THE TRADE SUPPLIED BY MORRISSON, PLUMMER & CO.

To Our Friends of the Drug Trade.

WE take pleasure in presenting the third edition of the DRUGGISTS' READY REFERENCE, revised and improved. Its price current columns have received careful attention, so as to include the many new articles introduced to the trade since our last issue, and the matter has been re-arranged and classified in accordance with what we believe to be a more convenient system for reference.

We have omitted price lists of many prominent manufacturers, pharmaceutical or otherwise, where these lists have been regularly and widely distributed to the trade by the proprietors, and quote discounts only.

As prices are constantly changing somewhere in the list of goods quoted, we offer those herein given as approximate only and will always be glad to give special figures on request.

While as full in its price lists and well illustrated with cuts as any similar book issued, we think the statistical, tabular and general pharmaceutical and other information it contains will render it a valuable and lasting reference book, long after its price columns have ceased to accurately represent the market on prices.

As a Ready Reference for many things of value, we take pleasure in presenting it to the trade in token of our appreciation of past favors and our desire to extend our list of customers.

We call especial attention of our customers and the trade generally, to the various advertisements, which represent an exceptionally fine list of first-class houses whose goods and methods of dealing will, we think, prove satisfactory to all. So far as the goods advertised enter into drug stock, we take pleasure in soliciting orders for them; where goods are not in our line, we recommend direct correspondence with the advertisers, or we will buy for you, if preferred.

Respectfully,

MORRISSON, PLUMMER & CO.

Chicago, August, 1887.

TO THE TRADE

WE offer the advantages of a large and thoroughly assorted stock in all departments, purchased by us from original sources, by importation or from first-class Importers and Manufacturers. With the aid of thirteen years' experience in this market, we guarantee excellence of goods according to the grade, and as low prices, quality considered, as given anywhere in our extended territory.

All orders committed to our care will be filled *promptly and fully* in our line, and for items we are requested to purchase in other lines, as fully as the resources of the city will admit.

In ESSENTIAL OILS we aim to lead the trade in purity, freshness and relative price.

In PHARMACEUTICALS we guarantee excellence and all the advantages of a large, well-equipped laboratory, now under the management of Mr. B. M. BUTLER.

In SUNDRIES we have a clean and large stock, under the constant supervision of Mr. T. C. BALLARD. We invite attention to this department in the price columns of our DRUGGISTS' READY REFERENCE, and personal inspection, from those who visit our city.

Soliciting trial orders from those who have not heretofore traded with us and a continuance of their valued favors from those who have, we remain,

Respectfully,

MORRISSON, PLUMMER & CO.

Terms, Etc.

OUR terms are cash in thirty to sixty days—according to character of the order, exchange to be paid by the buyer.

Parties ordering from us for the first time, to ensure prompt shipment should send references, give a detailed statement of their financial condition, or send draft to cover the order, as it sometimes requires several days to get the necessary information through other sources, regarding new parties.

Many orders for small packages can be sent by mail, but liquids are prohibited by the postal laws (see postal information, pages 659-665). Packages are carefully examined at the Chicago post-office for violations of the postal regulations, and where the goods have been mailed contrary to them letter postage is required and enforced.

All goods sent by mail, or otherwise, are at the risk of the buyer, our responsibility justly ceasing after delivery in proper condition, to the designated carrier.

No goods should be returned without previous notice and directions from us as to method or time of return, or other disposition of the goods.

In sending remittances with orders, it is a convenience to us and sometimes ensures more prompt work on the order, to have the remittance notice and the order on separate sheets of paper.

MARX & RAWOLLE,

163 Williams St., New York,

MANUFACTURERS OF

CHEMICALLY PURE

GLYCERINE,

COLORLESS, INODOROUS AND OF THE HIGHEST SPECIFIC GRAVITY.

Packed in 50 lb. Cased Cans and 450 lb. Bbls.

Sold by MORRISSON, PLUMMER & CO.

Glycerine may be brilliant, white, odorless and 30° Baume at 60° Fahrenheit, and still be far from chemically pure, and quite unfit for the uses of careful druggists. Its quality can be easily determined by the Nitrate of Silver test, which is the best practical test for Glycerine, and one which is indorsed by the United States Dispensatory. See "Impurities and Tests" page 448, second paragraph from top. We strongly urge all purchasers to TEST the quality of the Glycerine they buy.

For our Glycerine we COURT the severest and most critical comparative tests with other brands, confidently believing it fully equal to that of the best English makers—without exception, and much better both in fact and in practice than much of the "white, inodorous, 30° Baume Glycerine" now on the market.

NITRATE OF SILVER TEST.

Dissolve one part by weight of Nitrate of Silver Crystals, four parts of distilled water. Keep this solution from the light, in a glass stoppered bottle. Put in a small white glass bottle four teaspoonfuls of Glycerine, and one-half teaspoonful of the Nitrate of Silver solution; shake the mixture well and let it stand. If the glycerine is chemically pure, the above mixture may become a slight gray or red tinge after the lapse of several hours, but not the least sediment or deposit will be precipitated, even within several days after the test is made; whereas, if the Glycerine is impure, the mixture after a few hours, will become of a dark brown or black color, and after several days, when well shaken will become a dark brown, or black, opaque liquid.

Elixirs, Aromatic. Put up in 1 pt. and 5 pt. bots.

Many years' experience in pharmaceutical labor, careful examination and tests of all new formulas, and the supervision and labor of a competent pharmacist in our laboratory, enable us to offer our full list of Elixirs with confidence that they will maintain their clearness and perfect condition as long as the best that are made, and give more full and continued satisfaction than any other line sold at the same prices. We guarantee each one to contain the full medicinal properties and strength claimed for it on its label, and physicians can administer them with the assurance that the effect will be equal to that of the same quantity of medicine prepared by themselves from the original materials. Druggists wishing any Elixir prepared from private formula or of given strength of active ingredients, and not being prepared to manufacture for themselves, can have special prices for the Elixir wanted, by writing us for quotations and stating quantity desired.

NOTE.—When ordered simply in "bulk," these goods will be sent in ½ gal. bots. Prices quoted are for 1 pt. bots., list, less 25 per cent. discount. A deduction of 10c. per pint is made when ½ gal. bots. are ordered, less the discount.

Extracts, Fluid.

Prepared by cold re-percolation, thus avoiding the effect of heat. Made from crude drugs, selected with care. Formulas for making Infusions, Syrups, Tinctures, etc., from our Fluid Extracts are printed on the labels. Special attention is directed to our Fluid Extracts of Ipecac, Squills, Squills Comp., and Sarsap. Comp. for Syrups, which make clear syrups by simple admixture, filtration being unnecessary. Put up in 1 lb. and 5 lb. bottles. A deduction of 10c. per lb. from list prices when ordered in bulk (5 lb. bots.). Discount 25 per cent.

Oxymel of Squills	"	40
Paregoric (Tr. Opium Camph.)	lb.	60
Pepsin, Pure	oz.	75
	bulk, lb.	10 00

This is prepared from the stomach of the pig, and is a highly concentrated preparation. One grain in one ounce water, acidulated with six minims muriatic acid, C. P., will digest 175 grains coagulated albumen at 100° F, in 4 to 6 hours.

Pepsin, Saccharated		1 lb. bot., lb.	2 50
		½ " " "	2 60
		¼ " " "	2 75
		1 oz. v., oz.	25

Formula for making Liquid Pepsin from M., P. & Co.'s Sacch. Pepsin—

Sacch. Pepsin	32 grs.
Muriatic acid, C. P	3 fluidrachms.
Water	6 fluidounces.
Glycerine	2 fluidounces.

Mix and filter.

PILLS.

SUGAR COATED AND GELATIN COATED.

M. P. & CO.'S AND OTHER STANDARD MAKES.

FOR PILLS IN BULK SEE PAGE

Made with the greatest care, from the best materials, Special attention given to the making up of Pills according to private formulas, in lots of not less than three thousand. Estimates cheerfully furnished. The following list comprises those in general use. We are daily adding to our line, however, and will soon be able to offer a complete list of our own manufacture. We give prices only for bottles of 100. The usual reduction of three cents per hundred is made in the list price for bottles of 500 each. Discount, 25 per cent.

Tincture, (without Aloes)		3 00
Each pill represents one fluid dram Warburg's Tincture in which the Aloes has been omitted.		

PINK GRANULES.

An excellent form in which to administer remedies to children, and also for adults when used in repeated doses.

The uniformity and potency of the drugs used, coupled with perfect trituration, mixing and division, render them absolutely reliable.

Patent Medicines and Proprietary Articles,

DOMESTIC AND FOREIGN.

Believing it to be more convenient for reference, we have adopted the plan of classifying all articles under the manufacturers' names, except in a few instances, where the article is known only by its trade name, as in Cosmoline, Kidneywort, Vaseline, Vegetine, etc. Articles marked "C." are sold on Contract or Rebate Plan.

For list of freezable goods, see end of Proprietary list.

No. 3.

Balsam or Oil Bottles, English (see cut 1).

The advantage of these bottles is apparent from the fact that any overflowing liquid is caught in a cup which empties into the bottle, and thus saves the contents and keeps the bottle clean.

Solid Buggy Case No. 6—Open.

No. 6. Dimensions, 12 inches long, 7½ inches high, 5¾ inches wide. Contains 26 three drachm vials, 26 one ounce vials, 4 three ounce vials; space for powder papers, instruments, etc. Case made of Russia leather, mounted with German silver corners, nickel spring lock, with key, and nickel name plate, making the most substantial, complete and richest looking Physicians' Case ever placed on the market. Price ..... each, $12 00

It should be noted that the No. 6 Case is protected by German silver corners; also the new nickel edge trimmings around the center partition, which adds to the appearance of the case, and serves to protect from wear, and to keep the partition in place.

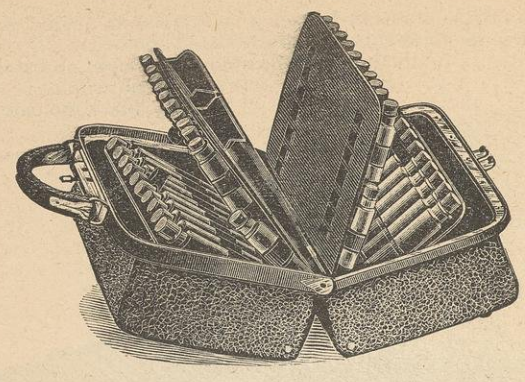

Satchel Buggy Case No. 7.

No. 7. Dimensions, 12 inches long, 7½ inches high, 6 inches wide, with space under side flap ½ inch deep, the size of one side of the case, also a box with cover 1½ inches deep, 6 inches long, 5 inches wide, for powder papers, instruments, etc. Contains 24 three drachm vials, 24 one ounce vials, 4 three ounce bottles, same as No. 6. Price (black or brown) ..... each, $13 85

Satchel Buggy Case No. 527.

Dimensions, 10 inches long, 7 inches high, 4½ inches wide. Contains 20 one ounce vials and 40 three drachm vials, with pockets for sundries, loops for instruments, etc. Price, (black or brown) ..... each, $12 50

SATCHEL BUGGY CASES—Cont'd.

No. 643 Buggy Case, red or black Morocco, very compact and well protected, containing 8-1½ oz., glass stoppered, 10-1 oz., 12-6 drachm, 8-4 drachm and 10-2 drachm corked vials, the rows of vials are arranged to fall and show all the labels; has large pocket ..... per doz., $126 00

No. 649 Buggy Case, dark morocco, contains 8-1 oz., 12-4 drachm, 15-1½ drachm and 15-1 drachm corked vials, and elastic loops for surgical instruments; pocket ..... per doz., $ 82 00

Above case is also made with 15-2½ drachm vials in place of the 1½ drachm and 1 drachm.

No. 651 Buggy Case, dark morocco, contains 8-1 oz., 12-4 drachm and 24-2 drachm corked vials, and space for sundries, 4½x1x4½ inches ..... per doz., $ 80 00

No. 652, Buggy Case, dark morocco, contains 6-1½ oz., 6-4 drachm, 12-2 drachm corked vials ..... per doz., $ 60 00

Above is a small, handy, buggy case.

No. 657, Buggy Case, dark morocco, contains 3-3 oz. 20-1 oz. and 15 long 4 drachm corked vials. Two covered spaces for instruments and sundries. Thoroughly protected from wear by nickel trimmings, case opens in centre ..... per doz., $150 00

A fine case for those wishing to carry a good deal of medicine. Suitable for country physicians.

No. 660 Satchel Case, 10-inch frame; contains 18-1 oz., 11-6 drachm and 11-4 drachm corked vials, ample loops for instruments, box for sundries, and a neat plush-lined case for hypodermic syringe ..... per doz., $140 00

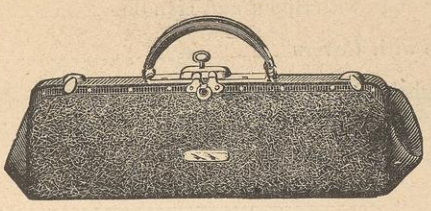

We think this is the most convenient satchel case in the market. All of the pieces holding the bottles are removable, transforming it into a traveling satchel, and can be replaced at pleasure.

Solid Leather Medicine Case No. 906.

Dimensions, 8½ inches long, 5 inches high, 3¾ inches wide. Contains 5 2-oz. glass-stopper bottles, 7 6-drachm, 9 4-drachm vials, sole-leather case, with two nickel clasps, bottles arranged in three rows with pocket for powders, etc. Price ..... each, $ 6 75

Solid Leather Case No. 646.

Dimensions, 8 inches long, 3¼ inches wide, 2 inches thick. Contains 12-2-drachm vials, and 10-3 drachm vials. Case is made of sole-leather, hand-stitched; is strong and durable. For hard usage and service no case is equal to it. Price_____each, $3 00

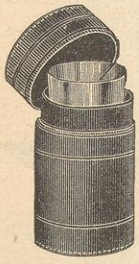

No. 800 Bag.

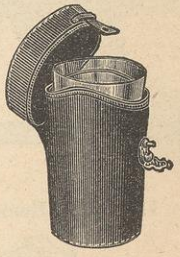

Obstetric and Gynecological Instrument Bags.

The style No. 800 is a shallow bag, 5 inches in depth and 5 inches in width, made in various lengths to meet the convenience of the physician. In style and appearance they are like a first-class traveling-bag, with steel-covered frames, nickel spring, double hasp lock, with key, nickel name plate, etc. Are made of the finest grain stock, lined with drab-colored chamois skin, inside pocket on one side. They are made up in a neat manner, and are found well adapted to the purpose intended.

Same scale mounted in a mahogany glass case, with counterpoised sliding door 27 00

Prescription Scale. P. 63.

In French polished mahogany case, with counterpoised door, sliding upward. Scale is of finest finish, all lacquered; pans are nickel plated; has improved raising apparatus; adjusting screws on the beam; sensible to $\frac{1}{50}$ grain. This scale is one of the leading favorites.

No. 63, diam. of pans, $2\frac{1}{2}$ in.; beam $8\frac{1}{2}$ in $22 00
Same scale provided with all "agate" bearings ..... $5 00 extra.

SCALES AND WEIGHTS—Cont'd.

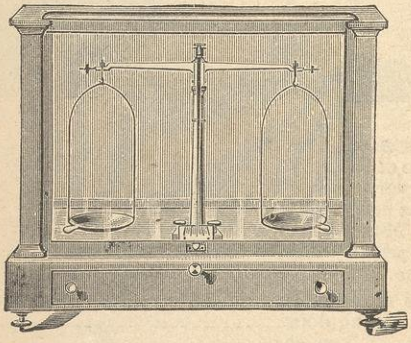

"Agate" Prescription Scale. P. 88.

Scale has indicator pointing upward, and weighs rapidly. Scale is full jeweled, having six "agate" bearings, making them proof against rust or corrosion. Beam is plated with gold all the other parts nickel so as to save cleaning; has adjusting screws on the beam; scale is very roomy and comfortable to work with, and will stand the hardest kind of continuous usage.

No. 88, diam. of pans 3 in.; sensibility $\frac{1}{100}$ grain. One of the most popular scales in the list $26 00

Mahogany case to suit this scale 12 00

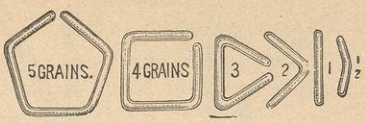

"Agate" Prescription Scale. P. 96.

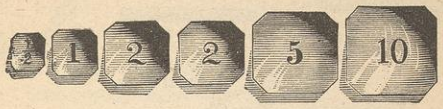

Elegant scale in French polished mahogany case; with counterpoised door sliding upward; has leveling feet; glass level; scale has indicator pointing downward; beam is plated with gold, all the other parts nickel; pans are 3-inch solid silver; all the bearings are jeweled; glass case is extra large and roomy.

No. 96, diam. of pans 3 in. (solid silver); sensibility, $\frac{1}{100}$ grain.. $45 00

The Trade supplied by MORRISSON, PLUMMER & CO.

MORRISSON PLUMMER & CO.'S

ABSOLUTELY PURE

READY MIXED PAINTS.

WE GUARANTEE OUR PAINTS TO BE

ABSOLUTELY PURE

AND TO GIVE MUCH BETTER SATISFACTION

Than White Lead and Oil Paint made by the old methods.

They will last longer, will spread over more surface, and are much easier applied.

We put it up in tin cans $\frac{1}{4}$, $\frac{1}{2}$, 1, 2, 3 gallons, also in 5 and 10 gallon kegs, and in half barrels and barrels, making no charge for packages.

Stir the paint up thoroughly from the bottom just before using, and satisfactory work will be the result.

NOTICE. Please observe size of Cans and number in each case as a guide when ordering; also give explicit shipping directions.

Put up for shipment as follows: In Barrels, Half-Barrels, Five and Ten Gallon Kegs, Tin Cans, Packed in cases as follows:

Half Gallon Cans, 12 in a case.
One Gallon Cans, 6 in a case.
Quarter Gallon Cans 24 in a case.
Two Gallon Cans, 4 in a case.

PAINTS AND PAINTERS' SUPPLIES.

IN

COLORS, VARNISHES, OILS, BRUSHES, ETC.

Brands not quoted here, furnished on order.

To avoid errors in ordering Lead or Zinc, please specify the brand; whether it is wanted in kegs or cans, and also the size of the packages.

In ordering Colors, state whether they are to be dry, in oil or coach colors; which shade, how assorted, and also the quality, as designated by the brand wanted.

In ordering Liquids, if you send packages to be refilled, please so inform us, and in shipping, mark your name and place distinctly on each can or keg.

NEAL'S CARRIAGE PAINTS

QUALITY AND DURABILITY ABSOLUTELY GUARANTEED.

They Dry Quick and Hard, with a Beautiful Glossy Finish, rendering Varnishing Entirely Unnecessary.

One Coat will make an old carriage look like new. Any inexperienced person can do the work.

We desire to make no extravagant representations to influence patronage, preferring to rely upon the *MERITS OF THE MATERIALS*, our *SPECIAL MANUFACTURING FACILITIES* and the *REPUTATION* already secured.

We *GUARANTEE* in our Paints *ALL THE REQUIREMENTS* and qualities a *THOROUGHLY RELIABLE* and *FIRST-CLASS* Carriage Paint should possess, while the simplicity of application is at once apparent.

GOOD GOODS. FAIR PRICES.

PHARMACEUTICAL INFORMATION.

A GOOD BUSINESS MAN

Has sacred regard for his promises, both spoken and implied; his word being found always true, he has the confidence of his customers and creditors alike.

He gives his business regular and careful personal attention, leaving its details to the care of his employes only so far as his knowledge of their capacity and trustworthiness renders it safe to do so.

He keeps his store in good order, his stock well assorted and looking clean and attractive and arranged for easy, economical handling when dealing with customers.

He buys prudently; regular stock in such quantities as insure him the best prices, stock for transient or uncertain demand he buys sparingly, but so as to meet as nearly all reasonable calls as possible.

He keeps old stock and articles likely to become unsalable, in remembrance, and on proper occasions, offers it for sale as stock that he wishes to close out and on which he will make concession in price; there are always persons who will buy such stock if there is a fall in price, and many times the sale can be to mutual gain.

He keeps careful account of all purchases and pays for them *when due*, or if possible, adds a double profit to his business, by discounting his bills at the time of purchase.

He credits with judgment and is prompt in presenting accounts that are due.

He is cordial and attentive to his customers and requires all employes to be so. He uses all reasonable means to please, but not at the cost of manliness or due profit.

He is just and courteous to his employes, remembering their rights, not only to fair compensation, but to careful business training and to opportunity for social and physical recreation.

He watches his expenses, both store and personal, and, if possible, keeps them always within the limits of his profit income, so that in dull years he adds a *little*, and in prosperous years much more to his accumulations, and thus in old age possesses both honor and a pecuniary competency.

ADVICE TO CLERKS.

1st. Consider your employer's interest as though it was your own. Serve an honest dealer, and try to do business as he wishes; serve him as faithfully in his absence as in his presence.

2d. Keep your store clean, neatly arranged as to display, and in good order as to stock. Do not have muddy tinctures or tincture-stained bottles on your shelves. Do not put anything in bottle or drawer, even temporarily, with label calling for a different article, unless great care is taken to see that no mistake *can possibly* occur from the mislabeling.

3d. Keep your scales, weights and measures in perfect order, clean and in their places.

4th. Be prompt and polite in waiting on customers, and when in busy moments any have to wait, give them a courteous recognition, saying that you will wait on them as soon as possible.

HILL'S PEERLESS REMEDIES

HILL'S PEERLESS SARSAPARILLA

Is put up in a 12 oz. bottle in nice style, price $7.00 per doz., retail $1.00; 6 bottles for $5.00. Will send plenty of advertising to any one ordering ½ doz. from their jobber, on receipt of postal from them to that effect.

HILL'S PEERLESS WORM SPECIFIC

Contains a Tonic, Vermifuge, Soothing Syrup and Cathartic. It is very pleasant to take, is purely vegetable, and is the largest 25 cent bottle of Worm Syrup in the market. Warranted.

HILL'S PEERLESS COUGH SYRUP.

A sure cure for Coughs, Colds, Croup, etc. Will relieve Asthma and Whooping Cough. Pleasant to take, and put up in bottles of extra size. Warranted.

N. B.—A package of ½ doz. Cobb's Little Pills is put up with every bottle of Hill's Peerless Cough Syrup. This is a powerful aid, curing Coughs that are caused by disordered stomach.

COBB'S LITTLE PODOPHYLLIN PILLS.

Unequaled for regulating the bowels and correcting all trouble arising from a disordered stomach. Very small in size—40 Pills in each bottle.

THE ABOVE GOODS ARE SOLD ON THIS IRON CLAD GUARANTY.

WE SAY TO THE DRUGGIST: *"Place these bottles on your shelves. Recommend them without qualification. Assure your customers that it will positively do all it claims to do; and if any one after taking it according to directions, will return the empty bottle, and say he has received no benefit, refund his money to him, and we will refund you yours."* YOU ARE THEREFORE INVITED TO TRY THE REMEDY AT OUR RISK. YOU RUN NONE.

This guarantee will be made good whether goods are bought of jobber, or direct from us, also after bill is paid as well as before. Any druggist having returned empty bottles has only to drop us a card and we will remit cost of same.

Cook books having druggist's card, and other printed matter, furnished on application to all druggists keeping our goods.

SPECIAL OFFER.

To any druggist ordering $50 worth of above goods, in one order by mail, we will send an oval upright Show Case, called perfumery case. Size, 2½ feet high, 2½ feet long, 2 feet 4 inches wide; made from full metal, or black walnut and metal corners, or ebonized wood and metal corners. Mirror in back and double doors, double-thick French glass, also plenty of printing matter to sell the goods.

W. H. HILL & CO.,

Manufacturers and Proprietors,

DETROIT, - - - MICHIGAN.

The trade supplied by MORRISSON, PLUMMER & CO.

5th. Promise nothing that you think you can not perform, and make your word good at all times. You may make temporary gain through deception, but the end will be loss, not only of your own self respect and that of others, but in money results also.

6th. As far as possible, keep forehanded in your work, use odd moments to fill drawers, jars or bottles, so that no delay will occur in busy times, by finding a container empty.

7th. When customers are not present, do not be idle or listless, but recognizing that knowledge is power, study in behalf of your business; try experiments in chemistry, learn something each day worth knowing, and learn all you attempt to learn, *thoroughly*. The lack of thoroughness in education and work is the prolific cause of failures, and makes many a life one of drudgery where it might have been one of prosperous proprietorship.

8th. "Are you a clerk, and do you want to become a proprietor? Put away $5.00 a month and watch your opportunity for investments."

9th. Watch your expenses, learn to regulate them not only by your salary but if that is fair, then learn the art of accumulating either for definite purposes, or for use when opportunity offers unusual and safe inducements for the profitable investment of your money. Avoid all speculation and all games or dealings of chance as you would poison, for the inevitable result of tampering with these will be the loss of your integrity and almost universally of your money also.

10th. Out of business hours, avoid bad company and habits; visits to saloons of whatever grade, billiard rooms or places of idle resort, will not only give you a bad reputation and cause business men to consider you unsafe for places of responsibility and trust, but will rapidly engender such habits as will insure failure and disgrace. Thousands have proven this to their shame, and none have found the statement false.

The dull good boy may fail, the dull bad boy will fail worse; the bright boy, keen, methodical and energetic, if good, *will succeed*, while the bright boy of evil habits, will in almost all cases sink into disgrace or obscurity before middle age.

Purity, Integrity, Diligence and Economy *will pay*, not only in reputation and self respect, but in money also.

ETIQUETTE OF LETTER WRITING.

From Hill's Manual of Social and Business Forms.

As a rule every letter, unless insulting in its character requires an answer. To neglect to answer a letter when written to, is as uncivil as to neglect to reply when spoken to.

In the reply, acknowledge first the receipt of the letter mentioning its date and afterward consider all the points requiring attention.

In writing a letter the answer to which is of more benefit to yourself than to the person to whom you write, enclose a postage stamp for the reply.

Letters should be as free from erasures, interlineations, blots and postscripts as possible. It is decidedly better to copy the letter than to have these appear.

A letter of introduction or recommendation should never be sealed, as the bearer ought to know the contents.

BUSINESS LETTERS.

1. In letters of business use as few words as possible.
2. Business letters should be promptly answered.
3. Use a clear, distinct writing, avoiding all flourish of penmanship or language.

MALTINE

Below please find net prices at which we shall be pleased to fill all orders from the trade for the preparations mentioned, viz.:

	Pints Per Doz.	5-Pint Bottles, Each.
MALTINE plain	$ 7 50	$2 75
MALTINE with Cod-Liver Oil	7 50	2 75
MALTINE Ferrated	7 50	2 75
MALTO-YERBINE	7 50	2 75
MALTINE with Alteratives	10 00	3 50
MALTINE with Hypophosphites	10 00	3 50
MALTINE with Pepsin and Pancreatine	10 00	3 50
MALTO-VIBURNIN	10 00	3 50
MALTINE with Cascara Sagrada	10 00	3 50
MALTINE with Peptones	12 00	4 50
MALTINE with Phosphate Iron, Quinia, and Strychnia,	12 00	4 50

MALTINE is far superior in nutritive and diastatic value to any Malt Extract manufactured in the world. There is no reconstructive that excells Maltine in phthisis and many wasting diseases.

MALTINE is a valuable food; a food of priceless value at times of emergency. In fact, in very grave gastric cases, it is a food which may very often be resorted to when at one's wits' end what to do. J. MILNER FOTHERGILL.

I have subjected "Maltine" and "Tromner's Extract of Malt" to an exact quantitative comparison of their diastatic activity. The results demonstrate conclusively the far greater diastatic value of Maltine, and enable me to state, without any qualification whatever, that it far exceeds in diastic power any of the six preparations of Malt which I have examined.

R. H. CHITTENDEN,
Professor of Physiological Chemistry in Yale College.

Out of fourteen trade samples of Malt Extract examined by Messrs. Dunstan & Limmock, only three possessed the power of acting on starch. These brands were Maltine, Corbyn, Stacey & Co.'s Extract, and Keppler's Malt Extract. WILLIAM ROBERTS, M. D., F. R. S.

MALTINE, in its different forms, is the only Malt preparation we now employ, being so palatable, digestible, and easily assimilated. Of its efficiency in appropriate cases, there is no more doubt in our minds than there is of the curative power of quinine, cod-liver oil, the bromides, and the iodides. It deserves to stand in the front rank of constructives; and the constructives, by their preventive, corrective, and curative power, are probably the most widely useful therapeutical agents that we possess. PROFESSOR L. P. YANDELL.

THE MALTINE MANUFACTURING COMPANY,

LABORATORY, YONKERS-ON-HUDSON. 182 FULTON ST., NEW YORK.

Full line in stock with MORRISSON, PLUMMER & CO.

4. Come at once to your subject, and state it so clearly that it will not be necessary to guess your meaning.

5. Give town, county, state and date explicitly. It is frequently of great importance to know *when* a letter was written.

6. Read your letter carefully when finished, to see that you have made no omissions and no mistakes. Also carefully examine your envelope, to see that it is rightly directed, with postage stamp affixed.

7. Copy all business letters, of your own, by hand or with the copying press, made for the purpose.

8. Send money by draft, post-office order or express, always stating in the letter the amount, and by what means sent. Thus you have something to show for the money, guaranteeing you against loss.

9. Write date and from whom received across the end of each letter, and file for future reference, fastening the letters together with rubber bands, or binding in a letter-file adapted to the purpose. The possession of a letter sometimes prevents litigation and serious misunderstanding.

In ordering goods state very explicitly the amount, kind, quality, color, shape, size, etc., and on what terms wanted. Whether you wish the same sent by freight or express, and *what* express. Much inconvenience is experienced by business men because of a neglect to designate explicitly what is wanted.

Should the writer wish to make suggestions, ask questions, or add other matter to the letter, which is foreign to the subject, such words should be placed entirely separate from the order. Of fifty or a hundred letters received to-day, by the merchant, that one which is mixed up with complaints, inquiries, etc., will probably be laid over until to-morrow, or until such time can be gained as will enable the merchant to read it through. Had the order been explicitly stated, and the suggestions placed elsewhere, the goods would have been forwarded immediately.

EXPANSION OF CREDIT

Beyond a reasonable percentage of the dealer's net capital, is dangerous alike to the dealer and his creditor.

The longer the time given on credit sales, the greater the danger of loss to both buyer and seller. Many an honest merchant has become bankrupt through long credits, and credit beyond a due limit as to amount, simply because he was deceived through these means as to his condition until he could not extricate himself.

A prudent and honest dealer, when he has to ask unusual terms either for past or present purchases, should consider carefully the cause for this necessity, and will often find in this investigation, that it is time to adopt vigorous and early retrenchment and concentration.

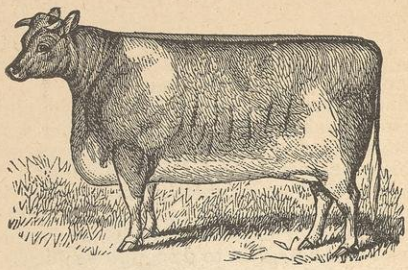

It is estimated that but ten out of every hundred merchants achieve lasting success and competency, and that seven of the ten do so after one failure, only three or possibly four working steadily upward.

COMMON SENSE.

A philosophic writer defines common sense as a resultant of mind force; that is to say, that an individual who is observant and stores up the ideas of others and his own experiences, and concentrates them to practical purposes in a single force which acts without confusion, possesses what is known as common sense: Measured by this standard how many are eminently devoid of common sense.

BOVINE · VACCINE · VIRUS.

PROPAGATED BY THE CHICAGO S. Y. VACCINE CO.

The vaccine farm consists of high, rolling prairie, with abundance of pure water. We have constructed buildings especially for this business, fitted with every convenience, which enables us to be prepared to meet any and all demands. Our heifers are selected with reference to

Perfect Health and Good Breeding.

The stables are under constant personal supervision of all details by members of the firm, propagators of many years' experience. All our Points are charged from two different animals. Our Ivory Points are packed in small silver cases, or rolled in rubber. When the virus has been used with care, and according to directions, and fails in *primary* vaccinations, a second package will be furnished gratis, if the tube is returned within three weeks from sale of same.

PRICE LIST.

Ten Ivory Points	***$1 00***
Five Double Charged Points	***1 00***
Single Points, each,	***20***
Mounted Crust Vaccine	***2 00***

1 kilometer	1089 yards.

STANDARD OF UNITED STATES OR ENGLISH LINEAR MEASURE.

The standard of United States or English linear measure is a rod $\frac{36}{39}:\frac{1000}{1013}$s, as long as a pendulum which will beat seconds in vacuo, at a temperature of 32° Fah. in New York; or $\frac{36}{39}:\frac{1000}{1013}$ at 60° at sea level in London; in round numbers, such a pendulum wouldbe 39 inches long and gives our yard as a unit of 36 inches, subdivided as follows:

6 points equal 1 line.
12 lines (72 points) 1 inch.
12 inches 1 foot.
3 feet one yard.

