charity or Liberality, to the Poor. See CHARITY, ALMONER, *&c.*

The *Romaniſts* alſo extend the Term to what is given to the Church, or other pious Uſes.—Hence, what the Church holds on this footing, is called *Tenure in Alms*; for according to *Raſtal*, *Alms*, or *Tenure in Alms*, is Tenure by Divine Service. See TENURE, and SERVICE.

The Eccleſiaſticks were antiently ſubſiſted wholly on *Alms*. See CLERGY, TITHE, *&c.*

The *Alms* of the primitive Chriſtians were divided into three Parts; one whereof belong'd to the Biſhops, another to the Prieſts, and a third to the Deacons and Subdeacons. —Sometimes they divided 'em into four; the laſt whereof went to the Poor, and the Repairing of Churches.

*Chrodedang*, Biſhop of *Metz*, in the VIIIth Century, enjoins, in the 42d Chapter of his Rule, that a Prieſt to whom any thing was offer'd for ſaying of Maſs, or for Confeſſion; or a Clerk for ſinging of Pſalms, or Hymns; ſhould not receive it on ony other Condition than as *Alms*.

M. *Tillemont* obſerves, upon the *Theodoſian* Code, p. 257. that from the IVth Century there were Women employ'd to collect *Alms* for the Priſoners. In all probability theſe were the Deaconeſſes of the Churches. See DEACONESS.

St. *Paul*, in his ſecond Epiſtle to the *Corinthians*, C. IX. explains the manner of collecting *Alms* in the Aſſemblies of the primitive Chriſtians.——This Practice they had borrow'd from the *Jewiſh* Synagogue, where it ſtill obtains. *Leon de Modena* deſcribes it in the 1ſt Book of the *Ceremonies and Cuſtoms* of thoſe of his Nation, C. XIV.

The *Jews* call *Alms*, *Tſedeka*, *i. e.* Juſtice.—The Evangeliſts and Apoſtles have alſo given it the ſame Appellation in the New Teſtament.

ALMSFEOH, or ALMESFEOH, among our *Saxon* Anceſtors, *Alms-Money*; that is Peter-pence, antiently paid in *England* on the firſt of *Auguſt*; called alſo *Romefeoh*, *Romeſcot*, and *Heorthpening*. See PETER-*Pence*.

ALMS-*Houſe*, a Houſe built by a Perſon in a private Capacity, and endow'd with a Revenue, for the Maintenance of a certain Number of poor, aged, or diſabled People. See HOSPITAL.

ALMUCANTARS, ALMACANTARAS, or ALMUCANTARATS, in Aſtronomy, are Circles parallel to the Horizon, imagin'd to paſs thro' all the Degrees of the Meridian. See CIRCLE, and HORIZON. See PARALLEL.

As the Meridians paſs thro' the ſeveral Degrees of the Equator; the *Almucantars* paſs thro' thoſe of the Meridian of any Place. See MERIDIAN.

The *Almucantars* are the ſame Thing with regard to the Azimuths and Horizon, that the Parallels are with regard to the Meridians and Horizon.

They ſerve to ſhew the Height of the Sun and Stars; and are deſcribed on many Quadrants, *&c.* being alſo called *Parallels of Altitude*. See PARALLEL *of Altitude*.

The Word is form'd of the Arabic *Almocantharat*.

ALMUCANTARS-*Staff*, is an Inſtrument uſually made of Pear-tree or Box, with an Arch of 15 Degrees; chiefly uſed to take Obſervations of the Sun, about the Time of its riſing and ſetting; in order to find the Amplitude, and conſequently the Variations of the Compaſs. See AMPLITUDE, and VARIATION.

ALNAGE, or AULNAGE, *q. d. Ell-meaſure*; the meaſuring of woollen Manufactures with an Ell; and the other Functions of the *Alnager*. See ALNAGER.

The Word is *French*; form'd of *Aune*, or *Alne*, an Ell. See ELL.

All our Laws relating to the *Alnage*, Sir *J. Child* obſerves, contribute nothing to the well making of our Manufactures, but are rather chargeable, and prejudicial thereto.

ALNAGER, ALNEGER, or AULNEGER, q. d. *a Meaſurer by the Ell*; ſignifies a ſworn publick Officer, who, by himſelf or Deputy, is to look to the Aſſize of woollen Cloth made thro' the Land, *i. e.* the Length, Width, and Work thereof; and to the Seals for that purpoſe ordained. See ALNAGE, CLOTH, *&c.*

There are now three Officers relating to the *Alnage* or Regulation of Cloth; all which were antiently compriz'd in one Perſon.—Theſe bear the diſtinct Names of *Searcher*, *Meaſurer*, and *Alnager*.

A Duty being impoſed on woollen Cloths, for the Maintenance of an Office to look to that Manufacture, and the Loyalty, as they call it, of the Stuffs produced therein; the *Alnager*, who had the Direction of the whole, is now become only the Collector of that Duty or Subſidy granted to the King: tho he ſtill holds the antient Denomination, becauſe the Collection of that Subſidy was committed to him. —Nor was he abridg'd of his Meaſuring and Searching, till by his own neglect it was thought proper to ſeparate the two Offices. So that there is now a peculiar Meaſurer, diſtinct from the *Alnager*, or Collector, to allow the Aſſize of the Length and Breadth of every Cloth made in *England* and *Wales*.

ALOES, Aloe, in Medicine and Pharmacy, the inſpiſſated Juice of a ferulaceous Plant of the ſame Name; much uſed as a purgative Remedy. See Purgative.

The *Aloe*-Plant grows in divers Parts of the *Eaſt* and *Weſt-Indies*; and is alſo found in ſome Countries of *Europe*, as *Spain*, and particularly the Mountains of *Siera Morena*. ——Its Leaves are green, very thick, hard, and prickly; yielding a kind of Cotton, whereof Laces may be made. Out of the middle of the Leaves ariſes a Stem, which bears the Flower, and the Fruit, the Seed whereof is very light and hemiſpherical.

*Dioſcorides*, *Pliny*, and the antient Naturaliſts, ſeem only to have been acquainted with one Species of *Aloes*; which is the *Aloe Vulgaris* above deſcribed: But the late Travels into *Aſia*, *Africa*, and *America*, have occaſion'd the Diſcovery of forty more ſorts, unknown to Antiquity. Mr. *Bradley* aſſures us, he has ſeen above ſixty ſeveral Kinds in the Phyſick-Garden at *Amſterdam*. So that *Aloe* is now become the Denomination of a Genus.—Among the Number, however, there are not above twelve that yield the purgative Juice above mentioned.

The Juice or Extract of *Aloes*, is uſually diſtinguiſh'd into three Kinds.—The firſt, which is called *Succotrine* as being brought from *Succotra*, is the pureſt and moſt tranſparent; being friable, inodorous, black in the Lump, but of a beautiful yellow Colour when bruis'd.—It is brought in Skins from the *Levant* and *Eaſt Indies*.

The ſecond is called *Hepatic*, becauſe of its Liver-colour: It is reſinous, ſmells like Myrrh, has a yellow Colour when pounded, and is brought from *China*.—Some confound this with the following ſort; as, in effect, there are but two ſorts commonly known in our Shops.

The third is the moſt impure, the blackeſt, and the ſtrongeſt.—It was formerly uſed by the *Indians* to pitch their Veſſels withal: and is of little Uſe among us, excepting for Horſes and Cattle; for which reaſon it is call'd *Caballine*, *i. e.* Horſe-*Aloes*.

Beſides theſe, ſome mention another kind of *Aloes* prepared in *Barbadoes*, and brought over in large Gourds: but moſt Writers make this the Caballine kind.

Some have imagin'd, that theſe differences of *Aloes* were owing only to the greater, or leſs Purification of the Juice: But this is a Miſtake; it having been found that no Diſſolutions, how often ſoever repeated, will change Hepatic into Succotrine, nor Caballine into Hepatic *Aloes*.

The manner of preparing *Aloes* is very eaſy, there being nothing to do but to cut the Leaves of the Plant, and to expoſe the Juice that ſpontaneouſly oozes out of them to the Sun, till it becomes of a proper Conſiſtence.

*Aloes* is extremely bitter, and purgative; externally applied, either in Subſtance or Tincture, it prevents Putrefaction and Gangrene.—Its Bitterneſs makes it ſo nauſeous, that it is rarely uſed in liquid Forms, but is generally made into Pills, whereof half a Dram is an ordinary Doſe.—Scarce any of the Officinal Pills are without this in their Compoſition. See Pill.

Its cathartick Virtue, is beſt employ'd in watery, cold, and corpulent Conſtitutions, as it heats and attenuates; being bad for thin and hectick Conſtitutions. It is accounted efficacious in promoting the Menſes; and is alſo good to deſtroy Worms.

M. *Boulduc*, by his Analyſis of *Aloes*, has found that the Succotrine ſcarce contains half the Reſin or ſulphurous Part, but one third more of the ſaline Part, found in the Hepatic. Hence the Succotrine comes to be preferable for internal Uſes, and the Hepatic for external.

Aloe *Roſata*, is a Preparation of the *Aloes* Juice, made by diſſolving it in Juice of Damask Roſes, and evaporating it to the Conſiſtence of a Paſte. Then, more Juice is added, and the Evaporation repeated, again and again.—This is held a gentler and ſafer Cathartick than the *Aloes* alone.

Aloes is alſo a kind of fragrant *Indian* Wood; thus called from its exceeding Bitterneſs, which reſembles that of the *Aloes* Juice.

This *Aloes*, called alſo *Agallochum*, is infinitely valued; and divers ſtrange Fables have been invented as to the Origin of the Tree that yields it: Some feign that it grew in Paradiſe, and was only convey'd to us by means of the Rivers overflowing their Banks, and ſweeping off the Trees in their way. Others ſuppoſe it to grow on inacceſſible Mountains; where it is guarded by certain wild Beaſts, &c. —The *Siameſe* Embaſſadors to the Court of *France*, in 1686, who brought a Preſent of this Wood from their Emperor, firſt gave the *Europeans* any conſiſtent Account of it.

The Tree grows in *China*, *Lao*, and *Cochinchina*; and is much about the Size and Figure of our Olive Trees.—The Trunk conſiſts of three ſorts of Wood, very different in Colour, and Properties: Immediately under the Bark it is black, compact, and heavy, call'd by the *Portugueze*, *Pao d'Aquila*, *q. d.* Eagle-Wood. That next under this, is of a Tan-colour, light and veiny, reſembling rotten Wood; and called *Calambou*.

The Heart, or innermoſt part, is called *Tambac*; and more valued by the *Indians* than Gold it ſelf. It affords a very ſtrong, but agreeable ſmell; and is uſed as a Perfume; and is withal held a ſovereign Remedy againſt the Palſy, Deliquiums, Weakneſſes, &c.

'Tis the *Calambou* alone that is known among us.—It is brought in ſmall bits of a very fragrant ſcent; eſpecially when caſt on the Fire, where it melts like Wax. The beſt is of a blackiſh purple Colour, and ſo light as to ſwim on Water: It is hot and drying; and eſteem'd a great Strengthener of the Nerves.

Some pharmaceutical Writers make a Diſtinction between *Aloes*, *Lignum Aloes* and *Xylo Aloes*; which may amount to the three Orders of Wood abovemention'd. Tho among us they are the ſame thing.

ALOETICS, Medicines wherein *Aloes* is the chief and fundamental Ingredient. See Aloes.

The Word is form'd of *Aloe*, which is further derived from ἁλς, the *Sea*, or *Salt*; that Plant being chiefly found near the Sea-Coaſts.

ALOGII, or Alogians, a Sect of antient Hereticks; who denied that Jeſus Chriſt was the Eternal Word. See Arian.

*Theodore* of *Byzantium*, by Trade a Currier, having apoſtatiz'd, under the Perſecution of the Emperor *Severus*; to defend himſelf againſt thoſe who reproach'd him therewith, ſaid; That it was not God he denied, but only Man. Whence his Followers were called in *Greek* ἄλογοι, in regard they rejected the *Word*; from the Privative α, and λόγος, *Verbum*.

ALOOF, a Sea Term, ſignifying as much as, keep your Luff: being a Word of Command from him that conns, to the Man at the Helm, to keep the Ship near the Wind, when ſhe ſails upon a Quarter-wind. See Conner, &c.

ALOPECIA, or Alopechy, in Medicine, &c. a Falling of the Hair, from what Cauſe ſoever that ariſe. See Hair.

The Word is form'd from ἀλώπηξ, *Vulpes*, a Fox; whoſe Urine, it is ſaid, will occaſion Baldneſs; or becauſe ſuch a Diſeaſe is common to that Creature.

ALPHA, the Name of the firſt Letter of the *Greek* Alphabet. See Letter, and Alphabet.

The *Alpha*, in Compoſition, denotes, ſometimes, *Privation*, in the ſame Senſe with ἄτερ, *without*; ſometimes *Augmentation*, as ἄγαν, *much*; and ſometimes *Union*, as ἅμα, *together*.

It was alſo uſed as a Letter of Order, to denote the *firſt*; and of Number, to ſignify *one*; but when it was a numerical Letter, a little Stroke, or an acute Accent was drawn above it thus 'A, to diſtinguiſh it from the A, which was a Letter of Order.

The Word is originally *Hebrew*, and comes from אלף *Alaph*, which ſignifies *to learn*; whence אלוף *the Leader or firſt of a Company*. In this Senſe, the *Hebrews* call the firſt Letter of their Alphabet *Aleph*, the Syrians *Olaph*, the Arabs *Eliph*, and the Greeks *Alpha*. See A.

*Alpha* and *Omega*, in the Divine Writings, ſignify the Beginning and the End; and therefore the Hieroglyphick of God is form'd of theſe two Letters, A and Ω.

ALPHABET, the ſeveral Letters of a Language, diſpoſed in their natural or accuſtom'd Order. See Letter, and Language.

The Word is form'd from the Names of the two firſt Letters of the Greek *Alphabet*, *Alpha*, *Beta*; which were borrow'd from thoſe of the Hebrew, *Aleph*, *Beth*. See Alpha, &c.

In the Engliſh *Alphabet* we reckon 26 Letters, *viz. a b c d e f g h i j k l m n o p q r ſ t u w v x y z*. See each under its proper Article.

But as there is a much greater Number of different Sounds in our Language; 'tis not without Reaſon that ſome Grammarians maintain, that there ought to be a greater Number of Letters: As alſo, that the double Letters, *x* and *y*, and the ſuperfluous ones, *k* and *g*, ſhould be retrench'd. See Consonant, Vowel, &c.

The French *Alphabet* only contains 23 Letters.—*Paſquier* indeed maintains it to conſiſt of 25, by reaſon he adds the two double Letters & for *et*, and ⁹ for *us*; but thoſe are only Abbreviatures. The *Abbe d'Angeau*, on better Grounds, reckons 34 different Sounds in the *French* Tongue; and urges, that the *Alphabet* ought of Conſequence to conſiſt of 34 different Characters, ſetting aſide the double Letters *x* and *y*, and the ſuperfluous one *q*. See French.

The Difference between Languages, with reſpect to the Number of Letters, is very conſiderable: The *Hebrew*, *Chaldee*, *Syriac*, and *Samaritan Alphabets*, have each 22; the *Arabic* 28; the *Perſian* 31; the *Turkiſh* 33; the *Georgian* 36; the *Cophtick* 32; the *Muſcovite* 43; the *Greek* 24; the *Latin* 22; the *Sclavonick* 27; the *Dutch* 26; the *Spaniſh* 27; the *Italian* 20; the *Indians* of *Bengal* 21; the *Baramas* 19.

The *Æthiopic* has no leſs than 202 Letters in its *Alphabet*, there being 7 Vowels, which they combine with each of their 26

Conſonants; to which they add 20 other aſpirated Syllables. — The like is ſaid of the *Tartarian*; each of their Letters is a Syllable; having one of the Vowels joined to its Conſonant: as *La*, *Le*, *Li*, &c.

The *Chineſe* have no *Alphabet*, properly ſpeaking; except we call their whole Language their *Alphabet*; their Letters are Words, or rather Hieroglyphicks, and are in Number about 80,000. See CHINESE, and CHARACTER.

In effect, *Alphabets* were not contrived with Deſign, according to the juſt Rules of Reaſon and Analogy; but ſucceſſively framed, alter'd, &c. as occaſion offer'd.——And hence many grievous Complaints as to their Deficiencies; and divers attempts to eſtabliſh new, and more adequate ones in their place.

Biſhop *Wilkins* charges the *Alphabets* extant with great Irregularities, with reſpect both of the Order, Number, Power, Figure, &c.——As to the *Order*, it appears inartificial, precarious, and confuſed; in that the Vowels and Conſonants are not reduced into Claſſes, with ſuch order of precedence and ſubſequence as their Natures will bear.—— Even the Hebrew *Alphabet*, from which the reſt are derived, is not free from this Imperfection.

As to *Number*, they are both redundant, and deficient: Redundant, either by allotting ſeveral Letters to the ſame Power, and Sound; as in the *Hebrew* ב and ש, and the ordinary *Latin c* and *k*, *f* and *ph*: or by reckoning double Letters among the ſimple Elements of Speech; as in the *Hebrew* ש, the *Greek* ξ and ψ, the Latin *q cu*, *x cs*, and the *j* Conſonant, or Jod.—Deficient in divers reſpects, eſpecially in regard of Vowels, of which there are ſeven or eight kinds commonly uſed; tho the Latin *Alphabet* only takes notice of five; whereof two, *viz. i* and *u*, according to our *Engliſh* Pronunciation, are not properly Vowels, but Dipthongs.

Add, that the Difference among Vowels in reſpect of long and ſhort, is not ſufficiently provided for: The Antients, we know, uſed to expreſs a long Vowel by doubling its Character; as *Amaabam*, *Naata*, *Ree*, *Seedes*, *Sanctiſſimiis*; tho the Vowel *i*, inſtead of being doubled, was frequently prolonged, as ÆDILIS, PISO, VIVUS.—The ways uſed in *Engliſh* for lengthning and abbreviating Vowels, *viz.* by adding *e* quieſcent to the End of a Word, for prolonging a Syllable; and doubling the following Conſonants, for the ſhortening of a Vowel, as *Wane Wann*, *Ware Warr*, &c. or elſe by inſerting ſome other Vowel, for the lengthning of it, as *Meat Met*, *Read Red*, &c. are all improper; in that the Sign ought ever to be where the Sound is.

As to their *Powers*, again, thoſe are not always fixed to the ſame Signification: The Vowels, for inſtance, are generally acknowledg'd to have each of 'em ſeveral Sounds: *Vocales omnes pluriſonæ*, ſays *Lipſius*; and *Voſſius* aſſures us, the Antients uſed their Vowels very different ways, *aliquando tenuius exiliuſque*, *nunc craſſius*, *nunc intermedio ſono*. Thus the Power of the Vowel *e* is expreſſed in writing no leſs than ſix ſeveral ways, *viz.* by *e*; as in *he*, *me*, *ſhe*, *ye*: —by *ee*, in *thee*, *free*, *we*; —by *ie*, in *field*, *yield*, *ſhield*, *chief*;—by *ea*, in *near*, *dear*, *hear*;—by *eo*, in *people*;— by *i*, in *privilege*. So is the Power of the Vowel *a*; as in *all*, *aul*, *aw*, *fault*, *caught*, *brought*: which are all only various ways of writing the ſame long Vowel; beſides the other diſtinct ways of expreſſing the ſame Vowel when uſed ſhort: Again, the Power of the Vowel *o* is written five ways; *o*, as in *to*, *who*, *move*;—*oe*, in *doe*.—*oo*, in *ſhoo*, *moon*, *noon*;—*ou*, in *could*, *would*;—*wo*, in *two*; and ſo of the reſt.——Nor are the Conſonants of more determinate Powers: witneſs the different Pronunciation of the ſame Letter (*c*) in the ſame Word, *Circo*; and of *g* in *negligence*. —To ſay no more, the Letters *c*, *ſ*, *t*, are uſed alike, to denote the ſame Power; and the Letter *ſ*, is commonly uſed for *z*: and which is yet worſe, ſome Letters of the ſame Name and Shape, are uſed at one time for Vowels, and at another for Conſonants; as *j*, *v*, *w*, *y*; which yet differ from one another, ſays Biſhop *Wilkins*, *ſicut corpus & anima*.

From this Confuſion in the Power of Letters, there ariſe divers Irregularites; as, that ſome Words are diſtinguiſh'd in Writing, which are the ſame in Pronunciation, *e. g. Ceſſio* and *Seſſio*, &c. and others are diſtinguiſh'd in Pronunciation, which are the ſame in Writing; as *give*, *dare*, and *Give*, *vinculum*, &c. Hence alſo the Latin *Male*, is a Diſſyllable, and the Engliſh *Male*, a Monoſyllable.

The *Names* alſo, in moſt *Alphabets*, are very improperly expreſs'd by Words of divers Syllables; as *Alpha*, *Beta*, &c. in which reſpect, the Roman and our Engliſh *Alphabets*, which only name the Letters by their Powers, have a great Advantage over the reſt.

Laſtly, their *Figures* are not well concerted; there being nothing in the Characters of the Vowels anſwerable to the different Degrees of Apertion: nor in the Conſonants, analogous to the Agreements or Diſagreements thereof.

All theſe Imperfections are endeavour'd to be obviated in the *Univerſal Alphabets*, or Characters of Mr. *Lodowic*, Biſhop *Wilkins*, &c. See *Univerſal* CHARACTER.

In the *French* King's Library, is an *Arabic* Work, intitled *Sephat Alacham*; containing divers ſorts of imaginary *Alphabets*, which the Author diſtributes into Prophetical, Myſtical, Philoſophical, Magical, Taliſmanical, &c.

Monſieur *Leibnitz* had it in view to compoſe an *Alphabet of Human Thoughts*. *Mem. de l'Acad. R.* An. 1716.

'Tis no wonder that the Number of Letters in moſt Languages ſhou'd be ſo ſmall, and that of the Words ſo great; ſince from a Calculation made by Mr. *Preſtet*, it appears, that, allowing only 24 Letters to an *Alphabet*, the different Words or Combinations that may be made out of thoſe 24 Letters, taking them firſt one by one, then two by two, three by three, &c. would amount to the following Number, 139,172428,887252,999425,128493,402200. See COMBINATION.

It may be here obſerv'd, that every Combination may make a Word, even tho that Combination have not any Vowel in it; becauſe the *e* mute or quieſcent inſinuates it ſelf imperceptibly between the Conſonants, or after the Conſonants, where there are but two; the latter of which would not be heard without it.—The uſe of this quieſcent *e* is very remarkable in the *Armenian*, *Welch*, and *Dutch* Languages; wherein the generality of Words have ſeveral Conſonants together.

Nor muſt it be omitted, that every ſingle Letter may make a Word: which is very apparent, where that Letter is a Vowel; Words of that kind being found in moſt Languages. Thus, *a* and *o* make Words in the *Greek*; *a*, *o*, in the *Latin*; *a*, *i*, *o*, in *Engliſh*; *a*, *o*, *y*, in *French*; *a*, *e*, *i*, *o*, in *Italian*; *a*, *y*, in *Spaniſh*; *a*, *o*, in the *Portugueſe*; *o*, in moſt Languages, and even in the *Dutch* and *Swediſh*. A Conſonant alſo becomes a Word, by adding an *e* mute to it in Pronunciation.

In fine, tho a conſiderable Number of the poſſible Combinations of 24 Letters were retrench'd, yet the Number remaining would ſtill be immenſe, and vaſtly ſuperior to that of the Words in any Language known.

Of all other Languages, the *Greek* is look'd upon as one of the moſt copious, the Radices of which are only eſteem'd about 3244; but then it abounds exceedingly in Compounds, and Derivatives. Biſhop *Wilkins* thinks theſe may be moderately computed at about ten thouſand.

*Hermannus Hugo*, indeed, aſſerts, that no Language has ſo few as 100000 Words; and *Varro* is frequently quoted by learned Men, as if he affirmed that there are in the *Latin* no leſs than 500000: But upon inquiring into the Scope of the Paſſage, Biſhop *Wilkins* obſerves, that this Number is not intended by him to expreſs the juſt Number of Words in the *Latin*; but the great Variety made thereof, by the Inflection and Compoſition of Verbs.—To this purpoſe he lays it down, that there are above one thouſand Radical Verbs in the *Latin*; and that each Verb admits of five hundred ſeveral Varieties: He further ſuppoſes, that each of theſe may be compounded with nine Prepoſitions; as *ceſſit*, *receſſit*, *acceſſit*, *deceſſit*, &c. which amounts to five Millions. See WORD.

ALPHABET, in Matters of Polygraphy, is a duplicate of the Key or Cypher, which each of the Parties correſponding are to keep by them. See CYPHER.

It is properly an *Alphabet* of the uſual Letters diſpoſed in their Order; oppoſite to, or underneath which, are the ſecret Characters correſponding thereto, with the blank or uſeleſs Letters, and the other Signs or Symbols ſerving to obſcure, and render it difficult to decypher. See DECYPHERING.

ALPHETA, in Aſtronomy, a Fix'd Star in the *Northern Crown*; otherwiſe called *Lucida Coronæ*. See LUCIDA.

Its Longitude, Latitude, &c. *ſee among the reſt of the Conſtellation* CORONA *Septentrionalis*.

ALPHONSINE *Table*. See TABLE.

ALPHOS, in Medicine, a Diſtemper deſcribed by *Celſus*, under the Name of *Vitiligo*; wherein, the Skin is rough, and looks as if it had Drops of white upon it, not much differing from Morphew. See MORPHEW.

ALRAMECH, or ABRAMECH, in Aſtronomy, the *Arabic* Name of a Star, otherwiſe called *Arcturus*. See ARCTURUS.

ALT, in Muſick. See DIAGRAM, and SCALE; ſee alſo ALTO.

The Word is form'd of the Latin *altus*, high.

ALTAR, ARA, ALTARE, a Place or Pile whereon to offer Sacrifice to ſome Deity. See SACRIFICE.

The *Jews* had their Brazen *Altar*, for Burnt offerings, and a Golden *Altar*, or *Altar of Incenſe*. See TABERNACLE, &c.

Among the *Romans*, the *Altar* was a kind of Pedeſtal, either ſquare, round, or triangular; adorn'd with Sculpture, with Baſſo Relievo's, and Inſcriptions, whereon were burnt the Victims ſacrificed to Idols. See VICTIM.

Thoſe

Thoſe *Altars* ſet apart for the honour of the celeſtial Gods, and Gods of the higher Claſs, were placed on ſome pretty tall Pile of Building; and for that reaſon were called *Altaria*, from the Words *Alta* and *Ara*, a high elevated *Altar*.—Thoſe appointed for the terreſtrial Gods, were laid on the Surface of the Earth, and call'd *Aræ*.—And on the contrary, they dug into the Earth, and open'd a Hole for thoſe of the infernal Gods, which they called *Scrobiculi*. See GOD.

The *Greeks* alſo diſtinguiſh'd two ſorts of *Altars*; that whereon they ſacrific'd to the Gods, was called βωμὸς, and was a real *Altar*; different from the other, whereon they ſacrific'd to the Heroes, which was ſmaller, and called ἐσχάρα. *Pollux* makes this Diſtinction of *Altars* in his *Onomaſticon*: He adds, however, that ſome Poets uſed the Word ἐσχάρα, for the *Altar* whereon Sacrifice was offer'd to the Gods.—The Septuagint Verſion does ſometimes alſo uſe the Word σκάρα, for a form of little low *Altar*, which may be expreſſed in *Latin* by *Craticula*; being a Hearth, rather than an *Altar*.

The *Jews* alſo gave the Name *Altar* to a kind of Tables, occaſionally rais'd in the Country or Field, whereon to ſacrifice to God.——In ſuch a Place, *he built an* Altar *to the Lord.*

ALTAR, is ſometimes alſo uſed among Chriſtians, for a ſquare Table, placed on the Eaſtern ſide of a Church, rais'd a little above the Floor, and ſet apart for the Celebration of the Euchariſt. See EUCHARIST.

Its Form is not borrow'd, either from that of the Heathen *Altars*, or even from that of the *Jews* in the Temple; but in regard the Euchariſt was inſtituted by Jeſus Chriſt at Supper, and upon a Table, the modern *Altar* is made in form of a Table; whence it is more uſually, and even more ſignificantly denominated *Communion Table*. See COMMUNION.

In effect, the Denomination *Altar* is founded on this Suppoſition, that the Euchariſt is a proper Sacrifice; which, tho the ſtanding Doctrine of the Church of *Rome*, is utterly denied by moſt of the Reformed. See MASS.

In the primitive Church, the *Altars* were only of Wood; as being frequently to be removed from place to place.—The Council of *Paris*, in 509, decreed, That no *Altar* ſhould be built but of Stone.

At firſt there was but one *Altar* in each Church; but the Number ſoon increas'd; and from the Writings of *Gregory* the Great, who lived in the VIth Century, we learn, that there were ſometimes 12 or 13.

The *Altar* is ſometimes ſuſtained on a ſingle Column, as in the ſubterraneous Chapels of St. *Cæcilia* at *Rome*, &c. ſometimes, by four Columns, as the *Altar* of St. *Sebaſtian* of *Crypta Arenaria*; but the cuſtomary Form, is, to be a Maſſive of Stone-work, ſuſtaining the *Altar-Table*.

Theſe *Altars* bear a reſemblance to Tombs: In effect, we read in Church-Hiſtory, that the primitive Chriſtians chiefly held their Meetings at the Tombs of the Martyrs, and celebrated the Myſteries of Religion thereon. For which Reaſon, it is a ſtanding Rule to this Day in the Church of *Rome*, never to build an *Altar*, without incloſing the Relicks of ſome Saints therein. See RELICK, SAINT, CHURCH-*Yard*, &c.

ALTAR *of Propheſis*, is a Name given by the *Greeks* to a ſmaller, preparatory kind of *Altar*, whereon they bleſs the Bread, before it be carried to the large *Altar*, where the ſolemn Liturgy is perform'd. See PROTHESIS.

F. *Goar* maintains, that the *Table of Propheſis* was antiently in the Sacriſty, or Veſtry; which he makes appear from ſome *Greek* Copies, where Sacriſty is made uſe of in lieu of *Propheſis*.

ALTAR is alſo uſed, in Church Hiſtory, for the Oblations, or contingent Incomes of a Church. See OBLATION.

In antient Days, they diſtinguiſh'd between the Church and the *Altar*.—The Tithes, and other ſettled Revenues, were called the Church, *Eccleſia*; and the other incidental Incomes, the *Altar*. See TITHE, &c.

ALTAR, *Ara*, in Aſtronomy, one of the Conſtellations of the Southern Hemiſphere; not viſible in our Climate. See STAR, and CONSTELLATION.

ALTARAGE, a Word which includes not only the Offerings made upon the *Altar*, but alſo the Profit that ariſes to the Prieſt on account of the *Altar*. See ALTAR.

ALTERATION, ALTERATIO, in Phyſicks, the Act of changing the Circumſtances and Manner of a thing; its general Nature and Appearance remaining the ſame.—Or, *Alteration* is an accidental, and partial Change in a Body; without proceeding ſo far, as to make the Subject quite unknown, or to take a new Denomination thereupon.—Or, it may be called, the Acquiſition or Loſs of ſuch Qualities as are not eſſential to the Form of the Body. See BODY, QUALITY, ESSENCE, &c.

Thus, a piece of Iron, which before was cold, is ſaid to be *altered*, when it is made hot; ſince it may ſtill be perceiv'd to be Iron, is called by that Name, and has all the Properties thereof.

By this, *Alteration* is diſtinguiſh'd from *Generation*, and *Corruption*; thoſe Terms expreſſing an Acquiſition or Loſs of the eſſential Qualities of a thing. See GENERATION, and CORRUPTION.

The modern Philoſophers, after the antient Chymiſts and *Corpuſcularians*, hold all *Alteration* to be effected by means of local Motion: According to them, it always conſiſts either in the Emiſſion, Acceſſion, Union, Separation, or Tranſpoſition of the component Particles. See PARTICLE, &c.

*Ariſtotle* makes a peculiar kind of Motion, which he calls the *Motion of Alteration*. See MOTION, &c.

ALTERANT, or ALTERATIVE, in Medicine, a Property, or Power in certain Remedies, whereby they induce an *Alteration* in the Body, and diſpoſe it for Health or Recovery, by correcting ſome Indiſpoſition; without occaſioning any ſenſible Evacuation. See MEDICINE.

Under *Alterants*, therefore, come all Medicines which are not Evacuants. See EVACUANT, and EVACUATION.

'Tis a Point much queſtion'd by ſome, whether there really be any ſuch thing as an *Alterant* in this Senſe; *i. e.* any thing which tends to cure a Diſorder otherwiſe than by eliminating or expelling ſome peccant Matter. See DISEASE, SPECIFIC, &c.

Dr. *Quincy* has made it probable, that Remedies uſually reputed *Alterants*, act in the ſame manner on the remoter and more intimate Parts of the Habit, as Emeticks, Purgatives, &c. do on the Stomach and Inteſtines. See PURGATIVE.

*Alteratives*, therefore, are better defined, ſuch Medicines as have no immediate ſenſible Operation, but gradually gain upon the Conſtitution, by changing the Humours from a State of Diſtemperature to Health.

ALTERCATION, a Debate or Conteſt between two Friends, or Acquaintance.

They never come to an open Quarrel; but there is continually ſome little *Altercation* or other.

The Word comes from the Latin *Altercari*; which antiently ſignify'd to converſe or hold Diſcourſe together. See DIALOGUE.

ALTERN *Baſe*, a Term in Trigonometry, contradiſtinguiſh'd from *true Baſe*, thus — In an oblique Triangle, the true Baſe is either the Sum of the Sides; in which Caſe, the Difference of the Sides is called the *Altern* Baſe: or, the true Baſe is the Difference of the Sides; in which Caſe, the Sum of the Sides is called the *Altern Baſe*. See BASE.

ALTERNATE, or ALTERNATIVE, is underſtood of ſeveral Things which ſucceed, or are diſpoſed one after another, *i. e.* by turns.

In this Senſe, we ſay, an *Alternate* or *Alternative Office* or Truſt, which is diſcharged by turns: So, two general Officers, who command each his Day, are ſaid to have the Command *alternately*.

In Botany, the Leaves of a Plant are ſaid to be *alternate*, or placed *alternatively*, when there is a Correſpondence between the Sides of a Branch; the Leaves of the one, following thoſe of the other.

ALTERNATE *Angles*, in Geometry, are the internal Angles made by a Line cutting two Parallels, and lying on the oppoſite Sides of the cutting Line; the one below the firſt Parallel, and the other above the ſecond. See ANGLE.

Thus, $x$ and $u$, and $z$ and $y$, (Tab. *Geometry*, Fig. 46.) are *Alternate Angles*.

There are alſo two external Angles, *alternately* oppoſite to the internal ones. See OPPOSITE.

*Alligation* ALTERNATE. See ALLIGATION *Alternate*.

ALTERNATE *Ratio*, or *Proportion*, is where the Antecedent of one Ratio is to its Conſequent, as the Antecedent of another, to its Conſequent; the very ſame Ratio, in this Caſe, holding *alternately* in reſpect of the Antecedents to each other, and the Conſequents to each other. See RATIO.

Thus, if A : B :: C : D; then, *alternately*, A : C :: B : D. See PROPORTION.

ALTERNATE, in Heraldry, is uſed in reſpect of the Situation of the Quarters. See QUARTER.

Thus, in Quarterly, Ecartele, the firſt and fourth Quarters are *alternate*; and are uſually of the ſame Nature. The like holds of the ſecond and third. See QUARTERING, QUARTERLY, &c.

ALTERNATION, a Term ſometimes uſed for the divers Changes, or Alterations of Order, in any Number of Things propoſed. See CHANGE.

This is alſo called *Permutation*, &c. and is eaſily found, by a continual Multiplication of all the Numbers, beginning at Unity. See PERMUTATION.

Thus, if it be requir'd to know how many Changes or Alternations can be rung on ſix Bells; multiply the Numbers 1, 2, 3, 4, 5, 6, continually one into another; and the laſt Product gives the Number of Changes. See COMBINATION.

ALTERNATIVE, is particularly uſed for the Choice of two things propoſed.—In this Senſe, we ſay, To take the *Alternative* of two Propoſitions. See ALTERNATE.

ALTIMETRY, ALTIMETRIA, the Art of taking or meaſuring Altitudes, or Heights; whether acceſſible or inacceſſible. See ALTITUDE.

*Altimetria* makes the firſt Part of Geometry; including the Doctrine and Practice of meaſuring both perpendicular and oblique Lines; whether in reſpect of Height, or Depth. See GEOMETRY; ſee alſo HEIGHT, *&c.*

The Word is compounded of the Latin *Altus*, high, and μετρεω, *metior*, I meaſure.

ALTITUDE, ALTITUDO, in Geometry, the third Dimenſion of Body; called alſo *Height*, or *Depth*. See HEIGHT; ſee alſo BODY, DIMENSION, *&c.*

ALTITUE, in Opticks, is uſually conſider'd as the Angle ſubtended between a Line drawn thro' the Eye, parallel to the Horizon, and a Viſual Ray emitted from an Object to the Eye.

*For the Laws of the Viſion of* ALTITUDE, ſee VISION.

If thro' the two Extremes of an Object, S and T, (Tab. *Opticks*, Fig. 13.) two Parallels, T V and S Q be drawn; the Angle T V S, intercepted between a Ray paſſing thro' the Vertex S, and terminating the Shadow thereof in V, makes, with the right Line T V, what is called, by ſome Writers, the *Altitude of the Luminary*.

ALTITUDE, in Coſmography, is the perpendicular Height of a Body, or Object; or its Diſtance from the Horizon, upwards. See HEIGHT; ſee alſo HORIZON.

*Altitudes* are divided into *acceſſible* and *inacceſſible*. See ACCESSIBLE, and INACCESSIBLE.

There are three Ways of *Meaſuring Altitudes*, *viz.* Geometrically, Trigonometrically, and Optically.—The firſt is ſomewhat indirect and unartful; the ſecond, perform'd by means of Inſtruments for the Purpoſe; and the third by Shadows.

The Inſtruments chiefly uſed in meaſuring of *Altitudes*, are the *Quadrant*, *Theodolite*, Geometrick *Quadrat*, or Line of *Shadows*, &c. *the Deſcriptions*, *Applications*, &c. *whereof*, *ſee under their reſpective Articles*, QUADRANT, THEDOLITE, QUADRAT.

*To take Acccceſſible* ALTITUDES.

*To meaſure an acceſſible* Altitude, *geometrically*.——Suppoſe it required to find the *Altitude* A B, (Tab. *Geometry*, Fig. 88.) plant a Staff D E perpendicularly in the Ground, of ſuch height as may equal the height of the Eye. Then, laying proſtrate on the Ground, with your Feet to the Staff; if E and B prove in the ſame right Line with the Eye C; the length C A is equal to the *Altitude* A B. If ſome other lower Point, as F, prove in the Line with E and the Eye; you muſt remove the Staff, *&c.* nearer to the Object: On the contrary, if the Line continued from the Eye over E, mark out ſome Point above the *Altitude* requir'd; the Staff, *&c.* are to be remov'd farther off, till the Line C E raze the very Point requir'd.—Thus, meaſuring the Diſtance of the Eye C from the Foot of the Object A; the *Altitude* is had; ſince C A = A B.

*Or thus*:——At the Diſtance of 30, 40, or more Feet, plant a Staff D E, (Fig. 89.) and at a diſtance herefrom, in C, another ſhorter one, ſo as that the Eye being in F; E and B may be in the ſame right Line therewith. Meaſure the Diſtance between the two Staves, G F; and between the ſhorter Staff and the Object, H F; as alſo, the difference of the Heights of the Staves, G E.——To G F, G E and H F; find a fourth proportional B H.—To this add the *Altitude* of the ſhorter Staff, F C. The Sum is the *Altitude* required, A B.

*To meaſure an acceſſible* Altitude, *trigonometrically*.—Suppoſe it required to find the *Altitude* A B, (Tab. *Trigonom.* Fig. 23.) chuſe a Station in E; and with a Quadrant, Theodolite, or other graduated Inſtrument duly placed, find the Quantity of the Angle of *Altitude* A D C. See ANGLE.

Meaſure the ſhorteſt Diſtance of the Station from the Object, *viz.* D C, which of conſequence is perpendicular to A C. See DISTANCE.

Now, C being a right Angle, 'tis eaſy to find the Line A C; ſince, in the Triangle A C D, we have two Angles, *viz.* C and D, and a ſide oppoſite to one of them, C D, to find the Side oppoſite to the other: for which we have this Canon.—As the Sine of the Angle A, is to the given ſide oppoſite thereto, D C; ſo is the Sine of the other Angle D, to the Side required C A. See TRIANGLE.

To the ſide thus found, adding B C, the Sum is the perpendicular *Altitude* requir'd.

The Operation is beſt perform'd by Logarithms. See LOGARITHM.

If there happen an Error in taking the Quantity of the Angle A, (Fig. 24.) the true *Altitude* B D will be to the falſe one B C; as the Tangent of the true Angle D A B, to the Tangent of the erroneous Angle C A B.

Hence, ſuch Error will be greater in a greater *Altitude* than in a leſs: and hence alſo, the Error is greater if the Angle be leſſer, than if greater.—To avoid the Inconveniences of both which, the Station is to be pitch'd on at a moderate Diſtance; ſo as the Angle of *Altitude*, D E B, may be nearly half right.

Again, if the Inſtrument were not horizontally placed, but inclined, *e. g.* to the Horizon in any Angle: The true *Altitude* will be to the erroneous one, as the Tangent of the true Angle, to that of the erroneous one.

*To meaſure an acceſſible* Altitude *optically*, *by the Shadow of the Body*. See SHADOW.

*To meaſure an acceſſible* Altitude *by the geometrical Quadrat*.——Suppoſe it required to find the *Altitude* A B, (Tab. *Geom.* Fig. 90.) chuſing a Station at pleaſure in D, and meaſuring the Diſtance thereof from the Object, D B; turn the Quadrat this and that way, till the Top of the Tower A, appear thro' the Sights.

If, then, the Thread cut the right Shadows, ſay, As the Part of the right Shadow cut off, is to the ſide of the Quadrat; ſo is the Diſtance of the Station D B, to the Part of the *Altitude* A E.—If the Thread cut the verſed Shadows, ſay, As the Side of the Quadrat is to the Part of the verſed Shadow cut off; ſo is the Diſtance of the Station D B, to the Part of the *Altitude* A E.

A E, therefore, being found in either Caſe, by the Rule of Three; and the Part of the *Altitude* B E added thereto; the Sum is the *Altitude* required.

*To take Inacceſſible* ALTITUDES.

*To meaſure an inacceſſible* Altitude, *geometrically*.——Suppoſe A B, (Fig. 89.) an inacceſſible *Altitude*, ſo that you cannot meaſure to the Foot thereof. Find the Diſtance C A, or F H, as taught under the Article DISTANCE: proceed with the reſt as in the Article for acceſſible Diſtances.

*To meaſure an inacceſſible* Altitude, *trigonometrically*.—Chuſe two Stations, G and E, (Tab. *Trigonom.* Fig. 25.) in the ſame right Line with the required *Altitude* A B, and at ſuch diſtance from each other, D F, as that neither the Angle F A D, be too ſmall, nor the other Station G too near the Object, A B.—With a proper Inſtrument, take the Quantity of the Angles A D C, A F C, and C F B. See ANGLE.—And alſo meaſure the Interval F D.

Then, in the Triangle A F D, we have the Angle D, given by Obſervation; and the Angle A F D, by ſubtracting the obſerved *Altitude* A F C, from two right Angles; and conſequently the third Angle D A F, by ſubtracting the other two from two right ones: and alſo the Side F D: From whence the Side A F is found by the Canon above laid down, in the Problem of acceſſible *Altitudes*. And again, in the Triangle A C F, having a right Angle C, an obſerved Angle F, and a ſide A F; the Side A C, and the other C F, are found by the ſame Canon. Laſtly, in the Triangle F C B, having a right Angle C, obſerved Angle C F B, and a Side C F; the other ſide C B, is found by the ſame Canon.

Adding, therefore, A C and C B; the Sum is the *Altitude* required, A B.

*To find an inacceſſible* Altitude, *by the Shadow*, *or the geometrical Quadrat*.——Chuſe two Stations in D and H, (Tab. *Geom.* Fig. 90.) and find the Diſtance D H or C G: obſerve what part of either the right or verſed Shadow is cut by the Thread.

If the right Shadows be cut in both Stations, ſay, As the Difference of the right Shadows in the two Stations, is to the Side of the Square; ſo is the Diſtance of the Stations G C to the *Altitude* E A.——If the Thread cut the verſed Shadow at both Stations, ſay, As the Difference of the verſed Shadows mark'd at the two Stations, is to the leſſer verſed Shadow; ſo is the Diſtance of the Stations G C, to the Interval G E. Which being had; the *Altitude* E B is alſo found by means of the verſed Shadow in G; as in the Problem for acceſſible *Altitudes*.

Laſtly, if the Thread in the firſt Station G, cut the right Shadows; and in the latter, the verſed Shadows: ſay, As the Difference of the Product of the right Shadow into the verſed, ſubtracted from the Square of the Side of the Quadrat, is to the Product of the Side of the Quadrat into the verſed Shadow: ſo is the Diſtance of the Stations G C, to the *Altitude* requir'd, A E.

*The utmoſt Diſtance at which an Object may be ſeen*, *being given*; *to find its* Altitude.——Suppoſe the Diſtance D B, (Tab. *Geography*, Fig. 9.) turn this into Degrees; by which means, you will have the Quantity of the Angle C: From the Secant of this Angle ſubtract the whole Sine B C; the Remainder will be A B, in ſuch Parts, whereof B C is 10000000.—Then ſay, as 10000000 is to the Value of A B in ſuch Parts; ſo is the Semidiameter of the Earth B C 19695359, to the Value of the *Altitude* A B in *Paris* Feet.

The Sun's *Altitude* may alſo be found without a Quadrant, or any the like Inſtrument, by erecting a Pin or Wire perpendicularly, as in the Point C, (Tab. *Aſtronomy*, Fig. 62.)

62.) from which Point you had deſcrib'd the Quadrantal Arch A F. Make C E equal to the Height of the Pin or Wire, and thro' E draw E D parallel to C A, and make it equal to C G, the length of the Shadow; then will a Ruler, laid from C to D, interſect the Quadrant in B; and B A is the Arch of the Sun's *Altitude*, when meaſur'd on the Line of Chords. See CHORD.

Suppoſe, *e. g.* the *Altitude* be required of a Tower A B, whoſe Top is viſible at the Diſtance of five Miles: Then will D C B 20′, from whoſe Secant 10000168, ſubtracting the whole Sine 10000000; the Remainder A B is 168, which will be found 331 *Paris* Feet.

ALTITUDE *of the Eye*, in Perſpective, is a right Line let fall from the Eye, perpendicular to the geometrical Plane.

ALTITUDE, in Aſtronomy, is the Diſtance of a Star, or other Point in the Mundane Sphere, from the Horizon. See SPHERE, HORIZON, DISTANCE, &c.

This *Altitude* may either be *true* or *apparent*.—If regard be had to the rational, or real Horizon; the *Altitude* is ſaid to be *true* or *real*: If to the apparent, or ſenſible Horizon; the *Altitude* is *apparent*.—Or rather, the *apparent Altitude* is ſuch as it appears to our Obſervation; and the *true*, that from which the Refraction has been ſubtracted. See TRUE, APPARENT, &c.

The *Altitude* of a Star, or other Point, is properly an Arch of a Vertical Circle, intercepted between the aſſigned Point and the Horizon. See VERTICAL.—Hence,

*Meridian* ALTITUDE.—The Meridian being a vertical Circle; a *Meridian Altitude*, that is, the *Altitude* of a Point in the Meridian, is an Arch of the Meridian intercepted between it and the Horizon. See OBSERVATION.

*To obſerve the Meridian* Altitude *of the Sun, of a Star, or other Phænomenon, by means of the Quadrant*, ſee MERIDIAN *Altitude*.

*To obſerve a Meridian* Altitude *by means of a Gnomon*, ſee GNOMON.

ALTITUDE *of the Pole*.—Since the Meridian paſſes thro' the Poles of the World; the *Altitude of the Pole*, is an Arch of the Meridian, intercepted between the Pole and the Horizon.

*To obſerve the* Altitude *or Elevation of the Pole*, ſee ELEVATION, and POLE.

The *Altitude of the Pole* coincides with the Latitude of the Place. See LATITUDE.

ALTITUDE *of the Equator*, is the Complement of the Altitude of the Pole to a Quadrant of a Circle. See ELEVATION *of the Equator*.

*To find the* ALTITUDES *of the Sun, Stars*, &c. *by the Globe*. See GLOBE.

ALTITUDE *of the Nonageſimal*, is the *Altitude* of the 19th Degree of the Ecliptic, reckon'd from the Eaſt Point. See NONAGESIMAL.

*Refraction of* ALTITUDE, is an Arch of a Vertical Circle, as S *s*, (Tab. *Aſtronomy*, Fig. 28.) whereby the *Altitude* S E, of a Star or other Body, is increas'd by means of the Refraction. See REFRACTION.

*Parallax of* ALTITUDE, called alſo ſimply *Parallax*; is the difference C B, (Tab. *Aſtron.* Fig. 27.) between the true and apparent Place of a Star; or, the Difference B C, between the true Diſtance of a Star A B, and the obſerved Diſtance A C, from the Zenith A.

The Parallax diminiſhes the *Altitude* of a Star, or increaſes its Diſtance from the Zenith.

*To find the Parallax of* Altitude, &c. ſee PARALLAX.

ALTITUDE *of a Figure*, in Geometry, is the Diſtance of its Vertex, from its Baſe; or the length of a Perpendicular let fall from the Vertex to the Baſe. See FIGURE, BASE, and VERTEX.

Thus, K M, (Tab. *Geometry*, Fig. 19.) being taken for the Baſe of the Rectangle-Triangle, K L M: the Perpendicular K M, will be the *Altitude* of the Triangle.

Triangles of equal Baſes and *Altitudes*, are equal; and Parallelograms, whoſe Baſes and Altitudes are equal to thoſe of Triangles, are juſt double thereof. See TRIANGLE, PARALLELOGRAM, &c.

ALTITUDE *of Motion*, is a Term uſed by Dr. *Wallis*, for the Meaſure of any Motion, eſtimated according to the Line of Direction of the moving Force. See MOTION.

ALTO *& Baſſo*, or *in* ALTO *& in Baſſo*, in Law, ſignifies the abſolute Reference of all Differences, ſmall and great, high and low, to ſome Arbitrator or indifferent Perſon.——*Pateat univerſis per præſentes quod Willielmus Tylar de Yetton, & Thomas Gower de Almeſtre, poſuerunt ſe in* Alto *& in Baſſo, in arbitrio quatuor Hominum*, viz.—*de quadam querela pendente inter eos in curia. Nos & terram noſtram Alte & Baſſe ipſius domini Regis ſuppoſuimus voluntati.* Du Cange.

ALUDELS, in Chymiſtry, *Subliming-Pots*. See SUBLIMATION.

*Aludels*, are a Range of earthen Tubes, or Pots without bottoms; fitted, one over another, and diminiſhing as they advance towards the Top.—The loweſt is adapted to a Pot, placed in the Furnace, wherein the Matter to be ſublimed is lodg'd.—And at the Top is a Head, to retain the Flowers which aſcend. See FLOWER.

ALVEARIUM, in Anatomy, the bottom of the Concha, or hollow of the Auricle. See AURICLE, and CONCHA.

The *Alvearium Auriculæ* terminates at the *Meatus Auditorius*. See MEATUS.

The Word literally ſignifies *Bee-hive*, form'd of *Alveus*, Channel.

ALVEOLI, in Anatomy, little Sockets in the Jaws, wherein the Teeth are ſet. See TEETH, and JAW.

The *Alveoli* are lined with a Membrane of exquiſite Senſe, which ſeems to be nervous, and is wrapt about the Roots of each Tooth; from whence, and the Nerve, proceeds that Pain called *Odontalgy*, or Tooth-ach. See ODONTALGY, and TOOTH-ACH.

ALVIDUCA, a Term uſed by ſome Writers for *looſening Medicines*. See PURGATIVE, &c.

The Word is compounded of *Alvus*, and *duco*, I draw.

ALUM, ALUMEN. See ALLUM.

ALVUS, among Anatomiſts, is ſometimes uſed to expreſs the inteſtinal Tube, from the Stomach to the Anus. See INTESTINES.

ALVUS, in a Medicinal Senſe, is taken for the State, and Condition of the Fæces, or Excrements contain'd within that Cavity. See EXCREMENT, &c.

Thus, when a Perſon is laxative, it is called *Alvus liquida*; and when coſtive, *Alvus adſtricta*. See COSTIVE, LAXATIVE, &c.

AMABYR, or AMVABYR, in our antient Law-Books.—*Pretium virginitatis domino ſolvendum.—Puella dicitur eſſe deſertum Regis, & ob hoc Regis eſt de ea* Amvabyr *habere*.

The Cuſtom was in honour of *Clun*, and obtained till ſuch time as *Henry* Earl of *Arundel*, *Temp. Phil. & Mar.* in conſideration of 60*l.* releaſed it to all his Tenants there, by the Name of the *Cuſtom of* Amabyr *and Chevage*. See CHEVAGE.

AMAIN, a Sea Term, uſed by a Man of War, to his Enemy; and ſignifying, *yield*.—Hence, *To ſtrike Amain*, that is, to lower your Topſails.

AMALGAM, or AMALGAMA, in Chymiſtry, a Maſs of Mercury, united and incorporated with a Metal. See MERCURY, and METAL.

The *Amalgam* of Mercury with Lead, is a ſoft, friable Subſtance, of a Silver Colour. See LEAD.

By waſhing and grinding this *Amalgam* with fair warm Water in a glaſs Mortar, the Impurities of the Metal will mix with the Water; and by changing the Water, and repeating the Lotion again and again, the Metal will be further and further purified.—*Boerhaave* mentions it as one of the greateſt Secrets in Chymiſtry, to contrive to bring off the Liquor at laſt as clear and unſully'd as when firſt pour'd on the *Amalgam*; which might afford a Method of making the nobler Metals, or procuring them from the Baſer. See TRANSMUTATION, PHILOSOPHER'S *Stone*, &c.

This philoſophical way of purifying Metals, may be applied to all the Metals, except Iron and Copper. See AMALGAMATION.

The Word *Amalgama* is form'd of the *Greek* ἅμα, *ſimul*, together, and γαμέω, *jungere*, to join.

AMALGAMATION, in Chymiſtry, the Operation of making an *Amalgama*; *i. e.* of calcining, or rather diſſolving ſome Metal, eſpecially Gold, by means of Mercury. See AMALGAMA.

*Amalgamation* is performed by fuſing, or at leaſt igniting the Metal; and in this State adding a proportion of Mercury thereto; upon which they mutually attract, and incorporate with each other. See MERCURY.

All Metals, except Iron and Copper, unite and *amalgamate* with Mercury; but Gold with the greateſt facility; Silver the next; then Lead, and Tin. See METAL, &c.

The *Amalgamation* of Gold is uſually perform'd by heating the Laminæ or Plates of Metal red hot; after which, Quickſilver is to be pour'd upon 'em, and the Mixture ſtirr'd with a little Iron Rod, till it begins to riſe into Smoke.—It is then thrown into a Veſſel full of Water, where it coagulates and becomes manageable.

This Calcination is in great uſe among Goldſmiths, and Gilders, who by this means render Gold fluid and ductile for their Purpoſes.—Such Mixture or *Amalgama* being laid on any other Metal, for inſtance, Copper; and this afterwards placed on the Fire to evaporate; the Gold will be left alone on the Surface of the Copper: which makes what we call *Gilding*. See GILDING.

The Blackneſs adhering to the *Amalgama* may be waſhed away with Water; and a deal of the Mercury preſs'd out thro' a linen Cloth: The reſt being evaporated in a Crucible, the Gold remains behind in an impalpable Pouder. See GOLD.

Gold retains about thrice its own weight of Mercury.

This Operation is denoted among Chymiſts by the Letters AAA. See CHARACTER.

AMATORII *Muſculi*, in Anatomy, an Appellation ſometimes given to thoſe Muſcles of the Eyes which give them a Caſt ſideways, and aſſiſt in that particular Look by ſome called Ogling. See EYE.

When the *Abductor* and *Humilis* act together, they give this oblique Motion. See ABDUCTOR, and HUMILIS.

The Word is form'd of the Latin *Amare*, to love.

AMAUROSIS, in Medicine, a Deprivation of Sight; the Eyes remaining fair, and ſeemingly unaffected. See EYE, *&c.*

*Amauroſis* is the ſame with what the *Latins* more uſually call *Gutta Serena*. See GUTTA *Serena*.

The Word is *Greek*, ἀμαύρωσις, q. d. *Darkneſs*; form'd of ἀμαυρόω, *obſcuro*.

AMAXOBII, AMAXOBIANS, or HAMAXOBIANS, in antient Geography, a kind of People who had no Houſes, nor even Tents; but lived altogether in Chariots. See HAMAXOBIANS.

The Word is compounded of ἅμαξα, *a Chariot*, and βιος, *vita*, Life.

AMAZON, in Antiquity, a Term ſignifying a bold, courageous Woman; capable of daring, hardy Atchievements. See VIRAGO, HEROINE, *&c.*

The Word is borrow'd from the *Amazons*, a Nation of warlike Women, in *Scythia*, inhabiting near the *Tanais*; who liv'd without Men, and had only to do with Strangers; killing their Male Children, and cutting off the left Breaſts of their Females, to make them more fit for the Combat.

'Tis from this laſt Circumſtance that they take their Name, *viz.* from the Privative α, and μάζος, *Mamma*, Breaſt.

'Tis a Point controverted even among antient Writers, whether ever there really were ſuch a Nation of *Amazons*.—*Strabo*, *Palæphatus*, and others, abſolutely deny it: on the contrary, *Herodotus*, *Pauſanias*, *Diodorus Siculus*, *Trogus Pompeius*, *Juſtin*, *Pliny*, *Mela*, *Plutarch*, &c. expreſly aſſert it.

*Hippocrates* mentions a Law among 'em, whereby they were doom'd to remain Virgins, till ſuch time as they had ſlain three Men of their Enemies.—He adds, that the Reaſon of their cutting off the right Breaſt, was to make the right Arm the ſtronger; as ſuppoſing this would now receive the Nutriment, which wou'd otherwiſe have gone to that.

Some Authors relate, that inſtead of killing, they twiſted the Legs of their Male Children; to prevent their being able to contend with 'em for the Maſtery.

M. *Petit*, a *French* Phyſician, publiſh'd a *Latin* Diſſertation in 1685, to prove that there really was a Nation of *Amazons*: It contains abundance of curious Inquiries, relating to their Habit, their Arms, the Cities built by 'em, *&c.*—On Medals, the *Amazons* Buſt is uſually arm'd with a little Ax, bore on the Shoulder, and a Buckler, in form of a Half-Moon, by the *Latins* called *Pelta*.

Some modern Geographers and Travellers mention *Amazons* ſtill in being.—*John de los Sanctos*, a *Portugueſe* Capuchin, in his Deſcription of *Ethiopia*, ſpeaks of a Race of *Amazons* in *Africa*. And *Æneas Sylvius* gives us a very preciſe Account of a Republick of real *Amazons*, in *Bohemia*, which laſted nine Years; founded by the Courage of a Maid named *Valaſca*.

AMBAGES, a *Latin* Term for a *Circumlocution*; or, an indirect Diſcourſe or Diction, tending to expreſs or ſhew ſomething by a Compaſs of Words or Sentiments fetch'd from afar. See CIRCUMLOCUTION.

AMBARVALIA, in Antiquity, a Feaſt, or Ceremony among the *Romans*; celebrated annually, to procure of the Gods a happy Harveſt. See FEAST, *&c.*

At theſe Feaſts, they ſacrificed a Bull, a Sow, and a Sheep; which, before the Sacrifice, were led in Proceſſion around the Fields; whence the Feaſt took its Name: from the *Greek* αμφι, *about*; or the Latin *ambio*, I go round, and *arvum*, Field.—Tho, *Scaliger* writes it *Ambarbalia*; and deduces it from *ambire urbem*, to go round the City.

From the Beaſts offer'd in Sacrifice, the Ceremony was alſo called *Suovetaurilia*. See SUOVETAURILIA.

'Tis not certain whether this Feaſt was fix'd, or moveable; nor whether it was celebrated once, or twice a year; Authors being of different Opinions on both thoſe Heads.

The *Ambervale Carmen*, was a Prayer preferr'd on this Occaſion; whereof we have the Formula preſerved in *Cato*, C. 141. *de Re Ruſtica*.

The Prieſts who chiefly officiated at the Solemnity, were called *Fratres Arvales*. See ARVALES.

AMBASSADOR. See EMBASSADOR.

AMBE, in Anatomy, a ſuperficial Jutting out of a Bone. See BONE.

The Word is alſo uſed as the Name of a Chirurgical Inſtrument, with which they reduce diſlocated Bones.

AMBER, SUCCINUM, CARABE or KARABE, GLESSUM, ELECTRUM, CHRYSOLECTRUM, in Natural Hiſtory, *&c.* a yellow tranſparent Subſtance, of a gummous or bituminous Form and Conſiſtence, but a reſinous Taſte, and a ſmell like Oil of Turpentine; chiefly found in the *Baltick* Sea, along the Coaſts of *Pruſſia*, &c.

Naturaliſts are infinitely divided as to the Origin of *Amber*, and what Claſs of Bodies it belongs to: ſome referring it to the Vegetable, others to the Mineral, and ſome even to the Animal Kingdom.—Its Natural Hiſtory, and its Chymical Analyſis, afford ſomething in favour of each Opinion.

*Pliny* deſcribes it as "a reſinous Juice, oozing from aged "Pines, and Firs; (others ſay, from Poplars, whereof there "are whole Foreſts on the Coaſts of *Sweden*;) and diſ-"charged thence into the Sea; where undergoing ſome Al-"teration, it is thrown in this form upon the Shores of "*Pruſſia*; which lie very low: They add, that it was hence "the Antients gave it the Denomination *Succinum*; from "*Succus*, Juice." *Nat. Hiſt.* Lib. XXXVII.

This Opinion of the antient Naturaliſt, is confirmed by the Obſervations of many of the modern ones; particularly the learned Father *Camelli*. *Philoſoph. Tranſact.* N° 290.

Some have imagin'd it a Concretion of the Tears of Birds; others, the Urine of a Beaſt; others, the Scum of the Lake *Cephiſide*, near the *Atlantick*; others, a Congelation form'd in the *Baltick* Sea, and in ſome Fountains where it is found ſwimming like Pitch.

Others ſuppoſe it a Bitumen, trickling into the Sea from ſubterraneous Sources; there concreted into this form, and thrown aſhore by the Waves.

This laſt Opinion was a long time the moſt popular; and ſeem'd to have the beſt Ground: but this, too, is now diſcarded; as good *Amber* having been found in digging at a conſiderable diſtance from the Sea, as that gathered on the Coaſt.

Others ſuppoſe *Amber* a compound Subſtance.—*Pruſſia*, ſay they, and the other Countries which produce *Amber*, are moiſten'd with a bituminous Juice, which mixing with the vitriolick Salts abounding in thoſe Places, the Points of thoſe Salts fix its Fluidity, whence it congeals: and the Reſult of that Congelation makes what we call *Amber*; which is more or leſs pure, tranſparent, and firm, as thoſe Parts of Salt and Bitumen are more or leſs pure, and mix'd in this, or that Proportion.

The Chymiſts are as much divided as the Naturaliſts. *Amber* being found by Diſtillation to yield an acid Spirit, which precipitates into a Salt; is inferr'd, by ſome, to be of a mineral Nature; this being a Circumſtance peculiar to that Kingdom, and never found in the Diſtillation of Vegetables: To which may be added, that *Amber* diſſolves in Alcohol, not in Water; melts at the Fire, and is inflammable; which are Characters, that ſeem to refer it to the Claſs of Sulphurs, or Bitumens.

Others, on the contrary, argue it of the Vegetable Kind, from its reſolving into the ſame Principles with Vegetables; *viz.* Water, Spirit, Salt, and Oil.—*Boerhaave* reſembles it to Camphire, which is a concreted Oil of the aromatic Plants of that Country, elaborated by Heat into a cryſtalline Form.

There are ſeveral Indications which diſcover where *Amber* is to be found.—The Surface of the Earth is there cover'd with a ſoft ſcaly Stone; and Vitriol in particular abounds there, which is ſometimes found white, ſometimes reduced into a Matter like melted Glaſs, and ſometimes figur'd like petrify'd Wood.

*Amber* aſſumes all Figures in the Ground; that of a Pear, an Almond, a Pea, *&c.* Among others, there have been found Letters very well formed; and even *Hebrew*, and *Arabick* Characters.—Within ſome pieces of *Amber*, have likewiſe been found Leaves, Inſects, *&c.* included; which ſeems to indicate either that the *Amber* was originally in a fluid State; or that having been expoſed to the Sun, it was ſoften'd, and render'd ſuſceptible of the Leaves, Inſects, *&c.* which came in its way. The latter of theſe ſeems the more agreeable to the Phænomenon, in regard thoſe Inſects, *&c.* are never found in the Centre of the piece of *Amber*, but always near the Surface.

'Tis obſerv'd by the Inhabitants of the Places where *Amber* is produc'd, that all Animals, whether terreſtrial, aerial, or aquatick, are extremely fond of it; and that they frequently find Pieces of it in their Excrements, and in their Bodies when open'd.

The moſt remarkable Property of *Amber*, is, that, when rubbed, it draws or attracts other Bodies to it; and this, 'tis obſerv'd, it does, even in thoſe Bodies which the Antients thought it had an Antipathy to; as oily Bodies, Drops of Water, the Baſiliſk, Sweat of human Body, *&c.* See ELECTRICITY.

Add, that by Friction it is brought to yield Light pretty copiouſly in the dark; whence 'tis reckon'd among the native *Phoſphori*. See FRICTION, PHOSPHORUS, LIGHT, *&c.*

*Amber* is reputed of ſome medicinal Efficacy; being uſed in Suffumigations, to remove Defluxions; and in Pouder, as an Alterant, Abſorbent, Sweetner, and Aſtringent. See SUFFUMIGATION, ABSORBENT, ASTRINGENT, *&c.*

In

In times of Plague, thoſe who work in *Amber* at *Koningsberg* are ſaid to be never infected; whence it is held a Preſervative.—It is eſteem'd a Lithonthriptick Diuretick, and Promoter of the Menſes.

Some diſtinguiſh *Amber* with regard to its Colours, into *yellow*, *white*, *brown*, and *black*.—But the two latter are ſuppoſed of a different Nature and Denomination; the one call'd *Jet*, the other *Ambergreaſe*. See AMBERGREASE.

The white is moſt valued for Medicinal Uſes, as being beſt digeſted, of the moſt odoriferous Smell, and containing the greateſt Quantity of Volatile Salt.—The yellow is moſt prized by thoſe who work it into Beads, and other Toys, by reaſon of its tranſparency.

*Kerkrig* pretends to be Maſter of the Secret of making Coffins of *Amber*, without deſtroying its Tranſparency. 'Tis probable he took the Hint from the *Ethiopians*, who bury their Dead in Glaſſes. An *Ethiopian*, tho black, makes a fine Figure in a Venice Cryſtal; much more would he do in a Cover of yellow *Amber*.

The *Amber* gather'd on the *Pruſſian* Coaſts, yields that Prince a handſome Revenue.—Authors make mention of other Places where it is found, as on the Banks of the *Po*; the Coaſts of *Marſeilles*; and divers Parts of *Aſia*, *Africa*, and even *America*: But *Hartman*, who has wrote the Hiſtory of the *Pruſſian Amber*, *Succini Pruſſici Hiſtoria*, &c. treats all theſe Accounts as Fables, and denies *Amber* to be found any where but in the Northern Countries of *Europe*, *viz.* in *Poland*, *Sileſia*, and *Bohemia*, rarely; *Jutland*, *Holſtein*, *Denmark*, oftener; more frequently ſtill on the Coaſts of *Samogitia*, *Courland*, *Livonia*, and *Pomerania*; but moſt of all, in *Pruſſia*, in the Country called *Sambia*, from *Neve Tiff* to *Urantz Urug*.

The Word is originally *Arabick*, *Ambar*, or *Anbar*, which ſignifies the ſame thing.

*Spirit of* AMBER, is an acid Liquor, procur'd from *Amber*, by pulverizing and diſtilling it by a Sand-heat, with or without the Addition of Tobacco-pipes, Bricks, Sand, &c.

It is chiefly uſed externally in Rheumatick Pains and Aches; and internally, in inveterate Gleets, &c.

*Oil of* AMBER, is a fine, tranſparent, ponderous, yellow Oil; procured after the Spirit, by increaſing the degree of Fire.—This, by Rectification, becomes a good Antihyſteric, and Emmenagogue; being very ſubtile and penetrative.

*Volatile Salt of* AMBER.—The principal Chymical Production of this Subſtance, is a peculiar white, tranſparent, acid Salt; which riſes after the Oil, and fixes in the Neck of the Retort, &c.

It is a good Cephalic, and Detergent: Dr. *Quincy* ſays, it extremely attenuates, cuts, and penetrates the moſt remote and minute Receſſes; and thus ſcours, as it were, the whole nervous Syſtem. Its chief tendency, he adds, is to Secretion; and what it carries along with it, is by Urine. It alſo contributes, with Alexipharmicks, to promote a Diaphoreſis; and is ſcarce ever omitted in Preſcription for chronick Caſes, as Epilepſies, Palſies, &c.

The great Conſumption of this Medicine, and the ſmall Proportion that *Amber* yields of it, occaſions it to be frequently adulterated with Sal Ammoniac, Nitre, Cream of Tartar, Salt of Coral, &c.

*Tincture of* AMBER, is procured by Digeſtion in Spirit of Wine with a Sand-heat. See TINCTURE, and DIGESTION.

It is preſcribed with the ſame Intentions as the *Salt of Amber*.

*Black* AMBER. See JET.

*Liquid* AMBER, is a kind of native Balſam, or Reſin, like Turpentine; clear, reddiſh or yellowiſh; of a pleaſant Smell, almoſt like Ambergreaſe. See RESIN.

It flows liquid, from an Inciſion made in the Bark of a fine large Tree in *New Spain*; but hardens as it grows older into a ſolid form, and is brought to us in Barrels.

It is reputed an excellent Balſam; mollifies, conſolidates, and is good againſt the Sciatica, Weakneſs of the Nerves, &c. See BALM.

AMBER-GREASE, AMBERGRIS, AMBRA-GRISIA, AMBARUM, a fragrant Drug, that melts almoſt like Wax; commonly of a greyiſh or aſh-colour, uſed both as a Perfume and a Cordial.

It is found on the Sea-Coaſts, in ſeveral Countries; as, along the Southern and Eaſtern Parts of *Africa*, *Madagaſcar*, the *Maldives*, ſome Parts of the *Mediterranean*; and in the *Weſt Indies*, about the Iſlands of *Bermudas*, &c. It is of divers Colours, whitiſh, browniſh, ſtreak'd with yellow, blackiſh, &c.

There is a great Variety of Opinions among Naturaliſts with regard to its Origin and Production: To rehearſe 'em all, would make a Volume.—The principal may be reduced to theſe which follow.

1°, Some take it for the Excrement of a Bird, which being melted by the Heat of the Sun, and waſh'd off the Shore by the Waves; is ſwallow'd by Whales; who return it back in the Condition we find it. Or, as *Barboſa* relates, from the *Mooriſh* Inhabitants of the *Maldives*; the Excrements abovemention'd are alter'd and refin'd by lying on the Rocks, expoſed to the Sun, Moon, and Air; from whence they are afterwards waſh'd off by the riſing Sea. They add, that the Whales frequently ſwallow pieces hereof: that thoſe Pieces we meet withal of a black Colour, took that Hue in the Stomach of thoſe Animals; that the brown are ſuch as have floated long on the Water; and the white, ſuch as have only been a ſhort time there, which they value the moſt. *Ramuſio*, Tom. I. fol. 313.

2°, Others ſpeak of it as the Excrement of a Cetaceous Fiſh; becauſe ſometimes found in the Inteſtines, and ſometimes in the Fæces themſelves, of ſuch Animals.—*Juſtus Klobius*, in his Hiſtory of *Amber*, deſcribes the Animal; which he ſays is a Whale, and called the *Trunk*: Adding, that the Sperma Ceti is taken out of the Head of the ſame Creature.—Others, with the *Perſians*, ſuppoſe the Fiſh that yields the *Ambergreaſe*, a Sea-Calf; others, with the *Africans*, a peculiar Species of Fiſh, named *Ambracan*; others a Crocodile, by reaſon its Fleſh is perfumed, &c.

But, to both theſe Hypotheſes it is objected, That we have no Inſtance of any Excrement capable of melting like Wax. Add, that if it were the Excrement of a Whale, it ſhould rather be found in ſuch Places where thoſe Animals abound, as about *Greenland*, &c. than about the *Maldivy* Iſlands, *Soffala*, *Melinda*, *Cape Comorin*, &c. where no Whales are found.

3°, Others take it for a kind of Wax, or Gum, which diſtils from Trees, and drops into the Sea, where it congeals, and becomes *Ambergreaſe*.

4°, Others, and particularly many of the Orientals, imagine it ſprings out of the bottom of the Sea, as Naphtha does out of ſome Fountains.—They add, that the only Springs hereof are in the Sea of *Ormus*, between the *Arabian* and *Perſian* Gulphs. *Edriſſi*, who is of this Opinion, in the firſt Climate of his Geography, mentions pieces of *Ambergreaſe*, on thoſe Coaſts, weighing a full Quintal.—*Paludanus* and *Linſchoot* ſpeak of it as a ſort of Pitch, gradually working up from the bottom of the Sea, and hardening in the Sun.

5°, Others take it for a Sea-Muſhroom, tore up from the bottom by the Violence of Tempeſts; it being obſerv'd, that *Ambergreaſe* is never found but after Storms.

6°, Others aſſert it a Vegetable Production, iſſuing out of the Root of a Tree, whoſe Roots always ſhoot toward the Sea, and diſcharge themſelves into the ſame.—This Account we have in the *Philoſophical Tranſactions*, from one of the *Dutch* Factors at *Batavia*: And the ſame is confirmed by Mr. *Boyle*. *Of Taſtes and Odors*.

7°, Others ſuppoſe it a ſpongious kind of Earth, which the working of the Sea waſhes from off the Rocks, where, being lighter than Water, it floats.—Others are of Opinion that it is a bituminous Matter; that it is at firſt liquid, and runs into the Sea, and that it is there condenſed and reduced into a Maſs.

8°, Laſtly, others maintain, that *Ambergreaſe* is made from the Honey-Combs which fall into the Sea from the Rocks, where the Bees had formed their Neſts.—This Opinion has ſomething of Experience on its ſide, and begins now to be generally allow'd; ſeveral Perſons having ſeen Pieces that were half *Ambergreaſe*, and half plain Honey-Comb: and others, again, having found large Pieces of *Ambergreaſe*, which when broke, Honey-Comb, and Honey too, were found in the middle.

The Pieces frequently ſeem compoſed of divers Strata, laid one over another; with Stones and other Bodies incloſed therein; and the Strata are ſometimes full of little Shells, which ſeem a Species of Concha Anatifera: Whence it may be conjectur'd, that the *Ambergreaſe* has originally been in a fluid State; or at leaſt, that it has been melted; and in that State has form'd it ſelf afreſh, and invelop'd ſuch Bodies as happen'd to be in its way.

It is of conſiderable uſe among Perfumers, who melt it over a gentle Fire, and make Extracts, Eſſences, and Tinctures of it.—It would be of more uſe in Phyſick too, were not its Smell ſo rank and offenſive, and on that account apt to occaſion Vapours.

We have various Inſtances in Authors, of huge Pieces of this Matter: The largeſt that has been known in *Europe*, was brought by the *Dutch Eaſt-India* Company, toward the Cloſe of the laſt Century; and kept in their Houſe for ſome Years. It was almoſt round; meaſured two Foot in Diameter, and weigh'd an hundred eighty two Pounds. The great Duke of *Tuſcany* offer'd fifty thouſand Crowns for it.

AMBER-SEED, or *Musk-ſeed*, is a Seed ſomewhat like the Millet, of a bitteriſh Taſte, and brought dry to us from *Martinico* and *Egypt*.—The *Egyptians* uſe it internally, as a Cordial, to fortify the Heart, Stomach, and Head, and to provoke Luſt.—It gives a grateful Scent to the Breath, after eating; but is not proper for thoſe who are inclinable to Vapours.

AMBI-

AMBIDEXTER, one who uſes both Hands alike, the Left as well as the Right, and this in Caſes where only the Uſe of one is neceſſary.

The Word is form'd from the Latin *ambo*, both, and *dexter*, right hand.—*Hippocrates* obſerves, that this never happens to Women.

In a legal Senſe, *Ambidexter* ſignifies a Juror, *&c.* who receives Money of both Parties, for the giving his Verdict, *&c.* for which he is to forfeit *decies tantum*, ten times as much as he receives. See JUROR.

AMBIENT, a Term applied to ſuch things as incompaſs others round about.

Thus, the Bodies ſituate around any other Body, are called the *Ambient*, and often the *Circum-Ambient* Bodies.

And the whole Body of Air, becauſe it incompaſſes all things on the Face of the Earth, is often by Phyſical Writers called, by way of Eminence, the *Ambient*, or *Ambient Air*. See AIR.

The Word is form'd of the Latin *Ambire*, to incompaſs, go round.

AMBIGENAL *Hyperbola*, in Geometry is that which has one of its infinite Legs inſcribed, and the other circumſcribed. See HYPERBOLA, and CURVE.

AMBIGUOUS, ſomething dubious, obſcure, or which may be taken in different Senſes.—The Word is form'd of the Latin *ambo*, both, and *ago*, I drive; *q. d.* that which keeps the Mind wavering, or in Suſpence; not knowing which ſide to chuſe.

The Anſwers of the antient Oracles were always *ambiguous*. See ORACLE.

AMBIT, of a Figure, in Geometry, is the Perimeter, Circumference, or Sum of all the bounding or incompaſſing Lines, that conſtitute or include it. See PERIMETER, CIRCUMFERENCE, *&c.*

AMBITUS, among the antient *Romans*, ſignified the Act of ſuing, or making Intereſt for Offices.

The Candidates, in this Caſe, went about the City; and into all publick Places, and Aſſemblies, to beg Voices; which was call'd *Ambitus*; *am*, in the antient *Latin*, ſignifying *circum*, about, or around, and *ire*, to go. See CANDIDATE.

AMBLE, AMBLING, in Horſemanſhip, a peculiar kind of Pace, wherein a Horſe's two Legs of the ſame Side, move at the ſame time. See PACE.

The *ambling* Horſe changes Sides at each remove; two Legs of a ſide being in the Air, and two on the ground, at the ſame time: An *Amble* is uſually the firſt natural Pace of young Colts; which, as ſoon as they have Strength enough to trot, they quit.—There is no ſuch thing as an *Amble*, in the Manage; the Riding-Maſters allowing of no other Paces, beſide Walk, Trot, and Gallop: Their Reaſon is, That a Horſe may be put from a Trot to a Gallop, without ſtopping him; but not from an *Amble* to a Gallop, without ſuch Stop; which loſes time, and interrupts the Juſtneſs and Cadence of the Manage. See TROT, GALLOP, *&c.*

There are various Practices and Methods of Diſcipline, for bringing a young Horſe to *Amble*: Some chuſe to toil him in his Foot-pace thro' new-plough'd Lands; which naturally inures him to the Stroke requir'd in the *Amble*. Its Inconveniencies are, the Weakneſs and Lameneſs that ſuch diſorderly Toil may bring on a young Horſe.

Others attempt it by ſudden ſtopping, or checking him in the Cheeks, when in a Gallop; and thus putting him into an Amazedneſs, between Gallop and Trot; ſo that loſing both, he neceſſarily ſtumbles on an *Amble*.—But this is apt to ſpoil a good Mouth and Rein; and expoſes the Horſe to the Danger of an Hoof-reach, or Sinew-ſtrain, by over-reaching, *&c.*

Others prefer *ambling* by Weights, as the beſt way; and to this end, ſome overload their Horſe with exceſſively heavy Shoes; which is apt to make him interfere, or ſtrike ſhort with his hind Feet.——Others ſold leaden Weights about the Fetlock Paſterns; which are not only liable to the Miſchiefs of the former, but put the Horſe in danger of incurable Strains, cruſhing of the Coronet, and breeding of Ring-bones, *&c.*——Others load the Horſe's Back with Earth, Lead, or the like maſſy Subſtance; which may occaſion a Swaying of the Back, overſtraining of the Fillets, *&c.*

Some endeavour to make him *Amble in hand*, ere they mount his Back, by means of ſome Wall, ſmooth Pale or Rail, and by checking him in the Mouth with the Bridle-hand; and correcting him with a Rod on the hinder Hoofs, and under the Belly, when he treads falſe: But this is apt to drive a Horſe to a deſperate Frenzy, ere he can be made to underſtand what they would have of him; and to rear, ſpraul out his Legs, and make other antick Poſtures, which are not eaſily quitted again.

Others think to effect it by a pair of hind Shoes with long Spurns or Plates before the Toes; and of ſuch length, that if the Horſe offers to trot, the hind-foot beats the fore-foot. But this occaſions Wounds of the back Sinews, which often bring on an incurable Lameneſs.

Some attempt to procure an *Amble*, by folding fine, ſoft Liſts ſtrait about his Gambrels, in the Place where he is gartered for a Stiffle Strain; and turn him thus to Graſs for two or three Weeks, and afterwards take away the Liſt.—This is a *Spaniſh* Method, but diſapproved; for tho a Horſe cannot then trot but with Pain, yet the Members muſt be Sufferers; and tho the *Amble* be gain'd, it muſt be ſlow, and unſightly; becauſe attended with a cringing in the hind Parts.

In effect, *Ambling by the Tramel* appears the neareſt to Nature, the beſt and moſt aſſured way. See TRAMEL.

There are divers Errors uſually practis'd in this Method: as, That the Tramel is oft made too long, and ſo gives no Stroke; but makes a Horſe hackle and ſhuffle his Feet confuſedly; or too ſhort, which makes him volt and twitch up his hind Feet ſo ſuddenly, that by Cuſtom it brings him to a String-halt; from which it will ſcarce ever be recover'd. Sometimes the Tramel is miſplaced, and to prevent falling put above the Knee, and the hind Hoof.—In which Caſe, the Beaſt cannot give any true Stroke, nor can the fore-Leg compel the hind to follow it: or if, to evade this, the Tramel be made ſhort and ſtrait, it will preſs the main Sinew of the hind-Leg, and the fleſhy part of the fore Thighs; ſo that the Horſe cannot go without halting before, and cringing behind.

As to the Form of the *Tramel*; ſome make it all of Leather, which is inconvenient; in that it will either ſtretch or break, and thus confound the Certainty of the Operation. In a true Tramel, the ſide-Ropes are to be ſo firm, as not to yield a Hair's-breadth; the Hoſe ſoft, and to lie ſo cloſe, as not to move from its firſt Place; and the Back-band flat, no matter how light, and to deſcend from the Fillets ſo as not to gall.

When the Horſe by being *Trameled* on one ſide, has attain'd to *Amble* perfectly in the Hand; it is to be changed to the other ſide, and that to be likewiſe brought to Rule. When, by this changing from one ſide to another, with a half Tramel, the Horſe will run and *amble* in the Hand, readily and ſwiftly, without Snappering and Stumbling; which is ordinarily done by two or three Hours labour; the whole Tramel is to be put on, with the broad, flat, Back-band, and both ſides tramel'd alike.

AMBLYGONOUS *Angle*, in Geometry, is an obtuſe Angle; or an Angle conſiſting of more than 90 Degrees. See ANGLE, and OBTUSE.

A Triangle is ſaid to be *Amblygonous*, when it has one Angle greater than a right Angle. See TRIANGLE.

The Word is *Greek*; compos'd of ἀμβλὺς, *obtuſe*, and γωνια, *Angle*.

AMBLYOPY, AMBLYOPIA, in Medicine, a Diſeaſe of the Eyes; otherwiſe called *Gutta Serena* and *Amauroſis*. See GUTTA *Serena*, &c.

The Word comes from ἀμβλὺς, *obtuſus*, dull, and ὄπομαι, *video*, I ſee.

AMBO, a kind of Pulpit, or Deſk, antiently uſed in Churches, whereon the Prieſts and Deacons ſtood to read, or ſing part of the Service; and preach to the People. See PULPIT.

It was aſcended by Steps; which occaſioned that part of the Office perform'd there, to be called the *Gradual*. See GRADUAL.

The Term is derived from ἀμβαινω, I mount.—The *Latins* alſo called it *Analogium*; by reaſon they read there.—The *Ambo* was mounted upon two Sides; and hence ſome derive the Appellation, from *ambo*, both.

The Goſpel was read at the Top of the *Ambo*; the Epiſtle a Step lower.

AMBROSIA, in the Heathen Theology, *&c.* a delicious kind of Food, whereon the Gods were ſuppoſed to feed. See GOD.

*Lucian*, rallying theſe poetical Gods, tells us, that *Ambroſia* and *Nectar*, of which one is the Meat, and the other the Drink of the Gods, were not ſo excellent as the Poets deſcribe them; ſince they would leave them for Blood and Fat, which they come to ſuck from the Altars like Flies.

The Word is compounded of the Privative Particle α, and βρότος, *Mortal*; in regard it render'd thoſe who fed thereon immortal, or was the Food of the Immortals.

AMBROSIAN, in Church Hiſtory.—We frequently read of the *Ambroſian Rite*, the *Ambroſian Office*, &c. denoting a particular Office, or Formula of Worſhip, uſed in the Church of *Milan*; which is ſometimes alſo called the *Ambroſian* Church. See RITE, OFFICE, *&c.*

We alſo meet with the *Ambroſian* Chant, or *Song*; which was diſtinguiſh'd from the *Roman*, in that it was ſtronger and higher.

The Term takes its riſe from St. *Ambroſe*, Archbiſhop of *Milan* in the IVth Century, who is uſually ſuppoſed to have been the Author of this Office. Yet ſome are of Opinion, the Church of *Milan* had an Office different from that of

the *Roman*, and other Churches of *Italy*, before the Time of that Father. In effect, till the Time of *Charlemaign*, each Church had its ſeveral Office: And when in after-Days the Pope took on him to impoſe the *Roman* Office on all the other Churches of the Weſt; that of *Milan* ſhelter'd it ſelf from the Impoſition, under the Name and Authority of St. *Ambroſe*; from which Time, the Phraſe *Ambroſian Rite* has obtain'd, in contradiſtinction to the *Roman* Rite.

The publick Library of *Milan*, is alſo called the *Ambroſian Library*. See LIBRARY.

AMBRY, or ARMORY, the Place where the Arms, Plate, Veſſels, and every thing belonging to Houſe-keeping were kept.

Hence, probably the *Ambry* at *Weſtminſter*, was ſo called, becauſe formerly ſet apart for that uſe; or rather, from *Aumonery*, a Houſe adjoining to an Abbey, in which the Charities were laid up, and diſtributed to the Poor. See ALMS.

AMBULATION, or *Walking*. See EXERCISE.

AMBULATION, in Phyſick, is uſed by ſome for the ſpreading of a Gangrene, or Mortification. See GANGRENE, *&c.*

AMBULATORY, a Term antiently applied to ſuch Courts, *&c.* as were not fixed to any certain Place; but held ſometimes in one Place, and ſometimes in another.—In oppoſition to *Sedentary* Courts. See COURT, and SEDENTARY.

The Court of Parliament was antiently *Ambulatory*; ſo were the Courts of King's Bench, *&c.* See PARLIAMENT, KING'S-*Bench*, &c.

The Word is form'd of the Latin *ambulare*, to walk.

We ſometimes alſo ſay, in a Moral Senſe, a Man's Will is *Ambulatory*, to the Time of his Death; meaning, that he has it always in his Power to revoke it.

AMBURBIA, or AMBURBALE *Sacrum*, in Antiquity, a Religious Feaſt, or Ceremony, practiſed among the *Romans*, wherein they made Proceſſions around their City.

The Word is compoſed of *ambio*, I go round; or of *amb*, or *ambu*, an antient Prepoſition, ſignifying *around*, and *urbs*, City.

Hence, alſo, we have *Amburbiales Victimæ*, the Victims carried along in the Proceſſion; and afterwards ſacrific'd.

*Scaliger*, in his Notes on *Feſtus*, maintains the *Amburbia* to be the ſame with *Ambarvalia*. See AMBARVALIA.

AMBUSCADE, AMBUSH, AMBUSHMENT, a Body of Men, who lie hid in a Wood, *&c.* to ruſh out upon, or incloſe an Enemy unawares.—Or, the Place wherein ſuch a Corps hide themſelves.

AMBUSTIO, in Medicine, a *Burn*: See BURN, and BURNING.

AMEL, or *Enamel*. See ENAMEL.

AMEN, a Church Term, uſed as the Concluſion of all ſolemn Prayers, *&c.* and ſignifying, *ſo be it*, or *fiat*.

The *Hebrews* had four kinds of *Amen*.—That juſt mention'd they called *Amen paſt*; which was accompany'd with the greateſt Attention, and Devotion: In this Senſe, the Word has paſs'd into almoſt all Languages, without any Alteration.

Some Authors are of Opinion, that the Word *Amen* is formed of the initial Letters of theſe Words, *Adonai Melech Neeman*, *Dominus Rex Fidelis*; an uſual Expreſſion among the *Jews*, when they would give Weight or Sanction to any thing they ſaid. In effect, 'tis known, that to expreſs the Words אדוני מלך נאמן *Adonai Meelech Neeman*, in the ordinary way of Abbreviatures; the Rabbins only take the initial Letters, which joined together, are really the Letters of the Word אמן *Amen*. See ABBREVIATURE.

On the other hand, there are ſome of their Cabbaliſts, who, according to their uſual manner of finding hidden Meanings in Words, which they call *Notaricon*; out of the Letters of the Word *Amen*, form the whole Phraſe, *Adonai Melech Neemen*. See NOTARICON.

Yet, 'tis certain alſo, that the Word *Amen* was in the *Hebrew* Tongue, before ever there were any ſuch things as Cabbala or Cabbaliſts in the World: as appears from *Deuteronomy*, Chap. XXVII. ver. 15. See CABBALA, *&c.*

The Primitive of the Word *Amen*, is the Verb *aman*, which, in the paſſive Voice, ſignifies to be true, faithful, conſtant, *&c.*—Hence came the Noun אמן *Amen*, which ſignifies, *Truth*.

And, laſtly, of this Noun *Amen* they made a kind of affirmative Adverb, which, when placed at the End of any Phraſe or Propoſition, ſignifies, *So be it*, *Be it true*, *I acquieſce in it*, &c.

Thus, in the Paſſage above cited from *Deuteronomy*, *Moſes* ordered the Levites to cry aloud to the People, *Curſed is he that makes any graven or molten Image*, &c. and all the People ſhall ſay, *Amen*; i. e. *Yes*, *May he be curſed*, *We deſire*, *we agree to it*.—But at the beginning of a Phraſe, as in ſeveral Paſſages of the New Teſtament, it ſignifies *Truly*, *Verily*.—When it is redoubled, or repeated twice together, as is always done by St. *John*, it has the Effect of a Superlative, agreeably to the Genius of the *Hebrew* Tongue, and her two Daughters, the *Chaldee* and *Syriack*.—In this Senſe we are to underſtand *Amen*, *Amen*, *dico vobis*. The Evangeliſts uſually preſerve the *Hebrew* Word *Amen*, in their *Greek* αμην; tho St. *Luke* ſometimes renders it by ἀληθῶς, *truly*, or ναι, *certainly*.

AMEND, or AMENDE, in the *French* Cuſtoms, a *Mulct*, or pecuniary Puniſhment, impoſed by a Sentence of the Judge; for any Crime, falſe Proſecution, or groundleſs Appeal. See MULCT, PUNISHMENT, APPEAL, *&c.*

AMENDE *Honorable*, is an afflictive Pain, importing, or carrying with it a Note of Infamy.—As, when the Delinquent is condemned to go naked to the Shirt, a Torch in his Hand, and a Rope about his Neck, into a Church or Auditory; and beg pardon of God, the King, or the Court, for ſome ill deed.

The Phraſe *Amende honorable*, is more peculiarly uſed where a Perſon is condemn'd to come into Court, or into the Preſence of ſome Perſon injured; and make an open Recantation, *&c.*

AMENDABLE, or AMAINABLE, is applied in our Law-Books to a Woman, that is ſuppoſed to be governable by her Husband. See WOMAN, WIFE, *&c.*

AMENDMENT, in Law, the Correction of an Error committed in a Proceſs, and eſpied before Judgment. See ERROR.

If the Error be committed in giving Judgment, *viz.* a wrong Judgment be given, there, they cannot *amend* it; but the Party aggriev'd muſt bring his Writ of Error.—However, where the Fault appears to be in the Clerk who writ the Record, it may be amended.

AMERCEMENT, or AMERCIAMENT, in Law, a Penalty aſſeſſed by the Peers or Equals of the Party *amerced*, for an Offence done; or a pecuniary Puniſhment impoſed upon Offenders, at the Mercy of the Court; and therefore in our Law frequently called *Miſericordia*. See PUNISHMENT, and MISERICORDIA.

There is this ſtated Difference between Fines, and *Amercements*; that Fines are Puniſhments certain, and determined by ſome Statute; but *Amercements* are arbitrary Impoſitions, proportion'd to the Fault, at the Diſcretion of the Court.

*Manwood*, in his *Foreſt Law*, makes another Difference: as if an *Amerciament* were a more eaſy and merciful Penalty, and a Fine a more ſharp and grievous one.

In the *New Terms of the Law*, *Amerciament* is ſaid to be properly a Penalty aſſeſſed by the Peers or Equals of the Party *amerced* for an Offence done; for which he puts himſelf upon the Mercy of the Lord.—The ſame Author mentions an *Amerciament Royal*; and defines it, a pecuniary Puniſhment laid upon a Sheriff, Coroner, or ſuch-like Officer of the King, by Juſtices, for ſome Offence or Abuſe in his Office.

AMETHYST, in Natural Hiſtory, a Precious Stone, of a violet Colour, bordering on Purple. See PRECIOUS *Stone*.

There are three ſorts:—The *Oriental*, which is the hardeſt, the ſcarceſt, and moſt valuable, is of a dove Colour; the *German*, which is of a violet Colour; and that of *Carthagena*, which has the Colour of a Panſy.

There are ſome Orientals alſo of a purple Colour, and others white, and like the Diamond.—There are beautiful ones found in the *Pyreneans*, and in the Mountains of *Auvergne*.

The *Amethyſt* is not extremely hard; but may be cut with a leaden Wheel, ſmear'd with Emery moiſten'd in Water.—It is poliſh'd on a pewter Wheel with Tripoli.—It is eaſily engraven on, either *in Creux* or *Relievo*.

*Plutarch* ſays, the *Amethyſt* takes its Name from its Colour; which, according to him, reſembles that of Wine mix'd with Water; and not from its preventing Drunkenneſs: which, however, was a common Opinion, and gave occaſion to its being hung about the Necks of great Drinkers.—Thoſe who aſcribe this Virtue to the *Amethyſt*, derive its Name from the Privative α, and μεθύσκω, *to inebriate*. See GEM.

AMETHYST, in Heraldry, ſignifies the purple Colour, in the Coat of a Nobleman; which in Gentlemens Eſcutcheons below that degree, is called *Purpure*; and in thoſe of ſovereign Princes, *Mercury*. See PURPLE, and PURPURE.

AMIANTHUS *Lapis*, in Natural Hiſtory, the ſame with *Aſbeſtos*. See ASBESTOS.

AMICTUS, in our antient Writers, the uppermoſt of the ſix Garments worn by Prieſts.

It was tied round the Neck, *Ne inde ad linguam tranſeat mendacium*; and covered the Breaſt and Heart, *Ne vanitates cogitet*.—*Amictus*, *Alba*, *Cingulum*, *Stola*, *Manipulus*, *& Planeta*.

AMIABLE *Numbers*, denote Numbers which are mutually equal to the whole Sum of one another's Aliquot Parts.—Such are the Numbers 284 and 220. See NUMBER.

AMITTERE *Legem Terræ*, a Law-Phraſe, ſignifying, the Forfeiture of the Right of ſwearing in any Court or Cauſe; or to become infamous. See LAW.

This is the Puniſhment of a Champion overcome, or yielding in the Combat; of Jurors found guilty in a Writ of Attaint; and of Perſons outlaw'd. See CHAMPION, COMBAT, JUROR, OUTLAWRY, *&c.*

AMMA, a Girdle, or Truſs uſed in Ruptures; to hinder the Inteſtines from bearing down too much. See RUPTURE, *&c.*

AMMI, or *Semen* AMMEOS, a kind of aromatick Seed, of conſiderable uſe in Medicine; the Produce of a Plant of the ſame Name.

The Seed is brought from the *Levant*: It is found to contain a great deal of eſſential Oil, and volatile Salt; and to be attenuating, aperitive, hyſterick, carminative, cephalick, and alexipharmick being, is one of the four leſſer hot Seeds.—It expels Wind, provokes the Menſes, *&c.*

According to *Lemery*, the Plant takes its Name *Ammeos* from ἄμμος, *arena*; its Seed being very like Grains of Sand.—It is alſo called *Ammi Creticum*, or *Ethiopicum*, to diſtinguiſh it from the vulgar *Ammi*, or Biſhops-weed. It is ſometimes alſo called *Cuminum Ethiopicum*.

AMMON, or HAMMON, in Antiquity, an Epithet given to *Jupiter* in *Lybia*; where was the celebrated Temple of *Jupiter Ammon*.

There has been a great Diſpute about the Origin of this Name.—Some derive it from the *Greek* ἄμμος, *Sand*; in regard the Temple was ſituate in the burning Sands of *Lybia*: Others borrow it from the Egyptian *Anam*, a Ram; as having been firſt diſcover'd by that Animal.—Others will have *Ammon* to ſignify the Sun; and the Horns wherewith he is repreſented, the Sun-beams.

However this be, *Jupiter Ammon* was uſually repreſented under the Figure of a Ram; tho in ſome Medals he appears of a human Shape, having only two Rams Horns growing out beneath his Ears.

AMMONIACK.—*Gum* AMMONIAC; or, as it is ſometimes, tho improperly, called, ARMONIAC, is a kind of Gum, brought from the *Eaſt Indies*; ſuppoſed to ooze from an umbelliferous Plant. See GUM.

It ought to be in dry Drops, white within, yellowiſh without, eaſily fuſible, reſinous, ſomewhat bitter, and of a very ſharp Taſte and Smell, ſomewhat like Garlick.

*Dioſcorides* ſays, it is the Juice of a kind of Ferula growing in *Barbary*; and that the Plant that produces it, is called *Agaſyllis*.

The good *Ammoniac* is of a high Colour, and not mixed with any Scrapings of Wood, Stone, or Sand; it is called θραῦσμα, *Fracture*.—The other, which is full of Stones or Sand, is called φύραμα, that is, *Mixture*.

*Pliny* calls the Tree whence it flows, *Metopion*; and ſays, the Gum takes its Name from the Temple of *Jupiter Ammon*, nigh which the Tree grows.

Some ſay, this Gum ſerved the Antients for Incenſe in their Sacrifices. See INCENSE.

It enters ſeveral medicinal Compoſitions, as an Attenuant, and Detergent, againſt Diſorders ariſing from Viſcidities, and Grumes.—Outwardly applied, it is reſolutive and ſuppurative; and, as ſome ſay, will of it ſelf draw out Splinters, *&c.*

Some diſſolve the Gum in Vinegar, and other Liquors, and call it *Lac Ammoniacum*; much uſed in Aſthmas, and Obſtructions of the Lungs.—But the more uſual form of preſcribing it is in Pills.

AMMONIAC.——*Sal* AMMONIAC, is alſo a kind of Salt; more uſually wrote ARMONIAC. See ARMONIAC.

*Cornu* AMMONIS, in Natural Hiſtory. See CORNU *Ammonis*.

AMMUNITION, in general, ſignifies all ſorts of warlike Stores and Proviſions, more eſpecially Pouder and Ball. See MUNITION.

The Word is form'd of the Latin *Amonitio*, which, according to *Du Cange*, was uſed in the corrupt State of that Language for *Subſiſtence*.

AMMUNITION-*Bread*, is what is provided for, and diſtributed daily to, the Soldiers of an Army or Garriſon.

Such an Officer has ſo many Rations of *Ammunition-Bread*, &c. See RATION.

AMNESTY, or AMNISTY, a General Pardon, which a Prince grants to his Subjects, by a Treaty, or Edict; wherein he declares that he forgets and annuls all that is paſt, and promiſes not to make any farther Inquiry into the ſame. See PARDON.

Such *Amneſties* are uſually practiſed upon Reconciliations of the Sovereign towards his People, after Rebellions, general Defections, *&c.*

Such, *e. g.* was the Act of Oblivion granted at King *Charles*'s Reſtoration.

The Word is derived from the *Greek* ἀμνεσία, *Amneſtia*; which was the Name of a Law of this kind, paſs'd by *Thraſibulus* upon the Expulſion of the thirty Tyrants out of *Athens*.—*Andocides*, an *Athenian* Orator, whoſe Life is written by *Plutarch*, and of whom we have an Edition, of the Year 1575; gives us, in his Oration *upon Myſteries*, a Formula of the *Amniſty*, and the Oaths taken thereupon.

AMNIOS, or AMNION, in Anatomy, the innermoſt Membrane, wherewith the Fœtus in the Womb is immediately inveſted. See FOETUS.

The *Amnios* is a white, ſoft, thin, tranſparent Membrane; making part of the Secundines, and lying next under the Chorion. See SECUNDINE, and CHORION.

It contains a limpid Liquor, like a thin Gelly-broth; with which the Stomach of the Fœtus being always found full, it is ſuppoſed to be the Matter of its Nouriſhment. See NUTRITION.

On its outſide lies the Allantois, or Urinary Membrane. In ſome Subjects, the Urinary Membrane, and Chorion, ſtick ſo cloſe to one another, that they appear to be but one.—It hath all its Veſſels from the ſame Origin as the Chorion. See ALLANTOIS.

The Word is deriv'd from the Greek ἀμνὸς, *a Lamb*, q. d. *Pellis Agnina*.

AMOMUM, a Medicinal Fruit, called alſo *Amomum Racemoſum*, *Amomum Verum*, and *Elaterii Pomum*.

It reſembles the Muſcat Grape; and grows, like it, in Cluſters; is about the bigneſs of a Chich-Pea, round, membranous, and divided into three Cells, which contain ſeveral brown, angular Grains; of a very ſtrong aromatick Taſte, and Smell.

This Fruit is brought from the *Eaſt Indies*; and makes part of the Compoſition of Treacle; and is thought to be the *Siſon*, or *Sinon* of the Antients.

Beſides this, there is likewiſe another paler Seed, which bears the Name, *Amomium*; but neither of them are in much repute in Phyſick.

The Commentators on *Pliny*, and *Dioſcorides*, have never been able to agree upon the antient *Amomum*; the generality of 'em pitch on Fruits different from this.—Some will have the Roſe of *Jericho* paſs for it.——F. *Camelli* is poſitive he has diſcover'd the real *Amomum* of *Dioſcorides*, and that it is the *Tugus*, or *Birao*, or *Caropi*, growing in the *Philippine* Iſlands; the Grains or Berries whereof, are worn by the Natives about their Necks; both on account of their agreeable Odour, and of their ſuppoſed Virtue in preſerving from Infection, curing the Sting of the Scolopendria, *&c.* *Phil. Tranſ.* N° 248.

*Scaliger* is confident, that the *Amomum* of the Antients was not a Fruit; but the Wood it ſelf, which bore ſome reſemblance to a Bunch of Grapes, and was particularly uſed in embalming of Bodies: and hence, ſays he, the Term *Mummy* was given to the Bodies of *Egyptians* embalm'd with it. See MUMMY.

AMORTIZATION, or AMORTISEMENT, in Law, the Act of turning Lands into Mortmain, *i. e.* of alienating or transferring 'em to ſome Corporation, Guild, or Fraternity, and their Succeſſors. See MORTMAIN.

The Term is alſo uſed for the Licence or Privilege which the King or ſuperior Lord grants, to enable ſuch Corporation, *&c.* thus to receive Lands into Mortmain: which otherwiſe they cannot do.—There is ſuppoſed to be ſome Fine, or Acknowledgment paid the King, or the Lord, in Conſideration hereof; to make 'em Satisfaction for ſeveral incidental Dues and Profits, which would have fallen to them in the common way; which are hereby cut off.

This Practice was borrow'd from the *Lex Papiria*, whereby it was forbidden to conſecrate any Land to Religious Uſes, without the Conſent of the People.

The Word is form'd of the French *Amortir*, to extinguiſh, put out, *&c.* See EXTINGUISHMENT.

AMPELITIS, in Natural Hiſtory, a kind of Earth that diſſolves in Oil; uſed to blacken the Eyebrows, and the Hair withal. See EARTH.

AMPHIARTHROSIS, in Anatomy, a neutral or dubious kind of Articulation, diſtinguiſh'd from the *Diarthroſis*, in that it has no apparent Motion; and from the *Synarthroſis*, in its not being abſolutely devoid of Motion. See ARTICULATION, DIARTHROSIS, *&c.*

Such is the Articulation of the Ribs, with the Vertebræ; and that of the Carpus with the Tarſus, *&c.* See VERTEBRÆ, CARPUS, *&c.*

The Word, according to *Dionis*, is deriv'd from ἄμφω, *both*, and ἄρθρωσις, *Articulation*; the *Amphiarthroſis* being compounded of both the other ſorts.—Whence ſome alſo call it, *Diarthroſis-Synarthroidal*.

AMPHIBIOUS, in Natural Hiſtory, a Term applied to a ſort of Animals which live both on Land, and in the Water; that is, which breathe the Air, but paſs part of their Time in the Water, as affording 'em their chief Food. See ANIMAL.

Such are the Frog, Caſtor, Otter, Tortoiſe, Sea-Calf, Crocodile, *&c.*

The *Amphibious* Kind have peculiar Proviſions in their Structure, to fit 'em for ſo various a way of Living; particularly

cularly in the Heart, Lungs, Foramen Ovale, &c. See HEART, FORAMEN *Ovale*, &c.

The Term is ſometimes alſo extended to Men, who have the Faculty of living a long time under Water —We have divers Inſtances of ſuch *Amphibious* Men; the moſt remarkable is of a *Sicilian*, named the *Fiſh Colas*. *Kircher* relates, that by a long Habitude from his youth, he had ſo accuſtom'd himſelf to live in Water, that his Nature ſeem'd to be quite alter'd: So that he lived rather after the manner of a Fiſh, than a Man. See DIVING, PEARL-*Fiſhing*, &c.

The Word comes from the *Greek* ἀμφὶ, *utrinque*, both-ways, and βίος, *Vita*, Life; as living in either Place.

AMPHIBLESTROIDES, in Anatomy, a Tunic, or Coat of the Eye, more uſually called *Retina*. See RETINA.

The Word is *Greek*, ἀμφιβληστροειδὴς, of ἀμφίβληστρον, *Rete*, Net; compounded of ἀμφὶ, *circum*, about, βάλλω, *jacio*, I caſt; and εἶδος, Form; by reaſon of its Net-like Texture: whence the *Latins* alſo call it *Retiformis*.

AMPHIBOLOGY, or AMPHIBOLIA, in Grammar, a Fault in Language, whereby it is render'd obſcure, and liable to be underſtood in a double Senſe.

*Amphibology* is chiefly uſed in reſpect of a Phraſe; as Equivoque is in reſpect of a Word. See EQUIVOQUE, and EQUIVOCATION.

Of this kind was that Anſwer which *Pyrrhus* receiv'd from the Oracle; *Aio Te, Æacida, Romanos vincere poſſe*: Where the *Amphibology* conſiſts in this, that the Words *Te* and *Romanos*, may either of 'em precede, or either of them follow the Words *poſſe vincere*, indifferently. See ORACLE.

The *Engliſh* Language uſually ſpeaks in a more natural manner, and is not capable of any *Amphibologies* of this kind: nor is it ſo liable to *Amphibologies* in the Articles, as the *French* and moſt modern Tongues. See CONSTRUCTION, ENGLISH, ARTICLE, &c.

The Word comes from the *Greek*, ἀμφίβολος, *ambiguous*, and λογὸς, *Diſcourſe*.

AMPHIBRACHIUS, the Name of a Foot in the *Latin* and *Greek* Poetry; conſiſting of three Syllables, the firſt and laſt whereof are ſhort, and that in the middle long. See FOOT, and VERSE.

Such is the Word *Amare*.

The Word comes from ἀμφὶ, *circum*, and βραχὺς, *brevis*, *q. d.* a Foot ſhort at both Ends, and long in the middile.

AMPHICTYONS, AMPHYCTONES, in Antiquity, the Deputies of the Cities and People of *Greece*, who repreſented their reſpective Nations in a general Aſſembly; having a full Power to concert, reſolve, and appoint what they ſhould think fit, for the Service of the common Cauſe.

The *Amphyctones*, in good meaſure, were the ſame with the States General of *Holland*; or rather, with what in *Germany* they call the Diet of the Empire. See STATES, and DYET.

The firſt Aſſembly of this kind, was held by the Direction of *Amphictyon*, the third King of *Athens*, who propos'd by that means to bind the *Greeks* more firmly together; ſo as to render them a Terror to the barbarous Nations their Neighbours.—Theſe met twice a year at *Thermopylæ*, in the Temple of *Ceres*, which was built in a large Plain, near the River *Aſopus*; and were called *Amphictyons* from the Name of their Founder.

*Pauſanias*, in his Liſt of the ten Nations which compos'd that Aſſembly, ſays nothing of the *Achaians*, *Eleans*, *Argians*, *Meſſenians*, &c. *Æſchines* alſo gives an Account of the Cities admitted into it, in his Oration, *De falſa Legatione*.

*Acriſius* inſtituted a new Council of *Amphyctones*, on the Model of the antient ones; who met twice a Year in the Temple of *Delphos*.

Each were indifferently called Ἀμφικτύονες, Πυλαγόραι, Ἱερομνήμονες, and their Aſſembly Πυλαία.

The *Romans* never thought fit to ſuppreſs the Meeting of the *Amphictyons*. *Strabo* even aſſures us, that they met in his Time.

AMPHIDROMIA, in Antiquity, a Feaſt celebrated on the fifth Day after the Birth of a Child. See FEAST.

AMPHIMACER, a Foot in the antient Poetry, conſiſting of three Syllables; the firſt and laſt whereof are long, and that in the middle ſhort. See FOOT, &c.

Such are the Words *Omnium*, *Caſtitas*, &c.

The Word comes from the *Greek* ἀμφὶ, *circum*, and μακρὸς, *longus*, by reaſon both Extremes are long.

AMPHIPOLES, in Antiquity, Archons, or chief Magiſtrates of the City of *Syracuſe*. See ARCHON.

They were firſt eſtabliſh'd by *Timoleon*, after his Expulſion of *Dionyſius* the Tyrant.—They govern'd *Syracuſe* for the Space of 300 Years; and *Diodorus Siculus* aſſures us, they ſubſiſted even in his Time.

AMPHIPROSTYLE, in the antient Architecture, a kind of Temple, which had four Columns in Front, and as many behind. See TEMPLE.

The Word is derived from the *Greek* ἀμφὶ, *about*, πρὸ, *before*, and στύλος, *Column*.

AMPHISCII, in Geography and Aſtronomy, the People who inhabit the Torrid Zone. See ZONE.

They are thus denominated, as having their Shadow turn'd ſometimes one way, and ſometimes another, *i. e.* at one time of the Year to the North, and at another to the South. See SHADOW.

The Word comes from ἀμφὶ, *about*, and σκιὰ, *Shadow*.

The *Amphiſcii* are alſo *Aſcii*. See ASCII.

AMPHISMELA, an anatomical Knife, edg'd on both ſides; from ἀμφὶ, *utrinque*, on both ſides, and μελίζω, *incido*, I cut.

AMPHITHEATRE, a ſpacious Building, either round or oval, having its Area or Arena incompaſſed with Rows of Seats, riſing gradually one over another; with Portico's both within and without-ſide. See AREA and ARENA.

Among the Antients, the *Amphitheatre* was appointed for the exhibiting of Spectacles or Shews to the People: as, the Combats of Gladiators, and thoſe of wild Beaſts. See SPECTACLE, GLADIATOR, &c.

Their Theatre was built in form of a Semicircle, only exceeding a juſt Semicircle by one fourth part of the Diameter; and the *Amphitheatre* was nothing elſe but a double Theatre, or two Theatres join'd together: ſo that the longeſt Diameter of the *Amphitheatre*, was to the ſhorteſt, as 1½ to 1. See THEATRE.

There are *Amphitheatres* ſtill ſtanding at *Rome*, at *Niſmes*, &c.—The *Amphitheatre* of *Veſpaſian*, called the *Coliſeum*, and that at *Verona* in *Italy*, are the moſt celebrated now remaining of all Antiquity. See COLISÆUM.

*Pliny* mentions an *Amphitheatre* built by *Curio*, which turn'd on large Iron Pivots; ſo that of the ſame *Amphitheatre*, two ſeveral Theatres were occaſionally made, whereon different Entertainments were preſented at the ſame time.

The Word is deriv'd from the *Greek* ἀμφὶ, *about*, and θέατρον, *Theatre*; which comes from θεάομαι, *ſpecto*, *contemplor*; ſo that an *Amphitheatre*, ſtrictly ſpeaking, is a Place whence a Perſon may ſee all around him.

AMPHORA, in Antiquity, an earthen Veſſel, which ſerv'd as a kind of liquid Meaſure, among the *Romans*. See MEASURE.

The *Amphora* contained 48 Sextaries; amounting to about ſeven Gallons, *Engliſh* Wine Meaſure.

*Amphora* is alſo a modern Meaſure uſed by the *Venetians*. See MEASURE.

*Suetonius* tells us of a Man who ſtood for the Queſtorſhip, and who drank an *Amphora* of Wine at one Meal, with the Emperor *Tiberius*.

The *Amphora* was ſometimes alſo uſed as a Dry Meaſure, containing three Buſhels; the Standard whereof was kept at *Rome* in the Capitol, to prevent falſe Meaſures. See STANDARD.

AMPLIATION, properly ſignifies an *Enlargement*; but in Law, the Word is uſed to denote a deferring of Judgment till the Cauſe be further examin'd.

AMPLIFICATION, in Rhetorick, part of a Diſcourſe or Speech, wherein a Crime is aggravated, a Praiſe or Commendation heighten'd, or a Narration enlarged by an Enumeration of Circumſtances; ſo as to excite the proper Emotions in the Souls of the Auditors. See ORATION, &c.

Such is that Paſſage in *Virgil*, where, inſtead of ſaying merely that *Turnus* died, he *amplifies* his Death,

*——Aſt illi ſolvuntur frigore membra,*
*Vitaque cum gemitu fugit indignata ſub umbras.*

*Amplification*, according to *Cicero*, is a vehement Argumentation; a forcible Affirmation, that perſwades by moving the Paſſions.

Some Authors define *Amplification*, after *Iſocrates*, to be a Diſcourſe which makes great things of little; or which raiſes and exaggerates little things, ſo as to make 'em appear great.—But in this Senſe, *Amplification* ſhould rather become a Sophiſt or Juggler, than an Orator.

The Maſters of Eloquence make *Amplification* the Soul of Diſcourſe.—*Longinus* ſpeaks of it as one of the principal means which contribute to the Sublime; but cenſures thoſe who define it a Diſcourſe which magnifies Things; this equally agreeing to the Sublime, the Pathetick, &c.—The ſame Author diſtinguiſhes *Amplification* from the Sublime by this, that the latter conſiſts wholly in an Elevation of Words and Sentiments, whereas the former conſiſts alſo in their Multitude: The Sublime is ſometimes found in a ſingle Thought; but *Amplification* cannot ſubſiſt, excepting in Abundance. See SUBLIME.

There is likewiſe a difference between the *Amplification*, and the Proof; in that the one ſerves to clear the Point, and the other to heighten, and exaggerate it. See PROOF.

There are two general Kinds of *Amplification*; the one *of Things*, the other *of Words*.—The firſt is produced in divers manners; as, 1°, by a Multitude of Definitions: Thus it

it is *Cicero amplifies* on Hiſtory: *Hiſtoria eſt teſtis temporum, lux veritatis, vita memoriæ, magiſtra vitæ, nuntia vetuſtatis.* See DEFINITION.—— 2°, By a Multitude of Adjuncts; of which we have a fine Inſtance in *Virgil*'s Lamentation for *Cæſar*'s Death, by enumerating the many Prodigies and Monſters that either preceded or ſucceeded it. ——*Vox quoque per Lucos vulgo exaudita ſilentes, ingens & ſimulacra modis pallentia miris viſa ſub obſcurum noctis; pecudeſque locutæ, infandum, ſiſtunt amnes, terræque dehiſcunt, & mæſtum illachrymat templis ebur, Æraque ſudant.* —3°, By a Detail of Cauſes and Effects.—4°, By an Enumeration of Conſequences.—5°, By Compariſons, Similitudes, and Examples. See SIMILITUDE, *&c.*——6°, By the Contraſt of Antithets, *&c.*

*Amplification* by Words, is effected ſix Ways.——1°, By uſing Metaphors. See METAPHOR.——2°, By Hyperboles. See HYPERBOLE.——3°, By Synonymas. See SYNONYMOUS. ——4°, By ſplendid magnificent Terms; as that of *Horace, Scandit æratas vitioſa naves cura: nec turmas equitum relinquit, ocyor cervis, & agente nimbos, ocyor euro.*—5°, By Periphraſes, or Circumlocutions. See PERIPHRASIS, *&c.*—6°, By Repetition. See REPETITION.

AMPLITUDE *of the Range of a Projectile*, is the horizontal Line ſubtending the Path in which it moved. See PROJECTILE.

AMPLITUDE, in Aſtronomy, an Arch of the Horizon, intercepted between the true Eaſt or Weſt Point thereof, and the Centre of the Sun, or a Star at its riſing or ſetting. See HORIZON, RISING, SETTING, *&c.*

*Amplitude* is of two Kinds; *Eaſtern* or *Ortive*; and *Weſtern*, or *Occiduous*.

*Eaſtern*, or *Riſing* AMPLITUDE, *Amplitudo Ortiva*, is the Diſtance between the Point wherein the Star riſes, and the true Point of Eaſt, wherein the Equator and Horizon interſect. See EAST.

Some call it *Eaſtern*, or *Ortive Latitude*. See LATITUDE.

*Weſtern*, or *Setting* AMPLITUDE, *Amplitudo Occidua*, is the Diſtance between the Point wherein the Star ſets, and the true Point of Weſt in the Equinoctial. See WEST.

The Eaſtern and Weſtern *Amplitude*, are alſo called *Northern*, and *Southern*, when in the Northern and Southern Quarters of the Horizon.

The Complement of the Eaſtern or Weſtern *Amplitude* to a Quadrant, is called the *Azimuth*. See AZIMUTH.

*To find the Sun's or a Star's* Amplitude, *either riſing or ſetting, by the Globe.* See GLOBE.

*To find the Sun's* Amplitude, *trigonometrically; having the Latitude, and the Sun's Declination given.*—Say, As the Co-ſine of the Latitude is to Radius, ſo is the Sine of the preſent Declination to the Sine of the *Amplitude.*— Suppoſe, *e. g.* the Latitude 15° 30′, and the Declination 11° 50′;

| | | | |
|---|---|---|---|
| Then to the Ar.co. of the Co-ſine of | 50° | 30′ | 0,2058503 |
| Add the Sine of | | | 9,3118926 |
| Sum is the Sine of | | | 9,5177429 |

which is the *Amplitude* requir'd.

*Magnetical* AMPLITUDE, is an Arch of the Horizon, contained between the Sun, at his riſing, and the Eaſt or Weſt Point of the Compaſs; or, it is the Difference of the Riſing or Setting of the Sun, from the Eaſt or Weſt Points of the Compaſs. See COMPASS, RISING, SETTING, *&c.*

It is found by obſerving the Sun at his riſing or ſetting, by an *Amplitude* Compaſs. If the Compaſs have no Variation, the *Magnetical Amplitude* will be the ſame as the true one.

AMPUTATION, in Chirurgery, the Operation of cutting off a Limb, or other Part of the Body, with an Inſtrument of Steel. See CHIRURGERY, OPERATION, *&c.*

In Caſes of Mortification, recourſe is frequently had to *Amputation.* See MORTIFICATION, GANGRENE, SPHACELUS, *&c.*

The Method of performing it, in the Inſtance of a Leg, is as follows.—The proper Part for the Operation being four or five Inches below the Knee; the Skin and Fleſh are firſt to be drawn very tight upwards, and ſecured from returning by a Ligature two or three Fingers broad: above this Ligature another looſe one is paſſed, for the Gripe, which being twiſted by means of a Stick, may be ſtraiten'd to any degree at pleaſure. Then, the Patient being conveniently ſituated, and the Operator placed to the inſide of the Limb; which is to be held by one Aſſiſtant above, and another below the Part deſigned for the Operation; and the Gripe ſufficiently twiſted, to prevent too large an Hemorrhage, the Fleſh is, with a Stroke or two, to be ſeparated from the Bone with the Diſmembring-Knife. Then the Perioſteum being alſo divided from the Bone with the Back of the Knife, ſaw the Bone aſunder with as few Strokes as poſſible.—When two parallel Bones are concerned, the Fleſh that grows between them muſt likewiſe be ſeparated, before the uſe of the Saw.

This being done, the Gripe may be ſlacken'd; to give an Opportunity for ſearching for the large Blood-Veſſels, and ſecuring the Hemorrhage at their Mouths, either by the actual Cautery, the Ligature, ſtitching them up, applying Vitriol Buttons, or the like. After this a dry Pledget of Lint, or one dipp'd in Spirit of Wine, and ſprinkled with Diapente, may be applied to the Stump. Then looſen the firſt Ligature, and pull both the Skin and Fleſh, as far as conveniently may be, over the Stump, to cover it; and ſecure them with the Croſs-ſtitch made at the depth of half, or three quarters of an Inch in the Skin.—It remains, to apply over the whole Stump two large Pledgets, dipp'd in Oxycrate and dried, and afterwards charged with Aſtringents; and on theſe to apply a Plaiſter of De-minium, or ſimple Diachylon; and over theſe, an Ox-bladder, wetted in Oxycrate; and over all, a Croſs-cloth pretty tight, ſecured with Rollers.

After all this, the Gripe may be ſlacken'd, ſo as to be made eaſy for the Patient; or even entirely taken away, after he is put to Bed; in which he muſt lie with the Stump ſomewhat raiſed; an Aſſiſtant for 12 or 14 Hours keeping faſt the Dreſſing with his hand, to prevent any violent Hemorrhage.—In three or four Days the Dreſſing may be removed; and proper Digeſtives, mixed with Aſtringents, applied: having an actual Cautery, or ſome powerful Styptick, in readineſs, in caſe of a violent Hemorrhage at the firſt opening.

M. *Sabourin*, Surgeon of *Geneva*, is recorded in the Hiſtory of the Royal Academy of Sciences, *An.* 1702, for an Improvement in the Method of *Amputation*, propoſed to that Academy.—The whole Secret conſiſts in ſaving a piece of Fleſh and Skin, a little lower than the Place where the Section is to be; wherewith the Stump is to be afterwards cover'd.—The Advantages hereof, are, that in leſs than two Days time, this Fleſh unites with the Extremes of the divided Veſſels, and ſo ſaves the Neceſſity either of binding the Ends of thoſe Veſſels with Thread, or of applying Cauſticks or Aſtringents; which are Methods very dangerous, or at leaſt very incommodious. Add, that the Bone thus cover'd up, does not exfoliate.

AMSDORFIANS, in Church-Hiſtory, a Sect of Proteſtants, in the XVIth Century; denominated from their Leader *Amſdorf.*

*Sanderus*, *Hær.* 186, repreſents them as maintaining, that good Works were not only unprofitable, but even oppoſite and pernicious to Salvation.—The *Amſdorfians* were rigid Confeſſioniſts.

AMULET, AMULETUM, a kind of Medicament, hung about the Neck, or other part of the Body; to prevent, or remove Diſeaſes.

The Word *Amulet* is form'd of the Latin *Amoletum, Amolimentum*; of *amoliri*, to remove, drive away. See PRESERVATIVE.

Such are Quills of Quick-ſilver or Arſenic, which ſome hang on the Neck, or wear under the Shirt againſt the Plague, and other contagious Diſeaſes; the Blood-ſtones worn by others againſt Hemorrhages; and that wore by the Women of the *Eaſt Indies* to bring down the Menſes.

*Amulets* are frequently no other than a ſort of Spells or Charms; conſiſting of quaint Words and Characters, ſuppoſed to have the Virtue of warding off ill.—*Pliny* makes frequent mention of 'em. See CHARM, *&c.*

The *Greeks* called theſe kind of Remedies φυλακτήρια, *Phylacteries*; περίαπτα, *Periapta*; ἀπόλεσματα, περιχρίσματα, περιάμματα, βρέβια.—The *Latins* call 'em *Amuleta, Appenſa*, &c. See PHYLACTERY, PERIAPTA, *&c.*——The Council of *Laodicea* forbids Eccleſiaſticks to wear ſuch *Amulets* and Phylacteries, on Pain of Degradation. St. *Chryſoſtom* and St. *Jerom* are likewiſe zealous againſt the ſame Practice. *Hoc apud nos*, ſays this laſt Father, *ſuperſtitioſæ mulierculæ, in parvulis Evangeliis & in crucis ligno & iſtiuſmodi rebus quæ habent quidem zelum Dei ſed non juxta ſcientiam, uſque hodie factitant.* See *Kirch.* Oedip. Ægypt.

*Amulets* are now fallen from the great Repute they were antiently in; yet the great Mr. *Boyle* alledges 'em as an Inſtance of the Ingreſs of external Effluvia into the Habit; in order to ſhew the great Poroſity of the human Body.— He adds, that he is perſwaded ſome of theſe external Medicines do anſwer; for that he himſelf having once been ſubject to bleed at the Noſe, and reduced to uſe ſeveral Remedies to check it; found that Moſs of a dead Man's Skull, tho only applied ſo as to touch the Skin till the Moſs was warm thereby, the moſt effectual of any.—A memorable thing of this kind was communicated to *Zwelfer* by the chief Phyſician to the States of *Moravia*, who having prepared ſome Troches of Toads after *Helmont*'s manner, not only found that being worn as *Amulets* they preſerv'd him and his Domeſticks and Friends from the Plague; but, being put on the Plague-Sores of others, they were greatly reliev'd, and even ſaved thereby.

The

The ſame Mr. *Boyle* ſhews how the Effluvia even of cold *Amulets*, may in tract of Time pervade the Pores of a living Animal; by ſuppoſing an Agreement between the Pores of the Skin, and the Figure of the Corpuſcles. *Bellini* has demonſtrated the Poſſibility of the Thing in his laſt Propoſitions, *De Febribus*: And the like is done by Dr. *Wainwright*, Dr. *Keil*, &c. See EFFLUVIA, PORE, SKIN, PLAGUE, *&c.*

AMULET, in Cookery. See OMELET.

AMURCA, in Pharmacy, a Medicine made of the Lees or Sediment of Olives.—It is an Aſtringent. See OLIVE.

AMY, in Law, the Perſon next of kin to an Orphan, or Infant; who is to be intruſted for him: properly called *Prochein Amy*. See PROCHEIN, *&c.*

The Word is *French*, and literally ſignifies *Friend*.

AMYGDALÆ. See ALMONDS.

AMYGDALATE, an Artificial Milk, or Emulſion, made of blanched Almonds, *&c.* See ALMOND.

AMYLUM. See STARCH.

AMYNTICA *Emplaſtra*, in Pharmacy, defenſative, or ſtrengthening Plaiſters.

ANA, or ää, in Medicine, denotes an equal *Quantity* of any Thing, whether in liquid or dry Meaſure. See A.

Hence *Anatica Proportio* is uſed by ſome Writers to ſignify the Ratio, or Proportion of Equality. See EQUALITY, RATIO, *&c.*

ANA, in Matters of Literature, a *Latin* Termination, adopted into the Titles of ſeveral Books in other Languages.——*Ana's*, or *Books in Ana*, are Collections of the memorable Sayings of Perſons of Learning, and Wit; much the ſame with what we otherwiſe call *Table Talk*.

*Wolfius* has given the Hiſtory of *Books in Ana*, in the Preface to the *Caſauboniana*: He there obſerves, that tho ſuch Titles be new, the Thing it ſelf is very old; that *Xenophon*'s Books of the Deeds and Sayings of *Socrates*, as well as the Dialogues of *Plato*, are *Socratiana*: That the Apothegms of the Philoſophers, collected by *Diogenes Laertius*; the Sentences of *Pythagoras*, and thoſe of *Epictetus*; the Works of *Atheneus*, *Stobeus*, and divers others, are ſo many *Ana's*. Even the *Gemara* of the *Jews*, with ſeveral other Oriental Writings, according to *Wolfius*, properly belong to the ſame Claſs. See GEMARA.

The *Scaligeriana* was the firſt Piece that appear'd with a Title *in Ana*. It was compoſed from the Writings of *Vaſſant* and *Verthunian*, who, as 'tis ſaid, took 'em from the Mouth of *Scaliger*, whom they had conſtantly attended a long time. The firſt Edition was in 1666.——Soon after came the *Perroniana*, *Thuana*, *Naudæana*, *Patiniana*, *Sorberiana*, *Menagiana*, *Anti-menagiana*, *Fureteriana*, *Chevræana*, *Leibnitziana*, &c. to *Arlequiniana*.

ANABAPTISTS, a Religious Sect, whoſe diſtinguiſhing Tenet is, That Children are not to be baptized, till they arrive at Years of Diſcretion; as holding it requiſite, that they give a Reaſon of their Faith, before they can receive a regular Baptiſm. See BAPTISM.

The Word is compounded of ἀνὰ, *denuo*, again; and βαπτίζω, *I baptize*; of βάπτω, *I waſh*; it being their Practice to re-baptize ſuch as had been baptized in their Infancy.

There were *Anabaptiſts* even in the Primitive Church; that is, Hereticks who baptized a ſecond time: Such were the *Novatians*, *Cataphrygians*, and *Donatiſts*. See NOVATIAN, CATAPHRYGIAN, and DONATIST.

There were alſo in the IIId Century ſeveral Catholick Biſhops in *Aſia* and *Africa*, who held the Baptiſm of Hereticks invalid; and therefore re-baptized ſuch as were converted to Orthodoxy.

But theſe antient Re-baptiſts were not called *Anabaptiſts*. See RE-BAPTIZER.

In the XIIth Century, the *Waldenſes*, *Albigenſes*, and *Petrobruſſians*, are alſo recorded as of the ſame Belief; but neither was the Denomination given them. See ALBIGENSES, WALDENSES, *&c.*

Thoſe properly called *Anabaptiſts*, are a Sect of Proteſtants, who firſt appeared in the XVIth Century, in ſome Provinces of *Germany*, particularly *Weſtphalia*, where they committed ſeveral Outrages.—They taught, that Baptiſm was not to be conferr'd on Children; that it is unlawful to ſwear, or to bear Arms; that a true Chriſtian cannot be a Magiſtrate, *&c.*

'Tis not known who was the Author of this Sect: Some charge it on *Carloſtad*; others on *Zuinglius*. *Cochlæus* ſays it was *Balthazar Pacimontanus*, who began to teach in 1527; and was burnt, at *Vienna*, ſome time afterwards.—*Mezorius* affirms it was firſt broach'd by *Pelargus*, in 1522; who was ſeconded by *Bodeſtein*, *Carloſtad*, *Weſtenberg*, *Quiccou*, *Didymus*, *More*, &c.

But the common Opinion fathers it on *Thomas Munſter*, or rather *Muncer*, of *Zwickau*, a City of *Miſnia*; and *Nich. Storck*, of *Stalberg* in *Saxony*; two Perſons originally Diſciples of *Luther*, from whom they took occaſion to ſeparate, on pretence that his Doctrine was not perfect enough; that he had only carried the Reformation half-way; and that to arrive at the true eſſential Religion of Chriſt, immediate Revelation muſt be added to the dead Letter of Scripture: *Ex revelationibus divinis judicandum eſſe dicebat, & ex bibliis, Muncerus.*—In effect, if theſe two Perſons were not the firſt Inventors of the Doctrine; they appear, at leaſt, to have been the firſt Teachers, and Propagators thereof. See LUTHERANISM.

*Sleidan* finiſhes the beſt Account of the Origin of the *Anabaptiſts*, in his *Hiſtorical Commentaries.—Luther*, he obſerves, had preach'd up ſo ſtrenuouſly for the Evangelical Liberty; that the Peaſants of *Suabia* flocking together, leagued themſelves againſt the Eccleſiaſtical Powers, on pretence of defending the Evangelical Doctrine, and ſhaking off the Yoke of Servitude: *Obducta cauſa quaſi & Evangelii doctrinam tueri, & ſervitutem ab ſe profligare vellent. Luther* wrote 'em ſeveral Exhortations to lay down their Arms, but in vain: They retorted his own Doctrine upon him; maintaining, that having been made free by the Blood of Jeſus Chriſt, it was injurious to the Name of Chriſtian, that they had hitherto been reputed Servants: *quod huc uſque ſint habiti velut conditione ſervi.* Accordingly, they proclaimed every where, that they only took up Arms, by reaſon they eſteem'd themſelves obliged thereto by Commandment of God.

*Luther* finding all his Exhortations ineffectual, publiſh'd a Book, wherein he invited all the World to take up Arms againſt thoſe Fanaticks, who thus abuſed the Word of God.—He was obliged to write a ſecond, ſoon after, to juſtify his Conduct; which to many appeared too ſevere, and even cruel.

The *Anabaptiſts*, to the Number of forty thouſand, ravaged all the Places wherever they came. *John* of *Leiden*, who headed 'em, declar'd himſelf their King; and never ſtirr'd out or appear'd in publick, without a large Retinue of principal Officers: Two young Men always rode immediately after him, the one bearing in his Hand a Crown, and the other a naked Sword.—Their Pretence was to eſtabliſh the new Reign of Jeſus Chriſt on Earth, by force of Arms; condemning all uſe of Arms for other Purpoſes.

*Calvin* wrote a Treatiſe againſt the *Anabaptiſts*, ſtill extant in his *Opuſcula*.—What they chiefly ſupported their great Doctrine on, was thoſe Words of our Saviour, *He that believes and is baptized, ſhall be ſaved*, Matt. C. XVI. v. 16. As none but Adults are capable of believing, they argued, that no others were capable of Baptiſm: Eſpecially as there is no Paſſage in all the New Teſtament, where the Baptiſm of Infants is clearly enjoined. *Calvin*, and other Writers againſt 'em, are pretty much embarraſs'd to anſwer this Argument; and are obliged to have recourſe to Tradition, and the Practice of the Primitive Church. In this Point they have apparently the Advantage over 'em; mention being made of Infant-Baptiſm by *Origen*; the Author of the Queſtions attributed to *Juſtin*; a Council held in *Africa*, ſpoke of by St. *Cyprian*, where the Baptiſm of Infants immediately after they were born, was expreſly enjoin'd; and ſeveral other Councils, of *Autun*, of *Maſon*, of *Giron*, of *London*, of *Vienna*, &c. beſide other Fathers, as *Ireneus*, *Jerom*, *Ambroſe*, *Auguſtin*, &c.

It muſt be added, that very conſiderable Arguments may be drawn againſt the *Anabaptiſts* even from Scripture: Children, we are told, are capable of the Kingdom of Heaven: *Mark* X. 14; *Luke* XVIII. 16; and our Saviour made ſuch be brought near him, and bleſs'd 'em. Yet, He aſſures us in St. *John* III. 5. that unleſs a Man be baptized he cannot enter the Kingdom of God. Whence it follows, that Children, inaſmuch as they are capable of entering into Heaven, are alſo capable of being baptized.—The *Anabaptiſts* anſwer, that thoſe here ſpoke of by our Saviour, were grown big, ſince they could come to him; and conſequently were capable of an Act of Faith: But this is contrary to the expreſs Terms of Scripture, which in St. *Matthew* and St. *Mark*, calls 'em παιδία; and in St. *Luke*, βρέφη, *little Children*: The ſame St. *Luke* writes, that they were *brought* to Jeſus; which is a Preſumption that they were not yet able to walk.

Another Argument much inſiſted on, is drawn from theſe Words of St. *Paul* to the *Romans*, C. V. "If by one Man's "Offence Death reign'd; much more they who re-"ceive abundance of Grace and of the Gift of Righteouſ-"neſs, ſhall reign in Life by one, Jeſus Chriſt." For, if all become criminal by one; then are Children criminal: Conſequently, if all are juſtified by one, then are Children juſtified: But this cannot be without Faith. And conſequently Children may have the Faith required for the receiving of Baptiſm, *i. e.* an Actual Faith, preceding the Sacrament, as a Diſpoſition requiſite thereto. This Faith they have, not of themſelves; but by others, *viz.* their Parents, or their Godfathers and Godmothers, who anſwer for 'em. Nor is there any thing in the whole Diſpenſation, but what is very equitable: It being but juſt, that as they had ſinned in the Will of another, they might alſo be juſtified by the Will of another.

The *Anabaptiſts* adopted ſeveral other Dogmata from the *Gnoſticks*, &c. touching the Incarnation, *&c.* But thoſe who now retain the Name, have abandoned the greateſt Part thereof; and in lieu of the Fanatick Zeal of the antient Founders of the Sect, have given into an Exemplary Simplicity in their Actions, Diſcipline, Dreſs, *&c.* not much unlike the modern Quakers. See QUAKERS.

As they multiplied, they divided into a great number of Sects; which took particular Denominations, either from the Leaders thereof, or the peculiar Opinions, which they ſuperadded to the general Syſtem of *Anabaptiſm.*—The principal were the *Muncerians*, *Catharists*, *Enthuſiaſts*, *Silentes*, *Adamites*, *Georgians*, *Independants*, *Hutites*, *Melchiorites*, *Nudipedalians*, *Mennonites*, *Bulcholdians*, *Auguſtinians*, *Servetians*, *Monaſterians*, *Libertins*, *Deoreliotians*, *Semperorantes*, *Polygamites*, *Ambroſians*, *Clancularians*, *Manifeſtarians*, *Bacularians*, *Pacificators*, *Paſtoricides*, *Sanguinarii*, &c.

ANABASII, in Antiquity, the Couriers who travel'd on Horſeback, or in Chariots. See COURIER, and POST.

The Word comes from the *Greek* ἀναβατις, *adſcenſus*, mounting.

ANABIBAZON, in Aſtronomy, the *Dragon's Head*; or the Northern Node of the Moon, where ſhe paſſes the Ecliptick from South to North Latitude. See DRAGON, and NODE.

