For the auditorium teachers, who must be well versed in a variety of subjects, it was proposed to pay salaries of \$1,440 for junior high and \$1,560 for senior high teachers. The specified requirements, which were deemed barely sufficient to insure that the incumbent could give the instruction required, were submitted to the Civil Service Commission, but no examinations were held, as the commission believed it futile to expect eligibles to qualify at the salaries offered. The situation was much the same for instructors of shop subjects, but the proposed requirements were reduced in grade so that an examination might be held.

Many of the school plants were erected for other purposes and have been adapted to school use. They are, with few exceptions, in a dilapidated condition from hard usage over a period of years without proper repairs. Sanitary conditions are not of the best, and generally their standard is not equal to other Government institutions. There has occurred a loss to the Government by reason of neglect of the mechanical plants by employees not having the requisite degree of training or ability, and instances of this have been frequent in connection with heating, power, lighting, and plumbing systems, which have suffered deterioration through improper operation and repairing or through waste of fuel and water.

The industrial program of the Indian Service was designed to encourage self-support instead of mendicancy, and upon its success ultimately depends a reduction in the Government's expenditures for maintaining the Indians.

With the exception of the Navajo and a few other tribes, nearly all Indians have been given individual allotments of land or have been assigned individual tracts with the prospect of future allotment. The purpose of making allotments was to supplant tribal relations with individual responsibility for self-support.

As soon as an Indian was given an allotment he was urged to establish a home. With a few saddle ponies and a piece of land held under trust patent which prevented him from borrowing on it, the average Indian was confronted with a problem if he expected to support himself and family. The Government's experience in reclamation for white farmers has demonstrated that a minimum capital of \$2,000 and two years' experience in agriculture are necessary if they may expect to succeed in making a living on Federal irrigated farms in the West, and these requirements have been established as a minimum qualification for all new settlers. Yet the Indian, untrained in agricultural pursuits and lacking individual capital, was placed upon raw land and expected to acquire inde-

pendence. Instead of starting in a direct line to promote self-support by assisting them to build homes, purchasing farm equipment, and providing instruction along agricultural lines, the practice of issuing rations and making per capita payments was continued by the Government. Consequently, the Indian could see no necessity for individual effort and became a pensioner looking to the Government for a living.

Within recent years the Government has been appropriating for the purpose of assisting Indians to obtain farm implements, live-stock and seeds, to equip them to make use of their allotments. If an Indian has sufficient land and no capital to improve it, the Indian Office, under this plan, may make a small loan to purchase a few of the things necessary for the cultivation of his land. The Indians are required to sign agreements providing for the repayment of the amount loaned within a specified time, and experience shows that they are making a remarkable record of repayment. This "reimbursable fund" is used only in cases where the Indians have no other resources available.

This method of assisting the Indians tends to give them a definite measure of self respect and a recognition of the obligations to meet their debts. While thousands of Indian families have been placed on a self-supporting basis through the use of these funds, the annual appropriation during the last few years has not exceeded \$200,000, and each year this amount proves inadequate to meet the demands made upon it. Last year only 6,000 Indians could be assisted with the \$185,000 available, and to reach even this number only the necessities for cultivation, such as seeds, could be provided. The law permits loans for as much as \$600 on unirrigated land, but the average assistance last year was around \$30, a sum so inconsiderable as to avail nothing toward agricultural development. If a larger fund were available for this purpose not only a greater number of Indians could be aided toward self-support, but more complete assistance could be given individuals than has been possible with the inadequate sum available.

White communities in territory adjacent to reservations where our Indian families live, employ trained workers called county agents, who visit and advise white farmers in agriculture, stock raising, and home economics. These agents are trained in agricultural colleges and universities for their special line of work. The salaries paid them run from \$2,250 to \$3,000, with provision for an adequate expense account. Our Indian Service farmers receive a salary of from \$1,200 to \$1,500 annually, and they have a more difficult problem in instructing the Indians than the county agent, who deals with white people having a more advanced basis of agricultural

experience to start with. The county agent lives in a community of white people, with splendid school facilities for his children, and his salary is sufficient to provide him with first-class living quarters. The Indian Service farmer lives in an isolated region usually not within reach of good schools. Due to low appropriations for repairs and upkeep of buildings throughout the service, the quarters at farm stations are generally in a state of disrepair and lacking in conveniences. The Indian Service farmer is compelled to travel great distances over roads which are in the main unimproved. The restricted amounts available for the purchase of automobiles, often makes it necessary for him to run a machine five or six years old, and it not infrequently happens that the machine is out of commission for two or three weeks. In some instances we are unable to furnish Government cars, and employees out of their small salaries are providing their own private cars without remuneration from the Government except for gas and oil. The class of farmer we are able to obtain for the salaries paid, and the conditions under which he must work, are not comparable with the county agents so common in rural communities to-day. One of the needs of the Service is to employ on the average reservation at least one man of county agent caliber, and on the larger reservations, two such men, in addition to the practical farmers now employed.

The conditions described reveal some of the obstacles against which officers of the department have had to struggle in their endeavor to properly care for the Indians. They are not conditions which may be corrected in a day or a year, nor would unlimited appropriation of funds by Congress prove to be a facile remedy. With the cooperation of the Budget and Congress, the department has progressed in Indian work during the last few years through increased appropriations and careful administration. Only a wise financial policy and reasonable annual increases in appropriations will continue to build up the Indian Service.

### HEALTH

The effects of the reorganization of the medical service of the Indian Bureau are becoming increasingly more apparent. The district medical directors visited nearly all of the jurisdictions within their districts and made many recommendations for improvement of the service rendered which were carried into effect. They have been able to establish cordial relations with the State and local health authorities which greatly assist the work.

The salaries of physicians in the two lower grades were reallocated with a consequent improvement in the morale. The effect of these increased salaries is also apparent in recruiting new physicians to fill vacancies. It is, however, still impossible to obtain a sufficient

number of physicians with the required qualifications to fill all vacancies.

The diseases against which the greatest efforts must be directed continue to be trachoma and tuberculosis, but progress has been and is being made in controlling both of these diseases. During the year the school at Fort Defiance, Ariz., and the Tohatchi School in New Mexico were selected for the reception of children afflicted with trachoma and their treatment by a trained personnel. Other schools have been set aside for the use of pupils free from trachoma to prevent the spread of the disease from the afflicted to the well children. The boarding school at Zuni, N. Mex., was converted into a sanatorium school for children of that jurisdiction having incipient tuberculosis.

The additional dormitory and the hospital authorized for the Fort Lapwai Sanatorium were completed and are now ready to receive patients. The new equipment installed includes a complete X-ray apparatus.

The hospitals at the Fort Peck and Blackfeet Agencies in Montana have also been equipped with small X-ray facilities which should prove of great value as aids to diagnosis and treatment in the medical work at these points.

The hospital at Klamath Agency was completed near the end of the year. The first use to which it was put was in connection with a survey of that reservation conducted by the National Tuberculosis Association aided by the Oregon State organization and by a special physician of this service.

The construction of the hospital authorized for the Choctaws of Mississippi has been delayed because of failure as yet to obtain clear title to the land.

The new hospital at Fort Peck, Mont., was opened for patients in January. The building was not entirely completed but is now operating at about half capacity.

Facilities have been provided at all of the general hospitals for advanced cases of tuberculosis which will not or can not be cared for in the established sanatoria. The segregation of such cases from contact with their families and others will be of material assistance in the prevention of the spread of this disease to which the Indian is generally very susceptible.

The tuberculosis sanatoria of the Indian Service were well patronized during the past fiscal year, several of them being kept full to capacity and the others being utilized to a greater extent than ever before. This increased attendance is due, in a large measure, to the effects of health education in the schools and among the adults of the reservation.

The nursing service was increased numerically during the year. Changes made in the organization of the nursing personnel will improve the conditions under which the work must be done and will have a tendency to attract a high type of nurse to the Indian Service. Inquiries concerning the positions were received from a greater number of nurses than during the prior year. The public health nursing work has been better organized and the quality of work is improving steadily. New positions of this nature have been established in five places.

### EDUCATION

Plans for introducing the platoon system in Indian boarding schools were extended to only eight schools because of insufficient funds. The schools so selected are at Carson, Nev.; Cheyenne and Arapaho, Okla.; Fort Sill, Okla.; Mount Pleasant, Mich.; Pima, Ariz.; Rapid City, S. Dak.; Seneca, Okla, and Wahpeton, N. Dak. At several of these schools money was not available to secure the necessary teachers. While the system properly applied utilizes during classroom hours all available school space, including the auditorium, effecting an economy of space and time for the pupils, yet a sufficient number of teachers must be employed to give the continuous instruction involved. The stringency in the amounts appropriated for the schools has sometimes prevented the purchase of essential food and other supplies.

As these expenses and other overhead expenses must be first met, sufficient funds may not and have not always remained with which to employ the additional teachers or employees to give the instruction required under the platoon system.

Reports of examinations from nearly all of the schools have shown a high percentage of promotions earned to the next higher grade.

The service has looked forward to morning and afternoon classroom sessions for all pupils of the first, second, and third grades, and eventually of all six elementary grades, in lieu of the long continued practice of one-half day only of instruction proper and one-half day work detail. In many schools, however, there have not been enough teachers to conduct all-day classes, even for the first three grades.

It has been recognized in the past that too much institutional routine labor, detrimental to educational advancement, has been required of the pupils. The three-fourths-one-fourth day plan announced in the report of the Commissioner of Indian Affairs for the fiscal year 1926 was intended to alleviate this condition to some extent. In May of this year further steps were taken to provide additional free time for the pupils, without employment other than their own pursuits, or perhaps supervised but nondirected pastimes.

The following table compares the enrollment by grades of Indian children in Government schools for the years 1926 and 1927.

|                    | 1926  | 1927  |                     | 1926   | 1927   |
|--------------------|-------|-------|---------------------|--------|--------|
| Beginners.....     | 3,288 | 3,015 | Eighth grade.....   | 1,130  | 1,379  |
| First grade.....   | 3,070 | 3,150 | Ninth grade.....    | 792    | 994    |
| Second grade.....  | 2,963 | 3,256 | Tenth grade.....    | 492    | 586    |
| Third grade.....   | 3,167 | 3,134 | Eleventh grade..... | 232    | 380    |
| Fourth grade.....  | 3,211 | 3,207 | Twelfth grade.....  | 1,159  | 212    |
| Fifth grade.....   | 2,635 | 2,895 | Specials.....       |        | 2,107  |
| Sixth grade.....   | 2,133 | 2,469 |                     |        |        |
| Seventh grade..... | 1,629 | 1,928 | Total.....          | 24,901 | 26,712 |

<sup>1</sup> Includes 17 special students taking advanced work.

<sup>2</sup> Includes 66 at the Phoenix Sanatorium who were not graded.

Organized teaching of home making has been extended to all schools having junior and senior high grades, to a large number of the elementary boarding schools and to two day schools. There are now 60 home economic teachers stationed in 44 schools. The primary purpose of this instruction is the improvement of living standards in the present-day Indian homes.

Many new centers of this instruction consist of small homes at the school which may serve as a standard for the reservation and its occupants. The school at Shiprock, Northern Navajo jurisdiction, N. Mex., has an improved hogan with furnishings which can be transported by wagon. The Ute Mountain School, Colo., has a small adobe house with fireplaces in each room, and the Taos and Zuni day schools, New Mexico, each have cottages of the accepted village type.

Care of the child is taught. Chilocco, Okla., is the only school thus far to have a baby in its practice cottage, but the very young children in the schools have served for teaching purposes. Much emphasis has been placed on development of desirable food and clothing standards which may pass to the everyday life of the Indian girl and of the Indian home. The home economics teachers have been encouraged to spend at least one month of the school vacation visiting Indian homes in order that their plans for teaching might more nearly meet the needs of the local group of Indians. The summer employment of Indian girls in good homes has become an aid to this department of the educational service and during the year 700 school girls received the best type of experience in real homes.

Improvement in the teaching personnel has been accomplished by requiring instructors attending summer sessions in universities or normal schools to take courses in curriculum construction, in addition to other subjects chosen. Curriculum revision was also assigned as the major topic for reading circle activities during the year, based upon a preliminary community survey of the Indians, their home conditions, ideals, habits, opportunities, and requirements.

The number of Indian children attending State public schools increases from year to year and the considerable number of Indians who have now obtained their education in the public schools like other citizens of the States is an evidence of the gradual advancement of these races to a place in the body politic.

During the school year 1926-27, 35,124 Indian children attended public schools. For a percentage of them tuition was paid by the Government at a predetermined rate per pupil for each day of attendance.

For the fiscal year authorities were issued for payments to 691 school districts for a prospective total attendance of 9,487 children, and there was allotted to cover anticipated obligations therefor a total of \$336,192 from the appropriation of \$350,000 by Congress for this purpose.

In addition, tuition was authorized to be paid for 1,032 Chippewa children in Minnesota and 41 Klamath children in Oregon from the funds of the respective tribes.

The rate per day per pupil varied from 20 to 60 cents, dependent upon the size and financial condition of the different schools, averaging between 35 and 40 cents.

### CONSOLIDATIONS

The bureau has continued the plan of consolidating units wherever such action can be taken without loss of efficiency. During the past year the following consolidations were effected:

The Seger and Cantonment jurisdictions in Oklahoma were placed under the Cheyenne and Arapahoe superintendency, with headquarters at Concho, Okla.

The Salt River and the Camp Verde Agencies were placed under the jurisdiction of the superintendent of the Phoenix School, Ariz.

The Moapa River Agency, Nev., becomes a subagency under the Kaibab jurisdiction, now the Paiute Agency, Cedar City, Utah.

The superintendent of Haskell Institute, Kans., has jurisdiction over the Potawatomi Agency.

In Wisconsin the Grand Rapids jurisdiction was placed in charge of the superintendent of the Tomah School, while the Laona and the La Pointe Agencies in that State and the Mackinac Agency in Michigan have been placed under the Lac du Flambeau superintendency.

### ALLOTMENTS

During the fiscal year ended June 30, 1927, a total of 1,099 allotments was made and approved to individual Indians embracing

lands on various reservations, aggregating 207,932.92 acres, as shown in the following table:

| Reservation                 | Number of allotments | Acreage    | Reservation                 | Number of allotments | Acreage    |
|-----------------------------|----------------------|------------|-----------------------------|----------------------|------------|
| Torres Martinez, Calif..... | 27                   | 1,023.97   | Klamath, Oreg.....          | 2                    | 240        |
| Grand Portage, Minn.....    | 1                    | 80         | Warm Springs, Oreg.....     | 1                    | 40         |
| Fond du Lac, Minn.....      | 1                    | 80         | Cheyenne River, S. Dak..... | 250                  | 40,021.66  |
| Leech Lake, Minn.....       | 2                    | 40         | Lower Brule, S. Dak.....    | 4                    | 507.60     |
| Fort Peck, Mont.....        | 576                  | 145,838.13 | Crow Creek, S. Dak.....     | 5                    | 494.30     |
| Blackfeet, Mont.....        | 1                    | 400        | Pine Ridge, S. Dak.....     | 1                    | 320        |
| Fort Berthold, N. Dak.....  | 7                    | 1,144      | Quinalt, Wash.....          | 218                  | 17,673.26  |
| Fallon, Nev.....            | 3                    | 30         |                             |                      |            |
|                             |                      |            |                             | 1,099                | 207,932.92 |

In addition to the foregoing 75 allotments were made to Indians residing on the public domain in various States, embracing 10,730.73 acres.

### SALES OF INDIAN LANDS AND FEE PATENTS

During the year both cash and deferred payment sales of individual Indian land holdings were consummated; sales of 430 original allotments and of 854 tracts of inherited lands aggregated a total of 141,422 acres. The total consideration received for these lands was \$1,758,730, which was less than the total receipts for the prior year although the acreage was somewhat greater.

There were received 657 applications from allottees for patents in fee, but only 272 justified favorable action and the issuance of the patents desired, somewhat less in number than during the prior year. There were also issued 50 certificates of competency and orders for removal of restrictions. A matter of especial importance was the passage of the act of February 26, 1927, which authorized the cancellation of patents in fee issued without application for or consent of the patentee in cases where the land has been neither encumbered nor sold. Pursuant to this legislation and to decisions of the Federal court a number of patents heretofore issued were canceled. (See *United States v. Benewah County, Idaho*, and *United States v. Kootenai County, Idaho*, 290 Fed. Rep., 628.)

### EXTENSION OF TRUST PERIOD

The trust period was extended by the President upon the recommendation of the department on allotments made to Indians within the following reservations: Sac and Fox, Kans.; White Earth, Minn.; Omaha, Sac, and Fox, and Winnebago, Nebr.; Cheyenne and Arapaho, Modoc, Ottawa, Citizen Pottawatomie, Seneca, Absentee Shawnee and Wyandotte, Okla.; Oneida, Wis.

By act of Congress approved February 8, 1927, the period of trust on lands patented to the Capitan Grande Band of Mission Indians, California, was extended for 10 years from March 9, 1924.

### *CALIFORNIA INDIANS*

One tract of land containing 5 acres was purchased for use by homeless Indians in the vicinity of Healdsburg, Sonoma County, Calif., affording them school facilities and labor opportunities. This land is an addition to 45 acres purchased last fiscal year for the Dry Creek and Geyserville Bands, consisting of 92 persons. The sum of \$3,000 has been obligated for the proposed purchase of 70 acres near Buena Vista, Amador County, Calif., for members of the Mewuk Band. The Indians occupying both tracts are under the jurisdiction of the Sacramento Indian Agency. To date approximately \$198,000 has been expended for 9,312 acres of land for homeless Indians in California.

### *CHOCTAW INDIANS OF MISSISSIPPI*

There is now pending the proposed purchase of four tracts of land under the jurisdiction of the Choctaw Indian Agency, containing a total of 333 acres. An expenditure of \$3,447 is involved, and the land will provide homes for at least eight Indian families, or approximately 40 persons. To date approximately \$32,015 has been expended in the purchase of 820 acres, which have been resold to full-blood Mississippi Choctaws under the reimbursable plan.

### *TAXATION OF INDIAN LANDS*

Operation of the Federal tax acts of May 6, 1910 and December 30, 1916, subjecting to State taxation the allotments of Omaha and Winnebago Indians in Nebraska held under extension of trust periods has caused hardship and embarrassment to the Indian allottees affected, as many of the tracts were yielding little income in excess of the tax levied. Under a principle of law recognized by the courts, real property held in trust by the Federal Government is not taxable by the State and exemption from taxation of property purchased for noncompetent Indians with their trust funds has been heretofore effected through restrictive clauses inserted in deeds conveying such lands to Indians. Exemption rights so specified have been generally sustained by the courts. This situation is such as to indicate the necessity for remedial legislation.

### *SUITS INSTITUTED AGAINST THE UNITED STATES*

Suits filed in the United States Court of Claims by Indian tribes for adjudication of their claims against the United States are:

Indians of western Washington, suit filed August 21, 1926.

Chippewa tribe of Minnesota, suits filed February 26, April 2, and April 13, 1927.

Colville and Okanogan, Washington, suit filed March 28, 1927.

Spokane Tribe, of Washington, suit filed March 28, 1927.

### TRIBAL ENROLLMENT

The act of June 4, 1924, provided for the making of a final tribal roll of the Eastern Band of Cherokee Indians of North Carolina preparatory to allotment of the reservation lands in severalty and the per capita payment of their tribal funds. More than 16,000 enrollment applications, and approximately 450 contested enrollment cases are pending for determination. It is believed that the work will not be completed in the field until some time in the fall of 1927.

### ROADS AND BRIDGES

Activity of the local and State highway authorities in securing rights of way for and in constructing and improving public highways across Indian lands in all sections of the country continued unabated and approximately 200 right-of-way applications were received and approved covering more than 1,000 miles of road.

### OIL AND GAS

New leases were made on 78,286 acres of allotted lands belonging to Indians of the Five Civilized Tribes during the year, or approximately 18,000 acres less than were leased during the prior year. The allottees received a revenue therefrom of \$4,846,091. There are now 7,050 producing oil wells and 214 producing gas wells on lands of the Five Civilized Tribes. The gross production of oil from lands of these Indians for the year was 13,414,657 barrels. There are 8,804 oil and gas leases in force covering more than 788,000 acres belonging to Indians of the Five Civilized Tribes, 70 coal and asphalt leases on tribal lands of the Choctaw and Chickasaw nations and 74 such leases on allotted lands. On December 7, 1926, the regulations were amended to provide that oil and gas leases on lands of the Five Civilized Tribes shall be advertised and sold through competitive bidding to the highest responsible bidder.

There were 411 producing oil wells and 49 gas wells drilled on the Osage Reservation during the year. There are now 9,887 producing oil wells and 776 producing gas wells within this reservation. There were 219 new leases approved during the year, for which the Indians received in bonus payments the sum of \$3,953,000. The rental and royalty income for the year was \$10,527,296. The gross production of oil within the Osage reservation for the year was 25,884,734 barrels, while the gross production from all Indian oil and gas leases was approximately 41,000,000 barrels.

The Indians of tribes other than the Osages and Five Civilized Tribes received a revenue for the year from oil and gas leases of more than \$1,200,000. Within the Navajo treaty reservation, N. Mex., 7 producing oil wells were drilled, making a total of 29

wells now producing there and yielding a gross oil production more than double that of the prior year or 860,208 barrels.

A small producing well has been reported within the Ute Mountain Reservation in southwestern Colorado, the first indication of oil there.

By act of Congress approved March 3, 1927, unallotted lands, within Executive order Indian reservations, may be leased under the provisions of the act of May 29, 1924. Section 5 of the former act provides for the issuance of prospecting permits, and about 200 applications for permits have been filed pursuant to regulations approved March 15, 1927.

### *QUAPAW LEAD AND ZINC MINING LANDS*

There are approximately 16,400 acres of Quapaw Indian restricted allotted land in Oklahoma, the leasing of which for lead and zinc mining purposes is governed by the provisions of section 26 of the act of Congress approved March 3, 1921, and departmental regulations thereunder. At the present time there are 53 departmental lead and zinc mining leases in force covering, in the aggregate, 7,024 acres. Within this leased area are also 55 subleases covering 2,657 acres.

During the fiscal year there were produced from the mines within the restricted land 236,512 tons of lead and zinc concentrates which sold for the aggregate sum of \$14,131,113. The royalties therefrom totaled \$1,307,114, which amount was equivalent to approximately 9¼ per cent of the gross proceeds of the sales. The royalties received were for the benefit of 50 Quapaw allottees or their heirs according to their respective interests therein. There are five Quapaws whose royalty income each for the year totaled more than \$80,000. In one case the royalty amounted to \$188,296.

Reports received indicate that the aggregate production of concentrates, the aggregate proceeds of the sales, and the total amount of royalties, were somewhat less than during the prior year. The mines on the Quapaw restricted land were reported to have produced during the year approximately 6 per cent of the lead and 22 per cent of the zinc output from ore mined in the United States during that period.

Through cooperative arrangement with the Geological Survey, the producing mines are visited periodically and inspections are made to insure strict compliance with the terms of the leases and that the mills and mines are being efficiently operated to conserve the interests of the Indian owners of the land.

Technical data and other valuable information have been obtained relating to mineral development, mining operations, and improve-

ments on the Quapaw restricted lands, which have been of material aid to the Indian Office in determining the terms and conditions upon which the leases should be made and the requirements for proper mining development of the land.

### INDUSTRIAL ACTIVITIES

Although there were crop failures on several reservations, the Indians generally have progressed in agriculture during the year; and, while definite figures are not available, preliminary reports indicate a substantial increase in the number of Indians farming and the total acreage cultivated, largely through the stimulus of the industrial programs mentioned in the last report, which have now been introduced within 55 reservations. The five-year program involves definite objectives for each year and functions through organizations of the men known as "chapters," with women's "auxiliaries" in each district. There were 306 chapters with 5,219 members and 90 auxiliaries with 1,217 members, besides a considerable number of Indians affiliated with irrigation and improvement societies.

Industrial surveys involving a canvass of the reservation to gather statistics as to the condition, resources, and needs of each family, were made within 85 reservations. They form the basis of the five-year program, which was originally adopted for the reservation as a whole but is gradually progressing toward a separate program for each family, adapted to and contributing toward the general program for the reservation.

The construction of improved homes for Indians is a feature of the five-year program. They have been provided as rapidly as the Indians have evinced a desire for them and whenever funds have been available. Detailed plans and specifications of several types of suitable homes were sent to the reservations during the year with a circular letter designed to stimulate interest in home building. Opportunity for development of the home building program was afforded within the Fort Hall Reservation, Idaho, through availability of the sum of \$400,000 authorized for use by Congress from moneys accruing to the Fort Hall Indians for lands taken for the American Falls Reservoir.

The reimbursable plan has continued to be important in the industrial welfare and progress of the Indians. It involves the purchase from funds appropriated by Congress of seed, animals, tools, machinery, building material, etc., for sale to Indians, repayment to be made by them in small annual installments extending over a period of years. The appropriation last year was \$175,000, all of which, except a small reserve, was authorized for expenditure. In North and South Dakota, Montana, and Wyoming, an effort was

made to interest the Indians in the sheep industry under the reimbursable plan, and wherever feasible, superintendents have arranged their five-year programs to this end.

The superintendent of the Salt River Agency, Ariz., reports that agricultural implements purchased for the Indians on the reimbursable plan have been of great benefit to them, since they would have been unable to provide themselves with proper machinery in any other way. The superintendent of the Mission Agency, Calif., reports that the large income received by the Indians of the Morongo Reservation for their apricots shows the beneficial results of this plan without which the acreage in that fruit would have been comparatively small. At the Northern Pueblos Agency, N. Mex., 2,000 pounds of alfalfa seed were purchased from this fund in 1924 and sold to the Indians; in 1925, 1,000 pounds; and in 1926, 1,500 pounds; making a total of 4,500 pounds which seeded about 300 acres and resulted in the production of 900 tons of alfalfa worth \$18,000. This entirely obviated the necessity of buying hay as was formerly done and the Indian livestock has materially increased in number. During the year approximately 4,177 Indians received help from the fund. Supplementing the appropriation, a considerable amount of tribal money authorized by Congress for general support and civilization purposes was used under the reimbursable plan.

Indians engaged in the stock industry within the various reservations received larger returns therefrom during the year as a result of generally improved conditions and consequently have evinced greater interest in matters relating thereto. This was true as to the sheep industry in the Southwest. For several years an endeavor has been made to improve the Indian sheep and the effect has been shown by increased prices which they received.

An appropriation of \$30,000 was made immediately available by Congress for the suppression of contagious diseases among Indian livestock, and an intensive campaign was commenced at once for the eradication of dourine, with which a considerable number of horses on the Navajo Reservation were infected. The campaign was begun in April and thereafter over 10,000 horses were tested, of which about 800 were found to have the disease and were condemned.

Excellent progress was made in Standard 4-H Club work among the Indian boys and girls. Acknowledgment is made to the experts of the United States Department of Agriculture and to the State and county extension forces for their hearty cooperation which has made possible the success achieved. Club work has been extended to nearly every reservation with a total registration of 5,500 members. The estimated value of club products during the year was \$43,752; 153 Indian children won county prizes, 42 State prizes, and 3

were awarded free trips to the national congress at Chicago. The canning clubs prepared 6,000 quarts of fruit and vegetables and the sewing clubs made over 4,000 garments. There was a large increase in attendance at such activities as State club camps, short courses, achievement days, club tours, etc., at which many of the Indian children gave demonstrations. There was also a noticeable increase and improvement in the exhibits at county fairs. Indian boys and girls who have been in clubs since the work was started are now taking their places as local leaders, and a number of them serve as presidents of their clubs. Except within the remote reservations, the Indian boys and girls belong to the same clubs as the white young people. The work is financed by the Indians themselves. Besides the direct benefit to the children, club work has brought about increased industrial activity on the part of adults through its ever-widening influence.

### *ANNUITY AND PER CAPITA PAYMENTS*

Annuity and per capita payments made during the year aggregated \$19,915,994, of which \$17,322,369 derived from oil and gas rentals, including interest, was paid to the Osage Indians of Oklahoma and \$2,593,625 accruing from leases, land and timber sales was disbursed to various other tribes.

### *ROADS AND BRIDGES*

Appropriations were available for road work during the year, as follows:

|                                       |          |
|---------------------------------------|----------|
| Red Lake, Minn., tribal funds.....    | \$9, 000 |
| Fort Apache, Ariz., tribal funds..... | 35, 000  |
| Mescalero, N. Mex., reimbursable..... | 9, 000   |
| Wind River, Wyo., reimbursable.....   | 6, 000   |
| Total.....                            | 59, 000  |

During the year 100 per cent Federal-aid projects for through roads on Indian reservations were built or approved for 116.41 miles involving an expenditure of \$1,883,901, making a total of 650.78 miles and an aggregate expenditure of \$7,084,330 for standard highways on Indian reservations without cost to this service.

### *LAW AND ORDER*

It is difficult to maintain law and order within Indian reservations since the Federal courts have jurisdiction of only the eight major Indian crimes enumerated in section 328 of the United States Criminal Code; and as the State courts have no jurisdiction, this leaves the other felonies and all misdemeanors to the reservation courts of Indian offenses, which can not deal with them adequately. Legislation is needed to extend the laws of civilization so as to apply to

Indians on reservations, and to render them subject to prosecution in the Federal or State courts for violations of the laws. Legislation of this character has been recommended by the department but failed of passage by Congress.

The suppression of the traffic in intoxicating liquors among Indians continues to be an important problem. Home improvement, stock raising, planting, cultivation and harvesting of crops, education, moral training, and all phases of Indian civilization are injuriously affected by their use of intoxicating liquors and therefore the progress of plans of the Government for betterment of the Indians is retarded. More complete protection to the Indians from the evils of intoxicants can not be effected without larger appropriations, enabling the employment of a larger force.

A considerable number of Indians now comply with the State law in contracting marriage or dissolving its bonds. However, there are still very many cases where loose relationships are impossible of correction or punishment because of the theory of "Indian custom" marriage and divorce. Much of this trouble occurs in the case of young, educated Indians informed as to their obligations but also aware of the difficulties involved in any attempt to evoke a penalty against them. Legislation is needed requiring that marriage and divorce between Indians be in accordance with the laws of the State in which they live, effective at a future date to be assigned. This legislation would not interfere with any special Indian marriage ceremony desired, but merely require compliance with the rules of decency.

### *INDIAN EMPLOYMENT*

Indians were employed in every State of the Union. Government schools for Indians, each year, graduate approximately 375 boys and girls, many of whom find employment in occupations for which they have received training. Indian youth, like children of other races, frequently leave school before graduation, unmindful of the advice of teachers, yet a considerable number of this class achieve economic success.

To some extent each Government school acts as an employment agency for its students. First it finds work for the older students during vacations, which frequently leads to permanent employment. Some of the more ambitious may fit themselves for the professions.

The record for the year presents no marked departure from the history of other years, except probably in some increase in the number of those who have sought and found employment, or who have established themselves in some calling or have undertaken the development of their lands.

The demand for articles of Indian handiwork, Navajo rugs and silverware, Indian pottery and beadwork, has shown a steady in-

crease. Instructions were issued to all field superintendents to gather the necessary information and compile records of the pursuits and circumstances of graduates from the Indian schools and this information when available will be of interest in its bearing on their present and future prospects.

### FORESTRY

In line with the policy of disposing of timber only as the interests of the Indians may require and of contributing to a sustained yield in each district where Indian timber is located, no encouragement has been given to prospective purchasers during the year within any reservation where substantial amounts of stumpage were already under contract. Two comparatively small units were offered on the Klamath Reservation, Oreg., to facilitate the cutting of isolated tracts that were directly adjacent to other areas from which the timber had been sold. Two small tracts were sold on the Spokane Reservation, Wash., primarily to meet the needs of allottees who desired funds. Similar conditions required the offering of two small tracts on the Quinaielt Reservation, Wash. Satisfactory prices were received for all these units and those for Klamath were exceptionally high. The bureau declined to offer large tracts on the Colville, Wash., Fort Apache, Ariz., Klamath and Warm Springs, Oreg., Reservations, maintaining that existing sales on those reservations were sufficient to meet all needs for funds and that economic conditions in the lumber trade and sound principles of forest management did not justify further large offerings.

Heavy operations were conducted on the Klamath and Quinaielt Reservations during the year, but operations on other reservations were generally rather light. There appears to have been a surplus of manufactured products on hand and prices of both logs and lumber have generally declined. During the fiscal year 1926 there were cut from Indian lands 579,958,014 feet of saw timber for which \$2,446,455.07 was received. This was the largest amount of timber ever cut in one year on Indian lands. The average stumpage price was more than \$4 per thousand feet. Figures are not yet available for 1927, but the value will probably exceed \$2,000,000.

The forest fire conditions in the Western States during the spring and summer of 1926 were the worst that have existed since 1910. The appropriation for forest patrol and other means of prevention was entirely inadequate and the service was unable to take effective measures to forestall extensive fires. Heavy electrical storms occurring in July and August started numerous fires that could not be suppressed promptly by the small force available. These uncontrolled fires spread rapidly to such an extent that emergency measures for their control became necessary. More than \$85,000 was spent for fire suppression in addition to the amount used for the salaries of the

regular force employed as forest fire guards, and substantial sums were expended by private operators in protecting timber within units on which the stumpage had been purchased. It is believed that with an additional appropriation of \$25,000 for fire prevention, as much as \$50,000 of the amount expended in suppression might have been saved and the destruction of large quantities of merchantable timber and young growth prevented.

It is felt that substantially increased appropriations are urgently demanded and that the gratuity appropriation of approximately \$100,000, made annually since 1909 for forest protection and administration on Indian lands, is less than one-half the amount that the interests of the Federal Government justify. The Federal Government has recognized its responsibility to assist private owners of timber lands in protecting their lands and the responsibility with respect to Indian trust lands is even greater than that as to ordinary private holdings. Every time timber on Indian lands burns, the potential wealth of the Nation is reduced many times the value of the timber so destroyed. All expenses connected with the sale of stumpage on Indian lands are paid from the proceeds of sales, but it is believed that the Federal Government should share with the Indians the cost of protecting the forests from fire and insects.

The Federal Government has long recognized its obligation to furnish educational, health, and industrial facilities for the benefit of the various Indian tribes. In recent years sales of timber from Indian lands have afforded funds for such purposes. Foresight in the administration of Indian affairs requires that special attention be given to the protection of resources that may contribute much to the future needs of the Indians and thus relieve the general public from gratuity appropriations for a dependent and impoverished people. Thus, from a purely economic standpoint a more determined effort to reduce the losses from forest fires and depredating insects on Indian lands is advisable.

### IRRIGATION

A survey of Indian irrigation projects was commenced in April, 1927, covering both engineering and economic phases, the primary purpose being improvement of conditions among the farmers—Indian and white—on such projects. The detail for this purpose consisted of an agricultural economist from the Department of Agriculture and one irrigation engineer from the Reclamation Service and one from the Indian Bureau. The scope of their work covers construction, operation, and maintenance, repayment of irrigation charges, proper utilization of irrigated lands by both the Indians and the whites, water supply, soil fertility, availability of markets, etc.

There are about 150 Indian irrigation projects, of which 18 may be classed as major projects. Approximately \$27,500,000 has been expended in the construction of such projects and about \$8,500,000 in operation and maintenance, a total of \$36,000,000.

Considerable progress has been made during the year on the Coolidge Dam across the Gila River, near San Carlos, Ariz.. Plans and specifications for this dam were printed and advertisement had in September, 1926. Nine bids were received, ranging from \$2,268,525.50 to \$3,010,275.50. The contract was awarded to the lowest bidder, and preliminary work promptly begun with a view of expediting completion of this dam at the earliest date. The preliminary work consisted chiefly of building a road to the dam site, constructing a power line from Hayden, Ariz., to furnish electric energy for construction purposes, and the erection of suitable quarters to house Government employees supervising this work. It is expected that this dam will be completed on or before June 30, 1929. The act of June 7, 1924, authorizing construction of this dam, limits the holdings of any one individual to 160 acres of land to be irrigated from this project. This has presented some difficulties due to the fact that a number of landowners holding areas in excess of 160 acres already have outstanding agreements with the Government in connection with the existing Florence Casa Grande project, which latter project will form a part of the larger project to be irrigated from the Coolidge Dam when completed. The matter of adjudicating water rights in the Gila River, both Indian and white, is also receiving attention, it being the contention of the Government that as the Indians were the first users of water from this stream they are entitled to prior rights. The quantity, or extent, of such prior rights presents the main difficulty, white water users above the Coolidge Dam having heretofore diverted a large part of the flow of this stream.

Negotiations have been pending looking to the execution of an agreement with white landowners in the Walker River Valley, Nev., in the hope of amicably settling controversies there between the Indians and the whites, it being here again contended that the Indians have a prior right to sufficient water from Walker River for the irrigation of their lands. Should these negotiations prove unsuccessful, it will become necessary to press the suit previously filed for the protection of these Indians.

Two suits, recently decided, against a white landowner on the Wind River Reservation, Wyo., are of some interest and importance. One holding is to the effect that the United States has an exclusive right to use the waters of an Indian reservation for the benefit of the Indians, and the other that white landowners on an Indian irrigation project are liable for payment of the annual operation and maintenance charges, fixed by the Secretary of the Interior, regardless of

whether such landowner actually uses water for irrigation purposes during the year or not.

The rehabilitation of the Fort Hall project, Idaho, begun under the act of May 24, 1922, has practically been completed. The owners of certain high areas contend that their lands should be furnished with gravity water. This was not contemplated in the original program, and to so include these lands will require considerable additional expenditure. The act of March 3, 1927, authorized an appropriation of \$145,000 to provide water for approximately 10,000 acres of additional land, known as the Gibson unit, as a part of the Fort Hall project.

The diking project authorized by the act of March 18, 1926, to reclaim lands in and adjacent to the Lummi Reservation, Wash., has not been completed owing largely to inability to obtain from the white landowners suitable contracts agreeing to pay their share of the cost of this work.

The act of February 14, 1927, authorized an appropriation of \$50,000 for reconnaissance work in conjunction with the Middle Rio Grande Conservancy District to determine whether Indian lands within designated pueblos in New Mexico can be economically reclaimed. As no appropriation was made, however, but little has yet been accomplished. The conservancy district was organized under State laws and contemplates the ultimate reclamation of approximately 144,000 acres, of which about 25,000 acres belong to the Indians.

An item in the appropriation act for this department of May 10, 1926, provided \$395,000 for the construction of a hydroelectric power house at the Newell tunnel site on the Flathead Reservation, Mont., actual construction, however, being conditioned on the formation of an irrigation district pursuant to State laws and the execution by such district of a contract agreeing to repay the irrigation costs assessable against the lands included therein. Definite results have not been accomplished. The development authorized by this appropriation would not exceed 20,000 horsepower, while full utilization of this power site by using Flathead Lake as a reservoir would produce approximately 100,000 horsepower. Naturally, this would require larger works and a considerably larger appropriation, which can not be undertaken in the absence of further legislation by Congress. Outside power interests have presented tentative proposals looking to the full development of the power resources along Flathead River, within this Indian reservation, but additional legislation will also be necessary before this could be permitted.

### *FIVE CIVILIZED TRIBES IN OKLAHOMA*

The remaining tribal property of the Choctaw and Chickasaw Nations is valued at \$10,504, of the Creek Nation at \$92,050, and of the Seminole Nation at \$30,000. There remains to be collected on tribal property of the Five Civilized Tribes heretofore sold a total of \$1,039,163.

There are approximately 12,000 enrolled Indians of the restricted class in the Five Civilized Tribes, and their restricted allotted lands aggregate 1,779,056 acres. There are 84,000 acres held as restricted land by Indian heirs born since March 4, 1906. It is estimated that the surface value of the restricted lands for agricultural purposes is approximately \$17,000,000 and that the value of improvements, furniture, etc., belonging to the restricted Indians is \$7,000,000, making a total valuation of the restricted land, improvements, furniture, etc., of \$24,000,000. The estimated value of oil and other minerals, producing and nonproducing leases, and the prospective value of restricted lands not under lease is \$30,000,000.

The cashier for the Five Civilized Tribes Agency handled a total of \$40,029,763, including receipts and disbursements of all classes of funds. The collection of tribal funds amounted to \$297,938, and there was credited to individual Indian accounts the sum of \$7,366,976.

Under the supervision of the field force of the Five Civilized Tribes Agency there was expended during the fiscal year the sum of \$4,096,815 of individual Indian money for maintenance, farms, buildings, livestock, and equipment. That the Indians are progressive is evidenced by the many applications received during the year for new homes and farm improvements. In open competition with all entrants at county, district, and State fairs the products of the restricted Indian farmers won many premiums. At the Free State Fair at Muskogee the Chickasaw Nation was awarded first in competition with the rest of the Five Civilized Tribes for the best display of agricultural and orchard products, this being the fifth consecutive year for the first premium.

During the year there was commenced an investigation as to living conditions, education, occupations, health, and business ability of the restricted Indians for consideration in connection with the approaching termination of the period of restriction on the lands.

### *PROBATE ATTORNEYS, FIVE CIVILIZED TRIBES*

The corps of probate attorneys in the Five Civilized Tribes in Oklahoma, consisting of a supervising probate attorney, seven probate attorneys, and one acting probate attorney, are freely consulted by the Indians and give advice and assistance to those seeking it, draw leases, examine abstracts of title, collect moneys due Indians for

rentals, negotiate sales of Indian and other lands, prepare petitions for removal of unsatisfactory guardians, require proper accounting of the funds of the wards, and appear when necessary in all the courts of Oklahoma, State and Federal. They settle and adjust controversies when possible without resort to litigation.

During the year these attorneys appeared in 2,486 cases and initiated 27 actions. They took action in the removal or discharge of 281 guardians, attended to the investment of \$27,250 of Indian funds, saved to Indians \$85,720, advised in many inherited-land and minor-allotment sales, and, in the furtherance of all of their varied duties, held more than 14,000 conferences with allottees and others involving Indian questions.

### *HEIRSHIP AND PROBATE*

During the fiscal year the heirs to 2,104 Indian estates were determined, 135 Indian wills were approved, and 57 wills disapproved. In addition thereto 199 wills were approved as to form during the lifetime of the makers. There were employed in the field 11 examiners of inheritance, with necessary clerical assistants.

The total amount of fees earned during the year for probate work was approximately \$66,485, and there was collected and deposited in the United States Treasury during that period \$56,089 as fees.

### *PUEBLO LANDS BOARD*

The work of the Pueblo Lands Board established under the act of June 7, 1924, for the purpose of adjusting and quieting titles to Pueblo lands in New Mexico, was continued during the year. Hearings were held for the Pueblo of Sandia and preliminary work done in the cases of the Isleta and San Felipe Pueblos. To the present time reports of findings have been made by the board in the cases of the Tesuque, Jemez, Nambe, Taos, Sia, and Santa Ana Pueblos. In the case of Sia there were no non-Indian claimants within the reservation and no damages were awarded the Indians. The report of the board on the Santa Ana Pueblo, including El Ranchito purchase, shows no adverse claimants within the Santa Ana Reservation, and in El Ranchito claims were sustained against the pueblo involving 21 tracts, the Indians sustaining damages in the amount of \$5,035, which however, can not be settled until suit to quiet title has been finally decided.

The board has now passed on 1,152 adverse claims, each case involving a detailed examination of original documents, of which many are old Spanish deeds, hearings in various pueblos and the taking of a large amount of testimony. Suits have been instituted in the Federal court in New Mexico to quiet title in the Indians to the pueblos of Taos and Nambe and report can not be made to Congress until final adjudication.

### *PURCHASE OF SUPPLIES*

The awarding of contracts and execution of details relative to the purchase of the supplies for the year were expedited in order that the supplies might be delivered under the contracts before the opening of the fall term of school. The accomplishment of this result will relieve the superintendents of considerable annoyance and will constitute a precedent for the future. A change in practice whereby canned goods, cereal products, flour, beans, etc., formerly bought in the fall, will be purchased at the spring letting of contracts, insuring delivery at the schools by the time they open. The new crop will not be available but its absence will be more than compensated by the presence of supplies at the schools when needed.

Leather shoes will be made for the fiscal year ensuing in accordance with statutory requirements, by the United States Penitentiary shoe factory at Leavenworth, Kans., arrangements therefor having been completed during the latter months of the fiscal year.

Supply bills for shipments handled by or through the warehouses will be paid by disbursing officers stationed at Chicago and San Francisco, thus expediting payments. All bills should be paid well within the discount period and lower cost to the Government for Indian Service supplies should result through discounts offered and accepted, closer prices being quoted because of the quicker settlement of accounts. This method is made possible only through recent legislation which permits the creation of a purchasing fund by the consolidation of sums temporarily transferred from appropriations for the Indian Service.

Fuel requirements for the year were fully met. During the closing months of the year advertisement was published for the coal supplies for the fiscal year 1928, based on proposed standard specifications recently adopted by an interdepartmental board convened for the purpose of establishing standard Government requirements for bituminous and anthracite coal. Several other branches of the service likewise have used the standard specifications in order that they might be fully tested.

# BUREAU OF INDIAN AFFAIRS

INDIAN TABLE 1.—*Indian population of the United States, exclusive of Alaska, June 30, 1927*

(Figures compiled from reports of Indian agents, supplemented by 1920 census where no Indian agent is located)

| States, agencies, and tribes                                       | Total    | Male     | Female   | Minors   | Adults   | Full blood | Mixed blood  |                |
|--|----------|----------|----------|----------|----------|------------|--------------|----------------|
|  |          |          |          |          |          |            | Half or more | Less than half |
| Total population.....  | 1354,940 | 1180,000 | 1174,940 | 1125,000 | 1229,940 | 1180,000   | 164,000      | 1110,940       |
| Alabama (not under agent).....                                     | 405      |          |          |          |          |            |              |                |
| Arizona.....   | 46,235   | 23,429   | 22,806   | 23,717   | 46,235   | 44,599     | 244          | 156            |
| Colorado River Agency.....   | 1,145    | 645      | 500      | 381      | 764      | (?)        | (?)          | (?)            |
| Colorado River Reservation (Mojave).....                           | 395      | 225      | 170      | 141      | 254      | (?)        | (?)          | (?)            |
| Fort Mojave Reservation (Mojave).....                              | 495      | 287      | 208      | 140      | 355      | (?)        | (?)          | (?)            |
| Chemehuevi.....  | 255      | 133      | 122      | 100      | 155      | (?)        | (?)          | (?)            |
| Fort Apache Agency (White Mountains Apache).....                   | 2,648    | 1,360    | 1,288    | 1,252    | 1,396    | 2,608      | 20           | 20             |
| Havasupai Agency.....  | 186      | 101      | 85       | 74       | 112      | 186        | 0            | 0              |
| Hopi Agency.....   | 5,233    | 2,801    | 2,432    | 2,488    | 2,745    | 5,233      | 0            | 0              |
| Hopi.....  | 2,483    | 1,334    | 1,149    | 1,144    | 1,339    | 2,483      | 0            | 0              |
| Navajo.....  | 2,750    | 1,407    | 1,283    | 1,344    | 1,406    | 2,750      | 0            | 0              |
| Kaibab Subagency (Paiute) (under Paiute Agency).....               | 93       | 50       | 43       | 38       | 55       | 93         | 0            | 0              |
| Leupp Agency (Navajo).....   | 1,231    | 608      | 623      | 685      | 546      | 1,231      | 0            | 0              |
| Camp Verde Subagency (under Phoenix) Mojave and Tonto Apaches..... | 418      | 232      | 186      | 98       | 320      | 418        | 0            | 0              |
| Pima Agency.....   | 5,575    | 2,899    | 2,676    | 2,451    | 3,124    | 5,575      | 0            | 0              |
| Gila River Reservation—Pima and Maricopa.....                      | 4,290    | 2,241    | 2,049    | 1,871    | 2,419    | 4,290      | 0            | 0              |

1 No data available.

2 Last year's figures.

3 Estimation.

4 Partial list.

5 Included in Yankton, S. Dak.

6 Not total population, but only that for which medical statistics are available.

7 Bases on total population minus Western Navajo, for which no vital statistics are available.

8 Includes 821 undifferentiated cases.

NOTE.—The above table of vital and morbidity statistics is published with the following reservations:

1. The figures are as accurate as possible under existing field conditions. Many factors operate to make them estimates, particularly in the case of the Navajo population count.
2. Birth and death rates for a given agency are often not inclusive, but are only for those cases with which the Government officials have come in contact.
3. Percentages for tuberculosis and trachoma are high in many instances, due to the fact that only suspicious cases were examined.

## *THE YEAR'S WORK IN BRIEF*

The report of the Institute for Government Research, which made perhaps the most comprehensive survey of Indian affairs ever undertaken, was received near the close of the fiscal year and is now being studied by the department. An engineering survey of the principal irrigation projects of the Indians was made during the year and the comprehensive report and recommendations submitted are having the attention of the officers of the department. An appropriation of \$25,000 for the employment of graduates of agricultural colleges, scientifically trained and qualified, to supervise the agricultural activities of the Indians will partially fill a long-felt need in the Indian Service. The various State colleges and universities of the Western States cooperated in working out the problems of Indian agriculture and stock raising. Farmers' short courses were held during the fall and winter of 1927-28, faculties volunteering their services and officials tendering the free use of buildings and equipment. There has been an increase in the enrollment of Indians in the junior high and senior high school years, the increase in 1928 over the prior year being 428 in the former and 231 in the latter. The reorganization of the Indian medical service, which was put into effect in 1926, resulted in better coordination of health activities. Cooperative arrangements have been made with other Federal health agencies; also with those which are State, local, and voluntary. An authorization of an appropriation of \$1,200,000 has been obtained to buy lands for the large number of Navajo Indians in New Mexico and Arizona scattered over the public domain. The Coolidge Dam, on the Gila River in Arizona, under construction at an estimated cost of \$5,850,000, including hydroelectric power development, to impound waters for adequate irrigation facilities for the Pima Indians, will be completed in the immediate future. By an agreement with the Salt River Valley Water Users' Association and the Paradise-Verde power and irrigation district, provision is made to insure an adequate water supply for the Pima Indians on the Salt River Reservation. This will satisfy a need of many years.

## *EDUCATION OF THE INDIANS*

The administration of the Bureau of Indian Affairs of this department touches a variety of human activities. On behalf of about

350,000 Indians, it administers educational institutions and sanatoria, purchases all kinds of articles and supplies, and employs a wide range of personal service, including that of laborers, farmers, teachers, nurses, physicians, and lawyers. It erects and maintains roads, bridges, buildings, and irrigation projects. Its forestry service has custody of some of the country's most valuable timber reserves. The bureau buys and sells lands. As trustee for Indians owning beneficial interests in real and personal property, it supervises individual and tribal values aggregating \$1,700,000,000. Legal questions, too, are involved in much of the bureau's current work. Direction and supervision of Indians in industry, in agriculture and stock raising, and in other pursuits are influential factors in the efforts of the bureau to assimilate Indians with our population and to help them to economic independence.

In furtherance of such purpose, the bureau has constructed school-houses and has employed teachers. Wherever conditions permit, Indian children are placed in public schools, local districts being reimbursed for tuition. Last year there were about 35,000 Indians in public schools, but the total appropriation of \$350,000 for tuition was soon exhausted and many applications were refused. An appropriation of \$375,000 was secured for the current year, but that fund is already nearly exhausted. No tuition is paid for children of less than one-fourth Indian blood, nor for those of families whose taxable holdings within the district exceed their nontaxable holdings.

It has been found that attendance of Indian children in public schools near their homes benefits both children and their families. Incidentally, it effects a saving of public funds, as many of the children for whom tuition is paid otherwise would be placed in Government boarding schools at Government expense.

However, the segregation on reservations of Indian children during their earlier years, the nomadic life of their parents and of a large proportion of the population, and the frequent controversies and complications as to property rights make it impossible for approximately one-half the Indian children to be provided with public-school facilities. Consequently, the Indian Service now maintains for these children 204 schools, with a capacity of 26,000 pupils, and about 5,000 pupils attend mission schools supported by religious denominations. The appropriation last year for Indian education, exclusive of public-school tuition, was \$5,923,000. During the last six years Congress has increased appropriations in support of Indian education by \$2,898,825, which has made it possible to improve school buildings, to increase the number of grades, to raise the standard of teaching, and to place more children in school.

But there is opportunity for greater advancement in methods of Indian education and for improvement of the facilities provided for

children of school age. Until recently the courses offered Indians were all of elementary grades. No complete high-school courses were taught for them until 1921, and then at only one school. In 1925, three such courses were added; one was added in 1926 and a fifth in 1927. The increase during the last three years in the number of pupils—junior and senior grades—has been by 1,178 in the former and by 526 in the latter. There are now only six institutions maintained by the Federal Government where Indians may receive a high-school education. Elementary and junior high-school courses are also taught in these institutions, the senior high-school grades constituting only one department. There is not an Indian school in the United States that is strictly a high school.

Contrast these conditions with the educational advantages offered the white population. During the last decade high-school enrollment in the United States has increased from 1,600,000 to 4,000,000. There are enrolled in colleges, universities, and other institutions of higher learning nearly a million young men and women, and untold thousands of youths and adults attend night and continuation schools. The enrollment in the public high schools in the United States is approximately 1 to every 6 pupils of school age, while among Indians it is only 1 to every 20. The aggregate number of Indians in institutions of higher learning or who are pursuing extension courses is negligible.

The yearly allotments for the support of Indian schools vary from \$230 to \$260 for each student, or from \$4.73 to \$5 per week. The increase in these allotments in the last 10 years ranged from only 10 to 20 per cent. Let this per capita cost be compared with the following statistics showing the increase in the weekly cost per student, for example, in Wisconsin State institutions, and note that in Wisconsin during the last 10 years it has almost doubled.

|   | 1916   | 1926        |
|---|--------|-------------|
| State hospital.....                     | \$4.92 | \$7.67      |
| General hospital for insane.....        | 6.72   | 10.17       |
| State sanatorium.....                   | 10.39  | 17.03       |
| State prison.....                       | 3.90   | 6.29        |
| State reformatory.....                  | 5.14   | 7.26        |
| Industrial school for boys.....         | 3.84   | 8.99        |
| Industrial school for girls (1918)..... | 4.02   | (1923) 8.64 |
| State school for deaf.....              | 5.91   | 11.61       |
| State school for blind.....             | 8.12   | 15.72       |

Shortage of funds for the support of Indian schools makes it impossible to equip them adequately. Expenditures for such essentials as textbooks, library books, maps, miscellaneous classroom supplies and equipment, furniture for dormitories, machinery for shop and farm are so limited as to decrease efficiency. Paucity of textbooks

may be the most serious handicap, particularly since no school has an ample supply of supplemental texts by other authors. Very few schools have libraries, and it is exceptional for a school to make annual purchases of library books. Dormitory rooms are frequently without chairs. Laundry machinery in many cases is out of date, inefficient, and more or less dangerous. Many of the quarters for teachers are not comfortably furnished.

During the year the Institute for Government Research, a non-governmental agency, completed an independent survey of the economic and social conditions of the Indians. The department invited the institute to make the survey, which was begun in 1926. The institute's report was transmitted to the Secretary of the Interior on February 21, 1928. This was the most thorough and comprehensive survey of Indian affairs ever undertaken. The report, which is entitled "The Problem of Indian Administration," comprises 872 pages. It contains many constructive suggestions and recommendations for the betterment of all branches of the service. The officers of the department have been studying it intensively, and some of the recommendations have already been incorporated in the Indian program.

As the inadequacy of the educational system for the Indians was one of the reasons for the department's request for the survey and report, the following summary of the findings of the investigators on this subject is of especial interest:

The survey staff finds itself obliged to say frankly and unequivocally that the provisions for the care of the Indian children in boarding schools are grossly inadequate.

The diet is deficient in quality, quantity, and variety.

The great protective foods are milk and fruit and vegetables, particularly fresh green vegetables.

The diet of the Indian children in boarding schools is generally notably lacking in these protective foods.

The boarding schools are overcrowded materially beyond their capacities.

The medical service rendered the boarding-school children is not up to a reasonable standard.

The medical attention given children in day schools maintained by the Government is also below a reasonable standard.

The boarding schools are supported in part by the labor of students.

The service is notably weak in personnel trained and experienced in educational work with families and communities.

There is in connection with Indian education a problem to which especial attention is being devoted by the department, viz, the welfare of the Indians after they leave school. The purpose of the department is to develop a constructive plan by which, for a limited time, the Government can supervise them, so that they may become established and adjusted to their white neighbors.