1 point equals $\frac{1}{2592}$ part of the length of such a pendulum in New York.

The standard of French measure is the meter or $\frac{1}{40.000.000}$ part of the earth's polar circumference, which is 39.37043 inches, or about 1-5 of an inch longer than a pendulum, beating seconds in vacuo at 60° Fah. at sea level in London, and about 3⅛ inches longer than our yard. The meter is subdivided as shown in our tables elsewhere.

TABLE OF QUANTITIES.

12 units or articles	1 dozen.
12 dozen	1 gross.
20 units or articles	1 score.
24 sheets of paper	1 quire.
20 quires	1 ream.
Printer's token	250 sheets.

RULES FOR CHANGING METRIC WEIGHTS AND MEASURES INTO APOTHECARIES.

To change grams and fluigrams into grains and minims, multiply by 15.
To change grams or fluigrams into drachms, divide by 4.
To change grams or fluigrams into ounces, divide by 32.

Fixed oils	103
Syrups containing Fluid Exts	97
Mixtures	89
Vinegars	77
Syrups not containing Fluid Exts	69
Solutions (one exception)	66
Diluted acids	61
Exceptions.	
Muriatic acid	70
Prussic acid	45

DROP EQUIVALENTS.

Acid—Acetic, 2 drops	1 minim.
Prussic, ¾ drop	1 minim.
Nitric, 1⅛ drops	1 minim.
Muriatic, ⅘ drop	1 minim.
Sulphuric. 1⅛ drops	1 minim.
Sulph. Arom., 2 drops	1 minim.
Alcoholic tinctures, 2 drops	1 minim.
Essential oils, 1½ to 2 drops	1 minim.
Ethers and etherial preparations, 2½ to 3 drops	1 minim.
Water and its solutions, ¾ to 1 drop	1 minim.
Wines, medicated, 1 to 1½ drops	1 minim.

These drops are to be from a minim or small graduate with a well formed lip, and liquids at a temperature varying from 60° to 75° Fah. It is not safe, however, to rely on domestic measures or drops, where the remedies are at all active, or accuracy is desired, as scarcely any two families have spoons or glasses of exactly the same size, and the size of drops varies so much from various causes usually unnoticed, such as the rapidity of falling, thickness of measure's lip, etc.

AVERAGE PERCENTAGE OF ALCOHOL IN VARIOUS LIQUORS.

Ale	6.87	Gin	51.6
Brandy	53.39	Irish Whiskey	53.9
Burgundy Wine	14.57	Madeira Wine	22.27
Currant Wine	20.50	Malaga "	17.26
Cape Muscat	18.25	Port "	22.90

BE SURE TO ORDER

M. & R. LICORICE

If you want the best Licorice in the world. It is the only Licorice made sixteen sticks to the pound, and affords the retailer eighty cents for every pound he sells. It is done up in 5-pound wood boxes, with *red label*, which should be placed on the counter, where the Licorice can be seen, for in that case twice the Licorice is sold.

M. & R. LOZENGES

Also put up in 5-pound tin canisters, with *Glass Front, and Scoop* for handling, and makes a splendid counter show. The Lozenges (Tablets, as some call them) are of the highest grade of Licorice, and are excellent for Colds or Roughness of the Throat, as well as a *Confection* for constant use.

4 Chatham Row, Boston.

Trade supplied by MORRISSON, PLUMMER & CO.

LIQ. POTASSA AS A SOLVENT FOR GUM RESINS.

(Morris.)

Solutions of Gum Resin in Liq. Potassa recommend themselves for their elegance and economy, while they are generally very effective. For instance, the dilution of Ammoniacum and Liq. Potassa with water is perfectly clear, whereas a tincture produces an opaque mixture. The alkaline solutions of Aloes, Catechu, and Kino are very cheap and elegant coloring mixtures, a few drops giving a deep tint to half a pint of water. Of course these solutions should not be used in prescriptions containing articles incompatible with the Alkali.

The quantity of Liq. Potassa best adapted to each Gum Resin will be found to be as follows:

Aloes	1 part	to 15	Liq.	Potassa.
Ammoniacum	1 "	4 "	"	
Asafœtida	1 "	15 "	"	
Catechu	1 "	10 "	"	
Guaiacum	1 "	7 "	"	
Myrrh	1 "	5 "	"	
Opium	1 "	10 "	"	

REMEDIES USED AS ATOMIZED INHALATIONS.

Aqua acidi carbolici	30 grs.	to 10 oz. water.
" " lactici	f. 3 iiiss.	
" " sulphurosi	30 min.	
" " sulphatis	20 to 40 grs.	
" " tannici	50 to 200 "	
" aluminii chloridi	f. 3 i. solution.	
" aluminis	80 grs.	
" ferri et alum sulph	30 "	
" " perchloridi	30 "	
" potassii permanganatis	50 "	
" sodii chloridi	50 "	
" zinc chloridi	20 to 50 "	
" " sulphatis	50 "	

The inhalation of atomized fluids is acknowledged to be a rational and successful method of treating various affections of the nose, throat, air passages and lungs. By its means the indicated remedy is applied directly to the diseased tissues, and is, in these cases, what washes and lotions are to the exposed surfaces when diseased or mechanically injured.

Inhalations may, in this manner, supplement constitutional treatment by the ordinary means, and it will be found a valuable auxiliary.

VOLATILES.

Carbonic Acid in Carbonates.
Sulphurous Acid in Sulphites.
Hydriodic Acid in Iodides.
Hydrobromic Acid in Bromides.
Hydro Sulphuric Acid in Sulphides.

SOLUBLES.

All compounds of K, NA, and (NH^4).
All Acetates, Nitrates, Chlorates, Permanganates.
All Chlorides, Iodides and Bromides except of Ag, Pb, and Hg.
All Sulphates except those of Ba, Ca, and Pb.

SUBSTITUTE FOR OIL OF BAY.

BAY ✻ RUM

ESSENCE.

This Essence is perfectly soluble in Spirit of the proper strength, and will make instantly,

WITHOUT FILTERING OR WASTE,

clear Bay Rum, of quality superior to that made from Oil of Bay. Price five dollars per pound. One pound to ten gallons. Directions on each bottle.

For Sale by WM. RUDKIN'S SONS, 74 William Street, New York,

and by MORRISSON, PLUMMER & CO.

INSOLUBLES.

All Oxides, Hydrates, Carbonates.
Tannates, Phosphates, Arsenites and Arsenates.
The last three are soluble in dilute acids.

Never prescribe together chemicals that have directly opposite chemical properties (as an acid with an alkali) as you will not get the effect of either. Do not prescribe two compounds of two metals, which by the interchange of the two metals produce either an insoluble compound or a volatile substance. Do not prescribe an acid with a carbonate, sulphite, iodide, bromide or sulphide.

SYRUP TABLE.

In the case of simple syrup the following table will prove useful:

Ozs.		Ozs. water yields.	Fluid ozs.	Density.	Temp. Fah.
16	sugar to	12	22⅝	1.365	60°
16	"	10	20⅜	1.349	60°

FOREIGN PHARMACEUTICAL WEIGHTS.

The pharmaceutical pound differs in different countries as follows:

United States (Troy)	373.24	metric	grams	or 5599	grains.
England (Avoird.)	453.6	"	"	" 6804	"
France	500.	"	"	" 7500	"
Rome and Tuscany	339.5	"	"	" 5092	"
Austria	420.8	"	"	" 6312	"
Germany and Russia	358.	"	"	" 5370	"
Prussia	467.7	"	"	" 7015	"
Holland and Belgium	369.	"	"	" 5535	"
Sweden	356.37	"	"	" 5345	"
Piedmont	307.4	"	"	" 4611	"

With the exception of England, France and Prussia (where the pound is divided into 16 ounces), the pounds are all divided into 12 ounces and the ounces into 8 drachms, and the drachms into 3 scruples.

RULES FOR ASCERTAINING THE RELATIVE VALUE OF DEGREES IN THE DIFFERENT THERMOMETRICAL SCALES.

To change Centigrade degrees to those of Fahrenheit, multiply by 9 and divide by 5, and add 32 to the quotient.

Example: 100° C×9=900÷5=180+32=212° Fah.

To change Fahrenheit degrees to Centigrade, subtract 32 from the number, multiply the remainder by 5 and divide by 9.

Example: 212° Fahr.—32=180×5=900÷9=100° C.

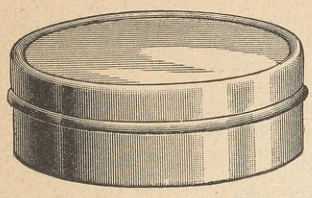

To change Reaumer degrees to Fahrenheit, multiply by 9, divide by 4 and add 32.

Example: 80° R×9=720÷4=180+32=212° Fah.

To change Fahrenheit degrees to Reaumer, subtract 32, multiply remainder by 4 and divide by 9.

Example: 212° F—32=180×4=720÷9=80° R.

CHICAGO, ILL.

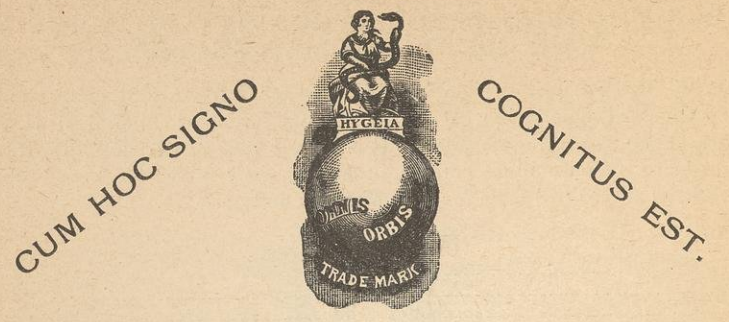

TABLE SHOWING SPECIFIC GRAVITY OF ACIDS BY THE USE OF BAUME'S SCALE.

P. W. Bedford, in the *Druggists' Circular* for October, 1881, offers the following standard table in use by all the manufacturers of mineral acids, and almost all manufacturing chemists. It is hoped that this brief note will lead druggists to exercise more care in procuring their mineral acids of proper strength, as also to test them for both strength and purity.

Degrees Baume.	Specific Gravity.	Degrees Baume.	Specific Gravity.
1	1.007	37	1.342

SPECIFIC GRAVITY.

Tables of specific gravity give the relative weights of equal bulks of different bodies, the standard being water, One cubic inch of water weighs $253\frac{1}{6}$ grains. To ascertain the weight of a cubic inch of any substance multiply $253\frac{1}{6}$ grains by the specific gravity, and it will give the result in grains.

A cubic foot of water weighs nearly one thousand ounces, or $62\frac{4\,9\,5\,0}{1\,0\,0\,0}$ avoirdupois lbs.; therefore to find the weight of any substance, whose specific gravity is known, we multiply by that specific gravity as follows:

ALCOHOL with specific gravity of .835 multiplied by 1,000=835 ounces or $52\frac{1}{10}$ lbs. per cubic foot.

COPPER, with sp. gr. of 4, would be 4,000 ozs., or to be exact, $249\frac{6}{10}$ lbs. to the cubic foot.

LIMESTONE, with a sp. gr. of 2.7, would be 2700 ozs., or to be exact, $168\frac{4\,8}{1\,0\,0}$ lbs. to the cubic foot.

EXPANSION OF METALS IN 100 FT. WITH EACH ADDED 100 DEGREES F.

Brass—$1\frac{1}{4}$ in.	Copper—$1\frac{1}{4}$ in.	Cast iron—$\frac{3}{4}$ in.
Wrought Iron—$\frac{8}{10}$ in.	Lead—$1\frac{3}{10}$ in.	Zinc—$2\frac{1}{10}$ in.

TRAPS FOR THE UNWARY

Retail Pharmacists are interested equally with honest manufacturers in exposing the tricks which the bushwhackers in trade resort to for the purpose of introducing goods which are too poor to sell on merit.

Don't be Deceived by Pretenaed Endorsements.

It is a not an uncommon trick of manufacturers who find honest methods in the introduction of their goods unavailing, to issue, in the names and without the knowledge or consent of jobbers who have accepted their goods on consignment, postal cards or other notices which are intended to carry the impression that the house whose name is appended to the notice has carefully investigated the subject, and finding advantages to the buyer in handling the new goods has stocked them and recommend that they be specified on orders. The deception is so transparent that it probably influences but few, but it should, at least, lead those who receive the postals, or other notices referred to, to watch that these cheap goods which the jobber may hold on consignment or may have obtained by some sort of exchange, are not by any chance substituted for the reputable and established makes which they are accustomed to handle.

And Beware of Bribed Salesmen.

The same desperate manufacturers have been known to bribe jobbing salesmen, when they could find any who were susceptible to that kind of influence, to make a special effort to sell their goods. Instances have come under our notice of salesmen for reputable jobbing houses urging retailers to take other makes of plasters, absorbent cotton, etc., when ours were specified. As we know that such discrimination is not sanctioned by the houses in question, and as we know of cases in which the manufacturers whose goods were urged on the buyer have offered bribes to jobbing salesmen to do this class of work, we are forced to conclude that the salesmen referred to had been debauched. Fortunately, there are few men on the road who can be bribed to misrepresent the interests of their employers, or to act as the cat's paw for manufacturers who find that legitimate business methods are not sufficient to sell inferior goods, even to the class of "Cheap John" Druggists who are willing to handle such goods at all.

We therefore suggest to retailers that the only safety when ordering anything in our line is to specify "S. & J." or "Seabury's" and refuse other makes which the jobber may want to get rid of.

—*Dick's Encyclopedia.*

BOILING POINT OF LIQUIDS.

With the air pressure at 15 lbs. to the square inch or barometer at 30—the boiling point will be as given here: Decreasing atmospheric pressure lowers the boiling point, and increase of the specific gravity of the fluid raises it.

Water that has been boiled until the air is largely driven out does not boil until the heat is much raised, sometimes as high as 270 degrees Fah.

HOLLOW SUPPOSITORIES

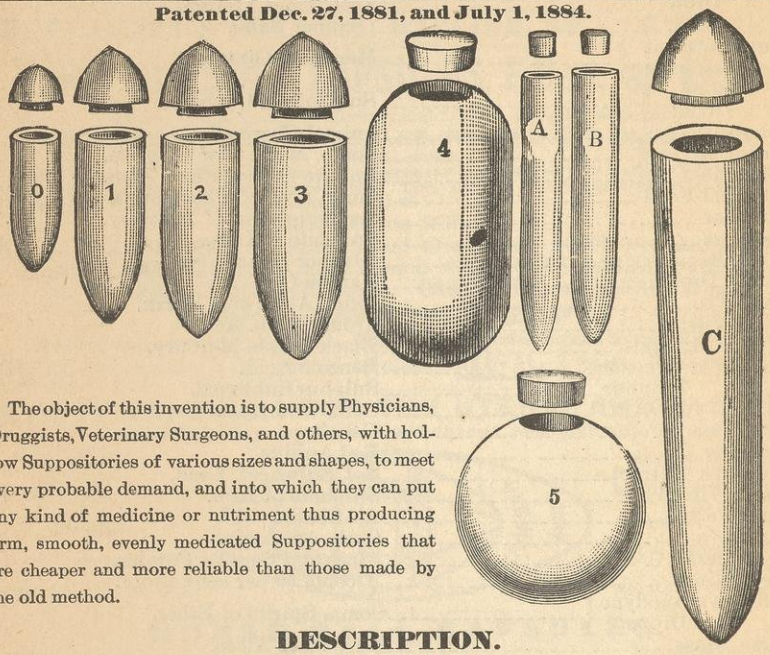

With Conoidal Self-sealing Stoppers.

ALL MADE FROM PURE BUTTER OF CACAO ONLY.

Each box contains a *Medicine Dropper* for filling the suppositories, and a pair of *Spring Forceps* for placing the stoppers in position.

The cuts show the exact sizes and shapes of the suppositories. They are adapted for Anal, Nasal, Urethral, Rectal, Cystic, Vaginal and Intra-Uterine Medication.

Patented Dec. 27, 1881, and July 1, 1884.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with hollow Suppositories of various sizes and shapes, to meet every probable demand, and into which they can put any kind of medicine or nutriment thus producing firm, smooth, evenly medicated Suppositories that are cheaper and more reliable than those made by the old method.

DESCRIPTION.

Size 0, hollow Suppository is intended for Infants and Children, and also as a vehicle for conveying medicines into the internal ear and into the nasal passages.

No. 1, is designed to convey such medicines into the rectum as require little space.

No. 2 and No. 3 are for the more bulky medicines.

No. 4 and No. 5 are for conveying remedies into the Vagina, where they may be kept in contact with the diseased surfaces by a tampon of sponge or cotton.

Sizes A and B are for Urethral and Intra Uterine medication.

Size C, is especially adapted to conveying nutriment into the system *via rectum*, and will be found of great value in cases where the stomach from any cause will not perform its functions.

DIRECTIONS.—Put the Medicine or nutriment into the Hollow Suppositories before removing them from the box; then taking up the Stoppers with the forceps, warm them slightly, and insert them.

When they cool, the suppositories will be hermetically sealed. Medicines may be triturated in a mortar with a little Butter of Cacao, and then the mass divided and put into the Hollow Suppositories. Powders and liquids may be put in and sealed up without mixing them with other substances. ☞**All Fillings must be COLD.**

Aromatic Sulphuric	Elixir Vitriol.
Tartaric	Acid of Tartar.
Alcohol	Spirit of Wine.
Aloes and Canella Powder	Hiera Picra.
Ammonia, Aqua	Spirit of Hartshorn.
Carb.	Hartshorn, Sal Volatile.
Muriate of	Sal Ammoniac.

T. W. HEINEMANN,

CHICAGO.

FACTORY: 34 & 36 W. MONROE STREET.

OFFICE AND SALESROOM: 67 & 69 LAKE STREET.

MANUFACTURER OF

INDIA RUBBER, MEDICINAL

AND SURGICAL PLASTERS,

Isinglass, Mustard, Court, Corn and Bunion Plasters,

SURGICAL AND ANTISEPTIC DRESSINGS,

ABSORBENT COTTONS AND LINT.

Suspensories, Shoulder Braces, Elastic Trusses, London Supporters, Chest and Lung Protectors, &c.

I also manufacture the following Important Novelties:

COCAINE COTTON,
COCAINE GAUZE,
COCAINE PLASTER.

These preparations were used with phenomenal success at the **Cook County Hospital** during the treatment of the sufferers from the Anarchist Riot at the Haymarket.

COCAINE COTTON.

Strength, 4 per cent., 60 grains absorbent cotton, impregnated with 4 per cent. of Hydrochlorate of Cocaine, in elegant glass jar, with nickel plated screw top.. Per doz. jars, $2 25

COCAINE GAUZE.

Strength, 4 per cent., 300 grains of absorbent gauze, impregnated with 4 per cent. of Hydrochlorate of Cocaine, size of piece, 12x36 inches, in elegant glass jars, with nickel-plated screw top..... Per doz. jars, 9 00

COCAINE PLASTER.

In Rubber Combination. Strength, 1 grain of Cocaine to every 20 square inches, in elegant boxes, each containing one plaster 6x18 inches.....Per doz., 6 00

MAGIC COCAINE COTTON.

For the instantaneous relief of Earache, Toothache, etc. This is 4 per cent. cocaine cotton put up in small vials, 12 of which are mounted on a chromo card, with plated wire stand, to retail at 15 cents each. Per gross bottles and dozen cards..... 9 00
Per single card..... 1 00

The use of Cocaine Cotton, Cocaine Gauze, or Cocaine Plaster in the treatment of painful superficial affections, has this **great general advantage over the solution**, that the **effect endures for many hours**, and therefore avoids the necessity of repeated applications. In Dentistry the cotton has been thoroughly tested with **phenomenal success** by an eminent member of the Northwestern College of Dentistry. An eminent Hospital Surgeon and general practitioner writes: "I find the **cocaine cotton particularly convenient** in examinations and operations for **diseases of the Rectum, Phymosis, Endocervicitis**, etc., and also in **diseases of the eye and ear.** The **cocaine gauze** I have used **with much success as an anodyne dressing** in **indolent ulcers, eczema, fistula**, etc., and I have used the plaster with special **success in Orchitis.**"

Full line these goods in stock with MORRISSON, PLUMMER & CO.

DRUG SYNONYMS REVERSED—Cont'd.

Proper Names.	Common Names.
Aniline	Fuchsine.
Antimony, Oxysulph.	Kermes Mineral.

Adder's Tongue	Ophioglossum Vulgatum.
Agaric	Agaricus Alba or Boletus Laricus.
Agrimony	Agrimonia Eupatoria.

HENRY THAYER & CO.'S

MEDICINAL ELIXIRS, SYRUPS & WINES.

We wish to call SPECIAL ATTENTION to the PRICES of our ELIXIRS, SYRUPS & WINES.

Many retail druggists omit to specify whose goods they want when sending an order to their jobber, and consequently often get goods which cost them more than other brands equally as good or better.

We GUARANTEE that all Elixirs, Syrups & Wines made and sold by us are equal in MEDICINAL ACTIVITY, ELEGANCE OF APPEARANCE, KEEPING QUALITIES and PLEASANTNESS OF TASTE to any in the market. This we WARRANT, and any druggist who buys our goods and is not satisfied in every respect is at liberty to return them.

In addition to this we claim that our prices are much lower than any goods of equal quality and that it will PAY THE RETAILER WELL to take the trouble to specify "THAYER'S" when sending in his order.

We submit a few of our list prices which please compare with those of other makers.

Elixir Calisaya,	$3 50	per gal.	$0 50	per pint.
" " Ferr ted,	4 00	"	60	"
" Gentian and Iron,	3 20	"	50	"
Syrup Hypophosphites, "Fellow's" Formula,	4 00	"	60	"
Syrup Hypophosphites, "Churchill's" Formula,	4 00	"	60	"
Wine of Beef and Iron	3 50	"	50	"
" American Ash,	4 00	"	60	"
" Coca,	4 00	"	65	"

Will send full price-list on receipt of Postal Card.

SPECIAL QUOTATIONS IN LOTS OF 25 GALLONS AND UPWARDS

Nicholl's Compound Syrup of Blackberry.

A VALUABLE REMEDY FOR ALL SUMMER BOWEL COMPLAINTS.

This remedy is compounded almost exclusively from *herbs*, and from those which, by long experience and careful study, have proven themselves to be by far the most efficacious of all remedies known for the cure of diseases incident to the summer months.

It possesses, to the greatest extent, those qualities which not only impart astringency to the lax blood-vessels of the intestines, but at the same time giving the intestines themselves that tonicity which is not possessed by any other remedy.

PRICE, 25 CENTS.

NICHOLL'S CARBOLIC SALVE

Cures Cuts, Wounds, Burns, Scalds, Ulcers, Fever Sores, Scrofula, Salt Rheum, Barber's Itch, and nearly all skin diseas

PRICE, 25 CENTS.

JAMES' GLYCERATED PETROLEI.

A positive cure for Chapped Hands, Lips and Face. The finest remedy made.

PRICE, 25 CENTS.

The North Star Lung and Throat Balsam is a sure cure for Coughs and Colds.

HUBER & FUHRMAN DRUG MILLS,

SUCCESSORS TO HUBER & CO.

COLLECTORS AND GROWERS OF

Medicinal Herbs, Roots, Barks,

SEEDS, ETC.

SOLE MANUFACTURERS OF

HUBER & CO.'S SUPERIOR

Pressed and Powdered Goods.

We make a Specialty of Pressing, Crushing, Grinding and Pulverizing Botanic Medicines.

As collectors and growers, we are enabled to renew our stock every year, and thus have nothing on hand but prime and fresh goods.

You will find our goods neatly wrapped, our packages put up with special reference to the wants of the trade and labeled with the officinal, German and common English names.

Aided by past experience, by careful and prompt attention to business, by exercising the strictest integrity, we hope to perpetuate and increase the steady growth of our trade and merit the confidence of our friends in the future.

WE ALSO CALL YOUR ATTENTION TO OUR

STRICTLY PURE POWDERED BOTANIC MEDICINES,

put up in one pound, round pasteboard boxes, with lifting cover, and five pound, square wooden boxes, with sliding cover. Both are neatly labeled, attractive in appearance, convenient in handling and protect the powder much better than the ordinary paper parcels. These pouders are warranted strictly pure, from fresh and selected stock, and to contain all the medicinal properties of the drug. We do not ask fancy prices for these goods. We are confident that no original package of strictly pure powdered drugs can be furnished for less money.

These goods have lately been offered to the trade, and in all cases where introduced, they are readily approved of and used by the leading pharmacists. Why? Because they cost no more than inferior and adulterated powders are customarily sold for, are uniform in strength, and reliable in quality.

THE GENUINE!

PROF. I. HUBERT'S

MALVINA CREAM AND LOTION

For beautifying the complexion and an infallible and radical cure for Freckles, Tan, Moth Patches, Pimples, Ring Worms, Liver Mole, Salt Rheum, and all Skin Diseases.

The well attested merits in the hundreds of testimonials in my possession, have secured for my preparations a large and ever increasing demand. With no advertisements, this popularity has been acquired by verbal recommendations from one patron to another, which truly proves their genuine worth.

CHAMPION

STICKY FLY PAPER

THE OLDEST AND BEST.

(PATENTED MARCH 18, 1884.)

It will now keep over winter and come out all right in the spring. It will not granulate or dry up, we guarantee this. Never fails and is always ready for use, clean and safe, not poisonous and every sheet warranted. Pays a better profit than any other Sticky Fly Paper and always gives satisfaction. Order early, remember to keep the box laid flat, and WE GUARANTEE THE PAPER WILL KEEP GOOD.

USE BAKER'S

SOLUBLE EXTRACT OF

PURE JAMAICA GINGER

For making Syrup of Ginger Ale, for the Soda Water Apparatus, and Syrup of Ginger U. S. Ph. It will give satisfaction.

Price per Pint, $1.00. Price per Gallon, $6.00.

DR. HEBRA'S

WONDERFUL CURE FOR

DYSPEPSIA.

Is the discovery of an eminent physician who has used it for many years in his extensive practice, and never without the most surprising results.

It is unrivalled as a DYSPEPSIA CURE. It renews and purifies the blood, restores tone and activity to the muscles, and reinvigorates the nervous system. It eliminates the acrid bile and liver poison, neutralizes the acid causes of inflammation, and banishes the morbid secretions that supply abscesses, tumors and boils.

This remedy hardly needs any encomium passed upon it when it is known to emanate from DR. HEBRA, Professor of the University of Vienna, who is one of the leading minds of Europe, not only in Materia Medica, at which he is the head, but in all matters relating to and governing Metaphysical and Physiological developments. It is as efficacious as a Prophylactic as a Therapeutic. Where the disease exists, either confirmed or in the germ undeveloped, this remedy will eradicate and cure it. All have DYSPEPSIA though they may not know it. *The germ is there*, and will expand and develop unless destroyed, and to destroy it no other remedy —and we say it with all due deference to others extant—can be found save DR. HEBRA'S.

In every case it has done its work so quickly and so effectually that we have no hesitation in saying that there is no case of Dyspepsia, be it never so acute or chronic, but DR. HEBRA'S DYSPEPSIA CURE will eradicate it root and branch.

Put up in handsome Cartons of a dozen each, for show window and counter display. Send for catalogues and price list.

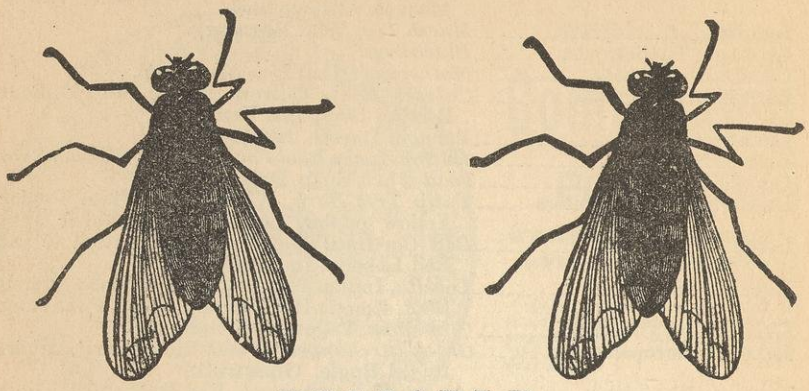

PREPARED ONLY BY J. K. COOK & CO., NEW YORK.

A SIMPLE MODE OF COMPUTING INTEREST.

Multiply any given number of dollars by the number of days of interest required, separate the right hand figure and divide by six. The result is the true interest for such a number of days at six per cent. This rule is simple and true, according to all business usages. There being no such thing as a fraction in it, there is scarcely any liability to error or mistake; and by no other arithmetical process can such desired information be obtained with so few figures.

GAUDICHAUD'S

COMPOUND EXTRACT OF

SANDAL WOOD

A Reliable Remedy for all

DISEASES OF THE URINARY ORGANS.

The best and most widely known remedy in the market for **all diseases of the Urinary Organs**, recent or of long standing.

FOR SALE BY

MORRISSON, PLUMMER & CO.

"Teaberry" is one of our most standard and best selling articles. We predict for it a largely increasing and lasting sale.

The neatest, most *recherche* toilet gem extant, metal plated screw top, certainly the most costly 25c. article in the market.

The dozen on your show case is very ornamental and the show it makes is sure to sell it—thus it makes new trade and does not interfere with the sale of competing goods.

CAUTIONS AS TO POISONS.

To avoid mistakes with poisons when not intending to use them: Keep all active poisons as Arsenic, Corrosive Sublimate, Hall's and Fowler's Solutions, etc., in bottles painted with rings of black, or a large black square under the label, in the center of which a death's head label might be pasted.

This not only prevents using such medicines by mistake in place of comparatively harmless remedies, but also calls attention to their dangerous character when using properly and incites closer notice of quantities prescribed.

It was the custom of an experienced prescription clerk when filling a prescription, to keep all bottles used from, either on the counter before him or out of place, until the prescription was finished or all the ingredients put together, and then to return the bottles to their places as he checked them on the prescription. This precaution at one time prevented the completion of some troches containing Arsenic used for powdered Acacia, while straightening the bottles on the shelf the error was discovered.

CALOMEL CHANGING TO CORROSIVE SUBLIMATE.

Experiments by German chemists seem to show that alkalies and their carbonates decompose Calomel and produce poisonous compounds, and they assert that Calomel pills made with sugar containing hydrate of lime, may in time become dangerously poisonous through the action of the lime.

PAPILLON

(CLARKE'S EXTRACT OF FLAX.)

SKIN CURE, $8.00 PER DOZ. Used externally for all diseases of the cutaneous system. Allays all inflammations.

CATARRH CURE, $8.00 PER DOZ. is the only purely vegetable Catarrh remedy, and as such, it is guaranteed to be free from any injurious effects.

COUGH CURE, $8.00 PER DOZ. Stands unrivaled for Whooping Cough, Bronchial Cough, and similar affections of the air passages and throat.

CLARKE'S FLAX SALVE.

"BEST SALVE ON EARTH."

CAUTIONS IN DISPENSING.

Detached caution labels, as "poison, to be shaken," and "for external use," should be placed on the upper part of the bottle, near the shoulder, because there they are read first, which is of the utmost importance. If pasted at the bottom of the bottle, below the written label, the hand that holds the bottle conceals involuntarily the note of warning which the dispenser was most anxious to convey. When two tablespoonfuls of an 8-ounce mixture is ordered to be taken the direction ought to state "an eighth part," and the bottle should be graduated; a large tablespoon holds an ounce, hence double doses may be given if too literally following the directions.

TREATMENT IN CASES OF POISONING.

SEND FOR A COMPETENT PHYSICIAN AT ONCE.

GENERAL TREATMENT.

Vomit the patient freely with warm water and mustard, Ipecac or salt water, then give white of eggs freely, or of lard, olive, or other bland oil, except in phosphorous poisoning.

If an acid has been taken, give freely of Calcined magnesia, Chalk, or other alkali.

If the poison has been an alkali, give oil freely, and after vomiting neutralize with acid drinks, followed by more oil and second vomiting, if acids will not make poisonous compounds with alkali.

SPECIAL TREATMENT.

ACIDS: Give quickly Calcined magnesia, stir up with water to a thin paste. Soap shavings in water, as a very thick suds; or in the absence of these, Chalk, powdered and mixed with water. After the acid is fully neutralized and the stomach emptied, soothe with alkaline mucilage, milk with magnesia in it, or sweet oil.

FOR ACONITE, BELLADONNA AND DIGITALIS: Vomiting, stimulants, strong coffee, Opium, and hot applications. Opium only under care of a physician or experienced person.

