The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

'Fluothane'

in neurosurgery

'FLUOTHANE' has valuable advantages in the anaesthetic management of the neurosurgical patient. It has been used successfully for intra-cranial operations, surgery of the vertebral column and spinal cord, and the radiological investigations.

In this field attention has been drawn to the swift, smooth induction provided by 'Fluothane', the absence of respiratory tract irritation, the

diminished bleeding and freedom from increases in cerebro-venous and cerebro-spinal fluid pressures. With these and other significant characteristics this non-inflammable and non-explosive anaesthetic is now making an important contribution towards improved operating conditions for the neurosurgeon and greater safety for the patient.
