Thus when we view the ſun's diſk appearing thro' a cloud, and fix our attention thereon, but without carrying our thoughts any further, we are ſaid ſimply to *apprehend* the ſun. After the like manner when the image of any abſent thing, *e. gr.* a lion ſeems as it were preſent to our imagination, and we view this image, but terminate our attention in the mere view, we have a ſimple *Apprehenſion* of a lion.

In this ſenſe ſimple *Apprehenſion* is diſtinguiſhed from idea, or notion, as the operation from the effect. *Wolf.* Philoſ. Ration. p. 33, 34, 35.

Philoſophers uſually confound ſimple *Apprehenſion* with pure ſenſation, and the more mechanical perception of external objects; by which means ſome ſuggeſt the firſt and fundamental diſtinction between human reaſon and the inſtinct of brutes is loſt.—Simple *Apprehenſion*, ſay they, is an act or operation of the mind, and not of the ſenſes; which laſt is common to us with brutes, but the firſt a perfection and excellency of an human ſoul. We are to ſuppoſe the imagination plentifully ſtored with ideas of ſenſation, without the concurrence of the pure intellect. In this common ſtore-houſe they lye in confuſion, disjoined and unranged, without any other order, than that in which they chance to be tranſmitted; and were there no immaterial principle at all within us, they would always remain in the ſame diſorderly condition undiſturbed and unobſerved. V. *Brown*, Proceed. Extent. *&c.* of Hum. Underſtand. l. 2.

Some object to this, that it is impoſſible to diſtinguiſh the ſimple *Apprehenſion* of an idea, without forming any judgment or drawing any inference concerning it, from the ſimple perception, or if you will the ſenſation of that idea; unleſs perhaps the latter may be applied only to the effect of a preſent object; whereas the other may alſo be uſed, when its idea is recalled by the memory and received by the intellect. Preſ. Stat. Rep. Lett. T. 2. p. 114. ſeq.

APPRENTICESHIP, the ſtate or condition of a perſon bound apprentice.

In France the ſons of tradeſmen, living in their father's houſe till 17 years of age, are reputed to have ſerved an *Apprenticeſhip* [a]. In that country the times of ſerving are different in the different profeſſions, from three years to eight.—After ſerving out an *Apprenticeſhip*, the perſon becomes what they call an *aſpirant*, or candidate for maſter-ſhip, and is to be examined by proper officers as to his ſkill and proficiency, and alſo exhibit a *chef d' ouvre* or maſter-piece in the art he has been bred to, ere he be ſuffered to ſet up to practiſe for himſelf [b]. —[[a] *Savar.* Dict. Comm. T. 1. p. 119. [b] *Savar* Dict. Comm. T. 1. p. 169. in voc. *Aſpirants*.]

APPROACH, (*Cycl.*) in gardening, is uſed in ſpeaking of the method of inarching or inoculating, which is called grafting by *Approach*. See INOCULATING.

Some phyſicians alſo ſpeak of a method of curing diſeaſes by touching or *Approach*. See APPROXIMATION.

APPROACHES, (*Cycl.*) *in Fortification*.—The antients made their *Approaches* towards the place beſieged much after the ſame manner as the moderns. M. de Follard ſhews, that they had their trenches, their ſaps, parallels, *&c.* which tho' uſually held of modern invention, appear to have been practiſed long before, by the Greeks, Romans, Aſiatics, *&c.* *Follard*, in Polyb. T. 2. p. 161.

APPROACHING, in fowling, a term uſed to expreſs ſuch deviſes as are contrived for the getting within ſhot of ſhy birds. It is principally uſed in marſhy low places. The beſt method of *approaching* is by means of three hoops tied together at proper diſtances according to the height of the man that is to uſe it, and having boughs of trees tied all round it, with cords to hang it over his ſhoulders; a man getting into this, conceals himſelf and approaches by degrees toward his game in the form of a moving buſh.

Geeſe, ducks, and teal, quit the waters in the evening and paſs the night in the fields, but at the approach of morning they return to the water again, and even when on the water they will retire to great diſtances, on the approach even of a horſe or cow, ſo that the buſineſs of the ſtalking horſe is of little uſe; but this deviſe of *approaching*, by the moving buſh ſucceeds tolerably well with them. Dict. Ruſt T. 1. in voc.

APPROBATION, a ſtate or diſpoſition of the mind wherein we put a value upon, or become pleaſed with ſome perſon or thing.

Moraliſts are divided on the principle of *Approbation*, or the motive which determines us to approve and diſapprove. The Epicureans will have it to be only ſelf-intereſt; according

to them, that which determines any agent to approve his own action, is its apparent tendency to his private happineſs; and even the *Approbation* of anothers action flows from no other cauſe but an opinion of its tendency to the happineſs of the approver, either immediately or remotely. Others reſolve *Approbation* into a moral ſenſe, or a principle of benevolence by which we are determined to approve every kind affection either in ourſelves or others, and all publickly uſeful actions, which we imagine to flow from ſuch affection, without any view therein to our own private happineſs. *Hutcheſ.* Inquiry into Orig. Beauty, *&c.* Tract. 2. Sect. 4. p. 179. and his Eſſ. on Paſſ. p. 207. ſeq.

APPROBATION is more particularly uſed for a teſtimony given of the goodneſs, or value of a thing, *e. gr.* ſuch a thing meets with univerſal *Approbation*.

It is a maxim among Civilians, *approbare dicitur qui non improbat*. He is judged to approve who does not diſapprove. *Calv.* Lex. Jur. in voc.

By the civil law, a mere *Approbation* of a crime after commiſſion, does not make a perſon guilty, but an *Approbation* attended with fact, is equivalent to a command. *Wood*, Inſt. Imper. Law. l. 3. c. 7. p. 250.

APPROBATION is more particularly uſed, in ſpeaking of recommendations of books, given by perſons qualified or authorized to judge of them.

Thoſe appointed to grant licences, and imprimaturs frequently expreſs their *Approbations* of books. The biſhop of Meaux's expoſition came out with the *Approbations* of the pope and ſeveral cardinals [a]—It has been an antient cuſtom to demand *Approbations* of books from the pope. Mabillon [b] ſays, after John the deacon, that the power of *approving*, or cenſuring books belongs to the pontiff, jure divino.—[a Work of Learn. T. 3. p. 83. b Act. Sanct. Bened. præf. c. 7. p. 90. ſeq. *Baill.* Jugem. de Scav. P. 1. c. 9.]

Boileau had the honour of a royal *Approbation*. Louis XIV. in the privilege granted for publiſhing the works of that poet declares that he does it *en vûe de donner au public par la lecture de ſes ouvrages la meme ſatisfaction que ſa majeſte en a reçûe*. V. Jour. des Scav. T. 53. p. 361.

APPROVEMENT (*Cycl.*) is ſometimes uſed for appropriating, or enjoying the profits of a thing to a man's-ſelf. See APPROPRIATION, *Cycl.*

This is called, in writers of the barbarous age, *Appruare* and *Approvare*. *Du Cange*, Gloſſ. Lat. T. 1. p. 270.

Some think the word derived from *ad* to and *provanda* or *præbenda*, ſuſtenance.

APPROVER (*Cycl.*) is particularly uſed in antient law writers, for a bailiff or land ſteward, appointed to have the care of a mannor, franchiſe or the like, and improve and make the moſt of it for the benefit of his maſter. *Du Cange*, Gloſſ. Lat. T. 1. p. 270.

In this ſenſe the word is alſo written *Appruare*. V. *Flet.* l. 2. c. 76. §. 1. Item. c. 82. §. 2.

APPROVERS are called, in middle age writers, *probatares* and *approbatores*. *Du Cange*, Gloſſ. Lat. T. 4. p. 430. in voc. *probatores*.

APPROXIMATION, (*Cycl.*) in medicine, denotes a magnetical kind of cure, or method of tranſplanting a diſeaſe into ſome other ſubject, whether animate or vegetable, by bringing it in immedite contact with the patient. *Brun.* Lex. Med. in voc.

APPROXIMATION, in algebra. See EQUATION.

APPULSE, (*Cycl.*) in a general ſenſe, a thing's being brought to, or in contact with another.

Articulation is either by *Appulſe*, i. e. when one of the moveable organs touches and reſts on ſome of thoſe which are immoveable; or without *Appulſe*, only by inclination of the moveable organ to the immoveable. *Hold.* Elem. of Speech. p. 35.

APPULSE *of Cattle*, *Appulſus pecoris*, in the civil law, the right of driving them to water. *Calv.* Lex. Jur. p. 79. b.

This is ranked in the number of ſervices.

The word is formed from *ad* to and *pellere* to drive.

APPULSE, in aſtronomy, is but a ſtep towards a tranſit, occultation, conjunction, eclipſe, *&c.*

M. Flamſted [a], M. de la Hire [b] and others [c] have given obſervations of the moon's *Appulſes* to the Pleiades.—[a Phil. Tranſ. N°. 76 p. 3061. It. N°. 86. p. 5034. b Mem. Acad. Scienc. An. 1708. p. 385. c V. Mem. Ibid. p. 382.]

The *Appulſes* of the planets to the fixed ſtars have always been of great uſe to aſtronomers in order to fix the places of the former. The antients wanting an eaſy method of comparing the planets with the ecliptic, which is not viſible, had ſcarce any other way of fixing their ſituations, but by obſerving their tract among the fixed ſtars, and remarking their *Appulſes* to ſome of thoſe viſible points. Hiſt. Acad. Scienc. An. 1710. p. 417.

Dr. Hally has publiſhed a method of determining the places of the planets, by obſerving their near *Appulſes* to the fixed ſtars. Phil. Tranſ. N°. 369. Art. 1.

The beſt method of diſcovering the longitude at ſea, is by obſervations of the *Appulſes* of the moon to the fixed ſtars.

An anonymous author has publiſhed an advertiſement to aſtronomers, of the advantages that may accrue from the obſervation of the moon's frequent *Appulſes* to the Hyades, during the three then enſuing years, 1718, 19, 20. Phil. Tranſ. N°. 354. Art. 1. ſee alſo Miſc. Berol. T 3. p. 169.

Of all the celeſtial obſervations hitherto made, none are capable of ſo perfect an exactneſs, as the near *Appulſes* of the moon and planets to the fixed ſtars; for though the places of the ſtars have not as yet attained their ultimate preciſion, yet ſuch obſervations are ever good, the places of the planets being thereby aſcertained in proportion to the correctneſs of any catalogues that may be made hereafter. But the ordinary number of ſtars, with which the planets may be thus compared, being ſmall, the opportunities of obſerving are conſequently rare; whence appears the great uſe of a full catalogue of all the teleſcopical ſtars within the zodiac, *viz.* that thereby opportunities of obſerving *Appulſes* may be more frequent. Since the royal obſervatory at Greewich was put under Dr. Halley's care, he endeavoured to put himſelf in a condition to ſupply the many and great vacancies to be met with in the preſent zodiac, and for the further ſervice of aſtronomy publiſhed a map, or planiſphere, of the ſtarry zodiac. Wherein are accurately laid down all the ſtars, to which the moon's *Appulſe* has ever been obſerved in any part of the world. Phil. Tranſ. N°. 369. p. 209. ſeq.

APRICOT. See the article PRÆCOCIA *Mala*.

A PRIORI, (*Cycl.*) in philoſophy.—A thing is ſaid to be known *a priori*, which is found out by reaſoning. *Wolf.* Pſychol. §. 491. ſeq.

APROSCLETOS DICE, Απροσκλητος δικη, in the Greek law, a ſentence paſſed againſt a perſon without having firſt cited him to appear. *Calv.* Lex. Jur. p. 79. a.

Such ſentences were null in themſelves.

APSINTHATUM, Αψινθιον, in phyſic, a kind of potion to ſtrengthen the ſtomach; of which we meet with divers formulas in the antient writers. *Caſtel.* Lex. Med. in voc. Vid. *Aet.* l. 3. c. 69. ſeq.

It was doubtleſs thus denominated, becauſe compoſed in great part of *Abſynthium*, or wormwood. *Gorr.* Med. Def. p. 68. Hence alſo Αψινθιτης οινος, *vinum Abſinthitis*, ſtill in uſe.

APSYCHIA, in medicine, a ſwooning or fainting away, called alſo *Lipopſychia* and *Apopſychia*. *Brun.* Lex. Med. in voc.

APSYCTOS, a word uſed by Pliny and other of the antients, as the name of a ſtone found in Arcadia, and of the colour of iron, the quality of which they ſay was, that when once heated red hot, it would never grow cold again. It is eaſy to ſee that this is an impoſſibility; and that ſome errors among the antients, and miſunderſtandings of their works by later writers, have given the occaſion for propagating ſo idle an opinion.

Pliny mentions alſo a ſtone called *Aſyctos*, which when once heated would continue hot for a week; but this ſeems only the copy of ſome other author who had written with more moderation on the ſame ſtone before deſcribed, as being unextinguiſhable for ever. It is probable that all the accounts of this ſtone aroſe only from miſunderſtandings of the relations given by the earlieſt writers of our aſbeſtus; but if their accounts were any thing like theſe, they muſt have been very widely diſtant from the truth, ſince no ſtone ſo ſoon cools as the aſbeſtus; a piece of cloth made of it, if heated red hot, and laid in that condition on a piece of white paper, cooling ſo quickly that it does not burn the paper; this has been an experiment often tried.

Metaphraſtus tells us, that our tutelary ſaint and patron St. George being condemned to be burnt alive, the Pagan judges were ſo terrified with the miracles wrought by him in the name of Jeſus Chriſt, that they thought he would be able by means of that name to put out a common fire, and therefore, ordered him to be thrown alive into a heap of the aſbeſtus made red hot, and then covered with as much more. It ſeems by this that the author underſtood aſbeſtus to be the unextinguiſhable ſtone called *Apſyctos* by the old writers, and that this ſtone being once heated could not be cooled again even by miracle; but Bollandus concludes from the accounts moſt to be depended upon, that it was no other than quick lime that this ſaint was burnt alive in. Philoſ. Tranſ. N°. 172. p. 1055.

We have ſome ſtones indeed in England, that when once heated will retain a warmth a long time, but all the other accounts ſeem groundleſs; our warming ſtone uſed in Cornwall and Yorkſhire, to lay at the feet of peoples beds, will retain warmth eight or ten hours; and there is a ſort of red ſtone cut out of the ſalt mountains near Cordova, and formed into broad tiles called ruggiolos by the Italians, which being once well heated will retain a ſenſible warmth twenty-four hours; but theſe do not at all come up to the qualities of this imaginary ſtone of the antients. See ASBESTUS.

APSYRTUS, in the materia medica of the antients, a name given to the common marrubium, or horehound, a plant at that time as well as now eſteemed very good in coughs, and other complaints of the breaſt.

APTITUDE, or APTNESS, (*Cycl.*) is often uſed in ſpeaking of the talents of the mind, for a promptitude, or diſpoſition to learn things with eaſe and expedition. *Charlt.* Diſc. of Diff. Wits. Sec. 2. Art. 2.

In which ſenſe *Aptneſs* amounts to the ſame with what the the Greeks call Ευμαθια, and the Latins *bona indoles*, and we ſometimes *docility*.

Charlton divides *Aptneſs* into theſe parts, *viz.* acuteneſs, ſagacity, and memory.

APUA, in zoology, the name of a ſmall ſea fiſh, ſuppoſed by many to be produced of the ſlime and mud of the ſhores. But ſuch opinions are all groundleſs and idle. There are two ſpecies of theſe fiſh, 1. the *Apua* vera, 2. the *Apua* phalerica. The firſt, or *Apua* vera is extremely ſmall, ſeldom exceeding two inches in length; it is uſually white, but ſometimes a little reddiſh; its eyes are black, it has no ſcales; and is ſo ſoft and tender as to be ſufficiently dreſſed almoſt as ſoon as it has come within the reach of the fire. The other, or *Apua phalerica*, is larger, but ſo ſoft that it even melts away between the fingers in handling it, is very fat, and often affords a ſort of oil when large quantities of it lie any time together. *Ray*, Ichthyogr. p. 343.

APUA *Membras*, in zoology, a name by which ſome have called the *pilchard*. *Willughby*, Hiſt. Piſc. p. 224. See PILCHARDUS.

APUS, (*Cycl.*) in aſtronomy, a conſtellation of the ſouthern hemiſphere placed near the pole, between the triangulum auſtrale, and the chameleon, ſuppoſed to repreſent the bird of paradiſe. *Keil*, Aſtron. Lect. 6. p. 50.

The *Apus* is ſuppoſed one of thoſe birds called *Apodes*, as having no feet. See APODES.

There are four ſtars of the ſixth, three of the fifth, and four of the fourth magnitude, in the conſtellation *Apus*.

Dr. Halley in 1677, obſerved the longitude and latitude of the ſtars in *Apus*, which Hevelius in his prodromus reduced with ſome alteration to the year 1700.

P. Noel has alſo given the places of theſe ſtars, with their right aſcenſions and declinations for the year 1687 [a]: But his obſervations differ widely from thoſe of Dr. Halley. Hevelius has repreſented the figure of *Apus*, and its ſtars, in his firmamentum ſobieſcianum, according to Halley's account; Noel has done the like, according to his own account. Wolfius, with what juſtice we will not pretend to ſay, gives the preference to this laſt [b].—[a Obſerv. Mathem. in Ind. and Chin. Fait. c. 4. p. 50. ſeq. b *Wolf.* Lex. Math. p. 138.]

APUTTASY, in botany, a name given by the people of Guinea to a tree, a decoction of which is in great uſe among them for waſhing the mouth to cure the ſcurvy in the gums, and preſerve the teeth; the leaves of this tree ſtand very irregularly, ſometimes in pairs, ſometimes alternately, and ſometimes at ſmaller, ſometimes at greater diſtances from one another. They have ſcarce any pedicle: they are broad at the baſe, and narrow at the point; ſmooth and gloſſy above, and whitiſh and ſomewhat hoary underneath; eſpecially the larger ribs, which being obſerved againſt the light are clouded; the largeſt leaves are two inches and a half long and about one inch broad; the tree is large and ſpreading. Phil. Tranſ. N°. 232.

APYCNI, απυκνοι, in the antient muſic, was uſed for ſuch chords or ſounds of the ſcale, as could never enter the ſpiſſum. They were fixed, or *Stabiles*. *Wallis*, Append. Ptolem. Harm. p. 165. See PYCNI, STABILES, GENUS, SPISSUM.

APYCNON, Απυκνον, *non ſpiſſum*, *rarum*, in the antient muſic, was applied to thoſe two conjunct intervals of a tetrachord, which taken together were greater than the third. *Wallis*, Append. ad Ptolem. Harm. p. 165.

This happened only in the two diatonic genera. See the article SPISSUM.

APYRENOS, properly ſignifies without kernels. The Greek writers, however, did not always keep up rigidly to the ſenſe of this word, but ſometimes applied it to ſuch fruits as had fewer and ſofter kernels than others of the ſame kind; thus the meſpilus tricoccus, or three kernelled medlar, was called by Theophraſtus and others meſpilus *Apyrenos*, becauſe the others having each five ſeeds, this was ſingular in not having ſo many.

APYROI, Απυροι, in antiquity, a denomination given to altars whereon ſacrifice was offered without fire. *Potter*, Archæol. Græc. l. 2. c. 2.

In which ſenſe the word ſtands contradiſtinguiſhed from *Empyroi*. See ALTAR.

APYROMETALLUM, in metallurgy, a name by which ſome authors have called gold, from its reſiſting the force of fire. *Aldrov.* Muſ. Met. p. 38.

APYRON, Απυρον, ſomething that has not undergone the fire. In this ſenſe, *ſulphur vivum*, or native ſulphur, is particularly denominated *Apyron*. *Caſtel.* Lex. Med. in voc. *Dioſcor.* l. 5. c. 124.

Some authors alſo give the denomination *Apyros*, Απυρος, to a modern proceſs for making Æthiops mineral without fire, by trituration alone.

AQUA (*Cycl.*)—AQUA *Alexiteria ſimplex*, the name now given in the London diſpenſatory to the ſimple water commonly called milk water. It is ordered to be made in the following manner: Take mint a pound and half, tops of ſea-wormwood, and leaves of angelica, all freſh and green, of each a pound; add as much water as is neceſſary to prevent burning, and diſtil off three gallons. *Pemberton*'s Lond. Diſp. p. 236.

AQUA *Alexiteria ſpirituoſa*, the name of a compound or cordial water, brought into uſe by the late London diſpenſatory. It is ordered to be made of half a pound of green mint, and four ounces of angelica leaves, with the ſame quantity of tops of ſea-wormwood, and a gallon of proof ſpirit; adding water enough to prevent burning, and diſtilling off a gallon. *Pemberton*'s Lond. Diſp. p. 243.

This with a double proportion of the angelica, and the addition of a pint of vinegar after the diſtillation, makes what is called the the *Aqua Alexiteria ſpirituoſa cum aceto*, which is intended to ſtand in the place of the treacle water, of the former diſpenſatories.

AQUA *Aluminoſa Bateana*, a form of medicine in the new London pharmacopœia, compoſed in the following manner; take alum and white vitriol of each half an ounce, water a quart; boil the whole together, that the ſalts may be diſſolved; and then letting it ſettle, filtre it thro' paper. *Pemberton*'s Lond. Diſp. p. 346.

Quincy gives another proceſs for making alum-water; as alſo its uſe in medicine: for which ſee the article ALUMINOUS.

AQUA *Fortis* (*Cycl.*) is uſed for ſtaining wood, and book-binders uſe it to throw on their leather to marble it; it is alſo uſed for ſtaining bone and ivory. *Boyle*'s Works, Abr. Vol. I. p. 133.

Silver is very nicely and finely purified by means of this menſtruum in the following manner; diſſolve ſilver that has been copelled in a clean glaſs body, with a ſufficient quantity of *Aqua fortis*; if the ſolution is at all turbid, filtre it thro' paper into another clean glaſs; pour into this ſolution by little and little ſpirit of ſalt, or a ſolution of common ſalt, or ſal armoniac, enough to produce a perfect *Aqua regia*. The limpid ſolution will now immediately become milky: let it reſt for ſome hours, and all the ſilver will ſubſide to the bottom in form of a white powder, which may be the ſooner effected, by pouring a large quantity of pure water on the ſolution if highly charged. Waſh the powder with many freſh waters or with the phlegm of ſpirit of ſalt or *Aqua-fortis*, till the calx and water are both perfectly inſipid; then ſeparate the remaining water by a filtring paper, and dry the calx. Put this into a crucible well rubbed over on the inſide with ſoap, and cover it with about one half of any fixed alkaline ſalt very dry and beaten to a fine powder; ſqueeze the whole well down with a finger; cover the crucible with a tile, and ſet it in a wind furnace; make at firſt a middling fire, only to make the veſſel grow red hot, and then encreaſe it to a higher degree; when the fuſion is compleated take out the crucible, and let the ſilver either cool in it, or elſe pour it into an ingot. *Cramer*'s Art of Aſſaying, p. 256.

Aqua-fortis diſſolves iron, copper, lead, ſilver, mercury, regulus of antimony, and tin imperfectly, but gold not at all; it alſo diſſolves biſmuth and zink.

Common *Aqua-fortis* when poured upon ſilver uſually grows troubled in the beginning of the operation of ſolution; and a little after this is perfected, there is made a precipitation of a whitiſh powder. This ſhews the imperfection of the menſtruum, and is wholly owing to the careleſſneſs or ignorance of the perſons employed in making it.

This powder ſometimes melts in the fire with pot-aſhes, and gives a regulus of ſilver at the bottom of the veſſel; ſometimes it melts with difficulty in the fire, and has all the characteriſtics of the calx of ſilver precipitated from *Aqua-fortis* by oil of vitriol. The fault of this *Aqua fortis* happens either from the uſe of too violent and long continued a fire, or becauſe the mixture of the vitriol and the nitre have been careleſsly made, or too large a proportion of the former uſed; in this caſe, when the the diſtillation draws towards an end, there appear white milky fumes in the recipient; theſe are vitriolic, and this phænomenon plainly ſhews the fault of the menſtruum, and might ſerve to prognoſticate the before-mentioned precipitation. This calx of ſilver ſeldom proves fluid in the fire, but runs into a kind of *luna cornea*, and ſhews that the nitre has been impure, and has contained ſome portion of ſea-ſalt. *Cramer*'s Art of aſſaying, p. 35.

For this reaſon, no *Aqua-fortis* ought to be uſed but what has been firſt carefully proved by the proper trials with ſilver and the other metals; and as the diſſolution, eſpecially that by which gold is ſeparated from ſilver with *Aqua-fortis*, is conſiderably hindered and impeded by this defect, and is made uncertain by this ſort of precipitation, that portion of oil of vitriol, and of ſpirit of ſalt which thus ſpoil the *Aqua-fortis* muſt be ſeparated from it before it is uſed; this may be done in the following manner. Pour one thirtieth or fortieth part of the menſtruum to be uſed into a ſmall cucurbit, and over a gentle fire, diſſolve in it ſome ſilver ſo as wholly to ſaturate the *Aqua-fortis*. If the liquor looks turbid and milky in the beginning of the ſolution, it is a proof that it wants to be purified; paſs the warm ſolution thro' a filtre, and when it is perfectly clear pour it drop by drop into the reſt of the *Aqua-fortis*, which is to be purified, till the dropping in the ſmalleſt drop of it will not any longer turn the whole milky as it did at firſt; then let it reſt ſome hours, that the precipitated calx may ſubſide, which done drop in again, and ſo on till this milkineſs is no longer produced. Finally, the clear *Aqua-fortis* is to be poured carefully off, or filtred thro' a four doubled paper, and it is then found to be pure, and fit for all the operations it may be required in.

Some uſe ſilver allayed with copper, or even copper itſelf for the precipitating of the ſpirit of ſea-ſalt or vitriol from the *Aqua-fortis*; but this, tho' it may ſucceed when the vitriolic ſpirit only is to be precipitated, fails when that of marine ſalt is to be ſeparated; becauſe this being mixed with *Aqua-fortis* diſſolves copper per-

perfectly. The oil of vitriol is indeed carried out of the *Aqua-fortis* by copper, but not ſo perfectly as by ſilver. It appears by this operation, that the precipitating body and that to be precipitated adhere to one another and ſink to the bottom together: this is the method uſed by the aſſayers.

The beſt *Aqua-fortis* is often tinged with a greeniſh colour, which happens if *Aqua-fortis* having been expoſed ſome days to the air, and loſt its red fuming ſpirit, there be poured to it ſome freſh ſtrong *Aqua-fortis* ſtill emiting its fumes, or if *Aqua-fortis* be diluted with water. As this colour may however proceed from copper diſſolved in it, to be certain that it does not, a little is to be poured into a cucurbit, and as much of ſome alkaline liquor to be added to it as will ſaturate the acid. Then if there be ever ſo little copper in it, the colour becomes a deep blue, and there is a cloudy precipitation made, becauſe the nitre has been regenerated by this proceſs, and does not diſſolve copper, ſo much as *Aqua-fortis* does: But if there be no copper in the *Aqua-fortis*, the colour diſappears.

The nice aſſayer, after having carefully proved his *Aqua-fortis*, muſt concentrate it to a certain degree; for, if too weak, it often retards the ſolution, and ſometimes does not even affect the ſilver; but this concentration is only to be in a certain degree; for, if carried too far, and the *Aqua-fortis* made too ſtrong by it, it vaniſhes into fumes, which ruſh violently out of the receiver, or veſſel the ſolutions are made in, tho' ſufficiently high, and carries away a part of the ſilver with it in vapours; and if there is any thing of gold in the ſilver, it will be corroded into a fine duſt, which it proves very difficult afterwards to collect together. *Cramer*'s Art of Aſſaying, p. 36.

When *Aqua-fortis* is too weak, it is to be put into a deep cucurbit, and the watry part is to be drawn from it, by a gentle fire, till yellow fumes begin to ariſe. To find out whether it be too ſtrong, the following method is to be uſed: Melt together one part of gold, and four parts of ſilver; of this make a flat plate, which cut into three or more parts; roll up each part, that it may be conveniently put into the neck of a cucurbite; when rolled up, and gently heated at the fire, put it into a cucurbit, and pour upon it three times its weight of *Aqua-fortis*, ſet it in a gentle heat: If the ſilver is eroded from the gold, and the gold retain the ſame figure of a piece of a plate rolled up, and there appear no reddiſh duſt at the bottom of the veſſel, then the *Aqua-fortis* has its proper degree of ſtrength: But if the diſſolution has been made with ſo much violence, that the gold was eroded, or the plate almoſt broken, then the *Aqua-fortis* was too ſtrong. It muſt then be diluted with a tenth, or an eighth part, of *Aqua-fortis* Phlegm, or, if that is not at hand, with the ſame quantity of common water. This done, the trial is to be repeated, by the diſſolution of a like plate rolled up; and this ſeveral times over, till the ſilver be diſſolved, without the leaſt diminution of the gold. By this the aſſayer is aſſured of a due degree of ſtrength in his menſtruum, for all the purpoſes he requires it for.

Aqua-fortis is better than in the common ſtate, when it is recovered by fire from a metal which had been diſſolved by it. It may be almoſt entirely recovered by fire, from ſuch ſolutions. Lemery, in his curious account of the arbor martis, obſerves, that the experiment ſucceeds much better with *Aqua-fortis*, drawn once from a diſſolution of iron, than with the common kind; and Cramer gives a very accurate and ready way of obtaining ſuch a revived *Aqua-fortis*, in any quantity, in this manner: Put into a glaſs alembic, a pound or more of any metalline ſolution, in *Aqua-fortis*; diſtil it into a large recipient, over a gentle fire, ſo that the drops may follow one another, at the interval of ſome ſeconds. When the liquor of this quantity is thus drawn off, let ſuch another quantity be put warm into the ſame cucurbit, to the reſiduum of the former; let this be diſtilled in the ſame manner, till all its liquor is drawn off, and then more added, till the whole quantity intended to be diſtilled, is thus diveſted of its liquor. After all this, when the yellowiſh vapours begin to appear from the Remainder, a dram of ſuet muſt be put into the veſſel, leſt the diſſolved metal ſhould, when dried up, adhere ſo faſt to the ſides of the veſſel, as to give great trouble in ſeparating it; and when, at laſt, the calx ſhall be quite dry, let it be ſeparated and fuſed with Pot-aſhes; thus will the metal be recovered, and the receiver will contain the *Aqua-fortis* revived from it.

The Germans build many arguments on the nature of fire, on a ſuppoſed experiment of Borrichius, which tends to prove, that *Aqua-fortis*, mixed with oil of turpentine, will take fire; but the experiment itſelf is fallacious, and, in reality, gives only the appearance of flame, not any real fire.

The mixture ordered by Borrichius is four ounces of oil or ſpirit of turpentine, and ſix ounces of *Aqua-fortis*, both very ſtrong, and newly made: Theſe are to be put together into a glaſs body, and this being ſet in the ſun, they will ferment together for ſome time, and a thick ſmoak will iſſue out, which, in the ſun-beams, reſembles flame; but if flax, or any other inflammable ſubſtance be placed in it, it will never take fire; and if the experiment be made in a dark room, where the fermentation ſucceeds equally well, there is no appearance of flame at all. In the making the experiment, candles are to be kept at a diſtance, for the ſmoak, raiſed from theſe liquors, will take fire at the flame of any other body, tho' at ſome diſtance, and the experimenter may be impoſed on. Phil. Tranſ. N°. 150.

AQUÆ-*Hauſtus*, in the civil law, a right of drawing water, and carrying it through another's ground. *Calv.* Lex. Jur. p. 80. a.

Aquæ-hauſtus is a ſpecies of ſervice, differing from *Aquæ-ductus* in this, that in the latter, water is only conveyed in pipes, or paſſages, under ground; whereas in the former, it may be carried by cattle. Add, that *Aquæ-hauſtus* could only be from a well, but *Aquæ-ductus* from either well or ſpring.

AQUA *Mercurialis*, a preparation of *Aqua-regia*, and ſublimate of mercury, with a little mercury, placed in a ſand heat, till the ſolution of the mercury be made. *Kirch.* Mund. Subter. l. 11. §. 2. c. 3. p. 261.

'Tis a mark of perfection of the *Aqua mercurialis*, if it turn a piece of copper caſt into it, of a ſilver colour. *Kirch.* loc. cit.

'Tis by this water, that the alchymiſts pretend, all metalline bodies may be reduced to their firſt matter, or mercury.

AQUÆ *Pavor* is uſed by ſome to denote the *Hydrophobia*. V. Phil. Tranſ. N. 147. p. 162.

AQUA *Regia*.—This menſtruum, beſides gold, diſſolves iron, copper, tin, mercury, regulus of antimony, biſmuth, and zink: It diſſolves lead better than the ſpirit of ſea-ſalt alone, but it becomes turbid in the ſolution. If it has its requiſite degree of ſtrength it does not diſſolve ſilver. If the quantity of marine ſalt, in the *Aqua-regis*, be too ſmall, however, it will then more or leſs corrode and diſſolve the ſilver. An exact ſeparation of gold and ſilver is therefore better made by *Aqua-fortis*, than by this acid; as the former can never diſſolve gold, whereas the latter may, and very frequently does, more or leſs, corrode and diſſolve ſilver. See AQUA-*fortis*, *ſupra*.

AQUA *Sicca Philoſophorum*, a cant term, invented by ſome alchymiſts for the flowers of zink, called by ſeveral other as unmeaning names, by theſe writers; as ſericum, philoſophic cotton, and talc.

A preparation of theſe flowers, by means of vinegar, has alſo been called oil of talc, and many great properties aſcribed to it; but it is truly no other than the oil of the grape, from which the vinegar was made, and has no title to any thing that has been ſaid of it. See TALC.

AQUA *Sulphurata*, *Sulphur-water*, a new name for what was originally called *Gas Sulphuris* by Van Helmont.

It is water impregnated with the fumes of burning ſulphur; and is conveniently prepared in the following manner. Take a quart of water, and half a pound of brimſtone; put the water into a large glaſs receiver; place it with its mouth ſideways, and then let the ſulphur be ſet on fire, in an iron ladle fixed to a wooden plug, made to go freely into the neck of the receiver, which ſhould be pretty long. This plug will then keep the ladle up horizontally, that it ſhall not dip into the water, and a cloth is to be thrown ſlightly over the mouth of the receiver, to confine the fumes. Let the burning of the ſulphur be repeated as often as the fumes from the laſt ſubſide, till the whole is burnt away. *Pemberton*'s Lond. Diſp. p. 211. See GAS, *Cycl.*

AQUA *Vitriolica cærulea*, a form of medicine in the late London Pharmacopœia, made in the following manner: Take blue vitriol three ounces, allum and ſtrong ſpirit of oil of vitriol, of each two ounces, water a pint and a half; boil the ſalts in water till they are diſſolved, and then add the oil of vitriol, and finally, ſtrain the whole through paper. *Pemberton*'s Lond. Diſp. p. 347.

AQUÆMANILIS is particularly uſed, in eccleſiaſtical writers, for a kind of baſon or laver, antiently placed in the veſtibles of churches, ſerving to waſh the hands in.

Aquæmanilis ſtood contradiſtinguiſhed from *Urceolus*, as the former was placed under the hands, the latter above them, from whence the water trickled down by a cock.

The prieſt alſo, after celebrating maſs, waſhed his fingers in an *Aquæmanilis*.

In the inventories of church plate, we frequently find mention of *Aquæmaniles*, *Aquaminilia*, *Aquiminalia*, of ſilver gilt, wrought, *&c.* V. *Du Cange*, Gloſſ. Lat. T. 1. p. 238. ſeq.

AQUATIA, in middle-age writers, a right of fiſhing three days in the year. *Du Cange*, Gloſſ. Lat. T. 1. p. 285.

In antient deeds, we find divers grants of this privilege of *Aquatia*, or *Aquatura*, ſometimes alſo called *Aquaria*.

In ſome writings *Aquatia* ſeems alſo to have ſignified a fee, or other ſervice, paid for the privilege of fiſhing.

AQUALICULUS, in anatomy, a name given by ſome to the region of the body, wherein the trunk terminates, and the thighs commence, and in which alſo the privities are placed. *Caſt.* Lex. Med. in voc. *Blaſ.* Not. ad Veſling. c. 1. p. 3.

The *Aqualiculus* is the ſame with what others call *Pubes*, others the *Hypogaſtrium*, *Sumen*, *Imus Venter*, &c.

AQUATIC *Inſects*. See INSECTS.

AQUATICUM, in middle-age writers, is a right of uſing a water. Hence *Aquaticum in Foreſta*, &c. *Du Cange*, Gloſſ. Lat. in voc.

AQUA-

AQUATUM, in ſome phyſical writers, denotes a thing diluted with water. *Brun.* Lex. Med. p. 116.

AQUATUM *Ovorum* is uſed, by ſome naturaliſts, for what is otherwiſe called *Grando*, but more uſually *Chalaza*. *Brun.* lib. cit. See CHALAZA.

AQUIFOLIUM, *Holly*, according to Tournefort, the name of a genus of plants, the characters of which are theſe: The flower conſiſts only of one leaf, and is of the rotated kind; the piſtil ariſes from the cup, and is fixed in the manner of a nail to the middle of the flower, and finally becomes a juicy fruit or Berry containing ſeeds, gibboſe on one ſide, and flat on the other.

The ſpecies of *Holly* enumerated by Mr. *Tournefort*, are theſe: 1. The common *Holly*. 2. The *Holly* with leaves variegated with yellow. 3. The *Holly* with leaves variegated with white. 4. The *Holly* with ſilvery thorns, and ſilvery edges to the leaves. 5. The rounder-leav'd *Holly*, with ſilvery thorns, and ſilvery edges to the leaves. 6. The *Holly* with ſilvery ſpines, and with leaves edg'd on one ſide only with a ſilvery white. 7. The longer-leav'd *Holly*, with yellow ſpines, and yellow edges to the leaves. 8. The rounder-leav'd *Holly*, with yellow ſpines, and yellow edges to the leaves. 9. The yellow-berried *Holly*: And 10. The *Holly* with the whole ſurface of the leaves echinated, called hedge-hog *Holly*. *Tourn.* Inſt. p. 600.

AQUILA, (*Cycl.*) *The Eagle.*—The general character of theſe birds is, that they are birds of prey, flying about in the day-light, not like the owl kind in the night, very large in ſize, extremely bold and fierce, and have beaks growing crooked, immediately from their inſertion at the head. The eagle differs from the hawk in ſize, and from the vulture in the crookedneſs of his whole beak. *Willoughby's* Ornithol. p. 26. See Tab. of Birds, N° 1.

AQUILA *Brava*, in Botany, a name given by the Portugueſe to the *Agallochum Sylveſtre*. See AGALLOCHUM. *Hofm.* Lex. in voc. *Tarum.*

AQUILA *Criſtata*, the *Creſted Eagle*, a name under which Nieremberg has deſcribed an American ſpecies of bird, of the *Eagle* kind, called by the Indians *Yzquahtli*. It has a yellow and black beak, pale yellow legs, and the belly white, variegated with black; its neck is of a browniſh yellow, its back and tail variegated with brown and black, and it has a very fine creſt of black feathers on its head. It is, by much, the largeſt of all the eagles, yet it is eaſily tamed, and fitted for the diverſions of hawking. This is placed by Mr. Ray among the birds, the deſcriptions of which he is very ſuſpicious of. *Ray's* Ornithol. p. 299.

AQUILA *Marina*, *Sea Eagle*, in ornithology, a name uſed by ſome authors for the *Haliœtus*, or oſprey. *Willoughby's* Ornith. p. 29.

AQUILA *Marina*, the *Sea Eagle*, in ichthyology, the name of a ſpecies of cartilaginous flat fiſh, of the paſtinachia marina kind. It is generally found ſmall, but ſometimes grows to a very large ſize. Its head is large for a fiſh of this genus, and ſomewhat reſembles a toad's in ſhape; its eyes are large and prominent; its mouth is placed in the under part of the head, and is large, and furniſhed with ſtrong teeth. Its ſides are broad and and thin, and repreſent the expanded wings of an eagle, whence it had its name. *Salvian*, de Aquat. p. 112. See Tab. of Fiſhes, N° 67.

AQUILÆ *Arbor*, in botany, a name given, by ſome authors, to the tree whoſe wood is the agallochum, or lignum aloes of of the ſhops. *Kempf.* Amon. Ex. p. 903.

AQUILEGIA, *Columbine*, in botany, the name of a genus of plants, the characters of which are theſe: The flower is of the polypetalous, anomalous kind, conſiſting of ſeveral irregular petals, ſome being plain, and others hooded, or galeated, and both placed in an alternate order.

The piſtillum ariſes from the center of the flower, and is ſurrounded with ſtamina. This finally becomes a fruit, in which ſeveral capſules are collected together into a ſort of head: Theſe uſually contain flat oval ſeeds. *Tourn.* Inſt. p. 488. See Tab. 1. of Botany, Claſs 11.

The ſpecies of *Columbine* enumerated by Mr. *Tournefort*, are theſe: 1. The common wild *Columbine*. 2. The ſingle garden red *Columbine*. 3. The ſingle garden white *Columbine*. 4. The bluiſh white *Columbine*. 5. The browniſh *Columbine*. 6. The hairy *Columbine*, with viſcous flowers. 7. The ſingle fleſh-coloured garden *Columbine*. 8. The ſingle garden *Columbine*, with flowers variegated with blue and purple. 9. The ſingle white garden *Columbine*, with flowers ſtreaked, and ſpotted with blue. 10. The great flowered mountain *Columbine*. 11. The ſmall flowered mountain *Columbine*, with leaves like meadow rue. 12. The thalictrum-leav'd *Columbine*, with extremely ſmall white flowers. 13. The tall early flowering Canada *Columbine*. 14. The low early flowering Canada *Columbine*. 15. The double garden *Columbine*, with great blue flowers. 16. The double garden *Columbine*, with great violet-colour'd flowers. 17. The double garden *Columbine*, with great white flowers. 18. The double garden *Columbine*, with great greyiſh flowers. 19. The double garden *Columbine*, with great red flowers. 20. The double garden *Columbine*, with great deep red flowers. 21. The purple flowered *Columbine*. 22 The great double variegated *Columbine*. 23. The great garden *Columbine*, with double violet-colour'd flowers. 24. The great garden *Columbine*, with double browniſh flowers. 25. The double garden *Columbine*, with ſmall flowers. 26. The garden *Columbine*, with inverted roſe-like flowers. 27. The garden *Columbine*, with white inverted flowers. 28. The garden *Columbine*, with fleſh-coloured inverted flowers. 29. The garden *Columbine*, with inverted blue flowers. 30. The garden *Columbine*, with double roſe-like flowers. 31. The purple ſtellated *Columbine*. 32. The red-flowered ſtellate *Columbine*. 33. The violet flowered ſtellate *Columbine*. 34. The ſtellate *Columbine*, with white flowers variegated with black ſpots. 35. The ſtellate *Columbine*, with variegated flowers. 36. The ſtellate *Columbine*, with grey flowers, variegated with purple ſpots. 37. The greeniſh-flowered degenerate *Columbine*. 38. The degenerate *Columbine*, with greeniſh purple flowers. *Tourn.* Inſt. p. 429. See COLUMBINE.

AQUILEGIA, in medicine.—The flowers of this plant are of different colours, ſome blue, ſome purple, ſome white, and ſome of them indented. The blue is only uſed in apothecaries ſhops, where the ſeed, the flower, and the herb, are all employed. It is moderately drying, opening, and healing. It purifies the blood, and removes obſtructions of the liver and ſpleen. It diſſipates the bile, and is of ſingular efficacy in curing the jaundice. A powder, or emulſion of its ſeeds, as alſo its diſtilled water, are of great ſervice in the jaundice; in which caſe, its extract may be alſo uſed with ſucceſs.

Many other virtues are aſcribed to it by medical writers: It removes the ſcurvy; promotes a diſcharge of urine, and the monthly evacuations of women; cures a beginning dropſy; is excellent for the breaſt and lungs; reſiſts all kinds of poiſon; cures wounds, and removes pains of the belly and matrix. Its ſeed, reduced to powder, and taken in wine, is recommended by Cluſius in tedious labours, coſtiveneſs of children, pains in the ears, *&c.* The flowers have a cordial quality, and are eſteemed good in malignant fevers, ſmall pox, and meaſles. Its ſyrup is excellent in diſorders of the throat and breaſt; and a decoction of the whole herb and root in wine, with the addition of a little ambergreaſe, is alſo recommended againſt impotency and barrenneſs. Vid. *Burrgr.* Lex. Med. and *James*, Med. Dict. in voc.

AQUILICIUM, or AQUÆLICIUM, in antiquity, a ſacrifice, celebrated among the Romans, in time of exceſſive droughts, to obtain rain of the gods. *Pitiſc.* Lex. Ant. T. 1. p. 140. a. *Voſſ.* Etym. in voc. *Aqua.*

Danet calls this *Aquiliciana*. The prieſts who officiated at it were denominated *Aquilices*, *quia aquam eliciebant*, becauſe they brought down water: But where he finds this new order of prieſts, he does not tell us. *Danet*, Lex. Ant. in voc. *Aquiliciana.*

By this, however, it ſhould ſeem, that the antient Romans feaſted for the ſame end as the moderns faſt.

AQUILIFER, among the Romans, an enſign-bearer, who carried the ſtandard on which the eagle was repreſented. *Danet*, Lex. Ant. in voc. *Signa.* See SIGNA.

AQUILUS, among the antients, a dark, or duſky colour, approaching to black. *Fab.* Theſ. p. 215.

Hence ſome of the heathen gods were called *Dii Aquili*, *q. d. Nigri.*

AQUIMINARIUM, in antiquity, a kind of luſtral veſſel, wherein the Romans carried their holy water for expiation, and other religious offices. *Pitiſc.* Lex. Ant. T. 1. p. 140. a.

AQUIQUI, in natural hiſtory, the name of a particular ſpecies of monkey, called by the people of Braſil, the king monkey, as being much larger than all the other monkeys.

This creature has in his throat a hollow, and very hard, but thin, and ſemi-tranſparent bone, two inches and a half long, an inch and half, or more, in height, and nearly two inches in breadth. It has at one end an aperture, an inch wide every way, and on the top is furrowed ſo, as to repreſent a puppy's ſkull: It is placed in the throat, or at the upper end of the larynx, near the epiglottis, and ſerves the creature, when he pleaſes to make a very loud noiſe. *De Laët.* Ind. Occ. L. 25. c. 5.

AQUO, in zoology, a name by which ſome authors have called the ayonus, a fiſh much approaching to the nature of the alauſa, or ſhad. *Benedictus Jovius.* See AYONUS.

ARA *parva*, *the little Altar*, a denomination, in the antient ſurgery, given to an elegant kind of bandage, ſaid to have been invented by Soſtratus. *Gal.* de Faſciis. n. 96. *Brun.* Lex. Med. in voc. See BANDAGE.

ARABIAN, (*Cycl.*) in a general ſenſe, ſomething belonging to Arabia, or the Arabs.

Some writers ſpeak of an *Arabian* church, founded by the apoſtles St. Peter and St. Paul, who are ſaid to have travelled thither. Whence we alſo find frequent mention of *Arabian* biſhops and biſhoprics. V. *Fabric.* Lux. Evang. c. 41. p. 693. The *Arabian* learning is divided into two ſtates, or periods, *viz.* Ante-Mahometan, and Mahometan.

Little is known concerning the firſt, which yet muſt have been both very conſiderable, and very antient, if, as is generally allowed by the modern learned, Job were of that nation, at leaſt lived in the country[a], and his friends of the ſect of *Sabæans*. We are alſo aſſured, that Porphyry, Pythagoras, and

and Democritus, travelled into Arabia to converſe with their ſages [b].—[a V. *Carpzov.* Introd. ad Libr. Poet. V. T. c. 2. §. 45. *Reinhard*, Comp. Hiſt. Phil. P. 1. c. 1. §. 4. b *Gundling*, Hiſt. Philoſ. Mor. c. 4. §. 1. ſeq.]

The *Arab* learning in this period, conſiſted, according to *Abulpharagius* [a], in the knowledge of their language, the propriety of diſcourſe, the compoſition of verſe, and the ſcience of the ſtars: But their chief attention ſeems to have been to oratory and poetry [b].—[a *Abulph.* Hiſt. Dynaſt. 9. p. 101. b V. *Renaudot.* de Barbar. Ariſt. Verſion. §. 6. *Fabric.* Bibl. Græc. l. 6. c. 5. §. 6.]

The ſecond period is more diſtinguiſhed, at leaſt from the time of Al-Mamon, the ſeventh caliph of the family of the *Abaſſides*, who flouriſhed about the year 820, and has the honour of being the founder of the modern *Arabian* learning. That prince, Elmacinus [a] tells us, was not only learned himſelf in aſtronomy, and the ſcience of the winds, but outwent all the European patrons, ever heard of, in the encouragement he gave to ſciences, and the pains he took to propagate them. He ſent for all the beſt books out of Chaldea, Greece, Egypt, and Perſia, relating to phyſic, aſtronomy, coſmography, muſic, chronology, *&c.* And penſioned a number of learned men, ſkilled in the ſeveral languages and ſciences, to tranſlate them into Arabic [b]. By this means, divers of the Greek authors, loſt in their own country and language, have been preſerved in Arabic [c].—[a *Elmac.* Hiſt. Saracen. l. 2. c. 8. b *Leo African.* de Viris Illuſtrib. ap. Arabes, c. 1. *Fabric.* Bibl. Græc. l. 6. c. 9. c *Greav.* in Pref. ad Tab. Geogr. *Voſſ.* de Sect. Philoſ. c. 3. §. 17. *Gundling.* loc. cit.]

Not but great defects are charged on theſe *Arabic* tranſlators, who, for want of ſkill in the Greek, or acquaintance with their ſubject, have often obſcured and miſrepreſented their author's meaning; as has been more eſpecially complained of in reſpect of Ariſtotle. *Morhof.* Polyhiſt. Philoſ. l. 1. c. 10. From that time *Arabia* became the chief ſeat of learning; and we find mention in Abulpharagius [a], Pocock [b], D'Herbelot [c], and Hottinger [d], of learned men, and books without number.—[a *Abulphar.* Hiſt. Dynaſt. b *Poc.* Not. ad Abulphar. c *D'Herb.* Bibl. Orient. d *Hottinger*, Bibl. Quadrip.]

The *Arabian* oratory, according to Renaudot, conſiſted in a luxuriancy of quaint, high flown words, epithets, and deſcriptions. *Renaud.* loc. cit.

The *Arabian* poetry may be divided into two ages. The antient, according to Voſſius, was no other than rhiming; was a ſtranger to all meaſure, and rule; the verſes looſe and irregular, confined to no feet, number of ſyllables, or any thing elſe, ſo they rhimed at the end; oftentimes all the verſes in the poem ended with the ſame rhime. 'Tis in ſuch verſe that the alcoran is ſaid to be written. See ALCORAN.

The modern *Arabian* poetry takes its date from the chaliphate of al Raſchid, who lived toward the cloſe of the eighth century: Under him poetry became an art, and laws of proſody were laid down: But in this there is no proper diſtinction of long and ſhort ſyllables; but the whole depends on rhime, a certain number of letters, and, in the obſervation of certain *Cæſuræ*, which are found, by carefully diſtinguiſhing the moveable conſonants from the quieſcent. A ſyllable to which a quieſcent letter is added at the end, becomes long by poſition, as that where this is wanting becomes ſhort by poſition. Bibl. Univ. T. 9. p. 231. ſeq. *Clark*, Proſod. Arab. c. 1.

Samuel Clark has publiſhed an expreſs treatiſe on the *Arabic* proſody. Scientia Metrica & Rythmica, Seu Tractus de Proſodia Arabica, Oxon. 1661. 8°.

Renaudot adds, that the *Arab* compoſitions in verſe are ſtill wild and irregular, being neither epic, dramatic, lyric, or reducible to any other kind. Their hymns to God, and their tales and jocular ſtories, are in the ſame ſtyle.

Their compariſons, in which they abound, are taken, with little choice, from tents, camels, hunting, and the antient manners of the *Arabs*. *Renaud.* de Barbar. Ariſtot. Verſion. §. 7. *Fabric.* Bibl. Græc. l. 6. c. 5. §. 6.

ARABIAN *Philoſophy* is divided into two periods, or ages, *viz.* The time of ignorance, as they denominate it, before the miſſion of Mahomet; and the time of knowledge, ſince.

The *Arabian philoſophy*, before Mahomet, was Sabian, and included the ſyſtem and ceremonies of that ſect of idolaters [a]. This it was that Mahomet ſet himſelf to decry; and he is even ſaid by ſome, to have carried his oppoſition ſo far, as to prohibit, if not puniſh, all ſtudy of philoſophy [b]. But his followers, by degrees, got over this reſtraint; the love of learning encreaſed; till, under the memorable caliphate of Al-Mamon, Ariſtotle's philoſophy was introduced and eſtabiſhed among them; and from them propagated, with their conqueſts, through Egypt, Africa, Spain, and other parts. *Avicenna* only flouriſhed in the eleventh century, and Averrhoes a hundred years after him; ſo that the honour of tranſlating the Greek philoſophy, by many attributed to theſe authors, is not juſtly due to them: Though they were the chief propagators of it through the countries of Europe [c].—[a *Sale*, Prelim. Diſc. to Koran, §. 4. p. 14. ſeq. b *Ryſſet*, Contin. *Voſſ.* de Sect. Philoſ. c. 3. §. 16. *Thomas.* Introd. Phil. Ant. c. 1. §. 59. c *Walch*, Hiſt. Logic. l. 2. Sec. 2. §. 4.]

Their method of philoſophizing was faulty; they followed Ariſtotle implicitly, and, in aſtrology, run into ſtrange ſuperſtitions. They founded ſchools and academies, gave themſelves much to ſubtilties and diſputation, and divided into ſeveral ſects. *Hotting.* Analect. Diſ. 6. *Gundling.* loc. cit.

As they choſe Ariſtotle for their maſter, they chiefly applied themſelves to that part of philoſophy called Λογικη, and thus became proficients in the knowledge of words, rather than things. Whence they have been ſometimes denominated, *Maſters of the wiſdom of words*; ſometimes the *Talking ſect.* Their philoſophy was involved in quaint arbitrary terms and notions, and their demonſtrations drawn from thence, as from certain principles, *&c.* *Walch*, loc. cit.

ARABIAN *Logic* was that of Ariſtotle, as explained by Avicenna and Averrhoes. Thoſe commentators had taken immenſe pains to illuſtrate their author; but the latter being born in Spain, and both of them utterly unacquainted with the Greek tongue, they had nothing but a faulty mutilated tranſlation to go by, which frequently miſrepreſented the author's real ſenſe, ſo that 'tis no wonder they made no greater advances in the art. *Rhodig.* Lect. Antiq. l. 3. c. 2. *Horn.* Hiſt. Phil. l. 5. c. 10. *Gentz.* Hiſt. Philoſ. P. 2. §. 2. *Morhof.* Polyhiſt. Philoſ. l. 1. c. 10. *Walch*, ubi ſupra.

Majus and Spanheim have treatiſes expreſs on the *Arabian* philoſophy of Job; Leo Africanus has given the lives of the *Arabian* philoſophers. Hottinger and D'Herbelot accounts of *Arabian* books, authors, *&c.* *Struv.* Bibl. Philoſ. c. 3. §. 4.

ARABICO-ARISTOTELIAN, a title ſome give to the philoſophy of Ariſtotle, as taught and explained by the Arabs. *Reinhard.* Comp. Hiſt. Phil. c. 5. §. 2.

This philoſophy commenced with the caliphate of Al-Mamon, in the ninth century. The chief philoſophers of this ſect are Avicenna, and Averrhoes.

Nicholas Antonio has given an *Arabico-Spaniſh* library, or an account of writers born in Spain, who have written in *Arabic.* Bibl. Hiſp. T. 2. p. 231.

ARABIAN *Phyſic* and *Phyſicians* ſucceeded the Grecian, and handed down the art to us, having made conſiderable improvements, chiefly in the pharmaceutical and chemical parts.

Schelhammer obſerves, that, beſides a number of obſervations relating to the cauſes and hiſtory of diſeaſes, they greatly enlarged the liſt of ſimple medicines, adding much to the advantage of the practice of phyſic. 'Tis certain we owe to them moſt of our ſpices and aromatics, as nutmegs, cloves, mace, and other matters of the produce of India. We may add, that moſt of the gentler purgatives were unknown to the Greeks, and firſt introduced by the *Arabs*, as manna, ſena, rhubarb, tamarinds, caſſia, *&c.* 'Twas they likewiſe who brought ſugar into uſe in phyſic, where, before, only honey was uſed. They alſo found the art of preparing waters and oils, of divers ſimples, by diſtillation and ſublimation. V. *Schelham.* Addit. ad Conring. Introd. Medic. c. 3. n. 21. p. 126.

The firſt notice of the ſmall pox, and the meaſles, is likewiſe owing to them [a]. Laſtly, the reſtoration of phyſic in Europe took its riſe from their writings [b].—[a Bibl. Anc. Mod. T. 20. p. 400. ſeq. b *Schelham.* loc. cit.]

There are Latin verſions of moſt of the writings of the *Arab* phyſicians, but thoſe generally miſerably done, beſides that moſt of them are become ſcarce. It has long been wiſhed, that better verſions were made; but this is now ſcarce to be hoped for. Bibl. Anc. Mod. T. 20. p. 400. *Schelham.* loc. cit.

Abon Oſſaiba, or, as Dr. Friend calls him, Abi Oſbaia, has given a hiſtory of the *Arabian* phyſicians [a]. The like has been done by Ebnal Daiah. b M. Le Clerc has given a ſketch, and Dr. Friend [c], an ample hiſtory of the *Arabian* phyſic. We have alſo a notitia of all the *Arabian* phyſicians, by Fabricius [d].—[a D'Herbel. Bibl. Orient. p. 31. See alſo *Friend*, Hiſt. Phyſ. P. 2. p. 34. b Id. ib. p. 43. c Hiſt. Phyſ. P. 2. d Bibl. Græc. l. 6. c. 9. §. 4. *Junck.* Conſp. Phyſiol. tab. 1. §. 18. ſeq.]

ARABIC *Marble*, *Arabicum Marmor*, a name given by the antient Greeks, to a ſpecies of marble brought from Egypt and Arabia, and remarkable for its beautiful whiteneſs. See MARMOR.

ARABIST, a perſon curious of, and ſkilled in the learning and languages of the Arabians.

Erpenius and Golius were great *Arabiſts*. The former is ſaid to have written the language in its utmoſt purity and perfection, inſomuch that his letters to the emperor of Morocco, were the admiration of that court. *Baill.* Jugem. de Scav. T. 2. P. 3. n. 742.

Severinus gives all the ſurgeons in the thirteenth century, the title *Arabiſts*, *Arabiſtæ*. *Friend*, Hiſt. Phyſ. T. 2. p. 301.

ARACARI, in zoology, the name of a Braſilian bird, of the woodpecker kind. It is of the ſize of our common green woodpecker, and has a very large, ſharp, and ſomewhat hooked beak. Its head and neck are covered with black feathers, which terminate in a rounded figure on the back. Its breaſt and belly are of a pale yellow, variegated with a glow of ſeveral other colours; and on the breaſt there is a broad tranſverſe line, of a fine blood red; its back wings, and tail, are of a blackiſh green: But at the origin of the tail there is a

very broad line of a blood red. *Marggrave*, Hiſt. Braſil. See Tab. of birds, N°. 14. and the article PICUS.

ARACHNOIDES, in natural hiſtory, the name of one of the genera of the echini marini, the diſtinguiſhing characters of which are, that it is of a circular circumference, but variouſly broken in at the edges. The mouth is round and placed in the center of the baſe, and the aperture for the anus is quadrangular, and ſituated in one of the ſides, on the upper ſuperficies, but near the edge. *Klein*, Echin. p. 33. See Tab. of teſtaceous and cruſtaceous animals, N°. 8.

ARACHNOIDES, in anatomy. See ARANEOSA *Tunica*.

ARACUS *Aromaticus*, in the materia medica, a name given by ſome authors to the vanilloes uſed in chocolate making.

ARAF, or AL-ARAF, in the Mahometan theology, a kind of ſeparation or partition-wall between paradiſe and hell. *Sale*, Prelim. Diſc. to Koran. §. 4. p. 94.

This is alſo called *Al Orf*, but more frequently in the plural *Al Aráf*; formed of the Arabic verb *Arafa*, to diſtinguiſh or ſeparate.

ARAHUM, or HARAHUM, in antient writers, denotes a place conſecrated or ſet apart for holy purpoſes. *Spelm.* Gloſſ. p. 38. *Du Cange*, Gloſſ. Lat. T. 1. p. 287.

Hence the phraſe, in *Araho jurare* or *conjurare*, to make oath in the church; for that by the Ripuarian laws, all oaths were to be taken in the church, on the relicks of the ſaints.

ARAIS ALNIL, in botany, the name given by the people of Ægypt, to the *faba Ægyptia*, or heads of the *niluſar*, a kind of water lilly growing in the Nile. *Proſper Alpin.*

ARALIA, in botany, the name of a genus of plants, the characters of which are theſe; the flower is of the roſaceous kind, being compoſed of ſeveral petals arranged into a circular form. Theſe flowers ſtand on a cup, which afterwards becomes a ſoft fruit, or roundiſh ſucculent berry which contains oblong ſeeds. *Tournef.* Inſt. p. 300.

There is only one known ſpecies of this genus, the *Aralia Canaderſis* of authors.

ARALIA, in antient law writers, denotes arable or ploughing lands. *Spelm.* Gloſſ. p. 37.

This is otherwiſe denominated *Aratoria*, *araturia*.

In domeſday, for Eſſex, we meet with, *decem acras prati*, *duos runcal*, *quatuor Aralia*.—Where *Aralia* ſeems to denote land fit for ploughing or tillage, by way of contradiſtinction from *runcalia* which was over-run with briars and thorns. *Du Cange*, Gloſſ. Lat. T. 1. p. 287.

ARANEA *Concha*, in natural hiſtory, the name of a kind of ſea-ſhell of which there are ſeveral ſpecies, we call them in Engliſh the ſpider ſhells; they are of the family of the murex and their peculiar character is the having digitated lips. The ſeveral ſpecies have different numbers of fingers, from the lip of the ſhell, as four, five, ſix, ſeven, or eight. See MUREX.

ARANEOSA *Tunica* is uſed by ſome for a peculiar coat of the eye inveſting the chryſtalline, of a fine reticular texture, reſembling a cobweb, called alſo *Arachnoides*.

Some have alſo applied the term *Araneoſa tunica* to the vitreous or glaſſy tunic. *Caſt.* Lex. Med. in voc.

ARANEUS, in zoology. See SPIDER.

ARANEUS *Marinus*, the *ſea-ſpider*, a name by which ſome authors have called the fiſh more uſually known by the name of *Draco marinus*, and ſuppoſed to have ſomething venomous in the ſpines of its back-fin. *Aldrovand.* de Piſc. p. 258. See DRACO *Marinus*.

ARATEIA, Ἀρατεῖα, in antiquity, a yearly feſtival celebrated at Sicyon, on the birth day of *Aratus*, wherein divers honours were paid by a prieſt conſecrated to this ſervice, who for diſtinction's ſake wore a ribband beſpangled with white and purple ſpots.

The *Arateia* were ſolemnized with much pomp of muſic, the choriſters of Bacchus attending. *Plut.* in Arat. *Potter*, Archæol. l. 2. c. 20.

ARARAUNA, in zoology, the name of a Braſilian bird of the macaw kind, its bill is black, its eyes blue, and their pupils black, the ſkin about the eyes is white, variegated with fine and ſmall black feathers as if wrought with a needle; its legs and feet are brown; above the beak there is a ſmall tuft of green feathers, and below it a circle of black ones ſurrounds the throat, the reſt of the throat, the breaſt, and belly, are all yellow, and its neck, back, and wings blue, but a little yellow is mixed among the blue at the ends of the wing feathers, and theſe are all black underneath. *Marggrave*, Hiſt. Braſil.

ARBOR *Dianæ*. See DIANÆ *Arbor*.

ARBOR *Martis*. See MARTIS *Arbor*.

ARBOREOUS (*Cycl.*)—Mich. Mayer has a treatiſe *de volucre Arborea*, or the *Arboreous* bird, by which he means, the barnacle. V. *Sibbald.* Prodrom. Hiſt. Nat. Scot. P. 2. Sect. 3. c. 6. Act. Erud. Lipſ. An. 1685. p. 176.

Schmeider has publiſhed an account of an *Arboreous* cloud, *de nube Arborea*, a cloudy meteor reſembling the appearance of a tree, frequent in Saxony, where it is made a prognoſtic of the change of weather. Vid. Act. Erud. Lipſ. ſupp. T. 6. p. 154. ſeq.

Schultzius has given the hiſtory of a green *Arboreous* frog, *de ranunculo viridi Arboreo*, called by the Greeks, δενδροβάλης, becauſe uſually found ſitting on trees, being of a colour as green as their own leaves. Ephem. Acad. N. C. Dec. 2. An. 6. Obſ. 157.

Naturaliſts ſpeak of a kind of oyſter, or ſhell-fiſh called *Arborea*, on acount of its adhering and growing to trees and ſhrubs on the ſea-coaſt; Dr. Woodward had ſeveral of theſe *oſtreæ Arboreæ*, in his collection, found in divers parts of England and other countries. V. Woodw. Cat. Engl. Foſſ. P. 2. p. 44. It. Catal. For. Foſſ. P. 2. p. 8.

ARBORESCENT, a term uſed to denote any thing that ſhoots or grows up in form of a tree.

Botaniſts ſpeak of *Arboreſcent* ſhrubs, and plants[a]; the *ſedum Arboreſcens*[b], &c. Mineraliſts treat of *Arboreſcent* metals, *Arboreſcent* ſilver, *Arboreſcent* iron, *Arboreſcent* ſtones, &c[c]. The fungus marinus is ranked by ſome in the claſs of *Arboreſcent* fluors[d]; the chemiſts produce *Arboreſcent* chryſtallizations, which they call philoſophical trees.—[[a] V. Phil. Tranſ. N. 198. p. 682. *Grew*, Muſ. Reg. Societ. P. 2. c. 2. [b] Phil. Tranſ. N°. 111. p. 51. [c] *Wooodw.* Nat. Hiſt. Engl. Foſſ. P. 1. p. 238. [d] Phil. Tranſ. N°. 129. p. 738.]

Zoologiſts give inſtances of *Arboreſcent* animals, particularly fiſhes.

The *Arboreſcent* ſtar fiſh, *ſtella Arboreſcens*, is one of the curioſities of nature found in ſeveral cabinets of natural rarities. It is deſcribed as upwards of a foot in diameter, having its mouth in the middle; the figure of the trunk is pentangular, and from the five angles ariſe as many branches, which ſubdivide into ſeveral others, and thoſe again into other leſſer ones, till the laſt are ſcarce thicker than horſe hairs, and in number, by a moderate eſtimate above a thouſand. The *ſtella Arboreſcens* in ſwimming ſpreads all his branches like a net to their full length; and as he perceives any prey within them, draws them in again; and thus takes it with all the dexterity of a fiſherman. *Grew*, Muſ. Reg. Societ. P. 1. Sect. 5. c. 4. p. 122. See STAR-*Fiſh*.

ARBUSCULA is uſed by Bradley, to denote a little or dwarf tree, above the rank of ſhrubs, but below that of trees, ſuch *e. gr.* as the elder. *Bradley*, Dict. Botan. in voc.

ARBUSTUM, implies a number or multitude of trees, planted for the fruit ſake. *Fab.* Theſ. p. 220.

Such are *oliveta*, *avellaneta*, *vineta*, &c.

The word was more peculiarly applied to a place planted with trees for faſtening vines to, which are hence called by Columella *Arbuſtivæ*. De Arborib. c. 16.

ARBUSTUM is ſometimes alſo uſed to denote an orchard, or field wherein trees are planted at ſuch diſtance, that there is room for ploughing, and growing corn between. *Bradl.* Botan. Dict.

ARBUTUS, *the Strawberry-Tree*, in botany the name of a genus of plants, the characters of which are theſe; the flower conſiſts only of one petal of the globular bell faſhioned kind. The piſtil ariſes from the cup, and is fixed in the manner of a nail to the hinder part of the flower; this finally becomes a roundiſh fleſhy fruit, divided into five cells, and containing a number of ſeeds affixed to a placenta.

The ſpecies of *Arbutus* enumerated by Mr. Tournefort are theſe.

1. The common *Arbutus*, with ſerrated leaves. 2. The ſerrated-leaved *Arbutus*, with oblong turbinated fruit. *Tournef.* Inſt. p. 598.

ARCA *Cordis* is uſed by ſome anatomiſts to denote the *pericardium*. *Blaſ.* Not. ad Veſting. c. 10. p. 145. See PERICARDIUM, *Cycl.*

ARCÆ *Cuſtos*, a title antiently given to the archdeacon, on account of his having the cuſtody of the churches cheſt, or treaſure. *Bingh.* Orig. Eccleſ. l. 2. c. 21. §. 5.

ARCANGIS, in the Turkiſh armies, an inferior kind of infantry, which ſerve as *enfans perdus*, and to harraſs and pillage the enemies frontiers. *Tournef.* Voyag. Lett. 13. T. 2. p. 36.

The *Arcangis* are an order inferior to the Janiſaries; and when any of them diſtinguiſh themſelves, are uſually preferred into the Janiſaries order.—They have no pay, but are to ſubſiſt on their plunder.

ARCANNA, a kind of red chalk, called by phyſiologiſts *rubrica fabrilis*, as being uſed by carpenters to colour their lines, for marking timber, &c. *Savar.* Dict. Com. T. 1. p. 129. *Aubert.* Ap. Richel. Dict. T. 1. p. 113. a.

ARCANUM *Duplicatum Catholicum*, in medicine, a name given by Wedelius, to a compound medicine given by him and others of the ſame time, with great ſucceſs, in a peſtilential fever, attended with a dyſentery which raged for many years together in Germany, and yielded ſo well to nothing as to this medicine. It was compoſed of bezoar, plantane-root, and the root of colchicum. This laſt root has generally been eſteemed a poiſon of late times, tho' the authors of the greateſt antiquity have ſhewn a much greater reſpect for it, and called it the ſacred root, or hierobulbus. *Wedelius*, de Colchico.

ARCEUTUM is uſed, in ſome antient law writers, for a procuration due to a biſhop, abbot, or archdeacon, from their clergy in time of entertainment. *Du Cange*, Gloſſ. Lat. in voc.

ARCH (*Cycl.*)—ARCH *of a Brick-Kiln*. See the article BRICK.

ARCH-*Angel*, in botany, a medicinal plant, called by botaniſts, *lamium*. It is of ſome uſe as a balſamic, &c. See the article LAMIUM.

There are two kinds of it, *viz.* the white *Arch-angel*, *lamium album*; and red, whoſe flowers are reputed ſoft and lubricating, and

as ſuch adminiſtred in ſome female weakneſſes, as the whites, and difficulty of urine. A conſerve of them is alſo made in the ſhops but ſeldom preſcribed. *Quinc.* Diſpenſ. P. 2. n. 181.

ARCH-*Count*, *Archicomes*, a title antiently given to the earl of Flanders, on account of his great power and riches. *Du Cange*, Gloſſ. Lat. T. 1. p. 301. *Spelm.* Gloſſ. p. 39.

ARCH-*Monaſtery*, *Archimonaſterium*, an appellation ſometimes given to the greater monaſteries, and abbies. *Du Cange*, Gloſſ. Lat. T. 1. p. 307.

ARCH-*Notary*, *Archinotarius*, the primicerius or chief of the notaries. *Du Cange*, Gloſſ. Lat. T. 1. p. 307. in voc. *Archinotarius*.

This officer is ſuppoſed by ſome to have differed from the *Arch*-chancellor, tho' wherein the difference conſiſted does not appear.

ARCH-*Subdeacon*, *Archiſubdiaconus*, the firſt or chief among the ſubdeacons, as the archdeacon is among the deacons. *Du Cange*, Gloſſ. Lat. T. 1. p. 310. in voc. *Archiſubdiaconus*.

In ſome copies of the Roman ordinal, he is called *ſubarchidiaconus*.

ARCHÆUS, among the chemiſts, ſignifies that peculiar fluid among the vegetable claſſes, which determines every particular plant to its odour, taſte, and other qualities.

The fruit of a plant is the part in which the ſeed is conceived and formed, the ſeed is the embryo of the plant with a placenta or cotyledon, to which it is faſtened by an umbilical ſtring. The cotyledons uſually contain a balſam which appears to be the laſt and higheſt preparation of the moiſt kind, which nature here lays up for the uſe of the offspring. In this is an oily tenacious matter, which repels all other moiſt things, defends the embryo, and by its tenacity retains and fetters the thin pure ſpirit, which is the ultimate bounds and object of the actions of nature in plants, and which would elſe eaſily fly away; this the chemiſts call the *Archæus* and ſpiritus rector; the oil is too groſs ever to enter the fine veſſels of the embryo. But this ſpirit being invigorated by a vegetable power probably breathes a vital principle, and impreſſes the ſpecific character on the food deſtined for the embryo, by which means every thing afterwards turns to the proper nature of the plant; in this ſpirit the fragrant odour, and peculiar taſte of the plant is lodged, and even its colour has a near dependance on it. *Boerhaave*'s Chem. p. 143. See the article ARES.

ARCHARD, in commerce, a kind of green fruit, pickled in vinegar, much valued throughout the Eaſt-Indies. *Savar.* Dict. Comm. Suppl. p. 27.

The beſt are thoſe brought from Perſia, in bottles, much like ſmall cucumbers among us.

ARCHÆOGRAPHIA, the art of deſcribing or explaining antiquities.

M. Spon, firſt erected the knowledge of what relates to antiques into a particular branch of ſcience under the denomination of *Archæographia*. *Spon*, in Pref. ad Miſcell. Erud. Antiq.

ARCHÆOTA, Αρχαιωλης, a keeper of antient records. *Pitiſc.* Lex. Ant. T. 1. p. 157. b.

ARCHAISM, properly denotes a phraſe, or diction now obſolete, and out of uſe, tho' antiently deemed good, or paſſable.

Etymologic ARCHAISM, *Archaiſmus Etymologicus*, is when either an obſolete word, declenſion, or conjugation is uſed.

Syntactic ARCHAISM, *Archaiſmus Syntacticus*, is an unuſual and obſolete conſtruction in diſcourſe.

ARCHED (*Cycl.*)—ARCHED-*Skene*, or *Scheme*, in architecture, is uſed to denote a flat *Arch*, leſs than a ſemicircular one.

ARCHEMY, *Archemia*, is uſed by ſome to denote the art of tranſmuting leſs perfect metals into the more perfect. *Brun.* Lex. Med. p. 122. in voc. *Archimia*. *Du Cange*, Gloſſ. Lat. T. 1. p. 963. in voc. *Chimia*. See TRANSMUTATION, *Cycl.* and *Suppl.*

In which ſenſe *Archemy*, differs from *Alchemy*, as a part from the whole.

ARCHENDA, in the antient phyſic, a kind of powder prepared of *alcanna* and leaves of the Egyptian liguſtrum, wherewith the people ſmeered their feet after bathing; as a preſervative againſt ſweating and ſtench of that part. *Proſp. Alpin.* de Medic. Ægypt. l. 3. c. 18. p. 113. in voc. *Caſtel.* Lex. Med. in voc.

ARCHES, among navigators, is particularly uſed for the Archipelago.

Gothic ARCHES, in architecture. See ARCHES *of the third and fourth point*, Cycl.

ARCHIEROSYNES, Αρχιερωσυνης, in the Grecian antiquity, a high-prieſt veſted with authority over the reſt of the prieſts, and appointed to execute the more ſacred and myſterious rites of religion. V. *Potter*, Archæol. l. 2. c. 3. p. 206.

The Athenians had ſeveral of theſe *Archieroſynes*, almoſt each god having his high-prieſt, who preſided over the reſt of the miniſters of that deity; as the *Daduchus* over the prieſts of Hercules; the *Stephanophorus* over thoſe of Pallas, &c.

Among the Opuntians there were only two high-prieſts, one belonging to the cœleſtial gods, the other to the dæmons or demi-gods. The Delphians had five, who were denominated, οσιοι, *q. d.* holy, one of whom had the care of the ſacrifices, and was called οσιωλης, or the purifier; another had the care of the oracle, and was called Αφηλας.

ARCHIGERONTES, in antiquity, the chiefs or maſters of the ſeveral companies of artificers at Alexandria. *Calv.* Lex. Jur. p. 86. a. *Schm.* Lex. Eccleſ. p. 71.

Some have miſtaken the *Archigerontes* for the arch prieſts, appointed to take the confeſſions of thoſe who were condemned to the mines.

ARCHIGUBERNUS, ARCHIGUBERNETA, or ARCHIGUBERNITES, in antiquity, the commander of the imperial ſhip, or that which the emperor was aboard of. *Pitiſc.* Lex. Ant. T. 1. p. 158. a.

The *Archigubernus* was not thus denominated from the extent of his command, but from his having the command of the emperor's veſſel; much as *archiater* denoted the emperor's phyſician.

Some have confounded the office of *Archigubernus* with that of *præfectus claſſis*, or admiral, but the former was under the command of the latter.

Potter takes the proper office of the *Archiguberneta* to have been, to manage the marine affairs, to provide commodious harbours, and order all things relating to the ſailing of the fleet, except what related to war. *Pott.* Archæol. Græc. l. 3. c. 19.

ARCHIMAGUS, in the antient Perſian religion, the chief prieſt or head of the order of magicians.

The *Archimagus* anſwered to the high-prieſt among the Jews, or the pope now among the Romaniſts, being the head of the whole religion. *Prideaux*, Connect. P. 1. l. 4. p. 314.

The *Archimagus* reſided in the fire temple, a place held in the ſame veneration among them, as the temple of Mecca among the Mahometans; every perſon of the ſect, being under a kind of obligation to make a pilgrimage to it once in their lives. Zoroaſter is ranked as the firſt *Archimagus*.

ARCHIPRESBYTER was antiently uſed for a dignitary in cathedral churches, who acted in many caſes in the biſhop's room, as his deputy. *Du Cange*, Gloſſ. Lat. T. 1. p. 308.

Archipreſbyter appears to have been the ſame with what in the church of Alexandria was called *protopreſbyter*. *Spelm.* Gloſſ. p. 39.

After the like manner, in the eaſtern empire we meet with *protopapa* for *archipapa*.

Valeſius obſerves, that in the church of Conſtantinople, the biſhops had a power of diſtinguiſhing and giving precedency to ſuch of their clergy as they thought deſerved it, and that theſe were what they called Αρχιπρεσβυτεροι. That he who is now called archprieſt was then denominated πρωτοπαπας, q. d. firſt of the prieſts, the title παπας, in thoſe days being applied to meer prieſts as well as biſhops. In. Not. ad. Socrat. Hiſt. Eccleſ. l. 6. c. 9.

In the decretals, we find a chapter *de officio Archipreſbyteri*, wherein precedence is given to the archdeacon over the archprieſt; tho' according to the ordination, the latter ſhould precede: but the archdeacon has acquired a juriſdiction, and the archprieſt has none. *Aubert.* Ap. Richel. Dict. T. 1. p. 115. a.

Archipreſbyter was afterwards a title given to thoſe now called *rural deans*, who act under the archdeacons. Id. ibid.

Fulrad abbot of St. Dennis is called, in an epiſtle of pope Adrian, *Archipreſbyter Franciæ*, whom on other occaſions we find denominated *ſummus Capellanus regis Pepini*, chief chaplain of king Pepin. *Du Cange*, loc. cit.

ARCHISYNAGOGUS, in the Jewiſh hiſtory, the chief or ruler of the ſynagogue.

Theſe are ſometimes alſo called the angels or princes of the ſynagogues: the Jews alſo called them Chachamim, *i. e.* wiſe.

Archiſynagogues were perſons of authority in each ſynagogue, who preſided in aſſemblies held therein, invited thoſe to ſpeak whom they judged capable of it; and decided all diſputes relating to money, &c. They had a power to have thoſe whipped who were convicted of acting contrary to the law; alſo a right of excommunicating or caſting out of the ſynagogue, thoſe whom they found to merit this puniſhment. Their number was different according to the extent of the city, or the number of perſons that came to the ſynagogue; in ſome there were ſeventy, in others eight or ten, and in others not above one. Vid. *Baſn.* Hiſt. des Juif. l. 7. c. 7. *Vitring.* de Synagog. *Calm.* Dict. Bibl. T. 1. p. 183. a.

ARCHITECTOGRAPHIA, the deſcription of antient buildings, temples, theatres, arches, pyramids, baths, gates, aquæducts, tombs, and the like. *Fabric.* Bibl. Antiq. c. 5. §. 2. p. 124.

ARCHITHALASSUS, in conchyliology, a name given by ſome authors to a very beautiful and precious ſhell of the voluta kind, called by us the admiral.

The curious in Holland have three ſpecies of this ſhell, which they call *Architalaſſus primus*, *ſecundus*, and *Aurantius*, the admiral, the vice admiral, and the orange admiral. See the article ADMIRAL.

ARCHITRICLINUS, Αρχιτρικλινος, in antiquity, the maſter or director of a feaſt, charged with the order and œconomy of it, the covering and uncovering of the tables, the command of the ſervants, and the like.

The

The word *Architriclinus* properly imports the chief or maſter of a triclinium or dining room. His office properly differed from that of *modimperator*, or *arbiter bibendi*, as the latter was appointed by the gueſts, the *Architriclinus* by the perſon who gave the feaſt.

The *Architriclinus* was ſometimes alſo called *ſervus triclinia-rcha*, and by the Greeks προγευστης, i. e. *præguſtator*, or foretaſter. Potter alſo takes the *Architriclinus* for the ſame with the *ſympoſiarcha*. *Pott.* Archæol. Græc. l. 4. c. 20. See the article SYMPOSIARCH.

ARCHIVIST, *Archiviſta*, a keeper of an archive. See ARCHIVE, *Cycl.*

Archiviſts are alſo called in the Greek laws, or collection of records, *chartophylaces* and *nomophylaces*. In the Roman law, *chartularii*, *ſcribæ*, *logothetæ*, *primiſcrinii*, *protoſcribæ* and *archiotæ*.

Under the emperors, the *Archiviſt* was an officer of great dignity, held equal to the proconſuls, veſted with the quality of a count, ſtiled *clariſſimus*, and exempted from all public offices, and taxes. Among the antient Greeks and Perſians, the truſt was committed to none but men of the firſt rank; among the Franks, the clergy being the only men of letters, kept the office among themſelves.

Since the erection of the electoral college, the archbiſhop of Mentz has had the direction of the archives of the empire. *Eckhard.* Sched. de Tabular. Ant. §. 22. *Reimman*, Idea Syſt. Liter. p. 371.

ARCHIZUPANUS, Αρχιζυπανος, a title given to the prince or deſpot of Servia. *Du Cange*, Gloſſ. Græc. p. 466.

The word is compounded of Αρχι and ζυπανος, governor.

In an epiſtle of pope Innocent the III^d, he is called Magnus Jupanus.

ARCHONTIUM, Αρχοντιον, denotes a dignity in the Greek church. *Suic.* Theſ. Eccleſ. T. 1. *Du Cange*, Gloſſ. Græc. in voc.

In this ſenſe the word is ſometimes alſo written *Archontia*, Αρχοντια.

We alſo find *Archontium* uſed for a degree in the church, as a diaconate.

ARCION, in botany, a name given by ſome of the antient writers on medicine, to the plant we call tuſſilago, or colt's foot. Neophytus ſuppoſes, that the name was originally *Arciophylla*, the arcium-leav'd plant; the leaves of the colt's foot, when large, approaching ſomewhat to the nature of thoſe of the arcium, or burdock, in their tough texture and hoaryneſs underneath. See TUSSILAGO.

ARCIVÆ *Aves*, in antiquity, birds which gave bad omens, either by their flight, noiſe, or manner of eating. *Pitiſc.* Lex. Ant. T. 1. p. 216. a. in voc. *Avis*.

They were called *Arcivæ*, ſometimes alſo *Arculæ*, *quia arcebant ne quid fieret*, prevented or forbad things being done. *Danet*, Dict. Ant. in voc.

ARCTAPELIOTES, in coſmography, the wind which blows at the 45°. from the north, towards the eaſt. *Wolf.* Elem. Geogr. §. 212.

In this ſenſe *Arctapeliotes* amounts to the ſame with what we call a north-eaſt wind.

ARCTOMYS *Palæſtinorum*, in zoology, the name of an animal of the rat kind, but very large, being of a middle ſize between the rat and the rabbit; it lives in caves, and feeds on vegetables, and is a fierce and bold creature. It uſes its fore feet as hands, and has a cuſtom of ſitting on the buttocks, and in this poſture looks very like a bear. *Ray*'s Syn. Quad. p. 221.

ARCUALIA *Oſſa*, in anatomy, a name uſed by ſome for the oſſa ſyncipitis, by others for the oſſa temporum. *Barthol.* Anat. libel. 4. c. 6. *Brun.* Lex. Med. in voc.

ARCUALIS *Sutura*, among ſurgeons, denotes the coronal ſuture. See SUTURE, *Cycl.*

ARCUATION, in gardening, the term uſed for the raiſing of trees by layers. The firſt thing, in order to do this with ſucceſs, is to chuſe large and ſtrong mother plants, which are uſually called among the gardeners, ſtools. It is no matter whether the trees be crooked, or otherwiſe deformed; and the larger they are the better: They are to be cut down cloſe to the ground. Theſe are to be planted in a border ſix feet wide, and in a ſtrait line ſix feet aſunder: The border muſt be well trenched, or dug clear from all roots, clods, ſtones, or other obſtructions.

Theſe trunks, or ſtools, being planted in this trench, will each throw out twenty, thirty, or forty plants, which may be begun to be laid about the Michaelmas following; and if the ſtools have been properly manag'd, they will alſo by this time have thrown out five, ſix, or more, main branches out of the root; and on every one of theſe, as many ſide or collateral branches. Theſe main branches muſt be bent down to the ground; and ſome gardeners cut them half through, that they may bend the more eaſily.

When the main branches are thus laid all round the ſtool, then they muſt be pegg'd faſt down; and after this the ſide ones and ſmall ones may be ſerved in the ſame manner; the main branches, or ſhoots, muſt be covered with earth all over, except the top; and the ſmall ſide branches muſt be covered two or three inches thick upon the joints; and many give all the branches a twiſt, in order to make them take root the ſooner. Some ſtrawy dung ſhould now be laid over them, in order to keep them moiſt; and they muſt have a large baſon of earth made round them, in order to hold the water during the enſuing ſummer. They muſt, if the weather be dry, be watered two or three times every week. About the middle of September following, they may be opened, to ſee if they have taken root; if not, they muſt be let alone till the next ſpring, and by that time they will be fit to tranſplant into the nurſery. Elms, Limes, Poplars, Willows, Platanus's, and many other trees, ſucceed very well in this operation. *Miller*'s Gardeners Dict.

ARCUBALISTA, in the military art, a kind of baliſta, probably made after the faſhion of a bow. *Aquin.* Lex. Milit. T. 1. p. 70. a.

It is mentioned by Vegetius; but the deſcription of it omitted by him, as too well known then, though now hard to be gueſſed at. *Veget.* l. 4. c. 22.

Thoſe who fought with this weapon were called *Arcubaliſtarii*, ſometimes *Manubaliſtarii*. *Veget.* l. 4. c. 21. *Aquin.* loc. cit.

ARCUCCIO, an inſtrument uſed in ſome parts of Italy, to prevent the overlaying of children by their nurſes. It conſiſts of a ſemicircular piece of wood, or head-board, of one foot and an inch diameter; to each ſide of which, a board three foot two inches and an half long, is faſtened. Each of theſe has an hollow on the upper edge, near to the head-board, for the nurſes breaſt to reſt in when ſhe gives ſuck; and a ſemicircular arch of iron is fixed to them, near the other end. From the top of the head-board, to the middle of the iron arch, there is a bar of wood fixed, on which the nurſe leans when ſhe ſuckles the child. The *Arcuccio*, with the child in it, may be ſafely laid under the bed-clothes in the winter. Phil. Tranſ. N°. 422. §. 6.

ARDAMON, or ARDAMA, in antiquity, a veſſel of water placed at the door of a perſon deceaſed, till the time of burial, as a token that the family was in mourning, and to ſerve to ſprinkle and purify perſons as they came out of the houſe. *Lakemak.* Antiq. Græc. Sacr. P. 3. c. 3. §. 5. *Pott.* Archæol. l. 4. c. 3.

This was otherwiſe denominated γαυγα; and, from the matter of which it was ordinarily made, οστρακον.

ARDEA, *the Heron*, in the Linnæan ſyſtem of zoology, makes a diſtinct genus of birds, of the order of macrorynchæ, or long beak'd. The characters of this genus are, that the middle toe of each foot is ſerrated or jagged, with a ſeries of ſcales on its outer ſide. Of this genus are the heron and bitourn. *Linnæi*, Syſt. Nat. p. 45. See HERON.

ARDEOLA, in zoology, the name of a very beautiful bird, of the Braſils, of the heron kind, but no larger than a pigeon. Its neck is extremely long; its head is of a ſteel-coloured gloſſy hue, with an intermixture of white, and pale brown ſpots; its neck and belly are variegated with white and grey, and its back is black, with a mixture of a browniſh and a ſteel colour. The long feathers of its wings are greeniſh, but have each a grey ſpot at their end. Its tail is covered with its wings when folded, and it walks very ſtately. *Marggrave*'s Hiſt. Braſil.

ARDENTES, in middle age writers, an appellation given to thoſe afflicted with the *Ignis Sacer*, or *Eryſipelas*. *Du Cange*, Gloſſ. Lat. in voc. See ERYSIPELAS.

They were thus called, as ſeeming to be ſcorched or burnt with the diſeaſe.

Hence alſo the abby of St. Genevieve at Paris is called *Domus Ardentium*, by reaſon, as it is ſaid, that great numbers were cured of that diſtemper at the ſhrine of this ſaint, in the reign of Lewis the VI^th.

AREA, *Field*, among microſcopical writers. See FIELD.

AREB, a kind of imaginary money, uſed in the dominions of the great mogul. *Savar.* Dict. Comm. Supp. p. 27.

Four *Arebs* are equal to one crou, or 100 laes; One laes to 100,000 roupies.

ARECA, in natural hiſtory, denotes the Indian or Malabar nut, or the fruit from which we obtain the *Catechu*. *Alleyn*, Diſpenſ. p. 95. See it repreſented in Tab. of Microſcopical Objects, Claſs 2.

The name is alſo given to the tree which produces the nut, called in Engliſh, the drunken date. *Bradl.* Dict. Bot. T. 1. in voc.

The *Areca* is a celebrated fruit of the Indies, the commerce and conſumption of which is incredible in the eaſt; being in uſe equally among poor and rich, who chew it with the leaves of betel, to promote ſpitting, cleanſe the gums, &c. *Savar.* Dict. Com. T. 1. p. 135. ſeq. *Corn.* Dict. T. 1. p. 54. b. See the article BETEL.

AREM, or AL-AREM, a vaſt mound, or dam, which formed a ſtupendous reſervoir above the city Saba, whoſe rupture cauſed an inundation, famous in eaſtern writers. *Sale*, Prelim. Diſ. to Koran. §. 1. p. 10.

The word *Arem* is Arabic, and literally ſignifies any mound, or dam, for the containing of water.

Mahomet, in his Koran, ſpeaks of the inundation of *Al-Arem*. c. 34. V. *Sale*, Not. ad loc.

The *Arem* was built by Abdſhems, ſurnamed Saba, who having built the city of that name, built this wall, or mound, to ſerve as a baſon, or reſervoir, to receive the water which

came

came down from the mountains, not only for the accommodation of the inhabitants of that city, and the watering their lands, but alſo to keep the country in better ſubjection, by being maſter of their water. The *Arem* ſtood like a mountain above their city, almoſt eighty fathoms high, and was built ſo ſtrong, that there were no apprehenſions of its ever failing: But it gave way, at length, in the night, and carried away the whole city, with all the towns and people in the country. *Pocock*, Specim. Hiſt. Dynaſt. p. 57. *Sale*, Prelim. Diſ. loc. cit.

ARENARIA, in zoology, the name of a bird, called in Engliſh the ſanderling, and in ſome places, particularly in Cornwall, the curwillet.

It is a water-bird, of the long legg'd, and open footed, not webbed kind, and is a little larger than the tringa minor, or ſand-piper; its body is of a longiſh ſhape, and its beak ſtrait, black, ſlender, and about a finger's breadth long. Its head is ſmall, and variegated with black and grey; its neck is more perfectly grey, and its ſhoulders are very beautifully variegated with black and white, and black and grey; the reſt of the back is paler. The wings are long, reaching, when folded, beyond the end of the tail; the long feathers of them are variegated with brown and white. The tail is ſhort, and variegated with grey and black. The belly is white as ſnow, and the breaſt white, but with a reddiſh caſt, and ſometimes variegated with reddiſh ſpots. It is common about the ſea ſhores, and generally flies in large flocks.

ARENARIA, in antient writers, is uſed for ſand pits, or ground out of which ſand is dug. *Vitruv.* Arch. l. 2. c. 4.

ARENARII, in antiquity, gladiators who combated with beaſts in the arena, or amphitheatre. The *Arenarii* were ſlaves of the loweſt rank, ſo that though manumitted, they were not capable of being Roman citizens. They were the ſame with what were otherwiſe called *Beſtiarii*. *Pitiſc.* Lex. Ant. T. 1. p. 167. ſeq. See BESTIARII, *Cycl.*

ARENARIUM, in eccleſiaſtical writers, denotes a cemitery or burying-ground.

The *Arenaria* were properly a kind of pits, or holes under ground, wherein the antient chriſtians, not only buried their dead, but held their religious aſſemblies, in times of perſecution. *Baron.* Annal. an. 130. n. 2. *Du Cange*, Gloſſ. Lat. T. 1. p. 317.

ARES, a term framed by Paracelſus, to expreſs a hidden diſpoſer, in the three principles of things, from which each being receives its proper form and ſubſtance, and aſſumes its own ſpecific nature, not that of any other being. *Rul.* Lex. Alch. p. 54. ſeq.

To conceive this occult ſyſtem of the antient chemiſts, we are to ſuppoſe one general or univerſal ſubſtance, called iliaſtes, which makes the matter of all bodies. This iliaſtes is diſpoſed by the archæus, into three kinds, *viz.* ſalt, ſulphur, and mercury, by which all things are dipoſed into their ſeveral genuſes. Here the *Ares*, or ſecond diſpoſer, comes in, and, from theſe genera, produces ſpecies and individuals. See the article ARCHÆUS.

Paracelſus diſtinguiſhes the *Ares* into archeical, which is natural, and chemical, which is artificial. *Brun.* Lex. Med. p. 122. b.

ARETALOGI, in antiquity, a ſort of philoſophers, chiefly of the Cynic or Stoic tribe, who having no ſchool or diſciples of their own, haunted the tables of great men, and entertained them in their banquets with diſputations on virtue, vice, and other popular topics. V. *Pitiſc.* Lex. Ant. T. 1. p. 167.

Theſe are ſometimes alſo denominated *Circulatores Philoſophi*. In this ſenſe, the word is derived from the Greek αρετη, virtue, and λογος, diſcourſe. Some authors chuſe to derive the word from αρετος, *gratus*, agreeable; and define *Aretalogi*, by perſons who ſtrive to divert and entertain their audience with jokes and pleaſant tales; which latter ſeems the more natural explication. *Calv.* Lex. Jur. p. 87. b.

ARGEMON, or ARGEMA, Αργεμον, or Αργεμα, in medicine, an ulcer about the iris of the eye, comprehending part of the white, and part alſo of the black. *Gorr.* Def. Med. in voc.

The *Argemon* appears of a red colour, on the outſide of the iris, and white within it. When it ſpreads far, and eats deep, it ſometimes occaſions the uvea to fall.

ARGEMONE, in botany, the name of a genus of plants, the characters of which are theſe: The flower is of the roſaceous kind, or compoſed of ſeveral leaves, arranged in a circular form. From the center of the flower there ariſes a piſtill, which finally becomes an unicapſular ſeed-veſſel, of an oval figure, with ſeveral ribs running from its baſe to its apex, the intermediate ſpaces being occupied by valves, which finally open at their tops; and from every rib there runs out a placenta, which is loaded with ſeeds, uſually of an orbicular figure. *Tourn.* Inſt. p. 239.

There is only one known ſpecies of *Argemone*, which is the plant, uſually called by botanical writers, the thorny Mexican poppy.

The rough headed poppies, called *Argemones* by ſome writers, are by no means of this genus, but properly of the corn-poppy kind. See PAPAVER.

ARGEMONION, in botany, a name given by ſome of the later Greek writers, to the plant called ſarcocolla by the other writers of their times. This was ſuppoſed by ſome to be the ſame with the argemone, a kind of wild poppy; but on examining the deſcription of it, given by Neophytus, who calls it *Argemone altera*, as a plant very different from the common kind, we find that it is the agrimony that is meant by this name.

ARGENTARIA *Creta*, *Silver Chalk*, in natural hiſtory, a name given to an earth, not properly a chalk, but a kind of tripela. It is a very beautiful earth, of a looſe friable texture, and perfectly pure white. While in the ſtratum it is dry, friable, and duſty, and flies from the pickax in large irregular maſſes, of an obſcurely plated, or laminated ſtructure; and ſplits more readily into flat pieces, than in any other direction; but its lamina are always very irregular. When dry, it becomes ſomething harder, and retains the ſame chalky whiteneſs, and is of a looſe, ſpungy texture, very light, and of a rough, uneven, duſty ſurface. It adheres very ſlightly to the tongue, is hard and harſh to the touch, breaks eaſily between the fingers, and a little ſtains the hands. It makes no efferveſcence with acids, and ſuffers very little change in the fire. It is dug in Pruſſia, and is much eſteemed for cleaning plate. It has alſo been found in France, and of late in Ireland. *Hill*'s Hiſt. of Foſſ. p. 807.

ARGENTARIUS is more freqently uſed in Roman writers for a money-changer or banker.

In this ſenſe, *Argentarii* amount to the ſame with the Greek Αργυροπραλαι, or Αργυρομοιβοι, and the Latin *nummularii*, *cambiatores*, *coactores*. *Du Cange*, Gloſſ. Lat. T. 1. p. 320.

The *Argentarii* were monied people, who made a profit either by the changing, or lending of money at intereſt. Theſe had their tabernæ, or offices, in the forum romanum, built there as early as the reign of L. Tarquinius Priſcus.

The *Argentarii* and *fæneratores* were much hated, on account of their covetouſneſs and extortion.

Mark Anthony taxed Auguſtus Cæſar with being the grandſon of an *Argentarius*; hence he was alſo called by Caſſius Parmenſis, *nummularii nepos*. *Pitiſc.* Lex. Ant. in voc.

ARGENTARII is alſo applied, in the civil law, to thoſe who adorned military arms with ſilver or gold.

In which ſenſe the word amounts to the ſame with *Barbaricarii*. See BARBARICARII.

ARGENTARIUS, in writers of the middle age, an officer entruſted with the cuſtody of money.

In this ſenſe *Argentarius* amounts to the ſame with the Greek Αργυροφυλαξ, and our caſhier.

The French had antiently their *Argentarius Regis*, or *Argentier du Roy*, into whoſe hands the treaſurer yearly paid a certain ſum out of the revenue, for ſupport of the houſhold. *Du Cange*, Gloſſ. Lat. T. 1. p. 320.

AEGENTARIUS *miles*, in our old writers, an officer of the exchequer, whoſe buſineſs it was to carry up the bag of money from the lower exchequer to the higher, in order to its being examined or told. *Spelm.* Gloſſ. p. 40.

ARGENTATI *Milites*, in antiquity.—Livy, l. 6. ſpeaks of *Argentati Milites*, as diſtinguiſhed from *Aurati*. Aquinas ſuppoſes theſe to have been ſimilar to the argyraſpides and chryſaſpides; but the deſcriptions do not quadrate. Livy only repreſents the *Argentati* as cloathed in white linen coats. *Aquin.* Lex. Milit. in voc. See the article ARGYRASPIDES, *Cycl.*

ARGENTEUM *Os*, in natural hiſtory. See Os *Argenteum*.

ARGENTICOMUS, among antient aſtrologers, denotes a kind of ſilver-hair'd comet, of uncommon luſtre, ſuppoſed to be the cauſe of great mutations below. *Vital.* Lex. Math. p. 62.

ARGENTIL, an old Engliſh name for the plant called *Percipier Anglorum*; in Engliſh, parſly piert, or parſley breakſtone. *Ger.* Emac. Ind. 4.

ARGENTINA, in ichthyology, the name of a genus of fiſhes of the malacopterygious kind; the characters of which, according to Artedi, are theſe: The body is oblong and cylindric; the teeth are placed on the tongue and palate. Artedi mentions only one ſpecies of this genus; this has large eyes, and the tail forked: The back fin contains ten bones; the pectoral fins contain fourteen bones; the belly fin eleven, and the pinna ani nine. The anus is placed very near the tail; and the ventricle is blackiſh. The appendices of the pylorus are ſix or ſeven in number. The air bladder is conic at each end, and is of a fine ſilvery colour. It is caught about the ſhores of Italy. *Artedi*, Gen. Piſc. 5.

Mr. Ray deſcribes the *Argentina* to be a ſmall fiſh of the harengiform kind, caught in the Mediterranean, and common in the markets of Rome, &c. Its body, he ſays, is oblong and rounded, not flat, like that of the herring. Its back is of a greeniſh grey, and very pale; its belly, and the lower part of its ſides, are white, ſilvery, and ſhining, looking as if covered with leaf ſilver. Its mouth is moderately large, but it has no teeth; but on the extremity of the tongue there are placed ſix or eight crooked ones, and there are ſome aſperities anſwering to theſe in the palate. The eyes are large, and the part of the head which is between the eyes, is of a purpliſh colour. The Brain is ſeen through the ſkull, divided into three lobes. Its tail is forked, and its air bladder is of a ſingular ſhape, not being divided into two, but tapering to a point at each end. *Ray*'s Ichthyography, p. 2209.

ARGENTINA, a medicinal plant, nearly reſembling cinquefoil, of ſome uſe as a cooler and aſtringent.

Argentina is called in Engliſh, *Silver Weed*, or *Wild Tanſey*, and among the botaniſts, *Potentilla* and *Pentaphylloides*. Antiently there was a diſtilled water, and a conſerve ordered from its flowers, but they are now out of uſe. *Alleyn*, Dipenſ. p. 17. See PENTAPHYLLOIDES.

ARGESTES, Αργηστης, is uſed by Vitruvius for the wind, which blows from that quarter of the horizon, which is 75°. from the ſouth, and weſtward. *Vitruv.* Archit. l. 1. c. 6.

Ricciolus, followed by other moderns, uſes *Argeſtes* for the wind which blows at 22°. 30′. from the weſt towards the north; coinciding with what is otherwiſe called *weſt north weſt*. *Ricciol.* Aſtron. Reform. l. 10. p. 452. *Wolf.* Elem. Geogr. §. 212.

ARGETENAR, in aſtronomy, a ſtar of the fourth magnitude, in the flexure of the conſtellation Eridanus. *Vital.* Lex. Math. p. 62. See ERIDANUS, *Cycl.*

Argetenar is repreſented in Bayer, by the Greek letter τ. Its longitude according to Hevelius in 1700, was 5°. 53′. 22″. and its latitude 38°. 28′. 47″. ſouthward. *Hevel.* Prodrom. Aſtron. p. 286. *Wolf.* lib. cit. p. 164.

ARGONAUTIC, ſomething belonging to the Argonauts. See the article ARGONAUTS, *Cycl.*

The *Argonautic* expedition is one of the greateſt *epochas*, or periods of hiſtory, which Sir Iſaac Newton endeavours to ſettle, and from thence to rectify the antient chronology. This he ſhews by ſeveral authorities, to have been one generation or about thirty years earlier than the taking of Troy; and forty three years later than the death of Solomon. Vid. Preſ. Stat. Repub. Lett. T. 1. p. 274. ſeq.

In confirmation of this he gives an aſtronomical proof which may be reduced to what follows; the ſphere appears to have been firſt formed at the time of the *Argonautic* expedition, partly from the teſtimony of Laertius, who obſerves that Muſæus one of the Argonauts made a ſphere; partly from this, that Chiron, another of the Argonauts, is ſaid by an antient writer to have firſt framed the conſtellations; and partly alſo from this, that moſt of the antient conſtellations delineated on the ſphere, are no other than the heroes embarked in that voyage. Sir Iſaac Newton ſhews, the firſt ſphere was probably formed by Chiron and Muſæus; two of the number of the Argonauts, for the uſe of this expedition itſelf.

Now it is more than probable, that in the firſt ſphere, the colures, or cardinal points of the equinoxes and ſolſtices, were in the middle of the conſtellations, Aries, Cancer, Chelæ, and Capricorn: conſequently this was their ſituation at the time of the *Argonautic* expedition. And by computing backwards from the preſent ſituation of the colures, to the time when they muſt have been in the middle of theſe aſteriſms, we find it coincides very nearly with the time before alledged. Id. Ibid. p. 277. ſeq.

ARGONAUTICA, *Argonautics*, in literary hiſtory, poems on the ſubject of the expedition and actions of the Argonauts.

We have the *Argonautics* of Orpheus in epic verſe publiſhed with notes by H. Stephens, and ſince by Eſchenbachius. Vid. *Fabric.* Bibl. Græc. l. 3. c. 21. §. 3. Id. Ibid. l. 1. c. 18. p. 112. Bibl. Univ. T. 15. p. 97. ſeq.

The *Argonauticon* of Valerius Flaccus is ſtill extant in eight books in Latin heroics, compoſed in imitation of Apollonius, but not compleated, at leaſt is not now to be found complete. Burman obſerves that the imitator has often ſurpaſſed his original [a]; ſome give it the ſecond place after the Æneid. Burman has given a fine edition of it at Leiden, 1724, 4° [b]—

[a] *Fabric.* Bibl. Lat. l. 2. c. 14. §. 2. ſeq. Id. Bibl. Græc. l. 3. c. 21. §. 4. [b] Act. Erud. Lipſ. An. 1724. p. 281. ſeq. Giorn. de Letter. d' Ital. T. 33. P. 2. p. 487.]

The *Argonautics* of Apollonius Rhodius is an heroic poem, conſiſting of four books: it has both its beauties and defects. Quintilian calls it *non contemnendum opus*. Tanaquil Faber cenſures it for the inequality of the ſtile; Caſaubon for the inaccuracy of the geography; Rapin for the want of agreeable and intereſting incidents and events; Heinſius taxes the periodology, œconomy, &c. V. *Fabric.* loc. cit. *Heder. Schul.* Lex. p. 378.

ARGUMENT (*Cycl.*)—ARGUMENT *from Affection*, *Argumentum ab amore*, ſtands oppoſed to the *Argumentum ab invidia*; as in the latter, the paſſions are engaged to make a perſon appear odious; ſo the former is a method of engaging the reaſon by means of the affections, and of preſenting an author in ſuch a light, as may prejudice readers in his behalf. Bibl. Germ. T. 5. p. 220.

M. Fabricius of Helmſtaldt has a diſſertation on the *Argumentum ab amore*.

ARGUMENTUM *ad ignaviam*, or the lazy *Argument*, a method of reaſoning which always concludes in favour of inaction. Mem. de Trev. An. 1729. p. 1713.

This the Greeks call Αργὸς λογὸς, q. d. idle, ſluggiſh reaſon. It is reducible to this or ſome other equivalent form, either it is decreed by deſtiny that you ſhall recover of this diſeaſe, or it is decreed you ſhall not recover; but the deſigns of deſtiny will be accompliſhed whether you imploy a phyſician or not, it is therefore uſeleſs to call in a phyſician. *Cicero*, de Fato. c. 12.

The Turks are ſo convinced of a fatality in all things, that they actually remain inactive in the time of a plague, without uſing any precaution to preſerve themſelves from the contagion. Hence it is, that all quarentines, and other means for ſtopping the progreſs of this diſtemper, are unknown among them. V. *Leibn.* Eſſ. de Theod. in Pref. p. 10. ſeq. Mem. of Liter. T. 3. p. 47.

ARGUMENTUM *ad ignorantiam*, that drawn from our ignorance and unacquaintedneſs with things, and importing that there are many reaſons for or againſt ſuch an opinion which we are unacquainted withal, or incapable of penetrating into.

In the diſpute about the nature and origin of the ſouls of brutes, we are frequently expoſed to the *Argument* which Mr. Lock calls *ad ignorantiam*, being forced to own we are ignorant of an infinity of things which might be alledged againſt their immateriality and conſequently immortality. V. *Le Clerc*, Bibl. Choiſ. T. 9. p. 38.

There are no kind of *Arguments* more frequent than thoſe *ab ignorantia ducta*, wherein people conclude that a thing is falſe becauſe they do not underſtand how it can be true, not conſidering that there are an infinite number of things, of which we can give no account, whoſe truth nevertheleſs is not to be queſtioned, *e. gr.* the communication of motion, the cauſe of gravity, or elaſticity, the union of ſoul and body, &c. V. *Le Clerc.* Bibl. Anc. Mod. T. 27. P. 379. ſeq.

ARGUMENTUM *ab invidia ductum*, that made uſe of to render an adverſary's opinion odious. *Wolf.* Log. §. 1050.

This kind of *Argument* is chiefly framed by drawing falſe or obnoxious conſequences from a doctrine which another delivers for true.

This *Argument* is but too frequent among divines; ſome have therefore called it the *theological Argument*. M. Le Clerc has a diſſertation expreſs on the *Argumentum theologicum ab invidia ductum*.

The progreſs of arguing *ab invidia* may be reduced to the following heads. 1. The opinion or doctrine oppoſed is ill explained. 2. It is compared with the doctrine of ſome other infamous or odious writers. 3. Odious names and appellations are beſtowed on it. 4. The point in queſtion is exaggerated, or the difference widened. 5. The author is reproached for departing from the common forms of ſpeech. 6. The reaſons on which his doctrine is ſupported are ſtudiouſly concealed. 7. The inconveniences which ariſe from the contrary doctrine are ſuppreſſed. 8. Invidious conſequences are drawn from the adverſary's doctrine. 9. Malicious ſuſpicions are caſt on them. 10. Their novelty is alledged againſt them as a crime. 11. Thoſe in authority are urged to ſuppreſs them. 12. Several matters are brought into the controverſy foreign to the merits of it, merely to create hatred. 13. Things indifferent are always taken on the worſe ſide. 14. An appeal is made from proper judges to improper.

It is needleſs to give inſtances of the uſe of this way of arguing; our polemical writers are full of little elſe, it is indeed the eaſieſt of all others: ideots may uſe it, if they have but malice and impudence enough; and generally the weakeſt and moſt ſhameleſs are the moſt forward, and go fartheſt in it.

A perſon who is a ſtranger to the method of demonſtrating, thinks a thing neceſſarily follows from another, which has no connection with it; he that is utterly ignorant of all principles, being unable to prove any thing by intrinſic *Arguments*, always flies to extrinſic ones, to the drawing of conſequences by the *Argumentum ab invidia*. Id. Ibid. p. 1212.

Some have given theſe the denomination of *conſequentarii*. *Wolf.* Logic. §. 1040.

ARGUMENTUM *a tuto*, that drawn from the conſideration of its being ſafer to chuſe one ſide of the queſtion than the other, ſuppoſing the evidence equal on both ſides.

The *Argument* for chriſtianity drawn *a tuto* is reducible to this, that it is ſafer and better to believe there is a God, and that Chriſt is the ſon of God, and redeemer of mankind, than to deny it; by reaſon a miſtake is of much leſs miſchievous conſequence on the former ſide than the latter. Dr. Gaſtrel ſtates it thus; that which promiſes me great happineſs, if I believe it, and infinite miſery, if I diſbelieve it, I am under an obligation to believe; but chriſtianity, &c.

The *Argument a tuto* or *a tutiori*, from the ſafer ſide, has been much uſed by ſome divines, eſpecially againſt Atheiſts and Infidels; its authority has been the ſubject of great diſputes; as it aims to convince by other means than that of evidence. Clark and Leibnitz allow it only a moral force.

This way of arguing was firſt ſtarted by Arnobius, and has been adopted by ſeveral other advocates for chriſtianity, as Paſchal, Tillotſon, Gaſtrel, &c. M. Jurieu openly owns, it was by this argument he was induced to believe the myſteries of chriſtianity; lord Shaftſbury, Pfaffius, and ſome others have endeavoured to explode it.

The only caſe where this *Argument* may be had recourſe to is, when the reaſons for and againſt the propoſition are exactly equal; the propoſition muſt alſo be of ſuch nature as to admit of nothing certain to be concluded of its truth or falſehood from the proper evidence.

The uſe of the *Argument a tuto*, ſuppoſes we can believe what we will without other reaſon than our own pleaſure or conveniency; and that the underſtanding, tho' preſſed by an

equal weight of reaſons upon both ſides, yet may incline to the one rather than the other, and that there are ſome doctrines neceſſary to ſalvation, which whether they be true or falſe, no human wit is able to diſtinguiſh: a ſuppoſition which ſeems iujurious to the wiſdom and goodneſs of God. In effect, to grant that all theſe principles of religion, there is a God, a Providence, a Saviour, *&c.* may be conteſted on both hands with equal *Arguments*, is not this to furniſh weapons to Atheiſts and Infidels, who will be apt to reaſon thus: whether there is, or is not a God, cannot be clearly proved by any proper *Arguments* or evidence; therefore whether I believe or diſbelieve the exiſtence of a God, it will amount to the ſame, ſince a truth which it is a crime to reject, muſt be clear and evident. On the whole, the *Argument* is equally applicable to the ſupport of falſehood as of truth; and accordingly we find it uſed by Papiſts to make converts from proteſtantiſm. They argue thus, the Proteſtants allow that ſalvation may be had in the church of Rome; but the church of Rome denies that Proteſtants can be ſaved; therefore it is ſafer to be in the Roman than in the Proteſtant communion. Malbranch alſo makes uſe of the ſame way of arguing to ſhew the inſignificancy of ſecond cauſes, and refers all the actions of creatures to the immediate agency of the deity.

But tho' the *Argument* be improper for proving the truth of any doctrine, it may be of uſe to move the will and excite us to action [a]. This reaſoning may be allowed; a thing which promiſes me pleaſure without danger is preferable to another where equal pleaſure is attended with danger; hence the *Argument* may be of ſome uſe with perſons of diſſolute morals, whoſe looſeneſs and inſenſibility diminiſh the force of other *Arguments* [b].—[a Vid. Act. Erud. Lipſ. An. 1724. p. 177. ſeq. b Bibl. Germ. T. 7. p. 231.]

The truth is, in the conduct of life, whether religious or moral, metaphyſical preciſion and proof is not to be demanded, a degree of certitude, ſuch as that, to which men of ſenſe are uſed to reſign, ſuffices where the object is human actions; to wait for evidence to act, would be never to act at all; and to take no ſide, would be to take the ſide of not acting. *Benoit*, Diſc. Sur. le Conſent. de tous les Peuples. Mem. de Trev. An. 1714. p. 240. ſeq.

M. Moſheim has a diſſertation expreſs on the force of the *Argument from the ſafeſt ſide* in theology, wherein he ſhews that it is of no force, with regard to the conviction of the mind, tho' it may be of uſe for perſuading or directing the actions. De Vi Argumenti quod *a tuto* dicitur in Theologia. *Wolfemb.* 1723. 4°. Vid. Act. Erud. Lipſ. loc. cit.

M. Aſtruc recommends the uſe of the *Argumentum a tuto* in the time of a plague, *i. e.* to act in ſuch manner as if we were convinced of the contagion, even tho' we had reaſon to doubt of it, becauſe there is no great harm in an error on the one ſide, tho' it might be fatal on the other. Vid. Jour. des Scav. T. 76. p. 562.

ARGUS, in natural hiſtory, the name given by authors to a peculiar ſpecies of porcellane ſhell, the variegations of which are a ſort of round ſpots repreſenting the eyes in a peacock's tail.

There are two kinds of this ſhell, a greater and a ſmaller; and beſides theſe there is a ſhell very nearly approaching to them in its ſhape and variegation, called the *Pſeudo-Argus*. See PORCELLANE.

ARGUTIÆ, witty and acute ſayings, which commonly ſignify ſomething further than what their mere words at firſt ſight ſeem to import.

Writers on rhetoric ſpeak of divers ſpecies of *Argutiæ*, viz.

ARGUTIÆ *ab Alieno*, when ſomething is ſaid, which ſeems repugnant either to the nature and property of a thing, or to common cuſtom, the laws, *&c.* which yet in reality is conſiſtent therewith; or when ſomething is given as a reaſon of another, which yet is not the reaſon of it. For inſtance, *ſi Caius nihil didiciſſet, erraſſet minus:* again, *aureum hoc ſæculum eſt, quia plurimus jam auro honos venit.*

ARGUTIÆ *ab alluſione*, thoſe wherein alluſion is made to ſome hiſtory, fable, ſentence, proverb, or the like, *e. gr. multi umbram captant & carnem amittunt.*

ARGUTIÆ *a comparatis*, when two things are compared together, which yet at firſt ſight appear very different from each other, but ſo as to make a pretty kind of *ſimile* or *diſſimile*, e. gr. *par eſt pauper nil cupiens principi omnia habenti.*

ARGUTIÆ *a repugnantibus*, when two things meet in a ſubject, which yet regularly cannot be therein; or when two things are oppoſed to each other, yet the epithet of the one is attributed to the other, *e. gr. dum tacent, clamant. Heder. Schul.* Lex. p. 380. ſeq.

ARGYRITÆ *Agones*, Αγωνες Αργυριται, in antiquity, games where money was the prize. *Pott.* Archæol. l. 2. c. 23.

ARGYRITIS, in natural hiſtory, a name given by the antients to a ſubſtance reſembling ſilver; ſome of the writers of the middle ages ſay that it was of the colour of ſilver, variegated with ſpots of gold; they ſeem to have taken it for a native foſſil; but the account given by Pliny of the *Argyritis* of the antients, ſhews it to have been a recrement of ſilver caſt up in form of froth in the refining.

In this laſt ſenſe, *Argyritis* was uſed to ſignify ſuch litharge as was of a white colour, by way of diſtinguiſhing it from that which was yellow, which they dignified with the name *Chryſitis*, as we do at preſent that of litharge of gold. Dioſcorides calls the litharge of ſilver alſo calabrites or calaurites; this was a name given to it from a peculiar place from whence the antients received it in great quantity; this place was not Calabria as ſome have ſuppoſed, from the name when ſpelt in that manner, but Calaura, an iſland near Crete, where there were metallurgic furnaces always at work, and from whence the Greeks were ſupplied with great quantities of all the recrementa metallica which they uſed in medicine.

The *Argyritis* of theſe later writers ſeems to have been a ſtone, the magnetis lapis of the antients mentioned by Theophraſtus, and by him carefully diſtinguiſhed from what we call the magnet or loadſtone; he ſays it had all the brightneſs of ſilver, and might even deceive the obſerver at firſt ſight, and be taken for that metal: cups and other veſſels for the ſervice of the table were made of this ſtone in the time of the Greeks, but in all their deſcriptions we have no account of thoſe variegations of gold in it, mentioned by the after writers; theſe ſeem to have been adventitious ornaments to the ſtone, either thrown in by the artiſt in the working, or elſe by the deſcriber.

ARGYRODAMAS, Αργυροδαμας, in natural hiſtory, a ſort of ſilver coloured talc, which bears the fire, and neither burns, melts, nor changes its hue. Vid. *Cæſalp.* Art. Med. l. 3. c. 32. *Plot*, Nat. Hiſt. Stafford. c. 3. §. 20.

Hence its denomination among the antients of *Argyrodamas*, *quaſi argentum indomitum.*

ARGYROGONIA, Αργυρογονια, is uſed by ſome alchymiſts for a kind of argentific, or ſilver-making ſeed, of a white colour, pretended to be procurable from a ſolution of that metal perfectly concocted. *Brun.* Lex. Med. p. 124.

Argyrogonia ſtands contradiſtinguiſhed from *Chryſogonia.*

ARGYROLIBANOS, in the materia medica of the antient Greeks, a word uſed to expreſs the white kind of olibanum.

It was common among the Greeks, to affix this word *Argyros* to the beginning of the names of things, to expreſs their being of the colour of that metal, thus argyrolithos expreſſed a ſtone of a ſilver colour. The yellow olibanum or frankincenſe was in the ſame manner expreſſed, by prefixing the word *chalcos* to the name, thus chalcolibanos is uſed in the apocalyps, but this word has been grievouſly miſunderſtood, and ſuppoſed to mean a ſort of braſs or of copper dug in mount Lebanon.

ARIADNIA, Αριαδνεια, in antiquity, ſolemn feſtivals held at Naxos in honour of Ariadne. *Plut.* in Theſeo.

The *Ariadnia* are ſaid to have been inſtituted by Theſeus, in attonement for his cruelty in expoſing Ariadne big with child on that coaſt. They were of a mournful caſt, one part of the ceremony was for a young woman to lie down and counterfeit all the agonies of a woman in labour. *Pott.* Archæol. l. 2. c. 20.

There was alſo ſaid to have been another feſtival of the ſame name, held at the ſame place, in honour of another Ariadne.

ARIDED, in aſtronomy, a fixed ſtar of the ſecond magnitude, in the extremity of the ſwan's tail. *Vital.* Lex. Math. in voc.

This is alſo called *hierezim* and *Adigege.*

ARIDELOSIS, Αριδηλωσις, in rhetoric, is ſometimes uſed for the figure commonly called *ſynonimia. Voſſ.* Rhet. l. 5. p. 276. See SYNONIMY, *Cycl.*

ARIDULLAM, in natural hiſtory, the name of a foſſil ſubſtance uſed in the Eaſt-Indies in intermittent fevers.

It is of a greeniſh yellow colour, and coarſe texture, and when burnt emits fumes ſmelling like arſenick. It is properly of the zarnick kind, tho' ſomewhat different from all the European kinds. See ZARNICH.

ARIDURA, in phyſic, a drineſs, or want of juice, and moiſture, in the parts.

ARIDURA is alſo uſed by ſome for an *Aridity*, or conſumption. *Rul.* Lex. Alch. p. 71.

ARIDURA is more particularly uſed to denote a hectic fever. *Dol.* Encycl. l. 4. c. 4.

ARIDURA is more frequently uſed, by modern writers, to denote a particular atrophy, or waſting of ſome ſingle member of the body.

In which ſenſe it amounts to the ſame with what we otherwiſe call *withering.*

ARINGA, in ichthyology, a name given by Paulus Jovius and others to the herring.

ARIOLI, in antiquity, a kind of prophets, or religious conjurers, who by abominable prayers, and horrible ſacrifices at the altars of idols, procured anſwers to their queſtions concerning future events. *Iſid.* Orig. l. 8. c. 9. *Struv.* Synt. Ant. Rom. c. 6. p. 312.

Theſe are alſo called *Harioli*, and their operation, *Hariolation.* Sometimes they were denominated *Aruſpices*, or *Haruſpices.*

The *Arioli* were diſtinguiſhed by a ſlovenly dreſs, diſorderly and matted beards, hair, *&c.*

ARISARUM, *Friars-Coul*, in botany, the name of a genus of plants, the characters of which are theſe. The fruit and inner part of the flower are the ſame with thoſe of the arum and dragons, but the flower itſelf is hooded or ſhaped like a friars-coul.

The ſpecies of *Ariſarum* enumerated by Mr. Tournefort are theſe.

1. The

1. The common broad-leaved *Ariſarum*. 2. The greater broad-leaved *Ariſarum*. 3. The *Ariſarum*, with the flower terminated in a ſharp point. 4. The large-leaved trifoliate American *Ariſarum*. 5. The leſſer trifoliate American *Ariſarum*. *Tournef.* Inſt. p. 161.

The leaves and flowers of *Ariſarum* are deterſive and vulnerary; and applied either in the form of ointment or decoction, they cure malignant ulcers. Its root taken in powder, is eſteemed againſt the plague; the doſe being from a ſcruple to a dram. Of the root alſo are made collyria, which are effectual in curing fiſtulas of the eyes; but by collyria, Dioſcorides does not mean, what we call ſo, but tents made in the ſhape of a collyrium. It corrupts the pudendum of any animal whatever, if introduced into it. V. *Lemery*, des drog. in voc.

ARISH (*Cycl.*)—The Perſian *Ariſh*, according to Mr. *Greaves*, is a long meaſure equal to $38\frac{364}{1000}$ Engliſh inches. Treat. Pract. Geom. p. 9.

ARISI, *Rice*, an Indian word, which does not properly ſignify the plant which produces the rice, but the ſeed itſelf, when cleanſed from its huſk, and render'd fit for uſe. The Indians call it *Ariſi* in this ſtate; but in the huſk, and upon the plant, they call it *nellon*.

ARISTA *of Corn*, in botany, the ſharp-pointed prickle which ſtands out from the huſk or end of the grain, and is commonly known in Engliſh by the name of the awn, or beard. *Miller*'s Gardner's Dict.

ARISTA, in ichthyology, a name given by Gaza, and ſome other writers, to a fiſh called, by the generality of authors, *Atherina* and *Hepſetus*. See ATHERINA.

ARISTOLOCHIA, *Birthwort*, in botany, the name of a genus of plants, the characters of which are theſe. The flower conſiſts of one leaf, and is tubular, and faſhion'd like a tongue, and is uſually crooked. The cup finally becomes a membranaceous fruit, of a globular, an oval, or a cylindric figure, and is divided into ſix cells, which contain a number of flatted ſeeds, lying cloſely upon one another.

The ſpecies of *Ariſtolochia*, enumerated by Mr. Tournefort, are theſe.

1. The round rooted *Birthwort*, with a blackiſh purple flower. 2. The round rooted *Birthwort*, with a purpliſh white flower. 3. The true long rooted *Birthwort*. 4. The Spaniſh long rooted *Birthwort*. 5. The upright clematite *Birthwort*. 6. The creeping clematite *Birthwort*. 7. The many rooted *Birthwort*, called *Piſtolochia*. 8. The little hoary *Piſtolochia*. 9. The cretic ever green *Piſtolochia*. 10. The Virginian many rooted *Birthwort*, with auriculated leaves. 11. The knotted ſtalk'd Virginian *Piſtolochia*, called Virginian ſnakeroot by ſome. 12. The oriental *Ariſtolochia*, with ſpear-pointed leaves. 13. The ſweet ſmelling ever green clematite *Birthwort*. 14. The white flowered ever green clematite *Birthwort*. 15. The long ſtalk'd climbing *Birthwort*, with leaves like thoſe of the hatchet vetch. 16. The long leav'd climbing American *Birthwort*, with creeping roots. 17. The creeping rooted American *Birthwort*, with heart-faſhion'd leaves, and very long blackiſh purple flowers. 18. The creeping rooted American *Birthwort*, with trifid or ivy-like leaves, and large flowers. 19. The creeping rooted American *Birthwort*, with an umbilicated leaf like the aſarum, and a very long flower. *Tourn.* Inſt. p. 162.

The roots of *Ariſtolochia* are ranked among the nervous ſimples, and highly eſteemed for their power of cleanſing the womb, both as provoking the menſtrual diſcharges, and promoting delivery. Some alexipharmic qualities are alſo aſcribed to them; on which account they have a place in the compoſition of the theriaca, and ſome other medicines of the ſame tribe. Externally applied, they are reckoned detergent and ſuppurative, and, for that reaſon, make a part of the ſtyptic plaiſters of Crollius and Paracelſus. Taken internally, they are great reſolvers of viſcidities, and therefore much recommended againſt the gout, aſthma, &c. They allay the exceſſive pains after child-birth, and are very ſerviceable for the neceſſary purgations on that occaſion. V. *Quinc.* Pharm. P. 2. §. 1. p. 89. *Burggr.* and *James*, Lex. Med. in voc.

ARISTOPHANEUM, Αριστοφανειον, in the antient phyſic, a name given to a kind of emollient plaiſter, prepared of pitch, wax, opopanax, apochyma, and vinegar. *Gorr.* Def. Med. p. 51. b.

ARISTOTELIA, Αριστοτελεια, in antiquity, annual feaſts, celebrated by the citizens of Stagiris, in honour of Ariſtole, who was born there; and in gratitude for his having procured from Alexander the rebuilding, and re-peopling of that city, which had been demoliſhed by king Philip. *Ammon.* in Vit. Ariſtot. *Stanl.* Hiſt. of Philoſ. P. 6. c. 8.

ARISTOTUS, in ichthyology, a name given by Albertus and others to the fiſh which we call the ſhad, or the mother of herrings. See the articles THRISSON and CLUPEA.

ARITHMETIC (*Cycl.*)—*Decadal* ARITHMETIC, that performed by the nine figures and a cypher, ſuppoſed to be the invention of the Arabians, and was, no doubt, taken from the number of our fingers; becauſe theſe are commonly made uſe of in computations, before people learn arithmetic.

Political ARITHMETIC. See POLITICAL.

ARITHMETICAL *Muſic* is that part of the ſcience of muſic which conſiders the relations of ſounds and numbers.

ARLYNG, in zoology, a name by which the common œnanthe is called, in many parts of England. See the article OENANTHE.

ARM (*Cycl.*)—We have an account of a man whoſe *Arm*, with the ſcapula, was torn off by a mill, and who was cured without any hæmorrhage. See Phil. Tranſ. N° 449. §. 5.

ARMADA, or ARMATA, a naval army, or fleet equip'd for war.

In this ſenſe we ſay the Spaniſh *Armada*, the Portugueſe *Armada*. The captain baſſa, before he puts to ſea with his *Armada* of galleys, uſually makes a viſit to the tomb of the famous *Barbaroſſa*. Phil. Tranſ. N° 152. p. 345.

ARMADILLA, in the Spaniſh America, denotes a ſquadron of men of war, to the number of ſix or eight, from twenty-four to fifty pieces of canon, which the king maintains, to prevent foreigners from trading with the Spaniards and the Indians, both in time of war, and peace. *Savar.* Dict. Comm. Suppl. p. 30. *Aubert.* ap. Richel. Dict. T. 1. p. 120. c.

The veſſels of this *Armadilla* are thoſe that have made ſo much noiſe, under the name of *Guarda Coſta's*.

They have even power to take all Spaniſh merchant-ſhips they meet with on the coaſts, that have not licences from the king. The ſouth ſea has its *Armadilla*, as well as the north ſea. The ordinary abode of the former are at Calao, a port of Lima; that of the latter at Carthagena.

ARMADILLO, in zoology, the name of an animal ſomewhat approaching to the hedge-hog kind, and called by the Latin authors the *Echinus Braſilienſis*.

This creature gathers himſelf up, when he pleaſes, head, feet, and tail, within his ſhell, and becomes as round as a ball; and this he does, not only when purſued, but every time he ſleeps. He is ſo good at digging, that, unleſs tied up, he will make his way out under the walls of a houſe. He is extremely valued among the Braſilians, for the whiteneſs and delicacy of his fleſh, and is a great diſh in their beſt feaſts. The plates of his ſhell, powder'd, and given in a doſe of a dram, are eſteem'd a ſudorific, and a remedy for the lues venerea. *Barlæus* de Reb. Braſ. p. 222. See Tab. of Quadrupeds, N° 21.

ARMAMAXI, in antiquity, a kind of Scythian chariots, or carriages, compoſed of two wheels, variouſly adorned with crowns, ſhields, breaſt-plates, and other ſpoils, carried in proceſſion after the images of the gods and great men. *Pitiſc.* Lex. Ant. T. 1. p. 177. a.

The word is hybrid, compounded of the Latin *Arma*, and the Greek Αμαξα, *Plauſtrum*, carriage.

Theſe were ſometimes alſo called *Amaxi*, or *Amaxæ*.

ARMATIUM, Αρμαλιον, in the antient phyſic, a deterſive kind of collyrium, of great value in removing aſperities of the eyelids. *Gorr.* Def. Med. p. 52. a.

Its chief ingredients were æs uſtum, gum ammoniac, and the roots of the tree *Thus*. The preparation is deſcribed by Galen, Aëtius, Paulus, and Scribonius.

ARMATURE, *Armatura*, in a general ſenſe, is the ſame with what we otherwiſe call armour.

ARMATURA is more particularly uſed in the antient military art, for a kind of exerciſe, performed with miſſive weapons, as darts, ſpears, arrows, and the like. *Aquin.* Lex. Milit. T. 1. p. 82. a.

In this ſenſe, *Armatura* ſtands contradiſtinguiſhed from *Palaria*; the latter being the exerciſe of the heavy armed, the former of the light armed.

The *Armatura* was practiſed with great diligence among the Romans: They had their campidoctores, on purpoſe to inſtruct the tyrones, or young ſoldiers, in it. Under it were included, the throwing of the ſpear or javelin, ſhooting with bows and arrows, &c. *Kenn.* Rom. Ant. Not. P. 2. l. 4. c. 13. *Pitiſc.* Lex. Ant. T. 1. p. 177. ſeq.

ARMATURA is alſo an appellation given to the ſoldiers who were light armed. *Veget.* l. 2. c. 15.

Aquinus ſeems, without reaſon, to reſtrain *Armatura* to the tyrones, or young ſoldiers, under diſcipline or tutorage in the exerciſe above-mentioned. *Aquin.* Lex. Milit. T. 1. p. 82.

ARMATURA is alſo a denomination given to the ſoldiers in the emperor's retinue. *Du Cange*, Gloſſ. Lat. T. 1. in voc.

Of theſe we find two ſchools, mentioned in the notitia imperii, called the *Armaturæ Seniores*, and *Armaturæ Juniores*. Their commander was entitled *Tribunus Armaturarum*.

Pancirollus ſuppoſes them to have been thus called, becauſe heavily armed, or rather becauſe completely armed, or becauſe their order conſiſted of ſuch as had been diſciplin'd in arms under the campidoctor.

ARMED *Loadſtone*. See LOADSTONE.

ARMENA, in botany, a name given by Pliny to a kind of wild aſparagus; but the antient Greeks have uſed the ſame word to expreſs the young ſhoots of the common aſparagus, at the time when they are eaten; and not only theſe, but the young ſprouts of the cabbage, and of all other eſculent plants.

ARMENIACA, *Apricot*, in botany, the name of a genus of trees, the characters of which are theſe. The flower is of the roſaceous kind, being compoſed of ſeveral petals, arranged in a circular form. The piſtil ariſes from the cup, and finally becomes

becomes a fleſhy fruit, of a roundiſh figure, but uſually a little compreſſed ſideways, and having a furrow down its middle. This fruit contains a flatted ſtone, which includes a kernel of the ſame figure. The ſpecies of *Apricot* enumerated by Mr. Tournefort are theſe.

1. The large fruited *Apricot*, with a bitter kernel. 2. The large fruited *Apricot*, with a ſweet kernel. 3. The *Apricot* with a middle ſiz'd oblong yellowiſh fruit, with a ſweet kernel. 4. The *Apricot* with a ſmall ſmooth yellow fruit, and a ſweet kernel. 5. The *Apricot* with a middle ſiz'd oblong fruit, partly yellow, partly red, and with a ſweet kernel. 6. The *Apricot* with a round fruit, of the ſize of a hazel nut, partly red, and partly yellow. 7. The common ſmall *Apricot*. 8. The *Apricot* with ſmall fruit, of the ſize of a hazel nut, and of a yellowiſh red throughout. 9. The *Apricot* with a middle ſiz'd oblong fruit, partly yellow, and partly green. 10. The *Apricot* with oblong middle ſiz'd fruit, of a gold colour, and green. 11. The *Apricot* with oblong fruit, of the ſize of a hazel nut, partly yellow, and partly of a bright red. *Tourn.* Inſt. p. 613.

ARMENIACUM, in natural hiſtory, a name uſed by Aëtius, and ſome other authors, for the lapis armenus, or blue ochre. See the article ARMENUS.

ARMENIUM, among the antient Greek writers, the name of the fine blue ore of copper, called lapis armenus at this time; but it has appeared ſtrange to ſome, that Zoſimus Panapolitanus, and ſome other of the old chemical writers, have mentioned the *Armenium* as one of thoſe foſſils which yield a fine yellow colour. This author ranks it, on this occaſion, with ochre, terra pontica, orpiment, and ſeveral other of the yellow foſſils: And Theophilus, and ſome other of the medical writers, have compared the yellow colour of the ſkin, in ſome caſes, and the yellow tinge of the urine, to the *Armenium*.

It has perplexed the interpreters of their works to reconcile theſe paſſages to the common ſenſe of the word: But the true account of them is, that tho' the antient writers among the Greeks uſed this word *Armenium* only as the name of the lapis armenus, all the later writers, from the time of Galen downwards, uſed it as the name of the Armenian bole of that author. Now tho' our modern bole armenic is red, it is very plain, from all the antient writers, that their bole armenic was yellow; and it was indeed juſt ſuch a colour as might be compar'd to ochre of ſome kinds.

ARMENUS LAPIS, *Armenian Stone*, in natural hiſtory, a mineral ſubſtance, which is but improperly called a ſtone, being no other than an ochreous earth, and properly called blue ochre. It is a very valuable ſubſtance in painting, being a bright and florid blue. It was in ſo high eſteem as a paint, among the antients, that counterfeits were continually attempted to ſerve in its place: And Theophraſtus has recorded it as a thing judged worthy a place in the Ægyptian annals, which of their kings had the honour of inventing the factitious kind; and he tells us the genuine native ſubſtance was a thing of that value, that preſents were made of it to great perſons; and that the Phœnicians paid their tribute in it. *Hill*'s Theophraſtus, p. 130.

It is a very beautiful earth, of an even and regular texture, and of a fine blue; ſometimes deeper, ſometimes paler, and frequently mixed with green. It is ſoft, tender, and light; of an even, but ſomewhat duſty, ſurface; it adheres firmly to the tongue, and is dry, but not harſh to the touch. It eaſily breaks between the fingers, and does not ſtain the hands. It is of a brackiſh diſagreeable taſte, and does not ferment with acids. It is a very ſcarce foſſil, but is found very pure, tho' in but ſmall quantities, in the mines at Goſſelaer in Saxony. It is frequently found ſpotted with green, and ſometimes with black; and very often is mixed among the green ochre, called *Berggruen* by the Germans, which has thence, by ſome, been erroneouſly called by its name. *Hill*'s Hiſt. of Foſſils, p. 65.

ARMILAUSA, in antiquity, a ſhort military coat, put over the thorax, and reaching down only to the knee. *Aquin.* Lex. Milit. T. 1. p. 83. ſeq. *Pitiſc.* Lex. Ant. T. 1. p. 179.

It was thus called, as being divided both before and behind, and only cloſe about the ſhoulders, *in Armos tantum clauſa*, quaſi *Armiclauſa*. *Iſid.* Orig. l. 19. c. 22.

The word is ſometimes alſo written *Armeclauſa*, *Armilauſia*, *Armicaſia*, and *Armilcaſia*.

ARMILAUSA is alſo applied, in eccleſiaſtical writers, to the ſcapular of monks and canons; thus called, on account of its hanging from the arms, or ſhoulders. *Schmid.* Lex. Eccleſ. p. 73. ſeq.

The ſame habit is vulgarly called *Patience*.

ARMILLATI *Milites*, thoſe who wore bracelets on their left arms, beſtowed on them by the generals, or emperors. Tho' the term is more frequently applied to ſoft and effeminate ſoldiers, who wore bracelets on their arms, not as the rewards of their proweſs, but marks of their foppery. *Aquin.* Lex. Milit. T. 1. p. 84. a.

ARMILUSTRIUM (*Cycl.*)—Some will have the *Armiluſtrium* to have been a kind of ſacred game, wherein arms were uſed; held annually in honour of Titus Tatius. Donatus ſuppoſes them to have been performed by the ſalii, armed with helmets, ſhields and ſpears, or at leaſt carrying theſe weapons in proceſſion. *Donat.* de Urb. Rom. l. 3. c. 13. *Aquin.* Lex. Milit. in voc.

ARMINIUS, in literary hiſtory, a celebrated romance in the German language, thus called from the name of its hero, the great champion, and deliverer of the Germans from the Roman yoke. V. Act. Erud. Lipſ. 1689. p. 287. It. 1690. p. 271. *Arminius* was compoſed by Caſpar von Lohenſtein, ſyndic of Breſlau. It abounds not only in intrigues of love, and feats of valour, but in moral and political inſtructions; and contains a large field of antient and modern learning. The finiſhing of it was left by the author's death to another. Some have ſuſpected that the late emperor Leopold was concealed under the character of *Arminius*, but that ſuggeſtion ſeems without ground. *Paſch.* de Var. Mod. Moral Tradend. c. 2. p. 197. *Stoll.* Introd. Hiſt. Liter. P. 1. c. 1. §. 16. p. 12.

ARMONIAC. See the article SAL.

ARMORACIA, in botany, a name given by the antients to a kind of radiſh. Pliny mentions it, but his account leaves us very much in the dark; for in one place he ſays, that there are two kinds of radiſh, the common garden kind, and the wild one; which laſt, the Greeks, he ſays, called *Agrion* and *Ponticiarmon*, and the Latins *Armoracia*. By this it ſhould appear, that the wild radiſh was called by the Romans *Armoracia*; but he afterwards ſays expreſsly, that the garden radiſh was common in Italy, and was called by them *Armoracia*.

There ſeems to be ſome error in the copy of Pliny, in this latter place, the firſt having the moſt title to our aſſent, as the garden radiſh needed no other name than that of *Raphanus*, by which it was ſufficiently known among the Romans in Pliny's time. The name *Armoracia* is by ſome written *Arboracea*, and ſeems to be given the plant from the circles in its root, which when cut tranſverſely, reſemble the ſeveral annual circles in the trunks of trees. *Pliny*, L. 27. *Ger.* Emac. Ind. 2.

ARMORIAL, ſomething that relates to arms, or heraldry. In this ſenſe we ſay an *Armorial* figure, *Armorial* bearing, *Armorial* enſign, the *Armorial* lilly of *France*, *Armorial* lion or leopard of England, &c.

There have been great diſputes, and even wars, for the *Armorial* figures of Sweden, the three crowns, which the Danes have alſo claimed. By a treaty concluded under the mediation of king James the VI^th^, of Scotland, it was agreed, that all contention for the three crowns ſhould ceaſe; that the kings of Denmark and Sweden ſhould have equally the liberty to uſe the ſame for ever, on condition that the king of Denmark ſhould not, by ſuch uſe, pretend to any right or title over the kingdom of Sweden. *Niſbet*, Eſſ. on Armor. c. 16. p. 206. The antient *Armorial* figures of the Engliſh banner royal were three leopards, which the Scottiſh heralds, on the acceſſion of king James the firſt, aſſerted were originally thoſe of the dukedoms of Normandy and Aquitain, and conſequently were to give precedency to the royal *Armorial* figure of Scotland, the lion rampant. The Engliſh denied, that the *Armorial* figures, borne for England, were thoſe of Normandy and Aquitain, tho' not to be diſtinguiſhed from them in appearance, and aſſerted them to be new ones aſſumed by their kings ſince the conqueſt.

To make this appear, William Segar, garter king at arms, delivered a manuſcript to king James, entitled, The variation of the arms and badges of the kingdom of England, from the time of Brutus, a thouſand years before the incarnation, till the year one thouſand ſix hundred after the incarnation; which is ſtill extant. The occaſion of compoſing it was, that king James had delivered it as his opinion, that England had no certain arms belonging to it: In anſwer to which, Segar endeavours to ſhew, that tho' no nation had changed their arms oftener than the Engliſh had done, by reaſon of the ſeveral invaſions and conqueſts made by the Romans, Saxons, Danes, and Normans; yet, that ſince king Henry the Second's time, who left the Norman leopards, and took the Engliſh lions, the arms of England had been moſt conſtant. But the mixture of fabulous tradition in his work, does no great honour to the cauſe he maintains. He deſcribes, *e. gr.* the arms of each of the three ſons of Brute, among whom the iſland was divided: The eldeſt, named Lochern, to whom that part, now called England, fell, bore for his arms, *or, a lion paſſant guardant, gules*. The ſecond, to whom Albania, now Scotland, fell, bore *a lion rampant, gules*, which to this day, with the addition of the double treſſure, continues the arms of Scotland, &c. Some have aſked a reaſon for changing thoſe leopards into lions, or making a diſtinction between leopards and lions *paſſant guardant!* For that 'tis ſaid, in heraldry, there is none; a *lion paſſant* and full faced, ſhewing both his eyes, which the Engliſh call *guardant*, being called a leopard by the French, and other nations. It may be added, that the antient Engliſh *Armorial* figures are called leopards by ſeveral antient Engliſh, as well as French and Latin heralds and hiſtorians. *Niſbet*, Eſſ. on Armor. c. 14. p. 160. ſeq.

ARMORIAL is alſo a title given to ſeveral books, which contain the arms of a number of perſons of quality. *Richelet*, Dict. in voc.

In this ſenſe we meet with the French *Armorial*, the Spaniſh *Armorial*, &c. See ARMORY, *Cycl.*

ARMORIC, or AREMORIC, ſomething that belongs to the province of Bretagne, or Britanny, in France.

The name *Armorica* was antiently given to all the northern and weſtern coaſt of *Gaul*, from the *Pyreneans* to the *Rhine*; under which name it was even known in Cæſar's time. *Cæſ.* de Bell. Gall. l. 7. c. 14. *Aubert.* ap. Richel. Dict. T. 1. p. 123. b.

The word is of bas breton, origin, and denotes as much as maritime; compounded, according to M. Menage, of *ar*, upon, and *more*, ſea. *Menage*, Orig. Franc. p. 48. b.

ARMORIC, abſolutely uſed, denotes the language in uſe among the inhabitants of Britanny.

The French uſually call this language *bas breton.*

The *Armoric* is a dialect of the Welch, and ſiſter of the Corniſh language.

The inhabitants of Britanny, of Cornwall, and of Wales, ſtill underſtand each other's ſpeech; tho' conſiderable diverſities have crept in between theſe languages, ſince their ſeparation from each other.

The inhabitants of Britanny, Mr. Lluyd obſerves, by their intercourſe with the French, have much altered their antient orthography; beſides that there are ſeveral words in the *Armoric* which have no affinity with the Welch; and that both the *Armoric* and Corniſh retain ſeveral antient words and phraſes which are loſt in the Welch. *Mem.* de Trev. an. 1711. p. 651. ſeq.

Julian Manoir, a jeſuit, has publiſhed an *Armoric* grammar and vocabulary in French, which has been tranſlated into Engliſh by M. Williams, and publiſhed with notes by Mr. Lluyd [a]. Before him Yvon Quillivere had publiſhed an *Armoric* vocabulary at Paris, 1521 [b].—[a In Archæol. tit. 3 & 4. p. 180. ſeq. b *Nichols.* Eng. Hiſt. Lib. P. 1. c. 3. p. 29.] Toland has given a catalogue of ſeveral *Armoric* words, which prove to be Iriſh; alſo a vocabulary *Armoric* and *Iriſh.* Collect. of Pieces, T. 1. New Mem. of Liter. T. 12. p. 106. ſeq.

ARMOURER, a maker of arms, or armour.

The Roman *Armourers* were diſpoſed in certain places in the empire, it being forbid either to ſell or buy, or make arms elſewhere. They were exempt from all offices, and taxes, and received a ſalary from the public.

When once they had taken the employment on themſelves, neither they, nor their children, were allowed to quit it. To prevent this, they had a kind of note, or ſtigma, impreſſed on the arm, whereby they might be known. If any of them fled, or ſecreted their ware, the reſt were obliged to anſwer for him; on account of which, the effects of ſuch as died without a legal heir, went to the college. *Pitiſc.* Lex. Ant. T. 1. p. 752. b. in voc. *Fabricenſes.*

There were fifteen *Armamentaries*, or repoſitories of arms, in the eaſtern empire, placed near the frontiers, and nineteen in the weſtern. V. *Pitiſc.* Lex. Ant. T. 1. p. 752. a. in voc. *Fabricæ.*

ARMOURER of a ſhip, a perſon whoſe office is to take care the arms be in a condition fit for ſervice. Dict. Marin. p. 44.

ARNABOS, in the materia medica, a name of an aromatic drug, deſcribed by Paulus Ægineta, and other of the Greek phyſicians, and ſuppoſed to be the ſame with the *Zarnab* of Aviſenna, that is with the carpeſia of the more antient Greek writers.

This was a drug much uſed as an aromatic and cordial, and allowed in many caſes to be a good ſubſtitute for cinnamon. It was the young ſhoots of the cubeb-tree, or ſomething of that kind, though poſſibly not the very tree which bears the cubebs, becauſe the Greeks ſay, it bore no fruit at all. It grew in Pamphylia, on certain mountains, from the names of which Galen has given it two epithets, expreſſing two different kinds, the laertiac and pontic. We know of no tree which does not bear ſome fruit; and it is very poſſible that this tree, from which the Greeks gathered their *Arnabos* or carpeſia, might bear the cubebs, tho' they did not know it; the *Arnabos* being gathered in ſpring, while the twigs were full of ſap, and before the fruit, or even the flowers appeared.

The carpaſium of the Greeks, which was a poiſonous gum, reſembling myrrh in colour, is ſometimes written carpeſia; but this muſt be carefully diſtinguiſhed from this carpeſia or *Arnabos.*

There is ſome reaſon to ſuſpect, however, that either the Greeks were not well ſettled about the ſenſe of the word *Arnabos*, or elſe that they made it ſignify two different things; for though many of them give accounts, which ſhew, that what they mean by that word is the ſame with the carpeſia, the young ſhoot of a tree, yet others ſeem to expreſs a bark by it.

Galen, who has given us the beſt account extant of the carpeſia, mentions the *Arnabos* in another part of his works, as a thing no way allied to the *Carpeſia*, but as a ſort of caſſia, or bark, reſembling cinnamon, and often uſed for it. He even makes the country of the *arnabos* and carpeſia different; for he tells us, that the *arnabos* was brought from the Eaſt Indies, and that the carpeſia grew only in Pamphylia.

Upon the whole, it does not appear certain, whether the zarnab, *Arnabos*, and carpeſia, were things alike in virtue, but ſomewhat differing in form; or whether they were all the ſame plant, not deſcribed with ſufficient accuracy.

ARNALDIA, in phyſic, a ſlow malignant kind of diſeaſe, frequent formerly in England; the moſt diſtinguiſhing ſymptoms whereof was a falling of the hair. *Brün.* and *Blanc.* Lex. Med. in voc.

Authors are much at a loſs for the nature, and kind of this diſeaſe, which appears to have been peculiar to our country. From the deſcription given of it in an antient chronicle, Mollerus concludes it to have been a ſpecies of the venereal diſeaſe, as that diſtemper appeared in thoſe days in this country. *Moller.* Diſſ. Philol. Hiſt. de Arnald. V. *Aloys* Luiſin. Aphrodiſiac. T. 1. p. 554.

ARNICA, in botany, a ſpecies of doronicum, with plantane leaves. See DORONICUM.

Dr. Bruckner recommends the decoction of *Arnica Vera*, or plavienſis, in feveriſh diſorders, accompanied with hæmorrhagies, efflorescentiæ, *&c.* Select. Med. Francof. T. 1. vol. 3. art. 4.

ARNOTTA, in botany, a name given by the peaſants of Burgundy, and many other places, to certain roots which they frequently turn up, from five or ſix inches depth in plowing the ground. They carefully collect theſe, and eat them, after roaſting in the aſhes, or otherwiſe; in which ſort of cooking they acquire the taſte of a cheſnut, and are found to be a very wholeſome and nouriſhing food. They are blackiſh on the outſide, and white within, and are of the ſize of a ſmall Walnut.

Ruellius is of opinion, that theſe are the ornithogalium roots of Dioſcorides; but there appears not the leaſt ground for ſuch a conjecture. Some others have thought them to be the roots of the apion, or apios; but this is yet more abſurd.

Some have called them *Pſeudorapios*, but with very little reaſon; for they are no other than the roots of the bulbocaſtanum, or earth-nut, which is common all over Europe, and anſwers to the deſcription of them in all particulars. The derivation of the name *Arnotta* has been variouſly gueſſed at; but it ſeems to be only a falſe pronunciation of the Dutch word Ertnote, which is earth-nut. See BULBOCASTANUM.

ARNULPHIN, *Arnulphinus*, a coin of the value of a ducat and an half, current in ſome parts of France in the 15th Century. *Du Cange*, Gloſſ. Lat. in voc.

AROLEC, the name of a weight, in uſe in ſome parts of America, and in quantity equal to twenty-five pounds of our weight.

AROMA is, by ſome authors, particularly applied to denote myrrh. *Linden*, Select. Medic. Ex. 10. §. 125. See the article MYRRH, *Cycl.* and *Suppl.*

AROMA *Philoſophorum* is uſed by ſome for ſaffron. *Hoffm.* Clav. ad Schrod. p. 459. See SAFFRON, *Cycl.* and *Suppl.*

Others give the appellation *Aroma Philoſophorum* to Paracelſus's aroph. See the article AROPH.

AROMA *Germanicum*, a denomination given by Platerus to elecampane. *Quinc.* Diſp. P. 2. n. 303.

AROMATIC (*Cycl.*)—Powders which have *aromatic*, or other acrid particles in them, not only abſorb liquors, but give more or leſs ſtimulus; and as the effect of all irritation is ſome degree of inflammation, which in ſores is principally removed by a ſubſequent increaſed ſuppuration, theſe powders may aſſiſt to ſeparate corrupted from ſound parts. Such of them as have balſamic particles in their compoſition, encourage the ſuppuration moſt.

Several of them reſiſt the putrefaction of animal ſubſtances, and therefore may preſerve a carious bone, or the matter coming from it, from ſuch a high degree of putrefaction as they might otherwiſe go to.

Beſides theſe effects on the ſore, regard muſt always be had to their operation, if any of their particles are abſorbed by the blood-veſſels, for ſome of them produce more or leſs of fever, others become purgatives, *&c.* Med. Eſſ. Edinb. Vol. 5. art. 24.

AROMATISATION, in pharmacy, the art of mixing aromatic, or ſpicy matters, as cinnamon, mace, and the like, with ſome drug, or other medicine, partly to augment its virtue, and partly to render it more agreeable to the palate, or the ſmell. *Savar.* Dict. Com. T. 1. p. 154.

AROMATITIS, Ἀρωματῖτις, in the antient phyſiology, a kind of bituminous ſtone, by ſome repreſented as a gem, both in ſmell and colour reſembling myrrh. *Gorr.* Def. Med. p. 57. It is ſaid to have been found in Arabia and Egypt, and to have been in great uſe among ladies, as a perfume.

AROPH, a term uſed by Paracelſus, to denote a medicine endued with a power of breaking or diſſolving the ſtone in the human body. *Burggr.* Lex. Med. T. 1. p. 1046. ſeq.

In which ſenſe *Aroph* amounts to the ſame with *Lithontriptic.*

Paracelſus ſpeaks of the *Aroph* to the following effect: The peccant matter is carried away by *Aroph*, which is reduced, by diſtillation, from bread to a liquor.

Van Helmont aſſures us, he was poſſeſſed of the *Aroph*, and ſpeaks of the wonderful effects he had produced by it. He deſcribes it as a remedy for the ſtone in the kidneys, prepared under dung, with a mixture of rye bread; and adds, that the

word *Aroph* imports as much as *Aroma Philoſophorum*; by which, on other occaſions, was denoted ſaffron. By this it ſhould ſeem, that *Aroph* was a preparation of ſaffron and rye-bread, digeſted with ſpirit of wine, in a horſe-dung heat, and at length diſtilled.

Cnoeffelius gives the proceſs at large, as deduced chiefly by conjecture, from two paſſages in Paracelſus. V. *Cnoeffel.* in Ephem. Acad. N. C. Dec. 1. an. 4. obſ. 109.

AROPH *Paracelſi* is alſo a name given to a kind of chemical flowers, elegantly prepared by ſublimation, from equal quantities of *lapis hæmatitis* and ſal armoniac; ſaid to be of great efficacy in quartan agues, the plica polonica, and hypochondriac diſeaſe. V. *Hoffm.* Clav. Schrod. p. 179. *Boerh.* Elem. Chem. P. 2. p. 35. *Junck.* Conſp. Therap. tab. 16. p. 454.

This is alſo called *Aroma Philoſophorum.*

AROPH is alſo uſed to denote *Mandragora.* *Rul.* Lex Alch. p. 71. See MANDRAGORA, *Cycl.* and *Suppl.*

ARORNOS, in botany, a name by which ſome authors have called the juniper. *Ger.* Emac. Ind. 2.

ARQUATA, in zoology, the name of a bird, called alſo by ſome *numenius*, and commonly known in England by the name of the *Curlew.*

The male, in this ſpecies, is ſomewhat ſmaller than the female, and is called the *Jack Curlew.* It is a conſiderably large bird, weighing 28 ounces. Its head, neck, and back are covered with feathers blackiſh in the middle, and greyiſh and tawney at the edges. On the throat and breaſt, the middle of the feathers are blackiſh alſo, and their edges white, or a little tawney. The belly and the rump are white. Its wings are mixed of black and white. Its beak is black, extremely long, ſlender, and crooked. Its legs are alſo long, and of a bluiſh brown. It is well known to be a very delicately taſted bird. *Ray*'s Ornithology, p. 217.

ARQUATA *Minor*, in zoology, the name uſed by authors for the bird called by our ſportſmen the *Wimbrel.* See the article WIMBREL.

ARRACHE'E, in heraldry, is uderſtood of repreſentations of plants forcibly torn up by the roots, with their roots hanging at them. *Niſb.* Herald.

In this ſenſe *Arracheé* amounts to the ſame with what is otherwiſe called *eradicate*, or *eraſed.*

ARRACK. See the article RACK.

ARRENDARE, in antient law books. See the article ARRENTATION, *Cycl.*

ARRENDARE is alſo uſed, in the Scottiſh law, for the letting out the uſe of a thing, in conſideration of a certain rent. *Skeu.* de Verb. Signif. p. 10.

ARREPTUS, in middle age writers, denotes a dæmoniac, or perſon poſſeſſed. This is alſo written *Arrepticius.* *Du Cange*, Gloſſ. Lat. T. 1. p. 340.

In this ſenſe we meet with *Arrepti a Dæmone Homines.* The *Arrepti* were not to be admitted to holy orders.

ARREST (*Cycl.*)—*Arreſts*, or *Arrets*, among farriers, denote a ſort of mangy tumours on the ſinews of the hind legs of a horſe, between the ham and the poſtern; called alſo *Rat-tails.* *Guill.* Gent. Dict. in voc.

The name is taken from the reſemblance they bear to the *Arretes*, or back-bones of fiſhes.

Arrets bear a near reſemblance to ſcratches.

ARRESTS of ſoldiers. See SOLDIERS.

ARRESTOGRAPHER is applied, by ſome French writers, to thoſe who have publiſhed collections of *Arrets.* *Richel.* Dict. T. 1. p. 126. a.

In this ſenſe Papon, Louet, Brodean, Henrys, *&c.* are celebrated *Arreſtographers.*

ARREYERS, *Arraiatores*, in our ſtatutes, officers that had the care of the ſoldiers armour, and whoſe buſineſs it was to ſee them duly accoutred. Stat. 12. R. 2. c. 6.

In ſeveral reigns, commiſſioners have been appointed for this purpoſe. *Cowel.*

ARRHAPHON, Αρραφον, denotes a ſkull without ſutures, found to be the cauſe of incurable cephalalgias. *Caſt.* Lex. in voc. *Arrhabon.*

ARRHENOGOGON, in botany, a name given by ſome to the parietaria, or pellitory of the wall. *Ger.* Emac. Ind. 2.

ARRIAGI, in the materia medica, a name given by ſome authors, particularly by Serapio and Aviſenna, to a fine kind of camphor.

It is ſometimes written *Alriagi* and *Alriachi*, or ſimply *Riachi.* It ſeems to be very nearly allied to that fine kind, called *Canſur* or *Canzuri*; and authors in general agree, that it is the ſame ſort, purified by art. They ſay, that the *Canzuri* had its name from a place called Canſur, where it was produced, and that the *Alriagi* was called ſo from the name of a certain king of that country, who firſt found out the method of whitening it by refining.

It is evident that the Arabians ſpeak of the alcanſuri and *Alriagi* as very little differing; and Aviſenna places them together as the beſt camphor, mentioning after them the alazed and alazrac, as of inferior value. It is ſaid, that the name of this monarch who invented the method of purifying camphor, was Riach, and that it was done by means of the ſun's heat, tho' ſome ſay by fire. It is certain, that we in Europe uſe fire in this proceſs, but we do not know what the ſun may be able to do there.

ARROBAS, or AROBAS, a weight uſed in Spain, Portugal, and the foreign dominions of both.

The *Arrobas* of Portugal is alſo called *Arata*, and contains thirty-two Liſbon pounds; that of Spain contains twenty-five Spaniſh pounds.

In Peru it is called *Arroue.* *Savar.* Dict. Comm. T. 1. p. 154. in voc. *Arobe.* See ARROUE.

ARROUE, or AROUE, a weight uſed in Peru, and other parts of the Spaniſh America.

The *Aroue* is no other than the Spaniſh *Arroba.* It weighs twenty-five pounds, French weight. Its chief uſe is in weighing the herb paraguay, uſed in theſe countries for tea, in ſuch quantity, that Peru alone conſumes ſeventy-five thouſand Arouas in a year. *Savar.* Dict. Com. T. 1. p. 154.

ARROW, (*Cycl.*) in ſurveying, is uſed for ſmall ſtrait ſticks about two feet long, ſhod with iron ferrils. Their uſe is to ſtick into the ground, at the end of the chain. See SURVEYING, *Cycl.* and *Suppl.*

Elf-ARROWS. See ELF-*Arrows.*

Magical ARROWS. See the article MAGICAL.

ARS *Theſſalica*, *Theſſalian Art*, is uſed by antient writers, for a ſpecies of magic, whereby it is pretended, they could draw the moon and ſtars out of heaven. *Struv.* Synt. Antiq. Rom. c. 6. p. 307.

It was denominated *Theſſalian* from its ſuppoſed inventors, the people of Theſſaly.

ARSE *Verſe*, in antiquity, a term, or formula, inſcribed on doors, to prevent fire.

It is ſaid to be of Tuſcan origin, where the word *Arſe* ſignifies avert, and *Verſe* fire. Vid. *Pitiſc.* Lex. Ant. T. 1. p. 181. a.

ARSELLA, in botany, a name given by ſome of the Greek writers, to the *Argemone*, a kind of wild poppy; and by others, to the common *Agrimony.* Both one and the other of theſe plants they alſo at times called *Sarcocolla.*

ARSENIC (*Cycl*)—This ſubſtance being reduced to a fine powder, and well mixed with ſome of the calcareous earths, and ſuch as are not to be affected by fire, is rendered, by this management, much more fixed than in its own nature. If to this mixture a little tartar be added, and it be then moiſtened with water, and preſſed down with ſmall plates of iron, in a veſſel able to reſiſt the greateſt fire, and this veſſel be cloſed every way, except a ſmall aperture, and expoſed to a violent fire, the matter is converted into a white brittle regulus of iron, not to be reduced to its former ſtate, but by long continuance in an open fire.

If copper be treated in the ſame manner with *Arſenic*, it acquires the ſame whiteneſs, but ſtill retains its malleability in a great degree, eſpecially if it be afterwards melted with tartar and borax, that all the ſuperfluous *Arſenic* may be evaporated. Tin and *Arſenic* mixed, and ſet over the fire, turn immediately to aſhes.

Lead mixed with *Arſenic*, and expoſed to the fire, is, in great part, immediately carried away in form of a thick ſmoak; the remainder is a glaſs of a fine ſaffron colour. Silver is alſo penetrated by *Arſenic* in the ſame manner, and loſes its malleability; but the *Arſenic* vaniſhes from it in a ſtrong fire, in the form of a ſmoak. Gold, penetrated by *Arſenic*, becomes very brittle, and loſes its colour; and, being ſuddenly thrown into a violent fire, part of it is ſublim'd.

Arſenic is in itſelf more fixed than ſulphur, and may be very ſtrictly united to ſeveral metals, earths, and ſtones, not excepting even glaſs itſelf, the vitreſcent ſtones, and ſalts; ſo that it remains with them, tho' melted in the moſt violent fire, evaporating but little; and when forced away by the joint action of air and fire, always carries away a part of the ſubſtances it was mixt with. The glaſſes in which this penetrating body is ſublim'd, are alſo pervaded by its vapours, ſo that they become white throughout their whole ſubſtance. It melts in many of the matrixes, in which it lies hidden, when ſuddenly put into a ſtrong fire. Thus in the white Pyrites, which is a ſubſtance hardly to be conquered by fire alone, becauſe it contains a great quantity of an unmetallic earth, with a very little of a martial one, it turns to a maſs, in appearance of a ſemi-metallic reguline nature, but not ſo in reality; becauſe a great part of it is unmetallic, and is not to be ſeparated from the *Arſenic*, unleſs by means of a fire carefully raiſed by degrees; which at length forces the *Arſenic* to abandon the more fixed parts: And very nearly the ſame happens to all the metals and ſemimetals with *Arſenic*; nay, it adheres to their ſcoriæ, and to their calxes, and melts with them, and is not to be ſeparated from them, but by means of a ſlow roaſting.

The efficacy of *Arſenic* is very great in producing dry ſolutions; and this is conſiderably encreaſed, when it is joined with a body which is fix'd and fuſible in the fire; as for inſtance, with the glaſs of lead: The effect of this mixture is much greater than that of ſimple glaſs of lead, or litharge alone. All the *Arſenics*, ſublim'd with ſulphur, are diſcovered by the flame they give, on melting them with nitre; but pure white *Arſenic* yields no flame on this trial.

The experiment is to be made in this manner: Beat

to

to powder a few ounces of the pureſt nitre, and put it into a deep crucible; put it into a wind furnace, and add gradually hot coals about it, but let them be ſuch as have done crackling, otherwiſe the veſſel may burſt. The coals muſt only reach up to the middle of the crucible, and it muſt be covered, to prevent any thing from falling into it, when the nitre is melted, and is moderately red, add to it the powder of a fine white piece of cryſtalline *Arſenic*, a noiſy ebullition is immediately made, and the nitre ſwells up, foams, and would run over the top of the veſſel, if not very large and wide; an arſenical fume is at firſt emitted, having the ſmell of garlic, and after this the ſmell of aqua-fortis. If the vapour of this mixture be ſaved in diſtillation, it is much the ſame with the penetrating ſpirit of nitre; but it is a very dangerous proceſs, for the veſſels uſually burſt in the operation. In this experiment great care muſt be uſed, that the *Arſenic* be perfecty pure and clean, for the minuteſt animal or vegetable fibre, even ſo much as the ſplinter of a box the *Arſenic* may have been kept in, or any thing of that kind, will make a very impetuous and violent deflagration with nitre melted and red hot. *Cramer*'s Art of Aſſaying.

Arſenic is attracted with a different force by different metals, and attracts them reciprocally; of all metals, it abſorbs iron moſt greedily; after this copper, tin, lead, and ſilver, in this order of ſucceſſion; therefore, all metals may be freed from the foulneſs of *Arſenic* by iron. The ſcoriæ may be uſed for this purpoſe in fuſion, in an open fire; for though they do not produce this effect as ſcoriæ, yet here being reduced to iron again, they act in the ſame manner as if pure iron had been put in.

This poiſonous mineral, though not found native in its perfect form, but buried in ores of various kinds, yet is capable of being ſeparated, and raiſed out of that ore, by the vapours continually paſſing through the earth; and, in this caſe, is carried up into the air, and occaſions many of the epidemical and fatal diſeaſes, to which the countries, where minerals abound under the earth, are ſubject. Cattle, whoſe noſes are kept nearer the ground than the human organs of reſpiration, are ſooner and more violently affected by theſe exhalations, which are often too heavy to affect any thing much above the ſurface, not riſing high up into the air, but falling almoſt immediately down on the ſurface again, and there deſtroying the herbage, and occaſioning that barrenneſs which is better known than underſtood in all the mine countries. When theſe poiſonous exhalations are thus heavy, they are of no great hurt to man, but when they are lighter and more ſubtle, though they are neceſſarily leſs ſtrong, yet, being carried up to his mouth and noſe, they are ſufficient to affect with the moſt terrible ſymptoms. Delafont does not ſcruple to attribute the plague itſelf to the air's being infected with theſe arſenical exhalations, entering the human body, either by the pores, or by reſpiration, or both. If they are taken in only by the breath, they affect the lungs and brain principally; but if they enter by the pores, they attack all parts at once, and there operate not by coagulation, as Willis ſuppoſes, but by corroſion, proceeding from a ſaline and acrid quality, with which we know the fumes of *Arſenic* to be endued. Many of the bodies of thoſe who have died of the plague, have been found, on opening, to have the lungs and ſtomach affected, exactly in the ſame manner as in perſons who die by ſwallowing *Arſenic*; the lungs inflamed, and the inner coat of the ſtomach eroded, and often black and corrupted. The origin of many other epidemical diſeaſes, as well as that of the plague, may be referred to the ſame cauſe; and the diſeaſes may be varied according to the varying of the fumes which occaſion them, which may be ſometimes plainly and ſimply arſenical, ſometimes mixed of arſenical, ſulphureous, ſaline, mercurial, and the like; and theſe may not equally affect all perſons, but may ſpare thoſe whoſe bodies are in a more temperate ſtate, and only affect thoſe who are full of blood, who have obſtructions, or perturbations of the humours, or who are of depraved conſtitutions. *Delafont*'s Diſſert. Medic. de Peſte.

The general opinion of the contagiouſneſs of the plague, and other epidemical diſeaſes, is carried much too far; doubtleſs many perſons, in the time of a general viſitation of a country with ſuch a diſeaſe, do take it by infection; but theſe are but a ſmall part of the number of the ſick, a thouſand being affected with it from the peſtilential nature of the air; that is, a thouſand have it primarily, for ten who have it by infection from other ſick perſons. It is obſerved, that many who are continually converſant among the ſick in theſe diſeaſes, yet eſcape it wholly; and there is ſo much in the temperament of the body, neceſſary for receiving the diſeaſe, that it is a queſtion whether any thing be to be allowed for the effect of the contagiouſneſs of the diſeaſe; the perſons who catch it by this means, muſt firſt be in a ſtate of body proper to receive it, and ſuch will receive it without the aſſiſtance of contagion, from the mere arſenical or other poiſonous ſtate of the air. *Delafont* de Peſte.

Arſenic, though a virulent poiſon, has been introduced into medicine. Mr. Boyle mentions a balſam made of it, with nitre and ſpirit of wine, or vinegar, as efficacious in the cure of venereal ulcers. See his Works, vol. I. p. 57, 501.

Dr. Cheyne mentions pills made of *Arſenic*, as uſed for the cure of obſtinate quartans. *Cheyne*, Nat. Method of curing diſeaſes.

ARSENOQUITA, from the Greek Αρσενοκοίτης, in middle-age writers, a ſodomite, or one who practices male venery.

Ratherius Veronenſis complains in his days, the clergy were ſo univerſally corrupt, that there was not one but was either an adulterer or an *Arſenoquite*. Quam perdita Tonſuratorum univerſitas tota, ſi nemo in eis qui non aut Adulter aut ſit *Arſenoquita*. *Du Cange*, Gloſſ. Lat. T. 1. p. 342.

ARSEPEDONAPTÆ, Αρσεπιδονακται, in antiquity, a name given by ſome to the Egyptian prieſts, or doctors. *Euſeb.* de Præpar. Evang. N. 4. p. 472. *Reimman*, Ant. Liter. Ægypt. §. 1.

ARSMART, in the botanic pharmacy, a medicinal plant, of a hot, pungent, penetrative taſte, whence it is alſo called *Hydropiper*, or water-pepper. Botaniſts call this plant *Perſicaria*, and ſometimes *Perſicaria non maculoſa*, by way of diſtinction from another ſpecies of that plant called *Perſicaria mitis*, or *Maculoſa*. See PERSICARIA.

Arſmart, by its heat and pungency, becomes almoſt intolerable to the tongue; and hence it obtains in ſcorbutic, hypochondriac, and other diſorders, ariſing from a ſluggiſh circulation of the fluids.

Several value its diſtilled water for its efficacy in the ſtone in the kidneys or bladder. Some alſo uſe the plant in external applications, particularly to diſſipate bruiſed blood; others for the toothach, *&c.* *Boyle*'s Works abr. T. 1. p. 46. *Junck.* Conſp. Therap. tab. 16. p. 439. *Quinc.* Pharm. P. 2. n. 331. *Lemer.* Treat. des Drog. p. 647.

ARSURA, in antient cuſtoms, a term uſed for the melting of gold or ſilver, either to refine them, or examine their value. *Spelm.* Gloſſ. . 45. b.

The method of doing this is explained at large in the black book of the exchequer, aſcribed to Gervaiſe in the chapter *de Officio Militis Argentarii*, being in thoſe days of great uſe, on account of the various places, and different manners in which the king's money was paid.

ARSURA is alſo uſed for the loſs or diminution of the metal in the trial. In this ſenſe, a pound was ſaid *tot ardere Denarios*, to loſe ſo many pennyweights.

ARSURA is alſo uſed for the duſt and ſweepings of ſilverſmiths, and others, who work in ſilver melted down. *Du Cange*, Gloſſ. Lat. T. 1. p 343.

ARSURA is alſo uſed, in ſome writers, for the diſeaſe called Eryſipelas, or *Ignis Sacer*. *Du Cange*, loc. cit. See ERYSIPELAS, *Cycl.* and *Suppl.*

ART *and* PART, in the law of Scotland, is uſed for being an accomplice of a crime, either by aiding or adviſing.

The facts inferring *Art and Part* need not be particularly laid in the libel or indictment, for theſe general words, as terms of ſtated ſignification, are ſufficient. Yet theſe facts may be ſet forth, and it is proper ſo to do, if the proſecutor chooſes to confide in the court rather than in the jury. V. *Mackenz.* Crim. Law.

Alſo in the criminal letters, the perſons of the accomplices muſt be deſcribed by proper names and deſignations.

One may be *Art and Part*, 1°. By giving counſel to perpetrate, without diſtinction, whether the crime would have been committed without ſuch counſel or not. This being what can never be perfectly known. But it is to be obſerved, that in the more atrocious crimes, he that gives counſel is equally puniſhed as him that commits them; but in the leſs atrocious leſs ſeverely. And ſometimes reaſons of mitigation are taken from the age, the manner of adviſing, *&c.*

2°. By aid and aſſiſtance, and that either previous, or concomitant, or ſubſequent, to the commiſſion of the crime. The firſt rarely comes up to *Art and Part*, unleſs very particularly qualified; the ſecond commonly does, and it is eaſily known, if it does not; the third never, and hardly deſerves the name, unleſs it be in providing for the criminal's eſcape. But any of the three make *Art and Part*, if the perpetration was premeditated.

3°. By a clear and explicit mandate to commit the crime, or to do ſomewhat unlawful in itſelf, which with great probability might produce it, if executed by the hand of the mandatory, and not that of another.

ARTABA, Αρταβη, an antient meaſure of capacity uſed by the Perſians, Medes, and Egyptians.

The Perſian *Artaba* is repreſented by Herodotus as bigger than the Attic medimnus by three Attic chœnixes; from which it appears, that it was equal to 6 $\frac{3}{4}$ Roman modii; conſequently that it contained 166 $\frac{2}{3}$ Pounds of wine or water; or 126 $\frac{2}{3}$ pounds of wheat. *Beverin.* de Pond. & Menſ. P. 2. p. 125.

The Egyptian *Artaba* contained five Roman modii, and fell ſhort of the Attic medimnus by one modius; conſequently held 133 $\frac{1}{3}$ pounds of water or wine, 100 pounds of wheat, or 60 of flour.

The Babylonians allowed their god Belus twelve *Artabas* of fine flour for his daily ſuſtenance; which will amount to 60 Roman modii, and conſequently 720 pounds of flour.

The Median *Artaba* was of the ſame content with the Attic medimnus,

medimnus, and consequently equal to six Roman modii, held 160 pounds of water, or wine, and 120 of wheat. Id. Ibid.

ARTADA, or ARTADAR, is used by some writers for realgar burnt, or calcined; commended by Paracelsus in malignant ulcers, and by Forestus for the cure of the Polypus. *Brun.* Lex. Med. p. 125. See REALGAR, *Cycl.*

ARTANITA *of the Antients.* See LEONTAPETALON.

ARTEMISIA, Αρτεμισια, in antiquity, yearly festivals observed in divers cities of Greece, particularly Delphi, in honour of Diana, surnamed *Artemis.* *Pott.* Archæol. l. 2. c. 20.

In the *Artemisia*, a mullet was sacrificed to this goddess, as being thought to bear some resemblance to her, in regard it is said to hunt and kill the sea-hare. *Athen.* l. 7.

ARTEMISIA, in the botanical pharmacy, a medicinal herb of great efficacy as an uterine, and promoter of the menses. *Gorr. Blanc. Lemer. Burgr.* in voc.

Artemisia is the same with what is popularly called *mugwort*; among botanists it is also known under the denomination of *Artemisia vulgaris major*, *Artemisia rubra*, and *Artemisia officinarum.* *Lemer.* p. 82.

It is much used in female complaints, both internally and externally: it is held an opener and discutient, a cleanser of the uterus, promoter of the menses, and of delivery. But it is more esteemed among midwives and nurses than among physicians. Its chief use in the shops is in a compound syrup which takes its name from it. *Junck.* Consp. Therap. Tab. 10. p. 312. *Quinc.* Dispens. P. 2. n. 58.

The Chinese Moxa is the produce of a sort of mugwort called *Artemisia Chinensis.* See MUGWORT.

ARTEMONITES, *Artimonitæ*, in church history, heretics in the third century who denied the divinity of Christ, asserting him to have only had a human nature, tho' divinely sent, and more excellent than the prophets. *Prateol.* Elench. Hærit. l. 1. n. 70.

The *Artemonites* absolutely denied that Christ is any where in scripture called God. Whence a late writer [a], who calls himself an *Artemonian*, endeavours to prove that they must have read the beginning of St. John's gospel differently from the present reading; and that instead of *and the word was God*, they read *and the word was of God:* not, καὶ Θεὸς ἦν ὁ λογος, but, Θεου ἦν ὁ λογος [b].—[a Init. Evang. S. Joann. ex. Antiq. Eccles. Restit. c. 28. b *John*, c. 1. v. 1.]

The *Artemonites* are the same with what in other writers are called *Theodotiani*, *Pauliani*, *Samosateani*, and *Photiniani*; and coincide nearly with the modern *Socinians.* *Ittig.* Hist. Photin. §. 8.

ARTENNA, in zoology, the name of a water-bird, of the size of a hen, of a browniſh colour on the back, and white on the belly; having a hooked bill, and its three fore toes connected by a membrane, but the hinder one loose. It is found on the island Tremiti in the Adriatic sea, and is supposed to be the *avis Diomedis* of the antients. *Ray*, Ornitholog. p. 251. See DIOMEDIS *Avis.*

ARTERIA *Venosa*, Αρτηρια φλεβωδης, a name given by the antients to what we call the pulmonary vein, or that vessel whereby the blood is conveyed from the lungs to the left ventricle of the heart.

The denomination was antiently given it, on a supposition of its being an air vessel, and that it served for the conveyance of the vital aura from the lungs to the heart. *Gorr.* Def. Med. p. 54. b.

ARTERIACS, *Arteriaca*, medicines proper for disorders of the trachea, and the voice.

Arteriacs are reduced by Galen to three kinds. 1. Such as are void of all acrimony, serving to mollify the asperities of the part; to which kind belong, gum tragacanth, after famius, amylum or starch, milk, &c. 2. Those of an acrimonious quality, whereby they stimulate even the sound parts; such are honey, turpentines, bitter almonds, iris root, &c. 3. Those of an intermediate kind, soft and mild, yet detergent; such are butter, and divers sappings made of almonds, milk, honey, &c. *Gorr.* Def. Med. p. 54. seq.

ARTERIOSUS *Canalis.* See CANALIS *Arteriosus.*

ARTERIOTOMY (*Cycl.*)—This operation is not performed so often among us as it was among the more antient surgeons, for fear of an aneurism, or too profuse hæmorrhage, yet if it be well adapted to the patient's Disorder, and carefully performed, it may often prove of the greatest service, and will not be attended with any ill consequences.

This operation is now seldom performed on any but the temporal arteries, which may be opened very easily by the lancet as they lie close under the skin, and lying close upon the os frontis, they may be readily compressed against it, and there is no danger of a profuse hæmorrhage, or aneurism; but even in this most convenient part, it must be acknowledged that the opening an artery is much more difficult than the opening a vein, as the vessel seldom appears plainly thro' the skin, and there is no guide but its vibration under the finger.

In the operation of *Arteriotomy*, the patient must be placed in a good light, and the surgeon must place two fingers of his left-hand, at a small distance from each other both on the artery. He must then observe the course of the vessel, and cut down into it deeper than in phlebotomy, and raise the point of the lancet, so as to make a sufficient orifice: in this he need not fear the cutting of the vessel quite thro', for even that is attended with no ill consequences after deligation. If now the blood follows the lancet in a very florid and salient stream, you may be satisfied the artery is well opened; if this is not the case it must be cut again, but as in this operation, the fine point of a lancet is liable to be broke against the bone; the use of a small scalpel is preferable. A pound or a pound and half of blood should be taken by this operation: when the sufficient quantity of blood is taken, the deligation must be made with three compresses, each larger than the other, laying on the smallest first, in which must be included a farthing, a bit of lead, or of chewed paper to compress the artery against the bone, and the head must continue tied up with a proper bandage eight days. *Heister*'s Surgery, p. 354.

ARTERY (*Cycl.*)—Mr. Weitbrecht concludes, from the small quantity of blood thrown out of the heart into the *Arteries*, and the great resistance in the capillary *Arteries*, that all or much the larger share of what is sent out of the heart, is retained in the *Arteries* during the systole of the heart, and is sent forward into the veins, by the contraction of the *Arteries*, but so, that the veins can have no pulsation, because so much as is received from the veins is thrown into the heart at the same time. The smallness of the quantity of blood thrown out of the heart makes him think, that the pulsation of the *Arteries* cannot be so much owing to their distention, as to their change of place; and he says he perceived, upon trial, that all the *Arteries* of the body are not dilated or contracted at the same time.

The auricles also, according to him, serve to give an impetus to the blood in the ventricles of the heart; for the blood moves so slow in the veins, that its momentum would not be sufficient to distend, and to give a spring great enough to the ventricles. The pulmonary blood acquiring considerable velocity by the motion of the lungs, requires a much less auricle from the blood of the vena cava. See Comment. Acad. Petrop. Tom. 6, & 7.

ARTERY *wounded.* When an *Artery* is wounded and not entirely divided, if it be a large one, the wounded fibres instantly contract themselves; by this means they dilate the orifice of the wound, and render it difficult to stop the flux of blood; and tho' the hæmorrhage be stopped for a little time, yet it will often burst out again on a sudden violently, or at least produce a dangerous tumour called an aneurism. This also will frequently be the case when only the external coat of the *Artery* is wounded, for by this means the internal coat of the *Artery* is left to sustain the whole impulse of the pulsation which it being unequal to, is forced by degrees into a tumour like a bag, which frequently brings on great mischiefs. *Heister*, p. 27.

ARTHRITES, in medicine. See GOUT.

ARTHRITICA, in botany, a name given by some to the primrose. *Ger. Emac.* Ind. 2.

ARTHRODIA, (*Cycl.*) in natural history, the name of a genus of crystal. *Hill*'s Hist. of Foss. p. 189.

The word is derived from the Greek ἀρθρωδης, complex, or joined together. The bodies of this genus are crystals, always found in complex masses, great numbers of them being always joined together, and either incrusting and covering over the outsides of roundish stony nodules, or else lining the cavities within such or other stony nodules; they are of the imperfect kind, having only single pyramids, which are usually very long, and very short and slender columns. The bodies on or in which these are found have been called by authors echinated or concave crystalline balls. See Tab. of Fossils, Class. 3.

Of this genus there are five known species. 1. A colourless and very bright one, found sometimes clustered together on the surfaces of small nodules, but more frequently in the cavities of flints, and very common in many parts of England; particularly wherever there are chalk-pits that have flints in them. 2. A dull and whitish one; this has shorter and more obtuse pyramids than the former, and is common in many parts of the kingdom, sometimes in the form of the echinated, sometimes of the concave crystalline ball, and sometimes encrusting the narrow fissures in strata of stone. 3. A blackish one with very short pyramids; this is the hardest and brightest of all the crystal class, tho' usually found very small. It is frequent in the forest of Dean in Gloucestershire, and is sometimes found among the other kinds about Bristol. 4. A very broad and blunt one, with a very short column; this is found in Cornwal, Yorkshire, and some other places, but no where so plentifully as in Gloucestershire; where it is generally found in the shape of the echinated crystalline ball. And, 5. One with a very long and narrow pyramid; this is found in vast abundance in Germany and Saxony; and not unfrequently with us in the inside of hollow stony nodules, about Kings-Weston in Gloucestershire, and in some other places. *Hill*'s Hist. of Foss. p. 192.

ARTICHOAK, in gardening.—We at present cultivate only one sort of *Artichoak* in the gardens about London, which is the red kind; the green *Artichoak* was once in great repute, but it is now never planted.

The manner of propagating this useful plant, is from slips or suckers taken from the old plant in February and March; these, if planted in a good soil, will produce a good fruit the au-

autumn following. The old *Artichoak* ſtocks are to be dreſſed in the latter end of February or beginning of March; this muſt be thus performed; with a ſpade remove all the Earth from about the ſtock, down below the Part from which the young ſhoots are produced. Then make choice of two of the cleareſt and ſtraighteſt, and moſt promiſing plants which are produced from the under part of the ſtock, let theſe be left for a crop; then with a thumb, force off all the other buds and young ſhoots cloſe to the Head of the ſtock, from whence they are produced, and with the ſpade draw the earth about the two plants which are left, cloſing it faſt with the hands to each of them, and ſeparating them aſunder as far as can be without breaking them, then crop off the tops of the leaves which hang down.

When this is done, a crop of ſpinach may be ſowed between the ſtocks, which will be gathered off before they come to ripen; in the beginning of May when the *Artichoaks* begin to fruit, all the young plants produced ſince the dreſſing muſt be removed, and all the ſuckers taken off, leaving only the one principal fruit; and when the *Artichoak* is fit to gather, the ſtock muſt be cut down cloſe to the ground, that it may ſhoot out new ſprouts before October, which is the ſeaſon for earthing them, or as the gardners call it landing the *Artichoak* ſtocks. *Miller*'s Gardners Dict.

The earthing them is thus done; cut off all the ſprouts cloſe to the ground, then dig trenches between the rows covering up the ſtocks with the earth in ridges; thoſe *Artichoaks* which are planted in a moiſt rich ſoil will always produce the largeſt fruit, but the roots will not live thro' the winter in a very moiſt one.

The *Artichoak* is a pleaſant, wholeſome, and very nouriſhing food; the roots are reckoned to be apperitive, cleanſing, and diuretic; good for the jaundice, and to provoke urine.

The French and Germans eat not only the heads, but alſo the young ſtalks boiled, and ſeaſoned with butter and vinegar. The Italians ſeldom boil the heads, but eat them raw, when young, with ſalt, oil, and pepper.

Artichoaks have the reputation of promoting venereal inclinations to a very great degree; the ſtalks, preſerved in honey, are ſaid to be an excellent pectoral; but they ſhould firſt be blanched, like celery.

The common leaves, boiled in white wine whey, are much commended in the jaundice, as is alſo the juice of theſe leaves. Vid. *James*'s Dict. Med. T. 2. in voc. See CINARA.

Jeruſalem ARTICHOAK is the root of a ſpecies of ſun-flower of the perennial kind, which is propagated in many gardens for the uſe of the kitchen; it is a very agreeably taſted root, but watery and windy, and therefore at preſent generally diſregarded.

It is propagated by planting out the ſmaller roots, or even pieces of the larger, which have buds to them in the ſpring or autumn; they muſt be allowed a very conſiderable diſtance, for they ſpread immoderately, and multiply very quick. The autumn following when their ſtems decay, the roots may be taken up for uſe. They are but an unſightly plant tho' very tall, and are commonly placed in obſcure corners of a garden. *Miller*'s Gardeners Dict.

ARTICULATED *Libel*, *Libellus Articulatus*, that wherein the parts of a fact are ſet forth to the judge in ſhort, diſtinct articles. *Calv.* Lex. Jur. p. 92.

This amounts to the ſame with what is otherwiſe called *Libellus poſitionalis*.

ARTICULATED *Leaf*. See LEAF.

ARTICULATED *Radius*, in natural hiſtory. See RADIUS *articulatus*.

ARTIFICERS, thoſe who work with the hands, and ſell things faſhioned by them into other forms.

Artificers amount to the ſame with what we otherwiſe call *handicrafts* and *mechanics*; ſuch are ſmiths, carpenters, taylors, ſhoemakers, weavers, and the like.

By the Engliſh laws, *Artificers* in wool, iron, ſteel, braſs or other metal, going out of the kingdom into any foreign country without licence, are to be impriſoned three months, and fined in a ſum not exceeding one hundred pounds. And ſuch as going abroad and not returning on warning given by our embaſſadors, *&c.* ſhall be diſabled from holding lands by deſcent or deviſe, from receiving any legacy, *&c.* and be deemed aliens. Stat. 5 Geo. I. c. 27.

The Roman *Artificers* had their peculiar temples, where they aſſembled and choſe their own patron, to defend their cauſes: They were exempted from all perſonal ſervices. Taruntenus Paternus reckons thirty-two ſpecies of *Artificers*, and Conſtantine thirty-five, who enjoyed this privilege. The *Artificers* were incorporated into divers colleges or companies, each of which had their tutelar gods, to whom they offered their worſhip. Several of theſe, when they quitted their profeſſion, hung up their tools, a votive offering to their gods. *Pitiſc.* Lex. Antiq. T. 1. p. 182.

Artificers were held a degree below merchants, and argentarii, or money-changers, and their employment more ſordid. Some deny, that in the earlieſt ages of the Roman ſtate, *Artificers* were ranked in the number of citizens; others, who aſſert their citizenſhip, allow that they were held in contempt, as being unfit for war, and ſo poor that they could ſcarce pay any taxes. For which reaſon they were not entered among the citizens, in the cenſors books; the deſign of the cenſus being only to ſee what number of perſons were yearly fit to bear arms, and to pay taxes towards the ſupport of the ſtate. It may be added, that much of the *Artificers* buſineſs was done by ſlaves, and foreigners, who left little for the Romans to mind but their huſbandry and war. V. *Dionyſ. Halicarn.* l. 2. p. 98. It. l. 9. p. 583. *Sigon.* de Ant. Jur. Civ. l. 2. c. 12. *Pitiſc.* ubi ſupra. T. 1. p. 182.

Ramazini has a treatiſe expreſs on the diſeaſes of *Artificers*. De Morbis Artificum Diatriba, Mutin. 1700. 8°. See Mem. de Trev. 1704. p. 920.

ARTIFICER *by Fire*, a denomination ſometimes given to chemiſts, and workers in metals. *Suic.* Theſ. T. 1. p. 620. in voc. Βαναυσος.

ARTIFICIAL (*Cycl.*)—ARTIFICIAL *Muſic*, that which is according to the rules of art; or executed by inſtruments invented by art. It is alſo uſed, in another ſenſe, for ſome artful contrivance in muſic; as when a piece is ſung in two parts; one whereof is by B molle, or flat, and the other by B ſharp. See *Artificii muſicali del Signor Vitali*.

ARTIFICIAL *Lightning*. See LIGHTNING *Artificial*.

ARTIFICIAL *Magnets*. See MAGNETS.

ARTILLERY (*Cycl.*)—ARTILLERY *Guard* is a detachment from the army to ſecure the artillery. This corps is in the front, and their centries are round the park. Upon a march they go in the front and rear of the *Artillery*, and muſt be ſure to leave nothing behind. If a gun or waggon break down, the captain is to leave a part of his guard to aſſiſt the gunners and matroſſes in getting it up again.

ARTIPHYES, Αρτιφυης, in the antient phyſic, denotes an even, entire, and perfect critical day; ſuch, according to Hippocrates, are the fourteenth and forty-ſecond days. *Brun.* Lex. Med. p. 134.

ARTISCUS, Αρτισκος, in medicine, denotes a troche, but more particularly that prepared of viper's fleſh, mixed up with bread, to be uſed in the compoſition of venice treacle. *Gorr.* Def. Med. p. 55. b.

Theſe are more particuly called *Artiſci Theriaci*, or theriacal troches.

They were formerly in great vogue, and brought with much parade from venice; but Zwelfer [a] diſcovered their vanity; ſince which time, vipers powder has been generally ſubſtituted for them, in the preparation of the treacle [b].—[a] In Pharmac. Auguſt. Animadv. ad cl. 12. p. 209. ſeq. [b] *Brun.* Lex. Med. p. 133. ſeq.]

ARTIST, in a general ſenſe, a perſon ſkilled in ſome art.

In this ſenſe, we ſay, an excellent, a curious *Artiſt*. The preheminence is diſputed between antient and modern *Artiſts*, eſpecially as to what relates to ſculpture, painting, and the like. At Vicenza, we are told of a privilege granted to *Artiſts*, like that of clergy in England; [a] in virtue of this, criminals adjudged to death, ſave their lives if they can prove themſelves the moſt excellent and conſummate workmen in any uſeful art. This benefit is allowed them *in favorem artis*, for the firſt offence, except in ſome particular crimes, of which coining is one. [b] The exception is juſt, ſince here the greater the *Artiſt*, the more dangerous the perſon.—[a] *Evel.* Diſc. of Medals, c. 7. p. 237. ſeq. [b] *Evel.* loc. cit. p. 238.]

De Piles mentions a blind *Artiſt* at Paris, who by only feeling the features of a face, could take, and mould the exact likeneſs of it in wax. *De Piles*, Cours de Peint. p. 329. *Wolf.* Pſychol. Rat. §. 162.

There are ſmall encouragements for *Artiſts* at Siam, where if a perſon ſhould arrive at any excellency, he would for his reward be obliged to work for the emperor gratis. Jour. des Scav. T. 19. p. 264.

ARTIST, *Artiſta*, in an academical ſenſe, denotes a philoſopher or proficient in the faculty of arts. *Heuman.* Via ad Hiſtor. Liter. c. 4. §. 39.

In the early ages of univerſities, the ſeven liberal arts compleated the whole courſe of ſtudy or philoſophy, as it was called. Whence the maſters in this faculty were denominated *Artiſts*.

The word is barbarous, formed in the ninth century, from *Ars*, with a termination which belongs rather to Greek words than to Latin.—An anonymous author has given the hiſtory of the word *Artiſt* as uſed for a philoſopher. Vid. Obſerv. Halenſ. T. 6. Obſ. 14. p. 118. ſeq.

From the ſame origin come alſo the words *Artiſtic*, *Artiſticus*, and *Artigrapher*, *Artigraphus*, found in ſome writers of thoſe ages.

ARTIST is more peculiarly underſtood of a chemiſt or alchemiſt. Obſerv. Halenſ. T. 6. Obſ. 23. §. 1.

In which ſenſe it is, that Paracelſus and other Adepts uſe the word.

We find frequent mention in authors of this claſs of *Elias Artiſta*, or Elias the *Artiſt*, who is to come ſome time before the diſſolution of the world, and reſtore and make perfect all arts and ſciences, but eſpecially the gold making art, and uſher in a truly golden age, or millennium.

The lower and meaner things in this ſublime art, Paracelſus obſerves, God has permitted to be already diſcovered; but for the greater and more important matters, as the tranſmutation of other metals into gold, they are reſerved to the coming of Elias the *Artiſt*. *Paracelſ.* de Vitriol. c. 8. Obſ. Halenſ. loc. cit. §. 3.

The Roſicrucians have alſo their Paraphraſes concerning the coming of Elias the *Artiſt*, who is in a more particular manner, the reſtorer of their myſterious art.

ARTIZOAS, Ἀρτιζῶας, is uſed by ſome antient phyſicians for an infant ſhort-lived, by reaſon of a difficult birth, whereby he was long detained in the paſſage from the womb. *Gorr.* Def. Med. p. 55. b. *Brun.* Lex. Med. p. 134. b.

ARTOMELI, Ἀρτομελι, in the antient pharmacy, a kind of cataplaſm, prepared of bread and honey, applied chiefly to the precordia. *Brun.* Lex. Med. in voc.

ARUM, *Wake-Robin*, in botany, the name of a genus of plants, the characters of which are theſe. The flower conſiſts of one leaf, of a very ſtrange figure, repreſenting, in ſome degree, a hare's ear; from the bottom of the flower ariſes a piſtil, which at its baſe is ſurrounded by a great number of embryos, each of which finally ripens into a roundiſh or oval berry, containing one or two ſeeds. To theſe marks it may be added, that the leaves are not divided.

The ſpecies of *Arum*, enumerated by Mr. Tournefort, are theſe:

1. The common *Arum*, with plain leaves. 2. The common *Arum*, with leaves ſpotted with white. 3. The common *Arum*, with leaves ſpotted with black. 4. The round leav'd ſpotted *Arum*. 5. The large *Arum* with white veins, and black ſpots on the leaves. 6. The largeſt Italian white-vein'd *Arum*. 7. The great Veroneſe white-vein'd *Arum*. 8. The Conſtantinople *Arum*. 9. The ſpotted flowered Arabian *Arum*. 10. The low broad leav'd Ceyloneſe *Arum*, with a ſcarlet piſtil. 11. The great Egyptian *Arum*, commonly called the Colocaſia. 12. The great large-rooted Ceyloneſe *Arum*. 13. The African *Arum*, with white ſweet-ſcented flowers. 14. The great flowered Indian *Arum*, with flowers four foot long. 15. The little eatable *Arum*, with leaves like thoſe of the water-lilly. 16. The little eatable *Arum*, with leaves like the arrow-head, of a deep green. 17. The great American *Arum*, with leaves of changeable colours, like a pigeon's neck. 18. The white-flowered narrow-leav'd climbing American *Arum*. 19. The narroweſt-leav'd climbing American *Arum*. 20. The heart-leav'd climbing American *Arum*. 21. The perforated ivy-leav'd climbing *Arum*, with large leaves. 22. The tree *Arum*, with leaves like thoſe of the arrow-head. 23. The tall cannacorus-leav'd Indian *Arum*. 24. The *Arum* with narrow, ridged and pointed leaves. 25. The large heart-leav'd *Arum*, with red tuberoſe roots. 26. The great leav'd American *Arum*, with red flowers and fruit. 27. The great American *Arum*, with red leaves, bordered with an edge of green. 28. The great yellow flowered American *Arum*. 29. The great leav'd climbing American *Arum*, with very long fruit. 30. The ſmall-flowered purple-berried American *Arum*. 31. The two-leav'd Arabian ſpotted *Arum*. 32. The Indian *Arum*, with ſcorzonera leaves. 33. The narrower-leaved Indian *Arum*, called by ſome ſerpentaria minor; and 34. The leaſt and narroweſt-leav'd American *Arum*, called by ſome, the narrow-leav'd ariſarum. *Tourn.* Inſt. p. 158. See ARISARUM and DRACONTIUM.

The root of *Arum* is extremely pungent and volatile, which quality makes it recommended in all viſcidities, phlegmatic and ſcorbutic caſes; becauſe it penetrates and rarifies tough concretions and infarctions of the glands and capillary veſſels. It has alſo been preſcribed in humerous aſthma's, and obſtructions of the bronchia. Van Helmont commends it greatly with vinegar, in bruiſes and falls, as ſerving to prevent the blood from ſtagnating, and falling into grumes, upon the injured parts. Some have affirmed, a dram of this root, freſh powdered, and taken in any proper vehicle, to be an infallible remedy againſt poiſon, and the plague. Matthiolus commends, with great reaſon, a cataplaſm of it, freſh bruiſed, and cow-dung to be applied hot, in arthritic pains. As this root, kept dry, ſoon loſes its efficacy, the compound powder of the ſhops, which takes it name from it, muſt be of little or no ſignification. V. *Quinc.* Pharm. P. 2. Sect. 4. p. 131. ſeq.

ARUNCUS, in botany, the name of a genus of plants called by Tournefort and others *barba capræ*. The characters of the genus are theſe:

The male flower has for its cup a one-leav'd perianthium, which is coloured, and is plain at the baſe, and lightly divided into five erect ſegments. The flower conſiſts of five oval petals inſerted into the cup, and ſcarce reaching beyond the ſegments of it. The ſtamina are about twenty in number, and are erect capillary filaments, doubly as long as the petals of the flower. The antheræ are ſimple. The piſtil has the rudiments of three germina. In the female flower the cup and petals are the ſame as in the male, the piſtil has three germina, which, by degrees, go off into a ſhort ſtylus, with ſimple ſtigmata. The fruit is compoſed of three ſeeds, of a pointed figure, ſurrounded by a cruſt.

This plant has been ſuppoſed to be of the ſame genus with the filipendula, but, by the cloſe examination of the flowers, they appear to be extremely different. *Linnæi*, Gen. Plant. p. 484. *Tourn.* Inſt. p. 141.

ARUNDO, *Reed*, in the Linnæan ſyſtem of botany, makes a diſtinct genus of plants, of the graſs kind; the diſtinguiſhing characters of which are, that the calyx, or flower-cup, is a bivalve erect glume, compoſed of two long, pointed, naked, or beardleſs valves, and containing one or more flowers. The flower is compoſed of two valves, of the length of the cup, theſe are oblong and pointed, and have a downy matter growing from their baſes to the length of the flower. The ſtamina are three capillary filaments; the antheræ are oblong, and ſplit at both ends. The germen of the piſtillum is oblong; the ſtyles are two in number, reflex, capillary and hairy; the ſtigmata are ſimple; the flower encloſes the ſeed, and does not open to let it fall; the ſeed is ſingle, oblong, pointed at both ends, and adorn'd with a long pencil of down from its baſe. *Linnæi*, Syſtem. Naturæ, p. 19.

ARUNDO *Indica*, in the materia medica, the name of the *Arundo ſanguinem draconis manans* of Moriſon. The plant from the fruit of which, by maceration in warm water, they get a kind of dragon's blood, which makes the fine red of the Indian varniſhes. *Dale*'s Pharm. p. 266.

ARURA, in antiquity, denotes a kind of land meaſure, amounting, according to Suidas, [a] to fifty feet, and, according to others, to one hundred cubits [b].—[[a] *Suid.* Lex. T. 1. p. 335. [b] *Magr.* Vocab. Eccleſ. p. 25. a.]

Strabo obſerves, that Egypt was antiently divided into prefectures, each of which was ſubdivided into toparchies, and thoſe into other leſſer portions, the ſmalleſt of which were denominated *Aruræ*, Ἀρουραι. *Strab.* Geogr. l. 18.

ARURA, Ἀρουρα, in middle age writers, denotes a field ploughed and ſowed.

ARUSPICI *Libri*, a kind of ſacred writings among the antient Hetrurians, wherein the laws and diſcipline of the *Aruſpices* were deſcribed. *Struv.* Synt. Ant. Rom. c. 6. p. 253.

Theſe were alſo called *Rituales*, ſometimes *Fulgurales Libri*, as directing how to take indications from thunder, lightning, *&c.*

ARVUM, in antient agriculture, properly denoted ground ploughed, but not ſowed. *Varr.* de Re Ruſt. l. 1. c. 24. *Fab.* Theſ. in voc.

Tho' the word is alſo ſometimes extended to all arable, or corn land, in contradiſtinction from paſture.

ARX, in the antient military art, a town, fort, or caſtle, for defence of a place. *Pitiſc.* Lex. Ant. T. 1. p. 184.

The *Arx*, in antient Rome, was a diſtinct edifice from the capitol, tho' ſome have confounded the two: According to Ryckius, the *Arx*, properly ſpeaking, was a place on the higheſt part of the capitoline mount, ſtronger and better fortified than the reſt, with towers and pinnated walls; in which was alſo the temple of Jupiter Capitolinus. *Struv.* Synt. Ant. Rom. c. 11. p. 522. ſeq.

ARX alſo denoted a conſecrated place on the palatine mount, where the augurs publickly performed their office.

Some will have the *Arx* to have been the augural temple; but Varro expreſsly diſtinguiſhes between the two. *Struv.* loc. cit. c. 6. p. 276.

ARX was particularly uſed for a public place in Rome, ſet apart for the operations of the augurs. *Feſt.* de Verb Signif. in voc. *Liv.* I. c. 18. & X. c. 7. *Struv.* Synt. Antiq. c. 6. p. 274.

In which ſenſe, *Arx* amounts to the ſame with what is otherwiſe called *Auguraculum*, and *Auguratorium*, and in the camp *Augurale*.

Out of this *Arx* it was that the feciales, or heralds, gathered the graſs uſed in the ceremony of making leagues and treaties. *Liv.* I. c. 24.

ASA, among naturaliſts. The writers of the later ages have formed this word *Aſa* from the *Laſar* of the antients, and attributed it to a gum very different from that antiently known by the name they have thus corrupted.

The *Aſa* of the antients was an odoriferous and fragrant gum, and the *Aſa* of the after ages had ſo little title to this epithet, that they diſtinguiſhed it by one, expreſſing its being of an offenſive or ſtinking ſmell.

The Arabian writers, according to this diſtinction, deſcribe two kinds of *Aſa*, the one ſtinking, the other aromatick; and the modern Greeks preſerv'd the name *Aſa*, or *Laſar*, to the ſtinking gum the Latins called by that name, but added a diſtinctive epithet to expreſs its ill ſmell, and called it *Scordolaſarum*. Thus Myrepſus always calls the ſame gum *Scordolaſarum*, that the Latin writers call *Aſſafœtida*.

The commentators on theſe writers explain the words *Laſaron* and *Scordolaſaron* often by the phraſe *Opium Cyrenaicum* and *Opium Quirinacium*. Aviſenna tells us, that the *Aſſafœtida* is one of the moſt ſtinking gums in the world, and that great quantities of it are brought from Kirvan. Kirvan, with him, is *Cyrene*, and thus far, as well in the nature of the drug, as in the place of its production, this author and the commentators perfectly agree.

ASA *Dulcis*, in the materia medica, a name by which ſome authors have called the *Benjamin*, or *Benzoinum* of the ſhops. *Dale*, Pharmac. p. 303. See BENZOIN.

ASA *fœtida*—The *Aſa fœtida* plant is recommended by Mr. Lawrence to be cultivated in our fields, for the food of cattle, inſtead of clover, ſaintfoin, or other ſuch herbs as we ſow among corn, and make into hay, in the ſucceeding ſummers, and uſe as food for cattle at other ſeaſons.

This gentleman is of opinion, that the ſheep, fed on this plant, would afford mutton of a much finer flavour than any that we are at preſent acquainted with. But it ſeems ſtrange, that this ſhould be the effect of theſe creatures feeding on a plant of ſo ſtrong a ſcent, that, as the ſame author obſerves, one drachm of the freſh root ſmells more than a hundred weight of the drug, as kept by the druggiſts, and that the whole air is ſtrongly and very diſagreeably ſcented with it, wherever it grows. Upon the whole, it ſeems probable, that tho' this plant, or the cyſtiſus, or ſeveral others, might be cultivated in England for the food of cattle, yet not any one would be ſo eaſily raiſed, or make ſo great an advantage to the farmer as the ſaintfoin. *Tull*'s Huſbandry. See SAINTFOIN.

ASÆVIS *Abſolutio*. See ABSOLUTIO, *Cycl.*

ASARINA, in botany, the name of a little plant, which alone makes a diſtinct genus, having its name from the reſemblance of its leaves to thoſe of *Aſarum*. Its characters are theſe: The flower is tubular, and perſonated, ſomewhat reſembling that of the antirrhinum. From the cup of this there riſes a piſtil which is fixed in manner of a nail to the hinder part of the flower; this afterwards becomes a fruit, or capſule, divided into two cells, and containing numerous ſeeds, affixed to a placenta. *Tourn.* Inſt. p. 171.

ASAROTA, Ασαρωτα, in antiquity, a kind of painted pavements, in uſe before the invention of Moſaic work. *Plin.* Hiſt. Nat. l. 36. c. 25.

The moſt celebrated of theſe, was that at Pergamus, painted by Seſus, wherein was ſeen the appearance of crumbs, as if the floor had not been ſwept after dinner, which, according to Pliny, gave the denomination to all the reſt.

The word is formed from the privative α, and σαιρω, I ſweep. V. *Pitiſc.* Lex. Ant. T. 1. p. 187.

———*Varias ubi picta per Artes*
Gaudet humus, ſuberantq; navis Aſarota *figuris.*
Stat. Sylv. 1. 3. 55.

M. Perrault, diſſatisfied with Pliny's account, takes the *Aſarota* to have rather been a black kind of pavements, which, by reaſon of their ſpunginess, drank up all that was ſpilt on them, ſo that there was no need to ſweep them. *Perraul.* ad Vitruv. l. 6. c. 5. V. *Danet.* Dict. in voc.

ASARUM, *Aſſarabacca*, in botany, the name of a genus of plants, the characters of which are theſe: The flower is of the ſtamineous kind, being compoſed of a number of ſtamina which ariſe from a cup, divided into three ſegments. The hinder part of this cup finally becomes a fruit, which is uſually of an angular figure, and is divided into ſix cells, containing angular ſeeds.

The ſpecies of *Aſarum*, enumerated by Mr. Tournefort, are theſe:

1. The common *Aſarum*. 2. The great American *Aſarum*. 3. The Virginian low broad-leav'd *Aſarum*. *Tourn.* Inſt. p. 501.

The common *Aſarum* is of conſiderable value as a ſternutatory; it is alſo ſometimes preſcribed as a vomit, and will operate violently both that way, and by ſtool. Many give it a place alſo among the diuretics, and preſcribe it, in that intention only, in ſmaller doſes. It is alſo a powerful emmenagogue, and has been recommended by authors in the gout, dropſy, and many other chronic diſorders.

ASASI, in botany, a name given, by the people of Guinea, to a tree, the leaves of which being boiled in water, and held in the mouth, cure the tooth-ach. This tree, in its form and manner of growing, reſembles the laurel; the leaves are very hard and ſtiff, and grow alternately on the ſtalks; they have ſhort pedicles, and the branches are blackiſh and rugged, but they are variegated with ſmall reddiſh ſpangles, or ſcaly protuberances. Phil. Tranſ. N°. 232.

ASBESTOS, (*Cycl.*) or ASBESTUS, in natural hiſtory, the name of a genus of foſſils, of the claſs of the Fibrariæ, the characters of which are, that the bodies of it are flexile and elaſtic, and compoſed of ſingle and continuous filaments. There are five known ſpecies of this genus, four of which have their filaments naturally collected into compact maſſes, and one which has them always naturally looſe and diſunited.

The word *Aſbeſtus* has been uſed by naturaliſts in general, as the diſtinguiſhing name not of a ſingle ſpecies, but of a whole genus of foſſils, and not only comprehending all the ſpecies, but all thoſe alſo of the amianthus, a genus to be diſtinguiſhed by its ſhort and abrupt filaments. See Tab. of Foſſils, Claſs 1. and the article AMIANTHUS.