AQUA AMMONIA, OR HARTSHORN: If taken undiluted is a violent poison. Give *vinegar*, instantly, mixed with a little water; this acts by neutralization. Vegetable oils, in large quantity, furnish the next best antidote, the ammonia acting upon them to form soap.

FOR ARSENICAL POISONING, RATS BANE, PARIS GREEN, ETC.: Vomit with Ipecac, solution of Alum or salt water. Give white of egg freely, and follow with weakened solution of perchloride of iron, or dialized iron.

If patient is very weak use hot applications, and very cautiously of Alcoholic stimulants.

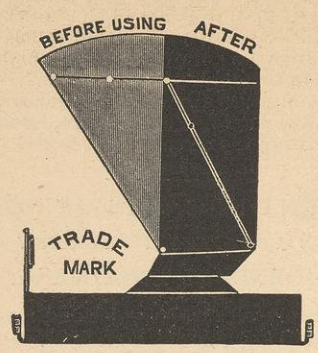

BELLADONNA: See Aconite.

CHLORAL HYDRATE: Vomiting, stimulants, strong coffee, hot baths, and dropping the head lower than the rest of the body, to cause a flow of blood to the brain.

CHLOROFORM: Death from Chloroform need never occur, according to the doctrine of Syme, Lister and Hughes, if this simple rule be observed: "Never mind the pulse, never mind the heart, leave the pupil to itself. Keep your eye on the breathing; and if it becomes embarrassed to a grave extent, take an artery forceps and pull the tongue well out." Syme never lost a case from Chloroform, although he gave it 5,000 times. This simple rule enabled him (so he thought) to make this excellent record.—*Lancet.*

Use Nitrate of amyle in inhalation, and lower the body so as to cause the blood to flow to the head.

TOUSEY'S

ENAMEL DRESSING

Preserves and Restores Original
Black Lustre Finish to

Carriage Tops, Dash-boards, Pads, Satchels,

RUBBER GOODS, ETC.

This dressing is composed largely of OIL, has a good wearing body, will not wash off, and will retain a brighter lustre longer than any other Dressing made.

One trial will convince you of its value, after which you will use no other.

It is used by the leading Carriage Manufacturers of the country in preference to all others.

We refer by permission to a few of the largest Carriage Manufacturers, who pronounce our Enamel Dressing the best. STUDEBAKER BROS., Chicago; C. P. KIMBALL & Co., Chicago; THOS. H. BROWN & SON, Chicago.

MANUFACTURED BY

TOUSEY & CO.,

200 E. Kinzie Street, **CHICAGO, ILL.**

TREATMENT IN CASES OF POISONING—Cont'd.

CORROSIVE SUBLIMATE AND OTHER MERCURIALS, BED BUG POISON, ETC.: Mix up quickly the *whites of a dozen eggs*, with a quart of cold water, give a cupful of the mixture every two minutes till the stomach can hold no more. If you have not eggs enough use what you have and make up the deficiency with *milk*. Wheat flour, mixed with water, is good. Use the stomach-pump if it can be had quickly, or vomit with Mustard, Ipecac, or any vegetable nauseant.

COPPER, BLUE VITRIOL, VERDIGRIS, POISON FROM COPPER VESSELS, ETC.: Give an emetic promptly, then white of eggs, milk, oil or mucilage; afterwards empty the stomach and give magnesia *in watery* paste.

DIGITALIS: See Aconite. Alcohol in two or three drachm doses, diluted, is said by Dr. B. F. Stockett, of Peoria, Ill., to be an antidote in Digitalis poisoning—dose to be repeated every twenty minutes while needed.

LAUDANUM: See Opium.

LEAD POISONING: Epsom salts in large doses, with Ipecac until vomiting and purging sets in. Use white of egg, if poison is a lead salt taken into the stomach, and give plenty of fresh milk. Strychnia is often found valuable when there is paralysis.

Fresh milk used regularly in diet is said to prevent lead colic with those who work in paint or lead.

LYE POISONING: Give freely of oil or warm lard and white of egg, and if possible, cause vomiting after giving the oil.

MERCURIALS: See Corrosive Sublimate.

OPIUM, MORPHIA AND LAUDANUM: Vomiting and white of egg. If the poison has been just taken give a solution of Tannin to prevent ready absorption of the poison. If already diffused in the system use Tincture belladonna in full doses until the pulse quickens and the pupils of the eye begin to dilate, observing great caution after these signs appear. Strong coffee is beneficial, also electric currents and frequent application of cold water so as to shock the system. Keep the patient in motion constantly if practicable.

If drowsiness comes on take the patient into the open air; dash water into the face, *by all means keep him awake*. If once allowed to fall asleep it may be impossible to arouse him.

PHOSPHOROUS, RAT PASTE, MATCHES, ETC.: Vomit promptly, then fill the stomach with white of eggs, then flour paste, mucilage or magnesia, and vomit again. *Do not use any oil or grease*, as this hastens the poisonous action.

SILVER, NITRATE: Use moderately strong solution of common salt, and after the vomiting give freely of fresh milk.

STRYCHNIA AND ITS SALTS: Vomiting, and if the poison has been recently taken use solution of Tannin, and very freely of white of egg. If convulsions appear use Chloroform, Chloral hydrate, or opium.

Professor Bellini, after a long series of experiments on poisoning by Strychnia and its salts arrives at the following conclusion: That the best antidotes are Tannic acid, Chlorine and the tinctures of Iodine and Bromine. Chlorine attacks the Strychnia even after it is diffused through the system. He believes the arrest in the symptoms by Tannin to be due, not to chemical action, but to its astringent effects on the mucous membrane of the stomach, whereby the absorption of the poison is rendered difficult.

Excellent results follow the very free use of Bromide of Potassium in *large* doses frequently repeated until relaxation of muscles appear. In severe cases doses may be as large as half an ounce, repeated as the effect seems to be wearing off.

TETANUS or Lockjaw has been cured by repeated doses of Bromide of Potassium given in heavy doses, ranging from two to four drachms, and repeated as fast as the effects of each dose seem to be wearing off. Cases where one-half to one pound have been thus taken within fifteen to twenty days and successfully, are on record.

TREATMENT IN CASES OF POISONING—Cont'd.

REMEDIES FOR POISON-OAK ERUPTIONS: 1st.—A strong solution of Bicarb. soda applied soon after the eruption appears, is frequently efficacious.

2d.—Fluid extract of serpentaria, applied by brush and cloths to the eruption, is said to be a successful remedy.

3d.—Dr. Q. C. Smith sends to the *Pacific Medical and Surgical Journal* the following formula for use in this affection:

℞. Acid Carbolic ..... ℥ ss,
Ol. Sassafras .....
Ol. Juniperi ..... aa ℥ i.
Ung. Zinci Oxide (Benzoated) ..... ℥ *i.*

M. Apply from two to four times daily, and before going to bed wash the inflamed part thoroughly with warm water and soap.

4th.—Dr. Ward in the *Medical Record* calls attention to the great value of Labarraque's Solution, or Liq. Chlor. Soda, in cases of poisoning from the Rhus Toxicodendron or Poison Oak: If the skin is not broken use its full strength several times a day, otherwise dilute the solution with five or six parts of water.

From a pamphlet on the use of PARIS GREEN as a destroyer of the *Colorado Potato Beetle*, issued by C. T. Raynolds & Co., we copy the following;

PRECAUTION IN THE USE OF PARIS GREEN.

All packages, whether large or small, should be plainly marked POISON.

There is great danger in mixing this green for potato bug and cotton worm poison, owing to the fine dust which arises in the process, which is inhaled, and also rapidly absorbed by the pores of the skin, especially if the person using it should be in a state of perspiration. To guard against this, the hands and face (particularly the nostrils) should be protected as much as possible, and should be carefully washed after working in it, or in any of the preparations of which it is an ingredient. As it penetrates and poisons WOOD—gets into the seams and crevices of articles made of metal, and even into earthenware that is at all porous; ALL HOUSEHOLD UTENSILS, or ANYTHING IN BARN OR STABLE (which cattle or horses could have access to) in which the article may have been mixed, or from which it has been used, should be carefully set aside, and NEVER AGAIN USED FOR ANY OTHER PURPOSE.

Malignant sores are not infrequentlv caused by scratching the skin when itching or irritated from handling the green. It should be constantly borne in mind that it is a more dangerous and deadly poison than arsenic; and farmers, planters, and others, when purchasing, should be duly cautioned to exercise the utmost care in using it.

CURE.

The free use of milk as a beverage is recommended, but we have found Hydrated peroxide of iron (a simple, harmless remedy) the best antidote. Sores caused by the green should be well covered with it, as with an ordinary salve, and a teaspoonful in a wine glass of water should be taken twice a day, internally, while working with the green. This remedy can be obtained from any druggist or chemist, but we give the following recipe for making it: Take

2 parts Commercial Nitric Acid or Aqua Fortis,
1 part of water—to which add slowly, stirring occasionally,
8 parts Copperas (Sulphate of Iron); and when dissolved,
Add water 10 times the bulk of the whole.

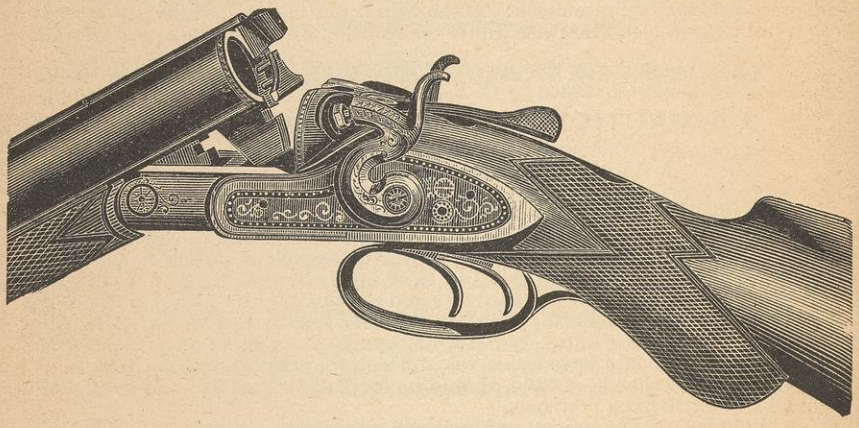

To this solution add Aqua Ammonia gradually, and stirring in as long as a precipitate of a dark red brown—iron rust color—is formed. This precipitate must then be filtered and washed two or three times to remove the Sulphate of ammonia. This leaves the Hydrated peroxide of iron—or antidote for Paris green and Arsenic—which, when taken internally, combines with any Paris green that may be in the stomach, forming an Arseniate of iron, which is harmless, and passes from the system in the natural course.

HOW TO TREAT A SUN STRUCK PERSON.

Take the patient at once to a cool and shady place, as near as possible Loosen the clothes thoroughly about his neck and waist. Lay him down with the head a little raised. Apply wet cloths or broken ice to the head, and mustard or turpentine to the calves of the legs and the soles of the feet. Give a little weak whisky and water if he can swallow. Meanwhile let some one go for the doctor, you can not safely do more without his advice.

SUNSTROKE is a sudden prostration due to long exposure to great heat, especially when much fatigued or exhausted, It begins with pain in the head, or dizziness, quickly followed by loss of consciousness and complete prostration.

HOW TO DECIDE WHETHER DEATH HAS TAKEN PLACE.

Dr. Hugo Magnus, the eminent professor of physiology in the University of Breslau, Germany, in a recent letter to the Iowa Board of Health, gives what he terms a "positive sign of death." "All that one has to do," he says, "is to tie a string firmly around the finger of the supposed corpse. If there is the least spark of life left—that is, if the blood circulates at all—the whole finger, from the string to the tip will gradually turn a bluish red, from engorgement of the veins. Nothing else, no post-mortem infiltration, can be mistaken for this appearance." This simple and seemingly infallible test can be applied by a layman as well as a physician.

2d.—Apply the flame of a candle to the tip of one of the great toes of the supposed corpse. and a blister will immediately rise. If the vitality is gone this will be full of air, and will burst with some noise if the flame be applied to it a few seconds longer; if life is not extinct, the blister will be full of water and will not burst. Though very few are actually buried alive, many may be abandoned as dead while life is still in them, and then die from being handled and exposed as corpses often are. The test therefore should be applied as soon as life is supposed to be extinct, and before an undertaker is called in.

HOW TO RESTORE DROWNING PERSONS.

The frequency of accidents on water should induce every person, whether old or young, to learn the best means known to physicians for resuscitating those who are taken from the water. Just how long a person can lie in water and be only asphyxiated, varies, as observation proves. Prompt, intelligent and persevering means has failed to restore when the body has been in the water only three minutes; the same means has been successful at other times when ten or more minutes have passed. The symptoms are the same in nearly all cases—respiration slow, labored or absent for minutes, pulseless, sometimes heart sounds are inaudible and yet they are not apparently dead, as efforts to resuscitate often prove. The following rules, laid down by Marshall Hall, the great Scotch philanthropist and physician, are generally used by the faculty and, as they are so easily understood and practiced, are both in this country and Europe placarded by boards of health in cities, around docks and vessels, and many a person has been saved by them.

"First.—Treat the patient instantly on the spot, in the open air, freely exposing the face, neck and chest to the breeze, except in severe weather.

Second.—In order to clear the throat, place the patient gently on the face, with one wrist under the forehead, that all fluid, and the tongue itself, may fall forward and leave the entrance into the wind-pipe free.

Third.—To excite respiration, turn the patient slightly on his side, and apply some irritating or stimulating agent to the nostrils, as veratrine. dilute ammonia, etc.

COLOGNE SPIRITS,

ALCOHOL, GIN AND BRANDY.

The especial attention of DRUGGISTS is called to our DOUBLE STAMPED WHISKIES and GINS, on account of their ABSOLUTE PURITY and freedom from FUSEL OIL.

The Whiskies, both RYE and BOURBON, are put up in ten-hoop packages, under different brands, in barrels and half barrels.

The Gin we make in two qualities and under two brands, viz.: RYE MALT ANCHOR and COLUMBIAN and in packages of 45, 24, 15 and 10 gallons. We sell only to wholesale dealers.

TRADE SUPPLIED BY

WHOLESALE DRUGGISTS.

HOW TO RESTORE DROWNING PERSONS—Cont'd.

Fourth.—Make the face warm by brisk friction, then dash cold water upon it.

Fifth.—If not successful, lose no time, but, to imitate respiration, place the patient on his face, turn the body gently but completely on the side and a little beyond; then again on the face, and so alternately. Repeat this movement deliberately and perseveringly, fifteen times only in a minute. When the patient lies on the thorax, this cavity is compressed by the weight of the body and expiration takes place. When he is turned on the side this pressure is removed and inspiration occurs.

Sixth.—When the prone position is resumed, make a uniform and sufficient pressure along the spine, removing the pressure immediately before rotation on the side. (The pressure augments the expiration, the rotation commences inspiration.) Continue these measures.

Seventh.—Rub the limbs upward, with firm pressure and with energy. (The object being to aid the return of venous blood to the heart.)

Eighth.—Substitute for the patient's wet clothing, if possible, such other clothing as can be procured, each bystander supplying a coat or cloak, etc. Meantime, and from time to time, to excite inspiration, let the surface of the body be slapped briskly with the hand.

Ninth.—Rub the body briskly until it is dry and warm, then dash cold water upon it and repeat the rubbing.

Avoid the immediate removal of the patient, as it involves a dangerous loss of time; also the use of bellows or any forcing instrument; also the warm bath and all rough treatment."

HOW TO INDUCE SLEEP.

It is a common expression that to take food immediately before going to bed and to sleep is unwise. Such a suggestion is answered by a reminder that the instinct of animals prompts them to sleep as soon as they have eaten; and in summer an after-dinner nap, especially when that meal is taken at midday, is a luxury indulged in by many. A twelve hours interval without food explains many a restless night, and much of the head and backache, and languid, half-rested condition on rising, which is accompanied by no appetite for breakfast. This meal itself often dissipates these sensations. It is, therefore desirable, if not essential in many cases, that the last thing before going to bed should be the taking of food. Sleeplessness is often caused by hunger, and a tumbler of milk, if drank in the middle of the night, will often put people to sleep when hypnotics would fail of their purpose. For some persons, food before rising is an equally important expedient. It supplies strength for bathing and dressing, and is a better morning "pick-me-up" than any hackneyed "tonic."

ON THE ADULTERATION OF DRUGS.

BY C. B. ALLAIRE.

This is a subject of so wide a scope that to treat of it fully would require more space and time than are at present available. We shall therefore take only one line of goods for consideration, viz., that of Powdered Drugs. The detection of adulterations is a work which has heretofore been considered beyond the reach of the ordinary druggist with his ordinary facilities; but much has been done in the last few years to make this work easier and more certain in its results.

Chemistry offers but very little assistance, as we have few alkaloids or strictly chemical substances to deal with. It is possible by determining the

SOMETHING NEW!

ROOTS AND BARKS

IN ONE OUNCE PACKAGES.

PROPERTIES.

Tonic, Diuretic, Antiseptic. Used in dyspepsia and jaundice, as a laxative in constipation and piles, as an alterative in catarrh, leucorrhœa, gonorrhœa, etc. Indians are said to use the powder externally in the treatment of old ulcers etc. Infusion, Golden Seal, one ounce, Hot Water, one pint. Dose, a wineglassful.

COMMON NAMES.

Golden Seal, Yellow Paint Root, Yellow Root, Orange Root, Yellow Puccoon, Ground Raspberry, Eye Root, Eye Balm, etc., etc.

In compliance with a small but steady demand from the trade, we have decided to add to our list a complete line of Roots and Barks in one ounce packages, in a style uniform with our ounce packages of Herbs, Leaves and Flowers now so familiar to the entire drug trade of the United States and other English speaking nations.

We are satisfied that this new line will be appreciated by the trade. These goods may be obtained from the jobbing trade generally by specifying A. W. & Co.'s on orders.

Allaire, Woodward & Co.,

PEORIA, - - - ILLINOIS.

Sold by MORRISSON, PLUMMER & CO.

ON THE ADULTERATION OF DRUGS—Cont'd.

percentage in the ordinary way, of active principles, such as resins, etc., to form an approximate idea of the value of a suspected article, as in the case of powdered jalap, golden seal, mandrake, etc., but if this test shows the article to be of inferior quality, we are at a loss to say whether it is due to the use of an inferior grade of crude material or to the addition of foreign inert matter. Therefore while the goods may be rejected on general principles it is impossible to give a good reason for the complaint.

There are some drugs such as oily seeds and ergot which are said to be devoid of starch, and these, if tested with a solution of iodine, ought not to give the customary reaction for starch; but if mustard flour is colored with turmeric, though this may not be considered an adulteration, it contains enough starch to destroy the value of the iodine test. Mustard which is to be tested in that way should be free from all coloring.

Inasmuch as chemistry or pharmacy afford so little assistance in the solution of these questions, we are compelled to look in some other direction for the desired relief. The microscope, we think, will afford the best means for this purpose, and from the writer's experience it is predicted that in a few years a knowledge of its use will be considered indispensable and even a requisite qualification for graduation in all the leading colleges of pharmacy in the United States.

It will be the object of this paper to show how examinations in this way of powdered drugs may be made quickly and with some degree of certainty. There is very little literature on this special subject to be referred to. When the writer appealed to one of the most expert microscopists in this country for suggestions, he was told to treat the powders as opaque objects, an utterly impossible thing to do with the objectives necessary for the work.

Many people have an idea that the magnifying power of a microscope lies in the stand, and they speak of a microscope which magnifies one hundred or five hundred times as the case may be; such is not the case. When one has a good stand he may add lenses or objectives* at pleasure and make his stand of as high a power as he pleases. All good stands now made have what is called the society screw,† and the objectives made by one house will now fit the stands made by another.

We will take it for granted that the reader is supplied with a good stand and with, say three, good objectives ranging from one inch to one-sixth inch,‡ these with two eyepieces, *A* and *B*, or 1 and 2 as they are termed by different makers, will give a range of powers up to about 750 diameters, which is ample for our present purpose. If a suitable stand has not been already procured, we would suggest that the advice of some one of experience be secured in making a selection, as a mistake in this respect will prove a serious detriment in accomplishing satisfactory future work. If the amount to be expended is limited it is better to secure a good stand at any rate, and the accessories‖ can be added from time to time as circumstances may require.

In the beginning only low powers will be needed, as there will be found plenty of preliminary work to be done in learning how to prepare slides and in mounting objects, in the management of the light, focusing, etc., also some glass slides three by one inch and some thin round cover glasses.

In using the microscope the eye must first become familiar with the objects seen, in the same way that we learn to recognize the ordinary objects of

---

*The lenses at the lower end of the stand are called objective because they are nearest the object.

†That is a connecting screw of uniform gauge between the objective and the tube.

‡The terms one inch, half inch, etc., are arbitrary terms so far as the working or focal distance is concerned, the lowest fractions having the highest power (give true definition).

‖This term applies to eyepieces, objectives, camera lucida, polarizing prisms, condensers and other sub-stage apparatus.

ON THE ADULTERATION OF DRUGS—Cont'd.

daily life. If a person has never seen corn or oats it can hardly be expected that he would recognize them if seen mixed. So also it is necessary to see corn starch alone and in a condition known to be such in order to recognize it when used as an adulterant. It is necessary, therefore, to educate the eye in this respect by examining all of the more prominent substances, such as wheat and buckwheat flour, corn and potato starches and such other substances as are liable to be used as adulterants. I believe that it is impossible to adulterate drugs in such a way that the sophistication can not be detected even with our present state of knowledge on the subject, that it may be an exceedingly difficult matter to detect the nature and percentage of the adulterant, I admit. But when a person is perfectly familiar with the appearance of say pure powdered Ipecac under the microscope it becomes a comparatively easy matter to detect the presence of a foreign body, and if the percentage of foreign matter is large enough it may be considered not accidental, but an intentional adulteration.

Nearly all vegetable substances, as before stated, contain starch, these starch granules differ from each other in form and markings just as distinctly as do the crude substances in their natural states. So far as the writer is informed these starches furnish the best means of identifying substances in a finely divided state, and it becomes just as easy to determine finely ground wheat flour from corn flour of the same degree of fineness and color as if the two articles were presented in the natural form and colors of the respective grains, on the same principle it becomes easy to detect the presence of wheat flour or middlings used as an adulterant in powdered ipecac root or other powders. By this remark I do not mean to convey the impression that wheat or any other starch grains are always of identically the same shape, size or appearance, for they are not, but they come under the same general shape and appearance as grains of wheat do to the naked eye, though no two of them are exactly alike. Some illustrations of starches are shown in connection with this article, these are not drawn to scale as the object is more to show the comparative shape, outline and markings than to show the comparative size, although with few exceptions they are all drawn from slides under the same powers. The subjects are taken mostly from work recently done and represent adulterations as found in commercial goods of supposed purity. The arrangement is arbitrary and designed to show only the points of most interest; we will consider them in detail.

Fig. 1 shows at *A* a section of mustard seed (yellow California) without the testa. *Ac* shows the cellular tissue, and *Ab*, starch forms. The writer's attention was attracted to this subject by the examination of commercial samples offered for sale guaranteed of absolute purity. Every sample contained starch forms in small percentage. All authorities on the subject state that mustard contains no starch in the mature seeds. Thinking the presence of starch forms was due to a slight mixture of immature or foreign seeds, a sample was selected and powdered, and still the starch forms were present. These forms are colored blue by iodine and polarize the same as starch grains, but faintly, and are about the size and shape of medium wheat starch, and up to the present writing the writer is not satisfied that they are not starches, though the percentage is so small that it could never be considered as an adulterant and entirely too small to be seen when treated with iodine in the ordinary way. This subject was taken to show the extreme delicacy of the microscope test.

Fig. 2 shows the presence of unconverted potato starch in a sample of dextrine, *Bc* showe the grains in their normal shape and with their peculiar markings. It will be noticed that the hilum or nucleus is located in the small end, differing from Maranta starch in this respect as shown in fig. 6, group 1. *Bd* shows the outlines and markings of starch grains partly converted, and *Bb* shows a broken and a normal grain as shown under polarized light. This effect furnishes a most excellent test for starches, as oil globules, air bubbles, aleurone grains and similar bodies do not polarize; cellular matter, especially epidermal

Gentlemen's Belt. *Electric Suspensory.*

DR. HORNE'S ELECTRO-MAGNETIC BELT.

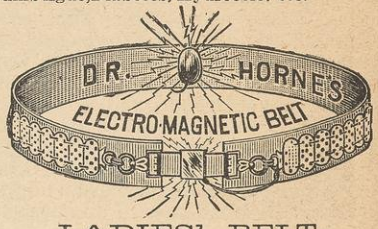

BEST SCIENTIFIC MEDICAL BELTS

This Electric Belt will cure the following Diseases without Medicine:

Pains in the Back, Hips, Head or Limbs, Nervous Debility, Lumbago, General Debility, Rheumatism, Paralysis, Neuralgia, Sciatica, Disease of Kidneys, Spinal Diseases, Torpid Liver, Gout, Exhaustion, Emissions, Asthma, Heart Disease, Dyspepsia, Constipation, Erysipelas, Indigestion, Weakness, Impotency, Catarrh, Piles, Epilepsy, Dumb Ague, Diabetes, Hydrocele, etc.

Belts forwarded to any part of the United States, at my expense, on Receipts of Price.

Electro-Magnetic Belts, new style	$10.00
Electro-Magnetic Belts, full power	15.00
Electro-Magnetic Belts, 9 improvements	20 00
Electro-Magnetic Trusses	10.00

LADIES' BELT.

Dr. W. J. HORNE,
Inventor, Proprietor and Manufacturer
OFFICES: { 191 Wabash Ave., Chicago.
{ 702 Market St., San Francisco,

An Ex-Druggist says "They are worth Car-Loads of Medicine."

DENVER, COL., Feb. 9, 1887.

Dr. W. J. Horne, Inventor, 191 Wabash Avenue, Chicago, Ill.—Dear Sir: My opinion of the merits of your Electro-Magnetic Belts (and Electric Trusses for Rupture) based on the reports received from thousands who have purchased them of me in this city during the last four years is that they GIVE BETTER RESULTS, in much less time, without injury to the system, than the CAR-LOADS of patent medicines I sold in twenty years while engaged in the drug trade, in the bilious and rheumatic State of Michigan.

For rheumatism, lame back, kidney diseases, sleeplessness and all nervous troubles in male or female they act like magic. No wonder unprincipled imitators are seeking to steal your trade and dispose of their inferior and worthless goods by calling them electric, magnetic, galvanic, etc., and offering them ON TRIAL. (Did they ever refund a dollar) "at cut prices to introduce," and in various ways induce people to buy their worthless articles?

Go on in the good work—manufacturing genuine Electric Belts and Trusses of merit. You can have my orders. I want nothing better, for they give complete satisfaction.

Respectfully yours, CHAS. K. WILLIAMS, Drug Broker and Manufacturers' Agent.

A Physician says "All of my patients are Satisfied."

GENEVA, NEB., Jan. 31, 1887.

Dr. W. J. Horne, Inventor.—Dear Sir: I recommend your Electric Belts to all who suffer with any nervous trouble, any chronic, liver or kidney disease. All of my patients that are using your Electric Belts are satisfied. Fraternally, M. PROPST, M.D., Physician and Surgeon.

A Drug Firm at Neenah, Wis. says.

NEENAH, WIS., July, 18, 1885.

Dr. W. J. Horne, Chicago, Ill.—Dear Sir: Please send us one of your full power fifteen dollar Belts, with suspensory for ordinary sized person. We have more confidence in your Electrical Appliances than in any others made. When a customer does not know what kind he wants, and says he wants the best, we always order yours. All that we have sold of yours give good satisfaction. Yours., etc., WILDIE & GLEASON, Druggists and Pharmacists.

A Druggist says.

AMBOY, ILL., Jan. 27, 1887.

Dr. Horne, Chicago.—Dear Sir: I have sold three of your Electric Belts recently, and they are giving the very best satisfaction. Yours respectfully, J. M. ARNOLD, Druggist.

The Trade Supplied by Morrisson, Plummer & Co.

ON THE ADULTERATION OF DRUGS—Cont'd.

cells frequently give beautiful effects under the polariscope, but of such different character as to outlines, that a very little practice will be all that is necessary to obviate any confusion.

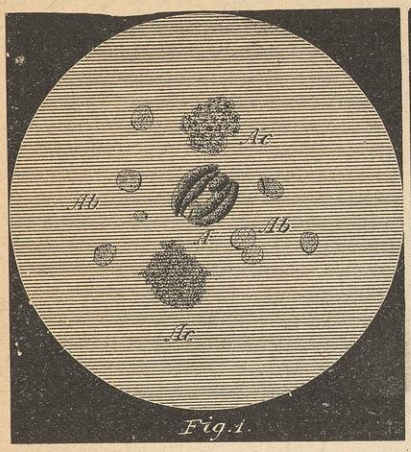

Fig. 1. *A*, Section of mustard seed, without the testa. *Ac*, cellular tissue. *Ab*, starch forms.

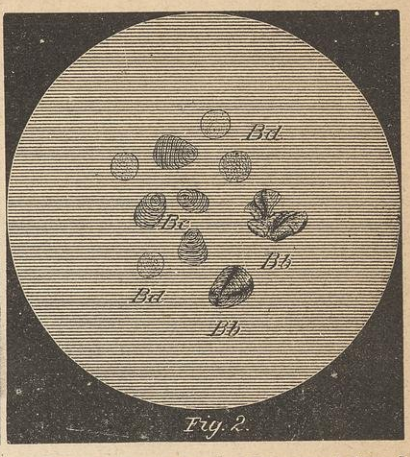

Fig. 2. Potato starch. *Bc*, normal shaped grains, showing their peculiar markings. *Bb*, normal and broken grains under polarized light. *Bd*, markings of starch grains partly changed to dextrine.

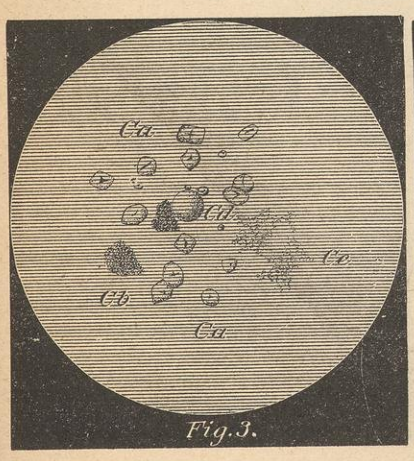

Fig. 3. Extract licorice adulterated with corn starch. *Ca*, corn starch. *Cb*, extractive matter. *Cc*, cellular matter. *Cd*, air bubble.

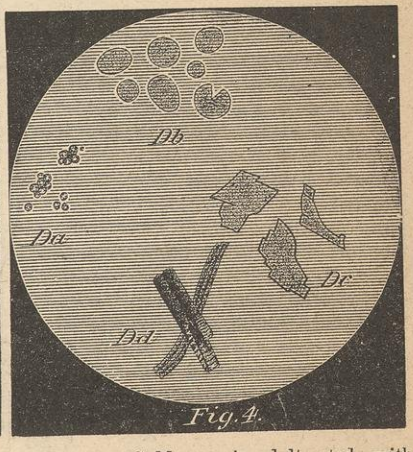

Fig. 4. Golden seal, adulterated with wheat flour. *Db*, wheat starch. *Da*, starch of golden seal. *Dd*, cellular structure peculiar to golden seal. *Dc*, fragments of cellular membrane.

Fig. 3 shows a field of Extract of Licorice, largely adulterated with corn starch, as shown at *Ca*. This was sold by the manufacturer for pure goods.

STEKETEE'S
Family Medicines.

We have at all times on hand a full supply of Steketee's Celebrated Remedies. No Medicine comes higher recommended.

PRICE LIST.

"SYRACUSE"
SUSPENSORY BANDAGE.

With Self-Adjusting Sliding Loop at back of Pouch.

The Pouch (A) is supported by two bands, the large band (B) passing around the body, and the small band (C) passing around the buttocks and through the sliding loop (D). The loop (D) slides freely on the small band (C) and thereby allows the pouch to adjust itself just as the movements of the person or clothing require; consequently the Suspensory will fit, no matter what position the body may assume.

The sliding loop (D) makes Suspensory SELF ADJUSTING and gives FREEDOM OF MOVEMENT, PREVENTS PULLING, CORDING and CHAFING. Gives SUPPORT WITHOUT RESTRAINT of MOTION, renders DISPLACEMENT IMPOSSIBLE. Makes our Suspensory PERFECT FITTING, and affords COMFORT and RELIEF to WEARER.

PRICE LIST.

No. 16	**Quality**	.....	**per doz.,**	**$3 00**	**No. 36**	**Quality**	**per doz.,**	**$18 00**

Trade Supplied by MORRISSON, PLUMMER & CO.

ON THE ADULTERATION OF DRUGS—Cont'd.

