The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

RECOVERY

'BRIETAL SODIUM'^{*}

METHOHEXITONE SODIUM

INTRAVENOUS BARBITURATE ANAESTHETIC

'Brietal Sodium' is an intravenous barbiturate anaesthetic with four exceptional features:

Induction is quick and smooth. A working level of anaesthesia is achieved in about 30 seconds.

Recovery is faster and safer because the drug is rapidly metabolised. The patient is clear-headed almost immediately with little tendency to fall asleep again. Most patients can walk with assistance within 5-7 minutes after induction and recovery is usually complete within 30 minutes.

Potency 'Brietal Sodium' is about 2½ times as potent as thiopentone, with a shorter action.

Safety Side-effects are negligible. 'Brietal Sodium' is non-irritant; there is no danger of venous thrombosis and no ill-effect in case of accidental perivenous injection. Blood pressure changes are usually minimal and the incidence of bronchospasm is low. There is little hangover and no unpleasant sulphur taste.

'BRIETAL SODIUM' HAS BEEN USED SUCCESSFULLY IN OVER HALF A MILLION CASES IN THE U.K. ALONE

'Brietal Sodium' is available in rubber-stoppered ampoules of 0.5 G. (50 ml. ampoule) and 2.5 G. (250 ml. ampoule)

Full information is available on request.