While this was the caſe, and the word *Aſbeſtus* ſeem'd to imply only one ſpecies of body, it ſeemed very difficult to reconcile the accounts of one author with thoſe of another, or to believe the ſtories related of the manufactures of it. The antients ſeem to have been very early acquainted with the art of ſpinning, and making the longer threaded kinds of it into cloth: The art was ſuppoſed, ſoon after, to be loſt, but this for no other reaſon, than the not diſtinguiſhing that there were ſeveral kinds or ſpecies of the ſtone; and people imagining every ſtone that would bear a ſtrong fire without hurt, to be *Aſbeſtus*, and all *Aſbeſtus* to be of the ſame ſpecies, wonder'd they could not do what their forefathers had done, while the one work'd with the proper materials, a long-threaded genuine *Aſbeſtus*, the other with a very improper one, perhaps one of the ſhort-fibred amianthi. Thus the art ſeem'd loſt, while, in reality, it was only the true and right ſpecies of the ſtone that was ſo, and notwithſtanding the many very little ſucceſsful attempts which have at times been made in later ages, the perſon who will compare the ſeveral ſpecies now known, and ſelect that which the length and ſoftneſs of its threads ſhews to be fitteſt for ſuch a work, will doubtleſs find it poſſible to do more than has of late been thought poſſible with it.

In the days of Pliny there ſeems to have been no good ſpecies known. What he deſcribes under the name of *Aſbeſtus* being properly an amianthus, and that of a very poor kind, unfit to be ſpun into cloth, and he not diſtinguiſhing that his and the *Aſbeſtus* of earlier times were different ſubſtances, ſays of *Aſbeſtus* in general, that it was not to be wrought without extream difficulty. The art ſeems indeed, in his time, to have been wholly loſt, but he gives evident proofs, that it was once known, ſpeaking of cloaths made of it, which himſelf had ſeen cleaned by burning.

Dioſcorides, who wrote a little before the time of Pliny, deſcribes very accurately another ſpecies of *aſbeſtos*, one very fit for working into cloth, and accordingly ſpeaks of it as an art well known, they making it into napkins, &c. at that time, and ſeeming to have had them in pretty common uſe. Since the days of theſe authors, the art has been many times loſt, and in ſome degree found again, according to the accounts of authors; but the true ſtate of the caſe every way appears to be, that it was ſtill not the art, but the proper ſpecies only, that was loſt; whenever a tolerable good kind has appeared, there have never been wanting one or other who have ſhewed there was no great difficulty in making cloth and paper of it, if they could have it in ſufficient quantity. It is firſt neceſſary to obſerve, that, in the ſearching after this ſubſtance, the diſtinction between the *Aſbeſtus's* and amianthus's is carefully to be obſerved, the one of theſe being compoſed of the long threads, and the other of very ſhort and abrupt ones; this is their great diſtinction, and all the *Aſbeſtus's*, or long-threaded ones, are more or leſs fitted for this work, and none of the amianthi, or ſhort-threaded ones, are at all ſo.

The ſpecies of the long-threaded incombuſtible bodies, or *Aſbeſtus's*, properly ſo called, are theſe: 1. A ſoft greeniſh kind, with ſlender and crooked filaments. This is found in the iſland of Angleſea, and in ſome parts of Wales, lodged in form of horizontal veins, in a greeniſh variegated marble. 2. A whitiſh brown ſilky kind, with very long and flat filaments: This lies looſe in the earth, and is found in vaſt quantities in many of our American plantations, particularly Penſilvania and Virginia. 3. A grey ſilky kind, with long and rounded filaments. This is found near the ſurface of the earth, in many parts of the Highlands of Scotland. 4. A greyiſh green ſilky kind, with long and very ſlender filaments. This is found on and near the ſurface of the earth, and on the ſea ſhores in the iſland of Cyprus, and in ſome parts of Italy. 5. A white, looſe, thready kind, with broad filaments, never forming themſelves into maſſes, but always remaining looſe. This is found near the ſurface of the earth, in many parts of Scotland.

Theſe are the diſtinct ſpecies of proper *Aſbeſtus*, ſeparated from the amianthi, and all of theſe ſeem capable of being worked into cloth, paper, &c. The firſt kind ſeems leaſt proper for this uſe, becauſe of its ſhortneſs; and the ſecond would give trouble, by the weakneſs of its filaments, all the reſt ſeem as if they might be worked with eaſe, and of theſe, the laſt perhaps would be found preferable to all. As this is the product of our own dominions, 'tis pity ſome ingenious perſon does not heartily ſet about the recovering, by its means, ſo curious a manufacture of the antients, ſo long thought loſt. *Hill*'s Hiſt. of Foſſils, p. 101. ſeq.

ASCARIDES. See the article WORMS.

ASCENDENS *Obliquus*, in anatomy, a name given by Fabricius, and others, to a muſcle called by the generality of writers, *Obliquus internus abdominis*.

ASCENDENT *Stalk*. See STALK.

ASCENSCIONAL *Force*. See the article FORCE.

ASCESIS, Ασκησις, properly denotes exerciſe of the body. It is formed from the verb Ασκειν, uſed by the antients in ſpeaking of the ſports and combats of the athletæ. V. *Caſaub.* Exercit. ad Baron. ſec. 13. *Suic.* Theſ. T. 1. p. 549.

ASCESIS is alſo uſed by philoſophers, to denote an exerciſe conducive to virtue, or to the acquiring a greater degree of virtue. *Budd.* Anal. Hiſt. Philoſ. p. 411. ſeq.

This is particularly denominated, the philoſophical *Aſceſis*, becauſe practiſed chiefly by philoſophers, who make a more peculiar profeſſion of improving themſelves in virtue; on the model whereof the antient Chriſtians introduced a religious *Aſceſis*. The antient philoſophers had peculiar kinds of exerciſes, appropriated to ſtrengthen each kind of virtue, and to weaken each vice; particularly voluptuouſneſs, ambition, and covetouſneſs. The practices were called by the Pythagoreans *Agones*, *Baſani*, and *Aſceſes*. Buddeus has a diſſertation expreſs on the *philoſophical Aſceſis*. Exerc. Hiſt. Mor. de ΑΣΚΗΣΕΙ Philoſophica ext. ap. ejuſd. Analect. Hiſt. Philoſ. p. 409. ſeq.

ASCETERIUM, in eccleſiaſtical writers, is frequently uſed for a monaſtery, or place ſet apart for the exerciſes of virtue and religion. *Suic.* Theſ. T. 1. p. 54. *Magri.* Vocab. Eccleſ. p. 25. *Schm.* p. 75.

The word is formed from *Aſceſis*, exerciſe, or *Aſcetra*, one who performs exerciſe. Originally it ſignified a place where the athletæ, or gladiators performed their exerciſes.

In barbarous and middle age writers, we find the word *Aſceterium* variouſly corrupted; ſometimes it is written, *Aſſiſterium*; ſometimes, *Archiſterium*, *Architerium*, *Arciſterium*, *Aciſterium*, *Aſcyſterium*, &c.

ASCIA, in antiquity, an inſtrument ſuppoſed of the ax-kind, uſed in the fabric of the Roman tombs, and frequently repreſented thereon.

The formula *ſub Aſcia dedicare*, is frequently found inſcribed on antient tomb-ſtones. We alſo meet with *rogum Aſcia ne poleito*, among the antique laws of the twelve tables. Theſe expreſſions, and the figure of the *Aſcia*, as ſeen on the tombs, have puzzled ſeveral antiquaries.

Some pretend that the word *Aſcia* is compounded of an α, and σκια; and that *ſub Aſcia dedicare*, ſignified to erect a monument in the open air. Others ſuppoſe the *Aſcia* to have been a ſort of a hatchet, wherewith ordinary people poliſhed their tombs; which were only made of brick; and that this was the practice forbidden by the laws of the twelve tables: *rogum Aſcia ne poleito.* Dom. Mabillon thinks it ſignifies an ax; and that by the formula, *ſub Aſcia*, we are to underſtand the pain of death threatened to thoſe who ſhould violate the ſepulchre.

F. Meneſtrier imagines that *Aſcia* is a maſon's trowel, for which he quotes Vitruvius's architecture *macerata calx Aſcia domatur*; and that *ſub Aſcia dedicavit*, ſignifies that he who erected the monument took a trowel with mortar on it, and laid the firſt ſtone of the work; a ceremony which is practiſed to this day in great buildings. *Vitruv.* l. 7 c. 2.

Others explain *Aſcia* by a hammer, which the Gauls placed on tombs as a Taliſman, to keep them inviolable; and that they uſed certain formula's of conſecration and imprecation on this hammer, which they held in the air over the monument, conjuring that inſtrument not to aſſiſt in deſtroying a work which it had helped to raiſe.

F. Martin rejects all theſe opinions, and with probability enough affirms, that the *Aſcia* was a howe, or ſort of a pick-ax for digging up the ground, which is to this day called *Aſſados*, or *Aiſſados* in Languedoc. This *Aſcia* he pretends was not an inſtrument of common uſe, but conſecrated and employed only for digging of graves; and that it is the ſame with what Sidonius Apollinarius calls *raſtrum funebre*, wherewith the Gauls digged their graves. *Sidon. Apoll.* l. 3. Ep. 12.

This he thinks appears plainly to be the ſignification of the word, from the Latin proverb, *Ipſe mihi Aſciam in crus impegi*; which is what often happens to thoſe who work with this inſtrument. Hence alſo he explains the law of the twelve tables, wherein the *Aſcia* is mentioned: thoſe laws, he obſerves, were written when the Romans talked Greek either entirely, or in a great meaſure; for that all the terms of this law are merely Greek, not Latin: Rogus, he obſerves, is not a funeral pile, but a ditch or grave, Ῥωγὰς or Ῥωγμὸς: *Aſcia* a howe, or a pick-ax, and comes from ἄσκω or ἀσκέω to labour, cultivate, work; nor does *poleito* come from the Latin word polire, to poliſh or ſmooth, but from πολέω, to till, dig, or plow up; and in this ſenſe the Greeks ſaid δίπολος γῆ ἢ τριπολος, a piece of ground that had been twice and thrice tilled.

On this footing this famous law, which has racked the brains of all our antiquaries to explain it, contained only a prohibition to dig graves with an inſtrument of iron, or copper, ſuch as the *Aſcia*. In reality it was a tradition obſerved by the remoteſt antiquity, that no inſtrument made of thoſe metals ſhould be uſed in ſepulchres.

Dom. Martin has given a diſſertation expreſs concerning the funeral monuments of the Romans, conſecrated *ſub Aſcia*. La Relig. des Gaul. T. 2. l. 5. V. Preſ. Stat. Rep. Lett. T. 1. p. 116. ſeq.

ASCIA is alſo uſed in ſurgery, for a kind of bandage, ſomewhat oblique or crooked; whoſe form and uſe are well deſcribed by Scultetus, in his Armam. Chirurg. P. 1. Tab 54. Fig. 3. ſeq.

ASCINDOE, in botany, a name given by the people of Guinea to a ſhrub, which they uſe in medicine, boiling it in water and giving the decoction in gonorrhœas, and the like complaints. Petiver has named it the prickly Guinea ſhrub with roundiſh crenated leaves, and filamentous flowers. The leaves are about an inch wide, and about an inch and half long, they ſtand on ſhort foot-ſtalks; and at the ends of the branches. There ſtand cluſters of ſtamineous flowers, the thorns on the large branches are very ſtrong. Phil. Tranſ. N°. 232.

ASCLEPIAS, *Swallow-wort*, in botany, the name of a genus of plants, the characters of which are theſe: The flower conſiſts of one leaf, and is bell-faſhioned, open at the mouth, and divided into ſeveral ſegments. From the cup there riſes a piſtil, which is fixed in the manner of a nail in the hinder-part of the flower, and to which there adheres a head divided into five parts. This piſtil ripens into a fruit, uſually conſiſting of two vaginæ of a membranaceous ſtructure, and opening from the baſe to the apex: this fruit contains many ſeeds winged with down, and affixed to a placenta in the manner of ſcales. It is alſo diſtinguiſhed from the apocynums and periplocas, which are the genera it is neareſt allied to, by its not yielding a milky juice. *Tournef.* Inſt. p. 93.

The ſpecies of *Aſclepias* enumerated by Mr. Tournefort are theſe:

1. The common white flowered kind. 2. The narrow-leaved, yellow-flowered kind. 3. The black-flowered kind. 4. The African kind, with thick pods called by ſome *fritillaria craſſa*. And 5. The African *Aſclepias* with longer and leſs dentated leaves.

For the medical virtues of *Aſclepias*, ſee VINCETOXICUM.

ASCOGEFYRUS, Ασκογεφυρος, in middle-age writers, denotes a bridge ſupported on bags made of leather, or bullocks hides. Such bridges appear to have been in uſe among the antients [a], and to have given the denomination to a tribe of Arabs, hence called *Aſcitæ* [b].—[a *Plin.* Hiſt. Nat. l. 6. c. 9. b *Du Cange*, T. 1. p. 350. *Aquin.* p. 88. ſeq.]

Hence alſo the appellation *Aſcomanni*, given to pirates, by reaſon of their uſing bridges, or rather boats made of leather; from *Aſcos*, *Utris*, and *Man.* Id. ibid.

ASCOLIASM, *Aſcoliaſmus*, in antiquity, a kind of game, wherein they held one foot from the ground, and danced, hopping on the other. *Pollux.* l. 9. c. 7. *Pitiſc.* T. 1. p. 188.

He that held the ſport longeſt, and made the largeſt hops, was the conqueror. Sometimes the gameſters purſued and brought each other down. Another ſpecies of this exerciſe was performed at the *Aſcolia*. See ASCOLIA, *Cycl.*

ASCRIPTI, or ADSCRIPTI, in antiquity, thoſe who entered their names in the colonies, and became coloni. *Feſt.* De Verb. Signif. in voc. *Calv.* Lex. Jur. p. 43. b.

ASCRIPTITII, or ADCRIPTITII, a kind of villains who, coming from abroad, ſettle in the lands of ſome new lord, whoſe ſubjects or ſervants they commence; being ſo annexed to the lands, that they may be transferred and ſold with the ſame. *Du Cange*, Gloſſ. Lat. T. 1. 351. *Calv.* Lex. Jur. p. 43.

Theſe are more peculiarly denominated *Aſcriptitii glebæ*; ſometimes *Servi glebæ*.

The *Aſcriptitii* are annexed to the lands they hold, ſo that they cannot ſtir from it; beſides, that whatever they acquire accedes to the benefit of the lord of the land. *Calv.* p. 43. b.

ASCRIPTITII is ſometimes alſo uſed in ſpeaking of aliens or foreigners, newly admitted to the freedom of a city or country. *Calv.* Lex. Jur. p. 94.

ASCRIPTITII was alſo uſed in the military laws, for the recruits appointed to ſupply the loſſes of the legions, called alſo *Accenſi*. *Feſt.* de Verb. Signif. *Calv.* Lex. Jur. in voc. p. 44. a. *Aquin.* Lex. Milit. p. 89. a. See ACCENSI, *Cycl.* and *Suppl.*

Salmaſius will have *Aſcriptitii*, or *Aſcriptivi*, to have been uſed for thoſe who were only entered into the muſter-rolls, to receive the benefit of ſervice, without any actual attendance; otherwiſe called *Supernumerarii*. V. *Aquin.* loc. cit.

ASCRIPTIVI, in antiquity. See ASCRIPTITII.

ASCUS, in natural hiſtory, a word uſed by De Laet, as the name of that pouch or bag which nature has given to the opoſſum, or poſſum, as our common people in America call it, for the receiving the young ones into in time of danger.

This *Aſcus* is a ſkinny bag, ſeparate from the reſt of the body, and only adhering by a membrane to the bottom of the belly. It is a vulgar error to ſuppoſe, that the young of this animal are taken back again into the womb, in time of danger, they being only at liberty to creep in and out of this bag, prepared on purpoſe for them. Scaliger calls the bag ſcrotum ſubventrale, and Peter Martyr, uterus exterior; by which we may ſee how confuſed and improper ideas theſe authors have had of the nature and uſe of this part. See OPOSSUM.

ASCYRUM, in botany, the name of a genus of plants, the characters of which are theſe: The flower is of the roſaceous kind, conſiſting of ſeveral petals, arranged in a circular form. The cup is alſo compoſed of ſeveral leaves, and from it there ariſes a piſtil, which finally becomes a pyramidal fruit, conſiſting of five cells, and containing a great number of oblong ſmall ſeeds.

Authors in general have not uſed the word *Aſcyrum* in this determinate ſenſe, but have made it the name of two or three of the ſpecies of hypericum; but Mr. Tournefort, who has aſcertained it in this manner to a diſtinct genus, enumerates the three following ſpecies of it;

1. The large flowered *Aſcyrum*, with very large ſeed-veſſels. 2. The ſmall-leav'd *Aſcyrum*, with very large flowers, deſcribed in Wheeler's Itinerary; and 3. The upright willow-leav'd *Aſcyrum*, with large flowers. *Tourn.* Inſt. p. 236.

ASELLUS, in zoology, the name of a genus of fiſhes, including the cod and whiting kind. The principal ſpecies of this are, 1. The *Aſellus major*, or common cod-fiſh. 2. The *Aſellus Huitingo Pollachius*, or whiting-pollack. 3. The *Aſellus niger*, called the coal-fiſh, and, in Cornwal, the rawling pollack. 4. The *Aſellus luſcus*, or blind whiting, called

called in Cornwall, the blind, and more usually, the bib. 5. The *Asellus Æglefinus*, or haddock. 6. The *Asellus mollis*, or common whiting. 7. The *Asellus mollis minor*, the mollo of the Venetians. 8. The *Asellus striatus*, called by the Germans, the darsch. 9. The *Asellus flavescens*, called by the Germans, the blank. To which may be added the *Asellus merlucius*, or hake; and the *Asellus longus*, or ling. All which see under their proper heads. *Willughby*'s Hist. Pisc. p. 160.

ASELLUS is also a name used by many authors for the common millepedes, called in English, woodlice and sows. *Johns.* de Insect. 126. See MILLEPEDES, *Cycl.* and *Suppl.*

ASHES (*Cycl.*)—The *Ashes* of all kinds of fuel make a fine manure for lands. They are the most proper for cold and wet lands, and should be kept dry till the time of using them, that the rain may not wash out their salts. One load of dry *Ashes* are found by the farmers to go as far as two loads that have been more carelesly kept. The wetting them moderately sometimes with urine, or soap-suds, adds to their virtue. Six loads of common *Ashes* are generally allowed to an acre, but two load of those, preserv'd in this manner, will be sufficient for the same quantity of ground.

The advantage that vegetable *Ashes* are of to land is abundantly seen in the profit of the farmer, by burning his stubble, *&c.* But sea-coal *Ashes* are the best for cold lands, and their virtue is found to be the most lasting of that of any kind.

Ashes are a great improvement for grass ground, as well as ploughed lands. On the former they are to be strewed in April, and on the latter, as soon as the corn is sown.

Soap-Ashes, after the soap-boilers have done with them, are found also to be of very great advantage to cold and sowre lands. The worst sort of land we have, which is naturally over-run with furze and heath, has been tried with this manure, in large quantities, and vast crops of wheat have been obtained from it for six years together. *Mortimer*'s Husbandry.

Kiln-*Ashes*, such as are made of straw, furze, *&c.* are as good as any, but they are very light. The maltsters in the West of England sift these over their corn and grass, but being very light, this must by no means be done in windy weather, and succeeds best of all when done just before rain or snow.

Pot-ashes, after the pot-ash-men have done with them, are also of great service; but as they have been, in a great measure, deprived of their salt, they are to be laid on in considerable quantity.

Turf-ashes are very good for all sorts of land, but especially for clay land; but these are much the better, when mixed first with lime. *Miller*'s Gardener's Dict.

Pot-ASHES. See POT-ASHES.

ASIARCHA, Ασιαρχης, in antiquity, the superintendent of the sacred games in Asia. *Montfauc.* Palæogr. l. 2. c. 6. p. 161.

The *Asiarcha* differed from the *Galatarcha*, *Syriarcha*, &c. This dignity is also called *High Priest of Asia*, Αρχιερευς Ασιας, in the Latin version of the New Testament, *Prince of Asia*, *Princeps Asiæ*. Act. c. xix. v. 31. τινες δε και των Ασιαρχων. Quidam de Asiæ principibus. *Calm.* D. Bibl. p. 211. Not.

'Tis disputed to what Asia, or division of the East, the *Asiarchs* were allotted; whether to Asia Minor, or the Proconsular Asia. V. *Walc.* Parerg. Acad. p. 152.

Some will have the *Asiarchs* to have been persons of rank, chosen in the way of honour, to procure the celebration of the solemn games, at their own expences. V. *Grot.* and *Hamm.* Annot. ad Act. xix. 31. *Calm.* loc. cit.

ASIICTOS, in natural history, a name given by the antients to a stone, described to have been of a black colour, variegated with spots and veins of red.

Pliny tells us this stone had the remarkable property of retaining heat a long time, and that, when once warmed, it would not grow cold again in a week. Salmasius quarrels with the word, and says, that it ought to be *Apsyctos*, αψυκτος.

ASILUS, in zoology, the name used by many for the *Luteola*, or *Regulus non cristatus*, an extremely small bird, common among willows. *Ray*'s Ornithology, p. 164. See LUTEOLA.

ASINARII, an appellation given, by way of reproach, to the antient Christians, as well as Jews, from a mistaken opinion, among heathens, that they worshipped an ass.

The appellation was originally given to the Jews, and only became applied to the Christians, by confounding the two religions: The Jews were charged with keeping a golden ass's head in the sanctuary of the temple, to which, on certain occasions, they paid adoration; in memory of a herd of asses, which, in their passing through the wilderness, shewed Moses the way, under a cruel want of water, to a spring. V. *Tacit.* Hist. l. 5. c. 3.

Some had even the impiety to represent Christ with an ass's ears, and one foot hoofed, holding a book, with the inscription *Deus Christianorum* ονοχηλος. *Crinit.* de Honest. Discipl. l. 1. c. 9.

ASINIUS *Lapis*, a name given by some writers of the middle ages, to a stone, said to be found in those places frequented by the wild ass.

The description of it is, that it is white, with a cast of yellow; its figure roundish or oval, and its usual size that of a walnut; and that it was soft in comparison of the generality of stones, and was subject to leave holes on the surface, which did not penetrate thro' its whole substance; and finally, that where it was broken, it appeared bright and glossy, and of a pale yellowish colour.

Its virtues were against disorders of the head, the bites of venomous animals, and poisons. There does not seem to be any stone now known that perfectly resembles this, according to the description; but if we consider the general inaccuracy of the writers of these times, it appears more than possible, that this stone may have been the *Bezoar*, badly described. See BEZOAR.

ASINUS *Piscis*, in zoology, a name given by some authors to the *Æglefinus*, or common haddock, called also *Onos*. *Willughby's* Hist. Pisc. p. 170. See the article ÆGLEFINUS.

ASIO, in zoology, a name given by Aldrovandus, and others, to the otus, or lesser horn owl. *Aldrovand.* de Avis. See the article OTUS.

ASKER, a name used in some parts of England for the water-newt, or Elf. *Ray*'s Engl. Words. p. 2.

ASLANI, in commerce, a name given to the Dutch doller, current in most parts of the Levant. *Savar.* Dict. Comm. T. 1. p. 166.

The word is also written corruptly, *Asselani*. It is originally Turkish, and signifies a lion, which is the figure stamped on it. The Arabs taking the figure of the lion for a dog, call it *Abukesh*.

The *Aslani* is silver, but of a base alloy, and oftentimes counterfeit. It is current for 115 or 120 aspers. See ASPER.

ASP, in natural history, a small poisonous kind of serpent, whose bite gives a speedy but easy death.

It is said to be thus denominated from the Greek ασπις, shield, in regard to its manner of lying convolved in a circle, in the center of which is the head, which its exerts, or raises, like the umbo or umbilicus of a buckler.

This species of serpent is very frequently mentioned by authors, but so carelesly described, that it is not easy to determine which, if any of the species known at present, may properly be called by this name. It is said to be common in Africa, and about the banks of the Nile: And Bellonius mentions a small species of serpent which he had met with in Italy, and which had a sort of callous excrescence on the forehead, which he takes to have been the *Aspis* of the antients. *Ray*'s Syn. Anim. p. 288. See ASP.

Naturalists mention three species of *Asps*; the first called *Cherſæa*, the second *Chelidonia*, and the third *Ptyas*, the most fatal of all. V. *Gall.* de Theriac. c. 8. *Aldrovand.* l. de Serp. & Drac. c. 7.

It is with the *Asp* that Cleopatra is said to have dispatched herself, and prevented the designs of Augustus, who intended to have carried her captive to adorn his triumphal entry into Rome [a]. But the fact is contested: Brown places it among his vulgar errors. The indications of that queen's having used the ministry of the *Asp*, were only two almost insensible pricks found in her arm. In reality, Plutarch says, it is unknown what death she died of [b].—[[a] *Ægin.* l. 5. c. 19. [b] V. *Brown*, Vulg. Err. l. 5. c. 12. p. 212.]

Lord Bacon makes the *Asp* the least painful of all the instruments of death: He supposes its poison to have an affinity to opium; but to be less disagreeable in its operation [a]; which does not so well quadrate with the description of the symptoms given by Dioscorides and others. Immediately after the bite, the sight becomes dim, a sensible tumour arises, a moderate pain is felt in the stomach [b].—[[a] *Bac.* Nat. Hist. Cent. 7. §. 643. [b] *Dioscor.* l. 6. c. 54.]

Matthiolus adds, that the bite is followed by a stupor of the whole body, paleness, coldness of the forehead, continual yawning, nictitation of the eyelids, inclination of the neck, heaviness of the head, sinking into a profound sleep, and lastly convulsions. *Matthiol.* Comm. ad loc. cit. *Dioscor.*

The bite of the *Asp* is said by Aristotle to admit of no remedy. Pliny and Ægineta allow of no other cure, but to cut off the wounded part. Others recommend burning the part, with the internal use of hot alexipharmic medicines. V. *Kirch.* Mund. Subter. l. 9. §. 2. T. 2. p. 143. *Burggr.* Lex. Med. T. 1. p. 1156. seq.

The antients had a plaister called δι' Ασπιδων, made of this terrible animal, of great efficacy as a discutient of strumæ, and other indurations, and used likewise against pains of the gout. The flesh and skin, or exuvia of the creature, had also their share in the antient materia medica. *Gal.* Theriac. ap. *Aldrov.* loc. cit. p. 213. Aët. l. 15. *Brun.* & *Burggr.* Lex. Med. in voc.

ASPARAGUS, in botany, the name of a genus of plants, the characters of which are these: The flower is of the rosaceous kind, being usually composed of six leaves, arranged in a circular form; from the center of the flower arises a pistill, which finally becomes a soft fruit, or a roundish berry, containing a number of hard seeds. To this it may be added, that the leaves are always fine and slender.

The species of *Asparagus*, enumerated by Mr. Tournefort, are these: 1. The common garden *Asparagus*. 2. The fine-leav'd

leav'd wild *Aſparagus*. 3. The ſea *Aſparagus*, with thicker leaves. 4. The ſharp-leav'd *Aſparagus*, called by many authors, *Corruda*. 5. The prickly *Aſparagus*, with four or five ſpines at every inſertion. 6. The prickly *Aſparagus*, with larger thorns. 7. The African prickly *Aſparagus*. 8. The great ſpreading prickly *Aſparagus* of Ceylon. 9. The Spaniſh *Aſparagus*, with very large prickles. *Tourn.* Inſt. p. 300.

ASPARAGUS was alſo uſed by the antient Greeks, to expreſs not only the young ſhoots of the plant of that name, but any other young ſprouts of an eatable plant. The ſprouts of the ſeveral kinds of cabbage were particularly expreſſed by this word, or ſometimes by the compound term *Crambaſparagus*. There was an opinion among the old phyſicians, that the young ſhoots of the cabbage were good in diſtemperatures of the eyes; but that, when eaten to exceſs, they would exulcerate the kidneys and bladder. Athenæus has given their opinions on this ſubject at large, from the oldeſt writers, in his chapter of the cabbage; and Pliny, according to a too frequent cuſtom with him, has tranſlated theſe accounts; but has attributed all the virtues and danger to the common *Aſparagus*. He alſo ſays, that it is a provocative to venery. This account is taken from the Greek writers ſaying the ſame of the *Orminum* or *Horminum*, which he ſuppoſes to have been the ſame with *Aſparagus*, becauſe the young ſhoots of *Aſparagus* were called *Ormena* by the Greeks. They did not however attribute this word only to the ſhoots of the *Aſparagus*, but all other young ſhoots of eſculent plants were alſo called *Ormena*.

ASPARAGUS is a medicinal plant, which furniſhes one of thoſe, called, the five opening roots.

Aſparagus, popularly called *Sparrow-graſs*, is a known diuretic; its top, or head, taken in the way of food, readily diſcovers itſelf in the ſmell of the urine [a]: But its root is ſtill more ſtrangely endued with that quality, as containing more of the ſalt from which it is derived. Hence it becomes, among us, an ingredient in all compoſitions, intended to cleanſe the viſcera, and guard againſt jaundices, dropſies, *&c.* It is alſo of ſome uſe as a pectoral; and makes a chief ingredient in the ſyrup of marſhmallows, againſt the ſtone [b]. Tho' foreign phyſicians ſpeak more ſparingly of the uſe and virtues of this medicine [c].—[[a] V. *Boyle*, Phil. Work. Abr. T. 3. p. 570. [b] *Quinc.* Diſpenſ. P. 2. §. 5. n. 342. [c] *Junck.* Conſp. Therap. tab. 5. p. 162. and *Burggr.* Lex. Med. in voc.]

For the propagation, cultivation, *&c.* of this plant, ſee the article SPERAGE.

ASPASIA, among antient phyſicians, a conſtrictive medicine for the pudenda muliebria. It conſiſted only of wool, moiſtened with an infuſion of unripe galls. V. *Caſtel.* Lex. Med. in voc.

ASPASTICUM, Ασπαστικὸν οἰκον, in eccleſiaſtical writers, a place, or apartment, adjoining to the antient churches, wherein the biſhop and preſbyters ſat to receive the ſalutations of the perſons who came to viſit them, deſire their bleſſing, or conſult them on buſineſs. *Bing.* Orig. Eccleſ. l. 8. c. 7. §. 8. *Magri.* Vocab. Eccleſ. p. 25. *Suic.* Theſ. T. 1. p. 556.

This is alſo called *Aſpaticum*, *Diaconicum*, *Receptorium*, *Metatorium* or *Meſatorium*, and *Salutatorium*; in Engliſh, *Greeting-Houſe*.

ASPER, (*Cycl.*) in ichthyology, a ſmall fiſh caught in the Rhone, ſo called from the roughneſs of its ſcales. Its head is large, in proportion to its body, and of a pointed ſhape. It has no teeth, but its jaws are ſharp to the touch. It is of a dark red colour, with large black ſpots. It is good to eat, being eſteemed apperitive. V. *Lemery*, des drog. in voc.

ASPER is alſo a Turkiſh coin, three of which make a medine. *Pocock*'s Egypt, p. 175. See MEDINE.

ASPERGILLUM, in antiquity, a long bruſh made of horſe-hair, fixed to a handle, wherewith the luſtral water was ſprinkled on the people in luſtrations and purifications. *Horſl.* Britan. Rom. l. 2. c. 1.

This is alſo denominated *Aſpergile*, and *Aſperſorium*. *Pitiſc.* Lex. Ant. T. 1. p. 191.

The antients, in lieu of a bruſh, made uſe of branches of laurel and olive.

ASPERGILLUM is alſo uſed in eccleſiaſtical writers, to denote the inſtrument in Romiſh churches, wherewith holy water is ſprinkled. *Magri.* Vocab. Eccleſ. p. 25.

The *Aſpergillum* is uſually made of metal, ſometimes of gold itſelf, with hairs at the end. Antiently, in lieu hereof, they uſed a fox's tail. The Greeks uſe branches of ocymum; the Latins, on Holy Thurſday, hyſſop.

ASPERGELLUS, in botany, the name given by Micheli to that genus of moſſes called, by Dillenius and others, *Byſſus*. Linnæus preſerves the name of *Byſſus* to theſe plants, but he removes them out of the claſs of moſſes, and places them under the general ſeries of fungus's, defining them to be fungus's compoſed of diſtinct capillary fibres, without knots.

ASPERIFOLIOUS, or ASPERIFOLIATE *Plants*, according to Mr. Ray, make a diſtinct genus; the characters of which are, the having the leaves alternately placed on the ſtalks, and producing, after every flower, four ſeeds. They all poſſeſs the ſame general virtues, and are ſub-aſtringent, and uſeful both internally and externally, as agglutinants.

ASPERJULA, a medicinal plant, reputed warm, and drying, recommended as an hepatic, and detergent.

This is alſo called *Aſpergula odorata*, and *Rubeola montana odorata*; in Engliſh, *Woodruffe*.

The antients directed it externally in cataplaſms, to aſſuage and diſcuſs tumours, and applied it to the feet to promote delivery. But the moderns own no ſuch qualities in it; nor do they much uſe it internally. See ASPERULA.

ASPERUGO, in botany, the name of a genus of plants, the characters of which are theſe: The flower conſiſts of one leaf, and is of a rotated form, and divided into ſeveral ſegments at the edge. The cup is ſhaped like a ſort of baſin, and from it ariſes a piſtill, which is fixed like a nail to the lower part of the flower, and is ſurrounded by four Embryo's, which afterwards become as many ſeeds, reſembling a viper's head in ſhape, and remaining in the cup, which becomes much enlarged.

The ſpecies of this genus are only two.

1. The common *Aſperugo*, which has been called by ſome, the procumbent bugloſs; by others, a ſort of echinum, and by many, a hound's-tongue, and ſuppoſed to be the topiaria of Pliny. 2. The tender ſtalk'd *Aſperugo*, with white flowers. *Tourn.* Inſt. p. 135.

The ASPERUGO, in the Linnæan ſyſtem of botany, is characterized thus: The cup is an erect perianthium, conſiſting of one leaf, divided into five ſegments at the edge, and having two little jaggs between the ſeveral ſegments. This remains when the flower is fallen. The flower is compoſed of only one petal, in form of a cylindric tube, very ſhort, and terminated by five ſlight ſegments; the opening of the flower is covered by five ſmall convex prominent ſcales, converging towards each other. The ſtamina are five filaments, very ſhort, and placed in the opening, or mouth of the flower. The antheræ are of an oblong form, and covered. The piſtil has four flatted germina; the ſtyle is ſlender and ſhort; the ſtigma is obtuſe. The cup ſerves in the place of a fruit; it is large, erect, compreſſed, and ſhut together in the manner of two parallel planes, and ſhews, on its extreme edge, five prominent ſegments. The ſeeds are four in number, and oblong, and, when view'd together, they appear flatted. The eſſential character of this genus is the figure of the cup. *Linnæi*, Genera Plantarum. p. 61.

ASPERULA, *Woodruffe*, in the Linnæan ſyſtem of botany, this makes a diſtinct genus of plants, the characters of which are, that the calyx is a very ſmall perianthium, ſituated upon the germen, and divided into four ſegments. The flower is compoſed of one petal, which is a cylindric tube of ſome length, divided into four ſegments at the end, the ſegments long, obtuſe, and bent backward. The ſtamina are four filaments placed at the top of the tube. The antheræ are ſimple. The germen of the piſtil is double, roundiſh, and placed below the receptacle. The ſtyle is ſlender, and bifid at the end. The ſtigmata are headed. The fruit is compoſed of two dry globoſe bodies, growing together. The ſeeds are ſingle, roundiſh, and large. *Linnæi* Genera Plantarum, p. 25.

The leaves and roots of this plant dried, are eſteemed aperient and diuretic; they are recommended in the obſtructions of the liver, and are thence ſuppoſed a great medicine in the jaundice.

ASPHALTA, in natural hiſtory, the name of a genus of foſſils, the characters of which are theſe: They are ſolid, dry, opake, inflammable ſubſtances, found in detach'd maſſes, of no regular ſtructure, nor viſible grain, breaking with equal eaſe in any direction, very light, not very hard, fuſible, and readily inflammable, burning ſome time with a greeniſh white flame, and leaving a reſiduum of white aſhes.

Of this genus there are only three known ſpecies. 1. A ſhining black kind, called the *Bitumen Judaicum*, or Jews pitch. This is of a deep black, of a leſs offenſive ſmell than the other kinds, and is found in large lumps in many parts of Egypt. 2. A hard ſtinking black ſpecies: This is a much more coarſe and foul kind, and is very common on the ſhores of the dead ſea, and in all the country thereabouts; but is not peculiar to that part of the world, being found alſo in France, Italy, and many other places: This yields an oil, which is an excellent cement, and is ſuppoſed to have been that uſed in building the walls of the antient Babylon. The third is a browniſh black ſtinking kind. This is the coarſeſt of all, and is common in Germany, and in ſome parts of England, particularly in Shropſhire, where it is called the pitch-ſtone. *Hill*'s Hiſt. of Foſſils, p. 414. See ASPHALTOS, *Cycl.*

ASPHALTIS *Water*. See *Dead* SEA.

ASPHODELUS, *Aſphodel*, in botany, the name of a genus of plants, the characters of which are theſe: The flower is of the lilliaceous kind, but conſiſts of only one petal, divided into ſix ſegments. The piſtil ariſes from the center of the flower, and finally becomes a fruit of a ſomewhat roundiſh, yet three-cornered form, and of a fleſhy texture. This, when ripe, opens at the point, and ſhews that it is compoſed of three cells, each of which contains a number of triangular ſeeds.

The ſpecies of *Aſphodel*, enumerated by Mr. Tournefort, are theſe:

1. The larger white-flowered branched *Aſphodel*, called the male *Aſphodel*. 2. The ſmaller white-flowered branched *Aſphodel*. 3. The ſingle-ſtalk'd not branched *Aſphodel*. 4. The purple *Aſphodel*, with ſpotted leaves. 5. The broad-ſtalked *Aſphodel*, with rough flatted leaves. 6. The yellow-flowered yellow-rooted *Aſphodel*. 7. The ſmaller narrow-leav'd yellow-flowered African *Aſphodel*. 8. The yellow Italian ſpiral *Aſphodel*, with large flowers. 9. The ſmalleſt white *Aſphodel*; and 10. The *Aſphodel*, with fiſtulous leaves. *Tourn.* Inſt. p. 343.

The ſeveral ſorts of this plant all flouriſh very well in any ſoil that is not too wet, which is ſubject to rot the roots in winter; and the way to increaſe them, is by parting their roots in Auguſt, before they ſhoot up their freſh green leaves. They may alſo be raiſed from ſeeds ſown in Auguſt, and the Auguſt following the plants produced from theſe may be tranſplanted into beds, and will produce flowers the ſecond year. They muſt not be planted in ſmall borders, among tender flowers, for they will draw away all the nouriſhment, and ſtarve every thing elſe. *Miller*'s Gardener's Dict.

The roots of *Aſphodel* are of an acrimonious taſte, and heating quality; being drank, they promote urine, and the menſes; and the weight of a dram taken in wine, is uſed with ſucceſs in pains in the ſide, coughs, convulſions, and ruptures. It is good againſt bites of ſerpents, and makes a good cataplaſm for foul ſpreading ulcers, inflammations, *&c.* The aſhes of the burnt root, rubbed on an alopecia, cauſe new hair to ſpring. V. *Lemery*, des drog. and *James*, Dict. Med. in voc.

ASPHURELATA, in natural hiſtory, a term uſed by Dr. Hill, to expreſs thoſe metallic foſſils which are fuſible by fire, and not malleable in their pureſt ſtate. Theſe have been uſed to be confounded with the metallic ſalts, and ſeveral other different bodies which contain metalline particles, under the little determinate name of ſemi-metals.

The *Aſphurelata* are all, in their native ſtate, penetrated by, and intimately mixed with, ſulphur, and other adventitious matters, and reduced to the ſtate of what is commonly called ore. *Hill*'s Hiſt. of Foſſils, p. 622.

Of this ſeries of foſſils there are only five diſtinct bodies. Theſe are antimony, biſmuth, cobalt, zink, and cinnabar. Which ſee under their heads.

ASPHYXIA, Ασφυξια, is uſed by antient phyſicians, to denote a privation, or ceſſation, of the pulſe, through the whole body, and all its arteries. *Caſt.* Lex. Med. in voc.

In ſtrictneſs, no ſuch ceſſation can ever happen, except in caſe of death; but in ſome other caſes, the pulſe is found ſo remiſs and languid, as not to be perceivable by the touch.

Hence the *Aſphyxia* is conſidered as an attendant of deep faintings, or deliquiums; and amounts to much the ſame with what is otherwiſe called *Lipopſychia* or *Syncope*.

ASPHYXIA is alſo uſed by ſome for a privation of pulſe in ſome one part of the body, *e. gr.* an arm, or the like. *Burggr.* Lex. Med. in voc.

ASPILATES, or ASPLENITES, in the writings of the antients, the name of a ſtone, famous for its virtues againſt the ſpleen, and many other diſorders; it was to be applied externally, and faſtened on to the part with camel's hair. Theſe, and the like accounts of virtues in ſtones, are, at this time very juſtly laughed out of the world. It is not eaſy to ſay what ſtone, of thoſe known to us at preſent, was meant by the antients under this name; all the account they have left us of it being, that it was of a flame colour, and that it was found in Arabia, ſometimes in the earth, and ſometimes in the neſts of certain birds. They mention alſo another kind of it, which was of a ſilvery white.

ASPIS, the *Aſp*, in zoology. See ASP.

ASPLENIUM, *Miltwaſt*, in botany, the name of a genus of plants, the characters of which are theſe: The leaves are of a peculiar figure, differing from thoſe of all the others of the ſame claſs, in their having a ſinuated margin. The flowers are not diſcovered, but the under part of the leaf is found thick covered with ſcales, from under which there emerge a ſort of globular capſules, ſurrounded each with an elaſtic ring, which, by its contracting, burſts the capſules, and diſperſes the ſeeds.

The ſpecies of *Aſplenium*, enumerated by Mr. Tournefort, are theſe:

1. The common *Aſplenium*, or ceterach. 2. The branched *Aſplenium*. 3. The great branched African *Aſplenium*, with ſhining ſtalks. 4. The tall hairy American *Aſplenium*. 5. The propendent curled American *Aſplenium*. *Tourn.* Inſt. p. 544.

ASPLENIUM, in the Linnæan ſyſtem of botany, is the name of a very large genus of capillary plants, taking in, beſides the ſpleenworts, uſually ſo called, the lingua cervina, or hart's tongue, and the trichomanes, or Engliſh maiden-hair, with all the ſpecies of each. The character of this genus is, that the fructifications are diſpoſed in right lines, under the diſk of the ſeveral leaves. See the articles PHYLLITIS and TRICHOMENES.

ASPOLATHUS, in botany, a name by which ſome authors have called the *Acacia*. *Ger.* Emac. Ind. 2. See ACACIA, *Cycl.* and *Suppl.*

ASPRATITES *Piſces*, in middle-age writers, denote ſhell-fiſh, of the ragged or cruſtaceous kind. *Du Cange*, Gloſſ. Lat. T. 1. p. 358.

In which ſenſe they ſtand oppoſed to *Leieſtria*.

Others will have the word denote thoſe which reſide in ſtony places of rivers, *&c.*

In which ſenſe it amounts to the ſame with *Saxoſi*.

ASPREDO, in ichthyology, a name given by Geſner to the *Cernua fluviatilis*, called by us, in Engliſh, the *Ruffe*.

It is a genuine ſpecies of pearch, and is diſtinguiſhed, by Artedi, by the name of the pearch with one back finn, and with the cavernous head. See CERNUA.

ASPRIS, in botany, a name uſed by ſome authors for the bitter oak, called *Cerrus*, *Cerris*, and *Ægilops*, by other writers. *J. Bauhin*, Vol. 1. p. 277.

ASS, a well known four-footed animal, of conſiderable uſe.

Ass, in antiquity. The coronation of the *Aſs*, was a part of the ceremony of the feaſt of Veſta, wherein the bakers put bread crowns on the heads of theſe quadrupeds; *Ecce coronatis panis dependet Aſellis. Ovid.* Faſt. l. 6. v. 311.

Hence, in an antient calendar, the ides of June are thus denoted; *Feſtum eſt Veſtæ. Aſinus coronatur!*

This honour, it ſeems, was done the beaſt, becauſe, by its braying, it had ſaved Veſta from being raviſhed by the lampſacan God. Hence the formula, *Veſtæ delicium eſt Aſinus.*

In the conſualia, horſes, as well as aſſes, had the honour of a coronation; perhaps on account of the Sabine women, whom the Romans brought home on theſe beaſts. Some have aſked for the affinity between the god of council, and an *Aſs?* 'Tis anſwered, both are grave and deliberative. Hence, among the cabbaliſt Jews, the *Aſs* is the ſymbol of wiſdom. *Pitiſc.* Lex. Ant. T. 1. p. 191.

Order of ASSES, *Aſinorum Ordo*, a denomination given to the Mathurins, or Trinitarians, by reaſon they were antiently obliged, in travelling, to ride on *Aſſes*, not horſes. *Du Cange*, Gloſſ. Lat. T. 1. p. 353. *Schmid.* Lex. Eccleſ. p. 76.

This obligation was ſet aſide, by a new rule given the order by pope Clement in 1267.

ASSA *Dulcis* and *Fœtida*. See the article ASA.

ASSABA, the name given by the people of Guinea to a ſhrub which they are very fond of, for its medicinal virtue; they boil it in water, and rub it on a bubo, and it proves a cure. Phil. Tranſ. N°. 232.

ASSAC, or ASSAX, in the materia medica of the antients, the name given by the Arabians to the gum ammoniac of the Greeks; but by many of the qualities attributed to this drug, it does not appear to be the ſame that is now called ſo.

ASSAPOORY, in natural hiſtory, a name given by the people of the Eaſt Indies to a peculiar ſpecies of ſlate, which they uſe in medicine, reducing it to powder, and ſtrewing this on burning coals, that the ſick perſon may receive the fumes of it. It is principally uſed to children, when they are diſordered by taking cold. The ſmell of it, while burning, is very offenſive.

ASSARIUM, ασσαριον, denotes a ſmall copper coin, being a part or diminutive of the *As*.

The word ασσαριον is uſed by Suidas indifferently with οβολος, and νομισμα, to denote a ſmall piece of money; in which he is followed by Cujacius, who defines ασσαριον by *Minimus Æris nummus. Cujac.* Obſerv. l. 7. c. 33.

We find mention of the *Aſſarion* in the goſpel of St. Matthew, c. x. v. 29.

Among Greek writers of the middle age, we frequently find *Aſſarium*, and Κοδραντης for quadrans, uſed as ſynonimous. Thus *Aſſarium uncias quatuor*; *Quadrans uncias quatuor*[a]. Tho' Seb. Paulus, from a paſſage in Marcellus Empiricus, concludes, that the *Aſſarium* was, in reality, only a fourth part of the uncia[b]. Gronovius, from a paſſage of St. Epiphanius, infers, that there were two kinds of *Aſſaria*; one of ſilver, called ασσαριον τω αργυρω, or *Aſſarium Argenteum*, equivalent to the Attic drachm, or the ſix thouſandth part of a talent; the other of copper, ασσαριον χαλκω, equivalent to the tenth part of the *Obolus*, or the ſixtieth part of a *Denarius*[c].—[[a] *Euſeb.* περι ταθμων. [b] V. *Mantiſſ.* ad Beverin. p. 231. [c] V. *Paul.* Add. ad Beverin. de Ponder. p. 32. ſeq.]

ASSARON, an antient Jewiſh meaſure of capacity, equal to the tenth part of the Ephah. *Calm.* D. Bibl. T. 1. p. 217. See EPHAH.

The *Aſſaron* is the ſame with what is more frequently called *Omer*, or *Gomer*.

Joſephus calls it Εσσαρον; in the Hebrew it is alſo written *Aſſarith*. V. *Arbuth.* Tabl. p. 101.

ASSATH, or ASSACH, in the antient Welch cuſtoms, a kind of purgation, wherein a party accuſed purged himſelf by the oath of three hundred compurgators. *Spelm.* Gloſſ. p. 46.

ASSAY-*Ballance* (*Cycl.*)—The flat pieces of glaſs often placed under the ſcales of an *Aſſay-Ballance*, ſeem, by their power of electricity, capable of attracting, and thereby making the lighter ſcale preponderate, where the whole matter weighed is ſo very ſmall. See Phil. Tranſ. N°. 480. p. 245.

The electricity of a flat ſurface of about three inches ſquare, has been known to hold down one ſcale, when there were about two hundred grains weight in the other. Lib. cit. N°. 479. p. 98.

ASSERAC, among the Turks. See ASSIS.

ASSERIDA, in botany, a name given by the people of Guinea to a kind of ſhrub, the leaves of which being chewed, are a

cure

cure for the colics to which that people are ſo ſubject. Phil. Tranſ. N°. 232.

ASSIDENT *Sign*, *ſignum aſſidens*, in medicine, a ſymptom which uſually attends a diſeaſe, but not always. *Caſt.* Lex. Med. in voc.

Thus a dry rough tongue, thirſt, and watching, are *Aſſident ſigns* in an ardent fever.

In this ſenſe *Aſſidents* differ from *Pathognomonics*, which are inſeparable from the diſeaſe; *e. gr.* in the pleuriſy, a pungent pain in the ſide; in an acute fever, difficulty of breathing, *&c.* collectively taken, are pathognomic ſigns; but that the pain extends to the hypochondrium or clavicle; or, that the patient lies with more eaſe on one ſide than on the other, are *Aſſident ſigns*.

ASSIDUUS, or ADSIDUUS, among the Romans, denoted a rich or wealthy perſon.

The word in this ſenſe is formed from *as aſſis*; q. d. a monied man.

Hence we meet with *Aſſiduous* ſureties, *Aſſidui fidejuſſores*, anſwering to what the French now call city ſureties or ſecurities, *cautions Bourgeoiſe*. *Calv.* Lex. Jur. p. 95.

When Servius Tullius divided the Roman people into five claſſes, according as they were aſſeſſed, or taxed to the public; the richer ſort who contributed aſſes, were denominated *Aſſidui*; and as theſe were the chief people of buſineſs, who attended all the public concerns; thoſe who are diligent in attendances came to be denominated *Aſſidui*. *Rævard.* ad Leg. XII. Tab. c. 9. *Calv.* loc. cit.

ASSIDUI was alſo uſed for volunteers, or thoſe who ſerved in the army at their own expence. *Feſt.* de Verb. Signif. in voc. *Aquin.* Lex. Milit. p. 91. a.

ASSIGNABLE *Magnitude*, in geometry, is uſed for any finite magnitude. And

ASSIGNABLE *Ratio*, for the ratio of any finite quantities. *Mac-Laurin*'s Fluxions, Art. 325.

ASSIMILATION, *Aſſimilatio*, in rhetoric, a figure denoting ſimilitude. Thus Cicero de Offic. *Quod ſi ea, quæ acceperis utenda, majore menſura, ſi modo poſſis, jubet reddere Heſiodus: quidnam beneficio provocati facere debemus? An non imitari agros fertiles, qui multo plus afferunt, quam acceperunt?* Scaliger diſtinguiſhes *Aſſimilation* into ſeveral ſpecies. V. *Voſſ.* Rhet. l. 5. p. 381.

ASSIRATUM, in antiquity, a bloody draught, wherewith treaties were ratified. *Feſt.* de Verb. Signif. in voc. *Pitiſc.* Lex. Ant. T. 1. p. 192.

It was made of wine, and blood, called by the antient Romans *Aſſir*.

ASSIS, in phyſiology, either denotes opium, or a powder made of hemp ſeed, which being formed into boles about the bigneſs of cheſnuts, is ſwallowed by the Egyptians, who are hereby intoxicated, and become ecſtatic and full of the moſt agreeable viſions. *Alpin.* de Medic. Egypt. l. 4. c. 2. p. 121. *Brun.* Lex. Med. in voc.

This is alſo called by the Turks *Aſſerac*.

ASSISII, in eccleſiaſtical writers, denote perſons beneficed in a cathedral church, not in a rank below that of canons.

The *Aſſiſii* probably anſwered to our minor canons. *Schmid.* Lex. Eccleſ. p. 77. *Du Cange*, Gloſſ. Lat. T. 1. p. 363.

They are ſuppoſed to have been thus called, either becauſe an *Aſſiſia*, or penſion was aſſigned them; or, according to the gloſs, from *aſſiduus*, becauſe they ought to be conſtant in attending the ſervice of the church.

ASSISUS, in antient law writers, denotes a thing demiſed, or farmed out for ſuch an aſſiſe, or certain rent in money, or proviſions. Hence *terra Aſſiſa* was commonly oppoſed to *terra dominica*; this laſt being held in demeſne, or occupied by the lord, whereas the former was let out to tenants. Hence alſo *redditus Aſſiſus* denote the ſet or ſtanding rent. *Kennet*, Gloſſ. Paroch. Antiq. in voc.

ASSITHMENT, or ASSYTHMENT, in the law of Scotland, is a compenſation given for a man ſlain. Vid. *Sken.* de Verb. Signif. p. 24.

Aſſithment is the ſame with what, in the Engliſh law, is called *Man-Bote*. See the article BOTE.

ASSIUS *Lapis*, Ασσιος λιθος, in phyſiology. See LAPIS *Aſſius*.

ASSIZES, in Scotland. See JUSTICIARY.

ASSRUMINA, in botany, the name given by the people of Guinea, to the ſhrub whoſe leaves they uſe as a cure for the long worms, which are found in their fleſh in thoſe parts of the world; they only bruiſe the leaves, and apply a large lump of the maſs to the part where the worm is, and they are eaſed at once without the pain and hazard of drawing it out. Phil. Tranſ. N°. 232.

ASSURRITANI, or ASSURRANI, a branch of donatiſts, in the middle of the fourth century. The *Aſſurritani* maintained, the ſon inferior to the father; they rebaptized their converts from the catholics, and aſſerted that the church is not compoſed of good and bad, but of the good alone. *Prateol.* Elench. Hereſ. p. 69.

ASSYRIAN *Letters*, *Litteræ Aſſyriæ*, a denomination given by ſeveral Rabbins, and Talmudiſts to the characters of the preſent Hebrew alphabet, as ſuppoſing them to have been borrowed from the *Aſſyrians* during the Jewiſh captivity in Babylon. *Montfauc.* Palæogr. Græc. l. 2. c. 1. p. 120.

ASSYTHMENT. See ASSITHMENT.

ASTAKILLOS, a denomination given by Paracelſus to a malignant gangrenous ulcer in the legs, occaſioned by a mercurial ſalt in the blood. This is alſo called by him, *araneus*, and *ulcus araneum*, the ſpider's ulcer. *Paracelſ.* l. de Ulcer. c. 18. *Brun.* Lex. Med. in voc.

ASTALIN, in antient writers, the ſame with *aſtanda*.

ASTANDA, in antiquity, a royal courier or meſſenger, the ſame with *angarus*. *Calv.* Lex. Jur. p. 95. a.

King Darius of Perſia is ſaid by Plutarch, in his book on the fortune of Alexander, to have formerly been an *Aſtanda*. *Calv.* loc. cit. See ANGARI.

ASTARILÆ, ASTHARITÆ, or ASTHAROTHITÆ, a name given by ſome to the Jews, who fell into the worſhip of *Aſtaroth*, or *Aſtharoth*, the goddeſs of the Sydonians, ſuppoſed the ſame with *Aſtarte*, or the moon. V. *Prateol.* Elench. p. 69. *Calm.* Dict. Bibl. T. 1. p. 218.

Prateolus treats of the *Aſtharitæ* as a particular ſect; but that author is fond of multiplying religious ſects: After the ſame manner he makes a ſect of *Molochitæ*, or worſhippers of Moloch; of *Remphanitæ*, or votaries of Remphan; and of *Thophetitæ*, who ſacrificed in the valley of Tophet, *&c.*

ASTEISM, Αστεισμος, in rhetoric, a genteel irony, or handſome way of deriding another. V. *Quint.* l. 8. c. 6. *Fab.* Theſ. p. 274. Such, *e. gr.* is that of Virgil.

Qui Bavium non odit, amet tua Carmina Mævi, &c.

Diomed places the characteriſtic of this figure, or ſpecies of irony, in that it is not groſs and ruſtic, but ingenious and polite.

ASTER, in botany. See STAR-*Wort*.

ASTER, in mineralogy, a denomination given to a ſpecies of Samian earth. *Mercat.* Metalloth. Arm. 1. c. 7. p. 15. See the article SAMIAN.

ASTER *Atticus*, a medicinal plant called alſo *inguinalis*, and in Engliſh *Golden Star-wort*. *All.* Diſpenſ. p. 31.

Its ſeeds are eſteemed deobſtruent, and the flowers cardiac: The leaves alſo have the credit of being vulnerary, but no part of the plant is much in uſe.

ASTER *Thalaſſius*, Αστηρ θαλασσιος, the *ſtella marina*, or ſtar-fiſh. See STELLA *Marina*.

ASTER is alſo a denomination, in the antient pharmacy, given to a kind of medicine, invented by Andromachus, againſt defluxions, and divers other pains. *Gal.* de Compoſ. Medic. l. 7. c. 5. *Brun.* Lex. Med. in voc.

ASTERIA, in zoology, a name by which ſome authors have called the *Accipiter Palumbarius* or Goſhawk. *Ray*'s Ornithology, p. 51. See the article PALUMBARIUS *Accipiter*.

ASTERIA is alſo the name of a gem, uſually called the cat's eye, or *Oculus Cati*. It is a very ſingular and very beautiful ſtone, and ſomewhat approaches to the nature of the opal, in having a bright encluded colour, which ſeems to be lodged deep in the body of the ſtone, and ſhifts about, as it is moved, in various directions; but it differs from the opal in all other particulars, but, above all, in its want of the great variety of colours ſeen in that gem, and in its ſuperior hardneſs.

It is uſually found between the ſize of a pea, and the breadth of a ſixpence, and is almoſt always of a ſemicircular form, broad and flat at the bottom, and rounded and convex at the top; it is naturally ſmooth and poliſh'd, and is uſually wore with its natural poliſh. It has only two colours, a pale brown and a white, the brown ſeeming the ground, and the white playing about in it, as the fire colour in the opal. It is conſiderably hard, and will take a fine poliſh, but is uſually worn with its native ſhape and ſmoothneſs.

It is found in the Eaſt and Weſt Indies, and in Europe. The iſland of Borneo affords ſome very fine ones, but they are uſually ſmall; they are very common in the ſands of rivers in New Spain; and in Bohemia they are not unfrequently found immerſed in the ſame maſſes of Jaſper with the opal. *Hill*'s Hiſt. of Foſſils, p. 601.

ASTERIA, is alſo the name of a figur'd ſtone. See STAR-*Stone*.

ASTERISCUS, in botany, the name of a genus of plants, the characters of which are theſe: The flower is of the radiated kind; its diſk is compoſed of ſeveral floſcules, and its outer edge of ſemi-floſcules. Theſe are all placed on the embryo ſeeds, and are incloſed in a cup of a ſtellated form, the parts of which ſtand out beyond the flower. The embryos finally become flat and marginated ſeeds.

The ſpecies of *Aſteriſcus*, enumerated by Mr. Tournefort, are theſe:

1. The annual *Aſteriſcus*, with ridged leaves to the flower. 2. The annual *Aſteriſk*, with ridged leaves to the flower, and with flowers of a ſulphur colour. 3. The tall annual *Aſteriſcus*, with ridged leaves to the flower, and with ſmall flowers. 4. The low *Aſteriſcus*, with ridged leaves to the flower, and with very ſmall flowers. 5. The annual ſpreading ſea *Aſteriſk*. 6. The annual ſpreading freſh-water *Aſteriſk*. 7. The perennial ſpreading ſea *Aſteriſk*. *Tourn.* Inſt. p. 497.

ASTEROPHYTON, in natural hiſtory, a name given by Linkius, and ſome other authors, to a kind of ſtar-fiſh, which is compoſed of a great number of cylindric rays, each branching out into ſeveral others, ſo as to repreſent the branched

branched ſtalks of a very intricate ſhrub. See the article STELLA *Marina*.

ASTEROPODIUM, in natural hiſtory, the name given by authors to a kind of extraneous foſſil, of an imbricated texture, compoſed of a number of ſmall convex or concave plates, and ſerving, when entire, as a baſe, or root, to the aſteria, or ſtar-ſtone.

It is very plain, that this is the remains of ſome animal body, probably of the ſtar-fiſh kind, to which the aſteria have alſo once belonged; but our imperfect knowledge in the animal hiſtory, has not yet aſcertained us of the particular creature; the moſt probable conjecture is, that it is the magellanick ſtar-fiſh, the rays of which nicely and exactly repreſent ſome of the more perfect aſteropodia. *Hill*'s Hiſt. of Foſſils, p. 654. See STAR-*Stone*.

ASTEROPODIUM *Minus*, in natural hiſtory, a name given by authors to the ſeveral joints, or plates, of which the common or complex *Aſteropodium* is made; when theſe happen to be found ſingle, as they frequently are in ſome places in the ſtrata of clay: they are ſmall bodies, ſometimes roundiſh, ſometimes oblong, ſometimes ſquare, or of other numbers of angles, and are convex on one ſide, and concave on the other. *Hill*'s Hiſt. of Foſſils, p. 654. See Tab. of Foſſils, Claſs 10.

ASTERISCUS, a name given, by ſome authors, to ſome of the ſpecies of *Buphthalmum*. See BUPHTHALMUM.

ASTHMA (*Cycl.*)—ASTHMA *Convulſive*, is a violent convulſive compreſſion of the muſcles of the breaſt, in which nature's effort ſeems to be the relieving herſelf from the load of a plethora, by a ſpitting of blood, tho' ſhe fails in the attempt.

The *convulſive Aſthma* reſembles the incubus, or night-mare, in many particulars; but it never ſeizes any body, but when awake, whereas the other uſually attacks them when between ſleep and waking; and this is a much more laſting complaint, and more frequent, in the returns of its fits, than the other. The incubus alſo prevents reſpiration in ſo violent a degree, that the perſon can form no articulate ſound. But the *convulſive Aſthma* ſuffers a ſomewhat more free reſpiration, and the uſe of the voice. The incubus is a diſeaſe of very little danger; the *convulſive Aſthma*, on the contrary, is a very dangerous, and often fatal, diſorder. *Junker*'s Conſp. Med. p. 634.

Signs of it. Theſe are a terrible ſhortneſs of breath, which differs from that of the ſuffocative catarrh only in this, that it is ſomewhat leſs violent, and is not attended with that terrible ſenſation of a ſtuffing up of the breaſt: This is attended with a numbneſs of the limbs, and a general laſſitude of the whole body; there is a violent compreſſion felt in the breaſt, and about the ſhoulders, with a great palpitation of the heart. The face is red in ſome parts, and ſeems tumid, and the temporal arteries are diſtended. The bowels are uſually coſtive, and there is a dimneſs often in the eyes, and ſometimes an alienation of the mind. Theſe ſymptoms uſually come on in an evening, and laſt an hour or two. Often, however, the fits are of much longer duration, and ſometimes they obſerve regular periods, at different diſtances of time.

Perſons ſubject to it. Thoſe of plethoric habits, are much more ſubject, than any other people, to this diſeaſe. It does not often ſeize young perſons, except in conſequence of other diſeaſes, and in that caſe it uſually is a very bad omen. It is moſt common to people of a middle age, and, with them, ſometimes returns with frequent, but leſs violent, fits, for many years together; ſometimes it is more violent, and takes them off in a very little time. People often fall into this diſeaſe, from having been uſed to periodic bleedings, or cuppings, and having afterwards neglected them; thoſe who change a buſy or laborious life, for an idle or ſedentary one, alſo often fall into it; as do thoſe who have had the gout, thrown back by improper medicines. Women alſo ſometimes fall into it from ſuppreſſions or imminutions of the menſes; and men of hypocondriac habits, from ſuppreſſions of habitual evacuations of blood from the hæmorrhoidal veins. The cauſes of this diſeaſe are very various, and it is ſometimes an idiopathic, ſometimes a ſymptomatic, complaint; it very often attends malignant fevers, and arthritic complaints, and joins itſelf with other diſtemperatures of the breaſt.

Prognoſtics in it. This, tho' not immediately deſtructive, is often a very dangerous complaint, and, in a ſhorter or longer time, proves fatal to the patient. In middle-aged people it uſually brings on either acute fevers, or ſpitting of blood; and, in old people, palſies, apoplexies, or ſuffocative catarrhs. It rarely remains what it was. *Junker*'s Conſp. Med. p. 636.

Method of Treatment. In the time of the fit, a glyſter is to be immediately given, and if no other ingredients for it be in readineſs, recent urine will ſerve; after this, bleeding is to be ordered, unleſs where there is a contra-indication, and after this the emotion of the blood is to be allayed by nitrous and cinnabarine powders; with theſe the gentle diaphoretics may be joined, eſpecially in caſe of a fever attending it, which very frequently happens. Where the caſe is very urgent, a ſmall doſe of the ſtorax pill may be added to the powder, to be taken at night. Externally, ſpirit of wine and camphire may be rubbed on the breaſt and ſhoulders, eſpecially where the patient has been uſed to cupping, and has neglected it; rubbing the ſhoulders with a flannel, often has a good effect alſo; and fumigations may be uſed of amber, ſtorax, and maſtich, with the flowers of citrine ſtæchas. When the fit is off, the patient ſhould uſe frequent waſhing the feet in warm water, and ſhould be always blooded in the foot in ſpring and fall; he ſhould alſo take gentle purges at times, and if the neglect of habitual cuppings, or ſuppreſſions of the hæmorrhoids, or, in women, of the menſes, have concurred, great care is to be taken to bring all back to their old ſtate again, otherwiſe no radical cure can be expected: Finally, a mixture of ſpirit of hart's-horn, and tincture of ſalt of tartar, ſhould be given to promote an equal diſtribution of the blood to all parts of the body.

Bleedings in the time of the fit, tho' they always give relief, yet are as much to be avoided as poſſible, ſince they ſubject the patient to frequent returns, and make it always neceſſary to repeat them at the time; for as nature intends, by this *Aſthma*, the relieving herſelf from a plethora, by a diſcharge of blood, when ſhe finds this intent anſwered by the opening a vein, ſhe will always afterwards bring on this diſeaſe, when at all moleſted by a plethora, and will never ſuffer it to go off but by the ſame means. In a firſt attack of this diſeaſe, bleeding is not abſolutely neceſſary, and is therefore always to be carefully avoided, but in caſes where cuſtom has made it neceſſary, it muſt be done, and a large quantity always taken away. Bleeding in the arm is found moſt ſerviceable in the time of the fit, and in the foot, by way of prevention. Vomits, in theſe caſes, are often very hurtful, and the more violent ones always dangerous, in conſideration of the ſpitting of blood, which there is always a greater or leſſer tendency to; yet, in caſes where a full meal has juſt preceded it, and where there is no immediate reaſon againſt it, a ſmall doſe of ſome gentle vomit may be properly given, after bleeding, and a glyſter. A ſweat very often ſucceeds the more violent fits of this diſorder, and is always obſerved to do the patient good; this is promoted by the nitrous and cinnabarine medicines. When this diſeaſe is attended with hypocondriac complaints, the mixtura ſimplex, well camphorated, is found of great uſe, as it diſpels the flatulencies which, in this caſe, are joined with, and always greatly exaſperate, the diſeaſe. The volatile ſalts are to be avoided in the time of the fit, and all anodynes, if given while the bowels are in a coſtive ſtate, bring on miſchief. The giving, in this caſe, the expectorating medicines, which are ſerviceable in other *Aſthmas*, is not only uſeleſs, as there is, in this caſe, nothing to be expectorated, but it is alſo dangerous. Finally, in caſes where there are hypocondriac complaints joined with this diſeaſe, the application of leeches to the hæmorrhoidal veins is attended uſually with great ſucceſs. *Junck.* Conſp. Med. p. 633.

ASTIPULATOR, *Adſtipulator*, in the civil law. See STIPULATOR.

ASTIPULATOR, in the Roman order, he by whoſe conſent and leave a nun takes the religious habit. *Du Cange*, Gloſſ. Lat. T. 1. p. 366.

ASTORCHA, in botany, a name by which ſome authors call the yellow ſtæchas, and others the purple, commonly called, the Arabian. *Ger.* Emac. Ind. 2.

ASTRÆA, in aſtronomy, a name which ſome give to the ſign *Virgo*, by others called *Erigone*, and ſometimes *Iſis*. *Vital.* Lex. Math. p. 70.

The poets feign that juſtice quitted heaven to reſide on earth, in the golden age; but, growing weary of the iniquities of mankind, ſhe left the earth, and returned to heaven, where ſhe commenced a conſtellation of ſtars, and from her orb ſtill looks down on the ways of men. *Dan.* Lex. Ant. in voc.

———*Et Virgo cæde madentes*
Ultima Cæleſtum terras Aſtræa reliquit.
Ov. Metam. l. 1. v. 149.

ASTRAGALOIDES, in botany, the name of a genus of plants, the characters of which are theſe: The flower is of the papilionaceous kind, and its piſtil, which ariſes from the cup, finally ſomewhat reſembles a ſmall boat in ſhape, and contains kidney-ſhap'd ſeeds. See Tab. 1. of Botany, Claſs 10.

There is only one known ſpecies of this genus, which is the Portugal *Aſtragaloides*, called by ſome, the *woolly Aſtragalus*, with thick roots. *Tourn.* Inſt. p. 398.

ASTRAGALOTE, Ἀστραγαλῶτη, in natural hiſtory, a ſpecies of foſſil allum, thus called, from its reſembling a talus, or ankle-bone; whence it is alſo denominated *Talare*. *Mercat.* Metalloth. arm. 3.

ASTRAGALUS, in botany, the name of a genus of plants, the characters of which are theſe: The flower is of the papilionaceous kind, and its piſtil, which ariſes from the cup, covered with a membraneous ſheath, finally becomes a bicapſular pod, containing kidney-ſhap'd ſeeds. To this it may be added, that the leaves ſtand in pairs on the middle ribs, the end of each of which is terminated by a ſingle leaf. *Tourn.* Inſt. p. 415.

The ſpecies of *Aſtragalus*, enumerated by Mr. *Tournefort*, are theſe:

1. The tuberous-rooted, climbing, aſh-leav'd *Aſtragalus*.
2. The perennial *Aſtragalus*, with purple ſpiked flowers.
3. The *Aſtragalus*, with pale blue, or pale purple vetch-like flowers.
4. The perennial, ſpiked *Aſtragalus*, with pale-coloured

loured flowers, and black ſtreaks in them. 5. The onobrychis-like mountain *Aſtragalus*. 6. The yellow perennial procumbent *Aſtragalus*, or common wild *Aſtragalus*. 7. The yellow perennial *Aſtragalus*, with double bladder-like pods. 8. The procumbent annual yellow Montpelier *Aſtragalus*. 9. The broad-leav'd, annual, procumbent, ſea *Aſtragalus*, with flowers ſtanding on pedicles. 10. The narrow-leav'd annual *Aſtragalus*, with blue flowers adhering cloſe to the ſtalks. 11. The narrow-leav'd annual blue-flowered *Aſtragalus*, with flowers ſtanding on pedicles. 12. The yellow ſweet-ſcented African *Aſtragalus*. 13. The Canada *Aſtragalus*, with greeniſh yellow flowers. 14. The Montpelier *Aſtragalus*. 15. The white flowered Montpelier *Aſtragalus*. 16. The tall alpine fox-tail *Aſtragalus*. 17. The procumbent *Aſtragalus*, with hairy and cluſter'd pods. 18. The dwarf *Aſtragalus*, with pods of the form of the epiglottis. 19. The hoary *Aſtragalus*, with crooked pods. 20. The Engliſh purple mountain *Aſtragalus*. 21. The vetch-leav'd, procumbent, branched, alpine *Aſtragalus*, with oblong blue flowers, gathered into heads. 22. The alpine bladder-fruited *Aſtragalus*, with leaves like thoſe of the tragacanth. 23. The branched tragacanth-leav'd alpine *Aſtragalus*, with blue glomerated flowers. 24. The alpine *Aſtragalus*, with narrow vetch-like leaves, and pale yellow flowers. 25. The Pyrenean *Aſtragalus*, with roundiſh vetch-like leaves, and yellow glomerated flowers. 26. The Pyrenean *Aſtragalus*, with Barba Jovis leaves, and pale yellow flowers, collected into heads. *Tourn.* Inſt. p. 416.

The root of this plant, drank in wine, ſtops a looſeneſs, and provokes urine. Dried to a powder, it is, with good effect, ſprinkled on old ulcers, and ſtops bleeding. V. *Lemery*, des drog. in voc.

ASTRAGALUS, (*Cycl.*) in anatomy.—According to the natural ſituation of the foot, and the connection of it with the leg, the *Aſtragalus* is the ſuperior, or firſt bone of the tarſus.

This bone may be divided into two portions, one large and poſterior, the other ſmall and anterior; the firſt is, as it were, the body of the bone, the latter an apophyſis, tho' commonly called, the anterior portion. The body, or poſterior portion, has four ſides, one ſuperior, two lateral, and one inferior. The upper ſide is the largeſt, it is covered all over with a cartilage, and is cylindrically convex from before backward, with a depreſſion running through the middle of its breadth, which repreſents half a pulley, and is continuous with the two lateral cartilaginous Sides, of which the external is broader than the other. The upper ſide is articulated with the lower ſide of the baſis of the tibia, the internal lateral ſide with the inner ankle, and the external lateral ſide with the outer ankle; below the internal lateral ſide there is a great depreſſion without a cartilage, and ſeveral other inequalities. The lower ſide is likewiſe cartilaginous, and obliquely concave, for its articulation with the os calcis. At the very loweſt and poſterior part of the body of the *Aſtragalus*, on the edge of the lower ſide, is a ſmall oblique ſmooth notch, or channel, for the paſſage of the tendons.

The apophyſis, or anterior part of the *Aſtragalus*, is diſtinguiſhed from the body by a ſmall depreſſion on the upper part; and on the lower part by a long oblique unequal notch, very broad toward the outſide. The anterior ſide of this apophyſis is all cartilaginous, and obliquely convex, for its articulation with the os ſcaphoides. The lower ſide, which is likewiſe cartilaginous, is parted in two, and articulated with the os calcis, being diſtinguiſhed from the lower ſide of the body of the bone, by the long oblique notch already mentioned. Beſide theſe two cartilaginous ſides, there is a third below the anterior, toward the inner part, which, in the dried ſkeleton, touches nothing. *Winſlow*'s Anatomy, p. 97.

ASTRANTIA, in botany, the name of a genus of umbelliferous plants, the characters of which are theſe: The flower is of the roſaceous kind, conſiſting of ſeveral petals, the ends of which are uſually bent backwards, and which are diſpoſed in a circular form, on a cup which afterwards becomes a fruit, compoſed of two ſeeds, involved in a curled calyptra. The flowers of this genus are collected into a ſort of head, and ſurrounded with a leafy crown. Some of the flowers in this genus of plants are barren, and the cups of theſe are wider. See Tab. 1. of Botany, Claſs 7.

The ſpecies of *Aſtrantia*, enumerated by Mr. Tournefort, are theſe: 1. The great *Aſtrantia*, with purple crowns to the flowers. This is called by ſome the ſanicle-leav'd black hellebore. 2. The great *Aſtrantia*, with white crowns to the flowers. And 3. The ſmaller *Aſtrantia*, called by ſome, the little alpine hellebore. *Tourn.* Inſt. p. 314.

This plant is cultivated in the gardens of botaniſts, and flowers in July. Its black and fibrous roots are only uſed in medicine, which are ſaid to purge melancholic humours. Hildanus preſcribes it alſo for the cure of a ſchirrous ſpleen. V. *James*, Med. Dict. in voc.

ASTRAPÆA, in natural hiſtory, a name given by the antients to a ſtone, ſince called, improperly, *Aſtrapia*, and by ſome *Aſtrapea*. The deſcription we have of it, is, that it was a blue ſtone, or blackiſh one, with white variegations, running in the form of waves, and clouds in it. Some ſpecimens of the Perſian lapis lazuli are of this kind, but they are rare. It is probable that the antients meant theſe, by the name, but as they are not a diſtinct ſpecies, they were in the wrong, to confound the ſame ſtone under two names.

ASTRARII, in middle-age writers, the ſame with *Manſionarii*, thoſe who live in the houſe, or family, at the time, for inſtance, when a perſon dies. *Du Cange*, Gloſſ. Lat. T. 1. p. 367.

Theſe are alſo denominated *Aſtro-addicti*, *q. d.* tied to the hearth. *Videndum ſi nepos & avunculus ſub eadem poteſtate anteceſſoris ſimul fuerunt* Aſtrarii *tempore mortis, eo quod ambo reperiuntur in atrio ſive in* Aſtro. *Bract.* l. 4. Tr. 3. c. 11. It. l. 2. c. 36. §. 6.

ASTRARIUS *Hæres* is uſed, in our old writers, where the anceſtor, by conveyance, hath ſet his heir apparent, and his family, in a houſe, in his life-time. *Coke*, 1. Inſt. 8 b.

Spelman carries the import of the word further, as if it denoted an heir to whom the inheritance was given by his predeceſſor in his own life, by a writing in form. *Spelm.* Gloſſ. p. 48.

The word is formed from *Aſtre*, an antient French term for the hearth of a chimney.

ASTRICTION, *Adſtrictio*, in medicine, an operation intended partly to conſtringe the parts and pores of the body, when too looſe, and partly to reſtrain the courſe of the humours, when too fluid.

Aſtriction, with regard to the object, is of two ſorts; the firſt employed on the too much relaxed ſolids; the ſecond on the fluids, chiefly in Hæmorrhages; intended to moderate or reſtrain the flux of blood thro' the cuſtomary paſſages, as the noſe, menſes, lochia, and the like: And ſometimes alſo to ſtop extraordinary and unuſual Hæmorrhages, ariſing from violent cauſes. *Nent.* Fund. Med. tab. 4. T. 1. p. 323.

ASTRICUS *Lapis*, in natural hiſtory, a kind of figured ſtone, broken or cut from the *Enaſtros*, after the ſame manner as the *Trochitæ* from the *Entrochi*. *Mercat.* Metalloth. arm. 9. c. 7. p. 230.

ASTRINGENTS (*Cycl.*)—*Aſtringent* medicines are to be carefully avoided in all kinds of Inflammations, and in all inflammatory caſes, for they diſturb nature in the effort ſhe is making to relieve herſelf from a congeſtion of blood in the part, and prevent that free paſſage which the blood ought to have, and which alone can make a cure, or break through the obſtruction that is the real diſeaſe.

Aſtringent powders, externally applied, in caſes of a procidentia ani, in which the common practice is to ſprinkle them upon that part of the gut which is out, ſhould always be extreamly finely powdered, for otherwiſe they adhere, by their large particles, to the inner coat of the gut, and when it is replaced, bring on a teneſmus, the effect of which is a relapſe into the former complaint; in this caſe alſo *Aſtringents*, which are too violent, act juſt contrary to what they ought, and prevent, inſtead of promoting, a cure. This is a very common accident, from the making allum, an ingredient in theſe powders, in too large a quantity, tho' a ſmall portion of it is very proper. *Junck.* Conſp. Med.

Mr. Petit concludes, from a great many experiments he made in covering pieces of fleſh with the different ſorts of *Aſtringents* employed in hæmorrhages, that ſome act only as abſorbents; ſuch are earthy ſubſtances, moſt of the *aſtringent* plants, ſome gums, reſins, and animal ſubſtances. Other *Aſtringents* abſorb, and, at the ſame time, their ſaline and ſulphureous particles, inſinuating themſelves into the fleſh, preſerve it from corruption. Vitriol and alum, which are acknowledged to be among the ſtrongeſt *Aſtringents*, appeared, by his experiments, to abſorb moſt humidity. V. Mem. Acad. Scienc. An. 1732.

ASTROBOLISM, Αστροβολισμος, the ſame with *Sphacelus*; tho' properly applied to plants which are deſtroyed in the dog-days, as if blaſted by that ſtar. *Caſtel*, Lex. in voc.

ASTROCYNOLOGIA, Αστροκυνολογια, a deſcription of the canicular, or dog-days, and their effects. See CANICULAR. Maria Florentinius, a noble Genoeſe, has written an *Aſtrocynologia*. V. Act. Erud. Lipſ. an. 1702. p. 514.

ASTROGNOSIA, the art of knowing the fixed ſtars, their names, ranks, ſituations in the conſtellations, and the like.

Strauchius, formerly profeſſor at Wittenberg, publiſhed a work expreſs on the ſubject, which may be of uſe to learners; but a knowledge of the ſtars is better had from Bayer's *Uranometria*, commonly referred to by aſtronomers, when they ſpeak of the ſtars, as in this work, all the fixed ſtars are denoted by letters, partly of the Greek, and partly of the Latin, alphabets; and from Hevelius, in his *Firmamentum Sobieſcanum*; and Flamſtead, in his *Hiſtoria Cœleſtis*, where the ſtars are all laid down in maps expreſs. To the ſame end conduce cœleſtial globes, planiſpheres, Dr. Halley's *Zodiacus Stellatus*, and the like. *Wolf.* Lex. Math. p. 193. ſeq.

ASTROITES, (*Cycl.*) in natural hiſtory, the name of a ſpecies of foſſil coral, compoſed of either ſingle or complex tubules, lodged in different ſpecies of ſtone; theſe are ſtriated from the centre to the circumference, and, in ſome kinds, the ends of the tubules are prominent, above the ſurface of the maſs, in others they are level with it, and in others they are ſunk below it.

The corals which are lodged in theſe maſſes, are alſo of different

ferent ſhapes, according to their various ſpecies; in ſome they are round, and in others angular, and in ſome the columns are perfectly ſeparate, in others, the ſtriæ of the ſeveral columns run one into another. The ſtones which contain the hollowed ſtars, are often beſet with numerous tubercles, and the ſtars are often elegantly hollowed, and not unuſually they are full of cavities, round at their external ſurface, and only ſtarr'd at the bottom: The cavities of theſe alſo often run very deeply and irregularly into the ſubſtance of the ſtone.

ASTROLUS, in natural hiſtory, a name given by authors to a white and ſplendid ſtone, ſmall in ſize, and of a roundiſh figure, reſembling the eyes of fiſhes.

ASTROMETEOROLOGIA, the art of foretelling the weather, and its changes, from the aſpects and configurations of the moon and planets. *Wolf.* Lex. Math. p. 198.

This makes a ſpecies of aſtrology, diſtinguiſhed by ſome under the denomination of *Meteorological Aſtrology*.

Dr. Goad publiſhed a large work in folio, expreſs on this ſubject, 1686, which he afterwards tranſlated from Engliſh into Latin, and publiſhed it at London in 1690. 4°. containing a ſort of ſyſtem of prognoſtications of the weather. To the ſame head alſo belong Coke's *Meteorologia*, firſt publiſhed in Engliſh, and ſince in High Dutch at Hamburgh, 1691, 8°.

ASTOMI, Ασομοι, in anthropology, people feigned without mouths. Pliny ſpeaks of a nation of *Aſtomi* in India, who lived only by the ſmell or effluvia of bodies, taken in by the noſe. *Brown*, Vulg. Err. l. 3. c. 21. p. 131.

Men without mouths are certainly fables; or, at beſt, monſters; for we have inſtances of children born, not only without mouths, but heads.

The pond muſcle is obſerved by naturaliſts, to be a ſort of *aſtomoſe* animal. It takes in it food by the anus, that is, at the ſame aperture whereby it evacuates it again.

ASTROPECTEN, in natural hiſtory, a name given by ſome authors, to a ſpecies of ſtar-fiſh, compoſed of a body, or central nucleus, furrowed in the manner of the ſhells of the common ſcallop, and parting into five principal rays, from each of which there iſſue ſeveral tranſverſe proceſſes, covered with a hairy down.

ASTROSCOPE, *Aſtroſcopium*, a kind of aſtronomical inſtrument, compoſed of two cones, on whoſe ſurface the conſtellations, with their ſtars, are delineated, by means whereof the ſtars may eaſily be known. *Wolf.* Lex. Math. p. 207.

The *Aſtroſcope* is the invention of Wil. Schukhard, formerly profeſſor of mathematics at Tubingen, who publiſhed a treatiſe expreſly on it, in 1698.

ASTROSCOPIA, the art of obſerving, and examining the ſtars, by means of teleſcopes, in order to diſcover their nature and properties. *Wolf.* Lex. Math. p. 206.

Huygens improved this art conſiderably, in his *Aſtroſcopia compendiaria tubi optici molimine liberata*; where he ſhews how to manage the largeſt glaſſes without help of a tube. *Wolf.* Elem. Dioptr. §. 372. See TELESCOPE.

ASTROTHEMATA, in aſtrology, the places or poſitions of the ſtars, in a theme of the heavens. *Vital.* Lex. Math. p. 73.

ASTROTHESIA is uſed by ſome for a conſtellation, or image in the heavens, compoſed of ſeveral ſtars. *Vital.* loc. cit.

ASTRUM, or ASTRON, a conſtellation, or aſſemblage of ſtars. In which ſenſe it is diſtinguiſhed from *Aſter*, which denotes a ſingle ſtar.

Some apply the term in a more particular ſenſe, to the great dog, or rather to the great bright ſtar in his mouth. *Vital.* Lex. Math. p. 72.

In this ſenſe we meet with *In Aſtro, extra Aſtrum*, &c.

ASTURIS, in zoology, a name by which ſome authors have called the *Accipiter Palumbarius*, or Goſhawk. *Ray*'s Ornithol. p. 51. See the article PALUMBARIUS *Accipiter*.

ASTYNOMUS, Αστυνομος, (*Cycl.*) in antiquity, an officer at Athens, appointed to take care of the ſtreets, inſpect the buildings, waters, &c. *Pott.* Archæol. l. 1. c. 15. *Pitiſc.* Lex. Ant. p. 194.

The *Aſtynomi* at Athens were much the ſame with the Ædiles at Rome. Ariſtotle, as cited by Harpocratian, makes ten *Aſtynomi*, five in the city, and as many in the Piræus. Sam. Petit, imagining a corruption in the numbers of Harpocratian's text, inlarges their number to fifteen, of which he diſtributes ten to the city, and five to the Piræus.

The *Aſtynomi* were officers of weight and authority, and are frequently called, in the antient laws, curators, or fathers of the ſtate; ſometimes ſimply fathers, *patres*.

Papinian wrote a treatiſe expreſs concerning the *Aſtynomi*. *Pitiſc.* loc. cit.

ASYMPTOTE (*Cycl.*)—*Aſymptotes* are diſtinguiſhed into various orders.

An *Aſymptote* is ſaid to be of the *firſt order*, when it coincides with the baſe of the curvilinear figure: Of the *ſecond order*, when it is a right line, parallel to the baſe; of the *third order*, when it is a right line oblique to the baſe; of the *fourth order*, when it is a common parabola, that has its axis perpendicular to the baſe; and, in general, of the *order* $r+2$, when it is a parabola, the ordinate of which is always as a power of the baſe, whoſe exponent is r. See *Maclaurin*'s Fluxions, Art. 334. ſeq.

The *Aſymptote* is oblique to the baſe, when the ratio of the firſt fluxion of the ordinate to the fluxion of the baſe, approaches to an aſſignable ratio, as its limit; but it is parallel to the baſe, or coincides with it, when this limit is not aſſignable.

The determination of the *Aſymptotes* of curves, is a curious part of the higher geometry. Mr. de Fontenelle has given ſeveral theorems relating to this ſubject, in his *Geometrie de l'Infini*. But this matter is treated of with greater accuracy by Mr. *Maclaurin*, in his fluxions, book I. chap. 10. where he has been careful to avoid the modern paradoxes, not to ſay jargon, concerning infinites and infiniteſimals.

The areas bounded by curves, and their *Aſymptotes*, though indefinitely extended, ſometimes have limits to which they may approach, ſo as to differ leſs from thoſe limits, than by any given quantity. This happens in hyperbolas of all kinds, except the firſt, or Apollonian. The ſame is alſo true of the area, compriſed between the logarithmic curve and its *Aſymptote*. V. *Maclaurin*, B. 1. c. 10. See LOGARITHMIC *Curve*.

Thoſe who do not ſcruple to ſuppoſe the curve and its *Aſymptote*, to be infinitely produced, ſay, that the infinitely extended area becomes equal to its limit.

The *aſymptotical* area in the common or Apollonian hyperbola, and in many other curves, has no limit; and it is uſual to ſay, theſe areas are infinitely great; by which, however, no more is meant, than that the curve, and its *Aſymptote*, may be extended, till the ſpace comprehended between them, exceeds any given magnitude.

Some authors, and Dr. Wallis among the reſt, have talked of ſome of theſe areas, as if they were more than infinite. This happened from an analogy they imagined between poſitive, nothing, and negative, and what is finite, infinite, and and more than infinite. Lib. cit. Art. 294. See the article HYPERBOLA.

Solids generated by hyperbolic areas, revolving about their *Aſymptotes*, have ſometimes alſo their limits; and ſometimes they may be produced, till they exceed any given ſolid. See Art. 307, 309, of the before-mentioned author.

When a curve, and its *Aſymptote*, are ſuppoſed to be produced infinitely, and the area, compriſed between them, to revolve about the *Aſymptote*, the ſurface generated will be finite, or infinite, according as the area of the generating figure is finite or infinite. *Cotes*, Harm. Menſ. p. 94. Schol. *Maclaur.* Flux. Art. 339. p. 283.

For the *Aſymptotes* of curves, deſcribed by the interſections of right lines revolving about given poles, ſee Mr. *Maclaurin*'s Fluxions, Art. 313. ſeq.

Parabolic ASYMPTOTE. See PARABOLIC *Aſymptote*.

ATABULUS, in phyſiology, a provincial wind in Apulia, of a dry pinching quality, and very noxious in its effects. V. *Plin.* Hiſt. Nat. l. 17. c. 24. *Senec.* Queſt. Nat. l. 5. c. 17. *Vital.* Lex. Math. p. 73.

The antient naturaliſts ſpeak of the *Atabulus* in terms of horror, on account of the ravage it made among the fruits of the earth, which it ſcorched, or withered up.

ATANTA, in botany, a name given by the people of Guinea to a kind of ſumach, called, by Petiver, *Rhus Guineenſe trifoliatum ſerratum ſcabium*, from its being trifoliate, and having rough and ſerrated leaves. This ſomewhat reſembles the hoary trifoliate African ſumach of Plukenet, but it differs in this, that its leaves are edged with prickles, whereas thoſe of Plukenet's kind are only deeply ſinuated. The people of Guinea are very fond of this, for its medicinal virtues; they give it as a reſtorative, boiled in water. Phil. Tranſ. N°. 232.

ATCHE, in commerce, a ſmall ſilver coin, current in the ſtates of the Grand Seignor, equal to about a third part of the Engliſh penny.

The *Atche* is the ſmalleſt coin uſed in Turkey; where there is no copper money current, except in the province of Babylon.

Some call the *Atche* the little *Aſper*: It is ſtamped like the *Para*, with Arabic characters. Three or four *Atches* are commonly given in exchange for the *Para*. *Savar.* Dict. Comm. Suppl. p. 35. ſeq.

ATEGAR, a weapon among the *Saxons*, which ſeems to have been a hand dart. The word comes from the Saxon *Aëton*, to fling, or throw, and *Gar*, a weapon. *Spelman* and *Blount*, in voc.

ATELEIA, Ατελεια, or Ατελειη, denotes an exemption from tribute, taxes, or other burthens. *Calv.* Lex. Jur. p. 96. a. Ατελεια λειτουργημαλων, is particularly uſed, in ſome antient laws, for an exemption from offices, granted the Egyptian clergy by Conſtantius. *Bing.* Orig. Eccleſ. l. 5. c. 3. §. 12.

ATH, ATHA, or ATHE, among our Anglo-Saxon Anceſtors, ſignifies an *oath*, eſpecially that taken by way of Purgation. *Du Cange*, Gloſſ. Lat. T. 1. p. 369.

In this ſenſe we meet with breaking of *Ath*, privilege of *Ath*, *Atha*, and *Ordela*.

ATHENA, Αθηνα, in the antient phyſic, a plaiſter, or liniment, commended againſt wounds of the head and nerves, of which

we find deſcriptions given by Oribaſius, Ælius, and Ægineta. V. *Gorr.* Def. Med. p. 8. a.

ATHANASIA, Αθανασια, among the antient phyſicians, an epithet given to a kind of antedotes, ſuppoſed to have the power of prolonging life, even to immortality. V. *Gorr.* Med. Def. p. 8. a.

In the Auguſtan diſpenſatory we ſtill find a medicine under the Appellation of *Athanaſia Magna*, commended againſt dyſenteries and hæmorrhages. *Brun.* Lex. Med. p. 88. a.

ATHANASIA, in botany, is uſed in ſome authors for tanzy. *Ger.* Em. Ind. 2.

ATHENATORIUM, among chemiſts, a thick glaſs cover, placed on a cucurbit, having a ſlender umbo, or prominent part, which enters like a ſtopple, within the neck of the cucurbit. *Brun.* Lex. Med. p. 88. b.

ATHENIPPUM, Αθενιππον, in the antient phyſic, a collyrium, commended againſt divers diſeaſes of the eyes; thus denominated from its inventor Athenippus. *Gorr.* Def. Med. p. 8. b. Its deſcription is given by Scribonius Largus, and by Gorræus after him. Ubi ſupra.

Galen mentions another *Athenippum*, of a different compoſition, by which it appears, this was a denomination common to ſeveral collyriums.

ATHERINA, in ichthyography, a name given by Rondeletius, and ſome other authors, to the *Hepſetus*, or *Anguella*, a ſmall fiſh, common on the ſhores of the Mediterranean; but by Bellonius appropriated to a fiſh of a different genus. *Willughby*, Hiſt. Piſ. p. 209.

The *Atherina* of this laſt author is a ſmall fiſh of the length and thickneſs of a finger, of a fine white colour, and, when held up againſt the light, as tranſparent as glaſs; its eyes are large, and its finns are placed two on the ſides, two in the middle of the belly, and only one on the back, which is thin, and very ſlender. In this particular it remarkably differs from the hepſetus, which has two back fins. *Bellonius*, de Piſcib.

ATHLETIC (*Cycl.*)—ATHLETIC *Habit*, Αθλητικη ἑξις, denotes a ſtrong hale conſtitution of body.

Antiently it ſignified a full, fleſhy, corpulent ſtate, ſuch as the *Athletæ* endeavoured to arrive at. *Gor.* Med. Def. p. 8. b.

The *Athletic habit* is eſteemed the higheſt pitch of health; yet is it dangerous, and the next door to diſeaſe; ſince when the body is no longer capable of being improved, the next alteration muſt be for the worſe. *Burggr.* Lex. Med. p. 1179. a *Brun.* Lex. Med. p. 88. b.

The chief object of the *Athletic* diet, was to obtain a firm, bulky, weighty body, by force of which, more than art and agility [a], they frequently overpowered their antagoniſt: Hence they fed altogether on dry, ſolid, and viſcous meats. In the earlier days, their chief food was dry figs, and cheeſe, which was called *Arida Saginatio* ξηρα τροφη, and Ασκησις διαξηρων ισχαδων: Oribaſius, or, as others ſay, Pythagoras, firſt brought this in diſuſe, and ſubſtituted fleſh in lieu thereof. They had a peculiar bread, called κολλυπια: They exerciſed, eat and drank without ceaſing: They were not allowed to leave off eating, when ſatiated, but were obliged to cram on till they could hold no more: By which means they at length acquired a degree of voracity, which, to us, ſeems incredible, and a ſtrength proportional [a]. Witneſs what Pauſanius relates of the four celebrated athletæ, Polydamus the Theſſalian, Milo the Crotonian, Theagenes the Thaſian, and Euthymus the Locrian: The ſecond is ſaid to have carried a bull on his back a conſiderable way, then to have knocked him down with a blow of his fiſt, and laſtly, as ſome add, devoured him at a meal [b].—[a V. *Gorr.* loc. cit. *Burggr.* Lex. Med. T. 1. p. 1177. *Pitiſc.* Lex. Ant. T. 1. p. 197. b *Dan.* Dict. Ant. in voc.]

ATHLETIC *Weight*. See the article WEIGHT.

ATHLOTHETA, Αθλοθεια, in antiquity, an officer appointed to ſuperintend the public games, and adjudge the prizes. *Pott.* Archæol. l. 2. c. 21.

The *Athlotheta* was the ſame with what was otherwiſe called *Æſymneta*, *Brabeuta*, *Agonarcha*, *Agonotheta*, &c.

ATINGA GUACU MUCU, in zoology, the name of a Braſilian bird of the ſtarling kind. It reſembles the thruſh in ſize. Its head is very large and thick, and its neck long. Its tail is very remarkably long, being no leſs than nine fingers breadth in length, and is compoſed of ten feathers. Its head, neck, back, wings, and tail, are all of a duſky blackiſh brown; its tail darker than the reſt, but the ends of all the tail-feathers are white, or of a mixture of brown and white; the throat, breaſt, and belly, are grey, and on its head it has two ranges of long feathers, which it can raiſe at pleaſure into a ſort of double creſt, or two horns. *Marggrave*'s Hiſt. Braſil. See Tab. of Birds, N°. 31.

ATIZOE, in the writings of the antient naturaliſts, a name of a ſtone uſed in the conſecration and anointing of kings. Pliny deſcribes it to have been of a lenticular figure, and of the ſize of three fingers, of a bright ſilvery colour, and of a pleaſant ſmell. He ſays it was found in India, and in ſome other places. Agricola is of opinion, it was a kind of bitumen.

ATLANTIDES, in aſtronomy, a denomination given to the Pleiades, or ſeven ſtars, ſometimes alſo called *Vergiliæ*. They are thus called, as being ſuppoſed by the poets to have been the daughters either of Atlas, or his brother Heſperus, who were tranſlated into heaven. *Fab.* Theſ. p. 284.

ATLANTIS (*Cycl.*)—*New* ATLANTIS is the name of a fictitious, philoſophical commonwealth, of which a deſcription has been given by lord Bacon.

The *new Atlantis* is ſuppoſed to be an iſland in the South Sea, to which the author was driven, in a voyage from Peru to Japan. The compoſition is an ingenious fable [a], formed after the manner of the Utopia of Sir Thomas More, or Campanalla's city of the ſun. Its chief deſign is to exhibit a model or deſcription of a college, inſtituted for the interpretation of nature, and the production of great and marvellous works, for the benefit of men, under the name of Solomon's houſe, or the college of the ſix days work. Thus much, at leaſt, is finiſhed; and with great beauty and magnificence. The author propoſed alſo a frame of laws, or of the beſt ſtate or mould of a commonwealth. But this part is not executed [b].—[a V. Pref. to Atlan. ap. *Bac.* Work. T. 3. p. 235. b *Shav.* Bibl. Phil. c. 7. §. 14. p. 291. *Paſch.* de Var. Mod. Mor. trad. c. 2. p. 214.

ATMOSPHERE (*Cycl.*)—Galileo, having obſerved that there was a certain ſtandard altitude, beyond which no water could be elevated by pumping, took an occaſion from thence to call in queſtion the doctrine of the ſchools, which aſcribed the aſcent of water in pumps, to the *fuga vacui*, and in the room thereof he happily ſubſtituted the hypotheſis of the air's preſſure and gravitation. It was to him, indeed, little better than an hypotheſis, ſince it had not then theſe confirmations from experiments, which were afterwards found out by his ſcholar Torricellius, and other ſucceeding philoſophers, particularly Mr. Boyle.

The gravity and preſſure of the air is clearly proved by the Torricellian experiment [a]; and was further confirmed by Monſieur Paſcal's imitation of that experiment with water [b]. Other experiments have alſo been made, with fluids variouſly combined [c].—[a V. the article AIR, *Cycl.* b See *Cotes*, Hydroſt. Lect. VIII. c Ibid.

Mr. Cotes has given us a computation of the weight of all the air which preſſes upon the whole ſurface of the earth. He finds this weight to be equal to that of a globe of lead of ſixty miles diameter. The computation proceeds on theſe principles: That the weight of a column of air, reaching to the top of the *Atmoſphere*, is moſt commonly equal to a column of water, having the ſame baſis, and the altitude of 34 feet; that the ſemi-diameter of the earth is equal to 20,949,655 feet; and that the ſpecific gravity of water is to that of lead as 1000 to 11,325. *Cotes*, Hydroſt. Lect. p. 112, 113.

No one has yet been able to determine, how far the air may admit of condenſation and rarefaction. It is, however, certain, that there are, in nature, ſome limits which cannot be exceeded. No condenſation can reach ſo far as to cauſe a penetration of parts; and if the rarefaction of the air be ſtill greater, as its diſtance from the ſurface of the earth increaſes, its ſpring will be at length ſo weakened, that the force which every particle of it endeavours to tend upwards, from the particles which are next below it, will be weaker than the force of its own gravity, which endeavours conſtantly to detain it. The rarefaction of the air muſt be therefore bounded, where theſe two oppoſite forces come to balance each other. But though it be certainly true, that the air cannot poſſibly expand itſelf beyond a certain meaſure, on account of its gravity, yet, ſince men have not hitherto been able to ſet any bounds to its utmoſt expanſion, it is equally certain, that we cannot define the limits of the *Atmoſphere*.

Yet we may collect how much the air is rarified, at any propoſed altitude from the ſurface of the earth: For if any number of diſtances from the ſurface of the earth be taken in an arithmetical progreſſion, the denſities of the air, at thoſe diſtances, will be in a geometrical progreſſion: And as the rarity of any body is reciprocally as its denſity, it follows, that as the diſtances from the ſurface of the earth do increaſe in an arithmetical progreſſion, ſo do the different degrees of rarity in the air increaſe in a geometrical progreſſion. See *Cotes*'s Hydroſt. Lect. p. 119—122. where he proves this in a very eaſy manner, and in a method intelligible to thoſe who are not acquainted with the properties of the hyperbola, and logarithmic curve made uſe of by Dr. Halley, and Dr. Gregory, in their reaſonings on this ſubject.

From hence it may be determined how much the air is rarified at any propoſed elevation from the earth's ſurface: For the elevation will be every where proportionable to the logarithm of the rarity. If then, by experiment, we can find the rarity of the air at any one elevation, we may, by the rule of proportion, find what is the rarity at any other propoſed elevation, by ſaying, as the elevation at which the experiment was made, is to the elevation propoſed, ſo is the logarithm of the air's rarity, which was obſerved at the elevation where the experiment was made, to the logarithm of the air's rarity at the elevation propoſed.

By Monſieur Paſcal's experiment at the Puy de Dome, and by Mr. Caſwell's, made upon Snowden-Hill, it appears, that at the altitude of 7 miles, the air is about 4 times rarer than at the ſurface of the earth. Hence it follows, that at the altitude of 14 miles, the air is 16 times rarer than at the ſurface;

and, at the altitude of 70 miles, about a million of times rarer; and at the altitude of 500 miles, if the *Atmoſphere* can reach ſo far, the air muſt be rarified ſo much, that if a globe of what we breathe, of an inch diameter, were as much dilated, it would occupy a larger ſpace than the whole ſphere of Saturn.

But it is to be obſerved, that theſe computations of the rarity of the *Atmoſphere*, at different heights, are founded on this principle, that the denſity of the air is every where proportionable to the ſuperincumbent weight.

Now this rule holds true only upon the ſuppoſition, that the heat is uniform, at different diſtances from the earth; for if the air be hotter in one part than in another, the air will be more rarified in the hotter part, than it will be in the cooler, altho' preſſed by the ſame weight, or at the ſame altitude above the earth's ſurface.

This obſervation will alſo ſhew how precarious the common method of meaſuring the heights of mountains by the barometer is. See MOUNTAIN.

It appears from the obſervations of aſtronomers, of the duration of twilight, and of the magnitude of the terreſtrial ſhadow in lunar eclipſes, that the effect of the *Atmoſphere* to reflect and intercept the light of the ſun, is ſenſible to the altitude of between 40 and 50 miles. So far then we may be certain that the *Atmoſphere* reaches; and at that altitude we may collect from what has been already ſaid, that the air is about 10,000 rarer than at the ſurface of the earth. How much further the *Atmoſphere* may extend, we are altogether ignorant. *Cotes*, ibid. p. 123—125.

The *Atmoſphere* has a refractive power, which is the cauſe of many phænomena. Alhazen the Arabian, who lived about A. D. 1100, ſeems to have been more inquiſitive into the nature of refractions than the preceding writers. So that having made experiments upon this ſubject, at the common ſurface betwixt air and water, air and glaſs, water and glaſs, or cryſtal, and being prepoſſeſſed with the old opinion of cryſtalline orbs in the regions above the *Atmoſphere*, he had the boldneſs to ſuſpect a refraction there alſo. This, he tells us, may be proved, by taking the diſtance of a ſtar from the pole of the equator, both when it is very low, and when very high, near the zenith; and he affirms, that the former polar diſtance will be found leſs than the latter, by reaſon of the refraction of the rays: And this, if we may credit friar Bacon, was taken from Ptolemy's eighth book of aſpects. But Dr. Smith obſerves, that if it be ſo in the book of aſpects, which the doctor could never meet with, it muſt have been written by Ptolemy, after his almageſt, whereby it appears that he had no ſuſpicion that ſuch effects as that above-mentioned were cauſed by a refraction of the rays of the ſun, or ſtar. *Smith*'s Optics, rem. 355.

However, it is certain that Alhazen deduced ſeveral properties of this kind of refraction; as that it increaſes the altitudes of all objects in the heavens; that it contracts their diameters, and diſtances from each other; and that it cauſes the twinkling of ſtars. But neither Alhazen, nor his follower Vitellio, knew any thing of its juſt quantity, which was not known to any tolerable degree of exactneſs, till Tycho Brahe, with incredible diligence, ſettled it.

Neither did Tycho, or Kepler, diſcover in what manner the rays of light were refracted by the *Atmoſphere*. Tycho thought the refraction was chiefly cauſed by denſe vapours, very near the earth's ſurface. Kepler placed the cauſe wholly at the top of the *Atmoſphere*, which he took to be uniformly denſe; and thence he determined its altitude to be little more than that of the higheſt mountains. But the true conſtitution of the denſity of the *Atmoſphere*, deduced afterwards from the Torricellian experiment, afforded a juſter idea of theſe refractions, eſpecially after it appeared, by a repetition of Mr. Lowthorp's experiment, that the air's refractive power is proportionable to its denſity.

By this variation of the air's denſity, a ray of light, in paſſing through the *Atmoſphere*, is continually refracted at every point, and thereby deſcribes a curve, and not a ſtrait line, as it would have done were there no *Atmoſphere*; or were its denſity uniform.

This refractive power of the *Atmoſphere* increaſes the altitude of the ſtars, and contracts their intervals; it alſo cauſes the ſun and moon to appear of an oval figure, when near the horizon. But it is to be obſerved, that the horizontal moon appears oval but rarely, eſpecially in the evenings of warm weather, the refractions being then ſmaller. V. *Smith*'s Optics, rem. 371. See alſo the article REFRACTION, *Cycl.* and *Suppl.*

The *Aſmoſphere*, or air, has alſo a reflective power; and this power is the cauſe that enlightens objects ſo uniformly on all ſides. The abſence of this power would occaſion a ſtrange alteration in the appearances of things, their ſhadows would be ſo very dark, and their ſides enlightened by the ſun ſo very bright, that, probably, we could ſee no more of them than their bright halves; ſo that, for a view of the other halves, we muſt turn them half round, or, if immoveable, muſt wait till the ſun could come round upon them. Such a pellucid unreflective *Atmoſphere* would indeed have been very commodious for aſtronomical obſervations upon the courſe of the ſun and planets among the fixed ſtars, viſible by day as well as by night; but then ſuch a ſudden tranſition from darkneſs to light, and from light to darkneſs immediately, upon the riſing and ſetting of the ſun, without any twilight, would have been very inconvenient and offenſive to our eyes.

Alhazen, and others, attempted to determine the height of the *Atmoſphere*, from the conſideration of the twilight, as before mentioned, and in the cyclopædia. The reſult of the computation was 50 miles for the height of the *Atmoſphere*, or reflective matter above the earth's ſurface. But this height, according to Dr. Halley's correction, in Phil. Tranſ. N°. 181. will be reduced to about 44½ miles.

It will follow as a conſequence from this, that any place is conſtantly enlightened in the day-time by rays reflected from every part of a ſegment of the *Atmoſphere*, whoſe height is about 44 ½ miles, and whoſe circular baſe is about 1200 miles in diameter. See *Smith*'s Opt. rem. 384.

Thus tho' the *Atmoſphere* is greatly aſſiſtant to the illumination of objects, yet it muſt alſo be obſerved, that it ſtops a great deal of light. By Monſieur Bouguer's experiments, it ſeems that the light of the moon is frequently 2000 times weaker in the horizon, than at the altitude of 66 degrees; and that the proportion of her lights at the altitudes of 66 and 19 degrees is about 3 to 2. The lights of the ſun muſt bear the ſame proportion to each other at thoſe heights; which Monſieur Bouguer made choice of, as being the meridian heights of the ſun, at the ſummer and winter ſolſtices, in the latitude of of Croiſic in France. *Boug.* Eſſai dioptr. ſur la gradat de la lumiere, p. 12. ap. *Smith*, Opt. rem. 95.

It has been ſaid that a ray of light paſſing through the *Atmoſphere* deſcribes a curve: To find the nature of this curve is a problem of no ſmall difficulty, for which the curious may conſult *Taylor*, Meth. increm. p. 108. ſeq.

This ingenious author computes the refractive power of the air to be to the force of gravity at the ſurface of the earth, as 320 millions to 1.

There have been often ſeen in the *Atmoſphere* ſome very luminous parts, even near the zenith about midnight. It has been thought that theſe luminous parts are nothing elſe but terreſtrial exhalations floating in the air, at a prodigious altitude, and thereby reflecting the light of the ſun, which they are expoſed to, at that great height, to our eyes.

But Mr. *Cotes* juſtly obſerves, that it will be next to impoſſible to give any tolerable account, how thoſe exhalations can be denſe enough to reflect ſo copious a light at that vaſt diſtance; and at the ſame time be ſupported, by a medium, ſo much rarer than the air we breathe in. It ſeems therefore more probable, that theſe extraordinary lights proceed from ſome ſelf-ſhining ſubſtance, or aerial phoſphorus.

A ſurprizing appearance of this kind was ſeen at Cambridge, on the 20th of March, in the year 1706. It was a ſemicircle of light, of about two thirds of the ordinary breadth of the milky way, but much brighter. The top of it paſſed very near the zenith of that place, inclining about 4 or 5 degrees to the north; it croſſed the horizon at a very ſmall diſtance from the Weſt, towards the South, and again, about as far from the Eaſt towards the North. It was moſt vivid, and beſt defined about the weſtern horizon, and moſt faint about the zenith, where it firſt began to diſappear. There was at the ſame time an *Aurora borealis*. The ſame appearance was ſeen in Lincolnſhire, at the diſtance of about 70 miles north of Cambridge, and there the ſemicircle ſeemed to lie in the plane of the equator. From theſe two obſervations compared together, it may be collected, that the matter, from which that light proceeded, was elevated above the earth's ſurface between 40 and 50 miles. *Cotes*, Hydroſt. Lect. p. 125, 126.

F. de Lana thought he had contrived an aeronautic machine for navigating the *Atmoſphere*[a]: Sturmius, who examined it, declared it not to be impracticable[b]: But Dr. Hook was of a different opinion, and detected the fallacy of the contrivance[c]. Roger Bacon long before propoſed ſomething of the ſame kind. The great ſecret of this art, is to contrive an engine ſo far lighter than air, that it will raiſe itſelf in the *Atmoſphere*, and, together with itſelf, buoy up and carry men with it. The principle on which it is to be effected, is by exhauſting the air of a very thin and light, yet firm, metalline veſſel, with an air pump.—[[a] V. Prodrom. c. 6. which is alſo given in Engliſh in *Hook*'s Philoſ. Collect. N°. 1. p. 18. ſeq. [b] Colleg. Curioſ. Tent. 10. *Morhof.* Polyhiſt. Philoſ. l. 2. p. 2. c. 22. * 2. [c] *Hook*, lib. cit. p. 28. ſeq.]

But the hopes of ſucceſs in ſuch an enterprize will appear very ſmall, if it be conſidered, that if a globe were to be formed of braſs, of the thickneſs only of $\frac{1}{12}$ inch, that globe muſt be above 277 feet in diameter to ſwim in the air; and if, as de Lana ſuppoſes, the diameter of the globe were but 25 feet, the thickneſs of the metal could not exceed $\frac{1}{133}$ of an inch. V. *Herman.* Phoronom. p. 158.

ATOCION, Ἀτοκιον, in antient naturaliſts, denotes an abortive medicine, or a medicament proper to expel the fœtus after conception. *Plin.* Hiſt. Nat. l. 29. c. 4.

ATOLLENS *Oculi*, in anatomy, a name given by Albinus to one of his *Quatuor recti musculi oculi*; this is the muscle called by Molinett, and others, the *Superbus*, and by Cowper, the *Elevator oculi*.

ATONICS, in grammar, words unaccented. See ACCENT, *Cycl.*

ATRA *Dies*, in antiquity, denotes a fatal day, whereon the Romans received some memorable defeat. V. *A. Gell.* l. 5. c. 15. *Plut.* in Quæst. Rom. qu. 15.

The word literally imports a black day; a denomination taken from the colour, which is the emblem of death, and mourning. Whence the Thracians had a custom of marking all their happy days with white stones, or calculi; and their unhappy days with black ones, which they cast, at the close of each day, into an urn. At the person's death, the stones were taken out, and from a comparison of the numbers of each complexion, a judgment was made of the felicity or infelicity of his course of life. V. *Plin.* l. 7. *Dempst.* in Paralip. ad Rosin. l. 4. c. 9.

The *Dies Atræ*, or *Atri*, were afterwards denominated, *Nefasti*, and *Posteri*.

Such, in particular, was the day when the tribunes were defeated by the Gauls, at the river Allia, and lost the city; also that whereon the battle of Cannæ was fought; and several others marked in the Roman calendar, as *Atræ*, or unfortunate. V. *Struv.* Antiq. Rom. Synt. c. 8. p. 376. seq.

ATRAGENE, the name by which the viorna, or traveller's joy, a small winding shrub, common in hedges, is known in the shops. *Dale*, Pharm. p. 162.

ATRAPHAXIS, in botany, the name of a genus of plants, according to Linnæus, called by Dillenius, a species of the atriplex. The characters are these: The cup is permanent and coloured; it consists of two leaves, which stand opposite one to another, and are of an oval form. The flower consists of two roundish sinuated petals, larger than the leaves of the cup, and permanent. The stamina are six capillary filaments of the length of the cup; the antheræ are roundish. The germen of the pistil is compressed, there is no style. The stigmata are two in number, and are capitated; the cup shutting itself up, finally includes the seed, which is single, roundish, and somewhat compressed. *Linnæi*, Gen. Pl. p. 153. *Dill.* Hort. Elth. p. 40.

ATRESIA, Ἀτρησια, in medicine, imperforation, or the state of those persons who want some natural aperture. *Brun.* Lex. Med. p. 90. a.

ATRETI, Ἀτρητοι, those persons, of either sex, in whom the anus, or genitals, are imperforate, or close, whether naturally, or occasioned by some accident, or disease, as the growth of some fleshy excrescence, or a membrane which stops the orifice. *Gorr.* Med. Def. p. 62. a. *Brun.* Lex. Med. p. 90. b.

ATRICAPILLA, in zoology, the name of a little bird, commonly known by the name of the black cap, and called, by some other authors, *Ficedula*, *Sycalis*, or *Melanchoryphus*, and by the Italians *Caponegro*. See MELANCHORYPHUS.

ATRICES, or ATTRICES, in medicine, small tubercles about the anus, which sometimes disappear, and then return again, at least while in their early state. *Brun.* Lex. Med. in voc.

The *Atrices* are ranked in the number of condylomata, or fici. Some authors also give the denomination *Atrici* to a kind of latent wounds in the extremity of the rectum, which however do not perforate the same. *Brun.* ubi supra.

ATRIENSES, in antiquity, a kind of servants, or officers, in the great families at Rome, who had the care and inspection of the atria, and the things lodged therein.

These are otherwise called *Atriarii*, though some make a distinction between *Atrienses* and *Atriarii*; suggesting that the latter were an inferior order of servants, perhaps assistants of the *Atrienses*, and employed in the more servile offices of the atrium, as to attend at the door, sweep the area, &c. V. *Pitisc.* Lex. Ant. T. 1. p. 199. a.

The *Atrienses* are represented as servants of authority and command over the rest: They acted as procurators, or agents, of their master, in selling his goods, &c. To their care were committed the statues and images of the master's ancestors, &c. which were placed round the atrium; and which they carried in procession at funerals, &c.

In the villa's, or country-houses, the *Atrienses* had the care of the other furniture, and utensils, particularly those of metal, which they were to keep bright from rust. Other things they were to hang from time to time in the sun, to keep them dry, &c. They were cloathed in a short white linen habit, to distinguish them, and prevent their loitering from home. V. *Calv.* Lex. Jur. p. 96. b. *Heder.* Lex. p. 461. *Pitisc.* loc. cit. *Fab.* Thes. p. 286.

ATRIPLEX, *Orach*, in botany, the name of a genus of plants, the characters of which are these: The flower has no petals, but is composed only of a number of stamina and a pistil, arising from a five-leav'd cup. The pistil finally becomes a flat orbiculated seed, inclosed in the cup in the manner of a capsule. Some species of *Atriplex* have also another sort of fruit, placed in a different part of the plant, not in that of the flowers. The embryo's of this fruit are large, and consist of two angular leaves, which nicely enclose and surround a seed of a roundish figure.

The species of *Atriplex* enumerated by Mr. Tournefort, are these:

1. The pale green garden *Atriplex*. 2. The red garden *Atriplex*. 3. The broad-leav'd *Atriplex*, or shruby halimus. 4. The Spanish shrubby procumbent sea *Atriplex*, 5. The racemose moorish shrubby sea *Atriplex*, with silvery leaves, like those of the common knot-grass. 6. The narrow-leav'd sea *Atriplex*, called by many halimus, and sea purslain. 7. The sea *Atriplex*, with jagged leaves. 8. The sea *Atriplex*, with narrow dentated leaves. 9. The halimus-leav'd *Atriplex*. 10. The little narrow-leav'd sea *Atriplex*. 11. The perennial sea *Atriplex*, with spear-pointed leaves, scarce at all hoary. 12. The common *Atriplex*, with spear-pointed leaves. 13. The *Atriplex*, with long and narrow leaves. 14. The *Atriplex*, with extremely long and narrow leaves. 15. The wild *Atriplex*, with roseate, starry, and compressed fruit. *Tourn.* Inst. p. 505.

This plant is sometimes cultivated in gardens as a culinary herb, being used as spinach, and, by some, much preferred to that herb: But there are few in England that are fond of it. It is to be sown in the spring as spinach, and must be eaten while it is young; for when it is run up to seed, it is very strong. If suffered to scatter its seed in a garden, it will make itself a lasting inhabitant, without farther trouble; the seeds often remain many years in the ground, and every time it is turned up, send up new plants. *Miller*'s Gard. Dict.

All the species of *Atriplex* are cooling and emollient. The leaves are sometimes used in clysters, and in cataplasms, intended to soften tumours, and to abate pains. Some give the seeds internally as diuretics, and others recommend them against disorders of the uterus and menses. V. *Quinc.* Dispens. P. 2. Sec. 1. §. 59.

ATRIUM, in ecclesiastical antiquity, denotes an open place, or court, before a church, making part of what was called the *Narthex*, or *Ante-Temple*. *Bingh.* Orig. l. 8. c. 3. §. 5.

The *Atrium* in the antient churches was a large area, or square plat of ground, surrounded with a portico or cloyster, situate between the porch or vestible of the church, and the body of the church.

Some have mistakenly confounded the *Atrium* with the porch or vestible, from which it was distinct; others with the narthex, of which it was only a part. *Schmid.* Lex. Eccles. p. 77.

The *Atrium* was the mansion of those who were not suffered to enter further into the church. More particularly, it was the place where the first class of penitents stood, to beg the prayers of the faithful, as they went into the church.

ATRIUM is also used, in the canon law, for the cemetery, or church-yard.

In this sense we find a law, prohibiting buildings to be raised in *Atrio Ecclesiæ*, except for the clergy [a]; which the glossary explains thus; id est *in Cœmeterio*, which includes the space of forty paces around a large church, or thirty round a little church, or chapel [b].—[[a] *Gratian.* 12. q. 1. c. 4. [b] *Spelm.* Gloss. p. 48. a.]

ATROPHY. See *Defect of* NUTRITION.

ATTAGEN, in zoology, a name by which authors have called two different species of birds, tho' of the same genus, both being of the gallinaceous kind. The *Attagen* of Aldrovandus is the francolino of the Italians, a bird very like our red game, or perhaps the same with it; and the *Attagen* of Gesner, and many others, is the gallina corylorum, or hazelhen. *Ray*'s Ornithology, p. 125. See the articles FRANCOLINO and HAZEL-*Hen*.

ATTALICÆ *Vestes*, in antiquity, garments made of a kind of cloth of gold. *Jun.* Paint. of Ant. c. 8. §. 9.

They took the denomination from Attalus, surnamed Philometer, a wealthy king of Pergamus, who was the first, according to Pliny, who procured gold to be woven into cloth. Hist. Nat. l. 3. c. 48.

ATTALUS, Ἀτταλος, and ATTALICUS, Ἀτταλικος, in the antient physic; epithets given to certain medicines, described by Galen, but now out of use. *Gorr.* Def. Med. p. 62. b.

ATTEMPERATION, in rhetoric, &c. the casting a restriction, or softening, on something said by the formulas, *Fama est, ut perhibent*, &c. *Scal.* Poet. l. 3. c. 35.

ATTENUANTS, in the materia medica. See INCIDENTS.

ATTERMINING, in our old writers, is used for a time, or term, granted for payment of a debt, according to Blount.

ATTILUS, a river fish, of the sturgeon kind, called by some adello, adano, and adeno. It grows to a very large size, and, when full grown, casts its scales, and never has any fresh ones in their place, but remains perfectly smooth; in which it differs from the common sturgeon. But it seems not to differ in any essential point from the huso germanum. It is an eatable fish, but is greatly inferior in taste to the sturgeon. *Willughby*'s Hist. Pisc. p. 241. See the article HUSO.

ATTORNARE, in the original sense, signified to turn over money and goods, that is, to assign and appropriate them to certain

certain perſons, or uſes. *Kenn.* Gloſſ. ad Paroch. Antiq. in voc.

This is more peculiarly called *Attornare rem*, to attorn a thing. *Quos quidem quatuor ſolidos attornavi ad unam protantiam, faciendam in conventu Oſencienſi.* Id. Paroch. Antiq. p. 209.

ATTORNARE *Perſonam* denotes to depute a repreſentative, or proxy, to appear and act for another. *Kenn.* Gloſſ. in voc.

Thus in trials at common law, the plaintiff, or defendant, retained *Attornatum ſuum poſitum in loco ſuo ad lucrandum vel perdendum.* Id. Paroch. Antiq. p. 405.

ATTORNATO *faciendo vel recipiendo*, in the common law, a writ to command a ſheriff, or ſteward, of a county-court, or hundred-court, to receive and admit an *Attorney* to appear for the perſon that oweth ſuit of court. F. N. B. 156. Every perſon that owes ſuit to the county-court, court-baron, *&c.* may make an *Attorney* to do his ſuit. Stat. 20. H. 3. c. 10. *Blount*, *Cowel.*

ATTROW, in botany, a name given by the people of Guinea to a plant which they uſe in caſes of ſwellings, boiling the leaves in water, and uſing the decoction by way of a fomentation.

It is a ſpecies of kali, and is called by Petiver Kali Guineenſe foliis poligoni, floribus verticilli in modum diſpoſitis, from its leaves reſembling the common knot-graſs, and its flowers growing in rundles round the ſtalks. Phil. Tranſ. N°. 232.

ATTRUMMAPHOC, in botany, a name given by the people of Guinea to a ſhrub which they uſe in medicine; they boil it in water, and give the decoction in the venereal diſeaſe. The juice of it, when freſh preſſed out, is alſo uſed, ſnuffed up the noſtrils, to promote ſneezing, and cure ſeveral diſorders of the head and eyes. Phil. Tranſ. N°. 232.

It is a ſpecies of colutea, called by Petiver *Colutea lanuginoſa floribus parvis ſiliquis piloſis deorſum tendentibus*, and Dr. Herman calls it an *Aſtragalus*. Commelin tells us alſo, that it is called, by the inhabitants of Ceylon, *pilæglias*. It grows in ſandy places, and riſes to about a yard high; the root is fibrous and whitiſh, the ſtalks are woody and reddiſh, and very hairy; the leaves grow by pairs, with one at the extremity, ſometimes three, and ſometimes five, growing on a rib; they are covered on both ſides with a ſoft woolline's, and have a ſtyptic and aſtringent taſte. The flowers are of the papilionaceous kind, and grow in long ſpikes, upon a naked pedicle; the cup is compoſed of ſix hairy leaves, and the pod is hairy, and of a roundiſh ſhape, like a packthread, and about three quarters of an inch long; the pedicles of the ſingle pods are very ſhort, and the ſeeds are ſmall, and lie lengthwiſe in the pod, ſeparated by thin partitions.

ATYPOS, *Erratic*, or *Irregular*, a word uſed by the old writers in medicine, for ſuch diſeaſes as did not obſerve any regularity in their periods.

Others have alſo uſed the ſame word in a very different ſenſe, namely, for deformities and irregularities in the limbs; and others, for perſons, who from ſome defects in the organs of ſpeech, cannot articulate certain particular ſounds.

AVANIA, in the Turkiſh legiſlature, a fine for crimes, and, on deaths, paid to the governor of the place. In the places where ſeveral nations live together under a Turkiſh governor, he takes this profitable method of puniſhing all crimes among the Chriſtians, or Jews, unleſs it be the murther of a Turk. *Pocock's* Egypt. vol. 2. p. 2. p. 30.

AVANTE, Αυαντη, among the old writers in phyſic, a name given to a diſeaſe, ſeeming, from their accounts of it, the ſame we call hypochondriaſm. Hippocrates has left us the following account of it.

The patient can neither bear abſtinence, nor eating; when faſting, he has a rumbling in his belly, with a gnawing pain in his ſtomach, and vomits up variety of matters, as bile, ſaliva, phlegm, and an acrimonious matter, and, after vomiting, ſeems to be a little eaſier. After eating, he is moleſted with eructations, and an inflammatory heat and redneſs; he always fancies he has occaſion to make a plentiful ſtool, but uſually voids only wind; he is afflicted with a pain in his head, and a pricking, as if with needles, in different parts of his body; his legs ſeem heavy, and he becomes very weak and extenuated.

In this caſe a purge muſt be given, and after that a vomit; the head is particularly to be purged: The patient is to abſtain from fat, oleous, and ſweet foods, and not to indulge himſelf in much drinking. After meals provoke vomiting, and, if the ſeaſon permit, after the uſe of aſſes milk, and whey, let him take a vomit or a purge, which ever ſhall be judged moſt ſuitable to his caſe. If it be ſpring, or ſummer, let him bathe in cold water; if autumn, or winter, let him uſe unctions, and much exerciſe, or take a journey. His diet muſt be cool and laxative; and, if coſtive, emollient clyſters muſt be adminiſter'd.

This is a chronic diſeaſe, and ſeldom leaves a man till old age, nay often accompanies him thro' that, to the grave.

AUBIN, in horſemanſhip, a kind of broken gait, or pace, between an amble and a gallop; reputed a defect in a horſe. *Guill.* Gent. Dict. P. 1. in voc.

AUCTORATI, in Roman antiquity, an appellation given to ſuch as entered the liſts as gladiators.

Others will have the *Auctorati* to have been gladiators who received wages; or who hired themſelves, for money, to perform in the games, or ſpectacles. *Pitiſc.* T. 1. p. 204. a. *Briſſ.* de Verb. Signif. p. 68. a. *Calv.* Lex. Jur. p. 98. b. *Aquin.* Lex. Milit.

The *Auctorati* degraded themſelves by the act; and became ſervile and infamous.

AUCTORATUS *ad ſepeliendum patrem*, in Quintilian, denotes a perſon who let himſelf out to perform as a gladiator, in order to raiſe money to bury his father. *Quint.* Declar. 302.

AUCTORATI *Milites* alſo denoted ſoldiers bound by oath, and the receipt of wages, to ſerve in war. *Aquin.* Lex. Milit. p. 103. b.

In this ſenſe *Auctorati* ſtand oppoſed to *Exauctorati*, who were diſbanded.

The ſtipend they received for their ſervice, was denominated *Auctoramentum.*

AUCTORATAS *Senatus*, in the Roman antiquity. See SENATUS *Auctoritas.*

AUDIANISM, the ſyſtem or ſentiments of Audius and his followers; particularly as to the belief of the human figure of the deity.

Audianiſm amounts to the ſame with *Anthropomorphiſm.*

Audianiſm appears to be much earlier than Audius: Many, both among the antient Jews, Heathens, and primitive Chriſtians, ſeem to have given into ſentiments much like thoſe of the Audians. Not to mention that M. le Clerc makes Moſes the patriarch or founder of *Audianiſm.* 'Tis certain, the antient Sadducees, the Ebionites, Seleucus, Hermias, Melito biſhop of Sardis, Tertullian, and others, held the deity corporeal. Epicurus calls God, Ανθρωπομορφος. M. Bayle charges the like belief on all the Gentiles.

The chief argument urged by Audius, was that paſſage in Geneſis, *Let us make man after our own image*, which he held, is not to be underſtood of the formation of the ſoul of man; (as that came not in courſe till afterwards) but merely of the formation of the body of man; ſince immediately after the words *Let us make man*, &c. the inſpired writer ſubjoins, and God took of the duſt of the earth, and made man. Conſequently, added he, it muſt have been the body of man that God made after his own image: And therefore God has a body like the human. This he confirmed by two other proofs; the firſt, from the apparitions of God to the prophets, recorded in the Old Teſtament, which ſeem to infer, that he muſt have been corporeal. 2°. From thoſe paſſages in ſcripture which attribute eyes, ears, hands, feet, *&c.* to the Divine Being, all which they interpreted according to the letter. V. *Schrod.* Diſſ. de Hæreſ. Audian §. 7. ſeq. *Jour.* des Scav. T. 63. p. 336.

Vogt has a diſſertation on *Audianiſm* before Audius. De Audianiſmo ante Audium. ext. ap. ejuſd. Bibl. Hiſt. Hæreſeol. T. 1. p. 600.

AUDITIONALIS *Scholaſticus*, in middle-age writers, is uſed for an advocate who pleads cauſes for his clients in audiences. *Du Cange*, Gloſſ. Lat. T. 1. p. 383.

AVELLANA *Purgatrix*, in the materia medica, the fruit of a ſpecies of ricinus. See RICINUS.

AVELLANDA, in botany, a name given by the Spaniards to the roots of the Tarſi, or ſweet Cyperus. Theſe are eſculent, and of a very delicious taſte; they ſeem to have had the name from their likeneſs to the avellana nux, or hazelnut. Garcias, and ſome others, have thought that the cureas of Malabar was the ſame with the *Avellanda* of Europe. But this does not ſeem to be the caſe, for the cureas is a fruit probably the ſame with the fruit *Bel*, deſcribed by the Arabians, and tho' of the ſame ſize and ſhape with the *Avellanda*, has a hard coat like the common filbert. The cureas of Egypt is indeed a root, but it is very different from theſe, being as long and as thick as a man's arm.

AVENA, *the Oat*, in the Linnæan ſyſtem of botany, makes a diſtinct genus of plants, the characters of which are, that the cup is a glume, containing many flowers, compoſed of two valves, and made up of a looſe arrangement of the flowers; the valves are ſharp pointed and bellied, and are large, lax, and without beards or awns. The flower is compoſed of two valves, the inferior one is of the ſize of the cup, but harder, ſomewhat cylindric, bellied, and pointed at each end, and ſends from its back part a beard or awn, ſpirally inſerted, and bent as it were with a knee. The ſtamina are three capillary filaments; the antheræ are oblong, and ſplit into two at the ends. The germen of the piſtillum is obtuſe; the ſtyles are two in number, erect, and curled, and the ſtigmata are curled or waved. The flower very firmly encloſes the ſeed, which is ſingle, oblong, and ſlender, and pointed at each end, and furrowed along the middle.

AVENUES (*Cycl.*)—All *Avenues* that lead to a houſe, ought to be at leaſt as wide as the whole front of the houſe, if wider they are better ſtill; and *Avenues* to woods and proſpects ought not to be leſs than ſixty feet wide. The trees ſhould not be planted nearer to one another than thirty-five feet, eſpecially if they are trees of a ſpreading kind, and the ſame ought to be the diſtance, if they are for a regular grove.

The

The trees moſt proper for *Avenues* with us, are the Engliſh elm, the lime, the horſe-cheſnut, the common cheſnut, the beech, and the abele. The Engliſh elm will do in all grounds, except ſuch as are very wet and ſhallow; and this is prefer'd to all other trees, becauſe it will bear cutting, heading, or lopping in any manner, better than moſt others. The rough or ſmooth Dutch elm is approved by ſome, becauſe of its quick growth; this is a tree which will bear removing very well, it is alſo green almoſt as ſoon as any plant whatever in ſpring, and continues ſo as long as any, and it makes an incomparable hedge, and is preferable to all other trees for lofty eſpaliers. The lime is valued for its regular growth, and fine ſhade: The horſe cheſnut is proper for all places that are not too much expoſed to rough winds. The common cheſnut will do very well in a good ſoil, and riſes to a conſiderable height, when planted ſomewhat cloſe, tho' when it ſtands ſingle, it is rather inclin'd to ſpread than to grow tall. The beech is a beautiful tree, and naturally grows well with us in its wild ſtate, but it is leſs to be choſen for *Avenues* than the before-mentioned, becauſe it does not bear tranſplanting well, but is very ſubject to miſcarry. Laſtly, the abele is fit for any ſoil, and is the quickeſt grower of any foreſt tree. It ſeldom fails in tranſplanting, and ſucceeds very well in wet ſoils, in which the others are apt to fail. The oak is but little uſed for *Avenues*, becauſe of its ſlow growth.

The old method of planting *Avenues* was with regular rows of trees, and this has been always kept to till of late; but we have now a much more magnificent way of planting *Avenues*, this is by ſetting the trees in clumps, or plattoons, making the opening much wider than before, and placing the clumps of trees at about three hundred feet diſtance from one other. In each of theſe clumps there ſhould be planted either ſeven or nine trees; but it is to be obſerved, that this is only to be practiſed where the *Avenue* is to be of ſome conſiderable length, for in ſhort walks this will not appear ſo ſightly as ſingle rows of trees. The *Avenues* made by clumps are fitteſt of all for parks. The trees in each clump ſhould be planted about thirty feet aſunder, and a trench ſhould be thrown up round the whole clump, to prevent the deer from coming to the trees to bark them. *Miller*'s Gardner's Dict. in voc.

AVER *Land*, in our old writers, ſeems to have been ſuch lands as the tenants did plough and manure, *cum Averiis ſuis*, for the proper uſe of a monaſtery, or the lords of the ſoil. Mon. Angl. ap. *Blount*.

AVERA, in doomſday-book, denotes a day's work of a ploughman, or other labourer, which the king's tenants in his demeſne lands were obliged to pay the ſheriff. *Spelm.* Gloſſ. p. 51. a.

AVERAGE, in agriculture, a term uſed by the farmers in many parts of England, for the breaking of corn fields, eddiſh, or roughings. The word ſignifies, in law, either the beaſts which tenants and vaſſals were to provide their lords on certain occaſions, or, among the merchants, the money laid out to repair loſſes by ſhipwreck. In the firſt of theſe ſenſes, the word is derived from averium, a labouring beaſt; in the ſecond, from averia, goods or chattles; from the French, avoir, to have or poſſeſs. In the laſt, or the farmer's ſenſe, it may be derived from haver, an Engliſh name for oats, or from averia, beaſts, being as much as feeding for cattle or paſturage. *Ray*'s Engliſh Words, p. 3.

AVERIIS *captis in Withernam*, a writ for the taking of cattle to his uſe, who hath cattle unlawfully diſtrained by another, and driven out of the county where they were taken, ſo that they cannot be replevied by the ſheriff. Reg. orig. 82. If the cattle are put into any ſtrong place in the ſame county, the ſheriff may take the poſſe comitatus, and break into it, to make the replevin. But when they are driven out of the county, he hath no authority to purſue them. *Blount*, *Cowel*.

AVERRHOA, in botany, the name of a genus of plants, the characters of which are theſe: The perianthium is ſmall, erect, and compoſed of five leaves. The flower is compoſed of five lanceolated petals, which ſtand erect on the lower part, and are expanded at the top. The ſtamina are ten ſetaceous filaments, half of which are of the length of the flower, and the other half ſhorter; theſe ſtand alternately together, and are terminated by roundiſh apices or antheræ. The germen of the piſtil is oblong, and faintly pentangular; the ſtyles are five in number, and are ſetaceous and erect; and the ſtigmata are ſimple. The fruit is a turbinated pomum, obtuſely pentangular, having five cells, and in each of them ſeveral ſeeds of an angular form, ſeparated by membranes. *Linnæi*, Gen. Plant. p. 201. Hort. Malab. v. 3. p. 47.

AVERRHOISTS, a ſect of peripatetic philoſophers, who appeared in Italy ſome time before the reſtoration of learning, and attacked the natural immortality of the ſoul.

They took their denomination from *Averrhoes*, a celebrated interpreter of Ariſtotle, born at Cordova in Spain, in the twelfth century, from whom they borrowed their diſtinguiſhing doctrine. The founder of this ſect, *Averrhoes*, is ſometimes called the commentator, by way of eminence, as being ſuppoſed to have entered beſt of all the commentators into the ſentiments of the philoſopher; inſomuch that ſome have pretended the ſoul of Ariſtotle had migrated into the body of Averrhoes. V. *Stoll.* Introd. Hiſt. Liter. p. 655. *Thomas*, Cautel. P. 1. p. 88. *Vives* de Corrupt. Art. l. 5. 179.

This author attacked what the Greek interpreters and commentators had all taught. He maintained that, according to Ariſtotle, and even according to reaſon (which was then thought the ſame thing) the immortality of the ſoul could not ſubſiſt. His reaſoning was thus—Mankind, according to Ariſtotle, is eternal; ſo that if ſouls don't periſh, we muſt either have recourſe to a metempſychoſis, which that philoſopher rejects; or, if there be always new ſouls producing, there muſt at length be an infinity of ſouls. But an actual infinity is impoſſible, according to the ſame Ariſtotle. Conſequently the ſouls, i. e. the forms of organical bodies muſt die with their bodies; at leaſt the paſſive underſtanding belonging peculiarly to each; ſo that nothing remains but the intellectus agens, which is common to all mankind; and which, according to Ariſtotle, was external, and operated wherever it met with organs diſpoſed thereto: As the wind produces a kind of muſic, when it happens to blow into the pipes of a well adjuſted organ. The Averrhoiſts took this for an invincible demonſtration, and hence held that there is a certain ſublunar intelligence, the participation whereof made our *intellectus agens*.

Others, among the ſchool philoſophers, leſs implicitly devoted to Ariſtotle, held an univerſal ſoul, the ocean of all particular ſouls; and believed this univerſal alone capable of ſubſiſting for ever, while particular ones are born and die; i. e. riſe out of it, and return into it, or are reunited therewith. The ſouls of animals riſe by withdrawing like drops out of their ocean, when they find a body proper for them to animate; and periſh by rejoining the ocean of ſouls, when the body becomes unfit, as rivulets loſe themſelves in the ſea. And many held that God is the univerſal ſoul; the others ſuppoſed it ſubordinate, and created.

The anima mundi of Plato has been taken by ſome in this ſenſe. But it was more likely the ſtoics ſhould give into this common ſoul, which abſorbs all others. Thoſe who are of this opinion may be called monopſychites, in regard there is, according to them, only one ſoul which truly ſubſiſts. M. Bernier obſerves, that this opinion obtains almoſt univerſally among the learned in Perſia, and the ſtates of the Great Mogul. It ſeems alſo to have got among the cabaliſts and myſtic divines—Spinoſa was much of the ſame opinion; teaching that there is but one ſingle ſubſtance in the world, whereof particular or individual ſouls are only tranſient modifications. Several late authors in Germany have held ſomething like it. The deification of the myſtics, according to Leibnitz, is a rivulet from the ſame fountain.

The *Averrhoiſts*, who held that the ſoul was mortal, according to reaſon, or philoſophy, yet proteſted to ſubmit to the chriſtian theology, which declares it immortal. But the diſtinction was held ſuſpicious; and this divorce of faith from reaſon, was rejected by the doctors of that time, and condemned by the laſt council of the Lateran, under Leo X^th^. yet it was ſtill maintained covertly: Pomponatius, Cæſalpinus, and others, were ſuſpected of it. But the corpuſcular philoſophy now introduced in Italy, ſeems almoſt to have extinguiſhed Averrhoiſm. *Walch.* Parerg. Acad. p. 321. *Leibnitz*, Theod. §. 7. ſeq. *Bud.* Comp. Hiſt. Philoſ. c. 5. §. 4. *Bayle* in Averrhoes. It. in Niphus.

AVERSIONE *Vænire*, or *Locare*, in writers of the civil law, ſeems to denote the ſelling, or letting things in the lump, without fixing particular prices for each piece. *Briſ.* de Verb. Signif. p. 70. a. *Calv.* Lex. Jur. p. 100. b. *Pitiſc.* Lex. Ant. T. 1. p. 206. a.

AVERTI, in horſemanſhip, is applied to a regular ſtep or motion enjoined in the leſſons. *Guill.* Gent. Dict. P. 1. in voc.

In this ſenſe they ſay, *Pas averti*, ſometimes *Pas ecouté*, and *Pas d'ecole*, which all denote the ſame.

The word is mere French, and ſignifies adviſed, apprized, *&c.*

AUGITES, Αυγιτης, among antient naturaliſts, a kind of gem, of a pale green colour, inferior in value to the topaz. *Agric.* Foſſil. l. 6. p. 292. *Caſt.* Lex. Med. in voc.

It is uſually ſuppoſed the ſame with the *callais* or *calais*, tho' this was diſputed even in Pliny's time. Hiſt. Nat. l. 37. c. 10.

AUGURAL, ſomething relating to the augurs.

The *Augural* inſtruments are repreſented on ſeveral antient medals. V. *Evel.* Diſc. of Med. c. 2. p. 33.

AUGURAL *Supper*, *Cæna Auguralis*, that given by a prieſt on his firſt admiſſion into the order, called alſo by Varro *Adjicialis*. De re ruſt. l. 3. c. 6.

AUGURAL *Books*, *libri Augurales*, thoſe wherein the diſcipline and rules of augury were laid down. *Cic.* de Divinat. l. 1. c. 33.

AUGURALE, the place in a camp where the general took auſpicia.

auſpicia. This anſwered to the *Auguratorium* in the city. *Struv.* Synt. Ant. Rom. p. 275.

AUGURALE is alſo uſed, in Seneca, for the enſign or badge of an augur, as the lituus. *Senec.* de Tranquill. c. 12.

AUGURATORIUM, a building on the palatine mount, where public auguries were taken. *Struv.* Synt. Ant. Rom. c. 6. p. 272.

This is alſo called *Auguraculum*, and arx.

AUGUST, in reſpect of chronology, denotes the eighth month of the Julian year.

This was called, in the antient Roman calendar, *Sextilis*, as being the ſixth from March, from which the Romans began their computation. The emperor Auguſtus changed the name, and gave it his own; not that it was the month in which he was born, but becauſe it had been fortunate to him, by ſeveral victories which he had gained in it. *Macrob.* Saturn. l. 1. c. 12. *Struv.* Antiq. Rom. Synt. c. 8. p. 348.

Our Saxon anceſtors called it *Weod-monath*, that is, weed-month, by reaſon of the plenty thereof in this ſeaſon. *Spelm.* Gloſſ. p. 420. a.

AUGUST is alſo uſed, in middle-age writers, for a power, or licence, of going out of a city in harveſt-time to reap, *&c.* *Du Cange*, Gloſſ. Lat. T. 1. p. 390.

AUGUSTATICUM, in middle-age writers, denotes a largeſs, or donative, of an emperor, to the people, or ſoldiery. *Du Cange*, loc. cit.

AUGUSTEUM *Marmor*, in the natural hiſtory of the antients, a name given to the common green and white marble, ſo frequent in uſe with us for tables, *&c.* and called by our artificers Ægyptian marble. The Romans however made a diſtinction between the differences of this marble, in regard to the diſpoſition of its veins, for thoſe pieces of it which had the white matter diſpoſed into a ſort of arches, were called the Auguſtan marble, while thoſe which had the white in a more diffuſed and leſs regular form, were called the Tiberian marble. But theſe are too ſlight diſtinctions; for the ſame block of marble, nay ſometimes the compaſs of the ſame table, affords us both the Auguſtan and Tiberian kind. *Hill*'s Hiſt. of Foſſils, p. 482.

AVIGNON *Berry*, a name given, by ſome, to the Lycium fruit. See LYCIUM.

AVIS, *bird*, in zoology. See BIRD.

AVIS *Longa*, a name given by Nieremberg to the *Hoitlallotl* of the Americans, a bird very remarkable for the ſwiftneſs of its running.

AVIS *Trivea*, a name under which Nieremberg has deſcribed an American bird, of the ſize of a thruſh, brown and black on the back, and yellow under the belly, it imitates the human voice, and is called, by the natives, *ceoan*. See the article CEOAN.

AVIS *Pennipulchra*, the name of an American bird, deſcribed by Nieremberg, and called by the Indians *Quetzaltototl*. It is of the ſize of a pigeon, and is all over its body of the more beautiful colours of the peacock. It has a creſt of very elegant feathers on its head, and its beak is crooked and yellow, its legs alſo are yellowiſh. *Ray*'s Ornithol. p. 302.

There are, beſide this ſpecies, three or four others, which he deſcribes under this general name, giving their Indian names, *Tzanatl*, *Hoitzitzillin*, *Tzinitzian*, and *Totoqueſtal*, which ſee under the ſeveral terms. Mr. Ray has, however, rang'd all theſe under the number of birds the accounts of which he is either dubious about, or ſuſpicious of the truth of.

AVIS *Scica*, a name given by Nieremberg to the *Hoactli*, or *Tobactli*, a large bird, common on the lakes of Mexico. See HOACTLI.

AVIS *Tropicorum*, the name of a bird, commonly called alſo, in Engliſh, the *tropic bird*. It is of the ſize of the common duck. Its beak is red, about two fingers breadth long, ſomewhat crooked, and ſharp at the point. It has on each ſide of the head a long white line, extended from the angles of the beak. Its belly is white, as is alſo its back, but this is beautifully variegated with oblong black ſtreaks. Its wings are very long, and their feathers partly black and partly white. Its legs are white, its feet black, and the toes all connected together by a membrane, and its tail, ſo far as is yet known, ſeems extreamly ſingular, appearing to conſiſt of only two long feathers. *Ray*'s Ornithol. p. 250.

It is only found about the *Tropics*, and thence has its name. See Tab. of Birds, N°. 52.

AVIS *Venti*, the bird of the wind, a name by which Nieremberg has called a bird of Mexico, called by the natives *Heatototl*.

AUK, in zoology, a name given by ſome to a bird called the *Alka* in Latin, and more commonly known among us by the name of the *Razor-bill*, a web-footed fowl, wanting the hinder toe. See the article ALKA.

AULETES, Αυλητης, in antiquity, denotes a flute-player.

One of the Ptolemies, kings of Egypt, father of Cleopatra, bore the ſurname, or denomination, of *Auletes*.

AULOS, in zoology, a name by which ſeveral of the antient writers nave called the ſolen, or razor-fiſh. See SOLEN.

AUNE, in commerce, a long meaſure, uſed in France, and other countries; it is of different lengths in different places. See MEASURE, *Cycl.*

AURA, in chemiſtry, a certain fine and pure ſpirit, found in every animal or vegetable body; but ſo ſubtle, as only to be perceptible by its ſmell and taſte, or other effects, not found in any other but that body. This *Aura* exhibits the proper character of the body, by which it is accurately diſtinguiſhed from all others; but is itſelf too fine and thin to be ſeen by the eyes, tho' armed with a microſcope; or felt by the hands, and withal is extreamly volatile; ſo that, when pure and ſingle, it flies off by its great mobility, mixes with the air, and is received into the great chaos of all volatiles, and there, ſtill retaining its ſame nature, it floats till it falls down in ſnow, hail, rain, or dew, when it again enters the boſom of the earth, impregnates it with its prolific virtue, and is at length received by other juices of the earth, and conveyed into the bodies of animals and vegetables; and, by this revolution, paſſes into new bodies, whoſe maſs it animates and directs. This ſubtle fluid is lodged in the oil of the body, to prevent its being diſſipated and thrown off, and hence it is, that all the antient alchymiſts ſay ſpirit reſides in ſulphur. *Boerh.* Chem. p. 168.

AURANTIUM, the orange-tree, in botany. See ORANGE.

AURANTIUS *Piſcis*, in ichthyology, a name given by Nieremberg to the *Dorado*, or dolphin, a ſpecies of the coryphæna, diſtinguiſhed from the others by its forked tail.

AURARIA *Ars*, in middle-age writers, the goldſmiths art. Hence alſo *Collegium Aurarianum*.

AURARIA *Functio*, *Penſio*, or *Præſtatio*, a tax or tribute to be paid in gold. *Du Cange*, Gloſſ. Lat. p. 393.

The collector hereof was denominated *Suſceptor Aurarius*, or *Chryſypodectes*.

AURATA, in zoology. See GILT-*Head*.

AURELIA, in natural hiſtory. See WEB-*Caſe*.

AURICHALCUM. See ORICHALCHUM.

AURICULA *Urſi*, *bears ears*, or, as they are vulgarly called, *Auriculas*, in botany, a diſtinct genus of plants, the characters of which are theſe: The flower is funnel-ſhaped, conſiſting of one leaf, divided into ſeveral ſegments at the rim. The piſtil ariſes from the cup, and is fixed in the manner of a nail to the hinder part of the flower. It afterwards ripens into a roundiſh fruit, partly covered by the calyx, and opening at the top, is ſeen to be full of ſmall ſeeds, fixed to a placenta.

The ſpecies of *Auricula Urſi*, enumerated by Mr. Tournefort, are theſe: 1. The yellow *Auricula*. 2. The purple *Auricula*. 3. The large flowered *Auricula*, with a velvety flower of a blackiſh purple, and a large and very white umbo. 4. The fleſh-coloured *Auricula*, with a large undulated flower, with a very large white umbo. 5. The variegated flowered *Auricula*, with a large undulated flower, and very large yellow umbo. 6. The *Auricula*, with a triple variegated umbo. 7. The *Auricula* with a very large gold yellow radiated umbo. 8. The *Auricula*, with a very large gold-coloured ſtellated umbo. 9. The white *Auricula*. 10. The large flowered ferrugineous black *Auricula*. 11. The *Auricula* with numerous and variegated leaves, and a very large flower. 12. The variegated flowered *Auricula*. 13. The round-leav'd *Auricula*. 14. The narrow-leav'd alpine *Auricula*. 15. The duſty or mealy-leav'd *Auricula*. 16. The fleſh-coloured *Auricula*, with leaves not ſerrated. 17. The ſmalleſt fleſh-coloured and white *Auricula*. 18. The beautiful red *Auricula*, with leaves hoary, and veiny on their under ſide. 19. The red-flowered jagged-leav'd *Auricula*, called *cortuſa* by Mathiolus. 20. The violet-flowered jagged-leav'd *Auricula*. 21. The great yellow double *Auricula*. 22. The great double white *Auricula*. 23. The great double purple *Auricula*. 24. The great double *Auricula*, with blackiſh purple velvety flowers. 25. The great double ſcarlet *Auricula*. 26. The great variegated double-flowered *Auricula*. 27. The graſſy-leaved alpine *Auricula*, with flowers like thoſe of the yellow jaſmine. *Tourn.* Inſt. p. 122.

The varieties raiſed by ſeeds from theſe ſpecies, are endleſs, and are one of the greateſt ornaments of the Dutch and Engliſh gardens.

The ſeveral ſpecies of the *Auricula*, when not in flower, are known by their thick hoary leaves, which are uſually terminated by a point.

Tho' this herb is ſeldom kept in the ſhops, it nevertheleſs ſtands recommended as a vulnerary, and as ſuch is found of ſervice, both for internal and external purpoſes. Mixed with ointments and plaiſters, it is reckoned good in ruptures. Four or ſix ſpoonfuls of the water, in which it has been boiled, taken every morning, is ſaid to cure coughs and ulcers of the lungs. The juice of its flowers removes ſpots of the face, and beautifies the ſkin; and with the ſame intention ſome diſtil a water from it. V. *James*, Dict. Med. in voc.

AURICULÆ *Primus Muſculus*, in anatomy, the name given by Fallopius to one of the muſcles of the head, called by Albinus the *Attollens Auriculam*, and by Winſlow the *ſuperior Auriculæ*. See SUPERIOR.

AURICULÆ *Secundus Muſculus*, in anatomy, a name given by Fallopius, and others, to the muſcles of the ears, called, by Albinus, *Retrahentes Auriculam*. Theſe are three in number, and ſo like one another, that they are eaſily miſtaken for one. Riolanus calls them the *Proprius Auris Externa*.

AURIFLAMMA, in the French hiſtory, properly denotes a flag, or ſtandard, belonging to the abby of St. Dennis, ſuſpended over the tomb of that ſaint, which the religious, on occaſion of any war in defence of their lands, or rights, took down, with great ceremony, and gave it to their protector, or advocate, to be borne at the head of their forces. *Du Cange*, Gloſſ. Lat. T. 1. p. 394. ſeq.

The word is alſo written *Auriflambe*, *Auriflambeum*, *Oriflamme*, and *Oriflambe*.

It is ſuppoſed to have taken the denomination on account of its yellow, or golden colour, from *Aurum* and *flammata*, which was a name given to all flags.

In later times the kings of France had the *Auriflamma* carried before them in all their military expeditions; and great virtue was ſuppoſed to be in it. Du Cange conjectures, that this practice came not in uſe before Lewis the ſixth, who acquired the county of Vilcaſſin, to which the protection or advowſon of the abbey of St. Dennis was annexed.

AURIFLAMMA is alſo ſometimes uſed to denote the chief flag, or ſtandard, in any army.

AURIFUSIA, AURIFUGIA, or AURIPHRIGIA, in middle-age writers, denote gold fringes, or borders, uſed on Veſtments, &c. V. *Spelm.* Gloſſ. p. 52. a.

AURIGRAPHUS, χρυσογραφος, in middle-age writers, a copiſt, or calligrapher, who wrote in gold letters. *Du Cange*, Gloſſ. Lat. T. 1. p. 397.

AURIS *Aſini*, *Aſſes Ears*, a name given, by naturaliſts, to a ſpecies of ſea-ſhell, ſuppoſed to reſemble the ear of an aſs in ſhape. It is of the family of the murex, and of that kind which has an alated and jagged lip. It is known by the crookedneſs of the beak, and the redneſs of the inſide of the mouth. There is another ſhell nearly allied to this, called *Auris Porci*. See MUREX.

AURIS *Marina*. See EAR-*Shell*.

AURIS *Porci*, *Hog's Ear*, in natural hiſtory, a name given by authors to a ſea-ſhell, a ſpecies of the murex kind, of that ſeries which have for their peculiar character an alated and laciniated lip. This ſpecies is of a ſort of triangular figure, and is ridged and furrowed very deeply. There is another ſhell very nearly allied to this, which is called *Auris Aſini*. See MUREX.

AURORA (*Cycl.*)—We read of an *Aurora Auſtralis*, a kind of light ſeen in the ſky, towards the ſouth, ſomewhat reſembling thoſe often ſeen towards the north. See Phil. Tranſ. N°. 461. Sect. 23, 24, and 25.

AURORA *Borealis*.—Mr. Euler thinks the cauſe of the *Aurora Borealis* not owing to the zodiacal light, as Mr. de Mairan ſuppoſes; (ſee AURORA *Borealis*, *Cycl.*) but to particles of our atmoſphere, driven beyond its limits by the impulſe of the light of the ſun. On this ſuppoſition, he endeavours to account for the phænomena obſerved concerning this light. He ſuppoſes the zodiacal light, and the tails of comets, to be owing to a ſimilar cauſe. See TAIL *of Comets*, and ZODIACAL *Light*.

This light ſometimes appears remarkably red, as it happened Dec. 5. 1737. of which we have very full accounts from divers parts of Europe, in the Phil. Tranſ. N°. 459. Sect. 7. p. 583—606.

AURORA *Surgens*, a phraſe, uſed by alchemiſts, to expreſs the multiplicative virtue of the philoſophers ſtone. Theat. Chym. T. 1. p. 169.

AURUM *ad Reſponſum*, among the Romans. See MAGISTER *Scrinii Diſpoſitionum*.

AURUM *Muſivum*, the antient name of what has been ſince called *Aurum moſaicum*. This old name is brought into uſe again in the London diſpenſatory, and the preparation directed to be made in the following manner: Take tin one pound, flower of brimſtone ſeven ounces, ſal armoniac and purify'd quickſilver, of each half a pound; melt the tin, and add to it the quickſilver, and when this is cold, reduce it to powder, and mix it with the other ingredients. Then ſublime the compound in a matraſs, and the *Aurum Muſivum* will be found under the part ſublimed, with a ſmall quantity of foulneſs at the bottom. *Pemberton*'s Lond. Diſp. p. 220.

AURUM *Potabile* (*Cycl.*)—Mr. Boyle gives us a method of making *Aurum Potabile* in an hour or two, without a furnace, or any other diſtilled liquor than rectified ſpirit of wine. See his Works abr. vol. 1. p. 63.

AURUM *Sophiſticum*, *mimic gold*, a chymical preparation, made as follows: Take fine diſtilled verdegreaſe eight ounces, crude Alexandrian tutty four ounces, borax twelve ounces, ſaltpetre one ounce and a half; pulverize and mix them altogether, tempering them with oil to the conſiſtence of a plaiſter; then put a german crucible into a wind-furnance, heat it red hot, and putting your maſs into it, let it be covered, and the furnace filled with coals over the crucible. When the maſs is melted, let it cool of itſelf, then break the crucible, and you will find at the bottom a fine regulus, like gold, weighing about four ounces, which being malleable, may be wrought into any form. V. *Smith*, Laboratory, p. 34.

AUSTRO-AFRICUS, the ſouth-ſouth-weſt point, or wind. *Wolf*, Elem. Geogr. §. 213.

AUSTROMANCY, *Auſtromantia*, properly denotes ſooth-ſaying, or a vain method of predicting futurity, from obſervations of the winds. *Rul.* Lex. Alchym. p. 96.

AUTER *Droit*, in law, is where perſons ſue, or are ſued, in another's right; as executors, adminiſtrators, &c.

AUTERFOIS *Acquit*, in law, a plea by a criminal, that he was heretofore *acquitted* of the ſame treaſon or felony. For one ſhall not be brought in danger of his life, for the ſame offence, more than once. 3 Inſt. 213.

AUTOCABDALI, Αυτοκαβδαλοι, in antiquity, an order of muſicians, who wore an ivy crown, or garland. *Fabric.* Bibl. Græc. l. 5. c. 40. p. 759.

Scaliger ſeems to rank them in the number of mimi. *Scal.* Poet. l. 1. c. 10.

AUTOCHTHONES, Αυτοχθονες, an appellation aſſumed by ſome nations, importing that they ſprung, or were produced, from the ſame ſoil which they ſtill inhabited.

In this ſenſe, *Autochthones* amounts to the ſame with *Aborigines*.

The Athenians valued themſelves on their being *Autochthones*, ſelf-born, or γηγενεις, earth-born, it being the prevailing opinion among the antients, that, in the beginning, the earth, by ſome prolific power, produced men, as it ſtill does plants. *Potter*, Archæol. l. 1. c. 1.

The proper *Autochthones* were thoſe primitive men, who had no other parent beſide the earth.

But the name was alſo aſſumed by the deſcendants of theſe men, provided they never changed their antient ſeat, nor ſuffered other nations to mix with them. V. *Fab.* Theſ. p. 319.

In this ſenſe it was that the Greeks, and eſpecially the Athenians, pretended to be *Autochthones*, and, as a badge thereof, wore a golden graſshopper woven in their hair, an inſect ſuppoſed to have the ſame origin.

AUTOCRATOR, Αυτοκρατωρ, a perſon veſted with an abſolute independent power, by which he is rendered unaccountable to any other for his actions.

The power of the Athenian generals, or commanders, was uſually limited; ſo that, at the expiration of their office, they were liable to render an account of their adminiſtration. But, on ſome extraordinary occaſions, they were exempted from this reſtraint, and ſent with a full and uncontroulable authority: In which caſe they were ſtiled Αυτοκρατορες. *Pott.* Archæol. l. 3. c. 5.

The ſame people alſo applied the name to ſome of their ambaſſadors, who were veſted with a full power of determining matters according to their own diſcretion. Theſe were denominated Πρεσβεις Αυτοκρατορες, and reſembled our *Plenipotentiaries*. Id. ib. c. 7.

AUTOCRATOR was alſo a title given the Roman emperors, firſt to Julius, and afterwards to his ſucceſſors, like that of Cæſar, or Auguſtus. *Dion.* l. 33. *Calv.* Lex. Jur. p. 105. a.

AUTODIDACTUS, Αυτοδιδακτος, a perſon ſelf taught, or who has had no maſter, or aſſiſtant of his ſtudies, beſides himſelf. V. *Morhof.* Polyhiſt. T. 1. l. 1. n. 14. *Bud.* Iſag. ad Theol. l. 1. §. 15. c. 3. *Suic.* Theſ. Eccleſ. T. 1. p. 581.

Autodidactus is uſed in divers ſenſes, ſometimes to denote a perſon who received his knowledge immediately from heaven, without any help of ſtudy. In which ſenſe the word occurs in Homer [a], and Clemens Alexandrinus [b].—[[a] Odyſſ. l. 22. v. 347. [b] Pædag. l. 3. c. 8.]

Sometimes for him who acquires his knowledge without either inſtruction by word of mouth, or reading of books. Such were the inventors of ſciences and laws.

Sometimes, and that moſt uſually, for him who arrives at learning by the uſe of books alone, without the aſſiſtance of any maſter, or inſtruction by word of mouth.

AUTOGLYPHUS *Lapis*, a ſtone, mentioned by Plutarch, and ſome other of the antients, as having naturally impreſſed on it the figure of Cybele. It is ſaid to have been found in Sagaris, a river of Perſia. Doubtleſs if any ſuch ſtone ever exiſted, the prieſts had got it made to deceive the people.

AUTOLITHOTOMUS, he who cuts himſelf for the ſtone.

Of this we have a very extraordinary inſtance given by Reiſelius, in the ephemerides of the academy naturæ curioſorum. Ephem. Acad. N. C. dec. 1. an. 3. obſ. 192.

Some chuſe to read the word, *Hautholithotomus*, or *Heautolithotomus*, ſuppoſing it formed on the model of Terence's *Heautontimorumenos*. *Brun.* Lex. Med. p. 95. a.

AUTONOMIA, a power of living, or being governed by our own laws and magiſtrates.

The liberty of the cities which lived under the faith and protection of the Romans, conſiſted in their *Autonomia*, i. e. they were allowed to make their own laws, and elect their own magiſtrates; by whom juſtice was to be adminiſtred, and

and not by Roman preſidents or judges, as was done in other places, which were not indulged the *Autonomia*. *Pitiſc.* Lex. Ant. T. 1. p. 229. a.

AUTOPHOSPHORUS, Αὐτοφωσφόρος, is, by ſome, uſed to denote phoſphorus, on account of its kindling as it were of itſelf. V. *Caſt.* Lex. Med. p. 95. a.

AUTOPRACTI, in the civil law, thoſe indulged this privilege, that they ſhould not be ſummoned or compelled to pay taxes, or tributes, by the collectors, but ſhould be left to their own free will. L. 34. Cod. Theodoſ. de Annon. and trib. ap. *Du Cange*, T. 1. p. 403.

Of this number were men of diſtinguiſhed dignity, and thoſe eminent for their probity and honour.

AUTOPYROS, Αὐτοπυρος, in the antient diet, an epithet given to a ſpecies of bread, wherein the whole ſubſtance of the wheat was retained, without retrenching any part of the bran.

Galen deſcribes it otherwiſe, viz. as bread where only the coarſer bran was taken out—On which footing, it was a medium between the fineſt bread, called *Similagineus*, and the coarſeſt, called *Furfuraceous*. *Bud.* de Aſſe, l. 5. p. 549. *Gorr.* Def. Med. p. 64. a. *Caſt.* Lex. Med. p. 95. b.

This was alſo called *Autopyrites*, and *Syncomiſtus*, συγκομιστος. See BREAD.

AUX, in aſtronomy, that point in a planet's path, or orbit, wherein it is at its greateſt diſtance from the centre of the world. *Wolf.* Lex. Math. p. 222. *Vital.* Lex. Math. p. 98.

Hence the antients, who conſidered the earth as the center, uſe *Aux* in the ſame ſenſe with *Apogee*. Among the moderns, on the contrary, it denotes the *Aphelium*.

Some alſo uſe *Aux* to denote the arch of the ecliptic, intercepted between the firſt point of aries, and the point wherein the ſun, or a planet, is at its greateſt diſtance from the earth. *Wolf.* loc. cit.

AUXESIS, Αὔξησις, (*Cycl.*) in rhetoric, ſometimes ſignifies the ſame with *Increment*. See INCREMENT.

AWAIT, in our old ſtatutes, is uſed to ſignify what we now call *waylaying*, or lying in *wait*, to execute ſome miſchief. In Stat. 13 R. 2. c. 1. it is ordained, that no charter of pardon ſhall be allowed before any juſtice, for the death of a man ſlain by *await*, or malice prepenſed, &c. *Blount*.

AXAMENTA, in antiquity, a denomination given to the verſes, or ſongs, of the Salii, which they ſung in honour of all men. The word is formed, according to ſome, from *Axare*; q. d. *nominare* [a]. Others will have the *Carmina Saliaria* to have been denominated *Axamenta*, on account of their being written εν τοις Αξωσι, in *Axibus*, or on wooden tables [b].—[[a] *Meiers*, Critic. Sine Criſſ. c. 2. p. 71. in Not. [b] *Walth.* Lex. Muſ. p. 60. b.]

The *Axamenta* were not compoſed, as ſome have aſſerted, but only ſung by the Salii. The author of them was Numa Pompilius; and, as the ſtyle might not be altered, they grew in time ſo obſcure, that the Salii themſelves did not underſtand them. Varro ſays they were ſeven hundred years old. *Quint.* Inſt. orat. l. 1. c. 11. V. *Pitiſc.* Lex. Ant. T. 1. p. 235.

AXAMENTA, or ASSAMENTA, in antient muſic, hymns or ſongs performed wholly with human voices. *Buleng.* de Theat. l. 2. c. 4. p. 343.

AXIOM, Αξιωμα, (*Cycl.*) in rhetoric, is uſed by Hermogenes to denote grandeur, dignity, and ſublimity of ſtyle. *Voſſ.* Rhet. l. 6. p. 433.

AXIOS, Αξιος, a form of acclamation, antiently uſed by the people in the election of biſhops. When they were all unanimous, they cried out Αξιος, he is worthy, or Αναξιος, unworthy. V. *Bingh.* Orig. l. 4. c. 2. §. 6.

AXIOSIS, Αξιωσις, in rhetoric, denotes the third part of an exordium; ſometimes alſo called Αποδοσις, and containing ſome new propoſition more nearly relating to the matter in hand, than the Προλασις.

Thus in Cicero's oration *pro Milone*, the *Protaſis* is, *non poſſum non timere, judices, viſa hâc nova judicii forma*; the καλασκευη, *Nec enim ea corona confeſſus veſter cinctus eſt, qua ſolebat*; the Αξιωσις, *Sed me recreat Pompei conſilium, cujus ſapientiæ non fuerit, quem ſententiis judicum tradidit, telis militum dedere*; the baſis, βασις, *Quamobrem adeſte animis judices, & timorem, ſi quem habetis deponite*. *Voſſ.* Rhet. *Heder.* Schul. Lex. p. 495.

AXIS, in zoology, the name of a very remarkable animal of the deer kind in all reſpects, except that neither the male nor female have horns; the tail is conſiderably long, and the whole ſhape and make extreamly like the fallow deer. The female is ſmaller than the male, and both are of a reddiſh tawney colour, variegated with ſpots of white; the belly is white. The voice is much more loud and ſhrill than that of the deer. It is very plain that this creature is neither of the red nor fallow deer kind, whence Bellonius, who ſaw it at Cairo in Egypt, was induced to call it the *Axis*. *Ray*'s Syn. *Quad. Bellon.*

AXUNGIA *Lunæ*, an affected name given by the German chemiſts to the *Terra Goltbergenſis*, from their imagining that it contains ſome particles of ſilver, and owes to them its virtues in medicine. *Dale*'s Pharmac. p. 19. See the article GOLTBERGENSIS *Terra*.

AXUNGIA *Solis*, is uſed for the terra ſileſiaca, and ſaid to be good againſt the plague, peſtilential fevers, &c. *Boyle*'s Works abr. vol. 1. p. 59. it. fol. edit. p. 501.

AZAB, in the military orders of the Turks, ſignifies a particular body of the ſoldiery taken in, or added firſt to the janizaries, but now become a ſeparate body from them.

The word, in the oriental languages, ſignifies an unmarried perſon, and the original order of theſe was, that they ſhould be ſingle men.

The *Azabs* in Egypt have been great rivals to the janizaries, and ſometimes they have got the better. Their inſtitution and officers are the ſame with thoſe of the janizaries; but with this difference, that from oda baſhees they are made ſerbajees, and from that office caias, and come into the divan. On the contrary, among the janizaries, when any one is made a ſerbagee, 'tis laying him aſide, and he is no farther advanced. *Pocock*'s Egypt, p. 169.

AZALEA, in the Linnæan ſyſtem of botany, the name of a genus of plants, the characters of which are theſe: The cup is a ſmall upright perianthium, of a different colour from the reſt of the plant, divided into five ſegments, and remaining when the flower is fallen. The flower conſiſts of one petal of double the length of the cup, wide open at the top, narrow at the baſe, and lightly divided into five curled ſegments. The ſtamina are five ſlender filaments inſerted into the receptacle. The antheræ are ſimple. The germen of the piſtillum is roundiſh. The ſtyle is ſlender, of the length of the flower, and remains when that is fallen. The ſtigma is obtuſe. The fruit is a round capſule, divided into five cells. The ſeeds are numerous and roundiſh. *Linnæi*, Genera Plantarum, p. 66.

AZAROLA, a tree of the meſpilus kind, and ſomewhat related to our common white thorn, but having a much larger fruit. The fruit of this is much eſteemed in Italy, and from thence it has been introduced into England.

It is to be propagated by budding or grafting on the common hawthorn, and ſhould be planted in a moiſt ſoil, and a warm ſituation, where it will annually produce great quantities of fruit. Theſe are ſhaped like the common haws in our hedges, but they are much larger, and are not fit for eating till they begin to decay, as is the caſe in the common medlar. It is a common miſtake to plant theſe trees againſt warm walls, ſuppoſing they will not produce fruit with us without that aſſiſtance, but it is a very erroneous opinion, for they produce both more and better taſted fruit as ſtandards. *Miller*'s Gardener's Dict.

AZARUM, a ſmall, dry, blackiſh, ſtringy, medicinal root, much uſed in France as a ſpecific for the farcy in horſes. *Savar.* Dict. Comm. T. 1. p. 204. ſeq.

The *Azarum*, called alſo *Nardus Sylveſtris*, grows in the Levant, Canada, and about Lyons in France. The firſt is reputed the beſt. It is given in powder, from the quantity of an ounce to two.

AZAZEL, in jewiſh antiquity. See SCAPE-GOAT.

AZED, in the materia medica, a name given by the Arabian writers to a kind of camphor, which they make the third in value, placing it after the alcanſuri and abriagi. The firſt of theſe was the fineſt of all the kinds of camphor, and was collected tolerably pure from the tree, as it grew in Canſur, the place whence it was named; the abriagi was the ſame camphor, rendered yet more pure by ſublimation. This was a diſcovery of one of the kings of that country, and the camphor was named from him. The third kind, or *Azed*, was the ſame with what we now receive from the Indies, under the name of crude or rough camphor. The word *Azed* ſignified only large, and was uſed to expreſs the camphor, formed into ſuch large cakes, as it is alſo at this time. Aviſenna ſays this camphor was groſs, of a duſky colour, and much leſs bright and pellucid than the other kinds.

AZEDARACH, the *bead tree*, in botany, the name of a genus of trees, the characters of which are theſe: The flower is of the roſaceous kind, being compoſed of ſeveral petals, arranged in a circular form. In the center of the flower there ſtands a tube, which ſurrounds a piſtil ariſing from the center of the cup. This piſtil finally becomes a roundiſh ſoft fruit, containing a ſtone, which is ſtriated, and uſually divided into ſeveral cells, containing oblong ſeeds.

The ſpecies of *Azedarach*, enumerated by Mr. Tournefort, are theſe: 1. The blue flowered aſh-leav'd *Azedarach*. 2. The ever green *Azedarach*. *Tourn.* Inſt. p. 616.

AZELFOGE, in aſtronomy, a fixed ſtar of the ſecond magnitude, in the ſwan's tail. *Wolf.* Lex. Math. p. 233. a. ſeq. *Vital.* Lex. Mathem. p. 79.

Hevelius aſſigns its longitude for the year 1700, ♓ 1°. 16′. 45″. and its latitude northward, 59°. 57′. 53″. Prodrom. Aſtron. p. 184.

AZOOPHAGUS, in natural hiſtory, a term uſed by authors to expreſs ſuch inſects or animals as feed on herbs, never eating the fleſh of any living creature.

AZOTH, (*Cycl.*) a name given by ſome to the philoſophers ſtone. When the Arabs began to cultivate the ſtudy of chymiſtry, the metaphorical and hieroglyphical manner of writing,

writing, which obtained among them, ſeems to have given riſe to a practice of calling the means made uſe of for bringing metals to perfection, by the name of medicines, the imperfect metals by the name of ſick men, and gold by that of a ſound and lively perſon. From hence the ignorant fall into the error of ſuppoſing, that theſe were to be underſtood in a literal ſenſe, eſpecially upon finding the impurities of the baſer metals, called by the name of leproſies, the moſt incurable of all diſeaſes; and hence roſe that opinion, which has ſince ſpread itſelf far and wide, that the imperfect metals might be turned into gold, and the bodies of ſick men into ſound ones, by the ſame preparation. To this preparation they gave the name *Azoth*, or the philoſophers ſtone, and to its poſſeſſors the name of adepts. *Boerhaave*'s Chym. p. 26.

AZURIUM, a hard chymical maſs, produced from two parts of mercury, a third part of ſulphur, and a fourth of ſal ammoniac. Theat. Chym. T. 2. p. 437. *Brun.* Lex. Med. p. 96. b.

AZYMITÆ, in church hiſtory, a name given to thoſe who communicate with bread not leavened or fermented. *Spelm.* Gloſſ. p. 54. a.

The Greeks, in the eleventh century, called the Latins, by way of reproach, *Azymitæ*, and their clergy, Ἀζυμῖται ἱερεις. *Du Cange*, Gloſſ. Lat. T. 1. p. 414.

AZZALUM, in the antient phyſiology, a ſpecies of iron, reputed the moſt excellent of all, ſuppoſed to have been brought from India. Whence it was called *Indicum*, but, in reality, according to ſome, brought from China. *Plin.* Hiſt. Nat. l. 34. c. 14. *Pancirol.* de Reb. Memor. tit. 13.

B.

B, (*Cycl.*)—In muſic, *b* is uſed to denote a flat, or the lowering of a ſound by a ſemi-tone minor. Thus A ♭ or ♭ A is the flat of A, or the ſemi-tone minor below A.

B, *b*, *quadro* or ♮, in the ſcale of muſical notes, ſignifies the ſound which is a tone above A, and a ſemi-tone below C.

In the works of the muſicians of former ages we often meet with the mark ♮ alone, to ſignify the ſame ſound as *b* ♮. The letter B, among them, ſignified what we now call B flat: but among modern muſicians, B is more commonly uſed for the ſound which is a tone above A; and to denote B flat, or the ſemi-tone major above A, B ♭ or ♭ B is uſed.

B is alſo uſed as an abbreviation of *baſſo* or baſs. Hence B. C. ſtands for *baſſo continuo*, or the thorough baſs.

BAAL, in antiquity, the ſupreme being among the Phenicians. See DÆMON, *Cycl.*

BAALIM, in Antiquity, inferior deities among the Phenicians. See DÆMON, *Cycl.*

BAARAS, BAHARAS or BACHARAS, a miraculous kind of root, ſaid to grow on mount Lebanon, in a valley called *Baaras*, whence the name, near the city Macheron.

Joſephus repreſents it as of a flame colour, and emitting rays of light in the night time, like a ſtar, but diſappearing in the day; on which footing it ſhould make a vegetable phoſphorus. This property it may be ſuppoſed to derive from the ſoil, which abounds in bitumen: not unlike the plains of Puzzuoli, which being replete with ſulphur, will flaſh under the horſes feet. But what the hiſtorian adds, concerning the difficulty and danger of pulling up this root, its ſhunning the hand, and retiring under-ground, with the extraordinary means uſed to ſtop it, and the expedient to pull it up, are ſo much on the marvellous, that we dare not relate them. The root, it ſeems, was highly prized for its virtue in curing epilepſies and poſſeſſions. V. *Joſeph.* de Bell. Jud. l. 7. *Salmuth* ad *Pancir.* P. 2. T. 1. p. 60. *Corn.* T. 1. p. 79.

BABBLING, among hunters, is when the hounds are too buſy after they have found a good ſcent. *Cox.* Gent. Recr. P. 1. p. 15.

BABYLONIAN, BABYLONIC, or BABYLONISH *Epocha*, *Gemara*, *Hours*, &c. See the articles EPOCHA, GEMARA, HOUR, &c. *Cycl.*

The *Babylonian* monarchy, hiſtory, &c. is the ſame with what is otherwiſe denominated, the *Chaldean*, or *Aſſyrian*, &c. V. *Strauch.* Brev. Chron. p 181.

In antient writers, we find frequent mention of *Babylonica Texta*, a rich ſort of weavings, or hangings, denominated from the city *Babylon*, where the practice of interweaving divers colours, in their hangings, firſt obtained. *Plin.* Hiſt. Nat. l. 8. c. 48. *Jun.* Pict. Vet. l. 2. c. 8.

Hence alſo *Babylonic* garments, *Babylonic* ſkins, *Babylonic* carpets, houſings, &c. *Briſſ.* de Verb. Signif. *Calv.* Lex. Jur.

Babylonica Solana, coverings laid over couches, &c. painted with gold, purple, and other colours. *Pitiſc.* Lex. Ant. T. 1. p. 237. a.

BABYLONIAN, *Babylonius*, is alſo uſed in ſome antient writers for an aſtrologer, or any thing relating to aſtrology.

Hence *Babylonia Cura* [a], the art of caſting nativities, and *Numeri Babylonii* [b], the computations of aſtrologers. — [[a] *Claud.* Paneg. Conſ. Honor. v. 18. [b] *Hor.* l. 1. Od. 12.]

BABYLONICS, *Babylonica*, in literary hiſtory, a fragment of the ancient hiſtory of the world, ending at 267 years before Chriſt; and compoſed by Beroſus or Beroſſus, a prieſt of Babylon, about the time of Alexander.

Babylonics are ſometimes alſo cited in ancient writers by the title of Caldaics. V. *Stanl.* Hiſt. Philoſ. p. 1034.

The *Babylonics* were very conſonant with ſcripture, as Joſephus and the antient chriſtian chronologers aſſure; whence the author is uſually ſuppoſed to have conſulted the Jewiſh writings. *Beroſus* ſpeaks of an univerſal deluge, an ark, &c. He reckons ten generations between the firſt man and the deluge, and marks the duration of the ſeveral generations by *ſari*, or periods of 223 lunar months; which reduced to years, differ not much from the chronology of Moſes. *Freret.* in Mem. Acad. Inſcr. T. 8. p. 282. ſeq. See SAROS, *Suppl.* CYCLE, GENERATION, CHRONOLOGY, &c. *Cycl.*

The *Babylonics* conſiſted of three books, including the hiſtory of the ancient Babylonians, Medes, &c. But only a few imperfect extracts are now remaining of the work; preſerved chiefly by Joſephus, and Syncellus. Where all the paſſages of citations of antient authors out of Beroſus are collected with great exactneſs. Annius of Viterbo kindly offered his aſſiſtance to ſupply the loſs; and forged a compleat Beroſus out of his own head. The world has not thanked him for the impoſture. V. *Fabric.* Bibl. Græc. l. 6. c. 12. §. 9

BABYROUSSA, in zoology, the name of an animal, called by ſome, *Porcus Indicus*, or the Indian hog. It is of the ſize and ſhape of a ſtag. Its head and its tail reſemble thoſe of a boar, and its legs and feet, the goats. But beſides all theſe ſingularities, there is another thing in which it differs from all the other known animals, which is, that it has four *dentes exerti*, or long and crooked tuſks, two of which ariſe from the lower jaw, and the other two from the upper, making their way through the fleſh. Some have choſe to call them horns, but they are certainly more properly diſtinguiſhed by the name of teeth, as they have each their alveolus, from which they grow juſt in the manner of teeth, and are of the ſubſtance of ivory, not of horn. The creature is found in the iſland of Borneo. *Ray*, Syn. Quad. p. 96.

BAC, in navigation, is uſed for a praam, or ferry-boat. *Aubin.* Dict. marin. p. 59. See the article FERRY, PRAAM, &c.

BAC, in brewing, a large flat kind of tub, or veſſel, wherein the wort is put to ſtand and cool before boiling. *Savar.* Dict. com. p. 207.

The ingredients of beer paſs through three kinds of veſſels. They are maſhed in one, worked in another, and cooled in a third, called *Bacs* or coolers.

BAC, in diſtillery, veſſels into which the liquor to be fermented is pumped from the cooler, in order to be worked with yeaſt. *Shaw*'s Chem. Lect. p. 216.

BACANTIBI, Βακαντιβοι, in eccleſiaſtical antiquity, wandering clerks, who ſtrolled from church to church. V. *Bingh.* Orig. Eccleſ. l. 6. c. 4. §. 5.

The word ſeems formed by corruption from *Vacantivi*.

BACCÆ *Bermudienſes*, in the materia medica, the name of the fruit or berries of the *Sapindus*, or ſoapberry-tree. *Dale*, Pharm. p. 309.

BACCALARIA, in middle age writers, denotes a kind of country farms, conſiſting of ſeveral manſes. *Du Cang.* T. 1. p. 418.

BACCALARIA *Dominicaria*, or *Indominicata*, was more particularly uſed for a farm belonging to the lord, and kept in his own hands.

BACCHÆ, in antiquity, the prieſteſſes of Bacchus, who celebrated the orgia, or myſteries of that god. See BACCHANALIA.

The *Bacchæ* were originally a troop of bold enthuſiaſtic women, who attended Bacchus in his traditionary expedition to the Indies, and were the chief means of his conqueſt.

The *Bacchæ* were alſo denominated *Mænides*, ſometimes *Baſſarides*, from a garment worn by them called *Baſſara*: ſometimes *Thyades*, and ſometimes again *Mimallonides*, *Clodones*, &c. V. *Suid.* T. 2. p. 332.

The *Bacchæ* were cloathed with the ſkins of wild beaſts; they went with their hair looſe, were crowned with ivy, and carried in their left hand the thyrſus. Ovid deſcribes the habit and equipage of the *Bacchæ*. Met. l. 6. v. 592.

Vite caput tegitur; lateri cervina ſiniſtro
Vellera dependent; humero levis incubat haſta.

They ran through the mountains, crying out *Evohe Bacche*, q. d. Let Bacchus live happily. In their frantic humours they tore flocks to pieces, and eat their fleſh raw: when they approached the Indian army, they took to their drums and cymbols, which joined with their howling ſhrieks, and producing their thyrſus's twiſted, terrified the enemy's elephants, and put them to flight. *Lucian* in Dial. Suid. T. 1. p. 411. *Danet*, in Voc. *Bacchus*. *Pitiſc.* Lex Ant. T. 1. p. 238. *Aquin.* Lex. Mil. T. 1. p. 108.

After the return from India, a feaſt was inſtituted by them, in honour of Bacchus, where their frantic exploits were yearly renewed.

BACCHÆ was alſo uſed for the ivy crowns or garlands worn by the prieſts of Bacchus, in offering ſacrifices to him. *Suid.* T. 1. p. 411. *Pitiſc.* T. 1. p. 438 a.

BACCHANALIA, (*Cycl.*) — Plutarch will have the Grecian *Dionyſia*, anſwering the Roman Bacchanalia, to be the ſame with the Egyptian *Pamylia*, celebrated in honour of Oſiris, who was the ſame with the Grecian Bacchus. *Plut.* de Iſid & Oſir.

The *Bacchanalia* at Athens were at firſt very ſimple; a veſſel of wine adorned with a vine branch was brought forth; after this followed a goat; then was carried a buſhel of figs, and laſtly, the *Phalli*. *Plut.* de Cupid. Divit. p. 527.

Many frantic ceremonies were afterwards added, ſome of which are mentioned in the Cyclopædia, to which we may add, that the frantic rout attending theſe ceremonies, was, upon one of the ſolemnities of this god, followed by perſons carrying certain ſacred veſſels; the firſt of which was filled with water; after which went a ſelect number of honourable virgins, called, Κανηφοραι, becauſe they carried little baſkets of

gold, filled with all ſorts of fruit: in theſe conſiſted the moſt myſterious part of the ſolemnity; and therefore to amuſe the common people, ſerpents were put into them, which ſometimes crawling out of their places, aſtoniſhed the beholders. Next was the Περιφαλλια, being a company of men carrying τας φαλλας, which were poles, to the end of which were fixed things in the form of a man's privities. Theſe perſons were crowned with violets and ivy, and had their faces covered with other herbs; they were called Φαλλοφοροι, and the ſongs repeated by them φαλλικα ασματα. After theſe followed the Ιθυφαλλοι, in women's apparel, with garments ſtriped with white, and reaching to their ancles, garlands on their heads, gloves compoſed of flowers on their hands, and in their geſtures imitating drunken men. There were alſo certain perſons called Λικνοφοροι, whoſe buſineſs it was to carry the λικνον or myſtical van of Bacchus, a thing ſo eſſential to this, and other ſolemnities and ſacrifices of this god [a]. Such at leaſt were the Athenian *Bacchanalia*: for the method of celebrating them among the Romans, ſeems not to have been altogether ſo frantic. In reality the *Bacchanalia* was a Grecian feaſt, and never publickly eſtabliſhed at Rome, though long tolerated, and held in the night-time, in the grove of Simila. After its prohibition, recorded at large by Livy, particular perſons ſeem to have continued its uſe. Tacitus gives an elegant deſcription of the *Bacchanalia*, as celebrated by Meſſalina [b]. [[a] *Pott.* Archæol. Græc. T. 1. l. 2. c. 20. p. 383. *Lakemak.* Antiq. Græc. Sacr. P. 4. c. 2. §. 12. p. 610. ſeq. *Pitiſc.* T. 1. p. 238. [b] V. *Tacit.* Anal. 11. c. 31.]

There were divers ſorts of Dionyſia or *Bacchanalia*, among the Greeks; for the name is frequently given to all the ſolemn feaſts of Bacchus.

The firſt held in the ſpring, in the month Elaphebolion, called Διονυσια Αστικα or τα εν Αστει, becauſe ſolemnized within the city, ſometimes μεγαλα, or the great *Bacchanalia*; and ſometimes abſolutely and by way of eminence Διονυσια, or *Bacchanalia*, as being the moſt celebrated of all the feaſts of this deity at Athens.

The ſecond held in autumn, in the month Poſideon, and called more particularly Ανθεια, lenæa; ſometimes τα κατ' Αγρους, or the rural feaſt, becauſe celebrated in the field; ſometimes alſo Διονυσια μικρα, or the leſſer *Bacchanalia*. *Lakemak.* Antiq. Græc. Sacr. P. 4. c. 2. §. 12. *Pott.* Archæol. l. 2. c. 20. p. 384.

The antheſteria are by ſome thought to have been ſacred to Bacchus, under the denomination of Διονυσια Αγχαια, or old *Bachanalia*. *Lakemak.* l. c. See ANTHESTERIA.

The others take theſe to have been two different feaſts, and the latter no other than the great *Bacchanalia*, called Αρχαια, or Αρχαιοτερα, by way of contradiſtinction from the leſſer, or rural ſort, which are denominated Νεωτερα, or the newer.

To theſe may be added the Διονυσια Βραυρωνια, held at Brauron, a borough of Attica; Νυκτηλια, not to be revealed; Αρκαδικα, held by the Arcadians; Τριετηρικα, held by the Thebans in memory of Bacchus's three years expedition into India. *Pott.* l. c. p. 384. *Lakemak.* p. 614.

Jo. Nicolai and Jac. Herrenſchnidius have diſcourſes expreſs on the antient *Bacchanalia* [d]. M. du Rondel [e], has given an apology for the *Bacchanalia*, and ſhewn they were not ſo bad as they have been repreſented.—[[d] V. *Fabric.* Bibl. Ant. c. 10. §. 10. [e] In Diſſ. de Chænice Pythag. publiſhed in French at Amſt. 1690. 12mo.]

Some writers call the Romiſh carnaval, the *Chriſtian Bacchanalia*. *Fabric.* l. c. p. 332. See CARNAVAL.

BACCHANALIA, bacchanals, is alſo a name given to pictures, or *baſſo relievos*, whereon the feaſt is repreſented, conſiſting chiefly of dancings, nudities, and the like.

There are antique bacchanals ſtill ſeen on ſeveral antient friezes. The bacchanals painted by Pouſſin are excellent. *Felib.* ap. Trev. Dict. T. 1. p. 782.

BACCHARACH *Wine*, a name of a particular kind of wine, by ſome eſteemed a kind of Rheniſh; but Portzius, who has written expreſly on the ſubject, obſerves, that it differs from all the common Rheniſh wine, in colour, odour, taſte and virtue. When the wine is firſt made, it is of a yellowiſh colour, but they take off this by means of ichthyocolla cut and ſteeped in fair water for ten or twelve hours, and then torn to pieces, and mixed with the wine, but only in a ſmall quantity. They add only ſo much of the wine as they ſuppoſe capable of diſſolving it; and then letting it ſtand ſix or ſeven days, they put it into a ſieve, and pouring ſome more wine on it, they waſh it through; and thus percolated, they pour it out of one veſſel into another till it froths; they then pour the whole into a proper quantity of the wine, to clarify it and take away its colour. Some add, at the ſame time, a quantity of ſand, or of powdered white glaſs, which being heavy, and entangling themſelves in the foul matter of the wine, carry it to the bottom with them. When they pour this ſolution into the veſſel, they uſe a little ſtick with a piece of thin board perforated at the end of it, with which they beat the wine in the veſſel, to mix the ſolution of iſinglaſs everywhere with it. Four or five days ſtanding quiet after this, ſeparates all the fœces, and the wine is then drawn out into other veſſels pure and colourleſs. *Portzius* de vin. Rhen.

The *Baccharach* wine is of a very agreeable taſte, and in its qualities is rather inciſive than diuretic; it is alſo accounted ſtomachic, and is famous for quickening the ſpirits more and ſooner than any other wine.

The *Baccaharach* wine agrees with the other wines, in that more ſpirit is obtained from it than from the Greek, Muſcodine, or any other of the ſweet wines.

The ſpirit diſtilled from this and other thinner wines is alſo more fine than the richer wines.

BACCHARIS, BACCHAR, in botany, commonly called *plowman's ſpikenard*, a ſweet ſcented ſhrubby plant. The leaves are rough, and of a ſize between thoſe of the violet and mullein. The ſtalk is bent into angles, and riſes to the height of a cubit, is ſomewhat rough, and not without ſuckers. The flowers are of a purple colour inclining to white, and have a fragrant ſmell; and the roots are like hellebore, and ſmell like cinnamon. It delights in a rough dry ſoil. See CONYZA.

This plant is but rarely uſed in medicine; though ſome reckon it a good vulnerary, and uſeful in bruiſes, &c.

The *Baccharis* is the *Conyza major vulgaris* of C. Bauhin. V. *Ray*'s Synopſ. & Hiſt. Plant. *Boerhaav.* index, &c. See alſo *Miller*'s Gard. Dict. voc. *Conyza*.

Monſ. Vaillant makes the *Baccharis*, (in French, *Bacchante*) a genus of the corymbiferous claſs, and enumerates its ſpecies in Mem. Acad. des Sciences, Anno 1719.

He ſuppoſes *Baccharis* to be derived from Bacchus, Βακχος, the god of wine; becauſe the plants to which the ancients gave this name had a vinous ſmell, or perhaps, becauſe they were uſed as a preſervative againſt the diſtemper called Βακχος by the Greeks, which they conſidered as an inchantment.

BACCHARIS, Βακχαρις, was alſo the name of a ſweet ointment among the ancients, perhaps from this herb's being a principal ingredient in it.

BACCHI, in mechanics, a kind of antient machines, in form of goats, uſed by Jupiter in his wars againſt the giants.

Rubeck deſcribes two kinds of *Bacchi*, one made like the battering ram, wherewith Jupiter demoliſhed the enemies fortifications; the other contrived to caſt fire out of; from whence the Greeks are conjectured to have framed their idea of chimera. *Rudbeck*, Atlant. P. 3. c. 13. Phil. Tranſ. N°. 302. p. 2078.

BACCHIC, ſomething relating to the ceremonies of Bacchus.

The celebrated intaglia, called Michael Angelo's ring, is a repreſentation of a *Bacchic* feaſt.

BACCHIC *Song*, *Bacchicum carmen*, is ſometimes uſed for a *chanſon à boire*, or compoſition to inſpire jollity. But in a more proper ſenſe, it is reſtrained to a dithyrambic ode, or hymn. V. Mem. Acad. Inſcrip. T. 7. p. 293.

BACCHICA, in botany, is uſed for ivy, *hedera*. *Blancard* Lex. Med.

BACCOFOE, in botany, the name of a fruit very common in Guinea. It is like the banana, except that it is whiter, thicker, and ſhorter. The taſte and ſmell are both very agreeable; and ſome pretend, that on cutting it through tranſverſely, there is the figure of a crucifix repreſented on each ſide of it. Phil. Tranſ. N°. 108.

BACCHUS, in zoology, a name given by ſome to the *myxon*, a fiſh of the mullet kind, remarkable for the red colour of its lips, and the extremity of the covering of the gills. *Willughby* Hiſt. Piſc. p. 276. See the articles MYXON and MUGIL.

BACHARIS, in botany. See BACCHARIS.

BACK, in the manege, and among farriers. A horſe's *Back* ſhould be ſtreight, not hollow, which is called *ſaddle backed*: horſes of this kind are generally light, and carry their heads high, but want in ſtrength and ſervice. A horſe with a weak back is apt to ſtumble. Ruſt. Dict. in voc. *Reins*.

In the French riding ſchools, to mount a horſe *a dos*, is to mount him bare-backed, without a ſaddle. *Guill.* Gent Dict. p. 1.

BACK *of a chimney*, the hind part between the jaumbs and the hearth, uſually formed of brick, ſometimes tiles.

Iron BACK, is a large plate of caſt-iron, frequently adorned with figures in low relievo, ſerving not only to preſerve the ſtonework of the chimney back, but alſo to reflect the heat of the fire forwards. V. *Davil.* Courſ. d' Archit. P. 1. pl. 57. and 58.

BACK *of a hip*, among builders, denotes the two planes on the outſide of the hip, lying parallel with the adjoining ſide and end of the roof. *Neve*, Build. Dict. in voc. *Hip*. See HIP.

BACK *painting*, is uſed by ſome for the art of paſting of prints, and other deſigns on glaſs. *Smith.* Art of Paint. c. 19.

BACKS, among dealers in leather, denote the thickeſt and beſt tanned hides uſed chiefly for ſoles of ſhoes. *Hought.* Collect. T. 1. N°. 123. p. 322.

BACKS, in diſtillery. See BAC.

BACKBEROND, or *Backberend*, in law writers, denotes a criminal caught carrying off ſomething on his back. *Spelman.* p. 55. a. *Skinner*, Etym. voc. Forens.

In this Senſe, Bracton uſes it for a ſpecies of what the civilians call manifeſt theft, *furtum manifeſtum*. *Bract.* l. 3. Trac. 2. c. 32.

In the foreſt laws, *Backberond* is one of the four circumſtances, or caſes, wherein a foreſter may arreſt the body of an offender againſt vert, or veniſon in the foreſt. The others are *ſtalle-*

ſtable-ſtand, *dog-draw*, and *bloody-hand*. *Manwood* of Foreſt Laws, p. 2. *Cowel*. *Blount*. Terms de Ley.

BACKING *a colt*, the operation of breaking him to the ſaddle, or bringing him to endure a rider.

To *back* a colt they uſually take him into ploughed ground, trot him a while, to rid him of his wantonneſs; then having one to ſtay his head, and govern the chaffing rein, the maſter mounts his back, not ſuddenly, but by degrees, firſt making ſeveral offers or half-riſings: when he bears theſe patiently, he mounts in earneſt, and ſettles in his place, cheriſhing him, &c. V. Dict. Ruſt. in voc. Gent. Recr. p. 44.

BACKING *a horſe*. See HORSE.

BACK-WORM, a name given by ſportſmen to a diſeaſe very common to hawks, and called alſo the *filander*. The worms are lodged between the ſkin and the fleſh, and grow to a great length, ſome of them being not leſs than half a yard long. They are very troubleſome to the bird, and will at length kill it, if they be not deſtroyed in time. Their uſual place is under the ſkin of the lower part of the back, towards the rump.

There are ſeveral ſymptoms which diſcover the bird to be troubled with this diſeaſe, the principal are the ſtinking of its breath, the croaking and mourning in the night, ruffling and writhing the tail, and the ſmallneſs of the dung.

The beſt method of cure is this: ſqueeze out the juice of ſome ſtrong and well-grown wormwood, put into it as many cloves of garlick as it will conveniently cover; let the cloves be well cleaned of all ſkins, and pierced with holes; this is to ſtand a few nights, and afterwards one of the cloves is to be given, freſh taken out of the liquor every evening, for four nights together, and after a reſt of a few days, the ſame number given again, and ſo on till the diſeaſe is got the better of. Others give a ſcouring of waſhed aloes, muſtard-ſeed, and agarick, of each equal quantities. Dict. Ruſtic. in voc.

BACOBA, in botany, a name by which ſome authors call the bonana-tree, or *muſa fructu breviori*. *Piſo*. p. 76.

BACON, ſwin's fleſh ſalted and dried in the chimney. Writers on this branch of œconomics give rules for the hanging, the ſalting, and curing of *bacon*, larding with *bacon*, &c. V. *Collins*, Salt. and Fiſhery, p 123, and 129.

BACON *ſward*, denotes the thick outer ſkin taken off the lard or fat.

Old hiſtorians and law writers ſpeak of the *ſervice of the* BACON, a cuſtom in the manor of Whichenacre in Staffordſhire, and Priory of Dunmore in Eſſex; in the former of which places, by an antient grant of the lord, a flitch of *bacon*, with half a quarter of wheat, was to be given to every married couple, who could ſwear, that having been married a year and a day, they would never within that time have once exchanged their mate for any other perſon on earth, however richer, fairer, or the like. But they were to bring two of their Neighbours to ſwear with them that they believed they ſwore the truth. On this the lord of another neighbouring manor, of Rudlow, was to find a horſe ſaddled, and a ſack to carry the bounty in, with drums and trumpets, as far as a day's journey out of the manor: all the tenants of the manor being ſummoned to attend, and pay ſervice to the *bacon*. V. *Plot*. Nat. Hiſt. Stafford. c 10. §. 77.

The *Bacon of Dunmore*, firſt erected under Henry III. was on much the ſame footing; only the tenor of the oath was, that the parties had never once repented, or wiſhed themſelves unmarried again. *Plot*. l. c. §. 80.

BACTROPERATA, an antient appellation given to philoſophers by way of contempt, denoting a man with a ſtaff and a budget. *Hieron* in Matth. c. 10.

The word is alſo written *Bactropereta*. It is compounded of βακτρον, ſtaff, and πηρα, bag, or budget.

Du Cange is of opinion, it ought to be written *Bactroperita*; and that it denoted a traveller, or pilgrim, who carried a ſtaff and a leathern bottle of wine, as the word is explained by Papias. Dict. de Trev. T. 1. p. 787.

We ſuppoſe it is of the ſame people, that Paſchaſius Radbertus ſpeaks, under the corrupt name of *Baccoperitæ*, or *Bacchionitæ*, whom he deſcribes as philoſophers who had ſo great a contempt for all earthly things, that they kept nothing but a diſh to drink out of; and that one of this order ſeeing a peaſant ſcooping up the water in his hand, threw away his cup as a ſuperfluity; which is nothing but the old ſtory of Diogenes the Cynic. Dict. de Trev. T. 1. p. 782.

BACULARES, a ſect of anabaptiſts, ſo called, as holding it unlawful to bear a ſword, or any other arms, beſides a ſtaff. *Pratol* Elench. Hæret. P. 1. l. 2. §. 2.

BACULARIUS, in writers of the middle age, an eccleſiaſtical apparitor, or verger; who carries a ſtaff, *bacculus*, in his hand, as an enſign of his office. *Du Cange*, Gloſſ. Lat. T. 1. p. 425.

BACULI Sti. *Pauli*, or batoons of St. Paul, a kind of figured ſtones of the ſame ſubſtance with thoſe reſembling the briſtles of ſome american Echini, called by Dr. Plott *Lapides Judaici*. *Lhuyd*. in Ray Phil. Lett. p. 235.

BACULOMETRY, *Baculometria*, (*Cycl.*) — is properly that branch or ſpecies of geodeſia, which finds heights and diſtances, by the help of ſtaves. *Wolf*. Lex. Math. 235.

Schwenter has explained this art in his geometria practica; the rules of it are alſo laid down by Wolfius [a], in his elements; Ozanam alſo gives an illuſtration of the principles of *baculometry* [b]. — [[a] Elem. Geom. § 183, 197, 201, 205, 243, 262, ſeq. 271, 345. [b] Dict. Math.]

BACULOSUS *Eccleſiaſticus*, in ſome antient laws, is uſed for a biſhop or abbot, dignified with the paſtoral ſtaff, or crozier. *Spelm*. Gloſſ. p. 55. a.

BADGER, in zoology. See the articles TAXUS and MELES.

BADIAGA, in the materia medica, the name of a ſort of ſpungy plant, common in the ſhops in Moſcow, and ſome other northern kingdoms.

The uſe of it is the taking away the livid marks from blows and bruiſes, which the powder of this plant is ſaid to do in a night's time.

We owe the knowledge of this medicine, and its hiſtory, to the accurate Buxbaum. He obſerves, that the plant is always found under water, and is of a very ſingular and peculiar nature.

It ſomewhat reſembles the *alcyoniums*, and ſomewhat the ſpunges, but differs greatly from both, in that it is full of ſmall round granules, reſembling ſeeds. It is of a looſe, light, and ſpungy ſtructure, and is made up of a number of fibres of an herbaceous matter, and is dry, rigid, and friable between the fingers.

This may ſerve as the generical character of the *badiaga*, of which this accurate obſerver has found three different ſpecies. The firſt of theſe he calls the great *badiaga*; this is mentioned in Loſel's *Flora Pruſſica*, under the name of *Muſcus aquaticus ceratoides*, the horned water moſs; and Breynius calls it an elegant ſpecies of ſpunge; the ſeeds of this large kind are whitiſh, and are convex on one part, and hollowed on the other, in the manner of the crabs eyes; the ſmell of this ſpecies is very offenſive, and reſembles the ſmell of ſome rank fiſh.

The ſecond ſpecies is ſmaller, and leſs branched than this, and is remarkable for its yellow ſeeds. It is like the former, of a dark blackiſh green colour, and of a fiſhy rank ſmell; this uſually adheres either to the mud at the bottom of lakes, or to ſome ſmall water plants, ſuch as the three leaved duckweed, or the like, whereas the former is generally found ſticking to old boards. This loves ſtanding water, and is called the leſſer *badiaga*.

The third kind is the grey, or aſh-coloured *badiaga*; this is the plant called the branched brittle river-ſpunge, by Mr. Ray. This is a much more elegant plant than either of the other ſpecies, and much approaches to the nature of the branched ſpunges, but it is very brittle; the branches of this often grow together, and form cavities between them occluded on all ſides. The ſeeds of this ſpecies Buxbaum had not an opportunity of obſerving, but judged from a ſimilarity in the other parts of the plants, that they were like thoſe of the reſt. Act. Petrop. Vol. 2. p. 344.

BADIGEON, a mixture of plaiſter and free-ſtone, well ground together, and ſifted; uſed by ſtatuaries to fill up the little holes, and repair the defects in ſtones, whereof they make their ſtatues and other work. *Savar*. Dict. Com. p. 209.

Maſons give the ſame name to a kind of mortar made of the duſt, or fragments of free-ſtone, wherewith they colour, or ſmeer over the common plaiſter, to give it a reſemblance of free-ſtone.

The ſame term is alſo uſed by joiners, for ſaw-duſt mixed with ſtrong glue, wherewith they fill up the chaps, and other defects in wood, after it is wrought.

BADOUCE, in natural hiſtory, the Eaſt Indian name of a fruit, very common in that part of the world. It is round, and of the ſize of one of our common apples; it is yellow on the outſide, and white within. It reſembles the mangouſtan; but its pulp is more tranſparent; its taſte is very agreeable, and has ſome reſemblance of that of our gooſeberries.

BÆTUS, in ichthyology, a name given by Ariſtotle, and other of the antient Greeks, to the fiſh called by the Latin writers *cottus*; particularly to that ſpecies of it which we call the *bull-head*, or the *miller's-thumb*. See COTTUS.

BÆTYLOS, or BÆTYLION, in antiquity, a kind of ſtones worſhipped among the Greeks, Phrygians, and other nations of the eaſt; ſuppoſed by modern naturaliſts to be the ſame with our *ceraunia*, or thunder-ſtone. *Mercat*. Metalloth. Arm. 9. c. 16. p. 240. See the article CERAUNIA.

The *Bætylos*, among the Greeks, is repreſented as the ſame with the *abadir* among the Romans. See the article ABADIR.

The *Bætyli*, repreſented by the ancient mythologiſts, are conſidered by ſome as a kind of animated ſtatues ſuppoſed to have been invented by Cælus, in his war againſt Saturn. Others derive their origin and worſhip from the ſtone which Saturn is ſaid to have ſwallowed by miſtake for his ſon Jupiter: others from the pillar of ſtone, which the patriarch Jacob erected at Bethel [b]; and which was afterwards worſhipped by the Jews [c]. And hence the uſual etymology of the word [d]. —[[b] Geneſ. c. 28. v. 18. [c] *Fabric*. Cod. Apocr. vet. Teſt. T. 1. c. 440. §. 134. Mem. Acad. Inſcrip. T. 3. p. 178. [d] V. *Voſſ*. Etym. p. 60. b.]

The prieſts of Cybele carried a *Bætylos* on their breaſt, repreſenting the mother of the gods. But it is a miſtake to ſuppoſe, that this was the only repreſentation of the goddeſs that they carried about with them. V. *Banier*. in Hiſt. Ac ad. Inſcrip. T. 3. p. 361.

These *Bætyli* were much the object of the veneration of the antient heathens. Many of their idols were no other. In reality no sort of idol was more common in the eastern countries, than that of oblong-stones erected, and hence termed by the Greeks, κιονες, pillars.

In some parts of Egypt they were planted on both sides of the highways. In the temple of Heliogabalus, in Syria, there was one pretended to have fallen from heaven. There was also a famous black stone in Phrygia, said to have fallen from heaven. These were most commonly nothing but shapeless stones, though honoured, as representing the mother of the gods. The Romans sent for it, and the priests belonging to it, with much ceremony, Scipio Nasica being at the head of the embassy. V. *Banier.* Hist. Acad. Inscrip. Tom. 3. p. 362. *Strab.* Geogr. l. 17. *Pott.* Archeol. l. 2. c. 2. p. 190. seq.

BAG, (*Cycl.*)—BAG, *faculus*, in medicine and pharmacy, denotes a kind of fomentation, prepared of proper ingredients, inclosed in a *bag*, to be applied externally to a part diseased, for present relief. *Barchuy's* Pharm. Synop. p. 132.

Dispensatory writers describe cordial *bags*, used in deliquiums; *bags* for the side, for the stomach, in weaknesses of the stomach; anodyne *bags* to ease pain in any part. *Quinc.* Pharm. P. 4. §. 14.

Wines and ales are frequently medicated by putting into them *bags* full of proper ingredients.

Sweet *bags*, are compositions of perfumes, scented powders, and the like, inclosed in *bags*, to give a fragrancy to clothes or the like. *Salmon.* Polygr. l. 5. c. 13.

Petty BAG. See PETTY *Bag*.

BAGADAT, a name by which some call the carrier pidgeon, the *Columba Tabellaria* of Moore. This name is probably a composition of the word Bagdat, the name of the city from whence they are sometimes brought to Europe; being originally brought thither from Bazora. *Moore's* Columb. p. 29.

BAGAUDÆ, or BACAUDÆ, an antient faction of peasants, or malcontents, who ravaged the Gauls.

The Gauls being oppressed with taxes, rose about the year of Christ 290, under the command of Amand and Elian; and assumed the name *Bagaudæ*, which according to some authors, signified, in the Gallic language, forced rebels; according to others, tribute; according to others, robbers; which last signification others allow the word had, but then it was only after the time of the *bagaudæ*, and doubtless took its rise from them. V. *Du Cange*, Gloss. Lat. T. 1. p. 431. *Pitisc.* Lex. Ant. T. 1. p. 238. *Menag.* Orig p. 69. b. *Aquin.* Lex Milit. T. 1. p. 108. a.

BAGGAGE, is particularly used in the military art, for the necessaries, utensils, apparel, &c of the officers and soldiers.

The *baggage* includes also women, children, suttlers, &c.

The *baggage* is well called by Roman writers, *Impedimenta*, on account of the great trouble and expence attending it. Unless strict discipline be kept, great inconveniences may arise from it; whence several military laws and ordinances relating to the *baggage*. Of late times, they have the precaution, when any expedition that requires dispatch is undertaken, or when a battle is expected, to send away the *baggage* to some place of security. *Fæsch.* Ingen. Lex. p. 930. b.

The *Baggage* waggons before a march are appointed a rendezvous, where they are marshalled by the waggon-master general, according to the rank the several regiments bear in the army. On a march, they are sometimes ordered to follow the respective columns of the army, sometimes to follow the march of the artillery, and sometimes to make a column of themselves. The general's *baggage* is generally first. If the army march from the right, the *baggage* of that wing has the van; if from the left, the *baggage* of the left has the van. Each waggon has a distinguishing flag, to shew to what regiment it belongs. *Guillet.* p. 2.

Packing up the BAGGAGE, *vasa colligere*, was a term among the Romans, for preparing to go to the war, or to be ready for an expedition. *Aquin.* T. 2. p. 415. a.