Cb represents the extractive matter which might be of any other shape. *Ce* shows cellular matter present, and *Cd* is an air bubble, this of course has no nucleus, air bubbles are always round, unless crowded out of shape by the density of the mounting medium, or the pressure of solid bodies on either side, they are very easily recognized after a little practice.

Fig. 4 shows a slide of Golden Seal adulterated with wheat flour, the starch of which is shown at *Db*. The aleurone or gluten grains should also be shown as corroborative of the wheat starch, but were by oversight omitted in making the sketch, they are exceedingly small globular bodies, of about the size of the smallest golden seal starch grains shown at *Da*. The peculiar cellular structure of the golden seal root is shown at Dd, and fragments of cell membrane at *Dc*.

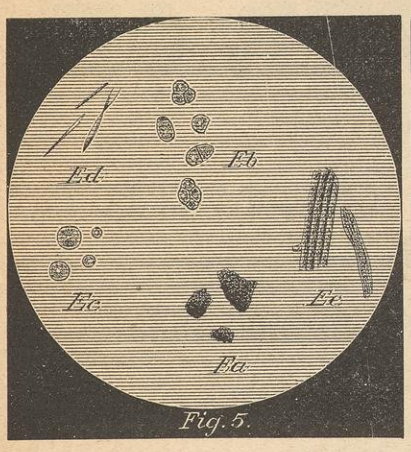

Fig. 5.

Fig. 5. Powdered ipecac adulterated. *Eb*, starch grains of ipecac. *Ed*, crystals peculiar to ipecac. *Ea*, resinous matter. *Ee*, cellular tissue. *Ec*, starch of wheat.

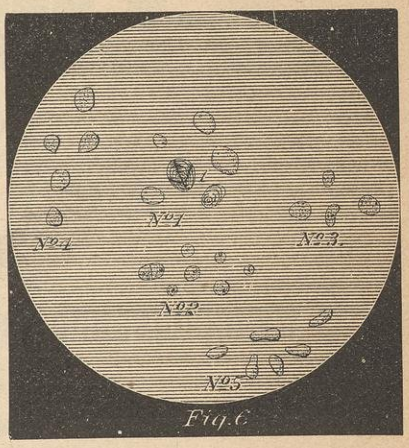

Fig. 6.

Fig. 6. Group 1. Arrowroot starches. Group 2. Tapioca starches. Group 3. Jamaica ginger starches. Group 4. Race ginger starches. Group 5. Galangal starches.

Fig. 5 shows a sample of Powdered Ipecac also adulterated. The Ipecac starch grains being shown at *Eb*. This form of starch is quite common and worthy careful study. It will be noticed that the grains are formed in clusters of two to five or more, when afterwards separated, one side shows a flattened surface, which was the point of contact during the period of growth, giving the grain the appearance of having been cut off, modifications of this shape are quite common, and will be seen in group 2, Fig. 6. Sometimes these forms settle on the flattened end, and then in looking at them they appear to be round. So also flattened grains will sometimes be seen on edge, giving them an oval appearance. Also starches such as corn, which have characteristic cracks on them, will present themselves with this portion obscured. Such may be turned over and examined on all sides by gently pressing the cover glass with a needle.

To return again to our description of Fig. 5, we have at *Ed*, crystals shown, peculiar to that drug, at *Ea* fragments of resinous matter, at *Ee* portions of cellular tissue, and at *Ec* starch of the adulterant.

Fig. 6 shows a collection of starches which are given to illustrate the constant variation in different drugs. Group 1 being Maranta starch, group 2 Tapioca starch, group 3 Jamaica ginger starch, group 4 Race ginger starch, group 5 Galangal starch. One in group 1 shows a polarized starch grain, which

ON THE ADULTERATION OF DRUGS—Cont'd.

though apparently like the polarized potato starch in Fig. 2, is in reality quite different; in the potato starch, two straight lines cross at the hilum which is in the small end, in the arrowroot starch the hilum is nearer the large end, and the black lines apparently meet there, but can not be said to cross at apparent right-angles as in the potato starch, this is due to the position as seen.

It will be seen by these illustrations that so far no two starches are exactly alike, and the writer believes that this rule extends through all starch-bearing substances, but we are not dependent entirely upon the starches for evidence in detecting adulterations, as corroborative, we have spiral and dotted ducts, cellular tissue, crystals, stone cells, vegetable hairs, and many other peculiarities that the careful observer will note. As stated before comparatively little has, so far, been done in this field of investigation, but enough has been done to establish the principle and encourage future investigation and painstaking work.

In making the drawings for these illustrations, they are shown as the objects appear under cheap objectives of good quality, for the reason that they may be referred to by persons having the same facilities. Whoever may have better lenses procured because they were really needed, will know probably the value of such, and make due allowance for necessary corrections.

It was not thought best to show lines and markings which the ordinary observer, would never be able to see with his limited facilities, or rather to leave out optical defects liable to be met with.

For the casual examination of powders, a glass slide should be carefully cleaned, a drop of clean water placed in the center, and a very small portion of the suspected powder stirred in, taking care to avoid the formation of air bubbles, then taking a clean cover glass place it gently on the moistened powder. If the space between the slide and cover glass is not filed with the water, it should be, if there is an excess of water around the edge of the cover glass it may be taken up with a piece of blotting paper.

If oily substances are to be examined, Turpentine or Benzole may be substituted for the water. The slide being thus prepared it may be examined at leisure. In the course of five or ten minutes the water will evaporate sufficiently to form bubbles under the cover glass so as to interfere with a thorough examination, this may be replaced, or if some hours are to be required for a thorough examination, a ring of glycerine jelly may be run around the cover glass when it will remain unchanged for days.

For permanent slides a ring of white varnish or asphaltum is generally used. All details of this character will be found in Beale's "How to Work with the Microscope," or Carpenter's "The Microscope and its Revelations." Sachs' "Structural Botany," will also be found very useful in the study of plant histology. For mounting fluids water is most used for ordinary work, but for permanent work Canada balsam, glycerine jelly, Damar in benzole, camphor water, etc., are necessary, according to the subject it is desired to preserve. This is an important part of the work and many books have been written on this branch of microscopy alone.

It is desirable to have for reference standard slides of all important drugs liable to adulteration, the material for these may be powdered very finely in a mortar and sifted through bolting cloth; also slides of the common adulterants should be kept for reference and comparison.

It will also be desirable to prepare thinly cut sections of the drugs which it is desired to study, making cross, longitudinal and tangenital sections, these will be found useful in studying cell structure, etc., and will help to confirm impressions derived from the study of the starchy and other portions.

In conclusion the writer desires to say that it is impossible to go much fuller into details for work of this kind without writing a book on the subject.

Much that is necessarily omitted will be readily supplied by the ingenuity of any person who may take up the study with the determination to master it.

WEST'S

Enamel Carriage Top Dressing

Is now the only popular goods of the kind in America. After having been used over twenty-five years by the leading carriage builders it is found to have no equal for preserving

A LEATHER OR RUBBER TOP.

10,000 Carriage Shops are Using it.

100,000 CARRIAGE TOPS ARE DRESSED ANNUALLY WITH IT.

Every Drug House throughout the country should carry these goods to supply the citizens of their town who are owners of Top Carriages.

THEY ALL NEED IT.

It is put up in sealed tin cans, Nos. 2, 3 and 4. No. 2 will dress one Buggy Top. No. 3 a two-horse Carriage. No. 4 will dress 5 Buggy Tops. Sold by the gross or dozen.

WEST'S BLACK CASTILE HARNESS SOAP

Will clean, soften and preserve a fine harness in the most perfect condition.

WEST'S HARNESS DRESSING

Is a Beautiful Finish for all New and Old Harness.

WEST'S SUPERIOR HARNESS OIL

Is the best in the market.

SOLD BY MORRISSON, PLUMMER & CO.

ON THE ADULTERATION OF DRUGS—Cont'd.

Only points of a general character have been given, many of them are such as the writer felt the need of when he first began to use the microscope, and they will at least serve for considerable preliminary practice, and until fuller works on the subject are needed.

Beginners should be very slow in their conclusions, "prove all things," and be sure you are right before you express an opinion, at first it may take a week to this, but the subject having been gone over once thoroughly, is then settled forever, and may be used as required.

The readers of this article as well as the writer are placed under great obligations to Messrs. Morrisson, Plummer & Co., for the magnificent illustrations furnished, no expense has been spared to make them perfect and better ones are rarely seen, even in the most expensive publications.

ADULTERATIONS.

ACACIA.—Powdered, generally adulterated with flour, starch or cheap arrow root, occasionally with mineral or earthy substances. For the first, test a thin mucilage of the suspected acacia with tincture of iodine, and for the mineral or earthy admixture let the mucilage be made thin, and then, if it is not clear, allow it to stand undisturbed awhile for the adulteration to settle. (See also chloroform test.)

ANILINE.—Is often adulterated with sugar, and is sold as commercial aniline by all houses. If bought as *pure*, and suspected, put a few grains in a little pure alcohol, which will dissolve the aniline and leave the sugar. If the alcohol has water in it this test will not answer.

To TEST BALSAM PERU.—When a drop or two of the true Balsam is placed upon the tongue, it produces a liquid diffused impression, while the sophisticated being generally a solution of resin, deposits the gum on the back of the teeth and tongue.

Other Tests.—(*American Drug Circular.*)—Hager gives the following; 1. Make a solution of five parts table salt with twenty-three parts of water. Pure Balsam, dropped from a height of seven to eight inches, should go to the bottom, its specific gravity being greater than that of the solution.

2. Shake some of the Balsam with Petroleum benzine and let the mixture stand awhile, when the supernatant liquid should be perfectly clear and nearly colorless.

3. A solution of one part Balsam in seven of alcohol should be of a beautiful dark-brown color, and when mixed with three parts water, make a milky liquid which will not clear or separate within two days.

CALOMEL TEST.—For Corrosive Sublimate mix with four or five times its weight of water and agitate the mixture occasionally during fifteen or twenty minutes, then filter, dry the residue and carefully weigh it. If it has lost no appreciable weight, there is no Corros. Sublim. present, as that is soluble in water. Pure Calomel will completely volatilize.

Other Tests—(*American Pharmacist*).—To ascertain whether Calomel contains any Corrosive Sublimate, the following re-agent should be prepared:

Iodide of Potash.....10 centigrammes.
Distilled water.....10 grammes.

For an assay take 50 centigrammes of Calomel, put it on a glass and make a paste by adding a few drops of the reagent. In case the calomel is pure it will take a green color. If it contains even 1-1000 part of the bi-chloride of mercury it will produce red stains.

THE SO CALLED CHINESE CANTHARIDES, Huechys sanguinea, has been investigated by John Moss, (Phar. Journ., p. 845), 1887, who failed to find, by various methods of extraction, any principles possessing vesicating or even rube-

Every Case Warranted. We guarantee Safe Delivery to any part of the United States.

Fig. 4.—SQUARE FRONT CASE.

Twenty-eight inches wide outside on the Base. Nineteen inches high outside. Highly polished Cherry or Walnut frames. With improved adjustable angle plates, round base corners. The above cut represents a square front case with polished walnut frame and nickel plated angle plates. The latter are burnished to mirror brilliancy. This combination of polished walnut and metal makes a *more ornamental article than the German silver frame show case, and saves the labor of cleaning.* Top glass 24 inches wide; front glass 16 inches wide or high. Extra heavy double thick French glass all around. Parties will please specify kind of wood.

Heavy mouldings, 19 inches high, with horizontal sliding doors.

Fig. 28. Masses of earthy adulterants softened by water, x 250.

CHLOROFORM, Chemically Pure—Does not redden Litmus nor give a cloudiness with Nitrate of Silver, and remains colorless when boiled with Potash. Mixed with Conc. sulph. acid and shaken, it should separate in half an hour into two colorless layers.

ANOTHER TEST.—Mr. Hardy states that Sodium when dried by wiping with unsized paper, does not act on pure Chloroform, but if Alcohol or Ether are present hydrogen is disengaged at once.

CLOVES, cassia and other ground spices, show their adulterations best to the microscope, except where the adulteration is great enough to be observed by the unassisted eye. No ordinary chemical tests will reach most of these frauds, as the adulteration is nearly always with vegetable matter with like properties with the spices.

COCHINEAL.—Adulterated by weighting with black lead or other dark substances. Put the suspected article in water after weighing, let the insects remain in ten or fifteen minutes with occasional stirring, then remove from the water, dry and weigh them, and the loss in weight represents the amount of adulteration.

ADULTERATIONS—Cont'd.

CREAM TARTAR.—For *Terra Alba*, dissolve in a solution of Caustic potash which leaves the impurity undissolved. *For Lime* in any form, dissolve in Aqua ammonia, and add a little solution of Oxalate of ammonia, which will precipitate Chalk of Lime in any form. *For Starch or Flour*, test the solution with Iodine for the blue color.

FRUIT EXTRACTS OR JUICES, for Aniline.—C. Puscher recommends dipping a silken or woolen thread into the Extract, and let the stain dry. If the color is from the fruit it will easily wash out, but if made with Aniline, it will have a rose color.—*Pharm. Centr. Halle.*

GINGERS.—Are adulterated with the woody stems—or bark and with starches. Use the microscope.

IPECAC—With starches and woody fibre. Use the microscope.

JALAP.—Ditto. Use the microscope, and for mineral adulterations try the chloroform test, page 607.

LARD.—A writer in the *Pharmaceutical Journal* says that he lately obtained a quantity of lard from a respectable pork dealer which was beautifully white ; indeed he had never seen an article that looked better. His first trial of it was in preparing ointment of Nitrate of mercury. The color, when the mercurial solution was added, was the reverse of citrine, indeed, decidedly saturnine, developing in a short time a full slate color. Surprised at this unprecedented result, the usual precautions having been taken as to temperature, etc., the lard was suspected, and, on examination, was found to contain a large proportion of Lime. Some time after, being in conversation with a lard renderer, a hint was dropped as to the relation of lime to color, when the information was confidentially imparted that a common practice among lard dealers was to mix from 2 to 5 per cent. of Milk of Lime with the melted lard. A saponaceous compound is formed, which is not only pearly white, but will allow the stirring in, during coloring, of 25 per cent. of water.

MUSTARD, Ground.—Is often adulterated with flour or meal, and colored with turmeric, and sometimes with Chrome yellow. The latter is a dangerous admixture, and any firm manufacturing or knowingly selling such goods should receive the active disapprobation of every honest dealer. The microscope is perhaps the best for corn-meal or bran, and Tinct. of iodine for the flour or starch. For the Lead or Chrome yellow, add to a watery mixture of the suspected Mustard, dilute Muriatic acid until it shows a clear reaction on litmus paper, then drop in a few grains of Sulphuret of potassium, which will give the mixture a reddish brown tint if lead is present and leave it unchanged if it is free. A still more positive test is to pass Sulphuretted Hydrogen through the mixture. For evidence of turmeric coloring, use a solution of borax, which gives a dark brown color with turmeric. Turmeric is added for the purpose of concealing the comparatively harmless adulteration with flour or meal which reduces strength and cheapens the goods without danger to anything but the consumer's purse.

QUININE.—Put 14 grains of the suspected Quinine in one ounce of water and add ten drops of chemically pure Sulphuric Acid. To this solution add a few drops of solution of Sulpho Cyanide of Potassium (2 drachms to one oz. of water), when the salts contained in the Quinine solution will be precipitated, and if Cinchonidia, Quinidia or Cinchonia are present they will each be known by their characteristic crystals. Or, place a small drop of each solution on a glass plate side by side, and place another thin glass plate over them, and as their edges touch, examine the line of junction with a magnifying glass, and an adulteration of 1-1000 gr. of foreign salt can be detected. —*London Pharm. Jour.*

RHUBARB, Powdered.—Put a few grains on white blotting paper, and add several drops of Chloroform. If of light colored Chinese Root and pure, but a very light stain will result, for the darker varieties a deep yellow stain occurs. Sprinkle over these stains a little powdered Borax and add one drop of Muriatic

Combined Galvanic and Faradic Batteries.

These Batteries have been adopted by the United States Government for use in the Medical Department of the Army and Navy.

THEY ARE THE

First and only Portable Batteries ever invented which give both the Galvanic and the Faradic Current. Two Distinct Batteries in one Case.

☞ No Physician can Afford to be without one.

This Celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each. The cells are composed of one piece of hard rubber, and are made in sections of six, each with a drip-cup; thus one section can be handled, emptied, and cleaned as easily and quickly as one cell. The drip-cup is to receive the elements when the Battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra large cell is added to the combined Batteries for the purpose of producing the faradic current. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our Batteries weigh less, occupy less space, and give a current of greater intensity and quality than any other battery manufactured.

Our Illustrated Catalogue, a handsome book, giving full description of all our goods, and other valuable information, sent free on application.

ADULTERATIONS—Cont'd.

acid. If the powdered root is pure no change of color will follow, but if Turmeric has been mixed with it the spot will soon turn red. Turmeric is not generally added with a view to cheapen the Rhubarb by weight, but to make a poor quality look and sell as a prime, light colored article.

SAFFRON, SPANISH.—For admixture with Safflower, soak the flowers and examine their structure. The usual adulteration is Honey or Glycerine and Barytes, or other heavy powder, which adheres to the Saffron because of the Glycerine or honey. Put one drachm in an ounce of water, allow it to stand a half hour with occasional stirring, then let it stand a few minutes to settle, and pour off the water and flowers; dry and weigh both the sediment and the Saffron; the lost weight represents the Glycerine, and it and the sediment represent the amount of adulteration which sometimes reaches 50 per cent., making a very low priced article, and a good profit to the mixer or dealer who sells it for a pure article.

TEST FOR ADULTERATION OF SANTONIN WITH BORACIC ACID.—Dissolve a little of the suspected Santonin in Alcohol with heat, and pour some of the solution on blotting paper; then burn, and if Boracic Acid is present the flame will be green.

SCAMMONY, POWDERED.—If pure, will dissolve in Ether to the extent of 75 to 90 per cent. It is sometimes adulterated with earthy matter and with meal. Put a little of the suspected powder in dilute Muriatic Acid, and if any mineral or earthy matter is present, effervescence ensues. For flour, apply the Iodine test.

TO DISCOVER LEAD IN TARTARIC ACID.—Tartaric Acid is frequently contaminated with lead, from the fact that a large proportion of the commercial acid is crystallized in leaden vessels. This may be discovered by passing sulphuretted hydrogen gas through a solution of half an ounce of the acid in about four ounces of water, when a black or brown precipitate will be produced according to the amount of contamination.

TESTS FOR SOME ADULTERATIONS OF VEGETABLE POWDERS.—Dr. C. Himly, in the *Year Book of Pharmacy* for 1877, says Chloroform is useful in detecting mineral adulterations in vegetable powders, and determining the amount of adulteration with reasonable accuracy. He says in each experiment a small quantity of the Powder was well shaken with about half a test tube full of Chloroform and the mixture allowed to rest for 12 hours, when the following drugs were found to have completely risen to the surface, viz.: Acacia, Tragacanth, Starches, Myrrh, Barbadoes Aloes, Jalap, Saffron, Cinchonas, Nux Vomica, Mustard, White Pepper, Capsicum and Guarana; mineral adulterations were found at the bottom, and the quantity was easily ascertained by pouring off the supernatant liquid and powder, evaporating the remaining Chloroform and weighing the mineral powder. Gamboge, Scammony, Opium, Socotrine Aloes, Licorice Root, Ginger, Colocynth, Ipecac, Cassia and Cardamoms would not thoroughly rise, but separated, part rising and part sinking, consequently the test is not universal in its application to vegetable substances.

TESTS FOR VERMILION.—The English *Chemical Gazette* suggests a number of tests for adulterations in Vermilion, some of which are new, while all are effective. The basis of its tests is the insolubility in Nitric Acid of Sulphide of Mercury—whether the black, formed by precipitation, or the red, made in any of the ways described in treatises. When Mercury is dear, the temptation to adulterate becomes very strong. The substances used for this purpose are generally Red Lead, Red Oxide of Iron, and an organic matter called Dragon's Blood, which gives a red color. If a sample of Vermilion, in powder, be treated in a test tube with Nitric Acid and boiled, and no change takes place, the Vermilion is free from iron or lead. If the Nitric Acid becomes yellow, iron has been dissolved in it, which may be proved by adding to the liquid, diluted with water, a few drops of a solution of Ferrocyanide of Potassium, which will immediately produce a deep blue color. If the Nitric Acid be colorless, still it may contain

Tansy.
and Pipmenthol Crystals.

☞Now obtainable in 500 gr., 8 oz. and 4 oz. sealed bottles (Pipmenthol in single ounces) through the leading wholesalers. If you wish to promote your own interests, and obtain *most economically* and quickly the *highest results possible*, specify "A. M. Todd's Crystal White Refined Oils." Once used you will use no other. They are recognized as the highest standard throughout the world, and are guaranteed not only the *best* but the most economical in use. With the immense adulterating frauds transpiring in Detroit, New York and Three Rivers, your security is the guarantee of one who has actively worked eighteen years in advancing and protecting the standards of quality. Fraudulent houses are imitating my trade-mark. Beware of so-called "Electro Concentrated" Essential Oils, they are not as represented. See that all containers are protected as stated above.

MORRISSON, PLUMMER & CO.

SPECIAL AGENTS.

ADULTERATIONS—Cont'd.

lead in solution. To settle this point dilute some of it with distilled water and add a few drops of Iodide of Potassium; if lead be present, a bright yellow precipitate will be formed which will dissolve on boiling, and will be precipitated, on cooling, in brilliant yellow scales. If a portion of the sample be treated with Alcohol, and Dragon's Blood be present, a red solution will be produced. Pure Vermilion, when heated on an iron palette-knife, first turns black and the sulphur burns off with a pale blue flame; after a time the Mercury volatilizes, and the whole disappears; if anything remains it is an adulteration. If iron be the adulterant, it will remain as red oxide; if lead, it will remain as yellow oxide, and will be fused or melted; and if Dragon's Blood has been employed, it will give off a powerful odor. The presence of Eosine, an adulterant recently noticed, is detected by means of Alcohol, which dissolves it out, leaving, in many cases, Red Lead behind.

ADULTERATION OF ESSENTIAL OILS.

OIL OF BITTER ALMONDS—Is adulterated with Nitro-benzole or Essence of Myrbane. J. M. Maisch, an authority in such matters, says: Dissolve half a drachm of the suspected oil in 2 or 3 drachms of Alcohol, add 15 grains of C. P. fused Caustic potash; heat for a few minutes so as to dissolve the potash, and reduce the liquid to one-third its volume and set aside to cool. If pure, the oil will remain liquid, but if Nitro-benzole is present a crystalline deposit will take place, proportioned to the amount of adulteration.

OIL ANISE—Is adulterated with Castor oil, with Alcohol, and with the two mixed; also with Spermaceti. Pure oil should have a specific gravity of .97 to .99, and should freeze about 50° Fahr. For Castor Oil, put a few drops on unsized paper and apply heat. If a fixed grease spot is left, Castor Oil will account for it. If Spermaceti is present, its crystals will differ in form from the oil crystals, and will also sink to the bottom of the bottle as the oil is chilled to the crystallizing point.

OIL BERGAMOT — Has a neutral reaction with the test paper, when pure, and dissolves in half its own weight of pure Alcohol, while Oil of orange decreases its solubility.

OIL CLOVES—Has a specific gravity of 1.034 to 1.056. If suspected, mix a little with an alcoholic solution of Potash, and the disappearance of the clove odor will generally make manifest the odor of any adulteration.

OIL LAVENDER—Should have a specific gravity of .876 or .880 and be completely soluble in five parts of weight of Alcohol of a specific gravity of .894. Oil of spike increases the specific gravity, and Spts. of turpentine decreases its solubility.

OIL LEMON—Is said to be adulterated by manufacturers with a highly refined Spirits of turpentine, and, being used at the time of distilling, is exceedingly difficult to detect. One of the best tests is to reduce the oil with Alcohol to compare its strength with that known to be pure.

OLIVE OIL—*For mixture with Cotton seed and Sesame oils.*—Mix equal parts of Nitric and Sulphuric acids and to three parts of this mixture add ten parts of the suspected oil. Pure Olive oil will give a faintly greenish white tinge—mixed with Cotton seed oil a pale green, and with oil Sesame a grass green color. After standing awhile the liquids separate—the pure oil being almost unchanged and the other oils turning a brown color.

Take 1 part Nitric acid and 9 parts suspected oil; put into a porcelain dish capable of holding at least 10 times the quantity. Apply gentle heat, until the action between oil and acid is fairly begun, then remove from the heat and stir until action is over.

Pure Olive oil assumes a pale straw color and sets into a solid mass. Seed oils give a deep, orange red color, and do not set into mass. In warm weather true oil may not solidify, so the color will be the real test of purity.

ADULTERATION OF ESSENTIAL OILS—Cont'd.

Pure Olive oil, mixed with Aqua ammonia, fully saponifies and remains so without separating, but this is not a fully satisfactory test, as other oils, mixed in given proportions, will also saponify.—*New Remedies.*

OIL PEPPERMINT—Adulterated with terebinthinate Oils is tested by dropping on Iodine scales; a violent explosive puff gives evidence of impurity. If the oil is quite new it will smoke with this test; but there will be no puff.

OIL ROSE—At 54 to 55° F., should congeal quickly and show clear floating scales, while Spermaceti adulteration will be deposited in crystals sinking to the bottom of the test tube or bottle.

Another Test—Mix 5 drops of the oil to be tested with 2 drops of pure concentrated Sulphuric acid; whether the oil be adulterated or not a thick yellowish-brown or reddish brown mixture results; when this cools shake it up with 3 drachms of Absolute alcohol. If now the oil is pure a tolerably clear yellowish-brown results, which after heating to boiling, remains clear. But should the Otto be adulterated with Geranium (a common practice), the solution remains cloudy, and in some cases a darker fluid separates, in which a deposit forms. On heating this solution the sediment melts together, and from the size of the mass so is the degree of adulteration. If, for example, the mass has one-fourth the volume of a drop, he concludes that the Otto was mixed with one-third of other oil. If the Otto should be adulterated with Spermaceti, this substance separates and floats on the surface of the solution or remains suspended in the liquid, as a scaly crystalline mass. This test is founded on the circumstance that pure Otto forms with strong Sulph. acid, a resinous substance, which is completely insoluble in absolute Alcohol. The odor of pure Otto is not affected by mixture with strong Sulph. acid. If the other oils are present a disagreeable odor is developed.—*Journal of Pharmacy.*

OIL WINTERGREEN—Is sometimes adulterated with Oil of Sassafras, which can be detected by adding a little strong Nitric Acid to the suspected oil. If Sassafras is present, the oil turns dark red, and soon shows a brown resinous mass. For Alcohol and Chloroform adulteration, heat the suspected sample and the Chloroform odor becomes apparent.

For most essential oils, especially including Lavender flowers, Lemon, Peppermint and Sassafras, a cultivated sense of smell is the surest detective of impurity. The most extensive buyers depend entirely upon the delicate odor of the true oil as their guide in purchasing.

TEST FOR ASCERTAINING THE PRESENCE OF ALCOHOL IN ESSENTIAL OILS—J. J. Bernonli recommends for this purpose dry Acetate of potash, which is added to the suspected oil. This salt dissolves in the Alcohol and forms a solution from which the volatile oil separates. If the oil be free from Alcohol, the salt remains dry therein.

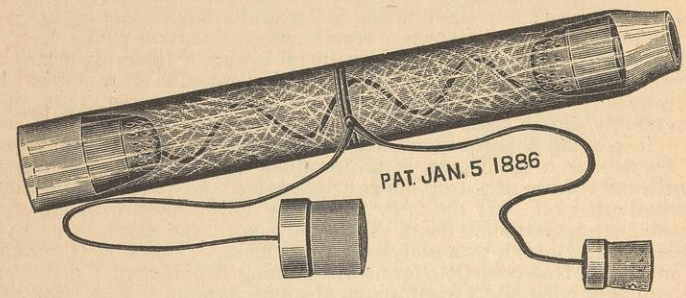

Chemically pure glycerine is miscible with alcohol, but not with essential oils. This fact may be utilized in detecting adulterations. To the suspected oil contained in a graduated tube, add an equal volume of glycerine, shake and allow to separate. The increase in the volume of glycerine will indicate the quantity of alcohol fraudulently added.—*Jour. de Pharm. d'Anvers.*

Another Test.—Add a given volume of water to the suspected oil. Shake the mixture and note the increase of water volume, if any, as water takes the alcohol from the oil.

A. Drechler employs as a re-agent, a solution of 1 part of Potassium bichromate in 10 parts Nitric acid of sp. gr. 1.30. Alcohol, if present, is at once betrayed by the pungent odor of Ethyl nitrite.

TO DETECT CASTOR OIL IN VOLATILE OILS.—H. N. Drayer gives the following test: Place 20 drops of the suspected oil in a capsule, and heat on a sand bath until the odor of the oil is no longer perceived. To the residue add 5 or 6 drops of Nitric Acid, and as soon as the fumes disappear dilute with a solution of Carbonate of soda. If Castor oil be present it will be manifest by its odor.

CUSHMAN'S
MENTHOL INHALER

So constructed as to hold pure crystals of Menthol, in a glass tube, in such loose condition that when placed to the nostril and the breath drawn through the Inhaler, the air becomes thoroughly Mentholized and is conveyed to the net work of nerves and membranes throughout the head, throat and lungs in such abundant quantity as to quickly relieve and by continued use permanently cure

HEADACHE, CATARRH, NEURALGIA, HAY FEVER, BRONCHITIS, ASTHMA, SORE THROAT, WEARINESS, COLDS, EXHAUSTION, ETC

Without doubt this is the most efficient way to apply this valuable remedy, which is heartily approved by physicians. The facility with which it sells commends it to the attention of every druggist.

THREE RIVERS, MICH.

ADULTERATION OF ESSENTIAL OILS—Cont'd.

Another test for adulteration with fixed oils is to pour a few drops of the suspected oil on blotting pad or unsized paper, and subject to moderate heat. If pure, the stain will almost entirely disappear; if adulterated with fixed oil, a plain grease spot will be left.

Albert M. Todd, one of the most extensive manufacturers of "Oil of Peppermint in the world, and proprietor of the Crystal White Essential Oils ' gives the following twelve tests for impurities in OIL OF PEPPERMINT, and adds:

"Many of the tests can not be made in the every day practice of the pharmacist. The iodine test, and that of the odor, solubility, specific gravity, volatility, breath test, and the test for alcohol, can all be made readily, and these should always be used."

Deficiencies in the quality of essential oils, result from a number of causes, chief among which are, first, INTENTIONAL ADULTERATION; second, CARELESS CULTIVATION; third, CARELESS DISTILLATION; fourth, IMPROPER CARE OF THE OIL after being distilled.

I will now proceed to give such tests as I find of value in every day practice, giving first their general principles; I will also publish, as soon as possible, more detailed instructions regarding the best methods of application.

1st. Odor and Taste. (General test of Quality.) Prime Oil of peppermint should have the agreeable odor and taste of the true Peppermint plant (Mentha piperita) and when taken into the mouth in slight quantity should produce a cooling effect when air is drawn into the lungs, without the burning or camphoraceous effect produced by turpentine and terebinthinate oils. The odor should be noticed both from the vessel containing the oil, also by evaporating a few drops from a sheet of paper. The test is best obtained by dissolving a half ounce of sugar on which a drop of the oil has been placed, in about 4 ounces of water.

2d. Specific gravity test. (General test for adulterations, weedy contamination and resinoids.) The specific gravity of prime American oil of peppermint should not be below .910 at 60° Fah. nor above .918, except in cases of VERY old or RESINIFIED oil it may be higher.

3d. Solubility. (For fixed oils, petroleum products and resinoids.) Prime oil of peppermint should be perfectly soluble, giving a clear solution without filtration, in any proportion of spirits or alcohol of 90 per cent strength.

4th. Iodine test. (For turpentine, Erigeron and terebinthinate Oils. Place a few grains of crystals of resublimed iodine on a watch glass or paper, preferably folded like a funnel or evaporating dish, dropping a few drops of the oil thereon, (sufficient to saturate the iodine, but not "drown" it.) The mixture produced should remain of a brown or brownish black color; the vapor which arises should be but very slight, assuming a bluish cast, and becoming invisible after having arisen a little distance above the oil. If turpentine or terebinthinate Oils are present, the iodine will be more quickly dissolved, a bright violet color will be produced in the mixture, which will boil, evolving a yellow or reddish vapor of rank odor.

