power. It may originate the exercise of its useful authority, and apply it by specific and valid regulations; but that exercise is not despotic, nor absolute, but is open to review, and an ordinance that upon its face is unreasonable and arbitrary is subject to judicial examination. When it is not bounded by fair and wise administration of municipal authority, but is unreasonable and arbitrary, it will be declared void, and the municipality restrained from its enforcement. *(Northwestern Tel. Exch. Co. v. City of Minneapolis*, 1901, 81 Minn. 140, 149.) *Wis. Tel. Co. v. City of La Crosse*, 1911, 7 W. R. C. R. 435, 447–448.

9. It is not the ascertainment of the rule, but the application of the same to the particular state of facts under consideration in any particular case that is often difficult in determining whether municipal action upon the subject is reasonable or unreasonable, as the line of demarcation between what is required and what is not required to subserve the convenience or necessity of the public in the premises is not always clear or indisputable; and, hence, it would seem that in case of any doubt the same should be resolved in favor of the legality of the regulation imposed by the municipality upon the public utility. *Wis. Tel. Co. v. City of La Crosse*, 1911, 7 W. R. C. R. 435, 448.

10. In the present case we do not deem that the cost of moving the poles and setting them in the adjoining alley would, in itself, be an adequate reason for declaring a proper ordinance or resolution of the common council requiring such alteration in the system of the telephone company void because imposing an unreasonable regulation. Such cost would be no more than commensurate with the public convenience resulting from the change. Nor is the difficulty in making such change, as contended by the petitioner, of sufficient consequence to stay the act of the city designed to accomplish a laudable civic enterprise. *Wis. Tel. Co. v. City of La Crosse*, 1911, 7 W. R. C. R. 435, 449.

11. Under the facts disclosed in the instant case, it would seem that the authority of the city to cause the poles to be removed from a street upon which it has expended considerable money for the purpose of converting it into a boulevard and driveway, for which it is suitably adapted because of its location upon the bank of the river, ought to be conceded; otherwise the purpose of cities to thus devote public thoroughfares to certain uses for which they are peculiarly fitted by nature would often be thwarted. *Wis. Tel. Co. v. City of La Crosse*, 1911, 7 W. R. C. R. 435, 449.

12. I can have no doubt that it is entirely competent for the city authorities, unless they are bound by some absolute contract permitting the poles and wires to stand as they are, to have them removed and put an end to such unsightly obstructions as these poles and wires are now in our streets. There must be a power, I think, somewhere, to cause them to be removed, and to regulate and control the manner in which telegraph lines shall enter and pass through the city. *(Mutual Union Teleg. Co. v. Chicago*, 1883, 16 Fed. 309, 315.) *Wis. Tel. Co. v. City of La Crosse*, 1911, 7 W. R. C. R. 435, 449.

13. Petitioner alleges that a resolution and order of the authorities of the city of La Crosse, Wis., requiring the removal of petitioner's poles and wires from South Front street is grossly unreasonable, arbitrary, discriminatory, invalid and void. It appears that this street has been permanently paved by the city and considerable money was expended in improving it and adjoining property used for park purposes; that it is a driveway overlooking the Mississippi river; that the beauty of the street is greatly marred by the unsightly poles that line both sides; that the poles could be moved, without much difficulty, to adjoining streets and alleys; that in case of fire, difficulty and danger might be incurred by the fire department in reaching the fire, because of numerous wires strung upon the poles in close proximity to the buildings. *Held:* The right given to telephone companies by sec. 1778, to construct and maintain their lines upon, in, along, across, or beneath the

surface of any public road or highway, is subject to all reasonable regulations by the municipality, and in the exercise of its police power, the municipality may, in a proper case where public safety, necessity or convenience requires, order the removal of telephone or electric poles from any thoroughfare, and the wires to be placed in conduits or the poles to be moved to another location. The order which the petitioner is required to comply with does not call for the laying of the wires in conduits, but the removal of poles and wires to adjoining streets, alleys or private right of way, the expense of which would not render the regulation unreasonable and would be no more than commensurate with the public convenience resulting from the change. The demand for the removal of the poles is not unreasonable under the circumstances. The resolution is a reasonable regulation and valid. The petition is dismissed. *Wis. Tel. Co. v. City of La Crosse*, 1911, 7 W. R. C. R. 435, 445, 448, 450.

TELEPHONE COMPANIES.

Capital stock—Requirement as to ownership of stock by subscribers.

14. The requirement that all subscribers must own a share of stock in the company, is of doubtful legality, but it is not considered necessary at the present time to pass upon the matter. *In re Appl. Morris Tel. Co.* 1911, 7 W. R. C. R. 426, 427.

THROUGH LINES

See CONNECTING CARRIERS.

THROUGH RATES

Joint or through rates and divisions thereof, *see* RATES, 38–44.

TILE

Rates, reduction of distance tariff and establishment of joint rates, Wisconsin points, *see* RATES, 40–41.

TON-MILE EXPENSES

Apportionment of ton-mile expenses in the determination of unit costs for transportation, *see* ACCOUNTING, 14.

As matter considered in determining reasonableness of railway rates, *see* RATES, 60.

TRAFFIC DIVERSITY FACTOR

Traffic diversity factor as matter considered in determining adequacy of service for street railways, *see* STREET RAILWAYS, 5.

TRAIN SERVICE

Village, unincorporated, deprived of train service by change in line, *see* RAILROADS, 10.

Adequacy of train service.

1. Petitioners allege that the passenger and freight service at Grantsburg, Wis., are inadequate. *Held:* The present passenger train service is inadequate. Respondent is ordered to run an additional train carrying passengers on its line between Grantsburg and the west boundary line of the state of Wisconsin, so that the citizens of Grantsburg and vicinity may have reasonable passenger service twice daily each way, except Sunday. *Nelson et al. v. N. P. R. Co.* 1911, 7 W. R. C. R. 764, 769.

TRANSIT PRIVILEGES

GRANTING OF PRIVILEGE IN SPECIFIC CASES.

Restoration of privileges to shippers of live stock.

1. Petitioners complained that the tariff formerly in effect on respondent's lines allowing one stop in transit to finish loading of live stock, had been changed so that it is now necessary to ship from originating point to stopping point, and from stopping point to destination at the sum of the two locals. This change amounts to a material increase in rates. It was contended by the respondent that the principal reason for the change was to avoid delay in stock shipments. It was shown that the change did not materially affect the time of shipments, and that its principal effect was to increase rates. *Held:* The withdrawal of the stoppage in transit privilege resulted in an unwarranted increase in rates throughout the state on stock shipments stopped to finish loading. Respondent received sufficient compensation in its regular rates on live stock, and in the additional charge for stoppage privilege to warrant an order requiring reinstatement of such privilege in the form in which it was formerly in effect. Since the scope of this proceeding does not cover all of the respondent's lines, the restoration of the transit privilege is ordered only for the stations named in the complaint. It is recommended that such privilege be reinstated generally on the lines of the respondent throughout the state. *Arries & Peckham et al. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 131, 139.

TRANSIT RATES

UTILITIES

See PUBLIC UTILITIES.

VALUATION

DETERMINATION OF VALUE OF PROPERTY OF PUBLIC UTILITIES—ELEMENTS CONSIDERED.

In general.

1. The valuation placed upon utilities depends, to some extent at least, upon the purposes for which it is intended. For instance, in valuing utilities for the purpose of condemnation and purchase, many elements must often be taken into account which should not be given any consideration in valuations made for the purposes of rate making. *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. 71, 72–73.

2. In determining the value of the physical property of a public utility several elements must be taken into consideration. The three elements of greatest importance in fixing the value of such plants are the original cost, the cost of reproducing the plant, and the present value. As to which of these elements shall be given the greatest consideration, must depend upon the circumstances in each case and must also depend upon the purpose for which the valuation is made. *(Hill et al.*

v. Antigo W. Co. 1909, 3 W. R. C. R. 623, 631.) *(In re Menominee and Marinette Lt. & Tr. Co.* 1909, 3 W. R. C. R. 778, 785–787.) *(State Journal Prtg. Co. et al. v. Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 557.) *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. 71, 74.

3. The original cost of the property, subsequent additions to and investment in the plants, and the present value and cost of reproduction, are elements which must largely determine the investment upon which the respondent in the present case is entitled to earn a reasonable return. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 255.

4. In fixing the value of a property for rate-making purposes, consideration should be given, on the one hand, to the ability of the utility to meet the reasonable demands placed upon it by its consumers, and to the existence of investment beyond the reasonable demands of the present or near future on the other. *City of Neenah v. Wisconsin Tr. Lt. H. & P. Co.* 1911, 7 W. R. C. R. 477, 480.

Franchise values.

5. The rights to do business in a particular city, which rights have been granted free of cost, can hardly be legitimately capitalized by utilities which are not entitled to more than reasonable returns on their investment. *(State Journal Prtg. Co. v. Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 578.) *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 277.

Going value—Net cost of building up the business.

6. The Commission has recognized the element of going value as one which is properly considered in determining the value of a utility upon which the reasonable return must be computed. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 276.

7. The costs of developing the business of a public utility are as much a part of the investment in the business as the physical structure. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 277.

8. For public utilities which, under both the common and the statute law, under normal conditions are only entitled to reasonable returns on the investment, justice as well as equity appears to demand that the amounts, if any, by which they, under ordinary conditions, have failed to earn such returns, should be considered in fixing values and rates for such plants. *(State Journal Prtg. Co. v. Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 585.) *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 277.

9. The early losses or deficits, or the amounts by which the earnings of the plant have failed to meet the ordinary operating expenses and taxes, and provide for depreciation and a reasonable return on the investment, will closely measure, in most cases, the cost of developing the business. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 277.

10. In allowing for the cost of developing the busines it is not meant, however, that deficits from operation can be equitably taken into account in the appraisals or rates regardless of the conditions under which they were incurred. As already stated, when such deficits are due to abnormal conditions, or when due to bad management, defective judgment, extravagance, lack of ordinary care and foresight, unduly high capital charges, and other causes of this nature, it is manifestly clear that they should be accorded little or no consideration in either the valuation or the rates. *(State Journal Prtg. Co. v. Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 585, 586.) *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 277–278

11. In estimating the amount for going value no allowance should be made for deficits which were incurred under and borne by others than

the present owners, and which have been wiped out in the various transfers of ownership. That these propositions are, as a rule, sound and equitable, appears to be so clear as to need no further argument. *(State Journal Prtg. Co. v. Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 586.) *City of Beloit v. Beloit W. G. & E. L. Co.* 1911, 7 W. R. C. R. 187, 277–278.

12. The amounts spent in litigation in the early history of the company in the present case were not incurred in connection with the performance by the company of its service to the public and cannot be capitalized and treated as a part of the going value. It would be an injustice to the consumers to compel them to pay dividends on money which had been spent without increasing, in any way, the value of the property, either in a physical sense or as a going concern. *In re Appl. Oconto City W. Supply Co.* 1911, 7 W. R. C. R. 497, 508–509.

13. Going value is an element which depends upon the circumstances in each case, and cannot be determined arbitrarily. The addition of an amount to cover going value depends upon the condition of the business and not upon a rule which would give to all concerns a going value, regardless of their financial situation. *In re Appl. Oconto City W. Supply Co.* 1911, 7 W. R. C. R. 497, 512.

14. Every water plant naturally goes through a period of development, during which people come to appreciate the advantages of being supplied with water under pressure, but in the present case this period has been unusually prolonged. In a case of this kind it is a question how much of the losses during the developmental period should be considered as adding an element of going value to the property. For example, if a utility is established in a city far in advance of the needs of the community, the losses during the early years of its operation may be very great, so much so that to consider these losses as adding to the going value of the utility would make the apparent value out of all proportion to the physical value. *In re Appl. Oconto City W. Supply Co.* 1911, 7 W. R. C. R. 497, 513.

15. In the present case the failure of the plant to earn large dividends during the early years of operation appears to have been due to the establishment of the plant before the wants of the people made it necessary. Charges were made without reference either to the provisions of the franchise or the interests of the business and no appreciable effort appears to have been made during this time to extend the business accordingly. Only a small amount is allowed as going value. To make a large allowance for going value, under the circumstances of this case, would be equivalent to capitalizing the losses incurred through careless and unprogressive management. *In re Appl. Oconto City W. Supply Co.* 1911, 7 W. R. C. R. 497, 513–514.

16. There is admitted to be a speculative element in the water supply business, and in the present case it appears that the development of the business did not fulfill the expectation of the promoters. If the community was in need of the utility for commercial and industrial water supply, the losses during the developmental period, assuming that the management was economical and efficient, would in reality form a part of the investment. If this situation does not hold, it is easy to conceive of a condition where the losses, added to the physical value, would soon reach such an extent that it would be impossible ever to earn dividends on such a valuation. If, then, the revenues during fourteen or fifteen years of operation were insufficient to provide for depreciation and a reasonable return on investment, it does not seem to be just to present consumers to add all these losses to the physical value. *In re Appl. Oconto City W. Supply Co.* 1911, 7 W. R. C. R. 497, 513–514.

17. Whether going value should constitute an addition to the cost new of the property, or to the value in its present condition, is a matter which must be decided largely on the circumstances in each individual

case, or, rather, cost of reproduction new, physical value in present condition, original investment, and going value are all elements to be considered in ascertaining the actual value of the property. *In re Appl. Oconto City W. Supply Co.* 1911, 7 W. R. C. R. 497, 515.

18. In view of the fact that the failure of the plant to earn large dividends during the early years of operation appears to have been due to the fact that it was established before the wants of the community made it necessary, that charges for water seem to have been made in a slipshod manner, without reference either to the provisions of the franchise or the interests of the business, and the further fact that no appreciable effort appears to have been made during this time to extend the business, it seems that only a small amount can be allowed as going value because of the cost of building up the business. To make a large allowance for going value, under the circumstances in this case, would be equivalent to capitalizing the losses incurred through careless and unprogressive management. *In re Appl. Oconto City W. Supply Co.* 1911, 7 W. R. C. R. 497, 516.

19. If losses are due to poor management during the period in which the business should normally be developing, it is not fair to the customers of the utility to add these losses to the physical valuation under the name of going value. The cost of building up the business, or the "cost of going value," ought to be clearly distinguished from the cost of unprogressive management. The greatest difficulty, of course, is to make such a distinction and to reduce it to terms of dollars and cents. It is not possible to make a mathematically accurate separation of these two items of expense, but from the facts in this case it seems that a large part of the losses during the first years of operation was due to managerial oversights or inefficiency, and such part should not be made in any form a charge against the consumer. *In re Appl. Oconto City W. Supply Co.* 1911, 7 W. R. C. R. 497, 516–517.

Going value—Net cost in building up the business—Cost charged to capital account or gradually charged off from earnings.

20. Expenditures for the development of the business, when reasonable and when well placed, would, therefore, seem to be legitimate and to constitute a charge, that, in some form, should be borne by the customers, or by those who avail themselves of the service in question. Whether these expenditures should be charged to construction and thereby become a permanent charge on the consumers, or be charged to the operating expenses and thereby be wiped out about as incurred, are questions that cannot be settled independently of the surrounding conditions. When the rates and the earnings of the utility are such as to yield a reasonable return to the investors if the expenditures in question are included in the operating expenses, then "operating expense" appears to be the place to which they should be charged. When, on the other hand, the rates and the earnings are not high enough to permit these expenditures to be charged to operating expenses without resulting in less than reasonable returns on the investment, then it would seem that until the earnings become adequate, at least, they should be charged to the cost of the plant. *(State Journal Prtg. Co. v. Madison G. & El. Co.* 1909, 4 W. R. C. R. 501, 589.) *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 215.

Going value—Net cost of building up the business—Whether an addition to cost of reproduction new or present value.

21. There may be a question as to whether the increment for going value should constitute an addition to the cost new of the property or to the value in its existing condition. If the cost new is the basis, it

may be said, in general, that the going value estimate should take into consideration a rate of return which should provide only for return on property and not for depreciation, for if the cost new is used, allowance is thereby made in the valuation for such amount as should have been set aside to cover depreciation. On the other hand, if the present value is used, the rate of return which is considered in arriving at the going value must be a rate which will cover interest and profits, and also depreciation. In the present case it seems that the allowance for going value constitutes a considerable addition to the existing value, but not a large increase in the cost new. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 642.

Monopoly value.

22. In the present case the company claimed a value for its water supply over and above the cost of development and the value of the physical property utilized. The company rested this claim chiefly on the contention that the company has the only developed source of ground water supply in the vicinity and that to secure an equally pure and satisfactory supply would necessitate either the construction of an expensive intake into the waters of Lake Michigan or the location, purchase and development of an equally good ground water supply. On these grounds the company contended for a large value for its water supply as distinct and separate from the physical property necessary in its utilization. *Held:* The value of this supply does not exceed the cost of developing and discovering the same, as estimated by the engineers of the Commission. *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. 71, 105, 130.

Physical property—Basis of unit prices.

23. Cases followed in determining basis of unit prices: *City of Appleton v. Appleton W. Wks. Co.* 1910, 5 W. R. C. R. 215, 228. Followed in *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. 71, 83.

24. Whether the prices should be based on a ten year average, five year, two year, or one year average, may properly be a matter for consideration but in view of the facts as regards the variation of current prices from month to month, it does not appear just or reasonable to allow current prices to govern in the determination of value, either for the purpose of sale or rate making. *In re Manitowoc W. Wks.* 1911, 7 W. R. C. R. 71, 85.

25. It is not believed to be either just or reasonable to permit current prices due to temporary and abnormal conditions to govern in the determination of value either for the purpose of sale or rate making. *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. 71, 128.

26. Cases followed in determining basis of unit prices: *Hill et al. v. Antigo W. Co.* 1909, 3 W. R. C. R. 623, 679–682. *City of Appleton v. Appleton W. Wks. Co.* 1910, 5 W. R. C. R. 215, 228–235. Followed in *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 211.

Physical property—Cost of reproduction new—Allowance for item of cost not actually incurred—Paving.

27. The question as to the inclusion of the value of the paving over the mains which has been laid since the mains were put down and which the company has never had to cut through and replace, has been discussed in several decisions of the Commission. No allowance will be made for paving which the company was not compelled to remove when laying its mains and services. *(City of Ashland v. Ashland W. Co.* 1909, 4 W. R. C. R. 273, 307.) *(State Journal Prtg. Co. et al. v. Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 554–555.) *(City of Ripon v. Ripon Lt. & W. Co.* 1910, 5 W. R. C. R. 1, 10.) *(In re Fond du Lac W. Co.*

1910, 5 W. R. C. R. 482, 492.) *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. R., 77, 88–89.

28. The Commission has held in several earlier decisions that the value of paving, where no expense had been incurred by the company, should not be included in a valuation for the purpose of rate making. *(City of Ripon v. Ripon Lt. & W. Co.* 1910, 5 W. R. C. R. 1, 10.) *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 233.

29. No allowance should be made for paving except where it was actually disturbed by the company. *(City of Ripon v. Ripon Lt. & W. Co.* 1910, 5 W. R. C. R. 1, 10.) *City of Neenah v. Wis. Tr. Lt. H. & P. Co.* 1911, 7 W. R. C. R. 477, 480.

Physical property—Cost of reproduction new—Discounts on bonds.

30. The relation of bond discounts to plant valuation cannot be determined without a knowledge of the circumstances existing at the time of the bond issue. It has usually been considered that when a community is in need of a utility to supply a particular class of service and when money for the construction of the plant can be secured on no better terms, the discount on bonds constitutes a proper charge to capital. In the present case there may be some question as to whether money for construction purposes could not have been obtained on better terms. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 639.

31. In cases where a discount on bonds is necessitated by a low interest rate, the fact that a discount is made amounts to a postponement of a portion of the interest payment until the date of maturity of the bonds. In the case under consideration, however, the interest rate of 6 per cent appears to have been at least as high as the normal rate for such bonds. The fact that these bonds were soon afterward reduced to a 5 per cent interest basis, because the plant was unable to meet a 6 per cent rate, seems to indicate that some discount was necessary to secure capital for construction purposes. On the other hand, that the utility was in poor financial condition may have been due to the fact that the community was not greatly in need of the water plant at the time it was built, or to the fact that not enough allowance was made for working capital during the period in which the business was being built up. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 639.

Physical property—Cost of reproduction new—Engineering.

See post, 32–34.

Physical property—Cost of reproduction new—Interest during construction, engineering, contingencies, etc.

32. Cases followed on allowance for interest during construction, engineering, etc.: *State Journal Prtg. Co. et al. v. Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 540–546. Followed in *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. 71, 88.

33. Cases followed on interest during construction, etc.: *State Journal Prtg. Co. et al. v. Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 626, 633; *In re Fond du Lac W. Co.* 1910, 5 W. R. C. R. 482, 505, 507. Followed in *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. 71, 99.

34. That interest during construction, engineering, legal work, organization expenses, omissions and contingencies are proper elements of cost or value to be included in an estimate of cost of reproduction and existing value of the physical property of plants, has justly been recognized. *(State Journal Prtg. Co. v. Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 540.) *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 237.

Physical property—Cost of reproduction new—Legal services, etc. during construction.

See ante, 32–34.

Physical property—Cost of reproduction new—Piecemeal construction.

35. Cases followed in determining allowance for piecemeal construction: *State Journal Prtg. Co. v. Madison G. & El. Co.* 1910. 4 W. R. C. R. 501, 546–549. Followed in *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 241.

36. That some consideration should be given to piecemeal construction in making valuations should be admitted. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 241.

Physical property—Cost of reproduction new—Service connections.

37. The petitioners contended that the service connections, the cost of which had been met by the consumers, should not be included in the value of the plant. This contention would also seem to be well taken, for it would hardly be fair to make the consumers pay interest and perhaps other costs on property for which they had met all the charges. *(Hill et al. v. Antigo W. Co.* 1909, 3 W. R. C. R. 623, 693.) *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 215.

38. It appears to be clearly established in the present case that the charges assessed against the consumers by the company for the installation of services has been in the aggregate sufficient to cover the cost of this work to the company. In view of these facts we are of the opinion that the value represented in the services under consideration, and for which the consumers have paid, is not a fair element in the valuation for the purposes of this case. This applies also to the value of the so-called private mains to the amount which the consumers have paid and have not been reimbursed by the company. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 215.

39. In the present case the city contended that the cost of the services installed at the company's expense is not a proper item of allowance in the valuation, for the reason that they are all located on the private real estate of the consumers and are, therefore, the property of the consumers. The city asserted that this is true at least of that portion of them which is within the lot line, or between the curb and the house. It would seem clear that the same reasons given for excluding the value of the services paid for by the consumers, will make it only reasonable and just to allow the company the full value of the services paid for by the company. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 222.

40. Justice to the company requires that services which it has installed at its own expense should be included in the valuation for purposes of rate making. The same applies to meters which are owned by the utility. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 636.

Physical property—Cost of reproduction new—Superintendence.

See ante, 32–34.

Physical property—Cost of reproduction new—Working capital.

41. Plants which are running or in actual operation, must have working capital as well as fixed capital. In this case the latter, or the fixed capital, is largely represented by the cost of reproducing the plants, while the working capital is, in part, represented by the figures given

for stores and supplies. The stores and supplies given, however, do not represent all the working capital the plants require. Plants of this kind, the same as practically all other business enterprises, must have on hand a reasonable cash balance and other current resources in order to operate economically and effectively. That this is the case, is almost self-evident. *(State Journal Prtg. Co. v .Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 550.) *(Cunningham et al. v. Chippewa Falls W. & Lt. Co.* 1910, 5 W. R. C. R. 302, 316.) *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 242.

Physical property—Original cost.

42. The original cost of the plant, if the records are properly kept, should prove of great assistance in arriving at a fair value of the property. *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. 71, 74.

43. The public has a right to expect the exercise of good judgment and reasonable intelligence on the part of those who are responsible for the expenditure of large sums of money in work in a public utility undertaking. If it can be clearly shown that such reasonable judgment and intelligently directed effort was lacking, then it would appear that the original cost is not a true measure of the value of the work in question. If, on the other hand, the work was carried out in accordance with the best available judgment and plans, then it would seem that the extra cost might, on equitable grounds, be entitled to consideration in the valuation of the plant. *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. 71, 78.

44. The original cost of the plant is also an element that should be taken into consideration in determining its value for rate-making purposes. In fact, this cost is often one of the most important factors that enter into such determination. *(City of Racine v. Racine G. Lt. Co.* 1911, 6 W. R. C. R. 228, 285.) *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 354.

45. The Commission has frequently found that, in cases where full data as to the original cost of plants were available and where the cost of reproduction had been compiled on the same basis as those used in the present case, the original cost and the cost of reproduction new were not far apart. *(City of Racine v. Racine G. Lt. Co.* 1911, 6 W. R. C. R. 228, 286.) *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 355.

Physical property—Present value.

46. In the appraisal of all property which is subject to deterioration with use, it is necessary not only to determine the cost of reproduction, but also its value as it exists at the date of appraisal, or, in other words, its present or existing value. The value of depreciable equipment may be said to consist of two elements: First, its value for the use for which it was designed; and second, its scrap or residual value at the end of its useful life. If we assume that the value when new is the cost of reproduction, then, at the end of its useful life the only value which remains is the scrap value. Between these two points the equipment is gradually decreasing in value. There is, however, much difference of opinion as to the progress of this decrease in value. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 235.

47. Where proper depreciation curves have been kept in the past, the present or existing value of a property, as determined by inventory, inspection and appraisal, plus the depreciation reserve, should theoretically equal the cost new of that property. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 236.

Physical property—Present value—As affected by depreciation from crenothrix.

48. It would appear that the presence of crenothrix and its probable

future increase in the present case are elements properly considered in determining the value of the utility for rate-making purposes. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 299.

DETERMINATION OF THE VALUE OF PROPERTY OF PUBLIC UTILITIES—METHODS OF APPRAISAL.

Determination of the value of the physical property of the plant —Cost of reproduction new—Land.

49. Cases followed in determining value of land: *State Journal Prtg. Co. et al. v. Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 528. Followed in *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. 71, 77.

Determination of the value of water power rights—Customary estimates.

50. It seems clear from the expressions of opinions thus made and from the general practice of engineers and other men in valuing water powers that the saving effected by the use of the water power over steam power, especially, measures the value of the water power. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. 187, 247.

51. The rental value and market value methods of appraising water powers are quite often open to objections which destroy their reliability and it appears that it is almost always necessary to fall back upon the method of calculating the saving over steam power and then, by capitalizing this saving, arrive at the total value of the water power. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 247.

52. In previous proceedings before the Commission claims have been made for value of the water right as a separate and distinct value from that of the dam etc., or cost of development of the water power. In this connection the Commission pointed out that from a purely commercial point of view the method of estimating the value of water power rights by the saving effected by the use of water power over steam power may, in the main, be sound. But it is not so clear that this can be said for it when the question is regarded from the point of view of public policy. This method, as stated, places water and steam plants on the same basis. By doing this it necessarily diverts all the advantages that may accrue from such water powers from the public to the private owners. In other words, it appears to deprive a locality of the natural advantages it might otherwise derive from being located near such water powers. If water rights are private property under the law, then all the benefits which accrue from these rights would probably go to their private owners. If, on the other hand, water power rights are public rights rather than private rights, then it would also seem that the public ought to share in any benefits that may be derived from such rights. *(Ross et al. v. Burkhardt Milling & El. P. Co.* 1910, 5 W. R. C. R. 139, 147.) *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 247–248.

53. Referring further to the method of measuring the value of a water right by the saving over steam power effected by the use of such power, it is necessary to inquire closely into the relations between the water power and steam power in the particular plant under consideration, for it is obvious that where steam power is necessary as an auxiliary to the water power, that the saving effected in such case cannot be measured by the actual saving with the steam plant operating as an auxiliary. Such a method of calculating the saving and thus the value of the water right would result in a larger value per horse power for the imperfect water power than would be the case for a perfect or complete water power, calling for no steam auxiliary. *City of Beloit v. Beloit W. G. El. Co.* 1911, 7 W. R. C. R. 187, 248.

54. In the present case several methods of determining the value of the water power were discussed and it was pointed out that from a point of view of public policy it is questionable whether the allowance should exceed the cost of development and value of the physical property utilized. *City of Beloit v. Beloit W. G. & El. Co.* 1911, 7 W. R. C. R. 187, 378.

ESTABLISHMENT, CONSTRUCTION AND MAINTENANCE.

Extension of water mains.

1. Complaint was made by the city of Janesville that the Janesville W. Co. refused and neglected to lay mains and make extensions as ordered by the common council. The city alleged that it is necessary that the water company make such extensions in order to serve the public's needs and requirements, that a large number of the residents upon the streets over which extensions were ordered laid are desirous of securing the service of the water company, and that the extensions are needed for fire protection. *Held:* An extension of mains is necessary to provide adequate service in certain districts. The extension ordered by the petitioner on St. Mary's avenue is to be constructed in not less than sixty days. The extensions ordered on Walker street

and on Eastern avenue are to be made, in case the city makes a further order to that effect, and are to be completed within ninety days from the time of the city's further orders. These two extensions are for fire protection only and the added amount to be paid by the city is fixed and determined. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 695, 707–708.

Extension of water mains—Duty of utility to extend mains.

2. A water utility should construct and own its distribution system, at least as far as to the consumer's premises. This being the case, it is difficult to see by what process of reasoning it can be held that the fact that the utility has in the past shifted upon consumers a portion of its rightful duties, the installing of parts of the distribution system, should stand in the way of the utility putting in a main or mains at the present time. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 689.

Extension of water mains—Duty of utility to extend mains—Conditions for extension.

3. That the cost of a new main should not be entirely met by the consumers directly served by that main, is true especially in cases where a main is so situated that further extension of it may be made as occasion arises. In such case the main not only serves to supply the consumers situated along its present course, but will serve the purpose of conveying water to other portions of the distribution system. In such cases it is not possible to isolate the cost of each portion of a main and charge the interest and depreciation directly to the consumers along its course. Since most portions of the distribution system fulfill a function other than the supplying of water to consumers immediately along their course, a rate schedule should consider that parts of the system are interdependent, and treat the system as a unit. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 691.

4. In view of the facts there may be some justification for considering, in this particular case, that interest and depreciation on the extension should be met by the revenue from consumers whom it will serve. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 691.

Extension of water mains—Reasonableness of order requiring extension.

5. In determining the question as to the reasonableness of the order requiring extension, due consideration should be given, not only to the interests of the utility, but to the interests of the consumer and the public. These interests, however, as well as the conditions upon which they depend, vary so much from place to place that it is difficult, if not altogether impossible, to lay down specific rules for extensions of the plant and the business that can be generally applied. In a general way it can, of course, be said that such extensions as the one in question here should be put in at the expense of the plant whenever they bid fair to become fairly remunerative. The term "fair remuneration" may not always stand for like elements. In most instances, however, it is likely to mean that the gross earnings from the additional consumers should be high enough to place them on about the same footing with reference to the cost of the service as that which obtains from the rest of the consumers of the plant who come in the same rate classes in its regular rate schedules. (*Beloit W. G. & El. Co. v. City of Beloit*, 1910, 5 W. R. C. R. 617, 623.) *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 689–690.

MUNICIPAL ACQUISITION—TERMS AND CONDITIONS OF SALE AND PURCHASE.

Compensation for property—Compensation determined by Commission in particular cases.

6. Notice was filed with the Commission by the common council of the city of Manitowoc, Wis., on Jan. 20, 1911, that by a vote of the majority of the electors it was decided to purchase the plant and property of the Manitowoc W. Wks. Co. A tentative valuation as of date Jan. 1, 1911, found the total cost new of the physical property of the plant, including paving, and stores and supplies, and non-operating property, to be $249,440, and present value $231,647. Investigation was made by the Commission in regard to the capitalization of the plant, its original cost, its subsequent extensions and additions to property, its cost of reproduction, its present value and its earning value especially since its acquirement by the present management, and the adequacy and character of its water supply. *Held:* The value of the property used and useful for the convenience of the public in this proceeding, is the sum of $236,000, plus the value of the materials and supplies on hand at the time of the transfer of the ownership of the plant, and plus also the cost of any extensions that may have been made since Jan. 1, 1911, up to the time of the transfer. *In re Manitowoc W. Wks. Co.* 1911, 7 W. R. C. R. 71, 127–130.

OPERATION.

Requirements as to service and facilities—Adequacy of service.

7. Petitioners allege that the water works system in the city of La Crosse, Wis., is unable to supply the demand for water; that the mains are too small and the pressure inadequate during a large part of the summer season; that the intakes in the river are often buried in sand, and that they are now cut off on the city side of the main channel, so that sewage is pumped into the water mains, thereby endangering the health of the people. The water is now taken from the Mississippi river, and an investigation showed that the continued use of this water, whether drawn directly from the river or from a lagoon in the city park, would require the installation of a filtration plant. An investigation was made of the ground water supply available, and for this purpose six test wells were driven and the capacity of the wells was determined. The water from the wells was analyzed chemically, examined bacteriologically, and compared with the water from the Mississippi river. *Held:* The ground water supply is adequate and the quality excellent. It is recommended that the city of La Crosse buy at least eighty acres of the land where the test wells were driven, and at once proceed to develop a municipal supply from the underflow gravel in the valley of the La Crosse river. It is ordered that the city of La Crosse take the necessary steps for securing and maintaining permanently a reasonable supply of wholesome water, and that it place its machinery and appliances in the proper condition to maintain adequate pressure for serving its consumers and for extinguishing fires. Eighteen months is deemed a reasonable time within which to comply with this order. *Torrance et al. v. La Crosse Board of Water Comm'rs.* 1911, 7 W. R. C. R. 27, 39, 40.

Requirements as to service and facilities—Appliances for the measurement of product or service—Duty of utility to provide meters.

8. It is the duty of the utility to install meters at its own expense unless exempted from so doing by the Commission. In the present case

the company is ordered to install meters in certain cases, and consumers are given the right to install meters at their own expense. *In re Appl. Oconto City W. Supply Co.* 1911, 7 W. R. C. R. 497, 549.

9. There seems to be no question that the maintenance of meters, whether owned by the utility or by the consumer, is an expense which should be borne by the utility. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 644.

10. The logic is overwhelming to the effect that meters constitute a part of the facilities incident to the service for which the management, whether public or private, is responsible. (*In re Invest. of the Hudson Municipal W. Wks.* 1908, 3 W. R. C. R. 138, 146.) *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 644.

11. If the utility is responsible for the accuracy of the meters used, it is clear that the maintenance of those meters is a duty of the utility, and the expense of such maintenance is a proper charge to operating expenses. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 644.

12. The law clearly contemplates that the divided ownership of parts of the equipment of public utilities shall cease, and that all responsibility for the installation and maintenance of the whole of the equipment shall be centered exclusively in the management. *(In re Invest. of the Hudson Municipal W. Wks.* 1908, 3 W. R. C. R. 138, 141.) *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 681.

13. Under the Utilities Law no utility can compel a consumer to acquire by purchase a meter, or any other part of the facilities which properly belong to the body of facilities which the utility is expected to furnish. *(In re Invest. of the Hudson Municipal W. Wks.* 1908, 3 W. R. C. R. 138, 142.) *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 681.

14. It is the duty of the utility to sell to all consumers through meters unless exempted from so doing by the Commission. Although no demand has been made in this case for a general extension of the meter system, this fact does not remove the company's obligation to install meters. In cases where the meters are now owned by consumers the company is either to buy the meters or to pay the reasonable rental prescribed. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 676, 706.

Requirements as to service and facilities—Services—Duty of utility to provide services.

15. The logical conclusion seems to be that the utility should install and own services to the curb line. The utility, and not the consumer, has the right to occupy the streets, and all pipes laid in the streets should be the property of the utility, and we believe should be put in by the utility. The business of the utility is to deliver its product to the premises of the consumer. If the utility should own the mains through which water is carried to various sections of the city, it seems equally true that it should own all parts of the distribution system as far as the consumer's premises. The service pipe from main to curb is as much a part of the utility's distribution system as is the main itself. Both parts of the equipment have the same purpose: the delivery of water to consumer's premises. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 681.

16. It is not believed that the utility should be required to install and own such portions of the service as are on private property. True, the utility very often owns meters, which are installed on consumer's premises, but such installation is done as a matter of convenience to the utility. As the purpose of the utility is to deliver water to the premises of the consumers, if other conditions were equal, the logical place for the meter would be at the property line. Piping inside the curb line

stands in very much the same relation to the utility as does the piping and plumbing in buildings, and should be a part of the property of consumers. In the present case the services from the main to the curb are hereafter to be installed at the expense of the company. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 681, 706.

Standards of service—Purity of water.

17. Complaint was made by the city of Janesville, Wis., that the Janesville Water Co. pumps water directly from the Rock river, and that such water is impure and unfit for human consumption. An investigation by the Commission showed no evidence that the company is taking any water from the Rock river. *City of Janesville v. Janesville W. Co.* 1911, 7 W. R. C. R. 628, 680.

M. CARPENTER BAKING COMPANY,
SKILES BAKERY COMPANY,
COLVIN'S BAKING COMPANY,
BENNISON & LANE COMPANY,
PAUL J. STERN ET AL.,
OSWALD JAEGER,

vs.

WELLS FARGO & COMPANY,
UNITED STATES EXPRESS COMPANY,
AMERICAN EXPRESS COMPANY,
WESTERN EXPRESS COMPANY.

Submitted July 18, 1911. Decided Sep. 27, 1911.

Petitioners allege exorbitant express charges between Wisconsin points on mixed shipments of baked goods consisting mostly of bread with a small proportion of cake. Respondent express companies formerly transported bread over their respective lines at "general special" rates, about 20 per cent lower than their merchandise rates, and allowed the same rates on mixed shipments of bread and cake when bread comprised at least half the total weight. An order of the interstate commerce commission of Feb. 1, 1911, required all such mixed shipments to take merchandise rates, which petitioners allege results in approximately a 25 per cent increase over the former charges for transportation of mixed shipments. They declare that if the merchandise rates are to be charged on mixed shipments they can ship no more cake, and that if they are unable to ship cake, they will lose a large part of their shipping business in bread.

Held: The ruling of the interstate commerce commission was made upon a consideration of conditions in the particular region involved, and cannot be of controlling weight where those conditions do not exist. The competitive situation in the baking industry makes the use of mixed shipments practically necessary for the most advantageous development of the business as carried on between the large factories and more or less distant cities and villages in this state. There is no considerable discrepancy in value between bread and cake, and mixed shipments are no more costly to the carriers than single shipments of bread. The practice of charging the merchandise rate for the shipments in question is unreasonable and should

be discontinued. The general special rate is ordered reinstated and refund is ordered of all excess charges caused by the change in classification complained of.

This proceeding involves the express classification of mixed shipments consisting mostly of bread, with a small proportion of cake and pies. The petitioners allege, in substance, that they are, respectively, four corporations, a co-partnership and an individual, all engaged in the manufacture and shipment of bread and of baked goods in Milwaukee and Janesville, Wis.; that they have for many years last past engaged in the shipment by express, over the lines of the respondent common carriers, of bread and other baked goods between points in the state of Wisconsin; that the transportation charges upon such shipments are substantially all prepaid and borne by the petitioners; that the respondent carriers have for many years provided for the transportation of bread over their respective lines at so-called "special" or "general special" rates, about 20 per cent lower than the so-called merchandise rates of the respondents, and have transported mixed shipments of bread, biscuits, cakes, pies and baked goods other than bread subject to the same rules, regulations and charges, as though the entire shipment consisted of bread; that the weight of baked goods other than bread entering into such mixed shipments is a relatively small proportion of the total weight, such goods other than bread being shipped by the petitioners practically without profit and only as an incident to their shipping business in bread, for the convenience and accomodation of their bread patrons and in order to retain their patronage; that by reason of the long continued practice of the respondents in permitting baked goods other than bread to be shipped subject to the same regulations, rates and charges as bread, the petitioners have built up a large and extensive baked goods shipping business between points in Wisconsin, and in reliance upon the continuance of such practice they have purchased and contracted for large quantities of materials, supplies, baskets, cartons, and shipping cases necessary for the continuance of such shipping business, and have made large investments in buildings and machinery to enable them to carry on such business.

The petitioners further allege that, effective Aug. 1, 1909, the regulations regarding mixed shipments of bread and baked goods other than bread were modified by official classification No.

19 of the respondent companies, providing that the general special rate should apply on mixed shipments only when the weight of the bread included therein was at least 50 per cent of the total weight, otherwise the merchandise rate should apply; that by supplement No. 4 to official classification No. 20 of the respondent companies, effective Feb. 1, 1911, the regulations of the respondents as to such mixed shipments were further amended by requiring that all such shipments take merchandise rates, which amendment, continued in force by supplement No. 7 to the same classification, results in increasing the charges for transportation of the mixed shipments of the petitioners by approximately 25 per cent over the former charges; that the present regulations, as above set forth, are oppressive, unreasonable, unlawful, and exorbitant, and have resulted in unreasonable, unjust, and illegal exactions.

The petitioners further allege that they have not been able, by inquiry from the agents of the respondent companies, to ascertain whether the amended regulations herein complained of have been duly filed by the respondents at all of their respective depots, stations and offices in Wisconsin to or from which such regulations apply; that the first notice or advice of the change in classification which was received by any of the petitioners located in Milwaukee, was by circular letter dated June 12, 1911, and setting forth the said change as being effective June 20, 1911; that since Feb. 1, 1911, the date of the effectiveness of the change, and also since June 20, 1911, the petitioners have shipped over the lines of the respondents in Wisconsin a large number of mixed shipments of the kind affected by the change, the number and weight of which the petitioners are unable to state, for the reason that the modified regulations were not enforced by the respondents until June 20, 1911, since which date no bills have been rendered by the respondents to the petitioners showing the amount of the increased charge for any shipments prior to June 20, 1911; but that all such increased charges, past and future, caused by such change in classification, are illegal, unusual and exorbitant.

Wherefore, the petitioners pray that the respondent companies be required to cancel the said change in the classification of mixed shipments of baked goods, and cease to enforce or attempt to enforce the same in the state of Wisconsin, and to continue to apply the provisions of the official express classifi-

cation as it was in force prior to Feb. 1, 1911; and that the respondent companies be required to refund to the petitioners all sums exacted or to be exacted of them on mixed shipments of baked goods over their lines in Wisconsin, in excess of the sums which would have been properly chargeable under the official express classification as it was in force prior to Feb. 1, 1911.

No answer to the above complaint was filed by any of the respondent companies. The hearing was held at Milwaukee, July 18, 1911. *Drew & Jameson* appeared for the petitioners and *B. F. Kerfoot* for the respondents. In addition, briefs were filed on the part of both the petitioners and the respondents.

The transportation and commercial conditions which have a bearing upon this case were quite fully brought out in the testimony for the petitioners. The petitioners, both at Milwaukee and at Janesville, are primarily bakers and shippers of bread. Their product is sold locally and shipped out over the respondents' lines to retailers throughout Wisconsin and, to a small extent, in Illinois and Michigan. A large proportion of these retailers demand that they be supplied with cake, pies, cookies and such products (which will for convenience be designated herein by the general term "cake"), as well as bread and bread products, and it is necessary, in order to hold the bread trade of these customers, that the petitioners supply them with the other goods ordered. The petitioners make practically no profit on the cake shipped; much of it is made at a loss, and some they do not make at all but buy in the regular market, merely for the purpose of accommodating the customers who demand cake. Itemized records showing the cost of making various cake products and the price at which they are sold, were submitted by two of the petitioners, and they may be summarized as follows:

BENNISON & LANE COMPANY, JANESVILLE.
(Costs given include no return upon the company's investment.)

	Cost delivered.	Price delivered.
Doughnuts per doz	$7 33 cts.	8 cts.
Sugar cookies, per doz	6 67 "	8 "
Oatmeal cookies, per doz	8 25 "	8 "
Berry pies, each	8 00 "	8 "
Apple pies, each	7 92 "	8 "
Yellow cake, mix, per doz	9 00 "	8 "
White cake, mix, per doz	9 50 "	8 "

M. CARPENTER BAKING COMPANY, MILWAUKEE.

(Costs given include overhead expense as computed quarterly by company.)

	Cost.	Selling price.
Jelly roll, per cut	7.91 cts.	8 cts.
Sweet doughnuts, per doz	7.48 "	8 "
Brown cookies, per doz	7.87 "	8 "
Angel food cake, each	16.88 "	15 "
Chocolate layer cake, each	33.48 "	32 "

None of the petitioners ever ship cake alone, for the reason that it is always ordered as an incident to a bread order, and not in sufficient quantity to fill a basket. The petitioners do not encourage their customers to order cake, and would prefer not to deal in it at all, but actual attempts to cut down the cake business in the past have resulted in loss of bread customers. There is not a bakery in the state engaged in shipping cake exclusively. Statements of the proportionate weight of bread goods and cake goods shipped by the various petitioners during the week preceding the hearing were submitted, and the results, in percentage form, are given below:

TABLE I.

PERCENTAGE STATEMENT OF WEIGHTS OF BAKERY PRODUCTS SHIPPED BY PETITIONERS, 1 WEEK, JULY, 1911.

Shipper.	Bread.*		Cake.*		Total.	
	Lbs.	Per cent of total.	Lbs.	Per cent of total.	Lbs.	Per cent.
M. Carpenter Baking Co.	19,342	94.37	1,155	5.63	20,497	100
Skiles Bakery Co.	15,820	96.95	497	3.05	16,279	100
Colvin's Baking Co.	11,584	84.13	2,185	15.87	13,769	100
Bennison & Lane Co.	6,736	87.28	982	12.72	7,718	100
Atlas Factory (Stern et al.)	25,860	98.02	523	1.98	26,383	100
Oswald Jaeger	6,671	97.56	167	2.44	6,838	100

*The articles included under "bread" and "cake", and the average weights at which their total weight is computed by the bakers, are as follows:

Bread.

Rye bread, 12 to 14 oz. per loaf
White bread, 1 lb. per loaf.
Graham bread, 13 to 16 oz. per loaf.
Bread rolls, 1 lb. per doz.
Coffee cake, ½ lb. and 1 lb. loaf.
Miscellaneous.

Cake.

Cake, 13 oz. and 1 lb. each.
Cookies, 1 lb. per doz.
Pies, 1 lb. each.
Miscellaneous.

The general definition of bread goods and cake goods, as given by one of the witnesses for the petitioners, was that bread goods were those made from yeast, including rolls and fried dough-

nuts, while cake goods were those in which baking powder was used. The material used in all the articles classed as bread is about equal in quality. The average weights upon which the statement in table I is computed were testified to be somewhat higher than the actual weights as to the cake goods, so that the total weight of cake goods shipped is probably smaller than the weight given above. Table I includes the entire shipments of the petitioners for a week, except in the case of the M. Carpenter Baking Company, Colvin's Baking Company, and the Bennison & Lane Company. Of these three, the last two report twenty-five of each day's shipments, so selected as to be representative of the total shipments, while the first-named company reports sixty-one shipments per day, taken from its files in alphabetical order according to the names of the consignees, and beginning at different points in the alphabet each day.

Approximate figures as to the volume of shipping business done by the various petitioners, as indicated by the value of goods shipped and the amount of express charges paid to the respondent companies, appear in the testimony as follows:

	Value of goods shipped, 1910.	Express charges paid, 1910.	Per cent charges to value.
M. Carpenter Baking Co	$76,000	$13,000	17.1
Skiles Bakery Co	30,000	5,000	16.7
Colvin's Baking Co	60,000	No testimony	
Bennison & Lane Co	50,000	6,000	12
Atlas Bread Factory	50,000	9,000	18
Oswald Jaeger	40,000	No testimony	

The testimony shows that the value of bread, as shipped by the petitioners, is 4 cts. per loaf of 12 to 15 ounces, or between 4 and 5 cts. per pound. The value of cake products varied, running as high as 30 and 35 cts. per pound; but the cake that is shipped is mostly the cheaper grades, valued at from 8 to 12 cts. per pound.

As bearing upon the conditions under which the bakery goods are handled, it was testified that comparatively little in the way of damage claims had been collected by any of the petitioners from the express companies within the past year. The M. Carpenter Baking Company collected $23.04 on this account, none of which was for cake shipments, and most of which was chargeable, not to accidents, but to failure of the express companies

to deliver the goods to the consignee on time. The Atlas Bread Factory collected $60, none of which was on cake shipments. The remaining petitioners collected, in all, less than $25.

It was the unanimous testimony of the witnesses for the petitioners that the change in classification, requiring that merchandise rates be paid upon mixed shipments of bread and cake, would result in heavy increases of expense in making shipments, and, in some cases, in the discontinuance of the shipments. Past experience in attempting to cut down on the amount and variety of cake shipments led the bakers to declare emphatically that if they were unable to ship cake, they would lose a large part of their shipping business in bread; and they were equally certain that if the merchandise rate were to be charged on mixed shipments, they could ship no more cake. It does not appear what proportion of the investment of each of the petitioners is devoted to the manufacture of goods which are shipped out, as distinguished from goods manufactured for local consumption, but the statement given above as to the value of the goods shipped in a year indicates a sufficient volume of product to involve a considerable investment. The number of baskets used in the express shipments of the petitioners is alone sufficient to represent an outlay of some magnitude. In addition, at least one of the petitioners has made contracts for materials to be used in the manufacture of cake goods for some time to come, including such articles as eggs, molasses, spices, and packing cartons.

According to the petitioners' testimony, the express companies have apparently changed their attitude toward the bakers within recent years. Some years ago the express companies were very anxious to obtain shipments of bread, were quick to respond to all requests for special commodity rates to given points to which the bakers wished to ship, and were even active, by their local agents, in soliciting customers for the large bakeries among the retailers of the smaller towns. This attitude, it was asserted by the bakers, had been succeeded by a policy of oppression on the part of the companies.

On the part of the respondent companies, the only testimony that was offered related to the history of the rates and regulations for bread shipments. The respondents rested their case upon the fact that the change in classification complained of was not made voluntarily by them, but was made by order of the

interstate commerce commission in *Oak Grove Farm Creamery v. Adams Express Co. et al.* 1910, 19 I. C. C. R. 454, and that the desirability of having the classification uniform on intrastate and interstate shipments led to its adoption throughout the territory covered by the respondents. It was testified that originally no distinction was made between mixed shipments of bread and cake and single shipments of bread, but that, upon discovering that it was the practice of certain cake manufacturers to ship a loaf or two of bread with a basket of cake, so as to obtain the mixed shipment rate, the express companies had adopted the rule that the weight of the bread must constitute at least half the weight of the mixed shipment in order to obtain the lower rate. This rule was in effect until the decision of the interstate commerce commission above cited, which decision declared the application of bread rates to mixed shipments of bread and cake to be a discrimination in favor of manufacturers of bread and cake and against manufacturers of cake exclusively.

The decision of the interstate commerce commission, above referred to, and relied upon by the respondents as controlling the present case, involved the following state of facts: The complainant was a manufacturer of cake in Boston, shipping its product to points in other states. The complaint alleged that the rates charged for shipments of cake were unreasonable, and the commission found that such was the fact. The commission then continued, in its decision, as follows (p. 455):

"Some time ago the defendants applied the bread rate to mixed shipments of bread and cake. For the purpose of availing himself of the lower rate thus made possible the complainant became, to a limited extent, a baker of bread. It often happened, however, that he would put into a hamper filled with cake only a loaf or two of bread. The defendants claimed, and the complainant did not deny, that he shipped bread with his cake solely for the purpose of obtaining the better rate. With a view to preventing this the defendants provided that the bread rate should not apply unless at least 50 per cent of the shipment consisted of bread. This rule debarred the complainant from making mixed shipments, while it permitted certain of his competitors who bake both bread and cake to obtain the bread rate upon shipments of bread and cake, and the complainant alleges that this rule is unreasonable.

"This contention is sustained. The almost universal rule is that where a package contains articles taking different rates of transportation the entire package goes at the rate applicable to the highest rated article in the package. In our opinion the

above rule of the defendants discriminates against the complainant, and is unjust and unreasonable, and should be discontinued.

"An order will be entered accordingly."

It will be noted, in the first place, that the shipper in the above case was in a position almost the converse of that presented in the instant case. He manufactured cake exclusively, and, until prevented by the 50 per cent rule of the express companies, shipped bread only as an incident to the cake business; while the petitioners in this case ship cake only because it is necessary for the conduct of their bread shipping business. The application of the bread rate to mixed shipments was found to be unreasonable because it placed the cake shipper at an undue disadvantage as compared with the shipper of both bread and cake. If there had been no such shippers of bread and cake whose competition was facilitated by the rule, the shipper in that case could have made no complaint of discrimination. In the present case, it is conceded by the respondents that there are no exclusive shippers of cake in the state of Wisconsin. Therefore, so far as the intrastate shipments which alone are involved in this case are concerned, the discriminatory feature of the application of the bread rate to mixed shipments cannot exist. The ruling of the interstate commerce commission was made upon a consideration of the facts of the case in hand and of the conditions obtaining in the region involved therein, and the decision of the commission cannot be of controlling weight where the conditions which actuated that decision do not exist, unless the desirability of uniform classification throughout the country and the customary practice of carriers to vary their charges with variations in the value of the articles, are decisive regardless of whether such uniformity and practices are based on sound principles and facts and are in line with the conditions which obtain.

Uniformity of classification throughout the country is highly desirable, but it is clear that such uniformity, to be practicable, must be based upon conditions that obtain in more than one section of the country. It is manifest that in a country such as this, where the conditions which affect transportation are apt to vary with practically every separate industrial and commercial center, it is very unsafe, to say the least, to adopt a classification that is based on the conditions in only one locality. That this is the case is well illustrated by the almost unsur-

mountable obstacles which the railways are encountering in their efforts to formulate and adopt a uniform classification for the entire country. In the case just cited, a change in the classification appears to have been ordered largely because demanded by the commercial conditions in one locality alone, conditions which, as far as we can see, furnished no stronger reasons for such decision than the reasons which the conditions with which the petitioners in the instant case are confronted furnish for a decision in their favor. If it is proper that local conditions alone should control in one case, it would seem only fair that they should not be without significance in other cases. A uniform classification, to be equitable and fair to all concerned, must be based on all the conditions affected by it rather than on a part of these conditions.

The fact that certain practices or rules have once been established by the carriers is not always conclusive as to the reasonableness of such practices or rules. As a general proposition the practice of placing articles of higher value in proportion to weight and bulk in higher classes than articles of lower value in proportion to the weight and the space occupied, is sound. In order to be equitable as between shippers or commodities, however, it is necessary that the articles be properly classified, that each class be placed in the proper relation to the other classes, as well as properly adjusted to competitive commercial conditions. To meet these requirements in the promulgation of a classification requires a thorough and scientific study, not only of the articles and commodities themselves, but of the commercial and industrial conditions involved. It also requires that the classes in the classification be numerous enough to provide for all of the more material differences that usually exist as between commodities and conditions. Among the carriers, the railways come much nearer meeting these requirements than the express companies. The latter in their classifications have but few classes, and these are limited in scope. They seem to have been made up without according proper consideration to the factors upon which classification should be based. Many articles are placed in the same class and charged the same rates as articles worth only half as much or less in proportion to weight and bulk. Even in such cases in the express service where more costly articles are charged higher rates than cheaper ones, it is often found that the higher rates

in the former case rest on other considerations than those which are ordinarily regarded as the controlling basis for classifications. From the examination of the facts it appears to us that the practices of the express companies in connection with their classifications and tariffs furnish stronger reasons for placing bread and cake of the kind in question here in the same class than for placing cake in a higher class than bread.

Our examination into the facts of this case will, therefore, be unaffected by the fact that the interstate commerce commission has set the seal of its approval upon the regulation complained against. This does not mean that this Commission might not have decided the case before the interstate commerce commission in the same way in which it was decided, but merely that there is such a disparity of conditions as between that case and this as to render that case unavailing as a precedent for the case now under consideration.

The questions at issue in the instant case, as already intimated, are closely connected with the classification and charges under competitive commercial conditions. While questions of this kind, when taken as a whole, may be of diminishing importance and, in most respects, secondary to the cost of the service, they are in many instances important enough to vitally affect the rates of transportation. When conditions are such that better terms cannot be had, it is usually best for all concerned, other things being equal, to accept less than the ordinary profits rather than lose the business. Any profit is, as a rule, better than no profit. That the traffic which can be had at something above actual cost should be moved, is also ordinarily in line with public interest, provided, of course, it can be so moved without unjust discrimination. In this case, however, the argument need not be carried as far as this, for the rates in effect before the amendments complained of were issued appear to have at least been adequate to the carriers.

There is no such discrepancy in value between bread and cake as to make it unreasonable under the circumstances to require the application of the lower rate to mixed shipments of the character involved in this case. The value of bread is between 4 and 5 cts. per pound. The value of the cake goods shipped, it seems, will average about 10 cts. per pound. The difference between the two, amounting to about 5 cts. per pound, would hardly seem great enough to make the inclusion of both articles

in mixed shipments at the lower rate an unreasonable requirement. This conclusion is much strengthened by the consideration that in this case the goods of the higher value are only a small percentage of the total included in the mixed shipment, so that of the total value of the shipment the part attributable to the higher grade of goods is relatively small. Thus, to take as an example one of the items included in table I, the average weight of the cake shipped by the M. Carpenter Baking Company for one week in July was about 5.63 per cent of the total, while the bread constituted 94.37 per cent. If the value of the cake is twice that of the bread, the value of the shipments will be 89.33 per cent bread and 10.67 per cent cake.

The competitive situation of the petitioners is such that, as explained time and again in the testimony, the inclusion of cake in bread shipments is absolutely essential in order to hold many of their bread customers, while at the same time the cake business is so unprofitable that the proportion of cake in a shipment must be kept as low as possible. The bakery business is a highly competitive business, and the competition is not confined to the large concerns such as the petitioners, but is to be found also, to some extent, between the large bakeries and the local producers. It must be regarded as proved in this case that the competitive situation in the baking industry makes the use of mixed shipments practically necessary for the most advantageous development of the business as carried on between the large factories and more or less distant cities and villages.

It is certain that rates fixed so high that no traffic will move are advantageous neither to the shipper nor to the carrier. Cake products, as shipped by the petitioners, are sold at very little profit and often at a loss, merely because they assist in the development of a bread trade. When the point is reached at which the unprofitableness of the cake business outweighs the benefit from the encouragement of the bread customers, the shipment of cake will cease, and with it will be discontinued a part of the bread shipping business. This point cannot be located with certainty, but the testimony indicates that even before the change in classification complained of, it was closely approached in the case of the petitioners. Some of them have lost customers by cutting down on their cake shipments, which means, of course, that the bread patronage of these customers

was not of as much importance to the shippers as were the losses on the cake business. If this is true, it is obvious that the present increase in the charges, occasioned, as it is, by the fact that cake is shipped with bread, will necessarily make the approach still closer to the point of unprofitableness, and the testimony of several of the petitioners shows that if the new regulation is continued that point will be reached.

As this Commission has already stated upon previous occasions, changes in rates or classification which have the effect of disturbing long established business conditions which have grown up in reliance upon the continuance of the existing system of rates or the existing classification, should not be made except for good reasons. *Wisconsin Box Co. et al. v. C. M. & St. P. R. Co. et al.* 1909, 3 W. R. C. R. 605, 617. The testimony in the present case shows that the practice of charging the bread rate on mixed shipments has been in vogue for many years; that the inclusion of cake with shipments of bread has become so frequent and regular a practice that many of the petitioners' customers condition their patronage on its continuance; that in addition to the financial outlay involved in equipping themselves to handle the cake business, the petitioners have in some cases contracted for supplies with reference to the continuation of that business; and that the express companies themselves have in the past greatly encouraged the development of the bread shipping business. All of these facts have a bearing upon the justice of the change in classification and make it incumbent upon the carriers to advance good reasons why the established order of things should be disturbed.

That the inclusion of cake with bread shipments does not make the handling of the shipments any more costly to the carriers than the handling of single shipments of bread, is evidenced by the fact that no claims for damages have been made by the petitioners within the past year upon cake shipments. The shipments are made in the same baskets, whether they are mixed or single shipments, so that no extra difficulties of handling are involved. In fact, it is difficult to find any factor entering into the cost of service which is not equally present in the case of single shipments as in the case of mixed shipments, and therefore the respondents' change in classification can have no justification in the extra cost of transporting mixed shipments.

An additional fact of importance in this case is that the respondent express companies have apparently not taken any steps toward the enforcement of the change in classification in this state, outside of Milwaukee. In Milwaukee, although the change was effective Feb. 1, 1911, no notice thereof was given to the bakers and no attempt at its enforcement was made for over five months. In Janesville, as the testimony shows, the agents of the express companies knew of the change and notified the bakeries of it, but have never based their charges upon it. In addition, an independent investigation undertaken by the Commission reveals the fact that the change has not been enforced in Racine, Oshkosh, Fond du Lac or Madison. In all these cities, the agents of the American Express Company, Wells Fargo & Company, and the Western Express Company, upon inquiry as to the rates in force, quoted the rates as they existed before the change in classification. In a number of cases the latest supplement to the classification was not on file. A check of the records of several bakeries in each of these cities, together with an examination of the express companies' records of the same shipments, shows that all mixed shipments during the period checked, covering about a month immediately preceding the hearing, had been charged the general special rate.

The facts set forth above as to the lack of enforcement of the change in classification indicate that the agents of the express companies either are totally uninformed as to the change, or are neglecting it entirely. These agents are undoubtedly conversant with conditions as to bakery shipments in their respective localities, and their failure to enforce the new regulation is to be regarded as a tacit recognition by them that the new rule is impracticable of enforcement. In addition, the Commission's investigation was made within three or four days of the date of the hearing, and it would seem as though the express companies themselves, knowing that a proceeding to test the reasonableness of the change was pending, would have attended to its enforcement if they had been really desirous of having it enforced. The fact that, except in the city of Milwaukee, it was not enforced in any of the cities mentioned, even after the present proceeding was begun, gives further weight to the impression gained from other sources, that the new regulation so disturbs the established methods of shipment

that its regular and continued enforcement is impracticable. This attitude of the express companies toward the new rule is to be inferred also from the fact that at the hearing they made no attempt to defend the rule as reasonable in itself, but relied entirely upon the fact that it had been ordered in effect by the interstate commerce commission, and that uniformity of classification was desirable.

In view of all the circumstances above detailed, the conclusion of the Commission is that the practice of the respondent companies, in charging the merchandise rate upon mixed shipments of bread and cake products, where the cake products constitute less than half the weight of the entire shipment, is unreasonable, and should be discontinued, and in place thereof the former practice of charging the general special rate upon all such shipments should be reinstated.

In their petition the petitioners pray for a refund of all excess charges caused by the change in classification. It follows naturally from the finding that such change is unreasonable, that the petitioners are entitled to such refund.

IT IS THEREFORE ORDERED, That the respondents herein, the United States Express Company, Wells Fargo & Company, the American Express Company, and the Western Express Company, discontinue the classification and rates on bread and baked goods other than bread in mixed shipments in this state, which were provided by amendment 4 to classification No. 20, effective Feb. 1, 1911, and by amendment 7 to the same classification, effective June 20, 1911, and that they substitute therefor the classifications and rates on bread and baked goods other than bread and mixed shipments which were in effect when the above amendments became effective.

IT IS FURTHER ORDERED, That the excesses in charges on shipments of bread and baked goods within this state, by reason of the above named amendments or changes in classifications and rates, be refunded to the petitioners herein by the respondents in this case.

WISCONSIN PULP AND PAPER MANUFACTURERS

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Oct. 2, 1911.

Petitioner alleges unusual and exorbitant charges on shipment of ten cars of pulp wood from Ladysmith to Menasha, Wis. The excess charge was due to an error in publishing the rate schedule. Subsequently respondent corrected the error and reinstated the rate and minimum loading requirement previously in effect.

Held: The rate exacted was unusual and exorbitant and a reasonable charge would have been 5 cts. per cwt., as provided in the tariff now in effect. Refund is ordered on this basis.

The petitioners are manufacturers of pulp and paper and have offices at Chicago, Ill. They allege that about May 1, 1911, they shipped ten cars of wood pulp consigned to themselves at Menasha from Ladysmith, Wis. The rate charged on such shipment by respondents was 6 cts. per cwt., minimum loading weight 40,000 lbs. per car, as provided in tariff G. F. D. No. 13121, effective April 15, 1911, whereas a rate of 5 cts. per cwt., minimum loading weight 60,000 lbs. per car, unless marked capacity of car is less when marked capacity will govern, was in effect for a number of years and is now in effect. Petitioners also allege that in issuing tariff G. F. D. No. 13121 an error was made in the rate from Ladysmith to Menasha and also in the minimum loading weight applicable, but upon discovery of the mistake correction was promptly made by respondent through a reissue of the tariff, reinstating the rate and minimum loading previously in effect, according to tariff No. 286, dated May 1, 1911, effective May 9, 1911. Reparation in the amount of $59.34 is asked.

The respondent admits all the allegations of the complaint and states that it is willing to make reparation by authority of the Commission.

The claim herein was submitted upon pleadings, papers, vouchers, documents and records on file.

The above claim arose out of an error in publishing a schedule to displace a lower schedule previously in effect. The error was corrected as soon as discovered, but the shipment in question had moved in the meantime. The facts in the case are similar to those in *Kaiser Lbr. Co. v. C. St. P. M. & O. R. Co.* 1910, 5 W. R. C. R. 196, and *Johns-Manville Co. v. C. M. & St. P. R. Co.* 1909, 4 W. R. C. R. 114.

Under the circumstances, we find and determine that the rate of 6 cts. per cwt., charged the petitioner for the above mentioned shipment of wood pulp shipped from Ladysmith to Menasha, Wis., was unusual and exorbitant, and that a reasonable rate to have charged for such shipment would have been 5 cts. per cwt., as provided in tariff G. F. D. No. 13350, now in effect.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company refund to the said Wisconsin Pulp & Paper Manufacturers the sum of $59.34, being the excess charge exacted as aforesaid.

IN RE JOINT APPLICATION OF THE LA CROSSE GAS AND ELECTRIC COMPANY AND THE LA CROSSE WATER POWER COMPANY, TO THE EFFECT THAT THE RAILROAD COMMISSION ACT AS ARBITRATOR IN INTERPRETING THE MEANING OF CERTAIN PROVISIONS IN A CONTRACT BETWEEN THE APPLICANTS.

Submitted July 25, 1907. Decided Oct. 4, 1911.

Joint application was made by the La Crosse Gas and Electric Co. and the La Crosse Water Power Co. to the effect that the Commission act as arbitrator in interpreting the meaning of the term "actual station operating costs" as used in a contract to which the applicants are parties. The question upon which a decision was asked was as to the principle involved in the charging of repairs as a part of the "actual station operating costs."

Held: That repairs properly belong among "operating expenses" or "cost of service."

The term "actual station operating costs" as used in the contract to which the applicants are parties, properly includes the cost of repairs to the power plant of the gas and electric company during the periods of its operation necessitated by the failure of the water power company to furnish the agreed amount of electric current to the gas and electric company.

The applicants, the La Crosse Gas and Electric Company and the La Crosse Water Power Company, are parties to a contract, dated March 25, 1909, by which the waterpower company is required to furnish electric current to the gas and electric company at a stated price, and in case of failure to furnish such power, is to pay the "actual station operating costs" of operating the gas and electric company's steam plants. At various times the waterpower company has been unable to furnish the required current, and as a result the gas and electric company has been operating its steam plants and rendering an itemized statement of cost each month to the waterpower company. These statements have in most cases included an item of "Maintenance supplies and expenses," and the amount represented by this item has been uniformly rejected by the waterpower company as not constituting a part of the "actual station operating costs." The following table shows the date and amount of each of such "Maintenance supplies and expenses" charges.

Date of bill.	Period covered.	Amount.
Sept. 1, 1910	August, 1910	$601 32
Oct. 1, 1910	September, 1910	222 10
Nov. 1, 1910	October, 1910	198 17
Dec. 1, 1910	November, 1910	118 30
Jan. 1, 1911	December, 1910	205 77
Feb. 1, 1911	January, 1911	215 99
Mar. 1, 1911	February, 1911	41 84
April 1, 1911	March 1 to 7, 1911	70 67
June 30, 1911	June 3, 8, 17, 1911	4 66
		$1,678 82

As the parties to the contract were unable to agree as to the inclusion of the item "Maintenance supplies and expenses" in the expense account, joint application was made, to the effect that the Commission act as arbitrator in the matter.

A hearing was held at La Crosse, July 25, 1911. The La Crosse Gas and Electric Company was represented by *D. G. McMillan* and *P. M. Gellatt,* and the La Crosse Water Power Company by *W. J. Ferris* and *O. Holway.*

The proceedings at the hearing indicate that the views of the respective parties to the contract are diametrically opposed on the subject presented for arbitration. It was stated by the representative of the waterpower company that the word "actual" was used to make sure that only "actual" station operating costs, meaning such items as labor, coal, oil, and waste, would be charged; and on the other hand, the interpretation given by the representative of the gas and electric company was that in case of failure to furnish power as required by the contract, the waterpower company was to pay such expenses of the gas and electric company in the generation of power, that the cost of the power to the gas and electric company would be the same as it would have been had the waterpower company performed its part of the contract. To bear out this latter contention, the representative of the gas and electric company cited a provision of the contract, immediately following that in which the waterpower company is obliged to pay "actual station operating costs," and reading as follows:

"The intention of this provision being that the party of the second part shall be penalized to the extent of not receiving any compensation for any electric current thus generated during such period of interruption, and in addition shall pay the actual station operating costs of the party of the first part, until the output from all plants so operated shall amount to 2,000 kw. hrs."

The representative of the waterpower company called attention to the fact that the first statement submitted by the gas and electric company contained no charge for "Maintenance supplies and expenses," which fact, it was argued, indicated that the officers of the gas and electric company at the time of making the contract did not contemplate the inclusion of maintenance items, but later included them as an afterthought.

Reference was made by both parties to the Commission's Classification of Accounts for Electric Utilities, which, on pages 16 and 17, contains the following language:

"**Operating Expenses** are intended to include all items of expense necessarily incurred in being prepared to serve or in serving the public as an electric utility. This includes the expense of maintaining intact the organization of the utility, the generation, distribution and sale of electric energy and all processes necessarily incident thereto, together with the collection of the revenues from such operations. * * *

"**Operating Expenses** in the broadest significance of the term are divisible into two classes, viz., *Operation* and *Maintenance*.

"**Operation** should be understood to mean the 'use' of the property and includes labor, materials and supplies and expenses, but excludes all *Maintenance* items.

"**Maintenance** should be understood to mean 'upkeep', and should cover all expenditures for current or ordinary repairs, renewals, or replacements of property resulting through wear and tear, or through those casualties which are incidental to the nature of the operation and which expenditures are necessary in order to keep up the productive capacity of the plant to its original or equivalent state of efficiency."

It was claimed by the representative of the waterpower company that the items includible under the term "Operation," as defined by the Commission, were all that were contemplated in the contract; while the gas and electric company contended that the items includible under the term "Operating expenses". were intended.

The only basis upon which the Commission can ascertain what the parties to the contract must in legal contemplation have intended to include in the term "actual station operating costs" is the ordinary, every-day accounting practice which the gentlemen who entered into the contract must be presumed to have had in mind at the time. It appears that the principal, and perhaps the sole element entering into the item "Maintenance supplies and expenses" as charged up to the waterpower company and rejected by that company, was the item of repairs.

The question then resolves itself into a consideration whether in ordinary business practice the term "actual station operating cost" is to be construed as including repairs.

To ascertain the usual business meaning of the disputed phrase, it is desirable to consult such authorities as the writings of accountants, the classifications of accounts used by various establishments, and the interpretation given to the phrase by the courts. It is to be remarked at the outset that the actual combination of words used in the contract here in question is not found in any of the classes of authorities above mentioned, so far as they have come to the attention of the Commission. The terms most commonly used are "cost of production," "expenses of operation," "operating expenses," "workshop expenses," and "cost of service." Whether any or all of these expressions mean the same thing as "actual station operating costs" would probably be disputed by the parties to this proceeding; but discussion of this question will be deferred until after the various authorities have been presented.

Among accounting authors PROFESSOR H. R. HATFIELD, in his work on Modern Accounting, writes as follows:

"In estimating the cost of production, there must be considered, not merely wages and material, interest and rent, repairs and renewals, but in addition some allowance must be made for the diminished value of the fixed assets due to gradual loss of serviceability."

Again, in his chapter on Cost Accounts, Hatfield says that the "cost of producing a given article" consists of wages and material used, and also of indirect expenses which must be apportioned. These indirect factory expenses, he says, include such items as wages of workmen employed in general labor, wages of foremen and superintendents, "light, heat, rent and repairs of factory and its equipment, depreciation," etc.

PROFESSOR WILLIAM M. COLE, in his work on Accounts, where he deals with the principles of cost accounting for factories, divides "producing cost for each article of product" into material, labor, and burden (p. 218). In charging the cost among the various machines used, the elements of cost considered in making up the "burden" are: interest on investment, repairs, depreciation, taxes, insurance. Speaking of repairs to buildings, the author says:

"Repairs to buildings are really a part of the cost of running the machines which they are built to house."

In Manufacturers' Accounts, a Canadian work by EDDIS AND TINDALL, the manufacturing account is divided, on the debit side, into material, wages, and workshop expenses. The workshop expenses named by the authors include repairs and renewals.

In his book on The Distribution of Expense Burden, A. H. CHURCH explains and defends the "new machine expense" system, by which each machine is made to bear the expense properly chargeable to it; and in speaking of repairs, the author remarks:

"It is usually understood that the cost of minor repairs during working life is being met out of revenue. Therefore such repairs are properly a shop charge. * * * It is evident that the cost of repairs to any one machine is part of the expenses of the little shop it is in."

Among classifications of accounts, it is apparently the universal practice to charge repairs to operating expenses. The following examples will suffice to illustrate the method.

The Uniform Classification of Accounts of the Railroad Commission of Wisconsin is the classification used by the parties to this proceeding, and is therefore the one which they are most likely to have had in mind at the time the contract was made. Under the head of Operating Expense Accounts, the first subdivision, "Power: (A) Steam Power Generation," includes the following accounts (pp. 18—24):

Superintendence, engine labor, electrical labor, miscellaneous labor, steam generated, steam purchased, lubricants, miscellaneous power plant supplies and expenses, maintenance of steam engines and turbines, maintenance of power plant auxiliary equipment, maintenance of generators, maintenance of auxiliary power plant electrical equipment, maintenance of power plant buildings, fixtures and grounds.

In the Uniform Classification of Accounts, Electric Corporations, New York public service commission, First district (pp. 35—38), operating expenses include:

Station superintendence and care, boiler labor, producer labor, engine labor, electric labor, fuel for steam, fuel for producer gas, water for steam power and gas, water for hydraulic power, lubricants for power, production supplies, station expense, repairs of power plant buildings, repairs of furnaces and boilers, repairs of boiler apparatus, repairs of steam accessories, repairs of reciprocating engines, repairs of steam turbines, repairs of other steam engine equipment, repairs of dams, canals and pipe

lines, repairs of turbines and water wheels, repairs of gas producers and accessories, repairs of gas engines, repairs of electric generators, repairs of electric accessories equipment, repairs of miscellaneous station equipment, steam from other sources, power gas from other sources, electric energy from other sources.

The "Uniform Classification of Accounts, Electric Corporations," New York public service commission, Second district (pp. 409—412), includes among production expenses the following:

Station superintendence and labor, fuel for power, other station supplies and expenses, repairs of power plant buildings, repairs of steam equipment, repairs of hydraulic power plant, repairs of gas power equipment, repairs of power plant electric equipment, miscellaneous station repairs, steam from other sources, power gas from other sources, electric energy from other sources.

The Standard Classification of Accounts of the National Electric Light Association for 1910 (pp. 53—57) uses the two headings, "Production—Operation," and "Production—Maintenance." These accounts include the following:

Production—Operation: Maintenance of way, boiler labor, engine labor, electrical labor, miscellaneous labor, fuel, water, lubricants, production supplies and station expenses.

Production—Maintenance: Sundry repairs, station structures repairs, boiler repairs, boiler apparatus repairs, pipe repairs, engine turbine repairs, mechanical apparatus repairs, tools and instrument repairs, electric equipment repairs, hydraulic equipment repairs, and gas equipment repairs.

Production is broadly defined (p. 7) as the cost of electric current delivered to station terminal board.

In the Classification of Accounts of the American Light and Traction Company, 1907, the account "Operating Expense of Steam Generation" includes:

Boiler fuel, water, boiler room labor, repairs of boilers and pipe, sundry supplies and expenses, total steam expense, steam heat or steam for gas department, net steam expense, engine and dynamo labor, oil and waste, repairs engines and condensers, repairs shafting and belts, repairs electrical equipment, sundry supplies and expenses, repairs general, sundry labor, clerical salaries and general superintendence.

The Doherty Operating Company Classification of Accounts for Electric Utilities includes under "Steam Generation" the following:

Boiler fuel, water, boiler room labor, general labor, superintendence, clerical salaries, repairs boilers and pipe, repairs general, sundry supplies and expenses, total steam expenses, steam heat, net steam expenses.

The Stone & Webster Standard System of Accounts divides "Cost of Manufacture (Generating)" into "Operation" and "Maintenance," as follows:

Cost of Manufacture (Generating) Operation: Power plant wages, fuel for power, water for power, lubricants and waste for power plant, miscellaneous supplies and expenses for power plant, higher power reserved for future development.

Cost of Manufacture (Generating) Maintenance: Maintenance of boilers, maintenance of engines, maintenance of electric plant, maintenance miscellaneous station equipment, maintenance buildings and fixtures, maintenance dams, canals and tail races, maintenance of gates, wheels and governors reserved for future development.

W. B. BROCKWAY, in his work on Electric Railway Accounting, includes "Maintenance" under the head of "Operating Accounts."

In Electric Railway Accounts, an English work by GEORGE JOHNSON, the caption of "Generation" includes the following items:

Fuel, generation stores, water, proportion of salaries of engineers, superintendents and officials, generation wages, repairs and maintenance of buildings, repairs and maintenance of engines, boilers, etc., repairs and maintenance dynamos, alternators, exciters, balancers and boosters, repairs and maintenance of machinery including condensers, pumps, steam, water and exhaust pipe and appliances, instruments and tools, repairs and maintenance of accumulators and accessories, repairs and maintenance of station lighting.

In addition to the accounting writers and classifications of accounts, the opinions of courts are of importance in determining the interpretation to be given to the phrase "actual station operating costs." No case exactly in point with the instant case has been found. Most of the cases which contain expressions bearing upon the present question involve the fixing of rates, and the question whether repairs are a part of "operating expenses" or "cost of service" is not directly at issue. It is not always certain, therefore, that in their use of the accounting terms involved in the present case the courts are careful to express their exact meaning. However, a number of judicial

expressions on the subject will be presented as indicating what is apparently the usual judicial acceptation of the terms.

"Actual cost of service" was defined by JUSTICE BREWER in *C. St. P. M. & O. R. C. v. Becker*, 1888, 35 Fed. 883, 886, to include repairs, as follows:

"In this case, the defendant took no testimony, and the complainant's testimony shows that the actual cost of the service, that is, wages of employes, rent of engines, keeping the track in repair, exceeds per car by 14 cts. the amount allowed in the schedule as compensation."

The same judge, in *C. & N. W. R. Co. v. Dey*, 1888, 35 Fed. 866, 879, includes repairs in "Cost of service":

"Compensation implies three things: Payment of cost of service, interest on bonds, and then some dividend. Cost of service implies skilled labor, the best appliances, keeping of the roadbed and the cars and machinery and other appliances in perfect order and repair. The obligation of the carrier to the passenger and the shipper requires all these."

Again, in *Regan v. Farmers' Loan & Trust Co.*, 1894, 154 U. S. 362, 407, JUDGE BREWER, delivering the opinion of the court, reinstates among the "operating expenses" of the railway certain items labeled "Cost of road equipment and permanent improvements," but really consisting of repairs.

That "operating expenses" or "current expenses" include repairs, is affirmed by the California supreme court in *San Diego Water Co. v. San Diego*, 1897, 118 Cal. 556, 574, in the following language, taken from the opinion of the court and a concurring opinion:

"With regard to the question of the depreciation of the plant by use, it is sufficient to say that ordinary repairs should be charged to current expense, that substantial reconstruction or replacement shall be charged to the construction account, and that depreciation should not otherwise be considered."

"If improvements are made in the plant, the cost of these improvements should be charged against the construction account. If repairs are made upon the plant as it stands, as, for example, a new pipe substituted for an old piece of the same size and quality, such charge should be considered operating expenses."

In *Erie v. Erie Gas & Mineral Co.* 1908, 78 Kan. 348, 354, the question was as to what constituted "actual net profits," since the gas company was required by contract to turn over one-fifth of such profits to the city. Speaking of the method of determining net profits, the court said:

"The cost of operation in furnishing gas within the city, upon which profits are to be divided, including necessary repairs, must be charged as expenses, to be deducted from the amount received therefor in order to determine the profits thereon."

On the other hand, a few detached phrases from judicial opinions may perhaps indicate a differentiation between "operating expenses" and "repairs." Examples of such expressions follow:

"Taking into account the cost of maintenance or depreciation and current operating expenses." *Kennebec Water District v. Waterville,* 1902, 97 Me. 185, 204.

"The cost of maintenance and administration, including ordinary repairs and taxes." *Long Branch Comm. v. Tintern Manor Water Co.* 1905, 70 N. J. Eq. 71, 95.

"Sum sufficient to keep the plant in good repair and to pay any fixed charges and operating expenses." *Brymer et al. v. Butler Water Co.* 1896, 179 Pa. St. 231, 251.

Annual expenses, "including the cost of repairs, management and operating expenses." *San Joaquin etc. Irr. Co. v. Stanislaus County,* 1908, 163 Fed. 567, 577.

The representative of the waterpower company cited at the hearing in the case of *McChesney v. Hyde Park,* 1894, 151 Ill. 634, 647, as holding that the word "operate" means "to put into operation or activity," and is distinguished from maintaining or keeping in repair. The question in the case was whether a municipal corporation, authorized to levy special assessments for maintaining a drainage plant, had authority to levy such assessments to pay its operating expenses. The court denied the existence of such authority, holding that authority to maintain did not mean authority to pay operating expenses. This merely amounts to a holding that, to revert to the classification of accounts of this Commission, the lesser account (maintenance) does not include the greater (operating expenses).

On the whole, from the various accounting and legal authorities above cited and quoted, it appears that repairs properly belong among "operating expenses" or "costs of service," in the opinion of men whose views must be taken as indicative of the ordinary business understanding of the subject.

The remaining question is as to how closely the expression "actual station operating costs" approaches in its meaning the various phrases which have been found ordinarily to cover repairs. It is not disputed that the cost of repairs as charged by the gas and electric company to the waterpower company, is

an "actual" cost, in the sense that it was actually incurred. This would seem to be the natural meaning of the word "actual" in the contract. The natural effect of the word "station" as used in the contract is to confine the costs to those connected with the generating station, and to exclude transmission and consumer expenses. For the remaining term, "operating costs," it would be difficult to find a meaning different from the meaning of "operating expenses." If, then, the terms used in the contract are paraphrased into "operating expenses actually incurred in the generating station," there is no doubt that the authorities cited above will apply, and repairs are properly included in the term "actual station operating costs."

The representative of the waterpower company also attached considerable importance to the fact that no charges for repairs were included in the first bill it received from the gas and electric company under the contract. Circumstances, however, point to the fact that the bill in question was made out in the office of the latter company by some one who was not familiar with the contract and that the omission was discovered as soon as it came to the attention of the officers of this company. The omission is also one that could easily have occured in the manner described. In view of all the facts we do not deem it of sufficient importance to materially affect our conclusions in the case.

As no question involving the justice or the actual amount of the repair items was submitted to the Commission, it is unnecessary to go into an examination of the bills themselves or the method by which the repair items included therein were computed. The only question upon which the decision of the Commission was asked was as to the principle involved in the charging of repairs to the waterpower company as a part of the "actual station operating costs."

From the facts presented at the hearing, the authorities consulted and partially reviewed in this opinion, and all the other circumstances which seem to have a bearing upon the case, it is the view of the Commission, that the term "actual station operating costs" as used in the contract to which the applicants are parties, properly includes the cost of repairs to the power plant of the La Crosse Gas and Electric Company during the periods of its operating necessitated by the failure of the La Crosse Water Power Company to furnish the agreed amount of electric current to the La Crosse Gas and Electric Company.

VILLAGE OF MARATHON CITY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted July 18, 1911. Decided Oct. 7, 1911.

Petitioner prays that the C. & N. W. R. Co. be required to provide protective devices to warn and protect the public from danger on its crossing at Main street in the village of Marathon City, Wis.

Held: An additional safeguard over the blowing of engine whistles or sounding of bell should be provided. It is ordered that the respondent install an automatic crossing alarm with illuminated sign for night indication for the protection of the Main street crossing, with track circuits of such length and so arranged as to afford adequate protection; and that the respondent maintain this alarm and so operate its trains while doing switching service at this station that the public may be safeguarded against misleading indications from the protective devices. The plans for the track circuits and the instructions to trainmen or other employes of the railway relative to the protection of such crossing are to be submitted to the Commission for approval. Sixty days is deemed sufficient time within which to comply with this order.

The petitioner is a municipal corporation in Marathon county, existing under and by virtue of the laws of the state of Wisconsin. The petition states that the above named railway company is a common carrier, subject to the provisions of ch. 87 of the Wisconsin Statutes of 1898 and acts amendatory thereto, and is likewise subject to the provisions of ch. 362 of the Laws of 1905 and acts amendatory thereto; that the petitioner has a plat or plan recorded at the register of deeds' office of Marathon county showing the subdivisions of the real estate and showing the blocks, streets and alleys lying within its corporate limits; that according to the last United States census it has 685 inhabitants; that the said recorded plat or plan shows that the respondent's railway passes through the corporate limits of the village of Marathon on and along Third street, between Washington and Hemlock streets, and crossing Main street where it intersects Third; that the village of Marathon has seven streets running north and south within its borders, only three of which are improved and open to traffic, Main street being the principal thoroughfare; that respondent's railway sta-

tion or depot in said village is located 600 feet west of Main street on Third street; that the main switch or sidetrack on which all cars for bark, bolts, ties, logs, lumber, timbers, shingles, and other products are loaded, leaves the respondent's main track about 125 feet west of said Main street on Third street; that there are no less than twelve trains per day passing through said village, all of which stop at the depot, and no less than four trains do switching on said main switch per day, causing the engines and cars of the respondent to cross Main street and thereby blockading the traffic on said street and making it dangerous for traffic; that the buildings on Main street are built close to said street and close to each other; that the buildings on Main street south of Third street, on which respondent's track is located, are built within twenty-five feet of the track and the buildings located on Main street north of the track run within forty feet of it; that there is a grade of 107 feet from the point where Third street intersects said Main street, running south to Eighth street, a distance of 1,500 feet; that teams and automobiles coming down this grade approaching respondent's track are unable to see an approaching train until within ten feet of the respondent's track where it crosses Main street; that at said track the respondent has not warned traffic in the past and has failed to provide a flagman, gates or bell, although having repeatedly been requested by petitioner to do so; that within the past few years no less than two accidents have happened at the crossing in question, in which human beings, horses and carriages have been injured and damaged. Wherefore, petitioner prays that the respondent be required to engage a flagman or to build gates or guards to warn and protect the public from danger on said crossing.

The respondent did not answer the allegations set forth in the petition.

The hearing was held July 18, 1911, in the village hall at the village of Marathon City. *A. W. Prehn* represented the petitioner. *Irving Herriott* represented the respondent.

At the hearing witnesses for the petitioner testified to an average of from thirty to fifty teams per hour crossing respondent's tracks on Main street. A witness for the respondent testified that on Monday, July 17, 1911, between 7 a. m. and 7 p. m. he had counted 121 teams passing over the crossing in question.

The testimony shows that eight regular passenger trains pass over this crossing daily, also four regular freight trains and from one to three etxra freight trains. The local switching is done by two freight trains; the one from the east does practically all of its switching at the west end of the yard and therefore rarely passes over the crossing in its switching movements, while the train from the west passes over the crossing eight or ten times during the switching operations.

The division superintendent of the railway testified that the passenger trains, while passing over the crossing, ran at a speed varying from twelve to twenty-five miles per hour. A speed in excess of twelve miles and hour over an unprotected crossing in any incorporated city or village is in violation of the law.

Petitioner's witnesses testified that the buildings south of the crossing were within thirty feet of the track on the east side of the street and thirty-six feet on the west side, while north of the crossing the buildings were within forty-five feet of the track on both sides of the street. The testimony further shows that a person standing at a distance of forty feet south of the crossing could not see farther than forty-five feet along the track eastward and fifty feet westward. At forty feet north of the crossing a view of two or three blocks can be obtained on either side of the track, while at a distance of one hundred feet away the track can be seen but for fifty to one hundred feet in both directions. Several years ago a team met with an accident in crossing the track.

Witnesses for petitioner declared that an alarm bell would be a nuisance at the crossing, because during switching movements and when trains were standing at the depot or on any part of the tracks near the crossing the bell would be ringing continuously.

It appears from the testimony and from an examination made by our engineering staff, that the view approaching the crossing from both sides is obstructed to such a degree that an additional safeguard over the blowing of engine whistles or sounding of bell should be provided. The safety service expert of the Commission reports that an automatic alarm can be satisfactorily operated at this point if properly installed and maintained, and that it can be operated only by trains or engines on the main line. He recommends an installation by which the alarm shall be sounded when an eastbound train or engine passes on the

main line between the passenger depot and crossing when the side track switch which connects to the main line a half block west of the crossing is set for the main line; and by train or engine between the clearance point of the side track and crossing when switch is set for the side track. With this arrangement when switching is being done on the side track, cars standing on the main line east of the depot and west of the side track switch would not sound the alarm, and at the same time ample warning could be given in the case of an engine moving to the crossing from the passing track. For west-bound trains the operation would necessarily be from the main line only. A number of automatic alarms are now in successful operation at points where track conditions are more complicated and where the switching is considerably heavier than at this point.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, install an automatic crossing alarm with illuminated sign for night indication for the protection of the Main street crossing in the village of Marathon City, with track circuits of such length and so arranged as to afford adequate protection against all trains and engines approaching or passing over said crossing at Main street, and that said railway company maintain this alarm and so operate its trains while doing switching service at this station that the public may be safeguarded against misleading indications from the protective device.

IT IS FURTHER ORDERED, That the plans for the track circuits and the instructions issued to trainmen or other employes of the railway relative to the protection of said crossing be submitted to this Commission for approval.

Sixty days is deemed a sufficient time within which to comply with the terms of this order.

A. H. KROUSKOP

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Sep. 12, 1911. Decided Oct. 17, 1911.

Petitioner alleges overcharges on a carload shipment of manufactured lumber from Richland Center to Stoughton, Wis. The respondent charged a rate of 7 cts. per cwt. The rate of 5 cts. per cwt., which the petitioner seeks to have applied, could not be justified except on condition that the lumber was transported for manufacture and reshipment over the same line. In *Wis. Retail Lbr. Dealers Assn. v. C. & N. W. R. Co. et al.* 1909, 3 W. R. C. R., 471, the Commission established a rate of 7 cts. per cwt. on shipments of lumber for distances of 80 miles and over 75 miles. This rate was applicable to the shipment in question.

Held: The rate of 7 cts. per cwt. charged by respondent was the lawful and reasonable rate to have applied under the circumstances. Petition for refund is dismissed.

The petitioner is engaged in the wholesale and retail lumber business, with offices at Richland Center, Wis. It alleges that on April 11, 1911, it shipped car No. 22572, loaded with manufactured lumber, from Richland Center, Wis., consigned to the Stoughton Lumber Association, Stoughton, Wis.; that the carload rate on lumber from Richland Center, Wis., to Stoughton, Madison, and intermediate points had been voluntarily fixed by the respondent on or about July 11, 1906, at 5 cts. per cwt.; that prior to July 11, 1906, it had paid 5 cts. per cwt. on all carload lots of lumber shipped from Richland Center to Stoughton, and that the car in question was shipped with the expectation that the freight would be 5 cts. per cwt., but that respondent charged a rate of 7 cts. per cwt.; that upon presentation to respondent of a claim for overcharge on the freight on this shipment, petitioner was informed that the rate on lumber in carload shipments from Richland Center to Stoughton, Wis., had been advanced to 7 cts. per cwt. Petitioner asks that reparation be made for whatever overcharge may be found.

The respondent railway company, answering the petition, alleges that if the shipment moved as alleged, the proper lawful rate to have been applied was the rate of 7 cts per cwt. The

respondent denies that the rate of 7 cts. per cwt. is unjust or unreasonable, and denies that petitioner has been overcharged on said shipment if it moved as alleged.

The hearing was held on Sep. 12, 1911. No appearance was made on behalf of the petitioner. The respondent was represented by *F. G. Wright,* its assistant commerce counsel, and *J. M. Davis,* its assistant general freight agent.

It appears from the testimony that the shipment in question was consigned to the Stoughton Lumber Association which is engaged in selling lumber at retail. The rate of 5 cts. per cwt., which the petitioner seeks to have applied to the shipment in question, when in effect was applicable only to shipments of lumber from Richland Center to Stoughton for manufacture and reshipment. The rate was canceled by the railroad company for the reason that it was discovered that lumber shipped from Richland Center to Stoughton for the declared purpose of manufacture and reshipment, was in fact sold at retail.

Shipments of lumber from Richland Center and vicinity consist almost entirely of high grade hard wood. A rate of 5 cts. per cwt. could not be justified, except on condition that the railway company was permitted to transport the product manufactured therefrom. In *Wisconsin Retail Lbr. Dealers Ass. v. C. & N. W. R. Co. et al.* 1909, 3 W. R. C. R. 471, the Commission established a rate of 7 cts. per cwt. on shipments of lumber for distances of 80 miles and over 75 miles. This was found by the Commission to be a reasonable rate. The rate was applicable to the shipment in question. Under the circumstances the application must be denied.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

W. E. MORGAN
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Oct. 17, 1911.

Petitioner alleges erroneous, illegal, unusual and exorbitant charges on carload shipments of cordwood from Unity to Waukesha, Wis. The respondent furnished small box cars instead of the flat cars of 40,000 lbs. capacity ordered. Petitioner claims that it was impossible to load wood to the full marked capacity of the cars furnished, and as a result he was compelled to pay excessive freight charges.

Held: As the shipments reached their destination more than six months before claim was made to the Commission, the Commission is without jurisdiction of the matter (sec. 1797—37m). Petition is dismissed.

Petitioner is a dealer in hardware, sash, door moulding, machinery, etc., at Unity, Wis. He alleges that the respondent railway company, in response to his request for cars, furnished petitioner box cars on which it was impossible to load wood to the full marked capacity of the car, and that petitioner was therefore compelled to pay a rate of freight which was erroneous, illegal, unusual and exorbitant. Petitioner therefore prays that the sum charged in excess of a reasonable rate be refunded to him.

The respondent railway company, answering the petition, alleges that the entire claim set forth in the petition accrued more than six months prior to the filing of the claim with the Commission, and is therefore barred by the statute.

The facts are practically as follows: During the months of September, October, November and December, 1910, petitioner ordered from respondent a number of flat cars, 40,000 lbs. capacity, for the purpose of loading cordwood for shipment from Unity to Waukesha, Wis. The railroad company, for the purpose of protecting itself against fire, furnished small box cars instead of the cars ordered. Petitioner claims that it was impossible to load wood to the full marked capacity of the cars furnished and as a result he was compelled to pay excessive freight charges.

As the shipments in question reached their destination more than six months before claim was made to the Commission, we are without jurisdiction of the matter. Sec. 1797—37m.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

HIGGINS SPRING AND AXLE COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Sep. 14, 1911. Decided Oct. 20, 1911.

Petitioner alleges that respondent's tariff provides a rate on vehicle springs of 12 cts. per cwt. on less than carload lots from Racine Jct. to Janesville, Monroe, Stoughton, Edgerton, and Madison, Wis., and a rate of 10 cts. per cwt. on similar shipments to the same points from Chicago; that thereby the respondent is discriminating against the petitioner and in favor of Chicago shippers of like articles.

Petitioner further alleges excessive charges on various shipments of vehicle springs from Racine to Stoughton, Wis., and prays for a refund of 2 cts. on each cwt. A similar claim was presented and a refund ordered on the basis of 10 cts. per cwt. in *Higgins Spring & Axle Co. v. C. M. & St. P. R. Co.* 1909, 4 W. R. C. R. 384.

Held: That 12 cts. per cwt. is excessive and that 10 cts. per cwt. is a reasonable rate for such transportation services. Respondent is ordered to discontinue its present rate and to substitute therefor the rate found reasonable by the Commission.

Refund from the excess charge on the shipments from Racine Jct. to Stoughton is ordered.

The petitioner is engaged in the manufacture and shipping of springs and various other iron and steel articles, with offices at Racine, Wis.

The petition alleges that respondent's tariff No. 3000 E provides a rate on vehicle or wagon springs of 12 cts. per cwt. from Racine to Janesville, Monroe, Stoughton, Edgerton, and Madison; that supplement No. 15 to said tariff names a rate of 10 cts. per cwt. on wagon springs moving to the same points from Chicago; that thereby the respondent is discriminating against the petitioner and in favor of Chicago shippers of like articles; that on and between Dec. 16, 1910, and June 5, 1911, the petitioner made various shipments of vehicle springs from Racine to Stoughton, weighing in all 40,630 lbs., upon which the petitioner was obliged to pay 12 cts. per cwt. Wherefore, petitioner prays that the respondent be directed to refund to it 2 cts. on each cwt. of said shipments.

The respondent railway company, answering the petition, denies that Racine is discriminated against in the matter of

rates on wagon springs from Racine to Monroe, Stoughton, Edgerton, Madison, or Janesville, and avers that the shipments referred to in the petition are barred by the statute of limitations, with the exception of any shipment made on June 6, 1911.

The hearing was held on Sep. 14, 1911. The petitioner was represented by *J. M. Malone* and the respondent by *F. G. Wright,* its assistant commerce counsel.

The petitioner is obliged to compete with Chicago manufacturers of vehicle springs at the points mentioned in the petition. About two years ago a claim similar to the one here involved was presented and a refund ordered. *Higgins Spring & Axle Co. v. C. M. & St. P. R. Co.* 1909, 4 W. R. C. R. 384. In that case we suggested that a 10 ct. rate be put into effect upon vehicle springs from Racine to Stoughton and other points. It necessarily followed from the holding, that the respondent should have voluntarily published the rate therein found reasonable or that, upon notice of failure so to do, the Commission would have taken proceedings to make such rate effective.

It is to be regretted that petitioner did not move in the matter as soon as it discovered that the rate of 10 cts. per cwt. upon shipments of vehicle springs from Racine to the various points mentioned in the petition had not been made effective, as contemplated by the ruling in the former case.

We find and determine that the rate of 12 cts. per cwt. is an excessive rate to exact for the transportation of vehicle springs and springs for agricultural implements from Racine Jct. to Janesville, Monroe, Stoughton, Edgerton, and Madison, and that a reasonable rate for such transportation services is 10 cts. per cwt.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and the same is hereby authorized and directed to refund to the petitioner the sum $8.12, being the amount herein found to be in excess of the reasonable charge for the aforesaid shipments.

IT IS FURTHER ORDERED, That the respondent herein, the Chicago, Milwaukee & St. Paul Railway Company, discontinue its present rate of 12 cts per cwt. for springs for agricultural implements and vehicles in less than carload lots from Racine Jct. to Janesville, Monroe, Stoughton, Edgerton, and Madison, and that it substitute therefor the rate of 10 cts. per cwt.

D. S. CLARK
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Oct. 23, 1911.

Petitioner alleges overcharge on a carload shipment of wood from Signor to Eau Claire, Wis. Respondent charged 8 cts. per cwt. on 40,000 lbs. and subsequently established a rate of 4½ cts. per cwt., minimum weight 40,000 lbs.

Held: Over six months intervened between the moving of the shipment and the filing of the complaint. The claim is therefore barred by sec. 1797—37m of the Wisconsin Statutes. Petition is dismissed.

The petitioner is engaged in the lumber and wood business, with offices at Eau Claire, Wis. Petitioner alleges that on Nov. 19, 1910, there was shipped from Signor, Wis., to Eau Claire, Wis., a carload of wood, weight 40,000 lbs., on which respondent collected 8 cts. per cwt., amounting to $32. Petitioner further alleges that subsequent to the movement of the shipment in question the respondent railway company published in its tariff G. F. D. No. 12750 a rate of 4½ cts. per cwt., minimum weight 40,000 lbs., on such shipments. Petitioner therefore claims to have been injured to the extent of $14, which represents the difference between charges as collected by the respondent railway company and charges which would have accrued at the rate of 4½ cts. per cwt., minimum 40,000 lbs., and asks that reparation be made to him in that amount.

Respondent, answering the petition, expressed its willingness to apply rate contended for by petitioner to shipment in question if so ordered by the Commission.

The shipment in question moved on Nov. 19, 1910, and complaint was filed with the Commission on Aug. 28, 1911, which is more than six months after the shipment moved. Sec. 1797—37m provides as follows:

"Within six months after the delivery of any shipment of property at destination, any person aggrieved may complain to the commission that the charge exacted for the transportation of such property between points in Wisconsin * * * is erroneous, illegal, unusual, or exorbitant, and thereupon the

commission shall have power to investigate such complaint, and to hear the same, and to decide upon the merits thereof, in the manner provided by section 12, chapter 362, laws of 1905."

The claim is therefore barred and the petition will be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

M. L. FITZGERALD, ET AL.
vs.
CITY OF TOMAHAWK.

Submitted April 7, 1911. Decided Oct. 25, 1911.

Complaint was made that the city of Tomahawk, Wis., a public utility engaged in furnishing water to the public, does not furnish adequate service, fails to enforce its rate schedule impartially, and charges unreasonable and discriminatory rates.

With respect to service petitioners allege that the supply of water is inadequate, and that patrons are unreasonably limited in their use of water, but that the use of meters would lessen the waste and make the present supply sufficient.

Whether the inadequate supply has been due to the insufficient capacity of the wells, the excessive use of water for sprinkling purposes, or the inadequacy of the present distribution system, can not be determined without additional data. Respondent is ordered to keep a record of day and night pumpage separately for each day, to install pressure gauges and preserve all records of pressure.

Held: A general order for the installation of meters does not seem to be justified at this time. Respondent is ordered to install meters, at the expense of the water department, upon all services which supply water to consumers, including public buildings, who are not subject to the schedule of flat rates approved by the Commission. Further orders respecting meters are postponed until more complete data are available.

Petitioners allege that discrimination results in that the rates as reported to the Commission are not actually enforced.

Held: A review of the consumer records fails to show more than two or three possible instances of failure to apply the schedule, and these appear to be due to errors of classification rather than to intentional disregard for the schedule. A little stricter application of the schedule will remedy this difficulty as far as the scheduled rates apply at all. For a number of consumers the schedule adopted by the city made no provision, and for these special rates were fixed from time to time. There seems to be some ground for the charge of discrimination as applied to these. It is ordered that the rates herein approved by the Commission be strictly enforced without any departure from the schedule.

Complaint is also made of the failure of the administration to enforce the provision of the original schedule which provides for a charge of 50 cts. per room for each room in excess of eight in residences.

Held: There is nothing to prove in the present case that, when other things are equal, a consumer in a large house will use more water under the flat rate plan than a consumer in a smaller house. As a portion of a flat rate schedule a room charge may have a place, but it is a question whether such a charge can generally be justified on the ground that the amount of water used varies with the number of rooms.

Discrimination is alleged in that no charge is made for lawn sprinkling; that no charge has ever been made for water used for street sprinkling, although the sprinkling was done by private parties under contract with property owners; and that no rate has ever been established for private hydrants nor has any charge ever been made for such hydrants; that on account of the failure of the city to charge for these purposes, other users of water have been obliged to pay for water and service rendered free.

Held: It would not be equitable to make other general users or the general public pay a higher rate in order that water may be used free of charge for sprinkling lawns and gardens. A charge should be made for this use which will pay for the water used and such part of the demand expenses as are properly chargeable to it.

Water used for street sprinkling should be paid for. In case water is used for this purpose in the future, a rate must be established for that use.

The contention that an additional charge should be made against private owners for hydrants installed on private property, aside from the general charge to the city for fire protection, is not tenable. In its opinion *In re Appl. Oconto City Water Supply Co.* 1911, 7 W. R. C. R. 497, 568, the Commission held that no such charge should be made. The water actually used for fire protection should be paid for by the city, and this is provided for in the rates herein prescribed.

Petitioners allege that the rates for general service are too high and that the city does not pay enough for fire protection.

Held: The excess in revenue above the apparent cost of service does not seem sufficient to warrant a reduction in rates for general service at the present time. The amount which the city pays for fire protection is so nearly the difference between the total cost of the service and the amount of interest included in the estimate of operating expenses that no increase need be made in this rate. The reasonableness of the scheduled rates will not be finally passed upon until proper accounting methods have placed the records of the utility in such shape that the real cost of running the business may be determined. For the present it is ordered that the flat rates be left as they are, with the addition of a charge for lawn sprinkling. A meter rate is ordered for certain classes of consumers who are not subject to the flat rates.

The petition in this matter is dated Aug. 20, 1910, and is signed by twenty-five residents of the city of Tomahawk. A number of the matters included in the petition are not complaints, but are charges relating to the general conduct of the water works. The petitioners allege:

1. That the city of Tomahawk is a public utility engaged in furnishing water to the public, and is subject to the Public Utilities Law.

2. That the city owns and operates its own system of water works and supplies water to the public buildings and fire hydrants of the city and to the people generally.

3. That the water works have been conducted for about twenty years, but that the city has no reasonably adequate

charts, maps, profiles or records showing the location of the water mains or of the service connections.

4. That the city has not, until recently, kept a system of records by which the cost of the plant or the cost of operation could be determined, and that no provision has been made for depreciation.

5. That no provision is made for charging to the water works the time of city employes who devote only part of their time to the service of the plant.

6. That reports of the water works to the Railroad Commission have been made largely by guess.

7. That the rates as reported to the Commission are not actually enforced.

8. That when the water works were built an ordinance establishing rates was passed, but that amendments have been made to this ordinance, and that records of such amendments have been so negligently kept that it is now impossible to determine from an inspection what many of the water rates are.

9. That officers of the city in charge of the collection of water rates have in some instances purposely disregarded the provisions of the ordinance by which rates were fixed, in that no charge is made for extra rooms, although the ordinance provides that a charge of 50 cts. per room shall be made to residence consumers for each room in excess of eight.

10. That no provision is made for the installation of meters.

11. That the city has not provided for a transfer from the general fund of the city to the water department of any sum for hydrant rental.

12. That no rate has ever been established for private hydrants, nor has any charge ever been made for such hydrants.

13. That no charge is made for lawn sprinkling.

14. That no charge has ever been made for water used for street sprinkling, although the sprinkling was done by private parties under contract with property owners.

15. That on account of the failure of the city to charge for purposes mentioned above, other users of water have been obliged to pay for water and service rendered free.

16. That the existing rates are unreasonable and discriminatory.

17. That the supply of water is not reasonably adequate for the needs of consumers and that patrons are unreasonably limited in their use of water, but that the use of meters would lessen the waste and make the present supply sufficient.

18. That discriminations exist in the enforcement of the rules and regulations of the water works.

19. That an ordinance to equalize rates and remove discriminations was vetoed by the mayor.

Petitioners ask that an adjustment of rates be made and that such rules and regulations be established as are reasonable and proper. A supplementary petition was filed, dated Aug. 22, 1910, setting forth that after the original petition had been circulated and a number of signatures had been secured, the city council established a rate of $25 per year for public fire hydrants and provided for a transfer from the general funds of the city to the water department of an amount to cover this rate, but the petitioners further allege that $25 per hydrant per year is an inadequate and insufficient amount.

Hearings were held on Oct. 26, 1910, and April 7, 1911, *Ryan & Runke* appeared for the petitioners by *Mr. Runke. M. C. Hyman* represented the city of Tomahawk. At the hearing of Oct. 26, 1910, petitioners were also represented by *G. M. Sheldon.*

From the charges made in petitioner's complaint it will readily be seen that the real matters in dispute are only a few in number. It is charged that rates are unreasonable, that there are discriminations in the present schedule of rates, that the city does not pay enough for fire protection. With regard to the service there are really only two disputed points: The charges that no provision is made for installing meters, and that the water supply is insufficient during sprinkling hours.

Valuation of the property was made by the Commission's engineer, as of date March 15, 1911. Following is a summary of the valuation:

Classification.	Cost new.	Present value.
1. Land	$600	$600
2. Wells, intakes, and suctions	5,004	4,635
3. Reservoir and standpipe	.....	.....
4. Distribution system	24,613	23,974
5. Pumping plant equipment	4,408	2,467
6. Buildings and miscellaneous	2,006	1,415
7. Office furniture, etc	.....	.....
8. Tools and instruments	268	134
9. Horses, wagons, etc	.....	.....
Total items 1—9	$36,899	$33,225
10. Add 12% for engineering, etc	4,428	3,987
11. Stores and supplies	2,483	2,483
Total	$43,810	$39,695

No objection to the valuation was entered by petitioners. It was contended on behalf of the city that the value reached by the staff is greater than the actual value of the plant. The city's statement of the cost of such portions of the plant as are in use at present shows an investment of only $31,671.58. This statement was made up from the records of the city as to what had actually been paid for the system. It seems to include no allowance for engineering, contingencies, supervision, etc., and it may be that 12 per cent is unnecessarily high, and the city's record may not be complete in other respects. It was shown that the cost of construction in Tomahawk was in some instances lower than the basis used by the staff The present case does not admit of any careful review of the actual investment or of the financial condition of the plant, but part of the difference of value appears to be due to a change in prices of material and labor between the time of building the plant and the period taken by the staff as a basis for unit prices. It does not seem to be necessary to analyze the valuation very closely. For purposes of this case it may be satisfactory to base our computations of interest and depreciation upon a value of $40,000.

In order to determine the justice of the rates for fire service, it is necessary to apportion the property as between fire and general service. Following is the apportionment:

Classification.	Fire service.		All other service.		Total.	
	Cost new.	Pres. value.	Cost new.	Pres. value.	Cost new.	Pres. value.
1. Land	$325	$325	$275	$275	$600	$600
2. Wells, intakes and suctions	2,752	2,549	2,252	2,086	5,004	4,635
4. Distribution system	14,784	14,419	9,829	9,555	24,613	23,974
5. Pumping plant equip.	2,380	1,332	2,028	1,135	4,408	2,467
6. Bldgs. and misc. struct.	1,053	741	953	674	2,006	1,415
8. Tools, implements, etc.	134	67	134	67	268	134
Total, items 1-8.	$21,428	$19,433	$15,371	$13,792	$36,899	$33,225
10. Add 12% for engineering, etc.	2,571	2,332	1,857	1,655	4,428	3,987
Total, items 1-10.	$23,999	$21,765	$17,328	$15,447	$41,327	$37,212
11. Stores and supplies	1,279	1,279	1,204	1,204	2,483	2,483
Total, items 1-11.	$25,278	$23,044	$18,532	$16,651	$43,810	$39,695
Percentage	*58%*	*58%*	*42%*	*42%*	*100%*	*100%*

The reports filed by the respondent have been very incomplete and fail to show the total operating expenses. The only expenses reported are as follows:

PUMPING.

	1909.	1910.	1911.
Operating labor	$1,400 00	$1,250 00	$1,250 00
Fuel	1,368 75	1,100 20	1,433 02
Pump. sta. sup. and exp	97 50	232 88	218 12
Maint. of pump. equip	.....	66 90	.....
Maint. of bldgs., etc	.....	.....	74 38
Total	$2,866 25	$2,649 98	$2,975 52

No separation of pumping station labor has been made as between boiler and pump labor, but the total pumping expenses appear to have been correctly reported. All other work in connection with the water works is done by city officials or employes, and no accurate statement of expenses other than pumping could be obtained. It seems clear that such expenses, however, have been very low.

The mayor receives no salary, although he seems to have devoted considerable time to the supervision of construction work and the purchase of supplies, as well as exercising general supervision of the plant. The treasurer has charge of such records as are kept and collects the water rent semi-annually. He states that if all of this work could be handled at one time, not more than three days would be required for its performance. As it is, the city authorities estimate that the equivalent of one week is devoted to the affairs of the water plant by the treasurer annually. They estimate that the clerk devotes even less time to the business of the plant than does the treasurer. Each of these officials receive a salary of $400 per year, but only a part of their time is spent in the service of the city.

All repairing in the pumping station appears to have been done either by employes of the water department or by outside help whose wages have been charged to that department. All maintenance and repair work outside of the station seems to have been done by city employes under the direction of the mayor and the street commissioner.

It was stated by representatives of the city that the street commissioner devoted about one month of each year to work for the water department. He receives $600 per year and is steadily employed. Laborers for outside work are hired and paid directly by the city. Services have all been put in at the expense of consumers and are maintained by them.

Although it is not possible to state definitely to what the expense of operating and maintaining the water utility in question amounts, a comparison with other utilities similarly controlled and operated will probably give results approximately correct.

Including plants which reported on the class B and condensed form reports to the Commission for the year ending June 30, 1909, nineteen plants in cities comparable to Tomahawk had an average pumpage expense of $2,335.20. Fourteen of these reported distribution expenses amounting to an average of $116.30, but for nine class B plants the average was $135.88. All other expenses have been included under the heading of general expenses, and the average was $336.55, with an average for the ten class B plants reporting, of $359.58. In the absence of any exact information concerning the expenses at Tomahawk, the best that can be done seems to be to assume expenses at about the average for similar plants, especially as there seem to be no unusual conditions at Tomahawk which would vitiate such a comparison.

On such a basis the expenses of the utility seem to be about as follows, including commercial and undistributed expenses under the head of general:

Pumping	$2,975.52
Distribution	125.00
General	350.00
Total direct operating expenses	$3,450.52

In making a statement of operating expenses it will probably be found best to make provision for interest, depreciation, and taxes at the rate of 6½ per cent upon a value of $40,000. It is true that no bonds or other interest bearing evidences of indebtedness occasioned by the water plant are at present outstanding. All bonds have been paid by the city, but we are not able to state how much of these have been paid by money raised by taxation. Up to 1908 no separate record whatever was kept of water works expenses, and only a very imperfect record since that date. It seems, though, that the greater part of these bonds were paid by the city with funds raised by taxation. If the city has paid this debt by taxation, the failure to include interest among operating expenses favors water consumers at the expense of taxpayers. Taxes should also be included in operating expenses, as outlined in *Dick et al. v. Madison Water Comm.*

1910, 5 W. R. C. R., 731. It was stated by representatives of the city that taxes in the city of Tomahawk had been about 3 per cent of the assessed valuation for a number of years, which would indicate that a rather high tax rate should be considered in connection with water utility expenses, but in view of all the circumstances it is believed that 6½ per cent upon a valuation of $40,000 will make sufficient provision for interest, taxes and depreciation.

As far as a detailed statement can be made, the following seem to represent the total expenses which should be met by the utility:

Pumping	
Pump and boiler labor	$1,250.00
Fuel	1,433.02
Supplies and expenses	218.12
Maintenance	74.38
Distribution	125.00
General	350.00
Taxes, interest and depreciation	2,600.00
Total	$6,050.52

An accurate apportionment of the foregoing into demand and output expenses is impracticable because of the lack of detail in the reports. An apportionment can, however, be made which will be sufficiently accurate to answer the purposes of this case as a basis for rates. This shows that of operating expenses, aside from taxes, depreciation and interest amounting in all to $3,450.52, $1,892.96 are demand, and $1,557.56 are output expenses.

Output expenses are practically altogether expenses of general service, since in actual operation very little water is pumped for fire protection. Demand expenses may be divided on the basis of the maximum demands of the two branches of service, or 54.5 per cent to fire and 45.5 per cent to general service. Interest, depreciation and taxes are divided between fire and other service according to the apportionment of the property, 58 per cent to fire and the rest to general service. The result of this division of expenses is shown below:

	Total.	Fire.	General.
Output	$1,557 56	.....	$1,557 56
Demand	1,892 96	1,031 66	861 30
Interest, taxes and depreciation	2,600 00	1,508 00	1,092 00
Total expenses	$6,050 52	$2,539 66	$3,510 86

The earnings from these two branches of service have been as follows:

	Earnings from	
	Fire service.	All other service.
Year ending June 30, 1909	$900 00	$3,973 00
Year ending June 30, 1910	975 00	3,846 00
Year ending June 30, 1911	1,025 00	3,961 00

The total revenues during the last fiscal year were thus $4,986, or more than $1,000 less than total operating expenses if a reasonable allowance for interest is made. The total revenue from general service is about $450 in excess of the cost of that branch, and the revenue from hydrant rentals is over $1,500 less than the cost of fire protection.

Of the 6½ per cent which has been assumed to be sufficient to cover interest, taxes and depreciation, about 4 per cent, or $1,600, would probably be enough to meet all interest payments. In this case, however, the entire bonded debt has been paid, so that no interest actually has to be paid. The indebtedness has been paid out of the general fund of the city. If the amount required to retire the bonds was raised by taxation so that the debt had been paid by the city, as distinct from the water department, it would seem to be just to reduce the charge to the city for fire protection by about the amount of the interest, which would indicate that the present charge for fire protection would be approximately correct.

On the other hand, if the funds which were used to retire the bonds were made available partly or wholly because of a surplus from the operation of the water plant, the debt has been paid to that extent by water consumers and the general body of users should share in the benefits resulting from the payment of the debt.

We have no record of the source from which the money for paying the debt was actually obtained, and the city authorities have not, until the past three years, kept any separate record whatever of the business of the water department. Since that date there has been a surplus each year, if no allowance is made for interest. With interest computed at 4 per cent, however, there has been an actual deficit, due to the fact that the city has not paid its full share for fire protection. If this condition prevailed during the earlier years of operation of the plant,

as there seems reason to believe was the case, the revenues from the plant have been insufficient to meet the real operating expenses. If the city had paid its proper share for fire protection, there would have been a small surplus during the past few years. If this condition prevailed during the earlier years, it follows that private consumers should be given some credit for creating a surplus to be used for retiring the debt. As to the actual conditions during these years, however, no one can do more than guess. It is quite generally true that the general business of water utilities develops slowly and gradually. If this was true at Tomahawk, it is unlikely that a full record of revenues and expenses during the life of the plant would show any considerable surplus arising because of the charges made to general water users. If this is a correct statement of conditions, it seems that the city and not the water department had paid the debt. In such a case it seems only equitable that the city should be allowed some form of return. Either the private consumers and the city can be charged their full share, including interest, depreciation and taxes in operating expenses, and the surplus which will be the amount of the interest turned over to the general fund, or the charge for fire protection may be reduced by the amount of the interest, which will accomplish the same purpose. For practical purposes, therefore, it seems that the amount which the city pays for fire protection is so nearly the difference between the total cost of the service and the amount of interest included in our estimate of expenses that no change need be made in this rate.

This brings up the question of what constitutes a reasonable schedule of rates for general service. As shown above, the revenue from this branch of service has varied within the last three years from $3,846 to $3,973. The estimated cost of this service is $3,510.86, or about $400 per year less than the annual revenue. Two questions relating to these rates were raised by the complaint, first, whether the schedule rates are being enforced, and second, whether the rates as shown in the schedule are reasonable. A complete and thorough review of the consumer records fails to show more than two or three possible instances of failure to apply the schedule, and these appear to be due to errors of classification rather than to intentional disregard for the schedule. A little stricter application of the schedule will remedy this difficulty, as far as the scheduled rates apply at all.

There are a number of consumers, such as factories and mills, livery barns, and schools for which the schedule adopted by the city made no provision, and for these uses special rates have been fixed by the council from time to time as individual consumers were added, and there seems to be some ground for the charge of discrimination as applied to these uses. Some of these are uses to which it would be difficult to adapt a schedule of flat rates.

Complainants also criticise the administration for its failure to enforce the provision of the schedule which provides for a charge of 50 cts. per room for each room in excess of eight in residences and for its failure to make any charge for water used for sprinkling lawns and gardens. Representatives of the city admitted that the original schedule of rates provided for a charge for additional rooms, but stated that this feature had not been enforced because the use of water was not determined by the number of rooms, but by the number of people using the service and the nature of its use. A charge per room is a very common feature of flat rate water schedules, but there is a question whether such a charge can generally be justified on the ground that the amount of water used varies with the number of rooms. As a portion of a flat rate schedule a room charge may have a place, but, so far as available information goes at least, there is nothing here to prove that, when other things are equal, a consumer in a large house will use more water, under the flat rate plan, than a consumer in a smaller house.

With regard to sprinkling lawns and gardens the situation is different. The argument of the city in support of its policy of making no charge for water used for this purpose was not that such use did not increase the amount of water used, but that the city should furnish this water free, for the purpose of beautifying the city. There seems to be no necessity for any extended argument to show the fallacy of this position. Furnishing this water involves expenses, which must be met in one of three ways:

1. By a direct charge for sprinkling.

2. By charging the city for this in addition to the charge for water used directly by it.

3. By charging other general users more than their proper share.

The city is not paying for this at present and it would be unjust to compel the general public to pay for water used for special

private purposes. Similarly it would not be equitable to make other general users pay a higher rate in order that lawns may be watered free of charge. An extension of this principle of free water to other general uses will show its incorrectness. A charge should be made for this use which will pay for the water used and such part of the demand expenses as are properly chargeable to it. The most satisfactory way of supplying this water would undoubtedly be through meters. The flat rate fixed for this service by the order in this case, however, is believed to be equitable, as far as such a rate can be made from the information at hand.

The reasonableness of the scheduled rates is a matter which is difficult of final settlement at this time. Little or no effort seems to have been made by the city to conform to the Commission's system of accounting. As a result the operating expenses given above are largely an estimate. When proper accounting methods have placed the records of the utility in such shape that it is possible to determine the real cost of running the business, the time for whatever readjustment may prove necessary will have come. The comparative methods used in arriving at the foregoing estimate of expenses are not sufficiently reliable to be accepted as conclusive, due to the deviation of local conditions from the average and to the fact that the accounting methods of the plants necessarily used for comparative purposes were themselves very imperfect and the average obtained may not be the average of real expenses. Under these conditions an excess of $400 in the entire revenues from general service above the apparent cost of that service does not seem sufficient to warrant a reduction at this time. Neither do the various elements in the schedule seem to be unreasonable. Following is the schedule:

Kitchen faucets	$4.00 per year
Store faucets	4.00 "
Private closets	1.00 "
Private baths	2.00 "
Hotel faucets	7.50 "
Public closets	5.00 "
Public urinals	5.00 "
Barber shop faucets	6.00 "
Pressure on beer	2.00 "
Boilers	2.00 "
Saloon faucets	8.00 "
Public baths	6.00 "
Meat markets	6.00 "
Horses and cows	1.00 "
Offices	3.00 "

Such instances of unfairness as exist appear to be due to difficulties inherent in the flat rate plan rather than to defects of the particular schedule in use.

The complainants argue that meters should be generally installed by the water department. If this were practicable it would be highly desirable, but a general order for the installation of meters does not seem to be justified at this time. Very few of the houses and only a part of the business places have cellars or other frost proof places where meters could be placed, and the general installation of meters would involve a large outlay which the water department is hardly prepared to meet. On the other hand, there are certain consumers whose use of water is almost impossible of estimate and to which use it is difficult to equitably apply the schedule of flat rates shown above. These include such uses as livery barns, saw mills, laundries, and schools. Special rates have been made for each consumer in these classes, about twenty in all. In order to avoid discrimination, these uses should be charged for according to a definite schedule, and where the uses are not easily included under the existing schedule the best method of dealing with them appears to be by means of a set of meter rates. At present there is no meter rate in effect in Tomahawk.

In fixing a schedule of rates for metered service it is necessary to take into consideration what amount of water would be likely to be delivered if all consumers were supplied through meters. At present the city has no record of the amount of water pumped, but from data furnished by the city and from that obtained by the Commission's engineer we estimate the total indicated pumpage at 116,680,000 gallons per year. A test of the pumps by members of the staff showed that the average loss due to slip is about 10 per cent of the total indicated pumpage, making the total amount delivered to the distribution system about 105,000,000 gallons per year. Until a counter is placed on the pump and a recording pressure gauge installed, any statement of total pumpage is liable to error and these appliances should be installed at an early date. Even in cities where practically all services are metered, the amounts of water used differ so greatly that comparative data have only a very limited value. If all services in Tomahawk were metered, however, it is not probable that the actual sales of water would exceed 30,000,000 gallons annually.

The estimated expenses of general service were found to be:

Direct operating expenses—output	$1,557.56
" " " —demand	861.30
Taxes, interest and depreciation	1,092.00
Total	$3,510.86

Apportioning taxes, interest and depreciation between output and demand according to the results obtained in the apportionment of direct operating expenses, we find the total expenses of general service to be:

Demand expenses	$1,459.72
Output expenses	2,051.14
Total	$3,510.86

As services have always been put in by consumers, no record of the number of services of different sizes exists, but city officials stated that a very large part of the services were only a half inch in diameter. In some cases these small services are being removed and replaced by larger pipes. The information furnished by the city shows a total of 449 service connections, exclusive of hydrants, although the number of users is considerably greater. Most of these are services which, if metered, would be supplied through a 5/8" meter. Public buildings, schools, mills, etc., would probably require larger meters, although we have no means of determining at this time what sizes would be used. If all services were to be metered, it would be necessary to fix rates at a point which would not only yield the amount of the present cost of general service, but an additional amount adequate to cover the expense of interest and depreciation on meters and of reading and maintaining meters. Without knowledge of what type or make of meters would be used, it is not possible to state just how much this should amount to, but the following seems to be about normal:

Size of meter.	Interest and depreciation.	Reading and maintaining meter.
5/8"	$1 00	$0 40
3/4"	1 50	40
1"	2 50	50
1½"	4 00	75
2"	5 00	1 00
3"	10 00	2 00

As we have no way to determine the number of meters of each size, we cannot state with any degree of accuracy how much would be needed for interest and depreciation if all services were metered. By far the largest part will be 5/8" meters, however, and $500 per year will probably be a sufficient allowance for interest and depreciation. For interest, depreciation, reading, and maintenance the total cost will be approximately $700 per year.

Total expenses of general service then would be:

Meter expenses	$700.00
Demand "	1,459.72
Output "	2,051.14
Total	$4,210.86

The lack of definite knowledge concerning conditions in Tomahawk will require that any meter rate made at present shall be a tentative rate, subject to revision as the introduction of meters and the keeping of more complete records show the need of change. Probably the most satisfactory form of meter schedule will consist of a quarterly service charge and a charge for water used, with the unit charge decreasing with increased use.

Assuming a total use with meters of 4,000,000 cubic feet, probably 2,500,000 cu. ft. would pay the rate charged for uses up to 5,000 cu. ft. per quarter; part of the remainder would pay the rate for the next 5,000 cu. ft. per quarter; and part the excess rate.

About the most satisfactory meter rate that can be made under present conditions seems to be as follows:

Service Charges.

Size of meter.	Quarterly charge.
5/8"	$0.75
3/4"	1.00
1 "	1.50
1½"	2.00
2 "	3.00
3 "	6.00

Charge for Water.

For the first 5,000 cu. ft. per quarter	8c per 100 cu. ft.
For the next 5,000 " "	6c " "
For the excess	4c " "

The service charge, with all services metered, would produce a revenue of approximately $1,500 per year, varying somewhat with the number of large meters. The charge for water, assum-

ing annual sales of 4,000,000 cu. ft., would yield from $2,500 to $2,800, depending upon the amount falling in each rate class. Total revenues would be about as needed to meet expenses.

About all that can be done in the way of adjusting rates at this time, then, seems to be to leave flat rates as they are, with the addition of a charge for lawn sprinkling, and to provide a meter rate, as outlined above, for certain classes of services.

It seems evident that all industrial uses of water should be metered, as it is impossible to make even an estimate of how much water they take under flat rates. All consumers who are subject to special rates, such as schools, livery barns, etc., should also be metered.

It would undoubtedly be advisable to meter certain other users, but an order requiring this may well be postponed until such time as a more complete investigation can be made and until the water department keeps its records correctly.

The complainants in this matter further allege that the supply of water is inadequate and that patrons are unreasonably limited in their use of water, but that the use of meters would lessen the waste and make the present supply sufficient.

Various causes have been ascribed for the shortage of water, of which the more important which have been mentioned are:

1. The inadequacy of the supply from the wells to meet reasonable demands.
2. Excessive use of water for sprinkling purposes.
3. The existence of a number of 2″ mains supplying several consumers.
4. The use of ½″ service pipes.

It is believed that, so far as any complaint concerning adequacy of the water supply has to do with the capacity of the wells, this will be overcome by enlarging one of the wells, as has recently been done. This will also probably overcome the difficulty which was encountered during sprinkling hours.

Two inch mains are in use as follows:

On Lincoln ave.—one and one-half blocks—fourteen consumers.

On Spirit ave.—two blocks—twenty-two consumers.

On Washington ave.—two blocks—fifteen consumers.

On 4th st. and Merrill ave.—three blocks—seven consumers.

On Somo ave.—one block—eleven consumers.

It is not improbable that a part of the failure to secure sufficient water during sprinkling hours has been due to the use of these

small mains, although it was shown that during these hours pressure had sometimes been lowered at the pumping station because of shortage of water. Until the increased supply due to enlarging one well is in use during the dry period, it is not possible to determine to what extent the small size of mains and services is responsible for lack of pressure. It may be that a pressure survey will have to be made in order to ascertain the degree, if any, to which the present distribution system is inadequate.

Water used for street sprinkling should be paid for. City officials testified that no water is used for this purpose at present, owing to the difficulty of meeting the other demands. In case water is used for this purpose in the future, a rate must be established for that use.

Complainants contend that a charge should be made for hydrants installed on private property, aside from the general charge to the city for fire protection. In its opinion *In re Appl. of Oconto City Water Supply Company for Valuation of its Property and Other Relief,* 1911, 7 W. R. C. R. 497, 568, the Commission held that no such charge should be made. Water actually used should be charged for, but this is provided for in the rates fixed by the order in this case.

Emphasis should be placed upon the necessity of the water department keeping its record according to the system of accounting prescribed by the Commission. Little or no effort has so far been made in this direction. It may be expected that more complete records will disclose a necessity of modifying or extending this order, and if that proves to be the case, the Commission will make such further investigation and order as may appear necessary. For the present the provisions of the following order seem to cover all matters that can be settled:

IT IS THEREFORE ORDERED:

1. That the respondent, the city of Tomahawk, have counters placed upon both of the pumps in its pumping station, and that it cause a record to be kept of day and night pumpage of each pump separately for each day.

2. That it have a recording pressure guage installed in the pumping station and one in the city hall, and that all records of pressure be preserved.

3. That meters be installed upon all services which supply

water to consumers, including public buildings, who are not subject to the following schedule of flat rates.

4. Flat rates shall be :

Kitchen faucets,	$4.00 per year.
Store faucets,	4.00 " "
Private closets,	1.00 " "
Private bath tubs,	2.00 " "
Hotel faucets,	7.50 " "
Public closets,	5.00 " "
Public urinals,	5.00 " "
Barber shop faucets,	6.00 " "
Pressure on beer,	2.00 " "
Boilers,	2.00 " "
Saloon faucets,	8.00 " "
Public bath tubs,	6.00 " "
Meat markets,	6.00 " "
Horses and cows,	1.00 " "
Offices,	3.00 " "
Lawn sprinkling,	2.00 " "

5. Meter rates shall be:

Service charge:

⅝ inch meter	$0.75 per quarter.
¾ " "	1.00 " "
1 " "	1.50 " "
1½ " "	2.00 " "
2 " "	3.00 " "
3 " "	6.00 " "

Charge for water:

For the first 5,000 cu. ft. used through a meter, per quarter,—8 cts, per 100 cubic feet.

For the next 5,000 cu. ft.—6 cts. per 100 cubic feet.

For all over 10,000 cubic feet per quarter, 4 cts. per 100 cu. ft.

6. Meters shall be installed and maintained at the expense of the water department.

7. Rates as fixed by this order shall be strictly enforced, without any departure from the schedule.

RHINELANDER PAPER COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY, MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Sep. 12, 1911. Decided Oct. 28, 1911.

Petitioner alleges unusual and exorbitant charges on three carloads of sulphite pulp shipped from Rhinelander to Rothschild, which is intermediate between Rhinelander and Grand Rapids, Wis. Respondents formerly had in effect joint commodity rates of 7 cts. per 100 lbs. for the transportation of sulphite or wood pulp in carloads, minimum weight 40,000 lbs., between Rhinelander and Grand Rapids, via Heafford Jct., and applicable as a maximum rate on shipments to or from intermediate points. These rates were discontinued and the local Wisconsin distance tariff, class rates, substituted therefor. Petitioner prays that just and reasonable joint rates, not exceeding 7 cts. per 100 lbs. for sulphite pulp in carload lots, be put in effect from Rhinelander to Grand Rapids, Port Edwards, Nekoosa, and Stevens Point and intermediate points, and further asks a refund of overcharges.

Held: The class rate applicable to the shipments in question is excessive. Respondents are ordered to restore the joint commodity rate of 7 cts. per 100 lbs. between those points where the one is situated upon the line of one road and the other is situated upon the line of the other road. This order is not to apply between points situated upon either road. Refund is ordered on this basis.

The petitioner is a Wisconsin corporation engaged in the manufacture of print paper and sulphite pulp at Rhinelander, Wis. It alleges, among other things, that the respondents heretofore and for an extended period of time in and by their joint commodity tariff (M. St. P. & S. S. M. G. F. D. No. 9000) issued, published and continued in force and effect a rate of 7 cts. per 100 lbs. for the transportation of sulphite or wood pulp in carloads, minimum weight 40,000 lbs., between Rhinelander, Wis., and Grand Rapids, Nekoosa, Port Edwards and Stevens Point, Wis., via Heafford Jct., Wis., and applicable as a maximum rate on shipments to or from intermediate points; that Rothschild, Wis., is a point on the line of the respondent, the Chicago, Milwaukee & St. Paul Railway Company, intermediate Rhinelander,

Wis., and Grand Rapids, Wis., under said joint tariff above named, and to which the said rate of 7 cts. per 100 lbs. between Rothschild, Wis., and Grand Rapids, Wis., applied as a maximum on shipments of sulphite pulp; that by item 170–A of supplement No. 18, effective April 15, 1911, to said joint commodity tariff No. 9,000, the respondents canceled and discontinued said joint commodity rate of 7 cts. per 100 lbs. on sulphite pulp between Rhinelander and the other Wisconsin points named and intermediate points, and provided that the local Wisconsin distance tariff, class rates, should apply between Rhinelander and said points; that said cancelation and tariff provisions, as above set forth, were re-issued and continued in effect by supplement No. 20, effective June 1, 1911, to said joint commodity tariff No. 9,000, and the same are still in effect; that the local Wisconsin distance tariff, class rates, and the charges thereunder, as provided by the respondent's tariffs and supplements and classifications, are and each of them is unjust, unreasonable, illegal, unusual, and exorbitant as rates and charges for the joint transportation of sulphite pulp in carloads between Rhinelander, and Grand Rapids, Nekoosa, Port Edwards and Stevens Point and intermediate points; that said charges now in effect are and each of them is unjust, unreasonable, illegal, unusual and exorbitant as compared with the joint commodity rate heretofore in effect over respondents' lines, and in dependence upon which the petitioner has sought and secured shipping business and made shipments, and as compared with the rate of the Chicago & North Western Railway Company under its tariff G. F. D. No. 10964–B, of 7 cts. per 100 lbs. for the transportation of pulp in carloads between Rhinelander and Rothschild, and also as compared with the rates of respondents generally for the transportation of sulphite and wood pulp in carloads for like distances in this state; that a reasonable joint rate for the transportation of sulphite and wood pulp in carloads, minimum weight 40,000 lbs., between Rhinelander, and Grand Rapids, Port Edwards, Nekoosa and intermediate Wisconsin points over respondents' lines by way of Heafford Jct., would not exceed 7 cts. per 100 lbs.; that the petitioner, during the month of June, 1911, shipped over the lines of the respondents from Rhinelander to the Marathon Paper Mill Company at Rothschild, Wis., three carloads of sulphite pulp, and that the respondents charged, exacted and collected for the transportation thereof a rate of 11½ cts. per

100 lbs., and charges as follows, which rates and charges and all of them were and have been paid by the petitioner:

June 9, 1911, one car, Wt. 52,800 lbs. at 11½ cts.....	$60.72
June 10, 1911, one car, Wt. 49,100 lbs. at 11½ cts.....	56.47
June 10, 1911, one car, Wt. 57,100 lbs. at 11½ cts.....	65.67
Total	$182.86

Petitioner further alleges that the rates and charges exacted on said shipments, and each of them, was and is, to the extent that the same exceeds the rate of 7 cts. per 100 lbs. and charges at the rate of 7 cts. per 100 lbs., illegal, unusual and exorbitant, and that the amount of said overcharge on said three carloads is the sum of $71.56. Wherefore, petitioner prays that an order be made requiring the respondents to publish and put in force and effect just and reasonable joint rates for the future transportation of sulphite pulp in carloads from Rhinelander to Grand Rapids, Port Edwards, Nekoosa and Stevens Point and intermediate points, not exceeding 7 cts. per 100 lbs., and that the respondents be required to refund to the petitioner the aforesaid overcharge of $71.56.

The respondent railway companies, by separate answers, admit the formal allegations of the petition, and the charges in the tariffs as therein alleged, but deny that the charges exacted were excessive.

The matter came on for hearing on Sep. 12, 1911. Petitioners were represented by *Drew & Jameson.* The respondent Chicago, Milwaukee & St. Paul Railway Company by *F. G. Wright,* its assistant commerce counsel, and the Minneapolis, St. Paul & Sault Ste. Marie Railway Company by *A. H. Bright,* its general counsel.

Prior to April 15, 1911, the respondent railway companies had in effect a joint commodity tariff naming a rate of 7 cts. per 100 lbs. on sulphite pulp between Rhinelander, and Grand Rapids, Nekoosa, Port Edwards and Stevens Point, Wis., by way of Heafford Jct., Wis., which was applicable as a maximum rate on shipments to or from intermediate points. Rothschild is a point intermediate Rhinelander and Grand Rapids. On said date the respondents' supplement No. 18 to its joint commodity tariff, carrying said rate of 7 cts. per 100 lbs., was canceled. This cancelation was due to the fact that the respondent Minneapolis, St. Paul & Sault Ste. Marie Railway Company

desired to cancel all joint tariffs between points on its own line. In doing this, the effect on intermediate points was not considered. The petitioner could have shipped over the line of the Chicago & North Western Railway Company upon a 7 ct. rate, but the service over such line is not satisfactory for the reason that there are practically four terminals where it would be necessary to do switching in order to reach Rothschild, while on the respondent's lines there is but one terminal at which switching is done. Consequently, the delay in transportation over the line of the Chicago & North Western Railway Company's line renders the use thereof by the respondent impracticable. We can see no reason why the joint rates in effect prior to April 11, 1910, between points, one of which is situated on the line of the one road and the other on the line of the other road, should not be restored. From the testimony, it appears that the Minneapolis, St. Paul & Sault Ste. Marie Railway Company is willing to publish joint rates between such points.

We find that the lowest rate in effect between Rhinelander and Rothschild over the respondent's lines is the regular class "C" distance tariff rate. The distance from Rhinelander to Heafford Jct. is seventeen miles. Class "C" rate for this distance is 4½ cts. per 100 lbs. The distance from Heafford Jct. to Rothschild is forty-nine miles, and such class rate is 7 cts. per 100 lbs. for such distance. This makes the through rate 11½ cts., which was actually charged.

The class rate applicable to shipments in question is excessive. In fact, such rates would be prohibitive of the movement of such traffic.

We therefore find and determine that the through rate of 11½ cts. exacted of the petitioner for the aforesaid shipments is unusual and exorbitant and that a reasonable rate to have exacted therefor is the sum of 7 cts. per 100 lbs.

NOW, THEREFORE, IT IS ORDERED, That the respondent railway companies restore the rate of 7 cts. per 100 lbs. between those points where the one is situated upon the line of one road and the other is situated upon the line of the other road. This order is not to apply between points situated upon either road.

IT IS FURTHER ORDERED, That the respondents be and the same are hereby authorized and directed to refund to the petitioner $71.56 overcharge upon the aforesaid shipments. The first named respondent will make such payment and collect from its co-respondent its proportionate charge thereof.

NORTHERN WOOD COMPANY
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Nov. 1, 1911.

Petitioner alleges excessive and unreasonable charges on a carload shipment of slabs from Hawkins to Milwaukee, Wis. Respondent charged the sum of the locals. Later a through rate of 5 cts. per cwt. was established.

Held: A shipper is not entitled to a refund merely because a railway company amends a tariff by lowering a rate which a shipper was obliged to pay for shipments made prior to the amendment. In the present case the sum of the local rates was exorbitant and a reasonable rate for the transportation service rendered would have been the through rate of 5 cts. per cwt. as subsequently established. Refund is ordered on this basis.

The petitioner in the above case its engaged in the wood business with offices at Chicago, Ill. It alleges that the respondent railway company collected an excessive and unreasonable rate on certain shipments of slabs from Hawkins to Milwaukee, Wis.; that on March 4, 1911, petitioner shipped from Hawkins, Wis., to the Standard Brick Company at Milwaukee, Wis., one car of slabs, on which the respondent railway company assessed charges on the basis of its local rates from Hawkins to Prentice, Wis., i. e., 3½ cts. per cwt., minimum 35,000 lbs., plus its local rate from Prentice, Wis., to Milwaukee, Wis., which is 4½ cts. per cwt., minimum 40,000 lbs., making the total charges on said car $30.25; that the rates from Prentice and Ladysmith, Wis., to Milwaukee, carried in respondent's tariff G. F. D. No. 9635, were 4½ cts. per cwt., but later, in supplement No. 9 to that tariff, effective March 31, 1911, a through rate of 5 cts. per cwt. was established from Hawkins to Milwaukee; that the charges exacted of petitioner by the respondent are excessive and unreasonable in view of the above facts, and that petitioner is injured to the amount of $10.25 on such shipment, which sum is the amount representing the difference between charges assessed and what charges would have amounted to had the rate of 5 cts. per cwt., later established, been applied thereon.

The respondent, answering the petition, states that it is willing to adjust the claim if after investigation this Commission finds it proper to do so and so orders.

In *Stevens & Jarvis Lbr. Co. v. C. St. P. M. & O. R. Co.* 1907, 2 W. R. C. R. 131, 134, it is said:

"A shipper is not entitled to a refund merely because a railway company amends a tariff by lowering a rate, which a shipper was obliged to pay for shipments made prior to the amendment. Such a reduction, independently of other considerations, should not be held to be an admission on the part of the railway company that the prior rate was either unusual or exorbitant, otherwise the policy of the law, of which the statute under consideration is an amendment, would be in a great measure defeated.

"This statute was intended to meet exceptional cases and provide relief in case of exceptional hardships, and not designed to penalize railway companies for voluntarily reducing rates where commercial or other conditions warranted a reduction. Evidently, if a railway company were subject to a rebate upon all shipments made during a period of six months prior to the reduction of any rate at which the shipments moved, we should find few alterations in schedules lowering rates except those ordered by the Commission upon complaint of shippers or upon investigations by the Commission upon its own initiative.

"It becomes necessary to revise tariffs from time to time to meet the ever changing conditions of commercial life. The law should not be so construed or administered to deter railway companies from exercising the right to reduce their charges upon their own volition when conditions require a reduction."

After a careful investigation of the various factors that enter in the question of reasonableness of the particular charges for transportation services in question, we are convinced that the sum of the local rates in effect over the respondent's lines for shipments of slabs in carload lots from Hawkins to Milwaukee, Wis., was an excessive charge, when considered in connection with the rate in effect to Milwaukee and other points within the state, and the joint rate of 5 cts. per cwt., now in effect, will yield ample compensation to the railway company for the services rendered. Under the circumstances, we think that the rate of 8 cts. per cwt., exacted from the petitioner by the respondent for the above shipment of slabs, is exorbitant, and do further find that a reasonable rate for the services rendered by the respondent in transporting the said carload of slabs from Hawkins to Milwaukee would have been 5 cts. per cwt.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the Northern Wood Company the sum of $10.25.

THE WISCONSIN RIVER PAPER & PULP COMPANY
vs.
CHICAGO & NORTH WESTERN RAILWAY COMPANY,
GREEN BAY & WESTERN RAILROAD COMPANY.

Decided Nov. 2, 1911.

Petitioner alleges unjust and unreasonable charges on a shipment of two carloads of wood pulp from Little Rapids to Stevens Point, Wis. At the time the shipments moved lower rates were in effect between Stevens Point and Fox river points, including Kaukauna and De Pere, Little Rapids being intermediate. Subsequently the same rates were established between Little Rapids and Stevens Point. From the evidence it is obvious that the omission from the schedule of the lower rate on wood pulp moving from Little Rapids to Stevens Point was due either to an oversight in the publication of the tariff or to the fact that theretofore no such commodity had moved between such points.

Held: The rate exacted was unusual under the circumstances and a reasonable charge would have been the rate of 6 cts. per cwt. now in effect. Refund is ordered on this basis.

The petitioner is a corporation engaged in the manufacture of paper at Stevens Point, Wis. It alleges that on June 29, 1911, the respondents transported two carloads of wood pulp from Little Rapids, Wis., to Stevens Point, Wis., for the petitioner and charged therefore $111.44, being at a rate of 8 cts. per 100 lbs. for a total weight of 139,300 lbs.; that on said date the rate in force over respondents' lines for the transportation of wood pulp in carload lots from Little Rapids, Wis., to Stevens Point, Wis., was 8 cts. per 100 lbs. as shown in C. & N. W. G. F. D. No. 8115—C, supplement No. 5; that a rate of 6 cts. per 100 lbs. on wood pulp, minimum weight 50,000 lbs., between Stevens Point and Fox river points, including Kaukauna and De Pere, was provided in said tariff; that Little Rapids is located between Kaukauna and De Pere; that as these shipments moved by way of Green Bay, the 6 ct. rate applicable from Kaukauna to Stevens Point should have been provided to apply from Little Rapids, inasmuch as it applied from Kaukauna, a point farther distant from Stevens Point; that the Chicago & North Western Railway Company issued, effective Aug. 20, 1910, its tariff G. F. D. No. 8115—D, which provided a 6 ct. rate, minimum weight

50,000 lbs., to apply on wood pulp between Little Rapids and Stevens Point; that subsequent to June 29, 1911, that is to say, from and after Aug. 15, 1911, a rate of 6 cts. per 100 lbs., minimum weight 50,000 lbs., has been in force over respondents' lines for the transportation of wood pulp in carload lots from Little Rapids to Stevens Point as shown in C. & N. W. Ry Co's. G. F. D. No. 8115—E; that the charges paid by the petitioner amounted to $111.44 at a rate of 8 cts. per 100 lbs. for the transportation of wood pulp from Little Rapids to Stevens Point and are unjust and unreasonable to the extent that they exceed an amount computed at a rate of 6 cts. per 100 lbs., which latter rate was intended by the railroads interested to apply from Little Rapids to Stevens Point in accordance with the provisions of C. & N. W. G. F. D. 8115—D, which was withdrawn and never become effective; that said rate of 6 cts. per 100 lbs. was in force for the transportation of wood pulp from Little Rapids to Stevens Point within approximately forty-five days after the petitioner's wood pulp was transported. Wherefore, petitioner prays that the respondents be required and directed to refund to it the sum of $27.86.

Chicago & North Western Railway Company, answering the petition, alleges that it is willing to make refund on shipments involved in excess of the 6 ct. rate, with the understanding that the Green Bay & Western Railroad Company will join therein. The Green Bay & Western Railroad Company, answering the petition, admits the allegations thereof and joins in the prayer of the petition.

The claim was submitted on the pleadings, papers and documents on file.

It is obvious that the omission from the schedule of the rate of 6 cts. per 100 lbs. on wood pulp moving from Little Rapids to Stevens Point was due either to an oversight in the publication of the tariff or to the fact that theretofore no such commodity had moved between said points.

We find and determine that the rate of 8 cts. per 100 lbs., exacted from the petitioner for the aforesaid shipments of wood pulp, was unusual under the circumstances, and that a reasonable rate to have charged for such services would have been the rate of 6 cts. per 100 lbs., now in effect. As alleged in the petition, it appears that the total number of pounds shipped amounted to 139,300 lbs., and the freight charges

paid therefor amounted to $111.44. If such charges had been assessed upon the basis of 6 cts. per 100 lbs., the same would have amounted to $83.58, or $27.86 less than was actually charged.

NOW, THEREFORE, IT IS ORDERED, That the respondents, the Chicago & North Western Railway Company and the Green Bay & Western Railroad Company, be and the same are hereby authorized and directed to refund to the petitioner the sum of $27.86 on account of the aforesaid shipment. The first carrier named will make the refund and collect from its co-respondent its proportion thereof.

OCONTO BREWING COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Aug. 1, 1911. Decided Nov. 2, 1911.

Petitioner alleges that respondent railway refuses to construct a spur track to its malting and brewing plant located near the city of Oconto, Wis. Petitioner submits plans showing four possible routes for the proposed track.

Held: The spur track in question is practically indispensable to the successful operation of the petitioner's business; its construction and operation is not unusually unsafe or dangerous; and it is not unreasonably harmful to public interest. Of the routes proposed that known as track No. 1 is the shortest and most direct, would be cheapest and easiest to build, and is the only track that would fully serve the brewing company's requirements. Respondent is ordered to construct such spur track along route No. 1. Petitioner is ordered to deposit with respondent company $1,300, the estimated cost of the track, and in addition $500 for the purchase of the necessary right of way, and to give the railway company a bond, to be approved by the Commission as to form, amount and surety, securing the railroad against any loss on account of any expense incurred beyond the amount of the deposit with the railroad.

The petition shows that the Oconto Brewing Company is a corporation organized and existing under and by virtue of the laws of the state of Wisconsin, and that it is engaged in the business of brewing and malting; that the above named railway company is a common carrier subject to the provisions of ch. 87 of Wisconsin Statutes of 1898 and acts amendatory thereto, and is likewise subject to the provisions of ch. 362 of the Laws of 1905 and acts amendatory thereto, and of ch. 352, Laws of 1907; that the petitioner is the owner and operator of a brewing and malting plant located on the following described property: Part of the southwest quarter of the southeast quarter, section 18, township 28, range 22, commencing at the northeast corner of the southwest quarter of the southeast quarter of section 18, township 28, range 22, thence running west 56 rods, thence south 12 rods, thence east 56 rods, thence north to place of beginning, containing 4 acres, more or less, and known as

part 1 of the southwest quarter of the southeast quarter of section 18, township 28, range 22, situated in Oconto county, Wis., the south line of said property being 700 feet from the north line of the right of way of said railway company's property; that the petitioner has built and fully equipped a brewing plant of 30,000 barrels capacity, and a malting plant of 20,000 bushels capacity; that said plants are in daily operation and that a large percentage of their output is shipped to petitioner's customers by railroad; that the main track of the said Chicago, Milwaukee & St. Paul Railway Company is located within two miles of petitioner's brewing and malting plant, and that for the successful operation of said plants it is practically indispensable that said railroad company provide a reasonably adequate and suitable spur track direct from its main track to and upon the grounds heretofore described and to the brewing and malting plant erected thereon, and that such spur track can be constructed and maintained without detriment to the public or to the said railroad company; that it would not be unusually unsafe and dangerous for the Chicago, Milwaukee & St. Paul Railway Company to provide and operate a reasonably adequate and suitable spur track from the main line of its railroad to and upon the grounds hereinbefore described and to the brewing and malting plant of petitioner; that it is impossible for the petitioner to successfully operate its plant at present, being compelled to haul its output to said main line and to haul its supplies from same; that there is no other railroad over which the petitioner can ship its output to market and receive its necessary supplies; and that said railway company, although requested by petitioner so to do, has failed and neglected and refused to operate and maintain a spur track to and upon the grounds and to the brewing and malting plant of petitioner, and has failed and refused and continues to so refuse to comply with the provisions of ch. 352 of the Laws of 1907. Wherefore, petitioner prays that the respondent be required to answer the charges set forth, and after due hearing and investigation that an order be made commanding said railway company to cease and desist from said violation of acts referred to in the petition and for such other and further order as the Commission may deem necessary and just in the premises.

In answer to the petition the respondent admits that the Oconto Brewing Company is a corporation organized and existing under and by virtue of the laws of the state of Wisconsin, and is engaged in the business of brewing and malting; that the respondent is a common carrier subject to the provisions of ch. 87 of Wisconsin Statutes of 1898 and acts amendatory thereto, and is likewise subject to the provisions of ch. 362 of the Laws of 1905 and acts amendatory thereto, and of ch. 352 of the Laws of 1907. As to the location of petitioner's plant and the extent of its business, respondent alleges that it has neither knowledge nor information sufficient to form a belief and therefore neither admits nor denies same, but demands that petitioner be held to the strict proof thereof. In answering the remainder of the petition the respondent admits that it operates a line of railroad near the point at which the petitioner alleges it owns and operates a malting and brewing business, but respondent denies that there is any reasonable necessity for the installation of a spur track, or that said spur track could be installed or operated as petitioner alleges without entailing upon the respondent company the maintenance of an unusually unsafe and dangerous track connection; and further answering the petition the respondent denies each and every allegation in said petition not admitted, denied or otherwise answered. Wherefore, respondent prays that the petition be dismissed

The hearing was held on Aug. 1, 1911, at the office of V. J. O'Kelliher in the city of Oconto. *V. J. O'Kelliher* appeared for the petitioner and *F. G. Wright* for the respondent. *Allan V. Classon* intervened on behalf of certain property owners.

Petitioner submitted plans showing four proposed routes to the brewing and malting plants which were described and are referred to as tracks Nos. 1, 2, 3 and 4. The engineer who prepared the plans testified that track No. 1 would have one sixteen degree curve in starting from the main track of the Chicago, Milwaukee & St. Paul Railway, and that it should be a straight track across the property of petitioner and was the best way to get to the plants. He stated that no other route could reach the property without an additional curve or meet the requirements of the brewing company.

The roadmaster of the Chicago, Milwaukee & St. Paul Ry. Co., called as a witness by the petitioner, testified that track No. 1 was the most feasible and less expensive way of reaching the brewing company's plant. He raised objections to tracks Nos. 2 and 3, on account of their curves being too sharp for the switching engines used in the Oconto yards. He considered track No. 4 to be a feasible route to the property, but stated that the curve at the plant, as shown on the plans submitted by petitioner, could not be made by the engines. Counsel for interveners introduced a plan of track No. 4, differing from petitioner's plan in that it reached the brewing company's plant along a public alley, terminating in a straight track but at right angles to the location desired by petitioner. The roadmaster stated that the change made a feasible route to the end of the track, but that both plans of track No. 4 called for a more expensive track on account of its greater length. As it started from their main track outside of their yard limits, he objected to it. Counsel for respondent objected to putting in any sidetrack where it brought switches outside of the switching limits.

Petitioner's bookkeeper submitted a statement prepared by him showing that the brewing company received and shipped 127 cars of freight during the year ending July 1, 1911. The statement also gave figures compiled by the witness showing that a saving of approximately $2,314.20 could have been effected during that period if petitioner could have loaded and unloaded its cars from a conveniently situated spur track at its plant instead of hauling its products and supplies to and from cars on the main track. He testified that petitioner's malting and brewing business has been and is increasing and that if the railway company would furnish satisfactory track facilities, the brewing company expected to erect a large malting plant having an annual capacity of 300,000 bushels, which would require about 250 cars of barley a year. He stated that neither of the plans of track No. 4 would meet the requirements of petitioner, but that track No. 1 would adequately serve all of the buildings and enable cars to be loaded and unloaded without additional transportation service.

An examination of the testimony shows that proposed track No. 1 will have a length of 1,120 feet and that it will cross

the property of Oconto Land Company, an alley, apparently private, Homer Don Levy, George Don Levy, and W. H. Phillips, and at about fifty feet from the rear of other property owners whose residences front on Superior avenue. This route is objected to by the intervener, chiefly because it crosses the property of George Don Levy which adjoins and fronts the land of Frank Don Levy whose residence is about 250 feet from the proposed track and about 450 feet from Superior avenue. All of the property of Frank Don Levy fronts on Percy avenue, a highway running parallel to Superior avenue. His residence is about equidistant from both roads, but it faces Superior avenue, access to which is obtained by crossing the property of George Don Levy, who has a vacant strip of land sixty feet wide fronting on Superior avenue. None of the property herein mentioned is platted into city lots, but is described and sold by meets and bounds. Track No. 4, according to the plan submitted by the intervener, would cross the property of other parties, then cross the highway known as Percy avenue or Gravel Pit road, and then run along a public alley from said highway to the brewery.

Two members of the engineering staff of the Commission have made an examination on the ground of the four routes mentioned and have submitted a report, from which it appears that the most feasible route is track No. 1, which is the shortest and most direct route to the brewery, would be the cheapest and easiest to build and is the only track that would fully serve the brewing company's requirements. Track No. 2 is considered as not feasible on account of the sharp curvature, its location on a public highway and its failure to serve the industry. Track No. 3 is regarded as not feasible on account of sharp curvature; this track, as proposed, would pass within fifty feet of three residences and would use twelve feet of a public highway, leaving but twelve feet for vehicular and foot traffic; it would therefore be detrimental to public safety. Track No. 4, as shown on both petitioner's and intervener's plans, is deemed objectionable for several reasons.

"The most serious objection is that an eastbound train would approach the switch on a 6 degree 30 minute curve. The proposed location of the switch can not be seen by an engineman on

an eastbound train for a distance exceeding three hundred and ninety feet. An engineman approaching the main line on the 11 degree curve of the proposed track No. 4 could only see an eastbound train on the main line for a distance of approximately one hundred feet west of the switch."

The curve at the brewing company's plant is too sharp to carry an engine or cars to the brewery and the track would not serve the brewing company's requirements. If track No. 4 were built, it would have to be located as described on intervener's plan, and if so built would not properly serve the industry. The expense of constructing track No. 4 would be more than twice the expense of building track No. 1. In regard to the question of danger to the public from the construction of track No. 1, the report says:

"Considering track No. 1 with regard to public safety, a person westbound on walk leading to Mr. Frank Don Levy's residence, when reaching a point one hundred and fifty feet east of proposed track No. 1, would be able to see a southbound train at a point two hundred and sixty feet north of the crossing of the present walk with the proposed track No. 1. A person westbound on walk leading to Mr. Don Levy's residence, when reaching a point fifty feet east of the proposed track No. 1, would be able to see a northbound train approximately fifty feet south of the crossing of the present walk with the proposed track No. 1. A person eastbound on walk leading to Mr. Don Levy's residence has an unobstructed view of the entire length of the proposed track No. 1 when standing at Mr. Don Levy's front door, aphas an unobstructed view of the entire length of the proposed track. A teamster westbound in alley south of Homer Don Levy's property, on reaching a point sixty feet east of the proposed track No. 1, would be able to see a southbound train at a point two hundred feet north of the crossing of the present alley with proposed track No. 1. From this same point he would be able to see a northbound train when it left the C. M. & St. P. Ry. Co.'s yards, four hundred feet southwest of the crossing of the alley with the proposed track No. 1. A teamster eastbound along the same alley, when reaching a point more than two hundred feet west of the proposed track No. 1, would be able to see the entire length of the proposed track No. 1.

"There are nine children, ranging from five to twelve years of age, living in the Homer Don Levy, Ahlberg, Van Renz and Phillips residences on Superior street. These children are all compelled to cross the present main line of the C. M. & St. P. to reach school. None of these children would be compelled to cross proposed track No. 1. The eleven year old daughter of Frank Don Levy would be compelled to cross proposed track

No. 1 on her way to school. Now, if these children are able to cross the main line of the C. M. & St. P. Ry. safely, a spur track carrying only slow moving trains located fifty feet west of the west property line, would not be a serious menace to the lives and limbs of these children."

Prof. Pence, the engineer of the Commission, has also examined the ground and investigated the merits of the proposed routes. A part of his report is as follows:

"The merits of the position taken by the intervener in this case, with respect to the alleged damage to his property due to having the sidetrack No. 1 pass along what is nominally the front of his residence place, it would appear, should be judged on a basis which will not lose sight of the fact that the only alternative plan, viz., track No. 4, cuts diagonally across the Hearld and Wittkopf tracts, which, with a possible future development of the city in a northerly direction, should be conserved for plotting for residential or other purposes. It is, of course, impracticable under existing conditions to forecast what the public interests in this respect may in future demand, but with court procedure fully protecting the interests of the intervener in the event that condemnation should be resorted to, there appears to be no reasonable question but that the location of track No. 1 should be adopted as representing best railroad practice. Considered from an operating point of view, there is no question but that track No. 4, located across a long stretch of open ground with an exposure to northwest winds, would, in periods of heavy snow and drift, be costly to operate, a condition which would not prevail to anything like the same extent with track No. 1."

He concludes by endorsing the recommendations made by the engineering staff in favor of the route described as track No. 1.

It is our judgement that the spur track in question is practically indispensable to the successful operation of the petitioner's brewing and malting business, that its construction and operation is not unusually unsafe or dangerous, and that it is not unreasonably harmful to public interest.

If it becomes necessary to acquire a right of way for the proposed extension, the cost of acquiring such right of way, as estimated by us, will not exceed the sum of $500.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, construct a suitable spur track as prayed for by the petitioner herein, along the

route designated by the blue print submitted by petitioner at the hearing as track No. 1.

IT IS FURTHER ORDERED, That the petitioner herein deposit with the Chicago, Milwaukee and St. Paul Railway Company the sum of $1,300, the estimated cost of the proposed spur track, and in addition thereto the sum of $500 to cover the portion of the right of way which has to be acquired by condemnation or otherwise; and also give the railroad company a bond, to be approved by the Commission as to form, amount and surety, securing the railroad against any loss on account of any expense incurred beyond the amount of the deposit with the railroad.

Sixty days is deemed a reasonable period of time within which to comply with the provisions of this order. If for any valid reason compliance with the order can not be made within such time, the Commission will extend the same upon application.

CITY OF OSHKOSH

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Sep. 25, 1911. Decided Nov. 2, 1911.

Petitioner alleges that respondent maintains an electrical gong at the intersection of its line with Sixth street in Oshkosh, Wis.; that this gong is a public nuisance, in that it disturbs the people day and night and greatly depreciates property values in the vicinity. Petitioner prays that the railroad company be ordered to remove the gong and substitute gates with an agent to open and close them when an engine or train passes, or that a flagman be stationed at the crossing. Investigation by the Commission showed that the frequent ringing of the bell when no trains pass over the crossing is due to the work of the switch engines moving from the round house to the coal chute and water tank. A shortening of the track circuit would enable switch engines to move or to stand at the coal chute without ringing the bell.

Held: Conditions at the crossing are not such as to justify a flagman. The crossing bell will give adequate protection, provided it is properly installed and maintained. Respondent is ordered to shorten the track circuit of its bell by moving the battery chute 150 feet nearer Fifth street.

The petition of the above named city of Oshkosh, by its attorney, represents that petitioner is, and for a long time past has been, an incorporated city located within the county of Winnebago and state of Wisconsin; that the above named railway company is a common carrier engaged in the transportation of persons and property by railroad within the state of Wisconsin, and that as a common carrier said railway company is subject to the provisions of ch. 87 of the Wisconsin Statutes of 1898 and acts amendatory thereto, and is likewise subject to the provisions of ch. 362 of the Laws of 1905; that a part of the railroad of said railway company crosses a public highway in the city of Oshkosh, to wit: Sixth street, located in the Sixth ward of said city, and that the said railway company has in the past maintained an electric gong at the crossing of said street and railroad; that said gong is a public nuisance, disturbing the

people residing in the neighborhood of said crossing, both day and night, and that the maintenance of said danger gong greatly depreciates the value of the property in that vicinity; that the owners of property located on and near said crossing have remonstrated against the maintenance of said danger gong by written petition to the common council of the city of Oshkosh and requested that the said gong be removed and a flagman stationed at said crossing. Wherefore, petitioner prays that the aforesaid railway company be required to answer the charges herein and that after due hearing and investigation an order be made commanding said railway company to remove the said danger gong, and directing said railway company, in lieu thereof and for the protection and safety of human life, to maintain at the said crossing of said railroad and Sixth street gates, and place an agent in charge to open and close the same when an engine or train passes, or that a flagman be stationed at said crossing, and for such other and further order as the Commission may deem necessary and just in the premises.

The respondent, answering the petition, states that it maintains a line of railway to said city of Oshkosh and that the said line of railway crosses certain streets in said city; it denies that said gong which is maintained at Sixth street in said city is a public nuisance, and further denies that there is any reasonable necessity for a change in the manner of crossing protection at that point, but that it at present affords reasonably adequate crossing protection; further answering, the respondent denies each and every allegation in the petition not hereinbefore admitted, denied or otherwise answered. Wherefore, respondent prays that the petition be dismissed.

The hearing was held on Sep. 25, 1911, at the city hall in Oshkosh. *R. A. Hollister* appeared for petitioner and *F. G. Wright* for the respondent.

Witnesses for the petitioner testified that the gong often rang when no train or engine passed over the crossing and that occasionally it rang continuously for several hours. They stated that the gong would ring when the engine was switching across the main track and that pedestrians and team traffic were thereby unnecessarily delayed and falsely alarmed. Witnesses declared that the gong could be heard for a long distance and that its ringing was an annoyance to persons living in the neighborhood.

One witness, whose residence was close to the crossing, stated that the ringing of the gong had lessened the value of his home.

The local agent of the Chicago, Milwaukee & St. Paul Railway Company testified on behalf of respondent that north of Sixth street there was a switch leading off the main track to the coal shed and one leading to the ice house, both being at about three hundred feet from the crossing, and that a train switching movement between either one of such side tracks and the main line would cause the gong to ring. He stated that about thirty minutes of continuous switching took place there once a day, but not more than two or three times a day at the outside, and any switching that would be done except at the prolonged period would be for a very few minutes. With regard to the continuous ringing of the bell which occurred once or twice, he said that it ceased suddenly when he arrived near the gong, as if the trouble had been caused by some persons who might have placed a wire across the track and to have pulled it away when he approached.

An engineer of the Commission has investigated the conditions surrounding the crossing and reports that the frequent ringing of the bell, when no trains pass over the crossing, is apparently due to the work of the switch engines moving from the round house to the coal chute and water tank. He recommends a shortening of the track circuit, thus enabling switch engines to make the move referred to without ringing the bell, and also enable engines to stand at the coal chute with one or two cars without ringing the bell. He further reports that the conditions at the crossing at this time are not such as to justify a flagman and that the crossing bell will give adequate protection, provided it is properly installed and maintained. Should it be found later that the conditions require a flagman, the bell should be maintained for night indication.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, shorten the track circuit of its bell at the Sixth street crossing in the city of Oshkosh by moving the battery chute 150 feet nearer Fifth street.

Thirty days is deemed a reasonable time within which to comply with this order.

MENASHA PAPER COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Nov. 4, 1911.

Petitioner alleges excessive charges on a carload shipment of newsprint paper from Ladysmith to Ashland, Wis. Subsequently a lower rate was put in effect.

Held: The rate exacted was the only one legally applicable at the time the shipment was made. This rate was exorbitant and a reasonable rate would have been 8 cts. per cwt., as subsequently made effective. Refund is ordered on this basis.

The petitioner is engaged in the manufacture of pulp and paper at Ladysmith, Wis.

It alleges that on May 14, 1911, it shipped one carload of newsprint paper from Ladysmith to Ashland, Wis., over the respondent's line; that respondent carrier charged petitioner a rate of 12½ cts. per cwt. for a total weight of 41,500 lbs., making a total charge of $51.88; that subsequent to May 14, 1911, that is, from and after Aug. 15, 1911, a rate of 8 cts. per cwt. has been in force on respondent's line for the transportation of paper in carload lots from Ladysmith to Ashland, Wis., as shown in respondent's tariff G. F. D. No. 13705; that if the the rate now in effect had been applied to the above shipment, there would have been a difference of $18.68 in favor of petitioner on said shipment, and petitioner prays that an order be made commanding the respondent railway company to refund the said sum of $18.68 to petitioner.

The respondent, answering the petition, admits all the formal allegations thereof, and states that it is willing to make refund as requested.

The claim was presented upon the pleadings, papers, schedules and documents on file.

The rate exacted of the petitioner was the only one that was legally applicable at the time the shipment was made. This rate was greatly in excess of a reasonable charge for the services ren-

dered, and the respondent has expressed its willingness to make proper refund in the matter. *H. W. Wright Lbr. Co. v. C. M. & St. P. R. Co.* 1910, 4 W. R. C. R. 770.

We therefore find and determine that the rate of 12½ cts. per cwt., exacted of the petitioner for the aforesaid shipment of newsprint paper from Ladysmith to Ashland, is exorbitant, and that a reasonable rate for such shipment would have been 8 cts. per cwt., the rate subsequently made effective.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the Menasha Paper Company the said sum of $18.68.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE RATES, RULES AND REGULATIONS OF THE R. CONNOR COMPANY OF STRATFORD, WISCONSIN.

Submitted June 23, 1911. Decided Nov. 7, 1911.

The Commission, on its own motion, investigated a complaint made by certain consumers as to the rates, rules and regulations, and service of the R. Connor Co., an electric utility of Stratford, Wis.

Complaint was made that the utility has a discriminatory rate schedule, that flat rate users pay less for current consumed than metered consumers, that in numerous instances the company rebates to a certain class of consumers, and that the rates, as a whole, are unreasonable and unsatisfactory.

It appears from the testimony and from investigation made that, under the present schedule, the consumers who are not employes of the company are to some extent discriminated against. It is difficult to see what can be done beyond insisting that the company shall not reduce its bills on complaint of the consumers unless the meter is tested and shown to be incorrectly registering, and further to insist that no discrimination between employes and non-employes shall be made in the enforcement of the rate schedule. No increase in rates can well be made, nor does the company desire such increase. No decrease in rates can be made in view of the fact that the gross earnings of the plant are far from sufficient to meet the ordinary operating expenses and to provide for interest and depreciation on the investment. The situation as it stands is entirely one of adjustment and securing of equal rates for the same classes of consumers. It appears that the only solution would be for the company to install meters wherever requested to do so by the consumers and that the company install these meters at its own expense and endeavor to place all consumers on a meter basis sooner or later. No order is issued in this case at this time, but the respondent is expected to take notice of the above suggestions and to proceed immediately to correct all unjust discriminations as to rates.

Complaint was made that the service of the company is inadequate and is not maintained at the standards prescribed by the Commission. A service inspection was made. From the testimony and from the investigation made, it appears that the company has discriminated. No order is issued in this case at this time, but the respondent is expected to proceed immediately to correct all unjust discriminations as to service.

Complaint was made by certain consumers in Stratford that the above named electric utility has a discriminatory rate schedule; that flat rate users pay less for current consumed than

metered consumers; that the rates as a whole are unreasonable and unsatisfactory; that in numerous instances the company rebates to a certain class of consumers; and that the service of the company is inadequate and is not maintained at the standards prescribed by the Commission.

A hearing in the above entitled proceeding was held June 23, 1911. *W. F. Goetz* appeared for the respondent. No appearances were entered for the petitioner.

The R. Connor Company manufactures hardwood, pine and hemlock lumber, its mill being located in Stratford. It appears that this is the principal industry and that the inhabitants of Stratford depend to a large extent upon this industry. The company originally installed the electric plant for its own use in lighting its mills, stores, offices, etc., and subsequently extended its system so as to furnish light to its employes and other inhabitants of Stratford. Mr. Goetz, the superintendent of the plant, testified that when the company first began to furnish electric service to the public, all consumers were placed on the meter basis and charged a uniform rate of 15 cts. per kw. hr. Soon after this rate was established certain large consumers, witness stated, threatened to discontinue the service unless they were given flat rates. Employes of the company were also anxious to obtain the service, and in order to relieve them of the expense of installing meters, the company decided to allow these employes to obtain service on a flat rate basis. It appears that the cost of installing meters is borne equally by the company and the consumers.

Notwithstanding frequent requests from this Commission for its rates, rules and regulations, the only rate filed by the company has been the meter rate of 15 cts. per kw. hr. It appears from the testimony and from investigations by the Commission that in addition to this uniform meter rate there is in force in Stratford a flat rate of 50 cts. per 16 c. p. lamp or per socket per month. If further appears, however, that for consumers with a rather large installation, a flat rate per socket is granted which is somewhat lower than the 50 ct. rate.

The company has never filed an annual report with the Commission, showing its earnings, expenses and operating data. In connection with this investigation, however, the company has submitted a statement of its expenses for the year 1910, together

with its consumer data, showing the connected load and monthly payments of its individual consumers.

The details of the operating expenses for 1910 have been reported as follows:

Labor	$1,286.97
Fuel	1,277.50
Oil and waste	97.44
Supplies	66.45
Sundry repairs to plant	57.33
Meter repairs	14.73
Miscellaneous expenses	44.02
Repairs for arc lamps	14.25
Total	$2,858.69

The generator is located in the same building as the pump which is used by the company for fire protection purposes. The steam is secured from a common battery of boilers, their boilers being fired with slabs, edgings and other mill refuse, the cost of this fuel being estimated at $3.50 per day. The company has a regular superintendent of the electric plant who does all of the line work, meter reading, etc. An employe at the mill also assists in the operation at the station.

The revenues of the company's electric business come from three principal classes of service, the earnings for 1910 being as follows:

Municipal arc lighting	$450.00
Incandescent lighting	826.77
Used by company	1,070.40
Total earnings from electric business	$2,347.17

Exclusive of its own stores, factory, mill buildings, barns, offices, etc., the company supplies electric energy to about thirty-eight consumers in Stratford. The statement submitted by the company shows that of these thirty-eight consumers about fifteen are on a meter basis. The number of lamps or sockets per consumer for the flat rate users varies from one to forty, the majority having less than ten sockets.

No valuation of the property of the company devoted to the electric business has been made. It is evident, however, that the gross earnings of the plant are far from sufficient to meet the ordinary operating expenses and to provide for interest and depreciation on the investment.

A service inspection made July 26, 1911, reveals the following conditions: Five meters were found by the inspector in

December, 1910, to be non-registering. One meter was installed where a flat rate was being charged. One meter was found to be creeping when all lights were disconnected. One meter was found which registered on full load, but did not start on smaller loads. With regard to Mr. Klumb's meter which is mentioned in the testimony, it was found that this meter was registering from 4 to 5 per cent slow, and was adjusted to within 1 per cent. There appears to have been no real basis for reducing the January bill, as was done by the company. Mr. Klumb's connected load was about 1.2 kws. This installation burning 3¼ hours for thirty days on a 15 ct. rate would bring a bill of $7.20, the amount indicated. On page 6 in the testimony the statement is made that he could not possibly have used that much current unless his lamps were burning night and day.

It appears from the testimony and from investigation made that the company has discriminated. The company does not appear to have followed any definite or uniform policy in regard to testing of meters or the determination of who should obtain a flat rate or who should pay on a meter basis. The company seems to have failed to meter its own employes, largely because of the fact that it wished to relieve them of the burden of paying one-half the cost of the meter installation. It is, of course, the duty of the company to install meters at its own expense. The company had also failed to file any flat rate schedule. The schedule which it has in force does not seem to have been constructed upon any scientific or careful basis, but was simply devised to meet the conditions at Stratford, and to relieve those consumers who have large installations and who threatened to disconnect unless their bills were lowered.

In view of the fact that the company is not securing a revenue large enough to meet its operating expenses and provide for depreciation and interest, it would hardly appear reasonable to order a universal installation of meters. Again, it is noted that a large number of the consumers are employes of the R. Connor Co., and further that no individual or company, nor the village, could hope to operate an electric plant in the village of Stratford and be able to pay its expenses under the existing rates. On the other hand, it seems certain that under the present schedule the consumers who are not employes of the company are to some extent discriminated against. It is difficult to see what can be done beyond insisting that the company shall

not reduce its bills on complaint of the consumers unless the meter is tested and shown to be incorrectly registering, and further, to insist that no discrimination between employes and non-employes shall be made in the enforcement of the rate schedule. No increase in rates can well be made, nor does the company desire such increase. No decrease in rates can be made in view of the conditions. The situation, as it stands, is entirely one of adjustment and securing of equal rates for the same classes of consumers. It appears that the only solution would be for the company to install meters wherever requested to do so by the consumers and that the company install these meters at its own expense and endeavor to pace all consumers on a meter basis sooner or later.

No order is issued in this case at this time, but the respondent is expected to take notice of the above suggestions and to immediately proceed to correct all unjust discriminations, both as to service and rates.

IN RE APPLICATION OF THE HILLSBORO WATER WORKS CO. FOR AUTHORITY TO INCREASE RATES.

IN RE APPLICATION OF THE HILLSBORO WATER WORKS CO. FOR A VALUATION OF ITS PROPERTY.

Decided Nov. 7, 1911.

Application was made by the Hillsboro Water Works Co. at Hillsboro, Wis., for a valuation of its property and for authority to increase its rates for hydrants. Considerable dissatisfaction having been expressed with the nature of the fire protection furnished by the applicant, an inspection and test of the system was made by the Commission. It was found that adequate fire protection was not furnished and that improvements in the plant were necessary in order to secure adequate service.

Held: That time should be given for the village and the water company to come to an understanding with regard to the installation of needed improvements, and that while the amount paid by the village to the petitioners is rather inadequate, a settlement of the charge for fire protection should not be made until opportunity has been provided for such agreement and for the making of such improvements as may be agreed upon.

This is an application of the Hillsboro Water Works Company, a public utility engaged in the business of supplying water for domestic and industrial purposes and for fire protection in the village of Hillsboro, Wis.

Application was made under date of Aug. 3, 1910, and a valuation of the property was made, as of date Sep. 20, 1910.

The application shows that on Sep. 7, 1899, a contract was entered into between the applicant and the village of Hillsboro, to be binding until July 1, 1909, by the terms of which the village agreed to pay $150 per year for hydrant rental, and install all hydrants at its own expense. Applicant points out that during the past ten years the number of hydrants has been increased from six to fourteen, which now cover about three-fourths of the buildings in the village, but that the six hydrants originally installed covered only part of the business portion and a small part of the residence portion of the village. Application is made for permission to put in effect an annual rate per hydrant of $30 for hydrants connected to four-inch mains, and of

$25 for hydrants set on two-inch mains. It was stated that seven hydrants are on four-inch and seven are on two-inch mains.

Hearing was held on Oct. 27, 1910, at the office of the Railroad Commission. Appearances were: For the applicant, *E. V. Wernick,* appearing in person and not represented by counsel. For the village of Hillsboro, *J. T. Dithmer,* and *C. F. Rose,* president of the village board.

At the hearing very little of a definite nature was brought out. What testimony was offered dealt principally with the nature of the service rendered, but as there is no pressure gauge connected with the system and no counter attached to the pump, very little is known about the amount of water pumped or the average pressure maintained.

Considerable dissatisfaction having been expressed with the nature of the fire protection furnished by the applicant, an inspection and test of the system was made by the engineering staff on Nov. 5, 1910. As outlined in the report made by the engineer in charge of the test, the principal features of the plant are:

(1) One 10—6—12 duplex steam pump, having a rated capacity of 331,000 gallons per 24 hours, set in a pit under a small shed attached to a creamery, from which latter plant the steam power for pumping is furnished. The running of the pump is in charge of the parties who operate the creamery.

(2) One driven well 6″ in diameter and understood to be 149 feet deep, connected directly to the pump.

(3) One steel tank on steel tower about 27 feet in height. The tank is 19½ feet in diameter, by 20 feet deep, holding approximately 45,000 gallons.

(4) Distribution system consisting of approximately

2763	feet of	4 ″	pipe
7503	"	2 ″	"
1434	"	1½″	"
1142	"	1¼″	"

(5) Seven double discharge hydrants set on four-inch mains and seven single discharge hydrants set on two-inch mains. All hydrants are owned by the village. Following is a summary of the valuation made by the Commission's engineer:

	Cost new.	Present value.
1. Wells and suctions	$205	$184
2. Tank	2,336	2,122
3. Distribution system	4,387	4,040
4. Plant equipment	354	235
5. Buildings	95	86
Total of above	$7,377	$6,667
Add 10%	738	667
Total value	$8,115	$7,334

The test to determine the adequacy of the system as a means of furnishing fire protection was divided into two parts, covering different parts of the system. The general plan followed in making the first test of the fire service was as follows:

(a) The pump was operated by the creamery employes as they would operate it in response to a fire alarm.

(b) The gate valve in the connection to the elevated tank was closed.

(c) One stream was taken from the most northerly hydrant on the system (corner of Mill st. and Harrison ave.) for a few moments.

(d) An additional stream was taken from the hydrant next south (corner of Mill st. and Field ave.).

(e) Continuous records of water pressure existing at several hydrants during the test were obtained by means of pressure recording gauges connected to those hydrants as follows:

One gauge about twenty feet from the creamery building.

Four gauges on Mill st. at the corners of Water st., High st., Field ave., and Harrison ave., at intervals of two blocks.

The second test was similar to the first, but during this test three pressure gauges were placed at points in the western part of the village. Hillsboro is built on somewhat hilly ground, and a part of the differences between pressure at the different hydrants is due to differences of elevation. For the purpose of analysis of the results shown by the pressure records, the differences of elevation of the several hydrants used in the test were obtained by means of an engineer's level.

The following summary shows the elevation of each gauge above the pump, with the corresponding decrease in static pressure:

	FIRST TEST.		SECOND TEST.	
	Feet.	Pounds.	Feet.	Pounds.
Gauge A	7	3	7	3
Gauge C	40	17.3	40	17.3
Gauge B	54	23¾	25	10.8
Gauge D	71	30⅝	21	9.1
Gauge E	75	32¼	28	12.1
Top of tank	109	47¼	109	47¼

The gauges are noted above in the order of their locations and distances from the plant.

Before making the test an examination was made of the map, from which it appeared that the hydrant at the intersection of Mill st. and Harrison ave. was the one likely to give the poorest service. Should a fire occur in the neighborhood of that hydrant while the creamery was closed and its boilers were not under steam pressure, the supply of water in the tank would be the only water available for such fire, and the static pressure at that hydrant (pressure while no water is flowing in that line) would not exceed 14.5 lbs. per square inch with the tank full, or about 10 lbs. with the tank half full.

The charts obtained in the test show that the effect of drawing one fire stream from the system, at that point, is to reduce the pressure furnished there by the tank to one or two pounds, which would be entirely useless for fire protection. On account of the small size of main leading to that hydrant and the consequent large loss of pressure from friction in the small pipe, it seems certain that only a decidedly inadequate fire stream can be furnished from the present system at that point, even with the tank valve closed and the pump working under a heavy direct pressure. The pressure chart obtained at that point shows that the pressure did not reach 7 lbs. at any time when the stream was flowing freely, although the pressure at the pumping plant was about 85 lbs. for part of the time.

The conclusion expressed by the engineer in charge of the test is quoted from his report, as follows:

"It is to be stated in conclusion, without discussing further at this time the details of the analysis of the conditions at Hillsboro, that it is believed that nothing like an adequate fire stream can be furnished, even under direct pump pressure, from any of the existing hydrants on the two-inch pipe lines, and that the tank on which the town must depend at times, for fire as

well as domestic service, is of insufficient height to furnish a strong stream from any hydrant.

"The pressure charts obtained during the test indicate a lack of air chamber capacity on the discharge side of the pump, and it is believed that the installation of a larger air chamber on the pressure main is a highly desirable improvement in the plant."

In view of these conditions it seems evident that no satisfactory settlement of this case can be made merely by a readjustment of rates. It should be stated that an analysis of the expenses of the applicant shows that the revenues from fire service at present are insufficient to meet the cost of that service. Inasmuch as it is apparent that a change in rates will not affect a final settlement of this matter, it appears advisable to hold the matter of determination of an equitable charge for fire protection in abeyance for a time and confine ourselves for the present to a number of recommendations which it is believed will remove the cause for complaint with regard to the adequacy of fire protection.

As a result of the examination and test of the system, the engineer in charge has submitted the following recommendations concerning changes which should be made in order for the plant to furnish adequate pressure and amount of water for fire protection:

"The village fire department equipment appears to include hose and nozzles for but two streams, there being about 600 or 650 feet of hose on hand at the time of inspection by members of the Commission's engineering staff. We would say that fair fire streams from ⅞" and 1" nozzles (the size of the two owned by the village) require at least 150 gallons of water per minute for each, and that the pressure in the hydrant be not less than 60 lbs. per square inch, with streams running, where hose leads are not over 300 feet. The pressure should be greater where hose leads are longer.