The formula whereby the soldiers declared they were in readiness, was, *vasa conclamare.*

The Romans distinguished two kinds of *baggage*, a *greater* and *less*: The lesser was carried by the soldier on his back, and called *sarcina*; consisting of the things most necessary to life, and which he could not do without. Hence *colligere sarcinas*, packing up the *baggage*, is used for decamping, *castra movere.*

The *greater* and heavier was carried on horses and vehicles, and called *onera*. Hence *onera vehiculorum*, *sarcinæ hominum.* The *baggage* horses were denominated *sagmentarii equi. Aquin.* Lex. Milit. T. 2. p. 268. a. It. p. 261. b.

The Roman soldiers in their marches were heavy loaden, insomuch, that they were called by way of jest, *muli mariani*, and *ærumnæ*. They had four sorts of *luggage*, which they never went without, *viz.* corn, or *buccellatum*, utensils, valli, and arms.—Cicero observes, that they used to carry with them above half a month's provisions; and we have instances in Livy, where they carried provisions for a whole month. Their utensils comprehended those proper for gathering fewel, dressing their meat, and even for fortification, or intrenchment, and what is more, a chain for binding captives.

For arms, the foot carried a spear, shield, saw, basket, rutrum, hatchet, lorum, falx, &c. Also stakes or pales, *valli*, for the sudden fortifying a camp; sometimes seven or even twelve of these pales were carried by each man, though generally, as Polybius tells us, only three or four.

On the Trajan column we see soldiers represented with this fardle of corn, utensils, pales, &c. gathered into a bundle and laid on their shoulders. V. *Lipsi* de milit. Rom. l. 5. dial. 2.

Thus enured to labour, they grew strong, and able to undergo any fatigue in battle; the greatest heat of which never tired them, or put them out of breath. In after-times, when discipline grew slack, this luggage was thrown on carriages, and porter's shoulders.

The Macedonians were not less inured to hardship than the Romans: when Philip first formed an army, he forbid all use of carriages: yet with all their load, they would march in a summer's day, twenty miles in military rank. V. *Aquin.* T. 2. p. 106. seq. *Pitisc.* T. 1. p. 944.

BAGGING *of Hops.* See HOPS.

BAGOI, among the antient Persians, were the same with those called by the Latins, *spadones*, viz. a species of eunuchs, in whom the canal of the penis was so contorted by a tight vinculum, that they could not emit the semen. *Plin.* Hist. Nat. l. 13. c. 4. *Calv.* Lex. p. 107. b.

BAGPIPE, this instrument was called by the Romans *utricularis tibia*, and the players thereon, *utricularii*; by the Greeks Ασκαυλοι. Some also take *nablion*, or *nablon*, mentioned by Strabo, and others, for a *bagpipe*. *Pitisc.* Lex. Ant. T. 2. p. 1126. b. & 246. b.

The invention of the *bagpipe* is by some derived from Tubal, who is called in Scripture *Pater canentium organo & cithara.* Others attribute it to Pan; others to Mercury; others to Faunus; others to Marsyas; and others to the young Sicilian shepherd Daphnis, who first composed pastorals.

The *bagpipe* was used to celebrate the praises of heroes and great men, as well as at sacrifices, solemn feasts, combats, funerals, &c. The *bagpipe* is only an improvement of the calamus or oaten pipe, by combining of several different sizes together; but much mended by the bellows being added to it, which is said to be the invention of a king of Phrygia. Before his time the instrument being blown by the mouth, subjected the player to much grimace; to prevent which, the antients used a kind of bridle, or leathern collar, called *capistrum*, which coming over the mouth, pressed the lips and cheeks so tight, as only just to leave room for giving breath to the pipe. Journ. des Scav. T. 6. p. 270.

An anonymous French author has published a treatise of the *bagpipe*, *traité de la musette*, with a new method of learning to play on it without a master. Fol. Par. 1672. V. Jour. des Scav. T. 6. p. 268.

BAGRE, in zoology, a small bearded fish of the anguilliform kind, of which there are several species. The most common of these, called simply the *bagre*, is to be known by these characters. Its body is oblong, the beginning of its back is elevated, and its head is pointed, or of a conic form, and covered with a hard crust or shell, reaching to the beginning of the back. Its usual length is about a foot; its beard, for all the fish of this name have beards, is composed of six fibres; the four lower of which are of a finger and an half long, and the two upper of the length of the whole body of the fish. It has seven fins besides the tail; of which the two that are below the gill-fins, and one placed erect on the summit of the back, have each a strong, bony, and serrated horn, of their own length; the others are supported by softer prickles; the tail is forked; it has no scales, but is covered over the whole body with a soft mucous skin of a silvery whiteness, and the beard, the head, and fins, are all of the same colour; the eyes are large, the mouth small, and without teeth. It is caught in the American seas, and is eaten; but if any body is wounded by its thorns, it generally gives great pain, and is difficult to cure. *Margrave's* Hist. Brasil.

The other species are some larger, others smaller, and have other slight distinctions; but they are all bearded, and all have thorns at some of their fins.

BAGRE *de Rio*, a name by which some call the fish more frequently known by the name of *Nhamdia*. *Margrave's* Hist. Brasil. See the article NHAMDIA.

BAHAR, or BARR, a weight used at Ternate, Moca, in the Moluccas, Achem, and divers other parts of the East Indies. Lex. Mercat. p. 385.

There are two kinds, the *great*, wherewith spice is weighed, equivalent to 200 catis, at 26 taels to the cati, amounting to 481 pounds 4 ounces, Paris measure.

The *little bahar* serves for the weighing quicksilver, vermilion, ivory, silk, musk, and other precious wares, containing likewise 200 catis, but at 22 tael to the cati, amounting to about 401 pounds 7 ounces, Paris measure. The Chinese *bahar* is 300 catis, but each cati only equal to 16 taels. *Savar.* Dict. Com. p. 211.

BAHIRA, among the antient Arabs, a name given to one of the four kinds of camels or sheep, which for some reasons of their religion, were turned out at liberty, with an ear-mark, no longer

longer to be used for service like other cattle. Vid. Kor. c 5. *Sale*, not ad loc. p. 96.

The *Bahira*, with the *Saiba*, *Wasita*, and *Hami*, were abolished by Mahomet, as no ordinance of God. Vide *Sale*, Prelim. Disc. to Koran, §. 5. p. 128, seq.

Authors are not agreed as to the characters of the *Bahira*.

BAILIAGE, is used for the office of a bailiff, for the place where he keeps his seat, and for the territory subject to his jurisdiction; which last is also denominated *bailiwick*.

French Compté is divided into three grand *bailiages*; most of the provinces of Germany are divided into *ampts* or *bailiages*, that is, into a number of cantons, containing each several villages, a city or town where the bailiff resides, who is properly the prince's officer, and obliged to look after his affairs.

Water BAILIAGE, *or* BAILAGE, is an antient duty received by the city of London, for all goods and merchandises brought into or carried out of the port. Lex. Mercat. p. 135.

BAILIFF, (*Cycl.*)—The name *bailiff*, *bailivus*, appears to have been first brought into England by the Normans. It is true, we find it in the laws of Edward the Confessor, chap. 35; where sheriffs, aldermen, *&c.* are called *bailiffs* of the king: *Vicecomites*, *aldermanni*, *& præpositi hundredorum & wapentachiorum*, *& cæteri* ballivi *domini regis*; but *Spelman*, with probability, takes the word not to have been in use, but added of later times.

We meet with divers species and denominations of *bailiffs* in these and the neighbouring countries; as *provincial*, *royal*, *itinerant*, and *heretable bailiffs*; *bailiffs* of France, of the Empire, of boroughs, of courts baron, of franchises, manors, *&c.*

Provincial BAILIFF, *Bailivus Provincialis*, among the French, was an officer appointed to administer justice in a certain province, or county, with an authority somewhat like that of our justices of assize, instituted by the dukes and counts in their several territories, after they had procured the inheritance of them. These acted in the name, and by authority, not of the king, as justiciaries, but of the dukes, or counts, who appointed them, and whose deputies they were. Spelman takes them to be the same with what, among our Saxon ancestors, were denominated *aldermen of counties*, and *graves*, or *reves*, which afterwards became *vicecomites*, and sheriffs. *Spelm.* p. 57. b.

Appeals lay from these to the *bailiffs* of France, *bailivi Franciæ*, who were those appointed over the provinces originally belonging to the crown.

Royal BAILIFFS, *Bailivi Regii*, were those over provinces afterwards annexed to the crown. Something like these still subsists in Scotland, under the title of high or heretable *bailiffs*; as those of Cunningham, Carrick, and Kyle; the first in the family of the earls of Eglington, the second, of the earl of Cassils, the third, of the earl of Loudon. *Chamberl.* Pres. State of Brit. P. 2. p. 680.

BAILIFFS *of Boroughs*, *Bailivi Burgorum*, were magistrates antiently in cities and towns, answering, in some measure, to what of later times was called *portgrave*, *mayor*, &c.

Canterbury was a *bailiff* town five hundred years ere it was made a mayor town. Westminster, Southwark, Scarborough, *&c.* are still governed by *bailiffs*. *Somn.* Antiq. Cant. p. 366.

Bailiffs differ in this from mayors, that the latter are always single in one place, whereas there was usually two *bailiffs* to a city, as formerly at London, and sometimes four, as at Norwich. *Spelm.* Gloss. p. 58. *Du Cange*, T. 1. p. 439.

BAILIFF *of the Empire*, was antiently the vicar or regent of the empire; as appears from a letter of Henry of Flanders to pope Innocent III. wherein he says, the princes, barons, and knights, have elected me *bailiff of the empire*; *bailivus imperii*. Dict. de Trev. T. 1. p. 804.

BAILO, or BALIO, a name given at Constantinople, to the embassador of Venice residing at the Port; who also does the office of consul of his nation. Diction. de Trev. T. 1. p. 799.

The word is doubtless the remains of the word *bajulus*, which the modern Greeks and Turks have formed into *bailo*. *Savar.* Dict. Com. p. 212.

The Venetian consuls at Aleppo, Alexandria, Smyrna, and other parts of the Levant, are also denominated *bailo*.

BAIOCCO, a money in modern Rome, equivalent to a tenth part of the *julio*, or a hundredth part of the ducat. *Moor.* Math. Comp. c. 3. p. 20.

The *baiocco* is worth about nine deniers, French money. *Savar.* Dict. Com. p. 214.

BAIRAM, (*Cycl.*)—The *Little* BAIRAM is properly that held at the close of the fast Ramazan, beginning with the first full moon in the following month *Shawal*. This is called in Arabic *Id al Fetz*, or the Feast of breaking the Fast; by European writers, the Turkish Easter, because it succeeds Ramazan, which is their Lent, more usually the *Great Bairam*, because observed with great ceremony and rejoicing at Constantinople, and through Turky, for three days, and in Persia for five or six days, at least by the common people, to make themselves amends for the mortification of the preceding month. Vid. *D'Herbel.* Bibl. Orient. in voc. *Bairam*.

This feast commencing with the new moon, the Mahometans are very scrupulous in observing the time when the new moon commences; to which purpose, observers are sent to the tops of the highest mountains, who, the moment they spy the appearance of a new moon, run to the city, and proclaim *Muzhdaluk*, welcome news; as it is the signal for beginning the festivity. Vid. *Hyd.* Not. ad Bobov. Liturg. Turc. §. 4. p. 134. The ceremonies are described at large by *Rycaut* [b] and *Tournefort* [c].—[b Vid. Pref. Stat. Ottom. Emp. l. 2. c. 24. p. 125, seq. c Voyage du Levant, T. 1. Lett. 1. p. 176. Idem, T. 2. Lett. 14. p. 2.

The Greater BAIRAM, is properly that held by the pilgrims at Mecca, commencing on the tenth of Dhu lhajia, when the victims are slain, and lasting three days. This is called by the Arabs, *Id al adha*, that is, the feast of sacrifice, as being celebrated in memory of the sacrifice of Abram, whose son God redeemed with a great victim [d]. By European writers it is called the *Lesser Bairam*, as being less taken notice of by the generality of the people, who are not struck with it, because the ceremonies, it is observed withal, are performed at Mecca, the only scene of the solemnity [e]. ——[d Vid. Koran, c. 37. e Vid. *Sale*, Prelim. Disc. to the Koran, p. 151]

On the feast of *Bairam*, after throwing little stones, one after another, into the valley Mina, they usually kill one or more sheep, some a goat, bullock, or even a camel; and, after giving part thereof to the poor, eat the rest with their friends. After this, they shave themselves. The second is a day of rest. On the third, they set out on their return home. Vide *Reland.* de Relig. Mahom. p. 116. See also *Bobov.* de Liturg. Turc. § 4. p. 133, seq. *Tournef.* Voyag. T. 1. Let. 1. p. 27.

BAIT, (*Cycl.*)—*Baits* make a capital article in angling; on the choice whereof, much of the sport depends; different seasons, and different game, having their appropriate *baits*. The red, or earth worm is good for the small fry most of the year round; and small fish are good *baits* for pikes at all times; sheep's blood and cheese are good *bait* in April; the bobs, dried wasps, and bees, are for May; brown flies for June; maggots, hornets, wasps, and bees, for July; snails in August; grasshoppers in September; corn, bramble berries and seeds, at the fall of the leaf; artificial pastes are for May, June, and July, and frogs for March. Sportsm. Dict. T. 1. in voc.

We meet with divers kinds of *baits*; live, and dead *baits*, ledger, and walking *baits*, &c.

Live BAITS, again, are either *natural* or *artificial*.

Natural BAITS include all kinds of worms, as the red worm, maggot, and the like; also frogs, grasshoppers, hornets, bees, brown flies, snails, roaches, bleak, gudgeon, and loaches. Vide Gent. Angl. p 25, seq.

Artificial BAITS, are flies of all kinds and shapes, made of silk, feathers, and the like. The variety of which is very great; there being not only different ones for every season and month of the year, but almost for every fish.

There are several *artificial baits*, for intoxicating of fowl, and yet without tainting or hurting the flesh, so as to make it unfit to eat.

Dead BAITS, are pastes of divers sorts, made of corn, cheese, fruits, wasps dried or undried, sheeps blood, boiled beans, and the like.

Ledger BAIT, is that which remains fixed in one certain place, while the angler may be absent; used especially in fishing for pike. *Cox.* Gent. Recr. P. 4. p. 45.

Walking BAIT, is that which the angler attends, while he keeps moving from place to place, in quest of the fish. Vid. Dict. Rust. in voc.

BAITS *of Hemp*, denote bundles of that plant, pulled and tied up, ready for steeping in the water. *Hought.* Collect. N° 347. T. 2. p. 390. See FLY and FISHING, *Cycl.* and *Suppl.*

Live BAITS, are to be kept each sort separate, and fed with those things which they like best.

The red worm is to be kept in rich black mould, with a little fennel chopped among it; a little ox or cow dung, newly made, is also a very acceptable thing to them. They may be kept in a box, with small holes in it, or in a bag. Red worms, and all other sorts, scowr quickly, and grow very tough and bright, on putting them into a thin clout, greased with fresh butter, or grease, before they are put into moss.

This is the best of all things to keep them in; but the moss must be first very well washed, and the water squeezed dry out again. As to food, a spoonful of cream, dropped into the moss once in three or four days, is better than any thing else. The moss is to be changed every week, and kept in a cool place.

White large maggots are an excellent *bait* for many sorts of fish, and they are to be kept on sheep's suet and liver, chopped small. They will thrive extremely on this sort of food.

Frogs and grasshoppers are to be kept in wet moss, and long grass; and, on moistening this afresh every evening, it will keep a long time. They are to have the legs and wings cut off, when they are used.

Live flies must be used as they are caught; but wasps, bees, hornets, and humble-bees, may be preserved dry.

The best method of drying them, is putting them in an oven after the bread is drawn. Care must be taken that they are not scorched; and when they are taken out, they are to have the heads dipped in sheep's blood. This is to be suffered to dry on, and then they are to be preserved in a box. They will keep very well for three or four months.

BAITING, among ſportſmen, the application of a proper bait, in a convenient manner, for the catching of game, or the like.

In this ſenſe, we ſay, *baiting* a hook, &c [a]. For cod, they bait with herring, mackarel, &c [b].—[[a] Vid. Gent. Angler, p. 29. [b] *Savar.* T. 1. p. 399.]

BAITING, or rather BATING, in falconry, is when a hawk flutters with her wings, either from perch or fiſt, as if it were ſtriving to get away.

BAITING alſo denotes the act of ſmaller, or weaker beaſts attacking, and haraſſing greater and ſtronger ones.

In this ſenſe, we hear of the *baiting* of bulls and bears by maſtiff or bull dogs, with ſhort noſes, that they maytake the better hold. Whales are *baited* by a kind of fiſh called *oriæ*, or *killers*; ten or twelve of which will attack a young whale at once, and not leave him till he is killed. Philoſoph. Tranſact. N° 287. p. 265.

Houghton gives us the hiſtory of *bull-baiting*, a ſport peculiar to England, and favouring, like ſome others, of our antient gothiciſm. Some of our countrymen are ſaid to be fond enough of it; to buy bulls on purpoſe, and travel with them, at great charge, to all the chief towns around.

Policy, in ſome caſes, enjoins *bull-baiting*. This animal is rarely killed without being firſt *baited*; the chaffing and exerciſe whereof makes his fleſh tenderer and more digeſtible. In reality, it diſpoſes it for putrefaction; ſo that, unleſs taken in time, *baited* fleſh is ſoon loſt.

But a ſpirit of barbariſm had the greateſt ſhare in ſupporting the ſport: bulls are kept on purpoſe, and exhibited as ſtanding ſpectacles for the publick entertainment. The poor beaſts have not fair play; they are not only tied down to a ſtake, with a collar about their necks, and a ſhort rope, which gives them not above four or five yards play, but they are diſarmed too, and the tips of their horns cut off, or covered with leather, to prevent their hurting the dogs. In this ſport, the chief aim of the dog is to catch the bull by the noſe, and hold him down; to which end, he will even creep on his belly: the bull's aim, on the contrary, is, with equal induſtry, to defend his noſe; in order to which, he thruſts it cloſe to the ground, where his horns are alſo in readineſs to toſs the dog. *Hought.* Collect. N° 108. T. 1. p. 289, ſeq.

BAJULATIO, the office of a *bajulus*, or bailiff. *Spelm.* p. 56. a. See BAJULUS and BAILIFF.

BAJULUS, (*Cycl.*) in ancient writers, properly denotes a guardian, or governour of a youth.

The word is derived from the Latin verb *bajulare*, to carry, or bear a thing in the arms, or on the ſhoulders. *Calv.* Lex. Jur. p. 107. b.

Caſſeneuve traces the origin of the name, as well as office, with great exactneſs. Vid. Orig. in voc. *Bailiff.*

Children, and eſpecially thoſe of condition, had antiently, beſide their nurſe, a woman called *gerula*, as appears from ſeveral paſſages of Tertullian; when weaned, or ready to be weaned, they had men to carry them about and take care of them, who were called *geruli* and *bajuli*, *à gerendo & bajulando*. Hence, in the gloſſes of Papias, we meet with *gerulus portitor*, *gerulus nutritor*, and, in the *Catholicon parvum*, *bajulus portitor*, *portiteur*, *ou bailleur à nourrice*. Hence it is, that governours of princes, and great lords, were ſtill denominated *bajuli*, and their charge or government *bajulatio*, even after their pupils were grown too big to be carried about. The word paſſed in the ſame ſenſe into Greece; Cedrenus, ſpeaking of Antiochus, governor of the emperor Theodoſius the younger, calls him βαιυλον; and Codinus ſpeaks of the office of μιγαλω βαιυλω, who was governor of the emperor's ſon; on which occaſion, Julius Pacius obſerves, that he was called *bajulus*, becauſe he bore the prince about when young. *Caſſen.* l. c. See alſo *Spelm.* p. 56. a. Dict. de Trev. T. 1. p. 811. *Du Cange*, Gloſſ. Gr. T. 1. p. 168. *Voſſ.* Etym. p. 61. a.

BAJULUS is alſo uſed for a pædagogue, or perſon who has the care of inſtructing children. *Du Cange*, Gloſſ. Lat. T. 1. p. 474.

BAJULUS is alſo uſed by Latin writers in the ſeveral other ſenſes, wherein *bailiff* is uſed among us. See BAILIFF.

BAJULUS was alſo the name of a conventual officer in the antient monaſtries, to whom belonged the charge of gathering and diſtributing the money and legacies left for maſſes and obits; whence he was alſo denominated *bajulus obituum novorum*. Dict. de Trev. T. 1. p. 812.

BAKER. See BAKING.

The *bakers* of London make the nineteenth company. They were incorporated about the year 1307, and conſiſt of a maſter, four wardens, thirty aſſiſtants, and one hundred and forty-nine on the livery, beſides the commonalty. New View Lond. §. 3. p. 596.

The *bakers* of London are under the juriſdiction of the lord mayor and aldermen.

The French had formerly a *great baker*, *grand panetier de France*, who had the ſuperintendency of all the *bakers* of Paris. But, ſince the beginning of this century, they have been put under the juriſdiction of the lieutenant general *de police*. *Savar.* Dict. Comm. T. 2. p. 957. in voc. *Panetier*. Trev. Dict. Univ. T. 1. p. 1155. *Du Cange*, Gloſſ. Lat. T. 3. p. 117. in voc. *Panitarius*. *Le Long.* Bibl. Hiſt. p. 708.

In ſome provinces of France, the lord is the only *baker* in his ſeigneury; keeping a publick oven, to which all the tenants are obliged to bring their bread. This right is called *furnagium*, or *furnaticum*, and makes part of the *bannalite*. Vid. *Du Cange*, Gloſſ. Lat. T. 2. p. 560. in voc. *Furnagium*.

BAKERS *Central Rule*. See CENTRAL *Rule*, *Cycl.*

BAKING, (*Cycl.*) is uſed for the expoſing a ſubſtance, incloſed in a cruſt, to the fire.

This makes an operation in pharmacy, uſed in the making of an oil of earth worms, commended againſt arthritic, ſhooting pains. The worms having ſtood ſome time to putrify, are covered up, together with the veſſel they are in, with a wheaten cruſt, and ſet in the oven: by which they are converted to a thick yellow oily liquor. *Etmull.* ad Ludov. Pharm. p. 422. *Caſtel.* p. 592. a.

BAKING *Herrings*. See HERRING.

BAKING *of Porcelain*. The determining the due degree of heat for the *baking* the China ware, and the finding out the proper time it ſhould remain in that heat, are two very eſſential points in the manufactory of this elegant ware. Perhaps our Engliſh attempts to imitate it, would be brought nearer the perfection we are aiming at, by a juſt regard to theſe particulars, than by many other leſs material articles, about which we ſeem more ſolicitous.

It is generally ſaid, that the Chineſe judge of the proper degree of *baking* for their ware, by obſerving when the gold and colours appear moſt perfect and brilliant, and then taking the thing out of the fire. But this is an idle opinion; for the colours are not ſeen at all, while the veſſel is red hot in the fire, but only appear gradually as it cools. The way they judge of the *baking* being enough, is by looking down into the furnace; when they can diſtinguiſh the whole range of the veſſels all equally red hot, and ſee one from another to the very bottom of the furnace, they know that the fire is ſtrong enough, and ought not to be encreaſed any farther. From this time they diligently watch the things; and when they perceive the inequalities on the ſurface of the coloured parts diſappear, and theſe coloured parts blend themſelves ſo with the reſt, as to make one even ſurface, they then know that the whole is done, and have nothing farther to do, but to let them cool as gradually as poſſible, to prevent their cracking.

This method of judging ſerves them very exactly for their ſmall furnaces; but when they are employed about the larger, they are forced to judge by other ſort of ſigns. When the flame that comes out of the furnace is not ſo red as at firſt, but becomes whitiſh, and the veſſels, as far as can be ſeen, appear thoroughly red, and when the whole furnace is ſo perfectly heated, that on looking in at the top, the floor is ſeen bright and ſhining; theſe are the tokens of the thing's being almoſt done, and what remains is to be performed by trial. The uſual way is to take out the pieces ſingly at different times, and obſerving when the colours and the varniſhing are as bright and perfect as they ſhould be. The fire is then to be put out by degrees, and the furnace gradually cooled. Obſervat. ſur les Coutumes de l'Aſie.

BALA, in botany, a name uſed by ſome authors for the *muſa* or plantain tree, called alſo the *banana* and *ficoides* by others. Hort. Mal. Vol. 1. p. 17.

BALÆNA, the whale. In the Linnæan ſyſtem of zoology, this makes a diſtinct genus of fiſhes, of the order of the *plagiuri*, or thoſe with tranſverſe tails. The diſtinguiſhing characters of which are, that it has a kind of horny teeth in its upper jaw, and uſually no fin upon the back. *Linnæi* Syſtema Naturæ, p. 51.

BALÆNA, in the Artedian ſyſtem of ichthyology, is not made the common name of all the whales, but only of one genus of them; the characters of which are theſe: the tail is placed horizontally, as in all the cetaceous fiſhes; in the upper jaw, there are ſeveral horny laminæ, which ſerve in the place of teeth, but there are none in the lower; the fiſtula or pipe is double, and is ſituated either in the middle of the head, or in the forehead or ſnout; the back uſually has no fin.

The ſpecies of *balænæ*, according to this generical character, are theſe: 1. The *balæna* with the fiſtula in the middle of the head, and with the back growing pointed toward the tail. This is the *balæna major* and *vulgaris* of authors; the common great whale. The lower jaw in this is much broader than the upper, and covers it on both ſides. The fiſtula is double, and ſtands directly between the eyes in the middle of the forehead. The eyes are ſmall, and placed very diſtant from one another. The females have two teats, not in the breaſt, but a little above the pudenda, in the lower belly. The tail is a little forked, and the head of a depreſſed figure. 2. The *balæna* with the fiſtula in the middle of the head, and with a tubercle reſembling a fin, on the lower part of the back. This is the ſpecies of fiſh called the *fin-fiſh*, or *fin-whale*, by us, and ſeems to have been the *phyſolus* and *phyſeter* of the antients. It is as long as the Greenland whale, but not more than one third of its thickneſs, being long and narrow, or ſlender. The back is leſs bent than that of the Greenland whale; and it throws up the water from its fiſtule in a very vehement and forcible manner. 3. The *balæna* with a double fiſtula in the ſnout, and a coniform protuberance toward the lower end of the back.

The

The ſnout of this is much more acute than in any of the others, and the belly has ſeveral *plicæ*. It has been ſeen near fifty feet long. The eyes are ſmall, and the fiſtules are placed ſix feet from the tip of the ſnout. 4. The *balæna* with a double fiſtule in the forehead, and with the lower jaw much broader than the upper. The lower jaw in this fiſh is of a ſemicircular figure. The fiſtula is of a pyramidal figure, and divided by a ſeptum towards the forehead. This has been found of twenty-eight feet long. *Artedi* Gen. Piſc. 44.

BALAM-PULLI, in botany, a name uſed by ſome authors for the tree whoſe fruit is the tamarind of the ſhops. Hort. Malab. Vol. 1. p. 39.

BALANCIER, a machine uſed in the ſtriking of coins, medals, counters, and the like. *Savar.* p. 219. See COINAGE, *Cycl.*

BALANITES, in natural hiſtory, a name given by the antients to a ſtone, ſeeming to have been one of the ſemipellucid gems. They deſcribe two ſpecies of it; the one of which was yellow, and the other green, but each having veins of a flame colour. Their deſcriptions are too ſhort for us to be able to aſcertain, what ſtones, among thoſe known at this time, they meant.

Some think the *balanites* to have been the *lapis judaicus*, on account of its acorn like figure and ſize. *Plin.* Hiſt. Nat. l. 37. c. 10. *Hardou.* not. ad loc.

BALANUS, (*Cycl.*) in natural hiſtory, the name of a genus of ſhell-fiſh; the characters of which are theſe: they are a multivalve ſhell, of the ſhape of an acorn, and are compoſed of twelve laminæ; the mouth, in moſt ſpecies, is wide; in ſome, it is very narrow. See the figure in Tab. of Shells, N° 26.

The *balani* may be arranged under the two ſubdiſtinctions of wide and narrow mouthed.

Of the larger and wider mouthed *balani* we have the following ſpecies. 1. The turban or Turkiſh crown ſhell. 2. The cup *balanus*. 3. The ſtriated tulip *balanus*. 4. The bell *balanus*. 5. The purple *balanus*. 6. The grey *balanus*.

Of the narrow mouthed kind, which are uſually ſmaller, we have the following. 1. The narrow mouthed red *balanus*. 2. The narrow purple *balanus*. 3. The ſix-plated *balanus*, ſtriated at the mouth, every other piece being bifid, occult, and of a ſquare figure. 4. The ſlender rediſh-yellow *balanus*.

BALANUS *Marinus*. It is a very common error to miſtake the names of the multivalve ſhells, ſo far, as to confound the *balani* and *conchæ anatiferæ*, as they are called, together; though they be extremely different.

The *balani* are found affixed in cluſters to a thouſand different ſubmarine things; ſuch as the harder ſea plants, all ſorts of teſtaceous, and cruſtaceous ſea animals, rocks, and timber. Notwithſtanding that, the greater number of naturaliſts, and all the later ones, have placed this ſhell among the multivalves, there have not been wanting ſome, who have ranked it with the univalves; and this, ſeemingly, is its moſt juſt place. For although it ſeems formed of ſeveral pieces, they are, in reality, all joined together, and never can open or ſeparate. This does not anſwer to the character of what we mean by valves. A late French writer, who has taken great pains in this part of natural hiſtory, has, however, given but a very indifferent reaſon for its being placed among the multivalves, in ſaying, it ought to be ſo, becauſe there are always ſeveral of this ſpecies found growing together. He might have as well called the oyſters multivalves, for the ſame reaſon. Though the ſhell of the *balanus* does in reality conſiſt only of one piece, the fiſh incloſed in it has four hard ſubſtances affixed to its head, which it ſhews when it thruſts itſelf out of the ſhell in ſearch of prey; and theſe may have been called by ſome, ſhells, though of a very particular kind; and if they can be allowed ſuch, they will bring it, in ſome degree, toward the claſs of the multivalves; though, perhaps, in the ſtricteſt juſtice, no nearer than the operculum of the wilks, and other univalve ſhells, brings them to the bivalves.

When the body of the fiſh appears out of the ſhell, theſe four ſhells are ſeen to be fixed to the mouth of the creature, and are of a triangular figure, and diſpoſed in form of a croſs. From the center of this croſs there iſſues a plume, or feathery ſubſtance, compoſed of many pieces, and reſembling the plumes of the *anatiferæ* and *pollicipedes*. This plumoſe ſubſtance has been taken, in the darker ages of natural hiſtory, for the rudiments of a bird in the *anatiferæ*, and, by ſome, in theſe ſhells. The four hard ſubſtances fixed to the head of the fiſh, ſerve to cloſe up the aperture of the mouth of the ſhell, when the creature is at reſt in it; for there is no motion in the ſeveral pieces of which the ſhell itſelf is compoſed; and therefore, the creature would be always expoſed to injuries in it, as much as if naked, were it not for theſe ſubſtances, which ſerve in the ſame office as the operculum in the wilks, and *cochleæ*, and are here much more neceſſary than in thoſe ſhells. Hiſt. Nat. Eclair. p. 857.

The ſmall fiſh which nature has covered with this ſhell, is of a very admirable ſtructure. Lewenhoek acknowledges, that he never met with any animal, in which ſo many objects of wonder lay open to the naked eye as in this. It has twelve legs or arms, which are crooked, and garniſhed with a great number of hairs: theſe twelve they elevate on all occaſions; and, beſides theſe, they have eight others, which are much ſmaller, and ſtand lower. Their body is, in all reſpects, like that of the *concha anatifera*. It is cartilaginous and mucous, and of an ill taſte. The ſhell ſhapes itſelf, at the baſe, to the figure of the ſurface of whatever it grows to, and ſticks very firmly to it.

BALASS, or BALLAS, a precious ſtone, of the ruby kind; whence it is alſo denominated *ballas-ruby*.

BALATITI, in natural hiſtory, a name given by the people of the Philippine iſlands to a ſpecies of bird, by the flight of which they divine the event of things. They have alſo two other birds, the one of which they call *Tigmemanvequin*, and the other *Salaeſac*. This laſt kind is beautifully coloured, and has a very long and large beak, of a browniſh colour, and ſhining.

BALBUSARDUS, in zoology, the name uſed by authors for the bird called in Engliſh the *Bald Buzzard*. It is of the long-winged and hawk kind, and has been deſcribed by Aldrovandus, and ſome other authors, under the name of the *Haliætus* and *Morphnus*, two kinds of the eagle.

It is a conſiderably large bird, growing near to ſixty ounces in weight. Its beak is black and crooked, and covered with a blueiſh red ſkin down to the noſtrils, and protuberant between the noſtrils and the bending part. The iris of the eyes is yellow, and the pupils large, and the whole very prominent. It is of a blackiſh and ferrugineous or ruſt colour on the back, and the back part of its head is covered with white feathers; whence it obtained the name of *Bald Buzzard*. Its throat, breaſt, and belly, are white, and its thighs are covered with white and ſoft feathers. Its legs are long, and its toes very thick and ſtrong, and of a blueiſh white. *Willughby*, Ornithol. p. 37.

It frequents the ſhores of ponds and rivers, and ſometimes of the ſea, where it preys on fiſh. It builds on the ground among reeds, and lays three or four large white eggs, little leſs than hens eggs.

BALCONY, (*Cycl.*) — *Balconies* are a kind of open galleries without the walls of buildings, contrived chiefly for the convenience of looking around, ſeeing proceſſions, cavalcades, and the like.

The parts of a regular *Balcony*, according to Mr. Le Clerc, are the terrace or platform, which make the floor, the balluſtrade, which incloſes it, and the conſoles, which ſupport it. *Le Clerc*, Traité de l'Archit. p. 174, ſeq.

The *Balcony* is ſometimes alſo ſupported by a little entablature, the cornice whereof makes the terrace, and the frieze and architrave continued, the ſides; the whole being farther ſupported by conſoles.

Where there is but one, it is uſually in the middle of the front of the edifice, and level with the firſt floor above ſtairs: ſometimes they are made of wood, ſometimes of caſt iron; the former ſurrounded with a rail, or balluſtrade, the latter wrought in various figures in demi-relievo. Some are alſo made of bar iron, faſhioned in crail-work, or flouriſhes of divers fancies. *Neve*, Build. Dict. in voc.

Sir Henry Wotton ſpeaks of a kind of *Balconies* at Venice, called *Pergoli*, erected on the very point of the angle of the wall; contrary to the common rule, that all outlets ſhould be at a diſtance from the angle; it being a ſoleciſm in building, to weaken that part which is to ſtrengthen all the reſt.

BALCONY, in a ſhip, denotes a gallery either covered or open, made abaft, either for ornament, or convenience of the captain's cabin. *Aubin* Dict. de Marine, p. 61.

BALDACANIFER, corruptly alſo written *Balcanifer*, denotes a ſtandard-bearer; chiefly in the antient order of knights templars. *Aquin.* Lex. Milit. T. 1. p. 108.

BALDACHIN, (*Cycl.*) is ſometimes uſed to denote the chief altar of a church, when inſulate, and covered with a canopy ſupported by columns. *Davil.* Archit. p. 407.

BALDACHIN, or BALDAKIN, or BALDEKIN, popularly BAUDEKIN, in middle age writers, denotes a rich kind of cloth, made of gold warp and ſilk woof, variouſly figured. It took the denomination from its being formerly brought into theſe countries from *Baldacio*, or Babylon. *Du Cange*, Gloſſ. Lat. T. 1. p. 443. *Spelm.* Gloſſ. p. 56, ſeq.

BALDACHIN is alſo frequently uſed for a canopy or umbrello, becauſe uſually made or covered with the cloth of that name.

BALDMONIE, an old Engliſh name for gentian, the root of which is uſed in medicine; ſome alſo have called the *meum* or ſpignal by this name. *Ger* Emac. Ind. 2.

BALDNESS, (*Cycl.*) a defect of hair, chiefly on the ſinciput. It differs from *alopecia*, *area*, *ophiaſis* and *tinea*, as theſe all ariſe from ſome vice in the nutritious humour; *baldneſs*, from the defect of it. But the diſtinction is not always obſerved by modern phyſicians. *Caſtel.* Lex. Med. p. 126.

When the eye-lids ſhed their hair, it is called a *ptiloſis*.

Among the cauſes of *baldneſs*, immoderate venery is reputed one of the chief: old-age uſually brings it on of courſe [a]. Some will have the proximate cauſe of *baldneſs* to be the dryneſs of the brain, and its ſhrinking from the cranium; it having been obſerved, that in *bald* perſons there is always a vacuity or empty ſpace between the ſkull and the brain [b].—[[a] V. *Barthol.* Anat. l. 3. c. 1. *Lang.* Epiſt. 2. l. 7. [b] *Ray*, Wiſd. of God. P. 2. p. 248.]

Calvus, *bald-pate*, was a frequent term of reproach among the Romans; among whom this defect was in great diſcredit.

Hence divers arts to conceal it, as falſe hair, a *galericulus* contrived on purpoſe. *Pitiſc.* Lex. Antiq. T. 1. p. 332

The later Romans however, ſeem to have been reconciled to baldneſs; for we find among them a kind of officers, or ſervants, called *glabratores*, or *glabrarii*, whoſe buſineſs was to take off the hair from all parts, even from the head. In an antient inſcription, there is mention of one Diophantus. TI. CÆSARIS ORNATOR GLABR. that is, *ornator Glabrarius*. V. *Pitiſc.* Lex. Antiq. T. 2. p. 868. b.

BALE, (*Cycl.*) — To ſell goods in the *bale*, is to ſell them in the lump, on ſhewing a ſpecimen, without unpacking, or taking off the cordage. Thus it is the Eaſt India company ſell their *bale* goods. *Savar.* Dict. Comm. T. 1. p. 226. in voc. *Bale.*

BALE *goods*, in the Eaſt India trade, the bulky goods, as ſaltpetre, pepper, red-earth, tea, &c. Plan, Engl. Comm. c. 1. p. 4.

The *bale* goods ſtand oppoſed to piece goods.

BALES *of camelet*, at Smyrna, are called *tables*, on account of their flat ſquare figure. *Savar.* Supp p. 1235.

BALE *of paper*, denotes a certain number of reams packed together in a bundle.

There are *bales* of more and fewer reams. Thoſe ſent from Marſeilles to Conſtantinople uſually contain 24 reams. *Savar.* Dict. Comm. T. 1. p. 228. in voc *Ballon.*

A *bale* or ballon of crown paper, manufactured in ſome parts of Provence, conſiſts of 14 reams, and is ſold in the Levant for Venice paper. Id. p. 228.

BALE *of dice*, denotes a little packet, or paper containing ſome dozens of dice for playing with. Id. p. 227.

BALE-DOCK, a noiſom filthy hole, into which priſoners for contempt of the court, at their trials at the Old Baily, were ſometimes caſt, by way of chaſtiſement.

Penn and Mead, for their ſtout defence at their trial, were dragged into the *bale-dock*; and the recorder proceeded to charge the jury during their detention there; urging for an excuſe, that they were ſtill within hearing of the court. V. Trial of Penn and Mead in Phenix, T. 1. p. 312.

BALENGER, BALENGARIA, in middle-age writers, a kind of veſſel of war, but what in particular ſeems not well known. V. *Du Cange* Gloſſ. Lat. in voc. *Balengaria.*

Blount ſays, that by the Stat. 28. Hen. 6. c. 5. *Balenger* ſeems to be a kind of barge.

BALESTRA, in zoology, a name by which Salvian and ſome other authors have called the fiſh, more uſually known by the name of Capriſcus. *Willughby*'s Hiſt. Piſc. p. 152. See CAPRISCUS.

BALIVIS, in natural hiſtory, a name given by the people of the Philippine Iſlands, to the common duck of that part of the world: this is ſomewhat ſmaller than our wild-duck, and much more beautifully coloured.

BALIVO *amovendo*, a writ to remove a bailiff from his office, for want of ſufficient land in the bailiwick. *Reg.* Orig. 78.

If a ſheriff chuſe one to be a *bailiff* of a hundred; or if the lord of a liberty elect one to be bailiff of the liberty, who hath not land ſufficient in the county to anſwer the king and his people, according to the ſtatute of Weſt. 2. then this writ ſhall be ſent the ſheriff to diſcharge ſuch *bailiff*, and chooſe another in his place. *Blount*, *Cowel.*

BALKS, (*Cycl.*) among builders, large pieces of timber, brought from abroad in floats. *Neve*, Build. Dict.

BALKS, are a ſort of beams imported from 5 to 12 inches ſquare.

The greater *balks* are accounted timber, if above 8 inches ſquare. *Crouch*, Surv. Cuſt.

In ſome parts of England, *balk*, or *bawk*, denotes the ſummer-beam of a building.

BALKS or *bawks* alſo denote poles laid over a ſtable, or other building for the roof *Ray*, Coll. Loc. words, p. 40.

BALKERS, (*Cycl.*) in the fiſhery, perſons placed on rocks, and eminences at ſea, to ſpy the herring droves, and give notice to the fiſhermen by waving boughs, what way they go, and where they may be found. 1. Stat. Jac. 1 c. 23. *Skin.* Etym. in voc.

BALL, (*Cycl.*) — Moxon deſcribes the method of turning hollow ivory balls, one within another. Mechan Exerc. p. 219.

BALLS of ſilk-worms and ſpiders, are little caſes or cones woven of ſilk, wherein thoſe inſects depoſite their eggs [a]. Spiders are extremely tender of their *balls*, which they carry about with them, adhering to the papillæ about their anus [b]. Grew ſpeaks of *balls* or bags of a ſpecies of ſilk-worms in Virginia, as big as hens eggs, and containing each, four aurelias [c]. — [a Phil. Tranſ N°. 362. p. 1037. b Mem. Acad. Scienc. 1710. c Muſ Reg. Societ. p. 1. §. 7. c. 3]

Zoologiſts ſpeak of a ſort of *balls* of hair covered over with a ſmooth, ſhining coat, or ſhell, found in the ſtomachs of oxen, cows, calves, horſes, ſheep, and goats, particularly the chamois, or *rupicapra.*

They are called by Pliny [d], *tophi nigricantes*; by Ferrante Imperato [e], *tophi di giovenca*; by Wormius [f], *tophi juvenci*; by Cardan, *ova vaccina.* — [d Hiſt Nat. l. 11. c. 37. e Hiſt. Nat. l. 28. c. 1. f Muſ. l. 1. §. 2. c. 8.]

Thoſe in the ſtomachs of horſes, made of the ſlender ſtalks of ſmall engliſh matweed, are called by ſome authors, *ſpart balls*, or *pilæ manſæ*; thoſe in the chamois goat, by Velſchius, *Ægagropilæ*; by Bauhin, the german bezoard. See BEZOARD, *Cyl.*

Balls are not only found in the firſt, or ſecond ventricle; but ſometimes alſo in the inteſtines, from which they have frequently been caſt by ſiege [g]. The like inſtances have alſo been found in the human kind; of which we meet with divers accounts in the Philoſophical Tranſaction [h]. The ſubſtance of theſe *balls* is not always hairy, but ſometimes ſtony, furzy, gritty, &c. [i] — [g *Plott.* Nat. Hiſt. Staffordſh. c. 7. §. 72. h N°. 304. p. 2164. i Phil. Tranſ. N°. 291 p. 1595]

Some have alſo been found in the uterus, and ovaries of females [k]. Sir Hans Sloan gives the hiſtory of a *ball* found in the inteſtines of a man, much afflicted with the cholic, ſix inches in circumference, of a ſpungy ſubſtance, and which when viewed with a microſcope, appeared made up of ſmall tranſparent hairs or fibres, wrought together like the *tophus bovinus*: in the middle, was a common plumb ſtone, which made, as it were, the core or nucleus, around which the fibrous matter had gathered, *ſtratum ſuper ſtratum* [l]. — [k Phil. Tranſ. N°. 309 p. 2387. l *Sloan*, in Phil. Tranſ. N°. 282. p. 1283. ſeq.]

Others have been found with plumb-ſtones, and cherry-ſtones in the centers. Bezoars have uſually ſome ſeed for a nucleus.

The origin and formation of theſe *balls* is conteſted. Bartholin, and after him Dr. Plott, and others, attribute them to the creatures licking themſelves and ſwallowing the hair, which being elaborated in the *reticulum*, become compacted together, much after the manner that the wool of a hat is by the hand of the workman; and lying long in the ſtomach, have a thick tough coat, ſuperinduced by the plenty of ſlime it there meets with. *Plott*, l. c. §. 71.

After the like manner, thoſe found in ſheep, are ſuppoſed to be formed of the wool, which they eat from each other, when they paſs the winter on ſnowy mountains, where there is no graſs to be come at.

The royal academy of ſciences at Paris ſubſtitute another origin. In diſſecting a chamois, a *ball* was found in the third ventricle, which did not ſeem compoſed of hair but of woody fibres, as appeared from their inequality, which were neither uniform in figure, nor ſize, as hairs are. Add, that the like *balls* are found in horſes, which are not animals that lick themſelves, and where of conſequence they muſt be formed of ſomething elſe than hair. Hence the generality of naturaliſts, particularly Geſner and Camerarius, take theſe *balls* to be formed of the reſidue of the plants, which the animals have eaten, the harder fibres whereof remain undigeſted. Thoſe of the *rupicapra*, in particular, are ſuppoſed to be the fibres of the plant Doronicum, reputed by ſome a ſpecies of aconite. Nat. Hiſt. Anim. p. 143. ſeq. Phil. Tranſact. N°. 189. p. 373.

BALL, in the military and pyrotechnical arts, is a compoſition of divers ingredients, generally of the combuſtible kinds, ſerving to burn and deſtroy, give light, ſmoak, ſtench, or the like.

In this ſenſe we read of fire-*balls*, light-*balls*, ſmoak-*balls*, ſtink-*balls*, ſky-*balls*, water-*balls*, land-*balls*, &c.

Fire-BALLS, *globi incendiarii*, are bags of canvas filled with gunpowder, ſulphur, ſaltpetre, pitch, &c. [m] to be thrown by the ſoldiers, or out of mortars, in order to fire the houſes, incommoding trenches, advanced poſts, or the like [n]. — [m *Wolf.* Elem. Pyrotech. §. 38, and 55. n *Guill.* Gent. Dict. p. 2. in voc.]

The Greeks had divers kinds of *fire-balls*, or Πυροβολοι λιθοι, one kind called, more particularly, σκυλαλια, or σκυλαλιδες, made of wood, ſometimes a foot, or even a cubit long; their heads being armed with ſpikes of iron, beneath which were hemp, pitch, and other combuſtibles, which being ſet on fire, they were caſt among the enemy. *Pott.* Archæol. l. 3. c. 4. p. 50.

The preparations of *fire-balls*, among the moderns, conſiſts of ſeveral operations, viz. Making the bag, preparing the compoſition, tying, and laſtly dipping the *ball.*

The bags for this purpoſe are either oval or round. V. *Wolf.* l. c. §. 48.

The compoſition wherewith fire *balls* are filled, is various. To ten pounds of meal gun-powder, add two of ſaltpeter, one of ſulphur, and one of colophony: or, to ſix pounds of gunpowder, add four of ſaltpetre, four of ſulphur, one of powdered glaſs, half a pound of antimony, as much camphor, an ounce of ſal ammoniac, and four of common ſalt, all pulverized [o]. Sometimes they even fill fire *balls* with hand granados [p]. — [o *Wolf.* l. c. §. 51. p Id. ibid. §. 56.]

For tying the fire *balls*, they prepare two iron rings, one fitted around the aperture, where the *ball* is to be lighted, the other near its baſe. A cord is tied to theſe rings, in ſuch manner as that the ſeveral turns repreſent ſemicircles of the ſphere, cutting the globe through the poles: over the cords, extended according to the length of the *ball*, others are tied, cutting the former at right angles, and parallel to each other, making a knot at each interſection Laſtly, putting in a leaden bullet, the reſt of the ſpace is filled with tow or paper. Thus compleated, the fire *ball* remains to be dipped in a compoſition of melted pitch four pounds, colophony two, and linſeed-oil, or oil of turpentine,

pentine two; after dipping, they cover it round with tow, and dip again, till it be brought to the juſt diameter required. *Wolf.* §. 53.

Light BALLS, *globi lucentes*, are ſuch as diffuſe an intenſe light around; or they are *balls* which being caſt out of a mortar, or the hand, burn for ſome time, and illuminate the adjacent parts. Id. ibid. §. 73.

Luminous, or light BALLS, for the hand, are made of ground powder, ſaltpetre, brimſtone, camphor, and borax, all ſprinkled with oil, and mouldered into a maſs with ſuet, common and Greek pitch, to the ſize of an ordinary granado: this is wrapped up in tow, with a ſheet of ſtrong paper over it. To fire it, they make a hole into it with a bodkin, into which they put ſome priming, that will burn ſlow. Its uſe is to be caſt into any works they would diſcover in the night time. Milit. Dict. in voc. *Fire-ball.*

For the *larger light* BALLS, or thoſe to be thrown to a greater diſtance, they melt equal quantities of ſulphur, turpentine, and pitch; and herein dip an earthen, or ſtone *ball*, of a diameter much leſs than that of the mortar out of which the fire *ball* is to be caſt: then rolling it in gun-powder, and covering it round with gauſe, they dip it again, and repeat the reſt till it come to fit the cavity of the mortar: laſtly, they ſprinkle it around with gun-powder. This being once kindled, will ſtrongly illuminate all round the place where it is thrown, and give opportunity for examining the ſtate and condition thereof. *Wolf.* ibid §. 65.

Smoak, or dark BALLS, thoſe which fill the air with ſmoak, and thus darken a place, to prevent diſcoveries. To prepare a darkening *ball*, make an oval, or ſpherical bag; melt roſin over the coals, and add an equal part of ſaltpetre not purified, alſo of ſulphur, and a fifth part of charcoal. The whole being well incorporated, put in tow firſt ſhred, and fill the bag with this compoſition, and dip it after the ſame manner as a fire *ball*. *Wolf* ibid. §. 66.

Stink BALLS, *globi fœtentes*, thoſe which yield a great ſtench where fired to annoy the enemy. *Wolf.* ibid. §. 48. ſeq.

Their preparation is thus; melt ten pounds of pitch, ſix of roſin, twenty of ſaltpetre, eight of gun-powder, and four of colophony; to theſe add two of charcoal, ſix of horſe hoofs cut ſmall, three of aſſa fœtida, one of ſtinking ſaracen, and any other offenſive ingredients. The reſt as in the former. *Wolf.* ibid. §. 67.

Sky BALLS, *globi aerii*, thoſe caſt on high out of mortars, and which, when arrived at their height, burſting like rockets, afford a ſpectacle of decoration. *Sky balls* are made of a wooden ſhell, filled with various compoſitions, particularly that of the ſtars of rockets. *Wolf.* l. c. §. 70.

Theſe are ſometimes intermixed with crackers, and other combuſtibles, making rains of fire, &c.

Water BALLS, *globi aquatici*, thoſe which ſwim, and burn a conſiderable time in the water, and at length burſt therein. *Wolf* l. c. §. 95.

Theſe are made in a wooden ſhell, the cavity of which is filled with a compoſition of refined ſaltpetre, ſulphur, ſaw-duſt boiled in water of ſaltpetre, and dried; to which ſometimes other ingredients are added, as iron filings, Greek pitch, amber duſt, glaſs powdered, and camphor. The ingredients are to be ground and mixed up, and moiſtened with lintſeed-oil, nut-oil, olive-oil, hempſeed-oil, or petrol. At the bottom is placed an iron coffin, filled with whole gun-powder, that the *ball* may at laſt burſt with a great noiſe; and laſtly, the *ball* is, by the addition of lead, or otherwiſe, made of the ſame ſpecific gravity with water. *Wolf.* l. c. §. 95.

Land BALLS, *globi terreſtres*, thoſe which being thrown out of a mortar, fall to the ground, burn, and burſt there. The ingredients are much the ſame as in the water *balls*, only the ſpecific gravity is not attended to. *Wolf.* l. c. §. 96.

Hero's BALL, *pila Heronis*, is a kind of artificial fountain, wherein the water is made to ſpout out of a hollow *ball*, or globe. V. *Wolf.* Elem. Hydraul. §. 124. ſeq.

It takes the denomination from the inventor *Hero* of Alexandria, who has left the deſcription of it in his *ſpiritalia*. See FOUNTAIN, *Cycl.*

BALL *of a pendulum*, the weight at the bottom. In ſhorter pendulums, this is called the *bob*. *Derham*, Artif. Clock-mak. c. 1. p. 4.

BALL alſo gives the denomination to a ſpecies of game or ſport frequent among the ancients; among the Latins under the denomination *pila*; among the Greeks under that of σφαιρα, ſometimes of κορυκος: ſaid to have been firſt invented by Anagallis of Corcyra. V. *Salmuth.* ad Pancirol. P. 1. tit. 23. p. 75. *Fabric* Bibl. Græc. l. 5. c. 40. p. 974.

The Romans had four kinds of *Pilæ*, or *Balls*; the firſt called *trigon*, or *trigonalis*, by reaſon the three gameſters at it were placed in a triangle: theſe caught and toſſed the *ball*, taking great care not to let it fall to the ground.

The ſecond called *follis*, made of leather, blown up like our foot-balls: the largeſt ſort of theſe were ſtruck with the arm, the ſmaller with the fiſt: The former ſeem to have been diſtinguiſhed by the appellation *paganica*, as being much uſed in country villages. The fourth was the *harpaſta*, a kind of ſmall *ball*, ſo called becauſe the gameſters endeavoured to ſnatch it from each other. *Voſſ.* de Quat. Art. *Popul.* c. 3. §. 65.

Galen has an entire treatiſe on the exerciſe of the *leſſer ball*: *Caſtel.* Lex. See alſo *Fabric.* Bibl. Antiq. c. 22. §. 6.

Tennis BALL, is a little globe, made and covered with cloth, uſed in playing at the game of tennis. *Savar.* Dict. Com. T. 1. p. 227.

Billiard BALLS, are ivory *ball's* uſed in the game of billiards.

BALL, among printers, a kind of wooden tunnel ſtuffed with wool, contained in a leather cover, which is nailed to the wood; with which the ink is applied on the forms, to be wrought off. *Savar.* Dict. Comm. T. 1. p. 227.

The preſſman holding one of theſe balls in either hand, firſt daubs them on the ink-block, and afterwards on the forms, which retain the ink neceſſary to make an impreſſion.

BALL, *pila*, is alſo the denomination of a form of medicines. We meet with *balls* for the tooth-ach, *pilæ odontagliçæ*; ſpitting *balls*, *pilæ maſticatoriæ*, uſed to promote a diſcharge of ſaliva, &c.

Horſe BALLS, among farriers, a kind of cordial medicines, adminiſtred in form of *balls*, ſuppoſed of great virtue for feeding and ſtrengthening ſound, as well as healing and raiſing unſound horſes.

Markham's horſe BALLS, are a preparation of aniſeeds, carthamus, elicampane, and other ingredients, wrought into a ſtiff paſte, and thence formed into *balls*. They are cleanſing and emollient, efficacious in colds, ſurfeits, and hard labour, and eſpecially uſeful where any of the chief viſcera are decayed: nothing raiſes a lean jade ſo ſoon, being partly food, partly phyſic. Ruſt. Dict. in voc. Farr. Dict. p. 50. ſeq.

Treacle BALLS, ſometimes alſo called in a more eſpecial manner, *cordial balls*, are made of juniper-berries, beaten, boiled, preſſed, and ſtrained; then the liquor, boiled up a ſecond time to the conſiſtence of a broth, and mixed with the cordial powder known among farriers, made of aniſe, fennel, liquorice, &c. adding to the whole ſome of the grains of kermes powdered. The maſs being made into *balls*, is commended againſt diſorders of the ſtomach, breaſt, wind, &c. and is by ſome called the treacle of the Germans. Ruſt. Dict. in voc. *Cordial.*

Chewing BALLS, are theſe which the horſe is to keep champing, or maſticating in his mouth, a conſiderable time, without ſwallowing. Theſe are chiefly uſed for loſt appetite; a thing very incidental to horſes.

They are uſually made of aſſa fœtida, liver of antimony, juniper, bay wood, and pellitory of Spain, beaten and incorporated into a maſs with verjuice. The method of adminiſtration is to wrap one of the *balls* in a linnen cloth, and having a ſtring faſtened to it, make the horſe chew it two or three hours at a time. Dict. Ruſt. in voc. *Chewing.*

BALL *of the foot of a dog*, is the prominent part of the middle of the foot, called by Latin writers of the middle age, *pelota*, which is to be taken away in expeditation. *Du Cange*, Gloſs. Lat.

BALL is alſo uſed in Cornwall, &c. for a tin-mine.

In this ſenſe Godolphin's *ball* is ſaid to be the moſt famous of all the *balls* or mines in Cornwall, for quantity of metal. Phil. Tranſ. N°. 138. p. 951.

BALL is alſo uſed, in a well-known ſenſe, for an aſſembly of both ſexes, who dance to the ſound of inſtruments. *Richel.* T. 1. p. 168. a

The word in this ſenſe is formed from the barbarous Latin, *ballare*, to dance, of the Greek, βαλλιζω, I dance; whence alſo βαλλισμος [a], and *ballimathia*, promiſcuous and laſcivious dancing, cenſured by antient councils [b].— [[a] V. *Suicer.* Theſ. T. 1. p 214. *Du Cange*, Gloſs. Græc. T. 1. p. 171. Mem. Acad. Inſcrip. T. 2. p. 135. *Skinn.* in voc. [b] V. *Bingham*, Orig. Eccleſ. l 16. c. 11. §. 15.]

Cryſtalline BALLS, there are two ſorts of foſſil bodies, mentioned in authors by this name, and diſtinguiſhed into the echinated, and concave.

The firſt are roundiſh nodules of ſtrong matter, covered over with points of cryſtal; and the others, flints and other ſtones, having cavities in their middles, which are lined, or cruſted over with theſe cryſtals.

BALL *vein*, in mineralogy, a name given by the miners in Suſſex to a ſort of iron ore, common there, and wrought to conſiderable advantage. It yields not any great quantity of metal, but what it has runs freely in the fire; it is uſually found in looſe maſſes, not in form of ſtrata, and is often covered with one or more cruſts. It generally contains ſome ſparkling particles, and is uſually of a circular form, in the perfect maſſes; thickeſt in the middle, and gradually thinner as it approaches the ſides. The ores of Suſſex in general are poor, but they require very little trouble in the working; ſo that a conſiderable profit is annually made from them.

Glaſs BALLS. See GLASS *Balls.*

Hair BALLS. See HAIR.

Puff BALL. See LYCOPERDON.

Wool BALLS. See WOOL.

BALLAD, or BALLET, a popular ſong, containing the recital of ſome action, adventure, or intrigue.

The French confine their *ballade* to ſtricter terms. A *ballade*, according to Richelet, is a ſong conſiſting of three ſtrophes, or ſtanzas, of eight verſes each, beſides a half ſtrophe; the whole in rhime, of two, three, or four verſes, with a burthen repeated

repeated at the end of each ſtrophe, as well as of the half ſtrophe. *Ozan.* Dict. Mathem. p. 665. Dict. de Trev. T. 1. p. 823.

In the old Engliſh verſion of the bible, the book of Canticles is entitled the *ballet* of *ballets*; which has given ſcandal to ſome Romiſh writers, as countenancing the opinion of thoſe who hold that book a *ballet* of love, or a recital of the amours between Solomon and his concubine, as Caſtalio and ſome others have conceived it to be. Vid. *Martin.* Diſcov. of Corrupt. of Script. by Hæret. c. 22. *Fulk.* Def. of Engl. Tranſlat. Bible, c. 22. p. 508.

Some have ſuggeſted, that a collection of *ballads* is neceſſary to a miniſter, in order to learn the temper and inclinations of a people, which are here frequently uttered with great ſimplicity. The great Cecil, chief miniſter to queen Elizabeth, is ſaid to have made a moſt ample collection of *ballads*, on this account. Vid. *Freſn.* Meth. de l'etud. l'Hiſt. c. 14. §. 7.

BALLANCE, (*Cycl.*) in aſtronomy, one of the twelve ſigns of the zodiac. See LIBRA, *Cycl.*

BALLANCE *Fiſh*, in zoology, an Engliſh name for the fiſh called the *zygæna* by authors, and by ſome the *hammer-headed ſhark*, or *libella*. It is, according to the new Artedian ſyſtem, a ſpecies of the *ſqualus*, and is diſtinguiſhed, by that author, by the name of the *ſqualus*, with a very broad and tranſverſe head, reſembling a hammer. See SQUALUS and ZYGÆNA.

BALLANCERS, in natural hiſtory, are two ſmall oblong bodies, placed under the wings of the two-winged flies, and, in ſome meaſure, ſupplying the office of the two other wings, which thoſe of the four-winged claſs are poſſeſſed of.

Theſe, though very ſmall, are yet extremely eaſy to diſcover, in almoſt all the kinds; becauſe they ſtand prominent, and are not applied cloſe to the body. The four-winged flies never have theſe, and the two-winged never are without them. They are indeed very often the moſt ready diſtinction of theſe two great claſſes of the fly kingdom. For, frequently, the flies of the four-winged kind have their under-pair ſo very thin, and ſo cloſely applied to the outer, that it is not eaſy to ſeparate or diſtinguiſh them for what they are. This diſtinction, however, never fails or deceives; for if we perceive theſe *ballancers* wanting, we may always determine the creature to have four wings, though we only diſcover two of them at firſt ſight. Every one is acquainted with the ballances applied to divers machines, and made of an iron rod, with a plummet or ball of lead at each end. Under the wings of all the two-winged flies, there are two oblong bodies, one under each wing, which are of the ſhape of the half of this machine, and may be called half *ballancers*, with moſt propriety; though the ſhorter name of *ballancers* alone is ſufficiently expreſſive.

Each of theſe is a ſmall ſlender ſtalk, faſtened by one end to the corcelet of the fly, and terminated at the other by a head, which, in ſome ſpecies, is round, in others oblong, and, in ſome of the figure of a ladle, or hollowed deeply on one ſide. The head of theſe bodies is always large, in proportion to its ſtalk, and forms a ſort of mallet. Swammerdam has, for this reaſon, called theſe the mallets, and ſome others have named them the counterpoiſes; ſuppoſing them to be of the ſame uſe to the creature, that the counterpoiſe carried in the hand of the rope-dancer is to him, ſerving to keep the juſt equilibrium in all its motions.

The flies frequently carry theſe *ballancers* in the ſame direction with their wings, and are able to move them with great ſwiftneſs; but the ſmallneſs of their ſize, in proportion to its body, or to the ſize of its wings, ſeem to make them of but little uſe to the creature, in the offices they are ſuppoſed to ſerve for. Unqueſtionably they have their uſes; but it is better abſolutely to declare we know not what they are, than to appropriate to them any they ſeem ſo little adapted to.

The *ballancers* in the gnat kind are placed cloſe under the inſertion of their wings, and are extremely eaſily ſeen; thoſe of ſome other flies are more hid, and are not placed exactly in the ſame part of the corcelet. Several of the ſhort-bodied flies, as the great blue fleſh-fly, and others, have one *ballancer* on each ſide, placed near the extremity of the corcelet, where it joins the body.

Theſe are certainly to be looked upon as ſome ſort of ſupplements to the wings of the fly that have them. If the wing of a great blue fleſh-fly be cut off near its origin, theſe two ſmall bodies may eaſily be ſeen; they appear like mutilated, or young, and juſt growing wings. The lower of theſe is the larger; it is faſtened to the corcelet of the fly, very near the inſertion of the wing; its form is that of a ſmall ſhell, or the half of a ſmall bivalve; its concavity is turned toward the body of the fly, its convexity outward. Near its edge it has a kind of brown band, bordered with a ring of very fine hairs; the reſt of its ſubſtance is very tranſparent; it reſembles a kind of talc, and is wholly without fibres. A little above this ſmall body, or talcky ſhell, there is another ſmall piece of the ſame ſubſtance, but very ſhort; this is of the ſame form with the other, were it not that it is often rumpled, and folded almoſt equally in two. This, like the other, has an edge fringed with hairs, but is uſually black, as is alſo its fringe; whereas the edge of the other is of a deep brown, and its fringe white. Theſe two pieces have their ſeparate inſertions in the corcelet; but if they are traced through the whole extent, they will be found joined to one another, and are really but one body. Theſe may be properly enough called the baſtard wings, or double ſhells, of the claſs of the two-winged flies.

All the ſhort bodied two-winged flies afford theſe to our obſervation; but, in the different ſpecies, they vary a little in their ſhape and ſituation. In the green and gold fly, the upper ſhell is not folded, as it is in the great blue fly, and many others of that claſs. In many ſpecies, the lower and larger ſhell reaches to the firſt ring of the body, and covers the inſertion and part of the ſtalk of the *ballancer*; and, in the gnat kind, theſe are ſo ſmall as to ſeem wholly wanting. Vid. *Reaumur*, Hiſt. Inſect. Vol. iv. p. 252, ſeq.

BALLAST, (*Cycl.*)—That *ballaſt* is beſt which is heavieſt, lies cloſeſt and faſteſt, and drieſt, both for the ſhip bearing a ſail, ſtowing of goods, health of the company, and ſaving of caſks and other goods. If a ſhip have too much *ballaſt*, ſhe will draw too much water; if too little, ſhe will bear no ſail.

To trench the BALLAST, denotes, to divide the *ballaſt* into two ſeveral parts, or more, in the ſhip's hold; commonly done to find a leak in the bottom of the ſhip, or to undock her.

The BALLAST *ſhoots*, that is, runs over from the one ſide to the other. Hence it is, that corn, and all kinds of grain, is dangerous lading, for that it is apt to *ſhoot*. To prevent which, they make *poucles*, that is, bulk-heads of boards, to keep it up faſt, that it may not run from ſide to ſide, as the ſhip heels upon a tack. *Boteler*, Sea Dial. 4. p. 148. *Manw.* in voc.

BALLATOONS, large, heavy luggage boats, carrying goods by the river from Aſtracan and the Caſpian ſea to Moſcow. Plan, Engl. Comm. c. 1. p. 57, ſeq.

Theſe will carry from a hundred to two hundred tun; and have from a hundred to a hundred and ten, or twenty men employed to row, and tow them along.

BALLERUS, in zoology, a name given by ſome authors to a ſpecies of freſh water fiſh of the leather mouthed kind, which appears to be the ſame with the *carcaſſius*, or, as authors call it, the *carcaſſii tertium genus*. *Rondelet* de Piſc. See CARCASSIUS.

BALLERUS, in ichthyology, a name given by Ariſtotle to that ſpecies of cyprinus, called *blicca* and *pleyſta*, and *pallerus*, by the modern writers.

BALLET, or BALET, BALETTO, a kind of dramatick poem, repreſenting ſome fabulous action or ſubject, divided into ſeveral entries; wherein ſeveral perſons appear, and recite things under the name of ſome deity, or other illuſtrious character. *Richel.* Dict. T. 1. p. 170. b.

BALLET is more particularly uſed for a kind of comic dance, conſiſting of a ſeries of ſeveral airs of different kinds of movements, which together repreſent ſome ſubject or action. *Broſſ.* Dict. Muſ. p. 12.

They are performed chiefly by maſks repreſenting ſylvans, tritons, nymphs, ſhepherds, and the like; and conſiſt of three parts, the entry, figure, and the retreat. Vid. *Walther*. Lex. Muſ. p. 67.

The word is of Greek origin, formed from βαλλειν, *jacere*, to caſt, throw, toſs; whence alſo, in writers of the middle age, we find *ballationes* for *ſaltationes*, dancings, and *ballare* for *ſaltare*, to dance. *Paſch.* Invent. Nov. Antiq. c. 7. § 60.

F. Meneſtrier has a treatiſe expreſs on ancient and modern *ballets*, according to the rules of the ſtage; wherein he explains the nature of dancing according to Ariſtotle and the antients. Vid. Act. Erudit. Leipſ. 1683, p. 238, ſeq.

BALLET, in the Engliſh poetry, &c. See BALLAD.

BALLISTA, (*Cycl.*)—The generality of authors confound the *balliſta* with the *catapulta*, attributing to the one what belongs to the other; an error from which Lipſius, Father Daniel [a], and Perrault himſelf, is not free. The detecting of it we owe to M. de Follard; according to him, the *balliſta* had two arms, the *catapulta* but one.—[[a] Vid. P. *Daniel*, Hiſt. de la Milice Franc. T. 1. p. 59.]

The *balliſta* was chiefly uſed in caſting arrows, javelins, and even beams and planks of vaſt bulk, beſet with ſpikes twelve feet long. The office of the *catapulta* was that of throwing ſtones [a]. We ſometimes indeed meet with *balliſtæ lapidum* [b] in Cicero; which ſeems to ſhew that the *balliſta* was employed in caſting of ſtones; neither is this denied by M. Folard, who mentions expreſsly, that leaden bullets were alſo thrown by the *balliſtæ* [c].—[[a] Vid. *Folard* ſur Polyb. T. 2. p. 587, 593, & 614. *Fæſch.* Ingen. Lex. p. 63, a. *Cæſar* de Bell. Civil. l. 2. c. 2. [b] *Cic.* Tuſc. l. 2. c. 24. [c] *Folard*, l. c. p. 614.]

Iſidore ſays expreſsly, *Balliſta magna vi jacit aut haſtas aut ſaxa.* Some chooſe to diſtinguiſh two kinds of *balliſtæ*, the greater uſed for caſting ſtones, the leſſer for darts [d]. According to Vitruvius [e], the *balliſta* was made after divers manners, though all uſed to the ſame purpoſe: one ſort was framed with levers and bars; another with pullies; another with a crane; and others with a toothed wheel [f].—[[d] *Calv.* Lex. Jur. p. 108, a. [e] *Vitruv.* Arch. l. 10. c. 16. [f] *Dan.* Dict. Ant. in voc.]

The *balliſta* is ranked by the antients in the ſling kind, and its ſtructure and effect reduced to the principles of the ſling; whence it is called by Hero, and others, *funda* and *fundibulus*. Guntherus calls its *balearica machina*, as a ſling peculiar to the Balearick iſlands. Pliny [g] makes the Phœnicians inventors both of the *funda* and *balliſta*. Guntherus calls thoſe which threw leſſer ſtones, *fundæ*, and thoſe which threw greater, *balliſtæ*. The leſſer *balliſtæ* were alſo called *centenariæ*, as throwing ſtones of an hundred pound weight. Siſena, on a like account,

count, calls them *talentaria*, which imports a somewhat greater weight. The greater *ballistæ* could throw three talents. They could also throw a thousand large stones at a time, and were kept playing at sieges night and day [h].—[[g] *Plin.* Hist. Nat. l. 7. c. 56. [h] *Aquin.* Lex. Milit. T. 1. p. 108, seq.]

Perrault, in his notes on Vitruvius, gives a new contrivance of a like engine for throwing bombs without gunpowder. p. 337. Vid. *Wolf.* Lex. Math. p. 238.

BALLISTA, in practical geometry, the geometrical cross, called also *Jacob's staff*. *Wolf.* L. Math. p. 237. See CROSS *Staff*, *Cycl.*

BALLISTA, or *Os* BALLISTÆ, is a denomination given by some anatomists to the first bone of the tarsus, otherwise called *talus* and *astragalus*. *Drake*, Anthrop. l. 4. c. 8. p. 440. See ASTRAGAL, *Cycl.*

BALLISTARII, or BALLISTRARII, in antiquity, slingers in the antient armies, or soldiers who fought with the *ballistæ*. See BALLISTA.

There were two kinds of *ballistarii milites*; the former cast stones, and other missive weapons, with the hand, called *manuballistarii*; sometimes simply, *manuballistæ*. The latter, called *carroballistarii*, sometimes only *carroballistæ*, made use of a machine. Some speak of a third kind, called *arcuballistarii*; but these are better reduced to the second. *Aquin.* Lex. Milit. T. 1. p. 109.

The *ballistarii* are scarce heard of before the age of Constantine. *Pitisc.* Lex. Ant. T. 1. p. 245, b.

BALLISTARIUS is also used in middle age writers, for a cross-bowman, or *arbaletier*.

BALLISTES, in ichthyology, the name of a genus of the branchiostegous fishes; the characters of which are these: There is no branchiostege membrane; the belly-fin is single and simple, aculeated, situated perpendicularly and longitudinally, in the same manner as the *pinna ani*; there are two, three, or four very robust and sharp prickles on the back; the jaws contain very large teeth, which stand very close to one another, and are protruded forwards; the head and body are broad and compressed. The species of this genus are these; 1. The *ballistes*, with three prickles on the back, and with a forked tail. This is the *guaperva* of Marcgrave, and is called by the English in America the *old wife fish*. 2. The *ballistes*, with two spines on the back, and with a square tail. This is the *guaperva longa*. It has no spine on the belly. 3. The *ballistes*, with a forked tail, and with the back-fin spotted. This is the *guaperva lata* of Lister. The prickle of the back in this species resembles a horn, and is beset every way with tubercles or teeth. 4. The *ballistes*, with striated lines, and a forked tail. The teeth of this are extremely like the *dentes incisores* in man. 5. The *ballistes*, with five prickles on each side. This is the *guaperva hystrix* of authors. It has a remarkable hairiness about the tail. 6. The *ballistes*, with two spines in the place of belly-fins, and with one single spine below. This is the *scolopax* of authors, and the *trombetta* of the Italians; but it differs so little from the former, that it seems only a variety of it. *Artedi*, Gen. Pisc. 38.

BALLISTEUM, or BALLISTÆA, in antiquity, a military song or dance used on occasions of victory.

Vopiscus has preserved the *ballisteum* sung in honour of Aurelian, who, in the Sarmatian war, was said to have killed forty eight of the enemy in one day, with his own hand. *Mille, mille, mille, mille, mille, mille decollavimus: Unus homo mille, mille, mille, mille decollavimus; mille, mille, mille vivat, qui mille, mille occidit. Tantum vini habet nemo, quantum fudit sanguinis.* The same writer subjoins another popular song of the same kind: *Mille Francos, mille Sarmatas, semel occidimus; mille, mille, mille, mille, mille Persas quærimus. Vopisc.* in Aurel. It took the denomination *ballisteum* from the Greek βαλλω, *jacio*, or *jacto*, to cast or toss, on account of the motions used in this dance, which was attended with great elevations and swingings of the hands.

The *ballistea* were a kind of popular ballads, composed by poets of the lower class, without much regard to the laws of metre. *Aquin.* Lex. Mil.

BALLISTICA, BALLISTICS, is used for the art of throwing heavy bodies. F. Mersennus has published a treatise on the projection of bodies, under this title.

BALLOON, or BALLON, in building, (*Cycl.*)—This word is French, *Ballon*, or *Balon*, where it literally signifies a great ball; though we do not find that the French architects use it in the sense abovementioned, but, in lieu thereof, *boule d'amortissement*, which is applied to any spherical body, serving to terminate a decoration; as the ball on the top of a steeple, a lanthorn, dome, or the like.

A *balloon* is to be proportioned to the magnitude, and altitude of the body, to which it serves as an *acroter*, or crowning. See CROWN, *Cycl.*

That on the top of St. Peter's at Rome is of brass, sustained by an iron arming within; and, being at the height of sixty-seven fathoms, is above eight foot in diameter. *Daviler*, P. 2. p. 432.

BALLOON also denotes a kind of game something resembling tennis.

The *balloon* is played in the open field, with a great round ball of double leather blown up with wind, and thus driven to and fro with the strength of a man's arm, fortified with a brace of wood. School of Recr. p. 135.

BALLOON, or BALOEN, is more particularly used among voyagers, for the state barges of Siam.

The *balloons* are a kind of brigantine, managed with oars, of very odd figures, as serpents, sea-horses, &c. but, by their sharpness and number of oars, of incredible swiftness. *Tachart.* Voyage de Siam, ap. Phil. Trans. N° 185. p. 251.

The *balloons* are said to be made of a single piece of timber, of uncommon length; they are raised high, and much decorated with carving at head and stern: some are gilt over, and carry an hundred and twenty, or even an hundred and fifty rowers on each side. The oars are either plated over with silver, or gilt, or radiated with gold; and the dome or canopy in the middle, where the company is placed, is ornamented with some rich stuff, and furnished with a ballustrade of ivory, or other costly matter, enriched with gilding. The edges of the *balloon* just touch the water, but the extremities rise with a sweep to a great height. Some are adorned with variety of figures, made of pieces of mother of pearl inlaid: the richer sort, instead of a dome, carry a kind of steeple in the middle; so that considering the slenderness of the vessel, which is usually an hundred, or an hundred and twenty feet long, and scarce six broad, the height of the two ends, and of the steeple, with the load of decorations, it is a kind of miracle they are not overset. *Aubin.* Dict. Marin. p. 61, seq. *Savar.* Dict. Comm. T. 1. p. 217, seq.

BALLOTE, βαλλωτη, *stinking horehound*, in botany, the name of a genus of plants; the characters of which are these. The flower consists of one leaf, and is of the labiated kind; the upper lip is hollowed in the manner of a spoon, and the lower is divided into three segments; the middle one much larger than the others, and of a heart-fashioned shape; the pistill arises from the cup, and is fixed in the manner of a nail to the hinder part of the flower, and surrounded by four embryos, which afterwards become four oblong seeds, ripening in a tubular pentangular capsule, divided into five segments at the edge, which was the cup of the flower. The only species of *ballote* is the common stinking kind; with the white flowered one, no other way differing from it but in the colour of the flower. *Tourn.* Inst. p. 184.

BALLOTADE, in the manege, the leaps of a horse between the pillars, or upon a streight line; so that when his fore-feet are in the air, he shews nothing but the shoes of his hinder feet, without yerking out.

The *ballotade* differs from a capriole, for that in the latter the horse jerks or strikes out his hind-legs with all his force, keeping them near and even.

Ballotades also differ from *croupades*, in this, that in the former the horse shews his shoes, when he lifts or raises his croup; whereas, in the latter, he draws his feet under him. See CROUPADE, *Cycl.*

A horse naturally takes to *ballotades*, after putting him on caprioles; when the fire and mettle of the caprioles is over, he falls of course to *ballotades*, and then to croupades, unless a poinson in a hard hand make him yerk out, and continue the air of caprioles. *Guill.* Gent. Dict. P. 1.

BALLUSTER, or BALLISTER, a small kind of column or pillar, whereof ballustrades were formed. *Davil.* P. 2. p. 408. See the article BALLUSTRADE, *Cycl.*

The word is French, *balustre*, which signifies the same; formed from the Latin *balustrum*, or *balustrium*, a place among the antients where the baths were railed in. *Casseneuv.* in voc. *Menage*, p. 74, a.

*Balluster*s are of divers forms, as well as matters, according to the different occasions, and different orders of architecture wherein they are used. We meet with stone *balluster*s, iron *balluster*s, brass or silver *balluster*s, round *balluster*s, square *balluster*s, whole *balluster*s, half *balluster*s, &c [a]. Also Tuscan, Doric, Ionic, Corinthian, Composite *balluster*s; fluted and rustick *balluster*s; *balluster*s in form of urns, of vases, &c [b].—[[a] Vid. *Davil.* P. 1. p. 318. pl. 94. Idem, P. 2. *Le Clerc*, Traité d'Archit. p 168. [b] *Davil.* P. 1. p. 318. pl. 319.]

BALLUSTER of the Ionic capital, denotes the lateral part of the volute, answering to what Vitruvius calls *pulvinata*, on account of its resemblance to a pillow. *Corneille*, Dict. des Arts, T. 1. p. 85. a.

BALLUSTRADE, (*Cycl.*)—The modern *ballustrade* amounts to the same with what Vitruvius calls *podium*, sometimes *pulpitum*. *Davil.* p. 408.

BALM, in botany. The manner of propagating this plant is by parting the roots either in autumn, or in spring, and planting them at eight inches asunder.

When they are first planted, they must, if the season prove dry, be well watered, till they have taken root; after this, they will require no farther care, only that they ought to be transplanted every other year; for otherwise the roots increase so fast as to choak one another. *Mill.* Gard. Dict. voc. *Melissa.*

BALM, in medicine, a denomination sometimes given to what is more usually called *balsam*. See BALSAM, *Cycl.*

The word *balm* rarely occurs, except in Scripture; where we read of *balm of Gilead*, a precious kind of medicine produced in that country, of which the Ishmaelites made a considerable trade to Egypt.

What this *balm* was, does not appear; the Hebrew name *zori*, which our translators have rendered *balm*, being by the Rabbins interpreted

interpreted to denote any resinous kind of gum. Some have imagined it the same with our balsam of Mecca, which they hence also denominate *balm of Gilead*; but of this there is small probability. Dr. Prideaux takes the ancient *balm of Gilead* to have been only a better sort of turpentine than that commonly then in use for the cure of wounds, &c. Vid. Connect. Hist. Old and New Test. P. 2. l. 6. p. 619, seq.

BALNEARII *Servi*, in antiquity, servants or attendants belonging to the baths.

Some were appointed to heat them, called *fornacatores*; others were denominated *capsarii*, who kept the cloaths of those that went into them; others *aliptæ*, whose care it was to pull off the hair; others *unctuarii*, who anointed and perfumed the body. *Danet*, Dict. Ant. in voc.

BALNEARIUS *Fur*, in antiquity, a kind of thief who practised stealing the cloaths of persons in the baths; sometimes also called *fur balnearum*.

The crime of those thieves was a kind of sacrilege; for the hot baths were sacred: hence they were more severely punished than common thieves, who stole out of private houses. The latter were acquitted with paying double the value of the thing stolen; whereas the former were punished with death.

These *balnearii fures* are represented as infinitely adroit and subtle: to guard against them, there were a kind of servants called *capsarii*, who made it their business, for a small fee, to watch the cloaths of those who went to bathe. *Pitisc.* Lex. Ant. T. 1. p. 248.

BALNEUM, (*Cycl.*)—BALNEUM *Roris*, or *Roritum*, is a furnace whereon the cucurbit, or distilling vessel, is only suspended over the vapour of water, and not in contact with the water itself. *Le Mort.* Collect. Chym. Leid. Prol. 2. c. 2. *Ruland.* p. 99. *Boerh.* Chem. P. 2.

This is also denominated *Balneum vaporarium*, or a *vapor bath*.

BALNEUM *Ventris Equini*, or a horse-dung bath, is when a body is laid to digest in horse-dung, the heat whereof is managed by the affusion of hot water. *Boerh.* l. c.

BALNEUM *Fœni*, a hay bath, is when a body is laid to digest in moist hay, whose heat is likewise directed by the application of water. Id. ibid.

BALNEUM *Minerale*, or mineral bath, is used by some chemists for *aqua regia*. *Le Mort.* Collect. Chym. Leid. c. 64.

BALONICH, in the Materia Medica of the ancients, a name given by Avisenna, Averroes, and others, to a kind of camphor, which they describe as coarse, brown, and of less value than the other sorts. This is probably the same with our rough camphire, as brought over to us from the East Indies.

BALSAM, (*Cycl.*)— The true origin of this substance is, that the native oil of the bark of trees is at first liquid; but after it has been some time formed, it becomes gradually inspissated by the sun's heat, and appears in the form and thickness of a *balsam*. By a still longer continuance, and more intense heat, it grows yet thicker, and becomes a kind of semi-resin, and, after a longer time, a true resin; which, from this origin, being more exhausted of its acid spirit, will wholly burn away in the fire, will liquify in the same, dissolve and mix with oil, obstinately refuse to mix with water, harden in the cold, and then lay aside its tenacity, and become friable. *Boerh.* Chem. p. 145. Mem. Acad. Scienc. 1721.

Dr. Grew says, that *balsams* are properly the juices of the roots; for though they be also procurable from other parts of plants, it is the root that usually yields the purest, as well as the greatest quantity of *balsam*. Vid. *Grew*, Anat. Veget. l. 2. c. 3. §. 21. Natural *balsams* bear so near an affinity to turpentine, in their aromatic, cleansing, and detergent qualities, that some will have them only so many species of turpentines. Vid. *Quincy*, Dispens. P. 2. §. 495.

Balsams are of great service in medicine and surgery. To use them, they are usually liquified with spirit of wine, or oil, and sometimes mixed up with the yolk of an egg.

The misfortune is, there is no vehicle found to carry *balsams* effectually into the lungs; what is taken into the stomach, must first pass the heart; and as to what is anointed on the breast and stomach, it will be taken up by the veins, and absorbent vessels, and carried into the ordinary course of circulation. Mr. Leewenhoeck proposes a new method of application; which see under the article BALSAMICS. Phil. Trans. N° 279. p. 1144.

The True BALSAM, *Balsamum verum*, distills from a small tree or shrub, called by the antient Arabian physicians *balsam*, and by the Grecians βαλσαμον. This is also called by divers other denominations, as *balm of Gilead*, *of the Levant*, *of Mecca*, *balsamum Gileadense*, *Orientale*, *de Mecca*, *Arabicum*, *Judaicum*, *Ægyptiacum*, *Syriacum*, *Antiquorum*, &c. *Burggr.* Lex. Med. p. 1426, seq.

The plant from which it distills, is a shrub which grows not higher than two or three cubits. A foot from the ground, it spreads into a number of small branches, no bigger than a goose's quill. Incisions being made in these, in June, July, and August, the balm trickles out. The incisions are usually made with glass, a knife, or sharp stone. If made with iron, it has been said, that the tree presently dies; which only holds when the incisions are made too deep. Vid. *Ray*, Hist. Plant. l. 31. c. 23. *Prosp. Alpin.* de Plant. Ægypt. c. 14. p. 48. *Worm.* Mus. p. 223. *Slevogt.* Diss. de Opobals. c. 2. §. 7. *Wedel.* Diss. de Terebinth. c. 1. p. 9.

Pliny tells us, that the *balsam* tree was no where to be found but in Judea, and there only in two gardens [a]. But now Ægypt produces it, and Judea has lost it. Prosper Alpinus assures us, that neither Judea nor Egypt is the natural country of the *balsam* tree, but Arabia Felix, as it grows naturally here, but never in Egypt or Judea, but as it is cultivated in gardens [b]: and that, in Egypt, the best cultivation cannot keep it from decay; so that they are forced frequently to send for new plants from Arabia [c].—[[a] *Plin.* Hist. Nat. l. 12. c. 25. [b] Vid. *Salmas.* Exerc. ad Solin. T. 1. p. 579, & p. 591. *Salmuth.* ad Pancirol. P. 1. tit. 12. p. 32, seq. [c] *Prideaux*, Connect. P. 2. l. 6. p. 617, seq. *Burggr.* Lex. Med. 1434, seq. *Clus.* Exot. l. 10. c. 9. *Alpin.* de Plant. Egypt. c. 14. p. 49. Id. in Dial. de Balsam. c. 2. p. 8.]

When first gathered, it is thin and light, so as to swim in water; when old, it grows thick, hard, and heavy; so that if dropped into water or milk, it presently sinks.

It is said to relieve inward decays, bruises, and sores; open obstructions of the lungs; heal erosions from acrimony, and the worst kind of ulcerations; to be excellent in asthmas and pleurisies, and whatever requires expectoration. It is also applied externally as a detergent and incarnative. Vid. *Quincy*, Pharm. P. 2. §. 285.

The *balsam* brought to us, comes chiefly from Egypt; not that it is the produce of that country, the greater part being brought from Mecca to Alexandria, by the caravans of Mahometan pilgrims, who travel yearly, out of devotion, to the birth-place of their prophet. And from Alexandria it is brought hither, whence the denomination *balsamum è Mecca*, and *Ægyptiacum*. Of late, the East India Company have also imported it directly from Arabia, by the way of the Red sea.

For the appellation, *balm of Gilead*, it is given it on a supposition, that the balm mentioned in Scripture to come from Gilead, was the same with that of Mecca; of which, we have already observed, there is little probability. See BALM.

The adulterated is known by swimming on water like oil, and shooting out streaks like a star; it also leaves a stain in woollen, which the genuine does not, but washes clean away. *Alpin.* Dial. de Balsam. c. 3. p. 21. 24. Id. c. 5. p. 37.

Another mark of the purity of the *balsam* is, when a drop of it, let fall on red hot iron, gathers itself into a globule; whereas oil, or spurious *balsam*, runs and sheds all around. To mention no more, the genuine *balsam* feels viscid, and adhesive to the fingers, which the adulterated does not. If sophisticated with wax, it is discovered by the turbid colour, never to be clarified; if, with honey, the sweet taste betrays it; if with resins, dropping it on coals, it yields a blacker flame, and of a grosser substance, than the genuine.

The pure was sold in the country where it was produced, for double its weight in silver; at least this was the antient price in the days of Theophrastus [d] and Dioscorides [e].—[[d] Hist. Plant. l. 9. c. 6. [e] L. 1. c. 18.]

The scarcity of the true balm, and the frequent adulterations of it, have led some to rank it in the number of lost things; and others to hold, that, at least, it is no longer imported into these countries. Peter Martyr, and, after him, Cardan, assure us, that the *balsam* shrubs were all extinct. Vid. *Card.* de Subtil. l. 8. p. 249.

Others infer, from a passage in Pliny, *Sæviere Judæi in eam* (arbusculam) *sicut in vitam quoque suam, contra defendere Romani, & dimicatum pro frutice est* [f], that the Jews had destroyed all the *balsam* trees in Judea, and that thus the juice was lost. But Razivil [g], Scaliger [h], Clusius, and others, effectually refute these suggestions. The point was hotly disputed at Rome in 1639, on occasion of some druggists of that city, who had procured a quantity of the *balsam* to be used in making the theriaca; their pretension being called in question by others of the profession, pope Urban VIII. assisted by cardinal Barberini, Thad. Collicula, his first physician, and J. Ubaldini, chief physician of the city, took cognizance of this matter; and, after a full examination of what was alleged on either side, pronounced the *balsam* was true.—[[f] Hist. Nat. l. 12. c. 25. [g] Hierozol. Peragr. p. 177. [h] Exerc. 157. §. 1. *Burggr.* p. 1427, seq.]

Fr. Perla, a Roman physician, wrote the history of the controversy; and Volcamer has collected all the pieces written on either side the question, under the title of *Opobalsami orientalis in theriaces confectione Romæ vocati, doctiorumque calculis approbati sinceritas*. Norimb. 1644. 12°. an extract of it is given by *Burggr.* in Lex. Med. Univ. p. 1429, seq.

BALSAM *of Copaiba*, is an oily, resinous liquor, at first limpid, like distilled oil of turpentine, but afterwards growing thicker, and from a white colour turning yellowish, of a subacrid bitterish taste, a brisk resinous terebinthinous smell, gathered from a tree of the same name growing in Brazil. *Burggr.* Lex. Med. p. 1457.

It was at first called, by reason of its clearness, *oil of copaiba*; by the Americans, sometimes *colocai*; by the Portuguese, *camelo*; by the French, *copaif*, and *cambaif*; among us, usually *capivi*; among foreign writers, we also find it denominated *copaliba*, *copaliva*, *copaiva*, and *capayva*.

Many of the Americans call all odoriferous resins, and sweet scented

ſcented gums *copal*; and the word *iba*, or *iva*, is the name for a tree; by which the etymology of *copaiva* eaſily appears.

It was firſt imported into Europe towards the cloſe of the ſixteenth century. The Portugueſe learned its virtues from the practice of the natives, whom they ſaw anoint their wounds with it; or, as ſome ſay, from the beaſts, eſpecially bears, which, when wounded, by a natural inſtinct rub themſelves againſt the tree. *Burggr.* Lib. cit. p. 1459, ſeq.

It is a great cleanſer of the urinary paſſages; on which account it obtains much in gonorrhœas, and all obſtructions and ulcerations in thoſe parts. It is alſo reputed a powerful balſamic, and, as ſuch, uſed in many diſtempers of the breaſt. *Quincy*, Diſpenſ. P. 2. §. 284.

But its heat and acrimony render it hurtful in inflammatory caſes, phthiſes, diſorders of the kidneys, &c. Vid. *Junck.* Conſp. Therap. tab. 5. p. 188, ſeq.

The *balſam of copaiva* is frequently adulterated with oil of ſweet almonds, and oil of turpentine; the near reſemblance it bears to this laſt, has occaſioned them to be ſometimes confounded. They may be diſtinguiſhed by the conſiſtence as well as by colour; turpentine being thicker, and of a vitreous caſt, the *balſam* being whiter, and more inclining to a yellow: add, that it is more odorous, as well as ſharper and bitterer to the taſte. *Burggr.* Lib. cit. p 1459.

BALSAM *of Peru*, is an oily, reſinous liquor, of a pungent, bitteriſh taſte, and a ſweet, fragrant ſmell, collected from a tree called by the native Peruvians *hoitziloxilt*. *Burggr.* Lex. Med. p. 1465, ſeq.

This balſam is called by Piſo *cabureiba*, and by Marggravius *cabui-iba*; by us, commonly, from the country, *Peruvian balſam*. Its heat renders it hurtful in certain caſes, and apt to create an inflammation; particularly in phthiſes, aſthmas, ulcers of the kidneys, &c. Vid. *Junck.* Conſp. Therap. Tab. 5. p. 189.

Its genuineneſs is known by this, that, when poured into water, it ſinks to the bottom, turns of a whitiſh colour, but does not mix or diffuſe at all in the water.

The way to make an intimate mixture of this *balſam* with water, is by means of the yolk of an egg. Vid. *Junck.* Conſp. Chir. p. 255. 336.

If mixed with turpentine, or any other liquor, it preſently loſes its ſmell. It unites with diſſolved ſugar, but, upon the application of cold water, the *balſam* readily ſeparates again. If evaporated over the coals, a thick ſediment is left at the bottom of the veſſel, reſembling colophony. If melted with wax, it preſently ſubſides. And hence an uſeful pharmaceutical rule, *viz.* that *balſam of Peru* may be retained in cerats while cold, but that, if melted, it preſently ſeparates itſelf, and ſettles to the bottom. *Burggr.* Lex. Med. p. 1468, ſeq.

BALSAM *of Tolu*, is an oily, reſinous liquor, of a ruddy colour, tending to a yellow; of a middle conſiſtence, between a fluid and a ſolid; extremely glutinous, ſo that wherever laid it ſticks firmly; of a ſweet and grateful taſte. It does not, like other balſams, excite a nauſea; yielding a moſt excellent fragrance, not unlike that of lemons [i]. It is an excellent balſamic and reſtorative; and good in all decays, eſpecially of the lungs. It ſoftens and thickens the blood, and cures cattarrhs, and coughs, from tickling defluxions, &c. Its healing virtues extend even to the ſeminal parts, where it is good in old gleets, &c. There is a ſyrup of it in the ſhops; but the beſt form of adminiſtring it is in pills, or in a ſolution in ſome ſpirituous menſtruum [k].—[i *Burggr.* Lex. Med. p. 1474. k *Quinc.* Diſpenſ. P. 2. §. 207.]

The *balſam of Tolu* comes neareſt to the *true* or *eaſtern balſam*; and, in effect, exhibits moſt of the marks and characteriſtics of it: whence Bartholin makes it the beſt ſubſtitute, where the other cannot be had. *Barth.* Diſſ. 2. de Theriac. p. 2. §. 25. It takes its denomination from a place called *Tolu*, ſituated between Carthagena and Nombre de Dios.

Hungarian BALSAM, *Balſamum Carpathicum*, or *Hungaricum*, is a ſpecies of oil, or liquid reſin, oozing from a coniferous tree growing on the Carpathian mountains, to which the Hungarians attribute many virtues. Vid. Ephem. Acad. N. C. Cent. 7. Obſ. 2. p. 4.

This *balſam* bears a near reſemblance to oil of turpentine. It was diſcovered in 1650, by Chr. ab Hortis, a phyſician of the country, who was ennobled by the emperor Ferdinand II. for his diſcovery. The firſt diſtinct account we had of it in theſe parts, was from M. Breynius. Ephem. Acad. N. C. l c.

The *Carpathian balſam* is the produce both of a ſhrub and a tree; though the juice of the latter is preferred, both as more fragrant, and of greater virtue. Breynius will have the tree to be the *Pinaſter* of Bellonius, or *Pinus ſylveſtris montana tertia C. Bauhin.* Some have given it the denomination of *Libanum Carpathicum.*

There are two ways of gathering it; one by wounding the branches of the tree, and faſtening glaſs veſſels exactly thereto, ſo as to cloſe the orifices, and prevent the exhalation of the finer parts of the *balſam*; the juice trickling out in the ſpring-time, being received in theſe glaſſes, is the *balſam*. The ſecond is by expreſſion from the branches of the tree, firſt cut off for the purpoſe. But this kind is of inferior value to the former. The very wood, by diſtillation, yields a fragrant balſamic oil, which has all the virtues of the *balſam* itſelf. *Burggr.* Lex. Med. p. 1453.

The virtues of this *balſam*, internally taken, or externally applied, are ſaid to be very great, and not inferior to thoſe of the *oriental balſam*. But whether either deſerve the commendation beſtowed on them, and how far they excel the common turpentine, is a queſtion which muſt be left to impartial practitioners.

The biſhop of Cloyne aſſerts, that tar-water has all the virtues of theſe *balſams*, without their bad effects. See TAR-WATER.

BALSAM is alſo applied to a mineral ſubſtance, of a fragrant, healing quality; extracted from a kind of ſtones diſcovered in a mine near *Bergamo* in Italy. Vid. Phil. Tranſ. N° 79. p. 3059.

This is more peculiarly called, by way of diſtinction, the *mineral balſam.*

The diſcoverer was Sig. Caſtagna. Its chief uſe is in diſorders of the uterus; on which account it is in great eſteem among the Genoeſe, to reſtore women after labour [l]. Some have alſo found it of great benefit in the phthiſis [m].—[l Phil. Tranſ. N° 127. p. 674. m *Nenter.* Fund. Medic. T. 1. P. 2. p. 379.]

Artificial BALSAMS are, by ſome, divided into ſimple and compound: to the claſs of *ſimple*, belong the rectified oils of wax, turpentine, linſeed, hypericum, roſes, ſolanum, and trifolium odoratum; to which Boerhaave adds freſh butter. Vid. *Boerh.* De Mat. Med. p. 49.

Compound balſams are numerous; the diſpenſatory writers furniſh a great number of forms, as magiſterial, chalybeat, paralytic, nephritic, and polychreſt *balſams*; red, green, Spaniſh, and Samaritan *balſams*; *balſams* of arceus, of amber, of pitch, &c. Vid. *Boerh.* de Mat. Med. Pharm. Colleg. Lond. *Le Mort.* Collect. Chym. Leid. c. 82, ſeq.

Beſides theſe, chymiſts and alchymiſts ſpeak of *balſams of antimony, of life*, &c.

BALSAM *of Antimony*, a famous medicine deſcribed by Baſil Valentine in his *Currus antimonii triumphalis.* This author has related many incredible things in its praiſe; but Kerkring, in his commentaries on that work, declares, that all he has ſaid of it, is ſhort of its real praiſe; and that, in particular, cancers were to be cured by it; himſelf having, as he informs us, performed a perfect cure on a breaſt condemned to be cut off, by anointing it with this *balſam*, and giving the common internals.

BALSAM *of Life.* The firſt medicine known by this pompous name, was the preparation of antimony, ſo highly extolled by Baſil Valentine, and, after him, by Kerkring. Theſe gentlemen are very cautious of giving the proceſſes for this and the like medicines, in intelligible terms; but they acknowledge, that it contains all the virtues of antimony, and all that can be done by the ſpagyric art.

The famous Frederick Hofman ſpeaks of a *balſam of life*, of his own invention, to which he aſcribes great virtues; but we know not if ever he publiſhed the proceſs for making it. That given in the Straſburg and Ratiſbon Diſpenſatories, under the name of *Balſamum vitæ Hofmanni*, is taken from the notes on Poterius, and is not the ſame with that *balſam*, which the late learned Fred. Hofman prepared in his own houſe.

BALSAM is alſo applied to certain preparations of ſpirit of wine, with balſamic and aromatic ſpices, fragrant reſins, and the like. Theſe are otherwiſe called elixirs. Among theſe, the *elixir balſamicum Hofmanni*, otherwiſe called his *balſamum vitæ*, is famous; but its preparation ſeems not known. Vid. ſupra.

Odoriferous BALSAMS are a fragrant kind of unguents, generally of a thick conſiſtence, compoſed of ſome fatty, denſe juice, joined with ſome diſtilled oils of divers kinds. *Burggr.* Lex. Med. p. 1477.

Theſe are alſo called *ſweet-ſcented*, or *apoplectic balſams.*

The Italians are ſuppoſed to excell in the preparation of *apoplectic balſams.* But, perhaps, they may be as well prepared according to Boerhaave's method, which is this: Melt an ounce of fine pomatum, in a china veſſel, over a ſmall and perfectly clear fire; then gradually add a dram of white wax, ſhaved into thin pieces. After theſe are perfectly blended together, remove the veſſel from the fire; and, when the matter begins to thicken in cooling, drop in, by ſlow degrees, a dram of any of the fragrant eſſential oils; keep the whole continually ſtirring all the the time the oil is dropping in, that it may perfectly mix. After which, ſet the veſſel in cold water, that the whole matter, immediately condenſing by the cold, may keep in the oil and ſpirit. When the *balſam* is thoroughly cold, put it immediately up in veſſels of lead or pewter; and, if theſe are cloſe covered, it will keep perfect a great many years.

Inſtead of pomatum and wax, the expreſſed oil of nutmeg may be uſed in this proceſs, after it has been waſhed in water, till perfectly inſipid, white, and inodorous.

If theſe *balſams* are required to be of any colour, it may be eaſily given at pleaſure. A ſcruple of cochineal, in fine powder, will tinge the *balſam* to a fine purple; or the ſame quantity of the inſpiſſated juice of buckthorn berries, to a fine green; a little native cinnabar will turn it ſcarlet; turmerick, yellow; and ſmalt, to a beautiful blue. Any of theſe may be uſed at pleaſure, provided that they have no ill ſmell, or hurtful properties.

Theſe *balſams* are prepared as rich perfumes, to raiſe the languid ſpirits; and the nobleſt and richeſt of the eſſential oils ſhould therefore be uſed in them. The oils principally direc-

ted by Boerhaave to this purpoſe, are thoſe of balm, calamus aromaticus, cinnamon, cedar, citron, cloves, jaſmin, lavender, white lillies, marjoram, mace, nutmeg, origanum, oranges, both thoſe of China and Sevil, roſes, rhodium, and yellow ſaunders; to which may be added, the natural balſams of Peru and Gilead; theſe two being ſpontaneouſly fragrant without diſtillation. Vid. *Boerh.* Chem. P. 2.

Diſtilled BALSAMS, are only etherial oils diſſolved in ſpirit of wine. *Burggr.* Lex. Med. p. 1478.

Unguentareous BALSAMS, are, properly, unguents compoſed of divers reſins, gums, and oils, fuſed into one maſs with ſpirit of wine, oil of turpentine, or the like; intended to cleanſe, preſerve from putrefaction, heal, mitigate, reſolve, *&c.* *Burggr.* Lex. Med. p. 1479.

BALSAM is alſo uſed, in pharmacy, as the name of one of the forms of medicines; of a conſiſtence ſomewhat greater than that of an oil, but leſs than that of an unguent. *Junck.* Conſp. Formul. Medic. tab. 16. p. 101. *Quinc.* Diſpenſ. P. 3. p. 443. Ejuſd. Lect. Pharm. 1. p. 8.

BALSAMUM *Samech*, of Paracelſus, is a ſalt of tartar dulcified, by diſtilling ſpirit of wine from it, till the ſalt be ſufficiently ſaturated with its ſulphur, and till it ſuffer the liquor to be drawn off, as ſtrong as when it was poured on. *Boyle*, Phil. Work. abr. T. 3. p. 286. Vid. *Le Mort.* Collect. Chym. Leid, p. 436.

BALSAM, among alchymiſts, is alſo appropriated to expreſs a ſubſtance, proper to preſerve bodies from putrefaction. *Ruland*, p. 95.

Hence the art of embalming is denominated *balſamation*.

The adepts in the faculty ſpeak of an *internal* as well as *external balſam*. The firſt is deſcribed as, I know not what occult principle in human bodies, neither bitter nor ſweet, but acerb, *&c.* called alſo *gluten naturæ*. The latter, according to Paracelſus, is no other than turpentine, which has not born the violence of the fire, yet digeſted. Vid. *Caſtel.* Lex. p. 99. a.

BALSAMUM *de Mumiis*, is a kind of balſam which they ſpeak of, drawn from fleſh.

Dead BALSAM, *Balſamum mortuum*, a liquor prepared of myrrh and aloes, diſſolved in ſpirit of wine, chiefly uſed for drying and abſorbing the humours of dead bodies. *Caſt.* Lex. p. 98. b. Vid. *Le Mort.* Collect. Chym. Leid. c. 100. p. 113.

We are alſo told of a *Balſamum elementorum*, and *Balſamum corporis hermetici*; but the definitions they give of them are much too ſubtile for our comprehenſion. Vid. *Caſtel.* Lex. p. 99. a.

BALSAM *of the Philoſophers*, *Balſamum Philoſophorum*, is one of thoſe enigmatical terms whereby they expreſs *aurum potabile*. Vid. Theat. Chym. T. 4. p. 328.

BALSAM is alſo ſometimes uſed, in eccleſiaſtical writers, for the ſacred chryſm.

This is otherwiſe denominated *balſamelæum*. *Du Cange*, Gloſſ. Græc. T. 1. p. 171.

BALSAMUM *Traumaticum*, *vulnerary Balſam*, a form of medicine preſcribed in the London Diſpenſatory, intended to ſupply the place of the tincture, commonly called the Friers *balſam*, ſo famous for curing freſh wounds. It is made thus: Take of benjamin three ounces, ſtrained ſtorax two ounces, balſam of Tolu one ounce, ſuccotrine aloes half an ounce, rectified ſpirit of wine a quart; digeſt them together, till as much as may be of the gums are diſſolved, and then ſtrain off the ſpirit. *Pemberton*'s Lond. Diſpenſ. p. 282.

BALSAMATION, *Balſamatio*, is uſed, by ſome writers, for the art or act of embalming dead bodies. See the article EMBALMING.

Dr. Hook ſpeaks of an univerſal *balſamation*, or method of preſerving all kinds of bodies from corruption, invented by Dr. Elſhot. See the article PRESERVATION.

BALSAMELÆON, in the Materia Medica, a name given by ſome authors to the balm of Gilead, or true balſamum Judaicum. *Dale*, Pharm. p. 282.

BALSAMIC (*Cycl.*) is often applied to things healing or vulnerary.

In this ſenſe, phyſicians ſpeak of the *balſamic* virtues of iron [a]: hence alſo the denomination, *balſamic ſtyptic*, given to Dr. Eaton's liquor [b].—[[a] Mem. Acad. Scienc. 1713. p. 247. [b] Phil. Tranſ. N° 283. p. 110.]

BALSAMICS are medicines endowed with a balſamic, that is, a reſtoring, healing, and cleanſing power.

The chief remedies in the claſs of *balſamics*, are the native balſams, which give the denomination to all the reſt.

BALSAMICS are divided into emollients, reſtoratives, vulneraries, and detergents.

BALSAMICS, again, are either internal or external; hot and acrid, or mild and temperate. The acrimonious kind are dangerous internally, and not to be given without the greateſt caution, where there is any diſpoſition to inflammation or fever; as in phthiſes [c], vomicas [d], gonorrhœas [e], urinous diſorders [f], ſtone [g], cephalæa [h], *&c.*—[[c] *Boerh.* de Mat. Med. p. 142. *Nent.* Fund. Med. T. 2. P. 2. p. 325. [d] *Junck.* Conſp. Med. p. 176. [e] Id. ibid. p. 480, ſeq. [f] Id. ibid. p. 42. [g] Id. ibid. p. 231. [h] *Nent.* l. c. T. 1. P. 114.]

BALSAMICS labour under this defect, that they muſt make a vaſt progreſs in moſt inſtances, ere they can arrive at the intended ſcene of action; by which means they not only come ſlowly, and in ſmall quantities, but much altered, and variouſly modified, by the action of the blood-veſſels, and the intermixture of its humours.

In the intentions where *balſamics* are chiefly given, the ſeat of the diſorder is generally in the viſcera; where a medicine can only arrive by the common conveyance of the blood: and how long, from its being taken into the ſtomach, muſt ſuch a medicine be, and how many alterations muſt it undergo in the divers parts of the body it paſſes through, ere it comes to the place deſired? Though the lungs are, by their ſituation, ſo near the ſtomach, a medicine cannot arrive there, till it has taken its courſe through the lacteals, paſſed all the meanders of the meſentery, gone up with the chyle into the ſubclavian vein, and there entered the blood: and, after all, it has only the chance of coming to the part in ſuch a quantity, as, with regard to the whole medicine which entered the blood, bears the ſame proportion, as the blood in the pulmonary artery bears to all the blood in the other arteries.

Hence nothing is to be expected from *balſamics*, in a ſhort time, or a few days: they muſt be repeated, and followed, till the animal juices are ſufficiently charged therewith, to afford a continual ſupply. *Quinc.* Diſpenſ. P. 2. §. 4. p. 103.

Add, that *balſamics* generally load, and clog the ſtomach; and, hence, have often bad effects. This conſideration leads the biſhop of Cloyne to prefer tar-water to all other *balſamics*. See TAR-WATER.

M. Leewenhoeck has propoſed a new method of adminiſtring balſams, free from the inconveniencies above-mentioned. His method is, to take a little piece of ſilver or copper, the bigneſs of a ſhilling, and, making a ſmall hole in it, fill the cavity with a little balſam proper for the occaſion, and place it on the tongue; then, ſtopping the noſtrils, let no air be admitted into the lungs, but through the mouth. By this means, the ſubtile or ſpirituous particles of the balſam will exhale, and deſcend into the veſſels of the lungs. But we do not find, that experience has confirmed this notion of Leewenhoeck. Phil. Tranſ. N° 279. p. 1144.

BALSAMINA, *Balſamine*, in botany, the name of a genus of plants; the characters of which are theſe: The flower is of the polypetalous, anomalous kind, and is, in ſome ſpecies, four-leaved, and, in others, ſix-leaved. In the four-leaved flowers, the upper leaf is arched, and the lower hollowed, and terminated by a tail, and the two ſide-leaves are aurited, and large.

In the ſix-leaved flowers of this genus, the lower leaf has no tail.

In both, the piſtil, which is furniſhed with two leaves, occupies the middle part of the flower, and, finally, becomes a fruit; ſometimes turbinated at one end, or both, and ſometimes emulating the ſhape of a pod, conſiſting of ſeveral muſcles, as it were, and endued with an elaſtic force, and flying open with great violence. The ſeeds it contains, are fixed to an axis, or placenta. See the figure repreſented in Tab. 1: of Botany, claſs 11.

The ſpecies of *balſamine* enumerated by Mr. Tournefort, are theſe: 1. The common female *balſam*. 2. The common female *balſam*, with white flowers. 3. The common female *balſam*, with flowers partly white, partly red. 4. The *balſam*, with a large beautiful flower. 5. The *balſam*, with a very large white flower. 6. The *balſam*, with narrow and elegantly crenated leaves, and with ſmall white flowers. 7. The Indian *balſam*, with flowers beautifully variegated with pale red, and white. 8. The Indian *balſam*, with double red flowers. 9. The narrow-leaved Indian *balſam*, with a ſmall, but very elegant, red flower. 10. The yellow *balſam*, called *noli me tangere*. 11. The paler flowered *balſam*, or *noli me tangere*. 12. The purple flowered *noli me tangere*. 13. The great Virginian *noli me tangere*, with deep yellow flowers, variegated with purple ſpots. *Tourn.* Inſt. p. 418.

The many varieties of this plant, kept in the gardens, are all raiſed from ſeeds ſown on hot-beds in the ſpring, and afterwards planted out into pots and borders; though there are two or three of the hardier kinds, as the common white, red, and purple kinds, which will come up in common ground, without any artificial heat, and will be ſtronger, and flower better ſo, than if raiſed on hot-beds. But the fine double large kind, or immortal eagle-flower, as it is called, requires to be ſet on a freſh hot-bed, after it has been raiſed on one, in order to bring it forward; elſe it does not get into flower till late in the year, and will not ripen its ſeeds. There are two kinds of this beautiful ſpecies; one brought from the Weſt Indies, by the name of the *cock's ſpur*: this produces large and ſtrong plants, but flowers very late. The other is from China, and is what is moſt commonly called the *immortal eagle-flower*, and is one of the fineſt annual plants we have, producing very large double flowers, and continuing a long time in flower, if ſheltered from violent winds and rain. This produces ſeeds very well with us; but theſe are apt to degenerate, after a few years, into ſingle flowers.

When the young plants are raiſed in a hot-bed, and are to be planted out into pots, ſuch are always to be preferred as have ſtalks finely ſpotted with red; for theſe always produce red and double flowers. *Miller*'s Gard. Dict.

BALTAGI, among the Turks, porters, and hewers of wood, in the court of the grand ſignior; who alſo mount on horſeback, when the emperor rides out. Part of them alſo, who, for that purpoſe, muſt be caſtrated, keep watch at the gates of the firſt and ſecond courts of the ſeraglio. Theſe laſt are called *capigi*, and their commander *capigi paſcha*. *Fæſch.* Ing. Lex. p. 64. a.

BALTHEUS *Orionis*, *Belt of Orion*, in aſtronomy, a part of the conſtellation of Orion, conſiſting of three bright ſtars of the ſecond magnitude, placed nearly in a right line in Orion's girdle. See ORION, *Cycl.*

BAMBELE, in zoology, a name given by many to a ſmall freſh-water fiſh, called by authors *phaxinus*, and, vulgarly, the *pink*. *Geſner*, de Aquat. p. 844. See PHAXINUS.

BAMBO, in matters of commerce, denotes an Eaſt Indian meaſure of capacity, containing five Engliſh pints. Lex. Mercat. p. 385.

BAMBO, or BAMBOU, or BAMBU, is more frequently uſed for a large Indian cane, ſometimes growing nine or ten yards high, and eight or nine inches in diameter, and hollow throughout, except that, at each joint, it is cloſed with a traverſe plate, to give it ſtrength and firmneſs proportionable to ſo great a height. Phil. Tranſ. N° 212.

BAMBO, in this ſenſe, is a corrupt name given to this reed by the Portugueſe: botaniſts uſually denominate it, *Ily*; ſome, *arundo Indica arborea cortice ſpinoſo*: the natives call it *nuayhas*, i. e. the ague-tree, from its effect on thoſe who waſh in the waters wherein the leaves have fallen. Phil. Tranſ. N° 145.

It grows in Malabar, eſpecially about Coromandel, near the ſea ſide. In the cavities of it is found a curdled juice, whereof the natives make a ſort of ſugar. *Grew*, Muſ. Reg. Societ. P. 2. §. 2. c. 2. p. 223, ſeq.

The large *bambous* ſerve to make poles, whereon the ſlaves carry that ſort of chair, or rather litter, called the *palanquin*; they alſo make ciſterns of them, wherein water will keep very cool. *Savar.* Dict. Comm. p. 229.

A decoction is made of the leaves, of uſe for diſperſing coagulated blood; and, of the pithy part in the middle, they alſo make a medicine againſt the ſtrangury. Vid. *Lemery*, Traité des Drogues, p. 111, ſeq.

BANANA, a name uſed by many authors for the *muſa*, or plantain tree, of the common kind; but more frequently, with us, underſtood to mean another ſpecies of the ſame genus, which the Portugueſe call *pacoeira*, and we, particularly, the *banana* tree. *Piſo*, p. 75.

The difference between the two is this; the *muſa* has a green ſtalk, and a long, crooked, angular fruit, reſembling a crooked cucumber; the *banana*, a ſpotted ſtalk, and a round fruit. *Dale*, Pharm. p. 273.

BAND, in matters of artillery, denotes a hoop of iron uſed about the carriage of a gun. *Guillet*, Gent. Dict. P. 2. in voc.

Such are the nave *bands*, which are iron hoops binding the nave at both ends.

BANDS *of a Saddle*, denote two flat narrow pieces of iron, nailed on each ſide the bows of the ſaddle, to retain thoſe bows in the ſituation which makes the form of a ſaddle.

To put a bow in the BAND, is to nail down the two ends of each *band* to each ſide of the bow.

Beſides the two great *bands*, the fore-bow has a ſmall one, called the *wither-band*, and the hinder-bow another to ſtrengthen it. *Guillet*, Gent. Dict. P. 1. in voc.

BAND, *Bandum*, is alſo uſed, in middle age writers, for a flag or banner. Vid. *Du Cange*, Gloſſ. Gr. T. 1. p. 173. *Aquin* T. 1. p. 112.

BANDS, in a military ſenſe, formerly denoted bodies of foot.

Thus the French, formerly, called all their infantry, *Bandes Françoiſes*, or *French bands*; but now the term is out of uſe. Milit. Dict.

Hence alſo the terms, *Prætorian bands*, *Trained bands*, &c.

BAND *of Penſioners*, is ſtill retained, to denote a company of gentlemen, who receive a yearly allowance of 100 *l.* for attending the king on ſolemn occaſions. *Guillet*, Gent. Dict. P. 1.

BANDS *of Columns*, properly denote a kind of emboſſments ſurrounding the ſhafts of ruſtic columns, at certain diſtances, by way of decoration.

Theſe are ſometimes plain, ſometimes picked or vermiculated, and ſometimes carved with decorations of low relievo, which are different in every different *band*. Vid *Davil.* Courſ. d'Archit. P. 1. p. 302. Id. P. 2. p. 409, ſeq.

Columns enriched with theſe *bands*, are ſometimes called *banded columns*.

BANDAGE (*Cycl.*) — *Bandages* are a very neceſſary part of the *apparatus* in dreſſing and binding up of wounds. They are not only of greater ſervice than compreſſes and plaſters, in ſecuring the other dreſſings, but are alſo of excellent uſe in reſtraining dangerous hæmorrhages, and in joining fractured, or diſlocated bones.

Almoſt all *bandages*, uſed in dreſſing of wounds, ulcers, or fractured or diſlocated bones, ſhould be made of clean linnen cloth, ſoftened by wearing, but ſtrong.

They are to be made of a proper length and breadth for the occaſion; and, that they may be ſtrong, examine the courſe of the threads, and tear the cloth lengthways. Darns, ſeams, and large hems in the cloth, are, as much as poſſible, to be avoided, that no inconvenience may be brought on by the roughneſs and irregularity of the roller.

There are different ſorts of *bandages*, for different uſes. Some are common; others are proper. Theſe laſt are only to be applied to particular parts; the others may be applied to any.

Bandages may be diſtinguiſhed alſo into *ſimple* and *compound*; the *ſimple* are thoſe which are formed of one entire piece of linnen; the *compound*, of ſeveral pieces, ſewed together in different manners.

The moſt ſimple of all *bandages*, is that uſually not rolled up, but left looſe, and uſed in phlebotomy.

The next to this, is that called the *ſingle-headed bandage*, which is rolled up at one end only. Next to that, the *double-headed bandage*, or that rolled up at both ends.

After theſe come thoſe *bandages*, which are made out of one piece of linnen, but are divided at both ends, almoſt as far as the middle; theſe are uſually called, by the ſurgeons, *four-headed bandages*.

Another ſort is ſomewhat ſhorter, and narrower, than the laſt deſcribed, and is divided at one end, and perforated at the other. It is uſually employed in dreſſings to the penis, or to one of the fingers.

Another kind is, from its uſe, called the *uniting bandage*; it is a double-headed *bandage*, divided about the middle, and ſerves to unite wounds that are made lengthways, without calling for the ſuture.

There is alſo another *bandage*, provided with an opening in the middle, through which the head may eaſily paſs; the extreme parts of the *bandage* hanging, one over the breaſt, the other over the back. The chief uſe of this *bandage* conſiſts in this, that, in dreſſing wounds of the thorax or abdomen, it is capable of ſupporting another *bandage*, ſomething wider, made of a cloth four or ſix times doubled, and bound round the breaſt or belly.

There remains ſtill to be conſidered, a compound *bandage*, made of two pieces of cloth, almoſt in form of the letter T. The upper part of this is to be brought round the belly, and faſtened by a knot; but the lower part paſſes under the body, between the thighs, and, being brought up again, is faſtened to the upper part upon the back. This *bandage* plainly appears to be deſigned for the ſecurity of ſuch dreſſings, as ſhall be thought proper to be applied to the anus, or parts of generation. Some, from the inventor, call this *Heliodorus*'s *bandage*. Others, from its ſhape, denominate it the T *bandage*; and, from the diviſion that is frequently made in the lower part of it, it is ſometimes called the *double* T.

As to *bandages* for the head, notwithſtanding that ſurgeons have formerly invented different kinds of them, for every wound that could be inflicted on that part, yet there is but one form that ſeems neceſſary; and this alone will anſwer all the ends that can be propoſed from this kind of application. It is made in the following manner: Take a handkerchief, napkin, or any ſquare piece of linnen; double it up in a triangular form, and apply it as we frequently do in hot weather, when we lay aſide the uſual coverings of the head, to avoid the exceſſive heat of the ſun.

The *bandage*, which is ſo much in uſe with the modern ſurgeons, and is called by the French the *grand couvrechef*, differs very little from this, and is commonly made of a napkin, or ſome piece of ſoft linnen, in a ſquare form. It is doubled in ſuch a manner, that the lower part is about four fingers breadth wider than the upper. The middle part of this cloth is placed ſo upon the head, that the fore-part may reach almoſt as far as the eyes; the four extremities, or corners of it, hanging over the cheeks. The two corners of the upper, or narrower part, are to be tied under the chin, at the ſame time that the two corners of the lower, or wider part, are to be brought under the back part of the head, and tied together, or faſtened with a needle and thread. This kind of *bandage*, when it is neatly made, ſticks cloſe to the head, and is an excellent contrivance to preſerve it from the injuries it might receive from cold air. The fore-part of it, that was extended toward the eyes, is, when the ends are faſtened, to be turned back as far as the crown of the head; and the two parts that hang over the neck, are to be turned back alſo, and faſtened behind the ears with a needle and thread.

The different names of ſimple *bandages*, which they aſſume according to the different windings that they form, in the manner of applying them, are not to be forgotten.

If a *ſimple bandage*, with one head, ſurrounds an injured part, in one direct courſe, it is called *annular*, *orbicular*, or *circular*; on the contrary, if the windings of the *bandage* aſcend, or deſcend, eſpecially if it be in a ſpiral manner, they are called *obtuſe*, or *ſpiral*. This frequently happens in fractures, and other kinds of diſorders, and is of eminent ſervice. But when the limbs, that are to be bound in this manner, are of different thickneſſes in the different parts of them, which is the caſe of the *tibiæ*, it requires a good deal of art to prevent the *bandages* from hanging looſe. The *bandage*, in this caſe, is to be applied to the *tarſus*, and to be brought upwards, ſo as to croſs the *malleoli*, rolling it round the *tibiæ*, in a ſpiral manner. But when you are come up to the calves of the legs, each round of the roller muſt be turned in a particular manner, and tightened, according as the caſe requires.

From

From what has been ſaid, the reaſon will be eaſily conceived, why the windings of the *bandage*, we have been deſcribing, are generally ſaid to be *inverted*, or *reverſed*, and, by the *French*, called *renverſees*. Theſe *bandages* are ſo managed, that the windings of the roller are contiguous to one another.

But there is another method of *bandage* in uſe, where the windings of the roller are not ſo frequent; and are therefore called *creeping bandages*, and, in the French ſchools, *rampants*. Theſe creeping, or, as we ſometimes call them, *ſerpentine bandages*, are uſed to ſecure cataplaſms, or compreſſes, upon a diſeaſed part.

The place of beginning and ending theſe *bandages* is alſo to be determined. When the arm is to be dreſſed, the beginning is formed by two or three circular windings on the wriſt, aſcending, by looſe ſpires, up to the cubit, or ſhoulder, as the nature of the caſe ſhall require. But when the beginning is to be on the foot, it is to be formed by three or four circular windings of the *bandage* round the *tarſus*, and *metatarſus*; then proceeding, in a ſerpentine courſe, up to the knee; or, if the caſe requires it, up to the head of the thigh; and then, as it ſometimes happens, deſcending again.

We ſhould not omit to mention, that the beginning of the *bandage* is ſometimes applied to the diſeaſed part, as in ſeveral kinds of fractures; ſometimes near it, above it, or below it; and ſometimes at a great diſtance from it, according to the diſpoſition of the wound. On the contrary, the extremity of the *bandage* is ſcarce ever faſtened on the diſeaſed part, but rather on a ſound one, to avoid giving pain. *Heiſt.* Surg. p. 19.

Beſides the double and four-headed *bandages*, ſurgeons ſometimes make uſe of the *eighteen-headed bandage*. Its figure may be learnt from Heiſter's Surgery, Tab. IX. fig. 4.

Knotted BANDAGE, a *bandage* for the head, called *knotted*, from its many croſſings on the temples, and *ſtellar*, or *ſolar*, from its direction *in radii*. It is a very uſeful *bandage*, when the temporal artery is divided, either in arteriotomy, or by an accidental wound, and hardly ever failing of ſucceſs in ſuppreſſing the hæmorrhage. For the application, vid. *Heiſt.* Surg. P. 3. c. 2. §. 7.

Stellar BANDAGE. See *Knotted* BANDAGE, ſupra.

Solar BANDAGE. See *Knotted* BANDAGE, ſupra.

Incarnative BANDAGE, is the ſame as the *uniting bandage*. Vid. ſupra, & *Heiſter*. Surgery, P. 3. c. 2. §. 5.

Depart-BANDAGE, the ſame as *diſcrimen*. See DISCRIMEN.

Expulſive BANDAGES, or ſuch as are uſed to reduce, and prevent the enlargement of tumors. They are frequently applied, with this intention, to ſwelled legs, and alſo to diſcharge the offenſive matter in fiſtulæ and ſinuous ulcers. Vid. *Heiſter*. Surgery, P. 3. c. 1. §. 9.

Retentive BANDAGE, is proper for the neck, as it ſerves to keep on the dreſſings, and topical remedies, applied to the neck after bleeding, *&c.* This *bandage* is generally compoſed of two ſimple bands, one of which is about a Paris ell, and the other an ell and an half in length; the firſt being of a thumb's breadth, and the laſt of three fingers. As to the application, vid. *Heiſter*. Surgery, P. 3. c. 3. §. 2.

BANDAGE *for Tracheotomy*. Vid. *Heiſter*. Surgery, P. 3. c. 3. §. 3.

Arnaud's BANDAGE, is a *bandage* contrived by Mr. Arnaud of Paris, for fiſtulæ and abſceſſes of the anus, and is, by Garengeot, highly commended. But Heiſter thinks, that the common T *bandage* has the ſame advantages, provided the ſcapulary be made ſtrong. Vid. *Heiſter*. Surgery, P. 3. c. 5. §. 6.

Few of the common *bandages* are capable of reſtraining a profuſe hæmorrhage, after cutting for the fiſtula of the anus, or for the ſtone. What Heiſter has contrived for this purpoſe, may be ſeen in his Surgery, P. 3. c. 5. § 7.

Beſides Heiſter, there are many other writers on *bandages*. That author, in his Introduction, §. 28. mentions Galen, tranſlated by Vido Vidius, with figures; Verduc on *bandages*, in French; and Solingen: but he thinks the beſt writers of all, are Le Clerc, in his *Apparoil Commode*, and Baſſius, in High Dutch.

For other *bandages*, as the *ſpica*, *ſcapulary*, &c. ſee them in their alphabetical places.

BANGELET (*Cycl.*) is ſometimes uſed for the three parts which compoſe the architrave, called, by Vitruvius, *faſciæ*; and which are ſometimes alſo denominated *bands*, or *platbands*. *Ozanam*, Dict. Math. p. 579.

BANDERET, the name appropriated to the commanders of the militia of the canton of Bern. Dict. de Trev. T. 1. p. 838.

BANDITTI, perſons proſcribed, or, as we call it, outlawed; ſometimes denominated *banniti*, or *foris-banniti*. *Spelm.* Gloſſ. p. 69. b. *Skinn.* Etym. in voc.

BANDITI, or BANDITTI, is alſo a denomination given to highwaymen, or robbers, who infeſt the roads in troops, eſpecially in Italy and France.

The term is alſo applied to a ſort of freebooters, who pillage in the iſlands of the archipelago. Vid. *Tournef.* Voyag. Lett. 6. T. 1. p. 96.

BANGUE, a ſpecies of opiate, in great uſe throughout the Eaſt, for drowning cares, and inſpiring joy.

This, by the Perſians, is called *beng*; by the Arabs, *eſrar*, corruptly *aſſeral*, and *aſſarth*; by the Turks, *bengitic*, and vulgarly *maſtack*; by the European naturaliſts, *bangue*, or *bange*.

Bangue is the leaf of a kind of wild hemp, *cannabis erratica*, growing in the countries of the Levant: it differs little either as to leaf, or ſeed, from our hemp, except as to ſize. Some have miſtaken it for a ſpecies of althæa. *Sloan*, in *Ray*. Phil. Lett. p. 174. *Pluken.* ap. eund.

There are divers manners of preparing it, in different countries. Olearius deſcribes the method uſed in Perſia. Mr. Sale tells us, that, among the Arabs, the leaf is made into pills, or conſerves [a]. But the moſt diſtinct account is that given by Alex. Maurocordato, counſellor and phyſician of the Ottoman Port, in a letter to Wedelius [b]. According to this author, *bangue* is made of the leaves of wild hemp, dried in the ſhade, then ground to powder; put into a pot wherein butter has been kept; ſet in an oven till it begin to torrify; then taken out, and pulverized again; thus to be uſed occaſionally, as much at a time as will ly on the point of a knife. Such is the Turkiſh *bangue*.—[[a] Prelim. Diſc. to Koran, §. 5. p. 124. [b] Ext. apud *Wedel.* Exerc. Medic. Philol. Dec. 5. init.]

The effects of this drug are, to confound the underſtanding, ſet the imagination looſe, induce a kind of folly, and forgetfulneſs, wherein all cares are left, and joy and gayety take place thereof.

Bangue, in reality, is a ſuccedaneum to wine, and obtains in thoſe countries where mahometaniſm is eſtabliſhed; which prohibiting the uſe of that liquor abſolutely, the poor muſſelmen are forced to have recourſe to ſuccedanea, to rouſe their ſpirits. The principal are *opium*, and this *bangue*.

Some alſo ſpeak of *bangue* as an aphrodiſiac, and tending to excite venery [c]; on which ſuppoſition, others have been puzzled to think how it could be a ſpecies of hemp, which, according to the generality of naturaliſts, has an antaphrodiſiac quality, and tends to emaſculate and render impotent. But this tendency of the *cannabis* is dubious. Galen [d], and other antients, aſſure, that hemp diſturbs the head, excites turbulent dreams, and even cauſes deliriums. Plukenet [e], who had ſome of the ſeed of the *bangue*, tells us, that it certainly cauſes a *dementia*, or frantic and ludicrous ſort of madneſs, which runs the body into all the idle geſticulations and poſtures of the moſt laſcivious; yet without any luſtful deſires. He adds, that, on a very liberal doſe, the effects have continued almoſt a week; and that, if carried too high, it will even kill.—[[c] *Sloan*, l. c. [d] De Aliment. Facult. l. 1. c. 41. [e] *Pluken.* l. c.]

As to the opinion among Europeans, that the Turks prepare themſelves for battle by a doſe of *bangue*, which rouſes their courage, and drives them, with eagerneſs, to certain death; Dr. Maurocordato aſſures us, that it is a popular error: the Turks think they are then going aſſuredly to receive the crown of martyrdom; and would not, for any conſideration, loſe the merit of it, which they would do, by eating the *bangue*, as being held unlawful by their apoſtle, among other things which intoxicate. *Sale*, l. c. *Maurocord.* ubi ſupra.

BANIAN (*Cycl.*)—The name of *banian* is uſed with ſome diverſity, which has occaſioned much confuſion, and many miſtakes. Sometimes it is taken in a leſs proper ſenſe, and extended to all the idolaters of India, as contradiſtinguiſhed from the Mahometans.

In which ſenſe, *banians* include the bramins and other caſts.

In this ſenſe it is Della Valle [f] uſes the word; and it is in the ſame ſenſe that Hen. Lord calls his book a diſcovery of the *Banian* religion; which, in reality, is an account of the religion of the idolatrous Indians in general. But as it was chiefly the merchants this author had to deal withal, being chaplain in the Engliſh factory at Surat, he took his title from them; with as much propriety as an Indian, who ſhould write an account of the religion of England, ſhould call it a diſcovery of the religion of the merchants of England; as if the merchants had a religion peculiar to themſelves. Yet it was from the bramins he received his informations; the *banians* not being learned enough in the myſteries of their faith. He aſſures us, he fetched his materials out of their manuſcripts, and by renewed acceſs, with the help of interpreters, made his collections out of a book of theirs called the *Shaſter*, which is to them as their bible [g].—[[f] *Della Valle*, Viagg. T. 1. P. 1. Lett. 3. p. 92. [g] *Lord*, Diſcov. Relig. Banian. Introd.]

Yet it is certain, the bramins, who are the depoſitaries of the Indian faith, are extremely reſerved as to communications of this kind. P. Bouchot, after many years reſidence in the country, as a miſſionary, complains he could never get a ſight of their Scripture. Their contempt for Europeans, whom they denominate *prangius*, that is, unclean, will not permit them to have any intercourſe with them.

BANIANS, in a more proper ſenſe, is reſtrained to a peculiar caſt, or tribe, of Indians, whoſe office or profeſſion is trade and merchandize

In which ſenſe, *banians* ſtand contradiſtinguiſhed from *bramins*, *cuttery*, and *wyſe*, the three other caſts into which the Indians are divided.

The four caſts are abſolutely ſeparate as to occupation, relation, marriage, *&c* though all of the ſame religion; which is more properly denominated the religion of the bramins, who make the eccleſiaſtical tribe, than of the *banians*, who make the mercantile.

The proper *banians* are called, in the *ſhaſter*, or book of their law,

law, by the name of *ſhuddery*, under which are comprehended all who live after the manner of merchants, or that deal and tranſact for others, as brokers; excluſive of the mechanics, or artificers, who make another caſt, called *wyſe*. Theſe *banians* have no peculiar ſect or religion, unleſs it be, that two of the eight general precepts given by their legiſlator, Bremaw, to the Indian nation, are, on account of the profeſſion of the *banians*, ſuppoſed more immediately to relate to them, *viz.* thoſe which enjoin veracity in their words and dealings, and avoiding all practices of circumvention in buying and ſelling. *Lord*, ubi ſupra, c. 12.

Some of the *banians*, quitting their profeſſion, and retiring from the world, commence religious, aſſume a peculiar habit, and devote themſelves more immediately to God, under the denomination of *vertea*. Theſe, though they do not hereby change their caſt, are commonly reckoned as bramins of a more devout kind, much as monks in the Romiſh church, though frequently not in orders, are reputed as a more ſacred order than the regular clergy. *Lord*, c. 10. p. 74.

The name *banian* imports as much in the bramin language, wherein their law is written, as a people innocent and harmleſs, void of all guile, and ſo gentle, that they cannot endure to ſee even a fly or worm injured; and who, when ſtruck, will patiently bear it, without reſiſting or returning the blow.

Their mein and appearance is deſcribed by Lord, in terms a little preciſe, but very ſignificant: "A people preſented themſelves to my eyes, cloathed in linnen garments, ſomewhat low deſcending, of a geſture and garb, as I may ſay, maidenly and well nigh effeminate, of a countenance ſhy and ſomewhat eſtranged." *Lord*, in Introduct.

Gemelli Careri [h] divides the *banians* into twenty-two tribes, all diſtinct, and not allowed to marry with each other: Lord [i] aſſures us they are divided into eighty-two caſts or tribes, correſpondent to the caſts or diviſions of the bramins or prieſts, under whoſe diſcipline they are, as to religious matters; tho' the generality of the *banians* chooſe to be under the direction of the two bramin tribes, the *Viſalnagranaugers* and *Vulnagranaugers*.—[h Voyag. T. 3. p. 264. i *Lord*, c. 12. p. 83.]

La Martiniere [k] miſrepreſents our countryman, when he ſays, that, according to the Sieur Lord, the *banians* are of the ſame tribe with the bramins; and that the different tribes marry with each other: theſe miſtakes he might probably fall into, by reading Lord in a French tranſlation [l].—[k *La Martin.* Dict. Geogr. T. 2. p. 76. b. l In Cerem. & Cout. Relig. de tout les Peuples du Mond. T. 1. P. 2.]

The *banians* are the great factors, by whom moſt of the trade of India is managed: in this reſpect, comparable to the Jews and Armenians, and not behind either, in point of ſkill and experience, in whatever relates to commerce [m]. Nothing is bought, but by their mediation. They ſeem to claim a kind of *jus divinum* to the adminiſtration of the traffic of the nation, grounded on their ſacred books, as the bramins do to that of religion. They are diſperſed, for this purpoſe, through all parts of Aſia, and abound in Perſia, particularly at Iſpahan and Bender-Abbaſſis, where many of them are extremely rich, yet not above acting as brokers, where a penny is to be got. The chief agents of the Engliſh, Dutch, and French Eaſt India companies, are of this nation: they are very faithful, and are generally truſted with the caſh of thoſe companies in their keeping [n]. They act alſo as bankers, and can give bills of exchange for moſt cities in the Eaſt Indies. Their form of contract in buying and ſelling, is remarkable; being done without words, in the profoundeſt ſilence, only by touching each other's fingers: the buyer looſening his *pamerin*, or girdle, ſpreads it on his knee, and both he and the ſeller having their hands underneath, by the intercourſe of the fingers, mark the price of pounds, ſhillings, *&c.* demanded, offered, and at length agreed on [o]. When the ſeller takes the buyer's whole hand, it denotes a thouſand, and, as many times as he ſqueezes it, as many thouſand pagods, or roupies, according to the ſpecies in queſtion, are demanded: when he only takes the five fingers, it denotes five hundred, and when only one, one hundred: taking only half a finger, to the ſecond joint, denotes fifty; the ſmall end of the finger, to the firſt joint, ſtands for ten [p].—[m Vid. *Tavern.* Voyag. des Ind. c. 32. p. 161. *Martiniere*, l. c. n *Savar.* Supp. p. 58. o *Lord*, c. 12. p. 84. p *Tavern.* Voyag. des Ind. l. 2. c. 15.]

BANILLIA, in the materia medica, a name uſed by ſome for the vanillia, or vanilloes, uſed in making the ſcented chocolate. *Dale*, Pharm. p. 340.

BANK, (*Cycl.*)—In Savari's Dictionary of Commerce, from whence [a] this article of the *Cyclopædia* is taken, we have alſo [b] an account of the *banks* of Amſterdam, Hamburg, and of the royal *bank* of France; to which we refer the curious, as the detail of ſuch particular objects do not properly come within our deſign.—[a Art. *Banco*. b Art. *Banque*.]

We have ſeveral accounts of the *bank* of England; among others, the Lex Mercatoria, the New View of London, and Maitland's Hiſtory of London, may be conſulted. But we do not know, whether any ſufficiently accurate detail of the method of tranſacting all the buſineſs of the *bank*, be any where publiſhed.

For the two *banks* of Scotland, ſee the Preſent State of Britain.

The general political queſtions relating to *banks*, might properly find their place here, could we find any thing accurate or determinate on the ſubject: but as moſt authors we have met with on this topic, have had ſome biaſs of their own, from party, or private intereſt, not to mention, that few have ſufficient experience of buſineſs, or habits of analyſing and reaſoning upon ſuch complex objects, we can do little more than wiſh to ſee this ſubject fully treated of by ſome maſterly hand. In ſuch a work, many important queſtions would occur; ſuch as,

The nature of paper credit in general? its advantages? diſadvantages? Whether it be limited? how thoſe limits, if any, are to be diſcerned? The nature of *banks*, and other monied corporations? their advantages and diſadvantages to the public? Whether there ought to be any public *bank* in a ſtate, other than the public treaſury? Whether great monied corporations, though inſtituted under a pretence to ſerve, and the pretended ſervants of the adminiſtration, be not, in reality, its maſters? Again, what is the beſt form of a *bank?* whether what a late French author [c] ſays be true, that the beſt *bank* is that which does not pay, like that of Amſterdam? or whether the form of the *bank* of England, and current notes, be beſt, *&c.?*—[c Eſſ. Polit. ſur le Comm. p. 253. Edit. 1.]

The diſcerning reader will eaſily perceive, that theſe, and the like queſtions, have been either very partially, or ſuperficially, treated of, in books and pamphlets of the times; and that a farther diſquiſition is neceſſary.

BANK is alſo applied, in a more particular manner, to ſocieties inſtituted for lending money on pledges. Of theſe there are ſeveral in Holland, particularly at Amſterdam, where it is called the *bank van leening*, or *bank of loan*. Private perſons are here furniſhed with money, on the depoſit of effects as a ſecurity, and on payment of a certain intereſt regulated by the burger-maſters. This *bank* is otherwiſe called the *Lombard huis*, or *Lombard houſe*, or, ſimply, *Lombard*; which is the name it is moſt commonly known by, in moſt of the towns in Holland. *Savar.* Dict. Comm. Suppl. p. 43.

BANK, in natural hiſtory, denotes an elevation of the ground, or bottom of the ſea, ſo as ſometimes to ſurmount the ſurface of the water, or, at leaſt, to leave the water ſo ſhallow, as uſually not to allow a veſſel to remain afloat over it.

In this ſenſe, *bank* amounts to much the ſame with flat, ſhoal, *&c.*

There are *banks* of ſand, and others of ſtone, called alſo ſhelves, or rocks. In the north ſea, they alſo ſpeak of *banks* of ice, which are large pieces of that matter floating. *Aubin.* Dict. Marin.

A long narrow *bank* is ſometimes called a *rib*.

The *bank* abſolutely ſo called, or the *main bank*, or *great bank*, denotes that of Newfoundland, the ſcene of the cod-fiſhery.

It is called the *great bank*, not only by reaſon of its vaſt extent, being, according to the Engliſh computation, two hundred miles long, and, according to the French, one hundred leagues, or three hundred miles; but alſo on account of ſeveral leſſer *banks* near it, where cod are alſo caught. Theſe laſt the French call *banquezeaux*. *Savar.* Supp. p. 862.

The *great bank* affords ſo vaſt a crop of cod, as to furniſh one of the chief articles of European commerce.

This is one of thoſe *banks* which have water enough to float a ſhip, and which, on this account, are not dangerous.

Banks are uſually diſtinguiſhed by a buoy, poſt, or the like. On charts, ſand *banks* are uſually marked by little dots, and *banks* of ſtone, by croſſes. The colours of the buoys are alſo varied accordingly; ſand *banks* being denoted by light-coloured buoys, and rocks by black ones.

In large rivers, as the Elbe, *&c.* ſand *banks*, by high tides and inundations, are liable to change places; care is therefore taken to ſhift the buoys from time to time, to ſhew the true channel of the river.

An exact knowledge of the *banks*, their extent, and the depth of water on them, makes the moſt eſſential part of the ſcience of a pilot, and a maſter of a ſhip: if the veſſel be large, and draw much water, great attention will be neceſſary to keep clear of the *banks*; on the contrary, if it be ſmall, the ſame *banks* afford a ſure aſylum, where it may brave the largeſt and ſtouteſt veſſels, which dare not follow it here. By means of this barrier, many ſmall craft has eſcaped its enemy.

BANK, in veſſels which go with oars, is uſed for the bench where the rowers are ſeated; popularly called, by our ſeamen, the *thaught*. *Manwayring*, Seam. Dict. p. 107.

In this ſenſe, we read of *banks* of gallies, of galeaſſes, of galliottes, of brigantines, and the like.

The Venetian gondolas have no *banks*; for the watermen row ſtanding.

The common gallies have twenty-five *banks*, that is, twenty-five on each ſide, in all fifty *banks*, with one oar to each *bank*, and four or five men to each oar. The galeaſſes have thirty-two *banks* on a ſide, and ſix or ſeven rowers to a *bank*. *Aubin*, Dict. Marin. p. 62.

BANK alſo denotes an elevation of earth, ſtones, ſtakes, or other materials, in form of a wall, or cauſeway, to ſtop the waters, and prevent inundations. Vid. *Ozanam*, Dict. Mathemat. p. 357.

Theſe, on other occaſions, are denominated *dams*, and *ſea-walls*,

walls, &c. and by the antients, *aggeres*: thoſe on the coaſts of Holland are more particularly denominated *dykes*. *Niewent.* Relig. Phil. p. 276. *Petty*, Dupl. Proport. p. 111.

BANK is alſo uſed, in ſeveral games, for the ſtock or fund of him who undertakes the game.

BANK *at Baſſet*, a ſum of money laid down by the *tailleur*, before the gameſters, to anſwer all the winning cards that ſhall turn up in his courſe of dealing. Compl. Gameſt. p. 31.

BANKER, (*Cycl.*)—The *bankers* were very antient at Lyons; De Rubis [a] traces their origin from the Guelphs and Gibbelins, in the thirteenth century; who, not daring to return to their own country, purchaſed of the king of France a power to ſet up their banks at Lyons, and in other parts of France. F. Meneſtrier [b] ſeems to fix their epocha higher; ſhewing, that there were rich *bankers* at Lyons, as early as the year 1209.—[a Hiſt. de Lyon. l. 3. p. 289. b Hiſt. Conſul. de Lyon. p. 392.]

The antient *bankers* were called *argentarii*, and *nummularii*; by the Greeks, τραπεζίται, κολλυβισται, and αργυραμοιβοι [c]. Their chief buſineſs was to put out the money of private perſons to intereſt: they had their boards and benches, for this purpoſe, in all the markets and public places, where they took in the money from ſome, to lend it to others [d].—[c Vid. *Hoſt.* Hiſt. Rei Nummar. T. 1. l. 1. c. 9. §. 13, ſeq. d *Pitiſc.* Lex. Antiq. T. 1. p. 168. *Calv.* Lex Jur. p. 87, b.]

BANKERS, among us, are goldſmiths, and others, in whoſe hands money is depoſited, to be drawn out again as the owners find occaſion. The monied goldſmiths firſt got the name *bankers*, about the time of K. Charles II. witneſs the following clauſe of an act of parliament under that prince: "Whereas ſeveral "perſons being goldſmiths, and others, by taking up or bor- "rowing great ſums of money, and lending out the ſame again "for extraordinary hire and profit, have gained, and acquired "to themſelves, the reputation and name of *bankers*, &c." Ann. 22, 23. Car. II.

BANKERS *in the Court of Rome*, are perſons authorized, excluſive of all others, to ſollicit and procure, by their correſpondents at Rome, all bulls, diſpenſations, and other acts diſpatched at the papal datary, or in the legateſhip of Avignon: they are diſperſed in all the cities of France, where there is a parliament, or a preſidial; and were erected into a regular, and hereditary office, by an edict in 1673.

They owe their origin to the Guelphs, who took ſhelter at Avignon, and in other cities within the obedience of the pope, in the time of the civil wars of Italy. The favour they were in with the pontiffs, for having eſpouſed the papal cauſe, occaſioned their being employed in procuring expeditions of the court of Rome. But the heavy extortions they practiſed towards their clients, ſoon rendered them odious, and occaſioned ſeveral denominations of reproach, as, *Coarcini*, *Caturcini*, *Caurſini*, *Corſini*, &c. from the city *Cahors*, the native place of pope John XXII. in whoſe pontificate they were in their higheſt power. *Corneille*, Dict. des Arts, T. 1. p. 88. a. Dict. de Trev. T. 1. p. 849.

BANKER *at Baſſet*, is, more properly, called *tailleur*, or *tallier*.

The *tailleur* has the firſt and laſt card at his own diſpoſal, with other advantages in the dealing ſo conſiderable, that, by a public edict of the king of France, the full privilege of a *tailleur* was allowed to none but cadets, or younger ſons of noble families: all others, for fear of ruining private families, were confined to a twelve-penny bank. Compl. Gameſt. p. 30.

Yet it is to be obſerved, that the *bankers* gain *per cent.* of all the money adventured at pharo, is greater than at baſſet; it being two pounds nineteen ſhillings and tenpence *per cent.* in the firſt, and but fifteen ſhillings and threepence in the ſecond. V. *De Moiv.* Doctr. Chanc. p. 93.

BANKER, in bricklaying, a piece of timber whereon they cut the bricks.

The *banker* is ſix feet long, or more, according to the number of men to work at it, and nine or ten inches ſquare: it is to be laid on two peers of timber, three feet high from the floor they ſtand on. *Moxon*, Mech. Exerc. p. 246.

BANKING, the making of *banks* to oppoſe the force of the ſea, rivers, or the like, and ſecure the land from being of overflowed thereby.

With reſpect to the water which is to be kept out, this is called *banking*; with reſpect to the land, which is hereby to be defended, *imbanking*.

BANKING, in a ſalt-work, the raiſing a fence againſt the ſea, whereby its waters may be kept out, excepting ſo much as is neceſſary for the preparation of the ſalt.

BANKING is alſo applied to the keeping a bank, or the employment of a banker. See BANK, and BANKER, *Cycl.* and *Suppl.*

Baking, in this ſenſe, ſignifies the trading in money, or remitting it from place to place, by means of bills of exchange. Plan, Engl. Comm. p. 2.

This anſwers to what the French call *faire la banque*.

In France, every body is allowed to *bank*, whether merchant or not; even foreigners are indulged in this kind of traffic. In Italy, *banking* does not derogate from nobility, eſpecially in the republic ſtates; whence it is, that moſt of the younger ſons of great families engage in it. In reality, it was the nobility of Venice and Genoa, that, for a long time, were the chief *bankers* in the other countries of Europe. *Savar.* Dict. Comm. p. 235.

BANKING is more particularly uſed for the act of exchanging monies, or coins, of different qualities and values. Plan, Engl. Comm. c. 1. p. 2.

BANKRUPT, (*Cycl.*)—In ſome places *bankrupts* are condemned to wear the green cap; at Lucca, an orange cap. Dict. de Trev. T. 1. p. 848.

Fraudulent BANKRUPT, he who deſignedly ſecretes or makes away his effects, conceals them under borrowed or feigned names, or by pretended ſales or aſſignments. *Savar.* Dict. Comm. p. 264, ſeq.

By an ordinance of Henry IV. in 1609, and another of Louis XIV. in 1673, fraudulent *bankrupts* are ordered to be proſecuted capitally, and puniſhed with death; which has frequently been practiſed accordingly. Though the ordinary puniſhment in France, be only the pillory. In England, *bankrupts* fraudulently concealing their effects, are guilty of felony, without benefit of clergy. See Stat. 5 Geo. II.

BANLEUGA, or BANNILEUGA, or BANLIEUE, in middle age writers, the territory within which the juriſdiction of municipal magiſtrates, or ordinary judges of a city, town, or the like, are confined. Vid. *Spelm.* p. 61. a. *Menag.* Orig. p. 74. *Du Cange*, T. 1. p. 465.

It is thus called, becauſe within this tract, they may make their proclamations, prohibitions, and other acts of juſtice and policy, compriſed under the name of *ban*, or *bannum*. See BANN.

In this ſenſe, we meet within *banleuga de Arundel*, uſed for all that is comprehended within that limits, or lands adjoining, and ſo belonging to the caſtle, or town. *Selden*, Hiſt. of Tithes, p. 75.

The *banlieu*, in France, ordinarily extends about a league around the place [a]. Its boundaries are commonly marked by a croſs, or a ſtone erected for the purpoſe [b].—[a *Ozanam.* Dict. Math. p. 376. b *Aubert*, ap. Richel. T. 1. p. 175. b.]

In ſome cuſtoms of France, *banlieue* is alſo uſed to denote the ſpace within which the inhabitants are obliged to carry their corn to be ground in the lord's mill. *Caſeneuve*, in voc.

BANN, (*Cycl.*)—M. d'Herbelot will have the word *bann* to be Sclavonic, where it is ſtill uſed, as well as among the Turks, for the commander of the forces, or troops, in the provinces belonging to the kingdom of Hungary. Bibl. Orient. p. 183. See alſo *Aquin.* Lex. Milit. T. 1. p. 112. b.

Others will have it the ſame with what, in Heſychius, is written βαγας, and which, according to him, ſignifies king, or great prince. Vid. *Seld.* Tit. of Hon. P. 2. c. 2. §. 5. Trev. Dict. Univ. T. 1. p. 831.

BANN is more particularly uſed, for a ſolemn convocation of the nobility of a province, to attend the king in his army, conformably to their ſeveral tenures.

Bann, in this ſenſe, differs from *rear-bann*; as the former reſpects thoſe who hold mediately of him. But the words are now confounded; and *bann*, and *rear-bann*, denote a ſummons to all the feudal tenants, mediate and immediate, to go to war in the king's ſervice.

BANN alſo denotes the aſſembly, or body of nobility and gentry thus convocated.

In this ſenſe, they ſay, the *bann* and *rear-bann* is long in getting into the field; the *bann* and *rear-bann* was aſſembled, &c.

The French nobility appear to have ſerved the king, in the way of *bann* and *rear-bann*, from the beginning of the monarchy; though the uſage was not regularly ſettled, till the time of the inveſtiture of feuds. From that time, the lay lords rendered preſent ſervice in the armies; and even the eccleſiaſtics, who held lands, were obliged likewiſe to appear with their vaſſals. It was this gave occaſion to the introduction of *vidames* and *advoues*, or *advocates*, to command the vaſſals of biſhopricks, and abbies, in lieu of their own prelates. But, during the wars againſt the Engliſh, as well as in the holy land, many of the gentry, engaged in thoſe expeditions, wanting money to ſupport the expence, procured leave of the king to ſell feuds to *roturiers*, or perſons not noble, and corporations. By this means, a conſiderable part of the fiefs of France, falling into the hands of perſons unfit for war, the *bann* and *rear-bann* came to be but thinly furniſhed with able ſoldiers. This occaſioned a tax to be laid on theſe *roturies*, in order to pay ſoldiers; and, beſides the tax, they were ſtill obliged to perſonal ſervice: which eſtabliſhment ſtill continues. Dict. de Trev. T. 1. p. 830.

BANN is more particularly uſed to denote proſcription, or baniſhment, for a crime proved [a]; becauſe antiently publiſhed by ſound of trumpet; or, as Voſſius thinks, becauſe thoſe who did not appear at the abovementioned ſummons, were puniſhed by proſcription [a].—[a Vid. *Spelm.* Gloſſ. p. 62. a. b *Menag.* Orig. p. 74. b.

Hence, *to put a prince under the* bann *of the Empire*, is to declare him diveſted of all his dignities. *Richel.* Dict. T. 1. p. 172.

The ſentence only denotes an interdict of all intercourſe, and offices of humanity, with the offender; the form of which ſeems taken from that of the Romans, who baniſhed perſons, by forbidding them the uſe of fire and water. *Calv.* Lex. Jur. p. 109.

Sometimes alſo cities are put under the imperial *bann*; that is, ſtripped of their rights and privileges.

BANN alſo denotes a pecuniary mulct, or penalty, laid on a delinquent for offending againſt a *bann*. *Du Cange*, Gloſſ. Lat. T. 1. p. 461.

BANN is alſo uſed for the ordinances and injunctions of eccleſiaſtical prelates. *Magri*, Voc. *Eccleſ.* p. 28. b.

The uſe of matrimonial *banns* is ſaid to have been firſt introduced in the Gallican church, though ſomething like it obtained even in the primitive times; and it is this Tertullian is ſuppoſed to mean by *trinundina promulgatio*. The council of Lateran firſt extended, and made the uſage general. By the ordonnance of Blois, no perſon could validly contract marriage, without a preceding proclamation of three *banns*: nor could any perſon whatever be diſpenſed with, except for the two laſt. But the French themſelves have abated much of this ſeverity; and only minors are now under an abſolute neceſſity of ſubmitting to the formality of *banns*. For majors, or thoſe of age, after publication of the firſt *banns*, the two latter are eaſily bought off. Dict. de Trev. T. 1. p. 830.

BANNUS, or BANUS, a title antiently given to the governor or viceroy of Croatia, Dalmatia, and Sclavonia. *Fæſch.* Ing. Lex. p. 66. See alſo *Aquin.* T. 1. p. 112. b. Dict. de Trev. T. 1. p. 849. *Du Cange*, Gloſſ. Lat. T. 1. p. 467.

BANNUS *Epiſcopalis*, was a mulct paid to the biſhop by thoſe guilty of ſacrilege, and other crimes. *Du Cange*, Gloſſ. Lat. T. 1. p. 462.

BANNUM *Capitis*, was a mulct paid in cattle. *Du Cange*, ibid. p. 463.

BANN is alſo uſed for a ſolemn anathema, or excommunication, attended with curſes, *&c.* Vid. *Tribechov.* de Doct. Scholaſt. c. 3. p. 97.

In this ſenſe, we read of *papal banns*, &c.

BANN *of God*, *Bannus Dei*, or the judgment of God. Spelman takes it for excommunication. *Spelman*, Gloſſ. p. 62. a.

BANN is alſo uſed for a prohibition.

In which ſenſe, the *bann* of harveſt, of vintage, *&c.* in the French cuſtoms, imports a prohibition to reap, or gather the grapes, without leave of the lord.

The former is now taken away, and the peaſant may reap his corn when he pleaſes; but the latter ſtill remains, perſons not being allowed to open the vintage, till publication is made by the officers of the place for that purpoſe. *Aubert.* ap. Richel. T. 1. p. 172. a.

BANN-*Vin*, in the French cuſtoms, a privilege enjoyed by lords, of ſelling the wine of their own growth, during a certain time, excluſive of all other perſons within the compaſs of their fees or lordſhips. *Savar.* Dict. Comm. p. 265. *Du Cange*, Gloſſ. Lat. T. 1. p. 458. Dict. de Trev. T. 1. p. 850.

The ſame right, in ſome places, extends alſo to other liquors; and even to hogs, cows, and other animals.

BANNALIS *Mola*, or *Bannal-Mill*, a kind of feudal ſervice, whereby the tenants of a certain diſtrict are obliged to carry their corn to be ground at a certain mill, and to be baked at a certain oven, for the benefit of the lord. *Calv.* Lex. Jurid. p. 109. a.

This amounts to the ſame with what obtains among the French, under the denomination of *bannalité*; which is a right belonging to the lord, to keep a mill, an oven, a wine-preſs, and a bull, and oblige his tenants to bring their corn to grind, their bread to bake, *&c.* at the ſame time.

The *bannalité* is an odious ſervice, unknown in the antient law, and of which no traces are to be ſeen before the tenth century. The violence of the lords, and the poverty of the people, ſeem to have occaſioned its riſe; and the manumiſſion of villains afterwards confirmed it. Fulbert, biſhop of Chartres, in a letter to Richard duke of Normandy, in the tenth century, complains that there were *bannal-mills* five leagues diſtance from the habitations of the vaſſals; and that they were nevertheleſs obliged to carry their corn thither to be ground. But, in after-time, this diſtance was reſtrained to the limits of one league. *De la Mare*, Traité de la Polic. ap. Dict. de Trev. T. 1. p. 840, ſeq.

BANNER, properly denotes a ſquare flag, faſtened like a cornet to a lance. Dict. de Trev. T. 1. p. 544.

Menage derives the word from the Latin *bandum*, a band, or flag; and ſuppoſes *banniere* to have been firſt written for *bandiere*; which is confirmed by this, that we meet with the word *banderia*, uſed, in the ſame ſenſe, by Latin writers of the barbarous age. *Menage*, Orig. in voc. See alſo *Spelm.* Gloſſ. p. 59. b.

Paſquier chooſes to deduce it from the old word *bann*, the publication made to call the vaſſals to war; others derive it from the German *ban*, a field or tenement, becauſe only lords of fees were allowed to bear a *banner*; others, again, ſuppoſe the word to have been formed, by corruption, from *panniere*, of *pannus*, cloth, becauſe it was originally made of cloth; whence alſo the denominations, *penons*, *panoneſeaux*, &c. Dict. de Trev. T. 1. p. 845.

A *banner* differed from a *pennon*, or *guidon*, which had a long tail, or train; the cutting off which, in the ceremony of creating a banneret, converted it into a *banner*. See BANNERET, *Cycl. & Suppl.*

Moſt of the antient lords are repreſented, on their ſeals, with *banners* in their hand; in which guiſe they entered the liſts in tournaments.

Arms BANNER-*wiſe*, or *en banniere*, are thoſe born ſquare; ſtill uſed in Bretagne, to denote families deſcended from bannerets. Favyn ſuppoſes the uſage to have been brought thither from England. Hiſt. de Navarre, l. 11. p. 620, ſeq.

It was reputed more honourable for a perſon to bear his arms in a *banner*, than in an *eſcutcheon*.

BANNER is alſo uſed to denote the flag under which all the tenants of the ſame fief were to muſter themſelves, when their ſervice was required in the army. Dict. de Trev. T. 1. p. 444.

BANNER is alſo uſed for the chief flag, or ſtandard of a prince, lord, baron, or the like. *Spelm.* Gloſſ. p. 59. b.

The BANNER *of France*, was the largeſt and richeſt of all the flags born by the antient kings, in their great military expeditions. St. Martin's cap was in uſe ſix hundred years, as the *banner* of France: it was made of taffety, painted with the image of that ſaint, and laid one or two days on his tomb, to prepare it for uſe [a]. This was ſucceeded by the famous *aurifiamma*, or *oriflamma*. (See AURIFLAMMA.) Though ſome make a difference between the *banner* of France and the *oriflamme*; making it the diſtinguiſhing character of the former, to be hung out at the window, where-ever the king was; whereas the latter was only uſed in extraordinary wars [b].—[a Dict. de Trev. T. 1. p. 845. *Le Gendre*, Mœurs & Cout. de France. b *Richel.* Dict. T. 1. p. 174. c.]

About the year 1100, came in a more pompous apparatus; the mode of which was borrowed from Italy; the *banner* royal was faſtened to the top of a maſt, or ſome tall tree planted on a ſcaffold, born on a chariot drawn by oxen, covered with velvet houſings, decorated with devices or, cyphers, of the prince reigning. At the foot of the tree was a prieſt, who ſaid maſs early every morning. Ten knights mounted guard on the ſcaffold, night and day, and as many trumpets, at the foot of the tree, never ceaſed flouriſhing, to animate the troops. This cumberſome machine, the mode of which was brought from Italy, continued in uſe about an hundred and thirty years. Its poſt was in the center of the army. And here it was the chief feats were performed, to carry off and defend the royal *banner*: for there was no victory without it; nor was an army reputed vanquiſhed, till they had loſt this *banner*. *Le Gendre*, Mœurs & Cout. des Franc. p. 105, ſeq.

BANNER is alſo uſed, in middle age writers, for any flag or enſign. *Spelm.* Gloſſ. p. 59. b.

But the word is out of uſe in this ſenſe, except in ſpeaking of former times, or foreign nations. In the Levant, they ſtill ſay, the Engliſh *banner*, the Venetian *banner*, &c. *Aubin.* Dict. Mar. p. 64.

The French alſo retain the denomination *banner*, in ſpeaking of eccleſiaſtical proceſſions; where the people, having each a croſs on, march under a *banner*, repreſenting the church militant; to denote themſelves ſoldiers of the church. *Richel.* l. c.

BANNERS *of the Romans*. See SIGNA.

BANNERET, (*Cycl.*) — There ſeems to have been *bannerets* created, either in a different manner, or by others, than the ſovereign; ſince King James, in the patent of baronets, gives them precedency to all knights *bannerets*, except ſuch as are created by the king himſelf in the field; which implies, either that there are ſome of this order created out of the field, or by inferior perſons. Vid. *Spelm.* Gloſſ. p. 75, a.

BANNERET is alſo the name of an officer, or magiſtrate of Rome, towards the cloſe of the fourteenth century.

The people of that city, and throughout the territory of the church, during the diſputes of the antipopes, had formed a kind of republican government; where the whole power was lodged in the hands of a magiſtrate, called ſenator, and twelve heads of quarters, called *bannerets*, by reaſon of the banners which each raiſed in his diſtrict. *Daniel*, Hiſt. de Franc. T. 2. p. 107. Dict. de Trev. T. 1. p. 838.

BANNISTERIA, in botany, the name given by Linnæus to a genus of plants, firſt deſcribed by Plumier under the name of *clematis ſpecies*. The characters are theſe; the perianthium is very ſmall and permanent, and is rigid and rough underneath, with tubercles; and there are ſmall melliferous glands placed under every jag, or ſegment of the cup, except one. Theſe glands are eight in number, and the ſegments of the cup are nine. The flower conſiſts of five very large petals, of an orbicular figure; they ſtand wide expanded, and have long and ſtrait ungues, and are crenated at the edges. The ſtamina are ten extremely ſmall filaments; the antheræ are ſimple; the germina of the piſtils are three; they are alated, and grow together; the ſtyles are three, and are of a ſimple ſtructure; the ſtigmata are obtuſe. There are are three fruits ſucceeding every flower; they are long, and run out into an ala of conſiderable length; they each contain one ſeed, and do not ſplit. The ſeeds are ſingle, and have their ſides indented. It is evident, from the flower, and glandules of the cup, that this genus has an affinity with the malpighia. *Linnæi*, Gen. Plant p. 194. *Plumier*, Ran. 92. See MALPIGHIA.

BANNOCK, in food, is an oat-cake kneaded only with water, and baked in the embers. Theſe are common in Lancaſhire, and ſome other counties. *Ray*'s Engl. Words, p. 5.

BANOY, the name given, by the people of the Philippine iſlands,

to

to a kind of hawk, ſomewhat larger than our ſparrow-hawk, and of a yellowiſh colour on the back and wings, and white under the belly. It is the moſt common of all the kinds of hawk in that part of the world, and is a very voracious animal.

BANQUET, in the manege, denotes that ſmall part of the branch of a bridle under the eye; which, being rounded like a ſmall rod, gathers and joins the extremities of the bit to the branch, in ſuch a manner, that the *banquet* is not ſeen, but covered by the cap, or that part of the bit next the branch.

BANQUET-*Line*, is an imaginary line drawn by the bit-makers along the *banquet*, in forging a bit, and prolonged upwards and downwards, to adjuſt the deſigned force or weakneſs of the branch, in order to make it ſtiff, or eaſy. For the branch will be hard and ſtrong, if the ſevil-hole be on the outſide of the *banquet*, with reſpect to the neck; and it will be weak, and eaſy, if the ſevil-hole be on the inſide of the line, taking the center from the neck. *Guillet*, Gent. Dict. in voc.

BANQUETTING-*Room*, or *Houſe*. See XENIA, SALOON, *&c.* The antient Romans ſupped in the atrium, or veſtibule, of their houſes; but, in after-times, magnificent ſaloons, or *banqueting-rooms*, were built, for the more commodious and ſplendid entertainment of their gueſts. Lucullus had ſeveral of theſe, each diſtinguiſhed by the name of ſome god; and there was a particular rate of expence appropriated to each. Plutarch relates with what magnificence he entertained Cicero and Pompey, who went with deſign to ſurprize him, by telling only a ſlave who waited, that the cloth ſhould be laid in the Apollo. The emperor Claudius, among others, had a ſplendid *banqueting-room*, named Mercury. But every thing of this kind was outdone by the luſtre of that celebrated *banqueting-houſe* of Nero, called *domus aurea*; which, by the circular motion of its partitions, and ceilings, imitated the revolution of the heavens, and repreſented the different ſeaſons of the year, which changed at every ſervice, and ſhowered down flowers, eſſences, and perfumes, on the gueſts [a]. Heliogabulus, nevertheleſs, is ſaid to have improved as much upon Nero, as the latter had done on Lucullus [b]. — [[a] *Senec.* Epiſt. 90. [b] Vid. l'Abbé *Couture*, in Mem. Acad. Inſcript. T. 2. p 427, ſeq.]

BANSTICKLE, in ichthyology, a name given by us to the *gaſteroſteus*. See GASTEROSTEUS.

The BANSTICKLE is otherwiſe called *prickle-bag*, or *prickle-back*.

BANTAM-*Work*, a kind of Indian painting, and carving on wood, reſembling Japan-work, only more gay, and decorated with a great variety of gaudy colours. Vid. *Park.* Treat. of Japann. p. 7.

Bantam-work is of leſs value among connoiſſeurs, though ſometimes preferred, by the unſkilful, to the true Japan-work. Formerly it was in more uſe, and eſteem, than at preſent, and the imitation of it much practiſed by our japanners.

There are two ſorts of *Bantam*, as well as of Japan work; as, in the latter, ſome are flat, lying even with the black, and others high or emboſſed, ſo, in *Bantam-work*, ſome is flat, and others in-cut, or carved into the wood, as we find in many large ſcreens; with this difference, that the Japan artiſts work chiefly in gold and other metals, and the *Bantam* generally in colours, with a ſmall ſprinkling of gold here and there.

For the flat *Bantam-work*, it is done in colours, mixed with gum-water, proper for the thing deſigned to be imitated. For the carved, or in-cut kind, the method of performing it is thus deſcribed by an ingenious artiſt. 1. The wood is to be primed with whiting and ſize, ſo often till the primer lie near a quarter of an inch thick; then it is to be water-plained, *i. e.* rubbed with a fine wet cloth, and, ſome time after, bruſhed very ſmooth, the blacks laid on, varniſhed up with a good body, and poliſhed well, though with a gentle hand. This done, the deſign is to be traced out with vermilion, and gum-water, exactly in the manner wherein it is intended to be cut; the figures, trees, buildings, *&c.* in their due proportions. Then the graver is applied, with other tools of proper ſhapes, differing according to the workman's fancy. With theſe he cuts deep or ſhallow, as is found convenient, but never deeper than the whiting lies; the wood being never to feel the edge of the inſtrument. Lines, or parts of the black, are ſtill to be left, for the draperies and other out-lines, and for the diſtinction of one thing from another; the rule being to cut where the white is, and leave the black untouched. The carving being finiſhed, they take to the pencil, with which the colours are laid into the cut-work. After this, the gold is to be laid in theſe places which the deſign requires; for which purpoſe, a ſtrong, thick gum-arabic water is taken, and laid with a pencil on the work; and, while this remains wet, leaf gold is cut with a ſharp ſmooth-edged knife, in little pieces, ſhaped to the bigneſs and figure of the places where they are to be laid. Theſe being taken up with a little cotton, they dab them with the ſame cloſe to the gum-water, which affords a rich luſtre. The work thus finiſhed, they clear up the black with oil, taking care not to touch the colours. The European workmen, in lieu of leaf-gold, ordinarily uſe braſs-duſt, which is leſs bright and beautiful. *Park.* ibid. c. 13. p. 37, ſeq.

BAOBAB, in natural hiſtory, the name of an African fruit deſcribed by Proſper Alpinus. It is of the ſize of a lemon, but it reſembles a gourd, and contains ſeveral black ſeeds, whoſe extremities are a little crooked. Its ſubſtance alſo much reſembles that of the gourd; and, when firſt pulled off, is moiſt, red, and of a grateful acid taſte. The people of Æthiopia, where it is plentiful, are very fond of it, in the ſcorching heats of ſummer; and the richer ſort add ſugar to it, to correct its acidity. It is a great cooler, and very agreeably quenches thirſt; and has alſo ſome medicinal uſe, as it is good in contagious and peſtilential fevers. The tree much reſembles the orange in ſize, and in the ſhape of its leaves. The people of Cairo, where the freſh fruit is not to be had, uſe its pulp dried and powdered. *Proſp. Alpin.* de Plant. Ægypt.

BAPHE, in the writings of the antients, a word uſed to expreſs that fine red colour, with which they uſed to illuminate the capital letters in manuſcripts, at the beginning of chapters. It is alſo called, by ſome, *encauſtum ſacrum*, and, by others, *coccus* and *cinnabaris*. It was a very elegant colour, and is ſaid to have been prepared of the purple colour taken from the murex, and ſome other ingredients. It was called *encauſtum*, from its reſembling very much the fine bright red uſed in enamels.

BAPTÆ, in antiquity, an effeminate, voluptuous kind of prieſts at Athens, belonging to the goddeſs Cotyttus; thus called, from their ſtated dippings and waſhings, by way of purification. It ſeems, they were to be made very clean and pure, that they might wallow, and defile themſelves, with the leſs reſerve; for their rites were performed in the night, and conſiſted chiefly of laſcivious dances, and other abominations. Eupolis having compoſed a comedy to expoſe them, entitled Βαπται, they threw him into the ſea, to be revenged; and the ſame fate is alſo ſaid to have befallen Cratinus, another Athenian poet, who had written a comedy againſt the *Baptæ*, under the ſame title. *Scalig.* Poet. l. 1. c. 7. p. 28.

Others deduce the denomination *Baptæ*, from the practice of dying and painting their bodies, eſpecially their eye-brows, and officiating at the ſervice of their deity, with the parade and demureneſs of women. *Fabr.* Theſ. p. 334.

Juvenal deſcribes them in this light:

Talia ſecreta coluerunt Orgia tædâ
Cecropiam ſoliti Baptæ laſſare Cotyton,
Ille ſupercilium madidâ fuligine tactum,
Obliquâ producit acu, pingitque trementes
Attollens oculos, vitrio bibit ille Priapo. Sat. 2. v. 91, ſeq.

BAPTES, in natural hiſtory, a name given by the antients to a foſſile ſubſtance uſed in medicine; they have left us but very ſhort deſcriptions of it: Pliny only tells us, that it was ſoft, and of an agreeable ſmell. Hence Agricola judges, that it was probably one of the bitumens.

BAPTISÆCULA, in botany, a name given, by ſome authors, to the blue corn-flower, called the *cyanus*, or blue-bottle. *Ger.* Emac. Ind. 2.

BAPTISM, (*Cycl.*) — *Baptiſm* is known, in eccleſiaſtical writers, by divers other names and titles; ſometimes it is called *indulgence*, or *abſolution*, by reaſon of its effects in remitting ſins [a]; ſometimes *palingeneſia*, or laver of regeneration [b]; ſometimes *ſalus*, or life and ſalvation [c]; ſometimes σφραγις, *ſignaculum Domini*, and *ſignaculum fidei*, or the ſeal of faith [d]; ſometimes abſolutely *myſterium*, and *ſacramentum* [e]; ſometimes the ſacrament of faith [f]; ſometimes *ſacraments*, in the plural, becauſe the euchariſt, confirmation, and exorciſm, were annexed to it [g]; ſometimes *viaticum*, from its uſe to departing perſons [h]; ſometimes *ſacerdotium laici* [i], or the lay prieſthood, becauſe allowed, in caſes of neceſſity, to be conferred by laymen; ſometimes it is called the *great circumciſion*, by reaſon it ſucceeds in the room of circumciſion, and is the ſeal of the chriſtian covenant, as that was the ſeal of the covenant made with Abraham; ſo, in regard that *baptiſm* had Chriſt for its author, and not man, it was antiently known by the name of Δωρον and χαρισμα Κυριε, *the gift of the Lord*; ſometimes it was ſimply called δωρον, without any other addition, by way of eminence, becauſe it was both a gratuitous and ſingular gift of Chriſt: in reference to the making men compleat members of Chriſt's body, the church, it had the name of Τελειωσις, and Τελειη, the *conſecration*, and *conſummation*; becauſe it gave men the perfection of chriſtians, and a right to partake of the Το Τελειον, which was the Lord's ſupper; it had alſo the name of μυησις and μυσαγωγια, the *initiation*, becauſe it was the admittance of men to all the ſacred rites and myſteries of the Chriſtian religion: and as the euchariſt, from its repreſenting the death of Chriſt, by the outward elements of bread and wine, was called the *ſacred ſymbols*, ſo *baptiſm*, ſometimes, had the ſame name [k]. — [[a] *Bingh.* Orig. Eccleſ. l. 11. c. 1. §. 2. Idem, l. 19. c. 1. §. 2. [b] Idem, ib. l. 11. c. 1. §. 3. [c] Id. ibid. c. 1. §. 5. [d] Id. ibid. §. 6. [e] Id. ibid. §. 8. [f] Id. ibid. [g] *Johnſ.* Eccleſ. Law, an. 740. §. 41. [h] *Bingh.* l. c. §. 10. [i] Id. ibid. §. 3. [k] Id. ibid. §. 10.]

BAPTISM had its origin from the Jewiſh church, where it was the practice, long before Chriſt's time, to baptize proſelytes or converts to their faith, as part of the ceremony of their admiſſion: a practice which obtains among them to this day; a perſon turning Jew, is firſt circumciſed, and, when healed, is bathed, or baptized in water, in preſence of their rabbins; after which he is reputed a good Jew. Vid. *Leo de Moden.* Cerem. & Cout. des Juifs, P. 5. c. 3. Dict. de Trev. T. 1. p. 850.

Chauvin, and ſome others, have pretended to derive *baptiſm* from the luſtrations and ablutions practiſed by the heathen prieſts; others will have *baptiſm* of Chriſtian origin, and to

have been first instituted by Christ himself, in that command to his disciples, *Go teach all nations, baptizing them*, &c. But Luther, Cave, Alting, Van Dale, and others, shew, that the Jews are rather to be owned the instituters of *baptism*. Vid. *Pfaff.* Introd. Hist. Theol. T. 2. p. 361. *Van Dale*, Hist. Baptism. p. 379. *Reimman*, Catal. Bibl. Theol. p. 25.

The design of the Jewish *baptism* is supposed to be, to import a regeneration, whereby the proselyte is rendered a new man, and of a slave become free. The effect of it is, to cancel all former relations; so that those, who were before akin to the person, after the ceremony cease to be so. It is to this ceremony Christ is supposed to have alluded, in his expression to Nicodemus, that it was necessary he should be born again, in order to become his disciple. *John*, iii. 10. Vid. *Calm.* Dict. Bibl. T. 1 p. 246.

The necessity of *baptism* to salvation, is grounded on those two sayings of our Saviour: *He that believeth, and is baptized, shall be saved*; and, *Except a man be born of water and of the spirit, he cannot enter into the kingdom of God.*

The antients did not generally think the mere want of *baptism*, where the procuring it was impracticable, to be such a crime, as to exclude men absolutely from the benefit of church-communion, or the hopes of eternal salvation. Some few of them, indeed, are pretty severe upon infants dying without *baptism*; and some others seem also, in general terms, to deny eternal life to adult persons dying without it: but when they interpret themselves, and speak more distinctly, they make some allowances, and except several cases, in which the want of *baptism* may be supplied with other means.

Such are, martyrdom, which commonly goes by the name of second *baptism* in mens own blood, in the writings of the antients; because of the power and efficacy it was thought to have, to save men by the invisible *baptism* of the spirit, without the external element of water.

Faith, and repentance, were also esteemed a supplement to the want of *baptism*, in such catechumens as died, while they were piously preparing themselves for *baptism*. *Bingh.* Orig. Eccles. l. 10. c. 2. §. 21.

Constantly communicating with the church, was thought to supply the want of baptism, in persons who had been admitted to communion, on a presumption of their being duly baptized, though the contrary afterwards appeared. Idem, ibid.

For infants dying without *baptism*, the case was thought more dangerous; as, here, no personal faith, repentance, or the like, could be pleaded, to supply the defect, and wash away original sin: on this account, they who spoke most favourably of them, as Greg. Nazianzen, and Severus bishop of Antioch, only assigned them a middle state, neither in heaven nor hell. But the Latins, as St. Augustin, Fulgentius, Marius Mercator, &c. who never received the opinion of a middle state, concluded, as they could not be received into heaven, they must go to hell. Pelagius, and his followers, who denied original sin, asserted, that they might be admitted to eternal life and salvation, tho' not to the kingdom of heaven; between which they distinguished. Where the fault was not on the side of the child, nor his parents, but of the minister, or where any unavoidable accident rendered *baptism* absolutely impossible, Hincmar, and others, make an exception, in holding the child saved without *baptism*. Idem, ibid. §. 24.

The receiving *baptism* is not limited to any time, or age of life. Some contend for its being administred like circumcision, precisely on the eight day, as Greg. Nazianzen; and others would have it deferred till the child is three years of age, and able to hear the mystic words, and make answer thereto, though they do not understand them [l]. In the canon law we find divers injunctions against deferring the *baptism* of infants beyond the 37th day [m], thirtieth day [n], and the ninth day [o]; some of them under pecuniary forfeitures.——[l *Bingh.* l. 11. c. 4. §. 13. [m] *Johns.* Eccles. Law, an. 960. §. 15. [n] Id. ibid. an. 950. §. 10. [o] Idem, ibid.]

Salmasius, and Suicerus from him, deliver it as authentic history, that, for the two first ages, no one received *baptism*, who was not first instructed in the faith and doctrine of Christ, so as to be able to answer for himself, that he believed; because of those words, *He that believeth, and is baptized:* which, in effect, is to say, that no infant, for the first two ages, was ever admitted to christian *baptism*. But, afterwards, they own, that pædo-baptism came in, upon the opinion that *baptism* was necessary to salvation. But Vossius, Dr. Forbes, Dr. Hammond, Mr. Walker, and especially Mr. Wall, who has exactly considered the testimony and authority of almost every antient writer that has said any thing upon this subject, endeavour to evince, that infants were baptized even in the apostolical age. It is certain, Tertullian pleads strongly against giving *baptism* to infants; which shews, at least, that there was some such practice in his age, though he disapproved of it [p]. After all, it must be owned, that it is from topical and scholastical, rather than historical arguments, that the advocates for infant-*baptism* prove their point. Some think it were better to omit the question *de facto*, whether infants are commanded to be baptized, or whether they actually were so in the apostles age, and insist only on the question *de jure*, that the church has a right or power to enjoin *baptism* on infants [q].—[p De Baptism. c. 18. [q] Vid. *Thomas.* Cautel. T. 2. c. 11. §. 7, seq.]

It is certain, the ordinary subjects of this sacrament, in the first ages, were converts from judaism and gentilism, who, before they could be admitted to *baptism*, were obliged to spend some time in the state of catechumens, to qualify them to make their professions of faith, and a christian life, in their own persons: for, without such personal professions, there was ordinarily no admission of them to the privilege of *baptism*. *Bingh.* lib. cit. l. 11. c. 5. §. 1.

Those baptized in their sick-beds, were called *clinici*, and held in some reproach, as not being reputed true christians [r]. Hence several censures, in councils and ecclesiastical writers, of *clinic baptism*. This *clinic baptism* was not sufficient to qualify the person, in case of recovery, for ordination [s]. —[r Vid. *Bos.* Exerc. de Clinic. Vet. c. 2, & 3. [s] *Bingh.* l. 4. c. 3. §. 11.]

Some had their *baptism* put off by way of punishment, when they fell into gross and scandalous crimes, which were to be expiated by a longer course of discipline, and repentance. This was sometimes five, ten, twenty years, or more; even all their lives, to the hour of death, when their crimes were very flagrant. *Bingh.* l. c. c. 6. §. 1.

In the earliest ages of the church, there was no stated time or place for the reception of *baptism* [t]. Afterwards, Easter, Whitsuntide, and Epiphany, became solemn seasons, out of which *baptism* was not administred, except in cases of necessity [u]. The catechumens, who were to receive it at these times, were called *competentes*; and to these it is that St. Cyril addresses his *Catecheses* [w].—[t *Bingh.* l. 11. c. 6. §. 9. [u] Idem, ibid. §. 7. See also *Johns.* Eccles. Law, an. 601. §. 8. an. 785. §. 2. an. 740. §. 10. an. 1071. §. 7. an. 1268. §. 1. an. 1237. §. 3. an. 1279. §. 4. [w] Vid. *Fabric.* Bibl. Græc. l. 5. c. 14. p. 544.

In the apostolical age, and some time after, before churches and baptisteries were generally erected, they baptized in any place where they had convenience; as John baptized in Jordan, and Philip baptized the Eunuch in the wilderness, and Paul the jaylor in his own house. *Bingh.* lib. cit. c. 6. §. 11.

But, in after-ages, baptisteries were built adjoining to the church; and then rules were made, that *baptism* should ordinarily be administred no where but in these buildings. Justinian, in one of his novels, refers to antient laws, appointing that none of the sacred mysteries of the church should be celebrated in private houses. Men might have private oratories for prayer in their own houses, but they were not to administer *baptism*, or the eucharist in them, unless by a particular licence from the bishop of the place. Such *baptisms* are frequently condemned in the antient councils, under the name παραβαπτισματα, *baptisms* in private conventicles. Idem, ibid. §. 12.

The antients observed the way of baptizing all persons naked, and by a total immersion under water; except in some particular cases of great exigency, wherein they allowed of sprinkling; as in the case of *clinic baptism*, or where there was scarcity of water. And this practice of baptizing naked was so general, that we find no exceptions made in respect either to the tenderness of infants, or the bashfulness of the other sex, unless in case of sickness or other disability [x]. But, to prevent any indecency, men and women were baptized apart. To which end, either the baptisteries were divided into two apartments, one for the men, the other for the women, as Bingham has observed [y]; or the men were baptized at one time, and the women at another, as is shewn by Vossius, from the *Ordo Romanus*, Gregory's *Sacramentarium*, &c. Add, that there was anciently an order of deaconesses, one part of whose business was to assist at the *baptism* of women.—[x *Bingh.* l. 11. c. 11. §. 2. [y] Idem, ibid. §. 6.] See BAPTISTERY.

The ordinary ministers, who had the right of administering this sacrament, that is, of applying the water to the body, and pronouncing the formula, were presbyters, anciently bishops; though, on extraordinary occasions, laymen were admitted to perform the same; and even women sometimes discharged this office.

Hobbes gives the king, as head of the church, a power of conferring *baptism*. Leviath. c. 42. p. 257.

In the primitive church, Bingham has shewn [z], that bishops, as the apostles successors, were the persons chiefly entrusted with this power; that they granted power to presbyters to baptize in ordinary cases; to deacons, sometimes in ordinary, and sometimes only in extraordinary cases; to laymen, only in extraordinary cases of extreme necessity; that the usurped *baptism* of laymen was allowed to be valid, so far as not to need repeating, though given irregularly; that the *baptism* of women was wholly prohibited; that the *baptism* of Jews and infidels was never allowed, though now accepted in the church of Rome; that the *baptism* of heretics, and schismatics, was disannulled by the Cyprianists, and some few others, who required a true faith, as well as a true form, to make a compleat *baptism*; but that this opinion was rejected by the great body of the catholic church, who thought the defects of heretical *baptism* might be supplied by imposition of hands, without rebaptizing. The church did not think fit to cancel, or wholly disannul the *baptisms* given by usurpation, and without any authority of the priesthood, so long as it appeared they were given in due form, in name of Father, Son, and Holy Ghost [a]. [z In Scholast. Hist. of Lay-Baptism, 1st and 2d Part, 1712,

and 1714. [a] Vid. *Bing.* Orig. Eccleſ. l. 4. c. 3. §. 12. l. 17. c. 5. §. 3. l. 11. c. 4. §. 1. See alſo l. 2. c. 3. §. 20. and l. 2. c. 20. §. 9. *Johnſ.* Eccleſ. Law, an. 734. §. 5.]

In the conſtitutions of archbiſhop Langton, made in the 13th century, we find lay-baptiſm allowed, and authorized, and particular directions given concerning the manner of conferring it, the diſpoſition of the water and veſſel wherein it was to be performed, *&c.* Vid. *Johnſ.* Eccleſ. Law, an. 1223. §. 1. and an. 1236. §. 10.

The Remonſtrants and Socinians reduce *baptiſm* to a mere ſign of divine grace [b]. The Romaniſts, on the contrary, exalt its power; holding, that all ſin is entirely taken away by it; that it abſolutely confers the grace of juſtification, and conſequently grace *ex opere operato*. Some alſo ſpeak of an indelible character impreſſed on the ſoul by it, called *character dominicus*, and *character regius* [c]; but this is held, by others, a mere ſpectre; for that the ſpiritual character, conferred in regeneration, may eaſily be effaced by mortal ſins.—[b *Pfaff.* Inſtit. Theol. p. 680, ſeq. c *Bingh.* l. 11. c. 1. §. 7.]

Dodwell maintained, that it is by *baptiſm* the ſoul is made immortal; ſo that thoſe who die without it, will not riſe again. It muſt be added, he reſtrains this effect to epiſcopal *baptiſm* alone.

From the effects ordinarily aſcribed to *baptiſm*, even by antient writers, it ſhould ſeem, that the ceremony is as much of heathen, as Jewiſh origin; ſince chriſtians do not reſtrain the uſe of it, like the Jews, to the admiſſion of new members into the church, but hold, with the heathens, a virtue in it for remitting and waſhing away ſins. Vid. *Bingh.* Orig. l. 11. c. 3. §. 11. Item, l. 4. c. 3. §. 10. See alſo *King*, Hiſt. Apoſt. Creed, c. 7. p. 362, & 379.

The bramins are ſtill ſaid to *baptize* with this latter view, at certain ſeaſons, in the river Ganges; to the waters whereof they have annexed a cleanſing, or ſanctifying quality. And hence it is, they flock from all parts, even of Tartary, driven by the expectation of their being eaſed of their load of ſins. But, in this point, many chriſtians ſeem to have gone beyond the folly of the heathens. It was only the ſmaller ſins of infirmity, which theſe latter held to be expiable by waſhing; for crimes of a blacker dye, they allowed no water could efface them, no purgation could diſcharge them. See ABLUTION.

The chriſtian doctrine of a total remiſſion of ſins by *baptiſm*, could not fail, therefore, to ſcandalize many among the heathens, and furniſhed Julian an occaſion of ſatyrizing chriſtianity itſelf: Whoever, ſays he, is guilty of rapes, murders, ſacrilege, or any abominable crime, let him be waſhed with water, and he will become pure and holy. Phileleuth. Lipſienſ. Rem. on Diſc. of Freethink. P. 2. §. 43.

The hiſtorian Zozimus ſeems to attribute Conſtantine's being *baptized*, to no other motive: he was too deeply tinged with guilt, and crimes, to admit of any abſolution, except from the chriſtian *baptiſm*.

In the antient church, *baptiſm* was frequently conferred on Jews by violence: but the church itſelf never ſeems to have allowed of force on this occaſion. By a canon of the fourth council of Toledo, it is expreſsly forbid to *baptize* any againſt their wills. That which looks moſt like force, in this caſe, allowed by law, were two orders of Juſtinian; one of which appoints the heathens, and the other, Samaritans, to be *baptized*, with their wives and children, and ſervants, under pain of confiſcation. *Bingh.* Orig. Eccleſ. l. 11. c. 5. §. 5.

By the antient laws, *baptiſm* was not to be conferred on image-makers, ſtage-players, gladiators, *aurigæ* or public drivers, magicians, or even ſtrolling beggars, till they quitted ſuch profeſſions [d]. Slaves were not allowed the privilege of *baptiſm*, without the teſtimony and conſent of their maſters [e]; excepting the ſlaves of Jews, heathens, and heretics, who were not only admitted to *baptiſm*, but, in conſequence thereof, had their freedom [f].—[d *Bingh.* l. 11. c. 5. §. 6, ſeq. e Idem, ibid. §. 4. f Idem, ibid. l. 8. c. 11. §. 17.]

It has been diſputed, whether *baptiſm* is to be conferred on monſtrous and preternatural births, hermaphrodites, moles, *&c.* Vid. *Teichmey.* Inſt. Med. Leg. c. 12. qu. 5. p. 84. Idem, c. 13. qu. 2, & 5. p. 86, 95. Idem, c. 14. qu. 11. p. 108. Voſſius has a learned and elaborate work, *De Baptiſmo*, wherein he accurately diſcuſſes all the queſtions concerning *baptiſm*, according to the doctrine of the antients. *Bingh.* Orig. Eccleſ. l. 11. c. 1. §. 1.

BAPTISM *by Fire*, ſpoken of by St. John the Baptiſt [g], has occaſioned much conjecture. The generality of the fathers held, that believers, ere they enter paradiſe, are to paſs through a certain fire, which is to purify them from all pollutions remaining on them unexpiated. Others, with St. Baſil, underſtand it of the fire of hell; others, of that of tribulation and temptation; others, with St. Chryſoſtom, will have it denote an abundance of graces; others ſuppoſe it to mean the deſcent of the Holy Ghoſt on the apoſtles, in form of fiery tongues; laſtly, others maintain, that the word *fire*, here, is an interpolation, and that we are only to read the text, *He that ſhall come after me, will baptize you with the Holy Ghoſt.* In reality, it is not found in divers manuſcript copies of St. Matthew.—[g *Matth.* iii. 11.]

The antient Seleucians and Hermians, underſtanding the paſſage literally, maintained, that material fire was neceſſary in the adminiſtration of *baptiſm*. But we do not find how, or to what part of the body, they applied it, or whether they were ſatisfied with obliging the perſon baptized, to paſs through the fire. Valentinus rebaptized all who had received water *baptiſm*, and conferred on them the *baptiſm of fire*.

Eis docuit tingi, traductoque corpore flamma.
Tertull. Carm. contr. Marc. l. 1.

Heracleon, cited by Clemens Alexandrinus, ſays, that ſome applied a red-hot iron to the ears of the perſon baptized, as if to impreſs ſome mark upon him. It has been commonly ſaid, that the Ethiopians, to this day, make prints, with a hot iron, on their newly baptized children, in three places, *viz.* the noſe, eyes, and temples. But Ludolph, and Renaudot, maintain this to be a fable. *Calmet*, Dict. Bibl. T. 1. p. 247, ſeq.

Water-BAPTISM was wholly rejected by the Valentinians, Manichees, Paulicians, and many other ſects. Vid. *Bingh.* l. 10. c. 2. §. 1, ſeq.

It is alſo rejected by the modern Quakers. See QUAKERS, *Cycl.*

The Abyſſinians are baptized afreſh every year, at the feaſt of Epiphany, in honour of the *baptiſm* of Chriſt. Certain ditches are dug for this purpoſe, and the people, flocking in crouds, deſcend naked into the water, where the prieſt, laying hands on them, dips them three times under water, with the cuſtomary formula, *I baptize thee in the name of the Father*, &c. *Fabric.* Lux Evang. c. 45. p. 720, ſeq.

St. Ambroſe, and Urſinus a monk of Africa, maintained, that *baptiſm* in the name of Chriſt alone, without mention of the other perſons, was valid; as, under this name, the whole Trinity was included.

The Tritheiſts, and Priſcillianiſts, baptized in the name of three unbegotten principles. *Bingh.* Orig. Eccleſ. l. 11. c. 3. §. 4.

Menander baptized in his own name, in virtue whereof he promiſed his followers incorruptibility, and an immediate reſurrection. Idem, ibid. §. 5.

The Elceſians conferred *baptiſm* in the name of the elements of letters. Idem, ibid. §. 6.

The Montaniſts baptized in the names of Priſcilla and Maximilla, their pretended propheteſſes. Idem, ibid. §. 7.

The Sabellians ſeem to have baptized in the name of the one, or ſupreme God. Ibid.

The Marcoſians, in the name of the unknown Father. Idem, ibid. §. 8.

The Eunomians uſed the form, *I baptize thee into the death of Chriſt.* Idem, ibid. §. 10.

The Marcionites refuſed *baptiſm* to all married perſons, admitting none but either virgins, widows, batchelors, or perſons divorced. Idem, ibid. c. 5. § 12.

BAPTISM *of the Dead*, a cuſtom which antiently prevailed among ſome people in Africa, of giving *baptiſm to the dead*. The third council of Carthage ſpeaks of it, as a thing that ignorant chriſtians were fond of. Gregory Nazianzen alſo takes notice of the ſame ſuperſtitious opinion prevailing among ſome who delayed to be baptized. In his addreſs to this kind of men, he aſks, whether they ſtaid to be baptized after death? Philaſtrius alſo notes it as the general error of the Montaniſts or Cataphrygians, that they baptized men after death.

The practice ſeems to be grounded on a vain opinion, that when men had neglected to receive *baptiſm* in their life-time, ſome compenſation might be made for this default, by receiving it after death. *Bingh.* Orig. Eccleſ. l. 11. c. 4. §. 3.

BAPTISM *of the Dead*, was alſo a ſort of vicarious *baptiſm*, formerly in uſe, where a perſon dying without *baptiſm*, another was baptized in his ſtead.

St. Chryſoſtom tells us, this was practiſed among the Marcionites with a great deal of ridiculous ceremony; which he thus deſcribes: After any catechumen was dead, they hid a living man under the bed of the deceaſed; then coming to the dead man, they aſked him, whether he would receive *baptiſm?* And he making no anſwer, the other anſwered for him, and ſaid, he would be baptized in his ſtead: and ſo they baptized the living for the dead.

Epiphanius aſſures us, the like was alſo practiſed among the Corinthians [h]. This practice they pretended to found on the apoſtle's authority; alleging that text of St. Paul for it, *If the dead riſe not at all, what ſhall they do who are baptized for the dead* [i]? A text which has given occaſion to a great variety of different ſyſtems and explications. Boſius enumerates no leſs than nine different opinions, among learned divines, concerning the ſenſe of the phraſe, *being baptized for the dead* [k].—[h Vid. *Suic.* Theſ. Eccleſ. T. 1. p. 64. *Calm.* Dict. Bibl. T. 1. p. 250. i 1 *Cor.* xv. 29. k V. Exerc. Hiſt. de Clinic. Veter. Eccleſ. c. 2.]

St. Ambroſe, and Walafred Strabo [l], ſeem clearly of opinion, that the apoſtle had reſpect to ſuch a cuſtom then in being; and ſeveral moderns have given into the ſame opinion, as Baronius [m], Joſ. Scaliger [n], Juſtellus [o], and Grotius [p]. —[l De Reb. Eccleſ. c. 26. m *Baron.* Annal. T. 1. ad an. 56. n. 166. n *Scal.* Epiſt. 236, ſeq. o *Juſtell.* in Not. ad Can. 57. p *Grot.* Annot. ad Conſult. Caſſand. Theol. l. 11. c. 11.]

Several among the Roman catholics, as Bellarmin [q], Salmeron [r], Menochius [s], and a number of ſchoolmen, underſtand

ſtand it of the *baptiſm* of tears, and pennance, and prayers, which the living undergo for the dead; and thus allege it as a proof of the belief of purgatory in St. Paul's days.—[q *Bellarmin*, l. 1. de Purgat. r *Salmer*. T. 14. Comm. Diſp. 24. s *Menoch*. Annot. ad Bellarm. l. c.]

Others underſtand it otherwiſe: the curious may conſult *Heinſ.* Exerc. ad Nov. Teſtam. l. 7. c. 13. Vid. Act. Erud. Lipſ. 1687. p. 304. *Wendel.* in Prodr. Biblioth. Biblic. p. 229, ſeq. *Spanheim.* Exercit. de Baptiſm. propt. Mort. in Opp. T. 3. p. 578.

Hypothetical BAPTISM, that formerly adminiſtred in certain doubtful caſes, with this formula; *If thou art baptized, I do not rebaptize; if thou art not, I baptize thee in the name of the Father*, &c. Vid. *Peckh.* Conſtit. Lamb. ap. *Johnſ.* Eccleſ. Law, an. 1200. §. 3. Idem, an. 1281. §. 3.

This ſort of *baptiſm*, enjoined by ſome antient conſtitutions of the Engliſh church, is now fallen into diſuſe.

Solemn BAPTISM, that conferred at ſtated ſeaſons; ſuch, in the antient church, were the *Paſchal baptiſm*, and that at *Whitſuntide*. This is ſometimes alſo called *general baptiſm*. *Du Cange*, Gloſſ. Lat. T. 1. p. 467.

BAPTISM *in deſire*, *Baptiſmus in voto*, or *Votum baptiſmi*, is a fervent deſire, or even a reſolution, to receive *baptiſm*. Cajetan aſſerts, that ſuch a deſire in a parent, together with ſomewhat of a benediction, or oblation of the infant to God, joined with an invocation of the Holy Trinity, may ſupply the want of actual *baptiſm* to an infant in the mother's womb. But this is refuted by ſeveral, particularly Alphonſus de Caſtro. Adverſ. Hæreſ. l. 3. Hær. 9. Dict. de Trev. p. 853.

To loſe one's BAPTISM, *Baptiſmum perdere*, is to forfeit the grace conferred by that ſacrament.

BAPTISM *of the Croſs*, *Baptiſmus crucis*, as practiſed among the Armenians, is deſcribed by Willebrand Abhouldenborg, in his Itinerary. *Du Cange*, Gloſſ. Lat. T. 1. p. 468.

Lay BAPTISM ſeems to have been allowed in the rubric of the Engliſh liturgy, till the time of King James I. Though there were great diſputes among the biſhops at the Hampton-court conference, whether the words of the liturgy imported ſuch allowance or not. The biſhop of Worceſter allowed them to be doubtful; but that the contrary practice of the church, which cenſured women for conferring *baptiſm*, ſhewed, that the compilers of the book did not intend them as a permiſſion: they had indeed propounded them ambiguouſly, becauſe otherwiſe, perhaps, the book would not have paſſed the parliament. The archbiſhop of Canterbury inſiſted, that the adminiſtration of private *baptiſm* by women and laymen, was not allowed in the practice of the church, but, on the contrary, inquired of, and cenſured by the biſhops in their viſitations. He even added, that the words of the liturgy do not infer any ſuch meaning. To which king James excepted; urging, and preſſing the words of the book, that they could not but intend a permiſſion of women, and private perſons, to baptize.

The biſhop of London anſwered, that the authors of the liturgy intended not, by ambiguous terms, to deceive any; but really meant a permiſſion of private perſons to baptize, in caſe of neceſſity, of which their own letters were witneſſes; ſome parts of which he then read; affirming withal, that it was agreeable to the practice of the antient church; and, to that purpoſe, urging the text of *Acts* ii. with the teſtimonies of Tertullian and St. Ambroſe, expreſs to the purpoſe. He was anſwered by king James, but defended by the biſhop of Wincheſter, who ſhewed, that, to deny private perſons to baptize in caſe of neceſſity, is to run counter to all antiquity. The iſſue was a conſultation, whether, into the rubric of private *baptiſm*, which leaves it indifferently for laymen or clerks to baptize, the words *curate*, or *lawful miniſter*, might not be inſerted? which was not ſo much ſtuck at by the biſhops. *Bart.* Account of Hampt. Court Confer. ap. Phœnix. T. 1. p. 146, ſeq.

At preſent, the Engliſh divines condemn it as invalid; and the biſhop of Sarum was ſeverely handled by ſome of them, for aſſerting, that faith in the Trinity gives every man a right to baptize. *Collins*, Diſc. of Freethink. p. 72, ſeq.

BAPTISM is alſo applied, abuſively, to certain ceremonies uſed in giving names to things inanimate.

The antients knew nothing of the cuſtom of giving *baptiſm* to inanimate things, as bells, ſhips, and the like, by a ſuperſtitious conſecration of them. The firſt notice we have of this, is in the Capitulars of Charles the Great, where it is only mentioned to be cenſured: but, afterwards, it crept into the Roman offices by degrees. Baronius carries its antiquity no higher than the year 968, when the great bell of the church of Lateran was chriſtened by pope John III. At laſt it grew to that ſuperſtitious height, as to be thought proper to be complained of, in the *Centum gravamina* of the German nation, drawn up in the public diet of the empire, held at Norimberg, *anno* 1518; where (after having deſcribed the ceremony of baptizing a bell, with god-fathers, who make reſponſes as in *baptiſm*, and give it a name, and cloath it with a new garment, as chriſtians were uſed to be cloathed, and all this to make it capable of driving away tempeſts and devils) they conclude againſt it, as not only a ſuperſtitious practice, but contrary to the chriſtian religion, and a mere ſeduction of the ſimple people. *Bingh.* Orig. Eccleſ. l. 8. c. 7. §. 15. & l. 11. c. 4. §. 2.

BAPTISMAL *Font* (*Cycl.*) is the mark of a parochial church.

BAPTISMAL *Vow*, or *Covenant*, a profeſſion of obedience to the laws of Chriſt, which perſons, in the ancient church, made before baptiſm. It was an indiſpenſable part of the obligation on catechumens, before they were admitted to the ceremony of regeneration. *Bingh.* Orig. Eccleſ. l. 11. c. 7. §. 6.

It was made by turning to the Eaſt, for what myſtical reaſons is not well agreed on. Idem, ibid. §. 7.

BAPTISMAL *Preſents* are in uſe in Germany, made by the ſponſors to the infant, conſiſting of money, plate, or even ſometimes fiefs of lands; which, by the laws of the country, are to be kept for the child till of age, the parents having only the truſt, not the right of diſpoſing of them.

An anonymous author has publiſhed a diſcourſe expreſs on this occaſion, entitled, *De pecunia luſtrica*. Dict. de Trev. T. 1. p. 854.

BAPTIST (*Cycl.*)—Some take thoſe chriſtians of St. John, ſtill ſubſiſting in Aſſyria, to be the ſect, or followers, of John the *Baptiſt*, or the deſcendants of thoſe whom the præcurſor baptized in Jordan. *Fabric.* Lux Evang. c. 5. §. 5. p. 119.

The chriſtians of St. John the *Baptiſt* hold, that John was not conceived after the ordinary manner, but by a mere embrace of his parents. The ſame aſſert, that the mother of Chriſt conceived by a draught of water, which, by command of God, ſhe drank out of a certain ſpring, that her virginity might remain untouched.

BAPTISTERY, Βαπτιστηριον, (*Cycl.*) in profane antiquity, a large baſon, or pool, belonging to the public baths, wherein perſons might not only bath, but ſwim. This was alſo called Κολυμβηθρα, and, by the Latins, *piſcina* and *natatio*. Vid. *Buret.* in Hiſt. Acad. Inſcrip. T. 1. p. 122. *Pitiſc.* Lex. Ant.

There were alſo *baptiſteria* in ſome private baths, as we find, particularly thoſe of Cicero and Pliny.

BAPTISTERY, in eccleſiaſtical writers, differs from *font*; as the former, properly ſpeaking, was the whole houſe, or building, in which the font ſtood, and where all the ceremonies of baptiſm were performed; whereas the font was only the fountain, or pool of water, wherein perſons were immerſed, or baptized.

The antient *baptiſteries* were commonly called φωτιστηρια, *photiſteria*, q. d. places of illumination; an appellation ſometimes given to baptiſm. Or, they might have the name for another reaſon, becauſe they were the places of an illumination, or inſtruction, preceding baptiſm: for here the catechumens ſeem to have been trained up, and inſtructed in the firſt rudiments of the chriſtian faith. Some moderns have miſtakenly placed the *baptiſtery*, like our font, in the *Narthex*; whereas the *baptiſteries* were buildings without the walls of the church, as appears from Euſebius, who calls the *baptiſtery* the chief of the *Exedræ*, as well as from other paſſages of antient writers. *Bingh.* Orig. Eccleſ. l. 8. c. 7. §. 1.

In the time of Juſtin Martyr, and Tertullian, we are not certain, that the church had any *baptiſteries*; but this is paſt doubt, that the place of baptiſm was not in the church, but ſomewhere diſtinct from it. After this manner *baptiſteries* continued to the ſixth age, as appears from what Durant obſerves out of Gregory of Tours, that he ſpeaks of *baptiſteries* ſtill without the walls of the church; though ſome now began to be taken into the church porch. *Bingh.* l. c.

Thoſe *baptiſteries* were antiently very capacious; becauſe, as Dr. Cave obſerves, the ſtated times of baptiſm returning but ſeldom, there were uſually great multitudes to be baptized at the ſame time. And then the manner of baptizing, by immerſion, or dipping under water, made it neceſſary to have a large font likewiſe. In *Venantius Fortunatus*, it is called *aula baptiſmatis*, the large hall of baptiſm; which was indeed ſo capacious, that we ſometimes read of councils meeting and ſitting therein. Idem, ibid. §. 2.

This hall, or chapel, was always kept ſhut during Lent, and the door ſealed up with the biſhop's ſeal, not to be opened till Maunday-Thurſday. Dict. de Trev. T. 1. p. 855.

The *baptiſtery* was always reputed a ſacred place: In the Roman order, we find the ceremonies uſed in the conſecration of the *baptiſteries:* they were to be built of a round figure, and diſtinguiſhed with the image of St John the Baptiſt; over the baſon, or font, was a figure of a dove in gold or ſilver, to repreſent the Holy Ghoſt.

The name *baptiſtery* is ſometimes alſo given to a kind of chapel in a large church, which ſerved for the ſame office.

BAPTISTERY is alſo uſed for a baptiſmal or parochial church. *Du Cange*, Gloſſ. Lat. T. 1. p. 469.

BAPTISTERY is alſo uſed, by the Armenians, for the feaſt of Epiphany, when the anniverſary of Chriſt's baptiſm is celebrated. *Du Cange*, ibid. p. 470.

BAPTISTERY is alſo uſed for a church-book, wherein the prayers and ceremonies of baptiſm were particularly deſcribed. Some take the *baptiſterium* to have contained the order of all the ſacraments, except the euchariſt. *Du Cange*, ibid. p. 470. *Johnſ.* Eccleſ. Law, an. 957. §. 21.

BAR, (*Cycl.*) in architecture, a long ſlender piece of wood or iron, uſed to keep things cloſe and faſt together.

In this ſenſe, we ſpeak of *bars* of windows, of doors, and the like. *Daviler*, Archit. p. 412.

BAR, among printers, denotes a piece of iron with a wooden handle,

handle, whereby the ſcrew of the preſs is turned in printing. See PRINTING, and PRESS, *Cycl.*

BARS *of Iron* are made of the metal of the ſows and pigs, as they come from the furnaces.

Theſe paſs through two forges, called the *finery* and the *chaufery*; where, undergoing five ſeveral heats, they are formed into *bars*. Vid. Phil. Tranſ. N° 138. p. 934. *Hought.* Collect. N° 273. T. 2. p. 224, ſeq. See IRON, and FORGE, *Cycl.*

BAR, in heraldry, is conſidered by ſome as a diminutive of the feſs. The ſpace the former poſſeſſes in the field, is one fifth, or ſixth; that of the latter, one third, horizontally. *Nisb.* Eſſ. of Arm. in fine.

The *bar* itſelf has its diminutives, which are the *cloſet* and *berrulet*.

The *bar* of legitimate cadets proceeds from right to left; that of baſtards, from left to right. *Aubert.* ap. Richel. T. 1. p. 180. a.

BAR-*Gemel*, denotes a double *bar*, or where the *bars* are placed in couples, at a ſmall diſtance, and more than two in the field, in even number. Cart. p. 129.

BAR, *or* BARRIER *of a Port*, is a long beam wherewith the entrance of a port is cloſed; more frequently called a *boom*. *Aubin.* Dict. Marin. p. 72.

BAR is alſo uſed for a heap of ſand or mud, or a chain of rocks, which block up the mouth of a river, or port, ſo that there is no entrance except at high-water.

The *bar* of Siam is a bank of mud, gathered at the mouth of the river, which allows not above thirteen feet water, when the tide is higheſt. *Aubin.* ibid. Vid. Phil. Tranſ. N° 162. p. 685.

BAR-*Maſter*, in mining, he who keeps the gage, or diſh, to meaſure all miners ore; he, or his ſervant, being preſent when meaſured. Vid. *Houghton*'s Compleat Miner, in the Explanation of the Terms of Art.

BARANGI (*Cycl.*) — Codinus [a], and Curopalata, obſerve, that the name is Engliſh, formed from *bar*, to ſhut; and that the *Barangi* were Engliſhmen, by country; Anglo-Danes, who, being driven out of England, were received into the ſervice of the emperor of Conſtantinople, and made guards or protectors of his perſon [b]. Whence they are called in Latin, by Cujaccius, *Protectores*; by others, *Securigeri*, as being armed with a battle-ax, *ſecuris*. Codinus adds, that they ſtill ſpoke the Engliſh tongue. Anna Comnena ſays, the *Barangi* came from the iſland *Thule*; by which is, doubtleſs, meant our iſland. Yet Nicetas makes them Germans; a miſtake eaſy to be made at that diſtance, conſidering the relation the Anglo-Saxons bore to Germany [c].—[[a] De Offic. Conſtant. c. 5. n. 45. [b] *Du Cange*, Gloſſ. Græc. T. 1. p. 175. [c] Vid. Trev. Dict. Univ. T. 1. p. 857.]