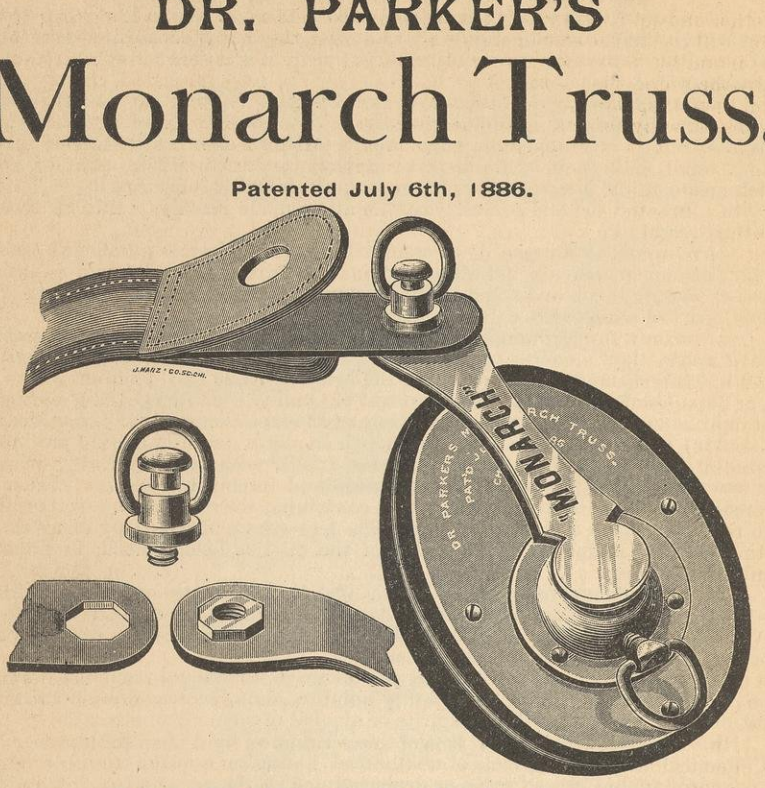

5th. Boiling point. (General test for impurities.) Pure oil of peppermint will not vaporize in any perceptible quantity below 405° Fah., and the first 75 per cent should distill at temperatures between 405° and 450°.

6th. Volatility. (For fixed Oils and Resinoids.) Prime oil of peppermint should volatilize without perceptible residue. This test is most readily performed by dropping a few drops of the oil upon a sheet of white paper and evaporating it in the open air over a lamp or gas jet. This also affords an excellent opportunity for noticing the odor of the oil at the different stages of evaporation.

7th. Test for Alcohol. Into a graduated test tube, pour clear water to about the depth of two inches, noting the exact height to which the water stands in the tube; afterwards pour gently into the test tube upon the water about the same volume of the suspected oil; shake the mixture thoroughly

DR. PARKER'S
Monarch Truss.

Patented July 6th, 1886.

PERFECTION REACHED AT LAST

By improvements on the "Common Sense Truss" that Dr. Parker has made so famous in almost every country in the world.

The Monarch Truss is only the width of the spring at the connection of the spring and pad part, thus avoiding the irritation that has been so troublesome in trusses generally.

The octagon projection, combined with the ring-screw, renders the joint more secure, less cumbersome; perfect adjustment right and left or different angles. The ring-screw pressing direct against the ball, in connection with two set-screws at an angle opposite, which are placed under the pad plate, effectually control the ball and socket joint.

Springs enameled full length and proper shape, Russia calf or silk cover pad plate, and neck gold plated. Enameled cedar or soft pads. The finest truss for the money on the market.

— ADULTS' SIZES ONLY. —

SINGLE, Doz., $21.00. **DOUBLE, Doz., $42.00.**

The Trade Supplied by Morrisson, Plummer & Co.

ADULTERATION OF ESSENTIAL OILS—Cont'd.

together and set it aside for a few moments to settle. If the oil is pure, the water will rise to the same height only as at first, the line of separation between the oil and the water not having changed. If alcohol is present it will be taken up by the water, the volume of which will appear to have increased, the volume of oil having apparently decreased to a like extent. This test can be made in any test tube by scratching the height to which the water rises upon the side of the glass; but it is much more conveniently performed with a centimeter test tube about a half inch in diameter, graduated into one hundred volumes, by which means the EXACT PROPORTION of the adulteration can be seen.

8th. Breath Test. (For weedy contamination.) Pour the oil into an open mouthed vessel like a graduate, and breathe upon it freely, letting the breath come warm upon the surface of the Oil. If the Oil is pure, the breath will quickly disappear, leaving little more than the slightest trace of its presence. If weedy, a milky or cloudy appearance will be seen at or near the surface of the Oil, part of which will collect and descend in web-like forms. (If the Oil has been FRESHLY DISTILLED, however, this test will not always show the presence of weeds.)

9th. Nitric acid and Alcohol test. (For Pennyroyal and Mentha Arvensis, or Japanese Peppermint.) Place in a small vial 25 drops of Alcohol, adding to it one drop of nitric acid, specific gravity 1,200, and one drop of the suspected oil, shaking this thoroughly. If the Oil is pure a delicate blue tint will be produced in the course of half an hour, the color growing more distinct for the first few days. When this test is applied either to Oil of pennyroyal or Mentha arvensis, no coloration is produced; and when either of these Oils is mixed with the true Oil of peppermint, the coloration produced is proportionately less distinct. For making this test valuable in practice, those using it should first familiarize themselves with the coloration required, by testing the true Oil and afterwards making a mixture in a small vial of the oils mentioned, with the true Oil of peppermint for the purpose of comparing the coloration.

10th. Nitric Acid test. To 50 or 60 drops of Oil of peppermint, add one drop of Nitric Acid, specific gravity 1,200, shaken thoroughly. The oil if pure will change in a half hour to a blue or bluish green, after a few days becoming deep green. Some adulterations will produce a yellow or yellowish brown color.

11th. Polarization. This test is of great value, as by its use adulterations, the chemical and physical nature of which are in other respects similar to Oil of peppermint, but which show wide variations in the polarization of light, can be detected. After the investigation of upwards of a hundred samples, I find none the absolute purity of which I am satisfied with, which when placed in a Mitscherlich's polariscope with a perception tube of 200 millimeters in length, polarize to the left a less number of degrees than 35; pure specimens also being rare which polarize as low as this. The maximum polarization of pure Peppermint except in exceedingly rare cases, is—66° (to the left). In the case of one sample distilled as a special experiment by myself, the leaves having been dried six months before distillation, the polarization was —72° (to the left) this being an experimental sample and not as appearing in commerce I would limit the maximum polarizing test to —66° (to the left).

12th. Refrigeration test; for determining the richness in crystalloid. There exists much difference of opinion as to the reliability and manner of using this test. I state it as follows:

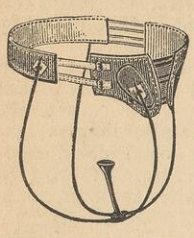

Place a quarter ounce of the oil to be tested, in a test tube five-eighths inch diameter and six inches high. Immerse this test tube in a mixture of freshly prepared salt and ice, so that the oil shall be immersed in the refrigerating mixture about two or three inches below the surface of the latter. Leave the test tube uncorked. In nearly every case if the oil has not been dementholized, it will assume a solid form within less than one hour after having been placed in the refrigerating mixture, and often in the space of twenty minutes. There is

YOUR ATTENTION IS INVITED TO THE

DR. McINTOSH Natural Uterine Supporter.

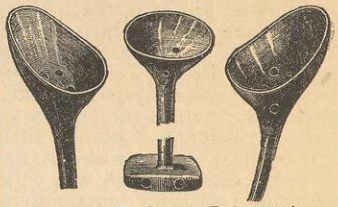

This Instrument meets the Wants of the Profession more Perfectly than any other Uterine Supporter ever made. It never fails to give Perfect Satisfaction, even in the most Difficult Cases, where any Instrument can be used.

The **Abdominal Portion** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The UTERINE PORTION is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts.

The cup and stem is suspended from the belt by two soft elastic-rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft-rubber tubes being elastic

Anteversion. Prolapsus. Retroversion.

adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb. The Instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities. It will answer for all cases of Anteversion, Retroversion, or any prolapsus of the Womb. It is used by our leading physicians with never-failing success.

Our Reduced Price to Physicians is $5.00 Each.

Instruments are sent by mail, at our risk, on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.--Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the Physician. To protect our patrons from imposture, we stamp each pad of the abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill.;" the base of each cup is stamped "Dr. McIntosh N. U. S. Co, Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac-simile signature of Dr. L. D. McIntosh. For further information in regard to the instrument, address

Dr. McIntosh Natural Uterine Supporter Co., 300 Dearborn St., **Chicago, Ill.**

☞ *Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.*

ADULTERATION OF ESSENTIAL OILS—Cont'd.

however much difference in the facility with which samples of equal purity of Peppermint crystallize, owing to variations in soil and climate. Furthermore it is not always those which crystallize with the utmost readiness which are of the greatest strength or therapeutic value, as the quality of the crystals produce d in oils crystallizing most readily, is quite likely to be inferior to that produced from an oil crystallizing less easily.

The above tests comprise most of those which I find convenient and useful in every day practice, but I shall have pleasure in making them more complete as soon as time will permit.

Hoping this brief outline of the principles may prove of value, I am

Very respectfully yours,

Nottawa, Mich. ALBERT M. TODD.

TESTS FOR CHLOROFORM.

The following easy tests are recommended by Professor Regnauld, in *Le Progress Medical.*

1st. Chloroform should have an agreeable odor.

2d. It should not redden blue litmus paper.

3d. Added to a solution of nitrate of silver, it should neither give a precipitate, nor even cause cloudiness.

4th. It should not become colored, when brought to the boiling point along with a concentrated solution of caustic potash.

5th. Sulphuric acid should not blacken when brought in contact with chloroform.

The above tests are not difficult; besides these, there are others, such as determining the *specific gravity* and the *boiling point*, which, however, are more within the province of a chemist; but no chloroform should ever be used for anæsthetic purposes which does not comply with the above requirements.

Chloroform, even when perfectly pure, is liable to sudden changes. Exposure to light, an imperfect cork stopper, or a but partially filled bottle, are conditions which may effect its purity; hence, it should be occasionally tested, especially before using. Dr. Yvon is of the opinion that the sulphuric acid test is not fully reliable; on the other hand, as caustic alkalis are used for the purpose of rectifying chloroform, there may be circumstances when the absence of coloration with an alkaline solution is not positive evidence of purity; he therefore recommends, as a far more delicate test, the combined action of permanganate of potash and a caustic alkali.

As a re-agent, he uses a solution of:

℞ Permanganate of potash ..... 15 grains.
Caustic potash ..... 2½ drachms.
Distilled water ..... 7½ ounces.

M.—The solution is of handsome violet red color, and when in contact with *pure chloroform*, remains unchanged.

But if the chloroform has been *imperfectly* rectified, the solution is acted upon and its color gradually changes to green.

To be successful this test requires considerable nicety.—*Scientific American.*

TO PRESERVE OIL OF SWEET ALMONDS.

A very good process to preserve oil of almonds for a long time from getting rancid, consists in heating it moderately in an evaporating dish, to make it lose the water it may contain, and also to coagulate its albumen. After it becomes cool it should be filtered and kept in well-corked bottles.—*American Pharmacist.*

CARE OF ESSENTIAL OILS.

They should be kept out of the bright sunlight and in amber colored bottles; also in the coolest part of the store. Always cleanse the shop bottle with alcohol and salicylic acid after dispensing one purchase, before adding new stock. A little absolute alcohol (1 part in 16 or 20) added to essential oils that cut readily with it, often preserves them from becoming terebinthinate with age, if added before the change commences.

A pure essential oil that has become slightly terebinthinate with age, may be sweetened by shaking with a watery solution of permanganate of potash, and decanting into a clean bottle.

Almond, Cod-liver and Olive oils should not only be kept from the light, but also from extremes of temperature to insure their continued sweetness and bland taste.

GOLD FISH.

Some of our friends having globes or aquariums may, perhaps, be glad to know a few rules whereby gold fish may be kept for ten or twelve years. 1. Allow not more than one fish to a quart of water. 2. Use the *same kind* of water, whether spring or river, change daily in Summer, every other day in Winter. Use deep rather than shallow vessels, with small, *clean* pebbles at the bottom. 4. Keep them in the shade in the cool part of the room. 5. Use a small net in handling the fish, rather than the hand, when changing the water, or a syphon may be used to advantage. 6. Feed the fish cracker, lettuce, yolk of egg, flies, etc. 7. Do not feed them with bread. 8. Feed them only every third or sixth day, and only a little at a time. 9. Do not feed them at all from November till March, and but little during the three following months.—*Weed's Year Book of Pharmacy.*

CHEMICAL FOOD FOR PLANTS.

Sulphate of Ammonia	4 parts.
Nitrate Potass	2 "
Sugar	1 part.

Mix well. A small teaspoonful in a gallon of water makes a suitable strength. Plants should be sprinkled with it once or twice a week.—*Year Book of Pharmacy.*

Carbonate of Ammonia that has effloresced, or the powdered remains in your Carbonate Ammonia jar, will make an excellent application for the soil around an unhealthy plant, or over grass that seems inclined to turn yellow when this tendency is not owing to lack of water.

PRESERVATION OF LEECHES.

The importance of preserving in health and vigor this useful little animal, has induced me to give you a plan which I have pursued for years with unequivocal success. I place the leeches in an earthenware vessel, half filling it with river, or where that can not be had, rain water; into this I place a handful of well-washed tow. I renew the water about twice or three times a week in Summer and once in Winter, each time washing the sides of the vessel, and, taking the tow, washing it out well under the water tap, in order to rid it of the epidermis which the leech appears to throw off every few days, and renewing the tow occasionally. By this very simple means I keep leeches far better than by any other. I can endorse Dr. Frodsham's recommendation to place the leeches in camphor mixture after having been used for hospitals and dispensaries; it would prove a great saving.—*Notes and Queries, Drug Circular.*

KAEMPFER'S
GENUINE PREPARED MOCKING BIRD FOOD,

FOR

Mocking Birds,
Thrushes,
STARLINGS,
Black Birds
Robins,
Troopials.

FOR

Japanese Robins,
English Black Caps,

PRESERVING INSECTS.

The *American Naturalist* says: That after killing the insect with Chloroform, paint it with a solution of Carbolic Acid in Alcohol—four grains to the ounce,—and then dry it in the sun. It keeps fresh and beautiful. In stuffing animals use cotton soaked in the same solution.

DISEASES OF BIRDS AND THEIR TREATMENT.

ASTHMA, or hard breathing, when arising from an oppressed stomach, generally yields to plantain and rape seed, moistened with water.

EPILEPSY. Cause, improper or rich food and want of exercise. Symptoms, fainting away of the bird. To cure it, dip the bird once or twice in cold water and cut the claws so closely as to let blood. A few drops of olive oil given inwardly is sometimes effective. Afford him an opportunity of drying his feathers in the warm sun or near a stove.

CATARRH AND COLD (Pips). This sickness is brought on by hanging the bird in a draft of air, change of temperature by keeping him in a hot room during the day and than in a cool one at night. The sick bird opens his bill because his nostrils are clotted with phlegm. He sneezes, coughs from time to time; he gasps and ruffles the feathers on his head and body. If not attended to at an early stage of the sickness it soon runs from bad to worse and the bird is threatened with hardening of the skin of the tongue and throat—commonly called Pips. The first and best method is to place the bird in a sunny room with even temperature, rinse his bill with lukewarm and moderately salt water, grease his nostrils with sweet oil and supply him mostly with soft food. Hard boiled eggs finely grated, also white stale bread soaked in milk and a piece of fresh fig should be freely given. Would not advise the old and barbarous way of placing a greased feather in his nostrils or to remove the diseased skin from the tongue with a needle or knife.

COSTIVENESS of birds may be cured by adding Carrot juice, a little of the tincture of Rhubarb added to the water, say six to eight drops or a very little Rochelle salts. For external remedy anoint the parts with Sweet oil.

DIARRHOEA. Give the bird in the drink about one to two drops of Laudanum and change the food to hard-boiled egg mixed with pulverized cracker, also stale white bread soaked in sweet milk.

FOOT DISEASE generally results from unclean cages. This disease may be prevented by keeping the floor of cage and perches carefully cleaned and always plenty of clean gravel or gravel paper in the bottom of the cage. Wash the feet of such birds in lukewarm water and afterward rub them with a little Glycerine or plain Cosmoline, which keeps their skin soft and tender.

REELING DISEASE results from wrongly constructed and ill-furnished cages. This disease is generally observed in birds kept in small, round cages, especially when the upper perch is fixed too high in the cage. Medicine will not cure this affliction; the only remedy is timely removal into a larger cage.

MOULTING, strictly considered is not a disease, but a regular and necessary change. Most birds moult from July to September. The change of plumage makes him feel ill and irritable, will disturb his regular mode of life so that he will appear sullen, nor will he sing. Extreme care must be taken not to expose them to draughts; while they may be in a more sunny locality do not let the hot sun shine on them. Increase quantity and quality of food. Seed eaters may be given in addition to their regular food such seeds as hemp, lettuce and poppy, also some eggs. To soft-food eaters supply as many different sorts of insects as possible and plenty of mealworms and dried ants' eggs. It sometimes happens that birds in moulting lose their feathers altogether. This arises from having caught cold, or from being kept in overheated apartments.

BIRD-LICE. Use Persian insect powder by sprinkling it on the end of the perches and open spaces between the wires and frame of cage. Also rub some

Compressed Tablet Triturates,

COMBINING ABSOLUTE ACCURACY OF DOSE,

Convenience in Administration, Speedy Disintegration, and Consequent Rapid Absorption,

THEREBY INSURING

THE MOST EFFECTIVE RESULTS.

WE feel confident that few physicians will prescribe any of the more powerful remedies, such as Aconite, Morphine, Digitalis, Arsenic, etc., either in powders or in solutions, when fully aware of the advantages presented by our TRITURATES, their accuracy and convenience in administration, coupled with the absolute freedom from danger in prescribing, always attending to a greater or less extent the dispensing of dangerous drugs in the form of powders, drops, or large doses in solutions.

The TRITURATES are absolutely exact, and will keep indefinitely; they can be readily swallowed with a mouthful of water, or, if smaller doses be required for infants, the tablets can be reduced to a fine powder by simply crushing with a knife, or the thumb nail.

Our circular (which it will give us pleasure to forward) gives in detail all the claims we make for this series of preparations, together with a list of all the combinations. It embraces almost every drug in popular demand, and the doses are so graduated as to meet almost every indication. The following are a few of the active agents in everyday use:

	Price per bot. of 500
ACID ARSENIOUS, 1-60 gr.,	$0.40
ACONITINE, 1-200 gr.,	1.25
ALOIN, ⅛ gr.,	.50
ANTIMONY and POTASS. TART, ⅛ gr.,	.40
APOMORPHIA, 1-10 gr.,	.60
ATROPINE SULPH., 1-100 gr.,	.60
CALOMEL, 1 gr.,	.50
COCAINE HYDROCHLOR., 1-50 gr.,	.70
CODEINE, ⅛ gr.,	2.75
CORROSIVE SUBLIMATE, 1-40 gr.,	.40
DIGITALIN, 1-100 gr.,	.50
ELATERIUM, ⅛ gr.,	2.00
ESERINE SULPH., 1-100 gr.,	.00
EXT. CANNAB. INDICA, ⅛ gr.,	.50
EXT. COLOCYNTH. COMP., ¼ gr.,	.45
EXT. IGNATIA, ¼ gr.,	.60
EXT. IPECAC. FLUID, ½ min.,	.50
EXT. NUX VOMICA, ¼ gr.,	.50

	Price per bot. of 500
EXT. PILOCARPUS FLD., ½ min.,	$0.45
HOMATROPINE HYDROB., 1-100 gr.	3.00
LITHIA CARB., ½ gr.,	.55
MERCURY, GREEN IODIDE, ¼ gr.,	.50
MERCURY, RED IODIDE, 1-30 gr.,	.40
MORPH. SULPH., 1-20 gr.,	.65
PILOCARPINE HYDROCHLOR., 1-20 gr.	1.25
PODOPHYLLIN, ⅛ gr.,	.45
SANTONINE, ½ gr.,	.85
STRYCHNINE, 1-60 gr.	.40
TR. ACONITE, 1 min.,	.40
TR. BELLADONNA, 2 min.,	.40
TR. GELSEMIUM, 3 min.,	.40
TR. HYOSCYAMUS, 2 min.	.40
TR. OPIUM, 2 min.,	.60
TR. VERATRUM VIRIDE, 1 min.,	.40
ZINC PHOSPHIDE, 1-10 gr.,	.50

For Anti-Septic Tablets, see opposite page.

We shall be glad to send samples of these Triturates to any physician who may desire to try them in his practice.

Complete lists, with prices, etc., of all of our preparations will be sent by mail on application.

DISEASES OF BIRDS AND THEIR TREATMENT—Cont'd.

lightly under the lower part of the wings of bird and cover the cage over night with a white cloth, which remove and shake well in the morning.

GENERAL REMARKS. In all cases with birds "an ounce of prevention is worth a pound of cure." Give your birds plenty natural, pure and wholesome food, buy the best and purest seed you can get and none of the cheaply put up articles. Keep cage and bird clean, give it plenty of clean, fine gravel, and plenty of pure water to drink and bathe in.

Never place them in the *direct rays of the hot sun*, nor in a *draught*, as a cold is generally fatal.

Remember that care, good food and instruction will improve their song and add to their enjoyment as well as your own.

ANTISEPTIC TABLETS FOR EXTERNAL USE.

JOHN WYETH & BRO., of Philadelphia, say in a card to the trade:

"It is a regret to us, that we are no longer able to supply Antiseptic Tablets. Their manufacture involves so great a risk, that it is not possible to prepare or compress the material in our establishment. Although we endeavored to overcome that objection by having a place, separate entirely from our manufacturing establishment, we found no means to avert the harmful effect upon the persons employed in their manipulation and compression.

"While we did not permit any of the girls employed in the room, to work more than half a day, at a time, a number of them experienced so decidedly the mercurial influence of the corrosive sublimate, that after careful consideration and consultation, we have definitely decided that it would be unfair, and we could not ask any of our employes to work with material, from which certainly, temporary, and, perhaps, permanent injury might result."

And give the following formula for preparing a powder, which could be safely made and kept in place of the Tablets.

"We would suggest that druggists should prepare for the use of physicians, a powder composed of $7\frac{7}{10}$ grains of Corrosive Sublimate, and $7\frac{3}{10}$ grains of Muriate of Ammonia, and put up the combination in small bottles; each bottle, say, to contain the equivalent of 10 or 20 Tablets, giving directions that 1-10th or 1-20th should be dissolved in so much water. If this were done, it seems to us it would be the nearest approach to what the doctors want. It would not be necessary to color the powder, as we felt was imperative, as an additional provision of security, owing to our manufacturing so many Tablets of that size and appearance. The doctor could determine with sufficient accuracy, the quantity of powder; there would be a minimum of danger, as he could keep the bottle himself, and the druggist would not have to make up but a small quantity at a time, avoiding entirely the dust that is inseparable from the manipulation of compressing Tablets, so that the operator would not be subject to any ill effects."

TO FIND OUT IF WATER CONTAINS COPPER.

A few drops of Liq. ammonia will turn it blue if copper be present.

TO FIND OUT IF WATER CONTAINS LEAD.

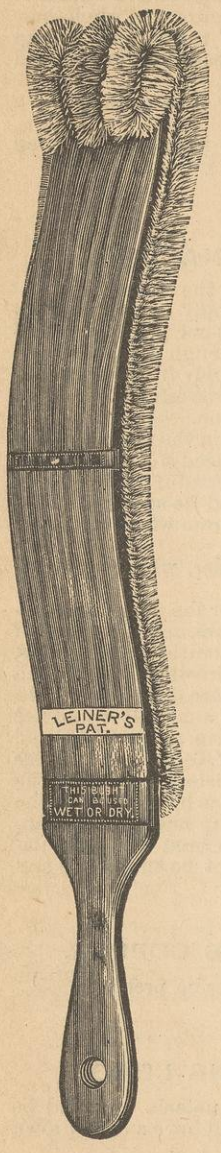

Add to the water a little sulphuret of ammonia or potash. If lead be present it will be known by the color of the water, which will have a dark brown or blackish tinge.

LEINER'S

Patent Combined

BATH AND FLESH BRUSH.

See Illustration. Page 266 for Prices.

We handle these Brushes to quite an extent and are able to recommend them with confidence for giving a superior friction, durability, aptness for both wet and dry use and still more as "Good Sellers." Our prices will compare favorably with any house in the trade.

We desire to correct an erroneous impression formed by many dealers outside of cities, or more remote country places, that this class of goods were not adapted for their trade, we beg to say that our experience proves the contrary, at least during the last few years, and we now count some of our best customers for them from such very sections.

Times, circumstances and men change rapidly and to convince, we request disbelievers to give a trial order, however small, for these brushes.

M. LEINER, New York City.

FOR SALE BY

MORRISSON, PLUMMER & CO.

TO FIND OUT IF WATER CONTAINS IRON.

Dissolve a crystal of Prussiate of potash in it. If it turns blue there is iron in it.

TO FIND OUT IF WATER IS HARD OR SOFT.

Dissolve a small quantity of soap in alcohol and let fall a few drops of it into a glass of the water. If the water becomes milky it is hard, but if little or no milkiness appears the water may be said to be soft.

SODA WATER SYRUPS, ETC.

PROF. HAMBRIGHT.

SIMPLE SYRUP.

Granulated Sugar	24 pounds.
Cooper's Gelatine	1 ounce.
Water	2 gallons.

Break the Gelatine into small pieces, and allow it to macerate in the water until soft, add the sugar, dissolve by gentle heat, and strain through cloth.

ACID SOLUTION.

Acid Citric	8 ounces.
Alcohol	2 "
Water, q. s	1 pint.

Mix, then filter.

OIL SOLUTION.

Fresh Oil Lemon	½ ounce.
Alcohol	7½ "

Mix by agitation, then filter.

ESSENCE SARSAPARILLA.

Oil Gaultheria	½ ounce.
" Anise	½ "
" Sassafras	¼ "
Alcohol, q. s	8 "

FOAM NO. 1.

To each gallon of syrup add from two to four ounces of Gum Arabic, dissolved in its own weight of water.

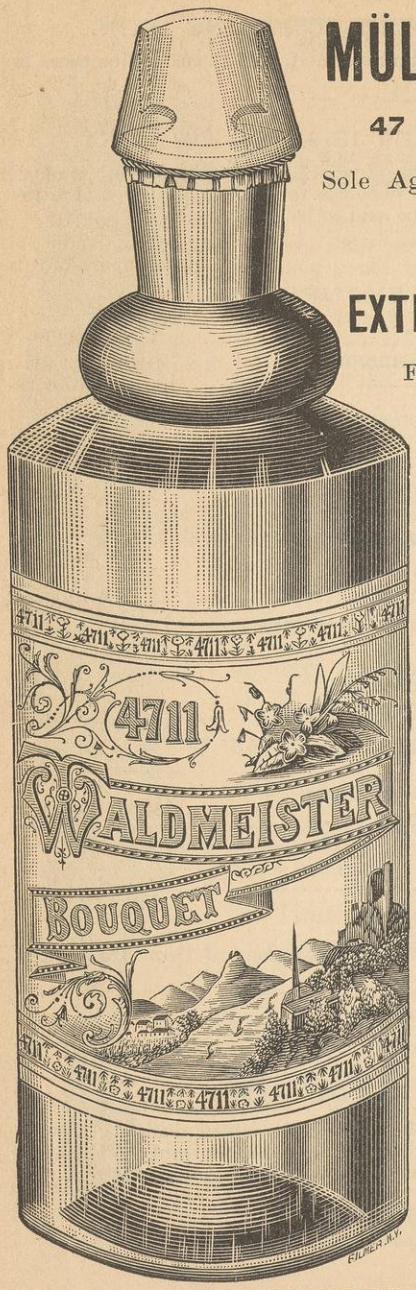

FOAM NO. 2.

Quillaya Bark	4 ounces.
Alcohol	4 "
Glycerine	4 "
Water	8 "

Exhaust the Quillaya Bark by percolation with the mixed alcohol, glycerine and water, adding sufficient of the menstruum to make one pint of tincture, and use from two to five drachms of this tincture, to each gallon of syrup.

FOAM NO. 3.

2 oz. Cooper's Gelatine or Isinglass to a gallon of syrup.

SODA WATER SYRUPS, Etc.—Cont'd.

SYRUPS.

BANANA SYRUP.

Oil of Banana ..... 2 drachms.
Tartaric Acid ..... 1 "
Simple Syrup ..... 6 pints.

COFFEE SYRUP.

Mocha Coffee ..... 2 ounces.
Glycerine ..... ½ "

Mix the Glycerine with the Ground Coffee, and allow it to stand for one or two hours, then pack it in a displacer, and percolate with boiling water until one pint of liquid is obtained; to this add 2 pounds of white sugar, and dissolve by the aid of a gentle heat.

CHOCOLATE SYRUP.

Baker's Chocolate ..... 3 ounces.

Rub fine in a porcelain mortar, then gradually add 2 pints of hot syrup. When cold add Ext. Vanilla, ¼ ounce, and preserve the syrup in a well-corked bottle placed on ice.

CHOCOLATE CREAM.

Syrup ..... 1 gallon.
Condensed Milk or Cream ..... 1 pint.
Extract Chocolate ..... 4 ounces.
Mix as for Chocolate syrup.

CREAM SYRUP.

Fresh Cream ..... 2 pints.
Soda Bi-Carb ..... 2 drachms.
Sugar ..... 2 pounds.

Mix and dissolve by frequent stirring with glass rod.

GINGER ALE SYRUP.

Syrup of Ginger ..... 2 pints.
" " Lemon ..... 1 "
Tincture Capsicum ..... 1 drachm.

GINGER SYRUP.

Tinct. Ginger ..... 1 ounce.
Syrup ..... 2 pints.

When desired ½ drachm Tinct. Capsicum may be added to increase its pungency.

LEMON SYRUP.

Acid Solution ..... ½ ounce.
Oil " ..... ¼ "
Syrup ..... 2 pints.

MAPLE CREAM.

Pure Maple Syrup ..... ½ gal.
Cream ..... 1 pint.

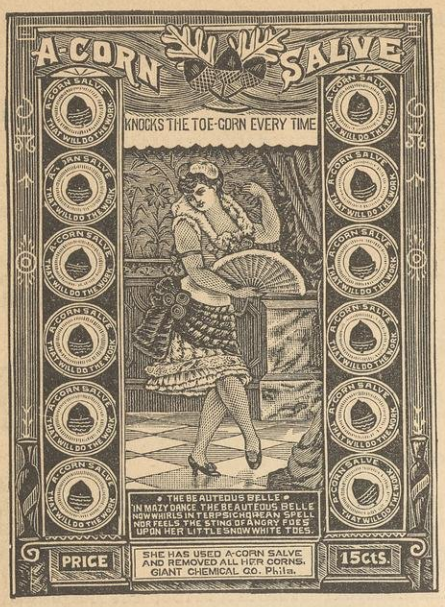

NECTAR SYRUP.

Conct. Raspberry Syrup ..... 4 ounces.
" Pine Apple Syrup ..... 2 "
Vanilla Syrup ..... 1 "
Syrup ..... 2 pints.

ORANGE.

Syrup ..... 1 gal.
Oil of Orange ..... 25 drops.
Citric Acid ..... 4 drachms.

Rub the Oil with the Acid and mix.

A-CORN SALVE.

The unprecedentedly large sale attained by this article is due:

FIRST. To the handsome manner in which it is put up. (See cut herewith of our beautifully lithographed counter stand on which each dozen comes packed.)

SECOND. To the universal satisfaction the article gives to the customer. We quote one sample letter only. E. D. Grover, Indianapolis, Ind. writes: "Send me a gross. It is the best selling corn salve I ever had and does the best work."

THIRD. To the liberal margin given the dealer. Price, per dozen, 85 cents; price, per gross, $9.50; retails at 15 cents per box. As an introductory offer the Giant Chemical Co. agree to send each retail druggist who will state over his signature that he has never had the article in stock, one dozen gratis, together with 100 advertising cards in shape and color of an acorn.

HANDSOMEST SHOW CARD EVER OFFERED.

We are now having made a magnificently lithographed life-size picture of one of the handsomest women in America, which will be 67 inches in height and 26 inches wide, making altogether the most striking show sign ever offered.

This will be sent to each druggist ordering of his jobber one gross A-corn Salve. Show cards ready about June 15, 1887. Many customers who have started the article, sell a gross a week.

Western Trade supplied by Morrisson, Plummer & Co.

SODA WATER SYRUPS, Etc.—Cont'd.

ORGEAT.

Syrup ..... 1 gal.
Extract Orgeat ..... 1 oz.
Fresh Cream or Condensed Milk ..... 1 pint.
Mix.

PEACH.

Syrup ..... 1 gal.
Peach Fruit Juice ..... 12 oz.
Mix cold.

PEAR.

Syrup ..... 1 gal.
Extract Pear ..... ½ oz.
Fruit Acid ..... 1 oz.
Mix.