"In the absence of a test of the well it is very doubtful if the single driven well supplying the plant is capable of furnishing anything like the amount required per minute for two fire streams in addition to the simultaneous domestic demand. The water supply should be capable of furnishing at least 350 gallons per minute continuously, in order to furnish the two streams which the village is prepared to use.

"There is only one pump in the plant, it being rated at about 228 gallons per minute, and that on a "no slip" basis. It probably can not furnish two good fire streams, together with the simultaneous domestic demand.

"The largest water main is 4" pipe, of which there is 2,763 feet. The friction of, or resistance to, a flow of 350 gallons per minute through 1,000 feet of 4" pipe is about 41 lbs., so that the pumping of 350 gallons per minute through 2,500 feet of pipe would involve a pressure loss of about 103 lbs.

"The elevated tank is much too low to furnish, even when filled with water, sufficient pressure for fair fire streams anywhere in the village. It should be promptly closed off from the mains at every fire alarm and the pump started for furnishing direct pressure, unless a much higher and larger water storage be provided and kept filled for use in fire service.

"For the purpose of furnishing prompt fire service at times when the pumping plant is shut down and without an attendant and without steam in the boilers, it would appear advisable to have a 10,000 to 12,000 gallon tank on a tower about 100 feet high, and the tank kept filled at all times for use only in case of fire. Such tank should be located on the highest ground reached by the water mains.

"Interest and depreciation on same would not likely need to be over $150 per annum, which sum would be less than the increased operating expenses resulting from providing continuous plant attendance. It would also render unnecessary the pumping of all water for domestic service against fire pressure, thus avoiding any material increase in fuel or other pumping expense. Such fire supply would, however, require unusual protection against freezing in winter.

"No pressure gauge has been maintained on the system, so far as learned, and no stroke counter was on the pump at the time of our inspection. Both instruments are regarded as indispensable to efficient and intelligent operation of the plant.

"Attention was called in the report on the fire stream test to a lack of air chamber capacity at the pump.

"The improvements considered necessary to render adequate fire protection in territory now served by the fourteen hydrants, are as follows:

"1. Probably an increase in water supply.

"2. Larger pump, with usual accessories, i. e., pump stroke counter, recording pressure gauge, and ample air chamber.

"3. Mains as follows:

Mill street, High to Harrison	1,300' of 6"
Madison and High streets, from pump to Water street	3,550' of 6"
Lake street, High to Water	650' of 6"
Total	5,500' of 6"

"4. High storage of not less than 10,000 gallons.

"It is believed that the above additions and improvements would cost between $6,500 and $7,000, and may be all considered as chargeable to fire service."

Undoubtedly it is desirable that the village have adequate fire protection and this appears to be a case for an agreement between the water company and the village with regard to the improvements to be made. When the system has been put in shape a revision of the rate for fire protection can be made by the Commission which will take into consideration the changes in plant value and in operating costs. In the meantime the Commission will co-operate with the water company and with the village and will be willing to furnish engineering advice with regard to the changes outlined.

It is therefore concluded that time should be given for the village and the water company to come to an understanding with regard to the installation of needed improvements, and that, while the amount paid by the village to the petitioners is rather inadequate, a settlement of the charge for fire protection should not be made until opportunity has been provided for such agreement and for the making of such improvements as may be agreed upon.

IN RE APPLICATION OF PEOPLE'S TELEPHONE COMPANY FOR AUTHORITY TO INCREASE RATES.

E. J. WILLIAMS ET AL.

vs.

PEOPLE'S TELEPHONE COMPANY.

Submitted Sep. 18, 1911. Decided Nov. 7, 1911.

Application was made by the People's Telephone Co. for authority to increase rates. The company's principal place of business is in Rio, Wis., and it operates exchanges in Fox Lake, Rio, Cambria, Fall River, Wyocena, and Randolph, Wis.

Complaint was made that service on some of the lines, especially on rural lines, is unsatisfactory on account of the inadequate maintenance of the wire plant. The engineering staff of the Commission recommend thorough overhauling and repair of the wire plant as a necessary step toward reasonable service.

Held: On the whole the company has been earning a fair return, and its financial condition is such that it is able to make needed improvements in the service. It is ordered that the company make such repairs and improvements to its plant as will enable it to furnish reasonable service and that it maintain such a standard of service.

The analysis of the expenses and revenues of the utility show that with the exception of a slight shortage at Rio and Randolph, the company has been earning a fair return and that its financial condition is such that it is able to make needed improvements in the service. Under the circumstances the adjustment of rates should be postponed until the company gets its plant into condition to render good service. It is ordered that the application for authority to increase rates be dismissed until such improvements in service are made.

The application of the People's Telephone Company for authority to increase rates was dated May 15, 1911. The application shows that the People's Telephone Company is a corporation organized and doing business under the laws of Wisconsin, with its principal place of business in Rio, Wis., and that it operates telephone exchanges in Fox Lake, Rio, Cambria, Fall River, Wyocena, and Randolph, Wis.

Valuation of the property was made as of date July 30, 1911, and hearing on all matters involved was held at Madison, Wis., on Sep. 18, 1911. *J. L. Farrington* appeared for the utility.

At the hearing no objection to the valuation was offered, although it was stated that the book value of the property ex-

ceeded the valuation put upon it by the engineering staff. Very little of a definite nature was offered with reference to service, but it was pointed out that service on some of the lines, especially on rural lines, is unsatisfactory.

With regard to rates the representative of the utility stated that the present rates were not high enough to yield a return sufficient for interest and depreciation. It was also stated that with revenues as they are at present satisfactory maintenance is impossible, and that the operating expenses will probably be increased because of the limitation placed by law upon the hours of labor of female employes. For the exchanges at Wyocena, Fall River, and Cambria the application shows that the rate for all classes of service is $1 per month, with an addition, in the case of the Fall River exchange, of 25 cts. per month for service to Columbus. For these three operating systems the applicant asks authority to put in effect a gross rate of $1.15 per month with 25 cts. additional per month for Fall River telephones which have the Columbus service, but with a discount of 15 cts. per month for payment on or before the tenth of the month in which service is rendered. As far as the operating systems at Wyocena, Fall River, and Cambria are concerned, therefore, the net rates are identical with existing rates. The addition of 15 cts. a month to the charge for all phones, which is remitted for prompt payment, is in the nature of a regulation to aid in securing prompt payment, and in case payment is made promptly does not amount to an increase in rates. Such a regulation is very common in the telephone business and it does not seem to be necessary to discuss its reasonableness at this time. This Commission has held, in a number of instances, that such a provision constitutes a reasonable feature of a schedule of rates and this case seems to be no exception to the rule, so that there seems to be no objection to granting this portion of the petition, provided the other matters asked for are to be granted.

For the exchanges at Rio and Randolph the present rates are $1 per month for local business and residence phones and for phones on grounded rural lines, and $1.25 per month for phones on metallic rural lines. For Fox Lake the rates are $1 per month for business, residence and grounded rural lines.

Season service for four months, from June 1 to Oct. 1, $12.50, or $24 per year.

Summer service on First Island for four months $10, or $15, per year.

No change is contemplated in the season rates as cited, and apparently no change is planned in rates for rural service. For local service the suggested rates for the exchanges in Fox Lake, Rio, and Randolph are as follows:

Single party business telephones	$1.65	per month
Single " residence "	1.40	"
Two " " "	1.15	"

All bills are to be subject to a discount of 15 cts. per month for payment on or before the tenth of the month in which service is rendered, so that the net rates for the three classes of service as listed above will be respectively $1.50, $1.25, and $1 per month, instead of $1 as at present.

The effect of the proposed increases upon annual revenues, based upon the installation of June 30, 1911, will be as shown below:

Exchange.	Class.	No. of phones	Annual revenue, present rates.	Annual revenue, proposed rates.	Increase
Rio	Business -1 party	22	$264	$396	$132
Rio	Residence-1 party	60	720	900	180
Fox Lake	Business -1 party	30	360	540	180
Fox Lake	Residence-1 party	46	552	690	138
Randolph	Business -1 party	42	504	756	252
Randolph	Residence-1 party	54	648	810	162

Increases are therefore:

For Rio exchange	$312
For Fox Lake exchange	318
For Randolph exchange	414
Total increase	$1,044

Following is a summary of revenues and expenditures for the three exchanges under consideration as reported for the year ending June 30, 1911:

	Randolph.	Fox Lake.	Rio.
OPERATING REVENUES:			
Exch. tel. earnings	$3,999 50	$2,838 65	$3,183 15
Earnings from con. lines	.....	.....	150 00
Misc. exch. system earnings	95 33	179 69	86 31
Total exch. oper. revenues	$4,094 83	$3,018 34	$3,419 46
OPERATING EXPENSES:			
Central office—manual	$869 59	$505 61	$753 00
Wire plant	205 57	140 30	140 25
Substation	822 28	561 20	611 00
Taxes	77 05	59 56	71 87
Total above expenses	$1,974 49	$1,266 67	$1,576 12

No general or undistributed expenses have been included in the exchange reports, but these items have been included in the report of the utility as a whole. Toll revenue for these three exchanges amounted to $627.21. General and undistributed expenses have been reported erroneously as deductions from gross income and have been confused with items which constitute renewals of or additions to property, and with some items which should have been charged directly to the various exchanges. The actual operating expenses of each of the three exchanges, including a proper share of general expenses, are as follows:

Randolph	$2,494.66
Rio	2,120.30
Fox Lake	1,628.12
Other exchanges	2,840.94

From the table of operating revenues shown above it will be seen that with operating expenses as stated above, the amounts available for interest and depreciation are as follows:

Randolph	$1,600.17
Rio	1,299.16
Fox Lake	1,390.22
Other exchanges	2,156.64

If toll earnings are included, the amounts available for these purposes are:

Randolph	$2,006.08
Rio	1,469.86
Fox Lake	1,440.82
Other exchanges	2,443.99

Following is a summary of the engineers' valuation of each of the six exchanges and of the rural and toll lines:

Exchanges.	Cost of reproduction.	Present value.
Rural	$41,616	$20,576
Toll	1,786	982
Rio	5,182	3,772
Cambria	2,031	1,036
Fall River	2,145	1,347
Randolph	5,524	3,502
Fox Lake	4,271	2,510
Wyocena	595	305
Total	$63,150	$34,030

Leaving the toll lines out of consideration, but including all rural lines, the total cost as reported by the utility as of June 30, 1911, is as follows:

Randolph	$12,492.68
Rio	8,803.99
Fox Lake	7,600.05
Cambria	8,106.48
Fall River	3,599.65
Wyocena	1,812.98
Total	$42,415.83

If the toll lines are added, the total cost is brought up to $45,-989.54.

Following is a summary showing the results obtained by apportioning the cost of rural lines, as determined by the engineer's valuation, among the six exchanges, on the bases indicated. The summary shows the total value of each exchange, exclusive of any portion of the toll system:

Exchange.	Basis of number of rural subscribers.		Basis of valuation of local property.		Basis of reported book value.	
	Cost new.	Present value.	Cost new.	Present value.	Cost new.	Present value.
Randolph	$17,759	$9,551	$17,177	$9,263	$17,759	$9,551
Rio	13,630	7,949	16,086	9,163	13,838	8,052
Fox Lake	9,431	5,062	13,260	6,955	11,679	6,172
Cambria	12,144	6,036	6,317	3,155	10,021	4,987
Fall River	5,766	3,137	6,681	3,590	5,682	3,096
Wyocena	2,634	1,313	1,843	922	2,385	1,190
Total	$61,364	$33,048	$61,364	$33,048	$61,364	$33,048

It will be noted that the values arrived at for individual operating systems, based upon book value and upon number of subscribers, agree rather closely. The apportionment based upon value of local property is probably an unsatisfactory one, as there is little relation between rural and local investment.

An average of the results arrived at by apportionments based on book value and on number of subscribers shows the following exchange values:

	Cost new.	Present value.
Randolph	$17,759	$9,551
Rio	13,734	8,000
Fox Lake	10,555	5,617
Cambria	11,082	5,512
Fall River	5,724	3,116
Wyocena	2,510	1,252

Excluding toll earnings, we find the amounts available for interest, and depreciation will yield as follows:

	On cost new, per cent.	On present value, per ct.	On book value, per ct.
Randolph	9.	16.8	12.8
Rio	9.4	16.2	14.7
Fox Lake	13.2	24.7	18.2
Other exchanges	11.1	21.8	15.9

With depreciation provided for at 6½ per cent of the cost of reproduction, the rates of interest and profits, based on present revenues, will be as follows:

	On cost new, per cent.	On present value, per ct.	On book value, per ct.
Randolph	2.5	4.7	3.6
Rio	3.0	5.1	4.6
Fox Lake	6.7	12.5	9.2
Total above	3.7	6.7	5.4
Other exchanges	4.7	9.1	6.6
Entire system	4.0	7.4	5.8

From the foregoing analyses it appears that the revenues are hardly sufficient to return an adequate rate of interest after provision is made for depreciation. In arriving at the results listed above, however, the revenues from toll service have been excluded, as have also interest and depreciation on toll investment. but direct operating expenses chargeable to toll business have not been excluded, because of the impracticability of apportioning expenses accurately from the information at hand. For practical purposes the effect of the operation of the toll system upon the adequacy of returns may be judged by dividing the cost of the toll system among the various exchanges on the same basis as was followed in the division of rural lines. The results of such a division are shown below:

	Cost new.	Present value.	Book value.
Randolph	$18,275	$9,835	$13,544
Rio	14,134	8,238	9,547
Fox Lake	10,862	5,784	8,236
Cambria	11,406	5,676	8,792
Fall River	5,890	3,208	3,904
Wyocena	2,510	1,289	1,967
Total	$63,150	$34,030	$45,990

Including toll revenues the amounts available for interest and depreciation are:

Randolph	$2,006.08
Rio	1,469.86
Fox Lake	1,440.82
Total of above	$4,916.76
Other exchanges	2,443.99
Total	$7,360.75

With provision made for depreciation at the rate of 6½ per cent per annum upon the cost new the rates of return for interest and profits are:

	Cost new, per cent.	Present value, per cent.	Book value, per cent.
Randolph	4.5	8.3	6.0
Rio	3.9	6.7	5.8
Fox Lake	6.7	12.7	8.9
Total of above	4.8	8.7	6.7
Other exchanges	5.8	11.3	7.8
Entire system	5.1	9.5	7.0

Increases which would be brought about by the proposed rates, based upon the installation of June 30, 1911, were found to be:

Randolph exchange	$414
Fox Lake exchange	318
Rio exchange	312
	$1,044

With allowance of 6½ per cent for depreciation, and with additional revenues as under the proposed rates, the rates of return for interest and profits would be as follows:

	On cost new, per cent.	On present value, per cent.	On book value, per cent.
Randolph	6.7	12.5	9.1
Rio	6.0	10.3	8.9
Fox Lake	9.6	18.1	12.7
Total of above	7.2	13.1	10.0
Other exchanges	5.8	11.3	7.8
Entire system	6 8	12.6	9.3

Based upon the 1911 reports to the Commission, the direct operating expenses per phone installed, excluding interest and depreciation, in the three exchanges under consideration are as follows:

Randolph	$5.86	per subscriber
Rio	6.18	"
Fox Lake	5.72	"

It is very doubtful whether the utility can continue to furnish adequate telephone service at as low cost as indicated above. If costs as low as these are continued, it will undoubtedly be at the expense of proper maintenance of the plant. On the basis of operating expenses as reported, the Fox Lake exchange appears to be producing enough revenue to cover operating expenses and depreciation, and leave a fair return for interest and profits. The rates now in effect at Fox Lake may not be as well adjusted, as among the various classes of users, as may be desirable. In view of the fact, however, that the reported expenses of the utility seem to be rather low and that some readjustment may have to be made after a time, it seems best to leave the Fox Lake rates as at present.

For the Randolph and Rio exchanges the present revenues appear to be insufficient to yield entirely adequate return, except upon the present value of the property. The proposed schedule, on the other hand, will return interest rates of from 8.9 per cent to 12.5 per cent on the basis of book value and present value, and of 6.7 per cent for Randolph and 6 per cent for Rio, upon the basis of the cost new. In this case the three indices of value are so widely variant that it is difficult to fix upon a definite amount as representative of the value of the utility. Apparently, however, a schedule so adjusted as to yield an adequate return on a little more than the book value would meet the requirements of this case. From this standpoint the proposed rates appear unnecessarily high. If rates for single party business service and single party residence service were fixed at $1.25 per month, and $1.10 per month, net, the total increase of revenue would be:

Randolph	$190.80
Rio	138.00

With 6½ per cent of cost new provided for depreciation, the interest rates under such a schedule would be:

	On cost new, per cent.	On pres. value per cent.	On book val., per cent.
Randolph	5.5	10.3	7.4
Rio	4.9	8.4	7.2

Apparently a great deal remains to be done before the utility will be in good condition, and it may be that when such a condition is reached the expenses will be considerably increased. As matters stand, it seems best to authorize no increases at present and to leave any adjustment until such time as actual increase in operating expenses is shown. Applicant pointed out that salaries of operators had increased materially within the past year, but even with consideration given to this fact, this does not seem to be the time to authorize any increases.

Applicant's accounting methods are very imperfect, as far as concerns their compliance with the uniform system of accounts prescribed by the Commission, and this is a matter which should be remedied at once.

The complaints with regard to service are really two in number, those of E. J. Williams et al., and of Leslie Gleason et al., but in the case of the latter the number of signers was less than the number fixed by law as necessary for the institution of a formal complaint. Complaints indicated that poor service has been due largely, if not chiefly, to the inadequate maintenance of the wire plant, and this is borne out by the reports of the engineering staff, who recommend the thorough overhauling and repair of the wire plant as a necessary step toward the rendering of reasonable service.

The analysis of the expenses and revenues of the utility shows that, with the exception of a slight shortage at Rio and Randolph, the company has been earning a fair return and that its financial condition is such that it is able to make needed improvements in service. Under these circumstances it seems that the matter of adjustment of rates should be postponed until the company gets its plant into condition to render good service. At that time it seems certain that certain increases must be authorized, but until changes are actually made, it is best to leave rates as they are.

IT IS THEREFORE ORDERED, That the People's Telephone Company make such repairs and improvements to its plant as will enable it to furnish reasonably adequate service and that it maintain such a standard of service.

That the application for authority to increase rates be dismissed until such improvements in service are made.

IN RE APPLICATION OF THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY FOR THE SUSPENSION OF THE OPERATION OF CHAPTER 358, LAWS OF 1911, BEING SECTION 1797—10m, WISCONSIN STATUTES.

Decided Nov. 9, 1911.

Application was made by the Chicago, Milwaukee & St. Paul Railway Company for the suspension of the operation of ch. 358, Laws of 1911, being sec. 1797—10m of the Wisconsin Statutes, which requires common carriers to move carload freight from the point of shipment to the point of destination at an average rate of seventy-five miles for each twenty-four hours. Applicant alleges the consignees of shipments of sugar beets are unable to unload the cars received by them as fast as they are delivered, the result being a congestion of traffic which makes it impossible to move that commodity seventy-five miles a day.

Applicant further alleges that such consignees do not use reasonable diligence in unloading cars and that their failure in this respect should subject them to supervision by the Commission and that conditions warrant the Commission in promulgating rules and regulations to modify the provisions of the act with reference to the transportation of sugar beets in carload lots.

Held: Undue delays in releasing cars are detrimental to the carriers, the shippers and the public. It is the duty of shippers to so regulate their shipments that there is a reasonable and fair relation between the amount of freight forwarded to them and the amount they are equipped to handle. In this case, however, it is not fully established that the receivers of the sugar beet have entire control of the shipping and for that reason it is deemed inadvisable to attempt, without further investigation, to prescribe specified rules governing the manner in which shippers should regulate and handle the traffic in question.

With reference to the suspension of the act, conditions appear to be such that immediate action is necessary. It is ordered that that part of ch. 358, Laws of 1911, being sec. 1797—10m, Wisconsin Statutes, which in substance provides that carload freight must on the average be moved seventy-five miles per day and which provides penalties for the violations of such provisions, be suspended, insofar as sugar beet traffic is affected, for a period of thirty days, subject to such modifications in this order as may be deemed necessary and proper upon further investigation.

On Nov. 8, 1911, *Mr. William Ellis* appeared before this Commission and presented the following application, supporting the same with facts which showed in detail the traffic situation on the applicant's lines in this state with respect to the sugar beet traffic:

"Please take notice that conditions have arisen on the line of railroad of the Chicago, Milwaukee & St. Paul Railway Company, over which it has no control and is liable for, which render it impossible for said company to move certain carload freight, to wit, sugar beets, from point of shipment to point of destination at an average rate of seventy-five miles for each twenty-four hours, because the consignees of such carload freight, to wit, sugar beets, are unable to unload the cars received by them as fast as they are delivered, which prevents this company from moving cars from out on its line into the terminals to which they are destined, the result being a congestion which makes it impossible to move that commodity seventy-five miles a day, and which materially and seriously impedes and interferes with the movement of other commodities.

"You will please take notice that the consignees of sugar beets in carload lots do not use due and reasonable diligence in unloading of cars, and it is respectfully submitted that such failure to do so should subject the consignee to supervision by your Commission, and that conditions warrant your Commission in promulgating reasonable and just rules and regulations to modify the provisions of said act with reference to the transportation of sugar beets in carload lots."

Said ch. 358, Laws of 1911, reads as follows:

"1. In all cases where common carriers move carload freight from point of shipment to point of destination at an average rate of less than seventy-five miles for each twenty-four hours, consignee shall be allowed for unloading without car service or demurrage being assessed, additional free time equivalent to the number of days in excess of seventy-five miles per day of twenty-four hours consumed by the common carrier in transporting said freight from point of shipment to point of destination.

"2. For the purpose of determining whether or not the consignee shall be entitled to additional free time as provided for in subsection 1 of this section, the time consumed by the common carrier in transporting the freight shall begin to run at twelve o'clock midnight of the day on which the freight is delivered to the common carrier at point of shipment and shall end at twelve o'clock midnight of the day on which the car is placed at a point accessible to the consignee for the purpose of unloading.

"3. The provisions of this act shall apply to carload freight transported by one or more common carriers from point of shipment to point of destination. Provided that whenever any railroad company shall notify the railroad commission of Wisconsin that conditions have arisen on its line of railroad over which it has no control and is liable for, stating in said notification the facts of the case, the railroad commission may, if it deems the facts such as to warrant, issue its order suspending the operation

of this act not to exceed thirty days, but may continue such order from time to time as the conditions may warrant. The consignee must use due and reasonable diligence in unloading all cars, and any failure to do so shall subject the consignee to a like supervision by the railroad commission. It is further provided that when conditions warrant the railroad commission shall have power to promulgate reasonable and just rules and regulations to enforce or modify the provisions of this act."

From the car reports of the superintendents of the various divisions of the petitioner's lines that are involved herein it appears that the daily loading of cars with sugar beets for the sugar factories at Janesville, Madison and Menomonee Falls considerably exceeds the average number of such cars that are daily unloaded at these factories, and that for this reason the petitioner now has on its tracks at various places some 385 cars loaded with sugar beets which the factories had so far failed to unload.

The congestion which has resulted from this was said to be so operating as to deprive the petitioner of the proper use of its equipment and to also tend to unable it to furnish other shippers with cars as promptly as they should be so furnished.

From other facts presented by the petitioner it also appears that this matter had been taken up with the beet sugar manufacturers interested and that these manufacturers had among other things been notified that the matter was to be laid before this Commission for the purpose of obtaining an order from it under which the law would be temporarily suspended.

While the manufacturers interested in this case have not been heard from in the matter and while it is not generally the practice of this Commission to make orders except upon formal hearings and investigations, the conditions in this case appear to be such that immediate action is necessary. The material facts in the case relating to the manner in which this traffic is handled by the shippers are of such character that there can be little or no dispute as to their correctness; undue delays in releasing cars are detrimental to the carriers, the shippers and the public. This case is of the nature of an emergency proceeding; it appears likely that the suspension of the provisions which require loaded cars to be moved seventy-five miles per day on the average may have a tendency to relieve the situation. The situation is, in fact, such that it appears advisable to order such suspension, pending further investigation of the facts.

That it is the duty of shippers to so regulate their shipments that there is a reasonable and fair relation between the amount of freight that is forwarded to them and the amount of freight they are equipped to handle, is of course clear. That in this case the receivers of the sugar beet have entire control of the forwarding or shipping of the same, however, is not an undisputed fact and has not as yet been fully established. For this reason we deem it inadvisable to attempt herein, without further investigation, to prescribe specific rules governing the manner in which the shippers should regulate and handle the sugar beet traffic in question.

IT IS THEREFORE ORDERED, That that part of ch. 385, Laws of 1911, being sec. 1797—10m, Wisconsin Statutes, which in substance provides that carload freight must on the average be moved seventy-five miles per day and which provides penalties for the violations of said provisions, be and is hereby suspended, insofar as sugar beet traffic is affected, for a period of thirty days, subject to such modifications in this order as may be deemed necessary and proper upon further investigation.

RHINELANDER PAPER COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Sep. 12, 1911. Decided Nov. 10, 1911.

The petitioner, a corporation engaged in the manufacture of paper, sulphite, and ground wood pulp at Rhinelander, Wis., complains that it is discriminated against by the respondent railway company. Petitioner alleges that such company charges lower rates on pulp wood than those fixed by the Commission *In re Rates on Pulp Wood*, 1908, 2 W. R. C. R. 168, for certain other Wisconsin points, while it applies the rates fixed by the Commission to Rhinelander. Petitioner prays that the respondent be ordered to desist from discriminating against the petitioner in the manner stated, or else to place Rhinelander upon the same basis, as to reduction of rates on pulp wood, with the other mill points in question.

Held: The reduction in rates to certain other mill points and not to Rhinelander amounts to an unjust discrimination. Although the distance tariff rates fixed by the Commission are believed to be fair to both the shippers and the carriers, there is no objection on the part of the Commission to a somewhat lower system of rates, provided the discriminatory conditions found to exist in this case are dispensed with. It is ordered that the respondent either discontinue the special rates to Grand Rapids, Port Edwards, Nekoosa, Neenah, and Menasha and substitute therefor the rates fixed by the Commission *In re Rates on Pulp Wood*, 1908, 2 W. R. C. R. 168, or reduce the rates on pulp wood from pulp wood shipping points on its lines in Wisconsin to Rhinelander in approximate proportion to the reductions, below the rates fixed by the Commission, now existing on pulp wood shipments to Grand Rapids, Port Edwards, Nekoosa, Neenah, and Menasha. It is further ordered that the respondent discontinue and cancel its joint trainload rate of 4 cts. with the C. & N. W. R. Co. on pulp wood shipments from Butternut, Fifield, and Park Falls to Kimberly, Wis.

The petitioner, a corporation engaged in the manufacture of paper, sulphite and ground wood pulp at Rhinelander, Wis., complains that the respondent railway company, which on its own line and in connection with other carriers transports pulp wood to paper mill points in the state of Wisconsin, discriminates against the petitioner in charging, for certain other points, rates lower than those fixed by this Commission *In re Rates on*

Pulp Wood, 1908, 2 W. R. C. R. 168, while it applies to Rhinelander the rates fixed by the Commission in said case. Wherefore, the petitioner prays that the respondent railway company be ordered to desist from discriminating against the petitioner in the manner stated, or else to place Rhinelander upon the same basis, as to reduction of rates on pulp wood, with the other mill points named.

The petitioner mentions specifically three tariffs which are alleged to offend in this regard, as follows: 1. Respondent's G. F. D. 13,692, effective Aug. 16, 1911, naming rates on pulp wood from certain Chicago division points to Grand Rapids, Port Edwards and Nekoosa, and to Neenah and Menasha, Wis. 2. Respondent's G. F. D. No. 12,805, effective Jan. 25, 1911, naming rates on pulp wood in connection with the Chicago & North Western Railway Company from stations on respondent's line to Appleton, Combined Locks, Kaukauna, Kimberly and Little Chute, Wis. 3. Respondent's G. F. D. No. 13,276, effective May 8, 1911, naming rates on pulp wood in connection with the Chicago & North Western Railway Company in trainload lots from Park Falls, Butternut and Fifield to Kimberly, Wis.

To the complaint as set forth above, the respondent Minneapolis, St. Paul & Sault Ste. Marie Railway Company filed an answer admitting the existence of the tariffs referred to and alleging, as to G. F. D. No. 13,276, that such tariff would be canceled Nov. 1, 1911, and as to G. F. D. No. 12,805, that its rates to the points of destination named in said tariff are based on the respondent's distance rates to Neenah and Menasha, and the Chicago, Milwaukee & St. Paul and Chicago & North Western rates from those points to destination. The respondent denies that any of said tariffs are unreasonable, unlawful or discriminatory, and prays that the petition be dismissed.

The matter was heard at the office of the Commission, Sep. 12, 1911. *Drew & Jameson* appeared for the petitioner, and *A. H. Bright* for the respondent railway company.

The testimony on the part of the petitioner at the hearing indicated that the petitioner, in buying pulp wood for its mill, competes with three buying associations, composed of mills located principally at Neenah, Appleton, and Grand Rapids, respectively. These associations ship from points in the neighborhood of Mellen and that portion of the respondent's line between Mellen and Hurley. It was testified that the joint rates between

the respondent and the Chicago & North Western and Chicago, Milwaukee & St. Paul railways, applying to Kaukauna and Appleton, are apparently based on the combined mileage of the two railways from origin to destination, and not on the sum of the local rates to and from the junction point. Specific illustrations of the difference between the present rates and the Commission's rates to various mill points were mentioned, which will be sufficiently brought out by tables which follow. It was testified also that on the finished product shipped out to Chicago, the rate from Rhinelander was about 2 cts. higher than the rate from either the Wisconsin river or the Fox river valley points. It was not definitely stated at the hearing at what points the petitioner's shipments originate, except that they move from points east and west to Rhinelander; but a statement by counsel for the respondent, that the petitioner's average rate was 2.485 cts. on 80 cars shipped by the petitioner during six months, was admitted by the witness for the petitioner to be about correct. This would make the average distance of the petitioner's shipments, under the Commission's rates, about 40 miles. On cross-examination the witness for the petitioner stated that the petitioner had no present occasion to ship from Park Falls, Mellen or Glidden, although an occasion might arise in the future when shipments from such points would be desired.

No testimony was introduced on the part of the respondent company. Its representative stated that if the special rates complained of were a menace to the Commission's rates, the company was willing to cancel them.

The rates established by the tariffs against which complaint is made are shown in table I. The table also shows what the rates to and from the same points would be under the Commission's schedule; and where joint rates are involved, the Commission rates are shown on the basis of the combined mileage as well as on the basis of the sum of the local rates.

TABLE I.

RATES ON PULPWOOD TO WISCONSIN RIVER AND FOX RIVER VALLEY POINTS. ON RESPONDENT'S LINE.

1. M. St. P. & S. S. M. G. F. D. No. 13,692, effective Aug. 16, 1911.

Park Falls	5.65	190	6.54	5.05	6.68	5.25
Butternut	5.80	195	6.69	5.25	6.83	5.25
Glidden	6.00	205	6.89	5.45	7.03	5.45
Morse	6.20	212	7.09	5.45	7.23	5.60
Mellen	6.35	224	7.24	5.80	7.38	5.80
Upson	6.55	237	7.44	6.00	7.58	6.15
Iron Belt	6.75	242	7.64	6.00	7.78	6.15
Hoyt	6.75	244	7.64	6.15	7.78	6.15
Hurley	6.75	250	7.64	6.15	7.78	6.30
High Bridge	6.55	231	7.44	5.80	7.58	6.00
Marengo	6.55	236	7.44	6.00	7.58	6.00
White River	6.75	243	7.64	6.00	7.78	6.15
Curtiss	4.83	123	5.72	4.08	5.86	4.20
Owen	4.83	122	5.72	4.08	5.86	4.20
Withee	4.95	125	5.72	4.20	5.86	4.20
Thorpe	5.08	134	5.84	4.33	5.98	4.33
Stanley	5.08	140	5.84	4.33	5.98	4.45
Boyd	5.20	146	5.97	4.45	6.11	4.45

It may be seen from the above table that the joint rates named in the tariff last set forth (G. F. D. 12,805) are not, as suggested by the petitioner, about equal to the Commission's rate on the basis of the combined mileage, but average about 0.50 to 0.75 cts. higher than such rate. In general, an allowance of about 0.75 cts. amply covers the cost of transferring traffic of this nature between two lines, so that a joint rate higher by that amount than the single line rate for the entire distance is correctly proportioned, from the point of view of cost of service, to the single line rate. It is plain, therefore, that the rates

named in this tariff, to Appleton, Combined Locks, Kaukauna, Kimberly and Little Chute, are not so far out of line with the Commission's rates as to discriminate against Rhinelander, and further consideration of this tariff is unnecessary for the purposes of this case.

On the other hand, the joint trainload rate of 4 cts. from Park Falls, Fifield and Butternut to Kimberly, shown in the second tariff of table I (G. F. D. 13,276), is over a cent lower than the Commission's rate would be if based upon the combined mileage, and the reasonableness of this tariff, as against the petitioner, is open to serious question. However, this tariff states upon its face that it expires Nov. 1, 1911, and the evident intention of the respondent, as shown both by its answer and by statements of its representatives at the hearing, was that the tariff should be canceled on that day. No request for authority to cancel the tariff has been filed with the Commission, and probably the tariff is still in legal effect, notwithstanding the statement on its face as to its expiration; but as all parties evidently intended that it should go out of effect on Nov. 1, the respondent company will be ordered in this proceeding to cancel it.

This leaves, as the basis of the petitioner's complaint, the tariff (G. F. D. 13,692) first set forth in table I, naming rates to Grand Rapids, Port Edwards and Nekoosa, and to Menasha and Neenah. This tariff, as the table shows, fixes rates which range, in the case of Grand Rapids, Port Edwards and Nekoosa, from 0.65 cts. to 1.1 cts. per 100 lbs. lower than those fixed by the Commission for like distances; and in the case of Neenah and Menasha, from 0.6 cts to 1.45 cts. lower than the Commission's rates. The question is, whether these reductions to certain mill points and not to Rhinelander amount to an unjust discrimination of which the petitioner has a right to complain.

Rhinelander, by reason of its nearness to the source of pulp wood supply, has a natural advantage over both Grand Rapids and Neenah in obtaining raw material. In the absence of special commodity rates to the latter cities, Rhinelander would enjoy upon pulp wood shipments in, an advantage of freight charges which, though not proportionate to the difference in distance, because distance rates are relatively higher for shorter than for longer distances, would greatly lessen the transportation cost of raw material shipped to the petitioner's mill, as compared with the cost to other mills. Table II shows the

advantage which Rhinelander would normally have upon shipments from a number of the points named in the tariffs complained of, as compared with the advantage it now has:

TABLE II.

ADVANTAGE OF RHINELANDER OVER NEENAH AND GRAND RAPIDS, UNDER PRESENT RATES AND UNDER COMMISSION RATES.

*Commission rate is the only rate in force.

It will be seen from table II that the advantage of Rhinelander over Grand Rapids is very greatly reduced by the present rates, being changed, in fact, from an advantage to an actual disadvantage. The advantage over Neenah is not so radically affected by the present arrangement, due largely to the fact that the distances to Neenah are greater than to Grand Rapids, and the Commission's rates themselves decrease the advantage by making the rates relatively lower as distances in crease.

It does not appear, however, that the petitioner ships to any considerable extent from the points named in table II, and therefore that table may not represent with accuracy the average cost per 100 lbs. of moving pulp wood into the petitioner's mill. The testimony indicates that the petitioner's shipments come principally from points east and west of Rhinelander and move an average distance of about forty miles. If several stations at about this average distance east and west of Rhinelander are taken as examples, the rates at which the petitioner's pulp wood is shipped into Rhinelander are about as follows:

	From.	Distance to Rhinelander.	Rate cts.
West:	Kennan	61	3.00
	Prentice	46	2.72
	Bradley	19	1.92
East:	Atkins	20	1.92
	Bonneval	44	2.72
	Dunbar	63	3.00

If, then, the point of origin for the petitioner's shipments in a given case is assumed to be Prentice, while the Grand Rapids shipments move from Mellen and the Neenah shipments move from Park Falls, the normal advantage of Rhinelander is 1.73 cts. over Grand Rapids, and 2.18 cts. over Neenah; but the present system of rates reduces this advantage to 0.78 cts. over Grand Rapids and 1.28 cts. over Neenah, or a reduction of nearly a cent per 100 lbs. in each case. That Mellen and Park Falls are typical points of origin for the shipments to Grand Rapids and Neenah, respectively, would seem to be borne out by the testimony. Numerous other illustrations of the reduction of Rhinelander's advantage by reason of the present rates to Neenah and Grand Rapids may be deduced from the tabulation given above and from table II, and the unavoidable conclusion from a study of the tables is that Rhinelander suffers a material detriment by reason of the reductions in rates to the other mill cities. In most cases the geographical advantage of Rhinelander is not entirely lost: that is, the advantage is not changed to an actual disadvantage; but in nearly all instances the discrimination is sufficient to make a large difference on a season's shipment of pulp wood.

The unfavorable effect of the present rates upon Rhinelander is more clearly demonstrated when it is considered that the Rhinelander mill must pay a higher rate on its product out to Milwaukee and Chicago and other points than the Neenah and Grand Rapids mills pay. The nearness of Rhinelander to the source of pulp wood supply is to some extent offset by a correspondingly greater distance to the paper markets. This longer haul out is the occasion for the establishment of a rate on paper from Rhinelander to Milwaukee and Chicago about 2 cts. per 100 lbs. higher than the paper rate from Neenah and Grand Rapids. It is obvious, therefore, that, with the disadvantage remaining the same on the haul out, a decrease in

Rhinelander's advantage on the haul in will have a very marked effect upon the total transportation cost of the raw material and finished product. It appears, from testimony in other cases before the Commission, that upon the average 2,000 lbs. of pulp wood will make about 700 lbs. of paper. Thus, if the cost of shipping one ton of pulp wood in is added to the cost of shipping 700 lbs. of paper out, the total cost will be a unit capable of satisfactory comparison as between localities. Table III shows how, upon this basis, the total cost of transportation in and out of Rhinelander compares with the cost in and out of Grand Rapids and Neenah, under the present rates and under the Commission's rates.

TABLE III.

COMPARISON OF PULP WOOD RATES IN, TOGETHER WITH PAPER RATES OUT TO MILWAUKEE,

AS BETWEEN RHINELANDER AND NEENAH AND GRAND RAPIDS, SHOWING ADVANTAGE OF RHINELANDER UNDER PRESENT RATES AND UNDER COMMISSION RATES.

No good reason has been advanced why the discriminations, shown in the above tables to have been made against Rhinelander, should exist. The Commission's distance rates are so arranged as to give ample effect to the principle that rates for long distances should be relatively lower than those for shorter

distances. The present system of special rates to Neenah and Grand Rapids is apparently an attempt to give the long-distance points a still further advantage. Such attempt is not justified by any of the facts brought out at the hearing or otherwise presented to the Commission. The petitioner is engaged in a highly competitive industry, is handicapped by its greater distance to the paper market in shipping its product out, and should be permitted to obtain whatever fair advantage is to be had from its nearness to the supply of raw material.

Although the distance tariff rates fixed by the Commission are believed to be fair to both the shipper and the carrier, there is no objection on the part of the Commission to a somewhat lower system of rates, provided the discriminatory conditions found to exist in this case dispensed with. The respondent will therefore be given an option, either to raise its rates to Grand Rapids, Port Edwards and Nekoosa, and to Neenah and Menasha, to the level of the Commission's rates, or to reduce the Rhinelander rates, so that, using the Commission's rates as a standard, they will be as low, proportionately, as the rates to Grand Rapids and Neenah. If the respondent chooses to adopt the latter course, and the rates established do not adequately remedy the situation, the matter can be again taken up by the Commission.

IT IS THEREFORE ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, either discontinue the special rates to Grand Rapids, Port Edwards, Nekoosa, Neenah and Menasha, shown in its G. F. D. No. 13,692, and substitute therefor the rates fixed by this Commission *In re Rates on Pulp Wood.* 1908, 2 W. R. C. R. 168, or reduce the rates on pulp wood from pulp wood shipping points on its line in Wisconsin, to Rhinelander, Wis., in approximate proportion to the reductions, below the rates fixed by this Commission, now existing on pulp wood shipments to Grand Rapids, Port Edwards, Nekoosa, Neenah, and Menasha.

IT IS FURTHER ORDERED, That the respondent discontinue and cancel its tariff G. F. D. No. 13,276, which provides joint rates with the Chicago & North Western Railway Company on pulp wood shipments from Butternut, Fifield and Park Falls, Wis., to Kimberly, Wis.

GEORGE A. GREEN
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Oct. 17, 1911. Decided Nov. 10, 1911.

Petitioner, a submarine diver residing at Milwaukee, Wis., alleges that respondent company refuses to check as baggage his submarine diver's outfit which is packed in three chests provided with suitable handles; that the outfit is essential to the prosecution of his business and should be accepted as baggage by respondent; and that respondent is the only railway company which refuses to carry these chests as baggage. Respondent objected that the schedule does not provide specifically for the carrying of property of this character as baggage.

Held: Anything that is ordinarily necessary for the convenience of the passenger while on his journey or which is essential to the execution of some temporary employment or pleasure at his destination is to be considered baggage and the property here in question may be properly classified as baggage. It is ordered that the respondent company transport as baggage, according to its rules and regulations, the petitioner's diving outfit when properly packed in suitable chests provided with such handles as are usually placed upon chests or trunks.

The petitioner is a submarine diver by occupation and resides at the city of Milwaukee, Wis. He alleges that his business engagements are urgent, as in cases of accidents, wrecks or delays in important construction work; that when notified by wire that he is required at any particular point, he advises his employer where to meet him and to be prepared to transport his outfit, himself and assistant to the work; that there is usually delay in transporting such outfit when made by express, and especially where one or more transfers are to be made; that the disadvantages in shipping by express are the fact that all trains do not carry express matter, that transportation by express is very slow and that delivery to consignee is usually delayed.

He further alleges that the respondent railway company refuses to check, as baggage, his outfit which is packed in three chests provided with suitable handles, one of which weighs 140 lbs., another 100 lbs., and the third 95 lbs. Wherefore, petitioner prays that the respondent railway company be required to carry his outfit as baggage.

The railway company, answering the petition, denies any knowledge or information sufficient to form a belief as to any of the material allegations of the complaint.

The matter came on for hearing on Oct. 17, 1911. The petitioner appeared in person, and the respondent by *F. G. Wright,* its assistant commerce counsel.

The petitioner is a submarine diver, and is employed chiefly by contractors who are engaged in construction work. When an accident occurs and damage to any structure results which requires submarine investigation, he is notified by his employers by telegraph, and it often becomes necessary, because of the urgency of the situation, for him to go to the place of the accident by the shortest and speediest route. It is important that he be able to take with him the necessary equipment for his work, for delay in investigation may result in further loss of property and great inconvenience to the parties concerned. A diver's outfit is as essential to the prosecution of his business and as imperative in cases of emergency as a surgeon's instruments are to a surgeon when called upon to perform an operation.

The petitioner has three chests in which he packs his equipment. These are provided with handles similar to those placed on the ordinary chest or trunk. One of the chests contains an air pump, which, with the chest, weighs 100 lbs.; another contains a diver's helmet, weighing 35 lbs., a life line one inch in diameter and one hundred feet in length, weighing about 18 lbs., and an air hose, chest and contents weighing 140 lbs.; and the third contains two diver's dresses made of rubber, a pair of rubber shoes, some tools and wearing apparel, chest and contents weighing 95 lbs. It also appears that the respondent is the only railway company which refuses to carry these chests as baggage. The objection is based on the fact that the schedule does not provide specifically for the carrying of property of the character of that in question. A further objection is also made to increasing the number of articles to be carried as baggage, for the reason that the volume of baggage is increasing to such an extent that it will be necessary to put additional baggage cars in trains unless there is a limit placed on the amount and character of the property that a railway company may be obliged to carry as baggage. It is claimed that this is becoming a somewhat serious problem with the railroads throughout the country.

In its published baggage rules and regulations the respondent defines baggage as follows:

"Baggage consists of wearing apparel and such personal effects of passengers as may be necessary for their journey and

will be checked upon presentation of proper transportation and only when enclosed in receptacles that will insure safe transportation, such as trunks, valises, telescopes, satchels, leather hat boxes, medium sized boxes containing personal effects and provided with suitable handles, tool chests, sailor or emigrant's boxes."

Under various restrictions and limitations as to carriage, the regulations provide specifically for the carrying as baggage, golf, cricket and similar paraphernalia, calcium light cylinders, stereoptican outfits and similar paraphernalia carried with and used by lecturers and other public entertainers, the dead body of a person of any age, baby carriages, go-carts, baby sleighs, bicycles, tricycles, guns in cases, saddles in boxes, miners' packs, steamer chairs, invalid chairs, surveyors' and civil engineers' equipment including tripods, transit levels, compasses and similar instruments, scenery and other property carried by parties for use in producing public entertainments, domestic and trained animals weighing not to exceed 250 lbs. each, dogs in crates, and dogs provided with collar and chain.

It will be seen from the foregoing enumeration of articles that many of them are merely used for the convenience or pleasure of passengers when reaching their destination and are not at all essential to the prosecution of any business or professional undertaking. There seems to be no fixed basis of classification. Whether any article shall or shall not be classified as baggage is apparently an arbitrary matter. It would seem, generally speaking, that anything that is ordinarily necessary for the convenience of the passenger while on his journey, or which is essential to the execution of some temporary employment or pleasure at his distination, is to be considered baggage. This also accords with the view taken by the courts, although the line of demarkation between what is and what is not baggage is not distinct.

In *Gleason v. Goodrich Transp. Co.* 1873, 32 Wis. 98, it is said:

"It has always been found very difficult to define with accuracy what shall be deemed baggage within the rule of the carrier's liability. The definitions given by BRONSON, J., in *Hawkins v. Hoffman*, 1844, 6 Hill 590, and by JUDGE STORY in his work on Bailments, 499, have generally been recognized as correct. After alluding to the difficulties and several of the definitions which have been attempted, CHIEF JUSTICE COCKBURN lays down the following rule in *Macrow v. Great Western Ry.*

Co., 1871, L. R. 6 Q. B. 622. He says: 'We hold the true rule to be, that whatever the passenger takes with him for his personal use or convenience according to the habits or wants of the particular class to which he belongs, either with reference to the immediate necessities, or to the ultimate purpose of the journey, must be considered as personal baggage. This would include, not only all articles of apparel, whether for use or ornament, but also the gun case or fishing apparatus of the sportsman, the easel of the artist on a sketching tour, or the books of the student, and other articles of an analogous character, the use of which is personal to the traveler, and the taking of which has arisen from the fact of his journeying. On the other hand, the term 'ordinary luggage' being thus confined to that which is personal to the passenger and carried for his use or convenience, it follows that what is carried for the purposes of business, such as merchandise or the like, or for larger or ulterior purposes, such as articles of furniture or household goods, would not come within the description of ordinary luggage, unless accepted as such by the carrier.'" (For a collection of cases on the subject, see: 4 L. R. A. (N. S.) 1035, note.)

If the definition of CHIEF JUSTICE COCKBURN is accepted, there can be no question that the property here in question may be properly classified as baggage, because the same is for the personal use of the passenger with reference to the ultimate purpose of his journey. It is just as essential to him that he have immediate possession thereof when he reaches his destination as the miner's pack is to the miner or the surveyor's equipment is to the surveyor when making a journey to or from his place of abode occasioned by professional engagement.

The suggestion that the petitioner can ship his equipment by express, does not appeal to us as safe to act upon in case of emergencies. Our experience, if at all general among shippers, would not warrant the pursuance of such a course. The petitioner would more often find himself at destination without his outfit than otherwise if he relied upon the facilities of the express companies to transport his chests. We are of the opinion that there is no justification on the part of the railway company to refuse to carry petitioner's equipment as baggage when packed in chests having suitable handles by which the same can be conveniently placed in and taken out of the baggage cars.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company transport as baggage, according to its rules and regulations, the petitioner's diving outfit when properly packed in suitable chests provided with such handles as are usually placed upon chests or trunks.

KENOSHA ELECTRIC RAILWAY COMPANY

vs.

KENOSHA GAS AND ELECTRIC COMPANY.

Submitted Nov. 8, 1911. Decided Nov. 13, 1911.

Respondent, the Kenosha Gas and Electric Company, filed with the Railroad Commission an amendment to its rate schedule for electric commercial lighting in the city of Kenosha, Wis., which provided for rates considerably lower than those previously in effect. Petitioner, the Kenosha Electric Railway Company, a competing electric utility of Kenosha, alleges that the new rates are insufficient and unreasonable, that the reduction is made with the purpose of commencing a rate war against the petitioner and injuring its business by depriving it of customers. Petitioner prays that the practices complained of be forbidden; that reasonable minimum rates and charges for commercial electric lighting and power service in Kenosha be established; that the amendatory schedule be canceled; and that the respondent be forbidden to furnish any service at the rates named therein.

Held: Upon investigation it appears that the reasons for the reductions are undoubtedly to be found in those motives which result in rate wars. A rate war in this case cannot possibly lead to anything but harm. The new rates are not only so low as to hardly cover operating expenses and depreciation, but they appear to be so made up as to be discriminatory as between long and short hour users. Business and public interests demand that the rates complained of be temporarily altered by being raised to a somewhat higher level and there maintained until the investigation as to reasonable electric rates in Kenosha has been completed. The respondent should be given the option of either reinstating the former rates or of putting into effect a rate that is substantially identical with the rates now charged for like service by the petitioner. It is ordered that the rates of the respondent as provided by the amendment complained of herein, immediately be temporarily altered and amended, pending the final order in this case, by substituting therefor either the rates discontinued by the amended new rates or the rates temporarily provided by the Commission.

On Nov. 2, 1911, the Kenosha Gas and Electric Company, the respondent in this case, filed in this office a certain amendment to its rate schedule for electric commercial lighting in the city of Kenosha, which under the law became effective ten days after said filing, or on or about Nov. 12, 1911. This amendment provided for new rates for the said commercial lighting which are

considerably lower than the rates previously in effect. In fact, the rates as amended compare as follows with the rates which they superseded. The figures given in these comparisons consist of the actual rates less the discounts for prompt payments.

Rates in cents per kw. hr.

	Present.	Proposed or new.
1st 50 kw. hrs	11.4	5.7
2nd 50 kw. hrs	9.5	5.7
2nd 100 kw. hrs	7.6	5.7
3rd 100 kw. hrs	7.6	5.7
4th 100 kw. hrs	5.7	5.7
5th 100 kw. hrs	5.7	2.97
6th 100 kw. hrs	5.7	2.97
Over above	3.8	2.97

The amended or new rates are not only a great deal lower than the former rates of the said company, but they are also considerably lower than the rates charged for like or similar service by the Kenosha Electric Railway Company, the petitioner in this case, which latter company is doing business in competition with the respondent herein, since both are operating electric utilities in the city of Kenosha.

The Kenosha Electric Railway Company has filed with this Commission a complaint against said amendment or reductions in the rates alleging, among other things, that the new rates are insufficient and unreasonable; that the reduction is made with the design, purpose and intent of commencing and prosecuting a rate war against the said petitioner and injuring its business, to deprive it of its customers for commercial lighting service, and to prevent it from obtaining other customers for such service.

The petitioner prays that orders be made forbidding the practices complained of, fixing and establishing reasonable minimum rates and charges for furnishing commercial electric lighting and power service in the city of Kenosha, and temporarily and pending the final orders herein altering and amending the schedule of rates which provides for the said reductions by canceling and striking from the files the respondent's said amendatory schedule, and forbidding it to put the said schedule into effect, or to furnish or agree to furnish any service at the rates and charges therein named, for the reason that said action is necessary to prevent injury to the business of the petitioner.

It is among the duties of the Commission to investigate com-

plaints, to forbid practices that are unjustly discriminatory, to determine and fix reasonable rates, and, when deemed necessary to prevent injury to business and public interest, to temporarily alter and amend existing rates. That the law covers such injuries to business and public interests as those caused by rate wars, seems clear, not only from its provisions, but from the circumstances under which these provisions were enacted.

From a preliminary investigation into the reasonableness of the rates complained of and their effect upon business and public interests, it appeared that good reasons existed for further inquiries into the matter before action was taken with respect to a temporary order altering or amending said rates. An informal hearing in the matter was therefore fixed for Nov. 8, 1911, at which the petitioner and the respondent herein, as well as the mayor and city attorney of the city of Kenosha, were requested to offer such facts and arguments in the case as might be deemed proper. At this informal hearing the petitioner was represented by its attorney, *Walter Drew,* and the respondent by its attorney, *Clarke M. Rosencrantz.* No appearance was made for the city of Kenosha.

The reduction of rates in question here was probably to some extent provoked by a reduction in a certain power rate which had recently been made by the petitioner, but the real reasons for the reductions are undoubtedly to be found in those motives which usually actuate such companies when they enter upon rate wars. At any rate, no other conclusions can be drawn either from the facts disclosed at the hearing or from the conditions inherent in the situation. It is true that the respondent attempted to justify the reduction on the ground that it was a necessary step in order to protect its business or property. But it is also a fact, that, when asked to show just how the reduction in question were necessary in preventing losses and protecting its property, no satisfactory explanations were offered.

Nor does it seem possible that a rate war in this case and under present conditions can possibly lead to anything but harm. Rate wars mean lower than paying rates, failure to keep the property in proper operating condition, and inadequate service. It usually results in the financial ruin to one or more of the contestants, the crippling of the rest, and in the ultimate consolidation of the remnants into one concern. When peace has thus been restored, the rates are advanced, not only to the level that prevailed before the contest, but to even higher figures.

This is often necessary, because it is frequently the only way in which the public can secure adequate service. This has been the history of rate wars since their beginning and there is nothing to indicate that history would not, in a measure, repeat itself in this case. These results, if the war were permitted to go on, could not be prevented or more than tempered under the Public Utilities Law, for the only way bankrupt corporations in the hands of receivers can be made to furnish adequate service to the public is through the additional investment of enough capital to restore the plants to efficient operating condition and by fixing rates that are high enough to yield reasonable returns for operating expenses, including repairs, depreciation and interest charges on the entire investment. In one way or another losses and destruction due to rate wars are almost certain to fall on the public; and in the end the customers of such utilities will lose more through such losses and through bad service than they gained through the temporary reductions in the rates while the war was on. Rate wars also have a demoralizing effect upon business methods and practices and usually result in future dissatisfaction and strife. In the public utility field they are so clearly against public policy that they should under no circumstances be permitted.

The value of the respondent's plant is not definitely known. Some idea of this value, however, may be had from the cost of reproduction of the physical property, as shown by the appraisal of the same by the engineers of this Commission in July, 1908, and from additions to the plant since, as reported by the company. The former item amounted to about $130,411, and the latter to $54,386, making the total cost $184,797. On this sum 8 per cent for interest and profit amounts to about $14,784 annually, while depreciation at 5 per cent on all the property outside of the land, which amounts to about $172,000, would foot up to about $8,600 per year. The company in its report to the Commission charged its operating expenses with $6,413 for depreciation, and this latter item is used in the calculations herein.

The operating expenses of the company for the year ending June 30, 1911, as reported by it, when taxes and when $6,413 for depreciation are included therein, stood at $44,659. The total would be increased to $46,846 if depreciation is placed at $8,600 instead of $6,413, as figured by the respondent. If the $44,659 is apportioned between demand and output expenses

on a basis that ordinarily obtains for plants of this kind, and if each of these items, in turn, are allotted between power and commercial lighting on a similiar basis, it is found that the total expense is about $26,508 for commercial lighting and $18,152 for power. These items, as stated, while they may not include the full depreciation charge, yet show that the average cost per kw. hr. of the commercial lighting current sold during the same period amounted to about 6 cts., or to a somewhat greater figure than will be received by the company under its new rate schedule. But the new rates are not only so low as to hardly cover operating expenses and depreciation, but they appear to be so made up as to be discriminatory as between long and short hour users. That such is the case is indicated by the following costs per unit which have been computed from the total costs as given above and from the operating statistics of the company as reported to this Commission. The proportion of the active to the connected load was placed at 50 per cent and 65 per cent, respectively, for commercial lighting and for power. The current sold was given as 447,372 kw. hrs. for the former service and as 490,415 for the latter.

Cost in cents per kw. hr.

	Commercial lighting.	Power.
One hour daily	10.73	5.60
Two hours daily	6.91	4.35
Three hours daily	5.64	3.93
Four hours daily	5.01	3.61
Five hours daily	4.62	3.50
Ten hours daily	3.86	3.35

The preceding costs per unit do not include anything for interest on the investment and perhaps an insufficient amount for depreciation. While these units are approximations only, they are not so far out of the way but that they show that 6 cts. per kw. hr. for the first 400 kw. hrs. is not only too low a rate from the point of view of public safety, but that such rate is also very badly adjusted between long and short hour users. It is, in fact, a rate under which long hour users are made to bear a large proportion of the expense that should be borne by those who use their installations only a comparatively short time each day. When a reasonable amount for interest and profit is included in the operating expenses, the costs per unit are, of course increased to much higher figures than those given above.

From these and other facts it appears to us that business and public interests demand that the rates complained of herein should be temporarily altered or amended by being raised to a somewhat higher level and there maintained until the investigation of the reasonableness of the rates for electric current in Kenosha, upon which the Commission is now entering, has been completed and the final order is made in the matter.

This conclusion raises the question as to what the rates ought to be by which the new rates, thus altered and amended, are replaced. From one point of view it would seem best that the rates just discontinued should be reinstated, as this would leave the situation where it was pending the investigation and would also cause the least disturbance to the records and practices of the company. From another point of view this might not be satisfactory, and this for the reason that the former rates of the respondent are somewhat higher than the present rates of the petitioner and may therefore tend to place the former at a disadvantage in the common markets for their services. While no facts in relation to this matter were presented at the hearing, and while we have not been able to obtain much light thereon from any other source, the fixing of the temporary rate may be an important feature in this case. For this reason it would seem best that the respondent should be given the option of either reinstating their former rates or of putting into effect a rate that is substantially identical with the rates now charged for like service by the Kenosha Electric Railway Company.

IT IS THEREFORE ORDERED, That the rates of the Kenosha Gas and Electric Company for its commercial lighting in Kenosha, as provided by the amendment to its rate schedule complained of herein and which rates read 6 cts. per kw. hr. for the first 400 kw. hrs. per month; 3 cts. per kw. hr. for all in excess of 400 kw. hrs. per month, immediately be temporarily altered and amended, pending the final order in this case, by substituting therefor either the rates discontinued by said amended new and reduced rates, or the rates which are given below:

For the first	100	kw. hrs.	10	cts. per	kw. hr.
" second	100	"	8	"	"
" third	100	"	7	"	"
" fourth	100	"	6	"	"
For all over	400	"	5	"	"

A prompt-payment discount of 2 cts. per kw. hr. from the above rates will be allowed on all bills paid at the company's office on or before the 10th day of the month next succeeding the month for which the service is rendered.

A. S. BADGER COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY,
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Oct. 17, 1911. Decided Nov. 13, 1911.

Petitioner alleges excessive rates on a carload shipment of lumber from Rhinelander to Star Lake, Wis. The rate charged was composed of two local rates, the one over the M. St. P. & S. S. M. R. from Rhinelander to Heafford Jct., the other over the C. M. & St. P. R. from Heafford Jct. to Star Lake. There was no through joint rate at the time this shipment was made, nor is there a joint rate in effect at present.

Held: An examination of the tariff schedules of the respondent companies shows that the local rate applicable to the shipment from Heafford Jct. to Star Lake was 7 cts. per cwt., and not 8 cts. as charged. The charge exacted was therefore illegal to the extent of this excess. The rate of 12½ cts. per cwt. exacted by the respondents, is illegal and exorbitant and a reasonable rate for the services rendered would have been a through rate of 7 cts. per cwt. Refund is ordered on this basis.

The petitioner is a corporation engaged in the buying and selling of lumber. It alleges that on June 29, 1911, it shipped a carload of pine and tamarack lumber over the respondent's lines from Rhinelander, Wis., to Star Lake, Wis., weighing 45,900 lbs.; that said carload of lumber moved over the line of the Minneapolis, St. Paul and Sault Ste. Marie Railway Company from Rhinelander to Heafford Jct. and over the line of the Chicago Milwaukee & St. Paul Railway Company from Heafford Jct. to Star Lake; that the petitioner was charged and obliged to pay freight from Rhinelander to Heafford Jct. at the rate of 4½ cts. per cwt., or $20.65, and from Heafford Jct. to Star Lake at the rate of 8 cts. per cwt., or $36.72, making the total freight charge collected on said shipment $57.37; that the rates thus assessed are excessive, and that a through rate of 5 cts. per cwt. from Rhinelander to Star Lake on lumber in carload lots would be an ample charge. Wherefore, petitioner prays that the respondent railway companies be required and directed to refund to it the sum of $34.42.

The Minneapolis, St. Paul & Sault Ste. Marie Railway Company, answering the petition, denies the material allegations thereof. The Chicago, Milwaukee & St. Paul Railway Company, answering the petition herein, alleges that if said shipment moved as alleged in the petition, the proper rate to have applied on its line from Heafford Jct. to Star Lake was a rate of 7½ cts. per cwt., which is a just and reasonable rate.

The matter came on for hearing on Oct. 17, 1911. There was no appearance on the part of the petitioner. The respondent railway companies were represented by *F. G. Wright,* assistant commerce counsel of the Chicago, Milwaukee & St. Paul Railway Company.

The respondents contended that the shipment of lumber was an abnormal movement, as it moved to a lumber producing point and therefore there is no necessity for a through rate to be established. Upon investigation it appears, however, that the petitioner maintains a large lumber yard at Rhinelander in which it carries a stock on an average of 15,000,000 to 20,000,000 feet of white pine and norway pine lumber; that previously two full carloads of lumber were shipped by the petitioner from Rhinelander to Star Lake, and that in all probability there will be other shipments in the future; that Star Lake is no longer a lumber producing point, as the saw mill located there was dismantled and removed several years ago; that there has not been any lumber manufactured at Star Lake for a period of more than five years.

There was no through joint rate at the time the shipments in question moved, nor is there a joint rate in effect at present. The distance from Rhinelander to Heafford Jct. is seventeen miles, and from the latter point to Star Lake forty-five miles. Minneapolis, St. Paul & Sault Ste. Marie G. F. D. 12400, effective Sep. 15, 1909, and still in effect, names a distance rate on lumber for seventeen miles of 4½ cts. per cwt. This rate was exacted on the shipment in question. C. M. & St. P. G. F. D. 6500—A, effective Aug. 3, 1908, and still in effect, names a distance rate on lumber for forty-five miles of 7 cts. per cwt., which rate was applicable to the said shipment for the haul from Heafford Jct. to Star Lake, but a rate of 8 cts. per cwt. was charged for this part of the haul. The charge exacted therefore was illegal to the extent of $4.59. The lawful through rate applicable to the shipment was 11½ cts. instead of 12½ cts. as actually charged.

The petitioner states that a through rate of 5 cts. would be an ample charge for the service rendered and asks for reparation on this basis. The tariffs on file indicate that a through joint rate on lumber in carload lots of 5 cts. per cwt. for a distance of 17 miles on one line and 45 miles on another, making a combined haul of 62 miles, would be an unusually low rate. The single line distance rate on practically all the lines in this state for a distance of 65 miles is 9 cts. The joint rate established by the Commission between the Chicago & North Western Railway Company and the Chicago, Milwaukee & St. Paul Railway Company in the case of *Wisconsin Retail Lumber Dealers Association v. C. & N. W. R. Co. and C. M. & St. P. R. Co.* 1909, 3 W. R. C. R. 471, is 6.8 cts. This rate, however, is included in a complete schedule of rates for distances ranging from 25 to 500 miles, and therefore should not be considered without reference to the complete table in which it appears and the circumstances and conditions under which the traffic thereby affected moves.

In the present instance, the complaint is against a rate composed of two local rates, applying from and to points which happen to be 62 miles apart, 17 miles of which is on one line and 45 miles on the other. With the exception of the joint rates established in the case cited, the rate between any two points in this state similarly situated, that is, 17 miles on one line and 45 miles on another, would be 11½ cts., the same as should have been assessed on the shipment in question. The following table shows the distance rates in effect from points on the line of the M. St. P. & S. S. M. R. Co. to points on the line of the C. M. & St. P. R. Co. and vice versa:

From M. St. P. & S. S. M. stations.	To C. M. & St. P. stations.	Miles.	Rate.
Rhinelander, Wis.	Wausau, Wis.	74	7½
Hawkins	"	98	8
Weyerhaeuser	"	133	8

" "	Alverno	49	6
Oconto	Potter	65	7
"	Alverno	83	7
Marinette	Potter	118	7½
"	Alverno	136	7½
"	Manitowoc	141	7½

After careful investigation of all the facts and circumstances involved in this case, it is our judgment that the rate of 12½ cts. per cwt., exacted of the petitioner by the respondents for the aforesaid shipment of lumber from Rhinelander to Star Lake, is illegal and exorbitant, and that a rate of 7 cts. per cwt. would have been the reasonable rate to have assessed upon said shipment. It follows that reparation should be made to the petitioner in the sum of $25.24.

Now, Therefore, it is Ordered, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company and the Chicago Milwaukee and St. Paul Railway Company be and the same are hereby authorized and directed to refund to the petitioner, the A. S. Badger Company, the sum $25.24, being the excess charge on the aforesaid shipment of lumber.

The first named carrier will make such refund and collect from its co-respondent its proportionate share thereof.

IN RE APPLICATION OF THE MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY, FOR THE SUSPENSION OF THE OPERATION OF CHAPTER 358, LAWS OF 1911, BEING SECTION 1797—10m WIS. STATUTES, INSOFAR AS THIS LAW AFFECTS THE SUGAR-BEET TRAFFIC CONSIGNED TO CHIPPEWA FALLS, MADISON, JANESVILLE, AND MENOMONEE FALLS.

Decided Nov. 14, 1911.

Application was made by the M. St. P. & S. S. M. Ry. Co. for the suspension of the provision in ch. 358, Laws of 1911, being sec. 1797—10m of the Wisconsin Statutes, which requires common carriers to move carload freight from the point of shipment to the point of destination at an average rate of seventy-five miles for each twenty-four hours.

Held: The conditions in this case warrant immediate suspension of this provision of the act. It is ordered that ch. 358, Laws of 1911, be suspended from operation for a period of thirty days, insofar as it may affect the sugar beet traffic on the lines of the M. St. P. & S. S. M. Ry. Co. consigned to Chippewa Falls, Madison, Janesville, and Menomonee Falls, Wis.

WHEREAS, The said ch. 358, Laws of 1911, provides that common carriers, under penalty, must move or transport carload freight seventy-five miles per day;

WHEREAS, It appears from the data presented that the volume of sugar beets now shipped to the stations named above is so great that it cannot be unloaded or handled as rapidly as it is shipped in, there being at this time about two hundred three cars loaded with sugar beets on the tracks of the said railway, consigned to Chippewa Falls alone, that cannot be unloaded or released without undue delays, and there being a congestion of such shipments consigned to the other stations named;

WHEREAS, Jas. O. Klapp, Manager of the Wisconsin demurrage bureau, on behalf of said bureau and of the said Minneapolis, St. Paul & Sault Ste. Marie Railway Company, has applied to this Commission for an order suspending the operation of the said provisions which, under penalty, require carload freight to be moved seventy-five miles per day insofar as it applies to the sugar beet traffic in question here;

WHEREAS, This Commission, upon application of the carriers, is authorized to order such suspension of the operation of the said provision or law;

BE IT THEREFORE ORDERED, That ch. 358, Laws of 1911, be suspended from operation for a period of thirty days, insofar as it may effect the sugar beet traffic on the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, consigned to Chippewa Falls, Madison, Janesville, and Menomonee Falls. This order, however, is subject to such changes and modifications as may be deemed proper upon further investigation.

BRITTINGHAM & YOUNG COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Sep. 14, 1911. Decided Nov. 17, 1911.

Petitioner alleges respondent's rates on lumber from points on its La Farge branch, chiefly at or near La Farge, Wis., to Milwaukee, Oshkosh, Janesville, and points intermediate, are excessive as compared with rates to the same markets from such other lumber shipping points on respondent's line as Tomah, Wausau, and Tomahawk, Wis. Petitioner prays for a full investigation of rates on lumber from the points on the La Farge branch to the above named market points, and for the establishment of such rates as may be found just and equitable.

Held: The rates which the petitioner pays to Milwaukee, Madison, Stoughton, Janesville and Beloit are fairly proportioned to other rates now existing under similar conditions, and a change at the present time in the few rates involved in this case might result in a number of discriminations as between localities. In the case of Watertown, Oshkosh and Fond du Lac, however, the present rates are not only considerably higher than the cost of service warrants, but are out of line with the general trend of the existing rates for similar hauls. It is ordered, therefore, that the respondent discontinue its present carload rate on lumber between points on its La Farge branch and Oshkosh and Fond du Lac, and substitute therefor a rate of 10 cts. per 100 lbs.; and that it substitute for its present carload rate on lumber between all points on the La Farge branch and Watertown a rate of 9 cts. per 100 lbs.

Petitioner further asks for reparation in the sum of $100 to cover loss to it on shipments made during the past year, or such amount as it may prove it has paid the respondent over and above the rates which the Commission may find to be reasonable.

Held: No refund can be granted which is based upon the petitioner's mere estimate of its loss during any period preceding the making of the claim, and only the shipments specifically set forth in the statement submitted will be considered as the basis for a refund. Of the shipments so designated all but one moved to points as to which no change in rates is to be made at this time. One shipment moved from La Farge to Watertown under the former rate, and refund on this shipment is ordered on the basis of the new rate.

The petitioner, a manufacturer and wholesaler of lumber with its principal office at Madison, Wis., alleges that it ships considerable quantities of lumber from points on the La Farge branch of the respondent's line, chiefly at or near La Farge,

Wis., and that the respondent has established rates from such points to the markets at Milwaukee, Oshkosh, Janesville and points intermediate, which the petitioner believes to be excessive as compared with the rates to these same markets from such other lumber shipping points on respondent's line at Tomah, Wausau, an Tomahawk, Wis. The petitioner prays for a full investigation of the rates on lumber from the points on the La Farge branch to the above-named market points, and that an order be made requiring the establishment of such rates as may be found to be just and equitable. The petitioner also asks for reparation in the sum of $100, to cover loss to it on shipments made during the past year, or such amount as it may prove it has paid the respondent over and above the rates which the Commission may find to be reasonable.

The respondent railway company, answering the petition herein, admits the existence of the rates complained of, but denies that such rates are unreasonable or excessive, either in and of themselves or in comparison with the rates established to the same lumber markets from other shipping points.

The hearing was held at the office of the Commission, Sep. 14, 1911. The petitioner was represented by *F. E. Jewett*, the respondent company by *F. G. Wright*.

The testimony introduced at the hearing on the part of the petitioner was largely confined to a re-statement of the rate situation as alleged in the complaint. It appears that the petitioner ships practically nothing but hardwood, and its cost of teaming the logs from the woods to the mills at La Farge and neighboring points is very high on account of the distance they must be hauled. A specific instance of paying $5 per thousand feet for such hauling was mentioned by the witness. The petitioner's sales of lumber are made to retail yards and to factories, and there is little competition between the petitioner's lumber and lumber that is retailed for building material. It is impossible for the petitioner to compete at Oshkosh with lumber from Wausau and Tomahawk without cutting the price fifty cents to a dollar per thousand, to overcome the difference in freight. In addition to lumber, the petitioner ships a quantity of lath, taking the lumber rate. The petitioner's entire manufacture of lumber in 1910 in the territory in question was about 2,200,000 feet.

No testimony was introduced by the respondent company,

but its representative called attention to the fact that the points of origin involved herein are on a branch line and more switching is involved than in the case at the points with which the petitioner made its comparisons. The respondent also introduced a compilation of rates, most of which appear in the tables which follow.

Since the basis of the petitioner's complaint is the unreasonableness of its rates as compared with those from other lumber shipping points in the state to the same markets, a comparison of lumber rates from such points to the markets, not only on the line of the respondent company, but on other large lines, is important in this case. Such a comparison is presented in tables I, II, and III for lumber shipping points on the Chicago, Milwaukee & St. Paul, Chicago & North Western, and Minneapolis, St. Paul & Sault Ste. Marie lines, respectively. In addition to the rate, the distance is given in each case.

As table I shows, the rates which the petitioner pays to Milwaukee, Madison, Janesville and Stoughton, can hardly be said to be out of proportion to the rates from other lumber shipping points to the same markets over the respondent's line. In the case of Watertown, Oshkosh and Fond du Lac, however, it would seem that the rates which the petitioner must pay are considerably higher than the general level of rates for like distances, and out of proportion to rates for greater and less distances. If table I is compared with tables II and III, it will be seen that the same general relation holds true, although there are, of course, numerous specific exceptions. The rates to Oshkosh from such Chicago & North Western points as Sparta and Van Buskirk, and on the respondent's line from Viroqua, all applying for distances about equal to that from the La Farge branch to Oshkosh, are fixed at 10 cts. per 100 lbs., while on the "Soo" line the rate from Butternut, 210 miles, is 10 cts., and the rates from Cameron and Rice Lake, 219 and 226 miles, respectively, are 11.5 cts. each. Only one rate in the whole compilation, that from Van Buskirk to Janesville, is as high as the present rate from La Farge to Oshkosh.

It is to be noted that several of the points from which the rates to Oshkosh are considerably lower than the rates from the La Farge branch, are themselves on branch lines and undoubtedly involve as much extra switching as do the shipments from the La Farge branch. For example, Richland Center and Viroqua, on the respondent's line, Hackley and Laona on the Chicago & North Western line, are off the direct route to Oshkosh.

It is true that, as to some of the points included in the tables, comparisons based on the distance via the line on which the rate applies are somewhat weakened by the fact of competition with shorter routes. A conspicuous example of this is the rate from Green Bay to Oshkosh on the respondent's line, which, fixed at 7.5 cts. for a distance of 215 miles, might seem extraordinarily low were it not for the fact that the distance between the same points on the Chicago & North Western line is less than 50 miles. However, a sufficiently large number of the points named in the tables are free from competitive influence so that a general survey of the figures presented will give a fair idea of the rate situation.

A careful analysis of the costs incident to the movement of lumber on the respondent's line in Wisconsin indicates that the

total expense of the service, both movement and terminal, including a reasonable return upon the investment, ranges from something less than 7 cts. for a haul of 140 miles to not far from 9 cts. for a haul of 240 miles. It is apparent that the rate of 12.5 cts. for 247 miles, which is the longest distance from any point on the La Farge branch to Fond du Lac, is considerably higher than the cost of the service warrants, while the present 10 ct. rate to Watertown, a maximum distance of 168 miles, is about as far out of proportion. The present rates of 8 cts. to Madison and Stoughton and of 9 cts. to Janesville and Beloit are, in each case, somewhat higher than the cost figures for the respective distances, while the present rate to Milwaukee is a little above the cost figures.

Under the circumstances, it seems that no injustice will be done by decreasing the rates from the La Farge branch to Oshkosh and Fond du Lac to 10 cts. per 100 lbs., and the rate to Watertown to 9 cts. per 100 lbs. The present rates to these points are, as already pointed out, not only considerably higher than the cost of service warrants, but are out of line with the general trend of the existing rates for similar hauls. It should, therefore, cause no great disturbance of the present rate system to make the change indicated in the rates to these points.

As to the rates to Milwaukee, Madison, Stoughton, Janesville and Beloit, the excess of the present rate over the cost figure is not so great as in the case of Oshkosh, Fond du Lac and Watertown. Moreover, the present rates seem to be, in general, fairly proportioned to other rates now existing under similar conditions, and a change at the present time in the few rates involved in this case might result in a number of discriminations as between localities. The petitioner is in position to move his product from the La Farge branch to Madison, Janesville and Stoughton at as low or lower rates than is the case with its competitors at Tomah, Tomahawk, and other northerly points. On shipments to Milwaukee, the petitioner pays the same rate as shippers at Tomahawk and Wausau; and the excess of the petitioner's rate over that from Tomah is perhaps to some extent justified when the 60 mile difference in distance is considered. Under the circumstances, it would seem that no great hardship will be inflicted upon the petitioner if relief is denied as to Madison, Stoughton, Janesville, Beloit and Milwaukee rates. It may be necessary in the near furture to make

a considerable readjustment of lumber rates throughout the state, and for this among other reasons any changes in rates which seriously affect the present relations of lumber rates, and are not greatly needed at this time by the public, are not to be encouraged.

In its petition, the petitioner asks for a refund of $100 to cover its losses due to the excessive charges on shipments for one year preceding the filing of the petition. At the hearing, the representative of the petitioner, under the impression that the Commission had no authority to grant refunds upon shipments moving more than six months prior to the claim, reduced the claim to $25, and also introduced a statement of shipments moving from points on the La Farge branch to the lumber markets. It is needless to say that no refund can be granted which is based upon the petitioner's mere estimate of its loss during any period preceding the making of the claim, and therefore only the shipments specifically set forth in the statement submitted will be considered as the basis for a refund. Of the shipments so designated, all but one moved to Madison, Janesville and Stoughton, as to which points no change in rates is to be made at this time. One shipment, dated May 6, 1911, moved to Watertown upon the 10 ct. rate, at a total charge of $55.80. Upon the basis of a 9 ct. rate the charge would have been $50.22, and the petitioner is therefore entitled to a refund of $5.58 upon the said shipment.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, discontinue its present carload rates of 12.5 cts. per 100 lbs. on lumber between points on the La Farge branch of its line and Oshkosh and Fond du Lac, Wis., and substitute therefor a rate of 10 cts. per 100 lbs.; and that it discontinue its present carload rate of 10 cts. per 100 lbs. on lumber between all points on the La Farge branch and Watertown, Wis., and substitute therefor a rate of 9 cts. per 100 lbs.

IT IS FURTHER ORDERED, That the respondent be and the same is hereby authorized and directed to refund to the petitioner, the Brittingham & Young Company, the sum of $5.88, the amount herein found to have been exacted in excess of a reasonable charge, upon a shipment of lumber from La Farge to Watertown, Wis.

IN RE APPLICATION OF THE LA CROSSE GAS AND ELECTRIC COMPANY FOR AUTHORITY TO INCREASE ITS RATES.

Decided Nov. 17, 1911.

Application was made by the La Crosse Gas and Electric Co. for authority to increase its gas, electric and heating rates in La Crosse, Wis. The application rests, almost entirely, upon the claim to an investment in plant and business that is much in excess of the cost of reproducing the physical properties. The city of La Crosse and certain organizations in the city appeared in opposition to the application and prayed that an order be made reducing the rates for electric current. In a previous case (*In re Appl. La Crosse Gas & El. Co.* 1907, 2 W. R. C. R. 3, 30) certain increases in electric rates were authorized by the Commission. The rates authorized for the time being were in the nature of emergency rates and were put in effect subject to necessary revision subsequent to a valuation of the property and further investigation.

The present value of the applicant's physical property, determined by the engineers' tentative appraisal as of date June 30, 1909, was $751,862 and the cost of reconstruction new was $963,086. By reason of subsequent adjustments because of facts relating to cutting through and replacing pavement, the present value of the properties Nov. 30, 1909, was determined to be $719,740 and the cost of reconstruction new, $921,337. From these amounts the value of certain non-operating property was deducted, amounting to $22,866 present value, and $43,939 cost of reconstruction new. Because of certain omissions from the engineers' tentative valuations, $13,000 was added to the cost of reconstruction new.

The applicant declared that the allowance for engineering and superintendence, interest during construction, contingencies, etc., should be placed at 15 per cent because of unusual financial and competitive conditions under which construction took place. The contention was made that in the present case an additional per cent above that usually allowed should be added for interest during construction, chiefly because during the competitive period the money necessary to finance competing concerns, later acquired by the petitioner, was secured upon short time loans bearing more than the usual rate of interest.

Held: The costs, which are represented by the addition of 12 per cent, are such as the Commission believes will, under ordinary circumstances, be the amount needed to furnish adequate engineering and superintendence, to provide interest upon funds necessary for financing the project during the construction period, to meet such incidental construction and legal expenses as are not apparent in the physical property, and to cover omissions from a carefully prepared inventory of the same. An allowance of 12 per cent appears to be rea-

sonably ample in the present case. With respect to the claim for an additional interest charge, the Commission has repeatedly held that expense in the form of interest entailed by the use of funds during construction of a plant is as legitimate a part of the physical value of the property as the costs of the raw materials and labor which enter into the construction, and the same principles that underlie the determination of unit costs and rates in one case apply also in the other; but in determining the reproduction value of the property, as distinguished from the original construction cost, the prices applied must be average or normal prices. The actual prices paid by the original investors might lead to values either much above or much below what it would cost to reproduce the property. The amount necessary to cover interest in arriving at the cost of reproduction new, in the present case, is not a definite rate per dollar of the total investment, but represents the entire interest cost of the several portions of the investment necessary at different stages of the construction. This allowance does not contemplate the use of the entire investment sum for the entire period of construction, as such use appears, as a rule, uncalled for. If a shorter period than usual is involved in constructing the plant, then the increased cost due to higher interest rates on short time loans may be expected to be offset by the shorter period during which it is necessary for the loans to run. The only grounds for allowing anything additional in this respect would be that the haste with which the competing plants were built may have arisen from need of the service which they were to furnish, but the petitioner admits that such need did not exist. Under the circumstances no additional allowance for interest will be made.

In the present case pavement not actually cut through and replaced by the utility was deducted from the tentative valuation. The applicant contended that, while the cost of pavement not actually disturbed by the utility might not properly be considered in determining the amount upon which it is entitled to return for interest and profits, the amount of paving actually overlying mains and conduits should be considered for the purpose of determining the return for depreciation to meet future costs of cutting through pavement in replacing mains and conduits laid prior to the laying of the pavement.

Held: Allowance for depreciation appears to be unnecessary for such items as paving in which investment has not been made. In the present case the cost of only the paving actually paid for by the utility need be included in the value upon which returns for interest and depreciation are to be determined.

It was claimed by the applicant that certain non-operating property, which it believes may be used in the near future, should be included in the cost of reproduction new upon which interest and depreciation should be computed.

Held: That the present business and its immediate prospective growth would not in any way be materially affected by the disposal of the equipment in question. When non-operating property may be disposed of without affecting the business, the only warrant for its retention is expected savings and additional net income. This being the case, an addition to the physical value of the plant for non-operating property can be justified for rate-making purposes only when the income expected therefrom is added to the actual income or is deducted from the operating expenses.

The applicant contended that increased valuation is justified in cases where competing utilities consolidate and thus secure cheaper operating conditions because severe losses of purely physical value inevitably occur in making such consolidations. This contention seems to rest upon the assumption that all physical construction costs and all costs of operation are proper elements upon which rates should be predicated, and that a utility is unquestionably entitled to a return for all its operating expenses and earnings on at least the reconstruction cost.

Held: While this assumption is in the main true under normal conditions, if the costs of operation are high because of unusual inefficiency of operation or if the investment is high because of equipment and work clearly unnecessary, it is apparent that equitable rates cannot be based thereon. Examination of such facts as are available concerning the annual operating revenues and expenses, additions to the property and their relation to the present cost of reproducing the physical equipment indicates that the amount upon which the applicant is now entitled to return is not very far from the cost of reproducing the properties of the combined utilities.

The applicant alleged that the rates charged for the several classes of service were not sufficient to cover the operating expenses, interest and depreciation on the investment in the gas, electric and heating properties.

Held: While the existing rate schedules are not just what they ought to be when considered from the standpoint of consumer, demand and output expenses, it was found that, when the net revenues are considered for each department as a whole, the return that the utility receives upon its investment in the several departments is not altogether unreasonable.

In the gas department the situation with respect to the net earnings has been such that an increase is not warranted at this particular time. A marked increase took place in the operating costs for the year ending June 30, 1911, but it is believed that this does not indicate a permanent change in the normal cost of operation. The facts in the case indicate that there should be a readjustment of the schedule, that it may more closely conform with the cost curve. But, because of prevailing conditions, and because the application is not so much for a readjustment of the rates as for an increase affecting a considerable portion of the sales with no corresponding decrease for the larger quantities used, it appears best to leave the gas schedule, for the present, as it now is.

The income accounts for recent years indicate that the earnings of the heating department have been ample to return a fair rate of interest and profit on the investment. Here again, the rate schedule might properly be readjusted to more closely correspond to the variable cost of service; but such a revision is demanded neither by the applicant nor by the respondent, and it appears advisable not to change the existing schedule at the present time.

In the electric department the increase prayed for in the maximum rate for commercial electric lighting service cannot be granted, but a slight increase in the ratio representing the relation of the active to connected load for business consumers should be made in order to correct, to some extent, the inequity between different classes of users of electric current. In the case of emergency or stand-by service, the cost of service is not proportional to the amount of current used, but depends much more upon the fixed expense occasioned by

preparation to meet the demand, and modifications in the schedule are required for this service. The applicant is authorized to amend its rate schedule so as to increase the minimum bill for commercial electric lighting to $1 per month, and to modify its service charge for business lighting and its charges for emergency or stand-by service for lighting and power in accordance with the rates approved by the Commission.

The petition in the above entitled matter was filed with the Commission Aug. 19, 1910, by the La Crosse Gas and Electric Company, requesting authority to substitute for the rates now in effect for gas, electric and heating service rendered by the petitioner in the city of La Crosse, other rates as outlined in the petition and constituting in certain respects increases over the rates now existing. This application was made following a period of operation of about three years under a previous provisional order of this Commission, decided Sep. 19, 1907, and affecting the petitioner's rates then in force for electric service. In the former proceedings the rates for gas and heating service were not considered and no order bearing thereon was made by this Commission. Consequently, the rates which now apply to these two classes of service are those which were in effect April 1, 1907. During this period the electric rates as authorized by the Commission have been so limited by a prior franchise agreement between the petitioner and the city of La Crosse that the maximum rate which the petitioner received both for service connection and current used was 10 cts. per kw. hr. The maximum rate thus established by the agreement appeared from such information then in possession of the Commission to result in so low a meter rate, to very short hour users, that a further restriction in this respect would be unwarrantable. By the same franchise agreement the price for gas was also limited to a maximum rate of $1 per 1,000 cu. ft. On June 20, 1908, the La Crosse Gas and Electric Co. surrendered the city franchise under which it operated and received, in lieu thereof, an indeterminate permit from the state, under the provisions of which the petitioner now operates in the city of La Crosse. The obligations of the company under the franchise having been set aside through the surrender of the same, the company again comes before the Commission, after several additional years of operating experience, with an application wherein it sets forth as follows:

"That it is a corporation organized and doing business under the laws of the state of Wisconsin, with its principal place of business in the city of La Crosse, La Crosse county, Wis., and that it is a public utility engaged in the management and operation of gas, electric and heating plants in said city.

"That, as such public utility, it is subject to the provisions of ch. 499, Laws of 1907.

"That under the provisions of sec. 1797m—105 of said ch. 499, Laws of 1907, it is unlawful for any public utility doing business within the state of Wisconsin to demand, collect, or receive a greater compensation for any service than a charge fixed by it on the lowest schedule of rates for the same service on the first day of April, 1907.

"That the electric rates on the first day of April, 1907, have been superseded by the electric rates authorized in an order of the Railroad Commission of Wisconsin, dated on Sep. 19, 1907, as follows:

"Electric Lighting Rates.

"The service charge on all lighting installations shall be $1.80 per year, per 16 c. p. lamp, or equivalent demand, on one-third of the connected installation, or when one-third of the connected installation is considered to be the demand.

"The meter rate for a consumption equivalent to sixty hours or less per month per each installation shall be 7½ cts. per kw. hr.

"The meter rate for a consumption equivalent to more than sixty hours per month for each installation shall be 6 cts. per kw. hr.

"The meter rate for 'patrolled service,' or for signs and other installations with fixed hours of use, shall be 5 cts. per kw. hr.

"Electric Power Rates.

"The service charge shall be $27 per year per horse power demanded.

"The meter rate for less than five hours per day per horse power demanded shall be 5 cts. per kw. hr.

"The meter rate for over five hours, but not exceeding eight hours per day per horse power demanded, shall be 3 cts. per kw. hr.

"The meter rate for over eight hours per day and not exceeding ten hours per day per horse power demanded shall be 2 cts. per kw. hr.

"The meter rate for over ten hours per day and not exceeding fifteen hours per day per horse power demanded shall be 1½ cts. per kw. hr.

"Special rates for over fifteen hours per day per horse power

demanded and on installations of 200 horse power or over, taking service at 2,300 volts.

"Rates for Gas.

"For a consumption of less than 40 M cu. ft. per month, the rate will be $1 per M cu. ft.

"For a consumption of over 40 M cu. ft. and not exceeding 80 cu. ft. the rate will be 95 cts. per M cu. ft.

"For a consumption of over 80 M cu. ft. and not exceeding 120 M cu. ft. the rate will be 90 cts. per M cu. ft.

"For a consumption of over 120 M cu. ft. and not exceeding 160 M cu. ft. the rate will be 85 cts. per M cu. ft.

"For a consumption of over 160 M cu. ft. and not exceeding 200 M cu. ft. the rate will be 80 cts. per M cu. ft.

"For a consumption of over 200 M cu. ft. and not exceeding 250 M cu. ft. the rate will be 75 cts. per M cu. ft.

"For a consumption of over 250 M cu. ft. and not exceeding 300 M cu. ft. the rate will be 70 cts. per M cu. ft.

"For a consumption of over 300 M cu. ft. and not exceeding 350 M cu. ft. the rate will be 65 cts. per M cu. ft.

"Rates for Hot Water Heating.

"The rate for hot water heating will be 18 cts. per square foot of radiation required for heating season (Sep. 15 to May 15).

"The rate for heating range boilers of a capacity of forty gallons or less will be $15.00 for the heating season (Sep. 15 to May 15).

"Minimum Bill.

"A minimum bill of 50 cts. will be charged when gas to less amount shall be consumed in any one month, and 75 cts. under like conditions for electric current.

"Penalty for Delay in Payment.

"Unless paid within ten days following date of presentation a penalty of 10 per cent will be added to all bills.

"The petitioner applies to this Commission for authority to increase its rates for the reason that the rates, tolls and charges in effect at this time are not sufficient to cover the operating expenses, interest and depreciation on the investment in the gas, electric and heating properties, and application is hereby made for authority to increase the rates of said applicant and to put into effect the following schedule:

"Electric Lighting Rates.

"The service charge on all lighting installations shall be $1.80 per year, per 16 c. p. lamp, or equivalent demand on one-third

of connected installation, or when one-third of the connected installation is considered to be the demand.

"The meter rate for a consumption equivalent to sixty hours or less per month per each installation shall be 7½ cts. per kw. hr., but the sum of the service and meter charges shall not exceed an equivalent of 13 cts. per kw. hr. for the current used.

"The meter rate for a consumption equivalent to more than sixty hours per month per each installation shall be 6 cts. per kw. hr.

"The meter rate for 'patrolled service' (signs and other installations with fixed hours of use) shall be 5 cts. per kw. hr.

"The minimum bill shall be $1 net per month.

"The company will renew burned out or badly dimmed carbon filament lamps of the type originally furnished or installed by the company, when returned unbroken to its office.

"Power Rates.

"The service charge shall be $27 per year per horse power demanded.

"The meter rate for less than five hours use per day per horse power demanded shall be 5 cts. per kw. hr.

"The meter rate for over five hours, but not exceeding eight hours per day per horse power demanded shall be 3 cts. per kw. hr.

"The meter rate for over eight hours per day and not exceeding ten hours per day per horse power demanded shall be 2 cts. per kw. hr.

"The meter rate for over ten hours per day and not exceeding fifteen hours per day per horse power demanded shall be 1½ cts. per kw. hr.

"Special rates for over fifteen hours per day per horse power demanded and on installations of 200 horse power or over, taking service at 2,300 volts.

"For 'stand-by' connections for emergency service for private lighting and power plants, the above service and meter rate charges shall apply without limit, as to maximum rate per kw. hr.

"Unless paid within ten days following date of presentation, a penalty of 10 per cent will be added to all bills for electric current.

"For the re-connection of meters for the same consumer upon the same premises a charge of $1 will be made.

"Rates for Gas.

"For a consumption of less than 20 M cu. ft. per month, the rate will be $1.15 per M cu. ft.

"For a consumption of over 20 M cu. ft. per month and not exceeding 40 M cu. ft. the rate will be $1 per M cu. ft.

"For a consumption of over 40 M cu. ft. and not exceeding 80 M cu. ft. the rate will be 95 cts. per M cu. ft.

"For a consumption of over 80 M cu. ft. and not exceeding 120 M cu. ft. the rate will be 90 cts. per M cu. ft.

"For a consumption of over 120 M cu. ft. and not exceeding 160 M cu. ft. the rate will be 85 cts. per. M cu. ft.

"For a consumption of over 160 M cu. ft. and not exceeding 200 M cu. ft. the rate will be 80 cts. per M cu. ft.

"For a consumption of over 200 M cu. ft. and not exceeding 250 M cu. ft. the rate will be 75 cts. per M cu. ft.

"For a consumption of over 250 M cu. ft. and not exceeding 300 M cu. ft. the rate will be 70 cts. per M cu. ft.

"For a consumption of over 300 M cu. ft. and not exceeding 350 M cu. ft. the rate will be 65 cts. per M cu. ft.

"The minimum bill shall be 50 cts. net per month.

"Unless paid within ten days following date of presentation a penalty of 10 per cent will be added to all bills for gas.

"For the re-connection of meters for the same consumer upon the same premises a charge of $1 will be made.

"Rates for Hot Water Heating.

"The rate for hot water heating will be 20 cts. per square foot of radiation required for heating season (Sep. 1 to June 1).

"The rate for heating range boilers of a capacity of forty gallons or less will be $15 for the heating season. (Sep. 1 to June 1).

"Rules and Regulations.

"The following rules and regulations are considered a part of the contract with all parties taking gas or electric service.

"1. Application for gas or electric service must be made at the office before using either, or such user may be held liable for any unpaid bills due from a former user, and the company may require the deposit of a sum of money to secure itself against loss.

"2. There must be no obstructions to easy access to meters, and agents of the company must have free access at all reasonable times to examine or remove them.

"3. Consumers must give notice when they are about to remove, or they will be held liable for all gas or electric current that may pass through the meters until notice is given.

"4. The company will keep the service pipe, service wires, and meters in repair; fixtures beyond must be kept in order by the consumer.

"5. If a meter ceases to register, the account bill will be made by the average of another meter, or by the amount used in a corresponding period.

"6. In default of payment of a bill within fifteen days after

presentation, the flow of gas or electric current may be stopped and the meter removed until the bill is paid, and if meter is removed for non-payment of bill, a charge of $1 will be made for re-setting meter.

"7. When gas or electric current is furnished to clubs or associations, other than corporations, the individual members thereof shall be held responsible for the payment of the same.

"8. Failure to receive bill will not entitle customers to any deviations from the above rules.

"Wherefore, the said La Crosse Gas and Electric Company prays that, after due hearing and investigation, the Railroad Commission make an order granting the application herein and establishing the proposed rates of charge, or such rates of charge as it may find to be equitable in the premises."

Upon the filing of this petition due notice was given, fixing the time and place of hearing, in the matter of the application to increase rates and in the matter of the valuation of the petitioner's property for Oct. 31, 1910, at the city hall in the city of La Crosse. The following appearances were entered:

Woodward & Lees, for the La Crosse Gas and Electric Company, *D. G. MacMillan* and *P. M. Gillatt,* president and secretary, respectively, of the company, present in person; *J. F. Doherty,* city attorney, appearing in opposition to the proposed increase in rates; *Frank Winter* and *J. E. Higbee,* representing the La Crosse Board of Trade. *F. H. Hartwell,* for the Progressive League and the Trades and Labor Council.

Further hearing in the same matters was held March 2, 1911, in the city of La Crosse, at which the same appearances were made. At this time formal answer as follows was filed by those appearing in opposition to the petition of the applicant:

"The answer of the city of La Crosse, the La Crosse Board of Trade, Trades and Labor Council of La Crosse, and the North Side Progressive League of the city of La Crosse, respectfully shows:

"1. That the foregoing are duly organized bodies representing commercial and other organizations in the city of La Crosse, which said organizations contain in a large measure the consumers of the light, gas and heat in the city of La Crosse.

"2. That the present rates prevailing in the city of La Crosse for gas, electricity and heat are sufficient and more than sufficient to reimburse the La Crosse Gas and Electric Co. for its services in furnishing said utilities, and that no raise in any case should be allowed.

"3. Further answering, and by way of a counter-petition, the above named city and organizations respectfully show, that the present rates for electrical current and service are excessive and that the same should be reduced.

"Wherefore, said city and said bodies pray that no increase in rates be granted said company, and that, after due hearing and investigation, an order of the Commission be made reducing the rates of electrical current and fixing reasonable and adequate rates, and for such other order as the Commission may deem just and necessary in the premises."

REVIEW OF FORMER PROCEEDINGS.

The present application before the Commission and the objections with which it is met are closely related to the earlier application and to the Commission's order therein (2 W. R. C. R. 3). This may be easily understood, for so little time has elapsed since the former proceedings, that the petitioner still finds conditions which existed at that time, and prior thereto, to be arguments for upholding its present application for increases in its rates. In 1907 the analysis of the company's accounts for a considerable period indicated quite clearly that the revenues from the service which the petitioner furnished were insufficient to meet the operating expenses which the service occasioned. The unusual conditions to which the business had been subjected appeared, in a large measure, to be the cause for the poor financial condition in which the petitioner at that time found itself. These unusual circumstances had, in fact, affected not only the plant operation by placing in the hands of the management a complex and, to a large extent, duplicate electric system, but had also brought the rates to that low level where the combined effect resulted in continual losses in serving the public. At the time of the proceedings in 1907, it was well understood that a careful valuation of the physical property, used and useful in the business of the company, was an essential factor in a sound rate-making analysis. But such a valuation of the property had not as yet been made. With the amount of work then on hand, it was apparent that considerable time must elapse before a valuation could be undertaken and completed by our staff. Information bearing upon other essential features, however, indicated with

sufficient certainty that under the rates then existing for electric service in La Crosse, the plant could not long adequately maintain itself to meet the public needs. Rather than to longer defer those earnings to which the investors were evidently justly entitled, to the detriment of sound business conditions and good service which the company is by law required to maintain, it was deemed advisable to authorize, at least for the time being, those rates which the petitioner requested. In so doing, the Commission commented upon the situation as follows:

"From the foregoing examination of the facts in this case it appears to us that the rates submitted by the petitioner fairly meet the situation, and that they are just and reasonable. It has been determined, therefore, that these rates shall be put into effect, subject, however, to such revisions as may be found necessary when the plant in question has been appraised, or for other reasons.

"The causes which led to this application, and because of which an increase in the rates is authorized, are of such character as to bring this case within sec. 99, ch. 499, Laws of 1907, which provides for emergency rates under certain circumstances. As soon as practicable after the appraisals of the plant, which have been decided upon, have been made, it is our intention to continue this investigation. Any of the rates in the order herein, which are then found to be in any respect unreasonable, will be promptly adjusted upon a fair and equitable basis." (2 W. R. C. R. 3, 30.)

The valuation of the property has now been completed and hearings therein and in the matter of the petitioner's application for further increases affecting the gas and heating rates, as well as the electric rates, have been held. The testimony and facts presented in these latter proceedings will not be distinguished herein from those presented in the former, for the order of occurrence of the facts, not the order of their presentation, is material for the proper understanding of the case.

HISTORY OF THE BUSINESS.

Although the gas, electric and central heating business in La Crosse is now conducted entirely by the La Crosse Gas and Electric Company, petitioner, this was not always so. The property which it holds and operates comprises not only plants and their equipment built by itself and its predecessors, but

other property with which it was at one time perforce in active and destructive competition. The results of the vicissitudes through which the lighting and power business had passed are not entirely evident from only an examination of the physical property now in use. A statement of the changes in business and public relationship, and of the changes in the physical property, is an important factor in the understanding of the situation now before us. In the Commission's former decision affecting the electric rates in La Crosse considerable attention was given to the history of the various plants from the beginning of the lighting by gas in 1856 to 1907 when the matter was brought before the Commission. Because of the great importance of an understanding of those circumstances, repetition at some length is made here:

"The original company organized for the supply of gas for illuminating purposes in La Crosse was the La Crosse Gas Company, which held its charter from the state in 1856. This company was reorganized in 1863 as the La Crosse Gas Light Company, and continued an independent corporate existence until its merger into the La Crosse Gas and Electric Company in November, 1901.

"The second lighting company organized in La Crosse was the La Crosse Brush Electric Light and Power Company, incorporated in October, 1881, shortly after the first patents were issued to Mr. Brush on his arc lighting system. The original purpose of the company was to furnish not only electric arc lights for street lighting, but to furnish series arc lamps distributed around in the stores for commercial lighting as well. It appears that at one time it also attempted to supply incandescent lights through the medium of a storage battery, but owing to the crudeness of the apparatus then in use, this plan was abandoned. The company did, however, succeed in obtaining a contract with the city for the lighting of the streets and was in possession of such contract at the time of its merger with the La Crosse Gas and Electric Company in 1901.

"The third lighting company to be organized in La Crosse was The Edison Light and Power Company, incorporated in February, 1887, shortly after Mr. Edison had perfected his incandescent lamp and low voltage dynamo, and the company began at once the general furnishing of electricity for light and power for the first time throughout the city. Shortly after this organization the Brush Company ceased to make any attempt at furnishing light for commercial purposes and relied exclusively upon its street lighting business for its existence.

"The above three companies were operated independently and maintained separate plants and offices until 1897, when a certain

group of capitalists, who had been largely interested in the Gas Light Company in the past, obtained a controlling interest in the stock of all of the companies, and from that time on, until the organization of the Gas and Electric Company in 1901, the three companies were managed from the same office, although retaining their individual corporate existence.

"In November, 1901, Mr. George MacMillan and his associates purchased from the holders of the capital stock of the three companies in existence, all of the property of these corporations and incorporated the La Crosse Gas and Electric Company; the capital stock of said company being $600,000, $150,000 of which being 5 per cent cumulative preferred stock, and $450,000 being common stock. The property was also at the same time bonded for $600,000. In the incorporation of this company and the issuing of the trust deed upon the same covering the bonds (which were made for twenty years) it became necessary to ask the city council of La Crosse to extend the franchise rights of the Edison Company beyond their then expiration, which was only about five years distant. The discussion of this matter produced a sentiment among a number of business men of the city for the establishing of another electric lighting company, and although the Edison Company acceded to all of the demands of the council regarding the establishment of a maximum charge of 10 cts. per kilowatt hour for current with a 2 per cent tax upon its gross receipts and other restrictions in regard to candle power, voltage, etc., the council, at the same time that it extended the franchise of the Edison Company, granted a similar franchise to the Central Electric Company, which had been organized and incorporated by some fifty citizens of La Crosse, and this company proceeded, forthwith, to the erection of a plant and began within some three months after its incorporation to furnish electric light and power quite generally throughout the business section of the city. The rates charged by the Edison Company previous to this time had been considerably higher than the maximum rate which was fixed in their renewal ordinance, and the lowering of the rates by from 33 1-3 per cent to 50 per cent, combined with the endeavor of the competing companies to secure business, very largely increased the use of electric light, but, unfortunately for the new concern, as soon as its one year contracts had expired, it found that the older company was beginning to cut rates very heavily and very soon the usual result of such a fight was reached and negotiations, which were first begun in an endeavor to make an agreement to maintain rates, ended after several months in the leasing of the plant and franchise by the Gas and Electric Company (which now owned the Edison Company) for a term of years practically coincident with the unexpired term of the franchise of the Central Company. The lease was consented to by a large majority of the capital stock holders of the Central Company upon the following basis:

"As the Central Company had invested between $70,000 and $80,000 in its plant and had outstanding at the time the lease was made $81,500 of capital stock, the rental price to be paid was fixed at $6,600 per year, which left to the stock holders of the Central Electric Company, after paying its taxes and insurance and other incidental expenses of about $1,500 a year, something between 6 and 7 per cent on their stock. The holders of a few shares of Central Electric stock, however, felt aggrieved at the making of the lease and proceeded at once to make all the trouble in their power for the Gas and Electric Company and the majority of the stockholders in the Central. The fight was waged largely in the newspapers, and after some fifteen months sentiment was worked up in certain quarters for the establishment of another competing electric company, and after some delay and a considerable amount of public discussion, the council granted another franchise, very similar in its terms to the ones previously granted to the Edison and Central companies, to the Wisconsin Light and Power Company, a corporation composed entirely of local capitalists. They proceeded without delay to erect a first class power building and install therein and throughout the city a first class and thoroughly modern electric generating and distribution system and apparatus. The general rates throughout the city, however, were already so low, owing to the low maximum rate fixed by the ordinance and the favorable contracts which the Gas and Electric Company had made with desirable consumers, that the new company found itself in much the same condition which the Central Company had been in at the end of its first year, and after some twenty months of operation, during which time the promoters had expended more than $35,000 upon their plant and distributing system, and during which time they had been operating the plant constantly at a loss, they disposed of their property to the Gas and Electric Company for exactly the amount of money which they had invested therein.

"The Gas and Electric Company in this operation assumed further liabilities in the shape of bonds upon the Wisconsin Light and Power Company's plant of $400,000, approximately $360,000 of which were represented by actual investment in the Wisconsin Company's plant, and the balance was paid to the Gas and Electric Company in cash, to apply on further additions and betterments to the Wisconsin plant, the stock of the Wisconsin Company becoming an asset of the Gas and Electric Company.

"It appears from the foregoing account that while the gas plant of La Crosse had passed from one control to another, no new or competing plant has been constructed and put in operation. In the electric lighting field, however, the situation is different. In this case four different plants seem to have been

in operation. The first of these, the Brush Electric Light and Power Co., was incorporated about 1881; the second, or the Edison Light and Power Co., was incorporated about 1887; the third, or the Central Electric Co., was organized in the fall of 1901 or soon after the two companies then in existence, but under the same control, had been taken over by the present, or by the La Crosse Gas and Electric Co. The Wisconsin Light and Power Company was organized about two or three years ago and operated for a while as an independent concern. But last spring [1907], owing to the severe competition which resulted, it gave up the struggle by selling its plant to the present company." 2 W. R. C. R. 3, 6–9.

Since the above statement was made in 1907, other important changes have taken place in the operating conditions of the electric and heating plants. In 1909 the La Crosse Water Power Company completed the construction of its water power generating plant on the Black river, near Hatfield, Wis., with transmission lines to La Crosse, Wis., and Winona, Minn. About Dec. 1, of that year, the water power company began to supply electric power to the La Crosse Gas and Electric Company, under a twenty year contract, which was entered into March 25, 1909. This contract provided, among other things, that the charge for electric current sold by the La Crosse Water Power Company to the petitioner shall be 1 ct. per kw. hr., as measured at the latter's substation in the city of La Crosse, and that the sum so paid for a period of an entire year shall not be less than $36,000, with a substation installation of 3,000 kws.; but when the La Crosse Gas and Electric Company's demands upon the services of the power company shall exceed 3,000 kws., which is the capacity of the present transformer installation, then the minimum annual charge shall be increased $12 per kw. for all demand in excess of 3,000 kws. It is agreed that the La Crosse Gas and Electric Company shall purchase from the power company all current required by the former, except so much as it shall be necessary to generate in the south side plant in supplying the central heating plant with sufficient exhaust steam during the heating season. It is further agreed that in case of failure on the part of the La Crosse Water Power Company to supply the demand, such failure not being caused by strike, riot, fire, floods, cyclones, earthquakes, or causes for which the La Crosse Gas and Electric Co. may be responsible, the latter company shall operate for its own use its own generating plants,

and the station operating costs occasioned thereby shall be borne by the former, which company shall receive nothing for current so generated during the period of interruption; but when the output of the steam plants, during the interruption, amounts to 200,000 kw. hrs., the La Crosse Gas and Electric Co. shall pay to the water power company for additional current generated by the steam plants, the usual rate of 1 ct. per kw. hr., but shall receive from the water power company the cost of operating the steam plants and, in addition, liquidated damages at the rate of $500 per month. The contract also provides that the La Crosse Gas and Electric Company shall build the necessary transmission line from the city limits to a suitable substation, which shall be provided by it in the city, that the funds from the construction of this line shall be borrowed from the water power company and that, upon the termination of the contract, title to the transmission line so built shall either revert to the water power company in full satisfaction of the loan made for the construction of the line, or shall remain in the possession of the local company upon payment to the power company of a sum equal to what may then be determined as the present value of the property in question. The annual rental which shall be paid by the power company to the gas and electric company for the use of the substation in the city of La Crosse was placed at such an amount as equals the annual interest charge on the loan for the construction of the transmission line within the city. The only additional construction expense, therefore, which is borne by the La Crosse Gas and Electric Company, and which is not met and offset by the terms of the agreement, appears to be such changes as are made in the old Edison generating plant to provide substation facilities, together with the cost of such additional substation auxiliary apparatus as switchboards and instruments.

GENERAL DESCRIPTION OF OPERATING PROPERTY.

Electric Department.

The property which the petitioner has available to serve the electric business in La Crosse consists of two steam operated generating plants owned by the company, besides the water power equipment of the La Crosse Water Power Co. from which

current is purchased. The steam plant of more recent construction, known as the North Side or Turbine station, was built in 1905 by the Wisconsin Light and Power Company and is equipped in every respect with modern machinery for the production of alternating current. In this plant three 350 h. p. water-tube boilers provide steam for two turbo-generators of 400 kws. capacity each, which supply 60 cycle a. c. current at 2,300 volts. The rated capacity of this plant is, therefore, 800 kws., available in two units of equal size for light and power service. Since this property was acquired by the present owners, the lines going out from this station have been so arranged that the turbine plant may be used to assist, by means of motor-generator sets, in the operation of the South Side or Edison plant. The latter is the plant formerly operated by the Edison Electric Company and now contains direct current generating equipment for commercial light and power and street lighting, some a. c. equipment. the central heating apparatus and, if we consider the substation portion, step-down transformers owned by the La Crosse Water Power Co. The generating equipment of this plant is driven by steam engines, gas engines and electric motors. Of the first mentioned prime movers, 3 simple non-condensing engines are connected to 5 d. c. generators with a total capacity of 380 kws., one to an a. c. generator of 200 kws. capacity, and another to two d. c. arc generators. A compound non-condensing engine drives two 75 kw. a. c. generators, while another is arranged to drive either a 300 kw. d. c. generator or a 325 kw. a. c. generator, or both. The latter outfit may also be operated so that either electrical machine may drive the other as a generator when the engine is disconnected. This plant, as has been observed, is entirely non-condensing, the reason for which is, of course, the fact that exhaust steam is used for central heating purposes. Two 3 cycle gas engines are connected to two d. c. generators and are now apparently used very little. In addition there is a 100 kw. motor-generator set, which may be driven either from the a. c. or d. c. side for the generation of alternating or direct current as circumstances require.

Direct current, all of which is generated in the Edison plant, is distributed by a three wire 110—220 volt system. The area supplied by this system is much more limited than that supplied by alternating current, is confined more or less to the business section of the city and is supplied, to a large extent, through

underground conduits. Until the advent of the water power, practically all of the alternating current was generated at the turbine plant and was sent out at about 2,300 volts to distribution or line transformers, there being stepped down to 110–220 volts for lighting and small power use, and to 440 volts for larger power use. The a. c. distribution system supplies current to all parts of the city. In the down-town or business portion of what is known as the south side, underground conduits were laid by the original owners of the turbine plant, so that to a considerable extent the conduits occupied by the d. c. conductors are now paralleled by others for the a. c. Series street lights are furnished from both the a. c. and d. c. systems.

HEATING DEPARTMENT.

The central heating plant, which is located in the Edison electric station, supplies heat to the south side business portion of the city and the adjacent residential districts, by means of a hot water system, during the contract season from Sep. 15 to May 15. The heating plant receives exhaust steam from the non-condensing engines of the electric plant and employs the same in closed heaters for heating the water required by the system. In the sense that the heating business is a separate business and because the electric plant, considered alone, is less efficient than if operated condensing and consequently more boiler capacity is required to furnish steam to the engines, a portion of the steam boiler equipment may be said to be required by the heating plant. Besides the steam equipment thus used in common with the electric plant, the heating plant is provided with several additional boilers for use in emergency, or when the strain on this system exceeds the exhaust which the electric station can supply. Several pumps render the necessary pressure to maintain the circulation of the heating system. The distribution system consists of about 11¼ miles of W. I. pipe, ranging in size from 1½″ to 8.″ The length of the distribution system, not considering the return mains, is about 5.6 miles. During the year ending June 30, 1910, there were about 226 consumers supplied and the total radiating surface heated amounted to about 190,000 square feet.

GAS DEPARTMENT.

In the gas department the coal gas process of manufacture is employed, using retorts consisting of four benches of sixes and

four benches of fives. The holder capacity is 167,000 cu. ft. and is divided between one small holder of 27,000 cu. ft. capacity and a larger one of 140,000 cu. ft. There are about forty miles of distribution mains consisting chiefly of sizes of four inches or less. During the year ending June 30, 1910, the sales of gas amounted to 72,387,300 cu. ft., and the number of consumers at the end of that period was 3,169.

VALUE OF PLANTS.

A tentative valuation of the physical property of the La Crosse Gas and Electric Company was made by the engineering staff of the Commission and is of date June 30, 1909. The final summary of the tentative valuation, with the engineers' division of the value among the several departments, is given below:

TABLE I.

TENTATIVE VALUATION OF THE PHYSICAL PROPERTY OF THE LA CROSSE GAS AND ELECTRIC CO.

As of date June 30, 1909.

Classification.	Gas Department.		Heating Department.		Electric Department.		Total.	
	Cost of reproduction.	Present value.	Cost of reproduction.	Present value.	Cost of reproduction.	Present value.	Cost of reproduction.	Present value.
1 Land	$11.700	$11,700	$2,300	$2,300	$11,575	$11,575	$25,575	$25,575
2 Water supply—intakes	.....	.....	.....	.....	1,165	1,102	1,165	1,102
3 Holders	21,573	14,928	.....	.....	.....	.....	21,573	14,928
4 Distribution system	105,744	81,914	42,793	39,370	244,479	198,675	393,016	319,959
5 Power plant equipment	30,934	27,641	29,469	17,835	168,040	121,614	237,473	167,090

Total items 1-13	$289,567	$223,095	$98,893	$79,539	$545,437	$434,911	$963,086	$751,862

NOTE:--Addition of 12% to cover cost of engineering and superintendence, interest during construction, contingencies, etc.

The valuation of the physical property as reproduced above was introduced at the hearings in this case. The property included in this valuation consists not only of that which is actually used and useful for the convenience of the public, but also a considerable additional amount that is, according to the tentative valuation, unused in the production of service which the petitioner renders. The inventories of the engineers, their unit values for materials, construction labor, etc., and the resultant total items, insofar as they relate to the reproduction costs, are unquestioned by either the petitioner or the respondent. It is, therefore, needless to enter into details of the valuation in this regard. The staff's usual methods of procedure have been followed in arriving at the final costs, and these practices have been frequently explained by the Commission. It is the intention of the staff that the valuation so determined shall be such as will be affected as little as possible by sudden fluctuations of market values. As to what items or portions of items of the valuation should be eliminated from the tentative valuation, what rate of depreciation should be allowed, and upon what items it should be based in the determination of the cost of reproduction and present value of the physical property to which the petitioner is justly entitled, the respondent and petitioner were not in so close agreement.

Allowance for Engineering and Superintendence, Interest During Construction, Contingencies, Etc.

There appears in the engineer's tentative valuation an allowance for engineering and superintendence, interest during construction, contingencies, etc., amounting to 12 per cent of the items 1 to 9. The fairness of the valuations upon which the allowance is based was not questioned, but the petitioner declares that the amount allowed to cover these costs should be 15 per cent, instead of 12 per cent, because of extraordinary conditions existing during the construction of the petitioner's plants. These extraordinary conditions were said to be due to financial and competitive causes as well as to the fact that, in the granting of franchises by the city council to competing companies, a time limit for beginning operation was made a condition of the grants, necessitating unusual speed of construction. These facts, it is said, resulted in the necessity of obtaining money for

such constructions from short time loans at higher rates of interest than have been allowed for this item in previous decisions of the Commission.

The costs, which are represented by the addition of 12 per cent, are such as the Commission believes will, under ordinary circumstances, be the amount needed to furnish adequate engineering and superintendence, to provide interest upon funds necessary for financing the project during the construction period, to meet such incidental construction and legal expenses as are not apparent in the physical property, and to cover omissions from a carefully prepared inventory of the same. The petitioner does not claim that all of these costs were occasioned under circumstances so unusual as to increase the costs much, if anything, above those which occur under ordinary circumstances; neither do we find that such unusual conditions have existed in the case of these properties. But it is the petitioner's claim that an additional 3 per cent, above that already allowed, should be added, chiefly because during competition money to finance competing concerns, later acquired by the petitioner, was secured upon short time loans bearing more than the usual rate of interest.

Expense, in the form of interest entailed by the use of funds during construction of a plant, is as legitimate a part of the physical value of the property as the costs of the raw materials and labor which enter into the construction, and the same principles that underlie the determination of unit costs and rates in one case apply also in the other. In arriving at the reproduction value of the property, as distinguished from the original construction cost, we do not seek to discover the actual prices paid by the original investors; to do so might lead to values either much above or much below what it would cost to reproduce the property. Unless, therefore, we intend to find what was actually paid by the investors for material and labor in arriving at the reproduction cost, it appears unnecessary to determine, for this purpose, the actual amounts paid for interest upon money used during construction.

The amount to cover interest during construction, as included in the tentative valuation by the allowance of 12 per cent, is not a definite rate per dollar of the total investment, but represents the entire interest cost for the several portions of the

investment necessary at different stages of the construction. This allowance does not contemplate the use of the entire investment sum for the entire period of construction, as such use appears, as a rule, uncalled for. If a shorter period than usual is involved in constructing the plant, then the increased cost due to higher interest rates on short time loans may be expected to be offset by the shorter period during which it is necessary for the loans to run. That each factor does offset the other to some extent is a conclusion that may be reached by principles which surround the situations; that each did not, in this case, entirely do so, has not been shown by the petitioner nor have we been able to so determine by other means. The only grounds for allowing anything additional, in this respect, would be that the haste with which the competing plants were built may have arisen from need of the service which they were to furnish. That such need existed does not seem probable, and as a matter of fact the petitioner states that such was not the case,

For the purpose of arriving at the cost of reproducing the petitioner's physical property, it does not appear that anything above what the engineers have determined need be added for items included in their allowance of 12 per cent.

PAVING.

The cost of paving for all departments has been included by the engineers in the tentative valuation at $81,930 for cost of reproduction, and for this cost less depreciation, at $69,833. These figures represent the cost that would result had the pavement, which today overlies the underground distribution systems, been cut through and replaced in the construction of distribution lines. Such items as these are, without question, costs to be considered in determining the reproduction costs and should properly be included in a valuation representing the cost of reproducing the plants today. That such sums should be retained in determining the physical value upon which returns should be allowed, is not so clear; this is a matter which is governed largely by conditions that have been met in constructing the plants. If sums, which have been arrived at as expenditures that would be necessary in order to cut through and replace pavement over the underground sys-

tems, have actually been disbursed for these purposes by the company or the former owners, it is difficult to consider such expenditures in any other light than construction costs; for the additional expense due to paving, when actually met, constitutes necessary investments that the company must make in order to place its services at the disposal of the public, regardless of whether the usefulness of the various mains and conduits so laid beneath pavement does or does not exceed the usefulness of others similarly located but in streets that are not paved. When, however, such sums as are said to represent the cost of paving, have not actually been paid out by the utility for this purpose but have been borne only by the community itself, to consider such values as investments upon which consumers must return to the company interest charges, appears unreasonable, as such procedure, under these conditions, places a penalty upon civic improvements due to economic and social conditions.

It is the claim of the respondent that the cost of paving should be excluded from the valuation for rate-making purposes and this contention is based upon the claim that the underground construction was undertaken and completed in advance of the paving. Under the conditions that existed in La Crosse it is difficult to conceive that all of the gas and heating mains and conduits for electrical conductors were laid prior to the original paving. It is the testimony of the petitioner that this was not the case, but that paving costs have actually been met by the owners of the plants involved in this case. To what extent this is true, is not evident from the testimony. It appears that the petitioner may have been under the misapprehension that the appearance of the item for paving in the tentative valuation indicated the Commission's conclusion that this is a legitimate item in the value of the property. While the item for paving has its place in the actual reproduction cost, it does not necessarily follow that the item should also be included in the value upon which the petitioner is entitled to receive returns. Investigation subsequent to the hearings was therefore necessary, on the part of the staff, to determine what expense, if any, had been borne by the company for paving. It was found that much of the gas mains was laid by the owners before the organization of the present concern. The records of the early period are not available and some uncertainty sur-

rounds the construction during that time. More complete data are available for the electric and heating systems. From a careful examination of the available accounts of the company, the records of the city and the history of paving and construction of underground distribution systems, we conclude that the paving costs, as they appear in the engineers' valuation, were not entirely borne by the company, but that the amount paid out for paving, as nearly as can now be determined, was about $33,-054, divided among the several departments as follows:

DISTRIBUTION OF PAVING.

	Cost.	
	New.	Existing.
Gas	$18,249	$15,614
Heating	1,453	1,337
Electric	13,352	12,951
Total	$33,054	$29,902

Although the petitioner does not claim that it has actually expended for paving an amount as large as the tentative valuation shows for this item, it does contend that the value of paving is a proper part of the physical valuation, for the reason that, insofar as the electric department is concerned, the installation of the underground conduits and cables not only did not in any way extend the services of the company, it having already made an investment in overhead pole lines and was actually serving the entire territory at the time of the passage of the underground ordinance, but it also caused the abandonment, tearing down an practically entire loss of this overhead construction, the cost of which in this case was considerably more than the addition allowed for paving by the engineers in their valuation; that this fact was true in the case of the original property of the gas and electric company; and that, in the case of the Wisconsin Light and Power Company, the pavements were actually taken up and replaced. It is also the claim of the petitioner that the cost to the company for paving is twice the actual expense, as the estimated cost must be deposited with the city before the pavement is cut through and the expense of relaying is thereafter borne by the company itself. This fact,

it is claimed, would greatly add to the reconstruction cost and greatly increases the necessary provision for renewals and extensions, both of electric conduits and gas mains.

The argument of the petitioner, that losses sustained through abandonment of equipment before the end of its usefulness on account of city ordinance requiring other construction to serve the same purposes should receive consideration in determining the investment upon which the owners are entitled to returns, seems worthy of attention. The argument is, however, entirely out of place when it attempts to attach to the physical value of the property the losses of abandoned equipment by adding other costs, such as for paving, for which the company has not paid.

Since the hearings of this case, the petitioner, the La Crosse Gas and Electric Company, submitted an argument wherein it declares that, while for rate-making purposes it might not be proper to include in the valuation all of the cost of pavement overlying conduits and mains in figuring the return on the investment, as all of the pavement was not actually taken up and replaced by the company, for the purpose of figuring depreciation reserve the cost of all such paving should be either included in the depreciable value or the rate of depreciation increased, as the company will eventually be compelled to bear this expense in future renewals of gas mains under existing pavement. The return for depreciation, to which a utility is justly entitled, is usually the sum which set aside annually will be sufficient, at the end of the useful life of the equipment in which investment has been made, to replace the property in question. But when investment has not been made by the company and the cost is borne entirely by the community, it is not clear that these expenditures by the public represent anything for the replacement of which the company is entitled to return. As the original paving by the company is customarily considered construction expense and is added to the company's investment in physical property, in like manner anticipated paving, if it is not in reality a renewal of pavement formerly laid and paid for by the utility, may perhaps be considered new construction cost more properly than renewal cost, even when undertaken in connection with the renewal of other materials. Viewed in this light, both interest and depreciation on paving should be deferred until such time as the paving in question shall, for the first time, be taken up

and replaced by the company. It would seem that, in the long run, the effect upon the return to the utility would be little different were depreciation allowed on all paving reported as overlying mains and conduits, or were it deferred for that portion of the cost in which the company has not participated, until such time as the utility is required to bear the cost. In the former instance the cost of paving for which the utility has not paid, but for which it is allowed return for renewal, should never become a part of the capital cost entitled to return for interest; in the latter instance, the utility should be entitled to return both for interest and depreciation as soon as the expense has been incurred.

Return for depreciation constitutes a re-accumulation of the investment to be returned to the investors and to be deducted from cost of plant or to be reinvested as a renewal of parts to be replaced according to circumstances of the business. Considered in this manner, allowance for depreciation appears to be unnecessary for such items as paving in which investment has not been made. Under a practice that considers as a capital expenditure the cost of paving done by the utility, it is to be supposed that, for rate-making purposes, such future expenditures will find their way into future valuations with little regard as to whether the cost thereof is borne by capital supplied by the investors or by a pre-investment depreciation reserve. For these reasons it is believed that the cost of only the paving actually paid for by the utility need be included in the value upon which returns for interest and depreciation are to be determined.

NON-OPERATING PROPERTY.

Property amounting in value to $29,189 cost of reproduction, and $14,317 present value, has been determined by the engineers in their tentative valuation as not used nor useful in the operation of the gas, electric and heating plants. The property which these values cover, is shown in the following table:

TABLE II.

NON-OPERATING PROPERTY

OF THE LA CROSSE GAS AND ELECTRIC CO.

	Cost of reproduction.	Condition, per cent.	Present value.
1—34″x14′ fire tube boilers	$355	20	$79
42″x20′ Lancaster boiler	210	20	52
10″x10″ Ideal H. S. engine No. 705	805	25	235
4—13″x19″x15″ McIntosh Seymour engines	10,000	25	2,863
1— 5″x 6″ vertical engine	100	20	20
56″x 8′ Excelsior open heater	480	20	119
1—12″ Baragwanath barometric condenser	262	20	58
12x20x18 Cooper horz. jct. condenser	2,791	50	1,461
Foundation for above	40	50	20
8x20x12 Allis condenser	1,589	64	1,044
Foundation for above	22	64	14
Belting, engine parts, etc	197	25	57
Scrap	36	100	36
2—Edison 50 kw. generators	3,700	15	810
Old 4′x14½′ steel tank	108	.....	35
1—24″ ammonia concentrator	1,750	100	1,750
Conc. ammonia tank	278	85	238
Misc. machinery in stock	200	25	50
Misc. fittings	306	50	153
Old condenser and scrubber	824	.....	130
Tar piping	23	72	17
Yard connections	119	93	112
Foundation ammonia concentrator	64	100	64
Foundations for old condenser and scrubber	30	.....	.....
Subtotal	$24,289	.....	$9,417
1.83 acres land on south side La Crosse river and west side of C. B. & Q. R. R.	4,900	.....	4,900
Total	$29,189	.....	$14,317

No evidence was furnished that shows that anything included in table II is required for the operation of the applicant's plants. While it is claimed by the applicant that certain items, especially the ammonia concentrator, may be used in the near future, we do not find that the present business nor its immediate prospective growth would in any way be materially affected by the disposal of this equipment. If the ammonia concentrators are retained by the company and are operated at some future time, then the saving or profit that may be derived therefrom should offset the interest, depreciation and operating costs of the same. When such non-operating property is held by a utility, the only warrant for its retention is expected savings and additional net income. This being the case, an addition to the physical value of the plant for non-operating property can be justified for rate-making purposes only when the

income expected therefrom is added to the actual income or is deducted from the operating expenses. Therefore, whether or not this non-operating equipment may profitably be kept on hand, is a matter which need not be passed upon for the purposes of this case; the relative economy of holding non-operating property as against purchases at such time as the equipment in question may be needed, is a matter concerning which the management must use its own judgment. The simplest equitable method would be, it seems, not to consider these investments in the determination of rates.

The respondent, through its witness, claims that certain equipment of the electrical department, which has been included in the tentative valuation as operating property, is in reality unneeded in conducting the petitioner's business and that the value thereof should be deducted from the total physical value in arriving at the investment upon which returns should be based. The conclusions of the respondent in this matter appear to rest upon certain observations of the plant operation during the peak load of Dec. 21 and 22, 1910, and upon respondent's estimate of what equipment is needed to meet the demands when generation is either by water or steam power. The respondent finds that the maximum generating capacity required for alternating current is 830 kws., and for direct current 460 kws. To meet these demands when water power is available, respondent believes that no a. c. generating equipment and only 400 kw. d. c. generating or converting capacity are needed in the petitioner's plants. When the operation is entirely by steam power, the respondent believes that an a. c. generating capacity of 850 kws. and d. c. generating capacity of 450 kws. is all that is required. From this assumption the respondent finds that the following equipment, in addition to that which is clearly noted by the tentative valuation as non-operating, can be dispensed with in the operation of the electric plants:

	Cost new.	Present value.
1—13x15 Taylor engine	$1,075	$318
Foundation	191	48
1—20x36x36 McIntosh Seymour engine	12,473	6,788
Foundation	1,032	516
2—Westinghouse gas engines	2,041	2,232
Foundation	206	152
2—40 kw. Edison d. c. generators	3,200	684
Foundations	60	9
2—50 kw. Edison d. c. generators	3,760	810
Foundations	84	13
Total	$24,962	$11,570

From the foregoing table it will be seen that the cost of reproduction and the present value of the equipment which is, according to the respondent, unneeded in operating the electric plant, are $24,962 and $11,570, respectively, as determined from the engineers' valuation. The expense of placing the remaining equipment in position to satisfactorily meet the demands of the electric plants is said to be about $562.

Concerning facts relating to the demands upon the electric system, considerable difference of testimony exists, due, it seems, to differences in observations and in final computations. Examination of the station records for 1909 and 1910 shows that the December peak was each year much above 1,290 kws., the peak demand determined by the respondent's witness and for which witness would allow a generating capacity of 1,250 kws. From these station records we find that the maximum load, exclusive of current for moonlight arcs, was 1,561 kws. on Dec. 20, 1909, and 1,593 kws. on Dec. 20, 1910, indicating quite conclusively that sufficient steam generating capacity has not been allowed in the estimate of the respondent's witness. The conclusion of the witness, that a considerable part of the steam generating capacity should be discontinued, seems to rest also upon the assumption that no reserve capacity is required aside from the incoming high tension transmission line. While it may be possible that in the future the source of purchased power may be so reliable that no reserve above the plant demand will be needed for generating purposes at La Crosse, the extended interruptions of the water power supply, since it was first used in La Crosse, seem to be conclusive evidence that complete reliance

cannot be placed thereon, that long periods prevail during which the steam generating plants must operate as though no other power were available, and that, therefore, for the present at least and until such time as the continuity of water power is reliably established, sufficient capacity must be maintained by the applicant to supply continuous service under such circumstances as might ordinarily be foreseen in the absence of any other source of power.

Since the date of the tentative valuation, further investigation of the electric operating conditions has been made by the engineers of the Commission, and while it is found that all of the equipment that the respondent's witness claims is unneeded in the operation of the plant can not, with due regard to continuous service, be removed from operation, the 20″x36″x36″ McIntosh Seymour twin compound engine installed in the Edison plant is reported to be safely dispensable.

Inspection of the station log sheets for 1909 and 1910 shows that during the early part of the former year this large engine was used for a very few hours only and during those hours of operation several of the other engines then in use were for the time being shut down. It is found from the log sheets that since the early part of 1909, this large McIntosh Seymour engine has not been used, although, during several months of this time, the company received no current from the water power company and the a. c. load was carried entirely by the steam turbine plant and by the a. c. generator at the Edison station. The maximum demand supplied by the water power company appears to have been 1,500 kws. on Dec. 22, 1910, and this demand was used for less than 30 minutes. At other times, during November and December, the maximum demand supplied by the water power company for less than 30 minutes varies from 1,000 to 1,450 kws., including, as we understand it, the power supplied to the street railway company. On Nov. 1, 1910, when the log sheet shows that no current was supplied by the water power company, the maximum demand supplied by the steam turbine station was 1,220 kws. at 5:30 p. m. The log sheet for the Edison station shows that during the time the maximum demand was supplied on that day from the turbine station, the 200 kw. a. c. generator at the Edison plant was not used. From these facts it appears that the maximum a. c. de-

mand can be carried for the short time necessary by the steam turbine station and the 200 kw. a. c. generator at the Edison station without the aid of the McIntosh Seymour engine, especially if the gas engines, driving d. c. generators, are used to relieve the load on the motor-generator set. With respect to the steam boiler capacity of the Edison plant, the engineers find that the steam boiler equipment consists of four 180 h. p. Scotch marine boilers, three 72″x18″ fire tube boilers, and one small Scotch marine boiler, which supply steam to the circulating pumps of the heating system as well as to all the steam engines. Since the engines are non-condensing and consequently the steam consumption per horse power is large, the boiler capacity in this plant does not appear large enough to operate the McIntosh Seymour engine during the time of maximum demand on the other engines and when the demand is heavy on the heating steam, which would be the time when the McIntosh engine would be needed if needed at all. For these reasons the value of the McIntosh Seymour engine, its foundation and belt, have been deducted from the engineer's value of operating property and have been added to non-operating property, item 13 of the valuation.

When item 12 of the tentative valuation, table I, has been so changed as to represent only the cost of paving actually disturbed by the company and item 13 has been increased by deducting from the value of the operating property the value of the McIntosh Seymour engine shown to be now unneeded, we find that the total cost of reproducing the applicant's plants, June 30, 1909, was $913,496, and the present value, that date, $711,899, which values have been distributed among the several classes of service as shown in table III:

TABLE III.

REVISED VALUATION OF THE PHYSICAL PROPERTY OF THE LA CROSSE GAS & ELECTRIC CO.

June 30, 1909.

NOTE:—Addition of 12% to cover cost of engineering and superintendence, interest during construction, contingencies, etc.

Since the date of the tentative valuation June 30, 1909, various additions were made to the physical property for the purpose of extending the business and for making available the services from the water power company. According to the petitioner's report to the Commission, these additions amounted to about $18,739 for the year ending June 30, 1910. When proper corrections are made to the tentative valuation for these changes, the cost of reproducing the physical property Nov. 30, 1909, is about $921,337, and its present value $719,740, distributed as shown below:

TABLE IV.

VALUE OF PHYSICAL PROPERTY.

November 30, 1909.

CLASSIFICATION.	Cost new.			Present value.		
	June 30, 1909.	Additions for 5 mo's.	Nov. 30, 1909.	June 30, 1909.	Additions for 5 mo's.	Nov. 30, 1909,

The cost of reproducing the physical property and the present value of the same are not the only matters to be considered in a determination of equitable rates. Consideration must also be given to the original cost of the plants, income accounts, financial statements as represented by the balance sheets, and other factors which, when taken as a whole, together with circumstances attending them, throw much light upon the situation.

ORIGINAL COST OF PLANT.

The original cost of the plants or cost to the investors should correspond to the book value of the plants if the accounts of the concern have been accurately and properly kept, and will be made up of the investment in the plants when first constructed, plus additions or extensions since that time. It is sometimes

the case, however, that the records bearing on these matters offer little explanation of the original transactions. To a considerable degree this seems to be the situation in this case. The present organization of the La Crosse gas, electric and heating utilities is one that was secured through purchase of properties that had already been in operation for a considerable time, and it has added to these properties not only extensions made by itself, but other constructions built by other concerns for competitive purposes. While the costs to present holders may usually be determined with some degree of accuracy from what records there may be of the transactions involved, these costs do not always represent investments in purely physical property, but frequently include also other real or fancied values for which the purchaser may be willing to pay in order to secure the business. Distinction should therefore be borne in mind between these costs to the present owners and the investments actually expended for constructions.

The petitioner finds that it has invested in gas, electric and heating enterprises from the date of its organization to Nov. 30, 1909, $1,290,530, exclusive of current assets of $79,159. The former amount comprises $547,000, said to be the sum paid in 1901 to the former owners of the plants, and $743,530, which is carried on the books as additions since that time. The petitioner divides the original cost of $547,000 into $285,000 for gas, and $262,000 for electric and heating plants; the additions, amounting to $743,530, into $113,963 for gas, and $629,567 for electric and heating. The difference between the petitioner's statement of $1,290,530, as the physical investment, and the total reproduction cost, determined as $963,086 in the tentative valuation, or $327,444, may be due to various causes. It is the claim of the petitioner that it is due, in part, to the fact that 12 per cent is too small an allowance for engineering, superintendence and interest during construction, contingencies, etc., and, in part, to the fact that the appraisal does not account for losses that have taken place through physical consolidation of plants on account of mergers of competing companies. That certain losses may occur in reorganization and combining competing utilities seems reasonable to suppose. The natural result of bringing together duplicate and competing properties is, in most cases, to cause this apparent value to approach more nearly the cost of a plant normally needed to meet the service

which theretofore was over-supplied. Even in the ordinary operation of public utilities losses occur through rearrangement, consolidation or combining of stations and abandonment of apparatus before the end of its natural life. Such losses may be said to be ordinarily met by that portion of the depreciation reserve which is set aside for obsolescence and inadequacy, aside from ordinary wear and tear from use. These losses may also be said to be offset, at least in part, by gains from greater efficiency of operation. They are, in fact, conditions over which the utility may have more or less control and in the case of which it may choose between losses due to inefficient operation and additional cost of remodeling and rearranging equipment. When such changes do not result in reduction in operating expenses or greater safety of operation, it is likely that such changes are not entirely warrantable. But in the case of the consolidation of plants formerly competing, the losses sustained thereby may not be and probably are not entirely due to inadequacy and obsolescence occasioned by the advent of superior apparatus and methods. They often appear to be due rather to a duplication of investment, resulting in unneeded equipment and increased operating costs. This is a circumstance over which the concern may have little or no control, and such changes must ordinarily be carried out as are required to bring the operating costs back to an amount that is more nearly normal.

The applicant has advanced the idea through its written argument that were the values of public utilities fixed solely on the reconstruction value of the plants as they exist at the present day, it would be a mistake for any company to consolidate the physical properties of its various plants in the endeavor to secure better and cheaper operating conditions, because in making such consolidations, severe losses of purely physical value inevitably occur. The applicant declares that this loss of physical value must be justified by decreased operating costs and did the owners of the property neglect or refuse to make such consolidation, as would be the tendency if the principle were established that only physical property should enter into valuations for rate-making purposes, the eventual rate which the public would have to pay for service would be still further increased by reason of increased operating and maintenance costs of a considerable amount of inefficient apparatus. Without attempting, at this time, to enter into a discussion of what ele-

ments properly enter into the value upon which rates should be based, it seems advisable to consider for a moment the applicant's argument in this connection, for its unquestioned acceptance may lead to untenable conclusions. The company's contention appears to rest upon the assumption that all physical construction costs and all costs of operation are proper elements upon which rates should be predicated, and that a utility is unquestionably entitled to a return for all its operating expenses and earnings on at least the reconstruction cost. That this is in the main true under normal conditions, will not be denied, but if the costs of operation are high because of unusual inefficiency of operation, or if the investment is high because of equipment and work clearly unnecessary, it is apparent that equitable rates can not be based thereon, and when excessive operating expense and duplication of equipment go hand in hand, it does not seem necessary, as the applicant contends, to justify reduction in the physical value by reduction in operating expenses. Under these circumstances, a reduction of either or of both is in itself justified and is the demand of normal conditions. High operating expenses may be the result of poor management, so also may be high investment. Again, they may be due to unusual circumstances during some period of the plant's life. These facts must, when possible, be taken into consideration in determining what a utility is entitled to receive for conducting the business.

In the case of the several utilities operating in La Crosse, certain losses may have occurred in the value of the physical property of these concerns through combining them for operation as one system. Such vanished value of the physical property can usually be determined with considerable certainty when complete information is available concerning the original construction costs of the component elements of the utilities that are combined and the conditions under which the constructions and consolidations took place. When this information is as meager as it is in the present instance, it is difficult to say with any considerable certainty that the apparent difference between the original investment costs and the reproduction cost is due to one reason or another. The considerations paid by the present owners to gain control of the business may have covered other assets than those of a purely physical nature, in which case the difference in question cannot be entirely accounted for

by disappearance of physical value. The cost of renewals, or a large part thereof, that may in reality be a replacement of waste due to ordinary wear and tear of operation and therefore properly an operating charge resulting in no way in extension of business or improvement above the original cost of operation, may appear in the construction account as additions to property, thereby swelling the plant investment.

During the period from 1901 to 1909 the La Crosse Gas and Electric Company maintained no depreciation reserve. As the various parts which make up the physical structure of plants of these kinds do not all have the same useful lives, various renewals are necessary from time to time. These renewals may sometimes be deferred beyond the period when replacement is customarily made, but, since much of the equipment in possession of the La Crosse Gas and Electric Company in 1901 had already seen considerable service, it is to be supposed that renewal of depreciable equipment began soon thereafter. To what accounts of the company the costs of such replacements were charged has not been shown. It is possible that part of this expense found its way into the operating expenses as maintenance of equipment; it is very likely that much of it was charged to construction costs of the plant extensions. The purchase of competing equipment might, furthermore, to a considerable extent be properly charged to depreciation, since the acquisition of apparatus in this way made it possible to substitute newer equipment for decrepit parts, the renewal of which necessity would soon require.

While the applicant maintains that no reserve has ever been established for depreciation and that, in fact, there is very little of the original equipment that is not now in operating condition, it admits through its testimony that the practice has been followed of including in the maintenance accounts allowances to cover at least a portion of depreciation or renewals. Analysis has been made of the maintenance costs for the petitioner's several plants since the year 1901, and comparison has been made between these costs and those for other class A utilities in Wisconsin. In the case of electric plants, we find that the average maintenance per kw. hr. generated is 0.24 cts., minimum 0.10 cts., maximum 0.63 cts., and median 0.19 cts. This cost varies for the petitioner's electric and heating plant, between 0.39 cts. per kw. hr. in 1902 and 0.13 cts. in 1910. From the analysis of operating

expenses of class A gas plants, the average cost of maintenance was found to be 4.20 cts. per thousand cubic feet sold, minimum 1.58 cts., maximum 10.43 cts., and median 5.44 cts., while for the La Crosse plant maintenance costs from 1902 to 1910 varied from a minimum of 1.10 cts. per thousand cubic feet sold in 1905 to a maximum of 5.88 cts. in 1910.

These figures, as a whole, seem to indicate that the expenses charged to maintenance accounts are about normal, as compared with other class A plants, but do not show how much is properly a maintenance and how much a renewal charge, since the practice has been quite general among such utilities of charging both costs to one account. The amount which should now be set aside for depreciation for the combined electric and heating plant appears to be somewhat less than 4 per cent and, for the gas plant, about 2 per cent. A deduction of about 2 per cent for the electric and heating plant and 1 per cent for the gas plant from the reported operating expenses or extension costs seems to be fair for the purpose of determining what sums were expended since 1902 for new construction and operating expenses, exclusive of depreciation or replacement.

The following table shows the cost of the physical property each year from 1901 to 1909, as determined from what the applicant states were the original cost and the annual additions or extensions:

TABLE V.

1908	.....	6,607	.....	85,857
1909	.....	14,233	.....	6,665
Paid for W. L. & P. Co. prop.	.....	.....	.....	347,651
Total	$285,000	$113,964	$262,000	$629,567
Additions	113,964	.....	629,567	.....
Total cost	$398,964	.....	$891,567	.....

According to the foregoing table, the amount added to the plant account because of the acquisition of the property of the Wisconsin Light and Power Company is $347,651. From such separation as can be made of the engineers' valuation, it appears that the value of this equipment is in the neighborhood of $242,000 and that the remainder is therefore represented by extravagant expenditure during construction, an excessive bond issue for the purpose of acquiring the business, or both. Under the circumstances it is difficult to find that much, if any, of the physical value has disappeared unless accompanied as well by disappearance of physical property. For these reasons, and because the values upon which the computations are based include only the physical value of operating and non-operating property as found by the engineers and as accepted at the hearings of the case, the value of the addition of the Wisconsin Light & Power Company's property will be placed at $242,000. The value of additions to the electric and heating plant reported by the company as $85,857 for the year ending Nov. 30, 1908, will be placed at $80,857, since the former sum includes a loss of $5,000 on account of releasing a former official of the company from the obligations of his contract.

In order to ascertain what was the probable cost of reproducing the physical property in 1901, we have determined first the cost of reproducing the plants Nov. 30, 1909, and have thereafter deducted what appear to be proper allowances for additions to the property during the preceding years. Starting with the engineer's revised cost of reconstruction of operating property, as of June 30, 1909, table III, we have added thereto $35,445 for non-operating electric and heating equipment, $8,494 for non-operating gas equipment, $3,454 for 5/12 of the company's reported electric extensions, year 1909–1910, and $4,397 for 5/12 of the reported gas extensions for the same period. The resulting totals of $662,238 and $259,109 are the amounts employed in this computation as the values of the electric and heating plants and of the gas plant, respectively, Nov. 30, 1909.

Table VI shows the value of the physical property on Nov. 30 of each year. These values were arrived at in the following manner: The sums reported by the company as extensions of plant, and corrected as shown in column 3 of table VI, were considered to be both additions and renewal of property. From

these amounts there were deducted estimates of the cost of replacements, column 4, which are based upon the plant value. The remainder, shown in column 5, represents the estimate of actual expenditure for additions during the year. Deducting this from the cost of the plant at the end of the year, there remains the value of the plant at the beginning of the year as shown by column 6.

TABLE VI.

COST OF PHYSICAL PROPERTY EACH YEAR 1909-1901.
STARTING WITH COST OF REPRODUCING OPERATING AND NON-OPERATING PROPERTY.
Nov. 30, 1909.

1904	276,080	16,160	5,522	10,638	265,442
1903	265,442	14,705	5,309	9,396	256,046
1902	256,046	50,989	5,121	45,868	210,178
1901	210,178	.....	.....	.....	.....
GAS PLANT.					
1909	$259,109	$14,233	$2,591	$11,642	$247,467
1908	247,467	6,606	2,475	4,131	243,336
1907	243,336	6,787	2,433	4,354	238,982
1906	238,982	7,162	2,390	4,772	234,210
1905	234,210	14,070	2,342	11,728	222,482
1904	222,482	8,532	2,225	6,307	216,175
1903	216,175	11,806	2,162	9,644	206,531
1902	206,531	44,767	2,065	42,702	163,829
1901	163,829	.....	.....	.....	.....

By this process the value of the electric and heating properties Nov. 30, 1901, is found to be $210,178, and of the gas property $163,829. While these values are considerably below the amounts said to have been paid to acquire the property in 1901, they do not appear to be lower than the physical investment ordinarily required for plants of their size. In the case of the gas plant, the total value of operating and non-operating property was, in 1909, $259,109, while the amount claimed as the cost in 1901 is $285,000. Since 1901 the sales of the plant have almost trebled, indicating quite clearly that the physical invest-

ment at that time must have been much below the cost of reproduction today.

The following table shows the cost of several class A gas plants per million cubic feet sold and of the La Crosse gas plant in 1902, as based on these units:

Cities.	Cost of gas plant per million cu. ft. sold.		Cost of La Crosse gas plant in 1902, on basis of foregoing units.	
	New.	Existing.	New.	Existing.
Madison	$3,110	$2,680	$80,000	$68,000
Racine	5,454	4,980	136,000	125,000
Kenosha	2,980	2,660	76,000	68,000
Kenosha (deducting purchased gas)	4 220	3,770	108,000	96,000
La Crosse, June 30, '09	3,760	2,880	96,000	73,500

From these comparative investment costs, it appears safe to conclude that $165,000, which is approximately the amount found by computing back from the cost of reproduction in 1909, is an ample allowance for the physical cost of the gas plant in 1901.

Concerning just what was the capacity of the electric plant when it was acquired by the applicant in 1901, we have no definite record. In 1906 the capacity of the direct current portion of the Edison plant was 900 kws. It is quite certain that the capacity of the plant in 1901 was no greater than this; it is even probable that it was no more than 800 kws., since records show that some of the direct current equipment was installed in 1902. Up to that time no underground lines had been laid and the station operated non-condensing, furnishing its exhaust steam to the heating plant. It seems, therefore, that $200 per kw. would have been ample for the cost of reproduction and $160 for the present value at that time. These figures are substantiated by the values of the Beloit and Madison plants as well as by the reported investments in electrical plants in other states:

	Capacity of electric plant in kws.	Cost new per kw.	Present value per kw.
Beloit	1,400	$182	$160
Madison	3,200	200	163

The following table shows the probable value of the La Crosse electric plant in 1901, based on 900 and 800 kw. plant capacity:

Capacity of plant.	Cost new.	Existing value.
900 kw	$180,000	$144,000
800 kw	160,000	128,000

The cost of reproducing the heating plant, Nov. 30, 1909, was $92,212, and the present value, that date, was $73,418. Since the acquisition of the property in 1901, the company reports additions to the heating plant amounting to approximately $40,000. It is very likely that this amount includes replacements as well as new construction. It appears, therefore, that the cost of reproducing the heating plant, in 1901, was about $60,000, and the existing value, at that time, about $50,000. When these values are added to the foregoing estimates for the electric plant, it appears that the total physical value of both heating and electric properties in 1901, was not far from the value determined by table VI.

COST OF THE PLANTS AND THEIR BUSINESS.

The applicant has set up no claim as to just what value it is entitled to return upon, but declares that this amount is considerably larger than that fixed as the cost of reproducing the physical property today. By methods purporting to follow those pursued by the Commission in other cases, the applicant finds that the value of the gas plant, Dec. 1, 1909, was about $528,000, and of the electric and heating plant $1,121,000, or about $1,649,000 for both. These values are said to represent the cost to the present owners of the physical property, plus the cost of building up the business, when the latter cost is considered to be the difference between the actual net earnings since 1901 and reasonable return upon the investment. It is stated that, for this purpose, annual interest at 8 per cent and depreciation at 4 per cent were allowed for the electric plant and 7½ per cent and 2½ per cent, respectively, for the gas plant. The details of the applicant's computations were not submitted

to the Commission and we are, therefore, not entirely certain as to just what has entered into the final figure of $1,649,000. It seems quite certain, however, that whatever has been expended for renewals has entered into the applicant's calculations twice, for, as we have already pointed out, no depreciation reserve was kept by the company and renewals must, therefore, have entered into either the cost of operation or of construction, appearing thereby, as well as by an allowance for depreciation, in the applicant's computation of earning value. If, in such a determination, an annual allowance for depreciation is deducted from net income, in years when the income is ample to return both interest and depreciation, or is added to the investment in years when the net income is insufficient for this purpose, actual expenditures for the up-keep of equipment, above ordinary maintenance, must be deducted from operating expenses or new construction costs, as the cost of such renewals is taken care of by the allowance for depreciation. In the absence of accurate knowledge as to what the costs of replacements were, it seems proper, for the purpose of estimate, to deduct from operating expenses and construction costs a fair annual allowance for renewals. Column 5 of table VI shows the resulting estimate of actual annual additions to the property when we deduct estimated renewals entirely from the reported extensions. This process leads, as is shown in table VI, to $210,178 as the physical value of the electric and heating plant and $163,829 as the value of the gas plant in 1901.

The following table shows the earning value of the properties, Nov. 30 of each year, starting with what was determined in table VI to be the value of the plants in 1901:

TABLE VII.

1907–1908	204,977	4,131	4,999	12,422	226,529	20,125	206,404
1908–1909	206,404	11,642	5,157	12,734	235,937	24,971	210,966

In order to determine what losses, if any, the applicant has sustained in conducting its business, interest has been computed in the foregoing table at 6 per cent upon the applicant's investment instead of at 8 per cent for the electric and 7.5 per cent for the gas plant. Were the latter figures employed, manifestly a higher earning value would have resulted. To just what rate of return the investors in these properties were entitled during the unprofitable years of the concern's existence, is not easily decided in view of the peculiar circumstances which existed at that time; but it seems quite clear that, when a "going value" or "earning value" determination is made, the capitalization of unearned sums for depreciation and interest and the unquestioning acceptance of the operating expense, amount to an elimination of the risks of the business and that, therefore, little, if anything, need be allowed for profit above a bare interest rate

on the investment during those years. The calculations upon which table VII is based lead to an earning value of the electric and heating business of $692,649, an amount about $30,400 in excess of the cost of reproducing the operating and non-operating property. The earning value found for the gas plant is $210,966, which is about $48,100 less than the cost of reproduction. The combined earning value is $903,615, being less than the cost of reproducing all of the applicant's plants and equipment by about $17,700, but exceeding the existing value by about $183,875.

Table VIII shows what earning values result when interest is placed at 7 per cent:

TABLE VIII.

GAS PLANT.							
1901	.....	.....	.....	.....	.....	.....	$165,000
1901–1902	$165,000	$42,702	$3,727	$13,045	$224,474	$14,510	209,964
1902–1903	209,964	9,644	4,205	15,035	238,848	22,987	215,861
1903–1904	215,861	6,307	4,478	15,331	241,977	28,597	213,380
1904–1905	213,380	11,728	4,658	15,347	245,113	26,359	218,754
1905–1906	218,754	4,772	4,823	15,480	243,829	27,126	216,703
1906–1907	216,703	4,354	4,915	15,322	241,294	22,514	218,780
1907–1908	218,780	4,131	4,999	15,459	243,369	20,125	223,244
1908–1909	223,244	11,642	5,157	16,035	256,078	24,971	231,107

From the foregoing table it will be seen that the cost of the electric and heating plant and its business amounted to $730,654 when interest is allowed at 7 per cent. This amount exceeds the cost of reproducing operating and non-operating prop-

erty by about $68,400. The value determined for the gas plant is $231,107, which falls short of the cost of reproduction by about $28,000.

It is quite certain that, insofar as the physical property is concerned, investment therein was greater at various periods than the business of the company required and that, since the value of such property has been included in the company's reported extensions, the resultant earning value is swollen not only by the amount of the investment in such property, but also by interest and depreciation thereon. Precisely how much should now be deducted from the computed earning value on this account it is impossible to determine, because of uncertainty as to when the various superfluous elements were added. The value of the non-operating or unneeded property, June 30, 1909, has been determined by the engineers to be $43,939 cost to reproduce, which, it seems, is the least that should now be subtracted from the earning values of tables VII and VIII.

Reference has already been made to competition that existed for several years in the electrical business by reason of which, it is believed, various losses were sustained by the La Crosse Gas and Electric Company, as well as by its competitors, in their endeavor to get and maintain business. Such cost of promoting business, if not returned to the investors through earnings during years of competition, may perhaps be said to represent costs which should now be charged to the business investment. Competition of this kind, accompanied by low rates and energetic solicitation of business, may and frequently does produce a high saturation of the use of current beyond that which would ordinarily result from the normal growth of the business, resulting in later years, when competition has relaxed, in a condition under which attempts to promote further use may be practically futile and the cost of such attempted promotion may be an additional loss to the plant. Such efforts, under these conditions, may be more or less dispensed with in years following competition resulting, ordinarily, in decreasing, for a time, the operating expenses in which new business costs are usually included. If this expense is neither considered as a cost of building up the business, nor is distributed as an operating expense over subsequent years, then, it seems, expenditures of capital may have been made for which there will be no return.

That business getting expenses should receive consideration in rate making, either as investments in the business or as additional operating expenses during following years when business promotion is uncalled for, with the view of returning whatever had been legitimately and normally expended, seems to be quite clear. While the latter method of providing for this expense, when unusually large, may appear to be in theory the more correct one, because if these costs are permanently charged to investment in the business, return would be had thereon in all future years regardless of the fact that natural conditions of business growth may again exist and the plant may be again bearing, in the operating expenses, its annual portion of the cost of getting new business; the effect of capitalizing the losses for the present will be about the same as to properly distribute them to later years. On the other hand, it is quite evident that costs of greatly developing the business during periods of competition, the costs of creating a desire for the commodity above the natural tendency in the community, may be and probably are, even when distributed over the years when the expense of promotion of business is low, much in excess of the costs that would ordinarily be borne for this purpose.

In former decisions of this Commission it has been pointed out that, during the promotion period which follows the first construction of the plant, the ordinary losses due to building up the business from an unprofitable plant with few or no consumers to a profitable one, are often sums for which the investors are entitled to return later on. But what consideration should be given to losses that may be the result of competition occuring some years after the first construction, is a matter that is not so clear. One view that may be held is, that during periods when no public regulation of utilities exists and there is little restriction as to the number of concerns that may enter the same field, the risks of the business are greater and utilities are therefore entitled to larger returns during the profitable years than would otherwise be the case. Investors, it may be held, knowing, as they should, that these conditions prevail, take upon themselves, when entering the field, the risks of the business as well as the privilege of enjoying substantial profits from the undertaking. Another view may be advanced, holding that since a municipality, during former years, could choose

between allowing one or more utilities of the same kind to supply the community, it took upon itself the responsibility of increased costs and losses due to competition when duplicate franchises were granted.

Whichever position is more representative of the truth in these respects, it seems quite certain that municipalities are to some degree responsible for the increased cost of service and losses in conducting the business when they permit duplicate investment to serve an already adequately supplied public. Just how the public in such instances expects to permanently profit by such action is difficult to say. As a rule, its action is believed to be due to misapprehension as to the cost of service, the amount of profit utilities usually secure, and the rights to which they are entitled. High rates, poor service or other local circumstances have sometimes formed the grounds upon which attack or retaliation has been made by the public by permitting competition to take place, and to what extent it was justified therein, in the absence of other protective methods, depends largely upon the importance of these offenses and whether the utility was responsible for them.

Whatever may have once been the situation in this respect in La Crosse, and whatever may have been the losses to the applicant during the years of competition, it now appears that the earnings from the business as a whole have been, during the several years of operation, sufficient or nearly so to reimburse the company for these unusual losses, and it is further found that, even when it is assumed that adequate sums have been set aside as a reserve for depreciation and full allowance is made for superfluous holdings of the company, the evidence points to the fact that the investment in the business of the La Crosse Gas and Electric Company is not very far from the cost of reproducing the combined utilities.

BALANCE SHEETS.

The balance sheets of the La Crosse Gas and Electric Company are reproduced in the following table for the period from Nov. 30, 1902, to June 30, 1910:

*Credits.

While the applicant claims that the amount paid to secure the properties in 1901 was $547,000, the plant account reported for Nov. 30, 1901, amounted to $1,075,000. During the following year, the balance sheet shows that there was added for new construction about $95,757, making a total book value of the plant of $1,170,757. The applicant's liabilities, at that time, show that there had been issued bonds to the extent of $550,000, and capital stock of $600,000. During the subsequent period to June 30, 1910, the book value of the plant increased to $1,827,782, the bonds outstanding to $1,000,000 and the capital stock to $650,000. The cost of reproducing both operating and non-operating property June 30, 1910, was about $930,000, being exceeded by the outstanding bonds by about $70,000, and by the book value by about $900,000.

WORKING CAPITAL.

It is the claim of the applicant that there is needed for conducting its business as a whole, a sum of at least $50,000 for working capital. While admitting that stores and supplies properly represent a portion of the necessary working capital, the applicant was unable to state at the hearing how much was needed in the way of actual cash, but was of the opinion that $12,700 is considerably less than the amount required for the electric business. By deductions from the Commission's opinion in the case of the *State Journal et al. v. Madison Gas & El. Co.* 1910, 4 W. R. C. R. 501, the respondent finds that $12,700 is ample for working capital above stores and supplies in the case of the electric department, and $7,000 in the case of the gas department. No statement was made as to what amount should be devoted to the heating business.

Reference to the balance sheets of the company shows that what are known as the quick assets and liabilities of the concern were, at various periods, as follows:

	Nov. 30, 1908.	June 30, 1909.	Nov. 30, 1909.	June 30, 1910.
CURRENT ASSETS				
Supply accounts	$22,052	$24,646	$23,979	$25,843
Accounts receivable	38,877	25,874	38,013	36,495
Cash	18,669	19,766	14,403	33,067
Total	$79,598	$70,286	$76,395	$95,405
CURRENT LIABILITIES				
Accounts payable	$47,742	$51,797	$50,779	$51,900
Labor unpaid	3,519	3,199	3,451	2,973
Total	$51,261	$54,996	$54,230	$54,873
Difference	$28,337	$15,290	$22,165	$40,532

From the foregoing it is seen that, on the several dates considered, the difference between the quick assets and liabilities was lowest June 30, 1909, when it amounted to $15,290, and highest June 30, 1910, when it was $40,532.

The following table shows what 15 per cent and 10 per cent of the gross earnings of the combined utilities amount to for the various periods:

	15 per cent of gross earnings.	10 per cent of gross earnings.
Year ending Nov. 30, 1908	$42,400 00	$28,300 00
Year ending June 30, 1909	43,200 00	28,800 00
Year ending Nov. 30, 1909	43,600 00	29,100 00
Year ending June 30, 1910	48,500 00	32,300 00

Without entering into a discussion of working capital, which subject was considered in some detail in the case of *State Journal et al. v. Madison Gas & El. Co.* 1910, *supra,* we conclude that the amount of working capital that the applicant declares is necessary for its business is excessive by about $15,000 and that $35,000, including stores and supplies, appears to be ample under present conditions. While the difference between this figure and the engineers' value of stores and supplies leaves as cash capital a sum that appears to be relatively a large proportion of the working capital, an increase in the value of stores and supplies by a reasonable amount for residual stock of the gas business decreases this difference materially.

INCOME ACCOUNT.

The following table X shows the detailed income account of the La Crosse Gas and Electric Company for the years ending June 30, 1909 and 1910. It should be borne in mind that, during the former year, electric generation was entirely by steam equipment of the La Crosse Gas and Electric Company, and that, during the latter year, power was purchased from the La Crosse Water Power Company for a portion of the time, from early in December 1909 to the end of the fiscal year.

Total deductions	$79,111 79	$82,012 93
Net income or deficit	$3,403 24	$25,277 46*

*Deficit.

Attention should be called to the fact that no depreciation reserve charge was made for the year ending June 30, 1909, but a provision of $50,000 was made for this purpose during the following year. While, exclusive of the depreciation reserve charge, the operating expenses of the combined utilities increased about $11,000 from the first to the second period, the total revenues increased about $35,000 during the same time.

APPORTIONMENT OF OPERATING EXPENSES.

The Commission's practice of dividing the operating expenses between the different departments of the business according to the respective responsibility of the several classes of service has been followed in the succeeding tables. Because of the intimate relation of the heating to the electric business, such service has at first been treated as one group and gas service as another. Tables XI and XII show the apportionment of revenues and operating expenses between the gas, and the electric and heating business for the years ending June 30, 1909 and 1910:

TABLE XI.

*Based on engineers' revised cost of reproduction, June 30, 1909, plus allowance for omissions and additional working capital.

Depreciation on the gas plant has been placed at $5,486 for the year ending June 30, 1909, and at $5,584 for the year following. For the electric and heating plants the depreciation for the respective periods was placed at $24,867 and $25,108. These values represent composite determinations for the various equipment going to make up the plant as a whole. From this analysis it is found that, during the first period, there remained for interest and profit a sum equal to 5.80 per cent of the total cost of reproduction, plus working capital, and during the second period, 8.35 per cent. During the first period, year ending June 30, 1909, this return, when properly divided between the gas and the heating and electric departments, was equal to 7.30 per cent of the cost of reproduction, plus working capital, for

the former department, and 5.20 per cent for the latter. For the year following these values were 7.25 per cent and 8.80 per cent, respectively.

GAS COSTS.

The operating expenses of the gas plant are divided in the following table XIII between consumer and output costs along lines which we have frequently explained. Interest and profits have been placed in this table at 7½ per cent of the cost of reproduction, plus working capital. Taxes, depreciation, interest and profits are apportioned between consumer and output, according to the investment in and use of the several portions of the plant:

TABLE XIV.

GAS ACCOUNT.

Items.	Cubic feet.	
	Year ending June 30, 1909.	Year ending June 30, 1910.
Gas on hand first of year	134,900	108,600
Gas made during year	75,168,500	79,044,800
Total gas to account for	75,303,400	79,153,400
Gas on hand close of year	108,600	144,400
Gas delivered to mains	75,194,800	79,009,000
Gas sold	63,616,700	72,387,300
Gas used by company	1,890,800	463,100
Total gas used and sold	65,507,500	72,850,400
Gas unaccounted for	9,687,300	6,158,600

From the foregoing table of the gas account it will be observed that the sales increased from 63,616,700 cu. ft. for the year ending June 30, 1909, to 72,387,300 cu. ft. for the year ending June 30, 1910. The gas consumed by the company decreased during this time from 1,890,800 cu. ft. for the former year to 463,100 cu. ft. for the latter. This large use by the utility during the year ending June 30, 1909, undoubtedly represents a considerable amount not directly chargeable to conducting the gas business, and we have therefore placed the sales for that period at 65,207,500 cu. ft., which is 300,000 cu. ft. below the amount reported by the company as sold and used. Were this difference increased to as much as 500,000 cu. ft. to correspond to the amount used by the company during the year following, the effect on the unit output cost would amount to only a fraction of a cent per M cu. ft. sold. By dividing the output costs of the gas department for the year ending June 30, 1909, by 65,207.5, and for the year ending June 30, 1910, by 72,387.3, we find that the unit output costs for these periods were, respectively, $0.8267 and $0.8315 per M cu. ft.

GAS METER-MONTHS.

	1908-1909.	1909-1910.
Meters in use first of year	2,711	3,032
" " " end " "	3,032	3,146
Average No. of meters in use during year	2,871.5	3,089
" " " meter-months " "	34,458	37,068

In order to properly distribute the consumer expenses of the gas department between the several consumers, we have divided the total consumer expense by the number of meter-months, and find the cost per meter-month to be 36 cts. for the year ending June 30, 1909, and 36.3 cts. for the year ending June 30, 1910. These amounts should be divided by the number of M cu. ft. used by the consumer and the result added to the output costs, in order to find what is the total charge per M for the quantity used. The following table shows these unit costs and also the average cost per M cu. ft. for the two years under consideration:

Class of expense.	Unit.	*Year ending June 30, 1909.*			*Year ending June 30, 1910.*		
		No. of units.	Total cost.	Unit cost.	No. of units.	Total cost.	Unit cost.
Consumer.	Meter-months.....	34,458	$12,397 18	$0.3600	37,068	$13,445 50	$0.3630
Output....	M cu. ft.....	65,208	53,906 28	.8267	72 387	60,189 91	.8315
Total....	M cu. ft.....	65,208	$66,303 46	$1.0168	72,387	$73,635 41	$1.0173

When the consumer cost is distributed over the quantity used as in table XV, the total cost per M cu. ft. used is found to vary, for the year ending June 30, 1909, from $1.187 for the first M to $0.827 per M for 1000 M cu. ft.; for the year ending June 30, 1910, the cost varies over the same range of use from $1.195 to $0.832 per M cu. ft.

TABLE XV.

GAS DEPARTMENT.

COST PER UNIT OF THE CONSUMER, THE OUTPUT AND THE TOTAL EXPENSE.

500.....	"	413.550	413.910	.828	"	415.750	416.113	.832
1000.....	"	826.700	827.060	.827	"	831.500	831.863	.832

The meter schedule asked for by the La Crosse Gas and Electric Co. proposes a rate of $1.15 per M for the first 20 M used, $1.00 per M for the next 20 M, and other decreases, as exist at present, for succeeding quantities. This schedule differs from the existing schedule by increasing the rate 15 cts. for the first 20 M used. Analysis of the consumption of gas in La Crosse shows that the sales are distributed as follows:

PER CENT OF TOTAL ANNUAL SALES IN EACH GROUP.

1st M	2nd M	3rd M	4th M	5th M	5th to 10th M	10th to 20th M	20th to 40th M	40th to 100th M	All over 100 M
41.75	23.60	10.84	5.67	2.99	5.56	3.58	2.66	1.92	1.43

From this it may be seen that the proposed increase would affect 93.99 per cent of the sales and would have amounted to an increase in revenue of about $10,206 for the year ending June 30, 1910. From an examination of the distribution of sales as shown in the foregoing table, and of the cost curves of table XV, it appears that the schedule which properly meets the conditions of service would consist of a rate of $1.10 per M for the first M cu. ft. used per month, $0.90 per M for the next 3 M, and $0.80 per M for all gas sold in excess of 5 M.

TABLE XVI.

ESTIMATE OF REVENUE FROM GAS SALES UNDER PROPOSED RATE.

Rate per M.	Group.	Per cent of total gas sold.	M cu. ft. sold.	Estimated revenue.
$1 10	First 2 M	65.35	47,305	$52,035 50
90	Next 3 M	19.50	14,116	12,704 40
80	All over 5 M	15.15	10,967	8,773 60
	Total	100.00	72,388	$73,513 50
	Total cost year 1909-1910			73,645 49
	Difference			$131 99

The foregoing estimate shows what revenues might be expected under the rates which we have proposed and conditions as they were for the year 1909—1910. Exclusive of revenue from minimum bills, above what the minimum bill may provide for cost of gas, the estimated revenue from gas sold is only about $130 less than the total gas cost for that year. The difference between

the revenue from minimum bills and the cost of gas used by consumers paying minimum bills may be expected to amply cover the small deficiency of the estimated revenue.

The minimum bill now existing for gas service is a monthly charge of $0.50. Further examination has been made of the expense, return for which the utility is supposed to be ensured by a minimum charge, in order to learn how accurately the present rate meets the existing conditions and to determine what adjustments may be necessary to equitably distribute these costs among the several consumers.

TABLE XVII.

COMPARISON OF CONSUMER EXPENSES PER METER FOR NINETEEN WISCONSIN GAS UTILITIES.

	Labor removing and resetting meters.	Meter and fitting department labor.	Customers premises expense.	Meter and fitting department supplies and expenses.	Maintenance of services.	Maintenance of meters.	Collection salaries and expenses.	Reading meters and delivering bills.	Collection supplies and expenses.	Uncollectible accounts
Minimum	$0.0607	$0.0323	$0.0760	$0.0089	$1.0080	$0.0696	$0.0325	$0.1242	$0.0017	$0.0163

La Crosse 1909–1910	.1332	.1385	.2994	.0061	.0026	.0643	.1532	.2238	.0146	.....

Table XVII is a comparison for La Crosse and nineteen other gas companies in Wisconsin of those operating expenses, exclusive of fixed charges, the return of which should be provided for even when no gas is used. As compared with the averages and medians for the nineteen companies, none of the items for La Crosse appear to be excessive, but on the contrary, several appear to be quite low.

The total of the foregoing expenses per meter-month, for the La Crosse Gas and Electric Company, was $0.074 for the year ending June 30, 1909, and $0.086 for the year ending June 30, 1910, as shown below:

TABLE XVIII.

CONSUMER EXPENSES.

LA CROSSE GAS AND ELECTRIC COMPANY.

Items.	Year ending June 30, 1909.	Year ending June 30, 1910.
Labor removing and resetting meters	$183 54	$411 39
Meter and fittings department labor	222 10	427 79
Customers' premises expenses	898 70	924 88
Meter and fittings department supplies and expenses	29 81	19 02
Maintenance of services	.....	7 92
Maintenance of meters	360 14	198 62
Collection salaries and commissions	269 11	473 19
Reading meters and delivering bills	592 33	691 25
Collection supplies and expenses	7 66	45 11
Uncollectible accounts	.....	.....
Total	$2,563 39	$3,199 17
Meter-months	34,458	37,068
Consumer expenses per meter-month	$0.074	$0.086

These costs added to the fixed costs, which vary with the size of meter, result in the total charges per meter shown in the following table:

COST PER METER PER MONTH.

Size of meters.	Fixed charges.*	Total charges year ending	
		June 30, 1909.	June 30, 1910.
3 light	$0.058	$0.132	$0.144
5 "	.072	.146	.158
10 "	.085	.159	.161

200 "	1.134	1.208	1.220

**City of Racine v. Racine Gas Light Co.* 6 W. R. C. R. 311.

From these facts it is to be concluded that a uniform minimum bill for all consumers is not equitable, but that, when these costs are properly distributed and there are added thereto sufficient sums to about cover the cost of gas used in small quantities, the minimum bill should be scaled about as follows:

Size of meter.	Minimum amount to be charged each month.	Size of meter.	Minimum amount to be charged each month.
3 light	$0.25	45 light	$0.60
5 "	.25	60 "	1.00
10 "	.35	80 "	1.50
20 "	.35	100 "	2.00
30 "	.50	200 "	4.00

Electric and Heating Costs.

The operation of the heating business is so completely dependent upon the operation of the Edison electric plant that costs of the combined business must receive careful examination in order that they may be charged in proper proportion to each service.

The respondent contends through its expert witness that, although the cost of coal per kw. hr. generated would amount to 2.35 cts. if the exhaust from the steam equipment of the La Crosse Edison plant were not charged to the heating business, such economies are effected by heating in connection with the electrical generation that the cost of fuel per kw. hr. would amount to only 0.4 cts. if the electrical business is charged only with that portion of the heat originally contained in the steam and actually converted into work (considering also certain losses) and if the balance of the heat of the steam were then charged to the heating system. Considering the electric plant as a whole, respondent believes that 1.0 cts. per kw. hr. would be a fair charge to the electric plant for fuel used. This figure, it is said, might be increased to 1.1 cts. per kw. hr. because of certain adjustments which respondent fails to point out.

The facts and figures upon which the witness' results and conclusions are based and their special application to the plants in question have not been made entirely clear. Because the heating business must receive all the heat of the steam which the engines have not converted into energy, hardly seems to be a valid reason for charging the heating business with that proportion of the cost of steam generated; for even in the most efficient steam operated electric plants, only a relatively small amount of the energy of the steam is converted into useful work, the remainder being lost in various ways.

It is the practice of the applicant to generate, as far as possible, only as much current at the non-condensing Edison plant as is required to furnish the necessary exhaust steam for the heating system. It is also the practice, when sufficient current from water power is not available, to generate as much of the balance of current at the turbine plant as possible. Inasmuch as water power is not at all times available in sufficient quantities, it would appear to be about right to charge the electric bus-

iness for the generation at the Edison plant at about the same rate as the cost of generation in the turbine plant, provided it were possible to generate at the turbine plant all the current required. But this is impossible during the winter months when the load is heaviest and it is then necessary to operate also the less efficient reciprocating steam engines of the Edison plant. It seems to be impossible to obviate this without additional high efficiency steam equipment.

The following table shows the cost of generation by the turbine plant for several periods of operation.

COST OF ELECTRICAL GENERATION LA CROSSE TURBINE PLANT.

Period.	Kw. hrs. generated.	Cost per kw. hr. in cents.				
		Fuel.	Steam generated.	Entire station.		
				Maintenance.	Operation.	Maintenance and operation.

Nov. "	247,800	1.13	1.29	.02	1.45	1.47
Total	1,375,100					
Weighted average		1.12	1.27	.057	1.448	1.505
Year ending June 30, 1909						1.57
" " " " 1910						1.68

The foregoing table shows that for the period from July 1 to Nov. 30, 1909, the cost of generation in the turbine plant per kw. hr. was as follows: For fuel 1.12 cts., steam generated 1.27 cts., total station maintenance and operation 1.505 cts. For the entire year ending June 30, 1909, the total cost of station maintenance and operation was 1.57 cts. per kw. hr. generated; for the year following, 1.68 cts. per kw. hr. The total maintenance and operating costs for 1908–1909 are only slightly greater than for the first five months of the following year, but for the year 1909–1910 there is a notable increase in the total turbine station cost, probably due to the lower station load factor brought about by the introduction of water power during that time. The following table shows what some of these costs amount to for the various electric utilities in Wisconsin:

TABLE XIX.

POWER EXPENSES.

WISCONSIN ELECTRIC UTILITIES.

Year ending June 30, 1909.

	Cents per kw. hr. generated.				No. of utilities represented.
	Average.	Median.	Minimum.	Maximum.	
Class A utilities					
Power expense, all methods	2.216	2.124	0.913	3.081	12
" " by steam only	2.089	2.060	.694	3.590	12
Steam generated	1.603	1.628	.590	3.040	12
Miscellaneous labor	.034	.005	.003	.117	12
Steam generated and misc. labor.	1.637	1.633	.593	3.157	12
Class B utilities					
Power expense, all methods	3.301	3.946	.501	5.011	10
" " by steam only	3.698	3.053	1.467	8.646	7

This shows that, for the class A and B electric plants, whose accounts were kept with sufficient detail for a complete comparison, the average and median costs of power generated by all methods and of power generated by steam were greater than for the La Crosse turbine plant, and that the average and median costs of steam generated in class A utilities were also greater than for the La Crosse turbine plant.

The following table is a comparison of the prices paid for coal by several Wisconsin class A electric utilities.

TABLE XX.

COST OF COAL FOR ELECTRIC POWER GENERATION.

WISCONSIN CLASS A UTILITIES.

Utility.	1908–1909.		1909–1910.		1910–1911.

11	2 97	25,500,000	.....	.....	2 08	25,638,000
12	2 32	14,372,000	3 05	14,234,000	3 15	14,127,718
13	.....	.....	.....	.....	2 80	9,050,000
Weighted average..	$2 994	.....	$2 946	.....	$2 87	.....
La Crosse G. & E. Co.	3 80	.....	3 75—4 40	.....	.....	.....

Although the comparison is not all that might be desired, because the table does not show the grade of coal used, it is interesting to note that the price paid by the La Crosse Gas and Electric

Company exceeds all prices paid by the other utilities for coal delivered. During the periods shown above, the La Crosse Gas and Electric Company and many of the other utilities tabulated used both lump coal and screenings. A comparison on the basis of kw. hr. generated per pound of coal would add considerably to the value of the foregoing table, but it is obvious that if we had the necessary facts for the La Crosse Edison plant for such a comparison we would have a satisfactory basis of apportioning the fuel cost between electric generation and heating. The facts available seem to indicate that the cost of the necessary generation in the La Crosse Edison plant is considerably more per unit than for the La Crosse turbine plant, and is probably somewhat more, on account of greater cost of coal transportation, than it is for the average class A utilities. For these reasons we are charging the electric generation in the Edison plant at the rate of 1.75 cts. per kw. hr. to cover the following items:

Miscellaneous labor
Steam operating labor
Heating operating labor
Fuel for steam
Fuel for hot water
Water for steam
Miscellaneous steam supplies
Power gas
Maintenance of boilers
Maintenance of coal and ash apparatus
Maintenance of boiler plant building
Maintenance of heating plant.

The following items of plant expense are either all electrical or all heating costs, and have been charged accordingly to the proper department:

Engine labor
Electrical labor
Maintenance of engines
Maintenance of generators
Miscellaneous heating plant supplies.

The following items are in the nature of overhead costs for both businesses, and have been divided in tables XXI and XXII according to the division of the other plant expenses:

Superintendence
Lubricants
Miscellaneous power plant supplies
Maintenance of power plant auxiliary apparatus
Maintenance of power plant building, fixtures and grounds.

When the operating expenses of the Edison plant are apportioned in this way, the cost of power generated at this plant is $34,434.55 or 2.11 cts. per kw. hr. for the year ending June 30, 1909, and $25,385.38 or 2.13 cts. per. kw. hr. for the year ending June 30, 1910. The amounts apportioned to the heating business for these respective periods are $19,830.22 and $20,-803.95. The following tables give the apportionment of all operating expenses between the electric and heating systems for the two years ending June 30, 1909 and 1910:

[1]—1,190, 214 kw. hrs. at 1.75 cts.

HEATING DEPARTMENT.

The foregoing apportionments of electric and heating expenses show that the cost of operating the heating plant, including taxes, depreciation and interest, was $33,635.87 for the year ending June 30, 1909, and $34,460.75 for the year ending June 30, 1910. For these respective periods the earnings from this class of service were $33,757.72 and $34,447.70. These facts indicate that the present uniform rate of 18 cts. per square foot is just about sufficient to return the cost of service.

TABLE XXIII.

APPORTIONMENT OF EXPENSES OF THE HEATING PLANT BETWEEN CONSUMER AND OUTPUT EXPENSES.

Total	7.10	$2,387 80	92.90	$31,248 07	$33,635 87	6.49	$2,235 47	93.51	$32,225 28	$34,460 75

In order to illustrate what are the costs of rendering such heating service to patrons having heating installations of different sizes, the operating expenses have been divided, in table XXIII, between consumer and output expenses in much the same manner as we are accustomed to apportion the expenses of gas plants. The consumer expenses, which bear little relation to the heating area, are about 7.10 per cent of the total heating expenses for the year 1908—1909 and about 6.49 per cent for the year 1909—1910. This amount divided by the number of patrons is the annual sum which should be paid by each patron regardless of the number of square feet of radiating surface. What we have termed output expense, to correspond with the same class of costs for gas plants, amounted to 92.90 per cent of the total operating expenses for the year 1908—1909 and 93.51 for the year 1909—1910. This amount divided by the total radiating area is the unit price to be paid per square foot.

We do not have a report of the radiating area for either of the years under consideration but, for a later date, the distribution of the heating area was as follows:

DISTRIBUTION OF HEATING AREA.

Heating area in square feet.	Number of patrons.	Total heating area, sq. ft.
0- 100	4	209
101- 200	14	2,033
201- 300	7	1,715
301- 400	16	5,635
401- 500	20	8,876
501- 600	26	14,091
601- 700	28	17,974
701- 800	37	27,447
801- 900	20	16,715
901-1,000	13	12,230
1,001-1,100	8	8,226
1,101-1,200	10	11,352
1,201-1,300	7	8,569
1,301-1,400	1	1,388
1,401-1,500	1	1,430
1,501-1,600	6	9,131
1,601-1,700	4	6,455
1,701-1,800	3	5,282
1,801-7,500	13	42,945
Total	238	201,703

According to the reports of the company, the number of service takers increased from 226, for the year ending June 30, 1910, to 238 at the date the above record was taken from the books.

Assuming that the radiating area increased in the same ratio, the number of square feet, for the year 1909–1910, is found to be about 191,050, which, at 18 cts. per square foot, produces a return of $34,389 per annum. This amount agrees very closely with the actual revenue for the year 1909–1910. Applying these values to the 1909–1910 costs, for the purpose of illustration, it is found that the output or area costs per square foot amount to 16.76 cts. per year and the consumer costs per consumer to $9.89. These costs are combined in the following table which shows that the cost of serving the various patrons varies from $0.3654 per square foot, for those having 50 square feet of radiating area, to $0.1689 per square foot for those having 7,500 square feet.

TABLE XXIV.

HEATING SYSTEM UNIT COSTS.

Year ending June 30, 1910.

Square feet of radiating area.	Consumer cost.	Output cost at $0.1676 per square foot.	Total cost.	Total cost per square foot.
50	$9.89	$8 38	$18 27	$0.3654
100	"	16 76	26 65	.2665
200	"	33 52	43 41	.2170
300	"	50 28	60 17	.2008
400	"	67 04	76 93	.1923
500	"	83 80	93 69	.1874
600	"	100 56	110 45	.1861
700	"	117 32	127 21	.1817
800	"	134 08	143 97	.1800
900	"	150 84	160 73	.1786
1,000	"	167 60	177 59	.1776
1,500	"	251 40	261 29	.1742
2,000	"	335 20	345 09	.1725
2,500	"	419 00	428 89	.1716
3,000	"	502 80	512 69	.1709
4,000	"	670 40	680 29	.1701
5,000	"	838 00	847 89	.1696
6,000	"	1,005 60	1,015 59	.1693
7,000	"	1,173 20	1,183 09	.1690
7,500	"	1,257 00	1,266 89	.1689

These figures suggest that the rate for heating service should be a charge of about 19.5 cts. for the first 500 square feet, 17.5 cts. for the next 500 square feet, and 15.5 cts. for all over 1,000 square feet. Analysis of the table of distribution of heating area shows that 53.03 per cent is in the first 500 square feet, 26.25 per cent in the next 500 square feet, and 20.72 per cent in the remainder. These percentages, applied to the total estimated area of 191,050 square feet for year 1909–1910, result

in the following distribution of service and estimated revenue therefrom:

	Area.	Rate.	Estimated revenue.
Primary (first 500 sq. ft.)	101,314 sq. ft.	19.5 cts.	$19,756 23
Secondary (next 500 sq. ft.)	50,151 " "	17.5 "	8,776 42
Excess (all over 1000 sq. ft)	39,585 " "	15.5 "	6,135 68
Total	191,050 " "		$34,668 33

ELECTRIC DEPARTMENT.