ANABROSIS, in Medicine, the iſſuing of Blood at a Hole wore in a Vein by Corroſion.——The Word is *Greek*, ἀνάβρωσις, *eroſio.*

ANACALYTERIA, in Antiquity, Feaſts celebrated among the Heathens, on the Day that the Bride was permitted to lay aſide her Veil, and to be ſeen in publick. See FEAST, MARRIAGE, *&c.*

They were thus called from the *Greek* ἀνακαλύπτειν, *to diſcover, uncover.*

ANACAMPTICK, ſignifies as much as *Reflecting*; and is frequently uſed in reference to Echoes, which are ſaid to be Sounds produced *anacamptically*, or by Reflexion. See REFLECTION, SOUND, and ECHO.

Hence alſo *Anacampticks* is by ſome uſed for *Catoptricks*, See CATOPTRICKS, PHONICKS, *&c.*

ANACATHARTIC, is underſtood of a purging Medicine, that works upwards. See PURGATIVE.

The Word comes from ἀνα, *ſupra*, upwards; and καθαιρω, *purgo*, I purge.

ANACEPHALEOSIS, in Rhetorick, a Recapitulation; or a ſhort and ſummary Repetition of what has been ſaid. See RECAPITULATION.

The Word comes from the *Greek* ἀνα, which in Compoſition ſignifies *Repetition*, and κεφαλὴ, *Head.*

ANACHORET, or ANCHORET. See ANCHORET.

ANACHRONISM, in Matters of Chronology, an Error in Computation of Time; whereby an Event is placed earlier than it really happen'd. See TIME, and CHRONOLOGY.

Such is that of *Virgil*, who places *Dido* in *Africa* at the Time of *Æneas*; tho, in reality, ſhe did not come there till 300 Years after the taking of *Troy.*—An Error on the other ſide, whereby a Fact is placed later, and lower than it ſhould be, is call'd a *Parachroniſm.* See PARACHRONISM.

The Word is compounded of the *Greek* ἀνα, *ſurſum*, *ſupra*, *retrorſum*, higher, backwards; and χρόνος, *tempus*, Time.

ANACLATICKS, that Part of Opticks which conſiders refracted Light. See REFRACTION.

*Anaclaticks* are the ſame with what we more uſually call *Dioptricks.* See DIOPTRICKS.

ANACLETERIA, in Antiquity, Feaſts celebrated in honour of Kings and Princes, when they took upon them the Adminiſtration of their State, and made a Solemn Declaration thereof to the People.

The Word is form'd of ανα, and καλέω, *voco*, I call.

ANACREONTIC, in the *Greek* and *Latin* Poetry, ſomething invented by *Anacreon*; or in the Manner and Taſte of *Anacreon.*

*Anacreon*, a Poet of *Teios*, who lived upwards of 400 Years before Chriſt, was famous for the Delicacy of his Wit; and the exquiſite, yet eaſy and natural, turn of his Poeſy.—We have ſeveral of his Odes ſtill extant; and few of the modern Poets, but have *Anacreonticks* in Imitation hereof.

They are moſt of 'em compoſed in Verſes of ſeven Syllables; or rather, of three Feet and an half, Spondees and Iambus's, tho ſometimes Anapeſts.—Hence, Verſes in that Meaſure are uſually called *Anacreonticks*, or *Anacreontic Verſes.* See VERSE.

ANADIPLOSIS, in Rhetorick, a Figure, in which one Verſe begins with the ſame Word wherewith the former ended. See FIGURE.

The Word is ſometimes alſo uſed in Phyſick, for a Reduplication of the Fits, or Paroxyſms of Fevers: in which Senſe, ſome Writers alſo call it *Epanadiploſis.*

ANAGLYPHICE, or the ANAGLYPHIC *Art*, ſignifies *Sculpture*; or the Art of Carving, Engraving, Chaſing, and Emboſſing. See SCULPTOR, CARVING, ENGRAVING, ENCHASING, *&c.*

The Word comes from the *Greek* ἀναγλυφω, *exſculpo.*

ANAGOGICAL, *Myſterious*, ſomething that raiſes the Mind to Things eternal and divine; the Matters of the next Life. See ANAGOGY.

This Term is principally uſed with regard to the different Senſes of the Scripture.—The literal Senſe is the firſt, and the natural Senſe: The myſtical Senſe is founded on the natural Senſe, from whence it is taken by Analogy or Compariſon, by Similitude or Reſemblance of one thing to another; and is divided into ſeveral kinds. See MYSTICAL.

Where it regards the Church, and Matters of Religion, it is called the *Allegorical* Senſe. See ALLEGORICAL.

Where it regards our Morals, it is called the *Tropological* Senſe. See TROPOLOGICAL.

And where it regards Eternity, or the Life to come, it is called the *Anagogical* Senſe. See SENSE.

The Word is derived from the *Greek* ἀναγωγὴ, *carrying away, overturning*; which is form'd of the Prepoſition ανα, *ſurſum*, upwards, and αγωγὴ, *leading*; of αγω, *duco.*

ANAGOGY, ANAGOGE, a Rapture, or Elevation of the Soul, to things Celeſtial, and Eternal. See EXTASY, *&c.*

This is not the natural Senſe of ſuch a Paſſage of Scripture, it is an *Anagogy.* See MYSTIC.

We have Comments on the Scripture, which are *Anagogies* throughout. See ANAGOGICAL.

ANAGRAM, ANAGRAMMA, a Tranſpoſal of the Letters of a Name; or a Combination thereof in ſome new manner, ſo as to exhibit one or more Words, either to the Advantage or Diſadvantage of the Perſon to whom it belongs. See NAME.

The Word is form'd from the *Greek* ἀναγεγραφω, *I write backwards.*

Thus, the *Anagram* of *Galenus* is *Angelus*; that of Logica, *Caligo*; that of *Loraine*, is *Alerion*; on which account it was, that the Family of *Lorrain* took *Alerions* for their Armoury.—*Calvin*, in the Title of his Inſtitutions, printed at *Strasburg* in 1539, calls himſelf *Alcuinus*, which is the *Anagram* of *Calvinus*, and the Name of an eminently learned Perſon in the Time of *Charlemaign*, who contributed greatly to the Reſtauration of Learning in that Age. *Barclay*, in his *Argenis*, anagrammatizes *Calvinus* by a leſs creditable Name, *Uſinulca:* and *Rabelais*, to be revenged of the ſame *Calvin*, who had made an *Anagram* of his Name, found in that of *Calvin*, *Jan Cul.*

Such as keep cloſe to the Definition of *Anagram*, take the Liberty to omit or retain the Letter *H*, and that Letter only; but ſuch as ſtand up for the poetical Licence, make bold ſometimes to uſe *E* for *Æ*, *V* for *W*, *S* for *Z*, and *C* for *K*; and *vice verſa.* See ALPHABET.

This way of writing was ſcarce known among the Antients: *Daurat*, a *French* Poet in the Reign of *Charles* IX. is uſually ſaid to be the firſt that broach'd it: Yet *Lycophron*, who wrote under *Ptolemy Philadelphus*, about 280 Years before Chriſt, appears to have been no Stranger to the Art of making *Anagrams.* *Canterus*, in his *Prologomena* to *Lycophron*, gives us two of his Pieces in this Kind; the firſt on the Name of King *Ptolemy*, Πτολέμαιος, in which he found απὸ μέλιτος, *of Honey*; to inſinuate the Sweetneſs and Mildneſs of that Prince: The ſecond was on Queen *Arſinoe*, Ἀρσινόη, of whom he made Ιον Ηρας, *Juno's Violet.*

The Cabbaliſts among the *Jews* are profeſs'd *Anagrammiſts*; the third Part of their Art, which they call *Mura*, *i. e.* changing, being nothing but the Art of making *Anagrams*, or of finding hidden and myſtical Meanings in Names: which they do by changing, tranſpoſing, and differently combining the Letters of thoſe Names.—Thus, of נח the Letters of *Noah*'s Name, they make חן *Grace:* of משיה *the Meſſiah*, they make ישמה *he ſhall rejoice.*

There are two manners of making *Anagrams*; for, 1°, ſome only conſiſt in dividing a ſingle Word into ſeveral: Thus the Ænigma of the God *Terminus*, mention'd by *Aulus Gellius*, Lib. XII. c. 6. is founded on the *Anagram* TER MINUS: and thus *Suſtineamus* yields *ſus tinea mus.*—This Kind alone ſeems to have been uſed among the *Romans.*

The ſecond, is where the Order and Situation of the Letters is changed: Such are thoſe abovemention'd; and alſo theſe, *Roma*, *Maro*, *Amor*; *Julius*, *Livius*; *Corpus*, *Porcus*, *Procus*, *Spurco.*

*To find all the* ANAGRAMS *any Name will admit of, algebraically*, ſee the Article COMBINATION.

The fineſt and happieſt of all the *Anagrams* extant, is that on the Queſtion put by *Pilate* to Jeſus Chriſt; *Quid eſt veritas?* which *anagrammatically* make, *Eſt vir qui adeſt:* The *Anagram*, here, is the beſt, and juſteſt Anſwer that could poſſibly be given.

Beſides,

Beſides the antient kind of *Anagram*, there have been new ones invented; as, the *Mathematical Anagram*, invented in 1680; by which the Abbot *Catelan* found, that the eight Letters of the Name of *Lewis* XIV. made *Vrai Heros*, i. e. *true Hero*.

We are now likewiſe furniſh'd with the *Numerical Anagram*; where the numeral Letters (*i. e.* ſuch as in the *Roman* cyphering ſtood for Numbers) taken together, according to their numerical Values, expreſs ſome Epocha: Of which kind is that Diſtich of *Godart* on the Birth of the late *French* King, in the Year 1638, on a Day wherein there was a Conjunction of the Eagle with the Lion's Heart:

*eXorIens DeLphIn aqVILæ CorDIſqVe LeonIs*
*CongreſſV gaLLos ſpe LætItIaqVe refeCIt.*

ANALECTA, a *Greek* Term, ſignifying *Collection*; form'd of ἀναλέγω, *I gather*.

ANALEMMA, a *Planiſphere*; or Projection of the Sphere, on the Plane of the Meridian, orthographically made, by ſtrait Lines and Ellipſes; the Eye being ſuppoſed to be at an infinite Diſtance, and in the Eaſt or Weſt Points of the Horizon. See PLANISPHERE, PROJECTION, and SPHERE.

ANALEMMA, is alſo uſed for an Aſtrolabe; or kind of Inſtrument, conſiſting of the Furniture of the ſame Projection, drawn on a Plate of Braſs or Wood; with an Horizon or Curſor fitted to it. See ASTROLABE.

Its uſe is for finding the Time of the Sun's riſing and ſetting, the Length of the longeſt Day in any Latitude, and the Hour of the Day.

The *Analemma* is alſo of conſiderable uſe among Dialliſts, for laying down the Signs of the Zodiack, with the Length of Days, and other Matters of Furniture, upon Dials. See DIAL, and FURNITURE.

The Word is derived from the *Greek* ἀνάλημα, of ἀναλαμβάνω, *reſumo*.

ANALEPTICKS, in Medicine, *Reſtoratives*; or Remedies proper to reſtore the Body, when waſted or emaciated, either by the Continuance of a Diſeaſe, or the Want of Food. See RESTORATIVE.

The Word is *Greek*, Ἀναληπτικὸς, derived of Ἀναλαμβάνω, *I re-eſtabliſh, reſtore*.

ANALOGY, a certain Relation, Proportion, or Agreement, which ſeveral Things, in other reſpects different, bear to each other.—Such is that between the Bull in the Heavens, and the Animal ſo called on Earth.

The Word is *Greek*, Ἀναλογία; which the *Latins* uſually render by *Comparatio*, and *Proportionalitas*: And hence, among Geometricians, *Analogy* is frequently uſed for a Similitude of Ratio's; called alſo *Proportion*. See PROPORTION.

Reaſonings by *Analogy* may ſerve to explain and illuſtrate, but not to prove any thing; yet is a great deal of our philoſophizing no better founded. See SIMILITUDE, PHILOSOPHIZING, &c.

In Matters of Language, we ſay, New Words are form'd by *Analogy*, *i. e.* new Names are given to new Things, conformably to the eſtabliſh'd Names of other Things of the like Nature and Kind. See LANGUAGE, and WORD.—— The Difficulties and Obſcurities in a Language, are chiefly to be clear'd up by *Analogy*. See ETYMOLOGY.

The Schoolmen define *Analogy* to be a Reſemblance, join'd with ſome Diverſity: Its Foundation, according to them, is laid in the Proportion of ſeveral Things, conſider'd as that Proportion proceeds upon different Conſiderations. See PROPORTION.

Thus, a *ſound* Animal, a *ſound* Food, and a *ſound* Propoſition, agreeing in this, that they have a common Denomination, but the Reaſon or Quality whereon the Denomination is founded, different; are ſaid to have an *Analogy*, or to be *analogous*.

Accordingly, *Analogous* Things are defined to be ſuch as have a common Name, but the Thing immediately ſignified by that common Name, different; yet with ſome Correſpondence or Relation diſcernible therein. See GENERAL *Term*.

Philoſophers uſually diſtinguiſh three Kinds of *Analogy*, *viz.*—of *Inequality*, where the Reaſon of the common Denomination is the ſame in Nature, but not in Degree or Order: In which Senſe, *Animal* is *analogous* to Man, and Brute.——Of *Attribution*; where, tho the Reaſon of the common Name be the ſame, there is a difference in its habitude or reſpect thereto: In which Senſe, *Healthy* is *analogous* both to a Man, and an Exerciſe.——Of *Proportionality*; where, tho the Reaſons of the common Name do really differ, yet they bear ſome proportion to each other: In this Senſe, the Gills of Fiſhes are ſaid to be *analogous* to the Lungs in terreſtrial Animals: and thus, the *Eye* and the *Underſtanding* are ſaid to bear an *Analogy* to each other.

ANALOGISM, ANALOGISMUS, in Logick, an Argument from the Cauſe to the Effect. See CAUSE, &c.

ANALYSIS, in Logick, a Method of applying the Rules of Reaſoning, to reſolve a Diſcourſe into its Principles; in order to a Diſcovery of its Truth, or Falſhood. See PRINCIPLE.

Or, *Analyſis* is an Examination of ſome Diſcourſe, Propoſition, or other Matter, by ſearching into its Principles, and ſeparating and opening its Parts; in order to conſider them more diſtinctly, and arrive at a more preciſe Knowledge of the Whole. See DISCOURSE, PROPOSITION, REDUCTION, &c.

The Word is *Greek*, ἀνάλυσις, which literally ſignifies, *Reſolution*; form'd of ἀνὰ, and λυω, *ſolvo, reſolvo*, I looſen, I reſolve.

*Analyſis* makes one great Branch or Species of Method; called alſo *Reſolution*. See METHOD, and RESOLUTION.

ANALYSIS, in Mathematicks, a Method of ſolving, or reſolving Mathematical Problems. See PROBLEM.

There are two general Methods of finding Truth in Mathematicks; Syntheſis, and *Analyſis*.—*Analyſis* is the Demonſtration, or Conſideration of the Conſequences drawn from any Propoſition; in which a Man proceeds, till he comes to ſome known Truth, by means whereof, he may be able to give a Solution of the Problem. See RESOLUTION.

The Method of *Analyſis* conſiſts more in the Judgment and readineſs of Apprehenſion, than in any particular Rules, where pure Geometry is made uſe of, as it was among the Antients; but at preſent Algebra is principally uſed on this Occaſion, which furniſhes certain Rules to perform or arrive at the End propoſed. See ANALYTIC.

This Method, under its preſent Improvements, muſt be allowed the Apex or Height of all human Learning; being the great Inſtrument or means whereby ſo many ſurprizing Diſcoveries have been of late Years made, both in Mathematicks, and Philoſophy. It furniſhes the moſt perfect Inſtances, and Examples of the Art of Reaſoning; gives the Mind a ſurprizing Readineſs at deducing and diſcovering Things unknown, from a few *Data*; and by uſing Signs for Ideas, preſents Things to the Imagination, which otherwiſe ſeem'd out of its Sphere. By this, Geometrical Demonſtrations may be wonderfully abridg'd; and a long Series of Argumentations, wherein the Mind cannot without the utmoſt Effort and Attention diſcover the Connection of Ideas, are hereby converted into ſenſible Signs, and the ſeveral Operations requir'd therein, effected by the Combination of thoſe Signs. But what is yet more extraordinary, by means of this Art, a Number of Truths are frequently expreſs'd by a ſingle Line, which in the common way of explaining and demonſtrating Things, would fill whole Volumes: Thus, by mere Contemplation of one ſingle Line, whole Sciences may ſometimes be learnt in a few Minutes time; which otherwiſe could ſcarce be attain'd in many Years. See MATHEMATICKS, KNOWLEDGE, THEOREM, &c.

*Analyſis*, is divided, with regard to its Object, into that of *Finites*, and that of *Infinites*.

ANALYSIS *of finite Quantities*, is what we otherwiſe call *Specious Arithmetick*, or *Algebra*. See ALGEBRA, and *Specious* ARITHMETICK.

ANALYSIS *of Infinites*, called alſo the *New* ANALYSIS, is particularly uſed for the *Method of Fluxions*, or *Differential Calculus*. See FLUXIONS, and CALCULUS.—See alſo INFINITE.

ANALYSIS, is alſo uſed in Chymiſtry, for the decompounding of a mixt Body; or the Reduction thereof into its Principles. See PRINCIPLE, REDUCTION, DECOMPOSITION, BODY, &c.

To *analyze* Bodies, or reſolve 'em into their component Parts, is the chief Object of the Art of Chymiſtry. See CHYMISTRY.

The *Analyſis* of Bodies is chiefly effected by means of Fire. See FIRE.

All Bodies, by a Chymical *Analyſis*, reſolve into Water, Earth, Salt, Sulphur, and Mercury; tho every Body does not afford all theſe Parts, but ſome more, ſome leſs, according to the Kingdom they belong to. See ELEMENT.—See alſo WATER, EARTH, SALT, &c.

The *Analyſis* of Vegetables is eaſy; that of Foſſils, particularly Metals and Semi-metals, difficult. See VEGETABLE, FOSSIL, METAL, &c.

Some Bodies of the Foſſil Tribe conſiſt of Particles ſo very minute, and ſo firmly united, that the Corpuſcles thereof need leſs heat to carry them off, than to ſeparate 'em into their Principles: So that the *Analyſis* is impracticable in ſuch Bodies.—Hence the difficulty of *analyſing* Sulphur. See SULPHUR.

The Anatomical Diſſection of an Animal, is a kind of *Analyſis*. See ANATOMY, and DISSECTION.

ANALYSIS is alſo uſed for a kind of Syllabus, or Table of the principal Heads, or Articles of a continued Diſcourſe; diſpoſed in their natural Order, and Dependency.—*Analyſes* are more ſcientifical than Alphabetical Indexes; but are leſs uſed, as being more intricate.

ANALYTIC, ANALYTICAL, ſomething that belongs to, or partakes of the Nature of *Analyſis*. See ANALYSIS.

Thus, we ſay, an *Analytical* Demonſtration; *Analytical* Enquiry; *Analytical* Table, or Scheme; *Analytic* Method, *&c.* See METHOD.

The *Analytic* Method ſtands oppoſed to the *Synthetic*.—'As in Mathematicks, *ſays Sir* I. Newton, ſo in Natural 'Philoſophy, the Inveſtigation of difficult Things by the '*Analytic* Method, ought to precede the Method of Com-'poſition. This *Analyſis* conſiſts in making Experiments, 'and Obſervations, and in drawing general Concluſions 'therefrom by Induction, and admitting of no Objections 'againſt the Concluſions, but ſuch as are drawn from Expe-'riments and other certain Truths. And tho the arguing 'from Experiments and Obſervations by Induction, be no 'Demonſtration of general Concluſions; yet it is the beſt 'way of arguing which the Nature of the Things admits of; 'and may be eſteem'd ſo much the ſtronger, as the Induc-'tion is more general. And if no Exception occur from 'Phænomena, the Concluſion may be pronounced generally. 'By this way of *Analyſis*, we may proceed from Compounds 'to Ingredients; and from Motions to the Forces producing 'them; and in general, from Effects to their Cauſes, and 'from particular Cauſes to more general ones, till the Argu-'ment end in the moſt general.——This is the *Analytic* 'Method.

'The Synthetic conſiſts in aſſuming the Cauſes diſcovered, 'and eſtabliſhed as Principles; and by them explaining the 'Phænomena proceeding from them, and proving the Ex-'planations.' See SYNTHESIS.

ANALYTICS, ANALYTICA, the Doctrine, and Uſe of *Analyſes*. See ANALYSIS.

The great Advantage of the preſent Mathematicks above the antient, is chiefly in Point of *Analyticks*.

The Authors on the antient *Analyticks*, are enumerated by *Pappus*, in the Preface to his 7th Book of Mathematical Collections; being, *Euclid*, in his *Data*, and *Poriſmata*; *Apollonius*, *de Sectione Rationis*; *Apollonius*, in his *Conicks*, *Inclinations*, and *Tactions*; *Ariſtæus*, *de Locis Solidis*, and *Eratoſthenes*, *de mediis proportionalibus*. But the antient *Analyticks* were very different from the modern.

To the modern *Analyticks*, principally, belong Algebra; the Hiſtory of which, with the ſeveral Authors thereon, ſee under the Article ALGEBRA.

The chief Writers upon the *Analyſis* of Infinites, are its Inventors, Sir *Iſaac Newton*, in his *Analyſis per Quantitatum Series, Fluxiones & Differentias, cum enumeratione Linearum* 3^ii^ *ordinis*; and *de Quadratura Curvarum*: and M. *Leibnitz*, in *Act. Eruditor.* An. 1684: The Marquis *de l'Hopital*, in his *Analyſe des Infiniment petites*, 1696: *Carre*, in his *Methode pour la meſure des Surfaces, la dimenſion des Solides*, &c. *par l' application du calcul integral*, 1700: *G. Manfredius*, in a poſthumous Piece, *de Conſtructione Equationum differentialium primi gradus*, 1707: *Nich. Mercator*, in *Logarithmotechnia*, 1668; *Cheyne*, in *Methodo Fluxionum inverſa*, 1703; *Craig*, in *Methodo figurarum lineis rectis & curvis comprehenſarum Quadraturas determinandi*, 1685; and *de Quadraturis figurarum curvilinearum & locis*, &c. 1693: *Dav. Gregory*, in *Exercitatione Geometrica de dimenſione figurarum*, 1684; and *Niuentiit*, in *Conſiderationibus circa Analyſeos ad quantitates infinitè parvas applicatæ, principia*, 1695.——The Sum of what is found in *l'Hopital*, *Carre*, *Cheyne*, *Gregory*, and *Craig*; is collected into one Volume, and very well explain'd by *C. Hayes*, under the Title of, *A Treatiſe of Fluxions*, &c. 1704.

ANALYTICK, in Logick, is a Part of that Science, teaching to decline and conſtrue Reaſon, as Grammar doth Words.

ANAMORPHOSIS, in Perſpective and Painting, *a monſtrous Projection*; or a Repreſentation of ſome Image, either on a plane or curve Surface, deformed; which at a certain diſtance ſhall appear regular, and in proportion. See PROJECTION.

The Word is *Greek*; compounded of *ανα*, and *μορφωσις*, *formatio*, of *μορφη*, *form*.

To make an *Anamorphoſis*, or monſtrous Projection on a Plane.——Draw the Square A B C D, (Tab. *Perſpective*, Fig. 18.) of a bigneſs at pleaſure, and ſubdivide it into a Number of Areolas, or leſſer Squares.—In this Square, or Reticle, called the *Craticular Prototype*, let the Image to be diſtorted be drawn.—Then draw the Line *a b* = A B; and divide it into the ſame Number of equal Parts, as the Side of the Prototype A B; and in E, the middle thereof, erect the Perpendicular E V, ſo much the longer; and draw V S perpendicular to E V, ſo much the ſhorter, as the Image is deſir'd to be diſtorted. From each Point of Diviſion draw right Lines to V, and join the Points *a* and S; as alſo the right Line *a* S. Thro' the Points *d e f g*, draw Lines parallel to *a b*; then will *a b c d* be the Space that the Monſtrous Projection is to be delineated in; called the *Craticular Ectype*.

Laſtly, in every Areola, or ſmall Trapezium of the Space *a b c d*, draw what appears delineated in the correſpondent Areola of the Square A B C D: by this means you will obtain a deformed Image, which yet will appear in juſt Proportion to an Eye diſtant from it the length F V, and raiſed above its height, V S. See DESIGNING.

It will be diverting to manage it ſo, that the deformed Image do not repreſent a mere Chaos; but ſome other Image: Thus, we have ſeen a River with Soldiers, Waggons, *&c.* marching along the ſide of it; ſo drawn, that when viewed by an Eye in the Point S, it appears to be the ſatyrical Face of a Man.

An Image alſo may be diſtorted mechanically, by perforating it here and there with a Needle, and placing it againſt a Candle, or Lamp; and obſerving where the Rays which paſs thro' theſe little Holes fall on a plane, or curve Superficies; for they will give the correſpondent Points of the Image deformed: by means whereof, the Deformation may be compleated.

*To draw the* Anamorphoſis, *or Deformation of an Image upon the convex Surface of a Cone.*

It is manifeſt from the former Caſe, that all here required, is to make a Craticular Ectype on the Superficies of the Cone, which ſhall appear to an Eye duly placed over its Vertex, equal to the Craticular Prototype.

Let the Baſe A B C D, therefore, of the Cone, (Fig. 19.) be divided by Diameters into any Number of equal Parts, that is, the Periphery thereof: And let ſome one Radius be likewiſe divided into equal Parts, and thro' each Point of Diviſion draw concentrick Circles: thus will the Craticular Prototype be made.——With double the Diameter A B, as a Radius, deſcribe the Quadrant E F G, (Fig. 20.) ſo as the Arch E G be equal to the whole Periphery: then this Quadrant folded duly up, will form the Superficies of a Cone, whoſe Baſe is the Circle A B C D.—Divide the Arch A B into the ſame Number of equal Parts as the Craticular Prototype is divided into, and draw Radii from each of the Points of Diviſion. Produce G F to I, ſo that F I = F G, and from the Centre I, with the Radius I F, draw the Quadrant F K H, and from I to E draw the right Line I E. Divide the Arch K F into the ſame Number of equal Parts, as the Radius of the Craticular Prototype is divided into; and draw Radii thro' each of the Points of Diviſion, from the Centre I meeting E F, in 1, 2, 3, *&c.* Laſtly, from the Centre F, with the Radii, F 1, F 2, F 3, *&c.* deſcribe the concentrick Arches.—Thus will the Craticular Ectype be form'd, each Areola whereof will appear equal to other.

Hence, what is delineated in every Areola of the Craticular Prototype; being transferred into the Areolas of the Craticular Ectype: the Image will be diſtorted or deformed: yet an Eye being duly raiſed over the Vertex of the Cone, will perceive it in juſt proportion.

If the Chords of the Quadrants be drawn in the Craticular Prototype, and Chords of their fourth Part in the Craticular Ectype, all things elſe remaining the ſame; you will have the Craticular Ectype on a quadrangular Pyramid.

And hence it will be eaſy to deform any Image, in any other Pyramid, whoſe Baſe is any regular Polygon.

Becauſe the Eye will be more deceived, if from contiguous Objects it cannot judge of the diſtance of the Parts of the deformed Image; therefore, theſe kinds of deformed Images are to be view'd thro' a ſmall Hole.

ANANAS, in Natural Hiſtory, by ſome called *Nanas*, by others *Jayama*, and by us popularly the *Pine-Apple* on account of the reſemblance it bears to the Cones of Pines or Firs; is a fine *Indian* Fruit, which grows on a Plant like the Fig-tree, and of the Size of an Artichoke.

The Fruit is adorned on the Top with a little Crown, and a bunch of red Leaves reſembling Fire. The Fleſh is fibrous, but diſſolves in the Mouth; having the delicious Taſte of the Peach, the Quince, and the Muſcadine Grape, all together.—M. *du Tertre* deſcribes three Kinds of *Ananas*. They make a Wine from the Juice, which is almoſt equal to *Malmſey* Sack, and will intoxicate as ſoon.

It is good to ſtrengthen the Heart and Nerves, againſt nauſeating, to refreſh the Spirits, and excites Urine powerfully; but is apt to occaſion Abortion in Women.—They make a Confection of the *Ananas* on the Spot, which they bring hither whole; and is found of good ſervice to reſtore a decay'd, or aged Conſtitution.

The *Anana*, or *Weſt-India* Pine-Apple, is generally allow'd, both for its rich and delicious Flavour, and its beautiful Colour, for the King of Fruits.——Great Endeavours have of late been uſed to cultivate the Plant in *Europe*; in which they have ſucceeded, and there are now produced delicious Fruits of this kind, in ſome of the fine Gardens in *England*.—They are uſually about the Size of a Tennis-Ball.

ANAPEST, ANAPESTUS, a Foot in the *Greek* and *Latin* Poetry, conſiſting of two ſhort, and one long Syllable. See FOOT.

b. b. Spine or three processes

Kind View of the Vertebræ of the Back.

Kind View of the Vertebræ of the Loins

One of Vertebræ of the Loins in a hind View.
a. The Hole for ye Spinal Marrow
bb. The Transverse processes
cc. The Oblique processes

Kind View of the Vertebræ of the Neck

Inside of ye Os Ileum.
a. Acetabulum
b. Os Ischii
c. Os pubis

The Os Temporis laid bare.
a. The Squammous part
b. b. Os Jugale
c. The Membrana Tympani.
d. Mamillary Process
e. Styleid Process
f. f. Foramina or Meatus leading from the Ear to ye Palate.

# ANGEIOLOGY, or the Vessels

Arteries of the Body.
a. a. The Glandulous Membranes
b. b. The Tegumens
c. The Internal Tunic.
a. a. The Internal or Nervous Tunic
b. b. The Muscular Coat
c. c. The Tegumentous or External Tunic.

Veins of the Body.
a. a. Orifice of the Cava from the right Auricle
b. b. Descending Trunk of the Cava
c. c. Ascending Trunk of the Cava
d. d. Subclavian Veins
e. e. Jugulars cut off
f. f. Internal Jugulars
g. Mammary Veins
h. Internal Jugulars
i. i. Axillar Veins
k. k. Crural Veins
l. l. Saphenæ
m. m. Emulgents
n. Trunk of ye Veins of ye Liver
o. o. o. Vasa Hepatica
p. Internal Sinuses
1. Vena Sacra
2. 2. Spermatic Veins
3. Epigastric
4. 4. Saphena

Trunk of a Large Vein Dissected.

Ramifications of the Porta within the Liver
a. The Place where the Porta Enters ye Liver
b. The Umbilical or Navel Vein
c. The Canalis Venosus
d. d. The External Sinuses
e. e. The Internal Sinuses
f. f. The Vena Portæ

Ramifications of the Cava within the Liver
a. The Trunk of the Cava
b. b. b. part of the Diaphragm

Pulmonary Artery, in ye time of Expiration.
a. a. The Trunk cut off close to the Basis of the Heart
b. b. The Division of the Right & Left Lobes of the Lungs
c. c. The Canalis Arteriosus
d. d. d. The Extremities of the Arteries Freed from the Muscles of the Lungs & Heart
e. e. e. The Branches into the Substance of the Lungs

Pulmonary Veins.
f. f. f. Trunks of the Pulmonary Veins
g. g. The Left Auricle of the Heart
h. h. Extremities of the Veins

Placenta & Funiculus Umbilicalis.
a. a. The Placenta
b. b. The Membranes
c. c. The Umbilical Cord
d. d. d. Vessels of the Navel String
e. e. e. Branches of the Vessels dispersed in the Substance of the Placenta
f. f. The Vessels of the Membranes
g. g. Membranes & Vessels
h. Urachus

Fœtus in Utero.
a. a. The Placenta
b. b. The Membranes
c. c. The Umbilical Cord
d. d. The Navel String
e. e. The Vessels of the Navel String
f. f. The Urachus
g. g. The Bladder
h. h. The Intestinum Rectum
i. i. The Os Coccygis
k. k. The Os Sacrum
l. l. The Vertebræ of the Loins
m. m. The Vertebræ of the Back
n. n. The Vertebræ of the Neck
o. o. The Occiput
p. p. The Os Frontis
q. q. The Eyes
r. r. The Nose
s. s. The Mouth
t. t. The Chin
u. u. The Ears

# MYOLOGY, or the Muscles.

## Exterior Muscles of the Fore Parts of the Body.

1. Frontalis.
2. Orbicularis Palpebrarum.
3. Elevator Alæ Nasi.
4. Elevator Labii Superioris, & Dilatator Alæ Nasi.
5. Elevator Labiorum communis.
6. Elevat. Labii Superioris proprius.
7. Depressor Labii inferioris proprius.
8. Depressor Labiorum communis.
9. Sphincter Labiorum.
10. Zygomaticus.
11. Buccinator.
12. Masseter.
13. Temporalis.
14. Elevator Auriculæ.
15. Mastoideus.
16. Elevator Scapulæ.
17. Rotundus and Subscapularis, part thereof.
18. Cucullaris, part thereof.
19. Deltoides.
20. Coracoideus.
21. Deltoides.
22. Pectoralis.
23. Coracobrachialis partly, Teen.
24. Biceps Cubiti.
25. Brachiæus internus.
26. Gemellus, part thereof in both Arms.
27. Pronator Radiceres, in the Left Arm
28. Supinator Radii longus.
29. Extensor Carpi Radialis.
30. Extensores Pollicis.
31. Adductor Pollicis.
32. Abductor indicis.
33. Flexor Secundi Ossis Pollicis, part thereof.
34. Radialis Flexor.
35. Flexor Digitorum Perforatus, part thereof.
36. Abductor pollicis in the Left Hand.
37. Extensor Digitorum communis in the Right hand
38. Minimi Digiti extensor
39. Ulnaris Extensor Carpi.
40. Ulnaris Flexor Carpi.
41. Teres major, part thereof
42. Latissimus Dorsi, pt thereof
43. Serratus major Anticus, part thereof
44. Obliquus Descendens
45. Obliquus Defendens.
46. Pyramidalis
47. Rectus Abdominis.
48. Musculus Membranosus.
49. Sartorius, part thereof on both Thighs.
50. Glutæus Medius, part thereof under the Tendinous Production of the Glutæus Magnus
51. Glutæus Magnus, part thereof.
52. Rectus Femoris in both Thighs
53. Triceps, part
54. Gracilis, part thereof
55. Vastus Internus, part thereof in the Left Thigh.
56. Vastus externus
57. Vastus externus
58. Tibialis Anticus in the Left Leg
59. Gastrocnemius internus in both Legs.
60. Extensor Digitorum pedis Longus
61. Peroneus Longus.
62. Gastrocnemius Externus
63. Tibialis Anticus in the Left Leg
64. Gastrocnemius internus in both Legs.
65. Extensor Digitorum pedis Longus
66. Peroneus Longus.
67. Soleus in both Legs, parts thereof
68. Musculus Plantaris
69. Long Tendon
70. Tibialis posticus
71. Extensor pollicis pedis longus, near its Termination in the Left Foot.
72. Abductor pollicis pedis
73. Extensor Digitorum pedis brevis
74. Abductor minimi digiti pedis
75. Extensor pollicis brevis.
76. Peronæus brevis, part thereof.

## Exterior Muscles of the Back Parts of the Body.

1. Musculus Occipitalis
2. Trapezius, pt thereof
3. Elevator Auriculæ
4. Zygomaticus
5. Glutæus, part thereof
6. Masseter, part thereof
7. Maloideus, part thereof.
8. Elevator Scapulæ. Small part thereof.
9. Cucullaris
10. Deltoides
11. Infraspinatus
12. Rotundus minor.
13. Rotundus major.
14. Anconæus, or Triceps Externus.
15. Biceps, part thereof.
16. Supinator Radii Longus, Part thereof.
17. Extensor minimi Digiti.
18. Extensor Carpi Ulnaris.
19. Radialis Extensor Carpi.
20. Extensor Digitorum Communis
21. The Muscles extending ye Thumb
22. Abductor minimi Digiti.
23. Interossei
24. Abductor Indicis.
25. Abductor Pollicis ad Dorsum Manus
26. Ulnaris Flexor Carpi in both Arms
27. Flexor Digitorum Perforatus in the Left Arm, part thereof.
28. Latissimus Dorsi
29. 29. Rhomboides, part thereof.
30. 30. Sacrolumbales and Dorsi longissimi, parts thereof seen in the Triangular Interstice
31. 31. Oblique descending Muscles of the Abdomen, parts thereof.
32. Glutæus medius, parts thereof.
33. Glutæus maximus
34. Membranosus, small part thereof.
35. Vastus externus.
36. Triceps, parts thereof.
37. Gracilis, in the Right Thigh.
38. Semimembranosus.
39. Semitendinosus.
40. Biceps
41. 41. Gastrocnemius externus, and internus.
42. Soleus.
43. Peroneus primus.
44. Peroneus Secundus.
45. Abductor minimi Digiti.

## Interior Muscles of the Body, appearing after ye Former are taken off.

1. Musculus Masseter.
2. Biventer, or Digastricus.
3. Elevator Scapulæ, pt thereof.
4. Splenius, part thereof.
5. Cucullaris, part thereof.
6. Scalæ, part thereof.
7. Corresponding part of ye Sternothoideus
8. Sternothoideus
9. Subclavius.
10. Serratus minor Anticus
11. Levator Costarum.
12. Latissimus Dorsi, part thereof in both sides
13. Rotundus major, part thereof in both sides
14. Obliquus ascendens Externus
15. Pronator Radii teres in the Right Hand
16. Pectoralis, in both Arms
17. Triceps, in both Arms
18. Sternum
19. Sphincter Radii longus in the left Arm, part thereof
20. Extensor Digitorum communis in the Left Hand
21. Extensor minimi Digiti
22. Extensor Carpi Ulnaris
23. Abductor minimi Digiti
24. Flexor Secundi Ossis Pollicis
25. Abductor minimi Digiti
26. Ulnaris Flexor Carpi in both Arms
27. Flexor Digitorum Perforatus in the Left Arm, part thereof
28. Latissimus Dorsi
29. 29. Rhomboides, part thereof
30. 30. Sacrolumbales and Dorsi longissimi, parts thereof seen in the Triangular Interstice
31. 31. Oblique descending Muscles of the Abdomen, parts thereof
32. Glutæus medius, parts thereof
33. Glutæus maximus
34. Membranosus, small part thereof
35. Vastus externus
36. Triceps, parts thereof
37. Gracilis, in the Right Thigh
38. Semimembranosus
39. Semitendinosus
40. Biceps
41. 41. Gastrocnemius externus, and internus.
42. Soleus.
43. Peroneus primus.
44. Peroneus Secundus.
45. Abductor minimi Digiti.

## Interior Muscles after ye Former of the Body Appearing are taken off.

1. Temporalis.
2. Zygomaticus
3. Masseter
4. Elevator Scapulæ
5. Complexus major & thereof
6. Splenius
7. Adductor Pollicis.
8. Abductor Indicis
9. Interossei
10. Trilateral
11. 11. Supinator Radii brevis
12. 12. Brachiæus internus
13. 13. 13. Brachiæus externus
14. Rotundus major
15. 15. Serr. Post. Anticus pars.
16. 16. Sacrolumbalis
17. 17. Dorsi Longissimus
18. Semispinalis
19. Obliquus Descendens, thereof
20. Semispinales Part thereof
21. Glutæus minor
22. 22. Pyriformes
23. Glutæus medius
24. 24. Marsupiales
25. Quadratus Femoris.
26. Obturator externus
27. Triceps
28. 28. 28. Popliteus
29. Peroneus primus
30. Peroneus Secundus
31. Flexor Pollicis longus
32. Flexor Digitorum Perforans.
33. Serratus Sup. Posticus
34. Supra Spinalis
35. Infraspinatus
36. Rotundus minor
37. Rotundus major
38. Teres vel Gibbus
39. Anconæus
40. Biceps
41. Pectinalis, part there of
42. Deltoides
43. Deltoides
44. Supinator Radii Longus
45. Supinator Radii brevis
46. Anconæus
47. Flexores Digitorum
48. Extensores Pollicis.
49. Indicator
50. Interossei

A Simple Muscle, & Inner Series of Fleshy Fibres.

A Regular Compound Muscle divided in ye Middle & Opened to shew ye Inside of both Bellies.

The Cuticula, there a. Microscope

The Cutis or Skin, there a. Microscope

a. a. &c. Sweat Pores
bb. &c. Sides of Pores

Such is the Word *Legerent*.

The Word is derived from ἀναπαίω, *contra ferire*; this Verſe being the Reverſe of the Dactyl. See DACTYL.

*Anapeſtick* Verſes, *i. e.* Verſes wholly compoſed of ſuch Feet, were much in vogue among the Antients.

ANAPHORA, in Rhetorick, a Figure whereby the ſame Sound is repeated in the Beginning of ſeveral Sentences, or Verſes. See FIGURE.

The Word is *Greek*, ἀναφορὰ, ſignifying *Relation*, or *Repetition*.

ANAPLEROTICKS, in Medicine, ſuch Remedies as incarnate, and fill up Ulcers and Wounds with new Fleſh. See WOUND, and ULCER.

*Anaplerotick*s are the ſame with what we otherwiſe call *Incarnatives*. See INCARNATIVE.

The Word comes from the *Greek* ἀναπληρῶν, *to fill up*.

ANARCHY, the want of Government in a Nation, where no ſupreme Authority is lodged, either in the Prince or other Rulers; but the People live at large, and all things are in confuſion. See GOVERNMENT.

The Word is derived from the *Greek* Privative α, and ἀρχὴ, *Command*, *Principality*.

ANASARCA, in Medicine, a ſort of univerſal Dropſy, wherein the whole Subſtance of the Body is ſtuffed, or bloated with pituitous Humours. See DROPSY.

The *Anaſarca* is otherwiſe called *Leucophlegmatia*. See LEUCOPHLEGMATIA.

The Word is form'd of the *Greek* ἀνασαρκα.—The *Anaſarca* is a further degree of a *Cachexia*. See CACHEXY.

In an *Anaſarca*, the Legs ſwell at the beginning, eſpecially towards Night, and then pit remarkably: The Urine is pale, the Appetite decays; at length the Swelling riſes higher, and appears in the Thighs, Belly, Breaſt, Arms. The Face becomes pale and cadaverous; the Fleſh ſoft and lax; a difficulty in Reſpiration comes on, attended with a ſlow Fever, *&c.*

ANASTOMASIS, or ANASTOMOSIS, in Anatomy, is ſometimes uſed to expreſs ſuch an Aperture of the Mouths of the Veſſels, as lets out their Contents. See VESSEL, *&c.*

The Word is form'd of the *Greek* ἀνα, *per*, thro', and στομα, *Os*, Mouth.

ANASTOMASIS is more frequently uſed to denote the opening of two Veſſels into one another; or the Union and Junćture of the Mouths of two Veſſels, whereby they come to communicate with one another.

There are various *Anaſtomaſes* of this kind, *e. g.* of an Artery with an Artery, a Vein with a Vein, or a Vein with an Artery. See ARTERY, and VEIN.

The Circulation of the Blood in the Fœtus is effected by means of the *Anaſtomaſes*, or Inoſculations of the Vena Cava with the Pulmonary Vein; and of the Pulmonary Artery with the Aorta. See FOETUS.

The ſame Circulation is alſo perform'd in Adults, by the *Anaſtomaſes* or Continuations of the Capillary Arteries with the Veins. See CIRCULATION *of the Blood*.

After the Circulation of the Blood thro' the Heart, Lungs, and large Blood-Veſſels, was demonſtrated by *Harvey*; it was only gueſs'd how the Extremities of the Arteries tranſmitted the Blood to the Veins: till *Leewenhoeck*'s Microſcopes had diſcover'd the Continuations of the Extremities of thoſe Veſſels, in Fiſh, Frogs, *&c.*—However, there were not wanting thoſe who doubted of the like Continuations of the Extremities of the Arteries and Veins in human Bodies and Quadrupeds; ſince thoſe Animals it had hitherto been chiefly ſeen in ſatisfactorily, were either ſuch Fiſh, or amphibious Kinds, as have but one Ventricle in their Hearts, and their Blood actually cold; beſide that their Blood does not circulate with ſuch Rapidity, as in Animals whoſe Hearts have two Ventricles. This difference in the principal Organs of Circulation, moved Mr. *Cowper* to make Experiments on Animals, whoſe Organs differ only from the Human in their groſs Figure, and not in their intimate Structure.—The Reſult was a plain Diſcovery of the like Inoſculations of the Arteries and Veins, in the Omentum of a Cat.

*George Frederick Francus*, of *Frankenau*, a Phyſician of *Copenhagen*, publiſhed, in the Year 1705, a learned and copious Work, intitled, *Anaſtomaſis Retecta*.

ANASTOMATICS, or ANASTOMATIC *Medicines*, are ſuch as have the Faculty of opening, and dilating the Orifices of the Veſſels; and by that means of making the Blood circulate the more freely.

The Word comes from the *Greek* Ἀνασομόω, *I open, unſtop*.

ANATHEMA, an Excommunication, attended with Execrations and Curſes. See EXCOMMUNICATION.

There are two Kinds of *Anathema's*; the one *Judiciary*, the other *Abjuratory*.

The former can only be pronounced by a Council, a Pope, Biſhop, or other qualified Perſon; and differs from a ſimple Excommunication in this, that an Excommunication only prohibits the Criminal from entering within the Church, or from holding Communion with the Faithful; whereas an *Anathema* cuts him off from the Body, the Society, and even the Commerce of the Faithful, and delivers him over to the Devil.

The latter kind of *Anathema* uſually makes a Part of the Ceremony of Abjuration; the Convert being obliged to *anathematize* the Hereſy he abjures. See ABJURATION.

Moſt *Greek* Writers diſtinguiſh *Anathema*, written with a long *e*, Ἀναθήμα; from *Anathema* with a ſhort *e*, Ἀνάθεμα: Yet *Beza* rejects the Difference.—*Pollux*, in his Lexicon, obſerves that the Word properly ſignifies, *Gifts dedicated to the Gods*: This Interpretation is confirm'd by *Heſychius*, who explains *Anathema* by *Ornaments*; theſe Gifts being hung up as Ornaments in the Temples.

The Criticks and Commentators are divided about the manner wherein St. *Paul* wiſhes to be *Anathema* for his Brethren, *Romans*, Cap. IX. 3. Some render it by *accurſed for*, others by *ſeparated from*, &c.

ANATOCISM, ANATOCISMUS, an Uſurious Contract, wherein the Intereſts ariſing from the principal Sum, are added to the Principal it ſelf, and Intereſt exacted upon the Whole.

*Anatociſm* is what we popularly call *Intereſt upon Intereſt*, or *Compound Intereſt*. See INTEREST.

This is the worſt Kind of Uſury, and has been ſeverely condemn'd by the *Roman* Law, as well as the Common Laws of moſt other Countries. See USURY.

The Word is originally *Greek*, but is uſed by *Cicero* in *Latin*; whence it has deſcended into moſt other Languages. It comes from the Prepoſition ἀνα, which in Compoſition ſignifies *Repetition* or *Duplication*, and τοκος, *Uſury*.

ANATOMY, the Art of diſſecting, or artificially taking to pieces, the ſolid Parts of Animal Bodies; in order to an exact Diſcovery of their Structure and Oeconomy. See ANIMAL, BODY, DISSECTION, and OECONOMY.

*Anatomy* makes a great Branch of that Diviſion of Medicine called *Phyſiology*. See MEDICINE, and PHYSIOLOGY.

It is ſometimes divided, with regard to its End, into *Speculative* and *Practical*; a Diviſion of very little uſe and moment.—It is alſo divided, with regard to its Subject, into *Human* and *Comparative*.

*Human*, which is abſolutely and properly denominated *Anatomy*, is that employ'd on the human Body; called alſo *Anthropology*. See ANTHROPOLOGY.

*Comparative Anatomy*, is that which conſiders Brutes, and other Animals, and even Vegetables; chiefly with a View to illuſtrate the human Structure. See COMPARATIVE *Anatomy*.

The Subject of *Anatomy*, *viz.* the Body, is variouſly divided into Parts, *Organical*, and *Inorganical*; *Similar*, and *Diſſimilar*; *Spermatick*, &c. See PART.—See alſo SIMILAR, ORGANICAL, *&c.*

Its more obvious Diviſion, is into *Solids* and *Fluids*, or Containing and Contained Parts. See SOLID, and FLUID.

Under the Solids come the *Bones*, *Muſcles*, *Nerves*, *Arteries*, *Veins*, *Cartilages*, *Ligaments*, *Membranes*, &c.——Under the Fluids, come *Chyle*, *Blood*, *Milk*, *Fat*, *Lymph*, &c. ſee each under its proper Article, BONE, MUSCLE, NERVE, ARTERY, VEIN, CARTILAGE, MEMBRANE, *&c.* See alſo CHYLE, BLOOD, MILK, FAT, *&c.*

The antient Writers of *Anatomy*, *Hippocrates*, *Democritus*, *Ariſtotle*, *Galen*, and others, look'd upon this as the moſt important Part of Phyſick, and that, without which the Uſes of the Parts of an human Fabrick, and conſequently the Cauſes of Diſeaſes incident thereto, could no way be diſcovered. And yet this Art, uſeful as it is, was entirely diſcontinued for ſeveral Ages; till in the XVIth Century it began to flouriſh afreſh.—The Diſſection of an human Body was look'd upon as Sacrilege before that time; and we have ſeen a Conſultation which the Emperor *Charles* V. appointed to be held by the Divines of *Salamanca*, in order to be ſatisfied, whether or no it were lawful, in point of Conſcience, to diſſect a dead Carcaſe.——We may add, that to this Day the uſe of Anatomy and Skeletons, is forbid in *Muſcovy*; the firſt as inhuman, the latter as ſubſervient to Witchcraft: And *Olearius* aſſures us, that one *Quirin*, a *German* Chirurgeon, being found with a Skeleton, hardly eſcap'd with Life; and the Skeleton, after being ſolemnly dragg'd about the Streets, was burnt. *Boyle's Uſefulneſs of Philoſ.*

*Veſalius*, a *Flemiſh* Phyſician, who died in 1564, was the firſt who ſet *Anatomy* on any tolerable footing. He was ſeconded by *Carpus*, *Sylvius*, *Fernelius*, *Fallopius*, *Euſtathius*, *Fabricius*, *Pareus*, *Bauhinus*, *Hoffman*, *Riolanus*, &c.

Theſe were ſucceeded by others, to whom ſome of the fineſt Diſcoveries in *Anatomy* are owing.—*Aſellius*, in the Year 1622, diſcovered the Lacteal Veins; and in 1628, the immortal *Harvey* publiſh'd his admirable Diſcovery of the Circulation of the Blood. See LACTEAL, and CIRCULATION.——*Pecquet* diſcovered the Reſervoir of the Chyle, and the Thoracick Duct, in 1651. See RECEPTACULUM *Chyli*, and THORACICK *Duct*.——*Rudbecks*, a *Swede*, and *Bartholine*, a *Dane*, found out the Lymphatick Veſſels, in 1650, and 1651. See LYMPHATICK.——*Wharton*, in 1655, diſco-

diſcovered the lower Salival Ducts; and *Steno* the upper Salival Ducts, thoſe of the Palate, the Noſtrils, and Eyes, in 1661. See SALIVAL.——*Wirtſungus*, in 1642, diſcover'd the Pancreatic Ducts. See PANCREATIC.——*Willis*, who came after him, publiſh'd an *Anatomy* of the Brain, and Nerves, in a manner much more exact than had been done before him; yet he had omitted ſome conſiderable Things, which were afterwards obſerv'd by *Vieuſſens*. See NERVE.——In effect, *Gliſſon* treated particularly of the Liver; *Wharton* of the Glands; *Havers* of the Bones; *Graaf* of the Pancreatick Juice, and the Parts of Generation; *Lower* of the Motion of the Heart; *Thurſton*, of Reſpiration; *Peyer*, of the Glands of the Inteſtines; *Brown*, of the Muſcles; *Drelincourt*, of the Conception of the Ova in Women, the Placenta, and the Membranes of the Fœtus. See LIVER, GLAND, BONE, GENERATION, RESPIRATION, FOETUS, *&c.*

*Malpighi*, who died in 1694, is one of thoſe to whom *Anatomy* owes the moſt: He made a great Number of Diſcoveries in the Lungs, Brain, Liver, Spleen, Glands, and Lymphaticks, by help of the Microſcope, *&c.* Nor muſt it be omitted that *Ruyſch*, ſtill living, has let great Light into many of the finer and more intricate Parts of the human Frame, particularly the Glands; by means of his Injections. See MICROSCOPE, and INJECTION.

*Mauget*, and *Le Clerc*, two Phyſicians of *Geneva*, have given us a *Bibliotheca Anatomica*; containing all the new Diſcoveries that have been made in this Art.

The beſt Syſtems of the Art, as it now ſtands, are thoſe of *Verheyen*, *Drake*, *Keill*, &c.

ANATOMY *of Plants*. See PLANT.—See alſo ROOT, BRANCH, BARK, PITH, WOOD, LEAF, FLOWER, SEED, *&c.*—See alſo VEGETATION, *&c.*

The Word comes from the *Greek* ἀνατομὴ, *Section*, or *Cutting*; of ἀνατέμνω, *diſſeco*.

ANATRON, or NATRON, a kind of native Salt-petre, or Nitre, found in *Egypt*. See NATRON, and NITRE.

ANATRON, is alſo a volatile Salt, ſkimm'd from the Compoſition of Glaſs, when in fuſion. See GLASS.

When pounded, it yields a kind of Pouder; which being diſſolv'd in the Air, or in a proper Liquor, becomes common Salt, after Coagulation.

*Anatron* is likewiſe the Name of a nitrous Juice, which condenſes in Vaults, Arches, and other ſubterraneous Places. See STALACTITES.

ANATRON is alſo uſed by ſome Writers for a compound Salt, made of Quicklime, Alum, Vitriol, common Salt, and Nitre. See SALT.

ANBURY, a kind of Wen, or ſpongy Wart, growing upon any part of a Horſe, or Cow, full of Blood.

ANCESTORS, Progenitors; or thoſe from whom a Perſon is deſcended. See PROGENITOR.

The Word is deriv'd from the Latin *Anceſſor*, wrote, by Contraction, for *Anteceſſor*, goer before.

The Law diſtinguiſhes between *Anceſtor* and Predeceſſor; the former being applied to a Natural Perſon, as ſuch an one, and his *Anceſtor*; and the latter to a Body Politick or Corporate, as a Biſhop, and his Predeceſſors.

ANCESTREL, in Law.—*Homage* ANCESTREL, ſignifies Homage that hath been done or performed by one's *Anceſtors*. See HOMAGE.

*Action* ANCESTREL. See ACTION.

ANCHOR, an Inſtrument uſed at Sea, and in Rivers; to retain and faſten a Veſſel by. See SHIP.

An *Anchor* is a large ſtrong piece of Iron, crooked at one End, and form'd into two Barbs, reſembling a Hook; faſten'd at the other end by a Cable. See CABLE, *&c.*

The Goodneſs of the *Anchor* is a Point of great Importance; the Safety and Conſervation of the Veſſel depending principally thereon.—Great Care is to be taken, that the Metal it is made of, be neither too ſoft, nor too brittle; the latter rendering it liable to break, and the former to ſtraiten. See IRON.

Travellers tell us of People in the *Indies* who make uſe of wooden *Anchors* in their Navigation.—The Inhabitants of the Iſland of *Ceylon*, in lieu of *Anchors*, uſe huge round Stones; and in ſome Places, the *Anchors* are a kind of Machines of Wood, loaden with Stones.

The Word comes from the Latin *Ancora*, of the *Greek* ἄγκυρα, which comes from ἄγκυλος, *incurvus*, crooked.

The Parts of an *Anchor*, are, 1°, The *Ring*, into which the Cable is faſten'd: 2°, The *Beam*, or *Shank*, which is the longeſt Part of the *Anchor*: 3°, The *Arm*, which is that which runs down into the Ground: at the End of which is, 4°, The *Flouke*, or *Fluke*, by ſome called the *Palm*; being that broad and picked Part with its Barbs like an Arrow-head, which faſtens into the Ground: 5°, The *Stock*, a piece of Wood faſten'd unto the Beam, near the Ring, ſerving to guide the Fluke, ſo that it may fall right, and fix in the Ground.

There are three Kinds of *Anchors* commonly uſed: the *Kedger*, the *Grapnel*, and the *Stream-Anchor*: *which ſee under their reſpective Articles.*

*Aubin*, in his Dictionary of Sea-Affairs, printed at *Amſterdam* in 1702, obſerves, that the *Anchor* of a large heavy Veſſel is ſmaller, in proportion, than that of a leſſer and lighter one. The Reaſon he gives, is, that tho the Sea employs an equal Force againſt a ſmall Veſſel as againſt a great one, ſuppoſing the Extent of Wood upon which the Water acts, to be equal, in both; yet the little Veſſel, by reaſon of its ſuperior Lightneſs, does not make ſo much reſiſtance as the greater; the Defect whereof muſt be ſupplied by the Weight of the *Anchor*.

ANCHOR, in Architecture and Sculpture, an Ornament in form of an *Anchor*, or Arrow's-head; frequently carved on the Echinus, or Quarter-round, in the *Dorick*, *Ionic*, *Corinthian*, &c. Capitals. See CAPITAL, *&c.*

The *Anchors* are uſually intermix'd with Repreſentations of Eggs; whence the Echinus it ſelf is popularly called *Eggs and Anchors*. See ECHINUS, QUARTER-*Round*, &c.

ANCHORAGE, or ANCHORING, Ground fit to hold a Ship's *Anchor*, ſo that ſhe may ride ſafely. See ANCHOR.

The beſt Ground for a Ship to anchor in, is ſtiff Clay or hard Sand; and the beſt riding at Anchor, is when a Ship is Land-lock'd, and out of the Tide.

ANCHORAGE, in Law, a Duty taken of Ships for the Pool of the Haven, where they caſt *Anchor*. See DUTY.

No Man can let an Anchor fall on the King's Ground in any Port, without paying for it to the King's Officer appointed by Patent.

ANCHORED, in Heraldry.——A *Croſs*-ANCHORED, or ANCREE, is a form of Croſs ſo called, becauſe the four Extremities reſemble the Flouke of an Anchor. See CROSS.

This Croſs is ſo like the Croſs *Moline*, that the Reſemblance has occaſioned many Miſtakes in Heraldry. See MOLINE.

ANCHORET, ANCHORITE, or ANACHORITE, a Hermit, or devout Perſon, living alone in ſome Deſart; to be further out of the reach of the Temptations of the World, and more at leiſure for Meditation. See HERMIT.

Such were St. *Anthony*, St. *Hilarion*, &c. *Paul* the Hermit was the firſt of the Tribe of *Anchorites*.——The Word comes from the *Greek* ἀναχωρέω, *I retire into a By-place*.

Theſe People are very numerous among the *Greeks*; conſiſting principally of Monks, who not caring for the Fatigues and Offices of the Monaſtery, purchaſe a little Spot of Ground, with a Cell, whither they retreat, and never appear in the Monaſtery again, excepting on ſolemn Days. See MONK.

Theſe are alſo called *Aſcetæ* and Solitaries. See ASCETA, and SOLITARY.

The *Anchorites* of *Syria* and *Paleſtine* retire into the moſt obſcure, and unfrequented Places; hiding themſelves under Rocks, and Mountains, and living on the ſpontaneous Productions of the Earth.—The *Anchorites* in *America*, are look'd upon there, as by far the moſt perfect ſort of Monks; and are held in much higher Opinion and Veneration than the Cœnobites, or Monks reſiding in Monaſteries. See COENOBITE.

Many of theſe retire, with the leave of their Abbots, and have an Allowance from the Monaſtery.—The People, in regard of their Piety, preſent them with good Sums of Money, which they carefully hoard up, and at their Death, bequeath it to the Monaſtery they had belong'd to.

ANCHOVY, in Matters of Commerce, *&c.* a little Sea Fiſh, much uſed by way of Sauce, or Seaſoning.

*Scaliger* deſcribes it as of the Herring-kind, about the Length of a Finger, having a pointed Snout, a wide Mouth, no Teeth, but Gums as rough as a Saw.—Others make it a ſort of Pilchard: But others, with better Reaſon, hold it a peculiar Species, very different from either. See FISH.

The *Anchovy* is caught in the Months of *May*, *June*, and *July*, on the Coaſts of *Catalonia*, *Provence*, &c. at which Seaſon, it conſtantly repairs up the Straits of *Gibraltar*, into the *Mediterranean*.

The Fiſhing is chiefly in the Night-time; when, a Light being put out on the Stern of their little Fiſhing-Veſſels, the *Anchovies* flock round, and are caught in the Nets. See FISHING.

When the Fiſhery is over, they cut off the Heads, take out the Guts; then lay 'em in Barrels and ſalt 'em.—The common way of eating *Anchovies*, is as Salad, with Oil, Vinegar, *&c.* in order to which, they are firſt boned, and the Tails, Fins, *&c.* ſlipp'd off. They are made into Sauce by mincing, adding to 'em a Cutlet of Veal or Ham, with Pepper, *&c.* over the Fire.

The Word is derived from the Spaniſh *Anchora*, or rather from the Italian, *Anchoia*.

ANCHYLOPS, in Medicine, a Species, or rather Degree of Fiſtula Lachrymalis; frequently confounded with *Ægilops*, &c. See FISTULA, and ÆGILOPS.

ANCIENT. See ANTIENT.

ANCO, or ANCON, the Tip of the Elbow; or the backward and larger Proceſs of the Cubitus. See CUBITUS.

The

The *Ancon* is the ſame with what the *Greeks* call *Olecranum*. See OLECRANUM. And hence,

ANCONÆUS *Muſculus*, in Anatomy, the ſixth Muſcle of the Elbow; ſo called, as being ſituate behind the Folds of the Ancon or Elbow.

It ariſes from the back part of the Extremities of the Humerus, paſſes over the Elbow, and is inſerted into the lateral and internal Part of the Cubitus; about three or four Fingers Breadth above the Olecranum.—Its uſe is to aſſiſt in extending the Arm.

ANCONES, in Architecture, are the Corners or Coins of Walls, Croſs Beams, or Rafters. See COIN, *&c.*

ANCONY, in the Iron Mines, a Bloom wrought into the Figure of a flat Iron Bar, about three Foot long, with two ſquare rough Knobs, one at each End. See IRON, and BLOOM.

ANCREE, in Heraldry, the ſame with *anchored*. See ANCHORED.

ANCYLE, or ANCILE, in Antiquity, a little Buckler, which fell, as 'tis ſaid, from Heaven, upon *Numa Pompilius*; at the ſame time that a Voice was heard, which declared that *Rome* ſhould be Miſtreſs of the World, while ſhe preſerv'd that Buckler. See BUCKLER.

The *Ancyle* was, as it were, the *Palladium* of *Rome*. See PALLADIUM.

Different Authors give different Etymologies of this Word.—Some derive it from the *Greek* ἀγκύλος, *crooked*: *Varro* derives it *ab Anciſu*; as being cut or arch'd on the two Sides, like the Bucklers of the *Thracians*, called *Peltæ*. *Plutarch* thinks the Word may be derived from the *Greek* ἀγκὼν, *Elbow*, this Weapon being wore on the Elbow: But the Opinion of *Varro* is the moſt probable.

Tho there was but one *Ancyle* that fell from Heaven; yet were there twelve preſerv'd: *Numa*, by the Advice, as 'tis ſaid, of the Nymph *Egeria*, having ordered eleven others, perfectly like the firſt, to be made; that if any ſhould attempt to ſteal it, as *Ulyſſes* did the Palladium, they might not be able to diſtinguiſh the true *Ancyle* from the falſe ones.

Theſe *Ancylia* were preſerved in the Temple of *Mars*; and were committed to the Care of twelve Prieſts or *Salii*, inſtituted for that purpoſe. See SALII.

They were carried every Year, in the Month of *March*, in proceſſion around *Rome*; and the 30th Day of that Month, were again depoſited in their Place.

ANCYLE, is alſo uſed in Anatomy, for the Contraction of the Ham.

ANCYLOGLOSSUS, ἀγκυλογλοσσος, one that is Tongue-ty'd, or has an Impediment in his Speech, ariſing from a Contraction of the Frænum of the Tongue. See TONGUE.

ANCYROIDES, is uſed by ſome Writers in Anatomy, for the Proceſs or ſhooting forth of the Shoulder-bone, in form of a Beak. See OMOPLATA.

ANDABATÆ, in Antiquity, a kind of Gladiators, who fought hood-wink'd. See GLADIATOR.

They were called *Andabatæ*, *quaſi* ἀναβαται, *aſcenſores*, becauſe they fought on Horſeback, or out of Chariots.

ANDREW.——*Knights of St.* ANDREW, or the *Thiſtle*. See THISTLE.

ANDREW's *Croſs*, is a Badge wore in the Hat, by the People of *Scotland*, on the Day of the Feaſt of that Saint.

It conſiſts of blue and white Ribbands, diſpoſed into a Croſs, or Saltier; and is intended as a Commemoration of the Crucifixion of St. *Andrew*, the tutelary Saint of *Scotland*. See CROSS, and SALTIER.

ANDROGYNE, or ANDROGYNUS, an *Hermaphrodite*; ſomething born with two Sexes, being Male and Female in the ſame Perſon. See HERMAPHRODITE.

Many of the Rabbins are of opinion, that *Adam* was created *Androgynus*; that he was Male on one Side, and Female on the other; and that he had even two Bodies, the one of a Man, and the other of a Woman: ſo that God, to create *Eve*, only ſeparated thoſe two from each other. See SEX.

*Plato* tells us, that in the Beginning People were born double, and with both Sexes; but that this Duplicity of Members, giving them too much Strength and Vigour, they became inſolent, and even declared War againſt the Gods.—Upon which, *Jupiter*, to tame their Pride, ſplit each of them into two; but ſo as that each Moiety ſtill retain'd a ſtrong Paſſion to be re-united: and hence that Philoſopher derives the natural Love between the two Sexes.

The Aſtrologers alſo give the Appellation *Androgynus* to ſuch of the Planets as are ſometimes hot, and ſometimes cold; as Mercury, which is reputed hot and dry when near the Sun, and cold and moiſt when near the Moon.

The Word comes from the *Greek* ἀνδρόγυνος, *Male and Female*.

ANDROIDES, an Automaton, in figure of a Man; which by virtue of certain Springs, *&c.* duly contrived, Walks, Speaks, *&c.* See AUTOMATON.

*Albertus Magnus*, is recorded as having made an *Androides*.—The Word is compounded of the *Greek* ἀνὴρ, ἀνδρὸς, *Man*, and εἶδος, *form*.

ANDROLEPSY, ANDROLEPSIA, in Antiquity.—If an *Athenian* were kill'd by a Citizen of ſome other Place; and ſuch City refuſed to deliver up the Criminal to Puniſhment; it was held lawful to take three Inhabitants of ſuch City, and puniſh the Homicide in them.—This the *Greeks* called *Androlepſia*, and the Romans *Clarigatio*. See CLARIGATIO.

Some Authors alſo uſe *Androlepſia* for *Reprizals*. See REPRIZAL.

The Word is form'd of ἀνὴρ, *Man*, and λαμβάνω, *capio*, I take.

ANDROMACHI *Theriaca*, or *Treacle of* ANDROMACHUS, in Pharmacy, is a capital Alexipharmic Compoſition; called alſo *Venice Treacle*. See THERIACA, and ALEXIPHARMIC.

ANDROTOMY, ANDRATOMY, the Anatomy or Diſſection of human Bodies. See DISSECTION.

It is thus called in oppoſition to *Zootomy*, which denotes that of Brutes. See ZOOTOMY.

Anatomy is the Genus, and comprehends all Diſſections in general, whether of Men, Beaſts, or Plants; and *Androtomy* and Zootomy are the Species. See ANATOMY.

ANECDOTES, ANECDOTA, a Term uſed by ſome Authors, for the Titles of *Secret Hiſtories*; that is of ſuch as relate the ſecret Affairs and Tranſactions of Princes; ſpeaking with too much Freedom, or too much Sincerity, of the Manner and Conduct of Perſons in Authority, to allow of being made publick.

Herein they imitate *Procopius*, who gives this Title to a Book which he publiſh'd againſt *Juſtinian* and his Wife *Theodora*; and ſeems to be the only Perſon among the Antients, who has repreſented Princes, ſuch as they are in their domeſtick Relation.—*Varillas* has publiſhed *Anecdotes* of the Houſe of *Medici*.

The Title *Anecdotes* is alſo given to ſuch Works of the Antients as have not yet been publiſhed.—In this Senſe, M. *Muratori* gives the Name *Anecdota Græca*, to ſeveral Writings of the *Greek* Fathers, found in the Libraries, and firſt publiſh'd by him.—F. *Martene* has given a *Theſaurus Anecdotarum Novus*, in Folio, 5 Vol.

The Word is *Greek* ἀνεκδότα, q. d. *Things not yet known, or hitherto kept ſecret*.

ANEMIUS *Furnus*, among Chymiſts, a *Wind-Furnace*; uſed to make fierce Fires for melting, *&c.* See FURNACE.

The Word is form'd of the *Greek* ἄνεμος, *Wind*.

ANEMONE, ANEMON, or *Wind-Flower*; a general Name, under which *Heſychius* comprizes all Flowers that are of a ſhort Duration, and that are eaſily beaten down, ruffled, and deſtroy'd by the Wind. See FLOWER.

The Word is derived from ἄνεμος, *Ventus*; in regard of the Effects which the Wind has on ſuch Flowers.——*Pliny* rather derives it hence, that the *Anemone* never opens but when the Wind blows. Others ſay, it was thus called from a Nymph of that Name.

ANEMOSCOPE, a Machine invented to foretel the Changes of the Wind. See WIND.

It has been obſerv'd, that Hygroſcopes made of Cats-gut, *&c.* prove very good *Anemoſcopes*; ſeldom failing, by the turning of the Index about, to foretel the ſhifting of the Wind. See HYGROSCOPE.

The *Anemoſcope* uſed by the Antients, ſeems, by *Vitruvius*'s Deſcription of it, to have been intended rather to ſhew which way the Wind actually blew, than to foretel into which Quarter it would change.

The Word is deriv'd from the *Greek* ἄνεμος, *Wind*, and σκέπτομαι, *to look*. See ANEMOMETER.

*Otto de Gueric* alſo gave the Title *Anemoſcope*, to a Machine invented by him, to foretel the Change of the Weather, as to fair and rain. See WEATHER.

It conſiſted of a little wooden Man, who roſe and fell in a Glaſs Tube, as the Atmoſphere was more or leſs heavy.—Accordingly, M. *Comiers* has ſhewn, that this *Anemoſcope* was only an Application of the common Barometer. See BAROMETER.

ANEMOMETER, a Machine wherewith to meaſure the Strength of the Wind. See WIND.

The *Anemometer* is variouſly contrived. In the *Philoſophical Tranſactions*, we have one deſcribed, wherein the Wind being ſuppoſed to blow directly againſt a flat Side, or Board which moves along the graduated Limb of a Quadrant; the Number of Degrees it advances, ſhews the comparative Force of the Wind.—*Wolfius* gives the Structure of another, which is moved by means of Sails, like thoſe of a Wind-Mill; which raiſe a Weight, that, ſtill the higher it goes, receding further from the Centre of Motion, by ſliding along an hollow Arm fitted on to the Axis of the Sails, becomes heavier and heavier, and preſſes more and more on the Arm, till being a Counterpoiſe to the Force of the Wind on the Sails, it ſtops the Motion thereof. An Index, then, fitted upon the ſame Axis at right Angles with the Arm, by its riſing or falling points out the Strength of the Wind, on a Plane divided, like a Dial-plate, into Degrees. *See its Figure*, Plate PNEUMATICS.

The Word is compounded of the *Greek* ἄνεμος, *Wind*, and μέτρον, *Meaſure*.

ANEURISM, ANEURISMA, in Medicine, a ſoft yielding Tumor, form'd of Blood extravaſated and ſpread under the Fleſh, by the Rupture or Dilatation of an Artery. See ARTERY, and TUMOR.

*Aneuriſms* uſually proceed from an Artery being accidentally cut, or prick'd in bleeding; or from ſome preternatural Diſtention, or a Corroſion of its Coats, *&c.* See PHLEBOTOMY.

If an Artery happen to be cut, the Blood guſhes out impetuouſly, by ſtarts; and is not eaſily ſtop'd: an Inflammation and Diſcolouration of the Part ſucceeds, with a Tumor, and Inability to move the Part. The Symptoms are nearly the ſame in caſe of a Corroſion of the Coats of the Artery, only leſs violent. See WOUND.

If the Blood ceaſe to flow from the wounded Artery, and pour it ſelf between the Interſtices of the Muſcles; recourſe is had to manual Operation; which being neglected, the Extirpation of the Limb frequently becomes unavoidable.—An *Aneuriſm* from a Diſtention of the Canal, is ſeldom fatal; tho reckon'd, when large, incurable: The chief Inconveniencies are the Magnitude of the Tumor, and the Pulſation. See HEMORRHAGE.

M. *Littre* gives us the Hiſtory of an *Aneuriſma* of this kind, in the Aorta; the Cauſe whereof he attributes to an extraordinary Diminution of the Cavity of the Axillary and Subclavian Arteries. *Hiſt. de l'Acad. R.* An. 1712.—— Another Hiſtory of an *Aneuriſma* of the ſame Part, we have in the *Philoſophical Tranſactions*. It was occaſioned by ſome violent Shocks the Patient receiv'd on the Breaſt, which threw him into ſpitting of Blood, and ſoon after form'd the Tumor, whereof he dy'd. Upon Diſſection, the *Aneuriſma* was found ſo big, that it filled the whole Cavity of the Thorax on the right Side. N° 265.

The Word comes from the *Greek* ἀνευρύνω, *dilato*, I dilate.

ANGARIA, a Term in Law, ſignifying any troubleſom, or vexatious Duty or Service, paid by the Tenant to the Lord.—The Word is form'd of the French *Angarie*, Perſonal Service; that which a Man is bound to perform in his own Perſon.—*Præſtationes Angariarum & Periangariarum plauſtrorum & navium*, impreſſing of Ships. See SERVICE, *&c.*

ANGEIOGRAPHY, a Deſcription of the Weights, Meaſures, Veſſels, *&c.* uſed by the ſeveral Nations. See MEASURE, WEIGHT, VESSEL, *&c.*

The Word is compounded of ἀγγεῖον, *Vas*, Veſſel, and γράφω, *ſcribo*, I deſcribe.

ANGEIOLOGY, ANGEIOLOGIA, in Anatomy, the Hiſtory, or Deſcription of the Veſſels in a human Body; *e. g.* the Nerves, Arteries, Veins, and Lymphaticks. See VESSELS.

*Angeiology* is a Branch of Sarcology. See SARCOLOGY.

The Word ſeems to be derived from ἀγγεῖον, *a Veſſel*, and λόγος, *Speech*, or *Diſcourſe*.

ANGEL, a ſpiritual, intelligent Subſtance; the firſt in Rank and Dignity among created Beings. See SPIRIT.

The Word *Angel*, is not properly a Denomination of Nature, but of Office; denoting as much as *Nuntius*, Meſſenger, a Perſon employ'd to carry one's Orders, or declare his Will.—Thus it is St. *Paul* repreſents *Angels*, *Heb.* I. 14. where he calls them Miniſtring Spirits: And for the ſame Reaſon the Name is given, in the Prophet *Malachy*, C. II. 7, to Prieſts; and by St. *Matthew*, C. XI. 10, to St. *John Baptiſt*. Jeſus Chriſt himſelf, according to the Septuagint, is call'd in *Iſaiah*, C. IX. 6, the *Angel* of the mighty Council; a Name, ſays *Tertullian*, *de Carne Chriſti*. C. IV. which ſpeaks his Office, not his Nature.—So the *Hebrew* Word uſed in Scripture for *Angel*, is alſo a Name of Office, and not of Nature מלאך *Legatus*, q. d. Legate, Envoy, Miniſter: and yet Cuſtom has prevailed; inſomuch that *Angel* is now commonly taken for a Denomination of Nature.

The Exiſtence of *Angels* is ſuppoſed in all Religions.—Indeed, the antient Sadducees are repreſented as denying all Spirits; and yet the *Samaritans* and Caraites, who are reputed Sadducees, openly avow it: witneſs *Abuſaid*, the Author of an *Arabick* Verſion of the Pentateuch; and *Aaron*, a Caraite *Jew*, in his Comment on the Pentateuch; both extant in Manuſcript, in the King of *France*'s Library. See SADDUCEE, CARAITE, *&c.*

In the Alcoran, we find frequent mention of *Angels*.—The Muſſulmen believe 'em of different Orders or Degrees, and deſtin'd for different Employments, both in Heaven, and on Earth. They attribute exceeding great Power to the *Angel Gabriel*; as, to be able to deſcend in the Space of an Hour from Heaven to Earth; to overturn a Mountain with a ſingle Feather of his Wing, *&c.* The *Angel Aſrael*, they ſuppoſe, appointed to take the Souls of ſuch as die; and another *Angel*, named *Eſraphil*, ſtands with the Trumpet ready in his Mouth to proclaim the Day of Judgment. See ALCORAN, MAHOMETANISM, *&c.*

The Heathen Philoſophers and Poets, were alſo agreed as to the Exiſtence of intelligent Beings, ſuperior to Man; as is ſhewn by St. *Cyprian*, in his Treatiſe of the Vanity of Idols, from the Teſtimonies of *Plato*, *Socrates*, *Triſmegiſtus*, &c. See PLATONISM, *&c.*—See alſo DÆMON, GENIUS, *&c.*

Some Chriſtian Writers, after *Lactantius*, Inſtitut. Lib. I. c. xv. alledge the *Energumeni*, and the Operations of Magick, as convincing Proofs thereof. St. *Thomas* produces other Conſiderations, in behalf of the Opinion, Lib. II. *contra gentes*, c. xlvi.

Authors are not ſo unanimous about the Nature as the Exiſtence of *Angels*.—*Clemens Alexandrinus* believ'd they had Bodies; which was alſo the Opinion of *Origen*, *Cæſarius*, *Tertullian*, and ſeveral others. *Athanaſius*, St. *Baſil*, St. *Gregory Nicen.* St. *Cyril*, St. *Chryſoſtom*, &c. hold 'em mere Spirits.

Eccleſiaſtical Writers make an Hierarchy of nine Orders of *Angels*. See HIERARCHY.

ANGEL is more particularly underſtood of a Spirit of the ninth and loweſt Claſs, or Order of the Hierarchy, or Heavenly Choir. See HIERARCHY.

The Scripture makes mention of the Devil and his *Angels*.—We alſo ſay, the Fallen *Angels*, Guardian *Angels*, &c. See GUARDIAN, DÆMON, GENIUS, *&c.*

In the Apocalypſe, the Denomination *Angel* is alſo given to the Paſtors of ſeveral Churches.—The *Angel* of the Church of *Epheſus*; the *Angel* of the Church of *Smyrna*, &c.

*Du Cange* adds, that the ſame Name was antiently given to certain Popes and Biſhops; by reaſon of their ſingular Sanctity, *&c.*

ANGEL is alſo uſed in Commerce, for an antient Gold Coin ſtruck in *England*; ſo called from the Figure of an *Angel* impreſs'd upon it. See COIN.

Its Value in 1 *Hen.* VI. was 6*s.* 8*d.* in 1 *Hen.* VIII. 7*s.* 6*d.* in 34 *Hen.* VIII. 8*s.* and in 6 *Edw.* VI. it was 10*s.*—And the *half Angel*, or, as it was ſometimes called, the *Angelot*, was the Moiety of this.

The *Angel* now ſubſiſts no otherwiſe than as a Money of Account. See MONEY.

The *French* have alſo had their *Angels*, *Demi-Angels*, and *Angelots*; now diſuſed.

ANGELIC, or ANGELICAL, ſomething belonging to, or that partakes of, the Nature of *Angels*. See ANGEL.

Thus, we ſay, an *Angelical* Life, *&c.*—St. *Thomas* is ſtyled the *Angelical Doctor*.—The *Angelical* Salutation is called by the *Romaniſts Ave Maria*. See AVE.

The *Greeks* diſtinguiſh two Kinds of Monks: Thoſe who profeſs the moſt perfect Rule of Life, are called Monks of the Great or *Angelical Habit*.

ANGELICA, called alſo ARCHANGELICA, and *Radix Siriaca*, a medicinal Plant, thus named, on account of its great Virtue as an Alexipharmic or Counterpoiſon. See ALEXIPHARMIC.

It is of a ſweet Smell, and aromatick Taſte; and is loaded with a highly exalted Oil, and volatile Salt.—It is reputed cordial, ſtomachick, cephalick, aperitive, ſudorifick, vulnerary, reſiſts Poiſon, *&c.* tho the chief Intention wherein it is now preſcribed among us, is, as a Carminative.

Its Root is in the moſt eſteem; tho the Leaves are alſo uſed.

ANGELICA-*Water*, is one of the compound Waters of the Shops; thus called from the *Angelica* Roots, which are the Baſis thereof. See *Angelica*-WATER.

ANGELICA, Ἀγγελικὴ, was alſo a celebrated Dance, among the antient *Greeks*, perform'd at their Feaſts. See DANCE.

It was thus called, from the *Greek* ἄγγελος, *Nuntius*, Meſſenger; by reaſon, as *Pollux* aſſures us, the Dancers were dreſs'd in the Habit of Meſſengers.

ANGELICA *Veſtis*, among our Anceſtors, was a Monkiſh Garment, which Laymen put on a little before their Death, that they might have the Benefit of the Prayers of the Monks.

It was from them called *Angelical*, becauſe they were called *Angeli*, who by theſe Prayers *animæ ſaluti ſuccurrebant.*—Hence, where we read the Phraſe *ad ſuecurrendum* in our old Books, it muſt be underſtood of one who had put on the Habit, and was at the Point of Death.

ANGELICI, were an antient Order of Knights, inſtituted in 1191, by *Iſacius Angelus Flavius Commenius*, Emperor of *Conſtantinople*. See KNIGHT, and ORDER.

They were divided into three Claſſes; but were all under the Direction of one Grand Maſter.—The firſt, were called *Torquati*, from a Collar which they wore, and were 50 in number.—The ſecond were called the *Knights of Juſtice*, and were Eccleſiaſticks.—And the third were called *Knights Servitors*.

*Juſtiniani* will have this Order to have been inſtituted in the Year 313, by *Conſtantine*; and ſuppoſes the Occaſion thereof to have been the Appearance of an *Angel* to that Emperor, with the Sign of a Croſs and theſe Words, *In hoc ſigno vinces*: But, that there was ſuch a thing as any Military Order in thoſe Days, is a mere Fable. See MILITARY *Order*.

ANGELICI were alſo a Sect of antient Hereticks.—St. *Auguſtin* ſuppoſes 'em thus call'd from their yielding an extravagant Worſhip to *Angels*, and ſuch as tended to Idolatry: Tho *Epiphanius* derives the Name from their holding that the World was created by *Angels*.

ANGERONALIA, in Antiquity, ſolemn Feaſts, held by the *Romans*, on the 21ſt of *December*, in honour of *Angerona*, or *Angeronia*, the Goddeſs of Patience and Silence. See FEAST.

*Feſtus* and *Julius Modeſtus*, quoted by *Macrobius*, *Saturn.* l. 1. c. 10. derive the Name from *Angina*, *Squinancy*; and ſuppoſe the Goddeſs to have been thus denominated, by reaſon ſhe preſided over that Diſeaſe.——Others ſuppoſe it form'd from *Angor*, Grief, Pain; to intimate that ſhe gave Relief to thoſe afflicted therewith. Others deduce it from *Ango* I preſs, I cloſe; as being reputed the Goddeſs of Silence, *&c.* See GOD and GODDESS.

ANGINA, in Medicine, a Diſeaſe, popularly call'd the *Quincy*, *Squinancy*, or *Eſquinancy*. See SQUINANCY.

*Angina* is a Difficulty of Reſpiration and Deglutition, from a Diſeaſe in the Muſcles and Glands about the Throat and Larynx. See LARYNX, *&c.*

The Word is formed from the *Greek* ἄγχειν, *ſtrangulare* to ſtrangle, ſuffocate.

If any Symptoms appear on the outſide of the Throat, the *Angina* is ſaid to be *external*; if none appear, *internal*.——It is ſometimes ſuppoſed to be *epidemical*.

In the *external Angina*, before any Suppuration appears, recourſe is had to repeated Venæſection in the Jugulars.—Veſicatories, and Cupping are alſo uſed; with Purgatives, emollient Gargles, *&c.*

ANGLE, ANGULUS, in Geometry, the Aperture or mutual Inclination of two Lines, which meet, and form an *Angle* in their Point of Interſection. See LINE.

Such is the *Angle* ABC, (Tab. GEOMETRY, Fig. 91.) form'd by the Lines AB, and AC, meeting in the Point A—The Lines A B and A C, are called the *Legs* of the *Angles*; and the Point of Interſection, the *Vertex*. See LEG and VERTEX.

*Angles* are ſometimes denoted by a ſingle Letter affix'd to the Vertex, or angular Point, as A; and ſometimes by three Letters, that of the Vertex being in the middle, as B A C.

The *Meaſure* of an *Angle*, whereby its Quantity is expreſſed, is an Arch, D E, deſcribed from its Vertex A, with any Radius at pleaſure, between its Legs, A C and B C. See ARCH.

Hence *Angles* are diſtinguiſhed by the Ratio of the Arches which they thus ſubtend, to the Circumference of the whole Circle. See CIRCLE and CIRCUMFERENCE.—And thus, an *Angle* is ſaid to be of ſo many Degrees, as are the Degrees of the Arch D E. See DEGREE.

Hence alſo, ſince ſimilar Arches, AB and DE, fig. 87. have the ſame Ratio to their reſpective Circumferences; and the Circumferences contain each the ſame Number of Degrees; the Arches A B, and D E, which are the Meaſures of the two *Angles* A C B, and A D E, are equal; and therefore the *Angles* themſelves are ſo too.——Hence, again, as the Quantity of an *Angle* is eſtimated by the Ratio of the Arch, ſubtended by it, to the Periphery; it does not matter what Radius that Arch is deſcribed withal: But the Meaſures of equal *Angles* are always either equal Arches or ſimilar ones; and contrarily.

It follows, therefore, that the Quantity of the *Angle* remains ſtill the ſame, tho' the Legs be either produced or diminiſhed——And thus ſimilar *Angles*, and in ſimilar Figures, the Homologous or Correſponding *Angles* are alſo equal. See SIMILAR, FIGURE, *&c.*

*To meaſure, or find the Quantity of an* ANGLE.

1°. On Paper—Apply the Centre of a Protractor on the Vertex of the *Angle* O; (Tab. SURVEYING, fig. 29.) ſo as the Radius O*p* lie on one of the Legs: The Degree ſhewn in the Arch, by the other Leg of the *Angle*, will give the *Angle* required. See PROTRACTOR.——To do the ſame with a Line of Chords, ſee CHORD.

2°. On the Ground—Place a ſurveying Inſtrument, *E. gr.* a Semi-circle, fig. 16. in ſuch manner as that a Radius thereof CG may lie over one Leg of the *Angle*, and the Center C over the Vertex.——The firſt is obtain'd by looking thro' the Sights F and G, towards a Mark fixed at the End of the Leg; and the latter, by letting fall a Plummet from the Centre of the Inſtrument——Then, the moveable Index HI being turn'd this way and that, till thro' its Sights, you diſcover a Mark placed at the extreme of the other Leg of the *Angle*: The Degree it cuts in the Limb of the Inſtrument, ſhews the Quantity of the *Angle*. See SEMICIRCLE.

To take an *Angle* with a *Quadrant*, *Theodolite*, *plain Table*, *Circumferentor*, *Compaſs*, &c. ſee QUADRANT, THEODOLITE, PLAIN TABLE, CIRCUMFERENTOR, COMPASS, *&c.*

*To plot or lay down any given Angle*; i. e. the Quantity of the *Angle* being given, to deſcribe it on Paper, ſee PLOTTING and PROTRACTING.

*To biſſect a given Angle*, as HIK, fig. 92. from the Centre L, with any Radius at pleaſure, deſcribe an Arch LM. From L and M, with an Aperture greater than LM, ſtrike two Arches, mutually interſecting each other in N. Then, drawing the right Line I N, we have H I N = N I K.

*To triſſect an Angle*, ſee TRISSECTION.

ANGLES are of various Kinds, and Denominations.——With regard to the Form of their Legs, they are divided into *Rectilinear*, *Curvilinear*, and *Mix'd*.

*Rectilinear*, or *right-lined* ANGLE, is that whoſe Legs are both right Lines; as ABC (Tab. GEOMETRY, fig. 91.) See RECTILINEAR.

*Curvilinear* ANGLE, is that whoſe Legs are both of 'em Curves. See CURVE and CURVILINEAR.

*Mix'd*, or *Mixtilinear* ANGLE, is that, one of whoſe Sides is a right Line, and the other a Curve. See MIX'D.

With regard to their Quantity, *Angles* are again divided into *Right*, *Acute*, *Obtuſe*, and *Oblique*.

*Right* ANGLE, is that form'd by a Line falling perpendicularly on another; or that which ſubtends an Arch of 90 Degrees——Such is the *Angle* K L M, Fig. 93. See PERPENDICULAR, *&c.*

The Meaſure of a right ANGLE, therefore, is a Quadrant of a Circle; and conſequently all right Angles are equal to each other. See QUADRANT.

*Acute* ANGLE is that which is leſs than a right *Angle*, or than 90°——as A E C, fig. 86. See ACUTE.

*Obtuſe* ANGLE, is that greater than a right *Angle*, or whoſe Meaſure exceeds 90°——as A E D. See OBTUSE.

*Oblique* ANGLE, is a common Name both for Acute and Obtuſe *Angles*. See OBLIQUE.

With regard to their Situation in reſpect of each other, ANGLES are divided into *Contiguous*, *Adjacent*, *Vertical*, *Alternate*, and *Oppoſite*.

*Contiguous* ANGLES, are ſuch as have the ſame Vertex, and one Leg common to both——Such are F G H, and H G I, fig. 94. See CONTIGUOUS.

*Adjacent* ANGLE, is that made by producing one of the Legs of another *Angle*——Such is the *Angle* A E C, fig. 86. made by producing a Leg E D, of the *Angle* A E D, to C. See ADJACENT.

Two *adjacent Angles*, *x* and *y*; or any other Number of *Angles* made on the ſame Point E, over the ſame right Line C D, are together equal to two right ones; and conſequently, to 180°——And hence, one of two contiguous *Angles* being given, the other is likewiſe given: as being the Complement of the former to 180°. See COMPLEMENT.

Hence, alſo, to meaſure an inacceſſible *Angle* in the Field; taking an adjacent acceſſible *Angle*, and ſubſtracting the Quantity thereof from 180°, the Remainder is the *Angle* required.

Again, all the *Angles* *x*, *y*, *o*, E, *&c.* made a-round a given Point E, are equal to four right ones; and therefore all make 360°.

*Vertical* ANGLES, are thoſe whoſe Legs are Continuations of each other——Such are the *Angles* *o* and *x*, fig. 86. See VERTICAL.

If a right Line A B, cut another, C D, in E, the vertical *Angles* *x* and *o*, as alſo *y*, and E, are equal.——And hence, if it be required to meaſure in a Field, or any other Place, an inacceſſible *Angle*, *x*; and the other vertical *Angle*, *o*, be acceſſible: This latter may be taken in lieu of the former. See SURVEYING.

*Alternate* ANGLES. See ALTERNATE.——Such are the *Angles* *x* and *y*; fig. 36.

The alternate *Angles* *y* and *x*, are equal. See OPPOSITE *Angles*.

*Oppoſite* ANGLES. See OPPOSITE.——Such are *u* and *y*, and alſo *z* and *y*.

*External* ANGLES, are the *Angles* of any right-lined Figure made without it, by producing all the Sides ſeverally.

All the external *Angles* of any Figure taken together, are equal to four right *Angles*: And the external *Angle* of a *Triangle* is equal to both the internal and oppoſite ones, as is demonſtrated by *Euclid*, Lib. 1. Prop. 32.

*Internal* ANGLES, are the *Angles* made by the Sides of any right-lined Figure within.

The Sum of all the internal *Angles* of any right-lined Figure, is equal to twice as many right *Angles* as the Figure hath Sides, excepting four. This is eaſily demonſtrated from *Euclid*, Prop. 32. Lib. 1.

The external *Angle* is demonſtrated to be equal to the internal oppoſite one; and the two internal oppoſite ones, are equal to two right ones.

*Homologous* ANGLES, are ſuch *Angles* in two Figures, as retain the ſame Order from the firſt, in both Figures. See FIGURE.

ANGLE *at the Periphery*, is an *Angle* whoſe Vertex and Legs do all terminate in the Periphery of a Circle——Such is the *Angle* E F G, fig. 95. See PERIPHERY.

*Angle in the* SEGMENT, is the ſame with that at the Periphery. See SEGMENT.

It is demonſtrated by *Euclid*, that all the *Angles* in the ſame Segment are equal to one another; that is, any *Angle* EHG, is equal to any *Angle* EFG in the ſame Segment EFG.

The *Angle* at the Periphery, or in the Segment, is comprehended between two Chords AB and BD, and ſtands on the Arch AB. See CHORD, *&c.*

The Meaſure of an *Angle* without the Periphery G, (fig. 96.) is the Difference between half the Concave Arch LM, whereon it ſtands, and half the Convex Arch, NO, intercepted between its Legs.

ANGLE *in a Semi-circle*, is an *Angle* in a Segment of a Circle, whoſe Baſe is a Diameter thereof. See SEGMENT.

It is demonſtrated by *Euclid*, that the *Angle* in a Semi-circle is a right one; in a Segment greater than a Semi-circle, is leſs than a right one; and in a Segment leſs than a Semi-circle, greater than a right one.

Since an *Angle* in a Semi-circle ſtands on a Semi-circle, its Meaſure is a Quadrant of a Circle; and therefore is a right *Angle*.

ANGLE *at the Centre*, is an *Angle* whoſe Vertex is in the Centre of a Circle, and its Legs terminated in the Periphery thereof.——Such is the *Angle* CAB. See CENTRE.

The *Angle* at the Centre is comprehended between two Radii, and its Meaſure is the Arch BC. See RADIUS, *&c.*

*Euclid* demonſtrates that the *Angle* at the Centre, BAC, is double of the *Angle* BDC, ſtanding on the ſame Arch BC.——And hence, half of the Arch AD, is the Meaſure of the *Angle* at the Periphery.

Hence alſo, two or more *Angles* HLI, and HMI (fig. 97.) ſtanding on the ſame Arch HI, or on equal Arches, are equal.

ANGLE *without the Centre*, HIK, is that whoſe Vertex K is not in the Centre, but its Legs HK and IK are terminated in the Periphery.

The Meaſure of an *Angle* without the Centre, is half of the Arches HI and LM, whereon it and its Vertical K do ſtand.

ANGLE *of Contact*, is that made by the Arch of a Circle and a Tangent in the Point of Contact.——Such is the *Angle* HLM, (fig. 43.) See CONTACT.

The *Angle* of Contact, in a Circle, is proved by *Euclid* to be leſs than any right-lined *Angle*: But from hence it does not follow, that the *Angle* of Contact is of no Quantity, as ſome have imagined.—Sir *Iſaac Newton* ſhews, that if the Curve HAE, fig. 97. be a cubick Parabola, the *Angle* of Contact, where the Ordinate DF is in the ſubtriple Ratio of the Abſciſſe AD, the *Angle* BAF contained under the Tangent AB in its Vertex, and the Curve, is infinitely greater than the circular Angle of Contact BAC; and that if other Parabola's of highter kinds be deſcribed to the ſame Axis and Vertex, whoſe Abſciſſes AD are as the Ordinates $DF^4$, $DF^5$, $DF^6$, *&c.* you will have a Series of *Angles* of Contact going on infinitely, of which any one is infinitely greater than that next before it.

ANGLE *of a Segment*, is that made by a Chord with a Tangent, in the Point of Contact.—Such is the *Angle* MLH. See SEGMENT.

It is demonſtrated by *Euclid*, that the *Angle* MLC, is equal to any *Angle* MaL in the alternate Segment MaL.

*For the Effects, Properties, Relations,* &c. *of Angles, when combined into Triangles, Quadrangles, and polygonous Figures,* ſee TRIANGLE, QUADRANGLE, SQUARE, PARALLELOGRAM, POLYGON, FIGURE, *&c.*

ANGLES are again divided into *Plane*, *Spherical*, and *Solid*.

*Plane* ANGLES are thoſe we have hitherto been ſpeaking of; which are defined by the Inclination of two Lines in a Plane, meeting in a Point. See PLANE.

*Spherical* ANGLE is the Inclination of the Planes of two great Circles of the Sphere. See CIRCLE and SPHERE.

The Meaſure of a Spherical *Angle*, is the Arch of a great Circle at right *Angles* to the Planes of the great Circles forming the *Angle*, intercepted between them.

*For the Properties of Spherical Angles*, ſee SPHERICAL *Angle*.

*Solid* ANGLE is the mutual Inclination of more than two Planes, or plane *Angles*, meeting in a Point, and not contain'd in the ſame Plane.

*For the Meaſure, Properties,* &c. *of ſolid Angles*, ſee SOLID *Angle*.

We alſo meet with other leſs uſual ſorts of *Angles* among ſome Geometricians; as,

*Horned* ANGLE, *Angulus Cornutus*, that made by a right Line, whether a Tangent or Secant, with the Periphery of a Circle.——

*Lunular* ANGLE, *Angulus Lunularis*, is that form'd by the Interſection of two Curve Lines; the one Concave, and the other Convex. See LUNE.

*Ciſſoid* ANGLE, *Angulus Ciſſoides*, is the inner *Angle*, made by two Spherical Convex Lines interſecting each other. See CISSOIDES.

*Siſtroid* ANGLE, *Angulus Siſtroides*, is that in Figure of a Siſtrum. See SISTRUM.

*Pelecoid* ANGLE, *Angulus Pelecoides*, is that in figure of a Hatchet. See PELECOIDES.

ANGLE, in Trigonometry. See TRIANGLE and TRIGONOMETRY.

*For the Sines, Tangents, and Secants of* ANGLES, ſee SINE, TANGENT, and SECANT.

ANGLE, in Mechanicks——ANGLE *of Direction*, is that comprehended between the Lines of Direction of two conſpiring Forces. See DIRECTION.

ANGLE *of Elevation*, is that comprehended between the Line of Direction of a Projectile, and a horizontal Line—— Such is the *Angle* ARB, (Tab. MECHANICS, fig. 47.) comprehended between the Line of Direction of the Projectile AR, and the horizontal Line AB. See ELEVATION and PROJECTILE.

ANGLE *of Incidence*, it that made by the Line of Direction of an impinging Body, in the Point of Contact—— Such is the *Angle* DCA, (fig. 63.) See INCIDENCE.

ANGLE *of Reflexion*, is that made by the Line of Direction of the reflected Body, in the Point of Contact from which it rebounds,——Such is the *Angle* ECF. See REFLEXION.

ANGLE, in Optics——*Viſual* or *Optic* ANGLE, is the *Angle* included between two Rays drawn from the two extreme points of an Object, to the Centre of the Pupil—— Such is the Angle ABC, (Tab. OPTICS, fig. 69.) comprehended between the Rays AB, and BC. See VISUAL *Angle*.

Objects ſeen under the ſame, or an equal *Angle*, appear equal. See MAGNITUDE and VISION.

ANGLE *of the Interval*, of two places, is the *Angle* ſubtended by two Lines directed from the Eye to thoſe places.

ANGLE *of Incidence*, in Catoptrics, is the leſſer *Angle* made by an incident Ray of Light, with the Plane of a Speculum; or, if the Speculum be concave or convex, with a Tangent in the point of Incidence——Such is the *Angle* ABD (fig. 26.) See RAY and MIRROUR.

Every incident Ray, AB, makes two *Angles*, the one acute, ABD, the other obtuſe, ABE; tho ſometimes both right——The leſſer of ſuch *Angles* is the *Angle* of Incidence. See INCIDENCE.

ANGLE *of Incidence*, in Dioptrics, is the *Angle* ABI, (fig. 56.) made by an incident Ray, AB, with a Lens or other refracting Surface, HI. See LENS, *&c.*

ANGLE *of Inclination*, is the *Angle* ABD, contained between an incident Ray, AB, and the Axis of Incidence, DB. See AXIS, *&c.*

ANGLE *of Reflection*, } in Catoptrics. See REFLEC-
*Reflected* ANGLE, } TION.

ANGLE *of Refraction*, } in Dioptrics. See REFRAC-
*Refracted* ANGLE, } TION.

ANGLE, in Aſtronomy——ANGLE *of Commutation*. See COMMUTATION.

ANGLE *of Elongation*, or, ANGLE *at the Earth*. See ELONGATION.

*Parallactic* ANGLE. See PARALLACTIC *Angle*.

ANGLE *at the Sun*, or *the Inclination*, is the *Angle* RSP, (Tab. ASTRONOMY, fig. 25.) under which the Diſtance of a Planet P, from the Ecliptic PR, is ſeen from the Sun. See INCLINATION.

ANGLE *of the Eaſt*. See NONAGESIMAL.

ANGLE *of Obliquity*, of the Ecliptic. See OBLIQUITY and ECLIPTIC.

*The Angle of Inclination* of the Axis of the Earth, to the Axis of the Ecliptic, is 23°, 30′; and remains inviolalably the ſame in all points of the Earth's annual Orbit. By means of this Inclination, ſuch Inhabitants of the Earth as live beyond 45° of Latitude, have more of the Sun's Heat, taking all the Year round; and thoſe who live within 45°, have leſs of his Heat, than if the Earth always moved in the Equinoctial. See HEAT, *&c.*

ANGLE *of Longitude*, is the *Angle* which the Circle of a Star's Longitude makes with the Meridian, at the Pole of the Ecliptic. See LONGITUDE.

ANGLE *of right Aſcenſion*, is the *Angle* which the Circle of a Star's right Aſcenſion makes with the Meridian at the Pole of the World. See RIGHT *Aſcenſion*.

ANGLE, in Navigation——ANGLE *of the Rhumb*, or *Loxodromic* ANGLE. See RHUMB and LOXODROMY.

ANGLES, in Fortification, are underſtood of thoſe formed by the ſeveral Lines uſed in Fortifying. See FORTIFICATION, FORTIFYING, *&c.*

ANGLE *of*, or *at the Center*, is the *Angle* formed at the Center of the Polygon, by two Semi-diameters drawn thither from the two neareſt Extremities of the Polygon. See POLYGON——Such is the *Angle* CKF (Tab. FORTIFICAT. fig. 1.)

ANGLE *of the Circumference*, is the mixed *Angle* made by the Arch drawn from one Gorge to the other. See GORGE.

ANGLE *of the Counterſcarp*, is that made by the two Sides of the Counterſcarp, meeting before the middle of the Curtain. See COUNTERSCARP.

ANGLE *of the Curtain*, or *of the Flank*, is that made by, or contain'd between, the Curtain and the Flank; ſuch is the *Angle* BAE. See CURTAIN.

ANGLE *of the Complement of the Line of Defence*, is the *Angle* ariſing from the Interſection of the two Complements one with another. See COMPLEMENT.

*Diminiſhed* ANGLE, is the *Angle* which is made by the meeting of the exterior Side of the Polygon, with the Face of the Baſtion——Such is the *Angle* BCF.

ANGLE *of the Polygon*, or *of the exterior Figure*, is the *Angle* FCN, formed at the Point of the Baſtion C, by the meeting of the two outermoſt Sides or Baſes of the Polygon, FC and CN.

ANGLE *of the Epaule*, or *Shoulder*, is that form'd by the Flank and the Face of the Baſtion——Such is the *Angle* ABC. See EPAULE.

ANGLE *of the Interior Figure*, is the *Angle* GHM, made in H, the Center of the Baſtion, by the meeting of the innermoſt Sides of the Figure GH and HM.

*Flanking* ANGLE *outward*, or ANGLE *of the Tenaille*, is that made by the two raſant Lines of Defence, *i. e.* the two Faces of the Baſtion when prolonged. See TENAILLE.

ANGLE *flanking inward*, is the *Angle* CIH, made by the flanking Line with the Curtain.

ANGLE *flanked*, by ſome call'd the ANGLE *of the Baſtion*, is the *Angle* BCS, made by the two Faces of the Baſtion, BC, CS; being the outermoſt part of the Baſtion, and that moſt expoſed to the Enemy's Batteries, and therefore by ſome call'd the *Point of the Baſtion*. See BASTION.

ANGLE *of the Triangle*, in Fortification, is half the *Angle* of the Polygon.

ANGLE *forming the Flank*, is that conſiſting of one Flank, and one Demi-gorge.

ANGLE *forming the Face*, is that compoſed of one Flank and one Face.

ANGLE *of the Moat*, is that made before the Curtain, where it is interſected. See MOAT.

*Re-entring*, or *Re-entrant* ANGLE, is that whoſe Vertex is turned inwards, towards the Place. See RENTRANT.

*Saillant* ANGLE, is that which advances its Point towards the Field. See SAILLANT.

ANGLE *of the Tenaille*, or *the outward flanking Angle*, called alſo *the Angle of the Moat*, or *the dead Angle*, is made by the two Lines ſichant in the Faces of the two Baſtions, extended till they meet in an *Angle* towards the Curtain——This always carries its Point in towards the Work.

ANGLE *of a Wall*, in Architecture, is the Point, or Corner, where the two Sides or Faces of a Wall meet. See WALL, COIN, &c.

ANGLES *of a Battalion*, in the Military Art, are the Soldiers where the Ranks and Files terminate. See BATTALION.

The *Angles* of a Battalion are ſaid to be *blunted*, when the Soldiers at the four Corners are removed, ſo that the ſquare Battalion becomes octagonal: which was an Evolution very common among the Antients, tho now diſuſed. See EVOLUTION.

ANGLES, in Anatomy, are underſtood of the *Canthi*, or Corners of the Eye, where the upper Eye-lid meets with the under. See EYE and EYE-LID.

That next the Noſe is call'd the *great* or *internal*, and that towards the Temples, the *leſs* or *external Angle* or *Canthus*. See CANTHUS.

ANGLES, in Aſtrology, are certain Houſes of a Figure or Scheme of the Heavens——Thus the Horoſcope of the firſt Houſe is termed the *Angle of the Eaſt*. See HOUSE, HOROSCOPE, &c.

ANGLICISM, a Diction in the *Engliſh* Idiom; or a Manner of Speech peculiar to the *Engliſh* Tongue. See IDIOM and ENGLISH.

ANGLING, the Art of catching Fiſh by means of a Rod, with Line, Hook and Bait fitted thereto. See FISH and FISHING.

There are ſeveral prudential Rules obſerved by thorough Anglers; as, not to wear any white or ſhining Apparel, but be cloathed in a dark sky-Colour: To invite the Fiſh to the place intended for *Angling*, by caſting in from time to time proper Foods, as boil'd Corn, Worms, and Garbage: To keep them together in the time of *Angling*, by throwing in Grains of ground Malt; or ſinking a Box of Worms, with ſmall holes for them to creep ſlowly out at, &c. To draw Salmon or Trout together, they uſe a Compoſition of fine Clay incorporated with Blood, and Malt ground.

To learn what Bait is beſt for any Fiſh at any time; after having caught one, they ſlit his Gills, and take out the Stomach; and thus find what he laſt fed on.

*The ſeveral Methods of* ANGLING *for Salmon, Trout, Carp, Tench, Perch, Pike, Dace, Gudgeon, Roach, Flounder*, &c. See the Articles *Salmon*-FISHING, *Trout*-FISHING, &c.

*For the Rules of* ANGLING *with the Fly*, ſee *Fly*-FISHING.

ANGLING-*Rod*. See FISHING-*Rod*.

In *Angling*, they obſerve, after having ſtruck a large Fiſh, to keep the Rod bent; which will hinder him from running to the utmoſt Length of the Rod-Line, by which he would be enabled to break his Hold or Hook.

ANGLING *Line* is either made of Hair, twiſted; or Silk; or the *Indian* Graſs——The beſt Colours are the Sorrel, White and Grey; the two laſt for clear Waters, the firſt for muddy ones. Nor is the pale watery Green deſpiſable: this Colour is given artificially, by ſteeping the Hair in a Liquor made of Allum, Soot, and the Juice of Walnut-Leaves boil'd together.

ANGLING *Hook*. See FISHING *Hook*.

ANGLING *Fly*. See FISHING *Fly*.

ANGLO *Saxon*. See ENGLISH.

ANGUINEAL *Hyperbola*. See HYPERBOLA and CURVE.

ANGULAR, ſomething that relates to, or hath, *Angles*. See ANGLE.

*Angular* Objects at a diſtance appear round; the little Inequalities diſappearing at a much leſs diſtance than the Bulk of the Body. See VISION.

ANGULAR *Motion*, is a compound kind of Motion, wherein the Moveable both ſlides and revolves at the ſame time. See MOTION, SLIDING, &c.

Such is the Motion of the Wheel of a Coach, or other Vehicle. See WHEEL.

The Phænomena, &c. of ſuch Motion, ſee accounted for under the Article ROTA *Ariſtotelica*.

ANGULAR *Motion*, in Aſtronomy, is the Increaſe of the Diſtance between any two Planets, revolving round any Body as the common Center of their Motion. See PLANET, CENTER, &c.

The Quantity of this Motion is expreſſed by two right Lines drawn from the ſaid Center, to the revolving Bodies; which will open wider, and conſequently grow greater, as the revolving Bodies part farther and farther from one another.

ANGUSTICLAVIA, or ANGUSTICLAVUS, in Antiquity, a *Roman Tunica*, embroider'd with little purple Studs. See TUNICA.

The *Anguſticlavia* was wore by the Knight. See KNIGHT.

The Word is compounded of *Anguſtus*, narrow, ſmall; and *Clavus*, Nail or Stud: in regard thoſe Ornaments were ſmaller in this Garment than in the *Laticlavus* wore by the Senators. See LATICLAVUS. See alſo SENATOR, &c.

ANHELITUS ſignifies a ſhortneſs and thickneſs of Breath; as in an Aſthma. See RESPIRATION and ASTHMA.

The Word is *Latin*, form'd of the Verb *anhelo*, I puff and blow.

ANIL, in Natural Hiſtory, the Plant from which Indigo is procured. See INDIGO.

ANIMA, a *Soul*; whether Rational, Senſitive, or Vegetative. See SOUL, RATIONAL, SENSITIVE, and VEGETATIVE.

The Word is pure *Latin*, form'd of the *Greek* ανεμος, *Ventus*, Wind, Breath. See SPIRIT.

ANIMA *Mundi*, q. d. *Soul of the World*, or *of the Univerſe*, is a certain pure, ethereal Subſtance or Spirit, diffuſed, according to many of the antient Philoſophers, thro the Maſs of the World, informing, actuating, and uniting the divers parts thereof into one great, perfect, organical, vital Body or Animal. See WORLD, UNIVERSE, ANIMAL, &c.

*Plato* treats at large of the ψυχη τε κοσμε, in his *Timæus*; and is even ſuppoſed to be the Author of the Dogma: Yet are Interpreters much at a loſs about his Meaning. *Ariſtotle*, however, taking it in the common and obvious ſenſe, ſtrenuouſly oppoſes it. See PLATONISM, &c.

*Serranus*, on *Plato*'s *Timæus*, explains this Doctrine thus: 'Our Philoſopher will have the Univerſe ζωον εμ-'ψυχον ἐννεν, conſiſting of Body and Spirit; the Spirit he 'makes to be that Analogy, or Symmetry, whereby things of 'different Nature, are amicably aſſociated in the grand Com-'pages of all things. In which ſenſe the *Anima Mundi* ſig-'nifies as much as the Form of the Univerſe.' See HARMONY.

Others will have the *Anima Mundi* to ſignify I know not what ignific Vertue, or vivific Heat, infuſed into the Chaos, and diſſeminated thro its whole Frame; for the Conſervation, Nutrition, and Vivification thereof. See HEAT, &c.

Hence

Hence that of the Poet,

*Igneus eſt Ollis Vigor & Cœleſtis Origo*——

Others ſuppoſe *Plato*, by his *Anima Mundi*, to have meant God, or the Spirit of God; and to have taken the Hint from *Moſes*, who in his Account of the firſt Day's Creation, ſays, *The Spirit of God moved on the Face of the Deep.* See GOD, ABYSS, *&c.*

The modern *Platoniſts* explain their Maſter's *Anima Mundi* by a certain univerſal, ethereal Spirit, which in the Heavens exiſts perfectly pure, as retaining its proper Nature; but on Earth, pervading elementary Bodies, and intimately mixing with all the minute Atoms thereof, aſſumes ſomewhat of their Nature; and becomes of a peculiar Kind——So the Poet:

*Spiritus intus alit, totumq; infuſa per orbem*
*Mens agitat molem, & magno ſe corpore miſcet.*

They add, that this *Anima Mundi*, which more immediately reſides in the Celeſtial Regions as its proper Seat, moves and governs the Heavens in ſuch manner, as that the Heavens themſelves firſt received their Exiſtence from the Fœcundity of the ſame Spirit: For that this *Anima*, being the primary Source of Life, every where breathed a Spirit like itſelf, by virtue whereof various kinds of things were framed conformable to the Divine Ideas. See IDEA, PLATONIST, *&c.*

The Notion of an *Anima Mundi* is rejected by moſt of the modern Philoſophers; tho M. *du Hamel* thinks, without any great reaſon; for the generality of them admit ſomething very much like it——The *Peripatetics* have recourſe to celeſtial Influxes, in order to account for the Origin of Forms, and the ſecret Powers of Bodies. See FORM, PERIPATETIC, *&c.*

The *Carteſians* have their ſubtile Matter, which anſwers to moſt of the Uſes, and Intentions of *Plato*'s *Anima Mundi*; being ſuppoſed to flow from the Sun and the other heavenly Bodies, and to be diffuſed thro all the Parts of the World, to be the Source or Principle of all Motions, *&c.* See SUBTILE *Matter*, CARTESIAN, *&c.*

Some later Philoſophers ſubſtitute Fire; and others a ſubtile elaſtic Spirit or Medium diffuſed thro all the Parts of Space. See FIRE, *Subtile* MEDIUM, *&c.* NEWTONIAN, *&c.*

The principal thing objected, on the Chriſtian Scheme, againſt *Plato*'s Doctrine of the *Anima Mundi*, is, that it mingles the Deity too much with the Creatures; confounds, in ſome meaſure, the Workman with his Work, making this, as it were, a part of that, the ſeveral Portions of the Univerſe ſo many parts of the Godhead——Yet is the ſame Principle aſſerted by *Seneca*, Epiſt. 92. *Totum hoc quo continemur, & unum eſt, & Deus. Et ſocii ejus ſumus & membra*——

ANIMA *Hepatis*, q. d. the *Soul of the Liver*; a Term applied by the Chymiſts, to the *Sal Martis*, Salt of Iron or Steel; on account of its Uſe in Diſtempers of that Part. See IRON, MARS, STEEL, SALT, LIVER, *&c.*

It is ſometimes alſo preſcribed under the Name of *Vitriolum Martis.* See VITRIOL.

ANIMA *Articulorum* is a Denomination ſometimes given to *Hermodactyls*; on account of their Efficacy in Diſorders of the Joints. See HERMODACTYL.

ANIMA *Pulmonum*, is uſed for Crocus, or Saffron; by reaſon of its great Uſe in Diſeaſes of the Lungs. See SAFFRON and LUNGS.

ANIMA, or *Gum* ANIMÆ, in Pharmacy, a kind of Gum or Reſin; whereof there are two kinds, *Weſtern* and *Eaſtern*——The firſt flows from an Inciſion of a Tree in *New Spain*, called *Courbati*; it is tranſparent, and of a Colour like that of Frankincenſe: its Smell is very agreeable, and it eaſily conſumes in the Fire. See GUM, *&c.*

The Eaſtern Gum *Anima* is diſtinguiſhed into three Kinds; the firſt white; the ſecond blackiſh, in ſome reſpects like Myrrh; the third pale, reſinous, and dry.

All the ſeveral Kinds of *Anima* are uſed in Perfumes, by reaſon of their charming Smell; they are alſo applied externally in cold Diſorders of the Head and Nerves, in Palſies and Catarrhs; but are little known among us; inſomuch that our Apothecaries uſually ſell Bdellium for Gum *Animæ.* See BDELLIUM.

ANIMADVERSION, ſometimes ſignifies *Correction*; ſometimes Remarks, or Obſervations made on a Book, *&c.* and ſometimes, a ſerious Conſideration and Reflection on any Subject, by way of Criticiſm.

The Word is formed of the *Latin animadvertere*, to animadvert: of *animus*, the Mind; and *adverto*, I turn to, or toward.

ANIMAL, a Being, which, beſides the Power of growing, increaſing, and producing its like, which Vegetables likewiſe have, is further endowed with Senſation, and ſpontaneous Motion. See BEING, SENSATION, and MOTION.

The Word *Animal* is derived from the *Latin Anima*, Soul; and literally denotes ſomething endued with a Soul. See ANIMA and SOUL.

An *Animal*, reſpect being only had to the Body, not the Soul, may be defin'd with *Boerhaave* to be an organical Body, conſiſting of Veſſels and Juices; and taking in the Matter of its Nutriment, by a Part called a Mouth; whence it is conveyed into another called the Inteſtines, into which it has Roots implanted, whereby it draws in its Nouriſhment, after the manner of Plants. See MOUTH.

According to this Definition, an *Animal* is diſtinguiſhed from a Foſſil, in that it is an organical Body; and from a Vegetable by this, that it has its Roots within itſelf, and a Plant without itſelf. See FOSSIL and VEGETABLE.

In effect, the Inteſtines of an *Animal* are, in reality, no more than its Earth, or the Body it adheres to; into which it ſends forth its Roots; that is, the lacteal Veſſels, which thence draw the Matter of its Life and Increaſe. See INTESTINES.

An *Animal* is better defin'd from its Mouth than its Heart; ſince we don't know whether the whole Tribe have ſuch a Part; for as ſeveral have 16 Hearts, particularly the Silk-Worm, and ſome even 60; ſo 'tis poſſible others may have none at all. See HEART.

Nor can any general Character of an *Animal* be taken from the Brain, the Lungs, or the like; ſince we know of many quite deſtitute thereof. See BRAIN, LUNGS, *&c.*

The genuine Characteriſtic, then, of an *Animal*, is to be free and at large with reſpect to the Subject it derives its Nouriſhment from: for every thing is taken in by the Mouth; and the Mouth does not adhere to any thing: Whereas all Plants are connected, in ſome manner or other, to the Body which furniſhes them Food.

Hence it follows, that a Fœtus, while it remains in the Mother's Womb, is a real Plant; as being connected by the Funiculus umbilicalis to the Placenta, and by the Placenta to the Uterus, from whence it receives its Nutriment—— If it did not derive its Food by the ſaid Funiculus, but by its Mouth, it were an *Animal*; and if it drew it by both, a Neophyte, or Plant-Animal. See FOETUS, NEOPHYTE, *&c.*

Some have defined *Animals* from their Loco-Motion, as being capable of Shifting from place to place, and Plants from their ſticking faſt to the ſame Subject: but on this Principle, Oyſters, Muſſels, Cockles, *&c.* are excluded from the Claſs of *Animals*, in as much, as they adhere, or grow to Rocks, *&c.* yet 'tis certain, that thoſe Creatures are real *Animals*, as they have Mouths and Stomachs to take in their Food, and Lacteals and Meſenteric Veins to receive it——Indeed, Muſſels ſeem an Exception from the former Definition. That Anomalous Creature breathes, and receives its Nouriſhment, not at the Mouth, but by the *Anus*: The Part which we account its Head, tho' without either Eyes, Ears, or Tongue, or any other Apparatus, ſave a Hole, which we may call its Mouth, is an immoveable Part; being faſtned to one of the Shells, ſo, that it cannot ſeek for Food, but the Food muſt come to ſeek it. This Food is Water, which, as the Shells open, enters in at the Anus of the Muſſel, which opens at the ſame time; and paſſing thence into certain Canals between the inner Surface of the Shell, and the outer Surface of the *Animal*, is conveyed thence into its Mouth, by a certain Motion, which the *Animal* can produce at pleaſure.

We chuſe therefore with Dr. *Tyſon*, to fix the Criterion of an *Animal* in a *Ductus Alimentalis*, *i. e.* a Gula, Stomach, and Inteſtines; all which make but one continued Canal. See DUCTUS *Alimentalis.*

All *Animals*, according to the moſt probable and receiv'd Opinion, come from Eggs, and are there incloſed, as it were in Epitome, till the Seed of the Male penetrate their Covering, and ſtretch them, ſo as they become ready for hatching. See EGG, GENERATION, *&c.*

There enters into their Veſſels a chylous Juice; which being puſh'd forwards by the Spirits, circulates thro the whole Habit of the little Body, nouriſhes and dilates it by little and little, and thus produces what we call *Growth.* See CHYLE, CHYLIFICATION, and NUTRITION.

This Circulation repeated ſeveral times, refines and attenuates the Juices, till at length they became of a red Colour, and are converted into what we call Blood—— This natural Operation bears a great reſemblance to ſeveral chymical Operations, by which, in attenuating and diſſolving oily or ſulphureous Subſtances, they aſſume a red Colour. See CIRCULATION, BLOOD, and SANGUIFICATION.

The Philoſophers comprehend Man under the Species of *Animals*; and define him, a reaſonable *Animal*: tho among Naturaliſts, *&c. Animals* are uſually reſtrain'd to Irrationals.

St.

St. *Auguſtin* relates, that a great many ſcrupulous perſons in his Time, extended that Prohibition of the Law, *Thou ſhalt not kill*, to all *Animals*: They grounded their Opinion on ſome Paſſages of Scripture wherein God ſpeaks of *Animals* as if they had ſome Principle of Reaſon; declaring that he will require the Blood of Man at the hand of Beaſts, *Gen.* c. 9. Adding, in the ſame place, that he makes a Covenant not only with Man, but with every living Creature.——See CARNIVOROUS.

ANIMALS are ordinarily divided into *terreſtrial*, *aquatic*, *volatile*, *amphibious*, *Inſects*, &c.

Terreſtrial *Animals*, are either Quadrupeds or Reptiles.——Quadrupeds have either the Feet cloven, as the Bullock; or entire, as the Horſe; or divided into ſeveral Toes or Claws, as the Dog, Lion, *&c.* See QUADRUPED, INSECT.

The other Diviſions will be found under the words FISH, BIRD, REPTILE, *&c.*

But, for a compleat and general Account of the various kinds of *Animals*, we ſhall here ſubjoin Mr. *Ray*'s General Scheme.

*Animals* are either,

- Sanguineous, that is, ſuch as have Blood, which breathe either by
  - Lungs, having either
    - Two Ventricles in their Heart, and thoſe either
      - Viviparous.
      - Aquatick, as the Whale-kind,
      - Terreſtrial, as Quadrupeds.
    - Oviparous, as Birds.
    - But one Ventricle in the Heart, as Frogs, Tortoiſes, and Serpents.
  - Gills, as all ſanguineous Fiſhes, except the Whale-kind.
- Exanguineous, or without Blood, which may be divided into
  - Greater; and thoſe either
    - Naked.
      - Terreſtrial, as naked Snails,
      - Aquatick, as the Poulp, Cuttle-fiſh, *&c.*
    - Covered with a Tegument, either
      - Cruſtaceous, as Lobſters and Crab-fiſh.
      - Teſtaceous, either
        - Univalve, as Limpets,
        - Bivalve, as Oiſters, Muſcles, Cockles, *&c.*
        - Turbinate, as Periwinkles, Snails, *&c.*
  - Leſſer, as Inſects of all Sorts.

Viviparous hairy Animals, or Quadrupeds, are either

- Hoof'd, which are either
  - Whole-footed or hoof'd, as the Horſe and Aſs:
  - Cloven-footed, having the Hoof divided into
    - Two principal Parts call'd Biſcula, either
      - Such as chew not the Cud, as Swine.
      - Ruminant, or ſuch as chew the Cud, divided into
        - Such as have perpetual and hollow Horns:
          - Beef-kind,
          - Sheep-kind,
          - Goat-kind.
        - Such as have ſolid, branched, and deciduous Horns, as the Deer kind.
    - Four Parts, or Quadriſcula, as the Rhinoceros and Hippopotamus.
- Claw'd, or digitate, having the Foot divided into
  - Two Parts or Toes, having two Nails, as the Camel-kind.
  - Many Toes or Claws, either
    - Undivided, as the Elephant
    - Divided, which have either
      - Broad Nails and an humane Shape, as Apes.
      - Narrower and more pointed Nails, which in reſpect of their Teeth, are divided into ſuch as have
        - Many Fore-teeth or Cutters in each Jaw:
          - The greater, which have
            - A ſhorter Snout and rounder Head, as the Cat-kind.
            - A longer Snout and Head, as the Dog-kind.
          - The leſſer, the Vermin or Weazel kind.
        - Only two large and remarkable Fore-teeth, all which are Phytivorous and are call'd the Hare-kind.

*For particulars relating to Animals, their Number, Analogous Structure, Sagacity, Inſtinct, &c.* See ARK, HEAD, NECK, TAIL, FEET, STORGE, INSTINCT, *&c.*

ANIMALS conſiſt of *Solids*, or firm parts, as Fleſh, Bones, Membranes, *&c.* and *Fluids*, as Blood, *&c.*

The Solids are mere Earth, bound together by ſome Oily Humour; and accordingly are reducible by Fire into ſuch Earth again. See EARTH, FIRE, SOLID, *&c.*

Thus a Bone being perfectly purg'd of all its Moiſture, by Calcination, is found a mere Earth, which the leaſt force will crumble into Duſt, for want of the natural Gluten: Yet the ſame Bone by immerging it in Water or Oil becomes firm and ſtrong again; and more ſo in Oil than Water. And thus Cupels are made of Animal Earth, which will ſuſtain the utmoſt Effect of Fire. See CUPEL.

The Fluid Parts of *Animals* are the cruder as they are leſs diſtant from the Lacteals, and abſorbent Veſſels——Thus Chyle is little elſe but a vegetable Juice; but in its farther progreſs, gradually lays aſide its vegetable Characters, till after a number of Circulations it becomes a perfect Animal Juice, under the denomination of *Blood*, from whence the other Humours are all derived. See CHYLE, BLOOD, HUMOUR, SECRETION, *&c.*

The parts of *Animals* are diſtinguiſhed from thoſe of Vegetables by two Circumſtances: The firſt, that when burnt they are found perfectly inſipid; all Animal Salts being volatile and flying off with heat: the contrary of which is found in Vegetables, which conſtantly retain ſome fixed Salt in all their Aſhes. See SALT, VOLATILE and FIXED.

The ſecond, that no ſincere Acid is contained in any Animal Juice; nor can any Acid Salt be extracted from the ſame: The contrary of which is found in all Vegetables. See ACID.

Yet are *Animals* reconverted into their Vegetable Nature, by Putrefaction. See PUTREFACTION.

ANIMALS make the Subject of that Branch of Natural Hiſtory call'd *Zoology*; ſee ZOOLOGY.

The Structure of *Animals*, with their Diſorders, Remedies, *&c.* make the Subject of Anatomy, Medicine, *&c.* See ANATOMY, MEDICINE, *&c.*

ANIMALS make the principal matter of Heraldry; both as Bearings and as Supporters, *&c.* See BEARING, SUPPORTER, *&c.*

'Tis an eſtabliſh'd Rule among the Heralds, that in Blazoning, *Animals* are always to be interpreted in the beſt Senſe; that is, according to their moſt noble and generous Qualities, and ſo as may redound moſt to the Honour of the Bearers.

Thus the Fox, being reputed witty, and withal given to filching for his Prey; if this be the charge of an Eſcutcheon, we are to conceive the Quality repreſented to be his Wit and Cunning, not his Theft.

*Guillim* adds, that all Savage Beaſts are to be figured in their fierceſt Action; as, a Lion erected, his Mouth wide open, his Claws extended, *&c.* Thus formed, he is ſaid to be *Rampant*.—— A Leopard, or Wolf is to be pourtray'd going, as it were, Pedetentim: which form of Action, ſaith *Chaſſanæus*, fits their natural Diſpoſition, and is termed *Paſſant*.——The gentler kinds are to be ſet forth in their nobleſt and moſt advantageous Action; as, a Horſe running or vaulting, a Grey-hound courſing, a Deer tripping, a Lamb going with ſmooth and eaſy pace, *&c.*

Every *Animal* is to be moving, or looking, to the right ſide of the Shield; and it is a general Rule, that the right Foot be placed foremoſt, becauſe the right ſide is reckoned the beginning of Motion: add, that the upper part is nobler than the lower; ſo that things conſtrained either to look up or down, ought rather to be deſign'd looking upwards.—It muſt be noted, that notwithſtanding theſe ſolemn Precepts of *Guillim*, and the other Maſters of Armory; we find by experience, that there are Lions Paſſant, Couchant, and Dormant, as well as Rampant, and that moſt *Animals* look down, and not up.

ANIMAL is alſo uſed Adjectively, to denote ſomething that belongs or partakes of the Nature of an Animal Body, ſee BODY.——Thus we ſay *Animal Food*, *Animal Oeconomy*, *&c.* See FOOD, OECONOMY.

ANIMAL *Actions* are thoſe peculiar to *Animals*; or which belong to *Animals*, as ſuch. See ANIMAL and ACTION.

Such are *Senſation* and *Muſcular Motion*. See SENSATION, *&c.*

ANIMAL *Motion* is the ſame with what we call *Muſcular Motion*. See MUSCULAR *Motion*.

It is divided into two Branches; Natural or Involuntary, and Spontaneous. See NATURAL and SPONTANEOUS.

ANIMAL *Functions*, among Phyſicians. See FUNCTION.

Moraliſts frequently oppoſe the *Animal* part, which is the ſenſible, fleſhy part of Man; to the Rational part, which is the Underſtanding.

ANIMAL *Secretion* is the Act whereby the divers Juices of the Body are ſecreted or ſeparated from the common Maſs of Blood, by means of the Glands. See SECRETION, BLOOD and GLAND.

The Theory of Animal Secretion is one of the Improvements in Phyſic, for which we are indebted to Geometrical Reaſoning——The ſum of what our late Writers on the Head have ſhewn, may be reduced to the following Heads.

(1.) Different Juices may be ſeparated from the common Maſs of Blood by means of the different Diameters of the

Orifices of the ſecretory Ducts. For all Particles, whoſe Diameters are leſs than thoſe of the Ducts, will paſs thro' them; ſo that any Matter may be evacuated by any of the Glands, provided the Diameters of its Particles be made leſſer than thoſe of the ſecretory Duct, either by a Comminution of the Matter to be ſeparated, or by an Enlargement of the ſeparating Paſſage.

(2.) By the different Angle which the ſecretory Duct makes with the Trunk of the Artery. For all Fluids preſs the Sides of the containing Veſſels in a Direction perpendicular to its Sides; which is evident in the Pulſation of the Arteries, it being to that Preſſure that the Pulſation is owing. It is likewiſe evident, that the Blood is urged forward by the Force of the Heart; ſo that the Motion of Secretion is compounded of both theſe Motions. Now the lateral Preſſure is greater when the direct Velocity is ſo; but yet not in proportion to ſuch Velocity: for the lateral Preſſure is conſiderable, even when the Fluid is at reſt; being then in proportion to the Specifick Gravity of the Fluid: And in a Fluid like the Blood in the Arteries which is thrown in a right Direction, or a Direction parallel to the Axis of the Veſſel, the lateral Preſſure will be in a Proportion compounded of both: From whence it will follow, that if two Particles of equal Diameters, but of unequal Specifick Gravities, arrive, with the ſame Velocity, at an Orifice capable of admitting them, yet they will not both enter it and paſs, becauſe their Motion of Direction will be different: So that the Diverſity of the Angles which the Ducts make with the Trunk of the Artery, is altogether neceſſary to account for all the poſſible Diverſities of ſecerned Fluids, even ſuppoſing their Diameters and Figures to be the ſame.

(3.) By the different Velocities with which the Blood arrives at the Orifices of the ſecretory Ducts.——For ſince the Secretions are made in a fluid form; no poſſible Reaſon can be aſſign'd, why ſome *Animals* have a ſoft looſe Texture of the ſolid Parts, and why one Part of the Body is of an eaſily ſeparated Texture, and others of a firmer, but this different Velocity of the Blood at the Orifices of the ſecretory Ducts, whereby the Particles ſecerned for Nouriſhment, and Accretion, are drove or impacted into the Vacuola, that receive them with a greater or leſs Force; it being difficult to imagine that ſuch a Diverſity in Texture can altogether proceed from the different Solidities and Contacts of the conſtituent Parts. *See further under the Article* SECRETION.

ANIMAL *Spirits*, are a fine ſubtile Juice, or Humour in Animal Bodies; ſuppoſed to be the great Inſtrument of muſcular Motion, Senſation, *&c.* See MUSCULAR MOTION, SENSATION, *&c.*

The Antients diſtinguiſhed Spirits into three Kinds, *viz.* *Animal*, Vital, and Vegetative: but the Moderns have reduced them to one ſort, *viz.* *Animal*; about the Nature of which, and the Matter whence they are formed, great diſputes have ariſen among the Anatomiſts, tho' their very Exiſtence has never been fairly proved.

As it is hard to define what cou'd never yet be brought under the Judgment of our Senſes, all that we ſhall here offer concerning them, is, that they muſt needs be extremely ſubtile Bodies, which eſcape all manner of Examination by the Senſes, tho ever ſo well aſſiſted; and pervade the Tracts of the Nerves, which yet have no diſcoverable Cavity or Perforation; nor could ever by any Experiment be collected; yet are conſtantly moving in vaſt Quantities, as they muſt of neceſſity be, to perform all thoſe mighty Operations which are aſcribed to them——However, the Antiquity of the Opinion claims ſome Reverence.

By the Help of theſe we are furniſhed with a vaſt Number of precarious Solutions of great Phænomena; and without them we muſt leave a great Chaſm in the philoſophical Hiſtory of *Animal* Bodies.

They are ſuppoſed to be ſeparated in the Brain, from the ſubtileſt Parts of the Blood; and thence carried, by the Nerves, to all Parts of the Body, for the Performance of all *animal* and vital Functions. See BRAIN and NERVE. See alſo further *under the Article* SPIRIT.

ANIMALCULE, ANIMALCULUM, is a Diminutive of *Animal*; and expreſſes ſuch a minute Creature as is ſcarce diſcernible by the naked Eye.

Such are thoſe numerous Inſects which croud the Water in the Summer Months; changing it ſometimes of a deep, or pale red, ſometimes a yellow, *&c.* They ſeem to be of the Shrimp kind, call'd by *Swammerdam*, *Pulex Aquaticus arboreſcens.* The cauſe of their Concourſe at this time, Mr. *Derham* obſerves is to perform their Coit. He adds, that they afford a comfortable Food to many Water Animals——The green Scum on the top of ſtagnant Waters is nothing elſe but prodigious Numbers of another ſmaller Order of *Animalcules*; which in all probability ſerve for Food to the *Pulices Aquatici.*

The Microſcope diſcovers Legions of Animalcules in moſt Liquors, as Water, Wine, Brandy, Vinegar, Beer, Spittle, Urine, Dew, *&c.* In the Philoſoph. Tranſact. we have Obſervations of the *Animalcules* in Rain-Water, in ſeveral Chalybeat Waters, Infuſions of Pepper, Bay-berries, Oats, Barly, Wheat, *&c.* See MICROSCOPE.

The human Seed has been obſerved by divers Authors to contain huge Numbers of *Animalcules*; which gave occaſion to the Syſtem of Generation *ab Animalculo.* See SEED and GENERATION.

ANIMATE, ANIMATED, ſomething endued with Life, or a living Soul. See LIFE and SOUL.

Thus, in Mechanicks, *Animate Power* is uſed to denote a Man or Brute; in contradiſtinction to inanimate ones, as Springs, Weights, *&c.* See POWER, *&c.*

ANIMATED *Mercury*, among Chymiſts, ſignifies Quick-ſilver impregnated with ſome ſubtile and ſpirituous Particles, ſo as to render it capable of growing hot when mingled with Gold. See MERCURY, AMALGAMA, *&c.*

ANIMATED *Needle*, a Needle touch'd with a Load ſtone. See NEEDLE, MAGNET, *&c.*

ANIMATION, ſignifies the informing of an animal Body with a Soul.

Thus the Fœtus in the Womb is ſaid to come to its *Animation*, when it begins to act as a true Animal; or after the Female that bears it is quick, as the common way of Expreſſion is. See FOETUS.

The common Opinion is, that this happens about 40 days after Conception. But *Jer. Florentinus*, in a Latin Treatiſe entitled, *Homo Dubius, ſive de Baptiſmo Abortivorum*, ſhows this to be very precarious. See CONCEPTION, ABORTION, *&c.*

ANISCALPTOR, in Anatomy, a Muſcle, otherwiſe called LATISSIMUS *Dorſi.*

ANKER, a liquid Meaſure, chiefly uſed at *Amſterdam*, &c. See MEASURE.

The *Anker* is the 4th part of the Aem, and contains two Stekans: each Stekan conſiſts of ſixteen Mingles; the Mingle being equal to two *Paris* Pints. See PINT, *&c.*

ANKYLOSIS, a Diſeaſe in the Junctures of an human Body; where the nervous Liquor that ſhou'd lubricate the Bones, and make their Motions more eaſy, growing too thick, clog up, and as it were, cement the Bones within one another. See BONE, ARTICULATION, *&c.*

The Word is derived from the *Greek* ἀγκύλωσις, which comes from ἀγκύλη, a Hardneſs, or Callus in a Juncture.

ANNALS, ANNALES, an hiſtorical Account of the Affairs of a State, digeſted in order of Years; ſee YEAR.

The difference between *Annals* and Hiſtory is variouſly aſſigned by various Authors—Some ſay that Hiſtory is properly a Recital of Things which the Author has ſeen, or been a by-ſtander to. What they build upon, is, the Etymology of the Word; Hiſtory in the *Greek*, ſignifying the Knowledge of *Things* preſent, and in effect, ἱστορεῖν, properly ſignifies *to ſee.* On the contrary, *Annals*, ſay they, relate to the Tranſactions of others, and ſuch as the Writer never ſaw. See HISTORY.

Of this Opinion, the great *Annaliſt*, *Tacitus* himſelf, ſeems to have been; in regard, the firſt Part of his Work, which treats of former Times, he calls *Annals*; whereas when he comes down to his own Times, he changes his Title, and calls it *Hiſtory.*

*Aulus Gellius* is of a different Sentiment, and pretends that Hiſtory and *Annals* only differ from one another as the Genus does from the Species; that Hiſtory is the Genus, and implies a Narration or Recital of Things paſs'd; and that *Annals* are the Species, and are alſo a Recital of Things paſs'd, but with this difference, that theſe laſt are digeſted into certain Periods, or Years.