PHOSPHATED SYRUP.

Phosph. Acid, 50 per cent ..... 2 ounces.
" Soda ..... 1 ounce.
Simple Syrup ..... 1 gallon.
Flavor with Lemon or other syrup.

PINE APPLE SYRUP

Conct. Pine Apple Syrup ..... (See next formula) ..... 4 ounces.
Syrup ..... 2 pints.

CONCENTRATED PINE APPLE SYRUP.

Take 2 Pine Apples, cut in thin slices, spread in layers in a wide shallow vessel, and sprinkle sugar over them, a layer of sugar on each layer of the fruit; let stand 24 hours, then pour off the juice and set aside. Wash the pieces with ½ gallon water, and express. To the expressed liquor add 8 pounds of granulated sugar, and apply a gentle heat until dissolved. When nearly finished add the juice first obtained, and simmer, strain and keep in well-corked bottles.

RASPBERRY SYRUP.

Conct. Syrup Raspberries ..... 4 ounces.
Liquid Cochineal ..... ½ ounce.
Simple Syrup ..... 2 pints.

SARSAPARILLA SYRUP.

Essence Sarsaparilla ..... ¼ ounce.
Caramel ..... ¼ "
Simple Syrup ..... 2 pints.

STRAWBERRY SYRUP.

Conct. Syrup Strawberries ..... 4 ounces.
Liquid Cochineal ..... 3 drachms.
Simple Syrup ..... 2 pints.

VANILLA SYRUP.

Ext. Vanilla ..... 1 ounce.
Caramel ..... ½ drachm.
Simple Syrup ..... 2 pints.

VANILLA CREAM.

Syrup ..... 3 pints.
Fluid Extract Vanilla ..... 1 ounce.
Cream ..... 1 pint.
Color with Caramel if desired.

For drawing HOT SODA WATER you will need :

1. *A supply of drinking water under moderate pressure.*—In a city, connection may be made directly with the service pipes; in the country, the pressure may be obtained by storing the water in a small tank on the floor above, or higher. The water can be brought to the heater through a small iron pipe,

HAFNER & WILL,

13 & 15 N. JEFFERSON ST., CHICAGO,

Soda and Mineral Water Fountains

We make every description of Soda Water Draught Apparatus. Re-tin and repair old Fountains. Prices moderate. Send for Catalogue and Price List.

SODA WATER SYRUPS, Etc.—Cont'd.

or better, through a block tin pipe. Near the heater should be a good globe valve for regulating the water supply.

2. *A small, strong, copper boiler tinned inside.*—This should be thoroughly made and capable of resisting considerable pressure. The best form is cylindrical, about eight to twelve inches long, with convex ends, and made after the manner of the water heaters connected with the ranges in city houses. On one end should be two brass nipples; one connected with a tin pipe running inside nearly to the other end of the cylinder, is for the cold water inlet; the other has no inside pipe, and is the outlet for hot water. To this is connected a short pipe attached to the fountain. The fountain valve should be in good order It will probably be best to set this boiler on end with inlet and outlet on top.

3. *A good lamp for heating the boiler.*—Gas is the most convenient fuel, but kerosene or 76° naphtha can be used with safe and portable lamps.

In using this apparatus be sure always to open wide the cold water supply valve before heating the water, and leave it open until after the light is extinguished. Neglect of this precaution may lead to an explosion; there is no danger if this rule is observed. *Use no lead pipe*; iron or block tin is best. Hot water can not be charged with carbonic acid gas. Coffee, chocolate and tea syrups with cream are the ones preferred for "hot soda;" acid syrups are not liked. Manufacturers of "soda water" appliances have various forms of apparatus for drawing hot soda, and can furnish prices upon application.

MANAGEMENT OF SODA FOUNTAINS.

We take the following

PRACTICAL HINTS

from Smith & Painter's little book advertising their fruit juices, as they apply to whatever syrups or juices may be used in the soda fountain.

1. SYRUPS.—All syrups, but especially fruit syrups, should be kept in cool and even temperature, either in glass or earthenware vessels. If kept too long or in too warm a place until fermentation has begun, many syrups may be recovered in very good condition by heating them to the boiling point, removing the scum and straining through flannel. As we have already said, heavy syrups keep better than light; therefore don't dilute them until just as they are to be put in the fountain.

2. SODA WATER.—Pay particular attention to the purity of the water used. See that it is thoroughly well charged at a pressure of not less than 180 lbs., and constantly agitated while receiving the carbonic acid gas.

3. ICE.—Use ice liberally. Pound it up in pieces, none larger than an egg, and pack it around the pipes and coolers of your fountain. See that it is pushed or settled down on the coolers several times during the day; otherwise it will melt *underneath* and form a crust *on top*, giving the ice box the *appearance* of being full when such is not the case. Replenish as often as the warmth of the day may require to keep both soda water and syrups *cold*. No greater mistake is ever made than in the daily attempt to save a little ice at the cost of trade and reputation. Many a concern has been stranded on this rock.

4. CLEANLINESS—Must be made a rule which has no exception. Everything connected with the soda counter must be clean and inviting. No slops, no dirty glasses about, no towels in use around the fixtures or for the hands of the dispenser that look like floor mops; but everything about the place, *whether in view or not*, neat attractive, *clean*.

TO THE DRUG TRADE.

McKESSON & ROBBINS, New York, desire to call your attention to their

PURE FRUIT JUICES,

which may be procured from

MORRISSON, PLUMMER & CO

CHICAGO.

The care exercised in the selection and preparation of the fruits, and the perfection of the process in every detail, insure Juices that will retain their flavor for a long time, and are not liable to change or ferment.

They are guaranteed to be absolutely pure, without any artificial flavoring whatever, and will keep in bulk as well as in bottles.

Your attention is particularly called to the 1 gallon, 2¼ gallon, and 5 gallon packages. *It is not necessary to make into syrups the entire contents of a package as soon as it is opened.*

PLEASE NOTE THE FOLLOWING REDUCED PRICES.

The McK. & R. Fruit Juices produce Syrups that will commend them to the most fastidious.

A trial order is respectfully solicited.

PLEASE SPECIFY "McK. & R."

SPECIAL DIRECTIONS FOR REMOVING STAINS AND SPOTS.

From New Remedies, March, 1882.

SUGAR, GELATIN, BLOOD AND ALBUMEN may be removed from all kinds of fabrics by simple washing with water.

ACIDS, VINEGAR, ORANGE JUICE, ETC., ON WHITE COTTONS AND LINENS.—Wash with pure water or warm Chlorine water.

ACIDS, VINEGAR, ORANGE JUICE, ETC., ON COLORED GOODS OR SILKS.—Aqua Ammonia diluted according to the fineness of the tissue and the delicacy of the color.

To remove rust stains from cotton and linen goods: A mixture of Powd. Cream Tartar two parts, and Oxalic Acid one part, is said to give better results than when only Oxalic Acid is used. Apply a little of the powder to the dampened goods.

COFFEE AND MILK STAINS may be removed from silk, woolen or other fabrics by painting over with Glycerine, and then washing with a linen rag dipped in luke-warm rain water. It is to be afterwards pressed on the wrong side with a moderately warm iron as long as it seems damp. The most delicate colors are unaffected by this treatment.

GREASE SPOTS.—For white linen or cotton goods, use soap or weak lye; for colored calicoes, warm soap-suds; for woolens, soap-suds or Ammonia; for silks Benzine, Ether, Magnesia, Chalk; yolk of egg with water.

MARBLE. No. 1.—Equal quantities of Ether and Lemon Juice will take stains out of marble. Put in a bottle and shake up well; wet the spots with the mixture, and in a few minutes rub with a soft cloth till they disappear.

MARBLE No. 2.—

Carbonate Soda	2 ounces.
Powdered Pumice	1 ounce.
Paris Whiting	1 "

Mix with water to form a paste; rub on the marble and allow the paste to dry. Then wash off with soap and water,

PAINT, VARNISH AND RESIN STAINS.—For white or colored cotton and woolen goods, Oil of Turpentine or Benzine, followed by soap-suds. For silk, Benzine, Ether, Soap; hard rubbing is to be avoided.

STEARIN, SPERM CANDLES.—For all kinds of goods, use ninety-five per cent. Alcohol.

NUT GALL, INK, RUST, IRON-MOLD.—White cottons and linens, warm solution of Oxalic acid, dilute Muriatic acid followed by sol. granulated tin. Colored cottons and woolens, repeated washings with a solution of Citric acid; if the color is fast silks, do nothing; all attempts only make things worse.

LIME, LYE, ALKALIES.—White cottons and linens, wash with cold water; colored goods and silks, a weak solution of Citric acid, applied with the tip of the finger to the spot previously moistened with water.

SCARLET CLOTH.—The following are the War Office instructions for removing stains from scarlet cloth: The coat is first to be well beaten and brushed. Then, with a clean hard brush a solution of one ounce of Salts of Sorrel (Binoxalate of Potassium) in a pint and a half of water is to be applied. Following this, another solution of one ounce Cream of Tartar in a pint and a half of cold water is to be applied. The solutions named are sufficient for eight officers' tunics. After cleansing, the coats should be hung up in the sun or in a dry place, but never near fire or stoves.

TAR, AXLE GREASE.—White cottons and linens, Soap, Oil of Turpentine, and water, each applied in turns. Colored cottons and woolens, first smear with lard, rub with soap and water, and let it stand for a short time. Then wash with Oil of Turpentine and water alternately. Silks the same, using Benzine instead of Turpentine, and dropping the water from a certain height on the under side of the stain; avoid rubbing.

TO THE TRADE

I take great pleasure in calling attention to the

ELEGANT, NEW, ART SOUVENIR

which I am now offering to the trade as an inducement to introduce the famous

Austen's Regina Bouquet Extract and Oriental Toilet Water.

This sumptuous work of art, of which the above is a fac-simile cut, represents a beautiful Turkish girl reclining at ease after her customary noonday siesta. The picture is 25x33 inches in size, and is executed in twelve (12) richly contrasting, but harmoniously blended colors, giving it all the softness and delicacy of the finest oil painting. It is fittingly encased in a richly carved frame of ebonized wood, with pebbled gold mat, giving it an air of artistic elegance seldom seen in any work of this kind. This striking and unique work of art will be given free of charge for a limited time with each order for **three dozen Austen's Regina Bouquet Extract, and one dozen Austen's Oriental Toilet Water.** No dealer need hesitate to place an order for a supply of these staple and popular toilet luxuries; although upon the market but a limited time, they have already achieved a marked success as general favorites with all persons of refinement and good taste.

PRICE LIST AUSTEN'S REGINA BOUQUET EXTRACT.

No. 1 or small, gold plated sprinkler stoppers, per dozen	$2 00
No. 2 or medium, " " " "	3 00
No. 3 or large " " " "	5 00

PRICE LIST AUSTEN'S ORIENTAL TOILET WATER.

Small, per dozen	$2 50
Large, "	5 00

These goods are sold by Morrisson, Plummer & Co., who will furnish the picture with the above specified quantity. Respectfully,

T. KINGSFORD, Successor to W. J. Austen & Co., Oswego, N.Y.

DIRECTIONS FOR REMOVING STAINS, Etc.—Cont'd.

WINE AND FRUIT STAINS.—White cotton or linen. Fumes of burning Sulphur, warm Chlorine water. Colored cottons or woolens; wash with tepid soap suds or ammonia. Silks the same, with very gentle rubbing.

To CLEAN MICA STOVE PLATES.—Use equal parts of Vinegar and Water, and rub with flannel cloth dipped into the mixture.

IODINE STAINS.—By adding a few drops of Liquid Carbolic Acid to the Iodine Tincture, the latter will not stain. According to Dr. Boggs, Carbolic Acid also renders the efficiency of Tincture Iodine more certain.

To REMOVE SILVER STAINS.—Put half a pound of Glauber Salts, quarter of a pound of the Chloride of Lime, and eight ounces of Water, into a wide-mouthed bottle, and when required for use pour some of the thick sediment into a saucer, and rub it well over the hands with Pumice Stone or a nail brush, and it will clean the fingers quite equal to cyanide, but without any danger. This will do to use over again until exhausted, and should be kept corked up. The disagreeable smell may be entirely avoided by the liberal use of Lemon Juice, which not only entirely removes the smell, but whitens the hands. *Photographic News.*

To CLEAN VERY DIRTY BRASS.—Rub some Bichromate Potassa fine, pour over it about twice the bulk of Sulphuric Acid, and mix this with an equal quantity of water. The dirtiest brass is cleaned in a trice. Wash right off in plenty of water, wipe it and rub perfectly dry, and polish with powdered rotten-stone.

A QUICK WAY TO CLEAN BRASS SCALES.—Turn in a pan enough Water of Ammonia to cover the bottom, and use a few handfuls of dry pine saw-dust or pine chips as they come from the planing mill, rubbing briskly until the pans are dry. It will be then cleaned and polished.

CLEANING WARE.—Sawdust rubbing, followed by a solution of crude Pot-ash or Soda ash, cleans grease from slabs, mortars, graduates, etc.

GREASE ERADICATOR.

Kilner (*Boston Journal of Chemistry*) gives the following receipt for this compound:

℞. Castile Soap, in shavings	4 ounces
Carbonate of Soda, powdered	2 "
Borax, powdered	1 ounce.
Aqua Ammonia	7 ounces.
Alcohol	3 "
Turpentine	2 "
Sulphuric Ether	2 "

Soft water enough to make one gallon. Boil the soap in the water until it is dissolved, and then add the other ingredients. Although it is not apparent what two ounces of Ether can do in a gallon of liquid, the mixture is said to be very efficient.

COLORS FOR DRUGGISTS' SHOW BOTTLES.

AMBER.

Chrome Yellow, deep	2 ounces.
Pearl-ash or Saleratus	6 "
Water	1½ gallons.

Boil for half hour gently, and when cool add

Muriatic acid	4 ounces,

and water to the desired shade.

HIRES' IMPROVED
ROOT BEER PACKAGES.

This preparation has steadily grown in public favor during the past ten years, until to-day it is used in every part of the United States and Canada, and a portion of the old world.

The tons of roots, barks and berries, which are collected in the season of their full development, that enter annually the composition of Hires' Improved Root Beer, have alone, by their intrinsic value, given it national distinction and fame. Therefore, in offering it to the trade, we do so confident that its superior excellency will commend it to your customers, as the best selling and most satisfactory article of the kind ever sold.

Wholesale Price List.

Packages in Dry form	$ 1 75	per dozen.
" " "	18 00	" gross.
" " Liquid form	1 75	" dozen.
" " " "	20 00	" gross.

Concentrated Solution for Drawing from Soda Fountain.

In Pint Bottles	75 cents each; $8 50	per dozen.
" One Gallon Cans	5 00	" gallon.
" Five " "	4 50	" "

If you want the most profitable trade with your fountain or bottling business, manufacture and run **Hires' Improved Root Beer.**

Country merchants can make money by making it up in a keg or bottling it and selling it at five cents a glass.

Comic and attractive show cards.

It can be made into a syrup and run in a soda fountain; it pays and takes better than soda water and all other drinks combined. Try it.

We solicit your trade, and shall be pleased to extend you any courtesies we can to further your interests. Hoping to hear from you, I am,

Yours very truly,

CHARLES E. HIRES,

48 N. Delaware Ave., Philadelphia, Penn.

SANFORD'S INKS AND MUCILAGE.

ALL VARIETIES, SIZES AND STYLES

PREMIUM WRITING FLUID,
FRENCH COPYING INK,
CARDINAL RED INK,
BLACK INK,
ASSORTED INKS,
ROYAL CROWN MUCILAGE.

SANFORD'S UNIVERSAL INKSTAND,

Patented January 13, 1885.

This stand has a metal ring spun on the neck, to which is attached a cover swinging laterally, so that the cork can be drawn and thrown away, leaving a perfect inkstand, with no cork to soil the writer's table or fingers.

Sanford's Black Ink, Cardinal Red Ink and Premium Writing Fluid are put up in these elegant Inkstands, and can be retailed at same prices as the old-fashioned corked bottles.

NO DEALER CAN AFFORD TO BE WITHOUT THEM.

Sanford's Universal Mucilage Bottle

WITH SPONGE TOP,

Patented Sept. 8, 1885, March 2, 1886.

The cap holding the sponge is beveled on the inside, making a funnel shaped cup that will carry the mucilage that may fall into it back into the bottle, and prevent its overflowing the top to foul the outside of the bottle, and render it inconvenient and unpleasant to handle. This cup catches all the surplus mucilage from the sponge.

This bottle is now filled with SANFORD'S TRANSPARENT ARABIC, a pure Arabic Mucilage, after an entirely new process, and put up in a new style never yet equaled.

Net Price, 2 oz., 1 dozen in box, per doz., $1.75.

SANFORD MANUFACTURING CO., Chicago

COLORS FOR DRUGGISTS' SHOW BOTTLES—Cont'd.

FOR WINTER.

All exposed show globes should have enough Alcohol in their colors to prevent freezing.

YELLOW.

Bichromate Potassa	3 ounces.
Carbonate "	2 "
Water	6 pints.

OTHER FORMULAS.—A very stable red is obtained by dissolving 1 drachm of Carbonate of Cobalt in pure Hydrochloric Acid, then adding enough Carbonate of Ammonia to redissolve the precipitate first formed, and diluting to 10 or 12 pints, Another red is made by adding Sulphocyanide of Potassium or Ammonia to a very dilute solution of Perchloride of Iron. Copper dissolved in Aqua Regia, and diluted sufficiently, yields a fine green. The addition of an excess of Ammonia to a very dilute solution of Sulphate of Copper produces a blue. For yellow, a dilute solution of Picric Acid may be used. Aniline colors do not resist the action of light well enough.

Journal of Chemistry

RECIPES FOR COLORED FIRES.

In making colored fires, it is necessary to remark that the materials are to be powdered *separately*, in a mortar, and finally mixed with the hand or a card. Each material that is employed, must be perfectly dry. As all colored fires containing sulphur are liable to spontaneous combustion, do not keep them in stock.

CRIMSON.

Chlorate Potassa	4½ ounces.
Charcoal	5¾ "
Sulphur	22½ "
Nitrate of Strontia	67½ "

DARK BLUE.

Calcined Alum, Carbonate of Copper each	12 parts.
Sulphur	16 "
Chlorate of Potassa	60 "

EMERALD GREEN.

Boracic Acid	10 ounces.
Sulphur	17 "
Chlorate of Potassa	73 "

GREEN.

Boracic Acid	5 drachms.
Sulphur	8 "
Chlorate Potassa	35 "

In using these fires it is best to make them into small cones, inserting a small piece of fuse at the apex.

WHITE.

Sulphur	13½ ounces.
Sulphuret of Antimony	17¼ "
Nitrate of Potassa	48 "

YELLOW.

Sulphur	3 ounces.
Dried Nitr. Soda	4 "
Chlorate Potassa	10 "

CAUTION TO THE TRADE.

LOONEN'S "LADIES' PERFECT TOOTH BRUSH" and all his best GOODS bear HIS TRADE-MARK. UNSCRUPULOUS dealers are selling a much INFERIOR Brush with the SAME NAME, but TRADE-MARK OMITTED for fear of the law.

Do not be IMPOSED UPON, but INSIST upon having the GENUINE LOONEN'S TRADE-MARK GOODS.

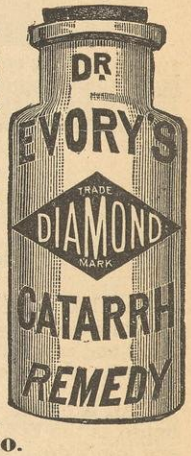

If you want RELIABLE Brushes order Loonen's.

KEPT IN STOCK BY MORRISSON, PLUMMER & CO.

Dr. Evory's Diamond Remedies.

Indorsed by the wholesale and retail trade because of their merit, ready sales, liberal profit, and satisfaction given to consumers.

CATARRH Cured by ☞ In its various stages, no matter of how long standing, a cold in the head or throat, deafness, roaring in the head, hay-fever, bronchitis, hoarseness, hacking cough, headache, fetid and sickening breath, stopping, clogging of the head and throat, nasal twang—restores the senses of smell and taste, strengthens and gives tone to the voice, eyes, etc. Is pleasant and easy to use, affording immediate relief and prompt cure. Price 50 cts. a bottle; sold by druggists.

Dr. Evory's Diamond Blood Renewer.

Cures chronic rheumatism, stiffness, soarness of the limbs and body, weak kidneys, malaria, chills, fevers, cough, colds, croup, cramp, asthma, sore or inflamed lungs, chest, pneumonia, constipation of the bowels, purifies and renews the blood. Price $1.00 a bottle; sold by druggists.

Dr. Evory's Diamond Invigorator.

The great life food, nerve food, and family medicine; cures dyspepsia and indigestion when everything else fails, quinsy, sore throat, diphtheria, measles, eruptions, colds, fever, cramp, pain in stomach, gout, piles, constipation, etc. Price 50 cts. a box; sold by druggists.

Calomel	3 "
Powd. Starch	4 "

REMEDIES FOR BURNS AND SCALDS.

Dr. Breyne in *L'union Pharmae*, June, 1873, recommends Glycerite of Lime, as soothing the pain and lessening the inflammation of burns. It is made as follows:

Freshly Slacked Lime	1 part.
Glycerine	50 parts.
Hydrochloric Ether	1 part.

Rub the Lime with a small portion of the Glycerine into a smooth cream, then add the remaining Glycerine and Ether, and thoroughly mix.

Lime water and pure Olive or Linseed Oils, equal parts; shake thoroughly to form a uniform and rather thin or liquid salve. Apply freely to the burns or scalds, and bind the wounds in rags saturated with it.

Lime water is made by pouring a gallon of water on a pound of unslacked lime, and after standing 12 hours decant or filter, and preserve for use when needed.

An excellent and available remedy for burns, at hand in almost every house, is the Bi-Carb. or ordinary Baking Soda. Make a thin paste with water and apply promptly; it will quickly remove the pain and check inflammation.

TO CLEAN A HAIR BRUSH.

Put a tablespoonful of each powder from Mme. Rowland's Bath Packet in a pint of water and wash the brush in it; it will very quickly make the brush clean as new. This is also excellent for cleansing or shampooing the hair.

ANOTHER METHOD EQUALLY GOOD.

Put a teaspoonful or a dessertspoonful of Aqua Ammonia into a basin half full of water, comb the loose hairs out of the brush and then agitate the water briskly with the brush, and rinse it well with clear water.

For Brittle Finger Nails.—Use a few drops of Olive Oil rubbed over the nails daily for two or three days.

DISINFECTANTS.

Kenyon, Potter & Co., of Syracuse, N. Y., offer the following formula as furnishing a cheap and reliable disinfectant. On the strength of their excellent reputation we extend its publicity for the benefit of our customers :

Nitrate Lead ..... 2 ounces.
Soft Water ..... 1 pint.
Dissolve.

Salt (Chloride Sodium) ..... 8 ounces.
Soft Water ..... 3 pints.
Dissolve.

Mix the two solutions and filter for use. One pint of this mixture with 8 to 16 gallons of salt water form the disinfectant ; this should be used freely in drains, cesspools, back-houses, stables, bad cellars, bad smelling rooms, for the preservation of the dead, and in fact for all purposes where a disinfectant is needed.

In the central chemical department of public health at Dresden, numerous researches were made with various disinfecting materials for the purpose of disinfecting liquid manure ; the chief results are appended. The value of chloride of lime and sulphuric acid, which form the most effectual disinfecting material, is here expressed by 100, while the remaining numbers show the value of the other materials as compared with the standard.

Chloride of Lime with Sulphuric Acid	100.0
Chloride of Lime with Sulphate of Iron	99.0
Luder and Lidloff's Powder	92.0
Carbolic Acid — disinfecting powder	85.6
Slacked Lime	84.6
Alum	80.4
Sulphate of Iron	76.7
Chloralum	74.0
Sulphate Magnesia	57.1
Permanganate of Potash with Sulph. Acid	51.3

VEGETABLE CHARCOAL.—Will absorb and retain many gases and foul odors, if placed in the liquid or mass producing them.

DRY EARTH. —Makes an excellent disinfectant of privy vaults.

TO DISINFECT CLOTHING.—Subject it to dry heat as great as it will bear without injury to the texture.

CONDIE'S DISINFECTANT.—Crude permanganate of potash half ounce; water half pint. Put a few teaspoonfuls in the room to be disinfected and renew as often as the solution loses its color. For purifying foul water a teaspoonful to the barrel is sufficient to sweeten, and if added until a faint tinge of color shows in the water, all injurious organic matter will be destroyed. If the water is for drinking, put in a little coffee or tea—a teaspoonful, and the tinge will disappear, leaving the water pure and wholesome.

FOR PRIVY VAULTS OR CESS POOLS.—Having a rotten egg smell (sulphuretted hydrogen) use copperas in coarse powder. One or two pounds to an ordinary vault will be ample, as a general rule, to remove all unpleasant odor.

Where the odor of Carbolic acid or chloride of lime is not objectionable, they will prove valuable disinfectants especially for drains, etc.

FOR WATER CLOSETS, BED PANS, ETC.—Use a solution of chlorinated soda, one ounce to the quart of water to rinse the vessel with.

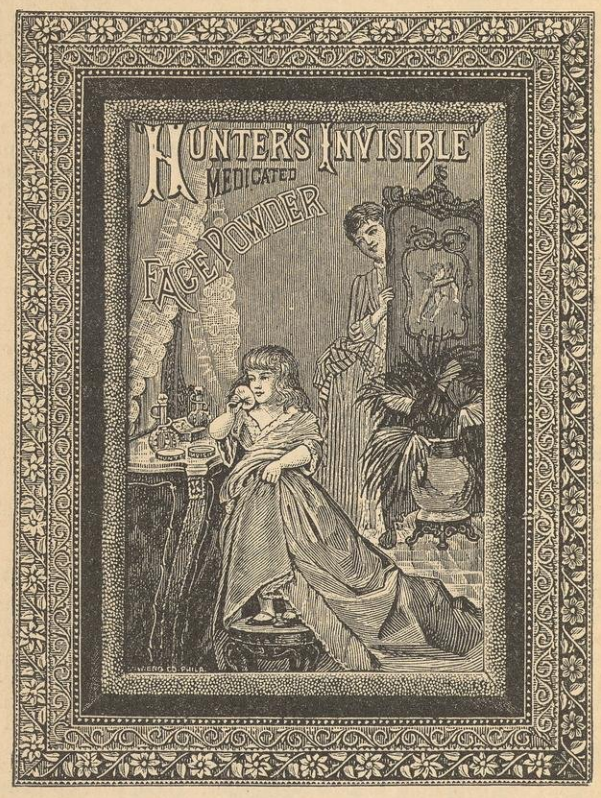

TO ASCERTAIN WHETHER THE AIR OF A SICK ROOM IS PURE OR NOT.—Dampen a piece of white linen or muslin in a solution of nitrate of lead. If impure, the cloth will darken, otherwise remain white.

"HUNTER'S INVISIBLE"

Medicated Face Powder.

Delightfully Fragrant! Guaranteed Harmless! Flesh, Pearl, Blonde and Brunette.

☞ **IMPOSSIBLE TO DETECT ITS USE.** ☜

Retail, 25c. **Per Dozen, $2.00.** **Per Gross, $21.60.**

MAJOR'S CEMENT

ESTABLISHED IN 1876.

For Repairing China, Glassware, Furniture, Meerschaum, Vases, Books, Tipping Billiard Cues, Etc., Per Bottle, 15 and 25 cents.

If you can make use of a sign, such as is illustrated with a 50 lb. weight, you can greatly increase your sales on

MAJOR'S CEMENTS.

If you would like to obtain one of these signs, send for descriptive circular No. 24, "How to obtain a sign from your wholesale druggist." **A. MAJOR, New York City.**

Little Rock, Ark.,
Jan. 25th, '87.

A. MAJOR, Esq., 232 William St., New York City.

DEAR SIR: I have noticed in one of our city drug stores your LARGE, striking sign of plate and weight for Cement. I think such a sign in my window, or in front of my store, would induce a large trade in this Cement. My store is one of the most, if not THE MOST, prominent retail stands in the city, being the principal corner at the city market. How and where can I obtain the large sign?

Respectfully,
JOHN B. BOND.

REDUCED TO 10 CTS. PER BOT.
80 cts. per dozen.

Philipsburg, Pa.,
Feb. 3, '87.

A. MAJOR, Esq., 232 William St., New York City.

MY DEAR SIR: We received the Cements and also the 50 lb. stone weight sign. The latter (the sign) is a grand thing. We, to tell the truth, have been surprised, in fact, we had not the least idea that it would create the demand it has for the Cement. Before getting the sign, we probably sold 2 or 3 doz. Cement yearly. Since we got the sign, a little over a month ago, we have sold 5 dozen.

Respectfully yours,
M. E. GEORGE.

Cement sold by MORRISSON, PLUMMER & CO.

DIET FOR THE SICK ROOM.

ARROW ROOT CUSTARD.

Dry Berm. Arrow Root.....2 drachms or 2 teaspoonfuls.
Sugar.....1 drachm or 1 teaspoonful.

Mix by rubbing or careful stirring with a little cold milk until all lumps are broken, and it forms a perfect mixture a little thicker than heavy cream. Boil half a pint of milk or water, and as soon as it comes to a boil pour it over the paste, stirring until it thickens. If any flavor is desired add it just before pouring on the boiling milk.

OAT MEAL GRUEL.

Oat meal, of med. fineness.....4 drachms or a tablespoonful.
Salt.....to season to the taste.

Mix with enough milk to form a paste and stir well, then add half a pint of milk and heat to a boil, maintaining this temperature five or six minutes while constantly stirring. Remove from the fire and add an even teaspoonful of sugar and a piece of butter as large as a cherry. Mix thoroughly,

RESTORATIVE JELLY.

Russian Isinglass..... 1 ounce.
Gum Arabic..... 2 drachms.
Sugar..... 2 ounces.
Cassia Buds, broken..... 1 ounce.
Lemon Juice..... 1 drachm.
Pure Port Wine..... half pint.

Mix altogether and let them stand in glass or porcelain vessel about two hours, then place the dish in a vessel of warm water, heat gently and stir until the Isinglass and Gum are dissolved, and finally bring the water to a boil a few minutes; then remove and strain the jelly into shallow moulds. A small slice of this jelly placed in the mouth of an unconscious or helpless invalid will gradually dissolve and pass into the stomach without effort of the patient.

BEEF TEA, QUICKLY MADE.

Put any desired quantity of thoroughly lean beef, cut across the grain and into small pieces, in a dry saucepan and allow it to rest over a slow fire for a few minutes, stirring to keep it from sticking to the pan; when of a whitish color pour on its own weight (pint for pound) of cold water and bring it to a boil, let it gently simmer ten minutes and strain under ordinary pressure into a shallow dish; if any fat appears upon the surface remove it with white filter or blotting paper. This makes a strong and excellent beef tea.

TOAST WATER.

Take one slice stale bread, half inch thick, and four by four inches in length and breadth, thoroughly toasted without scorching, put while hot into half pint boiling water, cover tightly and allow to cool, and then strain. This is quite refreshing to invalids unable to use stronger food.

PANADA.

Take two slices stale bread half inch thick, toast well without scorching, cut into small squares, put into a bowl, sprinkle a little salt over them and pour on a pint of boiling water, and grate in a little nutmeg.