The operating expenses, apportioned to the electric department in tables XXI and XXII, have been further divided between capacity and output costs in table XXV for the year ending June 30, 1909, and in table XXVI for the year ending June 30, 1910. During a portion of the fiscal year 1909–1910 a considerable portion of the current purchased from the La Crosse Water Power Company was delivered directly from the switchboard to the Listman Mill Company for power purposes and the rate, both for the purchase and re-sale thereof, was, by agreement with the water power company, placed at 0.75 cts. per kw. hr. The purpose of this transaction, on the part of the La Crosse Gas and Electric Company, was to keep the substation sufficiently loaded to ensure an advantageous rate for other use of current. This matter was in the nature of an experiment for all parties concerned, and the sale of current to the Listman Mill Company was later discontinued. For these reasons we have deducted from the income account of the electric business both the revenue and cost of current for all power sold to the Listman Mill Company. Were this service continued, we are not entirely certain at this time that this portion of the business should not bear some expense in addition to the price paid by the La Crosse Gas and Electric Company for the current resold.

TABLE XXV.

DIVISION OF TOTAL ELECTRIC OPERATING EXPENSES BETWEEN CAPACITY AND OUTPUT EXPENSES.

Year ending June 30, 1909.

Total operating expenses	$161,988 91	33.85	$54,832 24	66.15	$107,156 67

The capacity expenses of the electric department, for the year 1908–1909, have been divided among commercial lighting, commercial power and street lighting, as shown in table XXVII; the output expenses are for the same period as in table XXVIII. For the year 1909–1910, capacity and output expenses are di-

vided between these classes of service as shown in tables XXIX and XXX.

TABLE XXX.

APPORTIONMENT OF OUTPUT EXPENSES BETWEEN COMMERCIAL LIGHTING, COMMERCIAL POWER AND STREET LIGHTING.

Year ending June 30, 1910.

CLASSIFICATION.	Total.	Commercial lighting.		Commercial power.		Street lighting.	
		Per cent.	Amount.	Per cent.	Amount.	Per cent.	Amount.
Power	$42,451 24	44.98	$19,094 60	43.77	$18,580 94	11.25	$4,775 77
Distribution	1,232 32	65.14	802 75	29.12	358 89	5.74	70 68
Consumption	3,922 36	74.33	2,915 33	.30	12 04	25.37	994 99
Commercial	779 41	88.23	687 67	11.77	91 74	.....	.....
Total above	$48,385 40	48.57	$23,500 35	39.36	$19,043 61	12.07	$5,841 44
General	5,423 18	"	2,634 04	"	2,134 56	"	654 58
Undistributed	1,455 62	"	707 00	"	572 93	"	175 69
Total above	$55,264 20	48.57	$26,841 39	39.36	$21,751 10	12.07	$6,671 71
Taxes	6,969 15	60.30	4,202 40	29.90	2,083 78	9.80	682 97
Depreciation	15,485 72	"	9,337 89	"	4,630 23	"	1,517 60
Interest	29,437 60	"	17,750 87	"	8,801 84	"	2,884 89
Total output	$107,156 67	54.25	$58,132 55	34.78	$37,266 95	10.97	$11,757 17

From the foregoing tables we find that the cost of operating the electric department is divided among the several kinds of service as follows:

Classification.	Cost of Service.		
	Capacity.	Output.	Total.
1908-1909.			
Commercial lighting	$35,842 38	$62,661 11	$98,503 49
" power	18,149 50	40,996 68	59,146 18
Street lighting	5,067 84	13,068 81	18,136 65
Total	$59,059 72	$116,726 60	$175,786 32
1909-1910.			
Commercial lighting	$33,431 71	$58,132 55	$91,564 26
" power	16,643 23	37,266 95	53,910 18
Street lighting	4,757 30	11,757 17	16,514 47
Total	$54,832 24	$107,156 67	$161,988 91

The following is a comparison of the earnings and expenses for the several classes of electric service which the applicant furnishes:

Classification.	1908-1909.		1909-1910.	
	Earnings.	Expenses, including interest and depreciation.	Earnings.	Expenses, including interest and depreciation.
Commercial lighting	$94,820 52	$98,503 49	$106,114 15	$91,564 26
" power	42,586 18	59,146 18	*43,003 36	*53,910 18
Street lighting	17,447 88	18,136 65	17,899 38	16,514 47
Miscellaneous	2,979 67	.....	622 68	.....
Total	$157,834 25	$175,786 32	$167,639 57	$161,988 91

*Exclusive of current sold to Listman Mill Company.

During the year ending June 30, 1909, the earnings of the electric department were exceeded by the cost of service by about $18,000, but during the following year the situation was reversed and earnings exceeded the cost of service by about $6,000. The greatest improvement is found in the commercial lighting sales, in which instance a change occurred from a deficit of about $3,700 to a surplus of $15,000. The situation with respect to the commercial power business was less favorable, as the deficit of $16,600 for the first period was only decreased to a deficit

of $11,000 for the second period. These facts show that the earnings from lighting are more than sufficient to meet the cost of service and that it is the surplus from this source that places the electric business as a whole upon a satisfactory basis.

From an analysis of the consumer records, the distribution of the number of consumers, connected load, and current sold for twelve months residence, store, office and saloon consumers, is found to be as shown by the following tables:

RESIDENCE LIGHTING

DISTRIBUTION OF CONSUMERS, CONNECTED LOAD AND CURRENT SOLD.

Of the 1,428,637 kw. hrs. reported as sold for lighting purposes during the year 1909–1910, about 91 per cent has been so recorded as to enable a division to be made into primary, secondary, and excess use. This analysis is shown below:

DISTRIBUTION OF COMMERCIAL LIGHTING SALES.

Year ending June 30, 1910.

No. of consumers.	No. of lamps.	Primary, kw. hrs.	Per cent.	Secondary, kw. hrs.	Per cent.	Excess, kw. hrs.	Per cent.	Total, kw. hrs.	Per cent.
A 2,410	40,648	229,626	55.68	137,470	33.34	45,256	10.98	412,352	100.00
B 551	20,831	182,631	28.48	220,248	34.34	238,455	32.18	641,334	100.00
C 177	14,584	79,853	32.63	79,000	32.28	85,887	35.09	244,740	100.00
D 4	192	7,833	100.00	.....	.....	.....	.....	7,833	100.00
Total 3,142	76,255	499,943	38.27	436,718	33.43	369,598	28.30	1,306,259	100.00

Class A of the foregoing table consists of residences; class B of restaurants, lodges, halls, photo galleries, barber shops, bakeries, laundries, theaters, saloons, offices, railroads, stores, and several consumers reported as miscellaneous and can therefore not be otherwise classified; class C of factories, churches, hotels, barns, garages, warehouses, boarding houses, newspapers, printing shops, hospitals, schools, shops, clubs, city buildings, county buildings and federal buildings; class D of signs. The primary current consists of the first 30 hours' use per month of the active load, the secondary of the next 60 hours' use, and the excess of all over 90 hours' use.

The present electric rate schedule of the La Crosse Gas and Electric Company provides that there shall be a service charge on all lighting installations of $1.80 per year per 16 c. p. lamp or equivalent demand, on one-third of the connected installation, or when one-third of the connected installation is considered to be the demand. Thus, it may be seen that no distinction is made in the present service charge between different classes of users, although practice shows that considerable difference actually exists between the ratio of the active load to total connected load for different uses to which the load is put. For the purposes of this analysis, the active connected load is considered to be, for class A, 50 per cent of the first ten 50 watt lamps connected, plus one-third of all over ten lamps; for class B, 70 per cent of the first fifty 50 watt lamps, plus 55 per cent of all over fifty lamps; for class C, 55 per cent of the connected load; and for class D, 100 per cent of the connected load. On this basis the foregoing table shows that the primary current amounted to 38.27 per cent, the secondary to 33.43 per cent, and the excess to 28.30 per cent of that portion of the lighting sales which is so reported as to be capable of analysis. The commercial lighting load is distributed between the several classes of users as shown below:

ACTIVE CONNECTED LOAD
COMMERCIAL LIGHTING
Year ending June 30, 1910.

Class.	Total number 50 watt lamps connected.	Total lamp-months.	Per cent active.	Total active lamp-months.
A	40,648	432,801	42.1	182,361
B	20,831	219,316	63.7	139,851
C	14,584	170,549	55.0	93,802
D	192	1,693	100.0	1,693
Total	76,255	824,359	50.7	417,707

The average number of lamps connected during the year is found to be 68,696 by dividing the total lamp-months by 12. The ratio of the average active lamps to the average connected lamps, or of the active lamp-months to the total lamp-months, is 50.7 per cent. The ratio of the average lamps connected to the total lamps connected is 90.1 per cent. The total active lamp-months of 417,707 is equivalent to an average active connected lighting load of 1,740.4 active kws. Applying the ratios thus determined to the lighting load reported for the year ending June 30, 1909, the following units are arrived at:

Total 50 watt lamps connected..... 77,240 lamps
Average " " " = 90.10 x 77,240 = 69,593 "
" active 50 watt lamps = 50.7 x 69,593 = 35,284 "
" " kws. = 35,284 ÷ 20 = 1764.2 kws.

The commercial lighting output costs, amounting to $58,132.55 for the year 1909–1910, divided by the commercial lighting sales of 1,428,637 kw. hrs. for that period, results in a unit output cost of 4.069 cts. per kw. hr. Dividing the capacity costs of $33,-431.71 for the year 1909–1910 by the average active load of 1,740.4 kws., we find the unit capacity cost to be $19.21 per active kw. per year. This divided by 365 gives a unit cost of 5.263 cts. per kw. hr. for the first hour's daily use of the active load. For the year 1908–1909, capacity costs are 5.566 cts. per kw. hr. for the first hour's daily use of the active load and the output costs are 4.738 cts. per kw. hr. These units and the total cost per kw. hr. for various lengths of time the active load is used, are shown in the following table:

TABLE XXXI.

UNITS OF COST FOR COMMERCIAL ELECTRIC LIGHTING.

Use of active load, hours per day.	CENTS PER KW. HR.					
	1908–1909.			1909–1910.		
	Capacity.	Output.	Total.	Capacity.	Output.	Total.
1	5.566	4.738	10.304	5.263	4,069	9.332
2	2.783	"	7.521	2.632	"	6.701
3	1.855	"	6.593	1.754	"	5.823
4	1.392	"	6.130	1.316	"	5.385
5	1,113	"	5.851	1.053	"	5.122
6	.928	"	5.666	.877	"	4.946
8	.696	"	5.434	,658	"	4.727
10	.557	"	5.295	.526	"	4,595
24	.232	"	4.970	.219	"	4.288

The foregoing table shows that the difference between the cost of operation for the year ending June 30, 1909. when the generation was entirely by steam power, and for the year ending June 30, 1910, when a portion of the power was purchased, was about 1.0 cts. per kw. hr. for one hour's daily use of the active load and about 0.7 cts. for ten hour's use. The facts disclosed suggest that, for the former year, a rate of about 10 cts. per kw. hr. for the first 30 hours' use per month of the active load, 7 cts. for the next 60 hours' use, and 4.5 cts. for all use in excess of 90 hours would about return the cost of operation for that period. For the latter year the rate should be about 9 cts. per kw. hr. for the first 30 hours' use per month, 6 cts. for the next 60 hours' use, and 4 cts. for all use in excess of 90 hours.

Assuming that all of the commercial lighting sales for the years 1908–1909 and 1909–1910 are divided among primary, secondary and excess in the same ratios as are 90 per cent of the lighting sales for the year 1909–1910, we find the distribution in kw. hrs. to be as follows:

PRIMARY, SECONDARY AND EXCESS COMMERCIAL LIGHTING CURRENT.

Group.	Per cent.	Kw. Hrs.	
		1908-1909.	1909-1910.
Primary	38.27	506,140	546,740
Secondary	33.43	442,128	477,593
Excess	28.30	374,281	404,304
Total	100.00	1,322,549	1,428,637

The estimated revenues from the foregoing sales, based on the unit rates determined from table XXXI, are shown in the following table:

Group.	1908-1909.			1909-1910.		
	Kw. hrs.	Rate cts.	Estimated revenue.	Kw. hrs.	Rate cts.	Estimated revenue.
Primary	506,140	10	$50,614 00	546,740	9	$49,206 60
Secondary	442,128	7	30,948 96	477,593	6	28,655 58
Excess	374,281	4.5	16,842 64	404,304	4	16,172 16
Total	1,322,549		$98,405 60	1,428,637		$94,034 34
Actual cost			$98,503 49			$91,564 26

The following comparative table shows the revenue per kw. hr. for several classes of La Crosse and Madison consumers:

UNIT REVENUE.
FROM SALES OF ELECTRIC CURRENT.

Class.	La Crosse, year ending June 30, 1910.			Madison, year ending March 31, 1911				
				Rate existing under decision U-58.			New rate under decision U-114.	
	Kw. hrs. sold.	Net revenue.	Net revenue per kw. hour.	Kw. hrs. sold.	Net revenue.	Net revenue per kw. hour.	Net revenue.	Net revenue per kw. hour.
			cts.			cts.		cts.
Residence.....	411,225	$41,593 20	10.1	711,214	$80,527 19	11.3	$66,600 86	9.4
Short hour business.....	346,304	27,169 79	7.8	247,787	21,898 45	8.8	19,640 61	9.4
Long hour business.....	653,805	35,108 50	5.4	645,917	52,670 28	8.1	44,730 43	6.9
	1,411,334	$103,871 49	7.4	1,604,918	$155,095 92	9.7	$130,971 90	8.2

According to the foregoing table, La Crosse residence consumers have been paying an average rate of 10.1 cts. per kw. hr., which is somewhat less than was paid by Madison residence consumers under the rates recently superseded, but that amount is somewhat more than will be paid under the existing Madison rate. Apparently very few of the La Crosse residence consumers enjoy a rate lower than the maximum of 10 cts. per kw. hr.

In the case of business consumers, however, the average rate paid is about 1.5 cts. per kw. hr. less than for the corresponding group of Madison consumers. But this cannot be entirely due to the rate schedule; for, it may be observed, the average rate paid by La Crosse long hour business consumers is 5.4 cts. per kw. hr., while the lowest rate of the applicant's schedule is 6 cts. plus the readiness-to-serve charge. The evident explanation of this situation seems to be the existence of contract rates established prior to April, 1907. Although the revenue per kw. hr. may, therefore, be rather low for business consumers, it appears that this condition is brought about by such circumstances that it cannot be equitably remedied by an increase in the maximum rate prayed for. Some inequity, however, does exist, as we have already stated, between the readiness-to-

serve charge for business and residence consumers, and the facts seem to warrant an increase in the ratio of active to connected business lamps. There were connected, during the year ending June 30, 1910, about 35,400 equivalent 50 watt business lamps, which, under the existing schedule, correspond to an active connected load of 11,800 50 watt lamps. The revenue from the readiness-to-serve charge of $1.80 per active lamp per year is now about $21,240 for the business consumers.

The following table shows what the apparent increase of revenue from the service charge amounts to when the ratio of active to total connected load is increased to the amount shown below:

Number of 50 watt business lamps connected.	Per cent active.	Number of active 50 watt lamps.	Revenue from service charge of $1.80 per active lamp per year.	Increase over present revenue from service charge.
35,400	33⅓	11,800	$21,240	.....
35,400	35	12,390	22,302	$1,062
35,400	38	13,452	24,214	3,974
35,400	40	14,160	25,488	4,248

The bills of those consumers, who are now paying the maximum rate, would be unaffected by an increase in the ratio of active to connected load, and in such instances, therefore, the revenue from current sold would decrease at the same rate as the revenue from the service charge increased. Total revenues would therefore be increased by an amount somewhat less than the apparent increase due to a larger percentage active. Were the active business load increased to 50 per cent of the connected load, the apparent increase in the revenue would be about $10,620.

Electric Power.

During the year ending June 30, 1909, there were sold for commercial power purposes 1,274,815 kw. hrs., and during the year following, 1,322,815 kw. hrs. The total power output costs for these respective periods were $40,996.68 and $37,266.95, corresponding to a unit output cost per kw. hr. of 3.216 cts. for the former year and 2.817 cts. for the latter. To properly apportion the power capacity costs among the various installations, it is necessary to determine the active horse-power-months for this class of service. Analysis of the individual power in-

stallations for the year ending June 30, 1910, shows that the distribution of the load was as follows:

DISTRIBUTION OF POWER LOAD AND HORSE-POWER-MONTHS.
Year ending June 30, 1910.

Size of installation.	Number of consumers.	Horse power connected.	Total annual horse-power-months.	Per cent active.	Active annual horse-power-months.
Less than 10 h. p.	199	707.0	7,075.0	90	6,367.3
From 10 h. p. to 19 h. p.	33	425.0	4,269.5	70	2,988.6
From 20 h. p. to 49 h. p.	23	642.5	6,330.0	60	3,798.0
From 50 h. p. to 100 h. p.	5	416.0	3,707.5	55	2,039.1
Over 100 h. p.	.....	245.0	1,780.0	50	890.0
Total	.....	2,435.5	23,162.0	69.4	16,083.0

If the 2,435.5 h. p. had been connected for the entire year, the total horse-power-months would have been 29,226. Of this, the actual horse-power-months, amounting to 16,083, are 55.03 per cent. The total commercial horse power connected June 30, 1909, was reported to be 1,924, which corresponds to 23,088 horse-power-months were this load connected for a full year. Assuming that the relation of actual horse-power-months to the product of the total horse power by 12 remained the same for the two years, we find that the probable actual horse-power-months for the year ending June 30, 1909, were 12,705. Dividing the power capacity costs of $16,643.23 for year 1909–1910 by 16,083, and $18,149.50 for year 1908–1909 by 12,705, the unit capacity costs per active horse-power-month are found to be $1.035 for the year 1909–1910, and $1.428 for the year 1908–1909. Placing the rate for current used at 3 cts. per kw. hr. and the service charge at $1.70 per active horse-power-month for 1908–1909 and at $1 per active horse-power-month for 1909–1910, the estimated commercial power revenues are as follows:

ESTIMATED POWER REVENUE

Year 1908–1909.

12,705 active h. p. months at $1.70	$21,601.50
1,274,815 kw. hrs. at 3 cts	38,244.45
Total estimated revenue	$59,845.95
Actual power cost	$59,146.38

Year 1909–1910.

16,083 active h. p. months at $1	$16,083.00
1,322,815 kw. hrs. at 3 cts	39,684.45
Total estimated revenue	$55,767.45
Actual power cost	$53,910.00

Street Lighting.

The following table shows the relation between the cost of street lighting and the revenues therefrom for the two years under consideration:

	1908–1909.	1909–1910.
Capacity cost	$5,067 84	$4,757 30
Output cost	13,068 81	11,757 17
Total cost	$18,136 65	$16,514 47
Revenue	$17,447 88	$17,899 38

These facts show that during the year 1908–1909 the revenue from street lighting fell short of the cost of service by about $700. During the year 1909–1910, however, the cost of service so decreased that it is exceeded by the revenue from this source by about $1,300.

EFFECT OF ALLOWANCE FOR GOING VALUE.

The unit operating costs, so far computed, have taken into consideration no allowance for going value, but have been deduced from the operating expenses, including depreciation and interest, only upon the physical investment and necessary working capital. Taxes, also, have been included in the operating expenses as they were reported by the applicant. Subsequent to the hearings of this case, the supreme court of Wisconsin has held that the tax of 2 per cent, imposed by the city upon the applicant's gross income from electric lighting and power, is set aside since the applicant surrendered its franchise from the city and received an indeterminate permit from the state. This reduction in taxes corresponds to a decrease in operating expenses of about $2,748 as based on the gross revenue of the commercial electric business for the year ending June 30, 1909, and of $3,268 as based on the gross revenue for the year ending June 30, 1910. The former figure capitalized at 8 per cent corresponds to an investment of $34,000, and at 7½ per cent to $37,000. The tax for 1909–1910, capitalized at these rates, corresponds to an investment of $41,000 and $44,000. If no credit is now made to the operating expenses because of the discontin-

uance of the tax on the applicant's gross revenues, the effect on the net income would be the same as though there were allowed an intangible value of $34,000 to $44,000. In order to show what effect a further allowance for going value would have upon the unit costs of service, additional computations have been made assuming for the electric department a going value of $50,000. The return at 8 per cent upon this sum, distributed as was the interest upon the physical investment, results in slight increases in the unit costs.

UNIT COSTS FOR COMMERCIAL LIGHTING.

ALLOWING $50,000 GOING VALUE FOR ELECTRIC UTILITY.

Cents per kw. hrs.

Use of active load, hours per day.	*1908–1909.*			*1909–1910.*		
	Capacity.	Output.	Total.	Capacity.	Output.	Total.
1	5.694	4.845	10.539	5.393	4.170	9.563
2	2.847	"	7.692	2.696	"	6.866
3	1.898	"	6.743	1.797	"	5.967
4	1.424	"	6.269	1.348	"	5.518
5	1.139	"	5.984	1.079	"	5.249
6	.949	"	5.794	.899	"	5.069
8	.712	"	5.557	.675	"	4.845
10	.569	"	5.414	.539	"	4.709
24	.237	"	5.082	.225	"	4.395

From the following estimate of revenues it will be seen that, except for an increase of half a cent in the suggested rate for excess current for the year 1908–1909, the units already determined are ample to cover the costs of commercial lighting operation, including interest on a going value of $50,000, while deducting nothing for reduction in taxes:

Group.	1908-1909.			1909-1910.		
	Kw. hrs.	Rate, cts.	Estimated revenue.	Kw. hrs.	Rate, cts.	Estimated revenue.
Primary	506,140	10	$50,614 00	546,740	9	$49,206 60
Secondary	442,128	7	30,948 96	477,593	6	28,655 58
Excess	374,281	5	18,714 05	404,304	4	16,172 16
Total	1,322,549	.....	$100,277 01	1,428,637	.....	$94,034 34
Actual cost, inclusive of interest on going value of $50,000	.....	.....	$100,777 53	.....	.....	$93,387 91

Unit Costs for Commercial Power.

The allowance of $50,000 going value for the electric utility increases the capacity and output power costs for the year 1909–1910 to $17,054.22 and $38,187.28, respectively, from which the unit costs are found to be a service charge of $1.06 per active horse power per month and an output cost for current used of 2.887 cts. per kw. hr. For the year 1908–1909 the capacity costs on this basis are $18,565.59, and the output costs $41,925.95, from which are obtained a unit service charge of $1,462 per active horse power per month and an output charge of 3.290 cts. per kw. hr. These units differ very little from those previously computed.

Street Lighting.

The following table shows the relation between operating costs and revenues for street lighting when $50,000 going value is allowed for the electric utility:

	1908–1909.	1909–1910.
Total street lighting operating expenses	$18,548 91	$16,922 27
Street lighting revenues	17,447 28	17,899 38

MINIMUM ELECTRIC BILL.

The applicant requests that authority be granted to increase the minimum monthly electric lighting bill from $0.75 to $1. The readiness-to-serve form of the applicant's schedule is such that apparently those fixed expenses which are proportional to the number of consumers or number of meters are returned to the utility through the service charge of $1.80 per active lamp per year, and this would be the case were it not provided that the combined service and current consumption charges shall not be greater than 10 cts. per kw. hr. For this reason, it is necessary that provision be made for a minimum charge sufficient to cover those expenses which bear little or no relation to the consumption of current. When interest, depreciation, and taxes on the applicant's invest-

ment in consumers' meters and services are added to meter, collection and customers' premises expenses, and when further allowance is made for the cost of current likely to be used under the minimum bill, it appears that a minimum charge of $1 per month is not unreasonable.

EMERGENCY SERVICE CHARGE.

In order to meet the demand for "stand-by" connections, for such customers as generate their own current for light and power, the petitioner proposes that the existing service and meter rates apply without limit as to maximum rate per kw. hr. Obviously, the total cost of serving customers of this class is not proportional to the amount of current which they use, but depends much more upon the fixed expense occasioned by preparations to meet their demands. We have already shown what the capacity or demand costs amount to for the years ending June 30, 1909 and 1910. When these costs are reduced to the basis of one-third of the load active, they agree very closely with the readiness-to-serve charge now in effect. The commercial lighting output costs were 4.74 cts. per kw. hr. for the year 1908–1909 and 4.07 cts. for the year 1909–1910. The meter charge for this service should therefore be a uniform rate of from 4 to 5 cts. per kw. hr. when the service charge applies without limiting the total charge per unit used. In the case of power service, the output cost was found to be about 3 cts. per kw. hr.

SUPPLEMENTAL COMPARISON OF REVENUES AND EXPENSES

Since the determination of the foregoing units of operating costs, which are based chiefly upon conditions of operation from June 30, 1908, to June 30, 1910, there have been filed with the Commission the applicant's reports of its gas, electric, and heating business for the year ending June 30, 1911. Some analysis has been made of these statements, which will be presented here in order to throw more light upon the conditions under which the business is conducted.

GAS PLANT OPERATION.

COMPARATIVE TABLE OF THE INCOME ACCOUNTS OF THE GAS PLANT.
For the years ending June 30, 1909, 1910 and 1911.

	Year ending June 30,		
	1909.	*1910.*	*1911.*
OPERATING REVENUES			
Commercial earnings	$64,877 70	$72,975 75	$74,193 33
Power earnings	867 78	.....	.....
Misc. operating revenues	326 41	27 42	.....
Total operating revenues	$66,071 89	$73,003 17	$74,193 33
OPERATING EXPENSES			
Production	$57,829 39	$65,207 60	$71,580 92
Net earnings from residuals	30,396 04	34,094 81	32,630 21
Net cost of production	$27,133 35	$31,112 79	$38,950 71
Distribution	2,178 19	2,447 66	2,026 22
Commercial	1,738 93	1,927 58	1,583 31
Total direct expenses	$31,050 47	$35,488 03	$42,560 24
General	5,393 76	6,525 12	5,254 29
Undistributed	1,378 96	1,751 39	8,304 52
Total above expenses	$37,823 19	$43,764 54	$56,119 05
Taxes	4,221 63	4,885 47	5,522 92
Depreciation	5,486 00	5,584 00	5,625 00
Total operating expenses	$47,530 82	$54,234 01	$67,266 97
NET REVENUE	$18,541 07	$18,769 16	$6,926 34
Net revenue in per cent of cost of production	7.5	7.5	3.7

It will be observed that for the first two years of this period the net revenues remaining for interest and profits amounted to about 7.5 per cent of the cost of reproducing the gas plant. During the last year, however, the operating expenses have so increased without a corresponding increase in gross revenues that the net revenue fell to about 3.7 per cent of the cost of reproduction. Examination of the applicant's statements reveals the fact that a notable increase in production and undistributed expenses is accountable almost entirely for this marked falling off of the earning capacity of the gas plant. Of the undistributed expenses, amounting to $8,304.52 for the year ending June 30, 1911, $6,761.40 are for injuries and damages resulting from an accident in 1906, which was not fully covered by insurance. Such expenses are infrequent in occurrence and manifestly should be distributed over several years if a determination of normal operating costs is desired. The result of this operation will be to so increase the net revenues for the last fiscal year that the rate of return will be about 5 per cent.

The net cost of gas production during the year ending June 30, 1911, exceeded that for the preceding year by about $7,800. During the same time the revenues from commercial sales in-

creased only about $1,100. Although it appears that the gas produced increased about 4,760,000 cu. ft., or 6 per cent, there was no material increase in the amount of gas sold. The applicant's explanation of the condition of the station meter throws considerable doubt upon the reliability of this instrument and, therefore, upon the fairness of a comparison of the unit production costs that may be based on the amount of gas recorded at the station. The following table shows some of the important facts relating to the applicant's production of gas since June 30, 1908:

	Year ending June 30,		
	1909.	*1910.*	*1911.*
Cu. ft. of gas made	75,168,500	79,044,800	83,817,700
Cu. ft. of gas sold	63,616,700	72,387,300	72,476,200
Cu. ft. of gas used by Co.	1,890,800	463,000	758,000
Cu. ft. of gas sold and used	65,507,500	72,850,300	73,235,200
Per cent lost	12.9	7.7	12.6
Tons of coal carbonized	8,092	8,447	9,231
Cost of coal per ton	$4 60	$4 65	$4 67
Cu. ft. made per lb. of coal	4 64	4 68	4 54
Cu. ft. sold and used per lb. of coal	4 05	4 32	3 96
Residuals	$30,696 04	$34,094 81	$32,630 21
Residuals per ton of coal carbonized	3 80	4 03	3 53
Residuals per M ft. sold and used	.480	.468	.445

The foregoing table discloses that, during the last year of this period, very material decreases took place in the amount of gas sold and used per pound of coal carbonized, residuals per ton of coal carbonized, and per M cu. ft. of gas sold and used. The combined effect of these circumstances may best be shown by the following table:

	Year ending June 30,		
	1909	*1910.*	*1911.*
Production	$57,829 39	$65,207 50	$71,580 92
Residuals	30,696 04	34,094 81	32,630 21
Net cost of mfg.	$27,133 35	$31,112 69	$38,950 71
Net cost of mfg. per M sold and used	$0.413	$0.427	$0.532

It is the applicant's claim that although the grade of coal purchased for gas production is presumably similar to that heretofore used, its inferiority as represented by the decrease in the yield of gas is chiefly accountable for the increased cost of manufacture. Production labor has also increased over former years and, it is claimed, must be still further increased in order to meet conditions elsewhere. Comparison, however, with con-

ditions in other cities, as shown by the following table, does not substantiate the applicant's contention that the cost of its gas production labor is low. While it is true that this cost per M cu. ft. sold has increased in the applicant's business during the last three years, it is now considerably above the average for other coal gas plants of about the same size.

*Class A utilities producing only coal gas and purchasing no gas for resale.

Examination of the operating statistics for other class A coal gas utilities shows that there has been, on the whole, little or no change in the cost of gas coal and that the yield per pound of coal has slightly increased rather than decreased.

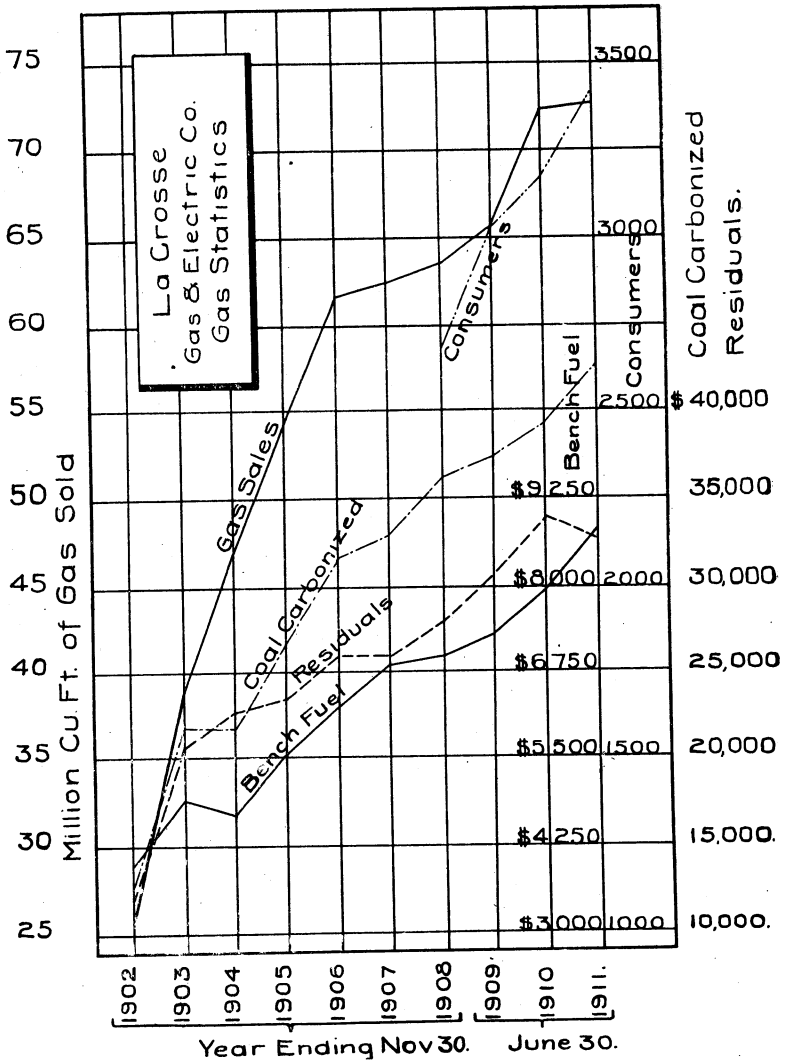
What the applicant's statement concerning its production expenses shows for the year ending June 30, 1911, as compared with the previous history of the business, may well be seen by examination of the following diagram:



From 1906 to 1908, the curves of the preceding diagram show a tendency to approach the horizontal. This is explained by the fact that, at about that time, the electric properties were all combined under the managment of the La Crosse Gas and Elec-

tric Company and active competition ceased between the gas and electric business as well as between the several electric utilities. When normal conditions again began to be restored, the curves again approached their former slope until the last year of operation when some of the curves show a remarkable tendency to reverse their direction. The points of the curves representing the number of consumers, the cost of coal carbonized and of bench fuel, seem to fall in their natural positions for the year ending June 30, 1911. Sales of gas, however, remain practically stationary and revenues from residuals decline considerably, although the quantity of coke per ton of coal carbonized and the price received per ton of coke remained the same.

Did all of these circumstances tend to show a permanent inclination of the gas business to narrow the margin between the operating revenues and the operating expenses, the business might, indeed, be considered to be in a grave situation. But these facts are supported neither by the history of the plant's business nor by the tendency of conditions elsewhere, and it therefore seems necessary to conclude that the conditions that apparently prevailed in the applicant's gas business during the year 1910–1911 are, at most, only temporary and do not indicate a permanent change in the normal cost of operation.

ELECTRIC PLANT OPERATION.

Year Ending June 30, 1911.

The following is a comparative statement of the income account for the applicant's electric business for the years ending June 30, 1909, 1910, and 1911:

ELECTRIC DEPARTMENT.

*Exclusive of earnings and expenses of current for Listman Mill Company, year ending June 30, 1910.

During the year ending June 30, 1911, the La Crosse Gas and Electric Company generated, by steam power, 2,721,740 kw. hrs. of electrical energy, and purchased from the La Crosse Water Power Company 2,122,550 kw. hrs. generated by water power. The La Crosse Water Power Company found itself unable to furnish the necessary demand at various times during this period and the costs of steam power were, to this extent, charged against the latter concern. As a result of this situation, the applicant reports the following account of its cost of power for the year 1910–1911.

Total steam power generation	$62,543.12
Total electric current purchased	37,718.52
Total	$100,261.64
Less charges to La Crosse Water Power Co.	38,284.87
Net cost of power	$61,976.77

Unusual rainfalls in the Black river valley, since the close of the last fiscal year, caused the Black river to overflow the embankments at the Hatfield plant of the La Crosse Water Power Company and to wash away the earthwork and to otherwise

damage the power company's property. Following this occurrence, the receiver of the La Crosse Water Power Company canceled its contract with the applicant. For these reasons the applicant is now compelled, at least during the immediate future, to generate its own current, and it estimates that the losses effected thereby will be about as follows:

Penalties actually received in 1911	$2,263.00
Increased cost of steam generation over water power contract basis, 2,883,700 kw. hrs. at about ½ cts. per kw. hr.	14,418.50
Rent of north side plant under the contract terms, eight months and seven days	4,116.69
Loss of profit on street railway business, 679,610 kw. hrs. at ⅛ cts. per kw. hr	1,224.25
Total loss which applicant estimates it will sustain by the failure of the La Crosse Water Power Company and the damage of its property	$22,022.44

The applicant also claims that, on the basis of the taxes for 1911, this expense will be increased during the ensuing year by $477 which, combined with a probable increase of 1 mill in the tax rate, will effect a further addition of $1,400 for the year ending June 30, 1911. On the other hand, the attorney for the respondent contends that the applicant's taxes are clearly too high and that an appeal should be taken to the board of equalization. For the purpose of this analysis, it appears reasonable to place taxes at the actual figure for the year 1910–1911.

During the year ending June 30, 1911, there were generated by steam power, 1,691,800 kw. hrs. of alternating current and 1,002,040 kw. hrs. of direct current, or a total, by steam power, of 2,693,840 kw. hrs. There were purchased, during this time, 2,122,550 kw. hrs. of current generated by water power, of which 991,227 kw. hrs. were resold at the switchboard to the street railway company, leaving 1,113,323 kw. hrs. of hydraulic current used for light and power. The combined delivery to the switchboard for these purposes was 3,825,163 kw. hrs.

SWITCHBOARD OUTPUT.

Year ending June 30, 1911.

Steam power generation	1,691,800 kw. hrs.	a. c.
Steam power generation	1,002,040 "	d. c.
Total steam power generation	2,693,840	
Purchased current	2,122,550 kw. hrs.	
Sold to traction company.	991,227 "	
Purchased for light and power	1,131,323 kw. hrs.	
Total generated and purchased for light and power	3,825,163 kw. hrs.	

What this current would have cost the applicant if generated entirely by its steam equipment, depends not so much upon the cost per unit of that current which was generated by steam power during the last fiscal year, as upon the cost of generation during former years when no current was purchased and when the load factor of the steam equipment must, undoubtedly, have been much better. During the year ending June 30, 1909, all current, except a small amount produced by gas power, was generated by the applicant's steam equipment and it is believed, therefore, that the cost of generation per kw. hr. during that period more accurately indicates the probable cost of production, when water power is not available, than any subsequent period. Although the average cost of steam power generation, as reported for the year 1910–1911, amounted to 2.32 cts. per kw. hr., the average cost, which we have found for the year 1908–1909, was 1.804 cts., being 2.11 cts. per kw. hr. for direct current and 1.57 cts. per kw. hr. for alternating current. Assuming that all of the direct current is generated in the Edison plant and all of the alternating current in the turbine plant, which will be approximately correct, the cost of generation by steam power is estimated to be as follows:

Direct current	1,002,040 kw. hrs. at 2.11 cts.	.....	$21,000.00
Alternating current	2,823,123 " " 1.57 cts.	.....	44,400.00
Total		.....	$65,500.00

Estimating on the basis of the average cost of current during year 1908–1909, the estimate of cost of generation is increased to $69,150. These estimates of power generation costs are used in the following table of income accounts for the purpose of which it was assumed that there existed no contract for purchase of current by the applicant nor sale of current for traction purposes.

ESTIMATE OF EXPENSES AND NET REVENUES.

Year ending June 30, 1911.

Assuming no Water Power and Street Railway Contracts.

Undistributed	3,346 27	3,346 27	2,200 49	2,200 49
Total above	$100,064 99	$96,414 99	$92,046 52	$88,396 52
Taxes	11,045 93	11,045 93	11,045 93	11,045 93
Depreciation	24,190 00	24,190 00	24,190 00	24,190 00
Total oper. expenses	$135,300 92	$131,650 92	$127,282 45	$123,632 45
Net oper. revenues	$38,099 91	$41,749 91	$46,118 48	$49,768 48
Non-oper. revenues	1,015 47	1,015 47	1,015 47	1,015 47
Total net revenues	$39,115 38	$42,765 38	$47,133 95	$50,783 95

In the first estimate of the foregoing table the cost of power is computed at the average cost of current produced during the year 1908–1909. Other expenses, except depreciation, are the same as were reported by the applicant for the year 1910–1911. The cost of power, in the second estimate, is based on 2.11 cts. per kw. hr. for direct current and 1.57 cts. for alternating current, resulting in a somewhat lower cost of power. In this, as well as in the first estimate, other expenses, except depreciation, are as reported by the company. It will be noted that the distribution, consumption, commercial, general and undistributed expenses, which the applicant reports for its electric business for the year 1910–1911, are somewhat greater than the expenses we have found for similar items for the preceding year. This may be due to taking on the street railway business, to a general increase of these expenses, or to loading the electric department with more than its fair share of the costs. Aside from the sales for traction purposes, the general business of the electric department during the last year's operation was not materially greater than for the year next preceding; the kw. hrs.

sold during these respective periods were 3,095,232 and 3,109,-721. For this reason, estimates three and four were made to illustrate the amount of net revenue resulting when the same costs are assumed for power, depreciation and taxes, as in estimates one and two, but when other expenses are placed at the same figures as for the year 1909–1910. What return on the investment the various estimated net revenues of the foregoing table amount to is shown below:

RETURN ON INVESTMENT IN ELECTRIC BUSINESS.

Year ending June, 30, 1911.

Return on present value plus working capital	*9.5%*	*9.3%*	*12.9%*

According to these facts a marked improvement has taken place in the financial condition of the heating business during the period when water power was available, which may be due, at least in part, to the fact that at such times the quantity of electric generation in the Edison plant can more closely conform to the demand on the heating system. But generation by the company's steam equipment must, for some indefinite period, be again reverted to, resulting in a probable increase of cost of service for the heating as well as for the electric business. How much this increase will amount to, it is difficult to say, but we are inclined to the belief that it is not likely to rise above the costs for the year ending June 30, 1909.

SUMMARY.

The application for the various increases of rates for the gas, heating and electric business, as heretofore enumerated, rests, almost entirely, upon the petitioner's claim to an investment in plant and business that is much in excess of the cost of reproducing the physical properties. Examination of such facts as are available concerning the annual operating revenues and expenses, additions to the property, and their relation to the pres-

ent cost of reproducing the physical equipment leads us to believe, however, that the amount upon which the applicant is now entitled to return is not very far from the cost of reproducing the properties of the combined utilities.

In the gas department the situation with respect to the net earnings has been such that we do not feel warranted, under the circumstances, in authorizing an increase at this particular time. The facts in the case indicate that there should be a readjustment of the schedule, as already outlined, in order that it may more closely conform with the cost curve. But, because of prevailing conditions and because the application is not so much for a readjustment of the rates as for an increase affecting a considerable portion of the sales with no corresponding decrease for the larger quantities used, it appears best to leave the gas schedule, for the present, as it now is.

A separation of the revenues and expenses for the electric and the heating systems has not been made for the entire period since the properties were acquired by the applicant, but separations of the income accounts for recent years indicate that the earnings of the heating department have been ample to return a fair rate of interest and profit on the investment. Here, again, the rate schedule might properly be readjusted to more closely correspond to the variable cost of service; but such a revision is demanded neither by the applicant nor by the respondent, and it appears advisable not to change the existing schedule.

The net earnings of the electric business have been less certain than those of the gas and heating departments, especially during the period of competition when various losses probably took place. Since Nov. 30, 1909, the electric business has much improved, due somewhat to use of purchased current, and the net earnings during that period offset, to some extent, the earlier losses. Since the close of the last fiscal year circumstances have developed which require the applicant to discontinue the use of purchased current for an indefinite period, and the net return for the year ending June 30, 1911, is therefore probably greater than should be expected for the immediate future. But estimates of the normal operating expenses, as based on former costs of steam generation, warrant the conclusion that the net earnings, with the existing rate schedule, will be sufficient or nearly so to meet the legitimate claims of the business. The schedule for commercial lighting fails to recognize the proper

relation between the residence and business use of current and it is believed that a small increase in the ratio representing the relation of active to connected load for business users will, to some extent, remedy this situation and at the same time add slightly to the applicant's income. The minimum commercial lighting bill also appears to be too low and should be increased to about $1.

The revenue from electric power sales appears to be insufficient to meet the expenses of this department when the operating expenses are divided upon a strictly cost of service basis. This is due chiefly to the fact that the applicant's average output charge is somewhat less than 2.0 cts. per kw. hr., although the output cost was found to be about 3 cts. On the whole, the form of the power schedule does not appear to be unreasonable, but the rate charged may not be just what it ought to be. The power business that has been built up may have been attracted by the advantageous rate rather than by the necessity of electric power. It appears advisable, however, not to disturb the power rates at this time.

In reply to the applicant's petition for increases in rates, the respondent has filed certain counter claims for reductions. It has been deemed unnecessary to discuss these claims as such, in detail, since the matters involved have been considered in connection with the discussion of the applicant's investment and the cost of service.

ORDER.

IT IS ORDERED, That the applicant in this case, the La Crosse Gas and Electric Company, be and hereby is authorized to amend its rate schedule, as follows:

COMMERCIAL LIGHTING.

Service Charge.

The service charge for all business lighting installations shall be $1.80 per year per 50 watt lamp, or equivalent unit, on 38 per cent of the connected installation.

No change is made in the rate for residence lighting.

Minimum Bill.

The minimum bill for commercial lighting shall be $1 per month. Where company is unable to read meter after reasonable effort, the fact shall be plainly indicated upon the monthly bill, the minimum charge assessed, and the difference adjusted with the consumer when the meter is again read.

Emergency or Stand-by Service.

The service charge for emergency or stand-by lighting service shall be $1.80 per year per active 50 watt unit. The charge for current used shall be 4.5 cts. per kw. hr. The service charge plus the charge for current used shall be unaffected by the existing maximum rate per kw. hr.

POWER.

Emergency or Stand-by Service.

The service charge for emergency or stand-by power service shall be $27 per active horse power per year. The charge for current used shall be 3 cts. per kw. hr. The service charge plus the charge for current used shall be unaffected by a maximum rate per kw. hr.

JOHN F. SCHLOSSTEIN
vs.
CHICAGO, BURLINGTON AND QUINCY RAILROAD COMPANY.

Submitted Oct. 19, 1911. Decided Nov. 20, 1911.

Petitioner alleges inadequate passenger service on the part of the C. B. & Q. R. Co. at Cochrane, Wis., and vicinity, and prays that the respondent company be required to stop two passenger trains each way daily, as provided in ch. 483, Laws of 1911.

Held: Independent of any statutory provision on the subject, the Commission would feel constrained to hold that the existing passenger service afforded was adequate under the circumstances. However, the statute deprives the Commission of any discretion in the matter. It fixes the quantum of passenger service for every station coming within the classification made. The respondent is accordingly ordered to stop one passenger train each way daily at Cochrane, in addition to those that already stop there.

The petitioner is a surveyor and resides at Cochrane, Wis. He alleges that the passenger service of the respondent railway company is inadequate for the village of Cochrane and vicinity; that at the present time the only trains stopping at Cochrane are as follows: North-bound train No. 91, freight carrying passengers, daily except Sunday, arrives at 10:17 a. m.; train No. 53, running daily, arrives at 10:58 a. m.; south-bound train No. 54, running daily, arrives at 9:09 a. m.; train No. 92, freight carrying passengers, running daily except Sunday, arrives at 1:10 a. m.; that the village of Cochrane has 260 inhabitants and is surrounded by a population of about 3,000 people, which is tributary to the respondent's station at Cochrane. Wherefore, petitioner prays that the respondent railway company be required to stop two passenger trains each way daily at Cochrane, as provided in ch. 483, Laws of 1911.

The matter came on for hearing on Oct. 19, 1911. The petitioner appeared in person, and the respondent by *Woodward & Lees,* its attorneys.

The principal complaint of the petitioner is that it is impossible for residents of Cochrane and vicinity to go to any point, either north or south of the village, by train and return

on the same day, except that one may go to Alma and return on the same day, but as the time between trains at Alma is so short, this privilege is of little value.

Cochrane is an incorporated village of about 260 inhabitants. It has four general stores, two saloons, two lumber yards and planing mills. The village of Buffalo, having a population of about 250, lies a short distance west of Cochrane. Alma, the county seat of Buffalo county, having a population of over 1,000, is situated 8.3 miles north of Cochrane. Fountain City, having a population of approximately 1,000, lies about eight miles south of Buffalo. All of the limited trains on respondent's line stop at Alma. Two passenger trains each way daily stop at Fountain City.

The respondent objects to stopping any more trains at Cochrane than are at present stopping there, for the reason that all of its other trains are heavy interstate trains, which are run in competition with trains upon other roads, and that if it was required to stop such trains at all stations having a population of 200, it would be impossible to continue them in service.

The respondent's road is located on the east bank of the Mississippi river and runs through a territory that is sparsely settled. About 90 per cent of all the passenger traffic over this line consists of people going from Chicago to St. Paul and points in Minnesota, the Dakotas, and the entire Northwest and Canada. Two trains are run each way daily between Chicago and Portland and Seattle. One train leaves Chicago in the morning and from St. Paul runs over the Northern Pacific line to the Northwest. Another train leaves Chicago in the evening, and from St. Paul goes over the Great Northern line to the Northwest. There are two corresponding trains east-bound. There is also a train each way daily between Chicago and Minneapolis, known as the "Minnesota Limited," which serves the traffic to Minneapolis and St. Paul on the one hand, and to Chicago and St. Louis on the other. In addition to these interstate trains, there is a local train each way running between Savannah and Minneapolis, which takes care of the traffic in the state of Wisconsin.

The west-bound train from Chicago to the Northwest by way of the Northern Pacific line from St. Paul is known as train No. 51, and is composed of standard Pullman and tourist cars.

The number of cars in the train is twelve. The corresponding east-bound train is known as train No. 53, and contains the same number of cars. Similar trains routed over the Great Northern line from St. Paul to and from the Northwest are known as trains 49 and 52, respectively. Trains No. 47 and 48 are each known as the "Minnesota Limited" and each is composed of one observation car, three standard sleeping cars, one St. Louis standard sleeping car, two Chicago coaches, one combined mail and baggage car, and two baggage cars. Train No. 58 consists of two sleeping cars and from five to eight baggage and express cars. All of these interstate trains are heavy and run at a maximum speed of fifty miles per hour in order to make connection with trains for the East at Chicago and with trains for the West at St. Paul. As the distance between Chicago and St. Paul over respondent's line is thirty-three miles greater than that over the line of the Chicago & North Western Railway Company and twenty-seven miles greater than that over the line of the Chicago, Milwaukee & St. Paul Railway Company, it becomes necessary for the respondent to operate its trains at a high rate of speed in order to meet the schedule time of its competitors' trains between such points, as well as to make the connections mentioned.

North-bound trains Nos. 53 and 91 and south-bound trains Nos. 54 and 92 stop at Cochrane. Nos. 91 and 92 are freight trains, but carry passengers. Nos. 53 and 54 are passenger trains.

The respondent offered in evidence a statement showing its earnings at a number of stations in this state situated somewhat similarly in respect to service as Cochrane. It is contended that if Cochrane is entitled to two trains daily each way, then each of the other stations would be entitled to the same service. It is very evident from the earnings at these stations that the railway company would not be justified in putting into service another local train.

The following table shows the earnings accruing in this state on ticket sales for the year ending June 13, 1911, at the stations which it is claimed are entitled to equal consideration with Cochrane in the matter of passenger service:

Stations.	Intrastate,		Interstate.		Total.	
	Passengers.	Revenue.	Passengers.	Revenue.	Passengers.	Revenue.
Bay City	1,511	$449.83	1,022	$490.00	2,533	$939.83
Maiden Rock	3,680	1,435.12	3,365	2,416.06	7,045	3,851.18
Stockholm	2,231	446.54	975	1,005.48	3,206	1,452.02

Independent of any statutory provision on the subject, we should feel constrained to hold that the existing passenger service afforded the village of Cochrane was adequate under the circumstances, and that therefore interstate trains could not be required to stop at that station. In other cases, where the facts were somewhat similar to those presented in the instant case, such conclusion seemed inevitable under the rulings of the courts. *Tate v. C. B. & Q. R. Co.* 1908, 2 W. R. C. R. 348; *Kemp v. C. B. & Q. R. Co.* 1909, 3 W. R. C. R. 350; *Maiden*

Rock v. C. B. & Q. R. Co. 1909, 4 W. R. C. R. 311; *Dyer v. C. M. & St. P. R. Co.* 1908, 2 W. R. C. R. 621; *Schmidt v. G. N. R. Co.* 1909, 4 W. R. C. R. 121; *Missouri, K. & T. R. Co. v. Norfolk,* 1909, 25 Okla. 325; *St. Louis & S. F. R. Co. v. Reynolds et al.* 1910, 26 Okla. 804.

Sec. 1801 was impliedly repealed by ch. 362, Laws of 1905, which conferred upon the Commission the power to regulate the rates and services of railway companies within the state. However, the recent legislature, by ch. 483, Laws of 1911, re-enacted sec. 1801 with certain amendments. This reads:

"Every corporation operating a railroad shall maintain a station at every village, whether incorporated or not, having a post office and containing two hundred inhabitants or more, through or within one-eighth of a mile of which its line of road runs, and shall provide the necessary arrangements, receive and discharge freight and passengers, and shall stop at least one passenger train each day each way at such station, if trains are run on such road to that extent; and if four or more passenger trains are run each way daily, at least two passenger trains each day each way shall be stopped at each and every such station."

This statute deprives the Commission of any discretion in the matter. It fixes the quantum of passenger service for every station coming within the classification made.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Burlington & Quincy Railroad Company be and the same is hereby required to stop one passenger train each way daily at Cochrane, in addition to the passenger trains that now stop there.

MEARS-SLAYTON LUMBER COMPANY

vs.

WISCONSIN AND NORTHERN RAILROAD COMPANY,
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

MEARS-SLAYTON LUMBER COMPANY

vs.

WISCONSIN AND NORTHERN RAILROAD COMPANY,
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY,
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided Nov. 21, 1911.

Petitioner alleges exorbitant charges on two carload shipments of lumber from Neopit to Crandon, Wis., upon which the Wis. & N. R. Co. and the C. & N. W. R. Co. charged the sum of the local rates; and further alleges exorbitant charges on several cars of lumber shipped from Neopit to Horicon, Wis., in which case the charges consisted of the sum of the Wis. & N. local rate, and the C. & N. W. and C. M. & St. P. joint rate. Petitioner asks for the establishment of reasonable joint rates between the points named, and for a refund of the excess charged.

Held: The rate charged on the shipments from Neopit to Crandon was excessive and a reasonable rate would have been the joint rate on lumber fixed by the Commission for 120 mile joint hauls between the C. & N. W. and the C. M. & St. P. lines. The Wis. & N. R. Co. and the C. & N. W. R. Co. are accordingly ordered to establish a joint rate of 7.9 cts. per 100 lbs. on carload shipments of lumber from Neopit to Crandon. Refund on these shipments is ordered on this basis.

With reference to shipments from Neopit to Horicon the extra terminal charges caused by the movement over three lines are necessarily so heavy that it would be difficult to establish a joint rate which would permit of successful competition between shippers using a single line and those using three lines. Lumber shipments over three lines in the region involved are very unusual and the facts at present before the Commission are meager. Under the circumstances presented by this case, it does not appear desirable to establish joint rates on lumber for three-line shipments at the present time.

As all the shipments moving from Neopit to Horicon arrived at their destination more than six months before the filing of the claim for a refund; and as the claim was filed prior to the effectiveness of the statute (ch. 28, Laws of 1911) extending the time for filing claims from six months to one year, all these claims are barred by the statute. The complaint involving these rates is dismissed.

The first of the above entitled matters involves shipments of two cars of lumber via the respondent's lines from Neopit to

Crandon, Wis., upon which the respondents charged the sum of the local rates, amounting to 11.4 cts. per 100 lbs. In the second case, the petitioner shipped several cars of lumber from Neopit to Horicon, Wis., via the several respondents' lines, upon which the petitioner was charged the sum of the Wisconsin & Northern local rate and the Chicago & North Western and Chicago, Milwaukee & St. Paul joint rate, or a total of 12.5 cts. per 100 lbs. Such charges to both Crandon and Horicon are alleged to be exorbitant for the mileage involved, and the petitioner asks for a refund of the amount found to have been charged in excess of a reasonable rate, and the establishment of reasonable joint rates between the points named.

All of the respondent companies filed answers in each case, admitting the existence of the rates complained of, but denying that they were excessive, exorbitant, discriminatory or unjust. In addition, the answer of the Chicago, Milwaukee & St. Paul Railway Company disputes the petitioner's statement of the distance from Shawano to Horicon, alleging that such distance is 130 miles instead of 118 miles as alleged in the petition.

The matters were set for hearing at the office of the Commission Sep. 12, 1911, but, owing to the non-appearances of the petitioner, a further hearing was set for Oct. 17, 1911. As no appearance was made by the petitioner on the latter date, no testimony was taken. At the first time set for hearing, the respondent Wisconsin & Northern Railroad Company was represented by *C. H. Hartley,* the Chicago & North Western Railway Company by *C. C. Wright,* and the Chicago, Milwaukee & St. Paul Railway Company by *F. G. Wright.*

The two shipments made by the petitioner from Neopit to Crandon via the Wisconsin & Northern and Chicago & North Western lines, were charged the Wisconsin & Northern local rate of 3.5 cts. for the 20.2 miles from Neopit to Shawano, the junction point, and the Chicago & North Western local rate of 7.9 cts. for the remaining 98 miles. In view of the fact that joint distance rates on lumber have been established by this Commission between the Chicago & North Western and Chicago, Milwaukee & St. Paul lines, and have been so fixed as to yield a revenue amply sufficient to cover all expenses, including a reasonable return upon the investment, and in view also of information at hand and obtainable from the reports of these re-

spondents, indicating that no injustice will be done by the application of the Commission's rate for an equal distance to the haul from Neopit to Crandon, it would seem that the rate of 11.4 cts., exacted of the petitioner in this case for shipments from Neopit to Crandon, was excessive under the circumstances, and that a charge of 7.9 cts. per 100 lbs., which is the rate fixed by the Commission for 120 mile joint hauls between the Chicago & North Western and the Chicago, Milwaukee & St. Paul lines, would be a reasonable rate for the haul in question. The shipments to which this finding applies, as a basis for a refund in this case, are as follows:

Date of arrival.	Weight.	Rate.		Actual charge.			Charge, on 7.9 cts. basis.	Refund.
		W. & N.	C. & N. W.	W. & N.	C. & N. W.	Total.		
1911.								
Mar. 4..	43,600	3.5	7.9	$15 26	$34 44	$49 70	$34 44	$15 26
Feb. 20..	50,200	3.5	7.9	17 57	39 66	57 23	39 66	17 57
Total....	.....	.....	.....	.....	.....	.....	.....	$32 83

It follows that the petitioner is entitled to a refund of $32.83 upon the shipments moving over the Wisconsin & Northern and Chicago & North Western lines from Neopit to Crandon.

As to the shipments from Neopit to Horicon, over three lines, all of the claims for refunds were upon shipments which arrived at destination more than six months before the filing of the claim; and as the claim was filed prior to the effectiveness of the statute (ch. 28, Laws of 1911) extending the time for filing claims from six months to one year, the claims are barred by the statute. Furthermore, it does not appear desirable at this time to establish a joint rate for three-line shipments under the circumstances presented by this case. The extra terminal charges caused by the movement of a shipment over three lines are necessarily so heavy that it would be difficult to establish a joint rate which would permit of successful competition between shippers using a single line and those using three lines. The fact that lumber shipments over three lines in the region involved in this case are very unusual, and that there are not sufficient facts at present before the Commission to warrant the fixing of a joint rate for the three-line haul herein involved, coupled with the fact that the petitioner is barred by the statute from

relief as to its past shipments, renders an examination into the reasonableness of the rate charged the petitioner unnecessary at this time. If the petitioner has occasion to make further shipments over three lines, it may, upon presentation of facts tending to show the unreasonableness of the rates charged, be found entitled to relief.

IT IS THEREFORE ORDERED, That the respondents, the Wisconsin & Northern Railroad Company and the Chicago & North Western Railway Company, establish a joint rate of 7.9 cts. per 100 lbs. on carload shipments of lumber from Neopit to Crandon, Wis.

IT IS FURTHER ORDERED, That the said respondents be and the same are hereby authorized and directed to refund to the petitioner, the Mears-Slayton Lumber Company, the sum of $32.83, the amount herein found to have exacted of the petitioner over and above a reasonable amount for the services performed.

IT IS FURTHER ORDERED, That the complaint of the Mears-Slayton Lumber Company against the Wisconsin & Northern Railroad Company, the Chicago, Milwaukee & St. Paul Railway Company, and the Chicago & North Western Railway Company, involving rates from Neopit to Horicon, Wis., be and the same is hereby dismissed.

CITY OF NEENAH

vs.

WISCONSIN TRACTION, LIGHT, HEAT AND POWER COMPANY.

Submitted Nov. 1, 1911. Decided Nov. 21, 1911.

Application was made by the Wis. Tr. Lt. Heat & Power Co. for a modification of the order of the Commission (*Neenah v. Wis. Tr. Lt. H. & P. Co.* 1911, 7 W. R. C. R. 477) reducing gas rates in Neenah, Wis. The respondent utility claims that new information has come to light to show that the valuation of $320,000, upon which the Commission's rates were based, is lower by over $300,000 than the actual price paid for the original property and for subsequent additions.

Held: That if an appraisement of the items of property bought by the respondent company shows a total reasonable value considerably lower than the price claimed to have been paid, the excess in price over such reasonable value represents an unfortunate investment which should not be saddled upon the consumers by means of excessive rates.

A careful checking of available information as to the physical make-up of the plant at the time of purchase indicates a value of little over $200,000. Other facts, such as the comparative investment per unit of gas sold and the earning value of the plant as based upon past operations, indicate that the plant, when purchased, was worth far less than the price now alleged to have been paid. It is by no means certain that the securities paid over as the consideration for the plant, represented or even approached their face value. In view of the prevalence of over-capitalization among public utilities in the past, it would be decidedly unsafe to accept upon a full cash basis the figures represented by bonds of the respondent and by its guaranties of the bonds of the company from which it purchased, even if there were not positive evidence that the property was not worth the amount claimed. It is hardly to be expected that men of the experience and business ability of the officers of the respondent company, who must have been cognizant of the actual condition of the property, either intended to or actually did make payment in securities whose real value was some $300,000 higher than the actual value of the property. The respondent has failed to prove either that the plant at the time of purchase was worth even half of the amount claimed to have been paid, or that property of the value claimed by the respondent was turned over as the consideration for the transfer of the plants. As regards the amount claimed to have been expended in additions since the purchase of the plant, even if the entire amount claimed is assumed to be correct and is added to the probable physical value of the property when purchased, the total will not equal the sum of $320,000 upon which the Commission in its former decision, in part, based its calculations as to the rates. Under the circumstances the valuation for rate-making purposes should not be

raised so much above the figures given that the interest charges would result in a higher rate schedule than that provided in the former order.

No evidence has been produced sufficient to warrant any change in the order of the Commission reducing gas rates in Neenah. The respondent is ordered to put the order already entered in this case into immediate effect.

A re-hearing in the above entitled matter, which involves the gas rates in the city of Neenah, Wis., was ordered by the Commission upon an application of the respondent company stating that it desired to offer additional evidence. The re-hearing was held Nov. 1, 1911, *C. H. Gaffney* appearing for the petitioner and *C. M. Rosecrantz* for the respondent company.

The basis of the respondent's request for a modification of the order of this Commission (7 W. R. C. R. 477), is that new information has come to light regarding the value of the property as determined by its original cost to the present owner. It is claimed that the valuation of $320,000, upon which the Commission's rates were based, is lower by over $300,000 than the actual price paid for the original property and for subsequent additions. Counsel for the respondent company expressly admitted at the re-hearing, as had been admitted in the former proceedings in this case, that the estimated cost of reproduction new and present value, as arrived at by the engineers of the Commission, was, for the purposes of this case, approximately correct, and based his entire case upon the assertion that a much larger amount had been paid for the plant.

The respondent's claim as to the actual cost of the plant is based upon the following facts: The property in question was bought by the respondent in 1904 from the Fox River Valley Gas and Electric Company, a corporation which was itself the result of the consolidation, in 1901 or 1902, of the Appleton Gas Light and Fuel Company of Appleton with the Neenah & Menasha Gas and Electric Company of Neenah. For the entire property so purchased, the respondent company paid $160,000 in par value of its own bonds, endorsed $350,000 of bonds of the Fox River Valley Gas and Electric Company, guaranteed $15,000 of bonds of the Appleton Gas Light and Fuel Company, and assumed certain floating indebtedness which brought the entire amount up to $557,397.32. The property so purchased included not only the gas plant involved in this proceeding, but in addition a small electric plant in Neenah. The value of this elec-

tric plant, however, appears to have been comparatively small, being estimated by officers of the respondent company at not over $40,000. In addition to the gross amount above stated, the respondent claims to have added to the gas department since the purchase the following amounts:

Year 1905	$41,450.64
Year 1906	22,332.21
Year 1907	8,481.12
Year 1908	9,659.59
Year 1909	8,026.31
Year 1910	10,491.00
6 mo. 1911	5,912.45
Total	$106,353.32

Thus the respondent contends for a total original cost of $663,750.64, of which something over $620,000 is chargeable to the gas department.

It is plain that if an appraisement of the items of property bought by the respondent company in 1904 shows a total reasonable value considerably lower than the price claimed to have been paid, the excess in price over such reasonable value represents an unfortunate investment which should not be saddled upon the respondent's consumers. Such an appraisement cannot be made with perfect accuracy at this time, but a detailed list of the station equipment, as contained in an engineer's report made at the time of the consolidation, together with statements made by the officers of the respondent and the appraisal made by the Commission's engineers for the purposes of the present case, has been used by the engineering department of the Commission as a basis for the following estimated physical value of the property at the time of the purchase:

Gas Department:	Land	$4,560
	Buildings	17,000
	Apparatus	30,077
	Holders	17,710
	Main (31.2 mi.)	72,950
	Services	19,600
	Meters	16,350
	Total of above items	$177,247
	12% for engineering etc	21,270
	Total gas department	$198,417

Electric Department:	Land	$1,150
	Buildings	2,347
	Machinery	18,070
	Dist. system	20,000
	Total of above items	$41,567
	12% for engineering, etc.	4,988
	Total electric department	$46,555
	Total plant value	$244,972

If the value of the stores on hand at the time of the sale, amounting to $12,713, and the cost of replacing the holder at Neenah, which is now a wreck and is not included in the above figures (amounting to about $8,500), are added to the above total, the approximate physical value of the entire property purchased with the $557,000 of securities would reach about $266,-185, of which about $219,630 is assignable to the gas plant.

To demonstrate further the abnormal cost represented by a figure of over $500,000 for the plant as it existed at the time of the sale, a few comparisons based upon the investment per thousand cubic feet of gas sold are in point. During the year ending June 30, 1904, the total sales of gas in Appleton, Neenah and Menasha were 35,741,900 cubic feet. If the amount of the securities given for the plant be reduced by $46,555, the figure given above as the approximate proportion chargeable to the electric plant, the alleged investment in the gas plant is found to be about $12.87 per thousand feet of sales. Table I shows the amount of investment per thousand feet of sales in a number of cities in which valuations of gas plants have been made by this Commission. The value of physical property given in each case excludes stores and supplies. It will be noted that in the two cities having the highest valuation the sales were very small compared with the sales in Neenah, Menasha and Appleton. The minimum figure, that given for Kenosha, is abnormal because a large part of the gas sold was purchased and not manufactured by the utility.

It will be seen that if the amount of the securities paid for the plant of the respondent is to be taken as representing the original cost, the investment per thousand feet of gas sold was over twice as high as the average plant investment in the cities named. If the figure arrived at by the engineers of the Commission as the probable value of the gas property purchased is used,

namely, $198,417, the respondent's original investment per thousand feet of gas sold was $5.55; and if the price of a new holder is added, making the total original value $206,917, the cost per thousand feet was $5.79.

TABLE I.

INVESTMENT IN GAS PLANTS PER THOUSAND FEET OF GAS SOLD.

City.	Sales, million cu. ft.	Investment per 1,000 cu. ft.

Still another proof of the excessiveness of a figure of over $500,000 as the price of the plant purchased by the respondent is to be found in the earnings of the plant purchased during the period shortly preceding the purchase. Where rates are not subject to governmental regulation, a common method of estimating the value of a given utility property for purposes of purchase is to capitalize the net income of the property for some period preceding the negotiations. Some light is thrown upon the income accounts of the utilities purchased by the respondent company previous to the purchase, by reports of experts employed to investigate the condition of the property. Thus, the records before the Commission include a report made by C. H. Evans, a consulting engineer of Chicago, in 1901, covering these same properties, which were then proposed to be consolidated into the Fox River Valley Gas and Electric Company; also two reports to the respondent company by H. C. Mackay, its comptroller and auditor, in 1904, upon the condition of the Fox River Valley Gas and Electric Company. Table II shows the book statements of net earnings disclosed by these reports at various times, and

also the capitalized value of the property at 6, 8 and 10 per cent upon the basis of the net income reported. In the Evans report, the Neenah and Appleton properties were examined separately, and complete figures for three years were given only for the Appleton portion, while the report on the net income of the Neenah plant was confined to an approximate statement for 1900. The first three items in the table, therefore, represent only the Appleton plant, while the remainder include the entire property.

TABLE II.

BOOK FIGURES SHOWING THE NET EARNINGS AND EARNING VALUE OF PLANTS PURCHASED BY RESPONDENT.

NOTE:—None of the statements of net revenue include any allowance for depreciation.

Period ending.	Report.	Property covered.	Total net revenue.	Earning value		
				At 6%	At 8%	At 10%
Oct. 31, 1898, year.....	Evans.....	Appleton ..	$6,814 30	$113,572	$85,179	$68,143

*Reduced to basis of 12 months in computing earning value.

It is worthy of note that, although the net income as given above for different periods is the amount shown by the books, the examining engineers in the reports from which these figures are taken suggested various reductions from these figures by reason of incorrect accounting. Thus, all the book statements of net income, as given by Mr. Evans, are considered by him to be too high, because of failure to charge anything for management expense and because of crediting gas sales at $1.50 per thousand feet, whereas the average price was only about $1.35 per thousand feet. The total deductions from net income advised by Mr. Evans amounted to from $2,400 to $2,900 for each year. Mr. Mackay in his reports singled out the six months and five months periods ending June 30 and May 31, 1904, respectively, for correction, and reduced the net income in these periods by about $3,700 and $3,300, respectively. These reductions were occasioned mainly by additional charges to salaries, traveling and legal expenses, and depreciation. Corresponding

changes would undoubtedly be in order for the other two periods covered by Mr. Mackay's reports, since the methods of accounting were the same throughout.

It is apparent, therefore, that if, when it was considering the purchase of the plant in question, the respondent company considered the past earnings of the plant as a basis of valuation, the highest valuation that could reasonably have been deduced from the books themselves was much below the alleged purchase price; and if, as is hardly to be doubted, the respondent's officers took into consideration the deductions from net income advised by the engineers and the fact that no depreciation was included in the book accounts or operating expenses, they must have found an earning value for the property much lower than table II would indicate.

The facts above set forth would seem almost conclusive upon the question whether the price of over $500,000, if such price was paid for the respondent's gas plant, represented a reasonably prudent investment upon all of which the respondent is now entitled to earn. Not only does a careful checking of the available information as to the then physical make-up of the plant indicate a value of little over $200,000, but such other facts as the comparative investment per unit of gas sold and the earning value of the plant as based upon past operations, concur to produce the conclusion that the plant, when purchased by the respondent company, was worth far less than the amount now alleged to have been paid.

But it is by no means certain that the securities paid over to the Fox River Valley Gas and Electric Company, as the consideration for the plant, represented or even approached in value the amounts shown by their face. Whatever may be the condition at the present day, it cannot be denied that over-capitalization has been common among public utilities in the past. To accept upon a full cash basis the figures represented by bonds of the respondent and by its guaranties of the bonds of the company from which it purchased, would be decidedly unsafe, even if there were not positive and convincing evidence that the property was not worth the amount claimed. It is hardly to be expected that men of the experience and business ability of the officers of the respondent company, who must have been cognizant of the actual condition of the property, either intended to

or actually did make payment in securities whose real value was some $300,000 higher than the actual value of the property. The respondent, therefore, has failed to prove to the satisfaction of the Commission either that the plant, when purchased by the respondent, was worth even half of the amount claimed to have been paid, or that property of the value claimed by the respondent was turned over as the consideration for the transfer of the plants.

As to the $106,000 claimed to have been expended in additions since the purchase of the plant, it is to be remarked that even if the entire amount is assumed to be correct, and is added to the amount computed by the engineers of the Commission to be the probable physical value of the property when purchased, the total will not equal the sum of $320,000 upon which the Commission, in its former decision, in part based its calculations as to the rates. It was not held in the former decision, nor is it so held here, that $320,000 represents the exact value of the plant and its business for all purposes. We are of the opinion, however, that this valuation for rate-making purposes should not, under the circumstances, be raised so much above the figure given that the interest charges would result in a higher rate schedule than that provided in our former order.

The respondent also claimed at the re-hearing that the amounts fixed as a minimum charge in the order of the Commission are too low, especially when compared with minimum charges in other cities. This contention requires no extended discussion. The basis upon which the minimum charge is fixed is the so-called consumer expenses of the plant, and the charge as fixed by the Commission is in every case amply sufficient to cover all such costs. As was suggested in the former opinion, the method by which minimum charges are established is fully explained in *City of Racine v. Racine Gas Light Co.* 1911, 6 W. R. C. R. 228, 309–317.

As no evidence has been produced sufficient to warrant any change in the order of the Commission already entered in this case, the respondent company will be ordered to put such order into immediate effect.

IT IS THEREFORE ORDERED, That the respondent, the Wisconsin Traction, Light, Heat and Power Company, comply with the order made herein on Aug. 4, 1911.

IN RE DETERMINING AND FIXING A JUST COMPENSATION TO BE PAID TO THE FOND DU LAC WATER COMPANY BY THE CITY OF FOND DU LAC FOR THE PROPERTY OF SAID COMPANY ACTUALLY USED AND USEFUL FOR THE CONVENIENCE OF THE PUBLIC.

Submitted Nov. 17, 1911. Decided Nov. 22, 1911.

The common council of the city of Fond du Lac entered into an agreement with the Fond du Lac Water Co. on Aug. 26, 1911, for the transfer of the water works from the company to the city. The agreement was made subject to the approval of the qualified electors of the city and the proposition was carried at a special election held for that purpose. Wherefore, the city prays that the Commission make a valuation of the materials and supplies on hand, the additions and betterments made to the plant since the valuation of Feb. 1, 1910, and that it make an order approving the agreement of sale and purchase between the city and the water company.

Previous to the proceedings in this case the common council of the city had voted to acquire the water works and had taken the necessary action to consummate the transfer in accordance with the law then in force. (*In re Fond du Lac Water Co.* 1910, 5 W. R. C. R. 483). At that time the Commission fixed the just compensation for the plant and property at $320,000. Intermediate to the initiation and final order of the Commission in the first proceeding the statute (sec. 1797m—80) governing the municipal acquisition of a public utility was amended (ch. 213, Laws of 1909), so as to require a majority vote of the qualified electors voting thereon, instead of a majority of the common council as was formerly the case. Subsequently an action was commenced by certain tax payers of Fond du Lac to enjoin the city from acquiring the property of the water company and paying the compensation fixed by the Commission. The court sustained the contention of the plaintiffs and held that the Commission did not acquire jurisdiction of the proceedings because the matter had not been submitted to the voters of the municipality and carried by a majority vote at a general or special election as required by the amendment to the law adopted subsequent to the action of the common council. But the court held the opinion that a subsequent determination by a vote of the people to acquire the property could cure the want of jurisdiction, or rather confer jurisdiction *nunc pro tunc* upon the Commission, rendering the proceedings valid, although had without any jurisdiction on the part of the Commission. Although these conclusions of law are novel, rather than incur the delay involved in appealing to the supreme court, the common council passed an ordinance submitting the question to the voters of the city, as set forth in the present petition.

Held: The owners of the property are entitled to the sum fixed in the former valuation (5 W. R. C. R. 482), plus the value of materials and supplies on hand, and the additions, betterments,

and improvements made since Feb. 1, 1910. The just compensation at the present time for the property actually used and useful for the convenience of the public is fixed at $344,456. The contract containing the terms and conditions of the purchase and sale, entered into between the city and the company on Aug. 26, 1911, is approved.

The petition of the city of Fond du Lac sets forth that the Fond du Lac Water Company owns and operates a plant and equipment in the city of Fond du Lac, Wis., for the furnishing of water to the public and the city; that on Sep. 5, 1911, the said Fond du Lac Water Company, at the request of the city, presented to the common council of said city of Fond du Lac an offer to sell to the said city its plant and property; that the said common council, at its regular meeting held on Sep. 5, 1911, duly adopted a resolution accepting said proposition of the Fond du Lac Water Company, subject to the approval of the qualified electors of the city of Fond du Lac, and directed that the question of the purchase of the plant and property be submitted to a vote of the qualified electors of said city at a special election, to be held for that purpose on the first Tuesday of October, 1911; that said resolution was duly adopted, approved and published as required by law; that notice was duly given and the election held upon the date designated; that the question submitted was "Shall the city of Fond du Lac purchase the plant and property of the Fond du Lac Water Company"; that the affirmative of said question was carried by a large majority; that on Oct. 5, 1911, the common council duly adopted a resolution directing the mayor and city clerk to execute a formal contract containing the terms and conditions as stated in the offer of the Fond du Lac Water Company and directing the city attorney to bring proper proceedings before the Railroad Commission of Wisconsin for the purpose of deciding the value of materials, supplies on hand and of the improvements and betterments made to the said plant since Feb. 1, 1910, fixed and determined by the said Commission, and to have the agreement of purchase approved; that said resolution was duly approved and published as required by law; that on Oct. 12, 1911, the city of Fond du Lac and the Fond du Lac Water Company duly entered into a formal contract as provided in said last mentioned resolution. Wherefore, the petitioner prays that the Commission make a valuation of the materials and supplies on hand, the ad-

ditions and betterments made to the said plant since Feb. 1, 1910, and that it make an order approving the agreement of purchase above mentioned.

The matter came on for hearing on Nov. 17, 1911. The city of Fond du Lac was represented by *F. J. Wolf*, its mayor, and *L. E. Lurvey,* city attorney. The Fond du Lac Water Company was represented by *Maurice McKenna,* its president, and *D. D. Sutherland,* counsel.

On Aug. 19, 1910, in a proceeding similar to the one here before the Commission, an order was made fixing and determining the just compensation to be paid to the Fond du Lac Water Company for the taking of the property of said company by the city of Fond du Lac, at the sum of $320,000, as of date of Feb. 1, 1910. Subsequently an action was commenced by Albert G. Purdy and other tax payers of the city of Fond du Lac against the city of Fond du Lac, its principal officers, and the Fond du Lac Water Company, to enjoin the city from acquiring the property of the water company and paying the just compensation fixed and determined by the Commission. On June 30, 1911, findings of fact and conclusions of law were entered by the court which sustained the contention of the plaintiffs in said action. The contention of the plaintiffs in the action was that the statutes having been amended (sec. 1797m—80 as amended by ch. 213, Laws of 1909) so as to require the determination to acquire the property of a public utility to be made by a majority vote of the electors at a general or special election, the act of the common council determining to acquire the property of the water company previous to such amendment was ineffectual to confer jurisdiction upon the Commission.

The conclusions of law are novel. Notwithstanding the holding that the Commission did not acquire jurisdiction of the proceedings because the matter had not been submitted to the voters of the municipality and carried by a majority vote at a general or special election, it seems to have been the opinion of the court that a subsequent determination by a vote of the people to acquire the property could cure the want of jurisdiction, or, rather, confer jurisdiction *nunc pro tunc* upon the Commission, rendering the proceedings valid, although had without any jurisdiction on the part of the Commission.

The language of the particular conclusion in question is

* * * "that the plaintiffs are entitled to a decree adjudging that the contract evidenced by exhibit 'A' of the complaint [which was a contract between the city and the water company as to the terms of the purchase and sale to become effective upon approval by the Commission], and the findings of the Railroad Commission pursuant thereto are insufficient and ineffectual to authorize the carrying out thereof for the payment of money or the execution of obligations pursuant thereto, unless or until the acquisition of the defendant water company's plant pursuant thereto be first determined upon and authorized by ordinance and a vote of the people pursuant to secs. 927—11 to 927—19 of the Wisconsin Statutes, and enjoining the defendants from carrying out the same, or paying any money or executing any obligation pursuant thereto, unless or until such determination and authorization be first made and had."

Rather than incur the necessary delay that would be required in appealing from the judgment to the supreme court, the common council passed an ordinance submitting the question to the voters of the city, as set forth in the petition.

It is needless to say that the action was an expensive as well as an unfortunate proceeding for the tax payers of the city of Fond du Lac. The company has been in possession of its plant and received the earnings thereof for more than a year since the decision of the Commission in the former proceeding. The net result amounts to a loss to the tax payers of anywhere between $30,000 and $50,000.

On Oct. 12, 1911, another contract was entered into between the city of Fond du Lac and the Fond du Lac Water Company, which contract resulted in the acceptance by the city, subject to the approval of the Commission, of the following propositions made by the water company:

"1. That it willingly consents that the question of the purchase of the plant and property of said water company by said city be submitted to the people of said city of Fond du Lac, Wis., for a vote thereon.

"2. It will waive the necessity, if such a necessity now exists or ever existed, of any proceeding in any court for the purpose of condemning the plant or property of said water company under any statute of the state of Wisconsin.

"3. It will agree to transfer all its right, title, interest and its equity of redemption in and to its plant and property, located in the city of Fond du Lac, Wis., which property consists of the entire water plant and system in said city.

"4. The property to be so transferred shall not include choses in action or accounts owing to said water company, or which may be earned by said water company, as hydrant rental or otherwise, up to and including the date of the transfer of the same as herein referred to. Other than the interest and principal unpaid on the outstanding bonds of said water company, said company shall discharge all obligations or demands against it for services rendered by its employes and all other obligations or demands against it, up to and including the date of said transfer herein referred to.

"5. Said water company will accept, as the purchase price of its said plant, the sum of $320,000, decided Aug. 19, 1910, by the Railroad Commission of Wisconsin, as just compensation to be paid to the said Fond du Lac Water Company for the taking of the property of said company by the city of Fond du Lac, as of the date of Feb. 1, 1910, plus a fair and just compensation, in addition to the above price, for the material on hand at the date of the taking over of said plant and property by said city, and for all new additions and betterments made to said plant by said company, from said Feb. 1, 1910, down to and including the date of said transfer herein referred to. In case the said city of Fond du Lac and the said water company shall not be able to agree on the value of said material on hand at the date of transfer and the value of the additions, betterments and improvements made to said plant from said Feb. 1, 1910, to the date of said transfer, then the price and value of said material, additions, betterments and improvements shall be submitted to said Railroad Commission, and such price and value of said material, betterments, improvements and additions shall be fixed by said Commission. In the event that such decision by said Railroad Commission as to said material, additions, improvements and betterments of said plant since Feb. 1, 1910, should be unsatisfactory to either said city of Fond du Lac or the said water company, each to reserve the right to appeal therefrom, pursuant to, under, and by virtue of the laws of the state of Wisconsin, applicable thereto.

"6. There are now outstanding against the plant and property of said water company bonds to the amount of $191,500, which sum should be deducted from the final valuation of the whole of said plant at the date of said transfer. The balance remaining after such deduction is the sum to be paid to the stockholders of said water company. The payment of this balance said water company will accept upon the following terms: $20,000 in cash, at the time of the transfer of said plant and property of said water company to said city, and the remainder of said compensation for the plant and property, and equity of redemption of said company, and all its rights therein to be paid in ten equal annual installments.

"Each installment, or deferred payment, shall be evidenced

by a time order, or other suitable and proper legal obligation of said city, indicating the amount of such installment and the time of its payment, and shall bear interest from its date, at the rate of 5 per cent per annum, payable semi-annually, and shall provide that in case of its non-payment when due, the holder of any such time order or obligation, falling subsequently due, may, at his option, declare such time order or obligation, both principal and interest, due and proceed to collect the same; and said water company hereby offers and agrees to accept said cash payment and said time orders in full payment for its equity of redemption in and to its said plant and property, and for all that part of the final valuation of its said plant and property in excess of the obligations and indebtedness of said water company which is evidenced by said outstanding bonds.

"Said city shall have the right to pay the whole or any part of the indebtedness evidenced by such time orders, at any time prior to the maturity thereof, interest thereon to cease at time of payment.

"7. This offer and proposition, if accepted by said city, shall be subject to the approval of said Railroad Commission.

"8. Time shall be of the essence of this proposition and the purchase of the property, and payment therefor, according to the terms of this proposition, shall be fully completed by said city on or before Dec. 1, 1911."

The additions, improvements and betterments made to the plant between Feb. 1, 1910, and Nov. 1, 1911, are as follows:

Classification.	Cost new.	Present value.
Transmission and distribution	$12,750	$12,750
Buildings and miscellaneous structures	5,602	5,602
Power plant equipment	2,833	2,833
General equipment	184	180
Paving	19	19
Total	$21,388	$21,384
Add 12% (see note below)	2,567	2,566
Total	$23,955	$23,950
Materials and supplies	3,351	3,351
Total	$27,306	$27,301
Total deductions, Feb. 1, 1910, to Nov. 1, 1911	4,083	3,582
	$23,223	$23,719
Total net additions (improvement in condition of reservoir roof omitted)	.....	235
	$23,223	$23,954
Additions Nov. 1, 1911, to Nov. 17, 1911	502	502
Total	$23,725	$24,456

NOTE:-Add 12% for cost of engineering, superintendence, interest during construction, contingencies, etc.

After careful consideration of the value of such additions, betterments and improvements, we are of the opinion that the actual cost thereof to the company should be allowed and added to the former valuation of $320,000, making a total of $344,456, as constituting just compensation to be paid to the water company for the taking of its property by the city.

IT IS THEREFORE ORDERED, That the just compensation to be paid to the Fond du Lac Water Company for the taking of the property of said company by the city of Fond du Lac, which property consists of items described in the decision of the Commission dated Aug. 19, 1910, and reported in 5 W. R. C. R. 482, and the items of additions, betterments and improvements made since Feb. 1, 1910, described above, be and the same is hereby fixed at the sum of three hundred and forty-four thousand, four hundred fifty-six dollars ($344,456).

IT IS FURTHER ORDERED, That the contract entered into by and between the city of Fond du Lac and the Fond du Lac Water Company on Aug. 26, 1911, containing the terms and conditions of the purchase and sale, be and the same is hereby approved.

IN RE DETERMINING AND FIXING A JUST COMPENSATION TO BE PAID TO THE MANITOWOC WATER WORKS COMPANY BY THE CITY OF MANITOWOC FOR THE PROPERTY OF SAID COMPANY ACTUALLY USED AND USEFUL FOR THE CONVENIENCE OF THE PUBLIC.

Submitted Oct. 2, 1911. Decided Nov. 22, 1911.

The city of Manitowoc prayed for a re-hearing of the matter of determining and fixing a just compensation to be paid to the Manitowoc Water Works Co. by the city of Manitowoc for the property of the company actually used and useful for the convenience of the public. Upon the former hearing (7 W. R. C. R. 71) the just compensation to be paid by the city to the owners of the property was fixed at $236,000. After the motion for re-hearing was made, and before the re-hearing was held, the city and the company entered into an agreement for the purchase and sale of the property and fixed the price to be paid at $247,500 plus certain specified additions, and further fixed other terms and conditions of the sale. On the re-hearing it appeared that several matters affecting the valuation which were not presented upon the original hearing were taken into consideration by the common council of the city and the water works company in arriving at their present agreement.

Held: There is no reason why the terms of the present contract between the city and the company should not be approved. It is ordered that the value of the property and the terms and conditions contained in the present contract be substituted in lieu of the compensation and terms and conditions of the purchase and sale formerly approved.

This is a re-hearing of the matter of determining and fixing a just compensation to be paid to the Manitowoc Water Works Company by the city of Manitowoc for the property of said company. Upon the former hearing a decision was made and entered on June 27, 1911, fixing the just compensation to be paid by the city to the owners of the property at the sum of $236,000, and also fixing the terms and conditions of the sale (7 W. R. C. R. 71).

On Aug. 25, 1911, the city of Manitowoc filed a petition praying for a re-hearing of the matter, which application was duly granted.

The matter came on for hearing on Oct. 2, 1911. The city of Manitowoc was represented by *Harry F. Kelley,* city attorney,

and the Manitowoc Water Works Company by *M. G. Jeffris,* its attorney.

After the motion for re-hearing was made and before the re-hearing was held, the city of Manitowoc and the Manitowoc Water Works Company entered into the following agreement:

"ARTICLES OF AGREEMENT made and entered into by and between the city of Manitowoc, (hereinafter called the City), and the Manitowoc Water Works Company, (hereinafter called the Company), this 19th day of September, 1911; the said City of Manitowoc acting by its Mayor and Finance Committee of its Board of Aldermen under and by virtue of the resolutions adopted by the Mayor and Board of Aldermen of said City, at a regular meeting held September 18, 1911.

"A controversy having arisen between the City and the Company over the purchase of the Water Works plant by the City, and it being desired by both parties to avoid the expense of further litigation and to arrive at an adjustment of the matter, it is agreed between the said City and the said Company as follows:

"1. The price of the Water Works plant is agreed to be $247,500, which the City agrees to pay for said plant on Oct. 2, 1911, and such additions as are hereinafter specified, and subject to the provisions as to earnings as are hereinafter specified, but for convenience said sum is herein called the purchase price.

"2. The City to take over and pay for the stock on hand and additions as specified in the decision of the Railroad Commission of Wisconsin, under date of June 27, 1911, in this matter. The price for the same to be agreed upon by the City and the Company, and in the event of the failure of said parties to agree upon a price, then such price is to be fixed by the Railroad Commission of Wisconsin.

"3. The Company to retain possession of the works until the 2nd day of October, 1911, and to receive and hold all income of the works up to the 1st day of October, 1911, including however, all of the street sprinkling earnings for the season of 1911. These sums to be collected by the Company either before or after the 1st day of October, 1911, but the Company to receive the same regardless of the time of collection. The meter readings to be made according to the custom heretofore prevailing under the practice of the Company. The company agrees to pay to the City on Oct. 2, 1911, the proportion of collections made prior to Oct. 1, 1911, from consumers for services to be performed or water furnished during October, November and December, 1911, excepting said street sprinkling.

"4. The City, on the 2nd day of October, 1911, to pay to the Company two months' hydrant rental, being for the months of August and September, 1911, which will have been earned by the Company.

"5. The City, on the 2nd day of October, 1911, to pay to W. G. Maxoy, Treasurer of said Company, said two months' hydrant rental, pay for said supplies and said additions, and pay $35,500 as part of the said $247,500, which will leave a balance of $212,000 of said $247,500, which sum of $212,000 shall be paid by said City on and after the 2nd day of October, 1911, in the following sums and in the following manner, to-wit: As and when the Company, or its representatives, or the holders, shall present bonds issued by the Company as follows:

"The City shall pay for every Five Hundred (500) Dollars bond presented to the City Treasurer, upon such presentation to the person presenting the bond, the sum of Five Hundred Thirty (530) Dollars; and for every One Thousand (1,000) Dollars bond so presented, the City Treasurer shall, upon presentation, pay to the person presenting the same, One Thousand Sixty (1,060) Dollars; so that for the Two Hundred Thousand (200,000) Dollars, face value of bonds presented, the City will pay Two Hundred Twelve Thousand (212,000) Dollars, which is equivalent to the par value of the bonds, a one per cent premium and interest upon the same at five per cent from August 1, 1911, to August 1, 1912. All bonds to be presented on or before the 1st day of August, 1912, or the same shall cease to draw interest under the provisions of the deed of trust covering said plant and securing said bonds. The calculation being made that the sum of Two Hundred Twelve Thousand (212,000) Dollars, to be used for the purpose of bond redemption, when added to the Thirty Five Thousand Five Hundred (35,500) Dollars, to be paid October 2, 1911, makes said sum of Two Hundred Forty Seven Thousand Five Hundred (247,500) Dollars. The Company agrees that on or about the 2nd day of October, 1911, there will be presented for payment approximately One Hundred Ninety Thousand (190,000) Dollars of said bonds, and that the Company will call the remaining Ten Thousand (10,000) Dollars, or approximately that amount, under the terms of the deed of trust, which shall be absolutely payable on or before the 1st day of August, 1912. It being understood that the presentation of approximately One Hundred Ninety Thousand (190,000) Dollars of bonds shall be made at the same time and as a part of the same transaction as the payment of said Thirty Five Thousand Five Hundred (35,500) Dollars, and other items above mentioned, and as part of the same transaction in which said plant is turned over to said City. And said bonds shall, as paid, be stamped "Paid" by the City Treasurer, and said City shall as fast as said bonds are paid, send them to the Farmers Loan and Trust Company, Trustee, for cancelation, to the end that when all of said bonds have been paid the trust deed securing the same shall be released.

"6. The City having possession of the plant for October, November and December, 1911, being one quarter of the year,

the City agrees to pay to the Company, or into the City Treasury, Twenty Five per cent of the taxes assessed against the plant for 1911, at such times as the amount of said taxes shall be settled and determined. The said City is to retain out of the payments to be made October 2, 1911, the sum of Two Thousand Four Hundred Ninety Eight Dollars and Ninety Cents, to secure the payment of seventy five per cent of the taxes on said plant, yet to become due under the assessment of 1911, be the same later determined to be more or less.

"7. Upon these payments, the Company agrees to deliver to the City said Water Works Plant, and other materials and supplies so paid for, and to make, execute and deliver to the City such reasonable conveyance, bill of sale, or other instrument, as the City may reasonably require, to transfer the title to said property from said Company to said City, free and clear from all liens, excepting the lien of such bonds as are not presented and paid, as hereinbefore provided, and for which unpresented bonds the City will retain the said proportionate amount of said purchase price to pay or redeem said unpresented bonds."

On the re-hearing it appeared that there were several matters equitably affecting the valuation which were not presented or considered upon the original hearing. These were all taken into consideration by the common council of the city and the water works company in arriving at the agreement above set forth. Under the circumstances, we saw no reason why the terms of the contract should not be approved, and the approval was accordingly made.

NOW, THEREFORE, IT IS ORDERED, That in lieu of the compensation and terms and conditions of the purchase and sale provided herein on June 27, 1911, the value of the property and the terms and conditions contained in the foregoing contract be and the same are hereby substituted and approved.

IN RE REFUSAL OF THE MERRILL RAILWAY AND LIGHT COMPANY TO COMPLY WITH CERTAIN ORDERS OF THE RAILROAD COMMISSION OF WISCONSIN.

Submitted Apr. 28, 1911. Decided Nov. 23, 1911.

The Commission proceeded on its own motion to determine whether the methods of the Merrill Railway and Light Co. in using and testing electrolytic ampere-hour meters for its lighting system at Merrill, Wis., are such as to comply with rules 14 to 21, inclusive, relating to meter accuracy, whether the requirements involving voltage comply with rule 23 relating to voltage regulation, and whether the company meets the requirements as to standards of service established by the Commission. (Wis. St. 1797m—23) (*In re Standards for Gas and Electric Service in the State of Wisconsin*, 1908, 2 W. R. C. R. 632).

Held: Electrolytic ampere-hour meters require different treatment from the motor type of electric meter, which was the only one contemplated at the time these rules of service were formulated. The following interpretations of the rules and standards for gas and electric service (2 W. R. C. R. 632) are made with special reference to electrolytic ampere-hour meters. In order to comply with rule 14 and rule 15, it is necessary to place the oil film over the surface of the electrolyte and keep the cover and stopper on the meter whenever the meter is in service. To keep the combined error within the requirements of rule 15, this type of meter shall be tested by measuring the volume between various points upon the scale so as to give the accuracy in volume for each one-fourth of the scale. In order that the meter shall not be overloaded, it is necessary that no meter shall be placed in service where the connected load is greater than the rated capacity of the meter or when the full load is used sufficiently often to introduce a sensible error due to entrained moisture passing off with the gases. Whenever a meter of this type is read for the purpose of making a charge for electric service rendered, the current must be shut off for a time sufficient to allow all bubbles to pass off from the electrolyte and to allow the electrolyte to reach approximately room temperature before the meter is read. In order that the error in registration due to voltage variations may be determined, and also that there may be full compliance with rule 23, voltage records shall be carefully taken in each locality at least once every three months or whenever changes are made and proper correction shall be applied to all bills rendered. A station log shall be kept giving the readings of all indicated instruments on the station switch board at least once every hour, and oftener during the hours when the lighting load is changing rapidly. The combined error in registration after applying the correction constant for voltage shall come within the limits prescribed in rule 15. The correction constant for voltage should appear upon the consumer's bill together with the meter readings. In order to conform with

rule 16, all meters in service prior to the date when the utility is equipped for making the tests already prescribed, shall be removed from service and tested before being replaced in service. The voltage surveys and installation tests of the electrolytic meters are all that are necessary for compliance with rule 17, unless some part of the meter affecting the registration is altered or replaced, in which case another test of the meters is necessary. Inspections should be made from time to time to see that the meters are sealed, that the covers and stoppers are in the meters, and that the meter is not overloaded. The records for the tests of these electrolytic meters, provided for in rule 18, shall contain the date of test, by whom made, serial number of meter, size of meter, number of scale, number on jar, condition of parts, scale divisions readings, amounts of water added, voltage rating of scale, accuracy of jar, and correction constant to be used in figuring bills for ——— volts. The following information shall be kept on file for each meter service, the same being revised as often as need be: average voltage during hours of use, voltage variation during hours of use, average record taken during hours of use, date of last voltage record, correction constant to be used in figuring bills for ——— volts. The company shall make a detailed report for the Commission's approval upon the equipment and methods it proposes to employ in carrying on the instructions under rule 19. This shall include a statement from the makers regarding the volumes and lengths of various tubes and various scales, together with such other information as is necessary to completely define the methods and equipment. Rules 20, 21, 22, 23, 24, and 25 need no special interpretation to cover local conditions at Merrill, but are to meet with full compliance. In order to comply with the spirit of the rules in general, the consumer shall be notified before refilling any meter. The electrolyte shall be free from bubbles and within 5 degrees Fahrenheit of room temperature when readings are taken both before and after refilling. It is ordered that the Merrill Railway & Light Company hereafter conform to all the rules and regulations as herein enumerated and interpreted.

This is a proceeding on motion of the Commission involving voltage regulation of the lighting system of the Merrill Railway & Light Company and its practice with regard to the using and testing of electrolytic ampere-hour meters. Changes are necessary in the methods of using and testing this type of meter by interpreting the general rules covering electric meter accuracy so that charges for electrical energy based upon the registration of this particular type of meters, used largely by the above named utility, shall be within the requirements of accuracy adopted by the Commission on July 24, 1908.

As provided by the Public Utilities Law (sec. 1797m—23) standards for gas and electric service in the state of Wisconsin were established by the Commission on July 24, 1908 (*In re Standards for Gas and Electric Service,* 1908, 2 W. R. C. R.

632). The rules prescribed include, among others, rules 14 to 21, inclusive, relating to meter accuracy, and rule 23 relating to voltage regulation. These rules were formulated to cover the types of equipment and methods employed generally throughout the state and apply to all lighting utilities in the state excepting where modification orders have been issued by the Commission upon application and for sufficient cause shown.

The particular type of meter adopted as the standard and used largely by the Merrill Railway and Light Company depends for its registration upon the fact that the quantity of water decomposed by the passage of an electric current is directly proportional to the ampere hours passed. This gives a registration which is proportional to the ampere-hours consumed rather than the watt-hours. In order to determine the watt-hours of energy actually used by the consumer, the voltage maintained at the time the current is consumed must be known.

The scale upon the meters of this type are labeled as reading killowatt-hours and the schedule of rates on file with the Commission for the above utility is expressed in kilowatt-hours. One of the purposes of the order herein is to prescribe the conditions under which the charges for electrical energy based upon the registration of this particular type of meter will fall within the limits of accuracy already established by the Commission for the watt-hour consumption.

Early inspections of the quality of electric lighting service furnished at Merrill showed that this particular type of meter required different treatment from the motor type of electric meter. The motor type of meter was the only one contemplated at the time the rules of service were formulated. In July, 1909, tests were made at Merrill, by inspectors for the Commission, of ten meters of the electrolytic type to determine their accuracy as ampere-hour meters. These tests showed that after the meters had run for twenty-two hours and the current had been disconnected for 45 minutes, the registration varied among the meters tested from 7.8 per cent slow to 11.4 per cent fast. Another test was run upon the same meters and after a total of thirty-nine hours with current passing and several hours shut down the registration for the entire period varied from 1 per cent slow to 16.1 per cent fast.

Following this testing at Merrill, sample meters of this type were secured and various experiments were carried on by mem-

bers of the Commission's staff at the laboratories of the University of Wisconsin. After considerable correspondence with the makers of such meters, and conference with agents selling and utilities using the same, and upon inspections at Merrill showing violation of rule 23 of the Commission's order already referred to, it was decided to hold a public hearing to consider the service rendered at Merrill, including the practice with regard to the use of the electrolytic ampere hour meter.

On April 28, 1911, the matter was heard in the office of the Commission. *E. M. Smart* appeared for the Merrill Railway and Light Company and introduced testimony relative to the improvements being made in the voltage regulation at Merrill, together with opinions regarding the proposed changes in meter practice. Upon request of the above utility and makers of this particular type of meter, decision in the matter was deferred until the manufacturers could be represented. On July 31, 1911, the hearing was resumed, at which time *Mr. G. H. Rettew* appeared for the manufacturers of the meter and together with the manager of the Merrill company discussed the precautions necessary in order to insure the prescribed meter accuracy in the electrolytic type.

The results of the preliminary investigation and of the testimony submitted at the hearing are considered in the following interpretation of rules with special reference to this electrolytic ampere-hour meter.

RULE 14: NO ELECTRIC METER WHICH REGISTERS UPON "NO-LOAD" SHALL BE PLACED IN SERVICE OR ALLOWED TO REMAIN IN SERVICE.

From the construction of this type of meter it would appear that the meter might register when no current is flowing, due to leakage or evaporation of the electrolyte. Since the electrolyte is carried in a glass jar, there is very little danger of slight leaks taking place and the cracked or broken jars can be so easily detected that no special rule appears to be necessary in order to eliminate errors due to leakage.

Each meter is provided with a lead cover and stopper to eliminate evaporation. In order to comply with rule 14 (and rule 15), it is necessary to *place the oil film over the surface of the electrolyte and keep the cover and stopper on the meter whenever the meter is in service.*

RULE 15: NO ELECTRIC METER SHALL BE PLACED IN SERVICE OR ALLOWED TO REMAIN IN SERVICE WHICH HAS AN ERROR OF REGISTRATION IN EXCESS OF FOUR PER CENT ON LIGHT LOAD, HALF LOAD, OR FULL LOAD.

In addition to leakage and evaporation, errors in registration of the type of meter under consideration may be due to the following causes: irregularities in glass jars, incorrect scales, meter being overloaded, reading taken while bubbles are in electrolyte, and to difference between voltage supplied and voltage for which meter scale was made.

Since the registration of the meter depends upon the difference in solution level in the glass jar, it is necessary that the jar be fairly uniform in cross-sectional area and that the volume displaced between any given scale readings shall be correct within sufficiently narrow limits to keep the combined error within the requirements of rule 15. *This type of meter shall be tested by measuring the volume between various points upon the scale so as to give the accuracy in volume for each one-fourth of the scale.*

In order that the meter shall not be overloaded it is necessary that *no meter shall be placed in service where the connected load is greater than the rated capacity of the meter, or when the full load is used sufficiently often to introduce a sensible error due to entrained moisture passing off with the gases.*

Whenever a meter of this type is read for the purpose of making a charge for electric service rendered, *the current must be shut off for a time sufficient to allow all bubbles to pass off from the electrolyte and to allow the electrolyte to reach approximately room temperature before the meter is read.*

In order that the error in registration due to voltage variation may be determined, and also that there may be full compliance with rule 23 (RULE 23: EACH COMPANY SUPPLYING ELECTRICAL ENERGY ON CONSTANT POTENTIAL SYSTEMS SHALL ADOPT AND MAINTAIN A STANDARD AVERAGE VALUE OF VOLTAGE AS MEASURED AT ANY CONSUMER'S CUT-OUT, WHICH SHALL REMAIN CONSTANT FROM DAY TO DAY, AND VARY DURING ANY ONE DAY BY AN AMOUNT NOT MORE THAN SIX PER CENT OF THE MINIMUM VALUE), *voltage records shall be carefully taken in each locality at least once every three months or whenever changes are made and proper correction shall be applied to all bills rendered.*

Although voltage records need not be taken at every consumer's cut-out, it is necessary that records be taken at enough services to give substantially the voltage conditions under which each meter is being operated. Furthermore *a station log shall be kept giving the readings of all indicated instruments on the station switchboard at least once every hour and oftener during the hours when the lighting load is changing rapidly.* This, together with the construction records, will serve as a check upon the changing of conditions requiring or affecting voltage surveys.

The combined error in registration after applying the correction constant for voltage shall come within the limits prescribed in rule 15. The correction constant for voltage should appear upon the consumer's bill together with the meter readings.

RULE 16: EACH ELECTRIC SERVICE METER SHALL BE TESTED AND ADJUSTED FOR ACCURACY AT THE TIME OF ITS INSTALLATION.

This particular type of meter may be tested before installation after assembling, and after being received by the operating utility. All meters in service prior to the date when the utility is equipped for making the tests already prescribed, shall be removed from service and tested before being replaced in service. Three months from the date of the order herein is deemed sufficient time in which to complete these tests.

RULE 17: EACH ELECTRIC SERVICE METER SHALL BE TESTED AT LEAST ONCE EACH YEAR; THE TEST TO BE MADE BY COMPARING THE METER WHILE CONNECTED IN ITS PLACE OF SERVICE WITH SUITABLE STANDARDS, ON LIGHT LOAD, HALF LOAD, AND FULL LOAD RATE OF OPERATION.

The voltage surveys and installation tests of the meters of the electrolytic type are all that are necessary, unless some part of the meter affecting the registration is altered or replaced. In this case another test of the meter is necessary. Inspections should be made from time to time to see that the meters are sealed, that the covers and stoppers are in the meters, and that the meter is not overloaded.

RULE 18: A COMPLETE RECORD SHALL BE KEPT OF ALL TESTS MADE ON ELECTRIC METERS.

The records for the tests of these electrolytic meters shall contain at least the following information:

Date of test.
By whom made.

Serial No. of meter.
Size of meter.
No. on scale.
No. on jar.
Condition of parts.
Scale divisions readings.
Amounts of water added.
Voltage rating of scale.
Accuracy of jar.
Correction constant to be used in figuring bills for———volts.

The following information should be on file for each meter in service, the same being revised as often as need be:

Average voltage during hours of use.
Voltage variation during hours of use.
Voltage record taken at .....
Date of last voltage record.
Accuracy of jar.
Correction constant to be used in figuring bills for———volts.

RULE 19: EACH COMPANY SUPPLYING ELECTRICAL ENERGY SHALL PROVIDE ITSELF WITH SUITABLE EQUIPMENT FOR THE TESTING OF METERS AND SHALL EMPLOY SUCH METHODS AS ARE APPROVED BY THE RAILROAD COMMISSION.

The company shall make a detailed report for the Commission's approval upon the equipment and methods it proposes to employ in carrying out the foregoing instructions. This shall include a statement from the makers regarding the volumes and lengths of various tubes and various scales, together with such other information as is necessary to completely define the methods and equipment.

RULE 20: EACH COMPANY SUPPLYING ELECTRICAL ENERGY SHALL MAKE A TEST ON THE ACCURACY OF A METER UPON REQUEST OF A CONSUMER, PROVIDED SUCH CONSUMER DOES NOT MAKE REQUEST FOR TESTS MORE FREQUENTLY THAN ONCE IN SIX MONTHS. A REPORT GIVING THE RESULTS OF SUCH TESTS SHALL BE MADE TO THE CONSUMER, AND A COMPLETE RECORD OF THE SAME SHALL BE KEPT ON FILE IN THE OFFICE OF THE COMPANY.

RULE 21: UPON FORMAL APPLICATION OF ANY CONSUMER TO THE RAILROAD COMMISSION, A TEST SHALL BE MADE UPON THE CONSUMER'S METER BY AN INSPECTOR EMPLOYED BY THE RAILROAD COMMISSION, SUCH TEST TO BE MADE AS SOON AS PRACTICABLE

AFTER THE RECEIPT OF THE APPLICATION. FOR SUCH TEST A FEE OF TWO DOLLARS ($2.00) SHALL BE PAID BY THE CONSUMER MAKING APPLICATION FOR THE TEST IF THE METER IS FOUND TO BE SLOW OR CORRECT WITHIN THE ALLOWABLE LIMITS, AND BY THE COMPANY OWNING THE METER IF THE METER IS FOUND TO BE FAST BEYOND THE ALLOWABLE LIMIT.

RULE 23: EACH COMPANY SUPPLYING ELECTRICAL ENERGY ON CONSTANT POTENTIAL SHALL ADOPT AND MAINTAIN A STANDARD AVERAGE VALUE OF VOLTAGE AS MEASURED AT ANY CONSUMER'S CUT-OUT, WHICH SHALL REMAIN CONSTANT FROM DAY TO DAY, AND VARY DURING ANY ONE DAY BY AN AMOUNT NOT MORE THAN SIX PER CENT OF THE MINIMUM VALUE.

These rules, together with rules 22, 24 and 25 already referred to, need no special interpretation to cover local conditions at Merrill, but are to meet with full compliance.

In order to comply with the spirit of the rules in general, it appears necessary to prescribe somewhat the practice to be employed in the refilling of the jars. Since all registration of previous consumption is entirely destroyed when one of these meters is refilled, and since there is no way of checking the "before-filling" reading after the meter has been filled, it appears to be a reasonable requirement that *the consumer be notified before refilling any meter. The electrolyte shall be free from bubbles and within 5 degrees Fahrenheit of room temperature when readings are taken both before and after refilling.*

It is believed that compliance with all the rules enumerated above, including the special interpretations to cover the conditions existing upon the system of the Merrill Railway and Light Company, will insure service of the standard established by the Commission in its general order of July 24, 1908.

IT IS THEREFORE ORDERED, That the Merrill Railway and Light Company hereafter conform to all the rules and regulations as enumerated and interpreted above. Three months is deemed sufficient time within which to comply with this order.*

* Since the above decision was issued our attention has been called to another feature in connection with the type of meter herein discussed. This type of meter should never be installed in a clothes press or other small confined space where there is any possibility of the gas being confined sufficiently to allow explosion to take place, as has been reported to have occurred elsewhere.

IN RE APPLICATION OF THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY AND THE MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY FOR THE SUSPENSION OF THE PROVISION IN CHAPTER 358, LAWS OF 1911, WHICH PROVIDES THAT CARLOAD FREIGHT SHALL BE MOVED NOT LESS THAN SEVENTY-FIVE MILES PER DAY, OR EVERY TWENTY-FOUR HOURS.

Submitted Nov. 22, 1911. Decided Nov. 24, 1911.

The Commission called a conference for the purpose of further investigating the car service with respect to the sugar-beet traffic; and for determining the effect upon that service of the suspension from operation of ch. 358, Laws of 1911, which under penalty requires carload freight to be moved seventy-five miles daily; and for the further purpose of ascertaining whether it is necessary and just to the parties involved that the suspension of the law remain longer in effect. The suspension of the law in question was ordered by the Commission for the C. M. & St. P. Ry. Co. on Nov. 9, 1911, and for the M. St. P. & S. S. M. Ry. Co. on Nov. 14, 1911, subject to such modification as might be found necessary by further investigation, which the Commission immediately entered upon. It was found that the traffic in question is surrounded by many abnormal features, which combined to particular disadvantage this fall. It also appeared that there had been a noticeable lack of system and co-operation between the shippers and carriers in the ordering and placing of cars for loading, and that much of the trouble would have been obviated had both parties adopted proper methods in ordering and placing cars and handling the traffic generally. The shippers have lately adopted the practice of storing the beets at their shipping stations until they can be handled at the factories. It appears that this will materially relieve the situation.

Held: It is as much the duty of the shippers to adjust their shipments and their orders for cars to their ability to handle such shipments at their destination, as it is the duty of the carriers to furnish the adequate number of cars and reasonably adequate service in other respects. It is strongly recommended that the shippers and the carriers in these cases agree, between themselves, upon more effective and reasonable methods for the ordering and placing of cars to be loaded with sugar beets, and for the handling of traffic generally, than those now in use. Practices and services in these respects, which ordinarily would be regarded as reasonable and adequate, may, under extraordinary conditions, be both unreasonable and inadequate. General rules may, therefore, fail to meet special conditions and cases of this kind may require determination upon their own particular facts rather than under general rule. The law in question has been suspended long enough to afford the carriers some of the relief for which they ask, and it is not likely that any further situation will arise this season under

which the suspension of the law will become necessary. The Commission's orders suspending the operation of the law are accordingly revoked.

A hearing or conference was called by the Commission for the purpose of further investigating the situation with respect to the car service, insofar as the sugar-beet traffic is involved, and for the purpose of determining the effect upon said service of the suspension from operation of the said ch. 358 of the Laws of 1911, which, under penalty, requires carload freight to be moved seventy-five miles daily, and for the further purposes of ascertaining whether it is necessary and just to the parties involved that the said suspension of said law should remain in effect.

The suspension of the law in question was ordered by this Commission for the Chicago, Milwaukee & St. Paul Railway Company on Nov. 9, last, and for the Minneapolis, St. Paul & Sault Ste. Marie Railway Company on Nov. 14, last, upon the application of the said carriers, and because the facts presented by them in support of these applications appeared to be of such character that immediate action was required in the matter.

As the shippers affected, although aware of the fact that such applications would be moved to this Commission, were not represented at the meeting held in the case, the said orders were made subject to such modifications as might be found necessary by the further investigations of the case, which the Commission immediately entered upon.

In these subsequent investigations facts were disclosed which indicated that the conditions concerning the sugar-beet traffic were such as would require a further hearing or conference in the matter, at which both the carriers and the shippers could be fully heard. Notices were therefore issued, fixing the time for such re-hearing on Nov. 22, 1911. At this hearing the shippers, the Rock County Sugar Company, was represented by *M. O. Mouat,* and the Wisconsin Sugar Company by *J. T. Lawson.* The Chicago, Milwaukee & St. Paul Railway Company was represented by *P. C. Eldredge,* and the Minneapolis, St. Paul & Sault Ste. Marie Railway Company by *J. O. Klapp.*

The hearing and the investigation disclosed facts which indicated that the sugar-beet traffic, especially this fall, is surrounded by many abnormal features; The shipping season is

very brief; the commodity is relatively very bulky and requires a great many cars and a large storage and unloading capacity at the beet-sugar factories to which it is shipped. The beet is grown in nearly all parts of the state and shipped in from hundreds of stations. This fall, owing to rainy and cold weather, the digging and shipping of the beets had been unusually spasmodic and irregular. Loaded cars of beets have been partially filled with water, which, with the beets, have frozen in a solid mass, requiring the use of picks and other extraordinary methods in handling, all of which has tended to materially retard the handling of the beets, and has resulted in several delays in unloading of cars, and in congestion of the traffic. It also appeared that, at least in places, there has been a noticeable lack of system and co-operation as between the shippers and the carriers in the ordering and placing of cars for loading; that a considerable proportion of the troubles with which both sides are now confronted are largely due to causes of this nature; and that these troubles would largely have been obviated had both parties adopted and adhered to proper methods of ordering and placing cars for loading and for the handling of the traffic generally. If further appeared that the shippers had lately adopted the practice of storing or pitting the beets at a large number of their shipping stations, to be there held until they could be handled at the factories and that this storing would materially tend to relieve the situation.

It is not entirely clear to us just what was the real purpose of the enactment of the law in question under which, as stated, carload freight must be moved seventy-five miles daily; neither have we been able to definitely determine the effect of the law, if left in operation under conditions such as those involved in this case. It is probable, however, that the legislature had in mind just such conditions at those involved herein, which are more or less out of the ordinary and which it is difficult, if not impossible, to adequately provide for in a set of general car service rules, and that it was of the opinion that the law might be of some relief to shippers under such conditions. While this law may fall short of what might have been expected of it, and while under certain conditions it may even be found to be unjust to the carrier, it is only just that it should be given a fair trial and that, in the meantime, it should be lived up to in good

faith. That there was some uncertainty as to how it would operate, is evidenced from the fact that provisions were made for its suspension when the facts are such as to warrant it.

That it is as much the duty of the shippers to adjust their shipments and their orders for cars to their ability to handle such shipments at their destination as it is the duty of the carriers to furnish the adequate number of cars and reasonably adequate service in other respects, is clear. It is also obvious that practices and services in these respects, which ordinarily would be regarded as reasonable and adequate, may, under extraordinary conditions, be both unreasonable and inadequate; that general rules may, therefore, fail to meet special conditions, and that there are cases of this kind which have to be dealt with on their own particular facts rather than under general rules.

During the hearing both parties admitted that it was possible, as well as practicable, to greatly improve the present system and practices of ordering and placing cars for loading, and for handling the traffic in other respects, and in substance agreed to institute improved methods. In view of this, and in view of the further facts that large quantities of beets are now being bought or stored; that the sugar-beet traffic is affected by many abnormal or extraordinary conditions that should be recognized; that the law in question here, or said ch. 358, Laws of 1911, was obviously intended to relieve the situation where extraordinary conditions arose; that this law has now been suspended for a long enough period to afford the carriers some of the relief for which they were asking; that from this time on to the end of the beet traffic season it is not likely that any situation will arise under which the suspension of the said law will become necessary, and because of the situation generally, it appears to us that the above named orders, for which said law was suspended from operation, should be revoked.

IT IS THEREFORE ORDERED, That the orders of this Commission by which, on Nov. 9, 1911, in the case of the Chicago, Milwaukee & St. Paul Railway Company, and by which, on Nov. 14, 1911, in the case of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, ch. 358, Laws of 1911, was suspended from operation insofar as it affected the traffic of sugar beets on their respective lines, be and hereby are revoked.

It is strongly recommended that the shippers and the carriers in these cases come together and between themselves agree upon more effective and reasonable methods for the ordering and placing of cars to be loaded with sugar beets, and for the handling of this traffic generally, than those now in use. In other words, it is recommended that the understanding reached by these parties upon these points at the hearing, and which have been referred to herein, be carried out in good faith.

HIGGINS' SPRING AND AXLE COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Nov. 25, 1911.

Petitioner alleges unusual and exorbitant charges on shipments of vehicle springs from Racine to Oshkosh, Wis. The regular third class rate was collected. For a number of years previous a rate of 16½ cts. per cwt. on vehicle springs was in effect between these points. In revising and correcting the tariffs, this rate was eliminated through error, but subsequently it was reinstated.

Held: The rate exacted was exorbitant and a reasonable rate would have been 16½ cts. per cwt., as subsequently reestablished. Refund is ordered on this basis.

The petitioner is a corporation engaged in the manufacture and shipping of vehicle springs and other iron and steel articles, with offices at Racine, Wis. It alleges that on Aug. 1, 1911 it shipped six vehicle springs, weighing 370 lbs., from Racine to Oshkosh, and on Oct. 16, 1911, it shipped fifty vehicle springs from Racine to Oshkosh, weighing 980 lbs.; that the railway company exacted a rate of 25 cts. per cwt. on said shipments; that said rate was unusual and exorbitant; and that a reasonable rate to have applied to such shipments was 16½ cts. per cwt., which latter rate has since been published and made effective by the respondent railway company; wherefore, petitioner prays that respondent be required and directed to refund to it the sum of $1.14.

The railway company consents to the making of the reparation upon authority of the Commission.

The rate of 25 cts. per cwt. is the third-class rate on wagon springs from Racine to Oshkosh. For a number of years previous to June 1, 1911, the rate on wagon springs between such stations was 16½ cts., which rate was reinstated Oct. 11, 1911, in tariff G. F. D. No. 2400-G. During the period from June 1, 1911, to Oct. 11, 1911, the class rate mentioned applied to shipments of vehicle springs in less than carload lots. The

tariffs in force previous to June 1, 1911, had been revised and corrected at various times and, as a result, the commodity rate on wagon springs between the points mentioned was eliminated through error.

The charges on the shipments in question at the rate of 16½ cts. per cwt. amount to $2.23, which is $1.14 less than was actually charged. Under the circumstances, we find and determine that the rate of 25 cts. per cwt., exacted by the railway company, was exorbitant, and that the reasonable rate that should have been charged was 16½ cts. per cwt.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and the same is hereby authorized and directed to refund to the Higgins Spring and Axle Company the sum of $1.14.

N. D. SERGEANT
vs.
CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted Nov. 22, 1911. Decided Nov. 27, 1911.

Petitioner alleges that the C. St. P. M. & O. R. Co. does not maintain a station at Spring Brook, Wis., and prays that such company be required to construct and maintain a suitable station. It appears that persons waiting for trains are exposed to all kinds of weather. Consignees are obliged to call for express matter at Trego, seven and one-half miles distant, and either there or at Hayward, twelve miles away, for freight which is not prepaid. Prepaid freight is deposited on the unprotected platform at Spring Brook with no one to care for it.

Held: The station facilities in question are inadequate and the respondent is ordered to provide a reasonably adequate station building at Spring Brook. June 1, 1912, is fixed as the limit of time within which the station is to be opened for traffic.

The petitioner resides at Spring Brook, Wis. He alleges that the respondent railway company does not maintain a station at Spring Brook for the convenience of the public; that persons waiting for trains are exposed to all kinds of weather; that express matter is held at Trego, seven and one-half miles from Spring Brook, where people are obliged to go for the same; that freight which is not prepaid is held either at the same station or Hayward, a station a distance of twelve miles away, whither consignees go to receive it; that prepaid freight is placed on the platform without any protection against inclement weather and with no one to care for it until the consignee is able to remove it; that in shipping freight one is obliged to send the bill to Hayward on the 1:15 train in order that the train which arrives at Spring Brook at 4:15 p. m. may pick it up; that persons living in the surrounding country are obliged to have someone in the village look after any shipment that they may receive; that freight often lies upon the platform for a number of days before the consignee knows of its arrival and occasionally some of it is stolen. Wherefore, petitioner prays that the respondent be required to construct and maintain a suitable depot or station at Spring Brook.

The respondent railway company, answering the petition herein, alleges that the freight received at Spring Brook during the year ending Dec. 31, 1910, amounted to $814.43 and the freight forwarded amounted to the sum of $2,502.97; that the business done at this station does not warrant any extensive facilities for the handling thereof; that the number of people affected thereby is very small; that it recognizes the fact that Spring Brook is entitled to better facilities and for that purpose the railway company has now under consideration plans and specifications for the construction of a depot building at said station; that some time during the ensuing year it expects and intends to construct said building; that the construction and maintenance of said building will furnish very adequate and full facilities for the transaction of all business at said station, and should answer all complaints respecting present facilities.

The matter came on for hearing on Nov. 22, 1911. The petitioner appeared in his own behalf. The respondent railway company was represented by *G. W. Peterson,* its general attorney.

It was conceded upon the hearing that the station facilities of the respondent railway company are inadequate for the traffic at Spring Brook. The company prepared plans for a station building some time ago, but postponed the construction of the building because of the demands for new buildings at more important points. It expressed its willingness to erect a depot at Spring Brook as soon as the weather would permit.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, St. Paul, Minneapolis & Omaha Railway Company provide a station building at Spring Brook which shall be reasonably adequate for the traffic at that station.

June 1, 1912, is deemed a reasonable date, not later than which said station shall be opened for traffic.

IN RE HIGHWAY ACCIDENT OCCURRING AT A HIGHWAY CROSSING ON THE TRACKS OF THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY, ONE-HALF MILE EAST OF RICHFIELD, WISCONSIN.

Submitted Oct. 17, 1911. Decided Nov. 28, 1911.

The Commission, on its own motion, investigated an accident at a highway crossing on the tracks of the C. M. & St. P. R. Co. about one-half mile east of Richfield, Wis., in which a carriage was struck by a train of the M. St. P. & S. S. M. R. Co., a lessee of the former company, and four of the six occupants were killed. The track in question is single, but from the station at Richfield to a point about 165 feet south of the highway it is tangent. Together the two railway companies run an average of 40 trains a day over this track.

Held: The crossing is dangerous to travelers upon the highway and some safety appliance should be installed to give warning of approaching trains. The C. M. & St. P. R. Co. is ordered to remove the obstructions to the view caused by trees and underbrush on either side of the east and west approaches to the crossing, and an automatic electric alarm with illuminated crossing sign for night indication is ordered installed, to be effective upon the approach of trains within three thousand feet of either side of this highway.

This is an investigation, on motion of the Commission, of an accident which occurred on Sep. 17, 1911, at a highway crossing of the tracks of the Chicago, Milwaukee & St. Paul Railway Company, about one-half mile east of Richfield, Wis. The hearing was had on Oct. 17, 1911. The Chicago, Milwaukee & St. Paul Railway Company was represented by *F. G. Wright,* its assistant commerce counsel, and by *P. C. Eldredge,* its assistant general superintendent.

At about 6:58 p. m. on Sunday, Sep. 17, 1911, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company's train No. 202, with engine No. 2,029, struck a two-seated buggy occupied by Mr. and Mrs. Frank Klein and their children, Grace Klein, eleven months old, Robert Klein, two years old, and Jerry Klein, seven years old; also Mary Nitka, a servant, seventeen years of age. The occupants, with the exception of Frank Klein and his son Robert, were killed. The headlight of the approaching en-

gine was taken for the switch light on the south switch to the passing siding. The accident occurred at a point where the highway crosses the tracks of the Chicago, Milwaukee & St. Paul Railway Company, about one-half mile east of Richfield. The "Soo" railway company is a lessee of the Chicago, Milwaukee & St. Paul Railway Company, and operates its trains over the track in question.

The highway leading across the track is the main road from the village of Germantown to the village of Holy Hill, extending east and west across the township of Richfield. The traffic on this highway consists of teams, automobiles and pedestrians. From a point about 950 feet west, the traveled road follows a descending grade of about 6 feet in 100 feet, to a point within about 375 feet of the center of the right of way. The natural ground line between these points is from one foot to four feet above the traveled roadway. Medium sized trees stand at intervals of forty to fifty feet along each side, about on the fence line. The fences on each side of the approach are of stone and rail, partially covered with underbrush, and are not well maintained. They tend to add to the height of the bank on each side of the road. This places a person with a team, driving toward the track, between two walls, until within about 375 feet of the center line of the right of way. From this last named point the grade of the road and natural ground line are about level with the base of the rail. The view to the north or to the south from a point 950 feet west on the highway to the point where the descending grade line ends, 373 feet from the crossing, is obstructed by the side hills and underbrush, as described, but from the end of the grade to the right of way the view to the south is comparatively unobstructed. The view to the north, when one is within 50 feet of the right of way, is obstructed by some small trees which are located in the northeasterly angle extending from 50 to 75 feet west of the right of way along the highway fence, and about 150 feet to 200 feet north of the highway along the right of way fence.

From a point about 300 feet east the traveled road follows a descending grade of about 4.8 feet in 100 feet to a point within 50 feet of the right of way fence. The natural ground line follows about the same grade, stone fences and trees lining each side of the highway very much in the same way as described at

the west approach. The view of the track, while somewhat obstructed, is not such as to make the approach from the east especially dangerous.

The track is single through this territory, but from the station at Richfield to a point about 165 feet south of the highway the track is tangent. At that point it curves to the east. There is practically no grade.

The average number of trains passing over this track in twenty-four hours is approximately forty. This includes the trains of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company as well as those of the Chicago, Milwaukee & St. Paul Railway Company. The former railway company operates its trains over this track between Milwaukee and Rugby Jct. Both railway companies operate trains over this track between the points mentioned. The whistle posts for this crossing are located, respectively, 2,130 and 1,080 feet north and south. The crossing sign is situated on the east side of the right of way in plain view of people approaching the crossing.

The property adjoining the right of way on the east and the small trees obstructing the view to the north from the east approach is owned by William Schulties. He testified that he and his servant were in the barnyard at the time the train in question left Richfield station and that they heard distinctly the warning whistle for the crossing, also a general alarm, which consists of consecutive short blasts of the whistle. They also observed that some time elapsed between the time the regular crossing whistle was sounded and the general alarm was given. The south switch for the passing siding for the station of Richfield is about 1,900 feet north of the highway, and a person on the west approach of the crossing can see the switch light before reaching the small trees mentioned.

Under the circumstances, it is very apparent that the crossing in question is a dangerous one to travelers upon the highway, and that some safety appliance should be installed, warning travelers of approaching trains. The engineers of the Commission, who investigated the matter, have recommended that the trees and underbrush on each side of the east and west approach be removed and that an automatic electric alarm be installed, with illuminated crossing sign for night indication, which should

be effective upon the approach of trains when within three thousand feet of either side of the highway.

Now, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and the same is hereby required to remove the obstructions to the view caused by trees and underbrush on either side of the east and west approaches to said crossing, and that an automatic electric alarm be installed with illuminated crossing sign for night indication, same to be effective upon the approach of trains when within three thousand feet of either side of this highway.

Ninety days in deemed a reasonable time within which to comply with the order herein.

CITY OF OSHKOSH

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY, MINNEAPOLIS, ST. PAUL AND SAULT STE MARIE RAILWAY COMPANY.

Submitted Sep. 25, 1911. Decided Nov. 28, 1911.

Petitioner, the city of Oshkosh, alleges that several parallel tracks of the C. M. & St. P. R. Co. and the M. St. P. & S. S. M. R. Co. cross Light street, a public highway in Oshkosh, Wis., and that the two railway companies in the past have jointly maintained one flagman at this crossing. Petitioner alleges further that the heavy travel on the highway and the frequency of trains and switch engines render the crossing unsafe and dangerous and prays that the railway companies be ordered to each maintain a flagman, so as to provide adequate protection. It appears that the speed of all trains over the crossings is comparatively slow and the possibility of more than one through train passing at one time is remote. In comparison with a city the size of Milwaukee, where similar conditions exist, the volume of travel is light, the switching movements are slow, and the 125 feet of territory covered by the flagman cannot be said to be excessive.

Held: The railroad should strictly enforce its rule which requires that when cars are being pushed over a crossing a switchman be stationed either on the ground or on the first car passing over the crossing, and it should also require strict obedience of the flagman's signals from its trainmen. On the assumption that the rules relative to switching movements will be strictly enforced, one flagman should provide adequate protection at this crossing and be of greater efficiency than two flagmen or the installation of gates. Petition is dismissed.

The petition of the above named city of Oshkosh, by its attorney, shows that petitioner is, and for a long time past has been, an incorporated city situated within the county of Winnebago, state of Wisconsin; that the above named railway companies are common carriers within the state of Wisconsin and are subject to the provisions of ch. 87 of the Wisconsin Statutes of 1898 and acts amendatory thereto, and are likewise subject to the provisions of ch. 362, Laws of 1905; that several parallel tracks of said railway companies cross Light street, a public highway located in the First ward of Oshkosh; that this highway is one of the main arteries of travel between the north

and south side of said city and the travel thereon by both vehicles and pedestrians is very heavy; that the above named railway companies in the past have jointly maintained one flagman at said crossing; that the heavy travel on said highway and the frequency of trains and switch engines renders said crossing unsafe and dangerous to travelers; that the residents of the First ward of said city have remonstrated against the further maintenance of said crossing with but one flagman, and that the common council has requested each of the railway companies to maintain a flagman at said crossing. Wherefore, petitioner prays that an order be made commanding and directing said railway companies to each maintain a flagman at said crossing for the protection and safety of human life.

The Chicago, Milwaukee & St. Paul Railway Company, in its answer, states that it maintains a line of railway which crosses certain streets in the city of Oshkosh; that it has furnished reasonably adequate crossing protection at the street complained of in the petition, and denies that said crossing is unsafe and dangerous to travelers upon that highway, and further denies that there is any reasonable necessity for the installation of further crossing protection. Further answering, said respondent denies each and every allegation in the petition not hereinbefore admitted, denied or otherwise answered unto. Wherefore, said respondent prays that the petition be dismissed.

The Minneapolis, St. Paul & Sault Ste. Marie Railway Company, in answering the petition, admits that the city of Oshkosh is an incorporated city in Winnebago county, Wis., that it is a common carrier subject to the provisions of ch. 87 of the Wisconsin Statutes of 1898 and acts amendatory thereto, and is likewise subject to the provisions of ch. 362 of the Laws of 1905. It admits that its tracks cross Light street, located in the First ward of said city, but denies that it has knowledge or information sufficient to form a belief as to the amount of travel across its tracks on Light street; admits that it has jointly maintained a flagman at this crossing with the Chicago, Milwaukee & St. Paul Railway Company; denies that the crossing is unsafe or dangerous as now protected, and denies that it has knowledge or information sufficient to form a belief as to whether the residents of the First ward of Oshkosh have remonstrated against the continuance of said crossing as now protected.

Wherefore, said respondent requests that said petition be dismissed.

The hearing was held on Sep. 25, 1911, at the city hall in the city of Oshkosh. *R. A. Hollister,* city attorney, appeared for the petitioner, *F. G. Wright* for the Chicago, Milwaukee & St. Paul Railway Company, and *Kenneth Taylor* for the Minneapolis, St. Paul & Sault Ste. Marie Railway Company.

At the hearing the city attorney stated that the persons who petitioned the common council informed him that they had no testimony to present; that it was a question for the Commission to decide upon a view of the situation, and for that reason he had no evidence on the petition to offer.

The division superintendent of the Chicago, Milwaukee & St. Paul Railway Company testified that his road had three tracks with thirteen foot centers crossing Light street; that there were seven tracks in all at that point, and that a space of about thirty feet existed between the two railway companies' tracks. The division superintendents of both railway companies testified that the present protection by one flagman at Light street was sufficient; that two flagmen would confuse the teamsters crossing the track by giving conflicting signals. They both objected to gates, believing a flagman to be more efficient in protecting teams and pedestrians, especially children, and that the crossing of many vehicles and pedestrians is less hampered by flagman protection than by gates.

A witness who had observed the traffic movements on the crossing for a number of years and who had been engaged in contracting and general teaming for a long period, testified for the respondents that neither two flagmen nor gates would be as efficient and safe as the present protection. He stated that during switching movements many pedestrians, and also the trainmen, disregarded the signals of the present flagman and that many narrow escapes from accident had occurred, primarily due to the failure of the railroad companies' engineers and switchmen to obey the flagman's signals.

Counsel for the "Soo" line introduced a petition signed by numerous business men and teamsters of Oshkosh, stating that they believed that the Light street crossing is protected and safeguarded by the present flagman in an effective manner, and that the maintenance of a separate flagman by the railroads

would, in their opinion, be detrimental and would lead to confusion.

Counsel for the Chicago, Milwaukee & St. Paul Railway Company gave the following information in regard to the traffic over the Light street crossing on Aug. 12, 1911:

	Day traffic.	Night traffic.	Total traffic.
Pedestrians	1,110	320	1,430
Vehicles	335	32	367
Trains	25	10	35
Switching movements	215	24	239

The safety service expert of the Commission has made an investigation of the crossing in question. From his report and a review of the testimony it appears that Light street is crossed by the single track main lines of both the Chicago, Milwaukee & St. Paul Railway Company and the Minneapolis, St. Paul & Sault Ste. Marie Railway Company and by some four or five switching tracks. The speed of all trains over the crossing is comparatively slow on both roads, and the possibility of more than one through train passing over the crossing at one time is remote. The travel on the street is comparatively heavy for a city of the size of Oshkosh; however, as compared with conditions in a city of the size of Milwaukee, where similar conditions exist, the volume of travel can be considered light. The distance covered by the crossings is 125 feet, measured along the west side of Light street, so that the territory to be covered by the flagman cannot be said to be excessive. The switching movements are slow on account of the physical conditions in the district, but the railroad companies should issue such instructions to their trainmen as will prevent a violation of the flagman's signals. The operating rules of the railway companies require that when cars are being pushed over the crossing that a switchman be stationed either on the ground or on the first car passing over the crossing, and this rule should be strictly enforced at this point.

On the assumption that rules relative to switching movements will be rigidly enforced, it appears that one efficient flagman should provide adequate protection at this crossing and be of greater efficiency than two flagmen or the installation of gates. Therefore, the petition is dismissed.

CITY OF MILWAUKEE
vs.
THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY.

Submitted Sep. 25, 1911. Decided Nov. 28, 1911.

The petitioner, the city of Milwaukee, alleges that The Milwaukee Electric Railway & Light Company operates the entire street car system in the city; that it does not maintain a through north and south line across the Menomonee valley, west of West Water and Reed streets; and that such a line has for a long time been a public necessity. The city recently compelled the company to lay tracks completing a through north and south line over which respondent maintains a broken or transfer service. The petitioner alleges that this service is inadequate and inconvenient and prays that the respondent be ordered to cease the transfer service and immediately institute a through service over this route.

Held: There can be no permanent solution of the problem involved until the recommendations of the Commission are carried out with respect to the construction of a cross-town line from the end of the viaduct on Sixteenth street, and with respect to other cross lines running directly from the south side to the northern limits of the city. Until the cross-town lines already recommended are constructed, the Eighth street line appears to be the most feasible route for the through traffic. In order to provide temporary relief, the respondent company is ordered, for a period of ninety days, to route enough cars to adequately care for the traffic on its Eighth street line from the northern terminus of the line to State street, thence west on State to Eleventh street, thence south on Eleventh to Clybourn street, thence west on Clybourn to Sixteenth street, thence south across the Sixteenth street viaduct to Eleventh avenue, thence south on Eleventh avenue to Muskego avenue, and along that street to its southern terminus. It is further ordered that the company continue, during the morning, noon, and evening hours, when traffic is greatest, to route enough cars to adequately provide for the traffic over the Eighth street line as at present routed to West Water street.

The petitioner alleges that The Milwaukee Electric Railway and Light Company operates the entire street car system in the city of Milwaukee; that its system is so constructed and arranged that there is not a through north and south cross-town line crossing the Menomonee valley in the city of Milwaukee west of West Water and Reed streets, which streets are near the east side of the city; that a cross-town line between the north and

south sides of the city has for a long time been and still is a crying need and a public necessity; that recently the city compelled the company to lay down tracks on Eleventh street from Grand avenue to Clybourn street, and on Eleventh avenue from National avenue to Greenfield avenue, under the provisions of a certain ordinance passed by the city on Jan. 2, 1900, so that the company has franchise privileges and tracks from the intersection of Forest Home avenue and Muskego avenue on Muskego avenue to Greenfield avenue; thence on Eleventh avenue to National avenue, and crossing the Sixteenth street viaduct to Clybourn street; thence east on Clybourn street to Eleventh street, and north on Eleventh street to State street; thence west on State street to Twelfth street, thence north on Twelfth street to Center street; thence west on Center street to Seventeenth street, and north on Seventeenth street to Hopkins street, and northwest on Hopkins street to the city limits; that instead of operating through cars from the intersection of Muskego avenue and Forest Home avenue over the above named route to the northern city limits, the company furnishes and provides a broken or transfer service over the said route, by compelling passengers who wish to go from the south side of the city to ride on the Muskego avenue line to Greenfield avenue, and then transfer on to the Sixteenth street viaduct line, which carries them to Eleventh street and Grand avenue, and again transfer to the Twelfth street line, which will take them to the northern city limits, and compelling passengers who wish to make such route in the reverse direction to transfer in the opposite direction at the same transfer points; and that there are a great number of passengers each day making the trip in either direction as above outlined, on account of the fact that there is an extensive factory district to the west of the south end of the route, and an extensive residence district east thereof, and an extensive factory and residence district in the locality of the northern terminus of the route; that the service on this route is a poor make-shift, inadequate, inconvenient, insufficient and obstinately persisted in; wherefore, the petitioner prays that the aforesaid company be required to answer the charges herein, and that after due hearing and investigation an order be made commanding the company to cease and desist from such broken or transfer service and to immediately institute and operate a through street car service over the said route,

and for such other and further order as the Commission may deem necessary and just in the premises.

The respondent filed no answer to the petition.

The matter came on for hearing at the city of Milwaukee on Nov. 20, 1911. The petitioner was represented by *Clifton Williams,* special assistant city attorney, the respondent by *Edwin S. Mack,* counsel.

Upon the hearing chairman Koch and other members of the committee on railroads of the common council were present and expressed their views upon the subject under investigation. It is apparent that there can be no permanent solution of the problem presented until the recommendations of the Commission are carried out with respect to the construction of a cross-town line from the end of the viaduct on Sixteenth street, and with respect to other cross lines running directly from the south side to the northern limits of the city. The existing lines north of the river are so located that they cannot be transformed so as to adequately serve the needs of the people who desire to travel with the least inconvenience between the northern and southern sections of the city, and furthermore they were originally designed and constructed solely with a view of carrying traffic to the down-town districts, before any demand for cross-town service had arisen.

A large number of mechanics residing on the north side of the city are employed in the industries located on the south side of the city and at West Allis, and also a large number residing south of the river are employed in the industries located in the northern section of the city. All these, whether using the Eighth street line or the Twelfth street line, are obliged to transfer twice in traveling between their homes and places of employment, or to be carried several miles out of their way through the district where street car traffic is most congested. Mechanics generally require street car service at the times when travel is greatest, and as a result consume more time in traveling than a reasonable service would require. The inadequacy of the present facilities for cross-town service was illustrated by the experience of Chairman Koch who said: "We want a through service from one part of the city to the other; any line; we do not care which line. Last Friday I was at the corner of Twenty-fourth street and National avenue. I took a car there and came down to the corner of Eleventh avenue and National avenue,

arriving there at about five minutes to twelve. I had my transfer over the viaduct. I waited and waited. I saw a fellow come over the viaduct with car No. 363. He went out to the end where he stops. I stood still there when he came back and then he took me over the viaduct. It took me about twenty-five minutes until I got a car." This experience is probably one of many similar ones and emphasizes the necessity of thorough service between the sections of the city involved.

It is apparent that, for temporary relief, either the Twelfth street line or the Eighth street line must be used in providing a through service from the north side to the south side of the city. According to the statistics gathered at the time the general survey of the service on all the lines in the city was made by the Commission, it appears that 16 per cent of the travel on the Twelfth street line and 51 per cent of the travel on the Eighth street line goes to the south side. It is claimed by the company that recent investigation shows that these percentages are still maintained. As the larger number of people would be accomodated by the Eighth street line, it would seem that this line should be preferred. By adapting the Twelfth street line it would require two transfers for passengers on the Eighth street line to reach the south side via the Twelfth street line. This would furnish little relief to such passengers. By routing the Eighth street cars west on State street from Seventh to Eleventh streets, passengers on the Twelfth street line destined to the south side could transfer at this point to the Eighth street cars and be carried to their destination without further transfer. When we consider that there are more than twice as many people traveling on the Eighth street line that require a through service to the south side than those traveling on the Twelfth street who require such service, and that the latter can be accomodated by a single transfer while the former cannot, we deem it only fair that an experiment should be made by routing Eighth street cars in the manner indicated.

There are, however, two weighty but perhaps not insurmountable objections to such routing. The first is that almost half of the traffic on the Eighth street line is destined to the down-town districts and would be obliged to transfer at the corner of Seventh and State streets to the State street line, on which the traffic is at present very heavy; the second is that that portion

of the line between Eleventh avenue and Reed street would become a stub line.

Mr. Stearns, of the Company, interposed the first objection mentioned. He said: "I would like to be on record here, as far as the company is concerned, that we would hesitate in taking the responsibility for discharging 50 per cent of the passengers now riding on the Eighth street line at a point as far north as State and Seventh streets." His idea was to extend the line on Seventh street from State street to Grand avenue, making the latter the transfer point. As the use of the Eighth street line for through service to the south side is in the very nature of things only temporary, we fail to see the necessity for the extension. When a practical cross-town line has been constructed, no necessity will apparently exist for a line on Seventh street between State street and Grand avenue. Furthermore, the common council evidently considers this street the only one available for any new interurban line to reach the business center of the city.

The objection to transferring passengers at Seventh and State streets, which is the most serious objection raised, can be readily obviated by placing in service more cars on this line and routing them to the down-town district as at present, during the morning, noon and evening hours when travel is greatest. This, perhaps, will remove most of the objections to transferring at Seventh and State streets.

It was agreed by the chairman of the committee on railroads and the city attorney that the suggested experiment be made. If it should prove detrimental to the service, some other plan can be substituted. It must be apparent to all who have given consideration to the subject that the proposed plan is not free from serious objections. It seems to be the best solution of the problem that a study of the situation warrants. It may prove a failure, as no one can anticipate the trend of street car traffic under changed conditions, nor is it possible to direct it. Time alone can determine the wisdom of the change.

NOW, THEREFORE, IT IS ORDERED, That the Milwaukee Electric Railway and Light Company be and the same is hereby required for a period of ninety days from the date this order becomes effective:

1. To route a sufficient number of its cars to adequately care

for the traffic operating on its Eighth street line in the city of Milwaukee from the northern terminus of such line to State street, thence west on State street to Eleventh street, thence south on Eleventh street to Clybourn street, thence west on Clybourn street to Sixteenth street, thence south across the Sixteenth street viaduct to Eleventh avenue, thence south on Eleventh avenue to Muskego avenue, and thence along Muskego avenue to its present southern terminus.

2. That it continue to route during the morning, noon and evening hours, when traffic is greatest, a sufficient number of cars to adequately provide for the traffic over its Eighth street line, as at present routed to West Water street.

HENRY MAURER

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Sep. 12, 1911. Decided Nov. 29, 1911.

Complaint was made that the M. St. P. & S. S. M. R. Co. does not maintain adequate station facilities at Medford, Wis. It was alleged that the station is not kept in sanitary condition, that the waiting room is too small, and that the freight house is inadequate and is not heated, with the result that the waiting room is filled with perishable freight in winter to the exclusion of passengers.

Held: The depot facilities at Medford are inadequate for the accommodation of passengers and freight. The respondent is ordered to provide a new station building in accordance with plans submitted to the Commission for approval and to have the building open for traffic not later than July 1, 1912.

The petition shows that the above named petitioner is a resident and property owner in the city of Medford, Taylor county, Wis., and that his occupation is bookkeeper for Henry Voss, a dealer in malt liquors at wholesale; that the above named company is a common carrier, engaged in the transportation of persons and property by railroad between points in the state of Wisconsin, and that as such common carrier said railroad company is subject to the provisions of ch. 87 of the Wisconsin Statutes of 1898 and acts amendatory thereto, and is likewise subject to the provisions of ch. 362 of the Laws of 1905 and acts amendatory thereto; that the railroad operated by said company passes through the city of Medford aforesaid; that the city of Medford has a population of 1800 people and a surrounding country well populated; that the passenger station building maintained by said railway company at said city of Medford is wholly inadequate to accommodate the public; that said building is unsanitary, being unventilated, and contains no toilet rooms whatever; that said building contains only one waiting room for the accommodation of both the male and female traveling public, and that said one waiting room is too small to accommodate the traveling public of said city of Medford; that

there are not enough seats to accommodate all those waiting, and very often there is not even sufficient standing room; that the waiting room is always crowded before every train and many passengers are compelled to wait for trains on the platform, even in cold weather; that said waiting room is often filled with freight and baggage to the exclusion of passengers and to impede their passage to and from the ticket and baggage windows, and that said station building is poorly kept and is unfit for use. Wherefore, petitioner prays that the aforesaid railway company be required to answer the charges herein and that, after due hearing and investigation, an order be made commanding said railway company to build and erect a suitable and proper depot building in the city of Medford, and for such other and further relief as the Commission may deem necessary and just in the premises.

Answering the petition, the respondent denies that it has knowledge or information sufficient to form a belief as to the petitioner's residence or business, and leaves the petitioner to his proof in that behalf; admits that it is a common carrier engaged in the transportation of persons and property between points in the state of Wisconsin, and that as such common carrier it is subject to the laws of Wisconsin as cited; admits that its railroad passes through the city of Medford. Respondent states that its depot in the city of Medford consists of an office 10 by 17 feet, on one side of which is a waiting room 17 by 24 feet and on the other side of which is a freight room 17 by 28 feet; that said waiting room is well ventilated, having three windows and two doors opening outdoors and one door and two windows opening into the office, which has four windows; it denies that it now has knowledge or information sufficient to form a belief as to the inadequacy of the building to accommodate the public, or as to the population of the city of Medford. Further answering, respondent states that it is improving the Chicago division of its railway as rapidly as conditions will warrant; that very large sums of money have recently been, and are now being expended upon cut-offs and other improvements on said property; that in view of said expenditures and the present financial conditions it is impracticable to incur the expense of building a new station at Medford, even if the present one be found inadequate in some respects. Wherefore, respondent requests that the said petition be dismissed if the present

station facilities be found adequate, or that, if they be found inadequate, any order requiring extensive improvements or a new building be suspended until the financial obligations involved can be met in a reasonable and practicable manner by the respondent.

The hearing in the matter was held on Sep. 12, 1911, at Madison. *K. J. Urquardt* appeared for the petitioner and *A. H. Bright* for the respondent.

Witnesses for the petitioner testified that the city of Medford had a population of 1,846 at the last census; that the depot at Medford was built in 1885, but that it is now inadequate to accommodate the traveling public; that often there are from 100 to 125 people at the station, while the waiting room has a seating capacity of not more than twenty and is not sufficiently large to give standing room for intended passengers; that many persons are compelled to sit or stand on the platform while waiting for the train, and that the platform is often inadequate. Witnesses stated that the waiting room is not kept clean, is not properly ventilated, and has no running water; that the present toilet facilities consist of an outhouse across the street which is inaccessible when trains or freight cars stand on the track; that there are two rooms in the outhouse, one of which is locked and used by employes, while the other is unfit for use. Witnesses testified that the city of Medford has a water and sewerage system which could be used in connection with toilet facilities at the depot. It was further stated that the freight house was inadequate; that it contained no stove for heating the room for the preservation of perishable freight, and that last winter the waiting room was largely used for storing perishable property; recently an empty box car has been placed on the ground with heating facilities for perishable freight.

Counsel for the respondent submitted figures showing the number of tickets sold at Medford for the year ending July 31, 1911, to be 21,354, and the revenue therefrom $19,802.93. The freight earnings for six months ending July 31, 1911, amounted to $41,250.52.

Under date of Oct. 5, 1911, counsel for the railway company wrote the Commission that his company would build this coming summer a suitable station, the facilities to be such as are given to other localities of like size. A copy of this communication

was submitted to the petitioner, who desired the Commission to issue an order to that effect.

From a review of the testimony we are convinced that the present depot facilities at Medford are inadequate for the accommodation of passengers and freight at that point, and that a more commodious station with modern toilet facilities should be provided.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company provide a station building at Medford which shall be reasonably adequate for the passenger and freight traffic at that station, in accordance with plans to be submitted to this Commission for approval.

July 1, 1912, is deemed a reasonable date not later than which said station shall be open for traffic.

W. W. WINCHESTER,
F. E. YATES

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Sep. 12, 1911. Decided Dec. 2, 1911.

Complaint was made that the M. St. P. & S. S. M. R. Co. does not maintain adequate station facilities at Amery, Wis. It appears that the waiting room, office, and warehouse of the station are far too small to conduct the present business of the company and that the village of Amery has outgrown the present station building.

Held: The present depot facilities at Amery are inadequate. The respondent is ordered to provide a station which shall be reasonably adequate for the passenger and freight traffic. The station is to be built in accordance with plans to be submitted to the Commission for approval and is to be open for traffic not later than July 1, 1912.

The petition shows that petitioner W. W. Winchester is president of the village of Amery, Wis., and petitioner F. E. Yates is engaged in the law and insurance business at said village; that the above named railway company is a common carrier, engaged in the transportation of persons and property by railroad between points in the state of Wisconsin, and that as such common carrier said railway company is subject to the provisions of ch. 87 of the Wisconsin Statutes of 1898 and acts amendatory thereto, and is likewise subject to the provisions of ch. 362 of the Laws of 1905 and acts amendatory thereto; that the village of Amery, Polk county, Wis., is a station on the main line of said railway company at which all its freight and passenger trains stop; that said village is situated in a well settled farming community and the station of said railway company at Amery is the place where the farmers for a large territory tributary to Amery do their freight and passenger business; that the station building at Amery is an old frame structure erected about twenty-five years ago and has but one small general waiting room; that the office in said station building is wholly inadequate to properly conduct the business of the company with its pa-

trons, and the warehouse in said building is, and for years has been, much too small to store the freight and baggage received by said company at said station; that a large number of the citizens of Amery and practically all the business men of said village have long ago presented a petition to said railway company asking that a station building be constructed at Amery suitable for the business at said station; that in response to said petition the said railway company sent its agents out to look the structure over and said agents admitted the need of a better and newer station building at Amery and that the present one was not a fit and proper place to conduct the business of the company, and therefore petitioners complain of said railway company and allege that it has failed and neglected to maintain at Amery, Polk county, Wis., a station building reasonably adequate and fit to conduct its business at said station; that said station building is too small, that there should be two waiting rooms and other accommodations for the patrons of the railway company than there maintained. Wherefore, petitioners pray that the aforesaid railway company be required to answer the charges herein and that, after due hearing and investigation, an order be made commanding said railway company to furnish adequate depot facilities at Amery, and for such other and further order as the Commission may deem necessary and just in the premises.

In answer to the complaint the respondent denies that it has knowledge or information sufficient to form a belief as to the occupation and place of business of petitioners; admits that it is a common carrier subject to the railway laws of Wisconsin; admits that Amery is a station on its main line at which its freight and passenger trains stop, but denies that it now has knowledge or information sufficient to form a belief as to the allegations regarding the density of the surrounding country or the number of persons using said station. Further answering, the respondent states that the waiting room is twenty feet nine inches by twenty-two feet ten inches; that the office is eleven feet nine inches by twenty feet four inches, and that the freight room is twenty-three feet by twenty-nine feet, and that each and all of said rooms are reasonably adequate for the handling of the business at Amery. Respondent denies that any of its agents were authorized to determine and admit to the petitioners or any other resident at Amery that said station was inade-

quate and denies, on information and belief, that such admissions were made. Wherefore, respondent requests that said petition be dismissed.

The hearing was held on Sep. 12, 1911, at Madison. *W. T. Kennedy* appeared for the petitioners, and *A. H. Bright* for the respondent.

The witness for petitioners testified that the present station building was built five or six years prior to 1891, and is now in a dilapidated condition; that there is but one waiting room with seating capacity for twelve persons and that there is not sufficient standing room for intending passengers; that the freight and baggage room is so overcrowded at times that a great deal of baggage is necessarily stored in the waiting room and on the platform; that neither the depot nor the platform are adequate to accommodate the passenger, freight and express traffic; that the platform is often so crowded with freight and baggage as to seriously interfere with the movement of passengers. The witness cited an instance a week previous to the hearing, when he had nine pieces of baggage belonging to some Boy Scouts, which could not be stored in the baggage room or waiting room, and were placed by the agent on the platform under the narrow projection of the roof, and became damaged by the rain. He stated that there are no toilet facilities in the depot or on the grounds, although the village has a good waterworks system.

Witness introduced some correspondence which had passed between the village president and the general manager of the railway company during the present year, relative to the inadequacy of the present structure to the needs of the traveling public, in which the railway company admitted that the village had outgrown the present building. Witness stated that the population of Amery, according to the last census, was between 750 and 800, but that probably there were 1,200 people living in the vicinity of Amery. He said that the village had been growing very steadily, and that a year ago a pickle factory was induced to locate there, and that this spring a pea canning factory was established.

The witness estimated that 1,700 carloads of freight were shipped out of Amery last year, and that 1,200 cars were received at that station during the same period. He estimated the pas-

senger revenue at about $17,000, freight earnings $45,000, express $4,500, making the total receipts $66,500.

Counsel for respondent submitted an exhibit giving the passenger revenue at Amery for the year ending July 31, 1911, $7,572.20, and the number of passenger tickets sold during the same period 10,757. Another exhibit showed the freight earnings to be $54,745.57, of which $28,907.73 was for freight forwarded and $25,837.04 for freight received.

The testimony clearly shows that the present depot building at Amery is inadequate to accommodate the traveling public, and that a more commodious structure with modern conveniences should be provided. Subsequent to the hearing the railway company wrote to the Commission agreeing to improve the depot facilities in the spring of 1912, a copy of which communication was transmitted to the petitioners, but they request that an order be issued by this Commission.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, provide a station building at Amery which shall be reasonably adequate for the passenger and freight traffic at that station, same to be in accordance with plans to be submitted to this Commission for approval.

July 1, 1912, is deemed a reasonable date, not later than which said station shall be open for traffic.

WESTERN INDIANA CONSTRUCTION COMPANY
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Dec. 5, 1911.

Petitioner alleges that the C. M. & St. P. R. Co. charged an excessive rate for switching two cars of steel rails from one point to another within the railway company's switching limits in Madison, Wis. The distance tariff rate of 4 cts. per cwt. was charged instead of the regular switching rate of $5 per car. The principle governing this case was applied in *Sinaiko Bros. v. C. M. & St. P. R. Co.* 1910, 4 W. R. C. R. 432, where a switching charge not to exceed $5 per car was substituted by order of the Commission for the distance tariff rates theretofore applicable to switching services within the city of Madison.

Held: The charges exacted were exorbitant and unlawful, and $5 per car was the lawful rate for the shipments in question. Refund is ordered on this basis.

The petitioner is a corporation engaged in the construction of a street railway in the city of Madison, Wis. It alleges that the respondent railway company charged it an excessive rate for switching two cars of steel rails from one point to another within the railway company's switching limits in the city of Madison; that instead of charging the regular switching rate per car, it exacted the rate of 4 cts. per cwt. on said shipments. Wherefore, petitioner prays that the respondent be required to refund to it the amount exacted upon said shipments in excess of the regular shipping charge.

Respondent, answering the petition, denies that the rate charged on the said cars for switching services is excessive. It alleges that the lawful rate applicable to said shipment was the distance tariff rate of 4 cts. per cwt., which was the rate applied.

The claim was submitted upon the pleadings, papers, documents and vouchers on file.

It appears that during the month of April, 1911, the Illinois Steel Company shipped from Galewood, Ill., to Madison, Wis., over respondent's line, two cars of steel rails consigned to the petitioner. Upon the arrival of these cars at destination the peti-

tioner was not ready to use the steel and entered into an arrangement with the respondent whereby the same were to be unloaded upon respondent's premises and there retained until the petitioner required them. The unloading and reloading of the cars were to be at petitioner's expense. The railway company unloaded the cars and was paid for such services by the petitioner. The reloading was done by the petitioner. The freight on these cars from Galewood to Madison amounted to $101.98. In addition to this, the petitioner paid the sum of $55.68 for switching the cars after being reloaded to the point of delivery. The cars were switched across the city from the West Madison depot to the Steinle Turret Machine Company's side track, where they were received and unloaded by petitioner.

The principle governing this case was applied in *Sinaiko Bros. v. C. M. & St. P. R. Co.* 1910, 4 W. R. C. R. 432, where a switching charge not to exceed $5 per car was substituted by order of the Commission for the distance tariff rates theretofore applicable to switching services within the city of Madison. See *Sinaiko Bros. v. C. M. & St. P. R. Co.* 1910, 5 W. R. C. R. 426.

We find and determine that the charges exacted of the petitioner for the aforesaid shipments of steel rails were exorbitant and unlawful and that a charge of $5 per car for such shipments was the lawful charge to have applied to the same. The amount of the overcharge is $45.68.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and the same is hereby authorized and directed to refund to the petitioner the said sum of $45.68.

C. R. MARTIN
vs.
SOUTHERN WISCONSIN RAILWAY COMPANY.

Submitted Sep. 16, 1911. Decided Dec. 6, 1911.

The petitioner sets forth that the Southern Wis. Ry. Co., a corporation engaged in the transportation of passengers in the city of Madison and the towns of Blooming Grove and Madison, Wis., has among its rules and regulations regarding the transportation of passengers and their baggage, the provision that baby carriages or carts of any kind are not allowed on cars unless they are folded, so as to occupy as little space as possible, and inclosed in cloth or paper, so as to protect the clothes of the passengers. Conductors or motormen are not permitted to fold or unfold these carriages or to delay the car for others to do so, but will receive and place them when prepared as required by this rule. The petitioner alleges that the rule in question has been in effect some thirty days and is now in effect, and that, insofar as it compels passengers with baby carriages and carts to inclose the same in cloth or paper, the regulation is unreasonable and unjust. Inquiries made by the Commission of the various street railway companies operating in Wisconsin show that none of the companies require folded baby carts to be wrapped or enclosed. This appears to be quite generally the rule with both urban and interurban roads throughout the United States.

Held: The rule of the respondent requiring folded baby carriages or carts to be wrapped or covered with cloth or paper when offered as baggage by passengers is unreasonable. The respondent is accordingly ordered to accept folded baby carriages or carts as baggage without requiring them to be wrapped or enclosed in cloth or paper.

The petition shows that the petitioner is a resident of the city of Madison, county of Dane and state of Wisconsin; that the above named respondent is a corporation engaged in the transportation of passengers in the city of Madison and the towns of Blooming Grove and Madison, Wis.; that the respondent has among its rules and regulations regarding the transportation of passengers and their baggage the following rule, to-wit:

"Baby carriages or carts of any kind are not allowed on any of our cars unless they are folded so as to occupy as little space as possible *and inclosed in cloth or paper so as to protect the clothes of the passengers.* Conductors or motormen are not per-

mitted to fold or unfold these carriages or to delay the car for others to do so, but will receive and place them, when properly prepared as above, so as to cause the least possible inconvenience to all passengers."

The petition sets forth that the above order has been in effect for thirty days, more or less, and is now in effect; that this order, rule and regulation is unreasonable and unjust, insofar as it compels passengers with baby carriages and carts to inclose the same in cloth or paper. Wherefore, petitioner prays that the respondent be required to desist from applying that part of said notice and rule which compels the inclosing in cloth or paper of baby carriages or carts.

In answering the petition the respondent denies each and every allegation, matter and thing set forth in the petition, except as admitted or otherwise answered; the respondent admits that it is engaged in the transportation of passengers in the city of Madison and in the towns of Blooming Grove and Madison, Wis.; admits that it has among its rules and regulations regarding the transportation of passengers the rule quoted in the petition; denies that such a rule is unreasonable or unjust insofar as it compels passengers with baby carriages or carts to enclose the same in cloth or paper, or in any other particular, but alleges that said rule is a reasonable one and conducive to the safety, convenience and protection of the traveling public. Wherefore, the respondent prays that the petition be dismissed.

The hearing was held on Sep. 16, 1911, at Madison. *C. E. Marks* of *Welton & Marks* appeared for the petitioner, and *E. J. B. Schubring* of *Jones & Schubring* appeared for the respondent.

Counsel for petitioner stated at the hearing that the rule requiring the wrapping of folded baby carriages is unreasonable; is practically prohibitive and is out of the ordinary; that it is not according to custom and to the rules of other street railroads in this state or other states. Witness for the petitioner showed by a practical demonstration that if a woman is alone with a baby it is exceedingly difficult for her, after lifting the child out of the cart, to fold the cart and then to enclose it in a piece of paper or place it in a bag. The last named movement requires the use of both hands while holding the baby, and is, according to the witness, impossible of execution unless the child is placed upon the ground. The witness stated that since the

rule became effective she had not seen a go-cart transported by the respondent company, because the rule, as it now stands, is prohibitory in the majority of cases and prevents women from taking their babies to parks or stores unless they carry them the entire distance, or, in addition to the child, carry the go-cart to and from the street car. Witness said that the wheels of a folded go-cart would not soil passengers' clothes more than muddy boots or suit cases, and that there was no greater danger in tripping over baby carts than other articles transported on street cars.

Counsel for respondent emphasized the fact that the franchise granted to the company by the city of Madison specified that passengers may carry a reasonable amount of hand luggage; that the respondents did not regard baby carriages as hand luggage, and that to conserve the convenience of the greatest number of its patrons it was endeavoring to eliminate the transportation of all articles and packages not hand luggage. The superintendent of the company testified that the rule requiring folding baby carriages to be wrapped was established to protect passengers from soiling their clothes and to prevent conductors getting off the car to fold or unfold the baby carts and thus delay the cars. He stated that the rule, as it stands, only inconveniences a few, while a larger number is benefited. He stated that the company has for some time been endeavoring to eliminate the carrying of anything that is unreasonable, in order to maintain schedule time. Witness admitted that two folding baby carts could be placed in the rear vestibule of a closed car and that a folded cart could also be taken into a cross section seat and be kept out of the aisle. He stated that a folded cart could be placed on the car as quickly as a suit case, that it would not take much more room than a suit case, and that it would not necessarily delay the car more than other luggage. He believed that the unwrapped baby cart was a source of danger as passengers might trip on it, and stated that the wrapped article was accepted mainly as hand luggage of passengers going to and from the steam railroad trains.

The testimony shows that the company at one time refused to carry folded baby carts at all, but later accepted them in accordance with the provisions of the present rule. An inspection of the folding carts on sale in Madison's leading furniture stores shows that the following sizes of carts are in common use:

7″ by 16″ by 24″, weighing about 14 lbs.;
8″ by 17″ by 28″, weighing about 15 lbs.;
8″ by 19″ by 28″, weighing about 16 lbs.;
9″ by 22″ by 35″, weighing about 32 lbs.

The measurements given apply to the carts when folded. The size most generally used in the city of Madison is the 8″ by 19″ by 28,″ weighing 16 lbs.

The foldable baby cart is an improvement over the old style perambulator, and is a modern convenience for mothers and other attendants of children to avoid carrying a baby to and from the cars on shopping excursions, or when visiting friends or taking recreation, and when the street car must be used as a part of the journey. This doubtless was the principal reason for its invention. To take advantage of the present rule a woman must wrap or cover the folded cart before leaving home or other place of starting and carry both the baby and the cart to the street car, as it is extremely difficult, if not impossible, to fold and then wrap or enclose the cart with a baby held in the arms before boarding the cars. A woman alone with a child, therefore, is practically debarred from using the street cars when duty or necessity takes her from home, and must either walk or carry the child the entire distance.

Objection is made that an unwrapped folded baby cart is a source of danger to travelers and is liable to damage passengers' clothes by dirt or grease. These objections, if real, do not seem to us to be very weighty, as they apply with equal force to other articles which protrude or are unclean, and can be overcome by making provision for the proper storage or placing of folded baby carts on the cars. It is customary for some street railway companies to place hooks in the vestibules of cars on which to hang the carts, while others provide receptacles or hooks on the outside of the cars. Possibly the turned-up fender at the rear of the car could be utilized for this purpose if it is not deemed advisable by the company to place the carts inside the car.

The testimony does not show the number of folded baby carts that have been handled by the respondent, but we believe that there will be no difficulty in taking care of such as are offered for transportation, except during rush periods. We suggest that statistics be kept by the company of the number of folded baby carts carried each day per car per trip for a certain

period, in order to determine whether many are being transported during rush hours or in unusual numbers, to warrant a modification of the order contained herein.

Inquiries made by the Commission of the various street railway companies operating in this state in regard to the rule applying on foldable baby carts, disclose the information that none of the companies required folded baby carts to be wrapped or enclosed. This rule appears to be quite general with both urban and interurban roads throughout the United States. From the facts presented at the hearing, and from an investigation of the rules and regulations of other street car companies operating in cities of equal size to or larger than Madison, we find and determine that the clause requiring folded baby carriages or carts to be wrapped or covered with cloth or paper is unreasonable.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Southern Wisconsin Railway Company, accept from passengers folded baby carriages or carts without requiring same to be wrapped or enclosed in cloth or paper; this order to take effect at once.

STOWELL MANUFACTURING AND FOUNDRY COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided Dec. 7, 1911.

Complaint was made of excessive charges on certain shipments of hardware from South Milwaukee to Milwaukee, Wis. It appears that for a number of years a special rate has been applied between Milwaukee and South Milwaukee on goods manufactured. Through inadvertence in the publication of a schedule, the wording was changed so that instead of making the special rate apply between Milwaukee and South Milwaukee, it was made to apply from Milwaukee to South Milwaukee, therefore not applying on shipments moving in the opposite direction. The respondent acknowledged its error in the printing of the schedule and later issued a supplement with the correct wording. During the interim the petitioner was charged on the basis of the regular class rate on all shipments to Milwaukee covered by the tariff as previously in effect and subsequently made effective.

Held: There is no reason for the exaction of a higher rate for the commodities in question when moving in one direction between the points involved in this case than when moving in the opposite direction. The regular class rate exacted was unusual, and the commodity rate of 5 cts. per cwt., as subsequently established, would have been a reasonable rate for the shipments in question. Refund is ordered on this basis.

The petitioner is a dealer in malleable and manufacturers' hardware, with its principal office at South Milwaukee, Wis. It alleges that respondent, through an error in G. F. D. 11442—C, charged petitioner an excessive rate on shipments sent forth April 27, 1911, moving between Milwaukee and South Milwaukee; that for many years a special rate has been applied between Milwaukee and South Milwaukee on goods manufactured, which rate is provided in C. & N. W. G. F. D. 11442 A and B; that on April 27, 1911, the respondent issued G. F. D. 11442—C, in the last paragraph of which, instead of making the rate apply between Milwaukee and South Milwaukee, it is made to apply from Milwaukee to South Milwaukee, therefore not applying on shipments moving from South Milwaukee; that respondent acknowledged its error in the printing of such schedule and has

since issued a supplement with the correct wording; that said supplement became effective Aug. 3, 1911; that during the interim respondent charged petitioner on the basis of 8 cts. per cwt. on all shipments to Milwaukee which are covered by this tariff. Wherefore, petitioner prays that respondent be authorized to refund to petitioner the difference between 5 cts. per cwt., which is the legitimate rate, and 8 cts. per cwt.

Respondent, answering the petition, admits all the formal allegations thereof and expresses its willingness to make refund on all shipments made since May 1, 1911.

The claim was submitted upon the pleadings, papers, documents, vouchers and correspondence on file.

The C. & N. W. local tariffs 266–A, 266–B and G. F. D. No. 11442–A named a rate of 4 cts. per cwt. on articles shipped in any quantity, about which complaint is made, between South Milwaukee and Milwaukee. This rate was in force, as shown by the tariffs mentioned, from Feb. 6, 1904, to May 1, 1911, a period of about seven years. Effective May 1, 1911, this rate was changed to 5 cts. per cwt. and made to apply from Milwaukee to South Milwaukee. The rate in the opposite direction on the same date was changed to the regular class rate, which, of course, varies according to the classification of the articles shipped. The class rates between South Milwaukee and Milwaukee are, for first class 12 cts., second class 10 cts., third class 9 cts., and fourth class 8 cts. Effective Aug. 3, 1911, the 5 ct. commodity rate was made to apply between South Milwaukee and Milwaukee. There seems to be no complaint about the change to the 5 ct. rate.

There is no reason for the exaction of a higher rate for the commodities in question when moving in one direction between the points named than when moving in the opposite direction between the same points. It is evident that the fact, that different rates were applicable when the commodities moved in different directions between the same points, was due to an oversight on the part of those who prepared the changes in schedule. Under the circumstances, reparation will be awarded as demanded in the petition.

The following tables show the consignees, dates of shipment, weight of same, rate charged, and amount of excessive charge:

Total refund table I..... $14.12
Total refund table II..... 1.98

Total refund $16.10

We therefore find and determine that the rate exacted of the petitioner for the aforesaid shipments is unusual, and that the reasonable rate applicable to the same is 5 cts. per cwt.

IT IS THEREFORE ORDERED, That the Chicago & North Western Railway Company be and the same is hereby authorized and directed to refund to the petitioner, the Stowell Manufacturing and Foundry Company, the said sum $16.10.

JOHN S. DONALD
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted May 9, 1911. Decided Dec. 8, 1911.

The petitioner alleges that the train service on the Lancaster division of the C. & N. W. Ry. Co. is inadequate. The principal complaint of the petitioner arises out of insufficient time given to transact business in the city of Madison between the arrival and departure of trains on the Lancaster division. Residents of Verona, Mt. Horeb, Dodgeville and the farming community adjacent thereto are greatly inconvenienced by the present schedule and are asking that an additional train, arriving at Madison at about 9:00 a. m. from the west and departing in the afternoon, be operated on this division. Subsequent to the filing of the complaint, the Commission suggested the advisability of operating, as an experiment, a mixed train, leaving Lancaster in the early morning, arriving at Madison as early as possible, and departing for the west late in the afternoon. A mixed train was operated according to this plan from July 10 to Sep. 10, 1911. The earnings evidently show that this train was not a losing proposition. Since the hearing numerous requests have been received that the train operated as an experiment be again put into service for the convenience of the local traffic. In view of the fact that the people residing along this division are not asking for a passenger train and are willing to accept the service of a mixed train, it would seem that a train carrying both freight and passengers could be so scheduled as to serve their reasonable requirements. As extra freight trains are operated almost daily on this division, it would not be a hardship upon the company to place in service a mixed train running upon a fixed schedule.

Held: The passenger service on the Lancaster division of the respondent railway company is inadequate. Respondent is ordered to operate a train daily except Sunday carrying passengers upon its line between Madison and Lancaster, Wis., or any point west of Lancaster that it may choose, so as to arrive at Madison not earlier than 7:15 a. m., and to depart from such station not later than 7:00 p. m.

The petitioner is a farmer residing near the village of Mt. Horeb, Dane county, Wis. He alleges that the respondent railway company's train service on its so-called Lancaster division is inadequate and insufficient for the needs of the public residing along said division; that the station building maintained by the respondent at Mt. Horeb is inadequate for the accommodation of passengers and for the handling and storing of freight, and is not properly lighted, heated or ventilated.

The respondent, answering the petition, admits the formal allegations thereof, and denies that the service on the division mentioned is inadequate or insufficient. It alleges that it would be impossible to change the schedule of trains now running without breaking important connections at Madison with interstate trains, and that there is not sufficient business to warrant the operation on said division of any additional passenger train west of Madison.

The hearing was held on May 9, 1911, *J. S. Donald* appearing in his own behalf and the respondent being represented by *F. D. Fulton,* its general attorney.

The time of the arrival and departure of trains at Madison on the Lancaster division of the respondent railway company, is as follows:

Leave Madison,—	No. 601	2:15 p. m.
	No. 607	8:00 a. m.
Arrive Madison,—	No. 614	12:20 p. m.
	No. 620	5:40 p. m.

The principal complaint of the petitioner arises out of insufficient time given business men and professional men, who are obliged to depend on the service of the Lancaster division, to transact business in the city of Madison between the arrival and departure of trains on the same day. Residents of Verona, Mt. Horeb, Dodgeville, and the farming community adjacent thereto are greatly inconvenienced by the present schedule, and are asking that an additional train, arriving at Madison at about 9:00 a. m. from the west and departing in the afternoon be operated on this division. At present, the east-bound trains to Madison are No. 614, which leaves Lancaster at 8:30 a. m., Mt. Horeb at 11:29 a. m. and arrives at Madison at 12:20 p. m., and train No. 620, leaving Lancaster at 1:50 p. m., Mt. Horeb at 4:50 p. m. and arriving at Madison at 5:40 p. m. West-bound trains from Madison to Lancaster are No. 617, which leaves Madison at 8:00 a. m., arriving at Mt. Horeb at 8:52 a. m. and reaching Lancaster at 11:45 a. m., and No. 601, leaving Madison at 2:15 p. m., arriving at Mt. Horeb at 3:10 p. m. and reaching Lancaster at 6:00 p. m. All of these trains make connections with Chicago and Milwaukee trains at Madison. They also make connections with trains at Montfort Jct. to and from Galena, and also make connections with mail trains of different branches. Such trains are operated primarily for the conven-

ience of passengers destined to or arriving from Chicago and Milwaukee.

Madison is the capital of the state and the county seat of Dane county. It is the largest city within a radius of many miles and forms the business center and principal market of a large population residing along the Lancaster division of the respondent's line. Under the existing schedule, lawyers desiring to attend sessions of the circuit, county or supreme courts, business men desiring to transact business, and people generally wishing to visit Madison upon missions of pleasure or business, find it impossible to reach Madison in time to transact business and return to their homes on the same day, for the reason that but two hours intervene between the arrival and departure of trains on the Lancaster division. Unfortunately, this period covers the noon hour, when all offices and places of business are practically closed.

Several years ago a train was operated on this division which started at Lancaster in the early morning, reaching Madison early in the forenoon and returning late in the evening. Such train rendered satisfactory service. It is now contended by the petitioner that the train was well patronized and that there was no justification for discontinuing it. On the other hand, the respondent contends that the train was discontinued for the reason that the traffic did not warrant its continuous operation. It is also maintained that the traffic on this division has increased but slightly since the discontinuance of the operation of such train. Respondent objects to operating train No. 614 upon a schedule fixing the arrival time at Madison at 9:00 a. m. for the reason that such schedule would discommode a very large number of people who desire to connect with trains for the south-east and north. It appears that about 70 per cent of the traffic carried on train No. 614 is destined for points beyond Madison. Furthermore, to arrive in Madison at such hour it would be necessary for the train to leave Galena at 4:20 a. m. and Lancaster at 5:30 a. m., which would inconvenience people at such points because of the untimely hour of the departure of the train.

It can not be denied that the existing accommodations are not at all times sufficient for the volume of through and local traffic. The trains are often filled beyond their seating capacity. Instances were related where ladies were obliged to take seats in the smoking car because the other coaches were filled.

Subsequent to the filing of the complaint, the Commission suggested the advisability of operating as an experiment a mixed train, leaving Lancaster in the early morning and arriving at Madison as early as possible, and departing for the west late in the afternoon. Accordingly a mixed train was operated from July 10 to Sep. 10, 1911, which arrived at Madison at 7:15 a. m. and departed at 7:00 p. m., It connected with train No. 507, leaving Madison at 7:45 a. m. for all points north, with No. 610 leaving Madison at 8:05 a. m. for Milwaukee, with No. 510 leaving Madison at 8:10 a. m. for Janesville and Chicago, with No. 518 leaving Madison at 9:10 a. m. for Chicago and intermediate points. The train was scheduled to leave Madison at 7:00 p. m. that it might make connections with No. 504 which arrives at Madison from Minneapolis at 5:25 p. m., with No. 516 which arrives at Madison at 5:40 p. m. from Winona and local points, with No. 513 which arrives at Madison at 5:23 p. m. from Chicago and intermediate points. In addition to such connections it also connected with two refrigerator and one passenger train coming from the west and with other trains arriving at Madison at about 7:00 p. m.

The passenger earnings show that this train, east-bound, known as No. 610, earned in fifty-five days from the passenger traffic $647.57, being an average of $11.77 per day; and west-bound, known as No. 607, earned from the passenger traffic $1,266.07 in fifty-six days, or an average of $22.60 per day. The average earnings of the train from passenger traffic amounted to approximately $34.37 per day, or an average of 26.9 cts. per mile. It is contended that the actual cost of operating this train per day amounted to $59.57.

We have been unable to obtain the freight earnings of this train, which of necessity were much greater than the passenger earnings. It is very evident that the train was not a losing proposition. The respondent contends that the freight carried on this train could have been carried on other trains and therefore the freight earnings shown by this train amount to deductions from the earnings of other trains. It is not denied that there are almost daily extra freight trains required on this division to care for the traffic; in fact, recently Mt. Horeb alone required at entire train to haul the stock shipped at that point.

Since the hearing numerous requests have been received from business men, professional men, farmers and persons whose oc-

cupations were not given, that the train which was operated as an experiment be again put into service for the convenience of the local traffic. Although the schedule was not entirely satisfactory, the public seems to be willing to concede to the company the right to operate the train upon any schedule that will result in the largest earnings, providing the time between the arrival of the train at Madison and its departure from such station is sufficiently long to enable persons to transact their ordinary business. The statement that a vast majority of the passengers traveling on this division are destined to points beyond Madison, is not a satisfactory response to the demands of those who require the facilities of the railway company for local travel. There is a large population tributary to Madison, residing along this division, who require local service of a character that will not require them to remain in Madison over night when going there upon professional or business engagements. Their number is sufficient that their interests cannot be ignored merely because a larger number require a service of a different character. In view of the fact that they are not asking for a passenger train and are willing to accept the service of a mixed train, it would seem that a train carrying both freight and passengers could be so scheduled as to serve their reasonable requirements. As extra freight trains are operated almost daily on this division, it would not be a hardship upon the company to place in service a mixed train running upon a fixed schedule.

After a careful investigation of all the facts and circumstances, it is our judgment that the passenger service on the Lancaster division of the respondent railway company is inadequate, and that a reasonable service will require the operation of an additional train so scheduled as to enable persons residing on and tributary to said division to arrive in the city of Madison early in the forenoon and to depart from said station late in the afternoon.

NOW, THEREFORE, IT IS ORDERED, That the Chicago & North Western Railway Company be and the same is hereby required to operate a train daily, except Sunday, carrying passengers upon its line between Madison, Wis., and Lancaster, Wis., or any point west of Lancaster that it may choose, so as to arrive at Madison not earlier than 7:15 a. m. and to depart from such station not later than 7:00 p. m.

THE ROBERT ROM COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Sep. 12, 1911. Decided Dec. 8, 1911.

Complaint was made of excessive charges on a carload shipment of foundry patterns for obsolete machinery from Milwaukee to Beaver Dam, Wis. The western classification provides a rate of one and one-half times first-class rates, or 48 cts. per cwt. for wood and metallic patterns, in any quantity. This was the only rate in effect and applicable at the time the shipment moved, and is the only rate in effect at the present time. Petitioner contends that since foundry patterns for obsolete machinery have a mere nominal value, the regular rate for foundry patterns was excessive for the obsolete forms, and that a reasonable rate for the shipment in question would have been the highest rate published for carload shipments in class 5, which is 12½ cts. per cwt.

Held: Under the circumstances the regular foundry pattern rate of 48 cts. per cwt. was exorbitant, and a reasonable charge for the shipment would have been the fifth-class rate, or 12½ cts. per cwt. Refund is ordered on this basis.

The petitioner is a corporation dealing in plumbers', steam and gas fitters' supplies, at the city of Milwaukee, Wis. It alleges that on June 10, 1911, it shipped one carload of foundry patterns from Milwaukee to Beaver Dam; that such patterns weighed 37,300 lbs.; that the tariff rate on such patterns is one and one-half times first-class rate, or 48 cts. per cwt.; that the total charge upon said shipments exacted by the railway company was the sum of $228.32, which is in excess of a reasonable charge for the transportation services rendered; that the highest rate published for carload shipments is class 5, which is 12½ cts. per cwt., which rate would have been a reasonable rate to have applied to such shipments. Wherefore, petitioner prays that the railway company be directed and required to refund to it the difference between the amount actually collected on said shipment and the amount based upon a rate of 12½ cts. per cwt.

The respondent, answering the petition herein, admits the formal allegations thereof, and alleges that if the said shipment moved as stated in the petition, the proper lawfully published rate was applied upon the same

The matter came on for hearing on Sep. 12, 1911. The petitioner was represented by *G. L. Waite,* its secretary, and the respondent by *F. G. Wright,* its assistant commerce counsel.

It appears from the testimony that the patterns in question were the accumulation of years of a Chicago manufacturer, who retired from business about three years ago. The petitioner bought all the stock of such manufacturer and the patterns were given to it without charge. They were taken to Milwaukee and stored by the petitioner and finally sent to the Beaver Dam Foundry Company. Such patterns have a mere nominal value. The only reason for saving them is that, in the future, some of them may be required in making parts of machines, which are now obsolete. Probably very few, if any, will ever be required. Under the circumstances, such patterns have no greater value than ordinary old lumber that may be used for fuel.

The western classification provides that wood and metallic patterns, in any quantity, shall be charged at one and one-half times the first-class rate. This was the only rate that was in effect and applicable at the time that the shipment moved, and is the only rate in effect at the present time. Ordinarily, patterns used by manufacturers of castings and by foundrymen are very valuable, but when the castings or parts become obsolete, such patterns lose their value and become mere junk. It is conceded by the railway company that the charge is an excessive one under the circumstances. The rates upon patterns was established with reference to their value and are not regarded generally as excessive. In the instant case the patterns have practically no value whatever. The cost of the transportation is probably many times in excess of what will ever be realized from the use of the patterns. Under the circumstances, patterns of this character should not be assessed at more than the fifth-class rate. The case is a peculiar one and it is not likely that many similar ones will occur. The necessity for a specific tariff covering such cases is probably not required.

For the reasons stated, we find and determine that the rate of 48 cts. per cwt. exacted of the petitioner for the aforesaid shipment of foundry patterns from Milwaukee to Beaver Dam, is exorbitant, and that a reasonable charge for such shipment would have been the fifth-class rate, being 12½ cts. per cwt. The charge, based upon a rate of 12½ cts. per cwt., amounts to $46.63. The overcharge for which reparation will be awarded is $181.69.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and the same is hereby authorized and directed to refund to The Robert Rom Company the said sum of $181.69.

F. MAYER
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY,
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Dec. 11, 1911.

Petitioner alleges excessive charges on three carload shipments of scrap iron from Monroe to West Bend, Wis., and prays that a joint rate of 8 cts. per cwt. be established for shipments of scrap steel and scrap iron between the points in question, and that reparation be made on this basis. The petitioner was charged the class rate. The rate charged is higher than commodity rates prevailing under like conditions between various points in Wisconsin and also higher than the cost of transportation for low grade commodities warrants. The joint rate of 8 cts. per cwt. for which the petitioner asks in the present case would not seem to be very much out of line with the rates generally in effect.

Held: The rates exacted of the petitioner were unreasonable and exorbitant, and a rate of 8 cts. per cwt. would have been a reasonable rate for the shipments in question. It is ordered that the C. & N. W. R. Co. and C. M. & St. P. R. Co. discontinue charging the rates now in effect on scrap iron and steel between Monroe and West Bend, and in lieu thereof substitute the joint rate of 8 cts. per cwt. Refund is ordered on this basis.