The ſame Author gives us another Opinion, which he ſays he borrows from *Sempronius Aſellio*: According to that Writer, *Annals* are a bare Relation of what paſſes each Year; whereas Hiſtory relates not only the Tranſactions themſelves, but alſo the Cauſes, Motives, and Springs thereof. The *Annaliſt* has nothing to do but to lay down his Facts, but the Hiſtorian reaſons and deſcants on them.

Of this laſt Opinion ſeems *Cicero* to be, when ſpeaking of *Annaliſts*, he ſays, *Unam dicendi laudem putant eſſe brevitatem, non Exornatores rerum, ſed tantum Narratores.* He adds, that Hiſtory, in its Original, was a Compoſition of *Annals.*

The ſame *Cicero* relates the Origin of *Annals*: To preſerve the Memory of Tranſactions, the *Pontifex Maximus*, ſays he, wrote what paſs'd each Year; and expoſed it on a Table, in his own Houſe, where every one was at liberty to read them——Theſe they call'd *Annales Maximi*; and the Cuſtom was kept up till the Year of *Rome* 620. See FASTI.

Several other Writers, in imitation hereof, took to this ſimple, and naked Way of relating Facts; and were hence denominated *Annaliſts*——Such were *Cato*, *Pictor*, *Piſo*, *Antipater*, &c.

ANNA-

ANNATES, Annats, *Annata*, the ſame with *Primitiæ* or Firſt-fruits; ſo call'd from the *Latin Annus* Year, becauſe the Rate of Firſt-fruits, paid for ſpiritual Livings, is after the Value of one Year's Purchaſe. See Primitiæ and First-Fruits.

*Annates* were antiently a Right paid to the Pope, upon his granting a Bull for a vacant Benefice, Abby, or Biſhoprick; but ſince the Reformation they are paid in *England* to the King.———The firſt Pope that impoſed them in *England*, ſeems to have been *Clement* V. who, according to *Matthew* of *Weſtminſter*, exacted *Annates* of all the vacant Benefices in the Kingdom, for the ſpace of two Years, or according to *Walſingham* for three Years. His Succeſſor *John* XXII. introduced the like in *France*.

Yet *Polydore Virgil*, and ſome others, take *Annates* to be of a much elder ſtanding; and to have obtained long before they were paid to the Pope.———'Tis certain at leaſt, that from the Twelfth Century, there were Biſhops and Abbots, who by ſome peculiar Cuſtom or Privilege, took *Annates* of the Benefices depending on their Dioceſe or Abbey.

*Matthew Paris*, in his Hiſtory of *England*, for the Year 746, relates that the Archbiſhop of *Canterbury* in virtue of a Grant or Conceſſion of the Pope, received *Annates* of all the Benefices that became vacant in *England*. But in after-times the Holy See thought fit to take 'em away from the Biſhops and Archbiſhops, and appropriate 'em to themſelves.

ANNEALING, or as it is popularly call'd *Nealing*. See Nealing.

One fine uſe of Silver, ſays Mr. *Boyle*, was only diſcovered ſince the Art of *Annealing* upon Glaſs came to be practiſed———For prepared Silver, or even the crude Metal being burnt on a Glaſs Plate, will tinge it of a fine yellow, or golden Colour. And there are ſeveral mineral Earths, and other coarſe Matters, of uſe in this Art, which by means of Fire impart tranſparent Colours to Glaſs, and ſometimes very different ones from thoſe of the Bodies themſelves. See *Painting on* Glass.

ANNEXATION, in Law, the uniting of Lands or Rents to the Crown. See Annexed.

ANNEXED, ſomething join'd to, or dependant of, another———Thus we ſay ſuch a Farm, ſuch an Advowſon is *annex'd* to ſuch a Fee, ſuch a Manor, &c. *Charles* VIII in the Year 1486, *annex'd Provence* to the Crown of *France*.

ANNIENTED, a Term ſometimes uſed in Law Books, in the Senſe of fruſtrated, or annull'd.

It is of *French* original; being form'd of the Verb *Annientir* to bring to nothing, annihilate.

ANNIHILATION, the Act of reducing a Subſtance into Nothing; or of totally deſtroying and taking away its Exiſtence. See Substance and Existence.

*Annihilation* ſtands oppoſed to *Creation*: The one ſuppoſes ſomething made out of nothing, the other nothing made out of ſomething. See Creation.

All Annihilation muſt be Metaphyſical or Supernatural. See Body, Alteration, Corruption, &c.

Bodies naturally admit of Changes and Alterations in their form; but not of *Annihilation*.

Philoſophers object againſt this Notion of *Annihilation*; in that it ſuppoſes an Act required thereto: Whereas, according to them, *Annihilation* muſt enſue upon God's merely ceaſing to act, or to create a thing. For, if the Conſervation of a thing be a continued Creation thereof; as is almoſt univerſally allowed: 'Tis evident a thing can no longer endure, than while God continues to create.

The Word is compounded of *ad* to, and *nihil* nothing.

ANNI *Nubiles*, among Law-Writers, the legal Age, at which a Maid becomes fit for Marriage; which is at 12 Years. See Age.

ANNIS SEED, or Aniseed, a medicinal Seed or Grain; produced by an Umbiliferous Plant of the ſame Name, common in our Gardens. See Seed.

It has a ſweetiſh Taſte, intermix'd with ſomething pungent and bitter: Is reputed an Aromatic, and preſcribed not barely as a Carminative againſt Wind; but alſo as a Pectoral, Stomachic and Digeſtive. See Carminative, &c.

It alſo yields by Diſtillation, a white cordial Oil call'd *Eſſence of Annis-ſeed*; of a very ſtrong penetrating Smell, and efficacious in its medicinal Operation: It being alſo uſed by the Confectioners to ſcent their Pomatums, &c.

In diſtilling the *Annis-ſeed* for the Oil; there is procured a limpid Water call'd *Annis-ſeed* Water; which has much the ſame Virtues with the Oil.

ANNIVERSARY, is properly the yearly Return of any remarkable Day; and was antiently called a *Year-day* or *Mind-day*, that is, a Memorial-day. See Annual Day, &c. On ſome extraordinary Occaſions ſuch Days have been regiſter'd, and annually obſerved, in gratitude to Founders and Benefactors.———

The Word is form'd from *annus* and *verto*, in regard of its returning every Year.———In this Senſe we ſay *Anniverſary* Days, *Anniverſary* Feaſts, *Anniverſary* Prayers, &c.

Anniversary *Days*, *Dies Anniverſarii*, among our Anceſtors were thoſe Days wherein the Martyrdoms of the Saints were yearly celebrated in the Church; as alſo Days whereon, at every Year's end, Men were wont to pray for the Souls of their deceas'd Friends.—*Anniverſaria dies ideo repetitur defunctis, quoniam neſcimus qualiter eorum cauſa habeatur in alia vita.*—This was the Reaſon given by *Alcuinus* in his Divine Offices.

ANNOISANCE, or *Nuſance*, in Law, a Hurt or Offence, either to a publick place, as a High-way, Bridge, or common River; or to a private one, by laying any thing that may breed Infection; by incroaching, or the like means. See Nusance.

Annoisance is alſo uſed for a Writ brought upon this Tranſgreſſion. See Nusance.

ANNOTATION, a ſuccinct Commentary, or Remark on any Book, or Writing; in order to clear up ſome Paſſage, or to draw ſome Induction or Conſequence from it. See Comment, &c.

The Criticks of the laſt Age have made learned *Annotations* on the Scriptures, the Claſſics, &c.

The Word is form'd of the Latin *adnotatio*; of *ad* and *Nota*, Note.

ANNUAL, ſomething which returns every Year, or cloſes at the end of the Year. See Year.

Thus we ſay an *Annual* or yearly Feaſt, Office, Commiſſion, Rent, &c. See Anniversary.

The Annual *Motion of the Earth ſee proved under the Article* Earth.

Annual, is ſometimes uſed for the yearly Rent, or Income of a Prebendary, &c. See Prebend, &c.

Annual *Plants*, call'd alſo ſimply *Annuals*, are ſuch as only live their Year, *i. e.* come up in the Spring, and die again in Autumn: And accordingly are to be recruited every Year. See Plant.

*Annuals* ſtand contradiſtinguiſhed from Biſannuals, Triennials, &c.

Annual *Leaves*, are ſuch Leaves as come up afreſh in Spring, and periſh in Winter. See Leaf.——Theſe ſtand oppoſed to *Perennials*. See Perennial.

Anno *Domini*, *q. d.* in the *Year of our Lord*; the Computation of Time from the Epocha of the Incarnation of Jeſus Chriſt. See Epocha, Computation, &c.

Annual *Equation*, of the mean Motion of the Sun and Moon, and of the Moon's Apogee and Nodes. See Equation, Moon, &c.

The *annual* Equation of the mean Motion of the Sun depends on the Eccentricity of the Earth's Orbit; and is $16\frac{1}{2}$ of thoſe Parts, whereof the mean Diſtance between the Sun and the Earth is 1000: whence by ſome, it is called the *Equation of the Center*, and when greateſt, is 1 Degree 56′, 20″.

The greateſt *annual* Equation of the Moon's mean Motion is 11′, 40″. of its Apogee 20′, and of its Node 9′, 30″. See Node, &c.

Theſe four *annual* Equations are always proportionable; ſo that when any of them is at the greateſt, the three others are alſo greateſt; and *vice verſa*.——Hence the *annual* Equation of the Center (of the Sun) being given, the other three correſponding Equations will be given; ſo that one Table (that is, of the central Equation) may ſerve for all.

ANNUALIA, yearly Oblations antiently made by the Relations of deceaſed Perſons, on the Day of their Death. See Oblation.

This Day they call'd *Year-day*, &c. and on it, Maſs was celebrated with great Solemnity. See Anniversary.

ANNUENTES *Muſculi*, in Anatomy, a Pair of tranſverſe Muſcles, at the Root of the *Vertebræ* of the Back; call'd alſo by Mr. *Cowper*, *Recti interni minores*, becauſe they lie under the *Recti majores*. See Recti.

They are called *Annuentes*, becauſe they help to nod the Head directly forward. See Head, Muscles, &c.

ANNUITY, a yearly Rent or Revenue, paid for Term of Life or of Years, or in Fee and for ever. See Revenue, Fee, &c.

In Common Law, the Difference between a Rent, and an *Annuity* conſiſts in this, that Rent is payable out of Land; whereas an *Annuity* charges only the Perſon of the Grantor: and that for the Recovery of a Rent, an Action lies; whereas for that of an *Annuity*, there only lies a Writ of *Annuity* againſt the Grantor, his Heirs and Succeſſors. See Rent, Writ, Action, &c.

Add, that *Annuities* are never taken for Aſſets; as being no Freeholds in Law. See Assets.

The Computation of the Value of *Annuities* belongs to Political Arithmetic. See Political *Arithmetic*.

Dr. *Halley*, in his Obſervations on the *Breſlaw* Bills of Mortality, ſhews, That it is 80 to 1, a Perſon of 25 Years of Age does not die in a Year———That it is $5\frac{1}{2}$ to one, a Man of 40 lives 7 Years; and that one of 30 may reaſonably

nably expect to live 27 or 28 Years. So great a difference is there between the Life of Man at different Ages; that it is 100 to 1. one of 20 lives out a Year; and but 38 to 1 that one of 50 doth so.

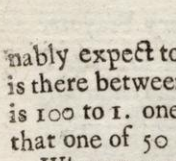
Whence, and from some other Observations, he constructed the following Table; shewing the Value of *Annuities* for every fifth Year of Life to the 70th.

| Age. | Years Purchase. | Age. | Years Purchase. |
|---|---|---|---|
| 1 | 10,28 | 40 | 10,57 |
| 5 | 13,40 | 45 | 9,91 |
| 10 | 13,44 | 50 | 9,21 |
| 15 | 13,33 | 55 | 8,51 |
| 20 | 12,78 | 60 | 7,60 |
| 25 | 12,27 | 65 | 6,54 |
| 30 | 11,72 | 70 | 5,32 |
| 35 | 11,12 | | |

ANNULAR, ANNULARIS, something that relates to, or resembles, a Ring, by the *Latins* called *Annulus*. See RING.

ANNULAR *Protuberance*, is a Process of the *Medulla Oblongata*; thus called by Dr. *Willis*, in regard it surrounds the same, much like a Ring. See MEDULLA *Oblongata*.

ANNULAR *Cartilage*, or ANNULARIS, is the second Cartilage of the Larynx; being round, and investing the whole Larynx; called also *Cricoides*. See LARYNX and CRICOIDES.



ANNULAR *Ligament*, *Ligamentum Annulare*, is a strong Ligament, encompassing the Carpus or Wrist; after the manner of a Bracelet. See LIGAMENT.

Its use is to connect or bind the two Bones of the Arm together; and also to restrain the Tendons of the several Muscles of the Hand and Fingers, and prevent their flying out of their places, when in Action. See CARPUS, HAND, FINGER, *&c.*

The Ligament of the Tarsus is also denominated *Annular* Ligament. See TARSUS.

Add, that the Sphincter Muscle of the Anus is also called *Annularis*, or *Annular* Muscle; from its Figure. See SPHINCTER.

ANNULAR is also an Epithet given the fourth Finger; popularly calld the *Ring Finger*. See FINGER.

ANNULET, *q. d. little Ring*; in Heraldry, is a Difference or Mark of Distinction, which the fifth Brother of any Family ought to bear in his Coat of Arms. See DIFFERENCE.

*Annulets* are also part of the Coat-Armour of several Families: They were antiently reputed a Mark of Nobility, and Jurisdiction; it being the Custom of Prelates to receive their Investiture *per Baculum & Annulum*. See BISHOP, INVESTITURE, *&c.*

ANNULETS, in Architecture, are small square Members, in the Doric Capital; under the Quarter-round. See DORIC and CAPITAL.

They are also called *Fillets*, *Listels*, &c. See FILLETS, *&c.*

*Annulet* is also a narrow flat Moulding, common to other Parts of a Column, *viz.* the Bases, *&c.* as well as the Capital; so called, because it encompasses the Column round.—In this Sense *Annulet* is frequently used for a *Baguette* or little Astragal. See BAGUETTE, and ASTRAGAL.

ANNULLING, the abolishing of an Act, Proceedure, Sentence, or the like. See ABOLITION.

The Word is compounded of *ad* and *nullus*, none; *q. d. un-doing*.

ANNUNCIATE, ANNUNTIADA, or ANNUNTIATE, a Denomination common to several Orders, both Religious and Military; instituted with a View to the Annunciation. See ORDER and ANNUNCIATION.

The first Religious Order of this kind, was instituted in 1232, by seven *Florentine* Merchants.——These are also call'd *Servites*, *q. d. Servants*. See SERVITES.

The second was a Nunnery at *Bourges*, founded by *Joan* Queen of *France*, after her Divorce from *Lewis* XII.

The third, was also a Nunnery, founded by a *Genoese* Lady in 1600.——The fourth, a Friary, founded by Cardinal *Torrecremata*, at *Rome*; which last are grown so very rich, that they give Fortunes of sixty *Roman* Crowns to above 400 Girls, on the Anniversary of the Annunciation.

*Knights of the* ANNUNCIATE, was a military Order, instituted in 1350, by *Amadeus*, Duke of *Savoy*. See KNIGHT.

It was at first call'd the Order of the True Lovers Knots; in memory of a Bracelet of Hair presented to the Founder by a Lady: but upon the Election of *Amadeus* VIII. to the Pontificate, it changed its Name for that of the *Annunciate*.

ANNUNCIATION, the Tidings which the Angel *Gabriel* brought to the Holy Virgin, of the Mystery of the Incarnation. See INCARNATION.

ANNUNCIATION is also the Name of a Feast, celebrated annually on the 25th of *March*, popularly call'd *Lady-day*, in Commemoration of that wonderful Event. See FEAST.

This Feast appears to be of great Antiquity in the *Latin* Church. Among the Sermons of St. *Augustin*, who died in 430, we have two on the *Annunciation*, *viz.* the 17th and 18th *de Sanctis*: And yet there are much earlier Testimonies of its use in the *Greek* Church. *Proclus*, who died in 446; *Chrysostom*, in 407; and even *Gregory Thaumaturgus*, in 295; have all of them Discourses on the *Annunciation*. *Rivet*, *Perkins*, and some other Protestant Writers after 'em, have indeed question'd the Authentickness of the two Homilies of *Gregory Thaumaturgus*, on the *Annunciation*; but *Vossius* acknowledges 'em the genuine Productions of that Father.

Add, that some Authors are of opinion, that the Feast was originally solemnized in Honour of our Saviour; and that the holding it in the Name and Honour of the Virgin, is of a much later standing.

Several of the Eastern Churches celebrate the *Annunciation* at a different Season from those of the West.——The *Syrians* call it *Bascarach*, *q. d.* Search, Inquiry; and mark it in their Calendar for the first Day of *December*. The *Armenians* hold it on the 5th of *January*; thus anticipating the Time, to prevent its falling in *Lent*: But the *Greeks* make no scruple of celebrating the Festival even in Lent. See LENT.

The Word is compounded of the Latin *ad* and *nuntio*, I tell, I declare; of *Nuntius*, Messenger.——The *Greeks* call it Εὐαγγελισμο, Good tidings; and χαιρεσισμὸς, Salutation.

The *Jews* also give the Title *Annunciation* to part of the Ceremony of their Passover, *viz.* that, wherein they explain the Origin, and Occasion of the Solemnity——This Explanation they call הגדה, Haggada, *q. d. Annunciation*.

ANNULUS, a *Ring*. See RING.

ANODYNE, in Physick, is understood of such Remedies, as by their gentle Heat and temperate Moisture, calm and assuage Pain. See PAIN.

These are also called *Paregoricks*. See PAREGORICKS.

There are others, which bear the same Name, but improperly, *viz.* such as occasion a Stupor, Drousiness, and Sleep, properly called *Narcoticks*, *Hypnoticks*, or *Opiates*. See NARCOTICK, OPIATE, *&c.*

The true *Anodynes* are applied externally, to the part affected——Such among the Class of Simples are the Onion, Lilly, Root of Mallows, Leaves of Violet, Elder, *&c.*

The Word is derived from the privative Particle α and ὠδύνα, *doleo*, to be in pain.

We have also certain compound Medicines in the Shops, prepared with this Intention; and called by this Name—Such is the *Anodyne Balsam*, made of Castile Soap, Camphir, Saffron, and Spirit of Wine; digested in a Sand-heat. It is recommended not only for procuring Ease in the most racking extremities of pain, but for assisting in discharging the peccant matter that occasion'd it.

ANOMALOUS, *q. d. Irregular*; something that deviates from the ordinary Rule and Method of other things of the same kind. See RULE, *&c.*

The Word is not compounded of the privative α, and νομος, Law, as is usually imagined: for whence, on such supposition, should the last Syllable *al*, arise? But it comes from the Greek ἀνώμαλος, *uneven*, *rough*, *irregular*, form'd of the Privative α, and ὁμαλὸς, *plain*, *even*.

ANOMALOUS *Verbs*, in Grammar, are such as are irregular in their Conjugations; deviating from the Rules or Formula's obsery'd by others. See VERB and CONJUGATION.

There are *Anomalous* Verbs, irregular Inflexions of Words, in all Languages——In the *English* all the Irregularity in our *Anomalous* Verbs, lies in the formation of the Preter Tense, and passive Participle; tho' this only holds of the Native *Teutonic* or *Saxon* Words, and not of the foreign Words, borrow'd from the *Latin*, *Welsh*, *French*, *&c.*

The principal Irregularity arises from the quickness of our Pronunciation, whereby we change the Consonant *d* into *t*, cutting off the regular ending *ed*.

Thus for *mixed*, we write *mixt* or *mix'd*; for *dwelled* *dwelt* or *dwell'd*; for *snatched*, *snatcht*, &c.——But this is rather of the nature of a Contraction than an Irregularity; and

and is complained of by ſome of our Politer Writers as an Abuſe much to the diſadvantage of our Language, tending to diſfigure it, and turn a tenth part of our ſmootheſt Words into Cluſters of Conſonants: which is the more inexcuſable, in that the want of Vowels has been the general Complaint of the beſt Writers.

Another Irregularity relates to the preter Tenſe, and paſſive Participle——Thus *give*, if it were regular, or formed according to the Rule, would make *gived* in the preter Tenſe, and the paſſive Participle: whereas it makes *gave* in the preter Tenſe, and *given* in the paſſive Participle.

ANOMALISTICAL *Year*, in Aſtronomy, called alſo *Periodical Year*, is the ſpace of time wherein the Earth paſſes thro' her Orbit. See YEAR.

The *Anomaliſtical*, or common Year, is ſomewhat greater than the Tropical Year; by reaſon of the præceſſion of the Equinox. See TROPICAL.

ANOMALY, in Grammar, the Irregularity of Formation or Conjugation, obſerved in ſeveral Verbs. See ANAMALOUS.

ANOMALY, in Aſtronomy, is the Diſtance of a Planet from the Aphelion or Apogee; or an irregularity in the Motion of a Planet, whereby it deviates from the Aphelion or Apogee. See PLANET, APHELION and APOGEE.

*Kepler* diſtinguiſhes three kinds of Anomalies; Mean, Eccentric and True.

*Mean* or *Simple* ANOMALY in the antient Aſtronomy, is the Diſtance of a Planet's mean place from the Apogee. See PLACE.

In the modern Aſtronomy, it is the Time wherein the Planet moves from its Aphelion A, to the mean Place or Point of its Orbit I. (Tab. ASTRONOMY, fig. 1.)

Hence, as the Arch, or the Angle, or the Elliptic Area A S I, is proportional to the Time wherein the Planet deſcribes the Arch A I; that Area may repreſent the mean *Anomaly*.——Or thus: The Area S K A found by drawing a Line L K, thro' the Planet's place, perpendicular to the Line of the Apſides P A, till it cuts the Circle D A, and drawing the Line S K; may repreſent the mean *Anomaly*; for this Area is every where proportional to the former Area S I A, as is demonſtrated by Dr. *Gregory*, *lib.* 3. *Elem. Aſtron. Phyſic. Math.*

ANOMALY *of the Eccentric*, or *of the Centre*, in the new Aſtronomy, is an Arch of the Eccentric Circle A K, fig. 1. included between the Aphelium A, and a right Line K L, drawn thro' the Centre of the Planet K, perpendicularly to the Line of the Apſides A P. See ECCENTRIC.

In the antient Aſtronomy, it is an Arch of the Zodiac, terminated by the Line of the Apſides, and the Line of the mean Motion of the Centre.

*True* or *Equated* ANOMALY, is the Angle at the Sun, A S I, which a Planet's diſtance from the Aphelium, A I, appears under; or it is the Angle or Area, taken proportional to the time in which the Planet moves from the mean Place I, to its Aphelion A.

And hence, in the Sun's Motion, it will be the diſtance of his true place, from the Apogee——

The true *Anomaly* being given, the mean one is eaſily found: but it is difficult to find the true Anomaly from the mean one given——

The Geometrical Method of *Wallis* and *Newton*, by the protracted Cycloid, are not fit for Calculation; nor yet the Methods of *Series*, as being too laborious. Hence Aſtronomers are forced to have recourſe to Approximation. *Ward*, in his *Aſtronomia Geometrica* takes the Angle A S I, at the Focus where the Sun is not, for the mean *Anomaly*; which will nearly repreſent it, if the Orbit of the Planet be not very Eccentric; and thus eaſily ſolves the Problem. But this Method does not hold of the Orbit of *Mars*, as being more Eccentric than thoſe of the other Planets.

Sir *Iſaac Newton* ſhews how to effect even this; and when his Correction is made, and the Problem ſolved, according to *Ward*'s Hypotheſis, Sir *Iſaac* affirms, that even in the Orbit of *Mars*, there will ſcarce ever be an Error of above a Second.

ANOMEANS, ANOMOEANS, or ANOMIANS, ANOMOEI, or ANOMIANI, a *Greek* Word, compoſed of the privative ἀ and ὁμοῖος, *ſimilar*, *reſembling*; q. d. different, diſſimilar.

In the fourth Century, this was the Name by which the pure *Arians* were diſtinguiſh'd; in regard they not only denied the Conſubſtantiality of the Word, but even aſſerted, that he was of a Nature different from that of the Father: In Contradiſtinction to the Semi-*Arians*, who indeed denied the Conſubſtantiality of the Word, but own'd at the ſame time, that he was like the Father. See ARIAN, and SEMI ARIAN.

The Semi-*Arians* condemned the *Anomeans* in the Council of *Seleucia*, and the *Anomeans* condemned the Semi-*Arians* in their Turn, in the Councils of *Conſtantinople* and *Antioch*; eraſing the Word ὁμοῖος out of the Formula of *Rimini*, and that of *Conſtantinople*, and proteſting that the *Word* had not only a different Subſtance, but alſo a Will different from that of the Father. Whence they were to be call'd Ἀνομοῖοι. See HOMOOUSIA, &c.

ANONYMOUS, ſomething that is nameleſs; or to which no Name is affixed. See NAME.

The Term is chiefly applied to Books which do not expreſs their Author's Name. It is derived from the *Greek* ἀνώνυμος, without Name, of the privative ἀ and ὄνομα, *nomen*, Name.

*Decker*, Advocate of the Imperial Chamber of *Spires*; and *Placcius* of *Hambourg*, have given a Treatiſe of *Anonymous* Books——*Burcard Gotthelfius Struvius*, treats of learned Men who have endeavoured to divine the Authors of *Anonymous* Books.

ANOREXY, ANOREXIA, in Medicine, an Inappetency, or Loſs of Appetite. See APPETITE.

*Anorexia* is properly a longer continuance than is natural, without a deſire to eat. See FOOD, FASTING, DISTASTE, &c.

If the Thought, or the Sight of proper Food, create a Sickneſs in the Stomach, or a Tendency to vomit; it is called a *Nauſea*. See NAUSEA.

*Anorexia*, is chiefly conſidered as a Symptom of ſome other Diſorder, from which the curative Indications are to be taken, and afterwards Stomachics uſed. See STOMACHIC.

The Word is compounded of the privative Particle ἀ and ὄρεγχω, *Cupio*, I deſire——

ANSES, or ANSÆ, in Aſtronomy, thoſe apparently prominent Parts of the Planet *Saturn*'s Ring, diſcovered in its opening, and appearing like Handles to the Body of that Plant. See SATURN and RING.

The Word is *Latin*; and literally ſignifies Handles or Arms of divers Utenſils.——

ANSCOTE, in our antient Law Books, the ſame with *Angild*. See SCOT and LOT.

ANSEL *Weight*. See AUNSEL *Weight*.

ANSPESSADES, a kind of Inferior Officers in the *French* Foot, below the Corporals, and yet above the common Centinels. See CORPORAL, &c.

There are uſually four or five in each Company——The Word is formed of the Italian *lanſa ſpezzada*, *q. d.* broken Lance; which was occaſioned hence, that they were originally disbanded Gendarmes, who for want of other Subſiſtence ſued for a Place of ſome diſtinction in the Infantry.

ANSWER. See RESPONSE, RESPONSAL, BILL, PLEADING, REPLICATION, &c.

ANTA, or ANTE, in the ancient Architecture, a ſquare Column, or Pilaſter, placed at the Corners of the Walls of their Temples and other Edifices. See PILASTER, TEMPLE, &c.

The *Antæ* ſtood out of the Wall, with a Projecture equal to one eighth of their Face, provided there were no Ornament that had a greater Projecture; but it was a Rule that the Projecture of the *Antæ* ſhould always equal that of the Ornaments.

They took their Name, according to Mr. *Perrault*, from the Prepoſition *Ante* before; becauſe placed before the Walls and Coins of Buildings to ſecure 'em.

ANTAGONIST, an *Adverſary*; or a Party oppoſite to another in any Combat or Diſpute. See ADVERSARY, &c.

The Word is formed from the *Greek* ἀντι, *contra*, againſt, and ἀγωνίζω, *oppono*, I oppoſe.

ANTAGONIST *Muſcles*, in Anatomy, are thoſe which have oppoſite Functions. See MUSCLE.

Such are the *Flexor* and *Extenſor* of any Limb, the one whereof contracts it, and the other ſtretches it out. See FLEXOR and EXTENSOR.

We have ſome ſolitary Muſcles, without any *Antagoniſts*; as the Heart, &c. See HEART, &c.

ANTANACLASIS, a Figure in Rhetorick; being a repetition of the ſame Word, but in a different Signification. See REPETITION.

The Word comes from the *Greek* ἀντι, and ἀνακλάω, *repercutio*, I ſtrike again.

ANTANAGOGE, ἀντανάγωγὴ, a Figure in Rhetoric, when not being able to anſwer the Accuſation of the Adverſary, we return the Charge, by loading him with the ſame Crimes. See RECRIMINATION.

ANTARES, in Aſtronomy, the *Scorpion's Heart*; a fix'd Star of the firſt Magnitude, in the Conſtellation *Scorpio*—— Its Longitude, Latitude, &c. ſee among the reſt of the Conſtellation *Scorpio*.

ANTARCTIC, or ANTARTIC, *Pole*, the Southern Pole, or End of the Earth's Axis; ſo called becauſe it is oppoſite to the Arctic or North Pole. See POLE, SOUTH, ARCTIC, &c.

The Stars near the *Antarctic* Pole never appear above our Horizon. See STAR, HORIZON, &c.

The Word is compoſed of ἀντι *contra*, and ἄρκτος, *Urſa*, bear.

ANTARCTIC, or ANTARTIC *Circle*, is one of the leſſer Circles of the Sphere, parallel to the Equator, at

the diſtance of 29 deg. 30. min. from the South Pole. See CIRCLE.

It takes its Name from its being oppoſite to another Circle, parallel likewiſe to the Equator, and at the ſame diſtance from the North Pole; called the *Arctic* Circle. See ARCTIC *Circle*.

ANTECEDENT, in the Schools, ſomething that precedes, or goes before another, in reſpect of time; from the *Latin* Prepoſition *ante*, before, and *cedens* of *cedere*, to go—In this Senſe the Word ſtands oppoſed to *Subſequent*.

An *Antecedent Decree*, is a Decree preceding ſome other Decree, or ſome Action of the Creature, or the Previſion of that Action. See DECREE.

'Tis a Point much controverted, whether Predeſtination be a Decree *antecedent* to Faith, or ſubſequent thereto. See PREDESTINATION.

So, an *Antecedent Will*, or *Deſire*, is that which precedes ſome other Will or Deſire, or ſome Knowledge or Previſion—Thus we ſay, God by a ſincere, but *Antecedent* Deſire, wills all Men to be ſaved: That is, this ſincere Deſire of God precedes, and does not ſuppoſe, the Knowledge of their Faith and Repentance.

By the way it muſt be noted that the Term *Antecedent* is only applied to God in reſpect of the Order of Nature, not of an Order of Succeſſion; for that God, by reaſon of his infinite Perfections, ſees and foreſees both at the ſame Time: after the ſame manner he alſo wills, and not ſucceſſively, one thing after another——Yet does not this hinder, but that God may will one thing on occaſion of another, or have ſuch a deſire on occaſion of ſuch a Previſion; which Divines call the Order of Nature, in contradiſtinction to that of Time.

ANTECEDENT, *Antecedens*, in Logick, is the firſt Propoſition of an Enthymeme, or of an Argument which only conſiſts of two Members. See ENTHYMEME, PROPOSITION, *&c.*

In Oppoſition hereto, the latter is called the Conſequent. See CONSEQUENT.

Thus in the Syllogiſm *cogito, ergo ſum*, I think, and therefore exiſt; *cogito* is the *Antecedent*; being thus called becauſe it precedes the *ergo*, or the *copula* of the Argument.

ANTECEDENT, in Mathematicks, is the former of the two Terms of a Ratio; or that which is compared with the other. See RATIO and TERM.

Thus, if the Ratio be of *a* to *b*; *a* is ſaid to be the *Antecedent*.

ANTECEDENT *Signs*, are ſuch Symptoms of Diſorder as appear before a Diſtemper is ſo formed, as to be reducible to any particular Claſs, or proper Denomination. See SIGN and SYMPTOM.

ANTECEDENT in Grammar, the Word which a Relative refers to. See RELATIVE.

ANTECEDENCE, ANTECEDENCY. See ANTECEDENT and ANTECEDENTIA.

ANTECEDENTIA among Aſtronomers——When a Planet appears to move Weſtward, contrary to the Order or Courſe of the Signs; as, from *Taurus* towards *Aries*: it is ſaid to move, *in Antecedentia*. See PLANET, ORDER, SIGN, *&c.*

On the contrary, when it goes Eaſtward or forwards, from *Aries* towards *Taurus*; it is ſaid to move *in Conſequentia*. See CONSEQUENTIA, *&c.*

ANTECESSOR, one that goes before, or leads another. See PRECURSOR, PREDECESSOR, *&c.*

The Term is particularly uſed in ſome Univerſities for a Profeſſor, who teaches, or lectures the Civil Law.

ANTECHAMBER, or ANTICHAMBER, an outer Chamber, before the principal Chamber of an Apartment; where the Servants wait, and Strangers ſtay, till the Perſon to be ſpoken withal is at leiſure, *&c.* See APARTMENT.

The Word is formed of the Latin *Ante Camera*. See CHAMBER.

ANTECHRIST, or ANTICHRIST, *Antichriſtus*, among Divines, *&c.* a Tyrant who is to reign on Earth, toward the end of the World; for the ultimate Proof of the Elect; and to give a ſhining Inſtance of the Divine Vengeance, before the laſt Judgment.

The Word is compounded of the Greek *αντι*, *contra*, againſt, and *χριστος*, Chriſt—In Scripture he is alſo called *Man of Sin, Son of Perdition*, &c. 'Tis added that he ſhall ſet up his Throne at *Babylon*.

The Bible and the Fathers all ſpeak of *Antichriſt* as a ſingle Man; tho' they aſſure withal, that he is to have divers Precurſors or Fore-runners——Yet many Proteſtant Writers apply to the Romiſh Church, and the Pope who is at the Head of it, the ſeveral Marks and Signatures of *Antichriſt*, enumerated in the Apocalypſe; which would rather imply *Antichriſt* to be a corrupt Society, or a long Series of perſecuting Pontiffs, than a ſingle Perſon.

However, the Point having been maturely debated at the Council of *Gap*, held in 1603, a Reſolution was taken thereupon, to inſert an Article in the Confeſſion of Faith, whereby the Pope is formally declared to be *Antichriſt*—Pope *Clement* VIII, we read, was ſtung to the Life with this deciſion; and even King *Henry* IV. of *France* was not a little mortified, to be thus declared, as he term'd it, an Imp of *Antichriſt*.

The learned *Grotius* maintains that *Caligula* was *Antichriſt*; but neither does this quadrate with his Appearance at the end of the World.

Father *Malvenda*, a Spaniſh Jeſuit, has publiſhed a large and learned Work, *de Antichriſto*, in XIII Books——In the firſt he relates all the Opinions of the Fathers with regard to *Antichriſt*. In the ſecond he ſpeaks of the Time when he ſhall appear; and ſhews that all the Fathers who ſuppoſed *Antichriſt* to be near at hand, judged the World was near its Period. In the third he diſcourſes of his Origin and Nation; and ſhews that he is to be a *Jew*, of the Tribe of *Dan*: This he founds on the Authority of the Fathers; on the Paſſage in *Geneſis* XLIX. *Dan is a Serpent in the Way*, &c. On that of *Jeremy*, VIII. 16. where it is ſaid *the Armies of Dan ſhall devour the Earth*; and on the *Apocalypſe*, cap. VII. where St. *John* enumerating all the Tribes of *Iſrael*, makes no mention of that of *Dan*. In the fourth and fifth Books, he treats of the Signs of *Antichriſt*. In the ſixth of his Reign and Wars. In the ſeventh of his Vices. In the eighth of his Doctrine and Miracles. In the ninth of his Perſecutions: And in the reſt, of the coming of *Enoch* and *Elias*, the Converſion of the *Jews*, the Reign of Jeſus Chriſt, and the Death of *Antichriſt*, after having reigned three Years and a half.

ANTECURSOR. See PRECURSOR.

ANTEDILUVIUN. See ANTIDILUVIAN.

ANTEJURAMENTUM, and PRÆJURAMENTUM, by our Anceſtors alſo called *Juramentum Calumniæ*; an Oath which both the Accuſer and Accuſed were obliged to make *before* any Trial or Purgation. See OATH and PURGATION——The Accuſer was to ſwear that he would proſecute the Criminal; and the Accuſed was to make Oath on the very Day that he was to undergo the Ordeal, *&c.* that he was innocent of the Fact of which he was charged. See ORDEAL.

If the Accuſer failed, the Criminal was diſcharged; if the Accuſed, he was intended to be guilty, and was not to be admitted to purge himſelf by the Ordeal. See COMBAT, DUEL, *&c.*

ANTEPAGMENTA, or ANTIPAGMENTA, in the antient Architecture, the Jaumbs of a Door, or Lintels of a Window. See DOOR and WINDOW.

The Word is alſo uſed for the entire *Chambranle*, *i. e.* the Door-Caſe, or Window-Frame. See CHAMBRANLE.

ANTEPENULTIMA, or ANTEPENULTIMATE, in Grammar, the third Syllable of a Word, reckoning from the latter End; or the laſt Syllable but two. See WORD and SYLLABLE.

'Twas upon this Syllable, that the *Greeks* placed their acute Accents. See ACCENT——The *Antepenultimate* of a Dactyl is long. See DACTYL.

The Word is compounded of the Prepoſition *Ante*, before; and *Penultimate*, laſt but one. See PENULTIMATE.

ANTEPREDICAMENTS, ANTEPRÆDICAMENTA, in Logick, certain previous Matters, requiſite to a more eaſy and clear apprehenſion of the Doctrine of Predicaments or Categories. See PREDICAMENT.

Such are Definitions of Common Terms; as Equivocals, Univocals, *&c.* with Diviſions of Things, their Differences, *&c.* See DEFINITION, DIVISION, *&c.*

They are thus called becauſe treated by *Ariſtotle before the Predicaments*; that the Thread of the Diſcourſe might not afterwards be interrupted.

ANTERIOR, or ANTERIOUR, ſomething before another, chiefly in reſpect of Place—In this Senſe the Term ſtands oppoſed to *Poſterior*. See POSTERIOR.

The Word is *Latin*; formed of the Prepoſition, *Ante*, before.

ANTESTATURE, in Fortification, a ſmall Retrenchment, made of Palliſadoes, or Sacks of Earth, ſet up in haſte, to diſpute with the Enemy the Remainder of a Piece of Ground, part whereof hath been already gain'd. See RETRENCHMENT.

ANTHELIX, in Anatomy, the inner Circuit of the Auricle; thus call'd from its oppoſition to the outer Circuit, call'd the Helix. See AURICLE and HELIX.

ANTHELMINTICKS, Medicines good to deſtroy Worms. See WORM and VERMIFUGOUS.

The Word is compounded of *αντι*, *contra*, againſt, and *ελμινς*, *Vermis*, Worm.

ANTHEM, *Antiphona*, a Church-Song, performed in Cathedral, and other Service, by the Choriſters, divided for that purpoſe into two Chorus's, who ſing alternately. See SONG, CHOIR, CHORISTER, *&c.*

The Word was originally uſed both for Pſalms, and Hymns, when thus perform'd. See PSALM and HYMN.

*Socrates* repreſents St. *Ignatius* as the Author of this way of ſinging among the *Greeks*; and St. *Ambroſe* among the *Latins*——*Theodoret* attributes it to *Diodorus* and *Flavian*. *Amalarius Fortunatus* has wrote expreſly of the Order of *Anthems*, *de Antiphonarum Ordine*.

At preſent the Term is uſed in a ſomewhat narrower Senſe; being applied to certain Paſſages taken out of the Pſalms, &c. and accommodated to the particular Solemnity in hand.

ANTHERA, in Pharmacy, a Term uſed by ſome Writers for the Yellow part in the Middle of a Roſe. See Rose——It is reputed more aſtringent than the reſt.

ANTHERÆ, among Botaniſts, thoſe little Tufts, or Knobs which grow on the Tops of the Stamina of Flowers; more uſually called *Apices*. See Apices.

ANTHESPHORIA, in Antiquity, a Feaſt celebrated in *Sicily*, in Honour of *Proſerpine*. See Feast.

The Word is deriv'd from the Greek ἄνθος, Flower, and φέρω, I carry, in regard that Goddeſs was forc'd away by *Pluto*, when ſhe was gathering Flowers in the Fields. Yet *Feſtus* does not aſcribe the Feaſt to *Proſerpine*; but ſays it was thus call'd, by reaſon Ears of Corn were carried on this Day to the Temples.

*Antheſporia* ſeem to be the ſame thing with the *Floriſertum* of the *Latins*.

ANTHESTERIA, in Antiquity, was a Feaſt celebrated by the *Athenians*, in Honour of *Bacchus*. See Feast.

Some are of opinion it took its Name from the Month *Antheſterion*, wherein it was celebrated——Others pretend, that it was not the Name of any particular Feaſt, but that all the Feaſts of *Bacchus* were call'd *Antheſteria*.

The moſt natural Derivation of the Word is from ἄνθος, *Flos*, a Flower; it being the Cuſtom at this Feaſt to offer Garlands of Flowers to *Bacchus*.

The *Antheſteria* laſted three Days, the eleventh, twelfth, and thirteenth of the Month; each of which Days had a Name ſuited to the proper Office of the Day——The firſt Day of the Feaſt was called πιθοιία, *i. e.* Opening of the Veſſels, in regard on this Day they open'd the Veſſels, and taſted the Wine——The ſecond they called χόες, *Congii*, the Name of a Meaſure, containing the Weight of about ten Pounds: on this Day they drank the Wine prepar'd the Day before——The third Day they called χύτροι, Kettles: on this Day they boil'd all ſorts of Pulſe in Kettles; which however they were not allow'd to taſte, as being offer'd to *Mercury*.

ANTHOLOGION, Anthologue, a Church Book in uſe among the *Greeks*. See Greek.

The *Anthologion* is a ſort of Breviary or Maſs-Book, containing the daily Offices addreſs'd to our Saviour, the Virgin, and the principal Saints; with other Common Offices of Prophets, Apoſtles, Martyrs, Pontiffs, and Confeſſors, according to the *Greek* Rite. See Breviary, Mass, Office, &c.

It is called ἀνθολογιον, *q. d. florilegium*, or a Collection of Flowers.

ANTHOLOGY, Anthologia, a diſcourſe or Treatiſe of Flowers; thus call'd from ἄνθος, *Flos*, a Flower, and λογὸς, *Sermo*, Diſcourſe. Others chuſe rather to derive *Anthology* from ἄνθος, *Flos*, a Flower, and λέγω I gather; and uſe it to ſignify a Collection of Flowers. See Flower.

Anthology is particularly uſed for a Collection of Epigrams of divers *Greek* Poets. See Epigram.

*St.* ANTHONY, gives the Name to an Order of Knighthood, eſtabliſh'd in 1382. by *Albert* of *Bavaria*, &c. who had then taken a Reſolution to make War againſt the *Turks*. See Order and Knight.

The Knights of this Order wore a Collar of Gold, with a Hermit's Girdle, to which hung a Crutch and a little Bell.

Some Authors mention another Order of St. *Anthony* in *Ethiopia*, inſtituted in 370.

*St.* ANTHONY's *Fire*. See Erysipelas.

ANTHORA, or *Healing Wolfs-bane*, a Species of *Aconite*, whoſe Root is uſeful in Phyſick; being reputed a good Antidote, and a certain Counterpoiſon to the *Thora*, whence its Denomination *Anthora*. See Aconite.

The Root contains a great deal of volatile Salt and eſſential Oil——It is alexipharmick, cardiack, ſtomachick, and good againſt the Wind-Cholick——

ANTHOS, Ἄνθος, in its original *Greek*, ſignifies *Flower*; but by way of Excellency is appropriated to *Roſemary*, ſo as to expreſs only Flowers of Roſemary. See Rosemary.

ANTHRACOSIS, a Diſeaſe of the Eyes, occaſion'd by a corroſive Ulcer, cover'd with Skin, and attended with a general Swelling; eſpecially of the Parts about the Eye. See Eye and Ulcer.

The Word is Greek ανθρακωσις, and *denotes* an Inflammation reſembling a Coal; ἄνθραξ ſignifying a Coal. See Anthrax.

ANTHRAX, ανθραξ, ſtrictly ſignifies a *live Coal*; and figuratively, a Scab or Blotch, made by a corroſive Humour, which, as it were, burns the Skin, and occaſions ſharp pricking Pains.

The *Anthrax* is alſo called *Carbo* and *Carbunculus*. See Carbuncle.

The Cure is attempted with Cataplaſms of *Theriac*. *Lond*. *Allium*, *Cepæ coct*. *Sapo Nig*. &c.

ANTHROPOLOGY, Anthropologia, a Diſcourſe or Treatiſe upon Man, or Human Nature.

*Anthropology* includes the Conſideration both of the Human Body and Soul, with the Laws of their Union, and the Effects thereof, as Senſation, Motion, &c. See Body, Soul, Sensation, Motion, &c.

Yet Dr. *Drake* entitles his Anatomy of the Human Body, *Anthropologia*. See Anatomy.

The Word is compounded of Ἄνθρωπος, Man, and λόγος, Diſcourſe.

Anthropology, is particularly uſed in Theology, for a way of ſpeaking of God, after the manner of Men; by attributing Human Parts to him; as Eyes, Hands, Ears, Anger, Joy, &c.——

We have frequent Inſtances of *Anthropology* in Holy Scripture; by which we are only to underſtand the Effect, or the Thing which God does, as if he had Hands, &c. See Anthropopathy.

ANTHROPOMANCY, or Anthropomantia, a Method of Divination, performed by inſpecting the Viſcera of a Perſon deceaſed. See Divination.

The Word is compounded of ανθρωπος Man, and μαντεια, Divination.

ANTHROPOMORPHITE, one who attributes to God, the Figure of a Man. See God, &c.

Anthropomorphites were a Sect of antient Hereticks, who, out of a too great Simplicity, taking every thing ſpoken of God in the Scriptures in a literal Senſe; imagin'd he had real Hands, Feet, &c.——The Paſſage they chiefly inſiſted on, was that in *Geneſis*, where it is ſaid that God made Man after his own Image.

The Word comes from the *Greek* ἄνθρωπος, Man, and μόρφη, Shape.

ANTHROPOPATHY, a Figure, Expreſſion or Diſcourſe, whereby ſomething is attributed to God, which properly belongs only to Man.

*Anthropopathy* is frequently uſed promiſcuouſly with *Anthropology*; yet in ſtrictneſs they ought to be diſtinguiſhed as the Genus from the Species——*Anthropology* may be underſtood of any thing Human attributed to God; but *Anthropopathy*, only of Human Affections, Paſſions, Senſations, &c. See Anthropology.

The Word is compounded of ἄνθρωπος, Man, and πάθος Paſſion.

ANTHROPOPHAGI, *Cannibals*; or ſuch as feed on Human Fleſh. See Cannibal.

The Word is compounded of the Greek ανθρωπος, Man, and φαγω, *Edo*, I eat——The primitive Chriſtians were accuſed by the Heathens of being *Anthropophagi*; as appears from *Tatian*, *Tertullian* in his Apologeticks, Cap. VII. and *Salvian* de Provid. Lib. IV. They affirmed that the Chriſtians, in the Myſteries of their Religion, killed a Child, and feaſted on its Fleſh. This Calumny was grounded on what they had heard of the Euchariſt, and the Communion. See Eucharist, Communion, Altar, &c.

ANTHROPOPHAGY, the Act of eating human Fleſh. See Anthropophagi.

Some Authors trace the Original of this barbarous Cuſtom, as high as the Deluge; and attribute it to the Giants——*Pliny* mentions *Scythians* and *Sauromatans*; and *Juvenal*, *Egyptians*, who accuſtom'd themſelves to this horrible Repaſt——*Livy* tells us, that *Hannibal* made his Souldiers eat human Fleſh, to render them more fierce and daring in Battel.

In the ſouthern Parts of *Africa*, and in ſome Parts of *America*; this horrid Practice ſtill obtains. See Cannibal.

The Phyſicians think they have diſcover'd the Principle of *Anthropophagy*, and that it conſiſts in a black acrimonious Humour, which being lodg'd in the Coats of the Ventricle, produces this Voracity. And they give ſeveral Inſtances of this inhuman Hunger, even among their own Patients——M. *Petit* has diſputed the Queſtion, whether or no *Anthropophagy* be contrary to Nature?

ANTI, a Greek Prepoſition, added to ſeveral *Engliſh* Words, in two different Senſes——Sometimes it ſignifies *before*; as in *Anti*-Chamber, a place before the Chamber; in which caſe it has the ſame Meaning with the *Latin*, *ante*, before: ſometimes again it ſignifies *contrary*, or oppoſite, and is then derived from the Greek αντὶ, *contra*, againſt; as in *Antipodes*, thoſe who have their Feet oppoſite to ours.

In this latter Senſe, the Word makes part of the Names of various Medicines: as *Antivenereals*, thoſe uſed againſt the Pox; *Antiarthriticks*, thoſe againſt the Gout; *Antiaſthmaticks*, againſt the Aſthma; *Antielminticks*, againſt Worms;

Worms; *Antaphroditicks*, againſt Luſt; *Anti-epilepticks*, againſt the Falling Sickneſs, &c.

ANTI, in matters of Literature, are Pieces written by way of Anſwer, to others, whoſe Names are uſually annex'd to the *Anti*.

See the *Anti* of *M. Baillet*; and the *Anti-Baillet* of *M. Menage*. There are alſo *Anti-Menagiana*, &c.

*Cæſar* the Dictator wrote two Books by way of Anſwer to what had been objected to him by *Cato*; which he call'd *Anti-Catones*; mentioned by *Juvenal*, *Cicero*, &c. —*Vives* aſſures us, he had ſeen *Cæſar*'s *Anti-catones* in an antient Library.

ANTIADES, a Term uſed by ſome Writers for the Glandules, and Kernels, more commonly called *Tonſils* and *Almonds of the Ears*. See TONSIL, ALMOND, and AMYGDALA, &c.

ANTIADIAPHORISTS, ANTIADIAPHORISTÆ, thoſe oppoſite to the *Adiaphoriſts*. See ADIAPHORIST.

This Name was given, in the XVIth Century, to the rigid *Lutherans*, who diſavow'd the Eſpiſcopal Juriſdiction, and many of the Church Ceremonies, retain'd by the Moderate *Lutherans*. See LUTHERAN.

The Word is compounded of the Greek ἀντι *contra*, againſt, and ἀδιάφορος, indifferent.

ANTIBACCHIC, ANTIBACCHIUS, in the antient Poetry, a Foot, conſiſting of three Syllables; the two firſt whereof are long, and the third ſhort. See FOOT. Such are the Words *cantare*, *virtute*.

It is ſo called as being contrary to the *Bacchic*, the firſt Syllable whereof is ſhort, and the two laſt long; as *egeſtas*. See BACCHIC.

ANTICARDIUM, in Anatomy, &c. that Part of the Breaſt juſt againſt the Heart, commonly called the Pit of the Stomach.

The Word is compounded of ἀντι, *contra* againſt, and καρδία, *Cor*, Heart.

ANTICHRESIS in the Civil Law, a Covenant or Convention, whereby a Perſon borrowing Money of another, engages, or makes over his Lands to the Creditor, with the Uſe and Occupation thereof, for the Intereſt of the Money lent.

This Covenant was allowed of by the *Romans*; among whom Uſury was prohibited: It was afterwards call'd *Mortgage*, to diſtinguiſh it from a ſimple Engagement, where the Fruits of the Ground were not alienated, which was call'd *Vif gage*. See MORTGAGE.

ANTICHTHONES, in Geography, are thoſe People who inhabit Countries oppoſite to each other.

The Word is Compounded of ἀντὶ, *contra*, and χθὼν, *Terra*.

The Term *Antichthones* is now uſed in the ſame Senſe with *Antipodes*; but the Antients uſed it in a different one.—They conſider'd the Earth as divided by the Equator into two Hemiſpheres, the Northern and Southern; and all thoſe who inhabited one of theſe Hemiſpheres were reputed *Antichthones* to thoſe of the other. In this Senſe the Word is uſed by *Mela* and other antient Authors. See ANTIPODES.

ANTICKS, ANTICK-WORK. See ANTIQUE.

ANTICIPATION, the Act of doing a Thing before the time.—Such a Debt was not yet become due; He *Anticipated* the time of Payment.

ANTICIPATION, in Philoſophy. See PRÆNOTION.

ANTICOR, ANTICOEUR or ANTOCOEUR, or *Avant Cœur*, among Farriers, is uſually deſcribed as a preternatural Swelling, of the Size and Figure of an Apple, occaſioned by a ſanguine and bilious Humour; and appearing in the Horſe's Breaſt oppoſite to his Heart.

A late Author affirms, that the generality of Writers on that Subject have been miſtaken as to this Diſeaſe; attributing it to the Heart, whence it is by *Solleyſell*, called the *Swelling of the Pericardium*; whereas it is really an Inflammation in the Gullet, and Throat; and the ſame that in human Bodies, is called the *Angina*, or *Squinancy*.

ANTIDACTYLUS in Poetry, a Foot in Verſe, contrary to a *Dactyl*; conſiſting of three Syllables, whereof the firſt two are ſhort, and the laſt long. See DACTYL.

ANTIDATE, a ſpurious Date, prior to the true Date of a Writing Inſtrument, Act, Deed, or the like. See DATE.

ANTIDICOMARIANITES, or ANTIDIACOMARIANISTES, antient Hereticks, who pretended that the Holy Virgin had not preſerved her Virginity, but that ſhe had ſeveral Children by *Joſeph*. See VIRGIN.

Their Opinion was grounded on ſome Expreſſions of our Saviour, wherein he mentioned his Brothers, and his Siſters. —The *Antidicomarianites*, were the Diſciples of *Helvidius* and *Jovinian*, who appeared in *Rome* toward the cloſe of the IVth Century.

ANTIDILUVIAN, ſomething before the Deluge. See DELUGE.

In this Senſe, thoſe Generations from *Adam*, till *Noah*'s Flood, are called *Antidiluvians*; and thoſe ſince deſcended from *Noah*, to the preſent time, are called *Poſtdiluvians*. See AGE, PATRIARCH, &c.

Dr. *Burnet*, and Dr. *Woodward* differ very widely about the *Antidiluvian* World; the former imagines its Face and Appearance to have been ſmooth, equable, and in all reſpects different from what we now find them to be.

The latter on the contrary endeavours to prove, that the Face of the terraqueous Globe before the Deluge was the ſame as it is now, *viz.* unequal, diſtinguiſhed into Mountains, and Dales, and having likewiſe a Sea, Lakes, and Rivers; that this Sea was ſalt as ours is; was ſubject to Tides, and poſſeſs'd nearly the ſame Space and Extent that it now does; and that the *Antidiluvian* World was ſtock'd with Animals, Vegetables, Metals, Minerals, &c. that it had the ſame Poſition in reſpect of the Sun which ours now hath, its Axis not being parallel, but inclined, as at preſent, to the Plane of the Ecliptic; conſequently that there were then the ſame Succeſſion of Weather, and the ſame Viciſſitudes of Seaſons, as now. See TERRAQUEOUS, MOUNTAIN, &c. See alſo FOSSIL, &c.

ANTIDOTE, a Remedy taken either to prevent, or cure, Contagion. See PLAGUE, CONTAGION, PRESERVATIVE, &c.

The Word *Antidote* is alſo uſed to ſignify a Medicine taken to prevent the ill Effects of ſome other, for inſtance, Poiſon. See POISON.

In this Senſe the Word has the ſame Signification with Alexipharmic, Alexiterial or Counterpoiſon. See ALEXIPHARMIC, COUNTER-POISON, &c.

The Word is borrow'd from the Greek ἀντὶ, againſt, and δίδωμι, I give; as being ſomething given againſt Poiſon, either by way of Medicine, or Preſervative.

ANTIENT, or ANCIENT, uſually ſtands oppoſed to *Modern*. See MODERN.

The Word comes from the French *Ancien*, of the *Latin Antiquus*. Thus we ſay the *Antient* Architecture, *Antient* Monuments, *Antient* Church. See ARCHITECTURE, &c.

When we ſay abſolutely, the *Antients*, we mean the *Greeks* and *Romans*——Thus, the *Antients* uſed to burn their Dead——The Learned have been greatly divided of late days, with regard to the Preference between the *Antients* and Moderns.

ANTIENT is ſometimes oppoſed to young or new——We ſay the *antient* Biſhop of ſuch a City, when he has reſign'd his See, and a new one is put in his Place. The *antient* Biſhop of *Frejus*, now Cardinal de *Fleury*.

ANTIENTS in Church-Diſcipline. See ELDERS.

The Society of *Grays-Inn*, conſiſts of Benchers, *Antients*, Barriſters, and Students under the Bar: the *Antients* are the Elder Barriſters. See INN, BARRISTER, &c.

In the Inns of Chancery there are only, *Antients* and *Students*, or Clerks; and among the *Ancients*, one is yearly the Principal, or Treaſurer——In the Middle Temple, *Antients* are ſuch as are paſt their Reading, and never read. See TEMPLE.

ANTIENT is ſometimes alſo uſed in a Military Senſe for an *Enſign*. See ENSIGN.

ANTIENTY, in ſome antient Statutes is uſed for *Elderſhip* or Seniority——Thus the eldeſt Siſter can demand no more than her other Siſters beſide the Chief Meſne, by reaſon of her Antienty.

ANTIENT, is alſo the Flag, or Streamer born in the Stern of a Ship. See FLAG, SIGNAL, &c.

ANTIENT *Demeſne*, or *Demain*, is a Tenure, whereby all Manors belonging to the Crown in *William* the Conqueror's, and St. *Edward*'s time, were held. See TENURE and DEMAIN.

The Numbers, Names, &c. hereof were enter'd by the Conqueror, in a Book call'd *Doomſday-Book*, yet remaining in the Exchequer; ſo that ſuch Lands as by that Book appear'd to have belonged to the Crown at that time, are called *Antient Demeſne*. See DOOMS-*Day*.

The Tenants in *Antient Demeſne* are of two ſorts; one who hold their Lands frankly by Charter; the other by Copy of Court-Roll, or by the Verge at the Will of the Lord, according to the Cuſtom of the Manor. See FREE-HOLD, COPY-HOLD, &c.

The Advantages of this Tenure, are, 1. That Tenants holding by Charter cannot be rightfully impleaded out of their Manor; and when they are, may abate the Writ by pleading the Tenure. 2. They are free from Toll for all things relating to their Livelihood and Husbandry; nor can be impanell'd on any Inqueſt.

Theſe Tenants held originally by plowing the King's Land, plaſhing his Hedges, and the like Services, for the maintenance of his Houſhold; and it was on this account ſuch Liberties were given 'em, for which they may have

Writs

Writs to ſuch as take the Duties of Toll, &c. See SERVICE, &c.

No Lands are to be accompted *ancient* Demeſne, but ſuch as are held in Soccage. See MONSTRAVERUNT.

ANTIHECTICKS, ANTIHECTICA, Remedies againſt *Hectical* Diſorders. See HECTIC.

ANTIHECTICUM *Poterii*, in Pharmacy, a celebrated Chymical Preparation, made of equal quantities of Tin, and chalybeated Regulus of Antimony, by melting 'em in a large Crucible, and putting to them, by little and little, three times the quantity of Nitre: the Detonation being over, the whole is waſh'd with warm Water till no ſaltneſs remains.

It is a very penetrating Medicine, making way into the minuteſt Paſſages, and ſearching even the nervous Cells; whence its uſe in *Hectic* Diſorders, from which it derives the Name. See HECTIC.

It is applied to good purpoſe in Heavineſſes of the Head, Giddineſs, and Dimneſs of Sight, whence proceed Apoplexies and Epilepſies; And in all Affections and Foulneſſes of the Viſcera of the lower Belly is reckoned inferior to nothing. Thus it obtains in the Jaundice, Dropſies, and all kind of Cachexies. Dr. *Quincy* adds, that there is ſcarce a Preparation in the Chymical Pharmacy of greater efficacy in moſt obſtinate chronick Diſtempers.

ANTILOGARITHM, is the Complement of the Logarithm of a Sine, Tangent or Secant; or the Difference of that Logarithm, from the Logarithm of ninety Degrees. See LOGARITHM and COMPLEMENT.

ANTILOGY, ANTILOGIA, a Contradiction between two Expreſſions or Paſſages in an Author. See CONTRADICTION.

*Tirinus* has publiſhed a large Index of the ſeeming *Antilogies* in the Bible; *i. e.* of Texts which apparently contradict each other, but which are explained and reconciled by him, in his Comments on the Bible——A *Malteſe* of the Oratory in *Italy*, has attempted the like; but has done little more than rehearſe what occurs of that kind in the principal Commentators.

The Word is *Greek*, αντιλογια, *q. d.* Contrary Saying.

ANTIMENSIA, a kind of Conſecrated Table-Cloth, occaſionally uſed in the *Greek* Church, in lieu of a proper Altar. See ALTAR.

*F. Goar* obſerves, that in regard the *Greeks* have but few conſecrated Churches; and that conſecrated Altars are not things eaſy to be removed: That Church has for many Ages made uſe of certain conſecrated Stuffs, or Linnens call'd *Antimenſia*, to ſerve the purpoſes thereof.

ANTIMONARCHICAL, ſomething that oppoſes or ſtands againſt Monarchy, or Kingly Government. See MONARCHY.

*Antimonarchical* is frequently uſed in the Senſe of *Republican*. See REPUBLIC.

ANTIMONIALS, in Medicine, Preparations of Antimony; or Remedies whereof Antimony is the Baſis, or principal Ingredient. See ANTIMONY.

*Antimonials* are chiefly of an emetic tendency; tho' they may be ſo qualified as to become either Cathartic, or Diaphoretic, or even only Alterative. See EMETIC, CATHARTIC, &c.

Dr. *Quincy* aſſures, that there are no Medicines in Pharmacy to be compared with theſe in Maniacal Affections: for that there are no Emetics or Cathartics of any other Tribe that are ſtrong enough for ſuch Patients, unleſs in an Overdoſe, which might be dangerous. See MANIA.

An *Antimonial Cup*, made either of Glaſs of *Antimony*, or of *Antimony* prepared with Salt-petre, tho' a Subſtance indiſſoluble by the Stomach, will give a ſtrong Cathartic, or Emetic Quality to any Liquor poured into it; without any diminution of its own weight.

ANTIMONY, ANTIMONIUM, in Natural Hiſtory, a Mineral Subſtance, of a Metalline Nature; having all the ſeeming Characters of a real Metal, excepting Malleability. See MINERAL and METAL.

*Antimony* is what we properly call a *Semi-Metal*; being a Foſſil Glebe, compoſed of ſome undetermined Metal, combined with a ſulphurous and ſtony Subſtance. See SEMI-METAL.

It is found in Mines of all Metals; but chiefly thoſe of Silver and Lead: That in Gold Mines is uſually held the beſt——It has alſo his own Mines; particularly in *Hungary*, *Tranſylvania*, and *Germany*, and ſeveral Provinces of *France*.

*Antimony* is found in Clods or Stones of ſeveral ſizes, bearing a near reſemblance to black Lead; only that it is lighter and harder: whence alſo it is called *Marcaſite of Lead*; and its metalline part ſuppoſed to be of that Species. See LEAD.

Its Texture is ſomewhat particular, being full of little ſhining Veins or Threads, like Needles; brittle as Glaſs—— ſometimes there are Veins of a red or golden Colour intermixed, which is called *Male Antimony*; that without 'em being denominated *Female*——It fuſes in the Fire, tho' with ſome difficulty; and diſſolves more eaſily in Water.

When dug out of the Earth, it is put into large Crucibles, fuſed by a violent Fire, and then poured into Cones, or *Antimonial* Horns; which makes the common or crude *Antimony* of the Shops, the Apex whereof is always the beſt and pureſt part, as the Baſis or broadeſt part is the foulеſt.

*Antimony* is ſuppoſed by many of the Chymiſts to contain the ſeminal Principles of all kind of Bodies; and accordingly the Character whereby it is denoted in their Writings, is the ſame with the Character of the Earth; to denote that *Antimony* is a kind of Microcoſm. See CHARACTER and EARTH.

The Uſes of *Antimony* are very Numerous, and Important——It is a common Ingredient in Specula, or burning Concaves, ſerving to give them a finer Poliſh——It makes a Part in Bell-Metal; and renders the Sound more clear—— It is mingled with Tin to make it more hard, white, and ſounding; and with Lead, in the caſting of Printer's Letters, to render them more ſmooth and firm. It is a general Help in the melting of Metals, and eſpecially in caſting of Cannon Balls. See SPECULUM, FOUNDERY, &c.

*Antimony* is the *Stibium* of the Antients; by the *Greeks* called στιμι——The reaſon of its modern Denomination is uſually referr'd to *Baſil Valentine*, a *German* Monk, who having thrown ſome of it to the Hogs, obſerv'd, that after purging them violently, they immediately grew fat upon it. This made him think that by giving his Fellow-Monks a like Doſe, they would be the better for it. The Experiment however ſucceeded ſo ill, that they all died of it; and the Medicine thenceforward was called *Antimony*, *q. d. Anti-Monk*.

Its ſingular Properties and Effects have occaſion'd it various other Denominations; as *Proteus*, by reaſon of its various forms and appearances, *Lupus*, *Devorator*, *Saturn of the Philoſophers*, *Balneum Solis*, *Lavacrum Leprorum*, &c. all chiefly reſpecting its Faculty of deſtroying, and diſſipating whatever Metals are fuſed along with it, all except Gold; whence its great Uſe in refining and purifying. See REFINING, PURIFYING, GOLD, &c.

*Antimony*, is particularly uſed in Pharmacy, under various Forms, and with various Intentions——Its medicinal Virtue is ſuppoſed to ariſe from the ſulphurous part in its Compoſition, which being diſſolved by any proper Menſtruum, ſets at liberty an active volatile Salt, or other unknown Principle, to which the Operation is chiefly owing. See ANTIMONIALS. See alſo SULPHUR.

Before the XIVth Century, *Antimony* had no place in Medicine; otherwiſe than as an Ingredient in ſome Coſmeticks: but about that time, *Baſil Valentine* having found a method of preparing, and correcting the dangerous Qualities of its Sulphur, publiſhed a Book, entitled *Currus Triumphalis Antimonii*, wherein he maintained it a ſure Remedy for all Diſeaſes——But, in ſpight of all he could ſay in its behalf, tho' confirmed by Experience, *Antimony* remained in a general Neglect, upwards of 100 Years; till about the beginning of the XVIth Century, when it was brought into Vogue by *Paracelſus*——The Parliament of *Paris*, immediately upon this Reſtoration, condemned the uſe of it in form; and a Phyſician named *Beſnier*, having been found delinquent herein, was excluded the Faculty. It ſeems, a deal of Miſchief had been done by it, for want of knowing the proper ways of Application; ſo that the Arret of Parliament repreſents it as a mere Poiſon——

Several learned Men complained of ſo ſevere and unjuſt a Prohibition; and by a Courſe of happy Experiments brought it into Eſteem again: whence in ſpight of all the Invectives made againſt *Antimony*, by divers Authors, it was at length replaced, in the Year 1657, by Public Authority, among the Number of Purgative Drugs; and was inſerted accordingly in the Pharmacopœia, publiſhed by the Faculty the ſame Year.

*Patin* did all he could to decry *Antimony*: in his Letters we find an unuſual Vehemence expreſs'd againſt it—— He had even compiled a large Regiſter of Perſons whom the Phyſicians had kill'd by it; which he called *the Martyrology of Antimony*.

*Crude* ANTIMONY, or *Antimony in Subſtance*, is the Native Mineral *Antimony*, melted down and caſt in Cones, as abovementioned——It is much uſed in Diet-drinks and Decoctions of the Woods, and Compoſitions againſt the Scurvy, as a Diaphoretic, and Deobſtruent. See DIAPHORETIC.

*Prepared* ANTIMONY is that which has undergone ſome Chymical Proceſs, whereby its Nature and Powers are altered or abated; and this differently, according to the Circumſtances of the Preparation. See ANTIMONIALS.

*Antimony*, ſays Mr. *Boyle*, alone, or aſſociated with one or two other Ingredients, by a variety of Operations and Compoſitions, might be brought to furniſh a whole Apo-

thecary's Shop: It will anſwer the Phyſician's Intention whether he wants to employ a Cathartic, or an Emetic, a Diuretic, Diaphoretic, Deobſtruent, Bezoardic, Cordial, &c.

*Regulus of* ANTIMONY, or *Purification of* ANTIMONY. See REGULUS *of Antimony*.

Of this are made the *Pillulæ Perpetuæ*, *Vinum Emeticum*, &c. See PILLULÆ *Perpetuæ*, EMETIC *Wine*, &c.

*Glaſs of* ANTIMONY, *Vitrum Antimonii*, is crude *Antimony* ground and calcined by a vehement Fire, in an earthen Crucible; till it ceaſe to fume, which is a Proof that its Sulphur is evaporated.——The Calx is then vitrified in a Wind Furnace; upon which it becomes tranſparent, ruddy, and ſhining. See GLASS.

This is the ſtrongeſt Emetic of any Preparation of *Antimony*. See EMETIC.——Yet, if diſſolved in Spirit of Urine, it ceaſes to be either Emetic, or Cathartic; even tho' the Menſtruum be drawn from it.

*Flowers of* ANTIMONY, is *Antimony* pulverized, and ſublimed in an Aludel; the volatile Parts whereof ſtick to the ſubliming Pot. See FLOWER and SUBLIMATION.

This is alſo a powerful Vomitive; of ſingular Efficacy in maniac Caſes; being the *Herculean* Remedy by which ſome have gain'd ſo much Reputation.

Another ſort of Flowers are made of the Regulus of *Antimony* with Sal-Ammoniac ſublimed as before; which make a Remedy ſomewhat gentler than the former.——*Helmont* alſo gives us a Preparation of *purging Flowers* of *Antimony*. See DIAPHORETIC *Antimony*.

*Butter of* ANTIMONY, is a white, gummous Liquor; otherwiſe call'd *Icy Oil of Antimony*. It is uſually prepared of crude (tho' ſometimes of Regulus of) *Antimony*, and corroſive Sublimate, by pulverizing, mixing, and diſtilling 'em by a gentle Heat: upon which the Butter riſes into the Neck of the Retort; from which, when full, it is to be melted down into the Receiver, by the Application of live Coals.

It is of a very fiery, corroſive Nature, ſo as to be a Poiſon when uſed internally. Externally it is applied as a Cauſtic, to ſtop Gangrenes, cure Caries's, Cancers, &c. See CAUSTIC.

This Butter may be converted into an Oil, called alſo *rectified Butter of Antimony*; by gently diſtilling it a ſecond time; which renders it more fluid, ſubtile, volatile, and efficacious.——This digeſted with thrice its Weight of Alcohol, makes the purple *Tincture of Antimony*, a Secret highly valued by Mr. *Boyle*, as an excellent Vomit.

The ſame Butter precipitates, by warm Water, into a white, ponderous Powder, or Calx, call'd *Mercurius Vitæ*, and Powder of *Algarot*; reputed a violent Emetic.

Of Butter of *Antimony* is alſo prepared the Bezoar Mineral; by diſſolving the rectified Butter with Spirit of Nitre; then drying the Solution, and applying more Spirit of Nitre; and repeating this a third time. The white Powder remaining at laſt, kept nearly red-hot for half an Hour, is the Bezoardicum Mineral. See BEZOAR.

*Cinnabar of* ANTIMONY, is prepared of Mercury, Sulphur, and *Antimony* mixed and ſublimed in a luted Bolthead, and a naked Fire.——It is a good Diaphoretic and Alterative. See CINNABAR.

There is alſo a Cinnabar of *Antimony* procured after the Butter of *Antimony* has done riſing, by increaſing the Degree of Fire.——This ſublimed a ſecond time, makes a yet better Cinnabar.

*Crocus*, or *Liver of* ANTIMONY, is the ſame with what we otherwiſe call *Crocus Metallorum*; excepting that this latter is more mild and leſs emetic; being made by repeated Lotions of the former, in warm Water, and then drying it again to a Powder. See CROCUS *Metallorum*.

It is alſo call'd *Terra Sancta Rulandi*, *Terra Aurea*, *Terra Rubra*, &c.

*Diaphoretic* ANTIMONY, is prepared of *Antimony* powder'd and mixed with three times the Quantity of Nitre; and the Mixture thrown at ſeveral times into an ignited Crucible: upon which, a Detonation enſues. What remains being kept in Fuſion a quarter of an Hour, turns into a white Maſs call'd *Antimonium Diaphoreticum Nitratum*, or Diaphoretic *Antimony* with Nitre; being hereby bereaved of its emetic and purgative Virtue, and rendred only Diaphoretic. See DIAPHORETIC.

If the Air can have Acceſs to it, it will again become emetic. See AIR.

There is alſo a kind of ſweet Diaphoretic *Antimony*; made of the former, by pulverizing, boiling it in Water, and filtrating the Decoction: Upon which, a white Powder will be left in the Filtre; which being waſhed by repeated Effuſions of warm Water, and dried, is the *dulcified* or *common Diaphoretic Antimony*.——This is given as an Alexipharmic in malignant Fevers, Small-Pox, &c. particularly in caſe of Deliriums. It is alſo applied in ſcorbutic and venereal Diſorders: Though the learned *Boerhaave* abſolutely decries it, as a mere metalline Calx, deſtitute of all medicinal Virtue, and only fit to load and choak up the Body, by its Inactivity and Weight.

*Diaphoretic Nitre of* ANTIMONY, is made by exhaling the Solution of the preceding Preparation over a gentle Fire to a dryneſs; upon which, there remains a Salt compoſed of Nitre, and the Sulphur of the *Antimony*, call'd *Nitrum Antimoniatum*.——It is no other than a ſort of *Sal Prunellæ*, or *Sal Polychreſtum*; and accordingly is found aperitive, cooling, diuretic; good in inflammatory Fevers, &c. See PRUNELLÆ and POLYCHREST.

*Golden Sulphur of* ANTIMONY, is made of the Scoria which ariſes in preparing the Regulus; by boiling it, filtrating the hot Decoction, and adding diſtill'd Vinegar: Upon which the whole coagulates, changes into a brown Colour, emits a ſtercoraceous Odor, and precipitates a red Powder. The whole Maſs being waſh'd by repeated Affuſions of Water, till the Liquor come away ſcentleſs and inſipid, and then dried, it becomes a red Powder, called the *Golden Sulphur*, or *Precipitate of Antimony*; either on account of its own Colour, or the yellow one it gives to Glaſs, Metals, &c.——It either proves emetic, cathartic, diuretic, or ſudorific, as its Force happens to be determined. See PURGATIVE.

*Ceruſs*, or *Calx of* ANTIMONY, is the Regulus diſtilled with Spirit of Nitre, in a Sand-Furnace; what remains after the Fumes are all ſpent, is a white Powder; which being waſh'd ſweet, is the Ceruſs required.——It is diaphoretic; and by many ſet on a footing with the Mineral *Bezoard*.

*Magiſtery of* ANTIMONY, is crude *Antimony* digeſted with *Aqua Regia* eight or ten Days; to which, Water is then put, but pour'd off again e'er it ſettle: This to be repeated till there remain nothing behind but a yellowiſh Powder; which, being ſuffer'd to ſettle, and the Water decanted off, becomes by repeated Ablutions, an inſipid Magiſtery. See MAGISTERY.

Its Operation is rather cathartic than emetic, tho' ſometimes ſudorific.

ANTIMONY *revivified*, *Antimonium reſuſcitatum*, is prepared of Flowers of *Antimony* and Sal-Ammoniac, digeſted in diſtill'd Vinegar; then exhaled, and the remainder ſweetned by Ablution.——It is emetic, and ſometimes alſo ſudorific; good in Maniacal Caſes, &c.

All theſe Preparations of *Antimony*, how ſevere ſoever alone, may yet be ſo managed, as to operate little or nothing at all in the *Primæ Viæ*, nor be perceived till they are got into the ſmalleſt Veſſels——And then it is they are qualified to combat the Gout, Pox, Evil, &c. See PURGATIVES.

ANTINOMASY, or rather ANTONOMASY, a Figure in Rhetoric, whereby a Noun Appellative is uſed inſtead of a proper Name. See FIGURE and NAME.

Thus we ſay, the *Philoſopher*, inſtead of *Ariſtotle*; the *Orator*, for *Cicero*; the *Apoſtle*, for St. *Paul*, &c.—— Thus alſo we call a voluptuous Perſon, a *Sardanapalus*, &c. And thus we ſay *Henry* the Great, meaning *Henry* IV. of *France*.

The Word is compounded of the *Greek* ἀντι for, and ὄνομα, Name.

ANTINOMY, *Antinomia*, a Contradiction between two Laws, or two Articles of the ſame Law. See LAW.

The Word ſometimes alſo ſignifies an Oppoſition to all Law; whence a Sect of Enthuſiaſts, who are for carrying Goſpel-Liberty above all moral Regards, and ſlight the Motives of Virtue as inſufficient to Salvation, are called *Antinomians*.

The Word is derived from the *Greek* ἀντι, *contra*, and νόμος, *Lex*, Law.

ANTINOUS, in Aſtronomy, a Part of the Conſtellation *Aquila*, or the Eagle. See EAGLE.

ANTIPAGMENTS, *Antipagmenta*. See ANTEPAGMENTA.

ANTIPATHY, ANTIPATHIA, a natural Enmity, or Averſion of one Body to another.——In this Senſe, the Word ſtands oppoſed to *Sympathy*. See SYMPATHY.

Such is commonly ſaid to be between the Salamander and the Tortoiſe, the Vine and the Elm, the Toad and the Weezel, the Sheep and the Wolf, the Olive and the Oak, &c.

*Merſenne*, in his *Quæſt. Comment. in Geneſ.* gives other more extraordinary Inſtances; as, that a Drum made of a Wolf-Skin, will break another made of a Sheep-Skin: That Hens will fly at the Sound of a Harp ſtrung with Fox-Gut Strings, &c. *See other Matters relating to this Head, under the Articles* SOUND, MUSICK, TUNE, TARANTULA, &c.

Mr. *Boyle* mentions "a Lady, who having a ſtrange *Antipathy* to Honey; and her Phyſician conceiving it in "great meaſure imaginary, mixed a little Honey in a Medicine applied to her Foot: But he ſoon repented his "Curi-

" Curiosity; for it caused a strange Disorder in her, which " ceas'd upon removing of the Medicine. *Useful. of Philos.*" ——Dr. *Mather* relates that " a Gentlewoman in *New-* " *England* swoons upon seeing any one cut their Nails with " a Knife; but is not the least affected, if the same be " done with a Pair of Scissars." *Phil. Transact.* N° 339.

The *Peripateticks* account for *Antipathies* from certain occult Qualities inherent in the Bodies. See OCCULT, PERIPATETIC, *&c.* See also WITCHCRAFT, CONSENT *of Parts*, &c.

Some think that the Term *Antipathy*, can only be applied to any certain purpose, when used with the Restriction of modern Philosophers; among whom it signifies no more than a *Vis Centrifuga*, or repelling Power. See REPELLING and CENTRIFUGAL.

The Word is compounded of the *Greek* αντι, *contra*, against, and παθος, Passion.

ANTIPERISTASIS, in Philosophy, the Action of two opposite Qualities, one whereof, by its Opposition excites and heightens the Force of the other. See QUALITY.

This Word is *Greek*, Αντιπερισταϛις; form'd of αντι, *contra* against, and περιϛαμαι, to stand round: *q. d.* Resistence or Renitency against any thing that surrounds or besets another.——It is usually defined, " the Opposition of a con- " trary Quality, whereby the Quality it opposes becomes " heighten'd, or intended; or the Action whereby a Body " attack'd by another, collects itself, and becomes stronger " by such Opposition; or an Intension of the Activity of " one Quality, by the Opposition of another."

Thus Cold, say the School-Philosophers, on many Occasions exalts the Degree of Heat; and Dryness that of Moisture. See COLD, *&c.*

Thus it is that Quick-Lime is set on fire by the Affusion of cold Water: So Water becomes warmer in Winter than in Summer, by *Antiperistasis*: And to the same Cause it is owing that Thunder and Lightning are excited in the middle Region of the Air, which is continually cold.

This *Antiperistasis* is a Principle of great Use and Extent in the Peripatetic Philosophy.——" 'Tis necessary," according to the Authors of that Class, " that Cold and " Heat be both of them endued with a self-invigorating " Power, which each may exert when surrounded by its " contrary; and thereby prevent their mutual Destruction. " Thus it is supposed that in Summer, the Cold expelled " from the Earth and Water by the Sun's scorching Beams, " retires to the middle Region of the Air, and there " defends itself against the Heat of the superior and in- " ferior. And thus, also, in Summer, when the Air a- " bout us is sultry hot, we find that Cellars and Vaults " have the opposite Quality: so in Winter, when the ex- " ternal Air freezes the Lakes and Rivers, the internal Air, " in the same Vaults and Cellars, becomes the Sanctuary " of Heat; and Water, fresh drawn out of deeper Wells " and Springs, in a cold Season, not only feels warm, but " manifestly smokes."

Mr. *Boyle* has canvass'd this Doctrine thoroughly, in his History of Cold.——'Tis certain that, *à priori*, or considering the reason of the thing abstracted from the Experiments alledg'd to prove an *Antiperistasis*, it appears highly absurd: Since, according to the Course of Nature, one Contrary ought to destroy, not to strengthen another: Beside, that it is an Axiom that natural Causes act as much as they can; which, as to inanimate Creatures, must be allowed physically demonstrative; in regard these act not by choice, but by a necessary Impulse.

'Tis commonly, indeed, alledg'd, as a Proof of a Power Nature has given Bodies of flying their Contraries, that Drops of Water, falling on a Table, collect into little Globules, to avoid the contrary Quality in the Table, and keep themselves from being swallowed up by the dry Wood: but this we can account for on more intelligible Principles, *viz.* the Power of Attraction, and Repulsion. See ATTRACTION and REPULSION.

As to the *Antiperistasis* of Cold and Heat, the Peripatetics talk of those Qualities being surrounded by their Opposites, as if each of 'em had an Understanding and Foresight, that in case it did not gather up its Spirits, and guard against its Antagonist, it must infallibly perish; which is to transform physical Agents into moral ones.

In effect, not only Reason, but Experiment also, concludes against the Notion of an *Antiperistasis*: The leading Argument urged in behalf of it, is, the heating of quick Lime in cold Water: Now, who can sufficiently admire at the Laziness and Credulity of Mankind, who have so long, and generally acquiesced in what they might so easily have found to be false? For if, instead of cold Water, the Lime be quenched with hot, the Ebullition will oftentimes be far greater than if the Liquor were cold. See HEAT.

Again; in freezing a Bason to a Joint-Stool with a Mixture of Snow and Salt, by the Fire-side, 'tis pretended, that the Fire so intends the Cold, as to enable it to congeal the Water that stagnated upon the Surface of the Stool, betwixt that and the bottom of the Vessel. But how little need there is of an *Antiperistasis* in this Experiment, appears hence, that Mr. *Boyle* has purposely made it with good success, in a place where there neither was, nor ever probably had been, a Fire. See FIRE and FREEZING.

The Patrons of an *Antiperistasis* usually plead that Aphoristical Saying of *Hippocrates*, " The Viscera are hottest " in Winter," in behalf of their Opinion: But the only Proof usually brought of such greater Heat, is, that Men then have a greater Appetite; so that the Aphorism supposes Digestion to be made in the Stomach by Heat, which is easily refell'd. See DIGESTION.

Another Argument, urged in favour of an *Antiperistasis*, is borrowed from the Production of Hail, which is presumed to be generated in Summer only, not in Winter; and, according to the Schools, is made in the lowest Region of the Air, by the Cold of the falling Drops of Rain being so highly intended by the Warmth they meet with in the Air near the Earth, as to congeal into a solid form. See the Article HAIL.

As to the refreshing Coldness which subterraneous Places afford in Summer, it may be deny'd that they are then really colder than in Winter; tho' if the contrary were allow'd, it would not necessarily infer an *Antiperistasis*.——'Tis certain, the smoaking of Waters drawn from deep places in frosty Weather, does not necessarily infer such Water to be warmer than at other times when it does not smoke; since that Effect may proceed, not from the greater Warmth of the Water, but from the greater Coldness of the Air. For a Man's Breath in Summer, or in mild Winter Weather, becomes very visible; the cold ambient Air suddenly condensing the suliginous Steams discharged by the Lungs; which, in warmer Weather, are readily diffused in imperceptible Particles through the Air. *See the Articles* WATER, COLD, *&c.*

ANTIPERISTALTIC, in Anatomy, a Motion of the Intestines contrary to the *Peristaltic* Motion. See PERISTALTIC.

The *Peristaltic* Motion is a Contraction of the Fibres of the Intestines from above, downwards; and the *Antiperistaltic* Motion is their Contraction from below, upwards. See INTESTINES.

The Word is derived from the *Greek* αντι, against, περι, about, and παλλω, that which hath the Power of compressing. See VERMICULAR.

ANTIPHONE, ANTIPHONUM, the Answer made by one Choir to another, when the Psalm or Anthem is sung between two. See ANTHEM, CHOIR, *&c.*

ANTIPHRASIS, a sort of figurative Speech which has a contrary meaning to what it carries in appearance.——Or, a kind of Irony, wherein we say one thing and mean the contrary. See FIGURE and IRONY.

The Word is derived from the *Greek* αντι and φρασις, of φραζω, *I speak.*

'Tis a common Error, to make *Antiphrases* consist in a single Word; as when we say that the *Parcæ* are thus call'd by *Antiphrasis*, because they spare no body, *Parcæ quia nemini parcunt.*——St. *Jerom*, in his Epistle to *Riparius* against *Vigilantius*, says he ought rather to be called *Dormitantius per Antiphrasin*, than *Vigilantius*, because he opposed the Christians holding Wakes at the Tombs of the Martyrs.

*Sanctius*, in his *Minerva*, p. 451. condemns such *Antiphrases*; by reason *Phrasis* is not applicable to a single Word, but signifies *Orationem*, *aut loquendi Modum.* See PHRASE.

That excellent Grammarian defines *Antiphrasis* to be a Form of Irony, whereby we say a thing, by denying what we ought rather to affirm it to be: *Antiphrasis est Ironiæ quædam forma cum dicimus negando id quod debuit affirmari.*——As when we say, *It did not displease me*, or, *He is no Fool*; meaning, *I was pleased with it*, or, *He is a Man of Sense.*——On this Principle, the *Antiphrasis* ought to be ranked among the Figures of Sentences, and not those of Words. See FIGURE.

ANTIPODES, or ANTICHTHONES, in Geography, a relative Term, understood of such Inhabitants of the Earth as live diametrically opposite to one another. See EARTH.

The *Antipodes* are those who live in Parallels of Latitude equally distant from the Equator, the one toward the North, the other to the South; and under the same Meridian, tho 180°, or just half of that Meridian, distant from one another. See PARALLEL and MERIDIAN.

The *Antipodes* have the same degree of Heat and Cold; the same length of Night, and Day; but at contrary times? It being Midnight with one when it is Noon with the other; and the longest Day with one, when shortest with the other. See HEAT, DAY, NIGHT, *&c.*

Again,

Again, as the Horizon of any place is 90° distant from the Zenith thereof; *Antipodes* have the same Horizon. See HORIZON.——And hence, when the Sun rises to one, he sets to the other. See RISING and SETTING.

The Word comes from the *Greek* ἀντὶ, *against*, and πὺς, ποδὸς, *a Foot*.

*Plato* is said to have first started the Notion of *Antipodes*; and likewise to have given them the Name: As he conceiv'd the Earth to be of a spherical Figure, it was easy for him to infer that there must be *Antipodes*. See EARTH.

Many of the Antients, and particularly *Lactantius* and *Augustin*, laugh'd at the Notion.

The latter of those Fathers is out of his wits to think how Men and Trees should hang pendulous in the Air, their Feet uppermost; as they must do in the other Hemisphere.

And if we may believe *Aventine*, *Boniface* Archbishop of *Mentz* and Legate of Pope *Zachary*, in the eighth Century, declared a Bishop of that Time, called *Virgilius*, a Heretick, for maintaining that there was such a thing as *Antipodes*.

But this Piece of History is controverted by the Authors of the *Mem. de Trevoux*; having been made use of, it seems, by some Persons, to shew that the Church has been mistaken in its Decisions——The only Account extant of the matter, upon which the Tradition is founded, is a Letter of Pope *Zachary* to *Boniface*; wherein he says, "If it "be proved that he maintain that there is another World, "and other Men under the Earth; another Sun, and an- "other Moon; expel him the Church, in a Council; after "first divesting him of the Priesthood, *&c.*" The Authors above-cited endeavour to prove that this Threatening was never executed; and that *Boniface* and *Virgilius* afterwards lived together in good Understanding; and that *Virgilius* was even canonized by the same Pope. *Mem. de Trev. an.* 1708.

They further assert, that were the Story true; the Pope had done nothing contrary to Truth and Equity: in regard the Notion of *Antipodes* was very different in those days, from what it is now——"For besides the Demonstra- "tions of the Mathematicians, say they, the Philosophers "too added their Conjectures; and asserted that the Sea "made two great Circles around the Earth, which divided "it into four parts; that the vast Extent of this Ocean, "and the burning Heats of the torrid Zone, prevented any "Communication between those four parts of the Earth, "so that Men could not be of the same Kind, nor proceed "from the same Original: and this," say our Authors, "was what was meant by the Word *Antipodes* in those "Times."

As to the Sentiments of the Primitive Christians with regard to *Antipodes*; some, rather than admit the Conclusions of the Philosophers, absolutely denied the whole, even the Demonstrations of the Geometricians relating to the Sphericity of the Earth: which is *Lactantius*'s way, *Instit. lib.* iii. *c.* 24. Others only call'd in question the Conjectures of the Philosophers: which is St. *Augustin*'s Method, *de Civit. Dei*, *lib.* xvi. *c.* 9.——After putting the Question, whether there ever were Nations of *Cyclopes*, or Pigmies, or of People whose Feet stood outward, *&c.* he comes to the point of *Antipodes*, and asks, "whether the "lower part of our Earth be inhabited by *Antipodes*"—— He made no doubt of the Earth's being round, nor of there being a part diametrically opposite to ours; but only disputes its being really inhabited. And the Considerations he suggests for that purpose are just enough: As, That they who asserted *Antipodes*, had no History for it; That the lower part of the Earth may be cover'd with Water; and that to place *Antipodes* there, of a different Origin from us, (as must have been the Opinion of the Antients, since they thought it impossible to go from our World to theirs;) is to contradict Scripture, which teaches that the whole Race descended from one Man——Such is the Sentiment of that Critic.

It may be added, that the Christian Fathers were not the only Persons who disputed the Truth of *Antipodes*. *Lucretius* had done it before them at the end of his first Book, *v.* 10, 63, *&c.* See also *Plutarch*, *lib. de Facie in Orbe Lunæ*; and *Pliny*, who refutes the Opinion, *lib.* ii. *c.* 65.

ANTIPRÆDICAMENTS, in Logic. See ANTEPREDICAMENT.

ANTIPTOSIS, a Figure in Grammar, whereby one Case is put for another. See CASE.

The Word comes from the *Greek* ἀντὶ, *pro*, and πτῶσις, *Casus*.

ANTIQUARY, ANTIQUARIUS, a Person who studies and searches after Monuments and Remains of the *Antients*; as, old Medals, old Books, old Statues, Sculptures, and Inscriptions, and, in general, all curious Pieces that may afford any light into Antiquity. See ANTIQUITY. See also MONUMENT, MEDAL, INSCRIPTION, SCULPTURE, STATUE, *&c.*

Formerly there were several other kinds of *Antiquaries*. The *Librarii*, or Copists, *i.e.* those who transcribed in fair legible Characters what had been before written in Notes, were called by this Name. See LIBRARII——They were also denominated *Calligraphi*.

In the chief Cities of *Greece* and *Italy*, there were other Persons of Distinction, called *Antiquaries*, whose business it was to shew Strangers the Antiquities of the Place, to explain the antient Inscriptions, and to give them all the assistance they could in this way of Learning.

This was doubtless a very curious and useful Institution; and might well deserve to be re-established——*Pausanias* calls these *Antiquaries* Ἐξηγητὰς; the *Sicilians* call'd 'em *Mystagogos*.

ANTIQUATED, ANTIQUATUS, something obsolete, or grown out of date, or use. See OBSOLETE.

ANTIQUE, ANTIQUUS, something that is *antient*. See ANTIENT.

The Term is chiefly used by Architects, Sculptors, and Painters; who apply it to such pieces of Architecture, Sculpture, Painting, *&c.* as were made at the time when the Arts were in their greatest perfection, among the antient *Greeks* and *Romans*, *viz.* from the Age of *Alexander the Great* to the time of the Emperor *Phocas*, when *Italy* became over-run by the *Goths* and *Vandals*.

In this sense the Word stands opposed to *Modern*. See MODERN.

Thus we say, an *antique* Building, or a Building *after the Antique*; an *antique* Bust, or Bas Relievo; the *antique* Manner, Taste, *&c.*

ANTIQUE is sometimes even contradistinguish'd from *antient*, which denotes a lesser degree of Antiquity, when the Art was not in its utmost Purity: Thus, *antique* Architecture is frequently distinguish'd from *antient* Architecture. See ARCHITECTURE.

Some Writers use the Compound *Antiquo-modern*, in respect of old *Gothic* Churches and other Buildings; to distinguish them from those of the *Greeks* and *Romans*.

ANTIQUE *Work*. See ANTIC *Work*.

ANTIQUITY, ANTIQUITAS, antient Days; or the Times past long ago. See AGE, TIME, ANTIQUE, ANTIENT, *&c.*

Thus we say, the Heroes of *Antiquity*, the Marks of *Antiquity*, *&c.*

ANTIQUITY is also used in respect of the Remains, or Monuments of the Antients. See MONUMENT, REMAINS, RUINS, *&c.*

Thus we say, the *Antiquities* of *Greece*, the *Jewish Antiquities*, *Roman Antiquities*, *&c.*——The *Chinese* are infinite Admirers of *Antiquity*.

ANTISCII, or ANTOECI, in Geography, the People who inhabit on different sides of the Equator; and who, of consequence, at Noon, have their Shadows projected opposite ways. See SHADOW.

The People of the North are *Antiscii* to those of the South; the one projecting their Shadows, at Noon, towards the North Pole, and the others towards the South Pole.

*Antiscii* are frequently confounded with *Antœci*, who inhabiting opposite sides of the Equator, have the same Elevation of Pole. See ANTOECI.

The *Antiscii* stand contradistinguish'd from *Periscii*, *&c.* See PERISCII.

ANTISCII are sometimes also used among Astrologers, for two Points of the Heavens equally distant from the Tropics——Thus the Signs *Leo* and *Taurus* are held *Antiscii* to each other.

The Word comes from the *Greek* ἀντὶ, *against*, and σκιὰ, *Shadow*.

ANTISCORBUTICKS, Remedies against the *Scorbutus* or *Scurvy*. See SCORBUTUS. See also DETERGENT.

ANTI-SPODIUM. See SPODIUM.

ANTI-SIGMA, a Mark in the antient Writings, when the Order of the Verses is to be changed.

ANTISPASTUS, in the antient Poetry, a Foot in Verse, having the first Syllable short, the second and third long, and the fourth short. See FOOT and VERSE.

ANTISTITIUM, a Term used in antient Histories, for a *Monastery*. See MONASTERY.

ANTISTROPHE, a Figure in Grammar, whereby two Terms or Things mutually dependent one on another, are reciprocally converted. See FIGURE and CONVERSION.

As, if one should say, the *Master* of the *Servant*, and the *Servant* of the *Master*.

ANTISTROPHE was also a kind of Dance in use among the Antients; wherein they stepped sometimes to the Right, and sometimes to the Left, still doubling their Turns or Conversions. See DANCE.

The Motion towards the Left, they called *Antistrophe*; from ἀντὶ, *against*, and στροφὴ, of στρέφω, *I turn*. See STROPHE ——Hence

ANTI-

ANTISTROPHE, is also used in Lyric Poetry, in respect of an Ode, which is usually divided into the *Strophe*, *Antistrophe* and *Epode*. See ODE.

The *Antistrophe* is a kind of Eccho, or Replication to the *Strophe*; and the *Epode* a launching out from them both. See STROPHE and EPODE.

ANTITACTÆ, or ANTITACTICI, in Antiquity, a kind of Gnosticks, who own'd that God, the Creator of the Universe was good and just; but asserted withal, that one of his Creatures had created Evil, and had engaged us to follow it, in order to set us in opposition to God the Creator; and that it becomes our Duty to oppose this Author of Evil, in order to avenge God of his Enemy. See GNOSTICKS.

Hence comes their Name; which is derived from the *Greek* ἀντιτάττω, I oppose, I am contrary.

ANTITENAR, in Anatomy, a Muscle of the Thumb; whose Office is to draw it to the Fingers——It rises from the Bone of the *Metacarpus* that sustains the Fore-finger, and is inserted into the first Bone of the Thumb. See FINGER.

ANTITENAR is also the Name of a Muscle of the great Toe; which arising from the inferior part of the third *Os Cuneiforme*, and passing obliquely, is inserted into the inside of the *Ossa Sesamoidea*. See TOE.

The Word is compounded of the *Greek* ἀντι, against; and τένας; as being Antagonist to the *Tenars*. See TENAR.

ANTITHESIS, in Rhetorick, a setting two things by way of Opposition to each other, that the Excellency of the one, and the Folly of the other may appear the more strongly. See OPPOSITE and OPPOSITION.

Such is that of *Cicero*, in the second *Catilinarian*: "On "the one side stands Modesty, on the other Impudence; on "the one Fidelity, on the other Deceit; here Piety, there "Sacrilege; here Continency, there Lust, &c."——Such also is that of *Augustus* to some seditious young Men, *Audite, Juvenes, Senem, quem Juvenem senes Audivere*——Such again is that of *Seneca*, *Curæ Leves loquuntur, Ingentes stupent.*

*St. Austin*, *Seneca*, *Salvian*, and many other antient Writers, seem greatly to affect *Antitheses*; but among the Moderns they are generally decried. *Desmarets* represents 'em as the Favourites of young Writers.

*Persius* long ago declaimed against the impertinent use of *Antithets.*

——*Crimina Rasis*
*Librat in* Antithetis, *doctus posuisse Figuras.*

ANTITHESIS is also a Figure in Grammar, whereby one Letter is substituted in the room of another; as *olli* for *illi*.

The Word is deriv'd from the *Greek* ἀντίθεσις, Opposition.

ANTITHETARIUS, a Term occurring in the Title of a Chapter in the Laws of *Canutus*, *viz.* Capit. 47. but not in the Chapter it self. The meaning of the Word, is where a Man endeavours to discharge himself of the Fact of which he is accused, by recriminating, *i. e.* by charging the Accuser with the same Fact. See RECRIMINATION.

ANTITHET, ANTITHETON, an Opposite, or Contrary; something disposed by way of Antithesis. See ANTITHESIS.

ANTITRAGUS, in Anatomy, part of the Auricle opposite to the *Tragus*. See TRAGUS, AURICLE and EAR.

ANTITRINITARIANS, Hereticks who deny the holy Trinity, and teach that there are not three Persons in the God-head. See TRINITY and GOD.

Thus the *Photinians*, who do not believe the Distinction of Persons in God; the *Arians*, who deny the Divinity of the Word; and the *Macedonians*, who deny that of the Holy Spirit, were all properly *Antitrinitarians*. See PHOTINIAN, ARIAN, and MACEDONIAN.

Among the Moderns, *Antitrinitarians* are particularly understood of *Socinians*, call'd also *Unitarians*. See SOCINIAN and UNITARIAN.

The *Biliotheca Antitrinitariorum*, or Antitrinitarian Library, is a Posthumous Work of *Christopher Sandius*, an eminent *Antitrinitarian*; wherein he gives a List digested in Order of Time, of all the Socinian or modern *Antitrinitarian* Authors, with a brief Account of their Lives, and a Catalogue of their Works.

ANTITYPE, a *Greek* Word, properly signifying a Type or Figure corresponding to some other Type. See TYPE.

The Word *Antitype*, Αντιτυπος, occurs twice in the New Testament, *viz.* in the Epistle to the *Hebrews*, IX. 24. and in St. *Peter*, 1 *Ep.* III. 21. where its genuine Import has been much controverted——The former says, that "Christ "is not entered into the Holy Places made with Hands, "which are ἀντίτυπα, the Figures or *Antitypes* of the true; "now to appear in the Presence of God for us."—Now Τυπος, as is elsewhere observed, signifies the Pattern by which another Thing is made: and as *Moses* was obliged to make the Tabernacle, and all Things in it, according to the Pattern shew'd him in the Mount; the Tabernacle so formed was the *Antitype* of what was shewn to *Moses*: Any Thing therefore formed according to a Model or Pattern, is an *Antitype*.

In the latter Passage, the Apostle speaking of *Noah*'s Flood, and the deliverance of only eight Persons in the Ark from it, says ὃ καὶ ὑμᾶς ἀντίτυπον νῦν σώζει βάπτισμα, *Baptism being an Antitype to that, now saves us; not putting away the Filth of the Flesh, but the Answer of a good Conscience toward God, &c.* The meaning is, that Righteousness, or the Answer of a good Conscience towards God, now saves us by means of the Resurrection of Christ, as formerly Righteousness saved those eight Persons by means of the Ark, during the Flood——The Word, *Antitype*, therefore here signifies a general Similitude of Circumstances; and the Particle ὃ, *whereunto*, refers, not to the immedient Antecedent, ὕδατος, Water, but to all that precedes.

ANTITYPE, among the antient *Greek* Fathers, and in the *Greek* Liturgy, is also applied to the Symbols of Bread and Wine in the Sacrament. See SYMBOL, EUCHARIST, &c.

Hence it has been argued by many Protestants, that the *Greeks* do not really believe the Doctrine of Transubstantiation; in regard they call the Bread and Wine *Antitypes*, αντιτυπα, *q. d.* Figures, Similitudes, even after the Consecration. See GREEK, TRANSUBSTANTIATION, &c.

*Clement*, in his Constitutions, S. *Cyril*, and *Gregory Nazianzen*, and several other antient Writers, make no scruple of using the Term on the same Occasion; as is allowed by *Leo Allatius*, *Suicer*, &c. *Thesaur. Ecc lesiast.*

M. *Simon* replies to Dr. *Smyth*, who had made this Observation of the *Greeks* calling the Species, *Antitypes*, after Consecration; that the *Greek* Church does not hold the Consecration compleated till after the Prayer call'd *Invocation of the Holy Spirit*, which comes after the Passage of the Liturgy, where the Bread and Wine are call'd *Antitypes.*

Add, that *Marcus Ephesius*, the Leader of the Party against the *Latins*, at the Council of *Florence*; makes use of this very Passage in the *Greek* Liturgy, to prove that the Consecration does not consist wholly in the Words, *This is my Body*; but also in the Prayer or Benediction which the Priest rehearses afterwards, invoking the Holy Spirit. See GREEK.

ANTLER, among Hunters, the first of the Pearls that grow about the Bur of a Deer's Horn. See HEAD.

There are also Sur-*Antlers*, Brow-*Antlers*, &c. See HUNTING.

ANTONOMASIA, in Rhetoric. See ANTINOMASY.

ANTRUM, in Anatomy, the beginning of the Pylorus, or lower Orifice of the Stomach. See PYLORUS and STOMACH.

ANTOECI, in Geography, those Inhabitants of the Earth who live under the same Meridian, and at the same Distance from the Equator; the one towards the North, and the other to the South. See EARTH.

Hence, the *Antœci* have the same Longitude and the same Latitude, only of a different Denomination. See LATITUDE, &c.

The Inhabitants of *Peloponnesus* are *Antœci* to the *Hottentots* of the Cape of *Good Hope*——*Antœci* are frequently confounded with *Antiscii*. See ANTISCII.

The *Antœci* have precisely the same Hours of the Day and Night; but opposite Seasons: when 'tis 12 a-Clock in the longest Summer Day with one; 'tis 12 a Clock of the shortest Winter's Day with the other; and hence the Night of the one is always equal with the Day of the other. See DAY, HOUR, SEASON, &c.

Hence also those Stars which never rise to any given Place, to the *Antœci* and Antipodes thereof never set: and *vice versa*——And if the *Antœci* turn their Faces toward each other, or the Antipodes look both toward the Equator, the Stars will rise to the one on the right Hand, and to the other on the Left. See ANTIPODES, &c.

The Word is form'd of the *Greek* ἀντι, *contra*, and οἰκέω, I dwell, inhabit——The *Antœci* are contradistinguish'd from the *Perioeci*. See PERIOECI.

ANUS, in Medicine, the Extremity of the Intestine *Rectum*; or the Orifice of the Fundament. See RECTUM and FUNDAMENT.

*Fistula's in Ano* are very difficult of Cure. See FISTULA.

The *Gabionites* sent golden *Anus*'s back with the Ark, to be cured of a Disease which afflicted them in the *Anus*. See ARK.

*Sphincter of the Anus, or Sphincter* ANI. See SPHINCTER *Ani.*

*Levator* ANI. See LEVATOR *Ani.*

*Scalptor* ANI. See ANI-SCALPTOR.

*Procidentia*, or *Prolapsus* ANI. See PROCIDENTIA *Ani.*

ANUS is also used for a small Hole in the third Ventricle of the Brain, which leads into the fourth Ventricle of the *Cerebellum*. See BRAIN and VENTRICLE.

AORISTUS, Aorist, a Tenſe in the *Greek* Grammar, anſwering to the Præter-perfect of the *Latin* and *Engliſh*. See Tense and Greek.

As, for inſtance, *I lov'd you*——The *Greeks* have two *Aoriſtus's*; the *Latins*, none. See Preter and Preterit.

AORTA, in Anatomy, an Artery, which ariſes immediately out of the left Ventricle of the Heart; and is diſtributed thence thro' all Parts of the Body. See Artery and Heart.

The *Aorta* is otherwiſe called the *great Artery*; as being the Trunk, out of which the other Arteries all ſpring; and the great Conduit or Canal whereby the Blood is convey'd throughout the Body. See Blood and Circulation.

The Word is form'd of the *Greek* ἀορτὴ, which ſignifies a *Veſſel*, *Cheſt*, &c.——The *Aorta* is divided into two grand Trunks, call'd the *Aſcending* and *Deſcending*; *Aorta, aſcendens* and *deſcendens*. See Ascending and Descending.

Oſſifications, or Petrifactions of the Coats of the *Aorta* at its riſe from the Heart, are ſo frequent, that ſome think it a conſtant Caſe.——Mr. *Cooper*, however, has an expreſs Diſcourſe to ſhew that whenever ſuch Oſſification happens in Man, it is a Diſeaſe, and incommodes the Part in the due Execution of its Office. Of this he gives us ſeveral Inſtances; one, in which an Intermiſſion of Pulſe was produced; in another, a Coldneſs of the Extremes with a Gangrene, &c. *Phil. Tranſact.* N° 299.

AONIDES, in Mythology. See Muse.

APAGMA, a Term uſed by ſome Writers in Chirurgery, for the thruſting of a Bone or other Part out of its proper place. See Dislocation.

APAGOGICAL *Demonſtration*, is ſuch as does not prove the thing directly, but ſhews the Impoſſibility and Abſurdity which ariſes from denying it. See Demonstration.

Hence it is alſo call'd, *Reductio ad impoſſibile*, or *ad abſurdum*. See Reduction and Absurdum.

APANNAGE, Apennage, or Appannage. See Appanage.

APELLITÆ, Hereticks in the Primitive Church, who taught that Chriſt left his Body diſſolved in the Air; and ſo aſcended into Heaven without it.

APARTMENT, a Portion of a large Houſe, wherein a Perſon may lodge ſeparately; having all the Conveniencies requiſite to make a compleat Habitation. See House, &c.

A compleat *Apartment* muſt conſiſt at leaſt of a Chamber, an Antichamber, and a Cabinet or Wardrobe. See Chamber, Antichamber, &c.

The Word comes from the *Latin Apartimentum*, of the Verb *partiri*, to divide.

APATHY, a moral Inſenſibility; or a Privation of all Paſſion, all Motion, or Perturbation of Mind. See Passion.

The *Stoicks* affected an entire *Apathy*: their wiſe Man was to enjoy a perfect Calmneſs or Tranquillity of Mind, incapable of being ruffled, and above the reach of any Senſe either of Pleaſure or Pain. See Stoicks, Pleasure and Pain.

The Word is form'd of the privative Particle α, and παθος, Paſſion.

In the firſt Ages of the Church the Chriſtians adopted the Term *Apathy*, to expreſs a Contempt of all earthly Concerns; a State of Mortification, ſuch as the Goſpel preſcribes. And hence we find the Word often uſed among the devouter Writers: *Clemens Alexandrinus*, in particular, brought it exceedingly in vogue; thinking hereby to draw the Philoſophers to Chriſtianity, who aſpired after ſuch a ſublime pitch of Virtue.

Quietiſm, is only *Apathy* diſguiſed under the appearance of Devotion. See Quietism.

APATURIA, in Antiquity, Feaſts celebrated by the *Athenians* in honour of *Bacchus*. See Feast.

The Word is derived from the *Greek* ἀπάτη, Fraud.—— It is ſaid to have been inſtituted in memory of a fraudulent Victory, obtain'd by *Melanthus* King of *Athens*, over *Xanthus*, King of *Beotia*, in a ſingle Combat, which they agreed upon, to put an end to a Debate between 'em relating to the Frontiers of their Countries.——Hence *Budæus* calls it *Feſtum Deceptionis*, the Feaſt of Deceit.

This Feaſt laſted four Days: The firſt Day, thoſe of the ſame Tribe made merry together; and this they call'd Δόρπια. The ſecond Day, which they call'd Ἀνάδρομος, they ſacrificed to *Jupiter* and *Minerva*. The third Day, which they call'd Κουρεῶτις, ſuch of their young Men and Maids as were of Age, were admitted into their Tribes. The fourth Day they call'd Ἐπίδεια.

Other Authors give a different Etymology of this Feaſt, from what we have now related: They tell us, that the young *Athenians* were not admitted into the Tribes on the third Day, till their Fathers had firſt ſwore that they were their own Children; and that till that time they were ſuppoſed, in ſome meaſure, to be without Fathers, ἀπάτορες, whence the Feaſt, ſay they, took its Name.

*Xenophon*, on the other hand, informs us, that the Relations and Friends met on this occaſion, and join'd with the Fathers of the young People who were to be received into the Tribes; and that from this Aſſembly the Feaſt took its Name: that in Ἀπάτουρια, the α far from being a Privative, is a Conjunctive, and ſignifies the ſame thing with ὁμοῦ, together.

APEPSY, Apepsia, in Medicine, a want of Digeſtion. See Digestion.

*Apepſia*, is a Defect in the Stomach, which prevents the Aliment taken in from affording a proper Chyle for ſupplying the Blood and nouriſhing the Body. See Food, Stomach, Chyle, Blood, Nutrition, &c.

The Word is form'd from the privative Particle α, and πέπτω, *coquo*, I boil, or concoct.

APERIENS, or *Aperient*, or *Aperitive*, in Medicine. See Aperient.

The Word is *Latin*; being the Participle of the Verb *Aperire*, to open; *q. d. opening*.

*Crocus Martis* Aperiens, *opening Saffron of Iron*, is a Preparation of Iron-Plates or Filings, made by expoſing them to the Rain or Dew, till they contract a Ruſt; which is the Medicine required. See Crocus and Mars. See alſo Air, &c.——it is a good *Aperient*.

Aperiens *Palpebram Rectus*, in Anatomy, is a Muſcle, which riſing in the Orbit of the Eye, near the entrance of the Optic Nerve; paſſes over the attollent Muſcle of the Eye, and is at laſt inſerted into the whole ſuperior Part of the upper Eye-lid, which it ſerves to open. See Eye and Palpebra.

APERIENTS, or Aperitive *Medicines*, are ſuch as open the obſtructed Paſſages of the ſmall Veſſels, Glands, and Pores; and by that means promote a due Circulation of the contained Juices. See Obstruction, Capillary, Gland, Circulation, &c.

*Aperients*, then, coincide with Deobſtruents. See Deobstruent.

The five leſſer *Aperient*, or opening Seeds, are Graſs, Madder, Eryngo, Capers and Cammock.——The greater opening Seeds are Smallage, Fennel, Aſparagus, Parſly, and Butcher's Broom.

APERTIONS, in Architecture, are the Openings in a Building; as Doors, Windows, Stair-caſes, Chimneys, Outlets and Inlets for Light, Smoke, &c. See Building. See alſo Door, Window, &c.

The *Apertions* ſhould be as few as may be; it being a Rule that all Openings are Weakenings.

APERTURE, Apertura, the *Opening* of any thing; or a Hole, Cleft, or vacant Place in ſome otherwiſe ſolid, or continuous Subject. See Opening.

The Word comes from the *Latin Apertura*, of *Aperire*, to open.

In Geometry, *Aperture* is uſed for the Space left between two Lines which mutually incline towards each other to form an Angle. See Angle.

In Optics, *Aperture* is the Hole next the Object-Glaſs of a Teleſcope, or Microſcope; thro' which the Light and Image of the Object come into the Tube, and are thence carried to the Eye. See Object-Glass.

Aperture is alſo underſtood of the Part of the Object-Glaſs itſelf, which covers the former, and which is left pervious to the Rays. See Telescope.

A great deal depends on having a juſt *Aperture*.—— To find it experimentally; apply ſeveral Circles of black ſmutted Paper, each bigger than other, upon the Face of the Glaſs, from the Magnitude of a Pea to the whole Extent of the Glaſs; and with each of theſe, ſeparately, view ſeveral diſtant Objects; as the Moon, Stars, &c. That thro' which they appear the moſt diſtinctly, is to be pitch'd upon.

M. *Auzout* affirms, that he found that the *Apertures* of Teleſcopes ought to be nearly in the ſubduplicate Ratio of their Lengths: But *Huygens*, who firſt introduced the Uſe of *Apertures*, aſſures us he found by experience, that the *Aperture* of an Object-Glaſs, *E. gr.* of 30 Foot, is to be determined by this Proportion: as 30 to 3, that is, as 10 to 1, ſo is the Root of the Diſtance of the Focus of any Glaſs multiply'd by 30, to its *Aperture*: and the focal Diſtances of the Eye-Glaſſes are to be proportional to the *Apertures*.

A *Table of Apertures for Teleſcopes of various Lengths*, &c. See under the Article Telescope.

The greater or leſs *Aperture* of an Object-Glaſs, it is to be noted, does not increaſe or diminiſh the viſible Area of the Object; all that is effected by this, is the admittance of more or leſs Rays, and conſequently the more bright or obſcure Appearance of the Object.

Hence,

Hence, in viewing *Venus* thro' a Teleſcope, a much leſs *Aperture* is to be uſed than for the *Moon*, *Jupiter*, or *Saturn*, becauſe her Light is ſo vivid and glaring——Which Conſideration does a little invalidate and diſturb M. *Auzout*'s Proportion, as is ſhewn by Dr. *Hook*, *Phil. Tranſact.* N° 4.

*Apertura Tabularum*, in antient Law-Books, ſignifies the breaking open a Laſt Will and Teſtament. See WILL and TESTAMENT.

*Apertura Feudi*, denotes the loſs of a feudal Tenure, by default of Iſſue to him, to whom the Feud or Fee was firſt granted. See FEE, FEUD, TENURE, &c.

APETALOUS, in Botany, ſomething without Petala or Leaves. See PETALA and LEAF.

The Word comes from the privative Particle α, and πέταλον, *Folium*, a Leaf. See FLOWER, PLANT, &c.

APEX, the Vertex or Summet of any thing. See VERTEX, APICES, &c.

APHÆRESIS, or APHERESIS, in Grammar, a Figure, whereby ſomething is taken away from the beginning of a Word. See FIGURE and WORD.

Thus *Ciconia*, by *Apharesis* is wrote *Conia*.

A like Retrenchment at the end of a Word is call'd *Syncope* or *Apocope*. See SYNCOPE and APOCOPE.

APHELION, or APHELIUM, in Aſtronomy, that Point of the Earth's or a Planet's Orbit, in which it is the fartheſt diſtant from the Sun that it can be. See ORBIT.

Thus a Planet being in A, (Tab. ASTRONOMY, fig. 1.) its utmoſt Diſtance from the Sun S; is ſaid to be in its *Aphelion*. See PLANET, SUN, &c.

In the Syſtem or Suppoſition of the Sun's moving round the Earth; the ſame Point is called the *Apogee*. See APOGEE.

The *Aphelion* ſtands oppoſed to the *Perihelion*. See PERIHELION.

The *Apheliums* of all the primary Planets are at reſt; excepting that thoſe Planets neareſt the Sun, *viz. Mercury*, *Venus*, the *Earth*, and *Mars*, being acted upon by *Jupiter* and *Saturn*, their *Apheliums* move a ſmall matter *in Conſequentia* with reſpect to the fixed Stars, and this in the ſeſquiplicate Ratio of the Diſtance of thoſe Planets from the Sun.

Hence, if the *Aphelium* of *Mars* move 35 Minutes *in Conſequentia*, in reſpect of the fixed Stars in 100 Years; the *Apheliums* of the *Earth*, *Venus*, and *Mercury*, will move in 100 Years, 18 Min. 36 Sec. 11 Min. 27 Sec. and 4 Min. 29 Sec.

The Method of finding the place of the *Aphelion*, is by obſerving ſeveral of the great Digreſſions of the Planet from the Sun; till by two or three repeated Obſervations it be found to remain at a ſtand——In the *Philoſophical Tranſactions*, N° 128. we have a Geometrical Method of finding the *Aphelia* of the Planets, by Dr. *Halley*.

*Kepler* places the *Aphelium* of *Saturn* for the Year 1700, in 28°. 3′. 44″. of *Sagitarius*: *De la Hire*, in 29°. 14′. 41″.——The *Aphelium* of *Jupiter* in 8°. 10′. 40″. of *Libra*: *De la Hire* in 10°. 17′. 14″.——The *Aphelium* of *Mars* in 0°. 51′. 29″. of *Virgo*; *De la Hire* in 0°. 35′. 25″.——The *Aphelium* of the *Earth* in 8°. 25′. 30″. of *Cancer*——The *Aphelium* of *Venus* in 3°. 24′. 27″. of *Aquarius*; *De la Hire* in 6°. 56′. 10″.——And the *Aphelium* of *Mercury* in 15°. 44′. 29″. of *Sagitarius*; *De la Hire* in 13°. 3′. 14″.

The annual Motion, according to *Kepler*, of the *Aphelium* of *Saturn* is 1′. 11″. of *Jupiter*, 47″. of *Mars*, 1′. 7″. of the *Earth*——of *Venus*, 1′. 18″. and of *Mercury* 1′. 45″. According to *De la Hire*, that of *Saturn* is 1′. 22″. of *Jupiter* 1′. 34″. of *Mars* 1′. 7″. of the *Earth*——of *Venus* 1′. 26″. and of *Mercury* 1′. 39″.

The Word comes from the *Greek* ἀπὸ, from, and ἥλιος, Sun.

APHONY, from the privative Particle α, and φωνὴ, *Vox*, Voice; implies a loſs of Speech, or Voice. See VOICE, &c.

APHORISM, a Maxim, general Rule, or Principle of a Science; or a brief Sentence, comprehending a great deal of Matter in a few Words. See MAXIM, &c.

The Term is chiefly uſed in Medicine and Law.——Thus we ſay the *Aphoriſms* of *Hippocrates*, of *Sanctorius*, of *Boerhaave*, &c. *Aphoriſms* of the Civil Law, &c.

The Word comes from the *Greek* ἀφορισμὸς, of ἀφορίζω, *ſeparo*, *ſeligo*, I ſeparate, I chuſe, *q. d.* choice, or ſelect Sentences. See SENTENCE, AXIOM, &c.

APHRONITRE, APHRONITRUM, a kind of Nitre, mention'd by the Antients; ſuppoſed to be the Spume, or the lighteſt and ſubtileſt Part thereof, emerging to the top. See NITRE.

Some modern Naturaliſts rather take the antient *Aphronitre* to have been a Native Salt-Petre; now call'd *Salt-Petre of the Rock*. See SALT-PETRE.

The Word is compounded of the *Greek* ἀφρὸς, Froth, and νίτρον, Nitre.

APHTHÆ, in Medicine, little Ulcers or Pimples riſing in the Mouth, the Palate, Gums, at the Root of the Tongue, &c. See ULCER, &c.

Sucking Children are particularly ſubject to theſe *Aphthæ*, when either the Nurſe's Milk is corrupted or the Child's Stomach becomes unfit for Digeſtion: for in theſe caſes, the ſharp acrimonious parts of the Milk riſing up, eaſily exulcerate thoſe tender and delicate parts.

There are ſome of theſe *Aphthæ* white, others red, others livid and blackiſh: The white and red are the leaſt dangerous, and the moſt eaſily cured; the livid and black often prove mortal.

When they happen in grown Perſons, they are owing to thin, ſerous, and ſharp Humours returned from the ſeveral parts of the Body to the Mouth.

A Liniment of *Mel Roſatum* and Oil of Vitriol, is eſteem'd a good Remedy for the *Aphthæ*.

The Word ſeems derived from the *Greek* φθίω, to corrupt; or from ἅπτω, *accendo*, I kindle.

APHTHARDOCITES, APHTHARDOCITÆ, a Sect of Heretics, ſworn Enemies of the Council of *Chalcedon*.

They aroſe among the *Eutychians*, and made their firſt appearance in the Year 535. See EUTYCHIAN.

The Word is derived from the *Greek* ἄφθαρτος, incorruptible, and ἄρχω, I judge; and was given them, becauſe they imagined the Body of Jeſus Chriſt was incorruptible and impaſſible, and not capable of Death.

APIARY, a *Bee-Houſe*; a Place or Court where Bees are kept.

The Word comes from the *Latin*, *Apis*, a Bee.

The *Apiary* ſhould be ſcreen'd from high Winds on every ſide, either naturally or artificially; and well defended from Poultry, &c. whoſe Dung is offenſive to Bees.

APICES, in Botany, little Knobs growing on the Tops of the *Stamina*, in the middle of Flowers. See STAMINA and FLOWER.

They are commonly of a dark, purpliſh Colour.——By the Microſcope they have been diſcover'd to be, as it were, a ſort of *Capſulæ ſeminales*, or Seed-Veſſels, containing in them ſmall globular, and often oval Particles of various Colours, and exquiſitely formed; called the *Farina Fœcundans*. See FARINA FOECUNDANS.

What the Uſes of theſe are, is not entirely agreed: Some have gueſſed them to be a kind of male Sperm which falling down into the Flower, fœcundates and ripens the Seed. See further under the Article *Generation of* PLANTS.

The Word is *Latin*; being the Nominative plural of *Apex*, the Top or Summet of any thing.

APOBATERION, among the Ancients, ſignified a farewell Speech, or Poem; occaſion'd by a Perſon's departure out of his own Country, or ſome other place where he had been kindly received, and entertained.

Such is that of *Æneas* to *Helenus* and *Andromache*, Æn. Lib. III.——The *Apobaterion* ſtands oppoſed to the Epibaterion. See EPIBATERION.

APOCALYPSE, *Apocalypſis*, q. d. *Revelation*; the Name of the laſt Book in the Canon of Scripture. See CANON and BIBLE.

The *Apocalypſe* contains Diſcoveries, or Revelations relating to many important Myſteries of Chriſtian Faith; made to the Apoſtle St. *John*, in the Iſle of *Pathmos*, during his Baniſhment there under the Perſecution of *Domitian*. See REVELATION.

The Word is form'd of the *Greek* ἀποκαλύπτω, I reveal, I diſcover.

This, of all the Books of the New Teſtament, is that, about which the antient Fathers, and the Practice of the Church, were the moſt and the longeſt divided——St. *Jerom* relates, that the *Greek* Church doubted of its Authentickneſs even in his Days: St. *Baſil* and *Gregory Nazianzen* abſolutely reject it; and the Council of *Laodicea* never mention it in their Canon of the Sacred Writings.

Some attributed it to the Heretic *Cerinthus*; and others, to another *John*, Diſciple of St. *John*——*Dionyſius Alexandrinus* cenſures it as written in bad *Greek*, and even finds Soleciſms and Barbariſms in it, abundance: tho he allows it to contain a myſtic ſenſe, which he ſays he admires even where he does not underſtand.

On the other hand, St. *Juſtin*, *Irenæus*, and St. *Auguſtin*, make no doubt of its being Canonical. The third Council of *Carthage*, held in 397, placed it in the Canon of the New Teſtament; and the Churches both of the *Eaſt* and *Weſt* have acknowledged it ever ſince.

The *Alogians* are repreſented by Eccleſiaſtical Writers, as great Declaimers againſt the *Apocalypſe*, many of the Flights whereof they turn'd into Ridicule; particularly the Viſions of the ſeven Trumpets; the four Angels bound on the River *Euphrates*, &c——St. *Epiphanius* defends it againſt them: The Book, he obſerves, is not a mere Hiſtory, but a Prophecy; ſo that it is no wonder the Author

ſhould

ſhould expreſs himſelf after the manner of the Prophets, whoſe Style is uſually figurative.

Of all their Objections againſt the Authority of this Book, that ſeems the beſt grounded which is drawn from thoſe Words in Cap. ii. ver. 15. *Write to the Angel of the Church of* Thyatira: There was not, ſay they, any Chriſtian Church at *Thyatira* at that time——St. *Epiphanius*, who grants 'em this Point, is forced to have recourſe to the Prophetic Spirit; as if St. *John* had foreſeen there would be a Church there in courſe of time.

Some late Authors have made a good amendment to St. *Epiphanius*'s Anſwer: 'Tis probable, in the time of that Father, the Catalogue of the Biſhops, with other Acts, which ſhew that there had been a Church eſtabliſh'd there from the time of the Apoſtles; might not be known. *Grotius* adds, that tho there was not, indeed, any Church of *Gentile* Converts at *Thyatira* when St. *John* wrote; yet there was one of *Jews*, as there had been another at *Theſſalonica* before St. *Paul* preached there.

Several Orthodox Writers have rejected the *Apocalypſe* as a Book which countenanced the Reveries of *Cerinthus* touching the carnal Reign of Chriſt on Earth. See CERINTHIANS, and MILLENARIES.

Tho *Dionyſius Alexandrinus* allow'd the *Apocalypſe* for an inſpired Writing; yet he took it for the Work of another *John*, beſide St. *John the Evangeliſt*; which he endeavours to make appear from the Diverſity of Style. But we all know how precarious the Arguments are, which are drawn from the mere Conſideration of Style——'Tis true, in moſt of the antient *Greek* Copies, both printed and manuſcript, we find the Name *John the Divine* at the Head thereof; but they who put this Title, meant no more thereby than to denote the Apoſtle St. *John*, whom the *Greek* Fathers call *the Divine*, by way of Eminence, to diſtinguiſh him from the other Evangeliſts. See EVANGELIST.

There have been ſeveral other Works publiſhed under the Title of *Apocalypſes*——*Sozomen* mentions a Book uſed in the Churches of *Paleſtine*, call'd *the Apocalypſe*, or *Revelation* of St. *Peter*. He alſo mentions an *Apocalypſe* of St. *Paul*; which the *Cophtæ* retain to this day. *Euſebius* alſo ſpeaks of both theſe *Apocalypſes*——St. *Epiphanius* mentions an *Apocalypſe* of *Adam*: *Nicephorus*, of an *Apocalypſe* of *Eſdras*: *Gratian* and *Cedrenus*, of an *Apocalypſe* of *Moſes*, another of St. *Thomas*, and another of St. *Stephen*.

*Porphyry*, in his Life of *Plotin*, makes mention of the *Apocalypſes* or *Revelations* of *Zoroaſter*, *Zoſtrian*, *Nicotheæus*, *Allogenes*, &c.

APOCHYLISMA, among Phyſicians, *Inſpiſſation*; the boiling and thickening of any Juice with Sugar and Honey, into a kind of hard Conſiſtence. See INSPISSATION, &c.

APOCOPE, a Figure in Grammar, wherein the laſt Letter or Syllable of a Word is cut off. See FIGURE and WORD.

The Word is derived from the *Greek* ἀποκόπτω, *to cut off*; which is form'd from the Prepoſition ἀπὸ, and the Verb κόπτω, *I cut*.

A like Retrenchment at the beginning of a Word is call'd *Aphæreſis*. See APHÆRESIS.

APOCRISIARIUS, or APOCRISARIUS, in Antiquity, an Officer appointed to carry or deliver the Meſſages, Orders, and Anſwers of a Prince——He afterwards became his Chancellor, and kept the Seal. In the baſer *Latin* we ſometimes meet with *Aſecreta*, Secretary, for *Apocriſary*.

*Zozimus* defines the *Apocriſarius*, Secretary for foreign Affairs; being the ſame with what *Vopiſcus* in the Life of *Aurelian* calls *Notarius Secretorum*.

The Title and Quality of *Apocriſary* became at length appropriated, as it were, to the Pope's Deputy or Agent, who reſided at *Conſtantinople* to receive the Pope's Orders, and the Emperor's Anſwer——St. *Gregory* was *Apocriſary* of Pope *Pelagius*, at the time when he compoſed his Morals on *Job*.

The *Apocriſary* did the Office of the modern Nuntio's. See NUNTIO.

Sometimes, however, he had the Rank and Quality of the Pope's Legate. See LEGATE.

The Hereſy of the *Monothelites*, and afterwards that of the *Iconoclaſtes*, broke off the Cuſtom of having a Papal *Apocriſary* at *Conſtantinople*.

The Word is form'd from the *Greek* ἀπόκειμαι, *Reſpondſum*, Anſwer——Hence he is uſually call'd in *Latin*, *Reſponſalis*.

APOCROUSTICS, Medicines intended to ſtop the Flux of malignant Humours, to a part diſeaſed. See REPELLENT.

They are uſually cold, aſtringent, and conſiſting of large Particles; wherein they differ from drawing Medicines, which are hot, and conſiſt of more ſubtile parts. See RIPENERS.

The Word is derived from ἀπόκρυπτω, *pulſo*, *pello*, I drive.

APOCRYPHAL, ſomething *dubious*; or that comes from an uncertain Author, whereon much credit cannot be repoſed.

Thus we ſay, an *Apocryphal* Book, Paſſage, Hiſtory, &c. meaning, ſuch as are of ſuſpected Authority——In Matters of Doctrine, the Writings of Hereticks, Schiſmaticks, &c. are held *Apocryphal*.

*Voſſius* obſerves, that with regard to the ſacred Books, none are to be accounted *Apocryphal*, except ſuch as have neither been admitted into the Synagogue, nor the Church, ſo as to be added to the Canon and read in public. See CANON, BIBLE, &c.

The Word is derived from the *Greek* ἀποκρύπτειν, to *hide*; becauſe the Origin of ſuch Books was *unknown*, or becauſe they contain'd ſome Myſteries not fit to be known——For this reaſon, the Books of the *Sybils* were antiently call'd *Apocryphal*, as being committed to the Truſt of the *Decemviri* alone: and for the like reaſon the Annals of the *Egyptians* and *Tyrians* were call'd by the ſame Name. See SYBIL, DECEMVIR.

Before the *Septuagint* Verſion, the Books of the Old Teſtament were all *Apocryphal* in this ſenſe——But in proceſs of time, the ſenſe of the Word was changed, and thoſe Books alone were call'd *Apocryphal*, which were of doubtful or ſuſpected Authority.

In the original meaning of the Word, all the Writings depoſited in the Temple were call'd *Apocryphal*; by reaſon they were kept ſecret from the People.

When the *Jews* publiſh'd their ſacred Books, they only gave the Appellations of *Canonical* and *Divine* to ſuch as they thus made public; and ſuch as were ſtill retain'd in their Archives, they call'd *Apocryphal*, for no other reaſon, but becauſe they were not public; ſo that they might be really Sacred and Divine, tho not promulged as ſuch.

Thus, in reſpect of the Bible, all Books were call'd *Apocryphal*, which were not inſerted in the *Jewiſh* Canon of Scripture; and 'tis in this ſenſe St. *Epiphanius* is to be underſtood, when he ſays, That the *Apocryphal* Books are not put in the *Ark* among the other inſpired Writings. See ARK.

There has been a great Diſpute between the Romaniſts and the Reformed, about the Authority of thoſe Books, now call'd, by the latter, *Apocryphal*; as, *Judith*, *Tobit*, *Eſdras*, *Maccabees*, &c. the one having the Opinions of many of the Primitive Fathers for their Vouchers, and the others, the Tradition of their Church.

M. *Simon* contends, that they muſt have been read, in *Greek*, even by the Apoſtles themſelves; which he infers from divers Paſſages in their Writings——He adds, that the Church receiv'd them with the other Books of Scripture, from the *Helleniſt Jews*; and that if the Churches of *Paleſtine* never admitted them, 'twas not for their accounting them *Apocryphal* in the ſenſe the Word is now uſed, but becauſe they read none but what were writ in *Hebrew*.

To this we oppoſe the Authority of a great number of Eccleſiaſtical Writers, particularly among the *Greeks*; who make a preciſe Diſtinction between the Books now call'd *Apocryphal*, and thoſe contain'd in the *Jewiſh* Canon——St. *Jerom*, in particular, is very full upon the Head; and even ſpeaks of his Opinion as the common Opinion of the Church at that time.

APODICTICAL *Argument*, or *Syllogiſm*, ſignifies a clear, convincing Proof, or Demonſtration of a Thing. See DEMONSTRATION, ARGUMENT, &c.

The Word is form'd of the *Greek* ἀποδείκνυμαι, *I demonſtrate*, *I ſhew clearly*.

APOGEE, APOGÆUM, in Aſtronomy, that Point in the Orbit of the Sun, or a Planet, which is furtheſt diſtant from the Earth. See ORBIT and EARTH.

The *Apogee* is a Point in the Heavens, at the Extreme of the Line of the Apſides; in which the Sun, or a Planet, is at the greateſt Diſtance that it can be at, from the Earth, in its whole Revolution. See APSIS, EARTH, PLANET, &c.

The oppoſite Point hereto, is call'd the *Perigee*. See PERIGEE.

The antient Aſtronomers regarding the Earth as the Centre of the Syſtem; chiefly conſider'd the *Apogee* and Perigee: The Moderns, making the Sun the Centre, change the *Apogee* and Perigee for Aphelion and Perihelion. See APHELION and PERIHELION. See alſo SYSTEM.

The *Apogee* has a Motion; the Quantity of which is found by comparing two Obſervations thereof made at a great diſtance of time; converting the difference into Minutes, and dividing it by the number of Years elapſed between the two Obſervations. The Quotient gives the annual Motion of the *Apogee*——Thus, from an Obſervation made by *Hipparchus* in the Year before Chriſt 140, whereby the Sun's *Apogee* was found 5°, 30′ of ♊; and another

another made by *Ricciolus*, in the Year of Christ 1646, wherein it was found 7°, 26′, of ♋; the annual Motion of the *Apogee* is found to be 1′, 2″.

Apogee *of the Moon.* See Moon.

Apogee *of the Equant*, is its farthest Distance from the Earth; or that Point where the Circumference of the Equant is intersected by the Line of the *Apsides*, in the remotest part of the Diameter.

So the *Perigee of the Equant* is the opposite Point, or the nearest part of the Diameter.

The *mean Apogee* of the Epicycle, is a Point where the Epicycle is cut above, by a right Line drawn from its Centre, to the Centre of the Equant, or the Point of the Epicycle most remote from the Earth. See Epicycle.

The Word is form'd of the *Greek* απο, *ab*, from; and γη or γαια, Earth——In the corrupt *Latin*, *Apogee* sometimes signifies a Grotto, or subterraneous Vault.

APOGRAPH, Apographum, a Copy or Transcript of some Book or Writing. See Copy.

In this sense the Word stands opposed to *Autograph*; as a Copy to an Original. See Autograph.

It is form'd of απο, *ab*, from, and γραφω, *scribo*, I write.

APOLLINARISTS, Apollinarians, antient Heretics, who denied that Jesus Christ assumed true Flesh.

*Apollinaris* of *Laodicea*, their Leader, fancied I know not what strange kind of Flesh, which he supposed to have existed from all Eternity.——He distinguish'd between the Soul of Christ, and what the *Greeks* call νους, *Understanding*; and from this Distinction took occasion to assert, that Christ assumed a Soul without its Understanding, and that this Defect was supplied by the Word: tho' some of his Followers held that Christ had no Soul at all.

*Apollinaris* further taught, that the Souls of Men were propagated by other Souls, as well as their Bodies——*Theodoret* charges him with confounding the Persons of the Godhead; and with giving into the Errors of *Sabellius*: and *Basil* accuses him of abandoning the literal sense of Scripture, and taking up wholly with the allegorical sense.

This Heresy was very subtile; it was condemn'd in a Synod at *Alexandria*, under St. *Athanasius*, in the Year 362. It was subdivided into several different Heresies, the chief whereof were the *Polemians* and the *Antidicomarianites*. See Antidicomarianite.

Apollinarian *Games*, in Antiquity, *Ludi Apollinares*, were solemn Games held yearly by the *Romans* in honour of the God *Apollo*. See Game.

The Tradition goes, that at the first Celebration hereof, they were suddenly invaded by the Enemy; and obliged to take to their Arms: upon which occasion a Cloud of Darts and Arrows falling upon their Enemies, the *Romans* soon return'd Victors to their Sports.

APOLOGETICAL, Apologetic, something said, or written by way of Excuse, or *Apology* for any Action, or Person. See Apology.

The *Apologetic* of *Tertullian* is a Work full of Strength and Spirit; such as in all respects became the Character of that Father————He there vindicates the Christians from all that had been objected to them, particularly the abominable Crimes said to be perpetrated at their Meetings, and their want of Love and Fidelity to their Country. The Grounds of this last Accusation, was their refusing to take the accustom'd Oaths, and swear by the tutelary Gods of the Empire————*Tertullian* addresses his *Apologetic* to the Magistrates of *Rome*; the Emperor *Severus* being then absent.

APOLOGUE, Apologus, a moral Fable; or a feign'd Relation, intended to inform, and amend the Manners. See Fable.

Such are the Fables of *Æsop*; whence, moral Fables are usually denominated *Æsopic Fables*.

*Jul. Scaliger* derives the Name απο λογε, λογον, inasmuch as the *Apologue* means something more than what at first sight it expresses.

Father *de Colonia* makes it essential to the *Apologue*, that it contain what passes among Brutes; and distinguishes it from the *Parable*, by this, that the latter, tho' feign'd, might possibly be true, which the former cannot; since Beasts cannot speak. See Parable.

APOLOGY, Apologia, *Defence*; a Discourse or Writing in vindication of a Person. See Defence, Vindication, &c.

The Word is form'd of the *Greek* απολογεομαι, *I refute, I repel with Words.*

APONEUROSIS, among Anatomists, the spreading or Expansion of a Nerve, or Tendon, breadth-wise; in manner of a Membrane. See Nerve and Tendon.

It sometimes also signifies the cutting off a Nerve or Tendon————And in some Writers we find it used for a Tendon itself. See Tendon.