Experience has demonstrated that it is futile to try to make all Indians farmers and stock raisers. Many will not interest themselves in those occupations. It has been believed that the young men and young women who have finished their schooling, perhaps have learned trades and prefer not to return to their reservations, should be encouraged to seek employment elsewhere. Thus many of them have formed lucrative connections in business.

Education of such a primitive people in the conservation and management of their resources is naturally a slow process. Even to-day superstition causes Indian homes to be abandoned because an Indian or Indians have died in them. Startling instances of human suffering in attempts to appease the gods frequently come to notice.

The present Secretary of the Interior recently has visited reservations in Montana, Arizona, and New Mexico, where he inspected the Indian school system—day and boarding—and studied the problem of vocational guidance. For a number of years many Indians, particularly the Apaches, have been employed in Arizona copper mines, but there has been no definite plan for guiding them and little thought has been given to conserving their earnings. It is reported that last year the Apaches on the San Carlos Reservation earned about \$400,000 in mines, on roads, and in the fields, but at the year's end they had no savings. In contrast, the achievements of a group of 120 Indian boys from three schools in New Mexico, who were employed in the sugar-beet fields of Colorado, under close supervision, may be cited. Their earnings aggregated \$17,250 for the summer, and their savings amounted to \$10,180, which they took back to their schools for their own uses.

The wide distribution of the Indians adds to the difficulties of administration. With 200 tribes scattered over 26 States, the problem is complicated not only by distance, but by climate, environment, and tribal customs. The disintegration of tribes and the division of tribal lands among individual families further complicate. Where, formerly, Indians were considered collectively, they now more and more require consideration individually.

It will be recalled that the Fort Belknap Reservation in Montana comprised over 600,000 acres of land, and the Indians at one time had a tribal or communal interest in the total area. This interest was divided in 1925 by approval of allotments to individuals, which separated the former tribal holding into 1,171 parcels. Where previously the business of the reservation was conducted by the bureau as one unit, now each parcel and its owner must receive attention: individual allotments may be leased or sold; heirs must be discovered and their rights adjudicated; allotments may be bartered and exchanged between the Indian owners; patents in fee may issue; taxes are an ever present concern; fraudulent purchases from

Indians of their trust lands are attempted, and frequently with success; individual complaints of all kinds constantly present themselves.

The issuance of trust patents to individual Indians entails the maximum of care and responsibility for the bureau—until the Indians shall have sold their allotments. Then fee patents issue to the new owners, usually whites.

There are many instances of Indians alienating their lands and dissipating the proceeds, who, left on their own resources, have applied themselves to useful pursuits. They have put to use knowledge and training of their school days with satisfactory results. This applies especially to those Indians who had manual training in school and are equipped for employment in shops, garages, and like industrial plants.

Students of the problems of the Indian quite generally condemn the rationing system, which has encouraged idleness and has deprived the object of the Government's bounty of his independence and manly attributes. It has stimulated the tendency to lease lands for inadequate rentals to enterprising whites, who permit the soil to be impoverished and the crude improvements to depreciate.

In an endeavor to correct such tendencies of the Indian, the bureau has been using a recent appropriation for the employment of six agricultural directors, technically trained as to soils, rotation of crops, breeding of livestock, etc. It is proposed also to assign to each Indian reservation at least one such expert farmer, with duties similar to those of the so-called county agent in agricultural States.

Subject to the efficient execution of a definite program of improvement, it is believed that no better use can be made of tribal funds than the establishment of reimbursable appropriations through which members of the tribe can be assisted in farming, livestock raising, home building, and other industrial operations. Such vocations will elevate the scale of living of the individuals directly benefited and through example react to the good of the whole tribe. To June 30, 1928, some \$1,542,968 of tribal money had been so used, all of which save \$96,350 has been repaid. This unpaid balance is secured by agreements.

Attention is called to this significant statement in the letter of transmittal of the report of the Institute for Government Research:

The members of the survey staff wish me to say clearly in this letter that in almost every activity of the Indian Service they found wide variation between the best and the worst. The best at times approaches the ideal; frequently the survey staff has been able to take as their standard for comparison the attainments of the Indian Service itself. The worst often falls far below the normal.

It may be stated that in certain of the schools visited by the present Secretary of the Interior instruction and recitations compared favorably with those to be heard in schools for white children. The Bureau

of Education of this department has been directed to cooperate with the Indian Service in an effort to improve the educational system of the Indians. This is expected to result in a program conforming to modern methods among whites and yet providing a practical plan suitable to the Indians. It seems clear that the traditional school system of the whites is not immediately applicable in its entirety to the needs of Indian children.

It is hoped that closer cooperation may be established between States having Indian populations and the Federal Government in dealing with questions of education, health, and law enforcement. Probably States should ultimately assume complete responsibility for the Indians within their borders, but pending that time there is much to be done by the Federal service.

The department has recognized that general conditions, as outlined, are of long standing, that they can not be remedied in a brief period, and that unwieldy appropriations, if made, could not be wisely expended in a single year; and so it is recommended that there be regular and reasonable annual increases, which will enable the department to readjust its personnel and activities.

#### *MIDDLE RIO GRANDE CONSERVANCY DISTRICT*

The Secretary of the Interior was authorized by Congress on March 13, 1928, to execute an agreement with the Middle Rio Grande conservancy district in New Mexico on behalf of the Pueblo Indians. The district, which is composed of white settlers in the Middle Rio Grande Valley, was formed under State law to provide irrigation, drainage, and flood control for approximately 132,000 acres of land. Interspersed with the district lands are 23,000 acres belonging to six Indian pueblos. These lands are not subject to the district law, nor to State and county taxation, the Indian being under the guardianship of the United States. However, for a comprehensive and economical development of the district, it was considered necessary to include the Indian lands, and Congress authorized the department to make a contract with the district providing for an equitable share in cost of construction.

The entire program is estimated to cost \$11,829,000. The act contemplates that the Government shall advance the Indians' share in a sum not to exceed \$1,593,311, to be repaid by cash from lessees, if and when received from such reclaimed Indian lands. About 8,346 acres of Indian lands included in the proposed development are now somewhat indifferently cultivated by the Indians under irrigation works. The water level is rising on this area, and unless drainage shall be provided considerable of the land ultimately will become water-logged and unfit for cultivation.

Some of the conditions to be incorporated in the agreement are specified by Congress. The Secretary is to determine the total acreage of the Indian lands that should bear a share of the cost. Only those lands susceptible of economical irrigation are to be taken into consideration. The average cost per acre to the Indians for the included lands can not exceed \$67.50. The Indians shall have free use of the present cultivated areas (8,346 acres) without payment of operation and maintenance charges and this acreage will be free from any lien created by the legislation. The Indians shall also have the privilege of using 4,000 acres of newly reclaimed lands without payment of rental charges, but these 4,000 acres are to bear their proportionate share of the operation and maintenance assessments. The remaining 12,000 acres of Indian lands are to be leased, the rentals therefrom being applied if and as collected to reimburse the Government for its advancements for and on account of the costs and benefits apportioned against the present cultivated area. The Indians are given a preference right to lease any part of the 12,000 acres, in which case they will be required to pay like rental as shall be paid by whites or others.

On August 6, 1928, a tentative agreement, prepared in the Department of the Interior, was signed by the officers of the Middle Rio Grande conservancy district and was returned to Washington for the signature of the Secretary of the Interior. As persons declaring themselves interested on behalf of the Indians requested to be heard respecting the agreement before it should be signed, a hearing was accorded them and officers of the district, by the Secretary of the Interior in Washington on September 19.

The agreement signed by the district, and concerning which the hearing was held, fixed a maximum charge to the Indian lands concerned of \$67.50 for any acre. Thereafter officers of the district, declaring that the purpose of the act is to provide that the average cost per acre shall be \$67.50, on October 12, notified the department that their previous execution of the agreement would be withdrawn, unless its language should be interpreted or changed to state that the per acre charge on the Indian lands should be an average rather than a maximum of \$67.50.

In early October the Secretary of the Interior visited New Mexico and during two days personally inspected on foot and by automobile about 100 miles of the proposed district. He met with the elected governors and Indian councils of four of the six Indian pueblos affected by the proposed development. As many as 25 Indians attended some of these sessions. At all the conferences the proposed development was discussed. At Albuquerque hearings were given to those favoring and to those opposing the plans of the district. Accompanying the Secretary were three engineers, representing the

Department of the Interior. Two of them have been in New Mexico studying the proposed development along the Rio Grande. Further action on the agreement has been withheld pending receipt of their report as to prospective benefits to be derived by the Indians, and the share of the cost which should be paid by their lands.

### *INDIAN CRAFTSMANSHIP*

There are 355,901 Indians in the United States. They are numerous in 24 States. Last year they earned through the sale of their blankets, baskets, pottery, beads, wood carving, embroidery, and paintings, \$1,267,816. Of this sum 74 per cent, or \$944,863, was earned by the Indians of Arizona, Minnesota, and New Mexico. There is wide interest among our people in these activities of the Indians; for the preservation and encouragement of Indian arts and crafts; and in the purchase of the articles they make. In my visits to Indian reservations and schools in Arizona, New Mexico, and elsewhere I gave special attention to their handiwork. Perhaps the Government could recognize these products in some official manner and thereby render a real service to those Indians now engaged in such crafts and to those who might be encouraged to interest themselves in them. Field instructors from the Indian Service might enlist additional Indian producers.

The market for Indian handiwork at present is largely local, the bulk of the output being bought by tourists from dealers at the places of production. The demand for articles of Indian craftsmanship in distant parts of the country is negligible, probably because potential buyers question the authenticity of the articles. In the Indian country the prospective buyer feels assured of genuineness, and the Indian setting provides an atmosphere which encourages him.

To enlarge the market for Indian handiwork, the department is considering the advisability of adopting a trade-mark design which could be registered in the United States Patent Office. The design would be attractive, suggesting craftsmanship of the North American Indian. It would be in a form suitable for attachment to the various articles to be marked. Use of the trade-mark would not be compulsory, but it would guarantee that the product was genuine.

A thorough distribution of the proposed trade-marks or labels could be accomplished by placing them with superintendents of Indian reservations and schools. Those officials would issue them with proper safeguards to insure their legitimate use. It would seem that some such plan need not interfere with established trade, and, with the co-operation of Indian traders and dealers generally, the distribution could be sufficiently wide that any Indian might readily obtain the trade-marks.

The department is mindful, too, of the benefits which might accrue to the Indians if some practical guaranty of the sanitary condition of such products were devised. The whole subject is receiving careful consideration.

### *THE PUEBLO LANDS BOARD*

The Pueblo Lands Board, established by Congress in 1924, continued its investigation of the status of Pueblo Indian lands and water rights in New Mexico. The board consists of the Attorney General, the Secretary of the Interior, and an appointee of the President, the two former acting through assistants. The Secretary of the Interior inspected the offices and records of the board at Santa Fe, N. Mex., in October, 1928, advised with the members and visited some of the pueblos. It is the duty of the Attorney General to bring suits to quiet title based on the reports of the board. After court proceedings and appeals shall have been concluded, the Secretary of the Interior is to issue patents to successful claimants.

There are 20 pueblos within the scope of the investigations, each of them comprising from 13,000 to upward of 200,000 acres. The board has completed the investigation of the pueblos of Taos, Picuris, Nambe, Tesuque, Santo Domingo, San Felipe, Santa Ana, Zia, Sandia, Isleta, and Jemez, and has filed its reports. In these 11 pueblos, 2,310 claims, affecting 26,165.6 acres, were considered and passed upon; 577 claims, affecting 18,579.47 acres, were rejected; and the remaining 1,733 claims were confirmed by the board in the claimants.

In the pueblos of Pecos and Pojaque no Indians remain, but the board will investigate and pass upon title to the lands within the areas. It is doubtful whether the pueblo of Zuni comes within the law, and few adverse claims exist in Laguna and Acoma. The investigations in these five pueblos therefore will be less complicated and onerous. The remaining four pueblos—San Juan, Santa Clara, San Ildefonso, and Cochiti—are distributed over an area of about 125 miles in length and 100 miles in width.

The work of the board involves hearings and investigations on each claim, the collection, translation, and abstracting of thousands of deeds, the examination of great numbers of witnesses, the study of extent, source, and character of Indian water rights and of adverse appropriations of Indian water by non-Indians. The board must consider the history and status of conflicting Spanish grants. It searches tax records in various county seats (which records are often incomplete and sometimes almost hopelessly confused). It appraises land values and estimates damages. It has many other collateral duties.

The amount of damage suffered by Indians for loss of lands and water through failure of the United States to prosecute rights of the United States or of the Indians, is also determined by the board, as is also the value of lands lost by settlers through adjudications of the board.

Congress has already made appropriations to cover losses on the Pueblos of Tesuque and Jemez, based on reports of the board, and recommendations will be made to the next Congress for appropriations to cover the awards on certain other pueblos. These funds are to be used under the direction of the Secretary of the Interior for rehabilitating the pueblos, for the purchase of land, and for the recovery of water.

There are but few of the Sandias left, and these are reported to be backward. The population of the other pueblos remains almost stationary. Some of them are distinctly progressive and energetic; others are apathetic and unable or unwilling to adapt themselves to present-day conditions. The Lagunas are undoubtedly the most prosperous and energetic of any of the Pueblo Indians. They are ambitious and enterprising, their people increasing in wealth, knowledge, and resources. The pueblos of Isleta, Sandia, Santo Domingo, San Felipe, and Cochiti have lands within the Middle Rio Grande conservancy project which proposes the irrigation and drainage of a large area on the Rio Grande in central New Mexico, as described elsewhere in this report. Upon the completion of the board's labors the status of all the pueblos should be greatly improved and the titles to the many valid claims within the pueblo areas will be cleared. The status of the various suits to that end has been reported to the Attorney General by his special assistant in Santa Fe. Generally, the courts have sustained the board's findings.

### *IRRIGATION OF INDIAN LANDS*

A survey of the principal irrigation projects was ordered on January 19, 1927, by the Secretary of the Interior. The inspection was conducted by Porter J. Preston, engineer, Bureau of Reclamation, and Charles A. Engle, supervising engineer, Bureau of Indian Affairs. The economic condition of the projects was studied by Ray P. Teele, an agricultural economist detailed by the Secretary of Agriculture. Mr. Teele's work was terminated by death on August 31, 1927. The report, which was the first comprehensive study of the problems of irrigation on Indian lands, was filed on June 8, 1928, and has since been studied by the officers of the department.

Irrigation was first undertaken by the Federal Government on behalf of the Indians about 60 years ago. There are now about 150 irrigation projects on the various Indian reservations of the West.

The projects vary in area from a few acres to as many as 183,000 acres. They comprise a total of 692,057 acres and have cost the Government in 60 years for construction and operation, \$35,967,925.72.

The report shows that only \$979,859.79, or 3.5 per cent, of the amount expended for construction of Indian irrigation works and which is reimbursable has been collected. In only a few instances where Indian land is leased are Indians being required to pay construction charges. In the report, it is estimated that the Government will ultimately sustain a loss of about \$2,000,000 by reason of its inability to make collections on lands now in white ownership. The total collections on account of operation and maintenance of the Indian projects amounted on June 30, 1927, to \$2,638,311.33, or 29.9 per cent of the sum expended.

Approximately 70 per cent of the land susceptible of irrigation on Indian projects is in Indian ownership, the remaining 30 per cent being owned by whites. The report shows that only 362,018 acres, or 52 per cent, of the reclaimed area, are now being irrigated; that only 117,189 acres, or 32 per cent, are irrigated by Indians; and that the remaining 244,829 acres, or 68 per cent, are irrigated by either white owners or lessees. This means that only 16.9 per cent, or 117,189 acres of the total acreage on Indian projects for which water has been provided by the Government, is irrigated by Indians.

The report calls attention to the fact that on many of the so-called Indian projects most of the farming—in some cases practically all—is being done by whites, either as lessees or owners. For example, on the Wapato project, Yakima Reservation, the total acreage irrigated is 77,938, of which 4,661 acres, or 6 per cent, are irrigated by Indians; on the Blackfeet project with 7,149 acres susceptible of irrigation, only 44 acres, or about 0.6 of 1 per cent, are irrigated by Indians; on the Flathead Reservation the Indians are irrigating only 452 acres, or 1.3 per cent, of the 34,441 acres irrigated.

The Indians of the Uintah Reservation, of Utah, are doing more farming than are the Indians of any other reservation. They cultivate 15,243 acres. The Gila River, or Pima Reservation, of Arizona, is second with 12,000 acres farmed by Indians. It is interesting to note that 40 per cent of all Indian farming on projects covered by the report is on the Uintah and Pima Reservations. It is recited that on many projects the acreage utilized by Indians is continually decreasing, while the acreage utilized by whites is increasing.

Crops produced on irrigated lands farmed by Indians in 1927 had an estimated value of \$1,500,000, or an average crop value of \$21 per acre. On the same projects, the average crop value or return secured by white farmers was approximately \$40 per acre.

The report discloses that many Indians, particularly those on the northern projects, are securing insufficient returns from their irrigable land, some as low as \$6 per acre. Most of such land is not cultivated,

and grows only wild hay. The maximum farm income of Indian families on the more successful projects seldom exceeds \$300 each per year.

The ultimate irrigable area, is estimated at 1,450,021 acres, indicating that the projects now are only 48 per cent completed. To date, the average total irrigation cost per acre for the 692,057 acres is \$52. It is estimated that approximately \$29,000,000 additional will be required to complete the projects.

The report of the survey contains 75 general recommendations. Many of them will be made effective as rapidly as conditions permit. In proper cases, necessary legislation will be recommended to Congress.

The report shows that changes in economic and social conditions in the region surrounding Indian reservations have profoundly affected life on those reservations, and that many of the problems in Indian affairs are due to lack of adjustment to these changes. Increase in the white population surrounding reservations has advertised the irrigable Indian lands and the whites have increased their effort to own or control them. Desire to acquire these lands has been greater by reason of the building of railroads and paved highways, which bring the Indian lands closer to markets and make agriculture more profitable.

Costly irrigation works have been built under laws and policies that were based on the idea that the water would be used by Indians. It was thought that the Indian lacked aptitude and experience and that he might require a long, unprofitable apprenticeship, before he would become a skilled irrigation farmer; consequently provisions for use of water or for paying for works were liberally drawn. Such provisions were inadequate to meet abuses which might arise, if these lands and water supplies should pass into the control of the whites.

It has happened that on some of the reservations whites have demanded the same sort of contracts as were made for the Indians. Controversy and uncertainty have followed with consequent threatened loss to the Indians and to the Government. To adjust these controversies, it may be wise to increase the legal staff of the department. Then the rights and financial obligations of both Indians and whites may be determined.

### HEALTH

The general medical work of the Indian Bureau was continued through the year with good results. The difficulties incident to the administration of this service as outlined in the Secretary's annual report of the fiscal year 1927 continue to obtain to a greater or less degree. Many years will be required before the necessary improve-

ments can be carried out to place this service on a more efficient basis, to reduce the turnover of medical and nursing personnel, still unduly high, and to create other factors which will provide a well balanced and equalized medical and surgical service for the Indian wards of the Government.

Trachoma, tuberculosis, and the diseases of infancy and childhood continue to be the outstanding health problems of this race.

It is felt that progress is being made, particularly in trachoma control, through the establishment of trachoma and nontrachoma schools and the closer delineation of the trachoma activities of the special physicians.

The following additional hospitals were constructed during the year and opened at the beginning of the new year: At the Albuquerque School, N. Mex., with 60 beds; Chin Lee, Ariz., and Tohatchi, N. Mex., schools with 15 beds each; Taos Pueblo, N. Mex., with 12 beds; and Havasupai Hospital, Ariz., with 6 beds. The new hospital at Choctaw Agency, Miss., was opened during April, with 25 beds, and nearly 100 patients were admitted up to June 30. A 36-bed general hospital was opened at the Western Navajo Agency, Ariz. Plans were also made for the conversion of the Kayenta Boarding School within the Western Navajo Reservation into a sanatorium with 40 beds for tuberculosis and 10 for general patients.

Authority was received during the past year for the installation of X-ray machines and other laboratory facilities in our general and tuberculosis hospitals. Increased facilities are being provided in our general hospitals for the treatment of advanced cases of tuberculosis not suitable for or unwilling to receive treatment in the established sanatoria.

The nursing service, which was increased considerably during the year, 21 hospital nurses having been added to the staff, will require additional numerical strength before being placed on anything like an adequate basis. The steps already taken will tend considerably toward reduction of the high turn-over in this personnel.

The public-health nursing work is being better organized, and it is felt that the quality of this service is showing considerable improvement. Twelve new positions of this nature have been established.

During the year there has been an unusually high incidence of both measles and influenza, particularly with reference to the Indian population of the Southwest. This, both directly and indirectly, is a factor of considerable importance in the lighting up of old cases of tuberculosis and in increasing the susceptibility of the younger population. The effects of an undue prevalence of these two diseases will influence tuberculosis cases for many years.

From data thus far received indications point to a decrease in the number of cases of trachoma found during this fiscal

year as compared to prior years. The factors having to do with a determination of the actual number of cases of tuberculosis are so many and so complicated that no accurate statement can be made regarding the increase or decrease of this disease.

The services of the medical and nursing personnel on the whole have been loyal and efficient. There is still at most reservations an inadequate number of both medical and nursing personnel and the physical facilities at most places are yet below accepted standards. A general improvement along these lines is apparent. In addition there has been a carefully prepared plan of expansion of present hospital facilities. On the whole, good service has been performed.

Considerable difficulty has been experienced in providing a sufficient water supply free from contamination at some places and the Public Health Service was called upon to investigate and report what methods are required to correct same. The Institute for Government Research also called attention to the need for improvement of the water supply at some jurisdictions. A consulting engineer has been added to our corps of employees for the purpose of making a survey of the water and sewer systems at every jurisdiction in the service and to make such recommendations as may be necessary to insure an ample supply of pure water and sanitary sewerage disposal.

### EDUCATION

For the fiscal year 1927 there was given a comparative statement showing enrollment of Indian pupils in Federal boarding and day schools by grades and there is appended a statement extending the comparison to include the year 1928. It will be noted that while the number of beginners is 250 less than in 1925-26, there is an average increase in the number in higher grades demonstrating an advance in their studies accomplished by a considerable number of pupils and a gradual trend toward an education higher than elementary.

The following table shows a comparison by grades of the enrollment of Indians in Government schools for three school years:

|                | 1926  | 1927  | 1928  |                 | 1926   | 1927   | 1928   |
|----------------|-------|-------|-------|-----------------|--------|--------|--------|
| Beginners..... | 3,288 | 3,015 | 3,038 | Grade VIII..... | 1,130  | 1,379  | 1,589  |
| Grade I.....   | 3,070 | 3,150 | 3,103 | Grade IX.....   | 792    | 994    | 1,239  |
| Grade II.....  | 2,963 | 3,256 | 3,129 | Grade X.....    | 492    | 586    | 662    |
| Grade III..... | 3,167 | 3,134 | 3,246 | Grade XI.....   | 232    | 380    | 458    |
| Grade IV.....  | 3,211 | 3,207 | 3,106 | Grade XII.....  | 159    | 212    | 289    |
| Grade V.....   | 2,635 | 2,895 | 3,102 | Special.....    |        | 107    | 193    |
| Grade VI.....  | 2,133 | 2,469 | 2,663 |                 |        |        |        |
| Grade VII..... | 1,629 | 1,928 | 1,901 |                 |        |        |        |
|                |       |       |       |                 | 24,901 | 26,712 | 27,718 |

<sup>1</sup> Special includes pupils in sanatorium schools, pupils in ungraded classes, and a few attending secondary schools or junior college.

Later reports, embodied in Table No. 3, in the appendix to this report, will show a slightly different total for 1928.

Indian schools owned and conducted by the Federal Government were inaugurated in 1870, pursuant to an appropriation by Congress of \$100,000. The growth of the boarding and day schools has been gradual since that date, culminating at the present time in 77 boarding schools and 129 day schools, which have a total capacity for accommodation of approximately 26,000 pupils. Of the boarding schools 58 are situated within Indian reservations for the children of the tribe or tribes domiciled there, and 19 of the number are termed nonreservation schools because they are not within a reservation, but at other conveniently selected places and receive children from any or all tribes within the approximate geographical district of the school. It has been found necessary from time to time to discontinue day schools because of changing tributary school population, but on the other hand new boarding schools have been established or others enlarged within the past few years in furtherance of a policy to eventually provide educational facilities for all Indian children, deducting, of course, from the total number of eligible children those who can to advantage attend State public schools and about 5,000 who attend mission schools operated by several religious denominations. Of eligible Indian children from 6 to 18 years of age, inclusive, there are approximately 78,000, the number being more definitely shown by statistical Table No. 2.

Education of Indians in State public schools has been promoted and has rapidly increased since the year 1900, through the efforts of the bureau facilitated by congressional appropriations for payment of tuition to the public schools. There were during the year about 35,000 Indians in the public schools. This policy is believed expedient from all points of view and it may be anticipated that many children not now attending will be placed in the public schools within the next two or three years.

Existing law (act of February 21, 1925, 43 Stat. L. 958) permits the expenditure of only \$300 per pupil per year for schools having an average attendance of less than 200, and \$270 for schools with an attendance of 200 or more. Annual appropriations, however, have been less than these limitations. For the fiscal year the appropriations for boarding schools allowed expenditures at a rate of \$225 per capita, with exceptions in cases of five small schools for which \$250 was appropriated. The current expenditures by the schools were necessarily curtailed in order to avoid incurrence of deficits, and while the stringency of funds was felt in many other respects, its effect upon the supply of adequate food for pupils was more especially evident. Increases in salaries under reclassified compensation scales have

added materially to cost of operation and while the increases provided by the act of May 28, 1928 (the Welch Act), were not in effect, yet for the ensuing year these will total \$322,531. It is generally admitted that the economies which Federal Indian schools have been compelled to practice have been harmful, and more adequate funds will have to be provided if Indian education is to advance.

Extension of the platoon system of class organization to many of the larger boarding schools has been delayed until teachers, space, and facilities could be secured. However, the additional instructors necessary have been secured for a considerable number of schools and it is now possible to progress with the development of the plan. During the year attendance of pupils of the first three grades during both forenoon and afternoon class sessions was accomplished in many more schools pursuant to instructions issued to such effect.

Under prior existing law 30 days' educational leave has been allowed to instructors in Indian schools in order that their service might be rendered more efficient by attendance at college or normal summer courses for teachers. As these courses are not less than of six weeks' duration, the time allowed was insufficient and credits could not be earned by the teachers. A change in the law was secured, as provided by the act of May 8, 1928, authorizing 60 days' educational leave in every alternate year for both teachers and physicians.

### *INDUSTRIAL ACTIVITIES*

Reports from the field indicate that there has been a steady increase in the acreage cultivated by the Indians. It is the purpose of the bureau to encourage efficient cultivation of a moderate-sized tract rather than to urge seeding indiscriminately without regard to quantity or quality of crops. There is not insistence that all Indians take up farming or stock raising. Where it is evident that they are not fitted for these industries or have no inclination therefor, they are encouraged and assisted in finding other employment. This is especially true of many of the younger generation who have a fair English education, together with industrial training, and hence can readily find remunerative employment.

Despite the many drawbacks to farming, such as floods, late springs, and early frosts in the mountains, and droughts and hot winds in the South and Middle West, the Indian farmers and stockmen manage to fare about as well as the average white man under similar circumstances. The superintendent of one reservation in Montana reports that although all sorts of setbacks were encountered last year, the Indians raised 51,780 pounds of garden vegetables, such as carrots, beets, onions, rutabagas, turnips, and cabbages.

One of the main objectives of the industrial program for the Indians is to have each family own and properly care for a milch cow. One instance of success in so doing was at the Colorado River Agency, in Arizona. The superintendent there selected six families and sold cows to them on the reimbursable plan. Five of the six families are producing all the milk they can use and making some butter and cottage cheese, thereby reducing their food bills materially.

The superintendent of the San Carlos Agency, Ariz., reports that last year 3,117 calves were branded for individual Indians, or a calf crop of about 55 per cent, as compared with 797 calves in 1923, when the industrial program was inaugurated.

The sheep industry was started two years ago at Fort Berthold, N. Dak., by providing 20 head for each of 7 families. In the spring of 1928 there were 19 families with sheep, some having as many as 90 head. Where this number was found the original sale was increased by a second sale on the part of the superintendent, or the Indian bought a few more head on the market. The natural increase averages about 30 head per family. The superintendent has been collecting for the Indian owners on these sheep \$1.50 per head from each wool clip and \$1 from the sale of each wether lamb. Accordingly, the Indians are gradually reducing their debt and increasing the fund for the conduct of their business.

The livestock industry throughout the country generally is again on a substantial basis, and the Indians have benefited materially through the higher prices received for their stock as the result of improved conditions. The returns which they received from the sheep industry have been particularly gratifying, and due to that fact the Indians are taking a very active interest in selecting and developing their flocks.

Satisfactory progress has been made during the year toward the removal and disposition of worthless horses on the various reservations. One concern reports that it has purchased 117,000 such horses in North and South Dakota, Wyoming, and eastern Montana. Reports indicate that from 6,000 to 8,000 horses have been sold from other reservations during the year. Arrangements have been made to dip all horses on the Blackfeet Reservation, which has been under quarantine for several years due to the presence of scab, and such horses as the Indians wish to dispose of will be purchased by the company mentioned.

An additional appropriation of \$20,000 was made by Congress to continue the dourine eradication work on the Navajo reservations. It is believed that the intensive campaign carried on during the past two years will result in the complete eradication of the disease. An active interest is being taken in the sheep industry by Indians on

reservations where it has not been carried on before. This indicates that they are beginning to appreciate the advantage of that industry as a means of support.

### IMPROVED HOMES

The bureau is giving special attention to the bettering of home conditions throughout the service. Believing that substantial houses, well ventilated and constructed, with due regard to sanitary requirements, are the best preventives against disease and the highest incentive to good morals and industrial advancement, the superintendents have been instructed to lend their best efforts to induce the Indians to use every possible available resource in the building of good homes, suitable to their means and needs.

A special campaign for better homes in the Navajo country, in Arizona and New Mexico, has aroused great interest among these independent and nomadic Indians. By the judicious use of reimbursable funds, augmented by their own efforts and the utilization of native building materials, the Navajos are building a considerable number of good homes. While the movement is only in its infancy, the interest shown is so great that it may be confidently predicted that the next five years will show a rapid change from the present dirt hogan to a class of homes of which the Navajos may well be proud.

On the Fort Hall Reservation in Idaho, using funds derived from the sale of the bottom lands covered by the American Falls Reservoir, over 100 houses have been built on the allotted lands. A large number of these people heretofore lived under very primitive conditions, but they are now taking pride in their new homes and the outlook is very promising for better health and better living generally. With a comfortable home, the Indian, like everyone else, finds it much easier to work and improve his economic condition.

The Indians of the Kiowa, Comanche, and Apache Reservations have made an unusual record in home building, having progressed so far that, taken generally throughout the territory occupied by them, their houses and outbuildings are equal to if not better than the average among the white people of the community. This splendid showing has been made possible by two factors: The fertility of the lands allotted to the Indians and the willingness of the Indians to so use their lands or dispose of surplus lands as to make it possible to finance the home building. In the campaign for better houses, the superintendent in charge made a survey of the assets of each family and pointed out to the members of the family the ways and means to be used, and in almost every instance the family has been quick to follow his advice.

Many other specific instances might be cited to show the awakening interest of the Indians in better homes. The movement is growing, and the results already obtained give encouragement for further effort.

### *ASSISTANCE OF OLD OR INDIGENT INDIANS*

The year witnessed a new use of the reimbursable fund. The appropriation act for the year, making available \$175,000 for the purpose of encouraging industry and self-support among Indians, now provides that loans can be made to old, disabled, or indigent Indian allottees for their support, to remain a charge and lien against their lands until paid. This provision makes it possible to aid such Indians as formerly were dependent on friends and relatives or ration issues. It is now possible to advance funds for their support in an amount not to exceed 50 per cent of the appraised value of their lands. There were 63 applications of this kind approved during the past year, involving a total amount of \$11,950.

### *INDIAN EMPLOYMENT*

The major number of requests for employment that come to the office from Indians are for positions in the Federal service. In the field superintendents act as labor agents and secure work for the Indians of their respective jurisdictions. At Blackfeet and other northwestern agencies there was considerable activity in putting Indians to work. At San Carlos a resident labor agent has induced all of the Indians of the vicinity to go to work and is extending his efforts now to adjacent reservations.

Indians having allotments with water available are achieving success in farming and stock raising, as their industry warrants. Within some reservations Indians have built and furnished modern homes, which are well kept and sometimes rival those of their white neighbors, this being brought about by the Indians finding employment regularly. In estimating the income of Indians, those who have established homes away from reservations must be included.

A considerable number of Indian boys and girls upon leaving school by graduation or otherwise find employment away from their homes in various occupations and render service creditable to themselves. Obviously the main purpose of the education which the Government is at pains to afford is to prepare them for and assist them to enter into such occupations as may serve to establish them in a future position of independence and self-support. Assistance in the matter of placing an Indian boy or girl in the most suitable occupation and environment is an essential factor of the entire problem of Indian

civilization. Assistance heretofore has been given by superintendents of schools and reservation employees to a limited extent but has not been systematized nor sufficiently organized and developed.

It would be highly important could this work be developed and sufficient moneys be appropriated for employment of a small but efficient personnel to conduct the work. This is a phase of Indian administration which especially calls for remedial action. The Indian graduate entering upon his life work is deprived of the assistance which in the case of the young white man or woman is rendered by parents or friends.

### *LAW AND ORDER*

Legislation is needed to apply the laws of civilization to Indians on reservations. Many offensive acts are committed by Indians of which the courts can not take cognizance because the laws prohibiting such offenses do not apply to them. Indians at present are in a somewhat anomalous position. Congress has conferred Federal citizenship upon all Indians born within the territorial limits of the United States, and by virtue thereof it is claimed that they have the right of suffrage in the elections of their State. On the other hand the State laws have not been extended to Indians and consequently the State can not prosecute this class of its "citizens" for violations of the law. Legislation to correct this condition has heretofore been urged.

For the suppression of the liquor traffic among Indians, \$22,000 was appropriated, but additional funds are needed. Considerable help and cooperation have been received from the Federal Prohibition Bureau and from many State officers, but the peculiar problems of this work as related to Indians call for a larger and more thoroughly organized force than can be secured with the present appropriation.

### *PERSONNEL*

During the year there has been material improvement in the personnel of the field service, and the passage of the act of May 28, 1928, called the Welch Act, affording increases in compensation effective July 1, 1928, should assist during the ensuing year in retaining and securing more contented and efficient employees. Arrangement was completed whereby Indians will qualify under the usual civil-service requirements which apply to white applicants, a certain preference percentage being allowed to them for appointment in the Indian Service. This plan will also open to Indians opportunities for employment in other branches of the Government service.

A plan has also been adopted permitting extension of the probationary period of appointment to better meet the special needs of our service.

## TRIBAL ENROLLMENT

Mention was made in the report for the preceding year of the preparation of a final roll of the Eastern Band of Cherokee Indians in North Carolina pursuant to the act of June 4, 1924 (43 Stat. L. 376). The work was continued during the current year under direction of the enrolling commissioner and his report thereon is expected early in the fall.

The act of June 3, 1926 (44 Stat. L. 690), provides for a "complete roll" of the Northern Cheyenne Indians, in order that they may receive individual allotments within the Northern Cheyenne Reservation, Mont. The roll was approved by the department June 21, 1927, but mention was not made of the matter in the report for 1927.

## ALLOTMENTS

During the fiscal year ended June 30, 1928, 1,067 allotments were made to individual Indians embracing lands on various reservations, aggregating 101,234.42 acres, as shown in the following table:

| Reservation                 | Num-<br>ber of<br>allot-<br>ments | Acreage | Reservation                | Num-<br>ber of<br>allot-<br>ments | Acreage    |
|-----------------------------|-----------------------------------|---------|----------------------------|-----------------------------------|------------|
| Colorado River, Ariz.....   | 55                                | 550.00  | Crow, Mont.....            | 326                               | 52,285.84  |
| Fort Yuma, Calif.....       | 1                                 | 10.00   | Fort Berthold, N. Dak..... | 4                                 | 680.00     |
| Augustine, Calif.....       | 4                                 | 162.37  | Kiowa, Okla.....           | 1                                 | 160.00     |
| Cabazon, Calif.....         | 12                                | 483.90  | Klamath, Oreg.....         | 5                                 | 792.79     |
| Torres-Martinez, Calif..... | 9                                 | 360.00  | Umatilla, Oreg.....        | 1                                 | 80.00      |
| Mission Creek, Calif.....   | 16                                | 157.41  | Pine Ridge, S. Dak.....    | 1                                 | 640.00     |
| La Jolla, Calif.....        | 77                                | 743.02  | Quinalt, Wash.....         | 551                               | 43,706.03  |
| White Earth, Minn.....      | 3                                 | 408.65  |                            |                                   |            |
| Fort Peck, Mont.....        | 1                                 | 14.41   |                            | 1,067                             | 101,234.42 |

In addition to the foregoing, 91 allotments were made to Indians residing on the public domain in various States, embracing 12,916.42 acres.

## EXTENSION OF TRUST PERIOD

The period of trust was extended by order of the President on allotments made to Indians of the following named tribes and bands: Nez Perce, Idaho; Prairie Band of Pottawatomie, Kans.; Devils Lake Sioux, N. Dak.; Tonkawa (Oakland Reservation), Okla.; and Pawnee, Okla. The period of trust was also extended on lands patented to 16 different bands of Mission Indians in California.

## CALIFORNIA INDIANS

One tract of land containing about 38 acres was purchased at a cost of \$5,000 for the use of about 150 homeless Indians located near the town of Wilton, Sacramento County, Calif. The location of this land affords the Indians school facilities and opportunities for

employment. Negotiations are pending for the purchase of a small tract containing about five acres on the Fort Independence Reservation, Inyo County, Calif., to provide home sites for three Indian families. Up to the present time approximately \$203,000 has been expended for the purchase of about 9,350 acres for homeless Indians in California.

### *CHOCTAW INDIANS OF MISSISSIPPI*

Three separate purchases have been made, covering a total of 170 acres, which have been resold to four Choctaws of the full blood under the reimbursable plan for a total consideration of \$2,950. These tracts will afford home sites for about 20 persons. One purchase is pending for a tract of 40 acres at a cost of \$500 for the benefit of a family of five persons. To this time \$38,412 has been expended for the purchase of lands in Mississippi covering a total of 1,323 acres for resale to 44 Mississippi Choctaws of the full blood under the reimbursable plan.

### *ADDITIONAL LANDS FOR INDIAN USE*

During the first session of the Seventieth Congress legislation was enacted providing for withdrawal from entry or other disposition under the public land laws of approximately 91,000 acres of public land for the use of Indians in several States, including about 14,000 acres for the Acoma Pueblo Indians in New Mexico, about 69,000 for the Walker River Indians in Nevada, and about 7,000 acres for the Umatilla Indians in Oregon.

### *ADDITIONAL LANDS FOR NAVAJO INDIANS*

Pursuant to authority contained in the second deficiency act for 1928, approved May 29, 1928, \$200,000 was made available for expenditure during the fiscal years 1928 and 1929, for the purchase of land and water rights for Navajo Indians residing on the public domain in Arizona and New Mexico. The item provides for a total expenditure of not to exceed \$1,200,000 from funds belonging to the Navajo Tribe representing proceeds from the leasing of tribal oil lands. The total income from this source for the fiscal year 1927 was approximately \$346,000, and for the first quarter of 1928 it was approximately \$52,000. The estimated income for the fiscal year 1929 is \$260,000.

The tribal representatives have expressed themselves as in favor of the use of tribal funds in the purchase of additional land for those members of the tribe living on the public domain and numbering about 6,000. The livelihood of the Navajo Indian is largely dependent upon the raising of sheep and cattle. It is therefore necessary

for them to have under their ownership or control sufficient land with which to pursue their principal industry and source of support. When all necessary information has been received and considered, steps will be taken to purchase such tracts in the various jurisdictions as may be found suitable and within the limits of the amount authorized.

### *SALE OF INDIAN LANDS AND FEE PATENTS*

During the year cash sales and deferred-payment sales were made of 417 tracts of original Indian allotments aggregating 49,731 acres and sales of inherited Indian lands comprising 851 tracts and totaling 101,682 acres. The total consideration received was \$2,321,860. Both the acreage sold and the amount received were somewhat greater than during the prior year.

By act of March 3, 1928, the sales act of June 25, 1910, was so amended as to permit retention of interest on deferred-payment notes in addition to the original payment of 25 per cent for the benefit of the Indian grantor, in cases where the sales are canceled because of default in final payment by the purchaser. This will have a favorable effect in insuring prompt payment of notes.

Patents in fee were issued to 242 applicants and heirs of allottees, covering 22,618 acres, and of the applications received 40 per cent were approved. Fifty-three certificates of competency and removal of restriction orders were approved, releasing 4,336 acres from Government supervision. Within many of the reservations much of the best agricultural land has already been sold or patented, and it is the policy to discourage sales except in cases where held by old or indigent Indians who are in need of money for support, and in cases of inherited lands where the heirs are so numerous that the lands can not be advantageously partitioned. When the heirs are less numerous (four or less) and the inherited tracts are susceptible of a fair and equal division, it is the policy to encourage partition of the property so that the younger Indians, many of whom did not receive allotments, may have farming lands and home sites which they may be thus encouraged to remain on and improve.

During the year a circular letter was sent to all superintendents requesting them to submit a list of all Indians under their respective jurisdictions to whom patents in fee were issued prior to 1921, during the trust period and without application therefor. The purpose is to afford relief if possible, through legislation or otherwise, to those whose lands were lost through lack of business efficiency or through taxation. Suits in the name of the United States are now pending to determine the question as to exemption from local taxation, of lands theretofore taxable, which were conveyed to Indians with restriction against alienation or incumbrance, except with approval

of the Secretary of the Interior, such lands having been purchased for homes and paid for with their trust funds. Also there is pending a suit to set aside sales of lands of the Eastern Band of Cherokee Indians of North Carolina for unpaid assessments for 1926, in which case the defendants assert the unconstitutionality of the act of June 4, 1924 (43 Stat. L. 376, 381), which provides that such lands shall be exempt from taxation after the expiration of the taxable year following the date of the act cited under which the restrictions were removed.

Some tracts have been set apart for mission purposes, with the consent of the Indians interested. The areas have usually been small. A few fee patents have been issued to mission organizations for sites that have been in use for not less than six years. In most cases they have been so used 15 to 20 years. Under the act of September 21, 1922 (42 Stat. L. 994, 995), a reversionary clause is placed in each patent so issued.

### *INDIAN SUITS AND JUDGMENTS*

The United States Court of Claims in the case of *Osage Tribe v. United States*, No. B-38, commonly known as the Osage civilization fund suit, held, May 28, 1928, that it had no power to change the terms of a treaty with the tribe, which "is the function and province of the political department of the Government"; and that the plaintiffs failed to sustain their claims. The attorneys for the Indians, it is understood, will appeal to the Supreme Court.

The Court of Claims held June 8, 1925 (53 Ct. Clms., 67), that the claim of the Yankton Band of Sioux to ownership of the so-called Red Pipestone Quarry property (640 acres) near Pipestone, Minn., was without merit as these Indians still possessed the restricted treaty right of quarrying stone therein. Upon appeal the United States Supreme Court held November 22, 1926 (272 U. S. 351), that the quarry tract was the property of the Yanktons, and that it had been taken as under eminent domain for Indian school purposes by the Government. The case was remanded to the lower court for a finding and decree as to the proper amount due the band for the value of the property so taken.

April 16, 1928, the Court of Claims awarded these Indians the sum of \$100,000, with interest at 6 per cent from March 1, 1891, until paid. Appeal from the award has been taken to the Supreme Court by the claimants.

April 23, 1923, the Court of Claims dismissed as without merit the suit of the Sisseton and Wahpeton Sioux against the United States. The act of March 4, 1927 (44 Stat. L. 1847), authorized an appeal to the Supreme Court, which in its decision of May 28, 1928, affirmed the finding of the lower court. The court held in brief that it had

power to consider only claims arising under treaties or laws of Congress and could not go behind them to permit recovery of amounts in excess of those provided for therein; and that power to abrogate express provisions of the treaties and statutes is political and not judicial.

During the year approximately 10 suits have been filed in the Federal Court for the Western District of Washington, claiming land on the Quinaielt Reservation, Wash., for about 45 children belonging to the Elliott and other related families. The cases have been heard but no decisions have as yet been reported.

The act of June 7, 1924 (43 Stat. L. 596), authorized certain squatters on the Pyramid Lake Indian Reservation, Nev., to obtain patents by purchase of lands which they have used for approximately 25 years. Senate Bill 2081, Seventieth Congress, first session, to authorize the issuance of patents on payment of \$2.50 per acre instead of at the appraised valuation, failed of enactment. Payment for the lands has not yet been made in most instances and action has been instituted to obtain settlement.

The United States Circuit Court of Appeals of Philadelphia, Pa., in its decision of March 9, 1928, upheld the judgment of the Federal district court in a case involving the right of Canadian Indians to cross the international boundary into the United States without first obtaining a passport. The district court had held that the Indians had the right to cross freely between the United States and Canada under the terms of the treaty between the United States and Great Britain of November 19, 1794 (8 Stat. L. 116), U. S. Ex. Rel. Paul Diabo *v.* John McCanless, 18 Fed. (2) 282.

### *SUITS INSTITUTED AGAINST THE UNITED STATES*

Suits not mentioned in the report for 1927 have been entered in the United States Court of Claims for the settlement of Indian claims, as follows:

Assiniboine Tribe, Fort Belknap and Fort Peck Reservations. Mont.; petition filed January 30, 1928.

Black River, Saginaw and Swan Creek Bands of Chippewa of Michigan; petition filed June 30, 1927.

Caddo Tribe of Oklahoma; suit filed May 21, 1927.

Cheyenne and Arapaho Tribes of Wyoming, Montana, and Oklahoma; suits filed February 26 and April 13, 1927.

Chippewa Tribes of Minnesota; suits filed May 5 and July 5, 1927.

Crow Tribe, Crow Reservation, Mont.; suit filed June 13, 1927.

Delaware Tribe of Oklahoma; suits filed March 3, May 31, and June 2, 1927.

Shoshone Tribe, Wind River Reservation, Wyo.; suit filed May 27, 1927.

### *RIGHTS OF WAY*

Codification of the regulations under the various rights of way laws was completed and will be available as soon as a printed supply can be obtained. A right of way was granted to the railroad through the San Carlos Reservation, Ariz., as one of the steps necessary to secure the abandonment and removal of the existing railroad within the flowage area of the Coolidge Reservoir. By act of April 21, 1928, certain sections of the Code of Laws of the United States of America, in force December 6, 1926, and the basic acts of Congress cited in such sections, regarding rights of way for railroads, highways, telephone and telegraph lines, and oil and gas pipe lines, were made applicable to the lands of Pueblo Indians of New Mexico. Much benefit to the Indians as well as to applicants for rights is expected to result from the provisions of this act.

Although less than during the preceding year it is noteworthy that applications for the opening of more than 700 miles of public highways have been approved.

### *OIL AND GAS*

Oil and gas mining leases were approved on approximately 208,000 acres of restricted Indian lands within 18 different reservations. A number of leases were made within reservations where there were no oil or gas producing wells and where heretofore there has been little or no oil leasing activity, particularly within the Cheyenne River Reservation, S. Dak., where 4,960 acres were leased, and the Cheyenne and Arapaho Reservation, Okla., where 15,558 acres were leased; also 1,520 acres were leased in Montana belonging to Chippewa Indian allottees under jurisdiction of the Turtle Mountain Agency.

There were 256 producing oil wells and 27 producing gas wells drilled during the year on restricted lands belonging to allottees of the Five Civilized Tribes in Oklahoma, which bring the total of producing oil and gas wells on lands of these Indians under supervision to 5,290 and 226, respectively. The total number of barrels of crude oil produced and sold from lands of the Five Civilized Tribes was 25,854,133, being nearly double the amount produced during the prior year. This increase in production was due in a measure to new discoveries in the Seminole country, although concerted effort to curtail production in that region was put forth by the operators. In the Osage Reservation where an attempt was also made to hold down production as far as possible, there were approximately 4,000,000 barrels less crude oil produced than during the prior year. The Osage Tribe received more than \$11,500,000 from oil and gas leases during the year, while the Indians of the

Five Civilized Tribes received in excess of \$5,500,000 from their leases.

The income from all oil and gas mining leases on restricted Indian lands for the year amounted to approximately \$17,809,752, and the total production of crude oil was 48,891,314 barrels. About \$16,600 was collected as oil and gas leasing fees and covered into the Treasury as miscellaneous receipts, pursuant to certain provisions contained in the act of Congress, approved February 14, 1920 (41 Stat. L. 408, 415).

### *QUAPAW LEAD AND ZINC MINING LANDS*

The lands of the Quapaw Reservation, Okla., are rich in deposits of lead and zinc. These lands lie in what is known as the Tri-State lead and zinc mining district. Mining was first conducted within the reservation in 1902, and since 1917 the production of zinc lead ore has increased enormously. During the year the mines of these Indians under departmental supervision produced 36.2 per cent of the lead and 28.1 per cent of the zinc output from the Tri-State district, and about 3.9 per cent of the lead and 15.5 per cent of the zinc output from ore mined in the United States. At the close of the fiscal year, there were 55 departmental lead and zinc mining leases in force, embracing 7,284 acres; and 49 subleases in force covering 2,374 acres. From these leases 215,993 tons of lead and zinc concentrates were sold during the year for \$9,425,525. The royalty of the Indians amounted to \$894,820 and in addition they received \$2,869 collected as advance rental paid in lieu of royalty on nonproducing leases.

### *FIVE CIVILIZED TRIBES IN OKLAHOMA*

The remaining tribal property (including amounts uncollected from sales of tribal land and minerals) of the Choctaw and Chickasaw Nations is valued at \$10,444,104. The amounts to be collected from Choctaw and Chickasaw tribal property heretofore sold aggregate \$944,754. The present tribal property of the Creek Nation is valued at \$92,050 and that of the Seminole Nation at \$30,000. The amounts to be collected on Creek tribal property heretofore sold aggregate \$27,334. A few small tracts of land belonging to the Cherokee Nation are yet to be disposed of and the sum of \$153 remains to be collected on Cherokee tribal property heretofore sold, otherwise the Cherokee tribal affairs, except pending litigation in the United States Court of Claims, are practically closed.

During the year legislation was obtained under which, and upon certain terms and conditions the purchasers of the segregated coal and asphalt deposits of the Choctaw and Chickasaw Nations heretofore sold might obtain limited additional time within which to make payments of the deferred and delinquent installments of the purchase

price. There are approximately 12,000 enrolled Indians of the restricted class in the Five Civilized Tribes, of whom approximately 9,000 are full bloods. The present restricted allotted lands aggregate 1,737,702 acres. During the year legislation was obtained extending the restrictions on the restricted allotted and inherited lands for a period of 25 years from April 26, 1931. The cashier for the Five Civilized Tribes Agency handled during the year a total of \$32,838,363, including receipts and disbursements of all classes of funds. The collection of tribal funds amounts to \$236,164 and there was credited to the individual Indian accounts the sum of \$7,385,462. During the fiscal year there was disbursed from the restricted individual Indian moneys the aggregate sum of \$4,227,782 for maintenance of the restricted Indians and for their farms, buildings, livestock, and equipment. The total amount expended from individual Indian accounts for permanent improvements during the year was \$485,776. The above-mentioned expenditures for the benefit of the individual restricted Indians were made under the supervision of the field force of the Five Civilized Tribes Agency. From reports received it appears that the Indians are beginning to appreciate more and more each year the importance of farming their land along remunerative lines and otherwise engaging in different kinds of work for the support of their families. The restricted Indians are encouraged in their efforts to depend on their own resources and on their ability as farmers and raisers of livestock. It is reported that in open competition the products of the restricted Indian farmers have won many premiums at county, district, and State fairs. This indicates that the Indians realize the economic necessity of raising products of a high standard. Many applications have been received during the year for new homes and farm improvements, and as a result many substantial homes have been built and many more are under construction.

#### *PROBATE ATTORNEYS, FIVE CIVILIZED TRIBES*

The work of our probate attorneys in eastern Oklahoma continued with beneficial results to the restricted Indians of the Five Civilized Tribes and Quapaw Agencies. Those Indians, who for want of education, lack of business experience, or because of age or other conditions are unable to properly protect themselves in matters affecting their property, are advised and assisted by these attorneys in matters relating to guardianship, administration of estates, transactions of various kinds concerning inherited and restricted property, and are advised regarding the conservation and use of their restricted lands and funds.

Besides examining witnesses and preparing cases for the courts and prosecuting or defending them to a final conclusion, the probate

attorneys hold consultations with the Indians seeking aid, prepare leases and other legal instruments for the Indians, investigate the validity of legal instruments submitted to them by the Indians, and often aid in placing minor Indians in schools.

The following statistical table shows certain savings to the Indians of the Five Civilized Tribes accomplished by these attorneys for the fiscal year, but does not represent the entire amount actually saved for the reason that many savings are effected in cases where the amount recovered can not be determined in dollars and cents:

|   |            |
|---|------------|
| Number regular cases in which attorneys appeared.....                     | 2, 167     |
| Amount involved in civil actions, land and partition suits not included.. | \$26, 252  |
| Number criminal actions instituted.....                                   | 7          |
| Number new bonds filed.....   | 115        |
| Amount covered by new bonds.....  | \$219, 750 |
| Number guardians removed or discharged.....                               | 154        |
| Conservation of funds: Investments.....                                   | \$200, 000 |
| Amounts saved to minors and others.....                                   | \$67, 307  |
| Number quitclaim deeds obtained.....                                      | 52         |

### DEPOSIT AND INVESTMENT OF INDIAN FUNDS

A total of \$1,158,994 in interest was paid by the banks holding Indian funds, \$391,842 of which accrued to Osage Indians and \$287,950 to members of the Five Civilized Tribes. The usual rate obtained on time deposits was  $3\frac{1}{2}$  per cent, but in some instances rates as high as 4 and 5 per cent were paid by depositories. Aggregate deposits averaged during the year approximately \$35,000,000, and on June 30, stood at \$37,215,608 secured by \$24,916,800 Government bonds and \$16,658,858 surety bonds. Deposits were carried by 598 States and national banks located principally in the north-west, north central, and south central sections of the country.

Whenever banking facilities proved inadequate, surplus funds were invested in Government securities of various issues, yielding from  $3\frac{3}{8}$  to  $4\frac{1}{4}$  per cent. The total amount of such investments was \$25,365,000 on June 30, and of this amount \$16,000,000 represented Osage funds and \$8,000,000 funds of members of the Five Civilized Tribes.

### FORESTRY

The fiscal year 1928 witnessed no marked revival in the lumber trade. In fact throughout the greater part of the year there was a constant tendency toward lower prices both for logs and for finished timber products. Although the volume of trade has been normal, the market has been controlled by the purchaser and only the more favorably situated or most skillfully managed operations have shown a satisfactory return on the invested capital. Under these conditions

the office has not sought to offer timber for sale unless there were special circumstances making an immediate offering desirable.

A small sale on the Santa Clara Pueblo was made late in the year 1927; about 18,000,000 feet of timber on the Kalispel Reservation in Washington was offered in February, 1928, to meet the urgent needs of allottees; and three units on the Klamath Reservation were offered under sealed bids opened in late March and early April, 1928. The offerings at Klamath were inadvisable from the standpoint of maintaining a sustained yield there, but were thought to be justified as a measure of forest sanitation and the salvage of values which might otherwise be lost. Since 1920 there has been a serious infestation of dendroctonus beetles on the Klamath Reservation. This infestation seemed to be receding in 1923-24, but during the period 1925-1927 it spread with alarming rapidity in the southeastern part of the reservation. Very heavy losses had already occurred on allotments within the Paiute district and it seemed advisable to offer the Five Mile, Paiute, and Kanott units, comprising approximately 340,000,000 feet, for sale under forms of contract which would require prompt logging of the areas. A bid of the minimum prices of \$5 per 1,000 feet for yellow pine and sugar pine, \$2.50 per 1,000 feet for Douglas fir and incense cedar, and \$1 for other species was received on the Five Mile unit. No bids were received on the other units. In view of the depressed lumber market, the great damage from bark beetles, and the comparative inaccessibility of the units the failure of operators to exhibit keen interest in the units was not unexpected.