The petitioner is a dealer in iron and steel scrap and has his office at Chicago, Ill. He alleges that on Nov. 3, 1910, Dec. 21, 1910, and March 16, 1911, respectively, he shipped over respondents' lines three carloads of scrap iron from Monroe to West Bend, Wis., and that a rate of 10 cts. per cwt. was charged by the respondents upon said shipments, which petitioner considers excessive; that the rate from St. Paul to Chicago is 8 cts. per cwt., and, although Monroe is not a competitive point, the rate in question should not be higher than such rate; that a rate of even 8 cts. per cwt. is in excess of a fair rate from Monroe to West Bend and that 7 cts. per cwt. would be a fair rate; that a rate of 8 cts. per cwt. should not only govern the above shipments, but should also be made effective and tariffs published accordingly. Wherefore, petitioner prays that a refund of $10.86 on the shipment moving on or about Nov. 3, 1910, $14.12 on the ship-

ment moving on or about Dec. 21, 1910, and $19.07 on the shipment moving on or about March 16, 1911, be made to him, and that a joint rate of 8 cts. per cwt. on scrap steel and scrap iron be established for shipments of such commodity from Monroe to West Bend.

The Chicago & North Western Railway Company, answering the petition, admits all the formal allegations thereof, and alleges that a rate of 8 cts. per cwt. is in effect between points mentioned in connection with the Illinois Central Railroad Company and the Chicago & North Western Railway Company, which was made effective by order of the Commission; that it is not just to require this respondent to maintain a joint through rate with the Chicago, Milwaukee & St. Paul Railway Company; that the through rate already established was fixed at the request of the petitioner and in the instant case known to the petitioner, who could have taken advantage of the 8 ct. rate by shipping said cars of scrap iron over the Illinois Central Railroad and Chicago & North Western Railway lines; that a rate lower than 8 cts. per cwt. would be unreasonable.

Respondent Chicago, Milwaukee & St. Paul Railway Company, answering the petition, denies that a rate of 8 cts. per cwt. would be a reasonable rate for transportation of said commodity from Monroe to West Bend, and prays that the petition be dismissed.

The claim was submitted upon the pleadings, papers, vouchers and documents on file.

It appears from the statement in evidence that petitioner shipped three carloads of scrap iron from Monroe to West Bend, one of which was shipped on or about Nov. 3, 1910, one on or about Dec. 21, 1910, and one on or about March 16, 1911. The charges exacted for such shipments were as follows:

Date of arrival at destination.	Car. No.	Weight.	Rate.	Charges paid.
11—7—10	281361	54300	10c per cwt.	$54 30
12—29—10	3372	70600	10c " "	70 60
4—17—11	58700	58700	5c " " / $1.40 per gr. ton	66 03

In view of the fact that the statute of limitations was enlarged by amendment from six months to one year within which claims for overcharge shall be filed with the Commission, which

amendment to the statute became effective April 29, 1911, and that none of the shipments herein made were barred before such amended statute became effective, all of the claims here presented come within the year limitation of the amended statute. (*Osborn v. Jaines,* 1863, 17 Wis. 573; *Pleasants v. Rohrer,* 1863, 17 Wis. 577.)

In *Mayer v. I. C. R. R. and C. & N. W. R. Co.* 1909, 4 W. R. C. R. 268, a joint rate of 8 cts. per cwt. on the commodity in question moving from Monroe to West Bend was established, in consequence of an order of the Commission, and is now in effect. The distance from Monroe to Milwaukee by way of the line of the C. M. & St. P. Ry. Co. is 105 miles, and from Milwaukee to West Bend via the line of the C. & N. W. Ry. Co. is 34 miles, making the total distance over the route the shipments in question moved, 139 miles. The distance via the line of the I. C. R. R. from Monroe to Madison is 37 miles, and via the line of the C. & N. W. Ry. Co. from Madison to West Bend is 116 miles, making the total distance via this route 153 miles. Previous to Jan. 24, 1910, the rate on scrap iron in carload lots between Monroe and West Bend via the lines of the I. C. R. R. and the C. & N. W. Ry. was 10 cts. This was class D rate, and was the same as and based on the joint class D rate between Rock Island, Ill., and West Bend, Wis., via either the line of the C. R. I. & P. Ry. Co. or C. B. & Q. R. R. Co. and that of the C. & N. W. Ry. Co., a distance of about 275 miles. The combination class D rate between Monroe and West Bend via the lines of the C. M. & St. P. Ry. and the C. & N. W. Ry. is 12 cts. There are no joint rates in effect between these points over this route, so that the rate of 12 cts. per cwt. would apply if it did not so happen that the C. M. & St. P. Ry. has a commodity rate of $1.40 per gross ton between Monroe and Milwaukee. The 5 ct. rate from Milwaukee to West Bend is class D rate. This rate amounts to $1.12 per gross ton, which, added to the C. M. & St. P. Ry. Co's rate of $1.40 per gross ton, makes a charge of $2.52 per gross ton as a through rate over the lines of these roads. As commodity rates on scrap iron are generally named in dollars and cents per gross ton, it is more convenient, for comparative purposes, to put the rate complained of on that basis.

Examination of tariffs on file with the Commission shows that there are numerous commodity rates on scrap iron in carload

lots between points on Wisconsin lines, both state and interstate. Most of these are gross rates when the same rate applies between many points. Practically all of these are considerably lower than class rates, but they are generally confined to single line hauls. There are, however, a few joint commodity rates between certain points, and some class rates, but they are mostly between points on one of the large lines and points on a connecting smaller line. The large lines, excepting the Chicago & North Western Railway Company and the Chicago, St. Paul, Minneapolis & Omaha Railway Company, seem to avoid joint rates as far as possible.

The tables given below show the general trend of such commodity rates on the line of the Chicago & North Western Ry. Co. The rates on other lines are the same, that is, between the same points or same group of points within about the same territory, and as there are no great differences in mileage, the tables of group rates may be taken to represent conditions generally. The rate asked for in this case, 8 cts. per cwt., which is $1.79 per gross ton, would not seem to be very much out of line with the rates generally in effect.

TABLE I.

RATES ON SCRAP IRON, CARLOADS.

[2] Tarriff rate is in cents. Gross ton rates are not exact in all cases, fractions less than one-half cent being dropped and over one-half cent added as one cent.

TABLE II.

MISCELLANEOUS SPECIFIC RATES LOCALLY VIA C. & N. W. RY.

From	To	Miles.	Rate per gross ton.	Class D rates per gross ton.
Sheboygan, Wis.....	Port Washington, Wis. ...	27	$0.56	$1 01
"	Cedar Grove.....	14	56	90
Manitowoc	Port Washington.....	52	67	1 23
Milwaukee.....	"	26	56	1 01

The respondents contend that as the joint rate now in effect over the lines of the Illinois Central Railroad and the Chicago & North Western Railway was put into effect at the instance of the petitioner, he should have shipped over this route. However, it appears that the tracks of the Illinois Central Railroad Company are so located with respect to the petitioner's place of business that he can not conveniently at all times use such route. It often occurs that in order to avail himself of the joint rate in effect, it is necessary to incur a large additional expense in hauling his commodity from his place of business to the track of the Illinois Central Railroad.

We do not see any reason for denying the petitioner a through rate between Monroe and West Bend over respondent's lines merely because he has such a rate over one of the respondents lines and the lines of another connecting carrier, especially in view of the inconvenience to which he is subjected in making shipments over the route where such joint rate is available.

The consideration given to the cost of transportation for the low grade and heavy commodity of the kind in question in *Mayer v. I. C. R. R. et al*, 1909, 4 W. C. R. R. 268, is applicable in all essential respects to the instant case, and therefore it is unnecessary to again review the subject. After a careful consideration of all the facts and circumstances, we are constrained to hold that the rates exacted of the petitioner for the aforesaid shipments were unreasonable and exorbitant, and that a rate of 8 cts. per cwt. would have been a reasonable rate to have applied to such shipments.

The amount of overcharge on the shipment which moved Nov. 7, 1910, is $10.86; on the shipment which moved Dec. 29, 1910, $14.12; on the shipment which moved Apr. 17, 1911, $19.07. The total overcharge on the three shipments amounts to $44.05.

NOW, THEREFORE, IT IS ORDERED, That the Chicago & North Western Railway Company and the Chicago Milwaukee & St. Paul Railway Company discontinue charging the rates now in effect on scrap iron and steel between Monroe and West Bend, and in lieu thereof charge the rate of 8 cts. per cwt. on such commodities.

IT IS FURTHER ORDERED, That the Chicago & North Western Railway Company and the Chicago, Milwaukee & St. Paul Railway Company be and the same are hereby authorized and directed to refund to the petitioner the said sum of $44.05.

CITY OF MARINETTE

vs.

CITY WATER COMPANY OF MARINETTE.

Decided Dec. 14, 1911.

Complaint was made by the city of Marinette, Wis., as to the rates charged for water by the City Water Co. of Marinette. The matters complained of are the rates charged both for fire protection and for general service, the practice of fixing special rates for certain classes of service, and of supplying water at meter rates where other rates are not specified.

The valuation made by the Commission of the physical property of the plant shows a cost of reproduction new of $356,683, and a present value of $326,759.

Held: The cost of marketing bonds is an element to be considered in arriving at the value of the property of a utility, but this does not mean that all discounts constitute proper additions to physical value. If this were the case, a company with poor credit which has been obliged to allow a large discount, would have a higher value and be entitled to a return on a greater valuation than a utility owning precisely similar property but whose credit was good enough so that it was not obliged to issue its bonds at a considerable discount. Similarly, a company would probably find it necessary to offer a greater discount on bonds bearing a lower rate of interest than on those bearing a higher rate. In the present case it is questionable whether the total amount of discounts on the bonds issued in 1890 constitutes a legitimate addition to the physical value of the plant. With respect to the issue of 1910, there seems to be no reason for adding to the value of the plant because of the cost of marketing this new issue of bonds, except possibly for such part of this outstanding issue as increased the bonded indebtedness above the former level.

The operating expenses for the past ten years indicate that no reduction in total revenues can be made under present conditions. The charge that rates for fire protection are unreasonably high, is not well founded and no reduction can be made in the charge for fire protection at the present time. A comparison of the Marinette rate with rates charged by other Wisconsin cities fails to show that the flat rates are unreasonable. The statement of revenues and expenses for unmetered services shows that the revenues from consumers on a flat rate basis are less than the cost of that service, and no general reduction can be made in the flat rate schedule for the present. Although the existing schedules are by no means perfect, it may be questioned whether they are unreasonable, either in themselves or as between fire protection and general service, to a degree which would require an order at this time putting in effect a new schedule of rates. No definite order regarding rates is made at this time, but it is recommended that the utility and the city agree to the schedule proposed by the Commission and which is deemed reasonable and just.

In the present case, in a few instances, water is supplied through the same services for fire protection and for ordinary industrial uses. In previous decisions the Commission has held that a water utility ought to make no charge for privately owned hydrants set at the expense of the consumer, but that the city should pay the entire cost of fire protection furnished through hydrants. The difficulty of making a rate for the inside fire protection systems in the present case is that water is supplied for fire protection and for industrial uses through the same services. In such cases these services should be metered, or the utility should insist that no connections to the fire protection system should be made for any purpose other than fire protection.

The utility is under obligation to put in meters and sell water at the meter rates unless exempted by the Commission. In the present case there is undoubtedly a considerable waste of water which would be checked by the introduction of meters, and it is recommended that meters be installed for all consumers except residences, and for all residences having cellars and sewer or cesspool connections.

Complaint was made informally that the utility had violated its rule giving a consumer dissatisfied with the assessed rates the right to attach a meter and pay for water at meter rates, provided the meter were attached under the direction and subject to the inspection of the company and in accordance with the other stipulations set forth in the rule.

Held: As long as this rule remains in effect, the utility is bound by its provisions and must conduct its business in accordance therewith.

Complaint in this matter was filed with the Commission on Jan. 23, 1908. It sets forth that the respondent is the successor and assignee of the American Water Works and Guarantee Company, which company was the original grantee of a franchise adopted and approved July 14, 1887, which franchise was granted by an ordinance of that date authorizing the American Water Works and Guarantee Company to construct, operate, and maintain water works in the city of Marinette. The complaint further shows that on Nov. 29, 1907, the respondent surrendered its franchise and took an indeterminate permit.

The matters complained of are the rates as charged by respondent both for fire protection and for general service, and the practice of fixing special rates for certain classes of service and of supplying water at meter rates where other rates are not specified.

Hearings were held on Sep. 20, 21, and 22, 1909, on Nov. 1, 1909, and on March 2 and 3, 1910, at the office of the Railroad Commission at Madison. Appearances were as follows: For petitioner, *H. R. Goldman;* for respondent, *George Lines* and *E. C. Eastman.*

By the terms of the franchise the city of Marinette agreed to rent from respondent, for a term of twenty years, except as otherwise provided in the ordinance, 125 fire hydrants, to be located on the original pipe system, and to pay for these an annual rental of $5,750. The franchise further provided that in case the city desired to have additional hydrants placed upon the original pipe system, no rental should be charged for such hydrants, provided that the city paid the cost of putting in such hydrants and the cost of keeping them in repair. It was also provided that at any proper season of the year the city might require the water company to make extensions of the pipe system with hydrants placed on such extensions at intervals of not to exceed 400 feet on the average, for which the city would pay an annual rental of $30 per hydrant.

The rates to private consumers were to be not less than $4 per year to any consumer, and connections to the mains and the laying of service pipes should be at the expense of consumers. Following are the rates for general service as prescribed by franchise:

Annual Rates.

Banks, one faucet	$6.00
Bakeries, daily average each bbl. of flour used, per bbl.	3.00
Barbershops, each chair	3.00
Baths, private, per tub	3.00
Baths, public, per tub	6.00
Baths, hotel or boarding house, per tub	5.00
Blacksmith shop, each fire	3.00
Building purposes, brick per thousand laid	.10
" " stone per perch	.07
" " plastering, per 100 yds	.25
Boarding house (no license less than $10), per room	1.50
Laundries	Special
Offices with wash basin	3.00
Printing offices, six hands or more, per hand	1.50
Photograph galleries	Special
Residences occupied by one family, four rooms or less	4.00
" " " " " each additional room	1.00
Restaurants, hotels, halls, and theaters	Special
Stables, private, including washing carriage, one horse	3.00
" private, each additional horse or cow	.75
" livery, boarding or sale, including washing carriage, per horse (no license less than $20)	Special
Steam boiler, per horse power	Special
Saloons	Special
Drinking water in mills, each 50 men employed	5.00
Stores and shops	Special
Urinals, private, with self-closing faucets	1.00
" public, with self closing faucets	3.00
Water-closets, private, self-closing	2.50
" " public, hotels, restaurants, saloons and stores	3.50
Street sprinkling, per cart per day, from any hydrant or hydrants	.50

Meter Rates

When the daily consumption is 100 to 1,000 gallons.....	$0.30
1,000 to 2,000 gallons per day per 1,000 gallons.....	.25
2,000 to 5,000 " " " " " "	.20
5,000 to 10,000 " " " " " "	.15

Season Rates.

Sprinkling lawns with one-eighth inch nozzle four hours per day, fifty feet front or less.....	$5.00
Each additional front foot.....	.05
Streets (corner lot measurement on both fronts for street sprinkling) per foot, in addition to lawn sprinkling.....	.05
Fountains, to be used not more than six hours per day for the season of six months, as follows:	
One-sixteenth inch jet	4.00
One-eighth inch jet	6.00
Three-sixteenths inch jet.....	10.00
Soda fountains	Special
All supplies not enumerated subject to special rates.	

In addition to the amount paid by the city for fire protection, there has been paid by the city for several years a sum to provide for interest on a filter plant which the water company installed. The payments amounted to $1,250 per year. It appears that during the year ending May 1, 1902, the first of these payments was made, amounting to $937.50. For the next six years $1,250 was paid annually, and the last payment recorded was one of $625, made during the year ending May 1, 1909. Since that time the city seems to have made no payment in accordance with the provisions of this contract, maintaining that the contract did not continue in force after the date on which the water company surrendered its franchise and took an indeterminate permit.

With this statement of the grounds for the controversy it may be well to take up the question of the valuation of the plant, and such phases of its history as have an effect upon the value.

The valuation of physical property, as fixed by our engineering staff, as of June 30, 1908, showed that the cost of reproduction of the property on that date was $362,400, and its value in existing condition was $331,848. In making up this valuation, 8,222 feet of 8-inch and 3,500 feet of 6-inch wrought iron mains were included as galvanized mains, but it was afterwards shown that these were not galvanized but were coated black pipe. With this correction the value of the physical property, as of June 30, 1908, was as shown below:

TABLE I.

VALUATION OF PHYSICAL PROPERTY.

BY THE COMMISSION'S ENGINEERING STAFF.

As of June 30, 1908.

CLASSIFICATION.	Cost of reproduction.	Present value.
1. Land and right of way	$1,300	$1,300
2. Wells and intakes	65,226	63,931
3. Reservoirs, storage tanks	6,397	5,977
4. Distribution system	171,972	162,864
5. Pumping plant equipment	42,872	30,674
6. Buildings and miscellaneous structures	21,270	18,223
7. Office furniture and appliances	353	247
8. Tools and instruments	720	432
9. Horses, wagons and miscellaneous	704	517
Total items 1—9	$310,814	$284,165
10. Add 12% (see note below)	37,298	34,100
Total items 1—10	$348,112	$318,265
11. Stores and supplies	6,366	6,366
Total items 1—11	$354,478	$324,631
12. Paving	4,098	3,852
Total items 1—12	$358,576	$328,483

NOTE:—Addition to cover engineering, superintendence, legal expenses, interest during construction, and contingencies.

On behalf of the city a valuation of the physical property was made by Geo. W. Sturtevant, which valuation differs to some extent from the value as fixed by the Commission's staff. To aid in comparing these valuations, the results obtained are here shown in the following table:

TABLE II.

COMPARISON OF VALUATIONS OF PHYSICAL PROPERTY.

MADE BY THE COMMISSION'S ENGINEERING STAFF AND BY GEO. W. STURTEVANT ON BEHALF OF THE CITY.

CLASSIFICATION.	COST OF REPRODUCTION.		PRESENT VALUE.	
	Commission.	Sturtevant.	Commission.	Sturtevant.
1. Land and right of way	$1,300	$2,250	$1,300	$2,250
2. Wells and intakes	65,226	60,346	63,931	51,336
3. Storage tanks and reservoir	6,397	6,353	5,977	5,483
4. Distribution system	171,972	153,405	162,864	124,098
5. Pumping plant equipment	42,872	41,554	30,674	26,184
6. Buildings and miscellaneous structures	21,270	20,861	18,223	16,817
7. Office furniture and appliances	353	350	247	228
8. Tools and instruments	720	720	432	432
9. Horses, wagons and miscellaneous	704	630	517	462
Total items 1-9	$310,814	$286,469	$284,165	$227,290
10. Engineering, interest, legal etc	37,298	35,808	34,100	28,410
Total items 1-10	$348,112	$322,277	$318,265	$255,700
11. Stores and supplies	6,366	6,366	6,366	6,054
Total items 1-11	$354,478	$328,643	$324,631	$261,754
12. Paving	4,098	4,381	3,852	4,031
Total items 1-12	$358,576	$333,024	$328,483	$265,785

It will be seen that the valuation placed on the physical property by the city places the cost of reproduction about $25,000 below that arrived at by the Commission, and the value in existing condition $63,000 below the Commission's figures. In the cost of reproduction the principal difference between the valuations is in the value placed upon the distribution system. A great deal of testimony was advanced on behalf of the city to show that the value placed upon the distribution system by the Commission is higher than the actual value. This testimony dealt principally with the character of the soil and the depths at which pipe are laid, as affecting the cost of the system. These elements, however, were taken into consideration by the staff in fixing unit values for the distribution system and a careful study of local conditions was made before the values were fixed. A careful review of the testimony introduced at the hearings fails to show that any change should be made in the cost of reproduction as determined by the staff. The relatively great difference in the present value between the city's valuation and that of the Commission appears to have been due largely to different methods of arriving at the effect of depreciation. The method followed by the staff is the method which has been generally used in cases of this kind and there seems to be no reason for departing from it at this time.

Aside from some testimony bearing on the depth of covering over mains and on the nature of the soil as affecting the investment, the respondent introduced very little evidence bearing upon the value of the physical property. It was stipulated on behalf of the respondent, however, that its failure to offer proof of error in the Commission's valuation should not be construed as an acceptance of that valuation of the physical property, except for the purposes of this decision. As far as the valuation of the physical property is concerned, then, it seems that the present case involves few, if any, disputed points, and the only matter to be determined in connection with the valuation is the extent and nature of adjustments which should be made because of non-physical elements which affect the value of the property. Before leaving the subject of physical value, however, it may be well to call attention to a few of the particulars in which the Marinette plant differs from others which have been valued. Table III shows the cost new per thousand gallons pumped, per consumer, and per mile of main:

TABLE III.

SHOWING COST NEW PER UNIT.

Plant.	Cost New Per		
	M gallons pumped.	Consumer.	Mile of main.
1	$0.425	$147 50	$7,620
2	.308	142.00	6,380
3	.866	206 00	13,380
4	.344	123 00	.....
5	.869	108 70	7,570
6	.324	136 80	10,780
7	6.320	.....	11,370
8	.....	.....	3,930
9	.380	93 00	12,020
10	50.500	51 20	3,030
11	.556	92 90	6,775
12	.....	.....	7,890
13	.796	.....	9,520
14	.555	121 50	9,050
15	3.275	161 30	11,110
16	.842	204 00	.....
17	.662	154 40	.....
18	.581	241 50	9,210
19	1.009	170 50	13,520
20	.....	.....	7,250
Median	.662	142 00	9,050
Marinette	.538	118 20	9,980

It will be noted that the investment per thousand gallons pumped and per consumer is lower than the median of plants which have been valued. The investment per unit of pumpage appears low because the total pumpage is rather high for a plant of the size of the one in question. It is hardly fair to judge of the investment by comparing the investment per unit of pumpage with other plants which have a much lower pumpage per consumer. With regard to the investment per consumer, it is also true that the value of a comparison with other utilities is not a very good index of the reasonableness of investment, because of the fact that increased saturation does not often cause a corresponding increase in investment.

Probably the best basis of comparison is the cost new per mile of main. Of course, this will be affected very considerably by the size of the community served and other elements, but a comparison is nevertheless of some value. It will be noted that the cost new per mile of main at Marinette is considerably above the median of the plants which have been valued by the Commission and above the general level for those utilities, although it is not the highest. An analysis of the investment, as shown in table IV, will help to explain why this apparent excess of investment exists.

TABLE IV.

SHOWING PERCENTAGE DISTRIBUTION OF TOTAL COST NEW.

No.	Land.	Wells, intakes, suctions.	Filters, reservoirs, standpipes.	Distribution system.	Power plant equipment.	Buildings and miscellaneous structures.	Office furniture and appliances.	Tools.	Miscellaneous.

[1] No. 10 excluded.
[2] No. 15 excluded.

This table fails to reveal anything abnormal about the reproduction cost of the respondent's property, except for the cost of wells, intakes, and suctions, and that of buildings and miscellaneous structures. It is seen that over one-fifth of the total reproduction cost is represented by the cost of wells, intakes, and suctions, which is due largely to the fact that it has been necessary to obtain the water supply from Green Bay, which involved a large outlay for intakes. Under buildings and miscellaneous structures the greater part, if not all of the apparent excess, is caused by the cost of the filter house and the houses occupied by the superintendent and the engineer. There seems to be no reason to question the necessity for the investment in the filter house, as a complete and adequate filter system seems to be necessary in order for the utility to supply pure water. It may be argued that the residences of the engineer and the

superintendent are not strictly a part of the water supply system, but it appears to have been the practice of the utility to furnish the use of these houses as a part of the salaries paid to these employes. If the total salaries, including the rental value of these houses, are not excessive, no injustice would appear to result from the inclusion of this property in the plant value.

During the fiscal years 1909 and 1910 the reports of the respondent show that additions to the physical property were made, amounting to $1,877.29, which would make the cost new on June 30, 1910, of physical property $360,453. The value in existing condition of property included in the staff's valuation would be lower on June 30, 1910, than on June 30, 1908. This would be offset, to some extent, by the increases during the two years in question, so that, if the value in existing condition of June 30, 1910, be taken as the same as that of two years previously, no injustice would seem to result, although this amount is probably slightly above the actual present value.

The two non-physical items which affect the value of the property are the bond discounts and the developmental costs or going value.

The first issue of bonds was dated Oct. 1, 1887, and an issue of $200,000 was authorized, although it appears that not all of these were issued. According to the testimony offered at the hearing, it was found necessary in 1890 to borrow a larger amount than $200,000. A new trust deed was prepared, dated March 1, 1890, to secure an issue of $300,000 of bonds. Under the terms of that trust deed $200,000 of the bonds of 1890 were set aside in the hands of the trustee to protect whatever bonds of the issue of 1887 were outstanding. The estimated cost of marketing these bonds was stated as $15,000 for the first $200,000 and $6,872.50 for the next $100,000. These were all 6 per cent bonds. The president of the water company testified that he was unable to state the exact amount of the cost of marketing the first of these issues of bonds, but stated as his belief that the first $200,000 were sold at about 92½ per cent of their par value. The $6,872.50 given as the cost of marketing the last $100,000 of these bonds was stated to be the exact cost.

As indicated in previous decisions of the Commission, the discount or cost of marketing bonds is an element to be considered in arriving at the value of the property of a utility. This does not mean that all discounts constitute proper additions to phys-

ical value. If this were the case a company with poor credit, which had been obliged to allow a large discount on its bonds, would have a higher value and be entitled to a return on a greater valuation than a utility owning precisely similar property, but whose credit was good enough so that it was not obliged to issue its bonds at a considerable discount.

Similarly, a company would probably find it necessary to offer a greater discount on 4 per cent bonds than on those earning 5 per cent, and more on 5 per cent than on 6 per cent bonds. In the present case the bonds bore 6 per cent interest, which seems to be as high a rate as was ordinarily paid on bonds of similar nature. Owing to the inability of the utility to furnish definite data concerning these bonds issues, it is not possible to state what effect the condition of the company's credit had upon the bond discounts. It may be that some allowance should be made for the cost of marketing these bonds in arriving at the value upon which rates should be based, although it is questionable whether the total amount of discounts on bonds constitutes a legitimate addition to the physical value of the plant.

The bonds of 1890 matured on March 1, 1910, and the authorized bonded indebtedness was then increased to $500,000, of which $381,000 was issued and outstanding at the end of the fiscal year. The cost to the utility of this new issue appears to have been made up of a discount of $18,400 and a few smaller and relatively unimportant expenses. Bonds of the new issue bear interest at 5 per cent and appear to have been issued to replace the bonds of 1890 which were retired. Except possibly for such part of this outstanding issue as increased the bonded indebtedness above the former level, there seems to be no reason for adding to the value of the plant because of the cost of marketing this new issue of bonds.

GOING VALUE

The utility has submitted no testimony bearing directly upon the question of what allowance should be made for going value, nor has it made claim to any definite amount. A number of exhibits were offered in evidence, however, dealing with the growth of business and the financial condition of the company up to date, from which it is possible to determine rather closely what additions should be made because of the cost of develop-

ing the business. Table V shows the number of gallons pumped, the number of general users, and the number of hydrants during the years ending on the dates indicated:

TABLE V.

34	1899	4,991	389	12.8
Average				8.3
Maximum				12.9
Minimum				4.8

From the foregoing tables it will be seen that the period of most rapid growth of the plant was completed by the end of 1895. This holds true of the amount of water pumped, the number of general consumers, and the number of hydrants. Since 1895 there has been a development, it is true, despite the fact that the total population of the city was less in 1910 than in 1895, but this later development has been rather slow and gradual, as distinguished from the rapid growth of business up to 1895. The saturation of territory supplied by this plant was better in 1895 than the average saturation of the later date shown in table VII. The period up to and including 1895 appears to have been the period of development, during which losses incident to building up the business might be expected to occur. By the end of 1895 the business had reached a point

where development expenses, that is, the normal costs of building up a business and securing a reasonable saturation of territory, appear to have practically ceased. By that time the business had reached a point of development such that any losses which might occur after that date could hardly be attributed to lack of business. The development period seems to be so clearly marked that the actual expense of building up the business, or the losses sustained during the developmental period, can be rather closely stated.

The next table shows the operating expenses, exclusive of any allowance for interest, depreciation, or salaries of general officers, from May 1, 1888, to Jan. 31, 1896, and the surplus or deficit for each period shown. Salaries of general officers have been excluded because such salaries were paid in only two of the years shown and because they do not seem to represent so much a return for services actually rendered as a disposition of the profits. According to the testimony of the president of the utility, the salaries of general officers are not fixed but are amounts paid whenever the condition of the company seems to warrant such payment after all operating expenses, including interest, have been provided for. The records and exhibits submitted in evidence in connection with this case substantiate the testimony referred to, and tend to show that the company has not regarded salaries of general officers as an operating expense, but rather as a bonus paid out of the net income or profits of the concern.

Following is the table:

TABLE VIII.

Period.	Expenses.	Earnings.	Surplus.
May 1, 1888—May 15, 1889	$2,235 03	$4,205 42	$1,970 39
Mar. 15, 1889—Mar. 11, 1890	3,975 34	14,689 75	10,714 41
" 15, 1890—Jan. 31, 1891	4,713 26	13,940 00	9,226 74
Jan. 31, 1891— " " 1892	6,387 32	19,519 62	13,132 30
" " 1892— " " 1893	5,993 01	21,495 66	15,502 65
" " 1893— " " 1894	7,476 86	25,752 75	18,275 89
" " 1894— " " 1895	7,932 17	26,266 43	18,334 26
" " 1895— " " 1896	9,934 16	28,694 69	18,760 53
Total	$48,647 15	$154,564 32	$105,917 17

The exhibits submitted by the utility show that the book value of the property on March 15, 1889, was $199,330.66. No statement of the cost of construction of the original plant or the cost of additions to the physical property has been furnished,

but it seems evident that the book value of the property bears little relation to the real value or to the actual cost, at least during the later years of operation. For the purpose of arriving at the adjustments of valuation, to be made because of the cost of developing the business, then, it appears necessary to start with a value somewhat below that shown by the books. Although it is not possible to state with entire accuracy what value should be used, it is believed that $180,000 as the cost of the plant on March 15, 1889, will be sufficiently accurate for use in this connection. The additions to property as reported by the utility since 1889 are shown in the earning value computations shown on the following pages. Table IX is a computation to show the effect of the cumulative deficits, based on the assumption that all the reported expenses of operation are legitimate and proper operating expenses, and that none of the reported extensions and additions to property were such that they should have been provided out of the depreciation fund. According to this table the amount of the accumulated deficits is $98,602.

TABLE IX.

EARNING VALUE COMPUTATION.

Period ending	Value beginning of period.	Extensions during period	Average value for period.	Interest at 6 per cent.	Depreciation at 1 per cent.	Total.	Net earnings.	Value at end of period.
March 15, 1890....	$180,000	$34,669	$197,335	$11,840	$1,973	$228,482	$10,715	$217,767

Value at end of period	$471,759
Original value plus extensions	373,157
Accumulated deficits	$98,602

A further examination of the reports filed by the utility as exhibits in this case points to the conclusion that the foregoing result cannot be given much weight in determining what additions should be made to the physical valuation because of non-physical elements. If we assume that the cost of the property of the utility at the beginning of the period covered by the computation was $180,000, or considerably less than the book value for that time, and that the reported additions to property were actual extensions of the physical property, we find the investment in physical property at the end of the period to be $373,-157, as compared with the cost new as determined by the Commission's valuation of $358,576, a difference of $14,561. This difference may arise from three causes:

1. The actual value of the property at the beginning of the period may have been less than $180,000, although this estimate seems to be a reasonable one.

2. The reported additions to property may not be actual extensions of physical property.

3. Part of the apparent increases of physical property may really have been replacements and renewals which should have been provided for out of a depreciation reserve.

To just what extent each of these elements has affected the apparent investment in the physical property of the utility, the available facts do now show, but the facts presented seem to indicate that the final result has been affected by some of them. Table X shows the reported or book value of the property from 1889 to 1909.

The fact that for a number of years the book value is exactly $225,000 and for one year exactly $261,000 seems to indicate that the values as given are not entirely accurate. From 1890 to 1892 there is no reported change in the property value and the same holds true from 1899 to 1902. The exhibits of property prepared by the respondent, however, show that additions were actually made to the physical equipment of the plant during these periods, so that the reported value of the property does not seem to correspond with the additions as made. In 1898 $200,000 was added to the book value to cover an issue of stock of a par value equal to the nominal addition, and it may be that some of the other additions reported cover items which affect the real value as little as this stock issue.

TABLE X.

REPORTED OR BOOK VALUE.

Date	Property
Mar. 15, 1889	$199,330.66
" 15, 1890	225,000.00
Jan. 31, 1891	225,000.00
" 30, 1892	225,000.00
" 31, 1893	234,686.38
" 31, 1894	258,154.81
" 31, 1895	261,000.00
" 31, 1896	270,809.59
Apr. 30, 1897	281,284.14
" 30, 1898	486,746.04
May 1, 1899	491,071.03
Apr. 30, 1900	491,071.03
" 30, 1901	491,071.03
May 1, 1902	491,071.03
" 1, 1903	551,012.10
" 1, 1904	562,193.95
" 1, 1905	570,225.28
" 1, 1906	573,935.55
" 1, 1907	579,000.09
Apr. 30, 1908	582,317.17
" 30, 1909	583,479.76

No provision was made by the utility for depreciation during the twenty years covered by our computations, nor have we any record of what has been expended for renewals and replacements, but it seems only reasonable to suppose that some such replacements and renewals must have been made, which would make the apparent additions to property greater than actual additions.

The result of this and of the defective property account is to make the apparent value greater than the actual. Another thing which makes the result obtained in table IX appear excessive, is the fact that the salaries of general officers are included in the operating expenses upon which the surpluses shown in the table are based, although, as stated before, salaries of general officers appear to have constituted a means of disposing of profits, or of all surplus existing after necessary interest payments were made, rather than an actual expense of operation.

The next table shows the earning value as computed with all salaries of general officers excluded from operating expenses, but including as extensions all increases in the book value of the property.

" " 1903....	273,079	59,941	303,050	18,183	3,107	354,310	20,127	334,183
" " 1904....	334,181	11,182	339,772	20,386	3,463	369,212	15,904	353,308
" " 1905....	353,308	8,031	357,323	21,439	3,559	386,337	18,612	367,695
" " 1906....	367,695	3,711	369,551	22,173	3,617	397,196	21,796	375,400
" " 1907....	375,400	5,064	377,932	22,676	3,661	406,801	21,648	385,153
" " 1908....	385,153	3,317	386,811	23,209	3,703	415,382	22,378	393,004
" " 1909....	393,004	1,162	393,585	23,615	3,726	421,507	22,401	399,106

Value at end of period	$399,106
Original value plus extensions	373,157
Accumulated deficits	$25,949

According to this table the accumulated deficits amount to $25,949, but this amount is in error because of the defective data relating to extensions and the exclusion of the entire amount of salaries of general officers from the expenses of operation. It does, however, serve as an index of approximately what the extent of deficits has amounted to.

A third computation of going value is given in table XII.

In preparing table XII an allowance of $1,000 per year has been made for salaries of general officers. Depreciation has, for the sake of convenience, been computed at ½ per cent, because it seems certain that the column headed "Extensions during period" includes as extensions amounts which were really renewals. If a deduction from reported extensions had been made for each year, the result would have been the same as the one reached by making these deductions from the allowance for depreciation. According to this method of computation, the accumulated deficits amount to $13,428, or less than the amount arrived at in the two last mentioned tables.

Value at end of period.....	$386,585
Original value plus extensions.....	373,157
Accumulated deficits.....	$13,428

Even this is probably excessive, as the reported value of the property of the utility seems to contain other elements than the actual investment as added to from time to time. To the extent that the book value exceeds the actual cost of the property, of course, the figures upon which the computations of earning value have been based are excessive, and the resultant amount of accumulated deficits is above the correct amount. In view of these facts here considered, it does not appear that the valuation as placed upon the property by the engineering staff should be increased to any considerable extent because of losses in developing the business.

In connection with the physical valuation it is necessary to consider the item of paving, with reference to what part of such paving has been disturbed by the respondent in laying water mains. No exact or reliable records of this appear to have been kept, but the estimate submitted by the utility places the amount of brick paving, which has been disturbed, at from 500 to 1,000 lineal feet, and the amount of macadam at from 2,000 to 3,000 feet. If we place the amounts at 750 feet and 2,500 feet, respectively, the value of paving which should be included

in the final valuation of physical property is $328, and $308 in existing condition. With this revision the final valuation of physical property shows a cost new of $354,806, and an existing value of $324,939, on June 30, 1908. Additions since that date bring the cost new up to $356,683, and the present value to about $326,759.

As stated above, it seems that only slight additions should be made on account of going value. It may even be that an accurate statement of original cost and of additions to property would result in an earning value table which would show an earning value lower than the physical value. Such additions as should be made on account of the discount on bonds will bring the value somewhat above the physical values of property new or in present condition as arrived at by the staff's valuation. If rates are adjusted upon a valuation substantially the same as the cost of reproduction, it appears that the result will be fair to both parties. Such examination as can be made with available data fails to show that any higher valuation can be sustained, and it is equally true that the non-physical elements are of sufficient importance to make any very marked reduction from this point appear unfair. For purposes of this case it may be well to compute interest upon a value of $350,000 in working out a set of rates, which can be adjusted so as to produce a reasonable return to the utility.

APPORTIONMENT OF PROPERTY.

The next step is the apportionment of the value of the property between the two branches of service, fire and general. As each branch of service should bear the burden of taxes, interest, and depreciation upon the share of the investment occasioned by it, it becomes necessary to make a careful apportionment of the value of the property. The general principles upon which the Commission's apportionment has been made have been outlined heretofore, so that it is not necessary, at this time, to make any extended explanation of the methods used. It may, however, be well to call attention to the method of apportioning some portions of the property.

Wells, Intakes and Suctions.

It is assumed that the present reasonable maximum demand for fire service in Marinette is a rate of 1,600 gallons per minute, or 2,300,000 gallons per day, equivalent to ten such streams as are specified in the franchise. Those streams were to have been taken from different hydrants, each through 100 feet of 2½-inch hose and an inch ring nozzle. They were to throw water to a height of 100 feet, or to a horizontal distance of 130 feet, in still air. Only eight streams were called for in that test, but what would have been regarded as a measure of adequate fire service at that time will hardly be adequate at the present time. Moreover it is reported that ten leads of standard 2½-inch fire hose and two leads of 1½-inch or 2-inch hose were actually in use during the Sawyer-Goodman Company's lumber yard fire of Aug. 1, 1908, and other leads of 2½-inch hose were in readiness for use at the same time.

The company reports that the average daily consumption of water in Marinette during the past two years has been in the neighborhood of 1,600,000 gallons. From this data and the usual variation in the rates of consumption for regular service it appears that the maximum demand which the plant must be prepared to meet for general service is in the neighborhood of 2,780 gallons per minute, or at the rate of 4,000,000 gallons per day.

It is assumed that if separate plants were in use, the supply for fire service would be taken from the river and that for general service from Green Bay. It has been estimated that a 16-inch pipe, 1,000 feet long, to supply river water for fire service, and a 16-inch Green Bay intake, 6,000 feet long, for general service, would be about as satisfactory under the respective maximum demands of those services as is the existing line during the period of combined maximum demands of the two kinds of service. The sum of the values of the existing 12-inch Menominee river suction and the Green Bay intake is apportioned between fire and general service in the ratio of the estimated costs of the intakes assumed for the separate plants, as explained above. This results in charging to fire service 12 per cent of the values of the two inventory items mentioned, and 88 per cent to general service.

Storage Tanks and Filters.

The storage tanks act in conjunction with the filters to provide a supply of filtered water for the varying demand rates of the different branches of service. When the demand rate exceeds the rate at which the filters alone will supply the water, an automatic float valve allows water to flow from the storage tanks to the pump below the filter from which the high service pumps take their supply. A separate fire service plant would have neither filters nor storage tanks, but as there is evidently more capacity in the plant for supplying filtered water (and therefore more investment) than is needed for general service alone, there is evidently some investment due to the combination of both kinds of service in the business of one plant. This extra investment above that required for general service, should be shared equally by the two divisions of the business.

Since the estimated maximum demand of general service is one-third greater than the rated capacity of the ten Jewel gravity filters, it is evident that such service requires either a certain investment in storage tanks, with a part of the present installation of filters, or all of the existing filters and a lesser storage capacity. It has been assumed that the general service should have all of the filter installation and an 80,000 gallon tank. The two existing tanks have a total capacity of 300,000 gallons. 8/30 or 27 per cent of the value of the tanks has been apportioned equally between fire and general service as the extra investment due to their combination in one plant.

Table XIII shows the apportionment of investment between the two classes of service as made by the Commission's staff:

TABLE XIII.

APPORTIONMENT OF VALUATION OF PHYSICAL PROPERTY.

CLASSIFICATION.	FIRE SERVICE.		GENER'L SERVICE.		TOTAL.	
	New.	Present value.	New.	Present value.	New.	Present value.
Land	$650	$650	$650	$650	$1,300	$1,300

Percentages	*38.3*	*38.5*	*61.7*	*61.5*	.....	.....

On behalf of the utility an apportionment of the property was made by Charles V. Seastone and Daniel W. Mead, which apportionment shows that 46 per cent of the investment is chargeable to fire and 54 per cent to general service. The methods used in making this apportionment were somewhat different from those used by the Commission. Each class of service was considered separately and an estimate made of the reduction which could be made below the existing investment for a plant designed to supply fire service only, and for a plant which would take care of only the general service. The following summaries show the estimated reduction in each class of property and in the total for separate plants designed to carry the fire and general service independently:

SUMMARIZED ESTIMATE OF REDUCTION IN VALUATION OF MARINETTE WATER WORKS AND EQUIPMENT.

FOR GENERAL SERVICES ONLY.

By Seastone and Mead.

	Percentage reduction in cost of reproduction
Land and Right of Way	20
Tank for Storage of Filtered Water	100
Not necessary for domestic service only, as clear well at filters will provide sufficient storage to provide for small fluctuations in demand.	
Pumping Plant	40
Domestic consumption 100 gallons per capita per day. Population 15,000. Average consumption 1,500,000 gallons per day. Maximum short time pumpage direct to mains will be about 200% of average or at a rate of 3,000,000 gallons per day. The present Worthington pump rated 3 million gallons would handle this demand and as no filtered water pressure reservoir is provided, a small unit high service must be held in reserve if continuity of service be maintained. One of the Deane Holyoke 2,000,000 gallon pumps might be used as a reserve unit. The other Deane pump could be dispensed with, resulting in a reduction in capacity of 30% in investment. Taking into account the proportionately larger decrease in boiler and auxiliary equipment if fire service were dispensed with, a fair value for reduction in cost of pumping and power plant would be 40%.	
Power Plant Buildings	30
Affected by reduction in capacity.	
Machinery Foundations	40
Filter Plant	30
Present installation 10 units. At a rate of 120,000,000 gallons per acre per day, capacity is 3,100,000 gallons in 24 hours. For domestic service only, 5 units would be required, and allowing 2 extra units for reserve, the reduction would be 30%.	
Tools, Livery and Miscellaneous	30
Paving	20
Low Service Pump	50
Intakes and Suctions	26.7
Do away with river intake and reduce lake intake 20%.	
Distribution System	32
All hydrants and connections and trenching for and laying hydrants, cut out.	
Cast iron mains	
Half of 12″ reduced to 10″	
All 10″ " " 8″	
" 8″ " " 6″	
Half of 6″ cut out	
" " 6″ reduced to 4″	
Laying and trenching, reduced proportionately.	
Valves—Cut out one-half of those above 2″	
Reduce remaining 8″ to 6″ and 6″ to 4″	
Total reduction	32

SUMMARIZED ESTIMATE OF REDUCTION IN VALUATION OF MARINETTE WATER WORKS AND EQUIPMENT

WERE FIRE SERVICE ONLY MAINTAINED.

By Seastone and Mead.

	Percentage reduction in cost of reproduction
Land	20
Artesian Wells and Piping	100
Suction Wells and Intakes. Cut out lake intake and add a duplicate river intake	80½
Tanks for filtered water storage	100
Filters and Appurtenances	100
Pumping Plant. Cut out one Deane pump, all condensing equipment, feed water heaters and filter engine and low service pump	35
Buildings—Pumping Station	35
Filters Building	100
Machinery Foundations	35
Tools, etc	50
Stores, Livery, etc	50
Distribution System:	
All services with trenching and laying, cut out.	
All small mains (2″ and under) with trenching, therefore, cut out	17.8
All meters and meter boxes, cut out	
All small valves (2″ and under), cut out	
Combined reduction on total cost of reproduction	42

The method by which Seastone and Mead have arrived at the conclusion that 46 per cent of the investment should be charged to fire and 54 per cent to general service is as follows: A plant designed for general service only would require an investment equal to 68 per cent of the existing investment, and for fire service only 58 per cent of the existing investment would be required. If, then, the plants were separate, according to this mode of figuring, the total investment would amount to 126 per cent of the present amount. Of this cost, equal to 126 per cent of the present property, the investment in the fire service plant, an amount equal to 58 per cent of the value of the existing plant would constitute 46 per cent, and the investment in the plant for general service, amounting to 68 per cent of the value of the existing plant, would be 54 per cent.

The method of apportionment adopted by Seastone and Mead differs so much from that used by the Commission's engineers that a direct comparison is difficult. The method followed by the Commission has been to make a direct apportionment of existing property, while the method used by Seastone and Mead has been to estimate the cost of two entirely separate plants and use the relative values arrived at by this estimate as a basis for apportioning existing property. The result obtained by the Commission's apportionment shows that the part of the property attributable to fire service is somewhat less than is usually found to be chargeable to such service in the case of plants of similar size. Generally speaking, about one-half of the investment in a water utility of such size is usually chargeable to the fire service, but in this case the proportion is lower, due principally to the manner of apportioning the investment in wells, intakes, and suctions, and to the relatively large demand of the general service. The Commission's apportionment agrees quite closely with that made by Seastone and Mead, so that there appears to be no reason to increase the proportion charged to fire service. The Commission has estimated the maximum demand rate of the general service at 4,000,000 gallons per day, as compared with an estimate of 3,000,000 gallons made by Seastone. Such estimates, of course, cannot represent the exact amount which would be used at the highest demand rate, but it is believed that the Commission's estimate of 4,000,000 gallons is little if any in excess of the actual rate of demand. Seastone's apportionment shows a slightly larger part of the distribution system to be due to the fire service than resulted from the Commission's apportionment, but aside from this there seems to be no reason for making any change in the Commission's estimate. Even with adjustments of the apportionment to correspond with a lower demand rate for general service, and possibly a slight change in the apportionment of the distribution system, it does not appear that the final apportionment will show more than 40 per cent of the property to be due to the fire service, leaving 60 per cent as the share due to general uses of water other than for fire protection.

OPERATING EXPENSES.

Table XIV shows the operating revenues of the utility from 1902 to 1910:

TABLE XIV.
OPERATING REVENUES.
1902-1910.

Year ending.	Meter.	Hydrant.	Filter int.	Street sprinkling.	Domestic.	Total.

June 30, '09,.....	5,674 64	9,143 75	1,250 00	130 25	25,923 07	42,121 71
June 30, '10.....	6,059 11	9,170 00	1,250 00	117 00	26,653 22	43,249 33

This table shows the steady growth of the business from year to year, earnings for each year being greater than for the one preceding.

Table XIV does not include the non-operating revenues nor the revenues from water sold for construction purposes, which would raise the total revenues from all sources above the results shown above. Classified according to the form prescribed by the Commission, the operating revenues and operating expenses for the past two years were as shown in the following summary:

TABLE XV.
OPERATING REVENUES AND EXPENSES.

	1909.	1910.
OPERATING REVENUES.		
Earnings from commercial sales.....	$27,396 18	$28,504 21
Earnings from industrial sales.....	4,201 53	4,208 12
Earnings from hydrant rentals.....	9,143 75	9,170 00
Earnings from street sprinkling	130 25	117 00
Miscellaneous earnings from operation.....	1,444 08	1,708 47
Total	$42,315 79	$43.707 80
OPERATING EXPENSES.		
Pumping	$7,708 44	$8,769 64
Distribution.....	597 08	817 27
Commercial.....	1,433 21	1,330 77
General	4,329 83	6,706 77
Undistributed	83 25	41 50
Taxes.....	6,855 96	8,700 22
Total	$21,007 77	$26.366 17
Available for interest, profits and depreciation.....	$21,308 02	$17,341 63

With a valuation of property amounting to about $350,000 it requires no further proof to show that if expenses as reported are all reasonable and legitimate expenses, no reduction in total revenues can be made. The amounts shown above as available for

interest, profits and depreciation for 1909 are sufficient to yield a return of 6.1 per cent and of a little less than 5 per cent during 1910. A further examination of reported operating expenses will, however, be necessitated before we can say whether the nominal rates of return as shown here are the actual returns, or whether the apparent return is diminished because of excessive operating expenses or because of the inclusion under the head of operating expenses of items which are really a return in some form upon the investment. The next table is a detailed statement of operating expenses for the fiscal years ending June 30, 1909, and June 30, 1910:

TABLE XVI.

*Credits.

An examination of the operating expenses of the past ten years fails to show that the direct expenses of operation, as reported for the year ending June 30, 1910, are abnormal. As reported by the utility, expenses exclusive of salaries of general officers, taxes, interest, and Railroad Commission expenses since 1900 were as follows:

TABLE XVII.

Year ending	Amount.	Per cent of 1901 expenses.
April 30, 1901	$10,902 56	100
" " 1902	10,237 60	93.9
" " 1903	12,746 64	117.2
" " 1904	17,638 83	161.8
" " 1905	13,947 29	127.9
" " 1906	12,211 45	112.
" " 1907	12,771 49	117.2
" " 1908	12,903 48	118.4
June 30, 1909	10,504 16	96.4
" 30, 1910	11,535 92	105.8

According to this table the reported expenses for 1910 were less than the general level of expenses for a number of years, but whether or not they are lower than they can be expected to remain, is difficult to determine. Pumpage has decreased in general since 1902, the lowest point having been reached in 1908, as shown in table V. The number of consumers has increased to some extent. The effect of the decreased pumpage seems to have been to lessen the cost of fuel, as there has been a general decrease since 1903. Even excluding fuel, however, we find that the remaining expenses were less during 1909—1910 than the general level of these expenses since 1901. The result of this exclusion of fuel costs is shown in the following table:

TABLE XVIII.

Year ending	Amount including fuel.	Fuel.	Amount excluding fuel.
April 30, 1901	$10,902 56	$3 645 21	$7,257 35
" 30, 1902	10,237 60	2,944 47	7,293 13
" 30, 1903	12,746 64	5,072 96	7,673 68
" 30, 1904	17,638 84	5,026 78	12,612 06
" 30, 1905	13,947 29	4,601 94	9,345 35
" 30, 1906	12,211 45	3,725 53	8,485 92
" 30, 1907	12,771 49	3,481 52	9,289 97
" 30, 1908	12,903 48	3,720 76	9,182 72
June 30, 1909	10,504 16	3,459 56	7,044 60
" 30, 1910	11,535 92	3,419 87	8,166 05

Expenses for the year ending April 30, 1904, were unusually high, because of the large amount expended for repairs during that year, but even excluding that year from consideration for comparative purposes, we find the expenses for the last two years to be somewhat below the normal level, and it seems that allowance should be made for this fact in making up a statement of expenses for rate determination. The foregoing tables of expenses, as stated, do not include taxes, interest, salaries of general officers, and Railroad Commission expenses. Taxes amounted to $6,855.96 and $8,700.22 for the years ending June 30, 1909, and June 30, 1910, respectively. Interest should be computed at a reasonable rate upon the value of the property. Railroad Commission expenses may best be distributed over a number of years, so that the cost of this proceeding will not be included in its entirety in the expenses of the year which is used as a basis for adjusting rates.

Salaries were paid to general officers, for the years shown in the foregoing tables, as follows:

TABLE XIX

SALARIES PAID TO GENERAL OFFICERS.

Year	Amount	Year	Amount
1901	$6,000 00	1906	$1,500 00
1902	4,500 00	1907	1,500 00
1903	2,500 00	1908	1,500 00
1904		1909	3,893 65
1905	1,000 00	1910	3,863 25

In the case of the *City of Janesville v. Janesville Water Co.* 1911, 7 W. R. C. R. 628, 648, the Commission held that $2,000 per year was sufficient allowance for salaries of general officers in that case. The conditions at Marinette are nearly enough like those at Janesville to lead to the conclusion that the same amount is a large enough allowance for use in this case. The fact that considerably more than this amount has been paid in some years, does not alter this conclusion. According to the testimony of the president of the water company, the payments which have been made for salaries of general officers were not payments for services rendered during the years in which such payments were made, but were rather payments on the general salary account, made whenever the financial condition of the utility would permit. That is, the payments to general officers were, to some extent at least, regarded as a means of disposing of profits and to

that extent should not be treated as an operating expense. Instead of paying dividends, it appears to have been the practice of the company to pay to the general officers as salaries substantially the amounts which might have been available for dividends. In view of these facts, it seems that the amount included under the heading of salaries of general officers should not necessarily be the amount paid in any one year, but rather an amount which seems reasonable, and it is believed that $2,000 per year is entirely ample for this purpose.

As a result of these adjustments, we find that the operating expenses upon which our computations should be based are about as follows:

TABLE XX.

Pumping.		
Pump labor	$1,541.65	
Purification labor	21.48	
Steam generated	4,716.52	
Lubricants	214.50	
Purification supplies and expenses	1,505.82	
Misc. pumping sta. supplies and expenses	42.40	
Maint. of steam pumping equipment	433.96	
" " auxiliary equipment	20.24	
" " source of supply	3.75	
" " intakes	25.87	
" " purification equipment	135.08	
" " " buildings	2.25	
" " pumping "	106.12	
Total pumping		$8,769.64
Distribution		
Street department labor	$41.00	
Maintenance of reservoirs	11.25	
" of dist. mains	529.41	
" of services	178.20	
" of meters	57.41	
Total distribution		817.27
Commercial.		
Collection salaries and commissions	$1,319.25	
Reading meters and delivering bills	3.00	
Promotion of business sup's. and exp's.	8.52	
Total commercial		1,330.77
General.		
Salaries of general officers	$2,000.00	
Misc. general office supplies and expenses	356.49	
Law expenses—general.	150.00	
Misc. general expenses.	70.25	
Railroad Commission expenses	500.00	
Total general		3,076.74
Undistributed and Insurance	$41.50	
		41.50
Total of foregoing		$14,035.92

Owing to the fact that the reported expenses for the year ending June 30, 1910, were considerably lower than the general level for the period since 1900, and more than $1,000 below the expenses for 1905, 1906, 1907, and 1908, it seems that some allowance should be made for the fact that the expenses are probably below the normal. The low level of expenses has undoubtedly been due largely to efficient management, but the change in the business of the company during recent years has not been great enough to warrant the conclusion that, even with a continuation of such management, expenses can be expected to remain as low as they were during 1909 and 1910. In order to arrive at a normal year's operating expenses, it is believed that additions should be made to the reported expenses, so as to bring the total up to $14,600 per year. Even this is less than the average for the past ten years, if, in determining that average, general officer's salaries, amounting to $2,000 per year, and Railroad Commission expenses are added to the amounts shown in table XVII.

Taxes increased from $6,855.96 in 1909 to $8,700.22 in 1910. If the utility is required to pay an increased amount of taxes, it seems unquestionable that the total amount paid becomes an expense of operation and should be so considered.

The composite life of the Marinette Water plant was found to be 56.95 years. If the depreciation reserve is set aside on a 4 per cent sinking fund basis the depreciation rate will be 0.48 per cent, and on a 2 per cent sinking fund basis the depreciation rate will be 0.95 per cent. On a straight line basis the annual rate will be 1.76 per cent. The cost new of actual depreciable property is very nearly $320,000. In practice it has usually been found best to set aside the depreciation reserve on approximately a 2 per cent sinking fund basis. The amount to be set aside annually to provide a depreciation reserve would be about $3,000.

A reasonable return for interest and profits would seem to be 7 per cent of the plant value used in this case, that is, 7 per cent of $350,000, or $24,500 per year.

The total expenses of the plant, then, are about as follows:

Direct expenses of operation	$14,600.00
Taxes	8,700.22
Depreciation	3,000.00
Interest	24,500.00
Total expenses	$50,800.22

If interest is computed at 6 per cent, the amount needed for interest will be $21,000 and the total expenses will be only $47,300.22 per year.

APPORTIONMENT OF EXPENSES.

The first step in determining how much of the expenses of the respondent should be borne by each class of service and what form of rate schedule should be used, is the apportionment of expenses. The first step in the apportionment is the separation of direct operating expenses into output, demand, and consumer expenses. Then these expenses have to be divided between the two classes of service, fire and general. The next step is the division of taxes, interest and depreciation between fire and general service, and the final step is the division of that portion of taxes, depreciation, and interest which was apportioned to general service, between consumer, output and demand.

The apportionment between output, demand and consumer, of direct operating expenses shows the following results:

	Per cent.	Amount.
Output	48.3	$7,059 82
Demand	37.3	5,443 55
Consumer	14.4	2,096 63
	100.0	$14,600 00

Of the consumer expenses of $2,096.63, $60.41 is due directly to consumers on a meter basis. No part of the consumer expenses is caused by the fire service, and consequently no apportionment of consumer expenses should be made as between fire and general service.

Output expenses, also, are chargeable almost entirely to general service, as only a very small amount of water is actually pumped for fire service. No accurate measure of the amount of water pumped for fires can be made, but such data concerning this as are available, indicate that not more than 1 per cent of the total amount of water pumped is for fire protection. If $70 per year of output expenses is charged to fire service, it seems that sufficient allowance will thereby be made for the cost of pumping the water actually used for fires.

Demand expenses are apportionable between fire and general service according to the ratio of the maximum demand of each class of service to the total. In this case the maximum fire demand appears to be such that it would require water at the rate of 2,300,000 gallons per day, and the general service will use water at a maximum rate of about 4,000,000 gallons per day. According to this estimate of demands, 36½ per cent of demand expenses are due to the fire service, and 63½ per cent to the general service, or $1,986.90 of demand expenses are due to the fire protection system and $3,456.65 are due to general service. The following is a summary of the division of direct operating expenses between the two classes of service:

	Fire.	General.
Consumer expenses		$2,096 63
Output	$70 00	6,989 82
Demand	1,986 90	3,456 65
Total	$2,056 90	$12,543 10

Depreciation, taxes and interest amount to $36,200.22 with interest computed at 7 per cent, and to $32,700.22 with interest at 6 per cent. Dividing these between fire and general service on the basis of plant values, we find the results to be as follows:

	Fire.	General.
7% basis	$14,480 09	$21,720 13
6% "	13,080 09	19,620 13

The total cost of fire service is thus found to be $15,136.99 or $16,536.99, and the cost of general service to be $32,163.23 or $34,263.23, depending upon whether a 6 per cent or a 7 per cent rate of interest is used. As the revenue from hydrants reached a total of only $9,170 during the year ending June 30, 1910, it is evident that the charge that rates for fire protection are unreasonably high is not well founded. Even if we add $1,250, the amount of the annual payments which the city for some time made because of the installation of the filter system, as a part of the city's payments for fire service, the total revenue is still so small that no reduction can be made in the charge for fire protection.

The total operating revenues of the utility, exclusive of hydrant rentals and interest on the filter plant, for the years ending June 30, 1909, and June 30, 1910, were $31,727.96 and $32,829.33, respectively. As the cost of this service was found to be from $32,163.23 to $34,263.23, depending upon the interest rate, it seems that no general reduction can be made in these revenues.

USES OF WATER.

The pumpage records submitted by the utility show that the total indicated pumpage during the fiscal year ending June 30, 1910, was 585,136,800 gallons, and during the calendar year 1910 the recorded amount was 621,318,500 gallons. As shown in table V, the annual pumpage for a number of years has been less than 600,000,000 gallons, and for several years prior to 1907 the annual pumpage was above that amount. As expenses of operation for the fiscal year 1909–1910 have in general been accepted as normal, it is probably fair to base our estimates of water used upon the pumpage statistics for the same year.

Of the indicated pumpage of 585,136,800 gallons during the year, not all was actually delivered to consumers. The slip of the pumps makes the indicated pumpage somewhat higher than the actual, and the loss in the distribution system still further reduces the actual amount of water delivered below the indicated pumpage. An examination and test of the pumps by the engineering staff shows that the amount of slippage is unusually small, being less than 2 per cent of the indicated pumpage. The amount of leakage in the distribution system is impossible of accurate determination. The normal leakage has been variously estimated at from 2,000 to 5,000 gallons per mile of main per day for water plants operating under conditions similar to those prevailing in most of the cities of this state. Any attempt to fix the amount of leakage within limits narrower than these involves practically a guess, but there are some features of the local situation which make it appear that the amount of leakage is rather close to the upper limit. The amount of water delivered to mains is so great that it seems that a considerable portion of it is not actually used by consumers. Although there are a number of mills in Marinette, so far as any records show there are no extremely large consumers whose use of water would very greatly affect

the total amount of pumpage. Of course, it is altogether probable that a rather large amount of water is used by these mills, but even if allowance for probable waste is made, the amount of water delivered to the mains appears to be largely in excess of the amount actually passing through services. Even a very liberal deduction for leakage and slip, however, would indicate that at least 500,000,000 gallons per year are actually delivered to consumers. So far as the available facts are any indication of the nature of the uses of water, there is no one class of consumers who are responsible for the excessive use of water. The use of more than the necessary amounts, or of more than the reasonable amounts, which the flat rate schedule presumes are to be furnished, seems to be very general. There is undoubtedly a considerable amount of deliberate or at least careless waste of water, which would be checked by the introduction of meters. There is probably, also, a great deal of loss due to leaky fixtures and services, which would also be prevented by the use of meters. Aside from these losses and waste of water, an analysis of the pumpage records for the past four years indicates that a portion of the excessive use is due to the fact that fixtures are left partially open during the cold months to prevent freezing, especially during the night. Table XXI shows the ratio of night pumpage to total during the past four years, for each month:

TABLE XXI.

RATIO OF NIGHT PUMPAGE TO TOTAL.

Year.	Jan.	Feb.	Mch.	Apr.	May.	June	July.	Aug.	Sept.	Oct.	Nov.	Dec.
1907.....	48.8	50.4	50.3	49.3	47.9	45.0	43.7	46.3	47.8	49.0	48.8	50.5
1908.....	50.9	51.3	49.8	47.9	48.6	43.1	45.3	43.6	42.5	47.6	47.4	48.5
1909.....	49.7	49.5	49.5	48.5	45.3	42.6	42.4	42.6	45.0	45.1	46.9	48.5
1910.....	48.2	47.9	46.7	47.7	44.8	42.7	43.7	44.2	46.7	47.2	48.2	48.7
Average.....	49.4	49.8	49.1	48.3	46.7	43.3	43.8	44.3	45.5	47.2	47.8	49.1

It will be seen that during the winter months the night pumpage is almost half of the total, although in the summer it is considerably less than half, even taking into account the lawn sprinkling which is done during the evenings. In a few of the winter months shown above the night pumpage actually formed more than one-half of the total, in spite of the fact that the or-

dinary uses of water were to some extent suspended during the night.

All these things seem to indicate that an estimate of 500,000,000 gallons per year delivered to services is not excessive. Only a small number of meters are in use. Most of the patrons have always been supplied on a flat rate basis, and it is doubtless true that a great deal of the waste and excessive use of water arise from an incorrect comprehension on the part of consumers of the true nature of the service received. This has been discussed heretofore in decisions of this Commission and it is not believed to be necessary to enter into any extended explanation at this time. It seems clear that a sale of water is a sale not merely of a service, but of a quantity, and it is this fact which the flat rate user often ignores or fails to recognize. An agreement to sell water to supply a kitchen faucet, for example, implies that service shall be furnished whenever required. Water must be kept constantly available under reasonable pressure. There is, however, an element of cost which varies with the quantity of water used in supplying the service, rather than being dependent upon the nature of the service. It is this fact which is overlooked by the flat rate schedule. Such a schedule provides that water shall be supplied for a given service at a given price, ignoring the fact that the quantity of water which may be used bears very little relation to the nature of this service. There is a natural tendency for the consumer also to neglect to exercise any care with regard to the amount of water used when his charge is based altogether on the nature of the service. That this is the case in practice, is an established fact and there is no reason to believe that the consumers in Marinette form any exception to the rule, so that although 500,000,000 gallons per year may be much more than a careful use of water would require, it does not seem that the amount actually delivered to consumers falls short of this amount.

The evidence, although necessarily not very definite, seems to indicate that there is a rather general waste of water rather than an extremely large use by a few consumers. Table XXII is a summary of all revenue consumers to whom water is supplied on a flat rate basis:

TABLE XXII.

" blacksmith shop and residence	1
" garage and residence	1
" dye works and residence	1
" saloon and hall	1

[2] Miscellaneous class includes:

1 hotel
1 hospital.
(1 fish pond), 1 machine shop,
1 bottling works,
1 garage,
1 poor house,
1 laundry,
1 fish packery,
1 bakery,
1 heating plant,
1 greenhouse,
1 hose,
2 cemeteries,
1 ph to gallery,
1 restaurant,
2 blacksmith shops,

Owing to the great number of special rates and the fact that no rate at all has been prescribed by franchise for certain classes of fixtures or premises, it is not possible to compute the annual revenue from the foregoing table. As far as this table may be accepted as an indication of the uses to which water is put, it fails to reveal any abnormal conditions. There are, however, two classes of consumers whose uses of water may be sufficiently abnormal to materially affect the total. These are the mills which are included in the foregoing table and those users to whom water is furnished free of charge. With regard to the mills, the listing of fixtures in table XXII fails to give any idea of the amount of water really used or the possible demands which may be exercised. Neither do the data tabulated above appear to be entirely accurate with respect to the mills. Diagrams were later submitted by the utility showing the number and nature of fixtures and connections, which are believed to be practically accurate. These diagrams indicate that there are four 6″, two 4″, one 2″, one 1¼″ and one 1″ connection to the mills. There appear to be eleven 1¼″ hose connections, six 1½″, twenty-six 2″, and two 2½″ hose connections, 2,290 automatic sprinklers, sixteen drinking faucets, and about a dozen miscellaneous openings. The manager of the respondent states that he finds that drinking faucets in the mills are allowed to run almost continuously and that the hose openings are frequently opened and used for purposes other than extinguishing of fire.

The free list of the utility embraces a table of sixty-seven consumers, with fixtures as shown in table XXIII:

TABLE XXIII.

SUMMARY OF MARINETTE FREE LIST.

Class of consumers.	No. of consumers.	Faucets.	Feet to be sprinkled.	Water closets.	Urinals.	Baths.	Motors.	Horses.	Boilers.	Rooms in excess of 4.	4″ streams.	Park sprinkler faucets.	Persons supplied in schools.

Total	66	132	4,730	116	9	22	2	7	16	119	15	5	3,935

2,550 feet of frontage would be charged 5 cts. per foot.
44 of consumers listed would also pay the $5 sprinkling minimum.

The revenues from these consumers, if the regular flat rates were applied, would amount to more than $2,000 per year, as shown by table XXIV. In computing the revenues which should have been derived from this source, the rates applied were the rates applied to the class of service most nearly like the one in question. In most cases the rate which should be applied was clear, but where a special rate would have to be applied, the estimated rates have been based upon the rates commonly used for such service by utilities which have a flat rate schedule substantially similar in other respects to the Marinette schedule. According to this computation the annual loss of revenue, due to the extensive free list, amounts to $2,177.25:

TABLE XXIV.

PROBABLE LOSS OF REVENUE DUE TO FREE SERVICE.

Schools.				
Drinking water—3,935 persons at 10 cts.		(equals)	$393.50

15—¼″ streams—estimated at $15	″	$225.00	225.00
Parks.			
2 at probably $100 each	″	$200.00	200.00
Total of above			$2,177.25

The utility's calculation of the amount which would be received from free services if regular flat rates were charged, based upon the free list of Oct. 1, 1908, shows the total to be $2,510.45.

To arrive at the proper rate for each branch of service it is necessary to analyze the costs a little further. That portion of interest, taxes, and depreciation which is due to general service may be further subdivided among demand, output and consumer expenses. There is a portion of the system in which the investment is caused directly by the increase in the number of consumers, which portion includes services, meters and meter boxes. The cost new of all services in the system has been found to be $20,854, and the cost new of meters $1,483, with $1,043 as the cost of reproduction of meter boxes at the date of the valuation. The ratio of value of each size of meter and service in use to the value of the ½″ and ⅝″ size, as used in this decision, is shown in the following summary:

	Services.	Meters.
½″	1.00	1.00
⅝″	1.08	1.00
¾″	1.14	1.775
1″	1.36	2.845
1½″	.....	4.00
2″	3.22	6.42
3″	.....	13.50
4″	3.25	.....
6″	4.56	.....

The apportionment of that part of interest, depreciation and taxes which is properly chargeable to the general service among demand, output, and consumer expenses, is shown in the following summary:

	Demand.	Output.	Consumer.
Depreciation	$703 17	$913 32	$183 51
Taxes	2,116 72	2,749 31	354 10
Interest	5,960 74	7,742 11	997 15
Total	$8,780 63	$11,404 74	$1,534 76

The total costs of general service as divided among demand, output, and consumer are as follows:

	Demand.	Output.	Consumer.
Direct operating expenses	$3,456 65	$6,989 82	$2,096 63
Taxes, interest, and depreciation	8,780 63	11,404 74	1,534 76
Total	$12,237 28	$18,394 56	$3,631 39

In arriving at the consumer expenses shown above, only those services which appear to have been put in at the expense of the company have been included in finding what portion of interest, depreciation and taxes should be considered as consumer expenses.

This may appear to be to some extent a discrimination against those consumers whose services were put in at their own expense, and it may be that a modification of the method of apportionment used in this case will have to be adopted which will cause the entire amount of interest, taxes, and depreciation on services to be provided by those whose services were put in by the utility, but for the present the method outlined and used here seems the most satisfactory one to follow.

A part of the consumer expenses shown above are due entirely to metered consumers, and a part should be apportioned alike to all consumers, whether on meter or flat rate basis. Those expenses which should be met entirely by metered consumers are the cost of reading and maintaining meters, and the interest, taxes and depreciation on meters and meter boxes. Of these the cost of reading and maintaining meters is divided equally among all metered consumers. Interest, taxes, and depreciation on meter boxes may probably best be divided on the same basis. To some extent there is a relation between these expenses and the size of meters, but the cost of these boxes varies with the material of which they are made rather than with the size of the meters. They constitute a part of the system necessary to furnish metered water service and it seems best to divide these costs equally among all metered consumers. On the meters themselves it is feasible to apportion the amount of interest, taxes and depreciation according to the value of the various sizes of meters.

Consumer expenses, amounting in all to $3,631.39, may be further apportioned as shown in the following summary:

Equally among all users	$3,222.87
Equally among all meters	185.37
Among meters according to value	223.15
Total	$3,631.39

At the end of 1910 the utility reported a total of 2,668 consumers, of whom 83 were supplied through meters; 2,451 were supplied on a flat rate basis; 65 were free; and 69 carried water.

As 65 of the consumers who were supplied free of charge have not been responsible for any of the collection expenses, and 69 consumers who carry water are not directly responsible for interest, depreciation and taxes on services, it follows that these should be excluded in finding unit consumer costs. For practical purposes this purpose will be accomplished without injustice to any consumer if the number of consumers among whom all consumer expenses are divided is taken as 2,600. Consumer expenses which should be borne equally by all such consumers amount to $1.24 per consumer per year. In addition each meter is responsible for an expense of $2.23 per year, besides the amount which should be apportioned according to the size of meter. Taking the average value of the ½″ and the ⅝″ meter as $10, and using this as the basis, we obtain an apportionment of these expenses among meters of various sizes. The total value of meters is equal to practically 163 times the average value of ½″ and ⅝″ meters. Each ½″ or ⅝″ meter will bear 1/163 of these expenses, and other meters will bear these costs in proportion to their value. The total to be apportioned is $223.15 or $1.37 for a ½″ or ⅝″ meter. The following table shows the amount of consumer expenses for each size of meter:

TABLE XXV.

Size of meter.	Consumer cost divided equally among all consumers.	Consumer costs divided equally among meters.	Consumer costs divided according to value of meter.	Total consumer costs.
½″	$1 24	$2 23	$1 37	$4 84
⅝″	1 24	2 23	1 37	4 84
¾″	1 24	2 23	2 43	5 90
1 ″	1 24	2 23	3 90	7 37
1 ½″	1 24	2 23	5 48	8 95
2 ″	1 24	2 23	8 81	12 28
3 ″	1 24	2 23	18 50	21 97

In getting at the foregoing unit consumer costs, the value of the ½″ meter has been taken as identical with that of the ⅝″. As a matter of fact the average cost of the ½″ meters in use in

Marinette appears to be greater than that of the 5/8", as a more expensive type of meter is used. The average price of all 1/2" and 5/8" meters in use is so very close to $10 each that it seems fair to use this value as a basis. If all services had been put in at the expense of the utility, it would be possible to make a further apportionment of a portion of the consumer expenses according to the value and size of services, but as matters stand with regard to services, the apportionment of cost maintenance of services, and of interest, depreciation and taxes on services equally among all consumers appears just.

From the foregoing analyses of expenses we can determine rather closely the cost of all metered services and the cost of unmetered services, under the existing conditions of operation.

The total consumer expenses of metered consumers are made up of $408.52, due to metered consumers only, and $102.92, or the share of general consumer expenses due to 83 metered consumers at $1.24 each, making a total of $511.44.

Output expenses, amounting in all to $18,394.56, may be divided between flat rate and metered users according to the amounts of water used. Of an estimated total of 500,000,000 gallons delivered to consumers during 1910, 36,773,800 gallons, or 7.355 per cent, were used through meters. According to this the output costs of metered service are 7.355 per cent of $18,394.56, or $1,352.91.

The total demand expenses amount to $12,237.28. These may be divided for the purpose of arriving at the approximate cost of metered service, according to the number of consumers. If the consumers in the metered class were in a position to make a much larger demand than the average of those in the flat rate class, or vice versa, this method of apportionment would be defective, but in this case it appears to be a fair basis. According to this 3.19 per cent of demand expenses are due to metered consumers, or $390.37. This shows the total cost of metered service to be as follows:

Consumer expenses	$462.47
Output expenses	1,352.91
Demand expenses	390.37
Total	$2,205.75

If the total amount of water delivered to consumers is less than 500,000,000 gallons per year, that is, if the leakage and

amount of water unaccounted for is greater than estimated, the proportion of output expenses assignable to metered service will be greater than 7.35 per cent and the cost of metered service will be greater than the amount shown above.

Assuming that the foregoing statement of cost of metered service is accurate, we find the cost of all other service to be $32,057.48. The revenue from metered sales during 1910 was $5,980.83 and during the fiscal year 1909-10 was $6,059.11. Flat rate earnings during 1909-10 were $27,228.69. During the previous year flat rate earnings were $26,247.40. Even allowing for defects in the apportionment of expenses between flat rate and metered users, which may make the cost of metered service higher than shown above and decrease the cost of unmetered uses, it is apparent that no general reduction can be made in the flat rate schedule. A comparison of the Marinette rate with rates charged by other Wisconsin cities fails to show that the flat rates are unreasonable.

The utility is under obligation to put in meters and sell water at the meter rates unless exempted by the Commission. In this case it may be that an order requiring complete metering is unnecessary and would involve an expense which would not be warranted by the results secured. No definite information is available concerning the number of buildings supplied with water which have cellar and sewer connections. It was shown that a considerable part of the city of Marinette is built upon very low, wet ground, which has been filled with saw-mill refuse to make it suitable for a building location. In this part of the city it seems that there are very few cellars.

The consumer statistics submitted by the utility show that water is supplied to 269 residences of four rooms or less and to a total of 590 residences having five rooms each or less.

If meters are to be placed in cellars, the cost of setting will be very small. Assuming that all except residence consumers and all residences which have cellars and sewer connections should be metered, the cost of metering can be determined with some degree of accuracy. Practically every service above ¾″ in diameter would be metered under such plan, as well as all small services which supply premises having sewer and cellar. The superintendent of the water company states that very few of the houses in Marinette have cellars, and it seems probable that not

much over half of the services would be equipped with meters placed in cellars.

The 6″ services in every case supply fire protection to mills. By a proper arrangement of the connections in such cases as these it would be possible to supply fire service only through these services and furnish water for other uses through smaller metered services, thus avoiding the expense of putting in very large meters.

Of 2,451 unmetered services probably about half, including all the larger services except those of 6″ diameter, would be metered.

The number of meters of each size would be about as follows:

Size.	Number.
4″	3
2½″	2
2″	4
1½″	2
1¼″	1
1″	20
⅝″	1,200, approximately

If the number of meters listed above is installed, the total cost, set in cellars, will be about $13,700, applying the unit prices used in the valuation, except that all ⅝″ meters are put in at $10 each. Of course, it is impossible to determine the exact total cost of putting in meters, in the absence of definite information concerning the number to be installed. The unit costs can, however, be determined with a sufficient degree of accuracy for our purposes here. Under this plan of placing meters very few meter boxes would be required, in fact, none at all except in the case of a few of the larger meters. As a result, the statements given in preceding pages of consumer expenses cannot be expected to hold true after all services supplying premises which have cellar and sewer are metered.

Interest, depreciation, and taxes on meter boxes amount at present to $124.96 per year. If, instead of apportioning these merely among meters which are already in use, they are apportioned over the approximate total of meters to be installed, they will amount to very nearly 10 cts. per meter. With additional allowance for such few meter boxes as may have to be constructed in order to supply industrial users through meters, the total of interest, depreciation, and taxes on meter boxes will hardly exceed 15 cts. per meter. The other two items which go to make up the consumer expenses which have been divided equally among metered consumers are the cost of reading and of main-

taining meters. These amount to 73 cts. per meter per year, which is probably above the point at which they may be expected to remain if meters are generally introduced. From such data as are available at the present time it seems that the cost of meter reading and maintenance will hardly reach the amount shown above, and we believe that with most of the meters set in cellars the maintenance and reading costs will hardly exceed 50 cts. per meter per year and may be somewhat less.

Instead of a consumer expense to be divided equally among all metered consumers, amounting to $2.23 per consumer per year, the probable amount per consumer will not be likely to exceed 65 cts. per year, including in this the cost of reading and maintaining meters and of interest, depreciation, and taxes on meter boxes. Other consumer costs, made up of collection expenses and the amount of interest, taxes, and depreciation on meters and services will hardly be affected by an extension of the meter system. Table XXVI contains a revision of consumer expenses which is believed to represent rather closely what these expenses will be if meters are introduced as suggested above.

TABLE XXVI.

Size of meter.	Consumer expenses divided equally among all consumers.	Costs divided equally among meters.	Costs divided according to value of meter.	Total.
½"	$1.24	$0.65	$1.37	$3.26
¾"	"	"	1.37	3.26
¾"	"	"	2.43	4.32
1 "	"	"	3.90	5.79
1½"	"	"	5.48	7.37
2 "	"	"	8.81	10.70
3 "	"	"	18.50	20.39
4 "	"	"	20.65	22.54

In order to make a meter rate which shall be satisfactory when meters are very generally introduced, it is necessary to estimate as closely as possible the amount of water which is likely to be used when meters are installed.

Some of the uses can be determined with considerable accuracy from the facts at hand. Water will be used by the city for purposes of street sprinkling, sewer flushing, street construction work, etc., which will hardly be subject to the regular meter rates. The estimated use of water for these purposes is as follows:

Street sprinkling	20,000,000	gallons per year
Sewer flushing, etc.....	6,000,000	" "
Public fountains	5,000,000	" "
Total	31,000,000	gallons per year

The amount of water actually used if all other consumer's uses, including public buildings and schools, were metered, would apparently be about 160,000,000 gallons per year, making the total amount of water which would actually be used a little over 190,000,000 gallons per year.

This amount may be found to be somewhat in error when meters have been in use for some time, but from available information it seems to be a safe basis for making a tentative meter rate. As meters will not be installed in buildings which do not have cellar and sewer, the actual total consumption of water may vary somewhat from the foregoing estimate. By following this plan of metering, however, the waste of water will be largely eliminated. At least it appears proper to base the unit prices of the meter rates upon the amount of water which would be likely to be used if the system were completely metered.

If 190,000,000 gallons per year are to be delivered to consumers, the output cost, based on the present operating costs, is 9.68 cts. per thousand gallons. Demand expenses are 6.44 cts., so that the total average cost of water, delivered, exclusive of consumer expenses, will be 16.12 cts. per thousand gallons.

Another reason why a meter rate to be made at this time can hardly be more than a tentative rate, is that the decreased pumpage will result in some decrease in the cost of operation. The actual decrease will probably be small. Taxes, interest, and depreciation will be affected only slightly by the decreased pumpage. There will be some saving in the cost of steam generation and in pumping station expenses. How great this saving will be, cannot be stated, but it is very doubtful if it will be sufficient to diminish the output costs to less than 9 cts. per thousand gallons delivered. On this basis the average cost, exclusive of consumer costs, per thousand gallons delivered will be 15.44 cts., or practically 15.5 cts.

Water used for street sprinkling and flushing sewers may properly be charged with less in the way of demand expenses than ordinary uses, as the use for these purposes can be entirely suspended during time of a large fire which would cause the maximum demand to be thrown upon the plant.

If these classes of service are charged with only the output costs of 9 cts. per thousand gallons, the total proper charge for street sprinkling would be about $1,800, and for sewer flushing about $540 per year. The rate for street sprinkling, if made strictly on this basis, would be about $2.50 per wagon per day, instead of the present rate of 50 cts.

Excluding water used for sprinkling and flushing purposes from the amount which should bear demand expenses, we find the demand expenses per thousand gallons to be 7.42 cts., making the total average, excluding consumer costs, 16.42 cts., or practically 16.5 cts. per thousand gallons delivered.

Although a considerable number of services will not be metered under the plan outlined above, the justice of a meter schedule may perhaps best be tested by the results which would be obtained if all services were metered. The information available does not show the size of services supplying consumers on the free list. Assuming that public schools would be supplied through 1″ meters and other services through ⅝″, the total number of meters of each size would be very nearly as follows:

Size of meter	Number
½″ & ⅝″	2,527
¾″	10
1″	35
1½″	5
2″	13
3″	1
4″	3

There may be a few cases in which the number of meters will not be exactly the number of each size listed above, but for practical purposes the differences may be neglected.

The following table shows the amount of revenue which would be obtained from the application of a service charge as indicated:

TABLE XXVII

Size of meter.	Number of meters.	Annual service charge.	Annual revenue.
½″ & ⅝″	2,527	$5 00	$12,635
¾″	10	6 00	60
1″	35	8 00	280
1½″	5	10 00	50
2″	13	16 00	208
3″	1	28 00	28
4″	3	40 00	120
Total	2,594		$13,381

According to the consumer costs shown in table XXVI, the total consumer costs in connection with 2,594 meters, as listed in table XXVII, would be $8,747.83. At this rate the service charge as outlined in table XXVII would yield an excess of $4,633.17 above the consumer costs. That is, if all services were metered, a service charge as outlined above would meet the consumer expenses and $4,633.17 of capacity expenses as well. As none of the 6″ services, five in number, have been included in the above estimates, it follows that the remaining demand expenses should not be entirely met by the services listed in the table, but part should be borne by the 6″ services. Just how much should be met by these large services is hard to determine. All of these 6″ services supply sprinkler systems, though in some cases they also carry water for other purposes. On the whole, if the revenue at present derived from the automatic sprinklers be taken as a measure of the demand expenses which should be borne by these large connections, it seems that the result will be satisfactory. It is very difficult in practice to apportion demand expenses accurately among services of various sizes, and the method used here of ascertaining what part of demand expenses should be met by the 6″ services appears to yield results as nearly correct as any. On this basis, with 3,239 sprinkler heads at 10 cts. each, $323.90 of capacity expenses should be charged to the 6″ services. This is practically the amount paid by patrons whose premises are supplied by 6″ services to meet demand expenses, as no water is used through sprinkler systems except in case of fire. At least for our purposes here this method seems adequate.

Of total demand expenses of $12,237.28, the large services should be charged with $323.90, leaving $11,913.38 to be met by services which might be metered. If the service charge, assuming that all services were to be metered, would provide $4,633.17, the remainder, amounting to $7,280.21, would remain to be met through the charge for water. This is equal to 4.41 cts. per thousand gallons delivered, which should bear a share of demand expenses. With output costs amounting to 9 cts. per thousand gallons, the average cost of water sold, exclusive of that portion which would be met through the service charge, is 13.41 cts., or practically 13.5 cts. per thousand gallons. Until meters have been in use for some time, we can have no means of determining how much of the water used would be paid for at the rate for

the first 25,000 or the first 50,000 gallons per quarter, for the second increment, etc., but if a tentative rate is made as outlined below, it seems that it will be reasonable. This rate would include a service charge as outlined in table XXVII and a charge for water as follows:

For the first 20,000 gallons per quarter, 16 cts. per thousand gallons.

For the next 30,000 gallons per quarter, 12 cts. per thousand gallons.

For all over 50,000 gallons per quarter, 9 cts. per thousand gallons.

It is likely that the average revenue under this plan will be from 13 cts. to 14 cts. per thousand gallons. At least it will be near enough to the cost to make the schedule as outlined above satisfactory as a tentative schedule. When meters have been generally introduced and used for some time, a readjustment can be made, if necessary, which readjustment can correct any defects in the estimates used herein. Owing to the necessity of resorting very largely to estimates, it is not at all unlikely that experience with meters will indicate some corrections which should be made, but for the present the meter rates outlined above appear reasonable.

The schedule as filed provides for a rate for water as follows:

	Per M gallons
Where the daily use is 100 to 1,000 gallons	$0.30
From 1,000 to 2,000 gals. per day	.25
From 2,000 to 5,000 " "	.20
From 5,000 to 10,000 " "	.15
Over 10,000 gals. per day	Not filed.

The quarterly minimums for different sizes of meters are as follows:

Size of meter	Quarterly minimum
½″	$3.00
¾″	6.00
1″	12.00
1½″	18.00
2″	24.00
2½″	30.00
3″	36.00
4″	48.00

Table XXVIII contains a comparison of quarterly charges under the present and proposed schedules for meters of different sizes:

TABLE XXVIII.

Gallons used per quarter.	¾ and 1" meter.		1½" meter.		1" meter.		2" meter.		3" meter.		4" meter.	
	Present rate.	New rate.	Present rate.	New rate.	Present rate.	New rate.	Present rate.	New rate.	Present rate.	New rate.	Present rate.	New rate.
1,000	$3 00	$1 41	$6 00	$1 66	$12 00	$2 16	$24 00	$4 16	$36 00	$7 16	$48 00	$10 16
10,000	3 00	2 85	6 00	3 10	12 00	3 60	24 00	5 60	36 00	8 60	48 00	11 60
15,000	4 50	3 65	6 00	3 90	12 00	4 40	24 00	6 40	36 00	9 40	48 00	12 40
20,000	6 00	4 45	6 00	4 70	12 00	5 20	24 00	7 20	36 00	10 20	48 00	13 20

40,000	12 00	6 85	12 00	7 10	12 00	7 60	24 00	9 60	36 00	12 60	48 00	15 60
50,000	15 00	8 05	15 00	8 30	15 00	8 80	24 00	10 80	36 00	13 80	48 00	16 80
100,000	25 00	12 55	25 00	12 80	25 00	13 30	25 00	15 30	36 00	18 30	48 00	21 30
150,000	37 50	17 05	37 50	17 30	37 50	17 80	37 50	19 80	37 50	22 80	48 00	25 80
200,000	40 00	21 55	40 00	21 80	40 00	22 30	40 00	24 30	40 00	27 30	48 00	30 30
300,000	60 00	30 55	60 00	30 80	60 00	31 30	60 00	33 30	60 00	36 30	60 00	39 30
500,000	75 00	48 55	75 00	48 80	75 00	49 30	75 00	51 30	75 00	54 30	75 00	57 30

According to a schedule as outlined above there would be a general reduction in the rates for water, especially where small amounts of water were used through large meters. The new schedule would be in accord with such analyses of costs as can be made at this time and seems to be nearly enough correct for adoption as a tentative schedule until final settlement of the meter rates can be made.

The statement of revenues and expenses from unmetered service, given in preceding pages of this decision, shows that the revenues from consumers on a flat rate basis are less than the cost of that service. The introduction of meters on services which supply premises which have sewers and cellars, and upon all services supplying other than residence uses, would undoubtedly result in most of the users who are paying large amounts for water at present being put on meters. Where there is no sewer connection, the amount of water used is usually small and the present flat rate will probably be adequate. At least it seems best to leave flat rates as they are, for the present, for all consumers who will not be metered.

During the year ending June 30, 1910, the utility had $17,454.66 available for interest and depreciation, and for the preceding year $21,485.16, which are equivalent to rates of 4.99 per cent and 6.14 per cent on a valuation of $350,000. In arriving at our statements of cost of service, a rate of very nearly 8 per cent for interest and depreciation has been used. Owing to the

fact that we have no means, at present, of learning just how many services will be metered, we cannot make any detailed statement of probable revenues. As the suggested rates have been based upon what appear to be normal uses of water and with a provision of about 8 per cent for interest and depreciation, there seems no reason to doubt that the return to the company would be adequate, and certainly would not fall below the present level. In individual instances there would be considerable reductions in consumer's bills, but the total revenue, with changes in rates for fire protection and for general service, would probably yield the company a somewhat larger return that it has had during the past two years.

Perhaps a few words should be said regarding the 6″ services which furnish private fire protection.

In previous decisions the Commission has held that a water utility ought to make no charge for privately owned hydrants set at the expense of the consumer, but that the city should pay the entire cost of fire protection furnished through hydrants. This would eliminate any charge for private fire hydrants in Marinette. The difficulty of making a rate for the inside fire protection systems in this case is that water is supplied through the same services for fire protection and for ordinary industrial uses. In such cases, the large services should be metered or the utility should insist that no connections to the fire protection system should be made for any purpose other than fire protection. Of the five 6″ connections now in use, one supplies water for fire protection only, so that a change should be made in the case of only four services. We are inclined to believe that metering these 6″ connections will be the most satisfactory method of dealing with this phase of the situation, and a meter rate can be established for this service in case meters are installed.

A review of conditions in Marinette leads us to the conclusion that it may be well not to make a definite order regarding rates at this time. Although it has been found that the existing schedules are by no means perfect, it may be questioned whether they are unreasonable, either in themselves or as between fire protection and general service, to a degree which would require an order at this time, putting in effect a new schedule of rates.

In connection with this case complaint was made informally that the utility has violated certain of its rules and regulations, particularly rule XI, which is as follows:

"Rule XI. The consumer shall have the right, should he be dissatisfied with the assessed rates upon his premises, to attach a meter, said meter to be approved by the company, and to be at all times subject to its inspection, and must be set under the direction of the company, the expense of setting and all maintenance to be borne by the consumer; provided, however, that no meter so set shall return to the company a less rate than one dollar per month for ½-inch meter, two dollars for ¾-inch meter, four dollars for one inch meter and two dollars per month for each additional ½-inch in size of meter. Consumers availing themselves of this rule shall not be permitted to attach or extend the water pipes into other or adjoining premises than those occupied and controlled by themselves."

As long as this rule remains in effect, the utility is bound by its provisions and must conduct its business in accordance with the rule.

It is decided, in view of all the conditions involved in this case, not to make any order relating to rates, but to recommend that the utility and the city agree to the following schedule which is deemed reasonable and just:

All consumers except residences, and all residences having cellars and sewer or cesspool connection, to be metered. Meter rates to be as follows:

Service charge:

Size of meter	Quarterly service charge
½" & ⅝"	$1.25
¾"	1.50
1"	2.00
1½"	2.50
2"	4.00
3"	7.00
4"	10.00

Charge for Water:

For the first 20,000 gallons per quarter, 16 cts. per thousand gallons.

For the next 30,000 gallons per quarter, 12 cts. per thousand gallons.

For all over 50,000 gallons per quarter, 9 cts. per thousand gallons.

Flat rates for such uses as will not be metered to remain as at present.

All large services supplying private fire protection to be metered, or fire protection systems to be entirely separated from systems supplying water for drinking and industrial uses.

The annual charge to the city for fire protection and sewer flushing to be $14,800, and no charge to be made for private fire hydrants; the street sprinkling rate to be 6 cts. per tank of water used.

IN RE APPLICATION OF THE OCONTO CITY WATER SUPPLY COMPANY FOR A VALUATION OF ITS PROPERTY AND FOR OTHER RELIEF.

Submitted Nov. 2, 1911. Decided Dec. 14, 1911.

MOTION FOR MODIFICATION OF THE DECISION OF THE COMMISSION DATED AUGUST 7, 1911.

Application is made by the Oconto City Water Supply Co. and by the city of Oconto for modifications in the Commission's decision of Aug. 7, 1911, relating to water rates in Oconto, Wis. (*In re Appl. Oconto City Water Supply Co.* 1911, 7 W. R. C. R. 497.)

The company asks that lines 3 to 10 on page 503 be stricken out, stating that they might convey the impression that the company had attempted to pad its book value.

Held: The decision taken in its entirety does not convey that impression and no action is necessary with regard to this portion of the application.

Lines 18 to 21 on page 505 comprise a surmise of the Commission as to the disposition of a reserve. The company asks to have a positive statement of the facts substituted therefor and lines 35–40 of the same page modified to conform to this change.

Held: The rights of neither party are involved here, and the change would have no effect upon the decision or the rates as made therein.

An insertion which the company asks for in line 43, page 507, which accounts further for the general law expenses, is held to have little bearing upon the final outcome of the case and to be of too little importance to necessitate a change at this time.

The clause "the utility attempted to enforce payment" in lines 5 and 6 on page 518, is objected to as giving the impression that the utility had used undue means to secure collection of bills.

Held: As used by the Commission the clause meant that the utility had attempted to enforce payment to the same extent that it is customary for a utility to attempt to enforce payment. With this explanation, the matter can be considered settled.

The company alleges that lines 11 to 14 on page 552 carry the idea that the company billed consumers at the franchise rate and collected in accordance with the Commission's orders only in cases where consumers refused to pay the franchise rate. As a matter of fact, the utility had not attempted to collect the franchise rate. Consumers were told of the Commission's orders relating to collections and were given opportunity to pay on account in accordance with those orders.

Held: Although the sentence cannot actually be stricken out of the printed decision, if it does misrepresent conditions, there is no objection to acknowledging that here.

The company objects to lines 33–37, page 563, which reads: "The data submitted by the water company indicate that the Oconto Lumber Company has two six-inch connections to the mains of the water company, but a more complete examination shows

that there is but one such connection." The consumers' cards of the company indicated that there were two connections, but an examination of drawings submitted by the utility shows that there was only one.

Held: If the sentence can be interpreted to give the impression that the utility misrepresented the number and nature of the connections, this opportunity is taken to correct that impression.

The utility asks that lines 9 to 12, on page 571 be changed so as to remove any obstacle which the order of the Commission might put in the way of the company collecting for fire protection from Dec. 6, 1909, to the date of the decision more than it would have collected under the rates prior to Dec. 6, 1909.

Held: If an agreement can be reached or has been reached between the company and the city relating to the charge for fire protection and providing that the amount as advised by the Commission shall be the basis for charges since Jan. 1, 1910, the order of Aug. 7, 1911, is so far modified as to remove any obstacle which might prevent the carrying out of such an agreement.

Application is made by the company for an order fixing rates for extra faucets, steam and hot water boilers for heating purposes; inserting in the franchise schedule "for power purposes" after "steam boilers"; and striking out the rates for horses and cows.

Held: A charge for extra faucets would often amount to a double charge for water used, especially if the nature and position of those faucets is such that their installation is not likely to lead to an increased use of water. However, in the present case no injustice will be done if a charge is made for wash basins and laundry tubs in addition to that for other fixtures and for rooms. The result of amending the franchise so that the rates for steam boilers shall apply only to those used for power purposes, would be that such boilers would in every case be supplied through meter. The original order intended that the charge for steam and hot water boilers for heating purposes should be placed on a meter basis, but as the franchise had never made a definite rate for these uses, the utility is without a fixed rate to apply before the time of such metering. It was very difficult to make collections of charges for horses and cows, and a charge for faucets placed in barns will be as satisfactory and just in the present schedule. Rates are accordingly fixed for wash basins, laundry tubs, barn faucets, and boilers for heating purposes, and the words "for power purposes" are ordered inserted after "steam boilers" in the present flat rate schedule of the utility.

The company asks that line 41 on page 577 be changed so as to make the charge for fire protection in the original order retroactive as far back as Dec. 6, 1909.

Held: As there was no provision prior to the date of the decision that the charge for fire protection should be retroactive, such a rate cannot now be made for that purpose. It is not, however, the intention of the Commission to have anything in its decision stand in the way of any reasonable agreement between the city and utility as to the charge for fire protection, dating back to this or any other time.

When the utility started operations ten consumers gave up a private plant and took water from the company under an agreement that each of them receive service to their premises at $20 a year during the life of the franchise, or for thirty years. The utility asks whether these private contracts are still in effect.

Held: The question of the legality of these contracts should be determined by counsel for the utility without reference to the Commission.

The city alleged that patrons of the utility had not taken the stand that the use of meters would be prejudicial to their interests, and asks that line 25, page 544, be changed so as to correct this impression.

Held: The impression was gathered at the hearing that a large number of the consumers objected to any ruling allowing the utility to put in meters at its own discretion.

The city wishes to have a modification of the language of the decision to make it clear that the consumers objected to the utility having the right to install meters only in case a corresponding right were not given the consumers.

Held: Although there may be sections in the decision which do not make this clear, line 33 on page 546 states the consumers' position with regard to the installation of meters in such a manner that no change in the text is necessary on this point.

This is an application of the Oconto City Water Supply Company, asking for a modification of certain portions of the Commission's decision of Aug. 7, 1911, relating to the rates as charged consumers in the city of Oconto. This application was filed on Oct. 11, 1911.

Hearing was held on Nov. 2, 1911, at Madison, Wis. Appearances were as follows: For the Oconto City Water Supply Company, *Greene, Fairchild, North & Parker,* by *J. E. North;* and for the city of Oconto, *V. J. O'Kelliher.*

At the hearing the city of Oconto also introduced an application for modification of the decision which will be considered in connection with the application of the Oconto City Water Supply Company.

Section I. The application of the company asks that certain portions of the decision be changed and that substitutions be made therein so as to change the meaning in certain respects. The first portion which the company wishes to have changed is on page 503 of the printed decision, lines 3 to 10. The company asks that the following be stricken out: "This amount does not help very much in arriving at the valuation of property for purposes of this case, as there is nothing to indicate on what basis the value of $111,189.19 for the beginning of the fiscal year 1908–1909 is made up, as the plant value was carried on the books for the year ending Dec. 31, 1907, at $106,-021.02. There is thus an amount of $5,168.17 unaccounted for as an increase in value from Dec. 1, 1907 to July 1, 1908." The reason for the company asking this change was stated at the hearing to be that the decision as printed might convey the im-

pression that the company had attempted to pad its book value by the amount mentioned above. It was stated on behalf of the utility that the value as entered for July 1, 1908, was an adjustment to conform with the engineer's valuation. Later in the printed decision of Aug. 7, 1911, the statement is made that this value apparently represents an attempt to readjust plant value to conform with the valuation made by the Commission's engineer. Inasmuch as this statement is made in the decision, it would seem that there is no opportunity for a false impression to be derived from what is there said. As the decision is already in print it will not, of course, be possible to actually strike out the section asked for from the printed copy, and as it seems that there is no necessity for a change because the decision, if taken in its entirety, does not convey the impression that the company has attempted to pad its book value, we do not believe that any action is necessary with regard to this portion of the application.

Section II. The company asks that the following be striken from page 505, lines 18 to 21 of the printed decision: "What disposition was eventually made of the $3,000 reserve does not appear, but it seems certain that it must have been turned over to the Oconto City Water Supply Co. after allowance was made for receivers' fees, etc." The company asks to have inserted in place of this the following: "The compensation for the services and disbursements of the receiver and of his counsel were finally allowed at the sum of $5,500. The $3,000 reserved as aforesaid was applied thereon, and the balance of $2,500 was paid by the Oconto City Water Supply Co. out of the $10,347.22 theretofore turned over to it."

Section III of the application asks for a modification to conform to the change suggested above on page 505, lines 35 to 40, of the printed decision. Although the correction as suggested above would serve the purpose of clearing up one portion of the record, as far as any practical bearing upon the decision in this case is concerned, it seems to be of no importance. The rights of neither party are involved in this matter, and the only purpose which it would accomplish would be to change the language of the decision so as to clear up this portion without having any effect upon the decision itself or upon the rates as made therein. Under these circumstances, it does not seem necessary to take any action with regard to these portions of the complaint.

Section IV. This portion of the application asks for a change on page 507, line 43, to insert after the words "installed in its system" the following: "And in prosecuting the two cases brought by the water company against the city, reported in 105 Wis. page 76." This portion of the decision has to do with the legal expenses during the earlier years of operation of the utility, and in the hearings preceding the decision of Aug. 7, 1911, it was pointed out by counsel for the respondent that the greater part of these expenses were incurred in defense of a suit brought against the water company in an attempt to secure payment for part of the pipe laid in its system. It was not stated that all of the legal expenses were so incurred, and it was not the intention of the order to convey this impression. This, however, is another question of phraseology which has little bearing upon the final outcome of the case and apparently very little upon the rights or interests of either of the parties to the case. Although it would perhaps have been desirable to have had the insertion, as suggested, made in the original order, this is not a matter of sufficient importance to necessitate a change at this time.

Section V. On page 518, lines 5 and 6, of the printed decision the utility asks that the clause "The utility attempted to enforce payment" be changed to read "The utility billed its consumers." As explained at the hearing of Nov. 2, 1911, the objection of the company to the clause as now contained was that it might give the impression that the utility had used undue means to secure the collection of bills. As used by the Commission in the decision, the clause meant that the utility had attempted to enforce payment to the same extent that it is customary for a utility to attempt to enforce payment, and there was no intention of giving the impression that any improper methods were used. With this explanation, we believe that the matter can be considered settled.

Section VI. The utility asks that on page 552, lines 11–14, the following sentence be stricken out: "The utility seems to have attempted to collect the franchise rate and to have taken advantage of the orders referred to only in cases where such collections could not be made." The orders in question are orders of the Commission, authorizing the utility to collect on account, pending the final decision in the matter, the amounts which it had collected prior to Jan. 1, 1909. It was stated at the hear-

ing of Nov. 2, 1911, that the utility had not attempted to collect the franchise rate, that all consumers were told of the two orders of the Commission relating to collections and were given an opportunity to pay on account in accordance with those orders. From a conversation with the treasurer of the Oconto City Water Supply Co. the representative of the Commission understood that it was the practice of the utility to bill consumers at the franchise rate and only to collect in accordance with the Commission's orders in cases where consumers refused to pay the franchise rate. If the sentence which the utility desires to have stricken out is an incorrect statement, it is due to a misunderstanding between the treasurer of the utility and the representative of the Commission, and although it will not be possible to actually strike out that sentence from the printed decision, if it does misrepresent conditions we see no objection to acknowledging that at this point.

Section VII. On page 563 of the printed decision, lines 33 to 37, the utility asks to have the following stricken out: "The data submitted by the water company indicated that the Oconto Lumber Co. has two six-inch connections to the mains of the water company, but a more complete examination shows that there is but one such connection." The utility asks to have the following inserted: "The data submitted by the water company indicate that the Oconto Lumber Co. has one six-inch connection to the mains of the water company." In stating that the data submitted indicated that there were two six-inch connections the Commission had reference to the consumers' cards submitted by the company, the cards in question being those bearing the numbers 786 and 281. An examination of the drawings submitted by the utility, however, shows that there were not in fact two six-inch connections, but that there was only one, as stated by the utility. The sentence in question should probably have been worded so as to read that the *cards* submitted by the water company indicated that the Oconto Lumber Company has two six-inch connections. The more complete examination referred to was an examination of the drawings submitted by the utility, and if the sentence in question can be interpreted to give the impression that the utility misrepresented the number and nature of the connections, we take this opportunity to correct that impression.

Section VIII. The utility asks that on page 571, lines 9 to 12, the following sentence be stricken out: "This being the case, no change can be made in the charge to the city for fire protection for the period from Jan. 1, 1909, to the date of this decision, from the charge which had previously been made," and asks to have inserted this sentence: "But as between the city and the water company it was agreed that the charge for public service since the date of the taking of the indeterminate permit, Dec. 6, 1909, should abide the decision herein." The effect of this is to ask that the Commission so revise its order as to remove any obstacle which might exist because of that order in the way of the company collecting for service rendered for fire protection from Dec. 6, 1909, to the date of the decision more than it would have collected under the rates as charged prior to Dec. 6, 1909. Before deciding whether or not the changes asked for should be made, it will be well to call attention to the alleged agreement between the city and the water company, relating to the charge which should be made following the date of the indeterminate permit. From a certified copy of the proceedings of the city council of Oconto, filed in connection with this application, and from the statements of counsel at the hearing of Nov. 2, 1911, it appears that an agreement was actually reached between the water company and the city, that for the period from Dec. 6, 1909, to Jan. 1, 1910, a matter of some twenty-five days, the rate for fire protection should be in accordance with the final decision of the Commission. It was not pointed out, however, and we fail to find any record to show, that such an agreement existed for the period from Jan. 1, 1910, to the date of the Commission's order. If, however, an agreement can be reached, or has been reached between the company and the city relating to the charge for fire protection and providing that the amount as advised by the Commission shall be the basis for charges since Jan. 1, 1910, this Commission has no purpose in interfering with the carrying out of such an agreement, and the order of Aug. 7, 1911, is so far modified as to remove any obstacle which might prevent the carrying out of such an agreement.

Section IX. The utility asks that the Commission fix flat rates in addition to those fixed by the order of Aug. 7, as follows:

Extra faucets, $2.00 each.

A rate for steam boilers for heating purposes and a rate for hot water boilers for heating purposes, and that it strike out of the franchise schedule the following rates:

Cows, $2.00 each,
Horses, one, including washing of carriage, $4.00,
Horses, each additional, $2.00,

and that it insert in the franchise schedule after the words "steam boilers" the following "for power purposes."

The testimony of Mr. Kelly, secretary of the utility, taken before the representative of the Commission on Sep. 20, 1910, states that the company had been in the practice of charging $2.00 for extra faucets, such as wash basins and laundry tubs, but that no charge had been made for hot water faucets. The order of the Commission, dated Aug. 7, 1911, probably needs to be changed somewhat in order to provide for some such charge as this, although we are of the opinion that there are cases where extra faucets should not be charged for. When fixtures in addition to a kitchen faucet, but exclusive of extra faucets, are charged for and when there is also a charge for each room in excess of five, there may be some question as to whether a charge for other faucets would not amount to a double charge for water used, especially if the nature and position of those faucets is such that their installation is not likely to lead to an increased use of water. In the present case, however, it does not seem that any injustice will be done if the utility is given the right to make a charge for wash basins and laundry tubs in addition to its charge for other fixtures and for rooms. We doubt whether any extra faucets other than these should be charged for and do not feel called upon to make a rate for such other faucets at this time. With regard to the company's application to have the charge for horses and cows abolished, we are of the opinion that the reasons submitted by the company are sufficient to warrant our taking action as requested. This does not mean that we believe that service such as this should be rendered free of charge. Under the conditions prevailing at Oconto, however, it appears to have been very difficult for the utility to make collections for this class of service and the purpose of the company in asking for this change appears to be to have abolished a rate which is difficult of collection and to have substituted therefor one which may be collected in the form of a charge for faucets placed in barns. Without expressing an opinion with regard to the advisability of such a change as applied to water utilities in general, we believe that it is justified in the present instance. A charge for faucets placed in barns may not in every case

secure a payment for water used for horses and cows, but it probably will be in its practical application as satisfactory and as just as the present schedule. We believe that a charge of $2.00 for a barn faucet, with the understanding that this rate should not apply to public or livery barns, will answer the purposes of this case. The franchise rates provide that the charge for steam boilers shall be special. The utility asks that this section of the franchise rates be amended to apply only to steam boilers for power purposes. The result of this would be that such boilers would, in the future, in every case be supplied through meter. Then the utility wishes the Commission to make a flat rate for steam and hot water boilers for heating purposes, which rate, it is understood, should be applied from Jan. 1, 1909, to the date of the Commission's decision upon the original application. The effect of making such a rate would be to furnish the utility an authoritative basis upon which to make its charges for such uses during that period. It was the intention of the original order that such uses as this should be placed on a meter basis, but as the franchise had never made a definite rate for these uses, the utility finds itself without a fixed rate to apply for the interval between Jan. 1, 1909, and the time of such metering. It appears to have been the practice of the utility to charge $5 per year for such service, and if the Commission approves this rate, we believe that the utility will have a satisfactory basis for billing such consumers for this service up to the time that meters are installed.

Section X. The company asks that on page 577, line 41, after the words "$9,800 per year" the following be inserted: "Effective from and after Dec. 6, 1909." The effect of this would be to make the charge for fire protection, as fixed in the original order, retroactive as far as Dec. 6, 1909. Inasmuch as there was no provision prior to the date of the decision that the charge for fire protection should be retroactive, we do not see how we can make a retroactive rate for that purpose. As previously stated, however, it is not the intention of the Commission to have anything in its decision stand in the way of any reasonable agreement which may have been entered into between the city and the utility as to the charge for fire protection, dating back to this or any other time.

Section XI. The company asks that direction be made as to the ten private contracts which were discussed in connection

with the original petition. It appears from the testimony taken in connection with this case that prior to the installation of the applicant's plant there had been a small water plant in the city of Oconto owned by ten residents of the city and used for the purpose of supplying water to their residences. When the Oconto Water Company started operation in the city of Oconto, the owners of this private plant gave up the operation of their plant and took water from the water company. It appears to have been agreed that each of the ten owners of this small plant should receive service from the water company to their premises at a rate of $20 per year each, during the life of the franchise of the Oconto Water Company, or for a period of thirty years. In each case service was to have been rendered through a ¾ inch service pipe connected to the main of the water company. The utility now asks that the Commission decide as to whether these ten private contracts are still in effect or whether such consumers should be billed in accordance with the regularly scheduled rates. The information submitted to the Commission with reference to these contracts has been so uncertain and the actual nature of the contracts is so much in question that it does not appear advisable for us to make a ruling with reference to them. The question of the legality of these contracts is one which perhaps can be determined by counsel for the utility without reference to the Commission and it would seem to be a matter which should be so determined. Under all the conditions existing, we do not feel called upon to make an order regarding this.

Section I. The city asks for a modification of the decision of Aug. 7, 1911, by striking out of page 544, line 25, the words "both the consumers and" and by changing the word "their" in line 26 to "its," so that the section in question shall read: "The management seems to feel that the introduction and use of meters will prejudicial to its interests." Counsel for the city insists that patrons of the utility have not taken the stand that the introduction and use of meters would be prejudicial to their interests. Although it does not appear to have been definitely stated at any point that consumers had such feeling, it was the impression gathered from the hearing in this case that a large number of the consumers objected to any ruling which would allow the utility to put in meters at its own discretion.

Section II. The city wishes to have a modification of the language of the decision to make it clear that the consumers objected to the utility having such right to install meters only in case a corresponding right were not given to the consumers. Although there may be sections in the decision which do not make this clear, on page 546, line 33, we find the statement: "Counsel for the city argued at some length that if the utility were given the right to install meters, the right to require the utility to do so should also be granted to consumers." We believe this states the position of the consumers with regard to the installation of meters in such a manner that no change in the text of the decision is necessary upon this point.

IT IS THEREFORE ORDERED, That there be added to the rates of the utility as fixed by franchise the following rates:

Wash basins, $2.00 each,
Laundry tubs, $2.00 each,
Barn faucets, $2.00 each,
Boilers for heating purposes, either hot water or steam, $5.00 each.

IT IS FURTHER ORDERED, That rates fixed by the franchise as follows:

Cows, each $2,00,
Horses, one, including washing carriage, $4.00,
Horses, each additional, $2.00,

be stricken out; and that the words "for power purposes" be inserted after the words "steam boilers" where they occur in the flat rate schedule of the utility now in effect.

JUNEAU ELECTRIC COMPANY

vs.

NEW LISBON MUTUAL TELEPHONE COMPANY.

Submitted Oct. 27, 1910. Decided Dec. 15, 1911.

The Juneau Electric Company alleges that the respondent, the New Lisbon Mutual Telephone Company, has so constructed its lines as to interfere with the service furnished by the petitioner and asks that the respondent so adjust its lines and service as not to interfere with the petitioner's rights. The Juneau Electric Co. has its principal place of business at New Lisbon, Wis., and is engaged in furnishing telephone service in New Lisbon, Camp Douglas, Hustler, and Necedah, with connections with Tomah, Clifton, Elroy, Wonewoc, Mauston, Friendship, and other places, besides having connection with the long distance lines of the Wisconsin Telephone Co. Charges of improper methods of construction and inadequate maintenance were made by both companies and several instances are cited where the lines of the two companies are strung so closely together as to cause interference. Disturbances on the lines of the two companies in the present case are due to leakage, electromagnetic induction, and electrostatic induction.

Held: A better understanding of the causes and cure of line disturbances on the part of both companies would lead to the following results: 1. Substitution of cable for open wire in New Lisbon by the applicant; 2. a metallic line for toll service; 3. cooperation of linemen of the two companies in separating the lines; 4. inspection and general repair of all lines; 5. exercise of greater care in keeping the lines well insulated, wire tight and securely tied; 6. exercise of more care in turning corners by the use of double arms; and 7. elimination of all dead wires. In order to furnish satisfactory service in the future the adoption of these recommendations is essential. It is ordered that the applicant and respondent make the improvements outlined and that they maintain their lines in condition to give reasonably adequate service. In case either utility shall desire to improve the service by any other method, such method shall be submitted to the Commission for approval.

The petitioner asks that just and equitable rates be fixed and that discrimination be abolished.

Held: The service matters at issue are sufficiently important to warrant a postponement of any adjustment of rates until adequate service is offered.

The petitioner further charges that the respondent is unreasonable in demanding that railway employes in the depot at New Lisbon answer a phone which has been installed there by respondent.

Held: The portion of the petition relating to the respondent's phone in the depot at New Lisbon is not a matter to be considered in connection with this case.

The application of the Juneau Electric Company, dated Sep. 12, 1910, shows that the applicant is a corporation duly organized under the laws of Wisconsin, with its principal place of business at New Lisbon, Wis. The company was organized in 1900 and is engaged in furnishing telephone service in New Lisbon, Camp Douglas, Hustler, and Necedah, with connections with Tomah, Clifton, Elroy, Wonewoc, Mauston, Friendship, and other places, besides having connection with the long distance lines of the Wisconsin Telephone Company.

The application further shows that the name of respondent is really the "New Lisbon Mutual Telephone Company."

Applicant charges that the respondent has so constructed its lines as to interfere with the service rendered by the applicant and further charges that the respondent is unreasonable in demanding that railway employes in the depot at New Lisbon answer a phone which had been installed there by respondent. Applicant asks for a full investigation regarding the service rendered, and asks that respondent so adjust its lines and service as not to interfere with applicants rights, and asks further that a just and equitable rate be fixed and that discrimination be abolished.

Respondent's answer sets forth:

1. That respondent is a corporation duly organized under the laws of the state of Wisconsin.

2. That its organization was not prompted by malice.

3. That its construction was done with the consent of the towns and cities through which it passed and with the consent of owners of land where lines were constructed.

4. That if induction or cross-talk exists on applicant's system, such induction or cross-talk results from applicant's failure to keep its lines in repair, that poles are decayed and that wires are out of place.

5. That linemen of petitioner have, apparently for the purpose of annoying respondent and affecting the efficiency of its service, constructed and repaired lines above those of respondent so that the wires of the two systems would come in contact, and that respondent has had to remove its own wires at such points.

6. That applicant has attempted to harass and injure respondent.

7. That applicant has permitted a single wire to drop or hang from its line so as to come in contact with those of respondent.

8. That respondent's lines are properly constructed.

Hearing was had at Madison, Oct. 27, 1910. Appearances were: For the applicant, *W. H. H. Cash, William Roney;* for the respondent, *Albert Klinker, A. M. Bradley.*

It was shown at the hearing that such portion of the application as relates to the phone installed in the depot at New Lisbon by respondent, is not a matter to be considered in connection with the present case.

With regard to rates very little of a definite nature was introduced at the hearing. The service matters at issue, however, appear sufficiently important to warrant a postponement of any adjustment of rates until adequate service is offered.

Leaving out of consideration all questions of motives which led to present conditions, the facts seem to be:

1. For some time after the organization of the Juneau Electric Company no charge, in addition to regular local rates, was made for the use of any of the lines of the system or of other systems, exclusive of the Wisconsin Telephone Company, with which it had connections.

2. On Jan. 1, 1907, applicant adopted an amendment to its rates, by which a charge was made, in addition to regular monthly rates, for all calls which passed more than one central.

3. A considerable number of subscribers discontinued the use of applicant's service, and the respondent company was soon after organized.

4. In some cases lines of the two companies have been strung on the same side of the road so that wires are close together.

Charges of improper methods of construction and inadequate maintenance were made by both applicant and respondent. In order to determine what conditions really are and what changes should be made in order to secure adequate service, an inspection of the portions of the systems involved was made by the Commission's engineer. What follows is based upon the engineer's report to the Commission.

On Nov. 24, 1911, an inspection was made of the lines of both of the above companies in the city of New Lisbon and on the Elroy road, paying especial attention to the points brought out in the testimony given in the hearing before the Railroad Commission on Oct. 27, 1910.

In this instance, as in hundreds of others in this country, the desire for cheap service prompted the organization of a second

and competing company. In most of these cases the idea that one telephone system was as good as any other led to the conclusion that cheap service was the most desirable service. Whether enmity between these two companies led to the construction now in dispute or not, is not of so much importance as the fact that the construction was carried out which now results in decreased efficiency in the service of both companies. From an examination of the wire plant it is evident that the builders of the second plant did not understand the sensitiveness of telephone instruments, otherwise they would have realized the dangers of placing their wires close to any others that surely would cause disturbance on their own lines, thus cutting down the usefulness of their plant.

As set forth in the testimony, the lines of the two companies are parallel on the Elroy road for about three miles. The distance between the wires varies from four feet to a few inches, so that a strong wind might bring the wires together and thus be the cause of annoyance to the subscribers and operators of both companies. In the rear of the office of the Juneau Electric Company a drop wire of this company is between eight wires above and one below belonging to the other company at a distance of less than one foot. The length of the pole of the New Lisbon Mutual Company would have allowed a clearance of at least two feet. Back of Barlow's store is another example of one lead going through the other at very close range. A drop to a clergyman's residence passes through the main lead of the New Lisbon Mutual Telephone Company, and in order to clear the cross thus made one wire has been dropped from the insulator and allowed to rest on the cross-arm. There are many other instances that might be cited to show the type of construction used by both companies. It was stated that a party on the No. 186 line of the Juneau Electric Company had often conversed with a relative on a line of the other company by means of cross-talk. Appointments were made beforehand or one happened to hear the other on the line. It is impossible to make the regular connection through the switchboard.

These instances have been pointed out to show how unwise both companies were: The New Lisbon Mutual Telephone Company in building as it did, and the Juneau Electric Company in allowing their lines to be subjected to interference. It has long been recognized by telephone engineers that a grounded system

is the least satisfactory because causes of disturbances on the lines cannot be eliminated. Such causes of disturbances are: 1. leakage; 2. electo-magnetic induction; 3. electro-static induction.

1. *Leakage.* The amount of current necessary to transmit sound waves in exceedingly small. The telephone receiver is so very sensitive that a varying current of one-millionth of an ampere will so disturb its operation as to render it uncommercial. A difference of potential between two ground rods might be a cause of disturbance. On telegraph lines in some cases these earth currents have been strong enough to transmit messages without the use of any battery. If the wires are apt to come in contact with electric light wires the grounded system gives such a ready path to the high current as to burn out a coil in the telephone. In many other ways it is found that poor insulation is a cause of poor service. As the grounded system has many contacts with the earth through the ground rods, it is very unsatisfactory, while the McClure is better, and the metallic best. The insulation of open wire lines should never be allowed to fall below one megohm per mile, even in bad weather. Poor insulation allows the current to spread to earth and thus limits the distance for telephonic transmission.

2. *Electro-magnetic Induction.* Current flowing in a conductor tends to set up an equal current in the opposite direction in the conductor lying parallel to it, due to the magnetic field surrounding the wire. When the disturbing wire is a telephone wire, cross-talk is the result. However, if it were an electric light wire carrying alternating current a continual hum like that of a transformer or arc lamp would make the line too noisy for use. The amount of electromagnetic disturbance depends upon five factors: 1. Volume of current in the disturbing wire; 2. actual distance of the disturbing wire from the telephone circuit; 3. relative distance between disturbing wire and the two sides of the telephone circuit; 4. the distance that the inductive circuits parallel the telephone circuit; 5. want of symmetry of telephone circuit. With a metallic line these induced currents may be eliminated by transpositions, but in all cases telephone circuits should be as far as possible from the disturbing wires.

3. *Electro-static Induction.* When a body is charged with electricity of one polarity, neighboring bodies tend to take an

equal charge of the opposite polarity. A telephone wire charged with varying amounts of electricity induces in a parallel wire varying amounts of electricity of opposite polarity, which will use the path of least resistance for the current thus set up. The action of electro-static currents is very similar to the electro-magnetic currents and the remedies are very much the same. No rule can be laid down as to the placing of transpositions in metallic lines, but a study will reveal the proper location. The American Telephone and Telegraph Company has made many rules in this respect that may be safely taken as a guide for other companies, since the Bell system has so perfected its line construction as to be able to transmit voice currents over a thousand miles with equal distinctness as if it were one mile.

As the three causes considered above result in the majority of disturbances on telephone lines, considerable space has been given to their discussion, not because the case in hand especially needs it more than any other grounded system, but because the above remarks apply to every telephone system. The great bugbear of the telephonist is cross-talk, because it is easy to detect, difficult to find the exact cause and location, and when found the remedy is hard to devise and expensive to apply. The easiest method by which to improve the grounded and McClure systems is to make the lines metallic, insert transpositions, and properly insulate the lines.

In this particular case it seems that a better understanding of the causes and cure of line disturbances on the part of both companies would lead to the following results: 1. Substitution of cable for a large amount of open wire in New Lisbon by the Juneau Electric Company. This would reduce troubles which are sure to come to the present system when the electric lighting plant now under construction in this city is started. 2. For toll service the line should be metallic if good service is desired and if the distance is not to be limited to the neighboring towns. 3. Cooperation of the linemen of the two companies in separating the lines so that the liability of crosses and cross-talk will be reduced. 4. An inspection of all lines, renewing all broken pins and insulators, tying in loose wire, supplying brackets and insulators where wire is apt to come in contact with pole, cross-arm, or other objects that may complete a ground under unfavorable weather conditions. 5. Exercise of greater care in keeping the lines well insulated, wire tight and securely tied.

6. Exercise of more care in turning corners by the use of double arms. This especially applies to the New Lisbon Mutual Telephone Company. 7. Elimination of all dead wires. Some of the recommendations made here do not apply to portions of the system involved in this complaint with conditions as they are at present, but it seems clear that in order to furnish satisfactory service in the future, the adoption of the recommendations made herein is essential.

This decision does not need to be concerned with the question of responsibility for the building of the second system. Conditions exist which cause poor service and, aside from any consideration of responsibility for those conditions or of damage to either company because of them, it is the duty of both utilities to make such improvements and changes along the lines outlined above as will result in adequate service. The question of increases in rates is postponed until the applicant shall have complied with the order in this case.

IT IS THEREFORE ORDERED, That the Juneau Electric Company and the New Lisbon Mutual Telephone Company, applicant and respondent, respectively, in this case, make the improvements outlined above and that they maintain their lines in condition to give reasonably adequate service; provided, that in case either utility shall desire to make use of any method of improving the service other than those herein outlined, such method shall be submitted to the Commission for approval.

IN RE APPLICATION OF THE CITY OF MILWAUKEE TO INSTALL A REVISED SYSTEM OF WATER UTILITY ACCOUNTS.

Decided Dec. 26, 1911.

Application was made by the city of Milwaukee for the Commission's approval of the adoption and installation of a new classification of accounts, blank forms and accounting procedure for the Milwaukee water works. A careful check of the text of the proposed system shows the detailed accounting requirements to be in conformity with the official classification of the Commission.

Held: Since some time will be necessary before the proposed changes can be so adjusted as to completely fit the large variety of operating conditions in the Milwaukee water works, it is deemed advisable to place the proposed system on trial for one year. During this time changes found necessary in installing the forms can be made upon amendment filed with the Commission. Fundamental changes in the keeping of accounts, if such should be found necessary, can be made before the opening of the next calendar year. The city is ordered to install and place in operation the proposed accounting system for one year, beginning Jan. 1, 1912.

The Railroad Commission is in receipt of the following letter from John R. Commons, director of the bureau of economy and efficiency of the city of Milwaukee, relative to a new accounting system for the water department of that city:

"The Bureau of Economy & Efficiency, acting under the direction of the Common Council of the City of Milwaukee and in cooperation with the departments of the City Comptroller and Public Works, engaged Mr. J. B. Tanner, Certified Public Accountant of Cleveland, Ohio, to design a classification of accounts, blank forms, accounting procedure, and a plan of reorganization for the Milwaukee Water Works. This work is now practically completed, and some of the forms have been installed.

"The classification of accounts designed for use of the Milwaukee Water Works was subjected to a critical conference held at the offices of the Railroad Commission at Madison on October 28. At this conference there were present Mr. Edwin Gruhl, Statistician to the Railroad Commission, Mr. John R. Commons, Director, Mr. B. M. Rastall, Associate Director of the Bureau of Economy and Efficiency, Professor S. W. Gilman, of the University of Wisconsin, Mr. J. B. Tanner, on behalf of the

Bureau, Mr: L. E. Everts, Deputy City Comptroller of Milwaukee, and Mr. H. P. Bohmann, Secretary of the Water Works.

"The classification of accounts was at this conference tentatively approved with some minor modifications, and it is the intention of the Milwaukee Water Works to adopt this classification of accounts on January 1, 1912.

"Inasmuch as this classification is in such form that it will not conflict with the uniform classification of the Railroad Commission, and will furnish all information that may be required, it is desired that it shall be formally approved and its installation ordered by the Railroad Commission. We respectfully request that you take proper action, and that the adoption and installation be carried out with your cooperation and approval.

"In reference to the forms and procedure which have today been filed with the Railroad Commission, it is desired that the Railroad Commission shall satisfy itself as to their merits, and if they meet with the approval of the Railroad Commission, we respectfully request that you take the proper action, and that the adoption and installation of these forms and procedure be carried out with your cooperation and approval.

"The classification of accounts, and the forms and procedure have been designed in such a manner as to furnish the necessary data for reporting monthly to the Railroad Commission, and it is also requested that the order of the Commission shall require monthly reports showing unit costs.

"In reference to the reorganization of the Milwaukee Water Works, we would call your attention to the fact that the present organization is extremely complex in that the administrative officials act under the authority of various state statutes and local ordinances, while one department of the Water Works is authorized and controlled by charter provisions of the Milwaukee City Charter. Notwithstanding these legal complications, the cooperation of the various departments of the city government has been secured and by mutual agreement the classification of accounts, forms and procedure, and the reorganization plan will be adopted for practical working purposes. We would, however, call your attention to the urgent need for legislation, including amendment to the Milwaukee City Charter, before an economical and efficient system can be permanently established, and we greatly desire the cooperation and assistance of the Railroad Commission in the prosecution of the efforts looking to the successful enactment of the necessary laws and the preparation of rules and regulations for the proper reorganization of this utility of the City of Milwaukee."

The original order of the Commission prescribing the uniform classification of accounts for water utilities, dated April 8, 1909, provides:

"Any utility in class A desiring a more detailed system may go into as much subdivision and refinement of each of the submitted accounts as its interest requires, but must not re-arrange or combine any two or more of the accounts in such a manner as to interfere with the integrity of the general scheme and thus destroy the possibility for comparisons. A copy of all additional accounts and the desired subdivision of the prescribed accounts must be filed with the Railroad Commission before such accounts are opened. All records and accounts, including those which are an enlargement, subdivision or refinement of the prescribed accounts, are to be open at all times to the examination of this Commission."

A careful check of the text accounts made in conference with the accountants employed by the city of Milwaukee discloses the fact that the detailed accounting requirements are in conformity with the official classification of the Commission, with such elaboration as was deemed essential to conform with the local needs of the Milwaukee water department.

The accompanying accounting forms have likewise been examined and have been made the matter of conference with the officials entrusted in administering the proposed changes. A complete exhibit of the new and superseded forms has been placed on file with the Commission.

Owing to the fact that some time will be necessary before the proposed changes in accounting practice can be so adjusted as to completely fit the large variety of operating conditions found in a large municipal plant such as the Milwaukee water works, it is deemed advisable to place the proposed system on trial for one year. During this time minor changes found necessary in installing the forms can be made upon amendment filed with the Commission. Fundamental changes in the keeping of accounts, if such should be found necessary, can be made before the opening of the next calendar year.

IT IS THEREFORE ORDERED, That the applicant, the city of Milwaukee, install and place in systematic operation its proposed accounting system for the water utility for a period of one year, beginning Jan. 1, 1912.

IN RE DETERMINING AND FIXING THE JUST COMPENSATION TO BE PAID TO THE KAUKAUNA GAS, ELECTRIC LIGHT AND POWER COMPANY BY THE CITY OF KAUKAUNA FOR THE PROPERTY OF SAID COMPANY ACTUALLY USED AND USEFUL FOR THE CONVENIENCE OF THE PUBLIC.

Submitted Feb. 6, 1911. Decided Dec. 26, 1911.

Notice was filed with the Commission by the common council of Kaukauna, Wis. that the qualified electors of the city of Kaukauna had voted to purchase the plant and property of the Kaukauna Gas, Electric Light and Power Co.

A tentative valuation of the physical property of the company as of Jan. 30, 1911, was made by the Commission. After certain readjustments the cost of reproduction was placed at $61,318 and the present value at $44,992.

Considerable difference of opinion was expressed by the city and company in regard to the present value of the plant as fixed by the engineers of the Commission. The points in controversy include the value of a water power lease held by the company, certain contracts which the company has for furnishing power to manufacturing concerns, and certain items of property which were to have been replaced in the proposed rehabilitation of the plant. The amount claimed by the company for going value is also disputed by the city.

Held: In the present case future plans for rehabilitation do not seem to warrant any change in the present value of the items under consideration. With respect to the contracts with manufacturing concerns, while they are not favorable from a money making standpoint, the obligations can be filled by the electric company without any real loss. They are therefore considered neither as a liability nor as an asset. The future value of the water power lease is considered as somewhat speculative. As regards going value the company's accounts are in such shape that it is impossible to separate the construction and operating items, hence no satisfactory check can be made of the going value claimed. It would seem that the allowance of two or three years for putting the company on a paying basis was reasonable under the circumstances. The subsequent loss of earning power was due to mismanagement. In the light of the facts that the company was put on a paying basis within two years after the present owners acquired the property, even allowing the amount claimed by the company for the 1905 present value, and in considering the somewhat speculative value of the water power lease and the loss of earning power due to mismanagement as well as all the other elements that must enter into a fair and just valuation, $50,000 is a just compensation for the property of the company actually used and useful for the convenience of the public. In addition to that sum, the city is ordered to pay the company for the material on hand at the date of taking possession and for any

new additions since the date of the original valuation, which have not been included in the items considered, at a price agreed upon by the parties themselves, or, in case they fail to agree, at a price fixed by the Commission. The city is to pay the compensation fixed within six months, with interest thereon at the rate of 6 per cent per annum from the date of taking possession of the plant until the amount is fully paid.

Notice was filed with the Commission by the common council of the city of Kaukauna on Jan. 4, 1911, setting forth that at an election held for the purpose of determining whether the city of Kaukauna should purchase the plant and property of the Kaukauna Gas, Electric Light and Power Company, a majority of the votes cast at such election was in favor of the acquisition of the said property by the city of Kaukauna.

The Commission fixed the time of the hearing for Feb. 6, 1911, at two o'clock p. m., at the city of Madison, Wis. The city of Kaukauna was represented by *F. M. Wilcox,* its attorney, and the Kaukauna Gas, Electric Light and Power Company was represented by *James F. Trottman,* its counsel.

The valuation of the physical property of the company ordered by the Commission, was made by the engineers of the Commission as of date Jan. 30, 1911. The summary of the first tentative valuation submitted by the engineers is as follows:

	Classification	Cost of reproduction	Present value
1.	Land—none		
2.	Track and track structures—none		
3.	Cars and car equipment—none		
4.	Electrical distribution system	$24,787	$20,136
5.	Power plant equipment	15,449	8,555
6.	Buildings and miscellaneaus structures	10,332	9,189
7.	Office furniture and appliances	553	387
8.	Tools, implements and machinery	339	169
9.	Horses, wagons and miscellaneous—none		
	Total items—1-9	$51,480	$38,436
10.	Add 12 per cent (see note below)	6,178	4,612
	Total items—1-10	$57,658	$43,048
11.	Stores and supplies	5,646	4,272
	Total items—1-11	63,304	$47,320

NOTE:—Addition of 12 per cent to cover cost of engineering and supervision, interest during construction, contingencies, etc.

In addition to the physical property of the company, it maintains that for sale purpose there should be included the value of a water power lease executed by the Green Bay & Mississippi River Canal Company, as lessor, to the Kaukauna Gas, Electric Light and Power Company, as lessee. The unexpired term of this

lease is about eighty years. The city, on the other hand, claims that this water power lease should be considered more in the nature of a liability, and that it should be so held by the Commission. The city also contends that two contracts which the respondent company has with manufacturing concerns in the city of Kaukauna for furnishing power are a liability and should be considered upon this basis in valuing the property of the company.

Much testimony was produced upon the hearings as to certain differences in the valuation placed upon the property by the engineers of the Commission and that advanced by the engineers for both the city and the company. While the differences as to the actual items included in the inventory were not great, and the cost of the reproduction of these items was generally conceded by both parties to be about the value fixed by the engineers of the Commission, yet there was considerable difference of opinion on the present value of these items. In a previous hearing before the Commission on the questions of service rendered by the respondent company to its patrons, the facts were brought out that the company's inability to comply with the Commission's prescribed rules of service was largely due to the fact that certain power plant machinery and part of the distribution system were considered as inadequate. The company, in agreeing to bring the service up to the standard required by the Commission, made certain proposals for rehabilitation of the property to enable it to meet the service demands. Throughout the hearing in this case the city has taken the position that, inasmuch as the company proposed to make a rehabilitation of its plant, all items of property which were to have been replaced in this proposed rehabilitation should now be excluded from the property actually used and useful in the lighting business, and be included at only such value as these items would bring at a re-sale. It should be stated at this point, however, that the proposals for rehabilitation of this plant on the company's part were mainly propositions that had been submitted to the company by engineers of manufacturing concerns, who were proposing to install a portion of the machinery, which they were selling, in the new rehabilitated plant. It was this fact that was dwelt very largely upon during the hearing, and it caused considerable differences of opinion between the company and the city as to what had been the proposed plan. For this rea-

son it is deemed necessary to take up in detail the items of the inventory in the order in which they were considered in the briefs submitted by both the city and the company, and to state briefly the testimony in regard to these items.

Poles. The city contends that the pole line construction is very poor, and that practically one-third of the poles are in scrap condition, and maintains for this reason that the value fixed by the Commission's engineers should be reduced by one-third. The company claims, however, that the reconstruction of the pole line in the last two years has brought the average value of these lines above that fixed by the Commission's engineers.

An inspection of these lines on Dec. 1, 1911, by representatives of the city and the company in connection with the Commission's engineers, disclosed only a slight change in the original valuation made by the Commission's engineers. In the details of the valuation there is an item of 73 poles, 35 feet in length, which were entered in scrap condition. It was found that 38 of these poles had been removed, and, of the 35 poles still standing in this group, 8 poles were unused, and that 12 poles besides the original 73 might well be considered in the minimum service class. This made 39 poles to be considered in 20 per cent condition. Since the last inventory five new 30 foot poles and two 35 foot poles have been set. The above readjustment resulted in a cost new of $3,938 and a present value of $2,348 for this item of poles.

Fixtures. The city contends that a 33⅓ per cent reduction should be made in the present value of this item on the basis of the general testimony of its engineer that the line is in very poor condition. On the contrary, the company maintains that the Commission's value is too low rather than too high. The testimony and the recent inspection of these lines show that the decayed condition of certain cross-arms is confined chiefly to the 2-pin and 4-pin arms, whereas the 6-pin arms, which comprise the larger part of the value of these fixtures, are really in good condition. For this reason this item is allowed to stand with the addition of five new 6-pin arms put in place since the last inventory, making the cost new $1,187 and the present value $761 for the items of fixtures.

Distribution and Wire. As to this item, the city contends that according to the testimony it is not good engineering prac-

tice to have No. 8, No. 10 or No. 12 wire in service in a distribution system, and that the present value allowed for wires of this size should be excluded from the valuation. The engineer for the company admitted that, while it was not good practice to have No. 12 or No. 10 wire in service in the distribution system, the replacing of this wire would really be a gradual process in the general course of the business of any company. It is a fact that the latest engineering practice is to use no smaller than No. 6 wire for the line and no smaller than No. 8 wire for the services. Although for the number of lights served at certain points in the Kaukauna system the No. 8 and No. 10 line wire and the No. 12 service wire might be ample, yet the service in many parts of this city has been very poor, as was shown in the service hearing before the Commission. It is almost impossible without great detailed work to locate the actual portion of this small wire which is responsible in part for the poor quality of service rendered. It would seem, therefore, that from a standpoint of adequacy all the No. 10 and the smaller wire in the line and the No. 12 and the smaller wire in the services should be placed at 30 per cent condition. Additions have been made for wire and services in place since the last inventory.

Meters, Transformers and Lightning Arresters. The testimony brought out no facts in regard to these items that warrant any material change in the figures placed by the Commission's engineers. A reduction for one transformer not owned by the company and the inclusion of the new meters purchased since the last inventory are the only changes required.

Street Lamp Equipment. The city contends that, in general, the street lighting equipment is in much poorer condition than the Commission's engineers seem to have found it. It is also stated that a deduction should be made of $309 for the value of fifteen lamps bought from the Western Electric Company since the city voted to acquire the plant. These lamps, however, were contracted for before the vote was taken and were paid for in the form of rent by the company, the final payment being made during the course of the hearing. The poor condition of the lamps was fully considered when the engineers placed the low per cent upon them because of their general condition. It is felt that, with the repairs of these lamps, which

the company withheld pending the negotiations for a street lighting contract with the city, this equipment could readily be put in fair average shape. The only change, therefore, is the deduction of $113 for the street arches which were found not to be the property of the respondent company.

Miscellaneous Electrical. There can be no changes in the estimates placed upon these items. A ground in one of the submarine cables has been found and repaired, and the cables are now in good working order, having been recently tested by the company in the presence of the city inspector.

Little Chute Distribution System. It appears that eighty 6-pin cross-arms listed in the engineers' inventory are not owned but only rented and maintained by the company, and a deduction of $54 is made for this item. A substantial agreement on the remaining part of the Little Chute distribution system was had between the city and the company.

Hoffman-Billings Corliss Engine. The engineer for the city, Mr. Vaughn, states that, according to his idea of a satisfactory rehabilitation of this plant, this engine would not be used in the new plant, and would, therefore, have a value no greater than that which could be obtained for it at a second-hand sale, which value he estimates at $541.

The engineer for the company, Mr. McMynn, states that it would be possible to build up the efficiency of this engine by adding a low pressure cylinder and attaching a condenser to the engine, and that the engine would be serviceable in a rehabilitated plant. It is true that, since the installation of new boilers which allow greater steam pressure, this engine could probably carry a full peak load that would come on the station at certain periods. If this were not the case, the addition of the condenser, or small connected steam unit, would give a steam equipment which would be adequate. Such an installation would be of the kind most generally used in the case of a plant of this size, and it would be operated to better advantage than a single large steam unit, which, with the varying load, must at times be operated at an extravagant cost. The present value of $1,536 for this engine is considered reasonable.

Boilers and Foundations. The Barnes and Porter boilers listed in the tentative valuation have since been removed and new boilers and foundations have been added. The value for the

old boilers, foundations, piping and stack have been deducted and values for these items, as replaced, have been added.

The Deane Simplex boiler feed pump is considered to be about 50 per cent condition, and the adequacy would not seem to be a factor in this case, so that the present value of $35 is allowed to stand.

Water Wheels. The figure of $675 cost new and $612 present value placed by the Commission's engineers on the large water wheel are considered as fair and no good reason has been advanced for changing these figures. The small wheel has been put in at 60 per cent condition, which reduces the present value of this wheel to $361. These valuations are considered as taking into full account the condition and type of construction of the above water wheels.

Water Turbine Governor. The fair cost of this governor appears to be about $400, and the freight and erection would bring the same to about $425, which, at 84 per cent condition with the scrap value of $5, would give a present value of $358.

Jack Shaft. Further inspection of the jack shafting and the reduction in the condition per cent of the small water wheel has caused a revision of the condition of the per cent of this shafting to 50 per cent, which would give a present value of $465.

Belt Tightener and Belting. The objection raised by the engineer for the city to the value placed on these articles is based on their abandonment in case a certain rehabilitation of the plant is carried out. Future plans for rehabilitation do not seem to warrant any change in the present value of these items.

Generators. The objection to the value of the 150 kw. generator is based on the proposed plan of rehabilitation, and is not considered as affecting its present value, which is allowed to stand.

The two Edison bi-polar d. c. machines and the 100 light Brush arc generator, which are in the service, are estimated at the minimum service value allowed on any machines of this class, that is 15 per cent, and, being in use, these present values are allowed to stand.

Wire Insulators, etc. In valuing these items at 35 per cent condition, account was taken of the poor character of the construction, and the present value, therefore, in this case would seem to be about right, and also in the case of the switch boards,

the character of construction, and the condition of the same have been carefully considered in determining their present value.

Buildings and Miscellaneous Structures. In this group there seems to be no substantial differences of opinion between the city, the company and the Commission's valuations. The original inventory of the Commission was taken after the new boiler house had been practically completed. The new boiler house and the brick base for the new stack were included in the Commission's original valuation. Adjustment was made of the old stack, which has been removed, and the new steel stack which has been added.

The poor condition of the frame work in the front of the water wheel pit was taken into account in arriving at the present value of the power station as a whole, and no adjustment is deemed necessary for this item.

Office Furniture and Appliances. The engineer's present value for these items was considered high by the city, but the general value of 70 per cent condition does not seem unreasonable, and therefore the same is allowed to stand.

Stores and Supplies. An inventory of the stores and supplies on hand, Dec. 1, was made and found to be as follows:

Merchandise and electrical stock	$2,450
Stationery	115
Stock at power station	380
Meters in stock	154
	$3,099

The items of the 230 kw. Edison bi-polar generators, which have not been of service for the past nine months, and the two boilers, which have been removed, are considered as not being useful in the company's business, and these would ordinarily be disposed of by the company at such second-hand values as they might be able to obtain. The new items purchased since the last inventory, and those admitted in the previous inventory, namely, the office sign, a wagon, set of bobs, eleven meters and thirty-six ground cones are considered as being a proper part of the property of the company. The readjusted valuation, taking into account the foregoing facts and circumstances, is given in the following table:

Classification.	Cost of reproduction.	Present value.
1. Land—none		
2. Track and track structures—none		
3. Cars and car equipment—none		
4. Electrical distribution system	$24,421	$18,235
5. Power plant equipment	16,134	9,538
6. Building and miscellaneous structures	10,429	9,050
7. Office furniture and appliances	553	360
8. Tools, implements and machinery	339	152
9. Horses, wagons and miscellaneous	105	69
Total items 1-9	$51,981	$37,404
10. Add 12% (see note below)	6,238	4,489
Total items 1-10	$58,219	$41,893
11. Stores and supplies	3,099	3,099
Total items 1-11	$61,318	$44,992

NOTE:—Addition of 12 per cent to cover cost of engineering and supervision, interest during construction, contingencies, etc.

POWER CONTRACTS.

In considering the power contracts with the Boyd Paper Company and the Kaukauna Lumber Company it was found that, while such contracts were not favorable from a money making standpoint, the obligations could be filled by the electric company without any real loss. These contracts are therefore not considered as a liability. Nor can they be regarded as an asset. They can be executed at about the cost of the service therein agreed to be rendered by the company.

WATER POWER LEASE WITH GREEN BAY & MISSISSIPPI CANAL COMPANY.

The Kaukauna Gas, Electric Light and Power Company entered into a lease with the Green Bay & Mississippi Canal Company in 1891 for 200 h. p. permanent power and for 100 h. p. revocable power. This lease has still some eighty years to run, with price adjustments to be made at intervals of ten years. The original lease stipulated that for the first ten years a price of $6 per h. p. per year was to be paid and that at the end of each ten year period an arbitrator from both sides and a third arbitrator agreeable to both parties to the lease should fix the price for the water power for the following ten year period. In 1907 the matter of this arbitration came up as that was the end of the first ten year period since the renewal in 1897. For some reason the Kaukauna Gas, Electric Light and Power Com-

pany has not taken the necessary steps to have this matter arbitrated, and it has been paying at the old rate of $6 per h. p. per year. The canal company claims that it is going to charge for back rental in excess of $6, and the price it seems to think fair is $12 per h. p. for the present ten year period.

This lease includes the land upon which the power plant is located and the company bears the expense of the intake flume from the government canal and the tail race to the river, as well as all buildings and improvements. In addition the company is obliged to pay all taxes on the land and water power right.

In considering this lease the company's engineer concluded that the same has a value for the 200 h. p. for permanent power. He figures that if the 200 h. p. were used every honr in the year at the rate of 3½ lbs. of coal per horse-power-hour, and that such power were generated by steam, the coal cost would amount to $11,200. The difference between this cost and the $2,000 per year, if the water cost $10 per h. p., with the cost of operation of the steam auxiliary when the water was low being considered, would give a saving of approximately $3,460. This value, capitalized for the 76 years which the lease has yet to run, would give a present value of this lease of $43,136.

The city's contention as to the value of this lease is about as follows: The fact that the rent is to be readjusted every ten years is held as a point which makes it very likely that each year the adjustment will have the tendency to bring the price per h. p. up to just what it is worth. It maintains that for the present ten year period the price per h. p. will likely be $12 to $12.50 and that there is no way of telling what the price may be for the next ten year period. The fact that the buildings and plant equipment of the electric company stand on leased ground belonging to the canal company is also considered as a detrimental feature of the contract. The attitude of the canal company to get full value out of the water power is considered as sufficient reason for saying that this lease is really of no value, but a distinct liability, inasmuch as back rental must be paid.

In making a determination as to the value of the lease the real point would seem to be: Can a saving in operation cost of this utility be made by using the water power, and, if so, just what such saving may be? If we consider the 200 permanent h. p. and figure a load factor of 50 per cent, which would be

very good for a plant of this kind, we would find 876,000 h. p. hours needed in the operation of this plant for a year. Assuming, then, the 3½ lbs. of coal per h. p. hour and deducting 983,410 lbs. of coal, which the company report shows was necessary besides the water power, we have 2,082,590 lbs. of coal necessary in addition to what was used in the operation of the plant. Using $4 per ton for coal, we have a fuel cost of $4,165. The water power cost, assuming $12 per h. p. would be $2,400, would result in a saving of $1,765 by using the 200 h. p. of water power. This being a saving in operation, a deduction must be made for the operating expense of taxes, which the electric company must pay by virtue of the lease. The taxes on the water power amount to $500 at least. This leaves a saving of $1,265 per year. In connection with this saving, it should be remembered that the present ten year period, during which time the $12 per h. p. rent would seem reasonable, has only six more years to run. There is no way to forecast what amount may be asked for and agreed upon for the next ten year period. It would seem reasonable to suppose that the canal company will bring the rent up to just such a point as will give only a large enough margin of saving to keep the electric company from going over entirely to steam power generation. What this point may be is not known, but the fact remains that an arbitration is provided for in ten year periods, and considering the disposition of the canal company to get as much as possible for this power, the future value of this lease beyond the present ten year period is certainly speculative. It is not to be considered that any arbitration board would act unjustly in its award. We must assume that any such board will fix the rental at a fair figure regarding what the value of such power is generally rated at the time of the arbitration.

GOING VALUE.

The company has prepared a table showing the going value of this plant and submitted same as part of the evidence in this case. It starts with a present value of the physical property of the plant in 1905 as $41,717.35. To this value are added the additions to the plant each year, and the difference between the net earnings and the sum of the plant depreciation at 5.72 per cent, and interest at 8 per cent. Continuing this process up to the year 1910, the company arrives at a value of $79,235.39 as

the value of the plant without considering the value of the water lease.

The city states, in the matter of going value, that the company has started with a plant value greater than really existed in 1905. It also contends that the records of the company do not show plainly what plant additions were ordinary maintenance repairs and what was really new construction. It further maintains that the business has not been properly developed and gross mismanagement has been the real factor in the operation of the plant ever since the present company owned it.

An examination of the inventory of the physical property of the company as of 1905 indicates the present value of the same as being more nearly $32,000 than $41,717.35, which latter amount is used by the company in its going value computations. An inspection of the company's going value table shows that within two years after the company took hold of the business the net earnings were sufficient to more than take care of a depreciation of 5.72 per cent and an interest charge of 8 per cent. This would seem to show that two or three years would be a reasonable time to allow to put the company on paying basis.

It was about this time that the controversy between the city and the company began to take up more of the time of the management of the company than did the business operation. According to this table the operating expenses increased steadily, the gross earnings remaining almost at a standstill, until in 1910 the operating expenses had reached a point 250 per cent of what they were in 1905, while the gross earnings were increased only 80 per cent. In the report of the company of June 30, 1911, only $2,175 is shown as additional construction for the year preceding, and in the report of the previous year, $3,139 is shown as the additions for that year, while in the going value table additions for 1909–1910 are listed at $13,797. In the 1911 report we also find that the company has reported a maintenance charge to the distribution system of $4,640. It is a fact that for the construction of a new boiler house and for the reconstruction of the distribution system somewhere between $6,000 and $10,000 was spent during 1909–1910. The company's accounts in this case are in such shape that it makes it impossible to determine just what amount was actually spent for construction and what amount was spent for operation; and where these items have been included twice in the going value

table. Because of this fact, that it is impossible to separate the construction and operating items, no satisfactory check can be made of this going value table.

But in the light of the facts that the company was put on a paying basis within two years after the present owners acquired this property, even allowing $41,717.35 for the 1905 present value and in considering the somewhat speculative value of the water lease and the loss of earning power due to mismanagement, as well as all the other elements of value that must be considered under the law governing in arriving at the fair and just value of the property under appraisement, it would seem that $50,000 would be a just compensation to be paid by the city of Kaukauna to the Kaukauna Gas, Electric Light and Power Company for the property of said company actually used and useful for the convenience of the public.

IT IS THEREFORE ORDERED, That the just compensation to be paid to the Kaukauna Gas, Electric Light and Power Company for the taking of the property of the said company by the city of Kaukauna, which property consists of the items described in the schedule last above mentioned, excepting any stock and material on hand and the additions to the plant that have been made since Jan. 30, 1911, which have not been included in the said items is hereby fixed at fifty thousand dollars ($50,000).

IT IS FURTHER ORDERED, That in addition to the above price, the material on hand at the date of the taking possession of the said plant by the said city and any new additions to the said plant that have been made since Jan. 30, 1911, which have not been included in the aforementioned items, be paid for by the said city of Kaukauna at such price as may be agreed upon by the parties themselves, or, in case the parties fail to agree upon a price, at the price to be fixed by this Commission.

IT IS FURTHER ORDERED, That the said city of Kaukauna shall pay the just compensation herein fixed within six months from date hereof, with interest thereon at the rate of 6 per cent per annum from the date of the taking possession of the said plant by the city of Kaukauna until the same has been fully paid.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE MILL STREET CROSSING AT LA CROSSE, WISCONSIN.

Decided Jan. 2, 1912.

The Commission, on its own motion, investigated the complaint that the Mill street crossing in the city of La Crosse, Wis., is unsafe and dangerous to the public. A hearing was ordered on the matter as provided in Wisconsin Laws of 1909, ch. 540.

Held: At this location public safety requires a separation of grades, that can be accomplished best by diverting the street railway traffic, and as much of the other street traffic as may be practicable, from Mill street to Rose street and carrying it across the tracks on a bridge. The present Rose street bridge is no longer serviceable and must be replaced with a modern structure capable of accommodating the traffic. The present grades of its approaches must be made lighter in order to attract team traffic to the new structure. It is ordered that the C. M. & St. P. R. Co. make plans for the entire work in accordance with certain specifications made by the Commission. The plans are to be approved by the Commission before work is commenced. The C. M. & St. P. R. Co. is ordered to construct, according to the approved plans and at its own expense, all that portion of the work lying within the limits of its right of way produced across Rose street. The city is ordered to construct all that portion of the work lying outside of the right of way limits as designated and to assume responsibility for all damages to adjacent property caused by the proposed structure. With the city's approval the La Crosse City Ry. Co. is ordered to change its tracks and overhead, according to the approved plans and at its own expense, so as to occupy the new bridge and eliminate the Mill street crossing. The expense of repairing the disturbed portions of the streets from which the tracks are removed is to be borne by the street railway company unless such an arrangement interferes with the terms of the franchise under which the present tracks were laid. The expense of paving that portion of the roadway occupied by the street railway tracks along the new route is to be borne as designated by the franchise under which the street railway company now operates. The C. M. & St. P. R. Co. is ordered to maintain such portion of the bridge and its approaches lying within its right of way limits as designated, except that the city shall maintain the pavement of the roadway and the sidewalks. The city may require the street railway company to maintain that portion of the pavement occupied by its tracks, if such an arrangement is customary on the other streets in the city. The remainder of the bridge and its approaches is to be maintained by the city. The plans for the work are to be completed and approved within ninety days and the entire construction is to be completed within nine months.

Complaint having been made to this Commission that what is known as the Mill street crossing in the city of La Crosse, Wis., is unsafe and dangerous to the public, an investigation was made by the Commission. There appeared to exist sufficient grounds to warrant the ordering of a hearing as provided in ch. 540, Laws of 1909; and such a hearing was held at the office of the Commission in the city of Madison on July 14, 1909.

A second hearing was held on Oct. 14, 1909, in the city hall at La Crosse, the following appearances being entered: *John F. Doherty*, city attorney, *Ori J. Sorensen*, mayor, and *George Bradish*, city engineer, for the city of La Crosse; *William Ellis*, and *H. B. Earling*, general manager, for the C. M. & St. P. Ry. Co.; *Woodward & Lees*, by *Andrew Lees*, and *Peter Valier*, for the La Crosse City Railway Co.

Opinions were solicited from the various parties represented, in regard to what should be done at this crossing in order to meet the demands of public safety. The city attorney for La Crosse said: "The Rose street viaduct should be reconstructed and the street car taken off Mill street." The representative of the street railway company said: "If we haven't any particular choice, we would rather stay where we are." The attorney for the Chicago, Milwaukee & St. Paul Railway Company said: "Taking the interests of everybody into consideration, the Rose street viaduct would be the better solution if the grades have to be separated."

After this hearing the matter remained pending for some time, due to the fact that the water works case at La Crosse came up and, owing to its importance, was given precedence over the crossing case. There was a question as to the extent to which the city's financial condition would admit of the apportionment of any share of the cost of handling the Rose-Mill street problems.

In August, 1911, the Rose street viaduct was inspected by one of the Commission's engineers, who reported it in very bad condition, and it seemed time to bring the case to a close, so that the type of viaduct to be built at Rose street might be determined and a new structure erected, the type of viaduct depending upon whether or not it is to carry the street railway.

Mill street is the main highway and practically the only connection between that part of the city known as North La Crosse and the remainder of the city. The population of North La

Crosse is about one-third that of the entire city, and in consequence the traffic along Mill street is heavy. For a portion of its length this street is occupied by the tracks of the La Crosse City Railway Company. Between Gould and Island streets, Mill street is intersected by the tracks of the Chicago, Milwaukee & St. Paul Railway, which maintains four tracks across the street at that point. There is considerable engine movement—11.4 engines per hour—at the crossing, due to the fact that just east of Mill street there is a freight yard, and just west are the station of North La Crosse, the roundhouse, wye, and numerous tracks and turnouts. In short, this important crossing is located almost at the center of a busy railroad yard. To add to the danger to the street railway traffic, the approach to the railroad crossing from the north is on about a five per cent falling grade. The crossing is protected by gates and watchmen.

Rose street is the next street east of Mill street. The tracks of the Chicago, Milwaukee & St. Paul Railway intersect this street in a cut and the highway is carried over the tracks on a timber bridge. There are no car tracks on this structure. The distance from the floor of the bridge to the top of rail of the tracks below is 22.08 feet. This bridge was built by the Chicago, Milwaukee & St. Paul Railway Company and is maintained by that company, except that the city maintains the planking on the floor. The city built and maintains the approaches and furthermore assumed the responsibility for any damages to adjoining property arising from the construction of the bridge and its approaches. The structure is in such condition that it is necessary to replace it at an early date. East of Rose street are several other streets crossing the tracks of the Chicago, Milwaukee & St. Paul Railway at grade.

Unusual effort has been made to increase the public safety at Mill street. As already stated, the crossing is protected by gates and watchmen maintained by the Chicago, Milwaukee & St. Paul Railway Company. Two or three years ago the president of the street railway company donated to the Chicago, Milwaukee & St. Paul Railway Company a number of acres of land, which the latter company occupies with part of the tracks of a new yard which it constructed with the object of decreasing the number of engine movements across Mill street. The decrease was actually realized to a certain extent. Previous to the pre-

sent investigation, the street cars ran this crossing without stopping unless the gates were down. That practice has been discontinued, and cars are now flagged across the tracks. In spite of all precautions, however, the Mill street crossing is conceded by all parties to be a dangerous one. Pedestrians can and do crawl under the gates when they are down, and street cars and automobiles can run through them. It has all the inherent dangers of a grade crossing increased greatly by the fact, already mentioned, that the street crosses what is practically a continuous railroad yard, where there is, naturally, much engine movement. This engine movement has been alleviated, but not eliminated by the yard changes referred to above. Public safety demands adequate facilities for carrying all classes of street traffic across the tracks of the Chicago, Milwaukee & St. Paul Railway Company at a grade different from that of the tracks themselves. At present the Rose street viaduct is the only attempt to provide such facilities, and it is so narrow and dilapidated, and has such steep approaches that it cannot be termed adequate.

In approaching a solution of the problem, Mill street naturally would be considered first. A subway beneath the tracks, or a bridge above them, could be constructed, which would provide the required facilities. It is apparent, however, that the cost of either would be greater than the cost of a bridge at Rose street. At Rose street the tracks of the Chicago, Milwaukee & St. Paul Railway are in a cut, and furthermore the approaches to the present bridges can be utilized in the new work. The new structure could be built with little or no inconvenience to street traffic, whereas at Mill street there would be considerable inconvenience, increased by the necessity of providing for street railway tracks while the work was in progress. The street railway can be diverted over the proposed new structure without any prejudice to its routing. It would mean merely the turning of the tracks to the east about four blocks south of where they now make the turn.

The question arose at the hearing as to what amount of the traffic now crossing at Mill street would use the Rose street bridge, provided the new structure was built, and considerable difference of opinion developed. It was even suggested that team and pedestrian traffic might increase on Mill street, due to

the removal of the street railway tracks. It is not at all probable that all of the traffic can be diverted from Mill to Rose street, but it is to be expected that the major portion will be so diverted if the proper facilities are provided. The following data in regard to traffic at Mill street and Rose street was offered by the city of La Crosse:

RECORD OF TRAFFIC ON MILL STREET CROSSING.
7 A. M. to 6 P. M.

Date.	Pedestrians.	Bicycles.	Teams,	Street cars.	Engines.
Aug. 9,09	930	280	755	141	124
Aug.11,09	680	133	264	165	140
Aug.16,09	1001	306	385	145	114
Aug.18,09	707	247	390	161	139
Aug.20,09	751	274	74	146	120
Aug.23,09	1008	308	317	162	126
Aug.25,09	845	227	418	158	112
Aug.27,09	767	285	303	159	129
Total	6689	2060	2906	1237	1004
Average	836	258	363	155	125

RECORD OF TRAFFIC ON ROSE STREET VIADUCT.
7 A.M.to 6 P.M.

Date.	Pedestrians	Bicycles.	Teams.	Automobiles
Aug.10,09	230	22	171	36
Aug.12,09	195	21	185	39
Aug.17,09	195	52	263	63
Aug.19,09	263	58	240	59
Aug.21,09	275	59	275	18
Aug.24,09	246	41	205	51
Aug.26,09	250	42	185	46
Aug.28,09	316	44	181	68
Total	1970	339	1705	380
Average	246	48	213	48

A study of the above figures will show that for every ten teams crossing at Mill street, six cross Rose street; for every ten pedestrians crossing at Mill street, three cross at Rose street; and for every six bicycles crossing at Mill street, one crosses at Rose street. If the automobile and team traffic together over the Rose street viaduct are compared with the team traffic at Mill street, the showing for Rose street will be even better. This appears to be a remarkably good showing for Rose street, con-

sidering the present poor condition of the bridge and its approaches. Bicycle and pedestrian traffic will probably continue to cross principally at Mill street, no matter what facilities are provided at Rose street, although it is possible that a large portion of the latter traffic would be diverted along with the teams and the street cars. The major part of the team traffic should be diverted to Rose street, due to the greater safety offered and the freedom from chance of being blocked by trains. Teams loaded to their capacity would probably continue to cross at Mill street. Practically all of the automobile traffic should be diverted, due to the same factors that would influence team traffic. The grades of the approaches would be less of an obstacle to automobiles than to any other class of traffic. Lastly, all of the street railway traffic would be diverted. It is to be expected, therefore, that the traffic at Mill street will be largely decreased. In any case, it is the duty of those having the matter in charge to provide a safe crossing for those who wish to use it.

The effect of diverting the greater part of the traffic to Rose street would not be to injure the interests of that section of the city that uses Mill street at present, as the greater part of North La Crosse lies to the east of both streets, and traffic must now cross Rose street in order to reach Mill street. Years ago, when the sawmill business was good, Mill street was one of the principal streets; now it is declining in importance and north of the tracks Rose street is more of a business street.

It has been suggested that Mill street be closed across the Chicago, Milwaukee & St. Paul tracks. It is difficult to find any reason why this street should be closed rather than Caledonia, Avon and Berlin streets, which lie east of Rose street. With the proposed new bridge at Rose street the traffic at Mill street should be greatly reduced, and that crossing should be no more dangerous than the others mentioned. It is not to be expected that the Rose street bridge will be sufficient for the traffic for all time and that all other streets may be closed.

There are three parties interested in the construction of the new bridge, namely, the city of La Crosse, the Chicago, Milwaukee & St. Paul Railway Company, and the La Crosse City Railway Company. All three parties would share in the benefits of the change. The principal work will comprise the tearing out of the present bridge and the construction of a new

one; the remodeling and extending of the approaches; and the building of the necessary new street railway track and tearing up of the old track, including the repairing of the disturbed portion of Mill street. The three parties at interest were called on for their views in regard to the distribution of the cost of the proposed work. The city of La Crosse responded with a copy of a resolution adopted by the common council on Sep. 8, 1911:

"RESOLVED, by the Mayor and Common Council of the city of La Crosse, that the City Attorney be and he is hereby instructed to communicate with the Railroad Commission in the matter of the Rose street viaduct, and inform the Railroad Commission of the state of Wisconsin that the Common Council of the city of La Crosse believes that it should bear no part of the expense of replacing the present viaduct over Rose street in the city of La Crosse, but that the expense of doing so should be borne by the Chicago, Milwaukee & St. Paul Railway Company and the La Crosse Street Railway Company."

The views of the La Crosse Street Railway Company were expressed in a letter from the general manager as follows:

"I have your letter of August 18th in regard to the Rose street bridge at La Crosse, asking the La Crosse City Railway Company to give their views in the matter of changing their tracks on Mill and Rose streets and standing their proportion of the expense of building this bridge and approaches, in cooperation with the C. M. & St. P. Ry. and the City of La Crosse.

"We do not feel that we should be asked to change our tracks on Rose street, as the city has already given the La Crosse City Railway Company a franchise and ordinance to use Mill street and St. Cloud street. The La Crosse City Railway Company has also paid for the macadamizing on Mill and St. Cloud streets, and has paid $2,526.27 for the brick paving on that portion of Mill street that is paved.

"It would also be necessary for the La Crosse City Railway Company to turn on Monitor street off the Plank Road onto Rose street if we should be compelled to go over on Rose street, and that would make it 3,100 running feet, or, in other words, 6,200 feet of track, as we have double tracked on Mill street and would expect to double track on Rose street. The macadam that is already in Rose street is practically all worn out, and it would only be a matter of a year or so before the city would order this brick paved. This would also necessitate macadamizing four blocks from Gould to Monitor streets, and of course we would have to stand our proportion of this.

"We would be compelled to buy all new material for the track and overhead work, as we would have to leave the track on Mill street until we got the other track laid (in order to take care of the public) and that would mean an expense of about $14,-

127.30, for new 70 lb. rail, new ties, new continuous joints, bolts, spikes and bond wires,—in fact, all new construction. And, if the city would compel us to put in iron poles, it would increase the amount approximately $2,765, but if we are allowed to put in cedar poles, it would be much less.

"I have no figures before me as to what this bridge will cost, or what the abutting properties' damage would be, nor have I been given an estimate of the proportion of the expense of putting in this bridge, that would be allotted to the La Crosse City Railway Company.

"When there was so much complaint coming in of the Mill street crossing, the president of this company donated to the Chicago, Milwaukee & St. Paul Railway Company a number of acres of land for the laying of their tracks, in order to do away with their switching tracks at the Mill street crossing, and it seems to me that it is of far more benefit to the Milwaukee road to put this bridge in, than it is to the public or to the City Railway Company. I feel as though the Milwaukee road should build this bridge at their own expense."

The chief engineer of the Chicago, Milwaukee & St. Paul Railway Company wrote as follows:

"Replying to your letter of August 18th, making inquiry as to the proper proportions of the cost of the new viaduct in Rose street, North La Crosse, which should be assumed by the La Crosse Street Railway Company.

"By virtue of an agreement dated Sept. 17, 1883, between the St. Paul Railway Company and the city of La Crosse, the railway company and the city jointly built a viaduct over the railway tracks at Rose street. The division of the cost of construction, and the subsequent maintenance, is set forth in a resolution of the Common Council as follows:

"'Said railway company shall perpetually maintain all of said structure except the planking of the floor of the same, that the city of La Crosse will re-plank said bridge when necessary, and keep the plank of said bridge in perpetual repair;

"'RESOLVED FURTHER, That in consideration of the construction of said bridge and supports for same, the said city will build the approaches to said bridge, and perpetually maintain the same;

"'RESOLVED FURTHER, That the city of La Crosse will save said Chicago, Milwaukee & St. Paul Railway Company harmless from all suits and actions that may be brought against said company by any adjoining lot owners, or any party interested on account of any injury or damage to property by reason of the construction of said bridge, its supports and its approaches.'

"The agreement as above has been in effect up to the present time.

"Adjoining Rose street viaduct and close by, is the grade crossing of Mill street, on which are the tracks of the La Crosse Street Railway Company, which have doubtless contributed in

no small degree to the increased amount of traffic over this grade crossing.

"The La Crosse Street Railway Company made a crossing contract with the Chicago, Milwaukee & St. Paul Railway Company, March 31, 1893, (ten years after the Rose street viaduct was built). By this contract the street railway furnished and maintains the crossings at its own expense; and also agrees to stop all its cars before crossing the tracks of the Chicago, Milwaukee & St. Paul Railway Company.

"The Rose street viaduct has outlived its usefulness, is beyond repair, and must be rebuilt, and the St. Paul Railway Company is ready to rebuild it under the provisions of its agreement with the city, hereinbefore mentioned. It is also ready to assume an equable share of the expense of replacing this viaduct with a larger and heavier structure, as may be necessary to provide for the traffic to be diverted from Mill street, provided that street can be closed.

"It would appear that the interests of public safety require the diversion from the Mill street grade crossing to the Rose street overhead crossing of a large part of the traffic—certainly all that of a through nature.

"If the street railway traffic is diverted to Rose street viaduct, that structure must be wider and heavier in order to provide for street cars, and this additional expense should clearly be borne by the street railway.

"The need of diverting the street railway traffic does not come about by reason of existence of the Chicago, Milwaukee & St. Paul Railway tracks any more than by reason of the street railway tracks. Both are public service corporations, and the tracks of each are in the street, and each has contributed to the danger of the present situation; therefore, each should share in the cost of eliminating the danger.

"The street railway would save the cost of the crossings and their maintenance, the cost of stopping all its cars at the crossing, and the cost of delays to its employes and equipment. All of these are tangible items of expense, and by avoidance of these delays to its patrons its business would undoubtedly increase. The risk to its traffic is, under present conditions, considerable, and is enhanced in this case by the steep grade approaching the crossing from the north. The street railway company should therefore assume a large share of the expense of rebuilding the Rose street viaduct and diverting its traffic thereto.

"Coming now to the division of cost between the parties in interest.

"It appears to be customary for street railways to assume the entire first cost and subsequent maintenance of that portion of the street paving included within the outer rails of its tracks, and for one or more feet beyond each outer rail. This indicates the

measure of the liability of street railways for the cost of pavements. Why should they not assume an equal proportion, on the basis of width of street, when the improvement consists not only of the paving, but of the structure carrying the paving.

"It also appears to be customary for street railways, when crossing street bridges which are not adequate for their heavier traffic, to strengthen them at their own expense, or to provide independent structures alongside. The latter is not infrequently the case; indeed, the La Crosse street railway has its own separate bridge alongside a city bridge only a short distance south of the Mill street grade crossing.

"The determination of the proportion of cost of the elimination of grade crossings which should be borne by street railways is in process of evolution, and cannot be decided on precedent. It is only within recent years that street railway cars have become so large and heavy as to greatly exceed the weight and size of other highway vehicles. When street railway traffic was by horse-drawn cars, of weights and dimensions not much, if any, exceeding ordinary vehicles, there could not be much liability on street railways for sharing in the cost of street improvements. Their cars at that time had a speed about the same as other vehicles, and bridges of ordinary construction were safe for their passage. But today the conditions are radically different, and street railway cars are very much larger and heavier than other vehicles, and they move at a speed which practically results in their exclusive use of that portion of the streets occupied by their tracks. In size and weight they are much nearer the ordinary steam railway car than the old time street car.

"Structures intended to carry streets on which there are street car tracks must be built much wider and heavier than for the same streets without street railways.

"If the street is in a subway, it must be wider and higher, and the depression of the street greater, and the inclines or approaches must be increased in length, in order to provide the desired clearance for electric cars. This greater depression of the street in subways, together with the lesser gradients of approaches to subways or viaducts in order to provide the better operating conditions asked for by street railways, both involve a very considerable disturbance of existing conditions, and add enormously to the consequential damages for grade changes.

"Street railways have, at times, taken the position that their franchises required of them only the maintenance of a portion of the street paving, and that it devolved upon the city to provide the streets for their tracks. The fallacy of this is indicated by the fact that where street railway traffic has become unduly burdensome on the street, street railways have been required, at their own expense, to elevate or depress their tracks, and thus have come about the elevated railroads in New York, Chicago and

Boston, and the subways in New York, Philadelphia and Boston. In the two latter places the street railways have been taken off the street surface, and elevated at some places and depressed at others, in order to relieve the congestion in the streets, and the cost has devolved entirely upon the street railways.

"It seems clear, then, that the street railway should assume no small proportion of the cost of a larger and heavier viaduct at Rose street, in order that it may obviate the danger to its traffic at Mill street. The exact proportion of the cost which it would assume in this case should, in a measure, be dependent on the dimensions of the viaduct which may be ultimately agreed upon between the railways and the city.

"The present Rose street viaduct has one 19-ft. roadway and two 5-ft. walks, and there has been no indication that these dimensions were not sufficient. For a new structure, with double track street railway, the least dimensions which probably could be considered would be a roadway 36 feet in width and two 5-ft. walks, making a total width of 46 feet, as compared with 29 feet on the present structure, or an increased width of 17 feet. The increased cost would be approximately in the same proportion as the increased width of structure, or 17/24ths, about 37%. This would be a minimum, as no account has been taken of the increased capacity of the structure other than width of roadway, whereas it would be necessary to make it much stronger on account of the excess weight of street cars over ordinary vehicles.

"If the addition of the double track street railway should require the roadway to be divided in two, by putting in a central line of trusses or girders, then the cost would be very much increased because of the greater complication of design, involving more material and greater unit cost.

"It would appear then that the street railway's portion of the cost of the new Rose street bridge, including sub-structure and superstructure, should be somewhere between 35% and 40%, probably even more.

"I attach a list of such cases as I have been able to discover in the short time at my disposal, where street railways have shared with steam railroads and cities in the cost of elimination of grade crossings. The information in some cases is not very complete, but it is the best that could be done in the time. In some cases the information is indefinite, but if a tabulation is made of such as are definite, it will be found that the street railways in the list of cases mentioned have assumed an average somewhat over 25% of the cost. Many of the cases referred to cover track elevations, where the street railways have paid a percentage of the cost of the entire elevation, but if the proportion was supplied to the cost of the street structure alone, it would be much larger than indicated.

"'CASES WHERE STREET RAILWAY COMPANIES HAVE SHARED WITH STEAM RAILROADS, THE COST OF ELIMINATION OF GRADE CROSSINGS.

"'COLUMBUS, OHIO.

"'The B. & O. R. R. Co. separated the grades at several streets, and under the state law it paid 65% of the cost, the city assuming 35% of the cost, but on these streets occupied by electric car lines, the city obliged the traction company to assume a portion of its share of the cost.

"'PITTSBURGH, PA.

"'The B. & O. R. R. Co. has a partially completed agreement for the elimination of the grade crossing at Liberty avenue, in which the B. & O. Co., the city and the electric railway company are to share in the cost, the division being approximately in equal parts.

"'KANSAS CITY, KANSAS. (In Armourdale)

"'The street railway company paid one-third of the cost of Kent avenue subway and approaches, and the several steam railways paid the remainder. In this case the city and the street railway companies maintain the structure.

"'SCRANTON, PA.

"'The Scranton Traction Co. paid one-third the cost of Lackawanna avenue viaduct over the tracks of the D. L. & W. R. R. Co.

"'MEMPHIS, TENN.

"'The city obliged the street railway company to vacate the crossing at Virginia avenue, and use the new subway under the I. C. R. R. Co. tracks at Iowa avenue, and the street railway company paid 30% of the cost of construction of the new subway.

"'LOUISVILLE, KY.

"'The city paid 42.54% of the Oak street subway, the remainder being divided between the I. C. R. R. Co., the Southern Railroad, the L. & N. R. R., and the street railway company assumed a portion of the city's share of the balance.

"'FORT DODGE, IOWA.

"'The city desired the I. C. R. R. Co. to build the Farley street viaduct strong enough for electric cars. The railway company declined to do so, unless the city or the street railway company contributed to the additional cost, and the requirement was dropped by the city and the bridge was built for ordinary highway traffic only.

"'ROCKFORD, ILLINOIS.

"'A joint agreement was made last year, between the city and the C. M. & St. P. Ry. Co., the Ill. Cent. R. R. Co. and the C. B. & Q. R. R., for the construction of Winnebago street viaduct, provided that should the city grant to any street or interurban railway company the right to lay its tracks over this viaduct, such company should, at its own expense, make whatever changes might be necessary. As the roadway of this viaduct is only 24 feet, and it is not built strong enough for street railway traffic, the burden on the street railway company desiring to use the bridge would be considerable.

"'DENVER, COLORADO.

"'The Alameda avenue subway, which carries the street with electric railway tracks under the tracks of the Santa Fe, the D. &

R. G. Ry. and C. & S. Ry., was paid for, one-third by the city, one-third by the railway companies, and one-third by the street railway company.

" 'EL PASO, TEXAS.

" 'The several railroads, the city and the street railway company are jointly building a viaduct estimated to cost $72,000, for which the expense is divided as follows:

Santa Fe Ry	$13,000
Southern Pacific Ry	18,000
E. P. & S. W. Ry	18,000
City of El Paso	15,000
Street Railway Co	18,000

and in addition the city takes care of all drainage, sewage, water pipes, etc.

" 'WICHITA, KANSAS.

" 'At one subway in some track elevation work in which there is a street railway, the street railway company pays not only for the changes in its tracks, etc., and the pavement in and between its tracks, but pays for the cost of the sub-structure of the street which it occupies, including the pavement and column pedestals, and the excavation for same. There is a mutual agreement here between the railway company and the city and the street railway company, that in any future track elevation, one-third will be paid by each party.

" 'COLLINSWOOD, OHIO.

" 'The L. S. & M. S. R. R. Co. eliminated the grade crossing at Adams avenue, and the Cleveland Electric Ry. Co. paid one-fourth of the expense.

" 'The L. S. & M. S. R. R. Co. built a viaduct to carry Gollmar street over its tracks, and the Cleveland, Painesville & Eastern Electric Ry. paid one-fourth the cost, as well as one-fourth of all claims for damages to abutting property owners, and the electric railway also assumed a proportion of the maintenance of the structure. Later the Cleveland Electric Co. desired to operate its cars over this bridge, and made an agreement with the L. S. & M. S. Co. by which it paid one-third the cost of maintaining the portion of the bridge which remained for the L. S. & M. S. Ry. Co. to maintain.

" 'CHICAGO, ILLINOIS.

" 'The street railway company paid the L. S. & M. S. Co. one-half the additional cost of providing one foot additional headroom, which was required by the ordinance for the 71st street subway; and at Cottage Grove avenue the electric company paid a considerable sum of money for an additional six inches headroom over that provided for in the ordinance for that subway.

" 'SOUTH OMAHA, NEB.

" 'The Union Pacific R. R. Co. built a viaduct to carry a street over its tracks. This viaduct cost exceeding $160,000 and 10 per cent of the cost was paid by the street railway company in addition to the cost of paving in and between its tracks, as provided for in its franchise.

" 'DETROIT, MICH.

" 'The various railroads in this city have separated the crossings in a number of instances, and wherever there have been street railway tracks involved, a portion of the cost has been assumed by the street railway companies.

"'CHATTANOOGA, TENN.

"'The McCallie avenue viaduct, built about ten years ago, was paid for: one-half by the several railroads, one-fourth by the county, and one-fourth by the street railway company. This was a very large structure, and at that time was in the suburbs of Chattanooga. The city limits have since been extended and now include this structure.

"'NASHVILLE, TENN.

"'The street railway company has in one or two instances borne one-fourth of the entire expense of grade separations, involving tracks of the Nash. Chat. & St. Louis Ry. Co.

"'DES MOINES, IOWA.

"'The viaduct carrying Seventh street over the tracks of the Des Moines Union Ry., the M. & St. L. Ry., the C. R. I. & P. Ry. and the C. B. & Q. R. R., will be paid for by the railway companies, the street railway which will use the viaduct assuming that portion of the cost covering the excess capacity of the bridge required on account of its traffic.

"'FORT WAYNE, INDIANA.

"'The street railway company paid 12½% of the total cost of some grade separation work done by the Wabash railroads.'

"In a pamphlet entitled "Report of Grade Crossing Elimination" by Mr. Robert H. Whitten, Librarian-Statistician of the Public Services Association of the First district, New York, No. 124 Nassau street, New York City, there are cited a number of instances in which street railway companies have assumed portions of the expense of grade crossing elimination. This report contains a table showing the apportionment of cost of a large number of grade separations in Massachusetts, in which street railway companies assumed in one case 5% of the cost of the structure costing $302,932, and various percentages from 10% to 15% of thirteen other structures varying in cost from $24,615 to $478,318.

"It also refers to a committee of the Cleveland Chamber of Commerce, which reported on the abolishment of grade crossings in that city, and after enumerating the benefits to street railway companies, recommends that the street railway company's proportion of the cost should not be less than 25%.

"This report also refers to a special grade crossing act in Indianapolis, in which the street railways which were involved paid 5% of the entire cost of the work involved within a distance of 200 feet on each side of the center line of the street.

"Particular attention is called to that part of this report referring to the report of the engineer of the Los Angeles board of public utilities of March 29, 1910, which includes an estimate of the cost of stopping cars of an important interurban railway at four steam railroad crossings, as follows:

"'General Manager McMillan, of the Pacific Electric Railway Company, estimates present cost of stopping cars at the four crossings at $48 per day, or $17,520 per annum, equal to interest at 6% on

$291,986.30. The saving in this and other ways, with gains in time and economy of operation, will amount to at least $500,000 annually for this division of the interurban traffic.'"

An estimate of the cost of the new viaduct was submitted by the Chicago, Milwaukee & St. Paul Railway Company as follows:

"I have made a careful estimate of the cost of the permanent viaduct, based on the specifications in your letter of July 15th, making a steel bridge 140 feet in length, of sufficient width for two street car tracks, a passageway for teams on either side and two 8-ft. sidewalks; the floor to consist of creosoted timber joists, creosoted plank and creosoted block paving. My estimate provides for the protection of abutting property by building concrete retaining walls from the abutments to a point near the center of the two cross streets north and south of our tracks, as this will be necessary to comply with your specifications of Island street and St. Andrew street about 3 to 5 ft. and the approaches on either end of Rose street will run out about 100 ft. farther than the present approaches.

I have not included the cost of this additional grading or possible consequential damages to adjoining property, as it is my opinion that the cost of this work should be assumed by the city, and I do not think it would be policy for the railway company to have its representatives make this investigation of these prospective damages at the present time, as it might embarrass future negotiations.

My estimate is separated into two parts:

First: The cost of the steel spans with concrete substructure	$18,260.00
Second: The approaches, including retaining walls, filling, paving, hand rails, etc.	13,138.00
Total cost of the viaduct and approaches	$31,398.00"

Summarizing the replies, the city of La Crosse feels that it should bear no part of the expenses; the street railway company feels that it should not be compelled to move its tracks; the Chicago, Milwaukee & St. Paul Railway expresses a readiness to rebuild the bridge under the provisions of the agreement under which the present structure was built, or to assume an equitable share of the expense of renewing the bridge with a larger and heavier structure as may be necessary to provide for the traffic to be diverted from Mill street, provided that street be closed, and it further claims that if the street railway traffic is diverted to Rose street the bridge must be wider and heavier in order to provide for street cars, and that this additional expense should be borne by the street railway company.

The city of La Crosse and the Chicago, Milwaukee & St. Paul Railway Company are of mutual benefit and are under obligations to each other. It is as essential to the life and growth of a city to have railroad transportation as it is to the prosperity of the railroad to have the business of such cities. Each is a benefit to the other and where the existence of one causes local damage, as is the case at the crossings under consideration, both parties should share in the expense of repairing the damage. What share of the burden should fall on each party must be decided for each case separately, as conditions may vary too much to allow of a general ruling. In this particular instance there is the precedent established when the present Rose street bridge was built under the agreement dated Sep. 17, 1883, between the Chicago, Milwaukee & St. Paul Railway Company and the city of La Crosse. The bridge was built by the railway company, while the city built the approaches and assumed the responsibility for any damages to adjoining property arising from the construction of the bridge and its approaches. This arrangement appears to have been just and satisfactory to both parties.

The question of the size and capacity of the bridge is a matter depending upon the needs of the city. The city is entitled to a structure that will carry any and all classes of traffic that is customarily accommodated in its streets and that is expected to use the bridge, whether this be teams, automobiles, steam rollers or street cars, and the railway company cannot, in justice, refuse to provide for any one of these various classes of street traffic. Such a refusal would limit the usefulness of a portion of the street concerned and the restrictions resulting would be prejudical both to the traffic involved and to the street itself.

The fact that the present bridge is small and light, should not be an argument to limit the size of the new structure. At the time it was built, in 1883, there were no heavy electric cars, and the structure probably served the traffic of that time satisfactorily. It is to be expected, however, that with the growth of the city and the increase of its business and street traffic, that a larger structure will be required, and when such point is reached it is the duty of the two parties responsible to provide the accommodations.