The Word is compounded of the *Greek* απο, *ab*, from; and νευρον, a Nerve.

APOPHLEGMATISMS, are Medicaments, chew'd, in order to draw away Phlegm, and Humours from the Head and Brain. See Masticatory.

Of this kind is Tobacco; which is as excellent as any, abating that it spoils the Teeth; and Sage has almost the same Virtues without the same Defects.

The Word comes from the *Greek* απο and φλεγμα.

APOPHYGE, Apophyges, in Architecture, that part of a Column where it begins to spring out of its Base, and shoot upwards. See Column and Base.

The *Apophyge*, in its Original, was no more, than the Ring or Ferril heretofore fasten'd at the Extremities of wooden Pillars, to keep them from splitting; which afterwards was imitated in Stone-work. See Order.

The Word in its original *Greek* signifies *Flight*; whence the *French* also call it *Escape*, *Conge*, &c. See Conge.

APOPHYSIS, in Anatomy, a Process or Protuberance of a Bone; being a part eminent or jutting out beyond the rest. See Bone, Process, &c.

Such are the Eminences of the *Vertebræ*, the Omoplate, Thigh-bone, &c. See Vertebræ, Omoplate, &c.

Apophyses *Mammillares*, are the Beginnings of the olfactory Nerves; as far as the *Os Cribrosum*, where they divide into little Fibres, which pass thro those Bones, and spread themselves throughout the upper part of the Nose. See Olfactory *Nerve*, Nose, &c.

Apophysis *Mammillaris*, or *Mastoideus*, is also one of the external Eminences of the *Os Petrosum*. See Petrosum.

The Word is *Greek*, and literally denotes a *Production outwards.*

APOPLEXY, in Medicine, a sudden Privation of all the Senses, and all the sensible Motions of the Body, excepting that of the Heart and Lungs; attended with a great Depravation of the principal Faculties of the Soul. See Sensation, Motion, &c.

It differs from a *Carus*, a *Lethargy*, and a *Coma*, in regard that in those three Distempers, the Stupor is not so profound, nor all Sensation quite destroy'd. See Carus, Lethargy, and Coma.

It differs from a *Syncope*, in that there is no sensible Pulse in this last; whereas in an *Apoplexy*, the Pulse is perceptible almost till Death. See Syncope.

It differs from an *Epilepsy*, in regard all Motion is not abolish'd in that as in this: and it differs from the *Palsy*, inasmuch as the Palsy is not attended with any Stupor, nor does it deprive the Patient of Sense and Perception. See Epilepsy and Palsy.

The *Apoplexy* may be occasion'd by an Interruption of the Passage of the Blood towards the Brain; or by any thing that hinders the Influx of the animal Spirits into the Organs of Sense, and the Parts of voluntary Motion: Sometimes it is owing to an abundance of Phlegm, and sometimes to a viscid *Pituita*, wherewith the Brain is oppress'd; as is observable in Winter *Apoplexies*, and in those of old People. It sometimes also comes from too gross a Lympha, which stops up the Nerves; or a Plethora, which oppresses them; or Excrescencies within-side the Cranium, pressing the Vessels; or a Polypus, blocking up the Carotids, &c. See Brain.

In dissecting Persons dead hereof, clotted extravasated Blood is usually found in one or both Ventricles of the Brain. See *Philos. Transact.* N° 173, 313, &c.

*Hippocrates* distinguishes two kinds of *Apoplexies*, the one *strong*, the other *weak*; only differing in the greater, or less Difficulty of Respiration.

The more modern Authors distinguish *Apoplexies*, from their Cause, into *Sanguineous* and *Pituitous*; to which may be added *Lymphatic*, *Polypous*, &c.

The Fit is usually preceded by a violent Pain in the Head, Dimness and Loss of Sight or Memory: Sometimes by an universal Indolence; and sometimes by a Flux of pituitous Matter by the Nose and Mouth————It is attended with a snoaring and difficulty of breathing; sometimes with a Fever, rarely with a foaming at the Mouth, frequently with a Sweat, Hemorrhoids, or Diarrhæa; and so goes off.

To prevent an *Apoplexy*, Wine and hard Labour are to be avoided; no eating to excess; nor no sleeping after Dinner: Exercise to be kept up, and Care and Chagrin to be kept under.

To cure an *Apoplexy*, Medicines must be used that occasion large Evacuations; and nothing of opiate or astringent meddled withal————During the Fit, copious bleeding in the Jugulars to be used, and the Patient laid on his back; applying strong Volatiles to the Nose; blow up strong Sternutatories, and rub the Temples with Cephalic Mixtures————A hot Iron may also be apply'd near the Vertex or Occiput; an Epispastic to the Neck; to which

are to be added powerful Purgatives, Clysters, &c.—— Cupping and Scarrification on the Head, are commended by some in lieu of Venæsection.

The Disease sometimes degenerates into a Paralysis.—— Sometimes only half the Head is affected; in which Case the Disease is called Hemiplegia. See HEMIPLEGIA, &c.

The Word *Apoplexy*, comes from the *Greek*, ἀποπλήτ]ειν, to strike or astonish; this Distemper striking suddenly, and, as it were, like a Thunder-bolt.

APOPLECTIC *Water*, *Aqua Apoplectica*. See WATER.

APORE, APORON, or APORIME, a Problem difficult to resolve, and which has never been resolved, tho' it be not, in itself, impossible. See PROBLEM.

Such we conceive the Quadrature of the Circle; the Duplicature of the Cube; the Trisection of an Angle, &c. See QUADRATURE, DUPLICATURE, TRISECTION, &c.

The Word is derived from the *Greek* ἄπορον, which signifies something very difficult and impracticable; being formed from the Privative α, and πόρος, Passage.

Hence also the Word *Pore*, which is understood of those imperceptible Passages in Bodies, which make room for the Transpiration of Humours. See PORE.

When a Question was proposed to any of the *Greek* Philosophers, especially of the Sect of Academists; if he could not give a Solution, his Answer was ἀπορῶ, *q. d.* I do not conceive it, I cannot see thro' it, I am not able to clear it up.

APORRHOE, APORRHOES, in Philosophy, sulphureous Effluvia or Exhalations, emitted from the Earth, and subterraneous Bodies. See VAPOUR and Exhalation.

The Word is form'd from the *Greek* ἀπορρέω, *defluo*, I flow from. See MEPHITES, &c.

APOSIOPESIS, in Rhetoric, otherwise called *Reticency*; a Figure, by which a Person really speaks of a thing, at the same time, that he makes a shew as if he would say nothing of it. See RETICENCY.

The Word comes from the *Greek* ἀποσιωπάω, *taceo, reticeo.*

APOSTASY, a deserting or abandoning of the true Religion. See RENEGADO.

Among the *Romanists*, it also signifies the forsaking of a religious Order, whereof a Man had made Profession; without a lawful Dispensation. See ORDER, &c.

The Antients distinguish'd three kinds of *Apostacy*; the first, *a Supererogatione*, is committed by a Priest or Religious, who abandons his Profession, and returns to his Lay State; the second, *a Mandatis Dei*, by a Person of any Condition, who abandons the Commands of God, tho' he retain his Faith; the third, *a Fide*, by him who not only abandons good Works, but also the Faith.

There is this difference betwixt an *Apostate*, and an Heretic; that the latter only abandons a part of the Faith, whereas the former renounces the whole. See HERETIC.

The Word is borrow'd from the *Latin Apostatare*, to despise or violate any thing. Hence

*Apostatare Leges*, anciently signified to transgress the Laws.——*Qui leges Apostabit terræ suæ, reus sit apud Regem.* L. L. Edw. Confess.

The *Latin Apostatare*, again, comes from the *Greek* ἀπό, and ἵστημι, *sto*, I stand.

APOSTATA *Capiendo*, a Writ which antiently lay against one, who having enter'd and profess'd some Order of Religion; broke out again, and wandred the Country, contrary to the Rules of his Order. See APOSTACY.

APOSTEME, APOSTEMA, APOSTUME, in Medicine, a preternatural Tumor; call'd also *Abscess* and *Imposthume*. See ABSCESS and IMPOSTHUME.

The Word is form'd of the *Greek* ἀπόστημα; which comes from the Verb ἀφίστασθαι, *abscedere*, to depart from one place and fix in another; alluding to the manner wherein the Tumor is usually form'd of a translated Humor. See DERIVATION, FLUXION, REVULSION, &c.

APOSTLE, APOSTOLUS, q. d. *Envoy* or *Messenger*; a Disciple of Jesus Christ, commission'd by him to preach his Gospel, and propagate it to all the Parts of the Earth. See GOSPEL.

St. *Paul* is frequently call'd *the Apostle*, by way of Eminence; and the *Apostle of the Gentiles*, by reason his Ministry was chiefly made use of for the Conversion of the Gentile World, as that of St. *Peter* was for the *Jews*.—— The several *Apostles* are usually represented with their respective Badges or Attributes: St. *Peter*, with the Keys; St. *Paul*, with a Sword; St. *Andrew*, with a Cross or Salteer; St. *James minor*, with a Fuller's Pole; St. *John*, with a Cup and a winged Serpent flying from it; St. *Bartholomew*, with a Knife; St. *Philip*, with a long Staff, whose upper End is form'd into a Cross, ; St. *Thomas*, with a Lance; St. *Matthew*, with a Hatchet; St. *Matthias*, with a Battle-Ax; St. *James major*, with a Pilgrim's Staff and a Gourd-Bottle; St. *Simon*, with a Saw; and St. *Thaddæus*, with a Club.

The Word *Apostle*, ἀποστολ⊕, originally signifies a Person *delegated* or *sent*; from the Verb ἀποστέλλω, *mitto*: In which Sense it occurs in *Herodotus*, and other prophane Authors. ——Hence, in the New Testament, the Term is applied to divers sorts of Delegates; and to the twelve Disciples by way of Eminence.

In this Sense, certain false Preachers of the Gospel antiently disputed *Paul* his Quality of *Apostle*; by reason none but those who had seen Jesus, and been Witnesses of his Actions, could be said to be sent by him——In answer to these sophistical Doctors, who had seduced the Churches of *Galatia*; he begins his Epistle to 'em with these Words, *Paul an Apostle, not of Men nor by Man, but by Jesus Christ and God the Father:* By which he signified that he had his Mission immediately from God; and of consequence was a true *Apostle*.

The name *Apostle* was also attributed to the ordinary travelling Ministers of the Church——Thus St. *Paul*, in the Epistle to the *Romans*, XVI. 7. says, *Salute Andronicus and Junia, my Kinsmen and Fellow-Prisoners, who are of note among the Apostles.*

The Name *Apostle* was also given to those sent by the Churches to carry their Alms to the Poor of other Churches. ——This Usage they borrowed from the Synagogues, who called those whom they sent on this Message, by the same Name; and the Function or Office itself ἀποστολή, *Apostole*, *q. d.* Mission.——Thus St. *Paul* writing to the *Philippians*, tells 'em, that *Epaphroditus* their *Apostle* had ministred to his Wants, Chap. II. 25.

APOSTLE is also used for a Person who first planted the Christian Faith in any place.

Thus St. *Dionysius* of *Corinth* is called the *Apostle* of *France*; St. *Xavier* the *Apostle* of the *Indies*, &c.—— In the *East-Indies*, the Jesuit Missionaries are also call'd *Apostles*. See MISSIONARY, &c.

In some Ages of the Church, the Pope was also denominated *Apostle*. See *Sidon. Apollin.* Lib. VI. Ep. 4. See also POPE and APOSTOLICAL.

In the *Greek* Liturgy, APOSTLE is particularly used for the Epistles of St. *Paul*, printed in the Order wherein they are to be read in Churches, thro' the Course of the Year.—— Another Book of the like kind, containing the Gospels, is call'd Εὐαγγέλιον, Gospel——The *Apostle*, of late Days, has also contained the other canonical Epistles; the Acts of the *Apostles*, and the Revelations. Hence it is also call'd, *Acts of the Apostles*, Πραξαπόστολ⊕; that being the first Book in it. See ACTS *of the Apostles*.

APOSTLE is also used among the *Jews*, for a kind of Officer anciently sent into the several Parts and Provinces in their Jurisdiction, by way of Visitor, or Commissary; to see that the Laws were duly observed, and to receive the Monies collected for the Reparation of the Temple, and the Tribute payable to the *Romans*——The *Theodosian* Code, Lib. XIV. *De Judæis*, calls *Apostoli*, *qui ad exigendum aurum atque argentum a Patriarcha certo Tempore diriguntur.* The *Jews* call'd 'em שליחון, *Schelihhin*, *q. d.* Envoys, Messengers.

*Julian* the Apostate remitted the *Jews* the *Apostole*, Αποστολή; that is, as he himself explains it, the Tribute they had been accustom'd to send him.

These *Apostles* were a degree below the Officers of the Synagogues call'd Patriarchs, and received their Commissions from 'em.——Some Authors observe, that St. *Paul* had bore this Office; and that 'tis this he alludes to in the beginning of the Epistle to the *Galatians:* as if he had said, *Paul*, no longer an *Apostle* of the Synagogue, nor sent thereby to maintain the Law of *Moses*, but now an *Apostle* and Envoy of Jesus Christ, &c.—St. *Jerom*, tho' he does not believe that St. *Paul* had been an *Apostle* of this kind; yet imagines that he alludes thereto, in the Passage just cited.

In the Arsenal of *Bremen* there are twelve large Pieces of Cannon call'd the twelve *Apostles*; on a Supposition that the whole World must be convinced, and acquiesce in the Preachings of such *Apostles*.

APOSTOLIC, APOSTOLICAL, APOSTOLICUS, something that belongs to the *Apostles*, or descends from them. See APOSTLE.

Thus we say the *Apostolical* Age, *Apostolical* Doctrine, *Apostolical* Character, &c.——The *Romanists* call their Church, the Catholic and *Apostolic* Church; and thus appropriate a Title to *Rome*, which anciently was held in common with it by several other Churches.

In the Primitive Church, the Appellation *Apostolic* was attributed to all such Churches as were founded by the *Apostles*; and even to the Bishops of those Churches, as being the reputed Successors of the *Apostles*.——These were confined to four; *viz. Rome*, *Alexandria*, *Antioch*, and *Jerusalem*.

In After-times other Churches assumed the same Quality, on account, principally, of the Conformity of their Doctrine with

with that of the Churches which were *Apoſtolical* by Foundation, and becauſe all Biſhops held themſelves Succeſſors of the Apoſtles. See BISHOP.

The firſt time the Term *Apoſtolical* is attributed to Biſhops, as ſuch, is in a Letter of *Clovis*, to the Council of *Orleans*, held in 511; tho' that King does not there expreſsly denominate 'em *Apoſtolical*, but *Apoſtolica ſede Digniſſimi*, Highly worthy of the *Apoſtolical* See. In 581 *Guntram* calls the Biſhops met at the Council of *Maſon*, *Apoſtolical* Pontiffs, *Apoſtolici Pontifices*.

In progreſs of Time, the Biſhop of *Rome* growing in Power above the reſt; and the three Patriarchates of *Alexandria*, *Antioch* and *Jeruſalem* falling into the hands of the *Sarazens*; the Title *Apoſtolical* became reſtrained to the Pope and his Church alone——Tho' ſome of the Popes, as St. *Gregory* the Great, not contented to hold the Title by this Tenure, began, at length, to inſiſt, that it belong'd to 'em by another and peculiar Right, as being the Succeſſors of St. *Peter*.

And hence a Legion of *Apoſtolicals*; *Apoſtolical* See, *Apoſtolical* Nuntio, *Apoſtolical* Notary, *Apoſtolical* Brief, *Apoſtolical* Chamber, &c.

APOSTOLOCI, call'd alſo APOSTOLI, and APOSTLES, a Name aſſum'd by two different Sects of Hereticks, on account of their pretending to imitate the Manners and Practice of the Apoſtles. See APOSTLES.

The firſt *Apoſtolici*, otherwiſe call'd *Apotactitæ* and *Apotactici*, roſe out of the *Encratitæ*, and *Cathari* in the IIId Century. They made profeſſion of abſtaining from Marriage, and the uſe of Wine, Fleſh, Money, &c. See APOTACTITÆ, ENCRATITÆ, &c.

The other Branch of *Apoſtolici* were of the the XIIth Century: Theſe alſo condemned Marriage, but allow'd of Concubinage; ſet aſide the uſe of Baptiſm; and in many things imitated the *Manichees*. St. *Bernard* wrote againſt 'em.

APOSTOLORUM *Unguentum*, the *Apoſtles Ointments*, in Pharmacy, is a kind of detergent, or cleanſing Unguent, compoſed of twelve Drugs; the Number of the *Apoſtles*, whence its Name. See UNGUENT. It was invented by *Avicenna*, and is otherwiſe called *Unguentum Veneris*.——

The principal Ingredients are Turpentine, Reſin, Wax, Gum Ammoniac, Birth-wort Roots, Olibanum, Bdellium, Myrrh, and Galbanum, Opopanax, Verdigreaſe, Litharge, Oil of Olives and Vinegar. See DETERGENT, &c.

APOSTROPHE, in Rhetoric, a Figure, whereby the Orator, in an extraordinary Commotion, turns his Diſcourſe from the Audience, and directs it to ſome other Perſon, or thing. See FIGURE.

Thus *Cicero*, in his Oration for *Milo*, addreſſes himſelf to the Great Patriots who had ſhed their Blood for the Public; and calls 'em to the defence of his Client. So the ſame Orator in his firſt *Catilinarian* directs himſelf to *Jupiter* the Protector of the City and Empire, and beſeeches him to repel the Parricide, &c.

The *Apoſtrophe* is frequently alſo addreſs'd to Inanimates, as Tombs, Monuments, Defuncts, &c.——*Cicero*'s *Apoſtrophe* to *Tubero*, in his Oration for *Ligarius*, is judg'd one of the fineſt Paſſages in his Works.

That *Apoſtrophe* of *Demoſthenes*, wherein he addreſſes himſelf to the *Greeks* ſlain at the Battle of *Marathon*, is famous. Cardinal *Perron* ſays, it has procured the Orator as much Glory as if he had rais'd 'em from the Dead.

The Word is *Greek* αποστροφη, *averſio*; form'd of απο, *ab*, from, and στρεφω, *verto*, I turn.

APOSTROPHE, in Grammar, is an Accent or Character, placed over a Letter, in lieu of a Vowel, to denote that the Vowel is cut off, and not to be pronounced. See ACCENT and CHARACTER. As in *Ev'n* for *Even*; *Th'Angelic Hoſt*, for *The Angelic*, &c.—The affectation of frequent *Apoſtrophes*, ſo uſual among ſome late *Engliſh* Writers, is a great Abuſe. See ANOMALOUS.

APOTACTITÆ, or APOTACTICI, an antient Sect, who affecting to follow the Evangelical Counſels of Poverty, and the Examples of the Apoſtles, and primitive Chriſtians, renounc'd all their Effects and Poſſeſſions. See APOSTOLICI.

It does not appear that they gave into any Errors during their firſt State: Some Eccleſiaſtical Writers aſſure us, they had divers Holy Virgins, and Martyrs, under the Perſecution of *Dioclefian*, in the IVth Century: but they afterwards fell into the Hereſy of the Encratitæ, and taught that the renouncing of all Riches, was not only a Matter of Council and Advice, but of Precept and Neceſſity——And hence the 6th Law in the *Theodoſian* Code joyns the *Apotactitæ* with the *Eunomians* and *Arians*. See EUNOMIAN and ARIAN.

The Word is form'd of the *Greek* αποτασσω, or αποτατ∫ω, I renounce——

APOTHECARY, a Perſon who practiſes Pharmacy, or that part of Phyſick which conſiſts in the Preparation and Compoſition of Medicines, See PHARMACY and MEDICINE.

*Nich. Langius* has wrote a large Volume expreſsly againſt the *Apothecaries*, their *quid pro quo's*, Ignorance in the *Materia Medica*, and ſuffering themſelves to be ſo eaſily impoſed on by foreign Merchants, Druggiſts, &c. who ſupply 'em with adulterated Drugs, one ſort for another, old Effœte exhauſted ones, for new ones juſt imported from the *Levant*, &c. See DRUGS, QUID *pro Quo*, &c.

The Apothecaries in *England* are obliged to make up their Medicines, according to the Formula's preſcribed in the College Diſpenſatory. See DISPENSATORY, OFFICINAL, &c.——Their Shops are ſubject to the Viſitation of the Cenſors of the College; who are empowered to deſtroy ſuch Medicines as they think good. See COLLEGE.

*Bartholin* complains of the too great number of Apothecaries in *Denmark*; tho' there were but three in *Copenhagen*, and four in all the Kingdom beſide: What would he have ſaid of *London*, where there are upwards of 1300?

The Word is derived from the *Greek* αποθηκη, Shop, by way of Eminence.

APOTHEGM. See APOPHTHEGM.

APOTHEOSIS, in Antiquity, a Heathen Ceremony, whereby their Emperors and great Men were placed among the Gods. See GOD.

After the *Apotheoſis*, which they alſo called *Deification* and *Conſecration*; Temples and Altars were erected to the new Deity, and Sacrifices, &c. offer'd to him. See DEIFICATION, CONSECRATION, ALTAR, SACRIFICE, &c.

It was one of the Doctrines of *Pythagoras*, which he had borrow'd from the *Chaldees*; that virtuous Perſons, after their Death, were rais'd into the Order of the Gods. See PYTHAGORIANS.

And hence the Antients deified all the Inventors of things uſeful to Mankind; and thoſe who had done any important Service to the Commonwealth——*Tiberius* propoſed to the *Roman* Senate the Apotheoſis of Jeſus Chriſt, as is related by *Euſebius*, *Tertullian*, and St. *Chryſoſtom*. *Juvenal* rallying on the frequent *Apotheoſes*, introduces poor *Atlas*, complaining that he was ready to ſink under the Burthen of ſo many Gods as were every day added to the Heavens. See HEAVEN.

*Seneca* ridicules the *Apotheoſis* of *Claudius* with admirable Humour——*Herodian*, in ſpeaking of the *Apoth oſis* of *Severus*, gives us a very curious Deſcription of the Ceremonies uſed in the *Apotheoſis* of the *Roman* Emperors——After the Body of the deceaſed Emperor, ſays he, had been burnt with the uſual Solemnities, they placed an Image of Wax, perfectly like him, but of a ſickly Aſpect, on a large Bed of Ivory, covered with Cloth of Gold, in the Veſtibule of the Palace. The greateſt part of the Day, the Senate ſat ranged on the left Side of the Bed, dreſs'd in Robes of Mourning; the Ladies of the firſt Rank ſitting on the right Side, in plain white Robes, without any Ornament——This laſted for ſeven Days ſucceſſively, during which, the Phyſicians came from time to time to viſit the Sick, always making their Report that he grew worſe; till at length they publiſh'd it, that he was dead.

This done, the young Senators and *Roman* Knights take the Bed of State upon their Shoulders, carrying it thro' the *Via Sacra*, to the old *Forum*, where the Magiſtrates were uſed to diveſt themſelves of their Offices. There, they ſet it down between two kind of Amphitheatres, in the one whereof are the Youth, and in the other the Maidens of the firſt Families in *Rome*, ſinging Hymns ſet to ſolemn Airs, in praiſe of the deceaſed. Theſe Hymns ended, the Bed is carried out of the City into the *Campus Martius*, in the middle of which Place is erected a kind of ſquare Pavilion, the Inſide whereof is full of combuſtible Matters, and the Outſide hung with Cloth of Gold, and adorned with Figures of Ivory, and various Paintings.

Over this Edifice are ſeveral others, like the firſt in Form and Decoration, but leſs; always diminiſhing and growing ſlenderer towards the Top.——On the ſecond of theſe is placed the Bed of State, and a great Quantity of Aromaticks, Perfumes, and odoriferous Fruits and Herbs are thrown all around; after which, the Knights make a Proceſſion or Cavalcade in ſolemn Meaſures around the Pile; ſeveral Chariots alſo run round it, thoſe who conduct them being clad in purple Robes, and bearing the Images of the greateſt *Roman* Emperors and Generals.

This Ceremony ended, the new Emperor comes to the *Catafalcha* or Pile, with a Torch in his Hand; and at the ſame time, fire is ſet to it, on all Sides; the Spices and other Combuſtibles kindling all at once.

While this is doing, they let fly from the Top of the Building, an Eagle, which mounting into the Air with a Fire-brand, carries the Soul of the dead Emperor along with it into Heaven, as the *Romans* believe; and thenceforward he is rank'd among the Gods——'Tis for this Reaſon, that the Medals, wherein *Apotheoſes* are repreſented, have uſually an Altar with Fire upon it; or however, an Eagle taking its Flight into the Air, and ſometimes two Eagles.

The

The Word *Apotheosis* is derived from the Prepoſition ἀπὸ and θεὸς, Deus, God——

APOTOME, in Mathematicks, the remainder or difference of two incommenſurable Quantities. See Incommenſurable.

An *Apotome* is an irrational Reſidue, as C B, ariſing, when from a rational Line A C, call'd *a*, you cut off a rational part A B, call'd *b*, only commenſurable in power to the whole Line A C——It may be expreſſed thus, $a - \sqrt{b}$

Apotome, in Muſick, is the Part remaining of an entire Tone, after a greater Semi-tone has been taken from it. See Tone and Semi-tone.

The Proportion, in numbers, of the *Apotome* is, of 2048 to 2187. See Degree.

The *Greeks* thought that the greater Tone could not be divided into two equal Parts; for which reaſon they called the firſt part ἀποτομὴ, and the other λεῖμμα; in this, imitating *Pythagoras* and *Plato*.

The Word is deriv'd from the *Greek* Verb ἀποτέμνω, *abſcindo*, I cut off.

APOZEM, in Medicine, a Form of Remedy, otherwiſe call'd a *Decoction*. See Decoction.

*Apozems* are a Claſs of liquid Medicines, compos'd of Decoctions of divers Plants, Roots, Flowers, Leaves, Fruits, and Seeds, ſweetned and clarified.

It differs from *Syrup*, in Thickneſs and Conſiſtence; the Syrup being more denſe and viſcous than the *Apozem*. See Syrup.

It differs from a *Julep*, in that it is thicker and more viſcous; and is not made with diſtill'd Waters, as Juleps are, but only with Decoctions. See Julep.

There are purging *Apozems*, Cephalic *Apozems*, Hepatic *Apozems*, &c.

The Word is derived from the *Greek* ἀποζέω, *deferveſco*, I grow hot, I boil.

APPANNAGE, Appenage, Appanage, or Apennage, the Fortune of a King's younger Son: or a ſettled Portion of Lands, &c. aſſigned for the Subſiſtence of the Cadets, or younger Sons of a Sovereign Prince. See King, &c.

The younger Sons of *England* have no certain *Appanages*, as in *France*; but only what the good-pleaſure of the King beſtows upon 'em. See Prince, &c.

Even in *France*, during the firſt and ſecond Races of Kings, the Right of Primogeniture and *Appanages* were unknown; but the Domains were divided pretty equally among all the Children. See Primogeniture.

Great Inconveniences ariſing hence; it was at length found proper to put off the younger born with Counties, Dutchies, or other-Diſtricts; on condition of their paying Homage and Fealty for the ſame, and of their reverting in defect of Heirs Male, to the Crown.

This has happened accordingly to the firſt and ſecond Branch of the Dukes of *Burgundy*——The Dutchy of *Orleans* is the *Appannage* of the ſecond Son of *France*.

*Nicod* and *Menage* derive the Word from the *Latin Panis*, Bread, which frequently includes all other ſorts of Proviſion neceſſary for Subſiſtence. *Du Cange* takes it to have been form'd of the baſe *Latin*, *Apanare*, *Apanamentum*, and *Apanagium*, which amounts to the ſame thing; thoſe Words, being apparently formed of *panis*.

APPARATOR. See Apparitor.

APPARATUS, properly ſignifies a formal Preparation for ſome publick and ſolemn Action. See Preparation.

Thus we ſay, the *Apparatus* of a Feaſt, Coronation, &c. The Prince made his Entry with great *Apparatus* and Magnificence.

Apparatus is alſo uſed for the Utenſils, and Appendages belonging to ſome more conſiderable Machine—— As the Furniture or *Apparatus* of an Air-pump, Microſcope, &c. See Air-*Pump*, Microscope, &c.

Apparatus is ſometimes alſo uſed, in Chirurgery, for the Bandages, Medicaments, and Dreſſings of a Part; or the ſeveral Matters apply'd for the Cure of a Wound, Ulcer, or the like. See Wound, Ulcer, &c.

There is no judging of the Quality of a Hurt, till after taking off the firſt *Apparatus*, or Apparel.

Apparatus is particularly uſed for the Operation of cutting for the Stone. See Stone and Cutting.

There are three ſorts of *Apparatus*; *viz.* the *Small*, *Great*, and *High Apparatus*: *Which ſee deſcribed under the Article* Lithotomy.

The *high Apparatus*, ſaid to have been invented by *De Franco*, is reputed the moſt antient; tho little uſed among us till of late——In this Method an Inciſion is made above the Groin, along the *Linea Alba*, into the Fund of the Bladder; thro which the Stone is extracted.

The *great Apparatus*, invented by *John de Romanis*, a Phyſician of *Cremona*, in the Year 1520; is perform'd by making an Inciſion in the *Perinæum*. See Perinæum.

It is denominated *great* from the number of Inſtruments uſed in it.

The *ſmall Apparatus*, thus call'd from the few Inſtruments it requires, was invented by *Celſus*——Here, the two Fore-Fingers are thruſt up the Fundament till they come againſt the Stone, and drive it to the Neck of the Bladder; from which it is extracted thro an Inciſion *in perinæo*.

Apparatus is alſo uſed as the Title of ſeveral Books compoſed in form of Catalogues, or Dictionaries; for the Eaſe and Conveniency of Study.

The *Apparatus* upon *Cicero*, is a kind of Concordance, or Collection of *Ciceronian* Phraſes, &c.——The *Apparatus Sacer* of *Poſſevinus*, is a Collection of all kinds of Eccleſiaſtical Authors printed in 1611, in three Volumes——Gloſſaries, Comments, &c. are alſo frequently call'd *Apparatus's*.

APPAREL, or Appareil. See Apparatus.

APPARENT, that which is viſible, evident to the Eye, or the Underſtanding. See Appearance.

*Heir* Apparent. See Heir *Apparent*.

Apparent *Magnitude* of an Object, is the Magnitude thereof ſuch as it appears to the Eye. See Magnitude.

The *apparent* or *ſeeming* Magnitude is meaſured by the Optick Angle. See Optick *Angle*.

Thus the *apparent* Magnitude of an Object is ſaid to be ſo many Degrees as the Optick or Viſual Angle ſubtends. See Angle and Degree.

The *apparent* Magnitudes of diſtant Objects are uſually ſaid to be as their Diſtances, reciprocally. See the Articles Visible and Vision.

In ſtrictneſs, however, it may be demonſtrated, that the *apparent* Magnitudes of the ſame Object A C, (Tab. Optics, fig. 61.) ſeen at different Diſtances, *viz.* at the Places D and B; that is, the Angles A D C and A B C are in a Ratio leſs than the reciprocal Ratio of the Diſtances D G and B G: but when the Object is very remote, *viz.* when the Optick Angles A D C and A B C, are not above one or two Degrees, they are nearly in that Ratio reciprocally.

Apparent *Magnitude* or *Diameter* of the Sun, Moon, or any Planet, is the Quantity of the Angle that their Diameters appear under, to an Obſerver on the Surface of the Earth.

The *apparent* Diameters of the Celeſtial Luminaries are ſubject to ſome Diverſity——That of the Sun is obſerv'd to be leaſt when he is in *Cancer*, and greateſt when in *Capricorn*. See Sun.

In the Moon there is a twofold Increaſe and Decreaſe of her *apparent* Diameter; the one, when ſhe is in the Conjunction, and Oppoſition with the Sun; and the other in her Quadratures.

The greateſt *apparent* Diameter of the Sun, according to *Caſſini*, is 32′, 10″, and the leaſt 31′, 38″.—According to *de la Hire*, the greateſt is 32′, 43″; and the leaſt 31′, 38″——The greateſt *apparent* Diameter of the Moon, according to *Kepler*, is 32′, 44″; and the leaſt 30′, 00″—— And according to *de la Hire*, the one is 33′, 50″; and the other 29′, 30″. See Sun and Moon.

The apparent Diameter of *Saturn*'s Ring, according to *Huygens*, is 1′, 18″, when leaſt. See Saturn.

*The* apparent *Diameters of the other Planets, ſee under the Article* Diameter.

If the Diſtances of any two remote very Objects, for example, two Planets, be equal, their true Diameters are proportional to the *apparent* ones; and if the *apparent* Diameters be equal, the true Diameters will be as the Diſtances from the Eye——Hence, when neither the Diſtances nor the *apparent* Diameters are equal, the true Diameters will be in a Ratio compounded of the direct Ratio of the Diſtances, and of the direct Ratio of the *apparent* Diameters.

There is a further very obſervable Difference between the *apparent* Magnitudes or Diameters of the Sun and Moon when in the Horizon, from what they are in the Meridian; the reaſon whereof has long perplexed the Philoſophers. See Moon.

Apparent *Place* of any Object, in Opticks, is that wherein it appears, when ſeen thro' one or more Glaſſes. See Place, Optick *Glaſs*, &c.

The *Apparent Place* is different from the real one; for when, by Refraction thro Glaſſes, that parcel of Rays which fall on the Pupil of the Eye, from each Point of any near Object, is made to flow as cloſe together as that which comes from a diſtant one; or when, by the ſame means, the Rays coming from diſtant Objects are made to diverge as much as if they flow'd from near ones; then the Eye muſt neceſſarily ſee the Place of the Object changed: which Change is its *Apparent Place*. See Vision.

If an Object be placed nearer to a convex Glaſs than is the Diſtance of its Focus; its *Apparent Place* may be determined: But if the Object be in the Focus of the Glaſs, the *Locus Apparens* of the Object cannot be determined; only that it will appear vaſtly remote.

Nor

Nor can the *Locus Apparens* be determined, if the Object be beyond the Focus of a convex Glaſs: But if the Object be further diſtant from a convex Glaſs, than its Focus, and the Eye lie beyond the diſtinct Baſe; its *Apparent Place* will be in the diſtinct Baſe. See *the Article* LENS.

*Apparent Place* of a Star, &c. is a Point in the Surface of the Sphere determined by a Line drawn from the Eye, thro the Centre of the Star, &c. See PLACE.

The true, or real Place, is determined by a Line drawn from the Centre of the Earth, through the Star or Planet.

APPARENT, or *ſenſible Horizon*, is that great Circle which limits our Sight; or the Place where the Heavens and the Earth ſeem to meet. See HORIZON.

It may be conceiv'd as a Cone, whoſe Vertex is the Eye, and its Baſe the circular Plain which terminates our Proſpect——It determines the Riſing and the Setting of the Sun, Moon, or Stars. See RISING, SETTING, &c.

APPARENT *Conjunction*, is when the right Line ſuppoſed to be drawn thro the Centres of two Planets, does not paſs thro the Centre of the Earth, but thro the Eye of the Spectator. See CONJUNCTION.

APPARENT *Motion*, *Time*, &c. See MOTION, TIME, &c.

APPARITION, in Aſtronomy, a Star or other Luminary's becoming viſible, which before was hid——In this ſenſe the Word ſtands oppoſed to *Occultation*. See OCCULTATION.

The *Heliacal* Riſing is rather an *Apparition* than a proper Riſing. See HELIACAL.

*Circle of perpetual* APPARITION. See CIRCLE *of perpetual Apparition*.

APPARITOR, or APPARITOUR, or APPARATOR, a Beadle in an Univerſity, who carries the Mace before the Maſters and the Faculties. See BEADLE and UNIVERSITY.

APPARITORS are alſo Meſſengers, who cite Men to appear in the Eccleſiaſtical Courts. See SUMMONS, SUMMONER, CITATION, &c.

Among the *Romans*, *Apparitors* were the ſame with Serjeants or Tip-ſtaffs among us; or rather *Apparitor* was a general Term, and comprized under it all the Miniſters and Attendants of the Judges and Magiſtrates, appointed to receive and execute their Orders——And hence, they ſay, the Name was derived, *viz.* from *apparere*, to be preſent, to be in waiting.

Under the Name *Apparitores* were comprehended the *Scribæ*, *Accenſi*, *Interpretes*, *Præcones*, *Viatores*, *Lictores*, *Servi Publici*, and even the *Carnifices* or Hangmen. See SCRIBA, ACCENSI, &c.

They were uſually choſen out of the Freed-Men of the Magiſtrates; and their Condition was held in ſo much Contempt, that as a Mark of Ignominy, the Senate appointed a City that had revolted from them, to furniſh them with *Apparitors*.

There were alſo a kind of *Apparitors of Cohorts*, call'd *Cohortales*, or *Conditionales*, as being attach'd to a Cohort, and doom'd to that Condition—The *Apparitors* of the Prætors, *Prætoriani*, were thoſe who attended the Prætors, or Governors of Provinces; and who, on their Maſter's Birthday, were always chang'd and preferr'd to better Poſts——Add, that the *Pontifices* had alſo their *Apparitors*, as appears from an Inſcription of an antient Marble in the *Via Appia*:

APPARITORI
PONTIFICUM
PARMULARIO.

APPEAL is uſed in Common and Civil Law, to ſignify the removing of a Cauſe from an inferior Judge to a ſuperior; or the having recourſe to a ſuperior Judge to rectify what is amiſs in a Sentence paſs'd by an inferior. See JUDGE and COURT.

*Appeals* lie from any of the ordinary Courts of Juſtice to the Houſe of Lords, who judge *en dernier Reſſort*; *i. e.* no *Appeal* lies from 'em. See RESSORT, PARLIAMENT, &c.

There are *Appeals* from Eccleſiaſtical Juſtice to Secular.——The firſt Inſtance is that of *Paulus Samoſatenus*, who being condemn'd and depoſed by the ſecond Council of *Antioch*, refuſed to ſurrender the Epiſcopal Houſe to *Domnus*, who had been elected his Succeſſor; and *appealed* to the Emperor.

APPEAL is alſo uſed in Common Law in the ſame ſenſe as *Accuſatio* among the *Civilians*. See ACCUSATION——For, as in the Civil Law, Cognizance of criminal Caſes is taken either upon Inquiſition, Accuſation, or Denunciation; ſo in ours it is taken either upon Indictment or *Appeal*.

Indictment comprehends both Inquiſition and Denunciation——*Appeal* or Accuſation is a lawful Declaration of another Man's Crime (which, by *Bracton*, muſt be Felony at the leaſt) before a competent Judge, by one that ſetteth his Name to the Declaration, and undertakes to make it good on the Penalty that may otherwiſe enſue.

An *Appeal* is commenced two ways; either by Writ, or Bill——*Appeal by Writ*, is when a Writ is purchaſed out of Chancery by one to another; to this end, that he *appeal* a third of ſome Felony committed by him, finding Pledges that he ſhall do it, and deliver this Writ to the Sheriff to be recorded.

*Appeal by Bill* is, when a Man of himſelf gives up his Accuſation in Writing to the Sheriff or Coroner; offering to undergo the Burden of *appealing* the Perſon therein named.

This Practice is drawn from the *Normans*, as appears from the grand Cuſtomary, wherein is a ſolemn Diſcourſe both of the Effects of this *Appeal*, *viz.* the Order of the Combat, and of the Trial by Inqueſt; which, by our Law, is in the choice of the Defendant. See TRIAL, COMBAT, INQUEST, &c.

APPEAL *of Mayhem*, is an accuſing of one that hath maimed another——But this being no Felony, the *Appeal* thereof is but in manner of an Action of Treſpaſs; ſo that there is nothing recover'd but the Damages.

*Bracton* calls this *Appellum de Plagiis & Mahemio*, and has a whole Chapter of it.

In King *John*'s time, there is recorded an *Appeal* againſt a *Jew*, *qui fecit ementulari quondam Nepotem ſuum*.

*Appeal of wrong Impriſonment*, is uſed by *Bracton* for an Action of wrong or falſe Impriſonment. See ACTION, &c.

APPEAL is particularly uſed for a private Accuſation of a Murderer, by one who had Intereſt in the Murder'd Party; or of any Felon by one of his Accomplices in the Fact. See MURDER, FELONY, &c.

If an *Appeal* of Murder or Felony be ſued by any common Perſon againſt a Peer; he ſhall be tried by Commoners, and not by his Peers. See PEER.

The Perſon who brings an *Appeal*, is call'd the *Appellant*; and the Perſon appeal'd, the *Appellee*.

APPEARANCE, the exterior Surface of a Thing; or that which firſt ſtrikes the Senſe, or the Imagination. See EXTERIOR and SURFACE.

The Academicks maintain, that the ſenſible Qualities of Bodies are only *Appearances*; and the like Doctrine is held by ſome later Philoſophers. See ACADEMICK and QUALITY. See alſo BODY, EXTERNAL *World*, &c.

Our Errors ariſe chiefly from a too haſty and precipitate Aſſent of the Will, which acquieſces too eaſily in the *Appearances* of Truth. See WILL, LIBERTY, ASSENT, ERROR, &c.

APPEARANCE, in Perſpective, is the Repreſentation or Projection of a Figure, Body, or the like Object, upon the Perſpective Plane. See REPRESENTATION and PROJECTION.

The *Appearance* of an objective right Line, is always a right Line. See PERSPECTIVE.

The *Appearance* of an opake Body and a Luminary being given, to find the *Appearance* of the Shadow; ſee SHADOW.

APPEARANCE *of a Star*, or *Planet*. See APPARITION.

APPEARANCES, in Aſtronomy, &c. are more uſually call'd *Phænomena*. See PHÆNOMENA.

In Opticks, we uſe the Term *Direct Appearance*, for the View or Sight of an Object by direct Rays; without either Refraction or Reflection. See DIRECT and RAY. See alſo OPTICKS, VISION, &c.

*To ſave* APPEARANCES, is to diſcharge one's Duty ſeemingly, or acquit himſelf of the Formalities and Externals thereof; ſo as to ſave his Character, and avoid the giving of Scandal or Offence.

APPEARANCE, in Law, is the Defendant's engaging to anſwer a Cauſe or Action entred againſt him in ſome Court of Judicature. See ACTION, PROCESS, &c.

*Appearance*, in the King's-Bench, is the Defendant's filing either of Common or Special Bail, if the Action be by Bill——If it be by Original, the *Appearance* muſt be with the Philazer of the County where the Arreſt was. See BAIL, BILL, PHILAZER, &c.

*Appearance*, in the Common-Pleas, muſt be entred with the Philazer there; but if it be by Bill, with the Prothonotary. See PROTHONOTARY, &c.

APPELLATIVE, or *Noun* APPELLATIVE, in Grammar, a common Name; or a Name which belongs, or is applicable to all things of that kind. See NAME and NOUN.

Such are the Names, *Man*, *Angel*, *Horſe*, *Plant*, *Tree*, &c.

*Appellatives* ſtand oppoſed to proper Names, which belong only to Individuals; as *Peter*, *Gabriel*, *Bucephalus*, &c. See PROPER *Name*.

The Word is form'd of the *Latin*, *appellare*, to call, name a thing.

APPENDANT, or APPURTENANT, in Law, is underſtood of ſuch things as by time of Preſcription have be-

longed, appertained, and been joined to ſome other principal thing.

Thus an Hoſpital may be *appendant* to a Manor, a Common of Fiſhing to a Freehold, &c.

Appended *Remedies*, Appensa, ſuch as are outwardly applied, by hanging about the Neck.

Such are divers Amulets, Necklaces, Phylacteries, &c. See Amulet.

The Word comes from the *Latin ad*, and *pendo*, I hang to.

APPENDIX, or Appendage, a thing acceſſory to, or dependant of, another. See Accessory, &c.

The Term is chiefly uſed in matters of Literature, for an additional Diſcourſe, placed at the end of any Piece, or Writing; to explain or proſecute ſomething there left deficient, or draw Concluſions therefrom——In this ſenſe the Word coincides with *Supplement*. See Supplement.

Appendix, in Anatomy, is a part, in ſome meaſure, detach'd from another part to which it adheres.

There are membranous *Appendices* of various Figures, in moſt of the inner parts of the Body.

The *Cœcum* is by ſome Writers call'd *Appendix*, or *Appendicula Vermiformis*. See Coecum and Intestine.

Appendix is particularly uſed in the ſame ſenſe with *Epiphyſis*. See Epiphysis.

APPERTINANCES, or Appurtenancies. See Appurtenancies.

APPETITE, Appetitus, Appetency, in Philoſophy, a Deſire of enjoying ſomething wanted; or a Complacency in the Enjoyment of a thing preſent.

Some Philoſophers define it more generally, a Paſſion of the Soul whereby we deſire ſomething; or a Propenſity or Impulſe towards any thing apprehended as good. See Passion, &c.

The Schoolmen diſtinguiſh *Appetite* into *Voluntary* and *Natural*——The firſt is the Will itſelf, acting under a competent Knowledge or Information of the thing in hand: Such is the *Appetite* or Deſire of being happy——The ſecond is a kind of Inſtinct whereby we are mechanically driven to conſult our own Preſervation. See Instinct, Will, Natural *Inclination*, &c.

Natural *Appetite* is ſubdivided into *Concupiſcible* and *Iraſcible*. See Concupiscence and Irascible.

The Word comes from the *Latin* Verb *appetere*, to deſire, to covet; form'd of *ad*, to, and *peto*, I draw.

Appetite, in Medicine, coincides with what we more uſually call *Hunger*, or *Thirſt*. See Hunger and Thirst.

A Loſs or Proſtration of *Appetite*, is call'd *Anorexia*. See Anorexia.

An immoderate *Appetite* is call'd *Bulimia*, or *Fames Canina*. See Bulimia.

Some, however, diſtinguiſh between the βελιμια, and Canine *Appetite*; making it the diſtinguiſhing Character of the latter, that it is attended with a *Lientery*, or other Cœliacal Flux. See Canine.

A prepoſterous *Appetency* of things not proper for Food, is call'd *Pica*. See Pica.

APPIAN *Way*, in Antiquity, *Via* Appia, a celebrated Road, leading from the *Porta Capena* in *Rome*, to *Brunduſium*, at the fartheſt Eaſtern Extremity of *Italy*. See Road and Via.

It took its Name from *Appius Claudius*, by whom it was made, during his Cenſorſhip, in the Year of *Rome* 441.—It ſtill ſubſiſts in many places; being paved, not with little Stones or Pebbles, like our Streets, but with large Flag-Stones, like the Pavements of our Churches.

APPLAUSE, properly ſignifies an Approbation of ſome thing witneſs'd by clapping the hands.

The Word is form'd of the *Latin Applauſus*, or *Plauſus*, of the Verb *plaudere*, to clap.

The antient way of applauding by clapping the hands, is ſcarce retain'd any where but in the Colleges and Theatres——Such a Tragedy was acted with great *Applauſe*: Such a Student maintain'd a Theſis with *Applauſe*, &c. See Acclamation.

APPLE. See Fruit, Orchard, &c.

APPLICATE, Appicata, *Ordinate* Applicate, in Geometry, is a right Line drawn a-croſs a Curve, ſo as to biſſect the Diameter thereof. See Curve, Diameter, &c.

*Applicate* is the ſame with what we otherwiſe call *Ordinate*. See Ordinate.

APPLICATION, the Act of *applying* one thing to another, by approaching or bringing them nearer together.

Motion is defined by a ſucceſſive *Application* of any thing to different parts of Space. See Motion.

The *Application* of a Veſicatory to the Neck or other part, produces an Irritation of the Bladder.

The true and only Secret in Phyſick, is how to *apply* a Medicine, not how to make it.

Application is alſo uſed for the adjuſting, accommodating, or making a thing quadrate to another. See Accommodation.

Thus we ſay, the *Application* of a Fable, &c. See Fable.

Application, in Theology, is particularly uſed for the Act whereby our Saviour transfers, or makes over to us, what he had earned or purchaſed by his holy Life, and Death.

'Tis by this *Application* of the Merits of Chriſt, that we are to be juſtified; and entitled to Grace, and Glory. See Merit, &c.

The Sacraments are the ordinary Means, or Inſtruments whereby this *Application* is effected. See Sacrament.

Application is ſometimes alſo uſed in Geometry, for what in Arithmetick we call *Diviſion*. See Division.

Application alſo ſignifies the fitting or applying of one Quantity to another, whoſe Areas, but not Figures, are the ſame.

Thus *Euclid* ſhews how to *apply* a Parallelogram to a right Line given, that ſhall be equal to a right-lined Figure given. See Apply.

APPLY is uſed among Mathematicians three ways.

1. It ſignifies to transfer a Line given into a Circle, moſt commonly, or into any other Figure; ſo as its Ends be in the Perimeter of the Figure.

2. To *apply* denotes as much as to *divide*, eſpecially among the *Latin* Writers; who, as they ſay, *duc* AB *in* CB, draw AB into CB, when they would have AB multiplied by CB; or rather, when they would have a right-angled Parallelogram made of thoſe Lines: So they ſay, *applica* AB *ad* CB, *apply* AB to CB, when they would have CB divided by AB; which is thus expreſſed, $\frac{CB}{AB}$.

3. It alſo ſignifies to fit Quantities, whoſe Areas are equal, but Figures different. See Application.

APPOINTEE, a Foot-Soldier, in the *French* Army, &c. who for his long Service, and Bravery, receives Pay above private Sentinels. See Anspessade.

APPOINTMENT, a Penſion or Salary given by great Lords and Princes, to Perſons of Worth and Parts; in order to retain them in their Service. See Salary.

The Term is chiefly uſed among the *French*——The King of *France* gives large *Appointments* to ſeveral of the Officers in his Service.

*Appointments* differ from Wages, in that the latter are fixed and ordinary, being paid by the ordinary Treaſurers; whereas *Appointments* are annual Gratifications granted by Brevet for a time uncertain, and are paid out of the Privy Purſe.

APPORTIONMENT, Apportionamentum, in Law, a dividing of a Rent into two Parts or Portions, according as the Land whence it iſſues, is divided among two, or more. See Rent, Division, Partition, &c.

Thus if a Man, having a Rent-Service iſſuing out of Land, purchaſe a part of the Land; the Rent ſhall be *apportioned*, according to the Value of the Land——So if a Man let Lands for Years, reſerving Rent; the Rent ſhall be *apportioned*.

But a Rent Charge cannot be *apportioned*, nor Things that are entire; as if one hold Land by Service, to pay to his Lord yearly at ſuch a Feaſt a Horſe or a Roſe; there, if the Lord purchaſe a part of the Land, this Service is totally extinct; becauſe ſuch things cannot be divided without hurt to the whole.

Yet, in ſome caſes, a Rent Charge ſhall be *apportioned*: As, if a Man hath a Rent-Charge iſſuing out of Land, and his Father purchaſeth a part of the Land charged in fee, and dies; and this Parcel deſcend to his Son, who hath the Rent-Charge: there the Charge ſhall be *apportioned* according to the Value of the Land; becauſe ſuch Portion of the Land, purchaſed by the Father, comes not to the Son by his own Act, but by Deſcent, and Courſe of Law.

Common appendant is of common Right, and ſeverable: And tho the Commoner, in ſuch caſe, purchaſe a Parcel of Land wherein the Common is appendant; yet the Common ſhall be *apportioned*. But in this caſe, Common appurtenant, not appendant, becomes extinct by ſuch Purchaſe. *Coke*.

APPOSAL *of Sheriffs*, is the charging them with Money received on their account in the Exchequer, 22 & 23 *Car.* 2. *Act for better Recovery of Fines due to his Majeſty*.

APPOSER, in Law. See Foreign *Appoſer*.

APPOSITION, the Act of putting or applying one thing to another. See Application.

Apposition is uſed in Phyſicks, with reſpect to Bodies, which derive their Growth from the Adjunction or Union of neighbouring Bodies. See Adjunction.

Moſt Bodies of the foſſil or mineral Kingdom, are form'd by Juxta-poſition, or the *Appoſition* of Parts, brought to join and adhere to each other. See Accretion.

Apposition, in Grammar, is the putting two or more Subſtantives together in the ſame Caſe, and without any copular

copular Conjunction between them. See SUBSTANTIVE, CONJUNCTION, COPULATIVE, &c.

Thus, *Flanders*, bloody Theatre, horrible Scene of War, &c.

APPRAISE, to rate, value, or ſet a Price on Goods, by a Perſon who is a competent Judge, and is authorized thereto.

The Word is derived from the French *apprecier*, which ſignifies the ſame thing——Hence we alſo ſay an *Appraiſer*, a ſworn *Appraiſer*, an *Appraiſement*, &c.

APPRENDRE, in our antient Law-Books, a Fee or Profit to be taken or receiv'd. See FEE.

APPREHENSION, in Logick, the firſt Idea which the Mind forms of any thing, abſtractly of its particular Qualities. See IDEA.

*Apprehenſion* coincides with what we otherwiſe call *Perception*. See PERCEPTION.

The Word literally denotes the Action of the Hand, whereby it takes hold of, and graſps any thing; being form'd of the *Latin ad*, to, and *prehendo*, I hold. See COMPREHENSION.

APPREHENSION, in Law, ſignifies the ſeizing a Criminal, in order to bring him to Juſtice.

APPRENTICE, one who is bound by Covenant to ſerve a Tradeſman, or Artificer a certain Time; uſually ſeven Years; upon Condition of the Maſter's inſtructing him in his Art or Myſtery. See TRADE, COMMERCE, ART, &c.

Sir *Thomas Smith* ſays, that Apprentices are a kind of Bondmen, or Slaves, differing only in this that they are Servants by Covenant, and for a time. *de Rep. Anglor. Lib.* 3. See SERVANT, SLAVE, &c.

Antiently, Benchers in the Inns of Court were called *Apprentices of the Law*, in *Latin Apprenticii Juris Nobiliores*; as appears by Mr. *Selden*'s Notes on *Forteſcu*: and ſo the learned *Plowden* ſtiles himſelf.

Sir *Henry Finch* in his *Nomotechnia* writes himſelf *Apprentice de Ley*: Sir *Edward Coke* in his Inſtit. ſays, *Apprenticii Legis* in pleading are called *Homines conſiliarii, & in Lege periti*; and in another place, Apprentices and other Counſellors of Law.

APPROACHES, in Fortification, the ſeveral Works made by the Beſiegers for advancing or getting nearer to a Fortreſs, or Place beſieged. See WORK, FORTIFICATION.

Such are *Trenches*, *Mines*, *Sapps*, *Lodgments*, *Batteries*, &c. See TRENCH, MINE, SAPP, BATTERY, &c.

APPROACHES, or *Lines of* APPROACH, are particularly uſed for Trenches dug in the Ground, and their Earth thrown up on the Side towards the Place beſieged; under Shelter or Defence whereof the Beſiegers may approach, without Loſs, to the Parapet of the cover'd Way; and plant Guns, &c. wherewith to canonnade the Place. See TRENCH.

The *Lines of Approach* are to be connected by Lines of Communication. See COMMUNICATION.

The Beſieged frequently make *Counter-Approaches*, to interrupt and defeat the Enemies *Approaches*.

APPROPRIATE, APPROPRIATED, in Philoſophy, is underſtood of ſomething which is indeed common to ſeveral; yet, in ſome reſpects, is peculiarly attributed to one. See PROPER and COMMON.

Thus, Creation is common to the Father, Son, and Holy Ghoſt; and yet is *appropriated* to the Father.

APPROPRIATE, in Law, is undeſtrood of a Church or Benefice, the Patronage whereof is annex'd to ſome Church-Dignity; ſo that the Parſon receives the Tithes. See CHURCH, BENEFICE, PATRONAGE, PARSON, and TITHE.

There are computed in *England* 3845 Churches *Appropriate* and *Impropriate*. See APPROPRIATION, IMPROPRIATION, &c.

APPROPRIARE *ad Honorem*, in Law, ſignifies to bring a Manor within the Extent and Liberty of ſuch an Honour. See HONOUR, MANOR, &c.

APPROPRIARE *Commune*, in Law, ſignifies to diſcommon, *i. e.* to ſeparate, and incloſe any Parcel of Land, which before was open Common. See COMMON.

APPROPRIATION, the Act of *Appropriating*, or applying a Church-Benefice, which of its own Nature is *juris divini*, and no Perſon's Patrimony, to the proper and perpetual Uſe of ſome Religious Community. See APPROPRIATE.

*Appropriation*, is where the Advowſon of a Parſonage is given or belongs to any Biſhoprick, religious Houſe, College, &c. and to their Succeſſors; ſo that the Houſe or Body, is both Patron and Parſon, and ſome one of the Members officiates as Vicar. See PARSON, ADVOWSON, &c.

It is called *Appropriation*, becauſe the Profits of the Living are appropriated to the uſe of the Patrons; ſo that Parſons, tho' they are not ordinarily accounted *Domini Uſufructuarii*, having no right of Fee-ſimple; yet, by reaſon of the Perpetuity of their Succeſſion, are reputed Owners of the Fee-ſimple, and are therefore called *Proprietarii*. See PATRON and PATRONAGE.

To make an *Appropriation*, after Licence obtain'd of the King in Chancery, the Conſent of the Dioceſan, Patron, and Incumbent, is neceſſary, if the Church be full; if it be void, the Dioceſan and the Patron, upon the King's Licence, may conclude it.

To *diſſolve an Appropriation*, it is enough to preſent a Clerk to the Biſhop, and he to inſtitute and induct him: for that once done, the Benefice returns to its former Nature.

APPROVEMENTUM, APPROVEAMENTUM, or APPROVEMENT, is ſometimes uſed in antient Writers for *Improvement*. See IMPROVEMENT.

Thus, to APPROVE, *Approbare*, is to make the beſt benefit of a thing by increaſing the Rent, &c.

In ſome antient Statutes, Bailiffs of Lords in their Franchiſes are call'd their *Approvers*. See BAILIFF.

*Cum omnibus Approviamentis & aliis pertinentiis ſuis*, &c. Mon. Angl.

APPROVEMENT, is more particularly uſed where a Man hath common in the Lord's Waſtes, and the Lord incloſeth part of his Waſte for himſelf; leaving ſufficient Common, with Egreſs and Regreſs, for the Commoner.

APPROVER, one who confeſſing Felony in himſelf, appealeth or impeacheth another or more of his Accomplices. See APPEAL.

He is ſo call'd becauſe he muſt *prove* what he hath alledg'd in his Appeal——This Proof ſhould either be by Battel, or by the Country, at the choice of the Appellee. See PROOF, BATTEL, PAIS, &c.

APPROVERS of the King, are thoſe who have the letting of the King's Demeſnes in ſmall Manors, &c. See DEMESNE.

APPROXIMATION, in Arithmetick, a continual approach nearer ſtill and nearer to a Root or Quantity ſought, without a poſſibility of ever arriving at it exactly. See ROOT.

We have divers methods of *Approximation* delivered by *Wallis*, *Raphſon*, *Halley*, *Howard*, &c. all of 'em being no other than Series's infinitely converging, or approaching ſtill nearer to the Quantity requir'd, according to the Nature of the Series. See CONVERGING and SERIES.

'Tis evident, that if a number propos'd be not a true Square, it is in vain to hope for a juſt quadratick Root thereof, explicable by rational Numbers, integers or fracted; whence, in ſuch Caſes, we muſt content ourſelves with *Approximations*, ſomewhat near the Truth, without pretending to Accuracy: and ſo for the Cubick Root, of what is not a perfect Cube; and the like for ſuperior Powers. See SQUARE, CUBE, POWER, QUADRATURE, EXTRACTION, &c.

This the Antients were aware of, and accordingly had their Methods of *Approximation*; which, tho' ſcarce applied by them beyond the quadratick or perhaps the cubick Root, are yet equally practicable, by due Adjuſtments, to the ſuperior Powers alſo: as is ſhewn in the *Philoſoph. Tranſact.* N° 215.

If there be a Non-quadratick or Non-cubick Number; the former being expreſſed by $aa+b$, and the latter by $aaa+b$, where $aa$ and $aaa$ are the greateſt Square and Cube in the propoſed Numbers; then $\sqrt{aa+b} = a + \frac{ab}{2aa+\frac{1}{2}b}$; and $\sqrt[3]{a^3+b} = a + \frac{ab}{3aaa+b} = {}^{1}a + \sqrt{\frac{1}{4}aa+\frac{b}{3a}}$ will be eaſy and expeditious *Approximations* to the Square and Cube Root.

*To extract the Root of an Equation by Approximation.*

1°. For a quadratic Equation——ſuppoſe the Equation $x^2 - 5x - 31 = 0$ —; let the Root be $8+y$, ſo that $y$ may denote the Fraction, whereby the aſſumed Number either exceeds or comes ſhort of the Root: Then

$$\begin{array}{l} x^2 = 64 + 16y + y^2 \\ -5x = -40 - 5y \\ -31 = -31 \\ \hline -7 + 11y + y^2 = 0 \end{array}$$

Since the Powers of Fractions are continually decreaſing; and we only here want a Root nearly true; $y^2$ is caſt away. Upon which,

$$\begin{array}{l} -7 + 11y = 0 \\ \hline y = \frac{7}{11} = \frac{6}{10} \text{ nearly} = 0.6 \end{array}$$

Wherefore $x = 8 + 0.6 = 8.6$

Suppoſe $x = 8.6 + y$. Then

$$\begin{array}{l} x^2 = \frac{7396}{100} + \frac{172}{10}y + y^2 \\ -5x = -\frac{430}{10} - 5y \\ -31 = -31 \\ \hline \frac{7396}{100} - \frac{430}{10} - 31 + \frac{172}{10}y - 5 = 0 \end{array}$$

Which,

Which, being reduced to the ſame denomination, as here follows

$$73.96 - 4300 - 3100 + (1720 - 500)y = 0$$
$$-0.04 + 122.0y = 0$$
$$12.20y = 0.04$$
$$y = 004 : 12.20 = 0.0032$$

Therefore $x = 8.6000 + 0.0032 = 8.6032$

Suppoſe $x = 8 - 60{,}2 + y$; Then will

$$x^2 = 7401505024 + 17.\overline{20640000}\ y + y^2$$
$$-5x = -43.01600000 - 500000000$$
$$-31 = -31.00000000$$
$$-0.000094976 : 12.20640000\ y = 0$$
$$y = 0.000094976 : 12.20640000$$
$$= 0.00000077808.$$

Therefore $x = 8.6032000000 + 0.00000077808 = 8.6032777808$.

Suppoſe, again, the Root of a Cubic Equation $x^3 + 2x^2 - 23x - 70 = 0$ be required by *Approximation*; here let the Root be $5 + y$, ſince the Terms are omitted wherein $y^2$ and $y^3$ are found; there is no neceſſity for expreſſing 'em in the Transformation of the Equation. Wherefore, we find

$$x^3 = 125 + 75y \ldots$$
$$+ 2x^2 = 50 + 20y \ldots$$
$$- 23x = 115 - 23y$$
$$- 70 = - 70$$
$$-10 + 72y = 0$$
$$y = -\tfrac{10}{72} = 0.1$$

Therefore $x = 5 + 0.1 = 5.1$

Suppoſe $x = 5.1 + y$: Then will

$$x^3 = 132.651 + 78.030y \ldots.$$
$$+2x^2 = 52.020 + 20.400y$$
$$-23x = -117.300 - 23.000y$$
$$-70 = -70.000$$
$$-2.629 + 75.430y = 0$$
$$75.430y = 2.629$$
$$y = 3.649 : 75.430 = 0.0348$$

Wherefore $x = 5.1 + 0.048 = 5.1348$.

And after the ſame manner might one proceed to Infinity.

APPUI, in the Manage, *q. d. reſt* or *ſtay upon the Hand*; is the reciprocal Effort between the Horſe's Mouth and the Bridle-Hand; or the Senſe of the Action of the Bridle in the Hand of the Horſeman. See HEAD, BRIDLE, &c.

A *juſt Appui of the Hand*, is the nice bearing up or ſtay of the Bridle; ſo that the Horſe being awed by the Senſibility and Tenderneſs of his Mouth, dares not reſt too much upon the Bit-Mouth, nor check or beat upon the Hand to withſtand it.

A *dull, obtuſe Appui*, is when a Horſe has a good Mouth, but his Tongue ſo thick, that the Bit cannot work, or bear upon the Bars; the Tongue not being ſo ſenſible as the Bars: tho' the like Effect is ſometimes owing to the groſſneſs of his Lips———A Horſe is ſaid to have *no Appui*, when he dreads the Bit-mouth; is too apprehenſive of the Hand, and can't bear the Bit.———He is ſaid to have *too much Appui*, when he reſts or throws himſelf too much, too hardily upon the Bit.———Horſes deſigned for the Army ought to have a *full Appui* upon the Hand.

APPULSE, in Aſtronomy, the approach of any Planet to a Conjunction with the Sun, or a Star. See CONJUNCTION.

APPURTENANCES, or APPERTINENCES, in Common Law, ſignify things both corporeal, *i. e.* belonging to another thing, as their principal; *E. gr.* Hamlets, to a chief Manor, and the like: and incorporeal, as Liberties and Services of Tenants, &c. See APPENDANT.

The Word is form'd of the *Latin*, *ad*, to, and *pertinere*, to belong.

APRIL, the fourth Month of the Year, according to the common Computation, but the ſecond according to that of the Aſtronomers. See MONTH.

In this Month the Sun travels thro' the Sign *Taurus*. See SUN and TAURUS.

The Word is derived from the *Latin aperilis*, of *aperio*, I open; becauſe the Earth, in this Month, begins to open her Boſom for the Production of Vegetables. See SPRING.

APRON, in Gunnery, a piece of Lead which caps, or covers the Vent, or Touch-Hole of a great Gun. See GUN, ORDNANCE, &c.

APSIDES, ABSIDES, or APSIDÆ, in Aſtronomy, two Points in the Orbit of a Planet, the higheſt whereof is called the *Aphelion*, or *Apogee*; and the loweſt the *Perihelion*, or *Perigee*. See APHELION, APOGEE, PERIHELION, and PERIGEE.

The *Apſides* are alſo called *Auges*. See AUGES.

The Diameter which joins theſe two Points is call'd the *Line of the Apſides*, and paſſes thro' the Center of the Orbit of the Planet, and the Center of the Earth.——Such is the Line AP, (Tab. ASTRONOMY, fig. 1.) drawn from the Aphelion A to the Perihelion P. See ORBIT and PLANET.

The Eccentricity is reckoned in the Line of the *Apſides*; being the Diſtance between the Center of the Orbit of the Planet C, and the Center of the Sun or Earth S, according as the *Copernican* or the *Ptolemaic* Syſtem is followed. See ECCENTRICITY.

For the Motion of the Line of the *Apſides*, ſee APOGEE, &c.

The Word comes from the *Greek* ἁψὶς, an Arch, or Vault.

APSIDES were alſo antiently uſed for a kind of private Oratories, or Chapels in great Churches; otherwiſe called *Doxologia*, or *Doxalia*. See ORATORY.

They were thus call'd, becauſe arched or vaulted over.

The Word ſtill obtains in the Low Countries, where it denotes a kind of Choir, or Place beyond the Altar; where the Religious ſit, and ſing the Office, ſeparate from the People, and without being ſeen by 'em.

AP-THANES, an ancient Term for the higher Nobility in *Scotland*. See THANE.

APTITUDE, the natural Diſpoſition any thing hath to ſerve for ſuch or ſuch a purpoſe.

Thus, Oil hath an *Aptitude* to burn, and Water to extinguiſh Fire.

APTOTE, in Grammar, a Noun indeclinable, or which is without any Variation of Caſe. See NOUN and CASE.

The Word is derived from the *Greek* Privative α, and πτῶσις, *Caſus*.

APUS, in Aſtronomy, the *Bird of Paradiſe*; one of the Conſtellations of the Southern Hemiſphere, not viſible in our Latitude. See CONSTELLATION.

APYREXY, in Medicine, the Intermiſſion of a Fever or Ague. See FEVER and AGUE.

The Word is form'd of the privative Particle α, and πῦρ, *Ignis*, Fire or Heat, or πυρέσσω, *febricito*, to be feveriſh.

AQUA, in natural Hiſtory, Phyſicks, Chymiſtry, Medicine, &c. See WATER.

The Word is pure *Latin*, and ſuppoſed to be compounded of *a* and *qua*, q. d. from which; alluding to the Opinion that Water is the Baſis or Matter of all Bodies.

AQUA *fortis*, is a corroſive Liquor, ſerving as a Menſtruum wherewith to diſſolve Silver, and all other Metals except Gold. See MENSTRUUM, DISSOLUTION, METAL, &c.

*Aqua fortis* is made of Salt-Petre, which is the only Salt that will act on Silver. See NITRE, SALT-PETRE, and SILVER.

To prepare *Aqua fortis*, they mix either Sand or Alum, or Vitriol, or the two laſt together, with the Salt-Petre; then diſtill it by a violent Fire; and catch the Fumes; which condenſing in the Receiver, are the *Aqua fortis*.

If ſome of thoſe Matters be not added to the Nitre, it runs too readily, and thus prevents the Evaporation; but when the Fuſion is prevented, the parts of the Salt receiving more violent Impreſſions from the Fire, are converted into a volatile Spirit.

If to the Spirit of Nitre thus diſtill'd, Sea-Salt or Sal-Ammoniac be added; it commences *Aqua Regia*, and will no longer diſſolve Silver, but Gold. See *Aqua* REGIA.

Hence, to try whether or no *Aqua fortis* be pure; put a Grain of a Solution of Silver in *Aqua fortis*, into a like Quantity of the Water in queſtion: and if the Solution remains without either the Water's turning milky, or the Silver precipitating, the *Aqua fortis* is pure.

*Aqua fortis* is commonly held to have been invented about the Year 1300; tho' others will have it to been known in the Time of *Moſes*.

*Aqua fortis* is a Liquor of various and extenſive Uſe.—It is very uſeful to Refiners for parting or ſeparating Silver from Gold and Copper. See PARTING, REFINING, &c.

To the Workers in Moſaic, for ſtaining and colouring their Woods. See MOSAIC.

To Dyers in their Colours, and particularly Scarlet. See DYING, COLOUR, SCARLET, &c.

To other Artiſts, for the colouring of Bone and Ivory; which is done by ſteeping the Matters therein, after firſt tinging it with Copper, or Verdigreaſe, &c.—Some alſo turn it into *Aqua Regia*, by diſſolving in it a fourth of its weight of Sal-Ammoniac, and then ſtain therewith Ivory Haſts and Bones, of a fine purple Colour. There are, alſo, Book-Binders, who throw it on Leather, and thereby make fine marble

marble Covers for Books. See MARBLING, BOOK-BINDING, &c.

And there are Diamond-Cutters, who uſe it to ſeperate Diamonds from metalline Powders. See DIAMOND.

'Tis, farther, of ſervice in etching Copper, or Braſs-Plates. See ETCHING.

Laſtly, Mr. *Boyle* aſſures us he has cauſed Canes to be ſtained like Tortoiſe-Shell, by a mixture hereof with Oil of Vitriol, laid on them at ſeveral times, over live Coals, to cauſe it to penetrate the deeper; and, afterwards, giving them a Gloſs with a little ſoft Wax and a dry Cloth.

AQUA *Regalis*, or REGIA. See *Aqua* REGIA.

It is thus call'd, becauſe it diſſolves Gold, which is vulgarly eſteem'd the King of Metals.——It is ſometimes alſo call'd *Aqua Chryſulea* and *Stygia*.

AQUA *Vitæ*, is commonly underſtood of what we otherwiſe call *Brandy*. See BRANDY.

Some, however, diſtinguiſh between 'em; appropriating the Term Brandy to what is procured from Wine, or the Grape; and *Aqua Vitæ* to that drawn after the ſame manner from Malt, &c. See WINE, MALT, DISTILLATION, &c.

AQUA *Marina*, in natural Hiſtory, a Gem, or precious Stone, of a Sea-Green Colour: whence its Name, ſee PRECIOUS *Stone* and GEM.

It is found along the Sea-Coaſts; and is ſaid to vie with the Amethyſt in hardneſs. See AMETHYST.

Some of the Criticks contend for its being the ſixth Stone in the Rationale of the *Jewiſh* High Prieſt; call'd, in the *Hebrew*, *Tharſis*; and render'd in *Latin*, by *Berillus*, *Thalaſſius*, &c. *Jonathan* and *Onkelos* call it, in the *Chaldee*, כרום ימא, *Cherum Jamma*: Tho' the Seventy, S. *Jerom*, *Aquila*, *Pagninus*, the Tranſlators of *Geneva*, and *Schindler* render it *Chryſolithus*.——Others will have it a *Turqueiſe*. *Leo de Juda* and *Hutterus* tranſlate it *Hyacinthus*.

Several of the Lapidaries take it for the Beryl; which coincides with the firſt Opinion. See BERYL.

AQUA *omnium florum*, in Pharmacy, ſignifies the diſtill'd Water of Cows-Dung, when they are at Graſs. See WATER.

AQUÆDUCT, AQUÆDUCTUS, q. d. *Ductus Aquæ*, a Conduit of Water; is a Conſtruction of Stone, or Timber, made on an uneven Ground, to preſerve the Level of the Water, and convey it, by a Canal, from one place to another. See WATER.

There are *Aquæducts* under ground, and others rais'd above it, ſupported by Arches.

The *Romans* were very magnificent in their *Aquæducts*; they had ſome that extended an hundred Miles. *Frontinus*, who had the Direction of them, tells us of nine that emptied themſelves thro' 13514 Pipes, of an Inch Diameter. *Blaſius* has obſerv'd, that in the ſpace of twenty-four Hours, *Rome* received, from theſe *Aquæducts*, no leſs than five hundred thouſand Hogſheads of Water.——The *Aquæduct* built near *Maintenon* for carrying the River *Bure* to *Verſailles*, is the greateſt in the World. It is 7000 Fathoms long; and its Elevation 2560 Fathom; containing 242 Arcades.

AQUÆDUCT, in Anatomy, is a Paſſage or Perforation, partly membranous, and partly cartilaginous; leading out of the Bony Paſſage of the internal Ear into the Palate. See EAR and PALATE.

It makes the beginning of the *Canalis particularis*, and is divided into two Parts; the ſhorteſt of which opens into the Cavity of the Skull, &c.

It is thus call'd, not only on account of its Form, which is that of a Canal; but from its ſerving to diſcharge any foreign Matters collected in the inner Cavities of the Ear.—— It is ſometimes call'd *Aquæductus Fallopii*, from the Name of its firſt Diſcoverer.

AQUARIANS, AQUARII, a kind of Hereticks in the third Century, ſo called from the *Latin*, *Aqua*, Water; becauſe they uſed nothing but Water in the Sacrament. See EUCHARIST.

'Tis ſaid the Occaſion of the Abuſe was owing to the Perſecution which prevail'd in thoſe Times: For the Chriſtians being then obliged to celebrate the Sacrament in the Night; found it neceſſary to make uſe of Water, leſt the ſmell of the Wine ſhould betray them to the Heathens. But they afterwards went further, and actually forbid the uſe of Wine in the Euchariſt, even when it might be uſed with ſafety.

*Epiphanius* tells us, the *Aquarians* were the Followers of *Tatian*; and were ſo call'd, becauſe they abſtain'd wholly from Wine, and did not uſe it even in the Euchariſt. See ABSTEMIOUS.

AQUARIUS, in Aſtronomy, the eleventh Sign in the Zodiac, reckoning from *Aries*. See SIGN and CONSTELLATION.

The Sun moves thro' it in the Month of *January*; 'tis mark'd thus ♒. See CHARACTER.

The Poets feign, that it was *Ganymede*, whom *Jupiter* raviſh'd under the Shape of an Eagle, and carried away into Heaven, to ſerve as Cup-bearer in the room of *Hebe* and *Vulcan*; whence the Name——Others hold, that the Sign was thus call'd, becauſe, when it appears in the Horizon, the Weather uſually proves rainy.——The Stars in the Conſtellation *Aquarius*, in *Ptolemy*'s Catalogue, are 45; in *Tycho*'s 40; in the *Britannic* Catalogue 99: The Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow:

*Stars in the Conſtellation* AQUARIUS.

AQUATIC, something which lives, breeds, or grows in, or about the Water. See WATER.

We have *Aquatic* Plants, *Aquatic* Animals, &c. See PLANT, ANIMAL, &c.

Trees which grow on the Banks of Rivers, or in Marshes, &c. are also call'd *Aquatics*.

AQUEOUS, AQUOSUS, something that partakes of the Nature of Water, or abounds therein. See WATER.

Thus Milk is said to consist of an *Aqueous* or serous, and a butyrous Part. See MILK.

The Chymists separate the *Aqueous* Part or Phlegm from all Bodies by Distillation. See PHLEGM.

AQUEOUS *Humour*, is the first or outermost of the three Humours of the Eye. See HUMOUR and EYE.

It lies immediately under the Cornea, which it causes to protuberate a little; and is supposed to be furnished by certain Ducts provided for the purpose. See CORNEA.

Anatomists are divided about the Origin and Conveyance of this Humour.———'Tis certain, the Source must be pretty plentiful, inasmuch as, if by any Accident the Coats it is contain'd in be wounded, so that the Humour runs out, and the Cornea falls or collapses; the Wound readily heals, by only closing of the Eye, and the Humour recruits: of which we have numerous Instances among Physicians.

Dr. *Nuck* thinks he has discover'd the Ducts whereby the Humour is furnish'd. See AQUEOUS *Ducts*.

Others denying the reality of those Ducts, suppose it immediately derived from the Arteries. Dr. *Drake* admits the Ducts, and takes 'em to be only Branches of the excretory Ducts of the *Glandula Innominata*, and *Lachrymalis*; which piercing the Tunicks of the Eye, deliver their Liquor by ways hitherto unknown.

AQUEOUS *Ducts*, or *Ductus Aquosi Nuckii*, are certain *Ducts*, discover'd by Dr. *Nuck*, whereby the *Aqueous* Humour is supposed to be convey'd into the inside of the Membranes which inclose that Liquor.—But the Discovery is not universally allow'd. See AQUEOUS *Humour*.

AQUILA, in natural History, &c. See EAGLE.

AQUILA, in Astronomy, a Constellation of the northern Hemisphere; usually join'd with *Antinous*. See CONSTELLATION.

The Stars in the Constellation *Aquila* and *Antinous*, in *Ptolomy*'s Catalogue, are 15; in *Tycho*'s, 17; in the *Britannic* Catalogue, 70: The Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

*Stars in the Constellation* AQUILA *cum* ANTINOO.

AQUILINE, Aquilinus, ſomething belonging to an Eagle——Hence, *Aquiline* Noſe, denotes a hooked Noſe, like the Beak of an Eagle; a Hawk's Noſe.

AQUILO, the *North-Eaſt Wind*; or that which blows from the North-Eaſtern Point of the Horizon. See Wind, North and Point.

The Seamen call it, *North-North Eaſt*. See Rhumb.

The Poets give the Name to all ſtormy Winds dreaded by the Mariners.

ARA, the *Altar*, in Aſtronomy, a Southern Conſtellation; conſiſting of eight Stars. See Star and Constellation.

ARAB, Arabian, Arabic, ſomething that belongs to the People of *Arabia*. See Arabia.

The Arabian *Horſe* is ſaid to be nurſed with Camel's Milk: There are many ſtrange Reports of this Beaſt. The Duke of *Newcaſtle* aſſures us, that the ordinary Price of one is 1000, 2000, or 3000 Pounds; and that the *Arabs* are as diligent in keeping the Genealogies of their Horſes, as Princes of their Families. They ſtrike Medals on every occaſion to keep up the Pedigree. The Fortune the *Arabians* give their Sons, when arrived at Manhood, is, two Suits of Arms, with two Scimeters, and a Horſe; who always lies in the next Room to him——Yet ſuch of the Breed as havebeen brought into *England*, never proved very extraordinary. See Horse.

Arabian *Year*. See *Arabian* Year.

ARABESQUE, or Arabesck, ſomething done after the manner of the *Arabians*.

*Arabeſque*, *Groteſque*, and *Moreſque*, are Terms applied to ſuch Paintings, Ornaments of Freezes, &c. wherein there are no human, or animal Figures, but which conſiſt wholly of imaginary Foliages, Plants, Stalks, &c. See Grotesque and Moresque.

The Words take their Riſe from hence, that the *Moors*, *Arabs*, and other *Mahometans*, uſe theſe kinds of Ornaments; their Religion forbidding them to make any Images or Figures of Men, or other Animals. See Image.

ARABIC, Arabick, Arabicus, ſomething that relates to *Arabia*, or the *Arabs*——

Arabic, or Arabic *Tongue*, is a Branch or Dialect of the *Hebrew*. See Language and Hebrew.

Father *Angelo de St. Joſeph* ſpeaks much of the Beauty and Copiouſneſs of the *Arabic*. He aſſures us it has no leſs than a thouſand Names for a Sword; five hundred for a Lion; two hundred for a Serpent; and eighty for Honey. See Word, Alphabet, &c.

Arabic *Figures*, or *Characters*, are the Numeral Characters commonly made uſe of in large Computations. See Figure, Numeral, &c.

The *Arabic* Characters ſtand contradiſtinguiſhed to the *Roman*. See Character, &c.

The Learned are generally of opinion, that the *Arabic* Figures were firſt taught us by the *Saracens*, who borrow'd them from the *Arabs*, and they from the *Indians*—— *Scaliger* was ſo ſatisfied of their Novelty, that he immediately pronounced a Silver Medallion he was conſulted about, Modern; upon his being told of the Numeral Figures 234, 235, being on it. The common Opinion is, that *Planudes*, who lived towards the Cloſe of the thirteenth Century, was the firſt Chriſtian who made uſe of them. Father *Mabillon* even aſſures us, in his Work *de Re Diplomatica*, that he has not found them any where earlier than the fourteenth Century.

Yet Dr. *Wallis* inſiſts on their being of a much older Standing; and concludes they muſt have been uſed in *England* at leaſt as long ago as the time of *Hermannus Contractus*, who lived about the Year 1050; if not in ordinary Affairs, yet at leaſt in Mathematical ones, and particularly Aſtronomical Tables.

The ſame Author gives us an Inſtance of their Antiquity in *England*, from a Mantle-Tree of a Chimney, in the Parſonage Houſe of *Helmdon* in *Northamptonſhire*, wherein is the following Inſcription in *Baſſo Relievo*, M° 133, being the Date of the Year 1133. *Philoſ. Tranſact.* N° 154.

Mr. *Luffkin* furniſhes a yet earlier Inſtance of their Uſe, in the Window of a Houſe, part of which is a *Roman* Wall, near the Market-place in *Colcheſter*; where between two carved Lions ſtands an Eſcutcheon, containing the Figures 1090. *Philoſ. Tranſact.* N° 255.

M. *Huet* is even of opinion, that theſe Characters were not borrowed from the *Arabs*, but from the *Greeks*; and that they were originally no other than the *Greek* Letters, which we all know that People made uſe of to expreſs their Numbers by. See Number, Numeral, &c.

*Gum* Arabick, is the Name of a Gum which diſtils from a Species of *Acacia*, growing in *Egypt* and *Arabia*. See Gum.

It is very common among us, but little is to be met with which is genuine; it is ſuſpected to be adulterated with our common Plumb-tree Gums——That is accounted beſt, which is in ſmalleſt Pieces, and almoſt of a white Colour. It diſſolves eaſily in any aqueous Liquor, and is good in all kinds of Fluxes.

Arabick, Arabicus, was alſo a Title or Denomination of Honour, given to the Emperor *Severus*; on account of his conquering *Arabia*, and reducing it into the form of a *Roman* Province. See Title, and Quality.

On the Reverſe of ſome Medals of that Emperor, we read PARTHIC. ARABIC. ADIAB. COS. II. PP. And ſometimes PARTH. ARAB. PARTH. ADIAB. That is, *Parthicus*, *Arabicus*, *Adiabenicus*, &c. Doubtleſs becauſe he overcame the *Parthians* in *Arabia* and *Adiabena*; and took from them thoſe two Provinces.

Arabici were alſo a kind of Hereticks, who ſprung up in *Arabia*, about the Year 207; whoſe diſtinguiſhing Tenet was, That the Soul died with the Body, and alſo roſe again with it. See Resurrection.

*Euſebius*, *lib.* vi. *c.* 38. relates, that a Council was call'd to ſtop the Progreſs of the riſing Sect; that *Origen* aſſiſted at it; and convinced them ſo thoroughly of their Error, that they abjured it.

ARABISM, Arabismus, an Idiom or Manner of ſpeaking peculiar to the *Arabs*, or the *Arabick* Language. See Idiom and Arabick.

R. *Martin* maintains, that the ו ſometimes expreſſes an Oath, in the *Hebrew*, as well as the *Arabick*: *Abenezra*, a perfect Maſter of the *Arabick*, and who makes great uſe thereof to explain the *Hebrew*; does not reject the Sentiment, nor yet much approve it: he contents himſelf barely to rehearſe it, which, for ſo zealous a Partiſan of *Arabiſms*, is enough to ſhew that he had no great opinion of it——Father *Scuciet*.

ARABLE-*Land*, antiently call'd Aralia, is ſuch as is fit for Tillage. See Land and Tillage.

It is thus call'd from the *Latin arare*, of *aratrum*, a Plough. See Plough and Ploughing.

ARACHNOIDES, in Anatomy, a fine, thin, tranſparent Membrane, which lying between the *Dura* and *Pia Mater*, is ſuppoſed to inveſt the whole Subſtance of the Brain. See Meninx and Brain.

Many Anatomiſts deny the Exiſtence of ſuch third Membrane; and contend that it ought rather to be looked on as the external *Lamina* of the *Pia Mater*, which ſends its internal *Lamella* between the Folds of the cortical part of the Brain. See Pia *Mater*.

Arachnoides, or Aranea *Tunica*, is likewiſe uſed for a fine, ſlender Tunick, wherewith ſome Anatomiſts ſuppoſe the cryſtalline Humour incompaſs'd. See Cryſtalline.

This, others call *Cryſtalloides*, and *Cryſtallina*; but others, and with good reaſon, deny the reality thereof, with its vulgarly ſuppoſed uſe. See Ciliary and Tunick.

The Word is borrowed from the *Greek* ἀραχνὴ, a Spider, Spider's Web; and εἶδος, Form: in regard of the Fineneſs of theſe Parts, which are ſuppoſed to reſemble that of a Spider's Web.

ARACK, or Arrack, a ſpirituous Liquor, imported from the *Eaſt Indies*; chiefly uſed by way of Dram, and in Punch. See Drink, Punch, &c.

The Nature and Compoſition of this celebrated Liquor has been much controverted——The Name *Arack*, Mr. *Lockyer* aſſures us, is an *Indian* Word for ſtrong Waters of all kinds; for that they call our Spirits and Brandy, *Engliſh Arack*——But, what we underſtand by the Name *Arack*, is really no other than a Spirit procured by Diſtillation, from a vegetable Juice call'd *Toddy*, which flows by Inciſion out of the Cocoa-nut Tree, like the Birch Juice procured among us. See Vegetable and Tapping.

The *Toddy*, Mr. *Lockyer* adds, is a pleaſant Drink of itſelf when new, and purges thoſe not uſed to it; and when ſtale, is heady, and makes good Vinegar. The *Engliſh* at *Madraſs* uſe it as Leven to raiſe their Bread with.

*Goa* and *Batavia* are the chief Places for *Arack*—— At *Goa* there are divers kinds; *ſingle*, *double*, and *treble diſtilled*. The double diſtilled, which is that commonly ſent abroad, is but a weak Spirit in compariſon with *Batavia Arack*; yet on account of its peculiar and agreeable Flavour, is preferred to all the other *Aracks* of *India*. This is attributed to the earthen Veſſels, which alone they uſe at *Goa* to draw the Spirit; whereas at *Batavia* they uſe Copper Stills.

The *Parier Arack*, made at *Madraſs*; and the *Columbo*, and *Quilone Arack* at other places, being fiery hot Spirits, are little valued by the *Europeans*, and therefore rarely imported; tho highly prized among the Natives.

ARÆOMETER, Aræometrum, an Inſtrument wherewith to meaſure the Denſity or Gravity of Fluids. See Fluid, Gravity, and Density.

The Word is form'd of the *Greek* ἀραιὸς, *rarus*, *tenuis*, thin; and μέτρον, Meaſure.

The *Araeometer*, or Water-poiſe, is uſually made of Glaſs; conſiſting of a round hollow Ball, which terminates in a long ſlender Neck, hermetically ſeal'd a-top: there being firſt, as much running Mercury put into it, as will ſerve to ballance or keep it ſwimming in an erect Poſition.

The Stem is divided into Degrees; (as repreſented Tab. MISCELLANY, fig. 18.) and by the Depth of its Deſcent into any Liquor, its Lightneſs is concluded; for that Fluid in which it ſinks leaſt, muſt be heavieſt; and that in which it ſinks loweſt, lighteſt. See WATER-*poiſe*, &c.

M. *Homberg* has invented a new *Araeometer*, deſcribed in *Philoſ. Tranſact.* N° 262. thus: *A* (fig. 19.) is a Glaſs-bottle or Matraſs, with ſo ſlender a Neck, that a Drop of Water takes up in it about five or ſix Lines, or $\frac{5}{12}$ of an Inch. Near that Neck is a ſmall capillary Tube *D*, about ſix Inches long, and parallel to the Neck——To fill the Veſſel, the Liquor is poured in at the Mouth *B*, (which is widen'd to receive a Tunnel) till it run out at *D*; that is, till it riſe in the Neck to the Mark *C*, by which means you have always the ſame Bulk or Quantity of Liquor; and conſequently, by means of the Balance, can eaſily tell, when different Liquors fill it, which weighs moſt, or is moſt intenſely heavy.

Some regard, however, is to be had to the Seaſon of the Year, and Degree of Heat and Cold in the Weather: by reaſon ſome Liquors rareſy with Heat, and condenſe with Cold, more than others; and accordingly take up more or leſs room. See SPECIFICK *Gravity*, RAREFACTION, &c.

By means of this Inſtrument, the ingenious Author has made a Table, to ſhew the different Weights of the ſame Bulk of the moſt conſiderable chemical Liquors, both in Summer and Winter; as follows:

| *The* Araeometer *full of* | *weigh'd in Summer.* | | | *in Winter.* | | |
|---|---|---|---|---|---|---|
| | *oz.* | *dr.* | *gr.* | *oz.* | *dr.* | *gr.* |
| Quick-ſilver | 11 | 00 | 07 | 11 | 00 | 32 |
| Oil of Tartar | 01 | 03 | 08 | 01 | 03 | 31 |
| Spirit of Urine | 01 | 00 | 32 | 01 | 00 | 43 |
| Oil of Vitriol | 01 | 03 | 58 | 01 | 04 | 03 |
| Spirit of Nitre | 01 | 01 | 40 | 01 | 01 | 70 |
| —— Salt | 01 | 00 | 39 | 01 | 00 | 47 |
| Aqua Fortis | 01 | 01 | 38 | 01 | 01 | 55 |
| Diſtilled Vinegar | 00 | 07 | 55 | 00 | 07 | 60 |
| Spirit of Wine | 00 | 06 | 47 | 00 | 06 | 61 |
| River Water | 00 | 07 | 53 | 00 | 07 | 57 |
| Diſtilled Water | 00 | 07 | 50 | 00 | 07 | 54 |

The Inſtrument itſelf weighed, when empty, one Dram twenty-eight Grains.

ARÆOSTYLE, ARÆOSTYLOS, in the antient Architecture, a ſort of Intercolumination; wherein the Columns were placed at the Diſtance of eight, or, as ſome ſay, ten Modules from one another. See INTERCOLUMNIATION.

In the *Araeoſtyle* the Columns were the wideſt and openeſt they were ever planted at; whence the Name: from the *Greek* αραιος, *rarus*, and στυλος, Column.

The *Araeoſtyle* is chiefly uſed in the *Tuſcan* Order; at the Gates of great Cities and Fortreſſes.

ARÆOTICKS, or AREOTICKS, in Medicine, ſuch Remedies as tend to open the Pores of the Skin, and render them large enough for the morbifick Matter's being carried off by Sweat or inſenſible Perſpiration. See PORE, SWEAT, PERSPIRATION, &c.

To the Claſs of *Araeoticks* belong Diaphoreticks, Sudorificks, &c. See DIAPHORETICK, SUDORIFICK, &c.

ARAIGNEE, in Fortification, a Branch, Return, or Gallery of a Mine. See MINE, &c.

ARANEA *Tunica*. See ARACHNOIDES.

ARATRUM *Terræ*, in our antient Law-books, as much Land as can be tilled with one Plough——*Hoc manerium eſt* 30 *Aratrorum*. See CARRUCATA *Terræ*.

ARATURA *Terræ*, an antient Service which the Tenant was to do his Lord, by ploughing his Land. See SERVICE, &c.

ARBALET, or BALISTA, a kind of Weapon, vulgarly called a *Croſs-bow*. See HARQUEBUSS.

It conſiſts of a Steel-bow, ſet in a Shaft of Wood, furniſh'd with a String and a Tricker; and is bent with a piece of Iron fitted for that purpoſe——It ſerves to throw Bullets, large Arrows, Darts, &c.

The Antients had large Machines to throw Arrows withal, called *Arbalets* or *Baliſtæ*. See BALISTA.

The Word is derived from *Arbaliſta*, i. e. *Arcubaliſta*, a Bow with a Sling.

ARBITER, in the Civil Law, a Judge nominated by the Magiſtrate, or choſen voluntarily by two contending Parties, on whom they conſer a Power, by Compromiſe, of deciding their Difference according to Law. See JUDGE and COMPROMISE.

The *Romans* ſometimes ſubmitted to a ſingle *Arbiter*; but ordinarily they choſe ſeveral; and thoſe in an uneven Number. See ARBITRATION.

In Matters wherein the Publick was concerned, as Crimes, Marriages, Affairs of State, &c. it was not allowed to have recourſe to *Arbiters*——Nor was it permitted to appeal from an arbitral Sentence; the Effect of an Appeal being to ſuſpend the Authority of a Juriſdiction, not of a Compact. See APPEAL.

Among the Moderns there are uſually divers kinds of *Arbiters*; ſome, obliged to go by the Rigour of the Law; and others, authorized by the contending Parties to relax, or give way to natural Equity; properly call'd *Arbitrators*. See ARBITRATION.

*Juſtinian* abſolutely forbids a Woman from being elected *Arbiter*, or rather *Arbitreſs*; as judging ſuch an Office unbecoming the Sex. And yet Pope *Alexander* III. confirm'd an Arbitral Sentence given by a Queen of *France*.

ARBITRAGE, or ARBITREMENT. See ARBITRATION.

ARBITRARY, ſomething left to the Choice and Determination of Men; or not fixed, and ſettled by any poſitive Law or Injunction. See LAW, LIBERTY, &c.

The Puniſhment of ſuch a Crime is *Arbitrary*——*Arbitrary* Fines or Mulcts are uſually called *Amercements*. See AMERCEMENT.

The Laws or Meaſures whereby the Creator acts, are *Arbitrary*; at leaſt all the Phyſical Laws. See *Law of* NATURE.

ARBITRARY *Power*. See DESPOTICK, POWER, MONARCHY, GOVERNMENT.

The Word is form'd from the *Latin Arbitrium*, Will; whence alſo *Arbiter*, *Arbitrator*, &c.

ARBITRATION, or ARBITREMENT, the referring of a Cauſe or Quarrel to the Deciſion of one, or more indifferent Perſons under the Quality and Denomination of Arbiters, or *Arbitrators*. See ARBITER and ARBITRATION.

Among us, two Arbitrators are uſually choſe by the contending Parties; and in caſe theſe cannot agree, a third is added, called an *Umpire*; in whoſe Deciſion both Sides bind themſelves to acquieſce.

ARBITRATOR, an extraordinary Judge, or Commiſſioner, in one or more Cauſes between Party and Party, choſen by their mutual Conſents. See ARBITRATION.

An Arbitriment is either general, that is, including all Actions, Quarrels, and Demands; or ſpecial, which includes one or more Matters, or Facts ſpecified.

The Civilians make a difference between *Arbiter* and *Arbitrator*, tho they both ground their Power on the Compromiſe of the Parties; yet their Liberty is diverſe: for an *Arbiter* is tied to proceed and judge according to Law, with Equity intermingled; whereas an *Arbitrator* is permitted wholly to his own Diſcretion, without Solemnity of Proceſs, or Courſe of Judgment, to hear or determine the Controverſy committed to him; ſo it be *juxta Arbitrium boni Viri*. See ALTO & *Baſſo*.

ARBOR, in natural Hiſtory, Botany, &c. See TREE.

ARBOR in Chymiſtry——ARBOR *Philoſophica*, is a Name common to ſeveral Metalline Cryſtallizations; thus call'd from their Ramifications reſembling a Tree. See CRYSTALLIZATION——Such are the

ARBOR *Dianæ*, *Diana's Tree*. See DIANA's *Tree*.

ARBOR *Martis*, *Tree of Mars*. See TREE *of Mars*.

ARBOR *Porphyriana*, among the Schoolmen, is a Scale of beings; or a Figure, conſiſting of three Rows or Columns of Words; the middlemoſt whereof contains the Series of Genera and Species; and bears ſome Analogy to the Trunk: and the Extremes, containing the Differences, to the Branches of a Tree. See GENUS, SPECIES, and DIFFERENCE——Such is

SUBSTANCE
Thinking Extended
BODY
Inanimate Animate
ANIMAL
Irrational Rational
MAN
This That
PLATO.

The *Arbor Porphyriana* is otherwiſe called *Scala Prædicamentalis*. See PRÆDICAMENT, &c.

ARBOR *Genealogica*, or Tree of Conſanguinity; ſignifies a Lineage drawn out, under the Figure or Reſemblance of Root, Stock, Branches, &c. See CONSANGUINITY, GENEALOGY, STOCK, &c.

ARBOR is alſo figuratively uſed in Mechanicks, for the principal part of a Machine, which ſerves to ſuſtain the reſt——It is alſo uſed for a Spindle or Axis whereon a Machine turns.

N° III

H. Fletcher. Sculp.

*Arbor of a Crane*, a Mill, Windmill, &c. See CRANE, MILL, WINDMILL, &c.

ARBOREUS, ARBOREOUS, is applied by ſome Naturaliſts to ſuch Excreſcencies, Fungus's, Moſſes, and other Paraſites as grow on Trees. See FUNGUS, MUSHROOM, GALLS, MOSS, PARASITE, ACORUS, &c.

ARBORIST, ARBORISTA, a Perſon skill'd in Trees; their Kinds, Forms, Natures, &c. See TREE.

*Arboriſt* is an appellation of leſs extent than *Botaniſt*. See BOTANY, &c.

ARBOUR, among Gardeners, &c. a kind of ſhady Bower or Cabinet, contrived to take the Air in. See GARDEN.

*Arbours* are now gone much into diſuſe, by reaſon their Seats, apt to be moiſt, are unwholeſome——They are diſtinguiſh'd into *natural* and *artificial*.

Natural *Arbours*, are formed only of the Branches of Trees, interwoven artfully, and born up by ſtrong Latticework, Poles, Hoops, &c. which make Galleries, Halls, Porticoes, and green Viſto's naturally covered.

The Trees wherewith theſe *Arbours* are formed, are uſually the Female Elms, or *Dutch* Lime-Trees; in regard they eaſily yield, and by their great quantity of ſmall Boughs, form a thick Bruſh-wood: the lower parts are filled up with Horn-beam.

*Artificial Arbours*, and Cabinets are made of Latticework, born up by Standards, Croſs-rails, Circles and Arches of Iron. For which purpoſe they make uſe of ſmall Fillets of Oak, which being planed and made ſtrait, are wrought in Checkers, and faſtened with Wire.

ARC, or ARK. See ARCH.

The Words are formed from the *Latin*, *Arcus*, a *Bow*.

ARCANUM literally ſignifies a *Secret*; and is therefore very pertinently applied by Quacks and Impoſtors in Medicine, who conceal their Ignorance and Fraud under a pretence of Secrecy——Hence Legions of *Arcana*.

There are alſo ſtanding officinal Compoſitions, under the Denomination of *Arcana*: ſuch are

The *Arcanum Corallinum*, a Preparation of red Precipitate; made by diſtilling it with Spirit of Nitre, and repeating the Diſtillation again and again, till a red Powder be procured. This Powder boiled in Water, and the Water poured off, and tartariz'd Spirit of Wine put to the Powder; two or three Cohobations are made: which leave a Powder, much like the Prince's Powder; of good uſe in the Gout, Dropſy, Scurvy, &c. It operates chiefly by Stool.

*Arcanum Joviale*, is made of an Amalgama of Mercury and Tin, digeſted in Spirit of Nitre: the Nitre being drawn off, the remaining matter is wetted with Spirit of Wine, and the Spirit burnt away; and this for ſeveral times till the pungent Taſte is gone: what remains is uſed much with the ſame Intentions as the *Antihecticum Poterii*, and is recommended by ſome as a Sudorific. See ANTIHECTICUM.

*Arcanum duplicatum* is prepar'd of Caput Mortuum of Aqua fortis, by diſſolving it in hot Water, filtrating, and evaporating it to a Cuticle; then leaving it to ſhoot.

The *Arcanum duplicatum*, or *Panacea duplicata* is extolled as a Diuretic, and Sudorific——The Recipe was purchaſed at the expence of 500 Dollars, by that great Virtuoſo the Duke of *Holſtein*. *Schroder*, that Prince's Phyſician, writes wonders of its great uſes in Hypocondriacal Caſes, continued and intermitting Fevers, Stone, Scurvy, &c.

ARC-BOUTANT, in Building, a flat Arch or part of an Arch abutting againſt the Reins of a Vault, to ſupport, and prevent its giving Way. See VAULT.

*Arc-boutants* are only arch'd Buttreſſes. See BUTTRESSE.

The name is *French*; form'd of *arc* and *bouter*, to a-but.

ARCH, ARK, ARCUS, a part of any curve Line; *e.gr.* of a Circle, Ellipſis, or the like. See CURVE.

ARCH *of a Circle* is a part of the Circumference thereof, leſs than a half, or Semicircle——Such is AB (Tab. GEOMETRY, fig. 27) See CIRCLE and CIRCUMFERENCE.

The Baſe or Line that joins the two Extremes of the Arch is called the *Chord*; and the Perpendicular rais'd in the middle of that Line, the *Sine* of the Arch. See CHORD and SINE.

All Angles are meaſured by *Arches*——to know their Quantity, an Arch is deſcribed, having its Centre in the Point of the Angle. See ANGLE.

Every Circle is ſuppoſed to be divided into 360 Degrees; and an *Arch* is eſtimated according to the Number of thoſe Degrees it takes up——Thus an *Arch* is ſaid to be of 30, of 80, of 100 Degrees. See DEGREE. Hence

*Equal* ARCHES are ſuch Arches of the ſame or equal Circles, as contain the ſame Number of Degrees. See EQUAL——Hence

In the ſame or equal Circles, equal Chords ſubtend equal *Arches*——And hence, again, *Arches* intercepted between parallel Chords are equal.

A Radius, CE, fig. 98. which biſſects the Chord in D, does alſo biſſect the *Arch*, in E; and is perpendicular to the Chord, and on the contrary——And hence the Problem, to *biſſect an Arch* is ſolved by drawing a Line AB perpendicular to the Chord in F.

*Similar* ARCHES are thoſe which contain the ſame Number of Degrees of unequal Circles. See SIMILAR——Such are the *Arches* AB and DE, fig. 87.

Two Radii being drawn from the Centre of two concentric Circles; the two *Arches* intercepted between 'em, bear the ſame Ratio to their reſpective Peripheries; and alſo the two Sectors to the Areas of their reſpective Circles. See ANGLE.

The Diſtance of the Centre of Gravity of an *Arch* of a Circle, from the Centre of the Circle, is a third Proportional to a third part of the Periphery and the Radius. See CENTRE *of Gravity*.

For the Sines, Tangents, &c. of *Arches*. See SINE, TANGENT, &c.

ARCH in Aſtronomy——*Diurnal* ARCH of the Sun, is part of a Circle parallel to the Equator, deſcribed by the Sun in his Courſe betwixt riſing and ſetting. See DIURNAL, DAY, &c.

His *nocturnal Arch* is of the ſame kind; excepting that it is deſcribed betwixt his ſetting and riſing. See NIGHT, RISING, &c.

The Latitude and Elevation of the Pole are meaſured by an *Arch* of the Meridian: The Longitude, by an *Arch* of a parallel Circle. See ELEVATION, LATITUDE, LONGITUDE, &c.

ARCH *of Progreſſion*, or *Direction*, is an *Arch* of the Zodiac which a Planet ſeems to paſs over, when its Motion is according to the Order of the Signs. See DIRECTION.

The ARCH *of Retrogradation* is an *Arch* of the Zodiac, deſcribed while a Planet is retrograde, and moves contrary to the Order of the Signs. See RETROGRADATION.

ARCH *of Station*. See STATION and STATIONARY.

ARCH *between the Centres* is an *Arch*, as AI (Tab. ASTRONOMY, fig. 35.) paſſing from the Centre of the Moon's Shadow, A, perpendicular to her Orbit GH. See ECLIPSE.

If the Aggregate of the *Arch* between the Centres AI, and the apparent Semi-diameter of the Moon, be equal to the Semi-diameter of the Shadow; the Eclipſe will be total without any duration: if leſs, total with ſome duration; and if greater, yet leſs than the Sum of the Semi-diameters of the Moon and the Shadow, partial——

ARCH *of Viſion* is the Sun's depth below the Horizon, at which a Star, before hid in his Rays, begins to appear again. See Poetical RISING.

ARCH, in Architecture, is a Concave Building, rais'd with a Mould bent in form of the *Arch* of a Curve, and ſerving as the inward Support of any Superſtructure. See BUILDING.

An *Arch*, ſays Sir *Henry Wotton*, is nothing but a narrow or contracted Vault; and a Vault, a dilated Arch. See VAULT.

*Arches* are uſed in large Intercolumnations of ſpacious Buildings; in *Porticos*, both within and without Temples; in publick Halls, as Ceilings, the Courts of Palaces, Cloiſters, Theatres and Amphitheatres. See PORTICO, THEATRE, CEILING, &c.

They are alſo uſed as Buttreſſes and Counter-forts to ſupport large Walls laid deep in the Earth, for Foundations of Bridges and Aquæducts, for triumphal Arches, Gates, Windows, &c. See BUTTRESS, ARC-*boutant*, &c.

*Arches* are either *circular*, *elliptical*, or *ſtrait*——

*Circular* ARCHES are of three kinds, *viz.*——1ſt, *Semicircular*, which make an exact Semicircle, and have their Centre in the middle of the Chord of the Arch.

2dly, *Scheme*, which are leſs than a Semicircle, and conſequently are flatter *Arches*; containing ſome, 90 Degrees, others 70, and others only 60.

3dly, *Arches of the third and fourth Point*, as ſome of our Workmen call them; tho' the *Italians* call them *di terzo* and *quarto acuto*, becauſe they always meet in an acute Angle at top——Theſe conſiſt of two *Arches* of a Circle ending in an Angle at the Top, and are drawn from the Diviſion of a Chord into three or four Parts, at pleaſure——Of this kind are many of the *Arches* in old *Gothick* Buildings; but on account, both of their Weakneſs and Unſightlineſs, they ought, according to Sir *Henry Wotton*, to be for ever excluded out of all Buildings.

*Elliptical* ARCHES conſiſt of a Semi-Ellipſis; and were formerly much uſed inſtead of Mantle-trees in Chimneys——Theſe have commonly a Keyſtone and Chaptrels or Impoſts.

*Strait* ARCHES, are thoſe whoſe upper and under Edges are ſtrait; as in the others they are curved; and thoſe two Edges alſo parallel, and the Ends and Joints all pointing towards a Center——Theſe are principally uſed over Windows, Doors, &c.

The Doctrine and Use of *Arches* is well delivered by Sir *Henry Wotton*, in the following *Theorems*.—1ſt, All Matter, unleſs impeded, tends to the Center of the Earth in a perpendicular Line. See DESCENT, GRAVITY, CENTRE, &c.

2dly, All ſolid Materials, as Bricks, Stones, &c. in their ordinary rectangular Form, if laid in Numbers, one by the Side of another, in a level Row, and their Extreme ones ſuſtained between two Supporters; thoſe in the middle will neceſſarily ſink, even by their own Gravity, much more if preſs'd down by any ſuperincumbent Weight—To make them ſtand, therefore, either their Figure or their Poſition muſt be altered.

3dly, Stones, or other Materials being figured *Cuneatim*, *i. e.* Wedge-wiſe, broader above than below, and laid in a level Row, with their two Extremes ſupported as in the preceding Theorem; and pointing all to the ſame Center; none of them can ſink, till the Supporters or Butments give way, becauſe they want room in that Situation to deſcend perpendicularly. But this is but a weak Structure; in regard the Supporters are ſubject to too much Impulſion, eſpecially where the Line is long; for which reaſon, the Form of ſtrait *Arches* is ſeldom uſed, excepting over Doors and Windows, where the Line is ſhort——In order to fortify the Work, therefore, we muſt not only change the Figure of the Materials, but alſo their Poſition.

4thly, If the Materials be ſhaped wedge-wiſe, and be diſpoſed in form of a circular *Arch*, and pointing to ſome Center; in this Caſe, neither the pieces of the ſaid *Arch* can ſink downwards, for want of room to deſcend perpendicularly; nor can the Supporters or Butments ſuffer ſo much Violence as in the precedent flat Form: for the Convexity will always make the incumbent Weight rather reſt upon the Supporters, than heave them outwards: whence this Corollary may be fairly deduced, that the ſecureſt of all the *Arches* abovemention'd is the Semi-circular; and of all Vaults, the Hemiſpherical.

5thly, As Semi-circular Vaults, rais'd on the whole Diameter, are the ſtrongeſt; ſo thoſe are the moſt beautiful, which keeping to the ſame height, are yet diſtended, one fourteenth part longer than the ſaid Diameter: which addition of width will contribute greatly to their Beauty, without diminiſhing any thing conſiderable of their Strength.

It is, however, to be obſerv'd, that according to Geometrical Strictneſs, to have the ſtrongeſt *Arches*, they muſt not be Portions of Circles, but of another Curve, call'd the *Catenaria*, whoſe Nature is ſuch, that a number of Spheres diſpos'd in this form, will ſuſtain each other, and form an *Arch*. See CATENARIA.

Dr. *Gregory* even ſhews, that *Arches* conſtructed in other Curves, only ſtand or ſuſtain themſelves by virtue of the Catenaria contain'd in their thickneſs; ſo that were they made infinitely ſlender or thin, they muſt tumble of courſe; whereas the Catenaria, tho' infinitely ſlender, muſt ſtand, in regard no one point thereof tends downward more than any other. *Philoſoph. Tranſact.* N°. 231.

*See further of the Theory under the Article* VAULT.

*Arches* are ſuſtain'd by Impoſts. See IMPOSTS.

ARCH is particularly uſed for the Space between the two Peers of a Bridge. See PEER and BRIDGE.

The chief or *Maſter-Arch* is that in the middle; which is wideſt, and uſually higheſt, and the Water under it deepeſt: being intended for the paſſage of Boats or other Veſſels——We read of Bridges in the Eaſt, which conſiſt of 300 Arches.

ARCH-*Stone*. See KEY-*Stone*.

*Triumphal* ARCH, is a Gate, or Paſſage into a City, magnificently adorned with Architecture, Sculpture, Inſcriptions, &c. which being built of Stone or Marble, ſerves not only to adorn a Triumph, at the Return from a victorious Expedition, but alſo to preſerve the Memory of the Conqueror to poſterity. See TRIUMPH.

The moſt celebrated Triumphal *Arches*, now remaining of Antiquity, are that of *Titus*, of *Septimus Severus*, and of *Conſtantine*, at *Rome*.

ARCH, in the Scripture Senſe. See ARK.

ARCH, or ARCHI, is alſo a Term without any meaning of itſelf, but which becomes very ſignificant in compoſition with other Words: It heightens and exaggerates them; and has the Force of a Superlative, to ſhew the greateſt Degree or Eminence of any thing.

Thus we ſay *Arch*-fool, *Arch* rogue, &c. to expreſs Folly and Knavery in the utmoſt Degree——So alſo *Arch*-Treaſurer, *Arch*-Angel, *Arch*-Biſhop, *Arch*-Heretick, &c. to denote ſuch as have a Pre-eminence over others.

The Word is form'd of the *Greek* ἀρχὴ, beginning; whence ἄρχος, *princeps, ſummus*.

In *Engliſh* we uſually cut off the final *i*, from *Archi*, tho' to very ill purpoſe; the Words wherewith it is join'd, ſounding much harſher on that ſcore than they wou'd do were it preſerv'd entire, as it is in moſt other Languages. See ANOMALOUS, CONTRACTION, &c.

ARCHÆUS, an obſcure Term, uſed chiefly among the Antient Chymiſts, to expreſs I know not what principle of Life and Motion; the Cauſe of all the Effects which we obſerve in Nature. See LIFE.

Hence, as they differ in their Ideas of a vital Cauſe; the Term *Archæus* becomes applied to very different Things: Tho moſt of 'em conceive it of the Nature of Fire. See FIRE.

Some uſe *Archæus* to denote the Fire lodg'd in the Centre of the Earth; to which they aſcribe the Generation of Metals and Minerals, and which they believe to be the Principle of Life in Vegetables. See CENTRAL, &c.

Others by the Word *Archæus* mean a certain univerſal Spirit, diffuſed throughout the whole Creation, the active Cauſe of all the Phænomena in Nature. See SPIRIT, ÆTHER, MEDIUM, &c.

Others, inſtead of *Archæus*, chuſe to call it the *Anima Mundi*; and others the *Vulcan* or *Heat* of the Earth. See ANIMA *Mundi*, &c.

They add, that all Bodies have their Share of this *Archæus*; and when this is corrupted, it produces Diſeaſes, which they call *Archæal-Diſeaſes*.

They likewiſe attribute Ideas to it; which for this Reaſon they call *Archæal Ideas*. See IDEA.

The Word is derived from ἀρχὴ, Principle; this Fire being the Principle and Source of all the Effects in Nature. See PRINCIPLE.

*Helmont* is a great Aſſerter of the Dogma of an *Archæus*—"No Poiſon, ſays he, can act on a Carcaſs: if, therefore, it "have any Effect, 'tis by means of the *Archæus*. He adds, "that if any heterogeneous Body happen to be preſent "to the *Archæus*; it riſes into a fervour, endeavours to "expel the hoſtile matter; and, in order to that, exerts "all the force of the Body——To cure any Diſeaſe, there"fore, is to pacify, and compoſe this *Archæus*. This *Ar*"*chæus*, he holds, is irritated at the leaſt appearance of any "thing heterogeneous; and as its Office is to watch over the "Health, and Safety of the whole Body; it is excited at "the very Shadow of the Enemy, calls its Forces to the "Charge, raiſes Fevers, &c. All, therefore, required to "an univerſal Medicine, is ſomething that may readily pa"cify, and lay this Unnatural Fever upon all occaſions." This Doctrine of *Helmont*, *Boerhaave* obſerves, would not be ſo abſurd, did he not aſcribe Underſtanding to this *Archæus:* ſetting this aſide, the Principle which renders Poiſons deadly, and Remedies beneficial, is the Circulation of the Blood. See CIRCULATION and BLOOD.

ARCH-ANGEL, an intellectual Subſtance or Angel in the eighth Rank among the bleſſed Spirits which compoſe the Celeſtial Hierarchy. See ANGEL, and HIERARCHY.

The Word is compounded of the *Greek* ἀρχὸς, Prince and ἄγγελος Angel.

ARCHBISHOP, ARCHIEPISCOPUS, a metropolitan Prelate, having ſeveral ſuffragan Biſhops under him. See BISHOP, SUFFRAGAN, &c.

*Archbiſhops* were not known in the Eaſt, till about the Year 320; and tho' there were ſome ſoon after this who had the Title, yet that was only a perſonal Honour by which the Biſhops of conſiderable Cities were diſtinguiſhed——It was not till of late that *Archbiſhops* became Metropolitans, and had Suffragans under them. See METROPOLITAN.

*Athanaſius* appears to be the firſt that uſed the Title *Archbiſhop*, which he gave occaſionally to his Predeceſſor; *Gregory Nazianzen*, in like manner, gave it to *Athanaſius:* not that either of them were entitled to any Juriſdiction, or even Precedence, in virtue thereof.

Among the *Latins*, *Iſidore Hiſpalenſis* is the firſt that ſpeaks of *Archbiſhops*. He diſtinguiſhes four Orders or Degrees in the Eccleſiaſtical Hierarchy, *viz. Patriarchs*, *Archbiſhops*, *Metropolitans*, and *Biſhops*. See PATRIARCH, &c.

*England* is divided into two *Archbiſhopricks*, or Provinces. See ARCHBISHOPRICK.

ARCHBISHOPRICK, ARCHIEPISCOPATUS, the Dignity of Archbiſhop; or the Province under his Juriſdiction. See ARCHBISHOP.

There are two *Archbiſhopricks* in *England*, *viz.* of *Canterbury* and *York*; the Prelates whereof are call'd *Primates* and *Metropolitans*. See PRIMATE and METROPOLITAN.

The

The Archbiſhop of *Canterbury* had antiently Juriſdiction over *Ireland* as well as *England*, and was ſtyled a *Patriarch*, and ſometimes *Alterius orbis Papa*, and *Orbis Britannici Pontifex*. Matters done and recorded in his Name ran thus, *Anno Pontificatus noſtri primo*, &c. See PATRIARCH, POPE, *&c.*

He was alſo *Legatus Natus*. See LEGATE.

He even enjoyed ſome ſpecial Marks of Royalty; as, to be Patron of a Biſhoprick, which he was of *Rocheſter*; to make Knights, coin Monies, *&c.*——He is ſtill the firſt Peer of *England*, and next to the Royal Family; having precedence of all Dukes, and all Great Officers of the Crown. See NOBILITY, PEER, PRECEDENCE, *&c.*

He has, by Common Law, the Power of Probate of Wills and Teſtaments, and granting Letters of Adminiſtration, *&c.* See PROBATE, ADMINISTRATION, *&c.*

He has alſo a Power to grant Licences and Diſpenſations in all Caſes formerly ſued for in the Court of *Rome*, and not repugnant to the Law of God. See DISPENSATION, PLURALITY, NON-RESIDENCE, COMMENDAM, *&c.*

He alſo holds ſeveral Courts of Judicature; as, Court of Arches, Court of Audience, Prerogative Court, and Court of Peculiars. See ARCHES, AUDIENCE, *&c.*

The Archbiſhop of *York* has the like Rights in his Province, as the Archbiſhop of *Canterbury*; has precedence of all Dukes not of the Royal Blood; and all Officers of State except the Lord High Chancellor. He has the Rights of a Count *Palatine* over *Hexamſhire*. See CONVOCATION, *&c.*

ARCHDEACON, ARCHIDIACONUS, a Church Officer, whoſe Buſineſs is to viſit the Pariſhes within a certain Diſtrict, or part of a Dioceſe committed to him. See VISITATION, PARISH, *&c.*

The *Archdeacon*, ſometimes alſo call'd *Arch-Levite*, was originally the firſt and eldeſt of the Deacons who attended on the Biſhop; whence his Name. See DEACON.

He was not known before the Council of *Nice:* his Function is ſince become a Dignity; and even ſet above that of Prieſt: tho' antiently it was quite otherwiſe. The *Archdeacon* was the Biſhop's chief Miniſter for all external Concerns, and particularly the Adminiſtration of the Temporalties. He took care that Order and Decency were obſerv'd in Divine Service, look'd to the Ornaments and Utenſils of the Church; had the Direction of the Poor, and the Inſpection of the Manners and Behaviour of the People: for which reaſon he was call'd the *Biſhop's Hand and Eye.*

Theſe Advantages ſoon got him the upperhand over Prieſts, who had only Spiritual Functions. But he had no Juriſdiction over 'em till the VIth Century; tho' by this time he was become ſuperior to the Archimandrite, or Rural Dean himſelf. See RURAL *Dean.*

In the Xth Century *Archdeacons* were conſidered as having Juriſdiction in their own Right or attach'd to their Office; with a Power of Delegating it to others. But from that time Meaſures were taken to leſſen their Power, by increaſing their Number——He whoſe Diſtrict lay in the Capital City, took the Quality of *Great-Archdeacon.*

We have ſixty *Archdeacons* in *England:* their Office is to viſit every other Year, to enquire into Reparations and Moveables belonging to the Church, reform Abuſes in Eccleſiaſtical Matters, and bring the more weighty Affairs before the Biſhop; beſides which, they have alſo a Power to ſuſpend, excommunicate, and in many Places to prove Wills, and in ſome to inſtitute to Benefices.

It is one part of the *Archdeacon*'s Office to induct all Clerks into their Benefices within his Juriſdiction; and by the Act of Uniformity, he is now oblig'd to be in Prieſts Orders. See INDUCTION.

Many *Archdeacons* in old Foundations, have, by preſcription, their Courts and Officials as Biſhops have. See COURT, OFFICIAL, *&c.*

ARCH-CHAMBERLAIN, ARCHI-CAMERARIUS, an Officer of the Empire; much the ſame with what in *England* we call *Great Chamberlain.* See CHAMBERLAIN.

The Elector of *Brandenbourg* is *Arch Chamberlain* of the Empire, being ſo appointed by the Golden Bull; and in that Quality, he bears the Scepter before the Emperor, walking on the left hand of the Elector of *Saxony.* At ſome Solemnities he ſerves on horſeback like other Electors; carrying a Baſon with a Towel in his Hands: from which alighting he ſets it for the Emperor to waſh—He has his Vicar, or *Sub Arch-Chamberlain*, who is Prince of *Hoheuzollern*, of the Houſe of *Brandenbourg.* See ELECTOR, EMPIRE, *&c.*

ARCH-CHANCELLOR, ARCHI-CANCELLARIUS, a Great Chancellor, who antiently preſided over the Notaries, that is, the Secretaries of a Court. See CHANCELLOR.

This Office chiefly obtained in *France*, under the two firſt Races of their Kings; and afterwards under the Empire: as they had three ſeveral Territories, *Germany*, *Italy*, and *Arles*; they had three *Arch-Chancellors*; and hence the three *Arch-Chancellors* ſtill ſubſiſting in *Germany*, the Archbiſhop of *Mentz* being *Arch-Chancellor* of *Germany*, the Archbiſhop of *Cologn* of *Italy*, and the Archbiſhop of *Treves* of *Arles.*

*Bern. de Malliackroth*, in an expreſs Treatiſe *de Archicancellariis Imperii Romani*, ſhews that theſe three Archbiſhops were *Arch-Chancellors* before they were Electors—We alſo read of *Arch-Chancellors* of *Burgundy*, &c.

ARCH-CHANTER, ARCHICANTER, the Chief or Preſident of the Chanters of a Church. See CHANTER.

ARCH-DRUID, ARCHIDRUIDA, the Chief or Pontiff of the antient *Druids* in a Nation. See DRUID.

ARCH-BUTLER, ARCHIPINCERNA, the Great Butler of the Empire. See BUTTLER.

The King of *Bohemia* is *Arch-butler*: his Buſineſs is to preſent the firſt Cup at an Imperial Entertainment; but he is not obliged to officiate with his Crown on. He has for Vicar or Deputy the Hereditary Prince of *Limbourg.* See ELECTOR.

ARCH-DAPIFER, or *Chief-Sewer*, is another Officer of the Empire. See EMPIRE.

The Elector of *Bavaria* is *Archdapifer*—The Palatine of the *Rhine* pretended this Office was annexed to his Palatinate; but has ſince deſiſted. See PALATINE.

ARCHDUKE, ARCHIDUX, a Duke veſted with ſome Quality, Pre-eminence, and Authority above other Dukes. See DUKE.

The *Archduke* of *Auſtria* is a very antient Title. There have alſo been *Archdukes* of *Lorrain*, and *Brabant.*

*Auſtria* was erected into a Marquiſate by *Otho*, or *Henry* I. and into a Dutchy by *Frideric* I. in 1156: But we don't well know when, nor why the Title *Arch-dutchy* was given it——'Tis commonly held, that Duke *Frideric* IV. firſt aſſumed the Quality: Others, that it was given by the Emperor *Maximilian* I. in 1459; and ample Privileges annexed to it. The principal hereof are, That the *Archduke* ſhall diſtribute Juſtice in his own Dominions, without Appeal; that he ſhall be judg'd to have received the Inveſtiture of his States, after having demanded it three times; and cannot be deprived of his Countries, even by the Emperor and the States of the Empire: that no Affair of the Empire can be concluded without his Participation; and that he have a power of creating Counts, Barons, and Gentlemen, throughout the whole Empire: which are Privileges to which the other Dukes of the Empire are ſtrangers.

ARCHE, among Phyſicians, the beginning of a Diſeaſe. See DISEASE.

ARCHED *Legs*, is an Imperfection in a Horſe, when being in his natural Poſition, he has his Legs bent forwards; and his whole Leg makes a kind of Arch or Bow. See HORSE.

It uſually ariſes from exceſſive Labour, whereby the back Sinews are made to ſhrink up ſo that the Legs remain *arch'd*, and tremble after a little Riding. Tho the Diſorder is ſometimes natural to them.

ARCHERS, a kind of Militia or Soldiery, armed with Bows and Arrows. See ARM, MILITIA, *&c.*

They were much in uſe in former Times; but are now laid aſide, excepting in *Turky*, and ſome of the Eaſtern Countries; where there are Companies of *Archers* ſtill on foot in their Armies.

The Name *Archer*, however, is ſtill retained even where the Thing is loſt: Thus, in *France*, the Officers who attend the Prevoſts, to make Captures, Seizures, Arreſts, *&c.* are called *Archers*; tho their Arms be only Halberds or Carabines——In this ſenſe they ſay, the *Archers* of the *Grand Prevot de l'Hotel*; of the *Prevot des Marchands*; the City *Archers*; the *Archers du Guet*, or of the Watch, *&c.*

They have alſo their *Archers des Pauvres*, *Archers* of the Poor; whoſe Office is to ſeize ſuch Beggars as they find in the Streets, and carry them to the Hoſpitals.

The Word is form'd of the *Latin Arcus*, a Bow; whence *Arcuarius*, *Arquites*, and even *Arquis*, as we ſometimes read it in the corrupt State of that Tongue——*Varro* obſerves, that *Archer* originally ſignified a Brigand, or Highwayman.

ARCHERY, in our antient Cuſtoms, a Service of keeping a Bow for the Uſe of the Lord, to defend his Caſtle. See SERVICE.

ARCHES, or *Court of* ARCHES, is one of the Archbiſhop's Courts; to which Appeals lie in Eccleſiaſtical Matters from all parts of the Province of *Canterbury.* See COURT, APPEAL, and ARCHBISHOP.

This Court is thus call'd, from the *arch'd* Church and Tower of St. *Mary le Bow*, where it was wont to be held.

The

The Judge of the Court of the *Arches*, is called the *Dean of the Arches*, or the *Official* of the *Arches* Court, &c. with which Officialty, is commonly joined a peculiar Juriſdiction over thirteen Pariſhes in *London*, termed a *Deanery*, exempt from the Authority of the Biſhop of *London*, and belonging to the Archbiſhop of *Canterbury*; of which the Pariſh of *Bow* is one, and the principal.

Others ſuppoſe the Denomination and Functions of *Dean of the Arches* to have aroſe hence, that the Archbiſhop's Official or Dean being oft employ'd abroad in foreign Embaſſies, the Dean of the *Arches* was his Subſtitute in this Court.

This Judge on any Appeal made, forthwith, and without any farther Examination of the Cauſe, ſends out his Citation to the Appellee, and his Inhibition to the Judge from whom the Appeal was made.

The Advocates who are allowed to plead in the *Arches* Court, are to be Doctors of the Civil Law, in one of our Univerſities. See ADVOCATE.

ARCHETYPE, ARCHETYPUS, a Pattern or Model, by which any Work is form'd, or which is copied after, to make another like it. See MODEL.

In this ſenſe the Word coincides with *Original*; and ſtands oppoſed to *Copy*. See ORIGINAL and COPY.

Among Minters, &c. *Archetype* is peculiarly uſed for the Standard or original Weight, by which the other Weights are to be adjuſted and examined. See STANDARD.

The Philoſophers, particularly the *Platoniſts*, talk of an *Archetypal* World; meaning, the World, ſuch as it exiſted in the Divine Mind, or in the Idea of God, before the Creation. See IDEA, PLATONISM, &c.

The Word is compounded of αρχη, Beginning; and τυπος, Type. See TYPE.

ARCHIACOLYTHUS, *q. d. Chief Acolythus*; was an antient Dignity, in Cathedral Churches: the Miniſters whereof were divided into four Orders, or Degrees, *viz.* Prieſts, Deacons, Subdeacons, and *Acolythi*; each of which had their Chiefs: The Chief of the *Acolythi* was called *Archiacolythus*. See ACOLYTHUS, &c.

ARCHIATER, ARCHIATRUS, ARCHIATOR, the chief Phyſician of a Prince who retains ſeveral. See PHYSICIAN.

The Word is form'd of the *Greek* αρχη, *Principium*, Chief; and ιατρος, *Medicus*, a Phyſician.

ARCHIEUNUCH, ARCHIEUNUCHUS, the Chief of the Eunuchs. See EUNUCH.

The *Archieunuch* was one of the principal Officers in *Conſtantinople*, under the *Greek* Emperors.

ARCHIGALLUS, in Antiquity, the Chief of *Cybele*'s Prieſts, call'd *Galli*. See GALLI.

ARCHILOQUIAN, a Term in Poetry, applied to a ſort of Verſes, whereof *Archilochus* was the Inventor. See VERSE.

Theſe conſiſt of ſeven Feet; the four firſt whereof are ordinarily Dactyls, tho' ſometimes Spondees; the three laſt Trochees: for inſtance;

*Solvitur acris Hyems grata vice Veris & Favoni.* Hor.

'Tis uſual to mix Iambic Verſes of ſix Feet, abating a Syllable, with *Archiloquian* Verſes; as *Horace* himſelf has done in the Ode now cited.

Theſe Verſes are alſo call'd *Dactylic*, on account of the Dactyls at the beginning. See DACTYL and DACTYLIC.

ARCHIMANDRITE, the Superior of a Monaſtery; amounting to what we now call *Abbot*. See ABBOT, SUPERIOR, &c.

*Covarruvias* obſerves, that the Word literally denotes the Chief or Leader of a Flock; in which ſenſe it may be applied to any Eccleſiaſtical Superior: Accordingly, we find the Name ſometimes attributed to Archbiſhops. But among the *Greeks*, where it is chiefly uſed, it is reſtrained to the Chief of an Abbey.

M. *Simon* maintains the Word originally derived from the *Syriac*; at leaſt the part *Mandrite*, which by a Circuition, he makes to ſignify a Solitary or Monk.

ARCHIMIME, ARCHIMIMUS, is the ſame thing, in effect, with Arch-Buffoon.

The *Archimimes*, among the *Romans*, were Perſons who imitated the Manners, Geſtures, and Speech both of the Living and the Dead. See MIME.

At firſt they were only employ'd on the Theatre; but were afterwards admitted to their Feaſts, and at laſt to their Funerals; where they walked after the Corps, counterfeiting the Geſtures and Behaviour of the Perſon who was carrying to the Funeral Pile; as if he were ſtill alive. See FUNERAL.

ARCHIPELAGO, in Geography, a Sea interrupted by a great Number of Iſlands. Sea SEA.

The moſt celebrated, and that to which the Name is in ſome meaſure appropriated, is that between *Greece*, *Macedonia*, and *Aſia*; wherein are the Iſlands of the *Ægean* Sea: which is call'd the *White Sea*, in contradiſtinction to the *Euxine*, which they call the *Black Sea*.

The modern Geographers mention other *Archipelago's*; as, that of *Lazarus*, near the Coaſt of *Malabar* and *Malacca*; the *Archipelago* of *Mexico*; that of the *Caribbees*, wherein are above 12000 Iſlands; that of the *Philippines*, containing 11000 Iſlands; thoſe of the *Molucco's*, of *Celebes*, &c.

The Word is form'd, by Corruption, of *Ægeopelagus*, q. d. *Ægean* Sea; which, again, is form'd of Αγιοπελαγος, or Holy Sea; a Name originally given it by the *Greeks*, on account of the *Cyclades*, for which they had a very high Veneration.

ARCHIPERACITA, or ARCHIPHERACITA, an Officer in the *Jewiſh* Academies. See ACADEMY.

The *Archiperacita* was not the ſame with the *Archiſynagogus*, as *Grotius* and others have miſtakenly imagined; but rather the Chief or Principal of theſe appointed to read, explain, and profeſs the Law, in their Schools—— And hence the Name; which is form'd of the *Greek* αρχη, Chief; and the *Hebrew* or *Chaldee* פרק, *Pherak*, Diviſion, Chapter.

ARCH-LEVITE, ARCHILEVITA. See ARCHDEACON.

ARCHMARSHAL, ARCHIMARISCHALLUS, the Grand Marſhal of the Empire. See MARSHAL.

The Elector of *Saxony* is *Archmarſhal* of the Empire; and in that Quality goes immediately before the Emperor, bearing a naked Sword.

ARCH-MINISTER, ARCHIMINISTER, the Prime Miniſter of a Prince or State. See MINISTER.

*Charles the Bald* having declared *Boſon* his Viceroy in *Italy*, under the Title of Duke; made him alſo his firſt Miniſter under that of *Archiminiſter*: from the *Greek* αρχη, and the *Latin Miniſter*——*Chorier*.

ARCH-PRIEST, ARCHIPRESBYTER, a Prieſt, eſtabliſhed in ſome Dioceſes, with a Pre-eminence over the reſt. See PRIEST.

Antiently, the *Arch-Prieſt* was the firſt Perſon after the Biſhop, and even acted as his Vicar, in his abſence, as to all ſpiritual Concerns. In the ſixth Century, there were found ſeveral *Arch-Prieſts* in the ſame Dioceſe; from which time they were call'd *Deans*. See DEAN.

In the ninth Century, they diſtinguiſhed two kinds of Cures or Pariſhes; the ſmaller, govern'd by ſimple Prieſts; and the Baptiſmal Churches, by *Archipresbyters*, who, beſide the immediate Concern of the Cure, had the Inſpection of the other inferior Prieſts, and gave an account thereof to the Biſhop, who governed the Chief or Cathedral Church in Perſon. See BISHOP, PARISH, CATHEDRAL, &c.

There are *Arch-Presbyters* ſtill ſubſiſting in the *Greek* Church; veſted with moſt of the Functions and Privileges of *Chorepiſcopi*, or Rural Deans. See CHOREPISCOPUS and RURAL *Dean*.

ARCH-PRINTER, ARCHITYPOGRAPHUS. See PRINTER.

ARCH-PRIOR, was a Name ſometimes given to the Maſter of the Order of Templars. See MASTER and TEMPLAR.

ARCHISTRATEGUS, Αρχιστρατηγος, the Generaliſſimo, or Captain General of an Army.

ARCHITECT, ARCHITECTUS, a Perſon ſkill'd in Architecture, or the Art of Buildings; who makes Plans and Deſigns of Edifices, conducts the Work, and directs the Maſons and other Artificers employ'd therein. See ARCHITECTURE, PLAN, DESIGN, &c.

The Word is derived from the *Greek* αρχη, *Princeps*, and τεκτων, Workman, *q. d.* the *principal Workman*.

The moſt celebrated *Architects* are, *Vitruvius*, *Palladio*, *Scamozzi*, *Serlio*, *Vignola*, *Barbaro*, *Cataneo*, *Alberti*, *Viola*, *Bullant*, and *De Lorme*.

*Vitruvius* enumerates twelve Qualities requiſite to an *Architect*; That he be Docil and Ingenious; Literate; ſkill'd in Deſigning; in Geometry; Opticks; Arithmetick; Hiſtory; Philoſophy; Muſick; Medicine; Law, and Aſtrology. See BUILDING, &c.

ARCHITECTONICK, that which builds a thing up regularly, according to the Nature and Intentions thereof.

Thus, that plaſtick Power, Spirit, or whatever elſe it be which hatches the Ova of Females into living Creatures of the ſame Species, is by ſome called the *Architectonick* Spirit. See PLASTICK.

ARCHITECTURE, Architectura, the Art of *Building*; *i. e.* of erecting Edifices proper for Habitation, or Defence. See Building, Edifice, &c.

*Architecture* is uſually divided, with reſpect to its Objects, into three Branches, *Civil*, *Military*, and *Naval*.

*Civil* Architecture, called alſo abſolutely and by way of Eminence Architecture, is the Art of contriving and executing commodious Buildings for the Uſes of Civil Life; as *Houſes*, *Temples*, *Theatres*, *Halls*, *Bridges*, *Colleges*, *Portico's*, &c. See House, Temple, Theatre, &c.

*Architecture* is ſcarce inferior to any of the Arts in Point of Antiquity.—Nature and Neceſſity taught the firſt Inhabitants of the Earth to built themſelves Hutts, Tents, and Cottages; from which, in courſe of Time, they gradually advanced to more regular and ſtately Habitations, with Variety of Ornaments, Proportions, &c. See *Vitruvius*'s *Account of the Origin of* Architecture *under the Article* Order.

The antient Writers repreſent the *Tyrians* as the firſt among whom *Architecture* was carried to any tolerable Pitch; and hence it was that *Solomon* had Recourſe thither for Workmen to build his Temple. *Villalpandus*, indeed, contends, that only Under-workmen were ſent for from *Tyre*, Artificers in Gold, Silver, Braſs, &c. and that the Rules of *Architecture* were delivered by God himſelf to *Solomon*. Hence, he adds, the *Tyrians* rather learnt their *Architecture* from *Solomon*; which they afterwards communicated to the *Egyptians*; theſe to the *Grecians*, and theſe again to the *Romans*—In effect, the Author laſt cited, undertakes to prove, that all the Beauty and Advantages of the *Greek* and *Roman* Buildings, were borrow'd from this Fabrick. *Tom.* ii. *Part* ii. *Lib. Iſagog.* iii. *C.* ix. x.

To confirm this, *Sturmius* produces ſeveral Paſſages in *Vitruvius*, where the Rules given by that Architect, *Lib.* vi. *C.* ii. and *Lib.* v. *C.* i. quadrate exactly with what *Joſephus* relates of the *Jewiſh* Temple, *Antiq. Jud.* Lib. vi. & viii. &c. See Temple.

To what a Pitch of Magnificence the *Tyrians* and *Egyptians* carried *Architecture*, ere it came to the *Greeks*, may be learnt from *Iſaiah* xxiii. 8. and *Vitruvius*'s Account of the *Egyptian* Oecus; their Pyramids, Obeliſks, &c. See Obelisk, Pyramid, &c.

Yet, in the common Account, *Architecture* ſhould be almoſt wholly of *Grecian* Original: Three of the regular Orders or Manners of Building, are denominated from them, *viz. Corinthian*, *Ionic*, and *Doric*: And ſcarce a Part, a ſingle Member, or Moulding, but comes to us with a Greek Name. See Corinthian, Doric, Ionic; ſee alſo Moulding, &c.