The great expansion in timber operations on the Klamath and Taholah Reservations during the fiscal year 1927, together with the resumption of operations on the Red Lake Reservation by the International Lumber Co., resulted in an exceptionally heavy cut in 1927. The value of the timber removed from Indian lands by contractors during the fiscal year 1927 was \$2,806,871.72. If there be added to this the stumpage value of the timber cut for manufacture at the Neopit and Redby mills on the Menominee and Red Lake Reservations, the total stumpage value for that year rises to \$2,953,202.10. Operations under the sale of 1917 to the International Lumber Co. on the Red Lake Reservation were completed during 1927. Under this contract there were cut 105,042,800 feet of saw timber and considerable quantities of cedar and other by-products, for all of which \$1,395,585.46 was received. Within all parts of the area not severely burned seed trees were left and satisfactory reseedling will be attained on much of the sale area.

Logging operations have been comparatively light during 1928 on the Jicarilla, Mescalero, and Spokane Reservations and the unfavorable lumber market restricted the production on the Colville and Flat-

head areas. While full data for the fiscal year 1928 is not available, it is known that the total value of the stumpage cut will exceed \$2,250,000.

On July 1, 1927, the logging and milling operations on the Menominee Reservation were segregated from the Keshena Agency and full responsibility for all forestry activities on the reservation was assigned to the manager of the Menominee Indian Mills. The results attained during the year appear to justify fully the return to a plan of organization that was inaugurated April 1, 1908, but abandoned July 1, 1910. The lumbering activity at Neopit is primarily a commercial enterprise of an entirely different character from the activities of an Indian agency. The Neopit business of more than a half million dollar turnover annually is of sufficient magnitude to require the undivided efforts of a man specially trained in forest management and commercial methods. Fortunately the reorganization at Neopit has been contemporaneous with a revival of interest in forestry practice in the State of Wisconsin. The rapidly crystallizing conviction of private owners of timberland in the Lake States as to the possibilities of commercially profitable forest management has aided materially in overcoming the prejudice against conservative lumbering that formerly hampered, or even nullified, attempts to apply sound forestry principles to the Menominee timberlands. The possibilities of future success are very encouraging.

### IRRIGATION

Effective June 30, 1928, Supervising Engineer Herbert V. Clotts of irrigation district No. 4 was made chief irrigation engineer of the Indian Service.

Progress on the Coolidge Dam being constructed across the Gila River near San Carlos, Ariz., has been marked. Though the contract requires completion of the dam by June 30, 1929, the present program will result in its completion in October, 1928. By the close of the fiscal year the domes and buttresses of the dam were constructed to an elevation of 2,509, which completed the buttresses but left the top portion of the domes yet to be constructed. The actual pouring of concrete on the dam was started November 24, 1927, and continued steadily throughout the remainder of the fiscal year, with the result that 918,000 cubic yards of concrete had been placed in the buttresses of the dam, and 67,900 in the domes. In the spillways 6,400 cubic yards were placed in the floor and spillway weir; 1,650 cubic yards in the walls and guide walls; 2,500 cubic yards in the bridge piers and wall supports of the bridges, and 3,500 cubic yards in the power house base. Less than 30,000 cubic yards yet remain to be placed in the dam and spillway structures.

The Interior appropriation act approved March 7, 1928, authorize the Secretary of the Interior to incur obligations, and enter into contract for the development of electrical power at the Coolidge Dam as an incident to the use of the Coolidge Reservoir not to exceed the sum of \$350,000. Funds were made available for the power development by the second deficiency act, approved May 29, 1928. The installation of the power machinery must be deferred until after completion of the dam.

It would appear that the contractor will be unable to close the opening in the dam left for by-passage of the waters of the Gila River until after removal by the Southern Pacific Railway of its tracks and road bed which are within the reservoir area.

Owing to conditions mentioned and the fact that it was necessary to excavate some 75,000 cubic yards more material from the dam base and spillways than estimated, it appears at this time that the estimate for the construction of the dam will be slightly increased by probably \$100,000, the original estimate being \$5,500,000 for the completed structure.

During June, two of the consulting engineers, Maj. Gen. W. C. Langfitt and Andrew J. Wiley, inspected and approved the construction work being done.

Pursuant to provisions contained in an act approved March 7, 1928, directing that the Federal Power Commission shall within 60 days after the approval of the act report to Congress what compensation, if any, in addition to that already provided, shall be paid to the Apache Indians of the San Carlos Reservation by reason of the generation of hydro-electric power at the Coolidge Dam, that commission reported that no additional compensation was due these Indians as the power development was incidental to the construction of the Coolidge Dam and impounding reservoir and not by reason of any natural power site that might have existed.

Organization work of the San Carlos project which is to be served by the waters impounded in the Coolidge Dam has progressed. The landowners' agreement previously approved as to form by the department was executed by persons owning lands considerably in excess of the area that could be designated within the project. The designation of the privately owned lands forming the project was approved April 25, 1928. The area was restricted to 50,000 acres, being a like area to that in Indian ownership within the Gila River Reservation coming within the project. The individual holdings under the provisions of the act of June 7, 1924, are restricted to 160 acres. After designation of the lands steps were immediately taken, in accordance with statutory requirements, to circulate the petition for the formation of the irrigation district. Progress is being made,

and it is believed that the district will actually be formed and ready to execute the required contract by January, 1929.

Progress on the Gila River adjudication suit, it is understood, is being made by the Department of Justice.

Legislation was secured authorizing surveys and investigation to determine the feasibility of irrigating the Michaud division and other lands in the Fort Hall Indian Reservation, Idaho, for which an appropriation of \$25,000 was made. There was also appropriated \$145,000 for continuing construction work on the Fort Hall irrigation project to provide irrigation facilities for the Gibson unit of the project, which work, when completed, will provide such facilities for approximately 10,000 additional acres under the project.

On March 13, 1928, legislation was approved authorizing the Secretary of the Interior to contract with the Middle Rio Grande conservancy district, a political subdivision of the State of New Mexico, to provide irrigation, reclamation, conservation, and flood control for six of the pueblos, namely, Cochiti, Santo Domingo, San Felipe, Santa Ana, Sandia, and Isleta. This subject is discussed in the Foreword to this report.

Irrigation districts were formed on the Flathead irrigation district, Montana, in pursuance to State law and as required by legislation applicable to this project. The form of agreement to be executed by these districts, approved by the department on December 16, 1927, has not been returned, though the Flathead district formation had been confirmed by the court, but an appeal had been filed by some of the dissenting landowners, which held up execution of the agreement. This district embodies approximately 80,000 acres of the project. Much needed construction work on the project can not be carried on under the provisions of the legislation until after the executed agreements have been received and approved by the department. The legislation applicable to this project was modified so as to authorize the Secretary of the Interior to either construct a power project at the Polson site of the Flathead River or to construct a transmission line for the distribution of power in the event that a license be issued to an outside company for the development of the total hydroelectric resources at that site.

There are pending seven suits affecting water rights of Indian irrigation projects. In addition to the principal activities mentioned, the usual operation and maintenance of the projects in the five irrigation districts has been conducted.

#### **PUEBLO LANDS BOARD**

The work of the Pueblo Lands Board, established by the act of June 7, 1924, to quiet titles to Pueblo Indian lands in New Mexico,

was continued and reports were submitted during the year on the pueblos of Santo Domingo, Sandia and San Felipe.

Suits that were instituted to quiet title in the Indians to the pueblos of Taos and Nambe have been settled, and the time granted under the act cited for review has expired in most of the cases upon which report has been made. The board accordingly recommended that the damages awarded the Indians for losses of lands and water-rights, be appropriated by Congress, as follows:

|                    |               |                |              |
|--------------------|---------------|----------------|--------------|
| Santo Domingo----- | \$13, 888. 20 | Santa Ana----- | \$5, 035. 54 |
| Sandia-----        | 20, 950. 90   | Nambe-----     | 26, 668. 63  |
| San Felipe-----    | 20, 341. 10   |                |              |
| Taos-----          | 48, 497. 00   | Total-----     | 135, 381. 37 |

### PURCHASE OF SUPPLIES

As a result of the intensive program planned and carried out during the year, further progress was made in the early delivery of supplies to the field units and bids on supplies for 1929 were opened fully six weeks earlier than in the prior spring, which has resulted in a large part of the supplies contracted for being received in the field before June 30, 1928. This is the nearest approach to accomplishment of what is desired, since the period antedating the World War. Cereal products, canned fruits, canned vegetables, and other items heretofore purchased in the fall in order that the new crop might be obtained were contracted for in March and April for the first time in more than 20 years.

With the assistance of the Bureau of Mines, both in the selection of coal and as to changes in the heating plants, serious complaint was avoided during the winter with regard to the heating of field units.

A general improvement was noted in the quality of wearing apparel. An exception applied to shoes for men and women (large boys and girls), which were manufactured in the Federal penitentiary, Leavenworth, Kans. Congress has directed that shoes for Government activities be made in the new shoe factory established at Leavenworth. A survey of the criticisms received from field officers concerning the wearing qualities of these shoes has enabled the service to procure new models made of better sole leather and improved stitching, which should remove the cause for complaint on future deliveries. Models have been selected also for the small girls and boys. Consequently all Indian Service leather shoes will hereafter be manufactured at the Federal penitentiary.

The system of paying general contract supply bills at Chicago and San Francisco instead of through individual field officers has fulfilled expectations, resulting in almost immediate payment for the goods delivered after they were inspected and accepted. A

saving of more than \$30,000 in discounts was made during the fiscal year, the larger part of which resulted from payments made at the warehouses. Nearly twice that amount will be saved annually hereafter through closer competition due to deduction by bidders of allowable discounts before quoting, rather than by making the discount contingent upon prompt payment.

INDIAN TABLE 1.—*Indian population of the United States, exclusive of Alaska, as of June 30, 1923*

| State, jurisdiction, subdivision, and tribes  | Total   |         |         | Degree of blood |       |        |             |      |        |
|---|---------|---------|---------|-----------------|-------|--------|-------------|------|--------|
|   |         |         |         | Full blood      |       |        | Mixed blood |      |        |
|   | Total   | Male    | Female  | Total           | Male  | Female | Total       | Male | Female |

<sup>2</sup> Data unavailable.<sup>1</sup> Annual Report of the Commissioner of Indian Affairs, fiscal year 1927, Government Printing Office, 1927, Table I.

NOTE.—At 8 agencies, namely, Western Navaho, Northern Pueblos, Southern Pueblos, Yakima, Bishop Subagency (Walker River), Rocky Boys, Carson, and Grand Rapids Subagency (Tomah School) a decrease in population for 1928 in comparison with 1927 is shown.

The population figures have in some instances been based on estimates. The policy has been established to obtain more accurate data and at the first 4 named agencies, actual enumerations have been made during 1928 with the resulting decreases.

For the other 4, the explanation for the apparent inconsistency is that the table of vital statistics does not show the total number of births and deaths which have occurred on a given reservation but the number reported to Government officials.

1 No data available.

NOTE.—The above table of vital and medical statistics is published with the following reservations:

- The figures are as accurate as possible under existing field conditions. Many factors operate to make them estimates.
- Birth and death rates for a given agency are often not inclusive, but are only for those cases with which the Government officials have come in contact.
- Percentages for tuberculosis and trachoma are high in many instances, due to the fact that only suspicious cases were examined.

## THE BUREAU OF INDIAN AFFAIRS

When the War Department was created by Congress under the act of August 7, 1789, the duties assigned to it included those "relative to Indian affairs."

A Bureau of Indian Affairs was organized in the War Department on March 11, 1824, with Thomas L. McKenney as its chief, and among the duties to which he was assigned were: The administration of the fund for the civilization of the Indians, under regulations established by the department, the examination of the claims arising out of the laws regulating the intercourse with Indian tribes, and the ordinary correspondence with superintendents, agents, and subagents. He was succeeded September 30, 1830, by Samuel S. Hamilton, whose successor about one year later was Elbert Herring.

By the act of July 9, 1832, there was created in the War Department the office of Commissioner of Indian Affairs, who, subject to the Secretary of War and the President, should have "the direction and management of all Indian affairs and all matters arising out of Indian relations."

On June 30, 1834, an act was passed "to provide for the organization of the Department of Indian Affairs." Under this enactment certain agencies were established and others abolished, and provision was made for subagents, interpreters, and other employees, the payment of annuities, the purchase and distribution of supplies, etc. This may be regarded as the organic law of the Indian Department.

When the Department of the Interior was created by act of March 3, 1849, the Bureau of Indian Affairs was transferred thereto, and hence passed from military to civil control.

Section 441 of the Revised Statutes provides that "the Secretary of the Interior is charged with the supervision of public business relating to \* \* \* the Indians."

Section 463 of the Revised Statutes reads: "The Commissioner of Indian Affairs shall, under the direction of the Secretary of the Interior and agreeable to such regulations as the President may prescribe, have the management of all Indian affairs, and of all matters arising out of Indian relations."

# REPORT OF THE COMMISSIONER OF INDIAN AFFAIRS

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
*Washington, D. C., August 15, 1929.*

The honorable the SECRETARY OF THE INTERIOR.

MY DEAR MR. SECRETARY: I have the honor to submit herewith the report of the Bureau of Indian Affairs for the fiscal year 1929, covering the activities of the service prior to my entrance on duty July 1, 1929.

Since taking office the new commissioner and his associate have been actively occupied in familiarizing themselves with the problems involved. We are impressed with the variety and complexity of administrative details which often prevent a clear view of the real objective of the Indian Service. We are determined to keep the goal before our personnel and the public to the end that the increased funds and trained personnel absolutely needed may be secured.

The cost of Indian education and care of health obviously must exceed that of similar services amongst the white population, yet heretofore the appropriations, particularly for food, clothing, and vocational training, have never been adjusted to postwar costs. Prior administrations have reported this situation, but the data now in hand convince us that as a mere economic problem it will save the taxpayers money to grant at once larger appropriations to the Indian Service and to continue this policy for several years, to the end that the Indian may soon be able to contribute his share to the life of the Nation.

## CORRELATION BETWEEN THE WASHINGTON OFFICE AND THE FIELD SERVICE

In the report of the commissioner for the fiscal year 1928 mention was made of the conditions existing in the Washington office and its relations with the field. So far as the present clerical force is inadequate to perform the work incumbent upon it and retardation or inefficiency occurs, conditions remain as before. For the best interests of the Indian Service, and especially that the assistance to or direction of the field units may be prompt, remedial, and conclusive, better provision for the accomplishing of the work continues to demand consideration.

Advice was issued to the field directing curtailment of correspondence, and this to some extent has been effected. Consistent with application of the policies of the service and with its prior plans for the future improvement of its field work and its schools, superintendents of units should administer their institutions and attend to the details thereof and assume responsibility therefor. Should they not measure up to this responsibility, so far as financing permits, a definite field reorganization would appear essential. There should be available

in the office time and resources for study of the major field problems and of important data and for formulation of constructive measures now forced aside by pressure of current routine work.

### PERSONNEL

During the year the efforts of the bureau have been directed toward the strengthening of the personnel of the field service. The requirements for qualification for civil-service examinations for teaching positions have been made more difficult and the educational standards for the position of principal have been raised. Now the possession of a degree is a prerequisite for examination and appointment to this position for persons not already in the service.

Pursuant to Executive Order No. 325, Indians have been given a classified civil-service status, effective April 1, 1929, but after that date Indians entering the service, except in certain minor positions, are required to qualify in open competitive examination. Certain preferences are allowed, however, in compliance with existing law requiring that Indians shall be employed whenever practicable.

Increased salaries allowed in conformance with existing reclassification laws have proven of noticeable benefit to the service in giving a more contented and efficient personnel.

### HEALTH

There has been progress in the general medical work of the service during the year. The Indian people are increasingly responding to their medical needs; that is to say, an increasing number of Indians are seeking appropriate relief for medical and surgical conditions. Likewise, progress is being made in matters relating to disease prevention and public health. This is becoming manifest in connection with the activities of health workers, as well as of lay personnel within Indian reservations. Greater interest is being developed in Federal, State, county, and municipal health organizations, as well as by voluntary agencies. Closer cooperative health activities are being developed in many States having large Indian populations. In many instances members of the health personnel of the Indian Service are working in conjunction with or under the direction of similar organized health agencies of these States and counties. In this general health work the Indians themselves are believed to be showing a responsive interest.

The Association of State and Provincial Health Authorities of North America has appointed a committee on Indian health and through this committee information regarding Indian health matters is being disseminated to State and local health agencies where Indians reside. Diagnostic, laboratory, and clinic facilities of these various organizations are being made known and available to health agencies of the Indian Service, all of which is conducive to a more complete and thorough health program in all sections of the Indian country.

Trachoma, tuberculosis, and diseases of infancy and childhood continue to constitute the outstanding health problems affecting the several Indian jurisdictions. While increased facilities have been provided for the care of tuberculosis and for incipient cases in Indian children, material progress in the eradication of this disease will not

be brought about until a well organized field nursing service has been instituted, together with an educational program which will reach the Indian home. The extension of this program will have its effect also in the reduction of mortality among infants and children.

While fluctuations occur in the reported incidence of trachoma, it is believed that the activities conducted by the special physicians of the service are bringing about a greater decrease in this disease. Organized primarily as a program exclusively for trachoma prevention and eradication, the work of this group of special physicians tends more and more to comprise a broader field of activity and now includes general and special operative procedure for other eye conditions, for the removal of diseased tonsils and adenoids, and the care of other ailments.

Epidemics of contagious diseases have been somewhat less as compared to preceding years. Influenza has been quite prevalent. Outbreaks of measles have been infrequent, due in all probability to the fact that a number of epidemics of this disease occurred during the two or three years prior to the period of this report. The incidence of whooping cough and chicken pox has been about as usual. The number of diphtheria cases has been low and almost no cases of epidemic cerebrospinal meningitis have occurred. Smallpox has occurred on five or six of the reservations, the largest number of cases being reported from the Nez Perce Reservation at Lapwai, Idaho. Vaccination of Indians throughout the country against smallpox has been continued and protection secured against diphtheria by administration of toxin antitoxin wherever possible.

Preparations were made during the latter part of the year to operate the Tacoma Hospital, Washington, which has been for some years operated by the Veterans' Bureau and was formerly the Cushman Indian School. This institution will have a capacity of about 100 beds and will be principally for treatment of tuberculosis. A new general hospital was constructed at the Western Navajo jurisdiction, Arizona, with a capacity of 36 beds. Small general hospitals were constructed at Taos in the Northern Pueblos jurisdiction, New Mexico, at Chin Lee, Ariz., and Tohatchi, N. Mex., both within the Southern Navajo Reservation. A small hospital or infirmary was erected in the Havasupai Canyon, Ariz., for the benefit of the Indians at this point. A converted hospital proposition was established at Toadlena in the Northern Navajo jurisdiction, New Mexico, with an approximate capacity of 20 beds. A new brick hospital was constructed at the Western Navajo jurisdiction, Arizona, with a capacity of 20 beds. A new brick hospital was constructed at the Keshena Agency, Wis., to replace the old frame hospital destroyed by fire. This has a capacity of 36 to 40 beds. The school plant at Kayenta within the Western Navajo jurisdiction, Arizona, was converted into a tuberculosis sanatorium, with a capacity of 40 beds and with provision of 10 beds for general cases. This sanatorium is 160 miles from the railroad. Its conduct under great administrative difficulties is in the nature of an experiment because of its distance from transportation lines. The Navajo Indians in this isolated section, however, are responding quite rapidly to the facilities thus provided for their welfare. A converted building has been made into an improvised sanatorium at the Crow Creek jurisdiction, South Dakota, and will provide for approximately 22 cases of tuberculosis. A new sanatorium of 40 beds was built on the

Yakima Reservation at Toppenish, Wash. These hospital and sanatorium facilities have added approximately 312 beds for Indians in need of treatment. New X-ray apparatus has been provided in a number of hospitals and sanatoria and hospital equipment generally has been improved. There has been an increase in the ratio of nursing personnel, which has permitted a less onerous working day, and a new schedule of pay offers the possibility of advancement for those who do efficient work and are competent to undertake executive responsibility.

In addition to the necessity for extension of hospital and sanatorium facilities as well as field personnel for the Indian reservations, there is pressing need for improvement and upbuilding of the institutions now being operated as infirmaries, hospitals, or sanatoria. Nearly all of these institutions are substandard in their equipment and operative personnel. Constant effort is being made to improve both the character and quality of the service rendered in these plants. With the establishment of adequate facilities and personnel the Indians generally have demonstrated a willingness to accept such services.

Attention has been given to the collection of more accurate data relating to health and disease among Indians and the statistical section of the Indian Office has cooperated to the end that better health records and more complete reports of births, deaths, and population may be available. The accuracy of census returns is obviously of great importance in a determination of the ratio of births, deaths, and health data generally relating to the Indian population.

Sanitary surveys by sanitary engineers of the United States Public Health Service are enabling the office to make better provision for safe water supply and proper disposal of sewage. The growing interest manifest on the part of the field employees of the Indian Service is encouraging. Also the increasing interest and helpful activities of the Public Health Service of State, county, voluntary, and other health organizations will be productive of better health among the American Indians.

### *EDUCATION AND CIVILIZATION OF THE AMERICAN INDIANS*

The work of the year represents the continuation of a system of civilization and education which has long been established, is historical, and, in fact, has necessarily been developed in conformity with Federal legislation and limited by financial resources. The energies and powers of the service have been directed toward the improvement of the educational system, although it should be understood that the desired culmination of these efforts has not been attained. In some phases, however, the results achieved at this time are of importance in their bearing upon the eventual solution of the Indian problem. Of these the most important perhaps is the present reliance of 35,000 Indian children upon the State public schools for their education. The endeavors of the service thus directed still continue and the next few years, it is believed, will witness a material increase in the number and a further elimination from the Federal Indian schools of those who can, to advantage, attend the public schools.

Thus there are at this time two means of reaching the end sought, namely, the schools of the several States and the schools conducted by the service. So far as the latter are to serve for some years to

come, the present problem is the improvement of these schools or such adjustments as may be found possible in order that better results may be secured. This applies more especially to the boarding schools, both reservation and nonreservation. In comparison with the public or with the Indian Service day schools, two important points of difference are to be considered, namely, training in vocations which will be of definite value to the graduate, and in the teaching of the English language.

The necessity for vocational training as an ultimate objective for the great majority of Indian youth has been recognized since establishment of the first Indian boarding schools. Such training has been given by the boarding schools, though imperfectly. While results bearing upon the future life and activities of the pupils have been attained in many cases, this has come about through practical training but without competent and systematic instruction because funds have never been available for employment of expert instructors and for the necessary equipment. In some of the nonreservation boarding schools these essential factors have been available to an extent; in the reservation boarding schools, not at all.

Therefore, it should be understood that there are two possible alternatives, either provision of adequate funds for efficient conduct of such vocational courses as are essential and adapted to the needs of Indian youth, or this training can not be given. However, some alleviation of the difficulties appears among the possibilities. If the Government schools may be relieved of those who do not require their aid and who should attend their local public schools, and also those who should rightly be considered white persons by reason of a small degree of Indian blood, the available financial resources, if not reduced in amount by legislation, will enable the service to perfect the vocational courses as well as to provide more liberally for all educational needs of the institutions. Existing law provides:

That hereafter no appropriation, except appropriations made pursuant to treaties, shall be used to educate children of less than one-fourth Indian blood whose parents are citizens of the United States and of the State wherein they live and where there are adequate free-school facilities provided. (Act of May 25, 1918, 40 Stat. L., 564.)

A study of the enrollment of the boarding schools has already been commenced and elimination of ineligible should proceed. The States and the local public-school districts appear to be generally in sympathy with the plan of education by the States, conditioned, however, upon such financial assistance as they need and as the Federal Government can offer. At present the rate paid for each day's attendance of each Indian pupil varies from about 20 to 60 cents, the average being slightly above 35 cents.

The objective of the service is admittedly such preparation and development of the individual as will fit him to become a self-dependent and worthy citizen. In the report of the Secretary for the fiscal year 1928, under Indian employment, brief mention was made of the importance of assistance in the placement of the Indian boy or girl graduate in some suitable occupation and environment, and of the need of an organized and efficient personnel to accomplish this work. Also, in prior annual reports it has been explained that considerable work of this kind by superintendents, supervisors, and field employees

has resulted each year in the employment of many young Indians, though this has been accomplished without organized and systematic guidance. A committee called by the Secretary very early in the year made this recommendation:

As a beginning and part of a comprehensive program of guidance and placement, the principal of each Indian school should collect information relative to the present employment of its graduates and forward this to the central office. For the future a record of the employment of each graduate in vocational types of work should be recorded, and a progressive record kept of the same. Many leads to additional opportunities for the placement of the graduates of Indian schools may be obtained in this manner.

Thereafter, attention of school superintendents was called to this recommendation and they were directed to make a study of their former students for the purpose of determining if they are engaged in the vocation for which they were trained and also to secure information of this character concerning all pupils leaving the schools. The action thus taken, while neither new nor radical, should yet be a step in the development of guidance and placement which, with consistent attention of the office and cooperation of the field service, should bring to pass in the near future the more definite growth and development of Indian employment.

Direction was issued to school superintendents to give full attention to the matter of a suitable and sufficient diet for school children, avoiding any possible deficiency, and to supply funds so far as available to the furtherance of this end. In checking over the cost of food for subsistence of Indian children in the Government boarding schools during the year, it has been found that this cost averaged 20 cents per pupil per day, of which 14 cents represented expenditure from the support funds of the schools, and 6 cents the value of food produced at the school. During the year emphasis was again directed to the inadequacy of the food ration and a committee was appointed to consider this question. The committee, consisting of Dr. M. C. Guthrie, chairman, Dr. E. Blanche Sterling, both of the Public Health Service, Dr. Frances Rothert, of the Children's Bureau, Department of Labor, and Dr. Edith Hawley, of the Bureau of Home Economics, Department of Agriculture, after careful study, found that the minimum cost to provide a proper diet for Indian school children would be 40 cents per pupil. Efforts are being made in connection with the budget for the fiscal year 1931 to secure through legislative action appropriations which will be sufficient to meet these requirements.

Emphasis upon child welfare has been embodied in a direction that there be periodical examinations by physician or nurse, record kept and treatment given where indicated. This has been supplemented by a caution to not overcrowd the schools to an extent detrimental to the health of the children.

Attention of the schools was also invited to the value of the use of local material in teaching, as Indian arts and life, Indian history, Indian geography, and matters of Indian daily experience.

Although already embraced within prior plans, attention has again been called to the importance of perfecting the teaching of gardening and poultry raising in the schools.

There is not at hand at this time definite data regarding the age-grade averages of pupils in the Indian schools. So far as the service has secured information, it appears that the Indian children in the Government schools are, on an average, about 2 years older than

the normal age-grade standard. This has been chiefly due to failure to secure the early entrance of children into school, although this condition has been remedied to a large extent within the past few years due to persistent effort of the bureau. Intelligence tests conducted have shown an intelligence quotient of 100 for Indian children, as compared with 114 for white, which difference would probably lessen somewhat with increase of education. It is clearly apparent; however, that differences exist between different Indian tribes or communities as to capacity for assimilation of knowledge or training. Therefore, any plan of schooling, theoretical or vocational, should not be rigid but adjusted to the capacities and tendencies of given cases. Related somewhat to this question the comparison by grades of enrollment in Government schools given in the report of the commissioner for 1928, and included in the report of the Secretary for 1928, page 57, is continued through the fiscal year 1929, as follows:

|                 | 1926  | 1927  | 1928  | 1929  |                            | 1926   | 1927   | 1928   | 1929   |
|-----------------|-------|-------|-------|-------|----------------------------|--------|--------|--------|--------|
| Beginners-----  | 3,288 | 3,015 | 3,038 | 3,122 | Grade IX-----              | 792    | 994    | 1,239  | 1,541  |
| Grade I-----    | 3,070 | 3,150 | 3,103 | 2,932 | Grade X-----               | 492    | 586    | 662    | 826    |
| Grade II-----   | 2,963 | 3,256 | 3,129 | 2,914 | Grade XI-----              | 232    | 380    | 458    | 472    |
| Grade III-----  | 3,167 | 3,134 | 3,246 | 3,103 | Grade XII-----             | 159    | 212    | 289    | 319    |
| Grade IV-----   | 3,211 | 3,207 | 3,106 | 3,216 | Special <sup>1</sup> ----- |        | 107    | 193    | -----  |
| Grade V-----    | 2,635 | 2,895 | 3,102 | 2,773 | Junior College-----        |        |        |        | 123    |
| Grade VI-----   | 2,133 | 2,469 | 2,663 | 2,730 |                            |        |        |        |        |
| Grade VII-----  | 1,629 | 1,928 | 1,901 | 2,198 |                            | 24,901 | 26,712 | 27,718 | 27,950 |
| Grade VIII----- | 1,130 | 1,379 | 1,589 | 1,681 |                            |        |        |        |        |

<sup>1</sup> Special includes pupils in sanatorium schools, pupils in ungraded classes, and a few attending secondary schools or junior college.

The familiar limitations imposed by legislation of expenditures per pupil per annum have been repealed by act of March 2, 1929, which provides:

That the provision in the act of April 30, 1908 (35 Stat. L. p. 72), and all other acts imposing a limit upon the per capita cost in Indian boarding schools, be, and the same are hereby, repealed.

There is now ground for the hope that reasonably liberal appropriations sufficient for the operation of efficient institutions may be hereafter secured.

With reference to the physical condition of school plants, it should be said that many of these are old and the buildings unsuitable or in a state of disrepair and modern improvements are lacking. Considerable new construction has been accomplished but a host of poor buildings remain. It has appeared advisable to expend funds for enlargement of some schools in order to provide additional facilities for children who have been without school opportunities. However, with the expectation that the State public schools will absorb gradually an increasing number of Indian children, it is believed that any general program of enlargement may cease. Then expenditures for material improvements may be confined to necessary repair or reconstruction at those schools whose continued operation will be essential for some years to come.

### EMPLOYMENT FOR INDIANS

Referring further to the matter of Indian employment, this concerns both the school graduate and the adult Indian. The aim usually is a permanent occupation for the young man or woman but

temporary or seasonal employment for the adult. As to the former class, unless he be placed in and become adjusted to an occupation adapted to his interest and abilities, then the whole scheme of education and civilization fails. If he may return home to farm on land where conditions offer promise of success, this may in those cases be a legitimate objective, but if he returns to a reservation where unfavorable conditions prevail and the influences are such as to force him back to primitive conditions and idleness, then the result is detrimental. An experience of more than 100 years forces the conclusion that the civilization of the Indian will not be effected until changes are brought about in the isolation and customs of the remaining reservations and all Indians must live in close contact with the white communities. Even then, not every individual will be a success, but neither are all individuals of other races, and he must at least be compelled to depend upon himself.

Meanwhile it has been the policy of the service with the scant resources at its command, to seek employment for them away from the reservations and, as mentioned in prior reports, many have been successfully placed in occupational employment. An overseer at large, with headquarters in the Northwest, has placed many Indian youth with railroads, mills, machine shops, factories and other business concerns and with orchardists or agriculturists. Existing instructions to the entire supervisory force and to the field superintendents make it incumbent upon them to devote a part at least of their time to the matter of Indian employment. Supervisors are directed to make careful investigation concerning the opportunities of their respective districts, to arrange with employers of labor to take Indians of suitable age, health, and physical ability. A labor overseer has been assigned to duty among the Apaches in Arizona and has succeeded in obtaining work for a large number of the Apaches. Within the reservation at the Fort Apache unit, Arizona, there have recently been constructed 12 cottages for Indian families, and while this may seem unimportant the matter is mentioned for the reason that these Indians have been among the most backward and the interest which they have taken in these homes is thought to be indicative of the breaking away from the old tribal customs and modes of thought and to offer promise for their future development.

### INDUSTRIAL ACTIVITIES

Generally throughout the country the Indians have continued to make encouraging progress along industrial lines, especially in farming and livestock activities, although somewhat retarded by drouths in the southwestern part of the country, until late in the year when abundant rains fell at several places. While complete data is not available, preliminary reports indicate that there has been a substantial increase in the number of Indians farming and the cultivated acreage on nearly all the reservations. Appreciation is expressed of the cooperation which has been given by the extension service of the United States Department of Agriculture and by many State colleges which have placed their facilities at the disposal of the service for the benefit of the Indians.

There were appointed during the year six directors of agriculture and three home demonstration agents, and it is hoped this personnel will do much to bring about still further improved conditions. Every

effort has been made to encourage and assist the Indians to make the most of their opportunities by means of industrial service and 5-year agricultural programs, which have been adopted on many of the reservations and which function through chapter organizations of the men and auxiliaries of the women.

Perhaps the largest and most important single project initiated during the year was the subjugation of 50,000 acres of allotted lands within the Pima Reservation in Arizona, which will eventually be irrigated from the Coolidge Reservoir. This work will require several years for completion, after which, however, it is believed the opportunity will be afforded to the Pima Indians for their agricultural rehabilitation and permit improvement in their present discouraging industrial condition which has been chiefly due to lack of water.

### ROADS AND BRIDGES

The present need is for local roads to connect the various Indian communities with the main highways. Prior to this year, there was no general appropriation for such roads and very little work of this nature could be undertaken, due to the fact that the regular appropriations for the service were all absorbed by necessary current activities. However, an appropriation of \$250,000 was made by Congress for this purpose, and while this was a relatively small sum compared to the needs of the service for improved local roads, it is hoped that continued appropriations may be made until reasonably adequate roads have been provided within all of the reservations. Requests from the field for allotment of moneys for this purpose have aggregated \$960,000.

The bridge across the Colorado River, near Lee's Ferry, Ariz., was completed during the year, at a total cost of \$329,533, of which \$100,000 is to be paid by the Federal Government from an appropriation made for this purpose about two years ago. The balance of the cost was paid by the State and county.

### ALLOTMENTS

During the fiscal year 253 allotments were made to individual Indians, embracing lands within various reservations aggregating 24,211.17 acres, as shown in the following table:

| Reservation             | Number of allotments | Acreage   |
|-------------------------|----------------------|-----------|
| Palm Springs, Calif.    | 24                   | 908       |
| Round Valley, Calif.    | 2                    | 15        |
| Rincon, Calif.          | 79                   | 419.04    |
| Fort Yuma, Calif.       | 3                    | 30        |
| Leech Lake, Minn.       | 1                    | 82.33     |
| Fort Belknap, Mont.     | 1                    | 530.73    |
| Flathead, Mont.         | 1                    | 120       |
| Fallon, Nev.            | 4                    | 40        |
| Kiowa, Okla.            | 1                    | 160       |
| Klamath, Oreg.          | 5                    | 798.21    |
| Cheyenne River, S. Dak. | 129                  | 20,678.86 |
| Lower Brule, S. Dak.    | 1                    | 109       |
| Rosebud, S. Dak.        | 1                    | 160       |
| Yakima, Wash.           | 1                    | 160       |
|                         | 253                  | 24,211.17 |

In addition to reservation allotments shown above, 57 allotments were made to Indians residing on the public domain in various States, embracing 8,371.72 acres.

### *EXTENSION OF TRUST PERIODS*

The period of trust was extended by order of the President on allotments made to Indians of the following-named tribes and bands: Prairie Band of Pottawatomie, Kansas; Iowa Tribe, Kansas and Nebraska; Winnebago, Nebraska; Pawnee, Oklahoma; Siletz, Oregon; Lower Brule, and Rosebud, South Dakota.

### *CHOCTAW INDIANS OF MISSISSIPPI*

Three separate purchases of land were made during the year, covering a total of 230 acres, at a cost of \$5,000. This land has been resold to six Choctaws of the full blood under the reimbursable plan and will provide home sites for about 30 persons. In addition to the tracts actually purchased, \$1,480 has been obligated in the proposed purchase of 160 acres for resale to three individuals, whose combined families comprise about 15 persons. To date, \$43,912 has been used for the purchase of 1,593 acres. This land has been resold to 58 Indians. It is estimated that approximately 253 individuals have been provided with homes in this way.

### *MISCELLANEOUS PURCHASES*

The purchase of 3,071 acres of land in Polk County, Tex., for the Alabama and Coushatta Indians has been consummated at a cost of \$29,000. Negotiations are under way for the purchase of 3,065 acres of privately owned land within the exterior boundaries of the Fort Apache Reservation, Ariz., at a cost of \$6,130. On the Crow Reservation, Mont., 160 acres of land was purchased at a cost of \$800, on the site of the Reno battlefield, for monumental purposes. A tract of land containing 20 acres was purchased for the Indian colony at Winnemucca, Nev., at a cost of \$500. Approximately 60 persons will be benefited by this purchase. All of these purchases were made from funds authorized by Congress.

### *ADDITIONAL LANDS FOR INDIAN USE*

Under authority of the act of February 9, 1929 (45 Stat. L. 1158), a small tract of land containing approximately 7 acres, located at Celilo on the Columbia River in Oregon, was transferred from the War Department to the Interior Department as a fishing camp site for a small band of Indians now living thereon.

Under authority of the act of February 11, 1929 (45 Stat. L. 1161), several tracts containing 920 acres, located near Kanosh, Utah, were permanently set aside for the use and benefit of the Kanosh band of Indians.

Under authority of the act of February 11, 1929 (45 Stat. L. 1161), a strip of land 1½ miles wide and 4 miles long, running north and south, lying between the boundary of the San Ildefonso Pueblo Grant on the east and the eastern boundary of the Santa Fe National Forest on the west, located in Santa Fe County, N. Mex., was permanently

reserved for the sole use and benefit of the Indians of the San Ildefonso Pueblo.

### *RIGHTS OF WAY*

The act of March 4, 1915 (38 Stat. L. 1188), authorizing the opening of public highways over Indian lands in Montana and Nebraska in accordance with the laws of the respective States, upon condition that maps of location must first be approved by the superintendent in charge of the lands involved, is in line with the present policy of transferring jurisdiction over Indian affairs to the several States.

Recently, numerous protests from taxpayers, as well as owners of the restricted Indian lands involved, were received against the issuance to the Montana State Highway Commission of permission to proceed with the construction of Federal State Highway Project No. 253-A, between the town of Wolf Point and the bridge, a few miles southeast thereof, over the Missouri River. The Bureau of Public Roads, after full consideration, decided there was no reason to withhold the extension of Federal aid to this project, and sufficient guarantees being secured that the Indian owners would be fairly compensated for the damage done, the superintendent of the Fort Peck Agency was authorized to permit construction work to proceed. It has since been reported that the Indians are determined to prevent work on this location, and have actually resisted the entry of the State highway commission upon the land. This department is without jurisdiction to interfere, and responsibility for proceeding with the work rests with the State highway commission. All parties in interest have been so advised, and the Indians have been counseled to refrain from the exercise of personal violence and to seek their remedy, if any, through the courts. It will be of exceeding interest to note the manner in which the State of Montana meets and discharges the responsibilities arising in connection with this situation.

### *INDIAN SUITS AND JUDGMENTS*

The United States Court of Claims, on May 6, 1929, handed down a judgment in the case of the Iowa Tribe of Indians (Oklahoma) *v.* The United States, No. 34677, awarding this branch of the Iowa Tribe the sum of \$256,850. The Iowas of Kansas and Nebraska are not entitled to participate in the judgment mentioned, as they were not parties to the suit, which related solely to lands of the Iowas who removed from Kansas and Nebraska to Oklahoma many years before the transactions occurred which resulted in the suit cited.

Suits not mentioned in the report for the year 1928 have been entered in the United States Court of Claims against the United States as follows:

Nisqually Tribe of Indians of Washington, petition filed December 31, 1928.  
Steilacoom Tribe of Indians of Washington, petition filed April 2, 1929.  
Kaw Tribe of Indians of Oklahoma, amended petition filed April 15, 1929.

### *INDIAN CLAIMS*

The act of May 3, 1928 (45 Stat. 484), directed the Secretary of the Interior to investigate and determine claims of individual Sioux Indians enrolled at the various Sioux agencies in North and South

Dakota, Montana, and Nebraska, against the United States arising from failure to receive allotments of land or for loss of personal property or improvements where the Indian claimants, or those through whom the claims originated, were not members of any band engaged in hostilities against the Government at the time the losses occurred. Where such claims are found to be meritorious, the Secretary of the Interior is directed to adjust them under existing law; and where no such law exists meritorious claims are to be reported by him to Congress with appropriate recommendation.

Proper instructions were promulgated June 27, 1928, by the department, and the superintendents in charge of the respective agencies and Indians are now investigating the claims in the field. Approximately, 2,000 such claims have been transmitted to this office for review and action. It is believed there will be more than 5,000 such claims filed for settlement under the act cited.

### TRIBAL ENROLLMENT

Preparatory to closing up the tribal affairs of the Eastern Band of Cherokee Indians of North Carolina, a final membership roll is being made under the provisions of the act of June 4, 1924 (43 Stat. L. 376), and the final report of the field enrolling official was submitted December 1, 1928. More than 12,000 applications for enrollment were filed and the tentative roll prepared contains 3,139 names, 1,222 of which were challenged or contested by the tribe. Nine hundred and forty-seven of the persons who were denied enrollment have appealed to the department. These cases are now being examined and will be submitted to the Secretary of the Interior for his final determination as required by the law.

The act of May 18, 1928 (45 Stat. L. 602), authorized the attorney general of the State of California to bring suit in the United States Court of Claims on behalf of the Indians thereof, and directed the Secretary of the Interior to make a roll of those Indians who are entitled to share in any favorable judgment obtained. The act also required a roll of all other Indians living in California May 18, 1928, and while the official census shows about 20,000 of these Indians, it has been reported that there will be 50,000 applicants.

### FORESTRY

The substantial improvement in the market that has been eagerly awaited by the lumber production industry during the past five years has not yet materialized. While there has been some advance in prices of logs and lumber since July 1, 1928, these advances have not been sufficient to afford the majority of producers of this basic commodity a reasonably adequate return on the investment, especially when consideration is given to the risks involved.

The policy of restricting sales of stumpage on Indian lands to cases in which funds were urgently needed, or certain conditions indicated a loss of capital values through delay, has been continued during the year beginning July 1, 1928. However, the depredations of the bark beetle, *Dendroctonus brevicomis*, on yellow pine of the Klamath Reservation, Oreg., to which reference was made in the annual report for the fiscal year 1928, though somewhat abated,

continued alarming. The timber offered as the Paiute unit in 1928, for which no bids were received, was combined with other timber at the north and west and again offered as the Black Hills unit. However, the damage already caused by forest insects was so great that no one was willing to bid even the minimum price of \$4 for pondosa pine. The timber on a large unit lying north of the Black Hills, designated as the Sycan unit, was sold at a price of \$6.92 for pondosa pine and prices of \$2 and \$1 for inferior species, of which there are small amounts. In view of the great reduction in volume that has already resulted from insect attack the price of \$6.92 is considered very advantageous from the standpoint of the Indians, even if the infestation should at once subside. On the Whiskey Creek unit lying along the reservation border south of Yainax and Beatty, pondosa pine brought a price of \$7.12 per thousand feet, and a small unit of 24,000,000 feet west of the Whiskey Creek unit sold for \$5.77. All of these units were offered, in contravention of the policy of restricted sales, because of the probability that a recurrence of an insect infestation such as occurred in 1926-27 might destroy a large part of the mature timber that had survived the earlier attacks.

Under the requirements of the decision of the Supreme Court of the United States in the case of *United States v. Payne* (264 U. S. 446), the greater part of the timberlands of the Quinaielt Indian Reservation, Wash., have been allotted to individual Indians. These lands are generally entirely unfitted for agricultural use and the only means by which the allottees can secure any benefit from the allotments consists in the sale of the timber. Because of the need of many Indians for funds and indications that the removal of certain large timber operators from the Quinaielt territory in the near future might diminish competition, four large units comprising all unsold timber on the Quinaielt Reservation and known as the Lunch Creek, Joe Creek, Raft River, and Cape Elizabeth units, were advertised for a period of nearly four months with sealed bids opened on June 18, 1929. After the advertisements were issued announcement was made that the Northern Pacific and Union Pacific Railways had decided to submit an application to the Interstate Commerce Commission for the privilege of building a common carrier railroad across Quinaielt Reservation to the Hoh River. This announcement aroused great interest for and against the proposed sales. While bids were invited and received upon the four units mentioned, after the close of the fiscal year all of these bids were rejected.

In September, 1928, more than one-half billion feet of pondosa pine on the Defiance Plateau unit in the Southern Navajo jurisdiction was sold at the rate of \$3 per thousand feet. About 20 miles of railroad must be built from the Atchison, Topeka & Santa Fe Railway to reach the edge of this tract of timber. As reproduction is very deficient in this area because of excessive grazing by sheep and goats, a very difficult problem in silviculture exists.

While operators on Indian lands have generally complained as to the inadequacy of profits, large investments in mills and logging equipment have practically forced them to operate on a fairly large scale each year. During the fiscal year 1928 contractors cut timber from Indian lands with a value of \$2,541,426, and, in addition to

this, timber with a value of \$140,445 was cut in connection with the timber operations conducted by the Indian Service on the Menominee and Red Lake Reservations. The detailed figures for 1929 are not available, but will be substantially the same as those for 1928.

The forest-fire situation on Indian lands was not as serious during the summer of 1928 as had been anticipated. A slightly increased appropriation enabled the forestry branch to place from two to five additional fire guards on duty July 1 at agencies having large forest areas to protect. Through the increased organization fires were quickly suppressed. The expenditure of \$10,000 for additional preventive organization and extra guards probably resulted in a saving of two or three times that amount in suppression expenditures. On the Hoopa Valley Reservation and on the Mission lands of southern California, where an adequate organization for detection and prompt suppression was not available, nearly \$12,000 was expended in suppression. Because of lack of funds for the meeting of such expenditures approximately one-half of this amount remained unpaid at the close of the fiscal year.

A deficiency act of May 29, 1928 (45 Stat. L. 908), appropriated \$25,000 for the resumption of the forest insect control work on the Klamath Reservation that had ceased at the close of 1924 because of lack of funds, and the Interior Department appropriation act of March 4, 1929, for the fiscal year 1930 (45 Stat. 1562, 1570), carried an item of \$25,000 for the continuation of preventive measures. Work was begun in September, 1928, continued in the spring of 1929, and will be resumed in September, 1929.

An appropriation of approximately the same amount will be requested for 1931. It is hoped that the work done under these appropriations and more favorable climatic conditions may result in a subsidence of epidemic conditions that have caused a loss of several millions of dollars to the Klamath Indians during the past decade. This infestation of forest insects has embraced an area in southern Oregon and northern California of which the Klamath Reservation is but a minor part and on some of the nonreservation areas the percentage of stand killed has been even greater than on the reservation. The experience in the Klamath Basin demonstrates conclusively the need for sufficient appropriations for the maintenance of a constant surveillance over this field of forest protection and prompt action when serious conditions are discovered by the forestry branch of the Indian Service.

### *PRINCIPAL IRRIGATION ACTIVITIES*

The irrigation division of the Indian Service is charged with the initiation, construction, operation, and maintenance and collections concerning all irrigation and drainage projects on Indian reservations, including in numerous instances privately owned lands in conjunction with Indian projects; including also development of stock and domestic water and flood protection. The operations in the field are carried on under five irrigation districts, each in charge of a supervising engineer, who is responsible for conduct of the work authorized by the Indian Office on the various projects under each jurisdiction.

District No. 1, with headquarters at Yakima, Wash., comprises Oregon, Washington, and northern Idaho, the larger projects included being the Yakima, Klamath, Colville, Lummi, and Kootenai.

District No. 2, with headquarters at Blackfoot, Idaho, comprises southern Idaho, Utah, and Nevada, the larger projects being Fort Hall, Uintah, Walker River, Pyramid Lake, and western Shoshone.

District No. 3, with headquarters at Billings, Mont., comprises Montana, Wyoming, and South Dakota, and includes Blackfeet, Fort Belknap, Flathead, Crow, and Wind River projects.

District No. 4, with headquarters at Los Angeles, Calif., comprises California and Arizona south of the Santa Fe Railroad and includes the San Carlos, Colorado River, Yuma, Fort Apache, San Xavier, Papago, Salt River, Mission, Tuolumne, Tule River, and other miscellaneous reservations in California.

District No. 5, with headquarters at Albuquerque, N. Mex., comprises New Mexico, northern Arizona and Colorado, and includes all the pueblos, with the exception of the Middle Rio Grande conservancy work as it applies to the Indian pueblos, the Navajo reservation, Mescalero, Jicarilla, Zuni, Pine River, Hogback, Ganado, and other miscellaneous projects. An engineer is to be appointed to handle the pueblo matters affected by the Middle Rio Grande conservancy district activities.

There are 205 projects on the books, of which 80 were active during the last year, with approximate total costs to June 30, 1929, for construction of \$37,104,000; for operation and maintenance, \$10,284,000. The construction repayments have been approximately \$1,271,000, and operation and maintenance repayments, \$3,400,000. The total area of land under constructed irrigation works is 754,000 acres, an increase of 44,500 acres during the past year; the total acreage irrigated during 1928, 387,552 acres. Of this amount the acreage irrigated by Indians was 124,316, the area irrigated by lessees 103,578, and by white owners of land 159,658 acres. There is an estimated total of 1,358,761 acres of irrigable lands under projects. The estimated cost to complete these projects to supply all of the irrigable land is \$31,000,000. There have been approximately 242 wells, 300 springs, and 34 ponds developed to date for domestic and stock water. These are mostly in Arizona and New Mexico, with by far the largest number on the Navajo reservations.

The costs for construction during the year were about \$3,750,000 and the costs for operation and maintenance about \$750,000. Collections for construction were approximately \$150,000 and for operation and maintenance \$400,000.

Of the larger projects on which crop census was taken the crop value was \$10,090,114 from 314,021 acres.

One of the major activities was the construction of the Coolidge Dam on the Gila River to supply water for irrigation of the San Carlos project in Arizona. The construction of this dam, which is of the multiple-dome type, 250 feet in height, was practically completed and the river-diversion opening closed on November 15, 1928. Owing to the extreme drought no water has been stored, and water conditions generally are worse than for many years. In connection with the dam a power plant consisting of two units of 6,250 kilowatts each is being installed. Practically all of the equipment is on the ground and it is expected that the installation will be completed by September, 1929. The limit of cost for the dam and power plant is \$6,050,500.

Contract was let in May, 1929, for the construction of a 20-mile transmission line from the dam to Rice for use of the school and agency and for irrigation pumping. Test wells were drilled and investigations made to determine the most satisfactory relocation for the Indians to be moved from the San Carlos Reservoir area. Construction work on the distribution system of the San Carlos project proceeded at a rapid rate under an increased appropriation of \$500,000.

Within the Yakima Reservation, Wash., construction was carried out and completed on the Wapato Pumping Unit No. 1. This is a direct connected hydro pumping plant designed to deliver 150 second-feet under a head of 85 feet to the pump canal 24 miles in length for the irrigation of 11,000 acres. The total cost of the work is approximately \$410,000. The distribution system is principally of cement pipe, 21 miles of which, varying in diameter from 6 to 18 inches, was installed at a total cost of approximately \$60,000. Water delivery was begun in June and water was supplied to approximately 1,000 acres. An investigation of the conditions on the Wapato project was made in March by Assistant Chief Engineer C. R. Olberg at the instance of the water users, and a further investigation was made by Consulting Engineer James W. Martin in May, the major recommendations being that the project lands should be defined, water rights determined, and the final cost fixed.

Within the Lummi Reservation, Wash., the construction of dikes was practically completed by June 15, 1929. The total cost of the work will be approximately \$65,000 for the reclamation of 4,446 acres of excellent land.

In Montana the principal construction work was on the Flathead project, for which \$347,500 was authorized to be expended for continuing construction work, including soil survey and classification of the project lands. Investigation of the foundations for the Kicking-horse Reservoir and the raising of Tabor Reservoir was made and Consulting Engineer A. J. Wiley was appointed in June, who reported favorably on the feasibility thereof.

Applications for development of the Polson power site are pending before the Federal Power Commission.

On the Fort Peck and Blackfeet projects investigations were made with reference to the advisability of continuing operations on these two projects. In regard to Fort Peck it was recommended that the project be abandoned but continuance of the Blackfeet project was recommended.

On the Fort Hall Reservation in Idaho, extensive surveys, including soil surveys by the Department of Agriculture, were conducted to determine the feasibility of irrigating the Michaud unit, and while the surveys were completed, the report had not been compiled at the end of the year. About 30,000 acres of suitable land was surveyed. Surveys and estimates were also made on various minor units at the Fort Hall Reservation.

The Gibson unit, of approximately 10,000 acres, was completed during the spring of this year at a cost of \$145,000. This involved the construction of 60 miles of canals and 9 miles of drains, including 568,000 cubic yards of excavation on which the contract price was \$79,554 and the construction of 96 structures at a cost of \$50,133.

Approximately \$48,000 is available for the construction of a spillway and drainage ditch to control the level of Lake Andes, S. Dak. This is contingent upon securing satisfactory guarantees from the State for the payment of one-half the cost of construction.

On the Pine River project in Colorado considerable progress has been made in clarifying the situation in regard to the interlocking rights and operation of the canal system and contracts have been entered into with several of the water users and ditch companies covering the payment of operation and maintenance charges.

Some progress has been made in the pending suit to define the rights of the respective parties in and to the waters of Gila River. A conference between the representatives of the defendants of this suit and the Government, represented by officials of the Department of Justice and this department, was held in Phoenix during the month of January for the purpose of reducing the amount of work involved in adjudication of the case by entering into stipulations agreeing to certain facts. While the representatives of both sides were unable to reach an agreement as to the stipulations, nevertheless it is believed a better understanding of the claims of the respective parties now exists by reason of this conference.

The development contemplated by the Salt River Valley Water Users' Association, involving hydroelectric power and utilization of the flood waters of the Verde River, has not yet been carried out. Under this proposed development as provided for in an agreement of June 19, 1929, the Indians of the Salt River Reservation may receive an adequate water supply to the extent of 6,310 acres. They have the right also to participate in the power development upon payment of the pro rata share of its cost. It is to be hoped that this development will be carried out at an early date as these Indians are in need of more water for the irrigation of their lands.

The severe drought that has been in evidence for the past several years in the Southwest has brought home more forcibly the need for additional water for these Indians. An agreement was reached with the Salt River Valley Water Users' Association under date of June 18, 1929, authorizing the association to operate three wells within the right of way of the reservation, upon condition that 500 acre-feet of water would be furnished free of charge for use of the Indians.

A controversy arose over the action of the city of Phoenix in emptying its sewage into the Salt River above the irrigation heading of the Maricopa Indians in that river. The matter became so acute that direction was issued by the Department of Justice to institute legal action for the abatement of the nuisance. At a conference held in Phoenix with the city officials an agreement was reached resulting in the abatement of the nuisance and avoidance of litigation.

The Flathead irrigation district, comprising within its confines approximately 50 per cent of the lands of the Flathead irrigation project, Montana, executed an agreement with the United States on February 27, 1929, which made available funds for much-needed construction work and paved the way for a better understanding between the district landowners and the Government and for better success of that part of the contract. The other two districts, the Mission Valley and Jocko districts, have not yet entered into an agreement, with the result that they do not receive the benefits

under the legislation, though it is probable they may do so in the immediate future.

A contract was entered into between the Government and the Middle Rio Grande conservancy district, a political subdivision of the State of New Mexico, which provides for the irrigation, reclamation, conservation, and flood-control works for approximately 132,000 acres of land within the Middle Rio Grande Valley, including six pueblos, namely, Cochiti, Santo Domingo, San Felipe, Santa Ana, Sandia, and Isleta. This contract was executed December 14, 1928. The district is to finance its share of the cost of the work from funds derived from the sale of bonds. It is understood that bonds to the extent of \$2,000,000, bearing 5½ per cent interest, were sold at 87.5 during June, 1929, and that there is an option held by a bond investment company on \$2,500,000 more of these bonds. Under the contract the Pueblo Indian lands are to pay for the work done for their benefits at not to exceed the per-acre amount to be paid by white land owners under the district, and in no event shall the Indian lands pay in excess of \$67.50 per acre. The payments for and on behalf of the Indian lands are to be made out of reimbursable appropriations.