The position of the street railway company in this case does not differ in the main points from the position it occupies with reference to the use of other city streets. The city grants the privilege of laying tracks in the streets and fixes the compensation for such use. Where tracks are laid in the street, it is customary to require the street railway company to bear the expense of paving between the rails and for a foot or two outside of them; in other words, to share in the expense of constructing the street. Where a street crosses on a bridge, such bridge is an integral part of the street and it is not unreasonable to expect the street railway company to share in the extra expense of the construction at such a point. The question of occupancy of the Rose street bridge by the street railway tracks and the compensation involved is a matter lying between the city and the street railway company, and does not concern the Chicago, Milwaukee & St. Paul Railway Company.

In this particular case it will be necessary for the street railway company to construct between two and three thousand feet of double track and overhead, and to tear up a like amount of old construction. This change of track and overhead should be included in any estimate of the cost of the proposed change of crossings. It is as much a part of the proposed work, taken as a whole, as the construction of the bridge or its approaches. Its cost will amount to approximately one-third of the entire expense, exclusive of damages. The moving of these tracks is work that falls naturally to the street railway company, and neither the Chicago, Milwaukee & St. Paul Railway Company nor the city could be expected to share in it. On the other hand, it might be considered that the street railway company should assume a portion of the city's share of the cost of constructing the bridge and approaches. It is the opinion of the Commission, however, that this would result in laying on the street railway company a burden of cost out of proportion to the benefits derived from the change.

IT IS THEREFORE ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company make, or have made, plans for the entire work, including a new bridge across its tracks at Rose street, approaches for same, and changes to the street railway tracks; the bridge to carry double street railway tracks spaced 11 feet center to center; to have space for a team between the

street car and the truss on both sides, and to have an eight foot sidewalk on each side; the approaches to have such grades as will permit best operation of street cars and be attractive to team traffic; the plans to be approved by the Commission before work is commenced.

That the Chicago, Milwaukee & St. Paul Railway Company construct, according to the approved plans and at its own expense, all that portion of the work lying within the limits of its right of way, produced across Rose street. In case there is a difference in width of right of way on the two sides of the street, the wider limits are to be taken. The intent of this division of the work is that the Chicago, Milwaukee & St. Paul Railway Company shall construct the superstructure and the substructure, including the abutments, and in case the approved plans provide that the abutments shall lie outside of the right of way limits produced, the Chicago, Milwaukee & St. Paul Railway Company shall construct all of that portion of the work lying between the limits determined by the extreme back face of the lowest footing of the foundations of the abutments on each end of the bridge.

That the city of La Crosse construct, according to the approved plans and at its own expense, all that portion of the work lying outside of the right of way limits just mentioned, and assume responsibility for all damages to adjacent property caused by the bridge, its supports and approaches.

That with the approval of the city of La Crosse, the La Crosse City Railway Company change its tracks and overhead, according to the approved plans and at its own expense; the expense of repairing the disturbed portions of Mill and St. Cloud streets to be borne by the La Crosse City Railway Company, unless such an arrangement interferes with the terms of the franchise under which the present tracks were laid; the expense of paving that portion of the roadway occupied by the street railway tracks, along the new route, to be borne as designated by the franchise under which the company now operates.

That the Chicago, Milwaukee & St. Paul Railway Company maintain such portion of the bridge and its approaches as lies within its right of way limits, as heretofore determined, except that the city of La Crosse shall maintain the pavement of the

roadway and the sidewalks. The city of La Crosse may require the La Crosse City Railway Company to maintain that portion of the pavement occupied by its tracks, if such an arrangement is customary on the other streets in the city. The remainder of the bridge and its approaches shall be maintained by the city of La Crosse.

That the plans for this work be completed and approved within ninety days and the entire construction completed within nine months from the date of this order.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, AS TO THE SAFETY OF THE WEST ALGOMA STREET BRIDGE OVER THE FOX RIVER IN THE CITY OF OSHKOSH, USED BY THE ELECTRIC RAILWAY COMPANY.

Decided Jan. 5, 1912.

Complaint was made that the West Algoma street bridge over the Fox river in the city of Oshkosh, used by the Wisconsin Electric Railway Co. in the operation of its interurban cars, is wholly unsafe for the traffic. A preliminary examination of the bridge was made by the Commission's engineers and a hearing was held subsequent to the complaint. After the first hearing ch. 590, Laws of 1911, became effective under which the Commission may, on its own motion, inquire into the safety of highway bridges over which interurban railways operate. Accordingly a further hearing was held at the instance of the Commission.

Held: Action in this matter, on the part of the Commission, must be based upon the demands of public safety. When a bridge is in such a period of questionable safety as in the present case, the time has arrived for some action that will remedy conditions. Those responsible for the bridge ought not to postpone action until the structure is plainly a menace to human life. The West Algoma street bridge is in an unsafe condition, owing to the narrowness of the roadway; the instability of the substructure; and the failure of the superstructure due to overloading and the ravages of corrosion. It has outlived its usefulness and should be replaced by a modern structure designed to meet the needs of the traffic. The new bridge should have standard spacing for the clearance of cars. Since the accommodation of the electric railway traffic will involve an expenditure above that required for team traffic alone, the extra expenditure made necessary by the requirements of the electric railway should be borne by the Wisconsin Electric Railway Co. It is ordered that the present West Algoma street bridge be replaced, both substructure and superstructure, by a modern structure. In addition to the requirements of the United States government with respect to navigation, the new structure is to conform to the specifications prescribed by the Commission. The city of Oshkosh is ordered to have plans made and specifications drawn up for both the bascule and the swing type of draw-span and to call for bids on both types. The complete plans, specifications, and bids are to be submitted to the Commission for final decision in regard to type. As soon as the final plans have been approved, the city of Oshkosh is to have the new bridge constructed according to the approved plans and specifications and to have the present structure, including substructure and superstructure, removed. Ninety-three per cent of the cost of the new structure, exclusive of the cost of the tracks and

overhead for the railway and the damages to adjoining property caused by the bridge and its approaches, is to be borne by the city of Oshkosh, and seven per cent by the Wisconsin Electric Railway Co. The railway company is ordered, at its own expense and in accordance with the approved plans, to provide the necessary material and to construct the track and overhead that will be required, making ample provision against the escape of electric current into the bridge structure. The city is to assume any damages to adjoining property caused by the construction of the new bridge and its approaches and is to own and maintain the new structure, except that the railway company is to maintain the pavement on that part of the roadway occupied by its tracks under the same terms as it now maintains the pavement in the streets of the city of Oshkosh, and is to maintain its tracks and all portions of the bridge devoted exclusively to supporting the trolley wire and its accessories. Complete plans, estimates and bids are to be submitted to the Commission within ninety days. Actual construction is to be commenced within sixty days after the plans are approved, and is to be completed within one year.

On April 12, 1911, a petition was filed with the Commission signed by four hundred and eighty-eight patrons of the Wisconsin Electric Railway Company, residing principally in the village of Omro, to the effect that said company operates its interurban cars over a certain bridge crossing the Fox river in the city of Oshkosh; that said bridge "was never designed for railroad traffic, and because of its old age, construction and design, want of repair, and dilapidation, is wholly inadequate and unsafe for such railroad traffic, and the running of said interurban cars across it, so loaded with passengers, freight, express and mails, is a constant menace to the safety of the lives of the passengers riding in said interurban cars," and praying this Commission to make an order requiring said bridge to be reconstructed or repaired so as to make it reasonably safe for the operation of interurban cars.

A preliminary examination of the bridge was made by the Commission's engineers. The structure consists of seven spans on masonry piers and abutments. At the center is a swing draw-span, operated by hand power; on each side of the draw-span are two through pin-connected truss-spans; and on each end of the bridge is a short girder-span. The draw-span has chords made up of iron angles and channels, vertical tension-members of iron rods and diagonal-members of wooden struts. The floor joists consist of 6″ x14″ timbers, resting on the lower chord.

The pin-connected spans are of iron or steel with suspended floor-beams. The wooden floor-stringers rest on the top flanges of the floor-beams without lapping each other.

The girder-spans are of iron or steel with a floor-beam in the middle of the span. The wooden floor-stringers rest on the top flanges of the floor-beams without lapping each other.

The width of clear roadway on the draw-span is 18′ and on the other spans 19′. The bridge carries double track spaced 7′ 2″ center to center. The pavement consists of one thickness of 3″ hard-wood plank laid crosswise.

There is a 5′ sidewalk on the upstream side of the bridge.

Calculation of the stresses showed that no part of the bridge is being overstrained by the present loads coming upon it, provided the members are full sized. There has, however, been considerable corrosion.

The first hearing was held on May 16, at the city hall in Oshkosh, the following appearances being entered: *W. E. Hulburt,* on behalf of the petitioners; *R. A. Hollister,* city attorney, for the city of Oshkosh; *E. E. McDonald,* district attorney, for Winnebago county; *J. G. Hargrove,* of *Miller, Mack & Fairchild,* for the Wisconsin Electric Railway Company.

After the first hearing further examinations of the bridge were made by the Commission's engineers, special attention being paid to the condition of the substructure, a diver being employed to make the examination below water level. In the piers that were examined, it was found that the masonry, instead of being carried down to bedrock, extends only about 7 ft. below the water level and rests on a timber construction which is in some cases piling, in others cribbing, and sometimes a combination of both piling and cribbing. Broken stone has been deposited about each of the piers except the center one, to increase the stability. In the case of the center pier, which rests on cribbing, the cribbing appears to have been carried down to rock bottom, and that pier seems to be in the best condition of all. The condition of the timber under the piers is good.

The stage of the water permitted an examination from above water level of the damage done some time ago to the pier nearest the bridge tender's house. About ten cubic feet of masonry has been knocked out of the cutwater of the pier. The damage has been repaired by the use of stones held in place by wooden wedges.

During the examination evidence was sought of the effects of the "bog" that came down the river one spring and lodged against the bridge, but no indications of any damage from that source were found. The masonry of the piers is in good condition, although the mortar has been washed out of the joints near the face, in some places. There are no large cracks in the masonry.

Vibration under moving load is noticeable in all of the piers, including the center pier. It was also noticed in several of the piers by the diver while beneath the water. For the purpose of comparison an examination was made of the vibration in the piers of the Main street bridge, which is a modern structure with piers that are carried down to rock bottom. No vibration at all was observable at the Main street bridge.

On July 8, 1911, ch. 590, Laws of 1911, became effective, under which the Commission may, on its own motion, inquire into the safety of highway bridges over which interurban railways operate.

Accordingly a further hearing was held at the instance of the Commission on July 31, 1911, at the city hall in Oshkosh, at which the Commission's engineer made the following report of the conditions found at the West Algoma street bridge:

"1. The bridge piers, although somewhat unsteady, are not unsafe.

"2. The stressing in members of the trusses is within safe limits, provided reasonable precautions are taken in restricting the loadings.

"3. The neglect of the bridge in the past through the failure to protect the metal by repainting at proper intervals has resulted in a serious deterioration of the metal in the floor system where the corrosive action has gone on at a rapid rate, especially in recent years.

"4. Although the critical danger due to the above mentioned attack on the metal floor system was met by the emergency repairs made in 1910 under direction of the city's consulting bridge engineer, these repairs can be regarded only as a temporary makeshift.

"5. The repairs to the timber floor system which heretofore appear to have been badly neglected, are now being handled satisfactorily.

"6. The present type of roadway surface is poorly adapted to the unusually severe teaming traffic over this bridge.

"7. The cost of maintenance of this bridge has become unreasonably high.

"8. The restriction to the use of the bridge imposed by the narrowness of the roadway frequently results in serious embarrassment during the time that street cars are passing over the structure.

"9. The uncomfortable rocking movement of the draw-span as cars and vehicles pass on and off, although not attended with special danger, is, of course, objectionable, and would not be permitted in a modern structure.

"*Recommendation:* In view of the conditions found in the investigation, it is recommended that the Algoma street bridge be replaced by a modern structure without further delay.

In his testimony the engineer stated that probably no one item of the nine enumerated would be sufficient to force the recommendation of a new bridge; but that the sum total of all the items compel this recommendation.

The correctness of his reasoning was substantiated in a prompt and rather spectacular manner on Aug. 1, the day following the hearing, when car No. 109, loaded with thirty-four passengers, broke through the bridge. One of the Commission's engineers made an investigation of the accident immediately. It was found that the accident occurred on the thirty-first girder-span at the east end of the bridge. Part of the top flange of the floor-beam had torn away for a length of seven feet, allowing the ends of three stringers to drop into the water. The rear truck of the car dropped about two feet before coming to rest.

An examination of the damaged span showed that it was badly corroded, the lower flange of the floor-beam practically being destroyed and the upper flange so weakened that it was yielding at several places other than where the break occurred. It was possible to take off scale three-eighths of an inch thick and several inches long. Collections of dirt and manure were found on every lodging place and even on the web of the floor-beam. The inside surfaces of the main girders and the surface of the floor-beam showed evidence of never having received more than the shop coat of paint, although the span was erected in 1890.

An examination of the similar thirty foot span on the west end showed the metal much less corroded, as the span has been painted, but the upper flange of the floor-beam is yielding under the load of the floor-stringers and the main girders of the span are very badly buckled. The thin webs of the main girders and the floor-beams lack stiffness and in this respect the design is

faulty, as is evidenced by the buckling or crumpling of the webs under their loads.

Repairs of a temporary nature were made by the city and full traffic resumed.

The question of the effect of electrolytic action on the bridge having arisen at the second hearing, an electrical survey of the structure was made by the Commission's engineers. The conditions found were similar to those observed a year previous during a test made at that time by the same engineers. The corrosion found is due almost entirely to natural corrosive conditions accelerated by accumulations of refuse. In places where the corrosion is most marked, the conditions preclude the possibility of electrolytic action and in certain other places, where the electrical measurement showed a condition favoring electrolytic corrosion, no such corrosion was found. In only one spot on the bridge was corrosion found which could be attributed to electrolytic action, and at that point it was due to a combination of electrolytic action with ordinary corrosion due to an accumulation of street dirt. Electrolytic action appears to have played little or no part in contributing to the present deteriorated condition of the structure.

Action in this matter, on the part of the Commission, must be based upon the demands of public safety. It is not the understanding of the Commission that it is necessary to demonstrate that a bridge is in imminent danger of collapse before action looking to the remedying of conditions is justifiable. As a matter of fact, such demonstration might not be easy to make in all cases, due to the difficulty of discovering the hidden weaknesses of a structure, parts of which are concealed from view. Nor is it to be expected that there will be a sharp dividing line between the period in which a bridge is safe and that in which its danger is plainly apparent. Deterioration due to age, service, or lack of maintenance is gradual, and before a bridge reaches the point where its dangerous condition is unquestionable, it passes through a period during which its condition is more or less dubious. It is the opinion of the Commission that when a bridge is in such a period of questionable safety, the time has arrived for some action that will remedy conditions; that those responsible for the bridge ought not to postpone action until the structure is plainly a menace to human life.

Furthermore, the collapse of the structure itself is but one of a number of possible dangers that may threaten a bridge and its users, and that should be given due consideration in the discussion of safety. In this particular case the narrowness of the roadway must be considered as an element of danger. The passageway is so scant that it is a common occurrence for either the teams or the street cars to stop so that the one can pass the other, and according to the testimony of an official of the railway company it frequently happens that the side of a car is scraped by protruding timbers on a passing lumber cart. It must be conceded that this is a dangerous state of affairs and one that easily may result in a serious accident either to passengers in the cars or to some one driving over the bridge. It was testified at the hearing that the cars must be handled with unusual care on the bridge because of the narrowness of the roadway and the heavy team traffic. "Unusual care," obviously, cannot be maintained at all times, and though it may postpone, it cannot be depended upon to avert entirely the inevitable accident. Investigation has indicated that instances are not uncommon in which narrowness of roadway has been a deciding factor in causing the renewal of a city bridge, not merely because of the inconvenience to which it gives rise, but also because of the fear of or the actual occurrence of an accident.

In the city of Milwaukee several rivers and canals flow through the heart of the city. They are spanned by numerous bridges, many of which carry the electric railways in addition to the team and pedestrian traffic. Both the traffic over the bridges and the navigation on the streams is considerable. Within recent years the city has made extensive bridge renewals, and a study of the actuating causes reveals the impelling effect exerted by "narrowness," that is, by the inadequacy of the roadway to accommodate the increased traffic. The following information in regard to the renewals was supplied by the superintendent of bridges and public buildings of the city of Milwaukee, upon request of the Commission:

"In the year 1901 a steel swing bridge, built in 1881, across the Milwaukee river at Grand avenue was found inadequate for vehicular and pedestrian traffic on said street, which is the busiest thoroughfare in the city of Milwaukee, and a new bascule bridge was constructed. The superstructure of the old bridge was moved to Chestnut street and is still in use and in

first class condition, being subject to a very heavy wagon traffic. The total number of openings for the entire year 1911 was 2,850.

"In the year 1901, a steel swing bridge, built in 1872 and extensively repaired in 1888, across Milwaukee river at Broadway street was found inadequate for vehicular traffic and navigation purposes and a new bascule bridge was constructed. The superstructure of the old bridge was moved to Lincoln avenue and is still in use and in first class condition. The traffic conditions at Lincoln avenue are extremely light and the total number of openings for the entire year of 1911 was only 66.

"In the year 1911, the steel swing bridge at Oneida street, built in 1883, was replaced with a bascule bridge, owing to the necessity of relieving the congested condition on Grand avenue, which is one block south. The old bridge was in first class condition, but the roadway was too narrow to properly accommodate street car traffic. The bridge was completely wrecked because no further use could be made thereof in the city.

"In the year 1910 the steel bridge at Michigan street, built in 1890, was replaced with a bascule bridge, owing to congested traffic conditions, both vehicular and pedestrian, excessive grade on west approach, and inadequate channel opening for navigation of large boats. The old bridge was in excellent condition when wrecked and was sold to a local party who, in turn, tried to dispose of the superstructure to the city of Sheboygan. Difficulties of transportation and price however prevented the transaction and the same was disposed of as scrap.

"In the year 1904 the steel swing bridge at West Water street, built in 1879 and extensively repaired in 1893, was replaced with a bascule bridge. The replacement was necessitated by traffic congestion, navigation and weakness of structure. The latter could have been overcome by extensive repairs, but it was deemed best to construct a new bridge. The old bridge was wrecked and sold for scrap.

"In the year 1908 the steel swing bridge at Kinnickinnic avenue, built in 1886 and extensively repaired in 1895 and 1900, was replaced with a bascule bridge. The replacement was the result of a street car accident in which several people were killed and, also, of the inner harbor improvement which required a new location for the navigable channel. The old bridge was wrecked and sold for scrap.

"In the year 1908 the steel swing bridge at East Water street, built in 1881 and extensively repaired in 1891, 1893 and 1899, was replaced with a bascule bridge. The old bridge was in a dangerous condition at the time and entirely inadequate to carry the heavy street car loads imposed upon it. In fact, the structure carried all the north and south bound street car traffic during the construction of the West Water street bridge and had, also, been severely damaged by boats. Navigation also required

an improved channel. The new bridge has a clear channel of 130 feet between fenders and is the largest bridge in the city of Milwaukee. The superstructure of the old bridge was wrecked and sold for scrap.

"Bascule bridges were constructed in the years 1906 and 1907, respectively, at Sixth street over the North Menomonee canal and at First avenue over the South Menomonee canal to replace steel swing bridges. This replacement was a part of the construction of the new First avenue and Sixth street viaduct. The old swing bridges were respectively built in the years 1883 and 1871. The old bridges were wrecked and sold for scrap.

"In the nine bridges herein described it is apparent that the causes which contributed more than all others to the replacement of the old bridges were those of the congestive traffic and navigation. You will note that in no case did a bridge attain an age of more than thirty-six years. I also wish to add that the choice of the bascule bridge in all replacements mentioned herein was due to the safety which is given to the public."

The West Algoma street bridge was built for team and pedestrian traffic only; in the original design no provision was made for the street railway. The draw-span was built in 1871, and the approach spans in 1890, twenty-six years and seven years, respectively, before the first electric car used the bridge. As should be expected, the bridge is not well adapted to that class of traffic, probably the worst feature being the floor-stringers. These are wooden stringers resting on the top flanges of the floor-beams instead of steel stringers rivetted to the webs of the floor-beams, as is the modern practice. The street railway company made an effort to strengthen the floor about the time the interurban cars began to use the bridge. Heavy timbers were placed under the rails, but no cross-ties were used, the rails being laid directly upon the longitudinal floor-stringers. This necessitated butting the ends of the stringers together instead of lapping them. This gave a bearing but 3½ inches long for the ends of each stringer. The result has been the gradual yielding of the flanges of the floor-beams under their burden, and it was this yielding of a floor-beam flange under the combined efforts of overloading and corrosion that resulted in the accident that occurred on Aug. 1, 1911. In 1910 the city made an effort to remedy this defect by putting plates and angles under the ends of the stringers to increase the bearing surface and by rivetting additional angle irons to the floor-beams wherever the flanges were in bad condition. The scheme appears to have been but moderately success-

ful; the bearing plates work loose and slip off and the flanges continue to yield. In the spring of 1911 some of the floor stringers worked off of their bearings and dropped, making it necessary to close the bridge for a few hours until repairs could be made. On Aug. 1, 1911, a floor-beam flange tore away and allowed several stringers to drop while a car was on the span. It is significant that both accidents occurred after an attempt had been made to provide a more secure bearing for the ends of the stringers. A bridge on which such accidents are possible cannot be considered anything but unsafe. The diver's measurements show twenty feet of water at the center pier. Should a car plunge through the floor into such a depth of water, it would mean almost certain loss of life.

The calculations of stresses that have been made by the various engineers do not indicate any serious overstressing under the present loadings, although some of the stresses are close to the safe limits. The calculations, however, are based on the assumption that the members of the structure are of full section and that no loss of metal has occurred. As a matter of fact, there has been considerable loss due to corrosion. In 1910 the corrosion had become so serious that it was found necessary to rivet on additional metal at the connections between the floor-beams and the vertical posts. Investigation by the Commission's engineers showed that the condition still is serious throughout the structure below the level of the floor and that corrosion has been sufficiently excessive to have decreased materially the strength of the bridge. To what degree the structure has been weakened has not been calculated and probably would be impossible to determine exactly, but it appears to be sufficient to make the safety of the bridge under present loading at least questionable.

The condition of the substructure is far from satisfactory. From the information available, concerning the history of the bridge, it appears that at the time the present draw-span was built, in 1871, wooden piers were built for it. These piers were in the form of cribs and apparently had excavations dredged for them down to bed rock. In time the upper part of the piers rotted away and was replaced with masonry. The masonry piers at the ends of the span are larger than the original cribs and it was necessary to enlarge the area of the old cribs by driving

piles outside of them. The piers under the steel spans are of more recent construction and are founded on piles which probably rest on the rock bottom. Stone riprap has been dumped around the piles to steady them and prevent them from sliding on the bottom. The piers are very unsteady, however, under moving loads and vibrate to an alarming extent. While there is no direct evidence, other than the vibration, to indicate that the piers are unsafe, still their condition seems to be highly questionable. They were not constructed according to present day practice and do not possess the degree of stability that is desirable in foundation work and that is necessary to insure a complete confidence in the strength and integrity of the structure.

During the course of this investigation five engineers have made examinations of the bridge, not including the engineer who made the electrical survey. Three of the engineers were on the staff of the Commission, one represented the city of Oshkosh, and one the Wisconsin Electric Railway Company. On the following points their opinions coincided: That the computed stresses do not indicate failure under the present loading; that the metal has suffered considerably from corrosion; that the roadway is too narrow for the traffic; that the draw-span is of obsolete design and that the bridge cannot be expected to last many years. It is evident from their reports and testimony that they consider the bridge in the period of questionable safety and approaching the point of absolute danger. This opinion is confirmed by the fact that during recent years it has been necessary to make rather extensive repairs. The engineers further specify that if the bridge is to continue in service, it must be watched carefully in order to be absolutely safe. The present condition of the structure is evidence of serious neglect in the past and is not a satisfactory guarantee for the close attention considered necessary by the engineers for its future security. It is not believed that public safety will be properly safe-guarded if it depends chiefly upon the exercise of unusual watchfulness.

In view of the foregoing, it is believed that the condition of the bridge is such as to require action on the part of the Commission.

It has been suggested that possibly the present approach spans can be remodeled so that they can continue in service, the proposal being made that the wooden floor-stringers be replaced with steel stringers, riveted to the webs of the floor-beams, thus doing away with the possibility of accidents due to the floor-stringers slipping off from their supports and falling. This would tend to stress the floor-beams more than at present, due to the increased stiffness of the floor. At present much of the heavy jarring is absorbed by the wooden floor-stringers, whereas with the proposed arrangement it would be carried to the floor-beams. But the floor-beams are the weak point under the present arrangement and should not be subjected to further stress. The flanges have been injured by the loads they carry and the webs have buckled due to lack of "stiffness." In addition, the floor beams have suffered loss of section from corrosion. If steel stringers are provided, it would probably be necessary to renew the floor-beams. The connections between the floor-beams and the vertical posts of the trusses have been practically eaten away by corrosion in many places and have been patched. If new floor-beams are to be added, it would be necessary to patch the vertical posts in order to provide connections for them. In fact, it is difficult to tell just where the work of renewing would end. It would be an expensive job and would result in a patched structure, and although public safety might be increased, the bridge would still be too narrow and would still rest upon an unstable substructure. The bridge has outlived its period of usefulness and should be replaced with a modern structure designed for modern traffic.

The new bridge should rest upon a substantial masonry substructure. At the West Algoma street crossing, rock foundation seems to lie at a reasonable depth and the piers and abutments should be founded directly upon it.

The United States government will require a clear channel seventy feet wide and piers placed parallel to the channel. The bridge may cross the stream at an angle, provided the other requirements are complied with. It appears desirable that there should be a six-foot sidewalk on each side, properly protected, of course, by a rigid hand rail. The draw span should be operated by electricity or steam and there should be provision for turning by hand in case of necessity. There must be ample protection for street traffic while the draw is open. In case the

bridge itself does not provide the necessary protection, such as is afforded by a well designed bascule bridge, safety gates must be provided. In the case of a bascule, there must be a close fit between the upraised leaf and the edge of the roadway when the bridge is open, and if a single leaf is used, the other side of the draw must be provided with a gate.

In deciding on the proper width of roadway, it is realized that in a bridge of this length, six hundred and sixty feet, every extra foot means an expenditure of several thousand dollars. A foot or two is a more serious matter than in a single short span, and for that reason an amplitude that might be considered desirable for the shorter span might not be justified in the longer one. On the other hand, the needs of the traffic should be met completely, and there should be no dangerous congestion due to narrowness. The present bridge has a clear width of roadway of 18 feet on the draw span, and 19 feet on the approach spans. This, admittedly, is too narrow for combined team and street railway traffic.

The street railway company submits a proposal for a bridge having a 20 foot roadway, with a single track placed on one side. This seems impracticable, owing to the interference with traffic it would cause due to the length of the structure. This may be illustrated by supposing the track to be placed on the down stream or south side of the roadway, for example, and considering what effect a car crossing the bridge would have on the traffic. A car going east would travel with the current and would cause no confusion; a car going west, however, would oppose the current on that side of the roadway. With a width of 20 feet there would not be space for the team traffic to turn into the other side of the roadway without blocking that current also. Whenever a car went west all east-bound traffic would have to stop before the car could go on to the bridge and would remain at a stop until the car had crossed. With a single track on a long bridge there should be sufficient roadway to accommodate teams in both directions, in addition to the space occupied by the street car. Assuming a width of car of nine feet and allowing a width of eight feet for a team, this would require a roadway 25 feet wide.

At the present time the street railway traffic over the bridge is light, only about a car every fifteen minutes. A single track,

perhaps, would accommodate such traffic satisfactorily. It is not probable, however, that it will be sufficient for the future traffic. The extra expense of building the bridge for double track at this time would be trifling compared with the cost of reinforcing the structure for double track at a later date, should it be found necessary to do so. Furthermore, the double track would be an insurance against the need of replacing the structure before the end of its normal life, as might be necessary if the growth of traffic made the bridge inadequate. Mr. Lehman, the city's consulting engineer, says that a double track bridge will require a roadway of 26 feet clear width. This is based on a track spacing of 13 feet center to center. The width necessary for a single track is 25 feet. The difference is not greatly in favor of the single track and disappears if the track spacing is reduced to 12 feet. With the same width of roadway the double track arrangement would give better accommodation to the team traffic, as there would be more space for vehicles between a passing car and the trusses, the single track allowing but 8 feet, whereas the double track would give 14 feet, room enough for even a load of hay.

Mr. Lehman, consulting engineer for the city, has proposed a track of 13 feet center to center which he claims is desirable, owing to the fact that it allows sufficient space for a person to stand safely if caught between passing cars. The street railway maintains that in case double track is required, a 10 foot spacing center to center would be sufficient, that ten feet is the standard spacing used by the company for side track and for double track in city street, and that so far there have been no accidents of the kind anticipated. The danger feared is not altogether an imaginary one and becomes more acute in a growing city as street traffic increases. The recent reconstruction of the street railway tracks in the city of Chicago has a direct bearing on this point. When the question of proper spacing came up in connection with that work, it was decided to space the tracks so that the cars would have the minimum clearance, on the theory that if people knew that there was not sufficient space between the cars to permit one to stand safely, they would take pains not to be caught between them. The reasoning is faulty, as it is based on the assumption that only the fear of death will keep people from between the cars, whereas no sane

person cares to be caught in such a situation. The accidents that occur are due principally to people becoming confused, and not being able to extricate themselves. Such a situation is likely to occur, no matter what the track spacing may be, and with narrow spacing it means a serious accident and probable death. As the danger is entirely avoidable, it should not be tolerated. After a portion of the tracks in Chicago had been laid to narrow centers so many accidents occurred that it was decided to allow a clear space of 14 inches between cars, and the tracks laid thereafter were spaced accordingly. From Mr. Lehman's testimony it is evident that even 14 inches is not a safe spacing.

The Milwaukee Electric Railway & Light Company of Milwaukee at one time had a standard spacing of ten feet. This was changed to eleven feet about 1908. The change is said to have been brought about partly because of accidents that occurred due to the ten foot spacing, and partly because the eleven foot spacing makes easier the arrangement of wide centers at curves.

The Chicago & Milwaukee Electric Railway has 12 foot centers in the city of Milwaukee and 13 foot centers outside of the city.

It is not uncommon to find wide spacing of electric railway tracks outside of city streets, as is shown by the following figures:

Aurora Elgin & Chicago	13′	center to center
Boston & Worcester	14′ 8½″	" "
Chicago & Milwaukee	13′	" "
Ft. Wayne & Wabash Valley	13′	" "
Illinois Traction System	13′	" "
Indiana Union Traction Company	16′	" "
Indianapolis & Cincinnati Traction	14′	" "
Inland Empire	16′	" "
Interurban (Iowa)	15′	" "

The space between cars depends upon the width of the cars as well as upon the spacing of the tracks. At present the average width, overall, appears to be about 8′ 6″, although there exists considerable variation in width. The new cars in Chicago were made unusually wide and measure 9 feet overall. Narrow cars will probably continue to be used in cities where there is a great deal of old double track laid to narrow centers It would seem however, that where a company is not hampered

by such old construction, wider and more commodious cars and wider track spacing are reasonably to be expected, as a matter of comfort and safety for the public.

Assuming then a 9-foot car and a spacing of 30 inches clear between cars, the track spacing should be 11′ 6″. This will give sufficient space between passing cars for a person to stand without being crushed. Between the car and the truss of the bridge there should be at least 24 inches. This space may be narrower than the space between the cars, as a person caught there would be able to crowd against the truss and would have a moving object on one side only. The Chicago requirement of 6′ 6″ clear from the center of the track to the truss appears satisfactory.

With the track spacing of 11′ 6″ and a side clearance of 6′ 6″ on each side, the clear width of the roadway must be 24′ 6″. Referring to the conclusions already reached in regard to width of roadway required for single track, it is seen that the advantage lies with the double track.

It is interesting to note the track spacing and width of roadway adopted for some of the bridges constructed in recent years both in this state and elsewhere:

No.	City.	State	Name of bridge.	Year built	Track spacing.	Width of roadway.	Lengt hof bridge.	Remark.

Both the swing and the bascule types of draw-span are available for use at this location. Each has points in its favor and a proper choice can be made only after due consideration of all things involved. The Commission prefers not to specify at this time the type to be used, believing that the interests of all parties will best be conserved by allowing the city and its consulting engineer to work out the problem of designing and constructing the best bridge at the lowest cost, under the fewest possible restrictions. Mr. Lehman has estimated that the bascule type will cost about $10,000 more than the swing type, while Mr. Geist, for the street railway, estimates the extra cost at $25,000. That sum of money properly invested will go far toward maintaining the structure. The element of cost seems to be the only one, however, in which the swing draw has the advantage, and unless the advantage in that respect is a substantial one, the Commission would favor and recommend the use of the bascule type, because of the greater safety it provides for the street traffic. Before a decision can be made in regard to type, plans and estimates must be made and bids called for on both types. Decision in regard to type will be withheld until the Commission has reviewed the plans, specifications and bids.

What will be the effect of the street railway upon the design and maintenance of the new structure? In the first place, a wider roadway is required. For team traffic alone, a clear width of 16 feet would permit a single line of traffic in each direction. The First Race bridge on Menominee street in Eau Claire, built in 1880, has two roadways, each with a clear width of 15′ 6″. The Fourth street viaduct in Superior is a very long timber bridge, recently reconstructed, and has a roadway 15′ 7″ wide. The bridge across Howard's Pocket in Superior, built in 1890, has a clear width of roadway of 16′ 9″. Although a 16-foot roadway is practicable, it is not desirable, especially for a long bridge, such as the one at West Algoma street. An unusually wide load, such as a load of hay, blocks all contrary traffic, while it is on the bridge, or for about three minutes. A width of 22 feet as advocated by Mr. Lehman gives sufficient space for such unusual loads to use the bridge without inconveniencing traffic, and if the bridge were designed for team traffic alone it is the narrowest width that would be allowable. This is 2′ 6″ less width than the width already shown to be necessary for a roadway with double track.

A heavier structure will be necessary. The increased width means more weight to be borne by the main trusses which must be made correspondingly heavier. In addition, the steel stringers under the track and the floor-beams to which they are connected must be stronger and heavier. The weight of the rails also calls for more strength in the bridge.

The cost of paving on the bridge will be increased by the extra width required by the fact that the rails will break the continuity of the surface of the pavement, making it more difficult and expensive to lay.

The cost of painting will increase as the quantity of metal to be painted increases.

The length and cost of the piers and abutments will be increased by the extra width.

The cost of maintenance will be increased. The wider roadway means a greater amount of paving to maintain; the presence of the tracks increases the difficulty of repairs to the pavement in their vicinity. The extra metal in the structure will increase the expense of cleaning and painting.

It is plain that the accommodation of the steel railway will involve the expenditure of a sum of money in excess of that required to build a bridge for team traffic alone.

There appears to be no accurate method of apportioning the cost of the proposed structure between the city and the railway company. The share which the railway company might be called upon to assume has wide limits of variation. The upper limit would be approximately one-half of the total expense. In arriving at that amount, it could be argued that if the city had no bridge at that point, or refused to allow the use of its bridge by the railway company, that the latter would be forced to build a bridge of its own. It is easy to imagine a case in which both parties contemplate building separate structures, but for the sake of economy, or other reasons, they agree to build one structure and share the cost equally. That presupposes, of course, that the railway company is strong enough financially to build a separate bridge if necessary. The lower limit would be the amount necessary to cover the extra cost involved in providing accommodation for the railway on the city's bridge, assuming that no extra width of roadway is necessary. The share that can justly be apportioned to the railway company lies somewhere between those limits.

It has been shown that the minimum width of roadway on a bridge carrying double tracks should be 24′ 6″, whereas a 22′ roadway is sufficient for team traffic alone, so that the accommodation of the street railway requires an extra width of 2′ 6″. With a roadway 24′ 6″ wide and two 6′ sidewalks, the total clear width of the bridge will be 36′ 6″, and the portion due to the railway will be $\frac{2.5}{36.5}$ or 7 per cent. It is understood, of course, that 7 per cent is not an accurate measure of the difference in cost between a bridge with a 24′ 6″ roadway designed for team and railway traffic and one with a 22′ roadway designed for team traffic alone, and that an accurate estimate might possibly increase the percentage. On the other hand, the extra 2′ 6″ of roadway will not be reserved exclusively for the use of the railway, but will be at the service of all the traffic, and will be an advantage to the public as well as to the railway company. While the figure is not an exact one and therefore might be disputed, it is believed to be a just one under the circumstances. The practical result, as far as the railway company is concerned, is to lay upon it no greater burden than the one assumed voluntarily in 1902 when the present structure was reinforced for the interurban cars. At that time the company spent $3,763.54 for which it has received, up to the present time, nine and one-half years' service, which is more than was expected, as the bridge has continued in service longer than was then anticipated. Dividing the amount spent by the number of years of service, gives $400 as the amount that the company has spent annually on the bridge exclusive of maintenance charges. The new bridge will last from twenty-five years up to forty or thereabouts, depending upon the treatment it receives and how well it is designed to meet future traffic needs. Taking thirty years as a fair expectation of life and an annual expenditure of $400, which is what the company has spent up to date at West Algoma street, $12,000 would be the sum that the railway could afford to spend on the new bridge. That is to say, if the company could spend $3,763.54 for nine and one-half years' service, it could afford to spend $12,000 for thirty years' service, interest charges being disregarded. This is exclusive of the $446 which is the average amount that the company has spent annually for maintenance on the present structure.

The cost of a bridge with a swing-draw has been estimated at $175,000 for a roadway 26′ wide and two 6′ sidewalks, or a total width of 38′. Assuming, what within narrow limits is approximately true, that the cost per square foot of bridge will not be affected by the width, and that the total cost will be proportionate to the width, then a bridge with a 24′ 6″ roadway and two 6′ sidewalks, or a total width of 36′ 6″, will cost $\frac{36.5}{38}$ of $175,000, or $168,000. Seven per cent of $168,000 amounts to $11,760, which is very nearly the sum already arrived at, as what the company should be willing to spend for thirty years' service, so that from the railway's point of view 7 per cent cannot be considered excessive.

From the city's point of view it must be considered that the Wisconsin Electric Railway Company is a tax payer, and as such will contribute to the cost of the new structure the same as other tax payers, and quite apart from the additional share that is to be apportioned to it as a direct charge.

It must be considered that the Omro line might not have been constructed had it been necessary for the railway company to build a bridge of its own across the Fox river; that having the present bridge available, made the construction of the Omro line possible; and that the city was willing, at the time the line was built, to grant the use of the bridge in return for the advantages it gained by the construction of the line. The line is the most direct route between Omro and Oshkosh and handles practically all of the passenger business between those towns, that is, without question, a benefit to both communities. These considerations, of course, do not give the railway a right to demand the use of the bridge for its traffic nor to expect the city to bear an extra burden of expense for its special benefit, but they do supply a reason why the city should grant the privilege of using the bridge, provided the railway company assumes the extra expense involved. West Algoma street is an old and important highway and the city will naturally, and in any event, maintain a bridge at that point, regardless of what the electric railway may or may not do. If the extra expense involved in accommodating the railway is borne by the railway company, the city may well be content to bear the greater share of the cost of the new structure.

Furthermore, it would be futile to lay upon the railway a burden of expense greater than what it is able to bear. The railway cannot be forced to pay beyond its capacity to pay, nor would the city benefit by such a course.

IT IS THEREFORE ORDERED, That the present West Algoma street bridge be replaced, both substructure and superstructure, by a modern structure.

That in addition to the requirements of the United States government with respect to navigation, the new structure shall conform to the following specifications:

A. The new bridge shall rest upon a substantial masonry substructure. This may be either stone or concrete masonry as may be found most available. The piers and abutments shall be founded directly upon the rock that appears to lie at a reasonable depth and to extend entirely across the stream. If the abutments are set back sufficiently to permit such construction, they may be founded on piles instead of being carried to rock, provided the difference in cost is such as to be a considerable factor.

B. The roadway shall have a clear width of 24′ 6″ and shall carry double tracks for the Wisconsin Electric Railway Company. The tracks shall be placed symmetrically with respect to the center of the roadway and shall be spaced 11′ 6″ center to center. The type of rail at present in service on the bridge will not be permitted and some heavier type must be substituted.

C. There shall be a 6′ sidewalk on each side, properly protected on the outside by a rigid hand rail.

D. The draw-span shall be operated by power supplied by electricity, steam or gas and shall be provided with means for turning by hand in case of necessity.

E. There must be ample and efficient protection for the street traffic while the draw is open. If the bascule type is adopted, there must be a close fit between the upraised leaf and the edge of the roadway when the bridge is open. If a single leaf is used, the unprotected side of the draw must be provided with an efficient gate. If the swing type is adopted, both ends of the draw must be provided with gates that will furnish real protection.

That the city of Oshkosh shall have plans made and specifications drawn up for both the bascule and the swing type of

draw-span and shall call for bids on both types. The complete plans, specifications and bids shall be submitted to the Commission for final decision in regard to type.

That as soon as the final plans have been approved by the Commission, the city of Oshkosh shall proceed to construct or have constructed, according to the approved plans and specifications, a new bridge over the Fox river at West Algoma street, and to remove or have removed the present structure, including substructure and superstructure.

That the cost of a new structure, exclusive of the cost of the tracks and overhead for the railway and the damages to adjoining property caused by the bridge and its approaches, shall be borne by the city of Oshkosh and the Wisconsin Electric Railway Company, 93 per cent being borne by the city of Oshkosh and 7 per cent by the Wisconsin Electric Railway Company.

That the Wisconsin Electric Railway Company shall at its own expense and in accordance with the approved plans provide the necessary material and construct the track and overhead that will be required, making ample provision against the escape of electric current into the bridge structure.

That the city of Oshkosh shall assume any damages to adjoining property caused by the construction of the new bridge and its approaches.

That the city of Oshkosh shall own and maintain the new structure except that the Wisconsin Electric Railway Company shall maintain the pavement on that part of the roadway occupied by its tracks under the same terms as it now maintains the pavement in the streets of the city of Oshkosh; shall maintain its tracks; and shall maintain all portions of the bridge devoted exclusively to supporting the trolley wire and its accessories.

That complete plans, estimates and bids shall be submitted to the Commission within ninety days after this order is issued; that actual construction shall be commenced within sixty days after the plans are approved; and that the new structure shall be completed within one year from the date hereof.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE SOUTH COMMERCIAL STREET CROSSING OF THE CHICAGO AND NORTH WESTERN RAILWAY COMPANY IN THE CITY OF NEENAH.

Decided Jan. 6, 1912.

The Commission, on its own motion, investigated a fatal accident which occurred at the South Commercial street crossing of the track of the C. & N. W. R. Co. in the city of Neenah, Wis. During the day time this crossing has been protected by a flagman for over ten years. Since the accident the railway company has put a flagman at the crossing during the night.

Held: In the present case an automatic alarm with illuminated sign would probably afford more effective protection for the crossing at night than that afforded by a flagman with a lantern. The respondent is ordered to install automatic electric bells, with illuminated sign, in such a manner as to adequately protect the crossing at night; to continue to protect the crossing by a flagman during the daytime as at present; and to cause the billboard situated near the South Commercial street crossing to be removed. Sixty days is deemed a reasonable time within which to comply with this order.

On Sep. 29, 1911, the Commission issued a notice of investigation of a fatal accident which occurred at the South Commercial street crossing of the tracks of the Chicago & North Western Railway Company in the city of Neenah, Wis., for the purpose of ascertaining and determining whether any additional protection should be installed at said crossing.

The hearing was had in the city of Neenah on Oct. 9, 1911. Appearances: *Charles H. Gaffney,* city attorney of the city of Neenah; *E. E. McDonald,* district attorney of Winnebago county.

South Commercial street in the city of Neenah crosses the single track line of the Chicago & North Western Railway Company at a point about one mile south of the passenger station. The street crosses the track at grade and at an angle of about 55 degrees.

The obstructions to the view of the railroad track upon either side of the crossing are as follows: Seven trees are located along the north line of the north sidewalk, running west from South Commercial street on the north side of the railroad. These trees are 40 feet west of the intersection of the center line of the

street and the railroad track, and extend 110 feet west. Five trees are located along the west curb line of the street on the north side of the railroad. These trees are 60 feet north of the crossing and extend 135 feet north and 20 feet west of the center line of the street. A house 23 feet by 60 feet is located 100 feet north of the intersection of the center line of the crossing and 45 feet west of the center line of the street. There is a flagman's shanty 75 feet north of the intersection of the center line of the crossing and 35 feet east of the center line of the street. A group of trees and shrubbery stands 130 feet north of the intersection of the center lines of the crossing, and extends from 35 feet east to 50 feet east of the center line of the street to a point 255 feet north of the intersection of the center line of the crossing and from 35 feet east to 130 feet east of the center line of the street. A pole is located 135 feet north of the intersection of the center line of the crossing and 20 feet east of the center line of the street. A house 24 by 50 feet is situated 275 feet north of the intersection of the center line of the crossing, and 50 feet east of the center line of the street. A railroad crossing sign with upright posts is located 65 feet south of the intersection of the center line of the crossing and 50 feet west of the center line of the street. There is a bill board on the west fence line of the street 98 feet south of the intersection of the center line of the crossing and extending to a point 180 feet south and 34 feet west of the center line of the street. A pole supporting an overhead electric light stands 45 feet south of the intersection of the crossing and 15 feet west of the center line of the street. Two telephone poles stand along the east curb line of the street, one being located 16 feet north of the intersection of the center line of the crossing and 25 feet east of the center line of the street, the other being located 65 feet south of the intersection of the center line of the crossing and 25 feet east of the center line of the street. A pole supporting an overhead electric light is located 10 feet north of the intersection of the center line of the crossing and 20 feet east of the center line of the street. A telegraph pole stands 15 feet north of the intersection of the center line of the crossing and 35 feet east of the center line of the street. There is a house 23 feet by 35 feet located 98 feet south of the intersection of the center line of the crossing and 50 feet east of the center line of the street.

It will be observed that the obstructions on either side of the street east of the crossing, with the exception of the bill board, do not materially obscure the vision of anyone approaching the crossing from that side. Except when a traveler is directly opposite the bill board, he has a clear vision of the railway tracks for a distance of a mile and three-quarters south of the crossing and three-quarters of a mile north of the crossing. In approaching the crossing from the west, however, there is considerable obstruction to the view of the railroad track for a considerable distance north and south until one is within a few feet of the track.

The danger incurred by those who are obliged to travel over the crossing upon the highway because of obstructed vision of passing trains is greater when approaching the crossing from the west than from the east, and yet the accident in question occurred when a wagon containing about thirty persons was passing over the crossing from the east to the west.

The account of the accident as related by the witnesses seems almost incredible. A party of young persons who had been at a dance at the home of one Peter Hanson, who resides about two miles south of the point of the accident, were returning home on the morning of Sep. 24, 1911, at about 3:10 o'clock. They were riding in a hayrack drawn by a team of horses driven by Mr. Hanson. It is stated by witnesses that they did not hear the approaching train or see the headlight of the engine until the wagon was on the track. Persons residing in houses near the highway testified that the party was quite noisy when passing. Mr. Hanson testified that he never looked to see whether a train was approaching until he was upon the track. It is clear that if the driver had looked he could have seen the train coming. The contention that the billboard obstructed the view does not affect the negligence of the driver in failing to observe an approaching train before driving upon the track. After passing the billboard he could have seen the train coming and stopped his horses. He admits negligence in the premises. However, if the billboard had not been there, it is probable that the approaching train would have been observed by some of the party in time to have obviated the diasaster which occurred.

The train was made up of an engine, one baggage car, one express car, one mail car, two coaches and two sleepers. Accord-

ing to the statement of the engineer, the rate of speed approaching the crossing was between 50 and 55 miles an hour, and that on reaching a point some 2,000 feet south of the crossing, where a whistling post is located, he sounded a station whistle and made an eight or ten pound brake application. The engine was equipped with an oil headlight. It was not until the engine had reached a point from 150 to 200 feet from the crossing that the engineer observed the hayrack, which was then directly upon the crossing. The night was dark, with considerable mist. The headlight was working properly, and the vision secured was the same as could reasonably be expected under the prevailing atmospheric conditions.

It appears that standing in the middle of the highway, opposite the end of the billboard nearest the crossing, a view of the track may be had to a point approximately 130 feet from the crossing, and standing at a point midway between the billboard and the crossing a view of the track may be had to a point approximately 350 feet from the crossing. During the day this crossing is protected by a flagman who remains on duty from 7:00 a. m. to 6:15 p. m. This method of protecting the crossing has been in effect for something over ten years. Since the accident the railway company has put a flagman at the crossing during the night, so that the crossing is now protected the entire twenty-four hours each day.

The engineers of the Commission have recommended that steps be taken to have the billboard removed, and that an automatic alarm with illuminated sign be installed for the protection of the crossing at night. Such a protection for night service is probably more effective than that afforded by a flagman with a lantern.

Now, Therefore, it is Ordered, (1) That the respondent, the Chicago & North Western Railway Company, cause to be removed the billboard situated near the South Commercial street crossing and described above; (2) that it install automatic electric bells, with illuminated sign, in such manner as to adequately protect the said crossing at night; (3) that it continue to protect the said crossing by a flagman during the daytime as at present.

Sixty days is deemed a reasonable time within which to comply with the terms of this order.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, AS TO THE CROSSING FACILITIES OF THE LAKE SHORE AND FOND DU LAC DIVISIONS OF THE CHICAGO AND NORTH WESTERN RAILWAY COMPANY, NEAR THIRTEENTH STREET IN THE CITY OF SHEBOYGAN.

Decided Jan. 8, 1912.

A petition was submitted to the Commission praying for an order to provide an underground passageway under the Fond du Lac branch of the C. & N. W. R. near Thirteenth st. just north of Indiana ave. in the city of Sheboygan, Wis. The petitioners request an enlargement of the present railway tunnel so that the eastern side may be used as a safe passageway for pedestrians and that an iron railing extending for two blocks be placed between the railroad track and the thoroughfare to be used by them as a protection from passing trains; if this plan cannot be carried out, they desire a subway constructed immediately east of the railway tunnel and a thoroughfare established across the Chicago & North Western Railway right of way and other private property. It was found that existing conditions are to a very large extent the natural result of the action of the city authorities of some time back in vacating South Twelfth street and in permitting the railroad company to block up Thirteenth street by its present tracks.

Held: It is not within the power of the Commission to grant the prayer of the petitioners in this case, as the question of the opening up of a public thoroughfare, otherwise than the diversion of a highway for the purpose of separating grades. rests with the common council of the city of Sheboygan. The petition is dismissed.

On Aug. 7, 1911, a petition was submitted to the Commission, signed by 227 workmen residing in the Fifth ward of the city of Sheboygan, praying for an order to provide a passageway under the Fond du Lac branch of the Chicago & North Western Railway near Thirteenth street, just north of Indiana avenue, in the city of Sheboygan, said underground way to be constructed just east of the present railway tunnel under said Fond du Lac branch of the Chicago & North Western Railway. The petition states that the signers thereof feel that the laboring men living south of the right of way of the Fond du Lac branch and their wives and children who carry dinner to them are compelled at the present time to use said railway tunnel in going to and

coming from their work, thereby subjecting themselves to constant danger of death or accident in said railway tunnel; and that they feel that an underground passageway on Thirteenth street should be constructed to protect them and their families.

A hearing was held Oct. 4, 1911, at the city hall in the city of Sheboygan. The petitioners were represented by *William Fischer* and *W. B. Collins;* the Chicago & North Western Railway Company was represented by *W. G. Wheeler.*

The testimony shows that the Fond du Lac branch of the Chicago & North Western Railway runs east and west at the point in question and crosses the Lake Shore division of the same railway on an overhead bridge. South Thirteenth street is not opened across the tracks of the railway company. The subway of the Lake Shore division passes beneath the Fond du Lac branch at about fifty feet east of South Thirteenth street. South Twelfth street, north of the tracks of the Fond du Lac branch, has been vacated by city ordinance and is occupied by railroad tracks and buildings of the Crocker Chair Company. At South Eleventh street there is an undercrossing of the Fond du Lac branch, but the street is unimproved, without sidewalks, and after a rain is impassable for pedestrians. The city engineer testified that the city has under consideration plans for improvement of South Eleventh street during the year 1912. South Fourteenth street crosses the tracks of the Fond du Lac branch at grade, and the crossing is guarded by a watchman.

The petitioners are employed in the factories located for the most part between Tenth and Thirteenth streets and north of the elevated track of the Fond du Lac branch; the majority reside south of Indiana avenue. It has been customary with them for some time to make use of the railway tunnel near Thirteenth street in going to and from work, thus shortening the distance, in some cases as much as four blocks. This route is also used by women and children who carry dinners to the workmen. It is a very common thoroughfare at all times of the day for residents south of Indiana avenue destined to the main retail business district of the city. Testimony does not disclose any accidents to have occurred to pedestrians using the railway tunnel and track, but several narrow escapes were cited by witnesses. While no evidence was submitted showing the lateral clearance at such subway, it was stated that there is not sufficient room

for a person to stand with any degree of safety while a train is passing through.

Petitioners' counsel advocated the opening of Thirteenth street by an underground crossing if feasible, but the witnesses called by petitioners opposed the suggestion and testified that if Thirteenth street were thus opened it would be little used by them, as such route would necessitate a second crossing of the tracks of the Lake Shore division at grade. Petitioners do not wish to use the two existing crossings, viz.: that at Fourteenth street which is protected by a watchman and the subway at Eleventh street, as the distance by such routes is from one to four blocks greater than the present thoroughfare used by them. They request an enlargement of the present railway tunnel so that the eastern side may be used as a safe passageway for pedestrians, and that an iron railing, extending for two blocks, be placed between the railroad track and the thoroughfare to be used by them as a protection from passing trains; if this plan cannot be carried out, they desire a subway constructed immediately east of the railway tunnel and a thoroughfare established across the Chicago & North Western Railway right of way and other private property.

According to the testimony of the city engineer and of the Commission's engineers, it appears that the opening up of South Thirteenth street by a subway crossing is impracticable. The engineering situation as to grades is peculiar at this point, as in going from Indiana avenue to Illinois avenue, one block northward, three tracks are encountered; the first is at grade and is the main line of the Lake Shore division, the next to the north is the elevated track of the Fond du Lac branch on a 20 to 22 foot bank, and finally, a track which connects the Lake Shore and Fond du Lac divisions and which is about seven feet below the grade of the Fond du Lac branch. One hundred feet farther north is Illinois avenue, a street which is about the same elevation as the Fond du Lac branch tracks. These various elevations bring about a very complex grade problem, which could not be met in a practical way by carrying Thirteenth street under the tracks. Probably the only practical solution of a separation of street grades at this point is a long overhead bridge with approaches extending for some distance north and south of Illinois and Indiana avenues, respectively. To reach this bridge at

South Thirteenth street and Indiana avenue it would be necessary to use steps. Such a solution would not remedy the situation complained of by petitioners, as at South Thirteenth street and Illinois avenue it would be necessary to descend steps, and then, as now, cross the tracks of the Lake Shore division, also the connecting track, in reaching the factories. The probable result would be that a bridge along South Thirteenth street would not be used by petitioners. It would appear that no other location for a subway or bridge to relieve the situation complained of is practicable. Existing conditions are to a very large extent the natural result of the action of the city authorities of some time back in vacating South Twelfth street and in permitting the railroad company to block up Thirteenth street by its present tracks.

It is not within the power of the Commission to grant the prayer of the petitioners in this case, as the question of the opening up of a public thoroughfare otherwise than the diversion of a highway for the purpose of separating grades rests with the common council of the city of Sheboygan.

Therefore, the petition is dismissed.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF AN ACCIDENT AT THE CROSSING OF THE HIGHWAY AND THE TRACK OF THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY ABOUT TWO MILES WEST OF BARDWELL STATION.

Decided Jan. 11, 1912.

The Commission, on its own motion, investigated a fatal accident at the crossing of the highway and the track of the C. M. & St. P. R. Co. about two miles west of Bardwell station, Wis. It was found that the view of the track is somewhat obstructed from certain portions of the highway near the crossing and that the highway is traveled quite extensively.

Held: Some protection at this crossing should be supplied. It is ordered that the respondent install an automatic bell, so that it will give warning of the approach of a train from either direction when the same is within not less than 3,000 feet of the crossing. Ninety days is deemed a sufficient time within which to comply with this order.

A complaint was made to the Commission that on July 24, 1911, at 6:40 o'clock in the evening of that day, two men were driving north on the main highway which crosses the track of the Chicago, Milwaukee & St. Paul Railway Company at a point two miles west of Bardwell station, and were struck by train No. 137, one of the men and one of the horses being killed and the wagon demolished.

The hearing was held on Oct. 17, 1911. The Chicago, Milwaukee & St. Paul Railway Company was represented by *F. G. Wright,* its assistant commerce counsel.

The road leading across the track of the Chicago, Milwaukee & St. Paul Railway Company at the point of crossing in question is a main highway running north and south about two miles west of Bardwell station. For some distance before reaching the railroad right of way the road leading to the crossing from the south follows an easy grade line and drains to a creek located about one thousand feet east. From two or three hundred feet south of the track the view of the same to the east is sufficient to make the crossing a not unusually dangerous one. The view of the track to the west is obstructed by a farm house, barn and buildings, also two trees near the right of way fence.

From a point two hundred to three hundred feet north of the track the view of same is good; that is, teams or pedestrians obtain a view of the track east and west for at least a mile each way. The highway, on approaching the track from the north and south at a point about on a line with the right of way fence, dips up about 1½ feet. This was made necessary by the established grade line of the railroad. The railroad from a point about 500 feet west of the highway runs through a cut of about 5 feet which terminates at a point about 600 feet east of the highway.

On July 24, 1911, at 6:40 p. m., two men, brothers, by the name of Underwood, were riding north on this highway. One was driving a team and lumber wagon; the other was seated in the back of the wagon. On reaching the crossing, train No. 137, going west, struck the wagon, killing the man in the back of the wagon, injuring one of the horses so that it died, and completely demolishing the wagon.

As the highway is traveled quite extensively, it would seem that some protection at this crossing should be supplied. The engineers of the Commission, who have examined the crossing, recommend that an automatic bell be installed in such a manner as to give warning on the approach of a train from either direction when the train is within not less than 3,000 feet of the crossing.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and the same is hereby required to install an automatic bell at the above described crossing, so that the same will give warning of the approach of a train from either direction when the same is within not less than 3,000 feet of the crossing.

Ninety days is deemed a sufficient time within which to comply with this order.

SOUTH MILWAUKEE FUEL AND SUPPLY COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Dec. 12, 1911. Decided Jan. 11, 1912.

Complaint was made of excessive charges on certain carload shipments of coal and coke between Milwaukee and South Milwaukee, Wis. The petitioner asks for refunds on the shipments which moved within the period covered by the statute, and also on those which moved within a period of six years prior to the filing of the petition. The petitioner further asks that refund be made upon similar shipments consigned to other parties having similar complaints. Reparation is asked for on the basis of the rate schedule made effective subsequent to the movement of the shipments in question. In a previous decision (*South Milwaukee Fuel & Supply Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 1) the Commission held similar charges excessive and ordered a refund on the basis that the charges exacted were higher than other rates charged under similar conditions, and also higher than the prevailing conditions warranted.

Held: Under the circumstances the rates exacted were excessive. Reparation is ordered on those shipments which come within the limitation of the statute. With respect to reparation to other parties having similar complaints, but who are not parties to this proceeding, refunds will be allowed in the present case. In the future each claimant will be required to file a separate claim in accordance with the literal provision of the statute.

The practice of one claimant instituting proceedings to recover not only the excessive charges exacted upon his own shipments but also for the purpose of obtaining refunds to other claimants upon like shipments, who were not parties to the proceeding, is not permitted by the statute. While in certain cases such practice might result in a saving of time and labor, it would in many, if not most cases lead to confusion and complications which ought to be avoided. The statute has provided an orderly method of dealing with overcharges which must be pursued literally by claimants.

The Commission is without jurisdiction in reparation proceedings to investigate the reasonableness of rates charged upon shipments which were made beyond the period of limitation contained in the statute. (*Connor Land & Lumber Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 774.)

The petitioner is a corporation engaged in the business of handling coal and other fuel, mason supplies, sewer and water pipe, and sand, and has its office in the city of South Milwaukee. It

alleges that prior to May 1, 1911, freight rates between Milwaukee and South Milwaukee, a distance of about ten miles, on carloads of coal, were 2 cts. per cwt. and on carloads of coke 2¼ cts. per cwt.; that freight rates between Milwaukee and Cudahy, a distance of about seven miles, were 1⅔ cts. per cwt. on coal and 2¼ cts. per cwt. on coke; that at the same time freight rates between Milwaukee and Layton Park, West Allis, Lindwurm and Siding No. 6, all stations located five, eight, ten and twelve miles distant, respectively, from Milwaukee, were $5 and $6 per car of 50,000 lbs. or less, and proportionately greater for excess over 50,000 lbs.; that for the purpose of adjusting such discriminatory conditions against South Milwaukee and Cudahy and for obtaining refunds on shipments, a petition was filed against the respondent railway company, upon which a hearing was held on April 4, 1911, and a decision rendered by the Commission on June 15, 1911, which reads in part as follows:

"It would seem reasonable that Cudahy and South Milwaukee be placed, as to shipments on which refund is asked, upon the same basis as the other manufacturing districts in and near Milwaukee at the time the shipments moved, and that this can be accomplished by authorizing a refund on the basis of $5 per car to Cudahy, and $6 per car to South Milwaukee, with 50,000 lbs. minimum in each case, excess at proportionate rates." *South Milwaukee Fuel & Supply Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 1, 9.

That thereafter there was put into effect by the respondent tariff No. 11442–C, effective May 1, 1911, governing such shipments, and making rates to all manufacturing centers in the vicinity of Milwaukee, including Cudahy and South Milwaukee, practically the same; that in the decision in said case the Commission ordered the respondent to refund on all shipments made between July 16, 1910, and Jan. 16, 1911, the six months immediately preceding the filing of the petition; that the object of this petition is to secure an order of the Commission requiring the respondent to make proper refund upon all shipments consigned to the petitioner which moved between Jan. 16, 1911, and May 1, 1911, and on all carload shipments consigned to petitioner for a period of six years prior to the filing of the petition.

The respondent railway company, answering the petition, admits all the formal allegations thereof, and alleges that said

stations are upon its regular line of road and that the Commission is without power or authority to establish switching rates as between the regularly maintained stations along its line of road; that it has complied with said order of the Commission and met reparation claims from July 16, 1910, to Jan. 16, 1911, being the six months immediately preceding the filing of the petition in the case of *South Milwaukee Fuel & Supply Company v. C. & N. W. R. Co.;* that it is willing to make refund on all shipments moving after Jan. 16, 1911, up to the establishment of the rates as provided for in the original hearing in said case; that shipments originating or delivered prior to July 16, 1910, are not within the jurisdiction or power of the Commission, and that the rates charged and collected prior to that time were not unreasonable, erroneous or illegal.

The hearing was held on Dec. 12, 1911. The petitioner was represented by *W. J. Riley,* its attorney, and the respondent by *C. C. Wright,* its general solicitor, and *C. A. Vilas,* its general attorney.

It appears from the record that the petitioner, prior to May 1, 1911, shipped several carloads over respondent's lines between Milwaukee and South Milwaukee upon which there was charged 2 cts. per cwt. for coal and 2¼ cts. per cwt. for coke; at the same time rates upon the same commodities to points within that vicinity five, eight, ten and twelve miles distant from Milwaukee were $5 and $6 per car of 50,000 lbs. or less; that on April 4, 1911, petitioner filed a claim with the Commission setting forth in substance the facts as above stated *(South Milwaukee Fuel & Supply Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 1); and that on June 15, 1911, decision was rendered in said case in which refund was granted to the petitioner upon the basis of $6 per car of 50,000 lbs. minimum weight, and excess weight at proportional rates. The order covered all shipments reaching their destination within a period of six months prior to the filing of the petition in said case. The claims here presented cover all shipments made since the filing of the former claim up to May 1, 1911.

It is conceded that an order should be entered herein awarding reparation upon the shipments made since the date of filing the former application and not included in the former order. The amount of the overcharge upon such shipments is $223.02.

It will be noted that the petitioner asks for a refund upon all shipments made within a period of six years prior to the filing of the claim herein. The Commission is without jurisdiction in this proceeding to investigate the reasonableness of any rates charged upon shipments made beyond the period of the limitation contained in the statute. *Connor Land & Lumber Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 774.

The petitioner also asks that refunds be made upon similar shipments consigned to Caveney & Company and Oak Creek Coal Company, South Milwaukee, and C. F. Becker and Stan Makowski, Cudahy. The practice of one claimant instituting proceedings to recover not only the excessive charges exacted upon his own shipments, but also for the purpose of obtaining refunds to other claimants upon like shipments who were not parties to the proceeding, is not permitted by the statute. While in certain cases such practice might result in a saving of time and labor, it would in many, if not most cases, lead to confusion and complications which ought to be avoided. The statute has provided an orderly method of dealing with overcharges which must be pursued literally by claimants. However, as we have permitted such practice in the former case, we shall permit it here, but in the future each claimant will be required to file a separate claim in accordance with the provisions of the statute.

The following are the claims for refund, other than those of petitioner which will be authorized: Caveney & Co. $118.63; Oak Creek Coal Co. $13.54; C. F. Becker $4.55; Stan Makowski $9.08.

IT IS THEREFORE ORDERED, That said Chicago & North Western Railway Company refund to the South Milwaukee Fuel & Supply Company, Caveney & Company, Oak Creek Coal Company, C. F. Becker and Stan Makowski the following amounts: South Milwaukee Fuel & Supply Company $223.02; Caveney & Company $118.63; Oak Creek Coal Company $13.54; C. F. Becker $4.55; and Stan Makowski $9.08.

G. D. FRANCEY COAL, STONE AND SUPPLY COMPANY
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Jan. 11, 1912.

Petitioner alleges unjust and unreasonable charges on 49 carloads of coal shipped from Milwaukee to Wauwatosa, Wis. The petitioner was charged the commodity rate instead of a switching rate in effect at the time the shipment moved.

Held: The claim in question is a meritorious one, and it is to be regretted that the petitioner delayed notifying the Commission until after the expiration of the limitation of the statute. Under the circumstances, the Commission is without jurisdiction in the premises and the petition is dismissed.

Prior to April 29, 1911, the limitation on filing claims for refunds was six months, but on that date the act (Wis. Laws 1911, ch. 28, being sec. 1797—37m of the Statutes as amended) of the recent legislature enlarging the time within which to file claims to one year became effective. Such extended time would be applicable to all shipments which had not been barred on the date that the amendment became effective.

The petitioner is a corporation engaged in the business of selling coal and stone, and has its principal office at the city of Milwaukee. It alleges that the respondent railway company charged excessive switching charges on forty-nine carloads of coal shipped from Milwaukee to Wauwatosa on and between Aug. 15, 1910, and Oct. 11, 1910; that a rate of 1½ cts. per cwt. was charged on such shipments, although switching rates of $5 and $6 per car were in effect between several Milwaukee switching points and Wauwatosa; that such switching rates could not be applied to the petitioner's shipments, as petitioner's name was not published in the Milwaukee switching tariff until Oct. 11, 1910, although petitioner's industry track was completed and ready for service on June 29, 1910; that through an omission of petitioner's name from the Milwaukee switching tariff the petitioner was overcharged on said shipments in the sum of $454.40; that the said rate of 1½ cts. per cwt. was unjust and unreasonable. Wherefore, petitioner prays that the respondent be required and directed to refund to it said overcharge of $454.40.

The respondent railway company, answering the petition, admits all the allegations thereof.

The claim was submitted upon the pleadings, papers, vouchers, and documents on file.

Section 1797–37m of the statute provides as follows:

"Within one year after the delivery of any shipment of property at destination, any person aggrieved may complain to the commission that the charge exacted for the transportation of such property between points in Wisconsin, or for any service in connection therewith, * * * is erroneous, illegal, unusual or exorbitant, and thereupon the commission shall have power to investigate such complaint, and to hear the same, and to decide upon the merits thereof, in the manner provided by section 12, chapter 362, laws of 1905. If upon such hearing the commission shall decide that the rate or charge exacted is erroneous, illegal, unusual or exorbitant, it shall find what, in its judgment, would have been a reasonable rate or charge for the service complained of. If the rate or charge so found shall be less than the charge exacted, the carrier shall have the right to refund to the person paying such charge, the amount so found to be excessive."

Prior to April 29, 1911, the limitation on filing claims was six months, but on such date the act of the recent legislature, enlarging the time within which to file claims to one year, became effective. Such extended time would be applicable to all shipments which had not been barred on the date that the amendment became effective. The last shipment in question moved on Oct. 11, 1910, and hence was barred after April 11, 1911, or eighteen days before the act enlarging the time became effective.

We have examined the correspondence and files of the Commission to ascertain whether any notice of the claim in question had reached the Commission on or prior to April 11, 1911, but from such examination we find that the first notice the Commission had of the claim was Aug. 31, 1911, when the petition herein was received.

The claim in question is a meritorious one, and it is to be regretted that the petitioner delayed notifying the Commission of the claim until after the expiration of the limitation of the statute. Under the circumstances, the Commission is without jurisdiction in the premises.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

C. A. LOTHROP, ET AL.
vs.
VILLAGE OF SHARON.

Submitted Oct. 23, 1911. Decided Jan. 11, 1912.

The petitioner alleges that the village of Sharon, Wis., a public utility furnishing water and gasoline gas to the public, has ordered all water users in the village to purchase and install water meters at their own expense and has threatened to cut off the service of all who fail to do so. The petitioner further alleges that the water plant and gasoline gas plant are each operated at a loss. A thorough investigation and a separation of the departments is asked for in order that each plant will be placed upon a paying basis.

The respondent submitted that the present officers of the village were merely enforcing the village ordinances as they found them. Under the water ordinance the right was reserved by the village board to cause a water meter to be attached at the owner's expense to any service pipe whenever the board deemed it expedient.

Held: It is the duty of the utility to put in meters unless exempted from so doing by the Commission. In the present case the village is required to install meters at its own expense, and to charge for all water passing through meters according to the prescribed schedule of rates. Where a consumer now owns the meter, the utility is ordered to acquire the meter or pay an annual rental of 50 cts. to the owner.

A gas meter which is used continuously for gasoline gas will probably show considerable inaccuracy, due to the fact that the gasoline gas has an injurious effect upon the diaphragm of the meter. In the present case it is suggested that meters which have been in use for at least three years be compared with a new meter, which will guard against any great inaccuracy and at the same time save the expense of a meter prover.

It appears that the accounts and records of the utility have not been kept in the form prescribed by the Commission and as required by the Public Utilities Law.

Held: It is important that a system of bookkeeping be installed at once that will show at any time clearly just what is being done and the condition of the plant. The Commission will provide an accountant to assist the village authorities in putting into effect the required system of accounting.

With respect to the rates for water and gasoline gas, the statement of earnings and expenditures shows that after paying the expenses of operation, excluding interest charges upon the funded indebtedness, there is a large deficit in both the gas and water departments for each of the three years given. Inspection of the expenditures discloses that no allowance for depreciation, as such, has ever been made by the village.

Held: Owing to the absence of meters, and especially to the failure of the utility to keep the accounts and records as required by the Public Utilities Law, the information available at present is insufficient as a basis for rate schedules. A station meter should be installed for the gas department, and a meter or counters on the pumps for the water department, in order that accurate information may be available as to the amount of gas manufactured and the quantity of water pumped. For the present the respondent is ordered to discontinue its present schedule of rates for water service and for gas service and to substitute therefor the increased rates deemed just and reasonable by the Commission. After meters have been put into general use, and after the accounts and records of the utility have been kept in the form prescribed by the Commission and as required by the Public Utilities Law, a revision of the water and gas rates, as prescribed, may be found necessary. Sixty days is deemed sufficient time within which to comply with this order.

The petition alleges that the village of Sharon has no authority to compel consumers to install water meters; that the said village built an addition to the plant without submitting the proposition to a vote of the people; and that the water plant and gas plant are each operated at a loss. Wherefore, a thorough investigation is asked for in order that each plant will be placed upon a paying basis.

A hearing was held on Oct. 23, 1911. The following appearances were entered: *C. A. Lothrop* for petitioners, *J. I. Morgan* for respondent.

The rates now in force in Sharon appear to be as follows:

GAS: $1.50 per M cubic feet used per month through any one meter.

WATER:

Meter rates:	1st 15,000 gals.	.....	$0.36 per M	gallons
	15,000–20,000 "	.....	.28 "	"
	20,000–25,000 "	.....	.26 "	"
	25,000–30,000 "	.....	.25 "	"

A minimum of $4.00 is charged, providing the consumption is below that amount.

Flat Rates:	House—per 12 months	$5.00
	Store	2.50
	Mill	15.00
	1st horse	1.98
	2nd horse	1.36
	1st cow	1.98
	2nd cow	1.36
	Closet	2.50
	Lawn	

C. A. Lothrop testified that as the petitioners did not have a voice in the building of the addition to the water and gas plant, they believed that the village could not compel the consumers to install water meters at the consumers' expense. The petitioners object to putting in their own meters, as the plant itself is running behind. The water and gas plants are run together, and neither is self-sustaining. A separation of the departments is asked for, so that each may be put upon a self-sustaining basis, and thereby permit the money in the general fund to be used for the purposes for which it was raised.

In reply to the complaint, the respondent submitted that the present officers of the village were mostly new members and that they were merely enforcing the ordinances as they found them on the ordinance book. One of the provisions of the water ordinance is as follows: "The right is reserved by the village board to cause to be attached, at the owner's expense, a water meter to any service pipe whenever the village board shall deem it expedient to do so." The respondent admits that there is considerable confusion in the accounts of the water and gas plants and that the books and records are not kept in such form that an accurate report can be made. Respondent states that only a very few consumers have failed to install meters. There are a large number of consumers, however, who have not paid for their meters and do not intend to unless compelled. Respondent submits that it is not in a financial position to pay for all the meters at the present time and that both plants have been a losing proposition and have failed to pay operating expenses. The apportionments of the expenses of the village and of the water and gas plants have not been properly made. The village authorities contend that there are many people in the village who were taxed for the installation of the plants and are now taxed for their maintenance, who do not receive any service from either plant, and who do not even have fire protection.

The gas and pumping stations are combined and contained in a substantial brick power house, located several blocks from the center of distribution. As the main line of the C. & N. W. R. Co. adjoins the plant, coal may be unloaded directly from the car to coal sheds at the plant. The design of the power station and the arrangement of the boiler room and engine room

would seem to be conducive to as efficient operation as is possible with that style of plant.

The gas made is a gasoline gas. From all the data available in the files of the Commission, it costs more to produce this kind of gas than any other. The so-called cold process is used, which consists in saturating air with gasoline vapors. The apparatus used consists of appliances for furnishing air under pressure together with a suitable steel tank. The carburette containing the gasoline for vaporization is so constructed that the air to be saturated is minutely divided during the passage through the liquid. The air is supplied from a compressor which is also used to furnish air for raising the water in the well to facilitate the pumping. The air for gas production is fed into the carburetter as rapidly as it is required by the demand upon the system, which is accomplished by means of a small gasometer or holder, which is mechanically connected with a valve in the air supply in such a manner that each time the container is empty the valve is opened until the holder is filled, then shut off until emptied, when the process is repeated.

Generally speaking, the equipment of the plant appears to be in good condition and well maintained. There are no station meters for either gas or water, or counters on the pumps, and consequently there is no accurate record of the total amount of gas made or water pumped.

There should be installed at the plant a station meter for the gas department, and a meter or counters on the pumps for the water department, in order that accurate information may be available as to the amount of gas manufactured and the quantity of water pumped. An approximation can be made of the amount of gas produced by adding that sold to metered consumers to the estimated amount consumed by the street lamps. Under the circumstances, the information available is not as complete or reliable as could be wished, so that the values given can not be relied upon too closely. They are given as showing in general the conditions which must be present if the figures are as presented.

The system of bookkeeping in use at Sharon is one that is often found in small municipal plants. The city clerk keeps a list of the bills paid in the finance book. There is also a voucher file in which all paid vouchers and bills are filed when

paid. The village treasurer has a sort of journal in which he keeps a consecutive record of the receipts and expenditures. No ledgers of any kind are kept, and very little attempt is made to apportion properly the expenditures from the general fund and from the water and gas funds. The bank does the collecting on a 2 per cent basis. At the end of the year the bank makes out a financial report from its books, showing the receipts and expenditures for the year roughly apportioned to the three funds. No effort has been made to conform to the "Uniform Classification of Accounts" prescribed by the Commission under the provisions of the Public Utilities Law.

It is important that a system of bookkeeping be installed at once that will show at any time clearly just what is being done, and the condition of the plant. Some suggestions along this line will be mentioned later.

At the hearing it was brought out that there was considerable feeling against the village because of the rule compelling consumers to install water meters. As an addition to the plant was made without submitting the proposition to a vote of the people, many of the citizens maintain that it would be unjust for the village to compel the consumers to put in the meters.

It was also contended on the part of the petitioners that there was no need of an addition to the plant or a new boiler, because there was a good boiler and a good gasoline engine which was not used. The following extract from a letter received from the superintendent of the plant, Mr. Le Baron, touches upon the necessity of this addition and is introduced here.

"It is bad policy to depend on one boiler, especially if constant service is required. Also it is improper to keep a boiler under pressure night and day, thus making the washing of the boiler a highly injurious necessity.

"As it has been heretofore, not over two hours in the middle of the day was allowed for the cleaning of the boiler. It was an impossibility to properly cool the boiler before washing, and it was customary to blow off under a pressure of from 20 to 60 lbs. No boiler firm will warrant their boiler under such conditions, neither will a casualty company insure under such conditions. The U. S. government inspection will not allow a boiler to be washed while hot, nor blown out under a pressure exceeding 20 lbs. When you take into consideration that we were under steam again in two hours from the time the boiler

was blown out for washing, it is plain that some means had to be taken whereby this trouble could be avoided.

"As the old boiler was placed, it was within ten feet of the gas tanks with an open doorway between. Now both boilers are some considerable distance from them, and the danger from that direction is to a great extent removed.

"As we have it now, we do not have to depend on one boiler. We use them alternately month to month, thus giving each in its turn plenty of time to cool, and also giving time to steam up the boiler for service slowly, heating and expanding the metal by degrees. We are not afraid of a fire breaking out during the time we are washing. Likewise, in a case of repairs to one or the other, the service is not interrupted. The second boiler was an absolute necessity, and the addition was necessary to place it in."

It appears that the air compressor in use requires about 18 horse power to operate it. The gasoline engine that was installed at the time the works were built developed only about 22 horse power, and consequently it was not able to handle the compressor when the boiler was shut down.

As close an inspection and examination as possible of the books and records of the village was made in the short time available. The expenses of the water and gas departments, from the building of the gas plant, 1906, down to date, have been obtained as accurately as possible from the vouchers and other records.

The following table shows our apportionment of expenses between the two departments for the three years ending June 30, 1909, 1910, and 1911, respectively:

SHARON MUNICIPAL WATER AND GAS PLANT.

Income Accounts for the Years Ending June 30.

	1909.		1910.		1911.	
	Water.	Gas.	Water.	Gas.	Water.	Gas.

Total	$30 00	$21 45	$30 00	$23 00	$33 60	$20 00
Total above	$1,680 17	$3,490 97	$1,813 49	$3,336 64	$2,589 51	$3,661 06

The preceding statement of earnings and expenditures shows that after paying the expenses of operation, excluding interest charges upon the funded indebtedness, there is a large deficit in both the gas and water departments for each of the three years given. Inspection of the expenditures discloses that no allowance for depreciation, as such, has ever been made by the village.

Water Department.

In order to arrive at the unit costs of operation of the plant which shall constitute a basis for the determination of fair and equitable rates, an apportionment of the expenses of the two departments has been made over output, capacity and consumer. Of the total direct expenses of the water department for the year ending June 30, 1911, amounting to $2,589.51, it is found that about 48.3 per cent, or $1,250.33, is chargeable to output, and 51.7 per cent, or $1,339.18, is chargeable to capacity. As no separation of the plant value has been made between public service or fire protection and private service, the depreciation and interest charges have been divided on the basis of the overhead. Depreciation and interest have been figured at 7 per cent on a value of $16,495.58 for the water department, giving $1,154.68. Dividing this on the basis of the direct expenses, it is found that $557.71 is chargeable to output and $596.97 to capacity.

The total expense, including depreciation and interest, amounting to $3,744.19, is then distributed, $1,808.04 to output and $1,936.15 to capacity.

Up to the present time the village has paid nothing for fire protection. We have assumed that 50 per cent of the total capacity expense is chargeable to the village for fire protection. It is difficult to apportion the output expense on the basis of the actual amount of water used, due to the fact that there are no accurate records available. It has been assumed, however, that 2 per cent of the output expense is incurred by the village. This division of the expenses between the private consumers and the public results in a total charge to private consumers of $2,739.95, apportioned $1,771.88 to output and $968.07 to capacity, and a total charge to the village for fire protection of $1,004.24.

The fixed charge per consumer per year, with about 233 private consumers, amounts to $4.15, or $2.00 per half year, meters being read only at six month intervals. Assuming a pumpage of 11,000,000 gallons with a total output charge of $1,808.04, gives a cost per M gallons pumped of about 16.4 cts. If 4,800,000 gallons of water per year are actually delivered to commercial consumers, the output cost per M gallons is 36.9 cts.

If the amount actually delivered to consumers is approximately 4,400,000 gallons per year, the output cost is 40.3 cts., which is extremely high. Although an output cost of 36.9 cts. per M gallons is high, it seems that the amount of water delivered to consumers cannot be far from 4,800,000 gallons.

With a consumer charge of about $1.25 per quarter, or $2.50 per half year, for all consumers having less than 1 inch meters, and $1.50 per quarter for 1 inch or over, the total revenue guaranteed by this charge will amount to about $1,100 for the year.

As the total cost of the private service was seen to be about $2,739.95, there is, then, an amount to be secured from private consumers equal to about $1,639.95, or an increase of approximately $440.00 over the present revenue from that class of service.

Our apportionment shows a total output expense charged to private consumers of $1,771.88, or an increase over the total present revenue of the water department of about $571.88. It would appear that a schedule of output charges must be devised which will increase the revenue from between $440 to $570.

No reliable statistics for towns of the size of Sharon exist in regard to the distribution of consumption, but it is probable that the consumers and consumption will be distributed somewhat as follows:

No. of consumers.	Per cent.	Approximate consumption per year, per consumer.	Total approximate consumption.	Probable Revenue.		
				Fixed charge.	Output charge.	Total revenue.
15	6.3	3,750 gals. ..	56,250	$75 00	$19 69	$94 69
15	6.4	5,625 "	84,375	75 00	29 53	104 53
16	6.6	6,750 "	107,400	80 00	37 59	117 59
60	25.7	11,250 "	675,000	300 00	236 25	536 25
129	55.0	30,000 "	3,876,975	645 00	1,356 94	2,001 94
235	100.0	.....	4,800,000	$1,175 00	$1,680 00	$2,885 00

The output charge being as follows:

1st 15,000 gallons per half year ..... 35 cts. per M gals.
Next 15,000 " " ..... 30 " "
All over 30,000 " " ..... 25 " "

Service charge:

Under 1 inch meter..... $5.00 per year
1 inch or over..... 6.00 "

Flat rates are seldom based on a cost analysis, and hence it seems for the best interests of everyone to do away with them if possible. Only those who are very small consumers might be given a flat rate; however, a minimum bill will take care of them.

At the hearing it was brought out that some of the tax payers do not have any fire protection from the water. From the total feet of hose in the fire department it appears possible to reach every house in the village from the nearest hydrant.

There are no very accurate records of the actual number of water meters connected. There are two meter books in use, one showing 178 metered consumers, the other showing a total of 223 consumers connected. From a close search of the records available, it appears that from 1897 down to date some 209 meters have been bought by the water department. Of these the records show that 115 have been paid for by the consumers. If only 178 are installed, there will be about 63 installed that are still owned by the village, and some 31 meters still on hand.

The situation as regards the installation and ownership of meters call for some action at once. It is the duty of the utility to put in meters unless exempted from so doing by this Commission. Where a consumer now owns the meter the utility shall acquire the meter or pay an annual rental to the owner of 50 cts.

When meters are in general use, but more especially when the accounts of the utility have been kept in the form prescribed by this Commission and as required by the Public Utilities Law, a revision of the rates may be necessary.

Gas Department.

Analysis of Gas Consumption.

An analysis of the distribution of gasoline gas sales in Sharon has been made which is similar to the analysis described in *State Journal Ptg. Co. et al v. Madison Gas & El. Co.* 1910, 4 W. R. C. R. 501, 734, and in *City of Racine v. Racine Gas Light Co.* 1911, 6 W. R. C. R. 228, 316.

An analysis of the consumption of gas in a town as small as Sharon has never been made before. This analysis is especially interesting, due to the fact of the gas being a gasoline gas.

Tabulations of the consumer data covering a period of one year were made. These tabulations show the consumption of gas in cubic feet for every metered gas consumer in Sharon for each and every month during the year when each consumer received service. The following table shows the percentage of the total gas sold during the year in the order of the monthly consumption by thousands of cubic feet:

DISTRIBUTION OF GAS SALES.

	Sharon. %	Taylorville. %	Beloit. %
1st 200 cu. ft.	14.4		
Next 300 " "	19.0		
Next 500 " "	23.1		
First M cu. ft.	56.5	55.8	37.3
2nd " " "	24.5	21.5	24.0
3rd " " "	11.3	8 7	12.3
4th " " "	4.9	4.07	5.8
All over 4 M	2.8	9.93	20.6

These figures constitute the foundation for the computations as to the probable revenues under the proposed rates which will be discussed later. Investigation has shown that the distribution of the sales will vary but little from year to year, so that the assumption of this basis of computing probable revenue is well founded.

DISTRIBUTION OF COMMERCIAL GAS SALES.

	Year ending June 30, 1910.	Year ending June 30, 1911.
1st 200 cu. ft.	185,900 cu. ft.	
Next 300 " "	245,800 " "	
Next 500 " "	300,000 " "	
First M	731,700 " "	
2nd "	315,700 " "	
3rd "	146,100 " "	
4th "	62,600 " "	
All over 4 M	36,400 " "	
Total (62%)	1,292,500 cu. ft.	1,300,000 cu. ft.
Used by street lights (38%)	800,000 " "	900,000 " "
Total consumption (100%)	2,092,500 " "	2,200,000 " "
Leakage (10%)	209,000 " "	220,000 " "
Total production	2,301,500 " "	2,420,000 " "

An apportionment of the expenses of the gas department for the years ending June 30, 1910 and 1911, over output, capacity and consumer shows the following division:

	Total.	Output.		Capacity.		Consumer.	
		Per cent.	Amount.	Per cent.	Amount.	Per cent.	Amount.
Total 1910	$3,797 32	89	$3,379 48	7.4	$281 38	3.6	$136 46
" 1911	4,121 69	89.5	3,686 60	.....	282 30	.....	152 79
Increase 1911 over 1910	$324 37	.....	$307 12	.....	$0 92	.....	$16 33

An allowance for depreciation has been made in the above apportionment which has never been made by the utility heretofore.

The total cost of gas for the year ending June 30, 1910, $3,797.32, divided by the total gas sales, 2,092,500 cu. ft., gives an average cost of gas of $1.815 per M cu. ft. sold. For the the year ending June 30, 1911, the same figure is obtained. There are two classes of service in Sharon, commercial lighting and fuel, and municipal lighting. The output and capacity expenses must be apportioned between these classes of service. In estimating the consumption of gas of the street lights, it was assumed that the four lights that burned all night would be in operation 4,000 hours per year per lamp. The 59 lamps which burned only from dusk to between ten and eleven p. m. were assumed to burn 1,000 hours each per year, the total of 63 lamps burning 75,000 hours per year. An average consumption of 12 cu. ft. of gas an hour was assumed, although it is highly probable that in this particular case the consumption may run up to as high as 15 cu. ft. per hour. On the 12 cu. ft. an hour basis, a total consumption for the year for the street lights is obtained amounting to about 800,000 cu. ft. For the year ending June 30, 1910, the commercial consumers used some 1,292,500 cu. ft. Of the combined consumption of the street lights and the commercial consumers, amounting to 2,092,500 cu. ft., it is seen that the latter were responsible for 62 per cent of the consumption, and the former for but 38 per cent.

In apportioning the operating expenses, the production expenses were divided on the above basis.

Upon apportioning the output and capacity expenses between the commercial lighting and municipal lighting the following division was obtained:

	Direct to consumers.	Total output.	Output apportioned to		Total capacity.	Capacity apportioned to	
			Commercial consumers.	Municipal lighting.		Commercial consumers	Municipal lighting.
Total 1910. ($3,797 32)	$136 46	$3,379 48	$2,057 31	$1,322 17	$281 38	$63 23	$218 15
Total 1911. ($4,121 69)	152 79	3,686 60	2,247 40	1,439 20	282 30	66 39	215 91

The present rate for gas in Sharon appears to have been $1.50 per M, irrespective of the number of thousands of cubic feet consumed per month.

It is well known that the cost of gas service per M cubic feet consumed decreases with increased consumption. Investigation of the total output costs (municipal and commercial) as determined for this plant, shows this cost to be close to $1.65 per M cu. ft. sold, and $1.50 per M cu. ft. made.

The total capacity and consumer costs charged to commercial consumers, amounting to $219.18, divided among the 119 consumers gives a fixed expense per consumer of about $1.68 for 1910 and $1.84 for 1911, or an average of about $1.76 per year, or 15 cts. per month.

It is necessary to have a minimum charge that will not only guarantee the fixed expenses, but also pay for the gas actually used by the minimum takers. For this reason it seems justifiable to charge from 40 to 50 cts. as a minimum bill or service charge per month.

In our apportionment of the output and capacity expenses between the commercial lighting consumers and municipal contract lighting it is found that of the total output expenses of $3,686.60, approximately 61 per cent or $2,247.40 is due to the private consumers, and 39 per cent or $1,439.20 is due to the village. The output cost (1911) per M cu. ft. consumed by private consumers is thus seen to be about $1.75.

From the foregoing it appears that the following schedule of gas rates is believed to be fair and reasonable:

$1.90 net or $2.00 gross per M cu. ft. for the first 4 M cu. ft. used during any one month through any one meter.

$1.80 net or $1.90 gross per M cu. ft. for the next 6 M cu. ft. used during the same month through the same meter.

$1.60 net or $1.70 gross per M cu. ft. for all gas in excess of 10 M cu. ft. during the same month and passing through the same meter.

The minimum bill, graduated according to the size of the meter, is as follows:

3 light meter	$0.50 per month.
5 "	.65 "

The effect of the proposed rates upon the monthly bills of the consumers is shown in the following table:

Gas consumption per month, cu. ft.	Monthly bill under old rate.	Monthly bill under proposed rates.
200	$0.30	$0.50
300	.45	.57
400	.60	.76
500	.75	.95
600	.90	1.14
700	1.05	1.33
800	1.20	1.52
1,000	1.50	1.90
~ 000	3.00	3 80
~ 000	4.50	5.70
~,000	6.00	7.60
500	6.75	8.50
000	7.50	9.40
,800	10.20	12.64
4 000	10.50	13.00
,0 500	15.75	19.20

Under the proposed rates a revenue of about $2,452.11 will be obtained from the commercial consumers, with a consumption of only 1,292,500 cu. ft. of gas.

The output cost charged to the municipal contract lighting amounts to $1,439.20. The capacity costs total $215.91, giving a total cost of municipal lighting of $1,655.11. With a total of 63 lamps this gives a cost per lamp per year of $26.30. Due to the fact that four of the lights burn all night, a larger cost should be borne by them, hence a charge of about $23 per lamp for those lamps burning from dusk to between ten and eleven p. m., and a charge of $75 per lamp for the four lamps which burn all night will produce a revenue of $1,657,

which equals the total cost apportioned to this class of service.

It appears that the majority of gasoline gas plants in the state were in general primarily installed to furnish street lighting. A report by Mr. Huddle to the Commission on the gasoline plants in Wisconsin states:

"While the light (from the street lamps) is very good, it seems that the cost is excessive, particularly when we consider that at the present price of gas to private consumers either a considerable part of the actual cost of the gas is charged against the street lighting, or the deficit is borne by the general taxpayer, which amounts to the same thing, since the village receives no other benefit from the plant."

In connection with the gasoline plants an important consideration is the danger of explosion and fire, due to the storage of large quantities of gasoline. In the Sharon plant unprotected lights are used in the generating room. In a number of plants throughout the state serious explosions have occurred, due to a leakage of gasoline. The breaking of one of the glasses of a night feed to the carburetter may result seriously at any time. At Sharon the addition to the plant has removed the boilers farther from the generating apparatus than it was previously, and hence has minimized the danger from this source to some extent.

The heat value of the gas is not known, but is probably below 600 B. T. U. To distribute a gasoline gas of this value can not be done without greatly increasing the cost. It requires a higher pressure upon the distribution system for gasoline gas than is customary with either coal or water gas, which may cause accidents through this leakage.

A gas meter which is used continuously for gasoline gas will probably show considerable inaccuracy, due to the fact that the gasoline gas has an injurious effect upon the diaphragm of the meter. It is suggested that meters which have been in use for at least three years be compared with a new meter, which will guard against any great inaccuracy and at the same time save the expense of a meter prover.

IT IS THEREFORE ORDERED, That the respondent in this case, the village of Sharon, discontinue its present schedule of rates for water service and for gas service, and place

in effect, as a substitute therefor, the following rate schedules deemed just and reasonable:

SCHEDULE OF RATES FOR WATER SERVICE.

The village shall install meters at its own expense, and shall charge for all water passing through meters according to the following schedule of rates:

1. Service charge payable semi-yearly in advance:

5/8 inch meter, one consumer on meter	$2.50
3/4 inch meter, one consumer on meter	2.50
1 inch meter, one consumer on meter	3.00
Over 1 inch meter, one consumer on meter	3.00
For each additional consumer on the same meter,	.50

Each dwelling, flat, store, tenant, etc., shall be regarded as one consumer in determining the service charge.

2. Output charge:

35 cts. net or 36 cts. gross per M gallons for the first 15,000 gallons used during a half year through any one meter.

30 cts. net or 31 cts. gross for the next 15,000 gallons per half year passing through the same meter.

25 cts. net or 26 cts. gross for all water in excess of 30,000 gallons per half year and passing through the same meter.

No free service shall be given, and schools and other public buildings shall be supplied through meters and shall be charged for water service at the rates above stated.

The village of Sharon shall pay the sum of $1,000 each year, in two equal annual installments, for fire protection service. This amount includes the water used for fountains and street sprinkling as these services are at present used by the village.

Where the village is unable to read a meter after a reasonable effort, the fact shall be plainly indicated upon the semi-yearly bill, the service charge assessed, and the difference adjusted with the consumer when the meter is again read.

Discount. The company shall bill all consumers at the gross rate and the difference between the gross and net rate above specified, or 1 ct. per 1,000 gallons, shall constitute a discount for prompt payment.

Where the consumer now owns the meter, the utility shall

acquire the meter or pay an annual rental to the owner of 50 cts.

SCHEDULE OF RATES FOR GAS SERVICE.

For all gas service furnished for lighting, fuel, industrial, or power purposes, and passing through meter or meters owned and installed by the company, a charge of

$1.90 net or $2.00 gross per M cu. ft. for the first 4 M cu. ft. used during any one month through any one meter.

$1.80 net or $1.90 gross per M cu. ft. for the next 6 M cu. ft. used during the same month through the same meter.

$1.60 net or $1.70 gross per M cu. ft. for all gas in excess of 10 M cu. ft. used during the same month and passing through the same meter.

The *minimum bill* shall be graduated according to the size of the meter and shall be as follows:

3 light, 50 cts. per month.

5 light, 65 cts. per month.

Where the village is unable to read meter after reasonable effort, the fact should be plainly indicated upon the monthly bill, the minimum charge assessed, and differences adjusted when the meter can be read.

Discount. Company shall bill all consumers the gross rate, and the difference between the gross and net rates specified above, or 10 cts. per M cu. ft., shall constitute a discount for prompt payment. Fifteen days after issuing bills is deemed a reasonable time in which this discount for prompt payment shall apply.

Re-Connection of Meters. For the re-connection of meters for the same consumers upon the same premises, a charge of $1 is deemed reasonable.

Municipal Lighting.

The rates for municipal lighting shall be as follows:

A charge of $23 per lamp per year for all lamps burning from dusk to ten or eleven p. m.

A charge of $75 per lamp for lamps burning on an all night schedule.

When the accounts and records of the utility have been kept in the form prescribed by this Commission and as required by the Public Utilities Law, a revision of the water and gas rates may be necessary. The Commission will provide an accountant to assist the village authorities in putting into effect the required system of accounting.

Sixty days from the date hereof is deemed sufficient time within which to comply with this order.

IN RE APPLICATION OF THE STATE LONG DISTANCE TELEPHONE COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Oct. 24, 1911. Decided Jan. 11, 1912.

Application was made by The State Long Distance Telephone Company, operating a telephone exchange and system in Elkhorn, Wis., and adjacent territory, for authority to increase its rates for telephone service. The applicant bases its prayer for increased rates upon the improvement of its long distance telephone and the increased cost of operation due to the purchase of the Elkhorn exchange of the Wisconsin Telephone Company, and the proposed acquisition of the rural line of the Badger Telephone and Telegraph Company. The applicant maintains that its present schedule of rates is insufficient to pay expenses, depreciation, and an adequate return on the property. An examination of operating expenses and revenues of the applicant was made for the last three years. Records of the utility have been so poorly kept that it was impossible to make an exact distribution of expenses over the primary expense groups, or even between operating expenses and new construction. An estimate of future operating expenses and revenues under present rates showed that from 16 to 16⅔ per cent will be available for interest, profits and depreciation, upon a valuation of $30,000.

A valuation of the property made by the Commission as of July 1, 1911, showed a cost of reproduction new of $32,434, and a present value of $21,760. It was pointed out in behalf of the applicant that there had been losses by the various telephone utilities which are now a part of the applicant's system, amounting to several thousand dollars. It does not appear that these losses have been borne by the applicant in this case, so they need not be considered further in connection with the valuation. Records of the financial history of the utility are too meager to furnish a basis for computing going value. The true value of this utility is somewhere between the cost of reproduction of physical property and its present value, and does not seem to be very far from the applicant's statement of value of $29,400.

Inasmuch as the books and records of the utility have been so poorly kept that the applicant has been unable to make even approximately correct reports to the Commission, and as investigation shows that an adequate return is being obtained, no increase in rates should be authorized at this time. The utility must keep its accounts in accordance with the requirements of the Commission. Then it will be in a position to know its own financial status and the readjustment of rates, if any need be made in the future, will be comparatively simple. The application is dismissed.

Application in this matter was filed with the Commission on June 8, 1911. The application shows that applicant is a

corporation organized and doing business under the laws of the state of Wisconsin, with its principal place of business in the city of Elkhorn, and that it is a public utility engaged in the management and operation of a telephone exchange and system in said city and adjacent territory. Applicant further shows that the rates in effect at the time of the application were as follows:

City residence phone, per month	$1.00
City business phone, per month	2.00
Farmers' phone inside city limits, per month	1.25
Farmers' phone outside " "	1.50
Business desk phone, per month	2.25
Extension phone, per month	.75
Residence desk phone, per month	1.25
Toll rates over lines belonging to the company	.10

Applicant further shows:

1. That for a number of years there have been two telephone exchanges in Elkhorn, one owned and operated by the Wisconsin Telephone Company and one by the applicant;

2. That applicant has had no long distance telephone connection with other companies except over the lines of the Badger Telephone & Telegraph Company, and with the exchange of the Wisconsin Telephone Company at Delevan;

3. That the lines of the Badger Telephone and Telegraph Company extending east from Elkhorn have for some years been out of repair, and that it has been impossible to get any service over these lines;

4. That lines of the same company to the west have been in poor condition and that the service has been very inadequate and unsatisfactory;

5. That the Wisconsin Telephone Company has sold a portion of its lines and equipment in the city of Elkhorn to the applicant and will discontinue its exchange in that city;

6. That the applicant has entered into a contract with the Wisconsin Telephone Company for long distance service over the lines of that company;

7. That applicant was negotiating for the purchase from the Badger Telephone and Telegraph Company of its line extending east from Elkhorn to the village of Bowers, a distance of about five miles;

8. That for a number of years past many of the business places in Elkhorn have had phones both of the applicant and

of the Wisconsin Telephone Company, with a charge of $2 per month for each instrument, and that a number of residences also had both instruments;

9. That the property purchased from the Wisconsin Telephone Company and the Badger Telephone and Telegraph Company, together with the new phones and equipment made necessary, and the cost of installing such phones and equipment will amount to about $2,000;

10. That in order to handle the additional business properly and give long distance service, an additional labor cost of about $804 per year must be incurred;

11. That the applicant is in debt about $2,500, and that its property is worth about $29,400;

12. That for the past four years the net earnings of the applicant have been about $2,500 per year, with no allowance for depreciation, and that no provision has ever been made for depreciation;

13. That the present schedule of rates is insufficient to pay operating and maintenance expenses and provide for depreciation and an adequate return on the property.

Because of the conditions enumerated above, the utility asks permission to discontinue its present schedule and to substitute for it the following schedule:

Business phones, single party, per month	$3.00
Business phones, four party, per month	2.50
Residence phone, city, single party, per month	1.25
Residence phone, city, four party, per month	1.00
Farmers' phone, in city, four party, per month	1.25
Farmers' phone, outside city, eight party, per month	1.50
Extension set, per month	.75
Toll rate to remain as at present.	

The schedule suggested would result in increases as follows:

Class.	Increase.
Single party business	$1.00 per month
Single party business, desk phone	.75 "
Four party business	.50 "
Four party business, desk phone	.25 "
Single party residence	.25 "

According to the schedules shown above there would be a decrease amounting to 25 cts. per month in the case of desk phones on four party residence installations, although there may be no patrons using this class of service.

Hearing was held at Madison on Oct. 24, 1911. *Jay W. Page*

appeared for the applicant. There were no appearances in opposition.

Valuation of the property was made by the Commission as of July 1, 1911. Following is a summary of the valuation:

Classification.	Cost of reproduction.	Present value.
1. Land		
2. Distribution system	$26,956	$17,945
3. Buildings and miscellaneous structures	60	30
4 Exchange equipment	1,250	865
5. General equipment	279	174
6. Paving		
Total	$28,545	$19,014
Add 12 per cent	3,425	2,282
7. Materials and supplies	464	464
Grand total	$32,434	$21,760

The cost of reproduction shown by the Commission's valuation is about $3,000 in excess of the plant value mentioned in the application, but is practically the same as the applicant's statement of what the cost of reproduction would be of a plant adequate to meet the needs of the community. It was pointed out that in June, 1911, the applicant took over part of the property of the Wisconsin Telephone Company's Elkhorn system and that it had also taken over a rural line from Elkhorn to Spring Prairie, and the applicant states that additions should be made to the Commission's valuation because of these additions to property. It was also argued on behalf of applicant that additions should be made because of the new instruments to be installed or which had been installed, but an examination of our inventory shows that all phones were included, and that the valuation also included the other property in question.

It was also pointed out on behalf of applicant that over $30,000 had been expended on its system and that there had been losses by various telephone utilities which are now a part of the applicant's system, amounting to several thousand dollars. It does not appear, however, that these losses have been borne by the applicant in this case, so that they need not be considered further in connection with the valuation. Records of the financial history of the utility are too meager to furnish a basis for computation of going value. That the true value of this utility is somewhere between the cost of reproduction of physical property and its present value, appears to be cer-

tain, and the actual value, as of July 1, 1911, does not seem to be very far from the statement of value included in the application, or $29,400.

Following is a summary of operating revenues and expenses for the three years past as reported by the utility:

	Year ending June 30,		
	1909.	1910.	1911.
Operating revenues	$6,218 00	$5,777 64	$7,208 33
Operating expenses	2,424 58	6,238 64	2,762 55
Net operating revenue	$3,793 42	$539 00	$4,445 78

An examination of the records of the utility was made by representatives of the Commission, which investigation shows operating expenses to have been as follows:

Classification.	Fiscal year 1909–1910.	Fiscal year 1910–1911.	Six months June 30, 1911 Dec. 31, 1911.
Central office	$1,207 48	$1,226 04	$897 79
Wire plant	492 49	326 44	712 46
Substation	93 28	160 35	81 65
Commercial	.....	1 00	.....
General	426 45	1,016 75	706 38
Undistributed	95 54	118 06	132 23
Total of foregoing	$2,315 24	$2,848 64	$2,530 51
Taxes	135 35	156 35	.....
Total	$2,450 59	$3,004 99	$2,530 51

Records of the utility have been so poorly kept that it was impossible to make an exact distribution of expenses over the primary expense groups, or even between operating expenses and new construction. As shown in the foregoing summary, wire plant expenses include some substation expenses, as no time record has been kept by the utility which would make it possible to distribute the cost of labor as between these two items. General expenses include what should properly be classed as commercial expenses, as it was impossible to further distribute these expenses. The manager does general, wire plant, substation, and construction work and no distribution of his time or of that of his employes has been made by the utility. The chief operator also does part of the bookkeeping and of the collection work, with no time distribution.

The total of operating expenses as shown above is excessive to the extent that it includes for each year a portion of salaries which a correct time distribution would almost certainly show should be charged to construction. For the whole period, and particularly for the last six months, reconstruction work has been done, the cost of which has been included above because the records of the utility are in such shape that no determination of the amount and cost of such reconstruction could be made. Operating expenses as given also include the cost of handling toll business, exclusive of messenger fees and payments to the Wisconsin Telephone Company. Without attempting from the unsatisfactory information at hand to make an apportionment of expenses as between local and toll business, it seems clear that an amount at least equivalent to the salary of one operator, or $300 per year, is chargeable to the toll business. On the basis of the last six months the expenses for a year would be $5,061.02. Deduction for expenses chargeable to toll business would be, to some extent, offset by the cost of keeping the books in proper shape.

Several hundred dollars of expenses of the past six months seem to have been expenses of reconstruction which should have been provided from the depreciation fund. Deducting this and such portion of the general expenses as it appears should be charged to construction and to reconstruction, we believe the normal annual operating expense will not be far from $4,000.

At the hearing counsel for the utility estimated that expenses would in the future be about $800 per year above what they had been for three or four years previous. Investigation by the Commission points to the conclusion that $800 in excess of expenses, as determined for the past fiscal year, is not an unreasonable allowance. For purposes of this decision it will be fair to base our estimates upon operating expenses of from $3,800 to $4,000, for exchange business only.

The number of phones in use on Jan. 1, 1912, may be taken as indicative of what earnings will be. The number was as is shown below:

Single party business phones	52
Single party residence phones	55
Four party residence phones	170
Farmers' phones in city	18
Farmers' phones outside city	240
Extensions	6
Switching service only	15

Annual revenues from these phones would be, under present rates:

52 at $24	per year	$1,248.00
55 at $12	"	660.00
170 at $12	"	2,040.00
18 at $15	"	270.00
240 at $18	"	4,320.00
6 at $ 9	"	54.00
15 at $ 3	"	45.00
Total		$8,637.00

This does not take into account the additional charge for desk phones, but the number of these appears to be very small. In one respect the utility has failed to abide by its schedule as filed. It charges $15 per year for single residence phones, although the rate on file is only $12 per year. As this increase has never been approved, it is not legally effective. A charge of $3 in addition to the four-party rate, for single party service, where the subscriber may choose as to which class of service he will take, does not seem unreasonable and may be authorized. With this increase, the annual revenues would be $8,802. According to our investigation the amount available for interest, profits, and depreciation, is from $4,800 to $5,000 per year. On a valuation of $30,000 this will yield a return of from 16 to 16⅔ per cent per year. Even if expenses should increase to $4,500 per year, which does not seem probable under present conditions, the rate of return would be 14.3 per cent. Inasmuch as the books and records of the utility have been so poorly kept that the applicant has been unable to make even approximately correct reports to the Commission, and that our investigation shows that an adequate return is being obtained, no increase should be authorized at this time. The utility must keep its accounts in accordance with the requirements of the Commission. Then it will be in a position to know its own financial status and the readjustment of rates, if any need be made in the future, will be comparatively simple.

The case is therefore dismissed.

L. M. ENGESETHER

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY,

CHICAGO AND NORTH WESTERN RAILWAY COMPANY,

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Dec. 12, 1911. Decided Jan. 12, 1912.

Petitioner alleges exorbitant, unreasonable and unjustly discriminatory charges on a carload shipment of rutabagas in bulk from Cumberland to De Forest, Wis. It appears that the shipment was routed via Madison, a distance of 28 miles more than if it had been routed via Camp Douglas. As no specific instructions to the contrary were given by the shipper, the shipment should have moved via Camp Douglas instead of via Madison, there being no through joint rate via either route. It is well settled that under the circumstances the shipper was entitled to a routing by which he would receive the lowest through rate. (*Hodges v. W. C. R. Co.* 1906, 1 W. R. C. R. 300.)

Held: The charges exacted of the petitioner were erroneous, and a reasonable charge would have been the amount computed upon the rates in effect upon a routing of the shipment via Camp Douglas. Refund is ordered on this basis.

The petitioner is a resident of the city of Cumberland, Wis., and is engaged in the business of farming. He alleges that on or about Oct. 21, 1911, he shipped from Cumberland over respondents' lines to De Forest, Wis., a carload of rutabagas in bulk; that the charges on said car were $70.68 on the lines of the first two carriers mentioned, and $16.00 on the line of the Chicago, Milwaukee & St. Paul Railway Company, making a total charge of $86.68 for said shipment; that said charges are exorbitant, unreasonable and unjustly discriminatory. Wherefore, petitioner prays that the railroad companies be required to refund to him the amount of the overcharge.

The only answering respondent is the Chicago & North Western Railway Company, which admits all the formal allegations of the petitioner, but denies that the rates charged on said carload of rutabagas are unreasonable, unjust or discriminatory, or in violation of any law, but that the same were assessed at the regular tariff rates.

The hearing was held on Dec. 12, 1911. The petitioner was represented by *John R. Ollis,* and the respondent Chicago & North Western Railway Company by *C. C. Wright,* its general solicitor.

It appears that the shipment in question moved on or about Oct. 21, 1911. The charges were assessed on the weight of 37,200 lbs., amounting to $86.68, of which $16.00 was the charge of the Chicago, Milwaukee & St. Paul Railway Company and $70.68 the charge of the Chicago, St. Paul, Minneapolis & Omaha Railway Company and the Chicago & North Western Railway Company. The shipment was routed via Madison. An examination of the tariffs on file with the Commission shows that there was no commodity rate on rutabagas in carload lots moving from Cumberland to DeForest. The class rate would therefore apply. The western classification in force on or about Oct. 26, 1911, provides for rutabagas shipped in carload lots, class C rate, with a minimum loading requirement of 24,000 lbs. This rate applies to the shipment in question. Chicago & North Western tariff G. F. D. No. 11600–A, in force on the date the shipment was made, names class C rate from Cumberland to Madison, 19 cts. per cwt., making a charge of $70.68, and Chicago, Milwaukee & St. Paul tariff G. F. D. No. 6500–A, in effect at the same time, names class C rate from Madison to De Forest 4.3 cts. per cwt., making a charge of $16.00. The shipment, therefore, was charged at the correct rate upon the route over which it moved. The distance the shipment moved over this route is 299 miles.

On the date of shipment Chicago, St. Paul, Minneapolis & Omaha tariff G. F. D. 1555–B names class C rate from Cumberland to Camp Douglas 13 cts. per cwt. The charge on the shipment, based on such rate from Cumberland to Camp Douglas, would be $48.36. On the same date Chicago, Milwaukee & St. Paul tariff G. F. D. 6500—A names class C rate from Camp Douglas to De Forest 8 cts. per cwt. The charge on the shipment based on this rate from Camp Douglas to De Forest would be $29.76. The total charge, therefore, via Camp Douglas would be $78.12, which is $8.56 less than the charges paid. The distance the shipment would have moved, had it been routed via Camp Douglas, is 271 miles, or 28 miles less than the route over which it actually moved. As no specific instructions to the con-

trary were given by the shipper, the shipment should have moved via Camp Douglas instead of via Madison, there being no through joint rate via either route. It is well settled that under the circumstances the shipper was entitled to a routing by which he would receive the lowest through rate. *Hodges v. W. C. R. Co.* 1906, 1 W. R. C. R. 300.

We find and determine that the charges exacted of the petitioner for the aforesaid shipment are erroneous, and that the reasonable charge therefor would have been the amount computed upon the rates in effect as above indicated upon a routing of such shipment via Camp Douglas.

NOW, THEREFORE, IT IS ORDERED, That the respondents be and they are hereby authorized and directed to refund to the petitioner the said sum of $8.56, being the amount herein found to be in excess of the reasonable charge therefor.

GRIFFEN H. DREEVES LUMBER COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Dec. 12, 1911. Decided Jan. 12, 1912.

A claim for reparation for teaming expenses was filed against the C. & N. W. R. Co. on the ground that a carload of lumber, which the petitioner desired to have shipped from Odanah to Camp Robinson, was shipped to Sparta, Wis. The petitioner asks that the extra expenses incurred for teaming, because the shipment was sent to Sparta, be refunded by the respondent. It appears that the carload of lumber was consigned to a construction company at "Rifle Range, Camp Robinson, Sparta, Wis." Camp Robinson is a station on the line of the C. M. & St. P. R. Co. The shipping directions actually given to the carrier would not have justified it in delivering the car to any other line, as by the terms thereof it was required to deliver the car to the consignee at Sparta, which is a station on its own line. Unless the carrier knew that the shipper intended the shipment to go to Camp Robinson, notwithstanding the shipping directions plainly to the contrary given by the shipper to the agent at Odanah, it cannot be charged with negligence in the matter. There is no contention that the railway company had any information other than that indicated by the shipping directions given to its agent at the point of origin of the shipment.

Held: In the present case the loss occasioned to the shipper by the delivery of the car to the consignee at Sparta was due to the erroneous and misleading shipping directions which were given to the respondent's agent at Odanah by the shipper. Under sec. 1797—37m, provision is made for reparation in cases where railway companies exact erroneous, illegal, unusual or exorbitant charges for the transportation of property or for any service in connection therewith. Even if the extra drayage charges incurred in the present case had been due to the negligence of the railway company and the shipper had a valid claim for the loss incurred, it could not be enforced in a reparation proceeding nor in any proceeding before the Commission. Damages in such a case, if due to the negligence of the carrier, can be recovered only in an action in court. The Commission has no jurisdiction in the matter. The petition is dismissed.

The petitioner is a corporation having its principal place of business at Chicago, Ill. It alleges that on May 19, 1911, it shipped a carload of lumber over respondent's line from Odanah, Wis., consigned to the Monolithic Concrete Construction

Company, at Rifle Range, Camp Robinson, Sparta, Wis., and that the bill of lading with such specific delivery directions was signed by the local agent of the respondent at Odanah; that the respondent moved said shipment direct to Sparta, Wis., over its own line, in view of which fact the respondent was unable to make final delivery as called for on the bill of lading; that on account of moving said shipment to Sparta the Monolithic Concrete Construction Company was obliged to incur a teaming expense of $35 in order to effect final delivery of the shipment as called for on the bill of lading. Wherefore, petitioner prays that the respondent be required to pay petitioner by way of reparation for the unlawful charge hereinbefore described the sum of $35, or such other sum as in view of the evidence to be adduced the Commission may consider the petitioner entitled to.

The respondent railway company, answering the petition, admits all the formal allegations thereof, and that the shipment was made and moved as therein alleged. It further says that the shipping directions given by petitioner did not designate for delivery upon the tracks of the Chicago, Milwaukee & St. Paul Railway Company, neither did the bill of lading which was issued and which was signed by its agent at Odanah, and says that no specific directions were given as to the routing, but that under the terms of the shipping ticket, as issued and signed by the respondent's agent, there was no obligation on the part of the respondent beyond the delivery of the car at Sparta, which service was fully performed. The respondent further says that it has no knowledge whatever of the teaming expenses incurred by the petitioner, or whether same was so incurred, or whether the same was necessary or reasonable, and therefore denies the same; and further in that regard states that under the laws of the state of Wisconsin the Commission is without power, authority or jurisdiction to grant the relief prayed for by the petitioner.

The matter came on for hearing on Dec. 12, 1911. The petitioner was represented by *I. W. Preetorius,* and the respondent by *C. C. Wright,* its general solicitor.

The petitioner shipped a carload of lumber over respondent's lines from Odanah, Wis., to Sparta, Wis., consigned to the "Monolithic Concrete Construction Company, Rifle Range,

Camp Robinson, Sparta, Wisconsin." Camp Robinson is a station on the line of the Chicago, Milwaukee & St. Paul Railway Company. If the directions given by the petitioner to the respondent's agent at Odanah had designated Camp Robinson as the point of destination, then it would have been the carrier's duty to have delivered the car to the Chicago, Milwaukee & St. Paul Railway Company at some point where there is a physical connection between the lines of the two roads, and where the sum of the local rates on the two lines would have been least. But the shipping directions actually given to the carrier would not have justified it in delivering the car to any other line, as by the terms thereof it was required to deliver the car to the consignee at Sparta, which is a station on its own line. The most that "Rifle Range, Camp Robinson," would indicate to the carrier, under the circumstances, was that the consignee's office or place of business was located at such point and that notice of the arrival of the car at destination could be there communicated to the consignee. The address given is similar in form to that often used where a consignee resides at a place distant from a line of railroad and receives his freight at some station on the railroad. Unless the carrier knew that the shipper intended the shipment to go to Camp Robinson, notwithstanding the shipping directions plainly to the contrary given by the shipper to the agent at Odanah, it cannot be charged with negligence in the matter. There is no contention that the railway company had any information other than that indicated by the shipping directions given to its agent at the point of origin of the shipment.

The loss occasioned to the shipper by the delivery of the car to the consignee at Sparta was due to the erroneous and misleading shipping directions which were given to the respondent's agent at Odanah by the shipper. Even if the shipper had a valid claim for the loss thus incurred it could not be enforced in this proceeding nor in any proceeding before this Commission. Section 1797—37m provides for reparation in cases where railway companies exact erroneous, illegal, unusual or exorbitant charges for the transportation of property or for any service in connection therewith. It is not contended that the charge exacted by the respondent in the instant case for transportation services rendered by it was in violation of such

statute. The claim is based upon the fact that the petitioner would have obviated drayage charges if the shipment had been delivered at Camp Robinson instead of at Sparta. Such damage, if due to the negligence of the carrier, can be recovered only in an action in court. The Commission has no jurisdiction in the matter.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE MARSHALL CROSSING OF THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY NEAR THE CITY OF NEW LISBON.

Decided Jan. 12, 1912.

The Commission, on its own motion, investigated the condition of the Marshall crossing of the C. M. & St. P. R. Co. near New Lisbon, Wis., in order to determine whether the physical conditions surrounding the crossing made it unsafe and dangerous to public travel.

Held: From the evidence submitted it appears that protection is necessary at this crossing. The respondent is ordered to install and maintain an electric bell with an illuminated sign for night indication in addition to the audible alarm, and is further ordered to remove the bank of dirt and the cottonwood tree situated at the northwest angle of the crossing. Sixty days is deemed a reasonable time within which to comply with this order.

The engineering staff of the Commission having inspected the above named crossing and reported upon the physical conditions surrounding it, a notice of hearing was issued to obtain testimony in order to determine whether said crossing was unsafe and dangerous to public travel.

The hearing was held on Nov. 21, 1911, at the village hall in Camp Douglas. *F. G. Wright* appeared for the Chicago, Milwaukee & St. Paul Railway Company.

The testimony shows that Marshall crossing is an intersection of the highway connecting the city of New Lisbon with the village of Hustler, about four and one-half miles distant, and is the third crossing northwest of New Lisbon railroad station. At this point the railroad runs northwest and southeast, while the highway runs east and west. On each side of the highway the railroad passes through a cut about six feet deep on a one degree curve. In approaching the crossing from the west a good view is obtained of trains coming from the northwest until a team is about twenty feet from the railroad right of way, when a bank of waste dirt and a big cottonwood tree obstruct the view entirely. The view to the southeast has no present obstruction, but a farmer testified that in summer time growing

corn prevents a person seeing a train coming from that direction. When approaching the crossing from the east, the same witness stated, the view to the northwest is obstructed by the rising ground which has a knoll about twenty feet above the level of the track on the land adjoining the railroad right of way. The view to the southeast, witness said, was often, during the winter months, obscured by freight cars which the railroad company left standing on their sidetrack close to the crossing. The road master stated that cars were rarely left there, but admitted that during congested times this had been done. The aforementioned farmer, who lives not far from the crossing, testified that the traffic over the highway consisted of probably fifty teams each way every twenty-four hours, about six automobiles and fifteen pedestrians, the last named being chiefly boys and girls attending high school at New Lisbon. He regarded the crossing as a dangerous one, especially when one was approaching from the east. He cited three accidents as having occurred to vehicles, without injury, however, to their occupants, two of which happened when the travelers were proceeding westward and one when going eastward. The division superintendent stated that from thirty to thirty-two trains pass over the crossing each day.

From the evidence submitted it appears that protection is necessary at this crossing, and that the bank of dirt and the cottonwood tree should be removed.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, install and maintain an electric bell with an illuminated sign for night indication in addition to the audible alarm at said Marshall crossing. It is further ordered that the respondent remove the bank of dirt and the cottonwood tree situated at the northwest angle of the crossing.

Sixty days is deemed a reasonable time within which to comply with this order.

M. D. CUNNINGHAM ET AL.

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Sep. 14, 1911. Decided Jan. 16, 1911.

The petitioners allege that the crossing of the track of the C. M. & St. P. R. with a highway situated in the town of Dover, Racine county, and one mile west of Kansasville, Wis., is dangerous by reason of the fact that the railroad passes through a cut, thereby obstructing the view of approaching trains and that the danger is increased by reason of a switching train which is accustomed to back or push cars over the crossing in operating between Corliss and Burlington stations. The petitioners pray that the railway company be required to protect the crossing by some safety device.

Held: The view of the approaching trains is obstructed to such an extent that some safeguard in addition to the sounding of engine whistles and bell and the standard highway crossing sign should be provided. The respondent is ordered to lengthen the north approach to the crossing so as to provide a uniform grade which will not exceed 6 feet in 100 feet, and to install an automatic crossing alarm bell with illuminated sign for night indication, with track circuit of such length as to give adequate protection against all trains and engines passing over the track. The details of the crossing bell and lighting installation are to be submitted to the Commission for approval. Six months is deemed a reasonable time within which to comply with this order.

The petitioners, the supervisors of the town of Dover, Racine county, Wis., and five other residents of said town, allege that the crossing of the track of the Chicago, Milwaukee & St. Paul Railway by a highway situated in said town, one mile west of the station, known as Kansasville, is dangerous by reason of the fact that the railroad passes through a cut just east of said crossing which obstructs the view of passing trains from the east by those approaching from the south. Wherefore, petitioners pray that said railway company be required to protect said crossing by some safety device.

The matter came on for hearing on Sep. 14, 1911. The petitioners were represented by *M. D. Cunningham.* The respondent was represented by *F. G. Wright,* its assistant commerce counsel.

The highway in question runs north and south and crosses the line of the Chicago, Milwaukee & St. Paul Railway Company about one mile west of Kansasville. The crossing was regarded by the witnesses as unusually unsafe and dangerous because the line of railroad passes through a cut east of the highway, thereby obstructing the view of trains approaching the crossing from the east, and that the danger referred to is increased by reason of a switching train which is accustomed to back or push cars over the crossing in operating between Corliss and Burlington stations. Mr. Cunningham testified that two or three teams, excluding his own, used this crossing daily, and that five school children cross the track daily at this point. A witness for the respondent testified that for ten hours one week day in April, 1911, eight persons on foot and no teams used the crossing; that on Sunday, Sep. 10, 1911, there were three single rigs, two double rigs, and two men on foot that used the crossing; that on Sep. 11, 1911, there were five men on foot and two double teams, and that during the night there were two single rigs and one man on foot using the crossing. It also appeared that regular and extra trains are run on the railway, and that during the season there is an ice train and a cabbage train which move between Corliss and Burlington, switching between these points, and that for convenience in operation cars are sometimes pushed ahead of the engine for three miles distance from Union Grove to Kansasville.

The highway crossing is rendered dangerous, on account of the limited and obstructed view of trains approaching from the east, to traffic using the highway, and particularly to traffic approaching the crossing from the south. Trains coming from either direction are not visible on the approach except from a point at some distance from the track and then again for only an inconsiderable distance immediately before reaching the track. When one approaches the track from the south, the view west of the highway is obstructed by small woods, while to the east of the highway there is a cut of some 600 feet in length and of maximum depth of approximately 20 feet, through which the railroad runs. From an investigation by the engineers of the Commission it also appears that the view of the approaching trains is obstructed to such an extent that some safeguard in addition to the sounding of engine whistles and bell, and the

standard highway crossing sign should be provided. The north approach of the highway to the track is on a grade of about 10 feet in 100 feet. The railway company should lengthen the north approach to this crossing so as to provide a uniform grade which will not exceed 6 feet in 100 feet. The town authorities should also improve the south approach to the crossing by starting a uniform 5 per cent grade at a point approximately 30 to 40 feet south of the railroad track and continuing same on an ascent southward for approximately 160 feet, or until reaching the level of the present roadway on the knoll to the south of the track, then changing to a level grade and continuing the same southward for 300 feet, or to its intersection with the natural grade of the roadway. This would provide some material for filling the depression in the road south of the knoll. It is not advisable to materially reduce the elevation of the roadway of the south approach in any readjustment of grade, as in so doing the already somewhat obscured view of the railroad is further obstructed. The crossing should also be protected by an automatic crossing alarm bell, with illuminated sign for night indication.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company lengthen the north approach to the above described crossing so as to provide a uniform grade which will not exceed 6 feet in 100 feet, and that it install an automatic crossing alarm bell with illuminated sign for night indication, with track circuit of such length as to give adequate protection against all trains and engines passing over this track. The details of the crossing bell and lighting installation shall be submitted to the Commission for approval.

Six months is deemed a reasonable time within which to comply with the terms of this order.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF A HIGHWAY CROSSING NEAR COLUMBIA STATION OF THE CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Decided Jan. 16, 1912.

Subsequent to a fatal accident at a highway crossing on the tracks of the C. St. P. M. & O. R. Co. near Columbia Station, Wis., the Commission, on its own motion, investigated the conditions surrounding the crossing. Investigation was made and a hearing held in order to determine whether any changes should be made in the crossing, whether any obstructions should be removed, and whether additional safety appliances should be installed.

Held: Additional protection is necessary at this crossing. It is ordered that the respondent install and maintain an electric bell with an illuminated sign in addition to the audible alarm for night indication. The device is to be effective upon the approach of trains from either direction. The respondent is further ordered to widen the approaches to the crossing so that the highway on each side of the track shall be thirty-two feet wide to a length equal to the width of the railroad right of way. The approaches are to be properly tiled for drainage. Four months is deemed a reasonable time within which to comply with this order.

At 4:10 p. m. on Oct. 12, 1911, train No. 303, going east over Chicago, St. Paul, Minneapolis & Omaha Railway from Merrillan to Marshfield, struck a covered wagon on the first highway crossing east of Columbia Station, killing one man, a boy and two girls. As soon as the accident was reported to the Commission, an engineer was sent to investigate the circumstances and also the physical conditions surrounding the crossing.

The report submitted shows that the highway in question crosses the single main track of the Chicago, St. Paul, Minneapolis & Omaha Railway about 1,800 feet east of Columbia Station. The railroad runs east and west, the angle of crossing being about 90 degrees. About 250 feet south of this main track the highway which runs north and south crosses a track running to a gravel pit located southeast of the station. Midway between the main track and gravel pit track, running at right angles to the road in question, is one of the main roads to Neillsville, and about the same distance north of the main

track and at right angles to this road is the main road to the village of Columbia. From this point the road extends north, intersecting another road leading to Neillsville, running in the same direction as the first road spoken of as going to Neillsville.

The man who was killed, whose name was August Languisch, was in the habit of taking his children, together with children by the name of Cook, from Neillsville to the school at Columbia, and returing with them at night. It had been his custom to use the road north of the tracks in going to Neillsville instead of the road south of the tracks, which would necessitate his using the crossing; leaving his children at his home, and then leaving the Cook children. Previous to the day when the accident occurred, Mr. Cook requested Mr. Languisch to bring his children home first, which necessitated using the crossing and south road, described as running to Neillsville between the main line and the gravel pit spur.

A hearing was had to determine what, if any, changes or alterations should be made in said crossing, whether or not underbrush and trees or other obstructions should be removed, and what, if any, safety appliances should be installed.

The hearing was held Nov. 21, 1911, in the village of Merrillan.

G. W. Peterson appeared for the Chicago, St. Paul, Minneapolis & Omaha Railway Company and *W. J. Rush* for Clark county.

From the testimony and the report of the Commission's engineer it appears that the highway parallels the railroad right of way from Columbia east for a distance of about 1,800 feet, where it intersects with the road that crosses the tracks to the south and that extends northward to the Neillsville road. The view of the road from Columbia to the intersection is unobstructed, and a person walking or in an open buggy should not have trouble in hearing approaching trains from either direction. The wagon used by Mr. Languisch had side curtains which made it very difficult for him to see or hear the approaching train. Approaching from the north, the view to the east and west from a point about 300 feet from the crossing is obstructed by small trees. On the south approach of the crossing the view to the east and west is obstructed by small trees. The width of the highway over the railroad track is sixty-six

feet, the crossing being planked to a width of sixteen feet. At this point the track is about three and one-half feet above the natural ground line. The traveled road is built up to meet this approach and is not of sufficient width to permit a team to turn around without liability of upsetting. Witnesses for the railway company did not consider the crossing a dangerous one, but a resident of Columbia testified that a person driving east along the highway could not see a train approaching from the west without having to turn almost clear around, and as the highway makes a sharp turn on to the crossing, a team could not turn back after it had started to cross the track and could then only get a good view of a train approaching from the west.

While the surrounding country is comparatively level, yet, as the highway parallels the track and makes a sharp turn at the crossing, an accident similar to that above related might again occur in the absence of protective signals. The approaches to the crossing should be widened sufficiently to allow teams to turn around with safety, and as this dangerous condition has been brought about by the elevation of the tracks above the natural level, the railroad company should grade the highway to a width of thirty-two feet on both sides of the crossing to a length equal to the width of its right of way, and plank the crossing the same width.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, St. Paul, Minneapolis and Omaha Railway Company install and maintain at the highway crossing situated about 1,800 feet east of Columbia Station an electric bell with an illuminated sign in addition to the audible alarm for night indication, the same to be effective upon the approach of a train from either direction.

IT IS FURTHER ORDERED, That the Chicago, St. Paul, Minneapolis & Omaha Railway Company widen the approaches to said crossing so that the highway on each side of the track shall be thirty-two feet wide to a length equal to the width of the railroad right of way, and that said approaches be properly tiled for drainage.

Four months is deemed a reasonable time within which to comply with this order.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE HIGHWAY CROSSING NEAR CALVERT OF THE CHICAGO, BURLINGTON AND QUINCY AND THE LA CROSSE AND SOUTH EASTERN RAILROADS.

Decided Jan. 19, 1912.

Subsequent to a fatal accident at a highway crossing on the tracks of the C. B. & Q. R. Co. near Calvert, Wis., the Commission, on its own motion, investigated the conditions surrounding the crossing. It appears that the tracks of the C. B. & Q. R. parallel the tracks of the La Crosse & S. E. R. for a mile on each side of the crossing in question, and that the highway crosses the tracks at an acute angle.

Held: Additional protective features aside from the crossing sign are required. The C. B. & Q. R. Co. is ordered to install and maintain an automatic audible alarm with illuminated sign for night indication. The device is to be located in the northwest acute angle of the crossing west of its tracks. Details of the crossing alarm and light installation are to be approved by the Commission. The La Crosse & S. E. R. Co. is ordered to install and maintain an automatic audible alarm to be located in the southeast acute angle of the crossing east of its tracks. Details of the installation are to be approved by the Commission. The acute angle at which the highway crosses the tracks makes changes in grading necessary, so that the wheels or runners of passing vehicles may be squarely on a level with the tracks before encountering the extremely diagonal crossing with the rails. It is therefore ordered that the C. B. & Q. R. Co. and the La Crosse & S. E. R. Co. fill and properly surface the roadway between their respective tracks so as to give a uniform grade from a point in the center line of the roadway and approximately sixty feet distant from the near rail of the one railroad to a like point approximately sixty feet distant from the near rail of the other railroad; and that that portion of the roadway between the near rails above mentioned and lines through above described points at right angles to the line of roadway be level and at an elevation equal to the elevation of the top of rails of tracks of their respective lines. It is further ordered that the two railway companies in question improve the highway so as to maintain a width of thirty-two feet available for traffic within the limits of the rights of way of their respective companies, with adequate planking around the railroad tracks to comply with the best practice. The construction is to be of a uniform standard throughout. Four months is deemed a reasonable period of time within which to comply with the terms of this order.

On Aug. 28, 1911, at about 1:15 p. m., Joseph Ober, a truck gardener, while driving over the crossing of the Mormon Coulee

road, about one and a half miles north of Calvert, was struck by the Chicago, Burlington & Quincy south-bound passenger train No. 52 and instantly killed; the horse was also killed and the wagon demolished. The Commission sent an engineer to investigate the accident and to examine the physical conditions surrounding the crossing. From his report it appears that the tracks of the Chicago, Burlington & Quincy Railroad parallel the tracks of the La Crosse and South Eastern Railway for a mile each side of the crossing in question. At this point the railroads run north and south, while the highway crosses at an acute angle and has a northwesterly and southeasterly direction. The Mormon Coulee road is an important macadamized highway leading from the city of La Crosse to Mormon Coulee, a prosperous farming community near Calvert, Wis., and is one of the old established roads or pikes which does not follow established land lines but diagonals across same, effecting considerable saving in distance to parties who use it. For some distance before reaching the railroad right of way from the west this road follows an even slightly descending grade line through a rather uneven country, draining to the sides and toward the railroad. At a point three hundred or four hundred feet west of the tracks the view of the latter to the north is obstructed by a cornfield. Two trees are located at about the point where the west right of way line and the north line of the highway would intersect, which obstruct the view when within fifty feet of the track. The tracks being located on a slight fill, however, afford a view of a train approaching from the north. This applies equally as well to the south side of the highway. On approaching the crossing from the east at a point five hundred or six hundred feet distant from the tracks, the view of the two railroads is equally as clear as that described for the west approach. There is a slight ascending grade to the La Crosse & South Eastern tracks which are located about eighty feet east of and parallel to the Chicago, Burlington & Quincy tracks. Between the tracks of these two railroads the grade of the highway descends to about two feet below the base of the road, ascending to the point where the highway crosses the Chicago, Burlington & Quincy tracks. On the date our engineer was making the inspection, section men were at work reducing this dip in the grade of the highway and renewing the planking.

A hearing was held at Madison, Oct. 19, 1911. The Chicago, Burlington & Quincy Railroad Company was represented by *Woodward & Lees;* the La Crosse & South Eastern Railway Company by its general manager, *Peter Valier.*

Mr. Valier testified that the rights of way of the railroad companies adjoined and took up the entire space between the two tracks without any dividing fence, and that the distance between the respective tracks was ninety feet. He stated that the country was flat and open and that a person could see an approaching train in either direction for a mile when he is a hundred feet away from the track. He regarded the separation of grades as impossible and did not believe any necessity existed for protecting the crossing by gates or signals or a watchman; he believed it was possible to make the crossing a right-angled one. Counsel for the Chicago, Burlington & Quincy Railroad Company stated that this was the first accident at the crossing for at least sixteen years, during which time he had looked after accident matters for his company. He admitted that there was a slight obstruction of a clump of trees, but he did not deem it necessary to make any change in the crossing for the purpose of safety; that while the highway crossed the railroad track at a very oblique angle, and in this particular case the man was driving in nearly a southerly direction and the train was coming from the same direction, yet it was obvious that he simply did not look or he could have seen the train.

After the hearing further investigations were made by the engineering staff of the Commission, which show that the testimony submitted is in accord with the general conditions existing at the crossing. The Chicago, Burlington & Quincy Railroad is at this point a double track line, carrying the extremely heavy traffic of that company between Chicago and the cities of St. Paul and Minneapolis. Trains are operated at a relatively high rate of speed and the period of traffic may be said to extend over the full twenty-four hours of the day. The La Crosse & South Eastern Railway at the point of crossing is a single track line. Traffic is light and ordinarily there are but four La Crosse & South Eastern trains a day (two in each direction) over this crossing. These run during normal daylight hours. The distance from the inside rail of the Chicago, Burlington & Quincy east track and the inside rail of the La Crosse & South Eastern track is 82 feet, but the distance along the road-

way in this space is 241 feet. Our engineering staff recommends that the Chicago, Burlington & Quincy Railroad Company and the La Crosse & South Eastern Railway Company be required to fill and properly surface the roadway between their respective tracks so as to give a uniform grade from a point in the center line of said roadway and approximately sixty feet distant from the near rail of the one railroad to a like point approximately sixty feet distant from the near rail of the other railroad, and that that portion of the roadway between the near rails above mentioned and lines through above described points at right angles to the line of roadway be level and at an elevation equal to the elevation of top of rails of tracks of the respective railroads. The object in the above is to place the wheels or runners of passing vehicles squarely on a level with the tracks before encountering the extremely diagonal crossing with the rails thereof, thus avoiding, as far as practicable with a grade crossing of this angle, the dangerous possibility of the wheels or runners becoming engaged between rails and planking. The distance from the outside rail of the west Chicago, Burlington and Quincy track to the outside rail of the La Crosse & South Eastern track is 95 feet, but the distance along the roadway between these two points is 320 feet. The width of roadway available for traffic within the limits of rights of way of the respective companies should not be less than 32 feet and the planking around the railroad tracks should give width equal to that of the roadway. Each company should make these improvements within the limits of its respective right of way, such construction to be of the same standard throughout.

The Commission's engineer reports that the Chicago, Burlington & Quincy Railroad Company has already taken steps towards clearing away the trees and bushes referred to in the testimony. With this obstruction removed there will be a good view of both railways in either direction when approaching the crossing, but the very acute angle at which the highway crosses the tracks and the length of the highway over the tracks would make it appear that additional protective features, aside from the crossing sign, are required. The Commission's engineers recommend the installation of an electric bell with illuminated sign for night indication by the Chicago, Burlington & Quincy Railroad Company, and an electric bell by the La Crosse & South Eastern Railway Company.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Burlington & Quincy Railroad Company install and maintain an automatic audible alarm with illuminated sign for night indication at the crossing of the Mormon Coulee road about one and a half miles north of Calvert, same to be located in the northwest acute angle of the crossing west of its tracks, details of such crossing alarm and light installation to be approved by the Commission.

IT IS FURTHER ORDERED, That the La Crosse & South Eastern Railway Company install and maintain an automatic audible alarm at the same crossing, to be located in the southeast acute angle of the crossing east of its tracks, details of such installation to be approved by the Commission.

IT IS FURTHER ORDERED, That the Chicago, Burlington & Quincy Railroad Company and the La Crosse & South Eastern Railway Company fill and properly surface the roadway between their respective tracks so as to give a uniform grade from a point in the center line of said roadway and approximately sixty feet distant from the near rail of the one railroad to a like point approximately sixty feet distant from the near rail of the other railroad, and that that portion of the roadway between the near rails above mentioned and lines through above described points at right angles to the line of roadway be level and at an elevation equal to the elevation of the top of rails of tracks of their respective lines.

IT IS FURTHER ORDERED, That the Chicago, Burlington & Quincy Railroad Company and the La Crosse & South Eastern Railway Company improve the highway so as to maintain a width of thirty-two feet available for traffic within the limits of the rights of way of their respective companies, with adequate planking around the railroad tracks to comply with best practice, the construction to be of a uniform standard throughout.

Four months is deemed a reasonable period of time within which to comply with the terms of this order.

SEYMOUR BUSINESS MEN'S ASSOCIATION
vs.
GREEN BAY AND WESTERN RAILROAD COMPANY.

Submitted Nov. 14, 1911. Decided Jan. 24, 1912.

The petitioner, a corporation organized for the purpose of promoting the business interests of the village of Seymour, Wis., alleges that the G. B. & W. R. Co. has discontinued its Sunday train service, to the disadvantage and detriment of persons residing along its line. Wherefore, petitioner prays that the respondent be required to operate Sunday trains for the convenience of the public. The respondent contends that Sunday train service during the period from Oct. 1 to May 1 would prove very unremunerative and would in fact fail to pay the operating expenses of the trains.

Held: The mere fact that a train might not be remunerative during a certain season of the year would not be a justification for not furnishing it if the convenience of the public, under the circumstances, reasonably required it.

The vital question in the instant case is whether a railroad company, under the existing law in this state, can be required to operate its trains on Sunday. Many states have statutes regulating the operation of railroads on that day (2 Stimson's Am. Stat. Law, sec. 8824), but there is no such statute in this state. In construing statutes similar to the Wisconsin statute (sec. 4595) prohibiting work on Sunday some of the authorities hold that the running of trains is not a "work of necessity," and hence is not excluded from the statute (*Sparhawk v. Union Passenger R. Co.* 1867, 54 Pa. St. 401), while others, and the greater number, take the contrary view. (*Commonwealth v. Louisville & Nashville R. Co.* 1882, 80 Ky. 291.)

Held: In the absence of a specific statute on the subject, the question must be determined with reference to the general penal statute prohibiting the performance of any business, work, or labor, "except only works of necessity and charity," on Sundays. (Wis. St. of 1898, sec. 4595.) The supreme court of this state has laid down the rule that a railway company is under no obligation to carry passengers on Sundays because of the inhibition of the statute (sec. 4595) (*Walsh v. C. M. & St. P. R. Co.* 1877, 42 Wis. 23.) Whatever may be our views as to the soundness or wisdom of the policy thus declared, it is controlling in effect in the case before us. Until the legislature expressly excepts railroad companies from the operation of such statute, or the supreme court recedes from its former position, the Commission is powerless to compel the running of railway trains on Sundays for the convenience of the public. The petition is dismissed.

The petitioner is a corporation organized for the purpose of promoting the business interests of the village of Seymour,

Wis. It alleges that the respondent railway company has discontinued its Sunday train service, to the disadvantage and detriment of persons residing along its line. Wherefore, petitioner prays that the respondent be required to operate Sunday trains for the convenience of the public.

The matter came on for hearing on Nov. 14, 1911. The petitioner was represented by *F. L. Forward* and the respondent by *J. B. Call.*

The village of Seymour has a population of about 1,200. It is situated on the line of the Green Bay & Western Railroad about seventeen miles west of Green Bay and twenty miles east of New London. It is the commercial center of a large and rich agricultural territory inhabited by a wealthy class of farmers who furnish fully 75 per cent of the passenger traffic from the station at Seymour.

The financial condition of the village and territory tributary thereto is reflected in the reports of the local banks, which show that on Sep. 1, 1911, the Seymour State Bank had resources amounting to $418,309.08 and the First National Bank had resources amounting to $321,730.16. As a shipping station this village furnishes the largest volume of business of any station on the line between Green Bay and Grand Rapids. A firm dealing in horses, cattle, calves, sheep and hogs purchased and shipped during the year preceding the hearing, stock amounting to $337,480.77. Within the same period another buyer also made heavy shipments of stock. Approximately one million dollars worth of dairy products and produce are shipped annually from this station. The incoming freight during the year consisted of 450 cars of local merchandise, 14 cars of farm implements, 40 cars of flour and feed, and a large number of cars of other commodities.

During the summer season the respondent operates a Sunday train between Green Bay and Grand Rapids which leaves Green Bay in the morning and returns at night, and also a train between Grand Rapids and Stevens Point which leaves the former station in the morning and returns at night. The fare for the round trip on either train is $1.50, while the regular fare on week-days is $2.50 one way between Stevens Point and Grand Rapids.

The respondent railway company contends that Sunday train service during the period from Oct. 1 to May 1 would prove

very unremunerative and would, in fact, fail to pay the operating expenses of the trains.

Relative to the complaint regarding mail service, the railway company claims that there is no actual necessity for mail service on Sunday, for the reason that the mail arrives at Seymour at 7:34 a. m. on Monday. It also showed that during the fall months, from the middle of October until after the first of January, there is a heavy movement of farm products, particularly on the east end of the line, between Grand Rapids and Green Bay, and that as a result practically every Sunday a train is operated east-bound from Grand Rapids to New London and very often to Green Bay for the purpose of assisting in clearing up the freight along the line. This train service does not necessitate the Sunday employment of agents, for the reason that the conductors receive their orders before starting out and the train has the line to itself. With an extra freight train on the line, placing empty cars and picking up loaded ones, and running regardless of schedule on Sunday, if a passenger train were also placed in service it would require train dispatchers with agents or telegraph operators on duty at the different stations. During the summer months there is no Sunday freight train service whatever and the two Sunday passenger trains running under a time card have their regular meeting points and demand little attention except in case of accident.

For the purpose of showing the revenue derived from ticket sales and cash fares between Green Bay and Seymour, for seven months commencing Oct. 1, 1910, and ending April 30, 1911, the respondent submitted the following statement:

From Green Bay to Seymour:	
One way tickets	$1,601.00
Round trip tickets	37.50
Cash fares	334.10
Total	$1,972.60
From Seymour to Green Bay:	
One way tickets	$1,364.50
Round trip tickets	42.50
Cash fares	383.20
Total	$1,790.20

It was also shown that during the same time the revenue derived from passenger traffic from Seymour to Grand Rapids and intermediate points amounted to $720.50, from Green Bay to

Stevens Point and all intermediate points, inclusive, amounted to $19,256.62, and from Grand Rapids to Seymour and all intermediate points, inclusive, amounted to $16,439.70. Residents of Shiocton, Ogdensburg, Black Creek, and other stations on respondent's line joined in the petition.

It cannot be denied that a Sunday passenger train, operated during the entire year, would be a great convenience to the citizens residing on and tributary to respondent's line between Grand Rapids and Green Bay. The volume of business would seem to warrant such a train, though it might not be remunerative during the winter season. However, this would not be a justification for not furnishing it if the convenience of the public, under the circumstances, reasonably required it. There are doubtless other trains which at times do not earn more than operating expenses, but the company could not, for this reason, withdraw them from service.

The vital question in the instant case is whether a railroad company, under the existing state of the law, can be required to operate its trains on Sunday. Many states have statutes regulating the operation of railroads on that day (2 Stimson's Am. Stat. Law sec. 8824), but there is no such statute in this state. Therefore, in the absence of a specific statute on the subject, the question must be determined with reference to the general penal statute prohibiting the performance of any business, work, or labor, "except only works of necessity and charity," on Sundays (Wis. St. 1898, sec. 4595). Some of the authorities, construing like statutes, hold that the running of trains is not a work of necessity, and hence is not excluded from the statute, while others, and the greater number, take the contrary view. The leading and perhaps the best reasoned decision, holding that the operation of trains on Sunday is not a work of necessity, is found in the case of *Sparhawk v. Union Passenger Ry. Co.* 1867, 54 Pa. St. 401, which is cited by practically every court of last resort which has, since the ruling therein made, considered the subject. The following excerpt from the opinion of JUSTICE STRONG (pp. 408 and 409) contains the reasoning upon which the conclusion of the court is based:

"The legislature has not exempted from the prohibition acts which may conduce to the convenience, or contribute to supply the necessities, of individuals, or even large portions of the

people. It must be presumed they considered what inconveniences would follow a prohibition of worldly labor on the Lord's day. In view of them, as well as of the evils flowing from the absence of a prohibition of such labor, they enacted the statute of 1794. Their controlling object was to protect the community against vice and immorality. This they attempted to do by declaring illegal all worldly labor and business, except works of necessity and charity. But they did not overlook public and individual convenience. In the proviso of the act they declared how far worldly labor might be done, not necessary to the agent, but contributing to the necessities of others. The enumeration in the proviso of things allowed to be done, shows what was intended by excepting works of necessity from the prohibitory clause. If it was not meant by the act to forbid work which might be a convenience or even a necessity in some sense to others than the laborer, the proviso is entirely superfluous. It is plain, however, that when they excepted works of necessity, they meant works of necessity to him who does them, and not to others. If this is not so, the act is without force. There is very little, if any, worldly business that does not subserve the convenience and even the necessities of some part of the community. Food, clothes, shelter and furniture are undoubted necessities. But may the agriculturist justify his ordinary worldly business on Sunday by the plea that he is thereby furnishing food for the hungry? May the cotton-mills, woolen-mills, and clothing establishments of the country be driven, as usual and without cessation, on the Lord's day, because they are thus contributing to provide clothing for those who need it? Is the business of the carpenter or cabinet-maker to move on through the seven days of the week, uninterruptedly and according to law, because others may need houses or furniture? May the chemist keep his laboratory in full operation on Sunday, because medicines are necessary? All these questions, and a multitude of others of similar character, must be answered in the affirmative, if running railway cars on Sunday and city passenger railways is a work of necessity within the meaning of the exception in the Act of 1794. It may be doubted whether keeping theaters and places of public amusement open on Sundays might not be justified by the same line of argument. Many might be found, doubtless, who would affirm on oath that theatrical representations are conducive to mental and bodily health, and that such recreation as they afford is a necessity. Such a construction of the statute would make it but an empty sound. It would be losing sight entirely of the objects sought to be secured, the observance of a day of rest for the community, thereby enabling every one to worship God according to the dictates of his conscience, without distraction, and without disturbance, and thus giving a check to

vice and immorality. A construction that leads to such an absurdity must be erroneous. There is no other possible interpretation, which gives to the act any operation, but that which holds the works of necessity spoken of to be such as are necessary to the actor. When the thing to be determined is whether worldy business done by any man, and not described in the proviso, is exempt from the prohibition because a work of necessity, the question must always be—is it necessary to him who does it? The defendants do not claim that running their cars for hire on Sunday is a charity, nor even that it is necessary for them. All they assert is that it is a convenience or a necessity for others. I think the act does not allow them to shelter themselves under others."

The leading case establishing the rule that the running of trains on Sunday is a work of necessity and excluded from the statute is *Commonwealth v. Louisville & Nashville R. Co.* 1882, 80 Ky. 291. In passing upon the question the court says in part:

"The meaning to be attached to the words 'or other work of necessity' found in the act must control the decision of this case, and if we are to attach to these words their scientific or physical meaning—that is, that the action of the company was inevitable, or could not have been otherwise—its liability would at once be fixed, as it might have stopped its trains or declined to receive freight or passengers unless upon the agreement that the delay in transportation should relieve it from responsibility. Under such ruling the cooking of food or the feeding of stock on the Sabbath might be dispensed with, and every other necessity in the way of labor that was not indispensable to man's existence. Could this have been the legislative intent when using such language in the statute? Or shall we not interpret the words as having a legal meaning designed to apply to the wants of the citizen, adopting the language in its construction to the manner, habits, wants and customs of the people it is to affect? And in many cases the rights and duties of those charged with a public or private duty and the obligations they are under to others must also be considered in determining the character of labor falling within the statutory prohibition. It is argued, in the case of *Sparhawk v. The Union Passenger R. Co. supra.* reported in 54 Pennsylvania, that it was not intended by such acts to exempt the party charged from the prohibition of the statute because his labor was a work of necessity to others, but it must be a work of necessity to him who does the labor. We do not so construe the statute. If so, why protect the apothecary who sells his medicines for the relief of the patient, or the dairyman who furnishes the milk for his customers, or the hotel-keeper who furnishes his guests

with food and lodging? It is the exigency of the object to be accomplished that determines to a great extent the means to be resorted to for that purpose. No safer rule, we think, can be established or any better definition given of the word 'necessity' than is found in the decision cited as adverse to the views herein expressed, and that is: 'The law regards that as necessary which the common sense of the country, in its ordinary mode of doing business, regards as necessary. The change in the habits and customs of the people and the mode and character of transportation and travel make that a necessity at this day that half a century since would not have been so regarded. * * * .'

"Railroad companies or carriers of passengers furnish at this day almost every accomodation to the traveler that is to be found in the hotels of the country; his meals as well as his sleeping apartments are often furnished him, and to require the train when on its line of travel to delay its journey that the passenger may go to a hotel to enjoy his Sabbath where the same labor is required to be performed for him as upon the train, or to require him to remain on the train and there live as he would at a hotel, would certainly not carry out the purpose of the law, and besides, the necessity for reaching his home or place of destination must necessarily exist in so many instances as to make it indispensable that the train should pursue its way. So of trains transporting goods, merchandise, live stock, fruits, vegetables, etc., that by reason of delay would work great injury to parties interested. A private carriage, in which is the owner or his family, driven by one who is employed by the month or year to the church in which the owner worships, or to the house of his friend or relative on the Sabbath, is not in violation of the statute. So in reference to the use of street railroads in towns and cities on the Sabbath day. Those who have not the means of providing their own horses or carriages travel upon street cars to their place of worship or to visit their friends and acquaintances, and such is the apparent necessity in all such cases that no inquiry will be directed as to the business or destination of the traveler, whether on the one car or the other, nor will an inquiry be directed as to character of the freight being transported. Nor will the person desiring to hire the horse from the livery stable be compelled to disclose the purpose in view in order to protect the keeper from the penalty of the law. Such employments are necessary, and not within the inhibition of the statute. The common sense as well as the moral sentiment of the country will suggest that the merchant who sells his goods, or the farmer who follows his plough, or the carpenter who labors upon the building, or the saloonkeeper who sells his liquors on Sunday, are each and all violating the law by

which it is made penal to follow the ordinary avocation of life on Sunday. The ordinary usages and customs of the country teach us that to pursue such employments on the Sabbath is wrong. Every man realizes the distinction between pursuing such avocations and that of transporting the traveler to his home, or the pursuit of such employment as must result from the necessary practical wants of trade.

"This statute is only a civil regulation enacted from motives of public policy alone, and to discuss it in a religious point of view would be to attribute to the Legislature the exercise of a power it does not possess—that is, to enforce the performance of citizens' duties."

We shall not undertake to cite the authorities on either side of the question, as our own supreme court, thirty-five years ago, laid down the rule for this state when it held that a railway company is under no obligation to carry passengers on Sunday, because of the inhibition of the statute in question. *Walsh v. C. M. & St. P. R. Co.* 1877, 42 Wis. 23. Whatever may be our views as to the soundness or wisdom of the policy thus declared, it has been acquiesced in by the public for more than a third of a century, and is controlling in effect in the case before us. Such public assent has, however, been a tacit one, doubtless due to the fact that no attempt has ever been made to enforce the statute against railroad companies. Nevertheless, until the legislature expressly excepts railroad companies from the operation of such statute, or the supreme court recedes from its former position, the Commission is powerless to compel the running of railway trains on Sundays for the convenience of the public.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

HOYT & BERGEN

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Dec. 12, 1911. Decided Jan. 25, 1912.

Petitioners allege excessive charges on shipments of live stock shipped from near-by points to Fond du Lac, Wis., and there stopped in order to finish loading for further shipment to Milwaukee and Chicago. The petitioners complain that shipments from Malone, Calvary, and Vandyne stopped at Fond du Lac are charged the local rates although the cars are stopped without loss of either time or money to the respondent. Reparation is claimed on such shipments made within the past year. Since the filing of the claim the railway company has established a charge of $2 for one stop in transit to finish loading shipments of live stock in carload lots, and consents to the awarding of reparation in the instant case upon such basis.

In presenting claims for reparation upon both state and interstate shipments to this Commission in the present case, it seems to have been the theory of the petitioners that as the service in stopping the cars to finish loading was rendered entirely within the state, the charges exacted therefor were subject to modification by this Commission. This is an erroneous conception of the character of such service. When a car was partly loaded at the original point of shipment, it was destined either to a point within or without the state. In the latter event, it was an interstate shipment and any transit privilege allowed would be a service rendered in connection with such transportation. Congress has defined the term "transportation," as used within the Act to Regulate Interstate Commerce, as including "cars and other vehicles, all instrumentalities and facilities of shipment or carriage, irrespective of ownership or of any contract, expressed or implied, for the use thereof, and all services in connection with the receipt, delivery, elevation, transfer in transit, ventilation, refrigeration or icing, storage, and handling of property transported." All charges exacted for any service rendered in connection therewith are subject to the exclusive jurisdiction of the interstate commerce commission.

Held: The charges exacted of the petitioners for the transit privilege allowed in connection with the intrastate shipments of stock are unusual and excessive and a reasonable charge therefor would have been the rate of $2 per car, the rate now effective. Refund is ordered on this basis.

The petitioners reside at Fond du Lac, Wis., and are engaged in buying and shipping live stock. They ship from Fond du Lac, Malone, Calvary, and occasionally from Vandyne, to

Milwaukee and Chicago. Malone is situated twelve miles east of Fond du Lac, Calvary fourteen miles east of Fond du Lac and Vandyne eight miles north of Fond du Lac. Petitioners allege that the train on which they ship from Malone and Calvary reaches Fond du Lac at 11:15 a. m. and that stock cars are there dropped and left until 7:00 p. m., during which time petitioners finish loading; that this is done without loss of either time or money to the railway company, although the latter charges local rates on all such cars. Wherefore, petitioners claim refund in the amount $132 upon a number of shipments made within the past year from such points to Milwaukee and Chicago.

The respondent, answering the petition, admits all the formal allegations thereof, and alleges that it is publishing an amendment to its rules to permit the stopping of live stock at Fond du Lac, Wis., to finish loading, similar to the rule contained in its tariff G. F. D. No. 11082–F, and therefore asks that the hearing be continued until such amendment can be put into effect.

The matter came on for hearing on Dec. 12, 1911.

The petitioners were represented by *F. E. Hoyt* and the respondent by *C. C. Wright,* its general solicitor.

An examination of the receipted freight bills filed with the petition herein discloses that but four of the shipments in question were intrastate. It seems to have been the theory of petitioners in presenting the claims upon both state and interstate shipments to this Commission that, as the service in stopping the cars to finish loading was rendered entirely within the state, the charges exacted therefor were subject to modification by this Commission. This is an erroneous conception of the character of such service. When a car was partly loaded at the original point of shipment, it was destined either to a point within or without the state. In the latter event it was an interstate shipment and any transit privilege allowed would be a service rendered in connection with such transportation.

Congress has defined the term "transportation," as used within the Act to Regulate Interstate Commerce, as including "cars and other vehicles, all instrumentalities and facilities of shipment or carriage, irrespective of ownership or of any contract, expressed or implied, for the use thereof, and all services in connection with the receipt, delivery, elevation, transfer in

transit, ventilation, refrigeration or icing, storage, and handling of property transported."

All charges exacted for any service rendered in connection therewith are subject to the exclusive jurisdiction of the interstate commerce commission.

The time of arrival and destination of the four intrastate shipments in question and the charges exacted for the transit privilege allowed in connection therewith, are as follows:

Date.	Weight.	Rate in cts.	Amount collected.
May 23, 1911	22,000	4½	$9 90
May 24, 1911	17,000	5½	9 35
October 3, 1911	22,000	4½	9 90
October 10, 1911	17,000	5½	9 35
Total			$38 50

Since the filing of the claim herein, the railway company has established a charge of $2 for one stop in transit to finish loading shipments of live stock in carload lots, and consents to the awarding of reparation in the instant case upon such basis.

We are of the opinion and find that the charges exacted of the petitioner for the transit privilege allowed in connection with the aforesaid intrastate shipments of stock are unusual and excessive, and that a reasonable charge therefor would have been the rate of $2 per car, the rate now effective.

The amount of the award is $30.50.

NOW, THEREFORE, IT IS ORDERED, That the Chicago & North Western Railway Company be and the same is hereby authorized and directed to refund to the petitioners, Hoyt & Bergen, the aforesaid sum of $30.50.

CITY OF MILWAUKEE

vs.

THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY.

Decided Jan. 30, 1912.

A re-hearing of the matters involved in the petition of the *City of Milwaukee v. T. M. E. R. & L. Co.* 8 W. R. C. R. 295, was held in order to determine whether any modifications should be made in the previous order of the Commission.

Held: From further investigation it is apparent that the former order relative to cross-town service must stand, but that in addition thereto, morning and evening service on Twelfth street to the south side by way of the viaduct, must be added, and the service on the Eighth street car line, as far as the Public Service Building, must be restored. Provision must also be made for two transfers upon a single fare in certain cases in order to render the service reasonably adequate under present conditions. It is ordered that paragraph 1 of the order made Nov. 29, 1911 (8 W. R. C. R. 295) be continued for a period of ninety days from the date hereof. The respondent is further ordered for a period of 90 days:

1. To route a sufficient number of its cars to adequately care for the traffic during the morning and evening hours, when traffic is greatest, on its Twelfth street line in the city of Milwaukee, from the northern terminus of such line to State street, thence east on State street to Eleventh street, thence south on Eleventh street to Clybourn street, thence west on Clybourn street to Sixteenth street, thence south across the Sixteenth street viaduct to Eleventh avenue, thence south on Eleventh avenue to Muskego avenue, and thence along Muskego avenue to the terminus of the line on such avenue.
2. To restore the service on its Eighth street line, as formerly operated, and over the same route to the Public Service Building, or to such point in the vicinity thereof as may be necessary and convenient for the sake of efficient operation.
3. To grant two transfers upon the payment of a single fare to all persons transferring from other lines north of the viaduct to the Twelfth street and Eighth street cross-town lines, who are destined to points west of such cross-town lines, which are situated on street car lines south of the viaduct, and that it grant two transfers upon the payment of a single fare to all persons transferring from other lines south of the viaduct to the Twelfth street and Eighth street car lines, who are destined to points west of such cross-town lines situated on street car lines north of the viaduct.

This order is to remain in effect for a period of ninety days from the time it becomes effective, unless modified or abrogated upon a further hearing prior thereto.

A re-hearing of the matters involved in the petition herein was held on Jan. 15, 1912, in the city hall in the city of Milwaukee, Wis.

The petitioner was represented by *Clifton Williams*, assistant city attorney; the respondent by *Edwin S. Mack*, of *Miller, Mack & Fairchild*, its attorney.

On Nov. 29, 1911, an order was entered in this proceeding, requiring the respondent, for a period of ninety days:

"1. To route a sufficient number of its cars to adequately care for the traffic on its Eighth street line in the city of Milwaukee, from the northern terminus of said line to State street, thence west on State street to Eleventh street, thence south on Eleventh street to Clybourn street, thence on Clybourn street to Sixteenth street, thence south across the Sixteenth street viaduct to Eleventh avenue, thence south on Eleventh avenue to Muskego avenue, and thence along Muskego avenue to its present southern terminus.

"2. To route during the morning, noon and evening hours, when traffic is greatest, a sufficient number of cars to adequately provide for the traffic over its Eighth street line, as at present routed to West Water street." (8 W. R. C. R. 295.)

As stated in the decision, the routing of the Eighth street car line in the manner provided in the order was only adopted as an experiment and primarily for the purpose of ascertaining the trend of traffic from the north side to the south side of the city, which is esential to a solution of the problem of providing a cross-town line which will convenience the greatest number of people requiring such service. In order to determine the volume of traffic and the points of origin of same, the railway company and the Commission stationed agents at the various transfer points to count the passengers. The result of these counts, together with the transfer slips, show approximately the number of people who are convenienced by the new service. Taking the 11th day of January, 1912, as a representative day, it appears that on that day approximately 3,300 passengers going south crossed the viaduct upon the new line. Of these, 104 entered the cars at the corner of Eleventh and Clybourn streets, 270 at Sixteenth and Clybourn streets, 201 transferred to the viaduct cars at Center street, 197 at North avenue, 182 at Walnut street, 107 at Chestnut street, 131 at State street, and 436 at Grand avenue and Eleventh street, the latter transferring from the Wells-Farwell line.

Of the traffic originating along the Eighth street line and the Twelfth street line, 1,191 passengers, or 73 per cent, came from the Eighth street line, and 435 passengers, or 27 per cent, came from the Twelfth street line. The total number of passengers going both north and south on the day named amounted to 6,700.

Passengers coming from the west and transferring to the Eighth street line at the transfer points mentioned north of State street, are obliged to travel three blocks east of Eleventh street and then back to Eleventh street on State street. This loop could be avoided if the Twelfth street line were routed over the viaduct. On the other hand, there are many persons residing along the Eighth street line and tributary thereto, who would be inconvenienced if the Eighth street cross-town services were discontinued. This would be particularly true as to those residing in the territory north and east of Center street.

Although it is apparent that the present services must be continued if the convenience of the greater number is the criterion by which the adequacy of the service is to be determined, yet an auxiliary service of like character by way of Twelfth street and the viaduct, morning and evening, seems to be essential in order to adequately provide for the transportation of all mechanics and persons requiring a cross-town service in going from their homes to their places of employment and vice versa.

It is very evident from the statistics gathered, that perhaps less than half of the workmen who travel between the north and south side of the city use the present cross-town service. This seems to be due to the fact that many cannot reach their destination by the new route without paying two fares, and consequently, they take through lines running through the congested sections of the city. As most of the industries are either located on or are tributary to the various lines running east and west, both on the north and the south sides of the city, it is probable that only those travel over the new lines whose homes and places of employment are so situated that they can travel between them upon a single fare. This necessarily limits the usefulness of the new service and only partially obviates the evil which the cross-town line is designed to remedy. Unless there is established a system of transfers by which persons residing along the east and west lines north of the river can reach points on the east and west lines south of the river, which are west of the

cross-town line, without being obliged to pay two fares, and also those residing on such lines south of the river can reach points on such lines north of the river, which are west of the cross-town line, without being obliged to pay two fares, the existing cross-town line, or any other cross-town line, will only serve a part of the people who require such service.

Practically all of the traffic carried on the new line is composed of mechanics who travel morning and evening. This traffic moves between 6:00 and 9:00 a. m. and 5:00 and 6:30 p. m. From 9:00 a. m. until 5:00 p. m. there is very little travel over the cross-town line.

The company seriously objects to granting two transfers upon a single fare, for the reason that it will establish a dangerous precedent and materially decrease the operating revenues. We doubt very much whether, under the circumstances of the particular line in question, any appreciable depreciation of revenues would result from such practice. The company is receiving but one fare from the traffic that would be accomodated by two transfers and is obliged to transport it a longer distance and through the most congested part of the city. While there is always more or less abuse of transfer privileges, there would perhaps be little, if any, on the cross-town line. This is obvious from the origin and destination of the traffic. The greatest abuse of such privileges occurs at principal transfer points in business centers, where there is a large number of persons entering and leaving cars on the intersecting lines. Until the contrary is shown by actual experience, we shall be of the opinion that the objection of the company to granting two transfers in the instant case is not tenable, nor can the practice in such case, because of its peculiarities, be considered as a precedent, to be followed in other cases. The public has as much interest as the company in the prevention of abuse of transfer privileges.

No objection has arisen to the new service over the viaduct. It has met with the general approval of those who are so situated as to avail themselves of it. Nevertheless, considerable objection has manifested itself to the abandonment of the former service on the Eighth street line. Those who are obliged to use this line to reach the down-town district, are greatly inconvenienced because the service is not a continuous one, as formerly. They ask that, in addition to the present cross-town serv-

ice, the original service be restored. Some five hundred patrons of the line have filed a petition in this proceeding, praying for the restoration of the former service. A study of the situation, however, does not convince us that a restoration of the service over the entire line, as formerly operated, will subserve the best interests of the public as a whole. Patrons of this line south of the river, with the exception of those residing on Washington avenue, prefer the cross-town line because they can go to Grand avenue and transfer to the different lines going east without delay. By this course there are no bridges or railway tracks to cross. The count of passengers shows that during the morning hours about five hundred transfer from the cross-town line to east-bound cars at Grand avenue and Eleventh street, and during the evening hours approximately the same number transfer at such point to the south-bound viaduct cars. Residents on Washington avenue are served by one car which runs back and forth between Eleventh avenue and Reed street upon a twelve-minute schedule. This is purely a stub-line proposition and subject to all the inconveniences incident to such character of service. But even if the line on Washington avenue were abandoned, the residents on that street would still enjoy street car facilities superior to those enjoyed by a large part of the population of the city. In such event, the farthest anyone living on that street, between Reed street and First avenue, would be obliged to walk to reach a carline, would be two blocks, and the farthest anyone living between First avenue and Eleventh avenue would need to go to reach a car line would be three blocks. Nevertheless, as the people residing on this street have become accustomed to the street car line in front of their property, they are reluctant to part with the same. Yet, in a large and growing city it becomes necessary at times to readjust street car lines in order that the system, as a whole, may serve the entire community more efficiently, and hence, under such circumstances, the few must make sacrifices in order that the many may be benefited. If the Eighth street-Muskego avenue line were to be constructed anew, no one familiar with the conditions of the traffic or the operation of the system would ever consider laying a line on Washington avenue between Reed street and Eleventh avenue.

Until a cross-town line is constructed north from the viaduct, as repeatedly advised and urged by the Commission, we can see

no reason for restoring service on the Eighth street line further south than the Public Service Building. Of course, the plan thus adopted is at most but a make-shift, and is, in the very nature of the situation, more or less unsatisfactory. Notwithstanding, it seems to be best solution of the difficulty that the information at hand and available at present indicates.

Speaking of the proposed plan, President Melms of the common council tersely states the objections interposed thereto as follows:

"Some people do not want the line to go over the old route on Eighth street; some people want an independent Eighth street line, and some want a Twelfth street cross-town line; some people do not want a Twelfth street cross-town line all day, and some people do not want a Twelfth street cross-town line, and we have had one gentleman who says that some of the business men on Twelfth street will go into bankruptcy if they put on more cars all day. He does not want Twelfth street service all day over the viaduct. Some people appeared before the committee that wanted nothing else but the Sixteenth street car line, and, of course, they cannot be accommodated at this time. I think that (the plan proposed) would be a solution, at least temporarily, until such time as we can plan a street car cross-town line along Sixteenth or Seventeenth streets."

From further invsetigation it is apparent that the former order relative to cross-town service must stand, but that in addition thereto, morning and evening service on Twelfth street to the south side, by way of the viaduct, must be added, and the service on Eighth street car line, as far as the Public Service Building, must be restored. Also, provisions for transfers, as indicated, must be made to render the service reasonably adequate.

NOW, THEREFORE, IT IS ORDERED, That paragraph 1 of the order made herein Nov. 29, 1911, be and the same is hereby continued for a period of ninety days from the date hereof.

IT IS FURTHER ORDERED, That for a period of ninety days from the date this order becomes effective, the respondent, The Milwaukee Electric Railway & Light Company, be and the same is hereby required:

1. To route a sufficient number of its cars to adequately care for the traffic during the morning and evening hours, when traffic is greatest, on its Twelfth street line in the city of Milwaukee, from the northern terminus of such line to State street, thence east on State street to Eleventh street, thence south on

Eleventh street to Clybourn street, thence west to Clybourn street to Sixteenth street, thence south across the Sixteenth street viaduct to Eleventh avenue, thence south on Eleventh avenue to Muskego avenue, and thence along Muskego avenue to the terminus of the line on said avenue.

2. That it restore the service on its Eighth street line, as formerly operated, and over the same route to the Public Service Building, or to such point in the vicinity thereof as may be necessary and convenient for the sake of efficient operation.

3. That it grant two transfers upon the payment of a single fare to all persons transferring from other lines north of the viaduct to the Twelfth street and Eighth street cross-town lines, who are destined to points west of said cross-town lines, which are situated on street car lines south of the viaduct, and that it grant two transfers upon the payment of a single fare to all persons transferring from other lines south of the viaduct to the Twelfth street and Eighth street car lines, who are destined to points west of said cross-town lines situated on street car lines north of the viaduct.

This order shall remain in effect for a period of ninety days from the time the same shall become effective, unless modified or abrogated upon a further hearing prior thereto.

PHILADELPHIA AND READING COAL AND IRON COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Jan. 30, 1912.

Fetitioner alleges overcharges on three carload shipments of coal from Milwaukee to Portage, Wis. The rate charged was in legal effect, owing to an error in the publication of the tariff. Subsequent to the shipments the error was discovered and the rate previously in force was reestablished.

Held: The rate exacted of the petitioner was unusual and exorbitant, and the reasonable rate would have been $1.25 per net ton, as previously in effect and subsequently reestablished. Refund is ordered on this basis.

The petitioner is a corporation engaged in the coal business in the city of Milwaukee, Wis. It alleges that on Nov. 11, 1910, it shipped two carloads of coal from Milwaukee to Portage, and on Nov. 26, 1910, shipped one carload of coal from Milwaukee to Portage; that the railway company exacted of the petitioner a rate of $1.50 per ton upon said shipments; that the respondent railway company, in publishing its tariff, erroneously published a rate of $1.50 per ton for coal shipped as aforesaid; that the rate it intended to publish and which is reasonable is the rate of $1.25 per ton; that as soon as the railway company discovered its error it rectified the same, but in the meantime the said shipments were made. Wherefore, petitioner prays that the respondent be required to refund to it the overcharge upon said shipments.

The respondent railway company, answering the petition, admits all the allegations thereof, and acknowledges that the publication of the rate of $1.50 per ton was an error and that the rate should have been $1.25 per ton.

The matter was submitted upon the pleadings, papers, documents and letters on file.

The investigation discloses that since 1904 Wisconsin Central tariff No. 361 named a rate of $1.25 per net ton on hard coal from Milwaukee to Portage, Wis. The respondent railway com-

pany, the lessee of the Wisconsin Central Railway Company, in the re-issue of said tariff and the consolidation of same with other tariffs, under the tariff G. F. D. No.11510, effective May 25, 1910, inadvertently omitted the said rate. In consequence, the rate shown in tariff G. F. D. 9975 became effective, and this provided a rate of $1.50 per ton, applicable to the aforesaid shipments. In November, 1910, several shippers of coal, believing that the rate in effect was still $1.25 per net ton, which was the rate effective on competing lines, forwarded several shipments over respondent's lines from Milwaukee to Portage, and as a result were obliged to pay the legal published rate of $1.50 per net ton. Upon discovering the error the respondent rectified the same by supplement No. 7 to G. F. D. No. 9975.

The shipments in question and charges exacted therefore were as follows:

Date.	Weight.	Rate charged.	Amount.	Overcharge.
Nov. 11 '10	87,500 lbs.	$1.50	$43.13	$7.19
Nov. 11 '10	49,300 lbs.	1.50	36.98	6.17
Nov. 26 '10	61,300 lbs.	1.50	45.98	7.67
Total			$126.09	$21.03

We find and determine that the rate of $1.50 per net ton exacted of the petitioner for the aforesaid shipments of coal from Milwaukee, Wis., to Portage, Wis., is unusual and exorbitant and that the reasonable rate to have exacted for such shipments would have been $1.25 per net ton.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul and Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the Philadelphia & Reading Coal and Iron Company the sum of $21.03.

PAUL GABLOWSKY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY, GREEN BAY AND WESTERN RAILROAD COMPANY.

CHARLES HAGEN

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY, GREEN BAY AND WESTERN RAILROAD COMPANY.

Submitted Jan. 9, 1912. Decided Jan. 31, 1912.

Complaint was made of the rates on saw logs from northern Wisconsin points on the C. & N. W. R. to Seymour and Black Creek located on the G. B. & W. R., where the petitioners respectively are engaged in the manufacture of cheese boxes and other woodenware. The petitioner located at Seymour complains specifically of the rates charged from Gagen, Bowler, Whitcomb, and Green Valley, and alleges that these rates are excessive as compared with other rates prevailing under substantially similar conditions. The petitioner located at Black Creek alleges excessive charges on shipments from Crandon and Monico as compared with other charges on the C. & N. W. R. and claims a refund upon the shipments in question. It appears that the former practice of the respondent companies in regard to the shipment of saw logs to Seymour and Black Creek was to apply the sum of the two carriers' distance rates conditioned on the shipment of the product out. These rates were much lower than the regular log rates of each carrier when no reshipment was involved. Owing to the fact that the cheese boxes were delivered to the factories by wagon and that the C. & N. W. R. Co. was not obtaining the direct shipments out, upon which the rate was conditioned, the regular joint lumber rates of the two respondents, fixed without regard to shipments out, were substituted early in 1911. The result was an increase in charges to the extent shown in the complaints.

Held: The present rates of respondents on shipments of saw logs from northern Wisconsin points to the petitioners' factories at Seymour and Black Creek are excessive and unreasonable. Under the circumstances fair and reasonable rates would consist of the present log rate of 1.5 cts. per cwt. on the G. B. & W. R., plus a distance rate on the C. & N. W. R. equal to that now in force on shipments of pulp wood. It is ordered that the respondents discontinue their present rates on logs of the kind used in the manufacture of cheese boxes and the other products of the petitioners' factories originating at points on the line of the C. & N. W. R. Co. and destined to Seymour or Black Creek, Wis., and substitute in lieu thereof the rates found reasonable by the Commission. Refund on this basis is ordered on the shipments from Crandon and Monico to Black Creek, Wis.

The above entitled cases involve the rates on logs from northern Wisconsin points on the Chicago & North Western line to Seymour and Black Creek, Wis., located on the Green Bay & Western Railroad, where the petitioners, Messrs. Gablowsky and Hagen, respectively, are engaged in the manufacture of cheese boxes and other woodenware.

In the first case, the petitioner complains specifically of the following rates on saw logs from Wisconsin points to Seymour: from Gagen, 129 miles, 8.5 cts.; from Bowler, 81 miles, 8.5 cts.; from Whitcomb, 61 miles, 8.5 cts.; from Green Valley, 41 miles, 6.5 cts. All of these rates are claimed to be excessive as compared, for instance, with the rate on the Chicago & North Western line of 4 cts. for the 121 miles from Gagen to Black Creek, Wis., and the rate of 2.5 cts. for the 109 miles from Long Lake to Green Bay. The rate from Gagen to Black Creek, with which this petitioner makes comparison, is, however, no longer in effect.

The petitioner in the second case complains of a present rate of 9 cts. per 100 lbs. from Crandon to Black Creek, as compared with a 4.5 ct. rate existing prior to Feb. 13, 1911; and also of a rate of 9 cts. per 100 lbs. from Monico to Black Creek, as compared with other rates on logs on the line of the Chicago & North Western Railway Company. This petitioner also claims a refund upon shipments from Crandon, amounting to $49.63, upon the basis of a 4.25 ct. rate which he claims to be reasonable, and likewise a refund of $60.67 upon shipments from Monico, on the basis of a 4 ct. rate.

The respondent Chicago & North Western Railway Company filed answers to both petitions, admitting the existence of the rates set forth but denying that they were unreasonable or unjustly discriminatory.

The matter was heard at the office of the Commission, Jan. 9, 1912. *Kittell & Burke* appeared for the petitioner in each case; *C. C. Wright* for the respondent Chicago & North Western Railway Company; and *J. B. Call* for the respondent Green Bay & Western Railroad Company.

It appears that the former practice of the respondent companies, in regard to shipments of logs to Seymour and Black Creek, was to apply the sum of the two carriers' distance rates conditioned on the shipment of the product out, which rates were much lower than the regular log rates of each carrier when no

reshipment was involved. This practice resulted in the following rates to Black Creek and Seymour from points mentioned in the complaints.

	Rate to junction cts.	Rate from junction cts.	Total cts.
To Seymour from:			
Gagen	2.5	1.5	4.
Bowler	1.75	1.5	3.25
Whitcomb	1.5	1.5	3.
Green Valley	1.5	1.5	3.
To Black Creek from:			
Monico	2.5	1.5	4.
Crandon	2.5	1.5	4.

Due to the fact, as explained at the hearing by a witness for the Chicago & North Western Railway Company, that the latter line was not obtaining the shipments out, upon which the rate was conditioned, the regular joint lumber rates of the two respondents, fixed without regard to shipments out, were substituted early in 1911 for the rates shown above, and the result was an increase in charges to the extent shown in the complaints.

It was contended by the petitioners at the hearing that, although their product does not move out directly over the Chicago & North Western line, the ultimate movement is largely in that direction, for the reason that the petitioners deliver their cheese boxes by wagon, through a territory about sixty miles in length, to a large number of cheese factories, most of which ship out the boxes when filled over the Chicago & North Western line. It would be impracticable for the petitioners to ship to these cheese factories over the Chicago & North Western or any other railway line, for the reason that few of them are directly on any railway line, and wagon delivery is the only suitable means of reaching them with the petitioners' product. In a few cases the cheese factories to which the petitioners deliver their product do not ship out over the Chicago & North Western line, but are nearer to the Chicago, Milwaukee & St. Paul and the "Soo" lines.

About 25 per cent of the logs shipped in to the petitioner Hagen are of insufficient quality for manufacture into cheese boxes, and are shipped out by the petitioner as lumber. These out-shipments made directly by Mr. Hagen are, according to his statement at the hearing, routed, where possible, so as to reach the Chicago & North Western line. A list of this peti-

tioner's out-shipments during the year 1911, showing both the shipments of lumber and such shipments of cheese boxes as were made directly by railroad, shows that out of seventy-two shipments, thirty-three were made to Chicago & North Western points, while twenty-six did not leave the Green Bay and Western line. The remainder were consigned to points on the "Soo" and Burlington lines, with one on the Chicago, Milwaukee & St. Paul line.

The logs shipped in to the petitioners' factories over the respondents' lines are of birch and elm, loading, when green, about 50,000 lbs., or about 4,000 feet, per average car. They are worth about $15 per thousand aboard cars at the shipping point, or some $5 to $15 per thousand less than pine logs. The movement in to the petitioners' factories is carried on mainly in the winter, since the logs deteriorate rapidly if left on the ground. The cheese box business, it seems, is subject to considerable competition in eastern Wisconsin, there being over twenty factories employed in that industry.

It is the desire of the petitioners, not that a joint rate be established between the two respondents from various specific shipping points to Seymour and Black Creek, but that a distance tariff be fixed for the Chicago & North Western line only, applying from the entire log-shipping region on that line to the junction points with the Green Bay & Western line at New London and Green Bay. Under this method the charges on the petitioners' shipments would consist of this distance rate to the junction point, plus the Green Bay & Western local rate of 1.5 cts. per 100 lbs. from the junction point to Seymour and Black Creek.

The representative of the Chicago & North Western Railway Company expressed the willingness of that line to make such distance rates, equal to twice the distance rates of that company upon logs for manufacture and reshipment. This proposal to fix the rate at double the reshipment rate was made, it was explained, because the Commission had used that proportion in the case of *Fergot v. C. & N. W. R. Co.* 1909, 4 W. R. C. R. 248, and the company considered it to be about correct. This method would make the total rate to Seymour and Black Creek from Gagen, Crandon and Monico, 6.5 cts. per 100 lbs. in each case. The petitioners, however, contended that the proportion suggested by the railway company would result in an excessive rate.

The following table shows the Chicago & North Western lumber tariff rate applying on logs, and also the rate on logs for manufacture and reshipment over the Chicago & North Western line, applying from points throughout the territory herein involved to New London and Green Bay, the junction points with the Green Bay & Western Railroad Company. As some reference was made at the hearing, by way of comparison, to the distance rates on pulp wood established by this Commission, *In re Rates on Pulp Wood,* 1908, 2 W. R. C. R. 168, the pulp wood rate is also inserted in the table for each shipping point.

PRESENT RATES ON LOGS, ON SAW LOGS AND BOLTS FOR MANUFACTURE AND RESHIPMENT, AND ON PULP WOOD FROM C. & N. W. POINTS TO NEW LONDON AND GREEN BAY.

Of the rates shown in the foregoing table, those upon pulp wood are independent of any requirement as to the movement of the product out. The Commission's investigations in the *Pulp Wood* case disclosed that the pulp wood rates as above given were sufficiently high in and of themselves to compensate the carrier for the services involved, without any reference to further shipment. There is a marked similarity between the conditions existing in the *Pulp Wood* case and those involved in the present cases. The value of the logs shipped in to the petitioners' factories appears to be but little if any higher than that of pulp wood; the loading per car is substantially the same in both cases; and numerous other circumstances show such a concurrence in various particulars as to indicate that the pulp wood rates would not be an unfair standard upon which to base the rates to the petitioners' factories. Furthermore, it is plain from the testimony that the respondent Chicago & North Western Railway Company is favored with a considerable proportion of the shipments of the petitioners' products out. This fact of partial reshipment, while it would not justify the application of a transit rate on the raw material shipped in, is worthy of some consideration when the log rate is fixed as an independent proposition.