Be this as it will, 'tis certain the *Romans*, from whom we derive it, borrow'd what they had entirely from the *Greeks*; nor ſeem, till then, to have had any other Notion of the Grandeur and Beauty of Buildings, beſide what ariſes from their Magnitude, Strength, &c.—Thus far they were unacquainted with any Order beſide the *Tuſcan*. See Tuscan.

Under *Auguſtus*, *Architecture* arrived at its Glory: *Tiberius* neglected it, as well as the other polite Arts. *Nero*, amongſt a Heap of horrible Vices, ſtill retain'd an uncommon Paſſion for Building, but Luxury and Diſſoluteneſs had a greater Share in it, than true Magnificence.—*Apollodorus*, excelled in *Architecture*, under the Emperor *Trajan*, by which he merited the Favour of that Prince; and it was he who raiſed the famous *Trajan* Column, ſubſiſting to this Day. See Trajan.

After this, *Architecture* began to dwindle; and tho the Care and Magnificence of *Alexander Severus* ſupported it for ſome Time, yet it fell with the weſtern Empire, and ſunk into a Corruption, from whence it was not recovered for the Space of twelve Centuries.

The Ravages of the *Viſigoths*, in the 5th Century, deſtroy'd all the moſt beautiful Monuments of Antiquity; and *Architecture* thence forwards, became ſo coarſe and artleſs, that their profeſs'd Architects underſtood nothing at all of juſt Deſigning, wherein its whole Beauty conſiſts: Hence a new Manner of Building took its Riſe, called the *Gothic*. See Gothic.

*Charlemagne* did his utmoſt to reſtore *Architecture*, and the *French* applied themſelves to it with Succeſs, under the Encouragement of *H. Capet*: His Son *Robert* ſucceeded him in this Deſign; till by Degrees the modern *Architecture* was run into as great an Exceſs of Delicacy, as the *Gothick* had before done into Maſſiveneſs. To theſe may be added, the *Arabeſk* and *Moriſk*, or *Mooriſh Architecture*; which were much of a-piece with the *Gothic*, only brought in from the South by the *Moors* and *Saracens*, as the former was from the North by the *Goths* and *Vandals*. See Arabesk, Morisco, Grotesk, &c.

The Architects of the 13th, 14th, and 15th Century, who had ſome Knowledge of Sculpture, ſeem'd to make Perfection conſiſt altogether in the Delicacy and Multitude of Ornaments, which they beſtowed on their Buildings, with a World of Care and Sollicitude; tho' frequently without any Conduct or Taſte.

In the two laſt Centuries, the Architects of *Italy* and *France* were wholly bent upon retrieving the primitive Simplicity and Beauty of antient *Architecture*, in which they did not fail of Succeſs: Inſomuch, that our Churches, Palaces, &c. are now wholly built after the Antique.—

*Civil Architecture* may be diſtinguiſh'd, with regard to the ſeveral Periods or States thereof, into *Antique*, *Antient*, *Gothic*, *Modern*, &c. See Antique, Antient, Gothic, and Modern, &c.

Another Diviſion of *Civil Architecture*, ariſes from the different Proportions which the different Kinds of Buildings render'd neceſſary, that we might have ſome proper for every Purpoſe, according to the Bulk, Strength, Delicacy, Richneſs, or Simplicity required.—

Hence aroſe five Orders or Manners of Building, all invented by the Antients at different Times, and on different Occaſions, *viz. Tuſcan*, *Doric*, *Ionic*, *Corinthian*, and *Compoſite*; the Hiſtory, Characters, &c. of each whereof ſee under their reſpective Articles, Tuscan, Doric, Ionic, Corinthian, and Composite.

What forms an Order, is the *Column* with its *Baſe* and *Capital*; ſurmounted by an Entablature, conſiſting of Architrave, Frieze, and Cornice; and ſuſtain'd by a *Pedeſtal*. See Order; ſee alſo Column, Entablature, Pedestal, &c. ſee alſo Capital, &c.

*For a general View of the Elements of Architecture, with the Rules which obtain with reſpect to the Matter, Form, Proportion, Situation, Foundation, Diſtribution, Covering, Apertures*, &c. See the Article Building.

For Particulars; ſee Foundation, Wall, Roof, Window, Door, Ceiling, &c. ſee alſo Beauty, &c.

There are ſeveral Arts ſubſervient to *Architecture*, as Carpentry, Maſonry, Paving, Joynery, Smithery, Glazery, Plumbery, Plaſtering, Gilding, &c. See Carpentry, Masonry, Paving, Joynery, Smithery, Glazery, Plumbery, Plastering, Gilding, &c.—See alſo Timber, Stone, Brick, Tyle, Mortar, Lead, Glass, &c.

We have no Greek Authors extant on *Architecture*—The firſt who wrote of it was *Agatharens* the *Athenian*, who was ſeconded by *Democritus* and *Theophraſtus*—— Among the *Latins*, the younger *Pliny* ſeems to ſpeak the beſt; and indeed ſhews himſelf very knowing therein.

Of all the Antients, *Vitruvius* is the only entire Author; tho' *Vegetius* relates that there were 700 Architects at *Rome* in his Time—He lived under *Auguſtus*, and compoſed a compleat Syſtem of *Architecture*, in ten Books, which he dedicated to that Prince. There are two Things cenſured by the Moderns in this excellent Work, *viz.* Want of Method, and Obſcurity. The Mixture of Latin, Greek, in *Vitruvius*, is ſuch, that *Leon Baptiſt Alberti*, has obſerved, he wrote Latin to the *Greeks*, and Greek to the *Latins*: He adds, that the Work contains abundance of Things ſuperfluous and foreign to the Purpoſe.—For this Reaſon M. *Perrault* has extracted all the Rules out of *Vitruvius*'s prolix Work, methodized and publiſhed them in a little Abridgment:—Several Authors have alſo endeavoured to explain the Text of *Vitruvius*, particularly *Philander*, *Barbaro*, and *Salmaſius*, in Notes added to their ſeveral Latin Editions; *Rivius* and *Perrault* in the Notes to their *German* and *French* Verſions; and *Baldus* in his *Lexicon Vitruvianum*:—The ſame M. *Perrault* has alſo compoſed an excellent Treatiſe *Of the five Orders*, which may be eſteemed a Supplement to *Vitruvius*, who left the Doctrine of the Orders defective.

The Authors upon *Architecture* ſince *Vitruvius*, are—*Leon. Baptiſt Alberti*, who in 1512, publiſhed ten Books of the Art of Building, in Latin, deſigned to outvie *Vitruvius*; in which, however, he has not ſucceeded: His Work has abundance of good Things, but is deficient in the Doctrine of the Orders—*Seb. Serlio*, who wrote ſeven Books of *Architecture*, five of which concerning the five Orders, were made publick in 1602; throughout all which, he religiouſly keeps to *Vitruvius*'s Rules: The ſeventh was ſince publiſh'd in 1575; but the ſixth, concerning private Buildings, has not yet appear'd.—*And. Palladio*, who wrote four Books of *Architecture*, containing the fundamental Rules of the Art, with various Inſtances of all the Kinds of Works; publiſh'd in Italian in 1575: The two firſt Books are render'd into High-Dutch, and enlarg'd with Annotations by *Boeckler*—*Phil. de Lorme*, who publiſh'd nine Books of *Architecture*, in *French*, in 1567—*J. Barozzio de Vignola*, who in 1631, made publick his Rules of the five Orders, in Italian; ſince tranſlated, with large Additions, by *Daveler*, under the Title of *Cours d'Architecture*, &c. and ſince alſo into High-Dutch, with Notes.—

To theſe are to be added *Vincent. Scamozzi*, his *Idea of Univerſal Architecture*, publiſh'd in 1615, in *Italian*; *Car. Phil. Dieuſſart*, in his *Theatre of Civil Architecture*, publiſh'd in High-Dutch in 1697; wherein he not only delivers the Rules of *Architecture*, but explains and compares the

five Orders as laid down by *Palladio*, *Vignola*, *Scamozzi*, &c. which ſame Deſign was alſo executed in French by *R. Freart de Cambray*, in a *Parallel of the antient Architecture with the Modern*, publiſh'd in *French* in 1650, and ſince tranſlated into *Engliſh* with Additions, by Mr. *Evelyn*. *Fr. Blondel* Director of the Royal Academy of Painting, &c. in 1698, gave a *Courſe of Architecture*, in *French*; being a Collection from all the celebrated Writers upon the Subject of the Orders, &c.—*Nich. Goldman*, in a Treatiſe *de Stylometris*, publiſh'd in Latin and High-Dutch, in the Year 1661, has done good Service, in reducing the Rules and Orders of *Architecture* to a further Degree of Perfection, and ſhewing how they may be eaſily delineated by means of certain Inſtruments invented by him.

Laſtly, the *Elements of Architecture* are laid down by Sir *H. Wotton*—The ſame are reduced by *Sturmius*, and *Wolfius*, to certain Rules and Demonſtrations; and thus is *Architecture* brought into the Form of a Mathematical Art; by the firſt, in his *Matheſis Juvenil.* and the ſecond, in his *Elementa Matheſeos*, Tom. II. *An.* 1715.

*Military* ARCHITECTURE, is the Art of ſtrengthening and fortifying Places, to ſcreen them from the Inſults of Enemies, and the Violence of Arms. See FORTIFIED *Place*.

This we more uſually call *Fortification*. See FORTIFICATION.

The Buſineſs of *Military Architecture*, is to erect *Forts*, *Caſtles*, and other *Fortreſſes*, with *Ramparts*, *Baſtions*, &c. See FORTRESS, RAMPART, BASTION, &c.

*Naval* ARCHITECTURE, or *Ship-Building*; is that which teaches the Conſtruction of *Ships*, *Galleys*, and other floating Veſſels for the Water; with Ports, Moles, Docks, &c. on the Shore. See VESSEL, SHIP, GALLEY, BOAT, &c. ſee alſo MOLE, DOCK, &c.

ARCHITECTURE *in Perſpective*, is a ſort of Building, wherein the Members are of different Meaſures and Modules, and diminiſh in proportion to their Diſtance; to make the Work appear longer and larger to the View than really it is. See PERSPECTIVE.

Such is the celebrated Pontifical Stair-caſe of the *Vatican*, built under Pope *Alexander* VII. by the Cavalier *Bernino*.

*Counterfeit* ARCHITECTURE, is that which has its Projectures painted, either in Black or White, or coloured after the Manner of Marble; as is ſeen practiſed in the Facades and Palaces in *Italy*, and in the Pavilions of *Marly*.

This Painting is made in Freſco, upon plaiſter'd Walls; and in Oil, on Walls of Stone. See PAINTING and FRESCO.

Under the Name of *Counterfeit Architecture*, which we otherwiſe call *Scene-Work*, is likewiſe comprehended, that painted on ſlight Boards or Planks of Wood, whereon the Columns, Pilaſters, and other Parts of Building, ſeem to ſtand out, with a *Relievo*; the whole being coloured in imitation of various Marbles, Metal, &c. and ſerving in the Decorations of Theaters, triumphal Arches, Publick Entries, Funeral Pomps, &c.

ARCHITRAVE, in Building, that part of a Column, or Order of Column, which lies immediately upon the Capital. See ORDER and CAPITAL.

The *Architrave* is the loweſt Member of the Frieze, and even of the whole Entablature. See FRIEZE and ENTABLATURE.

The *Architrave* is ſuppoſed to repreſent the principal Beam in Timber Buildings; whence the Name, which is form'd of the Greek ἀρχὴ, chief; and the Latin *Trabs*, Beam. See BEAM, &c.

The *Architrave* is different in the different Orders—— In the *Tuſcan* it only conſiſts of a plain Face, crown'd with a Fillet; and is half a Module in Height. See FACE, TUSCAN, &c.

In the *Dorick* and *Compoſite*, it has two Faces, or Faſciæ; and three in the *Ionick* and *Compoſite*; in which laſt Order it is $\frac{10}{12}$ of a Module high, tho' but half a Module in the reſt. See FASCIA, DORIC, CORINTHIAN, &c.

Architects, however, take a deal of Latitude in this Part; ſome uſing more Members than others; and many of them having two or three Forms of *Architraves*. What we give is after *Vignola*.

*Architrave* is ſometimes alſo called the *Reaſon-piece*, or *Maſter-beam* in Timber-Buildings, as Porticos, Cloiſters, &c. In Chimneys it is called the *Mantle-piece*; and over the Jambs of Doors, or Lintels of Windows, *Hyperthyron*. See MANTLE, &c.

The *Greek*, call it the *Epiſtyle*. See EPISTYLE.

ARCHITRAVE-*Doors*, are thoſe which have an *Architrave* on the Jambs and over the Door; upon the Cappiece, if ſtrait, or on the Arch, if the Top be curved. See DOOR, JAMB, &c.

ARCHITRAVE-*Windows*, of Timber, are commonly an *Ogee* rais'd out of the ſolid Timber, with a Liſt over it; tho' ſometimes the Mouldings are ſtruck and laid on; and ſometimes are cut in Brick. See WINDOW.

The upper Faſcia is called the *Header*, or *heading Architrave*; and the lower the *Jac*.

ARCHITYPE. See ARCHETYPE.

ARCHIVAULT, in Architecture, the inner Contour of an Arch; or a Band or Frame adorned with Mouldings, running over the Faces of the Arch-Stones, and bearing upon the Impoſts. See ARCH, VAULT, IMPOST, &c.

It is different in the different Orders—In the *Tuſcan*, it has only a ſingle Face; two Faces crown'd, in the *Dorick* and *Ionick*; and the ſame Mouldings with the Architrave in the *Corinthian* and *Compoſite*.

The Word is *French*, *Archivolte*, where it ſignifies the ſame thing.

ARCHIVE, or ARCHIVES, a Chamber wherein the Records, Charters, and other Papers and Evidences of a Houſe, or Community, are preſerved. See RECORD, PAPER, &c.

Thus we ſay the *Archives* of a College, of a Monaſtery, &c.

The *Archives* of antient *Rome*, were in the Temple of *Saturn*; and the *Archives* of *Chancery* are in the *Rolls-Office*. See CHANCERY, ROLLS, &c.

The Code calls *Archivum publicum*, *vel Armarium publicum ubi acta & Libri exponebantur*. *Code de fid. Inſtrum. Auth.* & xxx. q. 1.

The Word comes from the Latin *Arca*, (*quod arceat Viſum*) a Cheſt or Coffer; or the Greek ἀρχεῖον, which *Suidas* uſes in the ſame Senſe. In ſome Latin Writers we read *Archarium*.

ARCHNOIDES, ARACHNOIDES, or ARANEA *Tunica*. See ARACHNOIDES.

ARCHON, in Antiquity, a chief Magiſtrate of *Athens*.

After the *Athenians* had aboliſhed Monarchy, they created *Archons*, who were obliged to render an Account of their Adminiſtration.

Some of theſe were annual, and others perpetual; *Medon*, the Son of *Codrus*, was the firſt of thoſe; and *Creon* of theſe.

The Occaſion of their Inſtitution was this: *Codrus*, King of *Athens*, having devoted himſelf, for the good of his People, in the War with the *Heraclidæ*; his Sons, *Medon* and *Nileus*, diſputed the Crown betwixt them: The *Athenians* took this Occaſion of diſſolving their Monarchy, and in lieu of Kings, created perpetual Governors, under the Name of *Archons*.—*Medon*, Son of *Codrus*, was he who firſt had this Charge, and his Deſcendants enjoy'd it for a long Succeſſion of Years. But a perpetual Magiſtracy, ſeem'd to this free People, too lively an Image of Royalty, the very Shadow whereof they were reſolved to aboliſh.—Accordingly, the Adminiſtration of an *Archon*, which had before been perpetual, they now reduced to ten Years; and ſome time after, to one; with a View of recovering, as oft as poſſible, the Authority into their own Hands, which they never tranſferr'd to the Magiſtrates, but with Regret.

There were thirteen perpetual *Archons*, and ſeven decennial; the firſt whereof was eſtabliſhed in the 24th Olympiad.

Under the *Roman* Emperors, ſeveral *Greek* Cities had two *Archons*, for chief Magiſtrates, which were the ſame with the *Duumviri* in the Colonies and *Municipia*. See DUUMVIR.

The Name *Archon* is alſo applied by ſome Authors to divers Officers both civil and religious, under the Eaſtern or *Greek* Empire.—Thus Biſhops are ſometimes call'd *Archontes*; and the ſame may be ſaid of the Lords of the Emperor's Court.

We alſo read of the *Archon of the Antimenſes*, *Archon of Archons*, *Grand Archon*, *Archon of Churches*, *Archon of the Goſpel*, *Archon of the Walls*, &c.

The Word comes from the Greek ἄρχων, which ſignifies a Commander, or one that governs.

ARCHONTICKS, ARCHONTICI, in Church-Hiſtory, a Sect of Hereticks, who aroſe towards the Cloſe of the ſecond Century. See HERETICK.

They were thus called from the Greek Word ἀρχοντες, *Principalities*, or *Hierarchies of Angels*; by reaſon they held the World to have been created by the Angels. See ANGEL, HIERARCHY.

The *Archontici* were a Branch of *Valentinians*. See VALENTINIAN.

ARCH-TREASURER, *Archithеſaurarius*, the Great Treaſurer of the *German* Empire. See TREASURER.

This Office was erected with the 8th Electorate, in favour of the Elector Palatine, who had loſt his former Electorate, which was given to the Duke of *Bavaria*, by the Emperor *Ferdinand* II. who took it away from *Frederic* V. Elector *Palatine*, after the Battle of *Prague*, where he was defeated in maintaining his Election to the Crown of *Bohemia*. See ELECTOR.

The Dignity of *Arch-Treaſurer* is conteſted between the Elector of *Brunſwic*, now King of *Great-Britain*, who claims it in Virtue of his Succeſſion to the Elector *Frederic*; and the preſent Elector *Palatine*. See PALATINE.

ARCTIC,

ARCTIC, Arctick, in Aſtronomy, an Epithet given to the North-Pole, or the Pole rais'd above our Horizon. See North, and Pole.

'Tis call'd the *Arctic* Pole, on occaſion of the Conſtellation of the little Bear, in Greek call'd ἄρκτος; the laſt Star in the Tale whereof, nearly points out the North Pole. See Ursa *Minor*.

Arctick *Circle*, is a leſſer Circle of the Sphere, parallel to the Equator, and 23° 30′ diſtant from the North-Pole; from whence its Name. See Circle and Sphere.

This, and its Oppoſite, the *Antarctick*, are call'd the two *polar Circles*; and may be conceived to be deſcribed by the Motion of the Poles of the Ecliptick, round the Poles of the Equator, or of the World. See Pole and Polar.

A-RE, or A-LA-MIRE, one of the eight Notes in the Scale of Muſick. See Note and Scale.

ARCTOPHYLAX, in Aſtronomy, a Conſtellation, otherwiſe call'd *Bootes*. See Bootes.

ARCTURUS, in Aſtronomy, a Star, of the Conſtellation *Arctophylax*, or *Bootes*. See Bootes.

The Word is form'd of ἄρκτος, Bear, and οὐρά, Tail, *q. d. Bear's Tail*; as being very near it.—

It riſes on the firſt Day of *September*, and ſets on the 13th Day of *May*; and has been ſuppoſed rarely to appear without bringing ſome Storm. See Star.

ARCTOS, Arctus, in Aſtronomy, a Name given by the *Greeks* to two Conſtellations of the northern Hemiſphere; by the *Latins* called *Urſa* major and minor; and by us the greater and little *Bear*. See Ursa *major* and *minor*.

Arcuation, is uſed by ſome Writers in Surgery, for the large Cap of the Bones; as in the Caſe of Rickets, &c. See Bone, Rickets, &c.

Arcuation, in Gardening, is the raiſing of Trees by Layers. See Tree, Nursery, &c.

This, *Switzer* obſerves, is now the general Method of raiſing ſuch Trees as can't be raiſed from Seed, or that bear no Seed; as Elm, Abele, Lime, Alder, Sallows, &c. See Seed, Planting, &c.

The firſt Thing here done, is to procure large ſtrong Mother-Plants, which the Author calls *Stools*. Theſe being planted in a Trench, will throw out twenty, thirty, forty, or fifty Plants a-piece; which may be begun to lay about *Michaelmas* following; at which Time, if the Stools have been carefully managed, they will have ſhot five, ſix, or more main Branches out of the Root, and on every one of theſe, as many ſide or collateral Branches.

Theſe main Branches are to be bent down to the Ground, and when thus laid quite round the Stool, and pegged faſt down, the ſmall ones may be ſerv'd in the ſame manner. Thus the main Branches are to be cover'd over, all except the Top; and the ſmall, or Side-Branches, to be cover'd over two or three Inches thick upon the Joints. This done, they may be treaded to make them take Root the better.

About the Middle of *September* they may be opened; when it is probable they will have taken Root: Otherwiſe, they may lie till next Spring; then taking them up, plant them in the Nurſery. See Nursery.

ARDENT, Ardens, ſomething hot, and, as it were, burning. See Heat and Burning.

The Word is form'd of the Latin *Ardere*, to burn.

Ardent *Fever*, is a violent burning Fever. See Fever.

AREA, properly denotes any plain Surface whereon we walk. See Surface.

The Word is *Latin*, and originally ſignifies a *Thraſhing-Floor*; form'd of the Verb *Areo*. See Thrashing.

Area, in Matters of Building, ſignifies the Extent of the Floor. See Floor.

Area, in Geometry, denotes the Compaſs or ſuperficial Content of any Figure. See Figure and Content; ſee alſo Superficies.

Thus if a Figure, *e. gr.* a Field, be in Form of a Square, and its Side be 40 Foot long, its *Area* is ſaid to be 1600 ſquare Feet, or contains 1600 little Squares, each a Foot every Way. See Square and Measure.

Hence, to find the *Area* of a *Triangle*, *Square*, *Parallelogram*, *Rectangle*, *Trapezium*, *Rhombus*, *Polygon*, *Circle*, or other Figure, is to find the Magnitude or Capacity thereof in ſquare Meaſures—To do which, *ſee under the Articles* Triangle, Square, Parallelogram, Rectangle, Trapezium, Rhombus, Polygon, Circle, &c.

To find the *Area* of Fields, and other Incloſures; they firſt ſurvey or take the Angles thereof, then plot them on Paper, and thus caſt up their Contents in Acres, Roods, &c. after the uſual manner of other plain Figures. See Surveying, Plotting, &c.

The Law by which the Planets move round the Sun, is this, that a Line or Radius drawn from the Centre of the Sun to the Centre of the Planet, always ſweeps or deſcribes Elliptic *Areas* proportional to the Times. Thus, the Sun being ſuppoſed in S, and a Planet in A, (*Tab. Aſtronomy*, *Fig.* 65.) and letting it proceed in any given Time, to B. In ſuch Progreſs, its Radius A S, will have deſcribed the *Area* A S B. Suppoſe again, the Planet to be arrived to P; then the Elliptic Space P S D being drawn equal to the other A S B, the Planet will move thro' the Arch P D in the ſame Time as thro' the Arch A B. See Planet and Ellipsis.

Sir *I. Newton* demonſtrates, that whatever Bodies do obſerve ſuch Law in their Motions about any other Body, do gravitate towards ſuch Body. See Gravitation, and Newtonian *Philoſophy*.

Area, is alſo uſed in Medicine, for a Diſeaſe which makes the Hair fall. See Hair.

The *Area* is a general kind of Depilation, and is diſtinguiſhed into two Kinds, *Alopecia* and *Ophiaſis*. See Alopecia, &c.

ARENATION, among Phyſicians, a kind of dry Bath, when the Patient ſits with his Feet upon hot Sand. See Bath, Balneum.

AREOLA, or Areola Mamillaris, in Anatomy, the Circle which ſurrounds the Nipple. See Breast.

ARETOLOGY, Aretologia, that part of moral Philoſopher which treats of Virtue; its Nature, and the Means of arriving at it. See Virtue.

ARDENT *Spirits*, are thoſe diſtill'd from fermented Vegetables; thus call'd becauſe they will take Fire and burn. See Spirit, Distillation, and Fermentation.

Such are Brandy, Spirits of Wine, &c. See Brandy, &c.

ARDERS, are Fallowings or Plowings of Grounds.

ARDOR *Ventriculi*, a Heat in the Stomach, uſually expreſſed by the Word Heart-burn, or Cardialgy. See Cardialgy, &c.

ARENA, among the *Romans*, ſometimes ſignified the ſame with *Circus*, or *Amphitheatre*, viz. a Place where the Gladiators had their Combats. See Circus, Amphitheatre, &c.

But, properly ſpeaking, *Arena* was only the Pit or Space in the Middle of thoſe Places.—The *Arena* was the ſame thing with regard to the Gladiators, that the *Campus*, or Field, was to Soldiers and Armies, *viz.* the Place where they fought.—And he who fought in the *Arena* was called *Arenarius*. See Gladiator.

The Word is originally *Latin*, and ſignifies *Sand*, in regard the Place was always ſtrew'd with Sand, to conceal from the View of the People, the Blood ſpilt in the Combat.

AREOPAGUS, in Antiquity, a celebrated Tribunal of the *Athenians*.

Some imagine the *Areopagus* the proper Name of a Court of Juſtice, ſituate on a Hill, in *Athens*; and that in this Court the Senate of that illuſtrious City aſſembled.—Others ſay that *Areopagus* was the Name of the whole Suburbs of *Athens*, wherein ſtood the Hill on which the Court was built: And the Name *Areopagus* ſeems to countenance this laſt Opinion; for it ſignifies literally, the *Hill* or *Rock* of *Mars*, from πάγος, Hill, and Ἄρης, belonging to *Mars*. In effect, the Denomination might either ariſe hence, that the *Areopagus* was built in a Place where had been a Temple of *Mars*; or becauſe the firſt Cauſe pleaded there, was that of this God, who was accuſed of killing *Neptune*; or elſe becauſe *Mars* was there condemn'd for Adultery.

This Tribunal was in great Reputation among the *Greeks*; and the *Romans* themſelves had ſo high an Opinion of it, that they truſted many of their difficult Cauſes to its Deciſion.

Authors are not agreed about the Number of the Judges who compos'd this auguſt Court.—Some reckon thirty-one, others fifty-one, and others five hundred: In effect their Number ſeems not to have been fix'd, but was more or leſs every Year.—By an Inſcription quoted by *Volateranus*, it appears they were then 300.

At firſt this Tribunal only conſiſted of nine Perſons, who had all diſcharged the Office of Archons.—Their Salary was equal, and paid out of the Treaſury of the Republick: They had three *Oboli* for each Cauſe.

The *Areopagites* were Judges for Life.—They never ſat in Judgment but in the Night-time, to the Intent that their Minds might be more preſent and attentive, and that no Object, either of Pity or Averſion, might make any Impreſſion upon them.—All Pleadings before them, were to be in the ſimpleſt and moſt naked Terms; without Exordium, Epilogue, Paſſions, &c. See Exordium, Epilogue, &c.

At firſt they only took Cognizance of criminal Cauſes, but in courſe of Time their Juriſdiction became of greater Extent. — Mr. *Spon*, who examined the Antiquities of that illuſtrious City, found ſome Remains of the *Areopagus* ſtill exiſting, in the middle of the Temple of *Theſeus*, which was heretofore in the middle of the City, but is now without the Walls.—The Foundation of the *Areopagus* is a Semicircle, with an Eſplanade of 140 Paces around it, which properly made the Hall of the *Areopagus*. There is a Tribunal cut in the middle of a Rock, with Seats on each Side of it, where the *Areopagites* ſat, expos'd to the open Air.

This Court is ſaid by ſome to have been inſtituted by *Solon*; but others carry it much higher, and aſſert it to have been

been eſtabliſh'd by *Cecrops*, about the Time that *Aaron* died, *viz.* in the Year of the World 2553, maintaining withal, that *Solon* only made ſome new Regulations in it.—In effect, *Demoſthenes* himſelf, in his Oration againſt *Cteſipho*, owns himſelf at a Loſs on the Point: *The Inſtitutors of this Tribunal*, ſays he, *whatever they were, whether Gods or Heroes.*

AREOMETER, AREOSTYLE, AREOTIKS, } ſee { ARÆOMETER, ARÆOSTYLE, ARÆOTICKS.

ARGAL, or ARGEL, hard Lees ſticking to the Sides of Wine-Veſſels; otherwiſe called *Tartar*. See TARTAR.

ARGENTUM *Album*, mentioned in Domeſday, ſignifies *Bullion*, or Silver uncoined. See BULLION.

In thoſe antient Days, ſuch paſſed as Money from one to another in Payment—*Sumitur pro ipſo hoc Metallo penſili non Signato.* Spelm. See SILVER and MONEY.

ARGENTUM *Dei*, *God's Penny*; antiently ſignified *earneſt Money*, or Money given to bind a Bargain; in ſome Places called *Erles*, or *rles*. See EARNEST.

*Et cepit de prædicto Henrico tres denarios de* Argento *Dei præ manibus.* See CONVENTION.

ARGEA, ARGÆA, or ARGEI, in Antiquity, human Figures made of Ruſhes, thrown annually by the Veſtals into the River *Tyber*, on the Day of the Ides of *May*. See VESTAL.

This Ceremony we learn from *Feſtus* and *Varro*; the latter of whom, however, ſays they were caſt by the Prieſts: Unleſs, by *Sacerdotibus*, we ſuppoſe he meant Prieſteſſes. He adds that the Number of Figures was thirty—

*Plutarch*, in his *Roman* Queſtions, enquires, Why they were called *Argea*? There are two Reaſons aſſigned: The firſt, that the barbarous Nation who firſt inhabited theſe Parts, caſt all the *Greeks* they could meet withal, into the *Tyber*; for *Argians* was a common Name for all *Grecians*: But that *Hercules* perſuaded them to quit ſo inhuman a Practice, and to purge themſelves of the Crime, by inſtituting this Solemnity—The ſecond, that *Evander*, an *Arcadian*, and a ſworn Enemy of the *Argians*, to perpetuate that Enmity to his Poſterity, order'd the Figures of *Argians* to be thus caſt into the River.—

ARGENT, in Heraldry, ſignifies the Colour White, uſed in the Coats of Gentlemen, Knights, and Baronets. See COLOUR and WHITE.

Barons and all Nobles have the white Colour call'd *Pearl*; and ſovereign Princes have theirs called *Luna*.

Without either this or *Or*, the Heralds ſay there can be no good Armory. See OR.

*Argent* is expreſſed in Engraving, by the Parts being left plain, without any Strokes from the Graver. The Word is French, derived from the Latin *Argentum*, Silver; this Colour being ſuppoſed the Repreſentation of that Metal: Whence the *Spaniards* call this Field *Campo de Plata*, a Silver Field.

In the doubling of Mantles, where the White is ſuppoſed to repreſent a Fur, and not a Metal, it may be blazon'd *White*.

ARGILLA, or ARGIL, a white Earth, like Chalk, but more brittle; of ſome Uſe in Phyſick. See EARTH, CHALK, *&c.*

The Word is ſometimes alſo uſed for Potters Earth, or Clay. See POTTERY, CLAY, *&c.*

ARGO, in Antiquity, a Ship or Veſſel celebrated among the Poets; being that wherein the *Argonauts* made their Expedition. See ARGONAUT.

The Criticks are divided about the Origin of the Name: Some will have it thus called from the Perſon who built it, *Argus*; others, from the Greek Word *Argos*, ſwift, as being a light Sailer; others, from the City *Argos*, where they ſuppoſe it built: Others, from the *Argives*, who went on board it, according to the Diſtich quoted from an antient Latin Poet by *Cicero*, in his firſt Tuſculan;

*Argo, quia Argivi in ea Delecti Viri*
*Vecti, petebant pellem inauratam Arietis.*

*Ovid* calls *Argo* a ſacred Ship, *ſacrani conſcendis in Argum*; by reaſon, ſay ſome, that *Minerva* contrived the Plan, and even aſſiſted in the building thereof: Or rather, on account of a piece of Timber in its Prow, which ſpoke, and render'd Oracles—Several Authors make mention of the Piece of Timber, which is ſaid to have been hewn in the ſacred Foreſt of *Dodona*. See ORACLE and DODONEAN.

*Jaſon* having happily accompliſhed his Enterprize, conſecrated the Ship *Argo* to *Neptune*, in the *Iſthmus* of *Corinth*; where it did not remain long before it was tranſlated into Heaven, and made a Conſtellation. See CONSTELLATION.

The Generality of Authors repreſent the Ship *Argo* as of a long Make, reſembling the modern Gallies—The Scholiaſt of *Apollonius* obſerves, that it was the firſt long Veſſel ever made: And *Pliny* relates the ſame, after *Philoſtephanus*, who had affirmed, that *Jaſon* was the firſt that truſted out to Sea in a long Veſſel: *Longa Navè Jaſonem primum Navigaſſe, Philoſtephanus Auctor eſt. Hiſt. Nat.* l. c. 56. By a long Ship, it is to be obſerv'd, the *Greeks* underſtood a Ship of War, in oppoſition to Ships of Burthen, which were built round.—See SHIP.

ARGO, or *Navis*, in Aſtronomy, is a Conſtellation of fixed Stars, in the Southern Hemiſphere. See STAR and CONSTELLATION.

The Stars in the Conſtellation *Argo*, in *Ptolomy*'s Catalogue, are 8; in *Tycho*'s 11; in the *Britannic* Catalogue 25; the Longitudes, Latitudes, Magnitudes, *&c.* whereof, are as follow:

## *Stars in the Conſtellation* Argo *or* Navis.

| *Names and Situations of the Stars.* | Longit. | Latitude | Mag. |
|---|---|---|---|
| Præced. under the Shield in the Stern | ♋ 29 10 21 | 47 26 26 | 3 |
| Between the Sail and Lactea | 24 57 46 | 30 30 11 | 3 4 |
| | ♌ 0 38 10 | 46 46 34 | 6 |
| Subſeq. under the Shield of the Stern | ♋ 27 26 26 | 35 18 03 | 6 |
| 5. | ♌ 1 34 22 | 49 14 58 | 4 5 |
| South. in the Middle of the Stern | ♋ 27 32 40 | 35 09 13 | 6 |
| | ♌ 1 45 40 | 46 05 27 | 5 6 |

| 25. | ♌ 14 02 39 | 30 18 40 | 6 |

ARGONAUTS, in Antiquity, a Company of fifty-two or fifty-four Heroes, who embark'd along with *Jaſon*, in the Ship *Argo*, for *Colchos*; with a Deſign to obtain the golden Fleece. See ARGO and FLEECE.

*Hercules*, *Theſeus*, *Caſtor*, *Orpheus*, &c. were of the Number of the *Argonauts*.

ARGONAUTS *of St. Nicholas*, was the Name of a military Order inſtituted by *Charles* III. King of *Naples*, towards the End of the 14th Century. See ORDER and KNIGHT.

They wore a Collar of Shells, encloſed in a Silver Creſcent, whence hung a Ship with this Deviſe, *Non credo Tempori*, I don't truſt Time. Hence theſe *Argonaut*-Knights came to be called *Knights of the Shell*. They received the Order of St. *Baſil* Archbiſhop of *Naples*, and held their Aſſemblies in the Church of St. *Nicholas*, their Patron.—

ARGUMENT, ARGUMENTUM, in Philoſophy, as defined by *Cicero*, is ſome probable Matter alledg'd to gain Belief. See PROBABILITY, BELIEF, &c.

Others, ſomewhat more ſcientifically, define *Argument*, a Medium, from whoſe Connection with two Extremes, the Connection of the two Extremes themſelves is inferr'd. See MEDIUM and EXTREME.

*Arguments* are divided, with regard to their Source, into thoſe fetch'd from Reaſon, and thoſe from Authority. See REASON and AUTHORITY.

The Logicians alſo divide their *Arguments*, with regard to their Form, into *Syllogiſms*, *Enthymemes*, *Inductions*, &c. See SYLLOGISM, ENTHYMEME, &c.

An *Argument* in Form, is a Syllogiſm made according to the ſtrict Rules of Logick.—According to *Ariſtotle*, the Enthymeme is the *Argument* of Rhetoric, as the Syllogiſm is that of Logick.—Rhetoric is defined the Art of finding *Arguments* adapted to perſuade, or gain Belief. See RHETORIC, INVENTION, PERSUASION, &c.

The Rhetoricians divide *Arguments* with reſpect to the Places they are drawn from, into *intrinſic* or *artificial*; and *extrinſic* or *inartificial*, or remote. See PLACE, AMPLIFICATION, &c.

The *firſt*, are the proper Invention of him who ſpeaks; of which there are ſeveral Kinds, *viz. Definition*, *Diſtribution*, *Genus*, and *Species*, *Form*, *Similitude*, *Diſſimilitude*, *Compariſon*, *Repugnancy*, *Adjuncts*, *Antecedents*, *Conſequents*, *Cauſes*, and *Effects*. See each in its Place, DEFINITION, DISTRIBUTION, GENUS, &c.

To theſe ſome add two other Places of *Argument*, viz. the *Manners*, and the *Paſſions*. See MANNERS and PASSIONS.

The *ſecond*, are borrowed from abroad, and only applied by the Orator to the Point in hand; ſuch are *Laws*, *common Report*, *Books*, *Oaths*, *Torture*, and *Witneſſes*. See LAW, OATH, TORTURE, &c.

A late Author divides the Places or general Heads of *Arguments*, with regard to their End, into thoſe intended to perſuade or diſſuade, which are chiefly drawn from the Conſiderations of *Profit*, *Honour*, and *Equity*: See PERSUASION.—Thoſe intended to praiſe, or diſpraiſe; ſee PANEGYRIC.—And thoſe intended to accuſe or defend; ſee ACCUSATION, DEFENCE, CONFUTATION, CONFIRMATION, VINDICATION, &c.

ARGUMENT is alſo a kind of Syllabus, or Abridgement of the Subject of a Book, Hiſtory, Comedy, or the like.—We have almoſt loſt the original Uſe of Prologues, which was to give the *Argument* of the Play. See PROLOGUE.

ARGUMENT, in Aſtronomy, is an Arch whereby we ſeek another unknown Arch proportional to the firſt. See ARCH.

ARGUMENT *of Inclination*, is an Arch of the Orbit, intercepted between the aſcending Node, and the Place of the Planet from the Sun, number'd according to the Succeſſion of the Signs. See INCLINATION.

ARGUMENT *of the Moon's Latitude*, is her Diſtance from the Node. See NODE.

The ſame Term is ſometimes alſo uſed for the Diſtance of the Moon's true Place, from the Sun's true Place. See PLACE.

By this we find the Quantity of the real Obſcuration in Eclipſes, or how many Digits are darken'd. See ECLIPSE.

ARGUMENT *of the Moon's Menſtrual Longitude*, is an Arch of her Eccentric, L. P. (*Tab. Aſtronomy*, Fig. 32.) intercepted between her true Place once equated L; and a right Line P Q. drawn thro' the Centre of the Eccentric B, parallel to the Menſtrual Line of the Apſides.

The *annual Argument* of Longitude, is the Angle DAH.

ARGUMENTATION, the Act of inventing or framing *Arguments*; of making Inductions, and drawing Concluſions. See ARGUMENT, INDUCTION, CONCLUSION, &c. See alſo DISCOURSE, RATIOCINATION, &c.

*Argumentation*, according to *Cicero*, is the delivering, or unfolding of an *Argument*.—The Matter of *Argumentations*, is Propoſitions; the Form, their due Diſpoſition with regard to one another. See PROPOSITION, SYLLOGISM, ENTHYMEME, and SORITES.

ARGYRASPIDES, in Antiquity, Perſons arm'd with Silver Bucklers, or Bucklers ſilvered. See BUCKLER.

The *Argyraſpides*, according to *Quintus Curtius*, Lib. iv. *c.* 13. made the ſecond Corps of *Alexander*'s Army; the firſt were the Phalanx. See PHALANX.

According to *Juſtin*'s Account, *Lib.* xii. *c.* 7. *Alexander* having penetrated into *India*, and extended his Empire as far as the Ocean; for a Monument of his Glory, order'd the Armour of his Soldiers, and the Houſings of his Horſes, to be adorn'd with Silver: and hence commanded them to be called *Argyraſpides*; from the Greek ἀργυρος, Silver, and ἀσπις, Buckler.

By this Author it ſhould ſeem that *Alexander*'s whole Army was called *Argyraſpides*—After that Princes Death, the *Argyraſpides* deſpiſed all other Chief of the Army, diſdaining to obey any other after having born Arms under *Alexander*.

ARGYROPÆA, in Alchymy, the Art of making Silver. See ALCHYMY and SILVER.

The Scope or Deſign of *Argyropæa* and *Chryſopæia*, is to make Gold and Silver. See CHRYSOPÆA, TRANSMUTATION, PHILOSOPHERS-*Stone*, &c.

The Word is formed of ἀργυρος, Silver, and ποιεω, I make. See POESY.

ARIANS, or ARRIANS, a Sect of Hereticks, the Retainers to *Arius*, and *Arianiſm*. See ARIANISM.

The *Arians* divided into a great Number of Parties and Factions, under different Denominations, who mutually condemn'd each other.—Such were the *Semi-Arians*, *Anomians*, *Exacontians*, *Euſebians*, *Photinians*, *Eudoxians*, *Aodcians*, *Eunomians*, *Macedonians*, *Ælians*, *Pſatyrians*, &c. See SEMI-ARIAN, ANOMIAN, EUSEBIAN, PHOTINIAN, EUDOXIAN, &c.

ARIANISM, or ARRIANISM, an antient Hereſy in the Church, broach'd by *Arius*, in the beginning of the fourth Century. See ARIAN.

He denied that the Son was God conſubſtantial and coequal with the Father. He own'd that the Son was the Word, but denied that Word to have been eternal; aſſerting that it had only been created before all other Beings—See TRINITY, SON, FATHER, &c.

This Hereſy was condemn'd in the firſt Council of *Nice* in 321; but notwithſtanding that, was not extinguiſhed: On the contrary, it became the reigning Religion, eſpecially in the Eaſt, where it obtain'd much more than in the Weſt. —At the Time of St. *Gregory Nazianzen*, the *Arians* were Maſters of the Capital City of the Empire, and frequently upbraided the Orthodox with the Smallneſs of their Numbers. Accordingly that Father begins his 25th Oration againſt the *Arians*, thus: *Where are thoſe who reproach us with our Poverty, and define the Church by the Multitude of People; deſpiſing the little Flock*, &c.

*Arianiſm* was carried into *Africa* under the *Vandals*; and into *Aſia* under the *Goths*: *Italy*, the *Gauls*, and *Spain*, were alſo deeply infected with it. But having reigned 30 Years with great Splendor, it ſunk almoſt all at once.

*Eraſmus* ſeem'd to have aim'd, in ſome meaſure, to reſtore *Arianiſm*, at the beginning of the 16th Century; in his Commentaries on the New Teſtament: Accordingly, he was reproached by his Adverſaries, with *Arian* Interpretations and Gloſſes, *Arian* Tenets, &c. To which he made little Anſwer, ſave that there was no Hereſy more throughly extinct than that of the *Arians*: *Nulla Hæreſis magis extincta quam Arianorum.*

But the Face of Things was ſoon changed: *Servetus*, a *Spaniard* by Nation, publiſh'd in 1531, a little Treatiſe againſt the Myſtery of the Trinity; which once more ſet the Hereſy of the *Arians* on foot in the Weſt.—Indeed he rather ſhew'd himſelf a *Photinian*, than an *Arian*; only that he made uſe of the ſame Paſſages of Scripture, and the ſame Arguments againſt the Divinity of our Saviour, with the proper *Arians*. See SERVETIST.

'Tis true, *Servetus* had not, properly ſpeaking, any Diſciples; but he give occaſion, after his Death, to the forming of a new Syſtem of *Arianiſm* in *Geneva*, much ſubtiler and more artful than his, and which did not a little perplex *Calvin*.—From *Geneva* the new *Arians* removed to *Poland*, where they gain'd conſiderable Ground; but at length degenerated, in great meaſure, into *Socinians*. See SOCINIAN.

The learned *Grotius* himſelf, ſeems to have bordered a little on *Arianiſm*, in his Notes on the New Teſtament; where he mounts the Father too high above the Son; as if the Father alone were ſupreme God, and the Son inferior to him even in reſpect of his Divinity. And yet 'tis rather the Doctrine of the *Semi-Arians*, than of the *Arians*, that he ſeems to give into.—In *England*, the Progreſs of *Arianiſm*, or rather *Euſebianiſm*, is too recent, to need a Detail.

ARIETATION. See EARTHQUAKE.

ARIETUM *Levatio*, an antient kind of ſportive Exerciſe; by Tilting, or running at the Quintain. See QUINTAIN.

ARIES, in Aſtronomy, the *Ram*; a Conſtellation, or Sign of the Zodiac. See SIGN, CONSTELLATION, and ZODIAC.

The Stars in the Conſtellation *Aries*, in *Ptolomy*'s Catalogue, are 18; in *Tycho*'s, 21; in the *Britannic* Catalogue 65; the Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow:

## *Stars in the Conſtellation* Aries.

| | Longit. | Latit. | Mag. |
|---|---|---|---|
| *Names and Situations of the Stars.* | ♈ 26 58 25 | 11 04 58 | 7 6 |

ARIES alſo denotes a *battering Ram*; being a military Engine much in uſe among the antient *Romans*, to batter and beat down the Walls of Places beſieged. See MACHINE.

Of this there were two kinds; the one rude and plain, the other artificial and compound.—The former ſeems to have been no more than a great Beam, which the Soldiers bore in their Arms, and with one End of it, by main Force, aſſail'd the Walls.

The compound Ram is deſcrib'd by *Joſephus* thus: 'The 'Ram is a vaſt long Beam, like the Maſt of a Ship, ſtrength-'ned at one End with a Head of Iron, ſomething reſem-'bling that of a Ram, whence it took its Name. This is 'hung by the middle, with Ropes, to another Beam, which 'lies a-croſs a couple of Poſts; and hanging thus equally 'ballanced, is, by a great Number of Men, violently thruſt 'forward, and recoil'd backwards; and ſo ſhakes the Wall 'with its Iron Head. Nor is there any Tower or Wall ſo 'thick or ſtrong, as to reſiſt the repeated Aſſaults of this 'forcible Machine.

M. *Felibien* deſcribes a third ſort of battering Ram, which run on Wheels; and was the moſt perfect and effectual of them all.

*Vitruvius* affirms, that the Ram was firſt invented by the *Carthaginians*, while they laid Siege to *Cadiz*: Theirs was the ſimple kind above-mentioned: *Pephaſmenos* a *Tyrian*, contrived to ſuſpend it with Ropes; and *Polydus*, the *Theſſalian*, to mount it on Wheels, at the Siege of *Byzantium*, under *Philip* of *Macedon*.

The Engine oppoſed to the Ram, was called *Lupus*, the Wolf.—*Plutarch* tells us, that *Mark Anthony*, in the *Parthian* War, uſed a Ram of 80 Foot long; and *Vitruvius* aſſures us they were ſometimes made 106, and ſometimes 120 Foot long, to which, perhaps, the Force of the Engine was in great Meaſure owing.

The Ram was managed at once by a whole Century of Soldiers; ſo that it play'd continually, and without Intermiſſion, being uſually cover'd with a *Vinea*, to protect it from the Attempts of the Enemy. See VINEA.

ARISTA, in Botany, a long needle-like Beard, that grows out from the Huſk of Corn, or Graſs; called alſo the *Awn*. See CORN, &c.

ARISTARCHUS, in its original Greek, ſignifies, *good Prince*; but in its ordinary Uſe among the Learned, is underſtood of a very ſevere Critick; there having been a Grammarian of that Name, who criticiz'd on the Verſes of the very beſt Poets. See CRITIC and CRITICISM.

Hence we derive the Titles of ſeveral Books; *Ariſtarchus Sacer*, *Heinſius*'s Notes on the New Teſtament; *Ariſtarchus Anti Bentleianus*, &c.

ARISTOCRACY, ARISTOCRATIA, a Form of political Government, where the ſupreme Power is lodg'd in the Hands of the *Optimates*, i. e. a Council or Senate compoſed of the principal Perſons of a State, either in reſpect of Nobility, Capacity, or Probity. See GOVERNMENT and OPTIMATES.

The antient Writers of Politicks prefer this Form of Government to all others.—

The Republick of *Venice* is an *Ariſtocracy*. See REPUBLIC.

*Ariſtocracy* coincides with *Olygarchy*; which however, is more ordinarily uſed to ſignify a Corruption of an ariſtocratical State, where the Adminiſtration is in the Hands of too few. See OLYGARCHY.

The Word is derived from ἄριστος, *optimus*, and κρατέω, *impero*, I command, govern.

ARISTOLOCHIA, popularly call'd *Birthwort*; a medicinal Plant, uſed as an Ingredient in Treacle, &c. See THERIACA.

*Cicero* derives its Name from its Inventor *Ariſtolochus*; others, from its Virtues.—Theſe laſt ſuppoſe it form'd from ἄριστος, *optimus*, and λοχεία, bringing forth young; in regard it is found of excellent Uſe in bringing down the Lochia, or Menſes of Women newly deliver'd. See LOCHIA, &c.

There are four Kinds of *Ariſtolochia*, viz. the *round*, *long*, *rampant* or creeping, and the *ſlender*; but only the two former are uſed among us.—The *round* is of a ſub-acrid aromatic Taſte, found very common in *Languedoc*, *Spain*, and *Italy*: Its Root is of particular Uſe in facilitating Delivery, provoking the Menſes, and bringing down the After-Birth; and is externally applied in vulnerary Tinctures, and in Waters for Gangrenes.

The *long Ariſtolochia* likewiſe grows in *Languedoc*; its Root is uſed in Opiates, and in Tinctures for the Aſthma, and to excite the Menſes; its Decoction, in Lotions, to facilitate the Delivery of the After-birth, &c.

Beſides theſe, there are ſeveral other Kinds of *Ariſtolochia* in *America*; one particularly in *Virginia*, whoſe Roots are uſed againſt the Bites of venemous Beaſts, in malignant Fevers, and the Small-Pox.—Its alexipharmachick Virtue has occaſion'd it to be called *Viperinum Virginiæ*.

ARISTOTELIAN, ſomething that relates to *Ariſtotle*.—Thus we ſay the *Ariſtotelian* Philoſophy, an *Ariſtotelian* Dogma, &c.

The Philoſopher from whom the Denomination ariſes, was the Son of *Nicomachus*, born in the Year of the World 3670,

at

at *Stagyra*, a Town of *Macedonia*; whence he is alſo called the *Stagyrite*.

At 17 Years of Age he entred himſelf a Diſciple of *Plato*, and attended in the Academy 20 Years. See ACADEMY.

Being then ſent on an Embaſſy from the *Athenians* to King *Philip*, he found, at his Return, that *Xenocrates*, during his Abſence, had put himſelf at the Head of the Academic Sect; upon which he choſe the *Lyceum* for the future Scene of his Diſputations. See LYCEUM.

It being his Practice to philoſophize Walking, he got the Appellation *Peripateticus*; whence his Followers were alſo called *Peripateticks*.—Tho' others will have him to have been thus named from his attending on *Alexander* at his Recovery from an Illneſs, and diſcourſing with him as he walked about. See PERIPATETIC.

He was a Perſon of admirable Genius, and of great and various Learning: *Averroes* makes no Scruple to call him 'the Genius of Nature, the Limit of human Underſtanding; and declares him 'ſent by Providence to teach us all that 'may be known'—He is accuſed of a too immoderate Deſire of Fame, which led him to deſtroy the Writings of all the Philoſophers before him, that he might ſtand ſingly and without Competitors. And hence, in the Schools, *Ariſtotle* is called *The Philoſopher*.

*Laertius*, in his Life of *Ariſtotle*, enumerates his Books, to the Number of 4000; of which ſcarce above 20 have ſurvived to our Age: They may be reduced to five Heads; the firſt, relating to Poetry and Rhetoric; the ſecond, to Logicks; the third, to Ethicks and Politicks; the fourth, to Phyſicks; and the fifth, to Metaphyſicks. In all which, as there are many Things excellent and invaluable, particularly what relates to Poetry, Rhetoric, and the Paſſions; ſo there are others, in the other Parts, which the Improvements of later Ages have taught us to explode and deſpiſe. —See ARISTOTELIAN *Philoſophy*.

ARISTOTELIAN *Philoſophy*, the Philoſophy taught by *Ariſtotle*, and maintained by his Followers. See PHILOSOPHY.

The *Ariſtotelian* is otherwiſe called the *Peripatetick Philoſophy*; the Riſe and Fate whereof, ſee under the Article PERIPATETIC *Philoſophy*.

ARISTOTELIANS, a Sect of Philoſophers, otherwiſe called *Peripateticks*. See ARISTOTELIAN and PERIPATETICK.

The *Ariſtotelians* and their Dogma's prevail to this Day, in the Schools; malgre all the Efforts of the *Carteſians*, *Newtonians*, and other *Corpuſcularians*. See SCHOOL, NEWTONIAN, CARTESIAN, CORPUSCULAR, &c.

The Principles of *Ariſtotle*'s Philoſophy, the Learned agree, are chiefly laid down in his four Books *de Cælo*; his 8 *Books of Phyſicks*, belonging rather to Logicks, or Metaphyſicks, than to Phyſicks.—To give an Idea, then, of *Ariſtotelianiſm*, the reigning Syſtem of many Ages; and ſhew *Ariſtotle*'s Method of Philoſophizing; we cannot do better than produce a Specimen of the Work.

Thoſe four Books he entitles, *de Cælo*, becauſe the Heavens are the chief of the ſimple Bodies he treats of. He begins with proving that the World is perfect, which he does thus—All Bodies, ſays he, have three Dimenſions; they can't have more, for the Number three, according to *Pythagoras*, comprehends all: Now the World is the Aſſemblage of all Bodies, therefore the World is perfect.

In the ſecond Chapter, he lays down certain Peripatetic Axioms; as—that all natural Bodies have of themſelves a Power of moving; that all local Motion is either Rectilinear, Circular, or compoſed of the two; that all ſimple Motions are reducible to three, the Motion of the Centre, the Motion towards the Centre, and the Motion about the Centre: That all Bodies are either ſimple or compounded; ſimple are thoſe which have ſome Power within themſelves, whereby they move, as Fire, Earth, &c. Compound are ſuch as receive their Motion from thoſe others whereof they are compounded.

From theſe Principles he draws ſeveral Conſequences:

A circular Motion, ſays he, is a ſimple Motion: But the Heavens move in a Circle; therefore the Motion of the Heavens is ſimple: But a ſimple Motion can only belong to a ſimple Body; *i. e.* to a Body which moves by its own Force. Therefore the Heaven is a ſimple Body, diſtinct from the four Elements, which move in right Lines. This Propoſition he likewiſe proves by another Argument, thus—There are two kinds of Motions, the one natural, the other violent; the circular Motion of the Heavens, therefore, is either the one or the other: If it be natural, the Heaven is a ſimple Body diſtinct from the four Elements, ſince the Elements don't move circularly in their natural Motion: If the circular Motion be contrary to the Nature of Heaven, either that Heaven muſt be ſome of the Elements, as Fire, or ſomething elſe: But Heaven cannot be any of the Elements; *e. gr.* it cannot be Fire; for, if it were, the Motion of Fire being from below upwards, the Heaven would have two contrary Motions, the one circular, the other from below, upwards, which is impoſſible. Again; If the Heaven be any other thing which does not move circularly of its own Nature, it will have ſome other natural Motion, which likewiſe is impoſſible; for if it move naturally from below upwards, it will be either Fire or Air; if from above downwards, it will be Water or Earth; *ergo*, &c.—A third Argument is this— The firſt and moſt perfect of all ſimple Motions, muſt be that of a ſimple Body, eſpecially that of the firſt and moſt perfect of all ſimple Bodies: But the circular Motion is the firſt and moſt perfect of all ſimple Motions, becauſe every circular Line is perfect, and no right Line is ſo: For if it be finite, ſomething may be added to it; if infinite, it is not perfect, becauſe it wants an End, τέλος, and Things are only perfect when they are ended, τέλειος. Therefore, the circular Motion is the firſt and moſt perfect of all Motions; and therefore a Body which moves circularly is ſimple, and the firſt and moſt divine of ſimple Bodies. His fourth Argument is—That all Motion is either natural or not; and every Motion which is not natural to ſome Bodies, is natural to others: Now the circular Motion is not natural to the four Elements; there muſt, therefore, be ſome ſimple Body to which it is natural: Therefore the Heaven, which moves circularly, is a ſimple Body, diſtinct from the four Elements.—Laſtly, the circular Motion is either natural or violent to any Body; if it be natural, it is evident this Body is one of the moſt ſimple and perfect; if it be not, 'tis ſtrange this Motion ſhould laſt for ever.—From all theſe Arguments, therefore, it follows, that there is ſome Body diſtinct from the circumambient ones, and which is of a Nature as much more perfect than they, as it is more remote. Such is the Subſtance of his ſecond Chapter.

In the third Chapter, he aſſerts that the Heavens are incorruptible, and immutable; and the Reaſons he gives for it, are—That they are the Abode of the Gods, that no Perſon has ever obſerv'd any Alterations in them, &c.—

In the fourth Chapter, he attempts to prove, that the circular Motion has no Contrary: In the 5th, that Bodies are not infinite: In the 6th, that the Elements are not infinite: In the 8th, he ſhews that there are not ſeveral Worlds of the ſame Kind, by this very good Argument; that as Earth is heavy by Nature, if there were any other Earth beſide ours, it would fall upon our Heads, our Earth being the Centre, to which all heavy Bodies tend. In the 9th, he proves it impoſſible that there ſhould be ſeveral Worlds, becauſe if there were any Body above the Heavens, it muſt be either ſimple or compound, in a natural or a violent State; none of which is poſſible, for Reaſons which he draws from the three Kinds of Motion above mentioned. In the 10th, he maintains that the World is eternal, becauſe it is impoſſible it ſhould have had any Beginning, and becauſe it endures for ever. He employs the 11th in explaining the Notion of Incorruptibility; and in the 12th endeavours to ſhew that the World is incorruptible, becauſe it could not have any Beginning, and becauſe it endures for ever: All Things, ſays he, ſubſiſt either during a finite, or an infinite Space: But what is only infinite one Way, is neither finite nor infinite; therefore nothing can ſubſiſt in this Manner.

The Reader, we are of Opinion, will find this Taſte of Peripateticiſm ſufficient; otherwiſe, it had been eaſy to have given him his Fill. If he requires more, let him have Recourſe to the Articles PRINCIPLE, ELEMENT, FORM, QUALITY, ACCIDENT, SYMPATHY, FUGA VACUI, ANTIPERISTASIS, &c.

It were needleſs to point out the particular Defects in the Specimen here laid down; 'tis eaſy to obſerve that the Principles are moſt of them falſe and impertinent, and the Reaſonings abſurd and inconcluſive; but that the greateſt part has no diſtinct Meaning at all.

Such is the Philoſophy, and ſuch the Method of philoſophizing, of the *Genius of Nature*, the *Prince of Philoſophers*, *Ariſtotle*.

ARITHMANCY, ARITHMANTIA, or ARITHMOMANCY, a kind of Divination, or Method of foretelling future Events, by means of Numbers. See DIVINATION and NUMBER.

The Word is compounded of ἀριθμος, Number, and μαντεια, Divination.

The Gematria, which makes the firſt Species of the Jewiſh Cabbala, is a ſort of *Arithmancy*. See GEMATRIA and CABBALA.

ARITHMETIC, ARITHMETICA, the Art of Numbering; or, that Part of Mathematicks which conſiders the Powers and Properties of Numbers, and teaches how to compute or calculate truely, and with Expedition and Eaſe. See NUMBER, MATHEMATICKS, COMPUTATION, &c.

Some Authors chuſe to define *Arithmetic*, the Science of diſcrete Quantity. See DISCRETE and QUANTITY.

*Arithmetic* conſiſts chiefly in the four great Rules or Operations of *Addition*, *Subſtraction*, *Multiplication*, and *Diviſion*. See each in its Place, ADDITION, SUBSTRACTION, MULTIPLICATION, and DIVISION.

'Tis true, for the facilitating and expediting of Computations, both Mercantile and Aſtronomical, divers other uſeful Rules have been contrived; as, the Rule of Proportion, of Alligation,

Alligation, of False Position, Extraction of Square and Cube Roots, Progression, &c.—— But these are only Applications of the first four Rules. See RULE; see also PROPORTION, ALLIGATION, POSITION, EXTRACTION, &c.

We have very little Intelligence about the Origin and Invention of *Arithmetic*; History neither fixes the Author, nor the Time.—In all Probability, however, it must have taken its Rise from the Introduction of Commerce; and consequently, be of *Tyrian* Invention. See COMMERCE.

From *Asia* it passed into *Ægypt*, (*Josephus* says by means of *Abraham.*) Here it was greatly cultivated and improved; insomuch, that a great part of their Philosophy and Theology, seem to have turned altogether upon Numbers. Hence those Wonders related by them about *Unity*, *Trinity*; the Numbers *Seven*, *Ten*, *Four*, &c. See UNITY, TRINITY, TETRACTYS, &c.

In effect, *Kircher*, in his *Oedip. Ægypt.* Tom. II. p. 2. shews, that the *Egyptians* explained every thing by Numbers; *Pythagoras* himself affirming, that the Nature of Numbers goes through the whole Universe; and that the Knowledge of Numbers is the Knowledge of the Deity. See PYTHAGORIAN.

From *Egypt Arithmetic* was transmitted to the *Greeks*, who handed it forward, with great Improvements, which it had received by the Computations of their Astronomers, to the *Romans*; from whom it came to us.

The antient *Arithmetic*, however, fell far short of that of the Moderns: All they did was to consider the various Divisions of Numbers; as appears from the Treatises of *Nicomachus*, wrote in the third Century of *Rome*, and that of *Boethius*, still extant. A Compendium of the antient *Arithmetic*, wrote in Greek, by *Psellus*, in the ninth Century from our Saviour, was given us in Latin by *Xylander*, in 1556.—A more ample Work of the same Kind, was wrote by *Jordanus*, in the Year 1200; publish'd with a Comment by *Faber Stapulensis* in 1480.

*Arithmetic*, under its present State, is variously divided, into various Kinds; *Theoretical*, *Practical*, *Instrumental*, *Logarithmical*, *Numerous*, *Specious*, *Decadal*, *Dynamical*, *Tetractycal*, *Duodecimal*, *Sexagesimal*, *Vulgar*, *Decimal*, *Finite*, *Infinite*, &c.

*Theoretical* ARITHMETIC, is the Science of the Properties, Relations, &c. of Numbers consider'd abstractedly; with the Reasons and Demonstrations of the several Rules. See NUMBER.

*Euclid* furnishes a *Theoretical Arithmetic*, in the seventh, eighth, and ninth Books of his Elements.—*Bazlaamus Monachus* has also given a Theory for demonstrating the common Operations, both in Integers and broken Numbers, in his *Logistica*, publish'd in Latin by *Chambers*, in 1600.—To which may be added *Lucas de Burgo*, who, in an Italian Treatise publish'd in 1523, gives the several Divisions of Numbers from *Nicomachus*, and their Properties from *Euclid*; with the Algorithm, both in Integers, Fractions, Extractions of Roots, &c.

*Practical* ARITHMETIC, is the Art of Computing; that is, from certain Numbers given, of finding certain others whose Relation to the former is known—As, if a Number be required equal to two given Numbers 6 and 8.

The first entire Body of *Practical Arithmetic*, was given by *Nich. Tartaglia* a *Venetian*, in 1556, consisting of two Books; the former, the Application of *Arithmetic* to civil Uses; the latter, the Grounds of *Algebra*. Something had been done before by *Stifelius*, in 1544; where we have several Particulars concerning the Application of Irrationals, Cossicks, &c. no where else to be met withall.—

We omit other merely practical Authors which have come since, the Number whereof is almost infinite; as *Gemma Frisius*, *Metius*, *Wingate*, &c.

The Theory of *Arithmetic* is joined with the Practice, and even improved in several Parts, by *Maurolycus* in his *Opuscula Mathematica*, 1575; *Heneschius* in his *Arithmetica Perfecta*, 1609, where the Demonstrations are all reduced into the Form of Syllogisms; and *Tacquet* in his *Theoria & Praxis Arithmetices*, 1704.—

*Instrumental* ARITHMETIC, is that where the common Rules are performed by means of Instruments contrived for Ease and Dispatch; such are *Nepair's Bones*, described under their proper Article; Sir *Sam. Morland's* Instrument, the Description whereof was published by himself in 1666; that of *M. Leibnitz*, described in the *Miscellan. Berolin.* and that of *Polenus*, publish'd in the *Venetian* Miscellany, 1709.—To these may be added,

*Logarithmical* ARITHMETIC, perform'd by Tables of Logarithms. See LOGARITHM.

The best Piece on this Subject, is *Hen. Briggs's Arithmetica Logarithmica*, 1624.

To this Head may also be added, the universal *Arithmetical Tables of Prostaphæreses*, published in 1610, by *Herwart ab Hohenburg*; whereby Multiplication is easily and accurately perform'd by Addition, and Division by Subtraction.—

The *Chinese* have little Regard to any Rules in their Calculations; instead of which, they use an Instrument made of a little Plate, a Foot and half long, a-cross which are fitted ten or twelve Iron Wires, on which are strung little round Balls. By drawing these together, and dispersing them again one after another, they count, somewhat after the Manner in which we do by Counters; but with so much Ease and Readiness, that they will keep pace with a Man reading a Book of Accounts, let him make what Expedition he can: And at the End the Operation is found compleatly done; and they have their Way of proving it. See COMTE.

*Numerous* ARITHMETIC, is that which gives the Calculus of Numbers or indeterminate Quantities; and is performed by the common Numeral, or Arabic Characters. See ARABIC and CHARACTER.

*Specious* ARITHMETIC, is that which gives the Calculus of Quantities; using Letters of the Alphabet instead of Figures, to denote the Quantities. See SPECIOUS *Arithmetic.*

Specious *Arithmetic* coincides with what we usually call *Algebra.* See ALGEBRA.

Dr. *Wallis* has joined the Numeral with the literal Calculus; and by means hereof, demonstrated the Rules of Fractions, Proportions, Extractions of Roots, &c. A Compendium of which is given by Dr. *Wells*, under the Title of *Elements of Arithmetic*, An. 1698.

*Decadal* ARITHMETIC, is that performed by a Series of ten Characters, so that the Progression is from 10 to 10—Such is the common *Arithmetic* among us, which makes Use of the ten Arabic Figures, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9; after which we begin 10, 11, 12, &c.

This Method of Computation is not very antient, being utterly unknown to the *Greeks* and *Romans.*—It was introduced into Europe by *Gerbert*, afterwards Pope, under the Name of *Sylvester* II. who borrowed it from the Moors of *Spain.*—No doubt it took its Origin from the ten Fingers of the Hands, which were made use of in Computations before *Arithmetic* was brought into an Art.

The Eastern Missionaries assure us, that to this Day the *Indians* are very expert at computing on their Fingers, without any Use of Pen and Ink, *Lat. Edif. & Cur.*—Add, that the Natives of *Peru*, who do all by the different Arrangement of Grains of Maise, out-do any European, both for Sureness and Dispatch, with all his Rules; *Savary Dict. de Com.*

*Binary, or Dyadic* ARITHMETIC, is that wherein only two Figures, Unity, or 1, and 0, are used. See BINARY *Arithmetic.*

M. *Dangicourt*, in the *Berlin* Miscell. gives us a Specimen of the Use hereof in Arithmetical Progressions; where he shews, that the Laws of Progression may be easier discovered hereby, than in any other Method where more Characters are used.

*Tetractyc* ARITHMETIC, is that wherein only the Figures 1, 2, 3, and 0, are used.

We have a Treatise of this *Arithmetic*, by *Erhard Weigel:* But both Binary and this are little better than Curiosities, especially with regard to Practice; inasmuch, as the Numbers may be much more compendiously expressed by Decadal *Arithmetic*, than by either of them.

*Vulgar* ARITHMETIC, is that conversant about Integers and Vulgar Fractions. See INTEGER and FRACTION.

*Sexagesimal* ARITHMETIC, is that which proceeds by Sixties; or, the Doctrine of Sexagesimal Fractions. See SEXAGESIMAL.

*Sam. Reyher* has invented a Kind of Sexagenal Rods, in Imitation of *Nepair's* Bones; by means whereof the Sexagenary *Arithmetic* is easily performed.

*Decimal* ARITHMETIC, is the Doctrine of Decimal Fractions. See DECIMAL FRACTION.

*Political* ARITHMETIC, is the Application of *Arithmetic* to Political Subjects; as, the Strength and Revenues of Princes, Number of Inhabitants, Births, Burials, &c. See POLITICAL *Arithmetic.*

ARITHMETIC *of Infinites*, is the Method of summing up a Series of Numbers consisting of infinite Terms; or of finding the Ratio's thereof. See INFINITE, SERIES, &c.

This Method was first invented by Dr. *Wallis*; as appears from his *Opera Mathematica*, where he shews its Use in Geometry, in finding the Areas of Superficies, and the Contents of Solids, and their Proportions.—But the Method of Fluxions, which is an universal *Arithmetic* of Infinites, performs all this much easier; and Multitude of other Things which the former will not reach. See FLUXIONS, CALCULUS, &c.

ARITHMETIC *of Rationals* and *Irrationals.* See RATIONAL, &c.

ARITHMETICAL *Complement*, of a Logarithm, is what the Logarithm wants of 10.0000000. See COMPLEMENT.

Thus

Thus the *Arithmetical* Complement of 7.1079054, is 2.8920946; where each Figure, but the laſt, is ſubſtracted from 9; and that from 10. See LOGARITHM.

ARITHMETICAL *Progreſſion*, ARITHMETICAL *Proportion*, ARITHMETICAL *Medium* or *Mean*, } ſee { PROGRESSION. PROPORTION. MEDIUM.

ARK, or ARC, or *Arch*, *Arcus*, in Geometry, Aſtronomy, &c. See ARCH.

ARK, ARCA, in the Scripture-Language, a kind of floating Veſſel built by *Noah*, for the Preſervation of the ſeveral Species of Animals, from the Deluge. See DELUGE.

The *Ark* has afforded ſeveral Points of curious Enquiry among the Criticks and Naturaliſts, relating to its Form, Capacity, Materials, Time of Building, &c.

*Noah* is computed to have been an hundred Years in building the *Ark*, viz. from the Year of the World 1557, to the Flood, which happen'd in the Year 1656: At leaſt, this is the common Opinion of the Learned. *Origen*, lib. iv. *Contra Celſ.* *S. Auguſt. de Civit Dei*, lib. xv. c. 27. and *Contra Fauſtin.* lib. xii. c. 18. And in his *Queſt.* on *Gen.* v. and xxiii. *Rupert.* lib. iv. in *Gen.* xx. aſſert as much; and are followed by *Salian*, *Torniel*, and *Spondeus*.—*Pelletier* of *Rouen* declares himſelf of the ſame Opinion, in an expreſs Diſſertation, *De Arca Noæ*, printed in 1700.

Yet *Beroſus* affirms, that *Noah* only began to build the *Ark* 78 Years before the Flood: *Salomon Jarchi*, on the other hand, will have it 120 Years in building; and *Tanchuma* only 52. See the Texts, *Gen.* v. 35. *Gen.* vi. &c.

Fa. *Fournier*, in his *Hydrography*, gives into the Opinion of the Fathers; noting, that the only Hands employed in it were *Noah* and his three Sons. To this Purpoſe he alledges the Inſtance of *Archias* of *Corinth*, who, with the Help of 300 Workmen, built *Hiero*'s Great Ship in one Year. Add, that *Noah*'s eldeſt Son was not born till about the Time when the *Ark* was begun, and the younger, after; ſo that it was a long Time ere they could do their Father any Service.—However, for ſo large a Building, a prodigious Number of Trees muſt have been required, which would employ a great Number of Workmen to fell and hew; Were it poſſible for three Men to have lain them?

The Wood whereof the *Ark* was built, is called in Scripture עצי גפר, *etſe gopher*, *Gopher Wood*: And in the LXX. ξυλα τετραγωνα, ſquare Timbers. *Onkelos* and *Jonathan* render *Gopher* by קרום, *Kedros*, Cedar: St. *Jerom*, in the Vulgate, by *Ligna Lævigata*, Planed Wood; and elſewhere, *Ligna Bituminata*, q. d. Pitch'd Woods. *Kimhi* tranſlates it, *Wood proper to float*; Vatable, *Light Wood*, which ſwims in the Water without corrupting: *Junius*, *Tremellius*, and *Buxtorf*, a kind of Cedar, by the *Greeks* called Κεδρελατη; *Avenarius* and *Munſter*, Pine; *Fuller* and *Bochart*, Cypreſs; others, *Box*; others, *Fir*; *Caſtalio*, Turpentine, &c.—*Pelletier* prefers the Opinion of thoſe who hold the *Ark* made of Cedar: His Reaſons are, the Incorruptability of that Wood; the great Plenty thereof in *Aſia*, whence *Herodotus* and *Theophraſtus* relate, that the Kings of *Egypt* and *Syria* built whole Fleets thereof, in lieu of Deal; and the common Tradition throughout the Eaſt, imports, that the *Ark* is preſerved entire to this Day on Mount *Ararat*.

The Dimenſions of the *Ark*, as delivered by *Moſes*, are 300 Cubits in Length, 50 in Breadth, and 30 in Height; which, compared with the great Number of Things it was to contain, ſeems to many too ſcanty. And hence an Argument has been drawn againſt the Authority of the Relation.

To ſolve this Difficulty, many both of the antient Fathers and later Criticks, have been put to miſerable Shifts.—*Origen*, St. *Auguſtin*, and others, maintain, that by the Cubits here ſpoke of, we are to underſtand the *Egyptian* Geometrical Cubit, equal, according to them, to 6 vulgar Cubits, or 9 Foot. But the Truth is, it does not appear there ever was any ſuch Meaſure as a Geometrical Cubit either among *Egyptians* or *Jews*.—Others account for it, by aſſerting the Stature of Mankind, in the firſt Ages, to have been much greater than in our Days; and conſequently the Cubit, which is taken from a Part of the human Body, proportionably larger. But this does not avail, ſince the ſame Reaſon will infer an equal Augmentation of other Animals.—Others ſuppoſe the ſacred Cubit here ſpoke of, which was a Hand's-breadth longer than the civil one: But this only affords a ſmall Supply; beſide, that the ſacred Cubit does not appear to have been ever uſed, except in ſacred Edifices, as the Temple and Tabernacle.

This Difficulty is much better ſolved by *Buteo* and *Kircher*, in Treatiſes expreſs, *de Arca Noæ*, wherein, ſuppoſing the common Cubit of a Foot and an half, they prove geometrically, that the *Ark* was abundantly ſufficient for all the Animals ſuppoſed to be lodged therein.—*Snellius* computes the *Ark* to have been above half an Acre in Area: *Cuneus*, *Buteo*, and others, have alſo calculated the Capacity of the *Ark*. Father *Lamy* ſhews that it was 110 Foot longer than the Church of St. *Mary* of *Paris*, and 64 Foot narrower; to which his *Engliſh* Tranſlator adds, that it muſt have been longer than St. *Paul*'s Church in *London*, from Weſt to Eaſt, broader than that Church is high in the Inſide, and about 54 Foot in Height, our Meaſure.

The Things contained in it were, one Pair of every Species of unclean Animals, and ſeven Pair of every Species of clean Animals, with Proviſions for them all, during the whole Year.—The former appears at firſt View almoſt infinite, but if we come to a Calculus, the Number of Species of Animals will be found much ſmaller than was imagined, not amounting to 100 Species of Quadrupeds, nor 200 of Birds; out of which, in this Caſe, are to be excepted ſuch Animals as can live in the Water.—Zoologiſts uſually reckon but 170 Species in all; and Biſhop *Wilkins* ſhews, that only 72 of the quadruped Kind needed a Place in the *Ark*.

By the Deſcription *Moſes* gives of the *Ark*, it appears to have been divided into three Stories, each 10 Cubits, or 15 Foot high: And it is agreed on, as moſt probable, that the loweſt Story was deſtined for the Beaſts, the middle for the Food, and the upper for the Birds, with *Noah* and his Family; each Story being ſubdivided into different Apartments, Stalls, &c.—Tho' *Joſephus*, *Philo*, and other Commentators, add a kind of fourth Story, under all the reſt; being as it were, the Hold of the Veſſel, to contain the Ballaſt, and receive the Filth and Fæces of ſo many Animals.

*Drexelius* makes 300 Apartments, Father *Fournier* 333, the anonimous Author of the Queſtions on *Geneſis*, 400: *Buteo*, *Temporarius*, *Arias Montanus*, *Hoſtus*, *Wilkins*, *Lamy*, and others, ſuppoſe as many Partitions as there were different Sorts of Animals.—*Pelletier* only makes 72, *viz.* 36 for the Birds, and as many for the Beaſts: His Reaſon is, that if we ſuppoſe a greater Number, as 333 or 400; each of the eight Perſons in the *Ark* muſt have had 37, 41, or 50 Stalls to attend and cleanſe daily, which he thinks impoſſible. But there is not much in this; to diminiſh the Number of Stalls, without a Diminution of the Animals, is vain; it being, perhaps, more difficult to take care of 300 Animals in 72 Stalls, than in 300.

*Buteo* computes, that all the Animals contained in the *Ark*, could not be equal to 500 Horſes; he even reduces the whole to the Dimenſions of 56 Pair of Oxen. Father *Lamy* enlarges it to 64 Pair, or 128 Oxen; ſo that ſuppoſing one Ox equal to two Horſes, if the *Ark* had Room for 256 Horſes, there muſt have been Room for all the Animals. But the ſame Author demonſtrates, that one Floor would ſuffice for 500 Horſes, allowing 9 ſquare Feet to an Horſe.

As to the Food in the ſecond Story, it is obſerved by *Buteo* from *Columella*, that 30 or 40 Pounds of Hay ordinarily ſuffices an Ox for a Day; and that a ſolid Cubit of Hay, as uſually preſſed down in our Hay-racks, weighs about 40 Pound; ſo that a ſquare Cubit of Hay is more than enough for one Ox one Day.—Now it appears that the ſecond Story contains 150000 ſolid Cubits, which divided between 206 Oxen, will afford each more Hay by two thirds, than he can eat in a Year.—

Biſhop *Wilkins* computes all the carnivorous Animals equivalent, as to the Bulk of their Bodies and their Food, to 27 Wolves; and all the reſt to 280 Beeves. For the former he allows 1825 Sheep, and for the latter 109500 Cubits of Hay: All which will be eaſily contained in the two firſt Stories, and a deal of Room to ſpare.—As to the third Story, no Body doubts of its being ſufficient for the Fowls, with *Noah* his Sons and Daughters.—

Upon the whole, the learned Biſhop remarks, that of the two, it appears much more difficult to aſſign a Number and Bulk of neceſſary Things to anſwer the Capacity of the *Ark*, than to find ſufficient Room for the ſeveral Species of Animals already known.—This he attributes to the Imperfection of our Liſts of Animals, eſpecially thoſe of the unknown Parts of the Earth; adding, that the moſt expert Mathematician at this Day, could not aſſign the Proportions of a Veſſel better accommodated to the Purpoſe, than is here done; and hence concludes, that 'the Capacity of the 'Ark which had been made an Objection againſt Scripture, 'ought to be eſteemed a Confirmation of its divine Au'thority; ſince, in thoſe ruder Ages, Men being leſs verſed 'in Arts and Philoſophy, were more obnoxious to vulgar 'Prejudices than now; ſo that had it been an human Inven'tion, it would have been contrived according to thoſe wild 'Apprehenſions which ariſe from a confuſed and general 'View of Things; as much too big, as it has been repre'ſented too little.—

ARK *of the Covenant*, in Scripture, is uſed for a kind of Cheſt, wherein where kept the two Tables of Stone, whereon God had ingraven the ten Commandments given to *Moſes* on the Mount, and held in high Veneration among the *Hebrews*. See COVENANT.

The *Ark* was taken by the *Philiſtines*, and returned with divers Preſents.—It was at firſt placed in the Tabernacle, afterwards in the Sanctuary of the Temple. See TABERNACLE, TEMPLE, and SANCTUARY.

*Joſephus* deſcribes it at 5 Palms long, 3 broad, and as many high; the Wood, both within Side and without, lined with Plates of Gold, and fitted with golden Hinges.—The Lid or Covering of the *Ark* was called the *Propitiatary*, over which were two Figures placed called *Cherubim*, a kind of Spirits with Wings of a peculiar Form never ſeen but by *Moſes* before the Throne of God. It may be added that ſome Criticks take the Word *Cherub*, כרוב, to be only a Tranſpoſition of the Hebrew Letters of the Word רכוב, *Rechub*, *Chariot*; and that by the *Cherubim being placed over the Ark*, we are only to underſtand that the *Ark* was a ſort of Chariot, on which God ſate. See PROPITIATORY, CHERUB, *&c.*

The *Jews* to this Day, have a kind of *Ark* in their Synagogues, wherein their ſacred Books are repoſited, in imitation of the antient *Ark* of the Covenant.—This they call *Aron*. *Leo* of *Modena* gives a Deſcription thereof, in his Account of the *Cuſtoms and Ceremonies of thoſe of his Nation*: 'The *Jews*, ſays he, in the eaſtern Side of all their 'Synagogues, have an *Ark*, or Armory, called *Aron*; in 'Memory of the *Ark* of the Covenant. In this are preſer-'ved the five Books of *Moſes*, wrote on Vellum, with Ink 'made on Purpoſe, *&c.*

*Tertullian* calls this Ark, *Armarium Judaicum*; whence the Phraſe, *to be in the Armory of the Synagogue*, q. d. to be in the Number of canonical Writings. See APOCRYPHA.

ARM, *Brachium*, a part of the human Body, terminating at one End in the Shoulder, and at the other in the Hand. See BODY, SHOULDER, *&c.*

Among Phyſicians, the *Arm* only includes that part between the Shoulder and the Elbow; the reſt, from the Elbow to the Wriſt, being taken into the greater Hand. See HAND.

The *Arm*, in this latter Acceptation, has only one large Bone, called the *Humerus*, or Shoulder-Bone. See HUMERUS.

It has five ſorts of Motions, which are effected by five Pair of Muſcles; upwards, by the *Deltoides*, *Supraſpinatus*, and *Coracobrachialis*; downwards, by the *Teres*, *Rotundus major*, and *Latiſſimus Dorſi*; forwards, by the *Pectoralis*; backwards, by the *Infraſpinatus*; and circular, by the *Tranſverſalis*, *Subſcapularis*, and *Infraſpinatus*. See each Muſcle deſcribed under its proper Article.

The other Part conſiſts of two Bones, called *Focils*; viz. the *Radius* and *Cubitus*, or *Ulna*. See FOCIL, RADIUS, and ULNA.

The Muſcles whereby this Part are moved, are the *Biceps*, *Brachiæus Internus*, *Gemellus*, *Brachiæus Externus*, *Anconæus*, *Pronator Radi teres*, and *Quadratus*; *Supinator Longus*, & *Brevis*. See each in its Place.

The uſual Venæſections are in the *Arm*. See PHLEBOTOMY, *&c.*

ARM, in the Manage, is applied to a Horſe, when he endeavours to defend himſelf againſt the Bit; to prevent obeying, or being check'd thereby.

A Horſe is ſaid to *arm* himſelf, when he preſſes down his Head, and bends his Neck, ſo as to reſt the Branches of the Bridle upon his Briſket; in order to withſtand the Effort of the Bit, and guard his Bars and his Mouth.

A Horſe is ſaid to *arm* himſelf *with the Lips*, when he covers the Bars with his Lips, and deadens the Preſſure of the Bit.—This frequently happens in thick-lipp'd Horſes.—The Remedy is by uſing a Bit-mouth, forged with a Canon or Scatch-mouth, broader near the Bankers than at the Place of its Preſſure, or reſt upon the Bars.

For arming againſt the Bit, the Remedy is to have a wooden Ball cover'd with Velvet, or other Matter, put on his Chaul; which will ſo preſs him between the Jaw-bones, as to prevent his bringing his Head ſo near his Breaſt.

ARM, is alſo uſed in Geography, for a Branch of a Sea, or River. See SEA, OCEAN, RIVER, *&c.*

*Italy* and *Sicily* are only parted by an *Arm* of the Sea.—St. *George's Arm*, in the *Mediterranean*, is the *Thracian Boſphorus*.

Among Gardeners, *Arm* is ſometimes uſed in reſpect of Cucumbers and Melons, in the ſame Senſe as Branch, of other Plants. See BRANCH, CLASPER, *&c.*

ARM is uſed figuratively for *Power*.—The *Secular Arm*, is the Lay or Temporal Authority of a ſecular Judge; to which Recourſe is had for the Execution of the Sentences paſs'd by Eccleſiaſtical Judges. See SECULAR.

The Church ſheds no Blood: Even the Inquiſition, after they have found the Perſon guilty, ſurrenders him to the ſecular *Arm*. See INQUISITION.

The Council of *Antioch*, held in 341, decrees, that Recourſe be had to the *Secular Arm* to repreſs thoſe who refuſe Obedience to the Church: For ſecular *Arm*, they here uſe *exterior Power*.

ARM, in the military Art, Heraldry, *&c.* See ARMS and ARMOUR.

ARM, in the Sea-Language.—A Ship is ſaid to be *armed*, when fitted out and provided in all reſpects for War. See SHIP.

Alſo, a Croſs-Bar-ſhot is ſaid to be *armed*, when ſome Rope-yarn, or the like, is rolled round about one End of the Iron-Bar which runs thro the Shot, both that the Shot may be the better rammed down into the Gun, and leſt the ſharp End of the Bar ſhou'd catch into any Honey-Combs within the Cylinder of the Piece.

ARM, in reſpect of the Magnet.—A Loadſtone is ſaid to be *armed*, when it is capped, caſed, or ſet in Iron or Steel; in order to make it take up the greater Weight; and alſo to diſtinguiſh readily its Poles. See MAGNET, POLE, *&c.*

The uſual Armour of a Loadſtone in form of a right-angled Parallelopepidon, conſiſts of two thin Pieces of Steel or Iron, in a ſquare Figure, and of a Thickneſs proportionable to the Goodneſs of the Stone: If a weak Stone have a ſtrong Armour, it will produce no Effect; and if the Armour of a ſtrong Loadſtone be too thin, its Effect will not be ſo conſiderable as when thicker.—The proper Thickneſs is found by filing it thinner and thinner, till its Effect is found the greateſt poſſible.

The Armour of a Spherical Loadſtone, conſiſts of two Steel Shells faſtened to one another by a Joint, and covering a good Part of the Convexity of the Stone. This alſo is to be filed away, till the Effect is found the greateſt.—'Tis ſurprizing to what Degree the Armour of a Loadſtone will augment its Effect: A good Stone thus *armed*, will lift above 150 times more than before. See MAGNETISM.

*Kircher*, in his Book *de Magnete*, tells us, that the beſt way to *arm* a Loadſtone, is to drill a Hole thro' the Stone from Pole to Pole, and in that, to place a Steel Rod of a moderate Length; which Rod, adds he, will take up more Weight at the End, than the Stone itſelf *armed* the common Way, can do.

ARMA *dare*, q. d. *to give Arms*, in ſome antient Charters, ſignifies to dub, or make a Knight. See KNIGHT.

ARMA *deponere*, *to lay down Arms*, was a Puniſhment antiently enjoin'd when a Man had committed an Offence. *Leg. Hen.* I.

ARMA *Molita*, were ſharp Weapons: *Fleta* calls them *Arma Emolita*.

ARMA *Mutare*, q. d. to *change Arms*, was a Ceremony uſed to confirm a League or Friendſhip.

ARMA *Reverſata*, *Inverted Arms*; was when a Man was convicted of Treaſon or Felony. See DEGRADATION, *&c.*

ARMAN, among Farriers, a Confection of great Efficacy to prevent a total Loſs of Appetite in Horſes. See APPETITE.

ARMATURE. See ARMOR.

ARMARIUM *Unguentum*, in antient Writers, a ſympathetick Ointment, or Weapon Salve, whereby Wounds are ſaid to have been cured at a Diſtance, by only dreſſing the Weapon. See SYMPATHETIC.

ARMED. See ARM and ARMS.

ARMED, in Heraldry, is uſed in reſpect of Beaſts and Birds of Prey, when their Teeth, Horns, Feet, Beak, Talons, or Tusks, are of a different Colour from the reſt.—He bears a Cock, or a Falcon, *armed*, Or, *&c.*

ARMIGER, q. d. *Armour Bearer*; a Title of Dignity, render'd in *Engliſh*, by *Eſquire*. See ESQUIRE.

ARMILLARY, ARMILLARIS, in Aſtronomy, an Epithet given to an artificial Sphere, compoſed of a Number of Metalline Circles, repreſentative of the ſeveral Circles of the Mundane Sphere, put together in their natural Order. See SPHERE and CIRCLE.

*Armillary* Spheres eaſe and aſſiſt the Imagination to conceive the Conſtitution of the Heavens, and the Motions of the heavenly Bodies. See HEAVEN, SUN, PLANET, *&c.*

Such is repreſented, *Tab. Aſtron.* Fig. 21.—where P and Q repreſent the Poles of the World, A D the Equator, E L the Ecliptic and Zodiac, P A G D the Meridian, or the Solſticial Colure, T the Earth, F G the Tropic of Cancer, H T the Tropic of Capricorn, M N the Arctic Circle, O V the Antarctic, N and O the Poles of the Ecliptic, and R S the Horizon.

The Word is form'd of the Latin *Armilla*, a Bracelet.

ARMILLA *Membranoſa*, is a Name given by ſome Anatomiſts, to the annular Ligament. See ANNULAR *Ligament*.

ARMAMENT, a large Body of Forces, rais'd and provided with the Furniture of War, either for Land or Sea Service. See ARMY.

ARMENIANS, in reſpect of Religion, a Sect, or Diviſion among the Eaſtern Chriſtians; thus called from *Armenia*, the Country antiently inhabited by them. See SECT.

The *Armenians*, ſince the Conqueſt of their Country by *Scha Abas* King of *Perſia*, have had no fixed Place of Habitation, but are diſperſed in divers Parts of *Perſia*, *Turky*, and even ſome Parts of Europe.—Their chief Employment is

is Merchandiſe, in which they excel.—The Cardinal de *Richlieu*, we are told, had a Deſign to make an Eſtabliſhment of them in *France*, for promoting the Commerce of that Country.

With regard to Religion, there are two Kinds of *Armenians*; the one Catholicks, and ſubject to the Pope, having an Archbiſhop in *Perſia*, and another in *Poland*.—The other make a peculiar Sect, having two Patriarchs in *Natolia*. They have their Printing-houſe at *Marſeilles*.

The *Armenians* are of the Sect of *Monophyſites*, and only allow of one Nature in Jeſus Chriſt. See MONOPHYSITE.

As to the Euchariſt, they agree with the *Greeks*, except in this, that they mix no Water with their Wine, and uſe unleavened Bread after the manner of the *Latins*. See GREEK, AZYMUS, &c.

They abſtain very rigourouſly from eating of Blood and Meats ſtrangled, and are much addicted to Faſting, inſomuch, that to here them talk, one would conclude that their whole Religion conſiſted in Faſting.

The Monaſtic Order is in great Repute among them, ſince one of their Patriarchs introduced that of St. *Baſil*; but part of them which have united with the Church of *Rome*, have changed their antient Rule, for that of the *Dominicans*. See BASILIAN and DOMINICAN.

ARMENIAN-*Stone*, *Lapus Armenus*, in natural Hiſtory, called alſo *Lapis Stellatus*; is a kind of precious Stone, nearly reſembling the *Lapis Lazuli*, except that it is ſofter, and inſtead of Veins of Gold, is intermixed with Green. See STONE and LAZULI.

*Boerhaave* rather ranks it among Semi-Metals; and ſuppoſes it compoſed of a Metal and Earth.—See METAL.—He adds, that it only differs from the *Lazuli* in degree of Maturity; and that both of them ſeem to contain Arſenic. See ARSENIC.

It it found in *Tirol*, *Hungary*, and *Tranſilvania*; and is uſed both in Moſaic Work, and to make that beautiful Blue Colour called *Azure*. See AZURE and MOSAIC.

ARMENIAN *Bole*, *Bolus Armenus*, or *Bole Armoniac*, is a native Bole or Earth, brought from *Armenia*. See BOLE and EARTH.

Some conjecture it to have a Mixture of Iron in its Compoſition.—That which is paliſh, red, ſoft, fattiſh upon the Pallate, and adheſive on the Tongue, is the beſt. It is a good Aſtringent, and Vulnerary; and in thoſe Intentions frequently preſcribed againſt Diarrhæas, Dyſſenteries, Hæmmorrhages, and other Defluxions.—Externally it is uſed in ſtrengthening Plaiſters, againſt Luxations of the Joints.

ARMILUSTRIUM, in Antiquity, a Feaſt held among the *Romans*; wherein they ſacrific'd, armed at all Points, and with the Sound of Trumpets. See FEAST.

Some define *Armiluſtrium* to have been a Feaſt, wherein a general Review was made of all the Forces in the *Campus Martius*.—But this does not come up to the Point; for *Varro* does not derive the Word from the Latin *Arma* and *luſtrare*, to make a Review; but from the Cuſtom of holding this Feaſt in the Place where the Reviews were uſed to be made, or rather from their going round the Place armed with Bucklers. And he prefers this laſt Opinion, being perſuaded that it was from this Ceremony, that the Place where this Sacrifice was offer'd to the Gods, was called *Armiluſtrium*, or *Armiluſtrum*, *ab luendo aut luſtro*, i. e. *quod circumibant ludentes, ancilibus armati.*

This Sacrifice was intended as an ὁπλαθύσιον, an Expiation of Arms, for the Proſperity of the Arms of the People of *Rome*; and was celebrated on the 14th of the Calends of *November*.

ARMINGS, in a Ship, are the ſame with *Waſt-Clothes*, being Red Clothes, hung about the Outſides of the Ship's Upper-works, fore and aft; and before the Cubbridge Heads.—There are ſome alſo hung round the Tops, called *Top-Armings*.

ARMINIANISM, the Doctrine of *Arminius*, a celebrated Profeſſor in the Univerſity of *Leyden*; and of the *Arminians*, a Sect which follow him.

The principal Article wherein the *Arminians* differ from the other Reformed, conſiſts in this, that thinking the Doctrines of *Calvin*, with regard to Free-will Predeſtination and Grace, too ſevere, they have return'd to thoſe of the Romiſh Church, and maintain, that there is an univerſal Grace given to all Men; that Man is always free, and at Liberty to reject or embrace Grace, &c. See GRACE, FREE-WILL, &c.

*Gomar*, *Arminius*'s Collegue, ſtood ſtrenuouſly up for a particular or ſpecial Grace, given only to thoſe who were predeſtinated or elect; and for a poſitive Decree both of Election in ſome, and of Reprobation in others. See PREDESTINATION, ELECTION, REPROBATION, &c.

At length, the Matter came to an Hearing, before the Synod of *Dort*, where *Arminianiſm* was condemn'd in Form.—Theſe Diſputes began in the Year 1609. From the School they paſs'd into the Government, and the Republick of *Holland* was once in a fair way to be over-turned by them.

ARMINIANS, a religious Sect or Party, which aroſe in *Holland*, by a Separation from the *Calviniſts*. See ARMINIANISM.

The *Arminians* are ſometimes alſo called *Remonſtrants*, by reaſon of a Remonſtrance which they perſer'd to the States General in 1611, wherein the chief Articles of their Faith were laid down. See REMONSTRANT.

The latter *Arminians* carried Things much further than *Arminius* himſelf, and even came very near to *Socinianiſm*. —Eſpecially under *Simon Epiſcopius*.—When the *Calviniſts* upbraided them with renewing an antient Hereſy already condemned in the *Pelagians*, and *Semi-Pelagians*; they replied, that the mere Authority of Men cou'd not be allow'd a legitimate Proof any where but in the Church of *Rome*; that it was not enough to ſhew any Opinion had been condemned, without ſhewing it had been condemned juſtly: *Nec ſatis eſt damnatam Olim Sententiam eſſe, niſi damnandam, aut jure aut rite damnatam eſſe, conſtet.*

On this Principle, which the *Calviniſts* cannot well gainſay, the *Arminians* retrench abundance of thoſe called fundamental Articles of Religion. Not finding them all clearly expreſſed in Scripture, they laughed at all the Catechiſms and Formula's of Faith which they would have reſtrained them to; and accordingly were condemn'd at the famous Synod of *Dort*, held in 1618, whereat Divines from all the Reformed Churches were preſent.

Many among them have quitted the Doctrine of their Maſter relating to the Points of eternal Election and Predeſtination.—*Arminius* taught, that God elected the Faithful out of a Foreknowledge of their Faith: But *Epiſcopius*, and others, think he elects no Perſon from all Eternity, and only elects the Faithful, at the Time when they actually believe. They ſpeak very ambiguouſly of the Preſcience of God, which was the principal Strong-Hold of *Arminius*. They look on the Doctrine of the Trinity as a Point not neceſſary to Salvation; and many of them hold there is no Precept in Scripture, by which we are enjoin'd to adore the Holy Ghoſt; and that Jeſus Chriſt is not equal to God the Father. And they generally avoid the Word *Satisfaction of Chriſt*. Tho' *Epiſcopius* declares, that Jeſus Chriſt has made Satisfaction to God, ſo far as to render him propitious to Mankind.

They preſs with a great deal of Earneſtneſs, a general Toleration of all thoſe who profeſs the Chriſtian Religion; maintaining that all Chriſtians are agreed in the eſſential Points: As it has never been decided by any infallible Authority, which of the many Ways is the true one, and the moſt agreeable to the Word of God; they ought all to combine on the ſame Footing, to compoſe one Church, without obliging any to quit their own Sentiments, or embrace thoſe of others.

Their principal Writers are *Arminius*, *Epiſcopius*, and *Grotius*; to which may be added *Curcellæus*, who has collected a Syſtem of Theology out of the large diffuſive Writings of *Epiſcopius*, with the Addition of many Things of his own. —Tho' *Curcellæus*, it muſt be own'd, is rank'd by the *Socinians* among the Number of their Writers.

ARMISTICE, *Armiſtitium*, a ſhort Truce, or Ceſſation of Arms for a ſmall Time. See TRUCE, CESSATION, &c.

ARMONIACK, or rather AMMONIAC, in natural Hiſtory, a ſort of volatile Salt; whereof there are two Kinds, antient and modern. See SALT.

The antient *Sal Ammoniac*, called alſo *Sal Cyrenaic*, deſcribed by *Pliny* and *Dioſcorides*, was a native Salt, generated in the Earth, or rather the Sands, in thoſe large Inns or Caravanſeras, where the Crouds of Pilgrims coming from all Parts to the Temple of *Jupiter Ammon*, uſed to lodge.—The Method of Conveyance in thoſe Parts being on Camels; and thoſe Creatures when in *Cyrene* a Province of *Egypt* wherein that celebrated Temple ſtood, urining in the Stables, or ſay ſome in the parched Sands: Of this Urine, which is remarkably ſtrong, ſublimed by the Heat of the Sun, aroſe a kind of Salt, denominated ſometimes from the Temple *Ammoniac*, and ſometimes from the Region *Cyrenaic*.

This Salt being no longer found in thoſe Places, ſome Authors ſuſpect there was never any ſuch thing; and that the antient as well as the modern *Sal-Armoniac* was factitious.—What pleads for the contrary, is, that the Salt frequently belched out in large Quantities from Mount *Ætna*, appears much of the ſame Nature, and anſwers to moſt of the Characters of the antient *Sal-Armoniac*. The Reaſon no more is produced in *Egypt*, is the Ceſſation of Pilgrimages to that ancient Idol.

Its Characters are, that it cools Water, turns *Aqua Fortis* into *Aqua Regia*, and conſequently diſſolves Gold; that it ſublimes by a large Fire, and affords a pungent urinous Savor. See AQUA-REGIA, URINOUS, &c.

The modern *Sal-Armoniac*, called alſo *Aqua Cœleſtis*, is held by ſome to be native, and to trickle out of the Ground about Mount *Veſuvius*, *Ætna*, &c. in Form of a Liquor; which,

which, when filtered and inſpiſſated, becomes *Sal-Armoniac*.—But 'tis certain, all the modern *Sal-Armoniac* is compound and factitious; conſiſting of a Mineral, a Vegetable, and an animal Salt combined together.

Indeed, though there ſcarce be any Drug more common than *Sal-Armoniac*, the Public has been entirely at a Loſs, both as to the Place whence it comes, and how it was made; all we knew for certain, was that it came from the *Levant*, and was a volatile urinous Salt, penetrated by an Acid.—Father *Sicard*, the Jeſuite, has at length removed the Veil, in the Memoirs of the *Journal de Trevoux*, for *9ber*, 1717.—This Salt, ſays that Father, in a Letter to the Count de *Tholouſe*, is made in *Egypt*, in a ſort of Ovens contrived for the Purpoſe, the Tops whereof are perforated with ſeveral longitudinal Clefts; and on theſe Clefts are laid ſeveral long-necked Glaſs-Bottles, filled with Soot, a little Sea-Salt, and the Urine of Cattle; well ſtopped.

This done, they cover them up with a Body of Clay and Brick, all but the Necks, which lie open to the Air; and put the Fire in the Oven, which they keep up for 3 Days and Nights.—The Phlegm of the Materials contained in the Bottles, being thus exhaled by the Heat of the Fire; and the acid and alkaline Salts abounding therein, being thus brought together near the Necks of the Bottles, they coaleſce, harden, and form a whitiſh Maſs, which is the *Sal-Armoniac*—It muſt be added, that all Soot is not fit for the Purpoſe, but only that exhaling from a ſort of Fuel made of Dung.

Our Chymiſts have divers Ways of preparing a *Sal-Armoniac*, in Imitation of this.—The common Way is by putting one part of common Salt, to five of Urine; to which ſome add half that Quantity of Soot: The whole being put in a Veſſel, they raiſe from it by Sublimation a white friable farinacious Subſtance, which they call *Sal-Armoniac*.—*M. Lemery* ſuſpected, that what is imported to us from Abroad, muſt be made after a different Manner; he even concluded that it was made as our common Salt is, by Lotion, and Evaporation: In which Suſpicion, it appears from the foregoing Account, he is far from the Truth.—They purify it by Diſſolution in hot Water; which being filtered, and evaporated to a Cuticle, ſhoots into a fine white Salt, uſed in Medicine both as a Sudorific and a Diuretic; and proving a good Aperient in all Obſtructions.

There are various Preparations of this Salt, in the modern Pharmacy; as,

Sublimate of *Sal-Armoniac*, of like Virtue as the purified. See SUBLIMATION.—

*Volatile Sal Armoniac*, made by ſubliming the *Sal-Armoniac* with Salt of Tartar; uſed againſt malignant Fevers as a Sudorific; as alſo in Pocket Smelling-Bottles.—

*Flowers of Sal-Armoniac*; made of *Sal-Armoniac*, with Sea-Salt decrepitated.—Its Vertues are much the ſame as of the ſublimated *Sal-Armoniac*. See FLOWERS.—

Sometimes, inſtead of the Sea-Salt, Iron or Steel are uſed; which makes what they call *Martial Flowers of Sal-Armoniac*, of a very penetrating and deobſtruent Nature, and recommended in all Kinds of Obſtructions, Cachexies, Jaundice, Dropſies, &c.

*Spirit of Sal-Armoniac*—Of this we have various Kinds, which derive different Denominations and Properties from the different additional Ingredients the Salt is diſtilled with: As—*Spirit of Sal-Ammoniac with Tartar*, with *Quicklime*; with *Amber*; with *Steel* or *Iron*: *Sweet* Spirit of *Sal-Ammoniac*; *Acid* Spirit of *Sal-Armoniac*; *Diuretic* Spirit of *Sal-Armoniac*, &c.

ARMOR, or ARMOUR, a defenſive Habit, wherewith to cover and ſecure the Body from the Attacks of an Enemy. See ARMS.

Such are the *Buckler*, *Cuiraſſe*, *Helmet*, Coat of Mail, Gantlet, &c. See BUCKLER, CUIRASSE, HELMET, &c.

A compleat *Armor* antiently conſiſted of a Cask or Helm, a Gorget, Cuiraſſe, Gantelets, Taſſes, Braſſets, Cuiſſes, and Covers for the Legs, to which the Spurs were faſtened.—This they called *Armour Cap-a-pe*; and was the Wear of the Cavaliers, and Men at Arms.

The Infantry had only part of it, *viz.* a Pot or Head-Piece, a Cuiraſſe, and Taſſes; but all light.—Laſtly, the Horſes themſelves had their *Armour*, wherewith to cover the Head and Neck.

Of all this Furniture of War, ſcarce any thing is now retained.

The Gallantry of going to the Battle naked, without any defenſive *Armour*, prevailed ſo far, that the *French*, during the Reign of *Louis* XIV. were obliged to be continually iſſuing Ordonnances to reſtrain it; in conſequence of which, the General Officers, and thoſe of the Cavalry, were obliged to reſume the Cuiraſſe.—

*Coat*-ARMOUR, is the Eſcutcheon of any Perſon, or Family, with its ſeveral Charges, and other Furniture, as Mantling, Creſt, Supporters, Motto, &c. See ESCUTCHEON, CHARGE, CREST, MANTLING, SUPPORTER, MOTTO, &c.

Thus we ſay, a Gentleman of Coat-Armour; meaning one who bears *Arms*. See COAT, ARMS, GENTLEMAN, &c.

ARMORY, or ARMOURY, a Store-houſe of Arms, or a Place wherein military Habiliments are kept, to be ready for Uſe. See ARMS.

There are *Armories* in the Tower, and all Arſenals, &c. See TOWER and ARSENAL.

ARMORY is alſo uſed for a Branch of Heraldry; being the Knowledge of Coat-Armours, as to their Blazons, and various Intendments. See HERALDRY; ſee alſo COAT-*Armour*, BLAZON, &c.

ARMS, ARMA, all Kinds of Weapons, whether for Defence, or Offence. See WEAPON, DEFENCE, &c.

The *Arms* of Offence, are the Sword, Piſtol, Muſquet, Bayonet, Pike, &c. See SWORD, GUN, &c.

ARMS of Defence. See under ARMOR.

*Fire*-ARMS. See FIRE-*Arms*.

The principal *Arms* of the antient *Britons*, were Hatchets, Scythes, Lances, Swords, and Bucklers: The *Saxons*, &c. brought in the Halbard, Bow, Arrows, Arbalets, &c.

The Word is formed from the French *Armes*; which *Nicod* derives from a Latin Phraſe, *Quod operiant armos*, by reaſon they cover the Shoulders, or Sides: But ought rather to be brought from *Arma*; which *Varro* derives *ab Arcendo, eo quod Arceant hoſtes*.

'Tis ſuppoſed that the firſt *Arms* were of Wood, and were only employ'd againſt Beaſts.—That *Nimrod*, the firſt Tyrant, turn'd them againſt Men; and that his Son *Belus* was the firſt that waged War; whence, according to ſome, came the Appellation *Bellum*.—*Diodorus Siculus* takes *Belus* to be the ſame with *Mars*, who firſt train'd Soldiers up to Battle.—

*Arms* of Stone, &c. even of Braſs, appear to have been uſed before they came to Iron and Steel.

*Joſephus* aſſures us, that the Patriarch *Joſeph* firſt taught the Uſe of Iron Arms in *Egypt*, arming the Troops of *Pharoah* with a Cask and Buckler.

In the Eye of the Law, *Arms*, *Arma*, are extended to any Thing which a Man takes in his Hand in his Wrath, to caſt at, or ſtrike another.—So *Crompton*—*Armorum appellatio non ubique Scuta & Gladios & Galeas ſignificat, ſed & Fuſtes & Lapides*.

ARMS of *Courteſy*, or *Parade*, were thoſe uſed in the antient Juſts, and Tournaments. See JUST and TOURNAMENT.

Theſe uſually were Lances not ſhod; Swords without Edge or Point; and frequently wooden Swords, or even Canes.

*Paſs of* ARMS, was a Kind of Combat in uſe among the antient Cavaliers. See PASS *of Arms*.

*Place of* ARMS, in Fortification, &c. See PLACE *of Arms*.

ARMS, are alſo the natural Weapons, or Parts of Defence of Beaſts; as Claws, Teeth, Tusks of Elephants, Beaks of Birds, &c. See BILL, TALON, TUSK, &c.

Some Animals are ſufficiently guarded againſt all common Dangers by their natural Cloathing, their Armature of Shells, as the Tortoiſe, &c. See SHELL, TORTOISE, &c.—Others, deſtitute of this Guard, are *armed* with Horns; others with ſharp Quills, or Prickles, as the Porcupine and the Hedgehog; others with Stings, &c. See HORN, STING, &c.

ARMS are alſo uſed figuratively for the Profeſſion of a Soldier.—Thus we ſay, he was bred to *Arms*. See SOLDIER.

ARMS, or ARMORIES, are alſo uſed in Heraldry, for Marks of Dignity and Honour, regularly compos'd of certain Figures and Colours, given or authorized by Sovereigns, and bore in Banners, Shields, Coats, &c. for the Diſtinction of Perſons, Families, and States. See FIGURE, COLOUR, SYMBOL, HONOUR, NOBILITY, &c. ſee alſo SHIELD, &c.

They are called *Arms*, in regard they are bore principally on the Buckler, Cuiraſſe, Banners, and other Apparatus of War.—They are alſo called *Coats of Arms*, *Coat Armour*, &c. becauſe antiently embroider'd on Surcoats, &c. See COAT *of Arms*, &c.

Some will have the Name to have been firſt occaſioned by the antient Knights, who in their Juſts and Tournaments bore certain Marks (which were frequently their Miſtreſs's Favours) in their *Armour*, i. e. their Helms or Shield; to diſtinguiſh them from each other. See JUST, TOURNAMENT, &c.

*Arms* make the Subject of the Art of *Heraldry*. See HERALDRY and BLAZON.

Three *Flowers de lys*, in a Field Azure, are the *Arms* of *France*.—The *Arms* of *England* are three Lyons.—In the *Arms* of *Great-Britain* are Quartered the *Arms* of *France*, *England*, *Scotland*, and *Ireland*. See QUARTER and QUARTERING.

There has been a great Diſpute among the Learned about the Origin of *Arms*.—*Favin* will have them to have been from the Beginning of the World; *Segoin* from the Time of *Noah*; others, from that of *Oſiris*, which is ſupported by ſome Paſſages in *Diodorus Siculus*; others, from the Times of the *Hebrews*, in regard *Arms* were given to *Moſes*, *Joſhua*, the twelve Tribes, *David*, &c. Others

Others will have them to have taken their Riſe in the heroical Age, and under the Empires of the *Aſſyrians*, *Medes*, and *Perſians*; building upon *Philoſtratus*, *Xenophon*, and *Quintus Curtius*.

Some pretend that the Uſe of *Arms*, and the Rules of Blazon, were regulated by *Alexander*.—Some will have them to have had their Original under the Empire of *Auguſtus*; others, during the Inundations of the *Goths*; and others, under the Empire of *Charlemagne*.

*Chorier* obſerves, that among the antient *Gauls*, each Man bore a Mark on his Buckler, by the Sight whereof he might be known to his Fellows; and hence he refers the Original of the *Arms* of noble Families.—*Camden* has obſerv'd ſomething like this of the antient *Picts*, and *Britons*, who going naked to the Wars, painted their Bodies with Blazons, and Figures of divers Colours, which he ſuppoſes to have been different in different Families, as they fought divided by Kindreds. Yet *Spelman* ſays, that the *Saxons*, *Danes*, and *Normans*, firſt brought *Arms* from the North into *England*; and thence into *France*.

Upon the whole it is certain, that from Time immemorial, there have been ſymbolical Marks in uſe among Men, to diſtinguiſh them in Armies, and to ſerve as Ornaments of Shields and Enſigns; but theſe Marks were uſed arbitrarily as Devices, Emblems, Hieroglyphicks, &c. and were not regular *Armories*, like ours, which are hereditary Marks of the Nobility of a Houſe, regulated according to the Rules of Heraldry, and authoriz'd by Princes. See DEVICE, EMBLEM, HIEROGLYPHIC, &c.

Before *Marius*, even the Eagle was not the conſtant Enſign of the *Roman* Army; but they bore in their Standards a Wolf, Leopard, or Eagle indifferently, according to the Fancy of the Generals. See EAGLE, ENSIGN, &c.

The ſame Diverſity has been obſerved with regard to the *French* and *Engliſh*; on which account, Authors are divided when they ſpeak of the antient *Arms* of thoſe Countries.—In effect, it appears from all the beſt Authors, that the Armories of Houſes, as well as the double Names of Families, were not known before the Year 1000. And ſeveral have even endeavour'd to prove, that the Uſe of *Arms* did not begin till the Time of the firſt Croiſades of the Chriſtians in the Eaſt. See CROISADE.

The Truth is, it was the antient Tournaments that occaſioned the fixing of Armories. See TOURNAMENT.

*Henry* the Fowler, who regulated the Tournaments in *Germany*, was the firſt who introduc'd theſe Marks of Honour, which appear to be of an older ſtanding in *Germany*, than any other Part of Europe.—It was then that Coats of *Arms* were firſt inſtituted; which were a kind of Livery compos'd of ſeveral Bars, Fillets, and Colours; whence came the *Feſs*, *Bend*, *Pale*, *Chevron*, and *Lozenge*; which were ſome of the firſt Elements of *Armories*. See COAT, FESS, BEND, &c.

Thoſe who had never been concerned in any Tournament, had no *Arms*, tho' they were Gentlemen. See GENTLEMAN.

Such of the Nobility and Gentry as croſs'd the Sea in the Expeditions to the Holy Land, alſo aſſum'd theſe Tokens of Honour to diſtinguiſh themſelves.

Before theſe Times, we find nothing upon antient Tombs but Croſſes, with *Gothick* Inſcriptions and Repreſentations of the Perſons deceas'd. The Tomb of Pope *Clement* IV. who died in 1268. is the firſt whereon we find any *Arms*; nor do they appear on any Coins ſtruck before the Year 1336. We meet with Figures, it is true, much more antient, both in Standards and in Medals; but neither Cities nor Princes ever had *Arms* in Form; nor does any Author make mention of Blazoning before that Time.

Originally, none but the Nobility had a Right of bearing *Arms*; but King *Charles* V. having ennobled the *Pariſians*, by his Charter in 1371. he permitted them to bear *Arms*: From whoſe Example, the more eminent Citizens of other Places did the like.

*Camden* refers the Original of hereditary *Arms* in *England* to the Time of the firſt *Norman* Kings. He ſays their Uſe was not eſtabliſh'd till the Reign of K. *Henry* III. and inſtances in ſeveral of the moſt conſiderable Families in *England*, wherein, till that Time, the Son always bore different *Arms* from the Father.—About the ſame Time it became the Cuſtom here in *England*, for private Gentlemen to bear *Arms*; borrowing them from the Lords of whom they held in Fee, or to whom they were the moſt devoted.

ARMS, at preſent, follow the Nature of Titles, which being made hereditary, theſe are alſo become ſo; being the ſeveral Marks for diſtinguiſhing of Families and Kindreds, as Names are of Perſons and Individuals. See NAME, &c.

ARMS are variouſly diſtinguiſh'd by the Heralds.—

*Full* or *Entire* ARMS, are ſuch as retain their primitive Purity, Integrity, and Value; without any Alterations, Diminutions, Abatements, or the like. See DIMINUTION, ABATEMENT, &c.

'Tis a Rule, that the ſimpler and leſs diverſified the *Arms*, the more noble and antient they are.—For this Reaſon, *Garcias Ximenes*, firſt King of *Navarre*, and his Succeſſors for ſeveral Ages, bore only Gules, without any Figure at all.

The *Arms* of Princes of the Blood, of all younger Sons and junior Families, are not pure, and full; but diſtinguiſhed and diminiſhed by proper Differences, &c. See DIFFERENCE.

*Charged* ARMS, are ſuch as retain their antient Integrity and Value; with the Addition of ſome new honourable Charge or Bearing, in Conſideration of ſome noble Action. See CHARGE.

*Speaking*, or *Vocal* ARMS, are thoſe wherein the Figures bear an Alluſion to the Name of the Family.—Such are thoſe of the Family of *la Tour* in *Auvergne*, who bear a Tower; that of the Family of *Prado* in *Spain*, whoſe Field is a Meadow. See DEVICE, MOTTO, &c.

Moſt Authors hold theſe the moſt noble and regular, as is ſhewn by an Infinity of Inſtances produced by Fa. *Varenne* and *Menetrier*.—They are much debaſed, when they come to partake of the Rebus. See REBUS.

ARMS are alſo ſaid to be *Party*, or divided; *Couped*, *Quartered*, &c. See PARTI, COUPE, QUARTERING, &c.

ARMS are ſaid to be *falſe* and irregular, when there is ſomething in them contrary to the eſtabliſhed Rules of Heraldry.—As, when Metal is put on Metal, or Colour on Colour, &c. See METAL and COLOUR.

The Laws, and other Affairs of *Arms*, with the Cognizance of Offences committed therein, belong, among us, to the *Earl-Marſhal*, and *College of Arms*. See MARSHAL and COLLEGE *of Arms*.

ARMS, in Faulconry, are the Legs of an Hawk, from the Thigh to the Foot. See HAWK and HAWKING.

*King at* ARMS,
*Herald at* ARMS,
*Pourſuivant at* ARMS,
*College of* ARMS,
} fee {
KING *at Arms*,
HERALD,
POURSUIVANT
COLLEGE *of Arms*.

ARMY, a Body of Soldiers, Horſe and Foot, divided into Regiments, under the Command of a General, with ſeveral Ranks of ſubordinate Officers under him. See SOLDIER, GENERAL, OFFICER, REGIMENT, &c. ſee alſo CAVALRY, INFANTRY, &c.

This is to be underſtood of a *Land Army*.—A *Naval* or *Sea Army*, is a Number of Ships of War, equipp'd and mann'd with Marines, under the Command of an Admiral, with other inferior Officers under him. See NAVY, ADMIRAL, SHIP, &c.

We ſay, an *Army* ranged in Form of Battle—The March of an *Army*—The Retreat of an *Army*—The Review of an *Army*, &c. See MILITIA, BATTLE, MARCH, RETREAT, REVIEW, CAMP, &c.

An *Army* is uſually divided into three Corps; the Vanguard, Rear-guard, and Main-Body. See VAN-GUARD, REAR-GUARD, and BODY.

ARMIES are alſo rang'd in Lines, Columns, &c. with Wings. See LINE, COLUMN, WING, &c.

Our *Armies* antiently were a ſort of Militia, compoſed chiefly of the Vaſſals and Tenants of the Lords. See VASSAL, TENANT, LORD, SERVICE, MILITIA, &c.

When each Company had ſerved the Number of Days or Months enjoined by their Tenure, or the Cuſtoms of the Fees they held; they returned Home. See TENURE, FEE, &c.

The *Armies* of the Empire conſiſt of divers Bodies of Troops, furniſhed by the ſeveral Circles. See EMPIRE and CIRCLE.

The Groſs of the French *Armies* under the *Merovingian* Race, conſiſted of Infantry. Under *Pepin* and *Charlemaign*, the *Armies* conſiſted almoſt equally of Cavalry and Foot: But ſince the Declenſion of the *Carlovingian* Line, the Fees being become hereditary, the national *Armies*, ſays *le Gendre*, are chiefly Cavalry.

The *Armies* of the Grand-Signior conſiſt moſt of Janizaries, Spahi's, and Timariots. See JANIZARY, SPAHI, and TIMARIOT.

ARNODI, in Antiquity, the ſame with *Rhapſodi*. See RHAPSODI.

The Word is compounded of the Greek ἀρνος, a Lamb, which was their uſual Reward; and ᾠδη, Song, Singing.

ARNOLDISTS, ARNALDISTS, a kind of Sectaries in the XIIth Century; thus called from their Chief, *Arnold of Breſſe*.—He declaimed much againſt the great Wealth and Poſſeſſions of the Church, and preached againſt Baptiſm and the Euchariſt.

After raiſing great Diſturbances at *Breſſe* and *Rome*, he was hang'd at this latter Place in 1155, and his Aſhes caſt into the *Tyber*.—His Diſciples were alſo call'd *Publicans*, or *Poplecans*.

AROMATIC, Aromaticus, is underſtood of a Drug, Plant, or the like, which yields a brisk, agreeable Smell, and a warm, ſpicy Taſte.

Such are Frankincenſe, Storax, Benjoin, Cinnamon, Mace, Cloves, Nutmeg, Pepper, &c.—Such alſo are Lavender, Marjoram, Sage, Thyme, Roſemary, &c. See Spice, &c.

The Word is form'd of the Greek αρωμα, of αρω, to make fit, accomodate; in regard Spices, which are all *Aromatic*, are uſed for the ſeaſoning and preparing of Meats.

Aromaticks, or *Aromatic* Medicines, are either ſimple or compound.—To this Claſs belong moſt Cardiac, Cephalic, and Carminative Remedies, with many ſtomachic ones. See Cardiac, Carminative, Cephalic, Stomachic, &c.

The *Aromaticum Roſatum*, is a compound officinal Powder, made of Red Roſes, Liquorice, Aloes Wood, Yellow Sanders, Cinnamon, Cloves, Mace, Gum, Tragacanth, Nutmegs, Cardamums, Galangals, Spikenard, Ambergreaſe and Muſk mix'd together.—It is chiefly preſcribed in Cordial and Cephalic Boles and Electuaries, to ſtrengthen the Stomach and Head, which all *Aromaticks* have a Tendency to.

Some Writers give the Title *Aroma Germanicum* to Elecampane, as preferring it, in that Intention, to Ginger itſelf. See Elecampane, &c.

*Aromaticks* are of particular Service in cold cachectic Habits, where the Load of Humours has been forced away by ſtrong Detergents and Catharticks; as they tend to ſtrengthen the Fibres, and prevent a Relapſe.—Hence they become of abſolute Uſe after Purging, and carrying off the Waters of a Dropſy; or in the Intervals thereof, to fortify the Springs, and prevent a filling again. See Dropsy.

ARONDE, in Fortification. See Queue *d'Aronde*.

ARPAGUS, in antient Inſcriptions, ſignifies a Child who died in the Cradle.

The *Romans* made no Funerals for their *Arpagi*.—They neither burnt their Bodies, nor made Tombs, Monuments, or Epitaphs for them; which occaſioned *Juvenal* to ſay,

*—Terra clauditur Infans*
*Vel minor igne rogi.*

In after-times it became the Cuſtom to burn ſuch as had lived to the Age of 40 Days, and had cut any Teeth; and theſe they called *Rapti*.

The Word *Arpagus* ſignifies the ſame thing in *Greek*. *Euſtathius* aſſures us, it was the Cuſtom among the *Greeks* never to bury their Children either by Night or full Day, but at the firſt Appearance of the Morning, which they called, Ἡμέρας ἁρπαγίω.

ARQUEBUSS, or Harquebuss, a large Hand-gun, ſomething bigger than our Muſquet; and called by ſome a *Caliever*. See Harquebuss.

Arquebuss *a Croc*, is a ſort of ſmall Fort-Arm, which carries a Ball of about three half Ounces; now only uſed in old *Caſtile*, and ſome Gariſons of the *French*.

The Word is deriv'd from the *Italian Arcobuſio*, or *Arcoabuſo*, form'd of *Arco*, a Bow, and *Buſio*, a Hole; becauſe of the Touch-Hole of an *Arquebuſs*, which ſucceeds to the Uſe of the Bow among the Antients.

ARRAIGN, or Arrain, in Law, ſignifies to ſet a Thing in Order, or in its Place. See Arrangement.

Thus, he is ſaid to *Arraign* a Writ of Novel Diſſeiſin, who prepares and fits it for Trial before the Juſtices of the Circuit. In this Senſe *Littleton* ſays, the Leſſee *arraigneth* an Aſſize of Novel Diſſeiſin.—To *arraign* the Aſſize, is to cauſe the Tenant to be called to make the Plaint, and to ſet the Cauſe in ſuch Order, as the Tenant may be forced to anſwer thereto.

A Priſoner is alſo ſaid to be *arraigned*, when he is indicted and brought forth to his Trial. See Indictment.—

*Spelman* is of Opinion the Word ſhould be written *Arrame*, from *Arramare*, and that from the old French *Arramir*, i. e. *Jurare, promittere, Solemniter profiteri*. Yet in the Regiſter we find no ſuch Word as *Arramare*; but in all the Writs of Aſſize, the Year-Books, &c. it is *Arrainavit*: The more natural Derivation is from the French *Arraiſonner*, i. e. *ad rationem ponere*, to call a Man to anſwer in Form of Law; which comes from the barbarous Latin *Adrationare*, i. e. *placitare*— In which Senſe, to *arraign* a Criminal, is *ponere eum ad rationem*.

ARRAIGNMENT, or Arrangement, in Law, the Act of *Arraigning*, or ſetting a Thing in Order. See Arraigning.

ARRAIATIO *Peditum*, the arraying of Foot Soldiers. See Arraying.

ARRAS-Hangings, a ſort of rich Tapeſtry, made at *Arras* in the County of *Artois* in *Flanders*. See Tapestry.

ARRANGEMENT, or Rangement, the Diſpoſition of the Parts of a Whole, in a certain Order. See Part and Disposition.

The modern Philoſophy ſhews us, that the Diverſity of Colours depends entirely on the Situation and the *Arrangement* of the Parts, which reflect the Light differently; the Diverſity of Taſte and Smells on the different *Arrangements* of the Pores, which render them differently ſenſible; and the Diverſity of Bodies on the different *Arrangement* of their Parts. See Body, &c.

The happy *Arrangement* of Words makes one of the greateſt Beauties of Diſcourſe. See Construction, &c.

ARRAY, in Law, the ranking or ordering a Jury or Inqueſt of Men impannel'd on any Cauſe. See Jury, Inquest, &c.

The Word may be derived either from the obſolete French *Array*, Order, or from *Raye*, a Line.—Hence the Verb, to *Array a Pannel*, Ann. 3 Hen. V. &c. q. d. to ſet forth the Men empanelled one by another. The *Array* ſhall be quaſhed, *ib.* By the Statute, every *Array* in Aſſize ought to be made four Days before.—Hence alſo, to challenge the *Array*; ſee Challenge.

ARRAYERS, *Arraiatores*, is uſed in ſome antient Statutes, for ſuch Officers as had care of the Soldiers Armour, and ſaw them duly accoutred in their Kinds. See Armour, Accoutrements, &c.

Such were the *Commiſſioners of Array*, appointed by King *Charles* I. in the Year 1642.

ARREARS, or Arrearages, the Remains of an Account; or a Sum of Money remaining in the Hands of an Accomptant. See Account and Accomptant.

The Word is alſo uſed more generally for a Remainder of Rents, or Monies unpaid at the due Time; whether they be Rents of a Manor, or any other Thing reſerved.

The Word is derived from the French *Arrerages*, which is formed from *arriere*, and that again from *retro*, behind.

ARREST, in common Law, an Execution of the Command of ſome Court, or Officer of Juſtice.—Hence, when a Perſon is legally ſtopp'd, apprehended, and reſtrained of his Liberty, for Debt, &c. he is ſaid to be *arreſted*, or put under an *Arreſt*; which is the beginning of *Impriſonment*. See Attachment, Imprisonment, and Hautelode.

To *move* or *plead in Arreſt of Judgment*, is to ſhew Cauſe why Judgment ſhould be ſtay'd, tho' there be a Verdict in the Cauſe. See Judgment and Verdict.

To *plead in Arreſt of taking the Inqueſt*, is to ſhew Cauſe why an Inqueſt ſhould not be taken. See Inquest.

The Word *Arreſt*, is originally French, and is uſed by them for a Decree, or Determination of a Cauſe debated to and fro: In which Senſe it ſeems deriv'd from the Greek ἀρεσὸν, *placitum*, the Pleaſure of the Court. See Arret.

ARRENTATION, Arrendare, in the Foreſt Law, the Licenſing an Owner of Lands in the Foreſt, to encloſe them with a low Hedge and ſmall Ditch, in conſideration of a yearly Rent. See Forest, Purlieu, &c.

*Saving the Arrentations*, denotes a Power reſerved to give ſuch Licenſes for a yearly Rent.

ARRESTANDIS *Bonis ne diſſipentur*, a Writ which lies for him whoſe Cattle or Goods are taken by another, who, during the Controverſy, makes, or is like to make them away, and will hardly be able to give Satisfaction for them afterwards.

ARRESTANDO *ipſum, qui pecuniam recepit ad proficiſcendum in Obſequium Regis*, &c. is a Writ which lies for the Apprehenſion of him that hath taken Preſt-Money for the King's Wars, and hides himſelf when he ſhould go. See Prest-*Money*.

ARRESTO *facto ſuper bonis Mercatorum Alienigenorum*, &c. is a Writ which lies for a Denizen againſt the Goods of Strangers of another Country found within this Kingdom, in Recompence of Goods taken from him in that Country, after he hath been denied Reſtitution there. See Mark.

This among the antient Civilians, was called *Clarigatio*, now barbarouſly *Repriſalia*. See Clarigatio and Reprisal.

ARRETED, Arrectatus, is ſometimes uſed in our antient Law-Books, for *imputed*, or laid to; as, No Folly may be *arreted* to one under Age.

ARRHABONARII, a Sect in Religion, who held that the Euchariſt is neither the real Fleſh and Blood of Chriſt, nor yet the Sign of them, but only the Pledge or Earneſt thereof.

The Word is derived from the Greek Ἀρραβων, *Arrha*, Earneſt.

ARRHA, Arrhes, or *Argentum Dei*. See Earnest, &c.

ARRHEPHORIA, a Feaſt among the *Athenians*, inſtituted in Honour of *Minerva*.—Boys, or, as ſome ſay, Girls, between 7 and 12 Years of Age, were the Miniſters that aſſiſted at this Feaſt. See Feast.

The Word is derived from the Greek Ἀρρηφόρια, which is compoſed of ἀρρητον, Myſtery, and φέρω, I carry.—This Feaſt was alſo called *Herſiphoria*, from *Herſe* the Daughter of *Cecrops*, on whoſe account it was eſtabliſh'd.

ARRIERE,

ARRIERE, a French Term, literally ſignifying the *hind*, or *poſterior* Part of any Thing; uſually wrote in *Engliſh*, abridgedly, *Rear*. See REAR.

ARRIERE-BAN, or ARIERE-*Ban*, in the French Cuſtoms, is a general Proclamation, whereby the King ſummons to the War all that hold of him; both his Vaſſals, *i. e.* the Nobleſſe, and the Vaſſals of his Vaſſals. See VASSAL, TENURE, &c.

To the Provoſt of *Paris* belongs the convoking and commanding of the *Ariere-Ban*. See PROVOST, &c.

M. *Caſeneuve* takes the Word to be compoſed of *Arriere* and *Ban*: The *Ban*, according to him, denotes the convening of the Nobleſſe or Vaſſals, who hold Fees immediately of the King; and *Arriere*, thoſe who only hold of the King mediately.—*Paſquier* obſerves, that the Word is frequently mentioned in the Salic Law.

ARRIERE-*Corps*. See CORPS.

ARRIERE-FEE, or FIEF, is a Fee dependant on ſome other ſuperior one. See FEE.

Theſe commenced at the Time when the Counts and Dukes, rendering their Governments hereditary in their Families, diſtributed to their Officers certain Parts of the royal Domains which they found in their Provinces; and even permitted thoſe Officers to gratify the Soldiers under them, with Parts thereof. See COUNT, DUKE, &c.

ARRIERE-GUARD. See REAR-*Guard*.

ARRIERE *Vaſſal*, or *Tenant*, the Vaſſal or Tenant of another Vaſſal or Tenant. See VASSAL, TENANT, &c. ſee alſo ARRIERE-FEE.

ARRONDIE, in Heraldry, a CROSS-*Arrondie*, or *rounded*, is that whoſe Arms are compoſed of Sections of a Circle, not oppoſite to each other, ſo as to make the Arm buldge out thicker in one Part than another; but both the Sections of each Arm lye the ſame Way, ſo that the Arm is every where of an equal Thickneſs; and all of them terminating at the Edges of the Eſcutcheon, like the plain Croſs. See CROSS.

ARSACIDES, ARSACIDÆ, the Deſcendants of *Arſaces* King of *Parthia*.

This *Arſaces*, according to the *Perſian* Chronicles, was of the Lineage of *Cyrus*; tho others affirm that he was deſcended from *Darius*.—Be this as it will, *Arſaces* having freed the *Parthians* from the Dominion of the *Seleucides*, they eſteemed him the Founder of their Monarchy, and would have all their future Kings bear his Name, and be called *Arſacids*. Whence the Poets have attributed the Appellation to the whole Nation.

The *Arſacides* began to reign in *Arſaces*, under *Seleucus* II. ſurnamed *Callinicus*, the third of the *Seleucides*, 240 Years before Chriſt; and continued about 460 or 470 Years; when *Artaxerxes* kill'd *Artabanus*, the laſt of the *Arſacides*, about the Year of Chriſt 227.

ARSENAL, a royal or publick Magazine, or Place appointed for the making, and keeping of Arms neceſſary either for Defence, or Aſſault. See ARMS and ARMORY.

The *Arſenal* of *Venice* is the Place where the Gallies are built and laid up.—The *Arſenal* of *Paris*, is that where the Cannon or great Guns are caſt. It has this Inſcription over the Door—

*Vulcania Tela Miniſtrat,*
*Tela Gigantæos debellatura furores.*

There are alſo *Arſenals*, or Store-houſes, appropriated to Naval Furniture and Equipments. See NAVY, YARD, &c.

The Word, according to ſome, is deriv'd from *Arx* or *Arcus*; or rather from *Ars*, an Engine; this being the Place where the Engines of War are preſerv'd.—Some derive it from *Arx Senatus*, as being the Defence of the Senate; others from the Italian *Arſenale*, or from the modern Greek *Arſenalis*; but the moſt probable Opinion is, that it is deriv'd from *Darſenaa*, which, in the Arabick, ſignifies an *Arſenal*.

ARSENIC, ARSENICUM, in natural Hiſtory, a ponderous mineral Subſtance, extremely cauſtic or corroſive, to the Degree of a violent Poiſon. See FOSSIL, CORROSIVE, &c.

The Word is compounded of the Greek ανερ, Man, and νικαω, I overcome, kill; alluding to its poiſonous Quality. See POISON.—

In an antient Manuſcript aſcribed to the Sybils, is a Verſe which plainly intimates *Arſenic*:

*Tetraſyllabus ſum; prima pars mei Virum,*
*Secunda Victoriam ſignificat.*

*Arſenic* is rank'd among the Claſs of Sulphurs. See SULPHUR.

There are divers Kinds of *Arſenic*; *viz.* Yellow, or Native; Red, and Cryſtalline.

*Native Arſenic* is of a Yellow, or Orange-colour; whence it is alſo denominated *Auripigmentum*, or *Orpiment*.—It is chiefly found in Copper-Mines, in a ſort of Glebes or Stones, of different Figures and Sizes. Its Colour, tho' always Yellow, yet admits of divers Shades and Mixtures, as a golden Yellow, reddiſh Yellow, green Yellow, &c. It is found to contain a Portion of Gold, but ſo little, as not to quit the Coſt of ſeparating it. See ORPIMENT.

Of this are prepared two other Kinds of *Arſenic*, viz. *White* and *Red*.

This, ſublimed with ſome other Matters, is the *Sandaracha Græcorum*. See SANDARACH.

Tho' ſome Naturaliſts will have Red *Arſenic*, and *Realgal*, two diſtinct Drugs, taking the latter for a native Mineral, and the former for a Preparation of a native *Arſenic*. See REALGAL.

*Red Arſenic*, called alſo *Realgal*, is only the native Yellow rubified by Fire.

The *White*, or *Cryſtalline*, is drawn from the Yellow, by ſubliming it with a Proportion of Sea-Salt.—'Tis this Species is chiefly in Uſe among us for real *Arſenic*. Some Authors give it a different Origin, and maintain it a native Matter, found in white ſcaly Glebes in the Mines.

White and Yellow *Arſenic* are alſo procurable from Cobalt: The Method of which, as practiſed in *Hungary*, is given us by Dr. *Krieg*, in the *Philoſophical Tranſactions*, N° 293.—The Cobalt being beat to Powder, and the light ſandy Part waſh'd off, by a Current of Water, they put what remains in a Furnace; the Flame of which paſſing over the Powder, takes along with it the Arſenical Part, in Form of a Smoak; which being receiv'd by a Chimney, and carried thence into a cloſe Brick Channel, ſticks by the Way to the Sides; and is ſcraped off, in form of a whitiſh or yellowiſh Powder.—From what remains of the Cobalt, they proceed to make *Smalt*. See SMALT.

The ſmalleſt Quantity of any of theſe *Arſenics*, being mixed with any Metal, renders it friable, and abſolutely deſtroys its Malleability.

Hence, the Refiners dread nothing ſo much as *Arſenic* in their Metals; nor could any thing be ſo advantageous to them, were ſuch a thing to be had, as a Menſtruum that would abſorb, or act on *Arſenic* alone; for then their Metals would be readily purified, without flying off, or evaporating. See REFINING.

A ſingle Grain of *Arſenic* will turn a Pound of Copper into a beautiful ſeeming Silver. This Hint many Perſons have endeavoured to improve on, for the making of Silver, but in vain, as it could never be brought to ſuſtain the Hammer: Some have been hang'd for coining Species of this ſpurious Silver. See SILVER, COINING, &c.

The Chymiſts furniſh ſeveral Preparations of *Arſenic*, which all turn on repeated Ablutions and Sublimations, to blunt the corroſive Salts thereof, and change them into a ſafe Medicine, after the Manner of Sublimate—Such are Ruby of *Arſenic*, &c. But it ſcarce appears worth the Pains: And whatever ſome may urge, *Arſenic* ſhould never be uſed inwardly in any Form, as gnawing and tearing the Parts, and occaſioning mortal Convulſions.—Its Fume taken into the Lungs, kills inſtantly: And the oftner it is ſublimed, ſays *Boerhaave*, the ranker it grows.—Butter and Cow's Milk taken in large Quantities, prove good Antidotes againſt *Arſenic*.

*Regulus of* ARSENIC, is the moſt fix'd and compact Part thereof, prepared, by mixing it with Pot-aſhes and Soap, diſſolving the whole, and caſting it into a Mortar; upon which the heavieſt Part falls to the Bottom. See REGULUS.

*Cauſtic Oil of* ARSENIC, is a Butyrous Liquor, like Butter of Antimony, prepared of *Arſenic* and corroſive Sublimate.—It ſerves to eat off fungous Fleſh, cleanſe carious Bones, &c.

ARSENICAL *Magnet*, *Magnes Arſenicus*, is a Preparation of Antimony, with Sulphur and White *Arſenic*.

ARSENOTHELYS, among the antient Naturaliſts, the ſame with *Hermaphrodite*. See HERMAPHRODITE.

The *Greeks* uſed the Word both of Men and Beaſts.—It is form'd from αρσην and θηλυς, Male and Female.

ARSIS and *Theſis*, a Phraſe in muſical Compoſition; where a Point being inverted, is ſaid to move *per Arſin & Theſin*; that is, riſes in one Part, and falls in another; or, on the contrary, falls in one Part, and riſes in another: Whence is produc'd a very agreeable Variety.