The adjudication suit involving the water rights of the Walker River Indian Reservation is still pending. The master appointed by the court in the case has been taking testimony, but the United States deems it necessary to secure additional hydrographic data in connection with the alleged excessive losses in the Walker River beginning at a point before it enters the reservation.

Suits have been filed for the collection of delinquent construction and operation and maintenance assessments against private land-owners who acquired former Indian allotments on the Crow and Blackfeet projects in Montana, the Wind River project in Wyoming, and the West Okanogan project in Washington.

A suit was filed in the State courts by one H. H. Francis against C. J. Moody, project engineer of the Flathead project, to quiet title in and to waters of certain creeks within the Flathead irrigation project. It is understood that the jurisdiction of the State court will be brought into question with a view to dismissing the litigation.

The principles of the Winters case (207 U. S. 564) dealing with water rights of the Indians were applied in a recent case entitled United States ex. rel. re U. S. Attorney v. Hibner et al., reported in 27 Fed. (2d) 909-912.

### OIL AND GAS LEASING

Within the Navajo Treaty Reservation, Ariz., a test well on the Rattlesnake structure was completed to a depth of 6,765 feet. This well has been reported to have an average daily production of about 750 barrels of 38 Baumé gravity. There are now 25 producing oil wells in the Navajo fields, a number of which were considerably pinched during a part of the year. The total production therefrom has yielded to the Navajo Tribe \$115,595 for the year.

Discovery of oil in the vicinity of the Mount Pleasant Indian School, Michigan, has been reported. The yield is said to be about 48° gravity. There are a number of Indian allotments remaining

under restriction in this vicinity, which possibly may be leased and developed into available oil-producing lands.

Within the Ute Reservation, N. Mex., there are several good gas wells which have been closed because there was no market for gas, but negotiations are now in progress with the Mesa Grande Gas Co. for construction of a pipe line in order to market the gas in the city of Durango, Colo.

Five oil wells within the Crow Reservation, Mont., and a number of wells within ceded lands of the Shoshone Reservation, Wyo., remain closed. The oil from these fields is heavy in its crude state and of low gravity, and there are no pipe lines to the fields which afford the necessary outlet to a market.

Production from the Osage Reservation, Okla., during the year amounted to 16,629,116 barrels of oil, from which, including certain deferred bonus payments, an income of \$7,441,940 was derived. There has been a noticeable lessening of production and receipts from Osage oil and gas leases for several years and it appears that the high point has been reached and that these leases are now on the decline. Two public-auction sales of oil leases were held at Osage during the year, at which leases on 47,434 acres were sold. A provision was inserted in the leases, enabling the Secretary in his discretion to impose restrictions upon oil production when deemed necessary as a conservation measure and in conformance with similar restrictions imposed upon other wells in Oklahoma by State authority or agreement with operators.

A provision in the act approved March 2, 1929 (45 Stat. L. 1478), extends the trust period on the Osage lands, moneys, and other restricted properties until January 1, 1959. This act also amends the act of March 3, 1921, so as to give the Secretary more discretion in determining the acreage of Osage lands to be offered for leasing annually and provides that not less than 25,000 acres shall be offered for oil and gas mining purposes during any one year. Under the act of March 3, 1921, it was necessary to offer approximately 100,000 acres each year.

There was an increase in production from restricted lands of members of the Five Civilized Tribes, Oklahoma, over the production of the prior year, the total for the year being 27,698,850 barrels. The total income from leases of the lands of these tribes was \$5,636,919.

### QUAPAW LEAD AND ZINC MINING LANDS

The lands of the Quapaw Reservation, Okla., are rich in deposits of lead and zinc. The lands lie in what is known as the Tri-State lead and zinc mining district. Mining was first conducted within the reservation in 1902, and since 1917 the production of zinc-lead ore has increased enormously. During the year the mines of these Indians under departmental supervision produced 24 per cent of the lead and 32 per cent of the zinc output from the Tri-State district, and about 3.9 per cent of the lead and 14.2 per cent of the zinc output from ore mined in the United States. At the close of the fiscal year, there were 50 departmental lead and zinc mining leases in force, embracing 6,284 acres; and 44 subleases in force, covering 2,294 acres. From these leases 186,423 tons of lead and zinc concentrates were sold during the year for \$8,809,442 and the royalties received therefrom for the Indians amounted to \$848,219.

*FIVE CIVILIZED TRIBES IN OKLAHOMA*

The unsold coal and asphalt mineral deposits belonging to the Choctaw and Chickasaw Nations are valued at \$9,254,829, and the other unsold remaining property is valued at \$225,092. The amounts to be collected from the purchasers of Choctaw and Chickasaw tribal property heretofore sold aggregate \$869,656.

The present tribal property of the Creek Nation is valued at \$92,050 and that of the Seminole Nation at \$250,000.

In the Cherokee Nation there remain a few unsold tracts of tribal property.

The Cherokee, Creek, and Seminole tribal lands, with the exception of a few tracts above mentioned, have been allotted, sold, or otherwise disposed of as provided by law, and the tribal affairs, with the exception of pending suits in the United States Court of Claims, are practically completed and closed.

Before the Choctaw and Chickasaw tribal affairs can be closed the above-mentioned tribal property of said nations must be sold or otherwise disposed of as provided by law and funds derived therefrom and from collection of the sums due from prior purchasers must be distributed per capita to the enrolled Choctaw and Chickasaw Indians entitled to share in the tribal funds or be otherwise paid out as provided by law and the pending suits of said nations in the United States Court of Claims must be closed.

Under certain jurisdictional acts passed by Congress in 1924 the Cherokee, Creek, Choctaw, and Chickasaw Nations have filed a number of suits against the United States in the Court of Claims in which suits, pending before said court, are set forth the demands of said Indian nations against the United States aggregating many millions of dollars.

There are approximately 12,000 enrolled Indians of the restricted class in the Five Civilized Tribes, of whom approximately 9,000 are full-bloods. The department has supervision and control over the restricted allotted lands and funds of these Indians. The present restricted allotted lands aggregate 1,663,115 acres.

The cashier for the Five Civilized Tribes Agency handled, during the year, a total of \$41,701,248, including receipts and disbursements of all classes of funds. Collections of tribal funds amounted to \$240,398 and there were credited to the individual Indian accounts individual Indian moneys totaling \$14,080,029. During the fiscal year there was disbursed from the restricted individual Indian moneys the aggregate sum of \$4,869,281 for the maintenance of the restricted Indians and for their farms, buildings, livestock, and equipment. The total amount expended from individual Indian accounts for permanent improvements, including farms purchased, amounted to \$856,175, and the amount expended for livestock and farming improvements was \$131,833. These expenditures for the benefit of the individual restricted Indians were made under supervision of the field force of the Five Civilized Tribes Agency.

The office is informed that there are many first-class farmers among the Indians of the Five Civilized Tribes and that commendable comparative progress has been made in the education and competency of the restricted Indians. It is reported that in many instances the Indian farmers have benefited by the demonstration and results of

superior methods employed by white farmers in their neighborhood and desire better homes and more modern farming equipment. It is also reported that many of the younger generation are filling clerical and mechanical positions in the cities and towns of Oklahoma in competition with their white neighbors.

### *PROBATE ATTORNEYS, FIVE CIVILIZED TRIBES*

The beneficial work heretofore performed by the probate attorneys in eastern Oklahoma, formerly Indian Territory, has continued to yield good results to restricted Indians of the Five Civilized Tribes and Quapaw Agencies. These attorneys advise and assist the Indians who are in need of guidance in business or legal matters and who seek their aid in matters relative to guardianship, administration of estates, transactions of various kinds concerning their inherited and restricted property, and advise them regarding the conservation and use of their restricted lands and funds. The Indians consult these attorneys who examine witnesses, prepare cases for the courts, and conduct these cases to final conclusion. The attorneys prepare leases and other legal instruments for the Indians, examine the validity of legal instruments submitted to them, and aid in placing minors in schools.

The entire amount of money actually saved by these attorneys to the Indians during the year can not be definitely stated in dollars, but it is known to be considerable. In the report for the prior year statistics were given showing the number of cases handled, amounts of money involved, and other data, but this need not be repeated as the work which has been accomplished is comparable with that of the preceding year.

### *PUEBLO LANDS BOARD*

Mention was made in the report for the preceding year of the status of the work of this board established by the act of June 7, 1924, to quiet title to Pueblo lands in New Mexico.

During the year reports were submitted upon the pueblos of Isleta, Picuris, and San Juan.

The act of March 4, 1929 (45 Stat. L. 1638), appropriated \$47,132.90 for Picuris, \$7,684.50 of which amount is made available for the purchase of 118.567 acres of land for the use and benefit of these Indians. The amount appropriated is to repay them for damages sustained by reason of loss of land and water rights.

The board found that the pueblo of Isleta had sustained damages of the character indicated amounting to \$3,218.21, and that the San Juan pueblo had suffered losses amounting to \$29,090.53. Payment of the amounts due these pueblos will await appropriations by Congress.

### *PURCHASE OF SUPPLIES*

Concerning procurement of supplies for the schools, agencies, and hospitals, fancy merchandise is not purchased nor required, but standard grades believed to be in every way satisfactory are bought for the service, for the Indian boys and girls, and dependent adults. The quality of the food supplies in many lines is the same as of that bought for other governmental branches. Difficulty has been experienced,

however, in keeping cereals and fruit, particularly through the summer months, and on occasions this class of merchandise has been damaged by heat in transit. These difficulties are being obviated by changed methods of procurement. Continued emphasis has been placed on the need for careful inspection of deliveries and when expert assistance has not been obtainable within the service it has been procured from other governmental units or from the outside. Commodity specifications are constantly being revised.

Deliveries of food, wearing apparel, and other articles were more promptly made during the year than at any time since the World War period. Nearly all necessities were on hand when the schools opened.

The service is indebted to the Bureau of Mines, the Bureau of Standards, the Bureau of Public Roads, the Bureau of Animal Industry, the Bureau of Plant Industry, the Bureau of Chemistry, and other branches of the Government for their assistance and technical advice in the procurement and inspection of supplies.

### BIBLIOGRAPHY

In response to frequent requests for information there have been compiled a number of bulletins or pamphlets relating to Indian life, customs, history, population, etc., which are now available for those who desire, as shown in the following list:

- Primitive Agriculture.
- Bibliography—Legends.
- Bibliography—History.
- Arts and Industries.
- Indian Religion.
- Indian Missions.
- Education of the Indians.
- Colonial Population.
- Bibliography—Indian and pioneer stories for children.
- Indian Wars and Local Disturbances.
- American Indian in the World War.
- Cliff Dwellings.
- Indian Legends.
- Indian Music.
- Indian Citizenship.
- Indian Home Life.
- Indian Population, by States, Agencies, and Tribes, for the Preceding Year.
- Indian Reservations.
- Peyote.

### CONCLUSION

In concluding this report it is desired to express on behalf of the Indian Service our appreciation of the interest and cooperation of yourself and other representatives of your department in the Indian work.

Sincerely yours,

C. J. RHOADS, *Commissioner*.

The SECRETARY OF THE INTERIOR.

## APPENDIX

### STATISTICAL TABLES

#### POPULATION

There are 337,652 Indians enumerated at 82 Federal agencies located in 25 States.

The definition of an Indian as employed by the Indian Service not only includes persons of Indian blood who through wardship, treaty, or inheritance rights have contact with the service, but also non-Indians entitled to enrollment. Thus, the census of the Five Civilized Tribes includes 23,405 freedmen. The Census Bureau defines an Indian as a person of a recognizable amount of Indian blood. Furthermore, the population enumerated at Federal agencies is not necessarily domiciled on or near the reservations. It is the population on the agency rolls and includes both reservation and nonreservation Indians. Thus, an Indian may be carried on the rolls because of tribal or inheritance rights, etc., and may reside anywhere in the United States or in a foreign country. Reports of births and deaths among absentees are often not received. In many instances certification is made to the State registrars of vital statistics and thus to the Bureau of the Census, but not to the Indian Service. In a considerable number of cases the addresses of nonreservation Indians are unknown. For the above reasons the statistics of Indian population as shown in the decennial reports of the Bureau of the Census can not agree with the statistics of the Indian Service.

Indians living in States in which there are no agencies are shown below in a separate table based on the Fourteenth Census of the United States taken in 1920. The figures include a number whose names appear on agency rolls.

Indians enumerated at Federal agencies plus those residing in States in which there are no agencies give a total of 345,575, but it should be borne in mind that the Indian Service figure is for 1929 and that the Census Bureau figure is for 1920; also, that it is impossible to ascertain the number of Indians, not enumerated at Federal agencies, living in States in which agencies are located.

No accurate figures are available concerning nonreservation Indians. Agencies having approximately 30 or more per cent of the Indians residing away from the reservations are referred to in separate footnotes at the end of the table.

In some instances the population figures vary considerably from those of previous years. Explanations are given in most cases. The figures in the following table are subject to revision, but are the most accurate available.

*Indian population of the United States enumerated at Federal agencies as of June 30, 1929*

| State and agency                         | Total   | Male    | Female  |
|--|---------|---------|---------|
| Total.....                               | 337,652 | 117,222 | 114,272 |
| Arizona.....                             | 46,350  | 23,257  | 23,093  |
| Colorado River Agency <sup>1</sup> ..... | 1,161   | 643     | 518     |
| Fort Apache Agency.....                  | 2,648   | 1,371   | 1,277   |
| Havasupai Agency.....                    | 188     | 105     | 83      |
| Hopi Agency <sup>2, 4</sup> .....        | 5,745   | 2,978   | 2,767   |
| Kaibab Subagency, Paiute Agency.....     | 95      | 51      | 44      |
| Leupp Agency <sup>3</sup> .....          | 2,018   | 1,007   | 1,011   |

<sup>1</sup> Males plus females do not equal total, because for some agencies population by sex is lacking.

<sup>2</sup> Approximately 40 per cent live off the reservations, the majority in Needles, Blythe, and Los Angeles, Calif.; the others in Las Vegas, Nev.

<sup>3</sup> An enumeration of the Navajos was made in 1929 and included the following jurisdictions: Hopi Agency (Navajos), Eastern, Leupp, Northern, Southern, and Western Navajo Agencies. The census at Leupp, Northern and Southern Navajo has not been completed. Previous population figures for this tribe were estimates and can not be used for comparison.

<sup>4</sup> Hopi Agency has under its jurisdiction 2,492 Hopis (1,326 males and 1,166 females) and 3,253 Navajos (1,652 males and 1,601 females).

*Indian population of the United States enumerated at Federal agencies as of June 30, 1929—Continued*

| State and agency   | Total  | Male  | Female |
|--|--------|-------|--------|
| Arizona—Continued.   |        |       |        |
| Phoenix School.....  |        |       |        |
| Camp Verde Subagency <sup>1</sup> .....                                  | 430    | 241   | 189    |
| Salt River Subagency <sup>6</sup> .....                                  | 1,207  | 633   | 574    |
| Pima Agency <sup>6</sup> .....   | 5,020  | 2,593 | 2,427  |
| San Carlos Agency <sup>7</sup> .....                                     | 2,585  | 1,309 | 1,276  |
| Sells Agency <sup>6, 8</sup> .....                                       | 5,233  | 2,651 | 2,582  |
| Southern Navajo Agency <sup>3</sup> .....                                | 15,210 | 7,231 | 7,979  |
| Truxton Canon Agency <sup>9</sup> .....                                  | 442    | 222   | 220    |
| Western Navajo Agency <sup>3</sup> .....                                 | 4,368  | 2,222 | 2,146  |
| California <sup>10</sup> .....   | 19,060 | 9,650 | 9,410  |
| Bishop Subagency, Walker River Agency <sup>11</sup> .....                | 1,423  | 695   | 728    |
| Fort Bidwell Agency.....   | 619    | 316   | 303    |
| Fort Yuma Agency.....  | 870    | 461   | 409    |
| Hoopa Valley Agency.....   | 1,939  | 951   | 988    |
| Mission Agency <sup>12</sup> .....                                       | 2,804  | 1,490 | 1,314  |
| Sacramento Agency <sup>13</sup> .....                                    | 11,405 | 5,737 | 5,668  |
| Colorado: Consolidated Ute Agency.....                                   | 836    | 456   | 380    |
| Florida: Seminole Agency <sup>14</sup> .....                             | 516    | 260   | 256    |
| Idaho.....   | 3,898  | 1,955 | 1,943  |
| Coeur d'Alene Agency.....  | 706    | 345   | 361    |
| Fort Hall Agency.....  | 1,776  | 928   | 848    |
| Fort Lapwai Agency.....  | 1,416  | 682   | 734    |
| Iowa: Sac and Fox Sanatorium, Sac and Fox Subagency.....                 | 387    | 196   | 191    |
| Kansas: Haskell Institute, Potawatomi Subagency <sup>15</sup> .....      | 1,581  | 830   | 751    |
| Michigan: Mackinac Subagency, Lac du Flambeau Agency <sup>16</sup> ..... | 1,192  | 591   | 601    |
| Minnesota.....   | 15,573 | 7,865 | 7,708  |
| Consolidated Chippewa Agency <sup>17</sup> .....                         | 13,220 | 6,667 | 6,553  |
| Pipestone School, Mdewakanton Reservation <sup>18</sup> .....            | 563    | 279   | 284    |
| Red Lake Agency.....   | 1,790  | 919   | 871    |
| Mississippi: Choctaw Agency <sup>19</sup> .....                          | 1,514  | 779   | 735    |

<sup>1</sup> An enumeration of the Navajos was made in 1929 and included the following jurisdictions: Hopi Agency (Navajos), Eastern, Leupp, Northern, Southern, and Western Navajo Agencies. The census at Leupp, Northern, and Southern Navajo has not been completed. Previous population figures for this tribe were estimates and cannot be used for comparison.

<sup>2</sup> Approximately 35 per cent live off the reservation in Arizona, the majority in Clarkdale. The residence of 40 per cent is unknown.

<sup>3</sup> An enumeration of the Pima, and Papago Indians under Salt River Subagency, Pima, and Sells Agencies was made in 1929. The census of the Papagos at Akchin, and the Papago villages under Pima Agency is incomplete. 263 were enumerated. Reliable estimates place their number at 350. The Sells census has not been completed, and the figure is subject to revision.

<sup>4</sup> Approximately 30 per cent are living off the reservation in Arizona, the majority in Gila Valley.

<sup>5</sup> Approximately 10 per cent migrate to Mexico for the greater part of the year and approximately 15 per cent reside off the reservations in the Salt River Valley, Ariz.

<sup>6</sup> Approximately 65 per cent are off the reservation, the majority in Arizona; the others in California and Oklahoma.

<sup>7</sup> The Indians of California have a suit in the Court of Claims against the United States. Under the act of May 18, 1928, a roll of prospective beneficiaries and a separate roll of other California Indians are being prepared. They will not be completed until 1931. Present figures for the agencies in this State are estimates with the exception of those for Fort Yuma.

<sup>8</sup> Approximately 45 per cent live off the reservations in widely scattered localities in Inyo and Mono Counties, Calif.

<sup>9</sup> Mission Agency includes 28 small reserves widely scattered throughout the southern part of California.

<sup>10</sup> The Indians under Sacramento Agency are scattered over an area of approximately 100,000 square miles in 45 counties in northern and central California. No accurate census has ever been made. The majority reside on 52 scattered rancherias on the public domain. Approximately 10 per cent live on the Round Valley and Tule River Reservations.

<sup>11</sup> The Seminoles are scattered over an area of approximately 5,000 square miles within or near the Everglades, Fla. The territory is almost inaccessible and is uninhabited by whites. The census is accordingly inaccurate. Approximately 80 per cent live off the reservation.

<sup>12</sup> The majority have received patents in fee to their land and are carried on the rolls because of inheritance rights in trust property or funds. The census is inaccurate.

<sup>13</sup> Practically all of the Indians under Mackinac Subagency have been declared competent. They have little contact with the Indian Service. The last census was made in 1927.

<sup>14</sup> Approximately 30 per cent live off the reservations. 25 per cent of the absentees reside in Duluth, Minneapolis, and St. Paul, Minn. The remainder are scattered in 39 States, and 3 foreign countries, principally in Canada, although a small number reside in Panama and China.

<sup>15</sup> Approximately 45 per cent are living off the reservation, mostly in Minnesota.

<sup>16</sup> There is no reservation. Approximately 80 per cent of the Choctaws are renters or share tenants. Of the other 20 per cent the majority live on land bought by the Government for resale to them, and a few live on private property.

| Five Civilized Tribes Agency <sup>26</sup> .....    | 101,506              | ( <sup>23</sup> ) | ( <sup>23</sup> ) |
| Kiowa Agency.....                                   | 5,391                | 2,640             | 2,751             |

<sup>1</sup> Males plus females do not equal total, because for some agencies population by sex is lacking.

<sup>3</sup> An enumeration of the Navajos was made in 1929 and included the following jurisdictions: Hopi Agency (Navajos), Eastern, Leupp, Northern, Southern, and Western Navajo Agencies. The census at Leupp, Northern, and Southern Navajo has not been completed. Previous population figures for this tribe were estimates and can not be used for comparison.

<sup>20</sup> Walker River Agency also has under its jurisdiction Indians in Nye, White Pine, Esmeralda, and Churchill Counties, Nev., of whom no census has been made. The figures do not include an estimate of these scattered Indians.

<sup>21</sup> Most of the Navajos under Eastern Navajo Agency live in New Mexico. Approximately 30 per cent reside on railroad lands, 30 per cent on private property, and 20 per cent on public domain.

<sup>22</sup> The New York Indians live on 8 widely separated reservations. The United States has treaty obligations which provide for annual per capita payments of money and specified goods to the Allegany, Cattaraugus, and Tonawanda Senecas, who numbered 3,082 in 1928, when the last payment was made. The census of those receiving no payments is inaccurate.

<sup>23</sup> Population by sex is lacking.

<sup>24</sup> The final roll of the Eastern Band of Cherokees is being made under the act of June 4, 1924. To date it includes over 1,200 persons whose right to enrollment is challenged by the tribe. Approximately 30 per cent live off the reservation, the majority in North Carolina.

<sup>25</sup> The majority have received patents in fee and have severed connections with the agency. Approximately 50 per cent reside off the reservation and are scattered in the various States in the Northwest.

<sup>26</sup> The names of 101,506 persons were placed upon the final roll of the Five Civilized Tribes on Mar. 4, 1907. Of this total there were 75,493 citizens by blood, 2,608 by intermarriage, and 23,405 freedmen. It is impossible to give a reliable estimate of the living members. The figure shown is the best available, but is subject to a wide margin of error. The majority of the members reside in eastern Oklahoma, but a very considerable number are scattered throughout the United States. Thousands of citizens by blood have had their restrictions removed by act of Congress or with the approval of the Secretary of the Interior. They have no contact with the Indian Service, and their number is not known. A census of the enrolled restricted Indians made in May and June, 1927, showed approximately 12,000; also, approximately 13,000 unenrolled restricted Indians born since Mar. 4, 1907, making a total of restricted Indians under the jurisdiction of the Five Civilized Tribes Agency in the neighborhood of 25,000.

*Indian population of the United States enumerated at Federal agencies as of  
June 30, 1929—Continued*

| State and agency                                | Total   | Male              | Female            |

| Colville Agency.....                            | 3, 685  | 1, 818            | 1, 867            |
| Kalispel Reservation, Coeur d'Alene Agency..... | 85      | 45                | 40                |
| Neah Bay Agency.....                            | 654     | 335               | 319               |
| Taholah Agency <sup>34</sup> .....              | 2, 077  | 1, 032            | 1, 045            |
| Tulalip Agency.....                             | 3, 425  | 1, 743            | 1, 682            |
| Yakima Agency.....                              | 2, 955  | 1, 393            | 1, 562            |

<sup>27</sup> There are 1,115 restricted members. The census of the unrestricted members is inaccurate. Approximately 35 per cent of the tribe resides outside of Osage County in 21 States. The large increase in population for 1929 as compared with 1928 is the result of a special survey of absentees. The 1929 figure includes births previously unreported.

<sup>28</sup> Approximately 65 per cent reside off the reservations in 24 States. No census of the Miamis and Peorias under Quapaw jurisdiction is available. They are scattered over the United States and maintain no tribal relations. Restrictions on their land and property were removed in 1915. At that time they numbered 393. This figure is not included in that for the jurisdiction.

<sup>29</sup> Approximately 45 per cent live off the reservations. The increase of 1,664 in the census is due to the fact that the 1928 figure included only 725 Potawatomi, the number living on or near the reservation. The whereabouts of the others was unknown. The 1929 Potawatomi census shows 2,301, including those off the reservation in all sections of the United States.

<sup>30</sup> The Fourth Section Allottees were allotted under the fourth section of the general allotment act of Feb. 8, 1887, on the public domain in 5 counties in southern Oregon. Their census is inaccurate.

<sup>31</sup> There is no reservation. Approximately 55 per cent reside away from the old agency and are scattered throughout the United States.

<sup>32</sup> Approximately 30 per cent live off the reservations and are scattered throughout the United States. This percentage includes the Ponca and Santee Subagencies in Nebraska.

<sup>33</sup> Approximately 250 Alabama and Coushatta Indians live on a small reservation in Polk County, Tex., given them by the State, and to which has been added a small tract purchased by the United States in 1929. They are not Federal wards and have no treaty with the Government. However, there is an annual appropriation for educational purposes.

<sup>34</sup> Approximately 60 per cent reside off the reservations, the majority in Washington. A decrease of 688 in the 1929 census as compared with that for 1928 is due to the fact that in 1928 the unrestricted Cowlitz and Chinook Indians were estimated at 1,376; in 1929, at 688. They are widely scattered throughout southwestern Washington and northern Oregon and have little contact with the Indian Service. No census of them is available.

*Indian population of the United States enumerated at Federal agencies as of

| Wyoming: Shoshone Agency.....                                      | 1,979  | 1,017 | 962    |

<sup>35</sup> Approximately 35 per cent live off the reservation in Wisconsin and Minnesota.

<sup>36</sup> Approximately 55 per cent live off the reservations and are scattered throughout the United States. The last census of the Stockbridges and Munsees in 1910 showed a population of 599. They have received fee patents to their land. The Oneidas have severed their relationships with the agency with the exception of annuity payments. Their population is 3,012. The Menominees reside mostly on the reservation and number 1,939.

<sup>37</sup> The last census of the Rice Lake Chippewas under Lac du Flambeau was made in 1916 and showed a population of 170. They have little contact with the agency.

<sup>38</sup> The majority are living on restricted homesteads in Wisconsin and on land purchased with trust funds in Wisconsin, Minnesota, and Iowa. Approximately 40 per cent reside on private property in Wisconsin.

1 It is reasonable to believe that there is a considerable number of the balance indicated out of school who are actually in public school but are not so reported.

2 Based on 1928 figures.

3 Day.

29

Indian school population, number eligible for school attendance, number in schools, etc., and capacity of Government schools provided for Indian children during fiscal year ended June 30, 1929—Continued

| States and jurisdictions                   | Number school children 6 to 18 years, inclusive | Number eligibles 6 to 18 years | Number under 6 or over 18 years in school | Total eligibles (total columns 2 and 3) | Total number in school | Eligibles not in school | Indian children enrolled in schools |                       |                                |       |                   |                     |        |          | Public | Capacity of Government schools |  |                |

## THE OFFICE OF INDIAN AFFAIRS

When the War Department was created by Congress under the act of August 7, 1789, the duties assigned to it included those "relative to Indian affairs."

A Bureau of Indian Affairs was organized in the War Department on March 11, 1824, with Thomas L. McKenney as its chief, and among the duties to which he was assigned were the administration of the fund for the civilization of the Indians, under regulations established by the department, the examination of the claims arising out of the laws regulating the intercourse with Indian tribes, and the ordinary correspondence with superintendents, agents, and subagents. He was succeeded September 30, 1830, by Samuel S. Hamilton, whose successor about one year later was Elbert Herring.

By the act of July 9, 1832, there was created in the War Department the office of Commissioner of Indian Affairs, who, subject to the Secretary of War and the President, should have "the direction and management of all Indian affairs and all matters arising out of Indian relations."

On June 30, 1834, an act was passed "to provide for the organization of the Department of Indian Affairs." Under this enactment certain agencies were established and others abolished, and provision was made for subagents, interpreters, and other employees, the payment of annuities, the purchase and distribution of supplies, etc. This may be regarded as the organic law of the Indian Department.

When the Department of the Interior was created by act of March 3, 1849, the Bureau of Indian Affairs was transferred thereto, and hence passed from military to civil control.

Section 441 of the Revised Statutes provides that "The Secretary of the Interior is charged with the supervision of public business relating to \* \* \* the Indians."

Section 463 of the Revised Statutes reads: "The Commissioner of Indian Affairs shall, under the direction of the Secretary of the Interior and agreeable to such regulations as the President may prescribe, have the management of all Indian affairs and of all matters arising out of Indian relations."

# REPORT OF THE COMMISSIONER OF INDIAN AFFAIRS

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
*Washington, D. C., September 24, 1930.*

The honorable the SECRETARY OF THE INTERIOR.

MY DEAR MR. SECRETARY: We have the honor to submit herewith the report of the Office of Indian Affairs for the fiscal year 1930 dealing with the activities of the service during the first year of incumbency of the commissioner and his associate in office.

We desire to call to your attention the fact that when we took office on July 1, 1929, the appropriation bills for the year under review had been passed and that practically all of the personnel appointments for the year had been made.

## FOREWORD

In considering the administration of Indian affairs certain facts must be kept in mind. Practically no two groups of Indians are alike, either in inheritance or present environment; and the Indian Service must meet the situation as it applies to the Indians scattered among 28 States and divided into some 200 separate groups.

Many acts of Congress apply to the so-called ward Indians wherever located, others are special laws or treaties applicable only to certain tribes or groups. The Indian Service must administer these laws as passed and as interpreted by the courts. Every effort is made to present to Congress the needs and conditions upon which appropriations and other legislation are based.

In order to have a clear understanding of the American Indian and his relationship to our own existing civilization we must consider the Indian's history, environment (past and present), religion, and the effect these have had on his point of view and development. His conception of property and ownership is not the same as ours; he has little understanding of individual property rights in land, and no background affording him such an understanding. His view of ownership has been limited to personal possessions, but only such as met his traditional needs. The trait of acquisitiveness is undeveloped, and so far as this would constitute an incentive to personal effort the motive for industry fails. His interests have been in doing the things which his forefathers have always done and it is difficult to substitute for him a real interest instead in the activities of the white citizen. While inevitably the Indian must develop such interests as may enable him to become a component part of our organized civilization and be self-sustaining, we should not destroy

what is best of his own traditions, arts, crafts, and associations, but encourage their development and survival. In assisting in his development we must build on his own inherited good traits. These conditions suggest the need for the proper kind of social service for the Indian, a work which has been overlooked in the past in the struggle to protect the property rights of a minority race. Our task is the practical problem of preparation which will enable the Indian through his own acquired resources to become an independent, self-supporting, self-respecting member of the communities which now surround him.

### *REORGANIZATION AND DECENTRALIZATION*

In order to relieve the Washington office of many details and to increase efficiency, more responsibility has been thrown on the field force and in the Southwest many of the field details are cleared through the special commissioner to negotiate with the Indians, with headquarters at Santa Fe, N. Mex. This special commissioner, assisted by one of the field supervisors, has general supervision over the work in the States of New Mexico, Arizona, Colorado, and Utah, reporting to Washington on all questions of policy.

As herein indicated, certain changes in personnel in the Washington office have been made and others are in contemplation, with a view to securing better administration and the use of the full abilities of every person in the service.

### *CONSTRUCTION*

The amount of new construction in the Indian Service, both of hospital and school buildings, has necessitated a reorganization and enlargement of the construction force. A well qualified architect has been obtained from the Supervising Architect's Office of the Treasury Department to direct the work, and more complete plans, specifications, and estimates are now possible than heretofore. The staff has been increased by five persons, well trained in this class of work.

### *APPROPRIATIONS*

When we took office on July 1, 1929, the total appropriations available, exclusive of tribal funds, were \$16,673,215.78. For the year beginning July 1, 1930, we have \$21,270,979.74, or an increase of \$4,597,763.96 over the prior year. Additional sums totaling \$2,121,614.03 were made available for 1930 through the first and second deficiency acts, about \$1,000,000 of which has been carried over for expenditure in 1931 principally for purchase of furniture and equipment and other purposes in connection with educational activities and continuation of hospital construction begun under the regular appropriations. The general appropriations for 1931 will permit us to reach the minimum standard of an allowance of 37.8 cents per day for subsistence and an average of \$40 a year for clothing, for those pupils enrolled in boarding schools. The following table gives a comparison of the division of the gross appropriations made for 1930 and 1931:

|                                       | 1930              | 1931              | Increase        |
|---------------------------------------|-------------------|-------------------|-----------------|
| General purposes.....                 | \$2, 010, 195. 40 | \$2, 329, 708. 74 | \$311, 513. 34  |
| Industrial assistance.....            | 1, 305, 000. 00   | 1, 624, 000. 00   | 319, 000. 00    |
| Irrigation and water development..... | 1, 299, 954. 41   | 1, 445, 441. 00   | 145, 486. 59    |
| Education.....                        | 9, 173, 500. 00   | 10, 365, 250. 00  | 1, 191, 750. 00 |
| Conservation of health.....           | 3, 115, 100. 00   | 3, 411, 000. 00   | 295, 900. 00    |
| Support of Indians.....               | 1, 594, 560. 00   | 1, 768, 560. 00   | 174, 000. 00    |
| Miscellaneous.....                    | 288, 520. 00      | 327, 020. 00      | 38, 500. 00     |
| Total.....                            | 18, 794, 829. 81  | 21, 270, 979. 74  | 2, 476, 149. 93 |

In addition to the foregoing about \$3,000,000 a year is expended from Indian tribal funds for administrative and other activities of the service.

### PERSONNEL

The extent to which good results are dependent upon the more careful selection and placing of employees in the field service work with the Indians and in the schools was appreciated. It appeared necessary that this work should receive systematic direction in order that the best obtainable persons might be appointed and placed in the positions for which they are best qualified to render valuable service. To accomplish this a field representative having special qualifications for work of this character has been appointed to have advisory direction and supervision of the personnel work.

With regard to appointments in general in the field service, rein-statements have been curtailed to such an extent that a considerably larger number of positions have been newly filled by persons who have qualified through the civil service than has been the case in other years. This secures an infusion of new blood, which it is hoped will be of definite benefit.

### HEALTH

Continued progress in the general medical work of the Indian field service has been effected during the year. The number of Indians seeking medical and hospital relief for conditions requiring these services is constantly on the increase, and while there is far too much interruption of hospital treatment and medical care for unimportant reasons, it is believed that the situation in this respect is showing improvement from year to year. Indian mothers and fathers are still inclined to interrupt the hospitalization of members of their families in order that they may attend fairs, rodeos, and for other purposes, not infrequently when such interruptions are detrimental to the welfare of the individual case. Nevertheless, continued educational efforts are directed toward the lessening and discontinuance of the practice.

Emphasis during the year has been placed upon further development of public-health phases of the medical work of the service. An increased number of public health or field nurses has been provided. Agency, school, and special physicians have received instructions to develop to the fullest extent activities of a health character, all of which have been fostered and extended by the district medical directors. Continued interest is manifested on the part of the other Federal, State, county, and local health organizations, as well as by

several voluntary organizations, until there is gradually being developed an interest in the special Indian problems on the part of these other agencies not directly concerned therewith. Through the instrumentality of the Committee of Indian Affairs of the State and Provincial Health Authorities of North America, information has been and is being disseminated to the several States where Indians live for the purpose of making available to an increasing degree the laboratory, clinical, and diagnostic facilities of the States and the furtherance of other cooperative measures looking toward closer and more harmonious relationships between the personnel of the Indian Office and the various health agencies in these several localities. This includes not only the facilities mentioned but the making available of existing State, county, and municipal institutions for the care and treatment of Indians wherever possible. In several States health workers of the Indian Service are working in cooperation with and, in two instances, under the direction of similar State organizations engaged in the same field.

Special attention is being paid to the more accurate collection and reporting of vital statistics and the collection of morbidity data. In this work also the several agencies above mentioned are cooperating very closely.

The United States Public Health Service is continuing to detail personnel and to make available the service of medical officers, field directors, sanitary engineers, and of the National Institute of Health to the special problems which arise in connection with Indian health. This includes surveys from time to time, special investigations of sanitary and health conditions, and routine studies of water supplies, sewage disposal, and of milk production. In certain sections of the country these activities also include malarial surveys and remedial measures where indicated.

Trachoma, tuberculosis, and diseases of infancy and childhood continue to constitute the outstanding health problems of the Indian population. Some extension has been made to the bed capacity of the several institutions for the care of the tuberculous, though the facilities of this character are still very inadequate to meet the needs of the several jurisdictions. The educational program which is being carried out through the agency of the medical directors, physicians, and field nurses is designed to bring to the Indian knowledge of the factors which have to do with the spread of diseases of an infectious nature and with special reference to tuberculosis and to give them instructions as to the care and feeding of infants and children, the sick and the aged. In time the extension of this program to meet the needs of all of the jurisdictions will have its effect in reducing the mortality of these diseases. It is quite necessary, however, that the facilities for the care and treatment of the tuberculous especially be improved and extended in order that open cases of this disease may be segregated and foci of infection decreased or eliminated. The lack of sanitation in the Indian homes and the absence of the knowledge of the fundamental factors having to do with the transmission of diseases play an important part in its spread and dissemination.

More than 25,000 Indians were examined for trachoma, of which number between 4,000 and 5,000 were diagnosed as either positive or suspicious. The percentage of positive and suspicious findings

was between 19 and 20 per cent. During the year more than 1,300 surgical operations were performed by the special physicians of the service for the amelioration and cure of the disease and more than 3,000 other treatments were carried out. In addition to their activities in the diagnosis and treatment of trachoma, the special physicians of the service were very active in the treatment of other surgical conditions, namely, infected tonsils and adenoids, and in the surgical treatment of tuberculous glands, etc. Special emphasis has been placed by this group of physicians upon the educational phase of their work, to the end that the Indians might be informed of the safeguards to be observed for the protection of themselves and their families.

Of the contagious and infectious conditions, a larger number of cases of impetigo and scabies was reported than during the preceding year. These conditions become prevalent in many of the larger boarding schools especially, and constant vigilance is necessary to keep infectious conditions of this character at a minimum. The occurrence of measles was slightly in excess of the preceding year. A smaller number of cases of whooping cough was reported than for the year 1929. Influenza was reported during the year to the extent of slightly more than 3,500 cases, whereas during the preceding year more than 16,000 cases of this disease were reported. Influenza, measles, mumps, and whooping cough make up the larger number of diseases of an infectious nature occurring among Indian children. During the year 35 cases of cerebro-spinal meningitis were reported, as compared with 3 for 1929, with 9 cases of infantile paralysis reported, as against none for the preceding year. One hundred and seventy-one cases of smallpox were reported during the year, as against 53 cases for 1929. The larger number of cases of this disease occurred on the Flathead Reservation in Montana, 90 cases having been reported at this jurisdiction.

More than 32,000 vaccinations and inoculations were performed during 1930. Of this number, more than 12,000 were vaccinations against smallpox, more than 7,000 vaccinations against typhoid fever, and slightly more than 10,000 immunizations for protection against diphtheria.

The following hospitals were completed during the year: Colorado River Hospital, with a capacity of 30 beds; Phoenix School Hospital, with 60 beds, by addition of 20 beds to the total; Fort Bidwell Hospital, with 35 beds; Fort Berthold Hospital, with 20 beds; Claremore Hospital, with 34 beds; and Flandreau Hospital, with 35 beds, adding 13 beds to the total; or a total of 152 additional hospital beds provided.

The following hospitals were commenced during the year and were well under way toward completion at its close: Fort Belknap Hospital, adding 37 beds to the total; Tongue River Hospital, adding 32 beds to the total; Turtle Mountain Hospital, adding 27 beds to the total; Pawnee and Ponca, Pine Ridge, and Hayward Hospitals, with 47 beds each, making a total addition of 237 beds. Each of these new hospitals is of approximately 47-bed capacity.

There were also additions to, or remodeling of, the following hospitals: Western Navajo Hospital, wings added, 20 beds; Hopi Hospital, capacity doubled, 28 beds; Fort Totten Hospital, remodeled and enlarged, 20 beds; Cheyenne and Arapahoe Hospital,

roofs of wings raised, 28 beds; Kiowa Hospital, addition to make 100-bed capacity, 48 beds; Keshena Hospital, pavilions for tuberculosis and venereal cases, 24 beds—a total addition of 168 beds, with a total of 557 beds added for the three groups mentioned.

The further extension of hospital facilities is necessary in order to make provision of the care and treatment of Indian patients of jurisdictions for which such provision has not been made. The largest of these is the Eastern Navajo jurisdiction, New Mexico, with a population of approximately 7,000, for whom the hospital facilities are very meager and inadequate. Several other smaller jurisdictions are still without hospitals. As said before, additional tuberculosis sanatoria should be established, preferably at population centers, where public utilities are available, where transportation facilities both by rail and highway are present, and where specialistic medical service from private sources may be secured. The establishment of such institutions at such centers would enable them to serve a number of jurisdictions within the particular State or in adjoining States. Cooperative arrangements whereby hospital and sanatorium beds in State, county, or municipal institutions may be made available for the care and treatment of Indians should be encouraged. Some of the States with a considerable Indian population have extensive systems of county sanatoria. The reception, care, and treatment of Indians in these institutions should be brought about if practicable. In States having large Indian populations where there are no hospitals and sanatoria of such kind, or where facilities are very limited, consideration should be given to the establishment of such institutions by the Federal Government. The existing hospitals and sanatoria of the Indian Service which are being conducted in improvised or converted buildings are in great need of physical improvement and all Indian institutions are in need of increased diagnostic and treatment facilities, as well as an augmented personnel. Every effort should be made to raise the standards of these institutions to a basis comparable with similar institutions, whether governmental, State, or private, in order to conserve to the utmost degree the welfare of the Indian patients treated therein.

Acknowledgment is due of our appreciation of the increased interest shown and the material assistance extended by the other Federal health agencies, by State health forces, and by the various organizations of a semiofficial or private character.

The regular gratuity appropriation for health purposes for the year was \$2,658,600, an increase over the previous year of \$1,218,600. Supplemental appropriations during the last session of Congress made available \$400,000 more for this activity, and further increases have been granted for next year. The following tabulation discloses the division of this appropriation over a 3-year period:

|                                    | 1929        | 1930        | First<br>deficiency,<br>1930 | 1931        | Second<br>deficiency,<br>1931 |
|------------------------------------|-------------|-------------|------------------------------|-------------|-------------------------------|
| General purposes.....              | \$319, 000  | \$623, 500  | \$134, 500                   | \$758, 000  | -----                         |
| Support of hospitals.....          | 966, 000    | 1, 520, 100 | 500                          | 2, 008, 000 | \$38, 000                     |
| Construction of new hospitals..... | 155, 000    | 450, 000    | 265, 000                     | 372, 000    | 250, 000                      |
| Total.....                         | 1, 440, 000 | 2, 593, 600 | 400, 000                     | 3, 138, 000 | 288, 000                      |

The appropriation of \$65,000 for the construction of the Oraibi Sanatorium in Arizona is not shown in the 1930 total but is taken up in 1931 by reason of its reappropriation for general purposes. In addition to the amounts shown, tribal funds aggregating approximately \$350,000 annually are used for medical and hospital purposes.

### EDUCATION

Encouraging developments in education recorded in the 1929 report have been continued and supplemented during the year. The increased appropriations mentioned have begun to yield results, and while a large part of the improvement to date has necessarily been on the material side—better feeding and clothing of boarding school children, building construction, repairs and equipment—the fundamental needs of teaching personnel, content, and methods of education are beginning to receive more nearly adequate attention.

#### EDUCATION STAFF AT THE WASHINGTON OFFICE

Professional leadership has become axiomatic in State and National programs of education. During the past year the Indian Office has been able to make substantial additions to the group at Washington responsible for advising the commissioner on educational organization and methods, recruiting of teaching personnel and the building up of a definite program for the future in relation to the States. An assistant director of education, with special preparation and experience in educational administration and vocational guidance, has been appointed. In the field of home economics, where some of the most conspicuous advances had already been made, two additional supervisory positions were established in the fall of 1929. The two specialists appointed to these positions were women of high professional qualifications; their employment has not only made possible a definite supervisory program with a follow-up plan, but relieved the chief supervisor of home economics for important work at the Washington office.

One of the most significant steps of the year was the appointment of a supervisor for elementary education, with university training and successful State experience, and five field assistants, or so-called demonstration teachers in elementary education, all persons who qualified through civil service examinations based on modernized statements of requirements. Each of the five demonstration teachers, under the direction of the supervisor of elementary education, is supervising approximately 55 elementary teachers in sections of the country having the densest Indian school population—South Dakota, northern Arizona, southern Arizona, northwestern New Mexico, and Oklahoma. These demonstration teachers are women who are thoroughly conversant with modern elementary school practice and have pursued graduate study in their field. Already their helpful influence is observable in the work of the teachers of the elementary grades.

For secondary education it was found possible to transfer to the Washington office one of the field supervisors who had had superior preparation and valuable experience in the school of education of a western State university, to help in the organization and develop-

ment of the junior and senior high schools. Still another recent position established is that of supervisor of trade and industrial training, and to this position a qualified specialist in vocational education with long State experience under the Federal Board for Vocational Education has been assigned.

In the particularly important field of agricultural extension the aid of the Department of Agriculture was sought, and one of the active workers of that department has been transferred to the Indian Office to direct its program. A well-qualified specialist has been appointed supervisor of livestock, who will also advise as to the school herds. The office has also secured for the coming year the services of Dr. Erl Bates, of Cornell University, to help plan and coordinate the various educational and extension activities on the reservations.

With such a staff in education and related field as the nucleus of a planning organization, it is believed that it will be increasingly possible to build up a definite Indian education program.<sup>1</sup>

#### *HIGHEST QUALIFICATIONS FOR TEACHING PERSONNEL*

Steps taken in 1928 and 1929 to raise the standards of teaching and other educational service in Indian schools have begun to show results. The salary increases for teachers, while by no means large from the point of view of modern educational service in urban communities, have nevertheless been sufficient to attract some new entrants of more than satisfactory qualifications. The salaries of principals of boarding schools now range from \$2,000 to \$2,900; of senior high school teachers, \$1,860 to \$2,100; of junior high school teachers, \$1,680 to \$1,920; of elementary teachers, \$1,500 to \$1,740. The minimum qualifications for principals include "graduation with a degree from a normal school, teachers college, college or university of recognized standing, with 18 semester hours in the school of education" and a minimum of two years' successful experience. For senior high school teachers the new requirements comprise graduation from a 4-year course in a recognized college or university, with 16 units in education, the latter to include 12 units in psychology, principles of education, and methods of teaching. Junior high school teachers are required to have at least three years and elementary teachers two years beyond the high school. In actual practice the qualifications of many new entrants have been better than the minimum; in home economics, for example, practically all the applicants this year have been full 4-year graduates of colleges and universities of recognized standing, and among the nearly 200 new appointees to elementary and intermediate positions for the coming year are many above the minimum standard for these grades, including a number with college degrees. This is in part due to abnormal employment conditions and the slightly better salaries, but it also indicates the effectiveness of higher professional standards.

It should be understood that this necessary raising of standards can not be retroactive. In accordance with the established practice in any movement for improving personnel, employees now in the

---

<sup>1</sup> Since closing the year's work it has been the good fortune of the Indian Office to secure as director of education a distinguished educator from one of our best-known colleges, who has specialized in the education of minority races and who in the Civil Service examination far outranked all of the eighty-odd applicants.

service who do not meet the new qualifications but are otherwise competent—particularly if they are found to be successful in their human relations with Indian people—are being encouraged to secure the necessary additional educational qualifications. Training in service is an essential function of the new demonstration teachers previously referred to, and of all others directing the educational program. In case of withdrawals, of course, applications for reinstatement are being considered only from those who are qualified under the new requirements, but applicants for reinstatement, if otherwise qualified, are being advised as to means of securing the additional preparation. An unusual number of members of the teaching staff have this year taken advantage of the opportunity afforded by "educational leave" for advanced study. In the spring of 1930 suggestions were given as to the type of university summer courses that would be helpful to Indian school teachers, the universities having been canvassed to find out what they could offer. A circular issued in March, 1930, addressed to elementary teachers, urged the desirability of enrolling in "courses dealing with important phases of an elementary school program which are on the whole receiving insufficient attention in our Indian schools." Chief among these needs as listed were:

1. Environmental experiences of children as a basis for school procedure and curriculum content.
2. Philosophy of progressive education, basing school work on activities and at the same time recognizing and providing opportunities for various learning outcomes rather than beginning and ending teaching procedures mainly with subject matter.
3. Physical education and play as an opportunity for health, recreation, and creative expression.
4. Industrial and fine arts as a functional part of the school program.
5. Appreciative and creative phases of music.
6. Consciously capitalizing the opportunities for personality and character development which are inherent in every classroom situation and all school activities.

#### CHANGES IN CURRICULUM

Instead of attempting a total revision of the existing course of study, plans are well under way to enrich the curriculum through the selection and introduction of stimulating materials and initiating classroom procedure that approximate more nearly real life situations. Under guidance several teachers initiated construction activities involving on the part of children, choosing, planning, executing, and judging, in addition to providing the necessity for use of numbers, oral and written English, and art. The results of a survey of industrial and fine arts together with additional suggestions for such procedures will be issued to the elementary teachers for the purpose of further stimulation of this type of functional school work.

Emphasis is being placed upon the importance of basing all early primary reading on words that already have a place in the children's speaking vocabulary. Since this necessitates the construction of all reading material by the teachers, an initial purchase was made of 50 typewriters equipped with primer-sized type. These were distributed largely to schools where beginners are non-English speaking.

A carefully selected list of modern textbooks in reading, language, and geography has been added to the recommended book list for elementary grades. Up-to-date school supplies and materials, too, have been listed and submitted to the schools.

Seven positions of home-economics teachers were set up this past year in reservation schools. This means that home-economics departments are now organized in all but the smaller boarding schools, and in two of the day schools.

### THE INDIAN BOARDING SCHOOLS

Each boarding school situation is being scrutinized to determine whether the school is to be retained for some time, abandoned soon, or assigned to purposes other than that for which it now exists. The rapidity with which we can carry out our policy of eliminating young children from the boarding schools depends, of course, upon a number of factors. Some of the educational factors involved have to do with home conditions, remoteness from public-school facilities, ascertained need for institutional care, possibilities of health follow-up, and social case work not ordinarily available in the small rural communities in which so many Indian children live. Other factors that must be considered are the attitude of the white people of the community and the older Indians toward the boarding school and the attitude of white parents toward the Indian children. If the policy of the Government to increase public-school provision for the Indian school population is to be carried out, obviously local communities will have to be considerate and take an unselfish view of proposals to abandon Indian boarding schools.

In the meantime such boarding schools as remain must be helped to do the best work they can, especially for older boys and girls, and smaller children can be eliminated from these schools except where institutional care is found necessary after adequate investigation by trained social workers. Six large nonreservation boarding schools have now raised their grades to include the twelfth grade, or senior high school, and have concurrently dropped the lower grades.

Approximately 2,000 boys and girls were enrolled in the three upper high-school grades in 1930 as compared with 1,617 a year ago and 710 in 1926. The figures for five years are given in the table below. It will also be noted that this has taken place while there has been a falling off in the enrollment in elementary grades.

*Enrollment in Government Indian schools, 1925-1930, by school divisions*

|  | 1925-26 | 1926-27 | 1927-28 | 1928-29 | 1929-30 |
|--|---------|---------|---------|---------|---------|
| Elementary grades, 1 to 6.....           | 20,677  | 21,128  | 21,399  | 20,790  | 19,789  |
| Junior high school grades, 7 to 9.....   | 3,722   | 4,301   | 4,729   | 5,420   | 5,462   |
| Senior high school grades, 10 to 12..... | 710     | 1,178   | 1,409   | 1,617   | 1,966   |

As long as the boarding schools remain they must be staffed as effectually as possible. It is generally recognized that among the most important positions are those having to do with personal relations of the boys and girls. This is a weak point in nearly all institutional enterprises, but it is particularly serious in the Indian boarding schools. Previous reports have referred to the change in designation from "disciplinarians" and "matrons" to "advisers." No one would claim, of course, that changing the name changes the type of worker, except in so far as it gives official sanction to a different attitude toward the work. Some improvement has been

possible, however, on the girls' side of the problem. One of the most important accomplishments of the year was in securing an educational basis for the appointment of the girls' advisers. The qualifications for the larger schools require 3 years of college, the medium-sized schools 2 years, and the smaller schools 1 year. The majority of the women who took this examination were college graduates. Many of them have been high-school teachers and have had experience as advisers to girls in high schools, as leaders of Girl Scout troops, and in various other activities. This should make for a decided improvement in the caliber of women filling these positions, with a corresponding development on the part of the girls themselves. It is to be regretted that no such improvement can be reported in the qualifications of boys' advisers. This remains one of the most serious problems of the schools.

For some years attempts have been made to reduce the amount of noneducational institutional work required of boys and girls in Indian boarding schools. In the case of girls, for example, competent observers generally agree that no phase of institutional work is harder than sitting at a sewing machine for a three or four hour period. This year, for the first time, part of the girls' clothing was purchased ready made at a figure not much greater than the cost of the material, thus relieving the girls from the endless round of sewing. The purchase of girls' ready-made clothing does not, of course, in any way interfere with clothing instruction and practice.

Another boarding-school problem of the utmost importance is supervision of diet. In the majority of schools the home economics teachers have general supervision over the meal planning, the kitchen, and dining rooms. This, together with the additional funds available for food, is making a real improvement in these departments.

The work previously begun at the boarding schools in teaching Indian children their native arts and crafts has been continued. All Navajo schools now have native weavers who teach blanket weaving to the girls. Pottery is taught at Albuquerque and Santa Fe and also in the Maricopa, Hopi, and Pueblo day schools. Many of the Indian boys and girls are doing outstanding work in design. The girls have taken their native designs and applied them to household linens and other forms of household decoration.

#### *PUBLIC SCHOOLS FOR INDIAN CHILDREN*

Previous reports have described the efforts to have Indian children attend public schools. In the year just passed the number of Indian pupils reported in attendance in public schools increased from approximately 35,000 to 38,000. Contracts were made for payment of tuition for Indian children with 861 boards of education, 23 more than the previous year.

At many jurisdictions the problem of transporting Indian children to the public schools of their districts has been given special attention, and in one or two places has been made the subject of a comprehensive study of the situation. Among the Five Civilized Tribes of Oklahoma a field study of the smallest group—that of the Seminoles—was completed before the close of the fiscal year. Supervisor Thompson's report shows that of the 705 Seminole chil-

dren of school age 353 are enrolled in public schools, 146 in Government boarding schools, 61 in denominational and other schools, and 145 not enrolled in any school. He found State and local authorities glad to cooperate in the education of Indian children, and as a result of his investigation he recommended the further development of the public-school program for Indians and the abandonment of the separate tribal boarding school. This study of the Seminole situation is the first to be completed of a series of comprehensive studies of the school opportunities and needs of the Five Civilized Tribes. Less extensive studies are being carried out elsewhere.

It is recognized, of course, that merely placing Indian children in public schools, even where the community is cooperative, is by no means the whole solution. There are many situations where arrangements need to be made very slowly and only after careful study of all the factors involved. Reports by day-school representatives and others show a growing disposition to try to understand family and home conditions and other elements in the situation that really require the services of trained social-case workers.

#### *INDIAN EDUCATION AND OUTSIDE ORGANIZATIONS*

During the year under review Indian education has had the attention of various outside groups. The Lake Mohonk conference gave considerable space to education in its discussions and in its resolutions. There have been encouraging evidences of cooperation with the Boy Scouts and Girl Scouts, the Junior Red Cross, American Child Health Association, religious groups, and other associations and individuals interested in the Indian problem. Several of the committees of the White House Conference on Child Health and Protection have given separate attention to the Indian school child, and a special subcommittee of the conference appointed to deal with Indian education is headed by Miss Edna Groves, of the Indian Office.