Ordinarily, on hauls involving, as here, the use of two railway lines, the proper method of charging is that of joint rates. Such joint rates can, as a rule, be made somewhat lower than the sum of the local rates on the two lines. In the present instance, however, it has not been deemed necessary to go fully into the joint rate situation, for the reason that the petitioners at the hearing expressed their desire to use the sum of the local rates on the two lines. It does not seem advisable at this time that the investigation should go farther than the relief prayed for, and the Commission will therefore confine itself to the consideration of the log rate on the Chicago & North Western line. The 1.5 ct. rate of the Green Bay & Western line is satisfactory to the petitioners and will therefore not require notice in these cases.

As a general rule, the carriers are much averse to making rates under which raw material produced on their lines may be carried to manufacturing points where the product of such material is likely to be shipped out over other railway lines. This is the position of the respondent Chicago & North Western

Railway Company in this case, and it was upon this ground that the respondent attempted to uphold the comparatively high rates at present in force upon the petitioners' raw material. In addition to this contention, the respondent further maintains that a rate conditioned on the shipment of the product out over the line bringing in the raw material, should not be granted to a manufacturer who is not in position to reship over such line. This latter proposition is manifestly correct where the transit rate on the shipment of the raw material in to the factory is not sufficiently high in and of itself to return a fair compensation to the carrier. On the other hand, it is equally clear that manufacturers, though unable to guarantee the shipment of the product out over the same line, should have rates on their raw material which are no more than sufficient to yield an adequate return to the carrier for the services involved in the separate shipment of the material in to the factory. This reasoning, it would seem, is, in general, in line with public policy.

An application of the principles above stated to the present case leads to the conclusion that the pulp wood distance rates, as heretofore fixed by the Commission, would be fair and just rates for the kind of logs which the petitioners use. Table I, given above, shows that the present log rates of the Chicago & North Western line to New London and Green Bay are much higher than the pulp wood rates, and it seems clear from the testimony and the investigation of the Commission in these cases that, as applied to the class of traffic here involved, the present log rates are excessive and unreasonable. At the same time it is to be noted, by reference to the table, that the pulp wood rates are in all cases considerably higher than the respondents' transit rates, which, being conditioned on the shipment of the entire product out over the same line, would of course be inapplicable to the present situation.

We therefore find and determine, that the present rates of the respondents on shipments of logs from northern Wisconsin points to the petitioners' factories at Seymour and Black Creek, are excessive and unreasonable, and that, under the circumstances of these cases, fair and reasonable rates would consist of the present log rate of 1.5 cts. per 100 lbs. on the Green Bay & Western line, plus a distance rate on the Chicago & North Western line equal to that now in force on shipments of pulp wood.

No refund is asked in the Gablowsky case. In the Hagen case the petitioner presents a claim for refund on four shipments moving from Crandon and Monico. Upon these shipments the respondents collected the full joint rate of 9 cts. per 100 lbs. On the basis of the rates herein found to be reasonable, the rates applicable to these shipments would have been as follows:

	C. & N. W.		G. B. & W. rate, cts.	Total rate, cts.
	Miles to New London	Rate, cts.		
From Monico	100	$3.75	$1.50	$5.25
From Crandon	107	3.85	1.50	5.35

The petitioner is therefore entitled to a refund of 3.75 cts. per 100 lbs. on his shipments from Monico, and of 3.65 cts. per 100 lbs. on his shipments from Crandon. These shipments are as follows:

Date.	Origin.	Weight.	Refund per 100 lbs.	Total refund.
Apr. 17, 1911	Monico	57,600	$0.0375	$21 60
Apr. 17, 1911	Monico	63,800	.0375	23 92
Feb. 21, 1911	Crandon	48,100	.0365	17 56
Feb. 24, 1911	Crandon	56,400	.0365	20 59
Total refund				$83 67

IT IS THEREFORE ORDERED, That the respondents, the Chicago & North Western Railway Company and the Green Bay & Western Railroad Company, discontinue their present rates on logs of the kind used in the manufacture of cheese boxes and the other products of the petitioners' factories, orginating at points on the line of the Chicago & North Western Railway Company and destined to Seymour or Black Creek, Wis., and substitute in lieu thereof rates consisting of the Green Bay & Western local rate from Green Bay or New London to Seymour or Black Creek, plus the following distance rates for the haul on the line of the Chicago & North Western Railway Company:

Miles.	Rate in cents per 100 lbs.	Miles.	Rate in cents ger 100 lbs.	Miles.	Rate in cents per 100 lbs.
5	1.50	75	3.12	180	4.75
10	1.64	80	3.20	190	4.90
15	1.78	85	3.30	200	5.05
20	1.92	90	3.45	210	5.25
25	2.06	95	3.60	220	5.45
30	2.20	100	3.75	230	5.60
35	2.34	110	3.85	240	5.80
40	2.48	120	3.95	250	6.00
45	2.62	130	4.08	260	6.15
50	2.72	140	4.20	270	6.30
55	2.82	150	4.33	280	6.45
60	2.92	160	4.45	290	6.60
65	3.00	170	4.60	300	6.75
70	3.07				

IT IS FURTHER ORDERED, That the respondents above named refund to the petitioner Charles Hagen the sum of $83.67, being the amount exacted of him, on four shipments of logs from Crandon and Monico to Black Creek, in excess of the rates herein found to be reasonable.

JEFFERSON BRICK AND TILE COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Dec. 12, 1911. Decided Feb. 5, 1912.

The petitioner alleges erroneous, illegal, unusual, and exorbitant charges on shipments of second-hand and refuse lumber from Merrimac to Jefferson, Wis. It appears that the shipments were billed as lumber and the respondent applied the lumber rate thereto.

Held: The products in question should not have been described as lumber but should have been billed as "lumber waste," and taken the lower rate which is 80 per cent of the lumber rate. The charges exacted were erroneous and exorbitant, and the reasonable rate to have charged for the shipments would have been 6.4 cts. per cwt. Refund is ordered on this basis.

The petitioner is a corporation engaged in the manufacture of brick and agricultural tiles and has its office and place of business at Jefferson, Wis. It alleges that on and between Sep. 19, 1911, and Oct. 20, 1911, it shipped from Merrimac, Wis., and consigned to itself at Jefferson, Wis., certain second-hand and refuse lumber which formed a part of the brick-drying yards at Merrimac; that none of such material was merchantable timber, but that 50 per cent of it was inferior brick-yard fuel; that the rate charged thereon was erroneous, illegal, unusual and exorbitant. Wherefore, petitioner prays that the respondent railway company be required to refund to it all overcharges on said shipments.

The respondent, answering the petition herein, admits all the formal allegations thereof, and that certain lumber shipments were made by the petitioner in September and October, 1911, from Merrimac, Wis., to Jefferson, Wis., and that the freight thereon was collected at the rate of 9 cts. per cwt., which was the published tariff rate on lumber; and also admits that the said lumber was second-hand.

The respondent, further answering the petition, alleges that it is unreasonable to establish and maintain a rate upon second-hand lumber; that it has no information or knowledge as to the exact character of such shipments, except that the shipments

were billed as "lumber"; that in its tariff G. F. D. No. 11082–F, it provides for a rate on lumber products, waste, of 80 per cent of the lumber rate and that if the products in question could properly be classified as "lumber products, waste," under the definition as contained in said tariff, it would be willing to apply said rate and make reparation upon said basis.

The matter came on for hearing on Dec. 12, 1911. The petitioner was represented by *Anton Steele,* and the respondent by *C. C. Wright,* its general solicitor.

According to the testimony, it appears that the petitioner bought a number of brick-drying sheds, which were located at Merrimac, Wis. The sheds were torn down and the timber and lumber shipped to Jefferson, Wis. The sheds contained something over 4,300 standards, of which 3,000 were presumed to be serviceable. Nevertheless, when they reached their destination, it was discovered that about 2,000 of the standards only could be used. The petitioner billed the shipments as lumber and the respondent applied the lumber rate thereto.

If the condition of the material had been known by the petitioner when the same was loaded, it would probably have been billed as "lumber, waste," which, in fact, would have been a true description thereof under the testimony.

The following table shows the dates of shipment, weight, rate, and charges exacted:

Date of way bill.	Paid freight bill.		Car No.	Weight.	Rate in cts. per cwt.	Charges paid.
	Book No.	Receipt No.				
1911.						
Sep. 15	94318	601	27972	34,000	9	$30 60
Sep. 22	94318	974	75829	34,000	9	30 60
Sep. 26	88720	241	62031	34,000	9	30 60
Sep. 27	88720	240	61887	34,000	9	30 60
Sep. 25	88720	619	36589	30,000	9	27 00
Oct. 1	88720	559	61215	30,000	9	27 00
Oct. 4	88720	554	77789	42,200	9	37 98
Oct. 11	88720	967	65655	30,000	9	27 00
Oct. 11	95633	215	95507	34,300	9	30 87
Oct. 18	95633	322	6157	30,000	9	27 00
Oct. 19	95633	388	60221	34,800	9	31 32
Oct. 21	95633	647	560364	38,100	9	34 29
	Total	weight	.....	405,400	.....	$364 86

It is apparent that the rate applied and the charges exacted on the shipments in question are erroneous. Respondent's tariff

G. F. D. 5600–B, in effect on the dates of shipments and still in effect, names a rate of 8 cts. per cwt. on lumber in carload lots, from Merrimac to Jefferson, Wis. There is, therefore, an overcharge of 1 ct. per cwt., amounting to $36.49, even if the lumber rate is applied. Although the property was classified according to the description given at the time of shipment, nevertheless, the fact is that it should not have been described as lumber, but as refuse, and taken the lower rate, which is 80 per cent of the lumber rate, or 6.4 cts. per cwt. If the refuse rate had been applied, the charges would have been $259.46, or $105.40 less than was actually paid.

We therefore find and determine that the charges exacted of the petitioner for the aforesaid shipments were erroneous and exorbitant, and that the reasonable rate to have charged for such shipments would have been 6.4 cts. per cwt.

Now, Therefore, it is Ordered, That the Chicago & North Western Railway Company be and the same is hereby authorized and directed to refund to the petitioner the aforesaid sum of $105.40.

RUDOLPH KONOPATZKE

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY, BIG FALLS RAILWAY COMPANY.

Submitted Dec. 12, 1911. Decided Feb. 6, 1912.

The petitioner, a dealer in flour, feed and farm products, located at Big Falls, Wis., on the line of the respondent Big Falls Ry. Co., complains of the freight rates of that company, alleging that the minimum carload rate is $5 per car, while the minimum less than carload rate is 8 cts. per 100 lbs, for a distance of six miles. He also alleges that the respondent C. & N. W. R. Co. is the owner of the Big Falls line, and has leased it to the Big Falls R. Co.; that no joint rates are maintained between the two respondent companies, and it is not only necessary to rebill at Hunting, the junction point, all shipments destined to Big Falls, but this rebilling cannot be done until the freight for the haul on the C. & N. W. line has been paid. The petitioner prays for the establishment of joint rates and through billing between points on the C. & N. W. line and Big Falls. It appears that the objection often made by railways that joint rates permit raw materials to be moved off the producing lines, could hardly be made by either of the respondents in this case, since practically all the movement is toward the line of the C. & N. W. R. and the Big Falls R. has no important manufacturing points on its line to which it could transport its raw material for manufacture. Nor is there anything in the financial situation of the Big Falls R. Co. which would make it necessarily unfair or impracticable at this time to establish a system of joint rates between the two respondents. As the originating line of the larger part of the freight movement, the Big Falls line would be entitled to a substantial proportion of the entire through rate and it might well be that the introduction of joint rates would materially increase its traffic.

Held: In general, where shipments are made between points located on different lines of railway, it is reasonable and just that they should move under joint rates fixed at a point somewhat lower than the sum of the local rates on the two lines.

The present rates of the respondent companies to and from Big Falls, consisting of the sum of the local rates on the respective lines, constitute an unreasonable and excessive charge upon through shipments. The respondents are ordered to discontinue their present rates on shipments between Big Falls and points on the C. & N. W. line in Wisconsin, except Hunting, and substitute therefor the following joint rates: on shipments between Big Falls and points north and west of Hunting, the present rates between Marion and such points; and on shipments between Big Falls and points south and east of Hunting, the present rates between Tigerton and such points.

The petitioner, a dealer in flour, feed and farm products, located at Big Falls, Wis., on the line of the respondent Big Falls Railway Company, complains of the freight rates of that company, alleging that the minimum carload rate is $5 per car, while the minimum less than carload rate is 8 cts. per 100 lbs. for a distance of six miles. He also alleges that the respondent Chicago & North Western Railway Company is the owner of the Big Falls line, and has leased it to the Big Falls Railway Company; that no joint rates are maintained between the two respondent companies, and it is not only necessary to rebill at Hunting, the junction point, all shipments destined to Big Falls, but this rebilling cannot be done until the freight for the haul on the Chicago & North Western line has been paid. The petitioner prays for the establishment of joint rates and through billing between points on the Chicago & North Western line and Big Falls.

No answer was filed by either of the respondent companies.

The hearing was held at the office of the Commission Dec. 12, 1911. *E. E. Browne* appeared for the petitioner, *C. C. Wright* for the respondent Chicago & North Western Railway Company, and *J. H. Wall* for the respondent Big Falls Railway Company.

The Big Falls Railway is a line about twenty-one miles in length, located almost entirely in Waupaca county, Wis. It connects with the Ashland division of the Chicago & North Western Railway at Hunting, and extends from that point south about six miles to Big Falls, then west and northwest ten miles to a point called Comet. About half-way between Big Falls and Comet a branch about five miles in length runs off to a point called Norske, but it appears that this branch is not now operated. The right of way and track between Hunting and Big Falls are owned by the Chicago & North Western Railway Company and leased to the Big Falls Railway Company. No rental is paid to the lessor, but it is empowered by the lease to fix freight rates for the Big Falls Railway, and the latter company covenants to route over the Chicago & North Western line all shipments destined to points reached by that line. Beyond Big Falls, the Wall-Spalding Lumber Company, a corporation composed of the same individuals as the Big Falls Railway Company, owns the right of way and rents the track materials from the Chicago & North Western Railway Company. On this portion of the line, which, in turn, is leased by the Wall-Spalding Company to the Big Falls Railway Company at an annual rental

of $1,680, it appears that practically the entire business consists of the log shipments of the Wall-Spalding Company, although the line is open to the public as a common carrier.

The written lease under which the Big Falls Railway Company operated the line between Big Falls and Hunting, and under which the Wall-Spalding Company used the track materials beyond Big Falls, expired in 1909, and since then the lessees have continued in their possession and operation under a verbal understanding that the terms of the written lease should remain in effect until the parties should find it convenient to execute a new lease. The Big Falls Railway Company pays the taxes upon the entire line and keeps it in repair. The cars used for carload shipments moving to or from the Chicago & North Western line are furnished by the Chicago & North Western Company, but for shipments which are local on the Big Falls line the cars of the Big Falls Railway Company are used. The company owns one engine and something over forty logging cars.

No joint rates are in effect between the two respondent companies; the Big Falls Railway Company collects its full local rates on all shipments. It was the contention of the petitioner at the hearing that the Big Falls line from Hunting to Big Falls was virtually a branch of the Chicago & North Western line, and the rates between Big Falls and points on the Chicago & North Western line should be practically the same as those between Hunting and such points. A number of cases of Chicago & North Western branch lines were pointed out, where the rates on certain commodities to main line points from the point at the end of the branch were the same as those from the junction point.

As to the amount of traffic moving on the Big Falls line, the testimony of the president of the Big Falls Railway Company shows that in 1910 approximately 308 cars moved from Big Falls to Hunting and about 15 from Hunting to Big Falls. This witness was not able to give any figures as to the movement on that part of the line beyond Big Falls. The Big Falls Railway Company has no regular depot or agent at Big Falls; the shippers and consignees load and unload the cars. The principal industry at Big Falls is the sawmill of the Wall-Spalding Company, but the surrounding country is devoted quite extensively to agriculture, especially the raising of pota-

toes, and a creamery located at Big Falls ships about 8,000 lbs. of butter a month. This butter is not shipped over the Big Falls railway, but is hauled across country 13 miles to Iola, where it is shipped via the Iola & Northern and Green Bay & Western lines to various market points. The reason for this method of shipment is that the Iola & Northern and Green Bay & Western lines have joint rates. Another product of the region is fuel wood, which, according to the testimony, is worth about $2.25 per cord at Big Falls and $5.50 or more at Oshkosh. The present cost of transporting such wood the six miles from Big Falls to Hunting is about 50 cts. per cord.

At the hearing, the president of the Big Falls Railway Company introduced a statement showing the earnings and expenses of that line during the years ending June 30, 1911, and June 30, 1910. He was unable to segregate the amounts as between the Big Falls-Hunting portion of the line and the portion beyond Big Falls. This statement is combined with similar figures from the railway's reports for 1909 and 1908 in the following table:

TABLE I.

EARNINGS AND EXPENSES OF THE BIG FALLS RAILWAY CO.

For the Years 1908, 1909, 1910 and 1911.

	1911	1910	1909	1908
EARNINGS:				
Freight revenue	$7,182 11	$6,295 68	$6,731 59	$8,485 02
Passenger revenue	479 05	336 50	326 60	374 40
Mail revenue	300 53	300 51	350 59	296 67
Total revenue	$7,961 69	$6,932 69	$7,408 78	$9,156 09
EXPENSES:				
Maint. of way and structures	$2,058 29	$1,900 00	$2,123 29	$2,373 85
Maintenance of equipment	594 67	297 89	668 44	1,101 90
Transportation expenses	3,796 28	3,692 51	3,533 05	3,589 82
General expenses	530 83	182 89	156 79	22 12
Total operating expenses	$6,980 07	$6,073 29	$6,481 57	$7,087 69
Net operating revenue	$981 62	$859 40	$927 21	$2,068 40
Taxes accrued	314 06	*315 10	285 77	456 57
Operating income	$667 56	$544 30	$641 44	$1,611 83
DEDUCTIONS FROM GROSS INCOME:				
Rent of right of way	$1,680 00	$1,680 00	.....	$1,680 00
Interest on funded debt	188 00	150 00	$150 00	150 00
Net corporate gain	.....	.....	$491 44	.....
Net corporate loss	$1,200 44	$1,285 70	.....	$218 17

*Taxes for 1910 are reported by company as $157.55, the amount actually paid before the report was made; but this amount represents only one-half the taxes accruing during the year.

The above table shows a net operating income averaging a little over $600 per annum during the past three years, out of which to meet the company's rental charges and pay a return on its own actual investment. Nothing is set aside for depreciation. The present value of the Big Falls railway line, as fixed by the engineers of this Commission, is about $95,000, of which only about $16,000 is owned by the railway company itself, the remainder being leased from the Chicago & North Western Railway Company and the Wall-Spalding Lumber Company. No rental is paid to the Chicago & North Western Railway Company, but an annual charge of $1,680 is paid to the Wall-Spalding Company for the lease of the right of way between Big Falls and Comet. As mere farm land, the land included in this right of way is worth only about $4,800, so that the annual rental paid amounts to 35 per cent of its value if it is the bare land itself that is rented; but if the rental includes the tracks laid on the right of way, which belong to the Chicago & North Western Railway Company and are held free of any rental charge by the Wall-Spalding Company, the rent paid by the railway company amounts to less than 3 per cent of the value of the property rented. But whatever may be the facts as to the amount of property covered by this rental charge, the six miles of line between Big Falls and Hunting, involved in this case, are not affected by it. The line beyond Big Falls partakes so largely of the nature of a private logging road, handling almost exclusively the products of the owners of the Big Falls Railway, that it seems fair that the portion from Big Falls to Hunting should be considered alone in determining the rates upon that portion.

The local freight rates now in effect on the Big Falls line between Big Falls and Hunting are as follows:

LESS THAN CARLOAD:	
Ordinary way freight	8 cts. per 100 lbs.
Lumber	$1.00 per M.
Shingles	10 cts. per M.
Crockery and glassware	16 cts. per 100 lbs.
CARLOAD:	
Logs, lumber, brick, poles, posts, grain, feed, coal, etc.	1 ct. per 100 lbs. based on marked capacity of car. Minimum $5 per car; all cars over 80,000 lbs. marked capacity, $10.

Basswood bolts, Christmas trees, hub timber, potatoes, heavy stock, pulp wood, sawdust, shavings, tan bark, fuel wood	Cars of marked capacity 80,000 lbs. and under, $5 per car; marked capacity over 80,000 lbs., $7 per car.

The effect of these rates is to add, in most cases, 8 cts. per 100 lbs. on less than carload freight, and 1 ct. per 100 lbs. on carload freight to the Hunting rate on through shipments over the respondent's lines. The increase over the Hunting rate is somewhat less in the case of carload shipments of potatoes, fuel wood, tan bark and a few other enumerated commodities, but the difference is not as great as it might seem at first glance, owing to the high minimum charge imposed.

Taken as local rates alone, it does not seem that the rates of the Big Falls Railway between Big Falls and Hunting are out of line with the usual schedule of local rates on similar railways. The 8 ct. less than carload rate is equal to the Wisconsin distance tariff fourth class rate for six miles, and thus carries at a uniform rate merchandise of the first, second and third class upon which most railways charge considerably higher rates. The carload rate also, as a local rate, seems fully as low as, if not lower than, most local carload rates for equal distances in the state. A rate lower than 1 ct. per 100 lbs. is very seldom found for any distance on any line in the state.

The petitioner's chief complaint, however, is not against the rates above set forth as local rates, but is against their use in connection with local rates upon the Chicago & North Western line instead of joint rates. The following table shows how the rates of the respondents upon shipments to and from Big Falls compared with rates to and from other points situated both on branch lines of the Chicago & North Western Railway Company and on independent railway lines connecting with that company:

TABLE II.

COMPARISON OF RATES

Between Manitowoc and Various Branch and Connecting Line Points, with Rates between Manitowoc and the Junction Points.

1. CONNECTING LINES.

Rate at Jct. and at Connecting Line Point, in cts. per 100 lbs.

Class E	10.5	11 5	8	9	7 5	7 5	7 5	7.5	6.5	7	7
Lumber	10	10	10	10	8.5	8.5	8.5	8.5	8.5	8.5	8.5
Potatoes [1]	13	14	12.5	12.5	11	12	10.5	10.5	10.5	10.5	10.5
Grain	14	14	12	12	13	([5])...	10	10	10	10	10
Fuel wood [1] [2]	6.5	6.5	6.5	6.5	6	6	5.5	5.5	5.5	5.5	5.5

[1] East bound only.
[2] Based on low minimum loading. Rate based on high minimum is generally 1 to 1.5 cts. lower in each case.
[3] No carload class rates. Hunting to Big Falls. Flat rate covering nearly all commodities amounts to about the figure shown.
[4] Applies to 50,000 lb. loading or less, which is the usual loading.
[5] No commodity rate.
[6] No joint rate between C. & N. W. and G. B. & W. lines.

In the case of less than carload shipments, it will be noted from the above comparisons that in no case is the difference between the junction point and the branch or independent line point as great as is the difference in the present case, namely 8 cts. per 100 lbs.; while in the case of carload freight there is in a number of instances a difference as great as the difference of 1 ct. per 100 lbs. existing in the present case. The general result of these comparisons would seem to be that, regardless of whether the case involves a mere branch line or an independent connecting line having joint rates, the tendency is, in case of distances as short as those involved here, to make the less than carload rates at the point off the main line not more than 3 cts. higher than the rate at the junction point, though in the case of the Mattoon Railway the difference on a ten mile haul runs as high as 6 cts., while in the case of carload class rates the difference between the two points is usually from half a cent to a cent per 100 lbs. Commodity rates, it seems, are usually equalized as between the junction point and the point off the main line, but there is sometimes a difference of half a cent or a cent, or in exceptional cases even more.

In general, where shipments are made between points located on different lines of railway, it is reasonable and just that they should move under joint rates fixed at a point somewhat lower than the sum of the local rates on the two lines. This general statement and the reasons for it have often been reiterated by this Commission. The objection often made by the railways that such joint rates permit raw materials to be moved off the producing lines, could hardly be made by either of the respondents in this case, since practically all the movement is toward the line of the Chicago & North Western Railway, and the Big Falls Railway has on its line no important manufacturing points to which it could transport its raw material for manufacture. Nor is there anything in the financial situation of the Big Falls Railway Company which would make it necessarily unfair or impracticable at this time to establish a system of joint rates between the two respondents. By far the larger part of the movement is toward the Chicago & North Western line, so that the Big Falls Railway, as the originating line, would be entitled to a substantial proportion of the entire through rate. The testimony indicates that a considerable amount of traffic in creamery products, fuel wood, and agricultural products might be

obtained by the Big Falls Railway by the introduction of reasonable joint rates with the Chicago & North Western line, and it might well be that the introduction of such rates would materially increase the traffic on the Big Falls line.

The first station south of Hunting on the Chicago & North Western Railway is Marion, a distance of five miles. The same distance north of Hunting is the station of Tigerton. At these points the Chicago & North Western Railway Company has established class rates which differ from the Hunting rates, in general, by about 1 to 2 cts. per 100 lbs. on less than carload freight, and one-half cent per 100 lbs. on carload freight, while the commodity rates at these points are usually the same as at Hunting. It would seem from the conditions disclosed by the facts in this case that the application of these Tigerton and Marion rates to Big Falls, the former on traffic to and from the south, the latter on traffic to and from the north, would be a fair adjustment of the rate situation. This would leave the Big Falls rates in several cases somewhat higher than the Hunting rates, but at the same time the difference would be more properly proportioned to the distance of the haul, and the present excessive rates at Big Falls would be materially reduced.

The conclusion just stated is reinforced by a consideration of the facts as to the cost of performing the service involved in this case. The situation as between the two respondents regarding the ownership and operation of the Big Falls line is unique, and calls for treatment which may in some respects differ from that given to ordinary independent connecting lines. At the same time, a study of the situation shows that the establishment of the rates herein determined upon should not prejudice the Big Falls Railway to a great extent, for the reason that that line will be entitled, under a proper division of the joint rate, to a substantial part of the through rate. As for the Chicago & North Western Railway Company, it is clear from an examination of the data at hand in regard to its cost of performing the service that the rates herein fixed are amply sufficient to compensate the railway for its outlay.

We therefore find and determine that the present rates of the respondent companies to and from Big Falls, consisting of the sum of the local rates on the respondents' respective lines, constitute an unreasonable and excessive charge upon through shipments, and that reasonable joint rates for the services in-

volved would be, on shipments between Big Falls and points north and west, the present rates between Marion and such points, and on shipments between Big Falls and points south and east, the present rates between Tigerton and such points.

IT IS THEREFORE ORDERED, That the respondents, the Big Falls Railway Company and the Chicago & North Western Railway Company, discontinue their present rates on shipments between Big Falls and points on the Chicago & North Western line in Wisconsin, except Hunting, and substitute therefor the following joint rates:

Between Big Falls and points on the Chicago & North Western line in Wisconsin north and west of Hunting, the same rates as are applied between Madison, Wis., and such points.

Between Big Falls and points on the Chicago & North Western line in Wisconsin south and east of Hunting, the same rates as are applied between Tigerton, Wis., and such points.

A. H. PAPE

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided Feb. 12, 1912.

Petitioner alleges exorbitant charges on a carload shipment of gas coke from Watertown to New London, Wis., on which a class rate of 6½ cts. per cwt. was exacted, while for the greater distance from Milwaukee and Racine to New London a commodity rate of 5 cts. was in effect. This latter rate was subsequently made effective between the points in question.

Held: The rate exacted was unusual and the reasonable rate for such service would have been $1 per ton. Refund is ordered on this basis.

The petitioner is a resident of the city of New London, Wis. He alleges that on Dec. 5, 1910, there was shipped to him from Watertown to New London, Wis., over respondent's line, one car of gas coke weighing 41,500 lbs., for which the respondent charged and collected of him freight charges at the rate of 6½ cts. per cwt., amounting to $26.98; that such rate was exorbitant and that the rate for such shipment should not have exceeded 5 cts. per cwt., as the rate on gas coke from Milwaukee to New London in carload lots is 5 cts. per cwt., and also a rate on the same commodity from Racine to New London by way of respondent's line is but 5 cts. per cwt., although the distance from Milwaukee to New London is 110 miles, the distance from Racine to New London is 140 miles, and the distance from Watertown to New London is 96 miles. Wherefore, the petitioner prays that the respondent be authorized and directed to refund to him the amount collected on said shipment in excess of 5 cts. per cwt.

The respondent railway company, answering the petition, admits all the formal allegations thereof and denies that the rate charged on such shipment was erroneous, illegal, unusual or exorbitant.

The case was submitted upon the papers, pleadings, documents, and vouchers on file.

The shipment of coke in question was made on Dec. 5, 1910, from Watertown to New London, Wis. The weight was 41,500 lbs. Freight charges were assessed and collected at the rate of 6½ cts. per cwt., or $26.98 for the shipment. 6½ cts. per cwt. was the class D rate from Watertown to New London at the time the shipment in question moved. This rate is still in effect. Class D rates, in the absence of special commodity rates, apply generally throughout western trunk line territory on coke in carload lots. There was no special commodity rate at the time the shipment moved applicable to the same, hence class D rate was properly applied and the charges lawfully exacted.

However effective Nov. 1, 1911, and still in effect, respondent's tariff G. F. D. No. 13125-A provides a rate of $1 per ton on coke in carload lots from Watertown to New London. This is the rate which has been in effect from Milwaukee to New London for many years. Practically all specific rates on coal and coke are made applicable from lake points only. It is quite probable that there is little demand for such rates between interior points. The class D rate is nothing more nor less than a "paper" rate, that is, one that is not used. In general, so-called "paper" rates do not receive the attention given to rates under which traffic moves to any great extent and do not, therefore, conform to the general traffic conditions. Had there been any demand for a rate on coke from Watertown to New London previous to the date the shipment in question moved, it is probable that the rate at present in effect, of $1 per ton, which is the Milwaukee rate, would have been put in effect in time to have applied to such shipment.

The rate on coke from Manitowoc, Sheboygan, Milwaukee and Racine to New London is $1 per ton. The distances to New London from such points are as follows: Manitowoc 63 miles, Sheboygan 88 miles, Milwaukee 112 miles, Racine 135 miles. On the basis of $1 per ton the freight charges on 41,500 lbs. would be $20.75, or $6.23 less than was actually charged. Under the circumstances we are of the opinion that the petitioner should have had the advantage of a commodity rate. As $1 per ton is compensatory for the service rendered, we conclude that anything in excess thereof was unusual under the circumstances.

We therefore find and determine that the rate of 6½ cts. per cwt., exacted of the petitioner by the respondent for the transportation of the aforesaid carload of coke from Watertown

to New London, Wis., was unusual, and that the reasonable rate for such service would have been $1 per ton.

NOW, THEREFORE, IT IS ORDERED, That the Chicago & North Western Railway Company be and the same is hereby authorized and directed to refund to the petitioner the sum of $6.23 on account of said shipment.

SEYMOUR COHN

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided Feb. 12, 1912.

Petitioner who is engaged in the cartage business at Milwaukee, Wis., complains of discrimination by the respondent carrier in favor of his competitor, the North Western Transfer Co. The testimony shows that respondent failed to deliver to petitioner freight shipments for which orders had been duly filed by petitioner or by his customers; that the respondent permitted the North Western Transfer Co. to have access to the petitioner's freight bills; that the North Western Transfer Co. enjoyed important office privileges which enabled it to secure information not obtainable by competing transfer companies; and that freight which should have been delivered to petitioner had been delivered to the North Western Transfer Co. This discrimination may be partly due to respondent's faulty system of handling orders after they have been filed by consignees or their representatives. Respondent's assistant cashier attempts to memorize about two thousand orders filed by different transfer companies, claiming that he has not time to look up the orders although they are indexed alphabetically. Witnesses for respondent stated that a railway company must have some designated transfer company to haul freight not consigned in care of or for any particular transfer company, and also for the purpose of transferring freight to connecting railway and steamboat lines, so that the freight house may be kept clear of undelivered goods. In the present case this unconsigned freight is delivered to the North Western Transfer Co.

Held: Receivers of freight have the right to designate the person who shall team their goods from the depot, and delivery orders given by them should be strictly observed and regarded as private communications. No partiality should be shown in giving or withholding necessary information in the notification of arrivals or in the prompt delivery of shipments. Respondent is ordered to desist from delivering petitioner's goods to other teamsters or transfer companies, and to discontinue any practice of a discriminatory nature which has heretofore given the North Western Transfer Co. privileges not accorded to petitioner or other draymen under similar conditions. Frequent errors indicate either a faulty system or negligence, and additional clerical help is needed to prevent further complaints of this nature. Reference should be made to the indexed orders as each freight bill is received, instead of relying upon memory. To expedite the delivery of freight to connecting lines and of goods for local delivery, not teamed by consignees or their representatives, railroad companies must necessarily arrange with some transfer company for the perform-

ance of this special service, and in this respect only should there be any departure in the conduct of a railroad company toward different transfer companies.

The petition sets forth that the petitioner is a resident of Milwaukee and has been engaged in the cartage business in said city under the name of Cohn Transfer Company since September, 1909; that the North Western Transfer Company, also engaged in the cartage business in said city, is a competitor of the Cohn Transfer Company; that the Chicago & North Western Railway Company is a common carrier and maintains a depot and office in said city for the delivery of property transported over its line of railroad; that C. W. Brigham is manager of the North Western Transfer Company and that certain officials of said railway company are co-partners of said North Western Transfer Company; that by reason of the co-partnership of such railway officials in said North Western Transfer Company signed orders of petitioner's customers, directing said railway company to deliver their freight to petitioner, have been ignored and disregarded and the freight which should have been delivered to petitioner has been delivered to his competitor, the North Western Transfer Company, resulting in great loss and damage to the petitioner. The petition further sets forth that the North Western Transfer Company enjoys special privileges in the office and freight house of said railway company which are not extended to the petitioner; that through said privileges petitioner cannot obtain information of the arrival of goods consigned to his customers, and that, although the goods of his customers arrive at the freight house, he cannot obtain the necessary freight bills and delivery tickets in order to make delivery of such goods to his customers; that the North Western Transfer Company obtains freight from said railway company without orders signed by the consignees of such freight. Wherefore, petitioner prays that the Commission order said railway company to desist from extending special privileges to the North Western Transfer Company or to any other transfer company not extended to him, and that the railway company be required to desist from delivering to other transfer companies goods consigned to petitioner's customers and for which delivery petitioner has filed written orders with the railway company, and that the railway company be required to deliver all such goods promptly to petitioner.

The respondent, in answering the petition, admits that petitioner is a resident of Milwaukee and has been engaged in the cartage business in said city under the name of Cohn Transfer Company since September, 1909; that the North Western Transfer Company, engaged in the cartage business in said city, is a competitor of petitioner; that the Chicago & North Western Railway Company is a common carrier and maintains a depot and office in said city for the delivery of property transported over its line of railway. It denies that it has any information or knowledge sufficient to form a belief that any officials of the railway company are co-partners in the North Western Transfer Company; it denies any knowledge or information sufficient to form a belief that petitioner obtained signed orders from his customers whereby each of said customers directed respondent to deliver all freight consigned to them to the Cohn Transfer Company, and that such orders canceled all previous orders; it denies that it has extended any special privileges to the North Western Transfer Company not extended to petitioner; it denies that it has discriminated in any way against petitioner, and denies each and every allegation contained in the petition not specifically admitted or denied.

A hearing in the matter was held on March 20, 1911, at the city hall in Milwaukee. *Samuel M. Field* appeared for the petitioner and *W. G. Wheeler* appeared for the respondent. Counsel for the petitioner stated that the parties in the case had agreed to a continuance of sixty days for the purpose of enabling the respondent to put into effect certain reforms regarding delivery of freight which it was believed would remedy the evils complained of. The continuance was granted.

On July 12, 1911, a second hearing was held at the same place, and which was continued to July 22, 1911. *S. M. Field* appeared for the petitioner on both dates. No one appeared for the respondent on July 12, but on July 22 the railway company was represented by *W. G. Wheeler*.

Seymour Cohn, the petitioner, testified that the railway company had discriminated against his transfer company in favor of the North Western Transfer Company in numerous instances. He cited specific cases in which the freight bills and delivery tickets of freight for his customers were withheld from him while the consignments lay in the railway company's freight house, and enumerated several instances where the consignments were

delivered by the North Western Transfer Company, notwithstanding the fact that the railway company held orders from the parties to deliver their goods to the Cohn Transfer Company. He also cited cases where goods consigned to his customers had been held at the depot for an unreasonable length of time. Witness testified that the manager of the North Western Transfer Company had desk room in the freight office and was permitted to look at the freight bills before they were passed to the cashier's office, that he had access to a list of the customers of the Cohn Transfer Company and was allowed to go in the cashier's office and get out any freight bills he desired. These privileges witness stated were denied to him. Other witnesses testified that they were customers of the Cohn Transfer Company and had received goods delivered by the North Western Transfer Company for which orders had been placed with the railway company calling for delivery by the Cohn Transfer Company. Another witness stated that he had called up Mr. Cohn a number of times for information regarding the arrival of freight and was informed by him that the shipments had not arrived. On one occasion witness stated that after receiving no definite word from petitioner he called up the railway company to investigate the case and was by them informed that the shipment was in the freight house and could be delivered promptly by the North Western Transfer Company, but that the Cohn Transfer Company could not give good service. In view of this statement he ordered future shipments to be delivered by the North Western Transfer Company.

Witnesses for respondent admitted that previous to the first hearing the North Western Transfer Company had access to the freight bills before they reached the cashier's department and also after they had passed through the cashier's hands, but the employes of the cashier's department testified that since the hearing in March, 1911, this privilege had been denied the North Western Transfer Company. The manager of the North Western Transfer Company likewise testified that at present he was on the same footing as any other expressman or drayman and that he had no access to freight bills for goods for which delivery orders were on file by other transfer companies. Witnesses for respondent stated that a railway company must have some designated transfer company to do the hauling of freight not consigned in care of or for any particular transfer company,

and also for the purpose of transferring freight to connecting railways and steamboat lines so that the freight house can be kept clear of undelivered goods. This unconsigned freight, the manager of the North Western Transfer Company stated, was being delivered by him. The president of the Moody Transfer Company testified that on July 1, 1911, he had purchased the entire business of the North Western Transfer Company and that the railroad officials who had been copartners in it had sold out their interests entirely to him. Witnesses for respondent testified that it was a common occurrence with railway companies to receive freight ahead of the billing and also without billing and to misplace freight, thus causing unavoidable delays in delivering goods. The employes of the company who testified stated that there was no intention to discriminate against petitioner. They explained the methods employed in delivering the freight and in handling the freight bills and stated that some of the complaints made by petitioner were the result of errors and omissions and not of intentional acts.

The manager of the North Western Transfer Company testified that neither he nor any of the employes of his company or of the railway company, as far as he knew, had attempted to hinder in any way the business of the Cohn Transfer Company.

An examination of the complaints mentioned by petitioner in his testimony shows that twelve cases occurred before the hearing on March 20, 1911, and six subsequent thereto. Of the eighteen cases cited, ten were not answered by respondent; five cases were answered unsatisfactorily, and three cases satisfactorily. Of the six cases occurring after the first hearing, when a reformation of methods was promised, three were unanswered by respondent, one case answered unsatisfactorily, and two cases satisfactorily answered. The complaints since the hearing of March 20, 1911, are as follows:

On May 18, 1911, a freight bill for a box of cigars for Pollak-Crombie Co. was taken by the North Western Transfer Company when petitioner held the bill of lading for the goods and an order for delivery of consignee's shipments to petitioner was filed with the railway company on Feb. 7, 1911. Respondent's witness could not remember the transaction independent of any record. An explanation was possible as the particulars regarding the matter were mentioned by petitioner at the hear-

ing of July 12, and a transcript of the testimony was in the hands of respondent's counsel previous to the hearing at which his witness was testifying.

May 20, 1911, a postal card was sent by the railway company to Palace Clothing Co., one of petitioner's customers, advising them of the arrival of two cases of boots and shoes. On May 22 petitioner had made inquiry of the railway company regarding this shipment but was informed that there was no freight for the Palace Clothing Co. Petitioner was obliged to make a second trip on that day to get this consignment. Respondent made no answer to this complaint.

May 23, 1911, a case of cigars arrived for National Cigar Co. The railway company sent consignees a postal advice on May 24. Petitioner claims he had to make a special trip for the goods and did not get them until May 25. Respondent offered no testimony in regard to this complaint.

June 13, 1911, the North Western Transfer Company delivered a box of gloves to George Jeske, one of petitioner's customers, at which time there was on file with the railway company an order signed by Jeske directing the delivery of his goods to the Cohn Transfer Company. An employe in the cashier's department testified that he had charge of the freight bills and knew that an order had been filed by Jeske to deliver his shipments to the Cohn Transfer Company. Witness stated that he did not know how the North Western Transfer Company obtained the freight, but that if the freight bill was delivered by him to that company it was unintentional. He further stated that after the goods had been delivered to consignee the North Western Transfer Company handed him an order signed by Jeske to deliver his freight to that transfer company. The manager of the North Western Transfer Company testified that he obtained the freight bill from the cashier's department, but stated that he did not know that the Cohn Transfer Company had an order on file for delivery of Jeske's shipments. The testimony shows that the order alleged to have been given by Jeske to the North Western Transfer Company was not signed by him, but by one of his employes, who assumed he was signing for the receipt of the goods.

June 20, 1911, petitioner's driver accidentally discovered two consignments in the freight house for petitioner's customers, one for George Jeske and the other for J. and S. Pollacheck, but

could not obtain delivery tickets for them from the cashier. Petitioner himself then went to the assistant agent and asked for the freight bills, but was informed that the bills could not be found. Petitioner then requested the goods to be delivered to him, agreeing to file a bond or deposit a reasonable amount of cash as security and to later pay the freight when the bills were presented. The assistant agent declined to make delivery at that time, but when petitioner later called him up by phone, he then agreed to deliver him the goods, which necessitated another trip to the freight house. The assistant agent testified that the third day after the goods had been delivered circumstantial evidence pointed to the fact that the office boy lost the station record and the way bill of the two consignments. He stated that new freight bills were issued and that up to the time of the hearing the original bills had not been found. The absence of the freight bill from the files caused the delay in delivering the goods. Petitioner stated that the freight in question was found in a pile of goods to be delivered by the North Western Transfer Company, but a witness for respondent testified to the contrary, and the manager of the North Western Transfer Company testified that he did not see the shipments in his section of the freight house.

July 8, 1911, a shipment arrived for Palace Clothing Company which was held in the freight house for several days. The assistant agent testified that the delay in delivery was owing to the absence of a way bill for the consignment, without which document or the bill of lading no information could be obtained regarding the ownership of the property or the correct charge to be applied on its transportation.

Employes of the railway company testified that instructions had been in force since the first hearing that all transfer companies were to be treated alike in regard to examination of freight bills and in the delivery of goods for which orders had been placed on file by consignees or transfer companies. Petitioner expected that such instructions would give the relief prayed for, but since the conclusion of the second hearing he, by affidavit, cited two specific instances in which it seemed that special privileges were being still extended to the North Western Transfer Company. Another hearing was therefore had to receive testimony on the same. This hearing was likewise held in the city hall at Milwaukee and took place on Dec. 21, 1911.

Petitioner appeared in his own behalf, and *W. G. Wheeler* represented the C. & N. W. R. Co.

The testimony shows that on Aug. 18, 1911, an order was filed with the railway company signed by Victor Vogl, instructing them to deliver to the Cohn Transfer Company all freight consigned to him; that on Nov. 9, 1911, seven barrels of glassware arrived for Vogl and that on Nov. 13, 1911, the North Western Transfer Company received and delivered the shipment to consignee. The second case testified to by petitioner shows that on Aug. 31, 1911, an order was filed with the railway company signed by Chas. T. Bernhardt, instructing them to deliver his freight to the Cohn Transfer Company; that on Nov. 18 one crate of gloves and mittens arrived for Bernhardt and that on Nov. 21, 1911, the North Western Transfer Company received and delivered the shipment to consignee. The assistant cashier of the railway company testified that the delivery of the freight bills to the North Western Transfer Company was done by him unintentionally. He stated that he overlooked the fact that the Cohn Transfer Company had orders on file for the delivery of these shipments.

From a review of all the testimony in this case it appears that at the time this complaint was filed certain officials of the Chicago & North Western Railway Company were financially interested in the North Western Transfer Company, and that the manager of such transfer company enjoyed important office privileges not granted to other transfer companies, which enabled him to ascertain the names of petitioner's customers as well as to have access to documents denied to petitioner, and thus to possess information not obtainable by competing transfer companies. Since these proceedings began the railroad officials have disposed of their interests in the North Western Transfer Company to an outside party. This change in ownership should be productive of good results as it eliminates many objectionable features that often lead to discriminating acts. Receivers of freight have the right to designate the person who shall team their goods from the depot, and delivery orders given by them should be strictly observed and regarded as private communications. No partiality should be shown in giving or withholding necessary information and all should be treated alike as to the notification of arrivals and the prompt delivery of shipments. To expedite the delivery of freight to connecting lines

and of goods for local delivery not teamed by consignees or their representatives, railroad companies must necessarily arrange with some transfer company for the performance of this special service, and in this respect only should there be any departure in the conduct of a railroad company toward the different transfer companies. In the instant case, the railroad agent and his subordinates testified at the second hearing that the North Western Transfer Company was then on the same footing with the Cohn Transfer Company or any other transfer company except as to the special service of unconsigned and connecting line freight, but the third hearing disclosed the fact that an injustice was still being done to petitioner, even though the discriminations might have been unintentional, as respondent's witness testified was the case. Errors are always liable to occur, but frequent errors indicate either a faulty system or negligence. From the testimony of the assistant cashier, who was responsible for delivering the petitioner's freight bills to the North Western Transfer Company, it appears that he has about two thousand delivery orders filed by the different transfer companies which he attempts to memorize, claiming that he has not time to look up the orders, although they are indexed alphabetically. He said "If I took the time I would make a sure thing of it, and these things wouldn't happen." As he handles about eight hundred freight bills a day, it is very evident that similar errors will continually arise if he is overworked or if he relies upon his memory. We are of the opinion that additional clerical help is needed to remedy the situation and to prevent further complaints of this nature, also that reference should be made to the indexed orders as each freight bill is received, instead of relying upon the memory, as has been done heretofore.

Summarizing the testimony, we find that the petitioner has been injured in his business by the respondent's failure to deliver him freight shipments for which orders have been duly filed by him or by petitioner's customers, occasioned by the discriminatory method of permitting the North Western Transfer company to have access to the freight bills which have belonged to him and to competitive transfer companies, and by the faulty system of handling delivery orders after same have been filed by consignees or their representatives.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Chicago & North Western Railway Company, desist from delivering petitioner's goods to other teamsters or transfer companies, and discontinue any form, method or practice of a discriminatory nature which has heretofore given the North Western Transfer Company privileges not accorded to petitioner or other draymen under similar circumstances and conditions.

IN RE MODIFICATION OF RULE 9 OF THE CAR SERVICE AND DEMURRAGE RULES.

Decided Feb. 12, 1912.

A conference was held at the office of the Commission relating to the reasonableness of car service and demurrage rules now in effect, as applied to the pulp wood traffic in Wisconsin. Rule 9, of the car service and demurrage rules relating to average agreement, as enforced by the C. M. & St. P. Ry. Co., the C. & N. W. Ry. Co., the M. St. P. & S. S. M. Ry. Co., and the C. St. P. M. & O. Ry. Co., applies to cars released during the month and provides that seven days' credit may apply in cancellation of debits accruing on any one car.

Held: It is more equitable and reasonable to base calculations on cars received during the month. The provision that seven days' credit may apply in cancellation of debits accruing on any one car appears somewhat excessive and five days is deemed a reasonable allowance. A change in the classification of cars should also be made to meet present traffic conditions. It is ordered that rule 9 be changed in accordance with these requirements. This order is not confined to pulp wood traffic, but is made general in its application.

A conference was held on Jan. 15, 1912, at the office of the Commission relating to the reasonableness of the car service and demurrage rules now in effect, as applied to the pulp wood traffic in the state. At this conference *J. O. Klapp,* manager of the Wisconsin demurrage bureau, represented the Chicago, Milwaukee & St. Paul Railway Company, the Chicago & North Western Railway Company, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, and the Chicago, St. Paul, Minneapolis & Omaha Railway Company, and *W. D. Hurlbut* represented the Wisconsin Pulp & Paper Manufacturers.

As a result of such conference, and from such investigations as have been made by the Commission, it appears that changes should be made in rule 9 relating to average agreement. Such rule now applies to cars released during the month. It is more equitable and reasonable to base the calculations on cars received during the month rather than on cars released during the month. The provision in paragraph "a" of said rule, to the effect that seven days' credit may apply in cancellation of debits accruing on any one car, appears somewhat excessive, and

five days is deemed a reasonable allowance. A change in the classification of cars should also be made to meet present traffic conditions.

While at the conference no shippers were represented except the Pulp & Paper Manufacturers, who, we are informed, are those principally interested, this order will not be confined to such traffic, but will be made general, as we are not aware of any reason why it should not so apply. If this order should prove oppressive to any interests not represented, the Commission will be very glad to consider a modification of same.

IT IS THEREFORE ORDERED, That rule 9 of the car service and demurrage rules, as enforced by the Chicago, Milwaukee & St. Paul Railway Company, the Chicago & North Western Railway Company, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, and the Chicago, St. Paul, Minneapolis & Omaha Railway Company, be changed and amended so that the same shall read as follows:

"Rule 9.

"AVERAGE AGREEMENT.

"When a shipper or receiver enters into the following agreement, the charge for detention to cars, provided for by rule 7, on all cars held for loading or unloading by such shipper or receiver, shall be computed on the basis of the average time of detention to all such cars received during each calendar month, such detention to be computed as follows:

"(a). A credit of one day will be allowed for each car released within the first twenty-four hours of free time. A debit of one day will be charged for each twenty-four hours or fraction thereof that a car is detained beyond the first forty-eight hours of free time. In no case shall more than one day's credit be allowed on any one car, and in no case shall more than five days' credits be applied on any one car.

"(b). As soon as all cars received during the calendar month have been released, the total number of days credited will be deducted from the total number of days debited, and $1.00 per day charged for the remainder. If the credits equal or exceed the debits, no charge will be made to shippers or receivers on account of such excess of credits. Credits earned will be applied to debits on cars received the same month, but not released until the following month.

"(The report for the calendar month will not be closed until all cars received during the calendar month have been released and the debits and credits then computed as per rule.)

HERMAN FUNK
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Dec. 12, 1911. Decided Feb. 14, 1912.

Petitioner complains of inadequate stockyard facilities at Caledonia station, Wis., on the line of the C. M. & St. P. Ry. Co. and prays that the Commission order respondent to furnish adequate facilities. The only accommodation for loading and unloading cattle at Caledonia is a portable stock chute, which does not enable the cattle to be enclosed before loading them into cars. Since there are no stockyards at Caledonia, petitioner is compelled to drive his cattle to Franksville, three and a half miles south. He estimates that from this time on he will ship about forty cars per year. According to respondent's division superintendent this amount of traffic would justify the necessary expenditure for installing and maintaining yards. It appears that in the district in question the buying and selling of cattle by farmers is a regular practice.

Held: While a portable chute appears to have been adequate for loading purposes in the past, petitioner's statement as to his prospective shipments may be regarded as a fair estimate of his future business. The relief for which he prays should be granted. It is ordered that respondent install and maintain suitable stock yards at Caledonia for the yarding, loading, and unloading of cattle. Sixty days is deemed a reasonable time within which to comply with this order.

The petition shows that petitioner is a cattle buyer and shipper at Caledonia station on the line of the respondent; that the above named railway company is a common carrier engaged in the transportation of persons and property by railroad between points in the state of Wisconsin and that as such common carrier said railway company is subject to the provisions of ch. 87 of the Wisconsin Statutes of 1898 and acts amendatory thereof, and is likewise subject to the provisions of ch. 362, Laws of 1905, and acts amendatory thereof; that he has asked the respondent to build stockyards at Caledonia where he can load and unload stock, but that the respondent has failed to comply with his request; wherefore, petitioner prays that the aforesaid railway company be required to answer the charges herein and that, after due hearing and investigation, an order be made commanding said railway company to furnish stock-

yard facilities and for such other and further order as the Commission may deem necessary and just in the premises.

Respondent, answering the complaint, sets forth that it has neither knowledge nor information sufficient to form a belief that petitioner is a cattle buyer and shipper at Caledonia and therefore neither admits nor denies same, but demands that petitioner he held to the strict proof thereof; admits that it is a common carrier engaged in the transportation of persons and property and is subject to the provisions of ch. 87 of the Wisconsin Statutes of 1898 and acts amendatory thereof, and is likewise subject to the provisions of ch. 362, Laws of 1905, and acts amendatory thereof. Answering the remainder of the complaint, respondent denies that there is any reasonable necessity for the installment or maintenance of a yard at Caledonia station, but avers that it maintains reasonably adequate facilities for the loading and unloading of stock at this point; further answering, respondent denies each and every allegation in the complaint not hereinbefore admitted, denied or otherwise answered unto. Wherefore, respondent prays that the petition be dismissed.

Hearing was held at the office of the Commission on Dec. 12, 1911. Petitioner appeared in his own behalf. *F. G. Wright* represented the Chicago Milwaukee & St. Paul Railway Company.

Petitioner testified that for the last two months he had been buying stock at Caledonia, and had shipped four cars to Chicago; that he expected to make a regular business of shipping cattle in and out of Caledonia, which he estimated would amount to about forty cars a year. He stated that the farmers in the vicinity did not raise any stock, but bought their cattle of outside parties and sold them to dealers after the cows had ceased giving milk. He regarded the district as good territory for a stock dealer, as it was a dairy country and the farmers were continually buying and selling cattle. He said that there were no stockyards at Caledonia, so that he was compelled to drive his cattle to Franksville, three and a half miles south. He testified that on two occasions when he drove his cattle to Franksville there were hogs in one pen and cattle in another, and at another time there were cattle in both pens, which necessitated his moving his cattle and employing help to look after them and then to drive them in with some one else's cattle and

afterwards sort them. He claimed that with these conditions existing at Franksville, and with no other facilities than a chute at Caledonia, he could not continue to ship cattle. He had two competitors at Franksville and one at Oakwood, the nearest station north of Caledonia.

The division superintendent of the railway company testified that there was a portable stock chute for loading and unloading cattle at Caledonia, which is usually kept out next to the right of way line about thirty feet from the track, and when a car of stock comes in or is to be loaded out, the chute is skidded up next to the car. He stated that this stock chute is built in the same way as a permanent stock chute, has the same fence along the sides, and is entirely adequate for loading or unloading a small and limited amount of stock. He regarded such facilities as adequate for the amount of business done at that station during the past, but expressed a willingness to install a yard at Caledonia if the railway company could be assured of a substantial stock business there in the future. He thought that about forty cars per annum should be the minimum amount of business to warrant the installation of a stock yard at that station. Witness admitted that a portable loading chute did not enable the cattle to be enclosed before loading them into the car and was a disadvantage in that respect, but he did not regard the chute as making much difference in unloading stock.

The testimony shows that during the last two years seven cars of stock were received at Caledonia, with a freight revenue of $154. None appears to have been shipped from that station, although it is probable that cattle originating at Caledonia have been shipped from Oakwood or Franksville by parties other than petitioner, and which would have been loaded at Caledonia if yards existed at that place. A portable chute appears to have been sufficiently adequate for unloading purposes during the past and unless there were to be a reasonable number of cars of stock to be shipped out every year in the future, the railway company would not be warranted in expending the amount of money required to install yards at that station. It is therefore with reference to prospective shipments that we must regard this complaint as worthy of consideration. The petitioner appears confident of building up a permanent stock business and estimates that he will ship about forty cars per year, which, according to the testimony of the division superintendent, would

justify the necessary expenditure in installing and maintaining yards.

Previous to the hearing petitioner shipped four cars from Franksville within two months. As he has had experience in stock buying and appears to be located in a district where the buying and selling of cattle by farmers is a regular practice, they buying fresh cows when the old ones have gone dry, we see no reason to doubt the ability of petitioner to ship a sufficient number of cars to compensate the railway company for the facilities needed to do the required business. In order to obtain later information as to petitioner's shipments, the Commission addressed a letter to him inquiring if he had shipped any cars since the hearing. Under date of Feb. 9, 1912, petitioner wrote that he had shipped six carloads of cattle since Dec. 12, 1911, and would forward a car of horses from Wauzeka, Wis., to Caledonia on Feb. 12. It therefore appears that the petitioner's statement as to his prospective shipments may be regarded as a fair estimate of his future business, and that the relief for which he prays should be granted.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, install and maintain at Caledonia, Wis., suitable stock yards for the yarding of cattle and for the loading and unloading of same.

Sixty days is deemed a reasonable time within which to comply with this order.

IN RE JOINT APPLICATION OF THE WAUPACA ELECTRIC LIGHT AND RAILWAY COMPANY AND THE CITY OF WAUPACA TO THE EFFECT THAT THE RAILROAD COMMISSION ACT AS ARBITRATOR IN CERTAIN MATTERS PERTAINING TO STREET LIGHTING IN THE CITY OF WAUPACA.

Submitted Dec. 15, 1910. Decided Feb. 21, 1912.

In a complaint brought before the circuit court of Waupaca county, the Waupaca El. Lt. & Ry. Co. appealed from the disallowance, by the common council of the city of Waupaca, of bills for street lighting during February and March, 1910. In reply, respondent city stated that, disregarding the terms of the street lighting contract and without obtaining the consent of respondent, the petitioner had substituted lamps inferior to those called for by the street lighting contract, which respondent had refused to accept as complying with the contract. Through stipulation of the parties these proceedings were withdrawn from the court and brought before this Commission. It was agreed that all differences as to the efficiency and commercial value of the street lights under the present contract and the respective liability of the city and company under the contract be left unreservedly to the Commission to investigate, settle and adjust.

The contract for street lighting between the petitioning company and respondent city provides for "2000 candle power arc lights" in return for $6.36 each per month. The term "2000 candle power arc lights" was used to designate the 9.6 ampere d. c. open arc lamp in use at Waupaca at the time this contract was entered into and continued in use under the contract until the fall of 1904, when the electric company substituted 6 6 ampere a. c. enclosed arcs, which have been operated at 7 amperes since these proceedings were brought before the Commission.

The total reproduction cost, present value, and cost of operation were ascertained and apportioned between street lighting and all other service. After readjusting the operating expenses so as to eliminate excessive general office salaries and distributing the remainder, it was found that the income from street lighting is barely sufficient to compensate the electric company for the present a. c. enclosed lamps, and considerably below the operating cost of the 9.6 ampere d. c. open lamp.

In comparing the two types of arc lamps the quantity of light produced was not the only element taken into consideration. Qualitative characteristics, such as steadiness of light and uniformity of distribution, although hard to measure, were also considered. Tests made by the Commission's engineers showed that the illumination produced along the street by the 9.6 ampere d. c. open arc is about twice the amount produced by the 6.6 ampere a. c. enclosed arc. The opinion of experts,

including men on the Commission's staff, showed some divergence as to how far the greater steadiness and uniformity of distribution of the 6.6 ampere a. c. enclosed arcs offsets this lack of intensity of illumination.

Held: When the greater steadiness and uniformity of distribution of the 6.6 ampere a. c. enclosed arcs is taken into consideration, the deficiency for which the petitioning company might be responsible is so small and of such character that it cannot be made the subject of monetary damages, particularly in view of the fact that the rates paid by the city for the services involved are barely sufficient to compensate the company for the present a. c. enclosed lamps, and considerably below the operating cost of the 9.6 ampere d. c. open lamps. This deficiency is so small as to come within the limits of a reasonable difference of judgment based on all the facts in the case. It is the finding of the Commission, therefore, that the city of Waupaca, under the circumstances, has not suffered such damage by reason of the substitution of the a. c. enclosed lamps for the d. c. open lamps as to entitle it to claim any reduction from the contract price of the street lighting service furnished it by the Waupaca Electric Light & Railway Co. from the time of the change in the installation of street lamps up to the present time.

Respondent contended that these proceedings do not involve a determination of a reasonable rate of compensation for the street arc lighting now or heretofore furnished to respondent city, and consequently the argument of respondent was confined solely to the law in the case.

Held: Not only the legal rights of the parties under the law of contracts, but all the considerations of equity and justice which may be found to exist in the case are to be considered in reaching the final result.

Petitioner claims that respondent is estopped to deny that the lights are not in conformity with the contract and has waived any right to damages which might have resulted from the change because the change was made by and with the consent of respondent, and the respondent acquiesced in the change. Although the proposed change was brought to the attention of representatives of the city a considerable time before the change was put into effect, there appears to have been no official act of the municipality accepting the change either before or after it occurred. In paying the first six bills of the electric light company after the change in installation, the city had made a written reservation of its rights under the contract. On subsequent bills no written reservation had been made.

Held: It would hardly be consistent with the trend of judicial authority to determine upon the facts of the present case that the city's right to damage if any such right exists has been lost. This conclusion is, of course, entirely independent of the question whether the facts of this case actually show the existence of damages.

This case involves the lighting of the streets of the city of Waupaca and is a controversy between the Waupaca Electric Light and Railway Company, petitioner, and the city of Waupaca, respondent. Certain bills for services rendered by the petitioner in lighting the streets of Waupaca during several

months of 1910 were disallowed by the common council of the respondent city, whereupon the Waupaca Electric Light and Railway Company appealed from these disallowances to the circuit court of Waupaca county, and formal pleadings were ordered therein by the court.

On Oct. 24, 1910, the proceedings were withdrawn from the court, through stipulation by the parties concerned, dated Sep. 19, 1910, and were brought before this Commission for decision. It was agreed in the stipulation that all differences now existing between the parties as to the efficiency and commercial value of the street lights under the present contract for street lighting, bearing date March 31, 1903, and the respective liability of the city and company under the contract be left unreservedly to the Railroad Commission to investigate, settle and adjust. The pleadings ordered by the court and all papers relative to the case on file with the clerk of court were, by agreement, made a part of the proceedings before the Commission.

The complaint, therefore, which is now before this Commission is that which was brought by the petitioner, the Waupaca Electric Light and Railway Co., before the circuit court of Waupaca county, wherein the petitioner states that on or about April 1, 1903, a written contract was entered into by and between the respondent and petitioner whereby the petitioner agreed to furnish street lights to the city of Waupaca from the date of the contract to the 1st day of April, 1913, at the rate of $6.36 per month per light, payable monthly, a copy of which contract was attached to the complaint; that in fulfillment of its part of the contract the petitioner furnished to the city of Waupaca street lights from the date of the contract to April 1, 1910, and received payment in full therefor from the city of Waupaca, respondent, for all lights so furnished except for the months of February and March, 1910; that after furnishing lights to the city of Waupaca for the month of March, 1910, the petitioner filed with the city clerk of Waupaca its verified bill for the services rendered; that on April 6, 1910, the common council wholly disallowed the bill; and that on April 23, 1910, the petitioner filed its notice of appeal from the disallowance of the bill to the circuit court of Waupaca county.

In reply the respondent contended that, at the time the contract was entered into, the petitioner was furnishing and for a long time prior thereto had furnished, for the purpose of

lighting the streets pursuant to a contract with the respondent then about to expire, open arc lamps of 2,000 nominal candle power; that the actual candle power of these lamps was less than 2,000, which term was a nominal rating adopted by electricians and that the lamps were mutually accepted as fulfilling the contract. The respondent city further claimed that, disregarding the terms of the contract and without obtaining the consent of the respondent, the petitioner substituted for the lamps then in use enclosed arc lamps of less actual candle power and of a nominal rating among electricians generally of about 1,200 candle power; that both the actual and nominal candle powers of this lamp were about three-fifths of the actual and nominal candle powers of the open arc lamps so displaced; that the petitioner knowingly and falsely stated and represented to the respondent, its officers and agents, that the enclosed arc lamps were of a nominal rating of 2,000 candle power and were of equal candle power, size and efficiency as the open arc lamps, which were displaced, in order to induce the respondent to permit and allow the use of the enclosed lamps. The respondent further claims that, relying upon the false statements and representations of the petitioner and believing them to be true, the city paid for the lamps at the contract price until about Feb. 1, 1910, since when the respondent has refused to accept the enclosed lamps as complying with the contract and has so notified the petitioner.

In reply to the contentions of the respondent the Waupaca Electric Light and Railway Company, petitioner, claims that the lamps which were in use at the time the contract was entered into in 1903 were the same kind as were in use in the city of Waupaca since 1886 and that these lamps were displaced by the ones now in use about the month of August, 1904; that one of the principal reasons for the change was that the lamps formerly in use in Waupaca were becoming obsolete and that they have since gone completely out of the market; that "2,000 candle power arc lamp" was a term used merely to designate the lamps which were then in use in Waupaca and that those lamps were direct current, open arcs, operated at about 9 to 9.3 amperes with 50 volts at the arc, and which consumed about 450 to 465 watts at the arc. It is said that these lamps were never operated by the company so that the hourly output per

lamp exceeded 450 to 465 watt hours. In 1903 and 1904 electric companies generally, it is claimed, began to change from the use of open arc lamps for street lighting to the use of enclosed arc lamps and, upon investigation, the petitioner found the lamps now in use to be a fair and reasonable substitute for the open lamps formerly in use. From the time the enclosed arcs were installed until March 1, 1910, these lamps were operated, it is said, at 6.6 amperes and 73 volts. The company further contended that, having found that the proposed change would operate to the advantage of the city, it caused one of the new lamps to be installed in the street in front of the city hall and to be there kept burning every night for more than six weeks to serve as a comparison with the open lamps in use upon the streets; that the petitioner invited the opinion and judgment of the mayor, members of the common council and citizens at large as to the relative value of the illumination from the old lamps and the new lamps, and that it was then universally agreed that the new lamp was a very desirable substitute; that after the lamp had been on trial for the time stated, it appearing to the petitioner to be a more desirable light than the open arc light and it meeting with the approval of all who compared the new with the old lamps, the petitioner made the change at an expense to itself of about $5,000. The petitioner believes that this change was made by and with the consent of the respondent; that from the time the lamps were installed the city, with full knowledge of all the facts, acquiesced in the change and paid the petitioner's bills each and every month until Feb. 1, 1910; and that by reason of the foregoing facts the respondent is now estopped to deny that the lights are not in conformity with the contract and is estopped from refusing to pay for lights furnished under the contract.

The claims of the petitioner and respondent, as stated above, were those brought before the circuit court of Waupaca county. The matter thereafter having been brought before the Commission by a stipulation already referred to, hearing was held therein Dec. 15, 1910, *B. B. Parks* appearing for the petitioner, and *L. D. Smith* and *Van Hecke & Fisher* for the respondent.

The testimony introduced before the Commission followed in general the claims of the respective parties as already set forth. From this testimony and such other information as has been

brought together, it appears that the history of street arc lighting in the city of Waupaca is about as follows:

The first contract for lighting the public streets of Waupaca was made in June 1886, and provided for the use of "ten brush arc lights, or some other arc lights as good or better than the brush, of 2,000 candle power." Payment was to be at the rate of $60 per light per year. With respect to the operating schedule the agreement provided that "the lights shall be started or the lights shall be produced at such hours in the evening as the city council shall by resolution direct, the same to be kept running for eight hours each night from the time of starting." Upon such a schedule as this, the use of the lamps would amount to about 2,920 hours each per year. No statement was made as to the life of the contract.

A second contract was entered into on March 31, 1898, whereby it was agreed that for a period of five years there should be furnished "twenty-two 2,000 candle power arc lights" to render "all night service, from dusk until dawn, each and every night throughout the year." In return for this service the city was to pay $140 per month, amounting to $76.36 per arc per year. It was also agreed that in case of failure on the part of the electric company to build and operate an electric railway from the Wisconsin Central depot in the city of Waupaca to the Chain O' Lakes in the town of Farmington, in accordance with a certain prior franchise, the street lighting contract should become null and void at the option of the city. To meet the provision for all night burning, the company substituted for the brush arc lamps, having a single pair of carbons, Brush-Adams arc lamps with double carbons. In other respects these lamps were essentially similar.

Upon the expiration of the street lighting contract of 1898, a new and third agreement was made in 1903 by which it was mutually agreed that there should be provided "not less than twenty-seven 2,000 candle power arc lights for a period of ten years" in return for the sum of $6.36 each per month. A dusk to dawn schedule was agreed upon in words similar to those appearing in the contract just expired. This is the contract now in effect.

It appears to be the uncontradicted testimony that, at the time the present street lighting agreement was made, the company was supplying open direct current arc lamps and contin-

ued to operate these lamps for about a year and a half thereafter. In the fall of 1904 the electric company, petitioner, discarded the direct current street lamps and generator and substituted an a. c. generator, arc regulators and an equivalent number of enclosed a. c. arcs. It is for the service of these lamps that the city of Waupaca is unwilling to pay.

It has been shown by the testimony that the proposed change from open direct current to enclosed alternating current arc lamps was brought to the attention of the representatives of the respondent by officers of the petitioner a considerable time before the change was put into effect, and that a multiple circuit arc lamp, purported to be similar in its lighting characteristics to the series arc lamps later installed, was operated for general inspection. There appears to have been no official act of the municipality accepting the change either before or after it occurred. Neither does there appear to have been any official act discountenancing or refusing to accept the change until early in the year 1910, except the city's reservation of its rights, noted upon the orders issued in payment of the first several months' service of the new system. If the members of the city council, in 1903 and 1904, did not severally approve the change, it appears to have otherwise met with at least their passive consent, possibly through lack of knowledge as to its effect. Moreover, it appears that the company attempted to show the performance of the proposed lamps by operating a lamp, said to be similar, upon the street, and by suggesting that a committee of the council visit other cities having similar street lighting systems, at the company's expense. It does not appear that this suggestion was followed.

Before entering into a consideration of the terms of the agreement and the qualities the lamps at present in use and those displaced, it will be of interest to know the cost of producing the present street lighting service and the relation which it bears to the earnings from this source.

COST OF OPERATION

An inventory of the physical property of the Waupaca Electric Light and Railway Company, by the Commission's engineers, has placed the total reproduction cost, as of June 30, 1910, at $109,330, and the present value at $74,953. The total cost

of operation, exclusive of interest and depreciation, for the year ending June 30, 1910, amounted to $19,420.14. Some uncertainty was experienced in determining what part of the plant value and operating expenses should be charged to street lighting and to railway, commercial light and power service. This uncertainty was occasioned by the incompleteness of some of the plant statistics and the unreliability of others.

Operating Statistics

On Feb. 14, 1911, we were informed by the Waupaca Electric Light and Railway Company that the station meters which measure the commercial and street lighting outputs had been tested Nov. 11, 1910, and that these tests were the only ones that had been made for a period of several years. It was reported by the company that the tests made Nov. 11, 1910, showed that the street lighting meter was substantially correct, but that the commercial meter over-registered the output from 22 to 26 per cent. The latter meter was then readjusted, it is said, to be from 2.5 per cent slow to 5 per cent fast on various loads. No test was made on the railway meter.

An accurate knowledge of the current demands and outputs for the several kinds of service which the plant supplies is essential for a reliable apportionment of the value of the property and of the cost of operation. The difficulty of determining the true ratios when the measuring instruments are inaccurate is quite evident. On Feb. 28, 1911, the three station-output meters measuring the street lighting, railway, and commercial current were tested by members of the Commission's staff. The observations showed the street lighting meter to be about 1 per cent fast when measuring the usual load, and the railway meter to be about 8 to 11 per cent fast from light load to a load somewhat greater than the ordinary maximum load. The commercial meter, which in November, 1910, was found to be fast and was readjusted so as to be 2.5 per cent slow to 5 per cent fast, was now found to be from 3 to 6.5 per cent slow on various loads.

The annual report for the year ending June 30, 1910, is the only statement of operating expenses for the electric utility which the Waupaca Electric Light and Railway Company has made to the Commission up to the time of this investigation. We were, therefore, confined to that period for analysis of the oper-

ating costs. The errors of the meters, which were determined by the company and by the members of the Commission's staff, were discovered a considerable length of time after the operating period which we have for consideration. There is therefore, considerable doubt as to just what corrections, if any, should be made of the figures for output originally submitted by the company in its annual report.

Two divisions have been made of the property and operating expenses. The first is based upon the station data as recorded, the second upon this data as modified when the commercial output meter is assumed to have been 20 per cent fast, the railway meter 9 per cent fast, and the street lighting meter 1 per cent fast. In dividing the property value and operating expenses, cognizance was taken of the fact that some items are occasioned by street lighting service only and others by this service combined with one or more others; that some expenses vary with the capacity of the plant and others with the output. The principles upon which these apportionments are made by the Commission have been thoroughly discussed in former decisions. Only passing indications will therefore be made as to how the various items have been divided. However, some explanation seems necessary regarding conditions under which the plant operated.

The Waupaca Electric Light and Railway Company has but one power plant from which current is furnished for street light, street railway, and commercial light and power purposes. The plant contains both steam and hydraulic equipment supplying energy to a common jack-shaft. Therefore, we have no division of the energy generated separately by steam and water, although the output to each class of service is metered. The electrical generating equipment consists of one direct current railway generator and two alternating current, single phase generators for light and power, all of which are belted to the same shaft. It is the usual practice in this plant to carry the commercial light and power load on one alternating current generator and the street lighting on the other, although it is possible for one machine to carry both loads when the commercial demand is light. The nature of the operation is such that neither machine may be classed as useful for either service alone. All day commercial light and power service is furnished, while the street lighting is on all night, dusk to dawn sched-

ule, as we have seen. During the greater portion of the year, including the winter, the company has in operation only one street car, running over a route of about five miles. Service is given from about 8 a. m. to about 6 p. m., except during a few of the summer months when it is given from about 7 a. m. to about 10 p. m.

Statistics covering the railway, commercial, street lighting and total outputs, the time of starting and stopping the railway service, street lights and steam engine have been compiled from the daily log sheets showing the conditions of service throughout various days for the period of a year. These facts have been considered in determining the ratios of demands and outputs which will be given in tables to follow. The daily station records show that the commercial peak load for the year ending June, 30, 1910, occurred on several days of December. It appears, however, that the maximum plant load and output, as well as the maximum commercial load, occurred on Dec. 11. The conditions existing on that day have been used for determining the peak load relations for this case. There is no record of the maximum demand of the railway system, but the ordinary maximum demand of the one car during the winter is approximately 55 kws., which occurs when the car is ascending a hill. As there are several hills in the route of the car, the average maximum demand is attained three or four times during a period of half an hour, a frequency sufficient, it would seem, to warrant adding this maximum street railway demand to the maximum light and power demand that occurs before the railway service ceases.

The street lighting load is uniform and may be determined by dividing the output by the number of hours of operation. For Dec. 11, 1909, the load is computed to be 16.2 kws.

The commercial light and power load has been recorded in the station records in amperes instead of kilowatts. The maximum demand of this service has been determined by first finding the relation of the ampere-hour output to the kilowatt-hour output. By this method the peak commercial load, occurring when the railway and street lighting systems were both operating, has been found to be 77.8 kws. on Dec. 11.

DIVISION OF MAXIMUM DEMAND.

On Maximum Day: Dec. 11, '09.

(No correction being made for meter errors.)

Classification.	Kilowatts.	Per cent.
Railway	55.0	36.9
Commercial light and power	77.8	52.2
Street lighting	16.2	10.9
Total	149.0	100.0

The maximum demand on the alternating current system, consisting of street lighting and commercial light and power loads, occurred at about 7:30 p. m. Dec. 11, 1909.

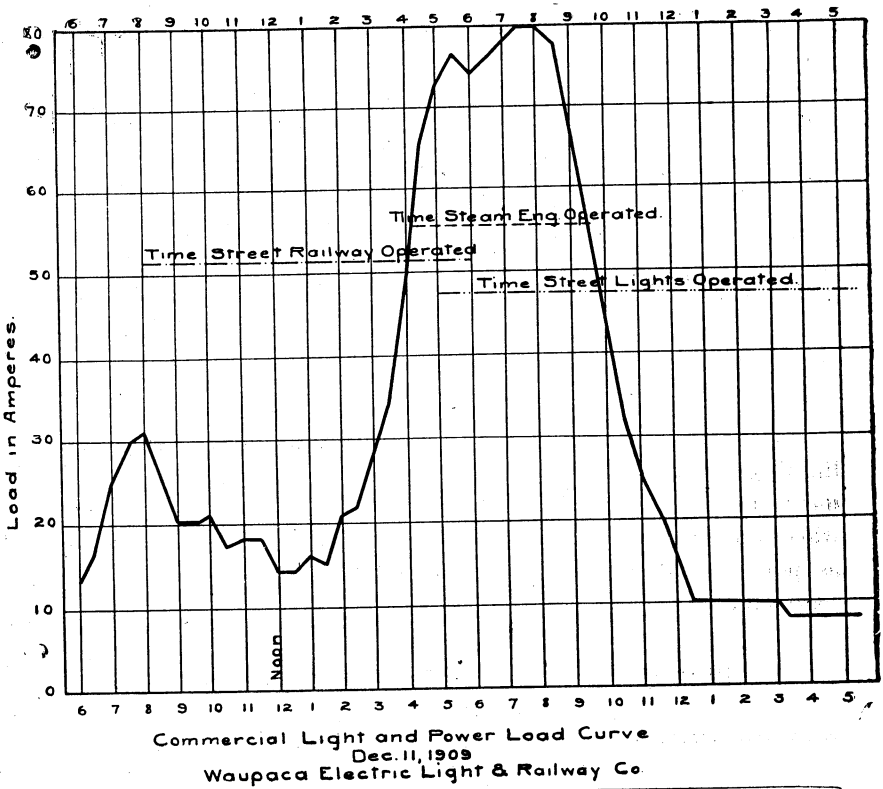
DIVISION OF MAXIMUM ALTERNATING CURRENT DEMAND.

On Maximum Day: Dec. 11, '09.

(No corrections being made for meter errors.)

Classification.	Kilowatts.	Per cent.
Commercial light and power	0.8	83.3
Street lighting	16.	16.7
Total	97.0	100.0

We find from the operating statistics, as shown graphically for Dec. 11, that the steam engine was put into operation to carry the peak load and that consequently the peak upon the hydraulic equipment is probably flat and extends over a considerable period of time. Current was not supplied for all purposes throughout the entire time during which the steam engine was running. During a portion of the time, street railway and commercial service was supplied; during another portion, street railway, commercial and street lighting service; and during still another, commercial and street lighting service. To divide the demand upon the hydraulic equipment according to the loads during any one portion of the period seems illogical, as the total load on the hydraulic equipment, when it is assumed that the steam engine cares for variations of the load, remains unchanged by throwing on or off the railway or street lighting circuits. As the most logical method which presents itself, this division is made on a basis of the average demand of each service multiplied by its length of use during the peak on the hydraulic equipment. The values, being



equivalent to the several outputs during the time the steam engine runs, are determined by finding the latter quantities. They are given with their relative percentages in the following table and were arrived at as follows:

The street lighting load being uniform, the output during this period is equal to the load multiplied by the hours of use. The street railway operates one car. The traffic is very light. Consequently it is safe to assume that the hourly consumption is practically uniform. This is substantiated, in part, by the fact that the railway daily output is very uniform. The average hourly railway consumption on Dec. 11, 1909, has been determined by dividing the kilowatt hours used by the railway during the entire day by the hours of use. When this quantity is multiplied by the length of use during the period considered, the consumption for that period is estimated with reliable accuracy. The commercial light and power output has been de-

termined by integrating the area under the curve during the period the steam engine was operated.

DIVISION OF OUTPUT DURING TIME STEAM ENGINE WAS OPERATED.

On Maximum Day: Dec. 11, '09.

Classification.	Kw. hr. output.	Per cent.
Railroad	24.50	5.1
Commercial light and power	381.00	80 1
Street lighting	70.75	14.8
Total	476.25	100.0

The value of the portion of the distribution system used for lighting the streets was found by adding to the value of equipment used exclusively for that purpose the value determined when the property used jointly with commercial service, such as poles, is divided in proportion to the number of miles of conductors used for each.

Plant Value

In table I is shown the division of the plant equipment between street lighting and other uses based upon station statistics as recorded and reported by the company. By this method, the reproduction cost of the portion devoted to street lighting appears to be $7,513, and the present value $5,084.

Total	396.8	100.0

The rate of depreciation of the Waupaca street lighting property has been determined as 4.5 per cent of the total reproduction cost. Because the engineers have placed a longer life value than the average upon the Waupaca steam equipment, which is used very little, the rate of depreciation computed for the entire property is somewhat less than might otherwise have been found. The valuations, as determined in tables I and II, represent the entire costs of equipment for thirty-two street arc lamps, thirty of which are furnished for municipal and two for private use. The investment per arc lamp appears to be from $235 to $251. Allowing interest on the investment at 8 per cent and depreciation at 4.5 per cent, these items together amount to about $29.38 to $31.38 per arc per annum, differing about $2.00 according as we divide the property on a basis of the original plant operating statistics or make allowance for errors determined later.

STREET LIGHTING PROPERTY.

Basis.	Cost of reproduction		Interest and depreciation per lamp. 12½%.
	Total.	Per lamp.

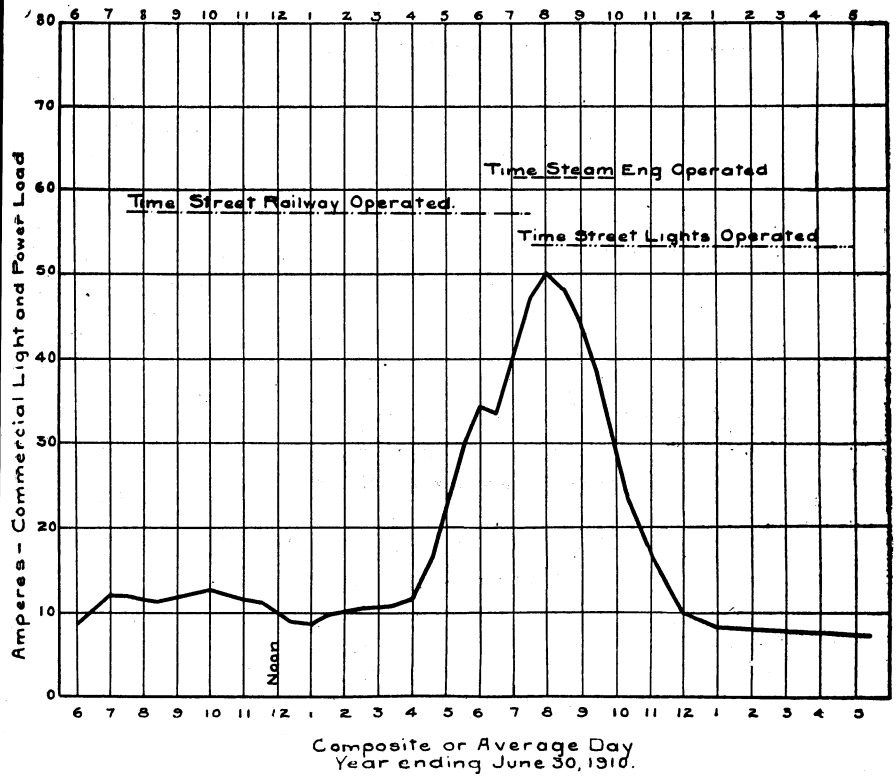
Table II	8,043	251	31 38
Difference	$1,530	$16	$2 00

Operating Expenses

Because of the nature of the plant's operation, it was seen that, although the steam and hydraulic movers act upon the same generating equipment, the relation of the demands of the several departments upon each prime mover and the outputs from each might not be the same as when the plant is considered as a whole. As has been previously pointed out, it was found from the daily records, that the steam equipment was used only during the peak load or at times of low water. This use was made in the summer, when the lighting load was small and the railway operated until about 10 p. m., as well as in the winter when the railway service stopped at 6 p. m. and the lighting load was large. These facts indicated that the use of the steam equipment was not devoted entirely to one class of service, and that it is proper to divide its expense of operation and its value, as has already been done, among the several services which the plant supplies. As the capacity expenses should properly be apportioned according to the demands upon the equipment, the ratios which have been determined for dividing the value of the steam outfit were used for apportioning the steam generation expenses which vary with the capacity. The capacity expenses of operating the hydraulic equipment were apportioned on the basis of the ratios determined for dividing its value.

As output expenses are those which by nature and definition are proportional to the plant's output, it is desirable to divide the steam and hydraulic output expenses according to the output ratios most applicable to each. As we have said, no record is available of the energy which is separately delivered by the steam and hydraulic portions of the plant. The steam engine, which operates during only a portion of the day—and some days not at all—for the purpose of aiding during the peak load, might not furnish energy to the several services in proportion to the annual outputs of the entire plant. Analysis was made of the daily log sheets to determine as closely as possible what this relation may be. A composite load curve was constructed for the commercial light and power service, showing the load for each half hour of the day as averaged for the entire year ending June 30, 1910. Above the curve are lines representing the average daily period of operation of the steam engine, railway and street lighting circuits. Since we must assume

that the load of each service is divided between steam and hydraulic power in the same ratio as the total load is divided, the assumption follows that the outputs from steam and water power divide themselves among railway, commercial light and power, and street lighting services in the same proportions as the total plant output is divided among these three services during the period.



From the composite load curve described above, the commercial output of the plant during the time the steam engine operated has been determined by integrating the area beneath the curve for this period. The outputs for railway and street lighting service, the hourly outputs of which have been shown to be practically uniform, have been computed by multiplying the average hourly consumption by the number of hours operation. These values having been derived from conditions indicated by the composite or average day, are proportional to similar values

for the entire year. The ratios, which were arrived at in this way, were employed for apportioning the steam output expenses. The values are given in tables following, in one case based on the plant statistics as recorded and reported by the company, and in the other based on these figures corrected for errors in the meters.

DIVISION OF OUTPUT

DURING TIME STEAM ENGINE WAS OPERATED FOR AVERAGE OR COMPOSITE DAY

Year ending June 30, 1910,

(No allowance made for wattmeter errors.)

Classification.	Kw. hrs. output.	Per cent.
Railway	13.4	6.6
Commercial light and power	144.6	71.2
Street railway	45.1	22.2
Total	203.1	100.0

DIVISION OF OUTPUT

DURING TIME STEAM ENGINE WAS OPERATED FOR AVERAGE OR COMPOSITE DAY

Year ending June 30, 1910.

(Allowance made for wattmeter errors)

Classification.	Kw. hrs. output.	Per cent.
Railway	12.0	6.9
Commercial light and power	115.7	66.3
Street lighting	46.7	26.8
Total	174.4	100.0

We have divided the output expenses of the hydraulic portion of the plant according to the division of the total annual output of the entire plant among railway, commercial and street lighting service. This appears to be about correct as the water power machinery is in operation at all times, except when repairs are necessary, and the assumption of part of the load by the steam engine during the peak will not change the relation of the amounts delivered by water power to the several services, although the amounts themselves are affected.

DIVISION OF ANNUAL OUTPUT

Year ending June 30, 1910

(As reported by the company)

Classification.	Kw. hrs. output.	Per cent.
Railway	56,920	20.92
Commercial light and power	151,288	55.59
Street lighting	63,900	23.49
Total	272,108	100.00

DIVISION OF ANNUAL OUTPUT

Year ending June 30, 1910

(Allowance made for wattmeter errors)

Classification	Kw. hrs. output.	Per cent.
Railway	51,797	22.0
Commercial light and power	121,030	51.2
Street lighting	63,261	26.8
Total	236,088	100.0

The usual practice of the Commission has been pursued in dividing the distribution system operating labor, maintenance, and supplies and expenses between street lighting and commercial services according to the miles of conductor used for each purpose. The wire used for street lighting purposes, as shown in a preceding table, is in length 38.06 per cent of the total length of wire used in Waupaca for lighting purposes. "Maintenance of transformers and meters" is entirely chargeable to commercial light and power service.

Although a division of the consumption expenses has been made by the company, in its annual report, between expenses chargeable to street lighting and those chargeable to commercial light and power, the fairness of this division is not clear. All costs of trimming and inspecting lamps, arc lamp supplies, and maintenance of lamps have been charged by the company to the service of lighting the streets, and "Miscellaneous consumption supplies and expenses" were divided equally between this and commercial service . Analysis of the latter item, "Miscellaneous supplies and expenses," disclosed that it consisted chiefly of labor expense distributed to this account by charging one-half of one man's time to "Distribution system labor," one-quarter

to "Trimming and inspecting lamps," and one-quarter to "Miscellaneous consumption supplies and expenses." Consideration of ordinary methods of operating a street lighting system would lead to the belief that when this system is charged with the cost of trimming, inspecting and maintaining the lamps and with its proportionate share of the distribution system expense, the service is carrying all of the outside labor expense which may with fairness be allotted to it. It is found that nothing has been charged by the company to the account "Customers' premises expenses." We have therefore charged to this account the cost of labor which, by the company, was placed in the account "Miscellaneous consumption supplies and expenses." The whole amount will therefore be apportioned to commercial light and power. The remainder, $9.50, covering miscellaneous supplies and expenses, will be divided equally between commercial and street lighting service, because the item is small and no other practicable method of division presents itself.

The cost of trimming, inspecting and maintaining arc lamps and arc lamp supplies will be divided in proportion to the estimated lamp-hours use of commercial and street lamps. Two commercial lamps on the street lighting circuit have not been distinguished in these computations from the municipal street lights, with the idea that the cost of operation per lamp will later be determined by dividing the entire cost of operating the street lighting system by the total of thirty-two lamps instead of by thirty.

ESTIMATED LAMP-HOURS OPERATION OF ARC LAMPS.

Number of arcs.	Lamp-hours.	Per cent.
Street—32. series	115,000	98.5
Commercial—3. multiple	1,740	1.5
Total	116,740	100.0

The number of lamp-hours for the street arc was arrived at by multiplying the recorded hours of operation of the street lighting system by the number of arcs in use. In the case of the commercial arcs, the estimate was obtained by assuming that the arcs were used from dusk to 9:30 p. m. two evenings, and until 6:30 p. m. four evenings of the week. It is the custom of the

stores in Waupaca to close at 6:00 p. m., excepting two evenings of the week when they remain open until 9:30 p. m. It is believed, however, that, on an average, the lights will be used about a half hour longer than the regular closing time.

Commercial, way and structure, railway equipment, and conducting transportation expenses are all charged to the commercial and railway business of the company, as no part thereof is occasioned by lighting the streets.

The general expenses, which amount to $5,951.12, have been apportioned according to the total foregoing direct expenses. Undistributed expenses, which would naturally be divided upon the same basis, have been divided into two items. Injuries and damages amounting to $4,429.74 have been charged entirely to railway, the department in which this expense appears to have been incurred, while the remaining amount for insurance, stationery and printing has been apportioned according to the direct expenses.

Depreciation which, at 4.5 per cent per year, is for the entire property, $4,919.85, and taxes, which are $1,022.12, were divided between street lighting and other uses in proportion to the value of the property devoted to each use.

The apportionment of the costs of operation which has been made upon the first method, that is, employing the operating data submitted by the company, is shown in table III. The apportionment upon the second method, making allowance for an average over-registration of the output of 20 per cent in the case of the commercial service, 9 per cent in the case of railway, and 1 per cent in the case of street lighting service, is shown in table IV.

*Not including cost of power.

The gross earnings of the petitioner's plant for the fiscal year ending June 30, 1910, amounted to $24,598.12, classified as follows in the annual report to the Commission:

Transportation	$11,718.60
Commercial light and power	9,706.72
Municipal lighting	2,499.20
Miscellaneous labor	205.85
Merchandise	311.41
Rents, etc	156.33
Total	$24,598.12

Of the item $2,499.20 for municipal lighting, $209.60 is for metered current taken from the commercial lines for municipal uses, while $155.92, included in the earnings from commercial light and power service, is for unmetered service of two arcs for private use connected to the street lighting system. As we wish to segregate, for the purposes of this case, all the expenses and revenues for the street lighting system, we have transferred the item of $209.60 for metered current for the city's use to commercial lighting earnings and have transferred the item of $155.92 for private arcs to earnings from street lighting. When this is done the classification of the income appears as follows:

Transportation	$11,718.60
Commercial light and power	9,750.40
Street lighting	2,455.52
Miscellaneous labor	205.86
Merchandise	311.41
Rents, etc.	156.33
Total	$24,598.12

The earnings from miscellaneous labor, sale of merchandise, rents, etc., have been divided between street lighting and the other services which the petitioner furnishes in proportion to the total costs of operation. This method appears to be fair to the several departments of the business as the costs of labor, material, etc., for rendering the services from which these miscellaneous revenues have been derived have been included with and are a part of the operating expenses which have been apportioned to the several departments.

Referring to tables III and IV, we find that when no allowance is made for errors in the measuring instruments of the plant, the street lighting investment is earning $264.45, which is about 3.5 per cent for interest and profits on the cost of reproduction new. When practically full allowance is made for these errors, as determined some time after the period during which the expenses were incurred, we find that the investment for street lighting is earning $36.39, or practically nothing above depreciation.

Total operating expenses, exclusive of interest, appear to be, according to table III, $70.10 per arc lamp per year and, according to table IV, $77.43. When we add interest at 8 per cent of the value new to these costs, they become, respectively, $88.98 and $97.88. The gross revenue per lamp is, according to

table III, $78.35, and according to table IV, $78.57. Which determination is the more reliable, it is difficult to conclude. However, it is quite apparent that, whichever value is more exact, the street lighting system will be found to earn very little in the way of interest above all other operating expenses. The same is true of the plant as a whole when we consider the operating expenses for the year ending June 30, 1910. If, however, we omit from the cost of operation $4,429.74 for injuries and damages charged to railway service, the net income is found to be about 4.5 per cent of the cost of reproduction. It cannot be denied that the sum for injuries and damages is an abnormal amount for a street railway of this kind operating one car during only the daylight hours for most of the year, and that this expense is not likely to, or should not, recur within a period of several years.

A further search for a reason for the small return which the plant receives reveals the fact that the general office salaries, amounting to $4,569.92, are a considerably larger proportion of the total operating expenses than would ordinarily be expected for a plant of this kind. The general expenses are classified as follows:

Salaries of general officers	$3,600.00
Salaries of general office clerks	969.92
Total general office salaries	$4,569.92
Miscellaneous general expenses	1,012.40
Railroad Commission expenses	17.00
Maintenance of general office equipment and fixtures and grounds	351.80
Total general expense	$5,951.12

While the fact must be considered that this is a combined electric and railway utility which should adequately pay for the management which it receives, it must be observed that in the absence of the existing relation between the departments there would be little possibility of there being an independently operated railway system in this locality that would be satisfied with or could exist upon the small amount of transportation that the petitioner conducts. It seems that when an electric utility in a city as small as Waupaca adequately provides for superintendence, there is little to warrant a burden for management represented by salaries of general officers as great as may be found in the operation of much larger utilities of the same kind.

The general office salaries of the petitioner, amounting to $4,569.92, are, exclusive of anything for superintendence, 23.5 per cent of the operating expenses, including taxes and depreciation. The amount paid to general officers alone is $3,600 and is about 18.5 per cent of the operating expenses. Some difficulty is met in attempting to find for comparison other street railways comparable in size with the one under consideration; but, when we combine the operating costs of the electric and railway departments, there seems to be little reason why comparison should not be made with other electric utilities of about the same size.

The general office salaries of fifteen electric utilities in Wisconsin supplying communities varying in size from 3,000 to 5,000 population average 12.3 per cent of the total operating expenses. The maximum of 23 per cent occurs for a utility in whose case this Commission has already found it necessary to comment upon the high executive salaries. The general office salaries of twenty-one class A electric utilities average 5.7 per cent of the operating expenses and range from 3.5 to 23.6 per cent, being less than 10 per cent in all but five instances. For seventeen electric railways in the state, the general office salaries are, on an average, 3.2 per cent of the operating expenses. If a comparison be made on a basis of the salaries paid to general officers only, we find that, for the twenty-one class A electric utilities, the average amounts to 3.4 per cent of operating expenses and for twelve class A and B electric railways 1.4 per cent. The corresponding percentage for the petitioner's utility is 18.5. Although it may be said that the foregoing comparisons are not all that may be desired, it is believed that the conditions of comparison are more favorable to the petitioner than otherwise, as the cost of superintendence is not included in the general expenses and an allowance is made in the total operating expenses for depreciation in arriving at the ratios for this utility while, without doubt, some superintendence is included in the general expenses and insufficient allowance for depreciation is in some instances made in the total operating expenses of other utilities from which the comparative percentages were derived.

Something has already been said by this Commission in regard to the cost of management and its effect upon the rate of return, a repetition of which may add to clearness in this case:

"The amount of work falling upon the management depends largely upon the investment, the amount of business that is done and the nature of the same. While there are great variations in this respect, it can, perhaps, be said that the amount of management that is required in a business depends more upon the circulating than on the fixed capital. In industries where the proportion of the former is relatively large, the work of the management is also relatively heavy and vice versa. As the cost of the management bears a somewhat close relation to the work that is required of it, it also follows that this cost is comparatively low where by far the larger proportion of the investment consists of a durable and easily managed plant which requires but little attention after it has been constructed and put in operation. In such industries the cost of management constitutes often only a comparatively small part of the total cost of investment, although this is not always the relation that exists between this cost and the value of the products of such utilities. * * *

"These relations between executive salaries on the one hand and the gross earnings and operating expenses on the other, are somewhat lower than is the case for many such plants and slightly higher than is the situation for certain other plants in the state. There are plants, for instance, where these percentages amount to as much as from 5 to 10 per cent and there are still other plants where they are as low as from 1.5 to about 3 per cent. Absolutely just comparisons of this nature, however, cannot easily be made, since this would imply exactly like conditions as between the plants compared, a situation which is rare and hard to discover. But, while not exact, these comparisons throw some light on the situation, and, therefore, are not without value in this connection.

"Whether the executive expenses in this case are unreasonably high, is something that can be determined with only approximate accuracy. In passing upon this question the size of the plants, their earnings and expenses, the conditions under which they are operating, the grade of men required for safe and effective operation, are all matters that should be carefully considered. The larger the plant, the more numerous the customers, the more is required of the management. High grade service safely rendered may also require greater efficiency on the part of the management than if the standard of the service were lower. When the salaries are fixed with these conditions in mind, and no more is paid than the amount that is sufficient to insure proper and efficient service, there is little to be said regarding the salaries paid. If, on the other hand, the salaries are kept at an unreasonably high level in order to cover up earnings, or for some other reason of this nature, there may be good ground for criticism." *State Journal Prtg. Co. v. Madison Gas & El. Co.* 1910, 4 W. R. C. R. 501, 638-641.

Regarding the necessity of making allowance for excessive executive salaries when considering the cost of operation for the purpose of rate making, the Commission has stated as follows in the case of *Ross et al. v. Burkhardt Milling and El. Power Co.* 1910, 5 W. R. C. R. 139, 152:

"A close analysis of the operating expenses has disclosed the facts that both the 'Distribution' and the 'General expenses' are higher than what can ordinarily be regarded as normal expense under the circumstances. * * * With respect to the 'General expenses,' the excess is due to the fact that the salary of the president has been placed at not far from $1,000 above the amount that appears to be warranted by the conditions. These conclusions are based on a detailed examination of the local conditions in this case, as well as upon facts disclosed by the examination of the facts and conditions that surround other plants that are similarly situated. Fairness seems to demand that for the purposes of this case, these excesses should be eliminated from the expenses."

Apparently similar conclusions were reached by the board of gas and electric commissioners of Massachusetts in the case of a complaint against the rates of the Leominster Gas Light Company, Twenty-Fifth Annual Report of the Board of Gas and Electric Light Commissioners of Massachusetts, p. 13:

"In view of the intimate relation which the management and owners of this company sustain to each other, it may be claimed that the management, if it desires, may choose between profits and a high operating cost, and that only the stockholders are interested as to whether a certain amount of income is retained for dividends or expended for management. But even if the public be not interested in the apportionment of a given sum between dividends and management cost, yet they have clearly an interest when the combination of such costs is unreasonably large. While it is true that the earnings divided among the stock holders in recent years have been far below what is considered a fair return on capital, it must be remembered that the fair return is not to be measured by the dividends declared, but by the actual profits derived from the business, however disposed of."

It can hardly be argued, in the petitioner's case, that the salaries of general officers are so large a proportion of the total operating expenses for the reason that the other costs of operation are unusually low, since from this fact would result a prosperous condition of the business and adequate return would be had upon the investment. As a matter of fact, there appears to be no condition under which this utility operates so unusual as

to warrant the general office salaries being much greater in proportion to the total operating expenses that usually obtains in electric utilities of about the same size. We cannot but conclude that anything more than 15 per cent of the total operating expenses for general office salaries and 10 per cent for salaries of general officers appears in this instance to be unreasonable. Upon this basis, we find that the amount paid to general officers is excessive by about $1,600 to $1,700. When this is deducted, there is still left what appears to be adequate compensation for the management which the petitioner's business requires. If we deduct $1,600 from the general expenses and exclude $4,429-.74 for injuries and damages, of which at most only a normal part should be included for a rate consideration, the total operating expenses of the petitioner's business are $17,310.25, leaving a gross income of $7,287.87, somewhat over 6.5 per cent of the cost of reproducing the physical property. Leaving the item for injuries and damages unchanged, because it does not affect the street lighting division of the business, but deducting $1,600 from the general expenses and distributing the remainder as was done in tables III and IV, we find that the street lighting investment is earning from somewhat less than 4 per cent to somewhat less than 6 per cent in the way of interest on the cost of reproduction. Just what this plant should earn, is difficult to decide in view of the conditions under which it operates. Although a sufficient investment has been made in hydraulic equipment to meet the demands of the plant, we find that full use cannot at all times be made of this equipment because of the inadequacy of the water supply and that an additional investment for steam generation has been necessary. Whether or not the operating costs have thereby been increased much above what they would ordinarily be under similar conditions with a single plant, is not entirely clear from such information as we have of the company's business.

QUALITY OF SERVICE.

Although we have taken up the cost of the street lighting service first, because it seemed that a knowledge of this matter would lead to a clearer understanding of the case, consideration of the quality is of prime importance, as these proceedings grow, not from disagreement as to a fair price for services now ren-

dered, but from refusal on the part of the city to pay anything for lighting the streets by arcs that the respondent claims are not equal to those designated by the contract. The points relating to the quality of service which it appears must be passed upon in this case, are whether the a. c. enclosed arcs as installed in Waupaca in 1904 and as operated until March, 1910, were a fair substitute for the open, d. c. 9.6 ampere arc, and if not, what damage, if any, the city has sustained because of such substitution; whether the lamps as operated since March 1, 1910, have been a fair substitute for open, d. c. 9.6 ampere arc lamps, and if not, what adjustment for the difference will be fair to both parties. These questions involve matters which were touched upon in the case of the *City of Sheboygan v. Sheboygan Ry. & El. Co.* 1910, 6. W. R. C. R. 353, matters which of recent years have received much investigation and discussion but which are not as yet so definitely settled that we are furnished with a basis for opinion without further comment or without further investigation. In passing upon these matters, consideration has been given to whatever of importance has been found to relate thereto and to extensive investigations by the Commission's staff.

Since the hearing of this case, a brief dealing with the relative merits of the a. c. enclosed and the d. c. open arcs has been prepared by Mr. Alton D. Adams, for the city of Waupaca. This brief confines itself chiefly to the luminous efficiency of the several lamps as based on candle power values given by several well known authorities. Basing his conclusions upon the mean hemispherical candle power per watt, as determined from Prof. C. P. Matthew's data on a. c. enclosed arcs and from Mr. W. D. A. Ryan's data on d. c. open arcs, and on estimates of energy consumed by the Waupaca lamps, Mr. Adams finds that each enclosed arc on Waupaca streets was worth 35.64 per cent of the contract rate for a 2,000 candle-power arc, from August 1904, to March 1910, and 37.80 per cent of such contract rate since March 1910.

Such an analysis, while affording some indication of the relative luminous efficiency—that is, total light production—of these light sources, leaves unconsidered some of the essential features of street illumination. These matters will be taken up in more detail later on.

The testimony in the case pointed out that the street lamps furnished by the petitioner since August, 1904, were a. c. series

enclosed arcs operated at 6.6 amperes. Neither the petitioner nor the respondent claims that these arcs were operated otherwise from the time of their installation until March 1, 1910. In the absence of any evidence or claim to the contrary, the Commission assumes that for this earlier period normal operation at 6.6 amperes existed and will compare the service which such systems are found to give with that from a system of open, d. c. 9.6 ampere lamps often called "2,000 candle power arc lamps." The petitioner has attempted to show that the open, d. c. arcs which were formerly furnished in Waupaca and which the present lamps displaced were operated at 9 to 9.3 amperes. The evidence on this point is not conclusive. Other testimony introduced by the petitioner was to the effect that such lamps were ordinarily operated at 9.6 amperes, with a consumption of about 480 watts at the lamp terminals. This statement agrees substantially with the description that general opinion seems to indicate designates the lamp orginally called a "2,000 candle power arc." For the purpose of comparison, it is believed that little or no injustice will be done in assuming that the lamps referred to, in the Waupaca street lighting contract of 1903, as "2,000 candle power arcs" were such lamps as were then in use in Waupaca, operated at 9.6 amperes and consuming approximately 480 watts at the lamp. At what amperage these open arcs were actually operated in Waupaca seems immaterial, except insofar as it may show some reason for the respondent accepting another system.

Attention was called in the case of the *City of Sheboygan v. Sheboygan Ry. and El. Co.* 1910, to the decision of the arbitrators in what is known as the Colorado Springs lighting controversy, wherein it was found that the 6.6 ampere, a. c., enclosed arcs as commercially operated were not a fair substitute for the arcs designated as having a nominal rating of 2,000 candle power. The decision was in accord, it appears, with the general opinion of the numerous experts who testified in the case. While the testimony of some of the witnesses indicated that the difference between the qualities of these arcs is greater than did that of other witnesses, it was very nearly, if not entirely, the unanimous expression of opinion that the 6.6 ampere a. c. enclosed arc falls somewhat short of being fully equivalent, as a street illuminant, to the 9.6 ampere d. c., open arc. The difference which the arbitrators found was 20 per cent. Because

of the difficulty which has been continually met, of making direct comparison between the qualities of those two kinds of lamps, the per cent which was settled upon, by the board of arbitrators, as representing the difference in illuminating value of the lamps, was reached by comparing the illuminating characteristics of the 6.6 ampere, a. c., enclosed lamp with those of a similar lamp operated at 7.5 amperes. This was believed by the arbitrators to be fair, as it was quite conclusive, considering the opinions of all the experts, that the latter lamp would be a fair substitute for the 2,000 candle power arc.

A similar conclusion, to the effect that the 6.6 ampere, a. c., enclosed arc lamp, as ordinarly operated, is not equal as a street illuminant to the 9.6 ampere, d. c., open arc, appears to have been reached by a committee of the National Electric Light Association in 1907, when that committee, by its recommendations relating to specifications for street lighting, placed the former arc in a lower class than the latter. The enclosed arc lamp operated at 7.5 amperes was placed by the committee in the same class as the 9.6 ampere d. c. open, and the 6.6 ampere d. c. enclosed lamps. Because of the prominence that has been given by the petitioner in its testimony to this committee's report, considerable attention is given here to what was contained therein. The report which the committee submitted to the 1907 convention of the N. E. L. A. explained what work the committee had undertaken and what form its recommendations were to take. In main, the committee reported as follows:

"In the year 1894 a committee of experts, appointed by the association to consider the rating of arc lamps, reported at the seventeenth convention, then in session at Washington, a preamble and resolution, which was adopted, as follows:

"'Recognizing the difficulty, if not impossibility, of measuring with any degree of accuracy the illuminating power of the arc lamp, and the great necessity for a more precise definition and statement of the obligations of the producer of electricity for illuminating purposes to the consumer thereof, be it

"'RESOLVED, That in the opinion of this convention what is ordinarily known as a 2,000 c. p. arc lamp is one requiring on the average 450 watts for its maintenance, the measurements being made at the lamp terminals, where no sensible resistance is included in series with the arc. In case such resistance is used, it must be excluded in the measurement of the voltage.'

"The rating of arc lamps on the basis of energy consumed, as set forth in the resolution, was then and would now be satisfactory as an equitable means of determining either a proper

rate of charge or illuminating value for street arc lighting furnished by a company to a municipality, under the same conditions, but at the time of the adoption of this resolution there was in use in the United States no type of arc lamp other than the open arc, which, although of many makes and designs, gave approximately the same illumnating power for a given amount of energy. Wherever the rating adopted by the committee in 1894 has been employed in connection with open-arc lamps of the general type then in use, little or no difficulty has been experienced in the adjustment of differences arising from the interpretation of contracts.

"During the very year in which this rating was adopted, however, the commercial introduction of enclosed-arc lamps began, and within the past ten or twelve years the gradual displacement of open-arc by closed-arc lamps has taken place. The manufacture of open-arc lamps has practically ceased, as a result of their inability to compete with the enclosed type, and manufacturers have devoted themselves almost exclusively to the latter unit quite recently. During the past four or five years there have been placed upon the market a number of distinct new types of lamps, which have been known by the general designation of 'flaming carbon' or 'luminous arc' lamps, some of which originated from American ideas, while others were imported.

"The characteristics of the various lamps mentioned, taken either individually or grouped in classes, are so widely at variance in performance in the ratio between light produced and energy expended that the difficulties experienced by operating companies are greater now than they were in 1894, and the preamble then adopted is equally applicable to day by reason of the introduction of these new devices.

"In addition to the new types of arc lamps, there have also been placed on the market and are now offered for sale certain kinds of mercury-vapor or vacuum-tube lamps, which can be used for street lighting, as well as a considerable number of new incandescent lamps constructed of some form of metalized filament. Quite a number of the latter are already in use, with every prospect of their general introduction within a reasonable time.

"Any attempt to compare the illuminating value of these latest forms of lamps, which are or may be used for street lighting, on the basis of energy consumed, is not only futile, but would be ruinous to the contracting company, for while the so-called high-efficiency lamps operate on a lesser expenditure of energy, they also give a larger volume of light. No reason can be given why a contractor should be penalized for giving more light than contracted for, after having made considerable investment for that purpose, simply because the number of watts

consumed is less, notwithstanding that other items of expense and renewals may be considerably increased.

"Your committee, after a most careful consideration of the difficulties to be met and for the purpose of establishing a definite basis, assumed: That, inasmuch as the lighting of streets by contract is a matter of illumination produced rather than of apparatus employed, the terms used in specifications should be in terms of illumination and not of energy consumed; that the individual lamp of each class should be the unit of number charged for; and that the average illuminating power of each unit should be comparable with and have a value equal to a known standard at proper relative distance.

"The following report is submitted as the best provisional solution of the problem of street lamp specifications that the unsatisfactory existing state of the science and art of outdoor photometry permits.

"The committee considers that street lighting lamps should not be rated in candle-power under contract specifications; because unless qualified as to the space distribution of the candle-power, such rating may be entirely misleading. The lamp may, by suitable reflectors, be made to possess a large candle-power in some particular direction or zone, and yet be very ineffective as a practical street illuminant. Consequently, the committee considers that the rating of street lamps in contract specifications should be in terms of the mean normal illumination cast at a considerable distance from the lamp, along the street which it illumines, i. e., the mean illumination thrown by the lamp upon a plane surface at a considerable distance from the lamp and supported perpendicularly to the rays.

"The following specifications are drawn to cover the ordinary conditions of street lighting, and are recommended to replace previous specifications, such as those appearing in the report of the committee on rating of arc-lamps of the National Electric Light Association at the meeting of 1894, a copy of which is reported above:

"'(1) Under ordinary conditions of street arc lighting, with lamps spaced 200 to 600 feet apart, specifications for street lamps should define the mean illumination thrown by the individual lamp, in position in the street, as measured at the height of the observer's eye and perpendicular to the rays, at some point not less than 200 feet nor more than 300 feet distant, along a level street, from a position immediately below the lamp, with all extraneous light screened off and with no reflection from surrounding objects not forming part of the lamp equipment.

"'(2) When using small units of light, such as series incandescent lamps spaced shorter distances apart, a correspondingly shorter distance from the lamp could be chosen in measuring the illumination.

"'(3) The lamp contracted for should give a mean normal illumination at the test point (selected as in sections 1 and 2) not less than the illumination given by the stationary standard incandescent lamp of 16 candle power at 1/x of the distance. The said standard in-

candescent lamp should be a standardized seasoned lamp having a determined candle power in a fixed direction.

"'(4) When the lamp tested fluctuates in intensity, a number of observations of the maximum normal illuminations should be made at a distance of not less than 200 feet horizontally from beneath the lamp, and the average of these measurements should be taken as the average maximum illumination. A similar number of observations of the minimum normal illumination should be made, the average of which should be taken as the average minimum illumination. The arithmetical mean of the said average maximum and minimum illumination should be taken as the mean normal illumination called for in section 1.

"'(5) A reasonable number of lamps covered by the contract should be tested.

"'(6) For measuring the mean normal illumination of a lamp comparison with the standard incandescent lamp may be made either with a suitable portable photometer or with a reading distance instrument, such as the so-called 'luminometer.'

"'(7) The unobstructed mean normal illumination must not be less at shorter distances than at the point of test.

"'(8) An approximate list of the mean normal illuminations thrown by street lamps of standard manufacture, at horizontal distances within the 200–300 feet range, hung approximately 20 feet above the level of the observer's eye, is given in the following table.

"'Data from which table is to be prepared are not yet completed. Table will be furnished later.'"

The research work of the committee was not completed in time for presentation of final conclusions in 1907, but the following year the X values which should apply to the various lamps were given by the Committee, in its last report, as follows:

"During the past year extensive tests have been conducted for the purpose of determining the relative lighting values of the different street arc lamps.

"Preliminary tests were made with the luminometer and the street photometer and the results check fairly well, but the latter proved more satisfactory to operate and was used exclusively thereafter.

"Approximately 15,000 observations were recorded, the majority of which applied directly to the constants required in the schedule included in the specifications of 1907.

"All the tests herein reported were made with the photometer at a distance of 250 feet from a point directly beneath the lamp. The lamps ranged in height from 15 to 30 feet and were on commercial circuits operating under first-class service conditions.

"Tabulation A is included for convenience in converting X values to foot-candles and vice versa for distances of 200, 250, and 300 feet.

X VALUES.

TABULATION B.

Lamps.	VALUE OF X.			
	Highest lamp.	Lowest lamp.	Aver.	Proposed value.
6.6 amp., d. c., ser. open arc	5	3	4	3 1/2
9.6 amp., d. c., ser. open arc...	6 1/4	2	4 3/4	4
5.0 amp., d. c., ser enc. arc.....	4 2/4	3	4	3 1/2
6.6 amp., d. c., ser. enc. arc.....	6 1/4	4	5	4
5.5 amp., a. c., ser. enc. arc.....	4	3	3 1/2	3
6.6 amp., a, c., ser. enc. arc.....	4 1/2	3 1/2	4	3 1/2
7.5 amp., a. c., ser. enc. arc.....	5	3 3/4	4 1/4	4
4.0 amp., d. c., ser. lum. lamp.....	7	5	6	5 1/2

"Tabulation B gives the X values for the highest and the lowest lamps, also the average of all lamps tested in each class. To this have been added proposed X values to be used in the schedule.

"In assigning the final constants it was necessary to consider not only the foot-candle readings, but such points as the total number of lamps tested, the relative results obtained by figuring the illumination from candle-power curves previously made, and the range of inherent variations peculiar to each type of lamp.

"The adoption of the proposed values resolves the lamps under consideration in the four following classifications:

"First classification. Value of X—5½.

"4.0 ampere, direct current, series luminous arc.

"Second classification. Value of X—4.

"9.6 ampere, direct current, series open arc.

"6.6 ampere, direct current, series enclosed arc.

"7.5 ampere, alternating current, series enclosed arc.

"Third classification. Value of X—3½.
"6.5 ampere, direct current, series open arc.
"5.0 ampere, direct current, series enclosed arc.
"6.6 ampere, direct current, series open arc.
"Fourth classification. Value of X—3.
"5.5 ampere, alternating current, series enclosed arc."

It is claimed by the petitioner that in making the specifications above, it was determined that the so-called 2000 candlepower arc should have an X value of four, that is, this arc should give the same illumination at 250 feet as a 16 c. p. lamp at one-fourth of the distance; and that into this class were placed also the 7.5 ampere a. c. and the 6.6 ampere d. c., enclosed lamps. These lamps were designated by the X value which calls for or corresponds to 0.0041 foot-candles on a plane normal to the rays of light at 250 feet from the lamp. The petitioner claims that, because the determination of the X values was, within certain limits, a more or less arbitrary matter and because the committee found it necessary to make big steps in dividing the lamps into definite classes, the division is not an exact measure of one lamp in turn with another. It is further claimed that, while the illumination at 250 feet, which corresponds to the X value of 3½, is about .0031 foot-candles, the illumination that the 6.6 ampere a. c. enclosed lamp gives at 250 feet is .0038 to .0039 foot-candles and that, therefore, this lamp lacks only a few per cent of being in the same class as the 9.6 ampere, d. c. open lamp. When the a. c. lamp is operated at 7 amperes, it is claimed by the petitioner that the illumination at 250 feet is increased about in proportion to the change of current from 6.6 to 7 amperes and that the lamp operated at 7 amperes would, therefore, be in the class having an X value of 4. Since chiefly upon these grounds rests the petitioner's claim that a fair substitution of lamps has been made, some analysis is necessary of the application in this case of the committee's recommendations concerning street lighting specifications. If the petitioner's argument, to the effect that a comparison according to the classification into which the various lamps have been placed by the committee of the National Electric Light Association may not fairly serve as a measure of the illuminating value of lamps in such a disagreement as is considered here, is correct, then the value of the committee's recommendations in this matter may be doubtful. If a comparison of the X values as recommended by the committee is not a fair basis for

comparing the illuminating values of street lights, then comparison of the actual average illumination from one lamp with the illumination corresponding to the committee's X value of another lamp may also be considered illogical.

Some of the results of its tests have been given by the N. E. L. A. committee in its report for the purpose of showing the method of classifying the observations. Nothing, however, aside from the X values, has been presented with reference to tests made upon 6.6 ampere, a. c. enclosed arcs and it is, therefore, necessary to depend upon general statements of the report for facts in this connection. Referring to tabulation B of the committee's report, we find that the highest value of X determined for 6.6 ampere, a. c. enclosed lamps was 4½ and the lowest 3½. While the average X value for all such lamps tested was found to be 4, the Committee apparently decided that all should be expected of this lamp is an X value of 3½ corresponding to the lowest value determined. In the case of open 9.6 ampere, d. c. arcs, tabulation B shows that the highest X value determined for this type of arc is 6¼ and the lowest 3½. The average for all lamps of this kind tested is an X value of 4¾ but the committee decided that an X value of only 4 should be expected. Because of what the X values appear to be by definition, a comparison of these values is equivalent to a comparison of the squares of the normal illumination at 250 feet from the lamps or of the candle powers producing the illumination. If such a comparison is made, it is found from the ratio of the recommended X values, 3½ and 4, that the 6.6 ampere, a. c. enclosed arc falls short of being equivalent to the 9.6 ampere, d. c. open arc by about 12½ per cent. The illumination at 250 feet from the lamp is .0031 foot-candles for an X value of 3½ and .0041 foot-candles for an X value of 4 upon the basis of which facts it is found that the 6.6 ampere a. c. enclosed arc is inferior to the 9.6 ampere, d. c. open arc by about 24 per cent.

It was pointed out that the petitioner objects to these comparisons because the illumination corresponding to the X value of 3½ for the a. c. lamp is less than the average illumination of this lamp. The same objection, it seems, might be raised to considering the illumination corresponding to the X value of 4, in the case of 9.6 ampere, d. c. open arc, since it can be shown from the committee's tables that the correspond-

ing illumination is much less than the average illumination from this lamp. The average X values for the 6.6 ampere, a. c. enclosed and the 9.6 ampere, d. c. open lamps, as shown in tabulation B, are 4 and 4¾ respectively, corresponding to illuminations of .0041 and .0057 foot-candles at 250 feet. Compared directly by their respective X values, it is found that the former lamp is inferior to the latter by about 16 per cent; compared by the illumination at 250 feet from the lamps, the former is about 28 per cent inferior to the latter.

While it may be agreed that the X values determined by the N. E. L. A. committee do not give an exact comparison of one lamp with another for the reasons set forth by the petitioner, it is not clear, from such facts as we can gather from the committee's report, that comparisons on a basis of the actual average X values, or their corresponding values of illumination, decrease the apparent difference between the lamps that we are considering.

METHODS OF COMPARISON.

Comparison of the amount of illumination produced at a certain distance from the light source upon a certain plane of reference probably leads to a more ready conclusion as to the relative value or effectiveness of an illuminant than practically any other comparative basis involving the intensity of the light or of the illumination produced. But, though a conclusion may be thus readily or easily reached, it does not necessarily follow that the basis for the conclusion is logical and safe to follow.

Various reasons for not confining the comparison to unidirectional measurements of light or illumination, for purposes with which we are now concerned, were pointed out in a former proceeding before the Commission and it appears that upon this point little need be added at this time. Whether or not such unidirectional or single position measurements are sufficient as a basis of comparison, depends largely upon whether the light units and their methods of use are similar and upon other conditions.

If a tower system of lighting is employed the units or groups of units are likely to be placed much farther apart than when the light sources are only twenty or thirty feet from the ground.

Under such conditions it is possible that the test as to the value of illumination produced should consist of some other test than the measurements of the light produced at about 250 feet from the source. If arc lamps are placed two blocks apart, there is again a question as to whether the measurement should be made at the same distance from the lamp as when the arcs are only one block apart, if it is desired to have measurements in a single position represent the most useful light from the lamp. In the first instance, it is important that the arc throw considerable light to the street intersection beyond; in the second instance, this is probably not as important as plenty of light would be furnished there by a lamp placed at that position.

For these reasons it appears that a comparison of light sources for street lighting purposes by the amount of illumination that is produced at a certain distance from the lamp leaves important factors unconsidered.

Arguments have been advanced to the effect that light cast to a certain distant point is the important light to be considered and that, when this is sufficient, light supplied between this point and the light source will also be sufficient. This may usually be true, but the argument seems to ignore the fact that the intervening illumination has relative usefulness or importance as well as the illumination at the distant point and that, while one illuminant may throw light to no considerable distance as compared with other illuminants, certain use may nevertheless be made of light thrown to shorter distances. For these reasons, tests were made by the staff of illumination at several distances from the lamp and of other factors which have an important bearing on the situation.

Until very recent years, commercial incandescent electric lamps were rated by what is known as their mean horizontal candle power which is an average or integrated value of the candle power measured in all directions in a plane through the lamp and normal to its axis. More recently, this rating is being abandoned for one which represents the total light given by the lamp in all directions, making it possible to compare more intelligently lamps of different forms. In this way, light that is thrown upward and downward has its effect on the rating as well as the light thrown outward. By some this is called a defect in the method of rating because weight is thereby given

to light that is termed unuseful; but whether the throwing of light upward or downward is a defect in a lamp depends, it would seem, upon circumstances under which the lamp is to be used and whether the light distribution is a matter which can be controlled. Until these points are determined, it is difficult to decide as useful only the light passing out in one direction.

Light sources for street lighting take somewhat the same position and a rating in only one direction seems to go but a short way in the measurement of the light that is made use of upon and along the street. In comparing various individual types of street lamps, rather than complete installations for street lighting, it is advisable that comparison be made in such manner that as little injustice as possible shall be done to the various legitimate and recognized schemes under which the lamps are generally used for street illumination.

Two distinct characteristics may be attributed to a light source, namely, its efficiency as a light producer and its efficiency as a light distributor. By the term efficiency as a light producer is not meant the relation between the energy supplied to the illuminant and the energy of the emanating light, though this would no doubt be the more exact definition; but the relation between the number of light units produced and the energy units supplied is implied by the term. By efficiency of distribution is usually meant the effectiveness of the distribution of the existing light for useful purposes. Upon the first basis, efficiency as light producers, it would seem, all artificial light sources for illuminating purposes may be freely and directly compared as this comparison involves only the amount of light produced and amount of energy consumed, both of which can be determined with reasonable accuracy. Upon the basis of efficiency as light distributors, comparison cannot be made without considerable qualification, as various factors outside of the lamp itself affect the results and must be considered when they are not eliminated.

The relative efficiency of street lamps as light producers is chiefly a matter of laboratory investigation and such weight as this factor is given in this case comes from a review of tests relating thereto by several investigators. The relative efficiency as light distributors, or, more properly, the relative adaptability for specific illuminating purposes, may be determined with more or less degree of accuracy from laboratory tests, but the perfor-

mance under such conditions is so likely to be somewhat different from that under actual operating conditions that, when possible, it is advisable to determine the character of the distribution of light under service conditions. For this purpose various methods are often followed, using portable photometers, luminometers, etc. A portable photometer was employed by the Commission's staff for all field measurements of light or illumination.

As there appears to be no unanimity of opinion, up to the present time, as to exactly how or what measurements of illumination should be made for a comparison of street lights, it was necessary for the staff to reach conclusions independently as to what should be undertaken in this regard to furnish a basis for an equitable decision. The recommendations of the N. E. L. A. committee, as already noted, specified that the measurements of illumination should be made in a plane normal to the light rays from the lamp at the test point. Others maintain that the measurements should be made on a horizontal plane, which is usually about parallel with the street surface. Still others advocate measurements of the illumination on a vertical plane. Each method has its own advantages and disadvantages.

For the purposes of this case, much of the work has followed the last method of using the vertical test plane, but it is not claimed that the use of this plane is in all respects superior to the use of others. It has the advantage that the same relative position of the test plane is maintained at all points of measurement with reference to the axis of the street and objects along this axis; that the most favorable condition for measurement is secured where the illumination is low and therefore where the measurement is usually least accurate; that light from the opposite lamp does not affect the measurement when the test position is midway between lamps; and that if reflection from the street surface is material, this reflection has its effect on the test plate near the lamp as well as at a considerable distance. It has the disadvantage that, as the test plane approaches or recedes from the lamp, the plane changes its angle with respect to the incident light.

The first mentioned method of measuring the illumination in planes which are normal to the rays of light seems to result in observations which are not entirely comparable with each other, from the point of view of persons on the street, as the position

of this reference plane is a variable one with respect to the street and depends on the height of the lamp and the distance from the position of measurement. Therefore, light that falls on the side of objects at a distance is compared with that falling on the upper surface when the object is near the lamp and a larger proportion of the light incident on the street surface may be reflected to the test plate at considerable distance than near the lamp. This method has the advantage that the candle power of the light may be computed directly from the observed illumination, and vice versa, since the cosine of the angle of incidence of the light rays on the surface is unity.

The second method, employing the horizontal plane, has the objection that the light falling at a considerable distance from the lamp is measured under very unfavorable conditions because the illumination, varying with the cosine of the angle of incidence, is very low on account of the small angle between the horizontal plane and the incident rays. Near or under the lamp the conditions for measuring the illumination are most favorable as the rays are about normal to the reference plane, resulting in about the maximum measurements possible at this position. The conclusion, then, is that the measurements where the illumination is low are made under the most adverse circumstances, but under the most favorable circumstances where the illumination is usually greatest. A further objection may be pointed out in that, when comparing individual street lights, the rays from other lamps than the one under test may fall upon the test plate of the instrument so that midway between the lamps the value measured is about twice the value resulting from one lamp. This might be considered an advantage when one system of lighting is to be compared with another, as the results show the combined effect from the system as a whole. Measurements of illumination on the horizontal plane, when the plane is not too high, may also be considered as representing the illumination upon the street surface and few will contend that the lighting of the surface of the street is not one of the most important features of street illumination. Measurements upon a horizontal plane have been quite universally adopted for examination of interior lighting conditions and this method probably leads to a better general comprehension of the resulting illumination at positions in the neighborhood of the test plate than almost any other system of meas-

urement. This is especially true when the light sources are several and the light is well diffused. When this is not the case, but only one light source is used, horizontal plane or any plane measurements may not indicate the effective illumination except from certain points of view. Objects are visible only as they transmit rays of light to the eye and only those directly reflected rays reach the eye which are incident to surfaces having the same angle to the incident ray as to the direction of sight. But other light rays, which have been reflected from surface to surface of minute particles of the object illuminated, finally come to the eye and it is this which renders clear and distinct vision of details. For these reasons, it may be said that while the light from the source to the object or position of test has, under a given condition, a certain defined direction, it is not clear that measurements upon one certain plane represent the important component illumination.

The illumination which is produced on a plane surface is a function of the intensity of light emanating from the source in the direction of the point of measurement, of the distance between the light source and the point of measurement, and of the angle which the incident ray makes with the plane surface considered. It therefore follows that, if measurements be made at a given distance from the lamps tested, the same relation will exist between measurements made in one plane as between those made in another. For this reason it appears that similar conclusions will be reached regardless of which reference plane is employed in the test, provided street reflection to the test plate is negligible. This does not appear to be true in case comparison is made between systems of lighting, but it is unnecessary to consider this matter here as it is not closely involved in the examination to be made in this case.

Comparative Tests of Lamps.

We have no record of illumination tests of the Waupaca street arc lights before March, 1910, but Bristol records of current obtained by the city at various times prior thereto indicate that the current of the arc circuits was maintained very close to 6.6 amperes. In March, 1910, following the complaint, the current was increased to 7 amperes, as shown by the testimony, but no test was made of the lamps themselves until Dec. 9, 1910, a few days before the hearing of the case, at which time

an expert for the respondent city tested the energy consumption and candle power emitted in a certain direction for several of the arcs as operated on the system at that time.

The following table shows the results of the energy tests as presented by the witness at the hearing:

TABLE V.

WATTAGE TESTS ON WAUPACA STREET LIGHTS

BY

JAS. R. CRAVATH, DEC. 9, 1910.

Location of lamp.	Time of day p. m.	No. of readings.	Minimum watts.	Maximum watts.	Average watts.
City hall	5:26	17	380	430	399
Union and Jefferson	7:21	13	350	375	360

Van and School	7:50	15	440	470	455
F. & F. Mill	8:07	17	320	370	350
Oborn and Ware	8:20	19	410	460	433
Mill and Oak	8:38	21	405	450	427
Waupaca and State	8:55	17	410	440	430
Division and Mill	9:07	19	360	400	384
Average wattage of 13 lamps tested	.....	.....	.....	.....	415

It was testified that the wattage readings on all lamps were made at intervals of ten seconds and that a Weston a. c. and d. c. wattmeter, calibrated the day before, was used in making the tests.

The candle-power tests, it is stated, were made with a Sharp-Millar photometer and, in order to secure observations about in accord with the recommendations of the National Electric Light Association, that is, at a small angle below the horizontal, the lamps were lowered to about 7 feet from the ground and the test plate was stationed at a distance of about 40 feet from the lamp and 3 feet from the ground. It is said that about ten to thirteen photometer readings at intervals of one or two minutes were taken for each lamp.

The following are the results of candle-power measurements as reported by the witness:

City hall lamp, test plate 41 feet distant and 4 feet below lamp:

Minimum observed c. p. 133
Maximum observed c. p. 336
Average of 10 readings observed c. p. 197

Union and Main street lamp, test plate 40 feet distant and 4 feet below lamp:

Minimum observed c. p. 78
Maximum observed c. p. 135
Average of 13 readings observed c. p. 113

Fulton and Main street lamps, test plate 40 feet distant and 4 feet below lamps:

Minimum observed c. p. 118
Maximum observed c. p. 216
Average of 13 readings observed c. p. 140

It is admitted by the respondent's witness that these tests of candle power are insufficient in number and duration to furnish conclusive evidence as to the performance of the lamps. The wattage tests cover, it would seem, a sufficient proportion of the lamps in use to give some indication of the performance of the lamps in this respect, at that time. From these tests it is seen that the Waupaca lamps, even when operated at 7 amperes, were, on Dec. 9, 1910, supplied with less energy than the rated consumption of such lamps normally operated at 6.6 amperes.

Following the hearing, the company expressed its intention of overhauling and readjusting all lamps on the system, and, since it was at that time too late for the Commission to secure tests showing the condition of service as rendered prior to the complaint of the city, it was decided to postpone the Commission's tests until the overhauling was completed that the results might show the quality of service which the applicant proposed or was able to furnish with the existing equipment rather than an intermediate grade corresponding neither to this nor to that which was formerly rendered.

Following this overhauling and readjustment, but preceding the tests made by the Commission's staff, two sets of tests were made upon the Waupaca street arcs in behalf of the applicant. The first tests were made by the applicant's electrician, and the observations as reported to the Commission were as follows:

TABLE VI.

Average wattage of 30 lamps tested.					472

It is reported that the foregoing tests were made with a Thompson indicating type "P" wattmeter, that the readings were taken at intervals of ten seconds, and that the tests were made during the regular operation of the system between the hours of dusk and dawn on the dates shown above.

From the foregoing tabulation it is quite evident that the adjustment of the arcs was so made that, although the current flowing was only 7 amperes, the energy consumption of the arc lamps was, on an average, not much less than the wattage rating of 7.5 ampere arc lamps of the same kind.

From March 10 to 14, 1911, after the hearing of the case and without knowledge on the part of the city regarding for whom and by whom the tests were made, the lamps were all tested again under the direction of the applicant's expert witness, Mr. W. D. A. Ryan. The report based upon these tests has been informally submitted to the Commission, but considerable objection has been raised by the respondent to consideration thereof. Summaries of these tests are presented in the following tables

but, because exhaustive tests by the Commission's staff were made soon thereafter covering the same ground, we have found it unnecessary to use the former values in the conclusions for this case.

The foregoing tables show the results of the tests made for the applicant as based upon two calibrations of the Ryan street photometer employed. One calibration was made at Waupaca before the tests were started and the the other at Schenectady, New York, after the completion of the tests. Regarding the photometric tests, it is said that about 25 readings were taken for each lamp at each photometric station at intervals of about 10 seconds. The following table shows the average for all lamps as based on the mean of the two calibrations:

* Some of readings below minimum of instrument.

‡ Inner globes blackened—not burning well.

Wattage taken from average of 20 readings at equal intervals for a period of 5 minutes.

Illumination and candle power readings taken from average of 10 readings at equal intervals for a period of 2.5 minutes.

Regarding the test upon the Waupaca street lighting system the inspectors have the following to say:

"The street lighting of Waupaca is done with 30 arc lamps distributed fairly uniformly over the city. Most of the lamps are two or more blocks apart except those along the main thoroughfare where they are one block apart.

"The light is supplied by G. I. L–8 differentially wound series, a. c. 6.6 ampere, constant current lamps operating at 7 amperes.

"The lamps are equipped with clear outer globes; light opal inner globes; and have 21" enameled porcelain reflectors. ½" x 10" Columbia carbons are used, one solid and one cored; the carbons are reversed on alternate trims. The system is divided into two circuits, with 16 lamps on the west circuit and 14 on the east circuit. Each circuit is supplied from a G. I. constant-current regulator at the station.

"A Stanley hot wire ammeter is used in each circuit for measuring the current and a Fort Wayne transformer-type integrating wattmeter measures the station output for the street lighting. The regulator and step-up transformer losses are included in the output measurements.

"Marks were placed on the front of both ammeters at the 7 ampere point as calibrated by the General Electric Company's expert. The results of a check test with the Commission standard showed a slight discrepancy of negligible amount.

"The Bristol recording ammeter at the city hall was checked with the Commission standard and found 0.1 ampere high when indicating on the east circuit. Such a test was not made for the west circuit on account of inadequate facilities at hand. A rough check by telephone showed the Bristol instrument to be within about 0.1 ampere. The readings shown by the charts are therefore practically correct. The charts taken during the tests are on file with the city clerk.

"The variations of current shown by these charts show current to be quite steady at all times. The east circuit was observed to be somewhat steadier than the west one, probably due to the smaller number of lamps.

"The tests were started on the second and third night after trimming the lamps, and the tests, with but few exceptions, were completed before reaching the 'shut-off' point or point when the carbons are consumed. The results are therefore free from troubles incident to fresh trim and to the lamp nearing the 'shut-off' point.

"On the first and second nights lamps were observed to act sluggishly and in some instances the linemen resorted to pulling on hanger chain to start the lamps. The manager and arc trimmer accounted for this fact by saying that the carbons in use were taken from a fresh lot just received from the factory which were found slightly over-size. This trouble practically disappeared after the third night of testing and had no appreciable

effect on the performance of any particular lamps except the annoyance incident to starting.

"The number of cracked inner globes observed during the wattage tests was accounted for by manager stating that the present inner globes were a little larger than those formerly used. The intense heat generated by the arc under the new adjustment may have some bearing on this trouble, particularly on a fresh trim when arc is near the top of the globe. Aside from the above troubles the lamps appeared to be fairly well maintained.

"The temperature of the lamps was found quite high compared with that under normal operating conditions. In some cases the top of the lamp was too hot to be touched with the hand. At this high temperature the wattage loss of the lamp mechanism is increased, thereby making the measured watts per lamp somewhat higher than under normal conditions.

"The average wattage for the thirty lamps tested was 506. The average of the maximum values for all lamps was 537 watts; the average of the minimum values was 477 watts. Per cent fluctuation of maximum from minimum was 12.6%. The average per cent fluctuation, by cities, for all the 6.6 amperes installations tested was 10.5%. Comparing this value with that of the Waupaca lamps, makes the latter appear to fairly approximate normal conditions.

"The average height of lamp is 25.9 ft. which is somewhat above the average for this type of lamp for most other places tested.

"The station wattage per lamp based upon the average of several days of each month for a period of 5 months was found to be 630, which, compared with the wattage per lamp as measured, appears quite high.

"The length of arc appeared to vary between 3/8″ and and 5/8″; this is a slightly longer arc than is produced by the 6.6 ampere and 7.5 ampere lamps under normal performances. It was observed in this connection that there was a tendency toward flaming which causes the arc stream to spread more and cut down the intrinsic brilliancy, rounding off the upper carbon and causing the entire end to glow."

In order to compare the 6.6 ampere a. c. enclosed lamp and the lamp as operated in Waupaca at 7 amperes with the so-called "2,000 candle-power arc," the inspectors conducted tests on several systems of 6.6 ampere a. c. enclosed and 9.6 ampere d. c. open arcs in other cities. The following statement concerning the methods pursued in all these tests is taken from the inspector's report:

"A representative number of installations of 6.6 amp. a. c. and 9.6 amp. d. c. lamps were tested for comparative purposes to ascertain the performance of standard lamps of both capaci-

ties and to establish a relation for comparison with the Waupaca lamps.

"A Sharp-Millar portable universal type photometer was used in making the illumination and candle-power tests. The method of procedure for these measurements was the same as for the Sheboygan controversy. The photometer was shielded in all cases where direct rays from the moon were encountered.

"Specially calibrated instruments were used in making energy tests. The method of procedure for energy tests was the same as outlined for the Sheboygan controversy, with the exception that the energy test on each lamp was made immediately after the illumination tests. This order was adhered to in order that time might be saved in getting the complete set of observation for each lamp without having to wait a certain interval between energy measurement and illumination readings, which would be the case if the orders were reversed. Sufficient time was always allowed after cutting in instruments to give lamp a chance to come up to normal operation before taking a set of energy readings.

"Wherever the lamps were located so closely together that the readings for the lamp under test would be affected by the others, the latter were either shielded or temporarily cut out of service. In some cities this method had to be employed for most of the measurements. In other cities the lamps were found sufficiently far apart so this sort of trouble was not encountered."

In making a comparison, for this case, between the illuminating qualities of 6.6 ampere a. c. enclosed and 9.6 ampere d. c. open arcs as types of street illuminants, it was recognized that a comparison of average conditions as represented by a random selection of systems in operation would not necessarily serve as a fair comparative measure of the qualities of the respective lamps, but that reasonable care must be taken that comparison be made of lamps of each type operating under normal conditions. Since the cost of maintenance, carbons, trimming, etc. of open arc lamps is ordinarily more than that of enclosed lamps, any attempt, in operating the former, to approach this cost for the latter is likely to result in impairment of service. The Commission was confronted at the very outset with the difficulty of obtaining tests upon open lamps operating under what may be termed first class conditions for, as is well known, this form of arc is now, for one reason or another, being rapidly displaced, in this country, by other types; and since those which still remain will for the most part be soon displaced, proper maintenance has, under these circumstances, been frequently neglected. The summaries of tests which follow for other

cities than Waupaca, are, therefore, made up of those which were believed to be most representative of lamps under normal conditions and, in all cases, lamps known to be operating abnormally for any reason were eliminated from the final conclusions. In the case of 9.6 ampere open arcs operating with a pronounced hissing period, readings during the hissings of the lamps were eliminated as it is believed by the Commission's experts that such lamps, when properly adjusted, will operate with a negligible hissing period and that this condition was due to improper care and maintenance rather than to inherent defects in the lamps. This fact is mentioned here that the nature of the data presented may be clearly understood. There may be those who believe all readings should have been taken into consideration because the pronounced hissing of the lamp is undoubtedly an objectionable feature. But since with proper maintenance, though higher maintenance expense, this trouble can be practically avoided, it appears that this difference between lamps of various kinds, if due to poor maintenance, may be dealt with better when considering the normal operating costs than when considering the relative merits as illuminants only.

Examination of the form of the light distribution from the 9.6 ampere open arc lamps, as given by such authorities as Mr. W. D. A. Ryan and Prof. C. P. Matthews as well as the data of our own staff, indicates quite conclusively that lamps of this kind should be placed much higher above the street surface than the 6.6 ampere or 7.5 ampere a. c. enclosed arcs in order to most effectively utilize the light produced. The first agreement as to street lighting between the applicant and respondent in 1886 specified that the open arc lamps should be placed on poles not less than forty feet in height. While it may be argued that specification is made of the height of poles to be used but not of the height of the lamp above the street, the logical deduction seems to be that it was at that time believed that such arcs should be placed about forty feet high. Since the facts of the matter seem to bear out this opinion and because we are attempting to determine the illumination of this lamp under normal conditions, it seems proper to give at least some consideration to the resultant illumination when the lamp is placed at this height.

The inspectors have therefore determined the difference between the intensity of illumination at various points along the

street for the lamps at heights as found and for the lamps as assumed at a height of forty feet. It was found that so raising the lamp decreases the intensity of illumination near the light source but increases it beyond fifty to ninety feet from the lamp, thereby producing more uniform distribution of illumination.

Because of the intimate relation that the 7.5 ampere a. c. enclosed arc bears to the question of relative merits of the lamps involved in this case, it has seemed proper to present here some facts regarding the operation of the former lamp as determined by the staff from their investigation in connection with the case of the *City of Sheboygan v. Sheboygan Ry. and El. Co.* 1910.

The following table shows in some detail various observations of the staff concerning the operation of the lamps under consideration. Table X is a summary of the observations of the operation of 7.5 ampere a. c. lamps in several cities. Only those lamps for which measurements were made of illumination to a distance of 250 feet from the lamp are included in this table. Tests of illumination at other distances, and of candle power in certain directions from the lamps were made for a considerable number of other lamps. At the time the tests were made on 7.5 ampere a. c. arcs, the lower measuring range of the photometer which was used was so high that a number of observations at 250 feet showed that occasionally the intensity of illumination was too low to be determined by the instrument.

Table X shows what average results when such observations were considered as zero readings and also when some estimated value is allowed. Of the several lamps for which complete distribution curves are shown by this table to a distance of 250 feet, there are three for which all measurements of illumination were within the range of the equipment and the average determined from the observations for these three are shown at the bottom of the table. The average illumination for the three lamps at 250 feet is 0.0049 foot-candles. The average at this point for all lamps, considering those readings below the range of the apparatus as zero, is 0.0030 foot-candles. Since the intensity of light, although not measurable by the instrument, had some value, it seems reasonable to suppose that the true average representing normal operation lies between 0.0030 and 0.0049 foot-candles.

* Some observations below minimum of instrument.

W. E. Co. A. C. 7 ampere type 314 Cat. 1267-18½″ enameled metal reflector.

Tables XVI, XVII, XVIII, and XIX are summaries of observations for 31 9.6 ampere d. c. open arcs operated in Milwaukee, Chippewa Falls, Hurley, Ironwood, Mich., and St. Peters, Minn. Because of the nature of the remarks which it was found necessary to make concerning the behavior of the Milwaukee lamps, and because in the readings of intensity of light from those lamps no allowance was made for hissing periods, etc., the observations for the Milwaukee lamps were omitted from the final average based on lamps for which pronounced hissing periods were eliminated.

FINAL SUMMARY OF REPRESENTATIVE 9.6 AMPERE D. C. OPEN ARC LAMPS.

ILLUMINATION MEASURED IN VERTICAL PLANE.	FOOT-CANDLES.				
Distance from point beneath lamp.....	50′	100′	150′	200′	250′
Computed values from c. p. curve. Average for 17 lamps assumed at height of 40 feet.....	0.1630	0.0487	0.0185	0.00875	0.00474
Measured values for same lamps at height as found in service.....	.1815	.0441	.0198	.00963	.00693
Average.....	0.1722	0.0464	0.0191	0.00919	0.00583

NOTE:—The 1908 N. E. L. A. committee on street lighting determined following average values of normal illumination at 250 feet from lamp:

9.6 ampere, d. c. open arc. 0.0057 foot-candles.
7.5 ampere, a. c. enclosed arc. .0046 foot-candles.
6.6 ampere, a. c. enclosed arc. .0041 foot-candles.

In order to render the facts disclosed by the foregoing tables more convenient for comparison, a general summary has been compiled in table XX. The general conclusions to be derived therefrom appear to be that, insofar as intensity of illumination is concerned, the 9.6 ampere d. c. open arc, as represented by tests on any individual group of such lamps, by the Milwaukee tests alone in which the hissing period was not eliminated, or by all lamps considered, is superior to any of the other groups of lamps tested; that the Waupaca lamps as operated at 7 amperes gave somewhat more illumination at 200 and 250 feet from the lamps than the average for the 6.6 ampere lamps of the same kind; that the 7 ampere lamps at Watertown gave about the same illumination as the 6.6 ampere lamp at 250 feet, but higher values near the lamp; and that the 7.5 ampere a. c. enclosed arc, as represented by all lamps which were tested out to 250 feet, is little different from the 6.6 ampere or the 7.0 ampere arc. This latter conclusion rests upon tests which include observations below the range of the instrument, which observations were considered as representing no illuminations, as heretofore explained. When allowance is made for the fact that those observations are entitled to at least some value between zero and the minimum scale reading of the photometer, or when an average is used for such lamps as had no such minimum observations, it is found that the observed value of illumination at 250 feet will be materially increased and the lamp takes a position somewhat above the 6.6 ampere and 7.0 ampere lamps.

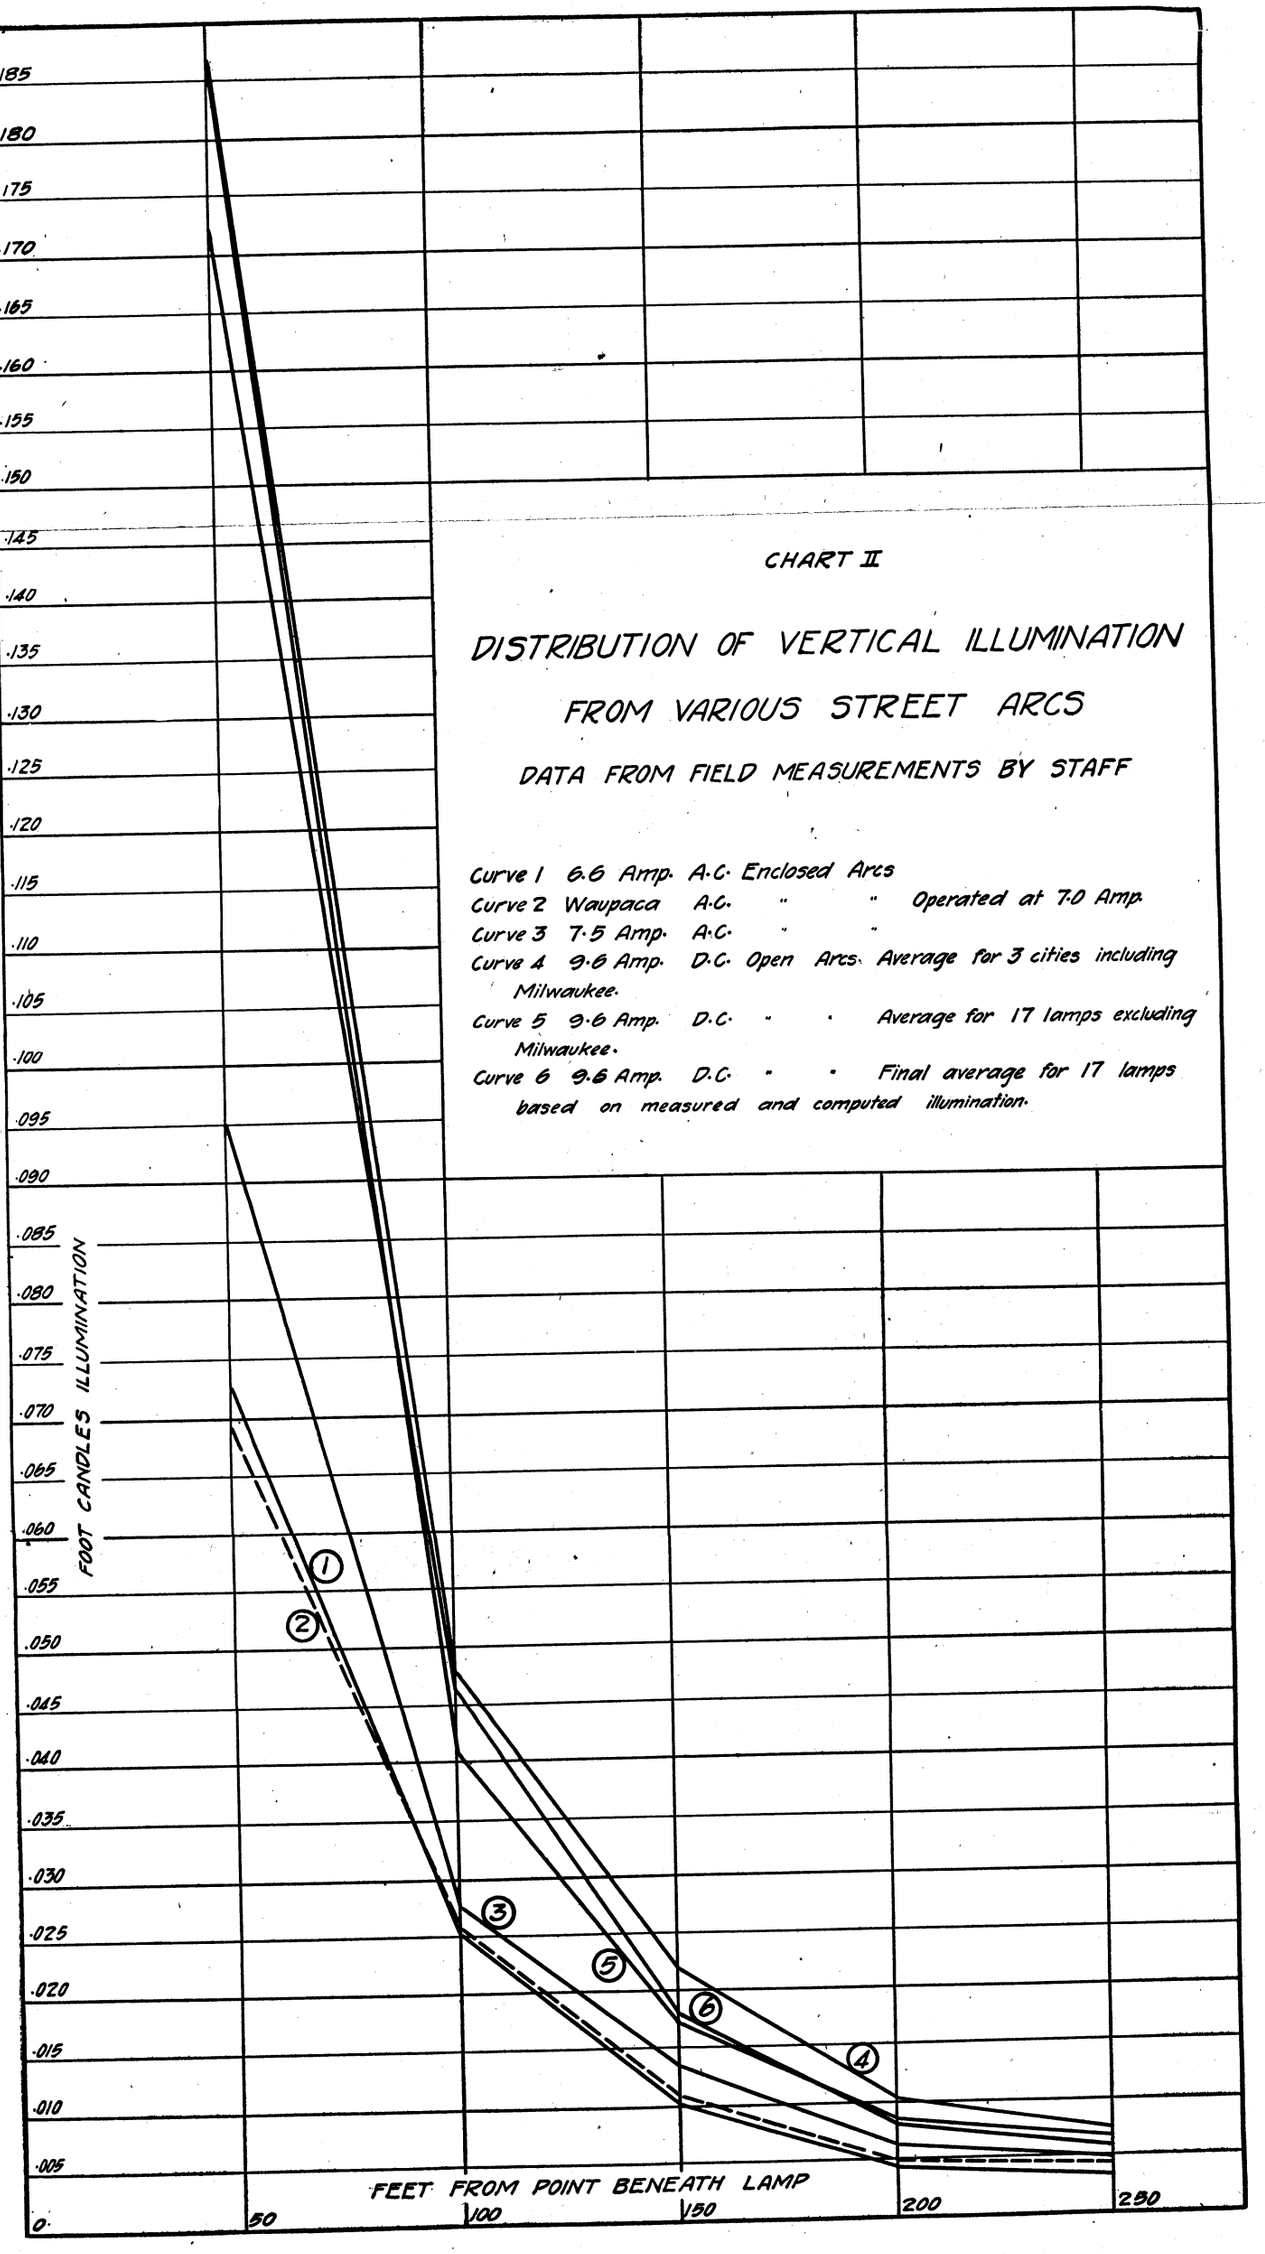
CHART II

DISTRIBUTION OF VERTICAL ILLUMINATION FROM VARIOUS STREET ARCS

DATA FROM FIELD MEASUREMENTS BY STAFF

Curve 1 6.6 Amp. A.C. Enclosed Arcs
Curve 2 Waupaca A.C. " " Operated at 7.0 Amp.
Curve 3 7.5 Amp. A.C. " "
Curve 4 9.6 Amp. D.C. Open Arcs. Average for 3 cities including Milwaukee.
Curve 5 9.6 Amp. D.C. " " Average for 17 lamps excluding Milwaukee.
Curve 6 9.6 Amp. D.C. " " Final average for 17 lamps based on measured and computed illumination.



Graphical representation is given in charts I and II of the distribution of light along the street as measured by the vertical component of illumination at various points from 50 to 250 feet from the lamp. Chart I shows values for the several systems of 6.6 ampere a. c. enclosed and 9.6 ampere d. c. open arcs. The heavy dotted line represents the average of the 6.6 ampere a. c. arc systems and the heavy full line the average of the 9.6 ampere d. c. open arc systems. Chart II shows the average curves of chart I to a larger and more convenient scale, together with the average curves for all Waupaca lamps, for 7.5 ampere lamps represented by arcs with no readings below the range of the instrument, and for 9.6 ampere lamps as represented by an average of illumination measured and as determined for a height of forty feet.

While, for reasons already given, the Commission met with little difficulty in concluding that a comparison of the radiants by ratios of illumination produced at a certain distance from the lamps is hardly sufficient as a measure of their relative merits, the problem still remained of deciding upon a proper comparison, now that we have for consideration fairly well established curves of distribution of illumination. The first method that naturally suggests itself is to determine the simple average of the ratios of the illumination measured at the several points. This has been done and the results are as follows:

TABLE XXI.
RATIOS OF INTENSITY OF ILLUMINATION.

Distance from lamp	50′	100′	150′	200′	250′	Av.
Ratio of 6.6 ampere a. c. lamp to 9.6 amp. d. c. lamp	% 41.8	% 54.0	% 54.3	% 63.1	% 60.3	% 54.7
Ratio of 7.0 ampere a. c. lamp to 9.6 amp. d. c lamp	40.4	55.2	57.5	68.4	75.8	59.5
Ratio of 7.5 ampere a. c. lamp to 9.6 amp, d. c. lamp	55.3	62.2	70.1	80.4	84.5	70.5
Ratio of 6.6 ampere a. c. lamp to 7.5 amp. a. c. lamp	75.7	86.5	77.6	78.3	71.5	77.9
Ratio of 7.0 ampere a. c. lamp to 7.5 amp. a. c lamp	73.2	88.7	82.2	85.2	90.0	83.9

But various reasons suggest themselves why the foregoing ratios may not be entirely fair. Street lighting, at least in a liberal sense, is not merely a matter of strip lighting, as might be at first supposed, but it involves, as well, the illumination of adjacent yards and buildings. The importance of this factor must not be neglected as it is a material aid in rendering visible

persons and objects upon and along the streets. Since this is true, it appears that areas rather than mere distances are involved in the lighting problem and that the measurements made at considerable distances represent, in general, larger areas lighted and greater light flux from the lamps than do those which are made within relatively short distances. Consequently, it seems that, if a comparison of the intensity of illumination at various points along the street is to serve as a measure of the relative merits of the lamps, the useful light at considerable distances should receive more weight than that near the lamp, and that the relative weight should be somewhat in proportion to the area lighted.

One of the most essential features of good street lighting, when not involving a special problem, is uniform distribution of light. This does not mean an entire obliteration of shades and shadows, but that the unobstructed light should produce as nearly as possible uniform illumination of the area lighted. Nearly every one is acquainted with the well known physiological phenomenon which occurs as one passes from a dimly lighted room to one which is brightly lighted, or vice versa. Although vision is at first quite distinct, passage into a room having considerable difference of illumination is usually accompanied by inability to see distinctly, if at all, until the eyes have adjusted themselves to the changed condition. It has often been observed that it is difficult to see from brightly lighted spots or past brilliant lights into more obscure places which, in themselves, seem adequately lighted.

Daylight intensities have been determined to be from 2,000 to 8,000 foot-candles between 8 a. m. and 4 p. m. The intensity of bright moonlight is only about 0.014 foot-candles. But, though the normal eye can so adjust itself as to afford distinct vision in the strong light of day or to render the use of the streets at night comparatively safe and convenient by moonlight, we experience blindness and sometimes optical pain from rapid changes in illumination of a much narrower range. Comparison of this value of moonlight with the intensities of illumination from the various arc lamps, table XX, reveals the fact that the intensity of illumination on a moonlight night is no greater than was found at 175 to 200 feet from 9.6 ampere d. c. open arcs or at 125 to 150 feet from a. c. enclosed arcs.

Regardless of what may be said as to the relative lighting requirements of various exterior public places and streets, it is believed that for ordinary use of streets and highways by night, the average person is satisfied with the illumination from the unclouded full moon, and that in those areas to which moonlight is admitted the absence of the arcs we are here discussing will receive but casual notice. This is not intended as an argument for moonlight schedules or for very low intensities for street lighting, but to point to the fact that, with uniform and well diffused light, vision is quite clear at very low values of illumination. These facts lead to the conclusion that when there is little to choose between various light sources, insofar as the quantity of light emanating to the street surface or other reference plane is concerned, that source is in general best which most evenly distributes the radiating light.

There is still another important factor, namely the steadiness of light, which is impossible of such scientific measurement as will offer a suitable basis of comparison. The need of uniform illumination in order that vision may not be impaired in the effort of the optical mechanism to adapt itself to changes in illumination as the person passes along a street, has been touched upon. Unsteadiness of the light source, resulting in flickering and flaring, has a somewhat similar deleterious effect upon vision. It requires little presentation of facts to show that in this respect the a. c. enclosed arcs are superior to the open d. c. arcs, as manufactured in this country, even when the latter are operating under good conditions. Upon this point there sems to be general agreement. However, just what is the difference in value due to a difference in steadiness, in the case of arcs which in other respects are equal, is a more difficult matter to determine.

Since the light produced varies in some proportion to the amount of energy supplied to the arcs, the fluctuation of watts measured at the lamp offers some indication of the unsteadiness of the incandescent arc. From a large number of measurements of energy consumed by various individual lamps in several cities, it has been found by inspectors of the Commission that the wattage of the d. c. open arc fluctuates about 6.5 times as much as that of the a. c. enclosed arc. But other factors, such as wind, rain, snow, insects and complexity of station

regulating equipment, also have their effects upon the steadiness of burning and render a comparison difficult.

What difference due to physiological and psychological effects of different intensities of illumination exists in the relative commercial value of light sources of the same general characteristics, as regards color of light, uniformity of distribution and steadiness of emissivity, has not as yet been satisfactorily determined. It is well known that by a certain physiological process the eye adapts itself for distinct vision at relatively high intensities and that the condition of the eye under this adaptation will not do for proper vision when the illumination is very low, but that there must again be a change in the eye for proper vision. At some intermediate intensity of illumination the eye has so adjusted itself that it is adapted to see distinctly neither with strong nor weak illumination so that, for the purpose of vision, the intensity of illumination under this condition is of less value than even a lower intensity. This phenomenon varies with different eyes and so far has been established in only such very general terms that its relation to the commercial value of various street lights cannot now be expressed in dollars and cents.

The facts which have been brought forth by this investigation show quite clearly that the characteristics of the lamps involved in these proceedings must necessarily be judged both quantitatively and qualtitatively. Concerning those characteristics which may be measured quantitatively, considerable data have been presented herein bearing out the fact that the illumination produced along the street by the 9.6 ampere, d. c. open arc is about twice the amount produced by the 6.6 ampere a. c. enclosed arc. But regarding the relative merits of those factors which must be considered qualitatively, there is some divergence of opinion. Even among the experts of the Commission's staff opinion differs somewhat as to the extent the inferior quantity of light from the 6.6 ampere a. c. enclosed arc is offset by superior steadiness and uniformity of distribution.

In support of the opinion that this lamp is a fair substitute for the 9.6 ampere, d. c. open arc, the following statement has been submitted by one of the Commission's experts:

"It is undoubtedly true that the primary factors bringing about the abandonment of the 9.6 ampere d. c. open arc and the adoption of the 6.6 ampere a. c. enclosed type of lamp were

the advantages in operation, the principal one of which is that the enclosed type requires trimming or replacement of the carbons about once a week, as against once a day. This, with other attendant advantages from the station equipment and distribution standpoints, involves a considerable saving in operating costs per lamp. Just how far the interests of the public were considered in developing and using the enclosed type of lamp, is difficult to determine. The change involved a sacrifice in light-emitting power per lamp of about 50 per cent and it is a debated question as to whether from the customers' standpoint the enclosed arc type has compensating advantages sufficient to have justified this development.

"It is only during the past few years that there has been developed and made available a type of portable photometric equipment suitable for the measurement of street illumination and candle power. By the use of this instrument much important information concerning street illumination has been obtained; but it has been brought out with striking emphasis that the actual usefulness of a system of street illumination is not capable of exact measurement by means of such equipment. This is due to the fact that there are certain qualities of illumination which cannot be determined by photometric means, qualities which determine in marked degree the useful efficiency of the light furnished. While the intensity of illumination can be determined by the photometer, the influence of flicker, non-uniformity and glare on the usefulness of this light are not capable of measurement.

"With a lack of methods of measurement of qualities which go to make up useful lighting efficiency, judgment must necessarily play a large part in arriving at such estimate. Even the interpretation of luminous intensity, that quality which can be measured by the photometer, an uncertain factor enters: i. e., the adaptability of the eye. The photometers tell us that daylight illumination is over one hundred thousand times the intensity of bright moon light, yet this enormous ratio does not represent the relative 'seeing ability' conferred by these two types of illumination, on account of the change which the eye itself undergoes in adapting itself to the amount of light available. As the intensity of illumination increases the percentage of light made use of by the eye decreases. With the comparatively low intensities involved when comparing two types of street lamps, the question of adaptability of the eye does not play as important a part, but still it is a factor to be considered. On an assumption, then, of equality of factors other than intensity of illumination, it does not appear probable that the relative intrinsic value of two street lights is directly proportional to the intensity of light, on account of the eye adaptability; while the 6.6 ampere a. c. enclosed arc has one-

half the light emitting power of the 9.6 ampere open arc, its relative usefulness is something more than 50 per cent. Just how much more, is impossible to determine on account of incomplete knowledge concerning adaptability. If we could add to this figure which is above 50 per cent another figure representing the percentage advantage of the enclosed over the open arc due to greater uniformity of distribution, another figure representing the advantage due to steadiness, another representting advantage of less glare, and another for less interruption of service, we would have a resultant figure which would represent the relative service value of the two types of lamp. Whether the sum total is 100 per cent, or less, or more, is a matter largely of judgment of experts, and authorities on illumination cover a considerable range, some holding that the old type of light is superior, others that there is approximate equality, and others that the enclosed type is the more useful. With this divergence of expert opinion the judgment of the public at large assumes an importance; and it appears that the judgment of the public is that the street lighting service which is given today is not inferior to that given twenty years ago.

"An important factor to be considered is that the direct current open arc lamp has become, or is rapidly becoming, obsolete in this country; that while economy and simplicity have had much to do with the introduction of the new types of lamps, it is almost inconceivable that in this development the interests of the public would or could have been sacrificed, in view of the fact that the science of illumination was developing and that fraud could not escape detection. As results of litigation and of various publications relative to street lighting systems the public has been informed on this subject, but such information does not appear to have retarded the change from the older type of lamp.

"In view of the considerations expressed in the foregoing pages, it appears to the writer that the 6.6 ampere alternating enclosed arc lamp is a fair equivalent of the older type 9.6 ampere d. c. open arc lamp, and that if there is any inferiority in effective illuminating service rendered by the former type, the amount is so uncertain and of such insignificance as to be impossible of measurement and not capable of numerical statement."

Although, as stated above and as noted elsewhere herein, various advantageous features affecting the cost of operation were primary factors in bringing about the introduction of the enclosed arc, the fact that economy of operation resulted does not lead to the conclusion that the service was equivalent. It does, however, have an important bearing upon the rate to which the utility is entitled, the number of lamps for which the city

can afford to pay, and consequently upon the kind of system which should be selected.

The testimony in this case brought out the fact that since the a. c. enclosed arc was introduced, it has been operated at various amounts of current and energy. The relative number of 6.6, 7.0 and 7.5 ampere a. c. enclosed arcs in use does not indicate what the public generally considered a fair equivalent of the open d. c. arc because of the advantage to the public of reduced rates which followed the introduction of the enclosed arc. At what amount of current and energy the a. c. enclosed arc should be operated in order to be acceptable as the equivalent of the 9.6 ampere d. c. open arc, is largely a matter of opinion.

Judging from opinions of a considerable number of experts, including members of our own staff, it seems to be established that what the 7.5 ampere a. c. enclosed arc lacks in intensity of illumination it just about makes up in those elements which cannot be properly evaluated and that, where prejudice does not exist, due to differences in operating costs or for other reasons not based on service itself, the 7.5 ampere a. c. enclosed arc ordinarily replaces with reasonable satisfaction the 9.6 ampere d. c. open arc as a street illuminant.

Various comparisons made by the staff appear to show that the 6.6 ampere a. c. enclosed arc is about 18 or 20 per cent inferior to the 7.5 ampere arc as a street illuminant. It therefore follows that the position of the 6.6 ampere a. c. enclosed arc is about the same amount below that of the 9.6 ampere d. c. open arc when the latter and the 7.5 ampere a. c. enclosed arc are considered as fair equivalents. Similar comparisons show that the enclosed arc lamps as operated at 7.0 amperes during the inspector's tests are about 10 per cent inferior to the 9.6 ampere d. c. open arc as street illuminants.

PROVISIONS OF STREET LIGTHING CONTRACTS.

The cause of these proceedings seems to have been the general looseness of the terms of the contract involved and the failure of the parties concerned to come to an understanding as to the meaning of those terms of the contract which bear upon the service to be rendered. This condition grew up, not in Waupaca alone, but seems to have been general throughout

the country. The first important attempt to depart from this state of affairs was made about 1894 when the National Electric Light Association went on record as advocating the specification of watts consumed by the lamps; but it was soon discovered that with the advent of newer types of lamps watts alone would not measure the quality of service or the cost thereof. In 1907, a committee of the National Electric Light Association, recognizing this fact, reported, as we have already quoted, as follows:

"Inasmuch as the lighting of streets by contract is a matter of illumination produced rather than of apparatus employed, the terms used in specifications should be in terms of illumination and not of energy consumed; that the individual lamp of each class should be the unit of the number paid for; and that the average illuminating power of each unit should be comparable with and have a value equal to a known standard at a proper relative distance."

Although the committee has stated that "the specification should be in terms of illumination and not of energy consumed" it does not seem that it was the intention to convey the idea that the rates to be paid should be based upon illumination, since the next clause states that "the individual lamp of each class should be the unit of the number charged for." Some have gone so far as to state that payments for lighting should be based upon the intensity or quantity of illumination produced. That the committee had this in view, might be concluded from its statement that the lighting of streets is a matter of illumination produced rather than of apparatus used and that the specification should be in terms of illumination. It seems, however, more logical to assume that it was the intent of the committee to substitute the intensity of illumination for the amount of energy used as a qualification of the normal performance of whatever type of lamp might be chosen.

During recent years much has been done by the illuminating profession in its effort to clear up the matter of indefiniteness of street lighting contracts. From a consideration of such progress as has been made, it is believed advisable to hold the recommendations of the committee not as final, but as a progress report in the transition from contracts rating lamps only on power consumed to the form which may later be recognized as in general the best. Such conclusions as can be drawn from the various aspects of street lighting as it is rendered today

seem to indicate that, while the quality of street lighting is one of the first considerations for a city entering into a street lighting contract, the cost of service is also very important and that this cost, and consequently the rate to be charged regardless of what unit it may rest upon, are not intimate functions of the intensity of illumination produced. It therefore seems that any schedule of street lighting rates which attempts to follow closely variations in illumination produced will fall short of being satisfactory through its failure to recognize the cost of producing service.

Equitable rates for street lighting, as well as for any other service of public utilities, will be based most properly upon the cost of service and those units for which payment is made should be employed which most exactly measure this cost. In ordinary commercial lighting service it has been proven that various forms of rate schedules based on the kilowatt hours delivered have been most equitably and successfully applied. It does not necessarily follow that such forms of rates should apply to street lighting service. Objection, as raised at various times to the specification of energy consumption in street lighting contracts, has already been referred to. This objection is to some extent, under certain circumstances, a reasonable one, since the cost of delivering energy to some lighting systems is only one of the important items of the total cost. Where, however, the city owns and operates the distribution system with its light producing units, the cost of service rendered by the utility is practically limited to the cost of delivering energy to the system. It naturally follows that under these conditions, as in commercial service, the energy delivered is a fair measure of the cost of service. In most cases, however, the utility contracts to furnish and properly maintain and operate the appliances by which light is produced upon the street as well as to supply the required energy, and in such instances the specification of wattage consumed, if it is intended to measure the amount to be paid rather than to merely designate a normal operating condition of the type of equipment used, may as inadequately serve as a measure of payment as may a specification of the intensity of illumination.

Utilities contracting to furnish street lighting service usually find it necessary to make considerable investment in special street lighting equipment useful for no other class of service,

and the kind of such special equipment is largely dependent upon the requirements established by the city. Inadequacy of various street lighting contracts, it seems, has been due not only to weakness in expressing the terms of the agreement, but also to failure to recognize the mutual responsibility of both interested parties for the form of the special equipment employed. Since, under most conditions of street lighting, the cost of energy produced is one important element of the total cost and the cost of operating the special apparatus for converting electrical energy into radiant light is another, and since, for these reasons, neither units of energy supplied nor of illumination produced properly measure the final cost of producing light, it appears that the unit which most successfully combines both elements will most adequately measure the payment for the service delivered.

Before deciding what that unit may be, it may be well to first examine the need of such a unit. As a rule the city is the only user of street lighting service, and as the total cost of such service must first be determined before a fair rate per unit can be established, the logical conclusion naturally follows that payment can as well be made for the service of the system as a whole as for a unit of such service, provided there is to be no flexibility in the extent of the system contracted for. But such flexibility must ordinarily be provided for to meet the changeable requirements of the city. Since these changes consist chiefly of the addition of lamps and the relation of the number so added to the total number provided measures fairly well the increased cost to the utility, it is believed that the individual lamp will, at the present time, most satisfactorily serve as the measure of payment for the system as a whole, and especially for the amount of service added above the original provision of the contract.

If contracts carefully specify the kind of lighting equipment to be used, the original extent of the system, the amount to be paid for the system as a whole or the fractional part thereof as measured by the number of the lamps, and specify a reasonable rate per lamp for all additions to the system, it would seem that, insofar as cost of service and payment therefor are concerned, ample provision will be made. However, it is well known that the quality of lighting service may vary greatly among lamps of the same type and this variation may be due

to several factors. It is therefore necessary that the contract should carefully state the conditions under which the lamps shall operate in order to render normal service.

It is not as essential, in this connection, that those specifications should determine the character of the product desired, namely illumination, as it is that they should definitely express those factors upon which the manufacturers of the equipment and the operators of the lighting system must rely in determining the proper adjustment and maintenance of the individual lamps that they may produce illumination of the proper character.

If any attempt were made to state just what those factors are, as applied to street lighting methods as a whole, considerable disagreement thereon would undoubtedly arise, depending in nature chiefly upon what kinds of systems were in mind.

In the case of tungsten street lighting, the kind of lamp and its auxiliary equipment having been specified and the lay-out of the system having been incorporated in the contract or made a supplement to it, it is quite probable that a specification of the energy supplied to the individual lamps will as adequately insure normal and uniform service as will any agreement that can be arrived at. In the case of arc lamps, it is probable that such provision as to energy consumption, in addition to the determination of the type of lamp to be used and the scheme of lay-out to be followed, will not in all cases ensure normal operation of the system, but additional provision may be necessary as to the amount of current flowing, the volts supplied at the arc, and other conditions. Just what these specifications should be for various kinds of illuminants for street lighting, we can not consider in detail here. For those types which have established their usefulness as street illuminants, the essential characteristics as to adjustment and operation are fairly well determined and can ordinarily be readily discovered by the parties interested.

In concluding this discussion of the essential elements of street lighting contracts, it may be said that because the rates to be paid cannot be equitably based upon the amount of illumination, and because of the lack of flexibility in changing from one kind of a lighting system to another, for which the utility can be held no more responsible than the city, the preliminary investigation leading to a selection of the system to be

employed should cover both the relative illuminating merits and cost of operation for the various systems under consideration.

As the proper illumination of streets is a matter of great importance and as contracts therefor usually involve the expenditure of considerable sums of money, sufficient professional skill, proportionate of course to the importance of the undertaking, should ordinarily be engaged in the preliminary investigation by the parties to the contract, to ensure the adequacy of the system selected to meet the needs of the community. The proper system having been chosen and a proper description of the same having been incorporated in the contract to ensure that equipments selected will be installed, there principally remain to be specified the conditions under which the system will deliver normal service, the rate to be paid, and provision for outage.

Since any system of street lighting so far designed has not been entirely free from outage of individual lamps, it seems that provision should be made that for a reasonable amount of outage, which amount should be specified by the contract, penalties will not be attached, but for outage in excess of this amount some deduction from the contract rate should be provided for.

Provision concerning such illuminating characteristics of the lamps as are possible of accurate and reliable measurement might under some circumstances be properly made in the contract, but in the present state of the street lighting art and with such devices for measuring illumination as are now available, it seems that the complexity of the photometric measurements necessary for a complete comparison of the relative performance of street light units in actual service is so great as to be ordinarily prohibitive for periodic inspection of service. What specifications of illumination might safely be incorporated in a contract with due regard to the rights of both parties, the Commission is not prepared to say at this time. This is a matter upon which many well known experts disagree. But if due regard is had for other qualifications of street lighting systems as outlined above, it is believed that little difficulty will arise between the parties to the contract as to the character of service to be furnished and paid for.

LEGAL RIGHTS.

While we have been enabled to arrive at some idea of the difference in the quality of illumination produced by the several lamps from the various facts presented, attendant circumstances, in this case, render a decision placing a money value upon the damage to the respondent in accord with the difference in the illuminating values of the arcs impossible.

It is the contention of the attorneys for the respondent that these proceedings do not involve a determination of a reasonable rate of compensation for the street arc lighting now or heretofore furnished to the respondent city and that, were this the sole question at issue, it should result in a reduction of price to the city from the price now being paid. The argument of the respondent confines itself almost entirely to the law in the case. On the other hand, it is argued by the applicant that these proceedings do not involve technicalities of law, but the determination of all the questions in dispute between the respective parties.

The circumstances under which this case was removed from a court of law in which the contest was started and was brought before the Commission by stipulation of both parties, their request that the Commission decide the differences between the parties as to efficiency and commercial value of the street lights and determine the liability of the city and company in view of all the facts and circumstances, as well as the terms of the contract and the principles of law, all lead us to believe that the reasonableness of the practices under the contract is a proper subject for consideration by the Commission in this case.

One of the important questions to be disposed of upon this view of the case relates to the legal rights of the city of Waupaca, which rights the electric light company claims the city has lost because of its conduct subsequent to the change in the street lighting system.

The Waupaca Electric Light & Railway Company contends that, regardless of the question of fact as to whether damage has resulted to the city from the change in the installation of street lights, the city is precluded, by estoppel or waiver, from setting up any claim for damages, by reason of its acquiescence in the use of the new lights and its payment of all bills presented to it

from 1904 to January, 1910. Upon this point of estoppel or waiver, the city of Waupaca sets up the facts that in paying the first six bills of the electric light company after the change in installation, it made a written reservation of its rights under the contract; that the city was not acquainted with the facts as to the comparative efficiency of the old and new lamps and was not to be held to a knowledge of such facts; and that the city took no formal action looking toward a ratification or a waiver of its rights, and the doctrine of estoppel is not to be invoked against a municipal corporation by reason of its mere silence.

The equitable doctrine of estoppel, by which a party is precluded from denying that which his words, actions, or mere silence have caused another person to believe, when a denial would cause injury to that person, is not applied to municipal corporations with the same strictness as to individuals. While cities are sometimes held to be estopped by their acts, as to matters not clearly beyond their powers, this is true only in very strong cases. The doctrine of the Wisconsin supreme court upon this point is stated in *Ashland v. Chicago & N. W. R. Co.* 1900, 105 Wis. 398, 405, as follows:

"Testimony to establish an estoppel against the city must be clear, distinct, and of such a character as to amount to a fraud, to permit it to claim otherwise. The rule is never applied as freely against the public as against private persons. It is only when some affirmative action has been taken, or when there has been some great negligence or delay with relation to some matter upon which the parties have a right to rely, that the court will be authorized to apply the rule, so as to prevent manifest injustice or wrong. Such injustice or wrong must be firmly established by facts and circumstances that leave no room for doubt or controversy." See also *Davis v. City of Appleton,* 1901, 109 Wis. 580.

It seems clear from a review of the facts of the present case, which have been set forth in the first pages of this opinion, that no estoppel can be found if the rule quoted above is to be applied. If the city in the present case were attempting to claim the contract was annulled by the company's acts, and to escape all liability, it might well be argued that so unjust a claim should be met by the doctrine of estoppel. But all the city claims in this case is the amount of damages which may be justly due it by reason of the company's deficient performance of its contract. Not only is there a lack of such gross negli-

gence as the Wisconsin rule of estoppel against municipalities requires, but it would seem that the city authorities were, at least at the outset, very careful to protect the city from estoppel, for they expressly reserved all rights of the city under its contract with the company. Nor is there to be found in this case such a reliance on the city's supposed acquiescence in the light furnished, to the detriment of the company, as entitles the latter to set up an estoppel. "In order to create an estoppel *in pais* the party pleading it must have been misled to his injury; that is, he must have suffered a loss of a substantial character or have been induced to alter his position for the worse in some material respect." 16 Cyc. 744. The city in the present case is perfectly willing to pay for the light furnished it by the company; this is not a case of attempted rescission of the contract so that company will be left without compensation for that which it has furnished. The only question is whether the company shall receive for the substituted service the same compensation which it was to have received for another service. It will be no hardship on the company to be obliged to take for the new service what that service is worth, instead of the contract price of a different service.

There is another doctrine of the law, however, which may be invoked with better chance of success in support of the electric light company's contention, and this is the ordinary doctrine of waiver as found in the law of sales. This rule is stated as follows by the supreme court of this state in *Charley v. Potthoff*, 1903, 118 Wis. 258, 264:

> "One who accepts goods known to be tendered as satisfying a contract or warranty will be deemed to have waived defects therein which are then known to him, or of which he could not escape knowledge save by failing to observe that which would be apparent to one exercising ordinary care, unless he objects then or within a reasonable time."

To establish a waiver, the electric light company need show neither the great negligence on the part of the city which is required for estoppel, nor any reliance by the company upon the acquiescence of the city to the detriment of the company. *Pabst Brewing Co. v. Milwaukee,* 1905, 126 Wis. 110; *Smith v. Burns Boiler & Mfg. Co.* 1907, 132 Wis. 177; *Swedish American Nat. Bank v. Koebernick,* 1908, 136 Wis. 473. But the doctrine of waiver has no application where the defects in the articles fur-

nished are not such as should be discovered by ordinary inspection. *Buffalo Barb Wire Co. v. Phillips,* 1886, 67 Wis. 129, 132; *Waupaca Electric Light & R. Co. v. Milwaukee Electric R. & Light Co.* 1901, 112 Wis. 469, 472. And if there are such latent defects as justify a failure to object immediately, the right to recover damages for the defects is not lost by delay in notifying the seller, though the right to rescind the contract may be so lost.

"If a person purchases property with a warranty as to quality or fitness, and there are latent defects therein which come to his knowledge after taking it into his possession, delay in calling the attention of the vendor thereto, in the absence of some contract to the contrary, only affects his right to rescind the sale, return the property, and sue to recover back the purchase money and perhaps special damages if there be any. The defects claimed to have existed in the generator being unquestionably of latent character, mere delay in notifying respondent of the condition of the machine, which developed upon a trial thereof, was wholly immaterial to the right of appellant to recover damages for breach of warranty if there were such breach." *Waupaca El. Light & R. Co. v. T. M. E. R. & L. Co.* 1901, 112 Wis. 469, 473.

An application of the foregoing general principles to the present case would seem to indicate that no waiver is to be found in any act or lack of action on the part of the city of Waupaca. Certainly during the time the city paid its bills subject to the express stipulation that all of its rights under the contract were reserved, it sufficiently apprised the company of its unwillingness to accept the service furnished as a complete service. That such an express reservation of rights is sufficient to prevent the establishment of a waiver is stated by the Wisconsin court in *Olson v. Mayor,* 1883, 56 Wis. 551, 556.