ART, ARS, is defined by the Schoolmen, a Habit of the Mind operative or effective according to right Reaſon; or, ſomewhat more intelligibly, a Habit of the Mind preſcribing Rules for the due Production of certain Effects; or the introducing of Changes in Bodies from ſome Foreknowlege and Deſign in a Perſon endued with a Principle or Faculty of Acting. See HABIT, ACTION, &c.

On this Footing, *Arts* are divided into *active* and *factive*.—Such as leave no external Effect after their Operation, as Dancing, Fiddling, &c. are called *active* or *practical Arts*: Thoſe which do leave an Effect, as Painting, &c. are called *factive*, or *Effective* Arts. *Magn. Moral.* lib. 1. cap. 35.

ART is better defined, after my Lord *Bacon*, a proper Diſpoſal of the Things of Nature by human Thought and Experience, ſo as to make them anſwer the Deſigns and Uſes of Mankind. See EXPERIMENT, &c.

Nature, according to that Philoſopher, is ſometimes free, and at her own Diſpoſal; and then ſhe manifeſts herſelf in a regular Order: as we ſee in the Heavens, Plants, Animals, &c.—Sometimes ſhe is irregular, and diſorderly, either thro' ſome uncommon Accident, or a Depravation in Matter, when the Reſiſtance of ſome Impediment perverts her from her Courſe; as in the Production of Monſters. See MONSTER.—At other Times ſhe is ſubdued and faſhion'd by human Induſtry, and made to ſerve the ſeveral Purpoſes of Mankind.

This laſt is what we call *Art*; in which Senſe, *Art* ſtands oppoſed to Nature. See NATURE, ARTIFICIAL, &c.

Hence, the Knowledge of Nature may be divided into the Hiſtory of Generations, of Prætergenerations, and of *Arts*.—The firſt conſiders Nature at Liberty; the ſecond, her Errors; and the third, her Reſtraints.—

ART is alſo uſed for Science or Knowledge reduced into Practice. See KNOWLEDGE.

Several of the Schoolmen hold Logic and Ethicks to be *Arts*; inaſmuch as they do not terminate in mere Theory, but tend to Practice. See THEORY and PRACTICE; ſee alſo LOGICKS, ETHICKS, &c.

In this Senſe, ſome Branches of the Mathematicks are *Arts*, others Matters of Doctrine, or Science. See MATHEMATICKS.

Staticks is wholly ſcientifical, as it takes up with the mere Contemplation of Motion: Mechanicks, on the contrary, is an *Art*, as it reduces the Doctrines of Staticks into Practice. See MATHEMATICKS.

ART is principally uſed for a certain Syſtem or Collection of Rules, Precepts, and Inventions or Experiments, which being duly obſerv'd, make the Things a Man undertakes ſucceed, and render them advantageous and agreeable. See RULE, PRECEPT, EXPERIMENT, &c.

In this Senſe, *Art* is oppoſed to *Science*, which is a Collection of ſpeculative Principles and Concluſions. See SCIENCE.

*The Nature and Origin of* Art, *and its Diſtinction from Science, will be farther conſider'd in the* Preface *to this Work.*

*Arts*, in this Senſe, may be divided, with reſpect to their Scope and Object, into *human*, as Medicine; and *divine*, as Theology. See MEDICINE and THEOLOGY.

*Human*, again, may be ſubdivided into *Civil*; as Law, Politicks, &c. *Military*, as Fortification, &c. *Phyſical*, as Agriculture, Chymiſtry, Anatomy, &c. *Metaphyſical*, as Logicks, pure Mathematicks, &c. *Philological*, as Grammar, Criticiſm, &c. *Mercantile*, to which belong the Mechanical Arts and Manufactures. See each in its Place.

ARTS are more popularly divided into *Liberal* and *Mechanical*.

The *liberal Arts* are thoſe that are noble, and ingenuous; or which are worthy of being cultivated without any regard to Lucre ariſing therefrom.—Such are *Poetry*, *Muſick*, *Painting*, *Grammar*, *Rhetoric*, the *military Art*, *Architecture*, and *Navigation*. See LIBERAL; ſee alſo POETRY, MUSIC, GRAMMAR, RHETORIC, &c.

*Mechanical Arts*, are thoſe wherein the Hand, and Body are more concern'd than the Mind; and which are chiefly cultivated for the ſake of the Profit they bring with them.—Of which kind are moſt of thoſe which furniſh us with the Neceſſaries of Life, and are popularly known by the Name of *Trades*.—Such are *Weaving*, *Turnery*, *Brewing*, *Maſonry*, *Clock-making*, *Carpentry*, *Joinery*, *Foundery*, *Printing*, &c. See TRADE, MANUFACTURE, &c.

The *mechanical Arts* take their Denomination from μηχανη, Machine; as being all practiſed by means of ſome Machine or Inſtrument. See MACHINE, &c.

With the *liberal Arts* it is otherwiſe; there being ſeveral of them which may be learnt and practiced without any Inſtrument at all: As Logic, Eloquence, Medicine properly ſo called, &c.

The *Arts* which relate to the Sight and Hearing, My Lord *Bacon* obſerves, are reputed liberal beyond thoſe which regard the other Senſes, which are chiefly employed in Matters of Luxury. See SENSE.

It has been well noted by ſome Philoſophers, that during the Riſe and Growth of States, the military *Arts* chiefly flouriſh; when arrived at their Height, the liberal *Arts*; and when on the declining hand, the voluptuary *Arts*.

There are alſo divers particular *Arts*; as the *Art* of Memory, the *Art* of Decyphering, *Art* of Flying, of Swimming, *Art* of Diving, &c. See MEMORY, DECYPHERING, FLYING, SWIMMING, DIVING, &c.

*Democritus* maintain'd, that Men learnt all their *Arts* from Brutes; the Spider taught 'em Weaving, the Swallow Building, the Nightingale Muſic; and ſeveral Medicine.

*The Nature, Office, Hiſtory*, &c. *of the ſeveral Arts; will be found under their reſpective Articles in this Dictionary.*

The Word *Art* is derived from the Greek αρετη, Virtue, Induſtry.—This is the Opinion of *Donatus*, on the firſt Scene of *Terence*'s *Andria*: *Ars* ἀπὸ τῆς ἀρετῆς, *dicta eſt per Syncopen*. Others derive it from ἀρὴς, Utility, Profit; which is found in that Senſe in *Æſchylus*.

ART is alſo applied to divers imaginary, and even ſuperſtitious Doctrines and Inventions.—Such are,

*Lully*'s ART, or the *Tranſcendental Art*, by means whereof a Man may diſpute whole Days on any Topic in Nature, without underſtanding the leaſt tittle of the Thing in Diſpute; thus called from its Inventor *Raimond Lully*, or *Ramon Lull*.

It conſiſts chiefly in diſpoſing the ſeveral Sorts of Beings into divers Scales or Climaxs, to be run down in a deſcending Progreſſion.—Thus, whatever were propoſed to be talk'd on, they wou'd ſay, firſt, it is a *Being*, and conſequently, *one*, *true*, *good*, *perfect*: then, it is either *created*, *or increated*. Again, every created Being is either *Body* or *Spirit*, &c.

*Angelical* ART, or *the* Art *of Spirits*, is a Method of attaining to the Knowledge of any thing deſired, by means of an Angel, or rather of a Dæmon. See DÆMON.

Under this come the *Arts* of *Magic*, *Sorcery*, *Witchcraft*, &c. See MAGIC, SORCERY, WITCHCRAFT, &c.

*Term of* ART, *Maſter of* ARTS, } ſee { TERM, MASTER, DEGREE, FACULTY.

*Ars Notoria*, is a manner of acquiring Sciences by Infuſion, without any other Application than a little Faſting, and making a few Ceremonies. See FASTING, &c.

They who make Profeſſion of this *Art*, affirm that it was by means hereof that *Solomon*, in one Night's Time, acquired all his Knowledge.—*Delrio* ſhews it to be a criminal Curioſity, and founded on a ſecret Compact with the Devil. *Diſquiſ. Mag.* p. 11. It was ſolemnly condemn'd by the Sorbonne, in 1320.

St. *Anſelm*'s ART, is a ſuperſtitious Manner of curing Wounds, by barely touching the Linen wherewith thoſe Wounds had been cover'd. See WOUND and SYMPATHY.

*Delrio*, in his *Diſquiſitiones Magicæ*, obſerves that ſome *Italian* Soldiers, who practiced this *Art*, attributed the Invention thereof to St. *Anſelm*; but aſſures us withal, that it was really invented by *Anſelm* of *Parma*, a celebrated Magician.

St. *Paul*'s ART, is a Branch of the *Ars Notoria*, ſo called as being ſuppoſed to have been taught by St. *Paul*, after his being taken up into the third Heaven.

ART *and Part*, is a Term uſed in the North of *England*, and in *Scotland*.—When any one is charged with a Crime, they ſay he is *Art and Part* in committing the ſame; that is, he was both a Contriver, and acted a Part in it. See PRINCIPAL, ACCESSARY, &c.

ARTERIOTOMY, in Chirurgery, &c. the Operation of opening an Artery; or of letting of Blood by the Arteries; practiced in ſome extraordinary Caſes. See ARTERY, PHLEBOTOMY, &c.—For the Effects hereof, ſee ANEURISMA.

*Arteriotomy*, is a very dangerous Operation, ſeldom uſed with Deſign, except in the Temples, and behind the Ears, where the Arteries are eaſily cloſed again by reaſon of the *Cranium* underneath, which would be very difficult in any other Part.—In the other Parts it uſually proves fatal; and we have numerous Inſtances of Perſons kill'd in Bleeding, by a Miſtake of an Artery for a Vein.

*Catherwood* endeavours to introduce *Arteriotomy* in apoplectic Caſes, as much preferable to Venæſection; but he is not much followed. See APOPLEXY.

The Word is form'd of αρτηρια, and τεμνω, *ſeco*, I cut.

ARTERY, ARTERIA, in Anatomy, a hollow fiſtulous Canal, appointed to receive the Blood from the Ventricles of the Heart, and diſtribute it to all Parts of the Body, for the Maintainance of Heat and Life, and the Conveyance of the neceſſary Nutriment. See BLOOD, HEART, LIFE, &c.

The Word is Greek, αρτηρια; which ſome imagine deriv'd from ἀὴρ, *Aer*, the Air, and τηρέω, *ſervo*, to keep: But others who underſtand the Uſe of the Part better, derive it from ἀπὸ τῦ ἀιρεῖν, becauſe of its continual Throbbing or Beating.

The *Arteries* are ordinarily compoſed of three Coats or Membranes. The firſt or outermoſt, nervous or tendinous; being a Thread of fine Blood Veſſels with Nerves, for nouriſhing the other Coats. The ſecond muſcular, made up of circular, or rather ſpiral Fibres; of which there are more or fewer *Strata*, according to the Bigneſs of the *Artery*: Theſe Fibres have a ſtrong Elaſticity, by which they contract themſelves with Force, when the Power by which they have been ſtretched out, ceaſes. The third and inmoſt Coat is a fine, denſe, tranſparent Membrane, which keeps the Blood within its Channels, which otherwiſe upon the Dilatation

of

of an *Artery*, would eaſily ſeparate the ſpiral Fibres from one another. As the *Arteries* grow ſmaller, theſe Coats grow thinner.

All the *Arteries* are conical, *i. e.* begin with a Trunk, and growing leſs and narrower, end in Branches ſo minute, that they eſcape the Sight, unleſs aſſiſted with Microſcopes; by which, in the Tails of Tadpoles and very ſmall Eels, the Extremities of the *Arteries* ſeem, by the ſwift uninterrupted Courſe of the Blood, to be inoſculated or continued to the Originations of the Veins: Tho by the Tranſparency of thoſe Veſſels, the actual Continuation be not viſible. See ANASTOMOSIS, and INOSCULATION.

The Coats of the *Arteries* are of a very denſe, cloſe Contexture; by which means the Blood not being viſible thro' them, they generally appear white. Add, that the Blood proceeding from a greater Capacity to a leſs, is thereby ſomewhat obſtructed in its Paſſage; but being forced on by the Motion of the Heart, diſtends the Coats, and thereby occaſions a ſaliant Motion, call'd the *Pulſe*.—By this Thickneſs and Whiteneſs of the *Arteries*, with the Pulſation obſerved therein, *Arteries* are diſtinguiſh'd from Veins. See VEIN.

The Pulſe of the *Arteries*, like that of the Heart, conſiſts of two reciprocal Motions, a Syſtole or Contraction, and a Diaſtole or Dilatation: But they keep oppoſite Times; the Syſtole of the one anſwering to the Diaſtole of the other. See PULSE, SYSTOLE, and DIASTOLE.

All the *Arteries* of the Body, we have obſerved, ariſe in two large Trunks, from the two Ventricles of the Heart. That from the right Ventricle, is called the *Pulmonary Artery*, ſerving to carry the Blood into the Lungs: That from the left, the *Aorta*, or *great Artery*; which, by its numerous Ramifications, furniſhes all the reſt of the Body, as far as the remoteſt Stages of Circulation. See CIRCULATION *of the Blood*.

The *Great Artery*, after it leaves the Heart, divides into two large Trunks, called the *aſcending*, or upper; and *deſcending*, or lower, *Trunks*. See AORTA.

The aſcending Trunk, or *Aorta aſcendens*, conveys the Blood to the Head, and other upper Parts of the Body, and is ſubdivided into three Branches.—The firſt, the right *Subclavian*, whence ariſe the *Carotid*, *Vertebral*, *Cervical*, right *Axillary*, &c.—The ſecond, is the *left Carotid*.—The the third, the *left Subclavian*; whence ariſe the *left Cervical*, *Vertebral*, and *Axillary*.—See each deſcribed in its proper Article, SUBCLAVIAN, CAROTID, VERTEBRAL, CERVICAL, AXILLARY, &c.

The *deſcending Trunk*, or *Aorta deſcendens*, carries the Blood to the Trunk, and the lower Parts of the Body.

Out of this ariſe the *Bronchial*, *Intercoſtals*, *Coeliac*, *Phrenic*, *Meſenteric*, *Emulgent*, *Spermatic*, *Iliac*, *Umbelical*, *Epigaſtric*, *Hypogaſtric*, *Crural*, &c. with their ſeveral Ramifications.—See each in its Place.

A Draught of the ſeveral *Arteries*, with their Diviſions and Subdiviſions, in their natural Order and Poſition, as taken from the Life; ſee in Plate *Anatomy*.

ARTERY, is alſo applied to that fiſtulous Tube, compoſed of Cartilages and Membranes, which deſcends from the Mouth to the Lungs, for the Conveyance and Reconveyance of the Air, in Reſpiration. See RESPIRATION and LUNGS.

This is particularly called the *Aſpera Arteria*, or *Trachea*, and popularly the *Wind-pipe*. See TRACHEA.

ARTERIAL, or ARTERIOUS, in Anatomy, ſomething that relates to the Arteries. See ARTERY.

The *arterial* Blood is ſuppoſed more warm, florid, and ſpirituous than the venal. See BLOOD.

The Antients gave the Name *Vena Arterioſa*, to the Tube or Canal whereby the Blood paſſes from the right Ventricle of the Heart to the Lungs, as ſuppoſing it of an intermediate Nature and Office, between an Artery and a Vein.—The Moderns finding it a real Artery, call it the Pulmonary Artery. See PULMONARY.

The *Canalis Arterioſus*, is a Tube in the Heart of a Fœtus; which with the Foramen Ovale, ſerves to maintain the Circulation of the Blood, and divert it from the Lungs. See CANALIS *Arterioſus*, FÆTUS, CIRCULATION, and FORAMEN *Ovale*.

ARTHRITIS, in Medicine, a Diſeaſe better known under the Name of the *Gout*. See GOUT.

The Word is form'd from the Greek αρθρον, *Articulus*, a Joint; in regard the chief Seat of that Diſtemper is in the Joints.—

ARTHRODIA, in Anatomy, a Species of Articulation, wherein a flat Head of one Bone is received into a ſhallow Socket of another. See BONE and ARTICULATION.

Such is that of the *Humerus* with the *Scapula*. See HUMERUS, &c.

The Word is formed from the Greek αρθρον, *Articulus*, and δεχομαι, *recipio*, I receive.

ARTHROSIS, or ARTHRON, in Anatomy, a Juncture of two Bones, deſigned for Motion; called alſo *Articulation*. See ARTICULATION.

The Word is formed from the Greek αρθρον, *Articulus*, Juncture, Joint.

ARTICLE, ARTICULUS, a little Part or Diviſion of a Book, Writing, or the like.—*Aquinas* divides his Sum of Theology, into ſeveral Queſtions; and each Queſtion into divers *Articles*.—Such an Account conſiſts of ſo many *Articles*.

ARTICLE is alſo uſed for the ſeveral Clauſes, or Conditions of a Convention, Treaty of Peace, or the like. See TREATY, CONVENTION, &c.

In this Senſe we ſay, *Articles of Marriage*, *Articles of Capitulation*, *Preliminary Articles*, &c.—The Eſtabliſhment of an *Eaſt-India* Company at *Oſtend*, is a direct Breach of the eighth and ninth *Articles* of the Treaty of *Munſter*.

ARTICLES *of the Clergy*, *Articuli Cleri*, are certain Statutes touching Perſons and Cauſes eccleſiaſtical, made under *Edward* II. and III.

ARTICLE *of Faith*, is ſome Point of Chriſtian Doctrine which we are obliged to believe, as having been revealed by God himſelf, and allow'd and eſtabliſh'd as ſuch by the Church. See FAITH, &c.

ARTICLE, *Articulus*, in Anatomy, is a Joint, or Juncture, of two or more Bones of the Body. See BONE, JOINT, &c. ſee alſo ARTICULATION.

ARTICLE of *Death*, *Articulus Mortis*, the laſt Pangs, or Agony of a dying Perſon. See AGONY.

The Pope uſually ſends his Benediction to the Cardinals, &c. in *Articulo Mortis*.

ARTICLE, in Arithmetic, ſignifies the Number 10, or any Number juſtly diviſible into ten Parts; as 20, 30, 40, &c.—Theſe are ſometimes called *Decads*, and ſometimes *round Numbers*: *Harris*.

ARTICLE, in Grammar, is a Particle uſed in moſt Languages, for the declining of Nouns, and denoting the ſeveral Caſes and Genders thereof. See PARTICLE, NOUN, CASE, GENDER, &c.

The Uſe of *Articles* ariſes hence, that in Languages which have not different Terminations to expreſs the different States and Circumſtances of Nouns; there is ſomething required to ſupply that Office. See TERMINATION.

The *Latins* have no *Articles*; but the *Greeks*, and moſt of the modern Languages, have had Recourſe hereto, for fixing and aſcertaining the Vague Signification of common and appellative Names. See NAME and APPELLATIVE.

The *Greeks* have their ὁ, the eaſtern Tongues their *he Emphaticum*; the *Italians* their *il*, *lo*, and *la*.—The *French* their *le*, *la*, and *les*.—The *Engliſh* alſo have two *Articles*, *A* and *The*; which being prefixed to Subſtantives, apply their general Signification to ſome particular Thing.—Thus we ſay, *A Man*; that is, ſome Man or other: *The Man*; that is, that certain Man.—

Hence it appears that *A* is uſed in a larger, and more general Senſe, being applied indifferently to any particular Perſon or Thing.—Whereas, *The* diſtinguiſhes individually, and ſhews what particular Thing is ſpoke of.—If the Subſtantive to which the Particle *A* is affix'd, begin with a Vowel, or an *H*; we write and ſpeak it, *An*: So we ſay, An Eye, an Hour, &c.

Some Grammarians make the *Article* a diſtinct Part of Speech; others will have it a Pronoun; and others, with Mr. *Greenwood*, a Noun adjective. See SPEECH, PRONOUN, ADJECTIVE, &c.

*Articles* are Things of great Service in a Language, as they contribute to the more neat and preciſe expreſſing of ſeveral Properties and Relation which muſt otherwiſe be loſt.—And hence one great Diſadvantage of the Latin, above other Languages which have *Articles*; in that the *Article*, being either expreſſed, or left out, makes an Alteration in the Senſe, which the *Latins* cannot diſtinguiſh.—Thus when the Devil ſaid to our Saviour, *Si tu es filius Dei*, it may either be underſtood, *if you are a Son of God*, or, *if you are the Son of God*.—*Scaliger*, from the Want of *Articles* in the Latin, concluded them uſeleſs.

The *Italians* even prefix Articles to proper Names, which dont naturally need any, in regard they do of themſelves ſignify Things individually.—Thus they ſay, *Il Arioſto*, *Il Taſſo*, *Il Petrarcha*.—Even the *French* join the *Article* to the proper Names of Kingdoms, Provinces, &c. as *la Suede*, *la Normandie*.—And we our ſelves do it to the Names of certain Mountains and Rivers; as the *Rhine*, the *Danube*, the *Alps*, &c.

*Indefinite* ARTICLE. The *Article A* is ſaid to be *indefinite*, becauſe applied to Names taken in their more general, and confuſed Signification; as, He travelled with the Port and Equipage of a Prince; where the Word *Prince* may be underſtood of any Prince in the general.

*Definite* ARTICLE. The *Article The* is ſaid to be *definite*, or *demonſtrative*, as fixing the Senſe of the Word it is put before, to one individual Thing. See DEFINITE.

Fa. *Buffier* diſtinguiſhes a third kind of *Articles* in the French, which he calls intermediate, or *partitive*; ſerving to denote part of the Thing expreſſed by the Subſtantives they

added to: As, *Des Scavans ont cru*, ſome learned Men have ſuppoſed, &c. I want, *De la lumiere*, ſome Light, &c.

The Uſe and Diſtinction of the definite and indefinite *Articles le* or *la*, and *de* or *du*, make one of the greateſt Difficulties in the French Tongue, as being utterly arbitrary, and only to be acquired by Practice.—We may add, that in the *Engliſh*, tho' the *Articles* be ſo few, yet they are of ſuch frequent Uſe, that they eaſily diſcover any Stranger, from a natural Engliſhman. See ENGLISH and FRENCH.

ARTICULARIS, ARTICULAR, in Medicine, an Epithet applied to a Diſeaſe which more immediately infeſts the *Articuli*, or Joints.—The *Morbus Articularis*, is the ſame with the Greek ἀρθρῖτις, and our *Gout*. See ARTHRITIS and GOUT.

ARTICULATE *Sounds*, are thoſe which expreſs the Letters, Syllables, &c. of any Alphabet, or Language. See SOUND, LETTER, ALPHABET, &c.

Brutes cannot form *articulate* Sounds, cannot *articulate* the Sounds of their Voice; excepting ſome few Birds, as the Parrot, Pye, &c. See VOICE.

ARTICULATION, ARTICULATIO, in Grammar, a diſtinct Pronunciation of Words and Syllables. See PRONUNCIATION, &c.

*Articulation*, is that part of Grammar which treats firſt of Sounds, and Letters; then of their Combination, for the compoſing of Syllables and Words. Hence he who pronounces his Words clearly, and diſtinctly, is ſaid to pronounce them *articulately*. See LETTER, SYLLABLE, WORD, &c.

ARTICULATION, in Anatomy, a Juncture or Connexion of two Bones, deſign'd for Motion. See BONE, MOTION, &c.

There are various Forms and Kinds of *Articulation*, ſuited to the ſeveral Sorts of Motion and Action.—That which has a notable and manifeſt Motion, is called *Diarthroſis*. See DIARTHROSIS.—This is ſubdivided into *Enarthroſis*, *Arthrodia*, and *Ginglymus*. See each in its Place, ENARTHROSIS, ARTHRODIA, and GINGLYMUS.

That which only admits of an obſcure Motion, is called *Synarthroſis*; ſee SYNARTHROSIS.—It is ſubdivided into *Symphiſis*, *Sutura*, *Harmonia*, *Syſſarcoſis*, *Syncondroſis*, *Syneuroſis*, *Syntenoſis*, and *Synymenſis*. See SYMPHISIS, SUTURA, HARMONIA, &c.

ARTIFICIAL, ARTIFICIALIS, ſomething made by Art; not produced naturally, or in the common Courſe of Things. See ART.

'Art is uſually conſider'd as a Thing very different from 'Nature; and *artificial* Things, from natural ones: Whence 'ariſes another more grievous Error, *viz.* that Art is a dif-'ferent Principle built upon Nature, and of ſuch Power, 'as to be able, either to perfect what Nature had begun, 'to rectify and amend her when diſordered, or to free her 'when confined; tho' not utterly to divert or tranſmute 'her.—But the Truth is, *artificial* Things do not differ 'from natural ones in Nature or Form, but only in the 'Efficient: Man has no Power over Nature, beſide what 'he has by Motion; in vertue whereof, he can apply natu-'ral Bodies to, or remove them from, one another. Where 'ſuch Application, or joining of active Things to paſſive 'ones, is practicable, there may Man do any thing; where 'it is not, nothing. Gold we ſometimes ſee purified by the 'Chymiſt's Fire; and ſometimes find it perfectly pure in 'the Sands, Nature herſelf having done the Buſineſs: So 'the Rainbow is ſometimes form'd on high in the Water 'of a Cloud; and ſometimes here below by a ſprinkling of 'Water. Nature, therefore, governs all Things; under 'this Subordination, of the Courſe of Nature, the Latitude 'or Evagation of Nature, and *Art*, or Man ſuper-added 'to her other Works. *Bacon de Augmen. Scient.* lib. II. See NATURE.

ARTIFICIAL frequently coincides with *factitious*. See FACTITIOUS.

Thus we have *artificial* Sal-Armoniac, *artificial* Borax, &c. See ARMONIAC and BORAX.

ARTIFICIAL Day. See DAY.

ARTIFICIAL Globe, Sphere, &c. See GLOBE, SPHERE, &c.

ARTIFICIAL Horizon. See HORIZON.

ARTIFICIAL Eye. See EYE.

ARTIFICIAL *Numbers*, are *Secants*, *Sines*, and *Tangents*.—See SECANT, SINE, and TANGENT; ſee alſo LOGARITHMICAL.

ARTIFICIAL *Lines*, on a Sector or Scale, are certain Lines ſo contrived, as to repreſent the Logarithmick Sines, and Tangents; which, by the help of the Line of Numbers, will ſolve all Queſtions in Trigonometry, Navigation, &c. pretty exactly. See LINE, SCALE, SECTOR, &c.

ARTIFICIAL *Fire-works*, are Compoſitions of inflammable Materials; chiefly uſed on ſolemn Occaſions, by Way of Rejoycing. See FIRE-WORKS.

ARTIFICIAL *Arguments*, in Rhetoric, are all ſuch Proofs or Conſiderations as ariſe from the Genius, Induſtry, or Invention of the Orator. See ARGUMENT and INVENTION.

Such are *Definitions*, *Cauſes*, *Effects*, &c. which are thus called to diſtinguiſh them from Laws, Authorities, Citations, and other Arguments of that Nature, which are ſaid to be *inartificial* Arguments. See DEFINITION, AUTHORITY, &c.

ARTILLERY, the heavy Equipage of War; comprehending all ſorts of great Fire-arms with their Appurtenances, as Cannons, Mortars, Bombs, Petards, Muſquets, Carbines, &c. See CANNON, MORTAR, GUN, PETARD, &c.

In this Senſe, the Word *Artillery* coincides with what we otherwiſe call *Ordnance*. See ORDNANCE.

There was no attacking ſuch a Place for want of heavy *Artillery*.—The *Perſians*, we are told in the Embaſſy of *Figueroa*, would never, in 1518, have either *Artillery* or Infantry in their Armies, by reaſon they hinder'd their Charging and retiring with ſo much Nimbleneſs; wherein their chief military Addreſs and Glory lay.

The Term *Artillery* is ſometimes alſo applied to the antient Inſtruments of War, as the *Catapultæ*, battering Rams, &c. See ARIES, MACHINE, CATAPULTÆ, &c.

*Park of* ARTILLERY, is that Place in a Camp ſet apart for the *Artillery*, or large Fire-arms.

*Traile* or Train of *Artillery*, is a Set, or certain Number of Pieces of Ordnance mounted on Carriages, with all their Furniture fit for Marching.—To it frequently belong Mortar-pieces, with Bombs, Carcaſſes, &c. under the Direction of a Maſter of the *Artillery*. See MASTER.

There are Trains of *Artillery* in moſt of the King's Magazines, as in the *Tower*, at *Portſmouth*, *Plimouth*, &c.

ARTILLERY-*Company*, is a Band of Infantry, conſiſting of 600 Men, making part of the Militia or City-guard. See MILITIA.

Their Officers are a *Leader*, two *Lieutenants*, two *Enſigns*, three *Gentlemen of Arms*, &c.

ARTILLERY is alſo uſed for what we otherwiſe call *Pyrotechnia*, or the Art of Fire-works, with the Inſtruments and Apparatus belonging thereto. See PYROTECHNIA.

The Writers upon *Artillery*, are *Caſimir Semionowitz*, *Apole*, *Buchnerus*, *Braunius*, *Mieth*, and *De S. Remigio*, in his *Memores de Artillerie*, which contains an accurate Deſcription of all the Machines and Inſtruments of War now in Uſe, with every Thing that relates thereto.

ARTOTYRITES, or ARTOTYRITÆ, a Sect in Religion; being a Branch of the antient Montaniſts, who firſt appear'd in the ſecond Century, and infected all *Galatia*. See MONTANIST.

They uſed Bread and Cheeſe in the Euchariſt, or perhaps Bread baked with Cheeſe.—Their Reaſon was, that the firſt Men offer'd to God, not only the Fruits of the Earth, but of their Flocks too.

Hence, according to St. *Auguſtin*, came their Name, which is Greek; being compoſed of ἄρτος, Bread, and τυρος, Cheeſe.

ARVALES *Fratres*, were Prieſts in antient *Rome*, who aſſiſted in the Sacrifices of the *Ambarvalia* offer'd every Year to *Ceres* and *Bacchus* for the Proſperity of the Fruits of the Earth, *viz.* of the Corn and Wine. See PRIEST and AMBARVALIA, &c.

They were inſtituted by *Romulus*, and were twelve in Number; all of them Perſons of the firſt Diſtinction; the Founder himſelf having been of the Body.—They made a College, called *Collegium Fratrum Arvalium*. See COLLEGE.

The Mark of their Dignity, was a Garland, compoſed of Ears of Corn, tied with a white Ribbon, which *Pliny* ſays, was the firſt Crown in Uſe at *Rome*. See CROWN.

The Word is originally Latin, and is formed from *Arvum*, a Field; becauſe, in their Ceremonies, they went in Proceſſion a-round the Fields: Others ſay, becauſe they were appointed Arbitrators of all Differences relating to the Limits of Fields and Land-Marks.

According to *Fulgentius*, *Acca Laurentia*, *Romulus*'s Nurſe, was the firſt Founder of this Order of Prieſts: She, it ſeems, had twelve Sons, who uſed to walk before her in the Sacrifice; one of whom dying, *Romulus*, in favour of his Nurſe, promiſed to take his Place; and hence, ſays he, came this Sacrifice, the Number twelve, and the Name of Brother.—*Pliny* ſeems to indicate the ſame thing, when he mentions that *Romulus* inſtituted Prieſts of the Fields, after the Example of *Acca Laurentia* his Nurſe.

ARUSPICES, an Order of Prieſts among the antient *Romans*, who foretold Things to come, by inſpecting the Entrails of Beaſts killed in Sacrifice. See PRIEST and SACRIFICE.

The Word is derived from *haruga*, which ſignifies the Entrails of Victims; and *aſpicere*, to view or conſider. Others ſay, from *Aras*, and *Inſpicere*, to inſpect the Altars.—Fa. *Pezron* is poſitive the Word was originally form'd of the Celtic *Au*, Liver; and *ſpicio*, I look; whence *Auſpex*: Which being a Word ſomewhat rude of Pronunciation, they thence form'd *Aruſpex*. See AUSPICES.

The Doctrine or Diſcipline of the *Aruſpices*, was form'd into a preciſe Art, called *Aruſpicina*. See DIVINATION.

ARYTÆNOIDES, in Anatomy, the third and fourth Cartilages of the Larynx, ſituate under the Thyroides; call'd alſo *Guttales*. See LARYNX.

The *Arytænoides* are thus called on account of the Figure of an Ewer; which, together, they ſomewhat reſemble:

From

From ἀρύω, *haurio*, to drink; and εἶδος, *Forma*, Shape.

ARYTÆNOIDEUS, in Anatomy, a Pair of Muſcles of the Larynx. See LARYNX.

The *Arytænoideus* has its Head in one Arytænoid Cartilage, and its Tail in the other; and ſerves to bring them together, and ſhut the Rima or Glottis. See GLOTTIS.

ARYARYTÆNODEUS, in Anatomy, one of the Muſcles ſerving to cloſe the Larynx; otherwiſe called little *Arytænoideus*, and *Aryaritænoideus*, as deriving its Origin from the poſterior and inferior part of the Arytænoides. See ARYTÆNOIDES.

ARYTHMUS, in Medicine, a Sinking or Failure of the Pulſe, ſo as it can no longer be felt. See PULSE.

The Word is form'd from the privative Particle α, and ῥύθμος, *Modulus*, or *Pulſus*.

AS, among Antiquaries, has two different Significations.

1° It ſignifies a Weight; and in this Senſe the Roman *As* is the ſame with the Roman *Libra*, or Pound. See WEIGHT, LIBRA, POUND, &c.

The *As* had ſeveral Diviſions.—The principal were, the *Uncia*, or Ounce; which was the twelfth Part of the *As*: *Sextans*, the ſixth Part of the *As*, or two Ounces: *Quadrans*, the fourth Part of the *As*, or three Ounces: *Triens*, the third Part of the *As*, which was four Ounces: *Quincunx* was five Ounces: *Semis*, half the *As*, that is ſix Ounces: *Septunx*, ſeven Ounces: *Bes*, two Thirds of the *As*, or eight Ounces: *Dodrans*, three Fourths of the *As*, or nine Ounces: *Dextans*, ten Ounces: *Deunx*, eleven Ounces. See OUNCE, UNCIA, QUADRANS, &c.

Hence, alſo, the Word *As* came to ſignify a whole or entire Thing, or the Totality of any Thing; in which Senſe it was uſed, principally, in Matters of Succeſſion, and ſignified the whole Succeſſion, or Inheritance. Thus, to inherit to any Perſon, *ex aſſe*, was to inherit all his Eſtate, to be his ſole Legatee, his only Heir; and thus, to inherit, *ex triente*, *ex ſemiſſe*, *ex beſſe*, was to inherit a Third, an Half, or two Thirds of the Eſtate.

2° *As* was alſo the Name of a Roman Coin. See COIN.

Under *Numa Pompilius*, according to *Euſebius*, the *As* was either of Wood, Leather, or Shell.—In the Time of *Tullus Hoſtilius*, it was Braſs, and was call'd *As*, *Libra*, or Pound.—Four hundred and twenty Years after, the firſt *Punic* War having exhauſted the Treaſury, they retrench'd a *Sextans* or two Ounces, and thenceforward only made it of the Weight of a *Dextans*, or ten Ounces.—After this they took away another Ounce, and reduced the *As* to a *Dodrans*, or nine Ounces.—Laſtly, by the *Papirian* Law, they took away an Ounce and half more, and reduced the *As* to a *Septunx* and *Semuncia*: And 'tis generally thought that it reſted here all the Time of the Commonwealth. See MONEY.

This laſt was called the *Papirian As*, in regard the Law juſt mentioned was paſs'd in the Year of *Rome* 563, by *C. Papirius Carbo*, then Tribune of the People. Thus there were four different *As*'s in the Time of the Commonwealth.

The Figure which the *As* bore, was a *Janus* with two Faces on the one Side, and the Roſtrum or Prow of a Ship on the other Side.

The Word is derived from the Greek αἷς, which, in the *Dorick* Dialect, is uſed for εἷς, one, *q. d.* an entire Thing; as above noted. *Goodwin* will have it named *As*, quaſi *Æs*, becauſe made of Braſs.—*Budæus* has wrote nine Books *De Aſſe & ejus partibus*, of the *As* and its Parts.

ASAPPES, ASAPPI, an Order of Soldiers in the *Turkiſh* Army, whom they expoſe to the firſt Shock of their Enemies, to the end that being thus fatigued, and their Swords blunted, the Spahi's and Janizaries may fall on and find an eaſy Conqueſt.

The *Aſappes* are held of ſo little Value, that they frequently ſerve as Bridges for the Cavalry to paſs over, in ill Roads, and as Faſcines to fill up the Ditches of Places beſieged.—The greateſt Part of them are natural *Turks*; they travel on Foot, and have no Pay, but the Plunder they can get from the Enemy.

The Word is deriv'd from the Turkiſh *Saph*, which ſignifies Rank, File, Order; from whence they have formed *Aſphaph*, to range in Battle.

ASBESTINE *Paper* or *Cloth*, is ſuch as will burn in the Fire, be purified by it, and yet not conſume. See INCOMBUSTIBLE.

It is made of the *Asbeſtos*, or *Lapis Amianthus*; and is by ſome called *Linum Vivum*. See ASBESTOS.

The Antients are ſaid to have made Napkins and Towels of it, which, when foul, inſtead of Waſhing, they threw into the Fire to cleanſe. See LINUM *Incombuſtibile*.

ASBESTOS, or *Amianthus*, *Lapis*, in natural Hiſtory, called alſo *Caryſtius Lapis*, an incombuſtible Matter; ſuppoſed by ſome to be a ſort of Flax, growing on the *Pyreneans*; whence it is alſo called *Linum vivum*, *Linum Incombuſtibile*, &c.

The *Asbeſtos*, or *Lapis Asbeſtos*, is really a ſort of native, fiſſile Stone, which one may ſplit into Threads or Filaments, very fine, brittle, yet ſomewhat tractable, ſilky, and of a greyiſh ſilver Colour, not unlike *Talc* of *Venice*.

It is almoſt inſipid to the Taſte, indiſſoluble in Water; and expoſed to the Fire, neither conſumes nor calcines.—A large Burning-glaſs, indeed, reduces it into little Glaſs Globules, in proportion as the Filaments ſeparate; but common Fire only whitens it. See BURNING-*Glaſs*.

Theſe Filaments are of different Lengths, from one Inch to ten.—The Stone is found incloſed within other very hard Stones, and is brought from the Iſles of the *Archipelago*, the *Pyreneans*, and from *Montauban* in *France*. We have alſo ſeen Inſtances of it in *Scotland*, *Wales*, &c.

Several Perſons have pretended to the Secret of ſpinning the *Asbeſtos*: *B. Porta* aſſures, that in his Time, 'twas a thing known to every Body in *Venice*: And yet this ſhould ſeem hardly practicable, without the Mixture of ſome other very pliant Matter, as Wool, Line or Hemp along with it; the Filaments of the *Amianthus* it ſelf being too brittle to make any tolerably fine Works.—*See further of the natural Hiſtory, Preparation, Manufacturing*, &c. *of this celebrated Stuff, under the Article* LINUM *Incombuſtibile*.

The Works made of *Asbeſtos*, were heretofore held in ſo great Eſteem, that they were of equal Price with Gold; and none but Emperors and Kings had Napkins made of it. See ASBESTINE-*Cloth*.

Some Antiquaries are of Opinion, that the Antients made Shrouds of the *Asbeſtos*, wherein they burnt the Bodies of their Kings, in order to preſerve their *Aſhes* entire, and prevent their being mix'd with thoſe of Wood, and other combuſtible Matters, whereof the common Funeral Piles were form'd. See FUNERAL, BURNING, &c.

Others aſſert, that the Antients uſed the *Asbeſtos*, to make perpetual Wicks for ſepulchral Lamps.

However this be, there are ſome at this Day who uſe the *Asbeſtos* for the Wicks of ſuch Lamps as they would not have any trouble withal; becauſe the *Amianthus* never waſting, there is no occaſion for ſhifting the Wick. See LAMP.

The Word ἄσβεστος, *Asbeſtos*, properly ſignifies an *incombuſtible Body*; being formed of the privative Particle α, and σβεννυμαι, *extinguo*.—Notwithſtanding the common opinion that Fire has no Effect on the *Asbeſtos*; yet, in two Trials before the Royal Society, a Piece of incombuſtible Cloth made of this Stone, a Foot long, and half a Foot broad, weighing about an Ounce and half, was found to loſe above a Dram of its Weight, each time.

The *Asbeſtos* applied to any Part of the Body, excites an Itching; and yet we read of it as antiently preſcribed for Diſeaſes of the Skin, and particularly for the Itch: Unleſs it were rather the *Alumen Plumoſum* that was meant hereby; for even at this Day, they are frequently confounded. See ALUM and PLUMOSE.

ASCARIDES, in Medicine, a kind of little Worms, ſometimes found in the Rectum, and adhering to the Fundament. See WORMS and VERMES.

They are thus called from the Greek ἀσκαρίζω, *I leap*, on account of their continual troubleſome Motion, cauſing a moſt intolerable itching.

ASCENDANT, or ASCENDENT, or ASCENDING *Line*, in Genealogy, is underſtood of ſuch Relations as have gone before us; or thoſe nearer the Root of the Family. See LINE and CONSANGUINITY.

Such are Father, Grandfather, Great Uncle, &c.—They are thus called in Contradiſtinction to Deſcendants, or the deſcending Line. See DESCENDANT.

Marriage is always forbid between the *Aſcendents* and Deſcendents, in the direct Line. See MARRIAGE, DEGREE, &c.

ASCENDENT, in Aſtrology, the Horoſcope; or the Degree of the Equator which riſes upon the Horizon, at the Time of the Birth of any one. See HOROSCOPE.

This is ſuppoſed to have an Influence on his Life and Fortune, by giving him a Bent and Propenſity to one thing more than another. See NATIVITY, &c.

In the Cœleſtial Theme, this is alſo called the *Firſt Houſe*, the *Oriental Angle*, and the *Significator of Life*. See HOUSE, THEME, SIGNIFICATOR, &c.

Such a Planet ruled in his *Aſcendent*.—*Jupiter* was in his *Aſcendent*, &c.

Hence the Word is alſo uſed in a moral Senſe, for ſome Superiority which one Man has over another, from ſome unknown Cauſe.

ASCENDING, in Aſtronomy, is underſtood of thoſe Stars, or Degrees of the Heavens, &c. which are riſing above the Horizon, in any Parallel of the Equator. See RISING and HORIZON.

ASCENDING *Latitude*, is the Latitude of a Planet when going towards the Poles. See LATITUDE.

ASCENDING *Node*, is that Point of a Planet's Orbit, wherein it paſſes the Ecliptic, to proceed to the Northward. See ORBIT, PLANET, &c.

This

This is otherwiſe called the *northern Node*, and repreſented by this Character ☊. See NODE, *&c.*

ASCENDING, *Aſcendens*, in Matters of Genealogy, *&c.* See ASCENDENT.

ASCENDING *Signs*, among Aſtrologers, are thoſe which are upon their Aſcent or Riſe; from the Nadir or loweſt Part of the Heavens, to the Zenith or higheſt. See SIGN, ZENITH, NADIR, *&c.*

ASCENDING, in Anatomy, is applied to ſuch Veſſels as carry the Blood upwards, or from lower to higher Parts of the Body. See BLOOD and VESSEL.

The *Aſcending Aorta*, *Aorta aſcendens*, is the ſuperior Trunk of the Artery, which furniſhes the Head. See AORTA.

The *aſcending Cava*, *Vena Cava Aſcendens*, is a large Vein form'd by a Meeting or Union of the two Iliacks of one Side, with thoſe of the other. See CAVA.

Many of the antient Anatomiſts, call'd this the *deſcending Cava*; as imagining that the Blood deſcended from the Liver by this Vein, to ſupply the Parts below the Diaphragm. But the Moderns have ſhewn that it has a quite contrary Uſe, and ſerves for the Conveyance of the Blood from the lower Parts to the Head; whence its Appellation *Aſcendent.*

ASCENSION, ASCENSIO, a riſing, or moving upwards. See ASCENT, ASCENDANT, ASCENDING, *&c.*

ASCENSION is particularly uſed for that miraculous Elevation of our Saviour, when he mounted to Heaven in the Sight of his Apoſtles.—

Hence alſo, ASCENSION-*Day*, a Feſtival of the Church, held ten Days before *Whitſuntide*, in Memory of our Saviour's *Aſcenſion.* See FEAST.

ASCENSION, in Aſtronomy, is either *right* or *oblique.*

*Right* ASCENSION. See RIGHT *Aſcenſion.*

To find the *Right Aſcenſions* of the Sun, Stars, *&c.* trigonometrically, ſay, as Radius is to the Coſine of the Sun's greateſt Declination, ſo is the Tangent of the Diſtance from *Aries* or *Libra*, to the Tangent of *Right-Aſcenſion.*

To find the *Right-Aſcenſions* mechanically by the Globe. See GLOBE.

*The Arch of Right-Aſcenſion*, is that Portion of the Equator intercepted between the beginning of *Aries*, and the Point of the Equator which is in the Meridian: Or it is the Number of Degrees contained therein.—This coincides with the *Right-Aſcenſion* it ſelf.—The *Right-Aſcenſion* is the ſame in all Parts of the Globe.

We ſometimes alſo ſay, the *Right-Aſcenſion* of a Point of the Ecliptic, or any other Point of the Heavens. See DESCENSION.

*Oblique* ASCENSION. See OBLIQUE *Aſcenſion.*

To find the Oblique *Aſcenſions* of the Sun, either trigonometrically, or by the Globe. See ASCENSIONAL *Difference*, and GLOBE.

*The Arch of Oblique-Aſcenſion*, is an Arch of the Horizon intercepted between the beginning of *Aries*, and the Point of the Equator which riſes with a Star or Planet in an Oblique Sphere.—This coincides with the Oblique *Aſcenſion* it ſelf.—The Oblique *Aſcenſions* change according to the Latitude of the Places.

The Difference between the Right and Oblique *Aſcenſions*, is called the *aſcenſional Difference.* See ASCENSIONAL.

ASCENSIONAL *Difference*, is the Difference between the Right and Oblique *Aſcenſion.* See ASCENSION.

Or it is the Space of Time which the Sun riſes or ſets before or after ſix of the Clock.

To find the *Aſcenſional* Difference trigonometrically, having the Latitude of the Place, and the Sun's Declination given; ſay, As the Co-Tangent of the Latitude, is to the Tangent of the Sun's Declination, ſo is the Radius to the Sine of the *Aſcenſional* Difference.

For Example, ſuppoſe the Latitude be 51°. 30′. and the Sun's Declination 9°. 00′.

| | | |
|---|---|---|
| Then, to the Ar-co. of the Co-Tangent of — — — | 51°. 30′. | 0,099395 |
| Add the Tangent of — — | 9°. 00′. | 9,199712 |
| Sum is the Sine of — — | 11°. 29′ | =9,299107 |

which is the *aſcenſional* Difference required; and being reduced into Time, by allowing four Minutes of an Hour for every Degree, it will be 44′. 29″. See TIME.

If the Sun be in any of the northern Signs, and the *aſcenſional* Difference, as D O, be ſubſtracted from the Right *Aſcenſion* D, in *Tab. Aſtronomy*, Fig. 63. the Remainder will be the Oblique *Aſcenſion* O.—If he be in a ſouthern Sign, the *aſcenſional* Difference being added to the *Right Aſcenſion*, the Sum is the Oblique *Aſcenſion*; and thus may Tables of Oblique *Aſcenſions* be conſtructed for the ſeveral Degrees of the Ecliptick, under the ſeveral Elevations of the Pole. See TABLE.

ASCENSORIUM occurs in our antient Writers for a Stair or Step. See STAIR.

ASCENT, ASCENSUS, the Motion of a Body tending from below upwards. See MOTION.

In this Senſe the Word ſtands oppoſed to Deſcent. See DESCENT.

The Peripateticks attribute the ſpontaneous *Aſcent* of Bodies, to a Principle of Levity inherent in them. See LEVITY.

The Moderns deny any ſuch Thing as ſpontaneous Levity, and ſhew that whatever aſcends, does it in virtue of ſome external Impulſe or Extruſion. Thus it is that Smoak, and other rare Bodies, aſcend in Atmoſphere; and Oil, light Woods, *&c.* in Water: Not by any external Principle of Levity, but by the ſuperior Gravity or Tendency downwards of the Parts of the Medium wherein they are. See GRAVITY, MEDIUM, ATMOSPHERE, *&c.*

The *Aſcent* of light Bodies in heavy Mediums is produced after the ſame manner as the *Aſcent* of the lighter Scale of a Ballance.—It is not that ſuch Scale has an internal Principle whereby it immediately tends upwards; but it is impelled upwards by the Præponderancy of the other Scale; the Exceſs of the Weight of the one having the ſame Effect by augmenting its Impetus downwards, as ſo much real Levity in the other: By reaſon the Tendencies mutually oppoſe each other.—*See this further illuſtrated under the Articles* SPECIFIC *Gravity*, FLUIDS, HYDROSTATICAL *Ballance*, &c.

ASCENT *of Bodies on inclined Planes.* See the Doctrine and Laws thereof, under the Article *Inclined* PLANE.

ASCENT *of Fluids*, is particularly underſtood of their riſing above their own Level between the Surfaces of nearly contiguous Bodies, or in ſlender capillary Glaſs Tubes, or in Veſſels filled with Sand, Aſhes, or the like porous Subſtance. See FLUID.

This Effect happens as well *in vacuo* as in the open Air, and in crooked as well as ſtrait Tubes. — Some Liquors, as Spirit of Wine, and Oil of Turpentine, aſcend ſwifter than others; and ſome riſe after a different manner from others. Mercury does not aſcend at all, but rather ſubſides.

The Phænomenon, with its Cauſes, *&c.* in the Inſtance of Capillary Tubes, will be ſpoke of more at large under the Article CAPILLARY *Tube.*

As to Planes—Two ſmooth poliſhed Plates of Glaſs, Metal, Stone, or other Matter, being ſo diſpoſed as to be almoſt contiguous, have the Effect of ſeveral parallel capillary Tubes; and the Fluid riſes in them accordingly, the like may be ſaid of a Veſſel fill'd with Sand, *&c.* the divers little Interſtices whereof form, as it were, a kind of Capillary Tubes. So that the ſame Principle accounts for the Appearance in them all. And to the ſame may probably be aſcribed the *Aſcent* of the Sap in Vegetables. See VEGETABLE and VEGETATION.

Thus Sir *I. Newton*—'If a large Pipe of Glaſs be filled 'with ſifted Aſhes well preſſed together, and one End dip-'ped into ſtagnant Water, the Fluid will *aſcend* ſlowly in 'the Aſhes, ſo as in the Space of a Week or Fortnight, to 'reach the Height of 30 or 40 Inches above the ſtagnant 'Water. This *Aſcent* is wholly owing to the Action of 'thoſe Particles of the Aſhes which are upon the Surface of 'the elevated Water; thoſe within the Water attracting as 'much downwards as upwards: It follows, that the Action 'of ſuch Particles is very ſtrong; tho' being leſs denſe and 'cloſe than thoſe of Glaſs, their Action is not equal to that of 'Glaſs, which keeps Quickſilver ſuſpended to the Height 'of 60 or 70 Inches, and therefore acts with a Force which 'would keep Water ſuſpended to the Height of above 60 'Feet.—By the ſame Principle, a Sponge ſucks in Water, 'and the Glands in the Bodies of Animals, according to 'their ſeveral Natures and Diſpoſitions, imbibe various 'Juices from the Blood.' *Opticks*, p. 367.

If a Drop of Oil, Water, or other Fluid, be laid on a Glaſs Plane perpendicular to the Horizon, ſo as to ſtand without breaking or running off; and another Plane inclined to the former, ſo as to meet a-top, be brought to touch the Drop; then will the Drop break, and aſcend towards the touching End of the Planes: And it will aſcend the faſter in proportion as it is higher, by reaſon the Diſtance between the Planes is conſtantly diminiſhing.—After the ſame manner, the Drop may be brought to any part of the Planes, either upward or downward, or ſideways, by altering the Angle of Inclination.

Laſtly, if the ſame perpendicular Planes be ſo placed, as that two of their Sides meet and form a ſmall Angle, the other two being only kept a-part by the Interpoſition of ſome thin Body; and thus immerged in a Fluid tinged with ſome Colour: The Fluid will aſcend between the Planes, and this the higheſt where the Planes are neareſt; ſo as to form a Curve Line, which is found to be a juſt Hyperbola, one of the Aſymptotes whereof, is the Line of the Fluid, the other being a Line drawn along the touching Sides.—

The

The phyſical Cauſe in all theſe Phænomena, is the ſame Power of Attraction. See ATTRACTION.

ASCENT, in Aſtronomy, &c. See ASCENSION.

ASCENT in Logic, is a kind of Argumentation, wherein we riſe from Particulars to Univerſals. See UNIVERSAL, ARGUMENT, and PARTICULAR.

As, when we ſay, This Man is an Animal, and that Man is an Animal, and the other Man, &c. therefore every Man is an Animal.—Or Fire, Water, Air, and Earth, are four; therefore the Number of Elements is four.—See INDUCTION.

ASCETIC, ASCETA, ASCETES, an antient Name for ſuch Perſons, as in the primitive Times devoted themſelves to the Exerciſes of Piety and Virtue in a retired Life; and particularly to Prayer and Mortification. See SOLITARY.

Afterwards, when the Monks came in faſhion, this Title was beſtowed upon them; eſpecially ſuch of them as lived in Solitude. See MONK, HERMIT, ANCHORITE, &c.

The Word is derived from the Greek ἀσκηταὶ, which is form'd from ἀσκέω, *exerceo*, I exerciſe.

The Term *Aſcetic* is alſo uſed as a Title of ſeveral Books of Spiritual Exerciſes: As, the *Aſceticks*, or devout Treatiſes of St. *Baſil*, Archbiſhop of *Cæſarea* in *Cappadocia*.

We alſo ſay, the *Aſcetic Life*, meaning the Exerciſe of Prayer, Meditation, and Mortification.—See MYSTIC.

ASECRETA, a Secretary. See SECRETARY.

ASCETERIUM, ASSISTERIUM, ARCHISTERIUM, &c. are Words frequently uſed among our antient Writers, for a *Monaſtery*. See MONASTERY.

ASCII, in Geography, are thoſe Inhabitants of the Globe, which, at certain Times of the Year, have no Shadow. See GLOBE and SHADOW.

Such are the Inhabitants of the Torrid Zone; by reaſon the Sun is ſometimes vertical to them. See TORRID and ZONE.

To find on what Days the People of any Parallel are *Aſcii*. See GLOBE.

The Word is form'd of the privative Particle α, and σκια, *Umbra*, Shadow.

ASCITÆ, in Antiquity, a Sect or Branch of Montaniſts, who appear'd in the eleventh Century. See MONTANIST.

The Word is derived from the Greek ἀσκὸς, a Bag or Bottle. The *Aſcitæ* were ſo call'd, becauſe they introduc'd a kind of Bacchanals into their Aſſemblies, who danced round a Bag or Skin blow'd up; ſaying, they were thoſe new Bottles fill'd with new Wine, whereof Jeſus Chriſt makes mention, *Matth.* xix. 17.

Theſe are ſometimes alſo call'd *Aſcodrogites*.—

ASCITES, in Medicine, a Species of Dropſy, affecting chiefly the Abdomen, or Lower Belly. See ABDOMEN.

The *Aſcites* is the ordinary Water-Dropſy. See DROPSY.

The Word is borrowed from the Greek ἀσκὸς, *Uter*, Belly.

ASCLEPIAD, ASCLEPIADÆUS, a *Greek* or *Latin* Verſe of four Feet, containing a Spondee, a Coriambus, and two Dactyls. See FOOT and VERSE.

Such is the Verſe, *Mæcenas atavis Edite Regibus.*

Or of four Feet, and a long Syllable; the firſt a Spondee, and the ſecond a Dactyl, after which comes the long Syllable, ſucceeded by two Dactyls: as,

*Sublimi feriam ſidera vertice.*

ASCODROUTES, in Antiquity, a Sect of Hereticks, in the ſecond Century, who rejected all Uſe of Sacraments, on this Principle, that incorporeal Things cannot be communicated by Things viſible and corporeal. See SACRAMENT.

They made perfect Redemption conſiſt in the Knowledge of the Univerſe, *Theodoret*, lib. 1. *Hæret.*

ASCOLIA, in Antiquity, a Feaſt which the Peaſants of *Attica* celebrated in Honour of *Bacchus*. See FEAST.

They ſacrificed a Goat to him, and of the Skin thereof made a Foot-ball, which they blew up, and anointed with ſome unctuous Matter. The young People playing at this, and keeping themſelves always on one Foot, whilſt the other was ſuſpended in Air, by their frequent Falls, gave occaſion of Diverſion to the Spectators.—Hence this Feaſt took its Name; ἀσκὸς, ſignifying a *Bag* or *Budget*.

ASELLUS, in Medicine. See MILLEPEDES.

ASHLAR, a Term among Builders; by which they mean common or free Stones, as they come out of the Quarry, of different Lengths and Thickneſſes. See STONE and QUARRY.

ASHLERING, among Builders, Quartering to tack to, in Garrets, about 2 ½, or 3 Foot high, perpendicular to the Floor, up to the Underſide of the Rafters. See BUILDING, ROOF, COVERING, &c.

ASH, in Building. See TIMBER.

ASH-WEDNESDAY, the firſt Day of Lent; ſo called from a Cuſtom of the antient Church, of Faſting in Sackcloth, with *Aſhes* on their Heads, in Token of Humiliation. See LENT.

ASHES, *Cineres*, the terrene or earthy Part of Wood, and other combuſtible Bodies, remaining after they are burnt or conſumed with Fire. See EARTH, BURNING, FIRE, &c.

*Aſhes* are properly the Earth, and fix'd Salts of the Fuel, which the Fire cannot raiſe, all the other Principles being gone off in the Smoak. See SMOAK, FUEL, FIX'D, VOLATILE, SALT, &c.

The Chymiſts frequently call the *Aſhes* of a Body its *Calx*. See CALX and CALCINATION.

*Aſhes*, if well burnt, are uſually pure White, by reaſon the Oil to which they owe their Blackneſs when in a Coal, is ſuppoſed quite evaporated. See COAL, SULPHUR, &c. WHITE, BLACK, &c.

The *Aſhes* of Kali, Fern, or the like, are a principal Matter in the Compoſition of Glaſs. See KALI, GLASS, &c.

The *Aſhes* of all Vegetables are found to contain Iron, inſomuch that M. *Geoffroy* makes it a chymical Problem, which he propoſes to the Public, *To find Aſhes without any Particles of Iron therein.*—Whether the Metal exiſted in the Plants themſelves, or is produced in 'em by the Operation of Calcination, is a Point very ingeniouſly controverted between Meſſ. *Geoffroy* and *Lemery* the younger, in the Memoirs of the Royal Academy. *See the Subſtance of the Diſpute under the Article* METAL.

*Aſhes*, are of conſiderable Uſe in making Lixiviums, or Lyes, for the Purpoſes of Medicine, Bleaching, Sugar-Works, &c. See LIXIVIUM; ſee alſo BLEACHING, &c.

The Antients preſerved the *Aſhes* of their dead Anceſtors, with great Care and Piety, in Urns, for the Purpoſe. See FUNERAL, URN, &c.

*Aſhes*, of all Kinds, in Virtue of their Salt, make an excellent Manure for cold and wet Grounds. See MANURE.

Hence that of *Virgil*,

———*Ne pudet,*
*Effœtos Cinerem immundum jactare per agras.*

*Pot*-ASHES. See POT-*Aſhes*.

In the *Philoſophical Tranſactions*, N° 21. we have an Account of a Shower of *Aſhes* in the *Archipelago*, which held ſeveral Hours, and extended to Places diſtant above 100 Leagues. See SHOWER and RAIN.

ASIDE, in the Drama.—*An Aſide*, *Seorſim*, is ſomething which an Actor ſpeaks a-part, or, as it were, to himſelf, for the Inſtruction of the Audience, by diſcovering ſome Sentiment which otherwiſe did not appear, and which is to be concealed from the reſt of the Actors then preſent.

The ſeverer Criticks condemn all *Aſides*; and with ſome Reaſon; as they are a manifeſt Breach of Probability.—Accordingly, they are never to be uſed but at a Pinch, which a good Author will ſcarce ſuffer himſelf to be brought to. See PROBABILITY, TRAGEDY, COMEDY; ſee alſo SOLILOQUY.

ASPALATH, ASPALATHUM, in Pharmacy, the Wood of a prickly Tree, heavy, oleaginous, ſomewhat ſharp and bitter to the Taſte, of a ſtrong Smell and Purple Colour. See WOOD.

The *Aſpalath* is otherwiſe called *Rhodium*, or *Roſewood*, and was antiently in much Repute, as an Aſtringent or Dryer, but now diſuſed. See ROSE.

In Virtue, Taſte, Smell, and Weight, it reſembles the *Lignum Aloes*; and in Phyſick they are frequently ſubſtituted the one for the other. See ALOES.

There are four Kinds of *Aſpalath*—the firſt, of the Colour of Box; hard, ſolid, heavy, and of a Smell like Roſes, whence its Appellation *Roſewood*.— The ſecond, red, like Yew, and of a very agreeable Smell.—The third, hard, twiſted, knotty: It has a rank Smell, like that of a Goat, and a diſagreeable Taſte.—The fourth, has an aſh-colour'd Bark, and its a Wood of a Purple Dye.

The Roſe-wood is what the Inhabitants of *Martinico* call *Cypreſs-wood*. See CYPRESS.

It affords an Oil of an admirable Scent; reputed one of the beſt of Perfumes, chiefly uſed in ſcenting Pomatums and Liniments. See PERFUME.

ASPECT, ASPECTUS, in Perſpective, Gardening, &c. See PROSPECT, EXPOSURE, &c.

ASPECT, in Aſtronomy, is uſed for the Situation of the Stars, or Planets, in reſpect of each other; or certain Configurations, and mutual Relations between the Planets, ariſing from their Situations in the Zodiac. See STAR, PLANET, &c.

Tho' ſuch Configurations may be varied, and combined a thouſand Ways, yet only a few of them are conſidered.—Hence, *Wolfius* more accurately defines *Aſpect* the meeting of luminous Rays emitted from two Planets, to the Earth, either ſituate in the ſame Right Line, or including an Angle which is one or more Quota Parts of four Right Angles. See RAY and ANGLE.

Hence it follows, that Conjunction and Oppoſition are the two Extremes of the *Aſpects*; Conjunction being the Beginning, and Oppoſition the higheſt Term. See CONJUNCTION and OPPOSITION.

Beſide theſe two extreme *Aſpects*, Conjunction, and Oppoſition, the Antients reckon'd three other, *viz. Trigon* or *Trine*, the Angle meaſured by A B. *Tab. Aſtron.* Fig. 3. *Tetragon* or *Quadrate*, the Angle meaſured by the Quadrant A D; and *Sextile*, which is the Angle meaſured by the Sextant A G. See TRIGON, TETRAGON, QUADRATE and SEXTILE.

The Doctrine of *Aſpects* was introduced by the Aſtrologers, as the Foundation of their Predictions.—Hence *Kepler* defines *Aſpect* by an Angle form'd by the Rays of two Planets meeting on the Earth, able to excite ſome natural Power or Influence. Accordingly, we read much of *benign Aſpects*, *malign Aſpects*, &c.—But this Notion is long ago exploded. See ASTROLOGY.

To the antient *Aſpects*, the modern Writers have added ſeveral more; as *Decile*, containing the tenth Part of a Circle; *Tridecile*, three tenths; and *Biquintile*, four tenths, or two fifths.—*Kepler* adds others, as he tells us, from meteorological Obſervations; as, the *Semi-Sextile*, containing the twelfth part of a Circle; and *Quincunx*, containing five twelfths.—Laſtly, to the aſtrological Phyſicians we owe *Octile*, containing one eighth; and *Trioctile*, containing three eighths.

The Angle intercepted between two Planets in the *Aſpect* of Conjunction is 0; in the *Semi-Sextile Aſpect*, 30°; in *Decile*, 36°; in *Octile*, 45°; in *Sextile*, 60°; in *Quintile*, 72°; in *Quartile*, 90°; in *Tridecile*, 108°; in *Trine*, 120°; in *Trioctile*, 135°; in *Biquintile*, 144°; in *Quincunx*, 150°; in *Oppoſition*, 180.

Theſe Angles or Intervals are reckoned on the ſecondary Circles; for the manner whereof, ſee SECONDARY *Circle*.

The *Aſpects* are uſually divided into *Partile* and *Platic*.

*Partile* ASPECTS, are when the Planets are juſt ſo many Degrees diſtant, as is above expreſſed.—

*Platic* ASPECTS, are when the Planets do not regard each other from theſe very Degrees; but the one exceeds as much as the other comes ſhort.—

*Double* ASPECT, is uſed in Painting, where a ſingle Figure is ſo contrived, as to repreſent two or more different Objects, either by changing the Poſition of the Eye, or by means of angular Glaſſes.—

Inſtances hereof ſee under the Articles MIRROR, CATOPTRICK CISTULA, ANAMORPHOSIS, &c.

ASPER, in Grammar.—*Spiritus* ASPER, a Character or Accent, in form of a c; placed over certain Letters, in the Greek Tongue, to ſhew they are to be ſtrongly aſpirated, and to ſupply the Place of an *h*. See ASPIRATE.

ASPER alſo ſignifies a little Turkiſh Silver Coin, wherein moſt of the Grand Signior's Revenues are paid. See COIN and MONEY.

The *Aſper* is worth ſomething more than an *Engliſh* Halfpenny.—The only Impreſſion it bears, is that of the Prince's Head under whom it was ſtruck.—The Pay of the Janizaries, is from twelve to fifteen *Aſpers per Diem*. See JANIZARY.

ASPERA *Arteria*, in Anatomy, the *Wind-pipe*; otherwiſe called the *Trachea*. See TRACHEA and ARTERY.

The *Aſpera Arteria*, is a Canal ſituate in the Fore-part of the Neck, before the Oeſophagus: Its upper End is called the *Larynx*; from whence it deſcends to the fourth Vertebra of the Back, where it divides and enters the Lungs. See OESOPHAGUS, LARYNX, VERTEBRA, &c.

It is form'd of annular Cartilages ranged at ſmall and equal Diſtances from one another, growing ſmaller and ſmaller, as they approach the Lungs; and thoſe of the Bronchia ſo cloſe to one another, that, in Expiration, the ſecond enters within the firſt, and the third within the ſecond, and the following always enters the preceding. See RESPIRATION, &c.

Betwixt the Larynx and the Lungs, theſe Cartilages make not complete Rings; but their hind Part, which is contiguous to the Oeſophagus, is membranous, that they may better contract and dilate, and give way to the Food as it paſſes down the Gullet. See DEGLUTITION.

The Cartilages of the Bronchia are completely annular, yer their capillary Branches have no Cartilages, but inſtead of them ſmall circular Ligaments, which are at pretty large Diſtances from one another.—The Uſe of the Cartilages, is to keep the Paſſage for the Air open; but in the capillary Bronchia, they would hinder the ſubſiding of the Veſſels. See BRONCHIA.

Theſe Cartilages are tied together by two Membranes, external and internal: the external is compoſed of circular Fibres, and covers the whole Trachea externally; the internal is of an exquiſite Senſe, and covers the Cartilages internally: it is compoſed of three diſtinct Membranes; the firſt woven of two Orders of Fibres; thoſe of the firſt Order being longitudinal, for the ſhortening the Trachea; theſe make the Cartilages approach and enter one another: the other Order is of circular Fibres, for the contracting the Cartilages.

When theſe two Orders of Fibres act, they aſſiſt, together with the external Membrane, in Expiration, in Coughing, and in Altering the Tone of the Voice. See EXPIRATION, VOICE, &c.

The ſecond Membrane is altogether glandulous; and the excretory Veſſels of its Glands opening into the Cavity of the Trachea, ſeparate a Liquor for moiſtening the ſame, and defending it from the Acrimony of the Air.—The laſt is a Net of Veins, Nerves, and Arteries; the Veins are Branches of the *Vena Cava*, the Nerves of the Recurrent; and the Arteries, Sprigs of the Carotides. *See further under the Article* TRACHEA.

ASPERIFOLIÆ, in Botany, one of the Diviſions or Kinds of Plants. See PLANT.

The Characters of the *Aſperifolious* Kind, are, that the Leaves ſtand alternately, or without any certain Order on the Stalks: The Flowers are monopetalous, but have the Margin cut into five Diviſions, ſometimes deep, ſometimes ſhallow; and the upper Spike or Top of the Plant, is often curved back, ſomething like a Scorpion's Tail.

They are called *Aſperifoliæ*, becauſe they are uſually *rough-leav'd*, but not always ſo.

After each Flower there uſually ſucceed four Seeds; Mr. *Ray* reckoning the *Cerinthe* the only Plant of this Genus, that hath leſs than four Seeds at the Root of each Flower; this, indeed, hath but two.

The *Herbæ Aſperifoliæ*, are the *Pulmonaria Maculoſa*, *Cynogloſſa*, *Borago*, *Bugloſſa*, *Anchuſa*, *Echinum*, *Linum Umbilicatum*, *Heliotropium majus*, *Aparine major*, *Conſolida major*, *Lithoſpermum*, *Echium Scorpoides*, and *Cerinthe*.

ASPERITY, ASPERITAS, implies the Inequality, or Roughneſs of the Surface of any Body; whereby ſome Parts of it do ſo ſtick out beyond the reſt, as to hinder the Hand, &c. from paſſing over it eaſily and freely. See PARTICLE.

*Aſperity*, or Roughneſs, ſtands oppoſed to Smoothneſs, Poliure, &c. See POLISHING, &c.

From the *Aſperity* of the Surfaces of contiguous Surfaces, ariſes *Friction*. See SURFACE and FRICTION.

According to the Relations of *Vermuaſen*, the blind Man ſo famous for diſtinguiſhing Colours by the Touch, it ſhould appear that every Colour has its particular Degree and Kind of *Aſperity*. He makes Black the rougheſt, as it is the darkeſt of Colours; but the others are not ſmoother in proportion as they are lighter; *i. e.* the rougheſt do not always reflect the leaſt Light: For, according to him, yellow is two Degrees rougher than blue, and as much ſmoother than green. *Boyle* of Colours. See COLOUR, LIGHT, &c.

ASPERSION, the Act of ſprinkling with Water, or ſome other Fluid. See WATER.

Some contend for Baptiſm by *Aſperſion*, others by Immerſion. See BAPTISM, IMMERSION, &c.

The Word is form'd of the Latin *aſpergere*, to ſprinkle; of *ad*, to, and *ſpargo*, I ſcatter.

ASPHALITES, in Anatomy, the fifth Vertebra of the Loins. See VERTEBRA.

It is thus called becauſe conceived as the Support of the whole Spine of the Loins; from the Privative α and σφαλλω, *I ſupplant*.

ASPHALTOS, or ASPHALTUM, a ſolid, brittle, black, inflammable, bituminous Subſtance, reſembling Pitch, brought from *India*; whence it is alſo called *Jewiſh Pitch*. See PITCH.

The *Aſphaltos* belongs to the Claſs of Bitumens; and is the furtheſt maturated and concocted of the whole Tribe; but conſiſts of the ſame ſimple Principles as the reſt. See BITUMEN and SULPHUR.

It is found ſwimming on the Surface of the *Lacus Aſphaltites*, or Dead Sea, where antiently ſtood the Cities of *Sodom* and *Gomorrah*.—It is caſt up from time to time, in the Nature of a liquid Pitch, from the Earth which lies under this Sea; and being thrown upon the Water, ſwims like other fat Bodies, and condenſes by little and little, thro the Heat of the Sun, and the Salt that is in it.

The *Arabs* uſe it to pitch their Ships withal, as we do common Pitch.—Beſides, there was a deal of it imploy'd in the embalming of the Antients. See EMBALMING, &c.

It is ſuppoſed to fortify, and reſiſt Putrifaction; reſolve, attenuate, cleanſe and cicatrize Wounds: But is little uſed among us either externally or internally.

'Tis uſual to ſophiſticate the *Aſphaltos*, by mixing common Pitch along with it; the Reſult whereof makes the *Piſaſphaltum*, which the Coarſeneſs of the black Colour, and the fetid Smell eaſily diſcover.—Others, however, will have its pitchy Quality natural to it, and ſuppoſe *Piſaſphaltum* to be the native *Aſphaltum*. See PISASPHALTUM.

ASPHALTUM is alſo a kind of bituminous Stone, found near the antient *Babylon*, and lately in the Province of *Neuchatel*; which, mix'd with other Matters, makes an excellent Cement, incorruptible by Air, and impenetrable by Water; ſuppoſed to be the Mortar ſo much celebrated among

among the Antients, wherewith the Walls of *Babylon* were laid. See MORTAR, &c.

It yields an Oil which defends Ships from Water, Worms, &c. much better than the ordinary Compoſition; and which is alſo of good Service for the cleanſing and healing of Ulcers, &c.

ASPIC—*Oil of* ASPIC, vulgarly called *Oil of Spike*, is an inflammable Oil drawn from the Leaves and Flowers of a Plant frequent in the Southern Parts of *France*, reſembling Lavender, and by the Botaniſts called *Lavandula Mas.* See OIL.

It is much uſed by Painters and Farriers; and ſometimes alſo in Medicine.—The true Oil of *Aſpic*, is of a white Colour, and an aromatic Taſte; and is held the only Thing capable of diſſolving Sandarach: By which it is eaſily diſtinguiſh'd from the Counterfeit, which is only Oil of Turpentine mixed with a little Petrol.

ASPIRATE, ASPIRATIO, or *Spiritus Aſper*, in Grammar, a Character uſed to denote an Aſpiration. See ASPER and ASPIRATION.

ASPIRATION, the Act of *aſpirating*; i. e. of pronouncing any Syllable, or Word, ſtrongly; with a good deal of Breath, and Vehemence. See ASPIRATE and PRONUNCIATION.

This we do, for inſtance, in thoſe Words which have the Letter *H*, before them; as Harangue, Hook, Holland, Hero, &c. whereas the like Syllables are ſounded much ſofter and eaſier without the *H*, as in Ear, Eat, &c. See *H*.

The *Aſpirate*, by the *Greeks* called *Spiritus*, and marked over their Vowels, ſeems to be very different from the Letters; but is, nevertheleſs, a true Letter, as well as the reſt, and a real Conſonant.—By Letters we dont mean the Characters of the Alphabet, which are changeable according to the Languages and the People, and among the ſame People, according to Time and Cuſtom; and even according to the Fancy of particular Perſons.—Thus, ſome, for inſtance, write the *Aſpirates*, or Letters *aſpirated*; which, by others, are omitted; tho both the one and the other pronounce alike; as in *Huomo*, *Huomoni*, an Italian Word frequently written *uomo uomoni*. See ALPHABET.

But, by *Letters*, we mean articulate Sounds, form'd by the Organs of Speech, (*viz.*) The Throat, Mouth, Tongue, Palate, Teeth, &c. See LETTER and VOICE.

Theſe Sounds are of two Kinds, the one ſimple, and the other compound, or modified.—*Simple*, are thoſe pronounced by a ſingle Motion of the Organ; ſuch are the Vowels. See VOWEL.

*Compound* Sounds, are thoſe ſame ſimple Sounds modified by a Motion of the Organ ſuperadded to the Motion neceſſary to pronounce the ſimple Sound; of which Kind are the Conſonants. See CONSONANT.

Now an *Aſpirate* is an Effect or Conſequence of a Motion made by ſome of the Organs of Speech; and therefore muſt either be a Vowel or a Conſonant.—The former it cannot be, as not being a ſimple Sound, or a Sound that may be pronounced by it ſelf. It muſt therefore be a Modificative, or Conſonant; and in Effect it has all the Properties of one.

For, *1ſt*, it reſults from a Motion of the Organ, which, of it ſelf, produces no Sound. Thus the *Spiritus* of the *Greeks*, our *h aſpirate*, as well as that of the *French*, and other People, has no more Sound of it ſelf than *b*, *c*, *d*, &c. and the ſame Thing may be obſerved of the *Aleph*, *Hheth*, and *Caph*, of the Eaſtern Languages.

*2dly*, On the contrary, our *h*, the *Spiritus* of the *Greeks*, and the other *Aſpirates* juſt mentioned, are pronounced with all the Vowels, in the ſame manner as Conſonants are.—They modify thoſe Vowels, and are Effects of a Motion of the Organ ſuperadded to the Motion neceſſary to form the Vowel. Thus, to pronounce *ha*, two Motions of the Organ are required as well as for *ba*, or *ca*, &c. One for *a* which it ſelf is a Sound; the other for *h*, which yields no Sound, no more than *b*; but adds ſomething to *a* which modifies it, and makes that *ha* is not mere *a*, nor *ba*, nor *ca*, &c. And this muſt hold ſtill more ſenſibly in the ſtronger *Aſpirates*, as thoſe of the oriental Tongues הָ, הַ, הִ, הֵ, הוֹ, הֹ, הֶ, הָ, &c. In all which, there are evidently two Motions, the one for the Vowel, and the other to modify it: Now this being the Nature and Eſſence of a Conſonant, it follows, that let them be denoted in what Manner they will, whether as our *h*, as the Orientals do, *i. e.* by proper Characters in the Courſe of the Words themſelves; or, as the *Greeks* do ſome of theirs, by a Sign of Aſpiration placed over the Vowel; it matters not. The *Aſpirate* is no leſs a Conſonant in ἅῖρω, than in χαιρω; in ἕω, than in χέω; in ὅλη, than χολη; and ſo of others.

The third and laſt Reaſon is, that the Eaſtern Languages, which do not expreſs the Vowels, do yet expreſs the *Aſpirates*.

Add, that the *Aſpirate* is frequently chang'd into a Conſonant, and expreſs'd by a Conſonant. Thus, of ἕξ is made *Sex*; of ἑπτα, *Septem*; of ἑσπερος, *Veſperus*, &c. Of the Hebrew יין, οἶνος, and thence *Vinum*, &c. Nay, even in the ſame Language, *Heſiod*, ſpeaking of *Hercules*'s Buckler, uſes Ἥρσυν for Θήρσυν; making no Difference between a Θ and an *Aſpirate*. See CONSONANT.

Hence it evidently follows, that *Aſpirates* are real Conſonants; and that it muſt be an Error to rank א, ה, ח, ע, of the Eaſtern Languages, among the Vowels; and to exclude the *h* in ours, out of the Number of Letters.

ASSA-FOETIDA, or ASA-FOETIDA, a Gum or Reſin, brought from the *Eaſt-Indies*, of a browniſh Colour, a ſharp Taſte, and a very ſtrong, offenſive Smell; whence it is alſo called *Stercus Diaboli*, or Devil's Dirt.

'Tis not known from what Plant this Gum is procured: all that has been advanced on that Point by the Botaniſts and the Writers of Pharmacy, amounts to no more than Conjectures, founded on the different Relations of Travellers—They who after the Antients, ſuppoſe it drawn from the *Laſer*, or *Laſerpitium*, would be hard put to it to get clear of thoſe many Diſputes which have ſo often divided the Botaniſts on the Subject of the true *Laſer*, and the *Succus Cyrenaicus*, ſo infinitely prized among them. Indeed there ſeems but little Reſemblance between the Gum deſcribed by M. *Furetiere*, out of *Pliny*, lib. xix. c. 3. and our *Aſſa-Fœtida:* If they be the ſame, 'tis certain we are not acquainted with half its Virtues.

The modern *Aſſa-Fœtida*, which is little uſed but by the Farriers, is a Gum ſaid to diſtil during the Summer's Heats, from a little Shrub, frequent in *Perſia*, *Media*, *Aſſyria*, and *Arabia*.—It is at firſt white, bordering on yellow, then on red, and laſtly on Violet; and melts under the Fingers like Wax.

It is of known Efficacy in ſome uterine Diſorders; but the Rankneſs of its Smell occaſions it to be ſeldom uſed; yet in the *Eaſt-Indies* it makes an Ingredient in their Ragouts.

ASSA-DULCIS, a Name ſometimes given to Gum Benjoyn. See BENJOYN.

ASARABACKA, or ASSARA-BACARA, a Plant mentioned by *Pliny* and *Dioſcorides*, under the Name of the *Wild Nardus*; by us called ASARUM.

*Avicenna* relates, that it is brought from *China*; that its Roots reſemble thoſe of Gramen, or Dog's-Tooth; but that it has a pretty briſk Smell, and bites the Tongue when taſted.—Its Leaves were antiently much in Uſe, as an Emetic, and Cathartic; and in ſome Authors we find a ſuperſtitious Obſervance in the gathering 'em: They alledge, that if the Plant be pull'd forward it becomes vomitive, but if backwards purgative. *Rulandus* and *Fernelius* frequently deſcribe it as a Diuretic.

But it is chiefly uſed among us as a Sternutatory, in order to which, it is dried and reduced to a Powder, to be taken as a Snuff; in which Quality it drains the Head of mucous Humours.

ASSACH, or ASSATH, a kind of Purgation, antiently uſed in *Wales*, by the Oaths of 300 Men. See PURGATION and OATH.

ASSAILANT, one that aſſaults, or ſets upon another. See ASSAULT, ATTACK, &c.

ASSART, in Law, an Offence committed in the Foreſt, by pulling up, by the Roots, Woods which ſerve as Thickets and Covert for the Deer, and making them plain as arable Land. See FOREST.

This is the greateſt Treſpaſs that can be committed in the Foreſt, being more than a Waſte. For whereas Waſte of the Foreſt is but the felling and cutting down the Coverts, which may grow again; *Aſſart* is a total Extirpation thereof. See WASTE.

What we call *Aſſartum*, is elſewhere term'd *Diſboſcatio*.

ASSART was alſo uſed for a Parcel of Land aſſarted. See ASSART.

ASSART-*Rents*, were thoſe paid to the Crown for the Foreſt Lands *aſſarted*. See RENT.

ASSASSIN, a Perſon who kills another with the Advantage either of an Inequality in the Weapons, or by means of the Situation of the Place, or by attacking him at unawares. See MURTHER, DUEL, &c.

The Word *Aſſaſſin* is ſaid, by ſome, to have been brought from the *Levant*, where it took its Riſe from a certain Prince of the Family of the *Arſacides*, popularly called *Aſſaſins*, living in a Caſtle between *Antioch* and *Damaſco*, and bringing up a Number of young Men, ready to pay a blind Obedience to his Commands; whom he employed in murdering the Princes with whom he was at Enmity. See ARSACIDES.

The Jew *Benjamin*, in his Itinerary, places them near Mount *Libanus*; and calls them in Hebrew, from the Arabic אל אשי שין, *El aſiſin*; which ſhews that the Name did not come from *Arſacide*, but from the Arabic חשיש, *Aſis*, *Inſidiator*, a Perſon who lies in Ambuſh.

The

The *Aſſaſſins*, or *Aſſaſſinians*, *Aſſaſſinii*, abovementioned, poſſeſſed eight or twelve Cities about *Tyre*: They choſe themſelves a King, whom they call'd the *Old Man* of the Mountain. In 1213, they *aſſaſſinated Louis* of *Bavaria*. They were *Mahometans*, but paid ſome Tribute to the Knights-Templars.—The Favourers of the *Aſſaſſins* were condemned by the Council of *Lyons*, and under *Innocent* IV. in 1231.—The *Tartars* overcame them, and kill'd their old Man of the Mountain in 1257; upon which the Faction became extinct.

ASSATION, the preparing or dreſſing of Medicaments, or Foods, in their own Juices, without Addition of any foreign Moiſture.

*Aſſation*, in reſpect of culinary Matters, is more frequently call'd *Roaſting*; and in Pharmacy, *Uſtion* or *Torrefaction*. See DRESSING, ROASTING, TORREFACTION, &c.

The Word is form'd of the Latin *aſſare*, to roaſt.

ASSAULT, in the Art of War, an Attack made upon a Camp, Fortreſs, or Poſt, in order to become Maſter thereof. See ATTACK, FORTRESS, &c.

An *Aſſault* is properly a general Attack, wherein the Aſſailants do not ſcreen themſelves by any Works.—

The Words are, to give an *Aſſault* to ſuch a Place, to be commanded to the *Aſſault*, to ſtand an *Aſſault*, to repulſe an *Aſſault*, to carry by *Aſſault*, &c.

While an *Aſſault* laſts, and both Parties are mix'd; there is no uſe of Cannon on either Side; for they are afraid of deſtroying their own Men thereby.

A Governour is obliged to ſuſtain three *Aſſaults* ere he give up the Place—'Tis very difficult ſaving a Town from Pillage that is carried by *Aſſault*. See PILLAGE, &c.

The *Enfans perdus* march firſt to the *Aſſault*. See ENFANS *Perdus*.

ASSAULT, in Law, is a violent Injury offered to a Man's Perſon, of a larger Extent than Battery, for that it may be committed by only offering to give a Blow, or by a threatning Speech, &c. See BATTERY.

To rebuke a Collector with foul Words, ſo that he departed for Fear, without doing his Office, was adjudg'd an *Aſſault*; and to ſtrike a Man, tho' he be not hurt with the Blow, is reputed the ſame. In Treſpaſs for *Aſſault* and Battery, a Man may be found guilty of the *Aſſault*, and excuſed of the Battery, 25 *Edw.* 3.

ASSAY, or ESSAY, or SAY, in Coinage, &c. the Proof or Trial of the Goodneſs, Purity, Value, &c. of Gold, Silver, or other Metals. See GOLD, SILVER, METAL, &c.

*The Methods of* ASSAYING, *or making* ASSAYS, *ſee under the Article* ESSAY.

ASSAY *of Weights and Meaſures*, ſignifies the Trial or Examination of common Weights and Meaſures, uſed by the Clerk of the Market. See WEIGHT, MEASURE, STANDARD, CLERK *of the Market*.

ASSAYER of the King, is an Officer of the Mint, eſtabliſh'd for the *Aſſay*, or due Trial of Silver and Gold. See ASSAY.

The *Aſſayer* is indifferently appointed by the Maſter of the Mint, and the Merchants who bring Silver, &c. for Exchange. See MINT, COIN, &c.

ASSEMBLAGE, the joining or uniting of ſeveral Things together; or, the Things themſelves ſo joined, or united. See UNION, &c.

The *Aſſemblage* of two Bones for Motion, is called *Articulation*. See ARTICULATION.

The Carpinters and Joiners have various Kinds and Forms of *Aſſemblage*; as, with Mortoiſes and Tenons, with Dove-tails, &c. See MORTOISE, DOVE-TAIL, &c.

The *Europeans* admire the Carpentry of ſome *Indians*, where the *Aſſemblage* is made without either Nails or Pins. *Herrera*. See CARPENTRY, NAIL, &c.

The Word *Aſſemblage* is alſo uſed in a more general Senſe, for a Collection of ſeveral Things, ſo diſpoſed together, as that the whole has an agreeable Effect.—'Tis with Diſcourſe as with Bodies, which owe their chief Excellency to the juſt *Aſſemblage*, and Proportion of their Members.—

ASSEMBLY, a meeting of ſeveral Perſons in the ſame Place, and with the ſame common Deſign.

The Word is form'd from the Latin *adſimulare*; compounded of *ad* to, and *ſimul* together.

*Aſſemblies* of the Clergy, are called Convocations, Synods, Councils; tho' that annual one of the Kirk of *Scotland*, retains the Name *General Aſſembly*. See CONVOCATION, SYNOD, COUNCIL, &c.

Thoſe of Judges, &c. are called *Courts*, &c. See COURT.

The *Aſſemblies* of the *Roman* People were called *Comitia*. See COMITIA, &c.

The *Aſſembly* of a Preacher, &c. is his Audience.—The Academies have their *Aſſemblies*, or Days of *Aſſembly*. See ACADEMY, &c.

The *Aſſemblies* of Diſſenters, &c. are frequently called *Conventicles*. See CONVENTICLE.

ASSEMBLY is particularly uſed in the *Beau Monde*, for a ſtated and general Meeting of the polite Perſons of both Sexes; for the ſake of Converſation, Gallantry, and News.

*Unlawful Aſſembly*, in Law. See UNLAWFUL *Aſſembly*.

ASSEMBLIES *of the* Campus Martii, *or* Maii, *of the Field of* Mars, *or* May. See FIELD *of Mars*, &c. CAMPUS, &c.

*Quarter*, or *Place of* ASSEMBLY, in a Camp, &c. See QUARTER *of Aſſembly*.

ASSEMBLY, is alſo uſed in the military Art, for the ſecond Beat of the Drum, before the March. See DRUM.

On hearing this, the Soldiers ſtrike their Tents, roll them up, and then ſtand to their Arms. See MARCH.

The third Beating is called the *March*, as the firſt is called the *General*. See GENERAL.

ASSENT, ASSENSUS, an Agreement or Acquieſcence of the Mind, to ſomething propoſed, or affirmed.—Thus, to *aſſent* to any Propoſition, is to allow it true, or to perceive its Truth. See TRUTH.

The Schoolmen obſerve, that to every Propoſition, how compound or complex ſoever it be, there only goes one *Aſſent* of the Mind.—Thus, in the conditional Propoſition, *If the Sun ſhines it is Day*; there is only one *Aſſent* of the Mind, which regards the Connexion of the Effect with the Condition. So in the disjunctive Propoſition, Peter *either ſtudies, or does not ſtudy*; the Mind does not give a two-fold *Aſſent* to the two Parts thereof, it being enough that *Peter* do either the one or the other, for the Propoſition to be true. See PROPOSITION.

*Aſſent* is diſtinguiſhed, like Faith, into *implicite*, or *blind*; and *explicite*, or *ſeeing*. See FAITH, &c.

Others diſtinguiſh it into *actual* and *habitual*.—

*Actual Aſſent*, is a Judgment whereby the Mind perceives a thing to be true.—

*Habitual Aſſent* conſiſts in certain Habits induced in the Mind by repeated Acts. See HABIT and HABITUDE.

To this belongs *Faith*, which is an *Aſſent* ariſing from the Authority of the Perſon who ſpeaks: Such alſo is *Opinion*, which is defined an *Aſſent* of the Mind *cum formidine Oppoſiti*, &c. See FAITH, OPINION, &c.

*For the Meaſures and Degrees of* ASSENT, ſee PROBABILITY, VERISIMILITUDE, EVIDENCE, DEMONSTRATION, &c.

Fa. *Mallebranch* lays it down as an Axiom, or Principle of Method, never to allow any thing for Truth, from which we can forbear our *Aſſent* without ſome ſecret Reproach of our own Reaſon. See LIBERTY, METHOD, MAXIM, &c.

ASSERTION, ASSERTIO, in the Language of the Schools, a Propoſition which a Perſon advances; which he avows to be true, and is ready to maintain in publick. See PROPOSITION.

ASSESSOR, or ASSESSOUR, an inferior, or ſubordinate Officer of Juſtice, chiefly appointed to aſſiſt the ordinary Judge with his Opinion and Advice. See JUDGE and JUSTICE.

The Maſters in Chancery are *Aſſeſſors* of the Lord Chancellor. See MASTER and CHANCELLOR.

The Word is Latin, form'd of *ad*, to, and *ſedeo*, I ſit.

There are two Kinds of *Aſſeſſors* in the imperial Chamber, ordinary and extraordinary.—The *ordinary* are now in Number 41, whereof 5 are elected by the Emperor, *viz.* 3 Counts or Barons, and two *Juris Conſulti*, or Civil Lawyers. The Electors appoint 10, the ſix Circles 18, &c. They act in Quality of Councellors of the Chamber, and have Salaries accordingly. See IMPERIAL and CHAMBER.

ASSESSOR, is particularly uſed among us, for an Inhabitant of a Town, or Village, elected by the Community, to ſettle the Taxes, and other Impoſitions of the Year, to fix the Proportion which each Perſon is to bear, and to ſee the Collection made. See TAX, &c.

By the Stat. 16 & 17 *Car.* 2. two Inhabitants in every Pariſh were made *Aſſeſſors* for the Royal Aid. See AID.

ASSETS, in Law, Effects ſufficient to diſcharge the Burden laid on an Executor, or Heir, for ſatisfying the Teſtator's Debts or Legacies. See EXECUTOR, HEIR, TESTAMENT, LEGACY, &c.

The Word is form'd of the French *Aſſez*, enough; in regard whoever charges another with *Aſſets*, charges him with having enough deſcended or come to his Hands to diſcharge that which is in Demand.

*Aſſets* are of two Sorts, *real* and *perſonal*—Where a Man dies ſeiſed of Lands in Fee-ſimple, the Lands which deſcend to his Heir, are *Aſſets real*. See REAL.

Where he dies poſſeſs'd of any perſonal Eſtate, the Goods which come to the Hands of the Executor, are *Aſſets perſonal*. See PERSONAL.

Of real *Aſſets* there are two Sorts, *per Deſcent*, and *Aſſets enter mains*.

ASSETS *per Deſcent*, are where a Man enters into Bond, and dies ſeized of Lands in Fee-ſimple, which deſcend to his

his Heirs, and are therefore chargeable as *Aſſets* in his Hands. If the Heir alien the Lands before the Bond be put in Suit, he is diſcharged.

Assets *enter mains*, is when a Man dies indebted, leaveing to his Executors ſufficient wherewithal to diſcharge his Debts and Legacies. See Executor.

ASSEVERATION, an earneſt Affirmation, or Avouching. See Affirmation, &c.

ASSIDÆANS, Assidæi, in Antiquity, a Sect among the *Jews*; thus called from the Hebrew, חסידים *hhaſidim*, merciful, righteous.—The *Aſſidæ* are recorded as holding Works of Superrogation neceſſary.—They were the Fathers and Predeceſſors of the *Phariſees*; and from them likewiſe aroſe the *Eſſeni*. See Pharisee and Esseni.

The Jeſuit *Serrarius* and *Druſius*, have wrote againſt each other upon the Subject of the *Aſſidæans*, on occaſion of a Paſſage in *Joſeph Ben Gorion*; the firſt maintaining, that by the Name *Aſſidæans* he means *Eſſeni*, and the latter *Phariſees*.

ASSIENTO, in Matters of Commerce, a Contract or Convention between the King of *Spain* and other Powers, for furniſhing the *Spaniſh* Dominions in *America*, with Negro Slaves. See Negro, *&c.*

The Term is originally *Spaniſh*, and ſignifies a *Farm*: Accordingly, the firſt *Aſſiento* was a Treaty or Contract made with the *French Guinea* Company, whereby they were put in poſſeſſion of this Privilege, in conſideration of a certain Duty which they were to pay to the King of *Spain*'s *Farms*, for every Negro thus furniſhed.—

This Contract was ſigned in the Year 1702, to laſt ten Years, with a further Liberty allow'd the *Aſſientiſts* of two Years more, in caſe they had not furniſhed the whole Number ſtipulated before.—The two principal Articles regarded, firſt, the Number of Negroes to be provided, which was 3800 while the War ſhould laſt, and 4800 in caſe of Peace. Secondly, The Duty to be paid the King of *Spain*, during the Farm, or *Aſſiento*; which was fixed at 33 Pieces of Eight *per* Head.—

By the Treaty of *Utrecht*, *Philip* V. being acknowledged King of *Spain* by the Allies; it was one of the Articles of the Peace between *England* and *France*, that the *Aſſiento* Contract ſhould be transferred to the *Engliſh*.—Accordingly a new Inſtrument was ſigned in *May* 1713, to laſt 30 Years; and the furniſhing of Negroes to the *Spaniſh America*, was committed to the *South-Sea Company*, juſt then erected. See *South-Sea* Company.

In virtue hereof, they are yearly to furniſh 4800 Negroes; for which they are to pay at the ſame Rate as the *French*, with this Condition, that during the firſt 25 Years, only half the Duty ſhall be paid for ſuch as they ſhall import beyond the ſtated Number.

The laſt Article gives them a further Privilege not enjoyed by the *French*; which is, that the *Engliſh Aſſientiſts* ſhall be allowed, every Year, to ſend to the *Spaniſh America* a Ship of 500 Tons, loaden with the ſame Commodities as the *Spaniards* uſually carry thither; with a Licence to ſell the ſame concurrently with them at the Fairs of *Puerto Bello*, and *La vera Cruz*.—This additional Article is ſuppoſed as advantageous to the Company, as the whole Contract beſides; being granted contrary to the uſual *Spaniſh* Policy, which has ever ſollicitouſly preſerved the Commerce of their *America* to themſelves. See Register.

Some new Articles have been ſince added to the antient *Aſſienta*; as, that the *Engliſh* ſhall ſend their Regiſter-Ship yearly, even tho' the *Spaniſh Flota* and *Galloons* do not go; and that for the firſt 10 Years, the ſaid Ship may be of 650 Tun.

The manner of valuing the Negroes, in order to ſettle the King of *Spain*'s Duty, is the ſame as delivered under the Article Negro.

ASSIGN, in Law, a Term introduced in favour of Baſtards; who, becauſe they cannot paſs by the Name of *Heirs*, are compriſed under that of *Aſſigns*. See Heir and Bastard.

Assign is alſo uſed for the appointing of a Deputy, or the making over a Right to another. See Assignee.

In this Senſe we ſay, ſuch Lands or Eſtate were *aſſigned* or affected to ſuch Perſons for ſuch Uſes, *&c.* See Affection, &c.

In the Stat. 20 *Edw.* I. we read of Juſtices *aſſign'd* to take Aſſizes, *&c.* See Assize.

Assign alſo ſignifies to point out, or ſet forth.—Thus we ſay, to *aſſign* the real Cauſe of ſuch an Event, *&c.*

So, *to aſſign Error*, is to ſhew in what part of a Proceſs at Law, an Error is committed. See Error.

*To aſſign falſe Judgment, Verdict*, &c. is to declare how and where Judgment, Verdict, or the like, is unjuſt. See Judgment, Verdict, *&c.*

*To aſſign Waſte*, is to ſhew eſpecially wherein the Waſte is committed. See Waste.

ASSIGNEE, in Law, a Perſon to whom a Thing is appointed, or *aſſigned*, to be occupied, paid, or done. See Assign.

An *Aſſignee* differs from a Deputy in this, that the *Aſſignee* poſſeſſes or enjoys the thing in his own Right; and a Deputy in the Right of another. See Deputy.

*Aſſignee* may be ſo either *by Deed* or *by Law*.

*Aſſignee by Deed*, is when a Leſſee of a Term ſells and aſſigns the ſame to another: that other is his *Aſſignee by Deed*.—

*Aſſignee by Law*, is he whom the Law ſo makes without any Appointment of the Perſon.—Thus, an Executor is *Aſſignee* in Law to the Teſtator, who dies poſſeſſed of a Leaſe made to him and his *Aſſigns*. See Executor, Testator, *&c.*

ASSIGNMENT, the Act of *Aſſigning*, or transferring to another. See Assign.

The *Aſſignment of a Dower*, is the ſetting out of a Woman's Marriage-Portion by the Heir. See Establishment and Dower.

ASSIMILATION, the Act of *aſſimilating*; or an Act whereby Things are rendered ſimilar or like to one another. See Similitude, *&c.*

The Word is compounded of *ad*, to, and *ſimilis*, like.

Assimilation, Assimilatio, in Phyſicks, is properly a Motion whereby Bodies convert other duly diſpoſed Bodies, into a Nature like, or homogeneous to their own. See Motion, Body, *&c.*

Some Philoſophers call it, *the Motion of Multiplication*, meaning, that Bodies are hereby multiplied, not in Number, but in Bulk; which is more properly expreſſed by *the Motion of Augmentation* or *Accretion*. See Accretion, Accession, Augmentation, *&c.*

Such *Aſſimilation* we ſee in Flame, which converts the oily or other Particles of a Fuel into its own fiery and luminous Nature. See Flame, Fuel, Fire, *&c.*

The like we ſee in Vegetables, where the watery Juices imbibed from the Earth, being further prepared and digeſted in the Veſſels of the Plant, become of a vegetable Nature, and augment the Wood, Leaves, Fruit, *&c.* thereof. See Vegetable, Vegetation, Sap, Wood, Fruit, *&c.*

So in Animal Bodies, we ſee the Food *aſſimilated*, or changed into an animal Subſtance, by Digeſtion, Chylification, and the other Operations neceſſary to Nutrition. See Food, Digestion, Chylification, Nutrition, Animal, &c.

ASSISA, or Assise, *Aſſize*. See Assize.

Assisa *Cadera*, to *fall from the Aſſiſe*, in Law, is to be *nonſuited*. See Nonsuit.

Assisa *Cadit in Juratam*, is where the Thing in Controverſy is ſo doubtful, that it muſt neceſſarily be tried by a Jury. See Jury.

Assisa *capi in modum Aſſiſæ*, is when the Defendant pleads to the *Aſſize*, without taking any Exception to the Count, Declaration, or Writ.

Assisa *Nocumenti*, is an *Aſſize* of Nuiſance. See Nuisance and Annoyance.

Assisa *Panis & Cereviſiæ*, denotes the Power or Privilege of aſſigning, or adjuſting the Weight and Meaſure of Bread and Beer. See Assize.

Assisæ *Judicium*, in Law, ſignifies a Judgment of the Court, given either againſt the Plaintiff or Defendant, for Default. See Default.

Assisa *Continuanda*, is a Writ directed to the Juſtices, to take an *Aſſize* for the Continuance of a Cauſe, where certain Records alledg'd cannot in Time be procured by the Party. See Writ.

Assisa *proroganda*, is a Writ directed to the Juſtices of *Aſſize*, for the Stay of Proceedings, by reaſon of the King's Buſineſs, wherein the Party is imployed. See Writ.

ASSIZE, or Assise, *Aſſiſa*, in Law, a ſitting of Judges, or Juſtices; for the hearing and determining of Cauſes. See Judge, Justice, Cause, *&c.*

The Word is French, *Aſſiſe*, of *Aſſis*, ſeated; form'd of *Aſſideo*, I ſit by; which is compounded of *ad*, to, and *ſedeo*, I ſit. See Assessor.

Assize, or Assizes, were originally uſed for certain extraordinary Sittings of ſuperior Judges, in the inferior Courts depending on their Juriſdiction; to inquire whether the ſubaltern

altern Judges and Officers did their Duty; to receive the Complaints prefer'd againſt them; and take Cognizance of Appeals from them. See APPEAL, &c.

ASSIZE, was alſo a Court or Aſſembly, compoſed of ſeveral great Perſons of the Realm; held occaſionally in the King's Palace, for the final Deciſion of all Affairs of Importance. See COURT, PALACE, &c.

This is more uſually called, among our Writers, *Placita*, or *Curiæ Generales*. See PLACITA, &c.

Yet there is ſome Difference between *Aſſizes* and *Placita*. —The Vicounts, or Sheriffs, who originally were only Lieutenants of the Comites, or Counts, and render'd Juſtice in their Place; held two Kinds of Courts, the one ordinary, held every Day, and called *Placitum*; the other extraordinary, called *Aſſize*, or *Placitum Generale*; at which the Count himſelf aſſiſted for the Diſpatch of the more weighty Affairs.—Theſe *Aſſizes* were alſo called *Mallum*. See COUNT, VICOUNT, SHERIFF, &c.

Hence, the Term *Aſſize* came to be extended to all grand Days of Judgment, at which the Trials and Pleadings were to be ſolemn and extraordinary.

The modern Conſtitution of *Aſſizes* is pretty different from that hitherto ſpoke of.—Our *Aſſize* may be defined a Court, Place, or Time where, and when Writs and Proceſſes, either civil or criminal, or both, are conſider'd, diſpatch'd, decided, &c. by Judges and Jury. See PROCESS, COURT, DAY, JURY, &c.

In this Senſe, we have two Kinds of *Aſſizes*; general and ſpecial.

*General* ASSIZES, are thoſe held by the Judges twice a Year, in their ſeveral Circuits. See CIRCUIT.

The Nature of theſe *Aſſizes* is explained by my Lord *Bacon*, who obſerves that all the Counties of the Kingdom, are divided into ſix Circuits; thro each of which two learned Men, aſſigned by the King's Commiſſion, ride twice a Year, call'd *Juſtices* or *Judges of Aſſize*, who have ſeveral Commiſſions, by which they ſit, *viz.*

1° *Commiſſion of Oyer and Terminer*, directed to them, and many others of the beſt Account in their reſpective Circuits. See OYER *and Terminer*.—In this Commiſſion, the Judges of *Aſſize* are of the *Quorum*; ſo that without them there can be no Proceeding. This Commiſſion gives them Power to deal with Treaſons, Murders, Felonies, and other Miſdemeanors. See TREASON, FELONY, &c.

The ſecond is of *Goal-Delivery*, which is only to the Judges themſelves, and the Clerk of the *Aſſize* aſſociate.—By this Commiſſion they have to do with every Priſoner in Goal, for what Offence ſoever. See GOAL-*Delivery*, &c.

The third is directed to themſelves, and the Clerk of the *Aſſize*, to take Writs of Poſſeſſion, called alſo *Aſſizes*; and to do Right and Juſtice thereupon. See WRIT.

The fourth, is to take *Niſi prius*, directed to the Juſtices, and the Clerks of *Aſſizes*, whence they are alſo called Juſtices of *Niſi prius*. See NISI *prius*.

The fifth, is a *Commiſſion of Peace*, in every County of their Circuit; and all the Juſtices of the Peace, having no lawful Impediment, are bound to be preſent at the *Aſſizes*, to attend the Judges. See PEACE.

The Sheriff of every Shire is alſo to attend in Perſon, or by a ſufficient Deputy allow'd by the Judges, who may fine him if he fail. See SHERIFF.

This excellent Conſtitution of Judges, Circuits, and *Aſſizes*, was begun in the Time of *Henry* the Second; tho ſomewhat different from what it is now.

*Special* ASSIZE, is a particular Commiſſion granted to certain Perſons, to take Cognizance of ſome one or two Caſes, as a Diſſeiſin, or the like.—This was frequently practiced among our Anceſtors. *Bracton*, lib. 3. c. 12.

ASSIZE, or *Aſſiſe*, is alſo uſed for a Writ directed to the Sheriff, for the Recovery of Poſſeſſion of Things immoveable, whereof your ſelf, or Anceſtors, have been diſſeiz'd. See WRIT, POSSESSION, &c.

*Littleton*, and others, ſuppoſe theſe Writs of *Aſſize* to give the Denomination to the *Aſſizes*, or Courts ſo called; and aſſign ſeveral Reaſons of the Name of the Writ: As,

Firſt, becauſe ſuch Writs *ſettle* the Poſſeſſion, and Right in him that obtains by them. Secondly, Becauſe, originally, they were executed at a certain Time and Place *appointed*; for, by the *Norman* Law, the Time and Place muſt be known forty Days before the Juſtices ſit; and by our Law there muſt be fifteen Days Preparation, except they be tried in the ſtanding Courts at *Weſtminſter*.—But, it is more natural to ſuppoſe the Writs denominated from the Courts; and that they were call'd *Aſſizes*, becauſe antiently tried at ſpecial Courts of *Aſſize*, ſet and appointed for that Purpoſe.—Tho, of later Days, they are diſpatched at the general *Aſſizes*, along with the Commiſſions of *Oyer and Terminer*, &c.

This Writ is as well of Things corporeal, as incorporeal Rights, being of four Sorts, *viz.*

ASSIZE, or *Aſſiſe, of Novel Diſſeiſin*, which lies where a Tenant in Fee-ſimple, Fee-tail, or for Life, is lately diſſeis'd of his Lands or Tenements, Rent-ſervice, Rent-ſeck, or Rent-charge, Common of Paſture, common Way, &c. See DISSEISIN, TENANT, &c.

To this may be added, the Bill of freſh Force, directed to the Officers or Magiſtrates of Cities or Towns-corporate; being a kind of *Aſſize* for Recovery of Poſſeſſion in ſuch Places, within forty Days after the Force, as the ordinary *Aſſize* is in the County. See FRESH *Forces*.

ASSIZE of *Mort d'Anceſtor*, lies where my Father, Mother, Brother, Uncle, &c. dies ſeized of Lands, Tenements, Rents, &c. held in Fee-ſimple; and after their Death, a Stranger abates. See ABATEMENT.—It is good as well againſt the Abator, as any other in Poſſeſſion. See ABATOR.

ASSIZE of *Darrein Preſentment*, lies where I, or my Anceſtor have preſented a Clerk to a Church, and after the Church becomes vacant by his Death, or otherwiſe, a Stranger preſents his Clerk to the ſame Church, in my Diſturbance. See PRESENTATION, PATRONAGE, &c.

Theſe three *Aſſizes* were inſtituted by *Henry* the Second, in the Place of Duels; which, till then, had obtained on theſe Occaſions.—*Magna aſſiſa eſt regale Beneficium, Clementia principis de Concilio procerum populis indultum; a quo vitæ hominum & ſtatus Integritati tam Salubriter Conſulitur, ut in Jure quod quis in libero Soli tenemento poſſidet, retinendo, Duello Caſum homines declinare poſſunt*, &c. *Glanvill*, lib. xi. c. 7. See DUEL, COMBAT, &c.

ASSIZE of *Utrum*, lies for a Parſon againſt a Layman, or a Layman againſt a Parſon, for Land or Tenement, doubtful whether it be in Lay-fee, or Free-alms. See TITHE, &c.

ASSIZE, or *Aſſiſe*, is alſo uſed, according to *Littleton*, for a Jury. See JURY.

This, that Author ſuppoſes to be by a *Metonymia effecti*, the Jury being ſo called, becauſe ſummoned by Virtue of the Writ of *Aſſize*. See ASSIZE.

Yet it muſt be obſerved, that the Jury ſummoned upon a Writ of Right, is likewiſe called the *Aſſiſe*; but this may be ſaid to be καταχρηστικῶς, or abuſively ſo termed. *Aſſiſe*, in this Signification, is divided in *magnam & parvam*.

ASSIZE is alſo uſed, according to *Littleton*, for an Ordinance or Statute of *Aſſize*. See STATUTE and ORDINANCE.

Thus the Statute of Bread and Ale, *Anno* 51 *Hen.* 3. is termed the *Aſſize of Bread and Ale*.

ASSIZE, or *Aſſiſe*, is further uſed for the Scantling or Quantity it ſelf preſcribed by the Statute.

Thus we ſay, when Wheat is of ſuch or ſuch Price, Bread ſhall be of ſuch *Aſſize*.

ASSIZE *of the Foreſt*, is a Statute or Condition containing Orders to be obſerved in the King's Foreſt. It is called an *Aſſize*, becauſe it ſets down and appoints a certain Meaſure, Rate, or Order in the Things it concerns.

*Clerk of* ASSIZE. See CLERK *of Aſſize*.

ASSIZE, again, is uſed for the whole Proceſs in Court, founded on ſuch Writ of *Aſſize*; and ſometimes for a part of it, *viz.* the Iſſue or Verdict of the Jury.

Thus we read, that *Aſſizes of Novel Diſſeiſin ſhall not be taken but in their Shires; and after this Manner*, &c. Mag. Chart. cap. xii.—So in *Merton*, cap. iv. Hen. III. we meet with, *Certified by Aſſize, quitted by Aſſize*, &c.

ASSIZER of Weights and Meaſures, is an Officer who has the Care and Overſight of thoſe Matters. See CLERK *of the Market*.

ASSISOR, the ſame with *Aſſeſſor*. See ASSESSOR.

In *Scotland*, *Aſſiſors* are the ſame with our *Jurors*. See JUROR.

ASSISTANCE. See AID.

ASSISTANT, is uſed for a Perſon or Officer appointed to attend a principal Officer, for the more regular Diſcharge of his Function.—Such a Biſhop or Prieſt had ſeven or eight *Aſſiſtants*.

ASSISTANTS, are particularly uſed for a kind of Counſellors, or Controllers, added to the Generals or Superiors of Monaſteries, *&c.* to take Care of the Affairs of the Community.—The General of the Jeſuits has five *Aſſiſtants*, of conſummate Experience, choſen by him out of all the Provinces of the Order, and denominated from the Kingdoms or Countries to which they belong, *e. gr. Italy, Spain, Germany, France,* and *Portugal.* See GENERAL, JESUIT, *&c.*

In the like Senſe, moſt of our Trading Companies have their *Courts of Aſſiſtants.* See COMPANY, *&c.*

ASSISTANTS are alſo thoſe condemned to *aſſiſt* in the Execution of a Criminal. See ABSOLUTION.

ASSOCIATE, an Adjunct, Partner, or Member. See ADJUNCT, ASSOCIATION, *&c.*

The Word is compounded of the *Latin ad* and *ſocius*, Fellow, Companion.

ASSOCIATION, ASSOCIATIO, the Act of aſſociating or forming a Society, or Company. See ASSOCIATE, SOCIETY, COMPANY, *&c.*

*Aſſociation* is properly a Contract or Treaty of Partnerſhip, whereby two or more Perſons unite together, either for their mutual Aſſiſtance, or the Joint carrying on of an Affair; or even for a more commodious Manner of Life.—The cloſeſt of all *Aſſociations* is that made by the Band of Matrimony.

ASSOCIATION *of Ideas*, is where two or more Ideas, conſtantly and immediately follow or ſucceed one another in the Mind, ſo that one ſhall almoſt infallibly produce the other; whether there be any natural Relation between them, or not. See IDEA.

Where there is a real Affinity or Connection in Ideas, it is the excellency of the Mind, to be able to collect, compare, and range them in Order, in its Enquiries: But where there is none, nor any Cauſe to be aſſign'd for their accompanying each other, but what is owing to mere Accident or Habit; this unnatural *Aſſociation* becomes a great Imperfection, and is generally ſpeaking, a main Cauſe of Error, or wrong Deductions in reaſoning. See ERROR, *&c.*

Thus the Idea of Goblins and Sprights, has really no more Affinity with Darkneſs than with Light; and yet let a fooliſh Maid inculcate theſe often on the Mind of a Child, and raiſe them there together, 'tis poſſible he ſhall never be able to ſeparate 'em again ſo long as he lives, but Darkneſs ſhall ever bring with it thoſe frightful Ideas.—Let Cuſtom, from the very Childhood, have joined the Idea of Figure and Shape to the Idea of God, and what Abſurdities will that Mind be liable to, about the Deity?

Such wrong Combinations of Ideas, Mr. *Lock* ſhews, are a great Cauſe of the irreconcileable Oppoſition between the different Sects of Philoſophy and Religion: For we can't imagine, that all who hold Tenets different from, and ſometimes contradictory to one another, ſhou'd wilfully and knowingly impoſe upon themſelves, and refuſe Truth offered by plain Reaſon: But ſome looſe and independent Ideas are by Education, Cuſtom, and the conſtant Din of their Party, ſo coupled in their Minds, that they always appear there together: Theſe they can no more ſeparate in their Thoughts, than if they were but one Idea, and they operate as if they were ſo. This gives Senſe to Jargon, Demonſtration to Abſurdities, Conſiſtency to Nonſence, and is the Foundation of the greateſt, and almoſt of all the Errors in the World.

ASSOCIATION, in Law, is a Patent ſent by the King, either of his own Motion, or at the Suit of the Party Plaintiff, to the Juſtices of Aſſize; to have other Perſons *aſſociated* to them, in order to take the Aſſize. See PATENT and ASSIZE.

Upon this Patent of *Aſſociation*, the King ſends his Writ to the Juſtices of the Aſſize, by it commanding them to admit them that are ſo ſent.

ASSOILE, in our antient Law Books, ſignifies to abſolve, deliver, or ſet free from an Excommunication. See ABSOLUTION, EXCOMMUNICATION, *&c.*

ASSONANCE, in Rhetorick and Poetry, a Term uſed where the Words of a Phraſe, or a Verſe, have the ſame Sound or Termination, and yet make no proper Rhyme. See RHYME.

Theſe are uſually vitious in *Engliſh*; though the *Romans* ſometimes uſed them with Elegancy: As, *Militem comparavit, Exercitum ordinavit, Aciem luſtravit.*

The *Latins* call it *ſimiliter deſinens*; and the *Greeks* ομοιοτελευτον. See HOMOIOTELEUTON.

ASSONANT *Rhymes*, is a Term particularly applied to a kind of Verſes common among the *Spaniards*, where a Reſemblance of Sound ſerves inſtead of a natural Rhyme. See RHYME.

Thus, *ligera, cubierta, tierra, meſa*, may anſwer each other in a kind of *aſſonant* Rhyme, in regard they have each an *e* in the penultimate Syllable, and an *a* in the laſt.

ASSUMPSIT, in Law, a naked Contract; or a voluntary Promiſe, by Word of Mouth, by which a Man *aſſumes* and takes upon him to perform, and pay any thing to another. See CONTRACT, COVENANT, *&c.*

This Term comprehends any verbal Promiſe; and is variouſly expreſs'd by the Civilians, according to the Nature of the Promiſe: Sometimes, by *pactum*; ſometimes by *promiſſio, pollicitatio,* or *Conſtitutum.* See PACTUM.

Where a Man ſells Goods to another, the Law makes the *Aſſumpſit*; and promiſes that he ſhall pay for them.

ASSUMPTION, ASSUMPTIO, a Feaſt celebrated in the *Romiſh* Church, in honour of the miraculous Aſcent of the Holy Virgin, Body and Soul, into Heaven. See FEAST, VIRGIN, *&c.*

The Word is compounded of the *Latin ad*, to, and *ſumo*, I take.

This Feaſt is held with great Solemnity both in the Eaſtern and Weſtern Churches.—Yet is not the *Aſſumption* of our Lady any Point of Faith. The antient Martyrologies ſpeak of it with a great deal of reſerve, as a thing not yet fully aſcertained: Tho' a Divine who ſhould now deny it, would be obliged to retract.

The *Sorbonne*, in the Year 1696, in the Condemnation of *Mary* of *Agreda*, proteſted, among other things, that they believed that the Holy Virgin was *aſſumed*, or taken into Heaven, Body and Soul.

ASSUMPTION was alſo among our Anceſtors, uſed for the Day of the Death of any Saint: *Quia ejus anima in Cœlum* aſſumitur.

ASSUMPTION, in Logick, is the Minor, or ſecond Propoſition, in a categorical Syllogiſm. See MINOR, SYLLOGISM, *&c.*

ASSUMPTION is ſometimes alſo uſed for a Conſequence drawn from the Propoſitions whereof an Argument is compoſed. See CONSEQUENCE.

Thus we ſay, the Premiſſes are true, but the *Aſſumption* is captious. See PREMISSE, *&c.*

ASSUMPTIVE *Arms*, in Heraldry, are ſuch as a Man has a right to *aſſume* of himſelf, in virtue of ſome Action. See ARMS.

As, if a Man who is no Gentleman of Blood, nor Coat Armour, takes a Gentleman, Lord, or Prince, Priſoner in any lawful War; he becomes intitled to bear the Shield of ſuch Priſoner, and enjoy it to him and his Heirs.—The Foundation hereof is that Principle in Military Law, that the Dominion of Things taken in lawful War paſſes to the Conqueror.

ASSURANCE, in Law. See SECURITY.

ASSURANCE, or INSURANCE, in Commerce. See INSURANCE.

*Policy of* ASSURANCE, is a Contract whereby one or more Perſons oblige themſelves to make good any Damages which a Ship, a Houſe, or the like, may undergo, by Sea, Fire, or the like Dangers.—The Nature and Laws hereof ſee under the Article of POLICY *of Aſſurance.*

We have ſeveral Offices of *Aſſurance from Fire.*—As, the *Sun-Fire Office*; the *Hand-in-Hand Fire Office*; the *Phenix Office*, &c. ſome for Houſes, others for Goods; and ſome for both.

We have alſo *Aſſurances for Life*, in Virtue whereof, when the Perſon *aſſured* dies, a Sum of Money becomes payable to the Perſon in whoſe Favour the Policy of *Aſſurance* was given. See ANNUITY, *&c.*

ASSURANCE, in Logick. See CERTAINTY, EVIDENCE, DEMONSTRATION, *&c.*

ASSUROR, a Merchant, or other Perſon, who *aſſures* a Ship, Houſe, Life, or the like. See ASSURANCE.

*Aſſurors* are not anſwerable for what Damages ariſe thro' the Negligence, or other Fault of the Maſter or Seamen; or even thoſe which ariſe from any Vice or Defect in the thing *aſſured.* See AVERAGE.

ASTATI, or ASTATHII, or ASTATHYI, a Sect of Hereticks in the ninth Century, the Followers of one *Sergius*, who renewed the Errors of the *Manichees.* See MANICHEE.

They prevail'd much under the Emperor *Nicephorus*; but his Succeſſor, *Michael Curopalates*, curb'd them with very ſevere Laws.

The Word is derived from the *Greek* privative α, and ἵστημι, *ſto*, to ſtand firm, and ſignifies any thing unſtable and inconſtant.

ASTERISK, a Character in form of a ſmall Star, ſet over any Word, or Sentence, to make it the more conſpicuous, or to refer to the Margin for a Quotation, Explanation, *&c.* See CHARACTER, NOTE, REFERENCE.

The Word is derived from a Diminutive of the *Greek* ἀστὴρ, Star.

ASTERISM, ASTERISMUS, in Aſtronomy, the ſame with *Conſtellation.* See CONSTELLATION.

The Word comes from the *Greek* ἀστὴρ, *Stella*, Star. See STAR.

ASTHMA, in Medicine, a Diſeaſe of the Lungs, accompanied with a Shortneſs, and Difficulty of Reſpiration. See RESPIRATION and LUNGS.

Or, *Aſthma* is a Difficulty of Breathing, ariſing from a Diſorder of the Lungs; and uſually attended with violent Motions of the Diaphragm, Abdominal and Intercoſtal Muſcles, as alſo a rattling in the Throat.

The Word is *Greek*, ἄσθμα; form'd of the Verb ἄω, *Spiro*; I breath.

If Reſpiration be only thick and quick, without the other Symptoms, it is call'd a *Dyſpnœa.*—If it be ſo intenſe as to occaſion a violent Motion of the Muſcles of the Thorax; ſo that the Patient cannot be tolerably eaſy, except in an erect Poſture, it is call'd an *Orthopnœa.* See DYSPNÆA and ORTHOPNÆA.

The *Aſthma* is uſually divided into *Moiſt* and *Dry*, or *Manifeſt* and *Occult*, or *Pneumonic* and *Convulſive*: The firſt attended with an Expectoration of purulent Matter; the latter without.

The true *Aſthma* is occaſioned by an abundance of Seroſities, or of groſs viſcous or purulent Humours, collected in the Cavities of the Lungs, which ſtop up or ſtraighten the Paſſages of the Air, and compreſs the *Bronchia*. See BRONCHIA.

It is alſo owing to Empyema's, Phthiſis's, Crudities in the Stomach, Cachexies, *&c.* See EMPYEMA, PHTHISIS, *&c.*

The convulſive *Aſthma* is ſuppoſed to be occaſioned by an irregular Motion of the Animal Spirits; and happens when the Spirits do not flow faſt enough, or in ſufficient Quantity, into the Muſcles of the Breaſt, either by reaſon of an Obſtruction, or of ſome other Obſtacle: The neceſſary Conſequence whereof is a violent and painful Reſpiration.—The *Aſthma*, again, is either *continual*, or *periodical*, and *intermitting*; which laſt returns chiefly where a ſober Regimen is not obſerved.

The *Aſthma* is found to be the moſt violent when the Patient is in Bed, and in a prone Poſture; the Contents of the lower Belly, in that caſe, bearing againſt the *Diaphragm*, ſo as to leſſen the Capacity of the Breaſt, and to leave the Lungs leſs room to move.

The Cure of the true or pneumonic *Aſthma*, is by bleeding; after which Emeticks may be uſed; and if the Paroxyſm returns, Epiſpaſticks, with Glyſters inſtead of Purges.—Infuſions of *Fim. Equin.* or the Juice thereof, being deterſive and attenuating, are reputed excellent. *Linctus*'s alſo contribute to the Cure, *Millepedes*, Spirit of *Gum Armoniac*, with *Sal Armoniac*, *Coffee*, Tincture of *Sulphur*, &c. are commended in *Aſthmatick* Caſes.

For the convulſive Kind, the Cure is attempted by *Antiepilepticks*, *Antihyſtericks*, *Antiſpaſmodicks*, *Opiats*, &c.

ASTRAGAL, ASTRAGALUS, in Anatomy, a Bone of the Heel, having a convex Head, articulated with the two *Focils* of the Leg, by *Ginglymus*. See HEEL and FOOT.

The *Aſtragalus* call'd *Talus*, and *Os Baliſtæ*, is the firſt Bone of the *Tarſus*. See TALUS and TARSUS.

Some alſo apply the Name to the *Vertebræ* of the Neck.—*Homer*, in his *Odyſſee*, uſes the Term on this Occaſion. See VERTEBRÆ.

ASTRAGAL, in Architecture, is a little round Member, in form of a Ring, or Bracelet; ſerving as an Ornament on the Tops and at the Bottoms of Columns. See MOULDING, COLUMN, *&c.*

The *Aſtragal* is ſometimes alſo uſed to ſeparate the *Faſciæ* of the Architrave; in which caſe it is wrought in Chaplets, or Beads and Berries,

It is alſo uſed both above and below the Liſts, adjoining immediately to the Square, or Die of the Pedeſtal. See DYE and PEDESTAL.

The Word is derived from the *Greek* ἀστράγαλος, which ſignifies the *Ankle* or *Ankle-Bone*.

ASTRAGAL, in Gunnery, is a Kind of Ring or Moulding on a piece of Ordnance, at about half a Foot's Diſtance from the Mouth; ſerving as an Ornament to the Piece, as the former does to a Column. See ORDNANCE, CANON, *&c.*

ASTRAL, ſomething belonging to the *Stars*, or depending of the *Stars*. See STAR.

The Word comes from the *Latin aſtrum*, of the *Greek* ἄστρον, Star.

ASTRAL, or *Siderial Year*. See SIDERIAL and YEAR.

ASTRINGENTS, ASTRINGENTIA, in Medicine, *binding Remedies*; or ſuch as have the Power of contracting the Parts, and diminiſhing the Pores thereof. See MEDICINE.

*Aſtringents* act either by the Aſperity of their Particles, whereby they corrugate the Membranes, and make them draw up cloſer; or by thickening the Fluids, whereby they cannot run off ſo faſt as before.

*Aſtringents* therefore ſtand oppoſed to *Laxatives*. See LAXATIVE, PURGATIVE, *&c.*

Hence, *Aſtringents* are of the Claſs of Strengtheners, or Corroborants; the Nature and Operation whereof, ſee under the Article STRENGTHENER.

*Aſtringents* only differ from *Stypticks*, in Degree of Efficacy. See STYPTICK.

The Word is compounded of the *Latin ad* and *ſtringo*, I bind.

Among Simples, Mint, red Roſes, Nettles, Sanicle, Barbaries, Quinces, Pomegranates, Sloes, Cinnamon, Blood-ſtone, Alum, Chalk, Boles, Coral, Tutty, *&c.* are principal *Aſtringents*.

ASTROITES, or *Lapis* ASTROITES, in Natural Hiſtory, a Kind of figured Stone, found in divers Parts, and particularly the North of *England* See FIGURED-*Stone*.

The Form thereof is very uniform and regular; conſiſting of ſeveral thin pentagonal Joints ſet one over another, ſo as to form a Kind of five-angled Column.—The uſual Figures, as given by Dr. *Liſter*, are repreſented in *Tab. Nat. Hiſtory, Fig.* 14.

Theſe Stones, as now found, are all Fragments, conſiſting of from 1 to 25 Joints.—The Matter or Subſtance thereof when broken, is Flint-like, of a dark ſhining Poliſture, but much ſofter, and eaſily corroded by an acid Menſtruum.—They creep, like the *Cornu Ammonis*, in Vinegar; but a ſtronger Spirit, as of Nitre, agitates them with ſome Violence. See CORNU *Ammonis*.

The protuberant Parts repreſented under the top Joint of the firſt Figure are not found in all; but only in thoſe which are deep-jointed.—They are always five in Number. Dr. *Liſter* calls them *Wyers*; and compares them to the Antennæ of Lobſters.

'Tis controverted among the Naturaliſts, to what Species of Bodies the *Aſtroites*, *Trochites*, *Entrochi*, &c. are to be referr'd. Some will have 'em Native Stones, others Rock-Plants, and others Petrifactions of Plants. See STONE. See alſo PETRIFACTION, SPAR, TROCHITES, ENTROCHI, *&c.*

ASTROLABE, ASTROLABIUM, was originally uſed for a Syſtem or Aſſemblage of the ſeveral Circles of the Sphere, in their proper Order and Situation with reſpect to each other. See CIRCLE and SPHERE.

The antient *Aſtrolabes* were the ſame with our Armillary Spheres. See ARMILLARY.

The firſt and moſt celebrated of this Kind was that of *Hipparchus*, which he made at *Alexandria*, the Capital of *Egypt*, and lodg'd in a ſecure Place, where it ſerv'd for divers Aſtronomical Operations.—*Ptolomy* made the ſame uſe of it; but as the Inſtrument had ſeveral Inconveniences, he bethought himſelf to change its Figure, though perfectly natural and agreeable to the Doctrine of the Sphere; and to reduce the whole *Aſtrolabe* upon a Plane Surface, to which he gave the Denomination of *Planiſphere*. See PLANISPHERE.—Hence,

ASTROLABE, is uſed among the Moderns for a *Planiſphere*; or a *Stereographick* Projection of the Sphere upon the Plane of ſome Circle thereof. See PROJECTION and STEREOGRAPHICK.

The uſual Planes of Projection are that of the Equinoctial, the Eye being ſuppoſed in the Pole of the World; and that of the Plane of the Meridian, the Eye being ſuppoſed in the Point of Interſection of the Equinoctial and Horizon.

*Stoffler*, *Gemma Friſius*, and *Clavius*, have treated at large of the *Aſtrolabe*.—*For a further Account of the Nature and Kinds hereof, ſee the Article* PLANISPHERE.

ASTROLABLE, or *Sea* ASTROLABE, is an Inſtrument chiefly uſed for taking the Altitude of the Pole, the Sun, or Stars, at Sea. See ALTITUDE.

The *Aſtrolabe* repreſented *Tab. Navigation*, *Fig.* 22. conſiſts of a large Braſs Ring, about 15 Inches in Diameter, whoſe Limb, or a convenient Part thereof, is divided into Degrees and Minutes; fitted with a moveable Index, or Label, which turns upon the Centre and carries two Sights.—At the Zenith is a Ring, to hang it by in time of Obſervation.

To uſe the *Aſtrolabe*, turn it ſo to the Sun, as that the Rays may paſs freely through both the Sights F and G; in which Caſe, the Edge of the Label cuts the Altitude in the divided Limb.

The *Aſtrolabe*, though now grown into diſuſe, is at leaſt equal to any of the other Inſtruments uſed for taking the Altitude at Sea; eſpecially between the Tropicks, when the Sun comes near the Zenith.—There are a great many other uſes of the *Aſtrolabe*; whereof *Clavius*, *Henrion*, &c. have wrote entire Volumes.

The Word is form'd from the *Greek* ἄστρον, Star, and λαμβανω, *Capio*, I take —The *Arabs* call it, in their Tongue, *Aſtharlab*; a Word form'd by Corruption from the common *Greek* Name: Though ſome of 'em have endeavour'd to give it an *Arabick* Original. But the learned are generally ſatisfied that the *Arabs* borrowed both the Name and the Uſe of the Inſtrument from the *Greeks*.—*Naſſt Reddi Thouſi* has a Treatiſe in the *Perſian* Language, enti led, *Bait Babſil Aſtarlab*, wherein he teaches the Structure and Application of the *Aſtrolabe*.

ASTROLOGY, ASTTOLOGIA, the Art of foretelling future Events, from the Aſpects, Poſitions, and Influences of the Heavenly Bodies. See ASPECT, INFLUENCE, *&c.*

The Word is compounded of the *Greek* ἄστρον, Star, and λογος, Diſcourſe; whence, in the literal Senſe of the Name, *Aſtrology* ſhould ſignify no more than the *Doctrine or Science of the Stars*; which we read was its original Acceptation, and made the antient *Aſtrology*; though, in Courſe of Time, an Alteration has aroſe; that which the Antients called *Aſtrology* being by us termed *Aſtronomy*. See ASTRONOMY.

*Aſtrology* may be divided into two Branches, *Natural* and *Judiciary*.

To the former belong the predicting of natural Effects; as, the Changes of *Weather*, *Winds*, *Storms*, *Hurricanes*, *Thunder*, *Floods*, *Earthquakes*, &c. See NATURAL. See alſo WEATHER, WIND, RAIN, HURRICANE, THUNDER, EARTHQUAKE, *&c.*

To this our Countryman *Goad* chiefly keeps, in his two Volumes of *Aſtrology*; wherein he pretends, that Inundations may be foretold, and an Infinity of Phænomena explained from the Contemplation of the Stars.—Accordingly, he endeavours to account for the Diverſity of Seaſons, from the different Situations and Habitudes of the Planets, from their Retrograde Motions; the Number of fix'd Stars in the Conſtellations, *&c.*

This Art properly belongs to Phyſiology, or Natural Philoſophy.

Its Foundation and Merits the Reader may gather from what we have ſaid under the Articles, AIR, ATMOSPHERE, WEATHER, ÆTHER, FIRE, LIGHT, COMET, PLANET, MAGNETISM, EFFLUVIA, *&c.*

For

For this *Aſtrology*, Mr. *Boyle* has a juſt Apology in his *Hiſtory of the Air*.—Generation and Corruption being the Extremes of Motion, and Rarefaction and Condenſation the Mean ones; he ſhews, that the Effluvia of the Heavenly Bodies, as we find them immediately contribute to the latter, muſt alſo have a mediate Influence on the former; and conſequently, all phyſical Bodies be affected thereby. See GENERATION, CORRUPTION, RAREFACTION, CONDENSATION, *&c.*

'Tis evident, that the Properties of Moiſture, Heat, Cold, *&c.* employ'd by Nature to produce the two great Effects of Rarefaction and Condenſation almoſt wholly depend on the Courſe, Motion, Poſition, *&c.* of the heavenly Bodies.—And 'tis alſo clear that every Planet muſt have its own proper Light, diſtinct from that of any other; Light not being a bare viſible Quality, but endued with its ſpecifick Power. The Sun, we know, not only ſhines on all the Planets, but by his genial Warmth calls forth, excites, and raiſes the Motions, Properties, *&c.* peculiar to them; and his Rays muſt ſhare or receive ſomewhat of the Tincture thereof; and thus tinged be again reflected into the other Parts of the World, and particularly the adjacent Bodies of the planetary Syſtem. Whence, according to the Angle the Planets make with that grand Luminary, and the Degree wherein they are enlightened, either by his direct or his oblique Rays; together with their Diſtance and Situation in reſpect of our Earth; the Powers, Effects, or Tinctures, proper to each, muſt be tranſmitted hitherto, and have a greater or leſs effect on ſublunary Things.—See *Mede de Imperio Solis & Lunæ*, &c.

*Judiciary*, or *Judicial* ASTROLOGY, which is what we commonly call *Aſtrology*, is that which pretends to foretell moral Events; *i. e.* ſuch as have a Dependance on the Will and Agency of Man; as if that were directed by the Stars. See WILL, ACTION, *&c.*

The Profeſſors hereof maintain, "That the Heavens are one "great Volume, or Book wherein God has wrote the Hiſtory "of the World; and in which every Man may read his own "Fortune, and the Tranſactions of his Time.—The Art, ſay they, "had its Riſe from the ſame Hands as *Aſtronomy* itſelf: While "the antient *Aſſyrians*, whoſe ſerene unclouded Sky favour'd "their Cæleſtial Obſervations, were intent on tracing the Paths "and Periods of the heavenly Bodies; they diſcover'd a con"ſtant ſettled Relation or Analogy, between them and things be"low; and hence were led to conclude, theſe to be the *Paræ*, the "Deſtinies, ſo much talked of, which preſide at our Births, and "diſpoſe of our future Fate. See PARÆ, DESTINY, FATE, "*&c.*

"The Laws therefore of this Relation being aſcertained by a "Series of Obſervations, and the Share each Planet has therein; "by knowing the preciſe Time of any Perſon's Nativity, they "were enabled from their Knowledge in Aſtronomy, to erect a "Theme or Horoſcope of the Situation of the Planets, at that "Point of Time; and hence, by conſidering their Degrees of "Power and Influence, and how each was either ſtrengthened or "temper'd by other, to compute what muſt be the reſult there"of. See HOROSCOPE, NATIVITY, HOUSE, *&c.*

Thus the *Aſtrologers*.—But the chief Province now remaining to the modern Profeſſors, is the making of Calendars or Almanacks. See CALENDAR and ALMANACK.

Judicial *Aſtrology* is commonly ſaid to have been invented in *Chaldea*, and thence tranſmitted to the *Egyptians*, *Greeks*, and *Romans*.—Though it is to the *Arabs* we owe it. At *Rome* the People were ſo infatuated with it, that the *Aſtrologers*, or as they were then call'd, the *Mathematicians*, maintained their Ground in ſpight of all the Edicts of the Emperors to expel them out of the City. See MATHEMATICKS.

Add, that the *Bramæ*, who introduced and practiced this Art among the *Indians*, have hereby made themſelves the Arbiters of good and evil Hours, which gives them a vaſt Authority: They are conſulted as Oracles; and they have taken care never to ſell their Anſwers but at good Rates. See BRACHMAN.

The ſame Superſtition has prevailed in more modern Ages and Nations. The *French* Hiſtorians remark, that in the Time of Queen *Catherine de Medicis*, *Aſtrology* was in ſo much Vogue that the moſt inconſiderable thing was not to be done without conſulting the Stars. And in the Days of King *Henry* III. and IV. of *France*, the Predictions of *Aſtrologers* were the common Theme of the Court Converſation.

This predominant Humour in that Court was well rallied by *Barclay*, in his *Argenis*, Lib. II. on Occaſion of an *Aſtrologer*, who had undertook to inſtruct King *Henry* in the Event of a War then threatned by the Faction of the *Guiſes*.

"You maintain," ſays *Barclay*, "that the Circumſtances of Life "and Death depend on the Place and Influence of the Celeſtial "Bodies, at the Time when the Child firſt comes to Light; and "yet own that the Heavens revolve with ſuch vaſt Rapidity, that "the Situation of the Stars is conſiderably changed in the leaſt "Moment of Time.—What certainty then, can there be in "your Art; unleſs you ſuppoſe the Midwifes conſtantly "careful to obſerve the Clock; that the Minute of Time may "be convey'd to the Infant as we do his Patrimony? How often "does the Mother's Danger prevent this Care? And how many are "there who are not touched with this Superſtition? But ſuppoſe "them watchful to your Wiſh: If the Child be long in Deli"very; if, as is often the Caſe, a Hand or the Head come firſt, "and be not immediately followed by the reſt of the Body; "which State of the Stars is to determine for him? That, when "the Head made its Appearance; or when the whole Body was "diſengaged? I ſay nothing of the common Errors of Clocks, "and other Time-keepers, ſufficient to elude all your Cares.

"Again, why are we to regard only the Stars at his Nativity, "and not thoſe rather which ſhone when the *Fætus* was animated in the Womb? And why muſt thoſe others be excluded "which preſided while the Body remained tender, and ſuſceptible of the weakeſt Impreſſion, during Geſtations?

