*Private Boxes.

Where keys are kept—Keys to open the doors of all boxes are kept in a little box fastened to the pole by the side of the street box, the box having a glass cover.

Directions for sending in fire alarms—In case of fire go to the nearest street box, break the glass cover of the key box, take the key from the hook and place it in the door of the street box, which has a spring lock and is easily worked. The lock being released, open the door. Place the index finger over the little brass hook or lug projecting from the slot near the top of the inner door, pull the hook down quickly, but steadily, to the bottom of the slot and let go immediately. The hook will fly back to its original place and the fire department will do the rest. Persons turning in an alarm should remain at the box until the arrival of the department for the purpose of giving information as to the location of the fire.

Signals given on the fire bell—Two taps on the fire bell, after the alarm from the box has been sounded, calls for one hundred pounds direct pressure. This signal repeated, calls for 125 pounds pressure. Three slow taps after the alarm means "fire out." Twelve taps in regular order, repeated twice, is a signal for the militia to assemble at their armory. Six taps, repeated twice, or "666" is the signal for the call members of the fire department to report at their respective stations. One tap on the bell denotes broken wire.

The steamer responds to alarms from box 444.

The first stroke or strokes of the fire bell designate the ward from which the alarm is turned in; it also designates the first figure of the box number. This is followed by a brief pause, and the remaining strokes indicate the second figure of the box number—thus: 1 stroke, pause followed by three strokes, means First ward, box No. 13; fire out, 1——1; more pressure, 2——2; more help, 3——3.