There were *Barangi* as early as the emperor Michael Paphlagonius, in the year 1035, as appears from Cedrenus; but they were then only common ſoldiers, not a life-guard.

Their commander was called Ακολουθος, as importing a perſon who always followed the emperor.

BARATHRUM, Βαραθρον, among the ancient Athenians, a deep pit into which condemned criminals were caſt headlong.

The *barathrum* was a dark noiſome hole, having ſharp ſpikes at the top, to prevent any eſcape; and others, at the bottom, to pierce and lacerate the offender. V. *Pott.* Archæol. Græc. l. 1. c. 25.

From its depth and capaciouſneſs, the name came to be uſed proverbially for a miſer, or a glutton, always craving.

In which ſenſe, the word *barathro* is uſed among the Latin poets. Vid. *Pitiſc.* Lex. Ant. T. 1. p. 250. *Fabric.* Theſ. T. 1. p. 324.

BARATHRUM is alſo uſed, in phyſiology, to denote certain baleful caverns, inacceſſible on account of their fetid, or poiſonous fumes.

Theſe amount to the ſame with what others call *Foſſæ Charoniæ*. *Caſt.* Lex. Med. p. 165. a.

BARB, or BARBE, in the manege, a horſe brought from Barbary. See BARBE, *Cycl.*

Theſe horſes are uſually very beautiful; they are of a ſlender make, and have very fine limbs, and fine turned bodies.

The Spaniſh and Engliſh horſes have much fuller bodies, and larger legs.

The *barb* is little inferior to the Arabian or Turkiſh horſe; but he is eſteemed, by our dealers, too tender and delicate to breed upon. The Turkiſh and the Spaniſh horſe are therefore uſually kept, for this purpoſe, by the nicer judges.

The *barb* is very lazy and negligent in all its motions; he will ſtumble in walking upon the ſmootheſt ground; his trot is like that of a cow, and his gallop very low, and very eaſy to himſelf: this ſort of horſe is, however, for the moſt part ſinewy, nervous, and excellently winded; he is therefore good for a courſe, if not over-weighted.

The *mountain barbs* are accounted the beſt, becauſe they are the largeſt and ſtrongeſt: they belong to the Allarbes, who value themſelves much upon them, and are as fond of them as other nations are; for which reaſon it is not eaſy to get at any of them. The common *barbs* are not uncommon among our people of faſhion. They may uſually be bought in Provence and Languedoc in France, at a moderate price, and many of the Engliſh have them from thence.

Barbs, among us, fall ſhort of that ſwiftneſs, attributed to them in their native country. This may be accounted for, partly from the ſmallneſs and lightneſs of their riders, and partly from their not being loaded with heavy ſaddles and bridles, as in Europe, nor even with ſhoes. An Arab ſaddle is only a cloth girt round, with a pair of light ſtirrups, and a ſort of pummel to ſuſtain them. *Corn.* Dict. des Arts, T. 1. p. 89. a.

Baſtard BARBS, deſcending from the beſt Engliſh mares, covered by *barb* ſtallions, are, by experience, conſtantly found both better ſhaped and fitter for the ſaddle, and ſtronger for ſervice than their ſires. Phil. Tranſ. N° 105. p. 53.

BARB is alſo uſed for the *Barbary pigeon*, called alſo by Moore the *columba Numidica*.

This is but a ſmall pigeon, and has a very ſhort beak like a bullfinch, with a ſmall water, and a naked circle of tuberoſe red fleſh round the eyes; the iris of the eye is of a pearl colour, and the broader and reder this circle round them is, the more the pigeon is valued; but this is always narrow while they are young, and does not arrive at its full breadth till they are four years old. Some of this ſpecies have a tuft of feathers behind their head, and others not. The red circle round their eyes grows pale and whitiſh, if they become ſick; but always recovers its redneſs as they grow well: their proper colour is black, or dun. There are likewiſe pyed ones; but they are of a mixed breed, and not ſo valuable. *Moore*'s Columbar. p. 50.

BARBA *Aron*, in botany, a name given by ſome authors to the common great houſeleek. *Ger.* Emac. Ind. 2.

BARBA *Capræ*, in botany, the name of a genus of plants, the characters of which are theſe: the flower is of the roſaceous kind, being compoſed of ſeveral petals, arranged in a circular form; the cup is made only of one leaf, and from it ariſes a piſtil, which finally becomes a fruit, compoſed of ſeveral ſmall capſules, collected into a ſort of head; each capſule containing only one ſeed, and that uſually of an oblong figure.

Of this genus Mr. Tournefort allows only one ſpecies, the common *barba capræ*, or, as it is called by ſome, *drymopogon*. *Tourn.* Inſt. p. 265.

BARBA *Jovis*, in botany, the name of a genus of plants, the characters of which are theſe: the flower is of the papilionaceous kind, and its piſtil, which ariſes from the cup, finally becomes a ſhort, and uſually an oval pod, containing a roundiſh ſhaped ſeed.

The ſpecies of *Barba Jovis*, enumerated by Mr. Tournefort, are theſe: 1. The beautiful ſhining *Barba Jovis*. 2. The dwarf hairy *Barba Jovis*, with globular purple flowers. 3. The ſhrubby, haresfoot-like, Cretic *Barba Jovis*, with hoary leaves, and large purple flowers, in ſpikes. 4. The yellow flowered, hoary ſpiked *Barba Jovis*. 5. The Eaſt Indian *Barba Jovis*, with conjugated leaves, hoary underneath. 6. The ſmall Portugal *Barba Jovis*, with little variegated flowers. *Tourn.* Inſt. p. 651.

BARBARICARII, in antiquity, a kind of artiſts, who, with threads of divers colours, expreſſed the figures of men, animals, and other things [a]; or, as others deſcribe them, thoſe whoſe buſineſs was to gild, and to decorate ſhields and helmets with gold and ſilver [b].—[[a] *Donat.* ad 11 Æn. v. 777. [b] *Du Cange*, Gloſſ. Lat. T. 1. p. 474.]

The *Barbaricarii* were ſo called, becauſe they learned this kind of painting from the Phrygians [c], who were particularly denominated *Barbarians*, in regard of their oppoſition to the Greeks [d]; though the name is ſometimes alſo written *Branbaricarii*.—[[c] *Briſſ.* de Verb. Signif. p. 77. *Pitiſc.* Lex. Ant. T. 1. p. 261. b. [d] *Fabr.* Theſ. p. 337. See alſo *Voſſ.* Etym. p. 63. b.]

BARBARICARII ſeem alſo to have been uſed for ſoldiers or officers, who wore masks and vizzards, thus adorned with gold and ſilver. Trev. Dict. Univ. T. 1. p. 860.

BARBARICUM, in antient writers, is uſed for a military ſhout, raiſed by the ſoldiers on point of engagement. *Feſt.*

This is called *barbaricum* from the barbarians, in whoſe armies this method of ſhouting much obtained.

The ſame appellation was given to a war, or expedition, undertaken againſt the barbarians.—*Quouſque ad ipſum tempus quo barbaricum exortum eſt inter nos & vos.* *Aquin.* Lex. Milit. T. 1. p. 114. *Du Cange*, loc. cit.

BARBARICUM was alſo uſed for an armoury, or magazine, wherein the Greek emperors kept the ſpoils, and donaries, taken from the barbarians in time of war or peace.

BARBARICUM is alſo an appellation given by the modern Greeks to rhubarb.

It is thus called from the *Sinus Barbaricus*, by the way of which this root was firſt brought to them. *Friend*, Hiſt. of Phyſ. P. 1. p. 115.

BARBARISM (*Cycl.*)—Authors differ in aſſigning the particular racters and limits of a *barbariſm*. Cicero, or whoever is author of the books to Herennius [a], defines it, a vicious pronunciation of a word. Suidas [b], and others, a word uſed contrary to the cuſtom of approved writers. Others, more generally, a word either written or pronounced, contrary to the genius or laws of the language.—[[a] Rhetor. ad Heren. l. 4. c. 12. [b] *Suid.* Lex. T. 1. p. 415.]

In this laſt ſenſe, it is diſtinguiſhed by ſome from ſoleciſm, as the latter conſiſts in a phraſe or compoſition of ſeveral words, the former in a ſingle word. But Vaugelas, and other modern writers, ſet aſide this diſtinction, and extend *barbariſms* to phraſes, as well as words.

Others make *barbariſm* to be properly an offence againſt ſyntax, and only to differ from ſoleciſm in degree; when the offence is grievous, it is denominated a *ſoleciſm*, when ſlighter, a *barbariſm*. *Buffier*, Gram. Franc. §. 174.

In general, under *barbariſms* are comprehended things written, ſpoken, declined, or conjugated wrong; or uſed in a wrong quantity, or in an unuſual ſenſe; as when a word is uſed which is foreign to the language, and not received by the better and purer ſort of writers therein. Such are *liper* for *liber*, *ſyllāba* for *ſyllăba*, *patri* for *patris*, *lexi* for *legi*, *bannus* for *proſcriptio*, &c. *Hederic.* Schul. Lex. p. 517. *Quinct.* Inſt. Orat. l. 1. c. 5.

Barbariſm is often charged, with great juſtice, on modern writers in the learned languages. The Latin books of late ages are full of Angliciſms, Galliciſms, Germaniciſms, &c. according to the country of the author. But what ſhall we ſay to Caſp. Scioppius, who accuſes Cicero himſelf of *barbariſm* in his own language? *Paſch.* Invent. Nov. Ant. c. 2. §. 20. p. 70.

There are great diſputes among critics concerning *barbariſms* in the New Teſtament. Arnobius, St. Auguſtin, Gataker, Vitringa, and others, pretend to find *Hebraiſms*, *Ciliciſms*, *Latiniſms*, and even *Arabiſms* therein [c]. H. Stephens, Schmidius, Blackwel, and others, have defended the ſacred writers from the imputation of *barbariſms*. Van den Honert allows of *Hebraiſms*, but denies any *barbariſms*, in the New Teſtament [d]; which ſeems to imply a contradiction.—[c Philoſ. Script. Interp. c. 3. p. 18, ſeq. d V. *Budd.* Iſag. ad Theol. l. 2. c. 8. p. 1498.]

Divers pious perſons are ſtartled at the apprehenſion of any thing like a *barbariſm* in the inſpired books, as ſuppoſing it an objection to the divinity thereof; yet this does not hinder but many of the Jews, after Abarbanel and others, ſtill maintain *barbariſms* in the Old Teſtament; in which they are ſeconded by M. Simon, Le Clerc, and others. Divers of the prophets are ſaid to have been unacquainted with the language they wrote in, particularly Jeremiah. V. *Rambach.* Inſt. Hermen. Sacr. l. 3. c. 1. § 8.

BARBARISM, *Barbaries*, is alſo uſed for that rudeneſs of mind, wherein the underſtanding is neither furniſhed with uſeful notices, nor the will with good morals. *Gentzken.* Syſt. Phil.

BARBARISM is alſo uſed for one of the grand ſects or hereſies in religion, from which all the reſt took their riſe.

Barbariſm is that ſtate of religion, which obtained among mankind before they were formed into ſociety, or compoſed a church. Thus it is, Damaſcenus ſays, *barbariſm* reigned from Adam to Noah. In which view, thoſe who acknowledged the true God, as well as thoſe engaged in idolatry, are equally included under *barbariſm*, it being properly the independency and entire liberty they were left under, that is intimated by the appellation *barbariſm*.

Others will have it, that *barbariſm*, which they alſo call *ſcythiſm*, denotes *atheiſm*, or the errors of thoſe, who, according to the Pſalmiſt, ſay in their heart, there is no God: ſome ancients, according to St. Epiphanius, held that *barbariſm* reigned till the deluge, and ſcythiſm from the deluge to Sarug, when heatheniſm commenced; but that diviſion ſeems without foundation. V. Dict. de Trev. T. 1. p. 862.

BARBAROUS, in a general ſenſe, ſomething that partakes of the quality of barbariſm. See BARBARISM.

In this ſenſe we ſay a *barbarous* nation, age, writer, word, or the like.

BARBAROUS *Words* are thoſe uſed contrary to the cuſtom of the beſt ages of a language. *Thom. Erot.* Rhet. c. 20. § 2, ſeq.

Under *barbarous words* or terms are included obſolete and antiquated, as well as novel and foreign, or unadopted words.

Words are either *barbarous* by foreign origin, or uſe: thoſe *barbarous* by uſe are various, as the *barbariſm* is either a Hebraiſm, Greciſm, or Latiniſm, &c.

There are alſo *barbarous* phraſes, where all the words they conſiſt of are pure, but the compoſition or application unuſual or foreign.

Barbarous Latin words are innumerable; the ſchoolmen are full of them: the chemiſts, phyſicians, lawyers, can ſcarce write intelligibly without them [e]. Du Cange has given two large volumes in folio of *barbarous* Latin words, and as many of *barbarous* Greek words [f].—[e V. *Tribbech.* de Doct. Scholaſt. f *Walch.* Hiſt. Crit. Ling. Lat. c. 2. §. 13.]

The modern or vulgar Greek is ſometimes called *barbarous* Greek, *barbaro-greca*, or *Greco-barbara lingua*. Langius has publiſhed *Philologia barbaro-greca*, *Gramatica barbaro-greca*, or *Gloſſarium barbaro-grecum*. V. *Budd.* Iſag. ad Theol. l. 2. c. 11. §. 5.

BARBARY-*Cow*, in zoology. See VACCA *Barbarica*.

BARBATUS *Piſcis*, in ichthyology, a name given by Salvian, and ſome others, to the *ſilurus*, called in Engliſh, the *ſheat-fiſh*; the *glanus* of Pliny and the ancients. This is characterized by Artedi by the name of the *ſilurus* with four *cirri*, or beards, at the mouth. By this it is diſtinguiſhed from the fiſh called the *lake*, or *alkuſſa*, which, tho' a genuine ſpecies of *ſilurus*, has only one beard.

BARBED, in heraldry, is underſtood of a cock, when his comb and wattles are of a different colour from the reſt of the body. In which caſe, he is ſaid to be *barbed and creſted*. *Coats*, Her. Dict. p. 26.

A Croſs BARBED, *Croix barbee*, is that whoſe extremities are faſhioned like the barb of iron ſpears or inſtruments uſed for ſtriking fiſh, &c. *Coats*, Ibid.

BARBEL, in ichthyology. See BARBUS.

BARBELICOTÆ, an ancient ſect of gnoſtics, ſpoke of by Theodoret. The doctrine of the *Barbelicotæ* was, that one of the Æons, poſſeſſed of immortality, had commerce with a virgin ſpirit named *Barbeloth*, who demanded of him, firſt preſcience, then incorruptibility, and laſtly eternal life; all which were granted to her: that being one day in a gayer humour than ordinary, ſhe conceived, and afterwards brought forth, light, which being perfected by the unction of the ſpirit, was called *Chriſt*: the child Chriſt deſired to have underſtanding, νου, and obtained it: after which, underſtanding, reaſon, incorruptibility, and Chriſt, united together; and from their union aroſe Autogenes, Αυτογενης. To theſe fables they add divers others. Their ceremonies were ſo full of abominations, that they became alſo denominated *Barboriani*. Vid. Dict. de Trev. T. 1. p. 867.

BARBERRY-TREE, *Berberis*, is very eaſily and plentifully propagated from the ſuckers taken from the roots of the old plants, which may be planted either in October or February, and ſucceed beſt in a ſtrong loamy ſoil. They may be either produced from ſeeds, or by laying down the branches; but the ſuckers are commonly ſo plentiful, as to make it unneceſſary. *Miller's* Gard. Dict.

This medicinal ſhrub is uſed both in the berry and bark, tho' with oppoſite intentions.

The berry is of an agreeable, cooling, aſtringent taſte, uſed chiefly in conſerve to quench thirſt, and ſtrengthen the ſtomach: yet the bark is, by experience, found an aperient and detergent. That which grows neareſt the tree is moſt eſteemed. It is rarely found in diſpenſatory compoſitions, but much in extemporaneous preſcription, againſt the jaundice, and other diſorders from foulneſs and obſtructions of the viſcera. *Quinc.* Diſpenſ.

BARBET, in natural hiſtory, a name given by M. Reaumur, and other of the French writers, to a peculiar ſpecies of the worms which feed on the pucerons.

This worm is more particularly called *barbet blanc*, as alſo *heriſſon blanc*, or white hedgehog, from its being covered with oblong white tufts of filaments, which ſtand in the manner of the quills of a hedgehog or porcupine. M. Reaumur calls theſe tufts of filaments, ſpines, not to ſignify that they are capable of pricking, for they have no ſuch power; but to expreſs their manner of arrangement on the body of the animal. There is, indeed, no proper name to call them by among all thoſe uſed for the parts of other animals, ſince there is nothing in the animal world at all like this ſubſtance, except the down on ſome of the pucerons.

This creature is of the ſize of a ſmall fly without its wings; but this tufted covering ſo much encreaſes the bigneſs, that it appears of the ſize of a fly of the largeſt kind.

The ſpines of this animal have neither the hardneſs of ſpines, nor the conſiſtence of hairs; their ſurface is rough, not poliſhed and gloſſy, like that of hairs; but they reſemble, in their ſpungy texture, a filament of cotton. All theſe ſpines or tufts of cotton are arranged in ſix lines, as evenly parallel to one another, as the ſhape of the animal's body will permit. Each of theſe lines reaches over the whole upper part of the body, following the courſe of one of the rings. The ſeveral ſpines, which compoſe each line, almoſt touch one another at their baſes; but as they all ſtand perpendicular, and are placed on a convex ſurface, they are conſiderably diſtant from one another at the points. In ſome places, they are nearly of the ſame diameter all the way up; and in others, they gradually taper from a broad baſe to a roundiſh blunt point, reſembling a cane in ſhape. The tufts on different inſects of this ſpecies are of different lengths. In the common kinds, they are ſhort, and ſtand perfectly erect; but in ſome they are ſo long, as not to be able to ſupport their own weight, but bend into hooks. The points of theſe have very different directions; thoſe of each ſide bending upwards; thoſe near the tail towards the tail; and thoſe near the head towards the head. In ſome other ſpecies they have directions very different even from theſe; and in all the ſpecies, every ſingle tuft has its irregularities, and is ſeen to be compoſed of ſeveral cottony filaments of unequal lengths, which are knotty and rough in ſeveral places; and when touched, they feel ſoft like cotton. It is alſo very remarkable, that on being touched, they always adhere to the fingers, and are ſo looſly connected with the body of the animal, that on rubbing the finger over it ever ſo lightly, they all come off, and leave it naked. The creature then appears green, and of a very different figure from what it had before; and the tufts loſe their figure, and appear only a congeries of round grains of a cottony matter. The ſudden change in ſize and appearance in the creature, makes it look as if it had undergone a transformation.

It is evident from obſervation, that the matter of which the tufts, which cover the body of this animal, are made, is of a very

very different nature and formation from the ſilky filaments which caterpillars, and other inſects, ſpin out of their entrails. They have all peculiar organs for the ſpinning it, and all draw it out to any length they pleaſe; but this matter, on the contrary, has a determinate length, which it cannot exceed, and is only formed of the matter perſpired through certain parts of the body of the creature, which hardens as it remains in the air.

As it is ſo eaſy to diveſt theſe creatures of their downy covering, it is eaſy to conceive, that nature muſt have made its reparation to the animal very eaſy; and this is indeed the caſe: for if the animal be wholly made naked, by drawing the finger three or four times over it, it loſes its fine green colour in half an hour afterwards, appearing as if duſted over with flour; and, in fine, within the ſpace of twelve hours, is furniſhed with tufts as long, and every way as large, as thoſe it loſt. Theſe tufts, as they grow upon the animal, appear much more even and regular in ſhape than they are afterwards: they have baſes, each compoſed of four arches, ſuited to the convex figure of the body; and their whole figure reſembles a quadrilateral pyramid inverted. In this ſtate they do not touch at their baſes; but have a green ſpot, that is a part of the naked ſurface of the body of the animal between. As they grow to their full ſize, they loſe the regularity of their figure, and meet at their baſes. The probable cauſe of their loſing their angular figure is, that they rub againſt one another, or againſt other ſubſtances, and their angles being the parts moſt likely to touch, are eaſily broke off: and as to thoſe which are crooked, it ſeems to be wholly owing to their being of ſo great a length in proportion to their thickneſs, that they are not able to ſuſtain their weight erect.

When the tufts have been rubbed off from one of theſe animals, and its body is left naked, if it be then examined by a microſcope, there will be found a number of ſmall hollows or depreſſions in the ſkin, exactly anſwering in place and number to the cottony tufts that are to ſucceed the loſt ones. It is to be conceived, that, within each of theſe hollows, there are a great number of fine apertures, through which the matter is to paſs, which is to form the new tufts; but theſe are not diſtinguiſhable by the moſt powerful glaſſes: if the tufts, however, be examined while forming, they will be found to conſiſt of a vaſt number of regular filaments, placed cloſe by one another, and each running diſtinctly the whole length of the tuft: this appearance is, however, wholly loſt afterwards, the fine threads ſticking to, and intermingling with, one another, and many of them breaking in ſeveral places; ſo that the whole tuft reſembles a coarſe and ſingle filament.

Theſe *barbets* are found in great plenty on the leaves of the plum-tree in the months of June and July. The puceron of this tree ſeems more to their taſte than any other kind; and they are often found in numbers on every leaf of the tree where theſe little animals are.

The matter of their tufts ſeems anologous to the downy covering of ſome of the pucerons, and to no other ſubſtance in the animal world. The puceron of the beech-tree has this downy matter running into much longer filaments even than this animal; and, in the ſeveral other ſpecies, it is found growing to the different lengths from this to a mere downy powder.

The *barbet* lives about a fortnight in that form, and then becomes a chryſalis; from which, after a month, there comes out a ſmall beettle, of the ſize of our cowlady, but of a flatter figure, and, in general, of a duſky brown colour. *Reaumur*, Hiſt. Inſect. Vol. 6. p. 157, ſeq.

BARBICANAGE, *Barticanagium*, in our old writers, money given for the maintenance of a *barbican*, or watch-tower; or a tribute towards repairing or building a bulwark. *Blount.*

BARBILLONS, in the natural hiſtory of inſects, are certain bodies, uſually two in number, placed under the creature's head, and moveable at pleaſure, ſomewhat reſembling hands or fingers placed on a ſhort or broken arm.

The word is a diminutive of the French *barbe*, beard.

Theſe are always covered with hairs: the creature is able to throw them out, and take them in, at pleaſure, and when they are out, can move them backward and forward with an incredible ſwiftneſs; by which means, a current of water is made about its head, and in that probably great numbers of ſmall animals are brought, which ſerve for food to the creature; and this is probably the way nature has taken to provide for many both of the larger and ſmaller of the inſect claſs. *Reaumur*, Hiſt. Inſ. Vol. 4. p. 312.

BARBITOS, or BARBITON, an ancient inſtrument of muſic, mounted with three, others ſay, ſeven ſtrings, much uſed by Sappho and Alcæus; whence it is alſo denominated *Leſboum*.

The *barbitos* is ſaid to have differed from the lyre and cithara; but wherein the preciſe difference lay, does not appear. Strabo makes it the ſame with the *ſambuca*. It is repreſented as yielding a grave, deep ſound, and, on that account, peculiarly fitted for Doric compoſitions. Anacreon is ſaid to be the inventor of the *barbiton*. V. *Suid.* Lex. T. 1. p. 416. *Scal.* Poet. l. 1. c. 48. *Athen.* l. 4. *Rhodig.* Lect. Ant. l. 5. c. 23.

BARBLE, or BARBEL, in ichthyology, the Engliſh name for the fiſh called by the generality of authors *barbus*, and *barbulus*; by ſome, *muſtus fluviatilis*. It is, according to the new ſyſtem of Artedi, a Species of *cyprinus*. See BARBUS.

BARBLES, in the manege, knots of ſuperfluous fleſh growing in the channels of a horſe's mouth; that is, in the intervals, which ſeparate the bars, and obſtruct his eating. *Guill.* Gent. Dict. P. 1. in voc.

Theſe are alſo called *barbes*; and obtain in black cattle as well as horſes.

For the cure, they caſt the beaſt, take out his tongue, and clip off the *barbes* with a pair of ſciſſars, or cut them with a ſharp knife; others chuſe to burn them off with a hot iron. Dict. Ruſt. in voc.

BARBONI, in zoology, a name given by many to the *mullus barbatus*, a fiſh greatly eſteemed at table, and caught in the Mediterranean, and ſome other ſeas. *Willughby*, Hiſt. Piſc. p. 285. See the article MULLUS *Barbatus*.

BARBUS, in zoology, the fiſh called in Engliſh the *barbel*, and by ſome writers in natural hiſtory, *muſtus fluviatilis*. It grows to a foot, or ſomewhat more, in length: its back is of a duſky, browniſh, olive colour; but with a paleneſs not common in other fiſh: its belly is of a ſilvery white: its back and ſides are ſpotted with black ſpots: the figure of its body is long and rounded; and its back riſes into a prominent and ſharp ridge: its ſcales are of a moderate ſize; and its ſide lines dotted: its mouth is large, but toothleſs; and its upper jaw hangs out a great way beyond the lower: it has four beards, two at the angles of the mouth, and two near the edge of the jaws; and in the middle of theſe there runs a ſlender red vein: it has only one fin on the back; and its tail is forked. Its fleſh is lax and ſoft; and there is an opinion that its ſpawn is poiſonous. It is caught in many of our rivers, and in thoſe of other parts of the world. *Ray*'s Ichthyog. p. 259. *Geſner*, de Piſc. p. 123.

The *barbel* is a fiſh commonly known, and ſo called, on account of the barb or beard under its noſe, or chaps. It is of the leather-mouthed kind.

This is but a moderately well-taſted fiſh. The male is eſteemed better than the female; but neither of them is very much valued. The worſt ſeaſon for them is April. They uſually ſwim together in great ſhoals, and love to be among weeds, where there is a hard, gravelly bottom. In ſummer they frequent the ſtrongeſt and ſwifteſt currents of the water; as deep bridges, weirs, and the like places, and are apt to get in among the piles, weeds, and other ſhelter; but in winter, they retire into the deepeſt and ſtilleſt waters.

The time for taking this fiſh is very early in the morning, or late in the evening: the place ſhould be baited with chopped worms ſome time before; and no bait is ſo good for the hook as the ſpawn of the ſalmon, or ſome other fiſh: in defect of theſe, lob-worms will do; but they muſt be very clean and nice, and the hook carefully covered, otherwiſe he will not touch them. Old cheeſe ſteeped in honey is alſo a very fine bait.

The rod and line for fiſhing for this fiſh ought to be very ſtrong: the line ſhould have a running plummet, that is, a bullet with a hole through it; and a piece of lead muſt be placed a foot or more above the hook, to keep the plummet from falling upon it: the worm, or other bait, will, by this means, always be at the bottom; and the plummet will lie, and not choak the fiſh: the bending of the rod will ſhew when he bites; and indeed it will be felt in the hand by the twitch he gives; but, if not carefully managed, he will often break the tackle, for he is a very ſtrong fiſh. The beſt ſeaſon for fiſhing for this fiſh is from May to Auguſt. Sportſm. Dict. in voc.

BARBYLA, in botany, a name by which Theocritus, and other of the early writers, have called the common damask prune. *Jonſ.* Dend. p. 77.

BARCALON, an appellation given the chief miniſter of the emperor of Siam, to whom belongs the care of trade both within the kingdom and out of it, the ſuperintendency of the royal magazines, the receipt of the revenues, and the management of foreign affairs. Dict. de Trev. T. 1. p. 870.

BARCES, or BERCHES, were formerly a kind of ſhip guns, not unlike ſakers, only ſhorter, thicker in metal, and wider bored. *Fæſch.* Ing. Lex. p. 67. b.

BARCONE, a ſhort broad veſſel, of a middle ſize, uſed in the Mediterranean ſea for the carriage of corn, wood, ſalt, and other proviſions, from one place to another. *Fæſch.* p. 68. a.

BARD, *Barda*, in middle age writers, is uſed for the armour and accoutrements of a war horſe, or ſtate horſe. *Caſeneuv.* Orig. p. 20. b.

Hence alſo the barbarous Latin *bardatus*, a horſe thus accoutred.

Menage derives the word from *cooperta*; whence, by corruption, *cooparta*, *parta*, and *barda*. *Menag.* Orig. Franc. p. 78. b.

BARD is alſo uſed, in the culinary art, for a broad ſlice of bacon uſed to cover fowls before they are roaſted, baked, or otherwiſe dreſſed. Dict. Ruſt. T. 1. in voc.

BARDARIOTÆ, in antiquity, was a kind of antient guard attending the Greek emperors, armed with rods, wherewith they kept off the people from crouding too near the prince, when on horſeback. *Aquin.* Lex. Milit. T. 1. p. 115. a. *Du Cange*, Gloſſ. Gr. T. 1. p. 176.

Their captain or commander was denominated *primivergius*.

The word was probably formed from the *bardæ* or houſings on their horſes. See BARD.

BARDANA,

BARDANA, *Burdock*, in botany, the name of a genus of plants, the characters of which are theſe: The flower is of the floſculous kind, being compoſed of ſeveral floſcules, jagged at the ends, placed upon the embryo ſeeds, and contained in one general cup, which is of a ſquammoſe ſtructure; each of the hooks of the whole being ſo bent back, as to lay hold of any thing which touches it. The embryos finally ripen into ſeeds, winged with a ſhort down.

The ſpecies of *bardana* enumerated by Mr. Tournefort, are theſe: 1. The common *burdock*. 2. The great *burdock*, with white flowers. 4. The great woolly headed mountain *burdock*. 4. The great mountain *burdock*, with ſmall, roundiſh, and more woolly heads. 5. The great American *burdock*, with prickly heads. *Tourn.* Inſt. p. 450.

The root of the common *burdock* is a very powerful diuretic and diaphoretic. It is given with great ſucceſs, in decoction, in obſtructions of the ſpleen, and in dropſies. It is alſo recommended by ſome in all diſeaſes of the breaſt and lungs, in aſthmas, in the ſtone, and in the ſciatica. The ſeed of it is eſteemed by many to be one of the greateſt lithontriptics known; and, by the inſtances that have been produced of its doing ſervice in nephritic complaints, it ſeems to merit a fair trial. The freſh leaves are by ſome recommended as a dreſſing for old ulcers, and for burns and luxations. They are alſo applied by the good women to the ſoles of the feet, as a remedy in hyſteric complaints.

The ſection of a *burdock* root, viewed with a microſcope, has the appearance repreſented in Tab. of Microſcopical objects, Claſs 3.

BARDED, in heraldry, is uſed in ſpeaking of a horſe that is capariſoned. *Corn.* Dict. des Arts. T. 1. p. 96. a. See BARD. He bears ſable, a cavalier d'or, the horſe *barded*, argent.

BARDELLE, in the manege, denotes a ſaddle made in form of a great ſaddle, but only of cloth ſtuffed with ſtraw, and tied tight down with packthread, without either leather, wood, or iron.

BARDELLES are not uſed in France; but in Italy they trot their colts with ſuch ſaddles; and thoſe who ride them are called *cavalcadours*, or *ſcozone*. *Guill.* P. 1. in voc.

BARDS (*Cycl.*) — Cambden makes this word of Britiſh etymon. Rowland admits it; but gives a different explication, deducing the word *bard* from the Welſh *beirrd* of *paradd*, to divide or diſtinguiſh; an extraction ſuitable enough to theſe people, as they were a peculiar claſs or order of druids, diſtinguiſhed from the reſt by their extraordinary talent of memory, which fitted them for recording, and reciting on occaſions, the various poſitions and explications of the whole druid ſyſtem of philoſophy. *Rowl.* Mona. Antiq. P. 1. §. 8. p. 61. See alſo *Skinn.* Etym. in voc. *Voſſ.* Etym. p. 64. a.

The abbreviator of Feſtus was miſtaken, when he ſaid, *Bardus a gente Bardorum, de quibus Lucanus*; ſince Lucan ſpoke of the *bards* as poets, and not as a nation. Meurſius, with all his learning, fell not into a leſs miſtake, Βαρδος, *via*, i. e. a road, ſays he; whence *bardocucullus*, a kind of cloak worn by travellers on the road. He cites Heſychius for his warrant, Βαρδοι οι οδοι παρα Γαλαταις, a paſſage corrupted, where, inſtead of οδοι, roads, it ought to be read ωδοι, ſingers. *Aubert.*. ap. *Richel.* Dict. T. 1. p. 178. c.

Valeſius takes the antient *bards* to have been much the ſame with the minſtrels, mimi, buffoons, morrice-dancers, &c. of later ages. *Valeſ.* ad Ammian. Marcel. l. 15. *Aquin.* Lex. Milit. T. 1. p. 1156.

Others rather compare them to the rhapſodiſts among the Greeks. (See RHAPSODI, *Cycl.*) But they differed much from them all, at leaſt in their regular diſcipline and manner of life. The *bards* made a particular order in the druidical hierarchy, and lived in a kind of community, having their conventual ſeat. Rowland obſerves, there is a townſhip in the iſland of Angleſey, ſtill denominated from them *Tre'r Beirrd*, q. d. *Habitaculum Bardorum*, the ſeat and habitation of the *bards*. *Rowl.* Mon. Antiq. P. 2. p. 245, ſeq.

If this be not concluſive, it is certain, at leaſt, the antient Scots and Iriſh had their *bards*. Dr. Nicholſon [a] aſſures us, there are *bards* ſtill in being in the Highlands. Rowland alſo ſpeaks of a later order of *beirdd* or *prydyddion* in Angleſey, diſtinguiſhed into certain claſſes and orders, as *priv veirdd*, *poſt-veirdd*, *arwydd-veirdd*, &c. ſhaddowing ſomething of the antient inſtitution, and having their reſpective diſciplines, directed by the *talaith*, or province they belong to; but they never lived in ſociety, but diſperſedly here and there [b]. — [[a] Scot. Hiſt. Libr. c. 2. p. 61. *Rowl.* Mon. Antiq. P. 2. p. 250.]

Among the Iriſh they are called *filadha*, which are deſcribed as the ſame with the *ſcalds* or *ſcaldi* of Iceland, and the *bards* of Gaul and Britain.

The genealogical ſonnets of the Iriſh *bards* are ſtill the chief foundations of the antient hiſtory of Ireland. Mr. Flaherty had three of theſe; one written by G. Caeman, whoſe canto begins at the firſt peopling the iſland; the ſecond and third by G. Modude and Conan o Mulconar, who continue Caeman's piece, the one from 428 to 1022, the other to 1014. Vid. *Nicholſon*, Iriſh Hiſt. Libr. Pref. p. 17 & 23.

The *bards* were not only the poets, but the genealogiſts, biographers, and hiſtorians, of thoſe countries and ages. Hence the remains of their ſongs are ſtill to be conſulted by antiquaries and hiſtorians. In theſe, according to a learned biographer, we have exact genealogies of all the Britiſh kings and princes up to Brute, and from thence to Adam. Almoſt all hiſtory, Celtic and Chaldæan, as well as Greek and Roman, had its foundation in poetry. Whether we ſhall find the rules of their proſody to agree with thoſe laid down by captain Middleton in his *bardometh*, or art of Welch poetry, we know not: but how methodically they ordered their *tybwyths* or tribes, Sylas, Taylor, and Rowland have at large informed us. Nor were they content to preſerve the pedigree of their own princes and great men, but were alſo ſo good-natured as to do the like ſervices for the Saxons. Thus we are told, that S. Penlanius, who is ſometimes quoted by the name of Samuel Britannus, and lived about the year 600, was a curious inquirer into the genealogies of many Engliſh families; ſome whereof he carried as high as the flood.

It was cuſtomary to ſing theſe compoſitions in the preſence of their nobles, and at their chief feſtivals and ſolemnities. *Nicholſ.* Engl. Hiſt. Libr. P. 1. c. 3. p. 31.

Among the antient Britiſh *bards*, the moſt celebrated is the great Merlyn, whoſe true name, according to Lhuyd, is *Merdhyn*. He was ſo mighty a man in his time, that our writers have thought it convenient to ſplit him into three: the firſt of theſe they call *Merlinus Ambroſius*, or *Merdhyn Emrys*, who lived about the year 480, and wrote ſeveral prophetical odes, turned into Latin proſe by *Geoffry of Monmouth*: the next is *Merlinus Caledonius*, who lived A. D. 570, wrote upon the ſame ſubject with the former, and had the ſame tranſlator: the third is ſurnamed *Avalonius*, who lived under king Malgocunus. But all this is ſtuff, and he is manifeſtly the ſame man, or nothing.

BARE, (*Cycl.*) in a general ſenſe, ſignifies not covered. Hence we ſay bareheaded, barefooted, &c.

The Roman women, in times of public diſtreſs and mourning, went *bareheaded*, with their hair looſe. *Struv.* Synt. Antiq. Rom. c. 2. p. 200 & 203.

Among both Greeks, Romans, and Barbarians, we find a feaſt called *nudipedalia*, at which perſons were to attend barefooted. *Pitiſc.* L. Ant. T. 2. p. 282. a. in voc. *Nudipedalia*.

The Abyſſinians never enter their churches but *bare-footed*; not on account of Moſes, who was commanded to put off his ſhoes on mount Sinai, but in reverence of the place; as is alſo done by them in entering the palaces of kings and great men. *Fabric.* Lux. Evang. c. 45. p. 731.

Sagittarius has a diſſertation expreſs on thoſe who went barefooted among the antients, *de nudepedalibus veterum*; wherein he treats of ſuch as went barefooted in journies or otherwiſe, either out of choice, or neceſſity: alſo of barefooted religious, of mourners and penitents, who went barefooted; and laſt of the leviri. Vid. *Fabric.* Bibl. Antiq. c. 18. §. 10. p. 559.

BARE, in reſpect of manufacture. A cloth is ſaid to be *bare* or naked, when the nap is too ſhort, as having been ſhorn too near, or not being ſufficiently covered with wool by the teazel. *Savar.* Dict. Com. p. 1683.

BARE is alſo uſed for a ſort of bowling ground, not covered with green ſwarth.

BARE-*foot Carmelites*, and *Auguſtines*, are religious of the order of St. Carmel and St. Auſtin, who live under a ſtrict obſervance, and go without ſhoes, like the capuchins.

There are alſo *barefoot* fathers of mercy. Formerly there were *barefoot* dominicans, and even *barefoot* nuns of the order of St. Auguſtin. Dict. de Trev. T. 2. p. 685.

BARGAIN, a contract either for the ſale, purchaſe, or exchange of a thing. See CONTRACT.

The word is formed from the French *barguigner*, to barter, or haggle. *Caſeneuv.* Orig. p. 20. in voc. *barguigner*. *Du Cange*, Gloſſ. Lat. T. 1. p. 479. *Skin.* Etym. in voc.

He that ſells is the *bargainor*, and he that buys the *bargainee*.

BARGAIN *and Sale*, in law, is properly a contract made of manors, lands, and other things, transferring the property thereof from the bargainor to the bargainee, for a conſideration in money.

It is a good contract for land, and the fee paſſes, tho' it be not ſaid in the deed, to have and to hold to him and his heirs, and tho' there be no livery and ſeiſin given by the vendor, ſo it be by deed indented, ſealed, and inrolled, either in the county where the land lies, or in one of the king's courts of record at Weſtminſter, within ſix months after the date of the deed. *Blount.*

This manner of conveying lands was created and eſtabliſhed by the 27 Hen. VIII. cap. 10. which executes all uſes raiſed; and as this introduced a more ſecret way of conveying than was known to the policy of the common law, therefore the inrolment of the deed of *bargain* and ſale was made neceſſary by the 16th chapter of that ſtatute. See the New Abridgment of the Law, Tit. *Bargain and Sale*.

BARGAINS, *in Commerce*, are of divers kinds: — *verbal*, thoſe made only by word of mouth, and giving earneſt; — *written*, thoſe where the terms are entered in form on paper, &c.

At Amſterdam they diſtinguiſh three kinds of *bargains*.

Conditional BARGAINS, for goods which the ſeller has not yet in his poſſeſſion; but which he knows have been bought for him by his correſpondents abroad, and which he obliges himſelf to deliver to the buyer, on their arrival, at the price and the conditions agreed on.

Firm BARGAIN, that wherein the ſeller obliges himſelf to deliver the buyer a certain quantity of goods, at the price and in the time agreed on.

BARGAINS *at Option*, thoſe wherein a dealer obliges himſelf, in conſideration of a premium received in hand, either to deliver or take a certain quantity of goods at a fixed price, and within a time limited; but with a liberty, nevertheleſs, of not delivering, or not receiving them, if they think proper, upon forfeiture of their premium. *Ricard*, Traité du Negoce, p. 54. *Savar.* Dict. Com. T. 2. p 660, ſeq. in voc. *Marché.*

Forehand BARGAINS, are thoſe wherein goods are bought or ſold, in order to be delivered at a certain time afterwards, ſome part of the price being advanced. *Malc.* Treat. of Book-keep. p. 47.

BARGE (*Cycl.*)—A *barge* differs from a bark, as being ſmaller, and only uſed on rivers; whereas the latter goes out to ſea.

There are alſo *barges* belonging to men of war, ſerving to carry generals, admirals, and chief commanders.

Theſe are generally finely built, and decorated with various ornaments, having bales and tilts, and ſeats furniſhed with cuſhions, and carpets, *&c.* and banks for many oars.

The name *barge* is alſo given to great flat-bottomed veſſels, employed in navigable rivers in carrying of goods. *Guill.* Gent. Dict P. 3. in voc.

BARGE-*Courſe* is uſed by workmen, to ſignify a part of the tiling, which projects over the principal rafters in all theſe buildings, where there is either a *gable*, or a *kirkenhead.* Dict. Ruſt.

BARGE, in zoology, a name uſed by ſome authors for the godwit, or, as it is called in ſome places, the ſtone-plover, the ægocephalus of authors. See ÆGOCEPHALUS.

BARGH, is uſed in ſome places of England for a ſteep horſe way up a hill. *Ray*'s Engl. Words, p. 5.

It ſeems to come from the German *bargh*, a hill.

BARGH-MASTER, BARMER, or BAR-MASTER, in the royal mines, the ſteward or judge of the barmote. *Pett.* Fodin. Regal. in fine. See BARGHMOTE.

The word is formed of the German *berg-meiſter*, q. d. maſter of the mines.

The *barmaſter* is to keep two great courts of barmote yearly, and every week a ſmall one, as occaſion requires. *Pett.* l. c. p. 98.

BARGHMOTE, or BARMOTE, a court which takes cognizance of cauſes and diſputes between miners. *Pett.* Fodin. Regal. in fine.

Some ſuppoſe it thus called from a *bar*, at which the ſuitors appear; others, with more probability, derive the word from the German *berg*, a mine. *Skinn.* Etym. in voc. *Forens.*

By the cuſtom of the mines, no perſon is to ſue any miner for ore-debt, or for ore, or for any ground in variance, but only in the court of *barmote*, on penalty of forfeiting the debt, and paying the charges at law. *Pett.* l. c. p. 97.

BARILLARIUS, an antient officer in monaſteries and great houſholds, who had the care of the casks and veſſels of wine, *&c.* in the cellars. *Du Cange*, Gloſſ. Lat. T. 1. p. 484.

BARILLIA, in the glaſs trade, a ſort of potaſhes imported from Spain, inferior in goodneſs to that of the Levant, called *polverine* when looſe, ſmall, and in powder, and *rochetta* when in hard, rocky lumps. *Neri*, Art of Glaſs, p. 27.

The fritt made of theſe makes fine and clear cryſtal glaſs, eſpecially that from the rochetta, or the polverine in lumps; but the *barillia* of Spain, tho' it be uſually fatter, yet makes not a glaſs ſo white, but uſually inclining a little to a bluiſh colour.

BARING *of Trees*, in agriculture, the taking away ſome of the earth over the roots, that the winter rain and ſnow-water may penetrate farther into the roots. Dict. Ruſt. in voc.

This amounts to the ſame with what among the antient writers on husbandry is denominated *ablaqueation.* See ABLAQUEATION, *Cycl.* and *Suppl.*

BARK (*Cycl.*)—The *bark* of plants is twofold, the outer, *liber*; and the inner, *alburnus.* The outer *bark* is dry, and in ſome trees rough. The inner is probably a ſuperadded new coat of that year's growth, between the woody and barky nature. *Tong.* in Philoſ. Tranſ. N° 43. p. 857.

The *bark* of the trunk conſiſts of a skin, a cortical body or parenchyma, and ſome fibres of the woody part intermixed. The skin is the production of the cuticle in the ſeed, and the cortical body, an augmentation of the parenchyma of the plume. *Grew*, Anat of Plants, B. 1. c. 3. §. 2, ſeq.

The skin is originally compoſed of ſmall veſicles or bladders cluſtered together, which, as the plant grows, dry up, and diſappear. The body of the *bark* conſiſts of parenchyma and veſſels; the former compoſed, like the skin, of cluſters of bladders: the veſſels are of divers kinds, roriferous, lymphæducts, and reſiniferous. *Grew*, lib. cit. B. 3. c. 2. §. 2.

The *bark* of roots is ſometimes yellow, as in dock; ſometimes red, as in biſtort; but oftenеſt white. It is derived from the ſeed itſelf, being only the extenſion of the parenchyma of the radicle. It is variouſly ſized, being ſometimes very thin, as in the Jeruſalem artichoke, and in moſt trees. Sometimes it is thicker, and makes the greater part of the ſubſtance of the root, as in aſparagus and dandelion. In beet-root, the *bark* ſcarce exceeds a good thick skin; whereas in a carrot, it is half the ſemidiameter of the root, being in ſome places above an inch over. This too is found common to the generality of roots, that their *barks* are proportionably thicker at bottom than at top. Vid. *Grew*, B. 1. c. 2. p. 11. Item, B. 2. c. 3. §. 1, ſeq.

The inner part of the *bark*, we have obſerved, annually lignifies, or turns to wood: the *bark* of a tree is found each year to divide and diſtribute itſelf two contrary ways: the outer part gives towards the skin, till it become skin itſelf, and at length falls off, like the ſcales or dandriff of our body, or the exuviæ of ſerpents; while the inmoſt portion is yearly diſtributed and added to the wood. *Grew*, lib. cit. B. 3. c. 3. §. 11.

The *bark* is found truly continuous to the body of a tree, as the skin of our body is to the fleſh; contrary to the common opinion, which imports, that the *bark* only ſurrounds the tree, as a ſcabbard does a ſword, or a glove the hand; which ſeems confirmed by the eaſy ſlipping of the *bark* of willow, and moſt other trees, when full of ſap, from the wood. Their continuity is effected by means of the parenchyma, which is one entire body, running from the *bark* into the wood, and thus uniting both together. The reaſon why the *bark* ſlips ſo eaſily from the wood, is, that moſt of the parenchymous parts are young veſſels, formed every year ſucceſſively between the wood and the *bark*, and are much in the condition of the tender veſſels or fibres of the embryos in a womb, or egg; a thouſand of which are broke with the ſmalleſt force. *Grew*, lib. cit. B. 3. c. 3. §. 1, ſeq.

That trees only live by the aſcent of the ſap in or between the *bark* and the wood, and that if a circle be drawn round any tree (except, perhaps, aſh) by inciſion to the timber, how thin ſoever the knife be, provided no part of the thickneſs of the *bark* remain uncut, the tree will die from that part upwards, has been the ſtanding doctrine of naturaliſts of all ages, and is delivered for fact by Pliny [a], and others [b]. Dr. Plott aſſerts this to be a popular error, from the inſtance of a large old elm in Magdalene College grove, quite diſbarked around, at moſt places two feet, at ſome four feet, from the ground, which yet grew and flouriſhed many years, as well as any tree in the grove. What is more, it was without all pith, being hollow within as a drum: and the ſame is confirmed from the hiſtory of the elm in the Thuilleries, related by M. Parent, which lived, and put out leaves, tho' entirely ſtripped of *bark* from top to bottom [c]. Add, that the plane and cork-trees diveſt themſelves yearly of all their old *bark*, and acquire a new one, as ſnakes do their skins: and in the change from one to the other, it is evidently not by the *bark* that they are nouriſhed. Some infer from hence, that the *bark* never feeds the wood. Dr. Plott is more reſerved in his concluſion, arguing only, that hence it ſeems to follow, that there muſt be other veſſels, beſides the ſap-veſſels of the *bark*, capable of the office of conveying ſap. It is probable, when the ordinary conveyance fails, ſome of the woody part, which had all once been ſap-veſſels, reſumes its antient office; or, as the author laſt-mentioned conjectures, they ſtill ſo far retain their office of conveying ſap, as to keep a tree alive, tho' not augment it; which may, perhaps, be one different uſe of thoſe ſap-veſſels in the wood from thoſe in the *bark*, the former being ſufficient for the continuation of a tree, and the latter ſerving only for its augmentation [d].—[[a] Hiſt. Nat. l. 17. c. 24. *Calv.* Lex. Jur. p. 182. a. [a] *Tong.* in Philoſ. Tranſ. N°. 43. p. 859. *Reneaume*, in Hiſt. Acad. Scienc. ann. 1707. p. 564. It. ann. 1711. p. 57, ſeq. [c] Vid. Hiſt. Acad Scienc. ann. 1709. p. 63. It. ann. 1711. p. 55, ſeq. [d] *Plott*, Nat. Hiſt. Oxford. c. 6. §. 65, ſeq.

Mr. Brotherton has given ſome new experiments, which ſeem to decide the controverſy, and ſhew, that the *bark* is not the vehicle of vegetation: he hacked a crab-tree round with a hatchet, ſo as, beſides cutting off the *bark*, to cut pretty deep into the wood, about four inches width; yet the ſame year it was obſerved to increaſe very conſiderably in thickneſs above the ſaid hacking, and to ſhoot in length of wood about one foot: the next year it alſo grew conſiderably, and ſhot in length five inches: the third year it died to the very root. The like was found in another tree, part of whoſe *bark* was eat off by the canker: the lower part ſtood without increaſe, and by degrees the wood rotted: the upper part increaſed to the third year, and then died alſo. Phil. Tranſ. N°. 187. p. 307.

The ſame author found, that, in the branches of Scotch fir, the joints above the rings *barked*, would grow much bigger in three years, than in five if the rings were not cut off. A ring of *bark* three inches broad being cut off a Scotch fir, near the bottom of the ſtem, below the uppermoſt knot or joint, was found to grow and ſhoot out at its top half a yard, and all the parts about the ring to increaſe in thickneſs the ſame year, much more than they would have done, had not the ſection been made; but all the part of the ſtem between the ring and the next knot below it, grew not at all: the part below the ring next under that, increaſed ſomewhat, tho' leſs than it would have done, if the *bark* had not been cut off. The ſecond year the increaſe was alſo conſiderable; but the third it died. Philoſ. Tranſ. ibid. p. 307, ſeq.

M. Magnol mentions an olive-tree, from which a circular ring of *bark* being cut away, the tree that year bore, above the place of inciſion, double the quantity of flowers and fruit which it uſed to bear. Mr. Reneaume relates a fact near akin

to

to this. In the country about Aix and Marſeilles, when an olive-tree grows old, and almoſt ready for felling, they have a method of making it firſt yield all the fruit which it is capable of producing, by cutting a circular ring of *bark*, an inch broad, from one of its young branches, and in its place putting an equal ring of *bark* taken from the branch of a young bearing olive-tree; the effect of this engraftment is, that the branches of the old tree bear plentifully the enſuing year, and thoſe of the young one die away. Hiſt. Acad. Scienc. ann. 1711. p. 60.

From the whole, Mr. Brotherton concludes, that the ſap, moſt of it, if not all, aſcends in the veſſels of the woody part, and not by the *bark*, nor between the *bark* and the wood. Philoſ. Tranſ. N°. 187. p. 312.

M. Leuwenhoek, on the other hand, has given ſeveral experiments and obſervations with the microſcope to ſhew, that the *bark* of trees is produced from the wood, not the wood from the *bark*. In reality, if the origin and nouriſhment of the *bark* came from the root, it would ſeem to follow, that the parts of the *bark* near the roots ſhould be found larger, and ramified into ſmaller and ſmaller, as they run higher, as the arteries and nerves are the farther they go from the heart and brain; whereas there is no difference between the *bark* of the root and trunk. Beſides, the veſſels of the *bark* of ſeveral trees, as the birch, cherry, peach, &c. run not upwards as they do in the aſh, oak, elm, nut, apple, pear, &c. but circularly round the ſuperficies of the tree; and all *bark*, whoſe veſſels run upwards, grows thicker as the tree increaſes, the outſide cracking, grows dead, and ſticks to the young *bark* underneath, which is the only living part of the *bark*. The contrary is evident in thoſe *barks*, the veſſels of which run round the tree; for as the tree increaſes, the veſſels not being able to ſtretch or ſeparate from each other, muſt neceſſarily break aſunder; ſo that the old *bark* is eaſily ſeparated and falls off from the new. Hence it is, that ſuch trees have always a very thin *bark*, as is moſt evident in the birch-tree. Phil. Tranſ. N°. 202. p. 840, ſeq.

Yet M. de Reneaume defended the antient ſyſtem of the uſe of the *bark*, and ſhews, that moſt of the inſtances above alleged, are conſiſtent therewith. The parts of a tree ſeparated from their whole, he obſerves, may carry with them a ſtock of nutritious juice, whereby they vegetate: thus the branches of elder, willow, &c. being cut off, do nevertheleſs produce leaves and young branches, even without ſetting them in the ground; and pieces of ſeemingly dry wood have been ſometimes known to do the like. How much more then may branches, which ſtill grow on the tree, and which of conſequence can never be ſo entirely defrauded of new ſap, continue to vegetate? For tho' none be ſuppoſed to riſe by the *bark*, which is entirely cut away, and which was the part that before furniſhed the greateſt quantity, they may ſtill receive ſome by the woody part, and more eſpecially by the *alburnum*, or inner rind, which is the ſofteſt part, as well as the neweſt, and that likeſt *bark*. Thus we may ſuppoſe it to have been, that the elm in the Thuilleries continued to grow without *bark* a whole ſummer, by virtue of the ſtock of juice it had already imbibed. For the olive-tree mentioned by M. Magnol, it was the better enabled to ſubſiſt without *bark*, as it is of an oily nature, and that even its wood is ſaturated with that juice, which, it is known, will keep long, and ſpends itſelf ſlowly. The reaſon of its increaſed fertility ſeems to be, that the canals of the young *bark* grafted on it, being more free and patent than thoſe of old ones, perform their filtrations better. As to the elm of Luxembourg, cited by the ſame M. Parent, whoſe upper parts appeared ſtripped of all their *bark* almoſt to the ground; upon a nearer examination, it was found to have fibres of the inner *bark* or *liber* ſtill remaining, which had a communication with the *bark* which communicated with the branches; and 'tis probable, by theſe fibres, that the upper branches of the tree were ſtill fed: theſe fibres, by length of time, and the plenty of juices they had tranſmitted, were hardened, and began to form a new ligneous ſubſtance. Other younger fibres of the ſame *liber*, and which had probably been formed ſince the baring of the tree, began to conſtitute a new *alburnum*, which began likewiſe to be covered with a new *bark* or skin. From this inſtance, M. Reneaume concludes, that it is of the *bark* the *alburnum* is formed; and as the *alburnum* is the wood laſt formed, the whole wood is, of conſequence, formed of the *bark* or *liber*. The manner of this converſion is deſcribed by him. While the *alburnum* retains any degree of its ſoftneſs, and ſtill partakes of its *barky* nature, it may preſerve the vegetation for ſome time; but when it is become abſolutely wood, it can no longer contribute thereto. The growth of the young branches is moſt quick, and the only that reaches to the flowers and the fruit, as being little other than *bark* itſelf. Hiſt. Acad. Scienc. ann. 1711. p. 57, ſeq.

It ſeems now certain, from the experiments of M. Buſon, that trees ſtripped of their *bark* the whole length of their ſtems, die in about three or four years.

But it is very remarkable, that trees thus ſtripped in the time of the ſap, and ſuffered to die, afford timber heavier, more uniformly denſe, ſtronger, and fitter for ſervice, than if the tree had been cut down in its healthy ſtate. Something of a like nature has been obſerved by Vitruvius and Evelyn. Vid. Mem. Acad. Scienc. 1738.

The *bark* of trees is ſaid never to be found petrified; but ſomething has been found about petrified wood, anſwering to *bark*. Vid. Phil. Tranſ. N°. 481. p. 309.

As animals are furniſhed with a panniculus adipoſus, uſually replete with fat, which inveſts and covers all the fleſhy parts, and ſcreens them from external cold; plants are encompaſſed with a *bark* replete with fatty juices, by means whereof the cold is kept out, and, in winter time, the ſpiculæ of ice prevented from fixing and freezing the juices in the veſſels: whence it is, that ſome ſort of trees remain ever-green the year round; by reaſon their *barks* contain more oil than can be ſpent and exhaled by the ſun, &c. Vid. *Ray*, Wiſd. of God, P. 1. p. 103.

Boerhaave mentions eight different ſpecies of juices lodged in the *bark*, viz, the watry ſap or chyle, an oil, balm, pitch, reſin, colophony, gum, and gummous roſin. *Boerh.* New Meth. Chem. P. 2. p. 159, ſeq.

The *bark* has its peculiar diſeaſes, and is infected with inſects peculiar to it [e]. Moſs is a diſeaſe of the *bark* [f]. Wounds of the *bark* often prove mortal [g].—[[e] Vid. Phil. Tranſ. N°. 296. p. 1859. *Bradl.* New Exper. Garden. P. 3. p. 59. [f] Vid. Hiſt. Acad. Scienc. ann. 1716. p. 38. [g] Mem. Acad. Scienc. ann. 1707 p. 367.]

Of the *bark* of willows and linden-trees is ordinarily made a kind of ropes. In reality, flax and hemp, with all their toughneſs, are only the ſap-veſſels, or ligneous fibres of the *bark* of thoſe plants. *Grew*, Anat. Veget. l. 3. c. 7. §. 12. See alſo *Plott*. Nat. Hiſt. Oxfordſh. c. 9. §. 119. p. 67.

The Siameſe having no hemp, make their cordage of the *bark* or rind of the coco-tree; and moſt of the Aſiatic, as well as African and Armenian nations are ſaid to do the ſame [h]. In the Caribbees, others make uſe of the *mahot*, which yields either ropes or packthread equal to hemp [i].—[[h] *Aubin.* Dict. Marin. p. 127. [i] *Savar.* Dict. Comm. Supp. p. 1249.]

BARK alſo makes a good manure, eſpecially that of oak, which is rich in ſalt; but the better ſort is reſerved for tanning. Ruſt. Dict. in voc.

Some ſpeak of *ſhining barks* of certain trees growing in Jamaica. *Ray*, Phil. Let. p. 210.

Naturaliſts ſpeak of a ſea-plant, which is a *bark* or rind, and nothing elſe, ordinarily faſtened to *lithophyta*, which have loſt their natural *bark*, either in whole or in part. It only covers naked parts: ſometimes alſo it is found to inveſt ſtones. It is of the ſubſtance of a muſhroom; its colour a lively red; its ſurface beſet with a number of bliſters full of a glutinous juice, and ſurrounded with tubules of an aurora-colour: the inner ſurface is quite ſmooth, and fits itſelf to the form of the body it grows on. It is a kind of ſea *paraſite*, but more wonderful than any of thoſe found on land plants. *Marſigli*, in Hiſt. Acad. Scienc. 1710. p. 95.

BARK is frequently uſed ſimply and abſolutely for *quinaquina*, *quinquina*, or the *cortex peruvianus*, called alſo *Jeſuits bark*. See QUINQUINA, *Cycl.* and PERUVIAN *bark*, *Suppl.*

Indian BARK, *Thuris cortex*, a medicinal *bark* brought from the Eaſt, rolled up like cinnamon, of a ruſty colour, a warm aromatic, bitter taſte, and pleaſant ſmell; ſometimes uſed in fumigation againſt fits of the mother. *Alleyn*, Diſpenſ. p. 136.

BARK, in ſhip-building. Aubin ſays, this is a veſſel with one deck and three maſts. The largeſt ſcarce exceeds 100 ton. *Aubin*, Dict. Marin. p. 67.

The Spaniards have a kind of *bark* almoſt peculiar to themſelves, which carries a huge ſail, and for that reaſon requires a heavy ballaſt—It is a fine ſailer; but requires great attention and dexterity to manage it. See its figure and deſcription in *Aubin*, Dict. Marin. p. 67.

Long BARK, is a ſmall veſſel without deck, longer and lower than the common *barks*, being ſharp afore, and commonly going both with ſails and oars. It is built after the manner of a ſloop, and in many places is called a double ſloop. *Aubin*, Dict. Mar. p. 67, ſeq.

Armed BARK, a kind of fire-ſhip filled with ſoldiers, uſed both for making ſallies, and to attack galleries, and bar the paſſage over them. *Fæſch.* Ingen. Lex. p. 69. a.

Water BARKS, are little veſſels uſed in Holland for the carriage of freſh-water to places where it is wanting, as well as for the fetching ſea-water to make ſalt of. They have a deck, and are filled with water up to the deck. *Aubin*, Dict. Marin. p. 68.

BARKARY denotes a tan-houſe, or place to keep *bark* in, eſpecially for tanners. Dict. Ruſt.

It is otherwiſe called a *heath-houſe* in old writers. *Cowel.*

BARKING *of trees* (*Cycl.*)—By the French laws, all dealers are forbid to *bark* their wood while growing, on the penalty of 500 livres. *Savari*, Dict. Comm. p. 1847. in voc. *Eſcorcer*.

This law was the reſult of ignorance; it being now found, that *barking* of trees, and letting them die, increaſes the force of timber. Vid. ſupra, in the article BARK.

BARKING is alſo a name given to the cry of dogs and foxes. Gent. Recr. P. 1. p. 10.

The term is alſo applied to certain quaint noiſes made by ſick perſons in ſome diſeaſes.

In cynic ſpaſms, and epileptic fits, the patient ſometimes ſnarls, howls, and *barks*, in all the notes of a dog [k]. But it

is in the hydrophobia that *barking* has been oftenest obſerved: perſons ſeized with this, are apt to rave, bite, ſnarl, and make a harſh noiſe in their throats, which is called *barking* [1].—[[k] V. Phil. Tranſ. N°. 280. p. 1173. [1] Vid. Phil. Tranſ. N°. 323. p. 436. It. N°. 207. p. 25. It. N°. 242. p. 247.]

BARLAAMITES, in church hiſtory, the followers of a Calabrian monk, afterwards biſhop of Emont, the great opponent of Greg. Palama and the Heſychaſtæ. Vid. *Fabric.* Bibl. Græc. l. 5. c. 43. §. 22.

The *Barlaamites* are the ſame with thoſe otherwiſe denominated *Acindynites*.

BARLERIA, in botany, the name of a genus of plants, the characters of which are theſe: The perianthium conſiſts of one leaf divided into five ſegments, and remains after the flower is fallen: the flower is one-leaved, and of the labiated kind: its tube is of the length of the cup; its mouth oblong, and inflated: the upper lip erect, emarginated, and obtuſe: the lower lip is divided into three ſegments, the middle one of which is of the length and figure of the upper lip, and the two ſide ones are ſmaller, and obtuſe. The ſtamina are four ſlender filaments, which are lodged under the upper lip of the flower, and are of the ſame ſhape with it: the antheræ are erect: the germen of the piſtil is ſmall, and oval: the ſtyle is ſimple and ſhort; and the ſtigma obtuſe. The fruit is an oval capſule, formed of two valves, containing two cells, and opening at the bottom, when ripe. The ſeeds are oval, and ſingle. *Linnæi* Gen. Pl. p. 289. *Plumier*, Gen. 31.

BARLEY, in botany, a gramineous, frumentaceous herb, whoſe ſeeds are of the larger ſort, being covered with a huſk, growing in a ſpike, and the grains bearded.

Barley, through neglect and poverty, is ſaid to degenerate into oats and darnel. Dr. Plott ſpeaks of *barley* and rye growing in the ſame ear alternately. *Plott*, Nat. Hiſt. Stafford. c. 9. §. 34.

Iſis is ſaid to have firſt diſcovered the culture and uſe of *barley* in Egypt. *Diod. Sic.* l. 1. p. 13. *Reimm.* Id. Antiq. Egypt. §. 25. p. 54.

The Greeks had a ſpecies of magic, or incantation, performed with *barley*, called κριθαριζειν, or κριθοφορειν. *Du Cange*, Gloſſ. Græc. T. 1. p. 724, ſeq.

The principal uſe of *barley* among us is for making beer, in order to which it is firſt malted.

The Spaniards, among whom malt liquors are little known, feed their horſes with their *barley*, as we do with oats. Trev. Dict. Univ. T. 1. p. 353.

Barley has alſo its medicinal virtues, in which it reſembles oats. *Junck.* Conſp. Therap. tab. 9. p. 276.

Pearl BARLEY, and *French* BARLEY, are both of the ſame kind, tho' differing ſomewhat in whiteneſs and ſize of the grain, and are thoſe chiefly uſed in phyſic.

Plott ſpeaks of ratheripe *barley*, *hordeum diſtichum præcox*, produced in Wiltſhire and Cornwall, which is ſometimes ſown and returned again to the barn in two months time. *Plott*, Nat. Hiſt. Oxford. c. 6. §. 29. *Hought.* Collect. N. 296. T. 2. p. 274, ſeq.

Whole BARLEY is that where the grain ſtill remains covered with its huſk.

Hulled BARLEY, called by the Greeks γυμνοκριθον, by the Latins *hordeum mundatum*, is that where the huſk is ſtripped off, to be uſed in the making of ptiſans; in order to which it is boiled a due time in water, then ſtrained, and ſuggar added.—Some call this *cremor ptiſanæ*. Trev. Dict. Univ. T. 4. p. 353.

The antients ſpeak of a bare *barley*, γυμνοκριθον, or *hordeum nudum*, growing naturally in Cappadocia [a]. Some take it for the ſame with our *hulled barley*, or *hordeum mundatum* [b], but without neceſſity: ſince modern naturaliſts are not without inſtances of natural *barley* without huſks. Plott mentions one in Staffordſhire, called there *French barley*, from the reſemblance of its ear to the *barley* of that denomination; but it grew like wheat, uncovered by any huſk. Botaniſts conſider it as a kind of medium between *barley* and wheat, and call it *tritico ſpeltum*, or *zeopyrum*. It makes indifferently either bread or beer [c].—[[a] *Oribaſ.* Collect. Med. l. 1. c. 1. [b] *Caſt.* Lex. Med. p. 376. a. *Plott*, Nat. Hiſt. Stafford. c. 6. §. 14.]

BARLEY *Water* is a decoction of either of theſe, reputed ſoft and lubricating, of frequent uſe in phyſic.

This well-known decoction is a very uſeful drink in many diſorders; and is recommended, with nitre, by ſome authors of reputation, in ſlow fevers.

There is a diſſertation of Hoffman's *de cura avenacea*.

BARLEY *Corn* is uſed to denote a long meaſure, containing in length the third part of an inch, and in breadth the eighth. *Holder.* Diſc. of Time, c. 1. p. 7.

The French carpenters alſo uſe *barley corn*, *grain d'orge*, as equivalent to the line, or the twelfth part of an inch. *Aubert*, apud *Richel.* Dict. T. 1. p. 777. in voc. *Grain d'orge*.

BARLEY *Corn*, *grain d'orge*, is alſo uſed, in building, for a little cavity between the mouldings of joiners work, ſerving to ſeparate or keep them aſunder; thus called becauſe made with a kind of plane of the ſame name. *Daviler*, Archit. P. 2. p. 630.

BARMINE, denotes ſuch mine or ore, as is adjudged at a court of barmote. See BARMOTE.

BARNACLE (*Cycl.*)— *Barnacle* is alſo a name given to a kind of ſhell-fiſh, which is found cleaving to the bottoms and ſides of ſhips in certain ſeas; ſometimes alſo to the fins and tails of whales, and the like.

In this ſenſe, *barnacle* is the ſame with what is called by ſailors *clam*; by naturaliſts, *concha anatifera*.

There are divers ſpecies of ſhell-fiſhes included under the denomination *barnacles*: ſome reduce them to two, *viz.* the *balanus* and *pinna marina*. Hiſt. Acad. Scienc. ann. 1724.

BARNACLES, in farriery, are alſo called *horſe twichers*, or *brakes*.

Barnacles differ from pinchers, as the latter have handles whereby to hold them; whereas the former are faſtened to the noſe with a lace or cord.

There is another meaner ſort of *barnacles*, uſed in defect of the former, called *roller barnacles*, or *wood twitchers*, which are only two rollers of wood bound together, with the horſe's noſe between them. Dict. Ruſt. in voc.

BARNFIARD, in zoology, the name of a bird uſually ſeen at ſea, and looked on as a foreteller of bad weather. It is about the ſize of a ſparrow: its neck and back are black, and its breaſt and belly grey; its feet are red, and its bill black, and ſomewhat broad. It ſkims very nimbly along the ſurface of the water. *Ray*'s Ornithol. p. 306.

BAROMETRICAL *Obſervations* make a branch or ſpecies of theſe called meteorological obſervations.

Modern philoſophers ſpeak much of the uſefulneſs, the advantages of *barometrical* obſervations. Dr. Wallis, Dr. Beal, Cruquius, de la Hire, and others, have publiſhed collections of *barometrical* obſervations, made at Oxford, Leyden, Delft, Paris, Zurich, in China, &c. Vid. Phil. Tranſ. N°. 55. p. 1113. It. N°. 249. p. 45. It. N°. 256. p. 323. It. N° 381. p. 4. Hiſt. Acad. Scienc. ann. 1699. p. 22. and in the ſubſequent volumes yearly. Mem. ann. 1705. p. 288, 322, 296, 300. Id. ann. 1724. p. 5.

Dr. Jurin has publiſhed an invitatory paper for making *barometrical* obſervations by joint conſent. Phil. Tranſ. N°. 379. p. 423.

BAROPTIS, or BAROPTINUS LAPIS, a name given by the antient naturaliſts to a ſpecies of ſtone, ſuppoſed to have wonderful virtues againſt venomous bites, externally applied. Pliny has left us but a very ſhort deſcription of it: he ſays, it was black in colour, but variegated with large ſpots of red and white.

BARQUETTE, or BARCHETTA, in the Mediterranean, denotes a leſſer ſort of barks, uſed for the ſervice of gallies, much as boats and ſhallops are for other ſhips, as to fetch proviſions, water, carry perſons aſhore, and the like. *Fæſch.* Ing. Lex. p. 68. a.

BARR, BARRA, or BARRO, in commerce, denotes a Portugueſe long meaſure, uſed in the menſuration of cloths, ſtuffs, and the like, ſix whereof are equivalent to ten *cavidos* or *cabidos*; each cavido equal to $\frac{4}{7}$ of a Paris ell.

The Spaniſh BARRA is the ſame with the yard of Seville.

BARR *of Valentia* is equal to $\frac{10}{13}$ of the Paris ell.

BARR *of Caſtile* is equal to $\frac{5}{7}$ of the Paris ell.

BARR *of Arragon* is equal $\frac{2}{3}$ of the Paris ell. *Savar.* Dict. Com. p. 273.

BARR is alſo uſed by the Portugueſe in the Eaſt Indies for a weight, more frequently called *bahar*. *Savar.* ib. p. 274. See BAHAR.

BARR-*Dice*, a ſpecies of falſe dice, ſo formed, as that they will not eaſily lie on certain ſides, or turn up certain points.

Barr-dice ſtand oppoſed to flat dice, which come up on certain points oftner than they ſhould do. Myſt. of Mod. Gam. p. 32.

BARRACOL, in ichthyology, a name given by Artedi, from the Venetians, to expreſs the ſpecies of ray-fiſh, called by Bellonius and Geſner *miraletus*, and by others *Raya oculata lævis*. The ſpecific name of Artedi carries in it a much better character of the fiſh; he call it the *ray*, with ſmooth back and belly, and with the eyes ſurrounded with a ſeries of ſpines, and three other rows of them on the tail.

BARRAGAN, or BARRACAN, in commerce, a kind of ſtuff belonging to the claſs of camblets, only of a grain much coarſer than the reſt, manufactured in divers parts of France and Flanders, chiefly at Abeville, Amiens, Rouen, and Liſle, and now in England.

The word is barbarous Latin, formed, as ſome ſuppoſe, from *barra*, q. d. *barrarum formam referens*. *Du Cange*, Gloſſ. Lat. T. 1. p. 497.

The chief uſe of *barragans*, called alſo by the French *bouracans*, is for ſurtouts, or upper garments againſt the rain, being, when good, of ſo cloſe a grain, that the water will not ſoke thro', but only run upon them.

For the woof, its thread is ſingle, twiſted, and fine ſpun; that of the warp is double or triple, *i. e.* compoſed of two or three threads twiſted well together. The uſual matter it is made of, is wool; tho' there are ſome made at Rouen, where the warp is hemp, and the woof wool. Some *barragans*, again, are made of wool, dyed before it comes to the loom; others are woven white, and dyed afterwards, red, black, blue, brown, &c. They are not fulled, but only boiled two or three times in fair water, when they come from the loom; then calendared

dared to make them ſmooth and even; and laſtly made into rolls, called pieces of *barragan*. *Savar.* Dict. Comm. T. 1. p. 442, ſeq. in voc. *Bouracan.*

BARRATI, *barred*, an appellation given to the Carmelites, after they were obliged to lay aſide the white cap, and wear cowls ſtripped black and white. *Schmid.* Lex. p. 88. *Aubert*, apud *Richel.* p. 181. b.

BARRATRY (*Cycl.*) — *Barratry* of mariners is ſo epidemical on ſhip-board, that it is rare if the maſter, be his induſtry ever ſo great, can prevent it, by reaſon of the encouragement one knaviſh ſailor gives another; yet the law, in ſuch caſes, imputes the offences of the mariners to the negligence of the maſter, and from him the merchant is to ſeek for remedy for all goods or merchandize loſt, embezzled, or otherwiſe damnified. *Molloy*, de Jure Maritim. l. 2. c. 3. §. 13, ſeq.

By the French ordonnances, inſurers are not obliged to make good the loſs or damage accruing to a veſſel, or its lading, by the fault of the maſter or crew, unleſs, by the forms of the policy, they be made accountable for the *barratry* of the patron. A maſter who, without neceſſity, takes up money on the body, proviſion or tackling of a ſhip, or ſells the effects on board, or, in his account of average, ſets down fictitious expences, ſhall pay the value, be declared unworthy of being maſter, and baniſhed the port where he ordinarily reſided. In ſome caſes, he is alſo ſubject to corporal puniſhment, and even to death, where it appears he willingly threw away the ſhip. *Savar.* Dict. Comm. p. 267, ſeq.

BARRATRY is alſo uſed for bribery or corruption in a judge, giving a falſe ſentence for money. *Skene & Cowel*, in voc.

BARRATRY is alſo uſed, in middle-age writers, for fraud or deceit in making of contracts, ſales, or the like. *Du Cange*, Gloſſ. Lat. T. 1. p. 471.

BARREL (*Cycl.*) — *Barrels* are of divers uſes in artillery, as for powder, ſmall-ſhot, flint, ſulphur, ſaltpetre, roſin, pitch, quick-match, and many other things.

Barrels filled with earth, ſerve to make parapets to cover the men, like gabions end canvaſs bags. Milit. Dict.

Fire BARRELS are casks of divers capacities, filled with bombs, grenados, fire-pots, mixed with great quantities of tow ſoaked in petrol, turpentine, pitch, &c. uſed by the beſieged to defend breaches. Theſe are ſometimes alſo called *thundering barrels*, being to be rolled down on the enemy on their entering the breach. *Ozanam*, Dict. Math. p. 538.

BARREL *of a pump* is the wooden tube, which makes the body of the engine, and wherein the piſton moves. *Ozan.* Dict. Math. p. 548.

BARREL *of a muſket*, firelock, piſtol, or the like, is that part wherein the charge or load is put.

BARREL *of a clock* is a cylindrical part, about which the ſtring is wound, anſwering to what in watches is properly called the *fuſy*. *Derham*, Artif. Clock-mak. c. 1. p. 2.

BARREL *of a jack* is the cylindrical part whereon the line is wound. *Moxon*, Mech. Exerc. p. 39.

BARRELLING, the art of putting up certain commodities in casks or barrels.

Gun-powder for the land-ſervice is often *barrelled* double, the barrel it is put in being incloſed in another barrel, partly to prevent the powder catching moiſture in the ſubterraneous places it is kept in, and partly to enable it the better to bear the motion and jolting of carriages, when it is to be conveyed to another place. *Savar.* Supp. p. 782.

BARRELLING *of herring* imports the cutting off their heads, as they are thrown into the buſs, and afterwards pulling out the guts, ſalting them, and putting them up in barrels. *Aubin*, Dict. Marin. p. 170. See alſo *Collins*, Salt and Fiſh. p. 107.

There are two ſorts of *barrelled herring*; one wherein they are laid orderly, layer over layer, called by ſome *packed herring*; — the other wherein they are thrown at random, called herring *in wrack*.

The difference ariſes thus; as faſt as the fiſhermen catch the herrings, they throw them on the deck of the veſſel, where having gutted and ſalted them, they throw them tumultuouſly into the barrel, to be carried home: this is the herring *in wrack*.

When arrived aſhore, they take the fiſh out of theſe barrels, caſt them into a tub, and ſalting them anew, range them handſomely in their barrels again, laying ſalt over them, to preſerve them: this is the *packed herrings*. And in this ſtate it is they are uſually ſold. *Savar.* Dict. Comm. T. 2. p. 974.

BARREN *Ground*, that which being ſowed, produces no crop, or, at moſt, ſo ſlender a crop, that it will not defray the charge of its tillage. Vid. *Ridl.* View of Civ. Law, P. 3. c. 4. §. 4. p. 200.

BARREN *money* is uſed, in the civil law, for that which is not put out to intereſt.

BARRING *a Vein*, an operation performed by farriers on the veins of horſes legs, and of other parts, in order to ſtop the courſe, and leſſen the quantity, of the malignant humours which prevail there.

It is done by opening the ſkin above the part, and, after diſengaging it, and tying it both above and below, ſtriking between the two ligatures.

When horſes have got traverſe mules, or kibed heels, and rat tails, or arreſts in the hinder legs, it is common to *barr a vein*. Farr. Dict. p. 52.

BARRITUS, in antiquity, a military ſhout, raiſed by the Roman ſoldiers at the firſt charge on the enemy. *Kenn.* Rom. Ant Not. P. 2. l. 4. c. 11. *Pitiſc.* Lex Ant. *Voſſ.* Etym. p. 65. a.

BARROW, in the Engliſh topography, denotes a large hillock or mount of earth raiſed or caſt up by art; ſuppoſed to have been one of the Roman *tumuli*, or ſepulchres.

Dr. Plott takes notice of two ſorts of *barrows* in Oxfordſhire; one placed on the military ways, the other in the fields, meadows, woods, &c.

The former were doubtleſs of Roman erection; the latter more probably erected by the Britons or Danes.

Some of theſe *barrows* appear rude and tumultuary, erected only of earth; others are more regular, trenched round; ſome with two or three circumvallations, and ſurmounted with monumental ſtones. *Plott*, Nat. Hiſt. Oxford. c. 10. §. 48, ſeq.

Barrows are conical hillocks, generally ſituated on places of eminence, on, or near the ſummit of downs, and often near the great roads. They are to be met with in ſeveral parts of England: thoſe in Wiltſhire are well known. We have an examination of the *barrows* in Cornwall by Dr. Williams, in the Phil. Tranſ. N°. 458. from whoſe obſervations we find, that theſe *barrows* are compoſed of foreign or adventitious earth, that is, ſuch as does not riſe on the place, but is fetched from ſome diſtance. On digging into the *barrows*, flat ſtones, carefully laid, have been found to cover others underneath, which were found irregularly mixed; and underneath theſe again were found a large number of ſtones artfully placed and contrived, ſo as to form the ſhape of a cone, with their points uppermoſt, and their largeſt parts downwards. Under this heap was found a circle of two feet in diameter, even with the natural ſurface of the country, and paved with ſmall ſtones laid edge-ways, their ſharp point downwards. Theſe ſtones being taken up, a cylindrical pit of two feet broad, and two and an half deep, cut out of the natural ſoil, was obſerved: the ſides of this pit were carefully lined round with flat ſtones; but none were found at the bottom. The ſtones of the heap lying over the pit, ſeemed to have been brought from places at a conſiderable diſtance.

It has been thought, that theſe *barrows* were erected for ſepulchres; and this conjecture ſeems well confirmed by the urn found in one of them. This urn is made of burnt or calcined earth, very hard, and very black in the inſide: it has four ſmall handles, and in it were found ſeven quarts of burnt bones and aſhes.

That it was the antient practice to burn the dead, is well known; and from theſe *barrows* it appears, how the nations, that practiſed this way of burial, expreſſed their regard for the dead. It was by erecting over their aſhes theſe *barrows*, or *tumuli*, compoſed of earth and ſtone brought from diſtant places; and the *barrow* was generally in proportion to the greatneſs, rank, and power of the deceaſed perſon. Each ſoldier or friend might bring ſome of the earth or ſtones from diſtant places where they lived, and thus compoſe the *tumulus*. Many paſſages might be quoted from antient authors to this purpoſe. See Phil. Tranſ. loc. cit.

BARROWS, in the ſalt-works, are caſes made with flat cleft wickers, in the ſhape almoſt of a ſugar-loaf, with the bottom uppermoſt, wherein the ſalt is put, as it corns, and ſet to drain. Vid. Phil. Tranſ. N°. 53. p. 1065. *Hought.* Collect. N°. 211. p. 81.

BARSANIANI, in church hiſtory, a ſect of antient heretics, who held all the errors of the Severians and Theodoſians.

Diviſions ariſing among the Eutichians, or thoſe who rejected the council of Chalcedon, they broke into parties; which took denominations from their leaders: the *Gajanites* from Gajanus; the *Severians* from Severus; the *Theodoſians* and *Themiſtians* from Theodoſius and Themiſtius; from whom ſoon after ſprung the Jacobites and Barſanians.

The *Barſanians* are called by M. Fleury, *Barſanuphiani*. Dict. de Trev. T. 1. p. 888.

BARSE, in ichthyology, an Engliſh name for the common pearch, a well known freſh-water fiſh. It is alſo the name now in uſe for the ſame fiſh in the Saxon language, and is one of the many Saxon words we have yet retained. *Ray*, Ichthyograph. p. 292. See PERCA.

BARTSIA, in botany, the name of a genus of plants, which ſeems of a middle nature between the *euphraſia*, *pedicularis* and *rhinanthus*. The characters are theſe: The perianthium conſiſts of one leaf, and is tubular and permanent: it is bifid at the extremity, and the ſegments are emarginated, and are coloured at the points. The flower conſiſts of one petal, and is of the ringent kind: the upper lip is erect, narrow, undivided, and longer than the cup: the ſtamina are four ſetaceous filaments of the length of the upper lip of the flower; but two of them are ſhorter than the others: the antheræ are oblong, and ſtand cloſe together, under the top of the upper lip of the flower: the germen of the piſtil is oval; the ſtyle is capillary, and longer than the ſtamina; and the ſtigma is obtuſe and nutant: the fruit is an oval capſule, of a compreſſed ſhape, and pointed: it is compoſed of two valves, and divided by a membrane into two cells within: the ſeeds are numerous, and ſmall. *Linnæi* Gener. Plant. p. 283.

BARYPICNI, Βαρυπυκνοι, in the antient muſic, was a name given to ſuch chords, as formed the graveſt notes of the ſeveral

ſyſſa.

ſpiſſa. There were five *barypicni* in the ſcale. See PYCNI and SPISSUM.

BARYTONUM, in the Greek grammar, denotes a verb, which having no accent marked on the laſt ſyllable, a grave accent is to be underſtood. Vid. Nouv. Meth. Græc. l. 2.

In the Italian muſic, *barytono* anſwers to our common pitch of baſs. *Broſs* Dict. Muſ p. 12.

BASALTES (*Cycl.*)—The *baſaltes* is a peculiar ſpecies of black marble, differing from the other kinds, in not being found in ſtrata, but in form of regular columns. It was ſometimes called by the antients *lapis lydius*. They called the ſame ſtone, when found in its beautiful columnar form, *baſaltes*; and when found in broken pieces in the beds of rivers, not diſtinguiſhing that theſe were only fragments of the columnar ſpecies, they called them by the name of *lydius lapis*. Authors have alſo called it the *baſanites*, *coticula*, and *lapis heraclius*; and ſome *paragone*.

It is a very regular and beautiful marble, of a perfectly fine, ſmooth, and equal texture, remarkably hard and heavy, and of a remarkably deep and naturally gloſſy black, mixed with no other colour, nor fouled by any extraneous mixture.

Its moſt remarkable quality, however, is, its arranging itſelf into columns, and ſeries of them. Wherever it has been yet found, either by the antients or moderns, it has been always ſeen ſtanding up in the form of regularly angular columns, compoſed of a number of joints, and thoſe nicely placed on, and fitted into one another, and a number of theſe columns nicely and exactly placed together, and ſo joined, that the prominent angles of the one pillar fit, and exactly fall into the hollows left between the others, and the plain ſides exactly anſwer to one another, the whole appearing as if formed by the hands of the niceſt workman. A number of theſe columns, thus joined, make one large pillar; and there are generally found ſeveral of theſe pillars at ſmall diſtances one from another. The ſingle columns, tho' all angular, are far from being all alike, ſome of them being of ſeven, ſome of ſix, and ſome of five ſides; ſome alſo are only of four, but theſe are the moſt rare. See Tab. of Foſſils, Claſs 5.

This is the account not only of the antients, but of every one who ever ſaw *baſaltes* in its native ſtate in any part of the world; and when we conſider this, is it not amazing, that when the noble and ſurpriſing quantity of it, called the *giants cauſeway* in Ireland, was taken notice of, it ſhould be doubted, whether it were not a work of art, and the name of the *baſaltes*, which alone accounts for it, never be thought of?

The deſcriptions the antients have agreed to give of the *baſaltes*, as carefully collected by De Boet, give us a very juſt and accurate deſcription of the Giants cauſeway, tho' that author had never ſeen or heard of it, the appearance of this marble in all parts of the world being the ſame, and theſe accounts plainly evincing, that the immenſe pile of the *baſaltes* in Ireland is no miracle, nor work of art, but, perhaps, the nobleſt collection of that body, which the world has to ſhew.

The origin and formation of this marble has much puzzled the world; but we may conſider, that many of the known foſſil bodies have a property, like ſalts, of arranging themſelves into different figures at the time of their firſt coaleſcence into a maſs. This is from the ſame laws in nature with that of ſalts; and we are well aſſured by daily experience, that cryſtal and ſpar, according to this natural determination, ever form regularly angular figures, when all the proper accidents have concurred to their concretion. The moſt common figures of cryſtals are the hexangular columns; and thoſe of ſpar, either trigonal columns or parallellopipeds. The combinations and mixtures of theſe, in different degrees, may naturally produce mixt figures, according to theſe degrees; and a third ſubſtance, tho' in itſelf not diſpoſed by nature to aſſume or arrange itſelf into any particular figure, if mixed with theſe, may be able to ſpread, extend, and inlarge the figures they concrete into, or otherwiſe alter them.

A mixture of three bodies is therefore capable of producing a fourth, of a figure different from any one of the three above; and we find alſo, by many parallel inſtances, that the quicker or ſlower paſſing off of the fluid from whence bodies are concreted, is capable of altering their figures.

The marble of the Giants cauſeway, or any other columns of *baſaltes*, analyſed by acids, is found to be compoſed of an admixture of cryſtal, ſpar, and earth. The ſpar is abſolutely diſſolved by the acid, may be precipitated out of it, and procured in its own form; and the remaining maſs, after the ſeparation of the ſpar, is found to be pure cryſtal, and an earth of the clay kind, ſeeming the ſame with the black pipe-clay of Northamptonſhire, and ſome other places, only much blacker. We know very well what would be the figures of theſe bodies concreted alone, and may thence deduce what may be the poſſible conſequences of their union, and the different accidents attending their concretions.

The *baſaltes* was found by the antients in columns in Ethiopia, and in fragments in the river Tmolus, and ſome other places. We now have it frequently both in columns and in ſmall pieces in Spain, Germany, and Ruſſia. In Denmark alſo there is much of it; and about Dreſden a great deal, in fine columns: but the nobleſt ſtore of it ſeems to be that in the county of Antrim in Ireland, ſo well known by the name of the Giants cauſeway. *Hill*'s Hiſt. of Foſſ. p. 467, 468. See GIANTS *cauſeway*.

The *baſaltes* makes a fine touchſtone, and is uſeful on many other occaſions.

BASANITES, in natural hiſtory, a name given by many authors to the touchſtone uſed for trying gold, *&c.* See LYDIUS *lapis*, and TOUCHSTONE.

Pliny ſpeaks of a *baſanites*, which yielded a bloody juice, and was good againſt diſeaſes of the liver. Hiſt. Nat. l. 36. c. 20.

BASANUS, in natural hiſtory, the touchſtone. *Suid.* T. 1. p. 418. See the article TOUCHSTONE, *Cycl.* and *Suppl.*

BASANUS *Hybernicus*. See *Iriſh* TOUCHSTONE.

BASCANIA, in antiquity, ridiculous or groteſque figures hung by the antient ſmiths before their furnaces, to divert envy. *Pollux*. Onomaſt. l. 7. c. 24. *Jun.* Paint. Anc. l. 2. c. 8. p. 160.

BASE (*Cycl.*)—BASE-*Knights*, *Bas-chevaliers*, denote the inferior order of knights, as diſtinguiſhed from barons and bannerets, who were the chief or ſuperior knights.

Hence ſome think, we now call *baſe-knights*, inferior to baronets, knights batchelors, *q. d. bas-chevalier*. *Kenn.* Gloſſ. ad Antiq. Paroch. in voc.

BASELS, *Baſelli*, in our old writers, a kind of coin aboliſhed by King Henry II. 1158. *Hollenſhed*'s Chron. p. 67. ap. *Blount*.

BASELLA, in botany, the name of a plant, in all things agreeing with the *cuſcuta*, or dodder; but that the ſeed is ſingle, only one ſucceeding each flower, which is incloſed in a ſucculent cup reſembling a berry. Hort. Malab. Vol. 7 p. 24.

BASEMENT, in architecture, a continued baſe, extended a conſiderable length, as around a houſe, a room, or other piece of building.

This is alſo called, by antient architects, *ſtereobata*; by the French, *embaſement*, or *ſoubaſement*; ſometimes *ſocle continu*, when it is without either baſe or corniſh. *Davilar*, Archit. P. 2. p. 562. & 858.

BASHARIANS, a ſect of Mahometans, being a branch or ſubdiviſion of the *Motazalites*.

The *Baſharians* are thoſe who maintain the tenets of Baſhar Ebn Motamer, a principal man among the *Motazalites*, who varied, in ſome points, from the general tenets, of the ſect, as carrying man's free agency to a great length, and even to the making him independent. He aſſerted, that God is not always obliged to do that which is beſt; for that, if he pleaſed, he could make all men true believers. Accordingly he taught, that God might doom an infant to eternal puniſhment; but taught at the ſame time, that he would be unjuſt in ſo doing. Vid. *Sale*, Prelim. Diſc. to Koran.

BASHAW (*Cycl.*)—The Turks, it is to be obſerved, pronounce indifferently *paſcha*, or *baſcha*; yet, according to d'Herbelot, *paſcha* is the title moſt frequently given to the great officers of the Porte, and *baſcha* to the lower officers of the army, ſometimes even to the common janizaries. Others pretend, that *baſcha* is the Arabic, and *paſcha*, the true, or Turkiſh pronunciation. Trev. Dict. Univ. T. 1. p. 784.

A *baſhaw* is made with the ſolemnity of carrying a flag or banner before him, accompanied with muſic and ſongs, by the Mirialem, an officer on purpoſe for the inveſtiture of *baſhaws*. *Rycaut*. Preſ. Stat. of the Ottom. Emp. l. 1. c 12. p. 51.

Baſhaw, uſed abſolutely, denotes the prime vizier; the reſt of the denomination being diſtinguiſhed by the addition of the province, city, or the like, which they have the command of; as the *baſhaw* of Egypt, of Paleſtine, *&c.*

The *baſhaws* are the emperor's ſpunges. We find loud complaints among Chriſtians of their avarice and extortions. As they buy their governments, every thing is venal with them. *Aquin.* Lex. Milit. T. 1. p. 118. b.

When glutted with wealth, the emperor frequently makes them a preſent of a bow-ſtring, and becomes heir to all their ſpoil. Vid. *Tournef.* Voyag. T. 1. let. 1. p. 17. a. It. T. 2. p. 22, 26.

There are alſo *ſub-baſhaws*, or deputy-governors under the firſt. Vid. Phil. Tranſ. N°. 218. p. 148.

BASIATRAHAGI, in botany, a name uſed by ſome for the common *polygonum*, or knot-graſs. *Ger.* Emar Ind. 2.

BASIL (*Cycl.*)—The order of St. *Baſil* ſtill continues in Greece. The habit of the monks is black, and plain, conſiſting of a long caſſock, and a great gown with large ſleeves: on their head they wear a hood, which reaches to the ſhoulders: they wear no linnen; ſleep without ſheets, in the ſtraw; eat no fleſh; faſt often; and till the ground with their own hands. *D'Emillian*, Hiſt. Monaſt. Ord. p. 19.

This order was introduced in the Weſt in 1057, and was reformed in 1569, by pope Gregory XIII. who united the religious of this order in Italy, Spain, and Sicily, into one congregation [a]; of which the monaſtery of St. Saviour at Meſſina is the chief, and enjoys preheminence over the reſt. Each community has its particular rule, beſides the rule of St. *Baſil*, which is very general, and preſcribes little more than the common duties of a Chriſtian life [b].—[[a] *Corn.* Dict. des Arts, T. 1. p. 94. b. *D'Emillian*, Hiſt. Monaſt. Ord. p. 20.]

BASIL, in botany. See OCYMUM.

BASILARE *Os*, (*Cycl.*) in anatomy, a barbarous denomination given to the *os ſphenoides*, on account of it being ſituated at the bottom

tom or baſis of the ſkull [a]; or becauſe a great part of the brain reſts hereon, as on its baſis [b].—[[a] *Drake*, Anthrop. l. 4. c. 2. p. 582. [b] *Blaſ.* ad Veſling. c. 13. p. 195.]—See SPHENOIDES, *Cycl.*

BASILEUS, Βασιλευς, a title aſſumed by the emperors of Conſtantinople, excluſive of all other princes, to whom they gave the title Ρηξ, *rex*, king. *Suic.* Theſ. T. 1. p. 669. *Du Cange*, Gloſſ. Gr. T. 1. p. 179, ſeq. *Ejuſd.* Gloſſ. Lat. T. 1. p. 499.

The ſame quality was afterwards given by them to the kings of Bulgaria, and to Charlemaign, from the ſucceſſors of which laſt they endeavoured to wreſt it back again.

The title *baſileus* has been ſince aſſumed by other kings, particularly the kings of England, *Ego Edgar totius Angliæ baſileus confirmavi. Du Cange*, Gloſſ. Lat.

Hence alſo the queen of England was intitled *Baſilla* and *Baſiliſſa. Du Cange*, Gloſſ. Lat. in voc. *Baſiliſſa.*

BASILEUS, in zoology, a name by which ſeveral of the old authors called the *regulus criſtatus*, or golden crowned wren.

The word is derived of the Greek βασιλευς, a king; and this, and the other names of royalty given to this little bird, are, on account of the golden crown on its head. *Ray*, Ornitholog. p. 163.

BASILICS, *Baſilica*, in literary hiſtory, (*Cycl.*) a name ſuppoſed to have been given by the emperor Leo to a collection of laws, in honour of his father Baſilius Macedo, who began it in the year 867, and in the execution chiefly made uſe of Sabbathius Protoſpatharius, who carried the work as far as 40 books. Leo added 20 books more, and publiſhed the work in 880.—The whole, thirty years after, was corrected and improved by Conſtantin Porphyrogenitus, ſon of Leo; whence many have held him the author of the *baſilica.*

Six books of the *baſilica* were tranſlated into Latin in 1557, by Gentian Hervetus. An edition of the Greek *baſilics*, with a Latin verſion, has been ſince publiſhed at Paris, in 1647, by Annib. Fabrottus, in 7 volumes. There ſtill want 19 books, which are ſuppoſed to be loſt. Fabrottus has endeavoured to ſupply, in ſome meaſure, the defect from the ſynopſis of the *baſilica*, and the gloſſes; of which ſeveral had been made under the ſucceeding emperors, and contained the whole Juſtinian law, excepting the ſuperfluities, in a new and more conſiſtent order, together with the later conſtitutions of the emperors poſterior to Juſtinian. Vid. *Strav.* Bibl. Jur. c. 4. §. 2, ſeq. *Hartung.* Exerc. Jur. Civ. l. 1. c. 6. p. 18, ſeq. *Menage*, Anti-Baill. T. 1. p. 137, ſeq. *Morhof.* Polyhiſt. T. 3. l. 6. c. 14. §. 11. *Fabric.* Bibl. Græc. l. 6. c. 6. Tom. 2. p. 425.

BASILICS, *baſilicæ*, in church hiſtory (*Cycl.*)—Thereis ſome diſpute concerning the origin and occaſion of this appellation, as well as the extent of it.

Some will have the antient churches to have been called *baſilicæ*, becauſe generally built in the faſhion of the Roman halls, called by that name: others, becauſe divers churches were formed of thoſe halls. In reality, on the converſion of Conſtantine, many of the antient *baſilicæ* were given to the church, and turned to another uſe, *viz.* for Chriſtian aſſemblies to meet in, as may be collected from that paſſage in Auſonius, where ſpeaking to the emperor Gratian, he tells him, the *baſilicæ*, which heretofore were wont to be filled with men of buſineſs, were now thronged with votaries praying for his ſafety. By which he muſt needs mean, that the Roman halls or courts were turned into Chriſtian churches: and hence, we conceive, the name *baſilicæ* came to be a general name for churches in after-ages. Baronius, Durantus, and Bona, give other reaſons for the appellation; as that it was becauſe churches were places where ſacrifice was offered to God, the king of all the earth; or becauſe they were only the more ſtately and magnificent churches which had the title, ſuch as, by their grandeur, either ſurpaſſed other churches, as the palaces of princes do private houſes. But this is not true in fact; for ever ſince the word came firſt into uſe, it appears to have been the common name of all public churches, as contradiſtinguiſhed from the private churches of monaſteries, *&c.* [a]. It has been diſputed between meſſieurs Launoi and Valois, whether the church of St. Vincent, built by king Childebert, were originally a monaſtery, or a *baſilic* [b].—[[a] *Bingh.* Orig. Eccleſ. l. 8. c. 1. §. 5. Vid. Giorn. de Lett. d'Ital. T. 1. p. 78. [b] Vid. Jour. des Sav. T. 20. p. 505.]

BASILIC is chiefly applied, in modern times, to churches of royal foundation; as thoſe of St. John de Lateran, and St. Peter of the Vatican at Rome, founded by the emperor Conſtantine. *Daviler*, Archit. p. 414.

Golden BASILIC, *baſilica aurea*, is an appellation given the church of the Lateran, on account of its richneſs and furniture.

BASILIC appears alſo to have been given in later ages to churches before conſecration. Vid. *Johnſ.* Eccleſ. Laws, ann. 1237. §. 1.

BASILICS were alſo little chapels built by the antient Franks over the tombs of their great men, ſo called, as reſembling the figure of the ſacred *baſilicæ*, or churches, *Du Cange*, Gloſſ. Lat. T. 1. p. 500.

Perſons of inferior condition had only *tumbæ*, or *porticuli* erected over them. By an article in the ſalic law, he that robbed a *tumba* or *porticu us*, was to be fined 15 ſolidi; but he that robbed a *baſilica* 30 ſolidi. Leg. Salic. tit. 58. §. 3, ſeq.

BASILICS, *baſilicæ*, among the Romans, were ſpacious and beautiful edifices, deſigned chiefly for the *centumviri*, or the judges to ſit in and hear cauſes, and for the counſellors to receive clients. The bankers too had one part of the *baſilicæ* allotted for their reſidence [c]. The ſcholars alſo went thither to make their declamations, according to the teſtimony of Quinctilian [d].—[[c] *Roſin.* Ant. l. 9. c. 7. [d] *Quinctil.* l. 12. c. 5.]

The Roman *baſilicæ* were covered, by which they were diſtinguiſhed from the *fora*, which were public places, open to the air.

Some have obſerved, that the *baſilicæ* were to be built adjoining to the forum [e]. But this will by no means hold in reſpect of all. At the end of each was a large, lofty hall, called *chalcidica*, furniſhed with galleries, wherein the ſpectators were placed during the adminiſtration of juſtice [f].—[[e] *Calv.* Lex. Jur. p. 111. b. [f] Vid. *Vitruv.* Archit. l. 5. c. 6. *Perrault*, Abreg. P. 2. c. 1. art. 3.]

Voſſius [g] has obſerved, that thoſe *baſilicæ* were built in the ſhape of our churches, that is oblong, which was the reaſon, that, upon the ruin of many of the *baſilicæ*, Chriſtian churches were raiſed on the old foundation; and often alſo a whole *baſilica* was converted to ſuch a pious uſe [h].—[[g] *Voſſ.* Etym. p. 65, ſeq. [h] *Kenn.* Rom. Antiq. P. 2. l. 1. c. 5. p. 48.]

The firſt *baſilica* was built at Rome by Cato the elder; whence it was called *Porcia*; the ſecond was called *Opimia*; the third was that of *Paulus*, built at a great expence, and with much magnificence, whence it was called by ſome *regia Pauli*; another was built by Julius Cæſar, called *baſilica Julia*; of which Vitruvius tells us he had the direction. Vid. *Liv.* l. 26. c. 27. There were others alſo, to the number of eighteen or twenty.

The *baſilica Julia* not only ſerved for the hearing of cauſes, but for the reception and audience of foreign ambaſſadors. It was ſupported by an hundred marble pillars in four rows, and inriched with decorations of gold and precious ſtones. In it were thirteen tribunals, or judgment-ſeats, where the prætors ſat to diſpatch cauſes. *Plin.* Epiſt. l. 2. Ep. 14. ap. *Heder.* Schul. Lex. p. 522.

BASILIDIANS (*Cycl.*)—In general, the *Baſilidians* held much the ſame opinions with the Valentinians, another branch of the gnoſtic family. (See GNOSTICS, *Cycl.*) They aſſerted, that all the actions of men are neceſſary; that faith is a natural gift, to which men are forcibly determined, and ſhould therefore be ſaved, though their lives were ever ſo irregular. Irenæus and others aſſure us, they acted conſiſtently with their principle, committing all manner of villainies and impurities, in confidence of their natural election. Vid. *King*, Hiſt. Apoſt. Creed, c. 5. p. 302.

They had a particular hierarchy of divine perſons, or *Æons*. See ÆONS, *Cycl.*

Under the name *Abraxas*, they are ſaid to have worſhipped the ſupreme God, from whom, as a principle, all other things proceeded.

There are ſeveral gems ſtill ſubſiſting inſcribed with the name Abraxas, which were uſed by the *Baſilidians* as amulets againſt diſeaſes and evil ſpirits. Vid. *Montfauc.* Palæogr. l. 2. c. 8. p. 177, ſeq. See ABRAXAS, *Cycl.* and *Suppl.*

BASILISCUS, in zoology, a name given by ſome of the old authors to the *regulus criſtatus*, or golden crowned wren. This name is a diminutive of the word *baſileus*, king, another of its names, given it becauſe of its golden crown. *Ray*, Ornithol. p. 163.

BASILISCUS, *baſiliſc*, or *baſiliſk*, is alſo uſed to denote a very dangerous ſort of ſerpent, which kills, as it is ſaid, by its breath or ſight only. This was alſo called *regulus*, which anſwers to the name of *baſiliſcus*, or little king, becauſe it has a kind of crown upon its head, and is the moſt dangerous of all ſerpents. Galen ſays, that it is of a colour inclining to yellow; that it has three little eminences upon its head, ſpeckled with whitiſh ſpots, which have the appearance of a ſort of crown. Ælian ſays, that its poiſon is ſo penetrating, as to kill the largeſt ſepents with its vapour only; and that if it but bite the end of any man's ſtick, it kills him. It drives away all other ſerpents with the noiſe of its hiſſing. Pliny ſays, it kills thoſe who look upon it.

The generation of the *baſiliſk* is not leſs marvellous, being ſaid to be produced from a cock's egg, brooded on by a ſerpent. Theſe, and other things equally ridiculous, are related by Matthiolus, Galen, Dioſcorides, Pliny, and Eraſiſtratus. Kirchmayer and Vander Wiel have given the hiſtory of the *baſiliſk*, and detected the folly and impoſture of the traditions concerning it. Vid. *Vater.* Phyſ. Exper. §. 8. c. 6. p. 831.

In ſome apothecaries ſhops there are little dead ſerpents ſhewn, which are ſaid to be *baſiliſcs.* But theſe ſeem rather to be a kind of ſmall bird, almoſt like a cock, but without feathers: its head is lofty; its wings are almoſt like a bat's; its eyes large, and its neck very ſhort.

The moſt eminent phyſicians, and modern philoſophers, look upon all that is ſaid of the *baſiliſc* as fabulous, and mere invention: they ſay that no one ever ſaw any real *baſiliſcs*; that thoſe which are ſhewn and ſold at Venice, and in other places, are nothing but little thornbacks artificially put into a form like that of a young cock, by ſtretching out their fins, and contriving them with a little head, and hollow eyes: and this, Calmet ſays, he has, in reality, obſerved in a ſuppoſed

baſiliſc, at an apothecary's ſhop at Paris, and in another at the jeſuits of Pont-a-Mouſſon.

We find the *baſiliſc* mentioned in the Bible; but the Hebrew word *pethen*, which is tranſlated *baſiliſc*, ſignifies an *aſp*, as the beſt interpreters agree. *Calm.* Dict. Bibl. in voc.

BASILISC is alſo myſtically uſed by the alchymiſts, to denote the ſublimate mercury of the philoſophers.

Lully applies the name to a certain ſtone, which kills mercury, and fixes it into perfect ſilver, without fire.

Others, by the word *baſiliſc*, expreſs the philoſophers ſtone itſelf, and with leſs impropriety, if, as ſome have held, this ſtone is made of the powder of the *baſiliſc*.

Paracelſus gives the appellation *baſiliſc* to the venereal diſeaſe.

BASILISC alſo denotes a great piece of ordnance; thus denominated from its reſemblance to the ſuppoſed ſerpent of that name.

The *baſiliſc* throws an iron ball of 200 pound weight. It was much talked of in the time of Solyman emperor of the Turks, in the wars in Hungary; but ſeems now out of uſe [h]. Paulus Jovius [i] relates the terrible ſlaughter made by a ſingle ball from one of theſe *baſiliſcs* in a Spaniſh ſhip; after penetrating the boards and planks in the ſhip's head, it killed above thirty men [k]. Maffeus [l] ſpeaks of *baſiliſcs* made of braſs, which were drawn eachby 100 yoke of oxen.—[[h] Trev. Dict. Univ. T. 1. p. 897. [i] Hiſt. T. 2. P. 1. [k] *Aquin.* Lex. Milit. T. 1. p. 118. a. [l] Hiſt. Ind l. 2.]

Modern writers alſo give the name *baſiliſc* to a much ſmaller and ſizeable piece of ordnance, which the Dutch make fifteen feet long, and the French only ten. It carries forty-eight pound. *Wolf.* Lex. Math. p. 245.

BASIOGLOSSUM (*Cycl.*)—The *Par baſiogloſſum* is otherwiſe denominated, from its figure, *par hypſiloideum*. Vid. *Barthol.* Anat l. 3. c. 13. p. 550. ap. *Caſt.* Lex. p. 100.

Some have denied the exiſtence of the *par baſiogloſſum*, particularly Fallopius and Mr. Cowper; tho' this laſt, on further inquiry, found ſome fibres, which, by their contrary order to thoſe of the *geniogloſſum*, induced him to allow the *baſiogloſſum* [a]. Heiſter only makes the *baſiogloſſum* a part of the ceratogloſſum [b].—[[a] *Drake*, Anthrop. l. 3. c. 15. p. 355. [b] Comp. Anat. §. 323.]

The *baſiogloſſum*, with the geniogloſſum, ceratogloſſum, and ſtyloglosſum, form the body of the tongue. See TONGUE.

BASIS (*Cycl.*)—The *Baſis of a medicine* denotes the principal part, or that directly levelled at the indication. Vid. *Junk.* Conſp. Form. Medic. tab. 1. p. 1.

BASIS, in the antient muſic and poetry, denotes the equability of ſounds proceeding in the ſame tenor. *Scalig.* Poet. l. 1. c. 19.

In which ſenſe, *baſis* ſtands contradiſtinguiſhed from *arſis*, or elevation, as well as from *theſis*, or depreſſion.

BASIS, in oratory, denotes the fourth member of a complete exordium, being that which ſucceeds the apodoſis, and prepares the way for the propoſition. *Heder.* Schul. Lex. p. 522.

BASIUM. Chemiſts uſe the word *baſium*, which literally in Latin ſignifies a kiſs, for an extemporaneous tincture of iron and copper, invented by Cloſſæus. *Schrod.* Pharm. l. 3. c. 11. *Caſt.* Lex. p. 100.

BASKET, a kind of veſſel made of oſier, wicker, ruſhes, or the like, of different figures and ſizes, according to the uſe it is intended for. See OZIER.

Baskets have their uſes not only in the œconomical, but military affairs: at ſieges, they make uſe of a ſmall *basket* filled with earth, and ranged on the top of the parapet.

They are about a foot and an half high, as much in diameter at top, and eight or ten inches at bottom; ſo that being ſet together, they leave a ſort of embraſeures at their bottom, through which the ſoldiers fire, without expoſing themſelves. *Guill.* Gent. Dict. P. 2. in voc.

BASKET alſo imports a kind of meaſure or quantity of certain commodities: a *basket* of *medlars* contains two buſhels; of *aſſafœtida* from twenty to fifty pound weight. Ruſt Dict. T. 1. in voc.

BASKET, *corbeille*, in architecture, a kind of vaſe, or figure-piece of ſculpture, in form of a *basket* filled with flowers or fruits, ſerving to terminate ſome decoration. *Daviler.* Archit. P. 2. p. 519.

BASKET *fiſh*, in natural hiſtory, a name given by the Engliſh in North America to a very remarkable fiſh, ſometimes caught in the ſeas thereabout, tho' not frequent any where.

Mr. Hooke, to whom it was referred by the Royal Society to name it, has called it, *Piſcis echinoſtellaris viſciformis*, the body of it reſembling an egg-fiſh, or *echinus marinus*, and the arms a ſtar-fiſh, and finally, the dividing of the branches being more like that of the branches of miſletoe than any other natural production we are acquainted with.

This fiſh ſpreads itſelf from a pentagonal mouth-piece, or root, in the centre of which the mouth is placed, into five main limbs or branches; and each of theſe, at its firſt iſſuing out of the body, is divided into two: this makes ten. Each of theſe ten again divides into two, which makes twenty, and ſo on, each dividing to the fourteenth time; at which place they make more than fourſcore thouſand limbs. Theſe are too ſmall to be traced farther by the eye, or preſerved in carriage; but it is very probable, that even theſe were again divided, perhaps, ſeveral times.

The branches between the joints are not all equally of a length, tho', for the moſt part, they are pretty nearly ſo; but thoſe branches, which were on that ſide of the fiſh on which the preceding joint was placed, are always about a fourth or a fifth part longer than thoſe on the other ſide. Every one of theſe branches, from the mouth to the very extremity, has a double range or chain of pores running regularly along it; and the body of the fiſh much reſembles the *echini* kind, being protuberant, and divided into five parts, each ſupported by its bony ridge. The arms or branches are never very ſtrong; but, when they are dry, they are greatly more brittle than before, the leaſt force imaginable deſtroying them.

The ſhoals of Nantuket, an iſland on the coaſt of New England, at times furniſh the fiſhermen with this creature; but it is remarkable, that they are never ſeen there, unleſs when taken by hooks in fiſhing for other fiſh. They claſp the hook-bait faſt, and encircle it with all their arms, coming up, when drawn by it, in form of a wicker basket; whence the name: but, when they have been ſome time out of the water, they become flat.

The uſe of the numerous arms of this fiſh is plainly to catch its prey. It probably extends them to their full length while under the water, and then claſps hold of any thing fit for food that chances to ſwim over them. The fiſhermen have ſometimes found the arms containing ſmall mackrel, or pieces of larger. Vid. Phil. Tranſ. N° 57, & 74.

Mr. Winthorp ſays, this fiſh might alſo be called *net-fiſh*, or *purſe-net-fiſh*. Phil. Tranſ. N° 74.

It is evident from the deſcription, that this fiſh is of the *ſtella arboreſcens*, or branched ſtar-fiſh kind; but whether the ſame with the commonly known kind called the *caput meduſæ*, is not evident from this deſcription. The body of this fiſh, by what is related of its protuberance, and reſemblance to the *echini marini*, may probably be the *aſteropodium* in its foſſil ſtate.

BASKET *ſalt*. This is a brime ſalt, made from the water of our ſalt ſprings in Cheſhire and elſewhere, differing from the common brime ſalt in the fineneſs of the grain, and in its whiteneſs and purity.

In the preparing this kind of ſalt, ſome uſe reſin, and other additions, to break the grain, and make it ſmall: others effect this by keeping up a very briſk fire under it, and ſtirring it all the while; but the moſt approved method is only to take out for this kind the third draught of every pan that is working for the common brime ſalt, and to do this before the granules or cryſtals are perfectly formed. By this means, the ſalt is very fine, and when it has been had hard preſſed down into ſmall wicker baskets, it is dried at the ſtove in them, and ſo kept for ſale.

BASON (*Cycl.*)—*Sale by the* BASON, at Amſterdam, is uſed for the public ſales made under the direction of the Ven du Meeſter; thus called, by reaſon that, before adjudging the lot or commodity to the laſt bidder, they uſually ſtrike a braſs *baſon*, to give notice of it. *Savar.* Dict. Comm. Supp. p. 53.

BASON, in water-works, a cavity dug in the ground, of a round, oval, ſquare, or other figure, lined or laid with ſtone, flint, or flags, bound with cement or lead, and bordered with turf, marble, or the like, ſerving to receive the water of a jet d'eau, or to ſupply water for the occaſions of the garden. *Daviler.* Archit. P. 2. p. 414.

There are divers ſpecies and denominations of *baſons*, *viz.*

Figured BASON, that whoſe plan or circumference makes ſeveral turns and returns, either ſtreight, circular, or the like. Such are moſt of the *baſons* of fountains at Rome.

BASON *with a baluſtrade*, that whoſe cavity is ſurrounded with a balluſtrade of ſtone, marble, braſs, or the like.

BASON *with a trench*, or *baſſin a rigole*, that whoſe border being of marble, or other ſtone, has a trench cut in it, from whence, at certain diſtances, ſprings out a thread of water, which lines the trench, and forms a kind of nape or gargle around the baluſtrade. Such is that of the fountain of the rock of the Bell-videre at Rome. *Daviler*, ib. p. 415.

BASON *en coquille*, that ſhaped like a ſhell.

BASON *of diſcharge*, *Baſſin de decharge*, that made in the loweſt part of a garden, for the water of the ſeveral fountains, after it has ſerved it purpoſe, to empty itſelf into; from thence to be conveyed by ſome trench or canal into the next river.

BASON *of a port* denotes the place where the ſhips ſtand. *Aubin*, Dict. Marin. p. 75.

The word is alſo uſed for a ſmall private port contrived in a large one, for the refitting of veſſels, more frequently called a dock.

Baſons, in gardening, are either for ornament or uſe. When there is a jet d'eau in the middle, the *baſon* muſt always be ſo proportioned to the height it throws the water, as to be capable of receiving it when blown about by winds, and not ſuffer it to be thrown on the walks.

The depth of *baſons* is uſually from two to three feet, this being ſufficient to ſecure the bottom of the *baſons* from froſt, and to dip the watering pots for the garden in; but, if they are intended to hold fiſh, they muſt be four or five feet deep. Deeper than this is dangerous, and unneceſſary.

Baſons are made either with clay, cement, or lead; but they are moſt uſually made with clay. In the making them this way, the diameter muſt be made four feet longer on each ſide than the *baſon* is to be. This will be taken up by the walls and clay. For the ſame reaſon, it muſt be dug two feet deeper than the intended depth of the water; becauſe it is to be laid over eighteen inches thick with clay, and ſix inches with gravel and paving. The wall is to be made with ſhards, rubbiſh, or flints, with the natural earth for mortar; and the clay muſt be well worked, and trod firmly down with the naked feet.

The way of making them with cement is, to allow one foot nine inches every way for the work; then cut the banks perpendicularly, and raiſe a wall of maſonry a foot thick, made of pebble-ſtones, or the like, laid in mortar of lime and ſand: the bottom is then to be covered to the ſame thickneſs; and then the ſolid lining of the cement is to be backed up againſt the walls, and over the bottom. This is to be made of ſmall flints in beds of mortar made of lime and cement. When this ſolid is eight inches thick, it muſt be plaſtered over the whole ſurface with cement well ſifted before it be mixed with the lime; and with this it is to be wrought over ſmooth with a trowel. The proportion of this cement ſhould be two-thirds of the cement or powdered tile to one-third of lime; and this cement has the property of hardening ſo under water, that it will become like ſtone or marble, and will not be ſubject to decay of a long time.

After the finiſhing, the *baſon* ſhould, for four five days, be anointed over very often with oil, or bullocks blood, to keep it from flawing or cracking in the drying; and after this, the water ſhould be let in as ſoon as may be.

The leaded *baſons* are made with walls a foot thick, and a bottom of half a foot. Theſe muſt be of rubble-ſtones cemented with plaſter; for the lime would injure and eat the lead. The ſheets of lead are to be ſpread over theſe walls and bottom, and ſeamed with ſolder. Theſe *baſons*, however, are but little in uſe now, from the expence of making them, and the danger of the lead's being ſtolen.

The waſte-pipes of fountains ought always to be made large enough, for fear of choaking. When the waſte water is to be carried off into common ſewers, it may be carried away in drains, or earthen pipes; but, when it is to ſerve for *baſons* that lie below it, it is to be conveyed in leaden ones. Vid. *Miller*'s Gard. Dict.

BASON *of the Sea.* See the article SEA.

BASSAD, or BESD, an Arabian name for the purple fucus of the Greeks, uſed by the women to paint their cheeks, and by the dyers about cloaths. It has been ſo far miſunderſtood by late authors as to be interpreted by the word coral; but the error of this is evident, ſince coral has none of theſe properties. See the article MARGINA.

BASSE, in ichthyology, the Engliſh name of the *ſea-wolf*, the *lupus piſcis* of authors. The Greeks have called this *labrax*; and ſome of the later writers, as Paulus Jovius, and others, *ſpigola*. It is properly a ſpecies of pearch, and is diſtinguiſhed by Artedi by the name of the pearch with thirteen rays in the ſecond fin of the back, and fourteen in the pinna auri. See the articles PERCA and LUPUS *Marinus*.

BASSE-*Cour*, in building, a court ſeparated from the principal one, and deſtined for the ſtables, coach-houſes, and livery-ſervants. *Daviler*, Archit. P. 2. p. 414.

BASSE-*Cour* of a country-ſeat, is the yard, or place where the cattle, fowls, &c. are kept.

That where ſtrange creatures of divers ſorts are kept for curioſity, is called by the French *menagerie*. The Romans gave the name *vivarium* to that place, where beaſts were kept for the public ſhews.

BASSE, in the middle-age writers, denotes a collar for cart-horſes, made of flags.

Hence alſo the round, matted cuſhion of flags, uſed for kneeling in churches, is called *baſſe*; in Kent, a *truſh*. *Kenn.* Gloſſ. Paroch. Antiq. in voc.

BASSET, or BASSETTE, a game with cards.

The perſons concerned in *baſſet*, are, 1°. The *tailleur*, *banker*, or *dealer*, who keeps the bank.

2°. The *croupier*, who is his aſſiſtant, and ſtands by to ſuperviſe the loſing cards.

3°. The *punter*, *ponte*, or *ſetter*, that is, any one who plays againſt the banker.

Beſides theſe, there are other terms uſed in this game, as,

4°. The *faſſe*, or *face*, which is the firſt card turned up by the tailleur belonging to the pack; by which he gains half the value of the money laid down on every card of that ſort by the punters.

5°. The *couch*, or firſt money which every punter puts on each card; each perſon that plays, having a book of thirteen ſeveral cards before him, on which he may lay his money, more or leſs, at diſcretion.

6°. The *paroli*, which is, when a punter having won the firſt ſtake, and having a mind to purſue his good fortune, crooks the corner of his card, and lets his prize lie, aiming at a *ſept et le va*.

7°. The *maſſe*, when having won the firſt ſtake, the punter is willing to venture more money on the ſame card.

8°. The *pay*, when the punter having won the firſt ſtake, be it a ſhilling, half-crown, guinea, or whatever he laid down on his card, and not caring to hazard the paroli, leaves off, or *goes the pay*; in which caſe, if the card turn up wrong, he loſes nothing, having won the couch before; whereas if it turn right, he, by this adventure, wons double the money ſtaked.

9°. The *alpiew*, much the ſame with paroli, and uſed when a couch is won by turning up, or crooking the corner of the winning card.

10°. *Sept et le va*, the firſt great chance or prize, when the punter having won the couch, makes a paroli, and goes on to a ſecond chance; ſo that if his winning card turns up again, it comes to *ſept et le va*, which is ſeven times as much as he laid down on his card.

11°. *Quinze et le va* is the next higher prize, when the punter having won the former, is reſolved to puſh his fortune, and lay his money a ſecond time on the ſame card, by crooking another corner; in which caſe, if it come up, he wins fifteen times the money he laid down.

12°. *Trent et le va* is the next higher prize, when the punter crooking the fourth corner of his winning card, if it turn up, he wins thirty-three times the money he firſt ſtaked.

13°. *Soixant et le va* is the higheſt prize, and entitles the winner to ſixty-ſeven times his firſt money, which, if it were conſiderable, ſtands a chance to break the bank: but the bank ſtands many chances firſt of breaking the punter. This cannot be won, but by the tailleur's dealing the cards over again.

The rules of the game of *baſſet* are as follow:

The banker holds a pack of fifty-two cards, and having ſhuffled them, he turns the whole pack at once, ſo as to diſcover the laſt card; after which he lays down all the cards by couples.

The punter has his book of thirteen cards in his hand, from the king to the ace; out of theſe he takes one card, or more, at pleaſure, upon which he lays a ſtake.

The punter may, at his choice, either lay down his ſtake before the pack is turned, or immediately after it is turned, or after any number of couples are down.

Suppoſing the punter to lay down his ſtake after the pack is turned, and calling 1, 2, 3, 4, 5, &c. the places of thoſe cards which follow the card in view, either immediately after the pack is turned, or after any number of couples are drawn. Then,

If the card, upon which the punter has laid a ſtake, comes out in any odd place, except the firſt, he wins a ſtake equal to his own.

If the card, upon which the punter has laid a ſtake, comes out in any even place, except the ſecond, he loſes his ſtake.

If the card of the punter comes out in the firſt place, he neither wins nor loſes; but takes his own ſtake again.

If the card of the punter comes out in the ſecond place, he does not loſe his whole ſtake, but only one half; and this is the caſe in which the punter is ſaid to be *faced*.

When the punter chooſes to come in after any number of couples are down, if his card happens to be but once in the pack, and is the laſt of all, there is an exception from the general rule; for tho' it comes out in an odd place, which ſhould entitle him to win a ſtake equal to his own, yet he neither wins nor loſes from that circumſtance, but takes back his own ſtake.

This game has been the object of mathematical calculations. Mr. De Moivre ſolves this problem: To eſtimate at *baſſet* the loſs of the punter under any circumſtance of cards remaining in the ſtock when he lays his ſtake, and of any number of times that his card is repeated in the ſtock. From his ſolution he has formed a table, ſhewing the ſeveral loſſes of the punter in whatſoever circumſtances he may happen to be. See Doctr. of Chances, p. 63.

From this table it appears, 1. That the fewer cards are in the ſtock, the greater is the loſs of the punter. 2. That the leaſt loſs of the punter, under the ſame circumſtances of cards remaining in the ſtock, is when his card is but twice in it; the next greater when but three times; ſtill greater when four times: and the greateſt when but once.

The gain of the banker, upon all the money adventured at at *baſſet*, is 15 s. 3 d. *per cent.* *De Moivre*, Doctr. of Chances, p. 93.

The game of *baſſet* is ſaid to have been invented by a noble Venetian, who, on account thereof, was baniſhed Venice.

It was firſt introduced into France by ſignior Juſtiniani, ambaſſador of that republic in 1674. Severe laws were made againſt it under Louis XIV. [a]; to elude which, they diſguiſed *baſſet* under the name of *pour & contre*, that is, for and againſt, which occaſioned new arrets and prohibitions of parliament [b]. —[a] Dict. de Trev. T. 1. p. 903. [b] Vid. *De Marre*, Traité de Police, l. 3. T. 4. c. 6.

BASSETING, in the coal mines, denotes the riſe of the vein of coal towards the ſurface of the earth, till it come within two or three feet of the ſurface itſelf. *Plott*, Nat. Hiſt. Stafford. c. 3. § 36.

This is alſo called by the workmen *croping*, and ſtands oppoſed to *dipping*, which is the deſcent of the vein to ſuch a depth, that it is rarely, if ever, followed to the end.

BASSO *Relievo* (*Cycl.*) make part of the furniture of antiquaries. Thoſe of the Trajan and Antonine columns have been copied

copied by Bartoli, and explained by Bellori, &c. Thoſe of the arch of Severus by Suareſius. Vid. *Fabric.* Bibl. Ant. c. 5. §. 6. p. 125.

Some have alſo made maps and proſpects of countries in *baſſo relievo.* Vid. Phil. Tranſ. N° 6. p. 99.

BASTAGARII, in antiquity, a college or company at Rome, who carried the fiſcal ſpecies out of the provinces to Rome or Conſtantinople. *Hartung.*Curſ. Jur.Civ.Exerc. 3. c. 15. §. 55.

The directors of theſe were called *præpoſiti baſtagarum.*

The word is derived from *baſtaga*, which properly imports the office of carriage or conveyance, απο τε βαστάζειν, *portare.*

Tho' ſome will have them called *baſtangarii*, q. d. *beſtiæ angariæ, eò quòd ruſticos angariabant, ad quintam beſtiam præſtandam. Du Cange*, Gloſſ Lat. T. 1. p. 502.

The denomination *baſtagarii* has alſo been given to thoſe who carry the images of ſaints at proceſſions. *Du Cange*, Gloſſ. Græc. T. 1 p. 182.

BASTARD (*Cycl.*) does not appear to have antiently imported any reproach. William the Conqueror makes no ſcruple of aſſuming that appellation. His epiſtle to Alan count of Bretagne begins, *Ego Willielmus cognomento Baſtardus. Du Cange*, Gloſſ. Lat. T. p. 502.

If a *baſtard* be got under the umbrage of a certain oak in Knollwood in Staffordſhire, belonging to the manor of Terley-Caſtle, no puniſhment can be inflicted; nor can the lord, nor the biſhop, take cognizance of it. *Plott*, Nat. Hiſt. Stafford. c. 8. §. 23. p. 279.

BASTARD, in the ſea language, is uſed for a large ſail of a galley, which will make way with a ſlack wind.

BASTARD is alſo uſed adjectively, or in compoſition with divers other words, to denote things of inferior or diminutive value.

In this ſenſe we meet with *baſtard* coral, *baſtard* alabaſter, *baſtard* amianthus, &c.

BASTARD *ſaffron* is the ſame with what is otherwiſe called *ſaf-flower*, ſometimes *ſcarlet-flower*, as being uſed in dying ſcarlets. *Plott*, Nat. Hiſt. Oxfordſh. c. 6. §. 35. p. 155. *Hought.* Collect. T. 4. N. 6. p. 361.

BASTARD *ſcarlet* is a name given to red dyed with bale madder, as coming neareſt the Bow dye, or new ſcarlet. *Hought.* Collect. N. 337. Vol. 2. p. 370, ſeq.

BASTARD, in reſpect of artillery, is applied to thoſe pieces, which are of an unuſual or illigitimate make or proportion.

Theſe are of two kinds, long and ſhort, according as the defect is on the redundant or defective ſide.

The long *baſtards*, again, are either common or uncommon. To the common kind belong the double culverin extraordinary, half culverin extraordinary, quarter culverin extraordinary, falcon extraordinary, &c. *Fæſch.* Ing. Lex. p. 72.

The ordinary *baſtard* culverin carries a ball of eight pounds. *Wolf.* Elem. Pyrat. §. 99.

BASTARDS are alſo an appellation given to a kind of faction or troop of banditti, who roſe in Guyenne, about the beginning of the fourteenth century, and joining with ſome Engliſh parties, ravaged the country, and ſet fire to the city of Xaintes. *Mezer.* ap. Dict. de Trev. T. 1. p. 908.

Mezeray ſuppoſes them to have conſiſted of the natural ſons of the nobility of Guyenne, who being excluded the right of inheriting from their fathers, put themſelves at the head of robbers and plunderers to maintain themſelves.

BASTARDY is a defect of birth objected to one born out of wedlock.

Euſtathius will have baſtards among the Greeks to have been in equal favour with ligitimate children, as low as the Trojan war; but the courſe of antiquity ſeems againſt him. Potter and others ſhew, that there never was a time when *baſtardy* was not in diſgrace. *Pott.* Archæol. l. 4. c. 15. p. 337, ſeq. *Lakemak.* Antiq. Græc. Sacr. P. 1. c. 6. §. 12.

Right of BASTARDY, *Droit de batardiſe*, in the French laws, is a right, in virtue whereof the effects of baſtards dying inteſtate, devolve to the king, or the lord. Dict. de Trev. T. 1. p. 900.

BASTONADO, *Baſtonade*, the puniſhment of beating or drubbing a crimin l with a ſtick.

The word is formed of the French *baſton*, a ſtick or ſtaff.

The *baſtonade* is a puniſhment uſed both among the antient Greeks, Romans, and Jews, and ſtill obtains among the Turks.

The Romans called it *fuſtigatio*, *fuſtium admonitio*, or *fuſtibus cædi*, which differed from the *flagellatio*, as the former was done with a ſtick, the latter with a rod, or ſcourge. The fuſtigation was a lighter puniſhment, and inflicted on freemen; the flagellation a ſeverer, and reſerved for ſlaves. It was alſo called *tympanum*, becauſe the patient here was beat with ſticks, like a drum. Vid. *Calv.* Lex. Jur. p. 394. a.

The penalty is much in uſe in the Eaſt to this day. The method there practiſed is thus: the criminal being laid on his belly, his feet are raiſed, and tied to a ſtake, held faſt by officers for the purpoſe; in which poſture he is beaten by a cudgel on the ſoles of his feet, back, chin, &c. to the number of one or more hundred blows. *Calm.* Dict. Bibl. T. 1. p. 260.

BASTONIER, or BÂTONIER, in the French law, an antient advocate, elected yearly according to ſeniority, to be the head or maſter of the community of advocates and attornies. He is preſident of the board held for maintenance of the order, and diſcipline of the palais. To him alſo belongs the commiſſion of the inferior judges, when put under interdict, ſo long as the interdiction laſts. *Corneil.* Dict. des Arts, T. 1. p. 97.

BASTONIER is alſo uſed for him who keeps the ſtaff of a community, and carries or follows it in proceſſions. *Corn.* Dict. des Arts, ibid.

BAT, in phyſiology, a mongrel or amphibious ſort of animal, partaking both of the mouſe and the bird, and flying, but without feathers.

The *bat*, called alſo by us *lapwing*, and *flittermouſe*, by the Latins, *veſpertilio*, ſeems a medium between the quadruped and the feathered kinds; but it partakes moſt of the former tribe, agreeing only with the birds in the ſternum, and the poſition of its liver; and with the quadrupeds in the kidneys, bladder, teeth, penis, teſticles, diaphragm, and lungs [a]. In reality, it only appears to be a bird by its flying. They lay themſelves up in winter in the drieſt apartments of caves; where planting their talons to the roof, they cover their bodies with their wings, and ſo hanging perpendicularly in great numbers, but ſo as not to touch each other, they ſleep for ſome months [b]. —[[a] *Willugh.* in *Ray*, Phil. Lett. p. 353. See alſo *Boyle*, Phil. Works Abr. T. 2. p. 186, ſeq. *Vater.* Phyſ. Exper. §. 8. c. 3. p. 811. *Lhuyd*, in *Ray*, l c. p. 301. [b] *Lhuyd*, in *Ray*, Phil. Lett. p. 301.]

Travellers ſpeak of a ſort of *bats* in Golconda bigger than hens. Vid. *Boyle*, loc. cit. p. 166.

In Braſil there is a large ſpecies of this animal, which, if men lie aſleep with their legs naked, will, it is ſaid, make a wound in them ſo gently, as not to wake them, but ſo deep, that they will ſuck the blood at it, and leave the perſon in ſome danger of bleeding to death. *Piſo*, Hiſt. Braſ. p. 69.

BAT, in commerce, a ſmall baſe ſilver coin, current in divers parts of Germany and Switzerland at different prices.

The *bat*, or *fladermouſe*, at Nurenberg, is equal to four criotzers; at Zurich, to $\frac{1}{28}$ of the French crown; at Baſil, Schaffhauſen, &c. to $\frac{1}{27}$; and at Bern and Friburg to $\frac{1}{30}$ of the ſame crown. Theſe laſt are callet *ſhort bats*. *Savar.* Dict. Comm. T. 1. p. 298.

BATABLE *Ground*. See BATTABLE *Ground*, *Cycl.*

BATARDIERE, a place in a garden, prepared for the planting of fruit-trees in, which being tranſplanted thither from the nurſery, are to be placed in eſpaliers, or elſewhere, to ſupply the place of dead trees. *Chomel*, Dict. OEcom. in voc.

BATCHELORS, or BACHELORS, (*Cycl.*) in the livery companies in London, are thoſe not yet admitted to the livery. *Cowel*, Interpr. in voc.

Every company of the twelve conſiſts of a maſter, two wardens, the livery, and the *batchelors*, who are yet but in expectation of dignity in the company, and have their function only in attendance on the maſter and wardens. *Cowel*, loc. cit.

BATCHELORS is alſo a name given in the ſix companies of merchants at Paris to the elders, and ſuch as having ſerved the offices, have a right to be called by the maſter and wardens to be preſent with them, and aſſiſt them in ſome of their functions, particularly in what relates to the *chef-d' oeuvres*, or maſter-pieces of ſuch as are candidates for being admitted maſters. *Savar.* Dict. Comm. T. 1. p. 207. in voc. *Bachelier.*

BATCHELOR is alſo particularly uſed for a man not married, or who is yet in a ſtate of a celibacy.

The Roman cenſors frequently impoſed fines on old *batchelors*. Dion Hallicarnaſſeus mentions an old conſtitution, by which all perſons of full age were obliged to marry. But the moſt celebrated law of this kind was that made under Auguſtus, called the *lex Julia de maritandis ordinibus*; by which *batchelors* were made incapable of legacies or inheritances by will, unleſs from their near relations. This brought many to marry, according to Plutarch's obſervation [a], not ſo much for the ſake of raiſing heirs to their own eſtates, as to make themſelves capable of inheriting thoſe of other men [b].—[[a] περὶ φιλοστοργ. [b] Vid. *Lipſ.* Excurſ. ad Tacit. Annal. l. 3. Tit. C. *Sueton.* in *Octav.* c. 34.]

The rabbins maintain, that, by the laws of Moſes, every body, except ſome few particulars, are obliged in conſcience to marry at twenty years of age: this makes one of their 613 precepts. Hence thoſe maxims ſo frequent among their caſuiſts, that he who does not take the neceſſary meaſures to leave heirs behind him, is not a man, but ought to be reputed a homicide. Lycurgus was not more favourable: by his laws, *batchelors* are branded with infamy, excluded from all offices civil and military, and even from the ſhews and public ſports. At certain feaſts they were forced to appear, to be expoſed to the public deriſion, and led naked round the market-place. At one of their feaſts, the women led them in this condition to the altars, where they obliged them to make *amende honorable* to nature, accompanied with a number of blows, and laſhes with a rod at diſcretion. To complete the affront, they forced them to ſing certain ſongs compoſed in their own deriſion. Mem. Acad. Inſcr. T. 5. p. 409, ſeq.

The Chriſtian religion is more indulgent to the *batchelor* ſtate: the antient church recommended it as preferable to, and more perfect than, the matrimonial ſtate. *Joſeph.* Hypomn. l. 5. c. 115.

In the canon law, we find injunctions on *batchelors*, when

arrived

arrived at puberty, either to marry, or turn monks, and profeſs chaſtity in earneſt. *Johnſ.* Eccleſ. Law, An. 748. §. 113.

BATENITES, a ſect of apoſtates from Mahometaniſm diſperſed through the Eaſt, who profeſſed the ſame abominable practices with the Iſmaelians and Karmatians. *Sale*, Prel. Diſc. to Koran, §. 8. p. 186.

The word properly ſignifies eſoteric, or people of inward or hidden light.

BATEN-KETOS, or BATA-KAITOS, in aſtronomy, a fixed ſtar of the third magnitude in the whale's belly; whence it is alſo denominated *venter ceti*. *Wolf.* Lex. Math. p. 252. *Vital.* Lex. Math. p. 84.

BATH (*Cycl.*)—Some authors ſpeak of *bloody baths*, *balnea ſanguinolenta*, prepared eſpecially of the blood of infants, antiently ſuppoſed to be a kind of ſpecific for the leproſy. *Bacon*, Opp. T. 2. p. 172.

Metaline BATHS, thoſe made of water, impregnated with the ſcoriæ of metals. The moſt common and uſeful of this kind are thoſe prepared with the ſcoria of iron, which abounds with earthy, ſaline, and ſulphureous ſubſtance of the metal; and theſe are of excellent ſervice for ſtrengthening and bracing up the parts, and recovering weak and decayed limbs; ſtopping various kinds of bleeding; and reſtoring the menſtrual and hæmorrhoidal flux, where obſtructed; inſomuch that they may well be ſubſtituted for the natural iron baths.

Adjacent to the ſmelting huts where metals are run from their ore, are to be found large quantities of the ſlag of copper, antimony, and cobalt, which abounding with ſulphur, vitrialic ſalt, and an earthy principle, make ſerviceable *baths* for ſtrengthening the loſt tone of the fibres, and relaxing them when they are too ſtiff. Theſe *baths* have likewiſe a deterſive and cleanſing virtue; ſo that, with prudence, and due regard to circumſtances, they may be uſed on many occaſions. The way of making theſe artificial *baths* is, either to take the ſlags as they come hot from the furnace, or elſe to heat them afreſh, and throw them into hot water; which is afterwards to be uſed either in the way of *bath*, or fomentation, occaſionally.

There are other artificial *baths*, prepared of allum and quicklime, by boiling them together in fine rain-water. Such *baths* are highly ſerviceable in paralytic diſorders, and weakneſs of the limbs. *Hoffm.* Exper. on Min. Wat. p. 203.

BATH, in chemiſtry, See BALNEUM, *Cycl.* and *Suppl.*

Tournefort mentions a *bath* at Smyrna ſo hot, that it will boil an egg ſoft in ten minutes, and hard in twenty minutes. *Tournef.* Voyag. Let. 21. p. 189. b.

There is a near affinity between hot *baths* and acidulæ, both as to their principles and effects. In reality, they appear only to differ in point of heat: where the pyrites are diſſolved more forcibly and haſtily, a heat is produced, which makes our thermæ; where the ſame pyrites are diſſolved more ſucceſſively and ſlowly, no heat ariſes, and we have acidulæ.

Hoffman has a diſſertation expreſs *de convenientia acidularum & thermarum quoad principia & uſum.* *Teichm.* Elem. Phil. Nat. P. 2. c. 8. p. 237.

The pepper *bath*, or *pfeffer-waſſer* on the Alps, is one of the moſt celebrated in Europe, and has been the ſubject of treatiſes expreſs, beſides what has been ſaid of it occaſionally by Scheuchzer, and others. It was firſt diſcovered in the year 1240, and is of the periodical kind. The water breaks forth in a dreadful place, ſcarce acceſſible to the ſun-beams, or indeed to men, unleſs of the greateſt boldneſs, and ſuch as are not in the leaſt ſubject to dizzineſs. Theſe *baths* have this ſingularity above all others, that they commonly break forth in May, and that with a ſort of impetuouſneſs, bringing with them beech-leaves, crabs, or other wood-fruit, and that their courſe deſiſts in September or October.

Scheuchzer profeſſes himſelf of opinion, that theſe waters are not impregnated with any minerals, or, if they do contain any, that their virtues in curing diſtempers, and preſerving health, do not proceed from them. They are exceeding clear, deſtitute of colour, taſte, or ſmell. Phil. Tranſ. N° 316. p. 151, ſeq.

According to Dion, Mæcenas was the firſt who made a *bath* at Rome: yet there are inſtances of public *baths* prior to this; but they were of cold water, ſmall, and poorly decorated.

Agrippa, in his ædilate, built one hundred and ſixty places for bathing, where the citizens might be accommodated, either with hot or cold, gratis [a]. After his example, Nero, Veſpaſian, Titus, Domitian, Severus, Gordian, Aurelian, Maximian, Dioclesian, and moſt of the emperors who ſtudied to gain the affections of the people, erected *baths* laid with the richeſt marble, and wrought according to the rules of the moſt delicate architecture [b]. — [a *Plin.* Hiſt. Nat. l. 35. c. 13. b Vid. L'Abbé *Couture* in Mem. Acad. R. Inſc. T. 2. p. 417.]

The rich had *baths* at home, and frequently very magnificent ones, eſpecially after the time that the practice of pillaging the provinces had begun; but they only uſed them on extraordinary occaſions. The great men, and even emperors themſelves, ſometimes bathed in public with the reſt of the people. Alexander Severus was the firſt who allowed the public *baths* to be open in the night-time during the heats of ſummer. Id. ibid. p. 419.

The Greek *baths* were uſually annexed to *Paleſtræ* or *Gymnaſia*, of which they were conſidered as a part [c]. Theſe *baths* conſiſted of ſeven different apartments, uſually ſeparated from each other, and intermixed with other buildings belonging to the other ſorts of exerciſes. Theſe were firſt the cold *bath*, *frigida lavatio*, in Greek λουτρον; ſecondly, the *elæotheſium*, or room where they were anointed with oil; thirdly, the *frigidarium*, or cooling room; fourthly, the *propnigeum*, or entrance of the *hypocauſtum*, or ſtove; fifthly, the vaulted room for ſweating in, or vapour *bath*, called *concamerata ſudatio*, or *tepidarium*; ſixthly, the *laconicum*, or dry ſtove; ſeventhly, the hot *baths*, called *callida lavatio* [d]—[c Vid. *Voſſ.* de Quat. Art. Popul. c. 3. §. 13. p. 14. d *Burette*, in Hiſt. Acad. Inſcrip. T. 1. p. 120. See alſo *Potter*, Archæol. Græc. l. 4. c. 19. p. 372.]

For the *baths* ſeparate from the paleſtræ, they appear to have been uſually double, one for men, the other for women; but ſo near, that the ſame furnace heated both. The middle part was poſſeſſed by a large baſon, which received water by ſeveral pipes, and into which they went down by ſteps, being ſurrounded by a baluſtrade, behind which was a kind of corrydor, called *ſchola*, which formed a pretty large area, to hold thoſe who were waiting, till there ſhould be room for them in the *bath*. They were vaulted over, and only received light from the top.

In the Roman *baths*, the firſt part that appeared was a large baſon, called κολυμβηθρα or βαπτιστηριον in Greek, and by the Latins *natatio* and *piſcina*. The middle was poſſeſſed by the *hypocauſtum*, which had a ſtring of four apartments on each ſide, correſpondent, called *balnearia*, ſo contrived, that one might eaſily go out of one into the other. Theſe were the ſtove, the *bath*, cold *bath*, and *tepidarium*. *Burette*, lib. cit. p. 122, ſeq. The two ſtoves, called *laconicum* and *tepidarium*, were joined together, and built circular. Their floor was hollow, and ſuſpended, to receive the heat of the hypocauſtum, which was a large furnace underneath, ſupplied with wood, the heat of which was communicated to the ſtoves, by means of the vacuity left under their floors. The ſame furnace alſo heated another room called *vaſarium*, ſituate near the ſtoves, wherein were placed three large brazen veſſels called *milliaria*, by reaſon of their capacity; one for hot water, another for warm water, and the third for cold; being ſo contrived, that the water might paſs out of one veſſel into another, by means of ſeveral ſyphons, and be diſtributed, by pipes and cocks, into the neighbouring *bath*, according to the occaſions of the bathers.

The deſcription is given by Vitruvius, and after him by Mr. *Burette*, in the Hiſt. Acad. Inſcr. Tom. 1.

At three in the afternoon, which is what Pliny calls *hora octava & nona*, the Romans all repaired to the *baths*, either the public or the private ones: this was called the *bath* hour *hora balnei*, which in winter was at nine, in ſummer at eight. The public *baths* were all opened by the ſound of a bell, and always at the ſame hour. *Plin.* Epiſt. i. l. 3.

Thoſe who came too late, ſtood a chance for bathing in cold water.

They began with hot water, after which, as the pores were now opened, and might give room for too plentiful a perſpiration, they thought it neceſſary, for their health, to cloſe them again, either with the cold *bath*, or at leaſt with a ſprinkling of cold water. During the *bath*, the body was ſcraped with a kind of knives, or ſmall ſtrigils, ſuch as are ſtill found in the cabinets of the curious. After bathing, ſucceeded unction and perfuming, from which they went freſh to ſupper. Vid. L'Abbé *Couture*, in Mem. Acad. Inſcr. T. 2. 414, ſeq.

The Romans, when they found their ſtomachs overcharged with meat, went to the *bath*, as we learn from Juvenal, who inveighs againſt thoſe, who having gorged themſelves with eating, were forced to go into the *baths*, to give themſelves relief. They found alſo that a *bath* was good to refreſh themſelves after ſome conſiderable fatigue or travel, as Celſus the phyſician tells us; which makes Plautus ſay, that all the *baths* in this world were not ſufficient to remove the wearineſs he felt.

After Pompey's time, the humour of bathing was carried to great exceſs, by which many were ruined, ſeveral having brought themſelves to ſuch a pitch, that they could not bear food without bathing firſt. The emperor Titus is ſaid to have loſt his life hereby [e]. Hence Pliny inveighs ſeverely againſt thoſe phyſicians, who held, that hot *baths* digeſted the food [f]. The emperor Hadrian firſt laid a reſtraint on the immoderate humor of bathing, by a public edict, prohibiting all perſons to bathe before the eighth hour [g].—[e *Plut.* de Tuend Valet. f Hiſt. Nat. l. 29. c. 1. g *Spartian.* in Vit. Hadrian.]

The BATHS *of Agrippa*, *thermæ Agrippinæ*, were built of brick, but painted in enamel: thoſe of Nero, *thermæ Neronianæ*, were not only furniſhed with freſh water, but even had the ſea brought into them: thoſe of Caracalla were adorned with two hundred marble columns, and furniſhed with ſixteen hundred ſeats of the ſame matter. Lipſius aſſures us they were ſo large, that eighteen hundred perſons might conveniently bathe in them at the ſame time. But the *baths* of Dioclesian, *thermæ Dioclesianæ*, ſurpaſſed all the reſt in magnificence. One hundred and forty thouſand men were employed many years in building them [h]. Great part of theſe, as well as thoſe of Caracalla, are ſtill ſtanding; and, with the vaſt high arches,

the beautiful and ſtately pillars, the extraordinary plenty of foreign marble, the curious vaulting of the roofs, the prodigious number of ſpacious apartments, and a thouſand other ornaments, make one of the greateſt curioſities of modern Rome [i].—[[h] *Salmuth.* ad Pancir. P. 1. Tit. 27. [i] Vid. *Kenn.* Rom. Ant. P. 2. l. 1. c. 7. p. 57. See alſo *Schott.* Itiner. Ital. p. 132. & *Pitiſc.* Lex. Antiq. T. 2. p. 951, ſeq.]

It has been thought by many, that the practice of drinking our *Bath* waters in Somerſetſhire is not very antient, and that their antient uſe was in bathing; but Dr. Friend endeavours to ſhew the internal uſe of thoſe waters to have been very early. Dr. Guidot, in whoſe time this uſage revived, and who has given us the beſt hiſtorical narrative of theſe waters, goes no higher for their internal uſe than the latter end of the ſixteenth century. But they appear to have been in uſe in the thirteenth century: Gilbert ſurnamed Anglicus, who, according to Bayle, lived in 1210, in the reign of king John, or more probably in that of Edward I. mentions a perſon cured of a leucophlegmacy, attended with a ſwelling, *&c.* by the ſulphureous *baths*; which Dr. Friend underſtands of the *Bath* waters; and that the cure was wrought by drinking, not bathing, which had been improper in ſuch a caſe. *Friend.* Hiſt. Phyſ. P. 2. p. 271, ſeq.

See the uſes of *Bath* waters, and their difference from thoſe of Briſtol, under the head *Briſtol* WATER.

Dry BATH.—The antients had divers ways of ſweating by a dry heat; as by the means of hot ſand, ſtove-rooms, or artificial bagnios, and certain natural hot ſteams of the earth, received under a proper arch, or hot houſe, as we learn from Celſus [k]. They alſo had another kind of *bath* by inſolation, where the body was expoſed to the ſun for ſome time, in order to draw forth the ſuperfluous moiſture from the inward parts; and to this day it is a practice in ſome nations to cover the body over with horſe-dung, eſpecially in chronical diſeaſes, to digeſt and breath out the humour that cauſes the diſtemper [l]. In New England they make a kind of ſtoves of turf, wherein the ſick are ſhut up to bathe or ſweat [m].—[[k] L. 2. c. 17. [l] *Hoffm.* Exper. on Min. Wat. p. 178. [m] Phil. Tranſ. N° 384. p. 130.]

BATH, in Jewiſh antiquity, is alſo the name of a liquid meaſure, containing the tenth part of an omer. *Chamberl.* of Jew. Meaſ. p. 137. *Godw.* Moſes and Aaron, l. 6. c. 9. p. 528.

The *bath*, called alſo *bathus*, was the tenth part of the omer in liquid things, as the *epha* was in dry; ſo that the *bath* and epha were of the ſame dimenſions. *Ezek.* c. 45. ver. 11. *Arbuth.* Tab. p. 99.

Some diſtinguiſh five kinds of *baths*; the firſt called the *greater bath*, of the ſame quantity with the *epha*, equal to the Roman *amphora*, and conſequently containing eighty pounds of water. Joſephus [n] indeed gives its dimenſion otherwiſe, making the *bath* to contain 12 ſextaries; on which footing the *bath* will be equivalent to the Attic *metretes* [o], and contain 1440 Roman ounces, inſtead of 960 given by the former account. Joſephus is followed by Eiſenſchmidt. Beverinus, and after him Lami, adhere to the other and ſmaller proportion [p].—[[n] *Joſeph.* Antiq. l. 8. c. 2. [o] Vid. *Holſt.* Hiſt. Rei Numm. T. 2. l. 1. §. 1. [p] Vid. *Paul.* ad Beverin. p. 130, ſeq.]

The ſecond *bath* contained 100 ounces of water; and of this it is the ſcripture is ſuppoſed to ſpeak in deſcribing the brazen ſea, which was to contain 2000 *baths*. 1 Kings c. 7. v. 26.

The third *bath* contained 66 ounces two-thirds of water; and of theſe *baths* the brazen ſea contained 3000. This *bath* is ſuppoſed to have been in uſe at the time when the book of Chronicles was written.

The fourth *bath* was only a fourth part of the ſecond, and conſequently contained 25 ounces of water.

The fifth *bath* contained ſix ounces two-thirds of water. *Beverin.* Synt. de Menſur. P. 2. p. 127, ſeq.

Some have imagined a ſacred meaſure of this name different from the common one, and containing a *bath* and an half of the other; but without foundation. *Calmet*, Dict. Bibl. T. 1. p. 261.

BATH *metal* is a preparation of copper with zink, which gives a more beautiful colour than the calamine uſed in the preparation of the common braſs. *Stahl.* Phil. Princ. Chem. P. 2. ſec. 4. §. 112. See PRINCE'S *Metal.*

BATH-*Kol*, in Jewiſh antiquity, a ſpecies of revelation by a voice or echo from heaven. *Baſn.* Hiſt. Juif. T. 3. p. 126, ſeq. *Wolf.* Bibl. Hebr. T. 2. p. 133. *Godw.* Moſes and Aaron, l. 4. c. 8. p. 165.

The word ſignifies in the original, *daughter-voice* or *daughter of a voice*; for it may be interpreted both ways. It ſeems to have been thus called with reſpect to the oracular voice delivered from the mercy-ſeat, when God was conſulted by urim and thummim: this latter was the grand and primary voice of revelation: the former of ſecondary dignity, and inferior to it as the daughter to the mother. *Prideaux*, Connect. P. 2. l. 5. p. 462.

The Jewiſh writers ſpeak of three kinds of revelation among them; the firſt by urim and thummim, which obtained from the erecting of the tabernacle to the building of the temple; the ſecond by the ſpirit of propheſy, which prevailed from the beginning of the world to the death of Malachi; the third the *bath-kol*, or *filia vocis*, which took place when the ſpirit of prophecy was wholly ceaſed in Iſrael. Vid. *Lightfoot*, Works, T. 1. p. 485. Talmud. Bab. in Tract. Sanhedrin, p. 11.

Divines are much divided as to the nature and manner of this revelation. Dr. Prideaux maintains, that the *bath-kol* was no ſuch voice from heaven as the Jews pretend, but only a phantaſtical way of divination of their own invention, like the *ſortes Virgilianæ* among the heathens: for as with theſe latter, the words firſt dipped at in the book of that poet were the oracle, whereby they prognoſticated thoſe future events which they deſired to be informed of; ſo with the Jews, when they appealed to *bath-kol*, the next words which they ſhould hear from any one's mouth were the oracle itſelf. This they called a voice from heaven; becauſe thereby they thought the judgment of heaven to be declared as to any dubious points, which they deſired to be informed of, and the decrees of heaven to be revealed concerning the future ſucceſs of any matter, which they would be pre-informed of.

Some have given another reaſon for the name, *viz.* that it came out of thunder; that the thunder-clap always went firſt, and the *bath-kol* after it: ſo that the thunder was as the mother-voice, and the *bath-kol* the daughter coming out of it. But this cannot be true; for moſt of the inſtances, which the Jewiſh writers give us of their *bath-kol*, are without any ſuch thunder preceding. *Prid.* Connect. T. 3. P. 2. l. 5. p. 463, ſeq. n.

Huet maintains, that ſome books of ſcripture were written by *bath-kol*, particularly the books of Tobit and Judith. It may be added, that the generality of the Jewiſh traditions, cuſtoms, ceremonies, *&c.* are alledged to be founded on ſome *bath-kol.* Vid. *Wolf.* Bibl. Hebr. T. 1. p. 259.

Danzius has a diſſertation on the iniquity and impoſture of the *bath-kol*; *de filia vocis nefanda, divinæ æmula.* Vid. *Calm.* Dict. Bibl. T. 1. p. 261. a.

Some of the learned diſtinguiſh between urim and thummim and the holy ſpirit, and reckon four degrees of prophetic or divine inſtruction, which were indulged to the Jewiſh church: the firſt and moſt excellent was, the ſpirit of prophecy, properly ſo called, as it was given to Moſes and the ſucceeding prophets. 2. The holy ſpirit. 3. Urim and thummim. 4. *Bath-kol* [a], which, Grotius [b] ſays, was the ſole oracle which remained to them during the time of the ſecond temple.—[[a] *Druſ.* in Matt. iii. 17. [b] *Grot.* in Joh. xii. 28. ap. *Middleton's* Examinat. of the Biſhop of London's Diſcourſes, p. 50.]

BATHING, the act of uſing or applying a bath; that is, of immerging the body, or part of it, in water, or other fluid. See BATH.

Bathing, on a religious account, is more properly called ablution, or baptiſm. See ABLUTION, BAPTISM, *Cycl.* and *Suppl.*

Bathing is a practice of great antiquity. The Greeks, as early as the heroic age, are ſaid to have bathed themſelves in the ſea, in rivers, *&c.* We even find mention in Homer of hot baths in the Trojan times; but theſe ſeem to have been very rare, and only uſed on extraordinary occaſions. Athenæus ſpeaks of hot baths as unuſual even in his age. In reality, public baths appear to have been diſcouraged, and even prohibited, by the antient Greeks, who were contented to waſh themſelves at home in a ſort of *bathing* tubs. Vid. *Pott.* Archæol. T. 2. l. 4. c. 19. p. 371, ſeq.

The method of *bathing* among the antient Greeks was, by heating water in a large veſſel with three feet, and thence pouring it on the head and ſhoulders of the perſon, ſeated in a tub for that purpoſe, who, at coming out, was anointed with oil. *Burette*, in Hiſt. Acad. Inſcr. T. 1. p. 117.

The Romans were alſo long ere they came into the uſe of baths, the very name of which, *thermæ*, ſhews they borrowed it from the Greeks. As the antient Romans were chiefly employed in agriculture, their cuſtom was, every evening, after work, to waſh their arms and legs, that they might ſit down to ſupper with more decency: for it is to be obſerved, the uſe of linnen was then unknown, and the people of that age went with their arms and legs bare, and conſequently expoſed to duſt and filth [a]. But this was not all; for every ninth day, when they repaired to the city, either to the nundinæ, or to attend at the aſſemblies of the people, they bathed all over in the Tiber, or ſome other river which happened to be neareſt them [b]. This ſeems to have been all the *bathing* known till the time of Pompey, when the cuſtom began of *bathing* every day.—[[a] *Mercurial.* de Art. Gymnaſt. l. 1. c. 10. [b] L'Abbé *Couture*, in Mem. Acad. Inſcr. T. 2. p. 414.]

The Celtic nations were not without the uſe of *bathing*: the antient Germans bathed every day in winter in warm water, and in ſummer in cold. This is what Tacitus ſeems to ſuggeſt, *ſtatim e ſomno — lavantur, ſæpius calida, ut apud quos plurimum hiems occupat.* De Mor. Germ. c. 22.

In England, the famous bath in Somerſetſhire is by ſome aſſerted to have been in uſe 800 years before Chriſt [c]. Of this, it muſt be owned, we have but ſlender evidence: however, Dr. Muſgrave makes it probable it was a place of conſiderable reſort in Geta's time, there being ſtill the remains of a ſtatue erected to that general, in gratitude for ſome benefactions he had conferred on it [d].—[[c] Vid. Phil. Tranſ. N° 49. p. 978. [d] It. N° 346. p. 386.]

Bathing, among the antients, made a part of diet, and was uſed as familiarly as eating, or ſleep: on which footing it ſtill remains among the Turks, where there are public baths in every town, and even village [e]. But among us, it is become only a part of medicine, and rarely practiſed but under the direction of phyſicians [f]. Great diſtinction is now made between thoſe who are fit, and thoſe unfit, to undergo the operation, and many rules and preſcriptions given for the more ſucceſsful uſe thereof: the body is to be prepared beforehand, in ſome caſes by evacuants, in others by reſolvents, in ſome by venæſection, *&c.* During the courſe, it is to be kept open and ſoluble by gentle laxatives, eſpecially Epſom ſalt [g]. The beſt time for uſing the bath is in the morning, nature having then a tendency to excretion by ſweat. At coming out, the cold air is to be avoided, and the patient to be put to bed, in order to procure the evacuation by ſweat [h]. — [e *Tournef.* Voyag. Lett. 14. p. 496. [f] *Bacon*, Nat. Hiſt. Cent. 8. §. 740. [g] *Nent.* Fund. Med. T. 1. P. 1. p. 274. It. P. 2. p. 316. [h] *Nent.* lib. cit. p. 274.]

Bathing is either cold, or hot, or warm, ſimple, or mixed, according to the temperature and conditions of the fluids.

Bathing in waters too hot, heats and expands the blood and humors to exceſs; whence palpitations of the heart, pains in the head, faintneſs, *&c.* The miſchief is ſtill greater if the body be full of blood, or turged with ill juices. *Hoffm.* on Min. Wat. §. 27. p. 133.

The waters uſed for *bathing* are either pure and ſimple, or ſuch as abound with heterogeneous parts of different kinds. Thoſe fitteſt for medicinal purpoſes are, the pureſt, lighteſt, ſimpleſt, and free from all participation of mineral or metallic parts. Such a kind of water is that of rain, collected in the free and open air, remote from large towns; or that of rivers, eſpecially after the land floods come down into them; or that of ſome ſprings, which afford a very ſubtile, pure, and light water, extremely proper both for internal and external uſe.

But as ſuch ſoft and ſubtile waters are not every where to be found, nor rivers at hand in all places, a neceſſity frequently occurs of correcting and ſoftening the common waters, to fit them for medicinal uſe. This is moſt advantageouſly performed by a ſmall addition of fixed alkaline ſalt, or by the uſe of bran, common camomile, both the herb and its flowers, linſeed, peaſe-ſtraw, or oatmeal: all which have the power of taking off the hardneſs of waters, or rendering them ſoft and thin, ſo as to make them more eaſily enter the ſolid parts of the body. *Hoffm.* lib. cit. p. 179.

Bathing is not to be practiſed without great care and precaution in melancholic [i], oedematous [k], or paralytic caſes [l]. As to the phthiſis, authors are divided: ſome abſolutely reject the uſe of baths for them; others allow it, provided the water be only of a moderate degree of warmth, and the body be prepared beforehand by laxatives and venæſection [m]. With theſe precautions, it may even be allowed child-bearing women juſt before delivery [n]. — [i *Nent.* lib. cit. T. 2. P. 3. p. 796. [k] *Junck.* Conſp. Med. p. 411. *Nent.* lib. cit. p. 284. [l] Idem, ibid. p. 442. [m] *Junck.* lib. cit. p. 171. *Nent.* T. 1. P. 2. p. 382. [n] *Junck.* p. 713.]

Different *baths* have different effects, according to the ingredients of their waters: thoſe of the vitriolic kind are ſaid to fix the morbific matter in arthritic diſorders, and render them ſtill more obſtinate. They are alſo leſs proper where the body is foul, and the viſcera weak or obſtructed, being apt to render ſuch patients hydropic. *Nent.* lib. cit. p. 373.

Sulphureous and aluminous *baths* are commended againſt an incontinency of urine [o]; but prove hurtful to cachectic habits [p]. The hot *baths* at Wolkenſtein are ſaid to give the itch [q]. — [o *Nent.* lib. cit. T. 2. P. 3. p. 107. [p] *Junck.* p. 421. [q] Id. p. 458.]

The Caroline baths have this quality beyond other hot waters, that they do not ſoften the body, but rather, by reaſon of the copious earthy and aſtringent matter they contain, bind up the parts, ſtrengthen thoſe which are weak, block up the pores, and thus produce a contrary effect to other hot ſprings. *Hoffm.* on Min. Wat. ſect. 3. §. 25. p. 131.

Hence they are prejudicial to people of a tender and delicate habit, where the body is foul, or affected with ſpaſmodic, hypocondriac, or colic diſorders, and in many other caſes. They are of uſe where the limbs are to be ſtrengthened, the ligaments and tendons to be gently excited to motion, and the body to be dried. *Wedel.* Amæn. Mat. Med. l. 1. §. 3. c. 11.

The uſefulneſs and miſchievouſneſs of *bathing* makes a complicated conſideration, only to be decided by taking the nation, climate, habit, the time of the day, ſeaſon of the year, diſorder, *&c.* of the perſon, and the particular qualities and ingredients of the water into conſideration.

In general, hot or warm *bathing* tends to relax the ſkin, promote perſpiration, cleanſe the body, dilute the blood, and carry off cuticular foulneſſes by the pores. To conceive the manner of its operation, it is to be obſerved, that when the body is plunged in a pure, light, and ſimple warm water, it muſt neceſſarily undergo the following changes:

1°. The heat neceſſarily rarifies and expands the blood and all the juices, and thus dilates the whole ſyſtem of the veſſels; the conſequence of which is, that the pulſe, or contractive ſtroke of the arteries, increaſes; whence the blood circulates with greater force, and the external parts of the body become red, and begin to ſweat.

2°. By the gravity of the water, the body, plunged therein, is greatly altered; as its ſurface, in that caſe, ſuſtains a violent preſſure, which ſqueezes the blood forcibly in upon the viſcera. Thus, whilſt the veſſels are compreſſed from without, and dilated from within, the inteſtine motion of the conſtituent parts of the blood is increaſed, and conſequently the viſcid juices are thus diſſolved, obſtructions overcome, and the humors the better fitted to paſs through all the ſecretory and excretory ducts.

Thence, as by the water's gravity the parts are compreſſed from without, and the blood driven plentifully upon the heart, the lungs, the brain, and the larger veſſels, we ſee why, if the bath be too hot, it cauſes palpitations of the heart, oppreſſions in the viſcera, or ſometimes fainting; and again, why, when the body is foul, or full of bad juices, it produces continued fevers, or inveterate intermittents, if the firſt paſſages abound with crudities. Theſe ill effects are more frequently obſerved from the hot ſprings, which have alſo an aſtringent quality, as the violently hot Caroline ſpring evidently has.

3°. Another change enſues upon the body from the moiſture of the bath, which, aſſiſted with a temperate heat, procures a great ſuppleneſs to the ſkin and fibres; inſomuch that, upon coming out of the water, the whole habit of the body ſwells conſiderably, is looſened in its texture, and opened in its pores and veſſels; whilſt the blood and juices have a more free paſſage to the ſurface. Hence it is, that if a perſon go directly out of the warm bath to bed, he preſently begins to ſweat plentifully, which is the beſt effect that can proceed from *bathing*, and of great ſervice in the cure of diſeaſes.

It is queſtioned by ſome, whether warm *bathing* can be ſerviceable in diſorders of the internal and remote parts of the head, breaſt, and lower part of the belly. Hoffman aſſerts the affirmative, on the footing both of reaſon and experience; for as warm *bathing* of the feet is of great uſe in internal diſeaſes, ſuch as the head-ach, vertigo, convulſive aſthma, dry cough, hypochondriacal and hyſterical diſorders, palpitations of the heart, *&c.* it may reaſonably be expected, that *bathing* more parts of the body in pure warm water may be attended with greater ſucceſs; and, in fact, we find the greateſt uſe of warm *bathing* in thoſe diſtempers, where, by a violent contraction of the membranous parts, the blood is thrown upon others; and both the blood and juices are prevented from coming to the ſurface of the body, and driven back upon the viſcera, which is indicated when the extremities of the body are cold and ſhrunk, the belly coſtive, the skin dry, and inſenſible perſpiration and ſweat obſtructed; for in this caſe, the habit of the body being relaxed, its texture opened, and the finer veſſels expanded, the blood not only freely circulates on the ſurface of the body, but the perſpiration of the skin is reſtored, and a great quantity of impurities made to paſs through that widened ſtrainer: and hence there is ſcarce a more immediate and aſſured remedy for removing impurities, and cleanſing the juices, than warm *bathing* properly uſed, as it ſo ſucceſsfully carries off all corroſive matters, which being ſeated deep in the nervous and membranous parts of the body, occaſion pain, ſpaſms, or even exulcerations, and diſcharges them at the open pores, or fine net of the skin. *Hoffm.* Exper. on Min. Wat. §. 6. p. 178—183, ſeq.

Bathing is found more eſpecially beneficial to thoſe of a moiſt habit, and who have ſtore of humors in their veſſels and pores, as it colliquates the humors, and promotes their diſcharge. *Nent.* Fund. Med. p. 373.

In the ſummer it ſerves to cleanſe the skin from ſweat, and keep the pores open; in winter to promote perſpiration [r]. It is uſed with good effect in many chronic diſorders, in atrophies, the ſtone [s], *&c.* It is a good palliative in the coryza [t]; but uſeleſs in the jaundice [u], and hurtful in the aſcites [w] and ſciatica [x], and generally to all in a time of plague [y]. By its promoting perſpiration, it becomes noxious to perſons of a dry conſtitution, as it exſiccates too faſt; more eſpecially to perſons hectically inclined, as by means thereof the humors, already too prone to colliquation, are ſtill more reſolved [z]. — [r *Burggrave*, Lex. Med. p. 1424. [s] *Junck.* l. c. p. 544, 216 & 230. [t] Id. p. 503. [u] Id. p. 446. [w] *Nent.* Fund. Med. T. 2. P. 3. p. 256. *Junck.* p. 432. [x] *Nent.* T. 1. P. 2. p. 190. [y] *Teichmey.* Inſt. Med. Leg. c. 19. queſt. 5. p. 160. [z] *Nent.* Fund. Med. T. 1. Tab. 4. p. 373, ſeq.]

Cold *bathing* was in high eſteem among the antient phyſicians for the cure of diſeaſes, as appears from Strabo [a], Pliny [b], Hippocrates [c], and Oribaſius [d]. Whence frequent exhortations to waſhing in the ſea, and plunging into cold water. — [a In Geograph. l. 65. [b] *Plin.* Hiſt. Nat. l. 29. c. 1. [c] De Humidor. Uſu. [d] L. 6. c. 27.]

The cold bath was uſed with ſucceſs by Ant. Muſa, phyſician of the emperor Auguſtus, for the recovery of that prince; but fell into neglect after the death of Marcellus, which is ſaid to have been owing to the improper uſe hereof: but it was brought into requeſt again towards the cloſe of the empire of Nero, by means of a phyſician of Marſeilles, named Charmis. During the ignorance of the ſucceeding ages, the practice was again baniſhed a long time. *Burette*, Hiſt. Acad. Inſcr. T. 1. p. 122.

Hot *bathing* firſt, and then uſing the cold bath immediately afterwards, is ſaid to be good for the ſcurvy, at leaſt for that kind ſo common in cold countries. This is confirmed by the practice of the Ruſſians, and other northern nations. See SCURVY.

In violent pains, hot and cold *bathing* produce the ſame effects, and in the ſame way, in one reſpect, *viz.* aſſuaging the pain, by taking off the attention from it. When one is much pained, withdrawing the action of the nerves correſponding to the affected part, employing many nerves, or ſome of them violently, another way, will ſeldom fail of giving eaſe. One pain is often a cure for another. Applying garlic to a diſtant part, burning, and bliſtering, cure all in this way. Med. Eſſ. Abr. Vol. 1. p. 248.

The efficacy of hot and cold *bathing* is acknowledged in many caſes. How they act, ſeems a queſtion not yet fully decided in the writings of phyſicians.

Some, to account for the effects of cold *bathing*, have had recourſe to the additional preſſure on our bodies by the preſſure of the circumambient fluid. (See BATH, *Cycl.*) But conſidering that this preſſure is rarely $\frac{1}{13}$, and in many caſes of domeſtic *bathing* in a tub not $\frac{1}{30}$ of the preſſure of the atmoſphere, and conſidering alſo how little time people remain in a cold bath, the additional preſſure ſeems a cauſe very inadequate to its great effects. The contraction of the fibres cauſed by the ſtimulus of cold, ſeems a much more rational account of the matter.

It ſeems not very uncommon in medical writers to confound hot and warm *bathing* as one and the ſame intention, only differing in degree. But by ſome experiments, we have ſeen, in relaxations from old ſprains, the effects of warm and hot *bathing* ſeem diametrically oppoſite; the firſt relaxing, and increaſing the diſorder; the latter ſtrengthening, and ſometimes healing radically. By hot *bathing*, in this caſe, is to be underſtood water heated to a degree as to give pain. Nor is this difficult to be accounted for, if we conſider, that pain acting as a ſtimulus, ſtrongly contracts the parts; whereas water of an agreeable warmth relaxes, both by its warmth and moiſture.

It is therefore an inquiry worth making, what degrees of heat in baths are ſuited to different diſtempers and conſtitutions; for to preſcribe warm and hot *bathing* indiſcriminately, is like directing laxatives or aſtringents for one and the ſame caſe.

Warm *bathing*, by adding to the heat of the blood, raiſes a temporary fever, and by that means may have great efficacy in the cure of ſeveral diſorders, as well as by the increaſed perſpiration it occaſions. See PEDILUVIUM.

BATHING *a hawk or falcon* is, when being weaned from her ramage fooleries, and alſo hired, rewarded, and throughly reclaimed, ſhe is offered ſome water to bathe herſelf in, in a baſon, where ſhe may ſtand up to the thighs, chooſing a temperate clear day for that purpoſe. By the uſe of *bathing* ſhe gains ſtrength, with a ſharp appetite, and ſo grows bold. Vid. *Hought.* Collect. T. 3. p. 358. Dict. Ruſtic. T. 1. in voc.

BATHING, among the Copts and Ethiopians, denotes the day of Chriſt's baptiſm, reputed the 6th of January; when, from an opinion of an extraordinary ſanctity in the waters on that day, they not only, by antient cuſtom, baptized their catechumens, but themſelves are all baptized anew.

The water of this day they carry home to keep; and Chryſoſtom aſſures us, that it had often been known to remain ſweet, uncorrupted, for two or three years. Orat. 74. Vid. *Seld.* de Syned. P. 3. c. 15. *Schm.* p. 82, ſeq.

BATHING-*Tub*, in the Roman baths. There were two kinds of *bathing*-tubs, the one fixed, and the other moveable: among the latter, ſome were contrived on purpoſe to be ſuſpended in the air, whereby, to the pleaſure of *bathing*, was added that of being ſwung or rocked, by the motion given to the *bathing*-tub. *Burette*, in Hiſt. Acad. Inſcript. T. 1. p. 123.

BATHRUM, βαθρον, a name given by antient ſurgeons to a kind of ſtool or bench proper for the reduction of diſlocated bones.

This is alſo called βαθρον Ἱπποκρατειον, or the Hippocratic ſtool. *Galen*, 1. de Artic.

Its deſcription and uſe are repreſented at large by Scultetus. Armam. Chirurg. P. 1. tab. 23. fig. 5. & tab. 46, 47, & 50. *Caſt.* Lex. Med. p. 101. a.

BATHYCHRUS *Color*, in painting, a term uſed by the Greeks to expreſs what the Romans call *auſterus color*. Such a colour was coarſe and dull, and wanted the life of the florid colours. See the articles FLORID, EVANTHUS, and AUSTERUS.

BATILLUS, a muſical inſtrument made of metal, in the form of a ſtaff, furniſhed with metalline rings, which being ſtruck, yielded a kind of harmonical ſounds, uſed by the Armenians in their church ſervice. Vid. *Hoffm.* Lex. Univ. in voc.

BATIS, in botany, a name by which Pliny and ſome other authors call the ſea-plant, which we know by the name of ſamphire, and eat as a pickle. *Ger.* emac. Ind. 2.

BATIS, in ichthyology, a name given by ſome old writers to the female skaite, or flaire. They called the male *batos*. See the articles BATOS and RAIA.

BATISTE, in commerce, a fine white kind of linnen-cloth, manufactured in divers parts of the Spaniſh Netherlands.—There are three kinds of *batiſte*; the firſt very thin; the ſecond leſs thin; and the third much thicker, called holland *batiſte*, as coming very near the goodneſs of hollands.

The chief uſe of *batiſte* is for neck-cloths, head-cloths, ſurplices, &c. *Savar.* Dict. Comm. p. 302, ſeq.

BATMAN, a weight in Turky conſiſting of ſix okes. Forty of theſe *batmans* make a camel's load, and amount to about ſeven hundred and twenty pounds Engliſh weight. *Pocock*'s Egypt, p. 175.

Batman, or *Battemant*, is a weight uſed in Turky and Perſia. The Turkiſh *batman* is of two kinds; the larger containing ſix *okes*, or *ocquos*, at three pounds three quarters Paris weight the *ocquo*; ſo that the *batman* amounts to about twenty-two Paris pounds and an half; the ſmaller, compoſed likewiſe of ſix *ocquos*, at fifteen ounces the *ocquo*, amounting to five pounds ten ounces.

The Perſian *batman* is likewiſe of two kinds; one called the *king's weight*, *batman de chahi*, or *cheray*, uſed for weighing moſt of the neceſſaries of life, equivalent to about twelve pounds and an half Paris weight; the other called *batman of Tauris*, equal to ſix pounds four ounces Paris or Amſterdam weight. *Savar.* Dict. Comm. p. 303, ſeq.

Theſe, at leaſt, are the proportions given by Tavernier. Chardin rates the Perſian *batmans* ſomewhat lower, *viz.* the former at twelve pounds twelve ounces; and the latter at five pounds fourteen ounces.

BATON, in botany, a name by which ſome authors call the true turpentine-tree. *Ger.* emac. Ind. 2.

BATOONS *of St. Paul*, BASTONCINI *di San Paolo*, in natural hiſtory, a name given by ſome of the Italian writers, as Aguſtino, Scilla, and others, to the *lapides judaici*, or other ſpines of echini. Theſe are found in vaſt abundance in the iſland of Malta, and as every thing there is commemorated with ſome title, with St. Paul at the end of it, theſe are called *baculi Sti. Pauli*, or *St. Paul's batoons*.

BATOS, in ichthyology, the name given by Ariſtotle, and all the old writers, to the skaite, or flaire. They have generally called the male *batos*, and the female *batis*. It is a ſpecies of the *raja*, and is diſtinguiſhed by Artedi, by the name of the variegated ray, with the middle of the back ſmooth, and with one row of ſpines on the tail. Albertus calls it the *rayte*, and *rubus*. See the article RAIA.

BATRACHIAS *Lapis*, the *frog-ſtone*, a name applied by different writers to two very different ſubſtances; ſome underſtanding by it lumps of common flint, which have accidentally formed themſelves into this figure; and others thoſe pieces of amber, which contain either a whole frog, or any part of one. See BATRACHITES, *Cycl.* and *Suppl.*

BATRACHITES (*Cycl.*)—Pliny ſpeaks of three ſtones under this denomination; *unam ranæ ſimilem colore, alteram ebori*, (or rather, according to Hardouin's correction, *ebeni*) *tertiam rubentis e nigro.*

The *batrachites* differed from the modern bufonites, which does not appear to have been known to the antients. *Mercat.* Metalloth. arm. 8. c. 8. p. 185. See BUFONITES.

BATRACHOMYOMACHIA (*Cycl.*)—Suidas [a] and Plutarch aſcribe this poem to one Pigres, a brother of Artemiſia; and Proclus, Euſtathius, and the anonymous author of Homer's life, publiſhed by Allatius, leave the matter in doubt. Heinſius and others reject the piece as ſpurious, and unworthy of the prince of poets [b]: yet Geddi ſcruples not to aſſert, that the *batrachomyomachia* is preferable, and comes nearer to perfection, than either the Iliad or Odyſſey, excelling them both in judgment as well as genius [c].—[[a] *Suid.* Lex. T. 3. p. 112. [b] Vid. *Fabric.* Bibl. Græc. l. 2. c. 1. §. 1. [c] *Geddi*, de Script. non Eccleſ. p. 208.]

Several authors have compoſed pieces in imitation of the *batrachomyomachia*; ſuch is the Moſchæa by Merlin Cocæus of Mantua, written in elegiac Latin verſe, deſcribing the war of the flies and the ants: ſuch is alſo the galeomyomachia, or the battle of the cat and the mice, in Greek iambics, publiſhed in 1549, together with the *batrachomyomachia*; and the three books of Elyſias Calentinus on the war between the frogs and the mice [d]. Van der Hardt has publiſhed a work under the title of βαλραχομυομαχια, wherein he endeavours to ſhew, that Homer's poem is a ſymbolical deſcription of the war between the Trachinii and Myonenſes [e]. The ſeveral editions and verſions of the *batrachomyomachia* are recited by Fabricius [f].—[[d] *Fabric.* loc. cit. §. 2. [e] *Reim.* Catal. Bibl. Theol. p. 751. [f] *Fabric.* Bibl. Græc. l. 2. c 1. §. 3.]

BATRACHOSALIAS, in ichthyology, a name given by many of the Greek authors to the lophius, or rana piſcatrix, of authors. See the article LOPHIUS.

BATTALIA, an army ranged in order of battle, or ready for engagement. Vid. *Aquin.* Lex. Milit. T. 1. p. 119. Milit. Inſtr. for Cavalry, P. 1. c. 32.

The word ſeems formed from the Latin *batualia*, ſometimes alſo written *batalia*, denoting a ſort of military or gladiatorial exerciſe, as fighting with foils, or tilting at a poſt. Vid. *Piſc.* Lex. Ant. T. 1. p. 268. b.

In this ſenſe, we meet with the depth of a *battalia*; to march in *battalia*, with the bagagge in the middle; to break the *battalia*, &c. In the Roman *battalia*, the haſtati made the front. *Richel.* Dict. T. 1. p. 186. a. See HASTATI.

BATTALION (*Cycl.*)—M. de Folard decries the modern method of ranging *battalions* ſo ſhallow, which renders them weak, and unable to ſupport each other; ſo that they are eaſily penetrated or broken: an eſſential fault in the modern tactics. The real ſtrength of a corps, according to this author, conſiſts in its thickneſs, or the depth of its files, and their connection and cloſeneſs. This depth renders the flanks almoſt as ſtrong as the front. He adds, that it may be laid down as a maxim, that every *battalion* ranged deep, and with a ſmall front, will beat another ſtronger than itſelf, ranged according to the uſual method. *Folard*, Polyb. T. 1. p. 7. *Richel.* Dict. T. 1. p. 186. a.

But this opinion of Folard has not been adopted in modern practice; and his theory has been vigorouſly attacked by two French officers in the ſervice of the States General. They admit the ſuperior ſtrength of his column to that of a modern *battalion*, if the action were to be decided with pikes and ſwords; but where fire-arms muſt be uſed, Mr. Follard's column is ſo very ill diſpoſed for this purpoſe, that it muſt infallibly be deſtroyed.

Battalions, when they engage, are drawn up three deep only, and not ſix deep, as is ſaid in the *Cyclopædia*.

Square BATTALION is that, where the number of men in file is equal to the number of men in rank.

Mr. Folard ſhews at large, in his book *de la Colonne*, the weakneſs of the ſquare *battalion*. Both the full and the hollow ſquare, according to him, are equally bad. *Richel.* loc. cit.

Doubling a BATTALION is a motion of the ſoldiers, whereby two ranks, or two files, are put into one. *Ozan.* Dict. Math. p. 605.

BATTERY (*Cycl.*) is ſometimes uſed in ſpeaking of the fabric of metalline utenſils.

In this ſenſe, *battery* works include pots, ſaucepans, kettles, and the like veſſels, which, tho' caſt at firſt, are to be afterwards hammered or beaten into form. Compl. Engl. Trad. T. 2. p. 64.

Some make *battery* for the kitchin, *batterie de cuiſine*, comprehend all utenſils for the ſervice of the kitchin, whether of iron, braſs, copper, or other matters. Others take the term in a narrower ſenſe, and reſtrain it to utenſils of braſs or copper. *Savar.* Dict. Comm. T. 1. p. 306.

A ſociety for the mineral and *battery* work of England was incorporated by queen Elizabeth, to whom ſhe granted all mines, minerals, and ſubterraneous treaſures, except copperas and allum, in all parts of England not mentioned in the patent of the ſociety of the mines royal. This ſociety has a governor, court of aſſiſtants, and other officers, who are the ſame as thoſe for the mines royal, with whom they are now aſſociated. Vid. *Pettus*, Fodin. Regal. P. 1. c. 17. p. 21, ſeq.

BATTIFOLIUM, or BATTIFOLLUM, a kind of tower or defence, frequently mentioned by Latin hiſtorians of the middle age. It ſeems to have been of wood, and to have been erected on ſudden and haſty occaſions. *Aquin.* Lex. Milit. T. 1: p. 120. a.

BATTLE (*Cycl.*)—The word is alſo written *battel*, *battell*, and *battail* [a]. It is formed from the French *battaille*, of the Latin verb *battuere*, to fence, or exerciſe with arms: whence *batualia*, and *batalia*, which properly denoted the action or exerciſe of thoſe who learned to fence, and who were hence alſo denominated *batuatores* [b].—[[a] *Skin.* Etym. in voc. [b] *Caſeneuv.* Orig. p. 21. b. *Menag.* Orig. Franc. p. 84. a. *Fabric.* Theſ. p. 342.

Battle is alſo called by divers other names, as fight, and combat; by the Latins *prælium*, *pugna*, and *campus*; by the Italians *giornata*, and the French *journée*, q. d. day or day's work. Vid. *Du Cange*, Gloſſ. Lat. T. 1. p. 728.

Some diſtinguiſh a *battle* from a combat, as the former is premeditated, and done with preparation; the latter is frequently occaſional, or unforeſeen. *Aubert.* ap. *Richel.* Dict. T. 1. p. 185. c.

Battle differs from attack, as the Roman *pugna* differs from *prælium*, i. e. as a whole from a part, there being frequently many attacks or *prælia* in one *pugna* or *battle*. *Aquin.* Lex Milit. T. 2. p. 182. b. in voc. *Prælium*.

Battle differs from ſkirmiſh both in extent and duration; a *battle*, properly ſo called, laſting ſeveral hours, ſometimes days. Bonfinius ſpeaks of a *battle* between the Turks and Hungarians, under the command of Amurath and Corvinus, which laſted three days. The *battle* between the Goths under king Roderic, and the Moors under count Julian, is ſaid to have laſted eight days; but it appears that ſeven of them were rather ſpent in ſkirmiſhing. *Marian.* de Reb. Hiſp. l. 6. c. 23.

Drawing up an army for BATTLE is called *embattelling*; the rules and method for which are furniſhed by the ſcience called by the antients *tactics*.

Order of BATTLE, the diſpoſition of the ſquadrons and battalions of an army in one or more lines, according to the conditions of the ground. *Ozan.* Dict. Math. p. 604.

Field of BATTLE, the ground on which the two armies engage.

The Greeks notified the places of their *battles* and victories by adding the word NIKH; whence Nicomedia, Nicopolis, Theſſalonica, *&c.* The antient Britons did the like, by adding the word *Mais*; whence Maiſſeveth, Malmaiſbury, *&c.* The Engliſh by the word *field*.

The Romans had their particular days, called *prælliares dies*, wherein alone it was lawful to join *battle*; and others wherein it was unlawful, called *dies atri*.

The Athenians, by the antient laws of their country, were not to draw out their forces for *battle* till after the ſeventh day of the month. And Lucian relates of the Lacedæmonians, that, by the laws of Lycurgus, they were not to fight before full-moon. Among the Germans, it was reputed an impiety to fight in the wane of the moon; and Cæſar tell us, that Arioviſtus was beaten by him, becauſe, contrary to the laws of his country, he had fought when the moon was in her wane. The German ſoldiers were intimidated with the apprehenſion, and afforded Cæſar an eaſy victory; *acie commiſſa impeditos religione hoſtes vicit.* De bell. Gallic. l. 2.

It is well known that Jeruſalem was taken by Pompey in an attack on the ſabbath-day, when, by the Jewiſh ſuperſtitious notions, they were not allowed to fight, or even defend themſelves. *Dion.* l. 7.

The Romans did not carry their ſuperſtition ſo far; their *atri dies* were only obſerved in reſpect of attacking: no day was too holy for them to defend themſelves in. *Macrob.* Saturn. l. 1. c. 16. *Aquin.* Lex. Milit. T. 2. p. 182, ſeq.

Among the antients, we find frequent inſtances of *battles* in the night: it was by the moon-light that Pompey beat Mithridates, and Scipio, Aſdrubal and Syphax. *Flor.* l. 3. *Appian.* de Bell. Punic. *Aquin.* Lex. Milit. T. 2. p. 213, ſeq.

BATTLE *array* denotes the order in which an army is drawn up at a review, or for engagement; more frequently called *line of battle*. *Guill.* Gent. Dict. P. 2.

Pitched or ſet BATTLE, that wherein both armies have room and time to range themſelves in good order.

The firſt pitched *battle*, of which we have any diſtinct account, is that between Croeſus and Cyrus, deſcribed by Xenophon [a], concerning which we have a diſſertation expreſs by M. Freret [b], wherein ſeveral points of the antient tactics are well explained.—[[a] *Cyropæd.* l. 6 & 7. [b] Mem. Acad. Inſcrip. T. 9. p. 209.]

In the modern war, we find few pitched or ſet *battles*: the chief view of the great commanders of late days is rather to haraſs or ſtarve the enemy by frequent alarms, cutting off his proviſions, carrying off his baggage, ſeizing his poſts, *&c.* than to join iſſue with him, and put the whole on the event of one day; a *battle* generally deciding the fate of a campaign, ſometimes of a whole war. Hence it is a rule, never to venture a general *battle*, unleſs either you fight to advantage, or be forced to it. *Macchiav.* Art. de la Guer. l. 4. c. 5. p 214.

Joining or giving *battle* ſhould always be by deſign: a general ſhould never ſuffer himſelf to be forced to fight. All the meaſures, movements, encampments, he makes, are to lead to the execution of his great deſign, which is to fight to advantage, till, by ſome miſtake of the enemy, he at length find the favourable opportunity. 'Tis in this that a ſuperior genius will at length prevail over an inferior: in the courſe of a campaign, he will take a number of advantages over him, which, together, are equivalent to a *battle*, the event of which is ever doubtful. *Feuguires*, Mem. de la Guer. §. 58. p. 244, ſeq.

The antients never joined *battle* without much ceremony and preparation; as taking auguries, offering ſacrifices, haranguing the ſoldiers, giving the word, or a *teſſera*, &c. The ſignals of *battle* were ſounding the *claſſicum*, or general charge, and diſplaying a peculiar flag, called by Plutarch a purple robe [c]. To which may be added, ſinging pæans, raiſing military ſhouts, and the like [d].—[[c] Vid. *Pott.* Archæol. l. 3. c. 9. *Kenn.* Rom. Ant. p. 209. *Aquin.* Lex. Milit. T. 2. p. 211. in voc. *pugna*. *Cruſo*, Milit. Inſt. P. 4. c. 9. p. 50. [d] *Veget.* l. 3. c. 71.]

Reaſons for giving a *battle* are, ſuperiority in the number or quality of forces; neceſſity of putting a ſpeedy end to the war; different views or intereſts of the commanders of the enemies army; their negligence in encamping or marching; neceſſity of relieving a place beſieged; the diſpoſition of an army, which muſt be ruined, unleſs prevented by the ſucceſs of a *battle*; the certainty of ſuccours coming to the enemy, which will render him ſuperior; ſome preceding advantage, which, tho' not deciſive, has given the enemy a conſiderable check. For avoiding it are, having leſs to hope for from a victory, than to fear from a defeat; expecting further ſuccours, or the junction of a ſeparate corps; finding the enemy advantageouſly poſted, or a proſpect of diſſipating his army by temporizing and avoiding *battle*. Means for execution are, to form the order of *battle* ſuitable to the quantity and quality of the forces whereof the army is compoſed, and the ground wherein it is expected to find the enemy; diſtributing the poſts to the general officers; giving copies of the order of *battle* to all thoſe who have command in it; diſtributing a ſufficient number of charges to the men, and having freſh munition and arms ready behind thoſe who have a long fire to ſuſtain; letting the army have time to reſt and refreſh themſelves before the *battle*; being ſufficiently provided with medicines and ſurgeons; being abſolutely free from the incumbrance of the heavy baggage; inſpiring the army with the deſire of fighting, hopes of victory, and promiſes of plunder; and not neglecting the advantages of wind and ſun. The ſtratagem of the Arabs deſerves mention. They uſed to turn looſe a number of camels loaden with ſand and duſt-bags full of holes to the windward of the enemy, who

by this means are covered and ſuffocated with a cloud of duſt. Vid. Phil. Tranſ. N° 219. p. 137.

On the day of *battle*, taking the advantages of the ground, obſerving the order of *battle* before concerted, changing it where found neceſſary, and giving notice thereof to thoſe concerned; diſtributing the artillery in the line according to the ground; watching for all advantages to be taken, by opening and ſtrengthening the wings; giving the word before marching to the enemy; taking care to obſerve the right and left, and the diſtance between the lines. If the army march in front, to make frequent halts, to give time for the line to recover its order, and to the artillery to fire and load again; above all, forbidding the ſoldiers from firing, to receive the enemies fire, and not to charge till after drawing their fire from them, is a capital point, it being certain, that when troops, who have parted with their fire, ſee others advance, and going to pour in their fire upon them, they will immediately give way. But when both ſides purſue the ſame maxim, the beſt expedient ſeems to be, to march up cloſe to the enemy, ere they give their fire, and having fired, prevent the enemy from giving his, by falling upon them with the bayonets on the muzzle of the muſkets the inſtant you have fired, which may be done under cover of the ſmoke, before they can perceive it. *Bland*, Milit. Diſcipl. c. 9. art. 2. p. 133, ſeq.

If the army, by its march, cannot come at the enemy in front, it muſt approach in a ſufficient number of columns to be in order of *battle*, out of diſtance of being charged in columns. The general officers who command the columns, are carefully to obſerve each other, that at leaſt their head make a front, and that, when arrived on the ground where the army may open itſelf, this movement be made with care and expedition, and out of reach of being charged by the enemy before the whole army is in order. The general is to be poſted where he may beſt ſee the effect of the firſt charge, that he may give orders for ſuſtaining the troops who have beaten, as well as to replace thoſe who are beaten; in order to which, he is to make uſe of the troops poſted between the lines, or thoſe of the body of reſerve. The *battle* growing hot, and the ſucceſs divided, the general is to make his chief effort againſt that part, where the enemy makes the ſtrongeſt reſiſtance; in which caſe, he is to repair thither himſelf, to animate the men by his preſence. If he be equally ſucceſsful through the whole firſt line, and have defeated that of the enemy, the chief care of the general officers is, to keep the troops together, and prevent their ſeparating and following the fugitives, except by bodies detached on purpoſe, from the battalions and ſquadrons; to march on ſlowly with the whole firſt line to ſuſtain thoſe who are detached, and to charge in front, and in order of *battle*, the ſecond line.

The artillery is ſtill to accompany the firſt line in the order wherein it was firſt diſtributed, if the ground will allow, and the reſt of the army to follow this motion, ſtill obſerving the diſtance between the two lines as at firſt appointed, to prevent confuſion. If the victory continue to declare in his favour, and he has the good fortune to overthrow the ſecond line, more care ſtill is to be taken to prevent the troops from ſeparating, leſt they be charged and put in diſorder by the firſt line of the enemy, who may have rallied behind their ſecond line. The routed troops muſt ſtill be purſued in a body, and in lines. No battalion ought ever to advance before the line in purſuit, for fear of being flanked, till the diſorder be general: afterwards, the number of thoſe detached for the purſuit is to be increaſed, without ever ſuffering a man to quit his flag without being commanded. On this occaſion, the general is to make uſe of the reſerved body, and of freſh troops, who have not engaged, to purſue the enemy, to prevent their rallying, and to take priſoners, which the troops muſt never be ſuffered to meddle with during the *battle*, nor ſo much as look on the plunder of the field, till the victory be abſolutely aſſured, and the enemy ſo broken, and at ſuch a diſtance, that there is no danger of his turning back on the bodies detached to purſue them: after which, during the reſt of the day, the victorious troops may be ſuffered to reap the plunder of the field of *battle*. If the firſt line give way, or be put into diſorder by the enemy, the battalions are to retire through the intervals left between thoſe of the ſecond line, behind which they are to ſtop and rally. Great care is to be here taken by the officers, that, inſtead of retiring through the intervals, they do not run directly into the battalions, and either carry them off with them, or put them into ſuch confuſion, that the enemy be upon them ere they have time to repair the diſorder. *Bland*, ib. p. 140.

On the firſt line's giving way, the ſecond ſhould march up briſkly to their relief, and attack the enemy, ere they have time to repair the diſorder, which the action and the purſuit muſt of courſe have thrown them into; by doing which they may eaſily retrieve what is loſt, and defeat and render uſeleſs the enemy's firſt line, who had been conſiderably weakened and diſordered by the former attack. This is the more eaſy to be effected, as the enemy's firſt fire is ſpent, which is that which does moſt execution; the other, from the great hurry of loading, being of little conſequence, in compariſon with the firſt. The great miſchief is, that the ſecond line ſeeing the firſt give way, are uſually ſtruck with a panic, which magnifies the enemy; ſo that by the time they approach near, they either betake themſelves to flight, or make but a faint reſiſtance. *Bland*, ibid. art. 10. p. 142.

In caſe fortune declare on the enemy's ſide, the great buſineſs of the general is to prevent a total rout. His capacity and experience are to ſhew him the moment which precedes the loſs of a *battle*, that he may take the neceſſary precautions to diminiſh the diſorder of a flight, either by the vigorous effort of a body of troops unſhattered, in order to give time for the reſt to rally, and thus ſecure a retreat; or by ſeizing ſome poſt behind, whither he may retire with ſafety; or a defile, behind which he may rally and re-aſſemble his ſcattered troops. As the loſs of the field of *battle* frequently carries with it that of the baggage and artillery, he is to remain no longer in this firſt place than while he can re-aſſemble his army; after which he is to lead it into ſome ſecure camp, where he may recover his loſſes, ſend for freſh cannon, troops, *&c.* If the loſs be conſiderable enough to hazard ſome conſiderable town, he is to throw into it the beſt of his infantry left, and endeavour ſtill to keep the field with the cavalry, to haraſs the enemy, in caſe he attempts a ſiege; or to oblige him to keep the army together, and prevent his dividing into ſeveral bodies, if his deſign be only to penetrate farther, and ravage the country. Vid. *Bland*, ib. §. 75. p. 306, ſeq.

BATTLE was formerly uſed for a body of forces drawn up in order of *battle*.

This amounts to the ſame with what is otherwiſe called battalion. See BATTALION.

In this ſenſe, we meet with the length or depth of the *battle*, the front, rear, and flanks of the *battle*. *Elton*, Milit. Art. l. 1. c. 25.

Length of the BATTLE is the number of men in a rank, or the ſpace from the left flank to the right flank.

Depth of the BATTLE is the extent of a file, or the number of men from the front to the rear.

A Roman legion, ranged in order of *battle*, conſiſted of *haſtati*, placed in the front; of *principes*, who were all old experienced ſoldiers, placed behind the former; and of *triarii*, heavy-armed with large bucklers, behind the *principes*. The *haſtati* were ranked cloſe; the ranks of the *principes* were much opener, ſo that they could receive the *haſtati*; and thoſe of the *triarii* opener ſtill, inſomuch that they could receive both the *principes* and the *haſtati* within them, without any diſorder, and ſtill facing the enemy. When therefore the *haſtati* found themſelves unable to ſtand the enemy's charge, they retired gently within the *principes*, where joining with them, they renewed the combat. If theſe found themſelves too weak to ſuſtain the enemy, both retired among the *triarii*, where rallying, they formed a new corps, and charged with more vigour than ever. If theſe failed, the *battle* was loſt; the Romans had no further reſource. *Macchiav.* Art de Guer. l. 3. c. 1.

The moderns are unacquainted with this method of inſerting or embattling one company into another; without which the former cannot be well ſuccoured or defended, and their places taken by others; which was a thing the Romans practiſed with great exactneſs.

For the *velites*, and, in later times, the archers and ſlingers, they were not drawn up in this regular manner, but diſpoſed of either before the front of the haſtati, or ſcattered up and down among the void ſpaces of the haſtati, or ſometimes placed in two bodies in the wings. Theſe always began the combat, skirmiſhing in flying parties with the foremoſt troops of the enemy. If they were repulſed, which was uſually the caſe, they fell back to the flanks of the army, or retired again in the rear. When they retired, the haſtati advanced to the charge. *Kenn.* Rom. Ant. Not. P. 2. l. 4. c. 10.

As to the cavalry, it was poſted at the two corners of the army, like the wings on a body, and fought ſometimes on foot, ſometimes on horſeback. The auxiliary forces compoſed the two points of the *battle*, and covered the whole body of the Romans.

Other leſs uſual forms of *battle* among the Romans were, the *cuneus*, or wedge; *globus*, or round form; *forfex*, or pair of ſheers; *turris*, or an oblong ſquare figure; *ſerra*, or ſaw. Vid. *Kenn.* Rom. Ant. P. 2. l. 4. c. 10. p. 205, ſeq.

The Greeks were inferior to the Romans in marſhalling their armies for *battle*, as they drew up their whole army in a front, and truſted the ſucceſs of the day to a ſingle force. *Pott.* Archæol. l. 3. c. 9. p. 75.

They had three forms of *battle* for the horſe, *viz.* the ſquare, the wedge, and the rhombus, or diamond form. The firſt held beſt for the defenſive; the two latter for the offenſive: the wedge being preferred as bringing moſt hands to fight. *Ælian.* Tact. c. 18.

BATTLE, in middle-age writers, properly denotes a combat or duel decreed by order of a court of juſtice, for the deciſion of a cauſe, where otherwiſe ſufficient proof could not be had. *Caſeneuv.* Orig. p. 21. b. See JUDICIUM *Dei*, ORDEAL, and PURGATION, *Cycl.*

BATTLE, in a naval ſenſe, denotes an engagement between two fleets, ſquadrons, or even ſhips.

This is more frequently diſtinguiſhed by the name of ſea-fight.

Of

Of late times, fleets are ranged in line of *battle*, like land armies, and fight much after the same order; to the expediency of which some objections may be made. Vid. Pref. Cond. of Navy, p. 23.

The antients had divers forms of sea *battles*; as the half-moon, circle, and forceps. In all these, not only the ships engaged each other, and by their beaks and prows, and sometimes their sterns, endeavoured to dash in pieces, or overset and sink each other, but the soldiers also annoyed the enemy with darts and slings, and, on their nearer approach, with swords and spears, boarding each other by laying bridges between the ships. Vid. *Pott.* Archæol Græc. l. 3. c. 21. p. 154, seq.

By way of preparation, they took down their sails, and lowered their masts, and secured whatever might expose them to the wind, choosing rather to be governed by their oars. Idem, ibid.

BATTLE is also used in speaking of the combats of brutes.

In this sense, we speak of *battles* between dogs, *battles* of cocks, &c. Mouffet describes a furious *battle* between two armies of wasps; which Derham takes rather to have been a venereal combat. Vid. Phil. Trans. N° 382. p. 58.

BATTLE-*Royal*, in cock-fighting, denotes a fight between three, five, or seven cocks all together; so as that the cock which stands longest, gets the day. Dict. Rustic. T. 1.

BATTLE-*ax*. The *battle*-ax was originally called *securis Danica*, because first introduced into England by the Danes; but being adopted in these countries, we find it called in later writers *securis Angla*, and *securis Scotica*, the English and Scottish axes. The grandees wore them enriched with gold, and beset with pearls. They were of that kind called *bipennes*, and have since generally degenerated into halbards or partisans, tho' we find them still retained, under their old denomination, by the band of gentlemen pensioners. *Du Cange*, Gloss. Lat. T. 4. p. 777.

BATTORY, a name given by the hans towns to their magazines or factories abroad. *Savar.* Supp. p. 54.

The chief of these *battories* are those at Archangel, Novogrod, Berghem, Lisbon, Venice, and Antwerp

BATTUTA, in the Italian music, the motion of the hand or foot in keeping or beating time.

Among Italian musicians, we frequently find the words, *A battuta*, which import, *in measure*, or beating each time equally. This usually occurs after what they call *recitativo*, which is rather declaiming than singing, and in which little or no measure is observed. *A battuta*, then, denotes, that they are to begin again to mark or beat the time equally. *Bross.* Dict. Mus. p. 13.

BATUDA, a method of fishing mentioned in some middle-age writers, wherein the fish are driven by beating the water with poles, till flocking into one place, they are the quicker caught. *Du Cange*, Gloss. Lat. T. 1. p. 508.

BAUDEKIN, BALDICUM, and BALDAKINUM, in our old writers, is used for cloth of *baudekin*, or gold; or tissue, upon which figures in silk, &c. were embroidered. But some writers account it only cloth of silk. See *Du Cange*, Gloss. Lat. voc. *baldakinus*.

BAUHINIA, in botany, the name of a genus of plants, so called from the names of the two Bauhines, famous for their botanical writings. The characters are these: the perianthium is of an oblong figure, and opens longitudinally on its lower side, and is inclined one way: its base also is divided into five leaves, which unite again at the top. The flower is composed of five petals, which are undulated, and end in narrow and reflex points; the lower ones are somewhat larger than the others; and the ungues of all are of the length of the cup: the stamina are ten filaments; nine of these grow together, forming a kind of cylinder, which opens in the lower side; the tenth filament stands below these, and is very long: the antheræ are oval; the tenth filament always has its antheræ; the others more frequently want them: the germen of the pistil is oblong, and stands upon a pedicle: the style is capillary, and bends downwards: the stigma is capitated, and assurgent: the fruit is a long pod, of a cylindrical figure, and contains only one cell, in which are placed a number of roundish, but flatted, seeds in a row.

Linnæus observes, that this character is founded on the American species of *bauhinia*; and that, in a species from Malabar, he found the upper nine stamina not growing together into a cylinder; so that the species of different countries are to be examined, before that article of the character can be perfectly established. *Linnæi*, Gen. Plant. p. 178. *Plumier*, 13. Hart. Malab. Vol. 1. p. 32.

BAUM, *melissa*, in botany. See BALM and MELISSA.

How to prepare the ens primum of *baum*, of which we meet with high commendations in Mr. Boyle, see ENS *primum*, *Cycl.*

BAVOSA, in ichthyology, a name given by the Italians to a species of the ray-fish, called by the modern authors *leviraia*, and *raia oxyrynchus*, and by the earlier authors, *raja bos*, *bos marinus*, and *leioraia*. It is distinguished by Artedi by the name of the variegated ray, with ten prickly tubercles on the middle of the back. See *Willughby*, Hist. Pisc. p. 135. and the article PHOLIS.

BAURAC, an antient name for nitre, but in some places used in a restrained sense, as not signifying every thing that was called by that name, but only one of two different salts that were confusedly called nitre. The Babylonians, according to Encelius, divided the salt, called by others nitre in general, into two kinds; the one they termed the bitter and redish nitre: this was probably the salt we now know under the name of *natrum*, or the Smyrna soap-earth: the other, they say, was acrid, but not bitter, and was used in seasoning their meat: this last they in particular called *baurac*, and distinguished it from the other by that name; and many are of opinion, that the nitre of these times, or common saltpetre, was known to them, and was the thing which they called *baurac*; and that the other fixed alkaline salt was what they properly and distinctly called nitre. Phil. Trans. N° 159. See also *Mercat.* Metalloth. p. 45. in not.

BAWD, a person who keeps a place of prostitution, or makes a trade of debauching women, and procuring or conducting criminal intrigues.

Some think the word is derived from the old French *baude*, bold or impudent; tho' Verstegan has a conjecture which would carry it higher, *viz.* from *bathe*, antiently written *bade*. *Skinn.* Etym. in voc.

In which sense, *bawd* originally imported no more than bath-holder, as if bagnios had antiently been the chief scenes of such prostitution. *Versteg.* Restit. Decayed Intellig. c. 10. p. 260.

The Romans had their male as well as female *bawds*; the former denominated *lenones* and *proagogi*, among us panders; the latter *lenæ*.

Donatus, speaking of the habits of the antient characters in comedy, says, *Leno palliis varii coloris utitur*. But the antient lenones, it is to be observed, furnished boys as well as girls for venereal service. *Fabr.* Thes. p. 1378. in voc. *leno*

Another sort of these merchants, or dealers in human flesh, were called *mangones*, by the Greeks ανδροκαπηλοι, who sold eunuchs, slaves, &c.

By a law of Constantine, *bawds* were to be punished by pouring melted lead down their throats. Vid. *Pancir.* P. 2. tit. 2. p. 86.

By the common law of England, a person may be indicted for keeping a bawdy-house, and punished by fine and imprisonment: and haunters of bawdy-houses bound to their good behaviour. See *Coke*, 3 Inst. 205. *Hawkins*, Pleas of the Crown, B. 1. ch 61. §. 2.

But it does not appear that the offence of being a *bawd* is indictable; tho' that of keeping a bawdy-house is. See the article STEWS.

BAWLING, among hunters, is spoke of the dogs, when they are too busy before they find the scent good. Gent. Recr. P. 1. p. 15.

BAY, (*Cycl.*) among huntsmen, is when the dogs have earthed a vermine, or brought a deer, boar, or the like, to turn head against them. *Cox*, Gent. Recr. P. 1. p. 15.

In this case, not only the deer [a], but the dogs, are said to *bay*. It is dangerous going in to a hart at *bay*, especially at rutting time; for then they are fiercest [b].—[a] Id. ib. p. 17. [b] Id. p. 74, seq.

There are *bays* at land, and others in the water.

BAY *colour* denotes a sort of red inclining to chesnut, chiefly used in speaking of horses.

In this sense, the word *bay* is formed from the Latin *baius*, or *badius*, and that from the Greek βαιος, a palm-branch: so that *badius* or *bay* properly denotes *color phœniceus*. Hence also, among the antients, those now called *bay* horses, were denominated *equi palmati*. *Menag.* Orig. p. 86. a. *Voss.* Etym. p. 60. b. *Du Cange*, Gloss. Græc. T. 1. p. 166. *Calv.* Lex. Jur. p. 107. b. *Kenn.* Gloss. ad Paroch. Antiq. in voc. *baius*.

We have divers sorts and degrees of *bays*; as a light *bay*, a dappled *bay*, &c.

All *bay* horses are said to have black manes, which distinguishes them from sorrels, which have red or white manes. *Guill.* Gent. Dict. P. 1. in voc.

BAY-*salt*. See the article SALT.

BAY, in building, denotes any kind of opening in walls; as a door, window, or even chimney. *Davil.* Archit. p. 419.

BAY *a mirroir*, in the manege, the same as *dapple-bay*. See DAPPLE.

BAY-*tree*, in botany. See LAURUS.

BAY *windows*, are the same with what we otherwise call *bow windows*. *Skinn.* Etym. in voc.

BAYARD, or BAIARD, in some old writers, is an appellative for a horse. *Kenn.* Gloss. in voc. *baius*.

Hence the phrases, *blind bayard*, *bayard's watering*, *bayard's green*, &c.

BAYONET (*Cycl.*)—The origin of the word is unknown; probably it came from the city Bayonne, where this weapon is said to have been first employed; or perhaps from its being invented by some engineer of that place. *Aquin.* Lex. Milit. T. 2. p. 299. in voc. *fica fistularia*.

The *bayonet*, popularly called *bagonet*, serves instead of a pike, wherewith the foot receive the charge of horse

Formerly the *bayonet* was made with a round handle, fitted for the bore of a firelock, and to be fixed therein after the soldier

had fired; but it is now made with an iron handle and ring, to go over the muzzle of the piece, and be screwed fast thereon. Since this invention of *bayonets*, pikes are out of use. *Guill.* Gent. Dict. P. 2. in voc.

This use of the *bayonet* fastened on the muzzle of the firelock was a great improvement, first introduced by the French, and to which, according to M. Folard, they owed a great part of their victories in the last century [a]; and to the neglect of this in the next succeeding war, and trusting to their fire, the same author attributes most of the losses they sustained [b].—[[a] Observ. in *Polyb.* T. 2. p. 452. *Fæsch.* Lex. Milit. p. 61. [b] *Folard.* sur *Polyb.* T. 1. p. 116.]