"But ſetting this aſide; and ſuppoſing, withal, the Face of "the Heavens accurately known: Whence ariſes this Dominion "of the Stars over our Bodies and Minds, that they muſt be "the Arbiters of our Happineſs, our manner of Life, and "Death? Were all they who went to Battle, and died together, "born under the ſame Poſition of the Heavens? And when a "Ship is to be caſt away, ſhall it admit no Paſſengers but thoſe "doomed by the Stars to ſuffer Shipwreck? Or rather, do not "Perſons born under every Planet go into the Combat, or aboard "the Veſſel; and thus notwithſtanding the Diſparity of their "Birth, periſh alike? Again, all who were born under the ſame "Configuration of the Stars do not live or die in the ſame man"ner. Are all who were born at the ſame Time with the King, "Monarchs? Or are they all even alive at this Day? View M. "*Villeroy*, here; nay view your ſelf: Were all that came into "the World with him as wiſe and virtuous as he; or all born "under your own Stars, Aſtrologers like you? If a Man meet "a Robber, you will ſay he was doomed to periſh by a Robber's "Hand; but did the ſame Stars which, when the Traveller was "born, ſubjected him to the Robber's Sword; did they likewiſe "give the Robber, who perhaps was born long before, a Power "and Inclination to kill him? For you will allow it as much "owing to the Stars that the one kills, as that the other is kill'd. "And when a Man is overwhelmed by the fall of a Houſe, did "the Walls become faulty becauſe the Stars had doom'd him "to die thereby; or rather, was not his Death owing to this, "that the Walls were faulty? The ſame may be ſaid with regard "to Honours and Employs: Becauſe the Stars that ſhone at a "Man's Nativity promiſed him Preferment, could thoſe have an "influence over other Perſons not born under them, by whoſe "Suffrages he was to riſe? Or how do the Stars at one Man's "Birth annul or ſet aſide the contrary Influences of other Stars, "which ſhone at the Birth of another?

"The Truth is, ſuppoſing the reality of all the planetary "Powers; as the Sun which viſits an Infinity of Bodies with the "ſame Rays, has not the ſame effect on all; but ſome things "are harden'd thereby, as Clay; others, ſoftened, as Wax; "ſome Seeds cheriſhed, others deſtroy'd; the tenderer Herbs "ſcorched up, others indemnified by their coarſer Juice: So, "where ſo many Children are born together, like a Field tilled "ſo many different Ways, according to the various Health, Habitude, and Temperament of the Parents, the ſame Celeſtial "Influx muſt operate differently. If the Genius be ſuitable and "towardly, it muſt predominate therein: If contrary, it will "only correct it. So that to foretell the Life and Manners of a "Child, you are not only to look into the Heavens, but into "the Parents, into the Fortune which attended the pregnant "Mother, and a thouſand other Circumſtances utterly inacceſſible.

"Further, does the Power that portends the new-born "Infant a Life, for Inſtance, of 40 Years; or perhaps a violent "Death at 30; does that Power, I ſay, endure and reſide ſtill "in the Heavens, waiting the deſtin'd time, when, deſcending "upon Earth, it may produce ſuch an effect? Or is it infuſed "into the Infant himſelf; ſo that being cheriſhed, and gradually "growing up together with him, it burſts forth at the appointed "Time, and fulfils what the Stars had given it in Charge? "Perſiſt in the Heavens it cannot; in that depending immediately on a certain Configuration of the Stars, when that is changed, the effect connected with it muſt ceaſe, and a new, perhaps a contrary one, take place. What Repoſitory then have "you for the former Power to remain in, till the Time come "for its Delivery? If you ſay it inheres or reſides in the Infant, "not to operate on him till he be grown to Manhood; the Anſwer is more prepoſterous than the former: For this, in the "Inſtance of a Shipwreck, you muſt ſuppoſe the Cauſe why the "Winds riſe, the Ship is leaky, or the Pilot, through Ignorance "of the Place, runs on a Shoal or a Rock. So the Farmer is "the Cauſe of the War, that impoveriſhes him; or of the favourable Seaſon which brings him a plenteous Harveſt.

"You boaſt much of the Event of a few Predictions, which, "conſidering the Multitude of thoſe your Art has produced, "plainly confeſs its impertinency.—A Million of Deceptions are "induſtriouſly hidden and forgot in favour of ſome eight or ten "which have ſucceeded. Out of ſo many Conjectures it muſt "be preternatural if ſome did not hit; and 'tis certain, that "conſidering you only as Gueſſers, there is no room to boaſt "you have been ſucceſsful therein. Do you know what Fate awaits "*Sicily* in this War; and yet are not apprehenſive what ſhall "befall your ſelf? Did not you foreſee the Oppoſition I was

"this

" this Day to make you? If you can ſay whether the King ſhall " vanquiſh his Enemies; find out, firſt, whether he will believe " you.

ASTRONOMY, Astronomia, the Doctrine of the Heavens, and the Phænomena thereof. See Heaven.

*Aſtronomy* is properly a mix'd mathematical Science, whereby we become acquainted with the Cæleſtial Bodies, their Magnitudes, Motions, Diſtances, Periods, Eclipſes, *&c.* See Mathematicks.

Some underſtand the Word *Aſtronomy* in a more extenſive Senſe; including under it the Theory of the Univerſe, and the primary Laws of Nature: In which Senſe it rather ſeems a Branch of *Phyſicks* than of *Mathematicks*. See Physicks, System, Nature, *&c.*

The Word is compounded of the *Greek* αστρ, Star; and νομος, Law, Rule.—Care muſt be taken to diſtinguiſh *Aſtronomy* from *Aſtrology*. See Astrology.

The Heavens may be conſider'd two Ways; either as they appear to the naked Senſe, or as they are diſcovered by the Underſtanding: And hence *Aſtronomy* is divided into two Branches, *Spherical* and *Theorical*.

*Spherical* Astronomy, *Theorical* Astronomy, } See { Spherical *Aſtronomy*. Theorical *Aſtronomy*.

The Invention of *Aſtronomy* has been variouſly aſſigned; and ſeveral Perſons, ſeveral Nations, and ſeveral Ages have laid claim to it.—From the Accounts given us by the antient Hiſtorians, it appears that Kings were the firſt Inventors and Cultivators of it: Thus, *Belus*, King of *Aſſyria*, *Atlas*, King of *Mauritania*, and *Uranus*, King of the Country ſituate on the Shore of the *Atlantick* Ocean, are ſeverally recorded, as the Perſons to whom the World owes this noble Science.

This, at leaſt, is pretty evident, that it was known to thoſe Nations long before it came into *Greece*: Agreeably to which, *Plato* tells us, it was a *Barbarian* who firſt obſerved the heavenly Motions; to which he was led by the clearneſs of the Weather in the Summer Seaſon, as in *Egypt* and *Syria*, where the Stars are conſtantly ſeen, there being no Rain or Clouds to interrupt the Proſpect. And the want of this clearneſs of Atmoſphere the ſame Author lays down as the Reaſon why the *Greeks* came ſo late to the Knowledge of *Aſtronomy*.

The generality of Writers fix the Origin of *Aſtronomy* and *Aſtrology* in *Chaldea*; and accordingly among the Antients we find the Word *Chaldean* frequently uſed for *Aſtronomer*.—Some chuſe to attribute the Invention to the antient *Hebrews*; and ſome, even, to the firſt Men; building on the Authority of *Joſephus*, and of what he mentions about *Seth*'s Pillars.—The *Muſſulmans* aſcribe it to *Enoch*, and other Orientals to *Cain*.—But theſe Opinions appear ſcarcely probable to others, in regard they find no Terms of *Aſtronomy* in the Language of thoſe firſt People, that is, in the *Hebrew* Language; which, on the contrary, are very frequent in the *Chaldee*: Though it muſt be own'd we have ſomething of this kind in *Job*, and the Books of *Solomon*.

We don't know whether it is worth noting, that *Rudbeck*, in his *Atlantis*, maintains *Aſtronomy* to have been invented by the *Swedes*: His Reaſons are, the great Diverſity in the length of the Days in that Country, which muſt naturally lead the People to conclude the Earth round, and that they lived near one of its Extremes: A Concluſion which the *Chaldeans*, and other Inhabitants of the middle Parts of the Globe, had no eaſy Way of coming at. The *Swedes*, adds our Author, prompted hereby to enquire further into the great Oppoſition of Seaſons, ſoon diſcover'd that the Sun bounds his Progreſs by a certain Space in the Heavens, *&c.*—But we have no Hiſtorical Facts to ſupport this reaſoning, which at beſt only proves that the thing might be ſo.

By *Porphyry*'s Account, *Aſtronomy* muſt have been of a very antient ſtanding in the Eaſt; for he tells us, that when *Babylon* was taken by *Alexander*, there were brought thence cæleſtial Obſervations, for the Space of 1903 Years, which therefore muſt have commenced within 115 Years of the Flood, or fifteen Years of the building of *Babel*:—*Epigenes*, according to *Pliny*, affirmed that the *Babylonians* had Obſervations of 720 Years, engraven on Bricks.—*Achilles Tatius* aſcribes the Invention of *Aſtronomy* to the *Egyptians*; and adds, that their Knowledge therein was engraven on Columns, and by that means tranſmitted to Poſterity.

From the *Egyptians*, *Aſtronomy* is commonly ſuppoſed to have paſs'd to the *Greeks*: *Laertius* tells us, that *Thales*, firſt, about the 90th Olympiad, and after him *Eudoxus* and *Pythagoras*, travell'd into *Egypt*, to be inſtructed herein; and that this laſt, in particular, living in a cloſe Community with the *Egyptian* Prieſts for ſeven Years, and being initiated into their Religion, was here let into the true Syſtem of the Univerſe; which he afterwards taught in *Greece* and *Italy*.—He was the firſt, among the *Europeans*, who taught that the Earth and Planets turn round the Sun, which ſtands immoveable in the Center; that the diurnal Motion of the Sun and fix'd Stars, was not real but apparent, ariſing from the Earth's Motion round its own Axis, *&c.* See Pythagorean.

Yet *Vitruvius* repreſents the Introduction of *Aſtronomy* into *Greece*, ſomewhat differently; maintaining, that *Beroſus*, a *Babylonian*, brought it thither immediately from *Babylon* itſelf; and open'd an *Aſtronomical* School in the Iſland of *Cos*. *Pliny*, Lib. VII. c. 37. adds, that in conſideration of his wonderful Predictions, the *Athenians* erected him a Statue in the *Gymnaſium*, with a gilded Tongue.—If this *Beroſus* be the ſame with the Author of the *Chaldee* Hiſtories, he muſt have been before *Alexander*.

After *Pythagoras*, *Aſtronomy* ſunk into neglect; moſt of the cæleſtial Obſervations brought from *Babylon*, were loſt, and 'twas but a very ſmall Number that *Ptolomy*, in his Time, was able to retrieve.—However, ſome few of his Followers continued to cultivate *Aſtronomy*; among whom were *Philolaus* and *Ariſtarchus Samius*.

At length, thoſe Patrons of Learning, the *Ptolomys*, Kings of *Egypt*, founding an Academy for *Aſtronomy*, at *Alexandria*, there aroſe ſeveral eminent *Aſtronomers* from the ſame; particularly *Hipparchus*, who, according to *Pliny*, undertook what wou'd have been a great Work even for a God to atchieve, *viz.* to number the Stars, and leave the Heavens as an Inheritance to Poſterity: He foretold the Eclipſes both of the Sun and Moon for 600 Years, and on his Obſervations is founded that noble Work of *Ptolomy*, intitled μεγαλη συνταξις. See Catalogue, *&c.*

The *Sarazens*, on their Conqueſt of *Egypt*, got a Tincture of *Aſtronomy*, which they carried with them out of *Africa* into *Spain*; and by this means *Aſtronomy*, after a long Exile, was at length introduced afreſh into *Europe*.

From this Time, *Aſtronomy* began to improve very conſiderably; being cultivated by the greateſt Genius's, and patronized by the greateſt Princes.—*Alphonſus*, King of *Caſtile*, enrich'd it with thoſe Tables which ſtill bear his Name. See Table.

*Copernicus* re-eſtabliſh'd the antient *Pythagorean* Syſtem; And *Tycho Brahe* publiſh'd a Catalogue of 770 fixed Stars, from his own Obſervations. See Copernican, Star. *&c.*

*Kepler*, from *Tycho*'s Labours, ſoon after diſcovered the true Theory of the World; and the phyſical Laws by which the heavenly Bodies move. See Planet, Period, Gravitation, *&c.*

*Galileo* firſt introduced Teleſcopes into *Aſtronomy*, and by their means diſcovered the Satellites of *Jupiter*; the various Phaſes of *Saturn*, the Mountains of the Moon, the Spots in the Sun, and its Revolution about its Axis. See Telescope, Satellite, Moon, Maculæ, *&c.*

Add, that *Hevelius*, from his own curious Obſervations, furniſhed a Catalogue of the fix'd Stars, much more complete than *Tycho*'s.—*Huygens* and *Caſſini* diſcovered the Satellites of *Saturn*, and his Ring.—And *Gaſſendus*, *Horrox*, *Bullialdus*, *Ward*, *Ricciolus*, *Gaſcoign*, &c. each contributed very conſiderably to the Improvement of *Aſtronomy*. See Saturn, Ring, Elliptic, Micrometer, *&c.*

The immortal *Newton* firſt demonſtrated from phyſical Conſiderations, the great Law that regulates all the heavenly Motions, ſets bounds to the Planets Orbs, and determines their greateſt Excurſions from the Sun, and their neareſt approaches to it.—'Twas he firſt taught the World whence aroſe that conſtant and regular Proportion obſerved by both primary and ſecondary Planets, in their Circulation round their central Bodies; and their Diſtances compared with their Periods.—He has given us a new Theory of the Moon, which accurately anſwers all her Inequalities, and accounts for 'em from the Laws of Gravity and Mechaniſm. See Newtonian. See alſo Attraction, Moon, Tide, *&c.*

Dr. *Halley* obliged the World with the *Aſtronomy* of Comets, and with a Catalogue of the Stars in the ſouthern Hemiſphere; and continues ſtill a Benefactor to *Aſtronomy*, by his Obſervations: To which it may be added, that he has in the Preſs, a new ſet of aſtronomical Tables; preferable by many Degrees to any yet publiſhed. See Comet, Table, *&c.*

Mr. *Flamſtead* upwards of forty Years watch'd the Motions of the Stars, and has given us a great number of curious Obſervations of the Sun, Moon, and Planets; beſides a noble Catalogue of 3000 fix'd Stars; which is more than double the Number in that of *Hevelius*.—Nothing now ſeem'd wanting to *Aſtronomy*, but an univerſal and compleat Theory of the cæleſtial *Phænomena*, explained according to their true Motions and phyſical Cauſes, which has been performed by Dr. *Gregory*. See Centripetal, Centrifugal, *&c.*

Astronomy is ſometimes divided, with reſpect to its different States, into *New* and *Old*.—The antient *Aſtronomy* is ſuch as the Art ſtood under *Ptolomy*, and his Followers; with all the Apparatus of ſolid Orbs, Epicycles, Excentricks, Deferents, Trepidations, *&c.* See Ptolomaic. See alſo Heaven, Epicycle, *&c.*

The antient *Aſtronomy* is deliver'd by *Claud. Ptolomy*, who died A. D. 147; in his μεγαλη Συνταξις; tranſlated in 827, into *Arabick*; and thence, in 1528, into *Latin*. An Epitome of it, for the uſe of Learners, was made by *Purbachius* and his Scholar *Regiomontanus*, in 1550; containing the whole Doctrine of the heavenly Motions, their Magnitudes, Eclipſes, *&c.*—On the Model hereof, *Albategennis* the *Arab*, compiled another Work, on the *Knowledge of the Stars*, publiſhed in *Latin* 1537.

The *New Aſtronomy* is ſuch as the Art has been ſince *Copernicus*; by whom thoſe fictitious Machines were thrown out; and the Conſtitution of the Heavens reduced to more ſimple, natural, and certain Principles. See Copernican. See alſo System, Sun, Earth,

EARTH, PLANET, ORBIT, *&c.* See alſo SPHERE, GLOBE, *&c.*

The modern *Aſtronomy* is deliver'd in *Copernicus*'s ſix Books of *Cæleſtial Revolutions*, publiſhed about the Year 1566; wherein, by retrieving *Pythagoras*'s and *Philolaus*'s *Dogma* of the Motion of the Earth, he laid the Foundation of a juſter Syſtem.—*Kepler*'s *Commentaries of the Motions of Mars*, publiſhed in 1609; wherein, in lieu of the circular Orbits admitted by all former *Aſtronomers*, he propoſed the elliptic Theory; which, in his Epitome of the *Copernican Aſtronomy*, publiſhed in 1635, he applied to all the Planets.—*Iſh. Bullialdus*'s *Aſtronomia Philolaica*, publiſhed in 1645, wherein he endeavoured to amend *Kepler*'s Theory, and render the Calculus more Exact and Geometrical: Some Errors committed by *Bullialdus* were pointed out by Dr. *Seth. Ward*, in his *Inquiry into the Philolaic Aſtronomy*, publiſhed in 1653; and corrected by himſelf in his *Foundations of the Philoaic Aſtronomy more clearly explain'd*, in 1657.—*Ward*'s *Aſtronomia Geometrica*, publiſhed in 1656; wherein a Geometrical Method is propoſed of computing the Planets Motions; though not conſiſtent with the true Laws of their Motions eſtabliſhed by *Kepler*. The ſame was propoſed the Year following by the Count *de Pagan*. The Truth is, *Kepler* himſelf does not ſeem to have been ignorant thereof; but rather choſe to ſet it aſide, as finding it contrary to Nature.—*Vin. Wing*'s *Aſtronomia Britannica*, publiſh'd in 1669; wherein, going on *Bullialdus*'s Principles, he gives juſt Examples of all the Precepts in practical *Aſtronomy*, well accommodated to the Capacity of Learners.—*Newton*'s *Aſtronomia Britannica*, publiſhed in 1657; and *Street*'s *Aſtronomia Carolina*, in 1661; both upon *Ward*'s Hypotheſis.

In *Ricciolus*'s *Almageſtum Magnum*, publiſhed in 1651, we have the ſeveral Hypotheſes of all the *Aſtronomers*, antient as well as modern.—And in Dr. *Gregory*'s *Elementa Aſtronomiæ Phyſicæ & Geometricæ*, in 1702, the whole modern Aſtronomy, as founded on the Diſcoveries of *Copernicus*, *Kepler*, and Sir *Iſaac Newton*.—The Marrow of the new *Aſtronomy* is alſo laid down by *Whiſton*, in his *Prælection. Aſtronomicæ*, in 1707.—For Novices in the Art, *Mercator*'s *Inſtitutiones Aſtronomicæ*, publiſhed in 1676; which contains the whole Doctrine, both according to the Antients and Moderns; and Dr. *Keill*'s *Introductio ad Veram Aſtronomiam*, in 1718, which only takes in the Modern, are the beſt calculated.

ASTRONOMICAL, ſomething that relates to *Aſtronomy*. See ASTRONOMY.

ASTRONOMICAL *Obſervations*. See CÆLESTIAL *Obſervations*.

The *Aſtronomical* Obſervations of the Antients, among which thoſe of *Hipparchus* make a principal Figure, are preſerved by *Ptolomy* in his *Almageſt*. See ALMAGEST.

In the Year 880, *Albategnius*, a *Sarazen*, applied himſelf to the making of Obſervations: In 1457, *Regiomontanus* undertook the Province at *Norimberg*; and his Diſciples *J. Wernerus*, and *Ber. Waltherus*, continued the ſame from 1475 to 1504. Their Obſervations were publiſhed together in 1544.—In 1509, *Copernicus*, and after him the Landgrave of *Heſſe*, with his Aſſiſtants *Rothmannus* and *Byrgius*, obſerved; and after them *Tycho*, at *Uranibourg*, from 1582 to 1601.—All the Obſervations hitherto rehearſed, together with *Tycho*'s *Apparatus* of Inſtruments, are contain'd in the *Hiſtoria Cæleſtis*, publiſhed in 1672, by Order of the Emperor *Ferdinand*.—Soon after, *Hevelius*, with a ſtill more magnificent and better contrived *Apparatus* of Inſtruments, deſcribed in his *Machina Cæleſtis*, began a Courſe of Obſervations. It is objected to him that he only uſed plain Sights, and could never be brought to take the Advantage of Teleſcopic ones; which occaſioned Dr. *Hook* to write Animadverſions on *Hevelius*'s Inſtruments, printed in 1674; wherein he deſpiſes them on account of their Inaccuracy: But Dr. *Halley*, who at the Inſtance of the Royal Society went over to *Dantzick* in the Year 1679, to inſpect his Inſtruments; approved of their Juſtneſs, as well as of the Obſervations made with them.

*Jer. Horrox*, and *Will. Crabtree*, two of our own Countrymen, are famous for their Obſervations from the Years 1635 to 1645.—They were followed by *Flamſteed*, *Caſſini* the Father and Son, *Halley*, *de la Hire*, *Roemer*, and *Kirchius*.—See *further under the Articles* OBSERVATORY, CATALOGUE, *&c.*

ASTRONOMICAL *Place*, of a Star or Planet, is its Longitude, or Place in the Ecliptick reckoned from the beginning *Aries*, *in Conſequentia*, or according to the natural Order of the Signs. See PLACE, LONGITUDE, *&c.*

ASTRONOMICAL *Time*. See *Aſtronomical* TIME.

ASTRONOMICALS, a Name uſed by ſome Writers for Sexageſimal Fractions; on account of their uſe in *Aſtronomical* Calculations. See SEXAGESIMAL.

ASYLUM, or AZYLUM, a Sanctuary, or Place of Refuge and Protection, where a Criminal who ſhelters himſelf is deem'd inviolable, and not to be touch'd by any Officer of Juſtice. See REFUGE, PRIVILEGE, *&c.*

The Word *Aſylum* is *Latin*: *Servius* derives it from the *Greek* ἄσυλον; which is compounded of the privative Particle α, and συλάω, *I take out, I draw*, becauſe no Perſon cou'd be taken out of an *Aſylum* without Sacrilege. See SACRILEGE.

The firſt *Aſylums* were eſtabliſh'd at *Athens*, by the Deſcendents of *Hercules*, to ſhelter themſelves from the fury of his Enemies. See HERACLIDES.

The Atars, Statues, and Tombs of Hero's, were, antiently, the ordinary Retreat of thoſe who found themſelves aggriev'd by the Rigour of the Laws, or oppreſs'd by the Violence of Tyrants: But of all others, Temples were held the moſt ſacred and inviolable Refuge. It was ſuppoſed that the Gods took upon them to puniſh the Criminal who thus threw himſelf upon them; and it had been a great Impiety in Man to take Vengeance out of the Hands of the Immortals. See ALTAR, TEMPLE, TOMB, STATUE, *&c.*

The *Iſraelites* had their Cities of Refuge, which were of God's own Appointment; where the Guilty, who had not committed any deliberate Crime, found Safety and Protection.—As to the Heathens, they allowed Refuge and Impunity, even to the vileſt and moſt flagrant Offenders, for the ſake of peopling their Cities; and it was by this means, and with ſuch Inhabitants, that *Thebes*, *Athens*, and *Rome*, were firſt ſtock'd.—We even read of *Aſylums* at *Lyons* and *Vienne* among the antient *Gauls*; and there are ſome Cities in *Germany* which ſtill preſerve the antient right of *Aſylum*.

Hence, on the Medals of ſeveral antient Cities, particularly in *Syria*, we meet the Inſcription, ΟΑΣΥΛΟΙ, to which is added, ΙΕΡΑΙ. For Inſtance, ΤΥΡΟΥ ΙΕΡΑΣ ΚΑΙ ΑΣΥΛΟΣ ΣΙΔΩΝΟΣ ΙΕΡΑΣ ΚΑΙ ΑΣΥΛΟΥ.— This Quality of *Aſylum* was given them, according to M. *Spanheim*, in regard of their Temples, and of the Gods revered by them.

The ſame Qualities has alſo been given to Deities: Thus *Diana* of *Epheſus* is call'd ασυλος.—Add, that the Camp form'd by *Romulus* and *Remus*, and which afterwards became a City, was firſt call'd *Aſylum*; and a Temple was therein erected to the God *Aſylæus*, Θεὸς ἀσυλαιος.

The Emperors *Honorius* and *Theodoſius* granting theſe Immunities to Church-yards, the Biſhops and Monks laid hold of a certain Tract or Territory, without which they fix'd the Bounds of the Secular Juriſdiction: And ſo well did they manage their Privileges, that Convents, in a little time, became next a-kin to Fortreſſes; where the moſt glaring Villains were in Safety, and braved the Power of the Magiſtrate. See CHURCH-*Yard*.

Theſe Privileges, at length, were extended not only to the Church-yards, but alſo to the Biſhop's Houſes, whence the Criminal cou'd not be removed without a legal Aſſurance of Life, and an entire Remiſſion of the Crime.—The Reaſon of the Extenſion was, that they might not be obliged to live altogether in the Churches, *&c.* where ſeveral of the Occaſions of Life cou'd not be decently done.

But, at length, the *Aſyla*, or Sanctuaries, were ſtripp'd of moſt of their Immunities, in regard they ſerved to make Guilt and Libertinage more daring and bold-faced. In *England*, particularly, they were entirely aboliſhed. See *the Article* SANCTUARY.

ASYMMETRY, ASYMMETRIA, a want of Symmetry or Proportion. See SYMMETRY.

In Mathematicks, the Term is particularly uſed for what we more uſually call *Incommenſurability*; which is when between two Quantities there is no common Meaſure: As, between the Side, and Diagonal of a Square.—In Numbers, ſurd Roots, as $\sqrt{2}$, *&c.* are incommenſurable to rational Numbers. See INCOMMENSURABLE, SQUARE, SURD, *&c.*

The Word is derived from the privative Particle α, συν, and μέτρια, q. d. *without Meaſure*.

ASYMPTOTE, in Geometry, a Line which continually approaches nearer and nearer to another, yet will never meet therewith, though indefinitely prolonged. See LINE.

The Word is compounded of the privative Particle α, συν, with, and πίπω, I fall; q. d. *In-coincident*, or which never meet.—Some *Latin* Authors call them *Intactæ*.

*Bertinus* gives us divers ſorts of *Aſymptotes*; ſome Strait, others Curve; ſome Concave, others Convex, *&c.* and further, propoſes an Inſtrument to deſcribe them withal.—Though, in ſtrictneſs, the Term *Aſymptotes* ſeems appropriated to right Lines.

*Aſymptotes*, then, are properly right Lines, which approach nearer and nearer to ſome Curve, of which they are ſaid to be the *Aſymptotes*; but which, though they and their Curve, were indefinitely continued, would never meet. See CURVE.

*Aſymptotes* may be conceived as Tangents to their Curves at an infinite Diſtance. See TANGENT.

Two Curves are alſo ſaid to be *Aſymptotical*, when they thus continually approach, without a poſſibility of meeting.—Thus two Parabola's, whoſe Axes are in the ſame right Line, are *Aſymptotical* to one another.

Of Curves of the ſecond Kind, that is, the Conick Sections, only the Hyperbola has *Aſymptotes*, which are two in Number.

All Curves of the third Kind have at leaſt one *Aſymptote*, but they may have three; and all Curves of the fourth Kind may have four *Aſymptotes*. See CURVE *of higher Kind*.

The Conchoid, Ciſſoid, and Logarithmick Curve, though not reputed Geometrical Curves, have each alſo one *Aſymptote*. See MECHANICAL, TRANSCENDENTAL, *&c.*

ASYMPTOTE *of the Conchoid*.—The Nature of *Aſymptotes* will be eaſily conceived in the Inſtance of the *Aſymptote* of a Conchoid.—Suppoſe MMAM, *&c.* (*Tab. Analyſis, Fig.* 1.) be a Part of a Conchoid, C its Pole, and the right Line Bd, ſo drawn that the Parts QM, EA, OM, *&c.* of right Lines drawn from the Pole C, are equal to each other: Then will the Line BD be an *Aſymptote* of the Curve: Becauſe the Perpendicular MI, *&c.* is ſhorter than MO, and MR than MQ, *&c.* ſo that the two Lines continually approach; yet the Points M, *&c.* and R, can never coincide, in regard there is ſtill a Portion of a Line to keep them aſunder; which Portion of a Line is infinitely diviſible, and conſequently muſt be diminiſh'd infinitely e're it become nothing. See DIVISIBILITY, INFINITE, *&c.* See alſo CONCHOID.

ASYMPTOTES *of the Hyperbola* are thus deſcribed.—Suppoſe a right Line DE (*Tab. Conicks, Fig.* 20.) drawn through the Vertex A of the Hyperbola, parallel to the Ordinates M*m*, and equal to the Conjugate Axes, *viz.* the Part DA, and that AE to the Semi-axis: Then, two right Lines drawn from the Centre C, of the Hyperbola, through the Points D and E; *viz.* the right Lines CF and CG, are *Aſymptotes* of the Curve.

*For the Properties of the* ASYMPTOTES *of a Hyperbola*, ſee HYPERBOLA.

If the Hyperbola GMR, *Fig.* 12. be of any kind whoſe Nature with regard to the Curve and its *Aſymptote*, is expreſs'd, by this general Equation $x^m y^n = a^{m+n}$; and the right Line PM be drawn any where Parallel to the *Aſymptote* CS, and the Parallelogram PCOM, be compleated: This Parallelogram is to the hyperbolick Space PMGB, contained under the determinate Line PM, the Curve of the Hyperbola GM indefinitely continued towards G, and the Part PB of the *Aſymptote* indefinitely continued the ſame way, as $m-n$ is to $n$: And ſo if $m$ be greater than $n$, the ſaid Space is ſquareable; but when $m=n$, as it will be in the common Hyperbola, the Ratio of the foregoing Parallelogram to that Space is as 0 to 1; that is, the Space is infinitely greater than the Parallelogram, and ſo cannot be had: And when $m$ is leſs than $n$, the Parallelogram will be to the Space, as a negative Number to a poſitive one, and the ſaid Space is ſquareable, and the Solid generated by the revolving of the indeterminate Space GMOL about the *Aſymptote* CE, is double of the Cylinder generated by the Motion of the Parallelogram PCOM about the Axis CO.

ASYMPTOTE *of a Logarithmic Curve*.—If MS be the Logarithmic Curve, PR an *Aſymptote*, PT the Subtangent, and MP an Ordinate; then will the indeterminate Space RPMS$=$PM$+$PT; and the Solid, generated by the Rotation of this Curve about the *Aſymptote* VP, will be $\frac{1}{2}$ of a Cylinder, whoſe Altitude is equal to the Length of the Subtangent, and the Semidiameter of the Baſe equal to the Ordinate QV. See LOGARITHMIC.

ASYMPTOTIC *Spaces*. See HYPERBOLA.

ASYNDETON, a Figure in Grammar, implying a defect or want of Conjunctions in a Sentence. See FIGURE and CONJUNCTION.

As, in the Inſtance, *Veni, Vidi, Vici*, I came, I ſaw, I conquer'd; where the Copulative *et*, and, is omitted.

The Word is derived from the privative α, and συνδέω, *colligo*, bind together.

*Aſyndeton* ſtands oppoſed to *Polyſyndeton*. See POLYSYNDETON.

ATAMADULET, the firſt Miniſter in the *Perſian* Empire. See MINISTER.

The *Atamadulet*, or, as *Tavernier* writes it, *Athematdoulet*; and *Sanſon*, *Etmadaulet*, is much the ſame with the Grand Viſier in *Turky*; excepting that he has not the Command of the Army, which the Viſier has. See VISIER.

The *Atamadaulet* is Great Chancellor of the Kingdom, Preſident of the Council, Superintendant of the Finances; and has the Charge of all Foreign Affairs.—The *Atmadaulet* is in effect Vice-Roy of the Kingdom: He iſſues the King's Mandates, or Orders, in this Style, *Bende derga Ali il alia Etmadolvet*; that is, I who am the ſupport of the Power, the Creature of this Port, the higheſt of all Ports, *&c.*

The Word is *Arabick*, compounded of *Itimâde* and *daulet*, that is, the Truſt of Majeſty, or according to *Tavernier*, the Support of Riches.

ATARAXY, ATARAXIA, a Term much uſed by the Stoicks, to denote that calmneſs and tranquillity of Mind, and that firmneſs of Judgment which ſets us free from any Agitations or Emotions ariſing from Self-Opinion, and the Knowledge we imagine our ſelves poſſeſs'd of. See STOICKS.

In this *Ataraxy*, they ſuppoſed the ſovereign Good to conſiſt. See GOOD.

The Word is purely *Greek*, compounded of ατυξ and τάξις, Order. See ATAXY.

ATAXY, ATAXIA, a want of Order or Regularity.—The Term is chiefly uſed in Medicine, where the Order of the Critical Days, or other Phænomena of a Diſeaſe, is inverted. See CRITICAL, *&c.*

The Phyſicians have frequent recourſe to an *Ataxy* or Irregularity of the Spirits, when at a loſs to account for any Diſorder in the Body. The Spirits, Dr. *Drake* obſerves, being always at Hand, are forced to bear the blame of a thouſand things they are innocent of. See SPIRIT.

The Word is compounded of the privative α, and τάξις, Order.

ATCHIEVEMENT, in Heraldry, the Coat of Arms of any Perſon or Family, duly marſhall'd with its external Ornaments, as *Supporters*, *Helmet*, *Wreath*, *Creſt*, and *Motto*. See COAT and ARMS. See alſo SUPPORTER, HELMET, *&c.*

Such are uſually hung out on the Fronts of Houſes after the Death of ſome conſiderable Perſon; and are now corruptly called *Hatchments*.

The Word is form'd of the *French*, *Achevement*, finiſhing, Conſummation, Perfection.

ATELLANÆ, or ATTELLANÆ, in Antiquity, a kind of comic and ſatyric Pieces, preſented on the *Roman* Theater; ſomewhat leſs ludicrous than the Farces on the *Engliſh* Stage, and yet leſs grave and ſerious than the *Greek* or *Latin* Comedies and Tragedies. See COMEDY, TRAGEDY, SCENE, *&c.*

The *Atellanæ*, or *Fabulæ Attellanæ* of the *Romans*, anſwer'd to the *Satyræ* among the *Greeks*. See SATYR, FABLE, *&c.*

They were thus called from *Atella*, or *Attella*, a City of *Tuſcany*, where they were firſt repreſented.

They became ſo licentious and impudent, that the Senate was at length obliged to ſuppreſs them. See SCENIC.

ATHANASIAN *Creed*. See CREED, TRINITY, *&c.*

ATHANASIANS. See ARIANS and ARIANISM.

ATHANATI, an Order of Soldiers among the antient *Perſians*.—The Word is originally *Greek*, and ſignifies *immortal*; being compounded of the privative α, and θανατος, Death.

The *Athanati* were a Body of Cavalry, conſiſting of ten thouſand Men, always compleat, becauſe, when any one of 'em died, another was immediately put into his Place.—It was for this Reaſon that they were call'd *Athanati*, or *immortales*.

ATHANOR, in Chymiſtry, a large immoveable Furnace, built of Brick or Earth, and cover'd with a Tower a-top; proper to maintain a temperate and equable Degree of Heat for a conſiderable time. See FURNACE, HEAT, *&c.*

The Heat of the *Athanor* is intended or remitted by opening or ſhutting a Regiſter. See REGISTER.

It is made to communicate its Heat by Tubes or Apertures at the Side of the Hearth or Fire-Place, to ſeveral adjacent Veſſels; by which means different Operations are carry'd on at the ſame time.—We meet with divers Forms and Conſtructions of this Furnace, in the Writers of Chymiſtry.

The *Athanor* is alſo call'd *Piger Henricus*, ſlow Harry; becauſe chiefly uſed in the ſlower Operation; and becauſe when once filled with Coals, it keeps burning a long time; whence the *Greeks* call it ακηδεῖν, q. d. *giving no trouble*, as it does need to be continually attended.—It is alſo call'd the *Philoſophical Furnace*, or *Furnace of Arcana*; and popularly, the *Tower Furnace*.

The Word *Athanor* is borrowed from the *Arabs*, who call an Oven, *Tanneron* from the *Hebrew* תנור, *Tannour*, an Oven, or Furnace; whence, with the additional Particle *al*, אלתנור, *Altannour*, &c.—Others chuſe to derive the Name from the *Greek* αθανατος, Immortal; becauſe of its durable Fire.

ATHEIST, ATHEUS, a Perſon who denies the Deity; who does not believe the Exiſtence of a God, nor a Providence; and who has no Religion, true nor falſe. See GOD, PROVIDENCE, RELIGION.

In general, a Man is ſaid to be an *Atheiſt* who owns no Being ſuperior to Nature, that is, to Men and the other ſenſible Beings in the World. See NATURE.

In this Senſe, *Spinoſa* may be ſaid to be an *Atheiſt*; and it is an Impropriety to rank him, as the learned commonly do, among *Deiſts*; ſince he allows of no other God beſide Nature, of which Mankind makes a Part; and there is no *Atheiſt* but allows of the Exiſtence of the World, and of his own in particular. See SPINOSISM. See alſo EXISTENCE, SUBSTANCE, *&c.*

*Plato* diſtinguiſhes three kinds of *Atheiſts*.—Some, who deny abſolutely that there are any Gods; others who allow the Exiſtence of Gods, but maintain that they don't concern themſelves with human Affairs, and ſo deny a Providence; and others, who believe there are Gods, but think they are eaſily appeas'd with a little Prayer, or the like; and that they remit the greateſt Crimes for the ſmalleſt Supplication. See EPICUREAN, *&c.*

The Word *Atheiſt* is derived from the privative α, and Θεὸς, God.

ATHENÆA, a Feaſt of the antient *Greeks*, held in Honour of *Minerva*, who was call'd Ἀθήνη. See FEAST.

Theſe were afterwards call'd *Panathenæa*. See PANATHENÆA.

ATHENÆUM, in Antiquity, a publick Place wherein the Profeſſors of the liberal Arts held their Aſſemblies, the Rhetoricians declaimed, and the Poets rehearſed their Verſes.

The

The *Athenæa* were built in form of Amphitheatres; and were alſo incompaſs'd with Seats, which *Sidonius* calls *Cunei*. See AMPHITHEATRE.

The two moſt celebrated *Athenæa* were that of *Rome*, and that at *Lions*; the former of which, according to *Aurelius Victor*, was built by the Emperor *Adrian*.

The Word is *Greek*, and is derived from *Athens*, a learned City, where many of theſe Aſſemblies were held; or from the *Greek* Name of *Pallas*, Ἀθήνη, Goddeſs of Science; intimating that *Athenæum* was a Place conſecrated to *Pallas*, or ſet a-part for the Exerciſes over which ſhe preſides.

ATHEROMA, in Medicine, a Kind of a Tumour or Swelling, of a pappy Conſiſtence, without pain, or diſcolouring the Skin. See TUMOR.

The *Atheroma* is contain'd in a Cyſtis or membranous Bag; and does not give way when touched with the Finger, nor retains any dent after preſſure.

The *Atheroma* is thus call'd from the *Greek* ἀθηρα, a Kind of Pap or Pulp which the Matter of this Tumour reſembles.—It is near a-kin to the *Meliceris* and *Steatoma*; and cured like them. See MELICERIS and STEATOMA.

ATHLETA, in Antiquity, a Wreſtler, or a ſtrong courageous Perſon, who employs himſelf in Exerciſes of the Body, as running, wreſtling, and other the like Gymnic Sports, for which the Antients had eſtabliſhed Prizes. See EXERCISE and GYMNASTIC. See alſo GAME, CIRCUS, *&c.*

The *Athletæ* lived in continual Abſtinence from Pleaſures, to render themſelves the more vigorous and robuſt. See ABSTINENCE.

The Word comes from the *Greek* ἀθλητὴς, of ἀθλέω, *certo*, *pugno*, I contend, I fight. See COMBAT, GLADIATOR, *&c.*

ATIA. See ODIO and ATIA.

ATLANTIS, or ATLANTICA, in Antiquity, an Iſland ſpoke of by *Plato* and other Writers, under ſome extraordinary Circumſtances; and render'd famous by a Controverſy among the Moderns about it.

The moſt diſtinct Account of this celebrated Place, is given us in *Plato*'s *Timæus*, and *Critias*; which amounts, in a few Words, to what follows.—" The *Atlantis* was a large Iſland in the We-
" ſtern Ocean, ſituate before, or oppoſite to, the Straights of
" *Gibraltar*. Out of this Iſland there was an eaſy Paſſage into
" ſome others, which lay near a large Continent exceeding all
" *Europe* and *Aſia*. *Neptune* ſettled in this Iſland, which he di-
" ſtributed among his ten Sons; to the youngeſt fell the extre-
" mity of the Iſland call'd *Gadir*, which in the Language of the
" Country ſignifies Ἔυμηλος, *Fertile*, or *abundant in Sheep*. The
" Deſcendants of *Neptune* reigned here from Father to Son, for
" a great Number of Generations, in the Order of Primoge-
" niture. They alſo poſſeſſed ſeveral other Iſlands; and paſſing in-
" to *Europe* and *Africa*, ſubdued all *Libya* as far as *Egypt*, and all
" *Europe* to *Aſia Minor*. At length the Iſland ſunk under Wa-
" ter; and for a long Time afterwards, the Sea thereabouts was
" full of Flats and Shelves.

The learned *Rudbecks*, Profeſſor in the Univerſity of *Upſal*, in an expreſs Treatiſe intitled, *Atlantica ſive Manheim*, maintains, very ſtrenuouſly, that *Plato*'s *Atlantis* is *Sweden*; and attributes to his Country, whatever the Antients have ſaid of their *Atlantis*, or *Atlantic Iſland*.—After the little Abridgment we have given of *Plato*'s Account, the Reader will be ſurprized to find *Sweden* taken for the *Atlantis*; and accordingly tho' *Rudbeck*'s Work be full of uncommon Erudition, the Author paſſes for a Viſionary in this Point.

Others will have *America* to be the *Atlantis*; and hence infer, that the new World was not unknown to the Antients: But what *Plato* ſays, does by no means quadrate thereto.—*America* ſhould rather ſeem to be the vaſt Continent beyond the *Atlantis*, and the other Iſlands mentioned by *Plato*.

*Becman*, in his *Hiſtory of Iſlands*, Cap. 5. advances a much more probable Opinion than that of *Rudbeck*'s.—The *Atlantis*, according to him, was a large Iſland extended from the *Canaries* to the *Azores*; and theſe Iſlands are the Remains thereof not ſwallowed up by the Sea.

The *Atlantis* took its Name from *Atlas*, *Neptune*'s eldeſt Son, who ſucceeded his Father in the Government thereof.

ATLANTIDES, among the Poets. See VERGILIÆ.

ATLAS, in Architecture, is a Name given to thoſe Figures, or Half-Figures of Men, ſo much uſed inſtead of Columns, or Pilaſters; to ſupport any Member of Architecture, as a Balcony, or the like. See COLUMN, *&c.*

Theſe are otherwiſe call'd *Telamones*. See TELAMON.

ATLAS, in Anatomy, the Name of the firſt *Vertebra* of the Neck, which ſupports the Head. See VERTEBRA and NECK.

It is ſo call'd in alluſion to the celebrated Mountain *Atlas*, in *Africa*, which is ſo high, that it ſeems to bear the Heavens; and to the Fable, in which, *Atlas*, the King of this Country is ſaid to bear the Heavens on his Shoulders.

The *Atlas* has no ſpiny *Apophyſes*; becauſe the Motions of the Head don't turn on this *Vertebra*, but on the ſecond. As it is obliged to turn about as often as the Head moves round, had there been any ſpiny *Apophyſes*, it would have incommoded the Motion of the Muſcles in the Extenſion of the Head.—It is alſo of a finer and firmer Texture than the other *Vertebræ*; and it differs further from them in that thoſe receive at one End, and are received at the other, whereas this receives at both Extremes; for two Eminences of the Occiput are inſerted within its two upper Cavities, which makes its Articulation with the Head; and at the ſame time, two other Eminences of the ſecond *Vertebræ* are received within its two lower Cavities, by means of which they are articulated together.

ATLAS is alſo a Title given to Books of univerſal Geography, containing Maps of the known Parts of the World; as if they were view'd from the Top of that celebrated Mountain, which the Antients eſteemed the higheſt in the World; or rather on Account of their holding the whole World like *Atlas*.

We have alſo *Atlas*'s of particular Parts, *Sea-Atlas*'s, &c.—The firſt Work under this Denomination was the *Great Atlas* of *Blaew*.

ATMOSPHERE, ATMOSPHÆRA, an Appendage of our Earth; conſiſting of a thin, fluid, elaſtic Subſtance, call'd *Air*, ſurrounding the Terraqueous Globe, to a conſiderable Heighth. See EARTH.

By *Atmoſphere* is uſually underſtood the whole Maſs. or Aſſemblage of ambient Air: Though, among the more accurate Writers, the *Atmoſphere* is reſtrain'd to that Part of the Air next the Earth, which receives Vapours and Exhalations; and is terminated by the Refraction of the Sun's Light. See REFRACTION.

The further or higher Spaces, though perhaps not wholly deſtitute of Air, are ſuppoſed to be poſſeſs'd by a finer Subſtance call'd *Æther*; and are hence denominated the *Ætherial Region*, or Space. See ÆTHER, HEAVEN, *&c.*

A late eminent Author conſiders the *Atmoſphere* as a large Chymical Veſſel, wherein the Matter of all the Kinds of ſublunary Bodies is copiouſly floating; and thus expoſed to the continual Action of that immenſe Furnace the Sun; whence innumerable Operations, Sublimations, Separations, Compoſitions, Digeſtions, Fermentations, Putrefactions, *&c.* See CHYMISTRY.

For *the Nature, Conſtitution, Properties, Uſes, Diverſities*, &c. of the ATMOSPHERE, ſee the Article AIR.

We have a large Apparatus of Inſtruments, contrived for indicating and meaſuring the State and Alterations of the *Atmoſphere*; as, *Barometers, Thermometers, Hygrometers, Manometers, Anemometers*, &c. ſee each under its proper Article, BAROMETER, THERMOMETER, HYGROMETER, *&c.*

The *Atmoſphere* inſinuates itſelf into all the Vacuities of Bodies; and thus becomes the great Spring of moſt of the Mutations here below; as Generation, Corruption, Diſſolution, *&c.* See GENERATION, CORRUPTION, DISSOLUTION, *&c.*

'Tis one of the great Diſcoveries of the modern Philoſophers, that the ſeveral Motions attributed by the Antients to a *Fuga-vacui*, are really owing to the Preſſure of the *Atmoſphere*. See FUGA-*Vacui*, PUMP, PRESSURE, *&c.*

### *Weight of the* ATMOSPHERE.

Organical Bodies are peculiarly affected by this Preſſure: To this, Plants owe their Vegetation; and Animals their Reſpiration, Circulation, Nutrition, *&c.* See PLANT, ANIMAL, VEGETATION, CIRCULATION, *&c.*

To this alſo we owe ſeveral conſiderable Alterations in the animal Oeconomy, with regard to Health, Life, Diſeaſe, *&c.* See HEALTH, *&c.*

And hence, a Calculus of the preciſe Quantity of this Preſſure, becomes a Point worthy of Attention.

Our Bodies, then, are equally preſs'd on by the incumbent *Atmoſphere*; and the Weight they ſuſtain is equal to a Cylinder of *Air*, whoſe Baſe is equal to the Superficies of our Bodies.—Now, a Cylinder of *Air* of the Height of the *Atmoſphere*, is equal to a Cylinder of Water of the ſame Baſe, and 35 Foot high; or a Cylinder of Mercury, 29 Inches high; as appears from the Torricellian Experiments; as alſo from the Height to which Water aſcends in Pumps, Syphons, *&c.* See TORRICELLIAN. See alſo PUMP, SYPHON, *&c.*

Hence it follows, that every Foot ſquare of the Superficies of our Bodies, is preſſed upon by a Weight of Air equal to 35 cubical Feet of Water; and a cubical Foot of Water, being found, by Experiment to weigh 76 Pound *Troy* Weight, therefore the Compaſs of a Foot ſquare upon the Superficies of our Bodies, ſuſtains a quantity of Air equal to 2660 Pound: For $76+35=2660$; and ſo many Foot ſquare as the Superficies of our Body contains, ſo many times 2660 Pound does that Body bear.

Hence, if the Superficies of a Man's Body, contain 15 ſquare Feet, which is pretty near the Truth, he will ſuſtain a Weight equal to 39900 Pound, for $2660+15=39900$, which is above 13 Tun for the ordinary Load.

The Difference of the Weight of the Air which our Bodies ſuſtain at one time more than at another, is alſo very great.—The whole Weight of Air which preſſes upon our Bodies when the Mercury is higheſt in the Barometer, is equal to 39900 Pounds. Whence, the Difference between the greateſt and the leaſt preſſure of Air upon our Bodies, may be prov'd to be equal to 3982 Pounds.

The

The Difference of the Air's Weight, at different times, is meaſur'd by the different Height to which the Mercury is rais'd in the Barometer; and the greateſt Variation of the Height of the Mercury being 3 Inches, a Column of Air of any aſſignable Baſe equal to the Weight of a Cylinder of Mercury of the ſame Baſe, and of the Altitude of three Inches, will be taken off from the Preſſure upon a Body of an equal Baſe, at ſuch times as the Mercury is three Inches lower in the Barometer; ſo that every Inch ſquare of the Surface of our Bodies, is preſſed upon at one time more than another, by a Weight of Air equal to the Weight of 3 cubical Inches of Mercury.—Now a cubical Foot of Water being 76 Pound; a cubical Foot of Mercury muſt be 1064 Pound =102144 Drams: And as 102144 Drams is to a cubical Foot, or, which is all one, 1728 cubical Inches, ſo is $59\frac{192}{1728}$ Drams, to one cubical Inch. So that a cubical Inch of Mercury being very near =59 Drams; and there being 144 ſquare Inches in a Foot ſquare, therefore a Maſs of Mercury of a Foot ſquare, =144 ſquare Inches; and if three Inches high, muſt contain 432 cubical Inches of Mercury, which ×59 (the Number of Drams in a cubical Inch of Mercury) makes 25488 Drams.—And this Weight does a Foot ſquare of the Surfaces of our Bodies, ſuſtain at one time more than at another.

Suppoſe again, the Superficies of a human Body =15 Foot ſquare; then would the Body ſuſtain at one time more than at another, a Weight $=15\times2548=\frac{382320}{8}$ Drams $(=\frac{47790}{12}$ Ounces) = 3982 ½ Pound *Troy*.

Hence, it is ſo far from being a wonder that we ſometimes ſuffer in our Health, by a change of Weather; that it is the greateſt, we don't always do ſo.—For when we conſider that our Bodies are ſometimes preſſed upon by near a Tun and a half Weight more than at other, and that this Variation is often very ſudden; 'tis ſurprizing that every ſuch Change does not intirely break the Frame of our Bodies to pieces.

In effect, the Veſſels of our Bodies being ſo much ſtraitned by an increas'd Preſſure, would ſtagnate the Blood up to the very Heart, and the Circulation would quite ceaſe; if Nature had not wiſely contriv'd, that when the Reſiſtance to the circulating Blood is greateſt, the Impetus, by which the Heart contracts, ſhould be ſo too.—For, upon an increaſe of the Weight of the Air, the Lungs will be more forcibly expanded, and thereby the Blood more intimately broken and divided, ſo that it becomes fitter for the more fluid Secretions, ſuch as that of the nervous Fluid; by which the Heart will be more ſtrongly contracted. And the Blood's Motion towards the Surface of the Body being obſtructed, it will paſs in greater quantity to the Brain, where the Preſſure of the Air is taken off by the Cranium; upon which ſcore alſo, more Spirits will be ſeparated, and the Heart, on that account too, more enabled to carry on the Circulation, through all paſſable Canals, whilſt ſome others, towards the Surface, are obſtructed. See HEART, CIRCULATION, *&c.*

The moſt conſiderable Alteration made in the Blood, upon the Air's greater or leſſer Preſſure on the Surface of our Bodies, is its rendring the Blood more or leſs compact, and making it croud into a leſs, or expand into a greater Space, in the Veſſels it enters.—For the *Air* contain'd in the Blood, always keeps it ſelf in Equilibrio with the external *Air* that preſſes upon our Bodies; and this it does by a conſtant Niſus to unbend it ſelf, which is always proportionable to the compreſſing Weight by which it was bent: So that if the Compreſſion or Weight of the circumambient Air be ever ſo little abated, the Air contain'd within the Blood unfolds its Spring, and forces the Blood to take up a larger Space than it did before. See BLOOD, HEAT, COLD, *&c.*

The Reaſon we are not ſenſible of this Preſſure, is well explained by *Borellus, De mot. nat. à Grav. fac. prop.* 29, *&c.*—After ſhewing that Sand perfectly rammed in a hard Veſſel is not capable by any means of being penetrated or parted, not even by a Wedge; and likewiſe that Water contained in a Bladder compreſſed equally on all Sides, cannot yield or give way in any Part: He proceeds, "In like manner, within the Skin of an Animal "are contained a diverſity of Parts, ſome hard, as Bones; others "ſoft, as Muſcles, Nerves, Membranes, *&c.* others fluid, as "Blood, Fat, *&c.* Now 'tis not poſſible the Bones ſhould be "broke or diſplaced in the Body, unleſs the Weight lay heavier "on one Part than another, as we ſometimes ſee in Porters. "If the Preſſure be ſubdivided, ſo that it lay equally all around, "upwards, downwards, and ſideways, and no Part of the Skin "is exempt therefrom, it is evidently impoſſible any Fracture "or Luxation ſhould follow. The ſame may be obſerved of the "Muſcles and Nerves; which, though ſoft, yet being compoſed of ſolid Fibres, do mutually ſuſtain each other, and reſiſt "the common Weight. The ſame holds of Blood, and the other Humours; and as Water does not admit any manifeſt "Condenſation, ſo the Animal Humours contained in ther Veſſels may ſuffer an Attrition from an impulſe made in one or "more particular Places; but can never be forced out of their "Veſſels by an univerſal Compreſſion.—It follows, that as none "of the Parts undergo either Separation, Luxation, Contuſion, or "any other Change of Situation; 'tis impoſſible any Senſe of Pain "ſhould enſue, which can only be the effect of a Solution of Conti-"nuity." This is confirmed by what we ſee in Divers, *&c.* See DIVING.

The ſame is farther confirmed by Mr. *Boyle*; who including a young Frog in a Veſſel half full of Water, and intruding ſo much Air as that the Water muſt ſuſtain eight times the Weight it otherwiſe would; yet the Animalcule, notwithſtanding the great tenderneſs of its Skin, did not ſeem to be at all affected thereby.

*For the Effects of the Removal of the Preſſure of the* Atmoſphere, ſee AIR-*Pump*.

*For the Cauſe of the Variations in the Weight and Preſſure of the* Atmoſphere, ſee BAROMETER.

### *Height of the* ATMOSPHERE.

The Height of the *Atmoſphere* is a Point about which the modern Naturaliſts have been very ſollicitous.—Had not the Air an elaſtic Power, but were every where of the ſame Denſity, from the Surface of the Earth to the extreme Limit of the *Atmoſphere*, like Water, which is equally Denſe at all Depths; it being above obſerved that the Weight of the Column of Air reaching to the Top of the *Atmoſphere* is equal to the Weight of the Mercury contained in the Barometer; and the Proportion of Weight likewiſe being known between equal bulks of Air and Mercury; it were eaſy to find the Height of ſuch Column, and conſequently of the *Atmoſphere* it ſelf.—For a Column of Air one Inch high, being to an equal Column of Mercury, as 1 to 10800; 'tis evident that 10800 ſuch Columns of Air, that is, a Column 900 Foot high, is equal in Weight to one Inch of Mercury: And conſequently the 30 Inches of Mercury ſuſtained in the Barometer, require a Column of Air 17000 Foot high, on which footing the Height of the *Atmoſphere* would only be 27000 Foot, or little more than five *Engliſh* Miles high. See TORRICELLIAN.

But the Air, by its elaſtic Property, being liable to expand and contract; and it being found by repeated Experiments in *England, France*, and *Italy*, that the Spaces it takes up, when compreſſed by different Weights, are reciprocally proportional to thoſe Weights themſelves; or, that the Air takes up the leſs Space, the more it is preſſed: It follows, that the Air in the upper Regions of the *Atmoſphere* where the Weight is ſo much leſs, muſt be much rarer than nearer the Surface of the Earth; and conſequently that the Height of the *Atmoſphere* muſt be much higher than is above aſſign'd.

If we ſuppoſe the Height of the whole *Atmoſphere* divided into innumerable equal Parts; the Denſity of the Air in each of the ſaid Parts being as its Quantity, and the Weight of the *Atmoſphere* being alſo as the Quantity of the whole incumbent Air; 'tis evident the Weight of the incumbent Air is every where as the Quantity of Air contained in the ſubjacent Part, which makes a Difference between each two contiguous Parts of incumbent Air.—Now, we have a Theorem in Geometry, that where the Differences of Magnitudes are geometrically proportionable to the Magnitudes themſelves, thoſe Magnitudes are in continual Arithmetical Proportion: Wherefore if, according to the Suppoſition, the Altitude of the Air by the continual Addition of the new Parts into which it is divided, do increaſe in a continual Arithmetical Proportion; its Denſity will be diminiſhed, or which amounts to the ſame, its Gravity increaſed, in continual Geometrical Proportion.

From ſuch a Series it is eaſy by making two or three Barometrical Obſervations of the Rarity of the Air at two or three different Heights; to find its Rarity at any other Height, or the Height correſponding to any Rarity; and conſequently the Altitude of the whole *Atmoſphere*, ſuppoſing the utmoſt Degree of Rarity known beyond which the Air cannot go. See the Articles BAROMETER, SERIES, PROGRESSION, *&c.* See alſo *Greg. Aſtron. Phyſ. Geom. Log.* 5. *Prop.* 3. and *Halley* in *Philoſoph. Tranſact.* N°. 181.

It muſt not be here omitted, that ſome Obſervations made by *Caſſini* and his Aſſociates, ſeem to render this Method precarious.—In continuing the Meridian Line of the Obſervatory at *Paris*, they meaſured the Altitudes of ſeveral Mountains with great accuracy; noting the Height of the Barometer at the Top of each; and found, that the Rarities of the Air as you aſcend from the Level of the Earth, are much greater than they ought to be, according to this Proportion.

Suſpecting, therefore, the juſtneſs of the Experiments, the Royal Academy made divers others, under great Dilatations of Air, far exceeding the Rarities found on the Tops of the Mountains; the Reſult whereof was, that they all exactly anſwered the Proportion of the incumbent Weights. Whence it ſhould follow, that the higher Air about the Tops of Mountains, is of a different Nature, and obſerves a different Law from that near the Earth.

The Reaſon hereof may be owing to the great Quantity of groſs Vapours and Exhalations here, more than there; which Vapours being leſs Elaſtic and not capable of ſo much Rarefaction as the pure Air above: The Rarefactions of the pure Air increaſe in a greater Ratio than the Weights diminiſh.—M. *Fontenelle*, however, from ſome Experiments of M. *de la Hire*, accounts for the Phænomenon in a different Manner; alledging, that the elaſtic

ſtic Power of Air is increaſed by the admixture of Humidity therewith; and conſequently, that the Air near the Tops of Mountains, being moiſter than that below, becomes thereby more Elaſtic, and rarifies in a greater Ratio than naturally and in a drier State it would.—But Dr. *Jurin* ſhews, that the Experiments produced to ſupport this Syſtem, are by no means concluſive. *Append. ad Varen. Geograph.*

Be this as it will, the Rarities of the Air at different Heights proving not to bear any conſtant Proportion to the Weights wherewith they are preſs'd; Experiments made with Barometers at the Feet and Tops of Mountains, cannot give the Height of the *Atmoſphere*; ſince our Obſervations are all made near the Earth; whereas the greater Part of the *Atmoſphere* is far beyond; and the farther from us, the farther does it ſeem to recede from the Nature and Laws of ours.—M. *de la Hire*, therefore, after *Kepler*, has recourſe to a more ſimple and ſecure Way of aſcertaining the Height of the *Atmoſphere*; viz. from the conſideration of the Crepuſcula.

'Tis allowed by Aſtronomers, that when the Sun is 18° below the Horizon, we begin or ceaſe to ſee the Twilight: Now the Ray whereby we do it, can be no other than a horizontal Line, or a Tangent to the Earth in the Place where the Obſerver is. But this Ray cannot come directly from the Sun, which is under the Horizon; and muſt therefore be a Ray reflected to us by the laſt inner and concave Surface of the *Atmoſphere*. We are to ſuppoſe that the Sun when 18° below the Horizon, emits a Ray which is a Tangent to the Earth, and ſtrikes upon this laſt Surface of the *Atmoſphere*, and is thence reflected to our Eye, being ſtill a Tangent, and horizontal.—If there were no *Atmoſphere*, there would be no Crepuſculum; and conſequently if the *Atmoſphere* were not ſo high as it is, the Crepuſculum would begin and end when the Sun is at a leſs Diſtance from the Horizon than 18°, And contrarily.—Hence we gather, that the largeneſs of the Arch by which the Sun is depreſs'd when the Crepuſculum begins or ends, determines the Height of the *Atmoſphere*. We are to note however, that 32′ Minutes muſt be ſubſtracted from the Arch of 18°, for the Refraction, which raiſes the Sun ſo much higher than he wou'd be; and 16′ more for the Height of the upper Limb of the Sun, which is ſuppoſed to ſend the Ray, above his Centre, which is ſuppoſed to be 18° low. The remaining Arch, therefore, which determines the Height of the *Atmoſphere*, is only 17° 12′.

Two Rays, one direct, and the other reflected, but both Tangents to the Earth, muſt neceſſarily meet in the *Atmoſphere*, at the Point of Reflection, and comprehend an Arch between 'em of 17° 12′, whereof they are Tangents.—Hence it follows from the Nature of the Circle, that a Line drawn from the Centre of the Earth, and cutting the Arch in two, will go to the Point of Concurrence of thoſe two Rays; and as it is eaſy finding the exceſs of this Line over the Semidiameter of the Earth, which is known, 'tis eaſy to find the Height of the *Atmoſphere*, which is only that exceſs.—On this Principle M. *de la Hire* diſcovers the Height of the *Atmoſphere* to be 37223 Fathoms, or near 17 *French* Leagues. The ſame Method was made uſe of by *Kepler*, who only rejected it, becauſe it gave the Height of the *Atmoſphere* 20 times greater than he otherwiſe allowed it.

It muſt be added, that in this Calculus, the direct and reflected Rays are ſuppoſed to be right Lines; whereas in fact they are Curves, form'd by the perpetual Refraction the Rays undergo in paſſing through a Series of different Denſities of Air.—Computing then, upon them as two ſimilar Curves; or rather as a ſingle Curve, one extreme whereof is a Tangent to the Earth: Its Vertex equally diſtant from both Extremes, determines the Height of the *Atmoſphere*; which therefore, will be found ſomewhat lower than in the former Caſe; the Point of Concurrence of two right Lines, which are here only Tangents to the Curve, the one at one end, and the other at the other; being higher than the Vertex of the Curve. On this footing, M. *de la Hire* finds the *Atmoſphere* 35362 Fathoms, or 16 Leagues. *Hiſt. de l. Acad. Roy. des Scienc.* An. 1713. See the Articles REFRACTION, CREPUSCULUM. *&c.*

### ATMOSPHERES *of the Heavenly Bodies.*

*Lunar* ATMOSPHERE.—*That the Moon is ſurrounded, like the Earth, with a changeable* Atmoſphere, ſee evinced under the Article MOON.

*The Reality of the Atmoſpheres of the other Planets*, ſee alſo under the Article PLANET.

*For the* ATMOSPHERES *of Comets, and the Sun*, ſee COMET and SUN.—See alſo MACULÆ, TAIL, *&c.*

ATMOSPHERE *of ſolid*, or *conſiſtent Bodies*, is a kind of Sphere form'd by the Effluvia, or minute Corpuſcles emitted from them. See SPHERE and EFFLUVIA.

Mr. *Boyle* endeavours to ſhew that all Bodies, even the hardeſt and moſt coherent, as Gems, *&c* have their *Atmoſpheres*. See GEM.—See alſo MAGNET, MAGNETISM, *&c.*

ATOM, ATOMUS, in Philoſophy, a *Corpuſcle*; or a Part or Particle of Matter ſo minute as to be indiviſible. See CORPUSCLE.

The Word is *Greek*, ἄτομος; form'd of the privative α, and τεμνω, I cut, I divide.

*Atoms* are properly the *minima Naturæ*, the laſt or ultimate Particles into which Bodies are diviſible; and are conceived as the firſt Rudiments, or component Parts of all phyſical Magnitude, or the pre-exiſtent and incorruptible Matter whereof Bodies were form'd. See PARTICLE, BODY, *&c.*

The Notion of *Atoms* ariſes hence, that Matter is not diviſible, *in infinitum*. See DIVISIBILITY.

And hence many Authors are led to deny the reality of Atoms, together with that of Mathematical Points: An *Atom*, ſay they, either has Parts, or it has none: If it have none, it is a mere Mathematical Point: If it have, then do theſe Parts alſo conſiſt of others, and ſo to Infinity. See CONTINUITY, *&c.*

But this is to recede from the genuine Character of *Atoms*, which are not eſteemed indiviſible, becauſe of their want of Bigneſs, or Parts; (for all phyſical Magnitude muſt have three Dimenſions, Length, Breadth, and Thickneſs; and all Extenſion is diviſible) but they are indiviſible on acconnt of their Solidity, Hardneſs, and Impenetrability, which preclude all Diviſion, and leave no Vacancy for the Admiſſion of any foreign Force to ſeparate or diſunite them. See INDIVISIBLE, DIVISIBILITY, EXTENSION, MATTER, *&c.*

As *Atoms* are the firſt Matter, 'tis neceſſary they ſhou'd be indiſſolvible, in order to their being incorruptible.—Sir *Iſaac Newton* adds, that 'tis alſo required they be immutable, in order to the World's continuing in the ſame State, and Bodies being of the ſame Nature now as formerly. See HARDNESS.

Hence the Antients were alſo led to maintain *Atoms*, eternal; for that what is Immutable muſt be Eternal. See ETERNITY.

They alſo added Gravity, and in Conſequence thereof, Motion, to their *Atoms*: And further, obſerving that *Atoms* thus falling perpendicularly, cou'd not join or unite together; they ſuper-added a fortuitous or ſide Motion, and furniſh'd them with certain hooked Parts, in order to enable them to catch and hang the better together.—And from a caſual or fortuitous Jumble of theſe hamous *Atoms*, they ſuppoſed the whole Univerſe to be formed. See GRAVITY, MOTION, HAMOUS, *&c.*

ATOMICAL *Philoſophy*, the Doctrine of *Atoms*; or a Method of accounting for the Origin and Formation of all things, from the Suppoſition of *Atoms*, endued with Gravity and Motion. See ATOM, WORLD, *&c.*

The *Atomical* Philoſophy was firſt broach'd and taught by *Moſchus*, *Leucippus*, and *Democritus*: It was cultivated by *Epicurus*; whence it became alſo denominated the *Epicurean Philoſophy*. See EPICUREAN.

It has been ſince retrieved by *Gaſſendus*, and others; and is now eſpouſed and adhered to by a great Part of the philoſophical World, under the Denomination of the *Corpuſcular Philoſophy*. See CORPUSCULAR *Philoſophy*.

ATONEMENT. See PROPITIATION, SACRIFICE, *&c.*

ATONY, ATONIA, in Medicine, *&c.* a want of Tone or Tenſion; or a Relaxation of the Solids of a human Body; occaſioning a loſs of Strength, Faintings, *&c.* See TONE, SOLID, FIBRE, RELAXATION, *&c.*

The Word is compounded of the privative α, and τείνω, *tendo*, I ſtretch.

ATRABILIS, in the antient Medicine, black or aduſt Bile. See BILE and ADUST.

*Atrabilis* was one of the great Humours of the antient Phyſicians; whence aroſe the *Atrabilary*, one of their Temperaments; anſwering to what we call *Melancholly*. See HUMOUR, TEMPERAMENT, MELANCHOLLY, *&c.*

ATROPHY, ATROPHIA, an Indiſpoſition or Diſeaſe, wherein the Body or ſome of its Parts, do not receive the neceſſary Nutriment, but dwindles or waſtes inſenſibly. See NUTRITION.

Such are what we commonly call *Conſumptions*, *Phthiſes*, &c. See CONSUMPTION, PHTHISIS, *&c.*

An *Atrophy* is natural in old Age, call'd *Atrophia Senilis*. See OLD AGE, DEATH, *&c.*

The Word is compounded of the privative Particle α, and τρέφω, I feed, nouriſh.

ATTACHING, or ATTACHMENT, in Law, the taking or apprehending a Perſon or Thing by Commandment or Writ. See COMMANDMENT and WRIT.

The Word is form'd of the *French Attacher*, to faſten, tye; and that from the corrupt *Latin Attachiare*, of *Attexere*, to weave to; or rather from the *Celtic Tach*, a Nail, and *tacha*, to nail.

*Lambard* makes this Difference between an Arreſt and an *Attachment*; that an Arreſt proceeds out of an inferior Court by Precept, and an *Attachment* out of a higher Court, by Precept or Writ; and that a Precept to arreſt hath theſe formal Words, *Duci facias*, *&c.* and a Writ of *Attachment* theſe, *Præcipimus tibi quod attachies talem, & habeas eum coram nobis*. See ARREST.

By this it appears, that he who arreſts, carries the Party arreſted to another higher Perſon, to be diſpoſed of forthwith; whereas he that *attaches* keeps the Party *attached*, and preſents him in Court at the Day aſſigned in the *Attachment*.

There is this further Difference, that an Arreſt lies only upon the Body of a Man; and an *Attachment* ſometimes on his Goods too; for a Man may be *attach'd* by an hundred Sheep.

ATTACHMENT, by Writ, differs from a Diſtreſs in this, that an *Attachment* does not reach Lands, as a Diſtreſs does; and that a

Diſtreſs does not touch the Body, which an *Attachment* does.—Yet the two are frequently confounded together.

In the moſt common Uſe, an *Attachment* is an Apprehenſion of a Man by his Body, to bring him to anſwer the Action of the Plaintiff.—A Diſtreſs with a Writ, is the taking of a Man; a Diſtreſs without a Writ, is the taking of a Man's Goods for ſome real Cauſe, as Rent, Service, *&c.* See DISTRESS.

ATTACHMENT *out of the Chancery*, is had of courſe, upon an *Affidavit* made that the Defendant was ſerved with a *Subpœna*, and appears not; or iſſueth upon not performing ſome Order or Decree. See CHANCERY.

After the Return of this *Attachment* by the Sheriff, *quod non eſt Inventus in Balliva ſua*; another *Attachment*, with Proclamation, iſſues: And if he appear not thereupon, a Writ of Rebellion. See REBELLION, *&c.*

ATTACHMENT *of the Foreſt*, is one of the three Courts held in the Foreſt. See FOREST.

The loweſt Court is call'd the *Attachment*, the mean Swanimote, the higheſt, the Juſtice in *Eyre's* Seat. See SWANIMOTE, and JUSTICE.

The Court of *Attachments* ſeems ſo call'd, becauſe the Verderors of the Foreſt have therein no other Authority, but to receive the *Attachments* of Offenders againſt Vert and Veniſon taken by the reſt of the Officers, and to inroll them, that they may be preſented or puniſhed at the next Juſtice Seat.—This *Attachment* is by three means; by Goods and Chattels; by Body, Pledges, and Mainprize; or by Body only.—This Court is held every forty Days throughout the Year.

ATTACHMENT *of Privilege*, is, by Virtue of a Man's Privilege, to call another to that Court whereto he himſelf belongs, and in reſpect whereof he is privileged to anſwer ſome Action. See PRIVILEGE.

*Foreign* ATTACHMENT, is an *Attachment* of Goods or Money found within a Liberty or City, to ſatisfy ſome Creditor within ſuch City or Liberty.

By the Cuſtom of ſome Places, particularly *London*, a Man may *attach* Money or Goods in the Hands of a Stranger: As, if *A.* owes *B.* 10 *l.* and *C.* owes *A* 10*l.* *B.* may *attach* the 10*l.* in the Hands of *C.* to ſatisfy himſelf.

ATTACHIAMENTA *Bonorum*, in our antient Law Books, denotes a Diſtreſs taken upon the Goods or Chattels of any Perſon, ſued for perſonal Eſtate, or Debt, by the legal *Attachiators* or Bailiffs, as a Security to anſwer the Action.

ATTACHIAMENTA *de Spinis & Boſco*, ſignifies an antient Privilege ganted to the Officers of Foreſts, to take to their own uſe, Thorns, Bruſh, and Windfalls, within their own Precincts or Liberties. See FOREST.

ATTACK, an Attempt upon any Perſon or Thing; or the Act of beginning a Combat, or Diſpute. See AGGRESSOR.

ATTACK, in the military Art, is an Attempt or Engagement to force a Poſt, a Body of Troops, or the like. See ASSAULT.

We ſay to begin, to make, to ſuſtain an *Attack*, &c. Several Authors have wrote of the Art of *attacking* and defending. See DEFENCE.

ATTACK *of a Siege*, is the Effort made by the Beſiegers with Trenches, Mines, Galleries, *&c.* to make themſelves Maſters of a Fortreſs, in *attacking* one of its Sides. See SIEGE, FORTIFICATION, WORK, *&c.*

*Falſe* ATTACK, is that which is not vigorouſly proſecuted; ſerving only to make a Diverſion among the beſieged, and to oblige them to divide their Forces, that the true *Attack* may be carried on with greater Succeſs. See FALSE.

To ATTACK *in Flank*, is to *attack* both Sides of the Baſtion. See BASTION.

ATTAINDER, in Law, is when a Man has committed Felony, or Treaſon, and Judgment is paſſed upon him. See FELONY and TREASON.

The Children of a Perſon *attainted* of Treaſon cannot be Heirs to him, or any other Anceſtor; and if he were noble before, his Poſterity are hereby degraded and made baſe: Nor can this Corruption of Blood be ſalved but by an Act of Parliament, unleſs the Judgment be reverſed by a Writ of Error. See ATTAINTED.

Our antient Laws makes this Difference between *Attainder* and *Conviction*, that a Man was ſaid to be convicted preſently upon the Verdict; but not *attainted* till it appeared he was no Clerk, or being a Clerk, and demanded by his Ordinary, cou'd not purge himſelf. See CLERGY.—add, that *Attainder* is more extenſive than Conviction; Conviction being only by the Jury, and *Attainder* not before Judgment. See CONVICTION.

A Man is *attainted* two ways; by *Appearance*, or by *Proceſs*.

*Attainder by Appearance*, is either by *Confeſſion*, by *Battel*, or by *Verdict*.—*Confeſſion*, whereof *Attaint* grows, is twofold; one at the Bar before the Judges, when the Priſoner, upon his Indictment read, owns himſelf guilty, never putting himſelf on his Jury. The other is before the Coroner, in Sanctuary; where he, upon his Confeſſion, was in former times conſtrain'd to abjure the Realm, which is alſo call'd *Attainder by Abjuration*. See SANCTUARY and ABJURATION.

*Attainder by Battel*, is when the Party appeal'd by another, chuſing rather to try the Truth by Combat than by Jury, is vanquiſhed. See BATTEL, COMBAT, DUEL, *&c.*

*Attainder by Verdict*, is when the Priſoner at the Bar anſwering Not guilty to the Indictment, hath an Inqueſt of Life and Death paſſed on him, and is by the Verdict of the Jury pronounced, Guilty. See INQUEST.

*Attainder by Proceſs*, otherwiſe call'd *Attainder by Default*, or *Attainder by Outlawry*, is where a Party flies, or does not appear after being five times publickly call'd in the County-Court, and at laſt, upon his Default, pronounced, or returned outlawed. See OUTLAWRY.

*Bill of* ATTAINDER, is a Bill brought into Parliament, for *attainting*, condemning, and executing a Perſon for High-Treaſon. See BILL, PARLIAMENT, TREASON, *&c.*

ATTAINT, ATTINCTA, in Law, a Writ which lies after Judgment, againſt a Jury that hath given a falſe Verdict in any Court of Record; be the Action real or perſonal, if the Debt or Damages exceed 40*s.* See JURY and VERDICT.

If the Verdict be found falſe, the Judgment antiently was, that the Jurors Meadows ſhould be ploughed up, their Houſes broken down, their Woods grubbed up, and their Lands and Tenements forfeited to the King.

If it paſs againſt him that brought that *Attaint*, he ſhall be impriſoned, and grievouſly ranſomed at the King's Will.

ATTAINTED, in Law, is uſed for a Perſon found guilty of ſome Crime or Offence, particularly of Felony or Treaſon. See ATTAINDER.

Yet a Man is ſaid to be *attainted of Diſſeiſin*; and ſo it is uſed in *French*: as, *eſtre attaint, & vaincu en aucun cas*, is to be caſt in any Cauſe.

ATTAINT, among Farriers, ſignifies a knock, or hurt in a Horſe's Leg; proceeding either from a Blow with another Horſe's Foot, or from an over-reach in froſty Weather, when a Horſe being rough-ſhod, or having Shoes with long Calks, ſtrikes his hinder Feet againſt his Fore-leg.

The Farriers diſtinguiſh *upper Attaints*, given by the Toe of the Hind-foot upon the Sinew of the Fore-leg.—And *nether Attaints*, or Over-reaches on the Paſtern-Joint, which are little Bladders like Wind-Galls, coming either by a Wrench, a Strain, an Over-reach, or the like. The uſual Place is in the Heel or Truſh.

ATTENDANT, or ATTENDENT. See ASSISTANT. See alſo RETINUE, SATELLIT, *&c.*

ATTENDANT, ATTENDENS, in Law, ſignifies one that owes Duty or Service to another, or depends upon him: Thus if there be Lord, Meſne, and Tenant; and the Tenant hold of the Meſne by a Penny; and the Meſne hold over by two Pence: If the Meſne releaſes to the Tenant all his Right in the Land, and the Tenant die, his Wife ſhall be endowed of the Land, and ſhall be *Attendant* to the Heir, of the third Part of the Penny, not of the third Part of the two Pence; ſhe being to be endowed of the beſt Poſſeſſion of her Husband.—Where the Wife is endowed by the Guardian, ſhe ſhall be *Attendant* to the Guardian, and to the Heir at his full Age. See WIFE and WOMAN.

ATTENTION, ATTENTIO, a due Application of the Ear, or the Mind, to any thing ſaid, or done.

*Attention* of Mind is not properly an Act of Underſtanding, but rather of the Will, by which it calls the Underſtanding from the Conſideration of other Objects, and directs it to the thing in hand. See UNDERSTANDING and WILL.

*Attention*, in reſpect of Hearing, is the ſtretching or ſtraining the *Membrana Tympani*, ſo as to make it more ſuſceptible of Sounds, and better prepared to catch even a feeble Agitation of the Air. Or it is the adjuſting the Tenſion of that Membrane to the Degree of loudneſs or lowneſs of the Sound we are attentive to. See TYMPANUM. See alſo HEARING, *&c.*

The Word is compounded of *ad*, to; and *tenſio*, of *tendo*, I ſtretch.

ATTENUANTS, ATTENUATIVES, or ATTENUATING *Medicines*, ſuch as ſubtilize or break the Humours into finer Parts; and thus diſpoſe them for Motion, Circulation, Excretion, *&c.* See ATTENUATION and HUMOR.

*Attenuants* ſtand oppoſed to *Thickners*, or Medicines which condenſe, inſpiſſate, *&c.* See DETERGENT.

ATTENUATION, ATTENUATIO, the Act of *attenuating*; that is, of making any Fluid thinner, and leſs conſiſtent than it was before. See FLUID.

The Word is compounded of the *Latin ad*; and *tenuis*, thin, ſlender, weak.

*Attenuation* is defined more generally by *Chauvin*, the dividing or ſeparating of the minute Parts of any Body, which before, by their mutual Nexus or Implication, form'd a more continuous Maſs.—Accordingly, among the Alchymiſts, we ſometimes find the Word uſed for Pulverization, or the act of reducing a Body into an impalpable Powder. See POWDER and PULVERIZATION.

ATTESTATION, the giving Teſtimony, or Evidence of the Truth of any thing; eſpecially in Writing. See TESTIMONY, EVIDENCE, *&c.*

Thus

Thus we ſay, Miracles need be well *atteſted*, to gain Credit. See MIRACLE.

The Word is compounded of the *Latin ad*, to; and *teſtis*, witneſs.

ATTICISM, ATTICISMUS, a ſhort, conciſe Expreſſion or manner of ſpeaking; thus call'd from the People of *Attica*, or *Athens*, who abounded therein. See STYLE and LACONIC.

ATTIC, ATTICUS, ſomething relating to *Attica*, or the City *Athens*.

In Matters of Philology we uſe, *Attic Salt*, *Sales Attici*, for a delicate, poignant Kind of Wit and Humour, peculiar to the *Athenian* Writers: *Attic Witneſs*, *Atticus teſtus*, was a Witneſs incapable of Corruption: So an *Attic* Muſe was an excellent one, *&c.*

ATTIC is alſo uſed in Architecture for a Kind of Building, wherein there is no Roof or Covering to be ſeen; thus called becauſe uſual at *Athens*.

ATTIC, or ATTIC-*Order*, is alſo a kind of little Order, rais'd upon another larger one; by way of crowning, or to finiſh the Building. See ORDER.

It is ſometimes alſo uſed for the conveniency of having a Wardrobe, or the like; and inſtead of regular Columns, has only Pilaſters of a particular Form. See COLUMN and PILASTER.

There are alſo *Attics* uſed for high Altars.—The Order takes its Name from *Athens*, where it was firſt practiced.

ATTIC *of a Roof*, is a Kind of Parapet to a Terrace, Platform, or the like. See PARAPET, TERRACE, *&c.*

ATTIC *Continued*, is that which encompaſſes the whole Pourtour of a Building, without any Interruption; following all the Jets, the Returns of the Pavillions, *&c.*

ATTIC *Interpos'd*, is that ſituate between two tall Stories, ſometimes adorn'd with Columns, or Pilaſters. See STORY.

ATTIC *Baſe*, is a peculiar Kind of Baſe uſed by the antient Architects, in the *Ionick* Order; and by *Palladio*, and others of the Moderns, in the *Dorick*. See DORIC and IONIC.

The *Attic* is the moſt beautiful of all the Baſes. See BASE.

ATTIRE, in Botany, is uſed to denote the third Part or Diviſion of the Flower of a Plant; the other two being the *Empalement* and the *Foliation*. See FLOWER. See alſo EMPALEMENT, *&c.*

This *Attire* is of two Kinds; Semini-form, and Florid.—The *Semini-form Attire* conſiſts of two Parts; Chives, or the Stamina; and Semets, or Apices; one upon each *Attire*. See STAMINA and APICES.

The *Florid Attire* is uſually call'd *Thrums*, as in the Flowers of Marigold, Tanſy, *&c.*—Theſe Thrums are called *Suits*, which conſiſt of two, but moſt times of three Pieces,—The outer Part of the Suit is the Floret, whoſe Body is divided at the top, like a Cowſlip Flower, into five Parts or diſtinct Leaves. See THRUM, *&c.*

ATTIRE, in Hunting, the Head or Horns of a Deer. See HEAD.

The *Attire* of a Stag, if perfect, conſiſts of *Bur*, *Pearls*, *Beam*, *Gutters*, *Antler*, *Sur-antler*, *Royal*, *Sur-royal*, and *Croches*.—Of a Buck, the *Bur*, *Beam*, *Brow-antler*, *Black-antler*, *Advancer*, *Palm*, and *Spellers*. See the Article HUNTING.

ATTITUDE, in Painting and Sculpture, the Poſture of a Figure, or Statue; or the Diſpoſition of its Parts, by which we diſcover the Action it is engaged in, and the very Sentiment ſuppoſed to be in its Mind. See FIGURE, STATUE, and ACTION.

The repreſenting of theſe in a ſtrong and lively manner, makes what they call a *good Expreſſion*. See EXPRESSION.

The Word comes from the *Italian Attitudo*, which ſignifies the ſame thing.

ATTOLLENS, in Anatomy, a Name common to ſeveral Muſcles, whoſe Office or Action is to raiſe the Parts they belong to. See MUSCLE.

The *Attollents*, or *Attollent* Muſcles, are otherwiſe call'd *Elevators*. See ELEVATOR.

The Word is compounded of the *Latin ad*; and *tollo*, I raiſe, I lift.

ATTORNEY, ATTURNATUS, in Law, a Perſon appointed by another to do ſomething in his ſtead; particularly to ſollicit and carry on a Law Suit. See AGENT, DEPUTY, *&c.* See alſo, CAUSE, PROCESS, ACTION, *&c.*

*Attorneys* in Common Law are much the ſame with *Procurators*, *Proctors*, or *Syndics*, in the Civil Law. See PROCURATOR, PROCTOR, *&c.*

The Word is compounded of the *Latin ad*, to; and the *French tourner*, to turn; q. d. to turn a Buſineſs over to another.—The antient *Latin* Name, according to *Bracton*, is *Reſponſalis*. See RESPONSALIS.

Antiently, thoſe of Authority in Courts had it in their Power whether or no to ſuffer Men to appear or ſue by another than themſelves; as appears from *Fitz. de Nat. Brev.* in the Writ, *Dedimis poteſtatem de Attornato faciendo*; where it is ſhewed, that Men were driven to procure the King's Writs, or Letters Patent, to appoint *Attorneys* for them: But 'tis ſince provided by Statutes, that it ſhall be lawful to appoint an *Attorney* without ſuch Circuition; as appears by ſeveral Statutes, 20 *Hen.* III. *cap.* 10.—6 *Edw.* I. *cap.* 8. &c.

There is a great diverſity of Writs in the Table of the Regiſter, wherein the King, by his Writ, commands the Judges to admit of *Attorneys*; whereby there aroſe ſo many unskilful *Attorneys*, and ſo many miſchiefs thereby, that for reſtraining them it was enacted, 4 *Hen.* IV. *cap.* 18. that the Judges ſhould examine them, and diſplace the unskilful; and again 33 *Hen.* VI. *cap.* 7. that there ſhould be but a certain Number of *Attorneys* in *Norfolk* and *Suffolk*.

*Attorney* is either *General* or *Special*.

ATTORNEY *General* is he who by general Authority is appointed to manage the Affairs or Suits of the Community.

Such is the *Attorney-General* of the King, who is the ſame as *Procurator Cæſaris* in the *Roman* Empire. See PROCURATOR.

To him come Warrants for making out Patents, Pardons, *&c.* He is at the Head of managing all Law-Affairs of the Crown, either in criminal Proſecutions or otherwiſe; eſpecially in Matters of Treaſon, Sedition, *&c.* In all Courts he pleads within the Bar; but when a Privy-Counſellor, he cannot plead in any Court, but on the King's Affairs, without obtaining a Privy Seal for ſo doing.

*Attorney-Special*, is he who is employ'd in one or more Cauſes particularly ſpecified.

*Attorneys* are alſo diſtinguiſhed with reſpect to the Courts, into *Attorneys at large*, and *Attorneys Special*, belonging to this or that Court only.

ATTORNEY *of the Court of the Dutchy of* Lancaſter, *Atturnatus Curiæ ducatus Lancaſtriæ*, is the ſecond Office in that Court, being there, for his Skill in Law, placed as Aſſeſſor to the Chancellor of that Court. See DUTCHY *Court* and ASSESSOR. See alſo CHANCELLOR, *&c.*

ATTOURNMENT, in Law, a transferring of Duty and Service to another Lord; or an Acknowledgment which a Tenant makes of Homage and Service to a new Lord. See LORD and TENANT.

Thus, when one is Tenant for Life, and he in Reverſion grants his Right to another; it is neceſſary the Tenant for Life agree thereto, which is called *Attournment*; and without which nothing paſſes by the Grant.—*If the Grant be by Fine, in Court of Record, he ſhall be compelled to Attourn.* Stat. 27 *Hen.* VIII.

The Words uſed in *Attournment* are theſe; *I agree me to the Grant made to you*; or more commonly, *Sir, I Attourn to you by force of the ſame Grant*; or, *I become your Tenant*; *or deliver to the Grantee a Penny by way of Attournment*, Littl. Lib. 3.

*Attournment* is either by Word, or by Act; voluntary, or compulſary; by the Writ, *Per quæ ſervitia*, or by Diſtreſs.—It may be made to the Lord himſelf or to his Steward in Court. There is *Attournment* in Deed, and *Attournment* in Law. *Coke. Attournment* in Law is an Act, which though it be no expreſs *Attournment*, yet in Intendment of Law it is of equal Force. *Coke on Littl.*

ATTRACTION, ATTRACTIO, or TRACTIO, in Mechanicks, the Act of a moving Power, whereby a Moveable is brought nearer to the Mover. See POWER and MOTION.

As Action and Re-action are always equal, and contrary; it follows, that in all *Attraction*, the Mover is drawn towards the Moveable, as much as the Moveable to the Mover. See ACTION and REACTION.

The Word is compounded of *ad*, to; and *traho*, I draw.

ATTRACTION, or ATTRACTIVE *Force*, in Phyſicks, is a natural Power inherent in certain Bodies, whereby they act on other diſtant Bodies, and draw them toward themſelves. See FORCE.

This, the Perpateticks call the *Motion of Attraction*; and on many Occaſions, *Suction*; and produce various Inſtances where they ſuppoſe it to obtain.—Thus the Air, in Reſpiration, is taken in, according to them, by *Attraction*, or Suction; ſo is the Smoak through a Pipe of Tobacco; and the Milk out of the Mother's Breaſts: Thus alſo it is that the Blood and Humours riſe in a Cupping-Glaſs, Water in a Pump, and Smoak in Chimneys; ſo Vapours and Exhalations are *attracted* by the Sun; Iron by the Magnet, Straws by Amber, and electrical Bodies, *&c.* See SUCTION.

But the later Philoſophers generally explode the Notion of *Attraction*; aſſerting, that a Body cannot act where it is not; and that all Motion is perform'd by mere Impulſion.—Accordingly, moſt of the Effects which the Antients attributed to this unknown Power of *Attraction*, the Moderns have diſcovered to be owing to more ſenſible and obvious Cauſes; particularly the Preſſure of the Air. See AIR and PRESSURE.

To this are the Phænomena of Inſpiration, Smoaking, Sucking, Cupping-Glaſſes, Pumps, Vapours, Exhalations, *&c.* See RESPIRATION, SUCTION, PUMP, CUPPING-*Glaſs*, VAPOUR, SMOAK, EVAPORATION, *&c.*

*For the Phænomena of magnetical and electrical Attraction*, ſee MAGNETISM and ELECTRICITY.

The Power oppoſite to *Attraction* is call'd *Repulſion*; which is alſo argued to have ſome Place in natural Things. See REPULSION.

ATTRACTION, or ATTRACTIVE *Power*, in the *Newtonian* Philoſophy, is a Power or Principle, whereby all Bodies, and the Particles

Particles of all Bodies, mutually tend towards each other.—Or, more juſtly, *Attraction* is the effect of ſuch Power, whereby every Particle of Matter tends towards every other Particle. See MATTER and PARTICLE.

*Attraction*, its Laws, Phænomena, *&c.* make the great Hinge of Sir *Iſaac Newton*'s Philoſophy. See NEWTONIAN *Philoſophy*.

It muſt be obſerved, that though the great Author makes uſe of the Word *Attraction*, in common with the School Philoſophers; yet he very ſtudiouſly diſtinguiſhes between the Ideas.—The antient *Attraction* was a kind of Quality, inherent in certain Bodies themſelves; and ariſing from their particular or ſpecific Forms. See QUALITY and FORM.

The *Newtonian Attraction* is a more indefinite Principle; denoting, not any particular Kind or Manner of Action, nor the phyſical Cauſe of ſuch Action; but only a Tendency in the General, a *Conatus accedendi*; to whatever Cauſe, phyſical or metaphyſical, ſuch effect be owing; whether to a Power inherent in the Bodies themſelves, or to the Impulſe of an external Agent.

Accordingly, the great Author, in his *Philoſ. Nat. Prin. Math.* Notes, "that he uſes the Words *Attraction*, *Impulſe*, and *Pro-*"*penſion*, to the Centre, indifferently; and cautions the Reader "not to imagine that by *Attraction* he expreſſes the Modus of "the Action, or the efficient Cauſe thereof; as if there were "any proper Powers in the Centres, which in reality are only "mathematical Points; or, as if Centres could attract. *Lib.* I. *p.* 5.—So, he "conſiders centripetal Powers as *Attractions*; "though, phyſically ſpeaking, it were perhaps more juſt to call "them Impulſes." Ib. p. 147. He adds, "that what he calls "*Attraction* may poſſibly be effected by Impulſe, though not a "common or corporeal Impulſe; or in ſome other Manner un-"known to us." *Optic*, p. 322.

*Attraction*, if conſider'd as a Quality ariſing from the ſpecific Forms of Bodies, ought, together with Sympathy, Antipathy, and the whole Tribe of occult Qualities to be exploded. (See OCCULT *Quality.*) But when we have ſet theſe aſide, there will remain innumerable Phænomena of Nature, and particularly the Gravity or Weight of Bodies, or their Tendency to a Centre, which argue a Principle of Action ſeemingly diſtinct from Impulſe; where, at leaſt, there is no ſenſible Impulſion concern'd. Nay, what is more, this Action, in ſome reſpects, differs from all Impulſion we know of; Impulſe being always found to act in Proportion to the Surfaces of Bodies; whereas Gravity acts according to their ſolid Content, and conſequently muſt ariſe from ſome Cauſe that penetrates or pervades the whole Subſtance thereof.—This unknown Principle, (unknown we mean in reſpect of its Cauſe, for its Phænomena and Effects are moſt notorious) with all the Species and Modifications thereof, we call *Attraction*; which is a general Name, under which all mutual Tendencies, where no phyſical Impulſe appears, and which cannot, therefore, be accounted for from any known Laws of Nature, may be ranged.

And hence ariſe divers Kinds of *Attractions*; as, *Gravity*, *Magnetiſm*, *Electricity*, &c. which are ſo many different Principles, acting by different Laws; and only agreeing in this, that we do not ſee any phyſical Cauſes thereof; but that, as to our Senſes, they may really ariſe from ſome Power or Efficacy in ſuch Bodies, whereby they are enabled to act, even upon diſtant Bodies; though our Reaſon abſolutely diſallows of any ſuch Action.

ATTRACTION may be divided, with reſpect to the Law it obſerves, into two Kinds.—1°. That *which extends to a ſenſible Diſtance.*—Such are the *Attraction* of *Gravity*, found in all Bodies; and the *Attractions of Magnetiſm* and *Electricity*, found in particular Bodies.—*The ſeveral Laws and Phænomena of each, ſee under their reſpective Articles*, GRAVITY, MAGNETISM, and ELECTRICITY.

The *Attraction of Gravity*, call'd alſo among Mathematicians, the *Centripetal Force*, is one of the greateſt and moſt univerſal Principles in all Nature.—We ſee and feel it operate on Bodies near the Earth, (See WEIGHT.) and find, by Obſervation, that the ſame Power, (*i. e.* a Power which acts in the ſame Manner, and by the ſame Rules; *viz.* always proportionally to the Quantities of Matter, and as the Squares of the Diſtances) does alſo obtain in the Moon, and the other Planets, primary and ſecondary as well as the Comets: And even that this is the very Power whereby they are all retain'd in their Orbits, *&c.* And hence, as Gravity is found in all the Bodies which come under our Obſervation, it is eaſily infer'd, by one of the ſettled Rules of philoſophizing, that it obtains in all others; and as it is found to be as the Quantity of Matter in each Body, it muſt be in every Particle thereof; and hence every Particle in Nature is proved to *attract* every other Particle, *&c.* See *the Demonſtration hereof laid down at large, with the Application of the Principle to the Celeſtial Motions, under the Articles*, NEWTONIAN *Philoſophy*, SUN, MOON, PLANET, COMET, SATELLITE, CENTRIPETAL, CENTRIFUGAL, *&c.*

From this *Attraction* ariſes all the Motion, and conſequently all the Mutation, in the great World.—By this, heavy Bodies deſcend, and light ones aſcend; by this Projectiles are directed, Vapours and Exhalations riſe, and Rains, *&c.* fall. By this Rivers glide, the Air preſſes, the Ocean ſwells, *&c.* See MOTION, DESCENT, ASCENT, PROJECTILE, VAPOUR, RAIN, RIVER, TIDE, AIR, ATMOSPHERE, *&c.*

In effect, the Motions ariſing from this Principle make the Subject of that extenſive Branch of Mathematicks, call'd *Mechanicks*, or *Statics*; with the Parts or Appendages thereof, *Hydroſtaticks*, *Pneumaticks*, &c. See MECHANICKS, STATICKS, HYDROSTATICKS, PNEUMATICKS. See alſo MATHEMATICKS, PHILOSOPHY, *&c.*

2°. *That which does not extend to ſenſible Diſtances.*—Such is found to obtain in the minute Particles whereof Bodies are compoſed, which *attract* each other at, or extremely near, the Point of Contact; with a Force much ſuperior to that of Gravity; but which at any Diſtance therefrom decreaſes much faſter than the Power of Gravity.—This Power, a late ingenious Author chuſes to call the *Attraction of Coheſion*; as being that whereby the Atoms or inſenſible Particles of Bodies are united into ſenſible Maſſes. See COHESION, ATOM, PARTICLE, *&c.*

This latter Kind of *Attraction* owns Sir *Iſaac Newton* for its Diſcoverer; as the former does, its Improver.—The Laws of Motion, Percuſſion, *&c.* in ſenſible Bodies under various Circumſtances, as falling, projected, *&c.* as aſcertain'd by the later Philoſophers, do not reach to thoſe more remote, inteſtine Motions of the component Particles of the ſame Bodies, whereon the Changes of the Texture, Colour, Properties, *&c.* of Bodies depend: So that our Philoſophy, if only founded on the Principle of Gravitation, and carried ſo far as that would lead us, wou'd neceſſarily be very deficient. See LIGHT, COLOUR, *&c.*

But, beſide the common Laws of ſenſible Maſſes, the minute Parts they are compoſed of, are found ſubject to ſome others, which have been but lately taken notice of, and are yet very imperfectly known. Sir *Iſaac Newton*, to whoſe happy Penetration we owe the hint, contents himſelf to eſtabliſh, that there are ſuch Motions in the *minima naturæ*, and that they flow from certain Powers or Forces, not reducible to any of thoſe in the great World.—In virtue of theſe Powers, he ſhews, "that the ſmall "Particles act on one another even at a Diſtance; and that ma-"ny of the Phænomena of Nature are the Reſult thereof. "Senſible Bodies, we have already obſerved, act on one ano-"ther divers ways; and as we thus perceive the Tenor and "Courſe of Nature, it appears highly probable that there may "be other Powers of the like Kind; Nature being very uni-"form and conſiſtent with herſelf.—Thoſe juſt mentioned, reach "to ſenſible Diſtances, and ſo have been obſerved by vulgar "Eyes: But there may be others, which reach to ſuch ſmall Di-"ſtances, as have hitherto eſcaped Obſervation; and 'tis proba-"ble Electricity may reach to ſuch Diſtances, even without be-"ing excited by Friction."

The great Author juſt mentioned, proceeds to confirm the Reality of theſe Suſpicions from a great Number of Phænomena and Experiments, which plainly argue ſuch Powers and Actions between the Particles, *e. gr.* of Salts, and Water, Oil of Vitriol and Water, Aqua Fortis and Iron, Spirit of Vitriol and Salt-petre.—He alſo ſhews, that theſe Powers, *&c.* are unequally ſtrong between different Bodies; ſtronger, *e. gr.* between the Particles of Salt of Tartar, and thoſe of Aqua Fortis, than thoſe of Silver; between Aqua Fortis and Lapis Calminaris, than Iron; between Iron than Copper, Copper than Silver, or Mercury. So Spirit of Vitriol acts on Water, but more on Iron or Copper, *&c.*

The other Experiments which countenance the Exiſtence of ſuch Principle of *Attraction* in the Particles of Matter are innumerable; many of them the Reader will find enumerated under the Articles MATTER, ACID, SALT, MENSTRUUM, *&c.*

Theſe Actions, in virtue whereof the Particles of the Bodies above mentioned tend toward each other, the Author calls by a general, indefinite Name, *Attraction*, which is equally applicable to all Actions, whereby diſtant Bodies tend towards one another, whether by Impulſe, or by any other more latent Power: And from hence accounts for an Infinity of Phænomena, otherwiſe inexplicable, to which the Principle of Gravity is inſufficient.—Such are Coheſion, Diſſolution, Coagulation, Cryſtallization, the Aſcent of Fluids in Capillary Tubes, Animal Secretion, Fluidity, Fixity, Fermentation, *&c.* See the reſpective Articles, COHESION, DISSOLUTION, CRYSTALLIZATION, ASCENT, SECRETION, SPHERICITY, FIXITY, FERMENTATION, *&c.*

"Thus," adds our immortal Author, "will Nature be found "very conformable to herſelf, and very ſimple; performing all "the great Motions of the heavenly Bodies, by the *Attraction* "of Gravity, which intercedes thoſe Bodies, and almoſt all the "ſmall ones of their Parts, by ſome other attractive Power dif-"fuſed through the Particles thereof.—Without ſuch Principles, "there never would have been any Motion in the World; and "without the continuance thereof, Motion wou'd ſoon periſh, "there being otherwiſe a great Decreaſe or Diminution there-"of, which is only ſupplied by theſe active Principles." *Opticks*, p. 373.

We need not ſay how unjuſt it is in the generality of foreign Philoſophers, to declare againſt a Principle which furniſhes ſo beautiful a View; for no other Reaſon but becauſe we cannot conceive how a Body ſhould act on another at a Diſtance.—'Tis certain

certain, Philoſophy allows of no Action but what is by immediate Contact and Impulſion: (for how can a Body exert any active Power there, where it does not exiſt? To ſuppoſe this of any thing, even the ſupreme Being himſelf, would perhaps imply a Contradiction.) Yet we ſee Effects without ſeeing any ſuch Impulſe; and where there are Effects, we can eaſily infer there are Cauſes, whether we ſee them or no. But a Man may conſider ſuch Effects, without entering into the Conſideration of the Cauſes; as, indeed, it ſeems the Buſineſs of a Philoſopher to do: For to exclude a Number of Phænomena which we do ſee, will be to leave a great Chaſm in the Hiſtory of Nature; and to argue about Actions which we do not ſee, will be to build Caſtles in the Air.—It follows, therefore, that the Phænomena of *Attraction*, are Matter of phyſical Conſideration, and as ſuch entitled to a Share in a Syſtem of Phyſicks; but that the Cauſe, thereof will only become ſo when they become ſenſible; *i. e.* when they appear to be the Effects of ſome other higher Cauſes, (for a Cauſe is no otherwiſe ſeen than as it ſelf is an Effect, ſo that the firſt Cauſe muſt from the Nature of things be inviſible.) We are therefore at Liberty to ſuppoſe the Cauſes of *Attractions* what we pleaſe, without any Injury to the Effects.—The illuſtrious Author himſelf ſeems a little irreſolute as to the Cauſe; inclining, ſometimes, to attribute Gravity to the Action of an immaterial Cauſe, *Opticks*, p. 343. *&c.* And ſometimes to that of a material one. *Ib.* p. 325.

In his Philoſophy, the Reſearch into Cauſes is the laſt thing; and never comes in turn till the Laws and Phænomena of the Effect be ſettled; it being to theſe Phænomena that the Cauſe is to be accommodated.—The Cauſe even of any, the groſſeſt, and moſt ſenſible Action is not adequately known: How Impulſe or Percuſſion it ſelf works its Effect, *i. e.* how Motion is communicated by Body to Body, confounds the deepeſt Philoſophers; yet is Impulſe received not only into Philoſophy, but into Mathematicks; and accordingly the Laws and Phænomena of its Effects, make the greateſt Part of common Mechanicks. See PERCUSSION, and COMMUNICATION *of Motion*.

The other Species of *Attraction*, therefore, when their Phænomena are ſufficiently aſcertain'd, have the ſame Title to be promoted from phyſical to mathematical Conſiderations; and this, without any previous Inquiry into their Cauſes, which our Conceptions may not be proportionate to: Let their Cauſes be occult, as all Cauſes ever will be; ſo as their Effects, which alone immediately concern us, be but apparent. See CAUSE.

Our noble Countryman, then, far from adulterating Philoſophy with any thing Foreign, or Metaphyſical; as many have reproached him; has the Glory of opening a new Source of ſublimer Mechanicks, which, duly cultivated, might be of infinitely more Extent than all the Mechanicks yet known: 'Tis hence alone we muſt expect to learn the manner of the Changes, Productions, Generations, Corruptions, *&c.* of natural things; with all that Scene of Wonders opened to us by the Operations of Chymiſtry. See GENERATION, CORRUPTION, OPERATION, CHYMISTRY, *&c.*

Some of our own Countrymen have proſecuted the Diſcovery with laudable Zeal: Dr. *Keil* particularly, has endeavoured to deduce ſome of the Laws of this new Action, and applied them to ſolve divers of the more general Phenomena of Bodies, as Coheſion, Fluidity, Elaſticity, Softneſs, Fermentation, Coagulation, *&c.* And Dr. *Friend* ſeconding him, has made a further Application of the ſame Principles, to account at once, for almoſt all the Phænomena that Chymiſtry preſents.—So that the new Mechanicks ſhould ſeem already raiſed to a compleat Science; and nothing can now turn up, but we have an immediate Solution of, from the *attractive Force*.

But this ſeems a little too precipitate; a Principle ſo fertile, ſhould have been further explored; its particular Laws, Limits, *&c.* more induſtriouſly detected and laid down, e're we had gone to Application.—*Attraction*, in the groſs, is ſo complex a thing, that it may ſolve a thouſand different things alike: The Notion is but one Degree more ſimple and preciſe, than Action it ſelf; and till more of its Properties are aſcertain'd, it were better to apply it leſs, and ſtudy it more.

As a Specimen of the extent of the Principle, and the manner of applying it, we ſhall here ſubjoin the principal Laws and Conditions thereof; as ſettled by Sir *Iſaac Newton*, Dr. *Keil*, Dr. *Friend*, Dr. *Morgan*, &c.

*Theor.* I. Beſides that *attractive* Power whereby the Planets and Comets are retain'd in their Orbits; there is another, by which the ſeveral Particles whereof Bodies conſiſt, *attract*, and are mutually *attracted* by, each other; which Power decreaſes in more than a duplicate Ratio of the Increaſe of the Diſtance.

This *Theorem* we have already obſerv'd, is demonſtrable from a great Number of Phænomena.—We ſhall here only mention a few eaſy and obvious ones; as, the Spherical Figure, aſſumed by the Drops of Fluids; which can only ariſe from ſuch Principle: The uniting and incorporating of two Sperules of Quick-ſilver into one, upon the firſt touch, or extremely near approach of their Surfaces: The riſing of Water up the Sides of a Glaſs Bubble immerg'd therein, higher than the Level of the other Water, or of Mercury, up a Sphere of Iron, or the like. See SPHERICITY, DROP, *&c.*

As to the juſt Law of this *Attraction*, it is not yet determined; only this we know in the general, that the force, in receding from the Point of Contact, is diminiſhed in a greater Proportion than that of the duplicate Ratio of the Diſtances, which is the Law of Gravity. For that if the Diminution were only in ſuch duplicate Ratio, the *Attraction* at any ſmall aſſignable Diſtance would be nearly the ſame as at the Point of Contact: Whereas Experience teaches, that this *Attraction* almoſt vaniſhes, and ceaſes to have any Effect, at the ſmalleſt aſſignable Diſtance.—But whether to fix on a triplicate, quadruplicate, or ſome other proportion to the increaſing Diſtances, is not aſcertain'd by Experiment.

II. The Quantity of *Attraction* in all Bodies, is exactly proportional to the Quantity of Matter in the *attracting* Body; as being in reality the Reſult or Sum of the united Forces of the *Attractions* of all thoſe ſingle Particles of which it is compos'd; or, in other Words, *Attraction* in all Bodies is, *cæteris paribus*, as their Solidities.

Hence, 1°. At equal Diſtances the *Attractions* of homogeneal Spheres will be as their Magnitudes.—And,

2°. At any Diſtance whatever, the *Attraction* is as the Sphere divided by the Square of the Diſtance.

This Law, it muſt be noted, only holds in reſpect of Atoms, or the ſmalleſt conſtituent Particles, ſometimes call'd *Particles of the laſt Compoſition*; and not of Corpuſcles or Compoſitions made up of theſe; for they may be ſo put together, as that the moſt ſolid Corpuſcles may form the lighteſt Particles; *i. e.* the unfitneſs of their Surfaces for intimate Contact, may occaſion ſuch great Interſtices as will make their Bulks large in Proportion to their Matter.

III. If a Body conſiſt of Particles, every one whereof has an attractive Power decreaſing in a triplicate, or more than a triplicate Ratio of their Diſtances; the Force wherewith a Particle is *attracted* by that Body in the Point of Contact, or at an infinitely little Diſtance from the Contact, will be infinitely greater than if that Particle were placed at a given Diſtance from the Body. See INFINITE.

IV. Upon the ſame Suppoſition, if the *attractive* Force at any aſſignable Diſtance, have a finite Ratio to its Gravity; this Force in the Point of Contact, or at an infinitely ſmall Diſtance, will be infinitely greater than its Power of Gravity.

V. But if in the Point of Contact the *attractive* Force of Bodies have a finite Ratio to their Gravity; this Force in any aſſignable Diſtance is infinitely leſs than the Power of Gravity, and therefore ceaſes.

VI. The *attractive* Force of every Particle of Matter in the Point of Contact, almoſt infinitely exceeds the Power of Gravity, but is not infinitely greater than that Power; and therefore in a given Diſtance, the *attractive* Force will vaniſh.

This *attractive* Power, therefore, thus ſuperadded to Matter, only extends to Spaces extreamly minute, and vaniſhes in greater Diſtances; whence, the Motion of the heavenly Bodies, which are at prodigious Diſtance from each other, cannot at all be diſturb'd by it, but will continually go on as if there were no ſuch Power in Bodies.

Where this *attracting* Power ceaſes; there, according to Sir *Iſaac Newton*, does a repelling Power commence; or rather, the *attracting* does thence forward become a repelling Power. See REPELLING *Power*

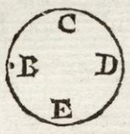
VII. Suppoſing a Corpuſcle to touch any Body, the Force whereby that Corpuſcle is impell'd, that is, the Force with which it coheres to that Body, will be proportionable to the Quantity of Contact: For the Parts farther remov'd from the Point of Contact, contribute nothing towards its Coheſion.

Hence, according to the Difference in the Contact of Particles, there will be different Degrees of Coheſion: But the Powers of Coheſion are greateſt when the touching Surfaces are Planes; in which caſe, *cæteris paribus*, the Force by which one Corpuſcle adheres to others, will be as the Parts of the touching Surfaces.

*Hence it appears why two perfectly poliſh'd Marbles, join'd together by their plane Surfaces, cannot be forc'd aſunder, but by a Weight which much exceeds that of the incumbent Air.*

Hence alſo may be drawn a Solution of that famous Problem *concerning the Coheſion of the Parts of Matter*. See COHESION.

VIII. The Power of *Attraction* in the ſmall Particles increaſes, as the Bulk and Weight of the Particles diminiſhes.



For, the Force only acting at or near the Point of Contact, the Momentum muſt be as the Quantity of Contact, that is, as the Denſity of the Particles, and the Largeneſs of their Surfaces: But the Surfaces of Bodies increaſe or decreaſe as the Squares, and the Solidities as the Cubes of the Diameter. Conſequently, the ſmalleſt Particles having the largeſt Surfaces in proportion to their Solidities, are capable of more Contact, *&c.*

Thoſe Corpuſcles are moſt eaſily ſeparated from one another, whoſe Contacts are the feweſt and the leaſt, as in Spheres infinitely ſmall.

Hence we have the Cauſe of Fluidity. See FLUIDITY, WATER, *&c.*

IX. The Force whereby any Corpuſcle is drawn to another nearly adjacent Body, ſuffers no Change in its Quantity, let the Matter of the *attracting* Body be increaſed or diminiſhed; ſup-

poſing the ſame Denſity to remain in the Body, and the Diſtance of the Corpuſcle to continue the ſame.

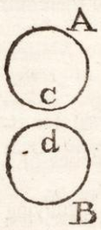
A. 

For ſince the *attractive* Powers of Particles are diffus'd only through the ſmalleſt Spaces; 'tis manifeſt that the remoter Parts at *C D* and *E* contribute nothing towards *attracting* the Corpuſcle *A*: And therefore the Corpuſcle will be *attracted* with the ſame Force towards *B*, whether theſe Parts remain or be take taken away; or, laſtly, whether others be added to them.

Hence, Particles will have different *attractive* Forces, according to their different Structure and Compoſition; thus a Particle perforated will not *attract* ſo ſtrongly as if entire. So, again, the different Figures into which a Particle is form'd, will occaſion a diverſity of Power: Thus a Sphere will *attract* more than a Cone, Cylinder, *&c.*

X. Suppoſe a Body of ſuch a Texture as that the Particles of the laſt Compoſition, by an external Force, ſuch as a Weight compreſſing them, or an Impulſe given by another Body, may be a little removed from their original Contact, but ſo as not to acquire new ones; the Particles by their *attractive* Force tending to one another, will ſoon return to their original Contacts.—But when the ſame Contacts and Poſitions of the Particles which compoſe any Body, return; the ſame Figure of the Body will alſo be reſtor'd: And therefore Bodies which have loſt their original Figures, may recover them by *Attraction*.

*Hence appears the Cauſe of Elaſticity.*—For, where the contiguous Particles of a Body have by any external Violence been forc'd from their former Points of Contact, to extremely ſmall Diſtances; as ſoon as that Force is taken off, the ſeparated Particles muſt return to their former Contact: By which means the Body will reſume its Figure, *&c.* See ELASTICITY.



XI. But if the Texture of a Body be ſuch that the Particles by an impreſſed Force being remov'd from their Contacts, come immediately into others of the ſame Degree, that Body cannot reſtore it ſelf to its original Figure.

*Hence we underſtand what Texture that is wherein the Softneſs of Bodies conſiſts.* See SOFTNESS.

XII. The Bulk of a Body heavier than Water, may be ſo far diminiſh'd, that it ſhall remain ſuſpended in Water, without deſcending by its own Gravity. See SPECIFIC *Gravity*.

Hence it appears why ſaline, metallick, and other ſuch-like Particles, when reduc'd to ſmall Dimenſions, are ſuſpended in their Menſtruums. See MENSTRUUM.

XIII. Greater Bodies approach one another with a leſs Velocity than ſmaller.—For the Force with which two Bodies *A* and *B* approach, reſides only in the neareſt Particles; the more remote having nothing to do therein. No greater Force, therefore, will be apply'd to move the Bodies *A* and *B*, than to move the Particles *c* and *d*; but the Velocities of Bodies mov'd by the ſame Force are in a reciprocal Ratio of the Bodies: Wherefore the Velocity with which the Body *A* tends towards *B*, is to the Velocity with which the Particle *c* detach'd from the Body would tend towards the ſame *B*, as the Particle *c* is to the Body *B*; conſequently the Velocity of the Body *A* is much leſs than wou'd be the Velocity of the Particle *c* detach'd from the Body.

Hence it is that the Motion of large Bodies is naturally ſo ſlow and languid, that an ambient Fluid and other circumjacent Bodies generally retard them; whilſt the leſſer go on more briskly, and produce a greater number of Effects: So much greater is the *attractive* Energy in ſmaller Bodies than in the larger.—Hence again appears the Reaſon of that chymical Axiom; *Salts don't act till they are diſſolv'd.*

XIV. If a Corpuſcle placed in a Fluid be equally attracted every way by the circumambient Particles, no Motion of the Corpuſcle will enſue.—But if it be *attracted* by ſome Particles more than others, it will tend to that part where the *Attraction* is the greateſt; and the Motion produc'd will correſpond to the Inequality of the *Attraction*, *viz.* the greater the Inequality, the greater the Motion, and *vice verſa*.

XV. Corpuſcles floating in a Fluid, and *attracting* each other more than the Particles of the Fluid that lie between them, will force away the Particles of the Fluid, and ruſh to one another with a Force equal to that by which their mutual *Attraction* exceeds that of the Particles of the Fluid.

XVI. If a Body be immerged in a Fluid whoſe Parts more ſtrongly *attract* the Particles of the Body than they do one another; and if there be a number of Pores or Interſtices in the Body pervious to the Particles of the Fluid; the Fluid will immediately diffuſe itſelf through thoſe Pores. And if the Connexion of the Parts of the Body be not ſo ſtrong, but that it may be overcome by the Force of the Particles ruſhing within it; there will be a Diſſolution of the Body. See DISSOLUTION.

Hence, for a Menſtruum to be able to diſſolve any given Body, there are three things requir'd.—1°. That the Parts of the Body *attract* the Particles of the Menſtruum more ſtrongly than theſe *attract* each other. 2°. That the Body have Pores or Interſtices open and pervious to the Particles of the Menſtruum. 3°. That the Coheſion of the Particles which conſtitute the Body, be not ſtrong enough to reſiſt the Irruption of the Particles of the Menſtruum. See MENSTRUUM.

XVII. Salts are Bodies endued with a great *attractive* Force, though among them are interſperſed many Interſtices, which lie open to the Particles of Water; theſe are therefore ſtrongly *attracted* by thoſe ſaline Particles, ſo that they forcibly ruſh into them, ſeparate their Contacts, and diſſolve the Contexture of the Salts. See SALT.

XVIII. If the Corpuſcles be more *attracted* by the Particles of the Fluid than by each other; they will recede from each other, and be diffus'd through the whole Fluid.

Thus, if a little Salt be diſſolved in a deal of Water, the Particles of the Salt, though ſpecifically heavier than Water, will evenly diffuſe themſelves through the whole Water; ſo as to make it as Saline at Top as Bottom.—Does not this imply that the Parts of the Salt have a centrifugal, or repulſive Force, by which they fly from one another; or rather, that they *attract* the Water more ſtrongly than they do one another? For as all things aſcend in Water which are leſs *attracted* than Water by the Gravity of the Earth, ſo all the Particles of Salt floating in Water, which are leſs *attracted* by any Particle of Salt, than Water is, muſt recede from the Particle, and give way to the more *attracted* Water. *Newt. Opt.* p. 363.

XIX. Corpuſcles, or little Bodies ſwimming in a Fluid, and tending towards each other; if they be ſuppos'd elaſtick, will fly back again after their Congreſs, till ſtriking on other Corpuſcles, they be again reflected towards the firſt; whence will ariſe innumerable other Conflicts with other Corpuſcles, and a continu'd Series of Percuſſions and Reboundings.—But, by the *attractive* Power, the Velocity of ſuch Corpuſcles will be continually increaſed; ſo that the inteſtine Motion of the Parts will at length become evident to Senſe. See INTESTINE *Motion*.

Add, that in proportion, as the Corpuſcles *attract* each other with a greater or leſs Force, and as their Elaſticity is in a greater or leſs Degree, their Motions will be different, and become ſenſible at various Times, and in various Degrees.

XX. If Corpuſcles that *attract* each other happen mutually to touch, there will not ariſe any Motion, becauſe they cannot come nearer. If they be placed at a very little Diſtance from each other, a Motion will ariſe; but if further remov'd, the Force wherewith they *attract* each other, will not exceed that wherewith they *attract* the Particles of the intermediate Fluid, and therefore no Motion will be produced.

*On theſe Principles depend all the Phænomena of Fermentation and Ebullition.* See FERMENTATION and EBULLITION.

Hence appears the Reaſon why Oil of Vitriol, when a little Water is poured on it, works and grows hot: For, the ſaline Corpuſcles are a little disjoin'd from their mutual Contact, by the infus'd Water; whence, as they *attract* each other more ſtrongly than they do the Particles of Water, and as they are not equally *attracted* on every ſide, there muſt of neceſſity ariſe a Motion. See VITRIOL.

Hence alſo appears the Reaſon of that uncommon Ebullition occaſion'd by adding Steel-filings to the foreſaid Mixture. For the Particles of Steel are extremely elaſtick; whence there muſt ariſe a very ſtrong Reflection.

*Hence alſo we ſee the Reaſon why ſome Menſtruums act more ſtrongly, and diſſolve Bodies ſooner, when diluted with Water.*

XXI. If Corpuſcles mutually *attracting* each other have no elaſtick Power, they will not be reflected back from each other, but will form Congeries, or little Maſſes; *whence a Coagulum will ariſe*. See COAGULATION.

If the Gravity of the Particles thus amaſs'd, exceed the Gravity of the Fluid, *a Precipitation will ſucceed.*—Precipitation may alſo ariſe from an Increaſe or Diminution of the Gravity of the Menſtruum wherein the Corpuſcles are immerg'd. See PRECIPITATION.

XXII. If Corpuſcles ſwimming in a Fluid, and mutually *attracting* each other, have ſuch a Figure, as that in ſome given Parts they have a greater *attractive* Power than in others, and their Contact greater in thoſe Parts than in others; thoſe Corpuſcles will unite into Bodies with given Figures; *and thence will ariſe Cryſtallization.* See CRYSTALLIZATION.

Particles immerged in a Fluid moved with a ſwift or a ſlow progreſſive Motion, will *attract* each other in the ſame Manner as if the Fluid were at reſt; but if all the Parts of the Fluid do not move equally, the *Attractions* will be diſturbed.

Hence it is that Salts will not cryſtallize till the Water wherein they are diſſolved is cold.

XXIV. If between two Particles of a Fluid there happen to be a Corpuſcle whoſe two oppoſite Sides have a ſtrong *attractive* Power, that intermediate Corpuſcle will agglutinate or faſten the Particles of the Fluid to it ſelf.—And ſeveral ſuch Corpuſcles diffus'd through the Fluid, will fix all its Particles into a firm Body; *and the Fluid will be froze or reduc'd into Ice.* See FREEZING.

XXV. If a Body emit a great Quantity of Effluvia whoſe *attractive* Powers are very ſtrong; as thoſe Effluvia approach any other very light Body, their *attractive* Powers will overcome the Gravity of that Body, and the Effluvia will draw it towards themſelves;

ſelves: And as the Effluvia are cloſer and more copious at little Diſtances from the emitting Body, than at greater; the light Body will be continually drawn towards the denſer Effluvia, till ſuch time as it comes to adhere to the emitting Body it ſelf.

*And hence moſt of the Phænomena of Electricity may be accounted for.* See ELECTRICITY.

ATTRACTIVE, ATTRACTRIX, ſomething that has the Power or Faculty to *attract*. See ATTRACTION, FACULTY, *&c.*

ATTRACTIVE *Power*, or *Force*, *Vis attractiva*. See POWER, ATTRACTION, *&c.*

ATTRACTIVES, or ATTRACTIVE *Remedies*. See ATTRAHENT.

ATTRAHENTS, ATTRAHENTIA, or ATTRACTIVE *Remedies*, ſuch Medicines, externally applied, as by their Activity and Warmth penetrate the Pores; and mix with and rarefy any obſtructed Matter; ſo as to render it fit for Diſcharge, upon laying open the Part by Cauſtick or Inciſion. See MEDICINE, CAUSTIC, *&c.*

*Attrahents* are the ſame with what we otherwiſe call *Drawers*, *Ripeners*, *Maturantia*, *Digeſtives*, &c. See RIPENNER, DIGESTION, *&c.*

The principal Simples belonging to this Claſs, are the ſeveral Kinds of *Fats*, or *Adipes*; the Dungs of Pidgeons and Cows; Bran, Yeſt, Herring, the Sucking of a Leech, Melilot, Tobacco, Oil, Pitch, Roſin, Frankincence, *&c.* See each under its proper Articles, FAT, ADEPS, HERRING, OIL, PITCH, ROSIN, FRANKINCENCE, *&c.*

In many Inſtances, as the Matter rarefies and grows more fluid by means of ſuch Medicines; the refluent Blood is apt to waſh it back into the common Maſs; which ſometimes does a deal of Miſchief; or by making it take up more room upon its Rarefaction, occaſions it to diſtend more the Parts in which it is contained: Upon which a Senſe of Pain is excited, and thereby a greater Concourſe of fluid, and conſequently a needleſs Increaſe of the Tumor. So that Medicines under this Denomination require the moſt careful Management.

ATTRIBUTE, ATTRIBUTUM, in Philoſophy, a Property which agrees to ſome Perſon, or Thing; or a Quality, which determines ſomething to be after a certain Manner. See PROPERTY and QUALITY.

Thus, Underſtanding is an *Attribute* of Mind; Figure, an *Attribute* of Body, *&c.*

*Spinoza* makes the Soul and the Body to be of the ſame Subſtance; with this only Difference, that the Soul is to be conceiv'd under the *Attribute* of Thought, and the Body under that of Extenſion. See SUBSTANCE, SPINOSISM, *&c.*

Of the ſeveral *Attributes* belonging to any Subſtance, that which preſents it ſelf firſt, and which the Mind conceives as the Foundation of all the reſt, is call'd its *eſſential Attribute*. See ESSENCE and ESSENTIAL.

Thus, Extenſion is by ſome, and Solidity by others, made the eſſential *Attribute* of Body or Matter. See BODY, MATTER, EXTENSION, SOLIDITY, *&c.*

The other *Attributes* are call'd *accidental* ones. See ACCIDENT and ACCIDENTAL.

Mr. *Lock* endeavours to prove, that Thinking, which the *Carteſians* make the eſſential *Attribute* of the Mind, is only an accidental one. See THINKING, MIND, SOUL, *&c.*

ATTRIBUTE, in Logic, is an Epithet given to any Subject; or it is any predicate thereof; or whatever may be affirmed or denied of any thing. See SUBJECT, PREDICATE, *&c.*

Every Propoſition conſiſts of a Subject, an *Attribute*, and a conjunctive Particle. See PROPOSITION.

*Attributes* are uſually divided into *poſitive*, which give a thing ſomewhat; as when we ſay of a Man that he is *animate:* And Negative; as when we ſay of a Stone that it is *inanimate.*—Others, again, divide them into *common*, which agree to ſeveral different Things, as *Animal:* And proper, as *Thought*, &c.

The Word is compounded of the *Latin*, *ad*, to; and *tribuo*, I give.

ATTRIBUTES, in Theology, are underſtood of the ſeveral Qualities and Perfections which we conceive in God; and which conſtitute his proper Eſſence; as *Juſtice*, *Goodneſs*, *Wiſdom*, &c. See GOD.

The Heathen Mythologiſts divided the Deity into as many diſtinct Beings as he has *Attributes:* Thus the Power of God was call'd *Jupiter*; the Wrath and Vengeance of God, *Juno*, &c. See POETRY.

ATTRIBUTES, in Painting and Sculpture, are Symbols added to ſeveral Figures, to denote their particular Office and Character. See FIGURE and SYMBOL.

Thus the Club is an *Attribute* of *Hercules*; the Palm an *Attribute* of Victory; the Peacock of *Juno*; the Eagle of Jupiter, *&c.* See STATUE, SCULPTURE, *&c.*

ATTRITION, ATTRITIO, or *Triture*, or *Friction*, expreſſes ſuch a Motion of Bodies againſt one another, as ſtrikes off ſome ſuperficial Particles; whereby they become leſs and leſs. See MOTION and FRICTION.

The Word is form'd of *atterere*, to rub, wear; compounded of *ad*, to; and *tero*.

The grinding and poliſhing of Bodies is performed by *Attrition*. See GRINDING and POLISHING.

The Effects of *Attrition* in exciting Heat, Light, Electricity, *&c.* ſee under the Articles HEAT, LIGHT, FIRE, ELECTRICITY, *&c.*

A Feather by being only drawn through the Fingers has been found by Mr. *S. Grey* to acquire a Degree of Electricity, and would be attracted by the Finger when held near it; a human Hair, after having paſſed three or four times between the Finger and Thumb, would fly to his Finger at the Diſtance of half an Inch; and the Hair of a Dog's Ear, and the Threads of Silk would do the like. The like was found in Pieces of Ribband of ſeveral Colours, half a Yard long; the Hand held at the lower-end of any of which, would attract them at the Diſtance of five or ſix Inches. But if they imbibed the Moiſture of the Air, their Electricity would be much weakened thereby; in which Caſe, the Fire never failed to give them a ſtrong one. In effect, the ſame Author found Woollen, Paper, Leather, Woodſhavings, Parchment, and Gold-beater's Skin, to be Electrical; and that they not only came to the Hand, or any other ſolid Body, but attracted ſmall Bodies to them, ſometimes at the Diſtance of eight or ten Inches: ſome of theſe, alſo, appeared luminous upon Friction. See *Philoſ. Tranſ.* N°, 366.

ATTRITION is alſo frequently uſed for the Friction, or rubbing of ſuch ſupple Bodies one againſt another, as will not wear out, but occaſion ſome particular Determinations of the Fluids they contain.

Thus, the various Senſations of Hunger, Pain, or Pleaſure, are occaſion'd by the *Attritions* of the Organs form'd for ſuch Impreſſions. See HUNGER, PAIN, PLEASURE, *&c.*

ATTRITION, among Divines, is a Sorrow or Regret for having offended God; ariſing from a Senſe of the Odiouſneſs of Sin, and the Apprehenſions of having incurred the loſs of Heaven, and Puniſhment; *i. e.* the Pains of Hell. See HEAVEN and HELL.

*Attrition* is eſteem'd the loweſt Degree of Repentance, being a ſtep ſhort of Contrition. See REPENTANCE and CONTRITION.

ATTURNATO *faciendo vel Recipiendo*, a Writ which a Man owing Suit to a County, Hundred, or other Court, and deſiring to make an Attorney appear for him there, whom he doubts the Sheriff or Steward will not otherwiſe admit; purchaſeth, to command him to receive ſuch Attorney, and admit his Appearance by him. See ATTORNEY.

AVANT, a *French* Prepoſition, ſignifying *before*, or a priority either in reſpect of Time or Place; ſometimes uſed, in Compoſition, in our Language, but more uſually contracted, and wrote *Vaunt*, or *Vant*, or even *Van*. See VAN.

AVANT *Corps*, AVANT *Foſſe*, &c. AVANT *Gard*, &c. } See { VAN *Corps*. VAN *Foſſe*. VAN *Guard*, &c.

AVAUNCHERS, among Hunters, the ſecond Branches of a Hart's Horn. See HEAD, HUNTING, *&c.*

AVAST, a Term frequently uſed on board a Ship, ſignifying to *ſtop*, *hold*, or *ſtay*.

The Word is form'd of the *Italian*, *vaſta*, or *baſta*, it is enough, it ſuffices.

AUCTIO, AUCTION, a kind of Sale among the antient *Romans*, perform'd by the publick Cryer, *ſub haſta*, that is, under a Spear ſtuck up on that occaſion, and by ſome Magiſtrate who made good the Sale by Delivery of the Goods.

This was termed *Auctio*, q. d. increaſe; becauſe according to *Sigonius*, the Goods were ſold to him, *qui plurimum rem augeret*, who wou'd bid moſt for them.

And hence our *Engliſh* Word, *Auction*, which ſignifies the ſame thing among us.

AUBAINE, in the *French* Cuſtoms, the act of inheriting after a Foreigner, who dies in a Country where he is not naturalized.

The Word is form'd of *Aubain*, a Foreigner; which *Menage* derives further from the *Latin*, *Alibi natus*; *Cujas*, from *Advena*; *du Cange* from *Albanus*, a *Scot*, or *Iriſhman*; by reaſon theſe were antiently much given to travelling and living abroad.

The King of *France*, by the right of *Aubaine*, claims the Inheritance of all Foreigners in his Dominions; excluſive of all other Lords, and even of any Teſtament the deceaſed cou'd make. An Embaſſador, though not naturaliz'd, is not ſubject to the right of *Aubaine*. The *Swiſs*, *Savoyards*, *Scots*, and *Portugueze*, are alſo exempted from the *Aubaine*, as being reputed Natives and Regnicoles.

AUDIENCE. See HEARING, ATTENTION, and AUDITORY.

The Word is form'd from the corrupt *Latin*, *Audentia*, of *Audire*, to hear.

AUDIENCE is alſo uſed for the Ceremonies practiced in Courts, at the admiſſion of Embaſſadors, and publick Miniſters, to a hearing. See EMBASSADOR, *&c.*

Such an Embaſſador ſent to demand *Audience*; took his *Audience* of Leave to depart, *&c.*

AUDIENCE is also the Name of a Court of Justice, established by the *Spaniards* in the *West Indies*; answering in effect to the Parliaments in *France*.

They judge without Appeal, and have each a certain District, which ordinarily takes in several Provinces, call'd also *Audiences*, from the Names of the Tribunals to which they belong.

Hence *Sanson* divides *Spain* into as many of these *Audiences* as there are of those Tribunals.—New *Spain* comprehends three *Audiences*; those of *Guadalajara*, *Mexico*, and *Guatimala*.

AUDIENCE is also the Name of one of the Ecclesiastical Courts, which is, where-ever the Archbishop calls a Cause to his own Hearing. See COURT and ARCHBISHOP.

The Court of *Audience* is chiefly concerned in Differences arising upon Elections, Consecrations, Institutions, Marriages, *&c.*

AUDIENDO *& terminando*, a Writ, or rather a Commission, directed to certain Persons, when an Insurrection or great Misdemeanour is committed in any Place, for the Appeasing and Punishment thereof.

AUDIENTES, in Ecclesiastical History. See AUDITORES.

AUDIT, a regular hearing and examining of an Account, by Officers appointed for that purpose. See AUDITOR and ACCOUNT.

AUDITA *querela*, a Writ which lies against him, who, having taken a Statute-Merchant, or a Recognizance in the Nature of a Statute-Staple, or a Judgment, or a Recognizance of another; and craving, or having obtained Execution of the same from the Mayor and Bailiffs, before whom it was entered; at the Complaint of the Party who entered the same, upon Suggestion of some just Cause why Execution should not be granted; as a Release, or other Exception.—This Writ is granted by the Lord Chancellor, upon view of the Exception suggested, to the Judges of either Bench, willing them to grant Summons to the Sheriff of the County where the Creditor is, for his appearance at a certain Day before them.

AUDITOR, a Hearer, or one who listens or attends to any thing. See HEARING, ATTENTION, and AUDITORY.

AUDITOR is also used for several Officers, appointed to *audit*, or hear Accounts, Pleadings, *&c.* See ACCOUNT.

Antiently the Word *Auditor* was also used for *Judge*, and even for *Inquisitor*. *Notaries* are also frequently call'd *Auditores*.

AUDITOR, in our Law, is an Officer of the King, or some other great Person, who yearly, by examining the Accounts of under Officers accountable, makes up a general Book, with the Difference between their Receipts and Charge, and their Allowances or *Allocations*. See ACCOUNT.

AUDITORS *of the Revenue*, or *of the Exchequer*, are Officers who take the Accounts of those who collect the Revenues, Taxes, *&c.* rais'd by Parliament; as also of the Sheriffs, Escheators, Collectors, Tenants, and Customers, and set them down, and perfect them. See REVENUE and EXCHEQUER.

AUDITORS *of the Prest* or *Imprest*, are Officers in the Exchequer, who take and make up the great Accounts of *Ireland*, *Berwick*, the Mint, Customs, Wardrobe, First-fruits, Naval and military Expences, and of all Monies impressed to any Man for the King's Service. See PREST and IMPREST.

AUDITOR *of the Receipts*, is an Officer of the Exchequer who files the Tellers Bills, and makes an Entry of them, and gives the Lord Treasurer a Certificate of the Money receiv'd the Week before. See EXCHEQUER and TELLER.

He makes Debentures to every Teller, before they pay any Money, and takes their Accounts. He keeps the black Book of Receipts, and the Treasurer's Key of the Treasury, and sees every Teller's Money lock'd up in the new Treasury.

There are also *Auditors of the First-Fruits*; of the Principality of *Wales*; of the Dutchy of *Cornwal*, &c. See FIRST-*Fruits*, &c.

AUDITOR *of the Rota*. See ROTA.

AUDITORS *Conventual*, *Collegiate*, &c. were Officers formerly appointed among the Religious, to examine and pass the Accounts of the House.

AUDITORES, or AUDIENTES, in Church History, *Catechumens*; or those newly instructed in the Mysteries of the Christian Religion, and not yet admitted to Baptism. See CATECHUMEN.—Hence,

AUDITORIUM, AUDITORY, in the antient Churches, was that Part of the Church where the *Auditores* stood to hear, and be instructed. See CHURCH.

The *Auditorium* was that Part now call'd *Navis Ecclesiæ*. See NAVE.

In the primitive Times the Church was so strict in keeping the People together in that Place, that the Person who went from thence in Sermon-time was order'd by the Council of *Carthage* to be excommunicated.

AUDITORY, something belonging to the Sense of Hearing. See HEARING.

AUDITORY, AUDIENCE, is also a collective Name, denoting an Assembly of Persons, hearing, or attending to a Person who speaks in publick. See ASSEMBLY, ORATION, *&c.*

AUDITORY is also used for the Seat or Bench where a Magistrate, or Judge, hears Causes. See BENCH.

At *Rome*, the several Magistrates had *Auditories* or Seats of Justice according to their Dignity.—Those of the superior Officers were call'd *Tribunals*; those of the inferior, *Subsellia*. See TRIBUNAL, *&c.*

The *Pedanei* had their Benches or *Auditories* in the Emperor's Portico.—Those of the *Hebrews*, at the Gates of Cities.—The Judges appointed by the antient Lords distributed Justice under an Elm, which was usually planted before the Manor-House, and served them for an *Auditory*.

AUDITORY *Nerves*, in Anatomy, a pair of Nerves arising from the *Medulla Oblongata*, and distributed, the one to the Ear, the other to the Tongue, Eye, *&c.* See EAR and TONGUE.

The soft and spongy Branch of the *Auditory Nerve* being diffused through the Labyrinth and Tympanum of the Ear, is the immediate Organ of the Sense of Hearing See HEARING.

The *Auditory Nerves* make the seventh Conjugation, according to the way of reckoning of the Moderns; and the fifth according to the Antients. See PAIR and CONJUGATION.

Anatomists observe a singular Mark of the Wisdom and Contrivance of the Creator in the *Auditory Nerve*'s being thus dispatch'd to different Parts; an admirable and useful Consent being hereby established between them.—Hence it is that most Animals upon hearing any uncouth Sound, are found to erect their Ears, and prepare them to catch it; to open their Eyes, to stand upon the Watch; and to be ready with the Mouth to call out, or testify their Danger: Accordingly most Animals when surprized or terrified, shriek or cry out, *&c.* See CONSENT *of Parts*.

Dr. *Willis* observes a further use of this nervous Communication between the Ear and the Mouth; which is, that the Voice may correspond with the Hearing, and be a Kind of Eccho thereof; that what is heard with one of the two Nerves may be readily express'd with the Voice, by the help of the other. *Cereb. Anat.* c. 17.

*Meatus* AUDITORIUS, or AUDITORY, Passage in Anatomy. See MEATUS.

