with the old-fashioned cough syrup containing narcotic principles, when the new idea in a cough syrup relieves the nervous paroxysm which causes cough, and acts as an expectorant in removing the irritating mucous.

Because it does just this, Thiate is winning success as the new, effective and unusually pleasant tasting cough syrup.

The composition of Thiate is a synergistic compound in which Potassium Guaiacol Sulphonate is combined with Benzocaine Benzoate, Sodium Mono-Benzyl Succinate, and Sodium Salicylate.

Thiate works, and you can prove it to your own complete satisfaction in one test, for which we will be glad to supply a bottle free of charge.