But tho' this writer commends the use of the *bayonet* so much, he thinks it far inferior to the pike, or rather partisan, as he describes it, of 12 or 13 feet long; and he proposes, that one-fifth of a body of infantry should be armed with these partisans. But it does not seem probable that this proposal should take place, while the great point of view in military discipline is to multiply fire, both in cannon and small-arms.

At the siege of Malta, a weapon called *pila ignea* was contrived to oppose the *bayonets*, being in some measure the converse thereof; as the latter consists of a dagger added to a fire-arm, the former consisted of a fire-arm added to a pilum, or pike. *Aquin.* Lex. Milit. T. 2. p. 155. a. in voc. *pila ignea.*

BAZAR, or BASAR, a denomination among the Turks and Persians, given to a kind of exchanges, or places where their finest stuffs and other wares were sold.

These are also called *bezestins.*

The word *bazar* seems of Arabic origin, where it denotes *sale*, or exchange of goods.

Some of the Eastern *bazars* are open, like the market-places in Europe, and serve for the same uses, more particularly for the sale of the more bulky and less valuable commodities. Others are covered with lofty cielings, or even domes pierced to give light; and it is in these the jewellers, goldsmiths, and other dealers in the richer wares, have their shops. *Savar.* Dict. Comm. T. 1. p. 313, seq.

The *bazar* or *maidan* of Ispahan is one of the finest places in all Persia, and even surpasses all the exchanges in Europe; yet, notwithstanding its magnificence, it is excelled by the *bazar* of Tauris, which is the largest that is known, having several times held thirty thousand men ranged in order of battle. *Savar.* Supp. p. 56.

At Constantinople, there is the old and the new *bazar*, which are large, square buildings, covered with domes, and sustained by arches and pilasters; the former chiefly for arms, harnesses, and the like; the latter for goldsmiths, jewellers, furriers, and all sorts of manufacturers. *Tournef.* Voy. de Levant, T. 2. Lett. 12. p. 10.

BAZGENDGES, in natural history, the name of a substance used by the Turks, and other eastern nations, in their scarlet-dying: they mix it for this purpose with cochineal and tartar, the proportions being two ounces of the *bazgendges* to one ounce of cochineal.

These are generally esteemed a sort of fruit, and are produced on certain trees in Syria, and other places; and it is usually supposed, that the scarcity and dearness of them is the only thing that makes them not used in Europe. But Mr. Reaumur, who had some of the Turkish *bazgendges* sent over to him, is of opinion, that they might easily be had in Europe; for he found, that they were no other than a kind of leaf-galls, produced by the means of an insect, in the manner of the horn of the turpentine-tree, and the common bladder-galls of the pucerons with us. The turpentine horn is, however, the thing which most resembles these, as they are the product of a tree of that species, the *bazgendges* themselves smelling very strong of turpentine; and when the horns of the common turpentine are dried, and compared with them, there is no visible difference. Hence it is to be observed, that these insects are not always mischievous and useless, but sometimes greatly beneficial to the world; and Mr. Reaumur very justly observes, that as the turpentine-tree is very common in many parts of France, and usually is full of its horns every year, it might be easy to gather a sufficient quantity of them to make trials of; and if found to answer the same purpose in Europe as in the East, the trees might be raised in any quantities.

Upon the whole, the *bazgendges* seem to be no other than the horns of the turpentine-tree in the eastern parts of the world; and it is not only in Syria that they are found, but China also affords them. Many things of this kind were sent over to Mr. Geoffroy at Paris from China, as the substances used in the scarlet-dying of that country, and they all proved wholly the same with the Syrian and Turkish *bazgendges*, and with the common turpentine horns. The lentisk or mastic-tree is also frequently found producing many horns of a like kind with these, and of the same origin, all being owing to the pucerons, which make their way into the leaves, to breed their young there. *Reaumur*, Hist. Insect. Vol. 6. p. 37.

BAZOCHE, or BASOCHE, a royal kind of jurisdiction exercised among the clerks of the palais, or courts of justice at Paris. *Richel.* & *Aubert*, T. 1. p. 191. *Corn.* Dict. T. 1. p. 95. b.

It is administred in the name and by the authority of the king of *Bazocke*, *roy de la Bazoche*, by virtue of an antient grant of the kings of France. The elder among the clerks are the officers; and he who presides is the chancellor.

This court only takes cognizance of causes among the clerks, or between clerks and artificers for goods bought, or work done. The freedoms they took with private characters in their inquisitions and remonstrances, has occasioned several arrets to restrain their power, and prohibit their holding pleas without leave.

A collection of statutes, ordonnances, regulations, monuments, and prerogatives of the kingdom of *Basoche* were published at Paris in 1654, 8vo. Dict. de Trev. T. 1. p. 901.

BDELLIUM (*Cycl.*)—The rabbins will have this *bdellium* to denote pearl, in which they are strenuously supported by the learned Bochart; but opposed by Salmasius, who maintained, that the scripture *bedollach* imports a sort of gum produced in Judæa, as well as the fruit of a tree growing in Arabia. Vid. *Bochart*, Hierozoic. P. 2. l. 5. c. 5. *Salmas.* de Homon. Hyl. Iatr. c. 109. *Le Clerc.* Bibl. Univ. T. 14. p. 406, seq.

The gum of this name among the moderns is somewhat bitterish to the taste, looks transparent when broken, and if rubbed, seems a fattish substance.

It is thought to facilitate digestion, to discuss and promote perspiration, and to be good in coughs, and many disorders of the breast; but its chief use now in composition is in discutient plasters, cerats, and unguents; in which it is mightily commended for reducing of ruptures, and softening any indurations of the nervous parts. *Junck.* Consp. Therap. tab. 5. p. 183. Vid. *Lemery*, Dict. des Drog. p. 116.

The *pilulæ de bdellio majores*, described by Mesne, are used by some against the piles and excesses of the menses. Hermannus [a] also praises the oil of *bdellium* against obstructions of the womb. Fumigations of the same gum, *suffitus ex bdellio*, received by the anus, are also ordered by some to stop immoderate fluxes of the hæmorrhoids [b].—[[a] *Cynosur.* Mat. Med. p. 262. [b] *Burggr.* Lex. Med. p. 1522, seq.

BEAD, (*Cycl.*) in assaying, the small lump or mass of pure metal separated from the scoria, and seen distinct and pure in the middle of the coppel while in the fire.

Thus, in the separating silver from its ore by means of lead, the silver remains in form of a *bead*, when the lead, that had before affisted in the operation, is all reduced to scoria. In this process, the *bead* of silver must be taken out of the coppel as soon as it is seen pure and fine, lest growing cold, it should be conglutinated to the coppel or litharge. This *bead*, when rightly made, is always porous underneath. *Cramer*, Art of Assay. p. 216.

BEADS are more particularly used among us for a sort of glass necklace, made in imitation of the colour and figure of pearl.

The Romanists make great use of *beads* in rehearsing their *ave Maria's* and *pater-nostre's*; and the like usage is found among the dervices and other religious throughout the East, as well Mahometan as heathen. The antient druids appear also to have had their *beads*, many of which are still found; at least, if the conjecture of an ingenious author may be admitted, who takes those antique glass globules, having a snake painted round them, and called *adder-beads*, or *snake-buttons*, to have been the *beads* of our antient British druids. Phil. Transf. N° 337. p. 96.

BEADS are also used in speaking of those glass globules vended to the savages on the coasts of Africa; thus denominated, because they are strung together for the convenience of traffic. *Savar.* Dict. Comm. T. 1. p. 665.

BEAD is also used for a little, round, white froth formed on the surface of brandy, or spirit of wine, upon shaking the glass; and which is the proof of the goodness of the liquor. *Savar.* loc. cit.

Hence the method of trying brandy by the *bead*, or chapelets, is called the *bead-proof*; sometimes *bubble-proof*. *Shaw*, Ess. on Distillat. §. 5. p. 119, & 137. See BEAD-*proof*, infra.

BEAD-*makers*, called by the French *patenostriers*, are those employed in the making, stringing, and selling of *beads*.

At Paris there are three companies of *patenostriers*, or *bead*-makers; one who make them of glass or crystal; another in wood and horn; and the third in amber, coral, jet, &c.

BEAD-*proof*, a term used by our distillers, to express that sort of proof of the standard strength of spirituous liquors, which consists in their having, when shaken in a phial, or poured from on high into a glass, a crown of bubbles, which stand on the surface some time after. This is esteemed a proof that the spirit consists of equal parts of rectified spirits and phlegm. See PROOF.

This is a fallacious rule as to the degree of strength in the goods; because any thing that will increase the tenacity of the spirit, will give it this proof, tho' it be under the due strength. Our malt-distillers spoil the greater part of their goods, by leaving too much of the stinking oil of the malt in their spirit, in order to give it this proof, when somewhat under the standard strength. But this is a great deceit on the purchasers of malt spirits, as they have them by this means not only weaker than they ought to be, but stinking with an oil, that they are not easily cleared of afterwards.

On the other hand, the dealers in brandy, who usually have the art of sophisticating it to a great nicety, are in the right

when they buy it by the ſtrongeſt *bead*-proof, as the grand mark of the beſt; for being a proof of the brandy containing a large quantity of its oil, it is, at the ſame time, a token of its high flavour, and of its being capable of bearing a very large addition of the common ſpirits of our own produce, without betraying their flavour, or loſing its own.

We value the French brandy for the quantity of this eſſential oil of the grape which it contains, and that with good reaſon; as it is with us principally uſed for drinking as an agreeably flavoured cordial: but the French themſelves, when they want it for any curious purpoſes, are as careful in the rectifications of it, and take as much pains to clear it from this oil, as we do to free our malt ſpirit from that nauſeous and fœtid oil, which it originally contains.

No judgment can be formed of brandies by the *bead*-proof as to their mixed or adulterated, or their pure ſtate, further than that they are likely to be moſt pure, when they have the greateſt proportion of this oil, in regard to mixtures of other ſpirits. There are many occaſions where we want ſpirit, merely as ſpirit, and where any oil, whether ſweet or ſtinking, muſt be equally improper. *Shaw*, Eſſay on Diſtillery.

BEAGLES, a ſmall ſort of hounds or hunting dogs. *Cox*, Gent. Recr. P. 1. p. 16.

Beagles are of divers kinds; as the *ſouthern beagle*, ſomething leſs and ſhorter, but thicker than the deep-mouthed hound; the *fleet northern*, or *cat-beagle*, ſmaller, and of a finer ſhape than the ſouthern, and a harder runner. From the two, by croſſing the ſtrains, is bred a third ſort, held preferable to either.

To theſe may be added a ſtill ſmaller ſort of *beagles*, ſcarce bigger than lap-dogs, which make pretty diverſion in hunting the coney, or even ſmall hare in dry weather; but otherwiſe unſerviceable, by reaſon of their ſize.

BEAK, (*Cycl.*) *roſtrum*, properly denotes the nib or bill of a bird.

In falconry, *beak* is the upper part of the hawk's bill, or the part that is crooked. Ruſt. Dict. T. 1.

The word comes from the barbarous Latin *beccum*, or the old French *becco*, which ſignifies the ſame. *Du Cange*, T. 1. p. 514, ſeq.

Si habuerit accipitrem, perdat beccum & ungues pedum & caudam. Bract. Tract. 2. l. 3. c. 28. §. 1.

The *beak* of the rinoceros-bird is reputed an antidote againſt all poiſons. *Grew*, Muſ. Reg. Societ. P. 1. §. 4. c. 1. p. 59.

Falconers have an operation called in French *raſſurer le bec*, or reſtoring the *beak*, when a hawk has broken, disjointed, or otherwiſe demoliſhed his *beak*, it being then apt to rot, or fall away in flakes through the negligence of his feeder. Dict. Trev. T. 4. p. 1027.

BEAK, called by the Greeks εμβολον, by the Latins *roſtrum*, was an important part in the antient ſhips of war, which were hence denominated *naves roſtratæ*. The *beak* was made of wood; but fortified with braſs [a], and faſtened to the prow, ſerving to annoy the enemy's veſſels. Its invention is attributed to Piſæus an Italian. The firſt *beaks* were made long and high; but afterwards a Corinthian, named Ariſto, contrived to make them ſhort and ſtrong, and placed ſo low, as to pierce the enemy's veſſels under water. By the help of theſe great havock was made by the Syracuſians in the Athenian fleet [b]—[a *Pitiſc.* Lex. Antiq. T. 1. p. 711. b *Pott.* Archæol. l. 3. c. 17. p. 135, ſeq.]

BEAK was alſo uſed for one of the antient battalias, or forms of ranging an army for battle, particularly uſed by the Macedonians. *Aquin.* Lex. Milit. T. 2. p. 249.

BEAK is alſo applied to the ſlender crooked prominences of divers bodies bearing ſome analogy or reſemblance to the *beaks* of birds.

In this ſenſe we meet with *beaks* of ſhoes, *roſtra calceorum*, for long peaked toes, in uſe of old. *Du Cange*, Gloſſ. Lat. T. 4. p. 630.

Among farriers, *beak* denotes a little horſe-ſhoe, turned up, and faſtened in upon the forepart of the hoof. Farr. Dict. p. 57.

Its uſe is to keep the ſhoes faſt, and not liable to be ſtruck off by the horſe, when by reaſon of any itch, or being much diſturbed with the flies in hot weather, he ſtamps his feet violently on the ground.

BEAKED, *Becqué*, in heraldry, is uſed when the beak or bill of a fowl is of a different tincture from the body.

In this caſe, they ſay *beaked* and membered of ſuch a tincture. *Coats*, Herald. Dict. p. 45.

BEAKING, in cock-fighting, expreſſes the fighting of theſe birds with their bills, or holding with the bill, and ſtriking with the heels. Ruſt. Dict. T. 1.

BEAM (*Cycl.*)—BEAM *of a Plough*, a name given by our farmers to the great timber of the plough, into which all the other parts of the plough-tail are infixed.

This is uſually made of aſh, and is ſtrait, and eight feet long in the common plough; but, in the four-coultered plough, it is ten feet long, and its upper part arched. The head of this *beam* lies on the pillow of the plough, and is raiſed higher, or ſunk lower, as that pillow is elevated or depreſſed by being ſlipped along the crowſtaves. Near the middle, it has an iron collar, which receives the tow-chain from the box, and the bridle-chain from the ſtake or gallows of the plough is fixed into it a little below the collar. Some inches below this, there is a hole, which lets through the coulter; and below that there are two other ſmall ones, through which the heads of the retches paſs. Theſe are the irons which ſupport the ſheat, and with it the ſhare. Farther backward ſtill is a large perforation, through which the body of the ſheat paſſes; and behind that, very near the extremity, is another hole, through which the piece called the hinder ſheat paſſes. *Tull*, Husb. See PLOUGH.

BEAN, *Faba*, in botany, the name of a genus of plants; the characters of which are theſe: the flower is of the papilionaceous kind, and from its cup there ariſes a piſtil, which finally becomes a large pod, containing large, flatted, and in ſome degree kidney-ſhaped ſeeds. To this it is to be added, that the ſtalks are firm and erect, and the leaves ſtand by pairs on a middle rib, which is terminated by an odd one.

The ſpecies of *bean* enumerated by Mr. Tournefort are theſe: 1. The *bean* with white flowers, marked with black ſpots. 2. The *bean* with blackiſh purple flowers. 3. The *bean* with very long and thick pods, with the ſeeds protuberating in the middle. 4. The *bean* with a middle-ſized pod, and ſeed flatted and ridged on both top and bottom. 5. The *bean* with very ſhort pods, and with very large and thick ſeeds. 6. The ſmaller, oblong, cylindric podded *bean*, or the white horſe-*bean*. 7. The ſmaller oblong, cylindric podded *bean*, or the black horſe *bean*. 8. The little, oblong, cylindric podded *bean*, with five or ſix pods on every ſtalk. *Tourn.* Inſt. p. 391.

We have four ſorts of *beans* commonly ſowed in our gardens. 1. The ſmall Liſbon. 2. The Spaniſh. 3. The Sandwich. And, 4. The Windſor *beans*.

The firſt and ſecond ſorts are to be planted in October and November, under warm walls and hedges, where if they ſtand through the winter, they produce *beans* early in the ſpring. They may alſo be raiſed very cloſe in beds, and covered with hoops and mats in the winter, and in ſpring planted out; but there is ſome hazard in the tranſplanting, and they will be a fortnight or more later than thoſe, which have ſtood the winter abroad.

The Lisbon *bean* is preferred to the Spaniſh; and the curious ought to have freſh ſeed every two years from abroad, for they are apt to degenerate, tho' not in goodneſs, yet in their earlineſs.

The Spaniſh and Windſor *beans* are not to be planted till Chriſtmas; but eſpecially the Windſor, which are ſubject, more than any other kind, to be hurt by the cold. Theſe *beans* ſhould have an open ground, and be planted at the diſtance of two feet and an half row from row, and four inches from one another in the rows; but if the place is cloſly ſurrounded with hedges or walls, the diſtance muſt be greater, elſe the ſtalks will run high, but they will bear very little fruit.

The Sandwich *beans* are hardier than the Windſor, and may be planted to come in between the early crops and them; and tho' not much regarded at preſent, they are a very good *bean*.

The firſt plantation of Windſor *beans* ſhould be made in the middle of January; and after that, a new plantation ſhould be made every three weeks till the middle of May, that there may be a ſucceſſion of crops. *Miller*, Gard. Dict.

There is ſcarce any plant, whoſe ſeed ſo well ſerves the purpoſe of the inquirer into the nature and ſtructure of ſeeds in general, as the *bean*.

In this ſeed, beſide the two coats, there are three conſtituent parts within. The main body is divided into two lobes, and two other parts: theſe are appendant to the baſe of the *bean*. One of theſe is called by Grew, and others ſince his time, the *radicle*, and the other the *plume*. The radicle is what afterwards becomes the root of the plant; and the plume becomes its trunk, bearing leaves and flowers. This plume is, at its end, divided into ſeveral pieces, which are finely and nicely laid together, and are ſo many leaves already formed, but not yet explicated. Theſe are to be the real leaves of the plant in its growing ſtate, and are in the ſeed folded up in the ſame plicature in which they are to appear out of the earth at the firſt ſhooting up from the ſeed.

Theſe organical parts of the *bean* are diſtinguiſhed from the reſt of the *bean*, and are compoſed of theſe ſimilar matters.

1°. The cuticle, extending itſelf over the whole *bean*, and herein diſtinguiſhed from the coats, that whereas theſe, on the planting of the *bean* in the earth, do only adminiſter the firſt ſap, and then die, thoſe, on the other hand, are inlarged, and the cuticle nouriſhed and co-extended with the *bean*.

2°. The parenchyma itſelf, having ſome reſemblance to the pith, while ſoft and pappy, in the trunks of plants, common to, and the ſame in the lobes, the radicle, the plume, and the *bean*.

3°. The inner body diſtributed throughout the parenchyma, but withal eſſentially different from it, called by the author, the ſeminal root, and diſtinguiſhed from the radicle, in that the former is the original root within its ſeed, the latter is the plant-root, which the radicle becomes in its growth; the parenchyma of the ſeed being in ſome ſort, that at firſt to the ſeminal root, which the mould is afterwards to the plant-root; and the ſeminal root being that to the plant-root, which the plant root is to the trunk.

The root of the grown plant is as evidently and ſubſtantially the ſame with that in the ſeed, called the radicle, as the arms and legs of a grown perſon are with thoſe of the fœtus. The root conſiſts of the skin, the cortical part, and the ligneous part. Within the root, in many caſes, there is a pith; this pith is a ſubſtance ordained for the perfecting the ſap, and its quicker and higher fermentation, begun in the cortical part, inſerted through the ligneous part, by which the ſap, like the blood of the diſſeminations of the arteries, is conveyed to its intimate parts. *Grew*, Anat. of Plants, c. 1. p. 4, ſeq.

The medicinal and dietetic qualities of *beans* are ſaid to be nutritive, but flatulent: the pods yield a water held good againſt the gripes in children [a]. Some have uſed the horſe-*bean* as a ſuccedaneum to coffee, which in principles it much reſembles; only that it contains but half the quantity of oil [b]. Mr. Boyle has ſeveral experiments of *beans* treated pneumatically, to ſhew the great plenty of air they afford, on which their flatulency depends [c].—[[a] *Alleyn*, lib. cit. [b] *Hought.* Coll. T. 3. p. 128. [c] *Boyle*, Phil. Work. abridged, T. 2. p. 615—621, &c.]

The expanſion of *beans* in growing, the ſame author found ſo conſiderable, that it would raiſe a plug clogged with above an hundred pound weight. Id. ib. T. 1. p. 285, ſeq.

Beans, with proper management, make one of the fineſt of all baits for fiſh. The method of preparing them for this purpoſe is this: Take a new earthen pot, glazed on the inſide; boil ſome *beans* in it, ſuppoſe a quarter of a peck: they muſt be boiled in river-water, and ſhould be beforehand ſteeped in ſome warm water for ſix or ſeven hours. When they are about half-boiled, put in three or four ounces of honey, and two or three grains of muſk: let them boil a little on, then take them off the fire, and uſe them in this manner: ſeek out a clean place, where there are no weeds, that the fiſh may ſee and take the *beans* at the bottom of the water. Throw in ſome *beans* at five or ſix in the morning, and in the evening, for ſome days. This will draw them together, and they may be taken in a caſting-net vaſt numbers together.

BEAN-*flower*, called by the Romans *lomentum*, was of ſome repute among the antient ladies as a coſmetic, wherewith to ſmooth the skin, and take away wrinkles. *Pitiſc.* Lex. Ant. T. 2. p. 102. voc. *lomentum*.

The antients made uſe of *beans* in gathering the votes of the people, and for the election of magiſtrates. A *white bean* ſignified abſolution, and a *black* one condemnation. *Danet.* Dict. in voc. *faba*.

Beans had a myſterious uſe in the *lemuralia* and *parentalia*; where the maſter of the family, after waſhing, was to throw a ſort of *black beans* over his head, ſtill repeating the words, I redeem myſelf and family by theſe *beans* [a]. Ovid [b] gives a lively deſcription of the whole ceremony in verſe.—[[a] Mem. Acad. Inſcr. T. 2. p. 46. [b] Faſt. l. 5. v. 435, &c.]

Abſtinence from *beans* was enjoined by Pythagoras, one of whoſe ſymbols is, κυαμων απεχεσθαι, *abſtine a fabis*.

The Egyptian prieſts held it a crime to look at *beans*, judging the very ſight unclean. The flamen dealis was not permitted even to mention the name [c]. Lucian introduces the ſame philoſopher in hell, ſaying, that to eat *beans*, and to eat our father's head, were equal crimes [d].—[[c] *Pitiſc.* Lex. Ant. p. 751. [d] *Voſſ.* de Sect. Philoſ. c. 6. §. 38, ſeq.]

This precept has been variouſly interpreted: ſome underſtand it of forbearing to meddle in trials and verdicts, which were then by throwing *beans* into an urn: others, building on the equivoque of the word κυαμος, which equally ſignifies a *bean* and a human *teſticle*, explain it by abſtaining from venery [e]. Lucian introduces Pythagoras himſelf explaining it; after ſaying, that he eats nothing which has life, but all other things, except *beans*, he is asked for what reaſon? He anſwers, becauſe they have ſomething that is divine: firſt, they reſemble the privy parts. 2°. Being boiled, and expoſed to the moon a certain number of nights, they turn into blood. But, 3°. what is moſt conſiderable, they make uſe of them at Athens in the election of magiſtrates [f].—[[e] *Voſſ.* loc. cit. [f] *Danet.* in voc. *Voſſ.* loc. cit.]

Clemens Alexandrinus grounds the abſtinence from *beans* on this, that they render women barren; which is confirmed by Theophraſtus, who extends the effect even to plants.

Cicero ſuggeſts another reaſon for this abſtinence, *viz.* that *beans* are great enemies to tranquillity of mind. For a reaſon of this kind it is, that Amphiaraus is ſaid to have abſtained from *beans*, even before Pythagoras, that he might enjoy a clearer divination by dreams. It may be added, that the compariſon aſcribed to Pythagoras of eating *beans*, with eating one's parent's head, is by Didymus aſcribed to Orpheus, who was conſiderably prior to the ſage of Samos. *Cic.* de Divinat. l. 1. c. 30.

After all, both the genuineneſs of the precept, and the reality of any ſuch abſtinence among the antient Pythagoreans, have been diſputed. Some attribute the precept to Empedocles, a diſciple of Pythagoras. Ariſtoxenus, an antient writer cited by A. Gellius, introduces Pythagoras ſaying, that he eat more frequently of *beans* than of any other pulſe, on account of their gently looſening the belly. *A. Gell.* Noct. Att. l. 4. c. 11.

BEAN, is alſo uſed by ſome anatomiſts to denote the *glans of the penis*, on account of its figure and reſemblance to that pulſe. *Rolfinck*, Tract. Meth. Part. Gener. Dicat. P. 1. c. 52. *Caſt.* Lex. p. 330. b.

BEAN is alſo improperly uſed for a weight, containing the third part of a ſcruple. *Ruland.*

Such appellations are of little uſe, by reaſon of the great variety of *beans*; the *Egyptian bean*, for inſtance, being much larger and heavier than the vulgar, or our *bean*.

Scribonius Largus, notwithſtanding, ſometimes deſcribes the doſes of medicines by the magnitude of a *bean*; where we are ſometimes to underſtand the greater *bean*, containing the weight of a drahm, and ſometimes the *lupine ſeed*, equivalent to four grains. *Caſtel.* Lex. p. 330. b.

Kidney-BEAN. See PHASEOLUS.

Horſe-BEAN. See HORSE-*bean*.

Molucca BEAN. See MOLUCCA *bean*.

BEAN-*fly*, in natural hiſtory, the name given by authors to a very beautiful fly, of a pale purple colour, frequently found on *bean*-flowers. It is produced from the worm or maggot called by authors *mida*.

BEAN-*ſtalks*. The aſhes of *bean*-ſtalks make good and clear glaſs. *Boyle*, Works abridg. Vol. 1. p. 131.

BEAR, (*Cycl.*) *Urſus*, in phyſiology, denotes a well-known quadruped of the cat kind, of ſome uſe in medicine; but more in commerce and ſport.

This creature differs, in many reſpects, from all the other beaſts of prey. Its head is much larger than theirs: its skin on the back is extremely hard, tough, and ſtrong; under the belly it is more tender: its hairs are longer, ſofter, and leſs rigid than in any other wild beaſt of prey, and reſemble wooll in ſome degree: its skull is much thinner than that of the lion; but its brain more than twice as much in quantity: its eyes are very ſmall, and, what is very remarkable, have a nictitating membrane to cover them on occaſion. Its feet have all five toes, as well the hinder as the fore ones; and what is remarkable is, that the large toe, which anſwers to the thumb with us, is in the place of the little finger. It is a very common creature in Germany, Poland, Lithuania, and many other places. *Ray*, Syn. Quad. p. 169.

Bear, in the Linnæan ſyſtem of zoology, makes a diſtinct genus of animals of the *fera* kind, the characters of which are, that the paps are two, and placed in the groin: the feet are formed either for climbing or walking; and the great toe placed outward. Under this genus, the author takes in the creature called the coati mundi, under the name of *urſus cauda elongata*, or the long-tailed *bear*. *Linnæus*, Syſt. Naturæ, p. 35. See Tab. of Quadrupeds and Serpents, N° 3.

The *bear* is obſerved to bear ſome analogy to man; as having hair on both eye-lids, which no other brute has [a]. His ſtructure and anatomy are deſcribed by the French academiſts [b].—[[a] *Grew*, Muſ. Reg. Societ. P. 1. §. 2. c. 1. p. 11. [b] *Du Hamel*, Hiſt. Reg. Acad. Scient. l. 1. §. 11. c. 3. p. 129.]

Some diſtinguiſh two kinds of *bears*, *terreſtrial* and *marine*; the former of which keep to the mountains; whereas the latter come out on the ice as far as the middle of the North-ſea. Some of this kind are found in Nova Zembla of an incredible ſize.

BEAR-*leading*, to ſhew tricks, is an antient practice, which we find prohibited in the canons of the church. *Du Cange*, Gloſſ. Lat. T. 4. p. 1371.

BEAR-*wards*, *urſarii*, were a kind of ſervants in great families among the Romans, who had the care of breeding and feeding thoſe animals. *Pitiſc.* Lex. Ant. T. 2. p. 1119.

Order of the BEAR was a military order in Switzerland, erected by the emperor Frederic II. in 1213, by way of acknowledgment for the ſervice the Swiſs had done him, and in favour of the abbey of St. Gal. To the collar of the order hung a medal, on which was repreſented a *bear* raiſed on an eminence of earth. Dict. Trev. T. 4. p. 403.

BEAR's-*breech*, *acanthus*, in botany. See ACANTHUS.

The farina of *bear's-breech*, microſcopically examined, has the appearance repreſented in Tab. of microſcopical Objects, Claſs 2.

BEAR's-*fleſh* was much eſteemed by the antients: even at this day, the paw of a *bear* ſalted and ſmoaked, is ſerved up at the table of princes. *Savar.* Dict. Comm. T. 2. p. 937.

BEAR's *greaſe* is eſteemed by ſome a ſovereign remedy againſt cold diſorders, eſpecially rheumatiſms. Some have alſo employed it with ſucceſs in the gout, and againſt tumors and ulcers. Vid. *Sext.* Placit. de Medic. ex Animal. c. 6. *Fabric.* Bibl. Græc. T. 13. p. 402. *Alleyn*, Diſpenſ. p. 152.

To be good, it muſt be newly melted, grayiſh, glutinous, of a ſtrong diſagreeable ſmell, and a moderate conſiſtence. That which is too white, is adulterated with common tallow. *Savar.* Dict. Comm. T. 2. p. 937.

BEAR's-*ſkin* makes a fur in great eſteem, and on which depends a conſiderable article of commerce, being uſed in houſings, on coach-boxes, &c. In ſome countries, cloaths are made of it, more eſpecially bags wherein to keep the feet warm in ſevere colds. Of the skins of *bears* cubs are made gloves, muffs, and the like. *Savar.* Dict. Comm. T. 2. p. 937.

BEAR-*garden*, a place where *bears* and other beaſts are expoſed as a public ſpectacle to be baited.

BEARD (*Cycl.*)—Cutting the *beard* has, as it is ſaid, in many caſes, been the occaſion of diſeaſes. Bartholin [a] ſpeaks of a Benedictin monk, who loſt his ſight by being ſhaven, according to the rule of his order, and recovered it again by ſuffering his

his *beard* to grow, and this for ſeveral times ſucceſſively, till at length he was diſpenſed by his ſuperiors from the obſervance of this rule. Another, grievouſly haraſſed by an obſtinate tooth-ach while he uſed to ſhave every week, found a cure, by accidentally letting his *beard* grow for three weeks together. Upon ſhaving again, his pains returned, and were removed again by letting his *beard* have its ſcope [b].—[[a] Epiſt. Cent. 3. Ep. 67. p. 275. [b] *Hotting.* in Ephem. N. C. dec. 3. an. 9 & 10. Obſ. 229.]

Shaving the BEARD, *barbæ raſio*, was the greateſt affront among the Franks, that could be offered any perſon. Taking away a ſingle hair was an injury ſcarce to be forgiven. *Du Cange*, Gloſſ. Lat.

Among the Turks, it is more infamous for any one to have his *beard* cut off, than among us to be publicly whipt, or branded with a hot iron. There are abundance in that country, who would prefer death to this kind of puniſhment. *Calm.* Dict. Bibl.

Conſecration of the BEARD was a ceremony among the Roman youth, who, when they were ſhaved the firſt time, kept a day of rejoicing, and were particularly careful to put the hair of their *beard* into a ſilver or gold box, and make an offering of it to ſome god, particularly to Jupiter Capitolinus, as was done by Nero, according to Suetonius. Vid. *Pitiſc.* T. 1. p. 251.

The monks were alſo ſaid to conſecrate their *beards*, when they laid them down upon their admiſſion to the monaſtic ſtate. *Du Cange*, Gloſſ. Lat. T. 1. p. 472.

Benediction of the BEARD, *barbæ benedictio*, was a ceremony uſed in the antient Latin church upon the ordaining of a prieſt, who, in conſequence of the canons, was to be ſhaven. *Du Cange*, Gloſſ. Lat. T. 1. p. 472.

Touching the BEARD was an action antiently made uſe of by ſupplicants, and thoſe who made vows. *Pitiſc.* Lex. Ant. T. 1. p. 252.

Kiſſing the BEARD. The Turkiſh wives kiſs their husbands *beards*, and children their fathers, as often as they come to ſalute them. The men kiſs one anothers *beards* reciprocally on both ſides, when they ſalute one another in the ſtreets, or come off from any journey. *Calm.* Dict. Bibl.

Touching the BEARD, *barbam tangere*, was alſo a cuſtom in the middle age of cutting the firſt down by the ſponſor or god-father of a perſon initiated. *Du Cange*, Diſſ. ad Toinvill 22. p. 279. It. in Gloſſ. Lat. T. 1. p. 471.

The faſhion of the BEARD has varied in different ages and countries; ſome cultivating and entertaining one part of it, ſome another. Thus the Hebrews wear a *beard* on their chin; but not on the upper-lip or cheeks. Moſes forbids them to cut off entirely the angle or extremity of their *beard*; that is, to manage it after the Egyptian faſhion, who left only a little tuft of *beard* at the extremity of their chin; whereas the Jews to this day ſuffer a little fillet of hair to grow from the lower end of their ears to their chins, where, as well as on their lower-lips, their *beards* are in a pretty long bunch. *Calm.* Dict. Bibl. T. 1. p. 267.

In the apoſtolic conſtitutions, the clergy are expreſly forbid to ſhave their *beards*. L. 1. c. 3. *Epiph.* Hæreſ. 50. *Fabric.* Bibl. Ant.

The Arabs make the preſervation of their *beards* a capital point of religion, becauſe Mahomet never cut his. Hence the razor is never drawn over the grand ſignior's face. The Perſians, who clip them, and ſhave above the jaw, are reputed heretics. It is likewiſe a mark of authority and liberty among them, as well as among the Turks. They who ſerve in the ſeraglio, have their *beards* ſhaved, as a ſign of their ſervitude. They do not ſuffer it to grow till the ſultan has ſet them at liberty, which is beſtowed as a reward upon them, and is always accompanied with ſome employment. *Calm.* Dict. Bibl.

The Jews, in time of mourning, neglected to trim their *beards*, that is, to cut off what grew ſuperfluous on the upper-lips and cheeks. In time of grief and affliction, they alſo plucked off the hair of their *beards*. *Calm.* T. 1. p. 267.

The Romans, on the like occaſion, choſe a contrary method of expreſſing ſorrow and mourning, *viz.* by letting their *beards* grow. *Pitiſc.* Lex. Ant. T. 1. p. 251.

Anointing the BEARD with unguents is an antient practice both among the Jews and Romans, and ſtill continues in uſe among the Turks; where one of the principal ceremonies obſerved in ſerious viſits is to throw ſweet-ſcented water on the *beards* of the viſitant, and to perfume it afterwards with aloes-wood, which ſticks to this moiſture, and gives it an agreeable ſmell, *&c.* *Pitiſc.* Lex. Antiq. T. 1. p. 252.

In middle-age writers we meet with *adlentare barbam*, uſed for ſtroking and combing it, to render it ſoft and flexible. *Du Cange*, Gloſſ. Lat. T. 1. p. 61.

The Turks, when they comb their *beards*, hold a handkerchief on their knees, and gather very carefully the hairs that fall; and when they have got together a certain quantity, they fold them up in paper, and carry them to the place where they bury the dead.

Plucking the BEARD was practiſed to Cynics by way of contempt.

Some authors alſo ſpeak of *mortgaging the beard*, *barbam hypothecare*. *Will. Tyr.* l. 11. c. 11. *Du Cange*, Gloſſ. Lat.

Falſe BEARD, *barba falſa*, was an artificial one. In a general court of Catalonia held in 1351, it is expreſly injoined, *Ne quis barbam falſam ſeu fictam audeat deferre vel fabricare.* *Du Cange*, Gloſſ. Lat. T. 1. p. 472.

Hottoman has given an elegant dialogue *de barba*, firſt printed by Plantin in 1586, which being ſcarce, is reprinted by Pitiſcus in Lex. Ant. Rom. T. 1. p. 252, ſeq.

BEARD *of a muſcle*, oyſters, or the like, denotes an aſſemblage of threads or hairs, by which thoſe animals faſten themſelves to ſtones, *&c.*

The hairs of this *beard* terminate in a flat ſpungy ſubſtance, which being applied to the ſurface of a ſtone, ſticks thereto, like the wet leather uſed by boys. Phil. Tranſ. N° 284. p. 1360.

BEARDS, in the hiſtory of inſects, are two ſmall, oblong, fleſhy bodies, placed juſt above the trunk, as in the gnats, and in the moths and butterflies. Vid. *Reaumur.* Hiſt. Inſect. Vol. 4. p. 580.

BEARD, or *under-beard*, called alſo *chuck*, of a horſe, is that part under the lower mandible on the outſide, and above the chin, which bears the curb of the bridle. *Guill.* Gent. Dict. P. 1.

BEARDED, *barbatus*, denotes a perſon or thing with a *beard*, or ſome reſemblance thereof. See BEARD.

In middle-age writers, this is ſometimes expreſſed by *malibarbis*, q. d. barba in malis ſeu genis. *Du Cange*, Gloſſ. Lat. T. 3. p. 368.

Naturaliſts ſpeak of *bearded* whales, ſometimes denominated Grand Bay whales [a]; *bearded* loaches, *gobites barbatulæ* [b]; *bearded* moſſes, *muſci barbati* [c], &c.—[[a] *Hought.* Collect. T. 3. p. 275. [b] *Grew*, Muſ. Reg. Societ. P. 1. §. 5. c. 3. p. 117. [c] Id. ibid. P. 2. §. 4. p. 236 & 249.]

The faces on antient Greek and Roman medals are generally *bearded*. Some are denominated *pogonati*, as having long beards, *e. gr.* the Parthian kings. Others have only a *lanugo* about the chin, as the Seleucid family [d]. Adrian was the firſt of the Roman emperors who nouriſhed his beard: hence all imperial medals before him are beardleſs; after him *bearded* [e].—[[d] *Evel.* on Medal. c. 2. p. 27. [e] *Pitiſc.* T. 1. p. 251.]

The Romans paid their worſhip to a *bearded* Venus, *Veneri barbatæ*, ſuppoſed to have been of both ſexes; a ſtatue of whom was alſo found in the iſle of Cyprus. *Serv.* ad Æn. l. 2. p. 632.

The reaſon of repreſenting the goddeſs of beauty with a beard is variouſly gueſſed at by the learned. *Boxhorn.* Quæſt. Rom. 13 & 27. *Gyrald.* Synt. Dar. p. 394, ſeq. *Pitiſc.* Lex. Ant. T. 2. p. 1049.

BEARDED *women* have been all obſerved to want the menſtrual diſcharge; and ſeveral inſtances are given by Hippocrates [f], and other phyſicians, of grown women, eſpecially widows, in whom the menſes coming to ſtop, beards appeared. Euſebius Nierembergius [g] mentions a woman, who had a beard reaching to her navel. Bartholin ſpeaks of a *bearded* woman [h] at Copenhagen, who, partly in virtue thereof, paſſed for an hermaphrodite.—[[f] Epidem. l. 6. §. 8. in fine. [g] De Miracul. Natur. l. 2. c. 35. [h] Epiſt. Cent. 3. Ep. 94. p. 406, ſeq.]

BEARDED *brothers*, *fratres barbati*, are more particularly uſed in eccleſiaſtical writers for thoſe otherwiſe called *fratres converſi* in the orders of Grammont and the Ciſterians. *Du Cange*, Gloſſ. Lat. T. 1. p. 477. Trev. Dict. Univ. T. 1. p. 870.

They took this denomination, becauſe allowed to wear their beards, contrary to the rule of the profeſſed monks.

BEARDED *husk*, among floriſts, a husk which is hairy on the edges, as is that of the roſe, *&c.* Dict. Ruſt. in voc.

BEARDLESS, *imberbis*, ſtands oppoſed to bearded. See BEARD and BEARDED.

The medals of gods, and heroes in vigorous youth, repreſent them *beardleſs*, except Jupiter, and a few others. *Evel.* on Medals, p. 47.

The bald and *beardleſs* portrait engraven on many precious ſtones in the king of France's cabinet, and elſewhere, with the name of *Solon*, do not repreſent the famous lawgiver of Athens; at leaſt, do not repreſent him right, ſince, in his time, the Greeks were all bearded. Hiſt. Acad. Inſc. T. 2. p. 407.

BEARER, (*Cycl.*)—BEARERS, *geſtantes*, in middle-age writers, are ſometimes uſed for a child's goſſips, by reaſon they hold the infant in their arms, and preſent him to the prieſt, in the ceremony of baptiſm. *Du Cange*, Gloſſ. Lat. T. 2. p. 618.

BEARERS are more peculiarly uſed among us for thoſe who bear dead corpſes to their graves.

In a ſenſe ſomewhat different from this, we alſo ſay *pall-bearers*, &c.

The antients had peculiar orders or officers of *bearers*, called by the Greeks κοπιάται; by the Romans *lecticarii* [a]. The *veſpillones*, or *bajuli*, were a lower ſort of *bearers*, appointed for perſons of inferior or vulgar rank [b].—[[a] *Arnd.* Lex. Ant. p. 423. [b] *Calv.* Lex. Jur. p. 951. *Pitiſc.* Lex. Antiq. T. 2. p. 244.

BEARERS, in agriculture, denote the fruit branches, or ſuch as bear fruit.

The *bearers*, or bearing branches of an apple-tree, and the like, are found to be rougher, and fuller of aſperities in their bark, than the other branches. Phil. Tranſ. N° 237. p. 54.

BEARING, (*Cycl.*) *geſtatio*, in the antient gymnaſtic phyſic, was a ſpecies of exerciſe uſed by weak perſons in tedious diſeaſes. *Pitiſc.* Lex. Ant. T. 1. p. 867.

BEARING *of an organ pipe*, denotes an error or variation from the juſt ſound it ought to yield. *Wallis*, in Phil. Tranſ. N° 10. p. 253. See TEMPERATURE.

BEARING *of an arch*, or *vault*, denotes the effort which the ſtones make to burſt open the piers, or *piedroits*.

This amounts to the ſame with what the French call *pouſsée*. Mem. Acad. Scienc. 1712. p. 91.

BEARING *down of the matrix*, a diſorder in pregnant women, being a ſenſation of a weight at the bottom of the abdomen, or preſſure on the neck of the womb, ſo as to hinder the perſon from walking without pain; and ſometimes alſo occaſioning difficulty of urine, numbneſs of the hips, uneaſineſs in going to ſtool, and in the end abortion. Vid. *Shaw*, New Pract. Phyſ. p. 464, ſeq.

BEARING *branches* in agriculture and gardening. See BEARERS.

BEARING *claws*, among cock-fighters, denote the foremoſt toes, on which the bird goes; which if they be hurt or gravelled, he cannot fight. Ruſt. Dict. T. 1.

Armorial BEARING is ſometimes uſed to expreſs what we more ſimply call *arms*. See BEARINGS *in heraldry*, infra.

Armorial bearings, in the tenth and eleventh centuries, were ſingle and plain, conſiſting only of few figures. Charges, differences, quarterings, &c. are the inventions of later times. *Niſb.* of Armory, c. 3. p. 31.

BEARING *of a ſtag* is uſed in reſpect of the ſtate of his head, or the croches which he bears on his horns.

If you be asked what a ſtag bears, you are only to reckon the croches, and never to expreſs an odd number; as if he have four croches on his near horn, and five on his far, you muſt ſay he bears ten; a falſe right on his near horn: if but four on the near horn, and ſix on the far horn, you muſt ſay he bears twelve; a double falſe right on the near horn. *Cox*, Gent. Rec. P. 1. p. 12.

To BEAR *ſail well* is ſaid of a ſhip, when ſhe is a ſtiff-guided ſhip, and will not couch down on a ſide with a great deal of ſail. *Manw.* Sea Dict. p. 6.

When a ſhip is ſaid *to bear out her ordnance*, it is meant, that her ordnance lie ſo high, and ſhe will go ſo upright, that, in reaſonable fighting weather, ſhe will be able to keep out her lower tire, and not be forced to ſhut in her ports. Id. ibid.

A ſhip is ſaid *to overbear another*, when it is able, in a great gale of wind, to carry out more ſails, *viz.* a top-ſail more, or the like. Id. ibid.

BEARING *off* is when a ſhip would not come near a land, or another ſhip; but goes more roomer than her courſe lies. *Manw.* Sea Dict. p. 7.

BEARING *off* is alſo uſed by ſeamen, generally in buſineſs belonging to ſhipping, for *thruſt off*. *Manw.* Sea Dict. p. 7.

Thus, in hoiſting any thing into the ſhip, if it hath hold by any part of the ſhip or ordnance, or the like, they ſay, *bear it off from the ſhip's ſide.*—So, if they would have the breech or mouth of a piece of ordnance, or the like, put from one, they ſay, *bear off*, or *bear about* the breech.

BEARINGS, in heraldry, a term uſed to expreſs a coat of arms, or the figures of armories, by which the nobility and gentry are diſtinguiſhed from the vulgar, and from one another. Theſe ſigns of nobility with us, are evidently a copy of the ſtatues and images among the antient Romans, which they uſed to expoſe before their houſes on public days, and carried before the body at a funeral of a great perſon. Theſe ſtatues among them were the reſemblances of their noble anceſtors. (See *Imaginum Jus.*) And as our coats of arms evidently were brought up in the place of them, it ſeems very natural to date the riſe and origin of heraldry in England, as now practiſed, from the time of the ſubverſion of the Roman empire by the Goths and Vandals; who, as they deſtroyed many liberal arts, ſo they ſeem, in return, to have given birth to this of heraldry. The original cuſtom with us ſeems to have come from the practice of theſe northern fierce people of painting on their ſhields, and other parts of their armour, the figures of ſome furious beaſt, to repreſent their own fierce diſpoſition. Thus, wolves, lions, bears, and the like, became common military diſtinctions; and when the perſon who firſt wore them became ſignalized in battle, they were continued down to his poſterity, as marks of the glory he had won. Theſe were called *teſſeræ gentilitiæ*, or *inſignia gentilitia*. They were after this called by ſome *arma*, and the title *gentilitia* added to it; and hence our word *arms*, tho' we have dropped the epithet.

Theſe warlike nations, having ſubdued the mighty Roman empire, and raiſed their glory by military ſervice, became very fond of the atchievements of their anceſtors and great men, and derived their enſigns and titles of honour from what concerned a ſoldier. They firſt, therefore, diſtinguiſhed the whole community into three ranks, which they named, according to the different orders of military men, *miles*, *eques*, and *ſcutifer*; and their poſterity, willing to commemorate their honours, reſerved to themſelves their ſeveral military enſigns; and theſe became what we call *bearings*, or arms, the marks of gentility, or of houſes, ſome one of which had once deſerved an elevation above the common rank of men. While the direct deſcendent of this honourable perſon carried his enſigns of honour for his diſtinction, the callateral branches alſo were ambitious of preſerving the memory of their having belonged to ſuch an honourable houſe; and therefore aſſumed the ſame figures, but with ſome difference, to diſtinguiſh the diſtance from the original claim. In proceſs of time, other families, who had deſerved as well of their prince and country, whether in civil or military affairs, became deſirous of the ſame ſort of diſtinction, by way of eternal memorial of their ſervices; and upon this occaſion many other devices were formed into arms, and continued down to poſterity in the ſeveral families. *Budæus*, Pandect. *Niſb.* Heraldry, p. 5.

BEARN-*Stone*. See PHOSPHORUS.

BEAST (*Cycl.*)—Authors make this difference between *beaſts of the foreſts* and *of chaſe*, that the firſt are *ſilveſtres tantum*, the latter *campeſtres tantum*. *Beaſts* of the foreſt make their abode all the day time in the great coverts and ſecret places of the woods; and in the night ſeaſon, they repair into the lawns, meadows, paſtures, and pleaſant feeding-places: whence their denomination *ſilveſtres*, q. d. *beaſts of the wood*.

Beaſts of the chaſe reſide all the day-time in the fields, and on the mountains afar off, to prevent ſurprize; but, on night's approach, they feed as the reſt in meadows, &c. whence their appellation *campeſtres*, q. d. *beaſts of the field*. *Cox*, Gent. Recr. P. 1. p. 5.

No other, according to Manwood, are accounted *beaſts* or fowls of warren, than hares, coneys, pheaſants, and partridges. The lord Coke is of another opinion [a], diſtinguiſhing *beaſts* of the warren from fowls of the warren. Under the former, he includes hares, coneys, and roes: the latter he divides into *ſilveſtres*, *campeſtres*, and *aquatiles*. To the firſt belong the pheaſant, woodcock, &c. to the ſecond the partridge, quail, rail, &c. to the third the mallard, hern, &c [b].—[[a] Com. on *Littlet.* p. 233. [b] *Cox*, loc. cit.]

BEAST *of burthen* is underſtood of all quadrupeds employed in carrying goods on their backs. The chief of theſe are the elephant, dromedary, camel, horſe, mule, and aſs: to which may be added the ſheep in Mexico and Peru. On ſome parts of the coaſts of Africa they uſe oxen, and in Flanders large dogs, for the ſame purpoſe. *Savar.* Dict. Comm. T. 1. p. 323, ſeq.

BEAST *at ombre* is, where the player, or perſon that undertakes the game, loſes it to the other two; the penalty of which is a forfeiture equal to the ſtake played for. Vid. Comp. Gameſt. p. 24.

The player is *beaſted*, unleſs he win five of the nine tricks, or at leaſt four; with this further circumſtance, that the other five be ſo divided between the two other gameſters, that one makes three tricks, the other two.

If the player win no more tricks than one of the other gameſters, it is called *repueſto*. If one of the gameſters win more tricks than the player, the latter is not ſimply ſaid to be *beaſted*, but to loſe *codille*. Dict. Trev. T. 1. p. 1003.

BEAST, *la bête*, is alſo the name of a French game at cards. V. Compl. Gameſt. p. 97.

BEAT, or UNDULATION, in muſic. See UNDULATION.

Beat is applied to the muſic of the drum, where it anſwers to what in other inſtruments is called the tune, air, or ſong.

The chief *beats* or beatings on the drum are, the general, the aſſembly, the march, the reveille, the retreat, &c.

BEAT, in fencing, denotes a blow or ſtroke given with the ſword. See BEATING.

There are two kinds of *beats*; the firſt performed with the foible of a man's ſword on the foible of his adverſary's, which in the ſchools is commonly called *baterie*, from the French *batre*, and is chiefly uſed in a purſuit, to make an open upon the adverſary. The ſecond and beſt kind of *beat* is performed with the fort of a man's ſword upon the foible of his adverſary's, not with a ſpring, as in binding, but with a jerk, or dry *beat*; and is therefore moſt proper for the parades without or within the ſword, becauſe of the rebound a man's ſword has thereby from his adverſary's, whereby he procures to himſelf the better and ſurer opportunity of riſpoſting. *Hope*, New Meth. Fenc. c. 4. p. 116.

BEAT in the manege. A horſe is ſaid *to beat the duſt*, when, at each ſtroke or motion, he does not take in ground or way enough with his fore-legs.

He is more particularly ſaid to *beat* the duſt at *terra a terra*, when he does not take in ground enough with his ſhoulders, making his ſtrokes or motions too ſhort, as if he made them all in one place.

He *beats the duſt* at curvets, when he does them too precipitantly, and too low.

He *beats upon a walk*, when he walks too ſhort, and thus rids but little ground, whether it be in ſtreight lines, rounds, or paſſings. *Guill.* Gent. Dict. P. 1.

BEAT *upon the hand*, in the manege. See CHACK.

BEATER is applied, in matters of commerce, to divers ſorts of workmen, whoſe buſineſs is to hammer or flatten certain matters, metals, or the like.

In this ſenſe we meet with *plaſter-beater*, *cement-beater*, *mortar-beater*, &c.

Gold-BEATERS are artiſans who, by beating gold and ſilver with a hammer on a marble, in moulds of vellum and bullocks guts, reduce them to thin leaves fit for gilding, or ſilver-

ing

ing of copper, iron, ſteel, wood, &c. *Savar.* Dict. Comm. T. 1. p. 307.

Gold-beaters differ from *flatters* of gold or ſilver, as the former bring their metal into leaves by the hammer; whereas the latter only flatten it by preſſing it through a mill.

There are alſo *Tin*-BEATERS employed in the looking-glaſs trade, whoſe buſineſs is to beat tin on large blocks of marble till it be reduced to thin leaves, fit to be applied with quick-ſilver behind looking glaſſes. *Savar.* Dict. Comm. T. 1. p. 307. See LOOKING-*glaſs*, FOLIATING, &c. *Cycl.*

BEATER is alſo uſed for an inſtrument wherewith to gravel walks and alleys in gardens even.

It is a piece of wood half a yard long, ſix inches thick, and eight or nine broad, having a handle in the middle. Dict. Ruſt. in voc.

BEATIFIC *Viſion*, (*Cycl.*) among divines, the preſence of God in glory, which the bleſſed enjoy in paradiſe to all eternity.

The time when the *beatific* viſion commences, was towards the middle of the fourteenth century, hotly diſputed. The queſtion was, whether the ſouls of the juſt ſhould ſee God face to face before the day of judgment? Pope John XXII. held the affirmative; friar Thomas Waleys, a dominican, ſupported by Dr. Thomas Poney, abbot of St. Auſtin's, Canterbury, the negative. The negative ſide proved triumphant; and the pope, with all his infallibility, was afterwards obliged to retract. *Steph.* App. to Dugd. Monaſt. T. 2. p. 329.

BEATIFICATION (*Cycl.*) is conſidered as an inferior and leſs ſpecies of canonization; the effects of which are, that an anniverſary honour is done the perſon as a ſaint, at his tomb, either by burning lights, hanging up gifts, or any other method. See Acta Sanctorum, T. 1. Junii, p. 371. F. & *Baillet*'s Diſſertation before his Lives of the Saints, publiſhed in French, p. 197, ſeq.

Beatification is alſo conſidered as a proviſional *canonization*, being generally premiſed, till the Roman ſee, after the ſpace of fifty, or more or fewer years, has determined a ſolemn canonization. Thus Mary Magdalen di Pazzis, a Florentine, who died in 1607, was *beatified* by Urban VIII. in 1626; but canonized by Clement IX. in 1669. Vid. Acta Sanctorum, T. 6. Maii, p. 315. 326.

It is remarkable, that particular orders of monks aſſume to themſelves the power of *beatification*.

Thus Octavia Melchiorica was *beatified* with extraordinary ceremonies by the Dominicans, for a legacy of 7000 dollars left the order. Vid. *Fabric.* Bibl. Antiq. c. 8. p. 274.

BEATING, (*Cycl.*) among ſportſmen, denotes the noiſe which hares make in the rutting-time. See RUTT.

The hare is ſaid to *beat*, the hart to *bell*, &c. *Cox*, Gent. Recr. P. 1. p. 10.

BEATING, in fencing. See the article BEAT.

Beating differs from *binding*, as the latter is performed with a kind of ſpring, and that, in performing it, a man keeps by, and engages more his adverſary's ſword, than when he *beats*; for which reaſon *binding* is chiefly proper when a man intends to become the purſuer; whereas *beating*, being performed by a kind of jerk, or dry ſtroke, is chiefly deſigned for the defenſive part, or parade, that a man may hereby return the quicker riſpoſte from it; ſeeing his ſword, if the *beat* be rightly performed, will, in ſome meaſure, rebound from his adverſary's ſword, and ſo aſſiſt him to make the quicker riſpoſte. Add, that the jerk or dry *beat* upon the parade forces the adverſary's ſword conſiderably out of the ſtreight line, which makes the riſpoſte ſtill the more certain, and which cannot be done with near that certainty nor ſtrength with the ordinary French parade, within and without the ſword from the quarte guard. *Hope*, New Meth. of Fenc. c. 4. p. 116.

BEATING is alſo uſed in ſpeaking of the agitation and noiſe of the death-watch, or *pediculus pulſatorius*.

Mr. Stackhouſe has deſcribed the manner of *beating* of the *pediculus pulſatorius*. Vid. Phil. Tranſ. N° 385. p. 159.

BEATING *flax*, or hemp, is an operation in the dreſſing of theſe matters, contrived to render them more ſoft and pliant. *Hought.* Collect. T. 2. p. 396.

When hemp has been ſwingled a ſecond time, and the hurds laid by, they take the ſtrikes, and dividing them into dozens, and half dozens, make them up into large thick rolls, which being broached on long ſticks, are ſet in the chimney corner to dry; after which they lay them in a round trough made for the purpoſe, and there with beetles beat them ſoundly, till they handle, both without and within, as pliant as poſſible, without any hardneſs or roughneſs to be felt: that done, they take them from the trough, open and divide the ſtrikes as before, and if any be found not ſufficiently beaten, they roll them up, and beat them over as before. Dict. Ruſt.

BEATING *the wind*, *verberare contra ventum*, was a practice in uſe in the antient method of trial by combat. If either of the combatants did not appear in the field at the time appointed, the other was to *beat the wind*, or make ſo many flouriſhes with his weapon; by which he was intitled to all the advantages of a conqueror. *Du Cange*, Gloſſ. Lat. T. 4. p. 1280.

BEATING *the hands or feet*, by way of praiſe or approbation. See the article APPLAUSE.

BEATING, *among book-binders*, denotes the knocking a book in quires on a block with a hammer, after folding, and before binding or ſtitching it. See BOOK-BINDING, *Cycl.*

BEATING, in the paper-works, ſignifies the *beating* of paper on a ſtone with a heavy hammer with a large, ſmooth head, and ſhort handle, in order to render it more ſmooth, and uniform, and fit for writing. *Savar.* Dict. Comm. T. 1. p. 308.

BEATING *time*, in muſic, a method of meaſuring and marking the time for performers in concert, by a motion of the hand or foot up and down ſucceſſively, and in equal times [a]. Knowing the true time of a crotchet, and ſuppoſing the meaſure actually ſubdivided into four crotchets, and the half meaſure into two, the hand or foot being up, if we put it down with the very beginning of the firſt note or crotchet, and then raiſe it with the third, and then down with the beginning of the next meaſure; this is called *beating* the time; and by practice, a habit is acquired of making this motion very equal [b]. Each down and up is ſometimes called a time, or meaſure [c].—[[a] *Sympſon*, Compl. Muſ. §. 7. p. 14. [b] *Malcolm.* Muſ. c. 12. §. 2. p. 399. [c] *Sympſ.* loc. cit.]

The general rule is, to contrive the diviſion of the meaſure ſo, that every down and up of the *beating* ſhall end with a particular note, on which very much depends the diſtinctneſs, and, as it were, the ſenſe of the melody. Hence the beginning of every time, or *beating* in the meaſure, is reckoned the accented part thereof. *Malcolm.* loc. cit.

Beating time is denoted, in the Italian muſic, by the term *a battuta*, which is uſually put after what they call *recitativo*, where little or no time is obſerved, to denote, that here they are to begin again to mark or beat the time exactly. *Broſſard*, Dict. Muſ. p. 12, ſeq.

The Romans aimed at ſomewhat of harmony in the ſtrokes of their oars, and had an officer called *portiſculus* in each galley, whoſe buſineſs was to *beat* time to the rowers; ſometimes by a pole or mallet, and ſometimes by his voice alone. *Pitiſc.* Lex. Ant. T. 2. p. 490.

The antients marked the rhythm in their muſical compoſitions; but, to make it more obſervable in the practice, they *beat* the meaſure or time, and this in different manners. The moſt uſual conſiſted in a motion of the foot, which was raiſed from, and ſtruck alternately againſt the ground, according to the modern method. Doing this was commonly the province of the maſter of the muſic, who was thence called μεσοχορος and κορυφαιος, becauſe placed in the middle of the choir of muſicians, and in an elevated ſituation, to be ſeen and heard more eaſily by the whole company. Theſe beaters of meaſure were alſo called by the Greeks ποδοκτυποι and ποδοψοφοι, becauſe of the noiſe of their feet; συνοναριοι, becauſe of the uniformity or monotony of the rhythm. The Latins denominated them *pedarii*, *podarii*, and *pedicularii*. *Burette*, in Mem. Acad. Inſcr. T. 7. p. 247. *Pitiſc.* Lex. Ant. T. 2. p. 399.

To make the beats or ſtrokes more audible, their feet were generally ſhod with a ſort of ſandals either of wood or iron, called by the Greeks κρουπεζια, κρουπαλα, κρουπεδα, and by the Latins *pedicula*, *ſcabella*, or *ſcabilla*, becauſe like to little ſtools, or foot-ſtools. Sometimes they beat upon ſonorous foot-ſtools, with the foot ſhod with a wooden or iron ſole.

They beat the meaſure not only with the foot, but alſo with the right-hand, all the fingers whereof they joined together, to ſtrike into the hollow of the left. He who thus marked the rhythm, was called *manuductor*. The antients alſo beat time or meaſure with ſhells, as oyſter-ſhells, and bones of animals, which they ſtruck againſt one another, much as the moderns now uſe caſtanets, and the like inſtruments. This the Greeks called κρεμβαλιαζειν, as is noted by Heſychius. The ſcholiaſt on Ariſtophanes ſpeaks much to the ſame purpoſe. Other noiſy inſtruments, as drums, cymbals, citterns, &c. were alſo uſed on the ſame occaſion.

They beat the meaſure generally in two equal or unequal times; at leaſt, this holds of the uſual rhythm of a piece of muſic, marked either by the noiſe of ſandals, or the flapping of the hands. But the other rhythmic inſtruments laſt-mentioned, and which were uſed principally to excite and animate the dancers, marked the cadence after another manner; that is, the number of their percuſſions equalled, or even ſometimes ſurpaſſed, that of the different ſounds which compoſed the air or ſong played. *Burette*, lib. cit. T. 7. p. 243, ſeq.

BEATING, *drubbing*, or *ſtripes*, make one of the moſt antient, as well as univerſal ſpecies of puniſhment. Among the Romans it obtained, under the denomination of *verberare*, *fuſtigare*, *flagellare*, *pulſare*, &c [d]. In later ages it was diſtinguiſhed by thoſe of *homicidium* [e], *homiplegium* [f], *plagare* [g], &c. In the Eaſt it ſtill prevails, under the name of *baſtonade*. It is inflicted with a cudgel, which, for its great virtue and efficacy in reforming mankind, is feigned by the Arabs to have come down from heaven [h].—[[d] Vid. *Kenn.* Rom. Ant. Not. P. 2. l. 3. c. 20. p. 143. *Pitiſc.* Lex. Ant. T. 2. p. 1050, ſeq. voc. *verbera*. *Du Cange*, Gloſſ. Lat. T. 2. p. 458. [e] Id. T. 2. p. 752. [f] Id. ibid. 753. [g] Id. T. 4. p. 299. [h] *Sale*, Prelim. Diſc. to Koran, §. 6. p. 141.] See BASTONADO.

Some diſtinguiſh between *pulſation* and *verberation*, as if the latter imported a *beating* with pain, the former without; but the diſtinction is not always kept to. *Calv.* p. 769.

BEATING, in the Engliſh laws. See BATTERY, *Cycl.*

Rolfinck ſpeaks of an empiric, who cured melancholic and maniacal patients by only whipping and *beating* them, *ſolis flagris & verberibus*. *Rolfinck*, in Ord. & Meth. Med. Sp. l. 14. §. 3. c. 17. *Caſt.* Lex. Med. p. 741: b.

BEATING *of the heart*. Divers ſyſtems have been framed to account for the *beating* of the heart. Some have doubted whether it be mechanical, that is, deducible from any known laws or powers of nature. Vid. *Ray*, Wiſd. of God. P. 1. p. 45.

The French philoſophers give an inſtance of an extraordinary *beating* of the heart, ſo ſtrong and loud, that it might be heard to the diſtance of ten paces [i]. The arteries have their pulſations correſpondent to thoſe of the heart, by which they are diſtinguiſhed from the veins, which have no pulſe; tho' there are inſtances alſo of *beatings* of the veins [k], like thoſe of the arteries.—[[i] Mem. Acad. Scienc. 1704. p. 30. [k] Mem. Acad. Scienc. 1704. p. 218.]

BEATING *in the flanks*, a diſtemper to which black cattle are ſubject, and is an indication of a great inflammation in the bowels. Ruſt. Dict.

BEATITUDE imports the ſupreme good, or the higheſt degree of happineſs human nature is ſuſceptible of; or the moſt perfect ſtate of a rational being, wherein the ſoul has attained to the utmoſt excellency and dignity it is framed for. *Micræl.* Lex. Philoſoph. p. 209.

In which ſenſe, it amounts to the ſame with what we otherwiſe call *bleſſedneſs* and *ſovereign felicity*; by the Greeks εὐδαιμονια; and by the Latins *ſummum bonum*, *beatitudo*, and *beatitas*. *Quinctil.* Inſt. Orat. l. 8. c. 3. Jour des Scav. T. 67. p. 235.

BEATITUDE, among divines, denotes the beatific viſion, or the fruition of God in a future life to all eternity.

BEATITUDE is alſo uſed in ſpeaking of the theſes contained in Chriſt's ſermon on the mount, whereby he pronounces bleſſed the poor in ſpirit, thoſe that mourn, the meek, &c. *Matth.* c. 5. ver. 2, ſeq.

BEATITUDE was alſo a title antiently given to all biſhops; but of later days reſtrained to the pope. *Schmid.* Lex. p. 89.

It appears to have been ſometimes alſo given to laymen. *Briſſ.* de Formul. p. 362. *Schmid.* loc. cit.

BEAVER, (*Cycl.*) in zoology. See FIBER.

BECAH or BEKAH, a Jewiſh coin, being half a ſhekel. *Cumberl.* Ant. Jewiſh Weight. c. 4. p. 138. See the article SHEKEL, *Cycl.*

In Dr. Arbuthnot's table of reductions, the *bekah* amounts to $13\frac{11}{16}$ *d.* in Dr. Prideaux's computation to 1 *s.* 6 *d.*

Every Iſraelite paid an hundred *bekahs* a head every year for the ſupport of the temple. *Calm.* Dict. Bibl. in voc.

BECALMING, in the ſea-language, is when any thing keeps the wind off or away from a veſſel. *Botel.* Sea Dial. 4. p. 187. Thus one ſhip is ſaid to *becalm* another, when ſhe comes up with her on the weather-ſide: the like is ſaid of the ſhore, when it keeps the wind away.

BECASSE, in natural hiſtory, the woodcock. The French writers have alſo made this the name of a kind of ſhell-fiſh, of the genus of the purpura. They call this the woodcock-ſhell, from the length of its beak. There are two ſpecies of this, a prickly and a ſmooth one.

The prickly kind is an extremely beautiful and elegant ſhell. It is of a yellowiſh colour; and its tail or beak (for the hinder extremity of the ſhell, which runs out into an immoderate length, is ſometimes called by the one, ſometimes by the other of theſe names) is furniſhed with four rows of large and very long ſpines: between the rows of theſe, there are alſo rows of ſmall and ſhort ſpines. The body of the ſhell is furrowed very deep, with a number of tranſverſe circular lines; and both this and the clavicle are beſet with ſeveral rows of long ſpines.

The ſmooth *becaſſe*, or woodcock-ſhell, is a very elegant ſpecies, but much leſs ſo than the other. It is of a yellowiſh colour, radiated with black and grey lines. It is all over deeply furrowed, and the ridges are beſet with tubercles, the clavicle is elevated, and the tail is extremely long, and hollowed into a ſort of tube. The mouth of this, as well as of the other, is ſmall and roundiſh, and in this ſpecies is of a light fleſh-colour.

BECASSINE, in zoology, a name given by many to the *tringa minor*, or, as we commonly call it, the *ſand-piper*. See the article SAND-*piper*.

BECCA, in the materia medica of the antients, a name given to a fine kind of reſin, collected from the turpentine and maſtic-trees of Greece and Syria, and mixed together for uſe. It was much eſteemed formerly, and not only uſed in the country where it was produced, but carried in great quantities to Mecca, and other parts of the Turkiſh dominions, where it was valued at a very great rate. Dioſcorides, however, tells us, that this reſin ſuffered in the admixture; for that the reſin collected pure from the turpentine-tree alone, was greatly preferable to this mixt kind; and in enumerating in another place the various reſins, he ſtill gives the ſame preheminence to that of the turpentine-tree, ſaying, that it is the firſt of all reſins, and that the maſtic is ſecond to it. The Greeks called the turpentine and the maſtic trees both by the ſame name, *ſura*; and the Arabians formed out of that word their name *dura*, or *daru*, which they, in like manner, uſed to expreſs both the turpentine and maſtic-trees; and thence the trees being ſuppoſed the ſame, it is no wonder that their reſins were mixed together in the collecting; and the *becca* or mixt reſin reſulting from this mixture could not but be eſteemed the beſt of all reſins by thoſe, who had never ſeen the finer part of the mixture pure and alone.

BECCIFAGO, in zoology, the name of a ſmall bird, ſcarce ſo large as the common linnet, and with a very remarkable ſhort body. Its head, neck, back, wings, and tail, are of a greeniſh grey, and in ſome of the birds of a greeniſh brown. This may, perhaps, be owing to the difference of ſex. Its long wing-feathers are of a mixt colour of black and green; and the under feathers of the wings are yellowiſh: the tail is two fingers breadth long, and not forked, and of a plain brown colour. It feeds on vegetables, berries, &c. and is common in the north of England, where it is called the *pettychaps*. *Ray*, Ornithol. p. 158.

BECK, a little river or brook, called alſo rivulet, or rill. Dict. Ruſt. in voc.

According to Verſtegan, the original word is *beke*, which properly imports a ſmall ſtream of water iſſuing from ſome bourn or ſpring. *Verſt.* Reſtit. Dec. Intell. c. 9. p. 222.

Hence *hell-becks*, little brooks in the rough and wild mountains about Richmond near Lancaſhire, ſo called on account of their ghaſtlineſs and depth. Ruſt. Dict. in voc.

Beck is chiefly uſed among us in the compoſition of names of places originally ſituate on rivulets; hence Welbeck, Bournbeck, &c.

The Germans uſe *back* in the ſame manner. *Martiniere*, Dict. Geogr. T. 2. p. 180.

BECTASSE, an order or ſect of religious among the Turks, denominated from their founder *Bectaſh*, preacher to ſultan Amurath.

All the Janizaries belonging to the Porte are of the religion of *bectaſſe*, being even ſaid to have derived their origin from the founder of this ſect.

The habit of the *bectaſſe* is white: on their heads they wear white caps of ſeveral pieces, with turbans of wool, twiſted rope-faſhion. They obſerve conſtantly the hour of prayer, which they perform in their own aſſemblies, and make frequent declarations of the unity of God. *Rycaut.* State Ottom. Emp. c. 19. p. 148.

BED (*Cycl.*)—BED *of juſtice*, *lit de juſtice*, in the French laws, denotes a throne whereon the king is ſeated in parliament. Vid. *Tillet.* ſur le Lit de Juſtice, P. 1. p. 255, ſeq. & P. 2. p. 67, ſeq. Trev. T. 3. p. 1495. voc. *Lit de juſtice*.

In this ſenſe, the king is ſaid to hold his *lit de juſtice*, when he goes to the parliament of Paris, and holds a ſolemn ſeſſion, under a high canopy erected for the purpoſe.

The *bed of juſtice* is only held on affairs relating to the ſtate; on which occaſion, all the officers of the parliament appear in red robes; at other times they wear black ones. Several authors have treated expreſly on the ceremonies of the *bed of juſtice*. *Le Long*, Bibl. Hiſt. §. 10825, ſeq. p. 563.

BED *of a gun* is a piece of plank laid within the cheeks of the carriage, on the middle tranſum, for the breech of the gun to reſt on. *Guillet*, Gent. Dict. P. 2.

BED or *ſtool of a mortar* is a ſolid piece of oak, in form of a parallelopiped, bigger or leſs, according to the dimenſions of the mortar, hollowed a little in the middle to receive the breech, and half the trunions.

On the ſides of the *bed* are fixed the cheeks or brackets by four bolts of iron. *Guillet*, ibid.

In ſhips, when the decks lie too low from the ports, ſo that the carriages of the pieces, with the trucks, cannot mount the ordnance ſufficiently, but that they lie too near the gun-wale; the method is to make a falſe deck for ſo much as the piece will require for her traverſing to raiſe it higher; and this they call a *bed*. *Manw.* Seam. Dict. p. 7.

Dining BED, *lectus triclinaris*, or *diſcubitorius*, that whereon the antients lay at meals.

The dining or *diſcubitory beds* were four or five feet high. Three of theſe *beds* were ordinarily ranged by a ſquare table (whence both the table, and the room where they eat, were called *triclinium*) in ſuch manner, that one of the ſides of the table remained open, and acceſſible to the waiters. Each *bed* would hold three or four, rarely five perſons. Mem. Acad. Inſcr. T. 2. p. 428, ſeq. *Pitiſc.* Lex. Ant. T. 2. p. 448.

Theſe *beds* were unknown before the ſecond Punic war: the Romans, till then, ſat down to eat on plain wooden benches, in imitation of the heroes of Homer, or, as Varro expreſſes it, after the manner of the Lacedæmonians and Cretans. Scipio Africanus firſt made an innovation: he had brought from Carthage ſome of theſe little *beds* called *punicani*, or *archaici* [a], being of a wood common enough, very low, ſtuffed only with ſtraw or hay, and covered with goats or ſheeps ſkins, *hædinis pellibus ſtrati*. In reality, there was no great difference, as to delicacy, between theſe new *beds* and the antient benches; but the cuſtom of frequent bathing, which began then to obtain, by ſoftening and relaxing the body, put men on trying to reſt themſelves more commodiouſly by lying along, than by ſitting down. For the ladies, it did not ſeem at firſt conſiſtent with their modeſty to adopt the mode of lying; accordingly they kept to the old cuſtom all the time of the commonwealth; but, from the firſt Cæſars, they eat on their *beds*. For the

youth,

youth, who had not yet put on the *toga virilis*, they were long kept to the antient diſcipline. When they were admitted to table, they only ſat on the edge of the *beds* of their neareſt relations. Never, ſays Suetonius, did the young Cæſars, Caius and Lucius, eat at the table of Auguſtus; but they were ſet *in imo loco*, or, as Tacitus expreſſes it, *ad lecti fulcra*. From the greateſt ſimplicity, the Romans, by degrees, carried their dining *beds* to the moſt ſurpriſing magnificence. Pliny [b] aſſures us, it was no new thing to ſee them covered over with plates of ſilver, adorned with the ſofteſt mats, and the richeſt counterpanes.—[[a] Vid. *Hor.* Ep. 5. l. 1. & *Galland*, in Mem. Acad. Inſcr. 1702. p. 220. [b] *Plin.* Hiſt. Nat. l. 33. c. 11.

Lampridius, ſpeaking of Heliogabalus, ſays, he had *beds* of ſolid ſilver, *ſolido argento habuit lectos, & tricliniares, & cubiculares* [c]. We may add, that Pompey, in his third triumph, brought in beds of gold [d].—[[c] *Lamprid.* in Heliogab. c. 20. [d] *Plin.* Hiſt. Nat. l. 37. c. 2.]

Seneca and the poets have many things on the matter and form of theſe *beds*, the choice of the purple, and exquiſiteneſs of the embroidery [e]. Ciacconius has treated this ſubject at large in his diſſertation *de triclinio*. The contraſt is well expreſſed in that paſſage of Ovid; the *beds* of our fathers were adorned with graſs and leaves; the rich themſelves could only afford to cover them with ſkins [f]; *qui poterat pelles addere, dives erat.* —[[e] *Abbé Couture*, Diſſ. de la Vie Privée des Rom. §. 4. in Mem. Acad. Inſcr. T. 2. p. 429, ſeq. [f] *Potter.* Archæol. l. 4. c. 20. p. 376, ſeq.]

BEDS, in gardening, for raiſing melons, muſhrooms, and the like, are commonly denominated *ridges*.

Muſhrooms raiſed on *beds* are not ſo good as thoſe which grow at large in the natural ſoil. Vid. *Bradl.* New Exper. on Gard. P. 2. p. 135.

Hot BEDS are enriched with extraordinary plenty of manure, and ſheltered from the cold air by ſtraw coverings, frames, and the like, ſerving to help forward the growth of plants, and force a vegetation, where either the ſeaſon or the climate of itſelf is not warm enough. *Bradl.* New Exper. on Gard. P. 3. c. 1. p. 101. See HOT-*bed*.

To make a hot-*bed* in February, or earlier, for the raiſing of colliflowers, cucumbers, melons, radiſhes, or other tender plants or flowers, they provide a warm place, defended from all winds, by being incloſed with a pale or hedge made of reed or ſtraw, and laid with freſh horſe-dung ſix or eight days old, trodden down hard, and level on the top; over which they lay rich earth three or four inches thick. When the extreme heat of the *bed* is over, which may be perceived by thruſting in the finger, they plant their ſeeds. This done, they ſet up forks four or five inches above the *bed*, to ſupport a frame made of ſticks, and covered with ſtraw or baſs-mat, to ſecure the ſeedlings from the weather. As the plants ſhoot in height, they earth them up; and when able to bear the cold, tranſplant them into natural *beds*. *Bradl.* loc. cit. Ruſt. Dict. in voc.

BEDS, in ſpeaking of hops, denotes the floor whereon they are ſpread to dry. *Hought.* Collect. T. 2. p. 451.

BED *of corn* is a heap, flat a-top, three or four feet high, otherwiſe called a *couch*.

Corn, in grannaries, keeps beſt in *beds* or couches. Mem. Acad. Scienc. 1708. p. 90.

BED-*algenſe*, a name given by the Arab aſtronomers to a fixed ſtar of the firſt magnitude in the right ſhoulder of Orion. *Vital.* Lex. Math. p. 84. *Wolf.* p. 255. See ORION, *Cycl.*

Bed-algenſe is of a ruddy colour, by which it is eaſily diſtinguiſhed. Its longitude, according to Hevelius, for the year 1700, was 24° 35′ 5″, and its latitude ſouthward 16° 3′ 52″. *Hevel.* Prodrom. Aſtron. p. 295. *Wolf.* loc. cit.

BEDALACH, in the materia medica, a name given by ſome writers to the gum bdellium; but particularly to that kind of it which was brought from Arabia, and was of a yellowiſh colour, like wax. It is to this bdellium that the manna, on which the children of Iſrael fed in the deſert, is compared, which, according to the account of that miraculous food, was not unlike it. The other coarſe, blackiſh, and foul bdellium comes from other countries.

BEDAUDE, in natural hiſtory, a name given by the French authors to a ſort of prickly caterpillar found on the elm. See CATERPILLAR.

BEDDING, *lectoria*, in reſpect of horſes and other cattle, denotes ſtraw or litter ſpread under them to lie on. Vid. *Du Cange*, T. 3. p. 237.

Bedding, in ſpeaking of a roe, is uſed by ſportſmen for the lodging of that beaſt. *Cox*, Gent. Recr. P. 1. p. 10.

A roe is ſaid to *bed*; a hart to *harbour*; a fox to *kennel*.

BEDENGIAN, in botany, a name given by Aviſenna and Serapion to the *poma amoris*, or love-apples, a ſort of fruit uſed in food by the Italians, and ſome other nations, and ſeeming to be the third kind of the *ſtrychnos* or *ſolanum* mentioned by Theophraſtus. That author firſt deſcribes two kinds of this plant, the one of which occaſioned ſleepy diſorders, and the other threw people who eat of it into madneſs. After theſe, which he properly accounts poiſonous kinds, he mentions a third, which was cultivated in gardens, for the ſake of the fruit, which, he ſays, is large, and eſculent. This is certainly the ſame with the *bedengian*, or *poma amoris*. See *Theophraſt.* and *Aviſenn.*

BEDEREP. See BEDRIP.

BEDOARA, in botany, a name uſed by the Arabians, and ſome other authors, for the white thorn. *Ger.* Emac. Ind. 2.

BEDOUIS, a ſet of the Arabs, inhabitants of Egypt. Theſe live in tents, and ſubſiſt moſtly by the cattle they graze, which are camels and goats that feed on ſmall ſhrubs. They live on each ſide the Delta, and are much about Mecca. *Pocock*'s Egypt, p. 177.

BEDRIP, or BEDREPE, or BEDERAPE, the cuſtomary ſervice which inferior tenants antiently paid their lord, by cutting down his corn, or doing other work in the field. *Kenn.* Gloſſ. ad Paroch. Antiq. in voc.

The word is formed from the Saxon *biddon*, to pray, and *repe*, to reap or cut corn.

In this ſenſe, *bedrip* amounts to the ſame with what is otherwiſe called in Latin writers *precaria*.

Bedrip is uſed, in ſpeaking of the days of work in harveſt; as ſome yet are bound to give them one, two, or three days work, called in ſome places *boon-days*. *Blount*'s Law Dict. in voc. *bederep*.

BEE, in phyſiology and husbandry, a naked, winged, faviſicous inſect, bred from maggots or worms, that are *apoda*, or without feet; remarkable for their skill and induſtry in gathering of honey and wax from flowers, and on that account frequently preſerved in gardens. *Hought.* Collect. T. 3. p. 257.

Beſides the common honey-*bee*, which we raiſe in hives, and have at all times under our care, there are nine other ſpecies, which we have wild about our fields. Theſe are, 1. The wild *bee*, of the ſize and colour of the common *bee*, but having very long and ſtreight antennæ. This is leſs hairy than the common *bee*. 2. The wild, black, wall *bee*. This is all over black: its body is ſhort, and its legs are of an orange colour. This has a ſting like that of the common *bee*. It builds in old walls. 3. The long-bodied wild *bee*, with a yellow body and black tail. This alſo builds in old walls. 4. The ſmall, long-bodied, wall *bee*, with white ſpots on its body and legs. This is alſo frequently found about old walls. 5. The ſmalleſt wild *bee*, with long reddiſh hair on the breaſt, and whitiſh on the ſides. 6. The earth *bee*. This ſpecies is ſo named from its making a hole in the earth for the reception of its young. This is ſmaller and weaker than the common *bee*, and is uſually met with in large ſwarms, all living in one large ſubterraneous apartment. 7. The great wild *bee*, reſembling the humble *bee* in its colours and hairineſs, and having a black rim round the wings. 8. The tree *bee*. This is ſo called from its always building in hollow trees. It is ſomewhat larger than the common *bee*, and is more hairy. *Ray*, Hiſt. Inſ. p. 244.

To the ſpecies of hive *bees* belong the common or honey *bee*; the male *bee*, or drone; and the king, or rather queen-*bee*.

The queen is ſomewhat bigger, conſiderably longer, and of a brighter red than the others. Her office is to direct and lead the ſwarms, and to raiſe a new breed, by depoſiting eggs, which turn to maggots in the cells, and are afterwards metamorphoſed into *bees*. Her fertility is ſo great, that ſhe brings forth ten or twenty thouſand young in a year; ſo that ſhe may be literally ſaid to be the mother of all her people.

Generally there is but one queen-*bee*, ſometimes two, or at moſt three in a hive of eight or ten thouſand *bees*. *Maraldi*, ap. Hiſt. Acad. Scienc. ann. 1712. p. 7, ſeq. & Mem. Acad. Scienc. ann. 1712. p. 394.

The drones are uſually ſuppoſed to be the males; but this is only conjecture: they are produced, like the reſt, by the queen; only the eggs for them are depoſited in a larger ſort of cells for the purpoſe. They have no ſtings, are of a darker colour, and generally larger, eſpecially longer, than the honey *bee*. Some hives have more of them, others fewer, and ſome at certain ſeaſons none. Their office is ſaid to be, to ſerve as ſervants and nurſes to the young fry, and as ſtallions for the pleaſure of the queen. Hiſt Acad. Scienc. loc. cit. *Hought.* ubi ſupra.

We have a ſort of *bees*, which breed up their young not in hives or combs, but in caſes made of leaves. They are not nice as to what tree they ſhall uſe the leaves of, but fix indifferently on almoſt any. The ſyringa, or lilac, however, is one of the moſt common. One leaf contains many caſes; and as theſe lie one behind another, and the hindermoſt is finiſhed, and the egg depoſited in it, firſt, it might appear, that the *bee* hatched there muſt come to maturity firſt, and eat its way thro' all the reſt to get out; but it is more probable, that all the eggs in the body of the parent being at the ſame ſtate of maturity when the neſt is begun, the firſt laid is the laſt hatched, the others having the advantage of being ſome time longer in the parent's body, which muſt bring them forward more than while in the caſe. By this means, the laſt laid will be firſt hatched, and ſo the anterior cells will be all uſeleſs and empty, as the animals in the poſterior ones become ready for their going out.

Bees, which breed in caſes made of willow-leaves, and lodged in the rotten wood of the ſame tree, are the moſt remarkable of this kind. Theſe creatures, in their maggot or worm-ſtate, either eat a hole deep enough for their reception, or finding one ready bored, take poſſeſſion of it. When they are to lie-

by

by for their change, each wraps its body round with twelve or fourteen leaves, making a hard and firm caſe, faſtened up at each end with as many pieces of leaves bitten off, and fixed carefully on.

The caſes are about an inch long, and lie one at the end of another, ſo as to fill up the whole hole. The holes in the wood are not alway ſtreight, but ſometimes burrowed, like thoſe of rabbits.

Mites are very great enemies to theſe creatures; and knowing that a helpleſs animal is contained there, they uſually eat their way thro' the caſe, and devour the animal in its reſiſtleſs ſtate of the nymph. When the *bees* eſcape this, and come to their proper maturity, they are in all reſpects like the common *bee*; except that they have a yellow ſtreak acroſs their belly, ſo bright, that it gives them the look of the waſp: but the body is too ſhort for that animal, and they are in reality true *bees*, having a ſting, and all the other parts of a regular *bee*. Phil. Tranſ. N° 64.

There is, in ſome parts of America, a very different ſpecies of *bees* from ours; and the manner of erecting their combs, and lodging their honey, is not leſs different than their form. Their combs are compoſed of a ſeries of ſmall bottles or bladders of wax, of a dusky brown or blackiſh colour; and each of theſe is much of the ſize and ſhape of a Spaniſh olive. They hang together in cluſters, almoſt like a bunch of grapes, and are ſo contrived, that each of them has its aperture while the *bees* are at work upon it; but as ſoon as it is filled with honey, this aperture is cloſed, and the *bees* leave it, and go to work upon another veſſel.

Their lodgings are uſually taken up in the hollow of an old tree, or in ſome cavity of a rock by the ſea-ſide. They are very cunning in chooſing the propereſt places of this kind, becauſe their honey is ſo delicious a bait, that they are hunted after by many ſorts of animals; and they have no power of defending themſelves, having no ſtings, as our *bees* have.

When the combs are removed, they muſt be very gently taken out of their place, and carried to where they are to be emptied in their exact natural poſition, otherwiſe they do not hold, but the greater part of the honey will be ſpilt, or mixed with the wax by the way.

The honey is clear and liquid as rock-water, and is hardly to be diſtinguiſhed from pure water by the ſight; and the manner of getting it clean out is, to prick the bottom of every bladder ſeparately with a thorn, or a pin. It is better indeed to give the puncture a little above the very baſe, becauſe there is often a ſmall ſediment of thicker matter juſt there, which would prevent the reſt from running out. It is uſed by the natives rather as drink with their food, than as honey. They uſe it alſo in medicine as a purge, drinking half a pint of it in a morning faſting. It is of an extremely agreeable flavour, and in ſome parts of America it is very plentiful. Phil. Tranſ. N° 172. p. 1030.

Naturaliſts relate wonders of the oeconomy, policy, ſagacity, and induſtry of *bees*. The diſtribution they make of their labour is no leſs celebrated; for while ſome are employed in gathering of honey or wax, others repair rotten hives; others carry out the dead; others cleanſe the filth; others keep guard, placing themſelves in five or ſix files, eight or ten deep, upon the floor of the hives, ſo that all the *bees* at entrance muſt paſs between them; ſome are even ſaid to ſerve for bridges and ladders for others to paſs on. *Maraldi*, ubi ſupra. See alſo *Boyle*, Work. abridg. T. 2. p. 181, ſeq.

In effect, no inſect, and indeed ſcarce any animal, makes ſuch a figure in the writings of naturaliſts as the *bee*; but when we come to examine ſtrictly into what is related of this inſect, we ſhall find, however, a great deal of falſity in the marvellous things recounted of it; but we ſhall find at the ſame time, by nice inquiry into their works, many things not leſs to their credit, which have been paſſed over in ſilence; and the place of imaginary wonders, exploded by ſuch a ſcrutiny, will be amply filled up by real wonders unknown before.

Ariſtotle, Pliny, and the reſt of the antients, have recorded, that the *bees*, in caſes of ſtormy weather, take up a ſmall ſtone in their legs, in order to their being of ſome weight, and not liable to be carried away by every blaſt of wind. This is one of the falſe wonders attributed to theſe inſects; and the falſity is eaſily detected, by only obſerving the numbers that fly to a hive in a ſtorm, it will not be ſeen, that any one of them has any ſuch contrivance; and indeed if they had, the fact would eaſily be known, by their leaving their ſtones either at the mouth of the hive, or within it, ſince a ſtone capable of adding any thing conſiderable to their weight, muſt be of ſome ſize, and ſo many thouſands of theſe as muſt be depoſited by the multitudes of *bees* driven home by every ſtorm, could not but be ſeen.

The antients had this foundation for their account: there is a ſort of two-winged fly, of the ſize and colour of a *bee*, and ſo like it as not to be diſtinguiſhed, except by its having only two wings inſtead of four, and its having no ſting. This fly builds its neſt with pieces of coarſe and large ſand, and to this end is frequently found carrying thoſe little ſtones thro' the air. This creature had been miſtaken by ſome obſervers for a *bee*, and the intent of its labour in carrying theſe ſtones miſtaken; and hence the account of the *bees* carrying them by way of ballaſt introduced into the world.

The moral virtues have been all, at one time or other, attributed to the *bees*. We have been told of their burying their dead with all the ſolemnity and ceremony of a regular funeral, and that with great labour. The thing which gave riſe to this was, the obſerving a ſingle *bee* often labouring to carry out of the hive another *bee*, which was dead: this, with the utmoſt difficulty, he at length flies away with, and depoſits at ſome diſtance from the hive. This, however, is not out of care for the dead, but for the living: theſe creatures hate to have any thing incumber them in the hive; and it is as common to ſee them carry out as great a load of any other offenſive or unneceſſary matter. We ſhall alſo throw off all our opinion of their charity in theſe operations, if we conſider, that, at certain times, when they think their ſtores will fall ſhort, they make no ſcruple to throw out of the hives their own offſpring, the nymphs, and young *bees* ſcarce extricated from that covering, often being carried away, and left to periſh in great numbers together. *Reaumur*, Hiſt. Inſect. Vol. 9. p. 268.

It is pretended by ſeveral authors, that the *bees* know how to diſtinguiſh virtuous from vicious men; and that being themſelves a chaſte and virtuous people, they love ſuch men as are ſo, and hate and injure others: they ſay, that a chaſte and virtuous man may go to their hives, and ſtand by them as long as he pleaſes, without hurt; but that a vitious perſon will certainly be ſtung, if he attempts it.

It is true, that many perſons have ſtood a long while near hives without hurt; and that others have been deſperately ſtung only in paſſing by them: but this is from far different cauſes. In general, thoſe *bees*, whoſe hives are ſituated near houſes, are uſed to ſee men every day, and therefore are not alarmed at them, and finding no danger from them, are not apt to ſuſpect any; ſo that they do them no injury: but, on the contrary, *bees* whoſe hives are in places leſs frequented, not being accuſtomed to the ſight of a man, will take him for an enemy whenever he appears. There is alſo another rule to be obſerved, in order to avoid being ſtung by them, which is, not to hurt or injure them. If a perſon will bear the humming noiſe of them about his ears, and not diſturb them, even when near his face, he may obſerve them many hours without danger; but if he moleſts or beats them away, he uſually ſuffers for it. Theſe are the reaſons why ſome people are ſtung by *bees*, and others not; and people not attending to theſe, have ſuppoſed many other imaginary and idle cauſes.

Bees have alſo been celebrated for their nice ſmell; and it is affirmed by many, that they love ſweets, and hate ſtinks in ſuch a manner, that they will fly to the one out of love, and will ſting the perſon who carries the other about him, by way of hatred. But there is ſo little ground for this, that Mr. Reaumur tried them, and found no difference when he carried ſweet or diſagreeable things about him: and it is to be obſerved, that we are not to judge for them in regard to what are ſweets and what are ſtinks, ſince they often frequent places where urine is voided, and lies to corrupt, which to us is a very ill ſmell.

The *bees* have frequent battles about the mouths of their hives; but it is but ſeldom that they proceed ſo far as to be mortal: ſometimes, however, many are left dead upon the ſpot, and the conquerors march in, in great triumph.

It is certain that the *bees* foreſee rain, and it being very detrimental to them, they always haſten to their hives to avoid it. Whether they ſee the clouds gathering for it, as ſome imagine, or whether (as is much more probable) they feel ſome other effects of it upon their bodies, is not yet determined; but it is certain, that no *bee* is ever caught even in what we call a ſudden ſhower, unleſs it have been at a very great diſtance from the hive, or have been before injured by ſome accident, or be ſickly, and unable to fly ſo faſt as the reſt.

All theſe things are to be ſeen on the outſide of a hive; but when we look within it, the wonder is greatly increaſed. The obſerving ſo many thouſands of little creatures all ſo actively at work, and with ſuch admirable regularity, making combs and cells for the reception of their winter's ſtores, and other neceſſary uſes, is a ſight of infinite amazement: nor is there leſs wonder in obſerving the cluſters of them at thoſe times when they are in a humour to take ſome reſt, that they may go jointly to work again with freſh ſpirits. Their method of reſting is, by getting together, and hanging one to another in vaſt numbers. When theſe cluſters of them are very large, they are only ſhapeleſs heaps; but when they are of fewer numbers, they make a ſort of chains, of which each link is a living animal. Theſe are often the beginnings of other cluſters, and theſe frequently hang from branches of trees in the form of feſtoons or garlands, each end being held to the branch, and the middle drooping from it.

The manner in which the *bees* hang together to form theſe ſmaller, as well as the larger cluſters, is this; each *bee*, with its two fore-legs, lays hold of the two hinder-legs of the *bee* that is next above it, or only by one of its fore-legs to one of the hinder-legs of the other. In this manner is formed a chain, by the ſucceſſive application of the *bees* one behind another; and thus the firſt *bee* ſupports the weight of all the reſt down

to the bottom of the chain. The largeſt cluſters are only a multiplicity of theſe chains, of which there are ſometimes many hundreds together. The *bees* never lay hold of any part of one another, except the legs, thoſe being the moſt proper for faſtening to one another by. *Reaumur*, Hiſt. Inſect. Vol. 9. p. 273.

The ſtructure and anatomy of the *bee* are deſcribed by divers naturaliſts. The parts chiefly uſed in their labours are, two ſcrapers wherewith they gather wax; two arms wherewith they work in making combs; and another part, called by Leuwenhoeck a wiper, wherewith he ſuppoſed them to wipe the honey from off the flowers [a]. But this laſt part Dr. Garden chooſes to denominate the ſucker, or proboſcis, as being hollow, and compoſed of circular fibres, and ſerving to imbibe or ſuck up the honey from plants [b].—[[a] *Leuwenh.* in Phil. Tranſ. N° 94. p. 6038. [b] *Garden*, ap. Phil. Tranſ. N° 175. p. 1158. See alſo *Maraldi*, in Mem. Acad. Scienc. 1712. p. 395.]

The ſting of the *bee* is a very curious weapon, and when examined by the microſcope, appears of a very ſurpriſing ſtructure. It has a horny ſheath or ſcabbard, which includes two bearded darts. This ſheath ends in a ſharp point, near the extremity of which a ſlit opens, through which, at the time of ſtinging, the two bearded darts are protruded beyond the end of the ſheath: one of theſe is a little longer than the other, and fixes its beard firſt, and the other inſtantly following, they penetrate alternately deeper and deeper, taking hold of the fleſh with their beards or hooks, till the whole ſting is buried in the fleſh; and then a venomous juice is injected through the ſame ſheath, from a little bag at the root of the ſting, which occaſions an acute pain, and a ſwelling of the part, which ſometimes continues ſeveral days. But this is beſt prevented by inlarging the wound directly, to give it ſome diſcharge. Mr. Derham counted on the ſting of a waſp eight beards on the ſide of each dart, ſomewhat like the beards of fiſh-hooks; and the ſame number are to be counted on the darts of the *bee*'s ſting.

When theſe beards are ſtruck deep in the fleſh, if the wounded perſon ſtarts, or diſcompoſes the *bee* before it can diſengage them, the ſting is left behind ſticking in the wound; but if he have patience to ſtand quiet, the creature brings the hooks down cloſe to the ſides of the darts, and withdraws the weapon; in which caſe, the wound is always much leſs painful. A waſp is not ſo liable to leave its ſting in the wound as a *bee*, the beards of it being ſhorter, and the creature more vigorous and nimble in its motions.

To view the ſting of a *bee* by the microſcope, the end of the tail is to be cut off, and then, touching it with a pin or needle, it will thruſt out the ſting and darts, which may be cut off with a nice pair of ſciſſars, and kept for obſervation: or, if a *bee* be caught in a leather-glove, its ſting will be left in the glove, the creature being unable to diſengage it from the leather. The bag containing the poiſonous juice may eaſily be found at the bottom of the ſting, and examined, it being commonly pulled out with it; and if a living *bee* be provoked to ſtrike with its ſting againſt a plate of glaſs, enough of the liquor will be left on the glaſs for examination; and the ſalts of it may be ſeen forming themſelves into cryſtals. *Baker*'s Microſcope, p. 310.

For the manner wherein the honey and waxy humors are ſecreted from the juices of the plant, authors are divided. Some ſuppoſe it done by coagulating the vegetable juices; others by only ſeparating the caſeous parts thereof already coagulated. Phil Tranſ. N° 274. p. 368. See alſo *Maraldi*, ubi ſupra, p. 391 & 438. See HONEY, WAX, *&c.*

By the accurate obſervations of meſſieurs Maraldi and de Reaumur, it has been found, that the baſes of the cells of *bees* are of that pyramidical figure, which requires the leaſt wax for containing the ſame quantity of honey.

Theſe baſes are formed from three equal rhombuſes, the obtuſe angles of which are found to be double of the angle, whoſe tangent is to the radius, as the diagonal is to the ſide of a ſquare. Phil. Tranſ. N° 471. §. 1.

Monſieur Maraldi [c] found them by menſuration to be nearly 110°; and obſerved, that if the three obtuſe angles, forming the ſolid angles of the baſe of the cell, were ſuppoſed equal to each other, they muſt be of 109° 28'. And Mr. Konig, by the method of infiniteſimals, found, that the angle in queſtion ought to be 109° 26'. But Mr. Maclaurin has lately demonſtrated, from the elements of geometry, that the moſt advantageous angle is the ſame which reſults from the ſuppoſed equality of the three plane angles forming the ſolid angle; and that the tangent of half of this angle is to the radius, as $\sqrt{2}$ to 1, or as 14142135 to 10000000; and conſequently the half angle is 54° 44'08", and the whole 109° 28' 16" [d].—[[c] Mem. Acad. Scienc. 1712. [d] Phil. Tranſ. ibid. p. 569.]

By this conſtruction, the inſects ſave a good deal of their labour and wax. How they arrive at this inſtinct is a queſtion of a higher nature; but it is remarkable, that their cells, by being hexagonal, are the moſt capacious, in proportion to their ſurface, of any regular figures that leave no interſtices between them, and at the ſame time admit of the moſt perfect baſes, and ſuch, that their conſtruction could not have been better contrived from the greateſt knowledge of geometry. See ALVEOLUS.

Mr. Dudly ſpeaks of a method of hunting of *bees*, or finding of *bees*-neſts, practiſed of late years in the woods in New England. It conſiſts in catching a *bee*, then letting it fly, and obſerving the way it ſteers: this ſhews the hunter the courſe or bearing of the neſt. To find the diſtance, he takes an offſet of an hundred perches, and lets fly another *bee*; the angle or point wherein theſe two courſes interſect, is the place of the neſt. Phil. Tranſ. N° 367. p. 148.

Writers on huſbandry and country affairs give many directions concerning the taking, removing, feeding, breeding, hiving, *&c.* of *bees*, on which their thriving much depends. Vid. Dict. Ruſt. in voc.

Bees ſwarm ordinarily about the middle of May: a ſwarm early in March is reckoned very extraordinary. Vid. Phil. Tranſ. N° 70. p. 2128.

Divers attempts have been made to get the young brood into new hives, without endangering their going forth in ſwarms to ſeek a new reſidence. Vid. Dict. Ruſt. in voc. Phil. Tranſ. N° 96. p. 6076. See HIVING and SWARMS.

Many authors have written on *bees*. Among the antients, Ariſtomachus is ſaid to have ſtudied them ſixty years; Philliſcus retired into a deſert wood, that he might have the opportunity of obſerving them to better advantage; Ariſtotle made a great number of curious obſervations on this inſect, which Virgil has put into Latin Verſe: they have been inlarged and confirmed by Pliny and others. Theophraſtus has a fragment ſtill extant περὶ μελιττῶν, concerning *bees*; or, as intitled in Laertius, περὶ μέλιτος, of honey. *Fabric.* Bibl. Græc. l. 3. c. 9. §. 12.

Among the moderns, prince Frederic Ceſi, inſtitutor of the Roman academy of ſciences, wrote expreſly on *bees*; but it is not known what became of the MS. no more than of that promiſed by Swammerdam on the anatomy of the *bee*, the want of which has been much regretted [e] among the French [f]. Among the Engliſh, Butler, Gurnay, Levets, Southern, Remnant, Hartlib, Ruſden, Warder, and others, have diſcourſes expreſs on *bees*.—[[e] Vid. Phil. Tranſ. N° 257. p. 365. [f] Vid. Mem. Acad. Scienc. 1712. p. 391, ſeq.]

BEE is alſo uſed figuratively to denote ſweetneſs, induſtry, *&c.* Thus Xenophon is called the Attic *bee*, on account of the great ſweetneſs of his ſtyle [g]. Antonius got the denomination *meliſſa*, or *bee*, on account of his collection of common-places [h]. —[[g] Mem. Acad. Inſcr. T. 9. p. 1. [h] Vid. *Fabric.* Bibl. Græc. l. 5. c. 30. T. 8. p. 821.]

Leo Allatius gave the appellation *apes urbanæ* to the illuſtrious men at Rome from the year 1630 to the year 1632. *Bail.* Jugem. des Scav. T. 5. P. 1. p. 187.

BEES *bread*. See PAIN *d'abeiles*.

BEE-*eater*, in zoology. See APIVORUS *luteus*.

BEE-*fly*. See DRONE-*fly*.

BEE-*hive*. See HIVE.

BEECH, *Fagus*, (*Cycl.*) in botany, a tree of the maſt-bearing kind, conſiderably uſed in its wood, fruit, oil, leaves, and water. See FAGUS.

Beech-wood is whitiſh, hard, and dry. It crackles in the fire, and is uſed in building and furniture; alſo to make utenſils, as ſhovels, ladles, bellows, ſtools, ſhoes, diſhes, trays, trenchers, dreſſer-boards, fillies of carts, *&c.*

If *beech*-timber be kept altogether under water, it is little inferior to elm; but if kept dry, or partly wet, partly dry, it is liable to the worm.

That of the mountain *beech* is whiteſt, and moſt fit for the turner's uſe; that of the field *beech* is blacker, but more durable.

In turning *beech*, it yields a well-ſcented effluvia, not unlike roſes. *Boyle*, Phil. Work. abridg. T. 1. p. 545.

The ſcale of *beech*-wood ſerves to make ſcabbards and band-boxes. The bark is uſed as floats for fiſhers nets, inſtead of cork. Its ſhavings are of uſe for fining wine.

Its aſhes, according to Creſcentius, with proper mixtures, are excellent to make glaſs.

Its leaves, gathered about the fall, before they are much froſt-bitten, afford the beſt matreſſes to lay under quilts, inſtead of ſtraw, as being very ſoft, and continuing ſweet for ſeven years. When chewed, they are held good for the gums and teeth.

The ſtagnant water gathered on the hollow of the *beech*-tree, is ſaid to cure tetter-ſcabs and ſcurfs in man and beaſt, by fomentation. Ruſt. Dict. T. 1.

BEECH-*galls*, in natural hiſtory, the name of a ſpecies of galls or protuberances found on the *beech*-tree, and ſerving for the lodgment of inſects. See GALLS.

Theſe galls are found on the leaves of the *beech*, and are ſometimes only one upon a leaf, ſometimes more; tho' ſeldom more than three or four are found upon the ſame leaf, and theſe always growing from the ſame point, owing, no doubt, to the fly's having laid ſo many eggs in the ſame ſpot.

Theſe galls are of an oblong figure, and ſomewhat flatted. They reſemble the ſtone of a plum in ſhape, and are ſo hard, that they are not to be broken between the fingers: their ſubſtance ſeems of the ſame nature with that of a nut-ſhell. In each gall there is only one cavity, which is inhabited by a white worm, which, in time, paſſes through the nymph ſtate into that of the fly, to which it owed its origin.

BEECH-*maſt*, the fruit of the *beech*-tree. It fattens hogs and deer, and has ſometimes ſupplied men inſtead of bread. Chios is ſaid to have endured a memorable ſiege by means of it.

BEELE, in mining, an inſtrument uſed by the workmen to break and pick out the ore from the rocks in which it lies. This inſtrument is called by the tin-men in Cornwall a *tubber*. It is an iron inſtrument of eight or ten pound weight, made ſharp, and ſteeled at both ends, and having a hole in the middle, where the handle is fixed in. When the ore lies in hard rocks, this inſtrument wears out ſo faſt, that it muſt have new points made to it every fortnight. The miners, who dig up the ore in the mines, are, from the uſe of this inſtrument, called *beele*-men; and thoſe who attend them, and whoſe buſineſs it is to take up the matter the others looſen or break up, are, from their inſtrument, which is a broad and hollow iron ſhovel, or a wooden one, with a very ſtrong iron lip, called the *ſhovellers*. In Cornwall, when the ore lies in a hard bed, they allow two ſhovellers to three *beele*-men; and when it lies in a ſoft or earthy matter, two *beele*-men and three ſhovellers is the proportion. Phil. Tranſ. N° 69. p. 2104.

BEEMEN, or SHEEMEN, in aſtronomy, ſeven ſtars of the fourth magnitude, following each other, in the fourth flexure of the conſtellation Eridanus. See ERIDANUS, *Cycl.*

BEER (*Cycl.*)—In New England they make *beer* from maize, or even the bread made thereof [a]. Some phyſicians recommend *beer* made of oats and birch-water, as preferable, in nephritic caſes, to that made of barley [b].—[a Phil. Tranſ. N° 138. p. 1068. b *Bartholin.* Act. Med. T. 1. obſ. 19. p. 49: Phil. Tranſ. N° 97. p. 6135.]

Foreigners have framed divers conjectures to account for the excellency of Engliſh *beer*, and its ſuperiority to that of all other countries, even of Bremen, Mons, and Roſtoch. It has been pretended, our brewers throw dead dogs flead into their wort, and boil them till the fleſh is all conſumed. Others, more equitable, attribute the excellency of our *beer* to the quality of our malt and water, and the ſkill of our brewers in preparing it. *Savar.* Dict. Comm. T. 1. p 333.

Some have endeavoured to compute the quantity of *beer* conſumed in England from the number of houſes where it is ſold, which amounts to two hundred thouſand; others from the quantity of malt that is yearly made, which amounts to three millions and three hundred thouſand quarters, of which three millions are employed in making *beer* and ale. Allowing therefore a quarter of malt to three barrels of ſtrong *beer*, we ſhall have nine millions of barrels. Vid. Compl. Engl. Trad. T. 2. p. 87, ſeq. See ALE.

Sour or decayed *beer* may be reſtored divers ways; as by ſalt made of the aſhes of barley-ſtraw, put into the veſſel, and ſtirred; or by three or four handfuls of beech-aſhes thrown into the veſſel, and ſtirred; or, where the liquor is not very ſour, by a little put in a bag, without ſtirring: chalk calcined, oiſter-ſhells, egg-ſhells burnt, ſea-ſhells, crabs eyes, alcalized coral, *&c.* do the ſame, as they imbibe the acidity, and unite with it into a ſweetneſs. Ruſt. Dict. T. 2. in voc. *reſtoring.*

Beer, it is ſaid, may be kept from turning ſour in ſummer, by hanging into the veſſel a bag containing a new-laid egg, prickt full of little pin-holes, ſome laurel berries, and a few barley-grains; or by a new-laid egg and walnut-tree leaves. Laurel-berries alone, their ſkin being peeled off, will keep *beer* from deadneſs [c]. Glauber commends his ſal mirabile and fixed nitre, put in a linnen bag, and hung on the top of the caſk, ſo as to reach the liquor, not only for recovering ſour *beer*, but preſerving and ſtrengthening it [d].—[c Phil. Tranſ. N° 111. p. 241. d Ruſt. Dict. loc. cit.]

Beer taſting of the caſk, may be freed from it, by putting a handful of wheat in a bag, and hanging it in the veſſel. Phil. Tranſ. loc. cit.

BEESTINGS, or BREASTINGS, denote the firſt milk taken from a cow after calving. Dict. Ruſt. T. 1. in voc.

The *beeſtings* are of a thick conſiſtence, and yellow colour, ſeeming impregnated with ſulphur. Dr. Morgan imagines them peculiarly fitted and intended by nature to cleanſe the young animal from the recrements gathered in its ſtomach and inteſtines during its long habitation *in utero*. The like quality and virtue he ſuppoſes in womens firſt milk after delivery; and hence infers the neceſſity of the mother's ſuckling her own child, rather than committing it to a nurſe whoſe firſt milk is gone. Vid. *Morgan*, Mechan. Pract. of Phyſ.

BEET, *Beta*, in botany, the name of a genus of plants; the characters of which are theſe: the flower is of the ſtaminous kind, conſiſting of ſtamina ariſing from a five-leaved cup. Great numbers of theſe flowers are uſually collected into a ſort of head; and the cups finally become capſules nearly of a globular figure, in which are contained the ſeeds.

The ſpecies of *beet*, enumerated by Mr. Tournefort, are theſe: 1. The white or pale *beet*, called *cicla*. 2. The common red *beet*. 3. The turnep-rooted red *beet*. 4. The broad ſtalked *beet*. 5. The wild ſea *beet*. 6. The great pale-green *beet*. 7. The great red *beet*. 8. The great yellow *beet*. 9. The yellow ribbed *beet*, with a great turnep-ſhaped root. 10. The *beet* with yellow leaves and ſtalks. *Tourn.* Inſt. p. 501.

All the ſpecies of this plant are propagated by ſowing their ſeeds in February or March in a looſe, deep ſoil, not over dunged. When they are come up, they muſt be howed out ſo as to leave them ten or twelve inches aſunder; for, if they have not room, the roots ſeldom grow large. It is a cuſtom with the gardners about London to ſow carrots on the ſame ground with their *beets*. The carrots are drawn off in the ſummer-time, and the *beets* have then ſufficient time to grow to their ſize. *Miller*, Gard. Dict.

Hares BEET, *beta leporina*, a name given by ſome of the old Latin writers to a ſmall green plant of an acrid taſte. Neophytus tells us, that the arum, or, as he calls it, the ſmall dracontias, is the plant meant by this name; but it is not eaſy to conceive, with what meaning the authors, who firſt uſed the word, could apply it to a plant ſo hot as the common arum is. There is indeed, in ſome parts of the world, an arum with eſculent roots. This was known to the antients, even ſo early as in the days of Theophraſtus, who has deſcribed it under the name of *arum edominon*; and the root of this may be food for hares in the countries where it is plentiful, and the name well enough given to it.

BEET-*fly*, a very ſmall fly, found always among the flowers of the *beet*.

BEET-*gall-inſect*. See GALL-*inſect*.

BEETLE, in zoology. See the article SCARABÆUS.

BEETLE, in a mechanical ſenſe, denotes a large wooden inſtrument, formed after the manner of the mallet, and uſed for driving piles, ſtakes, paliſades, wedges, and the like.

In this ſenſe, the word is alſo corruptly written in ſome places *boytle*. Skinner derives it from the Engliſh *beating*. Ruſt. Dict. in voc.

For the military uſe, *beetles*, called alſo *ſtampers*, are thick round pieces of wood, a foot and a half long, and eight or ten inches in diameter, having a handle of about four feet long. Their uſe is for beating or ſettling the earth of a parapet, or about paliſades; which is done by lifting up the *beetle* a foot or two, and letting it fall with its own weight. *Guill.* Gent. Dict. P. 2.

The name *beetle* is alſo given to the paviour's rammer, or inſtrument wherewith the ſtones are beaten down, and faſtened.

BEG, or BEY, is a Turkiſh title, properly ſignifying lord.

The word is alſo written *begh*, or *beig*, ſometimes *bec*, or *bek*, or *bech*; but pronounced *bey*. See BEY, *Cycl.*

BEG is more particularly applied to the lord of a banner, called alſo in the ſame language *ſangiak-beg*. *Martiniere*, Dict. Geogr. T. 2. p. 189.

A *beg* has the command of a certain number of the ſpahis, or horſe, maintained by the province under the denomination of timariots.

All the *begs* of a province obey one governor-general, called *begler-beg*, or *beyler-beg*, q. d. lord of lords, or of the beys of the province.

BEGS, or BEGHS, of Egypt, denote twelve generals, who have the command of the militia, or ſtanding forces of the kingdom, and are to ſecure the country from the inſults of Arabs, as well as to protect the pilgrims in their annual expeditions to Mecca. *Rycaut.* Preſ. Stat. Ottom. Emp. l. 3. c. 5. p. 182.

The *begs*, ſeveral of whom are deſcended from the antient race of the Mamalukes, are very rich and powerful, maintaining each 500 fighting men for their own guard, and the ſervice of their court. On diſcontents, they have frequently riſen in rebellion. They are often at variance with the baſhaw, whom they have more than once plundered and impriſoned.

BEGLERBEG (*Cycl.*)—The next to the vizier *azem*, or the firſt vizier, are the *beglerbegs* in Turky, which, according to Rycaut, may be compared to archdukes in ſome other countries, being the next miniſters below the prime vizier, and having under their juriſdiction many ſangiacks or provinces, and their *begs*, *aga's*, *&c.*

To every *beglerbeg* the grand ſignior gives three enſigns or ſtaves, trimmed with a horſe-tail, to diſtinguiſh them from the baſhaws, who have but two, and from ſimple begs, or ſangiac begs, who have but one. *Rycaut.* Preſ. Stat. Ottom. Emp. l. 1. c. 12. p. 51.

The province or government of *beglerbeg* is called *beglerbeglik*, or *beglierbeglik*. Theſe are of two ſorts; the firſt called *haſile beglerbeglik*, which have a certain rent aſſigned out of the cities, countries, and ſigniories allotted to the principality; the ſecond called *ſalianæ beglerbeglik*, for maintenance of which is annexed a certain ſalary or rent, collected by the grand ſignior's officers with the treaſure of the empire. *Rycaut*, loc. cit.

The *beglerbegs* of the firſt ſort are in number twenty-two, *viz.* thoſe of Anatolia, Caramania, Diarbekir, Damaſcus, Aleppo, Tripoli, Trebizond, Buda, Temiſwar, *&c.*

The *beglerbegs* of the ſecond ſort are in number ſix, *viz.* thoſe of Cairo, Babylon, *&c.*

Five of the *beglerbegs* have the title of viziers, *viz.* thoſe of Anatolia, Babylon, Cairo, Romania, and Buda.

The *beglerbegs* appear with great ſtate, and a large retinue, eſpecially in the camp, being obliged to bring a ſoldier for every five thouſand aſpers rent which they enjoy.

The *beglerbegs* of Romania brought 10,000 effective men into the field.

BEGLERBEG is alſo a title given to the chief governors of provinces in the Perſian empire, having the command over all kans, ſultans, *&c.* in their reſpective diſtricts. *Kempf.* Amœn. Exot. faſc. 1. relat. 10. p. 153.

BEGONIA, in botany, the name of a genus of plants; the characters of which are theſe: the flowers are of two kinds; the one kind is the barren, or male flower; this is compos'd

of

of four leaves, ſome broader, and others narrower; the other kind, which produces the embryo fruit, is of the roſaceous ſort, and is compos'd of ſeveral petals, arrang'd in a circular form, and plac'd on a foliated cup, which finally becomes a trigonal alated fruit, divided into three cells, and containing ſmall ſeeds.

The ſpecies of *begonia* enumerated by M. Tournefort, are theſe. 1. The great purple *begonia*, with auriculated leaves. 2. The ſmall ſmooth *begonia*, with auriculated leaves, and roſe-colour'd flowers. 3. The ſmall hairy *begonia*, with auriculated leaves, and roſe-colour'd flowers. 4. The *begonia*, with roſe-colour'd flowers, and with ſharp-pointed auriculated and ſerrated leaves. 5. The round-leav'd *begonia*, with roſe-colour'd flowers. 6. The great *begonia*, with auriculated leaves, and ſnow-white flowers. *Tourn.* Inſt. Bot. p. 660.

BEGUINAGE ſignifies a houſe, or convent of beguins, living in community. See BEGUINS, *Cycl.*

There were formerly magnificent *beguinages* at Amiens, and other cities of the low countries, as well as in Picardy, and at Paris; but moſt of them are gone to ruin, and their effects fallen into other hands. The moſt noted of theſe remaining is the *beguinage* of Mechlin, which is as large as a little town; and ſaid to contain 15 or 16 hundred of theſe beguins, beſides three times the number of boarders. *Trev.* Dict. Univ. T. 1. p. 901.

The beguins pretend to derive their origin from St. Begha, or Begga, dutcheſs of Brabant; but the pretenſion ſeems only founded on the reſemblance of name: Tho. Van Hoſtum has a treatiſe expreſs to ſupport it [a]. Others derive the appellation *beguin* from that of the veil wore on the head, called *begga*; but this ſeems more probable to have been denominated from them.—Others deduce the word from *beghinen*, to begin, as being the firſt beginning or ſtep towards a monaſtic life: others from a prieſt, called Lambert *le Begue*, the real founder of the inſtitute [b].—[[a] *Le Long*, Bibl. Hiſt. l. 2. c. 9. Art. 7. p. 284. [b] *Du Cange*, Gloſſ. Lat. T. 1. p. 519. *Caſenen.* Orig. p. 27.]

BEHEADING, a capital puniſhment, wherein the head is ſevered from the body by the ſtroke of an ax, ſword, or other cutting inſtrument.

Beheading was a military puniſhment among the Romans, known by the names of *decollare*, *decollatio* [a]. Among them the head was laid on a *cippus* or block, placed in a pit dug for the purpoſe; in the army, without the vallum; in the city, without the walls, at a place near the *porta decumana*. Preparatory to the ſtroke, the criminal was tied to a ſtake, and whipped with rods: In the early ages the blow was given with an ax; but in after-times with a ſword, which was thought the more reputable manner of dying. The execution was but clumſily performed in the firſt times; but afterwards they grew more expert, and took the head off clean, with one circular ſtroke [b].—[[a] *Calv.* Lex Jur. p. 263. [b] *Aquin.* Lex. Milit. T. 2. p. 286. *Pitiſc.* Lex. Ant. T. 1. p. 637.]

In England and France, *beheading* is the puniſhment of nobles; being reputed not to derogate from nobility, as hanging does. *Trev.* Dict. Univ. T. 2. p. 529.

In Scotland they do not behead with an ax, as in England; nor a ſword, as in Holland and France; but with an edged inſtrument called a *maid*, a piece of ſteel a foot ſquare, ſharp on the lower ſide, and loaden above with a heavy weight of lead, ſcarce to be lifted, which is let fall, or ſlide down between the two cheeks, or mouldings of a frame, ten foot high, on the criminal's neck. *Chamberl.* Preſent State Brit. P. 2. l. 3. c. 7. p. 447.

BEHEM, in the materia medica, the name given by the Arabians to the root call'd afterwards *behen*; and thence, by corruption and abbreviation, *been* and *ben*; and, in conſequence of that, confounded with the ben nut, or *glans unguentaria*; and by ſome with the hermodactyl, call'd alſo *behen* by ſome authors. The modern Greeks have call'd this *pechem*; and divided, according to the cuſtom of the Arabians, into white and red, and gave it the ſame virtues.

BEHMISTS, BOHMENISTS, or BOHMISTS, a kind of myſtic philoſophers and followers of Jacob Behmen, commonly called the teutonic philoſopher.

The *bohmeniſts* are attached to that motley ſpecies of philoſophy firſt introduced by Paracelſus, under the name of Theoſophia. *Schmid.* Supp. ad Sagit. §. 1. p. 671.

Behmen, or Bohmen, from whom the ſect takes its denomination, was born in 1575 near Gorlitz, and bred up to country labour, having juſt learning enough to read and write a little, which he acquired at ten years of age.

In 1600 he was ſeized with a ſpiritual rapture, and ten years after began to compoſe a book on the light he there received, entitled *aurora*, being a mixture of aſtrology, philoſophy, chemiſtry and divinity, written in a quaint obſcure ſtyle; ſeven years after he wrote divers others on the ſame model; the chief is the *myſterium magnum*. He died in 1624. All his works have been publiſhed together at Amſterdam in 1682, 8vo. His tenets are, that there is a great darkneſs among the ſtars, where the devil holds his principality; that all arts and ſciences flow from the ſiderial ſpirit of this world; that the ſeven liberal arts proceeded from ſeven ſpirits of nature; that all human things are compoſed of the four firſt properties, bitter, ſour, heat, and pain, (Angore.) *Gentzk.* Hiſt. Philoſ. p. 252.

Quirinus, Kuhlman, and Abr. a Franckenberg, are the moſt diſtinguiſhed among the *behmeniſts*. Gilbert Iſcheſchius, and Antagnoſius, were great oppoſers of behmeniſm. *Sagittar.* Introd. Hiſt. Eccleſ. c. 39. §. 19.

Dr. Henry More has alſo a piece expreſs againſt behmeniſm, Cenſura Philoſophiæ Teutonicæ, printed in his works, p. 520.

BEHEMOTH, a huge animal mentioned in ſcripture, concerning which interpreters are much divided. Job, c. 40, v. 5, 15.

Franzius, Junius, Calvin, and others, take it for the elephant; Bochart for the hippopotamus, or ſea-horſe; others for the ox; the fathers for the devil. *Grew*, Muſ. P. 1. §. 2. c. 1. p. 14. Phil. Tranſ. N° 326. p. 57.

The word is Hebrew, where it literally ſignifies beaſt in general, particularly the larger kind, fit for ſervice. *Calm.* Dict. Bibl. T. 1. p. 274.

BEHEN, (*Cycl.*) in the materia medica, the name of a root kept in the ſhops in ſome places, but little uſed any where; there are two kinds of it, the white and the red; the red is the root of a ſpecies of limonium or ſea lavender, and the white of a ſort of ſaw-wort, the *ſerratulæ affinis capitulo ſquammoſo luteo, ut et flore* of Caſpar Bauhine. *Pomet's* Hiſt. of Drugs, p. 50.

BEIBENIÆ *Stellæ*, a name given by ſome aſtronomers to the principal fixed ſtars in each conſtellation. *Vital.* Lex. Math. p. 84. Wolf. Lex. Math. p. 255, ſeq.

The appellation is more particularly given to the ſtars of the firſt magnitude, otherwiſe called the hearts, *corda*, of the ſeveral conſtellations; tho' ſome would diſtinguiſh between *corda*, and *beibeniæ ſtellæ*, reſtraining the former to ſtars only of the firſt magnitude, and extending the latter to ſeveral of the ſecond, or even third. *Vital.* l. c.

Hermes has a treatiſe expreſs *de ſtellis beibeniis*, publiſhed by Junctinus, in his *ſpeculum aſtrologicum*, and alſo in his commentaries upon Jo. de Sacroboſco's book *de ſphæra*. Id. ibid.

BEIDELSAR, in botany, a name by which ſome authors call the Syrian dogs bane, or *apocynum ſyriacum*, a poiſonous plant. *Alpinus*, Ægypt. p. 85.

BEISSKER, in ichthyology, a name given by Geſner and others to the fiſh commonly called *muſtela foſſilis*: This is a ſpecies of the *cobitis*, diſtinguiſhed by Artedi by the name of the blueiſh *cobitis*, with fine black longitudinal lines on each ſide. Schonefeldt calls this the *pœcilia*, and Jonſton the *piſcis foſſilis*. See COBITIS.

BEIZA or BEIZATH, in Jewiſh antiquity, a certain meaſure in uſe among the Jews; they ſay that the *beiza* contains the ſixth part of a log.

The *beiza* is alſo a ſort of gold coin common among the Perſians; it weighs forty *drachma's*, and from this word, not from the city *Byzantium*, the *bezam* was formed. A *bezam* is worth two *dinars*, and every dinar twenty or five and twenty drachma's. *Calm.* Dict. Bibl. in voc.

BEKKERANISM, or *Bekkerianiſm*, the ſyſtem or ſentiments of Balth. Bekker, who denied that ſpirits can act or operate on bodies. *Pfaff.* Inſt. Theol. p. 190.

The author of this ſyſtem was a Dutch divine, towards the cloſe of the 17th century, ſtrongly impreſſed with the Carteſian principle, that the eſſence of ſpirit conſiſts in thinking; hence he was led to conclude, that ſpirits cannot act, either on bodies, or on other ſpirits; he aſſerted, that it has not been proved, nor can it be proved by reaſon, that any other ſpirits exiſt beſide the human mind: but he allows it may be proved from ſcripture; and it being from this alone we learn the exiſtence of ſuch ſpirits, 'tis from the ſame we are to form our notions concerning their nature, and the meaſure of their powers: that what the ſcripture delivers concerning the operations both of good and evil ſpirits, is generally wrong underſtood, being not to be taken literally, but in a metaphorical ſenſe; for that which God himſelf does, either immediately, or by natural cauſes, is in ſcripture attributed to angels; and this partly in order to accommodate himſelf to human conception, and partly to raiſe and magnify our ideas of the divine majeſty among men. Hence all the paſſages in ſcripture concerning the guardianſhip of angels, and their intercourſes with men, he interprets ſo, as that by angels are underſtood other men, or other creatures, whoſe agency God makes uſe of to avert miſchiefs, or procure good to men: more particularly, that when God is ſaid to have notified, or revealed any thing to men by angels, it was effected only by making ſome change in the matter, or manner of human viſion; particularly, that by the angels which appeared to Abraham, are to be underſtood men; by thoſe ſaid to have attended God, when he gave the law to the Jews, are to be underſtood thunder, lightening, and other natural phænomena; that by the angel, who went before the Iſraelites in the wilderneſs, is to be underſtood a cloud. That by devils are ſometimes meant wicked men, enemies to us, who either by open force or cunning endeavour to ruin us; at other times our own corrupt deſires, which ſpur us on to the commiſſion of divers crimes. On theſe principles he accounts for what is

ſaid of the fall of our firſt parents; where by the devil's tempting them, we are only to underſtand, that they ſinned after the ſame manner as the devil had done, by following their own luſts. Hence alſo he accounts for the temptation of our Saviour, where it was not the devil meddled with him, but that Chriſt repreſented to himſelf a ſeries of corrupt deſires, as if he was tempted by them. By the combat of Michael with Satan, recited by Jude, he underſtands a diſpute between two doctors of the church; one of whom ſtrove to have the body of Moſes produced, that it might be the object of worſhip, which the other oppoſed; or perhaps one contended for the obſervance of the moſaic law, and the other for its rejection.

As to witches and conjurors, he aſſerts, that by thoſe in ſcripture are not to be meant men who, in conſequence of a compact with the devil, were aſſiſted by him to perform wonders, but philoſophers ſkilled in the ſecrets of nature; and, in virtue thereof, enabled to do things, which paſſed the vulgar comprehenſion; and who only feigned to have a commerce with ſpirits to conceal their art, and conciliate more admiration.

For the ſtories of perſons poſſeſſed, if there be any thing more in them than fiction, that they ariſe from melancholic diſeaſes, and other latent powers of nature; that as to diſeaſes, ſeveral are called in ſcripture by the name of devils, from whom theſe were ſaid to be freed, who were reſtored to health: laſtly, he attributes all either to impoſture, or to the errors of our external, or internal ſenſes; and accumulates inſtances, to ſhew that men have often thought they ſaw or heard, what they did not ſee or hear. Vid. *Budd.* Elem. Phil. Theor. P. 5. c. 2. §. 1—12.

BEL, in botany, the name of a plant called by ſome the *cucumis capparis*, or caper cucumber. This plant is very imperfectly deſcribed to us; and we find among the *Arabian* writers, that the fruit was called by this name as well as the whole plant. Aviſenna, who gives the fulleſt account we have of it, ſays that it was an Indian plant, reſembling in growth the common cucumber plant, but bearing a fruit like the caper; he tells us that this fruit was the only part of the plant uſed in medicine, and that it was very hot and bitter, being ſomewhat like ginger in the fiery heat of the taſte, and in qualities hot and dry in the ſecond degree, as they expreſs'd it; or, according to Dioſcorides in the third. Serapio tells us, that it was brought from the Indies; and ſeems to make it of the ſame kind with the plant *fel*, treating in the ſame chapter of the three plants *bel*, *fel*, and *ſel*, as three things of much the ſame kind; he ſays they were all hot and drying, and all brought from the Eaſt-Indies.

Raſes tells us that the *fel* was a fruit with a thick rind or covering on it, like a hazel nut; and that within this ſhell there was contain'd a kernel of an oleaginous and fat nature, and reſembling the *nux pini*, or pine kernels. Aviſenna tells us, that the fruit *bel* reſembles the capers; and it is plain, that what they meant by the name *capparis* was not unlike in ſhape to the hazel-nut, to which the fruit *fel* is compar'd; for Theophraſtus ſpeaking of the ben-nut, compares it to the caper-fruit, and Dioſcorides to the hazel-nut. Theſe authors both knew the fruit they deſcribe very well, as well as thoſe things to which they liken it; and it is certain, that they would not have compar'd it to two things that were unlike one to the other. This caſual obſervation is not unneceſſary, as it gives force to the deſcription of Aviſenna, who is ſuppos'd to have meant ſomething elſe by the word capers. It is certain, that his deſcription is a very odd one, as it ſtands in the common interpretation, where he is made to call the *bel* an Indian cucumber, with a fruit like the capers; but all that he means is, that it is a climbing plant, reſembling the cucumber in leaves. See FEL.

BELEMNITES, or BELENITES, in natural hiſtory, a kind of figured ſtone, uſually hollow, and a little tranſparent, ſhaped ſomewhat like an arrow, formed of ſmall ſtriæ or threads, radiating from the axis to the ſurface of the ſtone; and which when burnt, or rubbed againſt one another, or ſcraped with a knife, yields an odour like raſped horn. See its figure repreſented in Tab. of Foſſils, Claſſ. 10. Vid. *Plot*, Nat. Hiſt. Oxford. c. 5. §. 39. p. 94. *Vater.* Phyſ. Exper. P. 2. §. 5. c. 8. p. 499. *Caſt.* Lex. Med. p. 101.

The word is formed from the Greek, βελεμνον, arrow.

The *belemnites* is otherwiſe denominated *dactylus*, or *dactylus idæus*, on account of its bearing a reſemblance to the figure of a finger; by the antients, *lyncurius lapis*, or *lapis lyncis*, as being ſuppoſed to be generated of the urine of the lynx. *Mercat.* Metalloth. arm. 9. loc. 25. c. 30. p. 280. *Vater.* Phyſ. Eper. P. 2. §. 5. c. 8. p. 419.

Among us, popularly, the thunderbolt [a], or thunder-ſtone [b], as having been ſuppoſed to fall in time of thunder.—[[a] Phil. Tranſ. N° 314. p. 78. [b] *Woodw.* Catal. foreign Foſſ p. 8.] Dr. Plot will not allow the appellation *lyncurius* to have been given it on account of this ſuppoſed origin from the urine of that beaſt, but from the unpleaſant ſmell it has when burned or bruiſed, like the urine of cats, or ſuch like rammiſh creatures, whereof the lynx perhaps may be one [c]. But he is miſtaken; Ovid has a paſſage, which ſhews apparently the ſenſe of the antients on the urine of the lynx [d].—[[c] *Plot*, lib. cit. §. 42. p. 95. [d] *Ovid.* Met. l. 15.

Quicquid veſica remiſit
Vertitur in lapides, et congelet aere tacto.

Dr. Woodward, and a great many other authors, ſuppoſe the *belemnites* to be a native foſſil in its own proper figure; but it is more probably ſuppoſed by others to owe its preſent form to ſome animal body; and to be, like the other form'd ſtones, the *echinitæ*, &c. a ſubſtance caſt in a ſhell.

The *belemnites*, according to Klein, is one of the *tubuli marini*, never found with us in its recent ſtate, but very frequent foſſile, compos'd of a matter approaching to the nature of ſpars, of a cylindroid figure, and compos'd of ſeveral plates, each made up of a number of parallel *ſtriæ*, having a ſlit in the manner of ſome of the *tubuli marini*, running along its whole length, and a pervious cavity in the middle, in the larger end, frequently containing a concamerated ſhell, altogether reſembling the *tubuli concamerati* in ſtructure, of a ſhelly texture, and having a ſiphunculus, or pipe of communication between its ſeveral cells, in the manner of the *Nautilus Græcorum*, and other camerated ſhells.

The long and narrow cavities in the center of the lower part of the *belemnitæ*, are judg'd by this author to be no other than continuations of the ſiphunculus, or tubular proceſſes of the concamerated ſhell, found in the larger end of the *belemnite*; and he imagines, not without ſhew of reaſon, that the funiculus of the fiſh that inhabits the cameræ of the ſhell, is continued thro' this cavity to the end of the body, as in the *nautili*. Vid. *Klein*, de Tub. Marin. p. 15.

The general diſtribution of the *belemnitæ* is into three kinds, the cylindric, conic, and fuſiform. The cylindric do not taper to a point at the lower end, the conic are terminated by a point, and the fuſiform are thicker in ſome intermediate part than at either of the ends. Theſe are the moſt rare of all the kinds.

The *belemnitæ* are of ſeveral ſhapes, ſizes, and figures, but all of the ſame determinate internal ſtructure; and many of the figures in which we find this foſſile, and which are ſuppos'd eſſential to it, ſeem rather the effect of external accidents and injuries; and its general natural figure ſeems to be conic.

The *belemnitæ* are all form'd of ſeveral thin coats or cruſts incircling one another, and all of a ſtriated texture; they have uſually a hollow in, or near the middle; this is of a conic ſhape, and is ſometimes empty, but more frequently fill'd with earthy or ſtony matter; and often with a marine ſhell of the camerated kind, call'd by authors its *alveolus*. This ſhell however is not found only in the *belemnites*, but likewiſe looſe, and frequently of a much larger ſize than we could expect to find *belemnitæ* to be matrixes for. The inſide of the cavity of the *belemnites* is alſo frequently found mark'd with parallel circles, a ridg'd one and a furrow'd one, all adapted to the ſhape of the concamerated ſhell, which ſo frequently makes its alveolus. The *belemnitæ* have uſually a ſingle rima or chink, running down longitudinally in form of a ſtrait crack, the whole length of the body, or nearly ſo; ſometimes they have two or three of theſe cracks, but the additional ones uſually begin at the apex of the ſtone, and run up but a little way. There are alſo ſome of the *belemnitæ*, which have no obſervable crack at all.

Beſide the conic *belemnitæ*, there are ſome cylindrick, or nearly ſo, and ſome are thickeſt near the middle, or near one of the ends, and taper off to a ſort of point at both. Some alſo are of intermediate figures between conic and cylindric, and ſome are nearly orbicular; ſome alſo taper off very gradually, others more abruptly, and ſome have no obſervable cavity. There are beſide theſe many other figures, in which the *belemnitæ* are ſometimes found, and theſe are by ſome call'd ſo many ſpecies of the body; but, till we are perfectly inform'd to what animal they have originally belong'd, it is impoſſible to ſay which of all theſe are natural, and which accidental figures; tho' it is plain, that many are of the latter kind, being owing to the breaking, or wearing down of the more known figures.

Of the conic *belemnitæ*, ſome are nearly rounded; but more uſually they are flatted on one ſide, ſometimes on two oppoſite ſides, and ſometimes they are plainly cruſh'd and crack'd by accidents, as other of the animal formed foſſils ſo frequently are.

The *belemnitæ* are of various ſizes, from a quarter of an inch to eight inches in length; and, tho' always of the ſame matter and ſtructure, they are of various degrees of colour; ſome being of a fine amber colour, others blackiſh, others blueiſh, and ſome grey; others are of different degrees, of a darker or paler brown; and they have all a very remarkable and diſagreeable ſmell, when ſcrap'd to powder.

They are found in all ſorts of ſtrata, ſometimes in clay, ſometimes looſe among gravel, and often immers'd in beds of ſtone; not unfrequently alſo they are bedded among looſe flints; and ſometimes they are cover'd with a cruſt of ſparry matter, ſeeming to have been form'd in the manner of many other of the foſſils of the extraneous kind, in the place of the ſhell, which receiv'd and gave form to the *belemnites*. Sometimes alſo *tubuli marini*, and ſmall *fungitæ* or *mycetitæ*, with other marine productions, both of the animal and vegetable kind, are found adhering to them, as they are to the common marine bodies: but this in theſe is rare. The chop or chink in theſe bodies, in ſome ſeems ſlight and ſuperficial, but in others

it

it may be traced to the very axis; and the ſeveral cruſts the body is compoſed of, ſeem ſo many ſeparate *belemnitæ* incloſing one another.

The matter contained in the cavities of the *belemnitæ* is perfectly uncertain in its kind, being a part of ſuch bodies, whatever they be, as the *belemnites* has happened to be depoſited among. Frequently it is the matter of the common pyrites; often it is a coarſer, ſometimes a finer ſpar; and the ſubſtance called the *alveolus*, when found looſe, is uſually compoſed of one or other of theſe foſſils. Thoſe *belemnitæ*, which terminate in a point at each end, are more rare than the others, and uſually ſeem injured, or imperfect. In moſt of theſe alſo, the longitudinal crack is ſo fine and ſmall, as to be ſcarce perceptible.

The moſt probable opinion, as to the origin of theſe bodies, is, that they have been formed in ſhells of the *tubulus marinus* kind, and thoſe, perhaps, of ſeveral different ſpecies. *Hill*, Hiſt. of Foſſil. p. 652.

The *belemnites* is found in many parts of the countries of Pruſſia, Pomerania, Sileſia, and England, as appears from Dr. Woodward's enumeration. *Woodw.* Catal. Engl. Foſſ. p. 105, ſeq. and Catal. Foreign Foſſ. p. 8.

The *belemnitæ* are all of an alcalious nature, making a ſtrong efferveſcence with acids. Hence alſo they become abſorbent and reſolvent, and, on theſe accounts, ranked by phyſicians among antinephritic medicines. *Grew*, Muſ. Reg. Soc. P. 3. §. 1. c. 5. p. 302.

The German writers ſpeak much of the virtues of this foſſil, and it is kept in their ſhops, and ſometimes enters extemporaneous preſcription. They give it in caſes of the gravel, and all nephritic complaints; and ſay, that it has great virtues againſt the night-mare. With us it is not uſed at all, except among farriers; but, in all probability, it will anſwer the purpoſe of ſpar in any other form; and ſpar has at all times been celebrated for its virtues as a lithontriptic, whether given under the form of the *lapis judaicus*, or that of the *oſtracites*, or, finally, as diſſolved in the water of certain ſprings, which form incruſtations on things that fall into them. *Geoffrey*, Mat. Med. Vol. 1. p. 82. See OSTRACITES and JUDAICUS *lapis*.

BELENNUS, in zoology, the name of a ſmall anguilliform fiſh, called by others *blennis*. It is a ſea-fiſh, and very ſcarce. It approaches much in figure to the Engliſh bull-head, or miller's thumb, the *cottus* of authors. Its head is large, its noſe ſharp, and its mouth but ſmall. It has a ſmall, black fin upon its neck, like the *uranoſcopus*, or ſtargazer, which the bull-head has not. It has two other fins placed lower than this, and near the mouth. It has no ſcales. Its belly is white, and the reſt of its body brown. *Willugh.* Hiſt. Piſc. p. 138.

BELFRY, *belfredus*, is uſed by military writers of the middle age for a ſort of tower, erected by beſiegers to overlook and command the place beſieged. *Aquin.* Lex. Milit. T. 1. p. 120. b.

They were alſo called *berfredi*, *berefredi*, *verfredi*, and *belfragia*. Their ſtructure and uſe are deſcribed in verſe by a poet of thoſe days. Vid. *Vill. Brito.* Philipp. l. 2. ap. *Aquin.* loc. cit. *Belfry* originally denoted a high tower, whereon centinels were placed to watch the avenues of a place, and prevent ſurprize from parties of the enemies, or to give notice of fires, by ringing a bell. *Du Cange*, Gloſſ. Lat. T. 1. p. 519, ſeq. *Aquin.* Lex. Milit. T. 1. p. 120.

In the cities of Flanders, where there is no *belfry* on purpoſe, the tower of the chief church ſerves the ſame end. *Martiniere*, Dict. Geogr. T. 2. p. 188. b.

The word *belfry* is compounded of the Teutonic *bell* and *freid*, peace, becauſe the bells were rung here for preſerving the peace. *Du Cange*, loc. cit.

BELFRY is alſo uſed for that part of a ſteeple wherein the bells are hung. *Somner*, Antiq. Canterb. p. 160.

This is ſometimes called by middle-age writers *campanile*, *clocaria*, and *triſtegum*. *Somner*, ibid. p. 190. *Du Cange*, T. 4. p. 1200.

BELFRY is more particularly uſed for the timber-work, which ſuſtains the bells in a ſteeple; or that wooden ſtructure, to which the bells in church-ſteeples are faſtened.

BELIDES, in antiquity. See DANAIDES, *Cycl.*

BELINGELA, in botany, a name given by ſome authors to the *mala inſana*, or mad-apples. See MELONGENA.

BELL (*Cycl.*)—The uſe of *bells* is very antient, as well as extenſive. We find them among Jews, Greeks, Romans, Chriſtians, and Heathens, variouſly applied, as on the necks of men, beaſts, birds, horſes, ſheep; but chiefly hung in buildings, either religious, as in churches, temples, and monaſteries; or civil, as in houſes, markets, baths; or military, as in camps and frontier towns.

In the antient monaſteries, we find ſix kinds of *bells* enumerated by Durandus, *viz.*

Squilla, rung in the refectory; *cymbalum*, in the cloiſter; *nola*, in the choir; *nolula* or *dupla*, in the clock; *campana*, in the ſteeple; and *ſignum*, in the tower. *Durand.* Rational. l. 1. c. 14. *Spelm.* Gloſſ. p. 99. 515. 522. *Du Cange*, Gloſſ. Lat. T. 4. p. 862.

Belethus [a] has much the ſame; only that for *ſquilla* he puts *tintinabulum*, and places the *campana* in the tower, and *campanella* in the cloiſter. Others place the *tintinabulum* or *tinniolum* in the refectory or dormitory [b]; and add another *bell* called *corrigiuncula*, rung at the time of giving diſcipline, to call the monks to be flogged [c]. The *cymbalum* is ſometimes alſo ſaid to have been rung in the cloiſter, to call the monks to meat [d]. —[a *Beleth.* Divinor. Officior. c. 86. b *Du Cange*, Gloſſ. Lat. T. 4. 1130 & 1131. c Id. T. 2. p. 1232. d Id. T. 1. p. 1332.]

Among the Greeks, thoſe who went the nightly rounds in camps or gariſons, carried with them a little *bell*, which they rung at each centry-box, to ſee that the ſoldiers on watch were awake. *Suid.* ap. *Aquin.* Lex. Milit. T. 2. p. 366. *Pitiſc.* Lex. Ant. T. 2. p. 966.

A *codonophorus*, or *bell*-man, alſo walked in funeral proceſſions, at a diſtance before the corps, not only to keep off the croud, but to advertiſe the *flamen dialis* to keep out of the way, for fear of being polluted by the ſight, or by the funerary muſic. *Pitiſc.* T. 1. p. 480. voc. *codonophorus*.

The prieſt of Proſerpine at Athens, called *hierophantus*, rung a bell, to call the people to ſacrifice. *Danet.* in voc. *campana*.

There were alſo *bells* in the houſes of great men, to call up the ſervants in a morning [e]. Zonaras aſſures us, that *bells* were hung with whips on the triumphal chariots of their victorious generals, to put them in mind, that they were ſtill liable to the public juſtice [f].—[e *Pitiſc.* Lex. Ant. T. 2. p. 966. f *Zonar.* II. p. 32. ap. *Pitiſc.* loc. cit.]

Bells were put on the necks of criminals going to execution, that perſons might be warned by the noiſe to get out of the way of ſo ill an omen as the ſight of the hangman, or the condemned criminal, who was devoted, and juſt going to be ſacrificed to the *dii manes*. *Pitiſc.* Lex. Ant. T. 2. p. 966.

For *bells* on the necks of brutes, expreſs mention is made of them in Phædrus,

——— *Celſa cervice eminens*,
Clarumque collo jactans tintinnabulum. *Phædr.* II. 8. 4.

Taking theſe *bells* away was conſtrued by the civil law theft; and if the beaſt was loſt by this means, the perſon who took away the *bells* was to make ſatisfaction. *Pitiſc.* Lex. Antiq. T. 2. p. 966.

Among the Jews, we find mention in ſcripture of *bells* made uſe of in the temple. Their figure is not known; but they were made of copper, and their ſound was ſharp, and heard to a great diſtance. *Calmet*, Dict. Bibl. T. 1. p. 276.

The high-prieſt had a great number of little golden *bells* hung to the border of his garment, to give notice when he entered into, and when he came out of, the ſanctuary, and ſave him the trouble of knocking at the door. *Danet*, Dict. Ant. *Calmet*, loc. cit.

The prophet Zachary ſpeaks of *bells* hung to the bridles of war-horſes, that thereby they might be accuſtomed to noiſe. *Calm.* ib. T. 1. p. 275.

There are diſputes about the number of *bells* which were intermixed with pomegranates on Aaron's garment. Some will have it only twelve, others fifty, others raiſe it to ſixty-ſix, others to ſeventy-two, and ſome to eighty. The kings of Perſia are ſaid to have had the like habit. We may add, that the Arabian ladies, who are about the prince's perſon, to ſerve and divert him, have little gold *bells* faſtened to their legs, neck, and elbows, the motion of which, when they dance, makes an agreeable ſort of harmony. The princeſſes of this country are alſo ſaid to wear large, hollow gold rings, filled with little flints, which ſound like *bells* when they walk. Sometimes alſo large circles, with little rings hung round them, produce the ſame effect. Sometimes they wear a number of flat bobs fixed to the ends of their hair, which is matted, and hangs long behind, ſerving to make a noiſe as often as they ſtir, and give notice of the miſtreſs's paſſing by, that the ſervants may behave reſpectfully, and ſtrangers retire, to avoid ſeeing the perſon who paſſes. *Calmet*, loc. cit.

There is a curious obſervation in a paper of Mr. Reaumur's in the memoirs of the Paris academy, relating to the ſhape moſt proper for *bells*, to give them the loudeſt and cleareſt ſound. He obſerves, that as pots, and other veſſels more immediately neceſſary to the ſervice of life, were doubtleſs made before *bells*, it probably happened, that the obſerving theſe veſſels to have a ſound when ſtruck, gave occaſion to making *bells*, intended only for ſound, in that form; but that it does not appear that this is the moſt eligible figure; for lead, a metal which is, in its common ſtate, not at all ſonorous, yet becomes greatly ſo on its being caſt into a particular form, and that very different from the common ſhape of *bells*. In melting lead for the common occaſions of caſting in ſmall quantities, it is uſually done in an iron ladle; and as the whole is ſeldom poured out, the remainder, which falls to the bottom of the ladle, cools into a maſs of the ſhape of that bottom. This is conſequently a ſegment of a ſphere, thickeſt in the middle, and thinner towards the edges: nor is the ladle any neceſſary part of the operation, ſince if a maſs of lead be caſt in that form in a mould of earth or ſand, in any of theſe caſes it is found to be very ſonorous. Now, if this ſhape alone can give ſound to a metal which in other forms is perfectly mute, how much more muſt it neceſſarily give it to other metals naturally ſonorous in whatever form. It ſhould ſeem, that *bells* would much better perform their office in this than in any other form, and that

it must particularly be a thing of great advantage to the small *bells* of common house-clocks, which are required to have a shrill note, and yet are not allowed any great size. Mr. Reaumur very judiciously observes, that had our forefathers had opportunities of being acquainted with the sound of metals in this shape, we should probably have had all our *bells* at present of this form. Vid. Mem. Acad. Par. 1726.

BELL, in chemistry, denotes a glass vessel placed over some matter in a state of exhalation, either to collect the vapour, or gather the flowers.

Chemical *bells* are a sort of receptacles chiefly used in preparing the oil or spirit of sulphur, for gathering and condensing the fumes thereof into a liquor. *Castel.* Lex. Med. p. 127. b.

BELL, in building, is used to denote the body of the Corinthian and Composite capital, by reason of the resemblance hereof to the figure of a *bell* inverted. *Felibien*, Archit. &c. p. 365. *Davil.* Archit. p. 444.

In this sense, *bell* is the same with what is otherwise called *vase* and *tambour*, sometimes also *corbeil*.

The naked of the *bell* is always to be even and perpendicular with the bottom of the flutings of the column. *Felib.* p. 366.

BELL-*metal* is a composition of tin and copper melted together in due proportion; which has this property, that it is more sonorous than any of the ingredients taken apart. *Boyle*, Phil. Work. abridg. T. 3. p. 425.

Some also speak of a native mineral under the denomination *bell-metal*, or *helmettel* [a], from which Becher [b] affirms he had procured zaffer and smalt.—[a *Junck.* Consp. Chem. tab. 30. p. 663. b *Becher*, in Morosoph. p. 36.]

Law BELL. See LAW *bell.*

BELL *animal*, a name given by the writers on microscopical discoveries to a very small animal found at the roots of the common duckweed. The bodies of these animals are shaped like *bells*, and they have very long and slender tails, by which they fasten themselves to the roots of these little plants. They are usually found in great numbers together, in a sort of clusters or bunches; and all of the same bunch have always the same motion, very frequently contracting themselves, and afterwards expanding all together to the full length of their tails. They usually contract instantaneously; but are more slow in the expanding themselves again. *Baker*, Microscop. p. 90.

BELL *muschus*, in botany, a name given by some authors to the plant called *hamia moschata*, and mosch-seed. *Chabraus*, p. 302.

BELL-*polype*, in zoology, a particular species of polype, the extremities of whose branches resemble *bells*. See Tab. of Microscopical Objects, Class 1. See also the article POLYPE.

BELL-*weed*, an English name used by some authors for the *jacea nigra*, or common knap-weed, called also in many English writers *matfellon*. *Ger.* Emac, Ind. 4.

BELLADONNA, in botany, the name of a genus of plants; the characters of which are, that the flower is composed of one leaf, shaped like a bell, and divided into several segments at the end: this is inclosed in a cup, from the centre of which there rises a pistil, which is fixed, like a nail, into the hinder part of the flower, and finally grows to be a sort of round and soft fruit, divided by an intermediate septum into two cells, and filled with seeds affixed to the placenta. See Tab. 1. of Botany, Class. 1.

The species of this genus are, 1. One with large leaves and flowers. 2. One with small leaves and flowers. 3. A round-leaved, shrubby kind. 4. A tobacco-leaved shrubby kind, with white flowers. *Tourn.* Inst. p. 77.

BELLATRIX, in astronomy, a ruddy, glittering star of the second magnitude, in the left shoulder of Orion. *Vital.* Lex. Math. p. 14. *Wolf.* Lex. Math. p. 255.

It takes its name from *bellum*, as being antiently supposed to have a great influence in kindling wars, and forming warriors. *Vital.* loc. cit.

Its longitude, according to Hevelius, for the year 1700, was 16° 47′ 20″; and its latitude southward 16° 52′ 11″. *Hevel.* Prodrom. Astrom. p. 295. *Wolf.* loc. cit.

BELLICA *Columna*, in antiquity, a *column* near the temple of Bellona, from which the consuls or feciales cast javelins towards the enemy's country, by way of declaration of war. *Danet.* Dict. in voc.

BELLICULI, or BELLIRICI *Marini*, among naturalists, denotes a species of sea-shells of an umbilical figure, sometimes of a white colour, spotted with yellow, and sometimes of a yellow, streaked with black lines, after the snail-fashion. *Chiocc.* Mus. Calc. §. 1. p. 57. ap. *Cast.* Lex. Med. p. 102.

BELLING *of Hops* denotes their opening and expanding to their customary shape, supposed to bear some relation to that of a bell. *Hought.* Collect. T. 2. p. 448.

Hops blow towards the end of July, and *bell* the latter end of August, or beginning of September.

BELLIS, *the Daisy*, in botany, the name of a genus of plants; the characters of which are these: the flower is of the radiated kind: its disk is composed of floscules, and its outer circle of semi-floscules, standing on the embryo seeds, and contained in a common simple cup, divided into many segments at the end. The embryos finally become seeds, affixed to the thalamus, which is usually of a pyramidal figure.

The species of *daisy*, enumerated by Mr. Tournefort, are: 1. The common wild *daisy*. 2. The common, little, wild *daisy*. 3. The common, little, wild *daisy*, with red and white flowers, 4. The common, little, wild *daisy*, with blue flowers. 5. The little wild *daisy*, with red double flowers. 6. The large kind of the small wild *daisy*, with stalks two feet high, and large broad leaves, and red and white flowers. 7. The alpine little *daisy*, with small leaves and white flowers. 8. The smallest annual *daisy*. 9. The sun-dew-leaved little *daisy*. 10. The garden *daisy*, with large, double, white flowers. 11. The garden *daisy*, with large, double, flesh-coloured flowers. 12. The garden *daisy*, with large, double, bright-red flowers. 13. The garden *daisy*, with large, double, variegated flowers. 14. The garden *daisy*, with small, double, white flowers. 15. The garden *daisy*, with small, double, red flowers. 16. The proliferous garden *daisy*. 17. The new Dutch umbellated *daisy*, with bright-red flowers. 18. The green flowered garden *daisy*. 19. The garden *daisy*, with large, double, fistulous, red flowers. 20. The garden *daisy*, with white, bullated flowers. *Tourn.* Inst. p. 490.

The common little *daisy* has the reputation of being a very eminent medicine of the tribe of vulneraries. The roots and leaves are prescribed, fresh-gathered, both externally and internally in bruises, and in wounds. They make a sort of cataplasm of the whole plant bruised in some parts of the kingdom, which they apply to the part, and give the juice internally at the same time. The ladies have an opinion also, that the roots of this plant have a power of stopping the growth of animals, and with this intent give a decoction of them in milk to the puppies of their favourite breed, to keep them small.

The two species of *bellis* used in medicine are, the *bellis major*, called also *leucanthemum vulgare*, in English *ox-eye daisy*; and the

Bellis minor, called also *consolida minima*, or *symphytum minus*, of most repute for physical virtues, being esteemed a good attenuant, resolvent, healer, cooler, and astringent, efficacious against intumescences of the blood, hæmorrhages, &c. Vid. *Lemery*, Dict. des Drog. p. 119. *Burggr.* Lex. Med. p. 1535. *Junck.* Consp. Therap. tab. 5. p. 174.

Foreign dispensatory-writers describe a water, syrup, conserve, essence, tincture, extract, and fixed salt, prepared from this plant. Vid. *Burggr.* loc. cit.

BELLONARII, in antiquity, priests of Bellona, the goddess of war and battles.

The *bellonarii* cut and mangled their bodies with knives and daggers in a cruel manner, to pacify the deity. In this they are singular, that they offered their own blood, not that of other creatures, in sacrifice. In the fury and enthusiasm wherewith they were seized on these occasions, they ran about raging, uttering prophecies, and foretelling blood and slaughter, devastations of cities, revolutions of states, and the like: whence Martial calls them *turba entheata Bellonæ*. *Lactant.* Inst. l. 1. c. 21. *Lucan.* l. 1. ver. 565. *Tertull.* Apol. c. 9. *Minut. Felix*, p. 298. *Lamprid.* in Commod. c. 9. *Casaub.* ad Lamprid. loc. cit. *Pitisc.* Lex. Antiq. T. 1. p. 270. *Aquin.* Lex. Milit. T. 1. p. 121.

In after-times, they seem to have abated much of their zeal and transport, and to have turned the whole into a kind of farce, contenting themselves with making signs and appearances of cutting and wounds. Lampridius tells us, the emperor Commodus, out of a spirit of cruelty, turned the farce again into a tragedy, obliging them to cut and mangle their bodies really. *Lamprid.* loc. cit.

BELLOWING, among sportsmen, is used for the noise which roes make in rutting-time. Gent. Rec. P. 1. p. 10.

BELLOWS *(Cycl.)*—Anacharsis the Scythian is recorded as the inventor of *bellows*. *Strab.* l. 7. p. 209. *Pitisc.* Lex. Ant. T. 1. p. 79.

The action of *bellows* bears a near affinity to that of the lungs; and what we call blowing in the latter, affords a good illustration of what is called respiring in the former. Vid. *Niewent.* Relig Philos. cent. 7. §. 7. p. 47.

Animal life itself may, on some occasions, be subsisted by blowing into the lungs with a pair of *bellows*. Dr. Hook's experiment to this effect is famous: having laid the thorax of a dog bare, by cutting away the ribs and diaphragm, pericardium, &c. and having cut off the aspera arteria below the epiglottis, and bound it on the nose of a *bellows*, he found, that as he blowed, the dog recovered, and as he ceased, fell convulsive. And thus was the animal kept alternately alive and dead above the space of an hour. Vid. Phil. Transf. N° 28. p. 539.

There are *bellows* made wholly of wood, without any leather about them; one of which is preserved in the repository of the Royal Society [a]; and Dr. Plott describes another used in the copper-works at Ellaston in Staffordshire [b].—[a Vid. *Grew*, Mus. Reg. Societ. P. 4. §. 3. p. 369. b Vid. *Plott.* Nat. Hist. Staffordsh. c. 4. §. 28.

Ant. della Fruta contrived a substitute for *bellows*, to spare the expence thereof in the fusion of metals.

This is called by Kircher *camera æolia*, and in England commonly the *water-bellows*; where water falling through a funnel into a close vessel, sends from it so much air continually as blows the fire. If it have the space of another vessel to expatiate in by the way, it there lets fall its humidity, which else might hinder the work. *Hook* in Phil. Transf. N° 3. p. 80.

Mr.

Mr. Stirling has given the deſcriptipn of a *water-bellows*, or machine to blow fire by the fall of water. Vid. Phil. Tranſ. N° 475. §. 19.

We are alſo told of a new ſort of *bellows* to work in vacuo [c]. Some have even pretended to effect a perpetual motion by a new-contrived *bellows* [d].—[[c] *Boyle*, Phil. Work. abridg. T. 2. p. 503. [d] Phil. Tranſ. N° 182. p. 138.]

Smiths and founders *bellows*, whether ſingle or double, are wrought by means of a rocker, with a ſtring or chain faſtened thereto, which the workman pulls. The *bellows* pipe is fitted into that of the tewel. One of the boards is fixed, ſo as not to play at all. By drawing down the handle of the rocker, the moveable board riſes, and, by means of a weight on the top of the upper board, ſinks again. Vid. *Moxon*, Mechan. Exerc. Smither. p. 2.

The *bellows* of forges and furnaces of mines uſually receive their motion from the wheels of a water-mill. Others, as the *bellows* of enamellers, are wrought by means of one or more ſteps or treddles under the workman's feet. Vid. *Hought.* Collect. T. 2. p. 223.

Laſtly, the *bellows* of organs are wrought by a man called the blower; and in ſmall organs by the foot of the player.

Butchers have alſo a kind of blaſt or *bellows* of a peculiar make, by which they bloat or blow up their meat when killed, in order to piecing or parting it the better. *Savar.* Dict. Comm. T. 2. p. 1570.

Bone-BELLOWS, φυσιλῆρες οστεινοι, occur in Herodotus for thoſe applied by the Scythians to the genitals of mares, in order to diſtend the uterus, and, by this compreſſion, make them yield a greater quantity of milk. Vid. *Charlt.* OEcon. Anim. ex. 3. §. 9. *Caſtel.* Lex. Med. p. 588. b.

Acoſta ſays, that the metal of the Peruvian mines of Porco is eaſily refined with *bellows*; but that of the mines of Potoſi cannot be fuſed with them, but only by the breath of their ſmall furnaces built upon the ſides of mountains, and directed where the wind lies. Vid. *Boyle*'s Works abridg. Vol. 1. p. 170.

BELLUGA-*ſtone*, in natural hiſtory, the name of a calculus or ſtone found in the *belluga*, a large fiſh, accounted a ſpecies of ſturgeon, and called by Artedi *accipenſer tuberculis carens*.

This ſtone is of various ſhapes and ſizes; but its moſt uſual figure is either globular or oval, often ſomewhat flatted, and marked with ſeveral depreſſions. It is of a yellowiſh white colour, and of a ſmooth and naturally poliſhed ſurface; and it is found from the ſize of a pigeon's egg to that of a gooſe. They are uſually compact, ponderous, and ſolid, not friable, but requiring a ſtrong blow to break them. They yield eaſily to the ſaw; but this defaces their internal texture, which is naturally very elegant and regular. The ſtones conſiſt of ſeveral concentric coats, firmly adhering to one another, formed about a nucleus, which generally appears to be ſome heterogeneous ſubſtance.

But another very obvious circumſtance there is in its ſtructure, which makes it greatly different from all other ſtones of this kind, that is, its radiated ſtructure, it being compoſed of a number of regular and even ſtriæ running from the centre to the circumference, repreſenting, both in colour and form, the flakes of the *terra foliata tartari*, or the ſtriated ſpiculæ of antimony.

The fiſh is much like the ſturgeon in ſhape; but its ſnout is ſhorter and thicker. The skin upon the back is light-grey, and on the belly white, and without ſcales. Its fleſh is whiter than veal, and more delicious than ſturgeon. Of its row or ſpawn is made cavear; and ſome of them are ſo large as to yield two hundred weight of it. The fiſh is very common and very large in the Volga, near the city of Aſtracan. It has been caught there thirty-ſix feet long, and eighteen thick. It is alſo found in the Don, and other rivers, and in the Baltic and Caſpian ſeas. See ACCIPENSER.

It is not certainly known in what part of this fiſh the ſtone is found. Stralenberg ſays it is in the head and ſtomach; ſome authors ſay in the air-bladder; others in a particular bag near the anus; and others in other places. It is found in both ſexes, but moſt frequently in the male; and is found in fiſh of all ages and ſizes. It is far from being common, however; for in a thouſand fiſhes, there ſometimes is not found one ſtone.

It is hence evident, that theſe ſtones are no natural part of the fiſh; but are mere morbid concretions, like the bezoar-ſtones in the animal which produces them, or like the ſtones in human bladders. The ſituation of the parts in which it is found, and other circumſtances, may allot it its particular appearances.

If the ſtone be ſcraped to powder, and ſprinkled upon a hot iron, it gives a faint, urinous ſmell, and calcines into a light, inſipid, grayiſh earth.

The people about the Volga eſteem it greatly, and account it to have great virtues: they ſay it promotes delivery; and give it conſtantly in caſes of the ſtone, and diſorders of the urinary parts. Its doſe is from ten grains to a dram. Phil. Tranſ. N° 483.

BELLULA-*boſ*, in ichthyology, a name given by Paulus Jovius to that ſpecies of the ray-fiſh, which was called by the old Greek and Latin writers *bos marinus*, and by the later authors *raja oxyrynchus*. It is diſtinguiſhed by Artedi by the name of the variegated ray, with ten prickly tubercles on the middle of the back.

BELLY, in a general ſenſe, denotes the whole abdomen, or that region of the body contained between the ſeptum tranſverſum, the hypochondria, and pubes. *Caſt.* Lex. Med. p. 358. See ABDOMEN, *Cycl.* and *Suppl.*

Phyſicians recite inſtances of women with enormous *bellies*, commonly miſtaken for pregnancies.—A French nun, during eighteen years, had a *belly* ſo enormous, that when ſhe walked, ſhe was forced to have two other religious going behind to bear it up. On opening her, there was found a vaſt cyſtis or bag, full of divers matters, extended from her navel to her knees. Mem. Acad. Scienc. 1710. p. 50.

The big-*bellied* woman at Haman in Shropſhire got her living thirty years by making a ſhow of her *belly*. It reached up to her chin. When ſhe ſat, ſhe ſupported its weight on a ſtool placed before her. The reſt of her body was emaciated in proportion to the tumidity of this. On opening her, there were thirteen gallons of water taken out of the duplicatures of the peritonæum. Phil. Tranſ. N° 348. p. 452.

BELLY is alſo uſed, in a more confined ſenſe, for the inteſtines alone, as containing the fæces. *Caſt.* Lex. p. 740. a.

In this ſenſe it is we ſpeak of the looſeneſs or coſtiveneſs of the *belly*, &c.

BELLY is alſo uſed ſometimes for a pregnant woman. *Calv.* Lex. Jurid. p. 934.

In this ſenſe we are to underſtand the phraſe among civil lawyers, to put the *belly* in poſſeſſion of an eſtate.

BELLY is alſo uſed in ſpeaking of the bodies of beaſts. Thus, we ſay a light *belly*, meaning a ſlender or lank one: a cow *belly*, that where the ribs being unable to hold the viſcera, they preſs downwards, and bulge diſagreeably.

Feeding horſes with graſs, or much hay, and few oats, makes them grow cow-bellied [a]. It is a maxim, that horſes which are light-bellied, and firey, ſoon deſtroy themſelves [b]. —[[a] Farr. Dict. p. 60. [b] Id. ibid. p. 59.]

The *belly* of a horſe ſhould be of an ordinary bigneſs, except in draught horſes, where the larger the better, provided it be round, and well incloſed within the ribs; rather extending upon the ſides than downwards. Thoſe horſes are apt to be cow-bellied, which having ſtreight ribs, are great feeders. Ruſt. Dict. T. 1. in voc.

The *belly* is ſometimes alſo denominated the body, cheſt, gut, or flank.

A horſe is ſaid to be thick-bellied, well bodied or flanked, when he has large, long, and well-made ribs, neither too narrow, nor too flat. A horſe again is ſaid to have no *belly*, or body, or to be thin-flanked, when his ribs are too narrow or ſhort, and the flank turns up; ſo that his body looks flankleſs, like a greyhound. Such horſes are called by the French *eſtracs*, and generally prove fine and tender, not fit for travelling or fatigue, unleſs they feed very heartily. Coach-horſes are rejected when they are not well-bellied, or well-bodied, but narrow or thin-gutted, ſeeming to have the ſkin of their flanks ſtitched on their ribs. But a hunter is not the worſe liked for being light-bellied. Horſes pained, or weak in their hind-quarters, are commonly light-bellied. Such as have painful ſcratches in their hind-legs, are found to loſe their *bellies* extremely.

BELLY *of a muſcle*, in anatomy, denotes the body thereof; as contradiſtinguiſhed from the two extremities, or tendons. *Heiſter*, Comp. Anat. §. 305. See MUSCLE.

From the conditions of this, muſcles are divided into monogaſtric, or ſingle bellied, and digaſtric, or double bellied. Phil. Tranſ. N° 258. p. 378.

Lower [c] will have all the muſcles to be digaſtric, or double bellied; in which he is ſeconded by Hoffman [d], and others. —[[c] *Lower*, de Corde, c. 1. [d] *Hoffm.* in Diſſ. an. ad Horn. Microc. p. 252.]

Dragon's BELLY, *venter draconis*, is uſed by ſome aſtronomers to denote the point in a planet's orbit, wherein it has its greateſt latitude, or is fartheſt diſtant from the ecliptic; more frequently called its limits. *Vital.* Lex. Math. p. 519. *Wolf.* Lex. p. 1451. *Ozan.* Dict. Math. p. 408.

BELOAR, a name given by ſome to a ſtone, otherwiſe called *widuris*. See WIDURIS.

BELONE, in zoology, a name by which ſome of the old naturaliſts have called the *acus Oppiani*, called in Engliſh the horn-fiſh, or gar-fiſh. *Willugh.* Hiſt. Piſc. p. 281. See ACUS.

BELT, *Baltheus*, properly denotes a kind of military girdle, uſually of leather, wherewith the ſword or other weapons are ſuſtained. *Aquin.* Lex. Milit. T. 2. p. 110, ſeq. *Belts* are known among the antient and middle-age writers by divers names, as ζωνη, ζωμα, *zona*, *cingulum*, *reminiculum*, *rinca*, or *ringa*, and *baldrellus*. *Pott.* Archæol. Græc. l. 3. c. 4. T. 2. p. 28. *Pitiſc.* Lex. Antiq. T. 1. p. 248 & T. 2. p. 1132. *Du Cange*, T. 4. p. 857, 612. & T. 1. p. 444.

The *belt* was an eſſential piece of the antient armour; inſomuch that we ſometimes find it uſed to denote the whole armour. *Pott.* loc. cit. See ARMS, *Cycl.*

In later ages, the *belt* was given a perſon when he was raiſed to knighthood: whence it has alſo been uſed as a badge or mark of the knightly order. *Calv.* Lex. Jurid. p. 109.

The denomination *belt* is alſo applied to a ſort of bandages in uſe among ſurgeons, &c. See BANDAGE.

Thus we meet with quick-silver *belts*, used for the itch. A late writer describes a *belt* for keeping the belly light, and discharging the water in the operation of tapping. Medic. Eff. Edinb. T. 1. p. 218.

BELTS, (*Cycl.*) in astronomy. Dark spots have been frequently observed on Jupiter's *belts*. Cassini has also discovered a permanent one in the most northern part of the most southern *belt*: by this he has determined the length of Jupiter's day; that is, the time of his revolution on his axis, which is finished in 9 hours, 56 minutes. Phil. Trans. N° 10.

Some astronomers take the *belts* to be seas, which alternately cover, and leave bare large countries of the jovial world: The spots are by these writers conjectured to be gulphs in those seas, perhaps as big as our ocean, and sometimes full, sometimes dry [a]. M. Auzout rather imagined the spots to be protuberances of the *belts* [b].—[a Hist. Acad. Scien. an. 1708. p. 112. It. an. 1692. p. 4. b Phil. Trans. N° 4. p. 71.]

But the generality of astronomers take the spots, we mean the transparent and moveable ones, for the shadows of Jupiter's satellites. Phil. Trans. N° 15. p. 246. Item, N° 1. p. 3.

The *belts* of Jupiter were first observed, and described by Huygens, in syst. Saturnin. p. 7.

Cassini also speaks of *belts* of Saturn; being three dark, straight, parallel bands or fasciæ on the disk of that planet.

Saturn's *belts* do not appear to be inherent on his globe, as those of Jupiter are; but rather to be large dark rings at a distance from the planet, and surrounding his body. Some imagine them to be clouds in his atmosphere. The middlemost seems to be the shadow of Saturn's ring. Vid. Hist. Acad. Scienc. 1715. p. 55. seq.

BELT, or BELTIS, in ecclesiastical writers of the middle age, denotes a sort of string of beads.

In an antient council, we meet with *septem beltidum paternoster*, speaking of a pater-noster to be repeated seven times: Spelman interprets it a rosary, which was not then invented. Vid. *Spelm.* Gloss. p. 79. *Du Cange*, Gloss. Lat. T. 1. p. 522. *Schmid.* Lex Eccles. p. 91.

Johnson, with more probability, describes it as a certain number of studs fastened on a *belt*, serving the same purpose as the chaplets of later days. *Johns.* Eccles. Laws, an. 816. §. 10.

BELTS, in navigation, denote certain streights near the sound, thro' which ships must pass going between the Baltic and the German ocean.

The *belts* belong to the king of Denmark, who exacts a toll of all ships which pass them, excepting the Swedes, who are exempted from it. Vid. Theat. of Domin. and Laws of sea, p. 494, and 497.

BELT is also a frequent disease in sheep, cured by cutting their tails off, and laying the sore bare; then casting mould on it, and applying tar and goose-grease.

BELVIDERE, an Italian term, denoting a fine prospect. The name is more peculiarly given to a pavilion on the top of a building, or an eminence in manner of a platform in a garden, sustained by a terrace wall, or a massive of turf, contrived for the sake of commanding a large or beautiful prospect. *Davil.* Archit. p. 420.

BELULCUM, βελλκον, a chirurgical instrument of various figures, contrived for extracting darts, arrows, or the like, from wounds. *Paré*, Chirug. l. 10. c. 18. & seq. *Aquapend.* de Oper. Chir. p 150. *Cast.* Lex. Med. p. 102.

Hence also the denomination *belulcum*; *quasi* το βελος ελκων.

BEMA, βημα, in antiquity, denotes a step or pace.

The *bema* made a kind of itinerary measure among the Greeks, whose length was equivalent to one cubit, and two thirds, or to ten palms. *Montfauc.* Palæogr. l. 5. c. 4. p. 365. seq.

Whence also the term *lematizein*, βηματιζειν, to measure a road. *Polyb.* l. 3. c. 39. *Strab.* l. 7. p. 322. *Martin*, T. 2. p. 214. *Suic.* Thes. T. 1. p. 683.

BEMA, in ecclesiastical writers, denotes the altar part, or sanctuary in the antient churches. *Bingh.* Orig. Eccles. l. 8. c. 6. §. 10. *Suic.* Thes. T. 1. p. 523.

In which sense, *bema* made the third, or innermost part of the church, answering to the chancel among us. *Fabric.* Bibl. Ant. c. 9. §. 23.

BEMA was also used for the bishop's chair, seat, or throne placed in the sanctuary. It was called *bema* from the steps by which it was to be ascended. *Bingh.* loc. cit. §. 1.

BEMA was also used for the reader's desk. *Schmid.* Lex Eccles. p. 91.

This in the Greek church was denominated βημα γνοσων, in the Latin church *ambo*. See AMBO.

BEMA is more peculiarly used for the manichees altar, which was in a different place from that of the catholics.

BEMA was also a denomination given by this sect to the anniversary of the day when Manes was killed, which with them was a solemn feast, and day of rejoicing.

One of the chief ceremonies of the feast consisted in setting out and adorning their *bema*, or altar, with great magnificence.

BEMETRE, in zoology, a name by which the Portuguese in the Brasils call'd a greenish black-bird of the starling kind, common there, and more usually known by its Brasilian name *Pitangua-guacu*. See PITANGUA-GUACU.

BEN, (*Cycl.*) in pharmacy, the name of an exotic purgative fruit, of the size and figure of a nut; whence it is also called the *ben-nut*, sometimes *balanus myrepsica*, or *glans unguentaria*.

Naturalists distinguish two kinds of *bens*; viz. the great, *ben magnum*, which resembles the filbird, and is by some call'd *avellana purgatrix*, brought from America; and the small, *ben parvum*, brought from Ethiopia, from which last it is the Italians express that fragrant sort of oil, called oil of *ben*, or *oleum balaninum*, of some use among perfumers, but little known in medicine. Vid. *Grew*, Mus. Soc. P. 2. §. 2. c. 1. p. 217. *Lemery*, Dict. des Drog. p. 119.

BEN *of Judea* is a name given by some to the gum benzoin, or benjamin. *Savar.* Dict. Comm. T. 1. p. 319.

BEN is also sometimes used for the *behem*, or *been*. See BEEN, *Cycl.* and BEHEM, *Suppl.*

BENÆ *lapis*, in the natural history of the antients, the name given by the earliest writers to that fossil body, afterwards call'd *lapis thracius*. See THRACIUS *lapis*.

BENDIDIA, βενδιδεια, in antiquity, solemn feasts held by the Athenians on the twenty-first day of the month Tragelion, in honour of the goddess Diana. *Trev.* Dict. Univ. T. 1. p. 973.

The word is formed of βενδις, a denomination of Diana, according to Strabo, or of the moon according to Suidas, which amounts to the same.

The *bendidia* were held in the piræus, and bore some resemblance to the *Bacchanalia*. See BACCHANALIA, *Cycl.* and *Suppl.*

BENDING (*Cycl.*)—M. Bernouilli has a discourse on the *bending* of springs, or elastic bodies [a]. M. Amontons gives several experiments concerning the *bending* of ropes [b]. The friction of a rope *bent*, or wound round an immoveable cylinder, is sufficient with a very small power to sustain very great weights [c]. [a Mem. Acad. Scienc. 1705. p. 230. Hist. p. 164. b Mem. ejusd. Acad. 1699. p. 257. Hist. p. 135. c V. Mem. Acad. 1703. p. 367.]

Divers methods have been contrived for *bending* timber, in order to supply crooked planks, and pieces for building ships: M. Dalesme ingeniously enough proposed to have the young trees bent, while growing in the forest [d]. The method of *bending* planks by a sand heat, now used in the king's yards at Deptford, was invented by captain Cumberland [e]—[d Mem. Acad. Scienc. 1705. p. 172. e Phil. Trans. N° 371. p. 75.]

The *bending* of boards, and other pieces of timber for curved works in joinery, is effected by holding them to the fire, then giving them the figure required, and keeping them in this figure by tools for the purpose. *Davil.* Archit. p. 443.

BENDY, (*Cycl.*) in heraldry, denotes the field's being divided into four, six, or more parts, bendwise, *i. e.* diagonally, and varying in metal or colour.

In England the number is always made even, in other countries this is not regarded.

They say, *bendy* of four, *bendy* of six, *&c.* *Coats*'s Herald. p. 48.

BENEAPED, in the sea language, is said of a ship, when the water does not flow high enough to bring her off the ground, out of the dock, or over the bar. *Guill.* Gent. Dict. p. 3. in voc.

BENEDICITE is a name given to the hymn, or song of the three children, in the fiery furnace; by reason of its beginning with the words *benedicite omnia opera Dominum*. *Du Cange*, Gloss. Lat. T. 1. p. 528.

The use of the *benedicite* is very antient; it appearing to have been sung in all the christian churches, as early as St. Chrysostom's time. *Bingh.* Orig. Eccles. l. 14. c. 2. §. 6.

BENEDICTINS, (*Cycl.*)—For 600 years after the erection of the *benedictin* order, most of the European monks were followers of this rule; whatever other names they went by, Carthusians, Cistercians, Grandimontenses, Premonstratenses, Cluniacks, &c. they were but different branches of the *benedictins*, till about the year 1220, when the Dominicans and Franciscans took new rules.

Hospinian reckons no less than twenty-three religious orders that sprang from this one.

According to the *benedictin* computation, there have been of this order, 24 popes, 200 cardinals, 7000 archbishops, 15000 bishops, 15700 abbots, 4000 saints, 40,000 confessors, above 3000 martyrs and apostles, who have converted 30 provinces to the Christian faith, besides emperors, kings, *&c.* *Bingh.* Orig. Eccles. l. 7. c. 2. §. 12. *Work.* T. 1. p. 251.

The number of *benedictin* monasteries is computed at 37000. Vid. *Tabellam rerum illustrium ordinis sanct. Benedict. Salamanc.* 1569. ap. *Steph.* Suppl. p. 165.

F. Mabillon has published the acts of the *benedictin* saints, in ten volumes folio [a], and the annals of the order in four volumes more [b].—[a Acta sanctorum ordinis sancti benedicti. b Hist. Acad. Inscript. T. 7. p. 442.]

Some will have the appellation *black* given the *benedictins*, by way of distinction from the Cistercians; others pretend, that the English *benedictins* were more particularly called *black monks*, in contradistinction from the Scottish and Irish *benedictins*,

dictins, who were cloathed in white. Vid. *Steph.* Supp. to Dugd. Monaſt. T. 2. p. 169, and 184.

The origin and hiſtory of the *benedictins*, are in a great meaſure the origin and hiſtory of regular monachiſm, at leaſt in the Weſt. The religious before them, as of St. Columban, St. Patrick, St. Baſil, *&c.* not being ſtrictly regulars.

St. Benedict, founder of the order, made his firſt ſettlement in a deſart, in the dioceſe of Tibur, 40 miles from Rome; where he hid himſelf in a ſmall, low cave, formed by nature in a rock; now called the *holy grotto*. But the fame of his ſanctity drawing to him a great number of followers, he erected 12 monaſteries, of 12 monks each, in his wilderneſs; one of which in after ages grew ſo great, that it had 14 villages under its juriſdiction. From hence he removed to mount Caſſin, where he erected another monaſtery; from whence he ſent his miſſionaries, and propagated his order into other countries with great ſucceſs: Into Sicily by St. Placidius, in 534; into France by St. Maur, in 543. The ſame was brought into England in 596, by St. Auſtin, afterwards archbiſhop of Canterbury: the time of its introduction into Spain is conteſted. *Steph.* Supp. to Dugd. Monaſt. T. 2. p. 161, ſeq

The *benedictins*, tho' but one order, are divided into ſeveral congregations, which have their peculiar cuſtoms and obſervances, different from the reſt.

Each of thoſe are ſubdivided into provinces, which have their general chapters.

The Engliſh congregation, which had ſubſiſted from the time of the miſſion of St. Auſtin, was deſtroyed under Henry VIII. and by degrees reduced to one ſingle man; father Buckley, who in 1607, procured a re-eſtabliſhment of the congregation, at Doway, in the Netherlands, where it ſtill ſubſiſts in a kind of dependency on that of St. Valladolid in Spain. *Steph.* l. c. p. 169 and 181.

At the general chapters they chooſe provincials, with their aſſiſtants, for each of the provinces of Canterbury and York, who have juriſdiction over the miſſionaries employed therein. They are governed by a preſident-general, and three diffinitors, choſen every three years.

At their admiſſion they make a 4th vow, *viz.* that they will go to the miſſion in England, and return, when their ſuperiors think fit.

Some ſpeak of four congregations antiently in England; *viz.* Thoſe of St. Auguſtin, St. Benedict, St. Dunſtan, and St. Lanfrac; but theſe were not ſo properly different congregations, as different ages, or ſtates of this order under thoſe different perſons, who were all eminent reformers of the order. *Steph.* l. c. p. 169.

The antiquity of the Engliſh *benedictins* has been diſputed; the general tradition dates it from St. Auguſtin and pope Gregory, who are both ſuppoſed to have been of this order. F. Barnes, tho' a brother, wrote with zeal againſt this opinion, aſſerting that St. Auguſtin, and the monks who came with him, were not of the *benedictin*, but an older order of St. Equitius. He has been refuted with great force, chiefly by help of the MSS. in the Cotton library by F. Clement Reynal, who ſeems to have proved, that from the reign of Edgar to the conqueſt, there was no monaſtery in England, but what followed this rule. *Nicholſ.* Engl. Hiſt. Libr. P. 2. p. 146.

BENEDICTIN *nuns*, are religious women who embrace the rule of St. Benedict.

The origin of female *benedictins* is unknown; ſome will have them to have commenced in the time of St. Benedict, grounded chiefly on certain paſſages in his life, which ſpeak of his correſpondencies with women. Others, with more probability, make them of much later riſe. F. Mabillon takes St. Scholaſtica, about the year 620, for the mother of the *benedictin* nuns.

Their habit antiently was different, in different monaſteries; of late it has been a black gown, with a ſcapular of the ſame, and a tunic of wool, white, or not dyed. Over all, on ſolemn occaſions, and in the choir, a black cowl like that of the monks. *Steph.* Suppl. to Dugd. T. 2. p. 168.

BENEDICTION, in a general ſenſe, the act of bleſſing, or giving praiſe to God, or returning thanks for his favours.

Hence alſo *benediction* is ſtill applied to the act of ſaying grace, before or after meals.

Neither the antient Jews, nor Chriſtians, ever eat without a ſhort prayer. Dict. Trev. T. 1. p. 983. See alſo *Fabric.* Bibl. Ant. c. 19. §. 9. p. 573.

The Jews are obliged to rehearſe an hundred *benedictions* per day; of which, eighty are to be ſpoken in the morning. *Vitring.* de Synagog. vet. l. 3. p. 1033. *Wolf.* Bibl. Hæbr. T. 2. l. 8. p. 1467.

The firſt treatiſe of the firſt order in the Talmud, entitled *ſeraim*, contains the form and order of the daily *benedictions*. *Wolf.* l. c. T. 2. p. 704, and T. 3. p. 1194.

It was uſual to give *benediction* to travellers on their taking leave; a practice which is ſtill preſerved among the monks. Mem. Acad. Inſcr. T. 2. p. 23.

Benedictions were likewiſe given among the antient Jews, as well as Chriſtians, by impoſition of hands. And when at length the primitive ſimplicity of the Chriſtian worſhip began to give way to ceremony, they added the ſign of the croſs, which was made with the ſame hand, as before, only elevated, or extended. *Du Cange*, T. 1. p. 523. *Schmid.* Lex. in voc.

Hence *benediction*, in the modern Romiſh church, is uſed in a more particular manner, to denote the ſign of the croſs made by a biſhop, or prelate, as conferring ſome grace on the people.

The cuſtom of receiving *benediction*, by bowing the head before the biſhops, is very antient, and was ſo univerſal, that emperors themſelves did not decline this mark of ſubmiſſion. *Theod.* Hiſt. Eccleſ. l. 4. c. 5. *Evagr.* l. 4. c. 34. ap. *Bingh.* Orig. Eccleſ. l. 2. c. 9. §. 1.

Camerarius has given a collection of the ſeveral forms of *benediction* mentioned in ſcripture. *Fabric.* Bibl. Græc. l. 6. c. 9. p. 496.

Rabbi Nehemiah Baruch, in 1688, publiſhed a diſcourſe on the manner wherein the ſacerdotal *benediction* is to be pronounced. In the ſynagogue of Ferrara it is rather ſung than ſpoken. *Wolf.* Bibl. Hebr. T. 3. p. 827. See alſo *Fabric.* Bibl. Ant. c. 11. §. 14. p. 370.

BENEDICTION is alſo uſed for a preſent made to a prieſt, of ſomething firſt ſanctified by a ſort of *benediction*. *Du Cange*, T. 1. p. 527.

In this ſenſe, *benedictions* amount to the ſame with what are otherwiſe called *eulogia*.

Under the name *benediction*, the Hebrews alſo frequently underſtand the preſents which friends make to one another, in all probability becauſe they are generally attended with bleſſings and compliments, both from thoſe who give, and thoſe who receive them. *Calmet*, Dict. Bibl. in voc.

BENEDICTIONS are alſo uſed to denote an extraordinary ſort of repaſts given to monks on certain ſolemn days, called alſo *caritates*. *Du Cange*, T. 1. p. 528.

Nuptial BENEDICTION, the external ceremony performed by the prieſt in the office of matrimony. *Hartung.* Exerc. Jur. Civ. 6. p. 31. *Pfaff.* Inſt. Theol. app 2. p. 743.

This is alſo called ſacerdotal, and matrimonial *benediction*, by the Greeks ἱερολογια and ἱερολειτουργια. *Arnd.* Lex. Ant. p. 655.

The *nuptial benediction* is not eſſential to, but the confirmation of a marriage in the civil law. *Calv.* Lex Jur. p. 114.

Beatic BENEDICTION, *benedictio beatica*, is the viaticum given to dying perſons.

The pope begins all his bulls with this form. *Salutem & apoſtolicam benedictionem.* Dict. Trev. p. 975.

Regular BENEDICTION, that conferred by abbots on their monks, or by a ſenior monk on a junior.

BENEDICTIONE *privari*, to be deprived of benediction, was a kind of puniſhment inflicted on monks, whereby when the reſt received the abbot's bleſſing, the offenders were diſmiſſed without it. *Schmid.* Lex. Eccleſ. p. 92.

BENEDICTION is alſo uſed for an eccleſiaſtical ceremony, whereby a thing is rendred ſacred, or venerable.

In this ſenſe *benediction* differs from conſecration, as in the latter unction is applied, which is not in the former: Thus the chalice is conſecrated, and the pix bleſſed, as the former, not the latter, is anointed: Tho' in the common uſage theſe two words are applied promiſcuouſly.

The ſpirit of piety, or rather of ſuperſtition, has introduced into the Romiſh church *benedictions* for almoſt every thing.— We read of forms of *benediction* for wax-candles, for boughs, for aſhes, for church-veſſels, and ornaments; for flags or enſigns, arms, firſt fruits, houſes, ſhips, paſcal eggs, cilicium, or the hair-cloth of penitents, church-yards, *&c.* *Arnd.* Lex. Eccleſ. p. 816.

In general theſe *benedictions* are performed by aſperſions of holy water, ſigns of the croſs, and prayers ſuitable to the nature of the ceremony.

The forms of theſe *benedictions* are found in the Roman pontifical, in the Roman miſſal, in the book of eccleſiaſtical ceremonies, printed in pope Leo the 10th's time, and in the rituals and ceremonies of the different churches, which are found collected in father Martene's work, on the rites and diſcipline of the church.

BENEDICTION *of judgment*, *benedictio judiciorum*, denotes the office or ceremonies preparatory to the canonical purgations. *Du Cange*, Gloſſ. Lat. T. 1. p. 524.

BENEDICTION *of arms* was a ſort of public conſecration of the weapons, and enſigns, before the entring on a war, by a formula of words, and ceremonies appointed for that purpoſe. *Aquin.* Lex Mil. T. 1. p. 126. b.

BENEDICTIONALIS *liber*, an antient church book, containing the forms of the divers ſorts of *benedictions* given by biſhops, prieſts, *&c.* *Du Cange*, T. 1. p. 528. *Schmid.* Lex. Eccleſ. p. 93.

Such was the *benedictionalis liber* of Gregory the great, deſcribed by Lambecius.

BENEDICTUM, an epithet formerly given to lenient, or gently operating medicines; more eſpecially rhubarb. *Caſt.* Lex Med. p. 102.

In this ſenſe we find in ſome diſpenſatory writers, *benedictum laxativum*, uſed for lenitive electuary. Tho' in others, *benedicta laxativa*, or the bleſſed laxative, denotes another eaſy

purge, made up of turbith, diagrydium, ſpurges, hermodactyls, anis-ſeeds, fennel-ſeeds, ſal gemmæ, and honey. *Alleyn*, Diſpenſ. p. 272.

Schroder alſo gives the appellation *aqua benedicta* to his emetic; and Mynſicht does the ſame to his *aqua ſerpylli*, or water of wild thyme.

Some have called the philoſopher's ſtone *lapis benedictus*. *Caſtel.* Lex. ubi ſupra.

Vinum BENEDICTUM. See VINUM.

BENEFICE (*Cycl.*)—*Conſiſtorial* BENEFICES, in the French cuſtoms, are thoſe of royal foundation, which were elective before the concordat, and are now nominated by the king of France. *Fevret.* Tr. de l'Abus. l. 1. c. 8.

They are called conſiſtorial, by reaſon, on the king's nomination, they are to be propoſed in the papal conſiſtory, that is, in the congregation of cardinals, where the pope preſides.

To this claſs belong archbiſhopricks, biſhopricks, and abbies.

Theſe *benefices* were formerly elective; but by the concordat, which aboliſhed all elections, they are to be conferred by the pope, on the king's nomination. Annates are to be paid, and the pope's bulls obtained, for conſiſtorial *benefices*. Dict. Trev. T. 1. p. 976.

Non-conſiſtorial BENEFICES are either elective, or collative, or in patronage.

Elective BENEFICES are thoſe which are to be filled or ſupplied in the way of election; only this election to be confirmed by the proper ſuperior.

Collative BENEFICES are thoſe in the free diſpoſal of the collator, and which need no confirmation; provided the party have the qualifications required.

BENEFICES *in patronage* are thoſe which the collator is obliged to confer upon thoſe preſented by the patron.

BENEFICES *vacant in curia* are thoſe, whoſe incumbents or beneficiaries die *in curia*, that is, within ten leagues round Rome.

The pope confers all *benefices vacant in curia*, by virtue of a reſervation firſt introduced by pope Clement IV. Trev. Dict. ibid. p. 978.

The king of France gives no *benefices* to thoſe of other countries, but on condition of their obtaining from the pope a brief *de non vacando in curia*; after which, whether the perſon obtains or does not obtain ſuch brief, the *benefice* he is poſſeſſed of cannot be *vacant in curia*. In reality, the pope very rarely grants briefs *de non vacando*, except in behalf of cardinals, princes, &c.

Manual BENEFICE is that depending on an abby, and ſerved by a religious ſent thither, who is removeable at pleaſure by the ſuperior. *Corn.* Dict. des Arts, p. 105. Trev. ib. p. 977.

We alſo meet with *manual benefices*, *beneficia manualia*, uſed for thoſe, where the daily allowances of proviſions were only diſtributed to the reſidents. *Du Cange*, Gloſſ. Lat. p. 534.

Theſe are alſo denominated *victual benefices*, *beneficia victualia*.

BENEFICE is alſo uſed, in middle-age writers, for a fee, ſometimes denominated more peculiarly *beneficium militare*. *Calv.* Lex. Jur. p. 114. *Du Cange*, Gloſſ. Lat. T. 1. p. 1529.

In this ſenſe, *benefice* was an eſtate in land, at firſt granted for life only; ſo called, becauſe it was held *ex mero beneficio* of the donor; and the tenants were bound to ſwear fealty to the lord, and to ſerve him in the wars.

In after-times, as theſe tenures became perpetual and hereditary, they left their name of *beneficia* to the livings of the clergy; and retained to themſelves the name of *feuds*.

BENEFICIARII, in Roman antiquity, denote ſoldiers who attended the chief officers of the army, being exempted from other duty. *Horſl.* Britan. Rom. l. 2. c. 3. §. 80. p. 234.

Beneficiarii were alſo ſoldiers diſcharged from the military ſervice or duty, and provided with *beneficia* to ſubſiſt on. *Feſt.* de Verb. Signif. in voc. *Cæſ.* Bell. Civil. l. 4. c. 88. *Pitiſc.* Lex. Antiq. T. 1. p. 270. a.

Theſe were probably the ſame with the former, and both might be compriſed in the ſame definition. They were old, experienced ſoldiers, who having ſerved out their legal time, or received a diſcharge as a particular mark of honour, were invited again to the ſervice, where they were held in great eſteem, exempted from all military drudgery, and appointed to guard the ſtandard, &c. *Kenn.* Rom. Ant. P. 2. l. 4. c. 4. p. 189.

Theſe, when thus recalled to ſervice, were alſo denominated *evocati*; before their recal *emeriti*.

BENEFICIARII was alſo uſed for thoſe raiſed to a higher rank by the favour of the tribunes [a], or other magiſtrates [b].—[[a] *Veget.* l. 2. c. 7. [b] *Pitiſc.* Lex.]

The word *beneficiarius* frequently occurs in the Roman inſcriptions found in Britain, where *conſulis* is always joined with it; but beſides *beneficiarius conſulis*, we find in Gruter *beneficiarius tribuni*, *prætorii*, *legati*, *præfecti*, *proconſulis*, &c. *Ward.* ap. *Horſl.* ubi ſupra, p. 353.

BENEFICIARY, in a general ſenſe, ſomething that relates to benefices. See BENEFICE.

Rebuffe has collected ſix volumes on *beneficiary* matters. F. Paul has alſo a treatiſe on *beneficiary* matters.

BENEFICIARY, *beneficiarius*, is more particularly uſed for a beneficed perſon, or him who receives and enjoys one or more benefices.

Rowland gives a liſt of the *beneficiaries*, or beneficed clergy in the churches of Angleſey, from the time of Henry VIII. *Rowland*, Mona Antiq. p. 359.

A *beneficiary* is not the proprietor of the revenues of his church; he has only the adminiſtration of them, tho' unaccountable for the ſame to any, but God. Trev. Dict. p 980.

BENEFICIARY is more particularly uſed, among Roman writers, for a perſon exempt from public offices. *Calv.* Lex. Jur. p. 114.

In which ſenſe, *beneficiarii* ſtand contradiſtinguiſhed from *municipes*. See BENEFICIARII, ſupra.

BENEFICIARY is alſo uſed, in middle-age writers, for a feudatory or vaſſal.

BENEFICIARY is alſo uſed for a clerk or officer, who kept the account of the beneficia, and made the writings neceſſary thereto. *Pitiſc.* Lex. Ant. in voc.

The ſame denomination was alſo given to the officers who collected the rents and duties belonging to the fiſcus. *Pitiſc.* Lex. Ant. in voc.

BENEFICIUM, in military matters among the Romans, denoted a promotion to a higher rank, by the favour of ſome perſon in authority.

In this ſenſe alſo there was a *liber beneficiorum* in the times of the republic, wherein the governors of provinces, at their return to Rome, entered the tribunes, centurions, and other officers, whom they had preferred. *Pitiſc.* Lex. Ant. T. 1. p. 271.

The entry or report was called *ad ærrarium in beneficiis*.

BENEFIT is uſed for a privilege granted to ſome perſon, as of an immunity, or the like. *Pancirol.* Notit. Dign. c. 89. *Pitiſc.* Lex. Ant. *Calv.* Lex. p. 114. a.

BENEFIT *of ceſſion*, in the French law, is when a debtor is admitted to ſurrender all his effects to his creditors, and in conſequence thereof ſet at liberty. *Corneil.* Dict. T. 1. p. 105.

BENEFIT *of age*, in France, is when a minor obtains the king's letters, whereby he is emancipated, and impowered to manage his own income from eighteen years to his full majority.

BENENAIM, BENENATH, BENENASCH, or BENENAT, in aſtronomy, the outermoſt ſtar, of the ſecond magnitude, in the tail of the Great Bear. *Wolf.* Lex. Math. p. 216. Id. p. 32. See URSA *major*, *Cycl.*

This is ſometimes alſo called *Alalioth*.

Its longitude, according to Hevelius, for the year 1700, was 22° 39′ 24″, and it latitude 54° 25′ 7″ north. *Hevel.* Prodrom. Aſtrom. p. 306.

BENISH-*Days*, among the Egyptians, a term for three days of the week, which are days of leſs ceremony in religion than the other four, and have their name from the *beniſh*, a garment of common uſe, not of ceremony. In Cairo, on Sundays, Tueſdays, and Thurſdays, they go to the paſha's divan; and theſe are the general days of buſineſs. Fridays they ſtay at home, and go to their moſques at noon; but, tho' this is their day of devotion, they never abſtain from buſineſs. The three other days of the week are the *beniſh*-days, in which they throw off all buſineſs and ceremony, and go to their little ſummer-houſes in the country. *Pocock*'s Egypt.

BENLOJA, in ichthyology, the name by which the Swedes call that ſpecies of *cyprinus*, which we call the *bleak*. It is the *alburnus* of authors. See ALBURNUS and CYPRINUS.

BENOCTE, in botany, a name by which the French call the *caryophyllata*, or avens; called alſo by us *herb-bennet*. See CARYOPHYLLATA.

BENZOIN, or BENJAMIN (*Cycl.*)—Some recommend *benzoin* diſſolved in ſpirit of wine as a cephalic. It makes a tincture, commended for taking away freckles. It alſo enters the compoſition of ſome plaſters, as a diſcutient and ſtrengthener. *Quinc.* Diſp. P. 2. §. 4. n. 209. p. 111.

Pharmaceutic writers ſpeak of a water and tincture of *benzoin* drawn with the ſpirit of wine, ſaid to be good againſt aſthmas, &c. Flowers of *benzoin*, procured by ſublimation, are eſteemed a powerful pectoral. Spirit of *benzoin* is uſed as a diuretic; and oil of *benzoin* is accounted a good vulnerary. *Boerh.* New Meth. Chem. P. 3. p. 138. *Morl.* Collect. Chem. Leid. c. 92. p. 106, ſeq. *Quinc.* lib. cit. P. 2. p. 294, ſeq.

If two or three pounds of *benjamin* be diſtilled dry in a retort, with a mixture of a little ſand, there will ariſe ſpirit, oil, and flowers. This ſpirit being ſeparated from the reſt by filtration, and mixed with ſpirit of ſal armoniac, two parts of the ſpirit of *benjamin* to one part of the other, tho' both are ſeparately clear and colourleſs, the mixture will become red. Phil. Tranſ. N° 225.

BER, in botany, a name uſed by ſome authors for the Indian jujube; that ſpecies of the jujube-tree, on which the gum lacca of the ſhops is uſually found. *J. Bauhin*, Vol. 1. p. 44.

BERBENGINE, a name given by the Arabian phyſicians to the *pomum amoris*, or love-apple, a kind of eſculent nightſhade; and by ſome to a tree producing the nut *metel*, becauſe of its likeneſs to the plant which produces the *melongena* in the ſhape of its leaves.

BERBERII, in medicine. See PALSY.

BERBERIS, the *barberry-buſh*, in botany, the name of a genus of trees; the characters of which are theſe: the flower is of the roſaceous kind, being compoſed of ſeveral petals diſpoſed in a circular form: from the centre of the flower there ariſes a piſtil,

piſtil, which finally becomes a cylindric fruit, ſoft, full of juice, and containing one or two ſeeds.

The ſpecies of *barberry*, enumerated by Mr. Tournefort, are theſe:

1. The common *barberry*. 2. The *barberry* with no ſeeds in the fruit. And, 3. The Canada *barberry*, with very broad leaves. *Tourn.* Inſt. p. 614.

The propagation of this tree is deſcribed under the article *barberry*. See BARBERRY.

The *berberis* is a ſhrub, whoſe berries, as well as bark, are of medicinal uſe; known alſo by the name of *oxyacantha Galeni*.

Its berry is red, and oblong, of an agreeable, cooling, aſtringent taſte, chiefly uſed in the way of conſerve; where it quenches thirſt, ſtrengthens the ſtomach, and is good againſt diarrhæas and dyſenteries. We alſo read of a ſyrup, eſſential ſalt, and lozenges, made of the juice of the *barberry*. *Junck.* Conſp. Therap. tab. 13. p. 368. *Lemer.* Dict. des Drog. p. 121. *Burggr.* Lex. Med. p. 1543, ſeq.

The bark, on the contrary, is opening and deterſive; and, though rarely found in diſpenſatory compoſitions, is much uſed in common preſcriptions, as well as in medicated ales, againſt the jaundice, and other diſtempers from obſtructions and foulneſſes of the viſcera. *Quinc.* Diſp. P. 2. §. 4. n. 291. p. 130. See BARBERRY.

BERCARIA, BERQUERIA, or BERKERIA, in middle age writers, denotes a ſheep-fold, ſheep-cote, ſheep-pen, or other incloſure, for the ſafe-keeping a flock of ſheep. *Kennet*, Gloſſ. ad Paroch. Antiq. in voc. *Du Cange*, Gloſſ. Lat. T. 1. p. 537. *Spelm.* Gloſſ. p. 79.

The word is abbreviated from *berbicaria*, of *berbex*, detorted from *vervex*. Hence alſo a ſhepherd was denominated *berbicarius*, and *berquarius*.

BERDIN, in natural hiſtory, a name given to the *patella*, or limpet, in Normandy, and other places. In ſome it is ſpoke *berlin*. See PATELLA.

BERENGARIANISM, a name given by eccleſiaſtical writers to the opinion of thoſe, who deny the truth and reality of the body and blood of Chriſt in the euchariſt. *Sagittar.* Introd. Hiſt. Eccleſ. c. 31. §. 16.

The denomination took its riſe from Berengarius, archdeacon and ſcholiaſticus of the church of St. Mary at Anjou about the year 1035, who maintained, that the bread and wine, even after conſecration, do not become the true body and blood of our Lord, but only a figure and ſign thereof. *Tribbech.* de Doctor. Scolaſt. c. 1. p. 20. 33.

Berengarianiſm was ſtrenuouſly oppoſed by Lanfranc, Guitmond, Adelmannus, Albericus, *&c.* Divers ſynods were held, wherein the author was condemned at Rome, Verſailles, Florence, Tours, *&c.* He retracted, and returned again more than once, ſigned three ſeveral catholic confeſſions of faith; the firſt in the ſecond council of Rome; the ſecond in the third; and the third in the fourth council of the ſame city. But he ſtill relapſed to his former opinion when the ſtorm was over; tho' Mabillon maintains he ſoon recovered from his fourth fall, and died an orthodox catholic in 1088. Hen. Muller, profeſſor of Roſtoc, has given the hiſtory of *berengarianiſm* antient and modern, printed at Roſtoc, 1674. *Schmid.* Supp. ad Sagittar. §. 1. c. 31. p. 670.

Mabillon has a diſſertation expreſs on the manifold condemnation of Berengarius, his retractions, relapſes, and repentance. Ext. ap. Veter. Analat. T. 2. p. 268, ſeq. & ap. *Vogt.* Bibl. Hiſt. Hæreſ. p. 99, ſeq. *Le Long.* Bibl. Hiſt. l. 2. c. 5. art. 1. p. 74.

BEREWICHA, or BEREWICA, in our old writers, denotes a village or hamlet belonging to ſome town or manor, ſituate at a diſtance therefrom. *Spelm.* Gloſſ. p. 79.

The word frequently occurs in doomſday-book: *Iſtæ ſunt berewichæ ejuſdem manerii.*

BERFISCH, in ichthyology, a name given by the Germans to the common pearch.

BERG-*gruen*, in natural hiſtory, the name of an earth uſed in painting, and properly called *green ockre*, though not known among the colourmen under that name. It is found in many parts of Germany, Italy, and England, commonly in the neighbourhood of copper-mines, from particles of which metal it receives its colour. In many parts of Germany, they have a purer kind of this, diſtinguiſhed by no peculiar name, but ſeparated by art from the waters draining from the copper-mines, and differing no otherwiſe from this native ſubſtance, than as the waſhed ockres of Oxfordſhire, *&c.* do from theſe ſent us in their natural condition. The characters by which the native kind is known from other green earths, are theſe: it is a denſe, compact ſubſtance, conſiderably heavy, and of a pale, but not diſagreeable green; of a rough and uneven, but not duſty ſurface, and ſomewhat unctuous to the touch. It adheres firmly to the tongue; does not break eaſily between the fingers; nor at all ſtain the hands. It is of a brackiſh diſagreeable taſte, and does not ferment with acids. *Hill*, Hiſt. of Foſſils, p. 65.

BERGANDER, in zoology, a name by which ſome have called the ſhell-drake, or burrough-duck, a very beautiful ſpecies of duck, common on the coaſts of Lancaſhire; but not much eſteemed for eantig, called *tadoma*. *Aldrovand.* de Avib. See the article TADOMA.

BERIBERI, the name of a diſeaſe among the Indians, being a ſpecies of palſy. See PALSY.

BERICARIA, BERCARIA, or BERQUARIA, a ſheep down, or ground whereon to feed ſheep. *Alfred.* Leg. c. 9. *Dugd.* Monaſt. T. 1. p. 308. *Du Cange*, Gloſſ. Lat. T. 1. p. 536. See BERCARIA.

BERITH, a ſimple mentioned in ſcripture, uſed for cleanſing or taking out ſpots. *Jerem.* c. 2. v. 22.

Critics are divided concerning the *berith*: ſome will have it the *kali*, or ſalt wort, of whoſe aſhes ſoap is made; whence, in our verſion, it is rendered by ſoap. *Calmet*, Comm. ad Jerem. loc. cit. Ejuſd. Dict. Bibl. T. 1. p. 322.

Others, after Rudbeck, make the *berith* to be the dye of the purple-fiſh. *Rudbeck*, in Act. Suec. T. 1. p. 303 & 335. It. Mem. de Trev. Jan. 1734. p. 151.

Michaelis, Rudbeck, and Langius, have written expreſly on the *berith*.

BERLIN, in natural hiſtory, a name given to the *patella*, or limpet, in Normandy, and ſome other places. Some alſo ſpeak it *berdin*. See PATELLA.

BERLUCCIO, in zoology, the name of a ſmall bird of the *hortulanus* kind, and much reſembling the *yellow-hammer*; but ſomething ſmaller, and longer bodied. The tubercle on the beak is much ſmaller than in the *yellow-hammer*. Its throat and breaſt are grey; its belly of a rediſh brown; its rump rediſh; and its head greyiſh, with an admixture of browniſh black, and of greeniſh. In the male, the rump is greeniſh. It is common in Italy. *Ray*, Ornithol. p. 197.

BERMUDIANA, in botany, the name of a genus of plants; the characters of which are theſe: the flower is of the liliaceous kind, and is compoſed of ſix petals; and its cup finally becomes a fruit of the trigonal form, divided into three cells, and containing a number of roundiſh ſeeds.

The ſpecies of *bermudiana*, enumerated by Mr. Tournefort, are theſe:

1. The *bermudiana* with iris-leaves, and a fibroſe root. 2. The *bermudiana* with palm-like leaves, and a bulbous root. Theſe plants were, when firſt known in Europe, improperly called *ſiſyrinchiums*. *Tourn.* Inſt. p. 387.

BERNHARDIA, in botany, a name given by Houſton to a genus of plants, characterized by Linnæus under the name of *croton*. See CROTON.

BERNICLA, the *barnacle*, in zoology, the name of a ſpecies of gooſe, frequent on the coaſt of Lancaſhire in the winter-ſeaſon, and of about half the bigneſs of the common gooſe. The beak is black, and much ſhorter than in the common gooſe. The neck is all over black; the breaſt and belly of a greyiſh white; and the lower feathers of the thighs black; and the back is motled with black and grey. See BARNACLE, *Cycl.*

It has been ſuppoſed by many, that the *barnacle* and brent-gooſe were the ſame ſpecies of bird, only the one the male, and the other the female. But this appears to be by no means the caſe; and it is very improper to uſe the two words as ſynonymous terms. There has been an old opinion, that theſe birds were produced out of ſhells found on old trees lying in the ſea; and very grave authors, as Gerard, and the reſt, have avouched the truth of it from their own eye-ſight; but this is too idle and fabulous to need refutation. *Ray*, Ornithol. p 273.

BERNICLE, in natural hiſtory, the name of a ſpecies of ſhell-fiſh, called by authors *concha anatifera*. See ANATIFERA.

This is compoſed of five ſhells or valves, and agrees, according to Liſter, with the *pholas*, as well in the diſpoſition as in the number of theſe valves. There are two large ones: to each of theſe is affixed one ſmaller; and there is a fifth, which is a ſingle, narrow valve, crooked, and very long, ſo formed, as to cover the ſpace left between the four others, when they cloſe, and wholly hide the joining. The ſhape of the ſhell is triangular, and flat; and its colour is a mixture of whitiſh red, and a bluiſh tinge. It is radiated longitudinally. Its pedicle or trunk is formed like the proboſcis of ſome inſects, and has ſeveral folds, by means of which it may be lengthened or contracted at pleaſure by the animal. This is the organ by which the fiſh takes in its nouriſhment, and, by means of this, it affixes itſelf to any thing it pleaſes. This trunk is of a brown colour, and in ſome degree tranſparent, and repreſents an inteſtine of ſome animal. It is hollow, and uſually filled with a mucous liquor of an inſipid taſte. This trunk is compoſed of two membranes; one an external one, of a rough ſurface and cartilaginous texture; this is what ſerves to affix the animal to the bottoms of ſhips, or whatever elſe it adheres to; and the other, or internal one, is very thin and fine. It is of a yellowiſh red colour, and forms at the end a bag, which receives or covers the whole body of the fiſh. When the body is opened, the nervous junctures, by means of which the large pieces of the ſhell are joined, and can open or ſhut at pleaſure, as in the bivalves, are eaſily ſeen. The parts of generation are alſo very obvious: they are ſituated near the mouth. There are fourteen arms, which iſſue out of the ſhell at pleaſure; and in the midſt of theſe is the mouth: theſe are each divided into two, and are of a brown colour, and plumoſe, or having a reſemblance of feathers. *Liſt.* Hiſt. Nat. p. 360.