AVE-*Maria*, or AVE-*Mary*, the Angel *Gabriel*'s Salutation of the Virgin, at his bringing the Tidings of the Incarnation; thus called, as beginning with those Words, *Ave Maria*, Hail *Mary*. See VIRGIN, ANNUNCIATION, *&c.*

The *Ave-mary* is a Prayer or Formula of Devotion very usual in the *Romish* Church.—Their Chaplets and Rosaries are divided into so many *Ave-marys*, and so many *Pater-nosters*: And hence the Beads themselves, which indicate them, are also call'd *Ave*'s or *Ave-mary's*. See CHAPLET, ROSARY, *&c.*

AVELLANE, or *Cross* AVELLANE, in Heraldry, a Form of Cross which resembles four Filberds in their Husks or Cases, joined together at the great End. See CROSS.

Hence its Name; a Filberd in *Latin* being *Nux Avellana*.—*Syl. Morgan* says, it is this Cross which Ensigns the Mound of Authority, or the Sovereign's Globe.

AVENAGE, in Law, a certain Quantity of Oats, paid to a Landlord, in lieu of some other Duties; or, as a Rent, from the Tenant.

The Word is *French*, form'd of the *Latin*, *avena*, Oats.

AVENOR, an Officer under the Master of the Horse; who, by Order or Warrant from him, swears in all the Officers belonging to the Stables. See MASTER *of the Horse*.

The *Avenor* also makes up the Accounts of the Stables, and issues Debentures for paying the Officers and Servant.

In a Stat. *Car.* II. we find the *Avenor* mentioned as an Officer who provides Oats for the Stables.—In the *Rot. Parl.* 1 *R.* 21. *Edw.* III. we also read of *Avenor* of the Queen, of the Prince, *&c.*

AVENTURÆ, in our antient Writers, signify Tournaments, or Military exercises on Horseback. See TURNAMENT.

AVENTURE, or rather ADVENTURE, in our Law Books, a mischance, causing the Death of a Man, without Felony; as, when he is suddenly drowned, or burnt by any Misease or Mischance, falling into the Water or Fire. See MISADVENTURE, CHANCE, *&c.*

AVENUE, in Fortification, an Opening or Inlet into a Fort, Bastion, or the like Place. See FORT, BASTION, FORTIFICATION, *&c.*

The Word is form'd of the *French Avenir*, or *Advenir*, to come to, to arrive at. See ADVENT.

AVENUE, in Gardening, is a Walk, planted on each side with Trees, and leading to some Place. See VISTA. See also GROVE, GLADE.

All *Avenues*, *Mortimer* says, should lead to the Front of an House, Garden-Gate, Highway-Gate, or Wood, and terminate in a Prospect.—In an *Avenue* to an House, whatever the Length of the Walk is, it ought to be as wide as the whole Breadth of the Front, and if wider, better.

AVERAGE, AVERAGIUM, in Law, that Duty or Service which the Tenant is to pay the King, or other Lord, by his Beasts and Carriages. See SERVICE.

The Word is derived from the base *Latin*, *Averia*, Cattle; or the *French*, *Oeuvre*, Work.

AVERAGE is also used in Navigation and Commerce, for the Damage which a Vessel, or the Goods and Loading thereof, sustains, from the time of its Departure to its Return; as also, for the Charge or Contributions towards defraying such Damages.

A late Author who has wrote a Treatiſe expreſs upon *Average*, diſtinguiſhes two Kinds thereof; *Simple* or Private, and *Groſs* or Common.

To the firſt, the particular things which ſuffer, alone contribute; to the ſecond, all both the Ship and the Merchandizes contribute in common.

Of the firſt Kind are all extraordinary and unforeſeen Expences and Accidents, befalling either the Ship, or the Goods, or both; the Loſs in which Caſes, is to be wholly defray'd by the thing or things which occaſioned it.—Such as the loſs of Cables, Anchors, Maſts, and Sails, by reaſon of Storms, *&c.* As alſo Damages accruing to Goods through their own Defects, by waſting, rotting, wetting, Storms, Pirates, *&c.* The Sailor's Wages while the Ship is extraordinarily detained by Embargo's, provided ſhe be hired for the whole Voyage, and not *per* Month. All theſe are ſimple or private *Averages*, and not to be charged to the common Account.

For groſs or common *Average* to have Place, the Author juſt mentioned, ſhews, 1°. That ſomething muſt have been caſt into the Sea, and this out of abſolute Neceſſity. 2°. That the Commander have had the Conſent of the Owners for ſo doing. 3°. That it have only been done for the Safety of the whole Ship, and that the Ship have been ſaved in Conſequence thereof.—In ſuch Caſe, all thoſe for whoſe Intereſt the thing was caſt into the Sea, are to contribute to indemnify the Perſon whoſe Property it was: And every thing is to be taxed hereto, ſo much as Jewels, Gold, *&c.* notwithſtanding they do not any way burthen the Ship; and even the Veſſel it ſelf, but not Paſſengers, nor Proviſions. *Rainold. Chriſt. a Derſchau in Nov. Lit. Mar. Bal.* 1700.

To the occaſions of common *Average* may be added, Compoſitions with Pirates for the Ranſom of the Ship; as alſo Cables, Maſts, Anchors, *&c.* loſt or abandoned for the common Good; the Food and Phyſick of the Sailors wounded in Defence of the Ship; and the Pay and Proviſions of the Crew when the Ship is arreſted or put under Embargo by order of a Prince, provided it were hired for the Month, and not for the whole Voyage.

AVERAGE is more particularly uſed for the Quota or Proportion which each Merchant or Proprietor in the Ship or Loading is adjudg'd, upon a reaſonable Eſtimation, to contribute to a common *Average*.

AVERAGE is alſo a little Duty which thoſe Merchants who ſend Goods in another Man's Ship, pay to the Maſter thereof, for his care of them, over and above the Freight. See FREIGHT.

Hence, in Bills of Lading it is expreſſed.—Paying ſo much Freight for the ſaid Goods, with Primage and *Average* accuſtomed.

AVER-CORN, in antient Writings, ſuch Corn as by Cuſtom is brought by the Tenant's Carts or Carriages, to the Lord's Granary, or Barn.

AVERIA, in our Law Books, properly ſignify Oxen or Horſes uſed for the Plough; but in a general Senſe, any Cattle.

When mention is made of one Beaſt, they ſay, *Quidam equus, vel quidam Bos:* When of two, or more, they do not ſay *Equi* or *Boves*, but *Averia*.

AVERMENT, in Law, uſually ſignifies an Offer of the Defendant to make good, or juſtify an Exception pleaded in Abatement or Bar of the Plaintiff's Action.

The Word alſo ſignifies the Act as well as the Offer of juſtifying the Exception.

*Averment* is two-fold, general and particular.—A *general Averment* is the Concluſion of every Plea to the Writ, or in Bar of Replications, or other Pleadings; (for Counts, or Avowries in nature of Counts, need not be *averred*,) containing Matter affirmative, ought to be *averred* with an *hoc paratus eſt Verificare*.

*Particular Averment* is when the Life of a Tenant for Life, or Tenant in Tail, is *averred*, &c. And an *Averment* contains as well the Matter as the Form thereof.

AVERNI, among the antient Naturaliſts, certain Lakes, Grotto's, and other Places which infect the Air with poiſonous Steams or Vapours; call'd alſo *Mephites*. See MEPHITES, AIR, POISON, *&c.*

The Word is *Latin*, form'd of the *Greek* privative, α, and ὄρνις, Bird; as intimating that Birds could not fly over them, but drop'd down dead.

*Averni* are ſaid to be frequent in *Hungary* on account of the abundance of Mines therein. See MINE and MINERAL.

The Grotta *dei Cani*, in *Italy*, is famous. See GROTTA, EXHALATION, *&c.*

But the moſt celebrated *Avernus* was a Lake near *Bayæ*, in *Campania*, by *Strabo* call'd the *Lucrine Lake*, and by the *Italian* Geographers, *Lago di Tripergola*.—The Fumes it emitted are repreſented by the Antients as of ſo malignant a Nature, that Birds could not fly over it, but ſunk down dead; which ſome later Writers have choſe to attribute to this, that the ſulphurous Effluvia hereof, not being of conſiſtence to ſuſtain the Birds, they drop'd by their own Weight.

This Circumſtance, joined with the great Depth of the Lake, occaſioned them to take it for the Gate or Entrance of Hell; and accordingly *Virgil* makes *Æneas* deſcend this Way to the Inferi. *Vibius Sequeſter* ſays, there was no Bottom to be found of it: *Immenſæ Altitudinis cujus ima pars apprehendi non poteſt.* See HELL.

AVERRUNCATION, in Agriculture, the Act of ſcraping, cutting, or lopping off the ſuperfluous Branches of Trees. See PRUNING.

AVERRUNCI, in Antiquity, an Order of Deities among the *Romans*, whoſe Office was to avert Dangers and Evils. See GOD.

The *Greeks* call'd this Species of Gods, Ἀλεξικακοι, or Ἀποτρομπαιοι; and their Feaſt Ἀποτρομπη: Sometimes, Ἀποτροπαιοι.

The *Egyptians* had alſo their *Dii Averrunci*, or *Apotropæi*, who were pictured in a menacing Poſture, and ſometimes with Whips in their Hands.—*Iſis* was a Divinity of this Kind; as is ſhewn by *Kircher*. See *Oedip. Ægypt.* T. III. p. 487.

AVERPENY, *q. d.* Average-peny, Money contributed towards the King's Averages; or Money given to be freed thereof. See AVERAGE.

AVERSION. See ANTIPATHY.

AVERY, a Place where Oats, or Provender are kept for the King's Horſes. See AVERIA.

AUGES, in Aſtronomy, two Points in a Planet's Orbit, otherwiſe call'd *Apſides*. See APSIDES.

One of the *Auges* is particularly denominated the *Apogee*, the other *Perigee*. See APOGEE and PERIGEE.

AUGMENT. See AUGMENTATION.

AUGMENT, AUGMENTUM, in the *Greek* Grammar, an Increaſe of the Quantity, either of a Letter, or a Word. See QUANTITY.

There are two Kinds of *Augments.—Temporale*, or *of a Letter*, when a ſhort Vowel is changed into a long one; or a Dipthong into another longer one: thus call'd by reaſon the time of its Pronunciation is now lengthened.

*Augmentum Syllabicum*, or *of a Syllable*, is when a Letter or Syllable is added at the beginning of the Word; ſo that the Number of Syllables is enlarged.

AUGMENTS, in Mathematicks. See INCREMENTS, FLUXIONS, *&c.*

AUGMENTATION, AUGMENTATIO, the Act of *augmenting*; that is, of adding or joining ſomething to another, to render it larger, or more conſiderable. See ADDITION, ACCESSION, ACCRETION, AMPLIFICATION, *&c.*

AUGMENTATION is alſo uſed for the *Augment*; i. e. the Additament, or the thing added. See ADDITAMENT, ACCESSION, *&c.*

Such a Miniſter petitioned the King for an *Augmentation* of Salary, of Wages, *&c.*

AUGMENTATION was alſo the Name of a Court erected under *Henry* VIII. to the end the King might be juſtly dealt with, touching the Profit of ſuch Religious Houſes, and their Lands, as were given him by Act of Parliament the ſame Year.—This Court was diſſolv'd under Queen *Mary*, by the Parliament held the firſt Year of her Reign; but the Office of *Augmentation* remains to this Day.

The Court took its Name hence, that the Revenues of the Crown were thought to be much *augmented* by the Suppreſſion of the ſaid Houſes; many of which the King reſerved to the Crown.

AUGMENTATIONS, in Heraldry, are additional Charges frequently given as a particular Mark of Honour, and generally born either on an Eſcutcheon, or a Canton.—Such are the Arms of *Ulſter*, bore by all the Baronets of *England*.

AUGUR, in Antiquity, an Officer or Miniſter among the *Romans*, appointed to obſerve the Chattering and Feeding of Birds; and by means thereof, form Conjectures about future Events. See AUGURY.

The *Augurs* made a College or Community, which at firſt conſiſted of three Perſons, then four, and laſtly nine; four of them *Patricians*, and five *Plebians*.—*Cicero* was of the *College of Augurs*. See COLLEGE.

They bore an *Augural* Staff, or Wand, as the Enſign of their Office and Authority.

The Word *Augur* is derived from *Avis*, Bird, and *Garritus*, Chattering. *Pezron* derives it from the Celtic *Au*, Liver, and *Gur*, Man: So that according to him, an *Augur* is properly a Perſon who inſpects the Entrails, and divines by means of the Liver: Others derive it from the *Arabick Ogor*, good Fortune.

*Augurs*, properly ſpeaking, differed from *Auſpices*, and *Augury* from *Auſpicy*, in that the former was in ſtrictneſs confined to the chirping of Birds, and the latter to their flying, feeding, *&c.* See AUSPICES, *&c.*

AUGURY, in Antiquity, the Art of divining, or foretelling Events, by the chattering, ſinging, and feeding of Birds. See DIVINATION and AUGUR.

The Obſervation of *Auguries* is very antient, as having been prohibited by *Moſes* in *Leviticus*.—The Cup put in *Benjamin*'s Sack, in *Egypt*, was that uſed by *Joſeph* to take *Auguries* by.

In its more general Signification, the Word *Augury* comprizes all the different kinds of Divination; which *Varro* diſtinguiſhes into four Species of *Augury*, according to the four Elements.—Pyromancy, or *Augury* by the Fire; Aeromancy, or *Augury* by

the Air; Hydromancy, or *Augury* by the Water; and Geomancy, or *Augury* by the Earth. See AEROMANCY, PYROMANCY, *&c.*

The particular Branches are, *Alectoromancy, Anthropomancy, Belomancy, Catoptromancy, Capnomancy, Gastromancy, Geomancy, Aruspicina, Libanomancy, Lecanomancy, Necromancy*, &c. See each described under its proper Article.

*Cicero*, who was one of the College, wonders how two *Augurs* could meet without laughing at each other; by which it appears what Opinion he had of the Art.—And yet no Affair of Moment could be resolv'd on without first consulting them; and ther Advice, be it what it would, was, by a Decree of the Senate, enjoin'd to be exactly and religiously performed.

AUGUST, AUGUSTUS, something majestick, venerable, sacred. See MAJESTY, *&c.*

The Title *Augustus* was first given by the *Roman* Senate to *Octavius*, after his being confirmed by them in the Sovereign Power.—It was conceived as expressing something divine, or elevated above the Pitch of Mankind; being form'd of the Verb *augeo*, I grow, Increase; *tanquum supra humanam sordem* auctus.

The Successors of *Augustus* assumed the same Quality; so that thence-forward Emperor and *Augustus* were the same thing: They became synonimous Terms, See EMPEROR.

The presumptive Heir of the Empire, or he who was destined to succeed to the Dignity, was first created *Cæsar*; which was a step necessary to arrive at that of *Augustus* or Emperor.—Yet F *Pagi* maintains the Converse; *viz.* that it was necessary to be *Augustus*, previously to the being *Cæsar*. See CÆSAR.

M. *Flechier* observes, that the Emperor *Valentinian* proclaimed his Brother *Valens*, *Augustus*; without first declaring him *Cæsar*; which had never been practiced before.—'Tis added, that *Marcus Aurelius*, upon his succeeding to *Antoninus*, immediately created *L. Verus*, both *Cæsar* and *Augustus*. This was the first time the *Romans* had known two *Augusti* at once; for which reason the Year when it was done, *viz.* 161, was mark'd in the *Fasti* with the Consulate of the two *Augusti*.

It was a surprizing Spectacle to the People of *Rome* to see themselves governed by two Sovereigns, after so much Blood spilt for the Choice of a single Master.

The Empresses also took the Quality of *Augustæ*; and even some Ladies of the Imperial Family, who had never been Wives of Emperors.

On Medals and Coins, some of the antient Kings of *France* are also found with the Appellation *Augusti*; particularly *Childebert, Clothaire*, and *Clovis*: add that the Wife of this last, *Chrototochilda*, is also call'd by *Heric*, in his Book of the Miracles of St. *Germain*, indifferently, either *Augusta*, or *Queen*.

The *Historia* AUGUSTA, is the History of the *Roman* Emperors from the time of *Adrian* to *Carinus*, composed by six *Latin* Writers.

AUGUSTALIA, in Antiquity, a Feast instituted in Honour of the Emperor *Augustus*. See FEAST.

This Festival was first established after he had ended all his Wars, and settled the Affairs of *Sicily, Greece, Asia, Syria*, and the *Parthians*.—The Day whereon he made his Entry into *Rome*, was appointed to be kept a Feast; and was called *Augustalis*. See AUGUSTALIS.

AUGUSTALIA was also a Name given to the Games celebrated in Honour of the same Prince, on the 4th of the Ides of *October*. See GAME. See also AUGUSTALIS.

AUGUSTALIS, in Antiquity, a Name given by the *Romans* 1°. to those who led the first Ranks of an Army; 2°. to certain Magistrates in Cities; 3°. to all the Officers of the Emperor's Palace.

The Governor or Præfect of *Egypt* is particularly called *Augustalis*, or *Præfectus Augustalis*; as being first established by *Augustus*, after the Defeat of *Mark Anthony* and *Cleopatra*. He resided at *Alexandria*.

AUGUSTALIS was also a Priest or Pontiff, invested with the Direction and Superintendency of the Games perform'd in Honour of *Augustus*. See GAME, PONTIFF, *&c.*

The *Augustales* were instituted by *Tiberius*, immediately after *Augustus*'s Death; as is observ'd by *Tacitus*, who assures us they were Priests.—Several Cities had six of these *Augustales*; whence they were call'd, *Seviri Augustales*.

AUGUSTAN *Confession*, was a Confession of Faith, made by the the antient Reformers at *Augusta*, or *Augsburg*, in *Germany*. See CONFESSION, REFORMATION, PROTESTANT, LUTHERANISM, *&c.*

AUGUST, in Chronology. See MONTH.

AUGUSTINS, an Order of Religious; thus called from St. *Augustin*, whose Rule they observe. See ORDER and RELIGIOUS.

The *Augustin's*, popularly also called *Austin Fryars*, were originally Hermits, whom Pope *Alexander* IV. first congregated into one Body, under their General *Lanfranc*, in 1256. See HERMIT.

The *Augustins* are cloth'd in Black, and make one of the four Orders of Mendicants. See MENDICANT.

From these arose a Reform, under the Denomination of *Barefoot Augustins*, or *Minorites*, or *Fryars Minor*. See MINOR and MINORITE.

There are also Canons Regular of St. *Augustin*, who are clothed in white, excepting their Cope, which is black.—At *Paris* they are known under the Denomination of, *Religious of Genevieve*; that Abby being the Chief of the Order. See GENEVIEVE.

There are also *Augustines*, or Nuns, who observe the Rule of St. *Augustin*. See RELIGIOUS and NUN.

The AUGUSTIN of *Jansenius* is a celebrated Treatise of that Author, Bishop of *Ypres*, entitled, *Cornelii Jansenii Episcopi Iprensis, Augustinus*; the first Tome whereof contains a Discourse against *Pelagianism*; and the second divers Treatises of Reason; the use of Authority in Theological Matters; the State of Innocence; fall of Nature by Sin, Grace, *&c.*—From these several Treatises were collected the five famous Propositions, enumerated under the Article JANSENISM.

AU-GUY-l'AN-NEUF, or AGUILLANNEUF. See MISLETO and VISCUS.

AVIGNON-*Berry*, call'd also, *French Berry*, is the Fruit of a Shrub, by some Authors call'd *Licum*; growing plentifully near *Avignon*, &c. in *France*. See BERRY.

The Berry is somewhat less than a Pea; its Colour Green, approaching towards a Yellow; of an astringent and bitter Taste. —It is much used by the Dyers who stain a yellow Colour with it; and by the Painters, who make a fine golden Yellow of it. See YELLOW.

AULA, in our antient Law-Books, signifies a Court Baron. —*Aula ibidem tenta quarto die August*, &c. See BARON.

*Aula Ecclesiæ* is what we now call *Navis Ecclesiæ*. See NAVE.

AULIC, AULICA, an Act which a young Divine maintains in some foreign Universities, upon the Admission of a new Doctor of Divinity. See ACT.

It is so called from the *Latin, Aula*, a Hall; it being in the Hall of the University that this Act is usually held. See UNIVERSITY, DEGREE, DOCTOR, *&c.*

The Person who presides at the Disputation is the same, that is, to take the Doctor's Cap.

AULIC, AULICUS, is also a Name attributed to certain Officers of the Emperor, who compose a superior Court or Council, which has an universal Jurisdiction, and without Appeal, over all the Subjects of the Empire, in all Processes enter'd therein. See EMPEROR and EMPIRE.

We say *Aulic* Council, the *Aulic* Court or Chamber, *Aulic* Councellor, *&c.*

The *Aulic* Council is established by the Emperor, who nominates the Officers; but the Elector of *Mentz* has a right of visiting it.—It is compos'd of a President, who is a Catholick; a Vice-Chancellor, presented by the Elector of *Mentz*, and of eighteen Assessors, or Counsellors, nine whereof are Protestants, and nine Romanists. See ASSESSOR.

They are divided into two Benches, one whereof is taken up by Nobles, and the other by Lawyers.—They hold their Assembly in the Presence of the Emperor; and for that reason are called *Justitium Imperatoris*, the *Emperor's Justice*; and *Aulic Council*, because theirs follows the Emperor's Court, *Aula*, and has its Residence in the Place where he is.—This Court clashes a little with the Imperial Chamber of *Spires*; in that they are preventive of each other: It not being allowed to remove any Cause from the one to the other. See IMPERIAL CHAMBER.

Nor can the Emperor himself hinder or suspend the Decisions of either Court; much less call any Cause before himself which has once been before them; without the Consent of the States of the Empire. Yet, in some Cases the same Council forbears making any peremptory Conclusion without the Emperor's Participation; and only Decrees thus, *Fiat Votum ad Cæsarem*; that is, make a Report hereof to the Emperor in his Privy-Council.

AULNEGER, or ALNAGER. See ALNAGER.

AUMONE, or ALMS. See ALMS.

*Tenure in* AUMONE, is where Lands are given to a Religious House, or Church, that some Service may be said for the good of the Donor's Soul. See TENURE.

AUMONIER, or ALMONER. See ALMONER.

AUNCIENT *Demain*. See ANTIENT *Demain*.

AVIARY, a House or Apartment for the keeping, feeding, and propagating of Birds. See BIRD.

The Word is form'd of the *Latin, Avis*.

AUNCEL-*Weight, quasi, Handsel-Weight*, is a kind of Ballance, consisting of Scales hanging on Hooks fasten'd at each End of a Beam or Staff, which a Man lifts up on his Hand or Fore-finger, and so discovers the Equality or Difference between the Weight and the Thing weigh'd. See BALLANCE.

There being great Deceits practiced in these Weights, they were prohibited by several Statutes; and the even Ballance alone commanded. See WEIGHT and STANDARD.

The Word is still used in some Parts of *England*, to signify Meat sold by poising in the Hand, without putting it into the Scales.

AVISO, an Advice, piece of Intelligence, or Advertisement; to notify some Event, or Matter worthy of Knowledge. See ADVERTISEMENT, *&c.*

The Word is *Italian*, and is chiefly used in Matters of Commerce.

AVO-

AVOCATORIA, a Mandate of the Emperor of *Germany*, directed to ſome Prince or Subject of the Empire, to ſtop his unlawful Proceedings in any Cauſe brought by way of Appeal before him. See EMPEROR and EMPIRE.

AVOIDANCE, in Law, has two Significations: The one, when a Benefice becomes void of an Incumbent; the other, when we ſay in Pleadings in Chancery, confeſſed or *avoided*, traverſed or denied, *&c.* See VOIDANCE.

AVOIRDUPOIS, or AVERDUPOIS *Weight*, a kind of Weight uſed in *England*; the Pound whereof contains ſixteen Ounces. See WEIGHT.

The Proportion of a Pound *Avoirdupois* to a Pound *Troy*, is as 17 to 14. See TROY, POUND, and OUNCE.

All the larger and coarſer Commodities are weigh'd by *Avoirdupois* Weight; as Groceries, Cheeſe, Wool, Lead, Hops, *&c.* Bakers who live not in Corporation Towns, are to make their Bread by *Avoirdupois* Weight; thoſe in Corporations by *Troy* Weight.—The Apothecaries buy their Drugs by *Averdupois*, but ſell their Medicines by *Troy*.

AVOWEE, ADVOCATUS. See ADVOUEE and ADVOCATE.

The *Avowee* is he to whom the Right of Advowſon of any Church belongs, ſo that he may preſent thereto in his own Name: he is thus called by way of Diſtinction from thoſe who ſometimes preſent in another Man's Name, as a Guardian that preſents in the Name of his Ward; as alſo from thoſe who only have the Lands whereto an Advowſon belongs for Term of Life, or Years, by Intruſion, or Diſſeiſin.

AU PIS ALLER, a *French* Phraſe, ſometimes uſed among *Engliſh* Writers, ſignifying, *at the worſt*.

AURA, an airy Exhalation, or Vapour. See VAPOUR and EXHALATION.

The Word is *Latin*, deriv'd from the *Greek* ἀύρα, gentle Wind.

AUREA *Alexandrina*, in Pharmacy, a kind of Opiate or Antidote, in great Fame among the antient Writers. See ANTIDOTE.

It is called *Aurea*, from the Gold which enters its Compoſition; and *Alexandrina*, as having been firſt invented by a Phyſician named *Alexander*.—It is reputed a good Preſervative againſt the Colick and Apoplexy.

AURELIA, a Term uſed by natural Hiſtorians for the firſt apparent Change of the *Eruca*, or Maggot of any Species of Inſect. See INSECT.

*Aurelia* is the ſame with what other Writers call *Nympha*. See NYMPHA.

AUREOLA, the Crown of Glory given by Painters and Statuaries to Saints, Martyrs, and Confeſſors; as a Mark of the Victory which they have obtain'd. See CROWN.

F. *Sirmond* ſays, the Cuſtom hereof was borrow'd from the Heathens, who us'd to encompaſs the Heads of their Deities with ſuch Rays.

The Word *Aureola*, in its Original, ſignified a Jewel which was propos'd as the Prize of a Diſpute; and was given as the Reward of Victory.

Among the *Romiſh* School-Divines, *Aureola* is ſuppoſed to be a ſpecial Reward beſtow'd on Martyrs, Virgins, Doctors, and other Saints, on account of their Works of Supererogation.

AURICHALCUM, is a factitious Metal, popularly call'd *Braſs*. See BRASS.

The *Aurichalcum* is a Mixture of Copper and Calamine-ſtone melted together by a very vehement Fire, in Furnaces made on purpoſe. See COPPER and CALAMINARIS.

AURICLE, AURICULA, in Anatomy, the external Ear; or that Part of the Ear which is prominent from the Head. See HEAD.

The Word is a diminutive of *Auris*, Ear; q. d. *little Ear*.

*For the Structure and Variety in the Auricle; with the ſeveral Parts thereof, their Names*, &c. ſee EAR.

AURICLE is alſo applied to two Appendages of the Heart; being two muſcular Caps, covering the two Ventricles thereof. See VENTRICLE.

They move regularly like the Heart; only in an inverted Order; their Syſtole correſponding to the Diaſtole of the Heart and *Vice verſa*. See further of their Structure and Office under the Article HEART. See alſo SYSTOLE and DIASTOLE, *&c.*

AURICULA *Judæ*, or *Jew's Ear*, a kind of Fungus or Muſhroom, reſembling in Figure, a human Ear. See FUNGUS and MUSHROOM.

It grows on old Elder Trees, which is the Tree whereon, 'tis pretended, *Judas* hang'd himſelf; which has given occaſion to the Name.

This Fungus ſteep'd in Water, and applied to the Eyes, frees them of Inflammations: 'Tis alſo uſed Gargle-wiſe in Decoctions, againſt Inflammations of the Throat, or ſwelling of the Tonſils.

AURICULAR, AURICULARIS, ſomething known or learnt only by the Ears. See EAR.

Thus we ſay, an *Auricular* Witneſs, *Auritus Teſtis*, a Witneſs by hearſay. See WITNESS, EVIDENCE, TESTIMONY, *&c.*

AURICULAR *Confeſſion*. See CONFESSION.

The little Finger is alſo call'd *Auricularis*, becauſe uſed in cleanſing the Ear. See FINGER.

AURIGA, in Aſtronomy, the *Waggoner*; a Conſtellation of fixed Stars in the Northern Hemiſphere. See STAR and CONSTELLATION.

The Stars in the Conſtellation *Auriga*, in *Ptolomy*'s Catalogue are 14; in *Tycho*'s 23; in the *Britannia* Catalogue 68; the Longitudes, Latitudes, Magnitudes, *&c.* are as follow.

*Stars in the Conſtellation* AURIGA.

| *Names and Situations of the Stars.* | Sign. | Longitude. ° ′ ″ | Latitude. North. ° ′ ″ | Magn. Nort. |
|---|---|---|---|---|
| Præced. over the North Foot | ♊ | 11 22 20 | 14 52 35 | 6 |

AURIPIGMENTUM, call'd alſo *Orpiment*. See ORPIMENT.

AVOWRY, in Law, is where one takes a Diſtreſs for Rent or other thing; and the other ſues Replevin. In which Caſe the taker ſhall juſtify, in his Plea, for what Cauſe he took it: And if he took it in his own Right, is to ſhew it, and ſo *avow* the taking; which is called his *Avowry*. If he took it in the Right of another, when he has ſhewed the Cauſe, he is to make Conuſance of the taking, as being a Bailiff or Servant to him in whoſe Right he did it. See DISTRESS, *&c.*

AURIS, an *Ear*. See EAR.

The cutting off the Ears was a Puniſhment inflicted by the *Saxon* Laws on thoſe who robbed Churches; and afterwards on every Thief; and at length on divers other Criminals. See PUNISHMENT.

AURISCALPIUM, an Inſtrument wherewith to pick and cleanſe the Ear from Wax. See EAR, CERUMEN, *&c.*

The Word is compounded of the *Latin*, *Auris*, Ear; and *Scalpo*, I ſcratch.

AURORA, *Crepuſculum*, *Twilight*; that faint Light which begins to appear in a Morning, when the Sun is within eighteen Degrees of the Horizon. See CREPUSCULUM and TWILIGHT.

The Poets have perſonified, and even made it a Goddeſs; repreſenting her with a Chariot, roſy Fingers, *&c.*

*Nicod.* derives the Word, *ab Oriente ſole Quia aer aureſcit.*

AURORA *Borealis*, or AURORA *Septentrionalis*, the Northern *Dawn* or *Light*; is an extraordinary Meteor, or luminous Appearance, ſhewing it ſelf in the Night Time, in the Northern Part of the Heavens. See METEOR.

'Tis uſually of a reddiſh Colour, inclining to yellow, and ſends out frequent Coruſcations of pale Light, which ſeem to riſe from the Horizon in a pyramidal undulating Form, and ſtrike, with great Velocity, up to the Zenith.

This kind of Meteor never appears near the Equator, and was ſo rare in *England*, that none are recorded in our Annals ſince that remarkable one, *Novemb.* 14. 1574. till the ſurpriſing *Aurora Borealis*, *March* 6. 1716. which appeared for three Nights ſucceſſively, but by far more ſtrongly on the firſt.—Indeed, in the Years 1707 and 1708, five ſmall ones were obſerv'd in little more than eighteen Months.

Hence it ſhould ſeem that the Air or Earth, or both, are not at all times diſpos'd to produce this *Phænomenon*; for though 'tis poſſible it may happen in the Day-time, in bright Moon-ſhine, or in cloudy Weather, and ſo paſs unobſerv'd; yet that it ſhould appear ſo frequent at ſome times, and ſo ſeldom at others, cannot well this way be accounted for.—That in *March* 1716, was viſible to the Weſt of *Ireland*, Confines of *Ruſſia*, and to the Eaſt of *Poland*; extending at leaſt near 30° of Longitude, and 50° in Latitude, that is, over almoſt all the North of *Europe*; and in all Places at the ſame time, it exhibited the like wondrous Circumſtances.

A ſufficient number of Obſervations have not yet been made by the Curious, to enable them to aſſign the Cauſe of this *Phænomenon*, with any certainty.—Dr. *Halley*, however, imagines that watery Vapours, or Effluvia, rarified exceedingly by ſubterraneous Fire, and tinged with ſulphurous Streams, which Naturaliſts ſuppoſe to be the Cauſe of Earthquakes; may alſo be the Cauſe of this Appearance: Or, that 'tis produced by a kind of ſubtile Matter, freely pervading the Pores of the Earth, and which entering into it near the ſouthern Pole, paſſes out again with ſome Force into the Æther at the ſame Diſtance from the Northern; the obliquity of its Direction being proportion'd to its Diſtance from the Pole. This ſubtile Matter, by becoming ſome way or other more denſe, or having its Velocity increas'd, may be capable of producing a ſmall Degree of Light, after the manner of Effluvia from electrick Bodies, which by a ſtrong and quick Friction, emit Light in the Dark: To which ſort of Light this ſeems to have a great Affinity. *Phil. Tranſ.* N°. 347.

AURUM, in Natural Hiſtory, *Gold*. See GOLD.

The Word is chiefly applied to certain Chymical Preparations, whereof Gold is the Baſis or principal Ingredient.—Such are the *Aurum potabile*, *Aurum fulminans*, &c.

AURUM *fulminans*, fulminating or thundering Gold. See *Aurum* FULMINANS.

It is inflammable, not only by Fire, but alſo by a gentle Warmth; and gives a Report much louder than that of Gunpowder.

Its Effect is commonly ſaid to be principally downwards; in oppoſition to Gun-powder, which is chiefly upwards; but this rather ſeems a vulgar Error. See GUN-POWDER.

A Scruple of this Powder acts more forcibly than half a Pound of Gun-powder: a ſingle Grain laid on the Point of a Knife, and lighted at the Candle, goes off with a greater Noiſe than a Musket.—It is ſaid to conſume even to the very laſt Atom.

AURUM *potabile*, *Potable Gold*, is a Compoſition made of Gold, by reducing it, without any Corroſive, into a Gum, or Subſtance like Honey, of the Colour of Blood; which Gum ſteep'd in Spirit of Wine, acquires a Ruby-colour, and is call'd *Tincture of Gold*.

An Ounce of this Tincture, mix'd with ſixteen Ounces of another Liquor, is call'd *Aurum potabile*, becauſe of its Gold-colour; and is ſaid to be a ſovereign Remedy againſt ſeveral Diſeaſes. See *Potable* GOLD.

A modern Phyſician has aſſerted that Gold is a Reſin drawn from the Earth; and that the grand Secret of rendering Gold *potable*, does not conſiſt in diſſolving this Reſin by means of Corroſives, but by a Water, wherein it melts like Ice or Snow in hot Water; and this Water muſt be nothing but a Water extracted from Gold, agreeable to an Axiom that he lays down, which is, that Matters of different Natures have no Ingreſs into one another; but that every Menſtruum or Diſſolvent ought to be taken from Bodies of the ſame kind with thoſe it is to act upon.

The ſame Author obſerves, that Blood and Urine furniſh a *Sal Armoniac*, which mingled with *Aqua-fortis*, acts upon Gold: whence he conjectures, that there may be a conformity of Nature between Gold and Blood; and that by conſequence, Gold well open'd and ſubtiliz'd, might produce a Reſin, and a Fire that wou'd augment the Blood.

AURUM *Moſaicum*. See MOSAIC *Gold*.

AURUM *Moſaicum* is alſo a Preparation in Pharmacy, thus called from its golden Colour and Appearance. It is made of Mercury, Tin, Sal Armoniac, and Flowers of Sulphur, by grinding, mixing, then ſetting them three Hours in a Sand Heat.—The dirty Sublimate being taken off, the *Aurum Moſaicum* is found at the Bottom of the Matraſs.

It is recommended in moſt chronical and nervous Caſes; and particularly Convulſions of Children.

AURUM *Reginæ*. See QUEEN *Gold*.

AUSCULTARE, in our antient Cuſtoms.—In regard the reading of Prayers with a graceful Tone or Accent, makes ſome Impreſſion on the Hearers; there was antiently a Perſon appointed, in Monaſteries, to hear the Monks read, who inſtructed them how to perform it, before they were admitted to read publickly in the Church, or before the People.—This was call'd *Auſcultare*, q. d. to hear, liſten.

*Quicunque Lecturus vel Cantaturus eſt aliquid in Monaſterio; ſi neceſſe habeat ab eo*, viz. *Cantore, priuſquam incipiat debet Auſcultare. Lanfranc in Decret. pro Ord. Benedict.*

AUSPICES, in Antiquity, a ſort of Prieſts or Southſayers, appointed to obſerve the Flight of Birds, and thence to form Preſages of future Events. See DIVINATION.

The *Auſpices* were thus call'd, *Quaſi Aviſpices, ab avibus Inſpiciendis.*—They are ordinarily confounded with the *Augurs*, tho' in ſtrictneſs there be a Difference. See AUGUR.

AUSPICY, AUSPICIUM, a kind of Augury amongſt the Antients, which conſiſted in conſidering the Flight and feeding of Birds, in order to know whether any Undertaking they were about, would prove happy or unfortunate. See AUSPICES and AUGURY.

*Pliny* attributes the Invention hereof to *Tireſias* the *Theban*. See DIVINATION, OMEN, *&c.*

AUSTERE, implies a rough, aſtringent Taſte; ſuch as that of Vitriol, *&c.* See TASTE.

*Auſtere* things differ from acerb or ſour ones; in that they conſtringe the Mouth and Tongue ſomewhat leſs, and are devoid of Acidity. See ACERB.

The Word comes from the *Greek*, αὐστηρὸς.

AUSTERITY, AUSTERENESS *of Taſte*, that which denominates a ſapid Body, *Auſtere*. See AUSTERE.

AUSTERITY, in a moral Senſe, ſignifies *Severity*, or a rigid Carriage and Deportment in any thing.

Thus we ſay, *Auſterity* of Manners; the *Auſterities* of the Monaſtick Life. The *Auſterity* of the *Roman* Cenſors kept the People in their Duty. The greateſt *Auſterity* of the *Carthuſians* is perpetual Solitude. See CENSOR, CARTHUSIAN, SOLITARY, *&c.*

AUSTRAL, AUSTRALIS, the ſame with *Southern*. See SOUTH and SOUTHERN.

Thus, *Auſtral Signs*, are the ſix laſt Signs of the Zodiack; ſo called, becauſe they are on the South-ſide of the Equinoctial. See SIGN.

The Word is derived from *Auſter*, the South-Wind. See WIND.

AUSTRALIS *Piſcis*, is a Conſtellation of the Southern Hemiſphere; not viſible in our Latitude. See CONSTELLATION.

AUTHENTICK, AUTHENTICUS, ſomething genuine, and of good Authority; in oppoſition to what is fictitious and ſpurious.

It alſo ſignifies ſomething ſolemn, and celebrated; cloth'd in all its Formalities; and atteſted by proper Perſons to whom credit has been regularly given.

In this Senſe we ſay, the Truths of Chriſtianity are founded on *Authentic* Teſtimonies, *&c.*—*Authentic* Papers, Inſtruments.—The Nobility, and Perſons of Rank, were particularly call'd *Authentic Perſons*, as being ſuppoſed more deſerving of Credit than others.

The Word is *Greek*, Αὐθεντικος; q. d. *cum Authoritate.*

AUTHEN-

AUTHENTICKS, AUTHENTICÆ, in the Civil Law, is a Name given to the Novels of *Juſtinian*. See NOVEL.

The Reaſon of the Denomination is not well known.—*Alciat* will have it to have been firſt given them by *Accurſius*.

They were Originally compoſed in *Greek*, and afterwards tranſlated into *Latin* by the Patrician *Julian*, who alſo reduced them into fewer Words and leſs Compaſs.—In the time of *Bulgarus*, there was a ſecond Verſion made, more exact and literal, though not quite ſo elegant as the former.

This Tranſlation, ſays the Author juſt cited, being preferred by *Accurſius*, he call'd it the *Authentica*, by way of preference over that of *Julian*, as being more conformable to the Original.

The *Authenticks* or Novels are divided into IX Collations, or Chapters. See CHAPTER, CIVIL-*Law*, &c.

AUTHOR, AUCTOR, properly denotes one who created or produced any thing; and is applied by way of Eminence to the firſt Cauſe, *viz.* God.—Thus we ſay the *Author* of Nature, &c. See CAUSE, GOD, NATURE, &c.

The Word is *Latin*, form'd of the *Greek*, αυτος, *Ipſe*.

The Term *Author* is ſometimes alſo uſed in the ſame Senſe with *Inventor*.—*Polydore Virgil* has wrote eight Books of the *Authors* or Inventors of things, &c. See INVENTION.

*Pythagoras* is held the *Author* of the Dogma of *Metempſychoſis*. See METEMPSYCHOSIS, &c.

AUTHOR, in Matters of Literature, is a Perſon who has wrote or compoſed ſome Book, or Writing. See BOOK, WRITING, &c.

Thus we ſay the ſacred *Authors*; anonymous *Authors*, &c.—The *Latin Authors* pillaged the *Greeks*, &c. See ANONYMOUS, &c.

An *Original Author* is he who firſt treated of any Point or Subject; who did not follow any other Perſon, imitate any Model either in the Matter or the Manner of what he has wrote. See ORIGINAL.

AUTHORITY, AUCTORITAS, a right to command, and make one's ſelf obey'd. See POWER.

In this Senſe we ſay the Supreme or Soveriegn *Authority*; Abſolute or Deſpotic *Authority*; the Royal *Authority*; the Epiſcopal *Authority*; the *Authority* of the Church; of a Father, &c. See SUPREME, SOVEREIGN, ROYAL, DESPOTIC, &c. See alſo JURISDICTION, GOVERNMENT, &c.

AUTHORITY, is alſo uſed for the Teſtimony of an Author, or Writing. See TESTIMONY.

The Word is alſo particularly underſtood of an Apophthegm, or Sentence of ſome great or eminent Perſon, quoted in a Diſcourſe, either by way of Proof, or Embelliſhment.

The Term alſo includes Rules, Laws, Canons, Decrees, Deciſions, &c. alledged in Confirmation of a Matter in Diſpute. See CONFIRMATION, &c.

Paſſages quoted from *Ariſtotle* are of great *Authority* in the Schools: Texts of Scripture are of deciſive *Authority*.

*Authorities* make a Species of Arguments call'd by Rhetoricians, *inartificial*, or *extrinſic Arguments*. See ARGUMENT.

*For the Uſe and Effect of Authorities*, ſee EVIDENCE, REASON, PROBABILITY, FAITH, REVELATION, &c.

AUTOCEPHALUS, a Perſon who is his own Chief or Maſter, and has no other over him. See ACEPHALUS.

The Word is compounded of the *Greek* αὐτος, *ipſe*; and κεφαλὴ, *Caput*, Head.

This Denomination was given by the *Greeks* to certain Archbiſhops, who were exempted from the Juriſdiction of Patriarchs.—Such was the Archbiſhop of *Cyprus*, by a general Decree of the Council of *Epheſus*, which freed him from the Juriſdiction of the Patriarch of *Antioch*. See ARCHBISHOP, PATRIARCH, &c.

There were ſeveral other Biſhops in the Eaſt, who were *Autocephali*; and in the Weſt, thoſe of *Ravenna* pretended to the ſame Right.—The VIth Council, Canon 39. ſays, they have the ſame Authority with Patriarchs; but this is not to be underſtood in the full Latitude of the Words; but only as intimating, that the *Autocephali* have the ſame Authority over their Biſhops, that Patriarchs had over their Archbiſhops: In which Senſe only they are equal to Patriarchs. See BISHOP, METROPOLITAN, &c.

AUTOGRAPHY, AUTOGRAPH, the very Hand-writing of any Perſon: Or the Original of a Treatiſe, or Diſcourſe.—In oppoſition to a Copy. See HAND-*writing*, ORIGINAL, COPY, &c.

The Word is form'd of the two *Greek* Words αὐτος, and γράφω, *ſcribo*.

AUTOMATON, or AUTOMATUM, a ſelf-moving Engine; or a Machine which has the Principle of Motion within it ſelf. See MACHINE and MOTION.

Such were *Archytas*'s Dove, mentioned by *Aulus Gellius*, *Noct. Att. L.* 10. and *Regiomontanus*'s Wooden Eagle, which, as *Hakewill* relates, flew forth of the City, met the Emperor, ſaluted him, and return'd: As alſo his Iron Fly, which at a Feaſt flew out of his Hands, and taking a round, returned thither again. *Apol.* c. 10. §. 1.

Among *Automata* are reckoned all Mechanical Engines which go by Springs, Weights, &c. included within them; ſuch are Clocks, Watches, &c. See SPRING, PENDULUM, CLOCK, WATCH, &c.

The Word is *Greek*, αὐτόματος, compounded of αὐτος, *ipſe*, and μάτην, *facile*; whence αυτοματος, *ſpontaneous*.—The Carteſians maintain Brutes to be mere *Automata*. See CARTESIANISM, CAUSE, &c.

AUTOPSY, AUTOPSIA, an ocular Demonſtration; or the ſeeing a thing one's ſelf. See SIGHT, VISION, &c.

The Word is compounded of αὐτὸς, *ipſe*, and ὄψις, *Viſus*, Sight

AUTUMN, AUTUMNUS, the third Seaſon of the Year; being that wherein the Harveſt, and the Fruits of the Summer are gathered. See SEASON, YEAR, &c.

*Autumn* begins on the Day when the Sun's Meridian Diſtance from the Zenith, being on the decreaſe, is a mean between the greateſt and leaſt; which happens when the Sun enters ♎. Its End coincides with the beginning of *Winter*. See WINTER, &c.

Some derive the Word from *augeo*, I increaſe, *quod annum frugibus augeat*.

Divers Nations computed the Years by *Autumns*; the *Engliſh-Saxons*, by Winters.—*Tacitus* tells us, the antient *Germans* were acquainted with all the other Seaſons of the Year, but had no Notion of *Autumn*. *Linwood* obſerves of the beginning of the ſeveral Seaſons of the Year, that

*Dat Clemens Hyemem, dat Petrus Ver Cathedratus,*
*Æſtuat Urbanus,* Autumnat *Bartholomæus.*

AUTUMN, in Alchymy, the Time or Seaſon when the Operation of the Philoſopher's-ſtone is brought to Maturity and Perfection. See ALCHYMY and PHILOSOPHER'S-*Stone*.

AUTUMNAL, ſomething peculiar to *Autumn*. See AUTUMN.

AUTUMNAL *Point*, is one of the Equinoctial Points; being that from which the Sun begins to deſcend towards the North Pole. See EQUINOCTIAL *Point*.

AUTUMNAL *Equinox*, is the Time when the Sun is in the *Autumnal* Point. See EQUINOX.

AUTUMNAL *Signs* are thoſe through which the Sun paſſes during the Seaſon of *Autumn*. See SIGN.

The *Autumnal Signs* are *Libra*, *Scorpius*, and *Sagittary*. See LIBRA, SCORPIUS, and SAGITTARIUS.

AUXESIS, in Rhetorick, a Figure, when any thing is magnified too much. See FIGURE and HYPERBOLE.

AUXILIARY, AUXILIARIS, any thing that is helping or aſſiſting to another. See AUXILIUM.

Thus we ſay a Prince is to truſt more to his own Soldiers, than to *Auxiliary* Troops, &c.

AUXILIARY *Verbs*, in Grammar, are ſuch as help to form or conjugate others; that is, are prefixed to them to form ordenote the Mood and Tenſe thereof. See VERB, CONJUGATION, &c.

Such, in *Engliſh* are, *have*, *am*, or *be*; in *French*, *eſtre* and *avoir*; in *Italian*, *ho* and *ſono*, &c.

All the modern Languages we know of make uſe of *auxiliary* Verbs.—The reaſon is, that the Verbs thereof do not change their Terminations or Endings, as thoſe of the *Latin* and *Greek*, to denote the different Tenſes or Times of being, doing, or ſuffering; nor the different Moods or Manners of their ſignifying: So that to ſupply this defect, recourſe is had to different *auxiliar* Verbs. See TERMINATION, TENSE, PERSON, &c.

The *Auxiliary am* ſupplies the want of Paſſives in our Language. See PASSIVE.

Beſides the perfect *auxiliary* Verbs, we have ſeveral defective ones; as *do*, *will*, *ſhall*, *may*, *can*, and *have*; which by changing their own Terminations, ſave the neceſſity of changing thoſe of the Verbs they are added to.—Thus, inſtead of *ego uro*, *tu uris*, *ille urit*, &c. we ſay, I *do* burn, thou *doſt* burn, he *doth* burn, &c.

AUXILIUM, in Law. See AID.

AUXILIUM *Curiæ*, ſignifies an Order of the Court for the ſummoning of one Party at the Suit of another.

AUXILIUM *ad Filium Militem faciendum & filiam Maritandam*, was a Writ directed to the Sheriff of every County, where the King or other Lord had any Tenants, to levy of them reaſonable Aid, towards the Knighting his Son, and the Marriage of his eldeſt Daughter. See AID.

AWARD, in Law, the Judgment of one who is neither aſſign'd by Law, nor appointed by the Judge, for ending a Matter in Controverſy; but is choſen by the Parties themſelves that are at variance. See ARBITRATOR, ARBITRATION, &c.

AWN, in Botany, *Ariſta*; the Beard growing out of the Husk of Corn or Graſs. See ARISTA, CORN, &c.

AWNING, on board a Ship, is when a Sail, a Tarpaulin, or the like, is hung over any part of the Ship, above the Decks, to keep off the Sun, Rain, or Wind.

In the Long-boat they make an *Awning*, by bringing the Sail over the Yard and Stay; and boming it out with the Boat-hook.

AXILLA, or ALA, in Anatomy, the Cavity under the upper Part of the Arm; commonly called the *Arm-pit*. See ARM.

The Word is a diminutive of *Axis*; q. d. *little Axis*. See AXIS.

Abſceſſes in the *Axillæ* are uſually dangerous, on account of the many Blood-Veſſels, Lymphaticks, Nerves, *&c.* thereabout, which form large Plexus's. See ULCER.

By the antient Laws, Criminals were to be hang'd by the *Axillæ*, if they were under the Age of Puberty. See HANGING, PUBERTY, *&c.*

AXILLA, in Botany, is the ſpace comprehended between the Stems of Plants and their Leaves. See PLANT, STEM, LEAF, *&c.*

Hence we ſay, thoſe Flowers grow in the *Axillæ* of the Leaves, *i. e.* at the Baſe of the Leaves or their Pedicles. See FLOWER, *&c.*

AXILLARY, AXILLARIS, in Anatomy, ſomething that belongs to the *Axillæ*, or lies near them. See AXILLA.

AXILLARY *Vein* is one of the ſubclavian Veins; which paſſing under the Arm-pits, divides it ſelf into ſeveral other Veins. See SUBCLAVIAN and VEIN.

AXILLARY *Artery* is a Remainder of the Trunk of the ſubclavian Artery; which paſſing under the Arm-pits, changes its Name, and is call'd *Axillary*. See ARTERY.

The ſecond *Vertebra* of the Back is alſo call'd *Axillary*; in regard it is the neareſt to the Arm-pits. See AXIS and VERTEBRA.

AXINOMANCY, AXINOMANTIA, a Species of Divination, or Method of foretelling future Events by means of an Ax or Hatchet. See DIVINATION.

The Word is form'd from the *Greek* ἀξινη, *ſecuris*, and μαντεία, *divinatio*.

This Art was in good repute among the Antients; and was performed by laying an Agat-ſtone on a red-hot Hatchet. See AGAT.

AXIOM, AXIOMA, a ſelf-evident Truth; or a Propoſition whoſe Truth every Perſon perceives at firſt ſight. See TRUTH and PROPOSITION.

Thus, that the whole is greater than a Part; that a thing cannot give what it ſelf has not; that a thing cannot be and not be at the ſame time; that from nothing, nothing can ariſe, *&c.* are *Axioms*.—The Word is *Greek*, ἀξιωμα, q. d. *dignitas*, *Auctoritas*, or even *Effatum:* Whence *Cicero* in lieu thereof uſes the Word *Pronuntiatum*.

By *Axioms*, call'd alſo *Maxims*, are underſtood all common Notions of the Mind, whoſe Evidence is ſo clear and forcible, that a Man cannot deny them without renouncing common Senſe and natural Reaſon. See MAXIM, EVIDENCE, *&c.*

The Rule of *Axioms* is this, that whatever Propoſition expreſſes the immediate clear Compariſon of two Ideas without the help of a third, is an *Axiom*.—On the other hand, a Truth which does not ariſe from an immediate Compariſon of two Ideas, is no *Axiom*. See IDEA, RELATION, *&c.*

*Wolfius* aſſigns the Eſſence of an *Axiom* thus: Whatever Propoſition ariſes immediately from the Conſideration of a ſingle Definition, is an *Axiom*.—Thus it neceſſarily following from the Geneſis of a Circle, that all right Lines drawn from the Centre to the Circumference thereof, are equal; inaſmuch as they all repreſent the ſame Line in different Situations: This is an *Axiom*. See DEFINITION.

Hence, the Truth of *Axioms* being perceived by the meer Intuition of a Definition; they need no Demonſtration: Since they are neceſſarily as true, as the Definition is juſt. See DEMONSTRATION.

Several Authors abuſe this Property of *Axioms*, and obtrude for *Axioms* the Premiſſes of Syllogiſms, which they are not able to prove.—*Euclid* himſelf lies liable to Exception on this Account, having aſſumed the Equality of Figures which mutually agree, or are congruous to each other, as an *Axiom*. See CONGRUENCY.

*Axioms*, in effect, ſtrictly ſpeaking, are no other than identick Propoſitions.—Thus to ſay that all Right Angles are equal to each other, is as much as to ſay, all Right Angles are Right Angles: Such Equality being implied in the very Definition, the very Name. See DEFINITION.

My Lord *Bacon* propoſes a new Science, to conſiſt of general *Axioms*, under the Denomination of *Philoſophia prima*. See PHILOSOPHY, KNOWLEDGE, *&c.*

AXIOM is alſo an eſtabliſhed Principle in ſome Art or Science. See PRINCIPLE, *&c.*

Thus, it is an *Axiom* in Phyſicks, that Nature diſcovers herſelf moſt in the ſmalleſt Subjects; that Nature does nothing in vain; that Effects are proportional to their Cauſes, *&c.* Thus it is an *Axiom* in Geometry, that things equal to the ſame third are alſo equal to one another; that if to equal things you add Equals, the Sums will be Equal, *&c.* So it is an *Axiom* in Opticks, that the Angle of Incidence is equal to the Angle of Reflection, *&c.* It is an *Axiom* in Medicine, *&c.* that there is no ſincere Acid in the human Body, *&c.*

In this Senſe the general Laws of Motion are call'd *Axioms*; as, that all Motion is Rectilinear, that Action and Re-action are equal, *&c.* See *Laws of* NATURE.

Theſe particular *Axioms*, it may be obſerved, do not immediately ariſe from any firſt Notions or Ideas, but are deduced from certain Hypotheſes: This is particularly obſervable in phyſical Matters, wherein, as ſeveral Experiments contribute to make one Hypotheſis, ſo ſeveral Hypotheſes contribute to one *Axiom*. See HYPOTHESIS, *&c.*

AXIS properly ſignifies a Line or long Piece of Iron or Wood paſſing through the Centre of a Sphere, which is moveable upon the ſame. See SPHERE.

In this Senſe we ſay the *Axis of a Sphere*, or Globe; the *Axis*, or *Axle-Tree of a Wheel*, &c. See GLOBE, WHEEL, *&c.*

AXIS *of the World*, in Aſtronomy.—The *Axis of the World* is an imaginary Right Line, conceived to paſs through the Centre of the Earth, and terminating at each End in the Surface of the mundane Sphere. See SPHERE.

About this Line as an *Axis*, the Sphere, in the Ptolemaic Syſtem, is ſuppoſed daily to revolve. See EARTH and ROTATION. See alſo PTOLOMAIC.

This *Axis* is repreſented by the Line PQ, *Tab. Aſtronomy, Fig.* 52.—The two extream Points hereof, in the Surface of the Sphere, *viz.* P and Q, are called its *Poles*. See POLE.

AXIS *of the Earth*, is a Right Line, upon which the Earth performs its diurnal Rotation. See EARTH, ROTATION, *&c.*

Such is the Line PQ, *Tab. Geography, Fig.* 7.—The two extream Points hereof are alſo called *Poles*. See POLE.

The *Axis* of the Earth is a Part of the *Axis* of the World.—It always remains parallel to it ſelf, and at Right Angles with the Equator. See PARALLELISM.

AXIS *of a Planet*, is a Line drawn through the Centre thereof, about which the Planet revolves. See PLANET, *&c.*

The Sun, Moon, and all the Planets, except Mercury and Saturn, are known, by Obſervation, to move about their ſeveral *Axes*; and the like Motion is eaſily infer'd of thoſe two. See SUN, MOON, MERCURY, SATURN, *&c.*

AXES *of the Horizon*, the *Equator*, *Ecliptic*, *Zodiac*, &c. are Right Lines drawn through the Centres of thoſe Circles perpendicularly to the Planes thereof. See CIRCLE. See alſo HORIZON, ECLIPTIC, EQUATOR, *&c.* See alſo PLANE, *&c.*

AXIS, in Mechanicks.—The *Axis of a Ballance* is the Line upon which it moves or turns. See BALLANCE.

AXIS *of Oſcillation*, is a Right Line parallel to the Horizon, paſſing through the Centre, about which a Pendulum vibrates. See OSCILLATION and PENDULUM.

AXIS, in Geometry.—*Axis of Rotation*, or *Circumvolution*, is an imaginary Right Line, about which any plane Figure is conceived to revolve, in order to generate a Solid. See SOLID, GENESIS, *&c.*

Thus a Sphere is conceived to be formed by the Rotation of a Semicircle about its Diameter or Axis, and a Right Cone by that of a Right Angle Triangle about its perpendicular Leg, which is here its *Axis*.

AXIS *of a Circle or Sphere*, is a Line paſſing through the Centre of a Circle or Sphere, and terminating at each End, in the Circumference thereof. See CIRCLE and SPHERE.

The *Axis of a Circle*, &c. is otherwiſe call'd the *Diameter* thereof.—Such is the Line AB. *Tab. Geometry. Fig.* 27. See DIAMETER.

AXIS is yet more generally uſed for a Right Line proceeding from the Vertex of a Figure to the Baſe thereof. See FIGURE, VERTEX, and BASE.

AXIS *of a Cylinder* is properly that quieſcent Right Line about which the Parallelogram turns, by whoſe Revolution the Cylinder is formed. See CYLINDER.

Though, both in Right and Oblique Cylinders, the Right Line joining the Centres of the oppoſite Baſis, is alſo called the *Axis of the Cylinder*.

AXIS *of a Cone* is the Right Line or Side upon which the right angled Triangle forming the Cone makes its Motion. See CONE.

Hence it follows that only a Right Cone can properly have an *Axis*; in regard an Oblique one cannot be generated by any Motion of a Plane Figure about a Right Line at reſt.

But in Regard the *Axis* of a Right Cone is a Right Line drawn from the Centre of its Baſe to the Vertex; in Analogy hereto the Writers of Conicks do likewiſe call the ſame Line drawn from the Centre of the Baſe of an Oblique Cone to the Vertex, the *Axis* thereof.

AXIS *of a Veſſel*, is that Quieſcent Right Line paſſing through the Middle thereof, perpendicularly to its Baſe, and equally diſtant from its Sides.

AXIS *of a Conick Section*, is a Right Line paſſing through the Middle of the Figure, and cutting all the Ordinates at Right Angles. See CONICK *Section*.

Thus if AP, *Tab. Conicks, Fig.* 31. be drawn perpendicularly to MN, ſo as to divide the Section into two equal Parts; it is called the *Axis of the Section*. See SECTION.

*Tranſverſe* AXIS, called alſo the *firſt* or *principal* AXIS of an Ellipſis or Hyperbola, is the *Axis* AP, laſt defined: Being thus called in contradiſtinction to the conjugate or ſecondary *Axis*. See TRANSVERSE.

The Tranſverſe *Axis* in the Ellipſis the longeſt; and in the Hyperbola cuts the Curve in the Points A and P. *Fig.* 32.

*Conjugate* AXIS, or *ſecond* AXIS *of the Ellipſis*, is the Line FF, *Fig.* 31. drawn through the Centre of the Figure C, parallel to the Ordinate MN, and perpendicularly to the Tranſverſe *Axis* AP; being terminated at each extream by the Curve. See ELLIPSIS.

The

The Conjugate is the ſhorter of the two *Axes* of an Ellipſis. See CONJUGATE.

*Conjugate*, or *ſecond* AXIS *of an Hyperbola*, is the Right Line FF, *Fig* 32. drawn through the Centre parallel to the Ordinates, M N, M N, perpendicularly to the *Axis* AP. See HYPERBOLA.

The Length of this *Axis*, though more than infinite, may be found by this Proportion, $\sqrt{AM \times PM} : AP :: {}^{2}MN : FF$.

AXIS *of a Parabola*. See PARABOLA.

The *Axis of a Parabola* is of an indeterminate Length, that is is infinite.—The *Axis* of the Ellipſis is determinate.—The Parabola has only one *Axis*; the Ellipſis and Hyperbola two. See CURVE.

AXIS *in Opticks*.—*Optick* AXIS, or *Viſual Axis*, is a Ray paſſing through the Centre of the Eye; or it is that Ray which proceeding out of the Middle of the luminous Cone, falls perpendicularly on the cryſtalline Humour, and conſequently paſſes through the Centre of the Eye. See OPTICK, RAY, CONE, VISION, *&c.*

*Common* or *mean* AXIS, is a Right Line drawn from the Point of Concourſe of the two optick Nerves, through the Middle of the right Line, which joins the Extremity of the ſame optick Nerves. See OPTICK *Nerve*.

AXIS *of a Lens*, or *Glaſs*, is a right Line paſſing along the *Axis* of that Solid whereof the Lens is a Segment. See LENS and GLASS.

Thus a ſpherical convex Lens, being a Segment of ſome Sphere; the *Axis* of the *Lens* is the ſame with the *Axis* of the Sphere; or it is a right Line paſſing through the Centre thereof. See CONVEX, *&c.*

Or the *Axis* of a Glaſs is a right Line joining the Middle Points of the two oppoſite Surfaces of the Glaſs. See OPTICK *Glaſs*.

AXIS *of Incidence*, in Dioptricks, is a right Line drawn through the Point of Incidence, perpendicularly to the refracting Surface. See INCIDENCE.

Such is the Line DB, *Tab. Opticks, Fig.* 56.

AXIS *of Refraction*, is a right Line continued from the Point of Incidence or Refraction, perpendicularly to the refracting Surface, along the further Medium.—Such is the Line BE.

Or it is that made by the incident Ray, perpendicularly prolonged on the Side of the ſecond Medium. See REFRACTION.

AXIS *of a Magnet*, or *Magnetical* AXIS, is a Line paſſing thro' the middle of a Magnet, length-wiſe; in ſuch manner, as that however the Magnet be divided, provided the Diviſion be according to a Plane wherein ſuch Line is found, the Loadſtone will be made into two Loadſtones. See MAGNET and MAGNETISM.

The extreams of ſuch Lines are called the Poles of the Stone. See POLE and POLARITY.

AXIS, in Anatomy, is the third Vertebra of the Neck; reckoning from the Skull. See VERTEBRA.

'Tis thus called by reaſon the two firſt Vertebræ, with the Head, move thereon, as on an *Axis*. See HEAD and NECK.

*Spiral* AXIS, in Architecture, is the *Axis* of a twiſted Column, drawn ſpirally, in order to trace the Circumvolutions without. See *Twiſted* COLUMN.

AXIS *of the Ionick Capital*, is a Line paſſing perpendicularly through the middle of the Eye of the Volute. See IONIC and VOLUTE.

The *Axis* is otherwiſe call'd *Cathetus*. See CATHETUS.

AXIS *in Peritrochio*, is one of the five mechanical Powers, or ſimple Machines; contrived chiefly for the raiſing of Weights to a conſiderable Height. See MECHANICAL *Power*, &c.

It conſiſts of a Circle, repreſented AB, (*Tab. Mechanicks, Fig.* 44.) concentric with the Baſe of a Cylinder, and moveable together with it, about its *Axis* EF.—This Cylinder is call'd the *Axis*; the Circle, the *Peritrochium*; and the *Radii*, or Spokes, which are ſometimes fitted immediately into the Cylinder, without any Circle, the *Scytalæ*. See PERITROCHIUM.

Round the *Axis* winds a Rope, whereby the Weight, *&c.* is to be rais'd.

The *Axis in Peritrochio* takes place in the Motion of every Machine, where a Circle may be conceived deſcribed about a fix'd *Axis*, concentric to the Plane of a Cylinder about which it is placed; as in Crane-Wheels, Mill-Wheels, Capſtans, *&c.* See WHEEL.

*Doctrine of the* AXIS *in Peritrochio.*

1. If the Power, applied to an *Axis in Peritrochio*, in the Direction AL, *Fig.* 7. perpendicular to the Periphery of the Wheel, or to the Spoke, be to a Weight G, as the Radius of the *Axis* CE, is to the Radius of the Wheel CA, or the Length of the Spoke; the Power will juſt ſuſtain the Weight, *i. e.* the Weight and the Power will be *in Equilibrio*.

2. If a Power be applied to the Wheel in F, according to the Line of Direction FD, which is oblique to the Radius of the Wheel, though parallel to the perpendicular Direction; it will have the ſame Proportion to a Power which acts according to the perpendicular Direction AL, which the whole Sine has to the Sine of the Angle of the Direction DFC.

Hence, ſince the Diſtance of the Power in A, is the Radius CA; the Angle of Direction DFC being given, the Diſtance DC is eaſily found.

3. Powers applied to the Wheel in ſeveral Points, F and K, according to the Directions, FD and KI, parallel to the perpendicular one AL, are to each other as the Diſtances from the Centre of Motion CD and DI, reciprocally.

Hence, as the Diſtance from the Centre of Motion increaſes, the Power decreaſes; *& vice verſa*.—Hence alſo, ſince the Radius AC is the greateſt Diſtance, and agrees to the Power acting according to the Line of Direction; the perpendicular Power will be the ſmalleſt of all thoſe able to ſuſtain the Weight G, according to the ſeveral Lines of Direction.

4. If a Power acting according to the Perpendicular AL, lift the Weight G; the Space of the Power will be to the Space of the Weight, as the Weight to the Power.

For, in each revolution of the Wheel, the Power paſſes thro' its whole Periphery; and in the ſame time the Weight is rais'd a Space equal to the Periphery of the *Axis*: The Space of the Power, therefore, is to the Space of the Weight, as the Periphery of the Wheel to that of the *Axis*: But the Power is to the Weights as the Radius of the *Axis* to that of the Wheel. Therefore, *&c.*

5. *A Power, and a Weight being given, to conſtruct an* Axis in Peritrochio, *whereby it ſhall be ſuſtain'd.*

Let the Radius of the *Axis* be big enough to ſupport the Weight without breaking. Then, as the Power is to the Weight, ſo make the Radius of the Wheel, or the Length of the Spoke, to the Radius of the *Axis*.

*Hence*, if the Power be but a ſmall part of the Weight, the Radius of the Wheel muſt be vaſtly great.—*E. gr.* Suppoſe the Weight 3000, and the Power 50, the Radius of the Wheel will be to that of the *Axis* as 60 to 1.

This Inconvenience is provided againſt by encreaſing the number of Wheels and Axes; and making one turn round another, by means of Teeth or Pinions. See WHEEL.

AXUNGIA, a kind of Fat, the ſofteſt and moiſteſt of any in the Bodies of Animals. See FAT.

It is different from *Lard*, which is a firm Fat; and from *Suet* Leaf, or Adeps, which is a kind of dry Fat.

The *Latins* diſtinguiſh Fat into *Pinguedo*, call'd alſo *Axungia*; and *Adeps*, or *Sevum*; but many of our modern Writers confound them. See PINGUEDO.

The Phyſicians make uſe of the *Axungia* of the Gooſe, the Dog, the Viper, and ſome others, eſpecially that of Man, which is of extraordinary Service in the drawing and ripening of Tumors, *&c.* See ATTRAHENT. See alſo VIPER, *&c.*

The Word is ſuppoſed to be form'd, *ab Axe Rotarum quæ unguntur*.

AXUNGIA *of Glaſs*, call'd alſo the *Gall*, and *Salt of Glaſs*, is a Scum taken from the Top of the Matter of Glaſs before it be vitrified. See GLASS.

AYEL, in Law, a Writ which lies where the Grandfather being ſeized in his Demeſn the Day he died, a Stranger enters the ſame Day, and diſpoſſeſſes the Heir. See WRIT.

AYRY, or *Aery* of Hawks, a Neſt or Company of Hawks; ſo call'd from the old *French* Word *Aire*, which ſignifies the ſame thing. See HAWK and HAWKING

AYZAMENTA. See EASEMENTS.

AZIMUTH, in Aſtronomy.—The *Azimuth of the Sun*, or *a Star*, is an Arch of the Horizon, comprehended between the Meridian of the Place, and any given Vertical. See MERIDIAN and VERTICAL.

The *Azimuth* is the Complement of the Eaſtern and Weſtern Amplitude to a Quadrant. See AMPLITUDE.

The *Azimuth* is found by this Proportion; as Radius is to the Tangent of the Latitude, ſo is the Tangent of the Sun's Altitude to the Coſine of the *Azimuth* from the South, at the time of the Equinox.

*To find the Azimuth by the Globe*, ſee GLOBE.

The Word is pure *Arabick*, where it ſignifies the ſame thing.

*Magnetical* AZIMUTH, is an Arch of the Horizon contained between the Sun's *Azimuth*-Circle, and the magnetical Meridian; or it is the apparent Diſtance of the Sun from the North or South Point of the Compaſs. See MAGNETICAL.

It is found, by obſerving the Sun with an *Azimuth* Compaſs, when he is about 10 or 15 Degrees high, either in the Forenoon Afternoon. See *Azimuth* COMPASS.

AZIMUTH *Compaſs* is an Inſtrument uſed at Sea for finding the Sun's magnetical *Azimuth*. See *Magnetical* AZIMUTH.

The Deſcription and Uſe of the *Azimuth Compaſs*, ſee under the Article *Azimuth* COMPASS.

AZIMUTH *Dial*, is a Dial whoſe Style or Gnomon is at right Angles to the Plane of the Horizon. See DIAL.

AZIMUTHS, call'd alſo vertical Circles, are great Circles interſecting each other in the Zenith and Nadir, and cutting the Horizon at right Angles. See VERTICAL.

The Horizon being divided into 360°; for this reaſon they uſually conceive 360 *Azimuths*.—Theſe *Azimuths* are repreſented by the Rhumbs on Sea Charts. See HORIZON, RHUMB, CHART, *&c.*

On the Globe theſe Circles are repreſented by the Quadrant of Altitude when ſcrew'd in the Zenith. See GLOBE, QUADRANT *of Altitude*, &c.

On theſe *Azimuths* is reckoned the Heighth of the Stars and the Sun, when he is not on the Meridian. See ALTITUDE, SUN, STAR, *&c.*

AZONES, in Mythology, a Term antiently applied to ſuch of the Gods as were not the private Divinities of any particular Country or People, but were acknowledg'd as Gods in every Country, and worſhipp'd by every Nation. See GOD.

The Word is derived from the *Greek* privative α, and ζώνη, Zone, Country.

Theſe *Azones* were a Degree above the viſible and ſenſible Gods, which were call'd *Zonæi*; who inhabited ſome particular Part of the World, and never ſtirr'd out of the Diſtrict or Zone that was aſſign'd them.

AZOTH, among the antient Chymiſts, ſignified, ſometimes, the firſt Matter of Metals; ſometimes an univerſal Medicine; and ſometimes the Mercury of a Metal.—But the Term is now diſuſed. See METAL, MERCURY, *&c.*

AZURE, the blue Colour of the Skies. See BLUE, COLOUR, SKY, *&c.*

AZURE, in Heraldry, ſignifies a blue Colour, in the Coats of Arms of all Perſons under the Degree of a Baron. See COLOUR.

In the Eſcutcheons of Noblemen, Blue is call'd *Saphir*; and in thoſe of ſovereign Princes, *Jupiter*.

In engraving, it is repreſented by Strokes or Hatches drawn horizontally, as in the annexed Figure.

The *French* prefer this Colour to all others, by reaſon the Field of the Arms of their Kings is *Azure*.

AZURE is alſo uſed for a mineral Colour, prepared from the *Lapis Armenus*. See ARMENUS.

The *Azure* is very near a-kin to Ultramarine; being procured from the Armenian Stone much after the ſame Manner as the other is from *Lapis Lazuli*. See ULTRAMARINE and LAPIS *Lazuli*.

AZYGOS, in Anatomy, a Vein otherwiſe called *Vena ſine pari*, becauſe ſingle. See VEIN.

The *Vena Azygos* is the third Branch of the aſcending Trunk of the *Cava*.—It deſcends through the right Side of the Cavity of the *Thorax*, and at its arrival at the eighth or ninth *Vertebra*, begins to keep the Middle, and ſends forth on each Side, intercoſtal Branches to the Interſtices of the eight lower Ribs; and there is divided into two Branches, the larger of which is inſerted ſometimes into the *Cava*, but oftener into the Emulgent: The other enters the *Cava*, commonly a little below the Emulgent, but is ſeldom joined to the Emulgent it ſelf. See CAVA and EMULGENT.

AZYMITES, they who Communicate with Bread not leavened or fermented. See AZYMUS.

This Appellation is given by *Cerularius*, to thoſe of the *Latin* Church, upon his Excommunicating them in the XIth Century.

The *Armenians* and *Maronites* do alſo make uſe of *Azymus*, or unleavened Bread, in their Office; on which Account ſome *Greeks* call them *Azymites*. See ARMENIAN and MARONITE.

AZYMUS, ſomething not fermented, or that is without Leaven. See FERMENT and LEAVEN.

The Term *Azymus* is much uſed in the Diſputes betwixt thoſe of the *Greek* and *Romiſh* Church; the latter of whom contend, that the Bread in the Maſs ought to be *Azymus*, unleaven'd, in imitation of the paſchal Bread of the *Jews*, and of our Saviour, who inſtituted the Sacrament on the Day of the Paſſover; and the latter ſtrenuouſly maintaining the former, from Tradition, and the conſtant Uſage of the Church. See SACRAMENT, EUCHARIST, *&c.*

This Diſpute was not the Occaſion of the Rupture between the *Greek* and *Latin* Churches; *Photius* having broke with the Popes 200 Years before.—The Patriarch *Cerularius*, in the XIth Century, excommunicated the *Latins* for adhering to the Uſe of *Azymus* Bread.

St. *Thomas*, in 4 *Sent. Diſt.* 11. q. 2. *Art.* 2. *Quæſtiunc.* 3. relates, that during the firſt Ages of the Church, none but unleavened Bread was uſed in the Euchariſt, 'till ſuch time as the *Ebionites* aroſe, who held that all the Obſervances preſcribed by *Moſes* were ſtill in force: Upon which, both Eaſtern and Weſtern Churches took to the Uſe of leaven'd Bread; and after the Extinction of that Hereſy, the Weſtern Church returned to the *Azymus*; the Eaſtern pertinaciouſly adhering to the former Uſage.

This Account is controverted by Fa. *Sirmond*, in a Diſſertation expreſs; wherein he ſhews, that the *Latins* had conſtantly communicated in leaven'd Bread, till the Xth Century. And Cardinal *Bona*, *Rerum Liturgic*, c. 23. p. 185. owns a deal of diſtruſt of what St. *Thomas* alledges —In the Council of *Florence* it was decreed that the Point lay at the Diſcretion of the Church; and that either leavened or unleavened Bread might be uſed: The Weſtern Church has preferred the latter.

The Word is derived from the *Greek* ἄζυμος, *ſine fermento*, which is compoſed of the privative α, and ζύμη, *Ferment*.

# B A C

B A C

B, THE ſecond Letter of our Alphabet, and of moſt others, is the firſt Conſonant, and firſt Mute, and in its Pronunciation reſembles the Bleating of a Sheep; upon which account *Pierius* tells us in his Hieroglyphicks, that the *Egyptians* repreſented the Sound of this Letter by the Figure of that Animal. 'Tis alſo one of thoſe Letters which the *Eaſtern* Grammarians call *Labial*, becauſe the principal Organs employ'd in its Pronunciation, are the Lips. It has a near Affinity with the other *Labials* P and V, and is often uſed for P both by the *Armenians* and other *Orientals*, as in *Betrus* for *Petrus*, *apſens* for *abſens*, &c. and by the *Romans* for V, as in *amabit* for *amavit*, *Berna* for *Verna*, &c. whence aroſe that Jeſt of *Aurelian* on the Emperour *Bonoſus*, *Non ut vivat natus eſt, ſed ut bibat.* B requires an intire Cloſure and Preſſure of the Lips to pronounce it, and therefore can ſcarce ever end the Sound of a Word: But when you endeavour to pronounce it there, you are obliged to add an E to open the Lips again, as in *Job*, which is ſounded *Jobe*. This Letter alſo if it paſs through the Noſe, becomes an M; as appears by thoſe who have the Noſtrils ſtopt by a Cold or otherwiſe, when they endeavour to pronounce the Letter M; for Inſtance, *many Men*, is by ſuch an one ſounded *bany Ben*. With the Antients B ſtood for 300, as appears by this Verſe:

*Et* B *trecentum per ſe retinere videtur.*

When a Line was drawn above it, $\overline{B}$, it ſtood for 3000, with a kind of Accent below it for 200; but among the *Greeks* and *Hebrews* this Letter ſignified only 2. B F in the Preface to the *Decrees* or *Senatus-Conſulta* of the old *Romans*, ſignified *Bonum*. 'Tis often found on Medals to mark the *Epocha*. *Plutarch* obſerves that the *Macedonians* changed Φ into B, and pronounced *Bilip*, *Beronice*, &c. for *Philip*, *Pheronice*, &c. and thoſe of *Delphos* inſtead of B uſed Π, as βάδειν for πάδειν, βιχὸν for πιχὸν, &c. The *Latins* ſaid *ſuppono*, *oppono*, for *ſubpono*, *obpono*, and pronounced *optinuit*, tho they wrote *obtinuit*, as *Quintilian* has obſerved. They alſo uſed B for F or PH; thus in an antient Inſcription mentioned by *Gruter*, OBRENDARIO is uſed for OFRENDARIO.

BABYLONISH *Hours*. See *Hours*.

BACCHANALIA, a Religious Feaſt in Honour of *Bacchus*, celebrated with much Solemnity among the Antients, particularly the *Athenians*, who even computed their Years thereby, till the Commencement of the *Olympiads*. The *Bacchanalia* are ſometimes alſo call'd *Orgia*, from the *Greek* ὀργὴ, Fury, Tranſport; by reaſon of the Madneſs and Enthuſiaſm wherewith the People appear'd to be poſſeſs'd at the Time of their Celebration. They were held in Autumn, and took their Riſe from *Egypt*; whence, according to *Diodorus*, they were brought into *Greece* by *Melampus*. The Form and Diſpoſition of the Solemnity depended, at *Athens*, on the Archon, and was at firſt exceedingly ſimple, but by degrees became incumber'd with a world of ridiculous Ceremonies, and attended with a world of Diſſoluteneſs and Debauchery; inſomuch that the *Romans*, who grew aſham'd of 'em, ſuppreſs'd them by a *Senatuſ-conſultum* throughout all *Italy*. The Women had a great Share in the Solemnity, which is ſaid to have been inſtituted on their account; for a great Number of 'em attending *Bacchus* to the Conqueſt of the *Indies*, and carrying in their Hands the *Thyrſus*, i. e. a little Lance cover'd with Ivy and Vine-Leaves, ſinging his Victories and Triumphs wherever they went, the Ceremony was kept up after *Bacchus*'s Deification under the Title of *Bacchanalia*, and the Women were inſtall'd Prieſteſſes thereof under that of *Bacchantes*. Theſe Prieſteſſes at the Time of the Feaſt run thro the Streets and over the Mountains cover'd with Tygers Skins, their Hair diſhevell'd, their *Thyrſus* in one Hand and Torches in the other, howling and ſhrieking *Euhoe Evan*, *Euhoe Bacche*. Men and Women met promiſcuouſly at the Feaſt, all perfectly naked, except for the Vine-Leaves and Cluſters of Grapes which bound their Heads and Hips; here they danced and jump'd tumultuouſly, and with ſtrange Geſticulations ſung Hymns to *Bacchus*, till weary and giddy they tumbled down diſtracted. See *Caſtellanus*'s *Eortologion*.

BACCHIUS, in the *Latin* Poetry, is a particular Kind of Foot, conſiſting of three Syllables; where the firſt is ſhort, and the two laſt long, as *Egeſtas*: It is the Reverſe of a *Dactyle*, and takes its Name from that of *Bacchus*, becauſe frequently uſed in the Hymns compoſed in his Honour.

BACCIFEROUS *Plants*, whether Trees, Shrubs, or Herbs, are ſuch as bear Berries, *i. e.* Fruit cover'd with a thin Membrane, wherein is contained a Pulp, which grows ſoft and moiſt when ripe, and encloſes the Seed within its Subſtance. The *Bacciferous* Trees Mr. *Ray* divides into four Kinds: (1.) Such as bear a caliculate or naked Berry; the *Flower* and *Calix* both falling off together, and leaving the Berry bare, as the *Saſſafras* Tree, *&c.* (2.) Such as have a naked monopyreneous Fruit, that is, containing in it only one Seed, as the *Arbutus*, *Terebinthus*, *Lentiſcus*, &c. (3.) Such as have a naked but polypyreneous Fruit, that is, containing two or more Kernels or Seeds within it, as the *Jaſaminum*, *Liguſtrum*, &c. (4.) Such as have their Fruit compoſed of many *Acini*, or round ſoft Balls ſet cloſe together like a Bunch of Grapes, as the *Uva marina*, *Rubus vulgaris*, *Rubus Idæus*, and the *Rubus minor fructu cæruleo*. See *Plant*.

BACILLI, in *Medicine*, ſuch Compoſitions as are of a cylindrical Figure, like a Stick; call'd alſo Lozenges: from the *Latin* Word *Baculus*, a Staff.

BACK-STAFF, in Navigation, an Inſtrument by the *French* called the *Engliſh Quadrant*; invented by Captain *Davis*: of good Uſe in taking the Sun's Altitude at Sea. It conſiſts of three Vanes, A, B, and C, and of two Arches. [*Plate of Navigation*, *Fig.* 5.] The Vane at A called the Horizon-Vane; that at B the Shade-Vane; and that at C the Sight-Vane. The leſſer Arch B is of 60 Degrees, and that of C (or *f g*) of 30 Degrees.

*To Uſe the Back-Staff*; the Shadow-Vane B is ſet upon the *60th* Arch, to an even Degree of ſome Altitude leſs by 10 or 15 Degrees, than you judge the Complement of the Sun's Altitude will be: The Horizon-Vane is put on at A, and the Sight-Vane on the *30th* Arch *f g*: The Obſerver's Back being then turned to the Sun (whence the Name of *Back-Staff* or *Back-Quadrant*) he lifts up the Inſtrument, and looks thro the Sight-Vane, raiſing or falling the Quadrant, till the Shadow of the upper Edge of the Shade-Vane fall on the upper Edge of the Slit in the Horizon-Vane; and then if you can ſee the Horizon thro the ſaid Slit, the Obſervation is well made: But if the Sea appear inſtead of the Horizon, move the Sight-Vane lower towards *g*: If the Sky appear, move it upwards towards *f*, and ſo try if it comes right: Then obſerve how many Degrees and Minutes are cut by that Edge of the Sight-Vane which anſwers to the Sight-Hole, and to them add the Degrees cut by the upper Edge of the Shade-Vane, the Sum is the Sun's Diſtance from the *Zenith*, or the Complement of his Altitude. To find the Sun's Meridian, or greateſt Altitude on any Day, continue the Obſervation as long as the Altitude is found to increaſe, which you will perceive by the Appearance of the Sea inſtead of the Horizon, removing the Sight-Vane lower: but when you perceive the Sky appear inſtead of the Horizon, the Altitude is diminiſh'd; therefore deſiſt from farther Obſervation at that Time, and add the Degrees upon the 60 Arch to the Degrees and Minutes upon the 30 Arch, and the Sum is the *Zenith* Diſtance, or Co-altitude of the Sun's upper Limb.

And becauſe it is the *Zenith* Diſtance, or Co-altitude of the upper Limb of the Sun, not the Center that is given by the Quadrant, in obſerving by the upper End of the Shade-Vane, add 16 Minutes, the Sun's Semidiameter, to that which is produced by your Obſervation, and the Sum is the true *Zenith* Diſtance of the Sun's Center. If you obſerve by the lower Part of the Shadow of the Shade-Vane; then the lower Limb of the Sun gives the Shadow; and therefore you muſt ſubſtract 16 Minutes from what the Inſtrument gives: But conſidering the Height of the Obſerver above the Surface of the Sea, which is commonly between 16 and 20 Foot, you may take 5 or 6 Minutes from the 16 Minutes, and make the Allowance but of 10 Minutes, or 12 Minutes, to be added inſtead of 16 Minutes. Mr. *Flamſtead* contrived a Glaſs *Lens*, or double Convex, to be placed in the middle of the Shade-Vane, which makes a ſmall bright Spot on the Slit of the Horizon-Vane, inſtead of the Shade: Which is a great Improvement, if the Glaſs be truly made; for by this means the Inſtrument may be uſed in hazy Weather, and

a much more accurate Obſervation made in clear Weather, than could be by the Shadow.

BACK-BONE. See *Spina Dorſi*.

BACK-STAYS *of a Ship*, are Ropes whoſe Uſe is to keep the Maſt from falling aft: All Maſts, Top-Maſts and Flag-Staves have Stays, except the Sprit-Sail-Top-Maſt; the Stay of the Main-Maſt, which is called the *Main-Stay*, is by a Lannier faſten'd to a Collar which comes about a Knee belonging to the Head; the Main-Top-Maſt-Stay is faſten'd to the Head of the Fore-Maſt by a Strap, and a Dead-Man's Eye; and ſo is the Main-Top-Gallant-Maſt ſtayed to the Head of the Fore-Top-Maſt: The Fore-Maſt and Maſts belonging to it, are in the ſame manner ſtayed to the Bold-Sprit and Sprit-Sail, Top-Sail-Maſt, which Stays do likewiſe ſtay the Bolt-Sprit it ſelf. The Mizzen-Stay comes to the Main-Maſt by the Half-Deck, and the Top-Maſt-Stays come to the Shrowds with Crows-Feet. The Length of the Stay is the ſame with that of the Maſt it belongs to; the Main-Maſt, Fore-Maſt, with the Maſts belonging to them, have alſo *Back-Stays*, which help to keep the Maſt from pitching forward or over-board, becauſe they go on either Side of the Ship.

BACULE, in Fortification, a Kind of Portcullis or Gate, made like a Pit-fall with a Counter-Poiſe, and ſupported by two great Stakes: It is uſually made before the *Corps-de-Garde* advancing near the Gates.

BACULOMETRY, the Art of Meaſuring acceſſible and inacceſſible Lines, by the help of one or more Staves.

BACULUS DIVINATORIUS, or *Virgula Divina*; A Branch of Hazle-Tree, fork'd, uſed for the Diſcovery of Mines, Springs, &c. See *Virgula divina*.

BADGER, from the French *Bagagier*, i. e. a Carrier of Luggage; a licens'd Huckſter, or Perſon that buys Corn or other Proviſions, and carries them from one Place to another to make Profit of.

BAG, in Commerce a Term uſed to ſignify different Quantities of Commodities; a Bag of Almonds, for inſtance, is about 3 Hundred Weight, of Anniſeed from 3 to 4 Hundred, of Pepper from 1 ½ to 3 Hundred, of Goats-Hair from 2 to 4 Hundred, of Cotton-Yarn from 2 ½ to 4 ½, &c.

BAGNIO, an *Italian* Term ſignifying a *Bath*. Hence *Bagnio* is become a general Name in *Turkey* for the Priſons where their Slaves are incloſed; it being uſual in thoſe Priſons to have *Baths*. See *Baths*.

BAGNOLIANS, a Sect of *Hereticks* in the Eighth Century; in reality *Manichees*, tho they diſguis'd their Errors. They rejected the *Old Teſtament*, and Part of the *New*; held the World to be Eternal; and affirm'd God did not create the Soul, when he infus'd it into the Body. They derive their Name from *Bagnols*, a City in *Languedoc*.

BAGPIPE, a Muſical Inſtrument of the Wind-kind; chiefly uſed in Country Places. It conſiſts of two principal Parts: The firſt a Leathern Bag, which blows up like a Foot-Ball, by means of a Portvent, or little Tube fitted to it, and ſtopp'd by a Valve. The other Part conſiſts of three Pipes, or Flutes; the firſt called the Great Pipe, or Drone, and the ſecond the Little one; which paſs the Wind out only at Bottom: The third has a Tongue, and is play'd on by compreſſing the Bag under the Arm, when full, and opening or ſtopping the Holes, which are eight, with the Fingers. The little Pipe is ordinarily a Foot long, that play'd on 13 Inches, and the Portvent ſix. The *Bagpipe* takes in the Compaſs of three Octaves.

BAGUETTE, in Architecture, a little round Moulding leſs than an *Aſtragal*, ſometimes carv'd, and enrich'd with Foliages, Pearls, Ribbands, Laurels, &c. Tho according to *M. le Clerc*, when the *Baguette* is enrich'd with Ornaments, it changes its Name, and is called *Chapelet*.

BAILE, or *Bale*; the Seamen call Lading or Caſting the Water by Hand out of a Boat, *Bailing*, and when the Water is thus *bailed* out, they ſay, *The Boat is freed*. They call alſo thoſe Hoops that bear up the Tilt of the Boat *Bailes*.

BAIL, in Law, from the French *Bail*, a Guardian, or Goaler; is uſed for the ſetting at Liberty one arreſted or impriſoned upon an Action, either Civil or Criminal, under Sureties taken for his Appearance at a Day and Place aſſigned. 'Tis call'd *Bail*, becauſe hereby the Party confined is delivered into the Hands of thoſe who bind themſelves for his forth-coming: perhaps from the French *Bail*, *locatio*, a letting out any thing to Farm, &c. *Bail* is either Common or Special: *Common Bail* is in Actions of ſmall Prejudice or ſlight Proof, in which Caſes any Sureties are taken: *Special Bail* is given in Caſes of greater Moment, where 'tis requir'd that the Sureties be Subſidy Men at the leaſt, and according to the Value. *Manwood* diſtinguiſhes between *Bail* and *Mainpriſe* thus: He that is *mainpriſed* is ſaid to be at large, and to go about at his Liberty, without Ward, till the Time of Appearance; whereas he who is let to *Bail* to two or more Men, is always accounted by Law, to be in their Ward and Cuſtody for the Time; and they may, if they pleaſe, actually keep him in Priſon.

*Bale* in Commerce, a Pack or certain Quantity of Merchandize, as a *Bale* of Spicery, of Books, or Thread.

BAILEMENT, a Term in Law, ſignifying the Delivery of Things, whether Writings or Goods, to another; but ſometimes to the *Bailor*, that is, back to him who deliver'd them; ſometimes to the Uſe of him to whom they are deliver'd; and ſometimes to a third Perſon.

BAILIFF, in its Original ſignifies *Guardian*, and is uſed to expreſs an Officer who does Juſtice in a certain Diſtrict or Territory. *Paſquier* maintains, that *Bailiffs* were originally a Kind of Commiſſioners, or Judges Delegate, ſent into the Provinces to examine whether or no Juſtice were well diſtributed by the Counts, who were then the Ordinary Judges. *Loyſeau* refers the Origin of *Bailiffs* to the Uſurpation and Idleneſs of the great Lords, who having got the Adminiſtration of Juſtice into their own Hands, and being weary of the Burden, turn'd it over to their Commiſſioners, whom they call'd *Bailiffs*. The *Bailiffs* had at firſt the Intendance of Arms, of Juſtice, and of the Finances; but abuſing their Power, they were by degrees ſtripp'd of it, and the greateſt Part of their Authority transferr'd to their Lieutenants, who were to be Men of the Long Robe. 'Tis true, in *France* they have ſtill ſome Prerogatives, as being reputed the Heads of their reſpective Diſtricts; in their Name Juſtice is adminiſtred, Contracts and other Deeds paſſed, and to them is committed the Command of the Militia. From theſe it was that the *Engliſh Bailiffs* originally took both their Name and their Office: For as the *French* have eight Parliaments, which are ſupreme Courts, whence no Appeal lies, within the Precincts of the ſeveral Parliaments, or Provinces, and in which Juſtice is adminiſtred by *Bailiffs*, at leaſt by their Lieutenants; ſo in *England* are ſeveral Counties wherein Juſtice was adminiſtred by a Viſcount or Sheriff, who appears likewiſe to have been called *Bailiff*, and his Diſtrict or County *Bailiwick*. Further, the Counties were again ſubdivided into Hundreds; within which 'tis manifeſt Juſtice was antiently render'd by Officers call'd *Bailiffs*. But thoſe Hundred-Courts are now ſwallow'd up by the County-Courts, certain Franchiſes alone excepted, (ſee *County* and *Hundred*) and the *Bailiffs* Name and Office is grown into ſuch Contempt, at leaſt theſe *Bailiffs* of Hundreds, that they are now no more than bare Meſſengers, and Mandatories within their Liberties, to ſerve Writs, and ſuch mean Offices. Theſe *Bailiffs* are of two Kinds, *viz. Bailiffs Errant*, and *Bailiffs of Franchiſes*. *Bailiffs Errant* are thoſe whom the Sheriff appoints to go up and down the County to ſerve Writs, ſummon County-Courts, Seſſions, Aſſizes, &c. *Bailiffs of Franchiſes* are thoſe who are appointed by every Lord within his Liberty, to do ſuch Offices therein, as the *Bailiff Errant* does at large in the County. There are alſo *Bailiffs of the Foreſt*, and *Bailiffs of Mannors*, who direct the Husbandry, fell Trees, gather Rents, pay Quit-Rents, &c. The Word *Bailiff* ſtill retains ſome of its antient Significancy; being applied to the Chief Magiſtrates of ſeveral Corporate Towns, as *Ludlow*, *Leominſter*, &c. And again, the Government of ſome of the King's Caſtles is committed to Perſons call'd *Bailiffs*, as the *Bailiff* of *Dover* Caſtle. *Borel* derives the Word *Bailiff* from the *Greek* βαλὶ, Counſel. *Cambden* will have *Bailiff* to have been a Term uſed in the *Lower Empire*, and to have paſſed thence into *Sicily*, ſo to *France* and *England*, ſignifying *Conſervator*. This is certain, we frequently find the Word *Bajulus*, and ſometimes *Baylus*, to ſignify a Judge, whence *Bailiff* was eaſily form'd.

BAILIWICK the Place of the Juriſdiction of a *Bailiff* within his Hundred or Lord's Franchiſe.

BAIRAM, a Feaſt of the *Turks*, which they celebrate after the Faſt of *Ramazan*. 'Tis kept twice in the Year, once immediately after *Ramazan*, which they call *Grand Bairam*, and again 70 Days after, which they call *Little Bairam*. *Bairam* holds for three Days, during which no Work is done; but Preſents paſs from one to another with many Manifeſtations of Joy. If the Day after *Ramazan* ſhould prove ſo cloudy, as to prevent the Sight of the New-Moon, *Bairam* is put off to the next Day, when it begins tho the Moon be ſtill obſcured. When they celebrate this Feaſt; after numerous Ceremonies, or rather ſtrange Mimickries, in their Moſque, they end it with a ſolemn Prayer againſt the *Infidels*, to root out Chriſtian Princes, or to arm them one againſt another, that they may have an Opportunity to extend the Borders of their Law.

BAJULUS, an Officer in the Court of the *Greek* Emperors. The *Bajuli* were the *Præceptors* of the Emperors, whereof there were ſeveral Degrees; the *Grand Bajulus*; and the *Bajuli* who were the *Sub-Præceptors*. The firſt Officer who bore this Title was *Antiochus*, in the Time of the younger *Theodoſius*. Hence the *Italians* uſe the Word *Bajulus of the Kingdom*, in the ſame Senſe with the *Protector* of the Kingdom in *England*.

BAKING, the Art of preparing Bread, or of reducing Meals of any Kind, whether ſimple or compound, into Bread.

Bread. The Forms of *Baking* are various, but may be reduced to two; the one for unleavened, the other for leavened Bread: for the firſt the chief is *Manchet-Baking*, the Proceſs whereof is as follows. The Meal ground and bolted is put into a Trough, and being opened in the Middle, to a Buſhel is poured in about three Pints of warm Ale, with Barm and Salt to ſeaſon it. This is kneaded together with the Hands thro the Brake; or for want thereof with the Feet thro a Cloth: after having lain an Hour to ſwell, 'tis molded into Manchets; which, ſcotch'd in the Middle, and prick'd a-Top to give room to riſe, are baked in the Oven by a gentle Fire. For the ſecond, call'd *Cheat-Bread-Baking*, 'tis thus: The Meal being in the Trough, ſome Leaven (ſaved from a former Batch fill'd with Salt laid up to ſour, and at length diſſolved in warm Water) is ſtrain'd thro a Cloth into a Hole made in the Middle of the Heap, and work'd with ſome of the Flower to a moderate Conſiſtence; this is covered up with Meal, where it lies all Night, and in the Morning the whole Heap is ſtirr'd up and mixt together with a little warm Water, Barm and Salt, by which it is ſeaſon'd, ſtiffen'd, and brought to an even Leaven: 'tis then kneaded or trodden, molded and *baked* as before.

The Learned are in great doubt about the Time when *Baking* firſt became a particular Profeſſion, and *Bakers* were introduced. 'Tis generally agreed they had their Riſe in the Eaſt, and paſs'd from *Greece* to *Italy* after the War with *Pyrrhus*, about the Year of *Rome* 583. Till which time every Houſewife was her own *Baker*: For the Word *Piſtor*, which we find in the *Roman* Authors, before that time ſignified a Perſon who ground or pounded the Grain in a Mill or Mortar to prepare it for *Baking*, as *Varro* obſerves. According to *Athenæus*, the *Cappadocians* were the moſt applauded *Bakers*, after them the *Lydians*, then the *Phœnicians*. To the foreign *Bakers* brought into *Rome*, were added a Number of Freed-Men, who were incorporated into a Body, or, as they call it, a College; from which neither they nor their Children were allowed to retire. They held their Effects in common, and could not diſpoſe of any Part of 'em. Each *Bake-houſe* had a *Patronus*, who had the Superintendency thereof; and theſe *Patroni* elected one out of their Number each Year, who had the Intendence over all the reſt, and the Care of the College. Out of the Body of the *Bakers* were every now and then one admitted among the Senators. To preſerve Honour and Honeſty in the College of *Bakers*, they were expreſly prohibited all Alliance with Comedians and Gladiators; each had his Shop or *Bake-houſe*, and they were diſtributed into 14 Regions of the City. They were excuſed from Guardianſhips and other Offices, which might divert 'em from their Employment. See *College*.

BALANCE, *Libra*, or *the Scales*, one of the ſix ſimple Powers in Mechanicks, uſed principally for determining the Equality, or Difference of Weights in heavy Bodies, and conſequently their Maſſes or Quantities of Matter. The *Balance* is of two Kinds, *viz.* the Antient and Modern. The Antient or *Roman*, call'd the *Statera Romana*, or Steelyard, conſiſts of a Lever or Beam, moveable on a Centre, and ſuſpended near one of its Extremes: On one ſide the Centre are applied the Bodies to be weigh'd, and their Weight; meaſured by the Diviſions mark'd on the Beam, in the Place where a Weight moveable along the Beam being fix'd, keeps the *Balance in Æquilibrio*. This is ſtill in Uſe in Markets, &c. where large Bodies are to be weigh'd. See *Statera*.

The Modern *Balance*, now ordinarily in Uſe, conſiſts of a Lever or Beam ſuſpended, exactly by the Middle; to the Extremes whereof are hung Scales. In each Caſe the Beam is call'd the *Brachia*; the Line on which the Beam turns, or which divides its *Brachia*, is call'd the *Axis*, and when conſider'd with regard to the Length of the *Brachia*, is but eſteem'd a Point, and call'd the Centre of the *Balance*; and the Places where the Weights are applied, the *Points of Suſpenſion* or *Application*. In the *Roman Balance* therefore, the Weight uſed for a Counterbalance is the ſame, but the Points of Application various; in the Common *Balance*, the Counterpoiſe is various, and the Points of Application the ſame. The Principle on which each is founded is the ſame, and may be conceiv'd from what follows.

*Doctrine of the* Balance.

The Beam A B (*Plate of Mechanicks*, *Fig.* 9.) the principal Part of the *Balance*, is a Lever of the firſt kind, which (inſtead of reſting on a *Fulcrum* at C, the Centre of its Motion) is ſuſpended by ſomewhat faſtened to C, its Centre of Motion. Hence the Mechaniſm of the *Balance* depends on the ſame Theorem as that of the Lever, (See *Lever*). Wherefore, as the known Weight is to the unknown, ſo is the Diſtance of the unknown Weight from the Centre of Motion to the Diſtance of that of the known Weight, where the two Weights will counterpoiſe each other; conſequently the known Weight ſhews the Quantity of the unknown Weight. Or thus, the Action of a Weight to move a *Balance* is by ſo much greater, as the Point preſſed by the Weight is more diſtant from the Centre of the *Balance*, and that Action follows the Proportion of the Diſtance of the ſaid Point from that Centre. When the *Balance* moves about its Centre, the Point B deſcribes the Arch B *b* (*Fig.* 10.) whilſt the Point A deſcribes the Arch A *a*, which is the biggeſt of the two; therefore in that Motion of the *Balance*, the Action of the ſame Weight is different, according to the Point to which it is applied: Hence it follows, that the Proportion of the Space gone thro by that Point at A is as A *a*, and at B as B *b*; but thoſe Arches are to one another as C B, C A.

*Varieties in the Application of the* Balance.

If the *Brachia* of a *Balance* be divided into equal Parts, one Ounce applied to the ninth Diviſion from the Centre, will equiponderate with three Ounces at the third; and two Ounces at the ſixth Diviſion act as ſtrongly as three at the fourth, &c. Hence it follows, that the Action of a Power to move a *Balance*, is in a *Ratio* compounded of the Power itſelf, and its Diſtance from the Centre; for that Diſtance is as the Space gone thro in the Motion of the *Balance*. It may be here obſerv'd, that the Weight equally preſſes the Point of Suſpenſion at whatever Height it hangs from it, and in the ſame manner as if it was fixed at that very Point; for the Weight at all Heights equally ſtretches the Cord by which it hangs.

A *Balance* is ſaid to be *in Æquilibrio*, when the Actions of the Weights upon each *Brachium* to move the *Balance*, are equal, ſo as mutually to deſtroy each other. When a *Balance* is *in Æquilibrio*, the Weights on each Side are ſaid to equiponderate: unequal Weights may alſo equiponderate; but then the Diſtances from the Centre muſt be reciprocally as the Weights. In which caſe, if each Weight be multiplied by its Diſtance, the Products will be equal; which is the Foundation of the Steelyard. Thus in a *Balance* whoſe *Brachia* are very unequal; a Scale hanging at the ſhorteſt, and the longeſt divided into equal Parts: If ſuch a Weight be apply'd to it, as at the firſt Diviſion ſhall equiponderate with one Ounce in the Scale; and the Body to be weigh'd be put into the Scale, and the abovementioned Weight be moved along the longeſt *Brachium*, till the *Æquilibrium* be found; the Number of Diviſions between the Body and the Centre ſhews the Number of Ounces that the Body weighs, and the Sub-Diviſions the Parts of an Ounce.

On the ſame Principle alſo is founded the *deceitful Balance*, which cheats by the Inequality of the *Brachia*; for Inſtance: Take two Scales of unequal Weights, in the Proportion of 9 to 10, and hang one of them at the tenth Diviſion of the *Balance* above-deſcribed, and the other at the ninth Diviſion, ſo that there may be an *Æquilibrium*; if then you take any Weights, which are to one another as 9 to 10, and put the firſt in the firſt Scale, and the ſecond in the other Scale, they will equiponderate. *Several Weights hanging at ſeveral Diſtances on one Side, may equiponderate with a ſingle Weight on the other Side*: To do this it is required, that the Product of that Weight, by its Diſtance from the Centre, be equal to the Sum of the Products of all the other Weights, each being multiplied by its Diſtance from the Centre: To demonſtrate which, Hang three Weights, of an Ounce each, at the ſecond, third, and fifth Diviſions from the Centre, and they will equiponderate with the Weight of one ſingle Ounce applied at the tenth Diviſion of the other *Brachium*; and the Weight of one Ounce at the ſixth Diviſion, and another of three Ounces at the fourth Diviſion, will equiponderate with a Weight of two Ounces on the other Side at the ninth Diviſion. *Several Weights unequal in Number on either Side, may equiponderate*: In this caſe, if each of them be multiplied by its Diſtance from the Centre, the Sums of the Product on either Side will be equal; and if thoſe Sums are equal, there will be an *Æquilibrium*: To prove which, hang on a Weight of two Ounces at the fifth Diviſion, and two others, each of one Ounce, at the ſecond and ſeventh, and on the other Side hang two Weights, each alſo of one Ounce, at the ninth and tenth Diviſions, and theſe two will equiponderate with thoſe three.

To the Perfection of a *Balance* 'tis required, that the Points of Suſpenſion be exactly in the ſame Line as the Centre of the *Balance*; that they be preciſely equi-diſtant from that Point on either Side; that the *Brachia* be as long as conveniently they may; that there be as little Friction as poſſible in the Motion of the Beam and Scales; and laſtly, that the Centre of Gravity of the Beam, be placed a little below the Centre of Motion. See *Motion*, *Mechanicks*, &c.

*Balance of the Air*, is uſed for the Weight of that Fluid, whereby, according to its known Property, it preſſeth where 'tis leaſt reſiſted, till it is equally adjuſted in all Parts. See *Air*. See alſo *Gravity*, and *Barometer*.

*Hydroſtatical Balance*, is a Machine for determining the ſpecifick Gravities of Bodies. See *Hydroſtatical*.

*Balance of Trade*, is the Difference between the Value of Commodities bought of Foreigners, and the Value of the native Productions tranſported into other Nations. 'Tis neceſſary that this *Balance* be kept in Trading Nations; and if it cannot be made in Commodities, it muſt in Specie.

*Balance of a Watch or Clock*, is that Part of either, which by its Motion regulates and determines the Beats: The Circular Part of it is called the *Rim*, and its Spindle the *Verge*: There belong to it alſo two Pallats or Nuts, which play in the Fangs of the Crown-Wheel: And in Pocket-Watches, that ſtrong Stud in which the lower Pivot of the Verge plays, and in the Middle of which one Pivot of the Crown-Wheel runs, is called the *Potence*: The wrought Piece which covers the *Balance*, and in which the upper Pivot of the *Balance* plays, is the *Cock*: The ſmall Spring in new Pocket-Waches is called *Regulator*. See *Clock* and *Watch*.

*Balance*, one of the Signs of the *Zodiack*. See *Libra*.

BALANI, in Natural Hiſtory, are certain Excreſcences uſually growing to the Shells of the larger Sort of Sea-Shell-Fiſh. See *Shell*.

BALANUS, or *Glans*, is ſometimes uſed for the Nut of the Yard; ſometimes alſo the *Clitoris* is ſo called. It is ſometimes alſo uſed for a Suppoſitory. See *Penis*, &c.

BALAUSTINES, in Pharmacy, are the Flowers of the Pomegranate, which are very rough to the Tongue and Palate, and very aſtringing; they are therefore uſed in Diarrheas, and other Fluxes, Hernias, &c.

BALCONY, in Architecture, a Projecture beyond the Naked of a Wall or Building, ſupported by Pillars, or Conſoles, and encompaſſed with a Balluſtrade. This Contrivance is not only made uſe of in Houſes, but alſo in Ships. The Word comes from the *Italian*, *Balcone*, and that from the *Latin*, *Paleus*, or the *German*, *Palk*, a Beam. *Covarruvias* derives it from βάλλειν, *jacere*; aſſerting that *Balconies* were originally little Turrets over the Gates of Citadels, whence Darts, &c. were thrown on the Enemy.

BALDACHIN, or *Baldaquin*, a Piece of Architecture in Form of a Canopy, ſupported with Columns, and ſerving as a Crown or Covering to an Altar. The Word comes from the *Italian*, *Baldacchino*.

BALE, in Commerce, a Pack of Merchandize, of different Quantity; a *Bale* of Cotton-Yarn is from 3 to 4 Hundred Weight, of Raw-Silk from 1 to 4 Hundred, of Lockram or Dowlas either three, three and a half, or four Pieces, &c.

BALISTA, a military Engine in Uſe among the Antients, ſomewhat like our Croſs-Bow, tho much bigger; it had its Name from βάλλειν, *jacere*, being uſed in caſting of Stones, &c. in which it differed from the *Catapulta*, which was uſed only for caſting Darts and Arrows; in in other reſpects they were alike, and were each bent in the ſame manner. *Marcellinus* deſcribes the *Baliſta* thus; a round Iron Cylinder is faſten'd between two Planks, from which reaches a hollow ſquare Beam placed Croſs-wiſe, faſten'd with Cords, to which are added Screws; at one End of this ſtands the Engineer, who puts a Wooden Shaft with a big Head, into the Cavity of the Beam; this done, two Men bend the Engine, by drawing ſome Wheels: when the Top of the Head is drawn to the utmoſt End of the Cords, the Shaft is driven out of the *Baliſta*, &c.

BALKS, in Agriculture, are Ridges or Banks between two Furrows or Pieces of arable Land: the Word is uſed ſometimes for Poles or Rafters over Out-houſes or Barns; and among Bricklayers for great Beams, ſuch as are uſed in making Scaffolds.

BALL AND SOCKET, a Machine contrived to give an Inſtrument full play. It conſiſts of a *Ball* or *Sphere* of Braſs, fitted within a conclave Semi-Globe, ſo as to be moveable every way, both Horizontally, Vertically, and Obliquely. 'Tis carried by an endleſs Screw, and is principally uſed for the managing of Surveying Inſtruments; to which it is a very neceſſary Appendage. The antient *Balls and Sockets* had two Concaves, or Channels, the one for the Horizontal, the other for the Vertical Direction. The *French* call it *Genou*, *Knee*.

BALLAST, in Navigation, any heavy Matter uſed to ſink a Veſſel to its proper Depth in Water, or to give it a juſt Weight and Counterpoiſe; to prevent its Overturning. The ordinary *Ballaſt* is Sand, or Stones ſtowed in the Bottom, or Hold, next the falſe Keel of a Veſſel. The *Ballaſt* is ſometimes one half, ſometimes a third, and ſometimes a fourth Part of the Burden of the Veſſel. Flat Veſſels require the moſt. Maſters of Veſſels are obliged to declare the Quantity of *Ballaſt* they bear, and to unload it at certain Places. They are prohibited unloading their *Ballaſt* in Havens, Roads, &c. the Neglect of which has ruin'd many excellent Ports. The Word comes from the *Flemiſh*, *Balaſt*; the *French* call it *Leſt*, and the *Latins*, *Laſtagium*. See *Leſtage*.

BALLON, in Chymiſtry, a *French* Word for a large round ſhort-neck'd Matraſs, or Veſſel uſed in Chymiſtry, to receive what is diſtilled or drawn off by the means of Fire. *Ballon* is alſo uſed in Architecture for a round Globe placed a-top of a Pillar, or the like, by way of a Pillar. See *Acroter*, or *Crowning*.

BALLOTING, a Method of Voting at Elections, &c. by means of little Balls of ſeveral Colours, which the *French* call *Ballotes*.

BALLS, or *Ballets*, a frequent Bearing in Coats of Arms, in Heraldry, but never ſo called; but according to their ſeveral Colours have ſeveral Names, as Beſants when the Colour is Or; Plates when it is Argent; Hurts when it is Azure; Torteauxes when it is Gules; Pomeis when it is Vert; Pellets, or Agreſſes, when Sable; Golpes when 'tis Purple; Orenges when Tanné; Guzes when Sanguine: which are all the Colours uſually mentioned in Heraldry.

BALLUSTRADE, in Architecture, an Aſſemblage of one or more Rows of little turn'd Pillars, high enough to reſt the Elbows on, fixed upon a Terras, or the Top of a Building, or elſe to make a Separation between one Part of it and another. *Ducange* derives the Word from *Balauſtrum*, or *Balauſtrium*, a Place among the Antients where their *Baths* were rail'd in.

BALM, or *Balſam*, a kind of Gum, in very great Reputation in Medicine and Chirurgery; uſed to be liquified by means of Spirit of Wine or Oil, and found a ſovereign Remedy in the Cure of Wounds and ſeveral Diſeaſes. The Ladies ſet a particular Value on it, in regard when mix'd with the Yolk of an Egg and Spirit of Wine, it makes an admirable Paint. There are various Kinds of *Balms* or *Balſams*, if into the Number hereof we take all thoſe which Empirics, or even Phyſicians and Chirurgeons call by this Name; ſuch are *Apoplectic Balſams*, *Stomachic Balſams*, *Bezoardic*, *Hyſteric*, *Vulnerary*, *Magiſterial*, &c. But the *Genuine*, that is, the *Natural Balſams*, come in a little Compaſs, being in great meaſure reducible to theſe two, the *Balm* of *Gilead*, and *Balm* or *Balſam* of *Peru*.

*Balm* of *Gilead*, or of the *Levant*, is held in the greateſt Eſteem, tho there are ſome who hold that of *Peru* equal to it in Virtue. 'Tis drawn by Inciſion from a Tree called *Balſamum*, growing in *Egypt* and *Judea*, and which is held ſo precious, that it makes Part of the ſpecial Revenue of the *Grand Signior*, without whoſe Permiſſion none are allowed to be planted or cultivated. The Inciſion through which this admirable Juice flows, is made in the Dog-Days: *Theophraſtus* ſays it muſt be made with Iron Nails; *Pliny* with Glaſs, becauſe, ſays he, Iron makes the Plant die: *Tacitus* tells us, that when the Branches are full of Sap, their Veins ſeem to apprehend the Iron, and ſtop when the Inciſion is made with that Metal, but flow freely when opened with a Stone, or a Piece of broken Pitcher: Laſtly, *Marmol* ſays, the Veins muſt be opened with Ivory or Glaſs. The Juice is white at firſt, afterwards becomes green, by degrees a Gold Colour, and when old the Colour of Honey. It is at firſt muddy, but by degrees grows clear, and of the Conſiſtence of Turpentine. Its Smell is agreeable, and very brisk; its Taſte bitter, ſharp and aſtringent; it eaſily diſſolves in the Mouth, and leaves no Stain on Woollen Cloth. The *Balſam* commonly in Uſe is brought hither from *Cairo*, and is not properly the Gum, or Tears of the Tree, flowing by Inciſion, for it yields but little that way; but is prepared from the Wood and the green Branches of the Tree diſtilled; and yet even this is frequently adulterated with *Cyprus Turpentine*: Beſides which, there is likewiſe a Liquor extracted from the Seed of the Plant, which is frequently paſſed off for the true *Balſam*, tho its Smell is much weaker, and its Taſte much bitterer. The Tree is about the Height of a *Granada* Tree; its Leaves like thoſe of Rue, always green; its Flowers white, and in form of Stars, whence ſpring out little pointed Pods, incloſing a Fruit like an Almond, called *Carpobalſamum*, as the Wood is called *Xylobalſamum*, and the Juice *Opobalſamum*. See *Opo-balſamum*.

The *Carpobalſamum* enters the Compoſition of Treacle, having little other Uſe in Medicine: It muſt be choſen of an aromatick Taſte and agreeable Smell. See *Carpo-balſamum*. The *Xylobalſamum*, which like the other Products of the *Balſam-Tree*, is brought from *Cairo*, is uſed in Troches of *Hedycrum*. 'Tis in little Faggots, the Bark red, the Wood white, and reſinous, and aromatick. See *Xylo-balſamum*. There is likewiſe a *Balm* of *Mecca*, which is a dry white Gum reſembling Copperas, eſpecially when old. 'Tis brought from *Mecca* by the Return of the Caravans of Pilgrims and *Mahometan* Merchants, who travel there out of Devotion to the Birth-Place of their Prophet. It has all the Virtues of the *Balm* of *Gilead*, or *Judea*; and is probably the ſame, only harden'd, and its Colour alter'd.

*Balſam* of *Peru* is of three Kinds; or rather, one and the ſame *Balſam* has three ſeveral Names, *viz.* *Balſam*

*ſam of Inciſion*, which is a white glutinous Reſin ouzing at an Inciſion in the Tree, and afterwards thicken'd and harden'd. This is excellent for green Wounds, and much reſembles the *Opobalſamum*, excepting in Smell, which diſtinguiſhes it. *Dry Balſam*, which is diſtill'd from the Tips of Branches cut off, to which are faſten'd little Veſſels to receive the Liquor, which at firſt is like Milk, but reddens by being expoſed to the Sun. Its chief Uſe is in the Compoſition of the *Lac Virginale*, which is made much better with this, than with Styrax or Benjoin. Laſtly, *Balſam of Lotion*, which is blackiſh, and is drawn from the Bark, Roots, and Leaves of the Tree minced and boiled together. This is uſed in Wounds like the *white Balſam*; and on account of its excellent Smell, by the Perfumers.

Beſides theſe two *Balſams*, which alone are to be eſteemed genuine ones, Naturaliſts reckon *Balſam of Copaif* or *Copayba*, of *Tolu* or *liquid Amber*, and a *New Balſam*. *Balſam of Copa*, *Copaif*, *Campaif* or *Copayba*, comes from *Braſil* in earthen Bottles, pointed a-top. 'Tis a kind of Oil, either clear or thick; the firſt white, of a reſinous Smell: the other a little more on the yellow; both are admirable for Wounds: The *Jews* uſe it after Circumciſion to ſtop the Blood. *Balſam of Tolu* is a liquid Reſin, which as it grows old becomes of the Colour and Conſiſtence of *Flanders* Size. It comes by Inciſion from ſome Trees growing in *New Spain*; where the Inhabitants receive it in little Veſſels of black Wax: In Taſte and Smell it reſembles *Balm of Gilead*; as it grows old it takes the Conſiſtence of *dry Balm*. *Balſam of liquid Amber* is a clear reddiſh Reſin, produced by a Tree in *New Spain*, called by the Natives *Oſoſol*, much reſembling Ambergreaſe, eſpecially in Smell, whence its Name. The *New Balſam* is liquid; when new it is called *Oil of liquid Amber*, and when old *Balſam of liquid Amber*; it comes from both the *Spains*, in Barrels; and is very rare among us: 'Tis found ſovereign for Wounds, eſpecially in *Fiſtulas in Ano*: It reſembles *Balſam of Tolu* in Smell and Colour, and is expreſs'd in the manner of *Oil of Laurel*, from a red Fruit in the Iſland of *St. Domingo*.

*Artificial Balſams*, in Pharmacy, are Medicines uſually employ'd externally: In Conſiſtence they ſomewhat exceed a common Unguent, and are prepared principally to recreate the nobler Parts, by their excellent Odor. There are ſome alſo of a more liquid Conſiſtence, between an Oil and Liniment; the principal Uſe whereof is in Wounds: They are made various Ways, and of various Aromaticks and diſtill'd Oils; Oil of Nutmegs, or white Wax, are uſually the Baſis of *Balſams*; with theſe are mixed Deer's Greaſe, Manna, *&c.* According to the different Intentions they are to anſwer, they acquire different Names, as *Apoplectick*, *Stomachick*, &c. *Balm* or *Balſam of Sulphur* is of two kinds, *viz.* that of *common Sulphur*, and that of *Sulphur with Aniſe*: the firſt is drawn by Fire from a Compoſition of Nut Oil drawn without Fire, Flower of Sulphur, Oil of Tartar, and White Wine mix'd. This is uſed to digeſt and reſolve crude Matters gathered in any Part of the Body: 'tis applied externally, and ſerves for the Baſis of the Plaiſter of *Sulphur*. *Balſam of Sulphur aniſated*, is drawn from Oil of green Aniſe and Flower of Sulphur diſſolved together. *Balm of Saturn*, is a *Salt of Saturn*; Dr. *Harris* ſays, a *Sugar of Saturn*, diſſolved in Oil or Spirit of Turpentine digeſted, till the Matter have acquired a red Tincture. This is found to reſiſt the Putrefaction of Humours, and is good to cleanſe and cicatrize Ulcers.

*Balm* or *Balſam*, among the Chymiſts, is the Spirit of common Salt extracted by Art. The Preparation is this: They diſſolve the Salt, and place its Diſſolution, well clarified, in Horſe-Dung to purify, for the Space of two or three Months, and then diſtil it ſtrongly with a Sand-Heat; upon which there ariſes a pretious Unctuoſity, wherein Things the moſt corruptible being ſteep'd, are ſaid to remain entire, eternally. 'Tis ſaid, that 'twas by this means ſome of the Antients preſerved dead Bodies entire without reducing 'em to Mummy, and particularly that of the Woman mentioned by *Volaterran* to be found in a Mauſoleum near *Albania*, in the Time of Pope *Alexander* VI. which was by his Order thrown ſecretly into the *Tiber*, to prevent Idolatry; ſhe being found as freſh as when alive, tho ſhe had been dead 1300 Years.

BALNEUM, a Word much uſed by Chymiſts, generally ſignifying a Veſſel of Water, in which another is placed that requires a more gentle Heat than the naked Fire.

*Balneum Mariæ*, is by ſome ſo called, as being ſuppoſed to have been firſt invented by the Bleſſed Virgin; but by others with more Propriety, *Balneum Maris*, or *Sea-Bath*, in regard the Veſſel here floats on a kind of Sea. Here the Cucurbit is placed in hot Water, which warms the Matter contain'd. A Sand Heat is ſometimes alſo called *Balneum ſiccum*, or *cineritium*, or *arenoſum*. See *Bath*, *Sand*, &c.

BALOTADE, a Leap in which a managed Horſe offers to ſtrike out with his hind Legs, but does it not, only making an Offer, and ſhewing the Shoes of his hind Feet.

BALSAM. See *Balm*.

BALSAMICK, a Term in Phyſick, ſignifying that Property in a Medicine, whereby 'tis render'd ſoft, gently attenuating, and ſomewhat agglutinant.

BAN, or *Bans*, a ſolemn Proclamation or Publication of any thing, or a publick Edict or Summons; as of a Prince to the Nobles of a Province, frequent among the *French*; of a Lord to his Vaſſals, *&c.* to call 'em to Arms. Hence the Uſe of the Word *Banns* in publiſhing Matrimonial Contracts in the Pariſh-Church before Marriage; that if there be any Exceptions againſt either Party, as to prior Engagements, *&c.* there may be an Opportunity of making them. Theſe are what *Tertullian* ſeems to mean by *Trinundina Promulgatio*. *Bracton* mentions *Bannus Regis*, for a Proclamation of Silence made by the Court before the Congreſs of the Champions in a Combat. Some derive the Word from the *Britiſh*, *Ban*; *Clamor*, *Noiſe*: Others from the *German*, *Ban*, *Publication* or *Proſcription*, becauſe frequently made with Sound of Trumpet; whence alſo come the Words, *Baniſhment*, *Banner*, *Abandon*, &c. *Borel* derives it from the *Greek*, πᾶν, *all*, becauſe the Convocation is general.

BANC, or *Bench*, in Law, is a Seat or Bench of Judgment; as *Bancus Regis* the King's Bench, and *Bancus communium placitorum* the Common Bench. *Jus Banci*, or the Privilege of having a Bench, was antiently only allowed to the King's Judges, *qui ſummam adminiſtrant juſtitiam*. Inferior Courts, as Courts Baron, Hundred Courts, *&c.* were not allowed that Privilege; and even at this Day the Hundred Court of *Freibridge*, in *Norfolk*, is held under an Oak at *Geywood*; and that of *Woolfry*, in *Herefordſhire*, under an Oak, near *Aſhton* in that County, called *Hundred-Oak*. *King's Banc* or *Bench*, is a Sovereign Tribunal where the King himſelf formerly preſided, the Judges being placed in a lower *Bench* at his Feet. The Juriſdiction of this Court is very extenſive, and reaches throughout all *England*, the Law ſuppoſing the King himſelf to be preſent. See *King's-Bench*. *Common Bank* or *Common Pleas*, the ſecond Court of Juſtice in *England*, where common and ordinary Cauſes are pleaded between Subject and Subject. Here moſt Civil Cauſes are tried, whether real or perſonal, according to the Rigour of the Law. Here are uſually four Judges, the Chief whereof is called Lord Chief Juſtice of the Common Pleas. Formerly there were ſeven Judges, then ſix, then five, *&c.* See *Common Pleas*.

BAND, any Piece of Stuff cut long and narrow, as the *Swarth-Band* for Infants, *&c.*

*Band*, in Architecture, a general Name for any flat low Member; which is alſo called *Face*, from the Latin *Faſcia*, which *Vitruvius* uſes for the ſame thing; and ſometimes *Fillet*, *Plinth*, &c. See *Faſcia*, *Plinth*, *Fillet*, &c.

*Band, Knights of the*, are a military Order in *Spain*, inſtituted by *Alphonſus* XI. King of *Caſtile*, *Anno* 1332. It takes its Name from the *Banda*, Band, or red Ribbond which comes a-croſs over the Right Shoulder and under the Left Arm of the Knight. This Order is for none but Nobles; the eldeſt Sons of Grandees are excluded; and before Admittance, 'tis requiſite to have ſerved at leaſt ten Years either in the Army, or at Court. They are bound to take up Arms for the *Catholick Faith* againſt the *Infidels*. The King himſelf is Grand Maſter of the Order.

*Band of Soldiers*, ſo many as fight under the ſame Flag or Enſign; from *Bandum*, which the *Romans* uſed in the ſame Senſe with *Vexillum*, or *Banner*. Thus *Romulus* called thoſe who fought under the ſame Manipule, (a Handful of Hay being then uſed for a Flag) *Manipulus Militum*.

BANDAGE, a Ligature to bind up Wounds. Theſe are of ſeveral Sorts, and adapted to the different Parts of the Body where the Wound happens. The Knowledge of their proper Uſe is no ſmall Part of Surgery. *Truſſes* uſed in Ruptures are alſo thus called. See *Ligature*.

BANDALIERE, a large leathern Belt, thrown over the Right Shoulder, and hanging down under the Left Arm; wore by the antient Muſqueteers, both for the ſuſtaining of their Fire-Arms, and for the Carriage of their Muſket-Charges; which being put up in little wooden Caſes, coated with Leather, now commonly call'd *Bandaleers*, were hung to the number of 12 to each *Bandaliere*. The *French* Soldiery ſtill retain the *Bandaliere*; their Horſe, their Muſqueteers, and common Guards, wearing it indifferently; excepting for ſome Difference in its Garniture. The Word ſeems form'd from the French *Bandoalier*, a kind of *Banditti* particularly infeſting the *Pyreneans*; who were formerly diſtinguiſh'd by this Piece of Furniture; and were themſelves ſo denominated, *quaſi Ban de Voliers*, *a Knot of Robbers*.

BANDELET, in Architecture, any little Band or flat Moulding, as that which crowns the Doric Architrave: 'tis alſo called *Tenia*, from the Latin *Tænia*, which *Vitruvius* uſes for the ſame thing.

BANDEROLLE, a little Standard in form of a Guidon, extended further in Length than in Breadth, hung out on the Masts of Vessels, &c.

BANIANS, a religious Sect in the *Indies*, who believe a Metempsychosis; and will therefore eat no living Creature, nor even kill noxious Animals, but endeavour to release them if they see 'em in the hands of others: they are so fearful of having Communication with other Nations, that they break their Cups if one of a different Religion has drank out of 'em, or even touch'd 'em; and empty the Water out of a Pond where he has wash'd himself. If they happen to touch one another, they must wash and purify themselves before they drink, eat, or enter their own Houses. They carry, hanging at their Necks, a Stone called *Tamberan*, as big as an Egg, and perforated in the Middle, through which run three Strings; this Stone, they say, represents their Great God, and upon that account they have great Respect shewn them by all the *Indians*. *Banian*, in their Language, signifies, *innocent People and without Guile*; for, besides their refraining to hurt any the least living Creature, they profess to pardon the Injuries done to themselves.

BANISHMENT, or *Exile*, among us is of two Kinds; the one voluntary and upon Oath, the other by Compulsion, for some Offence or Crime. This Punishment is by the *Civilians* called *Bannimentum*, and was antiently term'd *Deportatio*, if perpetual; if for a Time, *Relegatio*.

BANK, in Commerce, a Term given to certain Societies, Cities, or Communities, who take on 'em the Charge of the Money of private Persons, to improve it, or to keep it secure. There are several of these *Banks* establish'd in the several principal Trading Cities in *Europe*; as in *Venice*, *London*, *Amsterdam*, *Hamburgh*, *Paris*, &c. But of all others that of *Venice* is the most considerable, as being the most antient, and that whereon the others are model'd. The *Bank of Venice*, commonly call'd the *Banco del Giro*, is properly a Board of publick Credit and Interest; or a general and perpetual Purse for all Merchants and Traders; establish'd by a solemn Edict of the Commonwealth, which enacts, That all Payments of Wholesale Merchandize, and Letters of Exchange, shall be in *Banco*, or *Bank Notes*; and that all Debtors and Creditors shall be obliged, the one to carry their Money to the *Bank*, the other to receive their Payments in *Banco*; so as Payments are perform'd by a simple Transfer from the one to the other: he who was before Creditor on the *Bank-Books*, becoming Debtor as soon as he has resign'd his Right to another, who is enter'd down as Creditor in his Place; so that the Parties only change a Name, without any effective Payment being made. Indeed, there are sometimes effective Payments made, especially in Matters of Retail, and when Foreigners are disposed to have ready Money to carry it off in Specie; or when particular Traders chuse to have a Stock by 'em to negotiate in Letters of Exchange, &c. The Necessity of these effective Payments, has given occasion to the opening a Fund of ready Money; which is found so far from diminishing the Stock, that this Liberty of withdrawing Money at pleasure rather augments it. By means of this *Bank*, the Republick, without incroaching on the Freedom of Commerce, or without paying any Interest, is Mistress of 500000 Ducats, to which the Capital of the *Bank* is limited, to be in readiness on any pressing Occasion; the Republick being Security for the Capital.

The Word *Bank* originally signified a *Bench*, which the first *Bankers* had in the publick Places, in Markets, Fairs, &c. on which they told their Money, wrote Bills of Exchange, &c. Hence when a *Banker* fail'd they broke his *Bank*, to advertize the Publick, that the Person to whom the *Bank* belong'd was no longer in a Condition to continue his Business. As this Practice was very frequent in *Italy*, 'tis said the Term *Bankrupt* is derived from the Italian *Banco rotto*, *broken Bench*.

BANKER, a Person who negotiates and trafficks in Money; who receives and remits Money from Place to Place, by Commission or Correspondents, by means of Bills or Letters of Exchange. See *Exchange*, *Bank*, &c. In *Italy* the Employment of a *Banker*, especially in Republicks, does not derogate from the Nobility; and hence it is, that most of the Cadets, or younger Sons of Condition, undertake it for the Support of their Family. The *Romans* had two Kinds of *Bankers*, tho their Office was much more extensive than that of the *Bankers* among us; being publick Officers, in whom were united the Functions of a *Broker*, *Agent*, *Banker*, and *Notary*; managing the Exchange, taking in Money, assisting in Buying and Selling, and drawing the Writings necessary on all these Occasions.

BANKRUPT, a Trader, who consumes his Stock, or runs out in Trade, so as not to be able to answer the Demands of his Creditors. His absconding from his Place of Abode, or being denied to his Creditors, suffering himself to be arrested willingly, for Debt, and suffering himself to lie two Months in Prison, on any lawful Action, is by Law deemed an Act of *Bankruptcy*. See *Commission of Bankruptcy*.

BANKRUPTCY, the Failure, Absconding, and Relinquishment of Traffick in a Merchant, Banker, or other Trader. There is some Difference however, between a *Bankruptcy* and a *Failure*; the first being supposed voluntary and fraudulent, and the latter constrain'd and necessary, by means of Accidents, &c. A *Failing*, or Stopping of Payment, diminishes the Merchant's Credit, but does not note him with Infamy, as *Bankruptcy* does. When a Merchant, &c. fails to appear at the *Exchange*, &c. without apparent Reason, 'tis call'd a *Failing of Presence*; the *Bankruptcy* becomes open from the Day he absconds, or the Seal is affix'd to his Effects. Those who *fail* are oblig'd to give in to their Creditors, a State or Inventory of all their Effects and Debts, and to surrender their Books; otherwise they are reputed *fraudulent Bankrupts*. All Payments and Transfers, as also all Acts, Obligations, &c. of Persons who *fail*, are null unless made ten Days before the *Failing* is become publick. See *Bank*.

BANNERET, an antient Knight or Lord, who had a Right to carry a *Banner* for assembling of his Vassals, when a *Ban* was proclaim'd, and might also form 'em into a Troop of Horse; from the Word *Banner*, or from *Ban* or *Bande*, which formerly signified a *Banner*. Antiently there were two kinds of Knights, Great and Little; the first whereof were call'd *Bannerets*, the second *Bachelors*; the first composed the upper, the second the middle Nobility. To be qualified for a *Banneret*, one must be a Gentleman of Family, and must have a Right to raise a certain Number of arm'd Men; with Estate enough to subsist at least 28 or 30 Men. This must have been very considerable in those Days, in regard each Man, besides his Servant, had two Horse-men to wait on him, armed, the one with a Cross-Bow, the other with a Bow and Hatchet. The Form of the *Banneret's* Creation was this: On a Day of Battle the Candidate presented his Flag to the King or General, who cutting off the Train or Skirt thereof, and making it a Square, return'd it again, the proper *Banner* of *Bannerets*: Hence *Bannerets* were sometimes call'd *Knights of the Square Flag*, and by this Form of their Flag they were distinguish'd from *Barons*. Others will have *Bannerets* to have been Persons who had some Portion of a Barony assign'd 'em; and enjoy'd it under the Title of *Baro Proximus*, with the same Prerogatives as the *Baron* himself. Some Authors attribute the Institution of *Bannerets* to *Conan*, Lieutenant of *Maximus*, who commanded the *Roman* Legions in *England* under the Empire of *Gratian*, in 383. This General, say they, revolting, divided *England* into 40 Cantons, and in these Cantons distributed 40 Knights, to whom he gave a Power of assembling, on Occasion, under their several *Banners*, as many of the effective Men as were found in their respective Districts; whence they were call'd *Bannerets*. However this be, it appears from *Froissart*, &c. that antiently such of the Military Men, as were rich enough to raise and subsist a Company of arm'd Men, and had a Right to do so, were call'd *Bannerets*. Not, however, that these Qualifications render'd 'em Knights, but only *Bannerets*; the Appellation of Knights being only added thereto, because they were of the Upper Nobility, or simple Knights before. Among the *Spaniards*, *Bannerets* are known by the Name of *Riccos hombres*. *Larrey* will have *Bannerets* so call'd, because of the *Banner* or *Standard* waved in the face of the Army at the time of their Creation. *Bannerets* were second to none but Knights of the Garter; but they dwindled, and at last became extinct, on the Institution of *Baronets* by King *James* I.

BANNIMUS, is the Form of Expulsion of any Member from the University of *Oxford*, affixing the Sentence up in some publick Place, as a Denunciation or Promulgation of it.

BANQUETTE, in Fortification, is a little Foot-Path or Elevation of Earth in Form of a Step, along a Parapet, or that by which the Musquetters get up to discover the Counterscarp, or to fire on the Enemies in the Moat, or in the Covert-Way: These are generally a Foot and half high, and almost three Foot broad.

BAPTISM, in Theology, from the Greek βαπτίζειν, *to dip* or *plunge*, the Ceremony of Washing; or a Sacrament whereby a Person is initiated into Christianity, and Original Sin wash'd away in Infants, and actual Sins in Adults who receive it. The *Jews* practised this Ceremony, after Circumcision, on their Proselytes, long before the Coming of Jesus Christ. For the Matter of *Baptism*, any natural Water is held sufficient, but nothing else is allow'd: For this reason Pope *Stephen* II. excommunicated a Priest for *baptizing* a Child with Wine. In the Primitive Times this Ceremony was perform'd by Immersion, as it is to this Day in the *Oriental* Churches, according to the Signification of the Word. The Practice of the *Western* Churches, is to sprinkle the Water on the Head or Face of the Person to be *baptiz'd*, except

in

in the Church of *Milan*, in whoſe Ritual 'tis order'd, that the Head of the Infant be *plunged* three times into the Water. A trine Immerſion was firſt uſed, and continued for a very long time: This was to ſignify either the three Days that our Saviour lay in the Grave, or the Three Perſons in the Trinity. But it was afterwards laid aſide, becauſe the *Arians* uſed it: 'twas then thought proper to *plunge* but once, leſt the *Hereticks* ſhould think that the *Catholicks*, like them, divided the Trinity. Some are of Opinion, that *Sprinkling* in *Baptiſm* was begun in cold Countries. 'Twas introduced in *England* about the Beginning of the 9th Century. At the Council of *Calchyt*, in 816, it was order'd, that the Prieſt ſhould not only *ſprinkle* the holy Water upon the Head of the Infant, but likewiſe always *plunge* them in the Baſon. There are abundance of Ceremonies deliver'd by Eccleſiaſtical Writers, as uſed in *Baptiſm*, which are now diſus'd; tho there are not wanting thoſe who contend for their Re-admiſſion; as the giving Milk and Honey to the *baptized*, in the *Eaſt*; Wine and Milk, in the *Weſt*, &c. It appears, that in the Primitive Times none were *baptized* but Adults. Formerly there were great Diſputes, whether the *Baptiſm* of *Hereticks* was valid. The general Opinion run for the Affirmative, provided it was conferr'd in the Name of the Trinity, and therefore they allow'd even that of the Laity, or Women in caſe of Neceſſity. The Council of *Roan* in 1072, order'd, that the Prieſt ſhould *baptize* faſting, &c. Theological Authors diſtinguiſh three Kinds of *Baptiſm*. 1. The *Baptiſm of Water*, which is that above-mention'd. 2. The *Baptiſm of Fire*, which is the perfect Love of God, join'd with a Deſire to be *baptiz'd*; call'd alſo the *Baptiſm of the Spirit*: on occaſion this may ſupply the Place of *Water-Baptiſm*. 3. *Baptiſm of Blood*; which is the Martyrdom of a *Catechumen*. *Baptiſm*, in the Primitive Times, was only adminiſter'd at *Eaſter* and *Whitſuntide*, except in Caſes of Neceſſity. The *Catechumens* were not forward in coming to *Baptiſm*. St. *Ambroſe* was not *baptiz'd* before he was elected Biſhop of *Milan*; and ſome of the *Fathers* not till the time of their Death; ſome deferring it out of a tender Conſcience; and others out of too much Attachment to the World, it being the prevailing Opinion of the Primitive Times, that *Baptiſm*, whenever conferr'd, waſh'd away all antecedent Stains and Sins. The *Fathers* rallied this ſuperſtitious Delicacy to ſuch a degree, that they introduced a different Extreme; the ridiculous Zeal of ſome People carrying them to *baptize* the Dead by Proxy.