#### *INCREASED APPROPRIATIONS FOR INDIAN EDUCATION*

The first deficiency act of March 26, 1930, made available the sum of \$1,100,000 to supplement the regular annual appropriations for support and education of Indian pupils in Federal school for the fiscal years 1930 and 1931. This money was to be used for the following purposes: For additional subsistence, \$195,000; for subsistence of pupils retained in boarding schools during summer months, \$40,000; for noonday lunches in day schools, \$50,000; for additional clothing, \$50,000; for additional personnel for enlarged program of study, \$200,000; for equipment, \$175,000; for furniture, \$240,000; and for livestock, \$150,000.

The act making appropriations for the Department of the Interior for the fiscal year 1931 contains also an appropriation of \$64,000 for subsistence of pupils retained in boarding schools during the months when school is not in session. The same act provides a special appropriation of \$200,000 for purchase of furniture, school, shop, and other equipment for Indian day, reservation, and nonreservation schools.

In the general appropriation, in the same act, for support of Indian day and industrial schools for the fiscal year 1931, an increase in the sum of \$417,000 was allowed in excess of the appro-

priation for 1930. Also, in the appropriation for 1931 for Indian boarding schools customarily receiving specific appropriations an increase was given in the amount of \$1,203,750 above the amount appropriated for the preceding year.

These material increases in moneys for support of Indian schools make possible an adequate food allowance for pupils up to a per capita average cost of 37.8 cents per day, an amount which had been carefully determined as necessary for a minimum proper standard. A discussion of this matter will be found in the report of the commissioner for the fiscal year 1929. The per capita allowance for the boarding schools is still below that of most State institutions, notwithstanding the decided improvement that has been made in the past three years. For the fiscal year 1928 appropriations were made at a rate of \$225 for these schools, with the exception of five schools, for which \$250 was made available. For 1929 the per capita ranged from \$240 to \$285, depending upon the size of the school; for 1930 it was \$260 to \$300; and for the new fiscal year, \$290 to \$330. State institutions which are regarded as reasonably comparable report per capita figures of from \$300 to \$600, and authorities seem to agree upon \$450 as a minimum for which creditable work can be done in feeding, housing, clothing, and educating children under institutional care.

### *GUIDANCE AND PLACEMENT*

The indispensable factors in our educational plans for practical meeting of the Indian's problems of life have already been set forth. The schools must be supplemented by getting the Indians into jobs. Hence an organization must be established to conduct this work of placement and employment. It should consist of capable, energetic, and patient workers who will inform themselves as to industrial conditions, will study the possibilities, interests, and tendencies of the Indian students of the schools or graduates therefrom, and who will bring about the best possible association between the employer and the employed, with the hope that permanency may be established upon a sound basis of satisfactory mutual relationship. If in work lies the salvation of the Indian race, the effort to awake his ambition, to enlist his interest, to form his habits must commence at an early age. The placement employees and the schools must join and coordinate their efforts to this end.

Several placement officers are now on the roll. One of the employment officers is Mr. George P. La Vatta, an Indian of the Shoshone people, who has for a number of years been successful in the employ of the Union Pacific Railroad. As he tells his own story, he was well grown before he knew a word of English. Then came an ambition for schooling. After leaving school he told the Indian agent that he wanted to go out into the world and work and live like other people. "Don't try it," was the advice in return. "Go back to the farm and work with your own people." Nevertheless he persisted, and finally secured work with the railroad. Now his advice to his people, as expressed in his own words, is:

People try to sympathize with me because the white man killed the buffalo and took the Indian's lands. I tell them that belongs to the past. The Indian on a reservation can only deteriorate; but if he will go out and work and live like other people, he has a future as promising as that of any other American citizen.

For Indians who prefer or who, because of conditions, must make their living on their reservations, or in their own communities, guidance and assistance are being provided by the appointment of trained home, agricultural, and social service extension workers.

### *INDUSTRIAL ACTIVITIES*

It is not the present policy to try to make farmers or stockmen of all Indians nor to force them into these occupations where all the attendant circumstances do not offer assurance of successful results or of contentment on their part. However, so far as it be found that a large number of adults will depend upon their land for support, we must endeavor to offer them practical assistance and encouragement. Industrial surveys and 5-year programs have been mentioned in prior annual reports, and these measures were adopted within many reservations for the purpose of providing such assistance. Realizing the need for more effective supervision, our field force has been strengthened by appointment of a director of extension work, as hereinbefore mentioned, to be in general charge of industrial activities. He is assisted by eight agricultural extension agents, each of whom has a specified territory which includes several reservations. A supervisor of livestock has also been appointed to give attention and supervision to activities of this character. Seven home demonstration agents are working among the Indian women in order to assist them in all that pertains to the making and conduct of a modern, well-kept home. The importance of placement work has already been emphasized. This work will continue also with regard to employment of the adult Indian and the affording of all other assistance through the personnel of placement organization which will enable him to successfully engage in work adapted to his wishes and abilities, but which will nevertheless eventually teach him the lesson of self-dependence.

### *REIMBURSABLE FUNDS*

The reimbursable fund continues to be an important factor in the industrial welfare and progress of the Indians. Consolidated Ute Agency, Colo., reports indicate a 100 per cent lamb crop from sheep bought for the Indians from moneys advanced. The revenue from sheep at this place last year accruing to the Indians was nearly \$10,000, due entirely to their own efforts, though assisted by the advice and help of Government employees. It is estimated that their income this year will be about \$25,000. Southern Navajo reports an unusual case in which \$150 was authorized from the reimbursable fund to buy tools and materials to establish a deaf Indian in the silversmith business. At Fort Berthold, despite the drouth, 100,000 pounds of Indian-raised wheat went through the flour mill, secured by use of the reimbursable fund. These Indians seeded from 50 per cent to 75 per cent more acreage in the spring of 1930. At Pine Ridge one of the women's auxiliary clubs sold 760 pounds of beans to the agency and used part of the money to buy a seeder. This year, also, 123 loans were made from the reimbursable fund to old Indians for support purposes, and 37 to owners of irrigable land for development purposes.

For 1929 the appropriation was \$200,000, and for 1930 and 1931, exclusive of subjugation work on the Pima Reservation in Arizona, \$325,000 has been appropriated. These amounts have been supplemented by appropriations from tribal funds of \$75,000 in 1929 and \$869,479.60 in 1930.

The total amount expended from all sources for reimbursable assistance to Indians is approximately \$6,408,143. Repayments to June 30, 1930, aggregate about \$4,124,270, leaving outstanding accounts of \$2,283,873.

### ROADS AND BRIDGES

The progress of the Indians has been impeded by lack of improved roads. Two years ago Congress authorized appropriations for this purpose. Since that time appropriations have been made in the sum of \$250,000 each for 1930 and for 1931. This money has been distributed to the best advantage throughout the service, with the result that a good beginning has been made in the construction of improved local roads connecting the various Indian communities within many of the reservations. The main thoroughfares are built under the Federal highway act without cost to this service. The most extensive single project being constructed is the road within the Turtle Mountain Reservation, N. Dak., in connection with the consolidated school under construction at that place. About \$50,000 was used for this system of roads last year and a like sum will be supplied from our general road appropriation for 1931.

A special appropriation of \$15,000 from tribal funds was available for road work within the Red Lake Reservation, Minn., with which to continue the road-construction program inaugurated several years ago, which it is hoped will eventually provide the entire reservation with improved facilities of this nature. Where possible small amounts are taken from tribal funds appropriated for general uses and expended in the hiring of Indian labor engaged on minor reservation road construction and repair work.

### ALLOTMENTS

During the fiscal year 504 allotments were made to individual Indians embracing lands within various reservations aggregating 103,314.99 acres, as shown in the following table:

| Reservation                 | Number of allotments | Acreage   | Reservation                 | Number of allotments | Acreage    |
|-----------------------------|----------------------|-----------|-----------------------------|----------------------|------------|
| Klamath, Oreg.....          | 4                    | 640       | Yakima, Wash.....           | 1                    | 160        |
| Fort Peck, Mont.....        | 259                  | 77,094.08 | Fallon, Nev.....            | 1                    | 10         |
| Morongo, Calif.....         | 1                    | 5.20      | White Earth, Minn.....      | 2                    | 161.90     |
| Crow Creek, S. Dak.....     | 4                    | 450.85    | Eastern Navajo, N. Mex..... | 2                    | 320        |
| Fort Berthold, N. Dak.....  | 4                    | 400       | Moapa River, Nev.....       | 3                    | 14         |
| Fort Yuma, Calif.....       | 18                   | 174       | Leech Lake, Minn.....       | 1                    | 80         |
| Fort Belknap, Mont.....     | 1                    | 519.06    | Rosebud, S. Dak.....        | 1                    | 160        |
| Quinalt, Wash.....          | 40                   | 3,198.71  | L'Anse and Vieux Desert...  | 1                    | 80         |
| Colorado River, Ariz.....   | 38                   | 380       |                             |                      |            |
| Cheyenne River, S. Dak..... | 121                  | 19,387.19 |                             |                      |            |
| Lower Brule, S. Dak.....    | 2                    | 80        | Total.....                  | 504                  | 103,314.99 |

In addition to reservation allotments shown above, 226 allotments were made to Indians residing on the public domain in various States, embracing 37,154 acres.

### *EXTENSION OF TRUST PERIODS*

The period of trust was extended by order of the President on allotments made to Indians of the following-named tribes and bands: Nez Perce, Idaho; Crow, Montana; Omaha, Nebraska; Seneca, Oklahoma; Devils Lake, North Dakota; Rosebud and Yankton, South Dakota; Uintah, Uncompahgre and White River Bands of Utes, Utah.

### *CHOCTAW INDIANS OF MISSISSIPPI*

Two separate tracts of land were purchased during the year embracing a total of 59 acres at a cost of \$2,155. This land has been resold to two full-blood Choctaws under the reimbursable plan and will provide home sites for two families consisting of a total of about 10 persons. In addition to these two tracts actually purchased, \$4,345 has been obligated in the proposed purchase of 242 acres for resale to six individuals whose combined families total approximately 30 persons. To date, 1,812 acres have been purchased at a cost of \$47,547 and resold to 60 Indians. It is estimated that about 263 individuals have been provided homes in this manner.

### *NAVAJO LAND PURCHASES*

Under authority contained in the act of May 29, 1928 (45 Stat. L. 883, 899), and the act of March 4, 1929 (45 Stat. L. 1569), we have purchased a total of 138,779.11 acres for the Navajo Indians at a total cost of \$218,230.17. These purchases were made from tribal funds. It is estimated that the total tribal receipts for the fiscal year 1931 will amount to approximately \$140,000, a portion of which it is proposed to use in acquiring certain tracts for these Indians during the next fiscal year.

### *ADDITIONAL LANDS FOR INDIAN USE*

Under authority of the act of May 23, 1930 (Public, No. 250, 71st Cong.), certain lands approximating 54,000 acres were eliminated from the Tusayan National Forest as an addition to the Western Navajo Reservation. This particular land lies north of the Little Colorado and east of the Colorado River and is contiguous to the present Western Navajo Reservation on the west. This act also contemplates the ultimate acquisition for the Western Navajo Reservation of about 62,000 acres of additional land lying south of the Little Colorado River, representing a total area of approximately 116,000 acres of good grazing land, all of which will in the future probably become part of the reservation.

### *SALE AND PATENTING OF INDIAN LANDS*

There have been cash and deferred payment sales of 290 tracts of original allotments, aggregating 35,773 acres, for a consideration of \$505,799; and of 596 tracts of inherited lands, aggregating 72,742 acres, for \$1,101,996, or a total of 108,515 acres sold for a total consideration of \$1,607,795. These totals represent, however, a decrease in sales and payments derived therefrom as compared with the prior year.

There were issued upon application therefor 230 patents in fee to allottees and to heirs of allottees, releasing 28,530 acres, and there were granted 38 certificates of competency and orders removing restrictions, releasing 3,026 acres; 285 applications for patents in fee were not accorded favorable action.

Within many of the reservations a large part of the best agricultural land has been sold or fee patented, and we do not encourage sales except where old and indigent Indians, or those afflicted, need money for support and assistance, or where sales of a part of an allotment will result in the improvement of home conditions, and in cases of inherited lands where the heirs are numerous and the lands can not be advantageously partitioned. In cases where the heirs are less numerous (four or less) and where the inherited tracts are susceptible of a fair and equitable division, the policy is to encourage partition so that the younger and more able-bodied Indians, many of whom did not receive allotments, will have farming lands and home sites and thus be encouraged to remain on and improve their lands. In most partition cases, trust patents are issued to the individual heirs to whom lands are set apart. Many purchases are made for Indians who have industrial occupations in and around towns and whose children need to be near schools.

### FORESTRY

An office memorandum approved by the Secretary of the Interior on April 15, 1930, directed that grazing activities on Indian lands be thereafter administered through the forestry branch of the Indian Service. Immediate steps were taken toward a reorganization of grazing work in accordance with these instructions. It has been recognized from the first that the task is a difficult one, but with the cooperation of other units in the service, the forestry force should be able during the fiscal year 1931 to gather the information upon which a systematic grazing plan may be developed and gradually placed in effect.

The representatives of the forestry branch will make the necessary reconnaissance of the range on each reservation to determine the most practicable grazing units, the carrying capacity of each unit, the class of stock best suited for the range, and other questions of this character. The supervision of all grazing by permittees or lessees on tribal land or on unfenced allotments will be exercised by representatives of the forestry branch under the general supervision of the superintendent whether the permittees or lessees be Indians or non-Indians. While the needs of individual Indians for range facilities will be given primary consideration, conservation of future grazing values must receive a greatly increased amount of attention in the administration of Indian lands. Through carefully planned and through studies of actual conditions on the range, it will be possible to relieve range depletion, gradually restore the native grasses, and check the erosion that has become, in recent years, increasingly destructive on Indian reservations in the Southwest. This erosion of soil on Indian lands must inevitably result in irreparable damage to lower lands and to reservoirs upon which the Federal Government, the States, and private interests have expended millions of dollars. The conservation, for future benefi-

cial use, of the agricultural, grazing, and forest resources of the Indians is a matter of the utmost importance to both the Indians and their neighbors.

At the first session of the Seventy-first Congress the Senate Committee on Indian Affairs reported favorably on bills for the creation of the Colville Indian Forest and the Klamath Indian Forest. The Klamath bill passed the Senate, but the Colville bill was returned to the committee. Neither bill was acted upon in the House of Representatives. At the second session of the Seventy-second Congress slightly modified bills as to the Colville and Klamath and similar bills for the creation of the Warm Spring and Yakima Indian forests were suggested by the Interior Department. All four bills were introduced in both the House of Representatives and the Senate. The Yakima bill was favorably reported by the House Indian Committee and was passed on June 23, 1930. The Yakima Indians have indorsed the proposed legislation. The Colville Indians have also expressed their approval of the creation of the Colville Indian Forest, but the approval of the Klamath and Warm Spring Indians has not been obtained. It is believed that their approval will be expressed when the members of these tribes come to understand the purpose of the bills. Legislation of this character is directed to the conservation of resources that may be made to yield a continuous income to the Indians and at the same time contribute to the welfare of the Nation as a whole. It is hoped that before the end of the Seventy-second Congress these four bills and similar ones regarding other Indian reservations, that will be suggested by the department, will be enacted into law. The definite establishment of a fixed forest land status for approximately 6,000,000 acres of Indian lands would contribute materially to the successful management of these forests and would mark a distinctive step forward in the conservation of national resources.

In April, 1930, changes in the allocation of a number of the more responsible positions in the forestry branch made it possible to pay salaries somewhat comparable to those paid for similar work in other branches of the Federal service and avoided the loss of several experienced employees who had seriously contemplated transfer to other departments or the accepting of employment with private corporations engaged in the lumber industry. With these increases it has also been possible to secure men with training in special lines of forestry work whom the service had been unable to obtain under the allocation formerly existing.

The act making appropriations for the Department of the Interior for the fiscal year 1931 contains the first specific authority for the payment of rewards for information leading to the arrest and conviction of persons setting forest fires in contravention of law. A substantial increase was also made in the appropriation for forestry work on Indian lands and this appropriation was separated from a general appropriation for several distinct lines of work. Twenty thousand dollars was appropriated for the continuation of forest insect control within the Klamath Reservation, for which two annual appropriations of \$25,000 each had previously been made. It is hoped that hereafter this infestation may be controlled by the expenditure of much smaller amounts taken from the general appropriation for forestry work at Klamath.

Very unfavorable conditions resulted in substantial losses from forest fires at the Fort Apache, Ariz., and Hoopa Valley, Calif., jurisdictions and a large amount was expended for fire control under the Mission Agency, Calif. Although the drought was exceptionally severe in eastern Washington and heavy losses were sustained on adjacent forest lands, only minor damage was done on the Colville and Spokane Reservations. The expenditures for control and the fire losses were small on most reservations, due partly to increased efficiency secured by means of more adequate appropriations. Several additional steel stairway lookouts were erected, this system of detection having demonstrated its effectiveness.

The policy of restricting sales of stumpage on Indian lands to cases in which funds were urgently needed, or certain conditions indicating a loss of capital values through delay, has been continued through the year for economic reasons as well as silvicultural ones. However, three sales have been made, one on the Bois Fort, or Nett Lake Reservation in Minnesota, comprising approximately 12,000 acres of allotted lands. The timber on these allotments consists principally of inferior species, being largely pulpwood, which should be removed now while a purchaser of adjoining timber has a logging railroad in that locality. A number of the allottees were also in need of the funds to be derived from the sale of the timber. In view of the market, the prices received were adequate. The second and third sales were within the Klamath Reservation in Oregon; one, the Calimus Butte unit, comprising only 3,500,000 board feet, could be most advantageously logged in connection with the Calimus-Marsh unit, now being operated; the other, the Sprague Canyon unit, comprising about 17,000,000 feet, had been greatly injured by pine bark beetles and immediate sale seemed desirable because of the logging of adjacent timber. Satisfactory prices were obtained for both of the Klamath units.

Early in the fiscal year it appears that the lumber market was recovering from the depression that had existed for some time, but in November, 1929, conditions became exceptionally unfavorable and throughout the remainder of the year there was a marked curtailment of production by companies cutting timber from Indian lands. The total amount cut during the fiscal year was only 561,415,352 board feet, for which the Indians received an income of \$2,313,644. This income was \$504,671 below the amount received for the fiscal year 1929.

During the fiscal year the logging railroad on the Menominee Reservation in Wisconsin was extended approximately 13 miles across the Wolf and Oconto Rivers into the northeastern township of the reservation. By means of this railroad a rather narrow strip of timber, consisting principally of hemlock and hardwoods, will be logged selectively and the timber brought to the Neopit sawmill for manufacture. This timber, which was left when the more valuable and floatable pine was taken out through the Wolf and Oconto Rivers over 30 years ago, is inferior in quality and its logging will necessarily be expensive. It is unfortunate that it should be logged when the market is so weak. However, plans directed to the concentration of logging operations in the future seem to demand the entering of this unfavorable territory at this time. Notwithstanding very ad-

verse conditions during the fiscal year 1930, a profit has been realized by the Menominee mills.

In furtherance of the general plan of forest administration within the Menominee Reservation, outlined in 1927, a fairly comprehensive study of forest growth on cut-over lands of the reservation was made during the past year. The results of this study were summarized in a report designated as A Preliminary Forest Management Plan for the Menominee Indian Reservation. This report presents in written form the guiding principles upon which logging operations at Neopit have been conducted in recent years and demonstrates clearly the possibilities of forest production which have heretofore been predicted by foresters from a general familiarity with tree growth in the Lake States.

An experimental forest area, consisting of 1,780 acres of logged and burned-over tribal lands, has been established as the Quinalt Reservation in western Washington. Early in 1929 forestry employees of the Taholah jurisdiction planted 3,500 3-year-old spruce seedlings on a part of this area. Although these trees were of natural growth, pulled within the reservation, a survival of 90 per cent was secured. On Lincoln's Birthday, 1930, members of the Elks lodge of Hoquiam, Wash., assisted the Indian Service rangers and scalers in planting about 20 acres additional. It is hoped that this first demonstration in the Grays Harbor region of the practicability of forest planting for commercial purposes may be of assistance in arousing and maintaining public interest in this subject.

On the Red Lake Reservation, Minn., where forest planting on a small scale was first tried in 1919 with only fair success, about 25,000 Norway and white pine transplants were placed in the field in May, 1930. This planting stock was purchased and donated to the Indian Service by a prominent lumberman, resident in Minneapolis, who had expressed a desire to have a part in an experiment of this character. As members of his family about 30 years ago had manufactured millions of feet of virgin pine taken from the Red Lake Reservation, his interest in the rehabilitation of the pine forests on the Red Lake Reservation affords a striking illustration of the broad view that progressive lumbermen have with regard to reforestation. This gentleman has indicated a desire for further cooperation concerning this worthy project.

The forest planting of 1930 on the Menominee Reservation was made along State Highway No. 47, where the results attained will afford a constant object lesson, not only to the Menominee Indians but also to the hundreds of thousands of tourists passing along the road each season. The site is not a particularly favorable one, being very sandy, but was selected because of its proximity to a main thoroughfare and the probability of protection of the plantation from forest fire.

Mention should be made of a unique forest fire lookout erected within the Quinalt Indian Reservation, Wash., through the cooperation of the forestry branch and the Hobi Timber Co. who were logging Indian timber. This lookout was constructed by topping a Douglas fir at a height of 174 feet from the ground and then building an observer's house approximately 8 feet square with its floor 170 feet from the ground. From this lookout approximately two-thirds of the entire area of the Quinalt Reservation, an extensive

area within the Olympic National Forest, and many square miles of private forest land, are visible.

For 1929 the total annual appropriations for ordinary care and preservation of timber on Indian reservations, including expenses incidental to the sale of timber, but exclusive of fire suppression charges, was \$335,000. This sum was increased for the 1930 fiscal year by \$25,000 and for 1931 a further increase of \$130,000 has been secured. Deficiency appropriations have been necessary to meet obligations incurred in the suppression of many fires occurring on timbered areas, and a total of \$70,000 spread over a 3-year period has been made available from tribal moneys for insect-control work on the Klamath Reservation, Oreg.

### *IRRIGATION ACTIVITIES*

The lands of the several Indian reservations in the western part of the United States are for the most part desert like in character, and their utilization can come about only through irrigation or the artificial application of water to the soil. In a wider sense irrigation is taken to include the whole question of conservation and utilization of water in the development of the arid regions and to embrace a discussion of features of social and political importance arising from the reclamation of the arid lands of these reservations. In the early days the Indians in most instances where cultivation of the soil was carried on for the production of crops would divert in a crude way, by the placing of brush and rock in the stream, small quantities of water into a crudely constructed ditch for such purpose. These methods were uneconomical and resulted only in very limited irrigation. To obviate this condition and provide adequate irrigation facilities an engineering force was first employed in the Indian Service about 1913. The work has been the planning and construction of irrigation works to divert and carry water from rivers and streams for application to the lands. This involves construction of diversion dams, headgates, canals, flumes and pipes, tunnels, and lining of canals in order to facilitate economically the transference of the water from the streams to the land. Many of the streams are seasonal, and after the melting of the snows in the spring the run-off diminishes until the natural flow of the streams is inadequate to take care of the lands of the particular project. This condition has necessitated the construction of various types of dams, such as masonry, concrete, rock-filled, and earthen dams to create reservoirs in which to impound the flood waters of the streams that prior to construction of the reservoirs are to a large extent wasted. This method results in providing an adequate water supply, enables regulation of its distribution, and assures water for crop production throughout the irrigation season.

There are also constructed ordinary and artesian wells for the tapping of underground waters to provide irrigation where the surface flow is inadequate or entirely absent. Underground wells are also provided for drainage purposes, the water being used to supplement the surface supply. Such operations result in preventing alkali and seeped conditions which are bound to follow after lands have been irrigated for a period of years unless drainage facilities are provided.

The irrigation branch of this service has also carried on the water development by drilling of wells, cleaning of springs, and construction of small reservoirs or charcos to catch the surface run-offs in sections where stock and sheep-raising conditions are successfully practiced, particularly within the Navajo and Hopi Reservations and the pueblos in New Mexico and Arizona.

As a by-product, power plants are installed and operated during the irrigation season of the impounding dams, power being generated from the water passed through the dam for irrigation purposes. In the carrying on of this activity there have been developed, both large and small, 205 irrigation projects at the approximate cost to June 30, 1930, as revised, of \$36,964,013 for construction work, and for operation and maintenance, \$10,994,576. The construction reimbursements have been approximately \$1,418,330 and the reimbursements for operation and maintenance have been \$3,776,482. The total area of lands under constructed works in the Indian irrigation service is approximately 775,000 acres, being an increase of about 25,000 acres during the current year; the total area irrigated during 1929 was approximately 361,708 acres. Within the boundaries of the various irrigation projects there is an estimated total of 1,358,761 acres of land susceptible of irrigation, and the estimated cost to complete the projects so as to supply water to this full acreage of irrigable land is \$30,000,000.

It is realized that readjustment of the reimbursable indebtedness must be made because instances exist where per acre charges against the land on behalf of irrigation works exceed the present value of the land. The policy is to place these irrigation projects on a sound economic foundation, so that the individual Indians will feel that their land is not encumbered with onerous obligations. At the present time some of the Indians refuse to utilize the irrigation activities afforded them, because they feel that they would be involved in the reimbursable obligation, where, as a matter of fact, under the law their lands are subject to a lien created against the lands to assure repayment of the obligation. Studies will be made for the purpose of thoroughly analyzing the whole situation with a view to securing proper legislation to remedy the conditions. It is believed this will effect greater interest by the Indians in the cultivation of their lands, and that they will be induced to remain thereon.

During the current year construction work has been performed at a cost of approximately \$1,514,241 and the cost for operation and maintenance during this year has been approximately \$740,064. In reimbursement of these expenditures, collections have been made for construction costs amounting to \$150,000, and for operation and maintenance expenses, \$389,877.

Much interest has centered around the Coolidge Dam and the San Carlos irrigation project in Arizona, the Coolidge Dam having been completed and the impounding of water commenced on November 15, 1928. To the present time only a small portion of the total capacity of the San Carlos Reservoir has been utilized owing to the comparatively light run-off during the time the storage of water has been in progress. The highest stage reached up to the present is approximately 163,300 acre-feet of available water. The total capacity of the reservoir is 1,200,000 acre-feet. Activities have been

in progress in the matter of completing a contract between the Government and the owners of the lands within the irrigation project for reimbursement of the costs. The formulation of a contract governing the generation and disposition of electric power at the Coolidge Dam has also been under consideration, installation of the equipment for generating power having been practically completed during the prior year. The power plant has been in operation since October 9, 1929. Construction of the canal and lateral system has also been receiving attention, and satisfactory progress is being made along that line, with the result that a considerable area both within the Indian reservation and on lands in white ownership is being served with water for irrigation purposes. The total acreage that will be eventually served will be 50,000 acres of lands within the Gila River Indian Reservation and 50,000 acres under white ownership outside the Indian reservation. Attention has also been given to the matter of readjusting the Indian allotments in order that each allottee, as nearly as practicable, may have a tract of land susceptible of irrigation from the San Carlos project.

Under the industrial branch of the service some 40,000 acres of the Pima Indian lands, not heretofore cleared and cultivated by the Indians, are being subjugated and necessary distributing systems constructed. This is being done with reimbursable funds appropriated by Congress to be repaid by the allottees over a long term of years. This procedure has been found necessary because of the fact that the Indians themselves are not able, situated as they now are, to finance the special machinery and organization necessary for the economical prosecution of the work if the land is to be placed under cultivation within a reasonable time after the water is available.

Within the Salt River Indian Reservation in Arizona further consideration has been given the matter of entering into an agreement between the United States and the Verde River irrigation and power district, and an agreement covering that matter was executed as of date June 30, 1930, thereby resulting in an adjustment of the Verde River situation, which has been under negotiation for a number of years.

Within the Yakima Reservation in Washington the various units have been in successful operation, including the Wapato Pumping Unit No. 1 recently completed. With a view to obtaining data for more efficient operation of this project, a soil survey under the direction of an expert from the Department of Agriculture has been in progress during the present year and will probably be completed within a few weeks. There has also been an investigation and report made by engineers of the irrigation service pertaining to the water supply of the Klickitat River and its tributaries with a view to diverting ultimately a portion of the water from that system to the Ahtanum and Toppenish-Simco irrigation units.

Within the Lummi Indian Reservation, under the Tulalip Agency, in the State of Washington, benefits are being derived by Indian lands and lands in white ownership included under the Lummi diking project, completed during the year 1929 at a cost of approximately \$67,700 and reclaiming 4,418 acres of excellent land. Attention is now being given to adjustment of the reimbursement of the

cost, which is to be apportioned on a per-acre basis to the lands benefited in proportion to the amount of benefit actually received.

During the year there has been brought to final conclusion the leasing of the Flathead Indian Power site No. 1 in Montana, one of the largest hydroelectric power sites in the country. License was granted by the Federal Power Commission to the Rocky Mountain Power Co. for the development of power site No. 1 within the Flathead Reservation and work has already been commenced on construction of a transmission line from Thompson Falls and of the first unit, which when completed will have an installation of 150,000 horsepower. The eventual complete development of the five sites will produce more than 200,000 horsepower. No license has yet been awarded for sites 2, 3, 4, and 5. The present development will be of importance in connection with the Flathead Indian irrigation project. The several units of the Flathead project have been in successful operation and the Flathead irrigation district has recently executed a contract, thereby acquiring the status of an independent irrigation district. Construction of the irrigation system on the Flathead project was carried on extensively, including the building of the Kickinghorse Reservoir and the raising of the Tabor Dam and canal construction. There have also been pending a number of suits, involving water rights on lands belonging to numerous individuals within the Flathead irrigation project, which matter has been receiving the attention of the supervising engineer and the irrigation district attorney, in cooperation with the United States district attorney, in support of the claims of the Government.

Irrigation operations of the Blackfeet and Fort Peck Indian irrigation projects, Montana, have been satisfactorily conducted, it having been definitely determined to continue the Little Porcupine and Big Porcupine divisions and not to exceed 4,000 acres under the west side canal of the Poplar River division of the Fort Peck project. As to the Blackfeet project, the supervising engineer reports encouraging indications of reviving interest on the part of the land owners in the use of the irrigation system and it is anticipated that an increased crop acreage will be irrigated under that project during the present season. The Fort Hall irrigation project in Idaho has been successfully operated, and legislation is now pending in Congress with a view to further development of the Michaud unit, involving about 30,000 acres of lands susceptible of irrigation. On the Pine River irrigation project, within the Southern Ute Indian Reservation in Colorado, suit is still pending for the purpose of adjudicating the waters of the Pine River and its tributaries. While this suit has been standing for a number of years, encouraging reports have been received from the field officials indicating that a final settlement may be expected within the near future. The irrigation project has been in operation with satisfactory results and progress has continued in adjustment of local controversies by the execution of agreements with certain water users and ditch companies involved in the project.

Pursuant to the provisions of the contract entered into between the Government and the Middle Rio Grande conservancy district, a political subdivision of the State of New Mexico, an engineer of the Indian irrigation service has been detailed to have supervision over the affairs of that undertaking in which the numerous Indian pueblos are involved. Progress is being made in the matter of obtaining the

necessary rights of way across the Indian lands for the construction works and a diligent effort has been put forth on the part of officials in the field to explain to the Indians the purpose of this project and the benefits their lands will derive therefrom, with the result that the opposition earlier manifested by the Indians appears to have been reconciled.

Within the Navajo Reservation in Arizona and New Mexico over 100 new spring wells and reservoirs were developed during the year as a part of a water supply for improving the grazing range of the 40,000 Navajos.

On the Walker River irrigation project, involving lands within the Walker River Indian Reservation in Nevada, suit is pending for the adjudication of the waters of the Walker River and its tributaries. The limited supply of water available for irrigating the Indian lands during the latter part of the growing season has resulted in the loss of crops in many instances. This condition has naturally resulted in a reduction of the area farmed and such will continue to be the case until some adjustment has been made in regard to the water supply. In the event the contentions of this service should be sustained in the case now in court there should be an adequate water supply from the normal flow of the river to successfully mature the crops. On the other hand, if the contention is not sustained in court, the alternative will be the construction of a storage dam for the purpose of impounding flood water with which to irrigate the reservation lands.

In connection with the Indian irrigation service there were established on July 1, 1929, three positions designated as irrigation district attorney. Irrigation district attorneys have accordingly been appointed and are now in service as follows: For irrigation district No. 1, with headquarters at Yakima, Wash.; for irrigation district No. 2, with headquarters at Blackfoot, Idaho; for irrigation district No. 3, with headquarters at Billings, Mont. The services of these attorneys will materially further the administration of irrigation affairs through their assistance in the conduct of the legal matters arising in their respective districts.

The gross amount appropriated for water development and irrigation purposes for 1930 was \$1,299,954.41 and for 1931 an increase of \$145,486.59 was obtained. Expenditures from public funds on some Indian irrigation projects are supplemented by collections principally from white water users.

### LITIGATION

Favorable decrees have been rendered in the following suits brought by the United States on behalf of Indians:

*U. S. v. Hunter* (U. S. C. C. A., 8th Circuit, 615 Law), holding that homesteads of deceased Osages, where the allottees and heirs are of one-half, or more, Osage blood and none had a certificate of competency, are not taxable. This applies also to devisees where title passed after February 27, 1925. Suit is now pending in the United States District Court, Northern District, Oklahoma, to recover taxes illegally assessed and paid (Eq. 550).

*United States v. Snook et al.* (U. S. District Court, District of South Dakota, Western Division, Eq. 111), canceling a fee patent

issued for an Indian allotment during the trust period without application by or consent of the allottee and declaring tax assessments and tax deeds void. It is expected that this decision will, in most cases, cause the counties in various States to settle the matter of taxes in similar cases out of court where like patents have been canceled by the department under authority of the act of February 26, 1927 (44 Stat. 1247). More than 250 of such patents have been canceled, and other cases are under consideration.

In *United States v. Kitty Jackson* (U. S. Supreme Court), it was held that Indian homesteads on the public domain acquired under the act of July 4, 1884 (23 Stat. 76), held under 25-year trust patents, are Indian allotments within the meaning of the act of June 21, 1906 (34 Stat. 326), authorizing extension of the trust period by the President.

Suit has been brought by the United States against J. Z. Wright et al (U. S. District Court, District of North Carolina), to set aside and declare void taxes assessed for the year 1926 and thereafter on lands held in trust by the United States for the benefit of the Eastern Band of Cherokees. The case has been heard and is under advisement by the court.

In *United States v. Miller Bros. et al.* (U. S. District Court, Western District of Oklahoma), 21 Indian allotments, or the value thereof, were recovered by the decree, but notice of appeal was filed.

A case is now being prepared for the purpose of final settlement of the question whether land purchased by this department with Indian trust funds, conveyed with restrictions against alienation or encumbrance and taxable prior to purchase, is exempt from taxation thereafter as an instrumentality of the Government.

The view of the department that proceedings in condemnation of Indian restricted lands for public purposes must be in the Federal courts and the United States a party defendant has been upheld by such courts. (*City of Takoma, Washington v. United States et al.*, U. S. District Court, Western District of Washington.)

Suit has been directed by the Attorney General on recommendation of the department to set aside taxes illegally assessed against personal property of Osage Indians and is being prepared by the United States attorney, northern district of Oklahoma.

Suit is pending against the State of Washington to clear title to unallotted tribal tide lands in the Lummi Reservation, Wash.

The work of preparing evidence for institution of suits (or settlements otherwise made) to recover lands assessed and sold for taxes contrary to law and the cancellation of patents in fee issued during the trust period and without application or consent of the Indians is still progressing, and many such patents in fee have recently been canceled under authority of the act of February 26, 1927. (44 Stat. 1247.)

### OIL, GAS, AND COAL PRODUCTION

Oil is being produced in commercial quantities from restricted Indian lands in four States, namely, Oklahoma, New Mexico, Wyoming, and Michigan. Several wells capable of producing oil in paying quantities have also been completed on the Crow Reservation in Montana, but there are no transportation connections with the

field for marketing the oil and the wells remain closed. The greatest activity and interest in oil and gas matters remains centered on the Osage Reservation and among the Five Civilized Tribes in Oklahoma, where oil and gas leases continue to be the source of the largest income of the Indians. Mandatory requirements of law make it necessary to offer annually not less than 25,000 acres on the Osage Reservation. Two public auction sales of leases were held last year in offering this minimum acreage. Under the present oil conservation policy no tribal lands are being leased for oil and gas mining purposes except where required by law on the Osage Reservation or where it is necessary to lease the lands in order to protect the tribe against damage resulting from the drainage of their lands through wells on adjacent lands.

Approximately one-third of the segregated coal and asphalt area belonging to the Choctaw and Chickasaw Tribes in Oklahoma, which originally contained 441,107 acres, was leased for coal mining purposes under the act of June 28, 1898 (30 Stat. L. 495), and the act of March 4, 1912 (37 Stat. L. 1007). A number of these leases are still in force. All of them will have expired by September 25, 1932. Under existing law there is no authority to make new leases within this area.

Field engineering problems and conservation matters in connection with operations in the production of minerals, including oil and gas, on restricted Indian lands are under field engineers of the Geological Survey, except within the Osage Reservation where the Indian service has its own petroleum experts and inspectors.

By act of May 26, 1930 (Public No. 264, 71st Cong.), the Secretary of the Interior is authorized to offer, in his discretion, the remaining tribal lands of the Choctaw and Chickasaw Tribes in Oklahoma for lease for oil and gas mining purposes through public competitive bidding.

Some interest has been shown in acquiring rights for unit operation of leases on Indian lands in the interest of conservation and more economical development, and recently a form of lease was approved by the department for use under a unit plan of operation and royalty pooling agreement for the development of a structure on the Yakima Indian Reservation, Wash.

### QUAPAW LEAD AND ZINC MINING LANDS

The lands of the Quapaw Indians in Oklahoma, rich in lead and zinc deposits, are within what is known as the Tri-State lead and zinc mining district.

During the year the mining industry in the district passed through a considerable period of depression, and many mines were shut down for temporary periods of time. Nevertheless, the mines on the restricted Quapaw lands under departmental supervision produced 35 per cent of the lead and 25 per cent of the zinc output of the Tri-State district, and 3.9 per cent of the lead and 14.2 per cent of the zinc output of ore mined in the United States last year.

There are 50 approved lead and zinc mining leases in force, embracing 6,244 acres, and 43 subleases in force, covering 2,214 acres thereof. From these leases 144,805 tons of lead and zinc concentrates

were sold during the year for \$6,166,601. The royalty thereon to the Indian owners of said lands amounted to \$587,255, and other income, \$2,842. Said royalty and income is shared by about 62 Indians according to their respective interests.

### *PUEBLO LANDS BOARD*

During the year reports have been submitted by the Pueblo Lands Board, established by the act of June 7, 1924 (43 Stat. L. 636), to quiet title to lands of the following pueblos, New Mexico:

San Ildefonso sustained damages amounting to \$24,367. Seven thousand nine hundred and sixty dollars of this amount is to be used to purchase 25.472 acres with water rights and improvements.

Laguna, no damages sustained by the Indians thereof.

Acoma, no damages for the Indians.

Santa Ana, supplemental report of the board awarding \$952 to the Indians.

Santa Clara, sustained damages amounting to \$86,821.

Cochiti, damages to the amount of \$7,311, of which \$4,863 is recommended by the board to buy 18.212 acres for the Indians.

Payments of the foregoing amounts found due these Indians will await appropriations by Congress.

### *INDIAN SUITS AND JUDGMENTS*

The United States Court of Claims, on April 7, 1930, handed down a judgment in the case of the Indians of the Fort Berthold Reservation (North Dakota *v.* the United States, No. B-449), awarding the Indians the sum of \$1,970,259.66. Their attorneys, June 4, 1930, filed a motion asking a modification of the judgment for an additional sum of approximately \$786,000.

Suits have been filed during the year in the United States Court of Claims against the Government as follows:

Indians of California, filed August 14, 1929.

Coos Bay, lower Umpqua, and Siuslaw Tribes of Oregon, filed August 15, 1919.

Lower Chehalis, Wash., filed November 19, 1929.

Ponca of Oklahoma and Nebraska, filed January 8, 1930.

Quinaielt of Washington, filed January 30, 1930.

Suattle of Washington, filed February 11, 1930.

Assiniboine of Montana, filed April 5, 1930.

Chief Joseph's Band of Nez Perce, Washington, filed May 22, 1930.

### *INDIAN CLAIMS*

Under act of May 3, 1928 (45 Stat. L. 484), the claims against the Government of individual Sioux Indians enrolled in the various Sioux agencies in North and South Dakota, Montana, and Nebraska, for land or for loss of personal property, are being investigated in the field, to enable the Secretary of the Interior to settle them under the act cited. The act of May 14, 1930 (Public 217), appropriated \$12,000 for the work.

The act of March 26, 1930 (Public 78), appropriated \$109,000 to pay the claims of 145 loyal Shawnee Indians of Oklahoma for depre-

dations committed against them by the Federal and the Confederate armies during the Civil War. The work of determining the heirs of the claimants is now in progress, as a prerequisite to payment.

### *RIGHTS OF WAY*

Mention was made in the annual report for 1929 of the efforts of the Indians of the Fort Peck Reservation, Mont., to prevent by force the construction thereon by the Montana State Highway Commission of Federal-aid highway project No. 253-A, between the town of Wolf Point and the bridge, a few miles southeast thereof, over the Missouri River.

As the Indians persisted in refusing their consent the State instituted condemnation proceedings, and by court decree of November 19, 1929, the sum of \$3,600 was awarded them as compensation for the lands taken for the highway. The amount of the award has been paid to the Indians or their representatives, and they have expressed themselves as being satisfied with the settlement made.

### *FIVE CIVILIZED TRIBES IN OKLAHOMA*

The area of the Five Civilized Tribes territory aggregated 19,525,966 acres, of which 145,063 acres were reserved for townsite and other purposes, 15,794,205 acres were allotted to the members of the Five Civilized Tribes, and 3,551,653 acres were sold, leaving unsold on June 30, 1930, 35,045 acres of tribal lands, including an area of 9,796.75 acres of the reserved surface of the coal and asphalt lands of the Choctaw and Chickasaw Nations.

The unsold tribal property—including amounts uncollected from sales of tribal lands and minerals—of the Choctaw and Chickasaw Nations is valued at \$10,252,138. The amounts to be collected from Choctaw and Chickasaw tribal property heretofore sold aggregate \$238,239. The largest and most valuable Choctaw and Chickasaw tribal property to be disposed of is the segregated coal and asphalt deposits, the value of which property is estimated at \$9,544,786. During the year necessary legislation was obtained authorizing and providing for the sale of said coal and asphalt deposits. The present tribal property of the Creek Nation is valued at \$95,218 and that of the Seminole Nation at \$250,000.

The tribal affairs of the Cherokee, Creek, and Seminole Nations are practically closed, except for the sale or disposal of the few tracts of tribal lands and except for the pending litigation in the Court of Claims by said Indian nations against the United States. Under certain jurisdictional acts of 1924, the Five Civilized Tribes have instituted in the Court of Claims a large number of suits against the United States, which suits are pending in that court and involve claims amounting to millions of dollars.

There are approximately 12,000 enrolled Indians of the Five Civilized Tribes in the restricted class, of whom approximately 9,000 are full bloods. The present restricted allotted lands aggregate 1,621,179 acres. In addition there are approximately 13,000 full-blood Indians born since March 4, 1906, who are in the restricted class, in so far as they will inherit restricted lands from full-blood allottees. It is estimated that about 118,000 acres consist of homestead allotments so inherited.

One of the biggest and most difficult tasks of the Five Civilized Tribes Agency at Muskogee, Okla., during the year was that of obtaining and filing land tax exemption certificates for the restricted Indians under the act of May 10, 1928. This work is not yet completed.

The cashier for the Five Civilized Tribes Agency handled during the year a total of \$44,915,910.64, including receipts and disbursements of all classes of funds. The collection of tribal funds amounted to \$148,525.89, and there was credited to individual Indian accounts the sum of \$8,628,197.77. Individual Indians of the Five Civilized Tribes have to their credit the aggregate amount of \$28,275,866.71, restricted funds. There was disbursed from said individual Indian funds the aggregate sum of \$3,981,065.18 for the use and benefit of the restricted individual Indians, said expenditures being made under the supervision of the field force of the Five Civilized Tribes Agency. Of said amount, \$1,621,343.51 were paid in cash and monthly installments to the Indians, approximately \$1,000,000 was expended for homes, furnishings, farms, improvements, etc., and approximately \$1,359,721.67 for medical attention, education, living expenses, automobiles, attorneys, fees, and for miscellaneous purposes.

#### **ACTIVITIES OF PROBATE ATTORNEYS, FIVE CIVILIZED TRIBES, OKLAHOMA**

The Indian Service, through the probate attorneys, has rendered assistance to restricted Indians, restricted minors, and judicially declared incompetent Indians under the jurisdiction of our agency at Muskogee by recovering moneys due them; recovering lands and personal property; obtaining cancellation of fraudulent leases and having vacated and set aside judgments obtained in fraud of the rights of restricted allottees. Large sums have been saved to restricted Indians through the efforts of this force by filing affidavits of erroneous assessments of taxes and having the restricted lands involved stricken from the tax rolls; obtaining tax-exempt certificates, setting aside tax deed, and recovering lands erroneously assessed and sold for taxes; obtaining quitclaim deeds from individuals holding under illegal deed; obtaining additional and higher bids upon inherited land sold by full-blood adult heirs and on the sale of lands inherited by minors; collecting rentals; filing objections to annual and final reports of guardians of restricted minors and judicially declared incompetent Indians, and collecting the balances found to be due from delinquent guardians.

#### **PROBATE WORK**

By the acts of May 27, 1908, and April 18, 1912, authority to determine the heirs of deceased members of the Five Civilized Tribes and of the Osages in Oklahoma was conferred on the courts of the State. As to all other Indians, however, having trust or restricted property subject to supervision or control by the Government, commonly referred to as "restricted Indian property," exclusive jurisdiction to determine the heirs of deceased Indians owning such property is expressly vested in the Secretary of the Interior by the act of June

25, 1910, as amended. This statutory authority also includes the power to approve or disapprove Indian wills.

A comparatively small corps of employees, consisting of 10 examiners of inheritance with necessary clerical assistants, is maintained in the field for the purpose of holding hearings to develop the facts in each case on which a finding of heirs can be made or appropriate action taken in the case of Indian wills. Under simplified procedure recently inaugurated, uncomplicated and uncontested cases are now being handled to a considerable extent by the superintendent and other local agency employees without awaiting the arrival of an examiner of inheritance, which may be necessarily delayed due to the pressure of other work elsewhere. The more difficult cases are thus left for an examiner of inheritance when one reaches the reservation. The results accomplished by this change in procedure have been very gratifying.

During the fiscal year just ended 1,912 Indian heirship cases were thus disposed of and final action taken in the matter of 222 wills. Pursuant to applicable statutory authority, fees aggregating \$58,603.88 were collected and turned into the Federal Treasury in reimbursement of the cost of this work. Under the law the scale of fees is a graduated one, ranging from nothing in those cases where the estate of the decedent is worth \$250 or less to as high as \$75 in those cases where the estate is worth \$7,500 or more. In other words, no fee greater than \$75 can be charged, even in those cases where the decedent was worth, say, even a million dollars.

### *PURCHASE OF SUPPLIES*

As to quantity, food, clothing, and other supplies were purchased in accordance with needs of the individual field units as estimated for by the officers in charge, limited only to the funds available for investment for that purpose. As to quality, better than the average supplies, materials, and equipment have been procured. Nothing has been spent for fancy grades nor quality of materials superior to our actual needs, but the field has been furnished with substantial food, serviceable clothing, and good grades of other merchandise. One of the outstanding features has been the delivery of the necessary supplies on or before the opening of the school term. The Indian Service has not deviated from its requirements that deliveries by contractors be made promptly and carefully inspected. More attention is being given to the fabrication of commodity specifications. The Indian Service has received help, both in the preparation of specifications and in the inspection of goods, from various branches of the Government service and their cooperation is appreciated.

### *BIBLIOGRAPHY*

In response to frequent requests for information there have been completed a number of bulletins or pamphlets relating to Indian life, customs, history, population, etc., which are now available for those who desire, as shown in the following list:

Primitive Agriculture.  
Bibliography—Legends.  
Bibliography—History.  
Arts and Industries.

Indian Religion.  
Indian Missions.  
Education of the Indians.  
Bibliography—Indian and pioneer stories for children.  
Indian Wars and Local Disturbances.  
American Indian in the World War.  
Cliff Dwellings.  
Indian Legends.  
Indian Music.  
Indian Citizenship.  
Indian Home Life.  
Indian Tribes, by States, Agencies, and Tribes for the Preceding Year.  
Indian Reservations.  
Peyote.

### CONCLUSION

In presenting this report of the year we wish to express our appreciation of the interest and assistance so generously extended by yourself and other representatives of the department. We also wish to take this opportunity to acknowledge the willing spirit of cooperation which has been shown by the employees of the Washington office, and also by the field personnel.

Acknowledgment is due of the continued help and cooperation received from the Board of Indian Commissioners which has been of great value and is deeply appreciated. Acknowledgment is also extended to persons, agencies, or organizations outside of the Federal service whose assistance has been enlisted through their interest in the well-being of the Indians.

Sincerely yours,

CHARLES J. RHOADS,  
*Commissioner.*  
J. HENRY SCATTERGOOD,  
*Assistant Commissioner.*

THE SECRETARY OF THE INTERIOR.

## APPENDIX

### *Indian Population*

An Indian as defined by the Indian Service includes any person of Indian blood who through wardship, treaty, or inheritance has acquired certain rights. This embraces non-Indians entitled to enrollment. Thus, the census of the Five Civilized Tribes includes 23,405 freedmen. The Census Bureau defines an Indian as a person having Indian blood to such a degree as to be recognized in his community as an Indian. Furthermore, the population enumerated at Federal agencies is not necessarily domiciled on or near the reservations. It is the population on the agency rolls and includes both reservation and nonreservation Indians. Thus, an Indian may be carried on the rolls because of tribal or inheritance rights, etc., and may reside anywhere in the United States or in a foreign country. Reports of births and deaths among absentees are often not received. In many instances certification is made to the State registrars of vital statistics and thus to the Bureau of the Census, but not to the Indian Service. In a considerable number of cases the addresses of nonreservation Indians are unknown. For the above reasons the statistics of Indian population as shown in the decennial reports of the Bureau of the Census do not agree with the statistics of the Indian Service.

The total estimated and enumerated number of Indians reported by Federal agencies on April 1, 1930, was 340,541. This number consists of 221,808 Indians who were actually enumerated and 118,733 other Indians who were taken from tribal rolls, earlier and special censuses, and estimates based on records. For convenience the latter number hereafter will be considered as an estimate. (See tabular statement below.)

The aggregate estimated and enumerated population for April 1, 1930, represents an increase over the corresponding figure for the previous year of 0.9 per cent. If a comparison is made between the number actually enumerated in the same areas for 1929 and 1930 the increase is 1.4 per cent.

Of the 221,808 Indians enumerated, 112,907 were males, 108,890 females, and for 11 the sex was not reported.

It is significant when the Indians enumerated are considered that 185,377, or 83.6 per cent, resided at the Federal jurisdiction where enrolled, while only 3,984, or 1.8 per cent, resided at another jurisdiction, and 32,447, or 14.6 per cent, resided elsewhere—that is, outside of any Federal jurisdiction.

Of the 32,447 Indians residing elsewhere, 41 were living in the New England States, 208 in the Middle Atlantic, 3,633 in the East North Central, 9,234 in the West North Central, 437 in the South Atlantic, 93 in the East South Central, 2,166 in the West South Central, 5,120

in the Mountain States, and 6,024 in the Pacific States, and for 5,491 Indians the residence was either not reported or unknown.

Oklahoma has far more Indians than any other State. If the estimated population of the Five Civilized Tribes and Kaw Reservation are included, the Indian population is 121,884, or 35.8 per cent of the aggregate Indian population. Arizona ranks next with 47,072, or 13.8 per cent. According to the enumerated population, only two other States have an Indian population of over 20,000—New Mexico and South Dakota.

According to a preliminary tabulation of the tribes enumerated on April 1, 1930, the most important numerically were the Navajo, Sioux, and Chippewa, numbering 40,863, 33,168, and 23,647, respectively.

The Indian population not actually enumerated (termed an estimate) is 118,733, which is compiled as follows:

|   |         |
|---|---------|
| California, Sacramento Agency, part of, 1930 estimate.....                          | 8,761   |
| Michigan, 1927 census.....  | 1,192   |
| New York, 1928 per capita payment rolls and 1930 estimate.....                      | 4,445   |
| Oklahoma:   |         |

In the following table the Indian population as reported by the United States Fourteenth Census for 1920 is given for States in which there are no Federal agencies.

Doubtless many of these Indians, if still residing in these States, are duplicated in the columns "Residing elsewhere" in the table showing Indian population in continental United States enumerated at Federal agencies, according to tribe, sex, and residence, April 1, 1930.

TABLE 1.—Indian population <sup>1</sup> of States in which there are no Federal Agencies, 1920

| Division and State     | Total | Male  | Female | Division and State        | Total | Male  | Female |
|------------------------|-------|-------|--------|---------------------------|-------|-------|--------|
| Total.....             | 7,923 | 4,205 | 3,718  | South Atlantic:           |       |       |        |
| New England:           |       |       |        | Delaware.....             | 2     | 2     | —      |
| Maine.....             | 839   | 420   | 419    | Maryland.....             | 32    | 18    | 14     |
| New Hampshire.....     | 28    | 13    | 15     | District of Columbia..... | 37    | 20    | 17     |
| Vermont.....           | 24    | 15    | 9      | Virginia.....             | 824   | 423   | 401    |
| Massachusetts.....     | 555   | 262   | 293    | West Virginia.....        | 7     | 4     | 3      |
| Rhode Island.....      | 110   | 59    | 51     | South Carolina.....       | 304   | 145   | 159    |

## THE OFFICE OF INDIAN AFFAIRS

Among the duties assigned to the War Department, when it was created by Congress under the act of August 7, 1789, were those "relative to Indian affairs."

On March 11, 1824, a Bureau of Indian Affairs was organized in the War Department. At the head of this bureau was Thomas L. McKenney. He was charged with the administration of the fund for the civilization of the Indians, under regulations established by the department, the examination of the claims arising out of the laws regulating the intercourse with Indian tribes, and the routine correspondence with his representatives in the field, the superintendents, agents and subagents. On September 30, 1830, Samuel S. Hamilton became chief. He was succeeded by Elbert Herring about a year later.

The office of Commissioner of Indian Affairs was created in the War Department by the act of July 9, 1832. Subject to the Secretary of War and the President, the commissioner was to have "the direction and management of all Indian affairs and all matters arising out of Indian relations."

Two years later, on June 30, 1834, an act was passed "to provide for the organization of the Department of Indian Affairs." Certain agencies were established, others abolished. This act, considered the organic law of the Indian Department, provided for subagents, interpreters, and other employees, the payment of annuities, the purchase and distribution of supplies, etc.

The Bureau of Indian Affairs passed from military to civil control when the Department of the Interior was created by the act of March 3, 1849.

Under section 441 of the Revised Statutes "The Secretary of the Interior is charged with the supervision of public business relating to \* \* \* the Indians," and section 463 provides that "The Commissioner of Indian Affairs shall, under the direction of the Secretary of the Interior and agreeable to such regulations as the President may prescribe, have the management of all Indian affairs and of all matters arising out of Indian relations."

### *Commissioners of Indian Affairs*

| Commissioner              | State             | Date          | Secretary                                    |

# REPORT OF THE COMMISSIONER OF INDIAN AFFAIRS

---

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
*Washington, D. C.*

The honorable the SECRETARY OF THE INTERIOR.

MY DEAR MR. SECRETARY: We have the honor to submit herewith the annual report of the Office of Indian Affairs for the fiscal year ended June 30, 1931.

## FOREWORD

Any governmental unit which has operated one hundred years has passed through a realm of experience and experiment. The Office of Indian Affairs has, during the past fiscal year, drawn on this fund of experience, adapting it, of course, in the light of modern practices to the reaching needs of the American Indian. It has strengthened the technical services. It has focused attention on basic, social, and economic facts underlying Indian problems. It has reorganized the bureau services to meet present-day requirements. The six thousand workers who compose the Indian Service have been aided during the past year by support, help, and stimulus received from the Congress, from related governmental services, Federal, State, and local, and from the semiofficial and voluntary organizations.

