The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

## THE PROOF OF THE PROTEIN IS IN THE GROWING

It is generally recommended that the protein intake of the formula-fed infant should be higher than that of his breast-fed contemporary.

The good growth made by 50 million babies raised on evaporated milk formulas during the past 30 years attests to the soundness of this recommendation.

For evaporated milk *does* provide the higher level of protein recommended when formulas derived from cows' milk are fed to babies.

Beyond that, evaporated milk permits greater flexibility than any ready-made preparation for infant feeding. It gives the physician freedom to specify type and amount of carbohydrate . . . to adjust degree of dilution . . . in fact to fit the feeding mixture to the individual needs of each baby. And, *specially processed* for infants, evaporated milk is always safe, uniform, easily digested.

50 million times, physicians have specified evaporated milk for babies.
