The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

to the famous color coded zimcode® traction system we've added a knee exerciser. color it timely.

To keep pace with advancements in total knee surgery, we've added the Zimmer Knee Exerciser to our traction system.

This splint system was designed specifically for facilitating knee exercises following a total knee procedure. It also eliminates pressure on the ischium, and distributes weight evenly for patient comfort.

The operative leg and the Knee Exerciser are placed in balanced suspension. A cord, attached to the end of the Pearson Attachment, is secured to the bed frame near the head of the bed. The patient is then able to passively exercise his knee by moving this cord.

our traction system is complete

The Zimcode traction system is the most complete, most comprehensive traction program in service. There is nothing like it anywhere else.

In addition to a wide range of frames for every type of traction need, the system has many unique features.

First of all, there's our color coded idea. Assembly is a cinch for almost anybody, because the components of each frame or accessory are color coded and numbered to show what fits to what.

To make the system even more

practical, there's the Zimmer Traction Handbook, which details—in plain language—the complete assembly of nearly every required traction application.

professional to the last detail

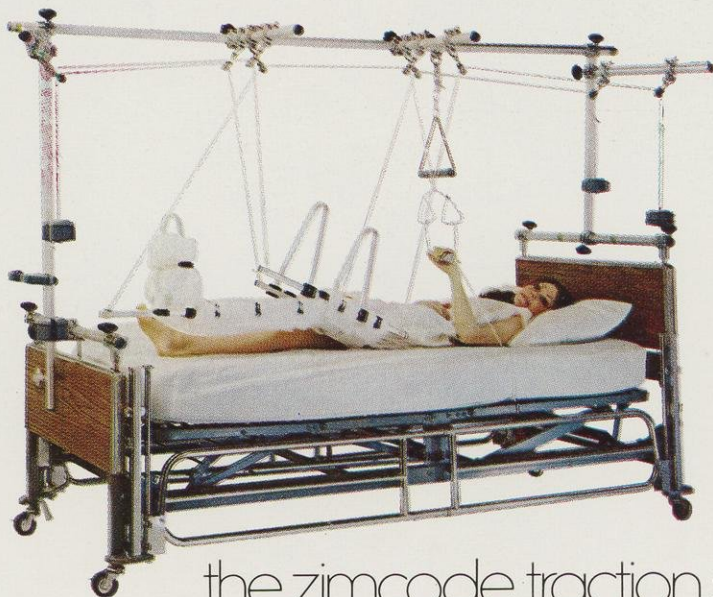

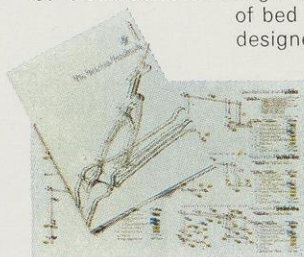

Like all Zimmer products, total professional attention to important design details distinguishes our traction system. The turn handles, for example, on the eight-sided clamp bars are easy-to-turn, water-faucet-like knobs. (We even took into consideration such things as the placement

of bed lights, and designed an offset

upright to fit around them). Regular in-service sessions—to thoroughly acquaint and instruct people in

the use of the system—are part of the service you can expect from your Zimmer man. He'll also pay constant attention to the proper stocking of the traction inventory.

It's a combination you just can't beat. The Zimmer total traction system, and total service from your Zimmer man.