BERNICLE is also a name given by the people of many parts of France to the *patella*, or limpet. See PATELLA.

BERRY (*Cycl.*)—Some define *berries* as a fruit smaller than apples, growing in bunches, but not so thick or close as grapes [a]. Others a soft, fleshy, succulent fruit, having stones or kernels within them [b].—[[a] *Cast.* Lex. Med. p. 97. a. [b] Trev. Dict. Univ. T. 1. p. 936.]

Such are the fruits of laurels, olives, currants, and the like.

French BERRY, *graine d'Avignon*, or *graine jaune*, is the fruit of a shrub called by the antients *lycium* and *pizacanta*, frequent about Avignon, and in the south parts of France; of considerable use among dyers and illuminers for a yellow colour. See LYCIUM.

The shrub grows in a rough, stony soil. Its branches are beset with prickles two or three feet long: its bark is blackish; its leaf small and thick, like that of box; but disposed like that of myrtle: its root yellow and woody: its *berry* is green, bordering on yellow, of the size of a grain of wheat, bitter and astringent to the taste. *Savar.* Dict. Comm. T. 2. p. 260, seq.

For the true *French berry* is frequently substituted another sort, called *berries of Noirprun*, or *Nerprun*, produced also about Avignon; which being steeped in water while green, yield a tolerable yellow colour. Id. ibid. p. 872.

Fishing BERRIES, *baccæ piscatoriæ*, a denomination given to the *cocculæ indicæ*, made by poachers into a paste, and crumbled small, like *berries*, wherewith they intoxicate fish; so that they may be taken with the hand. *Quinc.* Dispens. P. 2. §. 10. p. 492.

BERS, in antient medicine, an electuary used by the Egyptians to excite deliriums: the description whereof is given by Prosper Alpinus, de Medic. Egypt. l. 4. c. 122. a. *Cast.* Lex. Med. p. 102. b.

BERSARII, in writers of the middle age, a kind of hunters or sportsmen, who pursued wild beasts in forests and chaces. *Du Cange*, Gloss. Lat. T. 1. p. 541.

The word seems derived from the barbarous Latin *berfare*, to shoot with a bow [a]. On which principle, it should properly denote archers only, or bowmen. Or it might be derived from *berfa*, the fence or pales of a park [b]. In which view, it should primarily import those who hunt or poach in parks or forests.—[[a] *Menage*, p. 95. voc. *berfer*. [b] *Spelm.* Gloss. p. 80. *Du Cange*, lib. cit. voc. *berfa*.]

Hincmar speaks of a kind of inferior officers in the court of Charlemaign, under the denomination of *berfarii*, *veltrarii*, and *beverarii* [c]. Spelman takes the first to denote those who hunted the wolf; the second those who had the superintendency of the hounds for that use; and the third those who hunted the beaver [d].—[[c] *Hincm.* Epist. 3. c. 17. [d] *Spelm.* Gloss. p. 80.]

BERSE, in botany, the name given by the French writers to the *sphondylium*, or cow-parsnep, a species of umbelliferous plants common in our meadows, and known by its large rough leaves and remarkable height. See SPHONDYLIUM.

BERTH, in the sea-language, denotes a convenient distance or room to moor a ship in. *Manw.* Dict. p. 8. *Skinn.* in voc.

To take a good BERTH, signifies to go a pretty distance off to sea-board off any point, rock, or other thing they would go clear of. Id. ibid.

BERTHING, in the sea-language, denotes the raising or bringing up of ship-sides. Thus they say, a clincher hath her sides *berthed* up before any beam is put into her. *Manw.* Sea Dict. p. 8.

BERTONA, BERTONIA, BERTHONA, BERTON, or BARTON, properly denotes that part of a country farm, where the barns and other inferior offices stand, and wherein the cattle are foddered, and other business is managed. See Claus. 32. Ed. 1. m. 17. *Spelm.* p. 80.

BARTON is also used to signify a farm, as distinct from a manor. *Du Cange*, T. 1. p. 542.

In some parts of the west of England, they call a great farm a *berton*; and a small one a *living*. *Jac.* Law Dict. in voc.

Hence also *bertonarii* was antiently used for those we now call farmers, or tenants of *bartons*.

BERULA, in botany, a name given by some authors to the common upright water-parsnep, or *sium erectum umbellatum*. *Dale*, Pharmac. p. 125.

BERY, BERIA, or BERIE, in middle-age writers, denote a flat, wide campaign. *Du Cange*, T. 1. p. 538. *Spelm.* Gloss. p. 80.

In which sense, the word differs from *bury* or *borough*, a town, tho' usually confounded therewith by glossographers.

Hence *Beria S. Edmundi*, mentioned by Matt. Paris under the year 1174, is not to be understood of the town, but the adjoining plain.—And hence the denomination *bery-field*, and *bery-meadow*, is still retained to divers flat and wide meads, and open grounds. Hence also *berras assartare* is to dry or plow up heaths or downs. And hence our warrens are called *coney-berries*. *Kenn.* Gloss. ad Paroch. Antiq. in voc.

Bery is either used separately, or in composition with the names of divers places; as *Mixbery*, *Acornbery*, &c.

BERYL, (*Cycl.*) in natural history, the name of a fine pellucid gem, of a sea-green or bluish green. This is very plainly the same stone that the antients called the *beryl*; and the more accurate later writers have called it by that name, tho' our jewellers have learned of the Italians to call it the *aqua marina*. The antients, however, according to Pliny, took in several other of the gems, when of pale, diluted colours. The later writers have more accurately kept up to the characters of the gem, and taken in no other kind under the name. But our lapidaries, however, are more than even with the antients; for they call by this name not only a peculiar kind of crystal, described under the name of *beryl* crystal, but the purer and brighter oriental cornelian.

The *beryl*, or *aqua marina*, when pure and perfect, is a very beautiful gem; but it is at present not greatly esteemed. It is found in various shapes and sizes; but seems never to be found so very small as many other of the gems: the size of a hemp-seed is the smallest commonly met with; and the third of an inch may be esteemed the common size of the larger. It is sometimes found in form of a small and very irregularly shaped pebble, somewhat approaching to a rounded or oblong figure; but full of small, flat faces irregularly disposed: but its more usual appearance is the form of crystal, being found in hexangular columns, terminated by hexangular pyramids standing in clusters on the surfaces of rocks, or in the fissures of the strata of stone. It is ever of a bright and naturally-polished surface, and is of a mixed colour of blue and green, making together what we call a sea-water colour. It has this colour in all degrees, from a very deep and dusky hue to the paleness of water; but never has the least tinge of any other colour. The stones described by authors under the names of *chrysoberylli*, as having a mixture of yellow in their tinge, are properly another gem of the *prasius* kind, they not having the least tinge of blue among the green, nor at all resembling the sea-water in colour.

The *beryl*, in its finest state, approaches to the hardness of the garnet; but it is often much softer, and consequently of the less value. There is, however, a common error which gives our jewellers an idea of this, and other of our gems, being much softer than they really are, which is, the mistaking the common tinged crystals, frequent in mines, and called by authors *pseudoberyllus*, &c. for the genuine gems of those names. It is easy to conceive these cannot be any harder, and it is natural enough to suspect they cannot be so hard as crystal in its common colourless state.

The *beryl* parts with its colour in a very small fire; but is, when colourless, greatly inferior to the amethyst or sapphire. It is found in great abundance in the island of Ceylon, and in many other parts of the East Indies, as also in America: many of them are found also in Silesia, and some other parts of Europe; but in this, as in all other gems, the oriental are vastly superior to those of any other part of the world in hardness, as well as in lustre, and the beauty of their colour. *Hill*'s Hist. Fossil. p. 595.

Gorræus gives a list of eight sort of *beryls*, distinguished only by the diversity of their colour. *Cast.* Lex. Med.

Mr. Boyle also speaks of a white kind of *beryl*. Phil. Work. abridg. T. 3. p. 108.

The vulgate and the septuagint call the eighth stone belonging to the high-priest's pectoral, *beryl*; but the Hebrew, *jaspbe*. *Calmet.* Dict. Bibl. T. 1. p. 283.

BERYL is also a name given by several of our jewellers to a species of brown sprig crystal, with a remarkably long pyramid, called by Mr. Hill *ellipomacrostylum lucidum fuscum*, *pyramide longissima*, *maxime irregulari*.

This is the brightest of all the brown crystals, and is essentially different from the species commonly known by that name. It is found in Italy, and some parts of Germany. The Italians call it, by way of eminence, the *beryl crystal*; but our jewellers drop the word crystal, and call it simply the *beryl*. Hence it had, a few years ago, generally prevailed in London, that this was the *beryl*, or proper gem of that name; and every jeweller, being willing not to be without the *beryl*, and this species of crystal not being very common, any other tolerably clear brown crystal was cut, to supply its place; and good brown crystal was generally accounted the *beryl* of the antients. Nor was the error confined to London alone: for De Boot accuses his countrymen of ignorance on the same occasion. *Hill*, Hist. of Foss. p. 178.

BERYL, *berillus*, is also a name given to a kind of crystal looking-glass, superstitiously consecrated to the purposes of conjuring and divination.

Hence also the term *berillystica*, used for the mysterious art of seeing future or distant events in such glasses. *Ruland.* Lex. Alch. in voc. *berillus*.

BERYTIUM, βηρύτιον, in the antient physic, an opthalmic medicine or collyrium, invented by Berytius against the severest epiphoras. See its description in *Galen*, l. 4. de Compos. Medic. c. 7.

The same denomination is also given to a sort of pastil, of use in dysenteries. Vid. *Gal.* l. 9. c. 5. *Gorr.* Med. Defin. p. 74.

BES (*Cycl.*)—The *bes* originally weighed two asses; whence the origin of the word *quasi binus as*. Though Scaliger conjectures it to have been formed from *dues*; as *bellum* from *duellum*, or *bonum* from *duonum*. *Beverin.* Synt. de Ponder. p. 37.

BES was also used in the mensuration of lands, to denote $\frac{8}{12}$ of a *jugerum*, or acre. *Columel.* l. 5. c. 1. *Fab.* Thes. p. 349.

BESAILE, in the common law, a writ that lies where the great-grandfather was ſeiſed the day that he died of any lands or tenements in fee-ſimple; and after his death, a ſtranger entered the ſame upon him, and keeps out the heir. F. N. B. 222. *Terms of Law. Blount.*

The word is French, *beſaile*, or *biſayeul*, a great-grandfather.

BESANT (*Cycl.*)—Some repreſent the *beſant* as equivalent to the *ſolidus aureus* of Conſtantinople Ragueau makes it equal to fifty French ſols; though, in ſeveral feudal inſtruments, it is only rated at twenty ſols. *Paul. Mantiſſ.* ad Beverin. p. 231, ſeq.

The ranſom of St. Louis, according to Joinville, was two hundred thouſand *beſants*, which amounted to five hundred thouſand livres.

Thirteen *beſants*, or *beſantins*, are preſented at the maſs at the coronation of the kings of France. Henry II. had that number coined on purpoſe. *Corn.* Dict. des Arts, p. 107. Trev. Dict. Univ. T. 1. p. 998.

Divers conjectures have been formed by antiquaries concerning the reaſon of a foreign coin's being uſed by kings of France on ſuch occaſions: ſome ſuppoſe, that this uſage was introduced at the time when no gold coin was ſtruck in theſe parts; but this will ſcarce hold, in regard we find mention of ſeveral gold coins from the time of Hugh Capet. Le Blanc rather imagines, that the name *beſant* was antiently given to all gold coin, as that of *florin* was afterwards given to all ſpecies of gold, though not ſtruck at Florence. What ſeems to confirm this ſentiment is, that the Saracens called their gold money *beſant*, though not coined at Conſtantinople. Trev. Dict. Univ. loc. cit.

BESANTS, or BEZANTS, in heraldry, are repreſentations of round, flat pieces of money or bullion, without ſtamp or impreſs, introduced into coat-armour by thoſe who were at the holy war.

Beſants are ever of metal, and when blazoned, ſhould be expreſly ſaid to be of *or*, or *argent*. The Engliſh heraldry knows only the gold; but foreigners have alſo the ſilver kind.

When a field or charge contains above eight *bezants*, ſo placed as to fill the ſame equally on all ſides, and repreſenting a promiſcuous ſtrewing of pieces over the whole. Some blazon the field or charge *bezanted*, *bezantée*: but if there be ten, twelve, fifteen, or more, confined to any particular form or poſition, the number and form muſt be particularly mentioned. *Coats*, Herald. Dict. p. 49, ſeq.

Croſs BESANTED, *bezantée*, denotes a croſs made up of *beſants*, or pieces of money. *Coats*, ibid. p. 50.

This amounts to the ſame with what Upton calls a *croſs talented*, *crux talentata*, or made up of talents.

BESBASE, in the materia medica, a name given by the Arabian writers Serapio and Aviſenna to mace; but as the names *macis* and *macir* are very much alike in ſound, though different in ſenſe, they have confounded theſe two things under the ſame term *besbaſe*; the one meaning the covering of the nutmeg, and the other the bark of a tree uſed as an aſtringent; ſo that this word *beſbaſe* is to be underſtood as meaning the one or the other of theſe, according to the virtues aſcribed to it.

BESD, a term often uſed by Arabian writers for the plant called *margina*. See MARGINA.

BESLERIA, in botany, the name given by Plumier, and afterwards Linnæus, to a genus of plants; the characters of which are theſe: the perianthium is erect, and lax, and conſiſts of one leaf, divided into five ſharp ſegments: the flower conſiſts of one petal, and is of the ringent kind: the tube is cylindric, and of the length of the cup; and its verge is divided into five unequal ſegments, the loweſt being the largeſt, and the others all larger than the upper two: the ſtamina are four filaments, two of which are ſomewhat longer than the other two; and they are all placed within the tube of the flower: the antheræ are ſmall: the germen of the piſtil is oval: the ſtyle is ſubulated, and very ſmall: the ſtigma is acute: the fruit is a globoſe berry, having only one cell, in which is contained a great number of roundiſh and very ſmall ſeeds. *Linnæi*, Gen. Plant p. 296. *Plumier*, p. 5.

BESSIS (*Cycl.*)—BESSIS *centeſimæ*, denotes two-thirds of centeſimal intereſt, or uſury at eight *per cent*. *Bingh.* Orig. Eccleſ. l. 6. c. 2. §. 1. 6.

BESTARCHA, a dignity in the courts of the emperors of Conſtantinople, ſuppoſed to anſwer to that of maſter of the wardrobe among us. *Aquin.* Lex. Milit. T. 1. p. 128.

The word *beſtarcha* ſeems to have been formed from *veſtarcha*, by a change of the *v* into *b*.

BETA, the *beet*, in botany. See BEET.

BETEL, in botany, an Indian plant, in great uſe and eſteem throughout the Eaſt, where it makes a conſiderable article of commerce.

The *betel* bears ſome reſemblance to the pepper tree. Its leaves are like thoſe of ivy, only ſofter, and full of a red juice, which, among the Orientals, is reputed of wonderful virtue for fortifying the teeth, and rendering the breath ſweet. The Indians are continually chewing theſe leaves, which renders their lips ſo red, and teeth black, a colour by them vaſtly preferred to the whiteneſs affected by the Europeans.

The conſumption of *betel* leaves is incredible, no body, rich or poor, being without their box of *betel*, which they preſent to each other by way of civility, as we do ſnuff. *Savar.* Dict. Comm. T. 1. p. 324. See BETLE.

BETH, in literary hiſtory, makes the title of a multitude of books in the Hebrew language; *e. gr. beth avoth*, or the houſe of the fathers; *beth Elohim*, or the houſe of God; *beth Iſrael*, or the houſe of Iſrael, &c. *Wolf*, Bibl. Hebr. T. 2. l. 8. p. 1268.

BETHLEHEMITES, or BETHLEMITES, in church hiſtory, a ſort of monks antiently in England, habited like the dominicans, except that, on their breaſt, they wore a ſtar with five rays, in memory of the ſtar or comet which appeared over Bethlehem at the nativity of our Saviour. *Matth. Par.* ann. 1257. *Du Cange*, Gloſſ. Lat. T. 1. p. 543.

There is alſo an order of *bethlehemites* ſtill ſubſiſting in Peru, who have convents at Lima; one called of the incurables, the other of our lady of mount Carmel.

Theſe *bethlehemites* came originally from the city of Guatimala in Mexico, where they were inſtituted by the venerable Peter Joſeph of Betaneur for the ſervice of the poor. Innocent XI. in 1697, approved the inſtitute. They have already nine convents in Peru.

The *bethlemites*, though outwardly of great ſimplicity, paſs for the moſt refined politicians; inſomuch as to be called the quinteſſence of the carmelites and jeſuits. They are all friars. For their almoner they chuſe a ſecular prieſt, whom they hire, and who has no vote in the chapter. They are cloathed like the capuchins, except that, under the chin, they wear a bib point-wiſe, a quarter of an ell in length. Their founder is ſaid to have been accompanied eleven years by our Saviour, bearing his croſs viſibly. The other apparitions and revelations they aſcribe to him are of the ſame importance. *Fabric.* Lux. Evangel. c. 49. p. 780.

BETLE, in botany, a plant of the ſcandent kind, much celebrated in the Eaſt Indies. The leaves are the part in uſe, and are eſteemed beſt when full-grown, and of a yelloviſh colour. In the Molucca iſlands, the *betle* bears a kind of fruit wreathed like a lizard's tail; and this is eaten by the inhabitants, and is of a very agreeable taſte. The natives plant it as we do vines, and place props and ſupports for it to run and climb upon; and it is a common practice to plant it againſt the tree which bears the areca-nut. It grows naturally wild on all the ſea-coaſts of the Eaſt Indies; but is not found in the inland places, unleſs it has been planted there. Some authors have confounded the *betle* with the *malabathrum*, but they are extremely different, the malabathrum being the leaf of a tall and large tree. *Garcias*, Hiſt. Ind.

Betle is chewed by all the people of the Eaſt Indies, as tobacco is by many in Europe; but it is not uſed alone, but mixed with calcined ſhells, lime, the Indian-nut, and other cheap ingredients, by the meaner ſort, and by the rich with camphire, aloes-wood, musk, and ambergreaſe. Thus prepared, it is of an agreeable taſte, and gives a ſweetneſs to the breath. *Bont.* Med. Ind.

In many places they chew the areca nut, either alone or mixt with the *betle* leaf and lime, and the leaves of this plant are ſometimes chewed alone; but they are too ſharp, and uſually injure the teeth, and it is not uncommon to find men of twenty-five wholly toothleſs in this part of the world, merely from their having chewed this plant to an exceſſive degree. The prepared *betle* is a very common preſent among the poorer ſort; and, on taking leave of a friend, it is always the cuſtom to make him a preſent of a purſe of the leaves prepared for uſe. When the poorer ſort are to appear before the rich, they always chew a large quantity of *betle*, to give them a ſweet breath; and the women, on certain occaſions, never fail to take largely of it as a provocative. On all viſits, the company is regaled with prepared *betle*. The principal time of uſing it is after dinner, at which time, they ſay, it prevents ſickneſs of the ſtomach; and they never abſtain from it, except on the ſolemn occaſions of the funerals of their relations, and their days of faſting.

Moderately uſed, it ſtrengthens the gums, corroborates the heart and ſtomach, diſcuſſes flatulencies, and purges both the ſtomach and brain. If chewed after breakfaſt, it makes the breath ſweet for the whole day. The Portugueſe women are as fond of the *betle* as the Indians themſelves, and cannot live a day without it. *Ray*, Hiſt. Plant.

BETONY, *betonica*, in botany, the name of a genus of plants; the characters of which are theſe: the flower conſiſts of one leaf, and is of the labiated kind: the upper lip is erect, imbricated, and bifid; and the lower is divided into three ſegments, the middle one being larger than the reſt, and bifid: the piſtil ariſes from the cup, and is fixed in the manner of a nail to the hinder part of the flower: this is ſurrounded by four embryos, which afterwards become as many ſeeds, of an oblong form, to which the flower-cup ſerves as a capſule. The flowers of *betony* uſually grow verticillately in ſhort ſpikes on the tops of the ſtalks.

The ſpecies of *betony*, enumerated by Mr. Tournefort, are theſe:

1. The common purple flower'd *betony*. 2. The beautiful red-flower'd *betony*. 3. The white-flower'd *betony*. 4. The great Daniſh *betony*. 5. The ſmall mountain *betony* of Helvetia. 6. The yellow-flower'd, great, broad-leav'd, hairy, alpine *betony*. 7. The annual field *betony*, with yelloviſh white flowers,

flowers, call'd by many the ſmooth field *ſideritis*; and, 8. The pale, yellow-flower'd ſea-*betony*, call'd alſo by many a ſpecies of *ſideritis*.

Pliny tells us, that *betonica* was only the name given by the Gauls to the plant call'd in Italy *ſerrata*; which, by all deſcriptions left us of it, appears to have been the ſame with our *ſerratula*, or ſaw-wort, having deeply ſinuated leaves indented about the edges. Some authors have indeed attributed to it leaves like thoſe of the dock; but this ariſes from the ſtrange error of confounding it with the *britannica* of the antients, which was no other than our great water-dock. The commentator on the ſynonymous words of Dioſcorides has given *betonica* and *britannica*, as meaning the ſame plant, tho' their whole deſcription is different in that author, and their virtues wholly different, and nothing at all alike in them but the ſound of their names. Dioſcorides ſays, that the *betonica*, or *ceſtrum*, as he calls it, has leaves ſinuated and notch'd, and that the *britannica* has leaves like the great docks; yet authors have contriv'd ſince to apply theſe two characters to the ſame plant, and Neophytus has made a long Greek deſcription for his *bętonice*, containing all that this author has ſaid of this plant, and all that ſeveral others have ſaid, either of the *britannica* or *betonica*; for he ſets out with the error of ſuppoſing them the ſame, and has on the whole given an account more unintelligible, by reaſon of its length, than the generality of the accounts we have from the Greeks are, by reaſon of their ſhortneſs.

Betony is a medicinal plant, eſteemed a good cephalic, vulnerary, cardiac, diuretic, and dryer. Some alſo make *betony* a good ſplenetic, hepatic, thoracic, uterine, and what not.

The Italians, when they would praiſe any body, ſay, *tu hai piu di virtu che non ha betonica*; that is, you have more virtues than *betony*; and proverbially deſire, *vende la tunica & compra la betonica*; that is, ſell your coat and buy *betony*. *Ray*, Syn. Stirp Brit p. 127. *Mathiol.* ad *Dioſcor.* l. 4. c. 1.

Ant. Muſa, phyſician of the emperor Auguſtus, wrote a treatiſe expreſs, *de betonica*, ſtill extant [a]. Wherein he commends it greatly as a vulnerary, eſpecially in wounds of the head, and enumerates its uſes in the cure of no leſs than forty-ſeven diſeaſes [b].—[[a] It was printed with other writers de re medica, at Baſil, 1528. and again, with Apulæi Herbarium, Tigur. 1537. [b] Vid. *Fabric.* Bibl. Lat. T. 2. l. 3. c. 2. p. 25. *Burggr.* Lex Med. T. 1. p. 1554. ſeq.]

Betony is chiefly adminiſtred in the way of decoction, ſometimes of ſmoak, ſometimes as an ingredient of a cerat or plaiſter, hence called *emplaſtrum de betonica*. Some alſo give its juice boiled to the conſiſtence of honey, mixed with a little balſam of Peru, as a pectoral healer. *Quinc.* Diſpenſ. P. 2. §. 1. n. 1. p. 70.

Foreign diſpenſaries alſo give the preparations of a *betony* water, a ſyrup, conſerve, and extract of *betony*. Vid. *Junck.* Conſp. Therap. tab. 6. p. 238. and *Burrg.* p. 1553.

BETONICA *Pauli*, in botany, a name given by many to ſome of the ſpecies of the *veronica*, or ſpeedwell. See the article VERONICA.

BETROTHMENT, a mutual promiſe or compact between two parties, for a future marriage. Vid. *Walc.* Introd. Phil. l. 2. c. 6. §. 90.

The word imports as much as giving one's troth; that is, true faith, or promiſe. Vid. *Skin.* Etym. in voc.

Betrothment amounts to the ſame with what is called by civilians and canoniſts *ſponſalia*, or *eſpouſals*; ſometimes *deſponſation*; and, by the French, *fiançailles*. *Trev.* Dict. Univ. T. 2. p. 1780.

Betrothment is either ſolemn, made in the face of the church, or private, made before witneſſes out of the church. Trev. Dict. Univ. ubi ſupr.

To betroth by giving arrhæ, or earneſt, is called in middle-age writers *ſubbarrare*. *Du Cange*, T. 4. p. 982.

The nuns of the annunciada, hold an annual feaſt, in honour of the deſponſation, or *betrothment* of the holy virgin to Joſeph. Trev. Dict. Univ. T. 2. p. 704.

BETULA, the *birch-tree*, in botany. See BIRCH.

BEVEL (*Cycl.*)—The *bevel* anſwers, in good meaſure, to the French *fauſſe equerre*, *ſauterelle*, and *angle* [a]. Divers forms of which are deſcribed by Bion [b].—[[a] Vid. *Ozan.* Dict. Math. p. 29. [b] Trait. des Inſtrum. Mathemat. l. 4. c. 3. *Wolf.* Lex. Math. p. 620.]

Bricklayers have alſo a *bevel*, by which they cut the under ſides of the bricks of arches ſtreight or circular, to ſuch oblique angles as the arches require, and alſo for other uſes. *Moxon.* Mechan. Exerc. p. 245.

Graduated BEVEL is that which has about the center of one of its arms a ſemicircle graven, and divided into 180 degrees, whoſe diameter ſtands ſquare with the ſides of the ſame arm; ſo that the end of the other arm, being divided at right angles, almoſt to the centre, ſhews by its motion the number of degrees contained in the angle to be meaſured. *Davil.* Archit. p. 849.

This is alſo called *recipiangle*, and *pantametre*.

BEVERAGE, in a general ſenſe, ſignifies a drink. Hence nectar is ſaid to be the *beverage* of the Gods. In writers of the middle age, *beverage*, *beveragium*, or *biberagium*, denotes money given to an artificer, or other perſon, to drink, over and above his hire or wages. *Du Cange*, T. 1. p. 545.

BEUPLEURUM, in botany. See HARE'S *ears*.

BEWITS, in falconry, denote pieces of leather, to which a hawk's bells are faſtened, and buttoned to his legs. Ruſh. Dict. in voc.

BEXUQUILLO, in the materia medica, a name given to the white ipecacuanha, which the Spaniards bring from Peru, as the Portugueſe do the brown from Braſil.

BEZANTLER, among ſportſmen, that branch of a deer's horn next below the brow antler. Skin. Etym. in voc.

BEZOAR (*Cycl.*)—This is the ſame with what is otherwiſe called *bezaar*, or *bezehard*; by the Perſians *pazar*; by the Indians *bezar*, or *bazar*; by the Arabs *Hager*; by the Jews *belzuar*. *Salmuth.* ad Pancirol. P. 2. tit 3 p. 116. ſeq.

The firſt mention made of *bezoar* is in Avenzour, an Arab phyſician of the 10th century, who gives a very romantic account of its origin. The firſt genuine account we owe to Garcias ab Horto, phyſician to the Portugueſe vice-roy of the Indies [a]. Kempfer has given a further deſcription, with ſome more particulars [b].—[[a] *Garc. ab Hort.* de Aromat. & Simpl. Medic. ap. Indos, l. 1. [b] *Kempf.* Amœn. Exot. Faſc. 2. Rel. 9. §. 8. p. 398. ſeq.]

Nic. de Monardis, Caſp. Bauhin, and M. Geoffroy, have pieces expreſs on *bezoard*. Avenzour deſcribes it, as generated of the tears, or gum of the eyes of ſtags; who, after eating ſerpents, uſed to run into the water up to the noſe, where they ſtood till their eyes began to ooze a humour, which, collecting under the eye-lids, gradually thickned and coagulated, till being grown hard, it was thrown off by the animal in rubbing frequently. *Friend*, Hiſt. Phyſ. P. 2. p. 106. ſeq. *Lang.* Epiſt. Medic. 24. l. 2. *Pancirol.* de Reb. Memor. P. 2. tit. 3. *Salmuth* ad loc.

Other opinions no leſs fabulous obtain'd till the time of Garcias ab Horto, as that *bezoar* was found in the head of an animal, in the gall-bladder of a porcupine, *&c.* *Burgr.* Lex. Med. p. 1563. b.

There is generally, if not always, ſome foreign body in the center of the *bezoar*, around which, as a nucleus, the bezoartic coats, or ſtrata, are ranged [a]; as ſtraws, hair, marcaſites, pebbles, talc, ſand, *&c.* and ſtones like cherry-ſtones; but the common nucleus is the pod of a fruit much like that of the *Acacia vera Ægyptiaca*; though at firſt ſight it reſembles a caſſia, or tamarind ſtone. This fruit being taken into the ſtomach, cauſes, by its aſtringency, a condenſation of the liquors it there meets with, from which in time ariſes the *Bezoard* [b].—[[a] Mem. Acad. Scienc. 1712. p. 263, ſeq. [b] Phil. Tranſ. N° 282. p. 1284. Mem. Acad. Scienc. 1710. p. 264. ſeq.]

The ſtones produced by each animal may be felt and numbred on the out-ſide, by which in trade the price of the animal is regulated.

Pomet pretends, that one animal never produces above one ſtone, which is incloſed in a tunic, appropriated to that uſe: all which has been found a miſtake. *Geoffr.* ap. Mem. Acad. 1710. p. 266. ſeq.

Dr. Slare endeavoured to prove both the oriental and occidental *bezoards* factitious, which M. Geoffroy has refuted, by the conſideration of a foreign body being conſtantly found in the middle. Counterfeits would hardly tie themſelves down to ſuch an obſervance. We are, however, told of artificial *bezoars* in the iſle of Ormus, made ſo dexterouſly, as to be indiſcernable from the natural, unleſs they be firſt broken [a]. *Bezoar* is ſaid to be adulterated among us with powders, roſin, and mucilage [b]. Le Mort deſcribes a factitious *bezoar*, reſembling the native one, and ſhews how it may be prepared, from the magiſtery of alexipharmic herbs [c]. [[a] *Burgr.* Lex. Med. T. 1. p. 1569. [b] *Hought.* Coll. T. 2. p. 68. [c] In Chym. Med. Phyſ. c. 15. p. 198. *Caſt.* Lex. Med. p. 103. b.]

BEZOAR, in a more extenſive ſenſe, includes all animal ſubſtances form'd *ſtratum ſuper ſtratum*, in the ſtomachs or inteſtines of animals. *Geoffr.* in Mem. Acad. Scienc. 1712. p. 268. In which ſenſe pearls, the ſtones found in caſtoreum, *&c.* belong to the claſs of *bezoars*. *Fonten.* Hiſt. Acad. Scienc. 1717. p. 32.

Human *bezoars* are ſtony ſubſtances found in the inteſtines of ſeveral perſons, form'd from the ſtones of plumbs, or other fruits, retained in the cæcum, or other guts, and growing coated over; of which we have an inſtance given by Dr. Cole. Phil. Tranſ. N° 235. p. 30.

To this kind alſo belongs the *hippolithos*, or *bezoar equinum*, a ſort of ſtone ſometimes voided by theſe creatures by ſiege. *Plott*, Nat. Hiſt. Stafford. c. 7. §. 72. Phil. Tranſ. N° 250. p. 99.

To this alſo belongs *bezoar Germanicum*, or German *bezoar*, a kind of ſtony ſubſtance found in mountain deer, or goats, eſpecially on the Alps. *Caſt.* Lex. p. 103. b.

Though in ſtrictneſs this is not a ſtone, but rather a ball of hair or herbs, or perhaps roots compacted in the ſtomach of the animal, and call'd more properly by late writers *Ægagropilæ*, or *Ægagropilæ*. See ÆGAGROPILA.

Bezoar is alſo applied to other ſtony ſubſtances found in divers animals, diſpoſed *ſtratum ſuper ſtratum*. Mem. Acad. Scienc. an. 1710. p. 315. ſeq.

Such are the *cayman bezoar*; hog and deer *bezoar*, brought from Sumatra; the monkey *bezoar*; cow *bezoar*, and elephant *bezoar*,

zoar, from Zanguabar. Vid. Phil. Tranſ. N° 23. p. 432 Item, N° 250, p. 99. Item, p. N° 305, p. 2201. Atlas Marin. p. 218. See alſo the Cyclopœdia.

The cow *bezoar*, in the Chineſe cabinet, in the repoſitory of the royal ſociety, though compoſed of laminæ or coats, is apparently factitious, by reaſon it melts, when applied to the candle. *Sloan*, in Phil. Tranſ. N° 250, p. 70.

The forms in which *bezoar* appears, when genuine, are very different; the moſt frequent figure is round, but many are oblong; ſome of the ſhape of a kidney, and ſome perfectly irregular; they are of a greeniſh, or olive colour, and are ſpotted with pale, or whitiſh ſpots in different places; when try'd by burning, they are found to be eaſily inflammable, and to contain a volatile ſalt, and an oil; and the reſiduum much reſembles the *caput mortuum* left in the retort, after the diſtillation of different animal ſubſtances; a gentle heat will often make the ſeveral beds or *laminæ*, of which a *bezoar* is compos'd, ſeparate from one another. If *bezoar* ſtones are put to infuſe in ſpirit of wine, or in common water, both liquors will thoroughly penetrate their ſubſtance, but neither will receive any change from them. The matters, which ſerve as a nucleus to the *bezoar* ſtone, are very different in different animals, and often in the ſame individual, according to the indigeſtible matter, which it happens to have in its ſtomach, at the time of the ſtone's beginning to form itſelf. Sometimes a ſtraw, ſometimes a few hairs, ſometimes a pebble, and not unfrequently a piece of marcaſite is found in the center of the concretion. Small particles of matter of a ſtony kind, cemented together into a ſort of ſtone, are ſometimes found, as alſo pieces of talc, fragments of wood, and the ſtones of fruit, or a part only of ſuch a ſtone; and, in ſome, a ſeed of caſſia, or of ſome plant of the phaſeolus kind, has been found, its outer ſkin ſhrunk up and wrinkled, with manifeſt appearance of its having been before inflated and diſtended, and cover'd nicely over with an extreamly thin coat, of the ſubſtance of the *bezoar*, conforming itſelf to all its irregularities. In ſome of the ſtones alſo found on this nucleus, the outer membrane of the bean having periſh'd, and the bean ſhrunk in drying, there remains a vacuity between it, and the next coat of the *bezoar*; ſo that it rattles within it, when ſhaken in the manner of an ætites.

The formation of the *bezoar* ſeems to be this, that the undigeſted matter, be it what it will, remaining in the ſtomach of the animal, irritates the glands, and makes them diſcharge their contents, which, mixing with the juices of the ſtomach, impregnated with the virtues of the aromatick plant on which the animal feeds; theſe may together collect, and harden by degrees about this ſubſtance. In fine, their coats ſurrounding one another; the conſequence of which muſt be, that the whole *bezoar* muſt be of the ſhape of the accidental matter, on which it was form'd. If it be a ſtraw, the *bezoar* will be long; if a ſmall pebble, the *bezoar* will exactly be of its ſhape, however irregular that be; and, if a kidney-bean, there will be ſeen on the *bezoar* the ſeveral lineaments of that fruit. Mem. Acad. Par. 1711.

The true oriental *bezoars* were, about eighty years ago, ſo common in Cononor, that thoſe of the bigneſs of a pigeon's egg were frequently brought to market at ſix or ſeven reals a piece, and thoſe of the bigneſs of a hen's egg at twelve reals.

The method of trying the genuineneſs of the *bezoar* by water, was firſt brought into uſe in that place: thoſe who bought them, uſed to weigh them carefully, and after that to put them into water, letting them lie in it all night. If they, in the weighing the next morning, were found to have retained the ſame weight, they were judged to be good; if the weight were much altered, otherwiſe.

BEZOARD is alſo applied to a kind of foſſil figured ſtone found in divers countries, formed like the animal *bezoard* of ſeveral coats, or ſtrata, ranged round ſome extraneous body, which forms a nucleus, and ſuppoſed to have the ſame virtues. Mem. Acad. Scienc. 1710, p. 316.

It is found in Italy, eſpecially Sicily; and in France, eſpecially Languedoc. We have alſo inſtances of it in England. *Woodw.* Nat. Hiſt. Engl. Foſſ. T. 2. p. 9.

The foſſil, or mineral *bezoar*, is a cruſtated ferugenous body.

The Sicilian *bezoar* [a], or *bezoar minerale Siculum*, is by ſome, with Boccone [b], taken for a ſpecies of geodes, which Dr. Woodward [c] diſtinguiſhes it from, as well as from the enhydros and ætites, in that it has properly no cavity with matter in it, as thoſe bodies have.—[a Phil. Tranſ. N° 311, p. 2406. b *Boccon.* Muſeo di Phyſ. obſ. 8. Phil. Tranſ. N° 249, p. 54. c *Woodw.* ub. ſupr. T. 1.. p 234.]

Boccone mentions nuclei of different matters, as flints, gravel, wood, metal, coal, &c. M. Geoffrey even found rock chryſtal in the middle of a mineral of this ſpecies, call'd *priapolites*.

BEZOAR *mineral*, among chemiſts, appears to have been the invention of Baſil Valentine, tho' later chemiſts have given other proceſſes for preparing it [a]. It is much adulterated, by adding to it half, or two thirds the quantity of ſal ammoniac [b].—[a Vid. Pharmac. Coll. Reg. Lond. p. 11. *Barchuyſ.* Pharm. Synopſ. p. 39. *Teichm.* Inſtit. Chem. P. 2. c. 10. p. 150. *Boyl.* Phil. Work. Abr. T. 1. p. 384. b *Alleyn*, Diſpenſ. p. 366.]

Sylvius firſt ventured to introduce it into medicine, and frequently gave it with very bad ſucceſs: Yet many are to this day perſuaded with him, that it is poſſeſſed of wonderful antidotal virtues, as being obtained innocent and harmleſs from that violent poiſon, butter of antimony; whence they conclude, it muſt needs have a magnetical power of attracting to itſelf, like the *bezoar* ſtone, all the poiſon in the body.

Boerhaave, however, conteſts all its virtues, chiefly from the manner of preparing it: The acid of the antimony, he argues, being driven away by the violence of the fire, nothing remains but the ſluggiſh and calcined metalline part, which, tho' dignified with the name of *mineral bezoar*, is deſtitute of all medicinal virtues, and only ſerves to oppreſs the body by its gravity, being perfectly indigeſtible therein. *Boerhaave*, Meth. Chym. P. 3. p. 318.

From the *bezoar mineral*, mixed with other metals various ways, with or without detonation, ariſe other compound *bezoardics*, as the *bezoardicum Solare*, *Lunale*, *Martiale*, *Joviale*. Vid. the Cyclopædia, and *Stahl.* Phil. Princ. Chem. §. 2. p. 353, ſeq. See BEZOARTICUM.

BEZOARDIC, or BEZOARTIC, ſomething that belongs to, or partakes of the nature of the true *bezoar*. See BEZOAR.

In this ſenſe we ſay, a *bezoardic* animal, or *bezoardic* ſtone. Boccone deſcribes a *bezoardic* earth, or ſort of *terra lemnia*, to which he gives that denomination, and aſcribes conſiderable virtues. Phil. Tranſ. N° 249. p. 55.

BEZOARDIC is more peculiarly applied to certain medicinal powders, ſtones, &c. wherein *bezoar* is an ingredient.

To the claſs of *bezoardic powders* belong the Gaſcoyn's, and counteſs of Kent's powders, and others formed thereof. Among *bezoardic* ſtones is found the *lapis de Goa*, or Goa ſtone. We alſo meet with *bezoardic* tinctures given in fevers, &c. *Junck.* Conſp. Med. p. 270.

BEZOARDIC is more generally applied to all medicines endowed with a powerful alexiterial virtue, uſed for expelling poiſons, and other malignities.

In this ſenſe, *bezoardics* are either ſimple or compound, and fetched either from the vegetable or animal kingdoms.

The chief in the vegetable kind is the root of anthora, or contrayerva; and in the animal kingdom hartſhorn, or, according to ſome, the unicorn's horn.

Among the compound kind, the *tinctura bezoardica michaelis* is in much repute, at leaſt abroad. Salt of hartſhorn is by ſome called the *northern bezoar*, *bezoar ſeptentrionalis*. Willius has a poem on the uſe and abuſe of the *northern bezoar*. *Barthol.* Act. Med. T. 4. p. 200.

The chemiſts have alſo their mineral *bezoardics* of divers kinds, as ſolar, lunar, jovial, martial, and the like, to which great virtues are aſcribed; though concerning their uſe, and whether they deſerve to be ranked with the native, vegetable, or animal *bezoardics*, divers ſcruples have been raiſed. *Caſt.* Lex. Med. p. 103. See BEZOAR.

Mineral bezoardics are uſually prepared of the butter of antimony, brought into a fluid ſtate by repeated diſtillations; this being gradually and ſlowly mixed with ſpirit of nitre, ſo as to avoid that intenſe heat and ebullition, which would enſue upon putting them haſtily together; and they are thus both driven over in a retort, by a moderate degree of heat in ſand, till nothing but a dry powder remains behind, and ſpirit of nitre is again poured upon and abſtracted from the powder, and this at laſt is edulcorated; it becomes a diaphoretic, under the name of *bezoar mineral*. *Stahl.* philoſoph. Princ. Chemiſt. P. 2. §. 4. p. 351. See BEZOARTICUM.

BEZOARTICA *terra*, a name uſed by ſome authors for a medicinal earth dug in the pope's territories, and more frequently called *terra noceriana*. *Boccone*, Muſ. de Fiſic. p. 61. See NOCERIANA.

BEZOARTICUM *lunare*, *bezoard* of ſilver, a name given by the chymiſts to a preparation of ſilver. It is made from ſilver diſſolved in ſpirit of nitre, and butter of antimony. It is eſteemed a ſpecifick in epilepſies, convulſions, and apoplexies; and is ſaid to be anodyne and ſudorific, and of great uſe againſt the eryſipilas. The doſe is from ſix to ten grains.

BEZOARTICUM *ſaturni*, *bezoar* of lead, the name given by the chymiſts to a preparation of lead; it is made by extracting a tincture from glaſs of lead, prepared from red lead and flints, and mixing this with unrectified butter of antimony, and fixing it by means of ſpirit of nitre. It is eſteemed an antihyſterick, and is ſaid to be good in diſorders of the ſpleen; the doſe is ſix grains.

BEZOARTICUM *ſolare*, a name given by the chymiſts to a preparation of gold. It is to be made by diſſolving plates of gold in the *ſpiritus nitri bezoarticus*, and fixing it by pouring it on butter of antimony. It is ſaid to be a great ſudorifick, and of great uſe in the pox, the plague, the gout, the dropſy, fevers, and obſtructions of the ſpleen. Its doſe is from three to eight grains.

BEZOARTICUM *veneris*, *bezoar* of copper, a name given by the chymiſts to a preparation of copper, made by extracting a tincture from the filings of copper with rectified butter of antimony, and fixing it according to art with ſpirit of nitre. It is given by ſome in leproſies, and diſeaſes of the head and brain. Its doſe is ſix grains. Externally it is of uſe in old ulcers, fiſtulas, and impetigoes. *Bates*'s Diſpenſ.

BEZOLA, in zoology, the name of a truttaceous fiſh of the albula kind, and called by Geſner the *albula cærulea*. It reſembles the herring in ſhape, and is of a duſky blueiſh colour.

Its belly is broad and prominent; its head ſmall, and its noſe ſharp. It feeds principally on the ſpawn of other fiſhes, and is a very delicate and fine taſted fiſh. *Rondelet*, de Piſc. See the article ALBULA.

The *bezola* is the ſame with that ſpecies of *coregonius* diſtinguiſhed by having the upper jaw longeſt and flat, and fourteen rays on the back-fin. It does not eſſentially differ from the *lavaretus*. See LAVARETUS.

BIA, a name given by the Siameſe to a ſort of little white ſhells brought from the Maldivee iſlands, and uſed throughout moſt part of the Eaſt Indies for ſmall money. *Savar.* Dict. Comm. T. 1. p. 331, ſeq.

Theſe are otherwiſe called *coris*.

BIÆUM, βιαιον, in rhetoric, denotes a kind of counter-argument, whereby ſomething alledged for the adverſary is retorted againſt him, and made to conclude a different way; for inſtance, *occidiſti, quia adſtitiſti interfecto.*—βιαιον, *Immo quia adſtiti interfecto, non occidi; nam ſi id eſſet, in fugam me conjeciſſem.* You killed the perſon, becauſe you were found ſtanding by his body. *Biæum*, Rather I did not kill him becauſe I was found ſtanding by his body; ſince, in the other caſe, I ſhould have fled away. *Heder. Schul.* Lex. p. 549.

BIÆUM, in the Grecian laws, was an action brought againſt thoſe who raviſhed women, or uſed violence to any man's perſon. *Potter*, Archæol. l. 1. c. 24. p. 126. *Suid.* in voc.

BIÆUM alſo denotes a kind of ſaline or ſea-wine, uſed by the antient Greeks in various diſorders. It was made of grapes gathered a little before ripe, and dried in the ſun; then preſſed, the juice put up in caſks, and mixed with a large proportion of ſea-water; though Dioſcorides ſeems to deſcribe it as made of grapes ſteeped in ſea-water, and then preſſed. *Gorr.* Def. Med. p 75. in voc.

BIAFORA, in the cuſtoms of the middle age, a form of cry, or alarm to arms; on the hearing whereof, the inhabitants of towns or villages were to iſſue forth, and attend their prince.

The word ſeems originally from Gaſcony; and the Italians even now, on a ſudden inſurrection of the people, commonly cry, *Via-fora*, by an uſual change of the letter B into V. Vid. *Aquin.* Lex. Milit. T. 1. p. 128.

BIARCHUS, βιαρχος, an officer in the court of the emperors of Conſtantinople, intruſted with the care and inſpection of the proviſions of the ſoldiery. *Aquin.* Lex. Milit. T. 1. p. 128. *Briſſ.* de Verb. Signif. p. 79. *Suic.* Theſ. T. 1. p. 685. *Du Cange*, Gloſſ. Græc T. 1. p. 202. It. in Gloſſ. Lat. T. 1. p. 606. *Fab.* Theſ. p. 350. *Schoettg.* Lex. Ant. p. 218.

The word is formed from βιος, *annona*, victuals, and αρχη, chief or head.

The *biarchus* was the ſame with what the Latins call *præfectus annonæ*. His function was called *biarchia*; by the Latins, *præfectura rei cibariæ*. He belonged to the *ſcholia agentium in rebus*. See AGENTES.

BIARUM, in botany, a name by which the people of Egypt at this time call the root of the *nilufar*, or *faba Ægyptia*, growing on the Nile. See NILUFAR.

BIAS, or BIASS, the tendency or propenſity of a thing towards one ſide more than the other; particularly the deviation of a body, or a plain, from its rectilinear courſe, or its level. *Davil.* p. 422. in voc. *biais*. See INCLINATION, *Cycl.*

The word is French, *biais*, which ſignifies the ſame. Menage deduces this further from the Italian *biaco*; and that again from the Latin *obliquus*. *Menage*, Orig. Franc. p. 98.

BIAS *of a bowl* is a piece of lead put into one ſide, to load and make it incline towards that ſide.

BIBIO, the *Wine-fly*, in the hiſtory of inſects, a very ſmall fly, found frequently among empty wine casks. It is produced from a ſmall, oblong, red worm, very common in the ſediments of wine It is ſomething ſurprizing to find the worms of this fly in the ſediments of wine while yet in the hogſhead, into which there ſeems no acceſs for any living creature. The antients, from this obſervation, have ſuppoſed this littly fly, tho' it has no trunk or other viſible inſtrument for boring, yet capable of piercing through the ſides of a cask, though an inch thick.

BIBITORIUS *muſculus*, in anatomy, a name given by Molinet to one of the *quatuor recti muſculi oculi*; the *adductor* of authors. See ADDUCTOR.

It ſeems to draw the eye inwards, or towards the noſe; and takes the denomination *bibitorius* from the Latin *bibere*, to drink, by reaſon of its action in viewing the liquor in the glaſs while a man drinks. *Heiſt.* Comp. Anat. §. 316. p. 258. *Veſling.* Synt. Anat. c. 15. p. 237. *Drake*, Anthrop. T. 2. p. 323.

BIBLE (*Cycl.*)—The word *bible* comes from the Greek βιβλια, or βιβλιον, uſed to denote any book; but, by way of eminence, applied to the book of ſcripture. Βιβλιον again comes from βιβλος, the Egyptian reed, from which the antient paper was procured. Vid. *Voſſ.* Etym. p. 70. See BIBLUS.

The *bible* is known by various other appellations, as the *ſacred books*, the *inſpired writings*, *holy writ*, *ſacred text*, &c. By the Jews it is called *mikra*, that is, lecture, or reading; by the Chriſtians uſually *ſcripture*, q. d. *writing*; ſometimes alſo the *book of God*, the *canon*, *rule of faith*, &c. See other denominations in *Carpzov.* Introd. ad Libr. Bibl. c. 1. §. 1. p. 2. *Suic.* Theſ. Eccleſ. T. 1. p. 687. voc. βιβλιον.

The liſt of the books contained in the *bible* is called the *canon* of ſcripture. See CANON, *Cycl.*

The books of the *bible* are ſaid to be *canonical*, by way of contradiſtinction from others called *deutero-canonical*, *apocryphal*, *pſeudo-apocryphal*, &c. Vid. *Wolf.* Bibl. Heb. T. 2. ſect. 3. ſubſ. 2. §. 12 p. 210. See CANONICAL, &c.

The books of the Old Teſtament appear to have been written originally in Hebrew, in the character now called the Samaritan; from which it was tranſlated by Eſdras, after the Babyloniſh captivity, into the Chaldee character, which was then better underſtood by the Jews than their own. By degrees, the Jews adopting Chaldee words and phraſes, altered their language, and made a kind of jargon or mixture of both, which was the vulgar Hebrew in our Saviour's time. By this means, the antient, or *bible* Hebrew, became in great meaſure forgot; and though the ſcripture continued ſtill to be read in the ſynagogues in this language, they were forced to explain it in Chaldee; which ſeems to have given occaſion to the Chaldee paraphraſes ſtill extant. *Du Pin*, Diſſert. Prelim. §. 3. p. 57.

The preſent Samaritan and Jewiſh copies of the *bible* differ in many reſpects, chiefly in the chronology of the patriarchs, where the Samaritan comes nearer to the ſeptuagint. Other variations may be reſolved into the errors of tranſcribers, interpolations for explication's ſake, and, perhaps, the deſigned corruption of the Samaritan, to give countenance to the ſect. *Prideaux*, Connect. P. 1. l. 5. p. 601.

The original language of the Old Teſtament was doubtleſs the old Hebrew, at leaſt the greater part; for all the books do not appear to have been written in the ſame. Some chapters of Eſdras and Daniel are judged to have been compoſed in Chaldaic; and other chapters of this latter writer, as alſo the apocryphal books of Maccabees, of Wiſdom, &c. in Greek; Tobit and Eccleſiaſtes either in Greek or Syriac. *Du Pin.* Diſſert. Prelim. §. 3. p. 61. *Calmet*, Dict. Bibl. T. 1. p. 293.

For the New Teſtament, it was written in Greek, except St. Matthew, which ſeems to have been compoſed in the later Hebrew, that is, the Syriac. Some will have St. Mark to have been written in Latin; and the epiſtle to the Hebrews in Hebrew. *Calmet*, lib. cit. p. 294.

A warm diſpute has been on foot for many ages, whether the original character, in which the *bible* was firſt penned by Moſes and the inſpired writers, were the Samaritan, or the modern Hebrew? Among the antients, Origen, St. Jerom, and the antient rabbins; and among the moderns Joſ. Scaliger, Simon, Du Pin, Montfaucon, and others, contend for the former: the modern rabbins, followed by Buxtorf, and ſome others, for the latter. Vid. *Montfauc.* Palæogr. Græc. l. 2. c. 1. p. 119, ſeq.

For the authors of the *bible*, the names of moſt of them are prefixed to the books ſuppoſed to be written by them; as the pentateuch by Moſes, Joſhua by the general of that name, &c. though many objections have been made to divers of them.

Aben Ezra, followed by Hobbs, Pereyra, Spinoſa, and ſome others, deny the five firſt books to have been written by Moſes [a]. F. Simon [b] in particular aſſerts, that the books, as we now have them, are not the originals written by the inſpired pen-men, but abridgments of them made in after-times by a kind of college or order of public actuaries or ſcribes appointed for that end.—[[a] *Du Pin.* Diſſ. Prelim. ſur les Auteurs des Livres de la Bibl. §. 1. prefixed to his Nouv. Bibl. des Aut. Eccleſ. T. 1. p. 21, ſeq. [b] *Simon*, Hiſt. Crit. du Vieux Teſtam. l. 1. c. 1. p. 3. It. c. 2. p. 17. It. c. 7. p. 50. refuted by *Du Pin*, lib. cit. §. 1. p. 28, ſeq.]

In the time of Joſiah, through the impiety of the two preceding reigns of Manaſſeh and Ammon, the book of the law was ſo totally loſt, that, beſides a copy of it found by Hilkiah in the temple, none other appears to have been known; at leaſt, the ſurprize which Hilkiah ſhewed at the finding it, and the grief which Joſiah expreſſed at the hearing it read, ſhew, that neither of them had ever ſeen it before. 2 King. c. 22. ver. 22. 2 Chron. c. 34.

Copies were now made and diſperſed; yet, within a few years after, the authentic copy, preſerved in the temple, was burnt, with the temple, by the Babylonians. It was reſtored again after the return of the Jews from the Babylonian captivity by Nehemiah, or rather by Ezra; ſome ſay by divine inſpiration, others, with more probability, by collecting the fragments and copies which were ſtill remaining, comparing them together, and, out of them all, framing one compleat copy, where the readings were adjuſted, and the ſeveral books ranged in their proper order. *Prideaux*, Connect. P. 1. l. 5. p. 473—477. *Du Pin.* Diſſ. Prelim. §. 3. p. 61. not.

Irenæus [c], Tertullian [d], Clemens Alexandrinus [e], Baſil [f], Auguſtin [g], Jerom [h], Chryſoſtom [i], and others, hold, that the *bible* was totally loſt and deſtroyed during the captivity in Babylon, and reſtored by immediate revelation; but the only foundation for this opinion ſeems to have been the fabulous relation in the apocryphal book of Eſdras [k], where it is alledged that God inſpired Eſdras for the new work by a draught of a miraculous liquor; after taking of which he retired into a ſolitude, and, in the compaſs of forty days, diſgorged every tittle of the *bible* juſt as it had been before [l]. Some think it more probable, that all the copies had not been deſtroyed; at leaſt, Daniel appears to have had one in the Babyloniſh captivity; for he ſeveral times quotes it, and makes mention of the pro-

phecies

phecies of Jeremiah [m].—[[c] *Iren.* adv. Hæref. l. 3. c. 25. [d] *Tertull.* de Habit. Mulier. [e] *Clem. Alex.* ſtrom. 1. [f] *Baſil,* Epiſt. ad Chilon. 2. [g] *Hieron,* contr. Helvid. [h] *Auguſtin,* de Mirac. Sacr. Script. l. 2. [i] *Chryſoſt.* Homil. 8. in Epiſt. ad Hebr. [k] *Eſdr.* l. 2. c. 14. [l] *Gundling.* Hiſt. Philoſ. Moral. c. 7. p. 80. [m] *Prideaux,* lib. cit. p. 474.]

Ezra made additions in ſeveral parts of the book, where any thing appeared neceſſary for illuſtrating, connecting, or compleating the work; in which he is ſuppoſed to have been aſſiſted by the ſame ſpirit whereby they were firſt written. Among ſuch additions is to be reckoned the laſt chapter of Deuteronomy, wherein Moſes ſeems to give an account of his own death and burial, and of the ſucceſſion of Joſhua after him. To the ſame cauſe are to be attributed many other interpolations in the *bible*, which created difficulties and objections to the authenticity of the ſacred text, no ways to be ſolved without allowing them. *Prideaux*, lib. cit. p. 491.

He changed the old names of ſeveral places which were grown obſolete, and inſtead of them put their new names, by which they were then called, in the text. Thus it is that Abraham is ſaid to have purſued the kings who carried Lot away captive as far as *Dan*; whereas that place, in Moſes's time, was called *Laiſh*; the name *Dan* being unknown, till the Danites, long after the death of Moſes, poſſeſſed themſelves of it. Gen. c. 14. v. 14.

Laſtly, Ezra wrote out the whole in the Chaldee character, which was now alone in uſe among the Jews ſince the captivity, the old Hebrew being changed for it, which, ſince that time, has only been retained by the Samaritans, where it is uſed to this day.

Whether Ezra, in this review, added the *keri-cetib*, or various readings, and the vowel points, or whether they be the addition of later days, are queſtions which have been much agitated.

The books of the *bible* are divided by the Jews into three claſſes, *viz.* the law, the prophets, and the hagiographers; a diviſion which they are ſuppoſed to borrow from Ezra himſelf. Each book is ſubdivided into ſections, or *paraſches*; which ſome will have to have been as old as Moſes, though others, with more probability, aſcribe it to the ſame Ezra. Theſe were ſubdivided into verſes, *peſuchim*, marked in the Hebrew *bible* by two great points, called *ſoph paſuch*, at the end of each. For the diviſion of the *bible* into chapters, as we now have it, it is of much later date. *Prideaux*, Connect. P. 1. l. 5. T. 2. p. 479, ſeq.

Divers of the antient *bible*-books appear to be irrecoverably loſt, whether it be that the copies of them periſhed, or that Eſdras threw them out of his canon. Hence it is, that, in the books ſtill extant, we find divers citations of, and references to others, which are now no more; as the book of Jaſher [n], the book of the wars of the Lord [o], annals of the kings of Judah and Iſrael [p], part of Solomon's three thouſand proverbs, and his thouſand and five ſongs, beſides his books on plants, animals, fiſhes, inſects, &c [q]. To which may be added a book of Jeremiah, wherein he enjoined the captives who went to Babylon to take the ſacred fire and conceal it; alſo the precepts which that prophet gave the Jews to preſerve themſelves from idolatry [r], and his lamentations on the death of king Joſiah [s].—[[n] Cited Joſ. c. 10. v. 13. [o] Cited Numb. c. 21. v. 14. [p] Frequently cited in the books of Kings and Chronicles. [q] 1 King. c. 4. v. 32, ſeq. [r] 2 Maccab. c. 2. v. 1. [s] *Wolf.* Bibl. Hebr. T. 2. ſec. 4. §. 1. p. 211, ſeq. It. T. 4. ſec. 4. p. 47. *Calmet*, Dict. Bibl. T. 1. p. 292.]

The Jewiſh canon of ſcripture then was ſettled by Ezra; yet not ſo but that ſeveral variations have been ſince made in it: Malachi, for inſtance, could not be put in the *bible* by him, ſince that prophet is allowed to have liyed after Ezra; nor could Nehemiah be there, ſince mention is made in that book of Jaddua as high-prieſt, and of Darius Codomannus as king of Perſia, who were, at leaſt, an hundred years later than Ezra. It may be added, that, in the firſt book of Chronicles, the genealogy of the ſons of Zerubbabel is carried down for ſo many generations, as muſt neceſſarily bring it to the time of Alexander; and conſequently this book could not be in the canon in Ezra's days. It is probable the two books of Chronicles, Ezra, Nehemiah, Eſther, and Malachi, were adopted into the *bible* in the time of Simon the Juſt, the laſt of the men of the great ſynagogue. *Prideaux*, Connect. P. 1. l. 5. T. 2. p. 477, ſeq. It. l. 8. p. 816, ſeq.

The Jews, at firſt, were very reſerved in communicating their ſcriptures to ſtrangers [t]: deſpiſing and ſhunning the Gentiles, they would not diſcloſe to them any of the treaſures concealed in the *bible*. We may add, that the people bordering on the Jews, as the Egyptians, Phœnicians, Arabs, &c. were not very curious to know the laws or hiſtory of a people, whom in their turn they hated and deſpiſed. Their firſt acquaintance with theſe books was not till after the ſeveral captivities of the Jews, when the ſingularity of the Hebrew laws and ceremonies induced ſeveral to deſire a more particular knowledge of them. Joſephus ſeems ſurprized to find ſuch ſlight footſteps of the ſcripture-hiſtory interſperſed in the Egyptian, Chaldean, Phœnician, and Grecian hiſtory; and accounts for it hence, that the ſacred books were not as yet tranſlated into Greek or other languages, and conſequently not known to the writers of thoſe nations [u].—[[t] *Joſeph.* contra Appion. p. 1038. ap. *Calmet*, Dict. Bibl. T. 1. p. 294. [u] *Joſeph.* ap. *Calmet*, loc. cit.]

The firſt verſion of the *bible* was that of the ſeptuagint into Greek, in the time of Ptolemy Philadelphus, or rather much later; though the whole ſeems not to have been then tranſlated, but only the pentateuch; between which and the other books in the verſion called of the ſeventy, the critics find a great diverſity in point of ſtyle and expreſſion, as well as of accuracy. Vid. *Fabric.* Bibl. Græc. l. 3. c. 12. T. 2. p. 315. *Du Pin*, Diſſert. Prelim. ſur la *Bible*, l. 1. c. 6. §. 1. p. 171, ſeq. *Simon*, Hiſt. Crit. du Vieux Teſtam. l. 2. c. 2. See SEPTUAGINT, *Cycl.*

Ariſteas indeed ſpeaks of a tranſlation, though an imperfect one, of the Jewiſh ſcriptures before the time of Ptolemy; but his account is not ſupported by any appearance of probability. Vid. *Calmet*, lib. cit. p. 294. *Du Pin*, loc. cit.

Divers kinds of books have been compoſed on the *bible*, either to explain the ſenſe, or make its doctrine more obvious and acceſſible, or facilitate the remembrance of it; as introductions, apparatuſes, ſummaries, manuals, hiſtories, expoſitions, commentaries, harmonies, &c. Vid. *Wolf.* Bibl. Hebr. T. 2. §. 5. p. 262. It. T. 4. §. 4. p. 48, ſeq.

Saxon BIBLES.—The whole ſcripture is ſaid by ſome to have been tranſlated into the Anglo-Saxon by Bede, about the year 701; though others contend he only tranſlated the goſpels.

We have certain books or parts of the *bible* by ſeveral other tranſlators; as, 1°. The Pſalms by Adelm biſhop of Shireborn, cotemporary with Bede; though by others this verſion is attributed to king Alfred, who lived two hundred years after. Another verſion of the Pſalms in Anglo-Saxon was publiſhed by Spelman in 1640 [w]. 2°. The evangeliſts, ſtill extant, done from the antient vulgate, before it was reviſed by St. Jerom, by an author unknown, and publiſhed by Matth. Parker in 1571. An old Saxon verſion of ſeveral books of the *bible*, made by Elfric abbot of Malmeſbury, ſeveral fragments of which were publiſhed by Will. Lilly in 1638, the genuine copy by Edm. Thwaites in 1699, at Oxford [x].—[[w] Bibl. Litr. N° 4. p. 1—23. *Calmet*, Dict. Bibl. T. 1. p. 306, ſeq. [x] *Calmet*, loc. cit.]

Engliſh BIBLES.—The firſt Engliſh *bible* we read of was that tranſlated by J. Wickliffe about the year 1360; but never printed, tho' there are MS copies of it in ſeveral of the public libraries. J. de Treviſa, who died about the year 1398, is alſo ſaid to have tranſlated the whole *bible*; but whether any copies of it are remaining, does not appear.

Tindal's BIBLE.—The firſt printed *bible* in our language was that tranſlated by Will. Tindal, aſſiſted by Joy and Conſtantine, printed abroad in 1526; but moſt of the copies were bought up and burnt by biſhop Tunſtal and Sir Thomas More. It only contained the New Teſtament, and was reviſed and republiſhed by the ſame perſon in 1530. The prologues and prefaces added to it, reflecting on the biſhops and clergy, this edition was alſo ſuppreſſed, and the copies burnt.

In 1532, Tindal and his aſſociates finiſhed the whole *bible*, except the apocrypha, and printed it abroad: but while he was afterwards preparing for a ſecond edition, he was taken up, and burnt for hereſy in Flanders.

Matthew's BIBLE.—On Tindal's death, his work was carried on by John Rogers, ſuperintendant of an Engliſh church in Germany, and the firſt martyr in the reign of queen Mary, who tranſlated the apocrypha, and reviſed Tindal's tranſlation, comparing it with the Hebrew, Greek, Latin, and German, and adding prefaces and notes from Luther's *bible*. He dedicated the whole to Henry VIII. under the borrowed name of Thomas Matthews; whence this has been uſually called *Matthews's bible*. It was printed at Hamburgh, and licence obtained for publiſhing it in England by the favour of archbiſhop Cranmer, and the biſhops Latimer and Shaxton.

Cranmer's BIBLE.—The firſt *bibles* printed by authority in England, and publicly ſet up in churches, was the ſame Tindal's verſion, reviſed, compared with the Hebrew, and in many places amended, by Miles Coverdale, afterwards biſhop of Exeter; and examined after him by archbiſhop Cranmer, who added a preface to it: whence this was called *Cranmer's bible*. It was printed by Grafton, of the largeſt volume, and publiſhed in 1540; and, by a royal proclamation, every pariſh was obliged to ſet one of the copies in their church, under the penalty of forty ſhillings a month; yet two years after, the popiſh biſhops obtained its ſuppreſſion of the king. It was reſtored under Edward VI. ſuppreſſed again under queen Mary, and reſtored again in the firſt year of queen Elizabeth; and a new edition of it given in 1562.

Geneva BIBLE.—Some Engliſh exiles at Geneva in queen Mary's reign, Coverdale, Goodman, Gilbie, Sampſon, Cole, Whittingham, and Knox, made a new tranſlation, printed there in 1560; hence called the *Geneva bible*, containing the variations of readings, marginal annotations, &c. on account of which it was much valued by the puritan party in that and the following reigns.

Biſhop's BIBLE.—Archbiſhop Parker reſolved on a new tranſlation for the public uſe of the church, and engaged the biſhops and other learned men to take each a ſhare or portion. Theſe being

being afterwards joined together, and printed, with ſhort annotations, in 1598, in a large folio, made what was afterwards called the *Great Engliſh bible*, and commonly the *biſhop's bible*. The following year it was alſo publiſhed in 8°, in a ſmall but fine black letter: and here the chapters were divided into verſes; but without any breaks for them, in which the method of the Geneva *bible* was followed, which was the firſt Engliſh *bible* where any diſtinction of verſes was made. It was printed in large folio, with corrections, and ſeveral prolegomena, in 1572. The initial letters of each tranſlator's name were put at the end of his part, *e. gr.* at the end of the pentateuch W. E. for William Exon; that is, William biſhop of Exeter, whoſe allotment ended there; at the end of Samuel R. M. for Richard Menevenſis, or biſhop of St. David's, to whom the ſecond allotment fell: and the like of the reſt. The archbiſhop overſaw, directed, examined, and finiſhed the whole. This tranſlation was uſed in the churches for forty years, tho' the *Geneva bible* was more read in private houſes, being printed above thirty times in as many years. King James bore it a mortal hatred on account of the notes, which, at the Hampton-court conference, he charged as partial, untrue, ſeditious, *&c.* The *biſhops bible* too had its faults; the king frankly owned he had yet ſeen no good tranſlation of the *bible* in Engliſh; but he thought that of Geneva the worſt of all.

Rhemiſh BIBLE.—After the tranſlation of the *bible* by the biſhops, two other private verſions had been made of the New Teſtament; the firſt by Laur. Thomſon, made from Beza's Latin edition, together with the notes of Beza, publiſhed in 1583 in 4^to^, and afterwards in 1589, varying very little from the *Geneva bible*; the ſecond by the papiſts at Rheims in 1584, called the *Rhemiſh bible*, or *Rhemiſh tranſlation*. Theſe finding it impoſſible to keep the people from having the ſcriptures in the vulgar tongue, reſolved to give a verſion of their own, as favourable to their cauſe as might be. It was printed on a large paper, with a fair letter and margin. One complaint againſt it was its retaining a multitude of Hebrew and Greek words untranſlated, for want, as the editors expreſs it, of proper and adequate terms in the Engliſh to render them by; as the words *azymes*, *tunike*, *rational*, *holocauſt*, *præpuce*, *paſche*, &c. However, many of the copies were ſeized by the queen's ſearchers, and confiſcated; and Th. Cartwright was ſollicited by ſecretary Walſingham to refute it; but, after a good progreſs made therein, archbiſhop Whitgift prohibited his further proceeding therein, as judging it improper the doctrine of the church of England ſhould be committed to the defence of a puritan, and appointed Dr. Fulke in his place, who refuted the Rhemiſts with great ſpirit and learning. Cartwright's refutation was alſo afterwards publiſhed in 1618, under archbiſhop Abbot. About thirty years after their New Teſtament, the Roman catholics publiſhed a tranſlation of the Old at Doway 1609 and 1610, from the vulgate, with annotations; ſo that the Engliſh Roman catholics have now the whole *bible* in their mother-tongue; though, it is to be obſerved, they are forbidden to read it without a licence from their ſuperiors. Vid. Bibl. Liter. N° 4. p. 15, ſeq. *Calmet*, T. 1. p. 307.

King James's bible.—The laſt Engliſh *bible* was that which proceeded from the Hampton-court conference in 1603, where many exceptions being made to the biſhop's *bible*, king James gave order for a new one; not, as the preface expreſſes it, for a tranſlation altogether new, nor yet to make of a bad one a good one, but to make a good one better, or of many good ones one beſt. Fifty-four learned perſons were appointed for this office by the king, as appears by his letter to the archbiſhop, dated in 1604; which being three years before the tranſlation was entered upon, it is probable ſeven of them were either dead, or had declined the taſk, ſince Fuller's liſt of the tranſlators makes but forty-ſeven; who being ranged under ſix diviſions, entered on their province in 1607. It was publiſhed in 1610, with a dedication to king James, and a learned preface, and is commonly called *King James's bible*. After this, all the other verſions dropped, and fell into diſuſe, except the epiſtles and goſpels in the common prayer book, which were ſtill continued, according to the biſhops tranſlation, till the alteration of the liturgy in 1661, and the pſalms and hymns, which are to this day continued as in the old verſion.

BIBLIA, or BIBLIA *petraria*, in a military ſenſe, denotes a machine uſed by the antients for throwing ſtones or darts. Vid. *Aquin.* Lex. Milit. T. 1. p. 128. *Du Cange*, Gloſſ. Lat. T. 1. p. 547.

It was probably ſo called from *Biblus*, a city in Phœnicia, where it might be invented; though this is little more than conjecture; nor is the form of this machine known.

BIBLIOGRAPHIA, a branch of *archæographia*, employed in the judging and peruſing of antient manuſcripts, whether written in books, paper, or parchment. *Spon.* in Præf. ad Miſcell. Erud. Antiq. *Fabric.* Bibl. Antiq. c. 5. §. 2. p. 125. See ARCHÆOGRAPHIA.

All the great critics have been eminent cultivators of *bibliography*, as Scaliger, Sirmond, Salmaſius, Caſaubon, Labbe, Lambecius, *&c.*

BIBLIOGRAPHIA is alſo uſed for a notitia or deſcription of printed books, either in the order of the alphabet, of the times when printed, or of the ſubject-matters.

In which ſenſe, *bibliographia* amounts to much the ſame with what is otherwiſe called *bibliotheca*. See BIBLIOTHECA.

Literary journals afford alſo a kind of *bibliographia*.

Naude, Corn. Beughem, Boeclerus, and Fabricius, have publiſhed *bibliographias*. Bartels has a like work, under the title of *biblionomia*. V. *Naude*, Bibliogr. Politica. Ital. Magd. 1712. 8vo. *Ejuſd.* Bibliogr. Militaris. Jen. 1635. 12mo. *Fabric.* Bibl. Antiq. c. 17. §. 1. p. 532.

BIBLIOMANCY, βιβλιομαντεια, a kind of divination performed by means of the bible.

This amounts to much the ſame with what is otherwiſe called *ſortes biblicæ*, or *ſortes ſanctorum*.

It conſiſted in taking paſſages of ſcripture at hazard, and drawing indications thence concerning things future; as in Auguſtin's *tolle & lege*. It was much uſed at the conſecration of biſhops. Vid. *Prideaux*, Connect. P. 2. l. 5. p. 464.

F. J. Davidius, a jeſuit, has publiſhed a *bibliomancy*, under the borrowed name of *veridicus Chriſtianus*.

BIBLIOMANIA, an extravagant paſſion for books, to a degree of madneſs; or a deſire of accumulating them beyond all reaſon and neceſſity.

BIBLIOTHECA properly ſignifies a library or repoſitory of books. See LIBRARY, *Cycl.*

BIBLIOTHECA is alſo uſed for a compilation of all that has been written on a certain ſubject; or a digeſt of all the authors who have treated of it.

In this ſenſe, we have hiſtorical *bibliothecas*, as that of Diodorus Siculus; mythological *bibliothecas*, as that of Apollodorus; theological and ſacred *bibliothecas*, as thoſe of Ravanellus, *&c.*

The firſt model of a *bibliotheca* of this kind was given by Apollodorus of Athens, who lived in the time of Ptolemy Evergetes, 240 years before Chriſt. The *bibliotheca* of the origin of the gods by that celebrated grammarian, has met with imitators in almoſt every branch of literature. Apollodorus's *bibliotheca* conſiſts of three books, which contain the Greek ſtories and traditions concerning the genealogies of the gods and heroes till the Trojan times. It has been diſputed whether the work we now have be the original, or an abridgment of it made by Euphorion or Sopater [a]. Du Pin has given an extract of it [b].—[[a] Vid. *Fabric.* Bibl. Græc. l. 3. c. 27. T. 2. p. 660. and *Boecler*, Bibliogr. Crit. c. 5. p. 171. [b] *Du Pin*, Bibl. Univ. des Hiſtor. l. 1. §. 8. p. 27, ſeq.]

The hiſtorical *bibliotheca* of Diodorus Siculus is no other than a general hiſtory of all ages and countries known to the Greeks and Romans, brought down to the 180th olympiad.

It is full of fables and traditions; but the author has taken great pains to diſtinguiſh what is true from what is merely fabulous; on which account it ſeems to have been, that Pliny repreſents him as the firſt of the Greek hiſtorians who ceaſed to play the fool; *primus Græcorum deſiit nugari*. His work conſiſts of forty books, which were compoſed under the empire of Julius and Auguſtus. [c]. We have an extract of it in Du Pin [d].—[[c] *Fabric.* Bibl. Græc. l. 3. c. 31. p. 769. [d] Bibl. Univ. des Hiſtor. l. 1. §. 9. p. 57, ſeq]

BIBLIOTHECA *ſacra* is a title given by Ravanellus to his common-places or dictionary of the bible, containing all that he could find in theological books neceſſary for explaining ſcripture, digeſted in the order of the alphabet.

BIBLIOTHECA *ſtudii theologici* is a collection out of the works of St. Jerom, St. Auguſtin, and others, neceſſary for a ſtudent in divinity.

The *ſtromata* of Clemens Alexandrinus may be called a *bibliotheca* of the ſentiments and opinions of philoſophers; the hiſtory of Euſebius a *bibliotheca* of eccleſiaſtical writers; the Magdeburgh centuries are called by Spanheim a *bibliotheca* of eccleſiaſtical antiquity. *Fabric.* Bibl. Græc. l. 6. c. 4. T. 12. p. 161. See CENTURIATOR and CENTURY.

BIBLIOTHECA is alſo uſed for a book containing an enumeration of ſeveral authors, and the titles of their writings. *Du Pin*, Bibl. des Aut. Eccleſ. T. 1. Pref. p. 1. Jour. des Scav. T. 19. p. 671.

In this ſenſe, *bibliothecas* are either univerſal or particular, real or nominal, philoſophical, theological, eccleſiaſtical, or the like.

Univerſal BIBLIOTHECA is a book which treats indifferently of all kinds of authors and works, on however different ſubjects. Such are the *bibliothecas* of Photius, Geſner, Ciaconius, Poſſevin, Konig, and the epitomiſts and continuators of Geſner. *Conr. Geſneri* Bibliotheca Univerſalis Omnis Generis Authorum Nomina, cum Lucubrationibus Singulorum juxta Literarum Seriem propoſitum. Tigur. 1545. folio.

The *bibliotheca* of Photius is an account of what books the author read in his embaſſy in the ninth century to Syria [e]; and contains an abridgment of almoſt three hundred different authors, with the judgment of that patriarch on many of them. There are additions to it by Max. Planudes, only extant in manuſcript [f].—[[e] *Fabric.* Bibl. Græc. l. 5. c. 38. §. 6. T. 9. p. 369. *Boecl.* Bibl. Crit. c. 24. p. 397. [f] Vid. *Fabric.* lib. cit. l. 5. c. 45.]

The *bibliotheca ſelecta* of Poſſevin is judged the moſt complete of that kind, notwithſtanding the fooliſh partiality of that author, who, from principles of religion, has ſuppreſſed all the proteſtant writers. It was printed at Rome in 1598, and again at Cologn in 1607. folio.

Parti-

Particular BIBLIOTHECAS are those which are confined to some species or division of books and authors; as some science, country, age, order, or the like. Such are the *bibliothecas* restrained to sciences, as ecclesiastical and sacred *bibliothecas*. Of this kind we have ecclesiastical and theological *bibliothecas*; *bibliothecas* of chemists by Borelli and others; of the French law by Bouchel; of the conception of the virgin by Peter d'Alva and d'Astorga; of coins by Labbe; of manuscripts by Montfaucon. Vid. *Ph. Labbe*, Biblioth. Nummaria, printed at the end of his *Bibliotheca Bibliothecarum*. Rouen, 1678. 8vo. It contains the writers on the antient Hebrew, Greek, and Roman coins, medals, weights, and measures.

BIBLIOTHECA of ecclesiastical writers is a work treating of the authors who have written on matters of religion.

Such are the ecclesiastical *bibliothecas* of Miræus, Sixtus Siennensis, Du Pin, and Dom Cellier.

St. Jerom was the first who composed a work express on the writers of the Christian church, which was continued by Gennadius, Isiodore, and Ildefonsus, to their respective times. Honorius bishop of Autun made an abridgment of all four. Sigebert and Henry of Gant continued this work till the time of St. Bernard. Aub. de Miræus continued it to his own time, and published the whole under the title of *Bibliotheca Ecclesiastica*. M. Du Pin's *bibliotheque* of ecclesiastical writers contains the history of their lives, the catalogue, criticism, and chronology of their works, a summary of what is contained in them, a judgment on their style and doctrine, and a list of the several editions of their writings. *Du Pin*, Nouvelle Bibliotheque des Autheurs Ecclesiastiques, 3d edit. Paris, 1683. 4to. 20 tom.

To this kind also belong the *bibliotheca sacra's* of Le Long, and of Mabillon, annexed to his treatise of monastic studies. *Le Long*, Bibliotheca Sacra, five Syllabus omnium ferme Sacræ Scripturæ Editionum ac Versionum, improved and augmented by *Boernerus* professor of Leipsic.

F. Calmet, at the end of the later editions of his dictionary, gives an account of writers on the scriptures.

Philosophical BIBLIOTHECAS.—The first philosophical *bibliotheca* is that composed by Jo. Frisius, who not only took in the antient philosophers, but other antient writers, from the origin of learning to the sixteenth century, distinguishing them by the series of time when they lived, and rehearsing their several writings. *Jo. Jac. Frisii*, Bibliotheca Philosophorum classicorum Chronologica. Tigur. 1592. 4to. afterwards inserted into the Chronicon Chronicorum Ecclesiasticum of Jan. Gruter, Fran. 1614. 8vo.

He was followed by Israel Spachius, who, without any regard to the order of time, digested his work by the subjects. Draudius's *bibliotheca classica*, among the writers on other sciences, enumerates those on philosophy. But his work being composed chiefly from the catalogues of the Frankfort fairs, is not to be depended on.

Bolduanus's *bibliotheca philosophica* indicates the several writers according to their subject-matters; but is only a bare catalogue of titles. Lipenius's *bibliotheca realis philosophica* is digested under heads or topics, and has this advantage, that it contains the several writers on each point or matter. The misfortune is, that they are rehearsed without choice, and frequently the most trivial books mixed with the rest. What is worse, books are often produced under one head, which belong to another, the author having been deceived by the titles, as not looking into the books themselves. The last and most exact is the *bibliotheca philosophica* of Struvius, wherein the several authors are distributed under their respective classes. *Burch. Gotth. Struvii*, Biblioth. Philosophica in suas Classes distributa, several times published, but lastly with considerable additions by Jo. G. Lotterus, Jen. 1728. 8vo.

Real BIBLIOTHECA, that which is digested according to the order of things, or subjects of books; or it is an account of books digested or reduced under certain classes, according to their subject-matters. Such are the *bibliothecas* of Lipenius, Draudius, Boteluanus, and Struvius. Such likewise are the *bibliotheca academica*, *statistica*, *canonica* of Thurmannus; the *bibliotheca juris imperantium* of an anonymous author; the *bibliotheca numismatica* of Banduri and Struvius. Such also are the theological *bibliothecas* of Molanus; the ecclesiastical *bibliothecas* of Scultingius: the *bibliothecarius quadripartitus* of Hottinger; the historical *bibliothecas* of Le Long and Nicolson; the *bibliotheca studiosi theologiæ* of Gisb. Voetius; the *bibliotheca theologica contracta* of Meier; the *bibliotheca portatilis theologica* of Endterus.

BIBLIOTHECA is also used for a book rehearsing the writers of some particular language, place, order, or the like.

Such are Mart. Kempius's *bibliotheca Anglorum theologica*; Gazettus's *bibliotheca theologorum, aliorumque scriptorum, Belgii*, in French; Draudius's *bibliotheca Germanorum*, &c.

We have also *bibliothecas* of benedictine writers by Trithemius; of cistertians by de Visch; of canons regular by Gabriel Pennot; of augustins by Herrera and Elsius; of præmonstratenses by Le Page; of dominicans by Leander Alberti, Antony de Sienna, and Ambrose d'Alta Mura; of the franciscans by Luc. Wading, an Irish cordelier; of jesuits by Alegambe, Ribadeneira, Sotuel, and Labbe. Vid. Trev. Dict. Univ. T. 1. p. 1024.

National BIBLIOTHECAS are those reciting the writers and books of a certain place, people, or language. *Fabric.* Bibl. Græc. l. 6. c. 10. T. 13. p. 631.

Such are the Attic *bibliothecas* of Meursius; the Greek and Latin *bibliothecas* of Fabricius; the Spanish *bibliothecas* of Nic. Antonio and Scottus; the *bibliotheca* of Germany by Hertzius; the *bibliothecas* of France by La Croix du Maine, Manceau, and Du Verdier; and that of Naples by Nic. Toppi, commented on by Leon. Nicodemus. Dict. Trev. loc. cit.

The Latin and Greek *bibliothecas* of Fabricius are useful and excellent works in their kind, containing notitias of all the antient writers, non-ecclesiastical, in the order of ages when they lived, with an account of their writings, the several editions and translations of each; frequently their characters, subject matters, and the like. *Jo. Alb. Fabrici* BIBLIOTHECA *Latina*, five Notitia Auctorum Veterum Latinorum, quorumcumque scripta ad nos pervenerunt, first printed at Hamb. 1668, 8vo. but four or five times reprinted, with improvements, and succeeded, at different times, by two volumes of supplements; all which have been since incorporated in an edition at Venice, 1728, 2 vols. 4to. Ejusd. BIBLIOTHECA *Græca*, seu Notitia Scriptorum Veterum Græcorum quorumcumque Monumenta integra aut Fragmenta edita extant, tum plerorumque MSS ac deperditis. Ed. 2. 1708. In it we have an account of all the writers from Homer, to the taking of Constantinople by the Turks.

The same author has published a Latin *bibliotheca* of the middle and barbarous age, on the same plan with the former. *Bibliotheca Latina* mediæ & infimæ Latinitatis, Hamb. 1734—1736. 4 vols. 8vo. It is to be succeeded by several others, especially the historians; wherein he has endeavoured to furnish a supplement to Vossius, in alphabetical order, of the authors names.

The French *bibliotheca* of Sorel is a book, wherein he pretends to form a library, composed only of French books, which yet shall be sufficient for attaining the encyclopædia. Trev. Dict. Univ. T. 1. p. 1024.

Oriental BIBLIOTHECAS are those which enumerate the authors and books in the Hebrew, Syriac, Arabic, Turkish, Coptic, and Ethiopic languages. Such are those of Hottinger and d'Herbelot, divers Arabs, Turks, &c.

There are three kinds or methods of oriental *bibliothecas*. The first contains the lives of the writers, and a catalogue of their works: such are those of the Arabs. The second contains the names or titles of the books in alphabetical order: such is that of Buxtorf. The third digests or classes the books according to their subjects; such is that of Hottinger. *Hottinger*, Bibl. Orient. c. 2. p. 59.

The oriental *bibliotheque* of D'Herbelot not only contains the titles of Arabic, Persian, and Turkish books, but may serve as a kind of historical and geographical dictionary for those countries. Vid. *Struv.* Bibl. Philos. c. 3. p. 84. *Stoll.* Introd. ad Hist. Liter. P. 2. c. 1. §. 15. p. 427.

Rabbinical BIBLIOTHECA is a book containing a list of all the rabbin authors, with their writings, the editions of them, the times when the authors lived, &c. Trev. Dict. Univ. T. 1. p. 1024.

Several authors have attempted books of this kind, as Manassa Ben Israel, R. Bapt. Jonas, a converted Jew; but both left them unfinished at their deaths. R. Schabtai Ben Joseph has published one, intituled *siphte jeschenim*, or the lips of the sleepers, *labia dormientium*. We have another by Jul. Conr. Ottho, a converted Jew, under the title of *gali razia*, or explication of hidden things.

Among the Christians, Gesner, Sixtus Siennensis, Molderus, Theodore, Ebert, Possevin, Besodneus, De la Pause, Hottinger, Cæleſt. du Montmarsan, Heiddegger, and M. Simon, have given the like notitias of rabbinical books. Plantaritz, at the end of his *florilegium rabbinicum*, and the Buxtorfs, father and son, in their *bibliotheca rabbinica*, have done the same more professedly. But the most ample and best deserving the title of a *bibliotheca rabbinica*, is that of Bartolocci an Italian, abbot of the order of St. Bernard, continued by Imbonati, printed at Rome, in five volumes in folio, under the title of *bibliotheca magna rabbinica*. Trev. Dict. Univ. loc. cit.

It does not proceed according to the order of the titles of the books, like the former, but by that of the authors names, in the order of the Hebrew alphabet. The author dying, the work was finished by Jos. Imbonati, a monk of the same order, who added a mantissa of authors, omitted by Bartolocci; as also in 1694, a fifth volume, intituled, *bibliotheca Latina-Hebraica*, containing a list of all the writers in Latin against the Jews, their religion, antiquity, history, &c. *Wolf.* Bibl. Heb. p. 6.

The Hebrew *bibliotheca* of Wolfius contains a notitia both of the Hebrew writers of all ages, and of their books, whether written originally in Hebrew, or translated by them into that language, continued to the present times; being the substance of Bartolocci's great work, without the long dissertations and digressions, wherewith that is crouded; but supplied with a multitude of useful additions from other writers. *J. Chr. Wolfii*, Bibliotheca Hebræa, Lipsi. & Hamb. 4 Tomes, 1715.

BIBLIOTHECA is alſo uſed for a collection of the writings of ſeveral authors in the ſame kind. *Du Pin.* Bibl. des Aut. Eccleſ. T. 1. Pref. p. 3.

In this ſenſe, we have *bibliothecas* of the fathers, of aſcetics, preachers, chemiſts, *&c.* anatomical and pharmaceutical *bibliothecas*, &c.

The *bibliotheca* of chemical philoſophers contains ſeveral pieces and dialogues of Hermes, Mary, Calid, Morienus, Artephius, Geber, *&c.* Trev. Dict. Univ. T. 1. p. 1024.

The *bibliotheca anatomica* by meſſieurs Le Clerc and Manget, phyſicians of Geneva, contains a kind of body of anatomical writings.

BIBLIOTHECA *volante* is a collection of ſmall pieces or tracts, not exceeding ſix ſheets a-piece, made by Jo. Cinelli, an Italian academiſt of Florence, printed in 1677. M. Bayle calls theſe *pieces fugitives*, on account of their being apt to be neglected and loſt, by reaſon of their ſmallneſs: ſuch generally are eſſays, diſſertations, orations, eulogies, letters, and the like. *Fabric.* Conſpect. Theſ. Liter. Ital. p. 203. *Struv.* Introd. ad Notit. Rei Literar. c. 8. §. 21. p. 755.

BIBLIOTHECA *patrum*, or of the fathers, is a collection of the writings of ſeveral of the leſſer fathers, printed in one or more volumes. *Ittig.* de Bibl. & Cat. Patr. c. 1. §. 1. p. 1.

Combefiſius has given a *bibliotheca patrum concionatoria*; F. Chantelan, an aſcetic, a *bibliotheca patrum aſcetica*. *Fabric.* Bibl. Græc. l. 6. c. 10. §. 33. T. 13. p. 756. It. §. 38. p. 791. & §. 39. p. 794.

In this ſenſe, we have a great number of *bibliothecas* of the fathers, printed at divers places, and under various titles; as *orthodoxographia*, *hæreſiologia*, μικροπρεσβυτικον, *ſcripta veterum*, *theſaurus*, *analecta*, *ſpecilegium*, *muſæum*, *miſcellanea*, *acta ſanctorum*, *catenæ*, *antiquæ lectiones*, *varia ſacra collectanea*, &c.

The firſt collection of this kind was made by J. Tichardus in 1528, printed at Baſil, under the title of *antidotum contra diverſas omnium fere ſeculorum hæreſes*. He was followed at the ſame place by Hen. Petri, Jo Heroldus, Jac. Grynæus, G. Fabricius. Simler and Geſner did ſomething of the ſame kind at Zuric. Theſe were followed by De la Bigne and others at Paris, Cologne, Lyons, Leyden, Antwerp, Rome, Venice, *&c.* where each uſually improved and inlarged on his predeceſſors. Thus, the firſt only took in twenty fathers, the ſecond thirty, the next came to ſeventy, the next to eighty-five; the Paris *bibliotheca* of Bigne above two hundred; that of Cologn three hundred; and that of Lyons four hundred.

The firſt work of this kind, under the denomination of *bibliotheca patrum*, was that of Marg. de la Bigne, doctor of the Sorbonne, publiſhed at Paris 1576, in 8 volumes in folio; inlarged, in a ſecond edition in 1589, to 9 volumes; and in a third, in 1609 and 1610, to 10 volumes.

This has proved the baſis of all the *bibliothecas* which have been publiſhed ſince, under the denomination of great *bibliothecas*, and greateſt *bibliothecas*; particularly the *magna bibliotheca veterum patrum*, printed at Paris 1654, in 17 volumes folio; that at Cologn in 1618, in 15 volumes; and the *maxima bibliotheca* at Lyons in 1677, in 27 volumes in folio.

BIBLIOTHECA *ſacra* is a title given by the Paris editors to their *bibliotheca* of the fathers, which was cenſured, and ordered in the *index expurgatorius* to be eraſed.

The great defect of the *bibliothecas* of fathers, begun by Bigne, and carried on by others, is, that the works of the Greek fathers are only given in Latin tranſlations.

Ittigius has a treatiſe expreſs on the *bibliothecas* of the fathers, wherein are rehearſed the ſeveral works of this kind under the ſeveral cities or places where they were printed; and all the authors and pieces contained in each collection are enumerated. *Th. Ittigius* de Bibliothecis & Catenis Patrum, variiſque veterum Scriptorum Eccleſiaſticarum Collectionibus, Lipſ. 1707, 8vo. Vid. *Fabric.* Bibl. Græc. l. 6. c. 10. T. 13. p. 849.

BIBLIOTHECA is alſo uſed for a catalogue of the books in a library: Such are the *bibliotheca Coiſliniana*, *bibliotheca Cordeſiana*, *bibliotheca Thuanæa*, *bibliotheca Bignoniana*, *bibliotheca du Boiſiana*, &c.

Labbe has publiſhed a *bibliotheca* of *bibliotheca's*, or a catalogue of the names of thoſe who have written *bibliothecas*, which has ſince been continued, and improved under another title by Teſſier, from 800 writers to the number of no leſs than 2500. Schrammius has alſo publiſhed a *programma* on the writers of theological *bibliothecas*.

Ph. Labbe's *bibliotheca bibliothecarum* was firſt publiſhed at the end of his ſpecimen *novæ bibliothecæ*, MSS. Paris, 1653, 4to. Afterwards by itſelf with additions, and again at Rouen in 1664 and 1678. Beſides the writers of *bibliothecas*, it contains an account of the encomiaſts and biographers of learned men; of the moſt celebrated printers and bookſellers throughout Europe; of thoſe who have publiſhed *muſæums*, or cabinets of curioſities, inſcriptions, monuments, *&c.*

Ant. Teſſier's *Catalogus Auctorum qui Librorum Catalogos, Indices, Bibliothecas, Virorum Literatorum Elogia, Vitas*, &c. *Scriptis conſignarunt*, was publiſhed at Genev. 1686. 4to. To which has been ſince added a volume of ſupplements, Ibid. 1705, 4to. Vid. Nouv. Rep. Lett. ann. 1686. p. 832. Jour. des Scav. T. 33. p. 956.

J. Con. Schrammii de Scriptoribus Bibliothecarum Theologicarum, Helmſt. 4to.

BIBLIOTHECA is alſo a name given to the books of the Old and New Teſtament, in reſpect of their excellency, and ſufficiency for the uſes of the Chriſtian life. *Durand.* ap. Trev. Dict. Univ. T. 1. p. 1023.

BIBLIOTHECA *divina* of St. Jerom, the title by which the benedictines of the congregation of St. Maur call the Latin tranſlation of the ſcriptures made by that father from the Hebrew, publiſhed at Paris 1693, and which by him was called *canon Hebræus*; but it is much doubted by M. Simon and others, whether this *bibliotheca divina* be the pure Hebrew canon of St. Jerom. *Kuſter*, Biblioth. Nov. Liter. T. 3. p. 266. *Baſnage*, Ouvres des Scav. Mars 1694. p. 361. Trev. Dict. Univ. T. 1. p. 1023.

BIBLIOTHECA, *bibliotheque*, is alſo a title given to divers journals, or periodical accounts in French of new books.

Such are the *bibliotheque choiſie* of Paul Colomies, printed in 1682; *bibliotheque univerſelle* by M. Le Clerc, begun in 1686, and ended in 1693; which was ſucceeded by the ſame author's *bibliotheque choiſie*; and that by his *bibliotheque ancienne & moderne*: ſuch alſo are the *bibliotheque Angloiſe*, begun by M. De la Roche, and continued by M. De la Chapelle; the *bibliotheque Francoiſe* by M. Camuſat; the *bibliotheca* novorum librorum by Kuſter and Sykes; and the *bibliotheca literaria* by an anonymous writer; alſo the *bibliotheque Germanique*, *bibliotheque Italique*, and *bibliotheque raiſonnee*. Vid. *Struv.* Introd. ad Hiſt. Liter. c. 6. p. 498—567.

BIBLIOTHECARIAN, a library-keeper, otherwiſe called librarian. See LIBRARY, *Cycl.*

BIBLIOTHECARIAN is alſo uſed for the author of a *bibliotheca*, or a catalogue of books. See BIBLIOTHECA.

In this ſenſe, P. L'Abbe has given a *bibliotheca*, or catalogue of *bibliothecarians*. Geſner, Lipenius, Struvius, Fabricius, *&c.* are celebrated *bibliothecarians*.

BIBLISTS, *bibliſtæ*, an appellation given by ſome Romiſh writers to thoſe who profeſs to adhere to ſcripture alone as the ſole rule of faith, excluſive of all tradition, and the ſuppoſed authority of the church. Trev. Dict. Univ. T. 1. p. 1025. See BIBLE, *Cycl.* and *Suppl.*

In which ſenſe, all proteſtants are, or ought to be, *bibliſts*.

Bibliſts, among Chriſtians, anſwer nearly to *caraites* or *textuaries* among the Jews. See CARAITES and TEXTUARIES, *Cycl.*

Prateolus makes the *bibliſts* a branch of heretics, who aſſert, that nothing is to be received, or read to the people in the church, or ſtudied in the ſchools by the youth, but the bare text of the bible alone; that all further inſtruction and interpretation is needleſs, for that we are all divinely inſpired, and taught by God himſelf; and finally, that all human arts and philoſophy are ſuperfluous and vain. Vid. *Prateol.* Elench. Hæreſ. l. 2. §. 23. p. 101.

BIBLUS, βιβλος, in botany, an aquatic plant in Egypt, called alſo *papyrus*; of the ſkin whereof the antient Egyptians made their paper. Vid. *Montfauc.* Paleogr. Græc. l. 1. c. 2. p. 14. *Reiman.* Antiq. Liter. Ægypt. p. 91. *Pitiſc.* Lex. Antiq. T. 2. p. 372. Mem. Acad. Inſcrip. T. 9. p. 306. See PAPYRUS and PAPER, *Cycl.*

Hence alſo the Greeks gave the denomination βιβλος, to books made hereof. Thus Lucan,

Nondum flumineas Memphis contexere biblos
Noverat——— *Lucan*, Pharſ. l. 3. ver. 222.

BICAUDA, in zoology, the name of a fiſh of the *xiphias* or ſword-fiſh kind. It is a large fiſh: its body is long, and cylindric: its head terminates in a ſnout, like a hog's, running out into a long bony ſubſtance, like a ſword: its tail is forked: the upper part of its ſword is much longer than the under; and the creature has the power of moving both: the gills are large: it has no teeth: it has two tubercles near the tail; and has ſix fins, two at the gills; and over-againſt theſe, on the belly, it has two long bony bodies, of a black colour, joined together at their inſertion, and having behind them a furrow, into which it can depreſs them at pleaſure, this cavity running along the belly almoſt to the tail: below theſe, it has, on its belly, a broad, triangular fin, ending in an acute angle towards the tail; and another of the ſame kind on the upper part of its body: the tail is placed at about a finger's diſtance from the end of theſe; but the largeſt of all its fins is that on the back: this begins juſt behind the head, and runs three feet down the back: it is made of a membrane reſembling parchment, and is ſupported by ſeveral fibres: this naturally ſtands up to a conſiderable height; but the creature can depreſs this alſo, at pleaſure, into a furrow, which there is along the back behind it. It is five feet long, or more than that, and a foot and half broad at the breaſt, tapering gradually towards the tail. It is covered with a thick and rough ſkin, and is brown on the back and ſides; and has there ſeveral ſhort bony prickles: its belly is white: its fins are all of a browniſh grey, and the back one has ſeveral beautiful black ſpots. It is a very well-taſted fiſh. *Willughby*, Hiſt. Piſc. p. 163.

BICAUDALIS, in anatomy, an appellation given by ſome to a muſcle of the external ear, on account of its having two tails; but which is ſubject to great variety, having ſometimes only one, and ſometimes three tails: in which caſes, it is called *intricalis* and *tricaudalis*. *Coſtel.* Lex. Med. p. 104.

BICE, or BISE, among painters, a blue colour, prepared from the *lapis Armenus*, formerly brought from Armenia, but now from the ſilver mines in Germany. *Waller*, in Phil. Tranſ. N° 179. p. 26. See ARMENUS *lapis*.

The word comes from the barbarous Latin *biſus*, or *biſius*; and that, perhaps, from the French *bis*, grey, *griſius*; whence *biſius panis*. Vid. *Du Cange*, Gloſſ. Lat. T. 1. p. 565. *Skin.* Etym. in voc.

Bice bears the beſt body of all bright blues uſed in common work; but it is the paleſt in colour. It works indifferently well; but inclines a little to be ſandy, and therefore requires good grinding on a very hard ſtone, and ſhould be waſhed before uſed. It lies beſt near the eye of any blue now in uſe, except ultramarine. *Smith*, Art of Paint. p. 21.

We have alſo a green *bice*, made of the blue, with the addition of orpiment. It is of a ſandy nature; and therefore when uſed, which is rarely, it muſt be waſhed before uſe. *Boyle*, Phil. Work. abridg. T. 2. p. 68. *Smith*, ubi ſupra. See the article COLOURS.

BICEPS, (*Cycl.*) in anatomy, is a double muſcle, made up of two long, fleſhy bodies, more or leſs round, lying by the ſide of each other on the middle anterior part, and a little towards the inſide of the arm. Theſe two bodies are ſeparated above, each of them ending in a ſmall tendon.

BICEPS *femoris*, a muſcle made up of two portions, one long, the other ſhort, and ending in one common tendon. Both portions are fleſhy, and conſiderably thick, and are ſituated on the back and outſide of the thigh, between the buttock and the ham. The great portion is fixed above by a ſtrong tendon, in the poſterior and lower part of the tuberoſity of the iſchium, under the inſertion of the inferior gemellus, and cloſe behind that of the ſeminervoſus: from thence it runs down towards the lower extremity of the thigh, where it meets the other portion, and joins with it, forming a common tendon. The ſmall portion is fixed by fleſhy fibres to the outſide of the linea aſpera, below its middle, and to the faſcia lata, where it forms a ſeptum between the triceps and vaſtus externus: from thence the fibres run down a little way, and then meeting the great portion, a common tendon is formed between them. This ſtrong tendon runs down to the outer and back part of the knee, and is inſerted in the lateral ligament of the joint, and in the head of the fibula, by two very ſhort tendinous branches. It ſometimes ſends off a tendinous expanſion, which is often unskilfully cut off with the fat. As they run down, they become contiguous, and afterwards cloſely united by one common broad tendon. The antients, who looked on the two ſuperior extremities as two heads, thence gave it the name of *biceps*; but it may be more properly called, from its inſertion, the *coraco radialis*. It is fixed by one of the ſuperior tendons to the apex of the coracoide apophyſis of the ſcapula on one ſide of the tendon of the coraco brachialis, which adheres very ſtrongly to it. This tendon of the *biceps* is broader and ſhorter, and is ſituated more internally than the other; and the fleſhy body belonging to this tendon is longeſt, and conſequently runs higheſt up. The other ſuperior tendon is ſmaller and longer than the former, and the fleſhy body belonging to it ſhorter, and more compounded. This tendon is lodged in the bony channel of the os humeri, being ſurrounded by a membranous vagina continued from the capſular ligament, and ending at the fleſhy body, where it is intirely cloſed. At the upper part of the groove, the tendon runs between the inſertions of the tendons of the ſupra ſpinatus and ſubſcapularis, paſſes immediately over the head of the bone within the capſular ligament, then leaving the joint between the two tendons juſt mentioned, is covered by another ſhort vagina, and is inſerted in the glenoide cavity, in the ſuperior impreſſion of the neck of the ſcapula, near the baſis, or the coracoide apophyſis. The two fleſhy bodies thus ſeparately fixed by their ſuperior tendons, approach by degrees, as they deſcend, and, before they reach the middle of the os humeri, they are cloſely united, and form afterwards a common tendon of a conſiderable breadth, which is inſerted laterally in the poſterior edge of the tuberoſity at the neck of the radius. This inferior or common tendon of the *biceps*, a little before its inſertion, ſends off towards the interior condyle an aponeuroſis, which encreaſing obliquely in breadth on the ſame ſide, covers the inner and back parts of almoſt the whole fore arm, eſpecially the muſcles which lie upon the ulna, where it is inſenſibly loſt. It likewiſe ſtrongly adheres to the pronator teres, and radialis internus, on the fore-ſide of the joint of the elbow.

Both the fleſhy bodies of the *biceps* contribute to the formation of the aponeuroſis, each of the two portions, of which the common tendon is made up of, furniſhing a ſeries of tendinous fibres, which covering the foreſide of the true tendon, unite near the internal condyle by a particular kind of intertexture, and thus form the aponeuroſis. *Winſlow*'s Anatomy, p. 106.

BICHET, a corn-meaſure, containing about a Paris *minot*, chiefly uſed in Burgundy and the Lyonois. Trev. Dict. Univ. T. 1. p. 1026.

BICINIUM, in church-muſic, the ſinging of two, either together or alternately. *Iſid.* Orig. l. 6. c. 19. *Durand.* Rational. l. 1. c. 1. p. 18. *Du Cange*, Gloſſ. Lat. T. 1. p. 550.

In which ſenſe, the word ſtands oppoſed to monody. See MONODY, *Cycl.*

BICKERN *of an anvil*, the pike or beak-iron. *Moxon*, Mechan. Exerc. P. 1. p. 3. See ANVIL, *Cycl.* and *Suppl.*

BICLINIUM, in antiquity, two beds about a table; or, as ſome ſay, rather a bed whereon two perſons lie to eat. *Pitiſc.* Lex. Antiq. T. 1. p. 277. See BED.

BICORNE *os*, or *two-horned bone*, in anatomy, the ſame with the *os hyoides*. *Gorr.* Med. Def. p. 479. in voc. *Drake*, Anthrop. l. 3. c. 15. p. 350. See HYOIDES.

BICORNIS, in anatomy, an extenſor muſcle of the arm, otherwiſe denominated *radiæus externus*, and *extenſor carpi radialis*. *Drake*, Anthrop l. 4. c. 6. p. 419. *Heiſt.* Comp. Anat. §. 335. p. 281. See RADIÆUS.

BICORNIS *pollicis manus* is the proper extenſor muſcle of the thumb; ſometimes alſo, from the number of its horns, called *tricornis*. *Heiſt.* Comp. Anat. §. 338. p. 283.

It takes its riſe from the poſterior and middle part of the radius and ulna, and is inſerted in the firſt, ſecond, and third phalanx.

BICORPOREA *ſigna*, thoſe ſigns of the zodaic which have two bodies, or conſiſt of two figures. *Wolf.* Lex Math. p. 256. *Vital.* Lex. Math. p. 85.

Such are *gemini*, or the twins; alſo *piſces*, and *ſagittarius*, conſiſting of a man and a horſe.

BIDAL, or BIDALE, in our antient cuſtoms, denotes the invitation of friends to drink ale at ſome poor man's houſe, who, in conſideration hereof, expects ſome contribution for his relief.

This cuſtom ſtill obtains in the weſt of England, and is mentioned in ſome of our antient ſtatutes. Vid. Stat. 26 Hen. 8. c. 6. *Skinn.* Etym. in voc.

BIDALDI, an antient kind of foot-ſoldiers mentioned by the French hiſtorians, armed with two darts. *Aquin.* Lex. Milit. T. 1. p. 128.

Hence the origin of the word, which ſeems to be a corruption for *bidardi* or a *binis dardis*. They are alſo called *bidarii*, *bidaus*, *bideaux*, *bidauts*, and *pitauts*. *Caſen.* Orig. p. 24. Trev. Dict. Univ. T. 1. p. 1027.

BIDDING is uſed for proclaiming or notifying.

In which ſenſe, we ſometimes meet with *bidding* the banns. See BANN, *Cycl.* and *Suppl.*

One part of the office of deacons, in the antient church, was to *bidd* the prayers by certain known forms of words; that is, to notify to the people when each part of the ſervice began. *Bingh.* Orig. Eccleſ. l. 2. c. 20. §. 10.

BIDDING-*prayers* alſo denote an indirect kind of prayers, antiently called ευχαι απο προσφωνησεως, wherein no petitions were immediately addreſſed to God; but the people, eſpecially the catechumens, energumeni, and competentes, were called on, or exhorted to pray, and inſtructed what to pray for. Idem, ibid. l. 15. c. 1. §. 2.

We have a form of theſe *bidding-prayers* in the apoſtolical conſtitutions, tranſcribed from thence by Bingham.

BIDDING alſo denotes the raiſing the price of a thing at a ſale or auction. See AUCTION, *Cycl.*

This anſwers to what the Romans called *licitari*; the French *encherir*. The antients uſed to *bid* by holding up the hand or finger. Vid. *Pitiſc.* Lex. Antiq. T. 2. p. 88. voc. *licitatio*. *Calv.* Lex. Jur. p. 535. voc. *licitari*. *Savar.* Dict. Comm. T. 1. p. 1813.

BIDDING *of the beads*, a charge or warning which the pariſh-prieſt gave to his pariſhioners at certain ſpecial times, to ſay ſo many *pater-noſters*, &c. on their beads. *Skinn.* & *Cowel.* in voc.

BIDENS, in botany, the name of a genus of plants; the characters of which are theſe: the flower is uſually of the regular floſculous kind, compoſed of a number of ſmall floſcules, divided into ſeveral ſegments at their ends, placed on the embryos, and contained in one common ſcaly cup. Sometimes there are alſo a number of ſemifloſcules in the flower; but this is leſs common. The embryos finally ripen into ſeeds, terminating in ſeveral prickly points. See Tab 1. of Botany, Claſſ. 12.

The ſpecies of *bidens*, enumerated by Mr. Tournefort, are theſe:

1. The common *bidens*, with leaves divided into three parts. 2. The *bidens*, with undivided leaves. 3. The broad-leaved Canada *bidens*, with gold-yellow flowers. 4. The whole leaved American *bidens*, with white flowers. 5. The ſmallage leaved American *bidens*. 6. The hawk-weed leaved Indian *bidens*, with alated ſtalks. 7. The trifoliate American *bidens*, with daiſy-like flowers. 8. The American *bidens*, with roundiſh bullated leaves. 9. The American *bidens*, with oblong, bullated, and ſinuous leaves. 10. The ilex leaved ſhrub American *bidens*, with yellow flowers. 11. The ſhrubby American *bidens*, with the leaves and appearance of the cow-parſnip. 12. The trifoliate angelica-leaved American *bidens*, with yellow radiated flowers. 13. The five leaved American *bidens*, with radiated flowers. *Tourn.* Inſt. p. 462.

Bidens is a tall, large, aquatic plant, recommended as good againſt poiſon and the bite of ſerpents. It is alſo eſteemed a detergent, and uſed in ſternutatories. The name *bidens* has been given it from the pointed figure of its ſeed, which reſemble a fork. Vid. *Lemer.* Dict. des Drog in voc.

BIDENTAL, in antiquity, a place ſtruck with a thunderbolt, and on that account conſecrated to the gods, and forbidden to be trod on. *Non. Marcell.* c. 1. p. 564. Scholiaſt. *Perſ.* ad ſat. 2. v. 27.

Bidental only differed from *puteal*, as in the latter the thunderbolt was ſuppoſed to be hidden, or buried with ceremony under the ground. *Kenn.* Rom. Antiq. P. 2. l. 5. c. 10. p. 336. *Struv.* Antiq. Rom. c. 6. p. 293.

The fall of lightning, or a thunderbolt, on any place, was judged by the Romans an indication that Jupiter demanded it for himſelf. Hence they ſurrounded it with a wall, rail, ſtakes, or even a rope; and expiated it, by the ſacrifice of a *bidens*, or ſheep of two years old. Vid. *Buling.* de Fulm. c. 11. *Lomeier*, de Luſtrat. c. 13.

Feſtus repreſents the *bidental* as a temple, where ſheep of two years old were offered in ſacrifice [a]. But by temple he here means no more than a place incloſed, and conſecrated to the gods [b].—[a *Feſt.* de verb. ſignif. in voc. *Bidental.* b *Pitiſc.* Lex. Ant. T. 1. p. 277. in voc.

BIDENTES, in middle-age-writers, denotes two yearlings, or ſheep of the ſecond year. *Kennet*, Gloſſ. ad Paroch. Antiq. in voc.

The wool of theſe *bidentes*, or two year old ſheep, being the firſt ſheering, was ſometime claimed as a heriot to the King, on the death of an abbot. *Kennet*, loc. cit.

Among the antient Romans, the word was extended further to any ſorts of beaſts uſed for victims, eſpecially thoſe of that age: whence we meet with *ſues bidentes*. See BIDENTAL. Vid. *A. Gell.* l. 16. c. 6. *Struv.* Ant. Rom. c. 10. p. 462. *Lang.* Epiſt. Medic. l. 1. Ep. 61. p. 297. *Voſſ.* Etym. p. 71.

BIDET, a nag, or little horſe, formerly allowed to each trooper, and dragoon, for his baggage, and other occaſions. *Cruſo*, Milit. Inſtr. for Cavalry, app.

Bidets are grown into diſuſe, on account of the expences thereof, and the diſorders frequently ariſing from thoſe who attended on them, *&c.*

BIDIÆI, βιδιαιοι, an order of magiſtrates at Sparta, five in number, whoſe buſineſs was to have an eye over the *ephebi*, and be preſent at their exerciſes, wreſtlings, *&c.* *Craig.* de Repub. Lacedæm. l. 2. c. 5. *Schottg.* Lex. Antiq. p. 219.

BIER, a kind of wooden carriage, in which the bodies of the dead are born to their grave. See BURIAL.

The word comes from the French *biere*, which ſignifies the ſame. It is called in Latin *feretrum*, *a ferendo*.

Among the Romans the common *bier*, whereon the poorer ſort were carried, was called *ſandapila*; that uſed for the richer ſort, *lectica*, *lectica funebris*, ſometimes *lectus*. The former was only a ſort of wooden cheſt, *vilis arca*, which was burnt with the body; the latter was enriched and gilded for pomp. It was carried bare, or uncovered, when the perſon died a natural and eaſy death; when he was much diſfigured or diſtorted, it was veiled or covered over. *Pitiſc.* L. Antiq. T. 1. p. 774. voc. *Feretrum.* It. T. 2. p. 26. voc. *Lectica.* Id. ibid. p. 689. voc. *Sandapila.* *Kenn.* Rom. Ant. Not. P. 2. l. 5. c. 10. p. 348. *Du Cange* Gloſſ. Lat. T. 3. p. 241. voc. *Lectus.*

BIER is more peculiarly uſed for that whereon the bodies of ſaints are placed in the church to reſt, and expoſed to the veneration of the devout.

This is alſo called in middle-age writers, *lectus*, *feretrum*, *lectica*, and *loculus*; and was uſually inriched with gold, ſilver, and precious ſtones, which was the cauſe that the *bier* of St. Benedict was pillaged, and all its ornaments carried off. In our Engliſh churches we read of gilt, and cryſtal *biers*. *Du Cange*, Gloſſ. Lat. T. 3. p. 241. voc. *Lectus.* It. p. 319. voc. *Loculus.* It. p. 237. voc. *Lectica.* *Dugd.* Monaſt. Abr. p. 304.

BIFFA, in middle-age writers, a machine for caſting ſtones and darts, having a moveable counterpoiſe, which turned round its yard. *Ægid.* Rom. de Regin. Princ. l. 3. c. 18. *Aquin.* Lex. Milit. T. 1. p. 128.

BIFRONS, a perſon double-fronted, or two-faced.

BIFRONS is more peculiarly an appellation of Janus, who was repreſented by the antients with two faces, as being ſuppoſed to look both backwards and forwards: though other reaſons for it are recited by Plutarch [a]. Sometimes he was painted with four faces, *quadrifrons*, as reſpecting the four ſeaſons [b]. —[a Vid. *Serv.* ad Æn. l. 12. v. 198. *Plut.* Quæſt Rom. N° 21. *Pitiſc.* Lex. Antiq. T. 1. p. 925. b *Crinit.* de Honeſt. Diſcipl. l. 4. c. 10.]

BIGA (*Cycl.*)—The invention of *bigæ* is attributed by Pliny [a] to the Phrygians; by Iſidore [b], to Cyreſtenes of Sicyon, who firſt yoaked two horſes together.—[a *Plin.* Hiſt. Nat l. 7. c. 56. b *Iſid.* Orig. l. 18. c. 35.]

Bigæ were the chariots firſt uſed in the Circenſian games; then *trigæ*, and afterwards *quadrigæ*. See CHARIOT, *Suppl.* and CIRCENSES *ludi*, Cycl.

The moon, night, and the morning, are by mythologiſts ſuppoſed to be carried in *bigæ*, the ſun in *quadrigæ*.

Statues in *bigæ* were at firſt only allowed to the gods, then to conquerors in the Grecian games; under the Roman emperors, the like ſtatues, with *bigæ*, were decreed and granted to great and well-deſerving men, as a kind of half triumph, being erected in moſt public places of the city. *Pitiſc.* Lex. Ant. T. 1. p. 278. See STATUE, *Cycl.*

Figures of *bigæ* were alſo ſtruck on their coins. *Beverin.* Synt. de Ponder. p. 8. See BIGATI.

The drivers of *bigæ* were called *bigarii*; a marble buſt of one Florus a *bigarius* is ſtill ſeen at Rome. *Pitiſc.* loc. cit.

BIGA, or BIGATA, in writers of the middle and barbarous age, a cart with two wheels, drawn often with one horſe. It was more frequently called *birota*. *Kenn.* Gloſſ. ad Paroch. Antiq. in voc.

BIGAMY (*Cycl.*)—According to the law of Scotland, the crime in *bigamy* conſiſts in the perjury it implies, as being a manifeſt violation of the matrimonial oath; and it is puniſhed in the ſame manner as perjury, with confiſcation of moveables, impriſonment for a year and a day, or, longer, at the king's will, and infamy. This is by force of the act 19 Q. Mary. The crime is but ill defined in this ſtatute, but the meaning is plain enough, to ſhew that a man's marrying a ſecond wife, or a wife a ſecond huſband, during a ſtanding marriage with a former wife, or former huſband, is *bigamy*.

By a ſtanding marriage is meant one formally ſubſiſting at the time; for *bigamy* is committed, whether the former marriage is reducible for adultery, or ſubject to be declared null *ab initio*, for impotency or contingency of blood. But in this caſe, the caſe of the bigamiſt is held favourable; eſpecially if the former marriage be declared null, before the proceſs for the *bigamy* is commenced. *Mackenz.* Crim Law.

BIGATI, in antiquity, a kind of antient Roman ſilver coins, on one ſide whereof was repreſented a *biga*, or chariot drawn by two horſes. See BIGA, *Cycl.* and *Suppl.*

The *bigatus* was properly the Roman denarius, whoſe impreſſion during the times of the commonwealth, was a chariot driven by victory, and drawn either by two horſes, or four, according to which it was either denominated *bigatus*, or *quadrigatus*.

Bigati therefore were of different values, according to the ſpecies of denarii, *&c.* The *denarius bigatus* is rated by Beverinus at a Roman julio, the *quinarius* at half, and the *ſextarius* at a quarter of a julio. *Beverin.* Synt. de Ponder. p. 37, and 217.

Several of thoſe called conſular medals are alſo *bigati*.

In lieu of horſes, the chariot is repreſented on ſome *bigati*, as drawn by two deer, eſpecially in the medals of the family of Axſia; on thoſe of the family Crepereia, by two hippopotami, who draw, or rather bear Neptune on their tails. *Trev.* Dict. Univ. T. 1. 1036.

BIGGEL, in natural hiſtory, a quadruped much about the colour and bigneſs of a rein-deer; its head is ſaid to be like that of a horſe; its main like that of an aſs, with black cloven feet, and two black horns on his head.

This animal is found in the Eaſt-Indies, according to Mandelſloe, in Harris's collection of voyages, N° 52. p. 775.

A creature brought from Bengal, ſomething anſwering this deſcription, was ſhewn in London, an. 1745. We have a deſcription and figure of it by Dr. Parſons, in Phil. Tranſ. N° 476. §. 17.

BIGHT, in the ſea-language, denotes any part of a rope, as it is taken compaſſing, coiled up. When they cannot, or would not, take the end in hand, becauſe of the cables being coiled up; they ſay, give me the *bight*, or hold by the *bight*, *i. e.* by one of the fakes, which lies rolled up one over the other. *Manw.* Seam. Direct. p. 8. *Betel.* Sea. Dial. 4. p. 194.

BIGNONIA, in botany. See TRUMPET-*flower*.

BIGOT, (*Cycl.*) in Italian *bigontia*, is uſed to denote a Venetian liquid meaſure, containing the fourth part of the *amphora*, or half the *boot*. *Savar.* Dict. Comm. T. 1. p. 335.

BIGOURNEAU, in natural hiſtory, a name given by Bellonius to that genus of *cochleæ*, called the *ſemi-circular* mouthed, or *ſemi-lunar kind*, including the *neritæ*. See NERITA.

BIL, in ichthyography, a name given in ſome parts of England to a particular ſpecies of cod-fiſh, called by Willughby *aſellus luſcus*. It is but a ſmall kind, ſeldom exceeding twelve inches in length, and is not of the round bodied ſhape of moſt of the other ſpecies, but is broad and flatted at the ſides. Its colour on the back is a pale olive colour, or duſky yellow; its belly is white; its ſcales are more than twice as large as thoſe of the cod, and adhere very firmly to the ſkin. The mouth is of a moderate ſize, and under the chin, or in the angle of the lower jaw, there is a ſmall ſhort beard. The jaws are furniſhed with long, ſtrong, and ſharp teeth, which bend backward; but there is only one row of theſe in each jaw. The dotted lines running along the ſides, are curved to the end of the abdomen, deſcending gradually from the upper angle of the gills toward the bottom of the belly. It is diſtinguiſhed from the cod by its ſmallneſs, by its being ſhorter and broader in its ſhape, by the paleneſs of its colour, and largeneſs of its ſcales; tho' it agrees with it, in having a beard under the chin. *Willughby*'s Hiſt. Piſc. p. 169.

BILANCIIS *deferendis*, a writ directed to a corporation, for the carrying of weights to ſuch a haven, there to weigh the wool, that perſons by our antient laws were licenſed to tranſport. Reg. Orig. 270. *Blount. Cowel.*

BILANDER, in navigation, a ſmall flat-bottomed veſſel uſed in northern countries, with one large maſt and ſail; having

its

its deck raiſed from head to ſtern, half a foot above the plat-board. *Ozan.* Dict. Math. p. 272.

BILATERAL *cognation*, denotes kinſhip, or kindred, on both ſides; that of the father as well as mother. See COGNATION, *Cycl.*

Such is the relation of brothers, ſiſters. *Bilateral* ſtands contradiſtinguiſhed to unilateral. *Hartung.* Exerc. Jur. Civ. 5. c. 12. p. 41.

BILBOWS, at ſea, a puniſhment anſwering to the ſtocks at land. *Guill.* Gent. Dict. p. 3. in voc. See STOCKS.

BILCOCK, in zoology, a name given by ſome to the water rail, a bird of the moor-hen kind, but ſmaller than the common moor-hen. See ROLLUS.

BILE, in natural hiſtory and medicine. See GALL, *Suppl.* and BILE, *Cycl.*

BILIMBI, in natural hiſtory, the name of an Eaſt-Indian tree, very famous throughout that part of the world for its uſes in medicine. European botaniſts have called it *malus indica fructu pentagono*, or the Indian apple-tree, with the five-cornered fruit.

It ſeldom grows to above twelve feet high, and is not common wild, even in the Eaſt-Indies, but is carefully cultivated in gardens, where it flowers all the year round. *Bont*, Med. Ind.

The juice of the root is drank as a cure for fevers. The leaves boiled, and made into a cataplaſm with rice, are famed in all ſorts of tumors, and the juice of the fruit is uſed in almoſt all external heats, dipping linen rags in it, and applying them to the parts. And the ſame is drank, mixed with arrack, to cure diarrhæas; and the dried leaves, mixed with betle leaves, and given in arrack, are ſaid to promote delivery. The fruit is pleaſant to the taſte, when fully ripe, and is commonly eaten; when ſmaller, and unripe, it makes a very pleaſant pickle.

BILINGUIS, (*Cycl.*) διγλωσσος, properly denotes a perſon, who has two tongues in his mouth; an inſtance of which is given by Dolæus. *Bonet.* Medic. Septent. l. 5. §. 25. c. 1. p. 301. *Caſt.* Lex. Med. p. 104. See TONGUE, *Cycl.* and *Suppl.*

BILINGUIS is alſo uſed for a perſon who ſpeaks two languages, which was formerly reputed a kind of prodigy. *Gal.* l. 2. Diff. Pulſ. c. 5. *Caſt.* Lex. Med. p. 264. voc. *Diglottos.*

BILIOUS *fevers*, a term uſed by medical writers to expreſs ſuch fevers as ariſe from an immediate effuſion of the bile. Theſe often ariſe from violent fits of anger in the patient. Of this nature are the *cholerica febris*, and *cauſus*. See FEVER, *Cycl.* and *Suppl.* and CAUSUS, *Suppl.*

BILL, (*Cycl.*) in phyſiology, is a cartilaginous ſubſtance covered with a ſkin or cutis, which forms the beak, or *roſtrum*, of birds. See BIRD, *Cycl.* and *Suppl.*

The *bill* does the office of teeth in ſome birds; alſo of weapons of offence. In the parrot kind it is hooked, and ſerves to climb, and catch hold of boughs withal [a]. The upper *bill* of this bird is filled with rows of croſs bars; and the under *bill*, which is much ſhorter, ſhuts within the upper, and draws againſt the roof of the mouth; by which means a kind of maſtication is effected, before the meat paſſes into the craw [b]. The phœnicopter's *bill* is a true hyperbola, pointed at the end like a ſword; and what is remarkable, the upper *bill* of this bird moves in eating, the lower being fixed, which is the contrary of what is found in all other kinds [c]. The woodpecker's *bill* is ſtrong, and ſharp enough to dig holes, and build in the heart of the hardeſt timber [d]. [[a] *Grew*, Muſ. Reg. Societ. p. 57, ſeq. [b] Phil. Tranſ. N° 211. p. 155. [c] *Grew*, loc. cit. p. 67. [d] Phil. Tranſ. N° 350, p. 509.] See PHOENICOPTERUS and PICUS.

In the iſland of Fero, a fixed reward is given for the *bills* of ravenous birds: All watermen are obliged to bring a certain number yearly to the country courts, at the feaſt of St. Olaus; when they are thrown into a heap, and burnt in triumph [a]. Plott gives divers inſtances of monſtrous irregularities in the *bills* of birds; particularly of a raven, whoſe mandibles croſſed each other, the lower chap turning upwards, and the upper downwards [b]. [[a] *Barthol.* Act. Med. *Hoffn.* T. 1. p. 89. [b] *Plott*, Nat. Hiſt. Stafford. c. 7. §. 14. Item, §. 2.]

BILL, in commerce—*Lumbard* BILLS are inſtruments of an uncommon kind and figure, uſed in Italy and Flanders, and of late alſo in France; conſiſting of a piece of parchment, cut to an acute angle about an inch broad at top, and terminating in a point at bottom; chiefly given, where private perſons are concerned in the fitting out a ſhip on any long voyage.

The manner is thus: The party, who is deſirous to be concerned in the cargo or venture, carries his money to the merchant, who fits out the ſhip, where it is entered down in a regiſter; at the ſame time the merchant writes down on a piece of parchment, upwards of an inch broad, and ſeven or eight inches long, the name of the lender, and the ſum lent, which being cut diagonal wiſe, or from corner to corner, each party retains his half. On the return of the veſſel, the lender brings his moiety to the merchant, which being compared with the other, he receives his dividend accordingly. Much the ſame is practiſed in Holland by thoſe who lend money on pledges: The name of the borrower, and the ſum, are written on a like ſlip of parchment, which is cut in two, and half given to the borrower, and the other half ſtitched to the pledge; that, upon comparing them together again, the borrower may receive his goods on paying the money ſtipulated. *Savar.* Dict. Comm. T. 1. p. 343.

Crows BILL, *roſtrum corvi*, among chemiſts, the beginning of the philoſopher's ſtone, diſcovered by the blackneſs of the matter, called alſo the *crow's head*. *Libav.* Opp. T. 2. p. 205. *Caſt.* Lex. Med. p. 642. voc. *Roſtrum.*

BILLS *of mortality* are accounts of the numbers of births and burials within a certain diſtrict, every week, month, quarter, or year. See MORTALITY, *Cycl.*

In this ſenſe we ſay *weekly bills*, *monthly bills*, *quarterly*, and *yearly bills*. Phil Tranſ. N° 143. p. 21.

The London *bills of mortality*, which were the firſt, are compoſed by the company of pariſh clerks, and expreſs the number of chriſtenings of each ſex, and the number of deaths from each diſeaſe.

From the Breſlaw *bills* Dr. Halley has endeavoured to eſtimate the degrees or proportions of mortality at different ages, and from thence to ſettle thevalue of annuities on lives. Vid. Phil. Tranſ. N° 196. p. 597, and 654. See ANNUITY, *Cycl.* and *Suppl.*

Sir William Petty, and Capt. Grant, have publiſhed obſervations on the *bills of mortality* of London. The former of theſe authors has done the ſame on thoſe of Dublin. Phil. Tranſ. N° 143. p. 21, ſeq.

Dr. Sprengel gives a compariſon of the *bills of mortality* of ſeveral cities and countries in Europe. Phil. Tranſ. N° 380. p. 44. Item, N° 381. p 25. Item, N° 400. p. 365.

BILLARD, in ichthyology, an Engliſh name for the young fiſh of the coal fiſh, or rowling pollack, up to a certain ſize, as the cod to a certain ſize is called a *codling*. *Willughby*'s Hiſt. Piſc. p. 169.

BILLES, in traffick, a name given firſt by the French, and afterwards by other nations, to the maſſes of raw ſteel, or ſuch as has been tempered for ſale, and is ready to be wrought into tools, &c. This in working loſes its temper, but it recovers it again by plunging it into cold water.

BILLETS (*Cycl.*) are to be three feet long, and the band 24 inches round. *Moor*, Math. Comp. c. 2. p. 16.

BILLET, *billette*, in the French cuſtoms, a little ſign in form of a caſk, hung up at places where toll is to be paid, to advertiſe paſſengers and carriages, that ere they advance farther, the dues are to be paid to the king, or the lord who is charged with the care of repairing the highways. Trev. Dict. Univ. T. 1. p. 1044.

BILLETING *of ſoldiers*, is the lodging or quartering them in the houſes of the inhabitants of a place.

BILUR, in natural hiſtory, a name given by many of the Arabian writers to a gem, which, tho' they often mention, yet they have no where given us a deſcription of. Some have imagined it the onyx, and others the beryl; but it appears more probably to have been a ſpecies of cryſtal; probably the pebble cryſtal of the Eaſt-Indies, which is conſiderably finer than the common ſprig cryſtal, and is often ſold under the name of the white ſaphire; tho' conſiderably inferior, both in luſtre and hardneſs, to the true white ſaphire. The only reaſon that people have had for ſuppoſing the *bilur* to be the beryl, is, that the names ſeem eaſily formed out of one another, by the tranſpoſing of ſome of the letters; but as the Arabians have always deſcribed this as a clear, colourleſs ſtone, this will not bear. The medical writers of that nation, Aviſenna and others, have compared the fine pellucid, and colourleſs ſal armoniac to this ſtone: They ſay it was colourleſs as water, and reſembled the *bilur*. The author of the Nubian geography ſeems to have been well acquainted with this ſtone, but he has left us no deſcription of it; he only ſays, that it was found in the iſland of Serandib, and that the largeſt ſtones of it were found there.

Some of the people moſt ſkilled in the oriental languages, interpret the *ſoham* of the bible to be the ſame with the *bilur*; and ſay, that both theſe words expreſs only the onyx; but as there can be no reſemblance between a variegated ſtone, and a clear, uniform, and pellucid ſalt, it is plain from this alone, that the onyx was not the *bilur*. It is to be obſerved, that this ſal armoniac, of which this is ſpoken, is not the common factitious ſubſtance, now known under that name; but the foſſil ſalt, ſince called *ſal gemmæ*. See the article SAL AMMONIACUM.

BINDER, (*Cycl.*) in a general ſenſe. See BINDING.

BINDER, in a more particular ſenſe, denotes a perſon whoſe profeſſion is to bind books. See BOOK-*binding*, *Cycl.*

The antient *book-binders* were called *glutinatores*, as their chief buſineſs was to faſten together a number of leaves of the papyrus with glue, &c. *Pitiſc.* Lex. Antiq. T. 1. p. 877. in voc. *glutinatores.*

The tools uſed by the modern *book-binders* are, a folding-ſtick, hammer, block, preſs, needle, and knife for cutting, beſides gilding tools.

There were only two *binders* allowed in all Paris, with two gilders, under the name of *illuminers*, till the invention of printing, whereby books were publiſhed. In 1686, the *book-binders* were ſeparated from the bookſellers, and erected into a company

company apart, by the laws of which they are obliged to bind only perfect books; not to ſow above two quires or gatherings together; and to indorſe with parchment only, not paper. *Savar.* Dict. Comm. T. 2. p. 1370, ſeq. voc. *relieur.*

BINDER-*ooze*, the weakeſt kind of *tan-ooze*. Vid. *Hought.* Coll. T. 1. p. 319. See TANNING, *Cycl.*

BINDING, (*Cycl.*) the act of faſtening or joining two things together by ſome bond, or *vinculum.*

Bales are bound with cords; ſheaves of corn with ſtraw; faggots with bruſh-wood; maſts with iron-bands; caſks with hoops, &c.

BINDING is alſo uſed in ſpeaking of different matters joined together by ſomething which incorporates them together.

In this ſenſe, glue, ſize, and paſte, are uſed for *binding* paper, leather, wood, &c.

BINDING, in the art of defence, a method of ſecuring or croſſing the adverſary's ſword with a preſſure, accompanied with a ſpring from the wriſt.

Binding is a method of purſuit more ſafe and certain, as well as maſterly, than taking of time.

How *binding*, by thus ſpringing croſs on the adverſary's ſword, differs from beating, is ſhewn under the article *beating*. See BEATING.

Unleſs a man, by ſome kind of croſs, ſecure, as it were, or render his adverſary's ſword incapable to offend him during the time of his performing a leſſon upon him, it is impoſſible for him to be certain but that he may receive from his adverſary, either a fortuitous *contretemps*, or an exchanged thruſt, before the recovery of his body, or going off after a thruſt. *Hope*, Compl. Fenc p. 112.

The great objection made by ſome people, particularly thoſe time-catchers, againſt the frequent uſe of *binding*, is, that when a man, in performing it, cleaves too much to his adverſary's ſword, he is liable to his adverſary's ſlipping of him, and conſequently of receiving either a plain thruſt, or one from a feint. *Hope*, Compl. Fenc. ubi ſupra.

BINDING is a term in falconry, which implies tiring, or when a hawk ſeizes. Dict Ruſt. in voc.

BINDING is alſo uſed in a figurative and ſpiritual ſenſe: thus Chriſt is ſaid to have given his church a power of *binding and looſing*, i. e. of retaining or remitting ſins. Vid. *Calm.* Dict. Bibl. T. 1. p. 309.

The power of *binding and looſing* is otherwiſe called the power of the *keys*. See KEY, *Cycl.*

BIND-*weed*, in botany. See CONVOLVULUS.

BINN, *binna*, a ſort of cheſt or cupboard, wherein to lock up bread, meat, or other proviſions. *Du Cange*, Gloſſ. Lat. T. 1. p. 557.

The word is alſo uſed for a place boarded up to put corn in. Dict. Ruſt. in voc.

BINOMIUS, in middle-age writers, denotes a perſon with two names.

Moſt Chriſtians antiently were *binomii*, as having had other names in their heathen ſtate, which they changed at their converſion. Beſides, it was an antient cuſtom for parents to give names to their children immediately after they were born, and ſometimes other different ones afterwards at their baptiſm; one of which frequently became a *cognomen*, or ſurname. In reality, it was a conſtant practice to aſſume a new name at baptiſm, as the religious ſtill do in the Romiſh church, on their reception into the monaſtic ſtate; or the Jewiſh proſelytes at their circumciſion. *Du Cange*, Gloſſ. Lat. T. 1. p. 557, ſeq.

BIOCOLYTÆ, βιοκωλυται, in the Bizantine empire, an order of officers appointed to prevent the violences frequently committed by the ſoldiers. *Calv.* Lex. Jur. p. 117. *Du Cange*, Gloſſ. Lat. T. 1. p. 201. Trev. Dict. Univ. T. 1. p. 1047.

The word is Greek, compounded of βια, *vis*, violence, and κωλυω, *I hinder*; and ſhould rather be written *biacolytæ*.

The *biocolytæ* appear to have been much the ſame with the French archers of the marſhalſea. They were ſuppreſſed by the emperor Juſtinian.

BIOGRAPHY, βιογραφια, the art of deſcribing or writing lives.

Biography is a branch or ſpecies of hiſtory more entertaining, as well as uſeful in many reſpects, than general hiſtory, as it repreſents great men more diſtinctly, unincumbered with a croud of other actors, and, deſcending into the detail of a man's actions and characters, gives more light into human nature, as well as excites us more to imitation.

Holſtenius makes Homer's odyſſee the firſt pattern of *biography*, though he ſeems inclined to carry the invention up higher to Moſes, the author, or at leaſt tranſlator, of the life of Job. Vid. *Holſten.* de Vit. & Script. Porphyr. c. 1. *Fabric.* Bibl. Græc. T. 4. p. 207, ſeq.

Few have ſucceeded in this province: of all the moderns, ſome will not allow that glory to more than two, *viz.* Cammerarius and Gaſſendus, whoſe lives of Melancton and De Peiresk are maſter-pieces in *biography*. Vid. *Struv.* Bibl. Philoſ. c. 1. p. 12, ſeq. *Stoll.* Introd. Hiſt. Liter. P. 1. §. 71. p. 66.

BIOLYCHNIUM, βιολυχνιον, a ſubſtantial fire, flame, or heat, which ſome phyſicians ſuppoſe actually lodged, or inherent in the heart, and remaining there as long as life laſts. *Burggr.* Lex. Med. p. 1582. *Brun.* p. 173. See HEAT.

The word *biolychnium* is compounded of the Greek βιος, life, and λυχνος, lamp, or light.

Biolychnium frequently occurs in Charlton, and ſome other modern writers, where it ſignifies the ſame with what is otherwiſe expreſſed in Engliſh by the lamp of life, vital flame, innate heat; by the Latins, *calidum innatum*, *calor innatus*, *ignis inſitus*; by the Greeks, το εμφυλον θερμον, εμφυλον πυρ, &c.

Hippocrates and the antients have frequent recourſe to the ſyſtem of *biolychniſm*, though under other names. It firſt gave way to the diſcovery of the circulation of the blood.

This flame was ſuppoſed to be generated by the ingreſs of the air into the blood; but beſides that ſuch ingreſs is ſtill conteſted, the blood ſeems unfit to kindle, or take fire.

Some will have it to have been the human ſoul, others the animal ſpirits, and others the Deity, that did the office of a *biolychnium*, and was the ſpring of all the actions and motions of the body. See BLOOD, &c.

Caſp. Hoffman and Conringius have written treatiſes expreſs on the antient doctrine of the lamp of light, or innate heat.

BIOLYCHNIUM is alſo a denomination of a peculiar kind of vital balſam, prepared from human blood; the proceſs of which is deſcribed by Beguinus [a]. J. Ern. Burggravius has a treatiſe expreſs on it [b].—[[a] *Beguin.* Tyron. l. 3. c. 1. *Burggrav.* Lex. Med. p. 1584. [b] *J. E. Burggrav.* Biolychnium ſeu Lucerna cum Vita ejus, cui accenſa eſt, Myſtice vivens jugiter, &c. Franck. 1611.]

BIOTHANATI, βιοθανατοι, in ſome medicinal writers, denotes thoſe who die a violent death. *Foreſt.* ob. 1. in Schol. ii. ap. *Brun.* p. 173.

The word is alſo written, and with more propriety, *biathanati*; ſometimes *biæothanati*.

It was a common opinion, refuted by St. Chryſoſtom, that the ſouls of *biothanati* became dæmons, or goblins, and wandered in the air, without finding a place of reſt [a], at leaſt, for the ſpace of an hundred years; and hence the notion of ſpectres and apparitions ſeen about the places where perſons were put to death; unleſs we rather ſuppoſe the former notion to have taken its riſe from this latter. Be this as it will, the appellation *biothanati* appears to have been hence alſo given to ſpectres or goblins themſelves: ſo that, in the form of bleſſing the water in the eve of the epiphany, as preſcribed in an antient ritual written by the abbot of Miletus, we find the following words; *ſed expellas omnem umbram, omnes machinationes diaboli, ſive ſpirituum immundorum, ſive biothanatorum, ſive erraticium* [b]. —[[a] *Suic.* Theſ. Eccleſ. [b] *Chryſoſt.* Homil. 36. Opp. T. 5. *Suic.* loc. cit. *Magri.* Voc. Eccleſ. p. 36.]

BIOTHANATI, in a more particular ſenſe, denote thoſe who kill themſelves, more properly called *autothanati*. See MURDER, *Cycl.* and *Suppl.*

In this ſenſe it is that the word is uſed both by Greek and Latin writers. *Biothanati*, by the antient diſcipline of the church, were puniſhed by denying them burial, and refuſing all commemoration of them in the prayers and offices of the church. *Bingh.* Orig. Eccleſ. l. 16. c. 10. §. 6.

Dr. Donn, dean of St. Paul's, has publiſhed a book under the title of *biathanatos*, or a declaration of that paradox, that ſelf-homicide is not ſo naturally ſin, as that it may never be otherwiſe. The occaſion of the book, as aſſigned by the author, was, that he had often had a ſickly inclination to deſtroy himſelf, cauſed probably by his having had his firſt breeding and converſation among men of a ſuppreſſed and afflicted religion, accuſtomed to the deſpite of death, and hungry of an imagined martyrdom. Hence he goes on: whenever any affliction aſſaileth me, methinks I have the keys of my priſon in mine own hand, and no remedy preſents itſelf ſo ſoon to my heart as my own ſword. Often meditating on this has won me to a charitable interpretation of their action, who die ſo, and provoked me to inquire into their reaſons, who pronounce ſo peremptorily againſt them. Pref. p. 17.

BIOTHANATI was alſo a name of reproach given by the heathens to the primitive Chriſtians, for their conſtancy, and forwardneſs to lay down their lives in martyrdom.

Some will rather have the word *biothanatos*, here compounded of βιος, life, and θανατος, death; as alluding to the belief of a reſurrection, or future life after death, which was the real incentive to martyrdom. *Suic.* Theſ. Eccleſ. T. 1. p. 690. voc. βιοθανατος.

BIOTHANATOS is alſo uſed in ſome writers of the barbarous age for wicked, damnable, or accurſed. *Du Cange*, Gloſſ. Lat. T. 1. p. 559.

BIOUAC, BIVOUAC, or BIOVAC, in the military art, a nightly guard performed by the whole army, when there is an apprehenſion of danger from the enemy. *Guill.* Gent. Dict. P. 2. in voc. BIOVAC.

The word is formed, by corruption, from the German *weywacht*, a double watch or guard. Trev. Dict. Univ. T. 1. p. 1056. in voc. *Bivouac.*

BIPENNIS, a two-edged ax, uſed antiently by the Amazons in fight; as alſo by the ſeamen, to cut aſunder the ropes and cordage of the enemy's veſſels. *Scheffer.* de Mil. Nav. l. 2. c. 7. *Pitiſc.* Lex. Antiq. T. 1. p. 278, ſeq.

The *bipennis* was a weapon chiefly of the oriental nations, made like a double ax, or two axes, joined back to back, with a ſhort handle. Some compare it to the figure of a pen, and ſuppoſe it hence to have acquired the name *bipennis*; the tube or barrel of the pen repreſenting the handle, and the point or

nib the head. Modern writers uſually compare it to our halbard, or partizan [a]; from which it differed in that it had no point, and that its ſhaft or handle was much ſhorter [b].—[a *Fæſch.* p. 95. b *Heder.* p. 554.] See HALBARD, *Cycl.* and PARTIZAN, *Suppl.*

BIQUADRATIC *Equation*, in algebra, an equation raiſed to the fourth power; or where the unknown quantity of one of the terms has four dimenſions: thus $x^4+ax^3+bx^2+cx+d=0$ is a *biquadratic* equation. See EQUATION, *Cycl.*

BIQUADRATIC *parabola*, in geometry, a curve-line of the third order, having two infinite legs tending the ſame way. See PARABOLA, *Cycl.*

BIQUADRATIC *power of any number*, is the fourth power, or ſquared ſquare of that number: thus 16 is the *biquadratic* power of 2; for $2\times2=4$, and $4\times4=16$.

BIQUADRATIC *root of any number* is the ſquare root of the ſquare root of that number: thus the *biquadratic* root of 81 is 3; for the ſquare root of 81 is 9, and the ſquare root of 9 is 3.

BIQUALAR, in the cuſtoms of the Algerines, a cook of the divan.

The janizaries, whom the Algerines call *oldachis*, after ſerving a certain term as common ſoldiers, are preferred to be *biqualars*, or cooks of the divan, which is the firſt ſtep towards arriving at higher preferment. *Biqualars* have the care of furniſhing the officers and commanders of the Algerine ſoldiery with meat and drink in the camp, in garriſon, &c. From *biqualars* they are made *odobachis*; that is, corporals of companies, or commanders of parties, or ſquadrons. *Trev.* Dict. Univ. T. 1. p. 1047.

BIRABETANE, in the botanical writings of the antients, a name given to *verbena*, or vervain, and to other herbs uſed in ſacrifices. It is only the word *hierobotane*, as altered by the Æolic manner of writing and ſpeaking it. *Hierobotane* is the common Greek name of vervain, and other ſacrificial herbs, and it is probable that the Latin name *verbena* came from the Æolic manner of ſpeaking this word. All thoſe herbs, which were laid upon the altars on ſolemn occaſions, ſuch as making of peace, and other ſolemn contracts, and were to be taken up by the contracting parties as part of the ceremony, were called by the Greeks *hierobotanæ*, that is, ſacred plants, and *verbenæ*; but as the plant we now particularly know by the name *verbena* was more frequent in uſe than any other on this occaſion, it was afterwards diſtinguiſhed by that name.

BIRAO, in botany, the name given by the inhabitants of the Philippine iſlands to a plant more commonly known among botanical writers by the name *tugus*, and ſuppoſed by Camelli, who carefully obſerved it on the ſpot, to be the true *amomum* of the antient Greeks. See TUGUS.

BIRCH, *Betula*, in botany, the name of a genus of trees; the characters of which are theſe: the flower is of the amentaceous kind, being compoſed of a number of little leaves affixed to an axis, or long capillament, and abounding with a great number of apices: theſe are the male flowers. The embryo fruits are placed on different parts of the tree, and are ſquamoſe protuberances, which finally become cylindric fruits, containing a number of alated ſeeds, placed under the ſcales, which are affixed to an axis. There is no known ſpecies of this tree beſides the common one. *Tourn.* Inſt. p. 588.

The *birch* is a beautiful tree, of quick growth, yielding very ſlender twigs, reſembling the coniferous kind in its ſeed; the poplar in its leaves; and differing chiefly from the alder in the whiteneſs of its bark, the cuticle or outer skin of which falls off yearly. Vid. *Ray*, Synopſ. Stirp Britan p. 288.

The ſeeds of *birch* are ſo diſpoſed for germination, that they will even grow on the body of the mother-tree when falling, and being incaſed on it, adhere ſo ſtrongly, as never to ſeparate from it; but increaſing yearly, form thoſe crouded buſhes, like birds neſts, often ſeen on *birch*-trees. *Bradl.* Gard. Dict. T. 1. in voc. *betula.*

The piercing and bleeding of *birch* is performed thus: about the beginning of March, when the buds begin to be proud and turgid, and ere they expand into leaves, with a chizel and a mallet cut a ſlit almoſt as deep as the pith, under ſome branch of a well-ſpreading *birch*; cut it oblique, and not long-ways, as a ſurgeon does a vein; and inſert a ſmall ſtone or chip, to keep the lips of the wound a little open; laſtly, to this orifice faſten a bottle, or other convenient veſſel, appendant, into which will extil a limpid and clear water, retaining an obſcure ſmack both of the taſte and odour of the tree. The miracle is, that, in the ſpace of twelve or fourteen days, as much juice will be gathered, as will outweigh the whole tree, body and roots. *Evel.* Silv. c. 16. §. 3. p. 70. Phil. Tranſ. N° 43. p. 854. It. N° 44. p. 880. It. N° 46. p. 917 & 963.

The liquor or juice, thus procured, is uſed, in ſome northern countries, as a preſervative againſt the ſtone. Van Helmont extols a drink prepared with this juice, daucus-ſeeds, and brook-lime. Mr. Boyle tells us, he has ſeen extraordinary medicinal effects of the juice itſelf, even when other remedies failed; ſo that he uſually provided a quantity of it every ſpring. He ſays, it may eaſily be preſerved, by pouring a little oil on the top of it, or by diſtillation; but that the beſt way is, to impregnate it with the fumes of ſulphur. *Boyle*, Philoſ. Work. abridg. Vol. 1. p. 51. and Vol. 3. p. 338.

This juice is uſed both to make wine of, and to brew withal, being here employed in lieu of water, a barrel of malt will afford as much, and as good ale, as four with common water. Phil. Tranſ. N° 46. p. 917 & 963. *Evel.* Sylv. c. 16. §. 4. p. 72.

A great difference is found between the efficacy of that liquor which diſtils from the bold, or parts of the tree nearer to the root, and that which weeps out from the more ſublime branches; the former being more crude and watery, the latter purer, and more refined. *Evel.* Sylv. c. 16. §. 3. p. 71.

BIRCH-*bark* being bituminous, and conſequently warm and emolient, is uſed in fumigations to correct a diſtempered air.

The inner ſilken bark was antiently uſed for writing-tables, before the invention of paper; though Ray rather aſſigns the office of paper to the cuticle, or outer skin, which peels off yearly. And with the outward, thicker, and coarſer part are houſes in Ruſſia, Poland, and other northern tracts, covered, inſtead of ſlates and tyle. *Ray*, Hiſt. Plant. p. 1410.

The Indians make pinnaces with white cedar; which they cover with large flakes of *birch*-bark, ſewing them with thread of ſpruſe-roots, and pitching them; as the antient Britons did with the willow. Pliny ſpeaks of a bitumen actually procured from the *birch* tree. Plin. Hiſt. Nat. l. 16. c. 18.

Fungus of BIRCH, an excreſcence growing on its trunk: it is aſtringent, and good againſt hæmorrhages [a]; when boiled, beaten, and dried in an oven, it makes excellent ſpunk, or touch-wood [b].—[a *Ray*, loc. cit. b *Evel.* Sylv. loc. cit.]

BIRCH-*leaves* are of uſe in the dropſy, itch, &c. either internally or externally applied.

BIRCH-*twigs* ſerve to make rods and brooms; ſmeered with bird-lime, they are uſed by fowlers, to ſay nothing of the antient faſces carried by lictors.

BIRCH-*wine* is made by fermenting the vernal juice: formerly it was in great repute againſt all nephritic diſorders; but is left out in the modern London practice. *Quinc.* Pharmac. P. 2. ſect. 4. §. 212. p. 114.

The preparation of *birch*-wine is well and amply deſcribed in a book, intituled, *Vinetum Britannicum.* Vid. Phil. Tranſ. N° 123. p. 574.

BIRD, (*Cycl.*) *avis*, in natural hiſtory. The characters of this claſs of animals are, that they have a body covered with feathers, two legs, two wings, and a hard or bony bill; and that the females are oviparous. *Linnæus*, Syſt. Natur. p. 33.

The hiſtory and deſcription of *birds* makes a particular branch of ſcience called *ornithology.*

Birds are variouſly divided and denominated by naturaliſts from the places of their abode, their food and manner of living, make of their bills, wings, feet, &c.

From the diverſity of their bills, *birds* are divided into thoſe with *hard bills*, as the ſparrow; *long bills*, as the heron; *ſlender and ſoft bills*, as the ſwallow; *thick and ſtrong bills*, as the pica, or woodpecker; *ſhorter and leſſer bills*, as the hen and pidgeon kind; *crooked bills*, as the eagle and vulture. *Dale*, in Philoſ. Tranſ. N° 204. p. 930.

Small *birds* are ſubdivided into thoſe with *ſlender bills*, as the lark, ſwallow, martin, &c. *thick and ſhort bills*, as the bull-finch, houſe-ſparrow, linnet, &c. thoſe with a hard protuberance on the upper chap or bill, as the bunting, yellow-hammer, reed-ſparrow, &c. *Ray*, Loc. Words, p. 86, ſeq.

Of aquatic *birds*, ſome have *ſlender bills*, ſharp-pointed, as the greateſt diver, gull, grey gull, &c. others *toothed bills*, as the gaſſander, &c. others *broad bills*, as the ſwan, hooper, gooſe, duck, &c. Id. ib. p. 93, ſeq.

In flat-billed *birds*, as ducks, there are three pair of nerves, which come down between the eyes into the upper bill, whereby they are enabled to ſmell, and find out their food in the mire, water, and the like. The like has alſo been diſcovered in ſeveral round-billed *birds*; but much ſmaller, and ſcarce diſcernible, except in the rook, where they are conſpicuous enough; and it is remarkable that theſe, more than any other round-billed *birds*, ſeem to grope for their meat in cow-dung, and thelike. In the lower bill, there are alſo nerves, which have much the ſame ſituation with thoſe in the flat-billed kind; but very ſmall, and ſcarce diſcernible. Phil. Tranſ. N° 206. p. 990.

Of thoſe *birds* that live near wet places, ſome live upon fiſh or ſlime (out of which they ſuck ſomething that is oleoſe, and from thence yield a delicate fleſh, as wood-cocks, ſnipes, curlews, &c.) or on inſects. Phil. Tranſ. N° 120. p. 483.

The *colymbus minor*, or didapper, has ſuch a ſtructure of parts, that it moves much more eaſily under water than on its ſurface, or aloft. He raiſes himſelf from the water with great difficulty; but when he is got up to the air, he can then continue his flight long enough. Phil. Tranſ. N° 120. p. 485.

Concerning the carniferous or rapacious *birds*, it is obſerved, 1°. That though Ariſtotle ſays they fly ſolitary, yet that holds not in all; ſeeing that vultures have been ſeen to fly in troops fifty or ſixty together. Phil. Tranſ. N° 120. p. 483.

2°. That the females of the ravenous *birds* are bigger, ſtronger, and of greater courage, than the males, nature ſeeming to have been ſo provident, as to furniſh theſe females with ſuch advantages, upon the account that they muſt provide food not only for themſelves, but alſo for their young ones. Phil. Tranſ. ubi ſupra.

Of frugivorous *birds*, it is obſerved, among other particulars, that

that as quails eat hellebore, and ſtarlings hemlock, without any harm to themſelves; ſo parrots not only eat innoxiouſly the ſeed of *carthamus*, or baſtard-ſaffron, but alſo grow fat thereby; which yet is a purgative to man. Phil. Tranſ. ibid.

The ſtructure and œconomy of *birds* are, in many reſpects, different from thoſe of their fellow-biped man, and of their fellow-brutes the quadrupeds, having ſome parts which thoſe want, and being without others which they have, beſides great variations in the contrivance of parts which are common to both; all wiſely adapted to their different conditions and manners of life.

Among the parts peculiar to *birds*, are, firſt, the bill, which ſerves them both in lieu of lips and teeth; wherewith the rapacious tear their meat, the granivorous crack their ſeeds, and ſeparating the pulp with the tongue, throw out the huſk. *Drake*, Anthrop. l. 1. c. 13. p. 60.

Secondly, a horny membrane, to draw over and cover their eyes, and ſave them from the annoyance of thorns and buſhes, much like that which frogs are furniſhed with, to ſecure their eyes from mud and dirt. *Boyle*, Phil. Work. abridg. T. 2. p. 163. *Niewent.* Relig. Philoſ. cont. 22. §. 18. p. 340.

To which may, thirdly, be added, feathers and wings for cloathing and flight.

The parts not to be found in *birds* are, 1. Teeth and lips, as already mentioned. 2. Lacteal veſſels. 3. Kidneys, and a bladder of urine, which they can be without, as they have but little moiſture in their bodies, do but rarely drink, and this only to moiſten their food 4. A *ſeptum tranſverſum*, the want of which is ſupplied by a peculiar diſpoſition of the lungs. *Vater.* Phyſ. p. 806—810.

Laſtly, Pliny ſays they alſo want an epiploon; but in two eagles, and other *birds* diſſected by the royal academiſts at Paris, there were membranes like epiploons found. *Pitfield*, Nat. Hiſt. Anim. p. 185.

Some authors alſo ſpeak of ducts which paſs immediately from a ſort of kidneys to the extremity of the rectum of *birds*, whereby a white, liquid kind of excrement is diſcharged, being firſt mixed with the groſſer fæces. *Gentzken*, Phyſ. Hypoth. P. 2. c. 5. §. 4. p. 94.

Variations in the parts of *birds* from thoſe of men and quadrupeds, are, 1. In the ear, where the cavities and the drum are of a peculiar make. Vid. Philoſ. Tranſ. N° 199. p. 711.

2. In the diviſion of the aorta. Vid. *Pitfield*, Nat. Hiſt. Anim. p. 236.

3. In the ſpinal marrow, which is divided into two in the middle of the back, with a ventricle between the two. Phil. Tranſ. N° 189. p. 374.

4. In the bones, which are all hollow and fiſtular, to make the body lighter and more buoyant. *Niewent.* Relig. Philoſ. cont. 22. §. 12. p. 335, ſeq.

5. In the heart, which has a fleſhy valve at the mouth of the vena cava. *Pitfield*, lib. cit. p. 210.

6. In the lungs, which are ſtrongly conjoined to the back, for greater convenience of flight. *Vater.* lib. cit. p. 808.

7. In the ſtomach, of which *birds* have two or three, to ſupply the want of maſtication. *Grew*, Comp. Anat. of Stom. c. 8. p. 31, ſeq. *Vater.* ubi ſup. p. 710 & 810. *Gentzken*, Phyſ. P. 2. c. 5. §. 2. p. 93.

8. In the legs and feet, which, in ſome ſpecies of *birds*, are made to hold or cling faſt by; in others to wade in the mud without ſinking. *Niewent.* Relig. Philoſ. cont. 22. §. 19. p. 341.

9. In their tails, which are made to poiſe their bodies in flight. Id. ibid. §. 20. p. 342.

10. In the pectoral muſcles, which, in *birds*, are the ſtrongeſt of all, as ſerving for the motion of the wings, which, in long or ſwift flights, requires great ſtrength; whereas in man, the crural muſcles are ſtrongeſt; ſo that, if he would fly, it muſt rather be by the action of his legs than his arms. *Willughby*, in Phil. Tranſ. N° 120. p. 482.

11. In the brain, which is different from that both of man and quadrupeds, being adapted rather to the exerciſe of the locomotive faculty, than for imagination and memory. Id. ibid.

12. In the bronchial ducts, which are extended to the very bottom of the cavity of the abdomen, that the air received into them, may the better fill and inlarge the thorax, whereby they are rendered much lighter, than if their bodies were ſolid, like other animals. *Gentzken*, Phyſ. Hypoth. p. 93. Hiſt. Acad. Scienc. ann. 1693. p. 259, ſeq.

13. In the ovaries, which, in *birds*, are ſingle, and only furniſhed with ſingle tubes, whereby to convey the eggs to the uterus; the whole faſtened to their back. *Jauvry*, in Hiſt. Acad. Scienc. ann. 1699. p. 36.

The ears of *birds* differ much from thoſe of men or beaſts: there is almoſt a direct paſſage from one ear to the other of *birds*; ſo that prick but the ſmall membrane called the drum in either ear, and water poured in at the one ear will run out at the other. But this is not all; what is much more remarkable, they have no cochlea; but, inſtead thereof, there is a ſmall twiſting paſſage that opens into a large cavity running betwixt two ſculls, and paſſes all round the head; the upper ſcull is ſupported by many hundreds of ſmall thread-like pillars or fibres, which, as is ſuppoſed, have another uſe alſo, to break the ſound from making any confuſed echo, and to make it one and diſtinct.

This paſſage, obſerved betwixt the two ſculls, is much larger in ſinging *birds* than in others that do not ſing; ſo very remarkable, that any perſon that has been but ſhewn this, may eaſily judge by the head what *bird* is a ſinging *bird*, or has aptitude thereto, though he never ſaw the *bird* before, nor knew what *bird* it were. Phil. Tranſ. N° 206. p. 993.

The poſture and action of *birds* in ſtanding and walking, are ſhewn by Borelli to be very different from thoſe of man, tho' both be bipeds; particularly as to contrivance, whereby *birds* are enabled to ſtand better on one foot. *Borell* de Motu Animal. l. 1. prop. 144. Phil. Tranſ. N° 144. p. 63. *Sturm.* Math. Juven. T. 2. p. 177. *Redi*, in Phil. Tranſ. N° 92. p. 6004. *Ray*, Wiſd. of God, P. 1. p. 28.

The digeſtion of *birds* is very ſtrong, eſpecially in hens, ducks, and pigeons, whoſe ſtomachs have been found to act even on glaſs bullets. *Boyle*, Phil. Work. abridg. T. 2. p. 183.

The ſagacity of *birds* in building and placing their neſts out of the reach of enemies, and in avoiding noxious plants, is prodigious. It is ſaid they will not ſo much as touch or perch on ſuch plants, being warned of the danger by the ſmell or effluvia of the plant. Id. ibid. T. 1. p. 437.

Their whole ſtructure is admirably accommodated to flight, eſpecially that of the pelican, which, beſide all other apparatus for this purpoſe, has a quantity of air lodged in the veſiculæ of the ſkin, which it takes in at every inſpiration, and expels again at expiration, whereby its bulk is conſiderably inlarged, without any ſenſible increaſe of weight. Hiſt. Acad. Scienc. ann. 1693. p. 259, ſeq.

Cocks and hens in Virginia have no rumps; and what is more, in thoſe that are tranſported thither from England, the rumps in time rot off. Phil. Tranſ. N° 206. p. 992, ſeq.

Some have talked of the ſpeech or language of *birds*, with which Apollonius pretended to have been acquainted, and to have received divers intelligences by means thereof; particularly of an aſs fallen down loaded with corn, from the relation of a ſparrow. The augurs were ſuppoſed to be particularly knowing in this language; on which a great part of their ſcience depended. *Plin.* Nat. Hiſt. l. 10. c. 49. *Salmuth.* ad Pancirol. P. 2. tit. 10. p. 201. *Philoſtr.* l. 1. c. 14. *Pitiſc.* Lex. Antiq. T. 1. p. 217. voc. *avis*.

Feetleſs BIRDS, ἀπόδες, a fictitious denomination given by ſome of the antients to the *birds* of paradiſe, from a miſtaken notion that they had no feet, and could not walk, but only fly. *Vater.* Phyſ. Exper. p. 811. *Salmuth.* ad Pancirol. P. 2. tit. 1. p. 29. Theſe were placed in contradiſtinction to the oſtriches, which could only walk, not fly. *Pitfield*, Nat. Hiſt. Anim. p. 221.

Subterranean BIRDS, thoſe which reſide in caves and holes under ground; as ſome ſpecies of owls, batts, *&c.* *Kirch.* Mund. Subter. l. 8. §. 4. T. 2. p. 88.

To this claſs may alſo be referred thoſe vaſt quantities of ducks, which break out of the caves adjoining to the Zirchnitzer ſea in time of thunder, in ſuch numbers as to cover the lake. Phil. Tranſ. N° 191. p. 420.

Singing BIRDS are the nightingale, blackbird, ſtarling, thruſh, linnet, lark, throſtle, Canary-bird, bullfinch, goldfinch, *&c.*

Migratory BIRDS, the ſame with birds of paſſage. See PASSAGE *birds*.

Decoy BIRDS, thoſe trained up to call and allure others into the fowler's nets, ſnares, lime-twigs, or the like. *Salmuth.* ad Pancirol. P. 1. tit. 23. p. 303.

Meſſage BIRDS, *aves internunciæ*, thoſe employed to convey letters, or other diſpatches, either for the ſake of expedition or ſafety. *Salmuth.* ad Pancirol. P. 2. tit. 1. p. 31. See CARRIER *pidgeon*.

Mocking BIRD, in Virginia, a *bird* which imitates the voices of men, and the notes of all other *birds*, by way of diſguiſe, and thus eludes and eſcapes the fowler. Phil. Tranſ. No. 206. p. 993. Trev. Dict. Univ. T. 4. p. 264. See MOCK-*bird*.

Humming BIRD, the American *tomineius*, denominated from the noiſe it makes in flight. It is ſaid to be the ſmalleſt of the whole ſpecies of *birds*. Phil. Tranſ. N° 200. p. 760. See GUAINUMBI.

Anomalous BIRDS. It is diſputed whether the bat belong to the *bird* or quadruped kind. Later naturaliſts incline to the latter, and, notwithſtanding its wings, condemn it to be a mouſe. *Vater.* Phyſ. Exper. P. 2. §. 8. c. 3. p. 811. See BAT.

The like difficulty has been raiſed with reſpect to the barnacle, ſolan-gooſe, or macreuſe. Some, notwithſtanding its feathers, maintain it to be a fiſh. What ſhall we then ſay of the *pinguin*, or *penguin*, an eaſtern *bird*, denominated from the iſland of that name, which walks erect like a man, has no feathers, nor flies, nor aſſociates with other *birds*; and which ſome will have to participate both of the human, the volatile, and the fiſhy kingdom [a]. In reality, it is *animal bipes* and *implume*, and conſequently a man, on the terms of Plato's definition. Kircher ſpeaks of a *bird* called *hoang-cio-yu* in China, which even changes its nature and kind twice every year, being a *bird* all the ſummer, and a fiſh all the winter [b].—[[a] Trev. Dict. T. 4. p. 658. voc. *pinguin*. [b] Id. T. 4. p. 264. voc. *oiſeau*.]

Macer, among the antients [a]; and Willughby [b] and Ray [c], among the moderns, have written expreſsly on *birds*. This

laſt author aſſirms, that the kinds of *birds* known and deſcribed, are about 500 [d]. Boyle has given pneumatical experiments on *birds in vacuo* [e].—[a *Fabric.* Bibl. Græc. l. 6. c. 9. T. 13. p. 37. [b] Ornithol. Lond. 1676. fol. V. Phil. Tranſ. N° 120. p. 482, ſeq. [c] Synopſ. Method. Avium, &c. Vid. *Ray*, Phil. Lett. p. 278. Ejuſd. Collect. Local Words, p. 81, ſeq. [d] Id. Wiſd. of God, P. 1. p. 28. [e] Philoſ. Work. Abr. T. 2. p. 467, ſeq. 524, ſeq. 534, ſeq. 543, 594, 599.]

Preſcience, or knowledge of futurity, was ſuppoſed, among the antients, a natural faculty of *birds*, owing, perhaps, to their nearer intercourſe with heaven [c], or their breathing a purer and more celeſtial air than other animals. Hence it was, that Divination by *birds* obtained among the antient Greeks and Romans, being performed by obſerving, and interpreting the flight, chirping, and feeding of divers birds [d].—[c Mem. Acad. Inſcrip. T. 2. p. 384. Item, T. 6. p. 283. [d] *Pitiſc.* Lex. T. 1. p. 226. ſeq. voc. *auſpicium*. *Sale*, not. to Koran. c. 17. p. 229.] See AUGURY and AUSPICIUM, *Cycl.*

This kind of divination is ſaid to have been invented by Prometheus, or Melampus, the ſon of Amithaon and Dorippe; tho' Pliny reports that Car, from whom caria received its name, was the firſt who made predictions by means of *birds*, as Orpheus by other animals. Pauſanias aſſures us, that Parnaſſus, from whom the mountain of that name was denominated, firſt obſerved the flight of *birds*. Clemens Alexandrinus ſays the ſame of the Phrygians. The art, however, appears to have been much improved by Calchas; and at length gained ſo much credit, that nothing of moment was undertaken, either in war or peace, no honours conferred, nor magiſtrates created, without the approbation of *birds*. At Lacedemon the king and ſenate had always an augur attending them, to adviſe with; and Cælius reports, that kings themſelves uſed to ſtudy augury. *Potter*, Archæol. Græc. l. 2. c. 15. T. 1. p. 320. ſeq.

Birds, with regard to augury and divination, were of divers kinds, *viz.*

Aves auſpicatæ, or *felices*, thoſe which naturally portended good: Such were the dove, ſwan, &c.

Aves inauſpicatæ, *diræ*, *ominoſæ*, thoſe which boded ſome evil or miſchief: Such were the kite, raven, crow, and owl, every where, except at Athens. *Crinit.* de Honeſt. Diſcipl. l. 21. c. 15. *Struv.* Synt. Ant. Rom. c. 6. p. 262. *Lakemak.* Antiq. Græc. Sacr. P. 3. c. 9. §. 2. p. 545.

Admiſſiva, that which excites and encourages the conſulter to execute what he has in view. *Feſt.* in voc. *Pitiſc.* Lex. Ant. voc. *avis*. *Struv.* lib. cit. p. 263.

Arciva, or *arcula*, that which forbad a thing to be done; otherwiſe called *clivia*, *clamatoria*, and *prohibitoria*, *inebra*, and *inhiba*. *Struv.* ib. p. 263.

Incendiaria, that which gave omen of a fire, or other calamity; or which is ſeen carrying a fire-brand from the funeral pile to a houſe. *Struv.* ib. p. 264.

Remora, that which ſtays, or delays an action.

Siniſtra, that on the left hand, denoted a happy or proſperous omen; and was alſo called *ſecunda*, *proſtera*. *Serv.* ad Æn. l. 2. v. 693.

Alites, thoſe which gave omens by their wings and flight. *Pitiſc.* T. 1. p. 72. voc. *alites*.

Oſcines, thoſe by their ſinging or chirping.

Pulli, by their pecking.

Præpites, thoſe which by their flight, or perching gave happy omens. *Serv.* ad Æn l. 2. v. 361. *Pitiſc.* Lex. Ant. T. 2. p. 510. voc. *præpetes*. *A. Gell.* l. 6. c. 6. Crinit. de Honeſt. Diſcipl. l. 21. c. 15.

Inferæ, or *inebræ*, thoſe which in the like manner gave ill omens.

BIRD, *in falconry*, denotes a hawk, or falcon. See FALCON.

Niais BIRDS, *aves nidulariæ*, thoſe taken while in the neſt.

Ramage BIRDS, *arboreariæ aves*, thoſe only arrived at ſtrength ſufficient to fly from branch to branch.

Hagard BIRD, that which has lived at liberty, and is thence more wild and untractable.

BIRD *of the fiſt*, that which having been reclaimed, returns to, and perches on the hand, without the help of a lure.

BIRD *of lure*, that which comes to the lure, and by that means to the hand.

Baſtard BIRD, a hawk, for inſtance, bred of a hawk and a lanier. Or a ſaker, bred of a ſaker and a lanier.

Coward BIRDS, thoſe which only purſue their game for their own belly, and which are not to be reduced to juſt ſport. As ravens, kites, &c.

BIRDS, *in medicine*, are chiefly the gooſe, duck, hen, peacock, and pidgeon; of which the fat, eggs, and dung, are in uſe.

Sextus Placidus treats at large concerning remedies from *birds*. De Medicina ex Animal. P. 2. Vid. Fabric. Bibl. Græc. l. 6. c. 9. T. 13. p. 416.

Birds, conſidered as foods, are of a dry warm nature, as feeding chiefly on dry meats, and drinking little [a]. They are ſuppoſed to abound much in ſalt and ſulphur; whence Kircher accounts for the bright colours of their feathers [b]. Some have denied the exiſtence of any volatile ſalt in *birds*. Borrichius eſtabliſhes it [c]. [a *Caſt.* Lex. Med. p. 92. voc. *aves*. [b] Kirch. Mund. Subterr. l. 8. §. 1. T. 2. p. 17. [c] Vid. *Barthol.* Act. Med. T. 2. Obſ. 67. p. 169.]

The peacock has been called *avis medica*, or the medicinal *bird*, on account of its great efficacy in divers diſeaſes. *Schröd.* Pharm. l. 5. cl. II. 1. n. 65.

BIRDS, in huſbandry, are to be guarded againſt as deſtructive. Kites and hawks, to chickens; crows and pidgeons, to corn; jays, ſparrows, and other ſmall *birds*, to fruits, &c.

Writers in huſbandry preſcribe divers methods of ſcaring away, or deſtroying noxious *birds* [a]. Some prevent *birds* from eating the ſeed when firſt ſown, by liming, and mixing it with ſoot [b].—[a *Mortimer*, Syſt. of Huſband. l. 7. c. 3. T. 1. p. 320. [b] *Plott*, Nat. Hiſt. Staffordſ. c. 9. §. 40. p. 352.]

BIRD, *in aſtronomy*, *avis indica*, or *apoda*, is one of the 17 new conſtellations of the ſouthern hemiſphere, conſiſting of 12 ſtars of the fifth magnitude. Trev. Dict. T. 4. p. 264.

BIRD *of Phœbus*, the raven, one of the ſouthern conſtellations, containing ſeven ſtars; five of the third magnitude, one of the fourth, and one of the fifth. Trev. Dict. T. 4. p. 264.

BIRDS, *in heraldry*, are figures frequently born in arms.

Birds are eſteemed a more honourable bearing than fiſhes; and wild and ravenous birds, than tame ones.

Birds, according to Leigh, are to be numbered as far as ten; according to Chaſſaneus to 16; after which they are to be blazoned, without number. When their bills and feet are of a different colour from the reſt, they are ſaid to be *membred*.

Birds of prey are more properly ſaid to be *armed*.

Birds born of their natural colour, are to be blazoned by *proper*, without mention of the colour. In the blazoning of fowls much exerciſed in flight, if the wings be not diſplayed, they are ſaid to be born *cloſe*, e. gr. he beareth an eagle, a hawk, or a ſwallow, *cloſe*. In the general, wherever a *bird* is found in any action or poſture, to which nature does not ordinarily incline it, ſuch action or poſture is to be named, otherwiſe not. *Coats*, Her. Dict. p. 53, ſeq.

BIRD *of the wiſe*, among chemiſts, is the philoſophical mercury; and, in general, ſublimations or ſubſtances ſpiritualized by the ſeparation of their terreſtrial part.

Golden BIRD, the hermetic matter partly matured.

Green BIRD, the philoſopher's ſtone, at the time when its green colour appears. Dict. Trev. T. 4. p. 264.

BIRD-*call*, a little ſtick cleft at one end, in which is put a leaf of ſome plant, wherewith to counterfeit the cryer's call of ſeveral birds, and bring them to the net, or ſnare, or lime-twig, to be taken. Vid. *Savar.* Dict. Comm. T. 1. p. 116. voc. *appeau*. See CALL.

A laurel leaf fitted on the bird-call, counterfeits the voice of lapwings; a leak that of nightingales, &c. Dict. Trev. T. 4. p. 660. voc *pipeau*. *Cox*, Gent. Recreat. P. 3. p. 23.

Cyprian BIRDS, *aves Cypriceæ*, or *aviculæ Cypriæ*, is a denomination given to a kind of odorous candles, made of the matter of troches, and burnt for the ſake of their fumes, called alſo from their figure *baculi*, or *ſticks*. *Caſtel.* Lex. Med.

BIRD *of hermes*, *avis*, or *avicula hermetica*. All chemiſts ſpeak much of that which flies in the night without wings. *Dorn.* Tranſmut. Metall. c. 2. in Theat. Chym. T. 1. p. 725. and T. 4. p. 355. *Libav.* T. 2. p. 333. *Caſtel.* Lex. Med.

Some will have the *avicula hermetica* to be an univerſal ſalt prepared from dew. Ephem. Acad. Nat. Cur. T. 1. ann. 3. p. 452. It alſo denotes red lead. *Caſtel.* Lex. Med.

BIRD-*lime* (*Cycl.*)—This is a very peculiar vegetable juice, of the bark of the holly; but if trials were made, it ſeems probable, that many other juices would be found to have the ſame clammy nature. The miſletoe affords a juice, even ſuperior to that of the holly; and if a young ſhoot of the common elder be cut thro', there will a ſtringy juice draw out in threads, and follow the knife like *bird-lime*, or the juice of holly. It ſeems in this tree to be lodged, not in the bark, but in certain veins juſt within the circle of the wood. The roots of all the hyacinths alſo afford a tough and ſtringy juice of the ſame kind, and ſo does the aſphodel, the narciſſus, and the black bryany root, in a ſurpriſing quantity.

Bird-lime is a ſubſtance very apt to be congealed, and rendered unſerviceable by froſts; to prevent which, it is proper, at the cold ſeaſons, to incorporate ſome petroleum with it, before it is uſed. The method of uſing it is to make it hot, and dip the ends of a bundle of rods in it; then turn them about, and playing them together, till a ſufficient quantity is extended over them all. If ſtrings, or cords, are to be limed, they are to be dipped into the *bird-lime*, while very hot. The cords may be put in cold, but the rods ſhould be warmed a little. Straws are to be limed, while the matter is very hot; they are to be put into a large bundle at a time, and worked about in it, till they are well beſmeared. When thus prepared, they ſhould be put into a leather bag, till they are uſed. When the twigs, or cords, are to be put in places ſubject to wet, the common *bird-lime* is apt to have its force ſoon taken away. It is neceſſary, therefore, to have recourſe to a particular ſort, which, from its property of bearing water unhurt, is called *water bird-lime*; and is prepared thus.

Take a pound of ſtrong and good *bird-lime*, waſh it thoroughly in ſpring-water, till the hardneſs is all removed; and then beat it well, that the water may be clean ſeparated, ſo as not a drop remains; then dry it well, and put it into an earthen pot; add to it, as much capon's greaſe as will make it run. Then add two ſpoonfuls of ſtrong vinegar, one ſpoonful

of oil, and a ſmall quantity of Venice turpentine. Let the whole boil for ſome minutes over a moderate fire, ſtirring it all the time. Then take it off; and when there is occaſion to uſe it, warm it, and cover the ſticks well with it. This is the beſt ſort of *bird-lime* for ſnipes, and other birds that love wet places.

The moſt ſucceſsful method of uſing the common *bird-lime* is this: cut down the main branch or bough of any buſhy tree, whoſe twigs are thick, ſtrait, long and ſmooth, and have neither knots nor prickles. The willow and the birch-tree afford the beſt of this kind. Let all the ſuperfluous ſhoots be trimmed off, and the twigs all made neat and clean; they muſt all be well covered with the *bird-lime*, within four inches of the bottom; but the main bough, from which they grow, muſt not be touched with the *lime*. No part of the bark, where the *lime* ſhould come, muſt be left bare; but it is a nice matter to lay it on properly, for if it be too thick it will give the birds a diſtaſte, and they will not come near it; and if there be too little of it, it will not hold them when they are there. When the buſh is thus prepared, it muſt be ſet up in ſome dead hedge, or among ſome growing buſhes near the out ſkirts of a town, a farmer's back-yard, or the like, if it be in ſpring; for theſe places are the reſort of the ſmall birds at that time. If it be uſed in ſummer, the buſh muſt be placed in the midſt of a quick-ſet hedge, or in groves, buſhes, or white thorn trees, near fields of corn, hemp, flax, and the like; and in the winter, the proper places are about ſtacks of corn, hovels, barns, and the like. When the *lime*-buſh is thus planted, the ſportſman muſt ſtand as near it as he can, without being diſcovered; and with the mouth, or otherwiſe, make ſuch ſort of notes, as the birds do, when they attack, or call to one another. There are bird-calls to be bought for this uſe; but the moſt expert method is to learn the notes of call of the ſeveral birds, and imitate them by a ſort of whiſtling. When one bird is thus inticed to the buſh, and hung faſt, the buſineſs of the ſportſman is not to run up to take it, but to be patient; for it will hang itſelf more faſt, by its ſtruggling to get away; and its fluttering will bring more to the buſh; ſo that ſeveral may be taken together. The time of the day for this ſport is from ſun-riſe to ten o' clock, and from one to ſun-ſet. Another very good method of bringing the birds together, is by a ſtale; a bat makes a very good ſtale, but it muſt be faſtned, ſo as to be in ſight at a diſtance. An owl is a ſtill better ſtale, for this bird never goes abroad, but it is followed by all the ſmall birds in the neighbourhood. They will gather together in great numbers about it, and having no convenient place to ſit on, but the *lime*-buſh, will be taken in great numbers. If a living owl or bat is not to be had, the ſkin ſtuffed will ſerve the purpoſe, and will laſt twenty years. Some have uſed the image of an owl carved in wood, and painted in the natural colours, and it has been found to ſucceed very well.

A method of deſtroying ſmall birds in great numbers by *lime*-twigs, is this: take two or three hundred ſmall twigs, about as thick as ruſhes, and three or four inches long; ſtick theſe on the tops of ten or a dozen cocks of hemp, or other produce of the field, cut and cocked up. There are generally in theſe fields of hemp vaſt numbers of linnets, and other ſmall birds, feeding on the ſeeds; the whole field is to be beat over, after the twigs are planted, and the birds will naturally ſettle on the cocks, and many dozens of the ſeveral kinds will be taken at once.

Another method of taking great numbers in the winter ſeaſon is this; take a number of wheat ears, with the ſtraws about a foot long to them; melt ſome good *bird-lime* gently over the fire, adding one fourth part of its weight of ſome light fat, ſuch as the greaſe of fowls, or the like. When this runs thin, cover the ſtraws with it for ſix inches below the ears. Then take into a field, where the ſmall birds reſort in flocks, as they do at this ſeaſon of the year, a quantity of theſe limed ſtraws, and a peck or two of chaff; ſpread the chaff over a large ſpace of ground, and among it place the limed ſtraws, ſticking them in the ground at the bottom, and letting the ear droop down. When the place is thus planted, the ſportſman muſt beat the neighbouring fields and hedges; and the birds being diſturbed will riſe, and they will naturally make their way to where they ſee the chaff. They will then ſoon be pecking at the ears of corn; and, as the limed ſtraws will ſoon begin to ſtick to them, they will mount up into the air with them; but in their flight, the ſtraws ſoon get under their wings, and faſten them together; ſo that they can no longer fly, but fall ſtruggling to the ground.

As ſoon as they begin to fall, the ſportſman's buſineſs is to watch, not to run to take them up, for in a little time, more will be entangled; and, with patience, ſometimes five or ſix dozen may be taken in this manner at a time. This method ſucceeds better, as the weather is more and more ſevere; and beſt of all, when the ground is covered with ſnow. The ſame place will ſerve for many repeated flights. The limed ſtraws are to be taken away, as ſoon as the firſt flight is taken, and the place new bated with chaff; the birds may then be left to feed with freedom; and the next morning, the limed ſtraws being ſet up again, they will be caught in greater numbers, than at the firſt attempt.

M. Barrera, phyſician at Perpignon, has diſcovered an animal *bird-lime*, prepared of the bolls of a ſort of caterpillars, by putrifying them in the earth, ſteeping them in water, and then pounding and mixing them with olive oil. *Fontenel.* Hiſt. Acad. Scienc. 1720. p. 12.

BIRDS *neſts*, in cookery, the neſts of a ſmall Indian ſwallow, very delicately taſted, and frequently mixed among ſoops. On the ſea-coaſts of China, at certain ſeaſons of the year, there are ſeen vaſt numbers of theſe birds; they leave the inland country at their breeding time, and come to build in the rocks, and faſhion their neſts out of a ſpumous matter, which they find on the ſhore, waſhed thither by the waves. They are of a hemiſpheric figure, and of the ſize of a gooſe's egg, and in ſubſtance much reſemble the ichthyocolla, or iſing-glaſs. The Chineſe gather theſe neſts, and ſell them to all parts of the world; they diſſolve in broths, *&c.* and make a kind of jelly, of a very delicious flavour.

BIREMIS, in antiquity, a veſſel with one or more rows of oars, ranged, as ſome think, in two ſtages over each other; or a veſſel having two ranks or rows of oars placed over, and aſide of each other. But the particular fabrick of theſe veſſels ſeems far from being a ſettled point among the learned. Vid. *Meibom.* de Fabr. Trirem. *Pitiſc.* Lex. Antiq. T. 1. p. 279. Phil. Tranſ. N° 79. p. 3071. *Hook*, Poſth. Work. p. 572. *Kenn.* Rom. Ant. P. 2. l. 4. c. 20.

The Roman *Biremis* is the ſame with what the Greeks called δικρόλα, and ſtands contra-diſtinguiſhed from *triremis*, *quadriremis*, *&c.*

BIRETUM. See the article BIRRETUM.

BIROTA, *birotum*, a kind of vehicle denominated from the two wheels whereon it moved. *Pitiſc.* Lex. Antiq. T. 1. p. 279. The *birota*, by the conſtitution of Conſtantin [a], was drawn by three mules, and carried two hundred pound weight [b]; by which it was diſtinguiſhed from the rheda, which carried a thouſand pounds, and was drawn by eight, and in winter by ten mules.—[[a] Leg. 8. Cod. Theod. de Curſ. publ. [b] *Pancir.* Notit. Dignit. Imp. Orient. c. 6. *Du Cange*, Gloſſ. Lat. T. 1. p. 559.]

BIRRETUM, in writers of the middle and lower ages, a thin black cap, or cover for the head, made of linnen fitted cloſe to the head, and pointed by a pyramid, antiently worn by prieſts, ſoldiers, doctors, *&c.* *Pitiſc.* Lex. Ant. T. 1. p. 279. *Du Cange*, Gloſſ. Lat. T. 1. p. 560.

The word *birretum* ſometimes written *birrettum* and *biretum*, is alſo applied to a cap or coif of a judge, or ſerjeant at law *Spelm.* Gloſſ. p. 82.

The *birretum* alſo denotes the cap worn by the novices in the jeſuits order, formerly of a ſquare, now a round figure.

The *birret* was the ordinary cover of the head in France 500 years ago. It took its denomination from *birrus* or *birrum*, the coat antiently uſed by eccleſiaſtics; with which the cap was then of a piece, and made part of it; ſo that the whole covered, not only the head, but the ſhoulders. Afterwards, when they began to retrench the lower part, ſtill retaining the upper, it was no longer called *birrus*, or *birrum*, but diminutively *birret*, or *birretum*. *Trev.* Dict. Univ. T. 1. p. 1048.

BIRRUS, βιρρος, an antient habit worn by the chriſtians in Africa.

The word is alſo written *byrrus*, ſuppoſed to be formed from πυρρος, on account of its red colour. *Fab.* Theſ. p. 355.

Some will have the *birrus* an epiſcopal habit [a]. Others extend it to all the clergy [b]. Others, on juſter grounds, make it the common coat of all the chriſtians in that quarter [c].—[[a] *Magr.* Vocab. Eccleſ. p. 36. [b] *Pitiſc.* Lex. Ant. T. 2. p. 279. [c] *Bingh.* Orig. Eccleſ. l. 6. c. 4. §. 19. *Du Cange*, Gloſſ. Lat. T. 1. p. 560, ſeq. *Spelm.* Gloſſ. p. 81, ſeq. See BIRRETUM.

BIRTH (*Cycl.*)—*Eight months* BIRTH, *partus octimeſtris*, ſeldom if ever produces a living, or lively child. An eight month's *birth* is always weak and ſickly, and ſcarce ever ſurvives the fortieth day.

Phyſicians, as well as lawyers, have doubted, whether an eight months *birth* be legitimate and vital? grounded on the authority of Hippocrates, the ſuperſtitious concluſions of aſtrologers, the powers of numbers, and the malevolent influences of Saturn, the doctrine that the mother's labour and pains in this month are the ſevereſt, and her danger greateſt. Vid. *Plin.* l. 7. p. 5. *Hippoc.* de Octimeſt. Partu. *Maubr.* Fem. Phyſic. p. 142.

From the powers of the ſeptenary number, they conclude that the firſt efforts of the child for delivery muſt have been in the ſeventh month; and that, if its ſtrength had been ſufficient, it muſt have appeared at the cloſe of that month: But failing of that, it weakened itſelf ſo by its efforts, that the following month ſuffices not to recover itſelf; ſo that if it happen then to appear, it is no ways in a condition to ſupport the entrance upon a new ſtate of life. *Calv.* p. 676. voc. *Partus. Gorr.* Med. Defin. p. 464. voc. τοκος. *Maubr.* l. c. p. 141.

Seven months BIRTH, *partus ſeptimeſtris*, that which happens on the 180th or 182d day after impregnation. *Teichmey.* Inſt. Med. c. 9. qu. 9. p. 57.

This phyſicians allow may not only be a living, but a vital *birth*; tho' it does not often prove long-lived. And the civil laws all own it as legitimate. *Plin.* Nat. Hiſt. l. 7. c. 5.

Hippocrates has written expreſsly on the ſeven months *birth* [a], περὶ ἑπταμήνου, in two books, the firſt of which, as now extant, is held ſpurious. The ſecond is commented on by Galen. περὶ ἑπταμήνων βρέφων. [b].—[[a] Vid. *Fabric.* Bibl Græc. l. 2. c. 24. T. 1. p. 851, and 853. [b] *Fabric.* ibid. l. 4. c. 17. T. 3. p. 532.

Expoſition of BIRTH, among the antients, was where a new-born infant is expoſed or caſt-away, and left to the mercy of the firſt-comer, who may either take and bring it up, or ſuffer it to periſh. See EXPOSING *of children.*

Ger. Nodt has a treatiſe expreſs on the ſubject. *Julius Paulus*, ſive de partu expoſitione & nece apud veteres, Lugd. Bat. 1710, 4to.

Suppoſition of BIRTH, *partus ſuppoſitio*, in the civil law, is a crime, for which accuſation may be intented by thoſe who have intereſt therein, and is puniſhed with death, like the *crimen falſi*, or forgery. Trev. Dict. Univ. T. 4. p. 2070.

Suppreſſion of BIRTH, *partus ſuppreſſio*, is the crime of a woman, who endeavours, by medicines, to deſtroy or hinder the *birth* of a child; or, after its being born, hides, expoſes, or even ſtrangles it.

BIRTH-*day*, the anniverſary return of the day whereon a perſon was born.

This anſwers to what the antients called γενέθλιον, *genethlion*, *natalis dies*, *natalitius dies*, *natalitia*, and, in the middle age, *genetalius*.

The antients placed a good deal of religion in the celebration of *birth-days*, and took omens from thence of the felicity of the coming year. We meet with *birth days* of the gods, emperors, great men, poets, and even private perſons. What is more, the *birth-days* of cities, as Rome and Conſtantinople, were celebrated with great pomp by the inhabitants [a]. Virgil's *birth day* was held very ſtrictly by the wits and poets who ſucceeded him. Pliny aſſures us, that Silius did it with more ſolemnity than he did his own [b].—[[a] *Struv.* Ant. Rom. c. 9. p. 450, ſeq. *Pitiſc.* Lex. Ant. T. 2. p. 249, ſeq. voc. *natalis*. [b] *Plin.* Epiſt. l. 3. ep. 7. *Fabric.* Bibl. Lat. l. 1. c. 12. T. 1. p. 271.]

The manner of celebrating *birth-days* was by a ſplendid dreſs; wearing a ſort of rings peculiar to that day; offering ſacrifices, the men to their genius, of wine, frankincenſe; the women to Juno; giving ſuppers, and treating their friends and clients; who, in return, made them preſents, wrote and ſung their panegyrics, and offered vows and good wiſhes for the frequent happy returns of the ſame day. *Struv.* Ant. Rom. c. 1. p. 91 & 113, ſeq. It. c. 9. p. 450, ſeq. *Pitiſc.* Lex. Ant. T. 2. p. 249, ſeq. *Calv.* Lex. Jur. p. 605. voc. *natales*. *Fabric.* Bibl. Lat l. 2. c. 22. T. 1. p. 615.

The *birth-days* of emperors were alſo celebrated with public ſports, feaſts, vows, and medals ſtruck on the occaſion. *Du Cange*, Diſſ. de Infer. Ævi Numiſ. p. 31. *Struv.* Ant. Rom. c. 9. p 442.

But the antients, it is to be obſerved, had other ſorts of *birth-days* beſides the days on which they were born. The day of their adoption was always reputed as a *birth-day*, and celebrated accordingly.

The emperor Adrian, we are told, obſerved three *birth-days*; *viz.* the day of his nativity, of his adoption, and his inauguration. *Goldaſt.* Not. ad Hadrian. Reſp. & Reſcr. ap. *Fabric.* Bibl. Græc. l. 6. c. 6. T. 12. p. 541.

In thoſe times it was held, that men were not born only on thoſe days when they firſt came into the world, but on thoſe alſo when they arrived at the chief honours and command in the commonwealth, *e. gr.* the conſulate. Hence that of Cicero in his oration *ad quirites*, after his return from exile: *A parentibus id quod neceſſe erat, parvus ſum procreatus, a vobis natus ſum conſularis.*

Add, that thoſe who returned from baniſhment, were alſo conſidered as being born again, *renaſci*, and ever after called the day of their return their *birth-day*. Thus Cicero to Atticus; *Diemque natalem reditus mei cura, ut in tuis ædibus amæniſſimis agam tecum, & cum meis. Turneb.* adverſ. l. 3. c. 4. *Calv.* Lex. Jur. p. 605. in voc. *noſci.*

Cenſorinus has a treatiſe *de die natali*, addreſſed to Q. Cerellius, as a compliment on his *birth-day*. Vid. *Fabric.* Bibl. Lat. l. 3. c. 4. T. 2. p. 45.

BIRTH-*days of the ſaints and martyrs*, *natales ſanctorum*, denote the days of their deaths. *Du Cange*, Gloſſ. Lat. T. 3. in voc. *natales*.

In reality, *natalis* among the antients was not reſtrained to *birth-days*, but extended to all feaſt-days.

Hence it is we meet with *natalis ſolis*, *natalis calicis*, *natalis eccleſiæ*, *natalis reliquiarum*, &c. Trev. Dict. Univ. T. 4. p. 32. in voc.

BIRTH-*ſin*, the ſame with original ſin. *Benn.* Meth. Stud. 39 Art. p. 67. See ORIGINAL *ſin*, *Cycl.*

BIRTH *wort*, in botany, the Engliſh name of the plant *ariſtolochia*. See ARISTOLOCHIA.

BIS, in botany, a name given by ſome old writers to the *napellus*, or monks-hood; and by others to the *cicuta*, or hemlock. See NAPELLUS and CICUTA.

There is, however, another ſenſe of the word, very different from both theſe, in which it is uſed to expreſs an eſculent plant. The phraſe *bis alnil* is frequent among the Arabian writers; and as *alnil* ſignifies only of the river Nile, the whole name ſhould ſeem to expreſs the character of ſome poiſonous plant growing in the Nile. This, however, is by no means the ſenſe in which it is received; for we are told, that *bis alnil* ſignifies a bulbous root of a ſweet taſte, growing on the mountains about Damaſcus, and in other parts of Syria, and eaten in the ſpring by the people of the country thereabouts. It is certain, that this interpretation agrees very well with the ſenſe in which all the Arabians have mentioned this plant; though it is difficult to underſtand why they ſhould give the name of a poiſon to an eſculent root, or the name of the river Nile to a plant growing on the mountains of Syria. See BULBUS.

BIS *annual*, a name given by botaniſts to thoſe plants, which ordinarily do not flower till the ſecond year. Dict. Ruſt. in voc. *bloſſom*.

BISA, or BIZA, a coin in Pegu, current there for half a ducat.

The denomination is alſo given to a kind of weight uſed in the ſame country, equivalent to two Venetian pounds five ounces, or to three pounds nine ounces of the ſmaller weight of that city. *Savar.* Dict. Comm. T. 1. p. 350.

BISACUTA, in middle-age writers, an ax with two edges, or which cuts either way [a]; or a miſſive weapon, pointed at both ends [a].—[[a] *Du Cange*, Gloſſ. Lat. T. 1. p. 562. [b] *Aquin.* Lex. Milit. T. 1. p. 130.]

We meet with *ſecuris biſacuta*, πέλεκυς δίστομος, or δίστομος ἀξίνη. Walſingham repreſents the *ſecuris biſacuta* as peculiar to the Scottiſh nation. See BATTLE-*ax*.

BISARCA, in botany, a name uſed by ſome authors for the herb *tarragon*. *Ger.* Emac. Ind. 2.

BISBÆA, βισβαία, a feaſt celebrated by the Meſſapii, after the pruning of their vines, to obtain of the gods that they might grow again the better. *Meurſ.* Græc. Ferial. *Faſold.* de Feſt. Græc. l. 12. c. 9. *Schott.* Lex Ant. p. 221.

The word is formed from βισβη, uſed by ſome for a vine.

BISCAIAN *language* denotes the Cantabrian, or antient language of Spain, being a branch of the Celtic, which firſt gave way to the Romanſe. *Greenw.* Engl Gram. in Pref. p. 12, ſeq.

BISCIA, in zoology, a name by which ſome have called the *acus*, or, as we call it in Engliſh, the tobaccopipe-fiſh, the needle-fiſh, or trumpet-fiſh. *Willughby*, Hiſt. Piſc. p. 159. See the article ACUS.

BISCUTELLA, in botany, a name given by Linnæus to a genus of plants, called by Tournefort and others *thlaſpidium*. *Linnæi*, Gen. Plant. p. 314. See THLASPIDIUM.

BISELLIARII, or BISELLIARI, in antiquity, thoſe who enjoyed the honour or privilege of the *biſellium*. *Piteſc.* Lex. Ant. T. 1. p. 280. See BISELLIUM.

The word occurs in antient inſcription, CN. PLAETORIO VIRO AUGUSTALI BISELLIARIO. *Grut.* Corp. Inſcrip. p. 1099. n. 2.

The *honor biſellii* appears to have been much the ſame with what in France is called *droit de fauteuil*; and the *biſelliarii* thoſe who, in public aſſemblies, enjoy this diſtinction of the *fauteuil*, while other perſons are obliged to ſtand, or ſit on benches, ſtools, or ordinary chairs [a]. Scaliger, in his index to Gruter, miſtook the *biſelliarii* for artificers who made theſe ſeats [b].—[[a] Trev. Dict. Univ. T. 1. p. 1050. [b] *Varr.* de Ling. Lat. l. 4. *Pitiſc.* Lex. Antiq. T. 1. p. 280, ſeq.]

BISELLIUM, in antiquity, a kind of ſeat or chair, larger and richer than ordinary, big enough to hold two perſons, wherein to ſit in courts, theatres, and other public aſſemblies. *Grut.* Corp. Inſc. p. 475. n. 3.

Hence ſome will have the *honor biſellii*, in an antient inſcription in Gruter, to be underſtood of the *cella curulis*, or curule chair; but others, with more probability, of a privilege granted by authority to well-deſerving perſons of ſeeing the public ſhews at theatres and amphitheatres in a chair more ſplendid than thoſe of the reſt of the company [a]. Some ſuppoſe the magnitude and capacity of the *biſellium* to have been ſymbolical, and to have imported, that ſuch perſons were worth two, or equivalent to two others [b].—[[a] *Du Cange*, Gloſſ. Lat. T. 1. p. 563. [b] *Chimentel.* de Honor. Biſellii, c. 35, 36. *Schott.* Lex. Ant. p. 221.

BISERULA, in botany, the name of a genus of plants, including the *pelecinus* of Tournefort, and the *utrinque ſerrata* of Rivinus. The characters are theſe: the perianthium is compoſed of one leaf of a tubulated form, and lightly divided into five ſegments at the edge; theſe ſegments are pointed, and equal; and the two upper ones ſtand diſtant: the flower is of the papilionaceous kind: the vexillum is large, bent back at the ſides, roundiſh, and aſcending upwards: the alæ are of an oblong oval figure; they ſtand free, and are ſmaller than the vexillum: the carina is of the length of the alæ, and is obtuſe, and aſcends upwards: the ſtamina are diadelphous filaments, included in the carina: the antheræ are ſmall: the germen of the piſtil is oblong, and compreſſed: the ſtyle is pointed, and placed upwards: the ſtigma is ſimple: the fruit is a large, ſlender, flat, and bilocular pod, the partition which divides its cavity into two parts, running contrary-wiſe to the valves: the ſeeds are numerous, compreſſed, and kidney-ſhaped. *Linnæi*, Gen. Plant. p. 359. *Tourn.* Inſt. p. 234. *Rivin.* c. 4. p. 122.

BISETÆ, in natural history, a term used to express a genus of flies of the class of the *seticaudæ*, distinguished from the others by their having two hairs or bristles growing out at the tail. There are many species of this genus, and they are usually divided by authors into two principal kinds; such as have sharp ends, and such as have blunt ones. Of the former kind there are two species, which have silvery wings, four to each fly, ornamented with black spots, the shoulders blackish, the rest of the body of a dun colour, with transverse lines of black: the antennæ are slender, and black; and the hairs at the tail very long. These differ from one another only in size; and, besides these, our hedges afford us several other kinds of the sharp-ended *bisetæ*.

Among the blunt-ended, there is one of a yellowish colour, else much resembling the *henothrix*. Of the two bristles at the tail in this species, the one is extended to its full length, the other curled up in a spiral form. There are several other species of this kind also found frequently in our hedges. See HENOTHRIX.

BISHOP (*Cycl.*)—By the antient discipline, *bishops* were to be married once [a], and not to put away their wives on pretence of religion; but a second marriage was a disqualification for this order. If they lived chaste, they were ranked as confessors [b].—[[a] Can. Apost. 5. *Suic.* Thes. Eccles. T. 1. p. 725. voc. γαμος. [b] *Johns.* Eccles. Law, an. 740. §. 28. It. an. 957. §. 7.]

Hence, in writers of the middle age, we meet with the term *episcopa*, or *bishopess*, the *bishop's* wife, or the wife of one afterwards consecrated, and made a bishop. By an antient canon of the council of Tours, a *bishop*, who had no *bishopess*, was forbid to have any crowd of women in his retinue: *episcopum episcopam non habentem, nulla sequatur turba mulierum.* Vid. *Baron.* an. 34. n. 289. *Du Cange*, Gloss. Lat. T. 11. p. 254.

Bishops are called in antient writers by several other titles and denominations, as *apostles*, *angels*, *princes* of the church, *pontifices*, *pontifices maximi*, *summi sacerdotes*, or high-priests, *flamines*, *domini*, *beatissimi*, *sanctissimi*, θεωροι, προεδροι, προεστωτες, εφοροι, *God's beadles*, &c. Vid. *Bingh.* Orig. Eccles. l. 2. c. 2. §. 1, seq. It. l. 2. c. 9. §. 6. *Du Cange*, Gloss. Lat. T. 1. p. 191. voc. *angelus*. It. T. 2. p. 459. voc. *flamines*, & p. 160. voc. *domini*. It. T. 4. p. 346. voc. *pontifex*. *Bos.* Exerc. de Pontif. Max. c. 1. §. 4. *Suic.* Thes. Eccles. T. 1. p. 1293. voc. εφορος. It p. 1314. voc. ηγεμων. It. p. 1397. voc. θεωρος. It. p. 1444. voc. ιεροσολεστης.

Some *bishops*, in the middle age, on account of their *regalia*, or temporalities, were obliged to a military service called *hostis*, by which they were to lead their vassals into the field, and attend the king in his military expeditions. This Charlemaign excused, and even forbid: but the prohibition was little regarded; since we find the thing often practised afterwards. On the *bishop*'s refusal, his temporalities were seized, or mulcts imposed. Some, by a peculiar privilege, were only obliged to attend the army when the king himself was there; as the *bishop* of Orleans: others were intirely exempted from going in person, and only obliged to send their vassals. *Du Cange*, Gloss. Lat. T. 2. p. 791. voc. *hostes*. & p. 792—798.

Among the French *bishops*, there are three who are dukes and peers, and three counts and peers, by their office: the *archbishop* of Rheims is the first duke and peer; the *bishop* of Langres the second; the *bishop* of Laon the third: the *bishop* of Beauvais is the first count and peer; the *bishop* of Noyon the second; and the *bishop* of Chalons the third. Trev. Dict. Univ. T. 2. p. 1525. voc. *eveſque*.

The election of *bishops* was antiently placed in the clergy, and the people of the parish, province, or diocese; but afterwards, princes and magistrates, patriarchs and popes, usurped the power [c]. The election was to be within three months after the vacancy of the see; and the person to be chosen out of the clergy of that church [d]. Formerly the *bishop* claimed a share in the election of an *archbishop*; but this was set aside by the popes [d].—[[c] Vid. *Suic.* Thess. Eccles. T. 1. voc. επισκοπος, p. 1181. It. voc. επικηρυττω, p. 1167. *Bingh.* l. 17. c. 5. §. 3. It. l. 4. c. 2. §. 4. *Johns.* an. 692. per tot. [d] *Bingh.* l. 2. c. 10. §. 2. It. c. 11. §. 1. [e] *Johns.* an. 1126. Pref. It. an. 1222. Pref.]

In England, till the time of Henry VIII. *bishops* were elected by the chapters of monks or canons, some shadow of which still remains in the present method of disposing of bishopricks. *Johns.* Eccles. Law, an. 742. in Pref.

Ordinarily, at least three *bishops* are required in the ceremony of consecrating a *bishop* [f]; but, in some cases, a single one might suffice [g]. The English succession of protestant *bishops* stands on this last footing.—[[f] *Bingh.* l. 2. c. 11. §. 4. [g] *Johns.* an. 601. §. 6.]

The age of a *bishop* is to be at least thirty years; and, by the antient discipline, none were to be chosen but those who had passed through all the inferior orders [h]; but, in some cases of necessity, this was dispensed with, and deacons, nay laymen, were raised *per saltum* to the episcopal dignity [i].—[[h] *Suic.* Thes. Eccles. T. 1. voc. επισκοπος, p. 1183. *Bingh.* Orig. Eccles. l. 2. c. 10. [i] *Suic.* loc. cit. p. 1184. *Bingh.* loc. cit. §. 4.]

BISHOP *abbot*, *episcopus abbas*, was an abbot invested with the episcopal order; of which we meet with several in the richer and more considerable monasteries. See ABBOT, *Cycl.*

BISHOP *monk*, *episcopus monachus*, was a religious invested with the episcopal order, but still residing in a monastery, whether out of choice, or for want of another habitation. *Johns.* Eccles. Law, an. 673. §. 4. See MONK, *Cycl.*

Some take these *bishop monks* for a fiction, and to have arisen from a corruption of the text of a canon, where *episcopi monachi* crept in by the copyist's inadvertency, instead of *ipsi monachi*. The emendation may be just; but cannot disprove the existence of *bishop monks*. *Johns.* Eccles. Law, an. 693. §. 6.

BISHOPS *of villages*, *chorepiscopi*. See CHOREPISCOPUS, *Cycl.*

When, on account of the episcopal dignity, it was prohibited to appoint any *bishops* in villages or little towns, yet, in some cases, this had been found necessary, it was ordered, that they should not longer be denominated *bishops*, but *periodeutæ*. Concil. Laod. c. 57. *Suic.* Thes. Eccles. T. 2. p. 676. voc. περιοδευτης.

BISHOP is also a title sometimes given in the antient church to deacons. *Suic.* Thes. Eccles. T. 1. p. 870. voc. διακονος. See DEACON, *Cycl.*

Cardinal BISHOP, *episcopus cardinalis*, a *bishop* in chief, or *in capite*. *Du Cange*, Gloss. Lat. See the article CARDINAL, *Cycl.* and *Suppl.*

St. Gregory sometimes uses the term for a proper *bishop*. Antiently there were also *bishops*, who, by a peculiar privilege from the holy see, were ranked, and had a seat among the cardinals.

Cathedral BISHOP was also a title given the proper *bishops*, by way of distinction from the *chorepiscopi*. See CATHEDRAL, *Cycl.*

Vague BISHOPS, *episcopi vagantes*, those without any diocese, sometimes attendant in camps, or in foreign countries, for the conversion of infidels.

The like *vague bishops* were sometimes also granted by popes to monasteries, exempt from the jurisdiction of the diocesan, where they performed all the episcopal functions. They were chosen by the abbot from among his monks; but consecrated by the neighbouring *bishops*, and served on occasion to consecrate new abbots. Thus it was a *bishop* was granted by pope Stephen I. to the monastery of St. Dennis, and another by Urban II. to St. Martins at Tours. *Du Cange*, Gloss. Lat. T. 2. p. 256, seq.

BISHOP *in partibus infidelium*, he who is dignified with the title of a bishoprick, whose district or diocese is in the possession of infidels or heretics.

By the canon law, a *bishop in partibus* is qualified hereby to be a coadjutor of another *bishop*. See COADJUTOR, *Cycl.*

The denomination took its rise from the expulsion of the *bishops* and clergy out of the Holy-land by the Saracens; when flying into Italy for shelter, coadjutories were given them for their subsistence. *Du Cange*, ibid. T. 2. p. 256.

Acephalous BISHOP, he who is immediately subject to the papal see, without any metropolitan over him.

BISHOP *elect* is he who has the king's nomination, with the sanction of the chapter; but without consecration.

BISHOP *designed*, *episcopus designatus*, denoted a coadjutor of a *bishop*, who, in virtue of his office, is to succeed at the incumbent's death. *Calv.* Lex. Jurid. p. 278. voc. *designatus*. See COADJUTOR, *Cycl.*

Suffragan BISHOPS are coadjutors or assistants of diocesan *bishops*, authorized by commission from him.

Exempt BISHOPS, those freed from the jurisdiction of the metropolitan, and immediately subject to the see of Rome alone: See SUFFRAGAN, *Cycl.*

BISHOP *of the palace*, *episcopus palatii*, was probably the same with *bishop* of the king's chapel, a title in the court of Bohemia. *Du Cange*, Gloss. Lat. T. 2. p. 255, seq.

It was also a title given those *bishops*, who, by licence of the pope, dwelt in palaces of kings, to be in readiness for spiritual service, and counsel in church-matters.

Such court *bishops* the kings of Hungary and Croatia appear to have had; sometimes also called *royal bishops*, *episcopi regales*.

BISHOP *of the prime see*, *episcopus primæ sedis*, denoted a primate, otherwise denominated a *senior bishop*, *senex episcopus*. *Du Cange*, Gloss. Lat. T. 4. p. 806. voc. *senex*. See PRIMATE, *Cycl.*

Commendatory BISHOPS, or *bishops in commendam*, are cardinals not of the order of *bishops*, or other prelates, who yet hold bishopricks *in commendam*. See COMMENDAM, *Cycl.*

The appellation had its origin during the residence of the papal see at Avignon, when scarce any cardinal, priest, or deacon, was created, who held not one, two, three, or more bishopricks *in commendam*. *Du Cange*, Gloss. Lat. T. 2. p. 255.

Universal or catholic BISHOP is a title given to the patriarch of Armenia. *Fabric.* Bibl. Græc. l. 5. c. 5. T. 6. p. 393.

BISHOP *of the catholic or universal church*, *episcopus catholicæ ecclesiæ*, a title sometimes assumed by the popes.

Cyprian has a notion, which frequently occurs, of but one bishoprick in the church, wherein every single *bishop* had his share, so as all had the same concern in the whole. He does not represent it as a monarchy in the hands of any single *bishop*; but a diffusive power, which lay in the whole college of *bishops*, every one of which had a title to feed the whole church, or drive heresy out of any part of it. *Bingh.* Orig. Eccles. l. 2. c. 5. §. 2.

In

In things which did not belong to the faith, they were not to meddle with other men's dioceſes; but, when the faith or welfare of the church were at ſtake, every other biſhoprick was as much their dioceſe as their own.

BISHOP *of biſhops*, *epiſcopus epiſcoporum*, was a title antiently given to the prelates of ſome of the greater and more honoured ſees, as Jeruſalem and Rome.

The firſt who had the title was James *biſhop* of Jeruſalem; which made the ſpurious author of the epiſtles under the name of Clemens Romanus, addreſs one to that *biſhop* thus: *Clemens Jacobo domino epiſcopo epiſcoporum.* Some will have the appellation to have been common to all *biſhops*. *Bingh.* Orig. Eccleſ. l. 2. c. 2. §. 8.