This past year has shown evidence of a continuing and an increasing public interest in Indian affairs. Committees of both the Senate and House of Representatives have visited reservations, accompanied by representatives of the Washington office. These visits have afforded the field staff opportunity to discuss realistically the work of the service.

It is the intention of this office to continue to stress the importance of the home and economic life of the Indian, in order that we may have a basis upon which programs of health and education can be developed.

On March 30, 1931, after more than a year's study and planning, we announced that a complete reorganization of the bureau had been put into effect. Directors of high technical and professional ability have been placed in charge of the five field divisions of health, education, agricultural extension and industry, forestry, and irrigation. These are grouped under two assistants to the commissioners; one in charge of human relations, the other in charge of property. The assistant to the commissioner on human relations is directly responsible to the commissioners for the coordination of the divisions of health, education, and agricultural extension and industry. All personnel problems and policies are being worked out by him. The

assistant to the commissioner in charge of property is to be directly responsible to the commissioners for all activities dealing with the guardianship of Indian property, tribal and individual, and of land, irrigation, and forestry. His duty is to keep the activities of his sections in harmony with the plans and projects of the human relations phase of the service.

We feel the reorganization has already made the Washington office more responsive to the needs of the field.

If we are to preserve the best qualities of the Indian race and thereby enrich our Nation's cultural heritage, it is essential that we have sympathetic cooperation coupled with an assumption of responsibility by the local white community, the county and State governments.

### EDUCATION<sup>1</sup>

The purpose of education for any indigenous peoples at the present day is to help these peoples, both as groups and as individuals, to adjust themselves to modern life, protecting and preserving as much of their own way of living as possible, and capitalizing their economic and cultural resources for their own benefit and their contribution to modern civilization.

Accordingly, if the Indian Service were starting afresh on the task of Indian education, with what is now known of the processes of change and adjustment through schools and other agencies, it would undoubtedly begin with the Indian people in their own environment or in some comparable environment in which they could develop their own resources. It would employ other methods than some of those that have been employed—it would not use to any extent the reservation, "rations," or distant boarding schools for young children. But we are not starting afresh, and can not; one kind of a philosophy and one kind of a system have been established a long time. The basic Indian Service educational problem, therefore, is to work over from a more or less conventional institutional conception of education to one that is local and individual. It means abandoning boarding schools wherever possible, eliminating small children from the larger boarding schools, setting up day schools or making arrangements with local public schools to receive these children, providing the necessary family follow-up for such children, and directing the boarding schools into specialized purposes, at least partly vocational; in the meantime all these boarding schools (those that should be abandoned soon as well as those that have a degree of permanence) should be made as effective educationally as it is possible to make them, utilizing Indian arts and crafts

---

<sup>1</sup> The Indian education problem in the United States is not an isolated problem, but one of a series of situations involving indigenous peoples throughout the world. The United States has more of these situations than it has cared to recognize in any effective way—Alaska has Indians and Eskimos, and in Porto Rico, the Hawaiian Islands, the Philippines, Guam, Samoa, and the Virgin Islands the same problem of a native, or at least a different racial group presents itself, to say nothing of the millions of negroes in continental United States. That the same situation is recognized elsewhere in the world is suggested by the programs in South Africa, Mexico, and Peru. The United States itself has become responsible, at one time or another, for educational programs of similar difficulty in independent countries like the Dominican Republic—particularly during the years 1917-1924—and Haiti up to the present. Determination of a program of Indian education in continental United States and Alaska, therefore, involves more than a few hundred thousand American Indians—it would have significance for the United States and possibly to some extent for the rest of the world.

and Indian culture generally wherever these exist or can be revived, and developing throughout the service at all levels a staff of workers who understand the new point of view.

Some progress on all phases of this program can be reported for the past year.

#### *INDIAN EDUCATION IN LOCAL COMMUNITIES*

Opportunities to put Indian children into local schools rather than Government boarding schools exceeded the available financial resources in 1930-31; only by reducing the allotment rate to the school districts was it possible to act upon pending applications for the new year. Reports already received show more than 43,000<sup>2</sup> Indian children in public schools for the year ended June 30, 1931. "There is little racial prejudice anywhere against Indian children," the supervisor assigned to public school relations reports, "and the teachers take considerable pride in seeing the Indian child develop alongside the white child." Care is being taken, of course, not to rush the matter of public-school attendance for Indian children. Nevertheless, the number of school districts with which contracts for tuition were made increased from nearly 900 in 1929-30 to nearly a thousand in 1930-31, and if to these are added the numerous districts in Oklahoma aided by special appropriation, the Federal Government had tuition arrangements with 2,568 school districts involving 36,753<sup>2</sup> Indian children, an increase of 341 districts and 10,055 pupils over last year. Three boarding schools were closed during the year—Mekusukey, Okla., Fort Bidwell, Calif., and Fort Mojave, Ariz. None of these schools were closed until it became clear that they were serving no useful purpose and would have to be built up at needless expense if they were to be used at all. Mekusukey was the old Seminole school. It is significant that among the Seminole Indians, with cooperation between local and Federal officials on school attendance, the number of days actually attended by the Indian children was three times as great in 1930-31 as it was in 1929-30. Seven of the largest boarding schools no longer carry any grades below the fourth and four of these now enroll no pupils below junior and senior high school grades. In 1929-30 slightly more than half the pupils in the so-called "nonreservation" boarding schools were in junior and senior high-school grades; now nearly three-fourths are so classified.

Recent changes in supervisory and teaching personnel have been based largely on the change in point of view in education. Last year's report mentioned additional professional staff at the Washington office and in the field. Special supervision in elementary education, secondary education, home economics, and trade and industrial training has been developed. By the end of the year the position of district superintendent—a type of general inspection and supervision covering large areas—had been abolished. Three of the new professionally qualified superintendents of Indian schools in the highest grade were assigned to the direction of local educational programs in three of the most important and difficult jurisdictions. Joe

<sup>2</sup> Differences between these two figures are due to the number of Indian children for whom tuition is not paid.

Jennings, a former General Education Board man in Tennessee, was appointed superintendent of education for the Pine Ridge Reservation in South Dakota. R. M. Tisinger, a Cornell graduate specially trained in rural education and with experience in reclaimed areas elsewhere in the world, was placed in charge of the educational program for the Pima and Papago of the Southwest. J. Arthur Anderson, from the University of Minnesota, was made superintendent of education for the combined Turtle Mountain and Fort Totten Reservations, with the special task of building up the newly opened consolidated Indian school at Turtle Mountain, N. Dak. This is one of the most significant ventures in Indian education, representing, as it does, not only a departure from the boarding school to the local community school, but an interesting cooperative effort by the Federal Government and the State of North Dakota.

To secure further emphasis on localized direction of educational enterprise, we have recently filled administrative vacancies as heads of some of our largest schools with professionally equipped educators trained to meet community needs. The new head of Haskell Institute, Dr. Robert D. Baldwin, is a former president of a successful State teachers' college and is well known for his work in school administration and finance. At Flandreau, S. Dak., a University of Michigan man, B. J. Brophy, is developing a program of vocational training based on the needs of the Indian youth of the Northwest; and at Phoenix and Genoa Indian Schools two successful school superintendents, Carl H. Skinner of Nebraska and Herman Bogard of Wisconsin, with advanced training at the Universities of California and Wisconsin, respectively, are seeking to adapt their schools to meet the educational needs of the immediate region in which they are located.

Probably the most significant step in the effort to relate education more closely to individual Indian needs and the local community is the establishment of the position of "visiting teacher" (school social worker) to work between the home and the school. Eight such positions were made possible in the 1932 budget, and the first trained visiting teacher in the Indian Service, Miss Dorothy Deane, of Kansas, went on duty at Lac du Flambeau, Wis., just after the close of the year. Workers of this type of training and experience have proved to be exceedingly valuable in both urban and rural areas in situations similar to those found among Indian families, and it is believed that they are essential in making the transition between boarding school and local school attendance. We still have in the Indian Service "day-school representatives" whose functions vary from that of attendance officer to local school supervisor, and we shall probably continue to employ a certain number of these, but as rapidly as resources permit it is planned to supplement these with trained social case workers (visiting teachers) to help make the necessary adjustments between home and school.

#### *COURSE OF STUDY*

If Indians are to adapt themselves successfully to modern life with as little cultural loss as possible, it is essential, on the one hand, that Indian children in the schools have access to the same materials white

children have, and, on the other hand, that they use the materials that represent their own interests and their own heritage. State courses of study, rather than the former Indian Service course of study, have been suggested to teachers in the Indian Service as guides but which are by no means to be slavishly followed. Indeed, every teacher is urged to enrich and adopt the course of study he is using. "It is desirable to supplement this by all possible available sources of modern curriculum practice which stress child growth and development rather than subject matter," says a recent office letter to teachers. Among the Pueblos Marie Martinez, of San Ildefonso, has been teaching pottery making to children of her own village, visiting with them the collections in the recently opened anthropological laboratories at Santa Fe. Under the guidance of the demonstration teachers mentioned in last year's report teachers of young Indian children, especially those in the day schools, have been encouraging their children to use what they find in life about them. They urge them to write about their own Indian life, and to depict their own customs, their own legends, their own economic and social activities.

#### FEDERAL-STATE RELATIONS

It is assumed by some that the Federal Government is attempting to unload the Indian educational problem upon the States. This is not the fact. The historic Federal obligation in Indian education can not be denied. What is necessary, however, is a realization that Indian education is in no sense solely a Federal problem, but a State and local problem as well. When Congress in 1924 made all Indians citizens it served notice that Indians could no longer be overlooked in the citizenry of any State. Most of the States do recognize the joint problem and some of them, Minnesota for example, have taken a conspicuously fine attitude toward Indians and Indian education. At the Milwaukee meeting of the National Council of State Superintendents and Commissioners of Education in December, 1930, the following resolution was adopted:

In order that our Indian population may be strong, intelligent, and useful citizens of the United States—

*Be it resolved,* That we favor cooperative effort on the part of the State and Federal Governments to secure for the Indians at all times favorable living conditions, health, and good education.

To the end that they may enjoy all the advantages of equal educational opportunity, we favor their admission to the public schools of the State wherever these schools can be made available, on such terms of immediate and continuing financial assistance by the Federal Government as will be just to the State and the communities where they reside.

The committee which prepared this resolution was composed of J. M. McConnell, Bertha R. Palmer, John Vaughan, and A. Montoya, heads of the school systems in the States of Minnesota, North Dakota, Oklahoma, and New Mexico—States which together have more than half the Indian children of school age.

At this meeting the representatives of the Office of Indian Affairs put forth the following proposals in the form of "suggested next steps in Federal-State cooperation in Indian education":

1. Furnish to the State education authorities the most recent accurate data we can get as to the location of Indian children of school age in their States.

2. Wherever State and local communities are willing and able to take over the schooling of Indian children, give them every possible encouragement and help.

3. Study carefully each existing boarding-school situation, to determine whether the school is one that should be closed soon, continued for some other purpose, or maintained indefinitely.

4. Put our existing Indian schools into a position where they constitute a real part of the educational program of the State, using State courses of study wherever possible as a basis and meeting State requirements in so far as these are consistent with an education planned to meet the needs of the Indian children.

5. Make better tuition arrangements, using tuition payment in particular as a means for getting a better quality of education for both whites and Indians; better qualified teachers, health follow-up, hot lunch, visiting teacher (school social worker) to work between the school and the home.

6. Develop a more modern type of supervision:

(a) Supervisors from the Indian Office who seek to help the people in the field, rather than merely to inspect; these supervisors to visit public and private schools where Indian children are as well as Government Indian schools.

(b) In States where numbers warrant, a State supervisor of Indian education as part of the staff of the department of public instruction, working directly under the State superintendent or commissioner of education.

The most important step taken under this program was the appointment by the Indian Bureau of a State supervisor for Indian education in Oklahoma, the State having by far the greater number of Indians. The new appointee, George C. Wells, who was selected from a list of civil-service eligibles, is himself an Oklahoman, a graduate of the State university, with advanced training at Teachers College, Columbia University, and has had experience in Oklahoma in the Cherokee country, had served as State high-school supervisor, and at the time of his appointment was secretary to the State board of education.

#### *FINANCING THE NEW PROGRAM*

There are further steps that can be taken in the program of developing local day school and public school attendance. Reduction of enrollments in the large schools is possible regardless of a decision as to the abandonment of some of the schools. This would be by no means a radical step, and it has the further advantage of simplifying the problem of financing. Boarding school education is considerably more expensive than any other kind, even where carried out at the extremely low cost prevailing in the Federal Indian Service. By reducing the enrollment of a number of the schools we not only can lessen the institutional difficulties but we can release some of the money badly needed for the program of local and community education. It is estimated that the same sum of money that is required for 100 children of elementary school age in a boarding school will provide an adequate educational program, including necessary food, clothing, and follow-up service, for at least half as many more if expended in the local community, and with better ultimate results. This fact is of special importance at the present time, when Indian parents, often against their own best judgment, are tempted to send their small children to the boarding school if they anticipate difficulty in feeding and clothing them at home. It is both better economy and better education to leave the children in their own homes.

*INDIAN PARTICIPATION*

That the Indians themselves should be consulted regarding these and other plans for education of their children is axiomatic. We welcome signs of initiative on the part of Indians to work themselves free from dependence and take an interest in their own educational affairs. In the case of one tribe, the Choctaw, the Indian Office recently arranged a special plan of consultation in connection with the plans for education of the Indian children. Under the law we spend for them some \$55,000 annually of tribal funds for schooling. The principal chief of the tribe, Ben Dwight, has drawn up the plan whereby, in order to secure the education of Choctaw children, particularly orphans, in public schools rather than in institutions, children are to be placed in the families of other Indians. His plan contains some things that are difficult, of course, but the important point is that the Choctaw, through him (for Mr. Dwight is acting as the result of a decision formally reached at a meeting of the tribe), are not only determined to have their people part of the main current of American life instead of being isolated from it but are plunging in to do their own experimenting, as good citizens should, rather than wait for the Federal Government or the State government to act. An important aim of the Federal Government's program of Federal-State cooperation is to turn over to the State as many able Indian citizens as possible.

*THE EXISTING SCHOOLS*

The task of improving existing Indian schools, regardless of their ultimate disposition, has vigorously gone forward during the past year. Particularly significant have been additions and changes in personnel made possible by increased appropriations and the raising of standards. Mention has already been made of the appointment of heads of some of the most important schools. The qualifications set up for these positions included university training on a graduate basis in the field of educational administration, together with adequate experience in the same field. Equally significant are the changed requirements for educational positions elsewhere in the service. In the belief that the elementary teacher's position was of unsurpassed importance to the program, the requirements were again raised, this time to a minimum of three years of training above the high-school level, with special preparation for teaching children of the primary or intermediate state. Two-year normal graduates can no longer enter teaching positions in our service. In taking this step we are joining with the increasing number of communities that insist upon having teachers of young children as highly qualified as those teaching older children. Nearly all our new entrants are graduates of 4-year teachers' colleges or liberal-arts colleges furnishing teacher preparation. The entrance salary for elementary teachers was increased and of the 614 elementary teachers already in the service, 163, or 27 per cent, met the new requirements before they went into effect. Of this number 50 have a baccalaureate degree.

Another group of educational positions where improvement of standards is noteworthy is in home economics and in the girls' adviser and matron positions. Of the hundred or more teachers of home economics in our schools all but seven have degrees. There are 25 girls' advisers with a combination of college graduation and successful experience, and 14 more with at least three years of college work to their credit. Even among matrons—where an eighth grade requirement was in force only four years ago—a majority of the new entrants have one or more years of college training together with teaching experience. One could wish that a similar statement might be made for the so-called "boys' advisers" (formerly disciplinarians), but here the progress is necessarily slower because of a combination of factors. Nevertheless, even here there has been a measurable improvement. Through better requirements and in-service training we believe we are starting on a program that will mean improvement for the boys comparable with that brought about by Miss Edna Groves and her staff for the girls.

A number of new positions were made available as a result of congressional appropriations, the full effect of which will not be observable until well into the fiscal year 1932. Increased enrollments in primary grades and the successful effort to provide a full day of instruction in elementary grades made necessary the establishment of 38 new elementary teaching positions, 22 in boarding schools, and 16 in day schools. Lack of further funds made it necessary to postpone establishment of more elementary positions that were needed.

Under the direction of the newly appointed supervisor of trade and industrial education, new positions in the field of vocational education have been set up. There have been established to date 7 positions as head of industrial training department in the larger schools, 8 as shop instructor for senior high schools, and 7 as shop instructor for junior high schools. For new entrants and for those already in the service, special summer courses were provided early in the summer of 1931 at Colorado Agricultural College. Groups for in-service training have been organized at some of the larger Indian schools. A small group of Indian Service workers in this field met at Fort Collins June 10-14 to consider policies and practices in the administration of vocational education in Indian schools.

Other new positions made possible by congressional appropriations for 1932 are those for teachers of physical education, music, and fine arts. Besides strengthening Indian schools in accordance with the best practice in schools everywhere, these positions (especially those in fine arts) help in the utilization of Indian arts and crafts and other Indian resources.

Though introducing new standards and new personnel, we have sought to give due recognition to employees already in the service, provided their work was good and their attitude toward Indian people sympathetic. In a few cases involving brutality to Indian children we have had to dismiss employees from the service after charges had been preferred and the answers considered. In other cases, where employees lacked the technical educational requirements but have shown outstanding ability, we have had the much more

cheerful task of reallocating them to positions paying higher salaries. Funds have not been sufficient, however, to reallocate all whose positions should be reallocated.

We have tried to get a better handling of children in the boarding schools, both at admission and while in school. It is not always easy to steer between what may seem like cruel compulsion on the one hand and neglect of the child's best interests on the other. A letter from the commissioner on February 7, 1931, in regard to small children, especially in the Navajo country, gave specific instructions that the "dragging-in" method of enrollment must be given up, and that there should be substituted "the lure of good facilities, good personnel, need of education." It appears that little, if any, actual loss of attendance occurred as a result of this policy, and the gain in good will seemed real. With regard to attitudes toward Indian children in school, the office emphatically does not and will not tolerate flogging. On various occasions during the past year cases of corporal punishment have been summarily dealt with. This policy will be vigorously continued. Much more important, however, as we conceive it, is the constructive effort we have been making to put into the schools men and women trained in modern methods of handling boys and girls and sufficiently resourceful that they will not need to use crude methods of discipline. It is manifestly difficult to transform the attitudes of school and agency employees overnight, but we believe progress is being made.

Another improvement in the conduct of the schools is the gradual abandonment of formal school examinations, which used to be given to even the smallest children. A merely negative regulation on examinations would not bring about the desired result, but new teachers and new supervisors are gradually lessening emphasis upon formal examinations even in the most conventionally conducted of our schools.

#### ***GUIDANCE AND PLACEMENT***

Securing employment for the Indians was the object sought in the second deficiency act of 1931 and a provision of the Interior Department appropriation act for 1932. It was obvious that the very difficulties which led to this legislation would militate against much success in the work. Nevertheless more has been accomplished than seemed possible. A combination of the new resources with what had survived of the traditional "outing system" in connection with the boarding schools made it possible to maintain employment work of one kind or another in 10 locations in 1931. Placements were reported from these centers as follows: Kansas City, 160; Minneapolis, 55; Los Angeles, 783; Salt Lake City, 90; Phoenix, 531; Riverside, 433; Berkeley, 209; San Carlos, 1,057. It should be stated at once that fully two-thirds of the 3,318 placements reported were only temporary, but even this is probably a creditable showing when the comparatively small total Indian population and the marginal character of most Indian employment are taken into account. It will be necessary in the future to distinguish more sharply between guidance and junior placement as a part of the educational program for Indian youth and adult employment, but this

will probably have to wait upon the appointment of a full-time director of Indian employment.

One of the hopeful features of educational guidance and placement program is the number of qualified Indian youth who have taken advantage of the newly created Government loan fund to secure higher education or specialized training.

#### *COOPERATION WITH OUTSIDE ORGANIZATIONS*

One of the most characteristic features of American education is the cooperation of a public agency with nonpublic organizations, and the Indian Service in its educational work has taken full advantage of this method. During the past year the Scout organizations have been particularly helpful; the Scout institutes, created for leaders of scouting among both boys and girls, afforded valuable training for persons interested in Indian education. Education through missionary groups is still an important feature of Indian work. Other agencies, with which there was helpful cooperation in the field of education during 1931, were: The Indian Committee of the National Conference of Social Work, the President's Illiteracy Commission, the White House Conference on Child Health and Protection, the National Advisory Commission on Education, the American Council on Education (which set up "criteria of achievement" for various positions in our service), and the Institute for Government Research. Through this latter organization some of the other forms of cooperation were made effective; the institute made possible, in part, the institutes for scout leaders; it assisted in the training of new entrants to our service; it furnished a worker who studied the important and difficult "boys' adviser" situation. The Institute for Government Research also assisted us in holding the training institutes for the advisers, and it has recently made possible an investigation by one of our own staff, a well-trained Indian woman, of the higher education opportunities and needs for Indian youth at existing colleges and universities.

#### *ALASKAN EDUCATION*

The administrative change whereby responsibility for education in Alaska was transferred to the Office of Indian Affairs in March, 1931, is particularly important as an indication of a national unified policy for the education of various indigenous groups. More important than this, however, is the fact that the Alaskan education enterprise has been carried out in the past with a different philosophy and different practice. In contrast to the Indian Service, with its boarding schools, the Office of Education in Alaska until very recently confined its efforts to local community schools and a program of education that took into account in an amazing way the health and social and economic life of the native group. The Alaska program, therefore, represented the other extreme from the Indian policy in the States. There are undoubtedly elements of strength and weakness in both plans; the important point is that the Indian Service now has the opportunity to weigh the results and utilize the advantages of both.

## HEALTH

During the past year a larger number of Indians sought medical and hospital relief. Considerable progress can also be reported in general preventive measures and sanitation.

The interruption of hospital treatment and medical care for trivial reasons continues to constitute a problem and must be overcome gradually through educational procedures. Attendance upon rodeos, fairs, and various types of outdoor entertainment as carried on during the summer season are common excuses for removing children and adults from hospitals and sanatoria, before the period of such hospital or sanatoria care is complete.

The public health phases of the general health work have been developed progressively. The number of public-health or field nurses has been increased. The medical personnel at agencies, school special physicians, and others are working to an increasing degree toward the fuller development of health activities, all of which are fostered and extended by the medical directors most of whom are on detail from the United States Public Health Service. Other Federal, State, county, local, and voluntary health organizations are cooperating. At the present time a number of States are actively working with the Indian Service to improve health for Indians within their borders. The Committee on Indian Affairs of the State and Provincial Health Authorities of North America continues to function actively and wholeheartedly toward the development of these cooperative measures as well as for the purpose of disseminating, to the several States where the Indian lives, information and facilities having to do with laboratory, clinical, and diagnostic facilities. As reported last year, in several of these States cooperative measures are being carried forward under which health workers of the Indian Service are working in conjunction with and under the general direction of similar State activities.

Increased attention has been given during the past year to the more accurate collection and reporting of vital statistics and the collection of morbidity data.

The United States Public Health Service is continuing the detail of personnel to the Indian Field Service and in addition offers the services of medical officers, field directors, and sanitary engineers, as well as of specially trained medical officers of the National Institute of Health in connection with special problems relating to the cause and transmission of disease. These services include the assignment of medical officers to act as medical directors for special investigations of sanitary and health conditions, for the routine study of water supplies, sewage disposal, milk production, and control of venereal conditions. The laboratories of the State departments of health were also made available as well as the services of consultant specialists and other personnel.

Tuberculosis, trachoma, and diseases of infancy and childhood are major health problems among Indians. The facilities of many of the general hospitals have been extended to make provision for beds for the care of Indians suffering from tuberculosis. General and special procedures in connection with the conduct of hospitals and

sanatoria are being developed with the purpose of effecting further improvements. Emphasis has been placed on the educational program to bring a closer knowledge to Indians of the factors having to do with disease prevention and the maintenance of good health. Special attention to these measures is given in the care of those suffering from tuberculosis, to maternal and infancy welfare, improved dietary, and to the sick and aged.

A very encouraging feature of the Indian medical service conducted in its hospitals is the increasing number of live births in such institutions. During 1928, 595 live births were reported; 816 were reported for 1929; 1,099 for 1930; and 1,356 for 1931. The total number of patients treated in hospitals and sanatoria is also increasing with the increase of total beds available. During 1928, 34,790 patients were treated, 37,511 were treated in 1929, 38,536 in 1930, and 39,995 in 1931. The total days of hospital treatment rendered for the same years were: 631,463 for 1928, 677,241 for 1929, 768,160 for 1930, and 866,507 for 1931.

Approximately 30,000 examinations for trachoma were made by special physicians (not including examinations made by hospital, agency, and school physicians) during the year, of which number slightly more than 4,000, or 13.8 per cent, were diagnosed as positive. The number of surgical operations performed on trachoma cases was 1,330 and those otherwise treated totaled 2,175. In addition to the work carried forward for the detection, care, and treatment of trachoma, this group of special physicians has been increasingly active in the treatment of other surgical conditions, namely, infected tonsils, and adenoids, and in the surgical treatment of tuberculous glands. This group of physicians steadily advanced the educational phase of their work as carried forward in their daily contact with groups of Indians suffering from trachoma and allied conditions.

Of the contagious and infectious diseases reported, impetigo occurred almost twice as frequently during 1931 as in 1930. A slight increase in the number of cases of scabies was also reported. These conditions prevail particularly in the larger boarding schools where constant vigilance and persistent care and treatment are necessary for their control. The occurrence of measles during the year was less than for 1930, 1,331 cases being reported for 1931 as against 1,708 for 1930. Fewer cases of whooping cough were also reported, 679 cases for 1931 as against 1,069 for 1930. Influenza on the other hand had a heavier incidence during 1931 than the previous year, something over 6,500 cases being reported for 1931 as against 3,597 for 1930. Chickenpox showed an increase during the past year, 1,289 cases being reported as against 823 for 1930. During the year, 78 cases of cerebro-spinal meningitis were reported as against 35 for 1930. Fifteen cases of infantile paralysis occurred during this period as against 9 for 1930. Fifty-nine cases of smallpox were reported, of which number 25 occurred on the Colville Reservation, Wash. Sixty-seven cases of diphtheria were reported for 1931 as against 130 cases for 1930.

The total number of vaccinations and inoculations performed during the year as reported to the office was 29,437 classified as follows:

smallpox, 1,274; antityphoid fever, 5,991; diphtheria immunizations, 12,569; other vaccinations and inoculations, 603, of which number 270 were for Rocky Mountain spotted fever.

The following hospitals authorized in 1930 were completed during the year: Fort Belknap Hospital which added 37 beds; Tongue River Hospital which added 32 beds; Turtle Mountain Hospital which added 27 beds; Pawnee and Ponca Hospital, 47 beds; Pine Ridge Hospital, 47 beds; and Hayward Hospital, 47 beds. Each of these institutions has a capacity of 47 beds, two being new and the other four being replacement hospitals.

The following hospitals were authorized for 1931: San Xavier Sanatorium, Tucson, Ariz., 35 beds, preliminary estimates being made; Hopi-Navajo Sanatorium, Winslow, Ariz., 45 beds, authorized by second deficiency act, title to site up for approval and plans being prepared; Pipestone Hospital, Minnesota, 36 beds, under construction; Winnebago Hospital, Nebraska, 60 beds, estimates of cost being prepared and construction started; Walker River Hospital, Nevada, 30 beds, completed and ready for use; Clinton Hospital, Oklahoma, 30 beds, plans being completed; Tomah Hospital, Wisconsin, 41 beds, under construction.

The following hospitals were remodeled or equipped with additions: Phoenix Sanatorium, boys' building to replace six old 4-bed cottages; Choctaw Hospital in Mississippi, tuberculosis annex; Shawnee Sanatorium, Oklahoma, an infirmary for the care of bed-fast patients.

The addition of tuberculosis sanatoria during the coming year, notably Albuquerque Sanatorium and Sioux Sanatorium at Pierre, S. Dak., each with a capacity of approximately 100 beds, will establish much needed facilities for the care and treatment of Indian patients suffering from this disease.

Cooperative arrangements whereby hospital and sanatorium facilities in State, county, and municipal institutions may be made available for the care and treatment of Indians should be encouraged in order to make use of existing institutions now under operation. With mutually agreeable arrangements this character of service may be rendered at a minimum of cost to the Indian Service, particularly in States with considerable Indian population and where extensive systems of sanatoria are now in operation.

General physical improvement in existing Indian Service institutions has been brought about to some extent as well as improvements in the conduct of such institutions. Further improvements along these lines are indicated in order that these hospitals and sanatoria may conform to what are recognized as minimum standards for the care and welfare of their patients.

The gratuity appropriation for health purposes for the year was \$3,073,000, plus \$65,000 reappropriated from 1930 funds, a net increase of \$479,400 over 1930. The following tabulation shows this appropriation over a 3-year period:

*Comparative statement of health appropriations*

|                                | Fiscal year 1930 |                 |           | Fiscal year 1931 |                 |           | Fiscal year 1932 |                 |           |
|--------------------------------|------------------|-----------------|-----------|------------------|-----------------|-----------|------------------|-----------------|-----------|

| Total.....                     | 2,593,600        | 400,000         | 2,993,600 | 3,138,000        | 288,000         | 3,426,000 | 4,050,000        | 177,500         | 4,227,500 |

**AGRICULTURAL EXTENSION AND INDUSTRY**

The division of agricultural extension and industry was organized this year for the expressed purpose of rendering more direct assistance to the Indian in the solution of his home and economic problems. The first essentials to a satisfactory home life are an adequate food supply, proper clothing, and a comfortable shelter. With these things in mind, the representatives of the division of extension and industry (in cooperation with the other branches of the service, the State and local agencies, and the Indians themselves) are endeavoring to formulate a program that will enable the Indians to improve their social and economic status.

The extension field staff consists of a director, 4 supervisors of extension, 23 agricultural extension agents, 10 home extension agents, 221 farm agents or farmers, 62 stockmen, and 40 dairymen. The farm agents, stockmen, and dairymen are the key men in extension work because they have direct contact with the Indians. They are supervised and assisted by the agricultural extension agents, the home extension agents, and the supervisors. While the agricultural and home extension agents spend most of their time working with farm agents, stockmen, and dairymen, they do considerable work directly with the Indians. The supervisors and the director devote their time to organizing and supervising the work of the other employees in the division. The supervisors and the director have also assisted in making several fact-finding surveys that have been conducted on certain of the reservations for the purpose of determining what kind of programs would be most desirable for the various reservations under consideration.

On those reservations having agricultural extension agents and home extension agents, definite agricultural and home programs are being developed. For example, the extension agronomy programs this year are being built around: (a) Increasing the quantity of food and crops grown; (b) soil improvement by the use of rotation and soil-building crops; (c) weed control by mowing, clean cultivation, seeding to permanent crops, and, where practicable, the application of chemicals; (d) weed prevention by the use of clean tested seed; (e) crop disease control; and (f) better farm management by the utilization of sounder business principles and more scientific cultural practices.

During the past year special emphasis was placed on home gardens and the increase in the number of gardens planted was quite noticeable. The extension agent for the Standing Rock Reservation reports that as a result of the extension campaign for more gardens, 497 of the 618 families on the reservation planted gardens. Many of the other extension agents were equally successful in getting the Indians of their reservations to plant gardens. The garden, because of its importance in providing a food supply for the Indian home, is looked upon as one of the most essential projects of the entire extension program.

In the improvement of his livestock, the Indian is making real progress. More than 2,000 head of purebred and high-grade animals were selected during this year for the Indians by extension representatives.

Progress has been made also in the improvement of the school dairy herds. Several hundred inferior cows have been removed from the herds and replaced by a higher grade and more profitable type, and a large number of bulls with uncertain breedings have been replaced with sires of known breeding and performance.

Another activity which is fostered by the extension division and which is receiving a hearty response is the organization of farm chapters. The membership in these organizations varies from a few hundred on small reservations to several thousand on others. The Southern Navajo Reservation chapters in Arizona and New Mexico have a membership of 2,600. Many of these chapter organizations have built their own community houses for carrying on various activities of the chapter.

The 10 agricultural extension agents employed during the calendar year 1930 report that in their efforts to assist the Indians they made 1,962 personal farm and home visits. The Indians showed their interest in extension work by making 2,155 personal calls and 1,118 telephone calls to the agents' offices for information and advice.

To teach the Indians improved practices, the agents held 141 method demonstration meetings which were attended by 6,584 Indians. The Indians show increasing interest in poultry, swine, and dairy cows, though their principal livestock enterprises are still cattle and sheep—and probably always will be.

The extension division, cooperating with the extension services in the respective States and counties, is conducting 4-H club work with the Indian boys and girls. 4-H club work is an educational movement to teach boys and girls improved practices in farming and home making. Each individual who is participating uses recommended methods to carry on a project which must create, preserve, or conserve something of economic importance. Some typical projects are raising a litter of pigs under sanitary conditions; growing an acre of corn according to modern farming principles; preserving 10 quarts of vegetables for winter consumption; purchasing the material for and making an economical, suitable, and becoming dress; and rearranging a kitchen for convenience.

This 4-H club work has a real appeal to the Indian boys and girls and every year several hundred of them compete with their white friends for prizes which are offered by various organizations and

the State and county fair associations. The encouraging thing is that the Indian boys and girls usually win more than their share of the prizes. Of course, the real value of this work is not in the prizes won, but in the increased knowledge and skill which the Indians are acquiring and the food, clothing, and services which they are contributing to the family income.

The home extension work, which is still in its formative stages, will be built largely around sanitation and nutrition. However, clothing and home furnishings and equipment will receive considerable attention and some time will be devoted to the Indian arts and crafts. On the whole, the Indian women are responding very well to this extension work. In some homes, the Indians have literally been raised from the ground to chairs and beds and their food has actually been taken off of the earth and placed on tables.

## *IRRIGATION*

### *DUTIES*

Irrigation upon Indian reservations is practiced in 12 Western States. The irrigation division is charged with the investigation of new Indian irrigation projects, execution of programs approved by Congress, design and construction of works, and their maintenance and operation. It makes the collections of water charges on operating projects, and accounts for and disburses funds appropriated and collected for construction, operation and maintenance. It constructs wells for irrigation, stock watering, and for Indian schools and agencies. It attends to all drainage projects and flood-control works. It builds and operates hydroelectric plants. It furnishes engineering advice to the commissioner. Its public relations are similar to that of a publicly owned utility supplying water. Its consumers are the Indians actually owning farm lands under projects, whites leasing allotments from Indian owners, white owners successors to Indian patentees and white owners of non-Indian land adjacent to or within reservations whose lands have been included in Indian projects for more complete development.

### *POLICY AND OBJECTIVES*

The irrigation policy of the Indian Office is dictated primarily by Congress and is an important element in the educational and welfare programs. The general policy regarding new projects is to furnish within reason irrigation facilities for lands wherever allotted to Indians. As to joint projects utilizing Indian allotments and white lands, the practice has been to weigh the economic advantage of joint storage and canal systems. In such cases the project is financed by reimbursable appropriations repayable by the individual landowners within the project. Assessments have been made annually since 1920, except on the San Carlos, Fort Hall, and a few other projects. However, collections of these assessments are not enforced against Indian owners, but must be repaid when the Indian title is extinguished.

Efficient operation in the interest of landowners, together with the defense of water rights and maintenance and betterment of

works, are the chief objectives on existing projects. In general, the maintenance charges are collected against white landowners of Indian leased lands and are advanced by Federal appropriations for Indian tribal and allotted lands not so leased.

Anticipating the eventual absorption of the Indians into the community, the immediate objectives of the irrigation division are the evaluation and classification of existing projects for the purpose of recommending their continuation or abandonment or gradual transfer to local districts; recommendation for the clearing of reimbursable charges; the simplification of accounting; the appraisalment of the present worth of irrigation works and the ascertainment of the maximum charges which such irrigated land may stand. An example of such a transaction is the final settlement, incorporated into legislation by the act of March 4, 1931, of the San Carlos project, referred to later, in which reimbursable charges of nearly \$1,400,000 have been canceled.

### PROJECTS

Major Indian irrigation projects are the Wapato in Washington, Flathead in Montana, Wind River in Wyoming, Uintah in Utah, Fort Hall in Idaho, and San Carlos in Arizona. They range from 57,000 to 118,000 acres of irrigable land served by constructed ditches.

The Wapato project is self-supporting, construction charges are being amortized and the Indians pay their full share of operating charges. New construction during this year consisted of building the Satus unit pumping plant and canals for the irrigation of 6,000 acres.

On the Flathead project, contracts have been entered into with two irrigation districts formed under State law, the Mission and the Flathead, which include all white-owned land under the project except that known as the Jocko division. Negotiations are pending with this division, and when a contract is consummated with this district all assessments will be collected by the district organization as special taxes, thus insuring repayment of the Government's investment. The fiscal year 1931 saw the completion of Kickinhorse reservoir, miscellaneous ditches, and the building of many miles of transmission lines on the Mission and Camas divisions. The completion of this project involves an estimated expenditure of \$1,710,000. The Flathead Indians on tribal account receive a rental income for the occupancy and use for power and storage of Flathead Lake from the Rocky Mountain Power Co. This rental income is now \$1,000 per month. After the plant is in commercial operation, the revenue rises to \$60,000 per year and in succeeding years gradually increases until it reaches \$175,000 per year. The construction of the Flathead power development by the Rocky Mountain Power Co. has been started, and much work completed. On account of the depression, work has been discontinued for a year but the company plans to complete the project within the specified three years. Meanwhile the rental to the Indians is being paid. In addition the project as a whole will benefit by the use of 5,000 horsepower virtually at cost for pumping into the project works. During the past year the project has also purchased the local electrical distributing system in the vicinity of Polson, Mont., for use as a project enterprise.

The Uintah project is a collection of some 22 canals, serving both Indians and whites either jointly or under conveyance agreements between the parties. During the year the Federal court vacated its order for a water commissioner and at the present time the water is being distributed by a commissioner agreed upon by the project and the white water companies.

The Fort Hall project is largely complete except for the Michaud unit which has been authorized by Congress. Claims arising out of restrictions of legislation, for overflow by reservoir and the Blackfoot River remain to be adjusted.

The San Carlos project is one of the most recent enterprises of the Indian Irrigation Service. It is a joint project, half white and half Pima Indian Reservation. For many years each had been utilizing waters of the Gila River as direct flow for irrigation. Now they unite jointly in securing stored water for the Coolidge Reservoir. As the year closes, the repayment contract required by legislation has been signed with the San Carlos irrigation and drainage district representing the white ownership. This provides for the initiation of operation and maintenance assessments in 1932 and construction charges in 1934. Sixty per cent of the lands are already under cultivation. The project charges will amount to a lien of approximately \$100 per acre, representing 50 per cent of the true market value. Congress has by legislation written off nearly \$1,400,000 of reimbursable charges on this project. The charges had accumulated and included certain items not concerned with irrigation, chief of which was the Sacaton Bridge.

A power plant at the Coolidge Reservoir will yield an estimated net revenue of \$30,000 per year for the benefit of the project. The project appears to be on a sound basis financially and an important step in the welfare program for the Pima and Papago Indians.

In these six major projects some 500,000 acres are served by constructed ditches and 300,000 acres are under actual cultivation. The Indians cultivate 20 per cent of this area, lessees from Indians 25 per cent, and white owners 55 per cent.

Among the many minor projects those in the State of Washington are of small importance, limited to 2,000 acres and largely self-operating. In Montana the small projects are the Blackfeet, Fort Belknap, Fort Peck, and Crow projects, aggregating 170,149 acres. The beginnings of these projects were long ago, most of them through the initiative of Congress, and it is probable that not much new construction will be required under present conditions.

In Nevada the small Walker River project is under litigation to establish the Indian water rights. This project can only be moderately successful due to conditions of climate. At Fallon, Nev., are small groups of Indians for whom a supply of water is purchased from the United States Reclamation Bureau.

On the Western Shoshone project on the Duck Valley reservation in Nevada and Idaho a suit has been initiated for the protection of Indian water rights. At present the Indians use an area of 6,000 acres for winter hay to carry range cattle. Investigations are under way for storage to increase these operations.

The Pine River project in Colorado is operated for joint Indian and white use with a very large number of small canals. The service has won the suit in the Federal court decreeing Indian water rights. There is now under consideration a plan to reorganize this project with modern canals and possibly provide for storage. It is proposed to rehabilitate 6,000 acres for the raising of hay to balance the great grazing lands in the vicinity.

Pueblo Indians in New Mexico have practiced irrigation on the Rio Grande for centuries and the irrigation division there acts in an advisory capacity and assists principally in respect to replacement of flumes or revision of canal alignment. During the year appropriations of \$325,000 were made by the United States to continue construction under the contract with the Rio Grande conservancy district.

There are a number of small projects ranging from 300 to 4,000 acres scattered throughout the Navajo, Hopi, and Zuni Reservations in New Mexico and Arizona. The water supply is irregular with tremendous silt volume and the lands are at high altitude and subject to frost. The economic utility of these projects can be justified by their proximity to adjacent grazing lands.

On the Camp McDowell project the city of Phoenix has purchased for the pumping of water for the city a tract of land in which the Indian water rights have been fully protected. On the San Carlos reservation a few hundred acres are under irrigation by power furnished from the Coolidge Dam.

Potentially the most important new project in the irrigation service is on the Colorado River reservation, Arizona, where 6,000 acres are already irrigated. The first reclamation of arid Indian land by irrigation undertaken by the Government was on the Colorado River reservation in 1867. It is hoped that approximately 100,000 acres can be irrigated by gravity water from the Colorado River. This reservation has the notable distinction of being reserved for Indians without reference to tribe, which may permit departure from the segregation idea. The project management has been under great difficulty in operation with insufficient funds due to the distress of cotton lessees during this past year.

In California the irrigated tracts, principally occupied by Mission Indians, are small and widely scattered and are operated by the Indians. These Indians are only slightly different from the Mexican-American citizens in the same communities and amalgamation into the local communities is possible. It is hoped that a plan for their gradual independence from Government wardship will be worked out during the coming years. Pala Reservation is an example. An economic survey has been made showing that the community and individual holding of grazing and highly developed irrigation property are \$926 per capita appraised present net worth allowing for United States lien.

Of the 150 minor projects and units the total area under constructed ditches is 240,000 acres, of which 90,000 are actually farmed. Indians farm 63 per cent of this acreage, lessees 26 per cent, and white purchasers of Indian land 11 per cent.

On the Navajo reservations in New Mexico and Arizona 600 wells or other devices for stock watering have been installed for sheep grazing. It is estimated that these facilities serve some 4,000,000 acres out of approximately 12,000,000 acres of grazing land on the jurisdiction. Gradual extension of stock water facilities continued during the year. In southern Arizona the development of stock watering wells and tanks for the Papago has been a continuing and successful policy. During the year negotiations have been started with the city of Tucson at its initiative for the joint use of the underground water of San Xavier, near Tucson.

#### FINANCIAL

The original construction cost of works of Indian irrigation is in round numbers, \$40,000,000. Repayments of \$1,500,000 have been made, leaving \$38,500,000 as the net construction investment of the United States. The accumulated uncollected and unassessed expenditure for operation and maintenance is \$7,500,000. These accumulations cover a period of 47 years.

The expenditure by the irrigation division for the fiscal year 1931 was \$1,697,421 for construction, \$747,798 for operation and maintenance, and \$132,200 for actual administrative overhead, a total of \$2,577,419. The collections for construction were \$140,000 and for operation and maintenance \$434,000.

#### ORGANIZATION

For some time after the Government adopted the policy of building irrigation projects to serve Indian lands the work was directed by the reservation superintendents with such occasional temporary technical assistance as might be available. Later, beginning in 1905 a small corps of engineers was employed. This organization was gradually increased as the work expanded. During the past year the irrigation division has been reorganized under the supervision of Maj. William S. Post, formerly connected with the State engineer's office of California, who was appointed director of irrigation on March 21, 1931. The division was reorganized in order to more efficiently perform its functions which involve principally engineering, legal, and accounting work. The organization as adopted at the end of the year will consist of a civil service personnel of 5 in Washington, a field office of 26 which will be located at Denver, Colo., and 79 at 4 district offices or on projects within the districts. This personnel consists of a director and an assistant to the director, located in Washington, an assistant director with headquarters in the field office, 1 special engineer, 1 supervising engineer at large, 4 district or supervising engineers, 1 field cost accountant, 4 attorneys, 8 project engineers, 15 assistant engineers, and such other technical and clerical assistants as are required. During the year district No. 1 has been combined with district No. 2 reducing the number of districts from five to four.

The division, in addition, employs under local civil service boards construction and maintenance employees, ditchriders, foremen, time-

keepers, shovel operators, mechanics, and laborers varying from 300 in the winter to 800 in the summer.

The total number of projects is 45—project being defined as “a large enterprise under a project manager or a group of separate units in a given region under one administrative manager.” The 45 projects are subdivided into 168 units. Of these units 117 are largely complete; 20 units are being completed under a definite program and 31 are to be examined as to their economic and social value. The management responsibility for operation and maintenance is shown in the following table—the irrigation service acting in an advisory capacity for statistical purposes and for inspection on all units.

| Operating management            | Number of units |               |
|---------------------------------|-----------------|---------------|
|                                 | Operated by     | Maintained by |
| Indian irrigation division..... | 71              | 84            |
| Indian superintendents.....     | 14              | 7             |
| Indians.....                    | 69              | 63            |
| Districts or associations.....  | 12              | 12            |
| U. S. Reclamation Service.....  | 2               | 2             |
|                                 | 168             | 168           |

It will be noted that the Indians themselves operate nearly as many projects as the irrigation division.

### FORESTRY

On June 12, 1931, in an announcement indicating the purpose of the Interior Department to cooperate in every practicable way in the effort that was being made, under the leadership of the President, to restore confidence in the future of the lumber industry and to relieve the extreme economic depression that had for some time characterized this important source of national wealth, the general policy of restricting sales of timber on Indian lands was reaffirmed. In the annual report for the fiscal year 1925 attention was directed to the policy of restricting sales of timber on Indian lands to those cases in which the economic interest of a particular tribe demanded its sale or conditions were peculiarly favorable to a sale at advantageous prices. Both of these reasons were present on the Mescalero Reservation in New Mexico, and the latter one applied at the Klamath Reservation, where logging units were sold in 1926. In the report for 1926 reference was again made to the purpose of the Indian Service to achieve a sustained yield management at Klamath. A statement of this policy occupied the leading place in the report for 1927, with a reference to the declination of the service to accede to requests for offerings of large tracts on the Colville Reservation, Wash., the Fort Apache, Ariz., and the Klamath and Warm Springs, Oreg. In the reports for 1928 and 1929 the offering of large units on the Klamath because of forest insect infestations and on the

Quinaiaelt because of the urgent demand of allottees for income from their allotments, was explained. The first and only sale yet made on Navajo lands was partly directed to the production of funds through which the land holdings of these Indians might be extended and consolidated to insure their economic success in the grazing industry.

Due to the general business depression the production of lumber from timber cut on Indian lands has suffered a great decline during the fiscal year 1931. The total volume of timber removed, exclusive of that used by Indians or others for domestic or administrative purposes, was only 314,527,819 feet, yielding \$1,238,814.08, as compared with 561,415,352 feet cut in 1930, for which the Indians received an income of \$2,313,644. These figures include the stumpage value of timber cut at the mills operated by the Indian Service on Menominee and Red Lake Reservations.

In accordance with the plan for a more conservative administration of grazing resources on Indian lands, a policy which was mentioned in the report for 1930, detailed instructions were issued on July 7, 1930, for a comprehensive survey of grazing resources, the existing policy of administration and for an inventory of all stock owned by Indians, permittees, and lessees which are grazing stock on Indian lands. Because of the magnitude of this task, the local forestry force was required to make the survey wherever such a force was available, and forestry men at large were required to cover reservations where an organization of the forestry branch had not previously been effected. The issuance of the detailed outline of July 7, 1930, resulted in the submission of fairly complete reports from about 40 reservations and has provided the Indian Service its first opportunity for the formulation of policies based on a detailed study of the variable and intricate grazing problems of the 40 widely separated units of administration.

Unfortunately the economic depression of the past year not only involved a large amount of special work in connection with timber sale administration, but also presented many special problems in grazing administration that interfered seriously with the formulation of general plans of administration. However, the initial survey and inventory were completed on practically every unit prior to June 30, 1931, and the general report, the preparation of which was assigned to the assistant director of forestry, was submitted immediately after the close of the fiscal year. During April and May the preparation of new grazing regulations and of a full set of forms for the administration of grazing and the conservation of grazing values was given the most careful study by a committee of experienced men at the Washington office, and the new regulations, control stipulations, contracts, bonds, and other forms approved by the department on June 4, 1931, became effective on July 1, 1931.

The task of insuring the use of more than 40,000,000 acres of Indian grazing lands in such manner as to secure a reasonably adequate current economic return without impending future possibilities of similar return has by no means been completed, but in accordance with the President's and Secretary's policy of conservation, steps have been taken toward the correction of overgrazing and other unwise practices disclosed in a general grazing investigation. With the en-

tire force of the Indian Service applying its energies to a cooperative effort to correct past errors and to move forward to new accomplishments the achievement of the desired goal may be hoped for with confidence.

The effective administration of forests requires roads that facilitate the reaching of forest fires promptly after discovery. In view of the necessary maintenance of a forestry organization and equipment for road construction and repairs, superintendents of reservations having important forest interests have generally considered it advisable that all reservation road work be under the supervision of the forestry branch of the service. The assignment of range management to forestry resulted in the employment of foresters on a number of reservations where the forests are of relatively small importance but where a close supervision of range activities is necessary. To secure closer coordination and a more unified administration of road work in the central office and in the field the responsibility for road construction and maintenance was given to the forestry division by an order of May 27, 1931. While experienced local men will continue to direct supervision of construction on reservations, a small engineering force at large will be developed to make preliminary studies, prepare estimates, advise local men of improved methods, inspect construction work, and generally improve and expand activities directed toward this important means of economic and social development in the Indian country.

The construction of another important means of communication, namely, telephone lines, has been vigorously continued during the past year. Over 100 miles of new copper circuit was built at the Southern Navajo jurisdiction, where work was carried out in close coordination with extensive road construction. Special attention was given to the survey of a permanent location for both road and telephone line. Main lines between the agencies and the railroad points were completely reconstructed at Colville, Hoopa, and Mesca-lero, and between the Spokane subagency and Reardan, Wash. The Sprague River-Beatty line was entirely rebuilt at Klamath, and other lines extended and repaired. As the year closed work was beginning on a new standard line from Gallup, N. Mex., to the Zuni Agency, and on extensive reconstruction at Jicarilla. Marked progress has been made in telephonic communication in the service during the decade that the work has been under the skilled direction of the telephone supervisor, Mr. Clark M. Terry, who died suddenly on February 22, 1931.

A separate appropriation for forestry work was obtained in 1931, and the increased amount provided in this appropriation made possible the purchase of 13 lookouts, 10 of which have been erected, and the necessary roads and trails to them, and the purchase of new motor transportation to replace the trucks and cars that, through lack of funds, had been used far beyond the period of efficiency. While the appropriations available for forestry work on Indian lands are still far below the standard recommended by those most familiar with forest-protection problems, substantial increases have been made available for 1932; and it is confidently expected that with the return of more satisfactory economic conditions the Con-

gress will approve larger appropriations for the protection and improvement of the very valuable Indian timberlands, and that the legislation giving to these forests a permanent status, to which reference was made in our report for 1930, may be enacted.

Mr. J. P. Kinney, who has directed forestry work in the Indian Service for nearly 20 years, has been given the title of director of forestry; and Mr. Lee Muck, who was educated in engineering and forestry at the universities of Wisconsin and Michigan, was made assistant director of forestry. Mr. L. D. Arnold, an experienced forester in the Indian Service and formerly superintendent of the Klamath Indian Reservation, and who also is a graduate of the Michigan University School of Forestry, was transferred to the Washington office as assistant to the director of forestry upon the death of Mr. William H. von Bayer, who had served in the Washington office for approximately 20 years.

### *SOCIAL AND ECONOMIC SURVEYS*

During the fiscal year 1931 field representatives of the Office of Indian Affairs made basic social and economic surveys of the following jurisdictions: Yankton, Florida Seminole, Sisseton, Pima, Winnebago, Indians in Louisiana and Texas.

These surveys were made in order that we might have a clear picture of present conditions on and near the reservations. From these surveys we hope to evolve a program and policy for the future.

Other surveys will follow in other jurisdictions.

Dr. Erl A. Bates, loaned to the Indian Service for a year by Cornell University, made visits to the majority of the field units and assisted superintendents and others in developing educational extension programs.

### *APPROPRIATIONS*

For 1931 appropriations from the Federal Treasury aggregated \$21,723,199.25, including certain items carried in deficiency acts. This represents an increase of \$2,846,317.43 over the gross amount of \$18,876,811.82 available for the previous year. Authorizations from tribal funds for 1931 aggregated \$3,600,989.17, or \$1,125,800.69 less than the gross amount of \$4,726,789.86 available for 1930. The major portion of this decrease is accounted for through a large appropriation in 1930 for industrial purposes. The balance represents largely depletion of tribal funds usually available for support purposes. For 1932 the total sum chargeable to the Treasury is \$26,275,496.73, or an increase of \$4,552,297.48 over the amount for 1931. Included in this increase, however, is a total of \$1,243,000 for education and medical care for natives in Alaska, this work having been transferred to the Indian Service on March 15, 1931, pursuant to authorization contained in the second deficiency appropriation act approved March 4, 1931. Tribal fund authorizations were further decreased for 1932 by \$271,025.19, the gross total for the year being \$3,329,963.98.

The following comparison of appropriations for all purposes will be of interest:

*Treasury appropriations*

|   | Fiscal year<br>1930 | Fiscal year<br>1931 | Fiscal year<br>1932 |
|---|---------------------|---------------------|---------------------|
| General purposes.....                                 | \$2, 100, 247. 41   | \$2, 399, 808. 25   | \$2, 490, 335. 73   |

**FIVE CIVILIZED TRIBES OF INDIANS IN OKLAHOMA**

This agency has jurisdiction over the restricted members of the Cherokee, Choctaw, Creek, Chickasaw, and Seminole Indian Nations. Through this agency are administered by authority of various acts of Congress, under regulations established by the Secretary of the Interior, the sale and leasing of lands and the distribution of funds derived from sales or leases. The total number of restricted Indians under this jurisdiction is approximately 28,000. They have funds to their credit held in trust for them in the sum of \$28,169,341.49.

These Indians reside for the most part in rural communities, usually on their own lands and in homes similar in most respects to those of their white neighbors and under like conditions. The fullblood Indians speak their native language but there are usually members of the families who speak English. They have the right of franchise, their own churches, their own social activities, and are in a real sense part of the body politic of the State of Oklahoma. There are instances of their serving as county officers, as members of the State legislature, and as Members of Congress. Mr. Adrian M.

Landman was appointed superintendent of the Five Civilized Tribes Agency, located at Muskogee, Okla., and entered on duty January 23, 1931. Albert G. McMillan was appointed assistant superintendent on February 5, 1931.

A reorganization of the probate work, with headquarters in the Muskogee office under the chief of a newly organized legal unit, was accomplished, which, it is believed, will lead to more effective work by the probate attorneys in the protection of the property interests of the restricted Indians of the Five Civilized Tribes. These attorneys render assistance to the Indians in recovering money due them, recovering lands and personal property, obtaining cancellation of fraudulent leases, and in having vacated and set aside judgments obtained in fraud of the rights of restricted Indians. They are freely consulted by the Indians and give advice and assistance to those seeking it, draw leases, examine abstracts of title, advise regarding the sales or purchase of lands by restricted Indians, prepare petitions for removal of unsatisfactory guardians, require proper accounting of the funds of the wards, and appear when necessary in the courts of Oklahoma for the protection of the interests of the Indians.

### *RELIEF WORK IN OKLAHOMA*

On December 9, 1930, the Secretary of the Interior asked the American Red Cross to help in the relief of drouth sufferers among certain members of the Five Civilized Tribes of Indians in Oklahoma. Many of these Indians are without property and the majority, under existing statutes, can not be granted direct relief by the Federal Government. The Indian Office has made it a practice to relieve distress among individual ward Indians of these tribes but any wholesale relief would have required a large appropriation from the Federal Treasury, which was not believed warranted, since the Federal Government has no legal responsibility for these Indians.