It may be urged, however, that the discontinuance of the written reservation of rights after the first six payments indicated that the city had determined not to stand upon its rights any longer. Whether this is true is to be determined from the evidence, the question being: Did the city actually intend, or did its actions reasonably cause the company to believe it intended, at the time it discontinued making the express reservation, no longer to insist upon whatever deficiency there might be in the performance of the contract as a ground for damages; or did the city discontinue the express reservation of rights because

it believed it had done enough to notify the company that the change in installation was not acquiesced in? The latter result would seem reasonable. If the contract was breached at all, the direct cause of all the subsequent damage occurred at the moment the installation was changed. Immediately the city, by the written reservation of its rights, notified the company that it was not waiving its rights under the original contract. It is entirely reasonable to say that when the city expressly protested against the change in installation it intended to reserve its right to recover for all subsequent damage resulting from the single act of change, and not merely for the damage done during the month preceding the reservation. A person having a contract right against another is ordinarily not excluded from asserting that right until the statute of limitations has run against it. If he once negatives the idea that he has waived the right, his mere failure to sue to enforce it, for any period short of the statutory period, should not raise a new waiver.

The fact of ordering extensions of the street lighting system might very well be evidence of waiver if the city were claiming that the contract was a nullity, but in this case the extensions were ordered pursuant to the contract which still binds the city and the company, and if at the time of the installation of new lights by the company the city did not waive its rights under the original contract, it was under the original contract that the extensions were ordered. The city no more accepted as complete performance the lights furnished on the extensions than those furnished on the original installations. It had once for all reserved its right to seek damages for the change in installation, and, having made that reservation, continued executing the contract on its own part. It was merely deferring the bringing of a suit, or the assertion of a counterclaim, until such time as it should see fit to do so, and this it had a right to do, up to the time fixed by the statute of limitations.

The views which have been expressed above are supported by a review of a considerable number of cases involving the question of waiver of rights under public service contracts. Only a very brief survey of these cases can be attempted at this time.

Among the most important of these cases is that of the *Monroe Waterworks Co. v. Monroe,* 1901, 110 Wis. 11, where in an action against the city for accrued hydrant rentals, the city's counterclaim for defective service was held to have been lost

by waiver. It is claimed by the electric light company in the present proceeding that the *Monroe* case controls the present one; but the important difference between the two cases is disclosed by the following paragraph taken from the opinion in the *Monroe* case (p. 22):

"It is shown conclusively that the city knew of such imperfect service at the time so rendered, and also when called upon to pay the bills presented. It never gave official notice or made any claim that such services were not performed in accordance with the ordinance. Regularly each six months it paid the amount stipulated without protest, and as in full settlement of six months' service theretofore rendered."

In the present case it certainly is not shown conclusively, if it is shown at all, that the city knew of the deficiency of the service. The matter was widely discussed in Waupaca, and there were differences of opinion as to whether the new lights were as good as the old ones, but it remained for the careful examination of engineers in the present proceedings to really determine whether there was a failure to fulfill the contract. But, even if the city had knowledge, it did not "pay the amount stipulated without protest," and it did "give official notice that such services were not performed in accordance with the ordinance." Apparently uncertain, as it had reason to be, whether the company had complied fully with the contract, the city, in paying the bills, expressly reserved all rights arising under its contract. This was done six times, during the period immediately following the change in installation, and the signature of officers of the electric light company immediately below the written reservation of rights, by way of receipt for the money paid, proves that such reservation came to the knowledge of the company.

While there are many cases in which cities have been held to have waived their right to rescind public service contracts, the cases are very few in which the right to claim damages for deficient performance is held to have been lost. A strong case on this point is that of *Sykes v. City of St. Cloud,* 1895, 60 Minn. 442, where, in an action for hydrant rentals, the city's defense of insufficient service was held to have been waived as a bar to the entire action, but it was also held that the right to recoup in damages was not waived, and a rule of damages was stated, according to which the city was allowed to recover. The acts

of the city which in the *Sykes* case constituted a waiver of the right to rescind but not of the right to damages, consisted in permitting the company to make improvements without objection, in accepting the service rendered by the company with full knowledge of the imperfections therein, and in not merely acquiescing in the service but actually taking part in tests of the plant.

In the case of *Joplin Waterworks Co. v. Joplin,* 1903, 177 Mo. 496, the city's acceptance of poor service for over a year is held to be a waiver of the right to rescind the contract, but the court allows the city a counterclaim for over a thousand dollars of damages due to the poor service. A similar doctrine is laid down in *Wiley v. Inhabitants of Athol,* 1890, 150 Mass. 426; *Omaha Water Co. v. Omaha,* 1907, 156 Fed. 922; and *City of St. Charles v. Stookey,* 1907, 154 Fed. 772. The same view is apparently taken by the courts in the following cases, though the point is not necessarily involved in the cases: *Brush El. Lt. & Power Co. v. Montgomery,* 1896, 114 Ala. 433; *Burlington Waterworks Co. v. Burlington,* 1890, 43 Kan. 725. The case of *Lamar Water & El. Lt. Co. v. Lamar,* 1897, 140 Mo. 145, is one of the few cases where a waiver of the right to claim damages is found by the court. Acceptance of the water furnished for a year or more, without any complaint, is the ground of waiver in that case.

A number of cases, some of which are cited by the electric light company in this proceeding, involve the question of waiver of the right to rescind the contract, without any reference to a claim for damages. Such cases are those of *Creston Waterworks Co. v. Creston,* 1897, 101 Ia. 687; *Marion Water Co. v. Marion,* 1903, 121 Ia. 306; *Aurora Water Co. v. Aurora,* 1895, 129 Mo. 540; and *Central Electric Co. v. Street Lighting District,* 1904, 71 N. J. L. 403. These cases have no bearing upon the present question, for it is not to be contended that the right to claim damages is waived by circumstances as slight as those which will bar the harsher remedy of rescission.

The result of this examination into the legal situation involved in the present case is that no waiver of the right to damages, if any existed, can fairly be deduced from the acts or the attitude of the city of Waupaca. In many of the cases cited the conduct of the cities much more strongly suggested a waiver than did the conduct of the city of Waupaca in this

case, yet the courts have been very reluctant to find in any of these instances a waiver of the right to damages. It would hardly be consistent with the trend of judicial authority to determine upon the facts of the present case that the city's right to damages, if any such right exists, has been lost. This conclusion is, of course, entirely independent of the question whether the facts of this case actually show the existence of damage.

COMPARATIVE OPERATING COSTS OF OPEN AND ENCLOSED ARCS.

We do not believe that either the petitioner or the respondent contends that the cost of operating the 6.6 amperes a. c. enclosed arc system is as great as for the 9.6 ampere d. c. open arc. In fact, it seems to be generally admitted that the cost of operating the latter is considerably more per lamp than the cost of operating the former and that this was one of the most vital reasons for the general abandonment of the open arcs in this country upon the commercial introduction of the enclosed type. Examination of the petitioner's investment, income and operating expenses, shows that the net earnings of the entire business, or of street lighting as a part thereof, are hardly sufficient, even under the present method of street lighting, to furnish what would ordinarly be considered adequate, much less attractive, return upon the investment involved.

Whatever difference there may be in the investment necessary for the two kinds of arc systems seems to be in favor of the a. c. enclosed arcs, since the investment in distribution system equipment is in either case about equal, but the investment in plant equipment for the d. c. open system is ordinarily greater, as special generators are required, useful for no other purpose. The demands on the station and the power consumed are also somewhat less for the a. c. system when operated at 6.6 ampere and are no greater when operated at 7.3 amperes than for the 9.6 ampere open arc.

The following are several estimates of the saving derived from the use of the a. c. system. These estimates all cover about the same elements, namely cost of carbons, trimmings, etc., but not interest on the investment or cost of power.

	Saving per lamp per year
Louis B. Marks, testim. in Col. Spr. Ltg. controversy..	$10.00 to $15.00
W. D. A. Ryan " " " "	7.85
Louis Bell (book: Art of Illumination).....	8.00
Jas. R. Cravath (witness for city of Waupaca).....	10.58
Prof. Robb, paper before N. E. L. A. 1900.....	10.00
Utica Electric Co. discussion of above paper 1900....	9.74
Manufacturing company	5.40 to 7.70
" "	9.60

These figures indicate a general opinion that the cost of operation, as regards matters involving only the lamps and not the plant equipment, is about $10 more for the open d. c. than the enclosed a. c. arc. It is quite clear, therefore, that were the Waupaca Electric Light and Railway Company furnishing 9.6 ampere d. c. open arcs, the operating expense would be increased by at least $10 per lamp per year above the costs determined for the year ending June 30, 1910, and that the applicant would not be earning its operating expenses, to say nothing of a fair return for interest and profit. In this respect, if the cost of service in 1903 was about the same as it now is, it seems that the contract entered into at that time was not entirely a reasonable one as between both parties thereto, but that street lighting was a burden to the business if the business as a whole is entitled to adequate return.

GENERAL CONCLUSIONS.

Judging from the tests of the Waupaca lamps by our staff in April, 1911, which was since the lamps were overhauled and readjusted during the preceding January and February, the deficiency for which the applicant is responsible is so small as to come within the limits of a reasonable difference of judgment based on all the facts in the case. And, since the light from these lamps as they are now operated is, at most, only a point or two in desirability below that of the 7.5 ampere a. c. enclosed and the 9.6 ampere d. c. open arcs, and in view of other facts, it does not appear that there can be at this time an equitable reduction of the rate paid for this service.

For the period from March, 1910, when the current was raised from 6.6 to 7.0 amperes, to January, 1911, when the lamps were readjusted, it is probable that the service was a little poorer than it was found to be when tested in April, 1911, and

probably somewhat better than it was prior to March, 1910. The service may have been close to either limit, or it may have been anywhere between.

For a period prior to March, 1910, the Waupaca a. c. lamps were operated at about 6.6 amperes. There is no claim that the quality of service was better than this. There is some indication that at times the service may have been worse, but upon this point there is also no conclusive evidence.

When the difference between the quality of service of 6.6 ampere a. c. enclosed arcs and 9.6 amperes d. c. open arcs, normally operated, is properly adjusted, the deficiency for which the applicant might be responsible is so small and of such character that we are unable to see how it can be made the subject of monetary damages, particularly in view of the fact that the rates paid by the city for the services involved are barely sufficient to compensate the applicant for the present a. c. enclosed lamps, and considerably below the cost of the 9.6 ampere d. c. open lamps.

The Commission has proceeded in this investigation upon the assumption that not only the legal rights of the parties under the law of contracts, but all the considerations of equity and justice which may be found to exist in the case are to be considered in reaching the final result.

It is the finding of the Commission, therefore, as the result of the investigation undertaken upon this joint application, that the city of Waupaca, under the circumstances, has not suffered such damage by reason of the substitution of the a. c. enclosed lamps for the d. c. open lamps, as to entitle it to claim any reduction from the contract price of the street lighting service furnished it by the Waupaca Electric Light & Railway Company from the time of the change in the installation of street lamps up to the present time.

EMERALD CO-OPERATIVE CREAMERY ASSOCIATION

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Decided Feb. 28, 1912.

Petitioner alleges unjust and unreasonable charges on a carload shipment of soft coal from Superior to Emerald, Wis., on which respondent, the C. St. P. M. & O. Ry. Co., charged a rate of $1.40 per net ton. The M. St. P. & S. S. M. Ry. Co., a competing line, had a rate of $1 per net ton in effect at the same time for similar shipments. This rate was established by the respondent after the shipment in question had moved.

Held: The rate exacted was unusual and exorbitant and a reasonable rate for the services rendered would have been $1 per net ton, as subsequently established. Refund is ordered on this basis.

The petitioner is an association engaged in the manufacture of creamery butter at Emerald, Wis. It alleges that on Oct. 11, 1911, there was shipped to it at Emerald from Superior, Wis., over the lines of the respondent, a car of soft coal; that at the time said shipment moved the rate on soft coal in carload lots, minimum weight 40,000 lbs., from Superior, Wis., to Emerald, Wis., was $1.40 per net ton; that the Minneapolis, St. Paul & Sault Ste. Marie Railway Company had in effect at the same time a rate of $1 per net ton, minimum weight 40,000 lbs., as per tariff G. F. D. No. 9925; that petitioner believed that respondent had the same rate as its competitor and consequently shipped said car over respondent's line and paid charges thereon in the sum of $35; that after said shipment was made, petitioner learned that in supplement 2 to Chicago, St. Paul, Minneapolis & Omaha Railway Company's I. C. C. No. 3749, effective Jan. 8, 1912, there was an established rate of $1 per net ton from Superior to Emerald, Wis.; that if this rate had been applied to above shipment, the charges thereon would have been $25, and that the rate charged was unjust and unreasonable. Wherefore, petitioner prays that respondent be required and directed to refund to it the said sum of $10.

The respondent railway company, answering the petition, admits all the formal allegations thereof and alleges that, if

authority is given to it to extend the rate of $1 per ton to said shipment, such charge will be agreeable to it. The claim was presented upon the pleadings, vouchers, documents, and schedules on file.

The facts in this case are similar to those considered in *Barnes v. C. M. & St. P. R. Co. et al.* 1910, 4 W. R. C. R. 478, where it was said:

"Obviously the rate exacted for the shipment in question was unusual, as at the time of the movement of same a much lower rate was in effect on a competing line. The respondents could not expect to participate in the traffic, except upon the same terms as those granted by their competitor. The rate was also exorbitant. Considering the various factors involved in determining a reasonable charge for the transportation services rendered, we are convinced that a rate of 5 cts. per 100 lbs. would, perhaps, under the circumstances of this case, have been ample compensation to the respondents for such services."

We therefore find and determine that the rate of $1.40 per ton for the aforesaid shipment of soft coal from Superior to Emerald, Wis., exacted of the petitioner by the respondent, is unusual and exorbitant, and do further find that a reasonable rate for such shipment was that provided in supplement 2 to Chicago, St. Paul, Minneapolis, & Omaha Railway Company's I. C. C. No. 3749.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, St. Paul, Minneapolis & Omaha Railway Company refund to the petitioner the sum of $10.

A. P. NELSON, ET AL.

vs.

NORTHERN PACIFIC RAILWAY COMPANY.

Decided Mar. 1, 1912.

Respondent, the Northern Pacific Railway Co., brought action against the Commission in the circuit court of Dane county, Wis., under sec. 1797—16 of the Statutes to set aside an order (7 W. R. C. R. 764) requiring respondent to run an additional passenger train on its line between Grantsburg, Wis., and the western boundary line of the state, and to provide an adequate station building at Grantsburg. Additional testimony to that presented upon the hearing before the Commission was offered at the trial and the court transmitted a copy of such evidence to the Commission for consideration. The new testimony is directed in the main to the cost of additional service required by the order and the volume of passenger traffic to be served along the line in question, and shows that the prospective revenue to be derived from the operation of another train would probably not be remunerative at first.

Held: Segregating a branch line of a railway system for the purpose of ascertaining the cost of operation as a factor in the basis upon which to predicate the amount of service that should be rendered on such line, is a legitimate and proper method of arriving at one of the important, but not necessarily controlling elements in determining the amount of service reasonably required to subserve the public convenience. Every part of a railroad system can not be expected to be profitable. There are many short lines acting as feeders to main lines which could not be operated independently of the main lines. In determining the reasonableness of any branch line service, the relation of the branch line to the system as a whole, the needs of the public tributary to the branch, the character and volume of traffic, both present and prospective, the cost of operation and its effect upon the revenues of the entire system must be considered, and every factor given such weight as in the light of all the circumstances the situation warrants. A railway company is generally in duty bound to furnish reasonably adequate service, regardless of cost, and there is a minimum of service that must be rendered on every line, less than which would be a breach of public duty on the part of the carrier. As there is nothing contained in the testimony which modifies the view of the Commission as expressed in the decision to which the order in question (7 W. R. C. R. 764) is attached, the Commission declines to alter, modify, amend, or rescind its former order.

On Sep. 15, 1911, an order (7 W. R. C. R. 764) was entered in the above entitled proceeding requiring the respondent rail-

way company to run an additional train carrying passengers on its line between Grantsburg and the western boundary line of the state of Wisconsin, so that the citizens of Grantsburg and vicinity might have reasonable passenger service twice daily each way, except Sunday, and that an adequate station building be provided at Grantsburg which should be reasonably adequate for the passenger and freight traffic obtaining at such station. Thereupon an action was brought by the Northern Pacific Railway Company against the Commission, under sec. 1797–16, to vacate and set aside such order, on the ground that the service fixed in such order was unreasonable.

Upon the trial of the case in the circuit court of Dane county, testimony was offered in addition to that contained in the proceeding before the Commission, which was found by the court to be different from that offered upon the hearing before the Commission. The court transmitted a copy of such evidence to the Commission for consideration.

After careful review of the testimony given upon the trial in court, we are constrained to adhere to our ruling in this case. The new testimony is directed in the main to the cost of the additional service required by the order and the volume of passenger traffic to be served along the line in question, and shows that the prospective revenue to be derived from the operation of another train would probably not be remunerative at first. While it may be true that such service might be rendered at a loss in the beginning, yet it is not infrequent that such is the case upon branch lines. Every part of a railroad system can not be expected to be profitable. There are many short lines acting as feeders to main lines which could not be operated independently of the main lines. Therefore, in determining the reasonableness of any branch line service, the relation of the branch line to the system as a whole, the needs of the public tributary to the branch, the character and volume of traffic, both present and prospective, the cost of operation and its effect upon the revenues of the entire system, must be considered and every factor given such weight as in the light of all the circumstances the situation warrants.

Segregating a branch line of a railway system for the purpose of ascertaining the cost of operation as a factor in the basis upon which to predicate the amount of service that should be rendered on such lines, is a legitimate and proper method of

arriving at one of the important, but not necessarily controlling elements in determining the amount of service reasonably required to subserve the public convenience. The other elements mentioned can not be left out of consideration, for a railway company is generally in duty bound to furnish reasonably adequate service, regardless of cost.

The fact that Grantsburg is the county seat of Burnett county and the business center of practically all the population tributary to the line in question, which at present is almost precluded from the use of the line because of the time of the arrival and departure of trains at Grantsburg, can not be ignored. Furthermore, in comparing the service with that rendered under somewhat similar conditions at Frederic, a station on the line of the M. St. P. & S. S. M. R. Co., which is but seventeen miles distant and a less important station from a business standpoint than Grantsburg, it is obvious that if the service at Frederic is reasonably required for public convenience, the service at Grantsburg is an unreasonable one. The schedule upon which the train is operated upon the respondent's branch line in question is such that it inconveniences a greater number of passengers than it conveniences. Of course, stations on branch lines can not, in the very nature of things, obtain or reasonably demand equal service with stations upon main lines, though the former station may be more important than the latter; nevertheless, there is a minimum of service that must be rendered on every line, less than which would be a breach of public duty on the part of the carrier. In the instant case we are convinced, after a careful consideration of all the facts and circumstances involved, that the existing passenger service on the branch line in question is wholly inadequate to meet the reasonable requirements of the public, and that the intrastate service alone requires an additional train to be so operated as to enable the patrons of the road to reach Grantsburg, transact their business, and return to their homes on the same day.

We have not deemed it necessary to review the testimony here at length, as there is nothing therein contained which modifies the view of the Commission as expressed in the decision to which the order in question is attached. For the reasons given in such decision, as well as those briefly noted here, the Commission declines to alter, modify, amend, or rescind the order under consideration.

ALMA ROBB, ET AL.
vs.
GREEN BAY TRACTION COMPANY.

Submitted Sep. 26, 1911. Decided March 2, 1912.

Petitioners complain of unnecessary noise and disturbance caused by the operation of respondent's cars at the intersection of Monroe avenue and Polier street in Green Bay, Wis., and pray that the Commission order respondent to desist from creating the annoyance. The cars make a loud and disagreeable noise when moving rapidly around the curve, greatly disturbing the residents in the vicinity. The noise rarely occurs when the tracks have been lately greased. It is found that the gauge in the curve is somewhat less than the standard gauge of the track each side of the curve, and that the guard rail is considerably worn along its entire length.

Held: It is recommended that the gauge in the curve be broadened and the outer rail elevated, but if it is found that greasing alone will eliminate the noise, no structural change will be necessary. Respondent is ordered to take such steps as may be essential to eliminate the objectionable noises. The method of relief is left optional with them. Three months is deemed a reasonable period within which to comply with this order.

The petition shows that the petitioners are residents of the city of Green Bay, Wis., and reside at or in the vicinity of the intersection of Monroe avenue and Polier street in said city; that the Green Bay Traction Company is the owner of and engaged in the operation of a street and interurban railway system in Green Bay, and one of its lines of street railway is maintained and operated on said Monroe avenue and Polier street in said city of Green Bay; that at said intersection of Monroe avenue and Polier street the cars of said Green Bay Traction Company, when operated, make much unnecessary noise and disturbance, to the great annoyance of said petitioners, and so that said noise causes much unnecessary suffering and discomfort to said petitioners; that said cars are run over said line at said intersection every five minutes from six o'clock a. m. until eleven o'clock p. m. of each day, and make such a great and disagreeable noise thereby that the same have become a public nuisance. Wherefore, petitioners pray that said Green Bay Traction Company be required to answer the charges herein, and

that after the hearing and investigation an order be made commanding said Green Bay Traction Company to desist from making the noise complained of, and for such other and further order as the Commission may deem necessary and just in the premises.

Answering the complaint, the respondent admits that the petitioners are residents of the city of Green Bay and reside at or in the vicinity of the intersection of Monroe avenue and Polier street in the city of Green Bay; admits that it is the owner of and engaged in the operation of a street and interurban railway system in Green Bay and that one of its lines of street railway is maintained and operated on said Monroe avenue and Polier street in said city of Green Bay; admits that its cars pass the intersection of Monroe avenue and Polier street in the city of Green Bay at intervals of about five minutes from about six o'clock in the morning until about eleven o'clock in the evening of each day, and denies each and every allegation in said complaint except as hereinbefore expressly admitted. Further answering the complaint, respondent alleges that its tracks, curves and track appliances at the said intersection of Monroe avenue and Polier street in said city are new and of the most approved pattern and design and are laid according to the most approved engineering practice and in strict compliance with the direction of the city engineer of said city; that they are laid and constructed in and as a part of a new asphalt pavement recently completed on said Monroe avenue, and are a part of a new and permanent improvement of said city; that said curves and tracks at the said intersection of said streets are kept greased and cared for and are maintained and the cars of respondent operated thereon in the most careful and proper manner known in the operation of street cars on city streets, and that if any noise results from the operation of cars over such tracks, it is only such noise as is necessarily incident to the running of cars thereon and such as can not be avoided. Wherefore, respondent prays that the complaint be dismissed.

A hearing was held on Sep. 26, 1911, at the city hall in Green Bay. *T. P. Silverwood* appeared on behalf of the petitioner and *B. L. Parker* appeared for the respondent.

Witnesses for the petitioners testified that many of the cars operated by the street railway company made an exceedingly disagreeable and loud noise when moving rapidly around the

curve at the intersection of Monroe avenue and Polier street, especially the large interurban cars going to De Pere. They stated that the noise was considerably lessened when the cars were operated slowly and was eliminated when the power was entirely cut off and the cars went around the curve on their own momentum. Cars passed the corner every five minutes from six o'clock in the morning until eleven o'clock at night, and as the noise, which was described as a "shriek", "screech", "scream", and "grind" had a penetrating sound, it greatly disturbed the residents in the vicinity by interrupting conversation and preventing sleep and in other ways seriously annoying the quiet of the neighborhood. One witness termed the noise as being at times almost intolerable, while another testified that it depreciated the value of property. It was stated that the noise at this particular corner was worse than that at any other curve in the city, but that when the track was wet or had been lately greased the noise rarely occurred. Witnesses thought that the greasing was not done often enough. They expressed the opinion that the curve was too short and that if it were broadened no unusual noise would be made. They testified that formerly the track at that point had a longer curve and that the noise from the running of the cars was then unnoticeable.

The general manager of the street railway company testified that the original curve was laid around the corner with no reference to the highway, but simply conformed to the then grade and came within one or two feet of the catch basin; that when the street was improved the grade was changed, making a descent from both directions, thus causing a depression where the curve existed; that the city authorities would not permit the new curve to run as close to the corner as the old curve. He stated that the track was the best that could be constructed; that the curve had a fifty foot radius built with a No. 15 spiral and that it was elevated as much as it could be in a paved street without getting in conflict with the city authorities; that the work of laying the track as to the grade and as to the way the curve was laid out was supervised by the city engineer who gave all the grades and whose instructions in regard to the curves were carried out. Witness explained the operation of the cars and stated that the greater part of the so-called screaming noise was caused by the slip of the inside wheel traveling on the shorter curve and that a car could not run around a flat

curve without making a shrieking noise. He testified that it would be very unsafe and dangerous to strike the curve hard enough to carry the cars around without the application of additional power, but admitted that if the car could be sent into the curve with momentum enough to go clear around it, without any power being employed, the noise, depending on numerous conditions, would probably be lessened.

The engineering staff of the Commission has at different times made examinations of the curve in question, the last inspection being in the month of January, at which time no noise was created by the cars passing around the curve, probably due to the fact that the rail was frosty and considerable snow and ice covered the track. Our engineer reported that he found the gauge in the curve to be somewhat less than the standard gauge of track each side of the curve; that is, while the track each side was about 4 feet 8 5/8 inches, the gauge in the curve was in some places only 4 feet 8½ inches and at one point even less. At this last named point the outside rail had been cut away by the wheel flange until the gauge was approximately right, that is, 4 feet 8½ inches. He recommends that the gauge be broadened somewhat on this curve, especially at the point where the outside rail is being worn away, and that at no point should it be less than 4 feet 9 inches. Inspection shows that the guard rail is worn considerably along the entire length. He therefore recommends a greater elevation of the outer rail, thus causing the car to run close to the inside rail, which would considerably reduce the noise. He thinks it is probable that greasing alone would remedy the difficulty, but the greasing would have to be done at very short intervals and not as it has been in the past. During the time the investigation was being made by the engineering staff, a change of ownership of the street railway took place. The new management promptly responded to the Commission's demand for immediate attention to this matter. The chief engineer of the company made a critical examination of the curve, after which he conferred with the Commission's engineer on the ground, as to the methods to be adopted to prevent the noise complained of. We have received a copy of the report made by respondent's chief engineer to the president of his company, and notice that it is in accord with the recommendations made by our engineer. It is practically impossible to make any change in the curve at the present time,

but as soon as the frost is out of the ground, the recommendations outlined above can be put into effect. If it is found that greasing alone will eliminate the noise, no structural change will be necessary. The method of relief is left optional with the company.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Green Bay Traction Company, take such steps as may be essential to eliminate the objectionable noises made by its cars at the intersection of Monroe avenue and Polier street in the city of Green Bay. Three months is deemed a reasonable period within which to comply with this order.

TOWN OF MINERAL POINT
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Sep. 14, 1911. Decided March 5, 1912.

Complaint is made that part of the approach to the C. M. & St. P. Ry. Co's track, at a point where it intersects a public highway, in the town of Mineral Point, Iowa county, Wis., consists of a wooden bridge which is wholly within respondent's right of way and is out of repair and dangerous to public travel. Petitioner prays for an order requiring respondent to construct a new bridge at this point or repair the present structure. Respondent contends that as the highway was laid out after the railroad was built, it cannot be compelled to keep the highway in repair.

Held: Sec. 1299h—1 of the Statutes imposes upon the railway company the duty of maintaining that portion of the highway which lies within its right of way. Nothing contained in the statute limits its operation to situations in which the location of the railroad was subsequent to the location of the highway. The objection to the validity of the statute on the constitutional ground of taking property for public purposes without compensation can not be entertained by the Commission. Whether such obligation may be legally imposed upon the company is a question for the courts to determine. Respondent is ordered to construct the bridge in such manner that it may be safe and convenient for public travel. Four months is deemed an adequate time in which to comply with this order.

The petitioner alleges that the respondent's right of way and railroad crosses a public highway in said township in the northeast quarter of sec. 7; that part of the approach to the respondent's track at the point where it crosses the highway consists of a wooden bridge spanning a small creek; that said bridge is wholly within the respondent's right of way and is and for a long time has been defective, insufficient, out of repair and dangerous to public travel; that said bridge is only about one mile distant from the city limits of Mineral Point; that the highway crossing the bridge is one of the main roads leading to the city and is much used by the public for travel; that the petitioner has frequently called the respondent's attention to the condition of said bridge and requested it to put same into safe

condition; that respondent has repeatedly refused and still refuses to repair such bridge; that the petitioner has at various times repaired said bridge at its own expense, but that the bridge is now in such defective, unsafe and dangerous condition that an entirely new bridge is required for the safety of the public. Wherefore, petitioner prays that an order be made requiring the respondent to construct a new bridge at said point or repair the present structure if the Commission is of the opinion that same can be repaired so as to make it safe for public travel.

The respondent, answering the petition, admits all the formal allegations thereof, but denies that said bridge is wholly upon its right of way or is a part of its right of way, or that the building of its line of railway was the cause of the building of the bridge, or that there is any legal liability upon it to rebuild or maintain such bridge.

The hearing was held on Sep. 14, 1911. The petitioner appeared by *Fiedler & Fiedler,* its counsel, and the respondent by *C. H. Van Alstine* and *F. G. Wright.*

About one mile from the city limits of Mineral Point the respondent's railroad tracks intersect with a public highway leading to Mineral Point. The right of way of the respondent runs approximately north and south and is crossed by the public highway at an angle. A small cut runs parallel with the right of way and is crossed by the bridge in question. The highway is 85 feet in width. The distance from the edge of the creek to the track is 11 feet. The distance between the northwest corner of the bridge and the center of the track is 35 feet 7 inches, and between the southwest corner of the bridge and the center of the track is 40 feet 1 inch. The track is about one foot higher than the bridge. The highway between the track and wagon bridge on the east side is in poor condition, the sides having caved in so that only about one foot of earth extends outside the wheel tracks of vehicles; also the large stones which were thrown there for a foundation have been washed away. The condition on the west side of the bridge is likewise poor. The water has undermined the highway to such an extent that holes sufficiently large to allow a horse's hoof to go through have been washed.

The substructure of the bridge consists of cedar posts driven into the ground. These, as well as the bridge itself, seem to have outlived their usefulness.

The bridge was condemned and the respondent notified thereof. Nevertheless, the respondent has taken the position that it is in no way liable for the construction or maintenance of the bridge.

There seems to be no controversy over the condition of the bridge. It is conceded that those traveling over the bridge will be imperiled if the bridge is to continue in service in its present state of dilapidation. To repair it is inadvisable, as the cost of maintenance after making repairs would necessarily be excessive, to say nothing of the cost of improvements. Under the circumstances, wise economy would dictate the removal of the existing structure and the construction of a new bridge in place thereof.

As the highway was laid out after the railroad was built, the company contends that it can no more be compelled to keep that part of the highway in repair which lies within its right of way than it can be compelled to maintain any other portion of the highway, and that therefore sec. 1299h–1 of the statutes should be so construed as not to apply to a highway thus laid out, but only to apply to such as preceded the construction of the railroad. The language of the statute, however, seems to preclude such interpretation. It reads as follows:

"Whenever any highway in any town or incorporated village, without the limits of any incorporated city, shall extend upon, over or across the tracks or right of way of any such railway company, such railway company shall, at its own expense, construct, grade and maintain in safe condition for public travel, the portion of such highway or crossing extending upon, over or across the tracks or right of way of such railway company. Whenever any such town or village shall permanently improve or macadamize such highway extending upon, over or across the tracks or right of way of any such railway company, such railway company shall, at its own expense, improve or macadamize such portion of such highway as shall extend upon, over or across the tracks or right of way of such railway company, in substantially the same manner and of substantially the same materials as such town shall have used."

The highway in question extends upon and across the right of way of the railway company. Nothing contained in the

statute limits its operation to situations in which the location of the railroad was subsequent to the location of the highway. To so hold would be to read into the statute language that can not be implied from the context. Nor can such intention on the part of the legislature be presumed in the absence of any ambiguity as to the meaning of the language implied or the effect that would result from a literal application thereof. *Rosmiller v. State*, 1902, 114 Wis. 169; *State ex rel Williams v. Samuelson*, 1907, 131 Wis. 499; *Ashland v. Maciejewski*, 1909, 140 Wis. 642. The general purpose of the legislature to impose upon the railway company the duty of maintaining that portion of the highway, which lies within its right of way, seems clear from the provisions of the statute as a whole. Futhermore, there would have been no necessity for the enactment of the statute relative to the particular matter here under consideration if it were intended merely to apply to highways located across the right of way of a railroad before the latter was constructed, for sec. 1836 already covered the situation as to highways along or upon which a railroad might be constructed. Whether such obligation may be legally imposed upon the company, is a question for the courts to determine. Consequently, the objection to the validity of the statute, on the ground that it is repugnant to the constitutional provision inhibiting the taking of private property for public purposes without compensation being first made to the owner thereof, is not such as under the circumstances of this case can be entertained by the Commission. As the statute is plain and unambiguous in its terms and is clearly applicable to the situation under consideration, it follows that its mandates must be enforced.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company reconstruct the bridge mentioned and described in the petition, in such a manner that the same may be safe and convenient for public travel.

Four months is deemed an adequate time in which to comply with the above order.

CONNOR LAND AND LUMBER COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided March 6, 1912.

Application was made for a re-hearing of the matters involved in the case of the *Connor Land and Lbr. Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 774. The principal contention of the respondent was that the Commission failed to interpret the statute correctly in its application to the case. It was claimed that the rate exacted for the shipment in controversy was not an unusual one within the contemplation of the statute.

Held: It is to the interest of all parties concerned that the law relating to refunds should be administered in strict accord with the letter and spirit thereof. There was nothing presented upon the argument that changes the conclusion in the former case. The application for re-hearing is denied.

This is an application for a re-hearing of the matters involved in the petition herein. The principal contention of the respondent is that the Commission has failed to interpret the statute correctly in its application to this case. It is claimed that the rate exacted for the shipment in controversy was not an unusual one within the contemplation of the statute. There is no doubt that the line of demarcation between what is a usual and what is an unusual rate is often very shadowy. Whenever the question has arisen, the railroad companies have usually resolved the doubt in favor of the shipper. The Commission, however, has taken a firm stand that the mere fact that a railroad company reduces a rate upon its own volition or the same is reduced by action of the Commission does not entitle a shipper, as a matter of course, to any refund. Wherever this position has been departed from, it has been due to the urgency of the railway company rather than to the attitude of the Commission. It can not be denied that it is to the interest of all parties concerned that the law relating to refunds should be administered in strict accord with the letter and spirit thereof. A contrary course would obviously result in bringing about a state of affairs which would operate unjustly

against shippers. Unfortunately, the latter are not often far-sighted enough to see the evil consequences that might flow from the gratification at times of their apparent greed.

Another objection to the order in question is that the respondent may endeavor to put into effect a joint rate between the Laona & Northern Railway Company and the "Soo" line from Laona to the points to which the shipment in question moved, and thereby destroy the entire grouping of rates in the territory involved. This objection is more specious than real. No joint rate can be put into effect without the consent of the Commission and certainly under the circumstances the Commission would not authorize a joint rate over a circuitous route where there is in effect a joint rate over a direct route, when the former rate would have the tendency of destroying either the Wausau or the Rhinelander group rates.

There was nothing presented upon the argument that changes our views as expressed in the decision of the case *Connor Land & Lumber Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 774. The application for re-hearing is therefore denied.

VILLAGE OF LOHRVILLE

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Nov. 20, 1911. Decided March 7, 1912.

Complaint was made that the C. & N. W. Ry. Co. failed to provide adequate station facilities and did not maintain a station agent at the village of Lohrville, Wis.

Held: The station shed at present in use is inadequate for the accommodation of passengers and freight. The needs of the village demand a more substantial and commodious structure and the amount of business transacted requires the employment of an agent. It is ordered that the respondent provide a station building which shall be reasonably adequate for the passenger and freight traffic at Lohrville, and that it place the station in charge of a competent agent, who will perform those things which the local representative of a railway company at a station of this character is customarily expected to do. The plans for the station are to be submitted to the Commission for approval. Four months is deemed a reasonable time within which to comply with this order.

The petition, signed by forty-seven citizens of Lohrville, sets forth that Lohrville is an incorporated village of about 600 inhabitants; that the above named railway company is a common carrier, engaged in the transportation of persons and property by railroad between points in the state of Wisconsin, and that as such common carrier said railway company is subject to the provisions of ch. 87 of the Statutes of 1898 and acts amendatory thereto, and is likewise subject to the provisions of ch. 362 of the Laws of 1905 and acts amendatory thereto; that the village is growing rapidly; that the main industry is the quarrying of granite, which is manufactured into paving blocks, crushed granite, and dimensioned granite for monumental and building purposes, the stone for monumental purposes being shipped to the finishing plant of the American Granite Company at Milwaukee; that this monumental business is a well established, steady, continuous industry and is not subject to fluctuations, the Lohrville quarries being operated the entire year; that the residents of Lohrville are very much inconvenienced because all freight in less than carload lots must be prepaid, and since

many shippers refuse to prepay freight, the shipment is made to Red Granite; that the residents of Lohrville must purchase their tickets at Red Granite in order to have their trunks checked; that all express packages must be received and shipped from Red Granite as there is no station agent at Lohrville, and that there are also no telegraphic connections at Lohrville. Wherefore, the petitioner, for the above and other reasons, earnestly prays for prompt relief, which will be furnished by the installation of a station agent.

The Chicago & North Western Railway Company, answering the petition, admits that the petitioner is an incorporated village; that the respondent is a common carrier subject to the provisions of ch. 87 of the Statutes of 1898 and acts amendatory thereto, and to the provisions of ch. 362 of the Laws of 1905 and acts amendatory thereto; and that the residents of Lohrville must purchase their tickets at Red Granite in order to have their trunks checked, but denies that it has knowledge or information sufficient to form a belief as to the growing condition of Lohrville or the nature and extent of the granite industry at Lohrville. Respondent further denies that the residents of Lohrville are inconvenienced as regards less than carload shipments of freight, the sending and receiving of express packages and telegraphic connections, but alleges that it has furnished adequate facilities for handling its passenger and freight business at Lohrville by providing a platform and shelter shed thereat, and alleges that it has a station at Red Granite, which is 1.6 miles east of Lohrville, which affords adequate facilities for the handling of all passenger and freight business in that locality. Wherefore, the respondent prays that the complaint be dismissed.

A hearing was held on Nov. 20, 1911, in the village hall at Lohrville. *E. F. Kileen* appeared for the village of Lohrville and *C. A. Vilas* appeared for the C. & N. W. Ry. Co.

Witnesses for the petitioner testified that Lohrville is an incorporated village and that the inhabitants are permanent residents; that the census of 1910 showed a population of 668, but that there are now about seven or eight hundred inhabitants; that eight or nine new residences and a business building were built during 1911; that the village has a public school, a post office, two general stores, a meat market, barber shop, pool room, four saloons and five boarding houses; that a state bank with $10,000 capital has been incorporated and all of the stock sub-

scribed; that the village has electric lights, being supplied with electric current from Neshkoro, and that over a thousand dollars was expended on the streets last year. Witnesses further stated that the chief industry in the village was the quarrying of granite by the American Granite Company, who employed between 350 and 450 men during the busy season from April to December, and about 250 men during the remainder of the year; that the majority of these people stay in Lohrville the entire year; that the West Point quarry is less than a quarter of a mile west of Lohrville, the limits of the village extending to the quarry property; that less than half a mile from the village the Shaw quarry is situated with a population in its vicinity of 150 to 200, and that two miles west of Lohrville is the unincorporated village of Spring Lake, with about 250 inhabitants, thus making a total population of about 1,200 people besides the farming community who would be accomodated by a depot and agent at Lohrville. Witnesses testified that the nearest station having an agent was Red Granite, a village with a population of about 1,500, which was situated one and a half miles east of Lohrville by rail and two and a half miles by wagon road, which was very hard to travel, owing to its sandy condition, while the nearest station agency to the west was Neshkoro, eleven miles distant; that the present station facilities at Lohrville consisted of a platform about forty feet long, made of a framework of logs filled in with dirt and cinders, and a shed seven feet by eleven feet with a wooden bench or seat extending across the width. This shed being open at the front, passengers were exposed to the inclemencies of the weather, and as it was kept in a very unsanitary condition much discomfort and inconvenience was experienced, which was increased by the fact that, with one exception, all of the trains failed to keep scheduled time; intended passengers often had to wait for an hour, and on some occasions two and three hours beyond the scheduled time of arrival. It was further stated that the surrounding country was a good farming district, but that no farm produce had been marketed at Lohrville, due, it was claimed, to the lack of a depot and agent; that the less than carload business at Lohrville amounted to about half a carload per day, and that business was increasing. Witnesses further testified that receivers of less than carload freight were much inconvenienced by not having a station agent, as all incoming freight must be

prepaid by shippers, who often refused to prepay the freight, and that when such freight was not prepaid the goods were sent to Red Granite, where the freight charges must be paid by receivers and then the shipments teamed to Lohrville or returned by freight to Lohrville, all of which caused delay in the delivery of goods and often an extra expense to the receivers, while such freight was often held at Red Granite without arrival notice being given to consignees; that all less than carload freight shipped prepaid to Lohrville was left on the cinder platform by the train crew; that often groceries, meat and flour were thrown on the ground into the dirt; that meat shipped in thin cloth was sometimes so much soiled by the dirt as to cause a loss to the consignee; that due to the uncertain hour of train arrivals and the inadequate station facilities consignees were sometimes obliged to make several trips to the train in the winter time to prevent their goods being frozen and in the summer time to avoid damage by the heat, and that shortages and breakages could not be settled satisfactorily because adjustments had to be made through the agent at Red Granite. They further stated that outgoing less than carload freight was billed at Red Granite, unless the conductor accepted freight on the train, in which latter case the goods had to be held awaiting the arrival of the train, and that occasionally there was no car available into which goods could be loaded, when the freight had to be left on the platform until a car was furnished, or taken away and delivered on a later day.

The president of the American Granite Company testified that his company was engaged in quarrying paving blocks, crushed granite, building granite, dimension and monumental stone; that their business was increasing and that the supply of granite was practically unlimited. He stated that most of the carload freight shipped into Lohrville was coal for the quarries and lumber, while the carload shipments out consisted of granite, which was loaded on the spur track at the quarries; that the railway company did not give any receipts for carload shipments; that the cars were taken to Neshkoro, where the freight was waybilled; that such billing did not disclose the original point of shipment so that in one instance where his company had shipped twenty-five cars of stone, consignees were advised by the railway officials at Chicago that such shipment had not been made by his company, and that in another instance quite

a number of cars were billed to Kansas City by the Neshkoro agent at an erroneous rate, thus overcharging the Granite Company $600, which claim at the time of the hearing had not been paid and which overcharge would have been avoided had an agent been stationed at Lohrville. The superintendent of the American Granite Company testified that during 1911, up to the date of the hearing, his company had shipped out 1,117 carloads, and that they had received over forty carloads of coal. He estimated that the freight charges on his company's shipments amounted to between $60,000 and $70,000 a year. This witness stated that on an average about 30 or 40 persons left and arrived at Lohrville every day, making main line connections, and that in addition from 150 to 200 quarrymen rode to and from Red Granite daily. Witnesses testified that there was no express or telegraph accomodation at Lohrville; that previous to the filing of this complaint no baggage was checked at Lohrville, and that it was necessary to go to Red Granite to have anything checked, or to check baggage on the train after reaching the main line at Red Granite Junction.

The division superintendent of the railway company testified that Lohrville was situated on the Red Granite branch of his division; that Spring Lake was 4.4 miles east of Red Granite Junction, where the branch left the main line; that Lohrville was 1.7 miles east of Spring Lake and Red Granite 1.6 miles east of Lohrville; that there was a station and agent at Red Granite while Spring Lake and Lohrville were known as prepaid stations and were operated in the same manner as other prepaid stations on the Chicago & North Western Railway, to which points all shipments must be prepaid; that the outgoing carload and less than carload freight was picked up by the conductor of the train who was furnished with shipping tickets and authorized to receipt for all freight accepted by him, and that such shipping tickets are practically the same as bills of lading. He stated that there were four trains each way daily except Sunday, and that on the morning trip westward the freight was taken as far as Neshkoro on the main line and there weighed and waybilled by the agent. He believed that there was no necessity for an agent at Lohrville, and stated that there were other stations on the Chicago & North Western railway larger than Lohrville which did a larger less than carload business, outside of carload shipments, where they had no agent, and he did not under-

stand why the people at Spring Lake were not as much entitled to an agency as Lohrville. It was his opinion that the facilities provided at Lohrville were sufficient and adequate for the needs of the station, and that the shelter shed would protect all the less than carload business handled. Upon cross-examination he stated that he could not cite a specific case on the Chicago & North Western Railway where they had no agent at as large a place as Lohrville, and admitted that there was no station on his division where the population was so great and where they were doing as much business as Lohrville, without an agent. He said telegrams could be sent by the Red Granite operator if received by him through the telephone for transmittal.

The agent at Red Granite station testified that bills of lading were furnished to Lohrville shippers upon request; that the usual practice was for the shippers to make out bills of lading in duplicate, the original being receipted by the conductor and returned to the shipper after the freight was loaded, the duplicate being given to the agent at Neshkoro for billing purposes. However, he had billed some cars from Red Granite during the summer, which the American Granite Company had forwarded to Kansas City. He estimated the freight and passenger earnings at his station to average $15,000 per month for six summer months, and $8,000 per month for the remaining period, but admitted that the figures named were but a guess as he had not averaged it up. The passenger business he estimated to average about $1,000 per month, but he testified that such amount was based on his memory and that he could not then give exact figures. He admitted that quite a number of people from Lohrville bought tickets at Red Granite and checked their trunks from his station. He stated that prepaid freight was unloaded at Lohrville, but freight that was not paid went through to Red Granite; that occasionally Lohrville freight was teamed from Red Granite; that a merchandise car distributed and picked up less than carload freight on the branch "mostly every day," and that a heater was provided in the car for perishable freight; that he had received but one claim for shortage or damage to goods of Lohrville parties, although they had told him of cases where shortage or damage had occurred but no claim had been presented therefor; that he notified Lohrville consignees by mail or telephone when goods arrived at Red Granite for them, within two or three days after the shipments had been received.

The conductor testified that he handled both freight and passenger traffic over the branch line; that whenever passengers paid cash on the train he gave a cash fare receipt slip for it and sent the receipt stub to the ticket auditor in Chicago, which was used as a check against the cash he turned in to the company, and that passengers leaving Lohrville, destined to points on or beyond the main line, paid fare on his train only to Red Granite Junction. He was unable to state the amount of cash fares collected by him daily or how many passengers were carried on his train. He stated that he made four round trips each day and that his train made connections with the regular passenger trains of the main line at Red Granite Junction, but admitted on cross-examination that the scheduled time was not adhered to, as he waited at Red Granite Junction for the arrival of the main line passenger trains, arriving at Lohrville, in some cases, two hours late, while the occasional delays west from Red Granite were caused by extra switching work. Witness further testified that for two months he had been checking passenger's packages on his train and that the brakeman handled express on the train as agent for the American Express Company. In regard to unloading freight at Lohrville, he stated that less than carload shipments were left on the platform unless the weather was stormy, when it was placed in the shed; when the weather was too cold to unload perishable goods, the property was taken to Red Granite if consignees were not on hand at Lohrville to receive the freight, and it was brought back the next day after telephoning consignees. He said that he receipted for the American Granite Company's less than carload shipments on a special form used by them, but that for other shipments he signed a regular bill of lading and always accepted freight that was offered, but admitted that occasionally the regular way car did not arrive, although it was supposed to run daily. He stated that he had not signed any receipts for carload freight, as he had not been requested to do so, although he was supposed to sign for them and would do so if he were asked; it was customary for shippers of carload freight to make out their own bill of lading, which he gave to the agent at Neshkoro for the purpose of waybilling the shipment.

Since the hearing the respondent has furnished the Commission with tabulated figures covering the freight business destined to and originating at Lohrville, with the earnings thereon, and

also a statement of the cash fares reported by the conductor as received from Lohrville passengers. The freight traffic statement of the railroad company gives a total of 1,160 cars shipped from Lohrville and waybilled from Neshkoro for the year ending Oct. 31, 1911, with freight charges of $47,955.63, and 65 cars destined to Lohrville reported by agent at Red Granite for the same period, with freight charges of $3,885.72, making a total freight revenue of $51,851.35. The testimony of the American Granite Company's superintendent that his company had shipped during the year 1911 up to the date of the hearing 1,117 cars of stone and had received over 40 cars of coal during the same period is apparently confirmed by the railway company's records, although the statements evidently do not include the Lohrville cars shipped to Kansas City, testified to by the agent at Red Granite as having been billed from his station, nor do they take into account the revenue derived on prepaid shipments delivered at Lohrville. The American Granite Company has also forwarded us statements showing the amount of freight revenue derived from their shipments in and out of Lohrville, which give the total freight earnings on shipments forwarded to Milwaukee and Chicago during the year ending Dec. 31, 1911, of $49,490.76, and on shipments received at Lohrville but paid at Red Granite during the same period of $6,351.56, making a total of $55,842.32. Taking into account the omissions of the railway company as stated, we are inclined to believe that the figures of the American Granite Company more closely represent the freight revenue on Lohrville business, although a correct statement of such earnings must include the item of prepaid freight, not only on shipments consigned to the American Granite Company, but to all Lohrville receivers, which it appears is not obtainable.

The passenger traffic statement of the railway company shows a revenue of $226.52 reported by the conductor of the branch line as cash fares received from passengers taking trains at Lohrville for the year ending Oct. 31, 1911, with a total of 3,107 passengers as leaving Lohrville. The testimony shows that there is considerable passenger traffic along the line, especially between Lohrville and Red Granite, by workmen in the quarries going to and from the two villages morning and night; one witness testified that between 150 and 200 use the train to and from Red Granite every day when the quarries are working, so

that the number of passengers and the amount of revenue shown by the railroad's statement appear to be far too small. Assuming the testimony of the said witness to be correct, the revenue for one month alone from passengers transported between Red Granite and Lohrville would equal the yearly revenue as reported by the conductor. Such statement, however, does not include the revenue of passengers who bought tickets from Red Granite to Lohrville, nor the ticket sales from various stations on the Chicago & North Western railway to Lohrville, nor the fares paid by Lohrville passengers after they had reached the main line at Red Granite Junction, so that as an estimate of passenger earnings on Lohrville business it has little value and is no guide by which to determine the number of passengers who make use of the station facilities at Lohrville. We must therefore rely upon the testimony as given at the hearing, that from thirty to forty passengers make the trip each way between Lohrville and main line points and that at least an equal number take the train each way daily between Red Granite and Lohrville. The yearly revenue of thirty-five passengers each way daily between Lohrville and Red Granite Junction alone would amount to $2,600, and we may therefore assume that $5,000 would be a rather low estimate to place upon the annual passenger revenue of Lohrville station. $60,000 to $65,000 per annum may be regarded as a very conservative figure to represent the freight and passenger earnings of Lohrville. This amount of revenue justifies the expenditure necessary to maintain an agent at Lohrville, and the testimony clearly shows that there is sufficient business at that station to keep a person fully occupied in attending to the needs of the shippers and receivers and of passengers who arrive and depart from Lohrville. The present shed used as a shelter for passengers is not only insufficient and unservicable as a waiting place for the traveling public, but is inadequate for the storage and proper protection of freight.

Some objection was made by respondent at the hearing and by its counsel in argument that if an agency was established at Lohrville the railway company would have two agents within a distance of one and six-tenths miles upon a spur a little over seven miles in length. The distance, however, by wagon road between Red Granite and Lohrville is two and a half miles. Red Granite and Lohrville are two separate communities, each

having its village organization, with that local pride which aims at civic improvement and the fostering of competing industries in its own immediate vicinity. In considering the merits of the present case, we do not feel justified in withholding relief to avoid the condition objected to by the railway company. From the evidence submitted, it appears that the village of Lohrville, by reason of its own importance as an industrial and social center, by the revenue it gives the respondent, and by the needs of the community, is entitled to enjoy transportation facilities equal to other places of the same size and business magnitude.

We therefore find that the station shed at present in use at Lohrville is inadequate for the accommodation of passengers and freight, and that the needs of the village demand a more substantial and commodious structure. We also find that the amount of business transacted at such station requires the employment of an agent.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Chicago & North Western Railway Company, provide a station building at Lohrville which shall be reasonably adequate for the passenger and freight traffic at that station, in accordance with plans to be submitted to this Commission for approval, and that it place said station in charge of a competent agent who will perform those things which the local representative of a railway company at a station of this character is customarily expected to do.

Four months is deemed a reasonable time within which to comply with the above order.

JERRY VOSBURG

vs.

WISCONSIN ELECTRIC RAILWAY COMPANY.

Submitted June 20, 1911. Decided March 11, 1912.

Complaint was made of a discriminatory arrangement of fare zones and discrimination in rates on the part of the Wis. El. Ry. Co. on its line between Neenah and Oshkosh, Wis. The petitioner resides on Jackson street road in the town of Vinland, Winnebago county. He alleges that the fare charged per mile varies greatly on different parts of the line because the pay points are located without reference to their distance from the nearest pay point or from either Oshkosh or Neenah. He further alleges that the present arrangement of varying fare zone lengths is discriminatory not only to himself, but to other patrons of the road boarding the cars between Murdock and the cemetery. He prays that the railway company be required to establish reasonable overlapping zones at all regular pay points and to provide a fare schedule which shall do substantial justice to all patrons along the line by allowing them to pay in proportion to the distance they ride. It appears that the railway company has designated certain points on the line to each of which points from either Neenah or Oshkosh the fare charged for an adult passenger is 5 cts. or a multiple of 5 cts. The distance between two contiguous pay points varies from one to three miles in length, the effect of which is to discriminate against passengers riding short distances.

Held: The varying zone lengths are discriminatory not only to the petitioner but to other patrons of the road and they should be revised and placed on a basis equitable to all. If the volume of traffic alone is to be considered, an extension of the present overlapping zone to petitioner's stop is not justified, yet it is unjust to limit the petitioner's zone to half a mile in either direction. It is obvious that any zone system must lead to the payment of an extra fare by a passenger when boarding or leaving the cars between two zone points, but this unavoidable result should be minimized as much as possible. A more equitable plan would be the adoption of increased zones with lower fares for each zone or of a mileage system. The latter method may give extra work to the conductors, although other interurban roads have adopted it with marked success. Petitioner should be placed on a parity with other passengers on a combined fare occasioned by a break in the through journey to either Neenah or Oshkosh, but we believe that the respondent is best able to work out a solution of the present discriminatory condition. The respondent is ordered to rearrange its fare zones or schedule of rates so as to eliminate the discriminatory rates now charged the petitioner and

others residing in the mile zone bounded by Erdman's on the south and Gillingham's on the north. Thirty days is deemed a reasonable time within which to comply with this order.

The petitioner is a farmer residing on Jackson street road in the town of Vinland, Winnebago county. His petition alleges that the Wisconsin Electric Railway Company is a common carrier, subject to the provisions of ch. 87 of the Statutes of 1898 and acts amendatory thereof, and is likewise subject to the provisions of ch. 362 of the Laws of 1905 and acts amendatory thereof; that said railway company is engaged in the transportation of persons and property by electric line between the cities of Neenah and Oshkosh; that said line is approximately fifteen miles in length; that the fare charged for an adult passenger over said line is 25 cts. one way; that said railway company has designated certain points on said line to each of which points from either Neenah or Oshkosh the fare charged for an adult passenger is 5 cts. or a multiple of 5 cts.; that the fare charged per mile varies greatly on different parts of said line because the pay points are located without reference to their distance from the nearest pay point or from either Oshkosh or Neenah, and the distance between two contiguous pay points varies from one to three miles in length, the effect of which is to discriminate against passengers riding short distances as the petitioner does; that the middle point on said line is at or near Frazier's Corners, and the fare for an adult passenger from said Frazier's Corners to Neenah or Oshkosh is 15 cts.; that petitioner is informed and verily believes that the said railway company has established an overlapping fare zone extending one mile north of said Frazier's Corners to Erdman's Corners and one mile south to Mears' Corners; that all adult persons boarding the cars of said railway company at or between Erdman's and Mears' Corners are charged a fare of only 15 cts. for transportation to either Neenah or Oshkosh, though boarding said cars as much as a mile outside of the 15 cts. fare point; that at no other point or points on said line has the said railway company established overlapping zones; that the petitioner lives approximately one-half mile south of Gillingham's Corners on said line and about the same distance north of Erdman's Corners, and whether going to Neenah or Oshkosh on said line from his residence, the petitioner is compelled to pay 5 cts. for the first half-mile ride in either case; that the effect of this arrangement is to

compel the petitioner, living one-half mile south of the second pay station from Neenah, to pay the same fare to Neenah as a passenger boarding the same car at the fifth pay station from Neenah pays for his ride to Neenah. The petitioner further alleges that while the distance from his residence to Neenah is approximately two-fifths of the length of said line, he is charged a fare equal to three-fifths of the total fare, and while the distance from his residence to Oshkosh is approximately three-fifths of the length of the line, the fare charged him for a ride from his residence to Oshkosh is four-fifths of the total fare charged for a ride the total length of said line; that the establishment of pay stations, as herein alleged, is unjustly discriminatory with respect to the petitioner and all passengers boarding said cars at points between said cities of Neenah and Oshkosh; that the establishment of an overlapping fare zone at or near Frazier's Corners, as herein alleged, is unjustly discriminatory with respect to the petitioner and all other patrons residing along said line within one mile of a regularly designated pay station; that the establishment of a pay station one-half mile on either side of petitioner's residence, compelling him to pay the fare as above alleged, is unjustly discriminatory, and that petitioner verily believes that at no other point on said line is such unjust discrimination practiced. Wherefore, petitioner prays that the aforesaid railway company be required to answer the charges herein, and that after due hearing and investigation an order be made commanding said railway company to cease and desist from said violations of the acts referred to, and be required to establish reasonable overlapping zones at all regular pay points and to provide a fare schedule which shall do substantial justice to all farmers and patrons along said line by allowing them to pay in proportion to the distance they shall ride on said line; and for such other and further order as the Commission may deem necessary and just in the premises.

In its answer the respondent admits that the petitioner is a farmer residing on the Jackson street road in the town of Vinland, Winnebago county; that it operates an electric interurban line between the cities of Neenah and Oshkosh; that said line is approximately fifteen miles in length and that the fare charged for an adult passenger over said line between Main and High streets in Oshkosh and Commercial street in Neenah is 25 cts. one way; and that for the purpose of this proceeding it is sub-

ject to the provisions of ch. 362 of the Laws of 1905 and acts amendatory thereof. Respondent alleges that it is a corporation organized and existing under ch. 86 of the Statutes of 1898 and acts amendatory thereof, but denies that it is a commercial railway or that it is subject to the provisions of ch. 87 of the Statutes of 1898 or any portion of said chapter, excepting only the particular sections of ch. 87 which are expressly made applicable to interurban electric railways. The respondent alleges that on or about Dec. 14, 1909, it gave due notice, in accordance with law, of a new schedule of rates to take effect at the beginning of Jan. 15, 1910; that under date of Jan. 14, 1910, said respondent filed a petition incorporating an amendment of said schedule, which amendment was authorized to go into immediate force and effect by order of the Railroad Commission, and that said schedule of rates, including said amendment, became effective and in force and effect on Jan. 15, 1910; that said schedule so established divided the line of said respondent between Oshkosh and Neenah into a series of 5 ct. fare zones and the limits marking said fare zones established by respondent so as to prevent discrimination, and also in order to be of the greatest aid and convenience to the public; that thereafter the respondent petitioned the Railroad Commission for leave to amend its said schedule of rates, which became effective on Jan. 15, 1910, by creating an overlapping fare zone, including that portion of its line between Oshkosh and Neenah which lies between Mear's Corners on the south and Erdman's Corners on the north, so that passengers boarding respondent's interurban cars southward bound at any point between Commercial street, Neenah, and Frazier's, the former inclusive, for transportation to Mear's Corners or any point between Frazier's and Mear's Corners, should pay for such transportation the same rates of fare as had, according to the aforesaid schedule of rates, theretofore been charged by respondent from such point or points of boarding for transportation to Frazier's, and that passengers boarding respondent's interurban cars northward bound at any point between Main and High streets in the city of Oshkosh and Frazier's, the former inclusive, for transportation to Erdman's Corners or any point between Frazier's and Erdman's Corners on the line of said respondent, should pay for such transportation the same rate of fare as had, according to the aforesaid schedule of rates, theretofore been charged by respondent for

transportation from said point or points of boarding to Frazier's, and that the same rates of fare applying from said points north or south to said points intermediate between Mear's Corners and Erdman's Corners should apply from said interurban points to said points north and south thereof; that said amendment was made for the benefit of the persons traveling on said respondent's line and on its interurban cars, and for the purpose of benefiting and conveniencing such passengers. It admits that adult persons boarding its interurban cars at or between Erdman's and Mear's Corners are charged a fare of 15 cts. for transportation to either Neenah or Oshkosh. Respondent admits that at no other point or points on its line has it established an overlapping zone; it admits that the petitioner lives approximately one-half mile south of Gillingham's Corners on its line and about the same distance from Erdman's Corners, and that petitioner, whether going to Neenah or Oshkosh from his residence, is compelled to pay 5 cts. for the first half mile ride in either case; it denies that the establishment of its fare zones as hereinbefore described, or that the establishment of an overlapping zone between Mears' Corners and Erdman's Corners as hereinbefore described, is unjustly discriminatory with respect to petitioner or any other person residing on its line. Respondent alleges that its rates of fare, taken in connection with its fare zones and overlapping fare zone, are not now and never have been unjustly discriminatory to any person or persons traveling on its said line between Oshkosh and Neenah; and respondent further alleges that the rates of fare on its said interurban railway between Oshkosh and Neenah, taken in connection with the fare zones and the overlapping zone established on its said line, at all times have been and now are reasonable and just, and that they have not at any time been, or are not now, unreasonable, unjust or discriminatory so far as passengers traveling on its said line are concerned, and that the fare points established by it are the best available fare points to accord with its general level of rates as provided in the schedule, and to afford to the traveling public the greatest convenience and accommodation. Wherefore, respondent prays that the complaint be dismissed.

The hearing was held at the city hall in Milwaukee on June 20, 1911. *D. K. Allen* appeared for the petitioner; *Miller, Mack*

& Fairchild, by *Mr. Mack* and *Mr. Blake,* appeared for the respondent.

The petitioner, Jerry Vosburg, testified that he lived on the Jackson street road, half a mile south from Gillingham's Corners and half a mile north from Erdman's Corners; that his family traveled over respondent's line to and from Oshkosh and Neenah; that the rate of fare between those cities was 25 cts.; that the fare from his residence to Oshkosh was 20 cts. and to Neenah 15 cts.; that the distance from his home to Oshkosh was about nine miles and to Neenah about six miles; that previous to the spring of 1911 the fare from Erdman's Corners to Oshkosh was 20 cts., from Frazier's Corners to Oshkosh, 15 cts., from Mears' Corners to Neenah 20 cts., and from Frazier's Corners to Neenah 15 cts., but that in the spring of that year the Frazier's rate was applied from Mears' on passengers carried to Neenah, and the Frazier's rate applied from Erdman's when passengers were carried to Oshkosh, thus making a reduction of 5 cts. in such fares. This overlapping zone, witness claimed, was a discrimination against him and other passengers using the cars from his place, in that he being located but half a mile north of Erdman's was compelled to pay 5 cts. more when going to Oshkosh than a passenger boarding the cars at Erdman's and also in that a passenger boarding the cars at Gillingham's Corners, half a mile north of his residence, could ride to Neenah for 10 cts., while he was compelled to pay 15 cts., which rate of fare would also apply to a passenger boarding the cars as far south as Mears', two and a half miles from his place. He also stated that the sizes of the various zones were unequal and thus discriminatory, citing the fact that he paid 5 cts. from his house to Gillingham's, a distance of half a mile, then paid 5 cts. to the cemetery, a distance of four miles, and another 5 cts. from that point to Neenah, about a mile and a half further; also that he paid 5 cts. from his house to Erdman's, a distance of half a mile, then 10 cts. from that point to Murdock, the city limits of Oshkosh, a distance of 7.22 miles. Petitioner stated that before the overlapping zone was established passengers at Mears' and Erdman's or between Mears' and Erdman's paid a sum total of 35 cts. to obtain one ride between the cities of Neenah and Oshkosh, but that at the present time the people living at those points could get one ride to each of those cities for a sum total of 30 cts., while he had to pay 35 cts. for the same priv-

ilege. He said the same situation existed north of him, as a passenger taking the car at Gillingham's or between Gillingham's and the cemetery, a distance of more than a mile from Gillingham's and a mile and a half north of his residence, paid 20 cts. to Oshkosh, the same fare as paid by him, while the rate from such points to Neenah was 10 cts. and from his place 15 cts., so that the combined fares from such points to Neenah and Oshkosh amounted to 30 cts., while he was compelled to pay 35 cts. He considered it unfair to establish an overlapping zone at one station and not at another, where conditions were practically the same. On cross-examination witness testified that he had not been over the road to Oshkosh or Neenah since January, 1909, when the rates were raised, but that his family had used the line quite frequently.

Witness for respondent testified that the fare points had all been located with reference to cross-roads; that originally the terminal point of the zone from Gillingham's southward was Frazier's and the terminal point from Cox northward was Frazier's; that the terminal point from Gillingham's southward now is Mears', and the terminal point from Cox northward is Erdman's; that under the original 20 ct. fare Mears' was the dividing point and is really, from a traffic point of view, the dividing point of the road and an important place where the farmers generally meet and hitch their horses; that Mears' in itself originates more traffic for the company than any other corner; that the extension northward from Frazier's to Erdman's was a matter of evening up as against the advantage southward. Witness further testified that the bulk of the farming traffic on the line originated in the section between Erdman's and Mears', for which reason the extension of the boundary zone was made; that the through traffic between Oshkosh and Neenah was about 25 per cent and the local traffic 75 per cent of the total number of passengers carried; that the local traffic was largely from one city to a rural stop, such as Mears' to Oshkosh or Mears' to Neenah, and that the interior traffic was very small. He stated that he did not consider that petitioner was discriminated against by the establishment of the overlapping zone, but that the difference in the fare was the result of the evils in the zone system, and that when the traffic conditions were considered petitioner was not being treated unfairly.

The testimony shows that petitioner resides half a mile south of Gillingham's and half a mile north of Erdman's and that

Erdman's is the northern boundary of an overlapping zone extending two miles south to Mears'. Passengers at Erdman's and Mears', and at point intermediate, pay a fare of 15 cts. to Oshkosh and also to Neenah or a combined fare of 30 cts. from Oshkosh to Neenah or vice versa. Passengers at Gillingham's and north thereof pay a 10 ct. fare to Neenah and 20 cts. to Oshkosh, thus making the combined fare 30 cts. from Oshkosh to Neenah or vice versa. Petitioner being located midway between Gillingham's and Erdman's, has to pay an additional fare of 5 cts. to either Oshkosh or Neenah, or a combined fare of 35 cts. between the two cities. This condition of affairs, which respondents admits to exist, the petitioner claims to be discriminatory against him and others who take the cars at the stopping place by his residence. Respondent takes the position that no discrimination exists against the petitioner by reason of the establishment of the overlapping zone, but admits that "apparently he is getting the worst of it" by living outside the zone limit under complaint.

In order to ascertain the traffic conditions in the district under investigation, the Commission requested the respondent to furnish a statement showing the number of passengers boarding the company's cars at all the stations from Cox to the substation north of Gillingham's covering a period of thirty days. The following table shows the passenger traffic from July 24 to Aug. 23, 1911:

tion.	North-bound passengers.	Per cent of total.	South-bound passengers.	Per cent of total.
Cox	86	7.8	322	17.5
Nevotney	2	.2	7	.4
Clark	5	.4	52	2.8
Brook	44	4.0	368	21.1
Anderson	1	.1	7	.4
Schultz	3	.3	19	1.0
Mears'	160	14.5	257	14.0
Boettege	17	1.5	45	2.4
Hauetter	6	.5	25	1.4
Frazier's	32	2.9	117	6.4
E. Erdman's Cor.	24	2.2	13	7
W. Erdman's	10	.9	8	.4
Erdman's Cor.	125	11.4	141	7.7
Robie	14	1.3	26	1.4
Vosburg	26	2.4	35	1.9
Gillingham's	456	41.5	293	15.9
Darrow	26	2.4	9	.5
Substation	63	5.7	76	4.1
Total	1,100	100.0	1,840	100.0

The stations at the head of each group are zone boundaries, Mears' and Erdman's Corners being overlapping zone boundaries one mile north and one mile south of Frazier's, the original zone boundary, the other points shown being stopping places within the zones. An examination of the above table shows that the contention of respondent, that Mears' originated more business than other farming communities on its lines, is correct for the period mentioned, although Brook gave but five passengers less than Mears', while the overlapping zone from Mears' to Erdman's did not originate as many passengers as the stretch of a mile and a half from Erdman's to the substation. If the present zones were established on the theory that their terminating points were the originators of the greatest traffic, Brook should be entitled to the benefit of a fixed or overlapping zone. The original zones, as established by respondent, were as follows:

Going south and north.

Murdock to Cox	3.20	miles
Cox to Frazier's	3.01	"
Frazier's to Gillingham's	2.02	"
Gillingham's to cemetery	4.05	"

The zones as now established are as follows:

Going north.

Murdock to Cox	3.20	miles
Cox to Erdman's	4.02	"
Erdman's to Gillingham's	1.01	"
Gillingham's to cemetery	4.05	"

Going south.

Cemetery to Gillingham's	4.05	miles
Gillingham's to Mears'	3.02	"
Mears' to Cox	2.01	"
Cox to Murdock	3.20	"

These varying zone lengths, according to the testimony and the statistics furnished by respondent, are discrimnatory not only to petitioner, but to other patrons of the road boarding the cars between Murdock and the cemetery, and they should be revised and placed on a basis equitable to all. If the volume of traffic alone is to be considered, an extension of the present overlapping zone to petitioner's stop is not justified, yet it is unjust to limit the petitioner's zone to half a mile in either direction. It is obvious that any zone system must lead to the payment of an extra fare by a passenger when boarding or

leaving the cars between two zone points, but this unavoidable result should be minimized as much as possible. A more equitable plan would be the adoption of increased zones with lower fares for each zone, or of a mileage system. The latter method may give extra work to the conductors, although other interurban roads have adopted it with marked success. Petitioner should be placed on a parity with other passengers on a combined fare occasioned by a break in a through journey to either Neenah or Oshkosh, but we believe that the respondent is best able to work out a solution of the present discriminatory condition.

Now, Therefore, it is Ordered, That the respondent, the Wisconsin Electric Railway Company, rearrange its fare zones or schedule of rates so as to eliminate the discriminatory rates now charged the petitioner and others residing in the mile zone bounded by Erdman's on the south and Gillingham's on the north.

Thirty days is deemed a reasonable time within which to comply with this order.

CITY OF RHINELANDER

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Dec. 20, 1911. Decided March 12, 1912.

Petitioner, the city of Rhinelander, Wis., alleges that the proposed change in location of the passenger station of the M. St. P. & S. S. M. Ry. Co. would not provide adequate station facilities at Rhinelander, in that a station so located would be particularly hazardous and inconvenient to the public; that respondent now owns and has available at least two superior sites and prays that respondent be required to locate its new passenger station at some point which will better serve public convenience and safety. The city fully agrees with the respondent company that the existing station facilities are inadequate. Respondent contends that the Commission is not vested with authority to determine the location of a depot. Prior to the filing of this petition, respondent purchased the site complained of and began erecting the new depot. In order to reach the new depot site which is well out of the settled part of the city, it is necessary to cross the bridge on Davenport street over the Wisconsin river. From the independent investigation of the Commission's engineers it seems clear that in order to provide adequate facilities for freight traffic, both present and prospective, it was imperative that the respondent seek another locality for its passenger station and that engineering difficulties prevent its location at either of the sites mentioned by the city.

Held: Station facilities are a part of the service that the railway company is legally obliged to furnish. If such facilities are not reasonably adequate, because of the location or character of the building, the company may be required to provide a depot so located and constructed as to meet the reasonable requirements of the public. The Commission is empowered, in a proper case, to fix the point of location of a depot or station. The situation presented in this case differs somewhat from that where the Commission is called upon to establish a station in a community where none exists, but one is required, and where the company refuses to provide one. In such case, if any question as to the proper location should arise, the Commission, considering the convenience and interests of the community as well as of the railroad company, should establish the exact location. In the instant case, the initial question to be determined is whether the new building, now in the course of construction, will furnish reasonably adequate facilities for passengers at Rhinelander. Unless such facilities can be condemned as not reasonably adequate, a change of location could not be effected, for the power to command new or additional service or facilities rests upon the inadequacy or

inefficiency of the existing service or facilities. The new location is, in many respects, inconvenient of access and undesirable. However, in the face of the engineering difficulties mentioned, and the limiting of needed shipping facilities which would result from placing the passenger station at either of the locations desired by the city, and in the absence of any experience showing definitely the extent of the inconvenience that the public may suffer from the location of the passenger station on the west side of the river, a condemnation of such station, as affording unreasonably inadequate facilities because of its location, could not be legally justified. Under all the circumstances, it would seem to be to the best interests of all concerned to abide the result of experience, which will doubtless enlighten the judgment and indicate the proper solution of the questions presented. If it should appear at that time that the public is inconvenienced to a degree that may be regarded as a breach of the railway company's duty in the premises, the question of the relocation of the depot will be taken up and considered upon application of the city. The petition is dismissed.

The petition alleges that for more than twenty-five years past the respondent railway company has maintained on its main line of railroad in the city of Rhinelander, and still so maintains, a passenger depot; that the accommodations afforded the public at said station are, and for more than ten years past have been grossly inadequate; that in response to continual protests on the part of the traveling public and the petitioner, and to a resolution adopted by the common council of said city on Oct. 5, 1909, the railway company, through its general officers, on or about Sep. 25, 1910, notified the petitioner of its purpose to erect in said city a new passenger station, representing as available for such purpose two sites, one being substantially the present location, and the other being block 1 of the West Park addition to said city, and called upon the common council of said city for an expression of the wishes of petitioner as to its location; that in compliance with such request the said common council on Sep. 27, 1910, adopted a resolution recommending substantially the present location; that since the said purpose to erect a new passenger station became known to the public numerous petitions, signed by large numbers of the inhabitants of said city, have been filed with the general officers of said company, and various committees representing the petitioner and said inhabitants have called upon same, all setting forth the objections hereinafter stated and uniformly protesting against the erection of such station at said West Park addition; that the erection and maintenance of such passenger station upon said block 1 of the West Park addition would be a failure on the

part of the railway company to provide and maintain at said city adequate station facilities and conveniences for the accomodation of passengers; that said company, regardless of the wishes of the petitioner and its inhabitants, and wholly disregarding its aforesaid lawful duty to provide and maintain adequate station facilities and conveniences at said city for the accommodation of the public, now declares its purpose to erect and maintain such passenger station upon the said block 1 of the West Park addition, and is now preparing such site for the erection of same; that said proposed site is located in an unimproved and unpopulated district at the extreme western limits of said city, is in a section of same that is improbable if not impossible of extension, and in a direction opposite to that of its growth; that while substantially all of the business and residence portions of said city are situated on the east side of the Wisconsin river, the said site is located on the west side thereof and approximately twelve hundred feet from the eastern boundary line of same; that a passenger station so located would be inaccessible to 95 per cent of the inhabitants of said city except by passing over a grade crossing of the main line and switch yards of the Chicago & North Western Railway Company, consisting of four tracks, where engines and cars are almost continually in motion, and so located that the approach of said engines and cars from either direction is entirely hidden from the view of persons approaching said crossing; that the necessity for passing over same in going to and from such station would not only cause serious inconvenience and delay to the public, but would create a situation of such extreme danger as to constitute a standing menace to the public safety; that such location would also be inaccessible to the aforesaid proportion of said inhabitants except by passing over a 380 foot wagon bridge spanning the Wisconsin river, which bridge, while ample for present requirements, is of insufficient width to permit of vehicles meeting and passing each other thereon with safety or dispatch, or of extensive travel by pedestrians, and would be wholly inadequate to accommodate the traffic resulting from a station so located; that the situation thus created would result in serious inconvenience and delay to the public; that in addition to passing over said railroad crossing and bridge said 95 per cent of said inhabitants would be required to travel approximately one-third of a mile through a practically unimproved and unpopulated section

of said city, and in view of the fact that the principal passenger trains of said railway company arrive at and depart from said city in the night time, to wit, about two o'clock a. m., and to the fact that said route is dangerous and unsuitable for pedestrians and others, a station so located would be particularly hazardous and inconvenient to the public; that said company now owns and has available for said passenger station at least two other sites offering equal, if not superior, advantages to itself, one being its present location and the other directly across its right of way from same; that a passenger station erected and maintained on either of said sites would not only be free from all of the objections heretofore mentioned, but would provide the petitioner and its inhabitants with adequate service and facilities; that there are numerous equitable reasons why said passenger station should not be located at the proposed site; that practically all of the present site of the station grounds and switching yards of said company has been donated for its respective uses by petitioner and its inhabitants; that portions of several streets have been vacated for the same purpose; that, although the duty so to do rested with said company, petitioner has constructed and for more than twenty years maintained two overhead viaducts passing over said yards and aggregating eight hundred feet in length; that in doing so large sums of money have been expended by petitioner, all in reliance upon the permanency of said conveniences; that the location of said passenger station at the proposed site would necessitate the expenditure by petitioner of large sums of money for street improvement, street lighting, bridge construction, police protection, and for numerous other purposes, all of which would be unnecessary but for the establishment of same, and that all of said improvements and conveniences necessary in the establishment and maintenance of said station at either of the two available sites above mentioned have been already installed and provided for. Wherefore, petitioner prays that the said railway company be required to locate the passenger station herein mentioned at some point more responsive to the public convenience and safety than the proposed site herein described.

The respondent railway company, answering the petition herein, admits all the formal allegations thereof, and that it has for a number of years maintained a passenger and freight station at Rhinelander where same is now located, and that said station

has become inadequate for both passenger and freight business. It alleges that more than two years ago, realizing that better facilities must be furnished for its business in said city, it purchased adequate ground for a new passenger station at the site complained of; that as early as June 20, 1910, its president in a letter to its general manager declared it to be his purpose to build a passenger station on the ground so secured and to improve the present freight house; that on Sep. 15, 1910, its president, in a letter to its general manager, referring to the station improvement at Rhinelander, said: "You know our plan is to build a passenger station opposite the paper mill (which is the site complained of) and throw the present passenger station into a freight house;" that soon thereafter, to wit, on Sep. 20, 1910, orders were given to the chief engineer to grade said ground for said passenger station, which was done during the fall of 1910; that prior to the filing of this petition the foundation for said passenger station was well under way and a large force of men were on the ground for the construction of said passenger station, a contract for which had theretofore been let; that so far as the files in said matter disclose, the question as to the location of said new passenger station was settled and determined upon long before the resolution of the common council of Rhinelander, mentioned in the petition, was adopted; that there is no evidence in said files of any request by its president or any other official to said common council for an expression of the latter's preference in regard to the site for said station; that the plans which have been approved and which are now being carried out for said passenger station will furnish adequate facilities for the transaction of respondent's passenger and express business in said city for a long time to come; that said passenger station will be suitable in all respects for a city of the size and importance of Rhinelander; that when said passenger station is ready for service the freight house facilities of the respondent in said city will be enlarged by converting the present passenger station into a freight house, which will result in furnishing adequate facilities for the freight business of respondent in said city for many years, and that by carrying out the plans aforesaid respondent believes it will have fully complied with the requirements of the statutes of Wisconsin in such case made and provided.

The matter came on for hearing in the city of Rhinelander on Dec. 20, 1911. The petitioner was represented by *H. F. Steele,* its city attorney, and the respondent by *A. H. Bright,* its general counsel.

Upon the hearing it developed that public sentiment in Rhinelander is divided upon the question of the proper location of the new depot. Perhaps the greatest number of people favor locating the new structure on the site of the old one, and on ground just across the track from the same. Others look with favor upon the location selected by the railway company. Prior to the filing of the petition herein the company purchased a site for the new passenger depot, let a contract for the construction of same, and the actual work of such construction had been begun. Thereupon the common council caused these proceedings to be instituted.

The principal objection of the petitioner, as related by the witnesses produced on its behalf, seems to be that the larger number of people will be convenienced by the location of the new station somewhere in the vicinity of the present depot, that in order to reach the site chosen by the railway company it will be necessary to cross the main line and three switching tracks of the Chicago & North Western Railway Company at a point where pedestrians' vision of approaching trains is obstructed by buildings, and where there are always a number of train movements daily, and to cross a bridge 380 feet in length which spans the Wisconsin river; that the bridge has but one sidewalk five feet in width and the roadway is so narrow that it is difficult for teams to pass; that while the bridge is adequate for the present travel, it would be inadequate to accommodate the increased travel which would result from the location of the depot on the west side of the river; that women and children departing or arriving on trains late at night, when the principal trains of respondent arrive at Rhinelander, would be obliged to travel approximately two-thirds of a mile through an unpopulated section of the city to reach the west side of the river; that the territory on the west side of the river, where the new building is being constructed, is sparsely settled and that there is no prospect of any great development or increase of population in that section of the city.

The testimony on behalf of the railway company was to the effect that the space upon which the present station building

is located is too small for a first class passenger depot; that it is desirable to separate the passenger station from the freight station, which is now together in one building; that it is the purpose of the company to devote all of such building to the freight service; that if the company were to construct a station on the site suggested, across the tracks from the present station, it would be necessary to entirely remodel the west end of the freight yard, to move the roundhouse, turn table, coal shed and track scales, and in fact to change the location of practically all the tracks constituting the portion of the yard west of the first viaduct east of the depot, as the space available south of the main track is not adequate to put in a station of sufficient size or a platform of sufficient length to meet the requirements of the passenger traffic.

There was also considerable testimony offered relative to the undesirable surroundings of the present depot and the character of the street leading to the same upon which pedestrians are obliged to travel to reach the depot. These matters are not material, however, to a determination of the question at issue.

The respondent contended that the Commission is not vested with authority to determine the location of a depot. This contention does not seem to us tenable. Station facilities are a part of the service that the railway company is legally obliged to furnish. If such facilities are not reasonably adequate, because of the location or character of the building, the company may be required to provide a depot so located and constructed as to meet the reasonable requirements of the public. We fully agree with the city attorney that the Commission is empowered in a proper case to fix the point of location of a depot or station. *Pullen v. Wis. C. R. Co.* 1906, 1 W. R. C. R. 37. In the instant case, the company is engaged in constructing a new station building to be used exclusively for passenger service. Doubtless the increase of both passenger and freight traffic requires increased station facilities. By devoting the present structure exclusively to freight and erecting a passenger depot at another point, the railroad company can best meet the requirements of the traffic. The site of the present building is more convenient for freight. In fact, no thought of removing the freight house to a different location could be entertained, as its situation with respect to the business center of the city and its accessibility

for the receipt and delivery of freight are such as to compel its maintenance in the immediate vicinity of its present location.

Under the circumstances disclosed the company was obliged either to construct the new depot on the land now occupied by the old one and to move the old structure and place it on land just across the track from its present location, or to build the new depot on such land across the tracks, or to acquire land in another locality for passenger depot purposes. It chose the latter alternative. The situation presented in this case differs somewhat from that where the Commission is called upon to establish a station in a community where none exists but one is required, and where the company refuses to provide one. In such case, if any question as to the proper location should arise, the Commission, considering the convenience and interests of the community as well as of the railway company, would establish the exact location. But in the instant case the railway company has purchased ground and has a new building in process of erection. The city challenges the adequacy of the new structure because of its location. It fully agrees with the company that the existing station facilities are inadequate because of the character of the building. It seems, therefore, that the initial question to be here determined is whether the new building will furnish reasonably adequate facilities for passengers at Rhinelander. Unless such facilities can be condemned as not reasonably adequate, a change of location could not be effected, for the power to command new or additional service or facilities rests upon the inadequacy or inefficiency of the existing service or facilities. If the Commission should find for any valid reason that the new building will not provide reasonably adequate passenger facilities, then it must ascertain and determine what would be reasonable in the premises, and in so doing should prescribe the point at which the station should be situated, if the question of place is material to the inquiry.

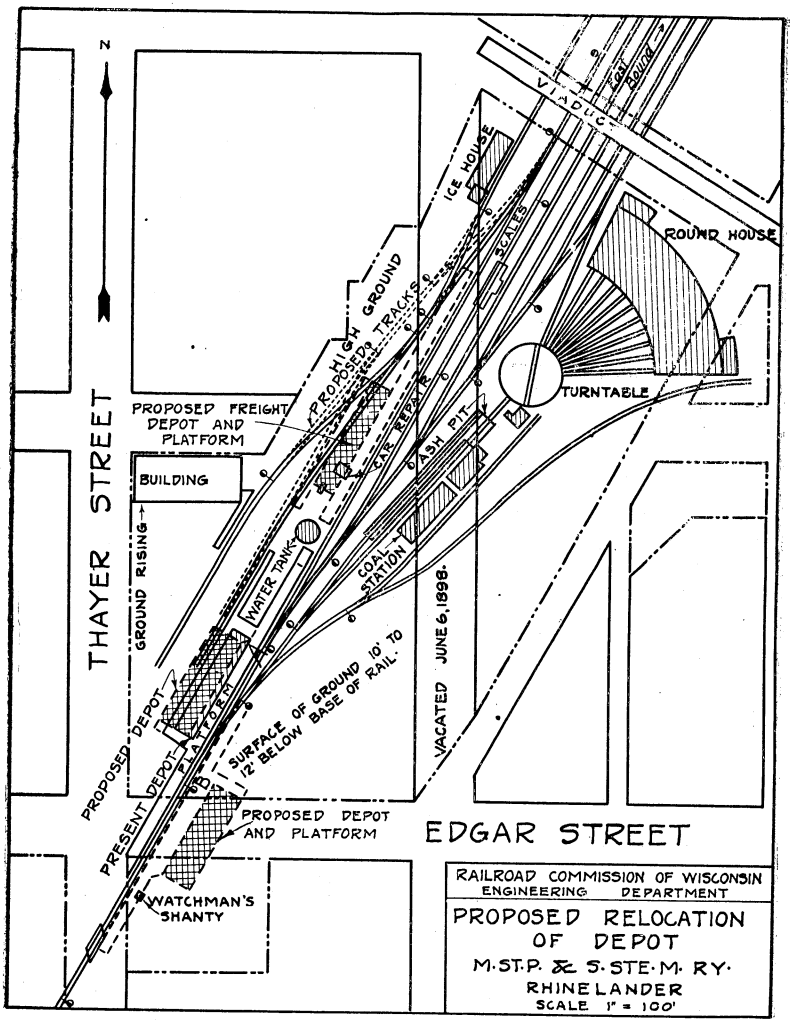
In ascertaining the reasonableness of the facilities that will be provided by the new depot, it becomes necessary to consider certain facts and conditions which seem to control the situation. From the testimony offered upon the hearing and the independent investigation by the engineers of the Commission, it appears that the railway company was influenced by the engineering features which were involved in solving the problem before

it. There are about 3,200 residents in the First, Second, Third and Fourth wards of the city who live nearer to the present depot than to the new depot. In fact, the present depot appears to be very near the center of population of such wards. On the other hand, about 2,500 people live in the Fourth, Fifth and Sixth wards, so located that the distance they will have to travel to reach the new depot would be slightly less than that to the present depot; this difference, however, being not over a few hundred feet. Considered from this point of view alone, no doubt the present site is considerably more desirable than the new site.

The diagram on the next page shows in double hatched lines two studies of the location of the depot as proposed by the city. The size of the depot, as indicated upon the diagram, is the same as the new depot across the river. One shows the depot located on the south side of the track, that is, opposite the present location; the other shows the depot located as nearly as possible in its present location. In the latter case, the present depot has been removed to a position east of the water tank, also shown in double hatched lines. This location of the freight house is rather cramped and if it should be adopted it would require some rearrangement of the house tracks. These track changes, however, are not extensive, and can be accomplished without much expense. One objection to having the freight house at the suggested location and the passenger station in its present position is that all teaming to and from the freight house and team track must pass close to the passenger depot. The contour of the land is such that the only entrance is from Thayer street, just north of Edgar street. This would undoubtedly result in considerable congestion at this point. The track changes necessary for this location of the freight house are shown in dotted lines.

There is no doubt, however, that any reduction in the amount of track available for use in serving the freight house and for teaming will be a serious matter, as even now there is only a very limited amount of track that can be devoted to that purpose, and it would appear that there might well be a demand for more such track rather than that the amount should be reduced. The only practicable location for the freight house is either the one at present occupied by the depot, or the one sug-

gested above. It could not be located immediately across the tracks for the reason that, with the present arrangement of tracks to the coaling station, ash pit and round house, no tracks could be placed to serve it. These tracks all lead off from the turn-out at "B", shown on the diagram, and unless radical changes are made in these plants it is impracticable to serve them with any other arrangement of tracks.



By reference to the depot on the south side, directly across the tracks from the present depot, it will be observed that the switch at "B", leading to the coaling station, ash pit and round

house, leaves the main track at a point directly in front of the proposed depot building proper, and can not be removed very much to the east without interfering with switch "A". This latter switch is the only one giving entrance from the west to five yard tracks lying south of the main track. To attempt to place switch "B" further east will require the shortening of all these five tracks and the probable removal of the scales. Even then the approach to the coaling station, ash pit and round house will be cramped, as it is necesary to have a track on the south side of the coaling station for supplying the coal to those plants.

The length of the present platform is about 375 feet, partly used, no doubt, for handling way freight. The length of the platform proposed to be built by the company at the new site is 400 feet. It will be observed that a length of platform of even 300 feet on the south side of the track requires part of same to be placed in Thayer street at one end, and that the leads to the roundhouse and coaling plant cross the other end. Such an arrangement is objectionable, both as to the platform in Thayer street and as to the tracks crossing same at the east end, and can not be avoided except by remodeling of the entire yard between the present depot and the viaduct next east thereof. This, in turn, would necessitate the removal of the coaling plant and the ash pit to another position, which would be objectionable, as their present position relative to the round house is far more satisfactory than any other that could be obtained.

From the point of view of a building site the new location is superior to either of the two above mentioned. The ground at that point is high, with a slope toward the river, which makes it easy to drain and easy to beautify. There are two rather serious objections to this location as a depot site, first, because of its being well out of the settled part of the city, and second, because of the necessity of crossing the bridge on Davenport street over the Wisconsin river in order to reach it, which will have to be done by all residents of the city with the exception of a very few who reside on the west side of the river. Undoubtedly the territory surrounding the new depot will be built up to some extent, but it is unlikely that the population on the west side of the river will ever be large as compared with that on the east side.

The bridge across the river consists of two 100 foot spans and one 180 foot span, or a total length of 380 feet. This is a through truss about 15 feet in the clear, with an additional walk on the north side for pedestrians. This is somewhat narrow for a bridge of this length, but has about the same clearance as the majority of highway bridges. Two ordinary vehicles can pass upon it, although no doubt a load of unusual width, such as a hay rack, will hold up all traffic in the opposite direction until it has passed over. The width of walk for pedestrians is not so great as it should be, and it may be necessary to place a similar walk on the south side. A further consideration in this connection is the difficulty to be encountered in crossing the bridge during a high wind. Also, in order to reach the station on the west side of the river it is necessary to cross four tracks of the Chicago & North Western Railway Company. The approach of trains on these tracks is shielded from the view of travelers on Davenport street in either direction until such travelers are very close to the track; in fact, a person west bound in a wagon can not see along the track until his horses are upon the first track. This obstruction is caused by warehouses placed at a distance of about eight feet from the center line of the first track, and makes this crossing a rather dangerous one. However, a crossing watchman is stationed there during the day, and if it becomes necessary to protect life and property, one may have to be stationed there during the night.

Relative to the site of the present station, it appears that there is considerable obstruction to traffic on Thayer street, the approach to the depot, by the respondent railway company. This is evident from the fact that a train must obstruct this street before it can enter the yard from the west end, which entrance is over a switch at "A", as shown on the diagram. Of course, this class of obstruction need not occur for a short time immediately before or after the arrival and departure of passenger trains, but the passenger trains themselves obstruct this street while they stand at the depot, and would also do so were the new depot built either on the present site or directly across the track. In the latter case, this would not be a serious matter, for the larger proportion of patrons would approach from the south.

The location now occupied by the depot would be the best site for a new one if sufficient accommodation for freight busi-

ness could be obtained by removal of the freight house to the position east of the tank, as shown on the diagram, and if some means of approach to the freight house could be had other than that near the passenger depot. This arrangement, however, would leave but little room for expansion, which is imperative at this time. Hence, this site is impracticable and inadvisable.

The site opposite the present depot does not have any of the objections which apply to the present site, but there is such a short strip of track available that it is hardly possible to secure sufficient room for a platform. This would be a good place for a passenger depot if the round house were not in the same block, but unless the round house is moved to some other location it does not appear possible to rearrange the tracks made necessary by it and the other facilities connected with it to give sufficient room for the platform. Furthermore, the cost of removal of the round house, coal shed, ash pit, turn table, construction of yards and tracks, would be fully $30,000 and the other changes necessary would render the cost almost prohibitive. Even if such changes were made, the freight facilities would be such as to prevent their extension to meet the reasonable requirements of the traffic at Rhinelander.

If it were not for the engineering difficulties mentioned and the limiting of needed shipping facilities which would result from placing the new passenger station at either of the locations desired by the city, and another feasible site were available, we should not hesitate to declare the location made by the railway company to be inadvisable. While we fully appreciate that the material welfare and growth of the city depends more upon its shipping interests than upon the passenger traffic and, therefore, nothing should be done to prevent the extension of shipping facilities to meet the requirements of the increasing freight traffic, nevertheless the convenience of the traveling public can not be ignored or sacrificed for the mere sake of the freight business. The situation is an unfortunate one from any viewpoint. From the independent investigation and careful report of the engineers of the Commission it seems clear that in order to properly provide adequate facilities for the freight traffic, both present and prospective, it was imperative that the railway company seek another locality for its passenger station. It selected a location which in many respects, as already noted, is inconvenient of access and undesirable. However, in the face of the report of

the engineers and in the absence of any experience showing definitely the extent of the inconvenience that the public may suffer from the location of the passenger station on the west side of the river, a condemnation of such station as affording unreasonably inadequate facilities because of its location could not be legally justified. Under all the circumstances, it would seem to be to the best interests of all concerned to abide the result of experience, which will doubtless enlighten the judgment and indicate the proper solution of the questions presented. If it should appear at that time that the public is inconvenienced to a degree that may be regarded as a breach of the railway company's duty in the premises, the question of a relocation of the depot will be taken up and considered upon application of the city. Although this conclusion will be a disappointment to a large number of the people of Rhinelander, it seems to be the only one that can be justly reached, from all the facts at hand. For the reasons stated, the petition will be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF A HIGHWAY CROSSING NEAR COLUMBIA STATION OF THE CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA RAILWAY COMPANY.

Decided March 12, 1912.

The point was raised that the Commission was without jurisdiction to enter the order, previously made, in regard to a highway crossing of the C. St. P. M. & O. R. Co. east of Columbia Station, Wis.

Held: The order is vacated and set aside.

The order having been made herein on the 16th day of January, 1912 (8 W. R. C. R. 516), whereby the respondent railway company was required to install and maintain at the highway crossing situated about 1,800 feet east of Columbia Station an electric bell with an illuminated sign in addition to the audible alarm for night indication, the same to be effective upon the approach of a train from either direction; and further ordered that the respondent railway company widen the approaches to said crossing so that the highway on each side of the track shall be thirty-two feet wide to a length equal to the width of the railroad right of way, and that said approaches be properly tiled for drainage; and

WHEREAS the question of the jurisdiction of this Commission to enter such an order has been raised;

NOW, THEREFORE, IT IS ORDERED, That the said order made herein on the 16th day of January, 1912, be and the same is hereby vacated and set aside.

EDWARD J. CHROMASTER
vs.
MILWAUKEE NORTHERN RAILWAY COMPANY.

Submitted May 15, 1911. Decided Mar. 12, 1912.

Petitioner alleges discrimination in that the M. N. Ry. Co. charges less per mile between certain other points along its route than it charges between the village of Mequon and the city of Milwaukee; and in that it refuses to stop its limited trains at Mequon. Petitioner complains further that respondent has unjustly and arbitrarily increased its rates and that the passenger service between the village of Mequon and the city of Milwaukee is wholly inadequate. A uniform mileage basis has been established for the rates from all stations and stopping places on respondent's line, except that at points competitive with the C. & N. W. Ry. Co. the mileage of the latter company has been used by respondent. Mequon is not an incorporated village. A valuation was made of the entire property of the M. N. Ry. Co., which was apportioned between the interurban and city systems, and respondent's income accounts and operating expenses were analyzed. Testimony showed inadequate service for the southern portion of respondent's line. The engineering staff of the Commission made a thorough investigation of traffic conditions between Milwaukee and Cedarburg and intermediate points and reported that the service offered on Saturday afternoons, Sundays and holidays during the summer months is not adequate to handle the traffic. Brown Deer was found to be the approximate north limit of the congested zone and Milwaukee the southern limit. Investigation of the car equipment and of trolley and feeder capacity led to the conclusion that under present conditions a twenty-minute schedule is a much more acceptable method of meeting the increased volume of traffic than to operate two-car local trains. Traffic demands over the territory under consideration could be most acceptably met by city or suburban type cars and not by cars of the interurban type.

Held: It is a general practice with steam and interurban electric roads to use the shorter mileage so as to meet the competition of the road having the shorter route, and there is no objection to this being done in the instant case, as the respondent is thus enabled to obtain a fair share of the available traffic whereby to increase its earnings and to give all of its patrons a lower fare than could be charged if its traffic were limited to strictly local business.

Petitioner is not discriminated against by the fact that limited trains do not stop at Mequon and all other stations between that point and Milwaukee. Limited trains for through passengers are essential to efficiency of service on long haul traffic, for if they should stop at every station on the line their usefulness

would be impaired and no advantage whatever would accrue in the establishment of such class of service.

The testimony does not disclose any excessive or unreasonable fare to have been exacted by respondent's schedule of rates. No reduction can be made in the rates charged.

The service furnished by respondent between Milwaukee and Brown Deer is inefficient and inadequate during the summer months, especially on Saturday afternoons, Sundays and holidays. Respondent is ordered to extend its tracks, in accordance with the Commission's specifications, so that double track railway conditions will be closely approximated within this district; to establish twenty minute local service between Milwaukee and Brown Deer on Saturday afternoons, Sundays, and holidays during the summer months; and to purchase sufficient additional city type cars to take care of this additional service. Such extensions and improvements are to be installed and in service for the traffic beginning June 1, 1912.

The petition of the petitioner shows that he is a resident of the village of Mequon in the county of Ozaukee and state of Wisconsin; that he is a dentist practicing his profession in the city of Milwaukee, Wis.; that the above named railway company is a common carrier engaged in the transportation of persons and property by railway between points in the state of Wisconsin, and that as such common carrier said railway company is subject to the provisions of ch. 87 of the Wisconsin Statutes of 1898 and acts amendatory thereof, and is likewise subject to the provisions of ch. 362 of the Laws of 1905 and acts amendatory thereof; that the respondent operates a line of railway between the village of Mequon and the city of Milwaukee; that respondent is and has been for a long time past discriminating in rates in favor of certain cities along its right of way and against the village of Mequon, and this discrimination consists in charging less per mile between the favored localities and certain other points on its route than it charges between the village of Mequon and the city of Milwaukee; that the respondent has for a long time past discriminated against the residents of the village of Mequon by refusing to stop its limited trains at the village or at other highways along its right of way, except Highway No. 5, and refuses to stop such trains for the residents of the village of Mequon whose business compels them to travel daily between the village and the city of Milwaukee. The petition states further that respondent has unjustly and arbitrarily increased its rates between Dec. 24, 1909, and Jan. 5, 1911, from $13 per 1,000 miles to $16 per 1,000 miles; that the passenger service between the village of Mequon and the city of Milwaukee is wholly inadequate for the great number of residents of the

village who desire to use the respondent's line between the village and said city; that the respondent runs its cars between the village of Mequon and said city at intervals of two hours, which service is entirely inadequate; that the distance between the village of Mequon and the north limits of the city of Milwaukee is approximately eleven miles, but that the respondent charges its patrons for a distance of fourteen miles between the village of Mequon and the city of Milwaukee. Wherefore, the petitioner prays that the respondent be required to answer the charges herein, and that after due hearing and investigation an order be made requiring the respondent to cease discriminating in rates and service against the citizens of the village of Mequon and other citizens along the route and right of way of said Milwaukee Northern Railway Company, and for such other and further order as the Commission may deem necessary and just in the premises.

In answer to the petition the respondent states that it is subject to the provisions of ch. 362 of the Laws of 1905 and the several acts amendatory thereof; it denies each and every allegation set forth in the petition not specifically admitted or controverted or explained; it alleges that the place or settlement at which the petitioner resides, designated in the petition as the village of Mequon, is not an incorporated village under the laws of this state and does not possess any of the legal characteritics of a village other than the fact that there are a collection of houses, too small in number to sustain and support a parish church or to have and enjoy any of the incidents essential to a village; that the entire resident population of such hamlet or collection of houses is 122, a population entirely insufficient to constitute a village or precinct of its incorporation as a village under the laws of this state; respondent denies that it is a common carrier subject to the provisions of ch. 87, Wisconsin Statutes of 1898 and acts amendatory thereof, but on the contrary is an electric railway corporation, incorporated under ch. 86 of the Wisconsin Statutes of 1898 and acts amendatory thereof, engaged in the operation of an interurban electric railway subject to the provisions of ch. 362, Laws of 1905, and several acts amendatory thereof. Respondent alleges that in the operation of its interurban electric railway between the city of Milwaukee and the city of Sheboygan, its railway crosses the east and west highway between sections 22 and 27 in township 9 north,

range 22 east, town of Mequon, Ozaukee county, Wis., at a point about 900 feet distant from the highway intersections referred to in the petition as the village of Mequon, at which point or place respondent receives and discharges passengers from such of its interurban railway cars or trains as are scheduled to stop at that place, to and from which place respondent maintains rates without discrimination; that the rates from the aforesaid highway crossing or place called Mequon to and from all cities and villages, as well as other places at which passengers are received and discharged on the line of respondent interurban railway company, are uniform, being based upon the mileage of its interurban railway, which is the shortest mileage of any existing railway between the aforesaid place called Mequon and other points hereinbefore referred to; that between such points and places upon the line of its interurban railway, between which points and places there is competition in traffic and for traffic between the respondent and the Chicago & North Western Railway Company, that is, between Milwaukee, Port Washington, Belgium, Cedar Grove, Oostburg, and Sheboygan, the through rate of the respondent is based upon the mileage of the Chicago & North Western Railway Company, which mileage is less than the mileage between such competing points, and for that reason the sum of the local rate from such competitive points to Mequon, and from that point to Milwaukee, is greater than the through rate from such competitive points to Milwaukee, but respondent denies that such rates as are now in force to and from Mequon are discriminatory. Respondent avers that the fact that it does not stop its limited trains or cars at the highway known as Mequon, does not in and of itself constitute a discrimination against that point or its traffic, for the reason that that point or place is not an incorporated village under the laws of this state, and that there is not sufficient traveling population to or from that point to justify and require the stopping of its said limited trains, thereby discommoding its through passenger traffic by such additional stop and increase in running time, as well as for the further reason and because of the fact that all of its limited trains are stopped at the incorporated village of Thiensville, where a waiting room is provided, which waiting room is but 2,900 feet further from the highway intersection called Mequon than the waiting room on the line of the respondent's interurban railway known as Mequon; it alleges

that Highway No. 5 upon its interurban railway line is not a regular stopping place or point for its limited trains; that at and during the time at which a number of persons, approximately 35, were employed in the construction of buildings near that point, one limited train was stopped daily for their accommodation, but that such stopping of its limited trains has been discontinued; it avers that the increase in its passenger rates made on Dec. 24, 1909, and Jan. 5, 1911, were had and made after the giving of proper notice of such increase by the posting in all of its ticket offices, as well as filing with the Railroad Commission of the state of Wisconsin, which increases of rates were necessarily made by reason of the insufficient operating earnings of its said interurban railway for the calendar year 1909, in which year its net earnings, after deducting taxes and without any deductions for interest or depreciation, were $91,236.84; that the valuation placed upon its railway by the tax commission of the state of Wisconsin, upon which it paid taxes during the year 1910, was $1,650,000; that its net earnings out of which interest and depreciation in its property must necessarily be paid was 5.5 per cent of the valuation of its property, as determined by the tax commission for taxation purposes; that notwithstanding the increase in rates which became effective Dec. 24, 1909, its net earnings, after deducting taxes, and without allowance for interest or depreciation, were but $112,809.35; that the valuation placed upon its railway property by the tax commission of Wisconsin, upon which it must pay taxes for the fiscal year 1911, was $1,650,000; that its net earnings from which interest and depreciation of its property must be paid were but 6.8 per cent of the valuation for the current year, as determined by the tax commission for taxation purposes, which net earnings are, as respondent submits, manifestly inadequate and insufficient for such purposes. The respondent avers that its passenger service between the stopping point known as Mequon and the city of Milwaukee is wholly adequate and sufficient, there being twenty daily local trains making stops at such point, and but fourteen daily limited trains making no stops at that place, which limited trains make stops at Thiensville station, less than 2,900 feet more distant than the station or stopping point known as Mequon; that on Sundays and holidays during the summer season there are twenty-six stub trains running between a point one mile north of Thiensville and Milwau-

kee and six through trains which stop on signal at the stop of Mequon, which trains afford as adequate accommodation as can with safety be operated over single track; that the receipts from the Thiensville ticket office during the year ending Dec. 31, 1910, was the sum of $4,559.29, while the amount received from the Mequon ticket office was but the sum of $728.28, which latter receipts are, as respondent submits, wholly inadequate to support a more frequent service, or to call for a stopping of its limited trains.

The respondent, while admitting that the distance between the station of Mequon and the north city limits of the city of Milwaukee is about eleven miles, denies that it makes a charge or charges for fourteen miles traffic between said station of Mequon and the city limits, but alleges that it does charge and make a traffic charge of fourteen miles from the station of Mequon to any point within the city of Milwaukee, that is, between the city limits and its terminal station at 5th and Wells street in said city, which additional charge of three miles is for city fare, the actual distance from the north city limits of Milwaukee to its terminal station being 3.4 miles. Wherefore, the respondent prays that the petition be dismissed.

A hearing in the matter was held at Milwaukee on May 15, 1911. *Edward J. Chromaster* appeared in his own behalf, and *F. W. Walker,* general manager of the Milwaukee Northern Railway Company, appeared for the respondent.

The petitioner himself, testifying, said that Sheboygan and Port Washington passengers paid less per mile than the passengers from the villages and highways where there is no competition with the steam roads, and cited two highway stops a few miles south of Sheboygan where the cash fare charged to Milwaukee was 7 cts. more than that from Sheboygan, and also that the fare from Highway 24, two miles south of Port Washington, was 3 cts. more than from Port Washington. He submitted a printed bond circular of the Milwaukee Northern Railway Company containing a synopsis of the respondent's earnings for the year ending Jan. 31, 1911, which he stated showed a net profit for that year of $120,170.30. Witness said that as the passenger fares were raised Jan. 5, 1911 from $14.50 per 1,000 miles to $16.00 per 1,000 miles and the other mileage in the same proportion, he figured that the net profits would be about $30,000 more for the ensuing year. Witness made comparison of cash

fares paid on respondent's line to those charged by the Milwaukee Light, Heat & Traction Company between Milwaukee and Waukesha. In the latter case the round trip fare was stated to be 50 cts., with the privilege of transfers in Milwaukee for a total distance of forty miles, while the rate charged by respondent from Cedarburg to Milwaukee, a distance of nineteen miles, or thirty-eight miles for the round trip, amounted to 74 cts. cash fare, without the transfer privilege, and a fare of 53 cts. charged from Mequon to Milwaukee and return, a distance of twenty-eight miles for the round trip, also without the transfer privilege. He further stated that when respondent's line was first put in operation the conductor pulled mileage for ten miles from Mequon to the north side station in Milwaukee, later eleven miles was pulled, and now fourteen miles was taken. Witness testified that passengers at Mequon were discriminated against in matters of service; that the limited trains were not permitted to stop at Mequon, but would stop at highways to pick up respondent's section men; that formerly Mequon had a train every hour, but that one train every two hours was now furnished Mequon, Keiper's park and the highways between Thiensville and Milwaukee; that the approximate number of passengers getting on and off respondent's trains yearly between Mequon and Milwaukee was 138,816; that the approximate number of passengers getting on and off at Mequon was 29,376 per year. Witness stated that all limited as well as all local trains should stop at Mequon and the highways between Thiensville and Milwaukee, as the district was closely populated and a rich farming community; that at present the trains were often late and were overcrowded with standing room only in many cases, especially on Saturday afternoons and Sundays; that those who could not get on had to wait for the next train, which was occasionally as long as two hours. On cross-examination the witness stated that he had not ridden on the cars on Saturdays or Sundays for more than a year; that he used thousand mile books mostly which were sold at 1.6 cts. per mile, and that he knew of no discrimination in rates except where the company met the passenger fares of the Chicago & North Western Railway at Sheboygan and Port Washington, and charged intermediate passengers the regular mileage rate.

Witnesses conducting summer resorts at points between Mequon and Milwaukee testified to the poor quality of service

given by the respondent which resulted in an injury to their business; that half-hour service had been promised to them by the railway company, but that they were getting a two hour service; that their patrons had complained of the uncertain running schedules, of the crowded cars, of the failure of some trains to stop and take them on thus compelling them to wait an unusual length of time for another train. Instances were given where persons were obliged to walk to other stopping places to take the car when scheduled trains failed to stop at the designated highways, where passengers were frequently compelled to stand the entire distance to or from Milwaukee and where persons waited as long as two hours after a full loaded train failed to stop, until the next train arrived.

Other witnesses gave similar testimony as to the inadequate service provided for the patrons of the company within the district mentioned. One witness who had made a record of his observations as to the number of persons standing on north-bound cars during the months of July and August, 1910, cited fifteen days when the cars were in an overcrowded condition, having a minimum number of twelve and a maximum number of forty persons standing, and that on May 13, 1911, two days previous to the hearing of this case, he noticed fourteen persons standing on a north-bound car.

The general manager of the company introduced a number of exhibits bearing upon the question of rates and service involved in the case, tables of distances, statistics of passengers carried, of station earnings and sales, of operating expenses, of train schedules and the dispatchers' original train sheet. He testified that same had been prepared by him and under his direction, and that they contained all the information which the Milwaukee Northern Railway Company had in connection with this matter. He stated that the Chicago, Milwaukee & St. Paul Railway did not stop its trains at Mequon; that the nearest station to Mequon was Thiensville, about half a mile north; that the fare on the Chicago, Milwaukee & St. Paul Railway from Thiensville to Milwaukee was 35 cts. and the fare by the Milwaukee Northern 27 cts.; that the fare from Thiensville by the Chicago, Milwaukee & St. Paul Railway to North avenue was 24 cts. and from Thiensville to Milwaukee city limits, via the Milwaukee Northern, 22 cts., while the rate from Mequon to the city limits by the Milwaukee Northern was 20 cts.; that the through fare

at points competitive with the Chicago & North Western was less that the sum of the two locals; that the rate from Mequon to Milwaukee by ticket was 25 cts., and to Atkinson avenue 18 cts.; that the receipts at Mequon through the agent of the Milwaukee Northern Railway for the year 1910 were $723.28, while the lowest receipts at any station where limited trains stop were, at Belgium, $2,140.27. Witness further stated that limited trains were put into service June 1, 1910, after repeated requests to do so by long haul passengers and after a study of the amount of through business which the Milwaukee Northern was receiving; that 34,815 passengers were carried on through tickets between Milwaukee and Sheboygan in 1909, and 40,502 passengers in 1910; that the increase in the ticket sales of 1910 over 1909 shows an increased revenue at Sheboygan ticket office of $7,300, while the increase at all of its other stations was but $5,000. With regard to the service, witness said that figures taken from the dispatcher's train sheets for Sunday, July 31, 1910, showed that the outgoing trains on that date averaged 64.2 passengers per car on the Thiensville local, which train runs from Milwaukee north as far as Thiensville; that the northbound through trains, including limited and locals, carried an average of 64 passengers per car on that day; that the Thiensville-Mequon local was run practically as a second section of the limited and local through trains, and therefore on Sunday Thiensville and Mequon had one-hour service, with the second section of the through train; that the trains were spaced fifteen minutes apart, the Thiensville and Mequon local leaving fifteen minutes after the through train; that without a double track between Thiensville and Milwaukee no more trains could be operated with safety over the line. Witness explained the method of operating the trains and stated that in order to render their operations safe, a single track block between Mud Creek and Atkinson avenue, a distance of about two miles, was operated, with a dispatcher at each end of the block in a booth, and only one train was permitted in that block at one time. He said that the schedule for Saturdays and Sundays made an average of one train every eight minutes passing through that block in one direction or another; that for the year 1911, in order to facilitate the operation of trains over said track, the siding at Mud Creek was being extended and that when it was

finished the number of cars operated over the line could probably be increased somewhat. On cross-examination he stated that the Sunday business to Thiensville did not pay, but admitted that it was the function of an interurban road to give good, frequent passenger service for comparitively short hauls. He said that ample accommodation was furnished between Milwaukee and Thiensville, yet he stated that during the summer time on Saturday afternoons and Sundays it was impossible to take care of the business offered on a single track road. He believed that the schedule as laid out, making the meeting points the same all through the day, was safer than to run a schedule of local trains and sandwich in so-called limited trains, which he regarded as a dangerous method and which had resulted in great loss of life on electric railroads. He disagreed with petitioner's witnesses that the diminished attendance at the summer resorts along the line was due to the lack of sufficient service, but was of the opinion that the falling off in visitors was on account of the superior facilities offered elsewhere. He regarded the stop at Keiper's Park as not justifiable, it being a private place and therefore discriminatory and the stop should be discontinued, or else the street which connects over to it should be dedicated as a highway.

There are practically but two questions involved in this case, one of rates and the other of service. In order to determine the reasonableness of the rates charged by the respondent, a valuation was made of the entire property of the Milwaukee Northern Railway Company. This was done by our engineering staff as of date June 30, 1911, and was the subject of investigation for some months. The total plant value and the apportionment of same to the interurban and city systems is given in tables I and II, which follow:

TABLE I.

VALUATION JUNE 30, 1911.

MILWAUKEE NORTHERN RAILWAY COMPANY.

	Cost new.	Present value.
A. Land	$192,000	$192,000
B. Transmission & distribution	146,146	130,335
C. Buildings & miscellaneous structures	86,727	83,925
D. Plant equipment	318,738	280,878
E. General equipment	215,495	181,323
G. Roadway	860,534	738,263
Total	$1,819,640	$1,606,724
Add 12% (see note below)	218,357	192,807
Total	$2,037,997	$1,799,531
F. Paving	57,601	30,081
Total	$2,075,598	$1,829,612
H. Supplies	19,011	19,011
Total	$2,094,609	$1,848,623
J. Non-operating	4,000	4,000
Total	$2,098,609	$1,852,623

NOTE:—Addition of 12% to cover engineering, superintendence, interest during construction, contingencies, etc.

J. Non-operating	4,000	4,000	.....	.....
Total	$332,660	$281,717	.....	.....

NOTE:—Addition of 12% to cover engineering, superintendence, interest during construction, contingencies, etc.

The respondent's railway began operation on Oct. 28, 1907. From that date until April 1, 1911, the railway was operated by the construction company under its contract for preliminary operation. On the latter date the Milwaukee Northern Railway Company took possession of the property. In its report

to the Commission the construction company separated the operating expenses of the city line from the interurban line. Those expenses which were common to both were apportioned on a unit basis. For the purposes of this decision the separation of expenses as made by the company will be accepted. As the complaint is primarily on interurban rates, it will be best to determine what effect the company's apportionment of expenses has upon the operating ratios of the interurban and city systems. The ratio of ordinary operating expenses to earnings for the past three years follows:

OPERATING RATIOS.
Year ending June 30.

Year.	Interurban.	Urban.
1909	60.38	68.52
1910	54.16	65.45
1911	48.30	65.20

In the following table III the income account is given for the year ending June 30, 1911, as reported to the Commission, and the rate of return upon the cost new is shown. The cost of reproduction has been considered the proper value to use because the company is entitled to a certain amount of going value and working capital in addition to the present value.

TABLE III.
INCOME ACCOUNT
YEAR ENDING JUNE 30, 1911.

	Interurban line.		City line.	
OPERATING REVENUES.				
Revenue from transportation	$246,413 03		$45,935 10	
Revenue other than transportation	5,913 20			
Total revenues		$252,326 23		$45,935 10
OPERATING EXPENSES.				
Way and structure	$11,965 26		$2,319 54	
Equipment	13,895 60		4,086 56	
Traffic	1 525 80			
Conducting transportation	80,219 24		20,843 96

[1] Depreciation figures on 2% sinking fund basis.
[2] Deficit.
[3] Valuation, cost new, for 1909: Interurban $1,584,675, city $298,480. For 1910: Interurban $1,594,186, city $300,271. Plant value apportioned for both years to interurban and city on basis of 1911 apportionment, table II, 84.15% and 15.85% respectively

A review of the facts presented by the above tables shows plainly that no reduction can be made in the rates charged by the respondent company. In regard to the question of discriminatory rates raised by petitioner, the testimony shows that a uniform mileage basis has been established for the rates from all stations and stopping places on the line, but that at points competitive with the Chicago & North Western Railway Company the mileage of the latter company has been used by the respondent. It is a general practice with steam and interurban electric roads to use the shorter mileage so as to meet the competition of the road having the shorter route, and we can see no objection to this being done in the instant case, as the respondent is thus enabled to obtain a fair share of the available traffic whereby to increase its earnings and to give all of its patrons a lower fare than could be charged if its traffic were limited to strictly local business. Increased earnings at a competitive

point inures to the benefit of all patrons of the road. We cannot see wherein petitioner and others using respondent's line between Milwaukee and Thiensville are injured by the slight increase in the fare at a highway immediately south of Sheboygan or south of Port Washington. The testimony does not disclose any excessive or unreasonable fare to have been exacted by the company's schedule of rates to Milwaukee city or to the station at the northern limits of Milwaukee. We therefore fail to perceive any cause for ordering a reduction in the present schedule of rates charged by the respondent.

With reference to the complaint regarding service furnished by the respondent, the testimony clearly shows that it is inefficient and inadequate during the summer months, especially on Saturday afternoons and Sundays. The conditions outlined at the hearing seemed to warrant a very thorough investigation of the interurban service being rendered and to evolve some plan which would solve the problems of inadequate service or increase the efficiency of service. The Commission therefore instructed its engineering staff to make an exhaustive study of the situation and to make a report thereon, embodying such recommendations as might be deemed necessary to bring about an improvement in the service then rendered. Our engineers selected three days, Saturday, Sunday and Monday, Aug. 26, 27 and 28, for this purpose. Saturdays and Sundays during the summer, as shown by the testimony, are days of heavy traffic; the conditions on Monday, Aug. 28, should fairly represent the normal amount of traffic the Milwaukee Northern is required to handle. On these same three days the staff likewise investigated the service on the company's Milwaukee city cars during the period of heaviest traffic only.

During this three day period, every interurban car in service on respondent's line between Milwaukee and Cedarburg carried a member of the Commission's engineering staff, who gathered the following information: (1) Duration of stop at each station; (2) time of departure from each station; (3) total number of passengers on car from each stop; (4) number of passengers in smoking compartment; (5) number of passengers in main compartment; (6) number of passengers standing; (7) number of passengers boarding car at each stop; (8) number of passengers leaving car at each stop; (9) number of passengers left at any stop unable to find room on car.

We quote from our engineer's report as follows:

"*Traffic conditions between Milwaukee and Cedarburg on Saturday, Aug. 26, 1911.* Cars scheduled to leave Milwaukee at 7:30 a. m., 1:30 p. m., 6:30 p. m. and 7:30 p. m. were loaded beyond their seating capacity. The 1:30 p. m. car had a maximum load of 87 passengers and a seating capacity of but 52 passengers. This is the only bad case of overloading that occurred on Saturday on a north-bound car. This excess load boarded the car at North Side station and the seating capacity of the car was exceeded until arrival at Brown Deer. In other words, some passengers were compelled to stand for a distance of seven and one-half miles. South-bound car leaving Cedarburg at 9:22 p. m. Saturday, Aug. 26, 1911, carried a maximum load of 88 passengers. The car was loaded beyond its seating capacity from Mequon to North avenue, a distance of approximately twelve miles. The maximum variation from schedule on Saturday, Aug. 26, 1911, was made by north-bound limited car No. 7 leaving Milwaukee at 6:30 p. m. This car arrived at Cedarburg 11 minutes behind scheduled time. The average variations from schedule by all cars running between Milwaukee and Cedarburg on Saturday, Aug. 26, 1911, at the different stations en route were as follows: Milwaukee ¼ minute, North Side station 2 minutes, Brown Deer 3 minutes, Thiensville 4 minutes, and Cedarburg 4 minutes.

"*Traffic conditions between Milwaukee and Cedarburg, Aug. 27, 1911.* On this day two bad cases of overloading occurred on north-bound cars. Car No. 10, leaving Milwaukee at 9:30 a. m., carried 79 passengers (seating capacity 52 passengers) from Milwaukee terminal to Center street, 82 passengers from Center street to North Side station, 91 passengers from North Side station to Brown Deer, and 92 passengers from Brown Deer to Cedarburg. Car No. 12, leaving Milwaukee at 11:20 p. m., carried 60 passengers from Milwaukee terminal to Chestnut street, 62 passengers from Chestnut street to Walnut street, 66 passengers from Walnut street to North Avenue, 67 passengers from North Avenue to Center street and 68 passengers from Center street to North Side station, 82 passengers from North Side station to Highway No. 1, 81 passengers from Highway No. 1 to Highway No. 2, 76 passengers from Highway No. 2 to Highway No. 4, and 75 passengers from Highway No. 4 to Cedarburg; or, in other words, this car was loaded away in excess of its seating capacity from Wells street station in Milwaukee to and beyond Cedarburg. Eight south-bound cars were loaded beyond their seating capacity. Car No. 12, scheduled to leave Cedarburg at 4:30 p. m., carried a maximum of 61 passengers and was loaded beyond its seating capacity from Thiensville to North Side station, a distance of approximately eleven miles. Car No. 8, scheduled to leave Cedarburg at

5:26 p. m., carried a maximum of 87 passengers and was loaded beyond its seating capacity from Thiensville to North avenue. Car No. 9, following car No. 8 as a second section, carried a maximum of 75 passengers, and was loaded beyond its seating capacity from Brown Deer to the Wells street Milwaukee terminal, approximately ten and one-half miles. Car No. 11, scheduled to leave Cedarburg at 6:30 p. m., carried a maximum of 93 passengers and was loaded beyond the seating capacity from Thiensville to North avenue. Car No. 5, scheduled to leave Cedarburg at 7:26 p. m., carried a maximum of 87 passengers and was loaded beyond its seating capacity from Cedarburg to Center street, a distance of approximately seventeen miles. Car No. 6, following car No. 5 as a second section, carried a maximum of 93 passengers and was loaded beyond its seating capacity from Cedarburg to the Wells street Milwaukee terminal. Car No. 3, scheduled to leave Cedarburg at 8:30 p. m., carried a maximum of 79 passengers and was loaded beyond its seating capacity from Mequon to Center street. Car No. 12, scheduled to leave Cedarburg at 9:26 p. m., carried a maximum of 64 passengers and was loaded beyond its seating capacity from Mequon to the Wells street Milwaukee terminal.

"Not a single car operated on Sunday, Aug. 27, 1911, ran on scheduled time. The maximum variation from schedule was made by car No. 3, south-bound, scheduled to leave Cedarburg at 8:30 p. m. The car arrived at the Milwaukee terminal one hour and four minutes late. The average variations from schedule made by all cars running between Milwaukee and Cedarburg on Sunday, Aug. 27, 1911, at the different stations en route were as follows: Milwaukee terminal, 17 minutes, North Side station 21 minutes, Brown Deer 20 minutes, Thiensville 20 minutes, and Cedarburg 18 minutes.

"*Traffic Conditions between Milwaukee and Thiensville Sunday, Aug. 27, 1911.* The most extreme case of overloading occurred on the Thiensville local cars. One of these cars carried a maximum of two and four-tenths times its seating capacity, and two of the cars were loaded to twice the seating capacity. Car No. 10, scheduled to leave Milwaukee at 7:45 a. m., carried a maximum of 101 passengers, approximately twice the seating capacity, and was loaded beyond its seating capacity from North avenue to Highway No. 9. In other words, the car was loaded beyond its seating capacity for nearly 79% of its run. Car No. 5, scheduled to leave Milwaukee at 8:45 a. m., carried a maximum of 71 passengers and was loaded beyond its seating capacity for nearly 71% of its run. Car No. 7, scheduled to leave Milwaukee at 9:45 a. m., carried a maximum of 104 passengers and was loaded beyond its seating capacity for 93% of its run. Car No. 5, scheduled to leave Milwaukee at 10:45 a. m., carried a maximum of 88 passengers and was loaded beyond its seating

capacity for 68½% of its run. Car No. 2, scheduled to leave Milwaukee at 12:45 p. m., carried a maximum of 74 passengers and was loaded beyond its seating capacity for 50% of its run. Car No. 11 carried a maximum of 60 passengers and was loaded beyond its seating capacity for 75½% of its run. Car No. 2, scheduled to leave Thiensville at 5:48 p. m., carried a maximum of 59 passengers and was loaded beyond its seating capacity 43% of its run. Car No. 4, scheduled to leave Thiensville at 6:48 p. m., carried a maximum of 127 passengers and was loaded beyond its seating capacity for 88% of its run. Car No. 2, scheduled to leave Thiensville at 7:48 p. m., carried a maximum of 89 passengers and was loaded beyond its seating capacity 60% of its run. Car No. 12, leaving Thiensville at 10:18 p. m., carried a maximum of 79 passengers and was loaded beyond its seating capacity 97% of its run.

"*Traffic Conditions between Milwaukee and Cedarburg, Monday, Aug. 28, 1911.* Car No. 9, local, scheduled to leave Cedarburg at 12:06 a. m. and to arrive at the Milwaukee terminal at 12:54 a. m., left Cedarburg at 12:40 a. m. and arrived at the Milwaukee terminal at 1:28 p. m. This car carried a maximum of 57 passengers and was loaded beyond its seating capacity for 56% of its run. Car No. 6, local, north-bound, scheduled to leave Milwaukee terminal at 9:30 a. m. left at 9:31 a. m. and arrived at Cedarburg five minutes late. This car carried a maximum of 63 passengers and was loaded beyond its seating capacity 36% of its run. Car No. 6, local, scheduled to leave Milwaukee at 3:30 p. m., left at 3:32 p. m. and arrived at Cedarburg five minutes late. This car carried a maximum of 74 passengers and was loaded beyond its seating capacity for 45% of its run. Car No. 1, local, scheduled to leave Milwaukee at 5:30 p. m., left at 5:33 p. m. and arrived at Cedarburg five minutes late. This car carried a maximum of 60 passengers and was loaded beyond its seating capacity for 20% of its run. Car No. 8, scheduled to leave Cedarburg at 6:32 a. m., left two minutes ahead of schedule and arrived at the Milwaukee terminal six minutes late. This car carried a maximum of 75 passengers and was loaded beyond its seating capacity for 58% of its run. Car No. 4, scheduled to leave Cedarburg at 7:32 a. m., left seven minutes late and arrived at the Milwaukee terminal eight minutes late. This car carried a maximum of 64 passengers and was loaded beyond its seating capacity for 50% of its run. Car No. 12, scheduled to leave Cedarburg at 9:22, left five minutes late and arrived at the Milwaukee terminal two minutes late. This car carried a maximum of 62 passengers and was loaded beyond its seating capacity for 45% of its run. Car No. 1, scheduled to leave Cedarburg at 4:29 p. m., left nine minutes late and arrived at the Milwaukee terminal seven minutes late. This car carried a maximum of 62 pas-

sengers and was loaded beyond its seating capacity for 25% of its run.

"Nine of the thirty-four cars in service between Milwaukee and Cedarburg on Monday, Aug. 28, 1911, were loaded beyond their seating capacities during parts of their runs; or, in other words, 26% of all cars operated between Milwaukee and Cedarburg on Monday, Aug. 28, 1911, were at times loaded beyond their seating capacities. The average variations from schedules by all cars running between Cedarburg and Milwaukee on Monday, Aug. 28, 1911, at the different stations en route were as follows: Milwaukee terminal 2½ minutes, North Side station 3 minutes, Brown Deer 5½ minutes, Thiensville 5½ minutes, Cedarburg 5 minutes.

"Examination of the service shows that Brown Deer is the approximate north limit of the congested zone.

"The more closely this traffic problem is studied, the more logical appears the conclusion that the southern portion of the Milwaukee Northern Railway Company's line is, strictly speaking, double track territory. The amount and character of the traffic within the limits of the territory bounded on the south by Milwaukee and on the north by Brown Deer, or even extending as far north as Cedarburg, is such that in the very near future a regularly operated double track line will be absolutely essential to efficient and adequate service. An examination of the train dispatcher's sheets for Sunday, Aug. 27, 1911, shows that one hundred and four trains were operated over single track in the above mentioned territory during a period of approximately eighteen hours, equivalent to a train every ten minutes if the traffic were uniformly distributed. However, this amount of traffic was not uniformly distributed, with the result that there were periods when the headway was less than ten minutes.

"With due consideration to these conditions that tend to increase the limit of single track capacity of an electric road, it is our opinion that the limit of that capacity for efficient operation has been reached on the single track of the Milwaukee Northern Railway between Brown Deer and Milwaukee, as regards summer traffic on Sundays and holidays.

"It is also the opinion of the members of the engineering staff joining in this memorandum that the solution tending to increased efficiency of service and the relief from the condition of inadequate service complained of, and which complaint has been substantiated by investigation, is the building of enough additional or second track between Brown Deer and Milwaukee so that double track conditions are closely approximated. There are three distinct great advantages to be gained by double track operation and the operation of single car trains over the operation of two or more car trains governed by multiple control and operated over a single track: 1st, increased safety of

operation and control; 2nd, a more uniform distribution of traffic; 3rd, a faster schedule.

"A twenty minute local service between Brown Deer and Milwaukee will relieve the regular local and limited trains of excess loading between Cedarburg and Milwaukee and enable these trains to make their schedule time on Sundays and holidays. The daily service offered by the Milwaukee Northern to the citizens of Mequon and intermediate stations between Mequon and Milwaukee (judging from results of tests on Saturday, Aug. 26th and Monday, Aug. 28, 1911) seems to be adequate.

"The interurban cars of the Milwaukee Northern Railway are designed with a single entrance and exit for passengers. The same are not suitable nor were they designed for handling strictly local traffic. In view of the special design of the interurban cars and the nature of the extra traffic which the company must equip itself to handle during the congested periods of the summer season, it is believed that it will be satisfactory and advisable that any extra equipment purchased for this specific purpose be of the general type of the local city cars now in service on the Milwaukee Northern Railway.

"In summing up, the data obtained from field observation and from review of the company's train sheets, together with study of the case, tends to show that the Milwaukee Northern service between Milwaukee and Cedarburg is adequate to take care of the traffic offered to it on five and one-half days of the week. The service offered on Saturday afternoons and Sundays and holidays, however, is not adequate to handle the traffic during the congested periods.

"As a result of this investigation and a thorough study of the case, the following suggestions are offered as constituting such changes as will secure, at all times, reasonably adequate service to wit:

"1. Double track the line from the Chicago, Milwaukee & St. Paul beer track crossing to the loop at O'Neil and Atkinson avenues.

"2. Extend present siding north of Chicago, Milwaukee & St. Paul beer track crossing towards Brown Deer siding a sufficient distance so that by reason of the small amount of single track remaining, double track railway conditions are very closely approximated within this district.

"3. Establish 20 minute local service between Milwaukee and Brown Deer in lieu of the hourly and half hourly service heretofore given by "Thiensville locals" and "Fiebranz locals," respectively.

"4. Purchase sufficient additional number of city type cars to take care of this additional service."

In order to determine the advisability of operating two-car trains on the Milwaukee Northern Railway between the North

Side substation in Milwaukee and the Brown Deer substation to handle the extra traffic offered on Sundays in the summer season, an investigation was made by another member of the staff of the car equipment and of trolley and feeder capacity between these points. His report is as follows:

"TROLLEY, FEEDER AND RAIL RETURN. From the North side substation the single track extends to the C. M. & St. P. beer tracks, a distance of approximately 1.8 miles with a siding of 0.15 miles long at the car barn at city limits. The trolley is 4/0 copper and the feeder is 250,000 circular mill copper equivalent aluminum, which extends across the C. M. & St. P. beer tracks three or four poles into the south end of double track. The rail is 70 lb. A. S. C. E. standard.

"Double track approximately 2.24 miles in length extends from the C. M. & St. P. beer tracks to a point about 1,400 feet north of the C. & N. W. undercrossing. A 4/0 copper feeder from the Brown Deer substation extends south 4 or 5 poles into this siding. From the north end of this siding to Brown Deer is single track, 4/0 trolley and 4/0 feeder, a distance of approximately 3.35 miles.

CAR EQUIPMENTS. The twelve cars used in interurban service are equipped with 4 Westinghouse 112–B motors and multiple unit control for train operation. Acceleration is automatic through relays acting on the control circuits and relays are set to permit the cutting out of resistance in the motor circuits while building up on parallel whenever the current intake from the trolley drops to 350 amperes. This is the maximum demand upon the distribution system.

"CALCULATIONS. It is necessary to assume two two-car trains at a point approximately midway between the substations and this point has been taken as the end of double track north of the C. & N. W. undercrossing, 3.35 miles from Brown Deer. Two two-car trains starting simultaneously at this point would, for a certain period, demand an average of 350 amperes per car (as explained above) or a total of 1,400 amperes. Assuming that 700 amperes would be taken from each substation the calculated drop in voltage from Brown Deer would reduce the effective voltage at the car to less than one-half of the normal voltage. This drop is considered too much for a high class interurban road, and would seriously interfere with the maintenance of schedule speeds, especially at a time when all stops are likely to be made. The above assumption does not take into consideration the fact that there may be other cars on the same trolley section, each demanding a certain current and adding to the line drop already of sufficient magnitude to affect the schedule of the cars under consideration.

"If two two-car trains should be operated on local runs, Milwaukee to Brown Deer, it would probably be necessary to make

all local stops between these points, whereas two separate cars running independently might not have to make more than 67 or 75 per cent as many stops. With two-car trains making all local stops the probability of two trains starting simultaneously is greatly increased and power conditions would probably be such, with the present distribution system, that all trains would be thrown behind their schedules. All trains must stop at the C. M. & St. P. crossing and be under control at all switch points, so that it is considered a serious question of satisfactory operation with the present distribution system.

"It has been learned that all of the cars do not operate together in an entirely satisfactory manner, but this is either a detail of adjustment or maintenance and could be corrected.

"CONCLUSION. Under the present conditions it is not considered advisable to operate two-car local trains to handle the increased volume of traffic on summer holidays and Sundays. The traffic demands over the territory under consideration are those to be handled most acceptably by city or suburban type cars and not by cars of the interurban type in service on the Milwaukee Northern Railway. A twenty minute service, Milwaukee to Brown Deer, is considered a much more acceptable method of relieving the unsatisfactory situation than to run two-car local trains of interurban equipment."

The above conclusions reached by members of the staff are fully concurred in by Professor Pence, the engineer of the Commission, who joins in the recommendations submitted by them. From such reports it appears that petitioner and other passengers using the cars between Milwaukee and Thiensville will be adequately accommodated by the additions and improvements recommended and herein ordered to be installed. After the respondent has taken the necessary steps to improve the service complained of, the Commission will cause a second investigation to be made to determine the adequacy and efficiency of service then rendered.

We cannot see wherein petitioner is discriminated against by the fact that limited trains do not stop at Mequon and all other stations between that point and Milwaukee. Limited trains for through passengers are essential to efficiency of service on long haul traffic, for if they should stop at every station on the line their usefulness would be impaired and no advantage whatever would accrue in the establishment of such class of service.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Milwaukee Northern Railway Company, take such steps as may be

necessary to provide reasonably adequate service to its patrons between Milwaukee and Brown Deer by making the following improvements:

1. Double track the line from the Chicago, Milwaukee & St. Paul beer track crossing to the loop at O'Neil and Atkinson avenues.

2. Extend present siding north of Chicago, Milwaukee & St. Paul beer track crossing towards Brown Deer siding, a sufficient distance so that by reason of the small amount of single track remaining, double track railway conditions are very closely approximated within this district.

3. Establish twenty minute local service on Saturday afternoons, Sundays, and holidays during the summer months between Milwaukee and Brown Deer in lieu of the hourly and half-hourly service heretofore given by "Thiensville locals" and "Fiebranz locals," respectively.

4. Purchase sufficient additional number of city type cars to take care of this additional service.

Such extensions and improvements to be installed and in service for the traffic beginning June 1, 1912.

INDEX-DIGEST.

Every point taken by the Commission has been included in the INDEX-DIGEST, whether essential to the decision or not. Wherever feasible the exact language used by the Commission, both in the *dicta* and in the decisions, has been embodied in the digest, so that for practical purposes reference back to the decision will in most cases be unnecessary.

ACCOUNTING

COST ACCOUNTING—ELECTRIC UTILITIES.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses.

1. In the present case, the operating expenses apportioned to the electric department have been further divided between capacity and output costs. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 211.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among the different departments of the service.

2. The capacity and output expenses of the electric department have been divided among commercial lighting, commercial power and street lighting. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 212.

3. In the present case the output expenses of the hydraulic portion of the plant have been divided according to the division of the total annual output of the entire plant among railway, commercial and street lighting service. This appears to be about correct as the water power machinery is in operation at all times, except when repairs are necessary, and the assumption of part of the load by the steam engine during the peak will not change the relation of the amounts delivered by water power to the several services, although the amounts themselves are affected. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca,* 1912, 8 W. R. C. R. 586, 604.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among different departments of the service—Depreciation.

4. Depreciation was divided between street lighting and other uses in proportion to the value of the property devoted to each use. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca,* 1912, 8 W. R. C. R. 586, 607.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among different departments of the service—Distribution system expenses.

5. The usual practice of the Commission has been pursued in the present case in dividing the distribution system operating labor, maintenance, and supplies and expenses between street lighting and commercial services according to the miles of conductor used for each purpose. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 605.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among different departments of the service—General expenses.

6. The general expenses in the present case have been apportioned according to the total direct expenses. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 607.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among different departments of the service—Power expenses.

7. The facts in the present case indicate that the use of the steam equipment was not devoted entirely to one class of service, and that it is proper to divide its expense of operation and its value, as has already been done, among the several services which the plant supplies. As the capacity expenses should properly be apportioned according to the demands upon the equipment, the ratios which have been determined for dividing the value of the steam outfit were used for apportioning the steam generation expenses which vary with the capacity. The capacity expenses of operating the hydraulic equipment were apportioned on the basis of the ratios determined for dividing its value. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 602.

8. As output expenses are those which by nature and definition are proportional to the plant's output, it is desirable to divide the steam and hydraulic output expenses according to the output ratios most applicable to each. *In re Joint Appl. Waupaca El. Lt. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 602.

9. Since in the present case we must assume that the load of each service is divided between steam and hydraulic power in the same ratio as the total load is divided, the assumption follows that the outputs from steam and water power divide themselves among railway, commercial light and power, and street lighting services in the same proportions as the total plant output is divided among these three services during the period. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 602-603.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among different departments of the service—Taxes.

10. Taxes were divided between street lighting and other uses in

proportion to the value of the property devoted to each use. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 607.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among different departments of the service—Undistributed expenses.

11. Undistributed expenses have been divided into two items. Injuries and damages have been charged entirely to railway, the department in which this expense appears to have been incurred, while the remaining amount for insurance, stationery and printing has been apportioned according to the direct expenses. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 607.

Determination of unit costs—Prorating of output, capacity and consumer expenses.

12. The commercial lighting output costs divided by the commercial lighting sales of kw. hrs. for the period gives the unit output cost per kw. hr. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 219.

13. Dividing the capacity costs for the year by the average active load of kws. we find the unit capacity cost per active kw. per year. This divided by 365 gives the unit cost per kw. hr. for the first hour's daily use of the active load. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 219.

COST ACCOUNTING—ELECTRIC, GAS, AND OTHER UTILITIES.

Determination of unit costs—Apportionment of expenses among different plants—Power expenses—Steam generated—(Electric, Gas, and Heating utilities).

14. Because the heating business must receive all the heat of the steam which the engines have not converted into energy, hardly seems to be a valid reason for charging the heating business with that proportion of the cost of steam generated; for even in the most efficient steam operated electric plants, only a relatively small amount of the energy of the steam is converted into useful work, the remainder being lost in various ways. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 203.

COST ACCOUNTING—GAS UTILITIES.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Depreciation.

15. In the present case, depreciation is apportioned between consumer and output, according to the investment in and use of the several portions of the plant. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 195.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Interest.

16. In the present case, interest is apportioned between consumer and output, according to the investment in and use of the several portions of the plant. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 195.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Profits.

17. In the present case, profits are apportioned between consumer and output, according to the investment in and use of the several portions of the plant. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 195.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Taxes.

18. In the present case, taxes are apportioned between consumer and output, according to the investment in and use of the several portions of the plant. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 195.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among different departments of the service.

19. In the present case, the output and capacity expenses are apportioned between commercial lighting and fuel, and municipal lighting. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 490.

Determination of unit costs—Prorating of output, capacity, and consumer expenses.

20. By dividing the output costs of the gas department for the year by the cubic feet sold, we find the unit output costs for the period. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 197.

21. In order to properly distribute the consumer expenses of the gas department between the several consumers, we have divided the total consumer expense in the present case by the number of meter-months, and thus we find the cost per meter-month. This amount should be divided by the number of M cu. ft. used by the consumer and the result added to the output costs, in order to find what is the total charge per M for the quantity used. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 198.

22. The total capacity and consumer costs for commercial consumers divided among the consumers gives the fixed expense per consumer. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 491.

COST ACCOUNTING—HEATING UTILITIES.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses.

23. In order to illustrate what are the costs of rendering heating service to patrons having heating installations of different sizes, the operating expenses have been divided between consumer and output expenses in much the same manner as we are accustomed to apportion the expenses of gas plants. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 209.

Determination of unit costs—Prorating of output, capacity, and consumer expenses.

24. The consumer expenses divided by the number of patrons gives the annual sum to be paid by each patron regardless of the number of square feet of radiating surface. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 209.

Determination of unit costs—Prorating of output, capacity, and consumer expenses.

25. The output expenses divided by the total radiating area give the unit output price to be paid per square foot. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 209.

COST ACCOUNTING—WATER UTILITIES.

Determination of unit costs—Apportionment of value of physical property among the different departments of the service.

26. In order to determine the justice of the rates for fire service, it is necessary to apportion the property as between fire and general service. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 44, 56–57.

27. As each branch of service should bear the burden of taxes, interest, and depreciation upon the share of the investment occasioned by it, it becomes necessary to make a careful apportionment of the value of the property between the two branches of service, fire and general. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 352.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses.

28. In order to arrive at the unit costs of operation of the plant which shall constitute a basis for the determination of fair and equitable rates, an apportionment of expenses has been made over output, capacity and consumer. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 486.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among different departments of the service.

29. Output expenses are practically altogether expenses of general service, since in actual operation very little water is pumped for fire protection. Demand expenses may be divided on the basis of the maximum demands of the two branches of service, or 54.5 per cent to fire and 45.5 per cent to general service. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 47.

30. The first step in determining how much of the expenses of the respondent should be borne by each class of service and what form of rate schedule should be used, is the apportionment of expenses. The first step in the apportionment is the separation of direct operating expenses into output, demand, and consumer expenses. Then these expenses have to be divided between the two classes of service, fire and general. The next step is the division of taxes, interest, and depreciation between fire and general service, and the final step is the division of that portion of taxes, depreciation, and interest which was apportioned to general service, between consumer, output, and demand. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 365.

31. In the present case, demand expenses are apportionable between fire and general service according to the ratio of the maximum demand of each class of service to the total. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 366.

32. To arrive at the proper rate for each branch of service it is necessary to analyze the costs a little further. That portion of interest, taxes, and depreciation which is due to general service may be further subdivided among demand, output, and consumer expenses. *City of Marinette v. City W. Co.* 1911, 8 W. R. C. R. 334, 373.

33. In arriving at the consumer expenses in the present case, only those services which appear to have been put in at the expense of the company have been included in finding what portion of interest, depreciation and taxes should be considered as consumer expenses. This may appear to be to some extent a discrimination against those consumers whose services were put in at their own expense, and it may be that a modification of the method of apportionment used in this case will have to be adopted which will cause the entire amount of interest, taxes, and depreciation on services to be provided by those whose services were put in by the utility, but for the present the method outlined and used here seems the most satisfactory one to follow. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 374.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among different departments of the service—Depreciation.

34. Depreciation is divided between fire and other service according to the apportionment of the property, 58 per cent to fire and the rest to general service. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 47.

Determination of unit costs—Apportionment of expenses over output capacity, and consumer expenses—Further apportionment among different departments of the service—Interest.

35. Interest is divided between fire and other service according to the apportionment of the property, 58 per cent to fire and the rest to general service. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 47.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among different departments of the service—Taxes.

36. Taxes are divided between fire and other service according to the apportionment of the property, 58 per cent to fire and the rest to general service. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 47.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among different departments of the service—Apportionment of expenses for private consumers as between metered and flat rate consumers.

37. A part of the consumer expenses in the present case are due entirely to metered consumers, and a part should be apportioned alike to

all consumers, whether on meter or flat rate basis. Those expenses which should be met entirely by metered consumers are the cost of reading and maintaining meters, and the interest, taxes, and depreciation on meters and meter boxes. Of these the cost of reading and maintaining meters is divided equally among all metered consumers. Interest, taxes, and depreciation on meter boxes may probably best be divided on the same basis. To some extent there is a relation between these expenses and the size of meters, but the cost of these boxes varies with the material of which they are made rather than with the size of the meters. They constitute a part of the system necessary to furnish metered water service and it seems best to divide these costs equally among all metered consumers. On the meters themselves it is feasible to apportion the amount of interest, taxes, and depreciation according to the value of the various sizes of meters. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 374.

38. Output expenses may be divided between flat rate and metered users according to the amounts of water used. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 376.

39. In the present case, the total demand expenses may be divided, for purposes of arriving at the approximate cost of metered service, according to the number of consumers. If the consumers in the metered class were in a position to make a much larger demand than the average of those in the flat rate class, or vice versa, this method of apportionment would be defective, but in this case it appears to be a fair basis. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 376.

UNIFORM ACCOUNTS—ELECTRIC UTILITIES.

In general—Accounting terms—Definitions of operating expenses.

40. The Commission's present Classification of Accounts for Electric Utilities contains the following definitions:

Operating Expenses are intended to include all items of expense necessarily incurred in being prepared to serve or in serving the public as an electric utility. This includes the expense of maintaining intact the organization of the utility, the generation, distribution and sale of electric energy and all processes necessarily incident thereto, together with the collection of the revenues from such operations. * * *

Operating Expenses in the broadest significance of the term are divisible into two classes, viz., Operation and Maintenance.

Operation should be understood to mean the "use" of the property and includes labor, materials and supplies, and expenses, but excludes all Maintenance items.

Maintenance should be understood to mean "upkeep", and should cover all expenditures for current or ordinary repairs, renewals, or replacements of property resulting through wear and tear, or through those casualties which are incidental to the nature of the operation and which expenditures are necessary in order to keep up the productive capacity of the plant to its original or equivalent state of efficiency. *In re Appl. La Crosse G. & El. Co. et al.* 1911, 8 W. R. C. R. 18, 20.

In general—Accounting terms—Interpretation of terms in contract.

41. Joint application was made by the La Crosse Gas and Electric Co. and the La Crosse Water Power Co. to the effect that the Commission act as arbitrator in interpreting the meaning of the term "actual station operating costs" as used in a contract to which the applicants are

parties. The question upon which a decision was asked was as to the principle involved in the charging of repairs as a part of the "actual station operating costs." *Held:* that repairs properly belong among "operating expenses" or "cost of service." The term "actual station operating costs" as used in the contract to which the applicants are parties, properly includes the cost of repairs to the power plant of the gas and electric company during the periods of its operation necessitated by the failure of the water power company to furnish the agreed amount of electric current to the gas and electric company. *In re Appl. La Crosse G. & El. Co. et al.* 1911, 8 W. R. C. R. 18, 27.

UNIFORM ACCOUNTS—GAS UTILITIES.

In general—Keeping of accounts—Conformity to Public Utilities Law required.

42. It appears that the accounts and records of the utility, in the present case, have not been kept in the form prescribed by the Commission and as required by the Public Utilities Law. *Held:* it is important that a system of bookkeeping be installed at once that will show at any time clearly just what is being done and the condition of the plant. The Commission will provide an accountant to assist the village authorities in putting into effect the required system of accounting. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 483.

UNIFORM ACCOUNTS—TELEPHONE UTILITIES.

In general—Keeping of accounts—Conformity to Public Utilities Law required.

Rates, advance in, petition for, dismissed for lack of accounting data required under law, *see* RATES, 66.

UNIFORM ACCOUNTS—WATER UTILITIES.

In general—Installation of new classification of accounts, blank forms, etc. for Milwaukee water works.

43. Application was made by the city of Milwaukee for the Commission's approval of the adoption and installation of a new classification of accounts, blank forms and accounting procedure for the Milwaukee water works. A careful check of the text of the proposed system shows the detailed accounting requirements to be in conformity with the official classification of the Commission. *Held:* since some time will be necessary before the proposed changes can be so adjusted as to completely fit the large variety of operating conditions in the Milwaukee water works, it is deemed advisable to place the proposed system on trial for one year. During this time changes found necessary in installing the forms can be made upon amendment filed with the Commission. Fundamental changes in the keeping of accounts, if such should be found necessary, can be made before the opening of the next calendar year. The city is ordered to install and place in operation the proposed accounting system for one year, beginning Jan. 1, 1912. *In re Appl. City of Milwaukee*, 1911, 8 W. R. C. R. 406, 408.

In general—Keeping of accounts—Conformity to Public Utilities Law required.

Rates, reasonableness of, not finally determined for lack of accounting data required under law, *see* RATES, 75, 78.

44. It appears that the accounts and records of the utility, in the present case, have not been kept in the form prescribed by the Commission and as required by the Public Utilities Law. *Held:* it is important that a system of bookkeeping be installed at once that will show at any time clearly just what is being done and the condition of the plant. The Commission will provide an accountant to assist the village authorities in putting into effect the required system of accounting. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 483.

BRIDGES

Safety of bridges.

1. Complaint was made that the West Algoma street bridge over the Fox river in the city of Oshkosh, used by the Wisconsin Electric Railway Co. in the operation of its interurban cars, is wholly unsafe for the traffic. A preliminary examination of the bridge was made by the Commission's engineers and a hearing was held subsequent to the complaint. After the first hearing ch. 590, Laws of 1911, became effective under which the Commission may, on its own motion, inquire into the safety of highway bridges over which interurban railways operate. Accordingly a further hearing was held at the instance of the Commission. *Held:* action in this matter, on the part of the Commission, must be based upon the demands of public safety. When a bridge is in such a period of questionable safety as in the present case, the time has arrived for some action that will remedy conditions. Those responsible for the bridge ought not to postpone action until the structure is plainly a menace to human life. The West Algoma street bridge is in an unsafe condition, owing to the narrowness of the roadway; the instability of the substructure; and the failure of the superstructure due to overloading and the ravages of corrosion. It has outlived its usefulness and should be replaced by a modern structure designed to meet the needs of the traffic. The new bridge should have standard spacing for the clearance of cars. Since the accommodation of the electric railway traffic will involve an expenditure above that required for team traffic alone, the extra expenditure made necessary by the requirements of the electric railway should be borne by the Wisconsin Electric Railway Co. It is ordered that the present West Algoma street bridge be replaced, both substructure and superstructure, by a modern structure. In addition to the requirements of the United States government with respect to navigation, the new structure

is to conform to the specifications prescribed by the Commission. The city of Oshkosh is ordered to have plans made and specifications drawn up for both the bascule and the swing type of draw-span and to call for bids on both types. The complete plans, specifications, and bids are to be submitted to the Commission for final decision in regard to type. As soon as the final plans have been approved, the city of Oshkosh is to have the new bridge constructed according to the approved plans and specifications and to have the present structure, including substructure and superstructure, removed. Ninety-three per cent of the cost of the new structure, exclusive of the cost of the tracks and overhead for the railway and the damages to adjoining property caused by the bridge and its approaches, is to be borne by the city of Oshkosh, and seven per cent by the Wisconsin Electric Railway Co. The railway company is ordered, at its own expense and in accordance with the approved plans, to provide the necessary material and to construct the track and overhead that will be required, making ample provision against the escape of electric current into the bridge structure. The city is to assume any damages to adjoining property caused by the construction of the new bridge and its approaches and is to own and maintain the new structure, except that the railway company is to maintain the pavement on that part of the roadway occupied by its tracks under the same terms as it now maintains the pavement in the streets of the city of Oshkosh, and is to maintain its tracks and all portions of the bridge devoted exclusively to supporting the trolley wire and its accessories. Complete plans, estimates and bids are to be submitted to the Commission within ninety days. Actual construction is to be commenced within sixty days after the plans are approved, and is to be completed within one year. *In re West Algoma Street Bridge in Oshkosh*, 1912, 8 W. R. C. R. 441, 446, 461–462.

CARRIERS

CARRIAGE OF PASSENGERS

Passengers' effects—Articles constituting personal baggage.

1. It would seem, generally speaking, that anything that is ordinarily necessary for the convenience of the passenger while on his journey, or which is essential to the execution of some temporary employment

or pleasure at his destination, is to be considered baggage. This also accords with the view taken by the courts, although the line of demarkation between what is and what is not baggage is not distinct. *Green v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 115, 117.

2. Petitioner, a submarine diver residing at Milwaukee, Wis., alleges that respondent company refuses to check as baggage his submarine diver's outfit which is packed in three chests provided with suitable handles; that the outfit is essential to the prosecution of his business and should be accepted as baggage by respondent; and that respondent is the only railway company which refuses to carry these chests as baggage. Respondent objected that the schedule does not provide specifically for the carrying of property of this character as baggage. *Held:* anything that is ordinarily necessary for the convenience of the passenger while on his journey or which is essential to the execution of some temporary employment or pleasure at his destination is to be considered baggage and the property here in question may be properly classified as baggage. It is ordered that the respondent company transport as baggage, according to its rules and regulations, the petitioner's diving outfit when properly packed in suitable chests provided with such handles as are usually placed upon chests or trunks. *Green v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 115, 118.

3. Whatever the passenger takes with him for his personal use or convenience according to the habits or wants of the particular class to which he belongs, either with reference to the immediate necessities, or to the ultimate purpose of the journey, must be considered as personal baggage. This would include not only all articles of apparel, whether for use or ornament, but also the gun case or fishing apparatus of the sportsman, the easel of the artist on a sketching tour, or the books of the student, and other articles of an analogous character, the use of which is personal to the traveler, and the taking of which has arisen from the fact of his journeying. On the other hand, the term "ordinary luggage" being thus confined to that which is personal to the passenger and carried for his use or convenience, it follows that what is carried for the purposes of business, such as merchandise or the like, or for larger or ulterior purposes, such as articles of furniture or household goods, would not come within the description of ordinary luggage, unless accepted as such by the carrier. (*Gleason v. Goodrich Transp. Co.* 1873, 32 Wis. 98.) *Green v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 115, 118.

4. The petitioner sets forth that the Southern Wis. Ry. Co., a corporation engaged in the transportation of passengers in the city of Madison and the towns of Blooming Grove and Madison, Wis., has among its rules and regulations regarding the transportation of passengers and their baggage, the provision that baby carriages or carts of any kind are not allowed on cars unless they are folded, so as to occupy as little space as possible, and inclosed in cloth or paper, so as to protect the clothes of the passengers. Conductors or motormen are not permitted to fold or unfold these carriages or to delay the car for others to do so, but will receive and place them, when prepared as required by this rule. The petitioner alleges that the rule in question has been in effect some thirty days and is now in effect, and that, insofar as it compels passengers with baby carriages and carts to inclose the same in cloth or paper, the regulation is unreasonable and unjust. Inquiries made by the Commission of the various street railway companies operating in Wisconsin show that none of the companies require folded baby carts to be wrapped or enclosed. This appears to be quite generally the rule with both urban and interurban roads throughout the United States. *Held:* the rule of the respondent requiring folded baby carriages or carts to be wrapped or covered with cloth or

paper when offered as baggage by passengers is unreasonable. The respondent is accordingly ordered to accept folded baby carriages or carts as baggage without requiring them to be wrapped or enclosed in cloth or paper. *Martin v. S. W. R. Co.* 1911, 8 W. R. C. R. 311, 315.

CLASSIFICATION

CHANGE IN CLASSIFICATION

Grounds for change.

1. Changes in rates or classification which have the effect of disturbing long established business conditions which have grown up in reliance upon the continuance of the existing system of rates or the existing classification, should not be made except for good reasons. (*Wisconsin Box Co. et al. v. C. M. & St. P. R. Co. et al.* 1909, 3 W. R. C. R. 605, 617.) *M. Carpenter Baking Co. et al. v. Wells Fargo & Co. et al.* 1911, 8 W. R. C. R. 1, 13.

CLASSIFICATION IN EXPRESS SERVICE

Basis of classification.

2. Uniformity of classification throughout the country is highly desirable, but it is clear that such uniformity, to be practicable, must be based upon conditions that obtain in more than one section of the country. It is manifest that in a country such as this, where the conditions which affect transportation are apt to vary with practically

every separate industrial and commercial center, it is very unsafe, to say the least, to adopt a classification that is based on the conditions in only one locality. *M. Carpenter Baking Co. et al. v. Wells Fargo & Co. et al.* 1911, 8 W. R. C. R. 1, 9.

3. If it is proper that local conditions alone should control in one case, it would seem only fair that they should not be without significance in other cases. A uniform classification, to be equitable and fair to all concerned, must be based on all the conditions affected by it rather than on a part of these conditions. *M. Carpenter Baking Co. et al. v. Wells Fargo & Co. et al.* 1911, 8 W. R. C. R. 1, 10.

4. The fact that certain practices or rules have once been established by the carriers is not always conclusive as to the reasonableness of such practices or rules. As a general proposition the practice of placing articles of higher value in proportion to weight and bulk in higher classes than articles of lower value in proportion to the weight and the space occupied, is sound. In order to be equitable as between shippers or commodities, however, it is necessary that the articles be properly classified, that each class be placed in the proper relation to the other classes, as well as properly adjusted to competitive commercial conditions. To meet these requirements in the promulgation of a classification requires a thorough and scientific study, not only of the articles and commodities themselves, but of the commercial and industrial conditions involved. It also requires that the classes in the classification be numerous enough to provide for all of the more material differences that usually exist as between commodities and conditions. Among the carriers, the railways come much nearer meeting these requirements than the express companies. The latter in their classifications have but few classes, and these are limited in scope. They seem to have been made up without according proper consideration to the factors upon which classification should be based. Many articles are placed in the same class and charged the same rate as articles worth only half as much or less in proportion to weight and bulk. Even in such cases in the express service where more costly articles are charged higher rates than cheaper ones, it is often found that the higher rates in the former case rest on other considerations than those which are ordinarily regarded as the controlling basis for classifications. *M. Carpenter Baking Co. et al. v. Wells Fargo & Co. et al.* 1911, 8 W. R. C. R. 1, 10–11.

COMPETITION

Between railways and interurban railways, reduced rates for competitive points, not unjust discrimination, *see* DISCRIMINATION, 6.
Competition, costs of building up the business resulting from competition, *see* VALUATION, 1.
Competitive conditions as matter considered in determining reasonableness of express rates, *see* RATES, 13.
Consolidation of competing utilities, allowances for losses of purely physical value due to consolidations, *see* VALUATION, 3.
Rate wars between competing utilities contrary to public policy, *see* RATES, 1.

COMPOSITE LIFE

Of electric plant, *see* DEPRECIATION, 1.
Of water plant, *see* DEPRECIATION, 2.

CONNECTED LOAD

Ratio of active to conected load as matter considered in determining reasonableness of electric rates, *see* RATES, 2.

CONNECTING CARRIERS

Joint or through rates, *see* RATES, 29–36.

CONNECTIONS

See SWITCH CONNECTIONS.

CONSTRUCTION OF STATUTES

See PUBLIC UTILITIES LAW; RAILROAD LAW.

CONSUMER CHARGES

See MINIMUM CHARGES.

CONSUMER COSTS

As element considered in making rates for gas utilities, *see* RATES, 19.

Elements included in consumer costs for gas utilities.

1. The items which go to make up the consumer expenses per meter, in the present case, include the following: labor removing and reset-

ting meters, meter and fittings department labor, customers' premises expenses, meter and fittings department supplies and expenses, maintenance of services, maintenance of meters, collection salaries and commissions, reading meters and delivering bills, collection supplies and expenses, uncollectible accounts. These costs added to the fixed costs, which vary with the size of meter, result in the total charges per meter. *In re La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 201.

CONTRACTS

Legality of contracts.

1. Application was made by the Oconto City Water Supply Co. and by the city of Oconto for modifications in the Commission's decision of Aug. 7, 1911, relating to water rates in Oconto, Wis. (*In re Appl. Oconto City Water Supply Co.* 1911, 7 W. R. C. R. 497.) The company asks that direction be made as to the ten private contracts which were discussed in connection with the original petition. It appears that when the utility started operations ten consumers gave up a private plant and took water from the company under an agreement that each of them receive service to their premises at $20 a year during the life of the franchise, or for thirty years. The utility asks whether these private contracts are still in effect. *Held:* the information submitted to the Commission with reference to these contracts has been so uncertain and the actual nature of the contracts is so much in question that it does not appear advisable for us to make a ruling with reference to them. The question of the legality of these contracts is one which perhaps can be determined by counsel for the utility without reference to the Commission and it would seem to be a matter which should be so determined. *In re Appl. Oconto City W. Supply Co.* 1911, 8 W. R. C. R. 388, 396–397.

Waiver of right to damages under public service contracts.

2. Where the city paid its bills subject to the express stipulation that all of its rights under the contract were reserved, it sufficiently apprised the company of its unwillingness to accept the service furnished as a complete service. Such an express reservation of rights is sufficient to prevent the establishment of a waiver. (*Olson v. Mayor*, 1883, 56 Wis. 551, 556.) *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 676.

3. In a controversy between the Waupaca El. Lt. and R. Co. and the city of Waupaca concerning the quality of service of the street lighting system in the city of Waupaca, Wis., the company claims that the city is estopped to deny that the lights are not in conformity with the contract and has waived any right to damages which might have resulted from the change from open d. c. to enclosed a. c. arcs because the change was made by and with the consent of the city and the city acquiesced in the change. Although the proposed change was brought to the attention of representatives of the city a considerable time before the change was put into effect, there appears to have been no official act of the municipality accepting the change either before or after it occurred. In paying the first six bills of the electric light company after the change in installation, the city had made a written reservation of its rights under the contract. On subsequent bills no written reservation had been made. *Held:* it would hardly be consistent with the trend of judicial authority to determine upon the facts of the present case that the city's right to damage if any such right exists has been lost. This conclusion is, of course, entirely independent of the question whether the facts of this case actually show the existence of damages. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 673–680.

DELIVERY AT DESTINATION

Discrimination between different transfer companies.

1. Petitioner who is engaged in the cartage business at Milwaukee, Wis., complains of discrimination by the respondent carrier in favor of his competitor, the North Western Transfer Co. The testimony shows that respondent failed to deliver to petitioner freight shipments for which orders had been duly filed by petitioner or by his customers; that the respondent permitted the North Western Transfer Co. to have access to the petitioner's freight bills; that the North Western Transfer Co. enjoyed important office privileges which enabled it to secure information not obtainable by competing transfer companies; and that freight which should have been delivered to petitioner had been delivered to the North Western Transfer Co. This discrimination may be partly due to respondent's faulty system of handling orders after they have been filed by consignees or their representatives. Respondent's assistant cashier attempts to memorize about two thousand orders filed by different transfer companies, claiming that he has not time to look up the orders although they are indexed alphabetically. Witnesses for respondent stated that a railway company must have some designated transfer company to haul freight not consigned in care of or for any particular transfer company, and also for

the purpose of transferring freight to connecting railway and steamboat lines, so that the freight house may be kept clear of undelivered goods. In the present case this unconsigned freight is delivered to the North Western Transfer Co. *Held*: receivers of freight have the right to designate the person who shall team their goods from the depot, and delivery orders given by them should be strictly observed and regarded as private communications. No partiality should be shown in giving or withholding necessary information in the notification of arrivals or in the prompt delivery of shipments. Respondent is ordered to desist from delivering petitioner's goods to other teamsters or transfer companies, and to discontinue any practice of a discriminatory nature which has heretofore given the North Western Transfer Co. privileges not accorded to petitioner or other draymen under similar conditions. Frequent errors indicate either a faulty system or negligence, and additional clerical help is needed to prevent further complaints of this nature. Reference should be made to the indexed orders as each freight bill is received, instead of relying upon memory. To expedite the delivery of freight to connecting lines and of goods for local delivery, not teamed by consignees or their representatives, railroad companies must necessarily arrange with some transfer company for the performance of this special service, and in this respect only should there be any departure in the conduct of a railroad company toward different transfer companies. *Cohn v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 569, 576–578.

DEMURRAGE CHARGES

Time allowed for unloading—Free time allowance—Modification under statute.

1. Chapter 358, Laws of 1911, (sec. 1797–10m of the Wis. St.) provides that: "1. In all cases where common carriers move carload freight from point of shipment to point of destination at an average rate of less than seventy-five miles for each twenty-four hours, consignee shall be allowed for unloading without car service or demurrage being assessed, additional free time equivalent to the number of days in excess of seventy-five miles per day of twenty-four hours consumed by the common carrier in transporting said freight from point of shipment to point of destination. * * * 3. * * * Provided that whenever any railroad company shall notify the railroad commission of Wisconsin that conditions have arisen on its line of railroad over which it has no control and is liable for, stating in said notification the facts of the case, the railroad commission may, if it deems the facts such as to warrant, issue its order suspending the operation of this act not to exceed thirty days, but may continue such order from time to time as the conditions may warrant. The consignee must use due and reasonable diligence in unloading all cars, and any failure to do so shall subject the consignee to a like supervision by the railroad commission. It is further provided that when conditions warrant the railroad commission shall have power to promulgate reasonable and just rules and regulations to enforce or modify the provisions of this act." *In re Appl. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 101, 102–103.

2. Application was made by the Chicago, Milwaukee & St. Paul Railway Company for the suspension of the operation of ch. 358, Laws of 1911, being sec. 1797—10m of the Wis. St., which under penalty requires common carriers to move carload freight from the point of shipment to the point of destination at an average rate of seventy-five miles for each twenty-four hours. Applicant alleges the consignees of shipments of sugar-beets are unable to unload the cars received by

them as fast as they are delivered, the result being a congestion of traffic which makes it impossible to move that commodity seventy-five miles a day. Applicant further alleges that such consignees do not use reasonable diligence in unloading cars and that their failure in this respect should subject them to supervision by the Commission and that conditions warrant the Commission in promulgating rules and regulations to modify the provisions of the act with reference to the transportation of sugar-beets in carload lots. *Held*: undue delays in releasing cars are detrimental to the carriers, the shippers and the public. It is the duty of shippers to so regulate their shipments that there is a reasonable and fair relation between the amount of freight forwarded to them and the amount they are equipped to handle. In this case, however, it is not fully established that the receivers of the sugar beet have entire control of the shipping and for that reason it is deemed inadvisable to attempt, without further investigation, to prescribe specified rules governing the manner in which shippers should regulate and handle the traffic in question. With reference to the suspension of the act, conditions appear to be such that immediate action is necessary. It is ordered that that part of ch. 358, Laws of 1911, being sec. 1797—10m, Wisconsin Statutes, which in substance provides that carload freight must on the average be moved seventy-five miles per day and which provides penalties for the violations of such provisions, be suspended, insofar as sugar-beet traffic is affected, for a period of thirty days, subject to such modifications in this order as may be deemed necessary and proper upon further investigation. *In re Appl. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 101, 103–104.

3. Application was made by the M. St. P. & S. S. M. R. Co. for the suspension of the provision in ch. 358, Laws of 1911, being sec. 1797—10m of the Wisconsin Statutes, which under penalty requires common carriers to move carload freight from the point of shipment to the point of destination at an average rate of seventy-five miles for each twenty-four hours. *Held:* the conditions in this case warrant immediate suspension of this provision of the act. It is ordered that ch. 358, Laws of 1911, be suspended from operation for a period of thirty days, insofar as it may affect the sugar-beet traffic on the lines of the M. St. P. & S. S. M. R. Co. consigned to Chippewa Falls, Madison, Janesville, and Menomonee Falls, Wis. *In re Appl. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 129, 130.

4. The Commission called a conference for the purpose of further investigating the car service with respect to the sugar-beet traffic; and for determining the effect upon that service of the suspension from operation of ch. 358, Laws of 1911, which under penalty requires carload freight to be moved seventy-five miles daily; and for the further purpose of ascertaining whether it is necessary and just to the parties involved that the suspension of the law remain longer in effect. The suspension of the law in question was ordered by the Commission for the C. M. & St. P. Ry. Co. on Nov. 9, 1911, and for the M. St. P. & S. S. M. Ry. Co. on Nov. 14, 1911, subject to such modification as might be found necessary by further investigation, which the Commission immediately entered upon. It was found that the traffic in question was surrounded by many abnormal features, which combined to particular disadvantage this fall. It also appeared that there had been a noticeable lack of system and co-operation between the shippers and carriers in the ordering and placing of cars for loading, and that much of the trouble would have been obviated had both parties adopted proper methods in ordering and placing cars and handling the traffic generally. The shippers have lately adopted the practice of storing the beets at their shipping stations until they can be handled at the factories. It appears that this will materially relieve the situation.

Held: it is as much the duty of the shippers to adjust their shipments and their orders for cars to their ability to handle such shipments at their destination, as it is the duty of the carriers to furnish the adequate number of cars and reasonably adequate service in other respects. It is strongly recommended that the shippers and the carriers in these cases agree, between themselves, upon more effective and reasonable methods for the ordering and placing of cars to be loaded with sugar beets, and for the handling of traffic generally, than those now in use. Practices and services in these respects, which ordinarily would be regarded as reasonable and adequate, may, under extraordinary conditions, be both unreasonable and inadequate. General rules may, therefore, fail to meet special conditions and cases of this kind may require determination upon their own particular facts rather than under general rule. The law in question has been suspended long enough to afford the carriers some of the relief for which they ask, and it is not likely that any further situation will arise this season under which the suspension of the law will become necessary. The Commission's orders suspending the operation of the law are accordingly revoked. *In re Appl. C. M. & St. P. R. Co. et al.* 1911, 8 W. R. C. R. 278, 281–282.

DEMURRAGE RULES

Reasonableness of rules—Rule relating to average agreement.

1. A conference was held at the office of the Commission relating to the reasonableness of car service and demurrage rules now in effect, as applied to the pulp wood traffic in Wisconsin. Rule 9, of the car service and demurrage rules relating to average agreement, as enforced by the C. M. & St. P. Ry. Co., the C. & N. W. Ry. Co., the M. St. P. & S. S. M. Ry. Co., and the C. St. P. M. & O. Ry. Co., applies to cars released during the month and provides that seven days' credit may apply in cancellation of debits accruing on any one car. *Held:* it is more equitable and reasonable to base calculations on cars received during the month. The provision that seven days' credit may apply in cancellation of debits accruing on any one car appears somewhat excessive and five days is deemed a reasonable allowance. A change in the classification of cars should also be made to meet present traffic conditions. It is ordered that rule 9 be changed in accordance with these requirements. This order is not confined to pulp wood traffic, but is made general in its application. *In re Car Service and Demurrage Rules*, 1911, 8 W. R. C. R. 579, 580–581.

DEPOTS

See STATION FACILITIES.

DEPRECIATION

Apportionment of depreciation in the determination of unit costs for electric utilities, *see* ACCOUNTING, 4.
for gas utilities, *see* ACCOUNTING, 15.
for water utilities, *see* ACCOUNTING, 34.
As element in the valuation of public utilities, *see* VALUATION, 2.

RATE OF DEPRECIATION

Rate of depreciation of electric plant.

1. In the present case the rate of depreciation of the street lighting property has been determined as 4.5 per cent of the total reproduction cost. Because the engineers have placed a longer life value than the average upon the steam equipment, which is used very little, the rate

of depreciation computed for the entire property is somewhat less than might otherwise have been found. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 601.

Rate of depreciation of water plant.

2. The composite life of the plant in the present case was found to be 56.95 years. If the depreciation reserve is set aside on a 4 per cent sinking fund basis the depreciation rate will be 0.48 per cent, and on a 2 per cent sinking fund basis the depreciation rate will be 0.95 per cent. On a straight line basis the annual rate will be 1.76 per cent. In practice it has usually been found best to set aside the depreciation reserve on approximately a 2 per cent sinking fund basis. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 364.

DISADVANTAGE

See DISCRIMINATION.

DISCOUNTS

As element in the valuation of public utilities, *see* VALUATION, 4.
Regulations as to payment of rates for services rendered by public utility, provisions for discounts, *see* RULES AND REGULATIONS, 2.

DISCRIMINATION

AS BETWEEN CUSTOMERS

Electric rates—Discrimination due to rate wars.

1. It is among the duties of the Commission to investigate complaints, to forbid practices that are unjustly discriminatory, to determine and fix reasonable rates, and, when deemed necessary to prevent injury to business and public interest, to temporarily alter and amend existing rates. That the law covers such injuries to business and public interests as those caused by rate wars, seems clear, not only from its provisions, but from the circumstances under which these provisions were enacted. *Kenosha El. Ry. Co. v. Kenosha G. & El. Co.* 1911, 8 W. R. C. R. 119, 120–121.

Water rates—Discrimination due to failure to enforce rate schedule impartially.

2. Complaint was made that the city of Tomahawk, Wis., a public utility engaged in furnishing water to the public, fails to enforce its rate schedule impartially. The petitioner alleges that discrimination results in that the rates as reported to the Commission are not actually enforced. *Held*: a review of the consumer records fails to show more than two or three possible instances of failure to apply the schedule, and these appear to be due to errors of classification rather than to intentional disregard for the schedule. A little stricter application of the schedule will remedy this difficulty as far as the scheduled rates apply at all. For a number of consumers the schedule adopted by the city made no provision, and for these special rates were fixed from time to time. There seems to be some ground for the charge of discrimination as applied to these. It is ordered that the rates herein approved by the Commission be strictly enforced without any departure from the schedule. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 49–50, 51, 56–57.

3. Complaint was made that the city of Tomahawk, Wis., a public utility engaged in furnishing water to the public, fails to enforce its rate schedule impartially. Complaint is made of the failure of the

administration to enforce the provision of the original schedule which provides for a charge of 50 cts. per room for each room in excess of eight in residences. *Held*: there is nothing to prove in the present case that, when other things are equal, a consumer in a large house will use more water under the flat rate than a consumer in a smaller house. As a portion of a flat rate schedule a room charge may have a place, but it is a question whether such a charge can generally be justified on the ground that the amount of water used varies with the number of rooms. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 50, 56–57.

Water rates—Discrimination due to free or reduced rate service.

4. Complaint was made that the city of Tomahawk, Wis., a public utility engaged in furnishing water to the public, charges unreasonable and discriminatory rates. Discrimination is alleged in that no charge is made for lawn sprinkling; that no charge has ever been made for water used for street sprinkling, although the sprinkling was done by private parties under contract with property owners; and that no rate has ever been established for private hydrants nor has any charge ever been made for such hydrants; that on account of the failure of the city to charge for these purposes, other users of water have been obliged to pay for water and service rendered free. *Held*: it would not be equitable to make other general users or the general public pay a higher rate in order that water may be used free of charge for sprinkling lawns and gardens. A charge should be made for this use which will pay for the water used and such part of the demand expenses as are properly chargeable to it. Water used for street sprinkling should be paid for. In case water is used for this purpose in the future, a rate must be established for that use. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 50–51, 55, 56–57.

AS BETWEEN PASSENGERS

Interurban fare zones—Discrimination due to arrangement of fare zones.

5. Complaint was made of a discriminatory arrangement of fare zones and discrimination in rates on the part of the Wis. El. Ry. Co. on its line between Neenah and Oshkosh, Wis. The petitioner resides on Jackson street road in the town of Vinland, Winnebago county. He alleges that the fare charged per mile varies greatly on different parts of the line because the pay points are located without reference to their distance from the nearest pay point or from either Oshkosh or Neenah. He further alleges that the present arrangement of varying fare zone lengths is discriminatory not only to himself, but to other patrons of the road boarding the cars between Murdock and the cemetery. He prays that the railway company be required to establish reasonable overlapping zones at all regular pay points and to provide a fare schedule which shall do substantial justice to all patrons along the line by allowing them to pay in proportion to the distance they ride. It appears that the railway company has designated certain points on the line to each of which points from either Neenah or Oshkosh the fare charged for an adult passenger is 5 cts. or a multiple of 5 cts. The distance between two contiguous pay points varies from one to three miles in length, the effect of which is to discriminate against passengers riding short distances. *Held*: the varying zone lengths are discriminatory not only to the petitioner but to other patrons of the road and they should be revised and placed on a basis equitable to all. If the volume of traffic alone is to be consid-

ered, an extension of the present overlapping zone to petitioner's stop is not justified, yet it is unjust to limit the petitioner's zone to half a mile in either direction. It is obvious that any zone system must lead to the payment of an extra fare by a passenger when boarding or leaving the cars between two zone points, but this unavoidable result should be minimized as much as possible. A more equitable plan would be the adoption of increased zones with lower fares for each zone or of a mileage system. The latter method may give extra work to the conductors, although other interurban roads have adopted it with marked success. Petitioner should be placed on a parity with other passengers on a combined fare occasioned by a break in the through journey to either Neenah or Oshkosh, but we believe that the respondent is best able to work out a solution of the present discriminatory condition. The respondent is ordered to rearrange its fare zones or schedule of rates so as to eliminate the discriminatory rates now charged the petitioner and others residing in the mile zone bounded by Erdman's on the south and Gillingham's on the north. Thirty days is deemed a reasonable time within which to comply with this order. *Vosburg v. Wis. El. Ry. Co.* 1912, 8 W. R. C. R. 709, 717–718.

Interurban rates—Reduced rates for competitive points.

6. Petitioner alleges discrimination in that the M. N. Ry. Co. charges less per mile between certain other points along its route than it charges between the village of Mequon and the city of Milwaukee. A uniform mileage basis has been established for rates from all stations and stopping places on respondent's line, except that at points competitive with the C. & N. W. R. Co. the mileage of the latter company has been used by respondent. *Held:* it is a general practice with steam and interurban electric roads to use the shorter mileage so as to meet the competition of the road having the shorter route, and there is no objection to this being done in the instant case, as the respondent is thus enabled to obtain a fair share of the available traffic whereby to increase its earnings and to give all of its patrons a lower fare than could be charged if its traffic were limited to strictly local business. *Chromaster v. M. N. Ry. Co.* 1912, 8 W. R. C. R. 734, 746–747.

Train service—Discrimination in interurban train service.

7. Petitioner alleges discrimination in that the M. N. Ry. Co. refuses to stop its limited trains at Mequon. *Held:* petitioner is not discriminated against by the fact that limited trains do not stop at Mequon and all other stations between that point and Milwaukee. Limited trains for through passengers are essential to efficiency of service on long haul traffic, for if they should stop at every station on the line their usefulness would be impaired and no advantage whatever would accrue in the establishment of such class of service. *Chromaster v. M. N. Ry. Co.* 1912, 8 W. R. C. R. 734, 746–747, 754–755.

AS BETWEEN SHIPPERS.

Freight rates—Difference in rates—effect upon competitive conditions.

8. Under the competitive conditions prevailing in the present case, the reduction in rates to certain other mill points and not to the mills of the petitioner, amounts to an unjust discrimination. *Rhinelander Paper Co. v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 105, 113–114.

AS BETWEEN SUBSCRIBERS.

Telephone service.

Discrimination in telephone service, *see* TELEPHONE UTILITIES, 1.

AS BETWEEN TRANSFER COMPANIES.

Conduct of railroad company toward transfer companies.

9. No partiality should be shown in giving or withholding necessary information in the notification of arrivals or in the prompt delivery of shipments. *Cohn v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 569, 576.

See ACCOUNTING.

MUNICIPAL ACQUISITION—TERMS AND CONDITIONS OF SALE AND PURCHASE.

Compensation for property—Compensation determined by Commission in particular cases.

1. Notice was filed with the Commission by the common council of Kaukauna, Wis. that the qualified electors of the city of Kaukauna had voted to purchase the plant and property of the Kaukauna Gas, Electric Light and Power Co. A tentative valuation of the physical property of the company as of Jan. 30, 1911, was made by the Commission.

After certain readjustments the cost of reproduction was placed at $61,318 and the present value at $44,992. Considerable difference of opinion was expressed by the city and company in regard to the present value of the plant as fixed by the engineers of the Commission. The points in controversy include the value of a water power lease held by the company, certain contracts which the company has for furnishing power to manufacturing concerns, and certain items of property which were to have been replaced in the proposed rehabilitation of the plant. The amount claimed by the company for going value is also disputed by the city. *Held:* in the present case future plans for rehabilitation do not seem to warrant any change in the present value of the items under consideration. With respect to the contracts with manufacturing concerns, while they are not favorable from a money making standpoint, the obligations can be filled by the electric company without any real loss. They are therefore considered neither as a liability nor as an asset. The future value of the water power lease is considered as somewhat speculative. As regards going value the company's accounts are in such shape that it is impossible to separate the construction and operating items, hence no satisfactory check can be made of the going value claimed. It would seem that the allowance of two or three years for putting the company on a paying basis was reasonable under the circumstances. The subsequent loss of earning power was due to mismanagement. In the light of the facts that the company was put on a paying basis within two years after the present owners acquired the property, even allowing the amount claimed by the company for the 1905 present value, and in considering the somewhat speculative value of the water power lease and the loss of earning power due to mismanagement as well as all the other elements that must enter into a fair and just valuation, $50,000 is a just compensation for the property of the company actually used and useful for the convenience of the public. In addition to that sum, the city is ordered to pay the company for the material on hand at the date of taking possession and for any new additions since the date of the original valuation, which have not been included in the items considered, at a price agreed upon by the parties themselves, or, in case they fail to agree, at a price fixed by the Commission. The city is to pay the compensation fixed within six months, with interest thereon at the rate of 6 per cent per annum from the date of taking possession of the plant until the amount is fully paid. *In re Kaukauna Lt. & P. Co.* 1911, 8 W. R. C. R. 409, 421.

OPERATION.

Conditions of operation—Load factor.

2. In the present case, the proportion of the active to the connected load was placed at 50 per cent and 65 per cent, respectively, for commercial lighting and for power. *Kenosha El. Ry. Co. v. Kenosha G. & El. Co.* 1911, 8 W. R. C. R. 119, 123.

3. No distinction is made in the present service charge between different classes of users, although practice shows that considerable difference actually exists between the ratio of the active load to total connected load for different uses to which the load is put. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 218.

Quality of service—Performance of street lighting system—Comparison of illuminating qualities of 6.6 *ampere a. c. enclosed and* 9.6 *amperes d. c. open arcs.*

4. In making a comparison, for the present case, between the illuminating qualities of 6.6 ampere a. c. enclosed and 9.6 ampere d. c. open

arcs as types of street illuminants, it was recognized that a comparison of average conditions as represented by a random selection of systems in operation would not necessarily serve as a fair comparative measure of the qualities of the respective lamps, but that reasonable care must be taken that comparison be made of lamps of each type operating under normal conditions. Since the cost of maintenance, carbons, trimming, etc., of open arc lamps is ordinarily more than that of enclosed lamps, any attempt, in operating the former, to approach this cost for the latter is likely to result in impairment of service. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 642.