BISHOPS, in the Lutheran church, are thoſe more uſually called *ſuperintendents*. See SUPERINTENDENT, *Cycl.*

The Calviniſts allow of no other *biſhops* beſides preſbyters; but the Lutherans make ſome diſtinction, and give a ſuperiority or preheminence over the reſt to their *biſhops*, or ſuperintendents.

BISHOP is alſo a quality ſometimes attributed to ſecular princes, in reſpect of their ſupremacy or juriſdiction in matters belonging to religion. See SUPREMACY, *Cycl.*

In this ſenſe it is that the emperor Conſtantin, in a letter to the *biſhops* in his dominions, calls himſelf *common biſhop*, κοινὸς ἐπίσκοπος, as being, in ſome reſpects, general *biſhop* of the whole Roman world. Vid. *Euſeb.* Hiſt. Eccleſ. l. 1. c. 44. & *Eund.* de Vit. Conſtant. l. 4. c. 24. *Fabric.* Bibl. Antiq. c. 13. §. 3. p. 437.

This epiſcopate of princes has given offence to the adorers of the eccleſiaſtic hierarchy, who have made many attempts to explain it away. Some, with Pet. de Marca, will have the epiſcopate of Conſtantin to be only underſtood in reſpect of the Gentiles, who were yet out of the church: others, with Leo Allatius, maintain it only to relate to civil matters: others give other ſolutions: yet pope Leo allowed the prieſthood to kings and emperors; on which footing, we do not ſee how the epiſcopate can be denied them. Vid. *Fabric.* Lux. Evangel. p. 282.

BISHOP *of the Jews*, *epiſcopus Judæorum*, the head of that people in England, choſen by themſelves, to whom they ſubmitted to be judged, and governed according to their law. *Prideaux*, Connect. P. 2. l. 5. p. 478. not.

This officer, which ſubſiſted under our Norman kings, and was licenſed by them, anſwered to the *æchmalotarchs* in Babylonia, and the *alabarchs* in Egypt. See ÆCHMALOTARCHA and ALABARCHA.

BISHOPS *at cheſs*, a kind of pieces, the third in rank below queens, but above knights, diſtinguiſhed by their cloven heads. Vid. Compl. Gameſt. p. 125 & 128. Court Gameſt. p. 95.

In Latin writers of the middle age, the *biſhop* is called *alphinus*; by the French *le fou*, the *fool* or *madman*. *Du Cange*, Gloſſ. Lat. T. 1. p. 150. voc. *alphinus*. See CHESS, *Cycl.*

BISHOP'S *ſee*, or *ſeat*, originally denoted the throne or chair in the church where the *biſhop* ſat. Vid. *Bingh.* Orig. Eccleſ. l. 2. c. 9. §. 7.

This was alſo denominated ἁψὶς, *apſis*. *Suic.* Theſ. Eccleſ. T. 1. p. 612. voc. ἁψὶς. See APSIS, *Cycl.*

BISHOP'S ſee alſo denotes the city or place where the reſidence of the *biſhop* is fixed.

Every *biſhop*'s ſee was antiently called *ſedes apoſtolica*; though the appellation has ſince been reſtrained to the ſee of Rome. *Bingh.* Orig. Eccleſ. l. 2. c. 2. §. 3. p. 22.

Antiently *biſhops* ſeem to have had a right to ſit as judges in the hundred and county-courts [k]. In after-times, they were forbid to ſit in ſecular courts [l], and had ſeparate courts erected for them [m]; which proved an occaſion of much diſpute between the two juriſdictions [n]. No church-tenant might be ſued in any court but the *biſhop's* [o]. There are alſo traces of a ſeparate court of the *biſhops* much earlier, among our Saxon anceſtors, in the eighth century [p].—[[k] *Johnſ.* Eccleſ. Law, an. 877. §. 16. It. an. 958. §. 7. It. an. 1008. §. 8. [l] Id. an. 1102. §. 1. [m] Id. an. 1085. [n] Id. an. 1164. Pref. [o] Id. an. 1064. §. 4. [p] Id. an. 734. §. 10.]

The regard born to the character of *biſhops*, made them the common arbitrators even of ſecular cauſes [q]: they had the cognizance of all cauſes concerning lands in frank almoign [r]; and for eccleſiaſtics, were judges even in capital cauſes [s].—[[q] *Bingh.* l. 2. c. 7. §. 1. & §. 4. It. l. 5. c. 2. §. 1. [r] *Johnſ.* an. 1164. §. 9. [s] Id. an. 1018. §. 14.]

BISHOPRIC (*Cycl.*)—The *biſhoprics* of England have undergone many alterations, divers antient ſees being loſt, or removed to other places, and many new ones erected. *Johnſ.* Eccleſ. Law, an. 1075. Pref.

It was long a complaint, that the number of biſhops and *biſhoprics* in the iſland was too ſmall [a]. About the middle of the eighth century, there were only twelve [b]; and, in the middle of the ſeventh century, there were no more biſhops than kingdoms, except that Kent had two; and the like had the eaſt Angles and Northumbrians for ſome time [c]. On excluding the pope, king Henry VIII. had a deſign to increaſe the number of *biſhoprics*, by contracting the dioceſes, which appeared too great and vaſt to be well overlooked by a ſingle man; but the deſign miſcarried [d]. Weſtminſter indeed was erected into a *biſhopric* in 1541; but it ſubſiſted not long, being converted, in 1550, into a dean and chapter [e].—[[a] *Johnſ.* Eccleſ. Law, an. 679. per tot. Id. an. 1023. Pref. [b] Idem, an. 679. §. 4. [c] Id. an. 673. §. 9. [d] *Bingh.* Orig. Eccleſ. l. 9. c. 8. in fine. [e] New View of Lond. T. 2. §. 2. p. 495.]

Many of the biſhops ſees were antiently fixed in obſcure villages; which ſeeming a diminution to the epiſcopal dignity, it was ordained, that, for the future, no biſhops ſhould be ordained in ſmall cities; which yet was not ſo ſtrictly kept to, but that we meet with deviations from it. *Bingh.* l. 2. c. 12. §. 1. & §. 3. It. c. 13. §. 2. See BISHOP.

Archbiſhop Lanfranc cauſed the ſees of many biſhops which till then remained in country villages, to be removed into cities. Whence a biſhop and a cathedral with us is the note of a city, excepting in that of Weſtminſter. The ſame alſo obtained in other countries. *Somn.* Antiq. of Canterb. p. 240.

Biſhops in Scotland had antiently no fixed ſees; but each exerciſed his epiſcopal office and juriſdiction indifferently, in whatever part of the kingdom he happened to reſide. King Malcolm III. founded the firſt regular *biſhopric*, which was that of Muthlac; though the *biſhopric* of St. Andrews claims an elder eſtabliſhment under king Kenneth II. *Nicolſ.* Scott. Hiſt. Libr. c. 5. p. 210.

BISK, or BISQUE, in cookery, a rich ſort of broth or ſoop, made of pidgeons, chickens, force-meat, mutton-gravy, and other ingredients. Trev. Dict. Univ. T. 1. p. 1052.

The word is French, formed, as ſome think, from *biſcocta*; by reaſon the *biſque*, conſiſting of a diverſity of ingredients, needs ſeveral repeated coctions to bring it to perfection.

There is alſo a *demi-biſque*, made at a low expence, where only half the ingredients are uſed; and a *biſque* of fiſh, made of carps, minced with their roes and lobſters.

BISKET (*Cycl.*)—To preſerve ſea-*biſket* from inſects, Mr. Hales adviſes to make the fumes of burning brimſtone paſs through the caſks full of bread. *Hales*, Philoſ. Experim

Biſket may be likewiſe preſerved a long time, by keeping it in caſks well calked, and lined with tin. *Boyle*, Phil. Work. abridg. Vol. 1. p. 52.

The antients had their *biſket* prepared after the like manner, and for the like uſe, as the moderns. The Greeks called it ἄρτον δίπυρον, *q. d.* bread put twice to the fire. The Romans gave it the name of *panis nauticus*, or *capta*. Pliny denominates it *vetus aut nauticus panis tuſus atque iterum coctus* [a]. By which it appears, that, after the firſt baking, they ground or pounded it down again for a ſecond. In ſome middle-age writers, it is called *paximas*, *paximus*, and *panis paximatus* [b]—[[a] *Plin.* Hiſt. Nat. l. 22. c. 25. [b] *Caſen.* Orig. p. 24. *Calv.* Lex. Jur. p. 612. voc. *nauticus*. *Pitiſc.* Lex. Ant. T. 1. p. 565. voc. *capta*.]

Among the Romans, we alſo meet with a kind of land-*biſket* for the camp ſervice, called *buccellatum*, ſometimes *expeditionalis annona*, which was baked much, both to make it lighter for carriage, and leſs liable to corrupt, the coction being continued till the bread was reduced one-fourth of its former weight. *Pitiſc.* Lex. Antiq. T. 1. p. 299. voc. *buccellatum*. *Calv.* Lex. Jur. p. 127.

BISLINGUA, *double-tongue*, a name uſed by many authors for the narrow-leaved *ruſcus*, or butchers broom; called by many others the Alexandrian bay, or *laurus Alexandria*. See the article RUSCUS.

BISMILLAH, in the Mahometan cuſtoms, a ſolemn form, *viz.* *in the name of the moſt merciful God*, conſtantly placed at the beginning of their books and writings in general, as a peculiar mark, or diſtinguiſhing characteriſtic, of their religion, it being counted an impiety to omit it.

The Jews, for the ſame purpoſe, make uſe of the form, *in the name of the Lord*, or, *in the name of the great God*; and the eaſtern Chriſtians that of, *in the name of the Father, and of the Son, and of the Holy Ghoſt*. Vid. *Sale*. Prelim. Diſc. to Koran, §. 3. p. 59.

BISMILLAH is alſo uſed among the Arabs as a word of invitation to eat.

An Arab prince will frequently ſit down to eat in the ſtreet before his own door, and call to all that paſs, even beggars, in this word, who do not fail to come and ſit down to eat with him; for the Arabs are great levellers, and ſet every body upon a footing with them. *Pocock*'s Egypt. p. 483.

BISMUTH, (*Cycl.*) in natural hiſtory, the name of a mineral ſubſtance, of the genus of the *aſphurelata*, or, as they are commonly called, the *ſemi-metals*. See ASPHURELATA.

Biſmuth bears a near affinity to zink. See ZINK, *Cycl.* and *Suppl.*

Its weight and colour diſcover it to be of a mercurial or metallic nature. In common menſtruums, it undergoes much the ſame alterations, and aſſumes much the ſame forms as lead [a]. Quincy ſays, there is always ſome ſilver in it [b].—[[c] *Stahl*, Philoſ. Princip. Chem. P. 2. §. 4. p. 345. [b] *Quinc.* Diſpenſ. p. 51.]

It is hard, and leſs friable than antimony, not ductile under the hammer, and, by the action of an acid on it, lets fall a bituminous matter. *Boerh.* Elem. Chem. P. 2. p. 35. *Chauv.* p. 82.

Its ingredients ſeem to be a mineral ſalt, a groſs ſulphur, mercury, a little arſenic, and a great deal of earth. Mem. Acad. Scienc. ann. 1713. p. 55.

Biſmuth is ſometimes found native, but that very rarely. Its

moſt

moſt uſual appearance is in the ſtate of ore, into which it is reduced by its particles being penetrated by, and intimately mixed with, a ſulphur, and with a large quantity of arſenic, and with an earthy matter, which yields a blue colour, equal to the zaffar, or ſmalt produced from cobalt.

In the fuſion of this ore, the ſulphur and arſenic evaporate over the fire; and the reguline matter being freed from its impriſoned ſtate, runs off from the earthy ſubſtance, which being left fixed behind, may, with the addition of flints, and a fixed alkali, be run into a fine blue, glaſſy matter, no-way differing from the ſmalt of cobalt.

Native *biſmuth* is found in ſmall compact maſſes, of a pale lead colour on the outſide, and when broken, of a fine, glittering, ſilvery white, and compoſed of a multitude of foliaceous flakes or plates, laid evenly over one another, and diſpoſed in ſeveral irregular directions in the maſs.

In the ſtate of ore, it is uſually of a bright ſilvery white, and of an obſcurely foliaceous ſtructure. Sometimes alſo it appears granulated; and in ſome ſpecimens, the granules are large, and the maſſes coarſe; in which caſe, every ſeparate granule appears of a cubic form.

It is ſubject to fewer variations in its ore than moſt other minerals; but it is ſometimes turned yellow by an over-proportion of ſulphur, and ſometimes is very deeply tinged with the matter of the common marcaſites, and, in this condition, is often miſtaken for mere marcaſite, to the no ſmall loſs of the proprietor of the mine.

It is very common in Germany and England. The tin-mines in Cornwall afford great quantities of it; but it is not much known there

Biſmuth is eaſily ſeparated from its ore, and may be procured pure, only by melting it in a crucible over a gentle fire. When the ore is more impure, it is eaſily ſeparated by means of the common black flux of the metallurgiſts; but, with this mixture, the fire muſt be kept very moderate, otherwiſe the *biſmuth* will be loſt. The regulus of *biſmuth*, thus prepared, is like the ore of *biſmuth* in its pureſt ſtate, or the native *biſmuth*, being compoſed of a ſeries of plates or flakes, arranged in various directions, and looking very much like thoſe of many of the ſpars; and each plate in theſe ſeries is compoſed, as in the ſpars, of regular cubic or parallelepiped concretions. It is naturally very bright and ſhining, and of a ſilvery white; but it eaſily tarniſhes, and acquires a pale yellow.

Biſmuth attenuates the parts of all other metals, by mixture with them. It renders them much more eaſily fuſible, and much more fit for amalgamation with mercury; the mercury, by its means, taking up a much larger quantity of them, and carrying them much more eaſily through leather. It is ſoluble, like lead, in vinegar; and the ſalt produced from it reſembles that of lead in its ſweet taſte. When diſſolved in ſtronger acids, it yields the famous coſmetic magiſtery, and is a very valuable mixture in the metal uſed for caſting types for printing, and in bell-metal. *Hill*, Hiſt. of Foſſ. p. 624.

Mr. Boyle mentions a medicine prepared from *biſmuth* by calcination, and the addition of ſpirit of vinegar and *cremor tartari*, which has been extolled in the dropſy. He alſo mentions a preparation of it with common ſublimate into a white powder, a few grains of which purge gently. *Schroder.* Pharmacop. l. 3. c. 18. ap. *Boyle*, Works abridg. p. 501.

Chemiſts have talked of a ſtrange liquor obtainable from the ore of *biſmuth*, which put into a phial cloſely ſtopped, would riſe and fall with the increaſe and wane of the moon. Vid. *Boyle*, Works abridg. Vol. 1. p. 69, 70. & p. 583.

He does not ſay he himſelf ever ſaw ſuch a liquor; but quotes Orthelius for that purpoſe.

Some, on account of the white bright colour of *biſmuth*, call it the *ſilver marcaſite*. Phil. Tranſ. N° 396. p. 193. *Burggr.* Lex. Med. T. 1. p. 1586. See MARCASITE.

Piſmuth is of great uſe as a flux-poader, to procure a thin fuſion to metals; and hence becomes of ſervice in the making of ſodders. It is alſo uſed by pewterers, inſtead of regulus of antimony. *Kirch.* Mund. Subter. l. 11. §. 3. p. 301. *Stahl.* loc. cit. p. 346. See FLUX.

Its medicinal virtue is much the ſame with that of the droſs of lead, being ſeldom uſed except in external forms [a], as containing an arſenical ſalt, very dangerous to be taken inwardly; yet M. du Clos made a purgative of it to be uſed in the dropſy [b]. Add, that *biſmuth* being diſſolved in ſpirit of nitre, yields a fume, which being precipitated with water, produces a white powder, found a good diaphoretic in acute caſes [c].—[a *Quinc.* Diſp. p. 51. b *Boyle*, Phil. Work abridg. T. 1. c *Stahl*, loc. cit. p. 345.]

But its chief uſe among the antients, as well as moderns, is as a coſmetic. Vid. *Pitiſc.* Lex. Ant. T. 1. p. 281.

Sig Poli, by repeated diſtillations of *biſmuth* with an equal quantity of corroſive ſublimate, procured a running mercury, and a fine powder, of the colour of pearl, which might be of uſe in counterfeiting the oriental pearls. Hiſt. Acad. Scienc. ann. 1713. p. 55.

BISMUTH *graupen*, in mineralogy, a name given by the Germans to a fixed earth contained in the ores of *biſmuth*, which ſerves to make ſmalt, as well as the earth of cobalt. After the *biſmuth* is melted from the ore, they take the *reſiduum*, or *graupen*, and mixing it with flints calcined and powdered, they run it into fine blue glaſs, which is no-way inferior to the common ſmalt.

The *biſmuth* ore is often mixed among the cobalt, and, in this caſe, the miners ſeparate them with all the care they can; but often they are not able to do it perfectly, and the two minerals bear the fire together; in which caſe, there ariſes ſome difficulty in the working, for the *biſmuth* mixing itſelf with ſome of the earth of the cobalt, in this caſe, ſubſides to the bottom of the veſſel in form of a rediſh regulus; but this is to be ſeparated by a ſecond operation, and the regulus obtained pure and white; and its own earth, together with that of the cobalt, are ſeparated from it, and wrought together into ſmalt.

BISNOW, or BISCHNOU, a ſet among the Indian banians, or caſt of merchants. See BANIAN.

The banian ſect conſiſts of two leſſer ones; that of *biſnow*, and that of *ſamarath*.

The followers of the former hold one God, whom they call *ram-ram*, and allow of no lieutenants or deputy-gods, as is done by thoſe of the ſect *ſamarath*; but they allow their god a wife, and have idols, which they dreſs up with gold chains, and collars of pearl and precious ſtones, and pay them worſhip, by ſinging hymns in their temples, and dancing before them to the ſound of flagelets and kettle-drums.

In this ſect, the wives do not burn themſelves after their huſbands death, as is practiſed by thoſe of the *ſamarath* ſect; but content themſelves with a perpetual widowhood. Trev. Dict. Univ. T. 1. p. 1051.

BISOMUM, in antiquity, a tomb for two bodies, or the aſhes of two. See TOMB, *Cycl.*

The word is hybrid, compounded of the Latin *bis*, twice, and the Greek σωμα, body, or aſhes of a body. Some, with more purity, write *diſomum*.

The antients frequently buried two, three, or four bodies in the ſame ſepulchre, diſpoſed aſide of each other; for it was held an impiety to lay one a-top of another [a]. Hence the ſepulchres of the primitive Chriſtians had the words *biſomi*, *triſomi*, *quadriſomi*, &c. inſcribed on them, to indicate the number of bodies depoſited in them [b].—[a *Pitiſc.* Lex. Ant. T. 1. p. 281. b *Du Cange*, Gloſſ. Lat. T. 1. p. 564. *Salmaſ.* Exerc. ad Solin. p. 1207.]

BISON, in natural hiſtory, the name of a ſpecies of wild bull, which differs from all other ſpecies, by having a very ſhaggy mane, running down his neck quite to his ſhoulders, and a large hump upon his back. In Mr. Ray's time, there was a bull of this kind kept in St. James's Park; but there was no account of whence it was brought. This author ſuppoſes it to have been from Florida, where, according to Ambroſe Paré, there are bulls called *butrones* by the natives, which have horns of about a foot long, and a bunch in the middle of the back, like the camel. Thevet alſo mentions this creature; and Geſner deſcribes it under the name of the *bos camelita*.

BISSACRAMENTALES, a denomination given by ſome Romiſh writers to proteſtants, on account of their only holding two ſacraments, *viz.* baptiſm and the ſupper. *Prateol.* Elench. Hæreſ. l. 2. §. 24. p. 101. See SACRAMENT, *Cycl.*

BISSELÆON, in the materia medica, a name that is found in many copies of the moſt antient Greek and Roman writers, and uſed to expreſs the oil of pitch, or that fluid ſubſtance which ſwims at the ſurface of melted pitch, and was taken up by means of wool or cotton by the antients, and uſed in many external diſorders. The common name of this oil was *piſſellæum*; and this other name is only a corrupt way of ſpelling it. The old authors, in many other words as well as this, have changed the initial P into B.

BISSEXTIALIS, or BISEXTIALIS *olla*, an antient meaſure or veſſel, containing twelve ounces, or two ſextaries. *Marcell.* Empir. c. 15. p. 108. *Du Cange*, Gloſſ. Lat. T. 1. p. 564. See SEXTARIUS, *Cycl.*

BISTI, a ſpecies of Perſian money, valued at ſixteen or eighteen French deniers. Some repreſent the *biſti* as an antient ſilver coin: others, as Chardin, make it only a money of account, and call it *dinar biſti*. *Savar.* Dict. Comm. T. 1. p. 352.

BISTORT, *biſtorta*, in botany, the name of a genus of plants; the characters of which are theſe: the flower is of the apetalous kind, conſiſting of a number of ſtamina, which ariſe from a cup, divided into ſeveral ſegments at the edge: the piſtil becomes afterwards a ſeed, uſually of a triangular figure, and contained in a capſule, which was before the cup of the flower. See Tab. 1. of Botany, Claſs 15.

To this it is to be added, that the flowers are diſpoſed in ſpikes; and the roots are large and fleſhy, oddly twiſted or contorted, and furniſhed with a number of ſmall fibres, like hairs. There are alſo ſome ſpecies of *biſtort*, in which, beſide the common flowers and ſeeds, there are certain tubercles, which have their roots, and rudiments of leaves.

The ſpecies of *biſtort*, enumerated by Mr. Tournefort, are theſe:

1. The common *biſtort*, with a leſs contorted root. 2. The *biſtort*, with a more contorted root. 3. The great alpine *biſtort*. 4. The middle-ſized alpine *biſtort*. And, 5. The little alpine *biſtort*. *Tourn.* Inſt. p. 511.

Biſtort, popularly called *ſnake weed*, is a very beautiful plant, and may be met with in moiſt places in many parts of England,

and growing to about a foot high, with deep green leaves, and very beautiful fleſh-coloured flowers, in ſhort, but thick ſpikes. The root is often an inch thick, and is oddly contorted and twiſted; it is of a blackiſh brown without, and of a beautiful pale red within. It ſhould be choſen plump, full, and well dried, not eaſy to be broken, and of an aſtringent, but not diſagreeable taſte.

The roots of the common *biſtort* are a ſtanding medicine in the ſhops; they are given in decoction, and ſometimes in powder, as an aſtringent, and generally in conjunction with the tormentil root. They give a bright red colour to the common hartſhorn drink, and add conſiderably to its virtue. It is good in diarrhœas, and hæmorrhages of all kinds.

Some alſo commend it as an alexipharmic, and ſudorific. *Quinc.* Diſpenſ. P. 2. Sect. 2. §. 164. p. 103. *Ray*, Synopſ. p. 59, ſeq. *Burrgr.* p. 1593. Savar. T. 1. p. 352.

Eiſtort is ſuppoſed to be the ſame with the antient καλαναγκη; others ſay, with the σπλαφυλλον, and others with the βεβλαυικη. *Gorr.* Def. Med. p. 80. 214, in voc. καλαναγκη, &c. See BRITANNICA.

BISTOURY (*Cycl.*)—We have the deſcription of a *biſtoury*, and furrowed director, ſomewhat different from the common, by Mr. Monro, in the Medic. Eſſ. Edinb. vol. 5. art. 41.

M. le Dran deſcribes a *biſtoury cachè*, for more ſafely performing the operation for herniæ. The point of the *biſtoury* ſlides in the furrow of the director, to keep down the guts, and thereby prevent their being cut. *Le Dran*, Tom. 2. Obſ. 80.

BISTRE, a compoſition made of the moſt gloſſy and higheſt burnt ſoot pulverized, and paſſed thro' a fine ſieve, then baked in a little gum water, and made into cakes. *Savar.* Dict. Comm. T. 1. p. 353.

BIT (*Cycl.*)—To BIT *a horſe*, is to give him ſuch a bridle as is moſt proper for gaining his conſent to thoſe actions, which are required of him. Dict. Ruſt. T. 1. in voc.

All *Bits* ought to be proportioned to the mouth of the horſe, according as it is more or leſs cloven or wide; or more or leſs ſenſible and tender: Alſo according as the tongue and lips are higher and flatter; and as the palate is more or leſs fleſhy. *Guill.* Gent. Dict. P. 1. in voc.

BIT is alſo uſed for a little tool, fitted to a ſtock, or handle to bore withal.

In this ſenſe we ſay, the *bit* of a piercer, an augre, or the like; meaning that iron part of thoſe tools, wherewith the holes are bored. See AUGRE, *Cycl.*

BIT *of a Key* is that part fitted at right angles to the ſhank of the key, wherein the wards are made. *Moxon*, Mechan. Exerc. P. 1. p. 94. See KEY, LOCK, *&c. Cycl.*

BIT is alſo uſed in commerce, for a piece of coin current in Jamaica, and valued at 7 *d.* ½. Lex. Mercat. p. 386.

BITS, or *bitts*, in a ſhip, are two great pieces of timber uſually placed abaft the manger in the ſhip's looſ, thorough which the croſs piece goes, their lower parts being faſtned to the rudders; and their middle parts, in great ſhips, bolted to two large beams, croſs the bows. Their uſe is to belay the cable to, when the ſhip rides at anchor. *Guill.* Gent. Dict. P. 3. *Manwvr.* Seaman's Direct. p. 9.

The word ſeems formed from the French *bittes*, which ſignifies the ſame [a]; unleſs we will ſuppoſe the French word formed from ours [b].—[a *Aubin*, Dict. Marin. p. 84, voc. *bittes*. b *Skin.* Etym. in voc.]

In great ſtorms, to ſtrengthen the *bitts*, and ſecure the bows, the cable is faſtened to the main maſt. *Guill.* loc. cit.

Fore-jeer-BITS, thoſe to which the fore-jeer is faſtened and belayed. *Guill.* loc. cit.

Fore-top-ſail-ſheet-BITS, thoſe to which the fore-top-ſail-ſheet is belayed. *Guill.* loc. cit.

BITE (*Cycl.*) is defined to be a ſolution of the continuity of a ſoft part, cauſed by the impreſſion of an animal's teeth. *Caſt.* Lex. Med. p. 510. in voc. *morſus.*

For the poiſonous, or venomous *bites* of vipers, the rattle-ſnake, mad-dogs, the Tarantula, *&c.* See VIPER, RATTLE-SNAKE, *&c.*

Snake-ſtone, ſnake-weed, *terra melitenſis*, &c. are reputed ſpecifics againſt poiſonous *bites*. *Grew*, Muſ. Reg. Societ. P. 1. §. 3. p. 52. and p. 227, and 347. See SNAKE-*ſtone*, SNAKE-*weed*, &c.

The *bites* of ſpiders, at leaſt ſome ſpecies, alſo appear to be poiſonous; which has perhaps been the occaſion of the common error, that this inſect is poiſonous, when eaten. See the article SPIDER.

Mr. Robie, a phyſician in New England, gives the hiſtory of a perſon bitten in the leg by a ſmall ſpider, accidentally incloſed in his ſtocking; it was followed by an acute, erratic pain; firſt in the leg, then in the groin, and ſucceſſively paſſing into the ſmall of the back, the thigh, and the head, attended with a numbneſs, *&c.* It was cured with ſp. cor. cerv. and ſal. vol. corn. cerv. with *vinum viperinum*, and onions or garlic externally applied to the wound. Vid. Phil. Tranſ. N° 382. p. 69. ſeq.

Sig. Redi attributes the malignity of the *bite* of a viper, to a yellow juice lodged in a bag behind the gum, which is inſtilled thro' a ſlit in the teeth, into the wound. M. Bourdelot, and Charas, aſcribe it to the irritated bilious ſpirits, and breath of the enraged animal. Vid Phil. Tranſ. N° 83. p. 4074 ſeq.

In ſupport of which it is alledged, that the viper's lungs are full of bilious ſpirits, which exhale with its breath; and that there is an immediate duct in this creature, from the gall-bladder to the throat; by means of which, a quicker, and more copious infuſion of the bile, is made into the wound. But much of this may be juſtly doubted of. Phil. Tranſ. N° 77. p. 3015.

The beſt remedy for it is ſucking the wound; a kind of cure, for which the antient Marſi and Pſilli are celebrated. *Redi*, in Phil. Tranſ. N° 9. p. 161. See VIPER.

The beſt cure for the *bite* of the rattle-ſnake is an actual cautery; *e. gr.* a hot burning coal held on the wound. Phil. Tranſ. N° 210. p. 127.

The *bites* of divers creatures, when mad, are poiſonous, which at other times are not ſo, as of dogs, cats, men, *&c.* See HYDROPHOBIA, MAD-*dog*, MADNESS, MANIA, *&c.*

BITE is alſo applied, in a leſs proper ſenſe, to the impreſſion of other ſharp, or pungent bodies. Thus a file is ſaid to *bite* the metal; aqua fortis *bites*, or eats into copper.

BITERLOGH, or BITHERLAGE, the antient Daniſh military, or camp-law. *Suen. Agg.* Hiſt. Dan. p. 144.

The word is compounded from *bithe*, mulct; and *lagh*, law; q. d. the law of *mulcts*, or *wites*.

Among the laws of the Danes, there are two peculiarly eminent; *viz.* the *hird-ſtraa*, or court-law; and the *bitherlage raett*, made by Canute the Great, about the year 1035. Of which an Edition has been given by Reſenius. Hafn. 1673. *Du Cange*, Gloſſ. Lat. T. 1. p. 565, ſeq.

BITHYNIARCHIA, a ſort of ſuperior prieſthood in the province of Bithynia, to which belongs the ſuper-intendency of the ſacred games, and which gave an exemption to him poſſeſſed of it, called *bithyniarcha*, from the care of tutorage. *Montfauc.* Palæogr. l. 2. c 6. p. 161. *Calv.* Lex. Jur. p. 117. *Pitiſc.* Lex. Ant. T. 1. p. 283. *Du Cange*, Gloſſ. Græc. T. 1. p. 200.

BITTACLE, a ſquare box, or frame of timber, placed in the ſteerage of a ſhip, wherein the compaſs is placed. *Botel.* Sea Dial. 4. p. 121. *Guill.* Gent. Dict. P. 3. in voc. See COMPASS, *Cycl.* and *Suppl.*

The word is formed, by contraction, from the French *habitacle*, which ſignifies the ſame.

Large veſſels have two *bittacles*, a leſſer placed before the pilot, and a greater before the ſteerſman. *Ozan.* Dict. Math. p. 279. *Savar.* Suppl. p. 869.

In the ſmaller veſſels, the *bittacle* is divided into three ſpaces or apartments; in large veſſels into five. One for the hour-glaſſes; another for the lamp, or light; another for the compaſs, *&c.* *Aubin*, Dict. Marin. p. 478. voc. *Habitacle.*

Great care is to be taken in the diſpoſition, framing, *&c.* of the *bittacle*, that it ſtand true, and that it be not faſtened together with iron nails, but with wooden pins, in regard the former would affect the compaſs. Vid. *Harris*, Treat. of Navigation, c. 4. p. 191.

BITTACUS, in natural hiſtory, a name given by Cteſias, and ſome others of the Greek authors, to the parrot. The word *pſittacus* is ſo near this, that they are plainly only a corruption of one another. The Greeks called this bird indifferently *pſittacus* and *ſittacus*, as they did the fine ointment *ſagda*, indifferently by that name, or *pſagda*, the *ps* being only one letter with them; and that, and the ſingle S, very frequently uſed at pleaſure for one another.

BITTER (*Cycl.*)—The qualities of *bitter* bodies, are ſuppoſed to be dry, warm, aſtringent and earthy. *Gorr.* Med. Defin. p. 373. voc. πικρον.

According to Grew, all plants which are *bitter* and pungent, either on the tongue, or in the throat, are good cleanſers, *e. gr.* daiſy, anagallis [a], *&c.* The ſame author adds, that moſt purgative and emetic plants, which have any ſenſible taſte, are *bitter*; either ſimply, as colocynthis; or *bitter* and aſtringent, as aloes, *&c.* [b]—[a *Grew*, Idea of Philoſ Hiſt. of plants, §. 30. p. 15. b *Grew*, l. c. §. 30. p. 14.]

Bitter things are generally reputed ſtomachic; yet, according to Abercromby, they are naturally the reverſe, and hurtful to the ſtomach; and only become beneficial to it, where their aſtringency renders them proper. Philoſ. Tranſ. N° 171, p. 1026. See STOMACHIC, *Cycl.*

BITTER *purging ſalt*, *ſal catharticum amarum.* See EPSOM *ſalt.*

BITTER *place*, *locus amarus*, a poor barren ſoil, by Pliny called *terra amara*, *ſive macra*. *Plin.* Hiſt. Nat. l. 17. c. 5. *Du Cange*, Gloſſ. Lat. T. 1. p. 159. voc. *amarus.*

BITTER, in the ſea language, denotes a turn of the cable about the bitts, in order to its being veered out by little and little at pleaſure. *Botel.* Sea Dial. 4. p. 199. *Guill.* Gent. Dict. *Manwar.* lib. cit. P. 3. p. 9. in voc.

A ſhip is ſaid to be brought up to a *bitter*, when ſhe is ſtopped by her cable. *Guill.* loc. cit.

BITTER-*end*, is that part of the cable, which ſtays within board, wound about the bitts, when the ſhip is at anchor [a], When they would have that end bent to the anchor, they ſay, bend to the *bitter-end* [b].—[a *Botel.* l. c. b *Manw.* p. 9.]

BITTERN, in zoology, the name of a bird of the heron kind, called by authors *ardea ſtellaris*; and by ſome *taurus*, *botaurus*, *butorius*, and *ocnus*. In Engliſh, the *butter-bump*, and *mire-drum.*

It is nearly of the ſize of the common heron; its head is ſmall and narrow; its crown is black; and there is alſo a black ſpot on each ſide, near the angle of the mouth. Its throat and ſides are reddiſh, variegated with black tranſverſe lines; the neck is covered with very long feathers, which make it appear much thicker and ſhorter than it really is; its belly is of a duſky white, with a caſt of a browniſh red, and its back is variegated with a pale reddiſh brown and black. It makes a very remarkable noiſe, which it repeats either three or five times. It is heard only in the building time, which begins in February. The common people, from the ſingularity of the noiſe, think the bird, in order to make it, ſticks its beak in a reed, or in the mud. It is commonly found lurking in ſedgy and reedy places, near the waters, and ſometimes in hedges.

Toward autumn, this bird flies very high in an evening after ſun-ſet, riſing with a ſpiral aſcent, till quite out of ſight; and as they riſe they make an odd noiſe, not at all like their uſual note. This they repeat alſo very often, as they are on the wing in the night; and hence they are called by ſome, tho' improperly, the *night raven*. It builds on the ground, and lays five or ſix eggs, which are roundiſh, and of a greeniſh white. When wounded, and going to be taken, it ſtrikes at the perſon's eye, and ought carefully to be guarded againſt. *Ray*'s Ornithol. p. 208.

BITTERN is alſo a name given to the brine ſwimming upon the firſt concreted ſalt in the ſalt-works; this liquor is ladled off, that the ſalt may be taken out of the veſſel, and is afterwards put in again, and affords more ſalt, which is to be ſeparated like the reſt, by ladling off the liquor a ſecond time, and ſo on. *Boerhaave*'s Chem. p. 104. n.

The *bittern*, according to Mr. Boyle, is a very ſaline, bitter, ſharp, pungent liquor, which drains off in the making of ſalt from ſea water; or which remains in the pans, after the coagulation, and granulation of the purer, and more ſaline part, by boiling. Vid *Boyle*, Phil. Work. Abr. T. 3. p. 482. *Collins* Salt. and Fiſh. p. 53. *Quinc.* p. 51.

A *bittern* alſo runs, or oozes, from the heaps of foſſil ſalt at Limington, and Portſea in Hampſhire. Phil. Tranſ. N° 377. p. 348.

Bittern makes the baſis of the *ſal catharticum amarum*, or Epſom ſalt. Phil. Tranſ. loc. cit. See EPSOM *ſalt*.

BITTERNESS (*Cycl.*)—According to Grew, *bitterneſs* is produced by a ſulphur well impregnated with a ſalt, either alcaline or acid, and ſhackled with earth.

Hence it is that the bittereſt plants uſually yield the greateſt quantity of lixivial ſalt; and that many diſtilled oils, digeſted with any ſtrong acid, acquire a bitter taſte. Add, that the leaves of all ſweet roots are bitter; the fig-tree, which bears a ſweet fruit, bleeds a bitter milk; and that the roots of plants, which bear a bitter ſtalk, are not bitter, but hot. That the earthy parts contribute conſiderably to the *bitterneſs* of bodies, appears hence, that moſt bodies of that kind are fixed; or, if they do emit fumes, do not loſe their bitter taſte therewith. Vid. *Grew*, Diſc. of taſte of Plants, c. 4. §. 12.

Mr. Boyle obſerves, that a ſubſtance bitter in the higheſt degree, may be divided into two ſubſtances, the one extremely ſour, and the other inſipid. This happens, when the cryſtals of ſilver are diſtilled by a heat ſufficient to drive away all the ſpirits from the ſilver. What remains is inſipid, and what riſes is highly acid. Works abr. Vol. 1. p. 541.

The extinguiſhing, or removing of *bitterneſs*, is called dulcifying, ſweetning, *&c.* See DULCIFYING, *Cycl.*

M. Bon has given methods of removing, or diſcharging the *bitterneſs* of olives and Indian cheſnuts. Vid. Mem. Acad. Scienc. 1720. p. 600.

The *bitterneſs* of ſea-water ariſes from the diſſolution of the beds, or ſtrata of bitumen; as its ſaltneſs does from a diſſolution of the ſtrata of ſalt. *Marſigli*, in Hiſt. Acad. Scienc. an. 1710. p. 33. See the article SEA.

BITUMEN (*Cycl.*)—From the origin and inflammability of *bitumens*, it appears they bear a near affinity to ſulphurs, and are ſuppoſed both formed of the ſame principles or ingredients; only differing in this, that ſulphurs are harder and more brittle, *bitumens* more fatty and tenacious. Yet is not this diſtinction ſtrictly kept to; divers other bodies being by ſome naturaliſts placed in one of thoſe ranks, by others in another. Vid. *Mercat.* Metalloth. p. 82. and *Budd*, Elem. Philoſ. Theor. P. 2. c. 2. §. 33. p. 175.

Bitumens are of different kinds, ariſing from the different proportion of the ſulphur principle in them; and the different intermixture of ſalts and earth, and other foreign matters with them. *Mercat.* ubi ſupra. *Verdr.* Phyſ. P. 2. c. 6. §. 6. p. 470.

Bitumens are uſually divided into two ſpecies, liquid and ſolid. Tho' ſome diſtinguiſh three kinds. *Gorr.* Med. Defin. p. 60. voc. Ασφαλτος. See the Cyclopædia.

Dr. Woodward gives a different diviſion of the Engliſh *bitumens*, or bituminous foſſils. The firſt are thoſe of a more lax and coarſe conſtitution; and which, when wetted, yield a groſſer, or pitchy matter: Such are the *lapis piceus*, or pitch-ſtone, the *lapis ampelites*, *obſidianus* or canel, and the *lithanthrax* or coal. The ſecond of a more denſe and fine conſtitution, and which yields an oil: Such are the *gagates*, or jet; and *ſuccinum*, or amber. *Woodw* Nat. Hiſt. Engl. Foſſ. T. 1. p. 165. See GAGATES and SUCCINUM.

Bitumen is ſuppoſed the chief fuel of the ſubterranean fires. Vid. *Kirch.* Mund. Subterr. p. 157. *Lang.* Epiſt. p. 737.

Many have been fond of ſuppoſing all ſea-water to contain a large quantity of *bitumen*, and that it owes its bitterneſs to this admixture; but this ſeems erroneous, ſince we find that all ſea-water contains a large quantity of bitter purging ſalt of the nature of what is ſold in our ſhops, under the name of *Epſom ſalt*; and its bitterneſs is of the very ſame kind with the taſte of that ſalt.

That there are, however, *bitumens* mixed in ſeveral places with the water of the ſea, is very certain. Barbadoes tar is found floating on the ſea, being waſhed in great quantities from the rocks, and count Marſigli obſerved ſpiral filaments ariſing from the ſurface of the ſea Marmora, near Conſtantinople, which concreted into *bitumen*, exactly of the ſame kind with that he obſerved at Zant, flowing from the ſides of a bituminous mountain. On ſome of the coaſts of Italy they ſkim off a kind of liquid *bitumen*, or petroleum, from the ſurface of the ſea. Some think that ambergreaſe is a *bitumen* of the ſea, and many travellers tell us of a fatty ſubſtance on the ſurface of it, that gives light in the night. Theſe various ſubſtances may impart various properties to the ſea-water, in ſuch parts where they are found to abound, and they may be common in many places, but they are certainly not found in all, nor is *bitumen* a neceſſary ingredient in ſea-water. Count Marſigli has indeed proved, that a ſpirit diſtills from the moſt common of all *bitumens*. Pit-coal will give water a bitter taſte, but ſea-water is not yet proved to be impregnated with ſuch a ſpirit. On the contrary, when diſtilled, it has no bitter taſte; therefore marine waters are not impregnated with ſuch a volatile ſpirit, but evidently owe their *bitterneſs* to a fixed principle; and it is very certain, that pit-coal cannot give this taſte, ſince the waters which iſſue out from among the ſtrata of Sea-coal are never found to be bitter, tho' often ſtrongly impregnated with iron.

All the *bitumens* are inflammable, and have this good quality in their burning, that they will do without a wick. Dr. Plot therefore conjectures, that the famous ſepulchral lamps of the antients were contrived of theſe *bitumens*, particularly of the liquid kind, becauſe any thing that would require a wick, would be liable to its choaking up, and being deſtroyed. See LAMPS *perpetual*.

BITUMEN, in a more particular ſenſe, is reſtrained to the *aſphaltos*, otherwiſe called *bitumen Judaicum*. *Mercat.* Metalloth. Arm. 5. c. 2. p. 81. *Caſt.* p. 106. See ASPHALTOS, *Cycl.* and ASPHALTA, *Suppl.*

BITUMEN *byblæanum*, in mineralogy, a name given by Boccone and others to a peculiar ſpecies of bituminous foſſil, which is flexile while in the earth, a property very ſingular in a foſſil not of the talky kind, as this evidently is not. It is a ſtony ſubſtance, ſmelling like the common *bitumens*, and compoſed of a very great number of thin plates, laid evenly and regularly on one another. It has its name from the place where it is found, which is the Hyblæan mountains of Sicily, near Milelli, neighbouring upon the town of Auguſta and the antient Megara. When burnt in a candle, the bituminous ſmell is perceived very ſtrong; and the ſtone, though when firſt taken up it be flexible like paper, yet in time it hardens, and becomes brittle like other foſſils of that lax conſiſtence. There are found whole hillocks covered with it. They do not ceaſe to bear plants and herbage for this, the roots of the graſs, *&c.* inſinuating themſelves between the laminæ of this ſtone, and getting good nouriſhment there. Phil. Tranſ. N° 100.

BITUMINOUS, ſomething that relates to, or partakes of, the nature and qualities of bitumen. See BITUMEN.

All *bituminous* bodies are offenſive to the head [a]. Their ſmell or ſtench makes the epilepſy diſcover itſelf [b].—[a] *Lang.* Epiſt. Med. l. 2. [b] *Plin.* Hiſt. Nat. l. 35. c. 15. *Lang.* l. 2. ep. 75. See EPILEPSY.

Naturaliſts diſcover a *bituminous* quality in the ſea-water, which it derives either from *bituminous* exhalations out of the body of the earth, or from ſprings and rivers, which import liquid and other bitumens into the ocean. It is to this *bituminous* mixture the bitterneſs of ſea-water is aſcribed by ſome. *Boyle*, Phil. Work. abridg. T. 3. p. 221, ſeq. See BITUMEN.

BIVALVE, in the hiſtory of ſhell-fiſh, the name of one of the three general claſſes, the other two being the *univalves* and the *multivalves*. The *bivalve* ſhells are thoſe which conſiſt of two pieces or ſeparate ſhells joined together by a cardo or hinge. Theſe are a leſs numerous claſs than the *univalves*, and have been arranged by a late accurate French writer under ſix genera. Theſe are: 1. The oiſters. 2. The chamæ. 3. The *mytuli*, or muſcles. 4. The cardiform ſhells. 5. The *pectines*, or ſcallops. And, 6. The *ſolens*, or razor-ſhells. For the characters and ſpecies of each of theſe, ſee their ſeveral heads, OSTREA, CHAMA, *&c.* Hiſt. Nat. Eclair. T. 2. p. 235.

BIUMBRES, in geography, an appellation given to the inhabitants of the torrid zone, by reaſon, at two different ſeaſons of the year, their ſhadows are projected two different ways. *Wolf.* Lex. Math. p. 260.

The

The *biumbres* are the same with those otherwise denominated *amphiscii*. See AMPHISCII, *Cycl.*

BIXA, in botany, the name of a genus of plants; the characters of which are these: the perianthium is flat, small, and permanent, the whole formed of one little leaf, divided into five segments at the end: the flower is double; the exterior one is composed of five large, oblong, equal, and coarse petals; the inner flower is composed of five petals also; but they are thinner and finer: the stamina are a great number of setaceous filaments, of about half the length of the flower: the antheræ are erect: the germen of the pistil is of an oval figure: the style is capillary, and of the length of the stamina: the stigma is bifid, compressed, and parallel: the fruit is a capsule, of an oval cordated form, beset with hairs, and composed of two valves; but having only one cell, in which are a number of turbinated seeds, with a truncated umbilicus. *Linnæi*, Gen. Plant. p. 242.

BIXA, in botany, is also a name by which some authors have called the *arnotto*; the same with the *orleana* and *orellana* of other writers. *J. Bauhin*, Vol. 1. p. 440.

BIZARRE, a term used among the florists for a particular kind of carnation, which has its flowers striped or variegated with three or four colours.

BIZE, in zoology, a name by which some call the *pelamys*, a sea-fish, of the shape of the tunny, and resembling the young brood of that fish; but distinguishable by its wanting scales in most parts of its body. *Willughby*, Hist. Pisc. p. 179.

BIZOCHI, or BISOCHI, a sect or branch of religious minorites, condemned by several popes. Vid. *Du Cange*, Gloss. Lat. T. 1. p. 566. *Prateol.* Elench. Hæres. l. 1. n. 2. p. 101.

The *bizochi* were also called *fratricelli*, or *fratres de paupere vita*; sometimes *bichini*, or *bicchini*. See BEGUINS, *Cycl.*

The name is formed from *bisaccus*, on account of a double budget or wallet wherewith they begged their living.

BIZZARRO, or *con* BIZZARIA, in the Italian music, signifies *with capricious changes*; sometimes fast, at others slow, soft, strong, &c. at the fancy of the composer. *Bross.* Dict. Mus. in voc.

BLACK (*Cycl.*)—Bodies of a *black* colour are found more inflammable, by reason the rays of light falling on them are not reflected outwards, but enter the body, and are often reflected and refracted within it, till they be stifled and lost [a]. They are also found lighter, *cæteris paribus*, than white bodies, being more porous [b]. It may be added, that cloaths dyed of this colour wear out faster than of any other, by reason their substance is more penetrated and corroded by the vitriol necessary to strike their dye, than other bodies are by the galls and alum which suffice for them [c].—[a *Newton*, Opt. Qu. 6. p. 314. b *Rohault*, Phys. P. 2. c. 27. §. 61. c Id. ibid. §. 72, seq.]

The inflammability of *black* bodies, and their disposition to conceive heat, beyond those of other colours, is easily evinced. Some appeal to the experiment of a white and a *black* glove worn in the same sun; the consequence will be, a very sensibly greater degree of heat in the one hand than the other [d]. Others alledge the phænomena of burning-glasses, where *black* bodies are always found to kindle soonest [e]. Mr. Boyle gives other proofs still more obvious: he took a large tile, and having whited over one half of its superficies, and blacked the other, exposed it to the summer-sun; where having let it lie a convenient time, he found, that whilst the whited part remained still cool, the *black* part was grown very hot. For farther satisfaction, the same author has sometimes left on the surface of the tile a part retaining its native red, and exposing all to the sun, has found the latter to have contracted a heat in comparison of the white part, but inferior to that of the *black* [f].—[d Vid. *Boyle*, Phil. Work. abridg. T. 1. p. 144. e *Rohault*. P. 1. c. 27. f *Boyle*, lib. cit. T. 2. p. 36.]

So also on his exposing two pieces of silk, one white, the other *black*, in the same window to the sun, he often found the latter considerably heated, when the former has remained cool [g]. It is observable likewise, that rooms hung with *black* are not only darker, but warmer than others [h].—[g *Boyle*, ibid. h Id. ibid.]

To all which may be added, that a virtuoso of unsuspected credit assured Mr. Boyle, that, in a hot climate, he had, by carefully blackening the shells of eggs, and exposing them to the sun, seen them thereby well-roasted in a short time. *Boyle*, ibid. See also *Gravesend*, Inst. Philos. Newton. §. 1251. p 344. *Verdr.* Phys. P. 2. c. 10. §. 6. p. 236. *Teichm.* Inst. Phil. Nat. P. 1. c. 19. p. 112.

BLACK, in matters of dress, is the distinguishing habit of churchmen and mourners. Vid. *Potter*, Archæol. Græc. l. 4. c. 5. T. 2. p. 196.

Some will have it, that the common people among the Romans were cloathed in *black*; whence the denomination given them of *turba pullata*. *Pitisc.* Lex. Antiq. T. 2. p. 561. voc. *pullati*.

To give the common *black* colour to glass, the glassmakers use the following method: take old broken glass of different colours; grind it to powder, and add to it, by different parcels, a sufficient quantity of a mixture of two parts zaffer and one part manganese: when well purified, work it into vessels, &c. See COLOURING *of glass*.

BLACK, in heraldry, is properly called *sable*. See SABLE, *Cycl.*

BLACK, in the manege.—A horse of a deep, shining, and lively *black* is called a *black-more*, or *coal black* [i]. Horses *black* all over are commonly reckoned dull and melancholy; but a white foot, or star in the forehead, gives them a degree of sprightliness. The Spanish gravity is said to be best pleased with those intirely *black* [k].—[i *Guill.* Gent. Dict. P. 1. in voc. k Farr. Dict. in voc.]

Bone-BLACK is made of the bones of bullocks, cows, &c. well burnt and ground. To be good, it must be soft and friable, of a glossy cast. It is in considerable use, though inferior in goodness to *ivory black*. *Savar.* Dict. Comm. T. 1. p. 871. The invention of *bone* or *ivory black* is attributed to Apelles. *Plin.* Hist. Nat. l. 35. c. 5. *Felib.* Princ. de l'Arch. p. 293.

Harts-BLACK, that which remains in the retort after extracting the spirit, salt, and oil of hartshorn. This residue being ground up with water, makes a *black* not much short of that of ivory.

Lamp-BLACK (*Cycl.*)—There is a finer and brighter kind of *lamp* or *candle-black* procured from the fumes of a lamp or candle, gathered by a proper receptacle placed in manner of a canopy over the luminary, and wiped or brushed off; but it is not procured in quantity sufficient for ordinary use. Vid. *Park.* Art of Japann. c. 5. p. 21.

Soot, or *Chimney*-BLACK, is a poor colour; but ready for painting *black* draperies in oil. *Felib.* Princ. de l'Archit. l. 3. c. 6. p. 299.

Curriers BLACK signifies a teint or dye laid on tanned leather; of which there are usually two, the first made of galls, alegre, and old iron; the second of galls, copperas, and gum Arabic. *Savar.* Dict. Comm. T. 1. p. 872. See CURRYING, *Cycl.*

BLACKBIRD, *merula*, in zoology. See the article MERULA.

The music of the *blackbird* is not its only valuable quality; for it is a very delicate bird for the table. It builds its nest in woods, very early in the spring, often in march, while the snow is on the ground. It generally chooses the stumps of trees, or thick hedges, for the place. The outside of the nest is made of dry grass, sticks, and the fibres of roots of trees: the inside is lined with clay, and formed so round, that art cannot mend it. They build three or four times in the year, and even oftner than that, if their nests are taken early from them. The young ones may be easily raised with any kind of meat. It sings three or four months in the year: the note is loud, and not very agreeable; but may be much improved by teaching.

Some people are very fond of them as food, and take them alive, and fatten them up: the way is, to have very large cages with some tame ones in them; these will teach the new-taken birds to eat, and plenty and variety of food being set before them, they will soon grow much fatter than when wild. Kircher, in his *China illustrata*, seriously tells of certain trees, whose leaves falling into the water of a lake, on the sides of which they grow, become *blackbirds*. He took this romantic story upon credit; but plays the philosopher in a very idle manner in attempting to account for it, by supposing, that it is owing to the seminal parts of some of the eggs of those birds dropped from their nests, which are sometimes built on those trees. The whole truth seems to be no more than this, that the tree easily sheds its leaves, and its young branches being brittle, are apt also to be broken by the winds. The waters are naturally strewed with these leaves, and, at the breeding-season of the birds, their nests being sometimes thrown down by the breaking of the twigs, the young ones are seen floating on the water among the leaves; and the people have been idle enough to suppose, that they were formed of them. The firm assertions of some great men about our shell-fish in Lancashire turning into geese, is a proof, that the general credit of a country about a miracle of this kind, does not prove the truth of it. *Kircher*, China illustrata.

BLACK *books*, a name given to those which treat of necromancy, or, as some call it, nigromancy. See NECROMANCY, *Cycl.*

The *black book* of the English monasteries was a detail of the scandalous enormities practised in religious houses, compiled by order of the visitors under king Henry VIII. to blacken, and thus hasten their dissolution. Vid. *Dugd.* Monast. abridg. in Pref. p. 8.

BLACK *canons*, a name given to the regular canons of St. Augustine, who wore a *black* mantle over their surplice, by way of distinction from the præmonstratenses. *Steph.* Suppl. to *Dugd.* Monast. T. 1. p. 69.

BLACK *cap*, in zoology, a name given by the common people of many counties of England to the *pewit*, a bird of the gull-kind. See the article PEWIT.

BLACK *cap* is also the common English name for the *parus palustris*, or marsh titmouse. The *atricipilla*, which is a much scarcer bird, being also called in English by the same name, many have contended for its being very common with us, mistaking it for this titmouse. *Ray*, Ornithol. p. 175. See the article ATRICIPILLA.

BLACK *diver*, in zoology, a name given by many to a species of duck very common about the coasts of Lancashire, Yorkshire, and some other counties, and called more generally the *scoter*. It is all over *black*. See SCOTER.

BLACK *game*, in zoology, a common Engliſh name for the *urogallus*, or *tetrao minor*, called alſo the *grouſe*. See the article GROUSE, *&c.*

BLACK *earth*, *terra nigra*, denotes the natural mould or loam. *Woodw.* Meth. Foſſ. p. 4. See SOIL, *&c.*

BLACK *eunuchs*, in the cuſtoms of eaſtern nations, are Ethiopians caſtrated, to whom their princes commonly commit the care of their women. *D'Herbel.* Bibl. Orient. p. 155. voc. *azhar*. See EUNUCH, *Cycl.*

BLACK *eye*, *hypoſphagma*, in medicine, a ſuffuſion of blood on the tunica adnata turning livid, occaſioned by a blow. *Caſt.* Lex. Med. p. 408. voc. *hypoſphagma*. See ECHYMOSIS, *Cycl.* and *Suppl.*

BLACK *eye* is alſo a name given to the germ in beans, which the Romans called *hilum*. *Vat.* Phyſ. Exper. P. 2. §. 6. c. 2. p. 501. See BEAN, GERMINATION, *&c.*

BLACK *fryers*, a name given to the dominican order, called alſo *predicants* and *preaching fryers*, in France *jacobins*. *Steph.* Suppl. to *Dugd.* Monaſt. T. 1. p. 186. See DOMINICANS, *Cycl.*

BLACK *land*, in agriculture, a term by which the husbandmen denote a particular ſort of clayey ſoil, which, however, they know more by its other properties than by its colour, which is rarely any thing like a true *black*, and often but a pale grey. This, however pale when dry, always blackens by means of rains; and when ploughed up at theſe ſeaſons, it ſticks to the plough-ſhares, and the more it is wrought, the muddier and duskier-coloured it appears. This ſort of ſoil always contains a large quantity of ſand, and uſually a great number of ſmall white ſtones. *Moreton*'s Northampt. p. 45.

BLACK *lead*, a mineral ſubſtance, in colour reſembling lead, but more tender and friable; and on that account uſed for marking, writing, and drawing.

The name ſeems given it with ſome impropriety, the common lead being the true *black lead*, ſo called by way of contradiſtinction from tin, otherwiſe called white lead. *Plott*, in Phil. Tranſ. N° 240. p. 183. See LEAD and TIN.

Black lead is otherwiſe popularly denominated *wad* or *wadt*, and *kellow*; by naturaliſts *nigrica fabrilis*, from its uſe in ſcoring; by analogy to the *rubrica fabrilis*, or ruddle, which has the ſame uſe. *Woodw.* Meth. Foſſ. cl. 5. p. 43. See RUDDLE.

Black lead was known to the antients under the names of *plumbago*, *galena*, and *molybdena*. Vid. *Ruland.* Lex. Alchem. p. 370. voc. *plumbago*. *Caſt.* Lex. Med. p. 355. voc. *galena*. See PLUMBAGO, *&c.*

It is found in divers parts of Germany, *&c* [a]. but the better ſort is the produce of England alone, and that reſtrained to the mines near Keſwick in Cumberland; beſides which, Dr. Woodward aſſures us, there is none found worth any thing in any other country [b].—[[a] *Savar.* Dict. Comm. T. 2. p. 739. voc. *mina de plomb*. [b] *Woodw.* Nat. Hiſt. Engl. Foſſ. T. 1. p. 5.]

'Tis ſomewhat difficult to aſcertain what claſs of minerals *black lead* belongs to. Metal it is not, as not being either ductile or even fuſible; nor can it be reckoned among ſtones, for want of hardneſs: it remains, therefore, that it muſt be placed among the earths, though it diſſolve not in water, as moſt earths will, except ſtiff clays and ochres; among the latter whereof Dr Plott judges it may be reckoned, it ſeeming to be a ſort of cloſe earth, of very fine and looſe parts, ſo burnt as to become *black* and ſhining, diſcolouring the hands, as all ochres do. Whence the moſt proper name that can be given it, according to this author, is *ochra nigra*, or *black* ochre. Phil. Tranſ. N° 240. p. 183. See OCHRE.

Some writers ſpeak alſo of a factitious *black lead*, or *plumbago*, produced in furnaces, being found adhering to the ſides of thoſe where gold or ſilver are melted. *Ruland.* Lex. Alch. p. 373. voc. *plumbago*.

BLACK *leather* is that which has paſſed the curriers hands, where, from the ruſſet as it was left by the tanners, it is become *black*, by having been ſcored and rubbed three times on the grain-ſide with copperas-water. *Hought.* Collect. T. 1. N° 122. p. 322.

BLACK *mail* (*Cycl.*)—The origin of this word is much conteſted; for though it ſeems a compoſition of *black* and *maille*, uſed for a ſmall piece of metal or money, whence the tribute of *black mails* ſeems to ſome to have been ſo denominated, as being paid not in ſilver or white money, but either in copper or victuals, according to the ability of the debtor; yet there is ground to hold the word *black* to be here a corruption of *blank* or white, and conſequently to ſignify a rent paid in a ſmall copper coin called *blanks*. This may receive ſome light from a phraſe ſtill uſed in Picardy, where ſpeaking of a perſon who has not a ſingle half-penny, they ſay, *il n' a pas une blanque maille*. *Du Cange*, Gloſſ. Lat. T. 1. p. 569. voc. *blakmale*.

BLACK *monks*, a denomination given to the benedictins [c], called in Latin *nigri monachi*, or *nigromonachi*; ſometimes *ordo nigrorum*, the order of *blacks* [d].—[[c] *Steph.* Suppl. to *Dugd.* T. 1. p. 69. [d] *Magri*, Voc. Eccleſ.] See BENEDICTINS, *Cycl.* and *Suppl.*

BLACK *proceſſion*, in eccleſiaſtical writers, that which is made in *black* habits, and with *black* enſigns and ornaments. See PROCESSION, *Cycl.*

Antiently at Malta there was a *black proceſſion* every Friday, where the whole clergy walked with their faces covered with a *black* veil. *Magri*, lib. cit.

BLACK *rents*, the ſame with *black-mail*, ſuppoſed to be rents formerly paid in proviſions and fleſh, not in ſpecie. See BLACK *mail*, *Cycl.* and *Suppl.*

BLACK *row grains*, a ſpecies of iron-ſtone or ore found in the mines about Dudley in Staffordſhire. *Plott*, Nat. Hiſt. Staffordſh. c. 4. §. 17. p. 159.

BLACK *ſheep*, in the oriental hiſtory, the enſign or ſtandard of a race of Turkmans ſettled in Armenia and Meſopotamia; hence called the *dynaſty of the black ſheep*. Vid. *D'Herbel.* Bibl. Orient. p. 253. voc. *cara*.

BLACK *ſtones* and gems, according to Dr. Woodward, owe their colour to a mixture of tin in their compoſition. Vid. *Woodw.* Hiſt. Engl. Foſſ. T. 1. p. 190.

BLACK *tin*, in mineralogy, a denomination given to the tin-ore when dreſſed, ſtamped, and waſhed ready for the blowing-houſe, or to be melted into metal. Phil. Tranſ. N° 69. p. 2110. *Woodw.* Nat. Hiſt. Engl. Foſſ. T. 1. p. 199. *Pettus*, Hiſt. Mines, c. 18. p. 79.

It is prepared into this ſtate by means of beating and waſhing; and when it has paſſed through ſeveral baddles or waſhing-troughs, it is taken up in form of a black powder, like fine ſand, called *black tin*. See TIN.

BLACK *whytlof*, in our old writers, bread of a middle fineneſs betwixt white and brown, called in ſome parts *ravel bread*.

In religious houſes, it was the bread made for ordinary gueſts, and diſtinguiſhed from their houſhold loaf, or *panis conventualis*, which was pure manchet, or white bread. *Cowel.*

BLACK *work*, iron wrought by the blackſmith; thus called by way of oppoſition to that wrought by whiteſmiths. *Savar.* Dict. Comm. T. 2. p. 1651. voc. *taillanderie*.

BLACKING is ſometimes uſed for a factitious black, as lamp-black, ſhoe-black, *&c.* *Crouch*, Surv. Brit. Cuſt. T. 1. p. 120. See BLACK.

BLACKS, in phyſiology. See NEGRO.

BLADDER (*Cycl.*)—Though the urinary *bladder* be naturally ſingle, yet there have been inſtances of nature's varying from herſelf in this particular. The *bladder* of the famous Caſaubon, upon diſſecting his body after his death, was found to be double; and, in the Philoſophical Tranſactions, we have an account of a triple *bladder* found in the body of a gentleman, who had long been ill, and no one could gueſs the cauſe. In this perſon's beſt ſtate of health, he never could void his urine in a continued ſtream, like other healthful perſons; but the quantity uſed to come away by little and little, and that with great trouble: and in the two or three laſt years of his life, a thick mucus diſcharged itſelf with the urine, and gave him pain, which he never had been ſubject to before. He ſuſpected at length that he had a ſtone in the *bladder*, and being ſearched for it with a catheter, the perſon who performed that operation, meeting with ſome reſiſtence in the way, forced the inſtrument through the membranes, and cauſed an effuſion of blood, which finally was the cauſe of his death, and on opening him, the *bladder* was found to be triple; a circumſtance which cauſed all his complaints, but which could not be known till it diſcovered itſelf too late.

As to the figure and ſituation of the human *bladder*, Mr. Weitbrecht has given a better deſcription of them than is to be met with in the common ſyſtems. Vid. Med. Eſſ. Edinb. from Comment. Acad. Petrop. T. 5.

The diſeaſes to which the *bladder* is ſubject [a] are ulcers [b], wounds [c], deſcents or ruptures [d], preternatural contents, particularly ſtones and gravel [e], ſchirrus [f], palſies [g], inflammations of its neck [h], *&c.*—[[a] *Diocl. Cariſt.* Epiſt. ad Antigon. ap. *Fabric.* Bibl. Græc. l. 6. c. 7. T. 12. p. 589, ſeq. [b] Phil. Tranſ. N° 280. p. 1211. where is an account of the cure of ulcers of the *bladder* by cantharides internally given, firſt practiſed by Groenvelt, and afterwards with ſucceſs by Mr. Yonge. [c] *Teichmey.* Inſt. Med. Leq. c. 23. p. 288. where it is inquired, whether wounds of the *bladder* be always mortal, as is aſſerted by Hippocrates. [d] Hiſt. Acad. Scienc. ann. 1717. p. 17. where is given an inſtance of a rupture of the *bladder*, by many held impoſſible on account of its magnitude. [e] Hiſt. Acad. Scienc. ann. 1702. p. 29. It. Mem. p. 34. *Teichmey.* ubi ſupra, c. 17. p. 138. [f] Med. Eſſ. Edinb. T. 1. §. 34. p. 321. where the hiſtory is given of a *bladder* becoming ſchirrous. [g] Id. T. 2. §. 32. p. 365. where is an inſtance of a cure of a ſuppreſſion of urine, cauſed by a palſey of the *bladder*. [h] *Littre*, in Hiſt. Acad. Scienc. ann. 1704. p. 35, ſeq. where an account is given of a total ſuppreſſion of urine, cauſed by an inflammation of the neck of the *bladder*.]

The internal membrane of the *bladder* has been known to come away with the urine, without any great danger. Mr. Rohault gives an account, in the memoirs of the academy of ſciences, of a patient he had, who, after a very violent ſtoppage of urine, voided with ſome pain a piece of a membrane of an inch ſquare. Three or four days afterwards, the patient felt ſomething again obſtruct the paſſage; and as it came nearer the end of the urethra, he at length took hold of it, and drew out a larger piece of the ſame ſort of membrane. Some time after this, in ſtraining violently in diſcharging his urine, he voided three other ſuch pieces, which together, according to Mr. Rohault's judgment, could not make leſs than two-thirds of the internal membrane of the whole *bladder*; and in effect it was plain, that, in the courſe of the diſeaſe, the whole in-

terna

ternal membrane had gradually detached itself from the external one, and made its way out by the urethra. After the whole was thus discharged, the urine found no stoppage; and it is evident, that what had before stopped its passage, was no other than the pieces of this membrane falling before, or blocking up the urethra. The pieces of the membrane, when examined, appeared to have all their blood-vessels in their natural size; and the urine, in the whole course of the disease, having never been tinged with blood, is a proof, that the membrane detached itself naturally, not by violence. The patient, after this, was wholly cured of his complaint; but had a small incontinence of urine attending him, which was plainly owing to the sphincter's having been weakened, by being, as well as the *bladder*, divested of its membranes. Mem. Acad. Par. 1714.

The operations performed on the *bladder* are chiefly section, and extraction for the stone[i]; to which may be added injection, dilatation, the application of lithontriptics[k], diuretics, *&c.*—[[i] Phil. Transf. N° 236. p. 15, seq. where Hippocrates's aphorism, that the sections of the *bladder* are always mortal, is defended; and the best method of extracting the stone out of the *bladder*, especially in women, is shewn to be by a gradual dilatation of the urethra. [k] Hist. Acad. Scienc. an. 1720. p. 33. where the great impediments to the dissolution of the stone in the *bladder* by lithontriptics, are represented to be the medicines not continuing long enough in the *bladder*, and its being altered by the urine.] See STONE.

The urinary *bladders* of brutes are differently contrived from the human *bladder*, and from each other, according to the structure, œconomy, and manners of living of each creature.

Birds are usually said to be without *bladders*, as being without urine[l]; yet does not this hold universally, since, in an ostrich dissected by the French academy, a *bladder* was found situate at the extremity of the rectum, big enough to hold both fists, and in it eight ounces of urine[m].—[[l] *Vater.* Phys. Exper. P. 2. §. 8. c. 3. qu. 4. p. 810. [m] Mem. for Nat. Hist. Anim. p. 227.]

Many have also denied a *bladder* of urine to fishes[n]; but the more exact observers find this part in all, at least, the greater part of the fishy kind[o].—[[n] Mem. for Nat. Hist. Anim. p. 257. [o] Phil. Transf. N° 178. p. 1303, seq.]

Tortoises, Aristotle observes, have large *bladders*, and they need no less; since being covered with a thick shell, and having no pores or perspirative vessels whereby to carry off their moisture, it is retained within them, and accumulated in the *bladder* of urine. But what he adds, that the sea-tortoise has a large, and the land-tortoise a small *bladder*, is contradicted by later philosophers, who find the reverse. Perhaps the mistake may have arisen from a corruption of the text; since the reason which Aristotle assigns, seems rather to conclude against him. Mem. for Nat. Hist. Anim. p. 257.

In the lion, the *bladder* is small, as is the kidney; for that creature rarely drinks, insomuch that Albertus affirms the female does not suckle her young, as having no milk. Mem. for Nat. Hist. Anim. p. 14.

Bladders, when below a certain magnitude, are more usually denominated by the diminutive vesicles, *vesiculæ*.

Of these we meet with many sorts both in the animal and vegetable world; some natural, as in the lungs[p], especially of frogs[q], and as some also imagine, in the muscles[r]; others morbid or preternatural, as the hydatides[s], and those observable in the itch[t]. Naturalists have also discovered *bladders* in the thorax and abdomen of birds[u], as well as others in the belly of fishes, called *air-bladders* and *swims*[w].—[[p] *Cast.* Lex. Med. p. 239. voc. *cystis*, where it is noted, that Malpighi held the substance of the lungs to be wholly vesicular, or composed of an infinite number of spherical *bladders*, formed of the finest and tendereſt membranes. [q] *Ent*, Antidiatr. p. 69. Phil. Transf. N° 142. p. 1073, where it is shewn, that what we call lungs in a frog, are only wind-*bladders*, answering to the office of swimming in fishes. [r] *Hook*, Philos. Collect. N° 2. p. 22, seq. *Waller*'s Life of Hook, prefix. to Posth. Works, p. 20. where the structure and action of a muscle are explained, by supposing the fibres thereof composed of a chain of little *bladders*, like a necklace of pearl, blown up by the ingress of some aerial matter or spirit. It is known, that, by blowing into a *bladder*, a small force will raise a considerable weight; but this hypothesis does not well account for the velocity or quickness wherewith muscular motions are performed. Vid. *Winsl.* in Hist. Acad. Scienc. ann. 1724. p. 43. [s] Philos. Transf. N° 295. p. 1798, where is an account of a great number of *bladders* voided by stool, and some also by vomiting. [t] Phil. Transf. N° 283. p. 1296, where it is observed, that each of the itchy *bladders* is the residence of an insect. [u] Mem. Nat. Hist. Anim. p. 179. It. p. 235. Mem. Acad. Scienc. an. 1693. p. 258, seq. *Du Hamel*, Hist. Acad. Scienc. l. 3. §. 6. c. 2. p. 277, seq. [w] *Niewent.* Relig. Philos. cont. 22. §. 26. p. 346. Phil. Transf. N° 178. p. 1303, seq.]

Vegetable *bladders* are found every-where, in the structure of the bark[x], the fruit, pith[y], and parenchyma, or pulp[z]; besides those morbid ones raised on the surface of leaves by the puncture of insects[a].—[[x] *Grew*, Anat. Plants, l. 3. c. 2. §. 2. p. 107. It. l. 3. c. 4. §. 1. p. 119. [y] Id. ibid. l. 2. c. 1. §. 5. p. 62. & c. 3. §. 4. p. 64. & c. 5. §. 6. p. 76. [z] Id. ibid. l. 1. c. 1. §. 18. p. 4. & l. 4. c. 1. §. 3. p. 179. & c. 3. §. 2. p. 182. [a] Mem. Acad. Scienc. 1724. p. 463.]

Air-BLADDER, in fishes, is a hollow membranous body, always distended with air, and affixed generally to the backbone. Artedi's description of the *air-bladder*, being more particular than what we have already given under the article *air*, is as follows.

In the spinose-fish it is always found single, and is found in all of them, except the pleuronectæ. As to its figure, it is in some fish single, oblong, and pointed at each end, as in the clupea and osmerus. In others it is oblong, and more obtuse at the ends, as in the esox, pearch, salmon, *&c.* In others it is oblong, and obtuse in the lower part; but, in the upper part, divided into two parts, as it were, in the manner of the figure of a heart at cards.: this is its figure in the lucioperca, and the mustela fluviatilis. In others it is transversely divided into two lobes, the hinder one being larger, as in the cyprini and congers; and in some it is divided longitudinally into two parts, as in the silurus.

As to the differences of its situation, it is, in some, extended along the whole abdomen from the diaphragm to the anus. This is the case in the cyprini, clupeæ, coregones, salmons, *&c.* In others it is lodged only in the upper part of the abdomen, separated by a membrane from the rest of the abdomen. As to its connection to the other parts of the fish, it is in some wholly free and loose, except that it adheres to the stomach by the pneumatic duct, as in the cyprini and clupeæ. In others it is longitudinally affixed to the backbone, as in the pearch, salmon, coregones, esoces, *&c.* *Artedi*, Ichthyol. See the articles AIR-*bladder* and DUCTUS *pneumaticus*.

Oil-BLADDERS, in the anatomy of plants. See OIL-*bladders*.

BLADDER *puceron*. See PUCERON.

BLADE, in botany, that part of the flower, or florid attire of a plant, which arises out of the concave of the sheath, and, at the top, usually divides into two parts, which are covered with globules of the same nature as those of the apices, but not so copious. *Grew*, Anat. of Plants, l. 1. c. 5. §. 20. p. 39.

The *blade* runs through the hollow of the sheath and base, and is fastened to the convex of the seed-case, having its head and sides beset with globules, which, through a glass, appear like turnip-seeds, and which, in some plants, grow close to the *blade*, and in others adhere to it by little pedicles, or foot-stalks. These globules, as the *blade* springs up from within the sheath, are still rubbed off, and so stand like a powder on both. In some plants, as knap-weed, they seem also to grow on the inside of the sheath, as appears on splitting it with a pin.

The head of a *blade* is divided usually into two; but sometimes, as in the cichory, into three parts, which, by degrees, curl outward, like scorpion-grass. *Grew*, ibid. l. 4. c. 4. §. 5, p. 170, seq.

BLADE, in commerce, a thin, slender piece of metal, either forged by the hammer, or run and cast in moulds, to be afterwards sharpened to a point, edge, or the like. *Savar.* Dict. Comm. T. 1. p. 476. voc. *lame*.

Sword-*blades* are made by the armourers, knife-*blades* by the cutlers, *&c.*

The English and Damascus *blades* are most esteemed. Among the French, those of Vienne in Dauphiny have the preference. *Savar.* loc. cit.

The conditions of a good *blade* of a small sword are, that it be light and tough, apter to bend than break. When it will stand in the bend, it is called *a poor man's blade*. *Hope*, Art. of Fenc. c. 4. §. 3. p. 60. It. c. 7. p. 200.

BLADE *of a chissel* is the iron or steel-part, as distinguished from the wooden handle. *Moxon*, Mech. Exerc. p. 77. Id. ibid. p. 202.

BLADE *of mace*, or cinamon, among apothecaries, are little slips or slices of those barks.

BLADE *of an oar* is the flat part, which is plunged into the water in rowing. On the length of this does the force and effect of the oar depend. *Petty*, Dis. of Dupl. Propor. p. 59.

BLADE *of a saw*, the thin part wherein the teeth are cut, which, to be good, must be stiff, yet bend equally into a regular bow all the way, without yielding more in one place than another. *Moxon*, Mech. Exerc. p. 96.

BLADE-*mill* is that contrived for grinding iron-tools, as scithes, reaping-hooks, axes, chissels, and the like, to a bright edge. *Hought.* Collect. T. 2. N° 276. p. 232.

BLADUM, in middle-age writers, is taken for all sort of standing corn in the blade and ear. The word is also written *blatum*, *blava*, and *blavium*.

In our old charters, the word *bladum* included the whole product of the ground, fruit, corn, flax, grass, *&c.* and whatever was opposed to living creatures. Vid. *Du Cange*, Gloss. Lat. T. 1. p. 567 & 571.

The word *bladum* was sometimes also applied to all sort of grain or corn threshed on the floor[a]: *tria quarteria frumenti, tria quarteria avenarum, & unum quarterium fabarum, erunt quieti de solutione prædicti bladi in perpetuum*[b].—[[a] *Kennet*, Paroch. Antiq. p. 291. [b] *Calv.* Lex. Jur. p. 117, seq. See also *Du Cange*, Gloss. Lat. T. 1. p. 567. *Spelm.* Gloss. Arch. p. 83.

But the word was more peculiarly appropriated to bread-corn, or wheat, called in French *blé*.

Thus the knights templars are said to have granted to Sir Wido

de Meriton's wife *duas ſummas bladi*. *Kenn.* Gloſſ. ad Paroch. Antiq. in voc. *Caſen.* Orig. Franc. p. 25. *Menag.* Orig. Franc. p. 106.

BLÆSUS, βλαισος, among medical writers, the ſame with *balbus*. *Sigon.* de Nom. Rom. ap. Gothofr. Script. Lat. p. 2440. voc. βλαισος. *Calv.* Lex. Jur. p. 118.

Dr. Holder calls the letters F. and Th. *Bleſe*, in regard of the difficulty multitudes find of pronouncing them. *Hold.* Elem. Speech, p. 52.

The word is alſo uſed to denote an irregularity in the figure of the limbs, eſpecially the legs, when bent outwards. *Gorr.* Def. Med. p. 75. *Caſt.* Lex. Med. p. 106.

BLAISE, a military order inſtituted by the kings of Armenia, in honour of *St. Blaiſe*, antiently biſhop of Sebaſta in that country, the patron ſaint of that nation.

Juſtinian calls them *knights of St. Blaiſe and St. Mary*, and places them not only in Armenia, but in Paleſtine. *Giuſt.* Hiſt. Ord. Mil. T. 1. c. 24.

They made a particular vow to defend the catholick religion of the church of Rome, and followed the rule of St. Baſil. Trev. Dict. Univ. T. 1. p. 1057.

The preciſe year of the inſtitution of the knights of *St. Blaiſe* is not known; but they appear to have commenced about the ſame time with the knights templars, and hoſpitallers, to the former of which they bore a near affinity; the regulars being the ſame in both.

BLANC. See the article BLANK.

BLANCS *manteaux*, a name originally given to the ſervites, or ſervants of the bleſſed virgin, on account of their white cloaks; but ſince applied to divers ſorts of religious, who have ſucceſſively inhabited the houſe of the ſervites, and now to the benedictins at Paris, though habited in black. Trev. Dict. Univ. T. 1. p 1061.

BLANCA, in medicine, denotes a lenitive compoſition, formerly much in uſe; ſo called either from its white colour, or becauſe of its purging white, *i. e.* phlegmatic humours. There were three ſorts; a great, middle, and leaſt *blanca*. *Caſt.* Lex. Med. p. 106.

BLANCA *mulierum*, among the chemiſts, ſignifies ceruſs. *Ruland.* Lex Alch. p. 104. See CERUSS.

Charta BLANCA, *carta bianca*, a ſort of white paper ſigned at the bottom with a perſon's name, and ſometimes alſo ſealed with his ſeal; giving another power to ſuperſcribe what conditions he pleaſes. *Fæſch.* p. 96.

Much like this is the French *blanc ſigne*, a paper without writing, excepting a ſignature at the bottom, given by contending parties to arbitrators, or common friends, to fill up with the conditions they judge reaſonable, in order to end the quarrel. *Savar.* Dict. Com. T. 1. p. 356. Trev. Dict. Univ. T. 1. p. 1060.

BLANCH *fermé*, or BLANK-*farm*, a *white farm*, that is, where the rent was to be paid in ſilver, not in cattle. *Jac.* Law Dict. in voc. *Skin.* Etym in voc.

In antient times the crown rents were many times reſerved to be paid in *libris albis*, called *blanch firmes*: In which caſe the buyer was holden *dealbare firmam*; *viz.* his baſe money or coin, worſe than ſtandard, was melted down in the exchequer, and reduced to the fineneſs of ſtandard ſilver; or inſtead thereof he paid to the king 12*d.* in the pound, by way of addition. *Lownd.* Eſſ. on coin, p. 5.

BLANCHERS, a name given to mechanics employed in *blanching*. See BLANCHING.

BLANCHING, (*Cycl.*) in gardening, an operation performed on certain ſallets, roots, &c. as of ſellery and endives, to render them fairer and fitter for the table.

The time for *blanching* of ſellery is about the middle of June, when ſome of the firſt ſowing will be fit to plant out in trenches for this purpoſe. Theſe trenches are to be cut by a line eight or ten inches wide, and about as many deep; into which they put their plants, after having firſt pruned off the tops and roots. As they grow large, they earth them up within four or five inches of their tops, and ſo continue to do at ſeveral times, till whitened ſufficiently for uſe; which they will not ordinarily be till ſix weeks after earthing them up [a]. For endive, as ſoon as it is well grown, they tie up ſome of it to whiten; and continue every fortnight, as long as it laſts, to tie up freſh parcels [b]. [[a] *Bradl.* New Improv. Gard. P. 3. p. 162. [b] *Bradl.* l. c. p. 163.]

BLANCHING is alſo a term uſed by the people, who cover thin plates of iron with tin, for that part of the work, which conſiſts in dipping the plates into the melted tin, in order to the covering of them. The people who do this part of the buſineſs are hence called *blanchers*.

BLANK, or BLANC, in a general ſenſe, ſignifies *white*.

BLANK, BLANCUS, or BLANCA, is more particularly uſed for a kind of white, or ſilver money, of baſe alloy, coined by Henry the 5th, in thoſe parts of France then ſubject to England, valued at 8*d.* ſterl. [a]. They were forbidden by his ſucceſſor to be current in this realm [b]. In ſome antient charters they are called *ſolidi blanci*, white Shillings [c].—[[a] *Stow*, Ann. p. 586. [b] Stat. 2. Hen. 6. c. 9. *Jac.* Law Dict. in voc. *Spelm.* Gloſſ. p. 83. *Cow.* Interp. in voc. *Skin.* Etym. in voc. [c] *Dugd.* Monaſt. T. 1. p. 352. *Du Cange*, Gloſſ. Lat. T. 1. p. 569. *Menag.* Orig. Franc. p. 105.]

BLANK alſo denotes a ſmall copper coin, formerly current in France, at the rate of five deniers Tournois.

They had alſo great *blanks*, or pieces of three *blanks*, and others of ſix, in reſpect whereof the ſingle ſort were called little *blanks*; but of late they are all become only monies of account. *Savar.* Dict. Comm. T. 1. p. 356. See alſo, Trev. Dict. Univ. T. 1. p. 1060.

BLANK, or BLANK-*ticket*, in lotteries, that to which no prize is allotted. See LOTTERY, *Cycl.*

The French have a game, under the denomination *blanque*, anſwering to our lottery. *Savar.* Dict. Comm. Supp. in voc. Trev. Dict. Univ. T. 1. p. 1063. *Menag.* Orig. T. 1. p. 105. voc. *blanque*.

BLANK, in coinage, a plate, or piece of gold, or ſilver, cut and ſhaped for a coin, but not yet ſtamped. Vid. *Savar.* Dict. Comm. T. 2. p. 184.

BLANK, in zoology, a name given by authors to a ſpecies of the cod-fiſh, called *gelbe*, *kolmulen*, and *aſellus flaveſcens*. It comes the neareſt of all the ſpecies to the whiting pollack, but its fins are ſmaller; and thoſe under the gills are of a fine clear yellow; all the reſt of a duſky browniſh hue, but with ſome yellow intermixed. Its back and ſides are alſo of a browniſh yellow, and are variegated with a great number of ſaffron-coloured marks. The belly is of a fine ſilvery whiteneſs; and the line that runs on each ſide, from the gills to the tail, is yellow, and is ſomewhat arched near the abdomen. *Willughby's* Hiſt. Piſc. p. 173.

BLANK-*bar*, in law, is uſed for the ſame with what we call a *common bar*, and is the name of a *plea in bar*, which in an action of treſpaſs is put in to oblige the plaintiff to aſſign the certain place, where the treſpaſs was committed.

It is moſt in practice in C. B. for in the court of B. R. the place is uſually aſcertained in the declaration. *Blount*.

BLANKET, in commerce, a warm woolly ſort of ſtuff, light and looſe woven; chiefly uſed in bedding.

The manufacture of *blankets* is chiefly confined to Witney in Oxfordſhire, where it is advanced to that height, that no other place comes near it. Some attribute a great part of the excellency of the Witney *blankets* to the abſterſive, nitrous water of the river Windruſh, wherewith they are ſcoured; others rather think they owe it to a peculiar way of looſe ſpinning, which the people have thereabouts. Be this as it will, the place has engroſſed almoſt the whole trade of the nation for this commodity; inſomuch, that the wool fit for it, centers here from the furthermoſt parts of the kingdom. There are ſaid to be at leaſt threeſcore blanketers in this town, who, amongſt them, have at leaſt 150 looms, and employ 3000 perſons, from children of eight years old, who work out about a hundred packs of wool per week. *Plott*, Nat. Hiſt. Oxford. c. 9. §. 169. p. 283.

Blankets are made of felt-wool, *i. e.* wool from off ſheep-ſkins, which they divide into ſeveral ſorts.

Of the head wool, and bay wool, they make *blankets* of 12, 11, and 10 quarters broad; of the ordinary and middle ſort, *blankets* of eight and ſeven quarters broad; of the beſt tail wool, *blankets* of ſix quarters broad, commonly called *cuts*, ſerving for ſeamen's hammocks. *Plott*, lib. cit. §. 170. ſeq. p. 284, ſeq.

Toſſing in a BLANKET, a ludicrous kind of exerciſe, or rather puniſhment, of which we find mention in the antients, under the denominations παλμος, and *ſagatio* [a]. Martial deſcribes it graphically enough.—*Ibis ab excuſſo, miſſus ad aſtra, ſago* [b].—[[a] Vid. *Pitiſc.* Lex. Antiq. T. 2. p. 672. voc. *ſagatio*. [b] *Mart.* l. 1. Epig. 4. *v.* 8.]

A late writer repreſents it as one of Otho's imperial delights, to be *toſſed in a blanket* [c]: But this is turning the tables; that emperor's diverſion, as related by Suetonius, was not to be the ſubject, but the agent in the affair; it being his practice to ſtroll out in dark nights, and where he met with a helpleſs, or drunken man, to give him the diſcipline of the *blanket* [d].—[[c] Trev. Dict. Univ. T. 1. p. 995. voc. *berner*. [d] *Suet.* in Othone, §. 2.]

BLANQUILLE, a ſmall ſilver coin, equivalent to about 2*d.* ſterling, current in Morocco, and on the coaſts of Barbary. *Savar.* Dict. Comm. T. 1. p. 364.

BLAPSIGONIA, βλαψιγονια, a kind of diſeaſe, or defect in bees, when they neglect, or fail to produce young, being wholly employed in making honey. *Plin.* Hiſt. Nat. l. 11. c. 19. *Columell.* l. 9. c. 13. p. 335.

The word is Greek, compounded of βλαπτω, I hurt, and γονη, brood or iſſue.

BLARE, a ſmall copper coin, containing a little mixture of ſilver, ſtruck at Bern, and valued at much the ſame with the *ratze* in other places. *Savar.* Dict Comm. T. 1. p. 364.

BLAS, a novel term, in the Helmontian philoſophy, denoting the local, and alterative motion of the ſtars; from whoſe influence proceed changes of weather, ſeaſons, ſtorms, and the like.

In imitation of this *blas ſtellarum*, the ſame author framed another in animals, either natural, whereby each viſcus is framed, according to the model of its particular; or voluntary, which is directed to motion by the will. *Helmont*, Tract.

Blas Meteor. & Blas Humanum. See alſo *Caſt.* Lex. Med. p. 106, ſeq.

BLASIA, in botany, the name of a genus of plants approaching to the nature of the *lichens*, the characters of which are theſe; the male flower has a cup compoſed of one leaf, which is oval at the baſe, ſomewhat cylindric in the middle, and expanded and truncated at the top; in this are contained a number of looſe granules, which ſeem to perform the office of apices, and contain the farina fœcundans. The female flower has ſcarce any cup, but produces a ſingle roundiſh fruit, uſually immerſed in the leaves; in this are contained certain round bodies, which appear to be ſeeds. Linnæus is much in doubt, whether theſe flowers are not to be underſtood a contrary way, and ſeems to ſuſpect, that what are called female flowers are really male ones; and what are called male, female. *Linnæi*, Gen. Plant. p. 807.

BLASPHEMY, *blaſphemia*, or *blaſphemium*, in middle-age writers, denotes ſimply the blaming, or condemning of a perſon, or thing. *Du Cange*, Gloſſ. Lat. T. 1. p. 570. voc. *blaſphemare*. Trev. Dict. Univ. T. 1. p. 1064. voc. *blaſmer*.

The word is Greek, βλασφημια, though others will have it deduced from the Italian *biaſimare*, or French *blaſmer*, which ſignifies the ſame. *Menag.* Orig. p. 105. *Caſen.* Orig. p. 25. voc. *Blaſmer*. Trev. loc. cit. *Voſſ.* Etym. p. 72. voc. *blaſphemus*. *Spelm.* Gloſſ. Arch. p. 83. voc. *blaſphemare*.

In this ſenſe, we meet with to *blaſpheme* the religion of a monaſtery. Azymos bread in the Euchariſt was called, *panis blaſphematus*, as being held unlawful. *Du Cange*, Gloſſ. Lat. T. 1. p. 570.

To blaſpheme a judgment or ſentence, *blaſphemare judicium*, was to falſify, *i. e.* impugn it as falſe, and appeal from it; anſwering to the French formula, ſtill in uſe, *blaſmer une ſentence*.

Among the Greeks *to blaſpheme*, βασφημιαν φθεγξασθαι, was to uſe words of evil omen, or that portended ſomething ill, which the antients were careful to avoid, ſubſtituting in lieu of them other words of ſofter and gentler import, ſometimes the very reverſe of the proper ones. Vid. *Lakemak.* Antiq. Græc. Sacr. P. 3. c. 10. §. 4. p 566, ſeq.

BLASPHEMY is more particularly uſed for the accuſing or condemning a thing that is good, *eſt blaſphemia cum aliqua mala dicuntur de bonis*. In which ſenſe, *blaſphemy* may hold both in reſpect of God and man.

Accordingly, among the ſchoolmen and caſuiſts, we meet with *blaſphemy* uſed for reproachful words againſt the ſaints, things ſacred, the myſteries of religion, *&c.* Trev. Dict. Univ. T. 1. p. 1066. *Magr.* Not. Vocab. Eccleſ. p. 37.

BLASPHEMY is more peculiarly reſtrained to evil or reproachful words ſpoken of the Deity. Auguſtin ſays, *jam vulgo blaſphemia non accipitur niſi mala verba de Deo dicere*. Vid. *Auguſt.* de Morib. Manich. l. 2. c. 11. *Du Cange*, Gloſſ. Lat. T. 1. p. 570.

In which ſenſe, *blaſphemy* may be defined, either by detracting from God that power or goodneſs which belongs to his nature, or by attributing to God ſomething that is not agreeable to his eſſential attributes. *Wood*, Inſt. Imp. Law. l. 3. c. 10. p. 270.

Blaſphemy, in this ſenſe, makes a crime to be puniſhed by the judge. St. Chryſoſtom does not allow it to be left to the magiſtrate, but enjoins private perſons to inflict a puniſhment. If thou meeteſt a man *blaſpheming*, ſtrike him a box on the ear, give him a daſh on the mouth, and ſanctify thy hand with a blow. *Chryſoſt.* Hom. 1. ad Antioch. p. 460. Edit. *Savil.*

The antient church diſtinguiſhed three kinds of *blaſphemy*; *viz.* that of apoſtates, and lapſers; of heretics, and prophane perſons; and the *blaſphemy* againſt the Holy Ghoſt.

The *blaſphemy* of apoſtates, and lapſers, conſiſted in a formula of words reviling, and curſing Chriſt, which the heathen perſecutors obliged their converts to pronounce. This appears to have been the common way of renouncing their religion. *Euſeb.* Hiſt. Eccleſ. l. 4. c. 15.

There ſeems to have been a peculiar formula of blaſphemous words, which the confeſſors were required to pronounce; but what they were does not appear. *Bingh.* Orig. Eccleſ. l. 16. c. 7. §. 1.

What the *blaſphemy againſt the Holy Ghoſt* is, which is pronounced unpardonable, has been much controverted; ſome hold it to be lapſing into idolatry; others denying Chriſt; others oppoſing the divinity of the Holy Ghoſt; others in attributing the miraculous works of the Holy Spirit to the operation of the devil. Vid. *Matth.* c. 12. v. 31. *Eulog.* Contr. Novat. l. 1. *Phot.* Bibl. Cod. 280. p. 1599. *Bingh.* loc. cit. §. 3.

The *blaſphemy* of heretics, and prophane perſons, conſiſted either in maintaining impious doctrines, or uttering impious diſcourſes, derogatory to the honour and majeſty of God, or detracting from the excellencies of the divine nature. In this ſenſe Chryſoſtom [a] terms thoſe *blaſphemers*, who introduced fate, in derogation of the providence of God. Irenæus [b] gives the ſame appellation to thoſe who denied God to be the creator of the world. And the Arians and Neſtorians are generally charged with the ſame, for denying the divinity of Chriſt [c]. St. Cyril has written expreſsly againſt the *blaſphemies* of Neſtorius [d].—[a *Chryſoſt.* Hom. 2. de fato. opp. T. 1. p. 118. b *Iren.* Præf. ad Libr. 4. c *Bingh.* l. c. §. 2. d Vid. *Fabric.* Bibl. Græc. l. 5. c. 27. §. 16. T. 8. p. 568.]

In this ſenſe, heathens, Jews, and other infidels, are charged with *blaſphe ming* Chriſt, and his goſpel. Porphyry, Celſus, Julian, and Proclus, are noted *blaſphemers*; and Lucian, for his ſarcaſms, has even acquired the ſurname *Dyſphemus*, or the *blaſphemer*. *Fabric.* Bibl. Græc. l. 5. c. 40. p. 730.

The charge of *blaſphemy* on the Jews has been maintained by ſeveral of the converts from judaiſm, as *Chriſtlieb* [a] and others. Rabbi Lipman's book, entitled *Nizzachon*, is full of *blaſphemies* of this kind [b]. But much more ſo is another book among the Jews, called *Zefer toldot Jehoſchua hanozeri*, or *the book of the generation of Jeſus the wanderer*; where he is never mentioned, but as the moſt vile and flagitious of men; and charged with crimes moſt abominable to nature [c].—[a Vid. *Wolf.* Bibl. Hebr. T. 3. p. 958. b Id. ibid. T. 1. p. 736. c Vid. *Nigri.* Tract. contra Judæos, p. 64. ap. *Wolf.* Bibl. Hebr. T. 2. l. 5. p. 1114.]

By the canon law, *blaſphemy* was puniſhed only by a ſolemn penance; and by cuſtom, either by a pecuniary or corporal puniſhment [a]. By the *Engliſh* laws, *blaſphemies* of God, as denying his being, or providence, and all contumelious reproaches of Jeſus Chriſt, *&c.* are puniſhed by fine, impriſonment, and pillory [b]. And, by the ſtatute law, he that denies one of the perſons in the Trinity, or aſſerts there are more than one, or denies Chriſtianity to be true; for the firſt offence, the party is rendered incapable of any office; for the ſecond, adjudged incapable of ſuing, being executor or guardian, receiving any gift or legacy, and to be impriſoned for three years [c].—[a *Greenw.* de Legib. Abrog. in Nov. 77. b *Hawk.* Pl. Cr. T. 1. p. 8. c Stat. 9 and 10 Will. 3. c. 32. *Wood*, Inſt. Engl. Law. l. 3. c. 3. p. 396.]

By the moſaic law, *blaſphemy* was puniſhed with death. Levit. xxiv. 13—16. As alſo by the civil law. Novel. 77. In Spain, Naples, France, and Italy, the pains of death are not now inflicted. In the empire, either amputation, or death, is made the puniſhment of this crime. See *Carpzov.* P. 1. Q. 45. n. 4. and 24.

Yet it is to be obſerved, that the law of thoſe countries takes *blaſphemy* as *læſa majeſtas divina*; and that it may be committed, either by the abſolute denial of the exiſtence of the ſupreme being; or of any of his eſſential attributes. Abſolute *blaſphemy*, that is, the abſolute denial of the exiſtence of God, is puniſhed capitally; and this puniſhment is extended to thoſe, who utter maledictions againſt the author of their being. But this rule is limited in practice, and only inflicts an arbitrary puniſhment. 1. In the caſe of thoſe under a total alienation of mind, by the effects of wine. 2. Of thoſe ſurprized by ſome violent fit of grief or anger, from ſome cauſe of moment, and while lawfully employed. 3. Of thoſe who ſhew a ſudden repentance, accompanied with horror at their crime: but ruſticity is no excuſe.

According to the law of Scotland, the puniſhment of *blaſphemy* is death. The firſt ſpecies thereof conſiſts in railing at, or curſing God, and here the ſingle act conſtitutes the crime. The ſecond conſiſts in denying the exiſtence of the ſupreme being, or any of the perſons of the Trinity; and therein obſtinately perſevering to the laſt. For reiterated denial does not fully conſtitute the crime, becauſe the Stat. of Charles 2. 1661. admits of repentance before conviction, as a complete expiation.

This ſtatute of 1661, is ratified by a ſtatute of king William, whereby the calling in queſtion the exiſtence of God, or of any of the perſons of the Trinity, or the authority of ſcripture, or the divine providence, is made penal. For the firſt offence impriſonment, till ſatisfaction given by publick repentance in ſack-cloth. For the ſecond, a fine of a year's valued rent of the real eſtate, and twentieth part of the perſonal eſtate. And the trial in both theſe caſes is competent to inferior judges. The trial of the third offence is death, to be tried only by the juſtices. *Bayne.*

BLAST, *flatus*, in the military art, a ſudden compreſſion of the air, cauſed by the diſcharge of the bullet out of a great gun. Trev. Dict. Univ. T. 4. p. 1829. voc. *Souffle.*

The *blaſt* ſometimes throws down part of the embraſures of the wall.

BLAST is alſo applied, in a more general ſenſe, to any forcible ſtream of wind, or air; excited by the mouth, bellows, or the like. Men, trees, houſes, are ſometimes thrown down by a *blaſt* of lightning: A *blaſt* of gunpowder will ſometimes ſhatter the windows at a diſtance. Vid. Phil. Tranſ. N° 236. p. 11. See THUNDER, LIGHTNING, *&c.*

The walls of Jericho fell down with the *blaſt* of rams-horn. St. John ſpeaks of the *blaſts* of a trumpet uſhering in the reſurrection. Theſe have been adopted by the followers of Mahomet, who have many traditions concerning the three *blaſts* of the laſt trumpet. The firſt, which they call the *blaſt of conſternation*, is to ſtrike all creatures in heaven and earth with terror; to ſhake the earth, level mountains, and throw the ſtars into the ſea. The ſecond is called the *blaſt of inanition*, at which all creatures, both in heaven and earth, are to be annihilated, except thoſe whom God ſhall be pleaſed to exempt from the common fate. Forty years after is to be heard the third, or *blaſt of reſurrection*; at which the angels, being reſtored

ſtored to life, ſhall call together all the dry, rotten bones, duſt, &c. to the very hairs of the head, to come to judgment. *Sale*, Prelim. Diſc. to Koran. ſect. 4. §. 17. p. 82. ſeq.

BLAST is alſo uſed in agriculture and gardening, for what is otherwiſe called a *blight*. *Mortim.* Syſt. of Huſbandry, T. 1. p. 303. See BLIGHT.

Blaſts differ from mildews, *rubigines*. See MILDEW.

The ſmut of corn is a ſpecies of *blaſt*. Vid. *Plott*, Nat. Hiſt. Stafford. c 9. §. 37. See SMUT.

Blaſts, or *blaſtings*, are by ſome ſuppoſed owing to cold [a]; by others, to the want of a due ſupply of ſap [b]; by others, to aſcending fumes of the earth [c]; by others, to ſharp winds and froſts, immediately ſucceeding rains [d]. [[a] *Calv.* Lex. Jur. p. 958. voc *uredo*. [b] Phil. Tranſ. N° 44. p. 881. [c] *Boyle*, Phil. Work. Abr. T. 3. p. 533. [d] Ruſt. Dict. in voc.]

That ſpecies called *uredines*, or *fire-blaſts*, is ſuppoſed by Mr. Hales owing to the ſolar rays reflected from, or condenſed in the clouds, or even collected by the denſe ſteams in hop-gardens, and other places. Vid. Phil. Tranſ. N° 399. p. 269.

The effect of them is to wither, ſhrivel, ſcorch, turn black, and, as it were, burn up the leaves, bloſſoms, and fruits of trees, ſhrubs, herbs, graſs, corn, even for whole tracts of ground. *Boyle*, loc. cit.

Phyſicians alſo ſpeak of a kind of *blaſts* affecting human bodies, and cauſing eryſipela's, palſies, &c. *Shaw*, New Pract. of Phyſ. p. 163. See ERYSIPELAS, PALSY, &c.

BLASTS, among miners. See DAMPS.

BLASTED, ſomething ſtruck with a blaſt. See BLAST.

Among the Romans, places *blaſted* with lightning were to be conſecrated to Jupiter, under the name of *bidentalia*, and *putealia*. See BIDENTAL and PUTEAL.

It was alſo a piece of religion to burn *blaſted* bodies in the fire. *Pitiſc.* Lex. Ant. T. 1. p. 825. voc. *fulgurati*.

BLASTING, among miners, a term for the tearing up rocks, which they find in their way, by gunpowder. The method of doing which is this; they make a long hole, like the hollow of a large-gun-barrel, in the rock they would ſplit; this they fill with gunpowder, then they firmly ſtop up the mouth of the hole with clay, except a touch-hole, at which they leave a match to fire it. A ſmall quantity of powder does great things this way. *Shaw's* Lectures, p. 247.

BLASTOLOGY, βλαϛολογια, the regular and ſtated pruning of vines. *Salmaſ* Exerc. ad Solin. p. 519, b. See VINE.

BLASTUM *moſylitum*, in the materia medica, a term uſed by ſome writers to expreſs the *caſſia lignea*, or caſſia bark, when not peeled off from the branches, but kept with the wood within it; this was a common way of collecting and preſerving, not only this bark, but the cinnamon, and many others. The word cinnamon with them is never uſed to expreſs any thing but this ſort of drug, the young ſhoots of the tree preſerved with the bark upon them: when they peeled off the bark, and kept it ſeparate, they called it *caſſia ſyrinx*, or *caſſia fiſtula*; and when they preſerved it with the wood within it, they called it *caſſia lignea*, or *hylo-caſſia*, and *blaſtum moſylitum*. We have perverted the ſenſe of theſe words, ſince their time, but this was their original meaning.

BLATTA, (*Cycl.*) in natural hiſtory, the name of a ſpecies of beetle, called by Columna *ſcarabæus teſtudinatus*. The common kind are frequently found in bakers houſes; the males have wings, and are ſmaller than the females, which have only a ſort of rudiments of wings near the ſhoulders, and are much rougher on the body than the males. The common length is about an inch; the head is ſmall, and is furniſhed with two long and ſlender antennæ, which are remarkably mobile any way. The breaſt is covered with a cruſtaceous ſcale; the wings in the male are four, the outer ones are of a middle nature, between the cruſtaceous and membranaceous kinds, the under wings are wholly membranaceous, and white; the legs are very long, and hairy on each ſide; and the tail has two ſpines ſtanding out at it, which give it a forked look. The female is of a blacker colour than the male, and has a broader body, covered with eight or nine ſcales. *Columna*, Aquat & Terreſtr. Obſ. cap. 19. *Ray's* Hiſt. Inſect. p. 68.

Beſide this kind, which is very common with us, there is another found in Jamaica, which is larger than the former, and has wings that cover the whole body, and reach beyond the tail: alſo a ſmall kind, found both in the Eaſt and Weſt Indies; the wings of which are of a yellowiſh colour, and the ſhoulders variegated with lines and ſpots of black.

BLATTA, in middle-age writers, denotes a purple in the wool or ſilk, dyed with the liquor of the fiſh of the *blatta*. *Briſſ.* de Verb. ſignif. p. 80. *Calv.* Lex. Jur. p. 118. *Pitiſc.* Lex. Ant. T. 1. p. 284. *Fab.* Theſ. p. 359. *Voſſ.* Etym. p. 72.

This was otherwiſe denominated *blatta ſerica*, or *blatto-ſericum*; whence alſo *blattiarius*, uſed in antient writers for a dyer in purple. *Pitiſc.* Lex. Ant. loc. cit. *Fab.* loc. cit.

BLATTA, according to ſome writers, was alſo uſed for the kermes inſect [a]; and, according to others, for the purple worm [b]. But both of theſe acceptations are ſuſpicious.—[[a] Vid. *Du Cange*, Gloſſ. Lat. T. 1. p. 571. [b] *Paul. Diacon.* ap. eund. ibid.] See KERMES.

We know that it was antiently uſed for a kind of moth, or fly, whoſe fat was reputed excellent for the ears. *Plin.* Hiſt. Nat. l. 29. c. 6. *Harduin.* Not ad loc.

BLATTARIA, *moth mullein*, in botany, the name of a genus of plants, the characters of which are theſe. The flower in all particulars reſembles that of mullein; the fruit, however, is not oval or pointed, but round, or nearly ſo

The ſpecies of *blattaria* enumerated by Mr. Tournefort are theſe.

1. The yellow *blattaria*, with long laciniated leaves. 2. The white flowered *moth mullein*. 3. The purple flowered *moth mullein*. 4. The duſky, or browniſh purple flowered *blattaria*. 5. The violet flowered *blattaria*, with large ſhining flowers. 6. The duſky blue flowered *blattaria*. 7. The ferrugineous coloured *blattaria*. 8. The perennial Engliſh *blattaria*, with duſky red flowers. 9. The great flowered *blattaria*. 10. The great flowered *blattaria*, with leaves like white mullein, and yellow flowers. 11. Hoary *blattaria*, with multifid leaves. 12. Hoary perennial cretic *blattaria*, with leaves placed two and two at the ſtalk. *Turn.* Inſt. p. 147.

BLEA, in vegetables, is that part of a tree, which lies immediately under the bark, and between that and the hard wood, and is the firſt progreſs of the alteration of the bark into wood by the natural growth and ſtrengthning of the fibres.

While the *blea* remains yet ſoft, and retains ſomething of the nature of bark, it may maintain a feeble vegetation; but when it is grown abſolutely hard and woody, it can contribute nothing to the growth of the tree. The vegetation of the young branches of trees is the moſt lively and vigorous, and the only one that goes as far as the flowers and fruit, and that becauſe theſe branches are little elſe but bark. *Boerhaave's* Chym. n. p. 138.

BLEACHED. See BLEACHING, *Cycl.*

We ſay *bleached* hair [a], *bleached* linnen [b], *bleached* yarn or thread [c], *bleached* wax, &c.[d]—[[a] *Savar.* Dict. Comm. T. 2. p. 345. voce *herbe*. [b] *Skin.* Etym. in voc. [c] *Savar.* T. 1. p. 1635. voc. *fil*. [d] Id. in Suppl. p. 147. voc. *cire*.] See the article HAIR, &c.

BLEAKE, in ichthyology, a name given by us to the fiſh, called by authors the *alburnus* and *albula*. According to the new ſyſtem of Artedi, it is a ſpecies of the *cyprinus*. The French call it the *ablette*. See the articles ALBURNUS and CYPRINUS.

BLEB, a ſmall bliſter or bubble. See BUBBLE, *Cycl.*

Naturaliſts have obſerved ſmall purple *blebs* on all the plants of the *hypericum* kind. Phil. Tranſ N° 224. p. 365.

Thick pieces of glaſs, fit for large optic glaſſes, are rarely to be had without *blebs*. Id. N° 4. p. 57.

BLEEDING (*Cycl.*)—The puncture made in the operation of *bleeding* ſhould neither be too ſmall, nor too large. In the making it, the lancet is to be puſhed ſlightly forward by the thumb and forefinger, till it has penetrated through the coats of the vein; and at that inſtant it ſhould be raiſed a little upwards, in order to inlarge the orifice, and give a more free paſſage to the blood. The operator ſhould keep between the two extremes of raſhneſs and timidity in making the puncture; for, as in the one caſe, he will only divide the common integuments, and leave the work undone, ſo, in the other, he will run the riſk of wounding an artery, nerve, or tendon. Different ſurgeons open the vein in three different directions: ſome make the orifice in a ſtreight line with the courſe of the vein; others tranſverſely; but moſt make it obliquely: and if the patient is to be blooded in the left-arm, the ſurgeon ſhould be able to uſe his left hand, inſtead of his right. *Heiſter's* Surgery, p. 276.

If the blood ſtops after a ſmall time, looſen the bandage a little, to give way to more blood's deſcending by the artery, and it will bleed freſhly again; and if the orifice be obſtructed by too great a tenſion of the ſkin, or an intruſion of the membrana adipoſa, the piece of fat ſhould be returned by preſſing with the finger, or a bit of ſponge, and the ſkin relaxed by bending the arm; and, laſtly, if the orifice be obſtructed by thick grumous blood, that impediment may be removed by wiping with a ſponge dipped in warm water.

As to the quantity of blood to be taken away, there can be no general rule given, becauſe different caſes and conſtitutions require different quantities; but this may be ſaid in general, that the patient, who ſhews no paleneſs of countenance, or diminution of ſtrength or ſpirits, may bleed longer than thoſe who quickly grow faint.

When a ſufficient quantity of blood is diſcharged, the ligature muſt be immediately taken off, and the ſkin about the orifice gently ſtroaked or preſſed together by the two forefingers of the left-hand; by which means, the lips of the divided vein are cloſed: then the ſmaller of the two compreſſes is to be applied, firſt leting what little blood there may be between the orifice and the vein be diſcharged; the larger compreſs ſhould then be laid on the ſmaller, and preſſed ſlightly down with the thumb: then wiping the blood from the arm, the bandage is to be applied. Some wet the compreſſes in vinegar, water, or ſpirit of wine; but it is not neceſſary, and they ſit eaſieſt when applied dry. *Heiſt.* Surg. p. 277. See BANDAGE.

BLEEDING *in the hand*.—There are two principal veins in the hand, which are ſometimes opened to bleed the patient: the

one

one is the ſalvatella, which runs on the outſide of the back of the hand towards the little finger. This was called ſplenica by the antients, and they eſteemed the opening it particularly ſerviceable in melancholy, and diſeaſes of the ſpleen. The other is the cephalica, which runs betwixt the thumb and forefinger, and was ſo denominated from an opinion, that the *bleeding* from it was particularly ſerviceable in diſeaſes of the head; but theſe opinions were all without foundation; and tho' the patient is bled more difficultly and ſlowly in theſe veins, the effect is the ſame as if bled in the arm. It is ſometimes, however, neceſſary for a ſurgeon to open them, either at the particular deſire of the patient, or when the veins of the arm are very obſcurely ſituated, or lie deep, while theſe lie fair and conſpicuous.

When any one is to be blooded in the hand, it muſt firſt be held for a conſiderable time in warm water, and well rubbed there with the other hand, in order to make the ſmall veins become turgid and conſpicuous; then a ligature is to be fixed on the wriſt, that the veins may continue thus diſtended, and wiping the hand dry with a napkin, an orifice is to be made in the moſt convenient part of the vein, as in *bleeding* in the arm. If the blood does not flow freely from the orifice, the hand muſt be again plunged into warm water, and kept there, till the quantity taken away is judged ſufficient; then the hand is to be wiped dry, and the orifice covered with a compreſs, defended by a proper bandage. *Heiſt.* Surg. p. 279.

BLEEDING *in the neck*.—It has been a very antient practice to bleed in the external jugular veins of the neck for moſt inflammatory diſorders of the adjacent parts. The accumulated blood and humours may certainly be thus diſcharged from the parts, and the operation is no-way difficult or dangerous; ſince the jugular veins run on each ſide the neck from the head to the clavicles, juſt under the ſkin. They are very large, and eaſily opened; but a ſtricture is firſt to be made on the lower part of the neck with a handkerchief, or the like ligature. The beſt method of raiſing this vein is, however, by a looſe ligature thrown over the neck, which the patient, or an aſſiſtant, may pull downward over the breaſt; and by this means the jugular veins will be compreſſed on each ſide, and become turgid, without occluding the trachea, or obſtructing perſpiration. When the veins are thus made turgid, which ever of them lies the faireſt, may be ſecured by the finger for inciſion, if the diſorder affects the whole head; but if only one ſide, it is beſt to open the jugular on that ſide.

When the proper quantity of blood is taken, cloſe the orifice, and apply a proper compreſs and bandage. The common fear of this vein's *bleeding* afterwards is but ill-grounded, and there ſeldom is any difficulty of ſtopping the blood. The patient commonly faints away in *bleeding*; but this occaſions no harm. *Heiſt.* Surg. p. 283.

BLEEDING *in the ranulæ*.—It is often found of ſervice in quinſies and other inflammatory diſorders of the neck, to bleed in two ſmall veins, which run under the tip or end of the tongue, eſpecially if a larger vein has been before opened in the neck or arm. To bleed in theſe veins, a ſtricture muſt be made upon the neck; the apex of the tongue muſt be then elevated with the left-hand, while with the other the veins are both opened, firſt one, and then the other, by the lancet. When they have bled ſufficiently, remove the ſtricture from the neck, on which the *bleeding* uſually ſtops of itſelf; but, if it does not, let the patient take a little vinegar, or red wine, in his mouth, or elſe apply a bit of vitriol, or alum, or a compreſs dipped in ſome ſtyptic liquor, till the hæmorrhage ceaſes. But there is no need of being too buſy with theſe topics; for the blood never flows violently, or long, without them; and if there be not a good quantity of blood diſcharged by theſe veins on the occaſions for which they are uſually opened, the operation is of no uſe. *Heiſt.* Surg. p. 284. See PHLEBOTOMY.

BLEEDING *at an artery* is called *arteriotomy*. See ARTERIOTOMY.

Some phyſicians extol *bleeding* as the ſureſt and moſt efficacious of all evacuants; yet was it little known or uſed among the antients. Eraſiſtratus of old, and Helmont and his followers among the moderns, decried *bleeding* as only fit to let out the treaſure of life, and draw away the receptacle of the ſoul [a]. Dr. Morgan ſays, that a man never recovers any great loſs of blood; which, if true, ſhould make us leſs willing to part with it. Others pretend, that twenty or thirty ounces of blood are recovered in little more than as many hours; elſe whence ſhould ſuch profuſe hæmorrhages as we read of have been ſupported. Some make no ſcruple of *bleeding* every other day in conſumptions, for ſeveral weeks together; and Dr. Morgan owns it of conſequence to a phyſician, in moſt caſes, to take at firſt a little blood, that he may be enabled to judge of its ſtate and conſtitution, whether there be any other occaſion for *bleeding*, or not; for as this can do no harm, ſo it may often be of great uſe [b].—[[a] *Hoffm.* New Exper. on Miner. Water. §. 3. p. 119. [b] *Morg.* Phil. Princ. Med. P. 3. pr. 1. p 407.]

In monaſteries there were five ſtated times in the year, when all the monks were obliged to bleed, whatever their habit of body might be [c]. This looks a little too like the method ſtill uſed in reſpect of ſoldiers horſes, where a whole troop are uſually blooded in a day [d].—[[c] *Du Cange*, Gloſſ. Lat. T. 3. p. 564. voc. *minuere*. It. T. 4. p. 597. voc. *ſanguiminuere*. [d] *Brack.* Not. to *Burd.* Farr. p. 96.]

Nothing is more ſucceſsful to ſtop the *bleeding* of the ſmaller veſſels, for inſtance, in cutting for the ſtone, than the application of wet ſponge. Phil. Tranſ. N° 478. p. 33.

Phyſicians ſeem greatly divided as to the propriety of letting blood in the ſmall-pox. See Med. Eſſ. Edinb. abridg. Vol. 2. p. 419.

From conſidering, ſays Mr. Queſnay, all the effects of bloodletting, it muſt be concluded, that there is only place for *bleeding*, when the liquids diſturb the action of the ſolids, or when the ſolids cauſe diſorder in the fluids; for when the ſolids or the fluids are found defective abſolutely, or in themſelves, the bad ſtate of neither of them can be repaired by *bleeding*. L'Art de Guerir par le Saignée. ap. Med. Eſſ. Edinb.

The aphoriſm of Hippocrates, if a pregnant woman be let blood, ſhe will miſcarry, has proved not a little deſtructive to many. Experience ſhews not only the ſafety, but benefit, of phlebotomy in many caſes of pregnancy. Vid. *Boyle*, Works abridg. Vol. 1. p. 27.

The bramins never bleed, but, in lieu thereof, faſt. Hiſt. des Bram. ap. Trev. T. 4. p 1438. voc. *ſaigner*.

BLEEDING *by meaſure* is where account is taken of the quantity as it flows from the vein, in order to put a ſtop to the flux when the requiſite proportion is had.

BLEEDING *at large*, where the flux is continued without regard to the quantity, till ſuch time as ſome expected effect is perceived. This method is ſometimes uſed in caſes of apoplexies, comata, *&c.*

BLEEDING, in farriery, is that practiſed on horſes, oxen, and other black cattle, eſpecially to cure and prevent defluxions, fevers, founderings, farcy, mange, *&c.* Vid. *Burd.* Farr. p. 42. Dict. Ruſt. T. 1. in voc.

BLEEDING is alſo uſed for a hæmorrhage or flux of blood from a wound, rupture of a veſſel, or other accident. See HÆMORRHAGE.

BLEEDING *of a corpſe*, *cruentatio cadaveris*, is a phænomenon ſaid to have frequently happened in the bodies of perſons murdered, which, on the touch, or even approach of the murderer, began to bleed at the noſe, ears, and other parts; ſo as formerly to be admitted in England, and ſtill allowed in ſome other parts, as a ſort of detection of the criminal, and proof of the fact. Vid. *Walc.* Introduct. Philoſ. l. 3. c. 2. §. 28. p. 689. *Voight.* Delic. Phyſ. ap. Phil. Tranſ. N° 77. p. 3017. Numerous inſtances of theſe poſthumous hæmorrhages are given by Webſter [e], Lemnius, Libavius, and eſpecially Horſtius [f], who has a diſcourſe expreſs on the point. [[e] Exam. Witch. c. 16. §. 28, ſeq. *Walc.* Lex. Phil. p. 280. voc. *bluten*. [f] De Cruentatione Cadaverum. Vid. *Vater.* Phyſ. Exper. P. 2. §. 2. c. 15. qu. 11. p. 273, ſeq.]

But this kind of evidence ought to be of ſmall weight; for it is to be obſerved, that this *bleeding* does not ordinarily happen, even in the preſence of the murderer, yet ſometimes in that even of the neareſt friends, or perſons moſt innocent, and ſometimes without the preſence of any, either friend or foe. In effect, where is the impoſſibility that a body, eſpecially if full of blood, upon the approach of external heat, having been conſiderably ſtirred or moved, and a putrefaction coming on, ſome of the blood-veſſels ſhould burſt, as it is certain they all will in time? *Vater.* loc. cit.

BLEEDING is alſo applied, in a leſs proper ſenſe, to a flux of ſap out of the wounded veſſels of plants, either ſpontaneouſly at certain ſeaſons, or by art, and the help of inciſion. See the article SAP.

This amounts to the ſame with what is otherwiſe called *weeping*, *dropping*, *running*, &c.

In this ſenſe, all plants, in the ſummer-time, are found to bleed, that is, to yield a juice from ſap-veſſels, either in the bark, or in the margin of the pith; the ſaps, thus bled, having either a ſour, ſweet, hot, bitter, or other taſte. At times alſo, the veſſels in the bark of a vine-branch bleed a ſour ſap.

But that which is vulgarly called *bleeding*, as in a vine, is a different thing, both as to the liquor iſſuing, and the place where it iſſues, being neither a ſweet, nor ſour, but taſteleſs ſap, iſſuing not from any veſſels in the bark, but from the air-veſſels in the wood.

So that there is as much difference betwixt *bleeding* in a vine, and the riſing of the ſap in any other tree in March and July, as there is betwixt ſalivation and an hæmorrhage; or betwixt the courſe of the chyle in the lactiferous veſſels, and the circulation of the blood in the arteries and veins. *Grew*, Anat. of Plant. l. 3. c. 1. §. 8. p. 125.

Ray, Willughby, Liſter, Tonge, Grew, Hales, and other modern naturaliſts, have given a great number of obſervations on the *bleeding* of plants, the times and ſeaſons thereof, the quantities diſcharged [g], and the ſorts of trees moſt ſubject thereto, particularly the birch [h], ſycamore [i], walnut-tree [k], vine [l], willow [m], and aloe [n]. Such *bleedings*, when ſpontaneous, are ranked by Tournefort in the number of diſeaſes of plants, anſwering to a plethora in animals, or a ſuperabundance of juice [o].—[[g] Phil. Tranſ. N° 40. p. 798. It. N° 44. p. 880, ſeq. It. N° 43. p. 854. It. N° 57. p. 1165. It. N° 70. p. 2119, ſeq. It. N° 224. p. 382. *Grew*, Idea Anat. Plant. §.

23. p. 11. [h] Vid. Phil. Tranſ. N° 48. p. 963. [i] Id. N° 68. p. 2067, ſeq. [k] Id. N° 58. p. 1199, ſeq. [l] *Hales*, Veget. Stat. c. 3. Phil. Tranſ. N° 398. p. 274. [m] *Ray*, Phil. Lett. p. 205. [n] *Hought.* Collect. T. 2. p. 337. N° 324. [o] Mem. Acad. Scienc. an. 1705. p. 437. and p. 452.] See BIRCH, &c.

BLEMMYES (*Cycl.*)—Some hold the origin of the fable of the *blemmyes* to have ariſen from this, that the people of that part hid, in ſome meaſure, their heads between their ſhoulders, by twiſting theſe up to an immoderate height; ſo that wearing withal long hair, their heads and necks did not appear: ſomething like which has been obſerved by modern travellers. Vid. *Borell.* Obſerv. Medic. Phyſ. cent. 3. obſ. 3. *Aldrovand.* ap. Schott. Phyſ. Cur. l. 3. c. 11. & c. 9. §. 1. *Beeman.* Hiſt. Orb. Ter. P. 1. c. 9. ſect. 2. §. 12. p. 362.

BLENCH, a ſort of tenure of land; as to hold land in *blench* is by payment of a ſugar-loaf, a couple of capons, a beaver-hat, &c. if the ſame be demanded in the name of *blench*, i. e. *nomine albæ firmæ*. *Blount.*

BLEND-*metal iron*, a coarſe ſort of iron from Staffordſhire mines, uſed for making nails and heavy ware; in ſome places alſo for horſe-ſhoes. *Plott*, Nat. Hiſt. Staffordſh. c. 4. §. 21. *Hought.* Collect. T. 2. N° 271. p. 221.

BLEND-*water*, a diſtemper incident to black cattle, and comes ſeveral ways, 1. From blood. 2. From the yellows, which is a ringleader of all diſeaſes. And, 3. From change of ground; for being hard, it is apt to breed this evil, which, if not remedied in ſix days, will be paſt help. Dict. Ruſt. T. 1. in voc.

BLENDE, in natural hiſtory, a name given to a ſubſtance, reſembling, in ſome degree, the ores of lead; but containing very little of that metal, and ſometimes none at all: it is therefore called by ſome *mock lead*. It is uſually found about the mines of lead, and has commonly ſpars and cryſtals about it.

BLENNIUS, in the Linnæan ſyſtem of zoology, the name of a genus of fiſhes of the general order of the *acanthopterygii*. The characters of this genus are, that the membrane of the gills has ſix bones; the fore-part of the head is very ſlanting; and the belly fins have two bones. Of this genus are the *blennus*, *alauda*, &c. *Linn.* Syſt. Nat. p. 54.

BLENNIUS, in the Artedian ſyſtem of ichthyology, the name of a genus of fiſhes; the characters of which are theſe: it is of the acanthopterygious kind; and the branchioſtege membrane on each ſide contains ſix diſtinct and eaſily perceived bones: the head is compreſſed, and in many ſpecies obtuſe at the end, or very declivious from the eyes to the mouth: the body alſo is compreſſed, and uſually variegated with ſeveral colours: the jaws are covered with large lips: there is only one fin on the back, and that generally reaches from the head to the tail, or nearly ſo: this ſometimes has little bones, in ſome ſpecies prickly, in others not ſo, and ſometimes one or two *pinnulæ*, or appendages, in the forehead near the eyes: the belly fins ſtand very forward; and the eyes are covered with a ſkin: the belly fins never have any more than two ribs. Theſe are the true and diſtinctive characters of the *blennius*; and the genuine ſpecies of this genus are theſe: 1. The *blennius*, with a furrow between the eyes, and a large ſpot in the back fin. This is the common *blennius* of authors. 2. The *blennius*, with two ſmall pinnulæ at the eyes, and with twenty-three bones in the *pinna ani*. This is the fiſh called by Willughby and others *gottorugine*. 3. The *blennius*, with the upper jaw longer than the under, and with the head acuminated at the top. This is the fiſh called *alauda non criſtata* by authors; and the *mulgrano* and *bull-card* by the people of Cornwall. 4. The *blennius*, with a cuticular creſt running tranſverſely over the head. This is the *alauda criſtata* of authors. The creſt is a triangular lobe of ſkin, red at the edges. It is ſituated between the eyes. 5. The *blennius*, with about ten black ſpots, and a white limb, on each ſide of the back fin. This is the *gunellus cornubienſium*, or, as ſome call it, the *butter-fiſh*, or *liparis*. *Artedi*, Gen. Piſc. p. 22.

The name is of Greek origin, and is derived from the word βλεννα, which ſignifies a tough and mucous matter, ſuch as the body of this fiſh is covered with.

BLENNUS, in zoology, a very remarkable fiſh, called in Engliſh the *butterfly-fiſh*. It is very thick at the head, and grows gradually ſmaller towards the tail. Its moſt uſual ſize is about ſix inches in length, and oftener leſs than more than that. Its colour is a pale-blueiſh, variegated with olive-coloured or duſky greeniſh lines. The eyes are very large, and their iris red or ſaffron-coloured. They are placed in the top of the head, and very near one another, with a furrow between them, and over each a ſmall fin. The mouth is ſmall; but capable of great extenſion: the foreteeth long, and placed regularly, reſembling the *dentes inciſores* of quadrupeds, with two other longer and crooked behind them, like the *canini*. It has a tranverſe ſkin in the middle of the palate, to keep the food from returning out of the mouth. It has one long back fin reaching from near the head to the tail. This is much broader near the head than elſewhere; and has, near its fifth ray or nerve, a beautiful ſpot, reſembling an eye, black in the middle, and ſurrounded with a white circle. It is from this ſpot, ſo like thoſe in the wings of ſome butterflies, that it got its Engliſh name; and by this it is eaſily known from all other fiſhes. It has no ſcales; but has a dotted line running down its ſides, and a large and prominent belly. It is common in the Mediterranean, and is ſold in Venice and elſewhere for the faber. The fleſh is very ſoft. *Willughby*, Hiſt. Piſc. p. 132. *Aldrovand.* de Piſc. l. 2. c. 26. See Tab. of fiſhes, N° 16.

Bellonius ſeems to have deſcribed a different fiſh under this name, mentioning it as covered with looſe ſcales, and with extremely minute teeth. But Salvian, Aldrovand, Ray, &c. all underſtand this fiſh alone by this name.

BLENNUS, in ichthyology, is alſo a name given by ſome authors, particularly Schonfeldt, to the *ſyngnathus corpore hexagono, cauda pinnata*; the *acus* of Ariſtotle; and *acus ſecunda* of other writers; called alſo by Geſner and Bellonius *typhle marina*.

BLENNUS, in zoology, a name uſed alſo by ſome for the tobaccopipe-fiſh. *Schonf.* Ichth. p. 11.

BLESENSIS *bolus*, *bole of Blois*, in the materia medica, a very valuable medicinal earth dug about Saumur, Blois, and Bourgoyne in France, and ſeeming to poſſeſs all the virtues of the Armenian bole of Galen, which it alſo much reſembles in external appearance. It is an extremely pure and fine earth, of a regular and compact texture, yet very light; and in colour of an extremely pale yellow, with ſome faint bluſh of rediſhneſs. It is naturally of a ſmooth ſurface, crumbles to pieces eaſily between the fingers, and does not ſtain the hands; and melts freely in the mouth, leaving no ſenſation of hard particles between the teeth. It ferments violently with acid menſtruums, and does not burn to a redneſs, as the common yellow earths do. *Hill*, Hiſt. of Foſſ. p. 7.

It is a very valuable medicine in fluxes and many other caſes, and might be had in any quantities, at a ſmall price; but ſuch is the preſent unhappy ſtate of medicine, that the druggiſts content themſelves with the moſt wretched counterfeits in the place of drugs even ſo cheap as theſe, while there can be had any thing cheaper. Many of our phyſicians preſcribe this bole; but it is not kept in the ſhops. The common red French bole is generally ſold in its place, and that too often counterfeited, or, inſtead of it, the ſubſtance we call bole Armenic, which is no other than a mixture of tobaccopipe-clay and red ochre.

BLESTRISMUS, βλησμος, in the antient phyſic, a continual toſſing and inquietude of the body, occaſioned by a tumultuary efferveſcence of the blood, eſpecially in acute fevers. *Caſt.* Lex. Med. p. 107.

BLETA *alba*, an epithet given by ſome to the milky urine voided in ſome diſorders of the kidneys, ranked by Paracelſus among the cauſes of the phthiſis. *Paracelſ.* de Tartar. l. 2. tract. 3. c. 3. *Caſt.* Lex. Med. p. 107.

BLETUS, βλητος, in the antient phyſic, a perſon whoſe ſide, by reaſon of ſome internal inflammation, as a pleuriſy or peripneumony, turns black or livid ſpotted, chiefly preſently after death. *Caſt.* Lex. Med. p. 107.

BLEW-CAP, an Engliſh name for a peculiar ſpecies of fiſh of the ſalmon-kind, diſtinguiſhed by a broad blue ſpot on the head, from whence they have their name. Theſe ſeem not to breed with us; but appear in our rivers only at certain ſeaſons, when there have been very violent north winds. This fiſh is ſeldom found ſingle; ſo that the fiſhermen rejoice at the taking one of them, expecting a large ſhoal of them near. *Willughb*, Hiſt. Piſc. p. 193.

BLEYME, in farriery, an inflammation in a horſe's hoof, occaſioned by blood putrified in the inner part of the coffin towards the heel, between the ſole and the coffin-bone.

Some write the word corruptly *bleyne* [a]. It is originally French, *bleime*, which ſignifies the ſame [b].—[[a] *Guill.* Gent. Dict. P. 1. in voc. *bleyne*. [b] Trev. Dict. Univ. T. 1. p. 1072. in voc. *bleime*.]

There are three ſorts of *bleymes*; the firſt bred in ſpoiled wrinkled feet with narrow heels, are uſually ſeated in the inward or weakeſt quarter: the ſecond, beſides the uſual ſymptoms of the firſt, infects the griſtle, and muſt be extirpated, as in the cure of a quitter-bone: the third is occaſioned by ſmall ſtones and gravel between the ſhoe and the ſole.—For a cure, they pare the foot, let out the matter, if any, and dreſs the ſore, like the prick of a nail. Dict. Ruſt. T. 1. in voc.

BLICEA, in zoology, the name of a ſmall fiſh of the harengiform kind, caught in the German and other ſeas, and ſuppoſed by many to be the ſame with what in England we call the ſprat, which to ſome ſeems to be no other than a young herring. *Willughby*, Hiſt. Piſc. p. 228.

BLICEA, in zoology, is likewiſe the name of a freſh-water fiſh of the malacoſtomous, or, as we call it in Engliſh, the leather-mouthed kind, ſeeming to be the ſame with the more common kind of carcaſſius. *Willughby*, Hiſt. Piſ. p. 250.

BLICEA *marina*, in zoology, the name of an Eaſt Indian fiſh, which might be more properly called *harengus minor Indicus*, or the ſmall Indian herring. It is of the ſhape of the herring; but ſomewhat broader and thinner, and is of the ſame colour. Its tail alſo is forked; but its head is of an odd figure, its eyes and the end of its ſnout being extremely large. This fiſh ſwims uſually in vaſt ſhoals, and is caught principally on the coaſt of Malabar. It is a well-taſted fiſh; but has not at all the taſte of the herring. It takes ſalt, which ſcarce any other of the Eaſt Indian fiſh will do, and is therefore very much valued, and ſent into all the neighbouring parts of the country in pickle. There is alſo another very conſiderable uſe it is put to

by the natives, which is the manuring the lands whereon they ſow their rice: they uſe this fiſh, which is caught in prodigious plenty, inſtead of dung on this occaſion. *Ray*, Ichthyol. Append. p. 2.

BLIEGG, in ichthyology, a name given by the Germans to the fiſh we call the *bleake*, and authors in general the *albula* and *alburna*. It is by Artedi very properly referred to the genus of the *cyprini*, and diſtinguiſhed by the name of the five inch *cyprinus*, with twenty rays in the *pinna ani*.

BLIGHTS, (*Cycl.*) ſometimes alſo written *blites*, are the ſame with what we otherwiſe call *blaſts*, or *blaſtings*. *Mortim.* Art. Husband. l. 7. c. 1. p. 305.

Another method, beſides that mentioned in the Cyclopædia, to preſerve trees from *blights*, is the uſe of tobacco-duſt; or by waſhing the leaves with water, wherein tobacco-ſtalks have been infuſed.

Another is by pulling off the leaves when withered, and cutting off the ſmaller branches, when they produce crooked and unnatural ſhoots.

Some imagine, that the *blights*, moſt deſtructive to fruit-trees, are produced by ſmall ſhowers of rain, or white hoar-froſts falling on the bloſſoms; which being ſucceeded by north or eaſterly winds, or froſty mornings, occaſion the miſchief ſo frequent in the ſpring-ſeaſon. To prevent theſe, it has been recommended by a reverend author to build new walls, in which, at every third courſe of bricks, are to be laid a row of plain tiles, to project forwards, and hang over the plain of the wall an inch and half, to carry off the perpendicular dews and rain, leaving room at diſtances between the tiles to carry up the branches of the tree.

Some judge, that the frequent *blights* to which corn is ſubject after a wet ſummer, are owing to over much moiſture lying continually at its roots, which makes it run much to ſtraw, and little to grain; the moiſt vapours exhaling from the ground at the time when it ſhould kern, operating like a mildew, and preventing the due growth of the ear. *Mortim.* loc. cit.

But Mr. Hales's account of *blights* appears the moſt authentic. According to him, they are often cauſed by a continued dry eaſterly wind for ſeveral days together, without the intervention of ſhowers, or any morning dew, by which the perſpiration in the tender bloſſoms is ſtopped; ſo that in a ſhort time their colour is changed, and they wither and decay: and if there happen a long continuance of the ſame weather, it equally affects the tender leaves, whoſe perſpiring matter becomes thickened and glutinous, ſo as cloſely to adhere to the ſurfaces of the leaves, and become a proper nutriment to inſects, which are always found preying on the leaves and tender branches of fruit-trees, when this ſort of *blight* happens, tho' it be not the inſects which are the firſt cauſe. The beſt remedy yet known, is gently to waſh and ſprinkle over the trees from time to time with fair water; and if the young and tender ſhoots ſeem much infected, to waſh them with a woolen cloth, ſo as to clear them, if poſſible, from this glutinous matter, that their reſpiration and perſpiration may not be obſtructed. Add, that broad flat pans or tubs of water being placed near the trees, which may receive the vapours exhaled from them, will help to keep their tender parts in a ductile ſtate; but whenever this operation of waſhing the tree is performed, it ſhould be early in the day, that the moiſture may be exhaled before the cold of the night comes on, eſpecially if the nights are froſty; nor ſhould it be done when the ſun ſhines very hot upon the wall, which would be ſubject to ſcorch up the tender bloſſoms.

Another cauſe of *blights* in the ſpring is ſharp hoary froſts, which are often ſucceeded by hot ſun-ſhine in the day-time, which is the moſt ſudden and certain deſtroyer of fruits known; for the cold of the night ſtarves the tender parts of the bloſſoms, and the ſun riſing hot upon the walls before the moiſture is dried from the bloſſoms, which being in ſmall globules, doth collect the rays of the ſun, and thereby ſcorch the tender flowers and other parts of plants.

But that *blights* are frequently no more than an inward weakneſs or diſtemper in trees, evidently appears, if we conſider how often it happens, that trees againſt the ſame wall, expoſed to the ſame aſpect, and equally enjoying the advantages of ſun and air, with every other circumſtance which might render them equally healthy, are often obſerved to differ greatly in ſtrength and vigour; and as often do we obſerve the weak trees to be continually blighted, when the vigorous ones in the ſame ſituation eſcape. This weakneſs in trees proceeds either from want of a ſufficient ſupply of nouriſhment to maintain it in perfect vigour, or from ſome ill qualities in the ſoil where it grows, or, perhaps, from ſome bad quality in the ſtock, or inbred diſtemper of the bud or cyon, which it had imbibed from its mother-tree, or from miſmanagement in the pruning, &c. See PRUNING, *Cycl.*

But there is another ſort of *blight*, againſt which it is more difficult to guard fruit-trees; that is, ſharp, pinching, froſty mornings, which often happen at the time when the trees are in flower, or while the fruit is very young, and occaſion the bloſſoms or fruit to drop off; and ſometimes the tender parts of the ſhoots and leaves are greatly injured thereby. The only method yet found out to prevent this miſchief is, by carefully covering the walls, either with mats, canvas, &c. which being faſtened ſo as not to be diſturbed with the wind, and ſuffered to remain on during the night, are to be taken off every day, if the weather permits.

Another ſort of *blight*, which ſometimes happens in April or May, and which is often very deſtructive to orchards and open plantations, and againſt which we know of no remedy, is what is called a *fire blaſt*, which in a few hours hath not only deſtroyed the fruit and leaves, but many times parts of the trees, and ſometimes whole ones have been killed by it. This is ſuppoſed to be effected by volumes of tranſparent flying vapours, which, among the many forms they revolve into, may ſometimes approach ſo near to a hemiſphere, or hemicylinder, either in their upper or lower ſurface, as thereby to make the beams of the ſun converge enough to ſcorch the plants, or trees they fall upon, in proportion to the greater or leſs convergency of the ſun's rays. This more frequently happens in cloſe plantations, where the ſtagnating vapours from the earth, and the plentiful perſpirations from the trees, are pent in, for want of a free air to diſſipate and diſpel them; than in thoſe planted at a greater diſtance, or ſurrounded with hills or woods. *Mill.* Gard. Dict. in voc. See RUST.

BLIKE, in zoology, a name given by ſome to an anadromous fiſh, ſomewhat reſembling our river chub, and called by Geſner *capito anadromus*; but more generally known by the name of *zerta*, or the *zerte*. *Willughby*, Hiſt. Piſc. p. 257. See the article ZERTA.

BLIND (*Cycl.*)—*Pore* BLIND denotes only a great degree of ſhort-ſightedneſs. Phil. Tranſ. N° 37. p. 731.

Moon BLIND is uſed in ſpeaking of horſes, which loſe their ſight only under certain ſtates of the moon, and ſee at every other time. Dict. Ruſt. T. 2. voc. *Moon*.

A *blind* man by the civil law cannot make a teſtament, except under certain modifications; but in every caſe he is diſabled from being a witneſs to a teſtament. *Calv.* Lex. Jurid. p. 131, and p. 195. voc. *cæcus*.

We read of *blind* authors, and men of learning [a]. *Blind* poets, as Thamyrus [b], Homer [c], and Milton. *Blind* aſtronomers, as Galilæo and Caſſini [d]. Blind geometricians, as profeſſor Saunderſon of Cambridge, &c.—[[a] *Bartholin.* Act. Med. T. 2. p. 78. Hiſt. Acad. Inſcr. T. 1. p. 487. [b] *Fabric.* Bibl. Græc. l. 1. c. 35. §. 4. T. 1. p. 240. The tradition is, that his eyes were put out for his temerity, in having contended for the palm in poetry with the muſes. [c] *Fabric.* Bibl. Græc. l. 2. c. 1. §. 7. T. 1. p. 259, where the ſeveral writers in the diſpute concerning Homer's blindneſs are recited. [d] *Fonten.* Elog. des Acad. T. 2. p. 145, where the author poetically imagines them to have been ſtruck *blind*, like Tireſias, for prying too near into the ſecrets of the gods.]

The moſt extraordinary of all is a *blind* guide, who, according to the report of good writers, uſed to conduct the merchants through the ſands and deſarts of Arabia [a]. James Bernoulli contrived a method of teaching *blind* perſons to write [b].—[[a] *Leo. Afr.* Deſcr. Afr. l. 6. p. 246. *Coſaub.* Treat. of Enthuſ. c. 2. p. 45. [b] *Fonten.* Elog. des Acad. p. 114.]

BLIND is alſo uſed for occult, or imperceptible. Hence *blind* rampart, *cæcum vallum*, among the antients, was that beſet with ſharp ſtakes, concealed by graſs or leaves growing over them. *Feſt.* l. 3. ap. *Calv.* loc. cit.

BLIND *teſtimonies*, cæca teſtimonia, thoſe given by abſent perſons in writing. *Calv.* Lex. Jur. p. 131. voc. *cæca*.

BLIND is alſo uſed in ſpeaking of bodies without apertures. Hence,

BLIND *wall*, *cæcus paries*, that without windows [a]. In a like ſenſe we meet with *blind* chamber, *cæcum cubiculum* [b].—[[a] *Calv.* ibid. [b] *Varro*, Ling. Lat. l. 8.]

BLIND is alſo uſed in ſpeaking of veſſels which are not perforated.

In this ſenſe, the chemiſts ſay a *blind* alembic. A tube is ſaid to be *blind*, when it is cloſed a-top.

Some anatomiſts alſo call the third cavity of the ear *cæcum*, as having no iſſue; but it is more uſually denominated labyrinth. See LABYRINTH, *Cycl.*

BLIND *granado*, that which does not light or take fire. *Fæſch.* Lex. Milit. p. 100.

BLIND, in zoology, a local name for a fiſh, called by authors the *aſellus luſcus*, and more univerſally in Engliſh the *bil*. It is a fiſh of the cod kind, but never growing to any great ſize. The word *blind* is uſed in Cornwall. *Willughby*'s Hiſt. piſc. p 169. See ASELLUS and BIL.

BLIND, or BLINDE, among mineraliſts, a kind of lead marcaſite, by our miners called *mock-ore*, *mock-lead*, and *wild lead*. See MARCASITE, LEAD, &c.

Blinde is a mineral maſs, flaky, gloſſy, and breaking in angles, much like the potters lead ore, only of a colour more duſky, and approaching to black. In it are veins of a yellow ſhining marcaſite, with a little white ſpar, and on one ſide a greeniſh æruginous matter. On a trial by the fire, it yielded a very little copper, leſs lead, and no tin. It is very obſtinate, ſeveral attempts having been made with the alcaline fluxes to run it, in vain. *Woodw.* Nat. Hiſt. Engl. Foſſ. P. 1. p. 183.

The German mineraliſts call it *blende*, whence our denomination *blinde*. It anſwers to what in Agricola is called *Galena inanis*. See GALENA.

It usually lies immediately over the veins of lead ore, in the mines which produce it, for it is not found in all. When the miners see this, they know the vein of ore is very near. *Ray*'s Engl. Words, p. 118.

BLINDS, or BLINDES. in the military art, denote every thing serving to cover the besiegers from the enemy, as wool-packs, earth-baskets, sand-bags, and the like. *Guill.* Gent. Dict. P. 2. in voc. *Fæsch.* Lex. Milit. p. 96. seq. voc. *blendungen.*

Blindes are sometimes only canvas stretched to take away the sight of the enemy; sometimes they are planks set up, properly called mantelets; others are of baskets, others of barrels.

BLINDES more peculiarly denote pieces of wood laid a-cross a trench, to support fascines or baskets, which are placed on them, loaded with earth to cover the workmen [a]. They are chiefly used, where the trenches are carried on in the face of the place, in a right line, so as the enemy might scour them with their guns from the walls [b].—[a *Ozan.* Dict. Math. p. 600. b *Fæsch.* Lex. Milit. p. 96.]

Blindes differ from *chandeliers*, as the latter are intended as a screen from above, the former from before. *Felib.* Princ. de l'Archit. p. 74. See CHANDELIER, *Cycl.*

Some also rank mantelets in the number of *blindes*. *Fæsch.* Lex. Milit. p. 97. voc. *blendungen.* See MANTELET, *Cycl.*

BLIND is sometimes also used for orillon. Milit. Dict. in voc. See ORILLON, *Cycl.*

BLINDING, a species of corporal punishment antiently inflicted on thieves [a], adulterers [b], perjurers [c], and others; and from which the antient christians were not exempt [d]. The inhabitants of the city Apollonia executed it on their watch, whom they found asleep [e]. Democritus, according to Plutarch, Cicero, and A. Gellius, put out his own eyes, that he might be less disturbed in his mental contemplations, when thus freed from the distraction of the objects of sight [f]. Though Laberius gives another reason, *viz.* that he might not have the mortification of seeing wicked men in splendor and triumph; and Tertullian another, *viz.* that he might be exempted from the stimulus to venery, excited by the sight of women [g].—[a Vid. *Solin.* Polyhist. c. 4. *Lamprid.* in Alex. Sever. c. 17. b *Valer. Max.* l 6. c. 5. n. 3. c *Luitprand.* de Reb. Imp. & Reg. l. 2. c 11. d *Lactant.* de Mort Persecut. c. 36. n. 7. e *Herodot* l. 6. c. 92. f *Au. Gell.* Noct. Att. l. 10. c. 77. *Cicero*, Tusc. Quæst. 5. g *Tertull.* Adv. Gent. *Stanl.* Hist. Philos P. 11. c. 5. p. 755.]

BLINDING, *obcæcatio*, in the black art, denotes a species of necromancy, whereby a visible body may be concealed, or hidden by an invisible power. *Cast.* Lex. Med. p. 532. voc. *obcæcatio.*

BLINDING *of a casemate* signifies erecting a battery against it, in order to dismount its cannon, and render them useless. Trev. Dict. Univ. T. 1. p. 723. voc. *aveugler.*

BLINDNESS (*Cycl.*) is of divers kinds. Natural *blindness* is that happening according to the ordinary course of things; thus that of certain insects formed without eyes, though it is not easy to fix which these are, since divers animals have been erroneously supposed so, on account of their smallness or imperceptibleness; as the cæcilia, commonly called the *blind* worm, the mole, &c. *Grew*, Mus. Reg. Societ. P. 1. § 3. p. 48.

That moles are naturally *blind* is a popular error, arising partly from the smallness of their eyes, and partly from their being hid, or buried deep in the head, to save them from the annoyances, which otherwise they would be perpetually liable to, in digging under ground; but, on occasion, they can exert or thrust them forward, as is likewise done by snails. *Brown*, Vulg. Error, l. 3. c. 18. p. 123.

Præternatural, or morbid *blindness*, is that owing to disease or accident.

Total *blindness*, that wherein all sight or perception, even of light, is wanting, as is the case of those who are said to be *stone blind.*

Partial *blindness*, that wherein some faint glimmering is left, as is always the case in people who have ripe cataracts, who are never so blind, but they can discern day from night; and, for the most part, in a strong light, distinguish black, white and scarlet, though they cannot perceive the shape of any thing. The reason is, that the light by which those perceptions are made, being let in obliquely through the aqueous humour, or the anterior surface of the chrystalline, (by which the rays cannot be brought into a focus upon the retina) they can discern in no other manner, than a sound eye can through a glass of broken jelly, where a great variety of surfaces so differently refract the light, that the several distinct pencils of rays cannot be collected by the eye into their proper foci; wherefore the shape of an object in such a case cannot be at all discerned, though the colour may. Vid. Philos. Trans. N° 402. p 447.

Perpetual *blindness*, that which remains alike under all the diversity of seasons, times, ages, &c.

Transient *blindness*, that which gives way of itself in due time, as that of whelps.

The Nogais tartars, according to father du Ban the jesuit, who lived among them, are born *blind*, and open not their eyes, ti after several days [a]; as the *blindness* of whelps for several days after they are littered, which is commonly said to hold nine days, rarely twelve [b].—[a Vid. Nouv. Mem. des Mess. T. 1. p. 23. Trev. Mem. Hist. Art. an. 1715. p. 1532. b *Brown*, Vulg. Err. l. 3. c. 27. p. 147.]

Periodical *blindness*, that which comes and goes by turns, according to the season of the moon, time of day, and the like.

Nocturnal *blindness*, called also *nyctalopia*, that which ensues on the setting of the sun in persons who see perfectly in the day, but become blind as posts as soon as night comes on. *Brigg*, in Phil. Trans. N° 159. p. 560, where an instance of it is given.

Lunar *blindness*, that which happens under a certain state or age of the moon, frequent enough in horses, but sometimes also observed in men. A very extraordinary instance of this kind is related in the Philosophical Transactions: a poor man in the north of Scotland was, every year in his life, taken blind two days before the new moon, and recovered again at the instant of the new moon. Vid. Phil. Trans. N° 233. p. 728.

The causes of *blindness* are either ordinary, as a decay of the optic nerve; (an instance whereof we have in the academy of sciences, where, upon opening the eye of a person long blind, the optic nerve was found extremely shrunk and decayed, and having no medulla in it) or some external violence, vitious conformation, growth of a cataract, gutta serena, small-pox, or the like. Vid. *Mery*, in Hist. Acad. Scienc. Par. ann. 1713. p. 161.

In the history of the academy of sciences, we have an account of a person born seemingly without eyes, *i. e.* the eyes were covered up by the eye-lids, which were grown together. Hist. Acad. Scienc. ann. 1721. p. 42.

Extraordinary causes of *blindness* are malignant stenches, poisonous juices dropped into the eye, baneful vermin, long confinement in the dark, or the like.

We have an account in the history of the academy of sciences, of two labourers struck quite blind by a fetid damp or stench; but cured again in twenty-four hours by M. Chomel [a]. And Boyle speaks of a *blindness* occasioned by a drop of liquor from a spider deposited in the eye [b].—[a Hist. Acad. Scienc. ann. 1711. p. 33, seq. b *Boyle*, Phil. Work. abrid. T. 3. p. 547.]

The ducks which generate under ground, and break out into the Zirchnitzer-sea in Carniola after all great storms, are blind at their first eruption; but, in some time, come to their sight.

Among the causes of *blindness* must also be recited the artificial ways of blinding practised on criminals, &c. of which we find frequent mention in antient writers, under the denominations *obcæcatio*, *exoculatio* [c], *oculorum effossio* [d], *abbacinatio* [e]. To which may be added *eluscatio*, which only denoted a kind of half-blinding, or putting out one of the eyes, and leaving the other [f].—[c *Du Cange*, Gloss. Lat. T. 2. p. 321. voc. *exoculare.* d Vid. *Spelm.* Gloss. p. 434. voc. *oculorum effossio.* e *Du Cange*, ibid. T. 1. p. 1. voc. *abbacinare.* f *Calv.* Lex. Jur. p. 323. voc. *eluscare.*]

Sometimes lime and vinegar, or barely scalding vinegar, was poured into the eyes, till their balls were consumed; sometimes a rope was twisted round the head till the eyes started out. *Schott.* Lex. Antiq. in voc. *augen.*

In the middle age, they changed total *blindness* for a great darkness, or diminution of sight, which they produced by holding a red-hot iron dish or bason before the eyes, till their humours were dried, and their coats shrivelled up.

The remedies for *blindness* are either regular, empirical, or superstitious.

Regular remedies are ophthalmic lotions adapted to the particular evil, collyriums, and the like.

Empirical remedies are certain mercurial and arsenical drops and powders, prescribed equally against all species of this disease [g]; or manual, as by couching [h], and the like.—[g Vid. *Boyle*, Phil. Work. abridg. T. 1. p. 103, where he speaks of an empyrical cure for *blindness* invented by Adr. Glassmaker, being a sort of turbith made by precipitating quicksilver with oil of vitriol. h Vid. Hist. Acad. Scienc. ann. 1721. p. 42, where is an account of cutting open the eyes of a person, in whom they were naturally closed up, and covered over by the eye-lids.]

Superstitious remedies are of various kinds, as that given by Myrepsus, pretended to have been revealed by the Virgin [i]; or the gall of Jonas's whale, the fish lamia, or canis carcharias; not to mention those fictitious cures attributed by Spartian to the emperor Hadrian [k], and others.—[i Vid. *Fabric.* Bibl. Græc. l. 6. c. 9. p. 7. & *Barth.* Act. Med. T. 1. p. 298. k Vid. *Bayle*, Dict. Crit. T. 2. p. 668. voc. *Hadrian.* note (M).]

The miseries of *blindness* are feelingly painted by Milton [l], and may be also partly guessed at by the extasies into which persons have fallen on their recovery from it [m]. Mr. Boyle mentions a gentleman, who having been blind, and brought to sight at eighteen, was very near going distracted with the joy [n].—[l *Milt.* Parad. Lost, l. 3. init. m Phil. Trans. N° 402. p. 450. n *Boyle*, Phil. Work. abridg. T. 1. p. 4.]

We find various recompenses for *blindness*, or substitutes for the

the uſe of the eyes, in the wonderful ſagacity of many blind perſons recited by Zahnius in his *oculus artificialis*, and others. In ſome, the defect has been ſupplied by a moſt excellent gift of remembring what they had ſeen; as was the caſe of the ſculptor mentioned by Aldrovandus. Others by a delicate noſe, or ſenſe of ſmelling; as in the blind guide mentioned above, who diſtinguiſhed the different ſcent of the earth in different parts, and thus found his way through the ſandy deſarts of Arabia, ſome of the earth being reached up to him at every mile [o]: not to mention other inſtances given by Smetius [p], of perſons whoſe loſs of ſight has been ſupplied by their noſes. Others by a fine ear, or ſenſe of hearing; as in Richard Clutterbuck of Redborough in Gloceſterſhire, who, though perfectly blind, had ſo curious an ear, that he could hear the fine ſand of an hour-glaſs fall [q]. Others by an exquiſite touch, or ſenſe of feeling, which they have had in ſuch perfection, that as it has been ſaid of ſome, that they learned to hear with their eyes, it may be ſaid of theſe, that they taught themſelves to ſee with their hands [r].—[[o] *Leo Afric.* Deſcr. Afr. l. 6. p. 246. *Caſaub.* of Enthuſ. c. 2. p. 45. [p] Miſc. Med. l. 5. ep. 15. *Barthol.* Act. Med. T. 2. obſ. 32. p. 78. [q] *Plott*, Hiſt. Nat. Stafford. c. 8. §. 60. p. 300. [r] *Plott*, loc. cit.]

Some have been enabled to perform all ſorts of curious and ſubtile works in the niceſt and moſt dextrous manner, as Martin Catelyn mentioned by Guiccardin, and Richard Clutterbuck by Dr. Plott, who would not only take a watch in pieces, and ſet it together again, and ſo an organ or virginals, and put them in tune; but would make all ſorts of ſtring-muſical inſtruments, which he alſo played on by notes cut in their uſual form, and ſet upon protuberant lines on a board: yet neither of theſe came near Van Eyck, the organiſt of Utrecht, who, though he had been blind from two years old, did every thing as nimbly as if he had carried his eyes in his hands, playing on all ſorts of inſtruments. *Plott*, loc. cit.

Others have been enabled to take the figure and idea of a face by the touch, and mould it in wax with the utmoſt exactneſs; as was the caſe of the blind ſculptor mentioned by De Piles, who thus took the likeneſs of the duke de Bracciano in a dark cellar, and made a marble ſtatue of king Charles I. extremely well. Vid. *De Piles*, Cours de Peint. p. 329. *Wolf.* Pſychol. Rat. §. 162.

But the higheſt atchievement this way is that of ſeveral perſons, who have been able to diſtinguiſh colours by the touch; of which Schmidius has a diſſertation expreſs. *Schmid.* Cæcus de Colore judicans.

The count of Mansfield, tho' blind, is alſo ſaid to have been able to diſtinguiſh black from white by the touch [s]. Van Eyck could tell in a crowd of virgins and young women which was the faireſt: yet more was performed by Peter of Maeſtricht, who, as Job Meckren informs us, tho' perfectly blind, played at dice and cards, and diſtinguiſhed the different colours of cloth by the touch [t]: in which, however, he ſeems to have come behind J. Vermaaſen of Utrecht, who had this talent in a wonderful degree. Indeed, ſome [u] have ſuppoſed it was not by the touch that he diſtinguiſhed, but by the exquiſiteneſs of his ſmell, which diſcovered the different ingredients uſed in the dying different cloths; and the rather as he is ſaid to have performed beſt faſting, which ſeems confirmed by the inſtance of the blind man alledged by Sturmius, who could readily diſtinguiſh the dyes or colours of cloths, ſilks, and the like, by applying them to his noſe [w]; but the man of Utrecht, it is pretty evident, judged altogether by the different degrees of aſperity or roughneſs, which he felt on the ſurfaces of the clothes [x]. —[[s] Phil. Tranſ. N° 114. p. 316. *Barthol.* Hiſt. Anat. cent. 3. hiſt. 44. [t] *Plott*, Nat. Hiſt. Stafford. c. 8 §. 61. p. 300. [u] *Boyle*, of Colour. P. 1. c. 3. §. 11. [w] Vid. *Sturm.* Phyſ. Elec. l. 1. §. 2. c. 8. phæn. 25. *Verdr.* Phyſ. P. 1. c. 10. §. 5. p. 226, ſeq. [x] *Vater.* Phyſ. Exper. P. 2. §. 2. c. 11. qu. 2. *Barthol.* Hiſt. Rar. 49. cent. 3.]

Yet have not blind perſons any idea of viſible objects, though they can diſtinguiſh them by the touch [y]: thus the gentleman couched by Mr. Cheſelden, though he knew the colours aſunder in a good light during his blind ſtate; yet when he ſaw them after couching, the faint ideas he had of them before were not ſufficient for him to know them by afterwards [z]. —[[y] *Wolf.* Pſychol. Rat. §. 145. [z] Vid. Phil. Tranſ. N° 402. p. 447.]

It was even a conſiderable time ere he could remember which was the cat, and which the dog, though often informed, without firſt feeling them. Add, that he had no idea of diſtance; but thought that all the objects he ſaw touched his eyes, as what he felt did his ſkin.

BLINDNESS, in farriery, is a diſeaſe incident to horſes, eſpecially thoſe of an iron-grey or dapple-grey colour, when ridden too hard, or backed too young. Phil. Tranſ. N° 37. p. 730.

It may be diſcovered by the walk or ſtep, which, in a blind horſe, is always uncertain and unequal, for that he dares not ſet down his feet boldly when led in one's hand; though, if the ſame horſe be mounted by an expert horſeman, and the horſe of himſelf be mettled, the fear of the ſpur will make him go more freely; ſo that his *blindneſs* can hardly be perceived.

Another mark whereby a horſe may be known to have loſt his ſight, is, that upon hearing any-body enter the ſtable, he will prick up his ears, and move them backwards and forwards, as miſtruſting every thing, and being in continual alarm by the leaſt noiſe Dict. Ruſt. T. 1. in voc.

D. Lower firſt ſhewed the cauſe of the ordinary *blindneſs* in horſes, which is a ſpongy excreſcence, growing in one, ſometimes in two or three places of the uvea, which being at length overgrown, covers the pupil when the horſe is brought into the light, tho' in a dark ſtable, it dilates again. *Ray*, Philoſ. Lett. p. 28.

BLINKS, among antient ſportſmen, denoted boughs broken down from trees, and thrown in the way where deer are likely to paſs, to hinder their running [a]; or rather to mark which way a deer runs, to be a guide to the hunter [b].—[[a] *Skinn.* Etym. Ant. in voc. *Jac.* Law Dict. in voc. [b] Trev. Dict. Univ. T. 1. p. 1248. voc. *briſees.*]

BLINKING *of beer*, in Lincolnſhire, ſignifies letting the wort ſtand for ſome time in the vat, till it have acquired ſome degree of acidity, in order to diſpoſe it to fine, and be ready for drinking the quicker. *Skin.* Etym. Angl. in voc. *blink.*

BLISSOM, among husbandmen, corruptly called *bloſſom*, is the act of a ram when coupling with a ewe. *Skin.* Etym. in voc.

BLISTER, (*Cycl.*) in the animal œconomy, denotes a thin bladder raiſed on the ſkin, and full of a watry or other humour.

Bliſters are ſymptoms uſually enſuing on burns, ſcalds, and cauſtic matters applied to the skin. *Caſt.* Lex. Med. p. 742. voc. *veſicatio.*

'Tis diſputed among ſurgeons, whether *bliſters*, in caſe of burns, are to be opened, or not? Some adviſe it, to prevent further ulcerations underneath; others, unleſs they be large, diſſuade it, as creating the patient needleſs pain. Vid. *Junck.* Conſp. Chir. tab. 11. p. 103.

BLISTER is more peculiarly uſed, in medicine, for that raiſed by an epiſpaſtic, or veſicatory, laid for that purpoſe on the ſhoulders, arms, legs, or other parts. Vid. *Quinc.* Pharmac. P. 2. §. 571. & §. 412. p. 167, ſeq.

Dr. Morgan endeavours to diſcard the method of dreſſing *bliſters*, by which nothing is gained, but the plaguing and tormenting the patient, and depriving him of the benefit of a much greater diſcharge, which would be at leaſt three to one, were the ſame plaſter left on for four or five days, or as long as it will draw off any thing; and then, when it has done running, taking it off, and applying a plaſter of melilot, or rather of diachylum, once for all, till the part is quite well and healed. Indeed, when a *bliſter* is firſt riſen, if it do not break and run of itſelf, it may be proper to raiſe the lower end of the plaſter a little, to ſnip the bladder, and let out the water; but if the ſurgeon has made the plaſter ſtrong enough, this is commonly done of itſelf, without help [a]. It is uſually objected, that a ſtrong epiſpaſtic left on five or ſix days, muſt deeply corrode the fleſh under it, and thereby endanger a mortification. But this, according to the author laſt cited, is ſo far from being true, that, on the contrary, it prevents the worſt accidents uſually happening in bliſtering, which are what they call *ſloughs*, or deep ſtrong incruſtations of a ſharp ſalt and adheſive matter, covering the whole ſurface of the fleſh where the plaſter had been applied. Now, this is always occaſioned by an unſeaſonable removal of the epiſpaſtic, while the humour is in full flow, and ſtrongly feeding to the part; and the humour, thus ſuddenly checked and thrown back for want of a ſufficient drain, forms this ſlough [b].—[[a] *Morg.* Mech. Pract. Phyſ. p. 176. [b] *Morg.* lib. cit p. 177.]

BLISTER is alſo uſed improperly for the medicine, by whoſe operation the veſicle is raiſed; which is more properly called a *veſicatory*, or *bliſtering plaſter*. See VESICATORY, *Cycl.*

Pharmaceutical writers give divers forms of *bliſters*, *bliſtering plaſters*, *bliſtering paſtes*, and the like. Vid. *Boerh.* Lib. de Mat. Med. p. 33. *Quinc.* Pharm. p. 356, ſeq.

The operation and effect of *bliſters* in curing fevers, is by ſome reſolved into the pain which they excite; by others into the ingreſs of the particles of the cantharides into the blood; by others into the quantity of hot, ſharp, and ſalt lymph diſcharged; by others into the condenſation of the blood, and ſtoppage of the rarefaction, whereby the ſpirits are diſpoſed to be plentifully ſeparated [c]. Dr. Cockburn, who refutes all theſe ſyſtems, accounts for it from the cantharides wounding the nerves or canals whereby the ſpirits are conveyed to the heart [d]; Dr. Morgan from the ſubtile, hot, active ſalts of the flies, ſtrongly attracted by the ſerum, and carried with it thro' the ſeveral glands and ſecretory ducts of the body, where they act by diſſolving, attenuating, and rarefying the viſcid coheſions of the lymph and ſerum, and ſtimulating the nervous coats of the veſſels, whereby they are induced to throw off their ſtagnating viſcidities, and reſtore the free drain of the lymph from the arteries to the veins; and at the ſame time, by ſcouring and cleanſing the expurgatory glands, bring on critical ſweats and urines [e].—[[c] *Morg.* Philoſ. Princ. Med. p. 229, ſeq. [d] Vid. Phil. Tranſ. N° 252. p. 173, ſeq. [e] *Morg.* Philoſ. Princ. Med. p. 303, ſeq.]

BLISTERING, in medicine and ſurgery, denotes an operation whereby a bliſter is raiſed on the cuticula, and a quantity of ſerum evacuated therefrom, by means of certain cauſtic medicines, eſpecially canthariſes, applied in form of plaſter thereon. *Junck.* Conſp. Chirurg. tab. 72. p. 507, ſeq. See the article BLISTER.

Bliſtering chiefly takes place in the dropſy [a], delirious and feveriſh [b] diſorders, apoplexies [c], pleuriſies [d], and the like. Some alſo preſcribe it in the hydrocephalus [e], ophthalmia [f], ſuffocative catarrhs [g], cephalæa [h], &c. Some ſay, that *bliſtering* is generally found hurtful in dropſies [i].—[[a] Vid. *Nent.* Fund. Med. T. 2. P. 3. p. 427. [b] Idem, ibid. T. 1. P. 2. p. 232. *Morg.* Phil. Princ. Med. p. 301, 307. [c] *Junck.* Conſp. Med. p. 055. & *Nent.* lib. cit. T. 2. P. 3. p. 434. [d] *Junck.* lib. cit p. 305. [e] Id. Conſp. Chir. p. 174. [f] *Nent.* lib. cit. T. 1. P. 2. p. 240. [g] Id ibid. T. 2. P. 3. p 153. *Junck.* Conſp. Med. p. 513. [h] *Nent.* lib. cit. T. 1. P. 2. p. 114. [i] *Junck.* lib. cit. p. 434.]

BLISTERING, in farriery, is uſed in caſes of ſtrains and ſhrunk ſinews in horſes, as ſome hold, with good effect [k], as others, with none [l].—[[k] *Bracken.* Notes on *Burd.* p. 23. [l] *Burd.* Farr. p. 36]

BLITUM, *Blite*, in the Linnæan ſyſtem of botany, the name of a diſtinct genus of plants; the diſtinguiſhing characters of which are theſe: the cup is a hollow, pointed, and expanded perianthium, compoſed of one leaf, divided into five ſegments, and remains after the flower is fallen: there are no petals: the ſtamina are three ſimple filaments, of the length of the cup: the antheræ are ſmall and ſimple: the germen of the piſtillum is rounded: the ſtyle is very ſmall, reflex, and divided into two: the ſtigmata are pointed: the ſeed is ſingle, rounded, and flattiſh, and is contained in the open cup. *Linn.* Gen. Plant. p. 20.

The characters of *blite*, according to Tournefort, are, that the flower has no petals; but is compoſed of three ſtamina, which ariſe from a cup divided into three ſegments: the piſtil finally becomes an oblong ſeed, contained in an inflated capſule, which was before the cup of the flower.

The ſpecies of *blite*, enumerated by Mr. Tournefort, are theſe: 1. The great white *blite*. 2. The great red *blite*. 3. The ſpiked wild *blite*. 4. The ſpiked wild *blite*, with leaves variegated with white and green. *Tourn.* Inſt. p. 507.

Blite is eſteemed cooling and emolient, and therefore good in dyſenteries and ſpitting of blood. *Lemery*, des Drog.

BLOATED *fiſh* or *herring*, in our ſtatutes, are thoſe which are half-dried. Vid. Stat ann. 18. Car. II. c. 2. *Blount.* in voc. *Bloated herrings* are made, by ſteeping them in a peculiar brine, and then hanging them in a chimney to dry. *Collins*, Salt and Fiſh. p. 109.

BLOATING, a puffing up or inflation of the exterior habit of the body, lodged chiefly in the adipoſe cells. It is the ſame with what phyſicians call an *emphyſema*. *Gorr.* Def. Med. p. 138. voc. εμφυσημα. *Caſt*, Lex. Med. p. 296. voc. *emphyſema*. Hiſt. Acad. Scienc. ann. 1713. p. 15, ſeq.

BLOATING or *bloting of herrings*. See BLOATED.

BLOCK, *(Cycl.)* in the mechanic arts, a maſs of wood, one or two feet high, and difficult to move, ſerving to work and cut things on, or faſten them to.

In this ſenſe, we ſay a chopping *block* [a]; a ſugar-finer's *block* [b]; a ſmith's *block*, on which his anvil is faſtened; an executioner's *block*, on which the criminal's head is laid to be ſtruck off.—[[a] *Moxon*, Mech. Exerc. p. 196. [b] *Savar.* Supp. Dict. Comm. p. 73.]

Mounting BLOCK, an eminence uſually of ſtone, cut in ſteps or notches, ſerving as a help to mount on horſeback. Theſe were much in uſe among the antients, who were unacquainted with ſtirrups. The Romans erected them at proper ſtations along all their great roads. *Davil.* Explic. Term. Archit. p. 712. in voc. *montoir*.

BLOCK, among cutters in wood, is a form made of pear-tree, box, or other hard and cloſe-grained wood, free from knots, on which they cut their figures in relievo with knives, chiſſels, &c. *Savar.* Dict. Com. T. 2. p. 1106. voc. *planche*.

The like *blocks* are in uſe for card-making; and from the ſame firſt aroſe the modern art of printing. Phil. Tranſ. N° 310. p. 2398.

BLOCKS, aboard a ſhip, are pieces of wood, in which the ſhivers of pullies are placed, and wherein the running ropes go. *Fæſch.* Lex. Milit. p. 311. voc. *Fluſchen.* & p. 446. voc. *Kloben.*

Of theſe ſome are ſingle, ſome double, and ſome have three, four, or five ſhivers in them. They are named and diſtinguiſhed by the ropes they carry, and the uſes they ſerve for; as the ſheet-*block*, the tack-*block*, the fiſh-*blocks*, &c. Double *blocks* purchaſe more than ſingle ones, ſo that on all occaſions, where much force is expected from few hands, they uſe double *blocks*. But theſe, as they do the work with more eaſe, do it alſo more ſlowly; ſo that, on occaſions which require diſpatch, ſingle *blocks* are uſed. *Boltel*, Sea Dial. 4. p. 121. *Manwar.* Seam. Direct. p. 9. *Guill.* P. 3. in voc.

Block and *block* is a phraſe uſed, when on hauling on any tackle, hallyard, or the like, to which two *blocks* belong, the two meet and touch; ſo that they can haul no farther. *Manwar.* loc. cit. *Guill.* loc. cit.

The *fiſh-block* is hung in a notch at the end of the davit, ſerving to haul up the flooks of the anchor to the ſhip's bow. *Guill.* P. 3 in voc.

The *ſnatch block* is a large *block* with a ſhiver in it, and a notch cut through one of its cheeks, for the more ready receiving a rope, ſince, by means of this notch, the middle part of the rope may be reeved into the *block*, without paſſing it endwiſe. It is commonly faſtened with a ſtrap about the main-maſt cloſe to the upper-deck, and is chiefly uſed for the fall of the winding-tackle, which is reeved into this *block*, and then brought to the capſtan. *Guill.* P. 3. in voc.

BLOCK, among bowlers, the mark which is aimed at, being a ſmall-ſized bowl led on the green for this purpoſe.

BLOCK-*Battery*, in the military art, denotes a wooden battery on four wheels, moveable from place to place, whereby to fire *en barbe*, or over the parapet; ſometimes alſo uſed in galleries and caſements, where room is wanted. *Fæſch.* Lex. Milit. p. 102.

BLOCK-*Houſe*, a kind of wooden fort or battery, either mounted on rollers, or on a veſſel, and ſerving either on the water, or in counterſcarps and counter-approaches.

The name is ſometimes alſo given to a brick or ſtone fort built on a bridge, or the brink of a river, ſerving not only for its defence, but for the command of the river both above and below; ſuch was that noted *block-houſe* antiently on the bridge of Dreſden, ſince demoliſhed on inlarging the bridge. *Fæſch.* loc. cit.

BLOCKADE *(Cycl.)*—There are two manners of forming *blockades*. The firſt is ſimply by fortifying or ſeizing poſts at ſome diſtance from the place, chiefly on the banks of rivers both above and below, and on the great roads and inlets, where bodies of foot and horſe are placed, communicating with each other, till the place being diſtreſſed for want of neceſſaries, occaſions deſertions of the garriſon, and murmurings or inſurrections of the townſmen, whereby the governor is frequently forced to capitulate.

The other ſort is made nearer the place, by lines of circumvallation, wherein an army is poſted; being chiefly uſed when after a battle, the vanquiſhed party have ſhut themſelves up in ſome town ill provided, and thereby capable of being ſtarved in a ſhort time. *Feuquiere*, Mem. ſur la Guer. art. 77. p. 326.

BLOCKING, in middle-age writers, denotes a kind of burial uſed for perſons dying excommunicated. *Du Cange*, Gloſſ. Lat. T. 3. p. 22. voc. *imblocatus*.

BLOCKY, among jewellers, a name given to a diamond when its ſides are too upright, by its table and collet being larger than they ought to be. *Jeffreys* on Diamonds, p. 25. See TABLE and COLLET.

BLOOD *(Cycl.)*—The *blood*, and other parts of animals, all contain more or leſs of an acid; and this ſeems wholly owing to the effects of their organs of digeſtion upon the aliments they take in, which, in fine, become aſſimilated to, and make part of their fluids and ſolids. All animals do not feed in the ſame manner; but may be divided, in this reſpect, into three different claſſes; the firſt of thoſe uſually called carnivorous animals, that is to ſay, ſuch as have no other food than the fleſh of other animals; the ſecond, of thoſe which never eat of fleſh at all, but feed wholly upon roots, fruits, and other vegetable matters; and the third of thoſe, which feed indifferently both on fleſh and vegetables. This diviſion extends itſelf to the whole animal creation; for there are birds, beaſts, fiſhes, and inſects of all three claſſes.

It ſhould ſeem, that the ſubſtance of thoſe creatures, which feed only on one ſort of animals, ſhould be of a nature nearly allied to that of the animals they feed on, ſince it is that which replaces every part of the creature, and becomes its fleſh and its juices; and we have, indeed, an inconteſtable proof of the truth of this obſervation in the fleſh of ſeveral of the ſea-birds, which, as they feed wholly on fiſh, is ſo ſtrongly rank and fiſhy to the taſte, that it is not eatable. Another very familiar inſtance is in the ſmall-birds with us, which feed on buckthorn berries; for, during the whole time that thoſe berries are in ſeaſon, the fleſh of theſe birds is of a purgative nature.

From hence it ſeems not raſh to conclude, that ſuch animals as feed on things which have acid juices in them, muſt preſerve thoſe acids unaltered in their parts and fluids; for it appears by the above inſtances, that the change of the food into part of the animal, does not conſiſt in an abſolute change of its nature, but merely in a nice and regular arrangement of its parts; and hence the acid, which made part of the food, now becomes part of the animal which eat that food. Hence the fleſh of that animal, and its juices, muſt yield that acid on a chemical analyſis; and that this acid, if it were originally owing to a vegetable, will, after this ſtate, be, at leaſt, wholly equal in ſtrength to that obtained at once from the original plant; nay, there are reaſons, of which hereafter, why it may be more than ſo. All the chemical analyſes that ever were made of the common herbs, fruits, and ſeeds uſed in food, have yielded, among other principles, a liquor manifeſtly acid. This makes a part of the body of the vegetable; and therefore man, who eats theſe vegetables, muſt be ſuppoſed to contain in his fleſh and juices theſe acids unaltered.

It might be ſuppoſed, that this acid, however, ſhould be only found in ſuch animals as eat vegetables, not on ſuch as feed on other creatures; but this doubt will vaniſh when we conſider, that the carnivorous animals ſwallow theſe acids, at leaſt, at ſecond-hand in the fleſh of thoſe animals which had fed on vegetables. This, tho' a very fair way of reaſoning, did not, however, content Mr. Homberg, but that he tried the facts themſelves by a number of experiments, the principal of which for inſtruction are theſe.

He took thirteen pounds of lambs *blood*, and when the ſerum was ſeparated, there remained ſix pounds of the coagulum; this he put without any mixture into a very large glaſs retort, and diſtilled it very gradually by a gentle ſand-heat, till with this degree of fire there aroſe no more vapours from the retort. The veſſels being unluted, there was found in the receiver about five pints of a clear aqueous liquor, which had not the leaſt mark of containing any acid. Another receiver being fitted to the retort, the fire was raiſed to the utmoſt degree of violence. There now came over about eight ounces of a liquor, one half of which was of an oily nature, and the other a red fluid, ſmelling very ſtrong of burning. This red liquor gave equal marks of its containing acid and alkaline particles, for it made an effervescence with ſpirit of ſalt, in the manner of alkali's; and turned a tincture of turnſol red, in the manner of acids. The caput mortuum in the retort was a hard and light ſpungy coal, weighing about five ounces.

The ſame experiment being tried with ſheeps *blood*, the red liquor of the laſt diſtillation was ſomewhat leſs acid than in the other proceſs. Calves and bullocks *blood*, being diſtilled in the ſame manner, gave at the end a red acid liquor of the ſame kind with the former; but in theſe, as in the former trials, the *blood* of the younger animal ſeemed to contain a ſtronger acid than that of the full grown of the ſame ſpecies.

It is remarkable in this liquor, that the acid and alkaline particles of the animal ſubſtance are both blended together in the ſame fluid, without deſtroying one another; which is the caſe in no other known inſtance, theſe two principles always blending intimately together, and forming a third ſubſtance, a ſort of neutral one, which is neither acid nor alkali; but here they appear to be kept diſtinct, and always ready to act upon other bodies, without any power of acting upon one another. The general rules, as to acids and alkali's, ſeem to hold good in the vegetable and mineral kingdoms, but not at all in the animal, where the animal or vegetable acids, and the volatile alkali's, ſeem to obſerve other rules, and require a certain portion of phlegm to ſwim freely in, in order to their acting upon one another. Now in this red liquor there is very little phlegm, and to this it is owing, that they act not at all upon each other, though both are prepared to exert their qualities, on mixing with other ſubſtances.

Human *blood* being diſtilled in the ſame manner, ſix pounds of it, when reduced to a pound and a half, by driving off the aqueous humidity, was put into a retort, and worked by different degrees of fire up to ſo great a one, as to make the retort red hot. The diſtillation afforded in all ſeventeen ounces of liquor; twelve ounces of this was a red aqueous liquor, very full of volatile ſalt, and ſmelling ſtrongly of burning, and the other five ounces were oil. The caput mortuum was a light coal, weighing four ounces and an half.

On rectifying the red liquor by a ſmall fire, in order to ſeparate the volatile ſalt, and the aqueous humidity, there remained at laſt in the retort about an ounce of a red liquor, of a ſtinking, auſtere, and very acid ſmell; this turned the tincture of turnſol to a deep red. Mr. Homberg now imagined, that the acid liquor in the *blood* of animals could not diſengage itſelf perfectly by theſe diſtillations, without addition; as the common ſalts, ſalt petre, and ſea ſalt, yield very little of their acid ſpirits, on a ſimple diſtillation, without mixture; whereas, on barely mixing them with ſome earthy matter, before they are put into the retort, they give all the acid they contain. He therefore determined to diſtil human *blood* with an admixture of ſome other ſubſtance; but as earths contain a ſalt, which might render the operation uncertain, he determined to uſe only the caput mortuum of a former diſtillation of the ſame ſubſtance, To this purpoſe, four pounds of the coagulum of human *blood* being well mixed with a large quantity of this reſiduum, and the whole dried in the ſun, it was put into an earthen retort, and diſtilled in an open fire, raiſed by degrees to the utmoſt violence. The oil being ſeparated from the aqueous liquor, this was rectified; and the effect was, that there came over four pounds of a red acid liquor, which turned the tincture of turnſol to a ſtrong red. All the diſtillations before mentioned of the red liquors being mixed together, and ſeparated from their yet remaining oil, by diluting with water, and careful filtration, were at length diſtilled together; the liquor that came over was as clear as water, and its firſt quantities contained a great deal of volatile ſalt, but the two laſt ounces were found to be as ſour as diſtilled vinegar. Convinced by this, that in carnivorous and fructivorous animals, and in ſuch as eat vegetables alone, the acids of thoſe vegetables remained acids in the parts of the animal; Mr. Homberg tried the ſame experiments on the fleſh and *blood* of the wolf, as a creature that eats only fleſh, and on the duck and the hog, which eat indiſcriminately every ſort of food, and the event proved the ſame in all. All contained a red acid liquor, which had the properties before deſcribed, and in which the alkali and acid were ſo blended together, that they deſtroyed not one another, but each was ready to exert itſelf on occaſion. Mem. Acad. Par. 1712.

Mr. Mery attempted to eſtabliſh the doctrine of air being mixed with the *blood* in the pulmonary vein, and being again diſcharged into the branches of the trachea by the ſmall branches of the pulmonary artery. His principal argument was, that air blown into the trachea, paſſed by the pulmonary veins into the heart; and that by blowing air into the pulmonary artery, it could be forced into the trachea. Mr. Bulffinger obſerved from experiments, that water thrown in at the trachea, ran out at both the pulmonary artery and vein, which neither milk nor air would do. Water injected into the pulmonary artery, paſſed into the trachea, and pulmonary vein, which air alſo did; water injected into the pulmonary vein was puſhed with difficulty, but at laſt ran into the trachea, and not into the pulmonary vein. Hence he concludes Mr. Mery's experiment, and conſequently his ſyſtem, to be falſe. See *Comment. Acad. Petrop.* T. 3. p. 230.

Boerhaave extends the proportion of the ſerum of *blood* to $\frac{5}{8}$ parts of the whole maſs [a]; yet Dr. Morgan ſcruples not to depart from this, and all thoſe mentioned in the Cyclopædia, and makes the cruor and ſerum equal to each other [b]. Indeed in cold, and ſufficiently coagulated *blood*, the tough craſſamentum, and its ſurrounding fluid, ſerum, are ordinarily found to the eye pretty nearly equal to one another [c].—[[a] Med. Eſſ. Edinb. T. 2. p. 90. [b] *Morg.* Phil. Princ. Med. P. 3. Prop. 1. p. 406. [c] *Boyle*, Phil. Works abr. T. 3. p. 252, 460. Med. Eſſ. Edinb. T. 2. p. 91.]

BLOOD *microſcopically examined*—*Blood* makes a very common object for microſcopical obſervations. The method of examining it is this; take a ſmall drop of warm *blood* immediately from the vein, with the nib of a pen, or a hair-pencil, and ſpread it as thin as poſſible on a plate of glaſs; and applying this to the microſcope with the ſecond, or firſt magnifier, the globules will be all ſeen very diſtinctly, and a little practice will enable us to form a judgment on the alterations that may happen in the ſize, figure, or colour of them. If a little warm water be applied to the *blood*, the globules will be divided, and many of them break into a number of ſmaller globules. If warm milk be added inſtead of water, the larger globules will be ſeen very diſtinct; but this ſmaller will be blended with, and loſt in milk, which is itſelf no other than a congeries of ſuch globules. *Baker*'s Microſcop. p. 112.

The mixing of different poiſonous and medicinal liquors with the *blood* may be of great uſe, but the experiments muſt be carefully made, and the apparatus all got ready before the *blood* is let out of the vein, becauſe if it be ſuffered to coagulate firſt, no judgment could be formed of the effects of the mixture.

Mr. Cowper examining by the microſcope a ſolution of opium, found its diſſolved particles in the ſhape of fringed globules; whence he concludes, that ſuch particles circulating in the maſs of *blood*, may eaſily be entangled in its ſerum, and thicken it in ſuch a manner, as to retard its velocity, when over violent, and render its motion calm and equal, whereby all painful ſenſations will be taken off; and, from the ſame principles it is eaſy to account for its other effects, and to conceive how too great a number of ſuch fringed globules muſt cauſe a total ſtagnation of the *blood*, and conſequently be the occaſion of death. Phil. Tranſ. N° 222.

A little *blood* being mixed with about four times its quantity of ſal volatile oleoſum, and viewed by the microſcope, there is ſeen an immediate ſeparation of the globules. They are immediately ſeen much diminiſhed in number as well as ſize, and ſeem quite diſſolved away, only two or three being often left out of twenty in a minute. It is probable hence, that ſal volatile, taken inwardly, may retain the ſame power, and by that means prevent coagulations of the *blood*.

Late writers have purſued the globules of the *blood* to a great length; and found divers orders of them: thoſe large ones viſible to the eye conſtitute the *globules of the firſt order*; each of which, according to Lewenhoeck, is compoſed of ſix ſmaller ſpheres, cluſtered together in a very regular way; and that ſo nicely, in a perfect globule, that the compoſition comes to be imperceptible [d]. But ſometimes the ſame perſon has ſeen a red globule looſening and breaking into theſe compounding ſpherules; and ſometimes has had the good fortune to perceive theſe running together, and beginning the compoſition of a new red globule. Theſe ſmaller ſpherules they call *globules of the ſecond order*. But Lewenhoeck did not ſtop here; he ſaw in the chyle and *blood* a great many particles ſix times leſs than theſe globules of the ſecond order, and thirty-ſix times leſs than the great red globules. So that the globules of the ſecond order are to be looked on as compounded of theſe ſmaller ones; which therefore are juſtly to be reckoned as another claſs, or *globules of the third order* [e]. Further, he finds innumerable *blood*-veſſels in the body, of ſuch ſmallneſs, that none of thoſe hitherto mentioned globules could paſs; ſo that it ſeems neceſſary to ſuppoſe inferior claſſes of *globules of the fourth, fifth, ſixth, &c. orders*. He even ſaw veſſels, the wideneſs of which was leſs than the eighth part of the diameter of a red globule; ſo that the particles paſſing through them, ſhould be upwards of five hundred times leſs than ſuch globules, and conſequently ſmaller than thoſe of the fourth order. What is more, upon a careful examination, he could perceive ſtill ſmaller veſſels, narrower than the tenth part of the diameter of a red globule, and conſequently not capable of tranſmitting ſpherules greater, than if a red globule were broken into a thouſand parts [f]. On the

the whole then, the globules of the firſt order are made up of ſix globules of the ſecond, theſe of ſix of the third, theſe of ſix of the fourth, theſe of ſix of the fifth order, and ſo on. And accordingly, we find the globules of the higher orders may be broken down into their compounded particles. That the *blood*, in ſome caſes, might be turned into ſerum, was obſerved by Ariſtotle Nor did ſuch a change of the *blood* eſcape the obſervation of the accurate Dr. Harvey [g].—[[d] Vid. Philoſ. Tranſ. N° 102. p. 23. Item, N° 106. p. 122. and p. 129. It. N° 109. p. 380. It. N° 165. p. 788. ſeq It. N° 263. p. 552. It. N° 380. p. 436. [e] Med. Eſſ. Edinb. T. 2. p. 74. [f] Id. ibid. p. 76. [g] Id. ibid. p. 77.]

Dr. Martine has alſo given us ſome computations of the diameters, magnitudes, weights, &c. of the globules of the *blood*. The doctor's computation of the diameter of a red globule agrees with Lewenhoeck's and Dr. Jurin's, being about $\frac{1}{1938}$ of an inch.

The *blood*, as already obſerved, is compoſed of globules of different orders and magnitudes. The diameters of thoſe of the tenth order are eſtimated at leſs than $\frac{1}{100000}$ of an inch. See Medic. Eſſ. ibid. or Abridg. Vol. 1. p. 256. ſeq.

Elements of the BLOOD, according to the antients, were,

1. The αἷμα, or the red part, which they conſidered as the true and proper *blood*. 2. The φλεγμα, or ſerum. 3. Bile. And, 4. Μελαγχολια, or *atra bilis*: and from hence did the doctrine of temperaments take its origin. *Martine*, in Medic. Eſſ. Edinb. T. 2. Art. 7. §. 2. p. 68.

The ſeveral temperaments, ſanguine, choleric, phlegmatic, &c. took their denominations from the conſtituent parts of the *blood*, as abounding more or leſs in one, or other of theſe elements. *Martine*, loc. cit. §. 6. p. 82. ſeq.

The elements of the *blood*, according to the chemiſts, are water, ſulphur, ſalt and earth. Vid. *Martine*, ibid. §. 3. p. 70. ſeq.

The fibres in the *blood*, ſtrenuouſly aſſerted by Malpighi, are not to be found in its natural ſtate. If they were, they muſt diſturb the circulation. Their appearance ſeems to be entirely owing to a ſubſequent preparation of extravaſated *blood*, whoſe viſcid parts, by the heat of warm water, and conquaſſations, or ſuch artifice, run together into new forms. *Martine*, in Medic. Eſſ. Edinb. Vol. 2. Art. 7.

According to Dr. Martine, the *blood* being unity, and conſiſting of 4873 grains, its elements are in the following proportions.

Water	gr. 4086		$\frac{5}{6}$
Oil	333		$\frac{1}{15}$
Salt	190		$\frac{1}{23}$
Earth	65		$\frac{1}{75}$
Air	171		$\frac{1}{28}$

The denſity of the *blood* is commonly examined, when it is expoſed to cold air; but as the *blood* thus expoſed muſt differ from what it is, when circulating in the veſſels of the animal, its real and natural denſity ſhould be inveſtigated in a live ſtate. We know that all bodies are condenſed by cold, and expanded by heat; therefore cold *blood* is ſpecifically heavier than the warm fluids circulating in the veſſels of a living animal; but the difference is not eaſy to determine. Dr. Martine, from his obſervations and experiments, concludes the real denſities of water and *blood* to be in theſe proportions.

Water in a temperate degree of heat	1000
—— freezing	1003
—— of the heat of human *blood* in the body—	990
Blood of the heat of temperate air	1056
—— in its natural living ſtate	1045$\frac{5}{8}$

Hence we may determine the weight of a given bulk of *blood*, which has not been hitherto done ſo accurately as it deſerves. The doctor from his experiments concludes, that a cubic inch of rain water, weighing 253$\frac{1}{2}$ grains, a cubic inch of warm *blood* will be equal to 264$\frac{3}{4}$ grains; and an ounce of *blood* will be 1,813 inches. An averdupois ounce is found to weigh 437$\frac{1}{2}$ grains, and is therefore in water equal to 1,727 inches; and 1,6526 inches of warm *blood*. See Medic. Eſſ. Edinb. Vol. 2. Art. 7.

The ſame author makes the denſity of cold ſerum 1032, that of rain water being 1000. And the ſerum reduced to the heat of live *blood* 1021$\frac{2}{3}$, or 1022. Dr. Jurin found the denſity of the craſſamentum 1084. but this varies conſiderably in different ſubjects, and Dr. Martine, at a medium, found it 1080; and he thinks the true denſity of a red globule circulating in the *blood* of a living man to be 1093. The reaſon for this increaſe of denſity is, that two thirds of the craſſamentum are taken up by red globules, and the other third by ſerum. This differs ſomething from Dr. Jurin's computation. See Medic. Eſſ. ibid. & Phil. Tranſ. N° 361.

If the red part of the *blood* bears too great a proportion to the ſerum, which is the caſe of athletic perſons, and others who do not take a ſufficient quantity of drink with their meat, the fault may be corrected by leſſening the meat, or by increaſing their drink. Dr. Bryan Robinſon tells us of a young man, who not having for a conſiderable time drank with his meat, had a very florid complexion, and ſcorbutic eruption all over his body, arguments of too great a proportion of the red part of the *blood* to the ſerum, was freed from his diſorder by drinking with his meat, without any farther remedy. Diſſ. on the food and diſcharge of human bodies, p. 65.

In the beginning of fevers, the proportion of the red part of the *blood* to the ſerum is greater, and at the end of them leſs, than it is in health. The change of this proportion is owing to perſons under this diſorder living wholly on drink and liquid nouriſhment. And bodies loaded with ſerous moiſture, an argument of too ſmall a proportion of the red part of the *blood* to the ſerum, have been freed from their load, by abſtaining wholly from drink.

There are other cauſes beſides the bare quantities of meat and drink, which vary the proportion of the red part of the *blood* to the ſerum; for this proportion is greater in country people than in citizens, in perſons who uſe exerciſe than in perſons who are inactive, and in perſons who live upon fleſh meats, and fermented liquors, than in perſons who live upon vegetables and water. In ſhort, this proportion is increaſed by things which dry the body, and ſtrengthen the fibres, and leſſened by things of a contrary nature.

Too great a proportion of the red part of the *blood* to the ſerum, renders bodies ſubject to inflammatory fevers on taking cold. Ibid. p. 66, ſeq.

When extravaſated *blood* is left to itſelf, the red globules run forcibly together, and ſqueeze out the intervening ſerum in ſome animals with a greater, in others with a leſs force; which is a proof, that theſe globules are endowed with an attractive power. This force in deer's *blood* is ſo weak, that it ſcarcely coagulates into a firm craſſamentum. On the contrary, in ſome great and ſtrong beaſts, it becomes a tough, and almoſt indiſſoluble maſs; ſo that the *blood* of bulls was frequently drank by the antients, as a moſt effectual poiſon. See *Herod.* III. 15. *Plin.* Hiſt. Nat. XI. 33. XX. 9. XXIII. 7. *Plutarch*, in vit. Themiſt. See EXTRAVASATED.

Mr. le Cat thinks, that the *blood* is detained in its fluid ſtate by a cauſtic fluid, and that this forms the red globules. But then it needs the aſſiſtance of the animal fluid, which is the principle that preſerves all from corruption, and to which we owe our ſenſation and motion. Med. Eſſ. Edinb. Abrid. vol. 2. p. 481. See SENSITIVE *fluid*.

Colour of the BLOOD varies according to the circumſtances of the perſon; a blackneſs ariſes in it from a deficiency of the ſerum; and a paleneſs, from a too great abundance of it. It will always be found, that when globules cohere together in too great a number, they give a black appearance; and when this is found to be the ſtate of the *blood*, the means of diluting it ſhould always be attempted. When Mr. Lewenhoeck found his *blood* too deep-coloured, his method always was to drink four diſhes of coffee in the morning inſtead of two, and ſix diſhes of tea in the afternoon inſtead of three. Theſe he always drank as hot as poſſible, and did not return to his uſual ſtint, till he found the globules of his *blood* grow paler.

Circulation of the BLOOD, viewed with the microſcope in the tail of a ſmall eel, affords one very beautiful phænomenon; that is, when the *blood* has paſſed in ſeveral channels to the end of the laſt bone; it there forms one ſimple channel, in which there ſeems to be a valve; and the progreſſive motion of the *blood* is different there from what it is in other places, the whole maſs coming to a ſudden ſtop, yet never getting at all back, and then advancing forward in a ſtrait line with violence; and theſe ſucceſſive progreſſes were ſo quick, that one could ſcarce have time to pronounce a ſyllable between one and the other of them. The veſſels alſo about the head in a very ſmall eel ſhew very beautifully this circulation; and the motion of the heart is eaſily ſeen. See CIRCULATION.

Motion of the BLOOD is either progreſſive or inteſtine. The progreſſive motion is its courſe or circulation from the heart by the arteries to the extreme parts, and thence by the veins to the heart [a]; which is differently performed in adults from what it is in a fœtus [b].—[[a] Vid. Hiſt. Acad. Scienc. ann. 1718. p. 21. It. Mem. p. 2810. [b] Vid. *Nent.* Fund. Med. tab. 1. T. 1. p. 7. Mem. Acad. Scienc. ann. 1708. p. 240.] See CIRCULATION and FOETUS.

The propulſion of the *blood*, or the impetus wherewith it is driven along its courſe to the remoteſt capillaries, is owing to the contraction of the left ventricle of the heart and that of the arteries; regurgitation of the *blood* being prevented by the ſigmoid valves. Hiſt. Acad. Scienc. an. 1713. p. 29.

This is great enough in ſome animals to raiſe the *blood* ſix, ſeven, or eight feet high from the orifice it ſpins out at; which, however, is far exceeded by that of the ſap of a vine in bleeding-time, which will ſometimes riſe upwards of forty feet high. *Hales*, Veget. Stat. c. 3. Phil. Tranſ. N° 398. p. 274.

The heat and motion of the *blood* are always greater from a greater

greater activity in the ſoul, in the day than in the night; and they are likewiſe ever greater from the food taken in the day-time, for the pulſe is always quicker after eating than before it; after a full meal than after a ſpare one; and after a meal of drier and ſtronger food than after a meal of food that is moiſter and weaker. Dr. *Bryan Robinſon*, Diſſ. on the Food and Diſcharges of human Bodies, p. 73.

Vitality and accenſion of the BLOOD—Dr. Willis endeavours to ſhew, that the *blood* being animate, this animation or life depends on its being kindled; inaſmuch as the common affections of fire and flame belong to the *blood*, though this vital flame do not appear to ſight, by reaſon its form is ſubordinate to another ſuperior form, *viz.* the ſoul of the animal. Vid. *Willis*, de Sanguinis Accenſione, ap. ejuſd. Exerc. de Affect. Hyſt. & Hypoch. Lond. 1670. 4to. Phil. Tranſ. N° 57. p. 1178. See the article BIOLYCHNIUM.

Quantity of the BLOOD—Anatomiſts and phyſicians have generally determined the quantity of *blood* in the human body to be between fifteen and twenty-five pounds weight. D. Keill ſhews, from many inſtances of profuſe hæmorrhages, that a conſiderable greater quantity muſt be allowed, ſince otherwiſe the patient could never have furniſhed, or at leaſt not ſurvived, ſuch evacuations; the leaſt of which exceeded the whole quantity of *blood* ſuppoſed by Dr. Moulin in the whole body, and many of them more, almoſt double of the largeſt quantity allowed by any. *Keill*, of Animal Secret. p. 104, ſeq.

In reality, the quantity of *blood* in the body is very difficult to determine. Bleeding to death, the method uſed by Dr. Moulin and others, can never give the eſtimate of its true quantity; becauſe no animal can bleed longer than while the great artery is full, which will be longer or ſhorter as the wounded artery is ſmaller or greater; and the aorta muſt always be the firſt veſſel that empties. The moſt certain way, in Dr. Keill's opinion, is, by finding what proportion the cavities of the veſſels, of which the whole body is compoſed, bear to the thickneſs of the coats. This, in the veins and arteries, may be exactly found; but, in the other veſſels, we only know the quantity of fluid they contain, by carefully evaporating as much as poſſible. Thus the doctor found the fluids to be to the veſſels, in the arteries as 1.7 to one; in the veins as 15.6 to 1; in the bones as 1 to 1: the leaſt of which proportions ſhews the liquors to be one-half of the weight of the body; and if a calculation be made on the proportion of the *blood* in the arteries to their coats, in a body weighing 160 pounds, there will be found 100 pounds of *blood*. *Keill*, of Anim. Secret. p. 89, ſeq. It. p. 109, ſeq. *Quinc.* Lex Phyſ. Med. p. 53.

Some think it probable, that at leaſt two-thirds of the quantity of *blood* contained in an animal body, is continually paſſing the capillaries and ſmall veſſels in the glandular and muſcular parts, which can never be drawn off by any quick diſcharge from cutting the large veſſels; ſince, in that caſe, the larger veſſels being emptied much faſter than they can be ſupplied again from the capillaries, a defect of *blood* will ſoon enſue at the heart, upon which the animal falls into convulſions, and the circulation ſtops, while far the greater part of the *blood* muſt be ſuppoſed ſtagnating in the ſmaller and remoter veſſels. *Morg.* Phil. Princ. P. 3. prop. 1. p. 398.

Inflammability of the BLOOD—Mr. Boyle having held a piece of human *blood*, dried till it was almoſt pulverable, in the flame of a candle, found it would take fire, and afford a flame much like that which excited it, burning with a crackling noiſe, and here and there melting. But this inflammability much better appeared, when putting together four or five thoroughly kindled coals, he laid on them a piece of dried *blood* of the bigneſs of a ſmall nutmeg; for this yielded a large and very yellow flame, and if it were ſeaſonably and warily blown from time to time, as the effluvia degenerated into ſmoak, would long continue to yield clear and yellow flames. The ſame author having cauſed ſome *blood* to be dried till it was reducible to fine powder, took part of the powder, which had paſſed a fine ſearce, and caſting it on the flame of a good candle, the grains, in their quick paſſage through it, took fire; and the powder flaſhed not without noiſe, as if it had been roſin. *Boyle*. Phil. Works abridg. T. 3. p. 449.

BLOOD, in medicine—The preſcriptions of modern phyſicians are generally founded on ſuppoſition, that a great ſhare of diſeaſes depend chiefly on the vitiated conſtitution of the maſs of *blood* [d]; and their cure on reſtoring the *blood* to its natural ſtate, to be done partly by evacuants, but more by ſpecifics or alterants, ſo adapted, as to furniſh certain active corpuſcles proper to ferment, or excite an unuſual commotion or agitation in the *blood*, whereby it may be corrected, and enabled to expel or ſurmount the cauſe of the diſeaſe. But it muſt be obſerved, that, when the whole maſs of *blood* is to be altered, the courſe of phyſic muſt be continued a long time, by reaſon the *blood* moves ſlower and ſlower the farther it moves from a great artery; conſequently it muſt be a long time before the whole maſs of *blood* can he mixt with the alterative medicine. Add, that the circulation of the *blood* through glands, which receive arteries immediately from any great veſſel, being very quick, they may carry off a great proportion of the medicine in a very little time; ſo that it is not the taking great quantities, but a conſtant taking for a conſiderable time, that can alter the maſs of *blood* [e].—[[d] Phil. Tranſ. N° 238. p. 101. *Boyle*, Phil. Work. abridg. T. 3. p. 565. [e] *Keill*, of Anim. Secret. &c p. 153, 154.]

It has long been a diſputed point, whether there be any real acid ſalt in the human *blood?* Boyle [f], Drake, and others, hold the negative; but from what has been already ſaid, this appears to be a miſtake. Sig. Lancifi [g] and M. Homberg [h] have ſufficiently proved the exiſtence of an acid in the *blood*, derived, doubtleſs, from the ſea-ſalt and vegetable acid ſo plentifully taken in among our food, and not ſo totally deſtroyed by the action of the viſcera, but that it ſtill retains its nature. —[[f] *Boyle*, Phil. Work. abridg. T. 3. p. 457. [g] Phil. Tranſ. N° 264. p. 599, ſeq. [h] Hiſt. Acad. Scienc. an. 1712. p. 58. Mem. p. 352.] See the articles ACID, SALT, *&c.*

Dr. Willis, and others after him, ſuppoſed fevers, agues, and ſeveral other diſeaſes, the effects of a fermentation of the *blood*. Other more mechanical writers deny, that the *blood*, while contained in the veſſels of the human body, is capable of any fermentation [i]: yet Malpighi ſeems to allow a perpetual fermentation of the *blood*, for the production of urine [k].—[[i] *Boyle*, Phil. Work. abridg. T. 3. p. 365. [k] *Junck.* Conſp. Phyſ. tab. 20. p. 306.]

To which may be added divers other morbific conſtitutions depending on the different ſtates and diſpoſitions of the *blood*, in reſpect of quantity, velocity, fluidity, denſity, ſeroſity, *&c.*

An exceſs in the quantity of *blood* conſtitutes what we call a *plenitude*, or *plethora*; a defect or want of a competent quantity, a *leiphæmia*. *Caſt.* Lex. Med. p. 452. voc. *leiphæmos*.

The ſymptoms of exceſs or defect, of an over-repletion or depletion, in the *blood*-veſſels, are obvious; but caution muſt be uſed not to miſtake every occaſional flushing or tide of the *blood* to the head for a general plethora of the *blood*-veſſels, ſuch tides and flushings being very common in caſes where there is yet no *blood* to ſpare. *Morg.* Phil. Princ. Med. P. 3. prop. 1. p. 399.

The æquilibrium of the *blood* is an uniform and proportional diffuſion of it through all the parts of the body.

Any conſiderable ſtimulus, it is known, will derive the *blood* in large quantities to the ſtimulated part, which muſt neceſſarily break the æquilibrium and uniformity of its circulation; whence congeſtions, ſtagnations, concretions, *&c.* of the *blood*; and hence it is that a great part of regular practice conſiſts in deriving, revulſing, diſcuſſing, and variouſly directing and determining the *blood*, in order to recover its æquilibrium. *Nent.* Fund. Med. T. 1. P. 2. p. 10, 25, 48, 57, 94, 101, 184, 218, ſeq. *Junck.* Conſp. Med. p. 108 & 629. *Morg.* Phil. Princ. Med. P. 3. pr. 1. p. 410.

The æquilibrium of the *blood* againſt any occaſional affluxes and refluxes of this fluid, is preſerved or reſtored, either by raiſing and diffuſing it when too weak and languid by cardiacs; as ſaffron, opium, Virginia ſnake-root, *&c.* or by depreſſing and repelling it when too much raiſed and diffuſed; which is done by the abſorbents, coolers, purgatives, acids of all ſorts, eſpecially apples. *Morg.* lib. cit. P. 3. prop. 3. p. 429, ſeq.

The morbific exceſs or defect of the *blood*'s velocity is as remarkable as that of its quantity; but this cannot be judged from the natural ſtate of the pulſe in health, which is different in different conſtitutions. The ordinary number of pulſations in a minute is from 70 to 80 under a ſtate of waking and moderate heat, and from 80 to 96 during the time of ſleep. *Morg.* lib. cit. P. 3. prop 1. p. 399.

The too great heat and viſcidity of the *blood* is one of its moſt generally prevailing morbific conſtitutions, eſpecially in a country as ours, abounding with all the temptations to, and proviſions for, eaſe and luxury. This ſtate of the *blood* is brought on generally by drinking too freely hot, ſpirituous, inflammable liquors, and feeding plentifully on things, which contain a large proportion of volatile oily ſalts; as fleſh-meats half-boiled or roaſted, eaten in their bloody gravy, and all hot, ſpicy, and high-ſeaſoned broths, ſauces, and the like. The *blood* being by theſe over-heated and rarefied, the ſerum is, in conſequence, thickened into a ſort of jelly, by which means it is rendered unfit for motion, coheres too ſtrongly with the craſſamentum, and paſſes but ſlowly through the lymphatics and ſecretory glands. In this ſtate, the thicker and more viſcid parts of the ſerum, lodging on the lymphatics and receptacles of the glands, gradually obſtruct or fill them up. From which obſtruction and diminiſhed or intercepted circulation of the animal fluids, the heat and viſcidity of the *blood* ſtill increaſes, till the vital flame, raiſed too high, produces a fever. This ſtate of the *blood*, and its ſymptoms, are aggravated by a ſedentary life, or the want of due motion and exerciſe; for while the natural motion of the muſcular fibrillæ is either not at all, or but little promoted by voluntary action, the glands, and their receptacles, muſt be the ſooner ſtuffed up, and the circulation of the lymph, that powerful means by which nature continually cools and dilutes the *blood*, ſooner be ſuſpended. *Morg.* lib. cit. P. 3. prop. 2. p. 411.

The *blood* is cooled, diluted, and attenuated by temperance, exerciſe, the uſe of water as beverage, and otherwiſe, and by deobſtruents, eſpecially mercury, in the gentler preparations of it; as

æthiops or cinnabar given in moderate doſes, ſo as not ſenſibly to affect the ſtomach, nor excite ſalivation, for a long time. *Morg.* Phil. Princ. Med. P. 3. prop. 2. p. 412, ſeq.

As to the greater or leſs degree of fluidity and viſcidity of the *blood*, it is manifeſt, that this humour may either have its parts too intimately divided and attenuated, or, on the contrary, there may be too cloſe a cohesion between its parts, ſo as to render the maſs too thick and viſcous. The firſt of theſe ſtates diſpoſes the *blood* to a too quick, eaſy, and rapid motion, and ſometimes diſſolves and fuſes it to ſuch a degree, that the globules or craſſamentum paſſes, together with the ſerum, through the glandular ſtrainers, and occaſions bloody ſecretions; as in malignant and peſtilential fevers, bloody ſweats, and other preternatural hæmorrhages. The latter or viſcid ſtate renders the *blood* unapt for motion, and diſpoſes it to ſtick and lodge in the capillaries and lymphatics. *Boerh.* Aphor. §. 96. Phil. Tranſ. N° 44. p. 891. *Morg.* lib. cit. P. 3. prop 1. p. 402. *Nent.* Fund. Med. T. 1. P. 2. p. 87.

The ſpecific gravity of the *blood*, or the various degrees of its rarefaction and condenſation, depend on the degrees of heat; as the natural heat either riſes too high, or ſinks too low, the *blood* will, of conſequence, be either too much rarefied, or too much condenſed. In the former caſe, where the *blood* is overheated and rarified, the expanſive force of the elementary fire and air contained in the maſs, prevails over the corpuſcular attraction; and then, by the coagulating power of heat upon the ſerum, and its too intimate mixture and cohesion with the craſſamentum, the lymph, which ſhould form the ſecretions, cannot be ſeparated, but the ſerum is, as it were, abſorbed in the craſſamentum; in conſequence of which, the ſecretions muſt be diminiſhed, or quite ſuſpended, and a fever enſue, more or leſs inflammatory, according to the degrees of heat in the *blood*, and the conſequent ſuſpenſion or interruption of the lymphatic ſecretions. *Morg.* lib. cit. P. 3. prop. 1. p. 403. See the article FEVER.

On the other hand, where the *blood* is immoderately cooled and condenſed, the corpuſcular attraction prevailing over the expanſive force, the ſerum will be over-thinned and diluted, and conſequently ſeparated too faſt, and thrown off too plentifully on the glands and lymphatics; ſo that if the urinary drains happen to be obſtructed, a ſurcharge of ſerum muſt enſue, and in conſequence of this a dropſy: and in caſe the fluid parts of the urine paſs freely enough, and only the groſſer recrements, ſalts, and fabula, be kept back, theſe being thrown on the ſeveral organs, will produce the ſymptoms of the ſcurvy. *Morg.* lib. cit. p. 404.

Thickneſs of the BLOOD, *ſpiſſitudo ſanguinis*, is alſo a preternatural concretion, following on a plethora, or diminution of its motion, from which ſtagnations and other diſorders draw their riſe. This is either general throughout the whole body; or ſpecial, confined to ſome particular part; as in hypochondriac and hyſteric caſes, where the *blood*, by reaſon of the ſlowneſs of its progreſſion, acquires a lentor in the region of the abdomen [a]. To the ſame cauſe are alſo owing polypuſes [b], apoplexies, pleuriſies, infarctions of the viſcera [c], palpitations of the heart [d], ſuppreſſions of the menſes [e], &c.—[[a] *Nent.* Fund. Med. tab. 2. T. 1. p. 87, ſeq. *Junck.* Conſp. Med. p. 188, ſeq. [b] Phil. Tranſ. N° 44 p. 891. [c] *Junck.* Conſp. Med. p. 197, ſeq. [d] Id. ibid. p. 629. [e] *Nent.* Fund. Med. T. 1. P. 2. p. 63.]