Because of the drought the relief needs became too great for the local communities to bear and the Red Cross was asked to extend its disaster program, particularly to the unrestricted Indians. The Red Cross responded immediately and instructed their chapter organizations throughout the eastern part of Oklahoma to cooperate fully with the Indian Office. We detailed one of our field representatives to work among these destitute Indian families and to help the Red Cross in their relief work.

Practically all the relief in Oklahoma was given to Indians within the territory of the Five Civilized Tribes. The work of the Red Cross closed on April 30, 1931. They had helped to feed and clothe during the winter an average of over 3,000 Indian families weekly. Their highest total of families assisted was 3,771 for the week ended March 14, 1931. After this date it gradually decreased. The following week a total of 3,631 families was assisted, of which 3,587 families were members of the Five Civilized Tribes. Only a comparatively few families of the Creeks and Seminoles were given relief, due to the fact that a large number of these Indians have had moneys due them from oil and gas leases, and those having funds were generous in assisting their friends and relatives.

The relief work done through the happy cooperation of the Red Cross more than met our expectations.

### *OIL, GAS, AND COAL MINING LEASES*

Interest in the acquisition of new oil and gas mining leases of restricted Indian lands was somewhat below normal during the year, while the number of leases surrendered for cancellation by lessees was unusually high. This was more or less a natural result, however, from prevailing economic conditions affecting the oil industry as a whole and drastic cuts in the prices of crude oil which went to an unprecedented low level. The records show 2,664 leases canceled and 1,279 leases approved during the year. Notwithstanding this there are approximately 1,282,500 acres still under lease and 14,748 producing oil wells, and 689 producing gas wells under supervision.

As a rule lessees have given splendid cooperation in the administration's general policy of conservation, by minimizing drilling activities, and in the curtailment of production. Relief from the drilling of additional wells required by the terms of leases executed prior to the inauguration of the present conservation policy was granted in a number of cases upon application of lessees; and permission to close temporarily producing wells where such can be done without damage to the producing sands was granted.

Many producing wells are being operated at much less than their full daily producing capacity. Naturally the gross production and total income of the Indians from oil and gas sources during the year has been substantially reduced. As compared with the prior fiscal year the figures are approximately as follows: Gross production for 1930, 40,696,424 barrels; gross production for 1931, 33,175,543 barrels; receipts for 1930, \$11,862,086; receipts for 1931, \$7,062,442.

Several suits were instituted during the year involving alleged unconstitutionality of provisions in the acts of Congress approved March 3, 1921 (41 Stat. L. 1249), and March 2, 1929 (45 Stat. L. 1478), extending the original mineral trust period on the Osage Reservation beyond April 8, 1931, on the underlying oil, gas, and other minerals, for the benefit of the Osage tribe in common. The United States district court for the northern district of Oklahoma decided the cases adversely to the contentions of the individual owners of the surface land, and appeals were taken to the United States Circuit Court of Appeals, tenth circuit, prior to close of the fiscal year.

Suits have been instituted in a number of cases involving leases of the segregated Choctaw and Chickasaw coal and asphalt lands in Oklahoma where we were unable to collect royalties. A number of these lessees have recently been placed under receivership. All leases in this area will have expired by September 25, 1932, and unless appropriate legislation is enacted by Congress prior to that time, the mines will have to be closed, as under present law we have no authority to make new leases of these deposits.

The Indian Service acknowledges with appreciation valuable assistance received through the Director of the Geological Survey, from petroleum engineers and other mining and geological experts in connection with the administration of mining leases upon restricted Indian lands.

**IRON ORE, FORT APACHE RESERVATION, ARIZ.**

The Geological Survey has published a bulletin, No. 821-C, describing valuable deposits of iron ore on the Fort Apache Indian Reservation, Ariz. The bulletin describes the ore as hematite, ranging from soft powdery light-red material to hard dense dark-blue iron oxide with more or less specularite present. Results of the brief survey made indicate that in the region near the mouth of Bear Spring Canyon, there is embedded a deposit of iron ore of good commercial grade and that the quantity mineable will reach approximately ten million long tons, with a possibility that even more may be found. The bulletin may be obtained from the Superintendent of Documents, Washington, D. C., for 15 cents.

**QUAPAW LEAD AND ZINC MINERAL LANDS**

The depression of the mining industry in the tri-State lead and zinc mining district has continued through the year. Many mines were shut down for temporary periods. However, during the past year the mines on the Quapaw restricted Indian lands produced 16.76 per cent of the lead and 28.13 per cent of the zinc output in that district, or 0.72 per cent of the lead and 9.64 per cent of the zinc output from ore mined in the United States during the fiscal year 1931.

At the close of the year there were in force 46 approved lead and zinc-mining leases (not including subleases) of Quapaw Indian restricted lands. The area covered by these leases aggregates 6,947 acres. From these leases and subleases 98,870 tons of lead and zinc concentrates were sold during the year for \$2,694,145.86. The royalties from bonus, rentals, and sale of tailings credited to the Indians during the year amounted to \$273,769.45. This royalty and other income is shared by about 72 Indians according to their respective interests.

**NAVAJO LAND PURCHASES**

Under authority contained in the act of May 29, 1928 (45 Stat. L. 883-899), and subsequent reappropriation acts we have purchased a total of 150,270.48 acres for the Navajo Indians at a total cost of \$251,212.91. These purchases were made from tribal funds. At present purchase of approximately 50,743 acres together with improvements is under consideration at a total cost of approximately \$65,176. In addition to the lands purchased, an exchange of land with the Santa Fe Railroad Co. in the Eastern Navajo district has been consummated. By this exchange approximately 2,300 acres were consolidated under authority contained in the act of March 3, 1921 (41 Stat. L. 1225-1239), for the benefit of the Navajo Indians, and resulted in overcoming the checker-board control within the area consolidated between the railroad company and the Indians. Active field work is now being carried on with a view of consummating in the near future a large exchange and consolidation under this act of all the railroad lands which the company feels it is willing to exchange.

### ADDITIONAL LANDS FOR INDIAN USE

Under authority of the act of February 21, 1931 (Public No. 707, 71st Cong.), 440 acres of public domain land were added to the Temecula or Pechanga Mission Reservation, Calif. A tract of approximately 15 acres within the city of Albuquerque, N. Mex., has been purchased at a cost of \$3,000 as a site for a sanatorium for the Indians of New Mexico and Arizona.

During the present fiscal year the act of May 23, 1930 (46 Stat. L. 378), was amended so as to provide for the relinquishment as an addition to the Western Navajo Reservation of approximately 23,000 acres of land now privately owned and adjacent to the reservation on the west. By act approved February 21, 1931 (Public No. 709, 71st Cong.), an appropriation of \$174,500 was authorized to purchase the privately owned land and improvements within the so-called 6-mile strip running east and west through the Papago Reservation, Ariz., separating the reservation into two parts. An appraisalment of the privately owned land, together with the improvements, has been made by our field force and it is expected that consummation of the purchase and permanent addition of the strip to the reservation will take place in the near future.

### CHOCTAW INDIANS OF MISSISSIPPI

During the fiscal year just closed seven separate tracts of land embracing a total of 302 acres were purchased at a cost of \$5,500. This land has been resold to eight full-blood Mississippi Choctaws under the reimbursable plan. It is estimated that these tracts will provide home places for 40 individuals. There is also under consideration the purchase of a 50-acre tract at a cost of \$1,000. If completed this land will be resold to one Indian.

The purchases to date for relief of these Indians embrace 2,356 acres, which have been acquired at a cost of \$57,932. This area has been resold to 77 individuals, and 348 persons have thus been provided with homes thereby.

### LEGISLATION

The act of March 4, 1931 (46 Stat. L. 1519), canceled irrigation reimbursables against Indian lands expended prior to June 7, 1924, the date of the act authorizing the construction of the Coolidge Dam, on irrigation works on the Gila River Reservation, Ariz., except \$100,000 expended for an electrical transmission line and rights to electric energy acquired from the Salt River Valley irrigation project; \$75,000 representing the value of the syphon of the Sacaton Dam and Bridge; \$87,000 representing the value of the Santan and Casa Blanca Canals and other works of the reservation situated north of the railroad which crosses the Gila River below Sacaton and not more than \$50,000 representing the value of the irrigation works for diverting and distributing the waters of the Gila and Salt Rivers below the railroad referred to, making a total not to exceed \$312,000. These sums remain reimbursable to the Government by the tribal and allotted lands of the reservation not included within

the San Carlos irrigation project. Congress by this legislation relieved these Indian lands of nearly \$1,400,000 that prior to enactment was a lien against the Indian lands that was created by prior congressional enactments the first of which was passed by Congress in 1905. There are other reservations on which reimbursable charges now exist and are a lien against the Indian lands that should be canceled. These problems are receiving consideration with the view to submission to Congress.

The act of March 3, 1931 (Public No. 788, 71st Cong.), authorized the Pillager Band of Chippewa Indians of Minnesota to submit their claims against the Government to the Court of Claims for adjudication. Formal contract based on a contingent fee has been entered into with a firm of attorneys for the purpose.

By the act of March 2, 1931 (Public No. 775, 71st Cong.), the Menominee Tribe of Wisconsin was authorized to employ general attorneys "for the purpose of defending any suits that may be brought against said tribe and formulating any claims that the Indians might have against the Government of the United States." Formal contract has been entered into, for a period of two years, with a firm of attorneys. Their fees and expenses are to be paid from the tribal funds in accordance with the terms of the act.

The act of February 14, 1931 (Public 650, 71st Cong.), authorizes the Secretary of the Interior to accept donations to, or in behalf of, institutions conducted for the benefit of Indians. In accordance with this act the department has accepted title in the name of the United States of America for a tract of something less than 3 acres in Winnebago, Nebr., which was donated and deeded by the Conservative Savings & Loan Association of Omaha, Nebr. We have also under consideration the acceptance of a tract to be donated for hospital or sanatorium purposes at the Pierre Indian School, Pierre, S. Dak., and a tract to be donated by the city of Winslow, Ariz., for a sanatorium.

An earnest effort was made during the last session of the Congress to obtain additional legislation dealing with restrictions affecting Indians of the Five Civilized Tribes in Oklahoma, but unfortunately the bill to accomplish that purpose, although passed by the House, failed in the Senate during the last hours of the Seventy-first Congress.

### *PUEBLO LANDS BOARD*

The last annual report mentioned the status of the work of the Pueblo lands board, which was established by the act of June 7, 1924 (43 Stat. L. 636).

During the year reports were submitted upon the Pueblos of Taos, Pojaque, and Zuni. This completed the reports on all except the San Felipe, in which suit is still pending in the court, and the Laguna Pueblo, which is delayed on account of efforts to effect a compromise settlement between the Indians and certain non-Indian claimants.

The total amount awarded the Indians for damages sustained for loss of lands and water rights has been increased by reason of court action in revising or modifying the board's awards in the cases of 13 Pueblos, in the sum of \$122,452.66. This now makes the total sum awarded the Indians, with the exception of the San Felipe and

Laguna Pueblos, \$545,136.09. The non-Indian claimants have been awarded the sum of \$170,180.17.

Payment to these Indians and to the non-Indian claimants for damages sustained will await appropriations by Congress.

### TRIBAL ENROLLMENT

The act of March 3, 1931 (Public No. 803, 71st Cong.), provided for the enrollment of children born since December 30, 1919, to members of the Blackfeet tribe of Indians, Montana, "to participate in the distribution of only such property, benefits, or money, as may be hereafter distributed," to the tribe.

Proper instructions have been given the superintendent of the Blackfeet Agency to make a roll of the children found entitled, for approval by the Secretary of the Interior, as required by the act cited.

The final roll of the Eastern Band of Cherokees of North Carolina, as provided by the act of June 4, 1924 (43 Stat. L. 376), was approved January 20, 1931, by the Secretary, and contained the names of 3,157 members of the tribe.

The act above mentioned was amended by that of March 4, 1931 (Public No. 841, 71st Cong.), providing in the main for a "true membership" instead of a final roll, and for postponement of allotments to these Indians until the receipt of further directions from Congress.

The work of enrolling the Indians of California, required by the act of May 18, 1928 (45 Stat. L. 602), is nearly finished in the field. It is understood that approximately 50,000 persons have applied for enrollment.

A roll or census of the so-called "Lost Band" of Chippewa Indians in the vicinity of Mole Lake, near Crandon, Wis., was prepared in August, 1930, and an investigation made as to their condition and needs. Of the 212 persons on the census, but 13 were found who were believed to be entitled to tribal rights with the Chippewa of the Lac du Flambeau Reservation, Wis.

A bill (H. R. 10932) was introduced in the last Congress for the relief of the 13, but failed of enactment.

### LITIGATION

In the case of Agnes Larsen Stookey et al. *v.* Ray Lyman Wilbur, Secretary, No. 78749, at law, the Supreme Court of the District of Columbia, held, in memorandum opinion of June 18, 1931, that mandamus would not lie to cause the Secretary of the Interior to enroll with the Gros Ventre tribe of Indians, Fort Berthold Reservation, Mont., Agnes Larsen Stookey, and 11 other members of the Larsen family. The petition was accordingly dismissed. The plaintiffs have given due notice of appeal and possibly will take the case to the District Court of Appeals.

The United States Supreme Court handed down a decision on April 14, 1930, in *Wilbur v. Kadrie et al.* (281 U. S. 206), which sustained the Solicitor's opinion of January 8, 1927, as against the one of February 17, 1919. Legislation was later introduced in Congress to supersede the decision (H. R. 13527 and S. 4832). The House

bill passed both houses of Congress, but was vetoed by the President on February 24, 1931.

One of the most important suits pending is the case, *United States v. J. Z. Wright, treasurer, Swing County, N. C., et al.*, taxation of lands of eastern Cherokee Indians for 1926 and subsequent years. The questions involved in this suit are the sovereignty of the United States over lands occupied by Cherokee Indians at the time of the Revolution and subsequently and ceded to the United States by treaties, and the constitutionality of section 21, act of June 4, 1924 (43 Stat. L. 376), providing that such lands should not be taxed after the taxable year following the date of the act until freed from restrictions after allotment. The case has been heard by the United States Circuit Court of Appeals, fourth circuit, but decision had not been rendered at the close of the fiscal year.

### INDIAN SUITS AND JUDGMENTS

The United States Court of Claims on December 1, 1930, handed down a supplemental judgment in the case of the Indians of the Fort Berthold Reservation, N. Dak., *v. United States*, No. B-449, awarding the Indians the net sum of \$2,169,168.58, which was an additional amount of \$198,908.92 over that awarded on April 7, 1930.

Suits have been filed during the year in the Court of Claims against the Government as follows:

Chippewa Indians of Minnesota, amended petition in H-155, filed August 8, 1930.

Northwestern Band of Shoshoni Indians, M-107, filed March 28, 1931.

Warm Springs Indians, M-112, filed April 7, 1931.

Chippewa Indians of Minnesota, M-135, filed May 7, 1931.

Citizen Band of Potawatomi, M-186, filed June 3, 1931.

At the beginning of the last fiscal year a suit had just been decided in the United States Circuit Court of Appeals, ninth circuit, entitled *the United States of America, appellant, v. Hilary Halbert, jr., et al.*, and 11 other cases involving the rights of the claimants to allotment on the Quinaielt Indian Reservation, Wash.

A decree in this case was rendered in favor of the United States, but the case was sent to the Supreme Court of the United States on a writ of certiorari. When the record was sent up it was found to be incomplete and inadequate to decide all questions at issue. The case was decided by the Supreme Court June 1, 1931, in favor of the claimants.

### INDIAN CLAIMS

Field investigation of claims against the Government filed by individual Sioux Indians enrolled under the various Sioux Agencies under the act of May 3, 1928 (45 Stat. L. 484), has been practically completed, although final report of the investigator has not been submitted. It will be necessary to review these cases in this office and submit them to the department with appropriate recommendation.

The determination of the heirs of the loyal Shawnee Indians of Oklahoma for depredations committed against them by troops dur-

ing the Civil War has been undertaken. This work was delayed by reason of a suit filed against the Secretary of the Interior involving the question as to the right of the department to determine the heirs of Indians of the Five Civilized Tribes. The suit was withdrawn and work is now in progress to determine such heirs in order that the \$109,000 appropriated by the act of March 26, 1930 (46 Stat. 125), can be paid out.

The act of June 21, 1930 (46 Stat. L. 793), authorized an appropriation of \$300,000 in settlement of the claims of the Sisseton and Wahpeton Bands of Sioux Indians against the Government.

The money was appropriated by the act of July 3, 1930 (46 Stat. 876), and the Secretary was authorized to withdraw the funds for payment by the act of March 4, 1931 (Public No. 869).

Instructions to investigate all applications for enrollment with these Indians, and to make a pay roll to be approved by the Secretary have been issued to the respective superintendents in charge of these bands of Sioux, and the work is progressing rapidly in the field. In view of the large number of applications to be passed upon, it will require considerable time before the roll can be completed, and the funds paid out to those found entitled to share in the funds. Members of the staff in Washington have been sent to the field to expedite this work.

An appropriation of \$1,217,221.25 was authorized by the act of February 13, 1931 (Public No. 622), in settlement of the claims against the United States of the Uintah, White River, and Uncompahgre Bands of Utes of Utah for lands taken without compensation by the Government for the Uintah National Forest.

The funds were appropriated by the act of March 4, 1931 (Public No. 869, 71st Cong.). They have been placed in the Treasury to the credit of these Indians at 4 per cent interest per annum; and, under the act of authorization, are to be "disposed of in the same manner as now or hereafter provided by law for the disposition of other funds belonging to said Indians."

A report was made July 20, 1931, to the Congress, as required by the act of February 13, 1931, of the value found by the Geological Survey of the 36,223 acres of coal lands within the forest—such value amounting to \$62,165.75.

### RIGHTS OF WAY

The outstanding development during the past year was the payment by the city of San Diego, Calif., of the sum of \$361,428 for the right to overflow and use for reservoir purposes some 2,000 acres within the Capitan Grande Indian Reservation, Calif., granted by the act of February 28, 1919 (40 Stat. L. 1206).

Despite urgings to the contrary, the Office of Indian Affairs feels that there is no need for hasty judgment as to where these Indians are to be located in the future, as they are privileged to occupy and use the reservoir site up to within 90 days of the time when water will be turned into the proposed reservoir, construction of which has not been commenced and will probably not be completed for several years.

Field investigations and studies of the many problems involved are now under way, and every effort is to be made to formulate a plan

which will not only be acceptable to the Indians themselves but also bring about the maximum improvement in their present living conditions. Before the plan ultimately adopted can be put into effect it may be that additional authority from Congress will be required.

### ALLOTMENTS

Allotments in severalty were made to 398 individual Indians during the 1931 fiscal year embracing lands on various reservations aggregating 82,784.88 acres, as follows:

| Reservation                  | Number of allotments | Acreage   |
|------------------------------|----------------------|-----------|
| Fort Peck, Mont.....         | 242                  | 59,907.64 |
| Cheyenne River, S. Dak.....  | 135                  | 21,671.49 |
| Pine Ridge, S. Dak.....      | 1                    | 160.00    |
| Lower Brule, S. Dak.....     | 1                    | 100.60    |
| Turtle Mountain, N. Dak..... | 1                    | 80.00     |
| Torrez-Martinez, Calif.....  | 9                    | 360.00    |
| White Earth, Minn.....       | 3                    | 240.64    |
| Fallon, Nev.....             | 4                    | 40.00     |
| Klamath, Oreg.....           | 1                    | 160.00    |
| Colville, Wash.....          | 1                    | 64.51     |
|                              | 398                  | 82,784.88 |

In addition to reservation allotments 345 allotments embracing a total of 54,654 acres were made to Indians residing on the public domain.

A special allotting agent is now engaged in making allotments in severalty to Indians on the Northern Cheyenne Reservation pursuant to authority contained in the act of June 3, 1926 (44 Stat. L. 690). Approximately 1,500 Indians are qualified to be allotted and it is expected that the work will be completed during the latter part of September of this year.

### EXTENSION OF TRUST PERIODS

The period of trust was extended by order of the President on allotments made to Indians of the Klamath River and Agua Caliente Mission Bands, California; Kickapoo and Potawatomi Bands, Kansas; Cass Lake, Leech Lake, Fond du Lac, White Oak Point, and Winnibigoshish Bands of Chippewas, Minnesota; Niobrara or Santee, Nebraska; Ponca, Oklahoma; Cayuse, Umatilla and Walla Walla Bands, Oregon; and various bands on the Cheyenne River and Pine Ridge Reservations, S. Dak.

### PROBATE WORK

Under the act of June 25, 1910 (36 Stat. L. 855), as amended, authority to determine heirs of deceased Indian allottees rests exclusively with the Secretary of the Interior, except in the Five Civilized Tribes and the Osage Nation. Authority to determine the heirs of the latter was conferred by Congress on the courts of the State of Oklahoma.

A few years ago the probate work was practically up to date. Through increasing deaths from old age and other conditions prevailing among the Indian population a considerable number of cases have accumulated, due primarily to the comparatively small corps of employees engaged exclusively in this work in the field. There are 11 examiners of inheritance with necessary clerical assistance employed for the purpose of holding hearings to develop the facts in each case, based upon which a finding of heirs can be made or appropriate action taken in the cases of deceased Indians leaving wills. Under the procedure inaugurated about two years ago uncomplicated and uncontested cases can be handled by the superintendents and other local agency employees without awaiting the arrival of an examiner of inheritance. The result of this innovation has been gratifying, the superintendents having sent in approximately 400 of this class of cases. The superintendents, however, are burdened with other pressing duties and necessarily there are a number of complicated cases which can not be handled until an examiner of inheritance reaches the reservation to conduct the required hearings and take the testimony.

During the fiscal year just ended 1,916 heirship cases were probated and 399 wills approved. In addition 174 wills were approved as to form and 1,759 miscellaneous letters handled.

Under the graduated scale of fees now in force \$74,655 was earned during the year and the aggregate amount actually collected during the same period was \$59,508.48.

### LAND SALES

Cash and completed deferred payment sales have been disposed of through this office during the fiscal year ending June 30, 1931, on 206 tracts of original allotments, aggregating 19,132 acres, for a consideration of \$282,452, and on 438 tracts of inherited lands, aggregating 50,663 acres, for \$726,086, making a total of 69,795 acres sold, for a total consideration of \$1,008,538.

This year's sales approximate 3,000 less acres than sold in 1930. Income from sales was \$97,500 less than last year. The difference is mainly due to the fact that time has been extended to purchasers to make final payments, thereby lessening the total number of sales completed.

There were issued on application 166 patents in fee to Indians, thereby releasing from governmental control 24,447 acres, and there have been granted 10 certificates of competency and orders removing restrictions, releasing 535 acres more. Less than 50 per cent of the applications for patents in fee received were granted.

There are always a large number of tracts of inherited lands partitioned among the heirs and trust patents are issued for lands assigned to the respective interests.

Where inherited lands are susceptible of a fair and equitable division and the heirs are not numerous, it is our policy to encourage partitions rather than sales so the younger and more able-bodied Indians, many of whom received no allotments, may have farm lands and home sites. Many purchases are made for Indians who

have industrial occupations in and around towns and where their children need to be near schools. To avoid, so far as possible, loss of lands which represent Indian trust funds, through taxation by the State, the purchase of lands which have been taxed and are therefore properly on the tax lists of the county, is discouraged, and superintendents are urged to find suitable tracts which are still under trust so that the line of Government supervision and trust and of tax exemption as provided by law or treaty will not be broken.

### *CANCELLATION OF PATENTS IN FEE*

Patents in fee issued to Indians for their allotments prior to 1921 under the so-called "declaration of policy" are being canceled under the provisions of the act of February 26, 1927 (44 Stat. 1247). More than 300 have been canceled so far and the number is expected to be greatly increased when applications have been made under the act of February 21, 1931 (Public 713, 71st Cong.). Each act applies to patents issued during the trust period without application by, or consent of, the patentee. The act of 1927 authorizes cancellation of the patent where the Indian had neither sold nor mortgaged any part of the land, and the patent never became effective. The act of 1931 authorizes cancellation so far as unsold portions are concerned, or the whole where the land has been mortgaged and the mortgage released. The bills enacted into these laws were introduced at the request of the Interior Department for the purpose of saving as many as possible of the homes of Indians imperiled by issuance of patents in fee without their application. The greater number have lost their lands through mortgage foreclosure, or tax sales, the fee patents having become effective upon execution of a deed or mortgage by the patentee.

### *CONSTRUCTION*

Funds made available during the last session of Congress for new construction in the Indian Service for the fiscal year ending June 30, 1932, aggregated \$6,058,800. For 1931, the amount available for construction was \$4,020,863. These amounts represent appropriations for school, agency, and hospital buildings, and new construction on Indian irrigation projects.

Plans and specifications are prepared by a staff of technical employees trained in designing, drafting, engineering, and other fields. Superintendents of construction are assigned to field areas for the purpose of assisting superintendents and others having immediate charge of construction projects.

### *POPULATION*

As a result of a shortage of funds this office was forced to estimate the 1931 population. Hence the April 1, 1931, Indian population was estimated by adding to the 1930 population the births and such Indians as had been previously omitted from the census roll but were entitled to enrollment and deducting from the 1930 population the reported deaths and the Indians illegally or wrongfully enrolled.

The number of Indians reported by the Federal agencies on April 1, 1931, was 314,543. This number consists of 225,544 Indians actually enumerated and 88,999 Indians taken from earlier and special censuses and estimates based on records.

Previously the population for the Five Civilized Tribes has been the number given on the Five Civilized Tribes roll of March 4, 1907. This number, 101,506, consists of 23,405 freedmen, 2,582 whites intermarried with the Five Civilized Tribes, and 75,519 Indians of the Five Civilized Tribes. The freedmen and intermarried whites have been deducted from the 1931 Indian population, as they are not Indians; but have the legal rights of an Indian.

The Federal census enumerated in Oklahoma 72,643 Indians of the Five Civilized Tribes, and this number has been substituted as the population for the Five Civilized Tribes. Hence the seeming decrease in the total population from 1930 to 1931.

In fact, excluding the Five Civilized Tribes, the April 1, 1931, population shows an increase of 2,865 Indians, or 1.2 per cent, over the preceding year.

### LIBRARY

The Indian Office library which is maintained for the use of the department and the general public has during the past year distributed 105,478 pamphlets to individuals and organizations interested in the various phases of our work. The library has also carried on considerable research into the history of the bureau.

### SUPPLIES AND EQUIPMENT

Market conditions during the past year resulted in our obtaining unusually good competition in the way of bids from dealers and manufacturers. It has been possible to purchase at low prices a line of high grade and substantial equipment and the additional supply of needed food and clothing.

Our catalogue of Indian goods and supplies for the field service has been revised and we have added many new items of foodstuffs, dry goods, medical supplies, and school books. We have also eliminated many supplies which have become more or less obsolete.

### CONCLUSION

In concluding this report we wish to express our appreciation of the interest and assistance so generously extended by yourself and other representatives of the department. We also wish to take this opportunity to acknowledge the willing spirit of cooperation which has been shown by the employees of the Washington office, and also by the field personnel.

We wish to acknowledge the continued help and cooperation received from the Board of Indian Commissioners which has been of great value and is deeply appreciated.

Sincerely yours,

CHARLES J. RHOADS,  
*Commissioner.*  
J. HENRY SCATTERGOOD,  
*Assistant Commissioner.*

THE SECRETARY OF THE INTERIOR.

## APPENDIX

### *Indian Population*

An Indian, as defined by the Indian Service, includes any person of Indian blood who through wardship, treaty, or inheritance has acquired certain rights. The Census Bureau defines an Indian as a person having Indian blood to such a degree as to be recognized in his community as an Indian. Furthermore, the population enumerated at the Federal agencies is not necessarily domiciled on or near the reservations. It is the population on the agency rolls and includes both reservation and nonreservation Indians. Thus, an Indian may be carried on the rolls because of tribal or inheritance rights, etc., and may reside anywhere in the United States or in a foreign country. Reports of births and deaths among absentees are often not received. In many instances certification is made to the State registrars of vital statistics and thus to the Census Bureau, but not to the Indian Service. In a considerable number of cases the addresses of the nonreservation Indians are unknown. For the above reasons the statistics of Indian population as shown in the decennial reports of the Bureau of the Census do not agree with the statistics of the Indian Service.

On account of a shortage of funds this office was unable to secure the services of the usual temporary employees for coding and tabulating the 1931 census roll. Therefore, the April 1, 1931, Indian population was estimated by adding to the 1930 population the births and such Indians as had been previously omitted from the census rolls but were entitled to enrollment and deducting from the 1930 population the deaths which were reported during the year and the Indians illegally or wrongfully enrolled, etc.

The total estimated and enumerated number of Indians reported by Federal agencies on April 1, 1931, was 314,543. This number consists of 225,544 Indians actually enumerated and 88,999 Indians taken from earlier and special censuses and estimates based on records. For convenience the latter number hereafter will be considered as an estimate. (See tabular statement below.)

The population for the Five Civilized Tribes has heretofore been taken from the final roll of the tribes of March 4, 1907. This roll numbered 101,506, and included 23,405 freedmen, 2,582 whites intermarried with Five Civilized Tribes Indians, and 75,519 Indians of the Five Civilized Tribes. The freedmen and intermarried whites have been dropped this year from the population figure, since they are not Indians. They, however, had the legal rights of an Indian, but this office no longer has jurisdiction over these groups.

The Bureau of the Census in a preliminary tabulation reports 72,643 Indians of the Five Civilized Tribes in 1930, and this number is being substituted for our previous estimated population of the Five Civilized Tribes.

A census roll of the Five Civilized Tribes has never been compiled by this office, and at present we have no sound basis for an estimated population, therefore the Bureau of the Census population for 1930 is accepted as the population for the Five Civilized Tribes. This number may seem inconsistent with the 75,519 Indians reported on the final roll of the Five Civilized Tribes 23 years earlier, but the difference no doubt is accounted for in part by the fact that so many of the Indians are mixed, and evidently were enumerated in 1930 as whites, hence it is believed the Census figure is an understatement.

The aggregate estimated and enumerated population for April 1, 1931, excluding the Five Civilized Tribes population, represents an increase over the corresponding figure for the previous year of 2,865, or 1.2 per cent. The per cent increase is the same when a comparison is made between the number actually enumerated in the same areas for 1930 and 1931.

Of the 225,544 Indians enumerated, 114,778 were males, 110,753 females, and for 13 the sex was not reported.

It is significant of the Indians enumerated that 189,162, or 83.9 per cent, resided under Federal jurisdiction where enrolled, while only 4,051, or 1.8 per cent, resided at another jurisdiction, and 32,331, or 14.3 per cent, resided elsewhere—that is, outside of any Federal jurisdiction.

Of the 32,447 Indians residing elsewhere on April 1, 1930, 41 were living in the New England States, 208 in the Middle Atlantic, 3,633 in the East North Central, 9,234 in the West North Central, 437 in the South Atlantic, 93 in the East South Central, 2,166 in the West South Central, 5,120 in the Mountain States, and 6,024 in the Pacific States, and for 5,491 Indians the residence was either not reported or unknown.

Oklahoma has far more Indians than any other State. If the Federal Census population of the Five Civilized Tribes is included, the Indian population is 93,785, or 29.8 per cent of the aggregate Indian population. Arizona ranks next with 47,577, or 15.1 per cent. According to the enumerated population only two other States have an Indian population numbering more than 20,000 New Mexico and South Dakota.

According to a tabulation of the tribes enumerated on April 1, 1930, the most important numerically were the Navajo, Sioux, and Chippewa, numbering 40,862, 33,168, and 23,647, respectively.

The Indian population not actually enumerated (termed an estimate) is 88,999, which is compiled as follows:

|  |        |
|--|--------|
| California, Sacramento Agency, part of, 1930 estimate.....             | 8,761  |
| Michigan, 1927 census.....   | 1,192  |
| New York, 1928 per capita payment rolls and 1931 estimate.....         | 4,491  |
| Oklahoma, Five Civilized Tribes, Bureau of the Census, 1930.....       | 72,643 |
| Texas, 1931 special report.....  | 250    |
| Utah, unallotted bands at Washakie, Fort Hall Agency, 1931 census..... | 127    |
| Washington, Taholah Agency, scattered bands, 1931 estimate.....        | 715    |
| Wisconsin:   |        |
| Rice Lake Band of Chippewa, special census, July, 1930.....            | 221    |
| Stockbridge Reservation, Keshena Agency, 1910 census.....              | 599    |

In the following table the Indian population as reported by the United States Fifteenth Census for 1930 is given for States in which there are no Federal agencies.

Doubtless many of these Indians are duplicated in the columns "Residing elsewhere" in the table showing Indian population in continental United States enumerated at Federal agencies, according to tribe, sex, and residence, April 1, 1931.

TABLE 1.—Indian population<sup>1</sup> of States in which there are no Federal agencies, 1930

| Division and State     | Total  | Male  | Female | Division and State        | Total | Male | Female |
|------------------------|--------|-------|--------|---------------------------|-------|------|--------|
| Total.....             | 10,456 | 5,557 | 4,899  | South Atlantic:           |       |      |        |
| New England:           |        |       |        | Delaware.....             | 5     | 3    | 2      |
| Maine.....             | 1,012  | 518   | 494    | Maryland.....             | 50    | 34   | 16     |
| New Hampshire.....     | 64     | 33    | 31     | District of Columbia..... | 40    | 17   | 23     |
| Vermont.....           | 36     | 20    | 16     | Virginia.....             | 779   | 436  | 343    |
| Massachusetts.....     | 874    | 458   | 416    | West Virginia.....        | 18    | 15   | 3      |

## THE OFFICE OF INDIAN AFFAIRS

Among the duties assigned to the War Department, when it was created by Congress under the act of August 7, 1789, were those "relative to Indian affairs."

On March 11, 1824, a Bureau of Indian Affairs was organized in the War Department. At the head of this bureau was Thomas L. McKenney. He was charged with the administration of the fund for the civilization of the Indians, under regulations established by the department, the examination of the claims arising out of the laws regulating the intercourse with Indian tribes, and the routine correspondence with his representatives in the field, the superintendents, agents, and subagents. On September 30, 1830, Samuel S. Hamilton became chief. He was succeeded by Elbert Herring about a year later.

The office of Commissioner of Indian Affairs was created in the War Department by the act of July 9, 1832. Subject to the Secretary of War and the President, the commissioner was to have "the direction and management of all Indian affairs and all matters arising out of Indian relations."

Two years later, on June 30, 1834, an act was passed "to provide for the organization of the Department of Indian Affairs." Certain agencies were established, others abolished. This act, considered the organic law of the Indian Department, provided for subagents, interpreters, and other employees, the payment of annuities, the purchase and distribution of supplies, etc.

The Bureau of Indian Affairs passed from military to civil control when the Department of the Interior was created by the act of March 3, 1849.

Under section 441 of the Revised Statutes "The Secretary of the Interior is charged with the supervision of public business relating to \* \* \* the Indians," and section 463 provides that "The Commissioner of Indian Affairs shall, under the direction of the Secretary of the Interior and agreeable to such regulations as the President may prescribe, have the management of all Indian affairs and of all matters arising out of Indian relations."

# REPORT OF THE COMMISSIONER OF INDIAN AFFAIRS

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
*Washington, D. C.*

The honorable the SECRETARY OF THE INTERIOR.

SIR: We submit herewith the annual report of the Office of Indian Affairs for the fiscal year ended June 30, 1932.

## FOREWORD

The effect of economic conditions on the social welfare of the Indians has been the outstanding factor in the administration of the Indian Service during the year.

Beginning in the summer of 1931, drought and grasshoppers devastated the States of Nebraska, North and South Dakota, and eastern Montana. Other States were also affected, and by early October the Indian Office was confronted with appeals for relief from most sections of the 26 States in which the Federal Government has jurisdiction over Indians. The Indian Service had little available money for relief work until after Congress met in December, but beginning in November the Red Cross most generously contributed over a period of several months \$192,260 for use in those sections of extreme drought. After an appropriation was obtained, the Red Cross funds were used for relief of nonwards in the areas mentioned.

With the coming of winter the general relief need became so great that we called upon the Army for surplus stocks. They responded with 55 carloads of clothing, including overcoats, jackets, gloves, wool trousers, underwear, shirts, socks, shoes, and blanket material. We also received and distributed 6,190,000 pounds of flour for human consumption and 5,500,000 pounds of crushed wheat for stock feeding which had been turned over by the Federal Farm Board to the Red Cross for relief purposes.

A succession of unprecedented storms began in New Mexico and Arizona during the month of November. Storm upon storm had by January covered a large area of the Navajo jurisdictions with a blanket of snow. Roads were impassable and marooned groups in the mountain fastnesses faced death and starvation. Again we called upon the Army. Within a few hours after the plight of these unfortunate people had been made known to the Assistant Secretary of War six airplanes were on their way from California into the Navajo country. In four days over 30,000 pounds of food were dropped to the distressed Indians.

Congress responded to our plea for funds and in addition to relief obtained from the foregoing sources, a total of \$410,000 more was appropriated for use during the year. The Department of Agriculture cooperated in granting seed loans to Indians in the Northwest. Notwithstanding the many adverse circumstances, with the cooperation above mentioned, we were able to meet all legitimate demands for relief.

The foregoing briefly covers the material side of the problem, but the social effect on the Indians was far-reaching.

Failure of crops and subsistence gardens when the Indians had planted more subsistence gardens than at any time in the past, the difficulty of Indians securing any kind of work in competition with thousands of unemployed whites all tended to a revival of the old ration system. Every effort was made to combat this tendency in a humane and sympathetic spirit. Indians were asked to work for food and clothing issued to them. Road appropriations were used to furnish wages, and employment was distributed on a stagger system in order to benefit the greatest number. The gratifying result was that the Indians in general responded to this program so that their self-respect has been well maintained.

Many Indians who had established themselves away from reservations lost their jobs and returned to live with relations and friends, thus intensifying the difficulty. This year many who so returned are turning to subsistence gardening where possible.

The 6,000 field service employees, one-third of whom are of Indian blood, met the crisis with courage and ability. Everywhere the doctrine of self-help was preached and put into practice.

### EDUCATION

The most significant feature of the year in Indian education was the determined effort to make the change from boarding school attendance to local day or public school attendance for Indian children. With economic conditions as they have been and with the notable improvement in food and clothing standards, school equipment, and personnel in Indian boarding schools, the whole situation of former years has altered. Instead of forcing Indian children into Government boarding schools, we are now engaged in a serious effort to prevent these schools from being badly overcrowded and to see to it that as far as possible places in the boarding schools are reserved for those for whom adequate facilities are not otherwise available. We have gone ahead steadily in our program of eliminating and reducing boarding school attendance, particularly for younger children. Six boarding schools were closed or changed to day schools at the end of the year and two others were put on the list to be closed in 1933. The two boarding schools closed were the Seger School, at Colony, Okla., and the Tulalip Boarding School, Tulalip, Wash. The four boarding schools changed to community day schools were those at Hoopa Valley, Calif.; Lac du Flambeau, Wis.; Fort Yuma, Calif.; and Pima, Ariz. In the six schools closed or changed there were 1,218 pupils, practically all of whom will now attend local schools and live at home.

Typical of the effort that is being made to provide the Indian's education in his own community setting, in close touch with his immediate economic and social requirements, is the program on the Pima Reservation in Arizona. Prior to the present year, although there were some day schools maintained by the Government and some of the younger children went to mission and public schools, a large proportion of the Pima boys and girls were sent to boarding schools away from their homes. In May, 1932, the Secretary of the Interior, acting in accordance with the special diversion provision in the 1933 appropriation act, authorized a construction program designed to build up schools for the Pima children close to their homes on the reservation. Two consolidated schools have been erected at centers of population (Casa Blanca and Santan), and these and the other day schools are taking children through the sixth grade. The former boarding school plant at Sacaton has become the central high and vocational school, to which pupils from the seventh grade and above are transported by a modern bus system. Having in mind the relation of the Pima Indians to the vital reclamation project that has been carried forward in their country and the traditional success of these Indians as irrigation farmers, the Sacaton school is emphasizing the teaching of practical agriculture.

One reason for the opposition in the past to day schools on the part of sincere friends of the Indians and the Indians themselves has been the meager provision in the old-time Government day school, which was in this respect like most other American rural schools. Special care is being taken to see that the community day schools to be set up in place of boarding schools are of good quality and adapted to the home and community needs of the Indians. At Lac du Flambeau, where for years the boarding school had mainly for its clientele the children of two near-by villages, a school social worker (visiting teacher) has been at work for a year, assisting the adults of the community, particularly the women, in getting ready for a change which for many of them means that for the first time in their lives they will have to undertake the responsibility of the care of children of school age throughout the year. In many instances a difficult task of rehabilitation of home and family life is involved, in which the most careful arrangements will have to be made to prevent serious harm to the children. The Lac du Flambeau School, like others of the community type, starts out with a staff of teachers and other workers superior to what would usually be provided in rural regions, and with a program more definitely related to the village needs than is ordinarily possible. For the sake of Indian children the Government can not afford to make the change from boarding school to day school without substituting an adequate program of health care, family follow-up, and practical training.

At Hoopa Valley the preparations for the change have involved particularly relations with public schools, while at Fort Yuma the task is essentially that of improving home conditions. At both Fort Yuma and Tulalip home economics teachers were retained as part of the new community set-up, and at Tulalip a school social worker was authorized to facilitate the adjustment between home and school under conditions of public school attendance.

*REDUCTION IN THE LARGER SCHOOLS*

As has been indicated in previous reports, the problem is not merely one of eliminating boarding schools and building up local education facilities but rather of making the best use of the facilities the Federal Government may be able to provide. It has been clear to interested observers for some time that a disproportionate amount of resources in Indian education has been going into boarding institutions and not enough into life on the reservation or in the community where the Indians live.

Aside from the abolishment of boarding schools already mentioned, the most important step taken during the past year has been in the reduction of numbers and particularly the elimination of small children from the large boarding schools. The program initiated in this respect five years ago whereby the larger schools dropped one of their elementary grades each year has been intensified this year. Two of the schools, both stressing a specialized vocational education (Haskell Institute, Lawrence, Kans., and Flandreau Indian School, Flandreau, S. Dak.) now have no boys and girls below the ninth grade. While we have been careful not to encourage college work at Haskell or any other Indian school, believing that the Federal Government ought not to duplicate higher education facilities that are available to Indians as well as to whites, we have encouraged the development of specialized vocational work at such places as Haskell, Flandreau, and Chilocco (Okla.). This program is for older youth, not for children.

Accordingly, in pursuance of a carefully worked out plan, instructions were issued in the spring of 1932 to most of the schools included in the so-called "nonreservation" group, specifying the grades they were to have, the geographical area from which they were to draw, or the special objectives they were expected to meet. Visitors to large Indian boarding schools who have been properly disturbed in the past at the hundreds of little children crowded into these institutions will be glad to know that, in addition to the three schools mentioned above, the Albuquerque Indian School, Albuquerque, N. Mex., has no pupils below the seventh grade, and that Sherman Institute, Riverside, Calif., Salem Indian School, Chemawa, Oreg., and Phoenix Indian School, Phoenix, Ariz., will have no pupils below the sixth grade. The schools at Santa Fe, N. Mex., and Genoa, Nebr., are also raising their ages and grades. In other boarding schools, particularly the smaller ones, the reduction in numbers is being worked out on a different basis. At Mount Pleasant, Mich., for example, the school social worker is studying the intake of pupils with great care in order that special cases regardless of age or grade may be cared for. Obviously some Indian children must be cared for in institutions, but the trend away from institutionalizing of large numbers of Indian children seems clear enough. Despite the pressure upon the boarding schools these past two years, due to the economic situation, the total numbers in boarding schools have decreased and the pupils in advanced grades far outnumber the others. There are 2,000 fewer boys and girls in Government Indian boarding schools in the fall of 1932 than there were a year ago, and of the

7,089 pupils enrolled in the 8 largest schools during the year, 5,787 were in grades above the sixth. Preliminary enrollments in this same group of 8 schools for the coming year show a total of 5,046, of whom 4,681 are in junior or senior high-school grades, and while the total enrollment in this group will increase somewhat over this advance figure as the year goes on, the proportion will almost certainly be even more heavily in favor of the higher grades. The whole tendency is to save these educational opportunities, as long as they are needed, for special types of work that Indian boys and girls, particularly those of a considerable degree of Indian blood, could not get in their own localities or with the resources they have.

#### *PUBLIC SCHOOLS*

The policy of encouraging education of Indian children in public schools wherever feasible has continued to meet with a hearty response, even under economic conditions that have meant a heavy pressure upon boarding school attendance. Contracts with school districts for tuition for Indian children that have been made for the year 1932-33 already total 1,160, as against 998 for the fiscal year 1931-32 and 841 for the year before. These contracts are for all parts of the Indian country except the Five Tribes of Oklahoma, where a special arrangement prevails. The number of Indian children attending public schools in the year ending 1932 was over 48,000, as compared with 43,000 in 1931 and 38,000 two years ago. The increase was so marked that it was necessary to secure a deficiency appropriation in 1932 to cover obligations incurred, and we have already had to reject a number of meritorious applications for the year beginning September, 1932, for lack of funds.

#### *THE EXISTING SCHOOLS*

Improvement in the institutional care and the quality of the educational process made possible by the 1931 and 1932 appropriations was distinctly noticeable in the schools this year. As a result of better standards for staff recruiting, improved professional supervision, and the eagerness of workers everywhere to take advantages of the opportunities for in-service training, all the schools, including nonreservation boarding schools, reservation boarding schools, and day schools—ranging from the smallest Pueblo school in the Southwest to the consolidated school at Turtle Mountain, N. Dak., with its hundreds scattered through all grades—had a good year. Especially successful have been the efforts to utilize Indian life and culture in the Southwest, in a school like that at Santa Fe, for example, where young Indian artists are having an unusual opportunity. Genuine needs for improvement exist without any question—needs that will doubtless have to be deferred in the present emergency—but Government Indian schools now come closer to meeting modern educational requirements than they formerly did, even though they still lag behind the standards set up by the White House Conference on Child Health and Protection and other organizations and agencies having to do with education and institutional care. It is believed that the steps so far

taken, especially in securing qualified educational personnel, are definitely in the direction of the planned procedure that is essential if the Indian program is to be worked out in our generation. Particularly valuable for the present and future Indian program is the small but effective group of local school superintendents made possible by the 1932 appropriations to supplement capable men and women already in the service. With qualified educational leadership recruited from the outside or developed and encouraged from within, with the help of such workers as the advisers in the schools, home economics teachers, additional special teachers, and school social workers on the reservations, it may fairly be said that progress is being made.

#### *GUIDANCE AND JUNIOR PLACEMENT*

Adequate vocational preparation, including guidance and placement, has been a serious problem in connection with Indian education from the earliest times. With the selection of a full-time director of employment for the Indian Service, referred to elsewhere in this report, it has become possible for the education staff to give its attention more directly to vocational guidance in schools, junior placement, and supervision of further training. Present-day forms of the "outing" system, long a feature of the Indian work, have continued in operation at Los Angeles and several other points. At Kansas City the assistant guidance and placement officer has inaugurated a plan of guidance through staff workers at Haskell Institute, and has been instructed to develop similar plans at other schools. Another such worker, having been granted leave for a year by the Indian Service to make, under the sponsorship of the Institute for Government Research, a special study of advanced training opportunities for Indians, has now been placed in charge of the work of higher education for Indians. With headquarters in Oklahoma, where a considerable number of Indian youth are already going on into college and other advanced training, this worker, who is herself a woman of Indian blood, graduated from one of the best American women's colleges, will pass upon applications for aid for further training. As indicated elsewhere, the Federal Government is not maintaining a separate college for Indians and does not plan to.

We can now, however, offer to a properly qualified Indian youth opportunities for higher education or advanced special training through any one or more of four different channels:

- (1) Educational loans, from Federal or tribal funds, repayable in eight years. Under the aid made possible through the educational loans, 76 Indian young men and young women were taking special training in universities and colleges or other training institutions of higher grade in the year ended June 30, 1932.
- (2) Room and board at Indian schools located close to universities and colleges, in return for a certain amount of labor.
- (3) Payment of tuition fees to State universities and colleges (made possible for the first time in the 1933 appropriation act).
- (4) Scholarships at various institutions. The University of Michigan recently established five scholarships open to Indian students throughout the United States.

## ALASKA

Available funds allowed little change in the number of schools or educational facilities generally in Alaska, but the year 1932 saw some important improvements come to fruition. The department's new boat, the *North Star*, upon which the Alaskan service necessarily depends in large part for supplies and transportation of personnel, especially in the more remote areas, was finished in time to make her first trip before the close of the fiscal year. The buildings of Wrangell Institute, the new boarding school at Shoemaker Bay, near Wrangell, were completed, and a new staff secured for beginning the work in the fall of 1932. In order to make possible the opening of this new school, and further to emphasize the unwisdom of multiplication of institutional facilities except where sorely needed, the Kanakanuk Orphanage was closed at the end of the year and the children either sent back to local communities or, in a comparatively small proportion of the cases, transferred to one of the few other boarding schools, the Alaskan education work properly emphasizing local educational provision wherever possible. Some informal preliminary inquiries were begun regarding cooperation between the Territory and the Federal Government schools. A 2-year study made under the auspices of Stanford University was completed on July 1, 1932, and the findings are to be made available for future planning in Alaskan education. Just before the close of the year the position of director of education for the natives of Alaska was set up, with headquarters at Juneau, this position taking the place of that of the chief of the Alaska division, which was abolished. The incumbent of the new position, Mr. Paul W. Gordon, has had training and experience in the fields of education, anthropology, and business administration.

## HEALTH

Each year finds an increasing number of Indians seeking medical and hospital relief. This increase has been manifest in the year just past. Progress is being attained in general public-health measures throughout the Indian field, and the medical, nursing, and lay personnel of the various jurisdictions are giving greater emphasis to all matters relating to the prevention of disease. Along these lines continual improvement is being shown in vaccination of Indians against smallpox, immunization for protection against diphtheria and typhoid fever, and other measures.

While interruption of hospital treatment and medical care for various reasons still continues to be a problem, educational measures as carried to the various Indian groups through physicians, field nurses, superintendents, teachers, and others, creating a better understanding among Indians of the factors which have to do with caring for the sick and the maintenance of physical well-being, are gradually overcoming these difficulties and developing an interest on the part of the Indian toward all matters relating to good health.

A constant endeavor has been made to maintain the existing activities upon an efficient basis and through closer supervision to make more effective all medical and health activities now established on the several jurisdictions. The interest which has been manifest through

the past several years on the part of other public-health workers, including Federal (U. S. Public Health Service), State, county, local, and voluntary health agencies, has been continued and participation in cooperative endeavors by this group has increased. These several health agencies are becoming more fully acquainted with Indian health conditions and health problems and are combining their resources with those of the Indian Service toward a better and more complete procedure directed to the improvement of health conditions on all jurisdictions.

The Committee on Indian Affairs of the State and Provincial Health Authorities of North America is participating to a greater degree each year toward the development of cooperative relationships between the Indian Field Service and the various State and local health agencies in all States having Indian groups within their population.

Increased attention, both by the Indian Service and State health organizations, has been given to the more accurate collection and reporting of vital statistics and of morbidity data. The United States Public Health Service has continued the detail of personnel to the Indian Service and has made available to an increasing degree the services of its medical officers, field directors, and sanitary engineers, as well as of the facilities of the National Institute of Health, to solve the problems which arise from time to time at various Indian centers. Routine investigations of water supplies, sewage disposal, milk production, the control of venereal conditions, etc., have been continued. The laboratories of the various State health departments are rather uniformly performing services of various character in connection with laboratory procedures necessary to the conduct of medical service throughout the field.

The major health problems among Indians continue to be tuberculosis, diseases of infancy and childhood, trachoma, and the epidemic outbreaks which devastate the Indian field from time to time. To an increasing degree the facilities of the general hospitals throughout the service are being made available for the care and treatment of tuberculosis, and emphasis has been placed upon improvements in hospital and sanatorium procedure for the purpose of rendering a more prompt and efficient hospitalization program to Indian groups. Special attention through field nurses has been given to those measures which bring to Indian mothers a better understanding of maternal and infancy welfare, and proper dietary for Indian children, as well as the sick and the aged.

The number of live births in Indian Service hospitals materially increases each year. This service offers a special opportunity for instruction of Indian mothers in matters relating to infancy welfare through the opportunity afforded for education along these lines during the period that the mother is necessarily detained in a service hospital. The statistics relating to the number of babies born in Indian Service hospitals within the past several years are as follows:

Live births:

|           |        |
|-----------|--------|
| 1928..... | 595    |
| 1929..... | 816    |
| 1930..... | 1, 099 |
| 1931..... | 1, 360 |
| 1932..... | 1, 888 |

Approximately 38,504 examinations for trachoma were made by the special physicians, not including examinations made by the hospital, agency, and school physicians, during the year, of which number about 4,142, or 10.8 per cent, were reported as positive for this disease. The number of surgical operations performed for the care of trachoma during the year was 1,866, and the number of treatments other than surgical totaled 2,422. Special physicians who in the past have devoted the major portion of their time to the detection, care, and treatment of trachoma have amplified their activities to include various surgical procedures, particularly those with reference to the eye, ear, nose, and throat, as well as, in many instances, general surgery for other conditions. This group of physicians is steadily advancing the educational phase of their services to Indians and through their daily contact in the care and treatment of trachoma particularly are acquainting Indians with the factors which have to do with the transmission and spread of this disease, as well as of other conditions:

Of the contagious and infectious diseases reported during the year the following data are submitted:

|                          | 1932   | Increase<br>(+) or de-<br>crease (-)<br>compared<br>with 1931 |                              | 1932  | Increase<br>(+) or de-<br>crease (-)<br>compared<br>with 1931 |
|--------------------------|--------|---|------------------------------|-------|---|
| Chicken pox.....         | 1,087  | +355  | Scabies.....                 | 2,086 | -610  |
| Diphtheria.....          | 55     | -57   | Scarlet fever.....           | 94    | -1  |
| Erysipelas.....          | 65     | +21   | Smallpox.....                | 47    | -21   |
| Impetigo.....            | 3,943  | +362  | Trachoma.....                | 6,760 | -1,273  |
| Influenza.....           | 14,763 | +7,157  | Tuberculosis, all forms..... | 4,354 | -683  |
| Measles.....             | 751    | -688  | Typhoid or paratyphoid.....  | 216   | +85   |
| Meningitis epidemic..... | 35     | +18   | Veneral diseases.....        | 2,659 | -298  |
| Mumps.....               | 329    | -1,117  | Vincent's Angina.....        | 121   | +20   |
| Poliomyelitis.....       | 11     | -6  | Whooping cough.....          | 934   | +51   |

The total number of vaccinations and inoculations performed in the field during the year as reported to the office from the various jurisdictions was 37,022, classified as follows:

|  |        |
|--|--------|
| Smallpox.....                            | 9,955  |
| Typhoid.....                             | 10,610 |
| Diphtheria.....                          | 14,475 |
| Other vaccinations and inoculations..... | 1,982  |

The Walker River Hospital, with a capacity of 30 beds, was completed during the year, and the following hospitals under construction are nearing completion:

|                          | Beds |
|--------------------------|------|
| San Xavier Hospital..... | 35   |
| Pipestone Hospital.....  | 36   |
| Winnebago Hospital.....  | 60   |
| Clinton Hospital.....    | 30   |
| Tomah Hospital.....      | 41   |
| Ignacio Hospital.....    | 35   |

A contract has been entered into for construction of the 45-bed Hopi-Navajo sanatorium at Winslow, Ariz. Plans and specifications for construction of sanatoria at Albuquerque, N. Mex., and

<sup>1</sup> Of which number, 607 were for Rocky Mountain spotted fever.

Pierre, S. Dak., are about complete. When erected these institutions will make available much needed facilities for the hospitalization of additional cases of tuberculosis. Cooperative arrangements whereby hospital and sanatorium facilities of State, county, and municipal institutions may be made available for the care and treatment of Indians have been developed and many States are now taking a special interest in the working out of arrangements of this character. In some instances it will mean the appropriation of Federal funds for increasing the facilities of such institutions; in other, the setting up of sufficient funds to pay for hospitalization of Indians in such institutions. The value of the utilization of established institutions belonging to States with Indian populations is becoming more fully appreciated and as soon as additional funds are made available these measures should be encouraged and extended.