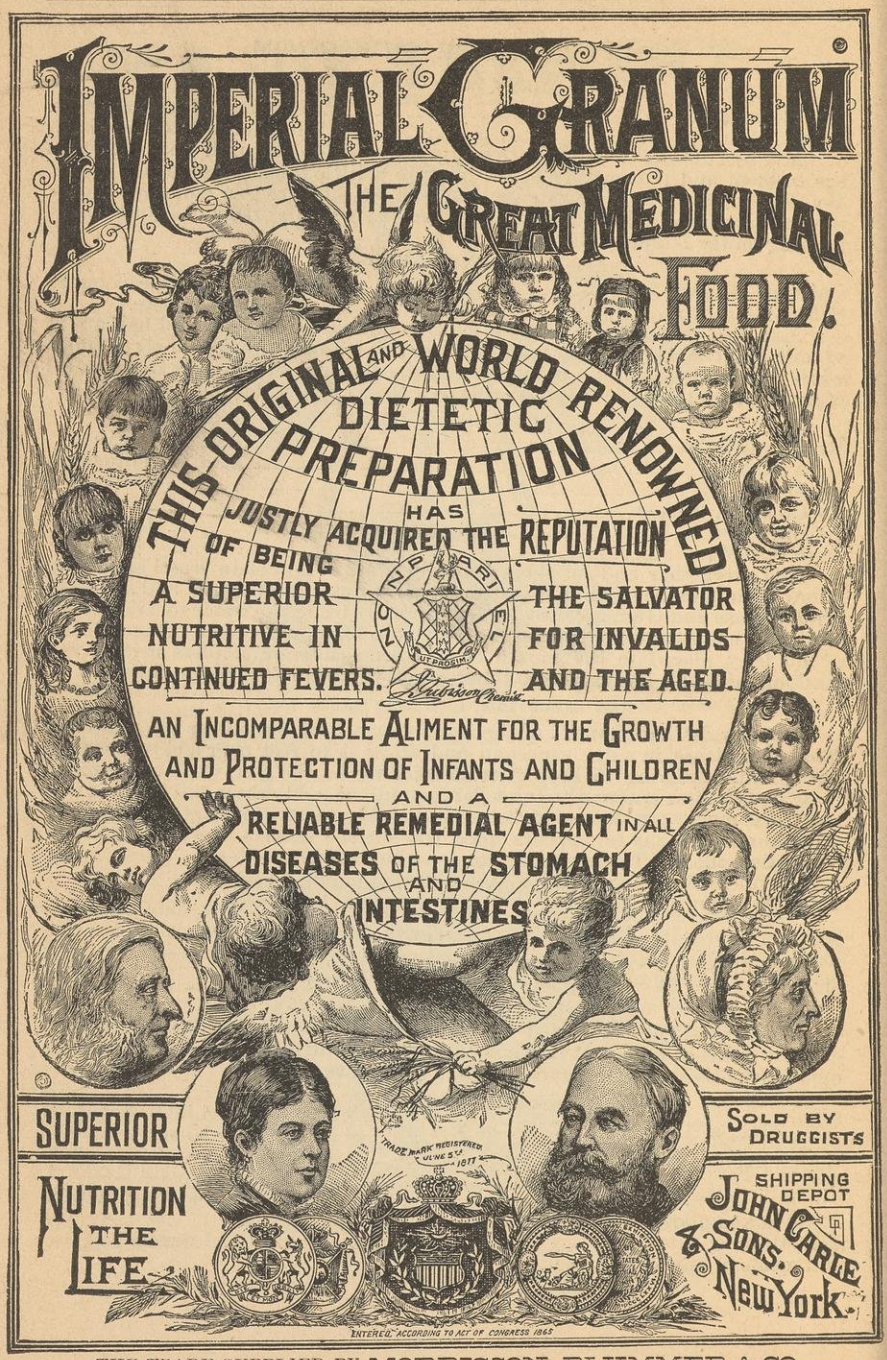

SAGO JELLY.

Sago.....4 tablespoonfuls.
Juice or rind of.....1 lemon.
Sugar, to suit the taste, perhaps.....2 ounces.
Water.....1 quart.

Mix and let them stand an hour, then boil, stirring frequently, until all is dissolved, and add,

Port Wine.....1 ounce.

Mix, allow it to cool.

THE TRADE SUPPLIED BY MORRISSON, PLUMMER & CO.

DIET FOR THE SICK ROOM—Cont'd.

CASTILLON'S POWDER.

Powdered Tragacanth, Sago, Salep, Sugar	1 ounce.
Prepared Carb. Lime	2 drachms.

Mix thoroughly and make into powders containing one drachm; for use, put one powder in four tablespoonfuls of cold milk, put into a pan and stir well, and add slowly one pint of boiling milk, and boil for 15 minutes and add sugar to the taste

DRIED MEAT FOR MEDICINAL PURPOSES.

Is prepared by Dannecy of Bordeaux by cutting fresh meat finely, spreading upon muslin, drying rapidly in a current of air, and rubbing into a brown powder, which is almost inodorous, and has a slightly saline taste. It is readily taken by patients, spread upon bread or a teaspoonful of it mixed with a cupful of broth, or soup, or by children if baked into biscuits.—*Pharm. Cent. Hall.*

ICE CREAM AND BEEF JUICE.

Dr. J. J. Tucker, in the *Chicago Journal of Medicine*, commends the following as an excellent dietary article:

℞—Cream	120 grams.
Sugar	30 "
Extract of Vanilla	8 "
Beef Juice	8 "

Any confectioner can make it, or it may readily be prepared at home with a freezer.

FLUID EXTRACT OF COFFEE.

A good article may be prepared on a small scale as follows:

Light-brown Coffee, roasted	5 ounces.
Dark-brown " "	5 "
Alcohol	3 "
Cold Water	12 "
Hot Water	Sufficient.

Grind the two kinds of coffee together, and macerate them for two days in a closed percolator with the alcohol and the cold water. Then add enough hot water to obtain fifteen ounces of percolate. Set this aside, and continue the percolation till ten ounces more have passed through. Evaporate this down to five ounces, filter, and add to the reserved liquor. Dose, two or three teaspoonfuls to a cup of hot water.—*Boston Jour. of Chem.*

EGG JELLY.

Beat up an egg in a bowl, and then add six tablespoonfuls of cold water, mixing the whole well together; then add two tablespoonfuls of farina of potatoes: let it be mixed thoroughly with the liquid in the bowl; then pour in as much boiling water as will convert the whole into a jelly, and mix it well. It may be taken alone or with the addition of a little milk, in case of stomach debility or consumptive disorders.—*Journal of Chemistry, April, 1882.*

HORSE RADISH VINEGAR.

Cider Vinegar	1 quart.
Fresh-grated Horse Radish	3 ounces.
Cayenne Pepper	1 drachm.
Mustard, pure, powdered	½ ounce.

Mix, and allow all to stand two or three days, with occasional shaking, then strain or filter, and you have an excellent seasoning for corned beef, or cold meats of any kind, salads, etc.

Scheffer's Pepsin.

SACCHARATED PEPSIN, U. S. Ph.
CONCENTRATED DRY PEPSIN, of superior strength.
LIQUID PEPSIN.

My make of Pepsin has stood the test of years, it has proven its superiority by not being deteriorated by age and by not losing its digestive power nor assuming an offensive odor, when exposed to the air.

E. SCHEFFER, Louisville, Ky.

SOLD BY MORRISSON, PLUMMER & CO.

DIET FOR THE SICK ROOM—Cont'd.

BREAD POULTICE.

Dry bread crumbs, q. s., boiling water to make a stiff mush of the crumbs, stirring well to remove all hard lumps, then stir in half teaspoonful of Glycerine to the teacupful of poultice, and it is ready for use.

SLIPPERY ELM POULTICE.

Powdered Elm, hot water or milk, enough of each to make a good paste, and then add Glycerine, half teaspoonful to cupful of poultice.

When either of these two poultices are to be applied to very painful surfaces, a little Laudanum can be added to advantage.

MILD MUSTARD POULTICE.

Good ground mustard, ground flax seed, each one ounce, water to make a thick paste, and spread on muslin.

STRONG MUSTARD POULTICE.

Best ground mustard, vinegar, enough to make a paste, spread on muslin. This poultice will often blister nicely.

LINSEED POULTICE.

Powdered flax seed.....4 ounces.
Hot water.....½ pint.

Add the seed gradually, stirring well till a soft paste is formed.

READY METHOD OF PREPARING FOMENTATIONS.

Take your flannel, folded to the required thickness and size, dampened quite perceptibly with water, but not enough to drip and place it between the folds of a large newspaper, having the edges of the paper lap well over the cloth, so as to give no vent to the steam. Thus prepared, lay it on the heated surface of the stove or register, and in a moment steam is generated from the under surface, and has permeated the whole cloth sufficiently to heat it to the required temperature. This method is often very convenient and efficient where there is no opportunity to heat much water at a time.—*Michigan Medical News.*

DIET FOR THE SICK.

By Mrs. Emma Brant.

Matron of the Hospital of the Michigan College of Medicine, Detroit.

From Medical Journal.

PLAIN OMELET.

1 egg.
1 pinch salt.
1 tablespoonful of milk.
A piece of butter the size of a hickory nut.

Beat the egg very light, add salt and milk. Have the pan very hot; put in the butter and then the egg. Shake the pan until the egg begins to settle, then brown well; run a broad bladed knife under it, fold one half over the other and serve hot.

ARROWROOT GRUEL.

1 pint milk.
1 teaspoonful arrowroot.
Salt to taste.

Let the milk just come to a boil; mix the arrowroot smooth with a little cold milk, and then stir it into the boiling milk, and add a little salt. Cook gently 10 minutes longer.

MOSCOW EXHIBITOIN, 1872. First Award—First Grand Silver Medal to Samuel Clarke, London, for his Patent Pyramid Nursery Lamp Food Warmer. Second Award—First Grand Silver Medal to Samuel Clarke, London, for his Patent Pyramid Night Lights. Prize Medal Awarded, London, 1873. Prize Medal Awarded at Paris Exposition, 1867.

Samuel Clarke's Patent Pyramid Nursery Lamp Food Warmers.

WITH PORCELAIN PANAKINS.

PATENT

PYRAMID NIGHT LAMPS.

50 cts. each, retail, or $3.00 per doz. wholesale.

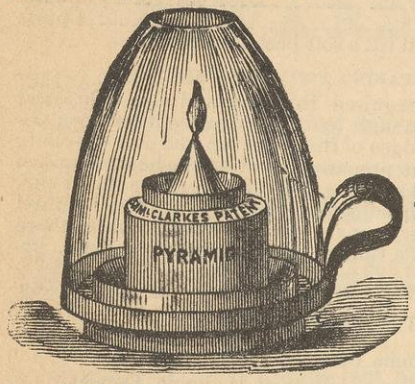

AND

PYRAMID NIGHT LIGHTS.

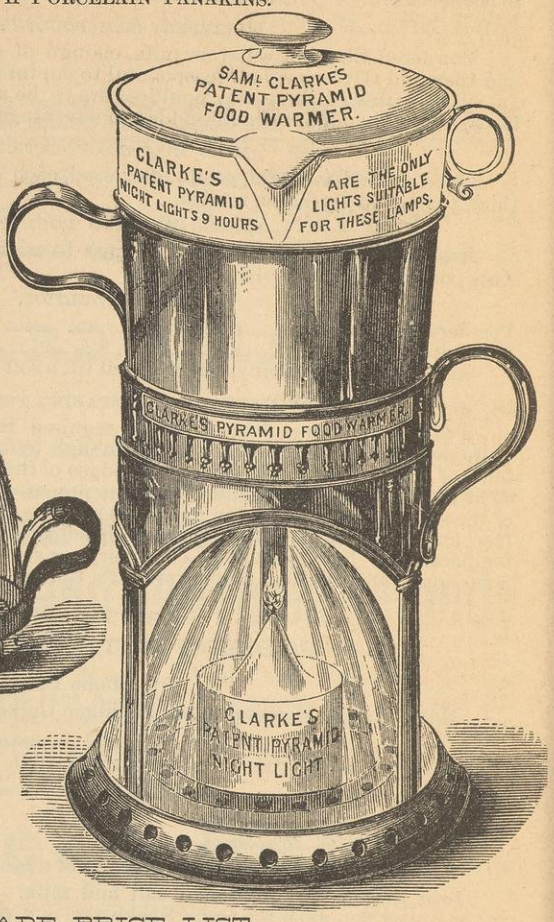

60 cts. per box.

The PYRAMID NIGHT LAMPS render the burning of a Night Light perfectly safe, entirely prevent flickering (so objectionable in all Night Lights not burned in a lamp), are clean, portable, and render a Night Light useful for many purposes where they otherwise would not be.

The PYRAMID FOOD WARMERS, by their peculiar construction — the glass chimney conducting and concentrating heat to the bottom of the water vessel, a larger amount of light aud heat is obtained than can be in any other lamp of the same class. Without smoke or smell.

The PYRAMID NIGHT LIGHTS have a patent prepared rush wick, are made much larger than any other Night Light, and give double the light; they are therefore, very suitable for nursery lamps, lighting passages, lobbies, etc., and adaptable to many purposes for which the common Night Lights are useless.

TRADE PRICE LIST.

	RETAIL.	WHOLESALE.
No. 1 Holds Half-pint Food, besides Water, Price,	$1 50 each	$11 00 per dozen.
No. 2 " Three-quarters Pint Food " "	1 75 "	12 50 "
No. 3 " One Pint Food, " "	2 00 "	14 40 "
Clarke's Pyramid N'ht Lamps, (Lacquered or Bronzed)	50 "	3 00 "
" " " Lights, (eleven in a box, each to burn nine hours)		4 75 doz. boxes.

CAUTION.—The Patentee begs to state that he will warrant his PATENT PYRAMID FOOD WARMERS to answer the purpose for which they are recommended, only when the Pyramid Night Lights are burned in them; the common night lights will not give sufficient heat. Persons who find a difficulty in obtaining the Pyramid Night Lights, are requested to write to the Patentee, **SAMUEL CLARKE, Newark, N. J.**, exclusive U. S. Depot for the Works, London, England, who will give the address of his nearest Agent. The Pyramid Food Warmers are sold by all responsible dealers throughout the United States at $1.50, $1.75 and $2.00 each.

TRADE SUPPLIED BY MORRISSON, PLUMMER & CO.

DIET FOR THE SICK—Cont'd.

POTATO PUFF.

Two cupsful mashed potatoes; two tablespoonsful melted butter. Stir these with a seasoning of salt to a light, fine creamy batter. Beat two eggs separately, and add with six tablespoonsful of sweet cream. Then beat altogether lightly and well. Pile in an irregular, jagged form in a dish, and cook in quick oven till nicely colored.

LEMONADE.

Some people might consider the making of lemonade such a simple thing that they would laugh at my giving directions for it; but I have so often found a "glass of lemonade" to mean water with slices of lemon floating in it, that I know *some* people may be taught if they will try.

Roll a lemon until it is perfectly soft; squeeze the juice into a glass, remove all seeds, add two teaspoonfuls of sugar, and fill the glass with water, and stirring well, then serve.

ORANGE WHEY.

The juice of one orange to one pint of sweet milk. Heat slowly until curds form, strain and cool.

EGG LEMONADE.

White of one egg, one tablespoonful pulverized sugar, juice of one lemon, one goblet water. Beat together.

SAGO MILK.

Three tablespoonsful sago soaked in a cup of cold water one hour; add three cups boiling milk; sweeten and flavor to taste. Simmer slowly a half hour. Eat warm.

BAKED MILK.

Put a half gallon of milk in a jar, and tie it down with writing-paper. Let it stand in a moderate oven eight or ten hours. It will be like cream, and is very nutritious.

PUNCH, WITHOUT LIQUOR

Take the juice of six oranges and six lemons, adding sugar to suit the taste, Put to this a quantity of pounded ice and some sliced pineapple, pouring over it two quarts of water. This is an agreeable summer beverage for anybody, sick or well.

HOW TO MAKE A SPICE-BAG.

Take half an ounce each of cloves, allspice, cinnamon and anise-seed, bruised, but not powdered in a mortar. Put between two layers of coarse flannel, about six inches square, and quilt them in. Soak for a few minutes in hot brandy, whisky or alcohol and water, equal parts. Apply warm, removing when it gets cold.—*Medical Record.*

SUGGESTIONS FOR THE SICK ROOM.

In a recent lecture on the art of nursing, Dr. Gause, of Philadelphia, gave the following suggestive hints under the head of "don't."

Don't waken a sick patient—not even for medicine or food. If patients don't sleep at night, let them sleep when they can.

Don't whisper in a sick room where the patient can hear and know that you are whispering. A sick person is exceedingly keen and watchful.

Don't walk on tiptoe in the sick chamber. It is just like whispering.

Don't stamp across the room; don't be inattentive to questions, no matter how trifling they may seem to be.

SUGGESTIONS FOR THE SICK ROOM—Cont'd.

Don't make a dust or needless noise. Never look anxious and lachrymose if you want to keep a patient's nervous condition right.

Don't get cross and grumpish; dont dispute with a patient.

Don't wear silk dresses or other noisy materials. Never hurry in a sick room, but be quick, alert and systematic. Anybody in a hurry will be sure to forget something.

Don't be loquacious; in conversation be concise and clear, and make no mistakes. Be careful in the use of words so as not to have anything between the lines for the sick person to study out.

Don't make light of the complaints of sick persons; listen to them with apparent interest.

Don't weary a patient with questions; don't gaze at him, and never allow anything to occur in the sick chamber that you don't see. There is a way of seeing things without attracting attention.

Don't cover a patient with silk or Marseilles quilts; they are only for ornament on beds not in use.

Don't cool hot tea or gruel by blowing it.

Don't keep food or drinking water in the sick room.

Don't fail to have a thermometer and clock in the sick room.

Don't put a patient's back to the window when the doctor calls to see him, but let the light strike on the patient's face while the physician is present.

SPONTANEOUS COMBUSTION.

Dr. Atkinson, in the course of an article on "The Treatment of Alcoholism," in the *Practitioner* for January, says: "To show to what extent Alcohol may be present in the blood, I may mention I have known it to burst into flame on a light being applied to a cut head, and Professor Ogston, of Aberdeen, has told me he has been able to set it alight when he has cut open the bladder of a man who has died in a fit of alcoholism.

Oily rags, greasy sawdust and other sweepings, if allowed to lie in a pile or close body, will heat and often ignite. This has doubtless been the cause of many fires whose origin seemed mysterious.

A small hole or opening in a floor over a hot stove or furnace, admitting a constant draught of dry, heated air, even if much below the usual igniting temperature, will often result in charred edges, absorption of oxygen, and finally a blaze and another mysterious fire.

A blister in a window pane, or a glass bowl with water in it, may act as a lens or sun glass, and concentrate the sun's rays enough to cause a blaze, but as this can only occur during daylight, few fires are likely to result, owing to early detection.

It is not safe to bottle Ethers, Benzine, or other inflammable and easily-vaporized liquids, by artificial light, as the vapor will float in the air many feet, catch fire, and carry it along the current to the bottles or other containers.

An English druggist relates how an incipient fire was caused in the show window by the reflection of the sun's rays from a show bottle containing the familiar solution of bichromate of potassium and sulphuric acid. According to the *Chemist and Druggist* this is not an unusual occurrence, and care should be taken to provide against such accidents by protecting the bottles with curtains whilst the sun's rays are the hottest.—*Western Druggist, May,* 1887.

DR. MOLESWORTH'S VAGINAL INJECTING AND SUCTION SYRINGE.

Is superior to all other Vaginal Instruments, for the following reasons:

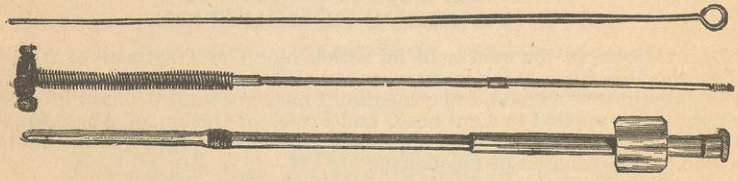

1st. It is easier used and cleaned, because less complicated.

2nd. It is less liable to be damaged or get out of repair by use, having no valve to be lost or pistons to become too tight or too loose.

3rd. This is the ONLY instrument that will carry a cleansing or medicated wash to EVERY and ALL parts of the vagina and mouth of the womb.

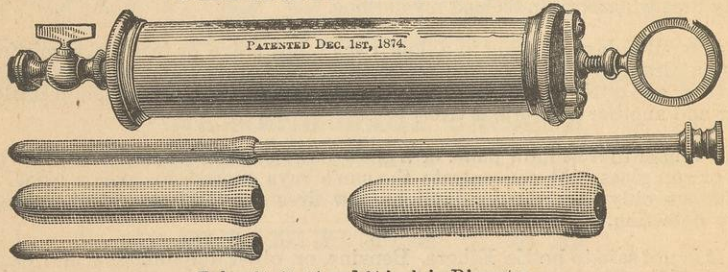

4th. This is the ONLY instrument that dilates and detaches from the walls, and removes by suction, without injury, all impurities or foreign matter that may be upon the walls and in the folds of the mucous membrane of the vagina, or within the mouth of the womb if open.

CERVICAL STRAIGHTENER OR ANTI-FLEXOR.

For STRAIGHTENING ALL FLEXIONS and CURVATURES of the CERVICAL CANAL.

CLIMAX DILATOR.

Tubes ⅛, ¼, ½ and ¾ inch in Diameter.

For Dilating the Os and Cervix Uteri, Urethra, Cervix Cystici, Sinus, Strictures of the Oesophagus, Vagina, Anus, etc., and as a General Tampon.

Each instrument has four Tubes; the smaller Tube is one-eighth of an inch in diameter and capable of being dilated to one-half inch. The larger Tubes will dilate to one, two and three inches in diameter. Price, $15.00 with Polished Mahogany Lock Box, Plush Lined.

SOLD BY MORRISSON, PLUMMER & CO.

TO MIX PAINTS OF VARIOUS COLORS.

A correspondent asks us a question on this subject, and we have no doubt there are numerous painter's manuals, or books of instruction, in existence; but many of these are not very reliable. We give the following table of compound colors, showing the simple colors which produce them, which may be of some service to our inquirer:

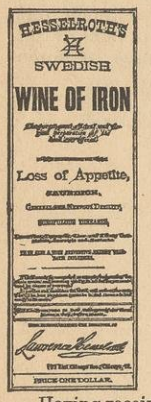

Buff.—White, yellow ochre and red.
Chestnut.—Red, black and yellow.
Chocolate.—Raw umber, red and black.
Claret.—Red, umber and black.
Copper.—Red, yellow and black.
Dove.—White, vermilion, blue and yellow.
Drab.—White, yellow ochre, red and black.
Fawn.—White, yellow and red.
Flesh.—White, yellow ochre and vermilion.
Freestone.—Red, black, yellow ochre and white.
French Grey.—White, prussian blue and lake,
Grey.—White lead and black.
Gold.—White, stone ochre and red.
Green Bronze.—Chrome green, black and yellow
Green Pea.—White and chrome green.
Lemon.—White and chrome yellow,
Limestone.—White, yellow ochre, black and red.
Olive.—Yellow, blue, black and white.
Orange—Yellow and red.
Peach.—White and vermilion.
Pearl.—White, black and blue.
Pink.—White, vermilion and lake.
Purple—Violet, with more red and white.
Rose.—White and madder lake.
Sandstone—White, yellow ochre, black and red.
Snuff.—Yellow and vandyke brown.
Violet.—Red, blue and white.

In the foregoing table of the combination of colors required to produce a desired tint, the first-named color is always the principal ingredient, and the others follow in the order of their importance. Thus in mixing a limestone tint, white is the principle ingredient, and red the color of which the least is needed. The exact proportions of each color must be determined by experiment with a small quantity. It is best to have the principal ingredient thick, and add to it the other paints thinner.—*Oil and Colorman Journal.*

Fifty years ago Chicago, with a population of 4,500, had three drug stores. To-day the proportion is about the same, one to every 1,500, or 460 drug stores to 700,000 inhabitants. What other city on the globe can show such growth.—*Western Druggist, May*, 1887.

If you want knowledge, you must toil for it. If food, you must toil for it, and if pleasure, you must toil for it. Toil is the law. Pleasure comes through toil, and not by self-indulgence and indolence. When one gets to love work, his life is a happy one.—RUSKIN.

We will take pleasure in filling orders for any of the above Medicines.

MORRISSON, PLUMMER & CO.

POSTAL REGULATIONS.

DOMESTIC POSTAGE.

FIRST CLASS.

Letters, and all other written matter, whether sealed or unsealed, and all other matter sealed, mailed, sewed, tied, or fastened in any manner, so that it cannot be easily examined, two cents per ounce or fraction thereof. Postal cards one cent each. Postal cards are unmailable with any writing or printing on the address side, except the direction, or with anything pasted upon or attached to them.

SECOND CLASS.

Newspaper and periodical publications when sent by publishers or news-agents, one cent a pound or fraction thereof. Newspaper and periodical publications when sent by persons other than the publishers or news-agents, one cent for every four ounces or fraction thereof.

THIRD CLASS.

Printed matter, in unsealed wrappers only (all matter inclosed in sealed envelopes notched on the sides or corners must pay letter rates), one cent for each two ounces or fraction thereof, which must be fully prepaid. This includes books, circulars, chromos, hand bills, engravings, lithographs, magazines, music, pamphlets, proof-sheets and manuscript accompanying the same, reproductions by the electric pen, hektograph, metallograph, papyrograph, and, in short, any reproduction upon paper by any process, except handwriting, typewriting, and the copying press, not in the nature of a personal correspondence. Limit of weight four pounds, except for a single book, which may weigh more. Third class matter must be fully prepaid or it will not be forwarded.

FOURTH CLASS.

All mailable matter not included in the three preceding classes which is so prepared for mailing as to be easily withdrawn from the wrapper and examined. Rate, one cent per ounce or fraction thereof. Limit of weight four pounds. Full prepayment compulsory.

PERMISSIBLE WRITING.

No writing is permitted on third or fourth class matter except as follows: The name and address of sender on the outside or inside of package, preceded by the word "from." On the wrapper may also be written the names and number of articles inclosed. The sender is further allowed to mark a word or passage in a book or paper to which he desires to call special attention. He may also write a simple inscription or dedication upon the cover or blank leaves of a book or pamphlet. There may be attached to articles of merchandise, by tag or label, a mark, number, name, or letter for purpose of identification. Printed circulars may contain the written name of the sender, or of the addressee and the date. Any other writing on third or fourth class matter will subject the package to letter rates of postage, and render the sender liable to a fine of ten dollars for each offense. Printed matter may be inclosed with fourth class matter, but the whole package is subject to the rate of one cent per ounce or fraction thereof.

UNMAILABLE.

Obscene books, letters, papers, pictures, and postal cards; lottery circulars and letters; liquids, gunpowder and other explosives; live reptiles, animals, and insects (except queen bees), poison, and any article liable to injure the mails or the person of those handling them.

POSTAL REGULATIONS—Cont'd.

RULINGS OF THE DEPARTMENT.

POSTAL NOTES.

A postal note, not presented for payment within three months from the last day of the month of issue becomes invalid.

To get your money back on a postal note which has expired, it is necessary for you to present it at the paying or issuing office and sign an application for a duplicate, to be issued by the superintendent of the money order system, Washington, D. C. This will cost you three cents.

If a postal note is lost or destroyed, no duplicate can be issued. This regulation is never departed from. It becomes necessary from the fact that postal notes are all made payable to bearer.

A postal note is also payable at the office of issue at any time within three months from the date of issue.

Postal notes are issued for sums of $5 or less, and the charge is only 3c., no matter what the amount.

Never leave the postoffice, after procuring a postal note, without first examining it, to see whether it has been properly filled.

MONEY ORDERS.

After a money order has once been paid, no matter by whom presented, the post-office department will not be liable to any further claim therefor.

In sending a money order by mail, never enclose it in the same letter with the information regarding it.

In making an application for a money order, be sure and state the given name, as well as the surname, of the person in whose favor it is to be drawn.

Whenever it is possible, the correct address—such as street and number—of both the person taking out the order and the person to whom it is to be paid should be given.

Money orders are never payable on the day of issue.

A money order can not be drawn for more than $100, and when a larger amount is desired, additional orders must be obtained to make it up.

No one person can secure more than three money orders on the same office in one day, when made payable to the same payee.

Whenever a money order has been incorrectly drawn, or whenever the remitter desires to change the place of payment, the postmaster is authorized to take back the first order and issue another, but another fee is exacted on the new transaction.

If a new order becomes necessary on account of a mistake made by the postmaster, he is compelled to issue a new one and charge himself with the fee.

THE REGISTRY SYSTEM.

This is one of the most valuable and important features of our postal system, and should be more liberally patronized by the public. It is just as expeditious as the express companies, while for small articles it is very much cheaper.

Any article regarded as mailable may be registered.

The fee for registering a letter or parcel is 10c. in addition to the regular postage, whatever that may be. For example, to register a simple letter on which the postage is 2c., the entire expense would be but 12c. If you desire to register an article of merchandise weighing 5 ounces, you would have to pay the regular postage of 1c. an ounce and 10c. additional for registering, making 15c. in all.

All articles belonging to the third or fourth class, presented for registering, must be so wrapped as to admit of examination without destroying the wrapper, for if it is not so wrapped the postage would be charged at letter rates.

POSTAL REGULATIONS—Cont'd.

THE REGISTRY SYSTEM—Cont'd.

Two or more letters or parcels addressed to or intended for the same person cannot be tied or otherwise fastened together and registered as one.

Any post office in the United States is duly authorized to receive and register mail matter.

Articles intended for foreign countries included in the Universal Postal Union may be registered just the same as if intended for this country, and the same fee of 10c. is charged.

DOMESTIC MONEY-ORDER RATES.

In accordance with the provisions of the Act of Congress, affirmed March 3, 1883, a single money order may be issued for any amount from one cent to $100 inclusive, but fractions of a cent must not be introduced with the amount of a money-order. The fees to be charged the public for domestic money orders will be as follows:

Orders not exceeding $10	8 cents
Exceeding $10 and below $15	10 "
" $15 and below $30	15 "
" $30 and below $40	20 "
" $40 and below $50	25 "
" $50 and below $60	30 "
" $60 and below $70	35 "
" $70 and below $80	40 "
" $80 and below $100	45 "

Postmasters are instructed to refuse to issue in one day to the same remitter, and in favor of the same payee, more than three money-orders payable at the same postoffice. The fees upon international money-orders remain unchanged, and the question of increasing the maximum limit of a single international money order to $100 (an increase requiring additional legislation) will hereafter be considered by the postoffice.

FOREIGN RATES OF POSTAGE, ETC.

To all countries except those named hereafter, the rate of postage is,

Letters, five [5] cents for each one-half [½] ounce or fraction thereof; condition of payment optional; limit of payment, destination.

Postal cards, two [2] cents.

Newspapers, printed matter, and samples of merchandise, one [1] cent for each [2] ounces or fraction thereof.

Registration fee on letters and other articles, ten [10] cents.

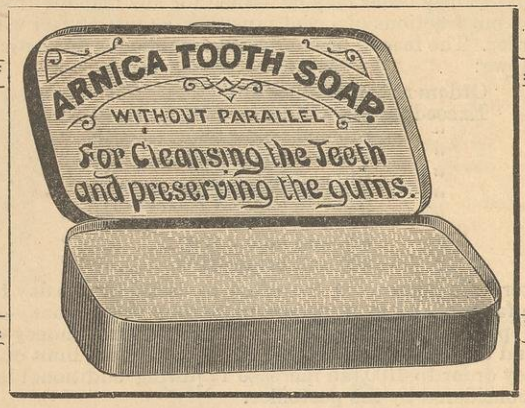

Articles of merchandise, except trade samples, are charged for at letter rates.

EXCEPTIONS TO THE ABOVE RATES.

	Letters.	Newspapers.	Other printed matter.
Canada and British Possessions in N. America (except Newfoundland which is as given above)	2c for 1 oz.	1c for 4 ozs.	1c for 2 ozs.
New South Wales, Queensland, Victoria, New Zealand, Norfolk Island (Oceanica)	12c " ½ oz.	2c each.	4c " 4 ozs.
Siam, (direct mail)	5c " ½ oz.	2c "	8c " "
Siam (via Brindisi)	5c " "	5c for 4 ozs.	4c " 2 ozs.

MORRISSON, PLUMMER & CO.

NOTICE.

TO THE DRUG TRADE.

We call attention to the article below, asking you to read over circular and testimonials *carefully*. It is a new departure, and a LEADER, and the only article that *positively cures* Female Diseases, though many are advertised.

Dr. J. A. MCGILL, of South Bend, Ind., an eminent and successful obstetric physician, has discovered and perfected a Compound Extract of Bitter Orange Blossoms that has caused a revolution in the treatment of female diseases, wherever its merits are tested and known it has done away with all dosing with nauseous drugs and surgical operations whereby so many precious lives have been lost.

As a discovery it ranks with Harvey's discovery of the circulation of the blood. It has proved in more than a thousand cases of the worst kind, to be a positive cure for the following female diseases: Ovarian Tumors, Polypus, Ulceration and Dropsy of Womb, Inflammation, Congestion and Falling of the Womb, Leucorrhœa, Painful and Suppressed Menstruation, Flooding, Frequent Urination, Bearing down Pains, Backache, Headache, Hacking Cough, Melancholy, absence of ambition or desire to live, or in fact any complaint having its origin in a disordered state of the generative and accompanying organs, whether from contagious diseases, Heredity, Accident, Tight Lacing, Miscarriage or other causes.

Orange Blossom is a harmless, pleasant, mild preparation. It is applied directly by patients themselves, thus securing correct local treatment. Its application is easy and simple. Its curative action on the inflamed, congested and ulcerated parts is immediate.

The method of treatment is convenient, and it is inexpensive. Physicians, druggists and others are requested to give it a trial. Sample furnished free, and "A plain talk to ladies" upon request.

Price, $1.00 per box, one month's treatment. $7.50 per doz.

Mailed to any part of the United States or Canada.

We have from 3,000 Physicians and over 30,000 Ladies

UNSOLICITED TESTIMONIALS

In our office, a few of which we append, any of whom may be written to, and will gratefully answer any inquiries.