5. The facts which have been brought forth in the present investigation show quite clearly that the characteristics of the lamps involved in these proceedings must necessarily be judged both quantitatively and qualitatively. Concerning those characteristics which may be measured quantitatively, considerable data have been presented herein bearing out the fact that the illumination produced along the street by the 9.6 ampere, d. c. open arc is about twice the amount produced by the 6.6 ampere a. c. enclosed arc. But regarding the relative merits of those factors which must be considered qualitatively, there is some divergence of opinion. Even among the experts of the Commission's staff opinion differs somewhat as to the extent the inferior quantity of light from the 6.6 ampere a. c. enclosed arc is offset by superior steadiness and uniformity of distribution. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 664.

6. The testimony in the present case brought out the fact that since the a. c. enclosed arc was introduced, it has been operated at various amounts of current and energy. The relative number of 6.6, 7.0 and 7.5 ampere a. c. enclosed arcs in use does not indicate what the public generally considered a fair equivalent of the open d. c. arc because of the advantage to the public of reduced rates which followed the introduction of the enclosed arc. At what amount of current and energy the a. c. enclosed arc should be operated in order to be acceptable as the equivalent of the 9.6 ampere d. c. open arc, is largely a matter of opinion. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 667.

7. Judging from opinions of a considerable number of experts, including members of our own staff, it seems to be established that what the 7.5 ampere a. c. enclosed arc lacks in intensity of illumination it just about makes up in those elements which cannot be properly evaluated and that, where prejudice does not exist, due to differences in operating costs or for other reasons not based on service itself, the 7.5 ampere a. c. enclosed arc ordinarily replaces with reasonable satisfaction the 9.6 ampere d. c. open arc as a street illuminant. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 667.

8. Various comparisons made by the staff appear to show that the 6.6 ampere a. c. enclosed arc is about 18 or 20 per cent inferior to the 7.5 ampere arc as a street illuminant. It therefore follows that the position of the 6.6 ampere a. c. enclosed arc is about the same amount below that of the 9.6 ampere d. c. open arc when the latter and the 7.5 ampere a. c. enclosed arc are considered as fair equivalents. Similar comparisons show that the enclosed arc lamps as operated at 7.0 amperes during the inspector's tests in the present case are about 10 per cent inferior to the 9.6 ampere d. c. open arc as street illuminants. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 667.

Quality of service—Performance of street lighting system—Contract specifications.

9. In the case of tungsten street lighting, the kind of lamp and its auxiliary equipment having been specified and the lay-out of the system having been incorporated in the contract or made a supplement to it, it is quite probable that a specification of the energy supplied to the individual lamps will as adequately ensure normal and uniform service as will any agreement that can be arrived at. In the case of arc lamps, it is probable that such provision as to energy consumption, in addition to the determination of the type of lamp to be used and the scheme of lay-out to be followed, will not in all cases ensure normal operation of the system, but additional provision may be necessary as to the amount of current flowing, the volts supplied at the arc, and other conditions. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 671.

Quality of service—Performance of street lighting system—Illumination measurements.

10. It appears that a comparison of light sources for street lighting purposes by the amount of illumination that is produced at a certain distance from the lamp leaves important factors unconsidered. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 626.

11. In the present state of the street lighting art and with such devices for measuring illumination as are now available, it seems that the complexity of the photometric measurements necessary for a complete comparison of the relative performance of street light units in actual service is so great as to be ordinarily prohibitive for periodic inspection of service. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 672.

Quality of service—Performance of street lighting system—Substitution of 6.6 ampere enclosed for 9.6 ampere open arcs.

12. In a complaint brought before the circuit court of Waupaca county, the Waupaca El. Lt. & Ry. Co. appealed from the disallowance, by the common council of the city of Waupaca, of bills for street lighting during February and March, 1910. In reply, respondent city stated that, disregarding the terms of the street lighting contract and without obtaining the consent of respondent, the petitioner had substituted lamps inferior to those called for by the street lighting contract, which respondent had refused to accept as complying with the contract. Through stipulation of the parties these proceedings were withdrawn from the court and brought before this Commission. It was agreed that all differences as to the efficiency and commercial value of the street lights under the present contract and the respective liability of the city and company under the contract be left unreservedly to the Commission to investigate, settle and adjust. The contract for street lighting between the petitioning company and respondent city provides for "2000 candle power arc lights" in return for $6.36 each per month. The term "2000 candle power arc lights" was used to designate the 9.6 ampere d. c. open arc lamp in use at Waupaca at the time this contract was entered into and continued in use under the contract until the fall of 1904, when the electric company substituted 6.6 ampere a. c. enclosed arcs, which have been operated at 7 amperes since these proceedings were brought before the Commission. The total reproduction cost, present value, and cost of operation were

ascertained and apportioned between street lighting and all other service. After readjusting the operating expenses so as to eliminate excessive general office salaries and distributing the remainder, it was found that the income from street lighting is barely sufficient to compensate the electric company for the present a. c. enclosed lamps, and considerably below the operating cost of the 9.6 ampere d. c. open lamp. In comparing the two types of arc lamps the quantity of light produced was not the only element taken into consideration. Qualitative characteristics, such as steadiness of light and uniformity of distribution, although hard to measure, were also considered. Tests made by the Commission's engineers showed that the illumination produced along the street by the 9.6 ampere d. c. open arc is about twice the amount produced by the 6.6 ampere a. c. enclosed arc. The opinion of experts, including men on the Commission's staff, showed some divergence as to how far the greater steadiness and uniformity of distribution of the 6.6 ampere a. c. enclosed arcs offsets this lack of intensity of illumination. *Held:* when the greater steadiness and uniformity of distribution of the 6.6 ampere a. c. enclosed arcs is taken into consideration. the deficiency for which the petitioning company might be responsible is so small and of such character that it cannot be made the subject of monetary damages, particularly in view of the fact that the rates paid by the city for the services involved are barely sufficient to compensate the company for the present a. c. enclosed lamps, and considerably below the operating cost of the 9.6 ampere d. c. open lamps. This deficiency is so small as to come within the limits of a reasonable difference of judgment based on all the facts in the case. It is the finding of the Commission, therefore, that the city of Waupaca, under the circumstances, has not suffered such damage by reason of the substitution of the a. c. enclosed lamps for the d. c. open lamps as to entitle it to claim any reduction from the contract price of the street lighting service furnished it by the Waupaca Electric Light & Railway Co. from the time of the change in the installation of street lamps up to the present time. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 667, 673–680, 681–682.

Standards of service—Electric lighting.

13. The Commission proceeded on its own motion to determine whether the methods of the Merrill Railway and Light Co. in using and testing electrolytic ampere-hour meters for its lighting system at Merrill, Wis., are such as to comply with rules 14 to 21, inclusive, relating to meter accuracy, whether the requirements involving voltage comply with rule 23 relating to voltage regulation, and whether the company meets the requirements as to standards of service established by the Commission. (Wis. St. 1797m—23.) (*In re Standards for Gas and Electric Service in the State of Wisconsin*. 1908, 2 W. R. C. R. 632.) *Held:* electrolytic ampere-hour meters require different treatment from the motor type of electric meter, which was the only one contemplated at the time these rules of service were formulated. The following interpretations of the rules and standards for gas and electric service (2 W. R. C. R. 632) are made with special reference to electrolytic ampere-hour meters. In order to comply with rule 14 and rule 15, it is necessary to place the oil film over the surface of the electrolyte and keep the cover and stopper on the meter whenever the meter is in service. To keep the combined error within the requirements of rule 15, this type of meter shall be tested by measuring the volume between various points upon the scale so as to give the accuracy in volume for each one-fourth of the scale. In order that the meter shall not be overloaded, it is necessary that no meter shall

be placed in service where the connected load is greater than the rated capacity of the meter or when the full load is used sufficiently often to introduce a sensible error due to entrained moisture passing off from the gases. Whenever a meter of this type is read for the purpose of making a charge for electric service rendered, the current must be shut off for a time sufficient to allow all bubbles to pass off from the electrolyte and to allow the electrolyte to reach approximately room temperature before the meter is read. In order that the error in registration due to voltage variations may be determined, and also that there may be full compliance with rule 23, voltage records shall be carefully taken in each locality at least once every three months or whenever changes are made and proper correction shall be applied to all bills rendered. A station log shall be kept, giving the readings of all indicated instruments on the station switch board at least once every hour, and oftener during the hours when the lighting load is changing rapidly. The combined error in registration after applying the correction constant for voltage shall come within the limits prescribed in rule 15. The correction constant for voltage should appear upon the consumer's bill together with the meter readings. In order to conform with rule 16, all meters in service prior to the date when the utility is equipped for making the tests already prescribed, shall be removed from service and tested before being replaced in service. The voltage surveys and installation tests of the electrolytic meters are all that are necessary for compliance with rule 17, unless some part of the meter affecting the registration is altered or replaced, in which case another test of meters is necessary. Inspections should be made from time to time to see that the meters are sealed, that the covers and stoppers are in the meters, and that the meter is not overloaded. The records for the tests of these electrolytic meters, provided for in rule 18, shall contain the date of test, by whom made, serial number of meter, size of meter, number of scale, number on jar, condition of parts, scale division readings, amounts of water added, voltage rating of scale, accuracy of jar, and correction constant to be used in figuring bill for ——— volts. The following information shall be kept on file for each meter service, the same being revised as often as need be: average voltage during hours of use, voltage variation during hours of use, average record taken during hours of use, date of last voltage record, correction constant to be used in figuring bills for ——— volts. The company shall make a detailed report for the Commission's approval upon the equipment and methods it proposes to employ in carrying on the instructions under rule 19. This shall include a statement from the makers regarding the volumes and lengths of various tubes and various scales, together with such other information as is necessary to completely define the methods and equipment. Rules 20, 21, 22, 23, 24, and 25 need no special interpretation to cover local conditions at Merrill, but are to meet with full compliance. In order to comply with the spirit of the rules in general, the consumer shall be notified before refilling any meter. The electrolyte shall be free from bubbles and within 5 degrees Fahrenheit of room temperature when readings are taken both before and after refilling. It is ordered that the Merrill Railway & Light Company hereafter conform to all the rules and regulations as herein enumerated and interpreted. *In re Merrill R. & Lt. Co.* 1911, 8 W. R. C. R. 270, 273–277.

ESTOPPEL

Estoppel against public, government, or public officers.

1. The equitable doctrine of estoppel, by which a party is precluded from denying that which his words, actions, or mere silence have caused another person to believe, when a denial would cause injury to that person, is not applied to municipal corporations with the same strictness as to individuals. While cities are sometimes held to be estopped by their acts, as to matters not clearly beyond their powers, this is true only in very strong cases. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 674.

2. Testimony to establish an estoppel against the city must be clear, distinct, and of such a character as to amount to a fraud, to permit it to claim otherwise. The rule is never applied as freely against the public as against private persons. It is only when some affirmative action has been taken, or when there has been some great negligence or delay with relation to some matter upon which the parties have a right to rely, that the court will be authorized to apply the rule, so as to prevent manifest injustice or wrong. Such injustice or wrong must be firmly established by facts and circumstances that leave no room for doubt or controversy. (*Ashland v. Chicago & N. W. R. Co.* 1900, 105 Wis. 398, 405.) (*Davis v. City of Appleton*, 1901, 109 Wis. 580.) *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 674.

OPERATION

Requirements as to service and facilities—Appliances for the measurement of product or service—Duty of utility to provide meters.

1. The petitioner alleges that the village of Sharon, Wis., a public utility furnishing water and gasoline gas to the public, has ordered all water users in the village to purchase and install water meters at their own expense and has threatened to cut off the service of all who fail to do so. The respondent submitted that the present officers of the village were merely enforcing the village ordinances as they found them. Under the water ordinances the right was reserved by

the village board to cause a water meter to be attached at the owner's expense to any service pipe whenever the board deemed it expedient. *Held:* it is the duty of the utility to put in meters unless exempted from so doing by the Commission. In the present case the village is required to install meters at its own expense, and to charge for all water passing through meters according to the prescribed schedule of rates. Where a consumer now owns the meter, the utility is ordered to acquire the meter or pay an annual rental of 50 cts. to the owner. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 488.

Standards of service—Meters, accuracy of—Gasoline gas.

2. A gas meter which is used continuously for gasoline gas will probably show considerable inaccuracy, due to the fact that the gasoline gas has an injurious effect upon the diaphragm of the meter. It is suggested that meters which have been in use for at least three years be compared with a new meter, which will guard against any great inaccuracy and at the same time save the expense of a meter prover. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 493.

OPERATION

Requirements as to service and facilities—Adequacy of service.

1. Petitioner alleges that the M. N. Ry. Co. refuses to stop its limited trains at Mequon, Wis., and that the passenger service between the village of Mequon and the city of Milwaukee is wholly inadequate.

Mequon is not an incorporated village. Testimony showed inadequate service for the southern portion of respondent's line. The engineering staff of the Commission made a thorough investigation of traffic conditions between Milwaukee and Cedarburg and intermediate points and reported that the service offered on Saturday afternoons, Sundays and holidays during the summer months is not adequate to handle the traffic. Brown Deer was found to be the approximate north limit of the congested zone and Milwaukee the southern limit. Investigation of the car equipment and of trolley and feeder capacity led to the conclusion that under present conditions a twenty-minute schedule is a much more acceptable method of meeting the increased volume of traffic than to operate two-car local trains. Traffic demands over the territory under consideration could be most acceptably met by city or suburban type cars and not by cars of the interurban type. *Held*: the service furnished by respondent between Milwaukee and Brown Deer is inefficient and inadequate during the summer months, especially on Saturday afternoons, Sundays and holidays. Respondent is ordered to extend its tracks, in accordance with the Commission's specifications, so that double track railway conditions will be closely approximated within this district; to establish twenty minute local service between Milwaukee and Brown Deer on Saturday afternoons, Sundays, and holidays during the summer months; and to purchase sufficient additional city type cars to take care of this additional service. Such extensions and improvements are to be installed and in service for the traffic beginning June 1, 1912. *Chromaster v. M. N. Ry. Co.* 1912, 8 W. R. C. R. 734, 747, 754, 755.

MINIMUM CHARGES

GAS UTILITIES.

Basis of minimum charge.

1. The basis upon which the minimum charge is fixed is the so-called consumer expenses of the plant, and the charge as fixed by the Commission is in every case amply sufficient to cover all such costs. (*City of Racine v. Racine Gas Light Co.* 1911, 6 W. R. C. R. 228, 309–317.) *City of Neenah v. Wis. Tr. Lt. H. & P. Co.* 1911, 8 W. R. C. R. 251, 258.

Determination of minimum charge.

2. In determining the minimum bill a sufficient sum to cover the cost of gas should be added to the fixed charges in each case. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 201.

3. It is necessary to have a minimum charge that will not only guarantee the fixed expenses, but also pay for the gas actually used by the minimum takers. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 491.

PURPOSE OF LAW

See PUBLIC UTILITIES LAW; RAILROAD LAW.

RAILROAD COMMISSION

Authority of Commission in awarding reparation.

1. Sec. 1797—37m of the statutes provides that: Within one year after the delivery of any shipment of property at destination, any person aggrieved may complain to the commission that the charge exacted for the transportation of such property between points in Wisconsin, or for any service in connection therewith, * * * is erroneous, illegal, unusual or exorbitant, and thereupon the commission shall have power to investigate such complaint, and to hear the same, and to decide upon the merits thereof, in the manner provided by section 12, chapter 362, laws of 1905. If upon such hearing the commission shall decide that the rate or charge exacted is erroneous, illegal, unusual or exorbitant, it shall find what in its judgment would have been a reasonable rate or charge for the service complained of. If the rate or charge so found shall be less than the charge exacted, the carrier shall have the right to refund to the person paying such charge the amount so found to be excessive. *Francey Coal, Stone & Supply Co. v. C. M. & St. P. R. Co.* 1912, 8 W. R. C. R. 477, 478.

Commission without authority to award damages due to negligence of carrier.

2. Damage, if due to the negligence of the carrier, can be recovered only in an action in court. The Commission has no jurisdiction in the matter. *Deeves Lbr. Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 507, 510.

Power of Commission to prevent rate wars between competing utilities.

3. It is among the duties of the Commission to investigate complaints, to forbid practices that are unjustly discriminatory, to determine and fix reasonable rates, and, when deemed necessary to prevent injury to business and public interest, to temporarily alter and amend existing rates. That the law covers such injuries to business and public interests as those caused by rate wars, seems clear, not only from its provisions, but from the circumstances under which these provisions were enacted. *Kenosha El. Ry. Co. v. Kenosha G. & El. Co.* 1911, 8 W. R. C. R. 119, 120–121.

Power of Commission with respect to safety of bridges connecting highways upon which railways are constructed.

4. Under ch. 590, Laws of 1911, the Commission may, on its own motion, inquire into the safety of highway bridges over which interurban railways operate. *In re West Algoma Street Bridge in Oshkosh*, 1912, 8 W. R. C. R. 441, 444.

Power of Commission with respect to service and facilities of railroads.

5. Sec. 1801 was impliedly repealed by ch. 362, Laws of 1905, which conferred upon the Commission the power to regulate the rates and services of railway companies within the state. However, the legislature, by ch. 483, Laws of 1911, re-enacted sec. 1801 with certain amendments. This reads: "Every corporation operating a railroad shall maintain a station at every village, whether incorporated or not, having a post office and containing two hundred inhabitants or more, through or within one-eighth of a mile of which its line of road runs,

and shall provide the necessary arrangements, receive and discharge freight and passengers, and shall stop at least one passenger train each day each way at such station, if trains are run on such road to that extent; and if four or more passenger trains are run each way daily, at least two passenger trains each day each way shall be stopped at each and every such station." This statute deprives the Commission of any discretion in the matter. It fixes the quantum of passenger service for every station coming within the classification made. *Schlosstein v. C. B. & Q. R. Co.* 1911, 8 W. R. C. R. 242, 246.

CONSTRUCTION, MAINTENANCE, AND EQUIPMENT

Crossings—Crossing facilities.

1. A petition was submitted to the Commission praying for an order to provide an underground passageway under the Fond du Lac branch of the C. & N. W. R. near Thirteenth st. just north of Indiana ave.

in the city of Sheboygan, Wis. The petitioners request an enlargement of the present railway tunnel so that the eastern side may be used as a safe passageway for pedestrians and that an iron railing extending for two blocks be placed between the railroad track and the thoroughfare to be used by them as a protection from passing trains; if this plan cannot be carried out, they desire a subway constructed immediately east of the railway tunnel and a thoroughfare established across the Chicago & North Western Railway right of way and other private property. It was found that existing conditions are to a very large extent the natural result of the action of the city authorities of some time back in vacating South Twelfth street and in permitting the railroad company to block up Thirteenth street by its present track. *Held:* it is not within the power of the Commission to grant the prayer of the petitioners in this case, as the question of the opening up of a public thoroughfare, otherwise than the diversion of a highway for the purpose of separating grades, rests with the common council of the city of Sheboygan. The petition is dismissed. *In re Sheboygan Railway Crossing Facilities*, 1912, 8 W. R. C. R. 467, 470.

Crossings, protection of.

2. Petitioner prays that the C. & N. W. R. Co. be required to provide protective devices to warn and protect the public from danger on its crossing at Main street in the village of Marathon City, Wis. *Held:* an additional safeguard over the blowing of engine whistles or sounding of bell should be provided. It is ordered that the respondent install an automatic crossing alarm with illuminated sign for night indication for the protection of the Main street crossing with track circuits of such length and so arranged as to afford adequate protection; and that the respondent maintain this alarm and so operate its trains while doing switching service at this station that the public may be safeguarded against misleading indications from the protective devices. The plans for the track circuits and the instructions to trainmen or other employes of the railway relative to the protection of such crossing are to be submitted to the Commission for approval. Sixty days is deemed sufficient time within which to comply with this order. *Village of Marathon City v. C. & N. W. R. Co.*, 1911, 8 W. R. C. R. 28, 30–31.

3. Petitioner alleges that respondent maintains an electrical gong at the intersection of its line with Sixth street in Oshkosh, Wis.; that this gong is a public nuisance, in that it disturbs the people day and night and greatly depreciates property values in the vicinity. Petitioner prays that the railroad company be ordered to remove the gong and substitute gates with an agent to open and close them when an an engine or train passes or that a flagman be stationed at the crossing. Investigation by the Commission showed that the frequent ringing of the bell when no trains pass over the crossing is due to the work of the switch engines moving from the round house to the coal chute and water tank. A shortening of the track circuit would enable switch engines to move or stand at the coal chute without ringing the bell. *Held:* conditions at the crossing are not such as to justify a flagman. The crossing bell will give adequate protection, provided it is properly installed and maintained. Respondent is ordered to shorten the track circuit of its bell by moving the battery chute 150 feet nearer Fifth street. *City of Oshkosh v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 75, 77.

4. The Commission, on its own motion, investigated an accident at a highway crossing on the tracks of the C. M. & St. P. R. Co. about one-half mile east of Richfield, Wis., in which a carriage was struck by a train of the M. St. P. & S. S. M. R. Co., a lessee of the former com-

pany, and four of the six occupants were killed. The track in question is single, but from the station at Richfield to a point about 165 feet south of the highway it is tangent. Together the two railway companies run an average of 40 trains a day over this track. *Held*: the crossing is dangerous to travelers upon the highway and some safety appliance should be installed to give warning of the approaching trains. The C. M. & St P. R. Co. is ordered to remove the obstructions to the view caused by trees and underbrush on either side of the east and west approaches to the crossing, and an automatic electric alarm with illuminated crossing sign for night indication is ordered installed, to be effective upon the approach of trains within 3000 feet of either side of this highway. *In re Richfield Crossing Accident on C. M. & St. P. R.* 1911, 8 W. R. C. R. 287, 289–290.

5. Petitioner, the city of Oshkosh, alleges that several parallel tracks of the C. M. & St. P. R. Co. and the M. St. P. & S. S. M. R. Co. cross Light street, a public highway in Oshkosh, Wis., and that the two railway companies in the past have jointly maintained one flagman at this crossing. Petitioner alleges further that the heavy travel on the highway and the frequency of trains and switch engines render the crossing unsafe and dangerous to travelers and prays that the railway companies be ordered to each maintain a flagman, so as to provide adequate protection. It appears that the speed of all trains over the crossing is comparatively slow and the possibility of more than one through train passing at one time is remote. In comparison with a city the size of Milwaukee, where similar conditions exist, the volume of travel is light, the switching movements are slow, and the 125 feet of territory covered by the flagman cannot be said to be excessive. *Held*: the railroad should strictly enforce its rule which requires that when cars are being pushed over a crossing a switchman be stationed either on the ground or on the first car passing over the crossing, and it should also require strict obedience of the flagman's signals from its trainmen. On the assumption that the rules relative to switching movements will be strictly enforced, one flagman should provide adequate protection at this crossing and be of greater efficiency than two flagmen or the installation of gates. Petition is dismissed. *City of Oshkosh v. C. M. & St. P. R. Co. et al.* 1911, 8 W. R. C. R. 291, 294.

6. The Commission, on its own motion, investigated a fatal accident which occurred at the South Commercial street crossing of the track of the C. & N. W. Ry. Co. in the city of Neenah, Wis. During the day time this crossing has been protected by a flagman for over ten years. Since the accident the railway company has put a flagman at the crossing during the night. *Held*: in the present case an automatic alarm with illuminated sign would probably afford more effective protection for the crossing at night than that afforded by a flagman with a lantern. The respondent is ordered to install automatic electric bells, with illuminated sign, in such a manner as to adequately protect the crossing at night; to continue to protect the crossing by a flagman during the daytime as at present; and to cause the billboard situated near the South Commercial street crossing to be removed. Sixty days is deemed a reasonable time within which to comply with this order. *In re South Commercial Street Crossing at Neenah*, 1912, 8 W. R. C. R. 463, 466. .

7. The Commission, on its own motion, investigated a fatal accident at the crossing of the highway and the track of the C. M. & St. P. Ry. Co. about two miles west of Bardwell station, Wis. It was found that the view of the track is somewhat obstructed from certain portions of the highway near the crossing and that the highway is traveled quite extensively. *Held*: some protection at this crossing should be supplied. It is ordered that the respondent install an automatic bell,

so that it will give warning of the approach of a train from either direction when the same is within not less than 3,000 feet of the crossing. Ninety days is deemed a sufficient time within which to comply with this order. *In re C. M. & St. P. R. Crossing Accident near Bardwell*, 1912, 8 W. R. C. R. 471, 472.

8. The Commission, on its own motion, investigated the condition of the Marshall crossing of the C. M. & St. P. R. Co. near New Lisbon, Wis., in order to determine whether the physical conditions surrounding the crossing made it unsafe and dangerous to the public travel. *Held*: from the evidence submitted it appears that protection is necessary at this crossing. The respondent is ordered to install and maintain an electric bell with an illuminated sign for night indication in addition to the audible alarm, and is further ordered to remove the bank of dirt and the cottonwood tree situated at the northwest angle of the crossing. Sixty days is deemed a reasonable time within which to comply with this order. *In re C. M. & St. P. Crossing near New Lisbon*, 1912, 8 W. R. C. R. 511, 512.

9. The petitioners allege that the crossing of the track of the C. M. & St. P. R. with a highway situated in the town of Dover, Racine county, and one mile west of Kansasville, Wis., is dangerous by reason of the fact that the railroad passes through a cut, thereby obstructing the view of approaching trains and that the danger is increased by reason of a switching train which is accustomed to back or push cars over the crossing in operating between Corliss and Burlington stations. The petitioners pray that the railway company be required to protect the crossing by some safety device. *Held*: the view of the approaching trains is obstructed to such an extent that some safeguard in addition to the sounding of engine whistles and bell and the standard highway crossing sign should be provided. The respondent is ordered to lengthen the north approach to the crossing so as to provide a uniform grade which will not exceed 6 feet in 100 feet, and to install an automatic crossing alarm bell with illuminated sign for night indication, with track circuit of such length as to give adequate protection against all trains and engines passing over the track. The details of the crossing bell and lighting installation are to be submitted to the Commission for approval. Six months is deemed a reasonable time within which to comply with this order. *Cunningham et al. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 513, 515.

10. Subsequent to a fatal accident at a highway crossing on the tracks of the C. St. P. M. & O. R. Co. near Columbia Station, Wis., the Commission, on its own motion, investigated the conditions surrounding the crossing. Investigation was made and a hearing held in order to determine whether any changes should be made in the crossing, whether any obstructions should be removed, and whether additional safety appliances should be installed. *Held*: additional protection is necessary at this crossing. It is ordered that the respondent install and maintain an electric bell with an illuminated sign in addition to the audible alarm for night indication. The device is to be effective upon the approach of trains from either direction. The respondent is further ordered to widen the approaches to the crossing so that the highway on each side of the track shall be thirty-two feet wide to a length equal to the width of the railroad right of way. The approaches are to be properly tiled for drainage. Four months is deemed a reasonable time within which to comply with this order. *In re C. St. P. M. & O. R. Crossing near Columbia Station*, 1912, 8 W. R. C. R. 516, 518.

11. Subsequent to a fatal accident at a highway crossing on the tracks of the C. B. & Q. R. Co. near Calvert, Wis., the Commission, on its own motion, investigated the conditions surrounding the crossing.

It appears that the tracks of the C. B. & Q. R. parallel the tracks of the La Crosse & S. E. R. for a mile on each side of the crossing in question, and that the highway crosses the tracks at an acute angle. *Held*: additional protective features aside from the crossing sign are required. The C. B. & Q. R. Co. is ordered to install and maintain an automatic audible alarm with illuminated sign for night indication. The device is to be located in the northwest acute angle of the crossing west of its tracks. Details of the crossing alarm and light installation are to be approved by the Commission. The La Crosse & S. E. R. Co. is ordered to install and maintain an automatic audible alarm to be located in the southeast acute angle of the crossing east of its tracks. Details of the installation are to be approved by the Commission. The acute angle at which the highway crosses the tracks makes changes in grading necessary, so that the wheels or runners of passing vehicles may be squarely on a level with the tracks before encountering the extremely diagonal crossing with the rails. It is therefore ordered that the C. B. & Q. R. Co. and the La Crosse & S. E. R. Co. fill and properly surface the roadway between their respective tracks so as to give a uniform grade from a point in the center line of the roadway and approximately sixty feet distant from the near rail of the one railroad to a like point approximately sixty feet distant from the near rail of the other railroad; and that that portion of the roadway between the near rails above mentioned and lines through above described points at right angles to the line of roadway be level and at an elevation equal to the elevation of the top of rails of tracks of their respective lines. It is further ordered that the two railway companies in question improve the highway so as to maintain a width of thirty-two feet available for traffic within the limits of the rights of way of their respective companies, with adequate planking around the railroad tracks to comply with the best practice. The construction is to be of a uniform standard throughout. Four months is deemed a reasonable period of time within which to comply with the terms of this order. *In re Crossing near Calvert of C. B. & Q. R. Co. et al.* 1912, 8 W. R. C. R. 519, 522–523.

12. The point was raised that the Commission was without jurisdiction to enter the order, previously made, in regard to a highway crossing of the C. St. P. M. & O. R. Co. east of Columbia Station, Wis. *Held*: the order is vacated and set aside. *In re C. St. P. M. & O. R. Crossing near Columbia Station*, 1912, 8 W. R. C. R. 733.

Crossings—Restoration and maintenance of highway.

13. Sec. 1299h—1 of the statutes provides: Whenever any highway in any town or incorporated village, without the limits of any incorporated city, shall extend upon, over or across the tracks or right of way of any such railway company, such railway company shall, at its own expense, construct, grade and maintain in safe condition for public travel, the portion of such highway or crossing extending upon, over or across the tracks or right of way of such railway company. Whenever any such town or village shall permanently improve or macadamize such highway extending upon, over or across the tracks or right of way of any such railway company, such railway company shall, at its own expense, improve or macadamize such portion of such highway as shall extend upon, over or across the tracks or right of way of such railway company, in substantially the same manner and of substantially the same materials as such town shall have used. *Town of Mineral Point v. C. M. & St. P. R. Co.* 1912, 8 W. R. C. R. 693, 695.

14. Complaint is made that part of the approach of the C. M. & St. P. Ry. Co's track, at a point where it intersects a public highway in the town of Mineral Point, Iowa county, Wis., consists of a wooden

bridge which is wholly within respondent's right of way and is out of repair and dangerous to public travel. Petitioner prays for an order requiring respondent to construct a new bridge at this point or repair the present structure. Respondent contends that as the highway was laid out after the railroad was built, it cannot be compelled to keep the highway in repair. *Held*: sec. 1299h—1 of the Statutes imposes upon the railway company the duty of maintaining that portion of the highway which lies within its right of way. Nothing contained in the statute limits its operation to situations in which the location of the railroad was subsequent to the location of the highway. The objection to the validity of the statute on the constitutional ground of taking property for public purposes without compensation can not be entertained by the Commission. Whether such obligation may be legally imposed upon the company is a question for the courts to determine. Respondent is ordered to construct the bridge in such manner that it may be safe and convenient for public travel. Four months is deemed an adequate time in which to comply with this order. *Town of Mineral Point v. C. M. & St. P. R. Co.* 1912, 8 W. R. C. R. 693, 695–696.

15. The contention that sec. 1299h—1, Wis. St., is limited in its operation to situations in which the location of the railroad was subsequent to the location of the highway does not seem tenable. To so hold would be to read into the statute language that can not be implied from the context. Nor can such intention on the part of the legislature be presumed in the absence of any ambiguity as to the meaning of the language implied or the effect that would result from a literal application thereof. *Rosmiller v. State*, 1902, 114 Wis. 169; *State ex rel Williams v. Samuelson*, 1907, 131 Wis. 499; *Ashland v. Maciejewski*, 1909, 140 Wis. 642. The general purpose of the legislature to impose upon the railway company the duty of maintaining that portion of the highway, which lies within its right of way, seems clear from the provisions of the statute as a whole. Furthermore, there would have been no necessity for the enactment of the statute relative to the particular matter here under consideration if it were intended merely to apply to highways located across the right of way of a railroad before the latter was constructed, for sec. 1836 already covered the situation as to highways along or upon which a railroad might be constructed. *Town of Mineral Point v. C. M. & St. P. R. Co.* 1912, 8 W. R. C. R. 693, 695–696.

Crossings—Separation of grades.

16. The Commission, on its own motion, investigated the complaint that the Mill street crossing in the city of La Crosse, Wis., is unsafe and dangerous to the public. A hearing was ordered on the matter as provided in Wisconsin Laws of 1909, ch. 540. *Held:* at this location public safety requires a separation of grades, that can be accomplished best by diverting the street railway traffic, and as much of the other street traffic as may be practicable, from Mill street to Rose street and carrying it across the tracks on a bridge. The present Rose street bridge is no longer serviceable and must be replaced with a modern structure capable of accommodating the traffic. The present grades of its approaches must be made lighter in order to attract team traffic to the new structure. It is ordered that the C. M. & St. P. R. Co. make plans for the entire work in accordance with certain specifications made by the Commission. The plans are to approved by the Commission before work is commenced. The C. M. & St. P. R. Co is ordered to construct, according to the approved plans and at its own expense, all that portion of the work lying within the limits of its right of way produced across Rose street. The city is ordered to construct all that

portion of the work lying outside of the right of way limits as designated and to assume responsibility for all damages to adjacent property caused by the proposed structure. With the city's approval the La Crosse City Ry. Co. is ordered to change its tracks and overhead according to the approved plans and at its own expense, so as to occupy the new bridge and eliminate the Mill street crossing. The expense of repairing the disturbed portions of the streets from which the tracks are removed is to be borne by the street railway company unless such an arrangement interferes with the terms of the franchise under which the present tracks were laid. The expense of paving that portion of the roadway occupied by the street railway tracks along the new route is to be borne as designated by the franchise under which the street railway company now operates. The C. M. & St. P. R. Co. is ordered to maintain such portion of the bridge and its approaches lying within its right of way limits as designated, except that the city shall maintain the pavement of the roadway and the sidewalks. The city may require the street railway company to maintain that portion of the pavement occupied by its tracks, if such an arrangement is customary on the other streets in the city. The remainder of the bridge and its approaches is to be maintained by the city. The plans for the work are to be completed and approved within ninety days and the entire construction is to be completed within nine months. *In re Mills Street Ry. Crossing at La Crosse*, 1911, 8 W. R. C. R. 422, 438–440.

OPERATION

Duty to operate—Operation at pecuniary loss.

17. The mere fact that a train might not be remunerative during a certain season of the year would not be a justification for not furnishing it if the convenience of the public, under the circumstances, reasonably required it. *Seymour Business Men's Assn. v. G. B. & W. R. Co.* 1912, 8 W. R. C. R. 524, 527, 531.

Duty to operate—Operation of Sunday train.

18. In the absence of a specific statute on the subject, the question as to Sunday train service must be determined with reference to the general penal statute prohibiting the performance of any business, work, or labor, "except only works of necessity and charity," on Sundays. (Wis. Stat. of 1898, sec. 4595.) The supreme court of this state has laid down the rule that a railway company is under no obligation to carry passengers on Sundays because of the inhibition of the statute (sec. 4595) (*Walsh v. C. M. & St. P. R. Co.* 1877, 42 Wis. 23.) Whatever may be our views as to the soundness or wisdom of the policy thus declared, it is controlling in effect in the case before us. Until the legislature expressly excepts railroad companies from the operation of such statute, or the supreme court recedes from its former position, the Commission is powerless to compel the running of railway trains on Sundays for the convenience of the public. *Seymour Business Men's Assn. v. G. B. & W. R. Co.* 1912, 8 W. R. C. R. 524, 527, 531.

RATE WARS

Between electric utilities, effect on utilities and on public, *see* RATES, 1.
Power of Commission to prevent rate wars between competing utilities, *see* RAILROAD COMMISSION, 3.

RATES—ELECTRIC

Discrimination in electric rates, *see* DISCRIMINATION, 1.

Rate wars, effect on utilities and on public.

1. Rate wars mean lower than paying rates, failure to keep the property in proper operating condition, and inadequate service. It usually results in the financial ruin to one or more of the contestants, the crippling of the rest, and in the ultimate consolidation of the remnants into one concern. When peace has thus been restored, the rates are advanced, not only to the level that prevailed before the contest, but to even higher figures. This is often necessary, because it is frequently the only way in which the public can secure adequate service. This has been the history of rate wars since their beginning and there is nothing to indicate that history would not, in a measure, repeat itself in this case. These results, if the war were permitted to go on, could not be prevented or more than tempered under the Public Utilities Law, for the only way bankrupt corporations in the hands of receivers can be made to furnish adequate service to the public is through the additional investment of enough capital to restore the plants to efficient operating condition and by fixing rates that are high enough to yield reasonable returns for operating expenses, including repairs, depreciation and interest charges on the entire investment. In one way or another losses and destruction due to rate wars are almost certain to fall on the public; and in the end the customers of such utilities will lose more through such losses and through bad service than they gained through the temporary reductions in the rates while the war was on. Rate wars also have a demoralizing effect upon business methods and practices and usually result in future dissatisfaction and strife. In the public utility field they are so clearly against public policy that they should under no circumstances be permitted. *Kenosha El. Ry. Co. v. Kenosha G. & El. Co.* 1911, 8 W. R. C. R. 119, 121–122.

Reasonableness of advance in rates in particular cases.

2. Application was made by the La Crosse Gas and Electric Co. for authority to increase its electric rates in La Crosse, Wis. The application rests, almost entirely, upon the claim to an investment in plant and business that is much in excess of the cost of reproducing the physical properties. The city of La Crosse and certain organizations in the city appeared in opposition to the application and prayed that an order be made reducing the rates for electric current. In a previous case (*In re Appl. La Crosse Gas & El. Co.* 1907, 2 W. R. C. R. 3, 30) certain increases in electric rates were authorized by the Commission. The rates authorized for the time being were in the nature of emergency rates and were put in effect subject to necessary revision subsequent to a valuation of the property and further investigation. The applicant alleges that the rates charged for the several classes of service were not sufficient to cover the operating expenses, interest and depreciation on the investment. *Held*: while the existing rate schedules are not just what they ought to be when considered from

the standpoint of consumer, demand and output expenses, it was found that, when the net revenues are considered for each department as a whole, the return that the utility receives upon its investment in the several departments is not altogether unreasonable. In the electric department the increase prayed for in the maximum rate for commercial electric lighting service cannot be granted, but a slight increase in the ratio representing the relation of the active to connected load for business consumers should be made in order to correct, to some extent, the inequity between different classes of users of electric current. In the case of emergency or stand-by service, the cost of service is not proportional to the amount of current used, but depends much more upon the fixed expense occasioned by preparation to meet the demand, and modifications in the schedule are required for this service. The applicant is authorized to amend its rate schedule so as to increase the minimum bill for commercial electric lighting to $1 per month, and to modify its service charge for business lighting and its charges for emergency or stand-by service for lighting and power in accordance with the rates approved by the Commission. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 238–241.

Reasonableness of rates—Matters considered in determining reasonableness—Cost of service.

3. In the case under consideration it appears that the maintenance accounts have included at least a portion of depreciation or renewals. Analysis has been made of the maintenance costs for the petitioner's several plants since the year 1901, and comparison has been made between these costs and those for other class A utilities in Wisconsin. In the case of the electric plants, we find that the average maintenance per kw. hr. generated is 0.24 cts., minimum 0.10 cts. maximum 0.63 cts., and median 0.19 cts. This cost varies for the petitioner's electric and heating plant, between 0.39 cts. per kw. hr. in 1902 and 0.13 cts. in 1910. These figures, as a whole, seem to indicate that the expenses charged to maintenance accounts are about normal, as compared with other class A plants, but do not show how much is properly a maintenance and how much a renewal charge, since the practice has been quite general among such utilities of charging both costs to one account. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 174–175.

Reasonableness of rates in particular cases.

4. The Commission, on its own motion, investigated a complaint made by certain consumers as to the rates, rules and regulations, of the R. Connor Co., an electric utility of Stratford, Wis. Complaint was made that the utility has a discriminatory rate schedule, that flat rate users pay less for current consumed than metered consumers, that in numerous instances the company rebates to a certain class of consumers, and that the rates, as a whole, are unreasonable and unsatisfactory. It appears from the testimony and from investigation made that under the present schedule, the consumers who are not employes of the company are to some extent discriminated against. It is difficult to see what can be done beyond insisting that the company shall not reduce its bills on complaint of the consumers unless the meter is tested and shown to be incorrectly registering, and further to insist that no discrimination between employes and non-employes shall be made in the enforcement of the rate schedule. No increase in rates can well be made, nor does the company desire such increase. No decrease in rates can be made in view of the fact that the gross earnings of the plant are far from sufficient to meet the ordinary operating expenses and to provide for interest and depreciation on the invest-

ment. The situation as it stands is entirely one of adjustment and securing of equal rates for the same classes of consumers. It appears that the only solution would be for the company to install meters wherever requested to do so by the consumers and that the company install these meters at its own expense and endeavor to place all consumers on a meter basis sooner or later. No order is issued in this case at this time, but the respondent is expected to take notice of the above suggestions and to proceed immediately to correct all unjust discriminations as to rates. *In re Investigation of the R. Connor Co.* 1911, 8 W. R. C. R. 80, 83–84.

5. Respondent, the Kenosha Gas and Electric Company, filed with the Railroad Commission an amendment to its rate schedule for electric commercial lighting in the city of Kenosha, Wis., which provides for rates considerably lower than those previously in effect. Petitioner, the Kenosha Electric Railway Company, a competing electric utility of Kenosha, alleges that the new rates are insufficient and unreasonable, that the reduction is made with the purpose of commencing a rate war against the petitioner and injuring its business by depriving it of customers. Petitioner prays that the practices complained of be forbidden; that reasonable minimum rates and charges for commercial electric lighting and power service in Kenosha be established; that the amendatory schedule be canceled; and that the respondent be forbidden to furnish any service at the rates named therein. *Held*: upon investigation it appears that the reasons for the reductions are undoubtedly to be found in those motives which result in rate wars. A rate war in this case cannot possibly lead to anything but harm. The new rates are not only so low as to hardly cover operating expenses and depreciation, but they appear to be so made up as to be discriminatory as between long and short hour users. Business and public interests demand that the rates complained of be temporarily altered by being raised to a somewhat higher level and there maintained until the investigation as to reasonable electric rates in Kenosha has been completed. The respondent should be given the option of either reinstating the former rates or putting into effect a rate that is substantially identical with the rates now charged for like service by the petitioner. It is ordered that the rates of the respondent as provided by the amendment complained of herein, immediately be temporarily altered and amended, pending the final order in this case, by substituting therefor either the rates discontinued by the amended new rates or the rates temporarily provided by the Commission. *Kenosha El. Ry. Co. v. Kenosha G. & El. Co.* 1911, 8 W. R. C. R. 119, 121–122, 124.

Street lighting rates—Contract provisions.

6. Such conclusions as can be drawn from the various aspects of street lighting as it is rendered today seem to indicate that, while the quality of street lighting is one of the first considerations for a city entering into a street lighting contract, the cost of service is also very important and that this cost, and consequently the rate to be charged regardless of what unit it may rest upon, are not intimate functions of the intensity of illumination produced. It therefore seems that any schedule of street lighting rates which attempts to follow closely variations in illumination produced will fall short of being satisfactory through its failure to recognize the cost of producing service. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 668–669.

7. Equitable rates for street lighting, as well as for any other service of public utilities, will be based most properly upon the cost of service and those units for which payment is made should be employed which most exactly measure this cost. In ordinary commercial

lighting service it has been proven that various forms of rate schedules based on the kilowatt hours delivered have been most equitably and successfully applied. It does not necessarily follow that such forms of rates should apply to street lighting service. Objection, as raised at various times to the specification of energy consumption in street lighting contracts, has already been referred to. This objection is to some extent, under certain circumstances, a reasonable one, since the cost of delivering energy to some lighting systems is only one of the important items of the total cost. Where, however, the city owns and operates the distribution system with its light producing units, the cost of service rendered by the utility is practically limited to the cost of delivering energy to the system. It naturally follows that under these conditions, as in commercial service, the energy delivered is a fair measure of the cost of service. In most cases, however, the utility contracts to furnish and properly maintain and operate the appliances by which light is produced upon the street as well as to supply the required energy, and in such instances the specification of wattage consumed, if it is intended to measure the amount to be paid rather than to merely designate a normal operating condition of the type of equipment used, may as inadequately serve as a measure of payment as may a specification of the intensity of illumination. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 669.

8. Since, under most conditions of street lighting, the cost of energy produced is one important element of the total cost and the cost of operating the special apparatus for converting electrical energy into radiant light is another, and since, for these reasons, neither units of energy supplied nor of illumination produced properly measure the final cost of producing light, it appears that the unit which most successfully combines both elements will most adequately measure the payment for the service delivered. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 670.

9. As a rule the city is the only user of street lighting service, and as the total cost of such service must first be determined before a fair rate per unit can be established, the logical conclusion naturally follows that payment can as well be made for the service of the system as a whole as for a unit of such service, provided there is to be no flexibility in the extent of the system contracted for. But such flexibility must ordinarily be provided for to meet the changeable requirements of the city. Since these changes consist chiefly of the addition of lamps and the relation of the number so added to the total number provided measures fairly well the increased cost to the utility, it is believed that the individual lamp will, at the present time, most satisfactorily serve as the measure of payment for the system as a whole, and especially for the amount of service added above the original provision of the contract. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 670.

10. If street lighting contracts carefully specify the kind of lighting equipment to be used, the original extent of the system, the amount to be paid for the system as a whole or the fractional part thereof as measured by the number of the lamps, and specify a reasonable rate per lamp for all additions to the system, it would seem that, insofar as cost of service and payment therefor are concerned, ample provision will be made. However, it is well known that the quality of lighting service may vary greatly among lamps of the same type and this variation may be due to several factors. It is therefore necessary that the contract should carefully state the conditions under which the lamps shall operate in order to render normal service. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 670–671.

Street lighting rates—Provision for outage.

11. Since no system of street lighting so far designed has been entirely free from outage of individual lamps, it seems that provision should be made for a reasonable amount of outage. *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 672.

RATES—EXPRESS

Advance in rates—Grounds for advance.

12. Changes in rates or classification which have the effect of disturbing long established business conditions which have grown up in reliance upon the continuance of the existing system of rates or the existing classification, should not be made except for good reasons. (*Wisconsin Box Co. et al. v. C. M. & St. P. R. Co. et al.* 1909, 3 W. R. C. R. 605, 617.) *M. Carpenter Baking Co. et al v. Wells Fargo & Co. et al.* 1911, 8 W. R. C. R. 1, 13.

Reasonableness of rates—Matters considered in determining reasonableness—Competitive conditions.

13. While questions pertaining to classification and charges under competitive commercial conditions, when taken as a whole, may be of diminishing importance and, in most respects, secondary to the cost of the service, they are in many instances important enough to vitally affect the rates of transportation. When conditions are such that better terms cannot be had, it is usually best for all concerned, other things being equal, to accept less than the ordinary profits rather than lose the business. Any profit is, as a rule, better than no profit. That the traffic which can be had at something above actual cost should be moved, is also ordinarily in line with public interest, provided, of course, it can be so moved without unjust discrimination. *M. Carpenter Baking Co. et al. v. Wells Fargo & Co. et al.* 1911, 8 W. R. C. R. 1, 11.

14. It is certain that rates fixed so high that no traffic will move are advantageous neither to the shipper nor to the carrier. *M. Carpenter Baking Co. et al. v. Wells Fargo & Co. et al.* 1911, 8 W. R. C. R. 1, 12.

Reasonableness of rates in particular cases—Bread and cake, mixed shipments, Wisconsin points.

15. Petitioners allege exorbitant express charges between Wisconsin points on mixed shipments of baked goods consisting mostly of bread with a small proportion of cake. Respondent express companies formerly transported bread over their respective lines at "general special" rates, about 20 per cent lower than their merchandise rates, and allowed the same rates on mixed shipments of bread and cake when bread comprised at least half the total weight. An order of the interstate commerce commission of Feb. 1, 1911, required all such mixed shipments to take merchandise rates, which petitioners allege results in approximately a 25 per cent increase over the former charges for transportation of mixed shipments. They declare that if the merchandise rates are to be charged on mixed shipments they can ship no more cake, and if they are unable to ship cake, they will lose a large part of their shipping business in bread. *Held:* the ruling of the interstate commerce commission was made upon a consideration of conditions in the particular region involved, and cannot be of controlling weight where those conditions do not exist. The competitive situation in the baking industry makes the use of mixed shipments practically necessary for the most advantageous development of the business as carried on between the large factories and more or less distant

cities and villages in this state. There is no considerable discrepancy in value between bread and cake, and mixed shipments are no more costly to the carrier than single shipments of bread. The practice of charging the merchandise rate for the shipments in question is unreasonable and should be discontinued. The general special rate is ordered reinstated. *M. Carpenter Baking Co. et al. v. Wells Fargo & Co. et al.* 1911, 8 W. R. C. R. 1, 15.

RATES—GAS

See also MINIMUM CHARGES.

Flat rates.

16. Flat rates are seldom based on a cost analysis, and hence it seems for the best interests of everyone to do away with them if possible. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 488.

Meter rentals.

17. In the present case, where a consumer owns the meter the utility is to acquire the meter or pay an annual rental of 50 cts. to the owner. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 488.

Minimum rates.

18. In determining the miniumm bill a sufficient sum to cover the cost of gas should be added to the fixed charges in each case. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 201.

19. The basis upon which the minimum charge is fixed is the so-called consumer expenses of the plant, and the charge as fixed by the Commission is in every case amply sufficient to cover all such costs. (*City of Racine v. Racine Gas Light Co.* 1911, 6 W. R. C. R. 228, 309–317) *City of Neenah v. Wis. Tr. Lt. H. & P. Co.* 1911, 8 W. R. C. R. 251, 258.

20. It is necessary to have a minimum charge that will not only guarantee the fixed expenses, but also pay for the gas actually used by the minimum takers. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 491.

Reasonableness of advance in rates in particular cases.

21. Application was made by the La Crosse Gas and Electric Co. for authority to increase its gas rates in La Crosse, Wis. The application rests, almost entirely, upon the claim to an investment in plant and business that is much in excess of the cost of reproducing the physical properties. The applicant alleged that the rates charged for the several classes of service were not sufficient to cover the operating expenses, interest and depreciation on the investment. *Held:* while the existing rate schedules are not just what they ought to be when considered from the standpoint of consumer, demand and output expenses, it was found that, when the net revenues are considered for each department as a whole, the return that the utility receives upon its investment in the several departments is not altogether unreasonable. In the gas department the situation with respect to the net earnings has been such that an increase is not warranted at this particular time. A marked increase took place in the operating costs for the year ending June 30, 1911, but it is believed that this does not indicate a permanent change in the normal cost of operation. The facts in the case indicate that there should be a readjustment of the schedule, that it may more closely conform with the cost curve. But, because of prevailing conditions, and because the application is not so much for a readjustment of the rates as for an increase affecting a considerable portion of the sales with no corresponding decrease for the larger quantities used, it appears best to leave the gas schedule, for

the present, as it now is. *In re Appl. La Grosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 238–241.

Reasonableness of rates—Matters considered in determining reasonableness—Cost of service.

22. In the case under consideration it appears that the maintenance accounts have included at least a portion of depreciation or renewals. From the analysis of operating expenses of class A gas plants, the average cost of maintenance was found to be 4.20 cts. per thousand cubic feet sold, minimum 1.58 cts., maximum 10.43 cts., and median 5.44 cts., while for the plant in the present case maintenance costs from 1902 to 1910 varied from a minimum of 1.10 cts. per thousand cubic feet sold in 1905 to a maximum of 5.88 cts. in 1910. These figures, as a whole, seem to indicate that the expenses charged to maintenance accounts are about normal, as compared with other class A plants, but do not show how much is properly a maintenance and how much a renewal charge, since the practice has been quite general among such utilities of charging both costs to one account. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 174–175.

23. It is well known that the cost of gas service per M cubic feet consumed decreases with increased consumption. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 491.

Reasonableness of rates in particular cases.

24. Application was made by the Wis. Tr. Lt. Heat & Power Co. for a modification of the order of the Commission (*Neenah v. Wis. Tr. Lt. H. & P. Co.* 1911, 7 W. R. C. R. 477) reducing gas rates in Neenah, Wis. The respondent utility claims that new information has come to light to show that the valuation of $320,000, upon which the Commission's rates were based, is lower by over $300,000 than the actual price paid for the original property and for subsequent additions. *Held:* if an appraisement of the items of property bought by the respondent company shows a total reasonable value considerably lower than the price claimed to have been paid, the excess in price over such reasonable value represents an unfortunate investment which should not be saddled upon the consumers by means of excessive rates. A careful checking of available information as to the physical make-up of the plant at the time of purchase indicates a value of little over $200,000. Other facts, such as the comparative investment per unit of gas sold and the earning value of the plant as based upon past operations, indicate that the plant, when purchased, was worth far less than the price now alleged to have been paid. It is by no means certain that the securities paid over as the consideration for the plant, represented or even approached their face value. In view of the prevalence of overcapitalization among public utilities in the past, it would be decidedly unsafe to accept upon a full cash basis the figures represented by bonds of the respondent and by its guaranties of the bonds of the company from which it purchased, even if there were not positive evidence that the property was not worth the amount claimed. It is hardly to be expected that men of the experience and business ability of the officers of the respondent company, who must have been cognizant of the actual condition of the property, either intended to or actually did make payment in securities whose real value was some $300,000 higher than the actual value of the property. The respondent has failed to prove either that the plant at the time of purchase was worth even half of the amount claimed to have been paid, or that property of the value claimed by the respondent was turned over as the consideration for the transfer of the plants. As regards the amount claimed to have been expended in additions since the purchase

of the plant, even if the entire amount claimed is assumed to be correct and is added to the probable physical value of the property when purchased, the total will not equal the sum of $320,000 upon which the Commission in its former decision, in part, based its calculations as to the rates. Under the circumstances the valuation for rate-making purposes should not be raised so much above the figures given that the interest charges would result in a higher rate schedule than that provided in the former order. No evidence has been produced sufficient to warrant any change in the order of the Commission reducing gas rates in Neenah. The respondent is ordered to put the order already entered in this case into immediate effect. *City of Neenah v. Wis. Tr. Lt. H. & P. Co.* 1911, 8 W. R. C. R. 251, 257–258.

25. The petitioner alleges that the village of Sharon, Wis., a public utility furnishing water and gasoline gas to the public, has ordered all water uses in the village to purchase and install water meters at their own expense and has threatened to cut off the service of all who fail to do so. The petitioner further alleges that the water plant and gasoline gas plant are each operated at a loss. A thorough investigation and a separation of the departments is asked for in order that each plant will be placed upon a paying basis. With respect to the rates for gasoline gas, the statement of earnings and expenditures shows that after paying the expenses of operation, excluding interest charges upon the funded indebtedness, there is a large deficit in the gas department for each of the three years given. Inspection of the expenditures discloses that no allowance for depreciation, as such, has ever been made by the village. *Held:* owing to the absence of meters, and especially to the failure of the utility to keep the accounts and records as required by the Public Utilities Law, the information available at present is insufficient as a basis for rate schedules. A station meter should be installed for the gas department, in order that accurate information may be available as to the amount of gas manufactured. For the present the respondent is ordered to discontinue its present schedule of rates for gas service and to substitute therefor the increased rates deemed just and reasonable by the Commission. After meters have been put into general use, and after the accounts and records of the utility have been kept in the form prescribed by the Commission and as required by the Public Utilities Law, a revision of the gas rates, as prescribed, may be found necessary. Sixty days is deemed sufficient time within which to comply with this order. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 482, 493–496.

RATES—HEATING

Reasonableness of advance in rates in particular cases.

26. Application was made by the La Crosse Gas and Electric Co. for authority to increase its heating rates in La Crosse, Wis. The application rests, almost entirely, upon the claim to an investment in plant and business that is much in excess of the cost of reproducing the physical properties. The applicant alleged that the rates charged for the several classes of service were not sufficient to cover the operating expenses, interest and depreciation on the investment in the gas, electric and heating properties. *Held:* while the existing rate schedules are not just what they ought to be when considered from the standpoint of consumer, demand and output expenses, it was found that, when the net revenues are considered for each department as a whole, the return that the utility receives upon its investment in the several departments is not altogether unreasonable. The income accounts for recent years indicate that the earnings of the heating department have been ample to return a fair rate of interest and profit on the investment. Here again, the rate schedule might properly be readjusted to

more closely correspond to the variable cost of service; but such a revision is demanded neither by the applicant nor by the respondent, and it appears advisable not to change the existing schedule at the present time. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 238–241.

RATES—INTERURBAN

Discrimination in interurban rates, *see* DISCRIMINATION, 5–6.

Reasonableness of passenger rates in particular cases—Between Mequon and Milwaukee, Wis.

27. Petitioner alleges that the M. N. Ry. Co. charges less per mile between certain other points along its route than it charges between the village of Mequon and the city of Milwaukee. Petitioner complains further that respondent has unjustly and arbitrarily increased its rates. A uniform mileage basis has been established for the rates from all stations and stopping places on respondent's line, except that at points competitive with the C. & N. W. Ry. Co. the mileage of the latter company has been used by respondent. A valuation was made of the entire property of the M. N. Ry. Co., which was apportioned between the interurban and city systems, and respondent's income accounts and operating expenses were analyzed. *Held*: the testimony does not disclose any excessive or unreasonable fare to have been exacted by respondent's schedule of rates. No reduction can be made in the rates charged at the present time. *Chromaster v. M. N. Ry. Co.* 1912, 8 W. R. C. R. 734, 746–747, 754–755.

Reasonableness of passenger rates in particular cases—Between Neenah and Oshkosh, Wis., and intermediate points.

28. Complaint was made of a discriminatory arrangement of fare zones and discrimination in rates on the part of the Wis. El. Ry. Co. on its line between Neenah and Oshkosh, Wis. The petitioner resides on Jackson street road in the town of Vinland, Winnebago county. He alleges that the fare charged per mile varies greatly on different parts of the line because the pay points are located without reference to their distance from the nearest pay point or from either Oshkosh or Neenah. He further alleges that the present arrangement of varying fare zone lengths is discriminatory not only to himself, but to other patrons of the road boarding the cars between Murdock and the cemetery. He prays that the railway company be required to establish reasonable overlapping zones at all regular pay points and to provide a fare schedule which shall do substantial justice to all patrons along the line by allowing them to pay in proportion to the distance they ride. It appears that the railway company has designated certain points on the line to each of which points from either Neenah or Oshkosh the fare charged for a adult passenger is 5 cts. or a multiple of 5 cts. The distance between two contiguous pay points varies from one to three miles in length, the effect of which is to discriminate against passengers riding short distances. *Held:* the varying zone lengths are discriminatory not only to the petitioner but to other patrons of the road and they should be revised and placed on a basis equitable to all. If the volume of traffic alone is to be considered, an extension of the present overlapping zone to petitioner's stop is not justified, yet it is unjust to limit the petitioner's zone to half a mile in either direction. It is obvious that any zone system must lead to the payment of an extra fare by a passenger when boarding or leaving the cars between two zone points, but this unavoidable result should be minimized as much as possible. A more equitable plan

would be the adoption of increased zones with lower fares for each zone or of a mileage system. The latter method may give extra work to the conductors, although other interurban roads have adopted it with marked success. Petitioner should be placed on a parity with other passengers on a combined fare occasioned by a break in the through journey to either Neenah or Oshkosh, but we believe that the respondent is best able to work out a solution of the present discriminatory condition. The respondent is ordered to rearrange its fare zones or schedule of rates so as to eliminate the discriminatory rates now charged the petitioner and others residing in the mile zone bounded by Erdman's on the south and Gillingham's on the north. Thirty days is deemed a reasonable time within which to comply with this order. *Vosburg v. Wis. El. Ry. Co.* 1912, 8 W. R. C. R. 709, 717–718.

Zone system rates.

See ante, 28.

RATES—RAILWAY

See REPARATION; TERMINAL CHARGES; various commodity subject headings; WEIGHTS.

Charges for terminal services, *see* TERMINAL CHARGES, 1–2.

Discrimination in rates, effect upon competitive conditions, *see* DISCRIMINATION, 8.

Unreasonable rates, reparation for charging, *see* REPARATION, 1–40.

Joint or through rates.

29. Ordinarily, on hauls involving the use of two railway lines, the proper method of charging is that of joint rates. Such joint rates can, as a rule, be made somewhat lower than the sum of the local rates on the two lines. *Gablowsky et al. v. C. & N. W. R. Co. et al.* 1912, 8 W. R. C. R. 544, 549.

30. In general, where shipments are made between points located on different lines of railway, it is reasonable and just that they should move under joint rates fixed at a point somewhat lower than the sum of the local rates on the two lines. *Konopatzke v. C. & N. W. R. Co. et al.* 1912, 8 W. R. C. R. 556, 563.

31. No joint rate can be put into effect without the consent of the Commission and certainly under the circumstances the Commission would not authorize a joint rate over a circuitous route where there is in effect a joint rate over a direct route, when the former rate would have the tendency of destroying the group rates over the direct route. *Connor Land & Lbr. Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 697, 698.

Joint or through rates—Cancellation of joint trainload rates on pulp wood—Butternut, Fifield, and Park Falls to Kimberly, Wis.

32. The petitioner, a corporation engaged in the manufacture of paper, sulphite, and ground wood pulp at Rhinelander, Wis., complains that it is discriminated against by the respondent railway company. Petitioner alleges that such company charges lower rates on pulp wood than those fixed by the Commission in *In re Rates on Pulp Wood*, 1908, 2 W. R. C. R. 168, for certain other Wisconsin points, while it applies the rates fixed by the Commission to Rhinelander. Petitioner prays that the respondent be ordered to desist from discriminating against the petitioner in the manner stated, or else to place Rhinelander upon the same basis, as to reduction of rates on pulp wood,

with the other mill points in question. *Held*: the reduction in rates to certain other mill points and not to Rhinelander amounts to an unjust discrimination. Although the distant tariff rates fixed by the Commission are believed to be fair to both the shipper and the carriers, there is no objection on the part of the Commission to a somewhat lower system of rates, provided the discriminatory conditions found to exist in this case are dispensed with. It is ordered that the respondent either discontinue the special rates to Grand Rapids, Port Edwards, Nekoosa, Neenah, and Menasha and substitute therefor the rates fixed by the Commission in *In re Rates on Pulp Wood*. 1908, 2 W. R. C. R. 168, or reduce the rates on pulp wood from pulp wood shipping points on its lines in Wisconsin to Rhinelander in approximate proportion to the reductions, below the rates fixed by the Commission, now existing on pulp wood shipments to Grand Rapids, Port Edwards, Nekoosa, Neenah, and Menasha. It is further ordered that the respondent discontinue and cancel its joint trainload rate of 4 cts. with the C. & N. W. Ry. Co. on pulp wood shipments from Butternut, Fifield, and Park Falls to Kimberly, Wis. *Rhinelander Paper Co. v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 105, 113–114.

Joint or through rates—Establishment of joint rates—Between Big Falls and points on the C. & N. W. line in Wisconsin except Hunting.

33. The petitioner, a dealer in flour, feed and farm products, located at Big Falls, Wis., on the line of the respondent Big Falls Ry. Co., complains of the freight rates of that company, alleging that the minimum carload rate is $5 per car, while the minimum less than carload rate is 8 cts. per 100 lbs. for a distance of six miles. He also alleges that the respondent C. & N. W. Ry. Co. is the owner of the Big Falls line, and has leased it to the Big Falls Ry. Co.; that no joint rates are maintained between the two respondent companies, and it is not only necessary to rebill at Hunting, the junction point, all shipments destined to Big Falls, but this rebilling cannot be done until the freight for the haul on the C. & N. W. line has been paid. The petitioner prays for the establishment of joint rates and through billing between points on the C. & N. W. line and Big Falls. It appears that the objection often made by railways that joint rates permit raw materials to be moved off the producing lines, could hardly be made by either of the respondents in this case, since practically all the movement is toward the line of the C. &. N. W. Ry. and the Big Falls Ry. has no important manufacturing points on its line to which it could transport its raw material for manufacture. Nor is there anything in the financial situation of the Big Falls Ry Co. which would make it necessarily unfair or impracticable at this time to establish a system of joint rates between the two respondents. As the originating line of the larger part of the freight movement, the Big Falls line would be entitled to a substantial proportion of the entire through rate and it might well be that the introduction of joint rates would materially increase its traffic. *Held*: in general, where shipments are made between points located on different lines of railway, it is reasonable and just that they should move under joint rates fixed at a point somewhat lower than the sum of the local rates on the two lines. The present rates of the respondent companies to and from Big Falls, consisting of the sum of the local rates on the respective lines, constitute an unreasonable and excessive charge upon through shipments. The respondents are ordered to discontinue their present rates on shipments between Big Falls and points on the C. &. N. W. line in Wisconsin, except Hunting, and substitute therefor the following joint

rates: on shipments between Big Falls and points north and west of Hunting, the present rates between Marion and such points; and on shipments between Big Falls and points south and east of Hunting, the present rates between Tigerton and such points. *Konopatzke v. C. & N. W. R. Co. et al.* 1912, 8 W. R. C. R. 556, 564–565.

Joint or through rates—Establishment of joint rates on scrap iron—Monroe and West Bend, Wis.

34. Petitioner alleges excessive charges on three carload shipments of scrap iron from Monroe to West Bend, Wis., and prays that a joint rate of 8 cts. per cwt. be established for shipments of scrap steel and scrap iron between the points in question. The petitioner was charged the class rate. The rate charged is higher than commodity rates prevailing under like conditions between various points in Wisconsin and also higher than the cost of transportation for low grade commodities warrants. The joint rate of 8 cts. per cwt. for which the petitioner asks in the present case would not seem to be very much out of line with the rates generally in effect. *Held*: the rates exacted of the petitioner were unreasonable and exorbitant, and a rate of 8 cts. per cwt. would have been a reasonable rate for the shipments in question. It is ordered that the C. &. N. W. R. Co. and the C. M. & St. P. R. Co. discontinue charging the rates now in effect on scrap iron and steel between Monroe and West Bend, and in lieu thereof substitute the joint rate of 8 cts. per cwt. *Mayer v. C. & N. W. R. Co. et al.* 1911, 8 W. R. C. R. 328, 332–333.

Joint or through rates—Reduction of joint rates on logs, Wisconsin points (northern Wisconsin) on the C. & N. W. R. to Seymour and Black Creek, Wis.

35. Complaint was made of the rates on saw logs from northern Wisconsin points on the C. & N. W. R. to Seymour and Black Creek, located on the G. B. & W. R., where the petitioners respectively are engaged in the manufacture of cheese boxes and other woodenware. The petitioner located at Seymour complains specifically of the rates charged from Gagen, Bowler, Whitcomb, and Green Valley, and alleges that these rates are excessive as compared with other rates prevailing under substantially similar conditions. The petitioner located at Black Creek alleges excessive charges on shipments from Crandon and Monico as compared with other charges on the C. & N. W. R. It appears that the former practice of the respondent companies in regard to the shipment of saw logs to Seymour and Black Creek was to apply the sum of the two carriers' distance rates conditioned on the shipment of the product out. These rates were much lower than the regular log rates of each carrier when no reshipment was involved. Owing to the fact that the cheese boxes were delivered to the factories by wagon and that the C. & N. W. R. Co. was not obtaining the direct shipments out, upon which the rate was conditioned, the regular joint lumber rates of the two respondents, fixed without regard to shipments out, were substituted early in 1911. The result was an increase in charges to the extent shown in the complaints. *Held:* the present rates of respondents on shipments of saw logs from northern Wisconsin points to the petitioner's factories at Seymour and Black Creek are excessive and unreasonable. Under the circumstances fair and reasonable rates would consist of the present log rate of 1.5 cts. per cwt. on the G. B. & W. R., plus a distance rate on the C. & N. W. R. equal to that now in force on shipments of pulp wood. It is ordered that the respondents discontinue their present rates on logs of the kind used in the manufacture of cheese boxes and the other products

of the petitioners' factories originating at points on the line of the C. & N. W. R. Co. and destined to Seymour or Black Creek, Wis., and substitute in lieu thereof the rates found reasonable by the Commission. *Gablowsky et al. v. C. & N. W. R. Co. et al.* 1912, 8 W. R. C. R. 544, 550–552.

Joint or through rates—Restoration of joint rates on pulp—Rhinelander to Grand Rapids, Port Edwards, Nekoosa, and Stevens Point and intermediate points, rate to be applied when one point is situated upon the line of one road and the other is situated upon the line of the other road.

36. Petitioner alleges unusual and exorbitant charges on three carloads of sulphite pulp shipped from Rhinelander to Rothschild, which is intermediate between Rhinelander and Grand Rapids, Wis. Respondents formerly had in effect joint commodity rates of 7 cts. per 100 lbs. for the transportation of sulphite or wood pulp in carloads, minimum weight 40,000 lbs., between Rhinelander and Grand Rapids, via Heafford Jct., and applicable as a maximum rate on shipments to or from intermediate points. These rates were discontinued and the local Wisconsin distance tariff, class rates, substituted therefor. Petitioner prays that just and reasonable joint rates, not exceeding 7 cts. per 100 lbs. for sulphite pulp in carload lots, be put in effect from Rhinelander to Grand Rapids, Port Edwards, Nekoosa, and Stevens Point and intermediate points. *Held:* the class rate applicable to the shipments in question is excessive. Respondents are ordered to restore the joint commodity rates of 7 cts. per 100 lbs. between those points where the one is situated upon the line of one road and the other is situated upon the line of the other road. This order is not to apply between points situated upon either road. *Rhinelander Paper Co. v. C. M. & St. P. R. Co. et al.* 1912, 8 W. R. C. R. 58, 61.

Manufacturers' rates on raw material.

37. The contention that a rate conditioned on the shipment of the product out over the line bringing in the raw material, should not be granted to the manufacturer who is not in a position to reship over such line is manifestly correct where the transit rate on the shipment of the raw material in to the factory is not sufficiently high in and of itself to return a fair compensation to the carrier. On the other hand, it is equally clear that manufacturers, though unable to guarantee the shipment of the product out over the same line, should have rates on their raw material which are no more than sufficient to yield an adequate return to the carrier for the services involved in the separate shipment of the material in to the factory. This reasoning, it would seem, is, in general, in line with public policy. *Gablowsky et al v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 544, 550.

Reasonableness of rates—Reduction of rate not to be construed as an admission of prior unreasonableness.

38. A reduction of rates independently of other considerations, should not be held to be an admission on the part of the railway company that the prior rate was either unusual or exorbitant. It becomes necessary to revise tariffs from time to time to meet the ever changing conditions of commercial life. The law should not be so construed or administered to deter railway companies from exercising the right to reduce their charges upon their own volition when con-

ditions require a reduction. (*Steven & Jarvis Lumber Co. v. C. St. P. M. & O. R. Co.* 1907, 2 W. R. C. R. 131, 134.) *Northern Wood Co. v. M. St. P. & S. S. M. R. Co. et al.* 1911, 8 W. R. C. R. 62, 63.

39. The Commission has taken a firm stand that the mere fact that a railroad company reduces a rate upon its own volition or the same is reduced by action of the Commission does not entitle a shipper, as a matter of course, to any refund. Wherever this position has been departed from, it has been due to the urgency of the railway company rather than to the attitude of the Commission. *Connor Land & Lbr. Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 697.

Reasonableness of rates in particular cases—Coal, Milwaukee to Portage, Wis.

40. Petitioner alleges overcharges on three carload shipments of coal from Milwaukee to Portage, Wis. The rate charged was in legal effect, owing to an error in the publication of the tariff. Subsequent to the shipments the error was discovered and the rate previously in force was reestablished. *Held:* the rate exacted of the petitioner was unusual and exorbitant, and the reasonable rate would have been $1.25 per net ton, as previously in effect and subsequently reestablished. *Philadelphia & R. C. & I. Co. v. M. St. P. & S. S. M. R. Co.* 1912, 8 W. R. C. R. 542, 543.

Reasonableness of rates in particular cases—Coal, Superior to Emerald, Wis.

41. Petitioner alleges unjust and unreasonable charges on a carload shipment of soft coal from Superior to Emerald, Wis., on which respondent, the C. St. P. M. & O. Ry. Co., charged a rate of $1.40 per net ton. The M. St. P. & S. S. M. Ry. Co., a competing line, had a rate of $1 per net ton in effect at the same time for similar shipments. This rate was established by the respondent after the shipment in question had moved. *Held:* the rate exacted was unusual and exorbitant and a reasonable rate for the services rendered would have been $1 per net ton, as subsequently established. *Emerald Co-operative Creamery v. C. St. P. M. & O. R. Co.* 1912, 8 W. R. C. R. 683–684.

Reasonableness of rates in particular cases—Coal and coke, Milwaukee and South Milwaukee, Wis.

42. Complaint was made of excessive charges on certain carload shipments of coal and coke between Milwaukee and South Milwaukee, Wis. In a previous decision (*South Milwaukee Fuel & Supply Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 1) the Commission held similar charges excessive and ordered a refund on the basis that the charges exacted were higher than other rates charged under similar conditions, and also higher than the prevailing conditions warranted. Subsequent to the shipment in question the respondent put in effect the rates provided for in the original hearing. *Held:* under the circumstances the rates exacted were excessive and a reasonable charge would have been made on the basis of $6 per car of 50,000 lbs., minimum weight and excess weight at proportional rates, as made effective after the shipment moved. *South Milwaukee Fuel & Supply Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 473, 476.

Reasonableness of rates in particular cases—Coke, Watertown to New London, Wis.

43. Petitioner alleges exorbitant charges on a carload shipment of gas coke from Watertown to New London, Wis., on which a class rate

of 6½ cts. per cwt. was exacted, while for the greater distance from Milwaukee and Racine to New London a commodity rate of 5 cts. was in effect. This latter rate was subsequently made effective between the points in question. *Held:* the rate exacted was unusual and the reasonable rate for such service would have been $1 per ton. *Pape v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 566, 567–568.

Reasonableness of rates in particular cases—Foundry patterns, Milwaukee to Beaver Dam, Wis.

44. Complaint was made of excessive charges on a carload shipment of foundry patterns for obsolete machinery from Milwaukee to Beaver Dam, Wis. The western classification provides a rate of one and one-half times first-class rates, or 48 cts. per cwt., for wood and metallic patterns in any quantity. This was the only rate in effect and applicable at the time the shipment moved, and is the only rate in effect at the present time. Petitioner contends that since foundry patterns for obsolete machinery have a mere nominal value, the regular rate for foundry patterns was excessive for the obsolete forms, and that a reasonable rate for the shipment in question would have been the highest rate published for carload shipments in class 5, which is 12½ cts. per cwt. *Held:* under the circumstances the regular foundry pattern rate of 48 cts. per cwt. was exorbitant, and a reasonable charge for the shipment would have been the fifth class rate, or 12½ cts. per cwt. *Rom Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 325, 326–327.

Reasonableness of rates in particular cases—Hardware, South Milwaukee to Milwaukee, Wis.

45. Complaint was made of excessive charges on certain shipments of hardware from South Milwaukee to Milwaukee, Wis. It appears that for a number of years a special rate has been applied between Milwaukee and South Milwaukee on goods manufactured. Through inadvertence in the publication of a schedule, the wording was changed so that instead of making the special rate apply between Milwaukee and South Milwaukee, it was made to apply from Milwaukee to South Milwaukee, therefore not applying on shipments moving in the opposite direction. The respondent acknowledged its error in the printing of the schedule and later issued a supplement with the correct wording. During the interim the petitioner was charged on the basis of the regular class rate on all shipments to Milwaukee covered by the tariff as previously in effect and subsequently made effective. *Held:* there is no reason for the exaction of a higher rate for the commodities in question when moving in one direction between the points involved in this case than when moving in the opposite direction. The regular class rate exacted was unusual, and the commodity rate of 5 cts. per cwt., as subsequently established, would have been a reasonable rate for the shipments in question. *Stowell Mfg. & Fdry. Co. v. C. & N. W. R. Co.* 1911, 8 W. R. C. R. 316, 319.

Reasonableness of rates in particular cases—Live stock, Wisconsin points, with stoppage in transit at Fond du Lac and further shipment over the C. M. & St. P. R.

46. Petitioners allege excessive charges on shipments of live stock shipped from near-by points to Fond du Lac, Wis., and there stopped in order to finish loading for further shipment to Milwaukee and Chicago. The petitioners complain that shipments from Malone, Calvary, and Vandyne stopped at Fond du Lac are charged the local rates although the cars are stopped without loss of either time or money to

the respondent. Reparation is claimed on such shipments made within the past year. Since the filing of the claim the railway company has established a charge of $2 for one stop in transit to finish loading shipments of live stock in carload lots, and consents to the awarding of reparation in the instant case upon such basis. *Held:* the charges exacted of the petitioner for the transit privilege allowed in connection with the intrastate shipments of stock are unusual and excessive and a reasonable charge therefor would have been the rate of $2 per car, the rate now effective. *Hoyt & Bergen v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 532, 534.

Reasonableness of rates in particular cases—Logs, Wisconsin points (northern Wisconsin) on the C. & N. W. R. to Seymour and Black Creek, Wis.

47. Complaint was made of the rates on saw logs from northern Wisconsin points on the C. & N. W. R. to Seymour and Black Creek located on the G. B. & W. R., where the petitioners respectively are engaged in the manufacture of cheese boxes and other wooden ware. The petitioner located at Seymour complains specifically of the rates charged from Gagen, Bowler, Whitcomb, and Green Valley, and alleges that these rates are excessive as compared with other rates prevailing under substantially similar conditions. The petitioner located at Black Creek alleges excessive charges on shipments from Crandon and Monico as compared with other charges on the C. & N. W. R. It appears that the former practice of the respondent companies in regard to the shipment of saw logs to Seymour and Black Creek was to apply the sum of the two carriers' distance rates conditioned on the shipment of the product out. These rates were much lower than the regular log rates of each carrier when no reshipment was involved. Owing to the fact that the cheese boxes were delivered to the factories by wagon and that the C. & N. W. R. Co. was not obtaining the direct shipments out, upon which the rate was conditioned, the regular joint lumber rates of the two respondents, fixed without regard to shipments out, were substituted early in 1911. The result was an increase in charges to the extent shown in the complaints. *Held:* the present rates of respondents on shipments of saw logs from northern Wisconsin points to the petitioners' factories at Seymour and Black Creek are excessive and unreasonable. Under the circumstances fair and reasonable rates would consist of the present log rate of 1.5 cts. per cwt. on the G. B. & W. R., plus a distance rate on the C. & N. W. R., equal to that now in force on shipments of pulp wood. It is ordered that the respondents discontinue their present rates on logs of the kind used in the manufacture of cheese boxes and the other products of the petitioners' factories originating at points on the line of the C. & N. W. R. Co. and destined to Seymour or Black Creek, Wis., and substitute in lieu thereof the rates found reasonable by the Commission. *Gablowsky et al v. C. & N. W. R. Co. et al.* 1912, 8 W. R. C. R. 544, 550–552.

Reasonableness of rates in particular cases—Lumber, Laona, Wis. and Wisconsin points.

48. Application was made for a rehearing of the matters involved in the case of the *Connor Land and Lbr. Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 774. The principal contention of the respondent was that the Commission failed to interpret the statute correctly in its application to the case. It was claimed that the rate exacted for the shipment in controversy was not an unusual one within the contemplation of the statute. *Held:* it is to the interest of all parties con-

cerned that the law relating to refunds should be administered in strict accord with the letter and spirit thereof. There was nothing presented upon the argument that changes the conclusion in the former case. The application for rehearing is denied. *Connor Land & Lbr. C. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 697, 698.

Reasonableness of rates in particular cases—Lumber, Neopit to Crandon and Horicon, Wis.

49. Petitioner alleges exorbitant charges on two carload shipments of lumber from Neopit to Crandon, Wis., upon which the Wis. & N. R. Co. and the C. & N. W. R. Co. charged the sum of the local rates; and further alleges exorbitant charges on several cars of lumber shipped from Neopit to Horicon, Wis., in which case the charges consisted of the sum of the Wis. & N. local rate, and the C. & N. W. and C. M. & St. P. joint rate. Petitioner asks for the establishment of reasonable joint rates between the points named. *Held:* the rate charged on the shipments from Neopit to Crandon was excessive and a reasonable rate would have been the joint rate on lumber fixed by the Commission for 120 mile joint hauls between the C. & N. W. and the C. M. & St. P. lines. The Wis. & N. R. Co. and the C. & N. W. R. Co. are accordingly ordered to establish a joint rate of 7.9 cts. per 100 lbs. on carload shipments of lumber from Neopit to Crandon. With reference to shipments from Neopit to Horicon the extra teminal charges caused by the movement over three lines are necessarily so heavy that it would be difficult to establish a joint rate which would permit of successful competition between shippers using a single line and those using three lines. Lumber shipments over three lines in the region involved are very unusual and the facts at present before the Commission are meager. Under the circumstances presented by this case, it does not appear desirable to establish joint rates on lumber for three-line shipments at the present time. *Mears-Slayton Lbr. Co. v. Wis. & N. R. Co. et al.* 1911, 8 W. R. C. R. 247, 248–250.

Reasonableness of rates in particular cases—Lumber, Rhinelander to Star Lake, Wis.

50. Petitioner alleges excessive rates on a carload shipment of lumber from Rhinelander to Star Lake, Wis. The rate charged was composed of two local rates, the one over the M. St. P. & S. S. M. R. from Rhinelander to Heafford Jct., the other over the C. M. & St. P. R. from Heafford Jct. to Star Lake. There was no through joint rate at the time this shipment was made, nor is there a joint rate in effect at present. *Held:* an examination of the tariff schedules of the respondent companies shows that the local rate applicable to the shipment from Heafford Jct. to Star Lake was 7 cts. per cwt., and not 8 cts. as charged. The charge exacted was therefore illegal to the extent of this excess. The rate of 12½ cts. per cwt. exacted by the respondents, is illegal and exorbitant and a reasonable rate for the services rendered would have been a through rate of 7 cts. per cwt. *Badger Co. v. M. St. P. & S. S. M. R. Co. et al.* 1911, 8 W. R. C. R. 125, 128.

Reasonableness of rates in particular cases—Lumber, Richland Center to Stoughton, Wis.

51. Petitioner alleges overcharges on a carload shipment of manufactured lumber from Richland Center to Stoughton, Wis. The respondent charged a rate of 7 cts. per cwt. The rate of 5 cts. per cwt. which the petitioner seeks to have applied, could not be justified except on condition that the lumber was transported for manufacture and reshipment over the same line. In *Wis. Retail Lbr. Dealers Assn.*

v. C. & N. W. R. Co. et al. 1909, 3 W. R. C. R. 471, the Commission established a rate of 7 cts. per cwt. on shipments of lumber for distances of 80 miles and over 75 miles. This rate was applicable to the shipment in question. *Held:* the rate of 7 cts. per cwt. charged by respondent was the lawful and reasonable rate to have applied under the circumstances. *Krouskop v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 32, 33.

Reasonableness of rates in particular cases—Lumber, Wisconsin points on La Farge branch of C. M. & St. P. R. to Oshkosh, Fond du Lac, and Watertown, Wis.

52. Petitioner alleges respondent's rates on lumber from points on its La Farge branch, chiefly at or near La Farge, Wis., to Milwaukee, Oshkosh, Janesville, and other points intermediate, are excessive as compared with rates to the same markets from such other lumber shipping points on respondent's line as Tomah, Wausau, and Tomahawk, Wis. Petitioner prays for a full investigation of rates on lumber from the points on the La Farge branch to the above named market points, and for the establishment of such rates as may be found just and equitable. *Held:* the rates which the petitioner pays to Milwaukee, Madison, Stoughton, Janesville and Beloit are fairly proportioned to other rates now existing under similar conditions, and a change at the present time in the few rates involved in this case might result in a number of discriminations as between localities. In the case of Watertown, Oshkosh, and Fond du Lac, however, the present rates are not only considerably higher than the cost of service warrants, but are out of line with the general trend of the existing rates for similar hauls. It is ordered, therefore, that the respondent discontinue its present carload rate on lumber between points on its La Farge branch and Oshkosh and Fond du Lac, and substitute therefor a rate of 10 cts. per 100 lbs.; and that it substitute for its present carload rate on lumber between all points on the La Farge branch and Watertown a rate of 9 cts. per 100 lbs. *Brittingham & Young Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 131, 137.

Reasonableness of rates in particular cases—Lumber waste, Merrimac to Jefferson, Wis.

53. The petitioner alleges erroneous, illegal, unusual, and exorbitant charges on shipments of second-hand and refuse lumber from Merrimac to Jefferson, Wis. It appears that the shipments were billed as lumber and the respondent applied the lumber rate thereto. *Held:* the products in question should not have been described as lumber but should have been billed as "lumber waste," and taken the lower rate which is 80 per cent of the lumber rate. The charges exacted were erroneous and exorbitant, and the reasonable rate to have charged for the shipments would have been 6.4 cts. per cwt. *Jefferson Brick & Tile Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 553, 554–555.

Reasonableness of rates in particular cases—Paper, Ladysmith to Ashland, Wis.

54. Petitioner alleges excessive charges on a carload shipment of newsprint paper from Ladysmith to Ashland, Wis. Subsequently a lower rate was put in effect. *Held:* the rate exacted was the only one legally applicable at the time the shipment was made. This rate was exorbitant and a reasonable rate would have been 8 cts. per cwt., as subsequently made effective. *Menasha Paper Co. v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 78, 79.

Reasonableness of rates in particular cases—Pulp, Little Rapids to Stevens Point, Wis.

55. Petitioner alleges unjust and unreasonable charges on a shipment of two carloads of wood pulp from Little Rapids to Stevens Point, Wis. At the time the shipments moved lower rates were in effect between Stevens Point and Fox river points, including Kaukauna and De Pere, Little Rapids being intermediate. Subsequently the same rates were established between Little Rapids and Stevens Point. From the evidence it is obvious that the omission from the schedule of the lower rate on wood pulp moving from Little Rapids to Stevens Point was due either to an oversight in the publication of the tariff or to the fact that theretofore no such commodity had moved between said points. *Held:* that the rate exacted was unusual under the circumstances and that a reasonable charge would have been the rate of 6 cts. per cwt. now in effect. *Wisconsin River Paper & Pulp Co. v. C. & N. W. R. Co. et al.* 1911, 8 W. R. C. R. 64, 65–66.

Reasonableness of rates in particular cases—Pulp, Rhinelander to Grand Rapids, Fort Edwards, Nekoosa, and Stevens Point and intermediate points, rate to be applied when one point is situated upon the line of one road and the other is situated upon the line of the other road.

56. Petitioner alleges unusual and exorbitant charges on three carloads of sulphite pulp shipped from Rhinelander to Rothschild, which is intermediate between Rhinelander and Grand Rapids, Wis. Respondents formerly had in effect joint commodity rates of 7 cts. per 100 lbs. for the transportation of sulphite or wood pulp in carloads, minimum weight 40,000 lbs., between Rhinelander and Grand Rapids, via Heafford Jct., and applicable as a maximum rate on shipments to or from intermediate points. These rates were discontinued and the local Wisconsin distance tariff, class rates, substituted therefor. Petitioner prays that just and reasonable joint rates, not exceeding 7 cts. per 100 lbs. for sulphite pulp in carload lots, be put in effect from Rhinelander to Grand Rapids, Port Edwards, Nekoosa, and Stevens Point and intermediate points. *Held:* the class rate applicable to the shipments in question is excessive. Respondents are ordered to restore the joint commodity rate of 7 cts. per 100 lbs. between those points where the one is situated upon the line of the one road and the other is situated upon the line of the other road. This order is not to apply between points situated upon either road. *Rhinelander Paper Co. v. C. M. & St. P. R. Co. et al.* 1911, 8 W. R. C. R. 58, 61.

Reasonableness of rates in particular cases—Scrap iron, Monroe to West Bend, Wis.

57. Petitioner alleges excessive charges on three carload shipments of scrap iron from Monroe to West Bend, Wis., and prays that a joint rate of 8 cts. per cwt. be established for shipments of scrap steel and scrap iron between the points in question. The petitioner was charged the class rate. The rate charged is higher than commodity rates prevailing under like conditions between various points in Wisconsin and also higher than the cost of transportation for low grade commodities warrants. The joint rate of 8 cts. per cwt. for which the petitioner asks in the present case would not seem to be very much out of line with the rates generally in effect. *Held:* the rates exacted of the petitioner were unreasonable and exorbitant, and

a rate of 8 cts. per cwt. would have been a reasonable rate for the shipments in question. It is ordered that the C. & N. W. R. Co. and C. M. & St. P. R. Co. discontinue charging the rates now in effect on scrap iron and steel between Monroe and West Bend, and in lieu thereof substitute the joint rate of 8 cts. per cwt. *Mayer v. C. & N. W. R. Co. et al.* 1911, 8 W. R. C. R. 328, 332–333.

Reasonableness of rates in particular cases—Springs, Racine to Oshkosh, Wis.

58. Petitioner alleges unusual and exorbitant charges on shipments of vehicle springs from Racine to Oshkosh, Wis. The regular third class rate was collected. For a number of years previous a rate of 16½ cts. per cwt. on vehicle springs was in effect between these points. In revising and correcting the tariffs, this rate was eliminated through error, but subsequently it was reinstated. *Held:* the rate exacted was exorbitant and a reasonable rate would have been 16½ cts. per cwt., as subsequently reestablished. *Higgins Spring & Axle Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 283, 284.

Reasonableness of rates in particular cases—Springs, Racine Jct. to Janesville, Monroe, Stoughton, Edgerton, and Madison, Wis.

59. Petitioner alleges that respondent's tariff provides a rate on vehicle springs of 12 cts. per cwt. on less than carload lots from Racine Jct. to Janesville, Monroe, Stoughton, Edgerton, and Madison, Wis., and a rate of 10 cts. per cwt. on similar shipments to the same points from Chicago; that thereby the respondent is discriminating against the petitioner and in favor of Chicago shippers of like articles. *Held:* that 12 cts. per cwt. is excessive and that 10 cts. per cwt. is a reasonable rate for such transportation services. Respondent is ordered to discontinue its present rate and to substitute therefor the rate found reasonable by the Commission. *Higgins Spring & Axle Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 36, 37.

Reasonableness of rates in particular cases—Switching charges —Substitution of switching charge in place of distance tariff rate—Steel rails, Madison, Wis.

60. Petitioner alleges that the C. M. & St. P. R. Co. charged an excessive rate for switching two cars of steel rails from one point to another within the railway company's switching limits in Madison, Wis. The distance tariff rate of 4 cts. per cwt. was charged instead of the regular switching rate of $5 per car. The principle governing this case was applied in *Sinaiko Bros. v. C. M. & St. P. R. Co.* 1910, 4 W. R. C. R. 432, where a switching charge not to exceed $5 per car was substituted by order of the Commission for the distance tariff rates theretofore applicable to switching services within the city of Madison. *Held:* the charges exacted were exorbitant and unlawful, and $5 per car was the lawful rate for the shipments in question. *Western Ind. Constr. Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 309, 310.

Reasonableness of rates in particular cases—Vegetables, Cumberland to De Forest, Wis.

61. Petitioner alleges exorbitant, unreasonable and unjustly discriminatory charges on a carload shipment of rutabagas in bulk from Cumberland to De Forest, Wis. It appears that the shipment was

routed via Madison, a distance of 28 miles more than if it had been routed via Camp Douglas. As no specific instructions to the contrary were given by the shipper, the shipment should have moved via Camp Douglas instead of via Madison, there being no through joint rate via either route. It is well settled that under the circumstances the shipper was entitled to a routing by which he would receive the lowest through rate. (*Hodges v. W. C. R. Co.* 1906, 1 W. R. C. R. 300.) *Held:* the charges exacted of the petitioner were erroneous, and a reasonable charge would have been the amount computed upon the rates in effect upon a routing of the shipment via Camp Douglas. *Engesether v. C. St. P. M. & O. R. Co. et al.* 1912, 8 W. R. C. R. 504, 506.

Reasonableness of rates in particular cases—Wood, Hawkins to Milwaukee, Wis.

62. Petitioner alleges excessive and unreasonable charges on a carload shipment of slabs from Hawkins to Milwaukee, Wis. Respondent charged the sum of the locals. Later a through rate of 5 cts. per cwt. was established. *Held:* in the present case the sum of the local rates was exorbitant and a reasonable rate for the transportation service rendered would have been the through rate of 5 cts. per cwt. as subsequently established. *Northern Wood Co. v. M. St. P. & S. S. M. R. Co. et al.* 1911, 8 W. R. C. R. 62, 63.

Reasonableness of rates in particular cases—Wood, Ladysmith to Menasha, Wis.

63. Petitioner alleges unusual and exorbitant charges on shipment of ten cars of pulp wood from Ladysmith to Menasha, Wis. The excess charge was due to an error in publishing the rate schedule. Subsequently respondent corrected the error and reinstated the rate and minimum loading requirement previously in effect. *Held:* the rate exacted was unusual and exorbitant and a reasonable charge would have been 5 cts. per cwt., as provided in the tariff now in effect. *Wis. Pulp & Paper Mfrs. v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 16, 17.

Reasonableness of rates in particular cases—Wood, Rhinelander from Wisconsin points.

64. The petitioner, a corporation engaged in the manufacture of paper, sulphite, and ground wood pulp at Rhinelander, Wis., complains that it is discriminated against by the respondent railway company. Petitioner alleges that such company charges lower rates on pulp wood than those fixed by the Commission *In re Rates on Pulp Wood*, 1908, 2 W. R. C. R. 168, for certain other Wisconsin points, while it applies the rates fixed by the Commission to Rhinelander. Petitioner prays that the respondent be ordered to desist from discriminating against the petitioner in the manner stated, or else to place Rhinelander upon the same basis, as to reduction of rates on pulp wood, with the other mill points in question. *Held:* the reduction in rates to certain other mill points and not to Rhinelander amounts to an unjust discrimination. Although the distance tariff rates fixed by the Commission are believed to be fair to both the shipper and the carriers, there is no objection on the part of the Commission to a somewhat lower system of rates, provided the discriminatory conditions found to exist in this case are dispensed with. It is ordered that the respondent either discontinue the special rates to Grand Rapids, Port Edwards, Nekoosa, Neenah, and Menasha and substitute therefor the rates fixed by the Commission *In re Rates on Pulp Wood*, 1908, 2 W.

R. C. R. 168, or reduce the rates on pulp wood from pulp wood shipping points on its lines in Wisconsin to Rhinelander in approximate proportion to the reductions, below the rates fixed by the Commission, now existing on pulp wood shipments to Grand Rapids, Port Edwards, Nekoosa, Neenah, and Menasha. It is further ordered that the respondent discontinue and cancel its joint trainload rate of 4 cts. with the C. & N. W. R. Co. on pulp wood shipments from Butternut, Fifield, and Park Falls to Kimberly, Wis. *Rhinelander Paper Co. v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 105, 113–114.

Through rates.
See ante, 29–36.

RATES—TELEPHONE

Reasonableness of advance in rates in particular cases.

65. Application was made by the People's Telephone Co. for authority to increase rates. The company's principal place of business is in Rio, Wis., and it operates exchanges in Fox Lake, Rio, Cambria, Fall River, Wyocena, and Randolph, Wis. *Held:* the analysis of the expenses and revenues of the utility show that with the exception of a slight shortage at Rio and Randolph, the company has been earning a fair return and that its financial condition is such that it is able to make needed improvements in the service. Under the circumstances the adjustment of rates should be postponed until the company gets its plant into condition to render good service. It is ordered that the application for authority to increase rates be dismissed until such improvements in service are made. *In re Appl. People's Tel. Co.* 1911, 8 W. R. C. R. 92, 100.

66. Application was made by The State Long Distance Telephone Company, operating a telephone exchange and system in Elkhorn, Wis., and adjacent territory, for authority to increase its rates for telephone service. The applicant bases its prayer for increased rates upon the improvement of its long distance telephone and the increased cost of operation due to the purchase of the Elkhorn exchange of the Wisconsin Telephone Company, and the proposed acquisition of the rural line of the Badger Telephone and Telegraph Company. The applicant maintains that its present schedule of rates is insufficient to pay expenses, depreciation, and an adequate return on the property. An examination of operating expenses and revenues of the applicant was made for the last three years. Records of the utility have been so poorly kept that it was impossible to make an exact distribution of expenses over the primary expense groups, or even between operating expenses and new construction. An estimate of future operating expenses and revenues under present rates showed that from 16 to 16⅔ per cent will be available for interest, profits and depreciation, upon a valuation of $30,000. Inasmuch as the books and records of the utility have been so poorly kept that the applicant has been unable to make even approximately correct reports to the Commission, and as investigation shows that an adequate return is being obtained, no increase in rates should be authorized at this time. The utility must keep its accounts in accordance with the requirements of the Commission. Then it will be in a position to know its own financial status and the readjustment of rates, if any need be made in the future, will be comparatively simple. The application is dismissed. *In re Appl. State Long Distance Tel. Co.* 1912, 8 W. R. C. R. 497, 503.

Reasonableness of rates in particular cases.

67. Complaint was made of the rates charged by the New Lisbon Mutual Tel. Co. The petitioner asks that just and equitable rates be fixed and that discrimination be abolished. *Held:* the service matters at issue are sufficiently important to warrant a postponement of any adjustment of rates until adequate service is offered. *Juneau El. Co. v. New Lisbon Tel. Co.* 1911, 8 W. R. C. R. 399, 405.

RATES—WATER

Discrimination in water rates, *see* DISCRIMINATION, 2–4.

Fire protection rates.

See post, 70–71.

Flat rates.

68. There is an element of cost which varies with the quantity of water used in supplying the service, rather than being dependent upon the nature of the service. It is this fact which is overlooked by the flat rate schedule. Such a schedule provides that water shall be supplied for a given service at a given price, ignoring the fact that the quantity of water which may be used bears very little relation to the nature of this service. *City of Marinette v. City W. Co.* 1911, 8 W. R. C. R. 334, 369.

Flat rates—Room charge.

69. As a portion of a flat rate schedule a room charge may have a place, but it is a question whether such a charge can generally be justified on the ground that the amount of water used varies with the number of rooms. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 50, 56–57.

Garden sprinkling rates.

See post, 72.

Hydrant rental—Fire protection through privately owned hydrants.

70. The contention that an additional charge should be made against private owners for hydrants installed on private property, aside from the general charge to the city for fire protection, is not tenable. In its opinion *In re Appl. Oconto City Water Supply Co.* 1911, 7 W. R. C. R. 497, 568, the Commission held that no such charge should be made. The water actually used for fire protection should be paid for by the city, and this is provided for in the rates herein prescribed. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 56–57.

71. In the present case, in a few instances, water is supplied through the same services for fire protection and for ordinary industrial uses. In previous decisions the Commission has held that a water utility ought to make no charge for privately owned hydrants set at the expense of the consumer, but that the city should pay the entire cost of fire protection furnished through hydrants. The difficulty of making a rate for the inside fire protection systems in the present case is that water is supplied for fire protection and for industrial uses through the same services. In such cases these services should be metered, or the utility should insist that no connections to the fire protection system should be made for any purpose other than fire protection. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 385.

Lawn and garden sprinkling rates.

72. It would not be equitable to make other general users or the general public pay a higher rate in order that water may be used free of charge for sprinkling lawns and gardens. A charge should be made for this use which will pay for the water used and such part of the demand expenses as are properly chargeable to it. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 50–51, 55, 56–57.

Meter rates.

73. Complaint was made informally that the utility had violated its rule giving a consumer dissatisfied with the assessed rates the right to attach a meter and pay for water at meter rates, provided the meter were attached under the direction and subject to the inspection of the company and in accordance with the other stipulations set forth in the rule. *Held:* as long as this rule remains in effect, the utility is bound by its provisions and must conduct its business in accordance therewith. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 385–386.

Reasonableness of advance in rates in particular cases.

74. Application was made by the Hillsboro Water Works Co. at Hillsboro, Wis., for a valuation of its property and for authority to increase its rates for hydrants. Considerable dissatisfaction having been expressed with the nature of the fire protection furnished by the applicant, an inspection and test of the system was made by the Commission. It was found that adequate fire protection was not furnished and that improvements in the plant were necessary in order to secure adequate service. *Held:* time should be given for the village and the water company to come to an understanding with regard to the installation of needed improvements. While the amount paid by the village to the petitioners is rather inadequate, a settlement of the charge for fire protection should not be made until opportunity has been provided for such agreement and for the making of such improvements as may be agreed upon. *In re Appl. Hillsboro W. Wks. Co.* 1911, 8 W. R. C. R. 85, 89, 91.

Reasonableness of rates in particular cases.

75. Complaint was made that the city of Tomahawk, Wis., a public utility engaged in furnishing water to the public, charges unreasonable and discriminatory rates. Petitioner alleges that the rates for general service are too high and that the city does not pay enough for fire protection. *Held:* the excess in revenue above the apparent cost of service does not seem sufficient to warrant a reduction in rates for general service at the present time. The amount which the city pays for fire protection is so nearly the difference between the total cost of the service and the amount of interest included in the estimate of operating expenses that no increase need be made in this rate. The reasonableness of the scheduled rates will not be finally passed upon until proper accounting methods have placed the records of the utility in such shape that the real cost of running the business may be determined. For the present it is ordered that the flat rates be left as they are, with the addition of a charge for lawn sprinkling. A meter rate is ordered for certain classes of consumers who are not subject to the flat rates. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 55, 56–57.

76. Complaint was made by the city of Marinette, Wis., as to the rates charged for water by the City Water Co. of Marinette. The matters complained of are the rates charged both for fire protection and for

general service, the practice of fixing special rates for certain classes of service, and of supplying water at meter rates where other rates are not specified. The operating expenses for the past ten years indicate that no reduction in total revenues can be made under present conditions. The charge that rates for fire protection are unreasonably high, is not well founded and no reduction can be made in the charge for fire protection at the present time. A comparison of the Marinette rate with rates charged by other Wisconsin cities fails to show that the flat rates are unreasonable. The statement of revenues and expenses for unmetered services show that the revenues from consumers on a flat rate basis are less than the cost of that service, and no general reduction can be made in the flat rate schedule for the present. Although the existing schedules are by no means perfect, it may be questioned whether they are unreasonable, either in themselves or as between fire protection and general service, to a degree which would require an order at this time putting in effect a new schedule of rates. No definite order regarding rates is made at this time, but it is recommended that the utility and the city agree to the schedule proposed by the Commission and which is deemed reasonable and just. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 385–387.

77. Application was made by the Oconto City Water Supply Co. and by the city of Oconto for modifications in the Commission's decision of Aug. 7, 1911, relating to water rates in Oconto, Wis. (*In re Appl. Oconto City Water Supply Co.* 1911, 7 W. R. C. R. 497.) The company asks for an order fixing rates for extra faucets, steam and hot water boilers for heating purposes; inserting in the franchise schedule "for power purposes" after "steam boilers"; and striking out the rates for horses and cows, and further asks that the order be changed so as to make the charge for fire protection in the original order apply as far back as Dec. 6, 1909. *Held:* a charge for extra faucets would often amount to a double charge for water used, especially if the nature and position of those faucets is such that their installation is not likely to lead to an increased use of water. However, in the present case no injustice will be done if a charge is made for wash basins and laundry tubs in addition to that for other fixtures and for rooms. The result of amending the franchise so that the rates for steam boilers shall apply only to those used for power purposes, would be that such boilers would in every case be supplied through meter. The original order intended that the charge for steam and hot water boilers for heating purposes should be placed on a meter basis, but as the franchise had never made a definite rate for these uses, the utility is without a fixed rate to apply before the time of such metering. It was very difficult to make collections of charges for horses and cows, and a charge for faucets placed in barns will be as satisfactory and just in the present schedule. Rates are accordingly fixed for wash basins, laundry tubs, barn faucets, and boilers for heating purposes, and the words "for power purposes" are ordered inserted after "steam boilers" in the present flat rate schedule of the utility. As regards the charge for fire protection, it is not the intention of the Commission to have anything in its decision stand in the way of any reasonable agreement between the city and utility as to the charges for fire protection. *In re Appl. Oconto City W. Supply Co.* 1911, 8 W. R. C. R. 388, 394–396, 398.

78. The petitioner alleges that the village of Sharon, Wis., a public utility furnishing water and gasoline gas to the public, has ordered all water users in the village to purchase and install water meters at their own expense and has threatened to cut off the service of all who fail to do so. The petitioner further alleges that the water plant and gasoline gas plant are each operated at a loss. A thorough investiga-

tion and a separation of the departments is asked for in order that each plant will be placed upon a paying basis. With respect to the rates for water, the statement of earnings and expenditures shows that after paying the expenses of operation, excluding interest charges upon the funded indebtedness, there is a large deficit in the water department for each of the three years given. Inspection of the expenditures discloses that no allowance for depreciation, as such, has ever been made by the village. *Held:* owing to the absence of meters, and especially to the failure of the utility to keep the accounts and records as required by the Public Utilities Law, the information available at present is insufficient as a basis for rate schedules. A meter or counters on the pumps should be installed for the water department, in order that accurate information may be available as to the quantity of water pumped. For the present the respondent is ordered to discontinue its present schedule of rates for water service and to substitute therefor the increased rates deemed just and reasonable by the Commission. After meters have been put into general use, and after the accounts and records of the utility have been kept in the form prescribed by the Commission and as required by the Public Utilities Law, a revision of the rates, as prescribed, may be found necessary. Sixty days is deemed sufficient time within which to comply with this order. *Lothrop v. Village of Sharon*, 1912, 8 W. R. C. R. 479, 482, 493–496.

Street sprinkling rates.

79. Water used for street sprinkling should be paid for. In case water is used for this purpose a rate must be established for that use. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 56–57.

RATIO OF DEMAND TO CONNECTED LOAD

See RULES AND REGULATIONS.

RELATION OF RATES

See RATES.

REPARATION

IN GENERAL.

Conditions under which awarded.

1. No refund can be granted which is based upon the petitioner's mere estimate of its loss during any period preceding the making of

the claim, and only the shipments specifically set forth will be considered as the basis for a refund. *Brittingham & Young Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 131, 137.

Proceedings for recovery—Claimants must pursue method provided by statute.

2. The practice of one claimant instituting proceedings to recover not only the excessive charges exacted upon its own shipments but also for the purpose of obtaining refunds to other claimants upon like shipments, who were not parties to the proceeding, is not permitted by the statute. While in certain cases such practice might result in a saving of time and labor, it would in many, if not most cases lead to confusion and complications which ought to be avoided. The statute has provided an orderly method of dealing with overcharges which must be pursued literally by claimants. *South Milwaukee Fuel & Supply Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 473, 476.

Strict enforcement of law relating to refunds to interest of all parties.

3. It can not be denied that it is to the interest of all parties concerned that the law relating to refunds should be administered in strict accord with the letter and spirit thereof. *Connor Land & Lbr. Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 697.

GROUND FOR RECOVERY.

Reduction of rate subsequent to shipment not to be construed as an admission of prior unreasonableness.

4. A shipper is not entitled to a refund merely because a railway company amends a tariff by lowering a rate, which a shipper was obliged to pay for shipments made prior to the amendment. Such a reduction, independently of other considerations, should not be held to be an admission on the part of the railway company that the prior rate was either unusual or exorbitant, otherwise the policy of the law, of which the statute under consideration is an amendment, would be in a great measure defeated. This statute (sec. 1797—37m) was intended to meet exceptional cases and provide relief in case of exceptional hardships, and not designed to penalize railway companies for voluntarily reducing rates where commercial or other conditions warranted a reduction. Evidently, if a railway company were subject to a rebate upon all shipments made during a period of six months prior to the reduction of any rate at which the shipments moved, we should find few alterations in schedules lowering rates except those ordered by the Commission upon complaint of shippers or upon investigations by the Commission upon its own initiative. It becomes necessary to revise tariffs from time to time to meet the ever changing conditions of commercial life. The law should not be so construed or administered to deter railway companies from exercising the right to reduce their charges upon their own volition when conditions require a reduction. (*Stevens & Jarvis Lbr. Co. v. C. St. P. M. & O. R. Co.* 1907, 2 W. R. C. R. 131, 134.) *Northern Wood Co. v. M. St. P. & S. S. M. R. Co. et al.* 1911, 8 W. R. C. R. 62, 63.

JURISDICTION OF COMMISSION.

Authority of Commission in awarding reparation.

5. Sec. 1797—37m of the statutes provides that: "Within one year after the delivery of any shipment of property at destination, any per-

son aggrieved may complain to the commission that the charge exacted for the transportation of such property between points in Wisconsin, or for any service in connection therewith, * * * is erroneous, illegal, unusual or exorbitant, and thereupon the commission shall have power to investigate such complaint, and to hear the same, and to decide upon the merits thereof, in the manner provided by section 12, chapter 362, laws of 1905. If upon such hearing the commission shall decide that the rate or charge exacted is erroneous, illegal, unusual or exorbitant, it shall find what in its judgment would have been a reasonable rate or charge for the service complained of. If the rate or charge so found shall be less than the charge exacted, the carrier shall have the right to refund to the person paying such charge, the amount so found to be excessive." *Francey Coal, Stone & Supply Co. v. C. M. & St. P. R. Co.* 1912, 8 W. R. C. R. 477, 478.

6. In the present case the loss occasioned to the shipper on account of extra drayage charges was due to the erroneous and misleading shipping directions which were given to the respondent's agent by the shipper. Under sec. 1797—37m, provision is made for reparation in cases where railway companies exact erroneous, illegal, unusual or exorbitant charges for the transportation of property or for any service in connection therewith. Even if the extra drayage charges incurred in the present case had been due to the negligence of the railway company and the shipper had a valid claim for the loss incurred, it could not be enforced in a reparation proceeding nor in any proceeding before the Commission. Damages in such a case, if due to the negligence of the carrier, can be recovered only in an action in court. The Commission has no jurisdiction in the matter. *Deeves Lbr. Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 507, 509–510.

LIMITATION OF STATUTE.

Claim for refund barred by limitation of the statute.

7. Sec. 1797—37m provides that: "Within six months after the delivery of any shipment of property at destination, any person aggrieved may complain to the commission that the charge exacted for the transportation of such property between points in Wisconsin * * * is erroneous, illegal, unusual, or exorbitant, and thereupon the commission shall have power to investigate such complaint, and to hear the same, and to decide upon the merits thereof, in the manner provided by section 12, chapter 362, laws of 1905." *Clark v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 38, 39.

8. The Commission is without jurisdiction in reparation proceedings to investigate the reasonableness of rates charged upon shipments which were made beyond the period of limitation contained in the statute. (*Connor Land & Lbr. Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 774.) *South Milwaukee Fuel & Supply Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 473, 476.

9. Prior to April 29, 1911, the limitation on filing claims for refunds was six months, but on that date the act (Wis. Laws 1911, ch. 28, being sec. 1797—37m of the Statutes as amended) of the recent legislature enlarging the time within which to file claims to one year became effective. Such extended time would be applicable to all shipments which had not been barred on the date that the amendment became effective. *Francey Coal, Stone & Supply Co. v. C. M. & St. P. R. Co.* 1912, 8 W. R. C. R. 477, 478.

Computation of period of limitation.

10. In the present case, shipments on which reparation is claimed arrived at their destination more than six months before the filing of the claim for a refund; and as the claim was filed prior to the ef-

fectiveness of the statute (ch. 28, Laws of 1911) extending the time for filing claims from six months to one year, all these claims are barred by the statute. *Mears-Slayton Lbr. Co. v. Wis. & N. R. Co. et al.* 1911, 8 W. R. C. R. 247, 249.

11. In view of the fact that the statute of limitation was enlarged by amendment from six months to one year within which claims for overcharge shall be filed with the Commission, which amendment to the statute became effective April 29, 1911, and that none of the shipments nerein made were barred before such amended statute became effective, all of the claims here presented come within the year limitation of the amended statute. (*Osborn v. Jaines*, 1863, 17 Wis. 573; *Pleasants v. Rohrer*, 1863, 17 Wis. 577.) *Mayer v. C. & N. W. R. Co. et al.* 1911, 8 W. R. C. R. 328, 332–333.

REFUNDS.

Refund from charge based on distance rate instead of concentration rate claimed by shipper.

12. Petitioner alleges overcharges on a carload shipment of manufactured lumber from Richland Center to Stoughton, Wis. The respondent charged a rate of 7 cts. per cwt. The rate of 5 cts. per cwt., which the petitioner seeks to have applied, could not be justified except on condition that the lumber was transported for manufacture and reshipment over the same line. In *Wis. Retail Lbr. Dealers Assn. v. C. & N. W. R. Co. et al.* 1909, 3 W. R. C. R. 471, the Commission established a rate of 7 cts per cwt. on shipments of lumber for distances of 80 miles and over 75 miles. This rate was applicable to the shipment in question. *Held:* the rate of 7 cts. per cwt. charged by respondent was the lawful and reasonable rate to have applied under the circumstances. Petition for refund is dismissed. *Krouskop v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 32, 33.

Refund from charge based on minimum weight of smaller capacity cars furnished at the convenience of the carrier instead of the minimum weight of the cars ordered by the shipper.

13. Petitioner alleges erroneous, illegal, unusual and exorbitant charges on carload shipments of cordwood from Unity to Waukesha, Wis. The respondent furnished small box cars instead of the flat cars of 40,000 lbs. capacity ordered. Petitioner claims that it was impossible to load wood to the full marked capacity of the cars furnished, and as a result he was compelled to pay excessive freight charges. *Held:* as the shipments reached their destination more than six months before claim was made to the Commission, the Commission is without jurisdiction of the matter (sec. 1797—37m). Petition is dismissed. *Morgan v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 34, 35.

Refund from excess charge based on class rates and in excess of commodity rates subsequently made effective.

14. Petitioner alleges exorbitant charges on a carload shipment of gas coke from Watertown to New London, Wis., on which a class rate of 6½ cts. per cwt. was exacted, while for the greater distance from Milwaukee and Racine to New London a commodity rate of 5 cts. was in effect. This latter rate was subsequently made effective between the points in question. *Held:* the rate exacted was unusual and the reasonable rate for such service would have $1 per ton. Refund is ordered on this basis. *Pape v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 566, 567–568.

Refund from excess charge based on commodity rates instead of class rates properly applicable.

15. Complaint was made of excessive charges on a carload shipment of foundry patterns for obsolete machinery from Milwaukee to Beaver Dam, Wis. The western classification provides a rate of one and one-half times first-class rates, or 48 cts. per cwt., for wood and metallic patterns in any quantity. This was the only rate in effect and applicable at the time the shipment moved, and is the only rate in effect at the present time. Petitioner contends that since foundry patterns for obsolete machinery have a mere nominal value, the regular rate for foundry patterns was excessive for the obsolete forms, and that a reasonable rate for the shipment in question would have been the highest rate published for carload shipments in class 5, which is 12½ cts. per cwt. *Held:* under the circumstances the regular foundry pattern rate of 48 cts. per cwt. was exorbitant, and a reasonable charge for the shipment would have been the fifth-class rate, or 12½ cts. per cwt. Refund is ordered on this basis. *Rom Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 325, 327.

Refund from excess charge based on commodity rates instead of switching rate in effect at the time the shipment moved.

16. Petitioner alleges unjust and unreasonable charges on 49 carloads of coal shipped from Milwaukee to Wauwatosa, Wis. The petitioner was charged the commodity rate instead of a switching rate in effect at the time the shipment moved. *Held:* the claim in question is a meritorious one, and it is to be regretted that the petitioner delayed notifying the Commission until after the expiration of the limitation of the statute. Under the circumstances, the Commission is without jurisdiction in the premises and the petition is dismissed. *Francey Coal, Stone & Supply Co. v. C. M. & St. P. R. Co.* 1912, 8 W. R. C. R. 477, 478.

Refund from excess charge based on distance tariff rate instead of general switching charge subsequently made effective.

17. Petitioner alleges that the C. M. & St. P. R. Co. charged an excessive rate for switching two cars of steel rails from one point to another within the railway company's switching limits in Madison, Wis. The distance tariff rate of 4 cts. per cwt. was charged instead of the regular switching rate of $5 per car. The principle governing this case was applied in *Sinaiko Bros. v. C. M. & St. P. R. Co.* 1910, 4 W. R. C. R. 432, where a switching charge not to exceed $5 per car was substituted by order of the Commission for the distance tariff rates theretofore applicable to switching services within the city of Madison. *Held:* the charges exacted were exorbitant and unlawful, and $5 per car was the lawful rate for the shipments in question. Refund is ordered on this basis. *Western Ind. Constr. Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 309, 310.

Refund from excess charge based on rates higher than rates prevailing under substantially similar conditions and also higher than the cost of transportation warrants.

18. Petitioner alleges respondent's rates on lumber from points on its La Farge branch, chiefly at or near La Farge, Wis., to Milwaukee, Oshkosh, Janesville, and other points intermediate, are excessive as compared with the rates to the same markets from such other lumber shipping points on respondent's line as Tomah, Wausau, and Toma-

hawk, Wis. Petitioner prays for a full investigation of rates on lumber from the points on the La Farge branch to the above named market points, and for the establishment of such rates as may be found just and equitable. Petitioner further asks for reparation in the sum of $100 to cover loss to it on shipments made during the past year, or such amount as it may prove it has paid the respondent over and above the rates which the Commission may find to be reasonable. *Held:* no refund can be granted which is based upon the petitioner's mere estimate of its loss during any period preceding the making of the claim, and only the shipments specifically set forth in the statement submitted will be considered as the basis for refund. Of the shipments so designated all but one moved to points as to which no change in rates is to be made at this time. One shipment moved from La Farge to Watertown under the former rate, and refund on this shipment is ordered on the basis of the new rate. *Brittingham & Young Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 131, 137.

19. Complaint was made of excessive charges on certain carload shipments of coal and coke between Milwaukee and South Milwaukee, Wis. The petitioner asks for refunds on the shipments which moved within the period covered by the statute, and also on those which moved within a period of six years prior to the filing of the petition. The petitioner further asks that refund be made upon similar shipments consigned to other parties having similar complaints. Reparation is asked for on the basis of the rate schedule made effective subsequent to the movement of the shipments in question. In a previous decision (*South Milwaukee Fuel & Supply Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 1) the Commission held similar charges excessive and ordered a refund on the basis that the charges exacted were higher than other rates charged under similar conditions, and also higher than the prevailing conditions warranted. Subsequent to the shipment in question the respondent put in effect the rates provided for in the original hearing. *Held:* under the circumstances the rates exacted were excessive and a reasonable charge would have been on the basis of $6 per car of 50,000 lbs. minimum weight and excess weight at proportional rates as made effective after the shipment moved. Reparation is ordered on those shipments which come within the limitation of the statute. With respect to reparation to other parties having similar complaints, but who are not parties to this proceeding, refunds will be allowed in the present case. In the future each claimant will be required to file a separate claim in accordance with the literal provision of the statute. *South Milwaukee Fuel & Supply Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 473, 476.

Refund from excess charge based on the sum of the locals instead of through rates.

20. Petitioner alleges excessive rates on a carload shipment of lumber from Rhinelander to Star Lake, Wis. The rate charged was composed of two local rates, the one over the M. St. P. & S. S. M R. from Rhinelander to Heafford Jct., the other over the C. M. & St. P. R. from Heafford Jct. to Star Lake. There was no through joint rate at the time this shipment was made, nor is there a joint rate in effect at present. *Held:* an examination of the tariff schedules of the respondent companies shows that the local rate applicable to the shipment from Heafford Jct. to Star Lake was 7 cts. per cwt., and not 8 cts. as charged. The charge exacted was therefore illegal to the extent of this excess. The rate of 12½ cts. per cwt., exacted by the respondents, is illegal and exorbitant and a reasonable rate for the services rendered would have been a through rate of 7 cts. per cwt. Refund is

ordered on this basis. *Badger Co. v. M. St. P. & S. S. M. R. Co. et al.* 1911, 8 W. R. C. R. 125, 128.

Refund from excess charge based on the sum of the locals instead of through rates subsequently made effective.

21. Petitioner alleges excessive and unreasonable charges on a carload shipment of slabs from Hawkins to Milwaukee, Wis. Respondent cnarged the sum of the locals. Later a through rate of 5 cts. per cwt. was established. *Held:* a shipper is not entitled to a refund merely because a railway company amends a tariff by lowering a rate, which a shipper was obliged to pay for shipments made prior to the amendment. In the present case the sum of the local rates was exorbitant and a reasonable rate for the transportation service rendered would have been the through rate of 5 cts. per cwt. as subsequently established. Refund is ordered on this basis. *Northern Wood Co. v. M. St. P. & S. S. M. R. Co. et al.* 1911, 8 W. R. C. R. 62, 63.

Refund from excess charge caused by failure through inadvertence to put in legal effect a lower rate previously in effect and subsequently made effective.

22. Petitioner alleges unusual and exorbitant charges on shipments of vehicle springs from Racine to Oshkosh, Wis. The regular third-class rate was collected. For a number of years previous a rate of 16½ cts. per cwt. on vehicle springs was in effect between these points. In revising and correcting the tariffs, this rate was eliminated through error, but subsequently it was reinstated. *Held:* the rate exacted was exorbitant and a reasonable rate would have been 16½ cts. per cwt., as subsequently reestablished. Refund is ordered on this basis. *Higgins Spring & Axle Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 283, 284.

23. Petitioner alleges overcharges on three carload shipments of coal from Milwaukee to Portage, Wis. The rate charged was in legal effect, owing to an error in the publication of the tariff. Subsequent to the shipments the error was discovered and the rate previously in force was reestablished. *Held:* the rate exacted of the petitioner was unusual and exorbitant, and the reasonable rate would have been $1.25 per net ton, as previously in effect and subsequently reestablished. Refund is ordered on this basis. *Philadelphia & R. C. & I. Co. v. M. St. P. & S. S. M. R. Co.* 1912, 8 W. R. C. R. 542, 543.

Refund from excess charge caused by failure through inadvertence to put in legal effect a lower rate subsequently made effective.

24. Petitioner alleges unusual and exorbitant charges on shipment of ten cars of pulp wood from Ladysmith to Menasha, Wis. The excess charge was due to an error in publishing the rate schedule. Subsequently respondent corrected the error and reinstated the rate and minimum loading requirement previously in effect. *Held:* the rate exacted was unusual and exorbitant and a reasonable charge would have been 5 cts. per cwt., as provided in the tariff now in effect. Refund is ordered on this basis. *Wis. Pulp & Paper Mfgs. v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 16, 17.

25. Petitioner alleges unjust and unreasonable charges on a shipment of two carloads of wood pulp from Little Rapids to Stevens Point, Wis. At the time the shipments moved lower rates were in effect between Stevens Point and Fox river points, including Kaukauna and De Pere, Little Rapids being intermediate. Subsequently the same rates were established between Little Rapids and Stevens Point. From

the evidence it is obvious that the omission from the schedule of the lower rate on wood pulp moving from Little Rapids to Stevens Point was due either to an oversight in the publication of the tariff or to the fact that theretofore no such commodity had moved between said points. *Held:* that the rate exacted was unusual under the circumstances and that a reasonable charge would have been the rate of 6 cts. per cwt. now in effect. Refund is ordered on this basis. *Wis. River Paper & Pulp Co. v. C. & N. W. R. Co. et al.* 1911, 8 W. R. C. R. 64, 65–66.

Refund from excess charge due to improper classification.

26. The petitioner alleges erroneous, illegal, unusual, and exorbitant charges on shipments of second-hand and refuse lumber from Merrimac to Jefferson, Wis. It appears that the shipments were billed as lumber and the respondent applied the lumber rate thereto. *Held:* the products in question should not have been described as lumber but should have been billed as "lumber waste," and taken the lower rate which is 80 per cent of the lumber rate. The charges exacted were erroneous and exorbitant, and the reasonable rate to have charged for the shipments would have been 6.4 cts. per cwt. Refund is ordered on this basis. *Jefferson Brick & Tile Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 553, 554–555.

Refund from excess charge for transit privileges.

27. Petitioners allege excessive charges on shipments of live stock shipped from near-by points to Fond du Lac, Wis., and there stopped in order to finish loading for further shipment to Milwaukee and Chicago. The petitioners complain that shipments from Malone, Calvary, and Vandyne stopped at Fond du Lac are charged the local rates although the cars are stopped without loss of either time or money to the respondent. Reparation is claimed on such shipments made within the past year. Since the filing of the claim the railway company has established a charge of $2 for one stop in transit to finish loading shipments of live stock in carload lots, and consents to the awarding of reparation in the instant case upon such basis. *Held:* the charges exacted of the petitioners for the transit privilege allowed in connection with the intrastate shipments of stock are unusual and excessive and a reasonable charge therefor would have been the rate of $2 per car, the rate now effectice. Refund is ordered on this basis. *Hoyt & Bergen v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 532, 534.

Refund from excess charge ordered on basis of commodity rates in effect in the opposite direction and subsequently made effective.

28. Complaint was made of excessive charges on certain shipments of hardware from South Milwaukee to Milwaukee, Wis. It appears that for a number of years a special rate has been applied between Milwaukee and South Milwaukee on goods manufactured. Through inadvertence in the publication of a schedule, the wording was changed so that instead of making the special rate apply between Milwaukee and South Milwaukee, it was made to apply from Milwaukee to South Milwaukee, therefore not applying on shipments moving in the opposite direction. The respondent acknowledged its error in the printing of the schedule and later issued a supplement with the correct wording. During the interim the petitioner was charged on the basis of the regular class rate on all shipments to Milwaukee covered by the tariff as previously in effect and subsequently made effective. *Held:* there is no reason for the exaction of a higher rate for the com-

modities in question when moving in one direction between the points involved in this case than when moving in the opposite direction. The regular class rate exacted was unusual, and the commodity rate of 5 cts. per cwt., as subsequently established, would have been a reasonable rate for the shipments in question. Refund is ordered on this basis. *Stowell Mfg. & Fdry. Co. v. C. & N. W. R. Co.* 1911, 8 W. R. C. R. 316, 319.

Refund from excess charge ordered on basis of joint commodity rates reestablished by order of the Commission.

29. Petitioner alleges unusual and exorbitant charges on three carloads of sulphite pulp shipped from Rhinelander to Rothschild, which is intermediate between Rhinelander and Grand Rapids, Wis. Respondents formerly had in effect joint commodity rates of 7 cts. per 100 lbs. for the transportation of sulphite or wood pulp in carloads, minimum weight 40,000 lbs., between Rhinelander and Grand Rapids, via Heafford Jct., and applicable as a maximum rate on shipments to or from intermediate points. These rates were discontinued and the local Wisconsin distance tariff, class rates, substituted therefor. Petitioner prays that just and reasonable joint rates, not exceeding 7 cts. per 100 lbs. for sulphite pulp in carload lots, be put in effect from Rhinelander to Grand Rapids, Port Edwards, Nekoosa, and Stevens Point and intermediate points, and further asks a refund of overcharges. *Held:* the class rate applicable to the shipments in question is excessive. Respondents are ordered to restore the joint commodity rate of 7 cts. per 100 lbs. between those points where the one is situated upon the line of one road and the other is situated upon the line of the other road. This order is not to apply between points situated upon either road. Refund is ordered on this basis. *Rhinelander Co. v. C. M. & St. P. R. Co. et al.* 1911, 8 W. R. C. R. 58, 61.

Refund from excess charge ordered on basis of joint rate established by order of the Commission.

30. Petitioner alleges exorbitant charges on two carload shipments of lumber from Neopit to Crandon, Wis., upon which the Wis. & N. R. Co. and the C. & N. W. R. Co. charged the sum of the local rates; and further alleges exorbitant charges on several cars of lumber shipped from Neopit to Horicon, Wis., in which case the charges consisted of the sum of the Wis. & N. local rate, and the C. & N. W. and C. M. & St. P. joint rate. Petitioner asks for the establishment of reasonable joint rates between the points named, and for a refund of the excess charged. *Held:* the rate charged on the shipments from Neopit to Crandon was excessive and a reasonable rate would have been the joint rate on lumber fixed by the Commission for 120 mile joint hauls between the C. & N. W. and the C. M. & St. P. lines. The Wis. & N. Ry. Co. and the C. & N. W. R. Co. are accordingly ordered to establish a joint rate of 7.9 cts. per 100 lbs. on carload shipments of lumber from Neopit to Crandon. Refund on these shipments is ordered on this basis. With reference to shipments from Neopit to Horicon the extra terminal charges caused by the movement over three lines are necessarily so heavy that it would be difficult to establish a joint rate which would permit of successful competition between shippers using a single line and those using three lines. Lumber shipments over three lines in the region involved are very unusual and the facts at present before the Commission are meager. Under the circumstances presented by this case, it does not appear desirable to establish joint rates on lumber for three-line shipments at the present time. As all the shipments moving from Neopit to Horicon arrived at their destina-

tion more than six months before the filing of the claim for a refund, and as the claim was filed prior to the effectiveness of the statute (ch. 28, Laws of 1911) extending the time for filing claims from six months to one year, all these claims are barred by the statute. The complaint involving these rates is dismissed. *Mears-Slayton Lbr. Co. v. Wis. & N. R. Co. et al.* 1911, 8 W. R. C. R. 247, 248–250.

31. Petitioner alleges excessive charges on three carload shipments of scrap iron from Monroe to West Bend, Wis., and prays that a joint rate of 8 cts. per cwt. be established for shipments of scrap steel and scrap iron between the points in question, and that reparation be made on this basis. The petitioner was charged the class rate. The rate charged is higher than commodity rates prevailing under like conditions between various points in Wisconsin and also higher than the cost of transportation for low grade commodities warrants. The joint rate of 8 cts. per cwt. for which the petitioner asks in the present case would not seem to be very much out of line with the rates generally in effect. *Held:* the rates exacted of the petitioner were unreasonable and exorbitant, and a rate of 8 cts. per cwt. would have been a reasonable rate for the shipments in question. It is ordered that the C. & N. W. R. Co. and C. M. & St. P. R. Co. discontinue charging the rates now in effect on scrap iron and steel between Monroe and West Bend, and in lieu thereof substitute the joint rate of 8 cts. per cwt. Refund is ordered on this basis. *Mayer v. C. & N. W. R. Co. et al.* 1911, 8 W. R. C. R. 328, 332–333.

Refund from excess charge ordered on basis of lower joint commodity rate.

32. Complaint was made of the rates on saw logs from northern Wisconsin points on the C. & N. W. R. to Seymour and Black Creek, located on the G. B. & W. R., where the petitioners respectively are engaged in the manufacture of cheese boxes and other wooden ware. The petitioner located at Seymour complains specifically of the rates charged from Gagen, Bowler, Whitcomb, and Green Valley, and alleges that these rates are excessive as compared with other rates prevailing under substantially similar conditions. The petitioner located at Black Creek alleges excessive charges on shipments from Crandon and Monico as compared with other charges on the C. & N. W. R. and claims a refund upon the shipments in question. It appears that the former practice of the respondent companies in regard to the shipment of saw logs to Seymour and Black Creek was to apply the sum of the two carriers' distances rates conditioned on the shipment of the product out. These rates were much lower than the regular log rates of each carrier when no reshipment was involved. Owing to the fact that the cheese boxes were delivered to the factories by wagon and that the C. & N. W. R. Co. was not obtaining the direct shipments out, upon which the rate was conditioned, the regular joint lumber rates of the two respondents, fixed without regard to shipments out, were substituted early in 1911. The result was an increase in charges to the extent shown in the complaint. *Held:* the present rates of respondents on shipments of saw logs from northern Wisconsin points to the petitioners' factories at Seymour and Black Creek are excessive and unreasonable. Under the circumstances fair and reasonable rates would consist of the present log rate of 1.5 cts. per cwt. on the G. B. & W. R., plus a distance rate on the C. & N. W. R. equal to that now in force on shipments of pulp wood. It is ordered that the respondents discontinue their present rates on logs of the kind used in the manufacture of cheese boxes and the other products of the petitioners' factories originating at points on the line of the C. & N. W. R. Co. and destined to Seymour or Black Creek, Wis., and substitute in

lieu thereof the rates found reasonable by the Commission. Refund on this basis is ordered on the shipments from Crandon and Monico to Black Creek, Wis. *Gablowsky et al. v. C. & N. W. R. Co. et al.* 1912, 8 W. R. C. R. 544, 550–552.

Refund from excess charge ordered on basis of rates for shortest available route.

33. Petitioner alleges exorbitant, unreasonable and unjustly discriminatory charges on a carload shipment of rutabagas in bulk from Cumberland to De Forest, Wis. It appears that the shipment was routed via Madison, a distance of 28 miles more than if it had been routed via Camp Douglas. As no specific instructions to the contrary were given by the shipper, the shipment should have moved via Camp Douglas instead of via Madison, there being no through joint rate via either route. It is well settled that under the circumstances the shipper was entitled to a routing by which he would receive the lowest through rate. (*Hodges v. W. C. R. Co.* 1906, 1 W. R. C. R. 300.) *Held:* the charges exacted of the petitioner were erroneous, and a reasonable charge would have been the amount computed upon the rates in effect upon a routing of the shipment via Camp Douglas. Refund is ordered on this basis. *Engesether v. C. St. P. M. & O. R. Co. et al.* 1912, 8 W. R. C. R. 504, 505–506.

Refund from excess charge ordered on basis of reasonable rate in effect on a competing line and subsequently made effective.

34. Petitioner alleges unjust and unreasonable charges on a carload shipment of soft coal from Superior to Emerald, Wis., on which respondent, the C. St. P. M. & O. R. Co., charged a rate of $1.40 per net ton. The M. St. P. & S. S. M. R. Co., a competing line, had a rate of $1 per net ton in effect at the same time for similar shipments. This rate was established by the respondent after the shipment in question had moved. *Held:* the rate exacted was unusual and exorbitant and a reasonable rate for the services rendered would have been $1 per net ton, as subsequently established. Refund is ordered on this basis. *Emerald Co-operative Creamery v. C. St. P. M. & O. R. Co.* 1912, 8 W. R. C. R. 683, 684.

Refund from excess charge ordered on basis of reasonable rate previously established by order of the Commission.

35. Petitioner alleges excessive charges on various shipments of vehicle springs from Racine to Stoughton, Wis., and prays for a refund of 2 cts. on each cwt. A similar claim was presented and a refund ordered on the basis of 10 cts. per cwt. in *Higgins Spring & Axle Co. v. C. M. & St. P. R. Co.*, 1909, 4 W. R. C. R. 384. *Held:* that 12 cts. per cwt. is excessive and that 10 cts. per cwt. is a reasonable rate for such transportation services. Respondent is ordered to discontinue its present rate and to substitute therefor the rate found reasonable by the Commission. Refund from the excess charge on the shipments from Racine Jct. to Stoughton is ordered. *Higgins Spring & Axle Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 36, 37.

Refund from excess charge ordered on basis of reasonable rate subsequently made effective.

36. Petitioner alleges overcharge on a carload shipment of wood from Signor to Eau Clairs, Wis. Respondent charges 8 cts. per cwt. on 40,000 lbs. and subsequently established a rate of 4½ cts. per cwt., minimum weight 40,000 lbs. *Held:* over six months intervened be-

tween the moving of the shipment and the filing of the complaint. The claim is therefore barred by sec. 1797—37m of the Wisconsin Statutes. Petition is dismissed. *Clark v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 38, 39.

37. Petitioner alleges excessive charges on a carload shipment of newsprint paper from Ladysmith to Ashland, Wis. Subsequently a lower rate was put in effect. *Held:* the rate exacted was the only one legally applicable at the time the shipment was made. This rate was exorbitant and a reasonable rate would have been 8 cts. per cwt., as subsequently made effective. Refund is ordered on this basis. *Menasha Paper Co. v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 78, 79.

38. Application was made for a rehearing of the matters involved in the case of the *Connor Land and Lbr. Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 774. The principal contention of the respondent was that the Commission failed to interpret the statute correctly in its application to the case. It was claimed that the rate exacted for the shipment in controversy was not an unusual one within the contemplation of the statute. *Held:* it is to the interest of all parties concerned that the law relating to refunds should be administered in strict accord with the letter and spirit thereof. There was nothing presented upon the argument that changes the conclusion in the former case. The application for rehearing is denied. *Connor Land & Lbr. Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 697, 698.

Refund from excessive express charges ordered on basis of the general special rate reestablished by order of the Commission.

39. Petitioners allege exorbitant express charges between Wisconsin points on mixed shipments of baked goods consisting mostly of bread with a small proportion of cake. Respondent express companies formerly transported bread over their respective lines at "general special" rates, about 20 per cent lower than their merchandise rates, and allowed the same rates on mixed shipments of bread and cake when bread comprised at least half the total weight. An order of the interstate commerce commission of Feb. 1, 1911, required all such mixed shipments to take merchandise rates, which petitioners allege results in approximately a 25 per cent increase over the former charges for transportation of mixed shipments. They declare that if the merchandise rates are to be charged on mixed shipments they can ship no more cake, and that if they are unable to ship cake, they will lose a large part of their shipping business in bread. *Held:* that the ruling of the interstate commerce commission was made upon a consideration of conditions in the particular region involved, and cannot be of controlling weight where those conditions do not exist. The competitive situation in the baking industry makes the use of mixed shipments practically necessary for the most advantageous development of the business as carried on between the large factories and more or less distant cities and villages in this state. There is no considerable discrepancy in value between bread and cake, and mixed shipments are no more costly to the carriers than shipments of bread. The practice of charging the merchandise rate for the shipments in question is unreasonable and should be discontinued. The general special rate is ordered reinstated and refund is ordered of all excess charges caused by the change in classification complained of. *M. Carpenter Baking Co. et al. v. Wells Fargo & Co. et al.* 1911, 8 W. R. C. R. 1, 15.

Refund of drayage charges.

40. A claim of reparation for teaming expenses was filed against the C. & N. W. Ry. Co. on the ground that a carload of lumber, which the

petitioner desired to have shipped from Odanah to Camp Robinson, was shipped to Sparta, Wis. The petitioner asks that the extra expenses incurred for teaming, because the shipment was sent to Sparta, be refunded by the respondent. It appears that the carload of lumber was consigned to a construction company at "Rifle Range, Camp Robinson, Sparta, Wis." Camp Robinson is a station on the line of the C. M. & St. P. Ry. Co. The shipping directions actually given to the carrier would not have justified it in delivering the car to any other line, as by the terms thereof it was required to deliver the car to the consignee at Sparta, which is a station on its own line. Unless the carrier knew that the shipper intended the shipment to go to Camp Robinson, notwithstanding the shipping directions plainly to the contrary given by the shipper to the agent at Odanah, it cannot be charged with negligence in the matter. There is no contention that the railway company had any information other than that indicated by the shipping directions given to its agent at the point of origin of the shipment. *Held:* in the present case the loss occasioned to the shipper by the delivery of the car to the consignee at Sparta was due to the erroneous and misleading shipping directions which were given to the respondent's agent at Odanah by the shipper. Under sec. 1797—37m, provision is made for reparation in cases where railway companies exact erroneous, illegal, unusual or exorbitant charges for the transportation of property or for any service in connection therewith. Even if the exact drayage charges incurred in the present case had been due to the negligence of the railway company and the shipper had a valid claim for the loss incurred, it could not be enforced in a reparation proceeding nor in any proceeding before the Commission. Damages in such a case, if due to the negligence of the carrier, can be recovered only in an action in court. The Commission has no jurisdiction in the matter. The petition is dismissed. *Deeves Lbr. Co. v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 507, 509–510.

RETURN

What constitutes a reasonable return for public utilities—Return for profits—Wages of management.

1. As the cost of the management bears a somewhat close relation to the work that is required of it, it also follows that this cost is comparatively low where by far the larger proportion of the investment consists of a durable and easily managed plant which requires but little attention after it has been constructed and put in operation. In such industries the cost of management constitutes often only a comparatively small part of the total cost of investment, although this is not always the relation that exists between this cost and the value of the products of such utilities. (*State Journal Prtg. Co. v. Madison G. & El. Co.* 1910, 4 W. R. C. R. 501, 638.) *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 613.

2. Whether the executive expenses in this case are unreasonably high, is something that can be determined with only approximate accuracy. In passing upon this question the size of the plants, their earnings and expenses, the conditions under which they are operating, the grade of men required for safe and effective operation, are all matters that should be carefully considered. The larger the plant, the more numerous the customers, the more is required of the management. High grade service safely rendered may also require greater efficiency on the part of the management than if the standard of the service were lower. When the salaries are fixed with these conditions in mind, and no more is paid than the amount that is sufficient to insure proper and efficient service, there is little to be said regarding the salaries paid. If, on the other hand, the salaries are kept at an unreasonably high level in order to cover up earnings, or for some other reason of this nature, there may be good ground for criticism. (*State Journal Prtg. Co. v. Madison Gas & El. Co.* 1910, 4 W. R. C. R. 501, 640–641.) *In re Joint Appl. Waupaca El. Lt. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 613.

3. It seems that when an electric utility in a city as small as the one under consideration adequately provides for superintendence, there is little to warrant a burden for management represented by salaries of general officers as great as may be found in the operation of much larger utilities of the same kind. The general office salaries of fifteen electric utilities in Wisconsin supplying communities varying in size from 3,000 to 5,000 population average 12.3 per cent of the total operating expenses. The maximum of 23 per cent occurs for a utility in whose case this Commission has already found it necessary to comment upon the high executive salaries. The general office salaries of twenty-one class A electric utilities average 5.7 per cent of the operating expenses and range from 3.5 to 23.6 per cent, being less than 10 per cent in all but five instances. For seventeen electric railways in the state the general office salaries are, on an average of 3.2 per cent of the operating expenses. If a comparison be made on a basis of the salaries paid to general officers only, we find that, for the twenty-one class A electric utilities, the average amounts to 3.4 per cent of operating expenses and for twelve class A and B electric railways 1.4 per cent. The corresponding percentage for the petitioner's utility is

18.5. Although it may be said that the foregoing comparisons are not all that may be desired, it is believed that the conditions of comparison are more favorable to the petitioner than otherwise, as the cost of superintendence is not included in its general expenses and an allowance is made for the total operating expenses for depreciation in arriving at the ratios for this utility while, without doubt, some superintendence is included in the general expenses and insufficient allowance for depreciation is in some instances made in the total operating expenses of other utilities from which the comparative percentages were derived. We cannot but conclude that anything more than 15 per cent of the total operating expenses for general office salaries and 10 per cent for salaries of general officers appears in this instance to be unreasonable. *In re Joint Appl. Waupaca El. & R. Co. and Waupaca*, 1912, 8 W. R. C. R. 586, 611, 612, 615.

ROUTES

Joint or through rates should be based on shortest available routes.

1. Where no specific directions were given, the shipper was entitled to a routing by which he would receive the lowest through rate. (*Hodges v. W. C. R. Co.* 1906, 1 W. R. C. R. 300.) *Engesether v. C. St P. M. & O. R. Co. et al.* 1912, 8 W. R. C. R. 504, 505–506.

ROUTING

Routing of street cars, *see* STREET RAILWAYS, 2–3.

RULES AND REGULATIONS

Classification—Express service.

1. The fact that certain practices or rules have once been established by the carriers is not always conclusive as to the reasonableness of such practices or rules. *M. Carpenter Baking Co. et al. v. Wells, Fargo & Co. et al.* 1911, 8 W. R. C. R. 1, 10.

Requirements as to payment of rates for service rendered by public utility—Regulations for discounts or penalties.

2. The addition of 15 cts. a month to the charge for all phones, which is remitted for prompt payment, is in the nature of a regulation to aid in securing prompt payment, and in case payment is made promptly does not amount to an increase in rates. Such a regulation is very common in the telephone business and it does not seem to be necessary to discuss its reasonableness at this time. This Commission has held, in a number of instances, that such a provision constitutes a reasonable feature of a schedule of rates and this case seems to be no exception to the rule. *In re Appl. People's Tel. Co.* 1911, 8 W. R. C. R. 92, 93.

Adequacy of station facilities.

1. Petitioner alleges that the C. St. P. M. & O. R. Co. does not maintain a station at Spring Brook, Wis., and prays that such company be required to construct and maintain a suitable station. It appears that persons waiting for trains are exposed to all kinds of weather. Consignees are obliged to call for express matter at Trego, seven and one-half miles distant, and either there or at Hayward, twelve miles away, for freight which is not prepaid. Prepaid freight is deposited on the unprotected platform at Spring Brook with no one to care for it. *Held:* the station facilities in question are inadequate and the respondent is ordered to provide a reasonably adequate station building at Spring Brook. June 1, 1912, is fixed as the limit of time within which the station shall be opened for traffic. *Sergeant v. C. St. P. M. & O. R. Co.* 1911, 8 W. R. C. R. 285, 286.

2. Complaint was made that the M. St. P. & S. S. M. R. Co. does not maintain adequate station facilities at Medford, Wis. It was alleged that the station is not kept in sanitary condition, that the waiting room is too small, and that the freight house is inadequate and is not heated, with the result that the waiting room is filled with perishable freight in winter to the exclusion of passengers. *Held:* the depot facilities at Medford are inadequate for the accommodation of passengers and freight. The respondent is ordered to provide a new station building in accordance with plans submitted to the Commission for approval and to have the building open for traffic not later than July 1, 1912. *Maurer v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 301, 304.

3. Complaint was made that the M. St. P. & S. S. M. R. Co. does not maintain adequate station facilities at Amery, Wis. It appears that the waiting room, office, and warehouse of the station are far too small to conduct the present business of the company and that the village of Amery has outgrown the present station building. *Held:* the present depot facilities at Amery are inadequate. The respondent is ordered to provide a station which shall be reasonably adequate for the passenger and freight traffic. The station is to be built in accordance with plans to be submitted to the Commission for approval and is to be open for traffic not later than July 1, 1912. *Winchester et al. v. M. St. P. & S. S. M. R. Co.* 1911, 8 W. R. C. R. 305, 308.

4. Petitioner complains of inadequate stockyard facilities at Caledonia station, Wis., on the line of the C. M. & St. P. R. Ry. Co. and prays that the Commission order respondent to furnish adequate facilities. The only accommodation for loading and unloading cattle at Caledonia is a portable stock chute, which does not enable the cattle to be enclosed before loading them into cars. Since there are no stockyards at Caledonia, petitioner is compelled to drive his cattle to Franksville, three and a half miles south. He estimates that from this time on he will ship about forty cars per year. According to respondent's division superintendent this amount of traffic would justify the necessary expenditure for installing and maintaining yards. It appears that in the district in question the buying and selling of cattle by farmers is a regular practice. *Held:* while a portable chute appears to have been adequate for loading purposes in the past, petitioner's statement as to his prospective shipments may be regarded as a fair estimate of his future business. The relief for which he prays should be granted. It is ordered that respondent install and maintain suitable stock yards at Caledonia for the yarding, loading, and unloading of cattle. Sixty days is deemed a reasonable time within which to comply with this order. *Funk v. C. M. & St. P. R. Co.* 1912, 8 W. R. C. R. 582, 585.

5. Complaint was made that the C. & N. W. R. Co. failed to provide adequate station facilities and did not maintain a station agent at the village of Lohrville, Wis. *Held:* the station shed at present in use is inadequate for the accommodation of passengers and freight. The needs of the village demand a more substantial and commodious structure and the amount of business transacted requires the employment of an agent. It is ordered that the respondent provide a station building which shall be reasonably adequate for the passenger and freight traffic at Lohrville, and that it place the station in charge of a competent agent, who will perform those things which the local representative of a railway company at a station of this character is customarily expected to do. The plans for the station are to be submitted to the Commission for approval. Four months is deemed a reasonable time within which to comply with this order. *Village of Lohrville v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 699, 707–708.

6. Petitioner, the city of Rhinelander, Wis., alleges that the proposed change in location of the passenger station of the M. St. P. & S. S. M. R. Co. would not provide adequate station facilities at Rhinelander, in that a station so located would be particularly hazardous and inconvenient to the public; that respondent now owns and has available at least two superior sites and prays that respondent be required to locate its new passenger station at some point which will better serve public convenience and safety. The city fully agrees with the respondent company that the existing station facilities are inadequate. Respondent contends that the Commission is not vested with authority to determine the location of a depot. Prior to the filing of this petition, respondent purchased the site complained of and began erecting the new depot. In order to reach the new depot site which is well out of the settled part of the city, it is necessary to cross the bridge on Davenport street over the Wisconsin river. From the independent investigation of the Commission's engineers it seems clear that in order to provide adequate facilities for freight traffic, both present and prospective, it was imperative that the respondent seek another locality for its passenger station and that engineering difficulties prevent its location at either of the sites mentioned by the city. *Held:* station facilities are a part of the service that the railway company is legally obliged to furnish. If such facilities are not reasonably adequate, because of the location or character of the building, the company may be required to provide a depot so located and con-

structed as to meet the reasonable requirements of the public. The Commission is empowered, in a proper case, to fix the point of location of a depot or station. (*Pullen v. Wis. C. R. Co.* 1906, 1 W. R. C. R. 37.) The situation presented in this case differs somewhat from that where the Commission is called upon to establish a station in a community where none exists, but one is required, and where the company refuses to provide one. In such case, if any question as to the proper location should arise, the Commission, considering the convenience and interests of the community as well as of the railroad company, should establish the exact location. In the instant case, the initial question to be determined is whether the new building, now in the course of construction, will furnish reasonably adequate facilities for passengers at Rhinelander. Unless such facilities can be condemned as not reasonably adequate, a change of location could not be effected, for the power to command new and additional service or facilities rests upon the inadequacy or inefficiency of the existing service or facilities. The new location is, in many respects, inconvenient of access and undesirable. However, in the face of the engineering difficulties mentioned, and the limiting of needed shipping facilities which would result from placing the passenger station at either of the locations desired by the city, and in the absence of any experience showing definitely the extent of the inconvenience that the public may suffer from the location of the passenger station on the west side of the river, a condemnation of such station, as affording unreasonably inadequate facilities because of its location, could not be legally justified. Under all the circumstances, it would seem to be to the best interests of all concerned to abide the result of experience, which will doubtless enlighten the judgment and indicate the proper solution of the questions presented. If it should appear at this time that the public is inconvenienced to a degree that may be regarded as a breach of the railway company's duty in the premises, the question of the relocation of the depot will be taken up and considered upon application of the city. The petition is dismissed. *City of Rhinelander v. M. St. P. & S. S. M. R. Co.* 1912, 719, 725–726, 730–732.

OPERATION

Requirements as to service and facilities—Track curves and elimination of noise.

1. Petitioners complain of unnecessary noise and disturbance caused by the operation of respondent's cars at the intersection of Monroe avenue and Polier street in Green Bay, Wis., and pray that the Commission order respondent to desist from creating the annoyance. The cars make a loud and disagreeable noise when moving rapidly around the curve, greatly disturbing the residents in the vicinity. The noise rarely occurs when the tracks have been lately greased. It is found that the gauge in the curve is somewhat less than the standard gauge of the track each side of the curve, and that the guard rail is considerably worn along its entire length. *Held:* it is recommended that the gauge in the curve be broadened and the outer rail elevated, but if it is found that greasing alone will eliminate the noise, no structural change will be necessary. Respondent is ordered to take such steps as may be essential to eliminate the objectional noises. The method of relief is left optional with them. Three months is deemed a reasonable period of time within which to comply with this order. *Robb et al. v. Green Bay Tr. Co.* 1912, 8 W. R. C. R. 688, 691–692.

Routing of cars.

2. The petitioner, the city of Milwaukee, alleges that The Milwaukee Electric Railway & Light Company operates the entire street car system in the city; that it does not maintain a through north and south line across the Menomonee valley, west of West Water and Reed streets; and that such a line has for a long time been a public necessity. The city recently compelled the company to lay tracks completing a through north and south line over which respondent maintains a broken or transfer service. The petitioner alleges that this service is inadequate and inconvenient and prays that the respondent be ordered to cease the transfer service and immediately institute a through service over this route. *Held:* there can be no permanent solution of the problem involved until the recommendations of the Commission are

carried out with respect to the construction of a cross-town line from the end of the viaduct on Sixteenth street, and with respect to other cross lines running directly from the south side to the northern limits of the city. Until the cross-town lines already recommended are constructed, the Eighth street line appears to be the most feasible route for the through traffic. In order to provide temporary relief, the respondent company is ordered, for a period of ninety days, to route enough cars to adequately care for the traffic on its Eighth street line from the northern terminus of the line to State street, thence west on State to Eleventh street, thence south on Eleventh to Clybourn street, thence west on Clybourn to Sixteenth street, thence south across the Sixteenth street viaduct to Eleventh avenue, thence south on Eleventh avenue to Muskego avenue, and along that street to its southern terminus. It is further ordered that the company continue, during the morning, noon, and evening hours, when traffic is greatest, to route enough cars to adequately provide for the traffic over the Eighth street line as at present routed to West Water street. *City of Milwaukee v. T. M. E. R. & L. Co.* 1911, 8 W. R. C. R. 295, 299–300.

3. A rehearing of the matters involved in the petition of the *City of Milwaukee v. T. M. E. R. & L. Co.* 8 W. R. C. R. 295, was held in order to determine whether any modifications should be made in the previous order of the Commission. *Held:* from further investigation it is apparent that the former order relative to cross-town service must stand, but that in addition thereto, morning and evening service on Twelfth street to the south side by way of the viaduct, must be added, and the service on the Eighth street car line, as far as the Public Service Building, must be restored. Provision must also be made for two transfers upon a single fare in certain cases in order to render the service reasonably adequate under present conditions. It is ordered that paragraph 1 of the order made Nov. 29, 1911 (8 W. R. C. R. 295) be continued for a period of ninety days from the date hereof. The respondent is further ordered for a period of ninety days: 1. To route a sufficient number of its cars to adequately care for the traffic during the morning and evening hours, when traffic is greatest, on its Twelfth street line in the city of Milwaukee, from the northern terminus of such line to State street, thence east on State street to Eleventh street, thence south on Eleventh street to Clybourn street, thence west on Clybourn street to Sixteenth street, thence south across the Sixteenth street viaduct to Eleventh avenue, thence south on Eleventh avenue to Muskego avenue, and thence along Muskego avenue to the terminus of the line on such avenue. 2. To restore the service on its Eighth street line as formerly operated, and over the same route to the Public Service Building, or to such point in the vicinity thereof as may be necessary and convenient for the sake of efficient operation. 3. To grant two transfers upon the payment of a single fare to all persons transferring from other lines north of the viaduct to Twelfth street and Eighth street cross-town lines, who are destined to points west of such cross-town lines, which are situated on street car lines south of the viaduct, and that it grant two transfers upon the payment of a single fare to all persons transferring from other lines south of the viaduct to the Twelfth street and Eighth street car lines, who are destined to points west of such cross-town lines situated on street car lines north of the viaduct. This order is to remain in effect for a period of ninety days from the time it becomes effective, unless modified or abrogated upon a further hearing prior thereto. *City of Milwaukee v. T. M. E. R. & L. Co.* 1912, 8 W. R. C. R. 535, 540–541.

SWITCH CONNECTIONS

RIGHT OF SHIPPER TO SWITCH CONNECTIONS.

Spur track, construction of, ordered by Commission.

1. Petitioner alleges that respondent railway refuses to construct a spur track to its malting and brewing plant located near the city of Oconto, Wis. Petitioner submits plans showing four possible routes for the proposed track. *Held:* the spur track in question is practically indispensable to the successful operation of the petitioner's business; its construction and operation is not unusually unsafe or dangerous; and it is not unreasonably harmful to public interest. Of the routes proposed that known as track No. 1 is the shortest and most direct, would be cheapest and easiest to build, and is the only track that would fully serve the brewing company's requirements. Respondent is ordered to construct such spur track along route No. 1. Petitioner is ordered to deposit with respondent company $1,300, the estimated cost of the track, and in addition $500 for the purchase of the necessary right of way, and to give the railway company a bond, to be approved by the Commission as to form, amount and surety, securing the railroad against any loss on account of any expense incurred beyond the amount of the deposit with the railroad. *Oconto Brewing Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 67, 73–74.

See ACCOUNTING.

OPERATION

Requirements as to service and facilities—Adequacy of service.

1. The Commission, on its own motion, investigated a complaint made by certain consumers as to the service of the R. Connor Co., an electric utility of Stratford, Wis. Complaint was made that the service of the company is inadequate and is not maintained at the standards prescribed by the Commission. A service inspection was made. From the testimony and from the investigation made, it appears that the company has discriminated. No order is issued in this case at this time, but the respondent is expected to proceed immediately to correct all unjust discriminations as to service. *In re Investigation of the R. Connor Co.* 1911, 8 W. R. C. R. 80, 83–84.

2. Application was made by the People's Telephone Co. for authority to increase rates. The company's principal place of business is in Rio, Wis., and it operates exchanges in Fox Lake, Rio, Cambria, Fall River, Wyocena, and Randolph, Wis. Complaint was made that service on some of the lines, especially on rural lines, is unsatisfactory on account of the inadequate maintenance of the wire plant. The engineering staff of the Commission recommend thorough overhauling and repair of the wire plant as a necessary step toward reasonable service. *Held:* that on the whole the company has been earning a fair return, and its financial condition is such that it is able to make needed improvements in the service. It is ordered that the company make such repairs and improvements to its plant as will enable it to furnish reasonable service and that it maintain such a standard of service. *In re Appl. People's Tel. Co.* 1911, 8 W. R. C. R. 92, 100.

3. The Juneau Electric Company alleges that the respondent, the New Lisbon Mutual Telephone Company, has so constructed its lines as to interfere with the service furnished by the petitioner and asks that the respondent so adjust its lines and service as not to interfere with the petitioner's rights. The Juneau Electric Co. has its principal place of business at New Lisbon, Wis., and is engaged in furnishing telephone service in New Lisbon, Camp Douglas, Hustler, and Necedah, with connections with Tomah, Clifton, Elroy, Wonewoc, Mauston, Friendship, and other places, besides having connection with the long distance lines of the Wisconsin Telephone Co. Charges of improper methods of construction and inadequate maintenance were made by both companies and several instances are cited where the lines of the two companies are strung so closely together as to cause interference. Disturbances on the lines of the two companies in the present case are due to leakage, electromagnetic induction, and electrostatic induction. *Held:* a better understanding of the causes and cure of line disturbance on the part of both companies would lead to the following results: 1. Substitution of cable for open wire in New Lisbon by the applicant; 2. a metallic line for toll service; 3. cooperation of linemen of the two companies in separating the lines; 4. inspection and general repair of all lines; 5. exercise of greater care in keeping the lines well insulated, wire tight and securely tied; 6. exercise of more care in turning corners by the use of double arms; and 7. elimination of all dead wires. In order to furnish satisfactory service in the future the adoption of these recommendations is essential. It is ordered that the applicant and respondent make the improvements outlined and that they maintain their lines in condition to give reasonably adequate service.

In case either utility shall desire to improve the service by any other method, such method shall be submitted to the Commission for approval. *Juneau El. Co. v. New Lisbon Tel. Co.* 1911, 8 W. R. C. R. 399, 404–405.

RATES
See RATES.

VALUATION
See VALUATION.

TERMINAL CHARGES

Reasonableness of rate. switching charge considered in relation to reasonableness, *see* RATES, 60.

Refund from excess charge based on commodity rate instead of switching rate in effect at the time the shipment moved, see REPARATION, 16.

Refund from excess charge based on distance tariff rate instead of general switching charge subsequently made effective, *see* REPARATION, 17.

Reasonableness of charge in particular cases—Coal, Milwaukee to Wauwatosa, Wis.

1. Petitioner alleges unjust and unreasonable charges on 49 carloads of coal shipped from Milwaukee to Wauwatosa, Wis. The petitioner was charged the commodity rate instead of a switching rate in effect at the time the shipment moved. *Held:* the claim in question is a meritorious one, and it is to be regretted that the petitioner delayed notifying the Commission until after the expiration of the limitation of the statute. Under the circumstances, the Commission is without jurisdiction in the premises and the petition is dismissed. *Francey Coal, Stone & Supply Co. v. C. M. & St. P. R. Co.* 1912, 8 W. R. C. R. 477, 478.

Reasonableness of charge in particular cases—Steel rails, Madison, Wis.

2. Petitioner alleges that the C. M. & St. P. R. Co. charged an excessive rate for switching two cars of steel rails from one point to another within the railway company's switching limits in Madison, Wis. The distance tariff rate of 4 cts. per cwt. was charged instead of the regular switching rate of $5 per car. The principle governing this case was applied in *Sinaiko Bros. v. C. M. & St. P. R. Co.* 1910, 4 W. R. C. R. 432, where a switching charge not to exceed $5 per car was substituted by order of the Commission for the distance tariff rates theretofore applicable to switching services within the city of Madison. *Held:* the charges exacted were exorbitant and unlawful, and $5 per car was the lawful rate for the shipments in question. *Western Ind. Constr. Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 309, 310.

TRAIN SCHEDULES

See also TRAIN SERVICE.

Car schedules for interurban railways, *see* INTERURBAN RAILWAYS, 1.

TRAIN SERVICE

Adequacy of train service.

1. Petitioner alleges inadequate passenger service on the part of the C. B. & Q. R. Co. at Cochrane, Wis., and vicinity, and prays that the respondent company be required to stop two passenger trains each way daily, as provided in ch. 483, Laws of 1911 (sec. 1801 as amended.) *Held:* independent of any statutory provision on the subject, the Commission would feel constrained to hold that the existing passenger service afforded was adequate under the circumstances. However, the statute deprives the Commission of any discretion in the matter. It fixes the quantum of passenger service for every station coming within the classification made. The respondent is accordingly ordered to stop one passenger train each way daily at Cochrane, in addition to those that already stop there. *Schlosstein v. C. B. & Q. R. Co.* 1911, 8 W. R. C. R. 242, 246.

2. Sec. 1801 was impliedly repealed by ch. 362, Laws of 1905, which conferred upon the Commission the power to regulate the rates and services of railway companies within the state. However, the legislature, by ch. 483, Laws of 1911, re-enacted sec. 1801 with certain amendments. This reads: Every corporation operating a railroad shall maintain a station at every village, whether incorporated or not, having a postoffice and containing two hundred inhabitants or more, through or within one-eighth of a mile of which its line of road runs, and shall provide the necessary arrangements, receive and discharge freight and passengers, and shall stop at least one passenger train each day each way at such station, if trains are run on such road to that extent; and if four or more passenger trains are run each way daily, at least two passenger trains each day each way shall be stopped at each and every such station. This statute deprives the Commission of any discretion in the matter. It fixes the quantum of passenger service for every station coming within the classification made. *Schlosstein v. C. B. & Q. R. Co.* 1911, 8 W. R. C. R. 242, 246.

3. The petitioner alleges that the train service on the Lancaster division of the C. & N. W. R. Ry. Co. is inadequate. The principal complaint of the petitioner arises out of insufficient time given to transact business in the city of Madison between the arrival and departure of trains on the Lancaster division. Residents of Verona, Mt. Horeb, Dodgeville and the farming community adjacent thereto are greatly inconvenienced by the present schedule, and are asking that an additional train, arriving at Madison at about 9:00 a. m. from the west and departing in the afternoon, be operated on this division. Subsequent to the filing of the complaint, the Commission suggested the advisability of operating, as an experiment, a mixed train, leaving Lancaster in the early morning, arriving at Madison as early as possible, and departing for the west late in the afternoon. A mixed train was operated according to this plan from July 10 to Sept. 10, 1911. The earnings evidently show that this train was not a losing proposition. Since the hearing numerous requests have been received that the train operated as an experiment be again put into service for the convenience of the local traffic. In view of the fact that the people residing along this division are not asking for a passenger train and are willing to accept the service of a mixed train, it would seem that a train carrying both freight and passengers could be so scheduled as to

serve their reasonable requirements. As extra freight trains are operated almost daily on this division, it would not be a hardship upon the company to place in service a mixed train running upon a fixed schedule. *Held:* the passenger service on the Lancaster division of the respondent railway company is inadequate. Respondent is ordered to operate a train daily except Sunday carrying passengers upon its line between Madison and Lancaster, Wis., or any point west of Lancaster that it may choose, so as to arrive at Madison not earlier than 7:15 a. m., and to depart from such station not later than 7:00 p. m. *Donald v. C. & N. W. R. Co.* 1911, 8 W. R. C. R. 320, 324.

4. Respondent, the Northern Pacific Railway Co., brought action against the Commission in the circuit court of Dane county, Wis., under sec. 1797—16 of the Statutes to set aside an order (7 W. R. C. R. 764) requiring respondent to run an additional passenger train on its line between Grantsburg, Wis., and the western boundary line of the state, and to provide an adequate station building at Grantsburg. Additional testimony to that presented upon the hearing before the Commission was offered at the trial and the court transmitted a copy of such evidence to the Commission for consideration. The new testimony is directed in the main to the cost of additional service required by the order and the volume of passenger traffic to be served along the line in question, and shows that the prospective revenue to be derived from the operation of another train would probably not be remunerative at first. *Held:* segregating a branch line of a railway system for the purpose of ascertaining the cost of operation as a factor in the basis upon which to predicate the amount of service that should be rendered on such line, is a legitimate and proper method of arriving at one of the important, but not necessarily controlling elements in determining the amount of service reasonably required to subserve the public convenience. Every part of a railroad system can not be expected to be profitable. There are many short lines acting as feeders to main lines which could not be operated independently of the main lines. In determining the reasonableness of any branch line service, the relation of the branch line to the system as a whole, the needs of the public tributary to the branch, the character and volume of traffic, both present and prospective, the cost of operation and its effect upon the revenues of the entire system must be considered, and every factor given such weight as in the light of all the circumstances the situation warrants. A railway company is generally in duty bound to furnish reasonablyy adequate service, regardless of cost, and there is a minimum of service that must be rendered on every line, less than which would be a breach of public duty on the part of the carrier. As there is nothing contained in the testimony which modifies the view of the Commission as expressed in the decision to which the order in question (7 W. R. C. R. 764) is attached, the Commission declines to alter, modify, amend, or rescind its former order. *Nelson et al. v. N. P. R. Co.* 1912, 8 W. R. C. R. 685, 686–687.

Adequacy of train service—Branch line service.

5. Every part of a railroad system can not be expected to be profitable. There are many short lines acting as feeders to main lines which could not be operated independently of the main lines. Therefore, in determining the reasonableness of any branch line service, the relation of the branch line to the system as a whole, the needs of the public tributary to the branch, the character and volume of traffic, both present and prospective, the cost of operation and its effect upon the revenues of the entire system, must be considered and every factor given such weight as in the light of all the circumstances the situation warrants. *Nelson et al v. N. P. R. Co.* 1912, 8 W. R. C. R. 685, 686.

6. Segregating a branch line of a railway system for the purpose of ascertaining the cost of operation as a factor in the basis upon which to predicate the amount of service that should be rendered on such lines, is a legitimate and proper method of arriving at one of the important, but not necessarily controlling elements in determining the amount of service reasonably required to subserve the public convenience. The other elements mentioned can not be left out of consideration, for a railway company is generally in duty bound to furnish reasonably adequate service, regardless of cost. *Nelson et al. v. N. P. R. Co.* 1912, 8 W. R. C. R. 685, 686–687.

7. Of course, stations on branch lines can not, in the very nature of things, obtain or reasonably demand equal service with the stations upon main lines, though the former station may be more important than the latter; nevertheless, there is a minimum of service that must be rendered on every line, less than which would be a breach of public duty on the part of the carrier. *Nelson et al. v. N. P. R. Co.* 1912, 8 W. R. C. R. 685, 687.

Sunday train service.

8. The petitioner, a corporation organized for the purpose of promoting the business interests of the village of Seymour, Wis., alleges that the G. B. & W. R. Co. has discontinued its Sunday train service, to the disadvantage and detriment of persons residing along its line. Wherefore, petitioner prays that the respondent be required to operate Sunday trains for the convenience of the public. The respondent contends that Sunday train service during the period from Oct. 1 to May 1 would prove very unremunerative and would in fact fail to pay the operating expenses of the trains. The vital question in the instant case is whether a railroad company, under the existing law in this state, can be required to operate its trains on Sunday. Many states have statutes regulating the operation of railroads on that day (2 Stimson's Am. Stat. Law, sec. 8824), but there is no such statute in this state. In construing statutes similar to the Wisconsin statute (sec. 4595) prohibiting work on Sunday some of the authorities hold that the running of trains is not a "work of necessity," and hence is not excluded from the statute (*Sparhawk v. Union Passenger R. Co.*, 1867, 54 Pa. St. 401), while others, and the greater number, take the contrary view. (*Commonwealth v. Louisville & Nashville R. Co.* 1882, 80 Ky. 291.) *Held:* the mere fact that a train might not be remunerative during a certain season of the year would not be a justification for not furnishing it if the convenience of the public, under the circumstances, reasonably required it. In the absence of a specific statute on the subject, the question as to Sunday train service must be determined with reference to the general penal statute prohibiting the performance of any business, work, or labor, "except only works of necessity and charity," on Sundays. (Wis. St. of 1898, sec. 4595.) The supreme court of this state has laid down the rule that a railway company is under no obligations to carry passengers on Sundays because of the inhibition of the statute (sec. 4595) (*Walsh v. C. M. & St. P. R. Co.* 1877, 42 Wis. 23.) Whatever may be our views as to the soundness or wisdom of the policy thus declared, it is controlling in effect in the case before us. Until the legislature expressly excepts railroad companies from the operation of such statute, or the supreme court recedes from its former position, the Commission is powerless to compel the running of railway trains on Sundays for the convenience of the public. The petition is dismissed. *Seymour Business Men's Assn. v. G. B. & W. R. Co.* 1912, 8 W. R. C. R. 524, 527, 531.

TRANSPORTATION

IN GENERAL

Interstate transportation—Definition of.

1. Congress has defined the term "transportation," as used within the Act to Regulate Interstate Commerce, as including "cars and other vehicles, all instrumentalities and facilities of shipment or carriage, irrespective of ownership or of any contract, expressed or implied, for the use thereof, and all services in connection with the receipt, delivery, elevation, transfer in transit, ventilation, refrigeration or icing, storage, and handling of property transported." *Hoyt & Bergen v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 532, 533–534.

WHAT TRANSPORTATION IS INTERSTATE AND WHAT INTRASTATE.

Interstate transportation—Effect of stoppage in transit.

2. In presenting claims for reparation upon both state and interstate shipments to this Commission in the present case, it seems to have been the theory of the petitioners that as the service in stopping the cars to finish loading was rendered entirely within the state, the charges exacted therefor were subject to modification by this Commission. This is an erroneous conception of the character of such service. When a car was partly loaded at the original point of shipment, it was destined either to a point within or without the state. In the latter event, it was an interstate shipment and any transit privilege allowed would be a service rendered in connection with such transportation. All charges exacted for any service rendered in connection therewith are subject to the exclusive jurisdiction of the interstate commerce commission. *Hoyt & Bergen v. C. & N. W. R. Co.* 1912, 8 W. R. C. R. 532, 533–534.

VALUATION

DETERMINATION OF THE VALUE OF PROPERTY OF PUBLIC UTILITIES—ELEMENTS CONSIDERED.

Going Value—Net cost of building up the business.

1. In former decisions of this Commission it has been pointed out that during the promotion period which follows the first construction of the plant, the ordinary losses due to building up the business from an unprofitable plant with few or no consumers to a profitable one, are often sums for which the investors are entitled to return later on. But what consideration should be given to losses that may be the result of competition occurring some years after the first construction, is a matter that is not so clear. One view that may be held is, that during periods when no public regulation of utilities exists and there is little restriction as to the number of concerns that may enter the same field, the risks of the business are greater and utilities are therefore entitled to larger returns during the profitable years than would otherwise be the case. Investors, it may be held, knowing, as they should, that these conditions prevail, take upon themselves, when entering the field, the risks of the business as well as the privilege of enjoying substantial profits from the undertaking. Another view may be advanced, holding that since a municipality, during former years, could choose between allowing one or more utilities of the same kind to supply the community, it took upon itself the responsibility of increased costs and losses due to competition when duplicate franchises were granted. Whichever position is more representative of the truth in these respects, it seems quite certain that municipalities are to some degree responsible for the increased cost of service and losses in conducting the business when they permit duplicate investment to serve an already adequately supplied public. Just how the public in such instances expects to permanently profit by such action is difficult to say. As a rule, its action is believed to be due to misapprehension as to the cost of

service, the amount of profit utilities usually secure, and the rights to which they are entitled. High rates, poor service or other local circumstances have sometimes formed the grounds upon which attack or retaliation has been made by the public by permitting competition to take place, and to what extent it was justified therein, in the absence of other protective methods, depends largely upon the importance of these offences and whether the utility was responsible for them. Whatever may once have been the situation in this respect in the case under consideration, and whatever may have been the losses to the applicant during the years of competition, it now appears that the earnings from the business as a whole have been, during the several years of operation, sufficient or nearly so to reimburse the company for these unusual losses, and it is further found that, even when it is assumed that adequate sums have been set aside as a reserve for depreciation and full allowance is made for superfluous holdings of the company, the evidence points to the fact that the investment in the present case is not very far from the cost of reproducing the combined utilities. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 184–185.

Physical property—Cost of reproduction new—Allowance for item of cost not actually incurred—Paving.

2. In the present case pavement not actually cut through and replaced by the utility was deducted from the tentative valuation. The applicant contended that, while the cost of pavement not actually disturbed by the utility might not properly be considered in determining the amount upon which it is entitled to return for interest and profits, the amount of paving actually overlying mains and conduits should be considered for the purpose of determining the return for depreciation to meet future costs of cutting through pavement in replacing mains and conduits laid prior to the laying of the pavement. *Held:* allowance for depreciation appears to be unnecessary for such items as paving in which investment has not been made. In the present case the cost of only the paving actually paid for by the utility need be included in the value upon which returns for interest and depreciation are to be determined. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 162–163.

Physical property—Cost of reproduction new—Allowance for losses of purely physical value due to consolidations.

3. The applicant in the present case contended that increased valuation is justified in cases where competing utilities consolidate and thus secure cheaper operating conditions because severe losses of purely physical value inevitably occur in making such consolidations. This contention seems to rest upon the assumption that all physical construction costs and all costs of operation are proper elements upon which rates should be predicated, and that a utility is unquestionably entitled to a return for all its operating expenses and earnings on at least the reconstruction cost. *Held*: while this assumption is in the main true under normal conditions, if the costs of operation are high because of unusual inefficiency of operation or if the investment is high because of equipment and work clearly unnecessary, it is apparent that equitable rates cannot be based thereon. Examination of such facts as are available concerning the annual operating revenues and expenses, additions to the property and their relation to the present cost of reproducing the physical equipment indicates that the amount upon which the applicant is now entitled to return is not very far from the cost of reproducing the properties of the com-

bined utilities. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 171–174.

Physical property—Cost of reproduction new—Discounts on bonds.

4. The cost of marketing bonds is an element to be considered in arriving at the value of the property of a utility, but this does not mean that all discounts constitute proper additions to physical value. If this were the case, a company with poor credit which has been obliged to allow a large discount, would have a higher value and be entitled to a return on a greater valuation than a utility owning precisely similar property but whose credit was good enough so that it was not obliged to issue its bonds at a considerable discount. Similarly, a company would probably find it necessary to offer a greater discount on bonds bearing a lower rate of interest than on those bearing a higher rate. In the present case it is questionable whether the total amount of discounts on the bonds issued in 1890 constitute a legitimate addition to the physical value of the plant. With respect to the issue of 1910, there seems to be no reason for adding to the value of the plant because of the cost of marketing this new issue of bonds, except possibly for such part of this outstanding issue as increased the bonded indebtedness above the former level. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 342–343.

Physical property—Cost of reproduction new—Engineering.

See post, 5.

Physical property—Cost of reproduction new—Interest during construction, engineering, contingencies, etc.

5. The applicant in the case under consideration declared that the allowance for engineering and superintendence, interest during construction, contingencies, etc., should be placed at 15 per cent because of unusual financial and competitive conditions under which construction took place. The contention was made that in the present case an additional percent above that usually allowed should be added for interest during construction, chiefly because during the competitive period the money necessary to finance competing concerns, later acquired by the petitioner, was secured upon short time loans bearing more than the usual rate of interest. *Held:* the costs, which are represented by the addition of 12 per cent, are such as the Commission believes will, under ordinary circumstances, be the amount needed to furnish adequate engineering and superintendence, to provide interest upon funds necessary for financing the project during the construction period, to meet such incidental construction and legal expenses as are not apparent in the physical property, and to cover omissions from a carefully prepared inventory of the same. An allowance of 12 per cent appears to be reasonably ample in the present case. With respect to the claim for an additional interest charge, the Commission has repeatedly held that expense in the form of interest entailed by the use of funds during construction of a plant is as legitimate a part of the physical value of the property as the costs of the raw materials and labor which enter into the construction, and the same principles that underlie the determination of unit costs and rates in one case apply also to the other; but in determining the reproduction value of the property, as distinguished from the original construction cost, the prices applied must be average or normal prices. The actual prices paid by the original investors might lead to values either much above or much below what it would cost to reproduce the

property. The amount necessary to cover interest in arriving at the cost of reproduction new, in the present case, is not a definite rate per dollar of the total investment, but represents the entire interest cost of the several portions of the investment necessary at different stages of the construction. This allowance does not contemplate the use of the entire investment sum for the entire period of construction, as such use appears, as a rule, uncalled for. If a shorter period than usual is involved in constructing the plant, then the increased cost due to higher interest rates on short time loans may be expected to be offset by the shorter period during which it is necessary for the loans to run. The only grounds for allowing anything additional in this respect would be that the haste with which the competing plants were built may have arisen from need of service which they were to furnish, but the petitioner admits that such need did not exist. Under the circumstances no additional allowance for interest will be made. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 157–159.

Physical property—Cost of reproduction new—Legal services, etc., during construction.

See ante, 5.

Physical property—Cost of reproduction new—Non-operating property.

6. It is claimed by the applicant in the present case that certain non-operating property, which it believed may be used in the near future, should be included in the cost of reproduction new upon which interest and depreciation should be computed. *Held:* that the present business and its immediate prospective growth would not in any way be materially affected by the disposal of the equipment in question. When non-operating property may be disposed of without affecting the business, the only warrant for its retention is expected savings and additional net income. This being the case, an addition to the physical value of the plant for non-operating property can be justified for rate-making purposes only when the income expected therefrom is added to the actual income or is deducted from the operating expenses. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 164–165.

Physical property—Cost of reproduction new—Superintendence.

See ante, 5.

Physical property—Original cost.

7. The original cost of the plants or cost to the investors should correspond to the book value of the plants if the accounts of the concern have been accurately and properly kept, and will be made up of the investment in the plants when first constructed, plus additions or extensions since that time. It is sometimes the case, however, that the records bearing on these matters offer little explanation of the original transactions. *In re Appl. La Crosse G. & El. Co.* 1911, 8 W. R. C. R. 138, 170–171.

ACCOUNTING

MUNICIPAL ACQUISITION—TERMS AND CONDITIONS OF SALE AND PURCHASE.

Compensation for property—Compensation determined by Commission in particular cases.

1. The common council of the city of Fond du Lac entered into an agreement with the Fond du Lac Water Co. on Aug. 26, 1911, for the transfer of the water works from the company to the city. The agreement was made subject to the approval of the qualified electors of the city and the proposition was carried at a special election held for that purpose. Wherefore, the city prays that the Commission make a valuation of the materials and supplies on hand, the additions and betterments made to the plant since the valuation of Feb. 1, 1910, and that it make an order approving the agreement of sale and purchase between the city and the water company. Previous to the proceedings in this case the common council of the city had voted to acquire the water works and had taken the necessary action to consummate the transfer in accordance with the law then in force. (*In re Fond du Lac Water Co.* 1910, 5 W. R. C. R. 482.) At that time the Commission fixed the just compensation for the plant and property at $320,000. Intermediate to the initiation and final order of the Commission in the first proceeding the statute (sec. 1797m—80) governing the municipal acquisition of a public utility was amended (ch. 213, Laws of 1909), so as to require a majority vote of the qualified

electors voting thereon, instead of a majority of the common council as was formerly the case. Subsequently an action was commenced by certain taxpayers of Fond du Lac to enjoin the city from acquiring the property of the water company and paying the compensation fixed by the Commission. The court sustained the contention of the plaintiffs and held that the Commission did not acquire jurisdiction of the proceedings because the matter had not been submitted to the voters of the municipality and carried by a majority vote at a general or special election as required by the amendment to the law adopted subsequent to the action of the common council. But the court held the opinion that a subsequent determination by a vote of the people to acquire the property could cure the want of jurisdiction, or rather confer jurisdiction *nunc pro tunc* upon the Commission, rendering the proceedings valid, although had without any jurisdiction on the part of the Commission. Although these conclusions of law are novel, rather than incur the delay involved in appealing to the supreme court, the common council passed an ordinance submitting the question to the voters of the city, as set forth in the present petition. *Held:* the owners of the property are entitled to the sum fixed in the former valuation (5 W. R. C. R. 482), plus the value of materials and supplies on hand, and the additions, betterments, and improvements made since Feb. 1, 1910. The just compensation at the present time for the property actually used and useful for the convenience of the public is fixed at $344,456. The contract containing the terms and conditions of the purchase and sale, entered into between the city and the company on Aug. 26, 1911, is approved. *In re Fond du Lac W. Co.* 1911, 8 W. R. C. R. 259, 265.

2. The city of Manitowoc prayed for a rehearing of the matter of determining and fixing a just compensation to be paid to the Manitowoc Water Works Co. by the city of Manitowoc for the property of the company actually used and useful for the convenience of the public. Upon the former hearing (7 W. R. C. R. 71) the just compensation to be paid by the city to the owners of the property was fixed at $236,000. After the motion for rehearing was made, and before the rehearing was held, the city and the company entered into an agreement for the purchase and sale of the property and fixed the price to be paid at $247,500 plus certain specified additions, and further fixed other terms and conditions of the sale. On the rehearing it appeared that several matters affecting the valuation which were not presented upon the original hearing were taken into consideration by the common council of the city and the water works company in arriving at their present agreement. *Held:* there is no reason why the terms of the present contract between the city and the company should not be approved. It is ordered that the value of the property and the terms and conditions contained in the present contract be substituted, in lieu of the compensation and terms and conditions of the purchase and sale formerly approved. *In re Manitowoc W. Wks. Co.* 1911, 8 W. R. C. R. 266, 269.

OPERATION.

Requirements as to service and facilities—Adequacy of service.

3. Complaint was made that the city of Tomahawk, Wis., a public utility engaged in furnishing water to the public, does not furnish adequate service. The petitioner alleges that the supply of water is inadequate, and that patrons are unreasonably limited in their use of water, but that the use of meters would lessen the waste and make the present supply sufficient. Whether the inadequate supply has been due to the insufficient capacity of the wells, the excessive use of water

for sprinkling purposes, or the inadequacy of the present distribution system, can not be determined without additional data. Respondent is ordered to keep a record of day and night pumpage separately for each day, to install pressure gauges and preserve all records of pressure. *Held:* a general order for the installation of meters does not seem to be justified at this time. Respondent is ordered to install meters, at the expense of the water department, upon all services which supply water to consumers, including public buildings, who are not subject to the schedule of flat rates herein approved by the Commission. Further orders respecting meters are postponed until more complete data are available. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 52, 55, 56–57.

4. Application was made by the Hillsboro Water Works Co. at Hillsboro, Wis., for a valuation of its property and for authority to increase its rates for hydrants. Considerable dissatisfaction having been expressed with the nature of the fire protection furnished by the applicant, an inspection and test of the system was made by the Commission. It was found that adequate fire protection was not furnished and that improvements in the plant were necessary in order to secure adequate service. *Held:* time should be given for the village and the water company to come to an understanding with regard to the installation of needed improvements. While the amount paid by the village to the petitioners is rather inadequate, a settlement of the charge for fire protection should not be made until opportunity has been provided for such agreement and for the making of such improvements as may be agreed upon. *In re Appl. Hillsboro W. Wks. Co.* 1911, 8 W. R. C. R. 85, 89, 91.

Requirements as to service and facilities—Appliances for the measurement of product or service—Duty of utility to provide meters.

5. Complaint was made that the city of Tomahawk, Wis., a public utility engaged in furnishing water to the public, does not furnish adequate service. The petitioner alleges that the supply of water is inadequate, and that patrons are unreasonably limited in their use of water, but that the use of meters would lessen the waste and make the present supply sufficient. *Held:* that a general order for the installation of meters does not seem to be justified at this time. Respondent is ordered to install meters, at the expense of the water department, upon all services which supply water to consumers, including public buildings, who are not subject to the schedule of flat rates herein approved by the Commission. Further orders respecting meters are postponed until more complete data are available. *Fitzgerald et al. v. City of Tomahawk*, 1911, 8 W. R. C. R. 40, 52, 55, 56–57.

6. The utility is under obligation to put in meters and sell water at the meter rates unless exempted by the Commission. In the present case there is undoubtedly a considerable waste of water which would be checked by the introduction of meters, and it is recommended that meters be installed for all consumers except residences, and for all residences having cellars and sewer or cesspool connections. *City of Marinette v. City W. Co. of Marinette*, 1911, 8 W. R. C. R. 334, 377.