General physical improvement in existing Indian Service hospitals and sanatoria has been brought about to some extent, both in the arrangement of the institution and in the improvement of its diagnostic and treatment equipment. Indian Service hospitals throughout the past year have inaugurated a procedure of securing Wassermann tests upon all hospital admissions. This has worked out very successfully in many of these institutions. This has been of great value in the diagnosis of obscure conditions

#### ALASKA

Through cooperative arrangements with the United States Public Health Service, an officer of that service, Dr. Frank S. Fellows, was designated as the medical director of Alaska and assigned to that jurisdiction under date of September 4, 1931, with headquarters at Juneau.

Doctor Fellows has spent his time thus far visiting the various activities within the Territory making an appraisal of the existing health facilities and making adjustments in personnel, type of service, etc., where such changes have given promise of improvement in the health service in such localities. As soon as he has visited and studied the health activities throughout the Territory, his recommendations will be reviewed with the purpose of establishing an improved medical and health program for the natives of Alaska, and particularly for the establishment of such public-health measures as give promise of better health and physical well-being to these beneficiaries of the Government. This work is being done wherever possible in conjunction with the local and Territorial health activities already established at these points.

#### EXTENSION AND INDUSTRY

The program of this division in better home making and better farming has made noteworthy progress. The response that has come from the Indians has been very encouraging to the field workers. The interest of the Indians in improving their home and farm conditions has been shown by their increased willingness to stay at home and look after their places and accept advice from extension representatives.

Reports of extension workers in the field, which cover the calendar rather than the fiscal year, will show a marked increase on the part of the Indians in all their agricultural and home activities for 1932. More gardens and field crops have been planted during the past spring than for the past 10 years. The lack of outside employment, coupled with losses from storms, drought, and crop pests, have forced the Indians to take a greater interest in their own welfare.

Through lack of funds the increased demands on the field workers for advice and assistance in improvement of farm and home conditions are greater than the present staff can meet. There is urgent need for additional field workers if the Indians are to have the help and follow-up that they should have in organizing and carrying out successfully a constructive program that will be adapted to their needs. It is difficult for those not experienced in handling Indian problems to realize how vital this assistance and close follow-up is to the Indians' success. Worth-while results can not be obtained without it. An adequate field extension staff is absolutely necessary if the ration roll is to be eliminated. Except for the old and indigent, a dependable food supply must be provided through the Indians' own efforts.

There has been but little expansion of the work. The staff is practically the same as reported for last year and projects included in the programs of the respective reservations for 1932 are largely a continuance of last year's projects. Again this year the garden project, because of its importance in providing an adequate food supply, has received more attention than any other. From 24 reservations having extension agents reports for the calendar year 1931 show 12,690 gardens planted with an acreage of 10,846. The acreage planted in field crops was 138,281.

The extension agents for these reservations made 36,739 personal farm and home visits. They held 2,269 meetings, with a total attendance of 73,659, and had 21,709 Indians call at their offices for information and assistance. Method and result demonstrations conducted in teaching the Indians better farm and home practices numbered 2,127. Assistance was rendered 1,175 Indian farmers in securing better livestock. Agriculture and home engineering were stressed by both agricultural and home extension agents, resulting in the construction of 276 new homes and the remodeling of 267 others. There were also 678 other farm buildings constructed or remodeled. Many community fairs, short courses, club camps, and picnics were held, at which improved farm and home practices were emphasized. During the year considerable time of the extension staff was given to relief work.

#### 4-H CLUB WORK

On the reservations 4-H club work is a most important phase of extension work. It is an organization of boys and girls between the ages of 10 and 21 who are doing systematic work in some phase of agriculture or home economics under the leadership of some local person, the agency staff, and the supervision of the cooperative extension service of the agricultural college of the State in which the jurisdiction is located. It is a movement to teach boys and girls improved practices in farming and home making. It is local and

individual. Recommended methods are used to carry on a project which must create, preserve, or conserve something of economic importance. The total club enrollment for last year was 3,377, consisting of 343 clubs, which enrolled 1,574 boys and 1,803 girls. Gardening was the most popular project, which interested 706. Other enrollments were as follows: Potato, 175; clothing, 559; Indian arts, 20; cooking, 44; calf, 21; foods, 189; homemade furniture, 44; canning, 5; sheep, 55; poultry, 410; corn, 410; beef, 181; dairy, 34; swine, 78; sewing, 222; jewelry, 5; pottery, 10; miscellaneous, 798.

Not only did these children learn the facts, attitudes, practices, methods, and skills involved but they had the social experiences of working together on the practical economic problems, in their native environments, and received the stimulating feeling of being contributors to the economic improvement of the community life.

### *HOME EXTENSION WORK*

In conducting home extension work the field staff has endeavored to keep in mind the cultural values of the past. In order to avoid disintegration of family life by the introduction of our own culture and practices too rapidly, the introduction of new materials is in terms of their culture with only very small elements of our own. The inadequate food supply is the largest single factor in the entire welfare problem of Indian life. In increasing the food supply the workers have built on the age-old customs of drying and storing, adding the elements of increased quantity and sanitation. The same principles have been applied to clothing and shelter.

Home extension work was carried on on 10 reservations. On 5 reservations 2,975 gardens of 2,164 acres were planted; on 6 reservations 2,665 garments were renovated and 9,000 articles of clothing were made; on 5 reservations 37 local leaders held 101 meetings, made 285 home visits, and gave 75 method demonstrations in food and nutrition work. On four reservations 1,450 yards were cleaned. Other projects promoted were poultry raising, cheese making, pest eradication, tribal arts and crafts, food conservation and storage, better bedding, home care, and homemade furniture.

### *AGRICULTURAL LEASING*

Due to the unhappy economic conditions leasing of agricultural lands on the various reservations has been handicapped during the year. An unusual amount of correspondence has been handled relative to cancellation of leases, reduction of rentals, and acceptance of other considerations in lieu of cash in order to afford relief to those farming Indian lands who are in distress because of drought, depression, and low price of farm products in general. Requests for such consideration have been received from practically all the reservations where Indian lands, either tribal or allotted, are under lease. The appeals are from both the individual farmer, with a very small acreage operating on a small scale with very little capital or financial backing, and the individuals or corporations with leases covering large areas of land financed by banks or land-loan companies. In reaching decisions relative to collection of delinquent rentals, exten-

sions or alterations of existing lease contracts, we have endeavored to solve the problems in a manner that will not jeopardize the Indian lessor, and changes in lease contracts have only been made with his consent.

The reimbursable appropriations, amounting to some \$675,000, are made available by Congress as loan funds for assisting Indians in establishing themselves in self-supporting enterprises, including farming, stock raising, and other like industries conducted on their allotments, for educational loans, and to assist old and indigent Indians who have land they can not use. Such assistance has made it possible for a large number of Indians who otherwise would probably have spent much of their time in enforced idleness to become established in self-supporting enterprises.

An important factor in the use of the reimbursable fund is its educational value to the Indians in teaching them the proper use of credit and the importance of respecting agreements and obligations when once made. On the whole, the results obtained and the way in which the Indians are paying off their loans is very encouraging.

Special mention should be made of the helpful cooperation received from the agricultural extension services in the respective States, and other outside agencies.

### EMPLOYMENT

During the year a full-time director of employment was appointed, an end toward which we have been working for several years.

A revised plan of organization, based upon a survey of the needs of the situation of the last three years, is being worked out by the new director. This plan contemplates more effective coordination of adult placement activities with the educational program of the Indian Service. It also contemplates coordinating the Indian Service employment activities with the various public employment offices operated by or in cooperation with the United States Employment Service and by certain cities and States.

The larger percentage of placements have been of seasonal or temporary character. Competition with white labor in many types of seasonal work has prevented Indians from obtaining employment. The total number of Indian placements during the past year was 2,497, of which 1,502 were seasonal or temporary and 995 were permanent. There were 2,627 follow-up visits to Indians and 3,558 visits to employers.

The director of employment has also completed an industrial survey of the Menominee Indian mills.

### FORESTRY AND GRAZING

Most reluctantly we must again refer to the economic distress of the lumber industry. One year ago it was hoped the late months of 1931 would bring a definite improvement in the situation. Unfortunately the close of 1931 and the early months of 1932 witnessed a marked decline in commodity prices generally and a further liquidation of lumber stocks at sacrifice prices. The close of the fiscal year finds the lumber industry of the United States in the most precarious

condition of its history, with production at the lowest ebb it has reached in many years and price levels seriously below the cost of production.

This general state of demoralization has had a serious effect upon the substantial timber-sale business formerly conducted by the Indian Service and the income to the Indians from this source was very greatly reduced for the fiscal period ended June 30, 1932. However, the existence of diversified forest development on several reservations made operations possible at these units regardless of the limited demand for lumber, and the business created by reason of this diversification has assisted materially in maintaining income and providing employment for the Indians.

The general decline registered in the price levels of lumber and other forest products has finally manifested itself in the stumpage market, and although comparatively few reductions have been effected in connection with the price of timber on existing timber-sale contracts, there is every indication that future sales will reflect values considerably below those that obtained prior to June 30, 1931. Owing to the comparatively high prices which were established on the Klamath Indian Reservation during the postwar period, it is expected that any deflation which may eventually be sustained on Indian timber holdings will be confined principally to that competitive field.

What the future holds in this connection is largely a matter of conjecture. Very few important timber sales have been made by the Indian Service during the past several years. No new sales are anticipated for some time to come, as the forestry branch of the service will endeavor to maintain the national policy of timber conservation.

The fiscal year 1932 has served to advance materially the efforts to consolidate ranges, reduce trespass, improve supervision, and introduce conservation measures in grazing management on Indian lands. New regulations covering grazing were placed in effect on July 1, 1931. Considering the extent of the area embraced, the variability of factors involved, and the need of overcoming resistance to a change in policy and methods, the results attained in the last two years are very gratifying.

The expansion of the forestry branch of the service to care for the grazing work on various reservations where forestry men had not previously been required has imposed a heavy burden on the funds available for forest administration.

During the past year considerable study has been given to road improvement on Indian reservations in order that the available appropriation of \$500,000 and amounts provided in the future might be expended for improvements of a beneficial and permanent nature. Road work on Indian reservations serves the twofold purpose of providing employment for a large number of adult Indians who have no other opportunity for work and furnishing better highway facilities.

The 4-year period 1928 to 1931, inclusive, was one of unusual drought in the States containing the major part of all Indian lands; in fact, the average annual precipitation for those years in the Great Plains region and in the Pacific Northwest was little more than one-

half of the normal precipitation. These successive years of drought culminated in a most abnormal forest-fire risk during the summer of 1931. The extreme dryness was accompanied by severe electrical storms and unusually strong and persistent air currents in the area between the Rocky Mountains and the Cascades. Thus, small fires were soon fanned into large conflagrations by hot, dry winds before men could reach them while they were yet of limited extent.

An increased appropriation for 1931 had enabled the Indian Service to purchase trucks and other equipment to an extent never before possible, but the lack of roads and trails into the forest areas seriously limited the mobility of such equipment and in several instances, particularly at the Warm Springs, Oreg., and Flathead Reservation, Mont., prevented the reaching of incipient fires. The result was that the headway gained by the fires required large suppression crews for long periods and a greatly increased cost of control and loss of timber. The damage on the Flathead Reservation alone was estimated at \$50,000 and the cost of control was nearly \$100,000.

Few persons realize the extent to which the timber and grazing resources on Indian reservations have contributed to the economic welfare of the Indians and the importance of maintaining these properties in a productive state. Between July 1, 1909, and July 1, 1931, timber with a value of more than \$40,000,000 was sold from Indian lands and this income has aided materially in their economic, educational, and social advancement.

While equally reliable figures are not available as to the income from grazing resources, it is estimated that during the same period approximately \$20,000,000 has been received through the sale of grazing privileges, and the Indians have themselves utilized range with a total estimated value in 22 years of not less than \$20,000,000.

### IRRIGATION

An audit and detail of assets and liabilities of Indian irrigation projects has been completed.

During the year revised rules of practices were adopted. These rules include the form of presenting technical, statistical, and other reports.

Upon the completion of a project, it is necessary to make a finding of the land which is subject to lien for the construction cost of the works; the irrigable, assessable land must be designated. Committees of designation have been engaged upon or have made reports on the Wapato, Blackfeet, San Carlos, and Wind River projects. Hydrographic records, beginning from 1925, when the United States Geological Survey discontinued measuring water on some of these Indian projects, are being edited and prepared for publication. About 50 abandoned measuring stations have been again put in service. Complete safe yield water-supply studies have been made of San Carlos and Fort Hall projects. Extensive hydrographic reports have been completed on water controversies affecting the Wapato project on the Yakima River, Wash.; the Fort Belknap project on Milk River, Mont.; and the Duck Valley Reservation project on the Owyhee River in Nevada and Idaho. Several hundred maps have been standardized and catalogued. A financial statement for the 110 projects has been prepared.

The construction programs have proceeded on various projects. The larger items expended in construction for the fiscal year 1932 are as follows, in round numbers:

|   |             |
|---|-------------|
| Flathead, Mont.....                                       | \$450, 000  |
| San Carlos, Ariz.....                                     | 416, 000    |
| Wapato, Wash.....   | 223, 000    |
| Blackfeet, Mont.....                                      | 50, 000     |
| Rio Grande conservancy district (New Mexico pueblos)..... | 334, 000    |
| Navajo and Hopi water supply, Arizona and New Mexico..... | 85, 000     |
| Wind River, Wyo.....                                      | 18, 000     |
| Crow, Mont.....   | 25, 000     |
| Other projects.....                                       | 612, 000    |
| Total construction.....                                   | 2, 213, 000 |

The original cost of all works of Indian irrigation since 1867 has been \$50,700,000, including annual operating costs advanced by the United States and that collected from the landowners. Deducting from this sum the repayments up to 1931, the net investment is approximately \$45,000,000.

The repayment of this investment, in so far as it applies to non-Indian owned lands, in some instances has been temporarily deferred as at the Flathead and San Carlos projects, where under legislation a future date has been fixed for the beginning of payments. Usually the construction costs are repayable over periods of from 20 to 40 years, depending on the particular repayment contracts which may have been entered into or pursuant to direction of the Secretary of the Interior. The Indians owning lands under the several projects, with few exceptions, in the past have paid no charges whatever. On their trust lands, which are leased, the annual operation and construction charges have been collected from the lessees where conditions warrant. On such Indian land, when sold, the purchaser has been required to pay in full the accumulated charges both for construction and whatever delinquent maintenance charges may be a lien against the land. The Indians of the Yakima Reservation pay maintenance and operation charges and construction charges on certain lands.

As the fiscal year closed Congress enacted legislation (Public, No. 240, 72d Cong.) which was approved July 1, making important changes in collection of charges on Indian-owned lands. This legislation is one of the most important Indian items enacted during the past session of Congress, and directs the Secretary of the Interior to adjust or eliminate reimbursable charges of the Government of the United States existing as debts against individual Indians or tribes of Indians in such a way as shall be equitable and just in consideration of all the circumstances under which such charges were made. This legislation, while primarily affecting irrigation reimbursable charges, includes all classes of reimbursable charges owing to the United States by individual Indians and tribes of Indians. With respect to irrigation costs, it definitely defers the collection of all construction costs against any Indian-owned lands within any Government irrigation project and prevents the assessment of construction costs or charges against Indian lands until the Indian title

thereto has been extinguished and cancels construction assessments previously levied against Indian lands that remained uncollected. The act requires that the Secretary of the Interior shall report to Congress annually on the first Monday in December showing the adjustments made under the act during the preceding fiscal year and provides that any proceedings shall not be effective until approved by Congress, unless Congress shall have failed to act favorably or unfavorably thereon by concurrent resolution within 60 legislative days after the filing of the Secretary's report, in which case the Secretary's action shall become effective at the termination of the said 60 legislative days. This act makes Congress jointly responsible with the Secretary of the Interior in all actions taken by him in adjusting or eliminating reimbursable charges against individual Indians or tribes of Indians. A committee is in the field investigating irrigation costs and correlating data with a view to presenting, on the first Monday in December of this year, a report to Congress covering reimbursable charges on some of the irrigation projects. Because of the vast amount of work involved, both in field investigations and in this office in order properly to carry out the intent of this legislation, it will be impossible to prepare a report except for a part of the cases involved.

### STATISTICAL TABLES AND SUMMARIES OF INDIAN IRRIGATION PROJECTS

TABLE A.—*Number and extent of Indian irrigation projects*

|  | Major<br>operative<br>projects | Minor<br>operative<br>projects | Minor<br>projects<br>advisory<br>not oper-<br>ated by<br>irrigation | Division<br>total |
|--|--------------------------------|--------------------------------|---|-------------------|
| Number of projects.....                          | 10                             | 16                             | 84  | 110               |
| Ultimate irrigable acreage.....                  | 744, 654                       | 158, 781                       | 129, 436  | 1, 032, 871       |
| Area under constructed ditches.....              | 574, 836                       | 86, 052                        | 70, 847   | 731, 735          |
| Area irrigated in season 1931.....               | 343, 261                       | 46, 265                        | 41, 782   | 431, 308          |
| Under constructed ditches, not irrigated.....    | 231, 575                       | 39, 787                        | 29, 065   | 300, 427          |
| Not under constructed ditches not irrigated..... | 169, 818                       | 72, 729                        | 58, 589   | 301, 136          |

TABLE B.—*Ownership of lands in Indian irrigation projects*

|   | 26 major<br>and minor<br>projects | 84 minor<br>projects | Total       |
|---|-----------------------------------|----------------------|-------------|
| Irrigated.....                            | 389, 526                          | 41, 782              | 431, 308    |
| Indian owned.....                         | 201, 076                          | 38, 809              | 239, 885    |
| White owned.....                          | 188, 450                          | 2, 973               | 191, 423    |
| Under constructed ditches not irrigated:  |                                   |                      |             |
| Indian owned.....                         | 190, 329                          | 1 29, 065            | 300, 427    |
| White owned.....                          | 80, 973                           |                      |             |
| Totals irrigable within project boundary: |                                   |                      |             |
| Indian.....                               | 566, 559                          | 170, 674             | 1, 032, 871 |
| White.....                                | 295, 638                          |                      |             |

<sup>1</sup> Segregation figures not available.

NOTE.—In this tabulation, under Indian ownership, are grouped all tribal, trust patent, restricted fee patent, Indian fee patent, and land used in connection with Indian administration.

Under white owned are grouped all white patented lands, being non-Indian land in joint Indian-white projects (as on Flathead and San Carlos projects) and land of original Indian title purchased by whites.

TABLE C.—*Land ownership analyzed, Indian irrigation projects—10 major and 13 minor projects, as of July 1, 1932*

| Character of ownership                         | Under constructed<br>ditches,<br>irrigated | Under constructed<br>ditches, not<br>irrigated | Not under<br>constructed<br>ditches, not<br>irrigated | Total with-<br>in project<br>boundaries |
|--|--|--|---|---|
| Tribal.....                                    | 14, 612                                    | 14, 640  | 24, 730   | 53, 982                                 |
| Deceased trust patent.....                     | 78, 330                                    | 63, 722  | 48, 010   | 190, 062                                |
| Living trust patent.....                       | 91, 412                                    | 88, 456  | 73, 805   | 253, 673                                |
| Deceased restricted patents.....               | 6, 466                                     | 6, 745   | 7, 444  | 20, 655                                 |
| Living restricted patents.....                 | 10, 235                                    | 9, 533   | 6, 965  | 26, 733                                 |
| Patented Indian.....                           | 4, 826                                     | 6, 094   | 6, 530  | 17, 450                                 |
| White owned.....                               | 185, 243                                   | 87, 986  | 22, 409   | 295, 638                                |
| United States.....                             | 2, 435                                     | 1, 139   | 430   | 4, 004                                  |
| Total (23 projects).....                       | 393, 559                                   | 278, 315                                       | 190, 323  | 862, 197                                |
| 87 minor projects not reported in detail.....  |  |  |   | 170, 674                                |
| Total ultimate irrigable area in projects..... |  |  |   | 1, 032, 871                             |

TABLE D.—*Ownership of land actually irrigated, 1929 to 1931*

| Ownership   | Fiscal<br>year<br>1929-30 | Fiscal<br>year<br>1930-31 | Calendar<br>year 1931 |
|-------------|---------------------------|---------------------------|-----------------------|
| Indian..... | 224, 279                  | 232, 955                  | 239, 885              |
| White.....  | 179, 520                  | 188, 573                  | 191, 423              |
| Total.....  | 403, 799                  | 421, 528                  | 431, 308              |

This tabulation shows that of the land actually farmed and irrigated on all projects in 1931 approximately 240,000 acres were in Indian ownership and approximately 191,000 acres were in white ownership. The ratio is 56 per cent Indian and 44 per cent white. The rate of increase per year of beneficial utilization of land for this period has been  $4\frac{1}{2}$  per cent per year for Indian and white alike.

TABLE E.—*Occupancy of irrigated lands*

|   | Fiscal<br>year<br>1929-30 | Fiscal<br>year<br>1930-31 | Calendar<br>year<br>1931 |
|---|---------------------------|---------------------------|--------------------------|
| Indian occupancy—Indian trust lands irrigated by Indians..... | 122, 451                  | 126, 970                  | 133, 134                 |
| Leased occupancy—Indian trust lands irrigated by lessees..... | 101, 848                  | 105, 985                  | 106, 751                 |
| Owner or lessee occupancy:                                    |                           |                           |                          |
| Indian patented lands.....                                    | 179, 520                  | 188, 573                  | 15, 692                  |
| White patented lands.....                                     |                           |                           | 175, 731                 |
| Total irrigated.....  | 403, 799                  | 421, 528                  | 431, 308                 |

#### INDIAN FAMILIES BENEFITED BY IRRIGATION

Heretofore in statistics emphasis has been placed on the number of Indian families actually farming, but the number of Indian families benefited by leasing of their lands has not been shown. Here-

tofore Indian families on patented lands have not been enumerated but classed with other white citizens. The approximate figure reported for families actually farming is 2,600. Probably an equal number are benefited by leasing and some 400 families are occupying or leasing fee patented land. The number of acres farmed per family averages 40.

### APPROPRIATIONS

The appropriations for the Indian Service for 1932, including funds contained in the second deficiency act, aggregate \$25,612,046.73 from the Federal Treasury and \$3,415,046.19 from tribal funds, making a total of \$29,027,092.92 available for expenses of the Indian Service. This represents an increase of \$3,477,235.99 above the amount provided for 1931. The appropriations for 1933 are \$4,860,271.57 less than the amount available for 1932. For comparison purposes attention is invited to the following tabulation showing appropriations of Treasury and tribal funds over a 4-year period:

#### TREASURY

|   | 1930           | 1931           | 1932           | 1933           |
|---|----------------|----------------|----------------|----------------|
| General purposes.....                       | \$2,100,247.41 | \$2,609,808.25 | \$2,497,885.73 | \$1,850,697.35 |
| Industrial assistance.....                  | 1,305,000.00   | 1,724,000.00   | 1,802,500.00   | 1,401,000.00   |
| Irrigation and water development.....       | 1,299,954.41   | 1,446,091.00   | 2,605,941.00   | 1,110,824.00   |
| Education.....                              | 9,175,654.09   | 10,376,380.00  | 11,426,900.00  | 10,396,500.00  |
| Conservation of health.....                 | 3,115,100.00   | 3,420,378.51   | 4,352,500.00   | 3,584,800.00   |
| Support of Indians.....                     | 1,594,560.00   | 1,945,280.00   | 2,216,300.00   | 2,156,300.00   |
| Miscellaneous (roads, annuities, etc.)..... | 288,520.00     | 427,020.00     | 710,020.00     | 1,451,020.00   |
| Total.....                                  | 18,879,035.91  | 21,948,867.76  | 25,612,046.73  | 21,951,141.35  |

#### TRIBAL

|   | 1930         | 1931         | 1932         | 1933         |
|---|--------------|--------------|--------------|--------------|
| General purposes.....                       | \$442,760.26 | \$584,249.63 | \$332,913.98 | \$126,300.00 |
| Industrial assistance.....                  | 894,479.60   | 20,000.00    | 180,532.21   | 45,000.00    |
| Irrigation and water development.....       | 105,000.00   | 28,500.00    | 49,500.00    | 59,000.00    |
| Education.....                              | 1,149,000.00 | 1,040,701.08 | 910,000.00   | 803,000.00   |
| Conservation of health.....                 | 160,000.00   | 100,000.00   | 125,000.00   | 125,000.00   |
| Support of Indians.....                     | 1,954,550.00 | 1,784,538.46 | 1,767,100.00 | 1,032,380.00 |
| Miscellaneous (roads, annuities, etc.)..... | 21,000.00    | 43,000.00    | 50,000.00    | 25,000.00    |
| Total.....                                  | 4,726,789.86 | 3,600,989.17 | 3,415,046.19 | 2,215,680.00 |

### LEGISLATION

The first session of the Seventy-second Congress, which convened December 1 last, was confronted with the usual deluge of bills affecting the Indians, a considerable part of which consisted of claims in some form, tribal or individual, against the Government. Aside from the regular appropriation acts carrying substantial funds for the benefit of the Indians, such as education, health, relief, industrial assistance, etc., but few other important measures reached the stage of final enactment. Some of these are mentioned elsewhere in this report, such as the act of July 1, 1932, authorizing the Secretary of the Interior to adjust reimbursable debts against the Indians, and the acts dealing with the Five Civilized Tribes in Oklahoma, including a measure still pending continuing the restrictions in behalf of a certain class of these Indians not specifically included in prior legis-

lation. We are still hopeful of favorable action in behalf of these Indians which is so greatly needed.

Special acts authorizing per capita payments from tribal funds to members of the Menominee, Red Lake, and other Chippewa tribes were enacted; also a measure of some interest and general application increasing the jurisdiction of the Federal courts from 8 to 10 major crimes committed by or against Indians on Indian reservations. A bill pertaining to the Osages of considerable importance to them passed the Senate March 10, 1932 (S. 3085), and is still pending in the House. Favorable action by the latter body is looked for.

A matter of particular importance, still in a formative stage and to which much thought has been given, deals with the status of persons of remote or small degree of Indian blood claiming rights as Indians. We feel that the time is approaching or has arrived when Congress in specific terms should declare that no person of less than a specifically stated degree of Indian blood should thereafter be regarded or considered as an Indian and dealt with as such at the hands of the Federal Government.

### *FIVE CIVILIZED TRIBES*

At the end of the fiscal year 1932 there was on hand in individual Indian money the sum of \$27,084,461.19, represented by cash and Government securities. Of this amount, approximately \$11,000,000 was deposited in the United States Treasury and banks and approximately \$16,000,000 was invested in Government bonds.

Every effort is being made to conserve the balances to the credit of individual Indians and to direct as wise an expenditure of funds as possible. The special estate in the homestead allotments of Five Civilized Tribes Indians of one-half or more Indian blood, inherited by the allottees' issue born after March 4, 1906, and held as restricted Indian property, terminated April 26, 1931. There has arisen considerable controversy and some litigation as to whether the accumulated funds derived from such lands during the restricted period continue to be restricted and should be held and disbursed under department control and supervision. It is the view of some that the department is without jurisdiction over these accumulated funds and that they should be released as unrestricted. In many cases these homesteads are valuable oil-producing lands and the heirs are, in many cases, full bloods with limited educational qualifications and little or no business experience. In view of the controversy and doubt, legislation was requested for the purpose of affording department supervision and protection to this class of heirs in regard to their inherited lands and funds. A bill covering this matter is pending in Congress.

Effective July 9, 1931, the law and probate divisions of the Five Civilized Tribes Agency office were consolidated and reorganized whereby the effectiveness of the work, involving probate and other legal matters, was largely increased.

It is a very difficult matter for seven probate attorneys to cover 40 counties and the very large number of Indian probate cases. There were pending 3,884 cases on June 30, 1932. Probate attorneys appeared in 1,935 cases and instituted 28 civil actions involving

\$82,350, and it is estimated that \$160,262.89 was saved for Indian minors and others through the action of the probate attorneys.

Due to removals of restrictions on alienation effected by the act of May 10, 1928, and death of Indians leaving full-blood heirs, there were 466 cases of Indian land sales requiring approval by the county courts. Appearances were entered and appraisals were submitted to the county judges by the probate attorneys showing the present value of the land sought to be sold. The demoralized condition of the land market made it impossible to obtain substantial prices for the lands sold. However, reasonable prices, based upon present-day values, were received in the cases handled by the probate attorneys and Indians were protected from receiving grossly inadequate consideration in a large number of sales.

Legislation was enacted by Congress (act of April 27, 1932, Public, No. 109, 72d Cong.) to require the approval of the General Council of the Seminole Tribe or Nation in case of the disposal of any tribal land.

By act of Congress, approved April 25, 1932 (Public, No. 105, 72d Cong.) jurisdiction was conferred on the Court of Claims to hear, consider, and determine certain claims of the Eastern or Emigrant and the Western or Old Settler Cherokees against the United States.

#### *QUAPAW LEAD AND ZINC MINING LANDS*

The aggregate value of the lead and zinc concentrates produced from the restricted Quapaw lands for the period from 1908 to 1932, inclusive, approximates \$121,407,582, and the royalties derived therefrom for the Indian owners of said lands aggregated approximately \$11,136,541.

The depression of the mining industry in the Tri-State district which began in 1930 and continued through 1931 still exists and many mines were shut down for more or less temporary periods. However, the mines on the Quapaw restricted lands, under department supervision, produced 25.3 per cent of the lead concentrate and 16.5 per cent of the zinc output of the Tri-State district, and 1.3 per cent of the lead and 5.3 per cent of the zinc output from ore mined in the United States during the year.

At the close of the year there were in force 39 approved lead and zinc mining leases embracing in the aggregate 5,524.43 acres of Quapaw Indian restricted land, and 27 approved subleases covering in the aggregate 1,438.64 acres of such leased land.

From these leases and subleases an aggregate of 37,537 tons of lead and zinc concentrates were sold during the year, the total sale price aggregating \$896,305.39. The royalties and other income received therefrom during the year aggregated \$85,684.99. This royalty and income are shared by about 62 Indians according to their respective interests.

#### *OIL, GAS, AND OTHER MINERAL LEASES*

Lessees have surrendered an unusual number of nonproducing oil and gas leases of restricted Indian lands for cancellation during the year, due no doubt largely to the lack of a more substantial advance in the price of crude oil. New leases were made covering about

25,300 acres, consisting of allotted lands with the exception of about 8,000 acres of tribal lands bid in at a sale which we were required by law to hold on the Osage Reservation.

Only a few of the several hundred special prospecting permits on tribal lands, issued under the act of March 3, 1927 (44 Stat. L. 1347), have been extended by the department, the permittees being unable or having failed in most cases to show sufficient equities to justify extensions, and most of the permits have been canceled or have terminated by limitation. Those remaining in force cover only about 20,000 acres. A small producing well has been reported on one of the permits in New Mexico.

On June 30, 1932, there were approximately 579,000 acres included in existing leases and permits, exclusive of the Osage Reservation of 1,500,000 acres, which is practically all leased for gas-mining purposes and a large area of which is also covered by oil leases.

There are 34 completed wells capable of producing oil on ceded tribal lands under the jurisdiction of the Shoshone Indian Agency in Wyoming and 17 such wells on Shoshone allotted lands that are shut in because there are no available pipe-line facilities connecting the field to a refinery or railroad transportation. We had hoped that this condition would be overcome through the application of the Public Service Commission of Wyoming, filed about one year ago with the Interstate Commerce Commission, seeking to compel an extension of a railroad line in the State of Wyoming which would have brought it much nearer the oil field, but the application was denied.

The suits instituted in the Federal courts by certain owners of surface lands on the Osage Reservation, Okla., questioning the right of Congress to reserve the minerals underlying the Osage Reservation for the communal benefit of the Osage Tribe beyond April 8, 1931, as provided for by the acts of March 3, 1921 (41 Stats. L. 1246), and March 2, 1929 (45 Stats. L. 1478), were recently determined by the United States Circuit Court of Appeals, Tenth Circuit, adverse to the plaintiffs.

Pursuant to the Government's oil-conservation policy no tribal leases of restricted Indian lands for oil and gas mining purposes have been made except on the Osage Reservation where required by law; and a provision has been placed in such leases enabling the Secretary of the Interior, in his discretion, to impose restrictions upon production where deemed necessary as a conservation measure and in conformity with similar restrictions imposed upon other wells in Oklahoma by State authority or agreement with operators. Orders of the Oklahoma Corporation Commission relating to the proration of oil wells have been approved to apply to Osage leases where such orders can be applied without effecting changes in royalty rates under the terms of existing leases or resulting in damage to oil-producing sands; and authority has been given to approve the temporary closing of wells upon application where practicable, without causing damage to the interests of the Osage Tribe. Similar authority with reference to closing in wells temporarily was given in connection with restricted allotted lands in Oklahoma.

It having been found that considerable butane and propane were being produced and marketed from leases on the Osage Reservation

and from two Kaw allotted leases, an investigation was ordered for the purpose of determining a fair basis of value for computing royalties on those products. The investigation was made by a field representative of the Geological Survey, assisted by oil and gas inspectors of the Osage Reservation; and based upon the report, the department adopted as a royalty rate  $16\frac{2}{3}$  per cent of  $33\frac{1}{3}$  per cent, based on a valuation of 3.6 cents per gallon for either propane or butane.

Six of the large gas leases on the Osage Reservation were under consideration during the year for the purpose of fixing the value of gas in the field for royalty purposes, to be established by the approval of the President as required by section 3 of the act of Congress, approved June 28, 1906 (34 Stats. L. 539-543). The lessees applied for a reduction of the value of gas as previously fixed by the Government and presented their reasons orally before the Osage Tribal Council and to the department. An investigation of present conditions affecting the value of gas on the reservation was made by the Geological Survey and the conclusion was reached that the value of 18 cents per thousand cubic feet, heretofore established as the basis for computing royalties, should be continued.

By the act approved April 21, 1932, Congress provided for the releasing of developed tracts of coal and asphalt deposits belonging to the Choctaw and Chickasaw Tribes in Oklahoma. Prior to the passage of this legislation there was no authority of law for continuing such lands under lease after September 25, 1932.

The Indian Service appreciates the valuable services rendered its superintendents by petroleum experts and other field employees of the United States Geological Survey in connection with mineral leases of restricted Indian lands.

### LAND SALES

Cash and completed deferred-payment sales have been disposed of during the year on 265 tracts of original allotments, aggregating 26,316 acres, for a consideration of \$230,145.50, and on 300 tracts of inherited lands covering 45,368 acres, for \$436,378.50, making a total area of 71,684 acres sold, for a total consideration of \$666,524.

There were issued on application 113 patents in fee to Indian allottees, or to heirs of allottees, releasing 13,441 acres, and 1,099 acres more were released through the issuance of certificates of competency and removal of restrictions order.

Considerable decrease in new sales has been noted and a large number of deferred-payment sales due to have been fully paid and completed have been extended for another year because of the depressed condition existing generally and of the lack of ready money with which to meet financial obligations falling due within the period covered by this report.

On some of the larger reservations no attempts have been made to hold regularly advertised sales, and only such lands have been offered as were necessary.

Out of the total area reported as sold it is interesting to note that 263 tracts, covering 25,200 acres, for \$175,576, involve sales between Indians and that this area is not land released from governmental control or subject in most cases to assessments for taxation purposes. This is the first time that sales between Indians have been of sufficient

volume to be included or mentioned in an annual report. However, most of these sales between Indians were on the Fort Berthold Reservation in North Dakota.

On many of the reservations considerable inherited land has been divided or partitioned among the heirs and separate trust patents or restricted deeds given to the individual heirs, so they may be better able to improve and cultivate independent units or to establish separate homes thereon.

An economic survey was made in July, 1931, on the Fort Berthold Reservation in North Dakota, for the purpose of determining a constructive program for the best and safest investment of funds received by these Indians from a judgment in excess of \$2,000,000 in their favor by the Court of Claims. A plan was worked out to have the shares of minor unallotted Indian children and other children who had allotments of little value invested in nontaxable agricultural and good grazing lands belonging in most part to their own parents. In pursuance of this plan the sale of approximately 20,000 acres, valued at about \$100,000, was consummated prior to July 1, 1932. These sales were at the appraised value of the lands involved, and in some few cases at less where the parents wished to favor the child.

Other miscellaneous transfers of land were completed during the year, including acquisition of several tracts to be used for Indian Service activities. Local municipalities donated tracts upon which are being or will be erected the Hopi-Navajo Sanatorium at Winslow, Ariz., the Winnebago Hospital, Nebraska, and the Sioux Sanatorium at Pierre, S. Dak.

About 2,000 acres of land were recovered for the Omaha Indians in Nebraska through decisions of the Federal court for the district of Nebraska in the cases of *U. S. v. George F. Phillips et al.* and *U. S. v. State Bank of Decatur, Nebr.*

### TRIBAL ENROLLMENT

#### *SISSETON AND WAHPETON SIOUX OF NORTH AND SOUTH DAKOTA*

Under the act of June 21, 1930 (46 Stat. L. 793), which authorized an appropriation of \$300,000 in settlement of claims of the Sisseton and Wahpeton Bands of Sioux Indians, payment rolls were prepared after a careful field investigation and submitted to the department, which on December 2, 1931, approved them. At the Sisseton Agency, S. Dak., 2,663 Indians were found entitled and at the Fort Totten Agency, N. Dak., there were 940 on the approved roll.

The \$300,000, less \$30,000 for attorney's fees, was paid to the Indians in December, 1931, and April and June, 1932, and amounted to a total per capita of approximately \$74.92.

#### *CALIFORNIA INDIANS*

The work of enrolling the Indians of California required by the act of May 18, 1928 (45 Stat. L. 602), as amended by the act of April 29, 1930 (46 Stat. L. 259), is now about completed and the rolls are being prepared for approval. The amending act referred to provided in effect that applications for enrollment with these Indians could not be submitted and receive consideration after May 18, 1932.

The applications, appeals, and rolls will be carefully examined before submitting them to the Secretary of the Interior for final action.

Events have justified the policy announced in our report for 1931 in regard to securing a future location for the Capitan Grande Indians. One of the properties long under consideration as a new home for these Indians is known as the Barona Ranch, including a total area of 5,000 acres. Until recently the price asked therefor was \$200,000, but an agreement to purchase for \$75,000 has now been made. As soon as transfer of title to the property has been consummated, actual establishment of the Indians thereon will be started.

By the act of May 4, 1932 (Public, No. 119), the act of February 28, 1919 (40 Stat. L. 1206), was amended so as to grant the city of San Diego 920 additional acres of land within the Capitan Grande Indian Reservation subject to certain conditions. We are advised that the city has elected to pay the additional compensation fixed in the amendatory act for the benefit of the Indians.

#### *INDIANS OF QUINAIELT RESERVATION, WASH.*

Following the decision in the Halbert case by the United States Supreme Court (283 U. S. 753), numerous applications for Quinaielt allotments to Chinook, Chehalis, and Cowlitz Indians have been filed with the special allotting agent assigned to this work. Approximately 500 people have been enrolled for such allotments at Quinaielt, and only about 50 of those who applied have been rejected.

#### *CHIPPEWA OF MINNESOTA*

Under opinion of February 17, 1919, by the then solicitor for the department, which based enrollment of Chippewa Indians upon blood status only, a large number of persons were enrolled. This was overruled by the opinion of January 8, 1927, which was sustained, in effect, by the Supreme Court in the Kadrie case (281 U. S. 206). The matter was referred to the Consolidated Chippewa Agency for an additional investigation of all those enrolled under the 1919 opinion. The examiner of inheritance submitted a report which by approval of the Secretary of the Interior of February 20, 1932, authorized the enrollment of 102 persons and denied 1,147. It was discovered later that some persons residing within the Dominion of Canada and certain parts of the United States had not been cited to show cause, and a supplemental investigation and report is now being prepared in the field.

#### *INDIAN SUITS*

Suits have been filed during the year in the Court of Claims against the Government as follows:

Pillager Bands of Chippewa Indians of Minnesota, No. M-387, filed October 20, 1931.

Winnebago Tribe of Indians of Nebraska and Wisconsin, No. M-421, filed December 3, 1931.

#### *INDIAN CLAIMS*

The act of May 3, 1928 (45 Stat. L. 484), authorized the determination of individual Sioux claims by the department. Approximately

18,000 claims were filed for various items of personal property and for allotments of land. All claims have been determined except those for allotments of land, but a report has not yet been submitted to the Congress of the United States as provided by the act.

#### LITIGATION

The last annual report mentioned the case of Agnes Larsen Stookey et al. v. Ray Lyman Wilbur, Secretary (No. 78749 at law), in which the Supreme Court of the District of Columbia held that mandamus would not lie to cause the Secretary of the Interior to enroll with the Gros Ventre Tribe of Indians, Fort Belknap Reservation, Mont., the said plaintiff and 11 other members of the Larsen family. The case was appealed to the District Court of Appeals, which in decision of April 4, 1932, sustained the finding of the trial court. (58 Fed. Rep. (2) 522.)

#### PUEBLO LANDS BOARD

The work of the Pueblo Lands Board, established by the act of June 7, 1924 (43 Stat. L. 636), has in the main been completed, and only a skeleton board remains.

The services of a former special assistant to the Attorney General have been obtained as a special attorney to make a final investigation and determination of just what remains to be done to carry out the findings of the board under the act cited.

Reports were submitted during the year by the board upon San Felipe and Laguna Pueblos, awarding them the sum of \$55,427.35 for losses sustained by reason of lands and improvements, title to which was found in the non-Indian claimants, which amount was appropriated by the act of July 1, 1932 (Public, No. 235, 72d Cong.). This now makes the total sum appropriated by Congress for the Pueblo Indians \$620,904.58. The total sum awarded by the board to the non-Indian claimants now amounts to \$217,253.22, which was included as an item in bills introduced in the last Congress but which were not enacted.

#### ALLOTMENTS

Allotments in severalty were made to 1,664 individual Indians during the 1932 fiscal year on various reservations aggregating 249,017.70 acres, as follows:

| Reservations             | Number of allotments | Acreage | Reservations            | Number of allotments | Acreage    |
|--------------------------|----------------------|---------|-------------------------|----------------------|------------|
| Gila River, Ariz.        | 4                    | 80      | Fallon, Nev.            | 1                    | 10         |
| Fort Yuma, Calif.        | 2                    | 20      | Klamath, Oreg.          | 2                    | 318.73     |
| Hoopa Valley, Calif.     | 1                    | 20      | Cheyenne River, S. Dak. | 73                   | 11,643.50  |
| Round Valley, Calif.     | 2                    | 15      | Pine Ridge, S. Dak.     | 1                    | 160        |
| Leech Lake, Minn.        | 1                    | 28.79   | Quinalt, Wash.          | 25                   | 2,078.45   |
| Northern Cheyenne, Mont. | 1,547                | 233,126 | Total                   | 1,663                | 249,017.70 |
| Fort Belknap, Mont.      | 3                    | 1,500   |                         |                      |            |
| Winnebago, Nebr.         | 1                    | 38.23   |                         |                      |            |

In addition to these reservation allotments, 23 allotments, embracing a total of 1,586.05 acres, were made to Indians residing on the public domain.

A special allotting agent is now engaged in making allotments in severalty to Indians on the Quinaielt Reservation, Wash., pursuant to the decision of the United States Supreme Court in the case of Hiliary Halbert, jr., et al. *v.* The United States (283 U. S. 753).

We also have an employee engaged in effecting exchanges of allotments on the Gila River Reservation, Ariz., to the end that each allottee may acquire 10 acres of irrigable land with an assured water right.

### *NAVAJO LAND PURCHASES*

Under authority contained in the act of May 29, 1928 (45 Stat. L. 883-899), and subsequent reappropriations, we have purchased a total of 257,627.57 acres for the Navajo Indians at a total cost of \$455,991.01. These purchases were made from tribal funds, excepting 54,373.55 acres, which were purchased from a reimbursable appropriation of \$100,000 carried in the act of February 14, 1931 (46 Stat. L. 1122). In addition to the lands purchased, we have leased with tribal funds 461,009.22 acres of privately owned land for a total annual rental of \$13,609.49.

Pursuant to the act of March 3, 1921 (41 Stat. L. 1225-1239), we have been active in effecting exchanges of land with the Santa Fe Railway Co. To date approximately 36,400 acres have been reconveyed by the railway company to the United States, and we have in process of early consummation an exchange with the railway company in the Crown Point district whereby approximately 140,000 acres are to be obtained through exchange. Another large exchange in addition thereto is planned for the near future in the vicinity of Gallup, N. Mex.

### *MISCELLANEOUS PURCHASES AND ADDITIONS DURING THE FISCAL YEAR 1932*

A tract of 35 acres, located at Elko, Nev., was purchased for village-site purposes at a cost of \$13,000, under authority of the acts of January 31, 1931 (46 Stat. 1046), and April 4, 1931 (46 Stat. 1566).

A 10-acre tract was also purchased at Ely, Nev., at a cost of \$1,000, for Indian village purposes. The land was acquired under the act of June 27, 1930 (46 Stat. 820), and February 14, 1931 (46 Stat. 1122).

A small strip of land was purchased at a cost of \$300 and added to the Umatilla school reserve, Oregon, for roadway purposes. This purchase was made under authority of an item contained in the appropriation act of May 14, 1930 (46 Stat. 284).

By the act of February 12, 1932 (Public No. 34, 72d Cong.), a tract of 320 acres was withdrawn from the public domain and added to the Skull Valley Indian Reservation, Utah.

### *PURCHASE OF LAND FOR CHOCTAWS OF MISSISSIPPI UNDER AUTHORITY OF THE ACT OF FEBRUARY 14, 1931 (46 STAT. 1121)*

During the fiscal year 1932 five tracts of land embracing a total of 307 acres were purchased at a cost of \$4,807. They have been resold to seven full-blood Mississippi Choctaws on the reimbursable plan. This land will provide homes for approximately 35 individuals. We

also expect to complete the purchase of five additional tracts, embracing 296 acres, at a cost of \$1,693, for resale to six other individuals.

We have purchased to date for these Indians 2,713 acres at a cost of \$63,739. All of it has been resold to 85 individuals, and thereby 388 persons have been supplied land upon which homes might be established for their benefit.

### EXTENSION OF TRUST PERIODS

The period of trust was extended during the fiscal year 1932 for 10 years by order of the President on the following reservations:

Temecula or Pechanga Mission Bands, California.

Sac and Fox, Kansas.

Grand Portage, White Earth, and Winnibigoshish, Minnesota.

Crow, Montana.

Sac and Fox and Santee, Nebraska.

Walker River, Nevada.

Devils Lake and Standing Rock, North Dakota.

Eastern Shawnee, Otoe, and Missouri, Oklahoma.

Warm Springs, Oregon.

Cheyenne River, Crow Creek, Pine Ridge, and Rosebud, South Dakota.

Yakima and Quinalt, Washington.

Shoshone or Wind River, Wyoming.

### PROBATE WORK

Probating Indian estates is an interesting part of the legal work handled primarily by the Indian Office. The act of June 25, 1910, as amended, gives the Secretary of the Interior exclusive jurisdiction to approve or disapprove Indian wills and to determine the heirs of deceased Indians dying intestate, except in the Five Civilized Tribes and the Osage Nation, Oklahoma, where such jurisdiction rests with the local courts under other special acts of Congress.

During the past year the heirs of 2,027 decedents were determined and 329 Indian wills were approved. In addition to this, 1,860 miscellaneous cases were disposed of consisting chiefly of applications for rehearing. Efforts have been made to simplify and expedite the procedure connected with such work as much as possible consistent with accuracy and good results. The more difficult cases are handled in the field by a corps of trained "examiners of inheritance"; the less complicated ones are taken care of largely by the superintendent and the clerical force at the respective Indian agencies. The law requires a notice and hearing in all such cases which is had in the field and the testimony taken is carefully reviewed by trained personnel in the Indian Office prior to submission to the Secretary of the Interior for final action.

The act of January 26, 1923, prescribes a graduated fee in such cases, ranging from \$20 to \$75, according to the value of the decedent's estate; no fee being charged where the amount involved is less than \$250, and no fee greater than \$75 can be charged no matter how valuable the estate of the decedent may be. During the past year fees aggregating \$53,730 were collected in behalf of this work.

### CONCLUSION

Before closing this review of Indian Service activities, we wish to mention the study of "Law and Order on Indian Reservations" made by a group of qualified investigators under the auspices of the Institute for Government Research. This report was completed just before the close of the fiscal year. It is a study of the complex problems of law and order and social welfare among certain groups of Indians and contains valuable suggestions as a basis for future legislation.

We wish to thank all members of the staff of the Indian Service for their cooperation during the past year. We desire also to express our appreciation for the help of the staff of the Department of the Interior and all other Government services whom we have called upon for assistance and advice. The reports received from the Board of Indian Commissioners continue to furnish us with suggestions and criticisms helpful to the Indian Service.

Sincerely yours,

CHARLES J. RHODES,  
*Commissioner.*

J. HENRY SCATTERGOOD,  
*Assistant Commissioner.*

The SECRETARY OF THE INTERIOR.

## APPENDIX

### *Indian Population*

An Indian, as defined by the Indian Service, includes any person of Indian blood who through wardship, treaty, or inheritance has acquired certain rights. The Census Bureau defines an Indian as a person having Indian blood to such a degree as to be recognized in his community as an Indian. Furthermore, the population enumerated at the Federal agencies is not necessarily domiciled on or near the reservations. It is the population on the agency rolls and includes both reservation and nonreservation Indians. Thus, an Indian may be carried on the rolls because of tribal or inheritance rights, etc., and may reside anywhere in the United States or in a foreign country. Reports of births and deaths among absentees are often not received. In many instances certification is made to the State registrars of vital statistics and thus to the Census Bureau, but not to the Indian Service. In a considerable number of cases the addresses of the nonreservation Indians are unknown. For the above reasons the statistics of Indian population as shown in the decennial reports of the Bureau of the Census do not agree with the statistics of the Indian Service.

Since funds were not available to secure the services of temporary employees for coding and tabulating the 1932 census rolls, the April 1, 1932, Indian population was tabulated in the field by the various agencies. In order to check the tabulation made from the census rolls three additional tabulations were required, showing all changes made on census rolls since 1930, when the rolls were coded and tabulated. One tabulation shows the changes by exact cause under the two headings, "Additions" and "Deductions." Under "Additions" were shown separately the births for the past two years, unreported births for previous years, enrollment by departmental authority, etc., while under "Deductions" were grouped separately deaths for the past two years, unreported deaths for previous years, dropped by departmental authority because of wrongful enrollment, duplications, etc. The second tabulation reports these same changes by residence of Indians, and the third tabulation shows all Indians on both the 1930 and 1932 census rolls who have changed their residence—the residence in 1930 reported under "Deductions" and the residence in 1932 under "Additions." The additions and deductions on the second and third tabulations were added to and subtracted from the 1930 population, and the results equal the tabulations from the 1932 census rolls. This gives not only a check on the tabulations but an analysis of all changes at each jurisdiction.

The total estimated and enumerated number of Indians thus reported in 1932 was 317,234. This number consists of 228,381 Indians actually enumerated and 88,853 Indians taken from earlier or special censuses and estimates based on records. For convenience the latter number will be considered hereafter as an estimate. (See tabular statement below.)

The Bureau of the Census reported 72,643 Indians of the Five Civilized Tribes in 1930, and this number has been substituted for our previous estimated population of the Five Civilized Tribes. (See p. 49 of the Annual Report of the Commissioner of Indian Affairs, June 30, 1931, for further discussion on the estimated population for Five Civilized Tribes.)

The aggregate estimated and enumerated number of Indians reported by Federal agencies on April 1, 1932, represents an increase over the corresponding figure for the previous year of 2,691, or 0.9 per cent.

Of the 228,381 Indians enumerated, 116,265 were males, 112,106 females, and for 10 the sex was not reported.

It is significant when the Indians enumerated are considered that 194,391, or 85.1 per cent, resided at the Federal jurisdiction where enrolled, while only 4,749, or 2.1 per cent, resided at another jurisdiction, and 29,241, or 12.8 per cent, resided elsewhere—that is, outside of any Federal jurisdiction.

Of the 32,447 Indians residing elsewhere on April 1, 1930, 41 were living in the New England States, 208 in the Middle Atlantic, 3,633 in the East North Central, 9,234 in the West North Central, 437 in the South Atlantic, 93 in the East South Central, 2,166 in the West South Central, 5,120 in the Mountain States, and 6,024 in the Pacific States, and for 5,491 Indians the residence was either not reported or unknown.

Oklahoma has far more Indians than any other State. If the Federal census population of the Five Civilized Tribes is included, the Indian population is 94,552, or 29.8 per cent of the aggregate Indian population. Arizona ranks next with 48,162, or 15.2 per cent. According to the enumerated population only two other States have an Indian population numbering more than 20,000, New Mexico and South Dakota.

According to a tabulation of the tribes enumerated on April 1, 1930, the most important numerically were the Navajo, Sioux, and Chippewa, numbering 40,862, 33,168, and 23,647, respectively.

The Indian population not actually enumerated (termed an estimate) is 88,853, which is compiled as follows:

|  |        |
|--|--------|
| California, Sacramento agency, part of, 1930 estimate.....       | 8,761  |
| Michigan, 1927 census.....                                       | 1,192  |
| New York, 1932 estimate.....                                     | 4,523  |
| Oklahoma, Five Civilized Tribes, Bureau of the Census, 1930..... | 72,643 |
| Texas, 1931 special report.....                                  | 250    |
| Washington, Taholah agency, scattered bands, 1932 estimate.....  | 664    |
| Wisconsin:   |        |
| Rice Lake Band of Chippewa, special census, July, 1930.....      | 221    |
| Stockbridge Reservation, Keshena agency, 1910 census.....        | 599    |

In the following table the Indian population as reported by the United States Fifteenth Census for 1930 is given for States in which there are no Federal agencies.

Doubtless many of these Indians are duplicated in the columns "Residing elsewhere" in Table 2 showing Indian population in continental United States enumerated at Federal agencies, according to tribe, sex, and residence, April 1, 1932.

Table 1.—Indian Population <sup>1</sup> of States in Which There Are No Federal Agencies, 1930

| Division and State     | Total         | Male         | Female       | Division and State         | Total | Male | Female |
|------------------------|---------------|--------------|--------------|----------------------------|-------|------|--------|

| Shoshone-Flathead.....                                      | 6                 | 2     | 4      | -----            | 4                                       | 1    | 3      | -----            | 2                                | 1    | 1      |                    |      |        | -----            |
| Shoshone-Paiute.....  | 3                 | 2     | 1      | -----            |   |      |        | -----            |                                  |      |        | 3                  | 2    | 1      | -----            |

<sup>1</sup> See estimated statement of other Indians not enumerated numbering 88,853.

<sup>2</sup> Apr. 1, 1931, population.

<sup>3</sup> Exclusive of part of Sacramento Agency. (See estimated statement.)

<sup>4</sup> Apr. 1, 1930, population.

<sup>5</sup> Tulare County Indians formerly returned under Tule River Reservation.

<sup>6</sup> Total population of Western Shoshone Agency was formerly returned under Nevada, the agency headquarters; but the reservation is in both Idaho and Nevada.

<sup>7</sup> The population for purchased lands last year was included twice. Population was returned under White Earth Reservation with no notation; hence the error.

<sup>8</sup> Flandreau School Jurisdiction was formerly returned under South Dakota; but jurisdiction is in both South Dakota and Minnesota.

<sup>9</sup> Consists of Blackfeet, Chippewa, Cree, Sioux, Arapaho, and Piegian Tribes or mixtures of these tribes.

<sup>10</sup> Total population of Sisseton Agency was formerly returned under South Dakota, the agency headquarters; but the reservation is in both North Dakota and South Dakota.

<sup>11</sup> The total population of Standing Rock Agency was formerly returned under North Dakota, the agency headquarters; but the reservation is in both North Dakota and South Dakota.

<sup>12</sup> Exclusive of Five Civilized Tribes. (See estimated statement.)

<sup>13</sup> Exclusive of scattered bands under Taholah Agency. (See estimated statement.)

<sup>14</sup> Exclusive of Stockbridge Reservation, Keshena Agency, and Rice Lake band of Chippewas, Lac du Flambeau Agency (See estimated statement.)