"Gives perfect satisfaction in all cases." W. F. BENTLY, Ionia City, Mich.
"It will do just exactly as represented." L. COFFIN, Stoneham, Mass.
"It works just like a charm." S. E. DEATON, Wayland, Texas.
"The best thing in medicine I ever saw or heard of." S. RECORD, Auburn, Maine.
"A perfect specific for all female diseases." ARTHUR MAXSON, Fair Water, Wis.
"'Tis a grand remedy for all female diseases." C. E. IDEN, Newark, Ohio.
"I am so glad I heard of the remedy." L. S. BOTTENFIELD, Des Moines, Iowa.

Dr. Gray's Back Supporting Shoulder Brace

—AND—

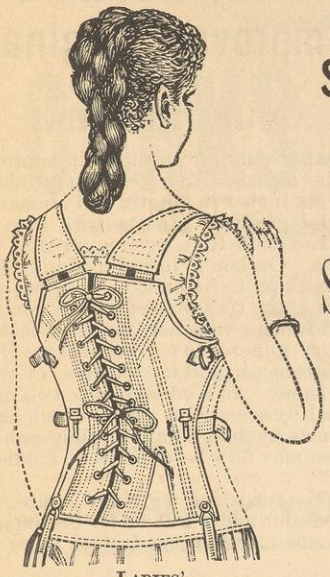

Shoulder Braces

—WITH—

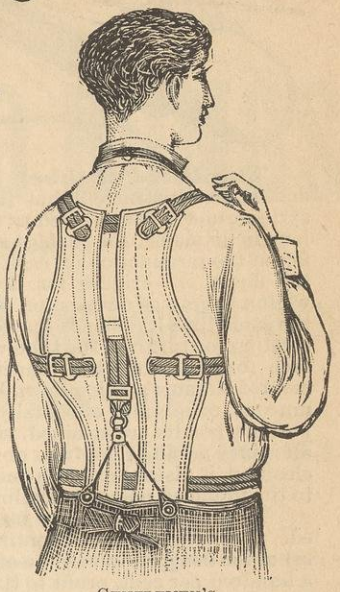

Suspender

—FOR—

Men and Boys.

LADIES'.

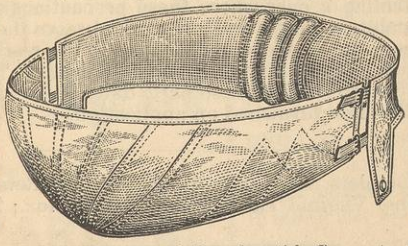

GENTLEMEN'S.

The Illustrations above show a back view of the article. Attention is called to the general construction, by which a perfect strengthening support is given to the back, at the same time drawing the shoulders back so as to expand the chest and throw the body into an erect, graceful position. All tendency to round shoulders is thus avoided, and this to the young at the period when bones and muscles are growing and hardening is a most important item.

Provision is made for attaching skirts and stocking supporters, thus relieving the hips entirely from the drag of both. The pad in front serves to keep the back securely in place and prevent all tendency to getting out of position.

Drs. Gray & Foster's Abdominal Supporter.

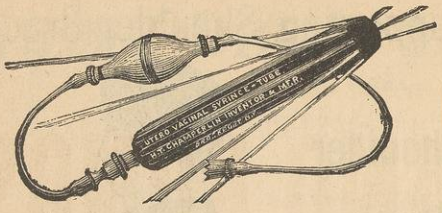

In the treatment of Chronic Diseases of Females, this Supporter has been prescribed in many instances by several of the leading Gynecologists of the country, and in every case has given the most perfect satisfaction. Especially has it been successful in its results when worn both before and after confinement, and in these cases has served as a preventive from the numerous diseases and deformities which are liable to occur from improper care at these critical periods.

Ladies who are suffering from pains in the back, hips, loins and sides, accompanied with constipation, nausea, headache and neuralgic pains in the limbs,—troubles which are often caused by the weight and downward pressure of the bowels, are relieved and frequently cured by the use of this Supporter.

These Supporters can be worn with ease at all times, and are the greatest aid ever yet devised to give comfort and support in walking up and down stairs, riding over rough roads, or any active exercise whatever.

GEO. FROST & CO., Boston, Mass.

ORDERS FILLED BY MORRISSON, PLUMMER & CO.

Chamberlin's
Improved Vaginal
AND
COMPLETE FAMILY SYRINGE.

The Hard Rubber Vaginal Tube is unlike anything in market, and is so constructed that it can readily be attached to a fountain or other syringe, and is constructed as follows: It is six inches in length, and about an inch in diameter; the surface is divided into longitudinal grooves, with an orifice at the termination of each at the base of the dome for a reverse stream; in the dome are orifices for diverging streams. On being introduced into the vagina, it acts as a repositor, pressing the womb up to its natural position; at the same time it distends the vagina, obliterating the transverse folds, by gently rotating (or turning) the tube while the liquid is being injected; the grooves detach (or scrape off) the tenacious mucus that adheres to the membrane; the reverse streams passing down between the instrument, and the surface of the mucous membrane effectually remove the same. As a consequence two important results are attained, viz.: The unhealthy secretions are removed, and all injury arising therefrom obviated. The parts having thus been thoroughly cleansed, if disease exists, a medicated solution may now be effectively applied to the inflamed mucous membrane.

This instrument can be used for any purpose for which a syringe is intended. It is indorsed by the entire medical profession, **and it will be for the interest of the Druggist** to call the attention of his customers to this fact, as there is a hundred per cent. profit to the retailer.

Physicians who are now using and recommending this syringe in their practice **concede that it is both unique and invaluable**, and the only instrument in market worthy of the name **"FEMALE SYRINGE."**

One of the cardinal principles to be observed, for the prevention and cure of uterine diseases, which should be kept before the mind, is the importance of having these parts **frequently and thoroughly cleansed.**

Too little attention is commonly paid to this subject. **No plan of treatment will succeed in effecting a cure where these precautions are habitually ignored or neglected.** I maintain that a lady should observe the same rule of cleanliness with reference to these parts that she does to the rest of her person. There is probably no cause more prolific of "Female Weakness," especially in married women, than a failure to cleanse these parts daily.

Descriptive Circulars furnished on application.

Syringe Complete, Wholesale, $15.00 per doz.; Retail, $2.50 each.
Hard Rubber Vaginal Tube alone, $9.00 per doz.; Retail, $1.50 each.

MOXIE

IS THE BEST THING THAT HAS HIT US.

It is said on the authority of the druggists, who tell the drummers, that **MOXIE NERVE FOOD BEVERAGE** is fast taking the place of liquors and wines, and it has the happy faculty of being a better drink, stopping the appetite for liquor, leaving no morbid appetite, and is harmless as gruel. There is good reason to believe that it stops the nervous, tired habit; no medicine, alcohol or poison in it. It is creating more excitement in the country than the discovery of the telephone, and its field of usefulness is higher.

PRICE.

X MOXIE,	$0.35 per bottle;	$2.90 per doz.
XX MOXIE,	.50 per bottle;	4.00 per doz.

Platt's Chlorides

THE HOUSEHOLD DISINFECTANT

An odorless, colorless liquid, powerful, efficient and cheap. Diluted with from four to twelve times its bulk of water and sprinkled about it immediately destroys all bad odors, purifies every impure spot and chemically neutralizes all infectious and disease-producing matter.

INVALUABLE in the sick room. Sold by Druggists everywhere. Quart bottles 50 cents.

Sold by MORRISSON, PLUMMER & CO.

BOVININE.

Bush's • Fluid • Food.

Containing 34 $\frac{70}{100}$ per cent. of Soluble Albuminoids.

The vital principles of Beef and Mutton concentrated. Does not become putrid in a short time as ALL other Raw Foods do. A highly condensed Raw Food Extract. Acceptable to the most delicate taste and smell. Retained by irritable stomachs that reject all other Foods. It assimilates more readily than any other Food known to the Medical Profession. Bovinine under the microscope shows the blood corpuscles in their normal condition strongly marked, while in all other Foods or Extracts this vitally important element is destroyed by the action of heat in cooking.

In Typhoid Fever the pathological conditions present in the large and small intestine about the ileo-cœcal valve from the inflammation and suppuration of the agminated and solitary glands demand a food containing no excrementitous matter, while the depressing effects of the disease upon the vital powers through the nervous system makes a highly nutritious and stimulating food absolutely necessary.

These indications for a food are met in Bovinine, which contains all the albuminoids of Beef and Mutton in a very concentrated form (as well as its stimulating meat salts), unchanged by heat or chemicals. The process of its extraction also insures perfect freedom from extraneous substances.

Bovinine alone, or as an adjuvant to the milk diet ordinarily employed, is of the greatest benefit in either the acute stage of the disease or during convalescence from it, as it is readily borne by the weakest stomach, and is acceptable to the taste of every patient.

In the vomiting of pregnancy, the extreme difficulty of nourishing the patient is obviated by Bovinine given in small doses frequently repeated. This symptom of reflex action can not always be entirely controlled, but its frequent recurrence is diminished, better nutrition assured, and the danger to life from inanition averted.

In all cases where rectal alimentation is necessary, no more eligible food preparation can be found than Bovinine. Reports of several cases are at hand showing increase of strength and weight in patients nourished for weeks upon Bovinine exclusively, administered in this manner.

In Diphtheria, a disease characterized by extreme prostration and rapid failure of the vital powers, where there is the most marked indication for a stimulating diet capable of bringing almost instant response, Bovinine is a most reliable food, its concentration and fluidity recommending it on account of the local lesions in and about the pharynx, while its nutrient value is demonstrated by its adaptation to the excessive prostration incident to the disease.

In disturbances of the intestinal tract accompanied by gastric irritation; in cancer of the stomach or rectum; in supplying the waste of albuminuria; in the marasmus of infancy or old age; in scrofulous conditions; in phthisis, and in so-called dyspeptic conditions, Bovinine will be found of signal service, securing better nutrition and assimilation, and alleviating the conditions present. Bovinine is a raw food and is neither partially or wholly digested, so that when given in cases of enfeebled digestive powers, it does not still further increase the inability of the gastric forces to perform their work, but restores them by its physiological stimulation to their normal effectiveness.

MEMPHIS, TENN., January 26th, 1887.

THE J. P. BUSH MANUFACTURING CO., 2 Barclay Street, New York City.

Gentlemen:—In reply to your note of inquiry regarding "Bovinine," I can say that I have very recently operated on a patient, in which case it was necessary to prevent action of the bowels for eight or nine days, meantime to furnish nutrition and support the system. I ordered for that purpose "Bovinine," taken in fresh sweet milk, and I must say that in a surgical experience of now nearly thirty years, I have never had *anything* to give me such satisfactory results. I wish every Surgeon and Physician viewed its *great* nutritive qualities as I do, for, although this was a "test-case," it is not the only one that has served to show me its rare merit as a nutrient.

Very truly, etc., J. P. McGEE, M. D., (Surgeon, etc.).

I have been prescribing "Bovinine" in my practice for some time, and am highly satisfied with the results. In one case of *Typhoid Fever*, where every other nourishment was rejected, the "Bovinine" was retained, and, I feel confident, *saved my patient*.

JOHN MILTON DUFF, M. D.
Professor of Obstetrics in the Western Pennsylvania College.

Gentlemen:—We have used your "Bovinine" extensively in this institution, with very satisfactory results. Its beneficial influence has been especially marked in cases of Typhoid Fever.

"DETROIT SANITARIUM,"
F. W. MANN, Resident Physician.

HENRY H. SHUFELDT & CO.'S

PURE

GOODS.

HATCH'S UNIVERSAL COUGH SYRUP,

Is one of the most profitable remedies in the market, both to dealers and customers, giving the best satisfaction to all parties, and having a leading sale wherever it is known; fully maintaining these distinguishing qualities in localities where it has been used for the past twenty years.

It does not constipate the bowels. It does not dry up a cough, but loosens it and relieves the patient. It is a

SPECIFIC FOR MEMBRANOUS CROUP.

We have yet to learn of a single failure to cure this midnight horror, when given promptly.

Thousands of physicians, who have become acquainted with its operations, prescribe it for their patients.

Wherever it has been used, the public acknowledge its eminent title to the appellation of

THE UNIVERSAL COUGH SYRUP.

It is put up with the express agreement of No Cure, No Pay.

WHAT THE TRADE SAY:

Universal Cough Syrup still the rage; my customers pronounce it the best cough remedy they have ever used. The demand has constantly increased, until now my sales of "Universal" exceed that of all other cough remedies combined. Send to me, at Angola, more goods, as per enclosed order at once. Yours, LEROY S. OATMAN, Buffalo, N. Y.

I have been in trade in this place forty-one years, and have sold scores of different cough remedies during that time. For the last six years I have sold more of Hatch's Universal Cough Syrup than I ever sold of a similar preparation in the same time. It became standard as soon as known. H. D. PINNEY, Oswego, N. Y.

Something over two years since, at the request of one of my customers, I consented, reluctantly, to order a quantity of Hatch's Universal Cough Syrup, a medicine at that time unknown in this city. With no advertising except that done by those who have used it, it has become one of the best selling articles among the scores of such preparations that I keep in stock. It has seemed to make its way by absolute merit. I am authorized to refund the price in all cases where satisfaction is not derived from its use.
Z. FOSTER CAMPBELL, Manchester, N. H.

Your Universal Cough Syrup has given as good satisfaction as any medicine I ever sold. I sell ten times more of it than of any other preparation for the same use.
Yours respectfully,
T. D. MILLER, Druggist, Norwich, N. Y.

We have on file at our office hundreds more of equally strong testimonials as to its value.

The dealer who buys this remedy, gets one of the best selling articles of the kind, one which as soon as it has been tried, becomes at once

A LEADER,

and is one of the very best remedies ever compounded. A trial order will convince.

A full supply of Coloring Receipts counter wrappers, etc., advertising these goods sent on application to

Cures Cancer, Catarrh, Scrofula, Eczema, Ulcers, Rheumatism, Blood Taint, Malaria.

The cut represents the method of its manufacture forty years ago in Georgia. It is Nature's own Remedy and made from herbs and roots gathered in the forests of Georgia.

Free from Mercury or Potash.

SOME TESTIMONIALS.

SEVERE CASE OF CATARRH CURED.

Swift Specific Co., Atlanta, Ga: MEMPHIS, TENN., Feb. 18, 1887.

GENTLEMEN—I was a victim of severe catarrh for seven years, and found no benefit from any medicine until I took S. S. S. Three dozen bottles of S. S. S. entirely cured me. To-day I have not a remnant of the nauseous disease. Yours truly, FRANK CORNS.

A LADY'S REMARKABLE TESTIMONY.

Mrs. Wilson is the wife of R. W. Wilson, one of the best known citizens of Hopkinsville, Ky. She had a wonderful cure by S. S. S., which she described in the accompanying letter, Mrs. Wilson would cheerfully give in detail to any sufferer her thrilling experience and joyful cure. She is enthusiastic over S. S. S. as a tonic for delicate women.

Swift Specific Co., Atlanta, Ga: HOPKINSVILLE, KY., Feb. 24, 1887.

GENTLEMEN—Seven years ago a sore developed on my nose from a finger-nail scratch. I tried a few simple remedies, but the sore would not yield. I grew worse every year for seven years. Many thought I had a cancer. Over a year ago, I began taking S. S. S., and two dozen bottles entirely cured me. When I began with Swift's Specific I was in very poor health, and could hardly drag about. After I had finished the course of S. S. S. I was strong, buoyant, and had a good appetite. I regard it a most invaluable medicine for ladies in weak, delicate health. It is a household medicine with me. Yours respectfully, MRS. R. H. WILSON.

MALARIAL POISON.

GENTLEMEN—Last August a year ago (1885) my wife was attacked with malarial poison. She was reduced to a skeleton. She could not eat anything. I sent her away from home in hopes of benefiting her, but she was so low that she was confined to her bed nearly all the time. At this juncture I commenced treating her with Swift's Specific. She began to improve rapidly under this treatment, and soon she was free of all malarial troubles, and her appetite was completely restored. She only took about one dozen bottles. So great is her faith in S. S. S., she says she believes it would almost raise the dead. I myself know that the effect of S. S. S., in her case was marvelous, I say miraculous. S. R. HARRIS.

Savanah, Ga., January 8, 1887. Treatise on Blood and Skin Diseases mailed free.
SWIFT SPECIFIC CO., Drawer 3, Atlanta, Ga.

FREE FROM RHEUMATIC PAIN.

Swift Specific Co., Atlanta, Ga:

GENTLEMEN—A year ago I had rheumatism and my blood was out of order. I underwent a thorough course of S. S. S., taking twenty-six bottles. It cleansed my blood and built me up, and when I closed the course I was free from all rheumatic pain. Yours, etc.

Memphis, Tenn., Feb. 19, 1887. JOE MANCINI.

INDORSED BY LEADING PHYSICIANS.

"Several years ago a negro came to me for treatment of a very severe sore throat. I cauterized it once, twice, three times, and without other than temporary benefit. On the fourth visit he made my office, I told him, after a thorough examination, that he had contracted blood poisoning. He confessed that he had; but said a doctor had cured him with black pills—mercury of course. Finding the foul and fearful disease yet in his system, I thought I would just experiment on him and see if there was any virtue in the favorable reports I had been hearing for years of Swift's Specific, so I put him under treatment of nothing but S. S. S. Four large bottles completely cured him, and left his throat as beautifully healed as I could desire.

Since then I have used S. S. S. in numerous cases in my practice, and I have never failed to make a safe, perfect and permanent cure, where the patients have followed your directions faithfully.

It is because of these remarkable cures that I have made in my own practice with S. S. S. that I cheerfully send you this testimony of Swift Specific's sure success in all such cases.

Those who know the almost inevitable permanently dangerous effects of mercury will welcome your discovery of S. S. S. as a boon to humanity. The medical profession, always wary of proprietary medicines, is coming slowly, and in some cases secretly, to the use of S. S. S. in cases of blood disorder. Of course a medicine that cures poisoning in its worst form must purify the blood of every disorder. Yours respectfully, J. N. CHENEY. M. D.

Ellaville, Ga., March 21, 1887.

MORRISSON, PLUMMER & CO.

TO THE RETAIL DRUG TRADE:

In placing our new Mikado Cologne on the market, we have met with the most flattering success. Druggists everywhere have given us generous support, and we return thanks to all for the same. We wish to call your attention to the fact that our Mikado Cologne is put up for the *Drug trade alone.* We do not nor will not touch the Dry Goods, Notion, Trimming or Grocery trade, as many other Cologne houses *do.* We pledge ourselves to furnish our advertising matter only to the Drug trade, and all our newspaper advertising will be for their benefit. Our other goods identify us with the Drug trade, and furnish a virtual guarantee that we will adhere to this course of doing business. In view of this we solicit your kind patronage and aid in making our Mikado Cologne the leading article of the kind on the market.

Yours, most respectfully,

Pittsburg, Pa. FLEMING BROS.

Also sent by mail, post-paid, upon receipt of **50c.** single bottle, package of two bottles, **$1.00.** Circulars and testimonials free.

CAUTION.—Beware of counterfeits or imitations. The above Trade Mark will be found on every bottle, and do not buy without it.

EDWARD P. HALL, Proprietor,

630 STATE STREET, - - - ERIE, PA.

Sold by MORRISSON, PLUMMER & CO.

PHENIC ACID, CHEMICALLY PURE.

In its pure state, Phenic Acid changes readily on exposure to moisture, air and light, and when so changed in color or smell, is unfit for medical use. To prevent this it must be recovered in its nascent state by combining it atom for atom with syrup or glycerine, when it will remain unaltered for an indefinite period. Combined with syrup we obtain our

SYRUP OF NASCENT PHENIC ACID.

each tablespoonful of which contains 2½ grains chemically pure nascent Phenic Acid.

From medical works, journals, letters and statements of physicians, we learn that brilliant successes have been obtained from this preparation in the treatment of zymotic diseases, as *Scarlet Fever, Diptheria, Membranous and Diptheritic Croup, Typhoid, Typhus and Typho Malarial Fever, Septicœmia, Erysipelas, etc. etc.* Physicians especially recommend it in Malaria. It is indicated in all disturbances where the tongue is of a dark or angry red, and many patients will at once convalesce on the use of the remedy. Dose, one tablespoonful three times daily before meals.

Many physicians prefer a combination of Sulphur with Phenic Acid. For such we prepare

SYRUP OF SULPHO PHENIQUE.

each tablespoonful of which contains Sulphuretted Hydrogen and Ammonia Phenate combined, 2 5-6 grains. The profession have found this combination especially serviceable in *Scarlet Fever, Diptheria, Croup, Tonsillitis, Quinsy Sore Throat:* chronic forms of *Rheumatism, Gout, Asthma, and Cutaneous Affections*, and all cases in short where sulphur is indicated. In *Chronic Nasal Catarrh*, in conjunction with the topical application of Glyco Phenique, it is universally remedial. This compound may be relied on in *Dyspepsia.* Dose, one tablespoonful three times daily before meals.

It frequently happens that the lesions left by acute disorders and constitutional diathesis require an alterative for which purpose Iodine and Iodide of Potassium have always held the first place. With these we prepare our

SYRUP OF IODO PHENIQUE,

each tablespoonful of which contains Iodine, 1-14 grains, Iodide of Potassium, 3-14 grains, Nascent Phenic Acid, 8-11 grains. This combination is in universal demand by the profession for the treatment of *Scrofula, Tumors, Hip-Joint Diseases, Caries and Necrosis* of bone, *Cancer, Syphilis*, and all specific and constitutional diseases; *Erysipelas, Acute and Chronic Skin Diseases.* In Malaria it is prompt, speedy and effective, abating the paroxysm and preventing future attacks. In "biliousness" or "liver complaint" it has no superior. In *Scarlet Fever* it should be used alternately with Syrup of Nascent Phenic Acid. Dose, one tablespoonful three times daily before meals.

In all fevers whether Idiopathic or Essential, the grave symptoms are high temperature, sleeplessness and nervous disturbances. The profession have found that one of the best remedial agents to combat these symptoms is our combination of

SYRUP OF AMMONIA PHENATE,

each tablespoonful of which contains Ammonia Phenate. 2 4-5 grains. The profession have reported that on the exhibition of this compound, high pulse and temperature will be reduced and neither delirium nor coma supervene. It is prescribed in the same class of diseases as the syrup of Nascent Phenic Acid, viz: *Scarlet Fevers, Diptheria, Typhoid, Typhus and Typho Malarial Fevers, Septicœmia, Erysipelas, Acute Rheumatism*, etc., etc. In Turberculosis and other pulmonary affections, as Pneumonia, Bronchitis, etc., etc., it has proved invaluable. Dose, a tablespoonful three times daily before meals.

The above combinations of Phenic Acid are also prepared with a non-saccharine base for diabetic patients and for those to whom sugar is objectionable.

GLYCO PHENIQUE.

A ten per cent solution of nascent Phenic Acid chemically pure.

Formula.–Pure nascent Phenic Acid, 1 gr.; pure hydrated glycerine, sp. gr. 1090 qu. s. ad. m. X.

THE MOST RELIABLE AND VALUABLE ANTISEPTIC FOR EXTERNAL USE.

The therapeutic value of this preparation has been established by the unqualified endorsement of the profession, both at home and abroad. Success has uniformly followed its use.

Hypodermic injections of Nascent Phenic Acid, Sulpho Phenique, Iodo Phenique and Ammonia Phenate, all at 2 per cent. Where a rapid and thorough effect is desired, whether in adults or children, these should be used with Hypodermic Syringe (Dr. Declat) with finger bearings, 2 needles, graduated, holds 80 minims.

STANDARD HOUSEHOLD REMEDIES.

DR. D. JAYNE'S,

FAMILY MEDICINES

ARE PREPARED WITH GREAT CARE, EXPRESSLY FOR FAMILY USE, AND ARE SO ADMIRABLY CALCULATED TO PRESERVE HEALTH AND REMOVE DISEASE, THAT NO FAMILY SHOULD BE WITHOUT THEM. THEY CONSIST OF

JAYNE'S EXPECTORANT, for Colds, Coughs, Asthma, Consumption, and all Pulmonary and Bronchial Affections. It promotes expectoration and allays inflammation.

JAYNE'S TONIC VERMIFUGE, for Worms, Dyspepsia. Piles, General Debility, etc. An excellent tonic for Children, and a beneficial remedy in many of the ailments of the young.

JAYNE'S CARMINATIVE BALSAM, for Bowel and Summer Complaints, Colics, Cramp, Cholera, etc. A certain cure for Diarrhœa, Cholera Morbus, and Inflammation of the Bowels.

JAYNE'S ALTERATIVE, of established efficacy in Purifying the Blood, and for curing Scrofula, Goitre, Dropsy, Salt Rheum, Epilepsy, Cancers, and Diseases of the Skin and Bones.

JAYNE'S LINIMENT OR COUNTER-IRRITANT, for Sprains, Bruises, Soreness in the Bones or Muscles, Rheumatism, and useful in all cases where an external application is required.

JAYNE'S SANATIVE PILLS, a valuable Purgative and a certain cure for all Bilious Affections, Liver Complaints, Costiveness, Dyspepsia, and Sick Headache.

JAYNE'S HAIR TONIC, for the Preservation, Beauty, Growth and Restoration of the Hair. A pleasant dressing for the hair and a useful toilet article.

JAYNE'S SPECIFIC FOR TAPE WORM, a certain, safe and prompt remedy.

In settlements and localities where the attendance of a Physician can not be readily obtained, families will find these remedies of great service. The directions which accompany them are in plain, unprofessional language, easily understood by all, and, in addition, Jayne's Medical Almanac and Guide to Health, to be had gratis of all agents, contains, besides a reliable Calendar, a Catalogue of Diseases, THE SYMPTOMS BY WHICH THEY MAY BE KNOWN, together with advice as to the proper remedies to be used.

All of Dr. D. Jayne & Son's Family Medicines are sold by MORRISSON, PLUMMER & CO.

Gouraud's Olympian Cream.

This standard preparation has from the time of its general introduction, received the commendation of the beauty and fashion of the land. As now put up it especially commends itself to the consideration of retail druggists and fancy goods dealers, who will find it far better adapted to the wants of their fair customers than any competing articles. All first-class druggists who desire a specialty that will attract the cream of the trade, will find in the OLYMPIAN CREAM a preparation sought by the elite and fastidious, one that they can recommend with a confidence that their favorable mention, will meet with warm appreciation and corresponding patronage.

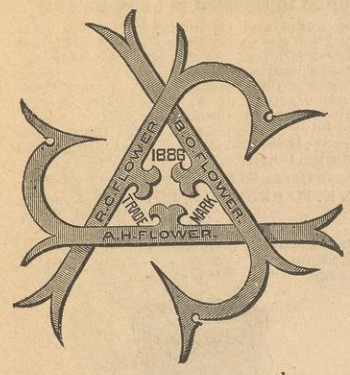

The public are especially warned against a nostrum, entitled "Oriental Cream," purporting to be prepared by representatives of my deceased father, Dr. T. Felix Gouraud. As his administrator I applied for and obtained a conditional injunction against its sale. The only genuine article is Gouraud's Olympian Cream.

Price, per dozen ***$7.50.***

ALLEN'S

LUNG BALSAM

PRICE 25c., 50c. AND $1.00 PER BOTTLE.

The 25 cent bottles are put up for the accommodation of all who desire simply a Cough or Croup Remedy. Those desiring a remedy for Consumption or any Lung Disease should secure the large $1.00 bottles.

Physicians who have failed to cure their patients should try this Medicine before they give the case up, as we know many valuable lives have been saved by being persuaded to give it a trial.

DIRECTIONS ACCOMPANY EACH BOTTLE.

☞Beware of Imitations put up in our style of Bottles.

Notice to Dealers in Lung Balsam.

The name and trade mark "LUNG BALSAM," belongs exclusively to the proprietors of this medicine. That right has been sustained by courts of law, and any person found selling an article by that name, and not from the manufactory of J. N. HARRIS & CO., Limited, will be prosecuted.

The Lung Balsam is sold by all respectable Druggists throughout the United States and in Foreign Countries.

Price 25 Cents, 50 Cents and $1.00 per bottle.

PERRY DAVIS'
VEGETABLE
Pain Killer,

The Great Family Medicine of the Age.

TAKEN INTERNALLY,
APPLIED EXTERNALLY.

We ask the attention of the trade and the public to this long and unrivalled FAMILY MEDICINE, for the cure of Colds, Coughs, Weak Stomach and General Debility, Indigestion, Cramp and Pain in the Stomach, Bowel Complaint, Colic, Diarrhœa, Cholera, etc. etc., and for Fever and Ague there is nothing better. It has been favorably known for more than forty years to be the ONLY SURE SPECIFIC for the many diseases incident to the human family. Internally and externally it works equally sure.

CAUTION.—Be sure you call for it and get the genuine Pain Killer, as many worthless nostrums are attempted to be sold on the great reputation of this valuable medicine. Directions accompany each bottle.

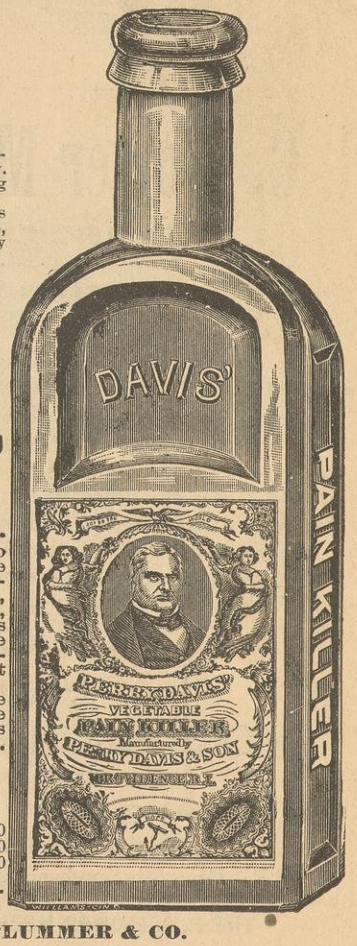

Prices: 25c., 50c. and $1.00 per Bottle.

HIBBARD'S RHEUMATIC SYRUP!

— THE —

Greatest Blood Purifier Known!

ITS PECULIAR COMBINATION MAKES IT A

GREAT TONIC and APPETIZER!

FOR A BILIOUS OR CONSTIPATED PERSON IT HAS NO EQUAL!

[TRADE MARK.]

There is no remedy known as highly endorsed as the following letter shows, signed by *the leading Druggists of its home State.*

RHEUMATIC SYRUP CO: JACKSON, MICHIGAN, March, 1887.

Gentlemen:—We are pleased to state that we have been selling Hibbard's Rheumatic Syrup for the past ten months, and that it is one of the best sellers that we have ever handled; our sale of it has steadily increased so that now we are buying in large quantities. We unhesitatingly recommend it, believing as we do that it is a remedy of great merit. Our customers speak of it in the highest praise, which bespeaks for it a great future as a family medicine.

We are very respectfully,

Pre-eminently the Cough Cure of the Day.
SURE AND SPEEDY.
Pleasant to the taste, and once sold will be called for again.

Sold by MORRISSON, PLUMMER & CO.

TUTT'S PILLS.

TORPID BOWELS.
DISORDERED LIVER AND MALARIA.

From these sources arise three-fourths of the diseases of the human race. These symptoms indicate their existence:

Loss of Appetite, Bowels Costive, Sick Headache, Fullness after Eating, Aversion to Exertion of Body and Mind, Eructation of Food, Irritability of Temper, Low Spirits, a Feeling of Having Neglected Some Duty, Dizziness, Fluttering at the Heart, Dots before the Eyes, Highly Colored Urine, CONSTIPATION.

And demand the use of a remedy that acts directly on the Liver. As a Liver Medicine **TUTT'S PILLS** have no equal. Their action on the kidneys and skin is also prompt; removing all impurities through these three "**scavengers of the system.**" producing appetite, sound digestion, regular stools, a clear skin and a vigorous body. **TUTT'S PILLS** cause no nausea or griping, or interfere with daily work, and are a perfect

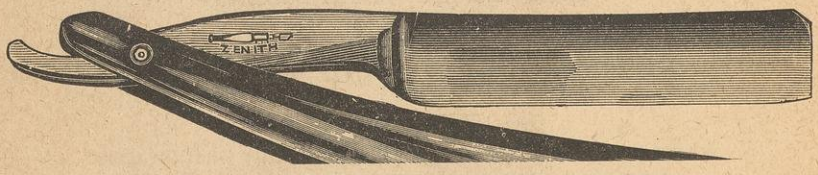

ANTIDOTE TO MALARIA.

Sold by all Druggists.

TERMS:—A rebate of ten per cent. will be allowed on ten gross lots. On five and less than ten gross a rebate of five per cent. will be allowed. No rebate allowed on less than five gross lots. Freight will be paid on five gross lots and upwards.

Office: 44 Murray Street, NEW YORK.