Solubility of the BLOOD is that tendency in the ſerum and craſſamentum, by which they are diſpoſed to ſeparate and diſengage from each other, when the *blood* comes to cool, and ſtand in a baſon. When *blood* is taken off, it muſt frequently ſtand a long time at reſt, and in a cold place, before its principles can diſunite, ſo as to effect a perfect ſeparation of the ſerum from the craſſamentum; and yet at laſt, when the ſeparation is made, there may be a ſufficient quantity of ſerum, and perhaps a greater proportion than ordinary; whereas, at other times, this ſeparation ſhall be quickly made, and the ſolution effected after a ſhort time of ſtanding in a warmer air. The principal reaſon of this difference ſeems to be, the different degrees of heat to which the *blood* is ſubject, the globules being much more rarified and expanded at one time than at another; and therefore, as the arterial *blood*, being hotter, is longer in effecting this ſeparation than the venal, ſo, in a high inflammatory fever, the venal *blood* requires a conſiderable time ſtanding in a cool place before it can throw off its ſerum; but, in in a cold condenſative ſtate of the *blood*, this ſeparation is procured almoſt preſently. *Boyle*, Phil. Work. abridg. T. 3 p. 454, ſeq. Idem, p. 610. Phil. Tranſ. N° 44. p. 891. *Morg* lib. cit. P. 3. prop. 1. p. 407.

Sweetening, purifying, or cleanſing the BLOOD [f], are terms which ſeem to have ariſen from a miſtake, as if the *blood* were an impure fluid, or capable of receiving impurities with the chyle; which ſeems to be overturned by the extreme fineneſs of the orifices of the lacteals, which will hardly allow any thing impure to paſs [g].—[[f] *Boyle*, Phil. Work. abridg. T. 3. p. 610. [g] Trev. Dict. Univ. T. 4. p. 1485.]

Excretions or evacuations of the BLOOD are either ſpontaneous, as in the hæmorrhoids, hæmoptoe, hæmorrhages at the noſe, the lochia, and menſtrual flux; or artificially produced by medicines, emenagogues, venæſections, ſcarifications, leeches, &c. *Junck.* Conſp. Therap. tab. 10. p. 305, ſeq.

The want of due evacutions of the *blood* produces plethoras [h]. In hypochondriacal caſes, the natural excretions by the anus, menſtrual flux, &c. are by all means to be promoted, as the ſureſt means of cure [i].—[[h] *Junck.* Conſp. Med. p. 8. [i] *Nent.* Fund. Med. T. 1. P. 2. p. 150.]

BLOOD, injecting liquors into it. See INJECTION.

Spitting of BLOOD.—Spirit of plantan-juice, comfrey-roots, and fine ſugar, are recommended by Mr. Boyle as an approved remedy againſt ſpitting and vomiting of *blood*. *Boyle*, Phil. Works abridg. T. 1. p. 66.

Tar-water is ſaid to be a very good remedy in this caſe. See TAR-*water*.

Orgaſm of the BLOOD denotes an extraordinary efflatus or ebullition, obſerved in fevers, phrenzies, hæmoptoes, palpitations of the heart, and even by ſome ſuppoſed in cephalalgias, ſcurvies, arthritic pains, &c. It is to be compoſed or allayed by calmers, nitroſe preparations, &c. rather than by opiats. *Junck.* Conſp. Med. p. 108, 265, 269, ſeq. 303, 629. *Nent.* Fund. Med. T. 1. P. 2. p. 25, 101, 103, 165, & 313. *Junck.* Conſp. Chir. p. 378. Ib. p. 10 & 16.

Cooling of the BLOOD, recommended by lord Bacon as a means of longevity, is to be effected by clyſters, baths, unctions, refrigerating decoctions applied to the belly [k], &c. Some have vainly imagined the chief office of reſpiration to be, to cool the kindled *blood*, and prevent too great a deflagration [l].—[[k] *Bac.* Hiſt. Vit. & Mort. ap. Works, T. 2. p. 158, ſeq. [l] *Junck.* Conſp. Phyſ. tab. 8. p. 198.]

Fluxes of BLOOD are called hæmorrhages. See HÆMORRHAGE. The periodical ones of women, menſes. See MENSES. Thoſe after child-birth, lochia. See LOCHIA. That ordinarily happening on the firſt coition, is by ſome called and conſidered as the teſt of virginity. *Blas*, Not. ad *Veſling*, c. 7. p 109, *Barth.* Anat. Reform. l. 1. c. 3. *Teichmey.* Inſt. Med. c. 4. qu. 3. p. 28.

Uſes of the BLOOD are either in the animal œconomy, or in medicine, religion, diet, arts, manufactures, &c.

In the animal œconomy, the *blood* ſerves as the ſource or fund from which all the humours of the body are ſecreted [m], whether neceſſary for nutrition, digeſtion, muſcular motion, ſenſation, or the like. Some alſo make it the principle of life and heat. And others hold it to do the office of a pondus in the alternate motion of the heart [n].—[[m] *Niewent.* Relig. Philoſ. cont. 8. §. 18. p. 63. *Vater.* Phyſ. Exper. §. 7. c. 24. p. 684. *Junck.* Conſp. Phyſ. tab. 19. p. 297. [n] Phil. Tranſ. N° 281. p. 1224. & p. 1229.]

Mechanical and commercial uſes of BLOOD are chiefly in agriculture, where it is found an excellent manure for fruit-trees [o]; among lapidaries, where, it is pretended, rabbits *blood* will ſoften glaſs and flint [p]; and goats *blood* diſſolves diamonds [q]; in building, boards are ſometimes rubbed with *blood* to turn them brown. Some alſo pretend it has antiently been uſed in the mortar of old walls [r].—[[o] *Evel.* Phil. Diſc. of Earth, p. 319. *Hought.* Collect. T. 1. N° 129. p. 339. [p] *Caſt* Lex. Med. p. 755. voc. *yrcus*. [q] *Brown*, Vulg. Err. l. 2. c. 5. p. 64. [r] *Hought.* loc. cit.]

Blood is the baſis of that noble colour called by painters *Pruſſian blue*; and it is to vitriol, that is, to iron diſſolved, and formed into a ſalt, that it owes its change into that colour. See PRUSSIAN *blue*.

On this principle, Mr. Brown, an excellent chemiſt among us, tried the effect of ſolutions of other metals mixed with *blood*, the reſult of which may be a baſis for many valuable diſcoveries. The *blood*, in all theſe experiments, was prepared into a lixivium, in the ſame manner as in the making the Pruſſian blue, that is, by calcining it with an equal weight of ſalt of tartar, and then diſſolving it in boiling water.

This lixivium of *blood* being poured into a ſolution of ſilver in aqua fortis, there is produced a coagulum of a pure fleſh colour. The like lixivium made with fleſh inſtead of *blood*, produces, in this caſe, a white coagulum; and ſimple oil of tartar being uſed in the ſame experiment, by way of compariſon with theſe lixivia, afforded a much whiter ſediment. Spirit of ſalt being added ſeverally to all the three mixtures, the bloom of the fleſh-colour was taken off in the firſt; but it ſuffered no other change. In the ſecond, the coagulum was tinged a little blue; and in the third, the whiteneſs was evidently improved. The blueiſh tinge in the ſecond caſe, is not wholly to be attributed to the fleſh, but perhaps might be owing to an alloy of copper in the ſilver, from which it is ſeldom entirely freed.

The ſame liquors were made uſe of to form a precipitate from corroſive ſublimate of mercury diſſolved in water, the conſequence of which was, that the lixivium with *blood* produced a pure yellow; that with fleſh, an orange colour; and the ſimple oil of tartar, a dingy red. The addition of ſpirit of ſalt afterwards to theſe made ſome very odd alterations; for the firſt changed its yellow for an orange colour; and the ſecond, its orange colour to a blue; while the third became without any colour. The blue colour in the lixivium with the fleſh, when mixed with this ſolution, may be accounted for from the vitriol in this preparation; but it is not ſo eaſy to ſay, why the ſame vitriol ſhould not have produced alſo a blue in a lixivium with *blood*.

Copper, when diſſolved in aqua fortis, brings the water of a green colour; and, on pouring to this the two lixivia of *blood*, and of fleſh, the coagula are much alike; that is, they are white,

white, tinged with green; but, on adding ſpirit of ſalt to them, they become of a colour not unlike that of copper before the ſolution. Oil of tartar gives a pale green ſolution, and the ſpirit of ſalt clears up the liquor, and reſtores it to its former colour.

Biſmuth diſſolved in aqua fortis, and mixed with a lixivium of *blood*, produces a milky coagulum, which, after a ſmall time ſtanding, with the addition of ſome ſpirit of ſalt, becomes of a pale blue. The lixivia of fleſh, and of crude ſalt of tartar, produced both white coagula, which the ſpirit of ſalt made no alteration in. From theſe experiments it appears, that not any of theſe metallick bodies would produce a fine blue colour, with the lixivium of the *blood*; but a ſolution of iron anſwers all the experiments that are made with the ſolution of vitriol, and produces as fine a blue colour, as that made in the common way. Philoſ. Tranſ. N° 381. p. 23.

Medicinal uſes of BLOOD—We find a great number of theſe enumerated by antient and modern writers; but moſt of them, we doubt, on falſe and inſufficient grounds.

The *blood* of the hare, is, by ſome, reputed a ſpecific againſt inflammatory tumors [a]. That of the mole againſt mortifications [b]. That of the aſs againſt manias, and other diſorders of the nervous kind [c]. That of the barble-fiſh againſt marks of the mother [d]. That of a cock's comb for facilitating dentition [e]. That of doves, as a filtre for procuring love [f]; and, by others, held excellent in cataracts [g]. Even that of the menſes is by ſome cried up for its uſe in ſynovias and white ſwellings [h].—[a *Junck.* Conſpec. Chir. tab. 5. p. 64. b Id. ib. tab. 10. p. 97. c *Nent.* Fund. Med. T. 2. P. 3. p. 786. It ſeems it is to be drawn from behind the ears, then dried, and a piece put into the patient's drink. d *Junck.* lib. cit. tab. 37. p. 237. e Id. Conſp. Med. p. 750. f *Potter*, Archæol. Att. l. 4. c. 10. T. 2. p. 251. g *Junck.* Conſp. Chir. tab. 88. p. 604. h Id. ib. tab. 60. p. 391.]

The volatile ſalt, and ſpirit of human *blood*, are commended by Mr. Boyle, as preferable to that of harts horn, for the cure of aſthmas, conſumptions [i], *&c.* though Quincy only puts them on a level [k]. Borrichius ſhews, that this ſpirit was much uſed by the Egyptians againſt epilepſies [l]. Several have pretended, that the *blood* of Chriſtian children is uſed by the Jewiſh women to facilitate delivery [m]; but this ſeems a calumny. Some ſcruple not to make the *blood* a preſervative from the leproſy, and attribute the frequency of this diſeaſe among the Jews, to their eating meat void of all *blood*; but it appears without all foundation [n]. In effect, all the medicinal uſes of *blood* are rejected by Bartholin, both from reaſon and experience [o]. Even the famed virtues of goats *blood* [p], for curing pleuriſies without bleeding, and diſſolving the ſtone in the bladder, ſeem not much better warranted than the reſt. —[i *Boyle*, Phil. Works abr. T. 1. p. 65. Item, T. 3. p. 492. It is to be preſerved in ſpirit of wine: and will draw tincture from ſaffron, turmeric, *&c.* Vid. *Boyle*, lib. cit. T. 3. p. 565, and 480. k *Quinc.* Pharmac. P. 2. §. 179. p. 107. l *Borrich.* ap. Philoſ. Tranſact. N° 113. p. 299. m *Wolf.* Bibl. Hebr. T. 2. p. 1102. Item, T. 3. p. 913. ſeq. n *Barthol.* Act. Med. l. c. p. 259. and 261. o *Barth.* Diſq. de Sang. ap. ejuſd. Act. Med. T. 1. p. 306. p *Savar.* Dict. Comm. T. 2. p. 1459. voc. *ſang de bouc.*]

Eating of BLOOD.—This practice appears to have been prohibited by Noah [a], which prohibition was renewed by Moſes, obſerved by the Jews, repeated by the apoſtles at the council of Jeruſalem, confirmed and defended by all the fathers, except St. Auguſtin, and the univerſal practice, both of the eaſtern and weſtern church [b], till his time; and, in many churches, even of the weſt, much longer, as low as the middle of the tenth [c], ſome ſay the eleventh [d] century. The queſtion is, whether the apoſtolical precept to abſtain from *blood*, be to be conſidered as only temporal and occaſional, a ſort of accommodation to the weakneſs of the Jewiſh converts [e]; or perpetual, founded on moral principles, and conſequently ſtill obligatory.—[a *Bud.* Hiſt. Eccleſ. Vet. Teſt. P. 2. ſec. 2. T. 1. p. 159. b *Barth.* Diſq. de Sang. vetito, Francof. 1672. 8°. Act. Med. Hafn. T. 1. p. 306. *Chriſt. Theophil.* de Sanguine vetito Diſquiſitio uberior pro Bartholino, Francof. 1678. 8°. Act. Med. Hafn. T. 4. p. 200. c *Johnſ.* Eccleſ. Laws, T. 1. d Trev. Dict. Univ. T. 4. p. 1845. voc. *ſang.* e *Bingh.* Orig. Eccleſ. l. 17. c. 5. §. 20.]

Religious uſes of BLOOD—Among the antients, *blood* was uſed for the ſealing and ratifying covenants and alliances, which was done by the contracting parties drinking a little of each other's *blood* [a]; for appeaſing the manes of the dead, in order to which *blood* was offered on their tombs, as part of the funeral ceremony. Thus we read, that twelve youths were ſacrificed at the funeral of Patroclus [b]; and eight at that of Pallas [c].—[a Vid. *Tacit.* Annal. l. 12. c. 47. n. 3. *Pitiſc.* Lex. Antiq. T. 2. p. 690. voc. *ſanguis.* *Potter*, Archæol. l. 4. c. 8. p. 236. b *Hom.* Il. Φ. ver. 27. c *Virgil*, Æn. l. 10. v. 518.]

The *blood* of victims was the portion of the Gods, both among Jews [a] and heathens [b]; and accordingly was poured, or ſprinkled on the altars in oblation to them.—[a *Calm.* Dict. Bibl. T. 1. p. 314. b *Lakemak.* Antiq. Græc. Sacr. P. 3. c. 1. §. 19. p. 371. ſeq.]

Some have aſſerted, that the Romans offered human *blood* to appeaſe their deities, which is denied by others. *Macrob.* Saturn. l. 1. c. 7. *Struv.* Synt. Ant. Rom. c. 10. p. 458. The prieſts made another uſe of *blood*, *viz.* for divination: the ſtreaming of *blood* from the earth [a], fire [b], and the like, was held a prodigy, or omen of evil.—[a *Apul.* Metam. l. 9. p. 302. b *Q. Curt.* l. 4. c. 2. n. 11. *Buleng.* de Prodig. c. 11. *Pitiſc.* Lex. Ant. T. 2. p. 690. voc. *ſanguis.*]

The Roman prieſts were not unacquainted with the uſe of *blood* in miracles; they had their fluxes of *blood* from images, ready to ſerve a turn; witneſs that ſaid to have ſtreamed from the ſtatue of Minerva at Modena, before the battle at that place [a]. But I know not whether in this their ſucceſſors have not gone beyond them! How many relations in eccleſiaſtical writers of madonas, crucifixes, and wafers bleeding? At leaſt the liquification of the *blood* of St. Januarius at Naples, repeated annually for ſo many ages, ſeems to tranſcend by far, all the frauds of the Grecian or Roman prieſthood. But the chemiſts are got into the ſecret, and we find M. Neumann at Berlin performed the miracle of the liquification of dried *blood*, with all the circumſtances of the Neapolitan experiment [b].—[a Dio. l. 46. p. 313. b Vid. Bibl. Germ. T. 29. an. 1734. p. 204.]

Among the ſchoolmen we find a famous diſpute, under Pope Pius II. whether the *blood* of Chriſt, which fell from him in the three days paſſion, retained or loſt the hypoſtatic union; and conſequently whether it were the proper object of adoration; that is, to be worſhipped with the *cultus latriæ*. The dominicans maintaining the former, the Franciſcans the latter. *Pfaff.* Inſt. Theol. P. 2. c. 6. p. 432. Ejuſd. Hiſt. Eccleſ. ſæc. 15. c. 2. §. 7. p. 721.

It ſeems the dominican doctrine gained the aſcendant, as being fitter to favour the profits of the monks; who becoming poſſeſſed ſome way or other of a few drops of this precious liquor, were ſecured of ample offerings from the deluded laity, who flocked to pay their homage to the ſacred relick. Joſeph of Arimathea is ſaid to have firſt brought into Britain two ſilver veſſels filled with the *blood* of Chriſt, which by his order were buried in his tomb. King Henry III. had a cryſtal, containing a portion of the ſame *blood*, ſent him by the maſter of the temple at Jeruſalem, atteſted with the ſeals of the patriarch; which treaſure the king committed to the church of St. Peter's, Weſtminſter, and obtained from the biſhops an indulgence of ſix years, and one hundred ſixteen days, to all that ſhould viſit it. Mat. Paris [a] even aſſures us, that the king's ſummoning his nobles and prelates to celebrate the feaſt of St. Edward in St. Peter's church, was chiefly *pro veneratione ſancti ſanguinis Chriſti nuper adepti* [b]. Divers others of our monaſteries were poſſeſſed of this profitable relick; as the college of Bon Hommes at Aſhridge, and the abby of Hales, to whom it was given by Henry, Son of Richard duke of Cornwall, and king of the Romans. To it reſorted a great concourſe of people for devotion and adoration; till in 1538, as the reformation took place, it was perceived to be only honey clarified, and coloured with ſaffron, as was ſhewn at Paul's croſs by the biſhop of Rocheſter. The like diſcovery was made of the *blood* of Chriſt, found among the reliques in the abby of Feſcamp in Normandy, pretended to have been preſerved by Nicodemus, when he took the body from the croſs, and given to that abby by William duke of Normandy: it was buried by his ſon Richard, and again diſcovered in 1171, and attended with different miracles; but the cheat, which had been long winked at, was at length expoſed, the relation of which is given by Speed [c]. [a *Matt. Paris*, Hiſt. Angl. ad an. 1249. b *Pryn*, Hiſt. Coll. T. 2. p. 715. c *Kenn.* Paroch. Antiq. p. 300. ſeq.]

BLOOD, in the Romiſh church, is uſed in ſpeaking of the wine in the euchariſt; which they ſuppoſe miraculouſly converted, by the prieſt's conſecration, into the real *blood* of Chriſt. See EUCHARIST, TRANSUBSTANTIATION, *&c. Cycl.*

There have been divers diſputes among their divines concerning the matter and form of the veſſel or cup, wherein the *blood* of Chriſt was to be made and contained. Vid. *Durant.* de Ritib. Eccleſ. l. 1. c. 7. p. 67, ſeq.

BLOOD is alſo uſed abuſively for the ſap of plants; as having much the ſame office in the vegetable, as the other in the animal oeconomy. See SAP.

In a ſenſe, not unlike this, wine is ſometimes alſo denominated the *blood of the grape*. *Calmet*, Dict. Bibl. p. 314.

BLOOD is alſo applied, in pharmacy, to certain vegetable juices, tears, *&c.* as dragons *blood*, *ſanguis draconis*, a ſort of eaſtern gum. See DRAGONS *blood*, *Cycl.*

Dragons BLOOD, *ſanguis draconis*, is alſo uſed by the Arabs for the juice of the anchuſa. *Caſt.* Lex. Med. p. 377. voc. *hæma.*

Satyrion BLOOD, *ſanguis ſatyrii*, a ruddy liquor produced from the roots of ſatyrium, baked with bread; and liquified, as it were, into *blood*, by a long digeſtion.

BLOOD, in chemiſtry and alchemy, is a denomination given to ſeveral artificial compoſitions, chiefly on account of their red colour.

BLOOD *of ſulphur*, *ſanguis ſulphuris*, is a preparation of liver of ſulphur, ground with oil of tartar *per deliquium*, then digeſted with dulcified ſpirit of nitre. It is reputed a good pectoral and diuretic, but rarely preſcribed. *Quinc.* Pharmac. P. 2. ſec. 17. p. 328.

BLOOD is more peculiarly used by the alchemists for the tincture of a thing.

In which sense we meet with *blood of mercury*, denoting the tincture of it; *dragons blood*, denoting the tincture of antimony.

BLOOD *of the philosophers*, in the hermetic art, denotes a mercurial spirit, inherent in all metals, but chiefly in gold and silver. *Cast.* loc. cit.

Salamanders BLOOD, signifies the redness remaining in the receiver, after distilling the spirit of nitre.

BLOOD, or *sanguis veri ruffi*, denotes the sulphur of marcasite. *Cast.* loc. cit.

Princes of the BLOOD, in France, are those descended from the *blood* royal. The antient heroes were all supposed to be issued from the *blood* of the gods. Trev. Dict. Univ. T. 4. p. 1486.

Avenger of BLOOD, among the Jews, was the next of kin to the person murdered, who was to pursue the murderer. *Calm.* Dict. Bibl. T. 1. p. 314.

Ecclesiastical judges retire, when judgment is to be given in *cases of blood*, by reason the church is supposed to abhor *blood*: it condemns no person to death; and its members become irregular, or disabled from their functions, by the effusion of *blood*. Vid. *Bingh.* Orig. Eccles. l. 2. c. 7. §. 4. Item, l. 17. c. 5. §. 34.

BLOOD is also used in middle-age writers for supreme jurisdiction, exercised by the lord of the fee, in cases where *blood* is spilt.

This is also called *judgment of blood*, *justice of blood*, sometimes *cognizance of blood*. *Du Cange*, Gloss. Lat. T. 4. p. 698. voc. *sanguis*.

BLOOD, in farriery, denotes a distemper in cattle's backs, which makes them in going draw their heads aside, or after them: the cure is by slitting the length of two joints under the tail, and thus letting the beast bleed plentifully. If he bleed too much, they knit his tail next the body, and then bind salt and nettles bruised on the part. Dict. Rust. T. 1. in voc.

BLOOD *running-itch*, is a species of itch in a horse, proceeding from an inflammation of the *blood* by over heating, hard riding, or other sore labour; which, getting between the skin and flesh, makes the beast rub and bite himself; and, if let alone, sometimes turns to a grievous mange, highly infectious to all nigh him. Dict. Rust. T. 1. in voc.

Precious BLOOD, a denomination given to a reformed congregation of Bernardin nuns at Paris, first established under that name in 1661. *Helyot.* Hist. Ord. Monast. P. 4. c. 43. T. 5. p. 447. Trev. Dict. Univ. T. 1. p. 1487.

Field of BLOOD, αγρος αιμαλος, in Syriac *aceldama*, was a field purchased by the Jews, with the thirty pieces of silver, which had been given to Judas for betraying his master, and which he had restored.

It still serves for a burial-ground, in which all pilgrims, who die in their pilgrimage at Jerusalem, are interred. *Heder.* Schul. Lex. p. 560. voc. *blut-acker*.

BLOOD *stone*, among naturalists, the *lapis hæmatites*. See HÆMATITES.

BLOOD *vessels*, in anatomy, usually include only the veins and arteries; tho', in a larger sense, all the vessels in the body, as the nerves, lymphatics, &c. to the very hair, may be comprehended under the denomination.

Mr. Boyle observed an actual *blood* vessel, and full of red *blood* in the middle of a nerve. Vid. *Boyle*, Phil. Work. abr. T. 1. p. 173 See NERVE, *Cycl.* and *Suppl.*

In the plica polonica, each hair is sensibly a *blood* vessel; and, when cut, will bleed like a small vein. Id. ibid. p. 449. See PLICA, *Cycl.*

BLOOD-*snake*. See HÆMORRHUS.

BLOOD-*wite*, in antient law writers, signifies *blood*, and a customary amercement paid as a composition for the shedding or drawing of *blood*. Vid. Leg. Hen I. c. 39. *Du Cange*, Gloss. Lat. T. 1. p. 573. *Kenn.* Gloss. ad Paroch. Antiq in voc. *Spelm.* Gloss. p. 38. *Skene* de Verb. Signif. p. 21. *Skinn.* Etym. voc. *forens*. *Cowel* Interpr. in voc.

The word is also written *blodwite*, *blodwita*, *blodwyta*, *bloodwit*, *blodwit* and *bloudwit*, *bluidweit*.

It is formed from the antient Saxon *blud*, *blood*, and *vite*, or *wite*, a fine or penalty.

BLOOD-*wite* also denotes a privilege or exemption from this penalty, granted by the king to certain persons and communities, as a special favour. *Fleta.* l. 1. c. 47. *Du Cange*, loc. cit. *Kenn* loc. cit. *Spelm.* ubi supr.

King Henry II. granted to all tenants within the honour of Wallingford—*Ut quieti sint de hidagio & blodwite & bredwite.* *Kenn.* Paroch. Antiq p. 114.

BLOOD-*wort*, in botany. See SANGUINARIA.

BLOODY (*Cycl.*)—BLOODY *crime*, *sanguineum crimen*, in writers of the middle and barbarous age, that which is punished with the *blood*, or life of the offender. *Du Cange*, Gloss. Lat. T. 4. p. 698. voc. *sanguineum*.

BLOODY *flux*—Boccone tells us, that the plant called *sophia chirurgorum*, and by us *flix weed*, that is, flux herb, is a certain cure for this disease. He says, however, that it must only be given in an infusion in wine from the whole plant; for that if it be bruised, or beaten to powder, it does not succeed.

BLOOM, (*Cycl.*) in the iron-works, a term used by the miners for a four square mass of hammered iron, of about two foot long, and three quarters of a hundred weight, made from part of a sow of cast iron. The *bloom*, however, is not yet become iron fit for the smith's use, but must undergo many hammerings first, and be first made what they call the *ancony*. *Ray*'s English Words, p. 128. See the article ANCONY.

BLOSSOM, in a general sense, denotes the flower of any plant. See the article FLOWER.

BLOSSOM, in a more proper sense, is restrained to the flowers of trees, which they put forth in the spring, as the forerunners of their fruit, otherwise called their *bloom*. *Bradl.* Lex. Bot. in voc.

The office of the *blossom* is partly to protect, and partly to draw nourishment to the embryo fruit, or seed. *Hales*'s Veget. Stat. c. 7. Phil. Trans. N° 399. p. 329.

As essential as *blossoms* may seem to be to fruits, being, according to Malpighi, both the uterus, and the egg, or fœtus of the plant [a]; yet we are told of trees bearing fruit without *blossoms* [b], as was done by the mapple-tree in New England, mentioned by Mr. Dudley, and is always done by the polonic tree in China, which, according to Kircher's relation, produces its fruit immediately from the stock, without the intervention of any *blossoms* [c].—[[a] Phil. Trans. N° 117. p. 405. [b] Phil. Trans. N° 385. p. 199. [c] *Kirch.* Chin. Illustr. ap. Phil. Trans. N° 26. p. 486.]

In some plants the male and female parts of generation are remote from each other; *e. gr.* in the gourd pumpkin, melon, cucumber, and all of that race; to which may be added the nut bearing, and perhaps most bearing trees, which have all *blossoms* distinctly, male and female, on the same plant.

The *male blossoms*, called also *catkins*, may be distinguished from the others, in that they have not any pistil, or rudiment of fruit about them, but have only a large thrum, covered with dust in their middle. See CATKINS, *Cycl.*

The *female blossom* has a pistil within the petala, or flower leaves, and the rudiments of their fruit is always apparent at the bottom of the flower before it opens.

Some sorts of willows appear to change their sex every year, and produce only male *blossoms*, or catkins, one year; and the year following strings of female *blossoms*, which, if they happen to be near enough some flowering male, will produce seed, not much unlike those of an apocinum. *Bradl.* New Improv. Gard. P. 1. p. 16. seq.

BLOSSOM is also used in the manege for the colour of a horse, which has his hair white, but intermixed all over with sorrel and bay hairs, called also *peach-coloured*.

Horses of this colour generally are hard and insensible, both in the mouth and the flanks; so that they are little valued; besides, they are apt to turn blind. *Guill.* Gent. Dict. P. 1. in voc.

BLOSSOM, in respect of sheep. See BLISSOM.

BLOSSOMING *of plants*, the act of blowing, or putting forth flowers or *blossoms*, called also flowering. See BLOWING.

The *blossoming* of the spina acuta, or Glastenbury thorn, piously on christmas day morning, is a vulgar error, owing to this, that the plant, besides its usual *blossoming* in the spring, sometimes puts forth a few white transient *blossoms* in the middle of winter [a]. For the *blossoming* of the rose of Jericho on the same day, as it is commonly held in England; or in the time of midnight mass, as it is held in France, is somewhat more than an error, being really a fraud on one side, and a superstition on the other. This rose, whose leaves are only closed and shrivelled up in winter, will, at any time, upon setting its pedicle in water, expand and blossom a-new; for that the pedicle being spongy imbibes the fluid apace, and thus fills and swells out the shrivelled leaves; which property some monks have turned to good account [b].—[[a] *Miller*, Gard. Dict. in voc. *mespilus*. [b] *Grew*, Mus. Reg. Societ. P. 2. sec. 2. c. 1. p. 219. *Brown*, Vulg. Err. l. 2. c. 6. p. 79. Trev. Dict. Univ. T. 2. p. 1394. voc. *epanouir*.]

BLOTTED *china ware*, a name given by some to a sort of china that is loaded with colours in an irregular manner. This pleases some people, but it is a defective sort of ware, the large blotches of colours having been only laid on to cover the blemishes or faults in the first baking.

BLOTTING *paper*, a species of *paper* made without size or stiffening, serving to imbibe the wet ink in books of accounts, and prevent its setting off, or blotting the opposite page. Trev. Dict. Univ. T. 1. p. 1259. voc. *brouillard*.

BLOTTING *book*, a sort of minute book, or memorandum book, used by some merchants, for making imperfect entries in a present hurry, which are to be copied out fairer and fuller at night into the journal. Comp. Engl. Tradesm. T. 1. Supp. p. 42. and p. 115. *Savar.* Dict. Com. T. 1. p. 491. voc. *brouillard*.

BLOW, in a general sense, denotes a stroke given either with the hand, a weapon or instrument.

In fencing, *blows* differ from thrusts, as the former are given by striking, the latter by pushing. *Hope*, New Meth. of Fenc. c. 1. p. 10.

We say to give, to return, to parry a *blow*. See PARRYING, *Cycl.*

‡

Blows

Blows on the ſword make a ſpecies of purſuit, called *beating*. *Hope*, New Meth. of Fenc. c. 5. p. 151, ſeq. See the article BEATING.

Blind BLOW, *ictus orbus* or *cæcus*, is that which does not appear, or is not attended with effuſion of blood; in contradiſtinction from that followed by a wound, diſcolouring, tumor, or the like, called *ictus apertus* or *apparens*, an open *blow*. *Du Cange*, Gloſſ. Lat. T. 3. p. 7. voc. *ictus*.

In the antient laws, we find *blows* for remembrance, given to make perſons remember ſome tranſaction, and enable them to become better witneſſes of it in future times. Leg. Ripuar. tit. 60. §. 1. Alapam dare & aurem torquere in teſtimonium. *Du Cange*, lib. cit. T. 1. p. 117. voc. *alapa*.

Military BLOW, *alapa militaris*, that given with a ſword on the neck or ſhoulder of a candidate for knighthood, in the ceremony of dubbing him. *Caſen.* Orig. Franc. p. 2. voc. *accolée*.

The cuſtom ſeems to have taken its riſe from the antient ceremony of manumiſſion.

In giving the *blow*, the prince uſed the formula *eſto bonus miles*; upon which the party roſe a complete knight, and qualified to bear arms in his own right. Sometimes a double or even triple *blow* was given, called *trinapercuſſio*. Vid. *Du Cange*. lib. cit. T. 1. p. 117, ſeq. voc. *alapa*.

BLOWS, in common law. See BATTERY, *Cycl.*

Blows and contuſions on the head, and about the larynx, are dangerous [a]; thoſe in the epigaſtric region, eſpecially about the ſcrobiculus cordis, are frequently mortal [b]—[a *Teichmey*. Inſt. Med. Leg. c. 23. qu. 2. p. 210. b Id. ibid. c. 22. qu. 5. p. 198, ſeq.]

Fly BLOWS, the ova of flies depoſited on fleſh, or other bodies proper for hatching them.

It is an experiment worth trying, whether inſects will breed in an ox-bladder ſo cloſe, that no paſſage be left for any *fly-blows*; and becauſe flies may be ſuppoſed to have blown on the outſide of the bladder, and the *fly-blows* to have eaten through the bladder, it might be proper to include it in a caſe, ſo as to defend it from *fly-blows* outwardly as well as inwardly. Vid. *Ray*, Phil. Lett. p. 110.

BLOW-*pipe*, among jewellers and other artificers, is a glaſs tube, of a length and thickneſs at diſcretion, wherewith they quicken the flame of their lamp, by blowing through it with their mouth. It is uſed in works of quicker diſpatch, which do not need the bellows. *Savar.* Dict. Comm. T. 2. p. 1829. voc. *tube*.

Though the wind blown out at a ſmall bent tube of glaſs, called a *blow-pipe*, ſeems not to have any great celerity, in compariſon of the parts of flame, and is itſelf of little force; yet, when the flame of a lamp or candle is directed by it, ſo as to beat upon a body at a convenient diſtance, it may be made to melt ſilver, or even copper itſelf, which yet may be kept, for many hours, unmelted in a red-hot crucible, or the flame of the lamp or candle unaſſiſted by the blaſt. *Boyle*, Phil. Work abridg. T. 1. p. 477.

The enamellers have alſo tubes of divers ſizes, wherewith to *blow* their enamel, anſwering to the ſame purpoſe as the *pontillo*, or *blow-pipe*, of glaſſmen. *Savar.* loc. cit.

BLOWER, *ſouffleur*, an appellation of contempt ſometimes given to alchemiſts. See ALCHEMIST.

In the French king's kitchen, there was antiently an officer under the denomination of *ſuffiator*, or *fire-blower*. *Du Cange*, Gloſſ. Lat. T. 4. p. 1002. voc. *ſuffiator*.

The Roman mint-men were diſtinguiſhed by the appellation of *blowers* of gold, ſilver, and braſs, *&c. flatores auri, argenti*, &c. *Pitiſc.* Lex. Ant. T. 1. p. 792. voc. *flator*.

BLOWING (*Cycl.*)—Butchers have a practice of *blowing* up veal, eſpecially loins, as ſoon as killed, with a pipe made of a ſheep's ſhank, to make it look larger and fairer. *Hought.* Collect. T. 1. N° 112. p. 301. *Savar.* Dict. Comm. T. 1. p. 428. voc. *bouffer*.

One method of adminiſtring medicines is by inflation, or *blowing* them into the part by a tube: thus it is they ſometimes convey powders into the eye, and ſometimes up the noſe, for the cure of a polypus. *Caſt.* Lex. Med. p. 431. voc. *inſufflatio*.

BLOWING is alſo uſed for breathing or reſpiring, or alternately receiving and expelling the air by the lungs. Trev. Dict. Univ. T. 4. p. 1829. voc. *ſouffler*. See RESPIRATION.

Aſthmatic perſons are ſubject to *blow* much after motion. A horſe is ſaid to be purſy when he *blows*, and his flank heaves upon briſk exerciſe. *Chauv.* Lex. Phil. p. 42. voc. *anhelitus*.

BLOWING, *exſufflatio*, was alſo a ceremony in the antient adminiſtration of baptiſm, whereby the catechumen, upon rehearſing the renunciation, *blew* three blaſts with his mouth, to ſignify that he rejected or caſt the devil abſolutely off. See the article BAPTISM.

Something like this is ſtill retained in the Ruſſian church, where the godfathers being interrogated in the child's behalf, whether they renounce the devil, ſpit thrice on the ground, to teſtify their abhorrence. *Du Cange*, Gloſſ. Lat. T. 2. p. 329, ſeq. voc. *exſufflatio*.

In the ſacramentary of St. Gregory, the prieſt who adminiſters baptiſm, is enjoined to *blow* thrice on the child's face, making the ſign of the croſs with his head, and pronouncing the words *exi ab eo ſatan* [a]. Juſtin Martyr, Tertullian, St. Cyril, and St. Auguſtin, ſpeak of this ceremony as uſed in their times [b].—[a *Durant.* de Ritib. Eccleſ. l. 1. c. 19. n. 22. p. 138. b *Cyril.* Catech. 2. *Auguſt.* contra Julian. l. 6. c. 2. *Calv.* Inſt. l. 4. c. 19. *Du Cange*, loc. cit.] See EXORCISM, *Cycl.*

BLOWING *of tin*, the running or melting the ore, after firſt burning it in a kiln, to deſtroy the mundic. Phil. Tranſ. N° 69. p. 2111, ſeq. See TIN.

BLOWING *of a fire-arm*, is when the touch-hole is gulled, ſo that the powder will flame out. *Manwayr.* Seam. Direct. p. 10.

BLOWING is alſo uſed in ſpeaking of the natural motion or courſe of the wind.

In the ſea-language, the wind is ſaid to *blow home*, or *blow through*, when it does not ceaſe, or grow leſs, till it comes paſt the place where the ſpeaker is. To *blow through* is ſometimes alſo uſed to denote, that the wind will be ſo great as to *blow* aſunder the ſails. When a wind increaſes ſo much that they cannot bear any top-ſails, they ſay, they were *blown into their courſes*, i. e. they could only have out the ſails ſo called. To expreſs an extraordinary great wind, they ſometimes ſay, it will *blow the ſail* out of the bolt-ropes. *Manwar.* Seam. Direct. p. 10.

BLOWING is alſo uſed in ſpeaking of the force and effect of kindled gun-powder, on bodies which happen to be over it. See GUN-*powder*.

In this ſenſe we ſay to *blow* up a houſe. Engineers at ſieges make mines wherewith to *blow* up walls, baſtions, and other defences. See MINE, *Cycl.*

Powder-mills are apt to *blow* up by the iron gudgeon's growing hot, and ſetting fire to the powder-duſt flying about. *Hought.* Collect. T. 2. N° 229. p. 125.

BLOWING, among gardners, denotes the action of flowers, whereby they open and diſplay their leaves.

In which ſenſe, *blowing* amounts to much the ſame with flowering or bloſſoming. See FLOWERING and BLOSSOMING.

The regular *blowing* ſeaſon is in the ſpring; though ſome plants have other extraordinary times and manners of *blowing*, as the roſe of Jericho, and the Glaſtenbury thorn. Divers flowers alſo, as the tulip, cloſe every evening, and blow again in the morning. Trev. Dict. Univ. T. 2. p. 1394.

Tulips are divided into *early blowers*, called alſo *præcoce*, and *late blowers*, or ſeratine tulips. *Bradl.* New Improv. Gard. P. 2. c. 7. §. 1. p. 143.

The *blowing* of hops differs from their belling, the former happening about the end of July, the latter about a week or fortnight after. *Hought.* Collect. T. 2. N° 376. p. 448. See the article HOPS.

Annual plants *blow* ſooner or later, as their ſeeds are put in the ground; whence the curious in gardening ſow ſome in every month in ſummer, to have a conſtant ſucceſſion of flowers [c]. The *blowing* of roſes may be retarded by ſhearing off the buds as they put forth [d].—[c *Bradl.* lib. cit. p. 134, ſeq. d *Mortim.* Huſband. l. 13. c. 1. T. 2. p. 167.]

BLOWING *of a flower*, among floriſts, an artificial proceſs, in order to bring a flower to diſplay itſelf with greater perfection and beauty than it would arrive to in the natural way of *blowing*. The uſual method is thus: about April, when the flower-ſtems begin to put forth, or ſpindle, as the gardeners call it, they place by each flower a ſtreight ſtick four feet long, and tie the ſpindles to it as they ſhoot. As ſoon as the flower-buds appear, they leave only one of the largeſt on each flower-ſtem to bloſſom. About ten days before the flowers open themſelves, the round podded kinds will begin to crack their huſks on one ſide, when the careful gardener, with a fine needle, ſplits or opens the huſk on the oppoſite ſide to the natural fraction; and about three or four days before the complete opening of the flower, cuts off with a pair of ſciſſars the points on the top of the flower-pod, and ſupplies the vacancies or openings on each ſide the huſk with two ſmall pieces of vellum or oil-cloth ſlipped in between the flower-leaves and the inſide of the huſk; by ſuch means, the bloſſom will diſplay its parts equally on all ſides, and be of a regular figure. Beſides this care, when the bloſſom begins to ſhew its colours, they uſe to ſhade it from the extreme heat of the ſun with a trencher-like board, or other device of the like nature, faſtened to the ſtick which ſupports it; for the flowers, as well as fruits, grow larger in the ſhade, and ripen and decay ſooneſt in the ſun. *Bradl.* New Improv. Gard. P. 2. p. 88.

In heraldry, a flower-de-luce is ſaid to be *blown*, *eſpanoui*, when its leaves are opened, ſo as buds appear among the fleurons. The arms of the city of Florence are argent, a flower-de-luce *blown*, gules. Trev. Dict. Univ. T. 2. p. 1395.

BLOWING *ſnake*, in zoology, a name given by the people of Virginia to a ſpecies of ſerpent much reſembling the European viper, but conſiderably larger, and very remarkable for its inflating and extending the ſurface of its head before it bites. Its wound is very fatal.

BLOWN *red*, in the manufacture of porcelane. See RED.

BLUBBER, in phyſiology and trade, the fat which inveſts the bodies of all large cetaceous fiſhes, or ſea-monſters, ſerving to furniſh an oil. Vid. *Collins*, Salt & Fiſh. p. 89.

The *blubber* is properly the adeps of the animal: it lies immediately under the ſkin, and over the muſcular fleſh [a]. In the porpoiſe, it is firm and full of fibres, and inveſts the body about

an inch thick [b]. In the whale, its thickneſs is ordinarily ſix inches; but, about the under lip, it is found two or three feet thick. The whole quantity yielded by one of theſe animals ordinarily amounts to forty or fifty, ſometimes to eighty, or more hundred weight [c].—[[a] *Hought.* Collect. T. 3. N° 534. & N° 535. p. 277 & 281. [b] Phil. Tranſ. N° 77. p. 2275. [c] *Atlaſ.* Marit. p. 134.]

The uſe of *blubber* to the animal ſeems to be partly to poiſe the body, and render it equiponderant to the water; partly to keep off the water at ſome diſtance from the blood, the immediate contact whereof would be apt to chill it; and partly alſo for the ſame uſe that cloaths ſerve us, to keep the fiſh warm, by reflecting or reverberating the hot ſteams of the body, and ſo redoubling the heat; ſince all fat bodies are, by experience, found leſs ſenſible of the impreſſions of cold than lean ones. *Ray*, Wiſd. Creat. P. 1. p. 152.

Its uſe in trade and manufactures is to furniſh train-oil, which it does by boiling down. Formerly this was performed aſhore, in the country where the whales were caught; but of late the fiſhers do not go aſhore, they bring the *blubber* home ſtowed in caſks, and boil it down there. Vid. *Atlaſ.* Marit. p. 132. *Savar.* Dict. Comm. Supp. p. 1072. *Hought.* loc. cit.

BLUBBER *livers*.—The livers of cods, which having been barrelled, yield ſpontaneouſly a conſiderable quantity of oil, which being ſkimmed off, the reſidue are called *blubber-livers*, to be boiled down for more oil. *Collins*, Diſſ. of Salt and Fiſh, p. 89.

Sea BLUBBER, a denomination given by our navigators to the *urtica marina*, or ſea-nettle. Phil. Tranſ. N° 349. p. 478. See URTICA *marina*.

BLUE (*Cycl.*)—The colour *blue* anſwers to what was called among the Greeks κυανος [a]; among the Latins, *cæruleus* [b]; in middle-age writers, *blavus*, *blaveus*, *blavius*, and *blocus* [c].—[[a] Vid. *Gorr.* Def. Med. p. 251. voc. κυανος. [b] *Caſt.* Lex. Med. p. 452. voc *cæruleus*. See alſo *Menage*, Orig. Franc. p. 106. *Caſen.* Orig. p. 25. voc. *bleu*. *Skinn.* Etym. voc. *blew*. [c] *Du Cange*, Gloſſ. Lat. T. 1. p. 572. voc. *blavus*.]

Of a mixture of *blue* and yellow is compounded 'green; tho' every *blue* and every yellow will not, by their mixture, produce green, *e. g.* amaranth. Vid. *Boyle*, Phil. Work. abridg. T. 1. p. 70.

Of *blue* and ſcarlet is made violet and panſy colour; and of *blue* and crimſon is made purple, and columbin or dove colour [d]. Dr. Hook will have *blue* and ſcarlet to be the only ſimple and primitive colours, out of whoſe mixture all the others are compounded [e]. Others aſcribe this prerogative to *blue* and yellow; an opinion which has had the honour of being combated by Sir Iſaac Newton [f].—[d Trev. Dict. Univ. T. 1. p. 1074. [e] Vid. *Hook*, Microgr. obſ. 9. p. 58, ſeq. [f] Phil. Tranſ. N° 96. p. 6086, ſeq.]

The juices of *blue* flowers become green by the admixture of alcalis; and red by that of acids. See the articles ACID and ALCALI.

The *blue* flowers of cichory are preſently changed to a blood colour by the juice of piſmires [g]. A ſolution of verdigreaſe with oil of tartar is found to produce a beautiful *blue* [h].--[g Phil. Tranſ. N° 68. p. 2064. [h] *Boyle*, Phil. Works abridg. T. 2. p. 73]

There are divers ſhades or degrees of *blue*, as ſky-*blue*, light-*blue*, deep livid-*blue*, &c. anſwering to which the Romans had their *cæruleus*, *cæſius*, *cæſitius*, &c [i]. Sir Iſaac Newton diſtinguiſhes *blues* by different orders: that of the firſt order is very faint and weak, ſuch as is the azure of the ſky [k].—[[i] *Pitiſc.* Lex. Ant. T. 1. p. 504, ſeq. voc. *color*. [k] *Newton*, Opt l. 2. P. 3. prop. 7. p. 232.]

BLUE, in commerce, is uſed for an artificial or compound body, prepared for imparting a *blue* colour to woods, ſtuffs, canvas, and the like.

The antient painters uſed an artificial *blue* made of ſand, ſalt, nitre, and copper-duſt [l]. But the moderns have a much better, which is ultramarine procured from lapus lazuli [m].—[[l] *Vitruv.* Archit. l. 7. c. 11. *Felib.* Princ. de l'Archit. p. 356. [m] *Felib.* lib. cit. p. 356.] See the article ULTRAMARINE, *Cycl.*

The azure or *blue* prepared from the lapis Armenus [n], ſuppoſed by Dr. Woodward to be much the ſame with the *terre bleue*, or *blue* earth, and called among us *Lambert's blue*, is a mineral earth of a bright colour, found in the north. Its blueneſs, which is much eſteemed, is owing to an admixture of copper [o].—[[n] Vid. *Grew*, Muſ. Reg. Societ. P. 3. §. 1. c. 6. p. 316. *Junck.* Conſp. Therap. tab. 3. p. 82. *Du Hamel*, Hiſt. Acad. Scienc. l. 4. §. 4. c. 1. p. 332. [o] *Woodw.* Nat. Hiſt. Engl. Foſſ. T. 1. p. 7 & 3.] See ARMENUS *lapis*.

To theſe may be added divers other mineral *blues*, or metallic cadmiæ, all prepared from cobalt. *Woodw.* Catal. For. Foſſ. p. 50. *Felib.* Princ. Archit. l. 3. c. 13. p. 319.

Dr. Plott alſo ſpeaks of a native or *earth blue*, found in a marl-pit in Oxfordſhire, the ſteam of which covered the roots of trees and other vegetables near it with a *bluiſh* ſubſtance, like flour of ſulphur. *Plott*, Nat. Hiſt. Oxfordſh. c. 6. §. 52. It. c. 3. §. 18.

Pruſſian BLUE, or *Berlin* BLUE, is a modern invention, conſiderably in uſe among painters, though inferior to the ultramarine *blue*. See PRUSSIAN *blue*.

Stone or *powder* BLUE, uſed in waſhing of linen, is the ſame with ſmalt, either in the lump or powdered. Vid. *Savar.* Dict. Comm. T. 1. p. 206. voc. *azur*. See SMALT.

When the ſmalt is taken from the pot, it is thrown into a large veſſel of cold water: this makes it more tractable, and eaſily powdered. Afterwards, when examined after cooling, it is found to be mixed with a greyiſh matter reſembling aſhes, which they call *eſchel*. This grey matter is ſeparated by waſhing, and then the *blue* ſubſtance is powdered and ſifted through fine ſieves, to bring it to what we call *powder blue*. Phil. Tranſ. N° 396.

BLUE *japan* is made of white lead, ſmalt, and iſinglaſs mixed. *Park.* Treat. of Japann. c. 5. p. 23.

BLUE-*cap*, in ichthyology. See BLEW-*cap*.

BLUE *gems*, ſuch are the turcois, and divers other artificial ſtones, whoſe preparation is deſcribed by Neri. Vid. *Neri*, Art. Vitriar. l. 1. c. 36. p. 56. It. l. 7. c. 111. p. 164 & 291. See TURCOIS, *Cycl.*

All *blue* gems, according to Woodward, derive their colour from a mixture of copper. *Woodw.* Nat. Hiſt. Engl. Foſſ. T. 1. p. 190. See GEM.

BLUE *nuns*, *filles bleues*, thoſe of the order of the annunciation.

BLUE-*bottle*, in botany, the Engliſh name of the *cyanus*, a ſmall plant, with beautiful blue flowers, common in our corn-fields, and of which many beautiful ſpecies are kept in gardens. See CYANUS.

BLUFF-*head*, or BLUFF-*headed*, in the ſea-language, is when a ſhip has but a ſmall rake forward on, being built with her ſtem too ſtreight up. *Botel.* Sea Dial. 4. p. 103. *Guill.* Gent. Dict. P. 3. in voc.

Bluff-headed ſhips are oppoſed to thoſe that are ſharp-headed. They are ſhorter, leſs maſted, and ſail cheaper. Vid. *Petty*, Diſc. of Duplic. Proport. p. 29, ſeq.

BLUING, (*Cycl.*) the act or art of communicating a blue colour to bodies otherwiſe deſtitute thereof. See BLUE.

Laundreſſes blue their linen with ſmalt; dyers their ſtuffs and woolls with woad or indigo. *Savar.* Dict. Comm. T. 1. p. 96. voc. *ampaſteler*.

BLUING *of iron*, a method of beautifying that metal ſometimes practiſed; as for mourning buckles, ſwords, and the like. The manner is thus: take a piece of grind-ſtone or whet-ſtone, and rub hard on the work, to take off the black ſcurf from it; then heat it in the fire, and as it grows hot, the colour changes by degrees, coming firſt to light, then to a darker gold colour, and laſtly to a blue. Sometimes alſo they grind indigo and ſallad oil together; and rub the mixture on the work with a woollen rag, while it is heating, leaving it to cool of itſelf. *Neve*, Build. Dict. in voc. *iron*.

Among ſculptors we alſo find mention of *bluing* a figure of bronze, by which is meant the heating of it, to prepare it for the application of gold-leaf, becauſe of the bluiſh caſt it acquires in the operation. *Felib.* Princ. Archit. p. 356.

BLUNDERBUSS, in the military art, a ſhort ſort of fire-arm, with a large bore, contrived to carry a number of muſket or piſtol-bullets at once.

The *blunderbuſs* is proper to do execution in a crowd, or to make good a narrow paſſage, as the door of a houſe, ſtair-caſe, or the like. Milit. Dict. in voc. Trev. Dict. Univ. T. 3. p. 524. voc. *mouſqueton*. *Skinn.* Etym. in voc.

BLUNT, in fencing.—To fight with *blunts*, is to exerciſe or parade with weapons without points or edges. *Hope*, New Art Fenc. c. 4. §. 5. p. 68.

BLUNTING *the angles of a battalion*, in the military art, ſignifies to retrench the four corners, and turn the ſquare into an octogon.

This is done in order to give an opportunity for preſenting the pikes, or firing on all ſides, and was a military evolution formerly much in uſe; but now out of doors. Trev. Dict. Univ. T. 2. p. 1286. voc. *emouſſer*.

BOADODA *Baſhee*, in the Turkiſh military orders, an officer of the janizaries, whoſe buſineſs it is to walk every day about the principal parts of the city, with a number of janizaries to attend him, to keep order, and ſee that all things are regular, even to the dreſs. This office is for three months, and from this the perſon is uſually advanced to be a *ſerach*. *Pocock's* Egypt, p. 167.

BOAR, in zoology. See the articles HOG and SUS.

BOARD (*Cycl.*)—Deal-*boards* are generally imported into England ready ſawed, becauſe done cheaper abroad, in regard we want ſaw-mills. *Hought.* Collect. T. 3. p. 45.

Clap-*boards* are imported from Sweden and Dantzic.

Oak-*boards* chiefly from Sweden and Holland; ſome from Dantzic. *Hought.* ibid. p. 194.

Pipe-*boards* are brought from Dantzic. We alſo import white *boards* for ſhoemakers; mill and ſcale-*boards*, paſt-*boards*, &c. for divers artificers. *Crouch*, View Brit. Cuſt. T. 1. p. 120.

Scale-*board* is a thinner ſort, uſed for the covers of primers, thin boxes, and the like. It is made with large planes; but might probably be ſawed with mills to advantage. *Hought.* lib. cit. T. 3. p. 46.

BOARD is alſo uſed for a kind of table or bench, whereon ſeveral artificers perform their work. *Felib.* Princ. Archit. p. 414. voc. *eſtabli*.

In this ſenſe, we ſay a work-*board*, a ſhop-*board*, a taylor's *board*, &c.

BOARD is alſo uſed for a flat machine, or frame, uſed in certain games, and the like.

In this ſenſe, we ſay a draught *board*, a cheſs-*board*, a ſhovel-*board*, and the like.

BOARDS, in bookbinding. See BOOKBINDING, *Cycl.*

BOARD, *bureau*, is alſo uſed for an office where accounts are taken, payments ordered, and the like. *Davil.* Explic. Term. Archit. p. 438. voc. *bureau.*

In this ſenſe, we ſay the *board* of works, *board* of ordnance, *board* of treaſury, and the like.

BOARD *of green cloth*, a court of verge for the king's houſhold, compoſed of the lord ſteward, treaſurer, comptroller, maſter, and cofferer of the houſhold, with clerks, *&c.* New View of Lond. §. 5. T. 2. p. 641.

BOARD *of trade*, *bureau de commerce*, an office in the French polity, eſtabliſhed in 1723, compoſed of eight perſons of experience in commerce and navigation, where all papers and propoſals relating to the improvement of trade are examined, and all difficulties which occur in affairs of navigation and commerce, either within or without the realm, are diſcuſſed. *Savar.* Dict. Comm. Suppl. p. 91. voc. *bureau.*

BOARD, or *aboard*, in the ſea-language, is uſed in ſpeaking of things within a ſhip, or other veſſel. *Fæſch.* Ing. Lex. p. 111, ſeq. voc. *bort.* *Aubin.* Dict. Mar. p. 101, ſeq. voc. *bord.* *Manwayr.* Seam. Direct. in voc.

Hence, to go *aboard* ſignifies to go into the ſhip; to heave over *board*, is to throw a thing out of the veſſel into the ſea; to ſlip by the *board*, is to ſlip down by the ſhip's ſide; *board* and *board*, is when two ſhips come ſo near as to touch one another, or when they lie ſide by ſide.

A ſhip is ſaid to make *a good board*, when ſhe advances much at one tack.

Weather board is that ſide of a ſhip which is to windward.

To *board a ſhip* is to enter an enemy's ſhip in a fight. *Guill.* Gent. Dict P. 3. in voc. See BOARDING.

To *make a board*, or, as it is otherwiſe expreſſed, *to board it up* to a place, is to turn to windward; which is done ſtanding ſometimes one way, ſometimes the other, to reach a place to the windward. In which it is to be noted, that the farther you ſtand off on one point of the compaſs, the better *board* you will make; and that it is better making *long boards* than ſhort ones, if you have ſea-room. A *long board* is when you ſtand a great way off before you tack or turn; a *ſhort board* is when you ſtand off a little; a *good board* is when we have got up much to windward; for ſometimes we take a great deal of pains, and get little, either by reaſon of a current or tide, that may take her on the weather-bow; or by reaſon of a head-ſea, which may drive her to leeward, and hinder her way; or becauſe the ſhip may be a leeward ſhip. Sometimes again, when it is a ſmooth ſea, a current under the lee-bow, and a good ſhip by a wind, ſhe will get a point or two more in the wind than we expect. But note, that a croſs-ſail ſhip in a ſea cannot make her way nearer than ſix points, unleſs there be a tide or current ſetting to windward.

To leave a land on *back-board*, is to leave it a-ſtern or behind; the *back-board* being that which, in boats or ſhips, we lean our backs againſt. *Manwayr.* loc. cit.

BOARDING *of a ſhip*, an attack made to take her, by entering men on her decks. When two ſhips fight, the defendant may chuſe whether the other ſhall board him, except in the quarter, which is a bad place to board; for that men can worſt enter there, in reſpect it is the higheſt part of the ſhip's hull, and that there are only the mizen-ſhrouds to enter by; as alſo for that ſhips are hotteſt there, and men being entered, can do little good, and are eaſily ſcoured off with muſkets from the cloſe-fights. *Manwayr.* Seam. Direct. in voc.

In order to *board* a ſhip, it is beſt to bear directly up with her, and cauſe all your ports to leeward to be beat open, and bring as many guns from the weather-ſide thither as you have ports for; and then lay the enemy's ſhip on board loof for loof, and order your tops and yards to be manned and furniſhed with neceſſaries, and let all your ſmall-ſhot be in a readineſs; then charge at once with both ſmall and great, and at the ſame time enter your men in the ſmoke, either on the bow of of the enemy's ſhip, or bring your mid-ſhip cloſe up with her quarter, and ſo enter your men by the ſhrouds: or, if you would uſe your ordnance, it is beſt to board the enemy's ſhip athwart her hawſe; for then you uſe moſt of your great guns, and ſhe only thoſe of the prow. Let ſome of your men endeavour to cut down the enemy's yards and tackle, whilſt others clear the decks, and beat the enemy from aloft; then let the ſkuttles and hatches be broke open with all ſpeed, to avoid trains, and the danger of being blown up by barrels of powder placed under the decks. Thus, your men being in poſſeſſion of the ſails and helm, and the enemy every way ſtowed below the decks, the ſhip is taken, and all lies at your diſcretion. *Botel*, Sea Dial. 6. p. 367, ſeq. *Guill.* Gent. Dict. P. 3. in voc.

BOARIA *Lappa*, a name given by the antient Romans to the fruit or rough balls of the common aparine or clivers. Pliny calls this plant ſometimes *lappa*, ſometimes *lappago*; and the fruit by the names of *lappæ boariæ*, or *lappæ caninæ*, and ſometimes *canariæ*.

BOAROLA, or BOARINA, in zoology, the name of a very ſmall bird, deſcribed by Aldrovandus, and ſome others, and ſeeming the ſame ſpecies with the *muſcicapa*, or fly-catcher. See MUSCICAPA.

BOAT (*Cycl.*)—The antients had their *boats* called *cymbæ* [a]; fiſhing *boats* called *lembi* [b]; *boats* formed of ſingle trees cut hollow, called *ſcaphæ* and *alveoli* [c], anſwering to the canow of the modern Indians, *&c.*—[[a] Vid. *Pitiſc.* Lex. Ant. T. 1. p. 627. voc. *cymba.* [b] Id. ibid. T. 2. p. 35. voc. *lembus.* [c] Id. ibid. T. 2. p. 700. voc. *ſcapha.* Item, T. 1. p. 77. voc. *alveolus.*] See CANOW.

Train of BOATS, a number of ſmall veſſels faſtened to each other, aſcending up the Loir in France, by ſails when the wind ſerves; otherwiſe towed by men, ſometimes to the number of ſeventy or eighty to a ſingle rope. *Savar.* Dict. Comm. Suppl. p. 788. voc. *equipes.*

Coach BOATS, *bateaux coches*, more frequently called *water-coaches*, are large covered *boats*, uſed chiefly on the river Seine, for the convenience of paſſengers, and conveyance of all ſorts of goods. *Savar.* Dict. Comm. T. 1. p 299. voc. *bateau.*

Boats belonging to a ſhip of war are, the long-*boat*, the ſkiff or ſhallop, and the barge. *Botel*, Sea Dial. 4. p. 246.

Long-BOAT, called alſo the *ſhip's boat*, is the largeſt and ſtrongeſt *boat* belonging to a ſhip that can be hoiſted aboard of her. It has a maſt, ſail, and oars, as other *boats*; alſo a tiller to the rudder, which anſwers to the helm of a ſhip.

Her thaughts are the ſeats where the rowers ſit; and her thowls the ſmall pins between which the oars are put when they row. *Botel*, loc. cit. p. 247.

A ſhip's *boat* is the very model of a ſhip, and is built in parts in all things anſwerable to thoſe which a ſhip requires, both for ſailing and bearing a ſail; and they bear the ſame names as to all the parts of a ſhip under water, as rake, run, ſtem, ſtern, bow, bildge, *&c.* *Manw.* Seam. Direct. in voc.

Its uſe is to weigh the anchor, bring goods, proviſion, *&c.* to or from the ſhip, and other ſervices as occaſion requires.

The terms uſed in navigating a *boat* are, *to trim the boat*, that is, to keep her even; *to wind the boat*, i. e. to bring her head the other way; *free the boat*, i. e. to fling out the water; *man the boat*, i. e. let ſome men go to row the *boat.* *Guill.* Gent. Dict. P. 3. in voc.

The *boat*'s gang includes thoſe who uſe to row in the *boat*, which are the cockſon and his gang, to whom the charge of the *boat* immediately belongs. *Fend the boat*, i. e. ſave her from beating againſt the ſhip's ſides. *A bold boat* is that which will endure a rough ſea well.

A good *long-boat* will live in any grown ſea, if the water be ſometimes freed, unleſs the ſea break very much. The rope by which it is towed at the ſhip's ſtern, is called the *boat-rope*, to which, in order to keep the *boat* from ſheering, they add another, called a *geſt-rope.*

To ſave the bows of the *boat*, which would be torn out with the twitches which the ſhip under ſail gives it, they uſed to ſwite her, *i. e.* make faſt a rope round by the gunwale, and to that faſten the *boat-rope.* *Manw.* Seam. Direct.

Pleaſure-BOAT among the antients. See THALAMEGUS.

BOAT, *ſcapha*, in ſurgery, a ſpecies of bandage, uſed when the crown of the head and the part between that and the forehead are to be bound. It is likewiſe called *tholus diocleus.* *Caſt.* Lex. Med. p. 654. voc. *ſcapha.* See BANDAGE.

BOAT-*fly*, a water inſect, whoſe back is ſhaped much like the bottom of a *boat*; the hind-legs, which are thrice as long as the fore, aptly enough reſembling a pair of oars. Accordingly, contrary to all other creatures, he ſwims, ſays Mouſet, on his back. *Mouſet*, de Inſect. l. 2. c. 38. *Grew*, Muſ. Reg. Societ. P. 1. §. 7. c. 2. p. 171.

BOATING, a kind of puniſhment in uſe among the antient Perſians for capital offenders.

The manner of *boating* was thus: the perſon condemned to it being laid on his back in a *boat*, and having his hands ſtretched out, and tied faſt to each ſide of it, had another *boat* put over him, his head being left out through a place fit for it. In this poſture they fed him, till the worms, which were bred in the excrements he voided as he thus lay, eat out his bowels, and ſo cauſed his death, which was uſually twenty days in effecting, the criminal lying all this while in moſt exquiſite torments. *Prideaux*, Connect. P. 1. T. 2. p. 368.

BOATSWAIN (*Cycl.*) is the ſame with what the Dutch call *bootſ-man*; the Germans, *bootſ-mann*, or *over bootſ-mann*; and the French, *contre maitre*, or *nocher.* *Fæſch.* Ingen. Lex. p. 110. voc. *bootſ-mann.*

It is he ſets the crew to work by direction of the maſter, and ſuperintends the handling the ſails and boltſprit, caſting or weighing anchor, and the like. *Aubin*, Dict. Mar. p. 271. voc. *contre maitre.* *Ozan.* Dict. Math. p 328.

BOATSWAIN's *mate* is an aſſiſtant of that officer, who has the peculiar command of the long-boat for the ſetting forth of anchors, weighing or fetching home an anchor, warping, towing, or mooring. He is alſo to give an account of his ſtore. *Guill.* Gent. Dict. P. 3. in voc.

This officer is the ſame with what the Dutch called *bootſ-man's mate*;

maet; the Germans, *unter bootſ-mann*; and the French, *boſſeman*, or *ſecond contre maitre*. *Fæſch.* Ing. Lex. p. 110, ſeq. voc. *unter bootſ-mann.* Item. p. 112. voc. *boſſeman.* *Aubin*, Dict. Math. p. 110. voc. *boſſeman.*

BOB *of a pendulum*, the ſame with its ball; except that the former is uſed in ſpeaking of ſhort pendulums, the latter of long ones. *Derh.* Artif. Clockmak. c. 1. p. 4. See PENDULUM, *Cycl.* and *Suppl.*

BOB, in ringing, denotes a peal conſiſting of ſeveral courſes, or ſets of changes.

BOBBING, or BOBBIN, in the manufactory of lace, a little piece of turned wood, whereon thread is wound, to be uſed in the weaving of bone-lace. *Hought.* Collect. T. 2. p. 404. The French alſo give the denomination *bobine* to what among us is more properly called a *ſpool* or *quill* [a]. In which they are alſo followed by ſeveral Engliſh [b].—[a *Savar.* Dict. Comm. T. 1. p. 376. b *Skinn.* Etym. in voc.

BOBBING, among fiſhermen, a particular manner of catching eels different from *ſniggling*.

Bobbing for eels is thus performed: they ſcour well ſome large lobs, and with a needle run a twiſted ſilk through them from end to end, taking ſo many as that they may wrap them about a board a dozen times at leaſt: then they tie them faſt with the two ends of the ſilk, that they may hang in ſo many hanks; which done, they faſten all to a ſtrong cord, and, about an handful and an half above the worms, fix a plummet three-quarters of a pound weight, and make the cord faſt to a ſtrong pole. With this apparatus fiſhing in muddy water, they feel the eels tug luſtily at the bait; when they think they have ſwallowed it ſufficiently, gently draw up the rope to the top, and bring them aſhore. *Cox*, Gent. Recr. P. 4. p. 39. Dict. Ruſt. in voc. *eel-fiſhing.*

BOBISATIO, or BOCEDISATIO, in muſic, denotes the uſing the ſeven ſyllables *bo*, *ce*, *di*, *ga*, *lo*, *ma*, *ni*, to expreſs the ſeven muſical notes, in lieu of the ſix uſual ones introduced by Aretine, *ut*, *re*, *mi*, *fa*, *ſol*, *la*, as has been ſometimes done by the Netherland and German muſicians ſince the beginning of the ſeventeenth century, to avoid the mutation neceſſary in the uſe of theſe latter. *Walth.* Lex. Muſ. p. 97.

BOCA, in ichthyology, the name given by Paulus Jovius to the *boce* of Ariſtotle, called the *boops*, from the largeneſs of its eyes. It is a ſpecies of the *ſparus*, and is diſtinguiſhed by having four parallel longitudinal gold and ſilver-coloured lines on each ſide. Gaza and ſome others call it *voca*; and the Italians *boga*.

BOCAMOLLE, in zoology, a name given by ſome to a very large and long Braſilian fiſh, more uſually called by its Braſilian name, *pira jurumenbeca*. *Willughby*, Hiſt. Piſc. p. 333.

BOCCA, in zoology, a name by which ſome authors have called the fiſh, more commonly known by the name of the *uranoſcopus*, or ſtargazer. *Aldrovand.* de Piſc. p. 258.

It is a ſpecies of the *trachinus*, diſtinguiſhed from the other kinds by having a great number of beards on the lower-jaw. See TRACHINUS.

BOCCA, in glaſs-making, the round hole in the working furnace, by which the metal is taken out of the great pots, and by which the pots are put into the furnace. This is to be ſtopped with a cover made of earth and brick, and removeable at pleaſure, to preſerve the eyes of the workmen from the violence of the heat. *Neri*, Art of Glaſs, p. 242.

BOCCALE, or BOCAL, a liquid meaſure uſed at Rome, anſwering to what among us is called a *bottle*, being equivalent to about an Engliſh quart. Seven *boccales* and an half make the *rubbia*. *Savar.* Dict Comm. T. 1. p. 376.

BOCCARELLA, in the glaſs manufacture, a ſmall hole or apperture of the furnace, one of which is placed on each ſide the *bocca*, almoſt horizontally with it. Out of them the ſervitors take coloured or finer metal from the piling pot. *Merret*, Obſerv. on Neri, p. 242. See BOCCA.

BOCCONIA, in botany, the name of a genus of plants; the characters of which are theſe: the cup is an oval, obtuſe, and hollow ſpatha, conſiſting of two leaves: the flower is compoſed of four extremely narrow petals: the ſtamina are a number of filaments about twelve, which are very ſhort: the antheræ are oblong and erect: the germen of the piſtil is large and roundiſh, but contracted on each ſide: the ſtyle is ſingle, and ſlightly divided into two: the ſtigmata are ſingle: the fruit is of an oval, oblong figure, contracted on each ſide, and ſomewhat compreſſed: it is filled with pulp; and has only one cell, in which there is a ſingle globoſe ſeed. *Linnæi*, Gen. Plant. p. 228. *Plumier*, p. 25.

BOCE, in ichthyology, the name given by Ariſtotle, and many other of the antient Greek writers, to the fiſh commonly called by authors *boops*. It is a ſpecies of the *ſparus*. See BOCA and SPARUS.

BOCKING *herring*, in the Dutch trade, ſignifies the ſame with bloated herring among us. *Savar.* Dict. Comm. Suppl. p 74. See BLOATED.

BOCKLAND, (*Cycl.*) in antient law-writers, denotes a poſſeſſion or inheritance held by evidence in writing.

The word was doubtleſs written *bockland*, quaſi *book-land*, anſwering to free land. It ſtood oppoſed to *folkland*, which was that held without writing. See FOLKLAND and COPYHOLD, *Cycl.*

BODIANO, in zoology, the name of an Amercian fiſh, of the ſize of a perch, with a purple back, and yellow ſides and belly. It is more uſually known among authors by the name *pudiano*. *Ray*, Ichthyogr. p. 339. See the article PUDIANO.

BODTY, in zoology, the name of a ſpecies of American ſnake of the *amphisbæna* kind, called alſo *ibijara*. See IBIJARA.

BODY (*Cycl.*)—According to the Peripatetics, *body* differs from matter, as a part from the whole, or an element from a mixt. *Walc.* Introd. ad Philoſ. l. 2. c. 3. §. 12. p. 241.

Among the mechanical philoſophers, *body* and matter generally denote the ſame thing; yet, on ſome occaſions, they ſeem to diſtinguiſh between them, as when ſpeaking of the poroſity of *bodies*, they ſay, there is but little matter in ſuch a *body*. Vid. Mem. Acad. Scienc. ann. 1709. p. 177.

The Carteſians are great aſſerters of the identity of matter and *body*; yet M. Cordemoy, otherwiſe a retainer of the Carteſian ſcheme, makes a difference between them. *Body*, according to this writer, is indiviſible extenſion, and matter an aſſemblage of ſuch *bodies*, but diviſible. Phil. Tranſ. N° 17. p. 307.

Body generally ſtands contradiſtinguiſhed from ſpirit; though, in Spinoſa's and the Chineſe ſyſtem, this difference is ſet aſide, and *body* and ſpirit ſuppoſed to be the ſame ſubſtance under different modifications. Mr. Hobbs likewiſe affirms ſpirits to be *bodies*, the exiſtence of any ſubſtance not corporeal being rejected by him. *Hob.* of Hum. Nat. c. 11. §. 5. p. 136.

The Chineſe philoſophers reaſon thus: among an infinite number of properties, all equally contained in the nature of being, we are ſometimes affected with its extenſion, mobility, ſolidity, figure, and colour; in which caſe we call it ſimply *body*, or matter. Sometimes we add moving force to the former, which conſtitutes what we call a living being. Sometimes, again, we conſider it as poſſeſſed with ſenſe, will, and underſtanding; in which caſe we allow it a ſoul, mind, or ſpirit. On this footing, the ſeveral properties of being, however different from each other in the impreſſions they make on us, are no-ways different as to their real nature; ſince they all exiſt neceſſarily with an infinity of others, and partake alike of one and the ſame infinite and unalterable exiſtence. *Freret*, in Mem. Acad. Inſcrip. T. 9. p. 364.

The true notion of *body* is hard to frame, and philoſophers are not yet agreed on it; the rather as the purſuit leads to the perplexing controverſy *de compoſitione continui*. *Boyle*, Phil. Work. abridg. T. 2. p. 210.

Some place the eſſence of *body* in ſolidity, or impenetrability; others in weight or gravity; others in extenſion; others in mobility. According to the firſt of theſe, *body* is defined as ſomewhat that perfectly fills a determinate quantity of ſpace or extenſion, ſo as neceſſarily to exclude all other *bodies* from being comprehended within the ſame dimenſions [a]. According to the ſecond, *body* is defined as a thing which is receptive and communicative of motion and progreſſion. Sir. W. Petty repreſents *body* as matter under ſome figure [b]. The Carteſians define it any thing extended every way, or towards all ſides, *res quoquoverſus extenſa* [c]. According to Wolfius, the eſſence of *body* conſiſts in its compoſition, or mechaniſm of parts, from which all its other properties reſult, even extenſion itſelf, ſince we cannot conceive a compounded *body* otherwiſe than as extended, or conſiſting of parts, at leaſt poſſible if not actual ones [d].—[a *Hook*, Lect. Cutl. p. 3. b *Pett.* Diſc. of Duplic. Proport. p. 16. c *Rohault*, Tract. Phyſ. P. 1. c. 7. §. 3. p. 21. *Chauv.* Lex. Phil. p. 151, ſeq. voc. *corpus*. d *Wolf.* Coſmol. §. 140. p. 120, ſeq.]

Dr. Hook places the eſſence of *body* in its mobility, or being receptive and communicative of motion, aſſerting, that, as to thoſe other properties of extenſion or quantity, hardneſs, ſoftneſs, &c. they are not the properties of *body*, but of motion. In reality, according to this author, every ſenſible particle of matter owes the greateſt part of its ſenſible or potential extenſion to its vibratory motion, whatever part thereof it may owe to *body*, according to the common notion thereof. *Hook*, Lect. de Potent. Reſtit. p. 7.

To make this more intelligible, imagine a thin plate of iron, a foot ſquare, moved with a vibratory motion forwards and backwards, flat-ways, the length of a foot, ſo ſwiftly as not to permit any other *body* to enter that ſpace within which it vibrates; this will compoſe ſuch an eſſence as I call, in my ſenſe, a cubic foot of ſenſible *body*, which differs from the common notion of *body*, as this ſpace of a cubit foot, thus defended by this vibrating plate, does not form a cubic foot of iron, or the like, ſolid throughout. *Hook*, lib. cit. p. 8.

A jeſuit, under the name of M. de Ville, in 1680, publiſhed a treatiſe expreſs on Des Cartes's doctrine of the eſſence of *body*; wherein he endeavours to ſhew, that it leads to hereſy and Calviniſm; that ſuppoſing this principle, it appears impoſſible for the *body* of Chriſt to be preſent in the euchariſt, according to the doctrine of the church of Rome; and that Calvin's concluſion muſt be allowed to be good, if Des Cartes's principle be true. Trev. Dict. Univ. T. 2. p. 254. voc. *corps*.

Dr. Hook ſuppoſes all the things in the univerſe, which become the objects of our ſenſes, to be compoſed of *body* and motion. Theſe he conſiders as diſtinct eſſences; but ſuggeſts, that

that they may poſſibly be found to be only different conceptions of one and the ſame eſſence. *Hook*, Lect. Cutl. p. 7.

Bodies, according to Wolfius are, compound beings, out of which, as of parts, the univerſe is framed. *Wolf.* Coſmol. §. 119. p. 108.

Bodies are aggregates of certain ſimple ſubſtances or principles, of which all that is ſubſtantial in them conſiſts. Id. ib. §. 176, 177. p. 143.

The firſt or internal principles of *bodies*, which are not reſolvable into others, are called *elements*. Id. §. 181. p. 145. See ELEMENT and PRINCIPLE, *Cycl.*

Light or fire is found an ingredient in all *bodies*; which ſome indeed, eſpecially among the chemiſts, make to be the ſame with the principle ſulphur. Vid. *Homberg*, in Mem. Acad. Scienc. ann. 1705. p. 122. It. ann. 1706. p. 336. See LIGHT, FIRE, and SULPHUR.

The Peripatetics maintain, that beſides the common matter of all *bodies*, there is ſomething in every ſpecies, which diſcriminates it from every other, and makes it what it is: this they call *form*; which, becauſe all the qualities, and other accidents of the *body*, muſt depend on it, they alſo imagine to be a ſubſtance, and indeed a kind of ſoul, that, united to the groſs matter, with it compoſes a natural *body*. Vid. *Vater.* Phyſ. Exper. P. 1. c. 3. qu. 1. p. 13. *Boyle*, Phil. Work. abridg. T. 1. p. 207.

The affections, properties, or attributes of *body*, are either eſſential and general, as belonging to all *bodies*, and not capable of intenſion or remiſſion; or particular and accidental, which may be abſent, yet the *body* ſtill ſubſiſt, and which may alſo be intended and remitted. Vid *s'Graveſande*, Inſt Phil. Newt. c. 2. n. 9. p. 4. *Junck.* Conſp Chem. tab. 1. p. 6. *Vater.* Phyſ. Exper. P. 1. c. 4 p. 21, ſeq.

The general affections of *body* are extenſion, ſolidity, diviſibility, mobility, figurability, and gravity. *Wolf.* Coſmol. c. 1. p. 108. §. 122, ſeq. *s'Graveſande*, loc cit.

The particular affections are coheſion, hardneſs, ſoftneſs, fluidity, elaſticity, fixity, volubility, denſity, levity, &c. *s'Graveſande*, lib. cit. c. 5 p. 11. n. 32.

Mechanical writers reſolve all the force and activity of *body* into its motion; and all the paſſion of *body* into impreſſions made on it by other *bodies* in motion [a]. Hence *bodies* can only act when in contact, that is, can exert no action at a diſtance, or where they do not impinge [b].—[[a] *Wolf.* Coſmol. §. 133. p. 116. [b] Id. ibid. §. 320, 325.]

The motion of *bodies* is either local or inteſtine. The latter is not ſenſible; but may be inferred from a great number of operations. Dr. Hook does not deſpair, but that, under further helps and improvements of the organ of hearing, we may come at length to diſcern the inteſtine motions of *bodies* by the ear. *Hook*, Poſthum. Works, p 39.

We muſt not, Mr. Boyle obſerves, look on the ſeveral *bodies* which affect our ſenſes, as bare lumps of matter of ſuch bigneſſes and ſhapes: many of them have their parts curiouſly contrived, and moſt of them, perhaps, in motion too. Nor muſt we ſuppoſe the univerſe that ſurrounds us a motionleſs and undiſtinguiſhed heap of matter, but a great engine, which having either no vacuity, or none that is conſiderable betwixt its known parts, the actions of particular *bodies* one on another muſt not be barely eſtimated as if two portions of matter, of their bulk and figure, were placed in ſome imaginary ſpace beyond the world, but as being ſituate in the world, conſtituted as it now is, and conſequently as having their action upon each other liable to be promoted, hindered, or modified by the actions of other *bodies*. *Boyle*, of Forms and Qualities, ap. Phil. Work. abridg. T. 1. p. 203.

The chemiſts call the ſoul the *inviſible body*, as being a medium between the viſible *body* and the inviſible ſpirit. *Rul.* Lex. Alchem. *Johnſ.* Lex. Chym. *Caſt.* Lex. Med. p. 220.

Paracelſus and his followers give the name *body* to that wherein the virtues or powers of things are concealed. *Paracelſ.* Tract. Paragram. tr. 2. *Caſt.* Lex. Med. p. 220. voc. *corpus*.

In which ſenſe, they even ſpeak of the *bodies* of diſeaſes.

Chemiſts ſpeak of the *bodies* of metals; of opening the *body* of gold, that is, diſſolving it.

BODY is alſo uſed figuratively for conſiſtence, ſolidity, and ſtrength.

In this ſenſe, we ſay the *body* of a cloth, wine, &c.

Vintners have divers arts of increaſing or diminiſhing the *body* of wine. Vid. *Charlt.* Myſt of Vint.

Cœleſtial BODIES are by ſome divided into two kinds, ſolid and fluid.

The ſolid are thoſe which appear or are ſenſible to us, either by their own light, or the light of others reflected from them.

The fluid are only different kinds of æther, of which Hook makes ſeveral, ſome more fluid and ſubtile than others. *Hook*, Poſth. Works, p. 165. See ÆTHER, *Cycl.* and *Suppl.*

Spiritual or pneumatic BODY, that which is not palpable or groſs enough for our feeling, as the air, light, &c. *Bacon*, Nov. Org. l. 2. T. 1. p. 363.

Spiritual BODY is alſo uſed, by Hobbs, for the ſubſtance of angels, human ſouls, and the like, which he holds to be natural *bodies*, only too ſubtile to affect the ſenſes [c]. On this principle we have alſo *thinking bodies*, *reaſoning bodies*, &c. which, according to the generality of philoſophers, involve a contradiction [d].—[[c] *Hobbs*, Diſ. of Hum. Nat. c. 11. §. 4. p. 133. [d] *Verdr.* Phyſ. p. 546.]

Simple BODIES, thoſe which are not compounded of others: ſuch are the four elements, and the cœleſtial *bodies*, ſuppoſed to be. Vid. *Ozan.* Math. Dict. p. 139. & *Wolf.* Elem. Coſmol. §. 253. See SIMPLE, *Cycl.*

Mixt BODIES, thoſe formed of a mixture of the elements. Theſe are divided by philoſophers into perfectly and imperfectly mixt. See MIXT, *Cycl.*

Bodies imperfectly mixt are thoſe compoſed of one, two, or a few of the Ariſtotelian elements; ſo as they may eaſily, and without any great alteration, be reſolved into the ſame: ſuch are exhalations, effluvia, ſnow, and other meteors, ſuppoſed to be.

Bodies perfectly mixed are thoſe, to whoſe compoſition moſt or all of the elements concur; ſo as a firmer and more durable concretion ariſes: ſuch are ſtones, plants, and animals. *Verdr.* Phyſ. P. 2. c. 2. §. 5. p 285.

Others reject this diviſion as of little uſe, and divide mixt *bodies* into ſimple and organical mixts.

Inorganical or ſimply mixt BODIES, *mixta ſimpliciter*, are thoſe, whoſe properties, powers, and actions depend ſolely on the temperature of the elements they are compoſed of: ſuch are minerals.

Organical mixt BODIES, thoſe whoſe functions are performed by means of the mechanical ſtructure of the parts: ſuch are vegetables and animals. *Verdr.* ibid.

An organical *body*, according to Wolfius, is that which, by its compoſition or ſtructure, is fitted for ſome determinate action.

In which ſenſe, this philoſopher ſuppoſes all *bodies* to be organical, and ſubdivides them into ſimple and compound. *Wolf.* Coſmol. §. 274. p. 209.

Simple organical BODY, that which is not compoſed of any other organical *bodies* or parts.

Compound organical BODY, that whoſe component parts are organical *bodies*, being compound beings; and every compound being being a machine, it follows, that every *body* is a machine. On which principle is founded the modern mechanical philoſophy. *Wolf.* ibid. §. 75. p. 68, ſeq. & §. 120. p. 108.

We may add, that what the peripatetics call *mixt bodies*, ſome late writers, after Becker and Stahl, call *compound bodies*; which they ſubdivide into aggregates, mixts, and compounds, properly ſo called. *Stahl.* Phyſ. Princ. Chem. P. 1. §. 1. p. 3, ſeq. *Junck.* Conſp. Chem. tab. 1. p. 4, ſeq.

Mixt BODIES, according to theſe writers, are thoſe compoſed merely of principles.

Compound BODIES, thoſe formed immediately of mixts into any determinate ſingle things.

Aggregate BODIES, thoſe formed of ſeveral compounds into any intire parcel or ſyſtem. See AGGREGATE, *Cycl.* and *Suppl.*

Homogeneous BODIES. See HOMOGENEOUS, *Cycl.*

Heterogeneous BODIES. See HETEROGENEOUS, *Cycl.*

Inertia of BODY, that power whereby it reſiſts motion. For as to what is taught by philoſophers, that *bodies* are perfectly indifferent in reſpect of motion or reſt, muſt be take *cum grano ſalis*. A certain degree of force is required to put a *body* at reſt into motion; but a like force is alſo required to ſtop it when moving. Vid. *Wolf.* Coſmol. §. 129. p. 113. It. §. 304, ſeq. *Verdr.* Phyſ. P. 1. c. 1. §. 9. p. 58. See INERTIA.

Action of BODY—The mutual action of *bodies* on each other are by Bacon [e] reſolved into a principle of aſſimilation; by Hook, into congruity and incongruity; by Newton, into that of attraction and repulſion; and by others, into that of affinity [d], or ſimilarity and diſſimilarity, &c.—[[e] *Bacon*, Phil. Work. p. 170. [d] Vid. Mem. Acad. Scienc. ann. 1718. p. 256.]

Soft BODY, that whoſe parts ſlide over each other [e]; or that which readily loſes its former figure by ſome ſtroke or impulſe [f]: ſuch are wax, clay, tallow, &c.—[[e] *Newt.* Opt. p. 370. [f] *Wolf.* Elem. Mechan §. 370. Ed. 1. Ejuſd. Coſmol. §. 384. *s'Graveſande*, Inſt. Phil. Newt. n. 34]

Solid BODY, that whoſe particles cohere, or are ſome way connected to each other. *Wolf.* Elem. Hydroſt. §. 4. See SOLID, *Cycl.* and *Suppl.*

Fluid BODY, that whoſe particles eaſily ſlide over each other, and are of a fit ſize to be agitated by heat [g]; or that whoſe particles do not cohere, but are eaſily put in motion by the ſmalleſt force [h].—[[g] *Newt.* ibid. p. 370. [h] *Wolf.* ibid. §. 3. *s'Graveſ* ibid. n. 35.] See FLUID, *Cycl.* and *Suppl.*

Fixt BODY, that which will endure the force of an intenſe fire, without evaporating, or vaniſhing in ſmoke. See FIXT, *Cycl.*

Volatile BODY, that which riſes by the force of heat. *Quinc.* Pharm. P. 1. §. 14. p. 37, ſeq. Item, p. 41, ſeq. See VOLATILE, *Cycl.* and *Suppl.*

Humid BODY, that which is apt to adhere or ſtick to things. *Newt.* lib. cit. p 370. See HUMIDITY, *Cycl.*

Elaſtic BODY, that whoſe figure being changed by any external force, it returns to the ſame by its own force [i]; that is, according to Sir Iſaac Newton, by a force ariſing from the mutual attraction of its parts [k].—[[i] *Wolf.* Elem. Mechan. §. 371. Ejuſd. Coſmol. §. 380. *Ozan.* Dict. Math. p. 529. [k] *Newt.* Opt. qu. 31. p. 370.] See ELASTIC and ELASTICITY, *Cycl.*

Unelaſtic BODY, that which having aſſumed a new figure by means of ſome external force, retains or continues in the ſame; as wax, clay, or the like.

Rough BODY, *corpus asperum*, that whose surface is beset alternately with eminences and cavities, in contradistinction from a smooth *body*, *Wolf.* Elem. Mechan. §. 646.

Ductile BODIES, those which being stretched, do not break, but extend one way as much as they shrink another. Of these some are hard and malleable, as metals; others soft or viscid, as glues, gums, &c. Mem Acad. Scienc. ann. 1713. p. 268.

Flexible BODIES, those which admit of being bent without breaking: such are thread, wire, fibres, and even glass, when spun very fine. These are contradistinguished from brittle *bodies*. Vid. *Teichmy.* Inst. Phil. Nat. P. 1. c. 14. p. 89. *Quinc.* Pharm. §. 1. p. 6, seq.

Specific gravity of BODIES. See GRAVITY, *Cycl.*

Dense BODY. See DENSITY, *Cycl.*

Rare BODY. See RARE, *Cycl.*

Luminous or lucid BODY, that which emits its own rays, or shines by its own light. *Wolf.* Elem. Opt. §. 9.

Illuminated BODY, that which diffuses the light of another by reflexion, or which shines by borrowed light. Id. ibid. §. 10.

Opake BODY, that which intercepts the rays of light, or prevents their passage through it. Id. ibid. §. 12.

Transparent, diaphanous, or pellucid BODY, that which transmits the rays of light. Id. ibid. §. 12. See the article TRANSPARENCY, *Cycl.*

Human BODY—The height of the human *body* is said to be different in different parts of the day; ordinarily it is an inch more in the morning than at night [a]. The *body* ceases to grow in height, when the bones are arrived at a degree of firmness and rigidity, which will not allow of farther [b] extension by the effort of the heart, and motion of the blood.—[[a] Vid. Phil. Transf. N° 283. p. 87 & 89. [b] *Drake*, Anthrop l. 2. c. 8. p. 263. *Nent.* Fund. Medic. T. 2. P. 1. p. 184.]

BODY, among painters—A colour is said to *bear a body*, when it is capable of being ground so fine, and mixing with the oil so intirely, as to seem only a thick oil of that colour. This do white lead, lamp-black, vermillion, lake, indigo, &c. On the contrary, verditers, smalts, &c. will not imbody with the oil, but be still apt to separate from it in working. *Smith*, Art of Paint. c. 2. p. 28, seq. See COLOUR, *Cycl.* and *Suppl.*

BODY is also used in a figurative sense to denote bread.

It has been disputed among Romanists, whether the *body* of Christ in the eucharist be corruptible, or incorruptible. *Pfaf.* Inst. Hist. Eccles. sæc. 12. c. 3. §. 2. p. 566.

Bertram has a work on the *body* of Christ, wherein the doctrine of transubstantiation is fully refuted. Vid. *Fabric.* Bibl. Med. Æv. Lat. T. 1. p. 661. See TRANSUBSTANTIATION, *Cycl.*

BODY *of a piece of ordnance*, that part comprehended between the center of the trunnions and the cascabel. It ought always to be more fortified than the rest. *Moor*, Tr. of Artill. P. 1. c. 1. p. 3. See CANNON, *Cycl.* and *Suppl.*

BODY *of a pump*, the thickest part of the barrel or pipe of a pump, within which the piston moves.

BODY is also used for an assemblage of several different things collected into one; more particularly a number of persons united into a company or college.

A state or nation, under the administration of one sovereign, is called a *body politic*. All large empires are unnatural, in regard the relation between the head and limbs is here too remote [l]. No *body*, either natural or politic, can long remain sound without exercise [m].—[[l] *Shaftesb.* Char. T. 1. p. 113, seq. [m] *Bacon*, Works, T. 1. p. 247.]

BODY, in speaking of a horse, denotes the chest, but chiefly the flanks.

A horse is said to have a good *body*, when he is full in the flank; a light *body*, when he is thin or slender in the flank. If the last of the short ribs be at a considerable distance from the haunch-bone, though such a horse may have a tolerable *body* for a time, if he be much laboured, he will lose it. It is a general rule never to buy a horse that is light bodied and fiery, because he will presently destroy himself. Dict. Rust. in voc. *body.*

Congruous BODIES, those whose particles have the same magnitude and velocity, or at least harmonical proportions of magnitude and velocity.

Incongruous BODIES, those which have neither the same magnitude, nor the same degree of velocity, nor an harmonical proportion of magnitude and velocity. *Hook*, Lect. Cutl. de Potent. Restit. p. 7.

Hard BODY. See the article HARD.

BODY *of reserve*, in the military art, a draught or detachment of a number of forces out of an army, who are only to engage in case of necessity. *Ozan.* Dict. Math. p. 613. See the article RESERVE, *Cycl.*

BODY, in matters of literature, a name given to a collection of whatever relates to any particular science: thus we say, the *body* of the canon law [n]; the *body* of the Saxon law [o]: King James I. had a design to compile a *body* of the English law.—[[n] *Struv.* Bibl. Jur. c. 13. §. 10. p. 410. Bibl. Ital. T. 12. p. 130, seq. [o] *Struv.* lib. cit. c. 5. §. 5. p. 58.]

The *body* of the civil law consists chiefly of the institutes, pandects, code, and novels [p]. A glossated *body*, *corpus juris civilis glossatum*, is that to which glosses are added in the margin, composed by several lawyers [q].—[[p] *Hartung.* Exerc. Jur. Civ. 1. c. 5. p. 14. *Struv.* Bib. Jur. c. 3. §. 1. p. 21. [q] *Struv.* lib. cit. §. 14. p. 34.]

The chief editions of the *body* of the civil law are the Haloandrian, the Florentine, and the vulgar, which is that of Dion. Gothofred. Id. ib. §. 7. p. 25.

We have also *bodies* of poets, *bodies* of historians, &c. *Baill.* Jugem. des Scav. T. 3. P. 1. p. 440. *Boecl.* Bibl. Crit. c. 4. § 30. p. 135.

Divers other *bodies* are proposed by Mr. Wasse, to lessen the charge and trouble of collecting a multitude of small volumes; as, 1°. Of all the Greek orators, except Demosthenes. 2°. The rhetores, or such as have delivered the rules of writing. 3°. The epistles called Socratic. 4°. The grammarians. 5°. The opuscula mythologica. Bibl. Liter. N° 2. p. 34, seq.

F. Charlevoux the jesuit engaged in making a *body* of history of the new world, including all the countries unknown to the Europeans before the fourteenth century. Mem. de Trev. Jan. 1735. p. 160.

BODY *of doctrine* imports the same with system, *viz.* an orderly collection of principles and conclusions, containing the substance of what is to be said or known on a certain subject. Trev. Dict. Univ. T. 1. p. 257. See SYSTEM, *Cycl.*

In this sense, we say *bodies* of divinity, physic, &c.

The Lutheran church has four *bodies* of doctrine, *viz.* the Philippic, Prutenic, Thuringic, and Julian; all composed in the sixteenth century. *Pfaff.* Inst. Hist. Eccles. sæc. 16. c. 3. §. 6. p. 189. See LUTHERANISM, *Cycl.*

BOEDROMIA, Βοηδρομια, in antiquity, solemn feasts held at Athens, in memory of the succour brought by Ion to the Athenians, when invaded by Eumolpus son of Neptune, in the reign of Erectheus. *Harpocrat.* & *Suid.* in voc.

Plutarch gives another account of the *boedromia*, which, according to him, were celebrated in memory of the victory obtained by Theseus over the Amazons, in the month *Boedromion*. *Plut.* in Thes. *Potter*, Archæol. l. 2. c. 20. p. 374. *Schoet.* Lex. Ant. p. 224. Trev. Dict. Univ. T. 1. p. 1080.

BOEDROMION, Βοηδρομιων, in the antient chronology, the third month of the Athenian year. It consisted of thirty days, and answered to the latter part of our August and beginning of September. See MONTH.

It takes its name from the festival *boedromia*, kept in it. See BOEDROMIA.

BOERHAAVIA, in botany, the name of a plant, which, in the Linnæan system, makes a distinct genus. The characters of this are; that the cup is extremely small, and is only a foliaceous rim surrounding the seed-germen: the flower consists of a single petal, in form of a bell, placed erect, of a quinquangular figure, and divided into five segments, each surrounded with a rim: the stamina are three short filaments; and the antheræ are small: the pistillum has its germen within the receptacle: the style is thread-like, and erect; and the stigma obtuse: the fruit is a capsule, of a turbinated form, ridged on its surface, and containing only one single cell: the seed is single, one only succeeding each flower. The plant is very nearly related to the valerians. *Linnæus*, Gen. Plant. p. 8.

BOG (*Cycl.*)—*Boggy* lands upon levels are generally called *fens* with us; and what our farmers particularly understand by the term *bog-land*, is that sort of *bog* which lies among hills, or between two eminences, and has descent enough to drain it, if the water could get off.

These lands are fed by springs pent up by a weight of earth, which dams in the water, and causes it to spread in the ground so far as the land is soft. These are to be drained only one way, which is, by observing the lowest place where there is a proper descent; then there is to be made a cut in this place deep enough to take all the water out of the *bog*, and this must be somewhat deeper than the springs, or else the labour is all lost.

In rushy grounds, the springs are commonly found to lie within a foot or two of the surface, when any thing of stonyness or small gravel is to be found, and sometimes considerably lower in a hungry gravel; but it is always lower in *boggy* ground than in rushy, and is deep, according to the weight of earth that pens it in. The best way is to begin the drain at the lowest place, and so carry it in towards the spring-head, where there must be made such trenches, either round or cross the *bog*, as shall be found necessary to the draining of it thoroughly.

If it be necessary to make such large and deep drains, that there is danger of the cattle's falling into them, they may be filled up with stones or brick-batts, and these covered with boards, and the turf laid over them. The cavities among the stones will give passage to the water, and the turf will grow at top, as if nothing had been done.

It is a common practice to make a bank with the earth dug out of the trench, laying it on the side; but this is extremely wrong. If the trench be small, the earth dug out of it should be carried away in wheelbarrows; and if large, it should be spread upon the lowest places of the *bog*, where there is room for it. *Mortim.* Husband.

Another excellent method is to make the trenches about a yard deep, and two feet wide, laying at the bottom of them green black-thorn-bushes, and over these a stratum of large and round stones, or at least of such as cannot lie close; over these

lay

lay another ſtratum of thorn-buſhes, and then place a quantity of ſtraw, to keep the dirt from falling in, and filling them up. By this means the trench will be kept open, which otherwiſe will naturally ſwell, and fill up of itſelf. *Plott*, Nat. Hiſt. Oxfordſh. p 254.

Bog *moving*, or *migrating*. See Migrating *bog*.

Bog-*wood*. See Wood *ſubterraneous*.

BOGA, in zoology, a name given by many to a fiſh caught in the Mediterranean, and ſold at market at Naples and Meſſina, called among authors *boops*. It is a ſpecies of the *ſparus*. See Boops and Sparus.

BOHEMIAN *Brothers*, *fratres Bohemi* or *Bohemici*, is an appellation antiently given to the proteſtants of Bohemia.

Laſicius has a treatiſe *de geſtis fratrum Bohemicorum*. Camerarius has alſo given the hiſtory of the *Bohemian brothers*. Trev. Dict. T. 1. p. 1086.

Hæreſiographers derive a large train of ſects from the Bohemians, as the Huſſites, Adamites, Taborites, Calixtins, &c. *Pratæol.* Elench. Hæreſ. p. 102, ſeq. See alſo Bibl. Germ. T. 23. p. 2.

BOHEMICA *Bolus*, *Bohemian bole*. See Bolus *Bohemica*.

BOJA, in antiquity, a collar or chain faſtened about the necks of criminals, to prevent their eſcape. *Pitiſc.* Lex. Antiq. T. 1. p. 284. *Meurſ.* Gloſſ. Barb. p. 111. *Voſſ.* Etym. p. 73. The word is alſo written *boga*, *bodia*, and *baga*. *Du Cange*, Gloſſ Lat T. 1. p. 577.

BOICININGA, in zoology, a name by which the Braſilians call the rattleſnake. See Rattlesnake.

BOIGUACU, in zoology, the name of a ſpecies of ſerpent, called alſo *iiboia*, and by the Portugueſe *cobra de veado*.

This is the largeſt of all ſerpents, growing to twenty-four feet long, and preying on large animals. Maregrave declares, that he ſaw one which had ſwallowed a goat whole. It is very thick in the middle of the body, and ſmaller both at the head and tail. It is of a very beautifully variegated colour. All down the middle of the back there runs a chain of black ſpots, a hand's breadth diſtant from one another, each having a ſpot of white in its middle; and below theſe there are two other rows of ſmaller black ſpots towards the belly. It has in each jaw two rows of very ſharp teeth, white as pearl. Its head is very broad, and, over the eyes, riſes into two protuberances; and in ſome of this ſpecies there are two claws, like thoſe of birds, behind the anus, towards the tail.

This is a very terrible creature, and will ſeize on a man, and either lies in ambuſh in thickets, or on the branches of large trees, from which it throws itſelf on its prey. It has no venom in its bite; and its fleſh is eaten, and eſteemed a great delicacy. *Ray*, Syn. Anim. p. 325.

This ſerpent is common in the Braſils. Authors give ſurpriſing accounts of its ſize: Boritius preſerved the ſkin of one which himſelf had killed, which was twelve yards long; and relates, that there was once a ſerpent of this kind killed in Java, which was thirteen yards and a half long, and had, when killed, a boar in its belly. And De Laet relates, that in the Rio de la Plata, there are ſome of them ſo large, that they will ſwallow a ſtag whole, horns and all. The natives and the Hollanders make them a part of their food. *Grew*, Muſ. Reg. Societ. p. 50.

BOIL, in medicine. See Furuncle.

Gum Boils. See the article Gum.

BOILED or Boyled *Silks*, thoſe which have been put, while in the balls, into hot water, to make them wind or reele the better. *Savar.* Dict. Comm. T. 1. p. 1635. in voc. *cuit*. It. T. 2. p. 1584. in voc. *ſoye*.

In which ſenſe, *boiled ſilk* ſtands oppoſed to *raw*.

BOILER, or Boyler, a large copper veſſel, wherein things are expoſed over the fire to be boiled. Dict. Ruſt. in voc. See the article Boiling.

The *boyler* in the alum-works is a veſſel, in which the liquor is evaporated to a conſiſtence, and is made of lead. The general ſize is about eight feet ſquare, and they contain about twelve tuns each.

They make them in this manner: firſt they lay long pieces of caſt-iron, twelve inches ſquare, as long as the breadth of the *boyler*, and at about twelve inches diſtance from one another. Theſe are placed twenty-four inches above the ſurface of the fire. On theſe maſſy bars of iron they lay, croſs-wiſe, the common flat bars of iron, as cloſe as they can lie together, and then make up the ſides with brick-work. In the middle of the bottom of this *boyler* is laid a trough of lead, wherein they put at firſt about a hundred pound weight of the rock. They uſe Newcaſtle coals in the boiling; and if they find the liquor not ſtrong enough, they add more of the rock at times, as it boils. Phil. Tranſ. N° 142.

BOILERY, or Boilary, in the ſalt-works, denotes a ſalt-houſe, pit, or other place where ſalt is made. Vid. *Collins*, Diſc. of Salt and Fiſh. p. 32. See Salt.

BOILING (*Cycl.*)—We generally annex the idea of a certain very great degree of heat to the *boiling* of liquids; but this does not ſeem to be a connection of nature's making, but of our own. It is reported by many, that a veſſel of tar being ſet over the fire till it *boils*, a perſon may, while it is *boiling*, put his hand into it without any injury; and that the artificers who uſe and prepare this commodity, know this property of it ſo well, that they uſually take off the ſkum from their pots of it, while *boiling*, with no other inſtrument than their naked hands.

Water, in the receiver of an air-pump, when exhauſted, will *boil* without any great heat. The receiver ſhould, for this experiment, be one part full of water, and three empty: in this caſe, the flame of a candle being placed under the veſſel, the water will *boil* violently, while the glaſs itſelf is ſcarce warm; and when the water has been thus kept *boiling* a quarter of an hour, the glaſs will ſcarce be any thing the hotter for it. When the candle is taken away, the water will ſtill continue a great while *boiling*, and when it ceaſes firſt, will renew itſelf again from time to time to a very great ebullition. All the bubbles that riſe out of the water on this occaſion, do not raiſe the mercury in a gage to any ſenſible height.

Spirit of wine, in the ſame manner, *boils* much ſooner in vacuo than the water, and in this ſtate will raiſe the mercury in the gage to an inch higher than its former ſtandard. If the receiver containing it in this *boiling* ſtate, be plunged into cold water, the liquor, inſtead of becoming calm, *boils* more ſtrongly than before. It might be ſuppoſed, that this phænomenon was owing to a periſtaſis; but we have more ground to ſay it came from hence, that the vapours of the ſpirit were more condenſed, and ſo made the receiver more empty, which is ſufficient to make the ſpirit of wine *boil*, tho' it were not hot, as liquors uſually do when put into the engine, and the air exhauſted. In all theſe, and many other caſes, *boiling* is induced without that heat, which is ſuppoſed a neceſſary concomitant of it. Phil. Tranſ N° 122.

Alabaſter, in *boiling*, will ſwell a ſixth or eighth part above the top of the pot. *Hook*, Microgr. p. 41.

Different fluids require different degrees of heat to make them *boil*. Dr. Friend gives a table of the different times required to make ſeveral fluids *boil* by the ſame heat. Vid. *Friend*, Chem. Lect. p. 152.

Water, when once brought to *boil*, is not ſuſceptible of any further degree of heat, however the fire be increaſed. Hiſt. Acad. Scienc. ann. 1703. p. 31. See Water and Heat.

Boiling, in trade and manufactures, is a preparation given to divers ſorts of bodies, by making them paſs over the fire, chiefly in water, or other liquors.

In this ſenſe, we ſpeak of the *boiling* of ſalt [a]; *boiling* of ſugar [b], alum [c], copperas [d], and the like.—[[a] Vid. Phil. Tranſ. N° 53. p. 1064. *Ray*, Collect. loc. Word. p. 142. *Coll.* Salt and Fiſh. p. 32. [b] *Hought.* Collect. T. 2. p. 314. [c] Phil. Tranſ. N° 138. p. 1055. [d] Id. ibid. p. 1058.]

Boiling *of ſilk with ſoap* is the firſt preparation in order to dying it. Thread is alſo *boiled* in a ſtrong lixivium of aſhes, to prepare it for dying. *Savar.* Dict. Comm. T. 1. p. 1634. in voc. *cuire*. See Dying, &c.

Boiling, in the culinary art, is a method of dreſſing meats by coction in hot water, intended to ſoften them, and diſpoſe them for eaſier digeſtion. *Drake*, Anthrop. l. 1. c. 13. p. 79, ſeq. See Digestion, &c.

The effects of *boiling* are different, according to the kinds and qualities of the water. Puls *boiled* in ſea-water grow harder; mutton *boiled* in the ſame becomes ſofter and tenderer than in freſh-water; but taſtes ſaltiſh and bitter. Hiſt. Acad. Scienc. ann. 1710. p. 36.

Boiling *to death*, *caldariis decoquere*, in the middle age, a kind of puniſhment inflicted on falſe coiners, thieves, and ſome other criminals. Vid. *Du Cange*, Gloſſ. Lat. T. 1. p. 682. in voc. *caldariis*.

Boiling is alſo a method of trying or eſſaying the goodneſs or falſeneſs of a colour or a dye, by *boiling* the ſtuff in water with certain drugs, different according to the kind or quality of the colour, to try whether or no it will diſcharge, and give a tincture to the water. *Savar.* Dict. Comm. T. 1. p. 1655, ſeq. in voc. *debouille*.

With this intention, red crimſon ſilks are *boiled* with alum, and ſcarlets with ſoap, in quantity equal to the weight of the ſilk.

Boiling *well*, in natural hiſtory. See Spring.

BOIOBI, in zoology, the name of a ſpecies of ſerpent found in America, and called by the Portugueſe *cobra de verd*. It is about an ell in length, and of the thickneſs of a man's thumb, and is all over of a very beautiful and ſhining green. Its mouth is very large, and its tongue black. It loves to be about houſes, and never injures any creature unleſs provoked or hurt; but it will then bite, and its poiſon is very fatal. The natives take as a remedy againſt its poiſon the root *caa apia* bruiſed, and taken in water. *Ray*, Syn. Anim. p. 328. See Caa *apia*.

BIOQUIRA, in zoology, a name by which the natives of ſome parts of America call the rattleſnake. *Ray*, Syn. Anim. p. 291. See Rattlesnake.

BOITJAPO, in zoology, the name of a ſpecies of ſerpent found in America, and called by the Portugueſe there *cobra de cipo*. It grows to ſeven or eight feet long, and to about the thickneſs of a man's arm, and is very ſmall and taper towards the tail. Its back is of an olive colour, its belly yellow, and covered with very regular and elegant triangular ſcales. It feeds on frogs, &c. and is a very poiſonous and fatal kind. *Ray*'s Syn. Anim. p. 327.

BOLE, (*Cycl.*) in natural hiſtory, a kind of earth conſtituting a diſtinct genus of foſſils, and containing many different ſpecies, uſed principally in medicine. The characters of this genus are, that the earths of it are moderately coherent, ponderous, ſoft, not ſtiff or viſcid, but in ſome degree ductile, while moiſt; compoſed of fine particles, ſmooth to the touch, eaſily breaking between the fingers, readily diffuſible in water, and freely and eaſily ſubſiding from it. *Hill*'s Hiſt. of Foſſ. p. 1.

Boles are alſo called *bolar earths*, *terræ bolares* [a]; ſometimes ſimply *bolaria* [b]. The word is formed from the Greek βωλος, *gleba*, on account of the form wherein theſe earths are uſually brought to us, which is that of glebes, or ſmall clods [c].—[a *Vat.* Phyſ. Exper. P. 2. §. 5. c. 3. p. 410. b *Nent.* Fund. Med. P. 3. p. 469. c *Aſſalt.* Not. ad Mercat. Metalloth. p 12. *Voſſ.* Etym. p. 74.]

Boles bear a near affinity to marles, with which ſome will have them to be the ſame. *Stahl.* Phil. Elem. Chem. P. 1. §. 4. p. 75. See MARLE, *Cycl.* and *Suppl.*

Dr. Grew makes them the firſt matter of ſtone, metals, and divers ſalts, into which they are formed by concentration. *Grew*, Diſc. of Mixt. Lect. 2. c. 2. §. 2.

There are divers kinds of *boles* uſed in medicine, chemiſtry, painting, and other arts: ſuch are the Samian *bole*; the Lemnian *bole*, both red and white; the Armenian *bole*; the Hungarian or Toccavian *bole*; to which may be added others of leſs note found in Bohemia, England, Italy, New England, and other places. *Woodw.* Meth. of Foſſil. cl. 2. p. 2. Ejuſd. Nat. Hiſt. Engl. Foſſ. T. 2. p. 2. It. T. p. 63. It. Catal. For. Foſſ. p. 1. *Caſt.* Lex. Med p. 103.

The chief medicinal uſes of *boles* are as aſtingents to ſtop bleedings [d]. They are generally hurtful in fevers [e], eſpecially epidemical ones [f], and externally in the hæmorrhoids [g], *&c.*—[d *Grew*, Muſ Reg. Societ. P. 3. §. 3. c 3. p. 347. *Plott*, Nat. Hiſt. Staff. c. 3. §. 29. *Tourn.* Voyag. lett. 17. p. 94. e *Nent.* Fund. Med. P. 3. p. 469. f Id. ibid. 540. g Id. ibid. P. 2. p. 160.]

Their chemical uſes are for making crucibles, retorts, and other veſſels, and for fixing oils and ſulphurs; with which view they are uſed in the diſtillation of nitre, wax, turpentine, *&c.* to prevent their fuſing and boiling over. *Lancif.* ap. Mercat. Metalloth. p. 37. *Stahl.* loc. cit. See BOLUS.

BOLENIÆ, or BOLÆ, in natural hiſtory, a name given by antient writers to a ſort of ſtones of a roundiſh figure, and marked with ſeveral ridges and lines. They are ſuppoſed to be the ſame with thoſe called *brontiæ* and *ombriæ*, both being imagined to fall from the clouds in time of thunder ſtorms; but they are really no other than a common ſpecies of echinitæ. See BRONTIÆ and ECHINITÆ.

BOLETO *Lichen*, a name given by Mr. Juſſieu to a plant, which partakes of the nature of the moreille and of the liverwort, and which he has accurately deſcribed in the memoirs of the academy of ſciences at Paris. Its root conſiſts of a number of flatted fibres, of the colour of the earth in which they grow, and not eaſily diſtinguiſhed from it: its ſtalk is of a columnar ſhape, and is buried about an inch deep in the earth, and ſtands about four inches above it: it is largeſt at the root, and gradually tapers to the top, and is marked with irregular longitudinal furrows, divided by flat ridges: it is full of many irregular cavities alſo within, and is thence very brittle and very light: the moſt eminent of the ridges, when they are arrived at the top of the ſtalk, become expanded into a ſort of head, which is wrinkled and thin, and is of a fleſh-colour on the upper ſide, and yelloviſh underneath. This much reſembles the common lichen; and the pores of the ſtalk as much reſemble the moreille; whence its name.

The whole plant has the ſmell of the common muſhroom, and when young, has a viſcous liquid contained under the foldings of its head, which finally, when the plant is arrived at maturity, dries into the form of an extremely ſubtle yellow powder, which is the ſeed. Mem. Acad. Par. 1728. See LICHEN.

BOLETUS, in botany, a word uſed by Linnæus to expreſs a genus of funguſes, uſually comprehended by authors under the name of *agarics*, though very different from them. The agarics and *boleti* are both horizontal muſhrooms; that is, they have no pedicle, but grow to trees, *&c.* by their ſide; but the firſt are lamellated underneath, in the manner of the common muſhrooms. The *boleti* are all porous underneath. See the article AGARIC.

The ſpecies of *boletus*, enumerated by Mr. Tournefort, are theſe:

1. The rough, duſky-white, eſculent *boletus*, called the morel. 2. The yelloviſh, rugoſe, eſculent *boletus*. 3. The large orbicular, eſculent, rugoſe *boletus*. 4. The conic eſculent *boletus*. 5. The purple cancellated *boletus*. 6. The yelloviſh cancellated *boletus*. 7. The ſtinking phalloide *boletus*. *Tourn.* Inſt. p. 561.

The *boletus* is a kind of wood-muſhroom, almoſt round, of a white colour, ſpotted with yellow and brown marks; by ſome naturaliſts called *fungus nemorum*. *Voſſ.* Etym. p. 74. *Pitiſc.* Lex. Ant. T. 1. p. 285. *Bradl.* Dict. Bot. in voc.

The *boletus* is the moſt exquiſite of all the fungus-kind. *Fab.* Theſ T. 1. p. 361. *Pitiſc.* loc. cit.

The Roman epicures had it particularly in delight. Nero uſed to call it the food of the gods, *cibus deorum* [a]. The emperor Claudius is ſaid to have been poiſoned with a medicated *boletus*, given him by his wife [b].—[a *Suet.* in Ner. c. 33. b Id. in Claud. c. 44. *Plin.* Hiſt. Nat. l. 22. c. 22.]

BOLINTHOS, in natural hiſtory, a name given by Ariſtotle, and ſome of the other antient Greeks, to the *monops* of Ælian, that is, the *bonaſus*. See BONASUS.

BOLLITO, in the glaſs-works, the calcined materials for glaſs-making; the ſalt and tarſo burnt together, and prepared for running into glaſs. This is commonly called *frit*. *Neri*, Art of Glaſs, p. 7.

BOLLOS, in the mines of Peru, a denomination given to the ingots or bars of ſilver procured there from the ore by the operation of the fire, and uſe of aqua fortis. *Savar.* Dict. Com. T. 1. p. 400.

BOLOGNA *bottles*. See UNANNEALED *bottles*.

BOLONIAN *ſtone*. See LAPIS *Bononienſis*.

BOLSTER, among ſurgeons, a ſoft yielding ſubſtance, either laid under the head, or a broken limb.

BOLSTER is alſo uſed for a ſtuffing, intended to fill out or raiſe a flat, ſinking, or hollow part.

In which ſenſe, *bolſters* are contrived for crooked, bunched, and otherwiſe diſtorted backs, ſhoulders, *&c.*

By a conſtitution made under archbiſhop Burchier, the clergy are forbidden to wear *bolſters* about their ſhoulders, in their gowns, coats, or doublets. The occaſion of the prohibition is variouſly conſtrued: ſome ſay, that *bolſters* came in faſhion in the reign of king Richard III. who being neceſſitated, by his natural deformity, to pad, the courtiers, and even the clergy, did the ſame, out of complaiſance to their prince; ſo that every body, who had the misfortune to be born ſtreight, was obliged to wear a *bolſter* on his ſhoulders to be in the faſhion. Vid. *Johnſ.* Eccleſ. Law, an. 1464. §. 2.

But though it is probably true this practice prevailed in Richard the third's uſurpation, the conſtitution above-cited was made twenty years before that prince took poſſeſſion of the throne; ſo that it cannot be ſaid to have begun in his reign, though it might have been continued in complaiſance to him.

BOLSTERS *of a ſaddle*, in the manege, thoſe parts which are raiſed on the bows, both before and behind, to reſt the rider's thighs, and keep him in a poſture of withſtanding the diſorders which the horſe may occaſion.

Common ſaddles have no *bolſters* behind, or even before. *Guill.* Gent. Dict. in voc.

BOLT, (*Cycl.*) in building, an iron faſtening for a door, moved with the hand, and catching in a ſtaple or notch made to receive it. *Davil.* Explic. Term. Archit. p. 907. voc. *verrouil.* *Felib.* Princ. Archit. l. 1. c. 20. p. 168. Item, p. 535. voc. *verrouil.* *Neve*, Build. Dict in voc.

BOLT *of a lock* is the piece of iron, which entering the ſtaple, faſtens the door; being the part which is moved backwards and forwards by turning the key. *Felib.* Princ. Archit. p. 481. in voc. *pene*. See LOCK and KEY, *Cycl.*

Of theſe there are two ſorts; one ſhuts of itſelf by only putting to the door, and is called a *ſpring-bolt*; the other, which only moves when the key opens or ſhuts it, is called a *dormant bolt*. *Moxon*, Mech. Exer. p. 23.

BOLT is alſo uſed for a large iron pin, having a round head at one end, and at the other a key-hole or ſlit, wherein to put a pin or faſtening, ſerving to make faſt the bar of a door, window-ſhutter, or the like. *Savar.* Dict. Comm. T. 1. p. 440. voc. *boulon*. *Neve*, Build. Dict. in voc.

This is more particularly called a *round bolt*, or *window-bolt*.

BOLTS, in gunnery, are of ſeveral ſorts; thoſe which go betwixt the cheeks of a carriage to ſtrengthen the tranſoms, are called *tranſom-bolts*. The large iron *bolts* or knobs on the cheeks of a carriage, which keep the handſpike from ſliding when it is poiſing up the breech of the piece. The two ſhort *bolts*, that being put one in each end of an Engliſh mortar-carriage, ſerve to traverſe her, are called *traverſe bolts*. The *bolts* that go through the cheeks of a mortar, and, by the help of quoins, keep her fixed at the elevation given her, are called *bracket bolts*. And the four *bolts* that faſten the brackets or cheeks of a mortar to the bed, are called *bed bolts*. *Moor*, Artill. P. 3. c. 1. p. 45. *Guill.* Gent. Dict. in voc.

BOLTS, in carpentry, denote pieces of wood cleft with wedges, in order to be ſplit into laths. *Neve*, Build. Dict. in voc.

BOLT is alſo uſed for a meaſure or certain quantity of canvas, amounting to twenty-eight ells. *Ruſt.* Dict. in voc.

BOLT of ſilk or ſtuff denotes a long narrow piece, of indefinite meaſure. *Kenn.* Gloſſ. ad Paroch. Antiq in voc. *bulter-cloth*.

Peaſe BOLT, in Eſſex, denotes the peaſe-ſtraw, when the grain is thraſhed out of it. Id. ibid.

BOLTED *flour*, that which has paſſed through the bolter. See the article BOLTERS.

BOLTEL, in building, any prominence or jutting out, as of a piece of timber, end of a beam, or the like, advancing beyond the naked of the wall. Vid. *Kenn.* Gloſſ. ad Paroch. Antiq in voc. *bulter*.

BOLTERS, or BOULTERS, a kind of ſieves for meal, having the bottoms made of woollen, hair, or even wire. *Hought.* Collect. T. 1. N° 89. p. 238.

The word ſeems derived from the German *beutel*, a ſieve: whence alſo *beutelen*, to bolt. *Kenn.* Gloſſ. ad Paroch. Antiq. in voc. *bulter*.

The bakers uſe *bolters* which are worked by the hand; millers have a larger ſort, wrought by the motion of the mill. *Savar.* Dict. Comm. T. 1. p. 375. voc. *bluteau.* See BOLTING.

BOLTING, or BOULTING, (*Cycl.*) the act of ſeparating the flour from the bran, by means of a ſieve or bolter. *Savar.* loc. cit. voc. *bluter.* *Skin.* Etym. in voc. *bolt.* See BOLTER.

BOLTING *cloth*, or BOLTER *cloth*, ſometimes alſo called *bulting cloth*, denotes a linnen or hair-cloth for ſifting of meal or flour. *Kenn.* Gloſſ. ad Paroch. Antiq. in voc. *bulter.*

BOLTING *mill*, a verſatile engine for ſifting with more eaſe and expedition. The cloth round this is called the *bolter.*

BOLTING, or BOULTING, among ſportſmen, ſignifies rouſing or diſlodging a coney from its reſting place. *Cox*, Gent. Recr. p. 10.

They ſay to *bolt* a coney, *ſtart* a hare, *rouſe* a buck, *&c.*

BOLUC *baſſi*, in the Turkiſh affairs, denotes the chief of a company, or a captain who has the command of an hundred janizaries. Trev. Dict. Univ. T. 1. p. 1102.

BOLUS (*Cycl.*)—The *bolus* is a form much uſed in England, leſs abroad [a]. In general, it may be conſidered as a doſe of an electuary, from which it differs only in conſiſtence, as being ſomewhat ſtiffer, and in that being wrapped up for taking, it needs not to be ground to the nicety of ſmoothneſs required in an electuary. The bolar form obtains chiefly in things of great efficacy, which require their doſes to be nicely adjuſted [b].—[a *Quinc.* Diſpenſ. P. 4. §. 6. p. 629. b Id. Pharm. lect. 16. p. 176, ſeq.]

Boluſes are chiefly denominated from their intentions, as emetic *boluſes*, purgative *boluſes*, aſtringent, anodyne, anti-febrile, alexipharmic, *&c. boluſes.* *Quinc.* Diſpenſ. P. 4. §. 6. p. 629. *Barchuyſ.* Pharm. Synop. p. 43. *Boerh.* Lib. de Matt. Med. p. 63, 94, &c.

Whatever is fit for internal uſe, either by itſelf, or mixed with proper ingredients, and can be reduced into a ſoft coherent maſs, and have a ſufficient quantity in a ſmall doſe, is fit for this form of medicine.

All dry ſubſtances, which operate when exhibited in ſmall doſes, and ſuch as are proper only for forming powders, are called *excipienda*, and cannot make *boluſes* without the addition of ſome liquid, tenacious body; and the ſofter ſubſtances, which are more or leſs thick, as conſerves, electuaries, ſoft extracts, robs, pulps, ſoft confections, thick native and factitious balſams, potable ointments, and ſyrups, are ſome of them naturally of the conſiſtence of a *bolus* themſelves; but the moſt are too thin, and are proper to be mixed with the powders or *excipienda* before-mentioned, to conſtitute this form. Theſe are therefore called *excipientia.*

Liquid ſubſtances, which are to be given in ſmall doſes, ſuch as liquid balſams, oils, ſpirits, tinctures, eſſences, and elixirs, being of themſelves unfit for the form of a *bolus*, are to be received into other ſubſtances, or elſe to receive a proper proportion of other ſubſtances into them, before they can be given in this form.

The choice of the proper ingredients for a *bolus* is regulated by the following conſiderations: a due coheſion, ſoftneſs, and equable mixture, are eſſentially neceſſary to a *bolus*; for this reaſon, dry ſubſtances muſt be put to liquid ones, and liquid ones to dry, to produce the proper conſiſtence; but the thicker electuaries, conſerves, and robs, are themſelves naturally in form of a *bolus.*

Acrid ſubſtances, and ſuch as are offenſive either to the ſmell or taſte, or are of a very viſcid nature, are much more properly exhibited in form of *boluſes* than of powders; ſince their offenſive qualities are by this means concealed. The draſtic purges, and mercurial preparations, are therefore very properly given in *boluſes.*

Balſams, and other ſuch liquid ſubſtances, are beſt mixed into a *bolus* with ſugar, becauſe it not only is the means of their going down eaſily, but it aſſiſts their diſſolution in the ſtomach. The alkaline fixed and volatile ſalts, and all other ſubſtances which ſoon become liquid, are very improperly made ingredients in *boluſes* which are to ſtand any time; ſince they ſpoil the form of the medicine, and looſe their own virtues; and for the ſame reaſon, ſuch ſubſtances as will ferment when brought together, are very improper for *boluſes*, unleſs they are to be ſwallowed as ſoon as made up. To this it may be added, that the number of ingredients in a *bolus* ſhould never exceed three, or at the moſt four.

The doſe of a *bolus* may be extended from a dram to a dram and half, or even to two drams, if the ingredients are very heavy; ſince this quantity of ſuch will lie in as ſmall a compaſs as half as much of the lighter; and indeed, in the *boluſes* made of light ingredients, the quantity never ſhould exceed a dram. If the neceſſary quantity for a doſe cannot be comprehended in this ſize, it is better to divide the doſe into two *boluſes*, to be taken at ſhort intervals, than to load the patient with too large a morſel at once.

The number of *boluſes* made up at once ought only to be one, or at the utmoſt two; but the apothecaries have got an almoſt univerſal cuſtom at preſent of ſending in four at a time; by which means, the laſt which are taken, are uſually too hard to be ſwallowed, and often have loſt all their virtues.

When dry ſubſtances are ordered into the form of a *bolus*, their doſe may be from one ſcruple to two; and the moſt uſual excipient with us is ſyrup, which is left to the diſcretion of the apothecary as to its quantity. When robs, electuaries, or conſerves are uſed, the powders muſt be leſs in quantity; and the common uſe, indeed, of conſerves for *boluſes*, is in the mixture with the mercurial powders, very ſmall quantities of which are ſingle doſes: and it is a general rule, that when the doſe of the powder is ſmall, the excipient muſt be thick, and itſelf nearly of the conſiſtence of a *bolus.* When the doſe of the powder is large, the excipient muſt be no thicker than a ſyrup; and when any thing liquid is added to a *bolus*, as the eſſential oils, *&c.* the quantity in each *bolus* muſt not exceed three or four drops, and that muſt be added firſt to the dry powder, that the proper quantity of the ſyrup only be added afterwards. Some ſort of *boluſes* are naturally of too thin a conſiſtence, and to theſe it is neceſſary, according to the ſeveral natures of their ingredients, to add to them powder of ſugar, liquorice, *&c.*

It is the common cuſtom to wrap up *boluſes* in leaf-gold, or in a wafer; but ſome chooſe neither of theſe, but will diſſolve them in ſome liquor before they are taken. The ſignature on each *bolus* is to expreſs its nature and deſign, the liquor to be taken with or after it, and the regimen to be uſed; and it is highly neceſſary to give a convenient liquor after ſome of them, if we ſuſpect they are made of ingredients which will not eaſily diſſolve in the ſtomach; and this caution is to be regarded principally in thoſe of the terebinthinous and other balſamic kinds.

Boluſes are a form of medicines almoſt univerſally uſeful. All we have to conſider in regard to the taking them is, whether the patient is in a condition to ſwallow a ſolid morſel, or not; and from hence it is eaſily inferred, that they are not to be given in quinſies, or in ulcers of the fauces; apoplexies, epilepſies, and ſyncopes alſo render them very improper. Vid. *Hoffman*, *Quincy*, *James*, *Bate*, &c.

BOLUS *Armena*, *Bole Armenic*, a medicinal earth in frequent uſe in the ſhops, but almoſt always ſophiſticated.

The true hiſtory of this ſubſtance is this: there are three kinds of it; the white, the yellow, and the red, which have been all in repute in different ages of medicine, but of which the laſt only is now thought of. The firſt or white *bole Armenic* was in uſe very early in the world, tho' under a different name, the antients calling it the white *Eretrian earth.* This was uſed in the times of Dioſcorides. The ſecond or yellow was introduced by Galen, and given in the great plague at Rome in his time. The third or red kind is the *bole Armenic* of Avicenna, which we alſo pretend at this time to uſe; but very little of it is to be found genuine among us.

The white *bole Armenic*, called white Eretrian earth by Dioſcorides, to diſtinguiſh it from the grey earth of the ſame place, is a fine, ſoft, and pure earth, moderately heavy, and of a cloſe, compact texture, of a clear, bright-white colour, adhering firmly to the tongue, inſipid to the taſte, and melting, like butter, in the mouth. It burns to a ſtony hardneſs without changing colour, and makes no effervescence with acid menſtrua. This ſeems, of all foſſile ſubſtances, the moſt to approach the nature of pure earth. This is now dug in the eaſtern part of Armenia; but is found in no great plenty, there being only one ſtratum known of it, and that not very thick. This is eſteemed a ſudorific and aſtringent.

The yellow *bole of Armenia*, or the *bole Armenic* of Galen, is a very fine and beautiful earth, of a cloſe, compact texture, naturally of a ſmooth ſurface, and very hard. It is heavier than any other of the yellow earths, and is very ſoft to the touch. It is readily diffuſible in water, and remains long ſuſpended in it, adheres firmly to the tongue, melts ſlowly in the mouth, and is of a very manifeſtly aſtringent taſte. It ferments very briſkly with acid menſtrua, and does not become red on burning. There have been many diſputes about the place whence this excellent drug was brought: Aetius will have it to be from the mountain Bagonoſa in Armenia; Cardan only from the iſland of Samos; and others from other places: but it is found to this day in Armenia, to the north-eaſt of Erzeron, in vaſt abundance. It ſeems the moſt valuable of all the medicinal earths. Experience proves it to be a very noble aſtringent. Many authors extol it highly as a ſudorific and alexipharmic; and Galen reports of it, that it often ſuddenly cured the plague, and that thoſe whom it did not cure, were relieved by no other medicines. It would be extremely worth while to encourage the uſe of this drug, as it may be had in any quantities; for much of it is carried to Germany every year, and ſometimes a little of it ſtraggles to us; and when it does ſo, our druggiſts, not being uſed to a yellow *bole Armenic*, ſell it under the name of *bole* of Blois.

The red *bole of Armenia*, or *bole Armenic* of Avicenna, and of moſt authors ſince his time, is the hardeſt of all the earths of this kind. It is very pure and fine, and in colour is of a ſtrong, but ſomewhat yellowiſh red, much approaching to that of ſaffron in the cake. It is of a ſurface the leaſt ſmooth and gloſſy of all the *boles.* It ſtains the fingers in handling, is not readily diffuſible in water. It adheres firmly to the tongue, and melts but ſlowly in the mouth, and is of a very manifeſtly aſtringent taſte. It does not ferment with acids, and becomes

of a darker colour in burning. Theſe are the ſeveral characters, by which the *Armenian boles* may he diſtinguiſhed from all other earths of the ſame colours. This laſt ſpecies is what we now pretend to uſe. It is found in vaſt plenty in the north-eaſt parts of Armenia, and is ſometimes uſed in Germany; but ſcarce ever ſeen in England. What is called *bole Armenic* in our ſhops being no other than a villainous compoſition of no better materials than common tobacco-pipe-clay, and an ochre known among painters by the name of Spaniſh brown. Vid. *Hill*'s Hiſt. of Foſſ. p. 2, 8, 10.

The *Armenian bole* is uſed in diarrhæas, dyſenteries, catarrhs, &c. Some alſo give it an alexipharmic virtue, efficacious in peſtilential diſeaſes; but its uſe in this intention is at beſt dubious. Vid. *Lang.* Epiſt. Med. l. 1. ep. 18.

The Germans, for the *Armenian bole*, uſe that of Tocay, which Crato holds preferable to it. The French uſe a like clay, found in divers provinces of that kingdom; and the Engliſh fullers earth. *Crat.* Conſil. 79. It. Epiſt. 123, 130. *Caſt.* Lex. Med. p. 108. Phil. Tranſ. N° 1. p. 11. *Boyle*, Phil. Work. abridg. T. 1. p. 59.

BOLUS *Bohemica*, *Bohemian bole*, in the materia medica, a medicinal earth, dug in many parts of the kingdom whoſe name it bears, and uſed there, in Germany, and ſome other countries, as an aſtringent, and a valuable medicine in malignant fevers. It is a very pure and fine *bole*, conſiderably heavy, and of a ſomewhat deep yellow, with a ſlight admixture of rediſhneſs. It is naturally of a ſmooth ſurface, ſomewhat friable, and melting in the mouth, with an unctuous or fatty taſte. It does not efferveſce with acids, and will not burn to a redneſs, as the common clays and ochres readily do in a ſmall fire. *Hill*, Hiſt of Foſſ p. 9.

BOLUS *Gallica*, *French bole*, in the materia medica, an earth dug in many parts of France; but principally in the neighbourhood of Paris, and very much uſed there, and ſometimes in England. It is a very good aſtringent, and much better than the adulterated ſubſtance we commonly call *bole Armenic*. It is an irregular and rude ſubſtance, very heavy, and compact in ſome parts, and looſe and friable in others. It is of a pale-red colour, veined, and ſpotted with a pale yellowiſh-red earth, of a much looſer texture than the reſt, and properly a marle. It eaſily breaks between the fingers, and melts in the mouth, leaving an unctuous ſoftneſs on the tongue. *Hill*, Hiſt. of Foſſ. p. 11.

The apothecary ought to chooſe ſuch as is free from veins, or elſe to pick out the veins before the maſs is powdered, they being not at all of the nature of the reſt; and the beſt is that which melts moſt freely in the mouth, and is perfectly free from ſand.

BOLUS *Orientalis*, in the materia medica, a name by which ſome authors have called the *bole* Armenic. Moſt of them, however, underſtand by this name the red kind, which is the bole of Avicenna, not the yellow one of Galen.

BOLUS *Toccavienſis*, in the materia medica, an earth found in Hungary, reſembling bole Armenic, and of ſimilar virtues. *Crato*, ap. *Boyle*, Works fol. Edit. vol. 1. p. 501.

BOM, in zoology, the name of an American ſerpent, remarkable for its noiſe, which is like the ſound of the word uſed as its name. It grows to a vaſt ſize, and is perfectly harmleſs, never hurting any one. *Ray*, Syn. Anim. p. 329.

BOMARIN, in zoology, a name uſed by ſome for the *hippopotamus*, or river-horſe. *Grew*, Muſ. p. 14.

BOMB (*Cycl.*)—*Bombs* may be uſed without mortar pieces, as was done by the Venetians at Candia, when the Turks had poſſeſſed themſelves of the ditch, rolling down *bombs* upon them along a plank ſet ſloping towards their works, with ledges on the ſides to keep the *bomb* right forwards. They are ſometimes alſo buried under ground to blow up. Milit. Dict. in voc. See CAISSON.

A new ſort of *bombs* of vaſt weight have been lately invented by the French, called *comminges*. *Fæſch* Ing. Lex. p. 108.

Bombs came not into common uſe before the year 1634, and then only in the Dutch and Spaniſh armies. One Malthus, an Engliſh engineer, is ſaid to have firſt carried them into France, where they were put in uſe at the ſiege of Colliouſe, in 1642. *Aubin.* Dict. Mar. p. 99.

The art of throwing *bombs* makes a branch of gunnery, founded on the theory of projectiles, and the laws and qualities of gun-powder. See GUNNERY, PROJECTILE, GUN-POWDER, &c. *Cycl.* and *Suppl.*

Meſſ. Blondel [a], Guiſnee [b], de Reſſons [c], de la Hire [d], and others [e], have written expreſly on the art of throwing *bombs*.—[[a] L'Art de jetter des *bombes*, Par. 1683. [b] Theor. des Project. ou du jet des *bombes*, printed in Mem. Acad. Scienc. an. 1707. p. 181, ſeq. An extract of it is given by Fontenelle, in Hiſt. Acad. 1707. p. 150. [c] Meth. pour tirer les *bombes* avec ſucces, printed in Mem. de l'Acad. Scienc. ann. 1716. p. 101, ſeq. [d] Vid. Mem. Acad. Scienc. ann. 1700. p. 257. Hiſt ibid. p. 183. [e] Bibl. Ital. T. 9. p. 198. *Reyn.* Anal. Demont. l. 8. ſec. 2. §. 321, ſeq.]

Water-BOMB. See WATER-*bomb*.

BOMB-*veſſels* are ſaid to be the invention of M. Reyneau, and to have been firſt uſed at the bombardment of Algiers. Till then, it had been judged impracticable to bombard a place from the ſea. Hiſt. Acad. Scienc. 1719. p 128.

BOMBARD (*Cycl.*)—*Bombards* can hardly be ſuppoſed to have been of metal, nor charged with gun-powder. They were rather a ſort of baliſtæ for throwing ſtones, and were played with ropes. *Froiſſart*, T. 2. c. 103. *Du Cange*, Gloſſ. Lat. T. 1. p. 579.

BOMBARDING, the art or act of attacking a city or fortreſs, by throwing bombs into it, in order to ruin or ſet on fire the houſes and magazines, and do other miſchiefs. *Fæſch.* Ing. Lex. p. 107, ſeq. *Aubin.* Dict. Mar. p. 99. See BOMB, *Cycl.* and *Supp.* *Bombarding* is not reckoned the moſt honourable method of making war, as it rather tends to do miſchief to the inhabitants than to the works.

BOMBASINE, in commerce, a kind of ſilk-ſtuff manufactured at Milan, and thence ſent into France and other countries. *Savar.* Dict. Comm. T. 1. p. 401.

The French alſo uſe the word *bombaſine* for ſtuff made of cotton, more properly called dimitty.

BOMBAST, in matters of diction, a ſtyle too high and pompous for the ſubject and occaſion; or words too big and ſounding for the ſenſe and meaning. *Werenf.* Treat. of Logomach. p. 187. *Bouh.* Man. de bien Penſer, dial. 3. p. 241, ſeq. Item, dial. 4. p. 342, ſeq. See STYLE, *Cycl.*

BOMBAX, a term uſed to ſignify the cotton-tree. See COTTON, *Cycl.*

The word is alſo written *bambax*, and doubtleſs came originally, by corruption, from the word βομβυξ. *Du Cange*, Gloſſ. Græc. T. 1. p. 580, ſeq. See BOMBYX.

BOMBUS, in muſic, an artificial motion with the hands, imitating, in cadence and harmony, the buzzing of bees.

The word is originally Greek, βομβος, where it ſignifies the buz or noiſe of bees, gnats, and the like. *Pitiſc.* Lex. Antiq. T. 1. p. 286. *Voſſ.* Etym. p. 74.

In this ſenſe, *bombus* made one of the ſpecies of applauſe uſed by the antient auditories. Vid. *Suet.* in Ner. c. 20. ap. Hiſt. Acad. Inſcr. T. 1. p. 142.

BOMBUS, in medicine, denotes a murmuring noiſe, as of wind breaking out of a narrow into a larger cavity, frequently heard in the thick inteſtines.

The *bombus* heard in the ears, in acute diſeaſes, is laid down by Hippocrates as a ſign of death. *Hippoc.* Coac. t. 135. ap. *Caſt.* Lex. Med. p. 108.

BOMBYCINUM, in antient writers, properly denoted a ſpecies of ſilk, brought from Aſſyria and the iſland of Cos.

In which ſenſe, it ſtood diſtinguiſhed from *ſericum*, another ſort of ſilk brought from the Indies. Mem. Acad. Inſcr. T. 7. p. 344. See SERICUM.

BOMBYLIUS, in natural hiſtory, the name of the common *humble bee*, of which we have a great variety of ſpecies, many of them very beautiful.

Mr. Ray, in his hiſtory of inſects, mentions no leſs than nineteen kinds, all wholly different from one another. 1. The great black *humble bee*; which is all over black, except that the two laſt rings of the body are rediſh. This ſpecies is very hairy. 2. The ſmall *humble bee*, with a black back, and an orange-coloured tail and belly. 3. The common honey-making *humble bee*. This is of a middle ſize; its back is covered with long rediſh hairs, and it uſually builds its neſt in the graſs. 4. The middle-ſized black *humble bee*, with a yellow down on the middle of its legs. 5. The great black *humble bee*, with a double ſtreak of yellow on the neck, and on the body. 6. The great black *humble bee*, with a yellow tail, and a yellow line on the back. 7. The middle black *humble bee*, with a red tail, and a yellowiſh green line on the ſhoulders. 9. The white-haired great *humble bee*, with a rediſh tail. 10. The middle-ſized black *humble bee*, with three lines of a rediſh yellow on the back. 11. The great black *humble bee*, with a white tail, and three lines of yellow on the back. 12. The middle ſized *humble bee*, with a black ſhining body, and white line round the neck. 13. The middle-ſized *humble bee*, covered all over with rediſh hair. 14. The great black *humble bee*, with a body intirely ſmooth and ſhining. The wings of this ſpecies are of a beautiful bluiſh purple colour. 15. The great black *humble bee*, with a white tail, and with two ſtreaks of yellow on the back. The belly of this ſpecies is wholly black. 16. The great black *humble bee*, with a white tail, and with two rows of a rediſh yellow on its back. The lower variegation is rather a large ſpot than a line. 17. The great *humble bee*, with two lines on its back; the upper of a duſky yellow, and conſiderably broad; the other narrower, and white. 18. The great *humble bee*, with a broad yellow collar, and with the hinder part of the body covered with fine white hairs. 19. The ſmall black *humble bee*, with a white collar, and a white rein round both its ſides, from the breaſt to the tail. *Ray*, Hiſt. Inſ. p. 246. See BEE.

BOMBYLOPHAGES, *humble bee-eater*, in natural hiſtory, the name of a fly of the *tipula* or father-long-legs kind, which is larger and ſtronger than the common kinds; and loving honey, without knowing how to extract it from the flowers, it ſeizes on the humble bees, and deſtroys them, in order to get at the bag of honey which they contain. It is of a blackiſh colour in the body; its head is of a bright red, and the eyes very large and prominent. It is chiefly found in mountainous places.

BOMBYLUS *Teredo*, in natural hiſtory, the name of a ſpecies of humble bee, which eats its way into wood, and there makes its neſt. Mr. Baniſter mentions one of theſe neſts, which he found

found in a beam of a houſe; the timber of which was ſo tough, that a piercer would ſcarce make its way into it. The hole was juſt large enough for the body of the bee. This hole went perpendicularly two inches into the wood, and then turned horizontally, and was of a capacity to hold ſeveral of theſe creatures. There were only three found in it; but others were about the entrance, and many more might have lived comfortably in it.

BOMBYX, in natural hiſtory, a name given by ſome authors to a ſpecies of winged inſect, endowed with a ſting in the manner of the bees and waſps. It is of the ſhape of a waſp, but all over black in colour; it ſtings very ſeverely, always leaving the ſting in the wound. It builds its neſt of clay, which it works up to a very hard conſiſtence, and finally faſtens to a ſtone.

BOMBYX is alſo a name given to the *ſilk-worm*. See the article SILK-WORM.

BOMBYX, βομβυξ, in the antient muſick, a kind of inſtrument, which, in Ariſtotle's time, was made of a reed, *calamus*; and, by reaſon of its length, was difficult to play on. V. *Barthol.* de Tibiis Veterum, c. 4. p. 27.

The word ſeems alſo to have been uſed for a contrivance of horn, for ſhutting and opening the holes of wind inſtruments. *Malc.* Treat. of Muſ. c. 14. §. 2. p. 470.

BOMBYX, in the antient naturaliſts, ſignifies indifferently either ſilk or cotton. *Plin.* Hiſt. Nat. l. 19. c. 1. Mem. Acad. Inſcript. T. 7. p. 339.

According to Montfaucon, *bombyx*, in Pliny and the antients, denoted only ſilk; it being not till the middle age that the word firſt came to ſignify *goſſipium*, or cotton. *Montfauc.* Palæog. Græc. l. 1. c. 2. p. 17. *Voſſ.* Etym. p. 75.

BOMONICA, in antiquity, an appellation given, at Sparta, to the children, who, in the ſacrifices of Diana, ſtrove who ſhould receive the greateſt number of ſtripes with rods, which they ſometimes continued to do the whole day, and even, as Plutarch relates, to death itſelf. V. *Meurſ.* Græc. Ferial. l. 2. Trev. D. Univ. T. 1. p. 1104.

The word is formed from βωμος, altar, and νικη, victory; importing as much as *victor ad aras*, or conqueror at the altars.

BON, or BAN, in botany, a name given by ſome authors to the tree, the kernel of whoſe fruit is the coffee. The fruit is, by the ſame authors, called *buna*. *Park.* Theat. 1622.

BONA *fides*, or BONA-*fide*, is uſed in ſpeaking of things done with an honeſt intention, in oppoſition to thoſe done with a deſign of fraud and deceit, ſaid to be *mala fide*. Stat. 13. Eliz. c. 5. 12 Car. II. c. 18. *Jac.* Law Dict. in voc.

In this ſenſe, we ſay, a grant, a conveyance, *bona fide*. *Wood*, Inſt. Engl. Law, l. 2. c. 3. p. 221.

In many caſes, in the civil law, the *bona fide* of an action excuſes the want of ſome of the cuſtomary forms. *Briſſ.* de Verb. Signif. p. 83. *Calv.* Lex. Jur. p. 119.

Contracts *bonæ fidei*, among civilians, ſtand contradiſtinguiſhed from thoſe *ſtricti juris*; the former being gained by plain honeſty and conſcience, which ſometimes includes ſeveral things not expreſsly mentioned; whereas the latter are reſtrained to the expreſs terms of the deed. *Wood*, l. 3. c. 1. p. 207.

A buyer *bonæ fidei*, is he who really believed the thing to belong to the ſeller at the time when he purchaſed it.

A poſſeſſor *bonæ fidei*, he who is in poſſeſſion of a thing belonging to another, but which he truly believes is his own. *Calv.* Lex. Jur. p. 121.

To be entitled to the benefits of next acceſſion, it is requiſite the perſons have poſſeſſed the thing *bona fide*, or really thought themſelves the proprietors. *Wood*, Inſt. Imper. Law, l. 2. c. 3. p. 161.

Preſcription cannot ariſe from acts done *mala fide*; ſince what was unjuſt in its origin, can never be made juſt by time and continuance. Id. ibid. l. 1. c. 1. p. 105. Item, l. 2. c. 4. p. 164. See PRESCRIPTION, *Cycl.*

Actions BONÆ *fidei*, thoſe wherein, for further light, the judge might take cognizance of things not mentioned between the parties. *Calv.* ubi ſupr. p. 120. *Briſſ.* loc. cit.

Judgment BONA *fide*, that wherein the parties are obliged to pay each other what is due *bona fide*, i. e. juſtly and equitably; and the judge has a power of eſtimating what is thus due to the actor or plaintiff; a power given him by the formula of the Prætor, viz. *Ex fide bona*, *vel quantum æquius melius*.

BONA *gratia*, a phraſe antiently uſed in ſpeaking of divorces, which were brought amicably about for ſome juſt reaſon, with the conſent of both parties, and without any crime on the part of either, as in caſe of old age, diſeaſe, barrenneſs, monachiſm, captivity, or the like. *Calv.* Lex. Jur. p. 120. *Du Cange* Gloſſ. Lat. T. 1. p. 582.

BONASUS, in natural hiſtory, the name of a ſpecies of wild-ox, of the ſize of the tame kind common with us, but of a thicker body, and having on its neck a mane like that of a horſe, and horns very ſhort and crooked, ſo as to be of no uſe to him in fighting.

When he is urged, he is able to throw out his dung a great way, and it is then of a hot and corroſive nature, though not ſo at other times; and this is his method of defending himſelf: a thing hardly credible, as Mr. Ray juſtly obſerves, if we had not inſtances of other animals, which are capable of the like things. *Ray*'s Synop. Quad. p. 71. See the article ELAPHOCAMELUS.

BOND, (*Cycl.*) in maſonry and bricklaying, is when bricks or ſtones are, as it were, knit and interwoven; that is, the joints are not made over, or upon other joints; but reach at leaſt ſix inches, both within the wall and on the ſurface, as the art of building requires. *Davil.* Explic. Term. Architect. p. 662. voc. *Liaiſon*. *Neve*, Build. D. in voc. See MASONRY, *Cycl.*

Among carpenters, when they ſay, make *good bond*, they mean, faſten the two or more pieces of timber well together, either with tenanting, mortiſing, dove-tailing, &c.

BONDMAN, *Bondus*, in the Engliſh law, is uſed for a villain, or tenant in villenage. *Du Cange*, Gloſſ. Lat. T. 1. p. 582. voc. *Bondus*. See VILLAIN and VILLENAGE, *Cycl.*

The Romans had two kinds of *bondmen*; one called *ſervi*, who were thoſe either bought for money, taken in war, left by ſucceſſion, or purchaſed by ſome other lawful acquiſition; or elſe born of their *bondwomen*, and called *vernæ*. Both are called in our law *villains in groſs*, as being immediately bound to the perſon and his heirs. We may add a third kind of *bondmen* mentioned by Juſtinian, called *adſcriptitii glebæ*, or *agricenſiti*; who were not bound to the perſon, but to the ground or place, and followed him who had the land. Theſe, in our law, are called *villains regardants*, as belonging to the manor or place. *Smith*, de Republ. Anglor. l. 9. c. 10.

In the Engliſh as well as Scottiſh laws, thoſe called by the Romans *vernæ*, are ſometimes alſo denominated *nativi*, as being born on the land. *Sken.* de Verb. Signif. p. 22. voc. *Bondagium*. *Spelm.* Gloſſ. voc. *Nativus*, p. 426.

The word is formed from the Saxon *bond*, ſignifying a fetter.

BONDAGE properly denotes a ſtate of ſervitude or ſlavery.

BONDAGE, *Bondagium*, in Engliſh law writers, the ſame with *villenage*. *Du Cang.* Gloſſ. Lat. T. 1. p. 582, ſeq. See VILLENAGE, *Cycl.*

Tenants in *bondage* paid heriots, and did fealty; they were not to fell trees in their own garden, without licence of the lord [a]. The widow of a *tenant in bondage* held her huſband's eſtate, *quamdiu vixerit ſine marito* [b].—[a V. *Kenn.* Paroch. Antiq. p. 456. b Id. ibid. p. 458. It. in Gloſſ. ad voc.]

BONDAGE *by the forelock*, or *Bondagium per anteriores crines capitis*, was when a freeman renounced his liberty, and became ſlave to ſome great man; which was done by the ceremony of cutting off a lock of hair on the forehead, and delivering it to his lord; denoting, that he was to be maintained by him for the future.

Such a *bondman*, if he reclaimed his liberty, or were fugitive from his maſter, might be drawn again to his ſervitude by the noſe; whence the origin of the popular menace, to pull a man by the noſe. *Sken.* de Verb. Signif. p. 22.

BONDUC, in botany, the name given by Plumier to a genus of plants, afterwards characterized by Linnæus under the name of *guilandina*. See GUILANDINA.

BONDUCH, in the materia medica, a name by which many authors have called the Molucca, Marſao, or Bezoar nuts. *Dale*, Pharm. p. 336.

BONE (*Cycl.*) — The origin and formation of *bones* is generally traced from cartilages, which all *bones* are ſuppoſed once to have been [a]; or, according to others, membranous tendons [b]. Some deduce theſe further from gellies [c]; and others from mere fluids [d]; which ſucceſſively ariving at greater and greater conſiſtency, become firſt gelatinous, then tendinous, then cartilaginous, and laſtly bony.—[a *Monro*, Oſteol. p. 34, ſeq. *Veſling.* Synt. Anat. c. 8. p. 124, ſeq. Phil. Tranſ. N° 54. p. 1096. Item, N° 71. p. 2136. Item, N° 81. p. 4023. b *Caſp. Barth.* Specim. Hiſt. Anat. ap. *Chauv.* Lex. Phil. p. 464. voc. *Os*. c *Monro*, loc. cit. d *Chauv.* l. c. p. 14.]

Hence the different ſtates of the *bones* in different ages, ſexes, and the like; which, in children, are found ſoft, moiſt, and cartilaginous; in aged people, hard, dry, and inflexible; the very cartilages in theſe frequently becoming bony. *Blaſ.* Comm. ad Veſling. c. 2. p. 14.

Dr. Niſbet, in his human oſteology, undertakes to demonſtrate, that the notion of all, or any *bones*, being originally cartilaginous, is without foundation in nature.

Some conſider the membrane wherewith the *bones* are lined, as a kind of *perioſteum internum*, if the expreſſion may be allowed; which, according to Havers, takes its origin from the muſcular coat of the medullary artery. Be this as it will, it is contiguous with the whole internal ſurface of the *bones*, and enters the tranſverſe pores, as the external perioſteum does the ſinuoſities of the *bones*; though it does not adhere ſo cloſe thereto as the external does. *Monro*, lib. cit. p. 19.

The *bones* are uſually capped at the ends with cartilages, and to them are alſo annexed ligaments. See CARTILAGE and LIGAMENT, *Cycl.* and *Suppl.*

The doctrine of the *bones* makes a particular branch of anatomy, under the denomination of *oſteology*, or *oſteography*. See OSTEOLOGY, *Cycl.* and *Suppl.*

The formation or geneſis of the *bones* is called *oſſification*, or *oſteogony*. See OSSIFICATION, *Cycl.* and *Suppl.*

A ſyſtem of the ſeveral *bones* of a body, dried, whitened, and joined together in their natural order by art, is called a *ſkeleton*. See SKELETON, *Cycl.* and *Suppl.*

Animals without *bones*, are ſaid to be *anoſtei*; ſuch are all the ſpecies of reptiles, inſects, &c.

Bartholin

Bartholin alſo gives an inſtance of an anoſteus, or boneleſs child, ſhewn at Briſtol, whoſe arms and legs were flexible like a glove. *Barthol.* Act. Med. Hafn. T. 5. Obſ. 103. p. 275. See alſo *Blaſ.* Comm. ad Veſling. c. 2. p. 15.

In a *bone* we conſider divers things; the body, which is the middle or greater part, called by Galen *diaphyſis*; the heads, which are the great protuberances at the ends [c]; the neck, the part immediately under the head; ſupercilia, the extremities of the ſides of a cavity at the end of a *bone*; ridges, the prominent, ſalient parts in the length of the body of the *bone* [f].—[[e] *Gagliard.* Anat. P. 1. c. 1. Obſ. 2. *Heiſt.* Comp. Anat. §. 45, ſeq. [f] *Le Clerc*, Comp. Surg. p. 10.]

Some cavities are formed for articulation, called *cotyles* and *glews*, which contain a mucilaginous humour, ſeparated from the glands of that name; others, not ſubſervient to articulation, receive different names, according to their figures; ſome being called *foramina*, or holes; others, *foſſæ*, or trenches; others, *ſulci*, or furrows, &c. *Heiſt.* lib. cit. §. 56, ſeq. p. 21. *Vat.* Phyſ. Exper. p. 660. *Horn.* Micro. p. 7, ſeq.

Bones, with regard to their form and ſtructure, may be divided into flat or broad, which have thin ſolid ſides, and a thick intermediate ſpongy part; and round, which are more hollow, having thicker and ſtronger walls. *Monro*, lib. cit. p. 26.

Bones may be divided with regard to their conſiſtence, 1. Into rocky, *oſſa petroſa*, which are hardeſt of all; as the temple *bones*, thoſe of the ear, the thigh *bone*, tibia, &c. 2. Soft *bones*, *oſſa mollia*; as the ethmoides, vertebræ, carpus, tarſus, and the epiphyſes. 3. Solid *bones*, *oſſa ſolida*, thoſe without any cavities; as the omoplata, iſchion, the teeth, &c. Trev. Dict. Univ. T. 4. p. 378. voc. *Os*.

The *bones*, in reſpect of their internal ſtructure, may be divided into thoſe which have a notable cavity within, filled with marrow, as the *bones* of the arms and legs; and thoſe which have no ſuch cavity, or marrow, as the *bones* of the ſkull and ribs, &c. *Drake*, Anthrop. l. 3. c. 16. p. 363.

Little *bones* are denominated *officles*. See OSSICLE.

Bones are alſo divided according to the parts wherein they are found, into the *bones* of the head, the feet, the thorax, &c. From their offices, figures, &c. many have likewiſe proper names, as the os ſacrum, jugale, lacrymale, coccendix, pubis, &c. Spongeous *bones*, *oſſa ſpongeoſa*, thoſe full of large pores, formed like honey-combs.

All the *bones* are full of pores [g], except perhaps the teeth: whence it is that ſkeletons imbibe the moiſture of the air, and increaſe in weight, as the atmoſphere does in humidity [h].—[[g] *Boyle.* Phil. Work. Abr. T. 1. p. 448. [h] Id. ibid. T. 2. p. 382, & T. 1. p. 449.]

Bones have their veſſels and circulating fluids, and, in ſhort, the ſame general texture which other parts have; ſolidity, and the ſtronger coheſion of parts, are the only evident diſtinguiſhing characters of the compoſition of *bones*. *Monro*, ap. Med. Eſſ. Edinb. Vol. 5. Art. 24.

There is at leaſt one artery for each *bone*, ſeveral having more, for the conveyance and ſecretion of the medullary matter. After the ingreſs of the artery into the *bone*, it divides into a number of branches, which are diſtributed *quaqua verſum* on the internal membrane [i]. The blood, which remains after the ſecretion of the marrow, is returned by proper veins, ſome of which paſs out of the *bone* either at the ſame hole whereby the artery entered it, or very near it [k].—[[i] *Niewent.* Relig. Philoſ. Cont. 11. ſect. 10. §. 13. p. 114. [k] *Monro*, lib. citat. p. 22. See alſo *Lemery*, in Hiſt. Acad. Scienc. An. 1704. p. 44. *Veſling.* lib. cit. c. 2. p. 16. & *Blaſ.* Comm. ad eund. ibid. *Junck.* Conſp. Phyſiol. Tab. 25. p. 363, ſeq. Hiſt. Acad. Scienc. An. 1700. p. 19.]

The *bones*, Mr. Hales obſerves, do not grow in the joints or articulations, which would deſtroy their motion: but this, we doubt, would be difficult to make out. Phil. Tranſ. N° 398. p. 324.

It is demonſtrable, that of whatever figures *bones* are, and in whatever manner their fibres are diſpoſed, their ſtrength muſt always be in a ratio compounded of their quantity of bony matter, and of the diſtance of their center of gravity from the center of motion. *Monro*, lib. cit. P. 1. p. 28. Med. Eſſ. Edinb. T. 1. Art. 10. p. 112, ſeq. Hiſt. Acad. Scienc. An. 1702. p. 157.

Hence, on a double account, the part of a *bone*, formerly fractured, muſt be ſtronger than any other part of that ſame *bone*, becauſe the diameter is enlarged, and the quantity of matter is increaſed. *Monro*, ib. p. 29.

The human *bones* have been ſometimes known to grow ſoft and flexible, ſo as to bend any way with leſs difficulty than the muſcular parts of a healthy perſon's leg. See Phil. Tranſact. N° 470. ſect. 3.

Bones have ſometimes been found incruſted with ſtone, which has given riſe to accounts of ſkeletons petrified. See Philoſ. Tranſact. N° 477. p. 557, ſeq.

By diſtillation in a retort, the *bones* reſolve into phlegm, ſpirit, volatile ſalt, fetid oil, and caput mortuum, which, calcined in an open fire, leaves a white earth, without any fixed ſalt. This laſt appears to be the proper conſtituent part of the *bones*, ſince, after the other principles are ſeparated, the earth ſtill retains the former ſhape of the *bone*, though it be ſo brittle, that, on the leaſt touch, it moulders into duſt. When moiſtened with a little water or oil, it recovers ſome degree of tenacity again; but cannot be reſtored to its former firmneſs. *Monro*, lib. cit. P. 1. p. 18, ſeq. *Heiſt.* Comp. Anat. §. 41. See alſo *Grew*, Diſc. of Mixt. ſect. 2. c. 3. §. 18.

BONES *microſcopically examined*. On viewing the *bones* with the aſſiſtance of good glaſſes, their ſuperficial part is found to conſiſt of a great many ſmall veſſels, and ſome few of a larger ſize: which laſt, when they come to the ſurface of the *bone*, appear inveſted with either a membrane or a bony ſubſtance, perfectly tranſparent. The inſide of the *bone* is a ſpongy or cellular ſubſtance, conſiſting of long particles, cloſely united; and theſe are compoſed of numberleſs ſmall veſſels, cloſely united, and ſome running lengthways, others taking their courſe toward the ſide of the bony fibres; which, notwithſtanding their great number of apertures, are extremely hard, and lie ſome parallel, and others perpendicular to the length of the *bone*. Mr. Lewenhoeck diſcovered once, in a ſmall bit of a ſhin *bone*, four or five veſſels, with apertures large enough for a ſilk to paſs through, each whereof ſeemed furniſhed with a valve, diſpoſed in ſuch a manner as to let out what was contained in the veſſel, but ſuffer nothing to return into it.

The way to examine the *bones*, is to ſhave off, with a very ſharp penknife, extremely thin pieces, lengthwiſe, croſſwiſe, and obliquely, and theſe from the outſide, inſide and middle of the *bone*, and apply theſe, ſome dry, others moiſtened with water, to the focus of the double microſcope; and thus the veſſels will be ſeen in all directions: but the beſt way of ſeeing the bony ſtructure, is by putting the *bones* in a very clear fire till they are red hot, and then taking them out carefully, you will find the bony cells, though tender, perfect and entire; and, being now quite empty, they may be viewed with eaſe and pleaſure. *Baker's* Microſcope, p. 143.

Diſeaſes of the BONES.—The diſeaſes to which the *bones* are ſubject, are fractures [l], luxations, fiſſures, caries [m], cancers, nodes, rickets, tophi, exoſtoſes [n] or excreſcences [o], &c. To which may be added other leſs uſual diſorders, as preternatural hardneſſes, almoſt to a degree of petrefaction [p], and ſtiffneſſes to the condition of wax [q], unions or coalitions of all the *bones* of the body into one [r], creaking of the *bones* in ſcorbutic caſes [s], worms in the cavities of the *bones* [t], &c. Mr. Petit gives an inſtance of the carnification of the *bones*; wherein, by a change contrary to that of their firſt formation, they were reconverted from *bones* to fleſh, or cartilages [u].—[[l] *Gorr.* Med. Defin. p. 212. voc. κάλαγμα. *Horn.* Microl. ſect. 1. §. 11. p. 32. [m] *Boerh.* Aph. §. 542, ſeq. [n] Mem. Acad. Scienc. An. 1706. p. 318. *Gorr.* lib. cit. p. 145. voc. ἐξοστώσις. Phil. Tranſact. N° 251. p. 140. [o] Vid. *Le Clerc*, Comp. Anat. c. 8. p. 23. ſeq. *Boerh.* Aph. §. 512, ſeq. [p] *Vat.* Phyſ. Exper. P. 2. ſect. 5. c. 6. *Blaſ.* Comm. ad Veſling. c. 2. p. 14. [q] *Barthol.* Act. Med. Hafn. T. 3. Obſ. 24. p. 38. *Blaſ.* ubi ſupra, p. 15. [r] Phil. Tranſ. N° 216. p. 21. [s] Mem. Acad. Scienc. An. 1699. p. 238. [t] Phil. Tranſ. N° 379. p. 429. [u] Mem. Acad. Scienc. An. 1720. p. 311. Item, Hiſt. p. 19.]

The operations practiſed in diſeaſes of the *bones*, are exciſion, amputation, perforation, trepanation, ſetting or replacing, exfoliation, ſhaving, filing, &c. Mem. Acad. Scienc. An. 1718. p. 392. *Horn.* Microl. p. 40, ſeq.

BONES, *wounds of*.—As blunt inſtruments uſually make fractures of the *bones*, ſo ſharp ones, ſuch as ſwords, ſpears, &c. do, properly ſpeaking, ſometimes wound them; and theſe wounds cannot be ſuffered, without a great variety of ſymptoms, which are often very dangerous, according to the ſize and depth of the wound, and the nature of the wounded part. Such ſlight wounds as do not penetrate deep into the *bone*, are often attended with no great danger, eſpecially if proper care be taken in the dreſſing of them, and the injured *bone* be as much as poſſible kept covered with its integuments, from the injuries of the external air. All fat and oily medicines muſt be wholly rejected in wounds of this kind, as great enemies to the *bones*. But when wounds of this kind penetrate deep, and wholly divide the *bone* and its adjacent parts, or violently affect any of the organs neceſſary to life, in the head, neck, back-*bone*, or breaſt, with a puncture or diviſion of the longer veins, arteries, nerves, and tendons of the upper and lower limbs, the danger is always great, the cure difficult, and death too often the conſequence. Petit has adviſed, that, in wounds of the *bones*, if the ſolution be inflicted lengthwiſe, the lips of the wound are to be cloſed and united by the uniting bandage; but if the wounds are very oblique, or wholly tranſverſe, then they are to be joined together by future, and the eighteen-headed bandage; but this is certainly a wrong method in many caſes of this kind. Indeed, in the firſt kind of theſe wounds, and when they are very ſlight, as when the ſkull is not wholly, nor indeed very deeply penetrated, and that without contuſion, nor the brain much hurt, this method may do very well; but when the contrary of theſe mild ſymptoms are the caſe, a very different method of cure is to be attempted; the wound is to be kept open with lint, and not healed up till thoroughly cleanſed; for, by a too ſpeedy cloſure of ſuch wounds, the very worſt ſymptoms, and even death very often, are brought on.

So alſo, in ſlight, oblique, or tranſverſe wounds of the *bones*, the future, or the eighteen-headed bandage, may be uſed with ſafety and ſucceſs; but theſe are ſeldom neceſſary; and oblique wounds of the head, forehead, and cranium, if not violent

ones,

ones, the parts may be much eaſier cloſed and retained by a common bandage and plaſter, than by ſutures with the needle, or the eighteen-headed bandage; but when the divided part hangs down, the ſuture may indeed be neceſſary.

If the *bones* of the fingers are thus wounded, or wholly divided by a ſword, they may be happily cured without the ſuture, by the following method. Firſt, accurately replace the divided *bone*, then ſecure it in its place, by winding round a ſlip of plaſter, and, over this, applying a compreſs dipped in ſpirit of wine, and laying over all little ſlips of paſteboard, by way of ſplints; then binding up the whole with a proper narrow bandage, and hanging the arm in a ſling from the neck. Once, in about three days, the dreſſing is to be removed, and the wound treated with a vulnerary eſſence, and in a month the cure will be perfected.

If either of the *bones* of the cubitus be divided, it uſually is the ulna, as that is moſt expoſed to the ſword in fighting. This caſe requires neither the ſuture nor eighteen-headed bandage; but the wound being cleanſed, is to be treated with ſome vulnerary eſſence or balſam, and with lint dipped in the ſame eſſence; after which are to be laid on, in order, the plaſter, compreſs, and paſteboard ſplints, wetted with ſpirit of wine, which are to be bound round the thick part of the cubitus near the wound, with a long bandage, that, as they dry, they may accommodate themſelves the better to the figure of the part; and, laſtly, the arm is to be ſuſpended in a ſling hung round the neck: after this, the wound is to be dreſſed every day, or every other day, in proportion to the diſcharge, and a cure without the help of the ſuture will be eaſily effected; the ſuture, in ſuch caſes, being not only unneceſſary but pernicious. But if both *bones* are divided, then indeed the eighteen-headed bandage may be neceſſary, and uſed with advantage; but, even in this caſe, the ſuture is much better let alone: for it is always to be avoided, except when perfectly neceſſary, from the dangers of inflammation, convulſions, and other bad ſymptoms that too naturally attend it.

If the thigh-*bone*, however, ſhould be cut with a ſword, in that caſe the bloody ſuture will be of ſervice, and is even neceſſary to cloſe and retain thoſe very ſtrong muſcles: the wound is, in this caſe, to be carefully treated, and the limb laid up in a caſe of ſtraw, as in other fractures: ſo alſo, if the *bone* of the humerus, or arm, ſhould be penetrated with a ſword, that wound alſo ſhould, for the ſame reaſon, be treated by the ſuture; but then it is not to be dreſſed with the eighteen-headed bandage, but with the common long and narrow bandage uſed in other fractures of the arm; the limb is afterwards to be ſupported by a ſhort napkin, faſtened about the neck, by which means the muſcles will be brought to a more ready union, and the cure ſooner perfected.

If it ſhould happen that both *bones* of the cubitus or leg ſhould be divided by a ſword, ſo as to leave the limb hanging only by the fleſh, ſkin and blood-veſſels, which is a caſe that very rarely happens, without wholly amputating the limb, then alſo the ſuture, with the eighteen-headed bandage, are the neceſſary applications; the ſuture, however, can be of no ſervice in a caſe of this kind, when the fleſh and blood-veſſels are divided, and the limb ſo far cut off, as to hang only by a ſkin, eſpecially when the part is ſo conſiderable as the leg or arm; for, in theſe caſes, the limb muſt be taken off, and the ſtump dreſſed as in other amputations.

When the lower jaw is ſo cut by a ſword, that the piece ſeparates, and cannot be otherwiſe retained, then alſo the ſuture may be uſed, adding a proper compreſs, plaſters, and the ſuitable bandage. If the clavicle, or acromion ſcapulæ, ſhould in like manner, be wounded by a ſword, the treatment and bandage are to be of the ſame kind, gently unbending, cleanſing and dreſſing the part either every day, or every other day, as the diſcharge ſhall require, till the cure is perfected. *Heiſter's* Surg. p. 138.

No medicines ſo effectually prevent the corruption of *bones* laid bare, and aſſiſt to cover them ſo ſoon with fleſh, as ointments, balſams, and dreſſing ſeldom, to have the aſſiſtance of the moſt effectual balſam of all, *pus*. With theſe we ſee the extremities of amputated *bones* covered over with fleſh, part of the ſkull, tibia, and other ſolid *bones*, covered in a little time with granulated fleſh, after they had been laid quite bare by wounds made even with bruiſing inſtruments; and likewiſe after their carious ſurface had been cut off, and a complete cure made, without the leaſt exfoliation. *Monro*, in Med. Eſſ. Edinb. Vol. 5. Art. 24.

Boiling and whitening of BONES, is a neceſſary operation in the making of ſkeletons; the method of doing which is thus deſcribed by Simon Pauli. They muſt firſt be well boiled, and afterwards expoſed day and night in the open air for a conſiderable time. The beſt ſeaſon for this operation is in wet ſtormy weather, eſpecially in the months of January, February, March, &c. the air being then impregnated with a nitrous ſalt, which contributes much to give them a bright white colour. If it does not rain, they muſt be ſprinkled with a bruſh dipt in rain-water; and even rubbing them gently with the bruſh may be of uſe.

In expoſing them, care muſt be taken to place them on a fir-board, by no means an oak-one, which ſhould be covered with a ſtratum of ſlate-ſtone, firſt well ſoaked in water; next, fine ſea-ſand is to be ſprinkled on, an inch or two deep. The uſe of the ſand is to imbibe what marrow or fat remains in the *bones* after boiling. Vid. *Barthol.* Act. Med. T. 2. obſ. 18. p. 42. Item, obſ. 113. p. 279.

Extraneous, or preternatural BONES have been found in the meninges [w], the duplicatures of the dura mater [x], between the cerebrum and cerebellum [y], in the matrixes of women, does, hares, cows [z], omentum of ſows [a], &c.—[[w] Hiſt. Acad. Scienc. ann. 1711. p. 36. [x] *Blaſ.* Comm. ad Veſling. c. 14. p. 211. [y] Hiſt. Acad. Scienc. ann. 1713. p. 28. *Pitt*, Nat. Hiſt. Anim. p. 125. [z] *Plott*, Nat. Hiſt. Staff. c. 7. §. 74. Item, §. 63, ſeq. [a] Idem, ibid. §. 56.]

BONES, *in the funeral ſolemnities of the antients.*—Divers uſages and ceremonies relating to the *bones* of the dead, have obtained in different ages; as gathering them from the funeral pile, waſhing, anointing, and depoſiting them in urns, and thence into tombs [b]; tranſlating them, which was not to be done without the authority of the pontiffs [c]; not to ſay worſhipping of them, ſtill practiſed to the *bones* of the ſaints in the Romiſh church. Among the antients, the *bones* of travellers and ſoldiers, dying in foreign countries, were brought home to be buried, till, by an expreſs S. C. made during the Italic war, it was forbid, and the ſoldiers *bones* ordered to be buried where they died: the reaſon was, leaſt the melancholy ſight ſhould diſcourage the people from venturing their lives [d].—[[b] *Salmaſ.* ad Pancirol. P. 1. Tit. 62. p. 335. *Potter*, Archæol. T. 2. l. 4. c. 6. p. 215. *Hought.* Collect. T. 2. p. 366. *Pitiſc.* Lex. Ant. T. 2. p. 341, ſeq. voc. *oſſilegium*. Item, p. 342. voc. *oſſuarium*. [c] *Pitiſc.* T. 2. p. 611. voc. *reliquiæ*. [d] *App.* de Bell. Civ. l. 1. p. 377. *Pitiſc.* Lex. Ant. T. 2. p. 340.]

Antiquaries are divided as to the manner of diſtinguiſhing the *bones* of the deceaſed, from thoſe of the beaſts and ſlaves who were ſacrificed at his funeral, and thrown into the ſame fire: probably it was done by diſpoſing the body of the dead in the middle of the pile, and the others towards the ſides. *Potter*, Archæol. T. 2. l. 4. c. 6. p. 214. See alſo *Pitiſc.* Lex. Ant. T. 2. p. 341.

The Romans had a peculiar deity, under the denomination *oſſilago*, to whom the care of the induration and knitting of the human *bones* was committed; and who, on that account, was the object of the adoration of all breeding women. *Pitiſc.* Lex. Ant. T. 2. p. 341.

BONES, in medicine.—The *bone* of the cuttle-fiſh is uſed as an abſorbent [e] and dentifrice [f]; that of a ſtag's heart as a cardiac [g]; the *bones* of ſnakes [h], and thoſe *bones* ſnatched from hungry bitches [i], have been uſed as philtres to excite love. Some have ranked human *bones*, half putrefied, as a ſpecific againſt the plague [k]. Divers ſorts have alſo been hung about the neck as amulets [l].—[[e] *Junck.* Conſp. Therap. Tab. 16. p. 452. [f] *Quinc.* Diſp. P. 2. §. 567. p. 227. [g] Idem, ibid. §. 444. p. 179. *Junck.* Conſp. Ther. Tab. 20. p. 510. [h] *Potter*, Archæol. l. 4. c. 10. p. 250, ſeq. [i] Idem, ibid. p. 252. [k] *Nent.* Fund. Med. T. 2. P. 3. p. 646. [l] *Caſt.* Lex. Med. p. 550. voc. *os*.]

BONE, in commerce.—The *bone* of the cuttle-fiſh is uſed by goldſmiths for making moulds; thoſe of bullocks for painters black; alſo, in lieu of ivory, for toys and cutlers work; where, if they be leſs white than ivory at firſt, they do not ſo ſoon turn yellow. *Savar.* Dict. Comm. T. 2. p. 933. voc. *os*.

Papin has given a method of turning *bones* to food. Phil. Tranſ. Nº 187. p. 329.

The Turks are ſaid to have applied *bones* to building, and to have built a wall with the *bones* of the chriſtians killed at the ſiege of Philadelphia.

A piece of this *bone* wall was ſent to Dr. Woodward, who found the tradition to be an error; the ſubſtance not being *bone*, but a looſe, ſoft, porous earth, formed in an old aqueduct, now in the wall; or rather, an incruſtation of ſeveral bodies, chiefly vegetable, cemented together by ſparry and ſtony matters, found in the ſpring. *Woodw.* Cat. For. Foſſ. p. 11.

BONE-*ſetting*, the art or act of replacing diſlocated *bones*, and the parts of fractured ones. Vid. Mem. Acad. Scienc. ann. 1718. p. 392.

The Spaniards call their *bone*-ſetters *algebriſts*. Trev. Dict. Univ. T. 1. p. 801. voc. *Bailleul*.

Bone-ſetting, by ſome called συνθλιſμος, *ſynthetiſmus*, includes the four operations of extenſion, coaptation, deligation, and reduction or repoſition. *Bohn.* ap. Caſt. Lex. Med. p. 703. voc. *ſynthetiſmus*.

Fractures and diſlocations of *bones* are ſo frequent, that it ſeems ſurpriſing the ſetting them ſhould ſo long have been left to quacks and perſons ignorant. 'Tis about 150 years ſince the methodical ſurgeons have applied themſelves to this art; which they have carried to a degree of perfection beyond what it ever arrived at among the Greeks.

To a *bone*-ſetter are required a perfect knowledge of anatomy, and mechanics; the former, to inform of the ſtate and ſituation of the fractured or diſlocated *bones*; the latter, to furniſh machines, whereby to reinſtate them. The famous bench of Hippocrates was once held the moſt perfect engine of this kind. See the article AMBE.

M. Petit has contrived another, which not only ſeems more handy and portable, but more powerful, as well as leſs painful to the patient. By means of it, the operator is fully maſter of the powers that pull it, and may proportion them to the ſtrength

and weakneſs of the ſubject, and that of the muſcles or tendons which are to be replaced. Add, that as it is neceſſary, the power which retains the body be equal to that which pulls the diſlocated member: in this machine, the ſame rope which pulls the limb, repels the body; and that the machines hitherto contrived, have only ſerved for luxations of the ſhoulder, and that of the hip, which are made upwards, and where the members are ſhortened; whereas this ſerves for fractures as well as luxations, and not only where the members are ſhortened, but where they are longer. Mem. Acad. Scienc. ann. 1716. p. 330, ſeq.

The replacing a diſlocated *bone* of a horſe, is a work of much difficulty, and requires great force: they uſually caſt the beaſt on a ſoft place, put four ſtrong paſterns on his feet, and draw him from the ground, that his whole weight may, in a manner, reſt on the disjointed member. Some tie a leathern thong about the paſtern, faſtening the other end of it to a yielding ſhrub, and thus whip the creature to make him ſtrain with all his force, till the *bone* fly into its place.

Foſſile, or petrified BONES, are thoſe found in the earth, frequently at great depths [m], in all the ſtrata, even in the bodies of ſtones [n], and rocks [o].—[[m] Vid. *Hook*, Poſthum. Works, p. 313, 436, 438, 444: [n] *Woodw.* Nat. Hiſt. Earth, P. 2. p. 77. [o] Hiſt. Acad. Scienc. ann. 1719. p. 30.]

There are divers ſorts of foſſile *bones*; ſome of a huge ſize, uſually ſuppoſed to be the *bones* of giants [p], but more truly of elephants [q], or hippopotami [r]; other ſmaller, as vertebræ, teeth [s], and the like.—[[p] Vid. *Kirch.* Mund. Subterr. T. 2. l. 8. ſect. 2. c. 4. §. 1. p. 53. *Plott*, Nat. Hiſt. Oxford. c. 5. §. 157. Ejuſd. Nat. Hiſt. Stafford. c. 8. §. 109. Phil. Tranſ. N° 6. p. 111. Item, N° 168. p. 880. Item, N° 261. p. 488. Hiſt. Acad. Inſcript. T. 2. p. 268. [q] Vid. *Kirch.* lib. citat. p. 59. Phil. Tranſ. N° 274. p. 924. Item, N° 327. p. 513. Item, p. 171, 141. Item, N° 234. p. 757. Item, N° 403. p. 457, and p. 497. [r] Mem. Acad. Scienc. ann. 1724. p. 309. [s] *Woodw.* Cat. For. Foſſ. p. 22.]

It has been diſputed whether theſe be really animal ſubſtances, or mineral; that is, ſtones thus figured [t]. Modern naturaliſts generally allow them to be animal, not merely on account of their figure and reſemblance, but of their chemical principles, which are found to be wholly of the animal kind [u]. 'Tis ſuppoſed they were repoſited in thoſe ſtrata at a time when all things were in a ſtate of ſolution, and that they incorporated and petrified with the bodies where they happened to be lodged [w].—[[t] *Kirch.* lib. cit. p. 60, ſeq. *Plott*, Nat. Hiſt. Oxford. c. 5. §. 142, ſeq. p. 127. [u] *Junct.* Conſp. Chem. Tab. 10. p. 283. Item, p. 292. *Verdr.* Phyſ. P. 2. c. 6. §. 8. p. 485. [w] *Woodw.* loc. cit. Item, Nat. Hiſt. Eng. Foſſ. P. 2. p. 3, & p. 111, &c. See alſo, concerning Foſſile *Bones*, Phil. Tranſ. N° 272. p. 883. Item, N° 360. p. 964. *Grew*, Muſ. Reg. Societ. P. 3. ſect. 1. c. 1. p. 254. *Aſſalt.* Not. ad Mercat. Metalloth. Arm. 9. c. 65. p. 327.]

BONE is alſo applied abuſively in ſpeaking of other matters which bear ſome analogy either in reſpect of ſtructure or office, to the *bones* of animals.

In this ſenſe, rocks are ſometimes called the *bones* of the earth [x]. Divers ſpecies of figured ſtones, as the cephalites, cardites, &c. are denominated mineral *bones*, enoſta, oſteocolla [y], &c. Some naturaliſts conſider ſhells as a ſpecies of *bones*. The lobſter, according to Fontenelle, is an animal which carries its *bones* on its outſide [z].—[[x] *Kirch.* Mund. Subterr. l. 2. c. 18. T. 1. p. 108. [y] *Plott*, Nat. Hiſt. Oxford. c. 5. §. 142. *Kirch.* ubi ſupra, l. 8. ſec. 2. c. 4. T. 2. p. 60. [z] Hiſt. Acad. Scienc. ann. 1709. p. 20, & 22.]

Giants BONES. See GIANTS *bones*.

Mammout BONES. See MAMMOUT.

BONE-*fire*. See *Bone*-FIRE.

BONGO *pala*, in botany, a name by which ſome authors have called the tree which produces the nutmeg. *Piſo*, Mant. Arom. p. 173.

BONIFACIA, in botany, a name uſed by John Bauhine, and ſome others, to expreſs the broad-leaved *ruſcus*, or butcher's-broom, commonly called the Alexandrian bay. See the article RUSCUS.

BONITO, in zoology, the name of a fiſh, of the tunny or trachurus-kind, and called by ſome *curvata pinima*. It is a large ſea-fiſh, with a long, broad, and thick body: its eyes are large, as are alſo its gills, and the greater part of its body is free from ſcales. It is a fiſh of very great beauty; its ſkin is ſmooth in the intermediate ſpaces, but it has a number of ſcaly and very elegant lines. One broad ſtreak, covered with ſcales, and of a fine gold-colour, runs along the middle of each ſide, from the gills to the tail. Near the origin of this, there begins alſo another line, which runs parallel with it for two thirds of the length of the body; then it cuts obliquely the former line, and, after this, is again continued parallelly with it to the tail. This ſecond line, from its origin to the place where it cuts the firſt, has a double ſeries of extremely ſmall ſcales, and is very ſmooth; but, from this part to the tail, it has a double row of larger ſcales, and is rough, as if made of a ſeries of the teeth of ſome fiſhes. It is of a greeniſh colour on the back and ſides, and of a ſilvery whiteneſs, and very bright on the belly. It has ſeven fins, two oblong ones behind the gills, two others below theſe in the lower part of the body, one in the middle of the belly, and another oppoſite to it on the middle of the back, and another between that and the head, and from the laſt back and belly-fin. It has others narrow and continuous, reaching to the tail, which is forked. It is an extremely common fiſh in ſome ſeas; our Eaſt-India ſhips uſually fall in with immenſe ſhoals of them. *Willughby*, Hiſt. Piſc. p. 179.

BONNA, in natural hiſtory, a name given by Pliny, and ſome other of the antient Latin writers, to the *bonaſus*. See the article BONASUS.

BONNET (*Cycl.*)—A *bonnet*, among mariners, denotes an addition of a piece to a ſail; ſo that when they ſay, the ſhip has her courſe and *bonnet* abroad, the meaning is, that ſhe has a piece of ſail added to her courſe, that is, to her ſail, which before ſhe had not, or ordinarily has not. *Eotel.* Sea Dial. 4. p. 158, ſeq.

Bonnets are commonly one third of the depth of the ſails they belong to. *Manw.* Seam. Dict. *Aubin.* Dict. Mar. p. 100. What the *bonnet* is to the courſe, that is the drabler to the *bonnet*; being only in uſe when the courſe and *bonnet* are too ſhallow to cloath the maſt: there are alſo *bonnets* in form of ſheaths, being ſmall ſails faſtened by the narrow end to each extremity of the yards, wider at bottom than at top, of good uſe when the ſea is ſmooth. *Aubin*, Dict. Marin. p. 101.

The words are, *lace on the bonnet*, that is, faſten it to the courſe; *ſhake off the bonnet*, that is, take it off the courſe.

BONNY, in mineralogy, a name given by our miners to a bed of ore found in many places in hills, not forming a vein, nor communicating with any other vein, nor terminating in ſtrings, as the true veins do: it is a bed of ore of five or ſix fathom deep, and two, or ſomewhat leſs than that, in thickneſs, in the largeſt ſort; but there are ſmaller, to thoſe of a foot long. They have their trains of ſhoad-ſtones from them, and often deceive the miners with the expectation of a rich lead vein. They differ from the ſquats only in being round beds of ore, whereas thoſe are flat. Philoſ. Tranſact. N° 69. p. 2098. See SQUAT.

BONOSIANI, or BONOSIACI, an antient branch of *Adoptiani*, in the fourth century, denominated from their leader *Bonoſus*, a biſhop of Macedonia. *Prateol.* Elench. Hæret. p. 103.

The *Bonoſiani* were prior to the *Feliciani*, and even to Neſtorius; whence ſome rather conſider them as a branch of Arians. They allowed Chriſt to be no otherwiſe the ſon of God than by adoption. Vid. *Forbes*, Inſtruct. Hiſt. Theol. l. 6. c. 1. *Iſid.* Orig. l. 8. c. 5. *Ireland.* Diſſ. de Felice Urgel, ſect. 1. §. 9. *Vogt.* Bibl. Hiſt. Hæreſ. T. 1. p. 363, ſeq.

BONPOURNIKEL, a denomination given to a coarſe kind of bread uſed in Weſtphalia. See BREAD.

BONS-*hommes*, or BON-*hommes*, a ſort of hermits of St. Auguſtin, found by F. de Paula, of whom there were three colleges in England; the firſt was ſettled at Aſhridge in Bucks, by Edmund earl of Cornwal, in 1283. See *Kenn.* Paroch. Antiq. p. 300, 302. *Steph.* Suppl. to Dugd. T. 2. p. 276, ſeq.

The name is ſaid to have ariſen from Lewis XI. of France, who uſed to call F. de Paula, prior of the order, *le bon homme*. Till then they had been called the *Minimi*, or the order of Grammont. *Menag.* Orig. p. 110. *Skin.* Etym. in voc. *Du Cange*, Gloſſ. Lat. T. 1. p. 584. voc. *Bons-hommes*.

BON-*hommes*, *Boni-homines*, was alſo an appellation given to the Albigenſes, or at leaſt to a ſect in the county of Tholouſe, condemned in 1176. *Du Cange*, Gloſſ. Lat. T. 1. p. 584. voc. *Boni-homines*. Trev. Dict. Univ. T. 1. p. 1109. See the article ALBIGENSES.

BONT-*viſch*, in zoology, the name given by the Dutch to an Eaſt-Indian fiſh, ſeeming to approach to the nature of the European *turdus*, but that it has no ſcales. It is about a foot long, and conſiderably thick; its colour is a duſky brown, and the tail and fins are of this hue, as well as the body, and the whole fiſh is variegated with blue ſpots; its mouth is ſmall, and it is ſtreaked with blue lines under the belly. It is a well taſted and extremely valued fiſh, but it is ſaid to have ſomething poiſonous about it; which is carefully to be taken out. *Ray*'s Ichthyogr. Append. p. 6. See Tab. of fiſhes, N° 64.

BONTIA, in botany, the name of a genus of plants, the characters of which are theſe: the perianthium conſiſts of one leaf, divided into five obtuſely pointed ſegments; it is erect, very ſmall, and permanent; the flower conſiſts of one petal, and is of the labiated kind; the tube is long and cylindric, and the mouth open; the upper lip is erect and emarginated, and the lower is turned back, and lightly divided into three ſegments, and is of the ſame ſize with the upper; the ſtamina are four ſubulated filaments, of the length of the flower, placed under its upper lip, and bent into its ſhape; two of them are ſomewhat ſhorter than the others; the antheræ are ſimple; the germen of the piſtil is oval; the ſtyle is ſimple, and of the length of the ſtamina; and the ſtigma bifid and obtuſe; the fruit is a large *drupa* of an oval figure, and the ſeed a ſingle nut of an oval figure, with only one cell. *Linnæi* Gen. Plant. p. 290.

BONZES, or BONZUS, a name given to the prieſts and religious of China, Japan, and Tonquin.

The *bonzes* are the great adverſaries of the miſſionaries; and to their influence are attributed the perſecutions which have been raiſed in thoſe countries againſt the chriſtians. *Fabric.* Lux. Evang. c. 39. p. 668.

They generally live in a ſort of community, in places apart,

or consigned wholly to them. The island Pou-to, near Chusan, is a famous seat of *bonzes*, being wholly inhabited by them, to the number of 3000, all of the sect of Hoshang, or unmarried *bonzes*.

They live a kind of Pythagorean life, and have not less than 400 Pagods, or temples in this little island. They have also female *bonzes*, a sort of nuns. Phil. Trans. N° 280. p. 1204.

The Japaneze *bonzes* are divided into several sects, which however different among themselves, are agreed in denying the providence of God, and immortality of the soul; doctrines which they however only teach in private to the grandees, having other matters to entertain the populace withal, viz. heaven, hell, and the punishments of another life. They are under a sovereign *bonza*, or high priest; and have several universities, the chief whereof is that of Frenoiama, near Meaco, which is said to have antiently contained no less than 3800 temples and convents of *bonzes*; the direction whereof was only trusted to the nearest relations of the emperor. The *bonzes* belonging to it were masters of a third part of the kingdom of Voma. In time the number of the temples was reduced to 800; and the *bonzes* quitting study for arms, entered Meaco in 1535, burnt the city, and continued other violences till the year 1551, when the emperor attacked their mountain, put a number of them to the sword, and demolished half their temples. *Voss.* de Idol. l. 1. c. 25. *Miræi* Polit. Eccles. l. 2. c. 29. Trev. Dict. Univers. T. 1. p. 1118. seq. *Corn.* Dict. des Arts, T. 1. p. 121. seq.

BOOBY, in natural history, the name of a bird common about Jamaica, and in several other parts of the world. It is described by sir Hans Sloan in his history of Jamaica under the name of *avis fusca anseri bassano affinis*. It feeds upon fish, and dives under water after them, but is often robbed of its prey by another voracious bird, called the *albitrosse*, or the Man of War bird. The frequent contests between these two birds are very diverting, the one being as unwilling to part with the prey it has so dearly earned, as the other resolute to have it; but the *albitrosse* generally succeeds.

BOOKS (*Cycl.*)—The importation of *books* first printed in this kingdom, and reprinted abroad, is prohibited. Vid. Stat. 12 *Georg.* 2. c. 36. Sect. 1.

There was a clause in the statute of the 8th of Q. Anne, ch. 19. impowering the chancellor, and some other great officers of state, to set the price of *books*; but this is now repealed by 12 *Georg.* 2. ch. 36. Sect. 2.

Everlasting-BOOK.—We find in signior Castaguo's account of the asbestus, a scheme for the making a *book*, which from its imperishable nature, he is for calling the *book of eternity*. The leaves of this *book* were to be of the asbestus paper, the covers of a thicker sort of work of the same matter, and the whole sewed together with thread spun from the same substance. The things to be commemorated in this *book* were to be written in letters of gold, so that the whole matter of the *book* being incombustible and everlastingly permanent against the force of all the elements, and subject to no changes from fire, water, or air, must remain for ever, and always preserve the writing committed to it.

He carried this project so far towards execution, as to find a way of making a sort of paper from the asbestus, which was so tractable and soft, that it very well resembled a thin parchment; this, by the same process, was capable of being thickened or thined at pleasure, and in either state equally resisted the fire. The covering of the thinest paper of this kind only makes it red hot and very clear, the fire seeming only to pass thro' it without wasting or altering any part of it. Copper, iron, or any other metal, except gold or silver, exposed to the same degree of fire, in the same thin plates, would be found not to bear it in this manner, but to scale and burn into scoriæ at the surface, tho' this stone does not. Vid. Phil. Trans. N 71.

BOOM (*Cycl.*) is used to denote a cable stretched a-thwart the mouth of a river, or harbour, with yards, top-masts, battling or spars of wood, lashed to it, to prevent an enemy's entering. Such a *boom* M. Chateau Renault had with diligence and art prepared at Vigo, for the defence of the plate fleet lying there in 1702; but how strong soever, it was forced by sir Thomas Hobson. *Guill.* Gent. Dict. P. 3. in voc.

BOOMING, in the sea-language, the application of a *boom* to the sails.

Booming of the sails is never used but in quarter winds, or before a wind. By a wind, studding sails, and *booming* the sails is not proper.

When a ship is said to come *booming* towards us, it imports as much, as that she comes with all the sail she can make. *Manw.* Seam. Dict. in voc.

BOOMITES, a term used by some authors to express a kind of agate, of a very remarkable brightness and transparence, which represents the figures of shrubs, trees, mosses, &c. in the manner of the Dendrachates, a common mocoa-stone. This is however very different in the degree of transparence and brightness.

BOOPHTHALMUS, *Oxeye-stone*, in natural history, a name given by Scheuchzer to a peculiar agate, in which there frequently appear circles of considerable size, resembling some large animals eyes. The ground colour of the stone is grey, and the circles of a deep bluish black. See AGATE.

BOOPS, in zoology, the name of a fish caught in the Mediterranean, and sold at Naples, Messina, and Genoa. It is a small fish, seldom exceeding five inches in length, and very remarkable for the largeness of its eyes. It is of a rounded, not flat shape, and its scales are large. Its back is of a changeable colour, appearing olive-coloured, if viewed from above; and yellow if viewed sideways. Its side-lines are dotted, and are nearer the back than the belly; and below these there are four or five other slender yellow lines on each side. Its belly is white, its mouth is of a moderate size, its teeth are but small, and its back-fin has several of its anterior rays rigid, but not prickly, the hinder ones are all soft. *Gesner*, de Pisc. p. 147. See Tab. of fishes, N° 56.

Beside this, which is the common species of the *Boops*, there are two other kinds, the one commonly called *bouge-ravel*. See BOUGE-*ravel*.

The other a small kind, not above three inches in length, and without scales. Its mouth is small, and its eyes extremely large. Its tail is broad and thick. This in the taste and consistence of its flesh no way differs from the common *boops*.

BOOR-*Worm*, in natural history, a name given by Rumphius to the *solen lignorum*, a sea-worm, which bores the bottoms of ships.

BOOT, (*Cycl.*) a leathern cover or defence for the leg, used on horse-back, both to keep the body more firm, and defend the part from the injuries of the weather.

Boots seem to have been called thus, from their resemblance to a sort of jacks, or leathern bottles, formerly in use, and called *bottæ* [a], in the old French *bouts* [b]. Borel derives the name from the antient French word *bot*, a stump, by reason the *boot* gives the leg this appearance [c].—[a *Menag.* Orig. Franc. b *Kenn.* Gloss. ad Paroch. Antiq. in voc. *Bothagium.* c Trev. Dict. Univ. T. 1. p. 1132.]

It is not long that the *boots* used on horse-back have been called by this name. In the reign of Charles VII. of France, they were called *houses*, hose. *Monstrel.* T. 3. *Casen.* Orig. Franc. p. 26.

Fishing-BOOTS are a thick strong sort used in dragging ponds, and the like.

Hunting-BOOTS, a thinner kind, used by sportsmen.

Jack-BOOTS, a kind of very strong *boots* used by the troopers.

The antient monks usually wore *boots*, that is, the denomination *bottæ*, or *botti*, was given to their buskins. *Du Cange* Gloss. Lat. T. 1. p. 594. in voc. *botta*.

The Chinese have a kind of *boots* made of silk, or fine stuff, lined with cotton, a full inch thick, which they always wear at home. This people are always *booted*; and when a visit is made them, if they happen to be without their *boots*, their guest must wait while they put them on. They never stir out of doors without *boots* on; and their scrupulousness in this point is the more remarkable, as they are always carried in their chairs. Trev. Dict. Univ. T. 1. p. 1132. seq.

There are also chirurgical *boots*, for the cure of vari & valgi, or crooked and distorted legs. *Paræus*, Chirurg. l. 22. c. 11. *Cast.* Lex. Med. p. 535. voc. *Ocrea*.

The *boot* was much used among the antients, by the foot, as well as horsmen. Vid. *Pitisc.* Lex. Ant. Rom. T. 2. p. 309. in voc. *Ocrea*.

The *boot* is the same with what was called by the antient Romans *Ocrea*, in middle-age writers, *greva* [a], *gamberia* [b], *bainberga* [c], *bembarga*, or *benberga*. — [a *Du Cange*, Gloss. Lat. T. 2. p. 654. voc. *Greva*. b Id. ibid. p. 579. voc. *Gamberia*. c Id. ibid. T. 1. p. 433. voc. *Bainberga*.]

The *boot* is said to have been the invention of the Carians [a]: it was at first made of leather, afterwards of brass and iron, and was proof both against cuts and thrusts. It was from this that Homer calls the Greeks *brazen-booted* [b].— [a *Plin.* Hist. Nat. l. 7. c. 56. b *Hom.* Il. 7. ver. 41.]

The *boot* only covered half the leg; some say only the right leg [a]; which was more exposed than the left, it being advanced forwards in an attack with the sword; but in reality it appears to have been used on either leg, and sometimes on both.

Those who fought with darts, or missive weapons, advanced the left leg foremost; so that this only was *booted* [b].— [a *Veget.* l. 1. c. 20. *Pitisc.* Lex. Ant. T. 2. p. 309. seq. b Vid. *Aquin.* Lex. Milit. T. 2. p. 102. voc. *Ocrea*.]

BOOTES (*Cycl.*)—This constellation is called by divers other names, as *Arctophylax*, *Bubulcus*, *Bubulus*, *Thegnis*, *Clamator*, *Vociferator*, *Plorans*, *Plaustri-Custos*, *Philometus*, *Arcas*, *Icarus*, *Lycaon*, and *Arcturus-Minor*; by others, *Septentrio*, *Lanceator*, *Ceginus*; by Hesychius, *Orion*; by others, *Canis-Latrans*; by the Arabs, *Aramech*, or *Arcamech*. Schiller, instead of *bootes*, makes the figure of St. Sylvester; Schickhard, that of Nimrod; and Weigelius, the three Swedish crowns. Vid. *Wolf.* Lex. Math. p. 266.

BOOTH, *Botha*. See the article BOTHA.

BOOTY, the moveables taken from an enemy in war.

Among the Greeks, the *booty* was divided in common among the army, the general only claiming a larger share. Trev. Dict. Univ. T. 1. p. 1294. voc. *Butin*.

By the military discipline of the Romans, spoils taken from the enemy belonged to the republic, particular persons had no right to them. The generals who piqued themselves on their probity, carried it wholly to the public treasury. Sometimes, indeed,

indeed, they divided it among the ſoldiery, to animate them, and ſerve in lieu of reward. But this diſtribution depended on the generals, who were to conduct themſelves herein with great equity and moderation; otherwiſe it became a crime of peculate to lay hands on the pillage, as regularly belonging only to the ſtate. The conſuls Romulius and Veturius, were condemned for having ſold the *booty* taken from the Æqui. Vid. *Liv.* l. 8.

Among the Jews, the *booty* was divided equally between the army and the people, though under the kings a different kind of diſtribution obtained. Numb. c. 31. v. 27.

Among the Mahometans, two thirds of the ſpoils are allowed to the army; the other third to God, to Mahomet and his relations, and to the orphans, the poor, and the pilgrims. *Calmet*, Dict. Bibl. T. 1. p. 321.

Among us, formerly, the *booty* was ſometimes divided among the ſoldiery. If the general be in the field, every body takes what he can lay hold on: If the general be abſent, the *booty* is diſtributed among the ſoldiery, two parts being allowed to the cavalry, and one to the infantry. A captain is allowed ten ſhares, a lieutenant ſix, and a cornet four. *Cruſo*, Milit. Inſtruct. for Caval. P. 1. c. 16. p. 8. See PRIZE.

BOQUINII, a ſort of ſacramentarians, who aſſerted that the body of Chriſt was preſent only in the euchariſt to thoſe for whom he died, that is the elect. *Lindan*, dubit. dial. 2. *Prateol* Elench. Heræt. l. 2. p. 104.

They took the denomination from one *Boquinus*, a Lutheran divine, who was one of the chief of the party.

BORA, in natural hiſtory, the name of the *Buſonite*, in ſome authors; theſe are ſuppoſed by many to be real ſtones, but are truly the teeth of a fiſh.

BORAGO, *Borrage*, in botany, the name of a genus of plants, the characters of which are theſe: The flower conſiſts of one leaf, of a rotated form; the cup is divided into ſeveral ſegments, and from it there ariſes a piſtil, which is fixed in the manner of a nail to the middle part of the flower, and ſurrounded with four embryos, which are afterwards changed into as many ſeeds. Theſe are of the ſhape of the head of a ſnake, and are contained in the cup, which becomes much inlarged, till they are perfectly ripe.

The ſpecies of *borrage* enumerated by Mr. Tournefort are theſe: 1. The common blue-flowered *borrage*. 2. The white-flowered *borrage*: and 3. The pale-red flowered *borrage*. *Tourn.* Inſt. Bot. p. 133.

BORAGO, according to Linnæus, is characterized thus: the cup is the perianthium, divided into five ſegments, and remaining when the flower is fallen. The flower is compoſed of a ſingle petal, of the length of a cup, in form of a cylindric tube, with a flat rim divided into five ſegments, and its opening crowned with five obtuſe prominences, with rims round their edges. The ſtamina are five tapering filaments converging towards one another. The antheræ are oblong, and are affixed to the middle of the inner ſide of the ſtamina, and converging, like them, one towards another. The piſtil has four germina, the ſtyle is ſlender and longer than the ſtamina, and the ſtigma is ſimple: the cup becomes larger and inflated, and ſerves in the office of a fruit, containing four roundiſh rough ſeeds, hollowed externally near their extremity, globoſe at the bottom, and inſerted into a hollowed receptacle. *Linnæi* Genera Plant. p. 59. See Tab. of Botany, Claſs 2.

The common *borrage* has long held its rank as a cordial of the firſt claſs, though perhaps it would not be eaſy to ſay on what foundation. Its flowers are of the number of the four cordial ones of the ſhops, and it has been recommended as a medicine of great efficacy in malignant and peſtilential fevers, and againſt the bites of poiſonous animals.

BORAK, among mahometans, a fabulous animal, ſuppoſed to be of a middle kind, between an aſs and a mule, whereon their prophet was carried in his nocturnal flight from Jeruſalem into the Heavens.

This animal, the Arabs called *Al Borak*. q. d. ſhining. The night when the journey was performed is called *Leilat al Meerage*, i. e. the night of aſcenſion; and the flight itſelf *Al Meſra*; concerning which, there are a multitude of traditions. *D' Herbel.* Bibl. Orient. p. 211. voc. *Borak*.

BORASSUS, in botany, the name of a genus of plants deſcribed by Linnæus, and called in the Hortus Malabaricus *ampana*, and *carimpana*. The characters are theſe: The male and female flowers grow on ſeperate plants, and give the plant ſuch a different figure, that they are called by the two names before mentioned: the male being the *ampana*, and the female the *carimpana*. The male, or *ampana*, has for the cup of its flower, the whole compound ſpatha, which is amentaceous and imbricated: the flower is divided into three ſegments, the petals being hollowed and of an oval figure: the ſtamina are ſix thick filaments, and the antheræ are thick and ſtriated. In the female, the cup is the ſame as in the male, but the petals of the flower, which is divided into three parts, in the manner of the male, are very ſmall, of a roundiſh figure, and remain when the piſtil, &c. fall off. The germen of the piſtil is roundiſh; the ſtyles are three in number and ſmall, and the ſtigmata are ſimple: The fruit is a roundiſh obtuſe berry, of a rigid ſtructure, and containing only one cell: The ſeeds are three in number, and are of an oval compreſſed figure. Vid. *Linnæi* Gen. Plant. p. 514.

BORATELLO, in zoology, a name given by ſome authors to the eel while ſmall, and erroneouſly ſuppoſed a different ſpecies from the common eel.

BORAX *(Cycl.)*—The word *Borax* is formed from the modern Greek, βοραχιον; and that apparently from the Arabic, *bauracon*, nitre, as being reputed a ſpecies of that ſalt [e]. The antient Greeks called it Χρυσε Κολλα, q. d. glue of gold; the Romans *chryſocolla* & *ſanterna*; the Arabs *tincar* or *tincal* [f]. —[[e] *Vater*. Phyſ. Exper. P. 2. Sec. 5. c. 4. p. 240. [f] *Mercat*. Metalloth. Arm. 2. c. 8. p. 43. ſeq. *Aſſalt*. Not ad Eund. p. 44. *Du Cange* Gloſs. Gr. T. 1. in voc. βοραχνη.]

This ſalt is naturally found in a fluid ſtate, ſuſpended in certain waters, and diſcoverable in them by a ſweetiſh mixt with a bitteriſh and brackiſh taſte: it is readily ſeparable by evaporation, and appears where ſeparated, in a ſolid, bright and tranſparent form, and in large and ſomewhat regularly figured bodies, affording, on a nice ſolution and evaporation, octohædral cryſtals. *Hill*'s Hiſt. of Foſ. p. 395.

In ſeveral parts of the dominions of the great Mogul, in Perſia, and in ſome parts of Tartary, and other places in the eaſt, there ouzes out of the ſides of hills, which contain metals, and particularly copper, a thick turbid water, of a bluiſh grey colour, and of a brackiſh bitter, and very diſagreeable taſte. This, where it runs in ſufficient quantity, is generally taken care of for uſe, being directed in its courſe into wide and ſhallow pits, lined with a ſtiff clay: in theſe it is left expoſed to the ſun, in order to evaporate; but the people who have the care of it, daily mix among it, the grey fine mud left in its paſſage; and when it is brought to the conſiſtence of a ſoft pap, they throw into it, in the middle of a hot day, a large quantity of ſome animal fat melted over the fire. This is all well ſtired together; and then covered with ſticks and branches of trees; and over theſe is thrown a cruſt of any common clay. Thus it is left till perfectly dried up; then the covering is taken off, and the whole ſifted to ſeparate the earth and dirt; and in the ſieves is found, what is ſent to us under the name of *rough borax*; which is in rude irregular maſſes, but ſomewhat approaching to a priſmatic figure, very foul earthy and fattiſh, of a duſky greeniſh colour, and having a particular rank and diſagreeable ſmell.

This is afterwards refined for uſe, by diſſolving it ſeveral times in large quantities, and cryſtalizing it while the liquor is hot and kept cloſe covered from the air; and finally being diſſolved in a lixivium of quick-lime and potaſhes, and cryſtalized in the ſame manner, it is what we call *refined borax*.

It requires two and twenty times its own weight of water to diſſolve it perfectly. Expoſed to the fire, it ſwells and bliſters, and after it has ſtood on the fire ſome time, ſubſides into a fine white gloſſy ſubſtance, which is with difficulty ſoluble in water. It vitrifies all earths and ſtones mixed with it, and expoſed to a proper degree of heat; and is of great uſe in ſoldering metals, particularly gold. The antients uſed for this laſt purpoſe, a green arenaceous ſubſtance, which, from its uſe, they called *chryſocolla*, or gold ſolder; and the moderns have from this ſimilar uſe of *borax*, called it by the ſame name.

It yields nothing in diſtillation, but an inſipid phlegm, and makes no effervecence, either with acids or alkalies; yet it turns ſyrup of violets green, and a ſolution of ſublimate coroſive to a reddiſh yellow; and mixt with ſal armoniac in fuſion, gives a plainly urinous ſmell: whence it is evident that it has ſome of the properties of the alcaline ſalts, tho' it wants their great character, the fermenting with acids. *Hill*'s Hiſt. Foſſ. p. 97. 396.

Borax is of great uſe in the collecting the particles of any metal over the fire, and running them into a maſs; and this, with very little diminution of their weight. Dirt or aſhes, tho' in ever ſo ſmall a quantity, will certainly hinder ſome ſmall particles of gold or ſilver from running together into a maſs over the fire; but if they are ſo diſpoſed by a very ſtrong fire as to meet into a regulus, a great part of the metal will always adhere to the dirt that is thrown away. The leſs perfect metals not only ſuffer the above-mentioned accidents, but their ſurfaces being greatly increaſed, copper and iron turn entirely into ſcoriæ, and are deſtroyed, and lead and tin are ſo in great part. It is therefore very detrimental when theſe baſer metals are mixed in any, even in ever ſo ſmall a quantity, with gold or ſilver; for in the melting, there come upon the ſurfaces, light ſcoriæ, in which part of the gold or ſilver are retained, as in the pores of a ſponge, and prevented from running into a regulus.

To remedy this miſchief, *borax* is added, becauſe as it helps the melting of metals and of all bodies by fire, its bringing the whole maſs into a quick fuſion, gives the metals an opportunity to ſink together in a maſs to the bottom, and vitrifies the lighteſt ſcoriæ, throwing them off to the ſurface; and this uſe of this ſalt is not reſtrained to gold and ſilver, but takes place as well in regard to iron as copper.

This ſalt alſo cauſes metals to melt in a much leſs fire than they otherwiſe would, and is of very ſingular uſe in preſerving the leſs perfect metals while in fuſion. It flows over them and covers their ſurface while tortured in the fire, as if it were with a kind of very thin glaſs, which defends them againſt the combined force of the fire and air, ſo deſtructive of the imperfect metals.

The assayers have a custom of rubbing with *borax* the insides of vessels, in which the more precious metals are to be melted, which always fills up the small cavities in their sides, that might otherwise take in a part of the metals. When gold is melted with *borax* alone, it makes it pale; but this is obviated by the adding a small quantity of nitre, or of sal armoniac. Care must be taken, however, not to add both these salts together, because they would cause a detonation. The abovementioned use of *borax* has caused it to be reckoned, by some writers, among the reducing bodies; that is, such bodies as restore metals, however destroyed, to their pristine form: but this is an error; for *borax* does not reduce the destroyed metals, but only the scattered particles of them, while they yet retain their true metallic form. *Cramer*'s Art of Assaying, p. 42.

BORAX, in medicine, is used to promote delivery. V. Medic. Ess. Edinb. Vol. 1. p. 341.

The use of *borax* is that of an incisive and aperient salt, by virtue of which it is effectual against diseases which proceed from an inspissation of the humours, and obstructions thence arising. The dose is a dram.

Its stimulus, however, is too weak to be depended upon for present relief in a difficult birth, unless it be joined with other ingredients of more efficacy. For this reason, *borax* is commonly given in powder mixed with saffron, myrrh, oil of cinnamon, castor, the volatile salt of amber, and the like.

Some advise a few grains of it to be taken in a poached egg, as a provocative to venery.

Borax calcined, is reckoned of specific virtue in fluxes of the belly, or the semen, as being a kind of styptic earth. The dose is from a scruple to half a dram. V. *James*'s Med. Dict. in voc.

BORAX is also used in making *Glauber's salt*. See the article GLAUBER's *salt*.

BORAX is also a name given by some to the *bufonites*, or toadstone; a kind of bezoard said to be found in the head of that vermin. *Savar.* Dict. Comm. T. 1. p. 410. See the articles BUFONITES, and BEZOAR.

BORBONIA, in botany, the name of a genus of plants, the characters of which are these; the perianthium is composed of one leaf, of a turbinated form, of about half the length of the flower, and lightly divided into five segments; these are nearly of a size, and are pointed, rigid, and prickly; the flower is of the papilionaceous kind, and is composed of five petals; the vexillum is short, obtuse, and reflex; the alæ are lightly cordated at the ends, and are shorter than the vexillum; the carina is lunated, obtuse, and composed of two petals; the stamina are nine filaments, which grow together into a sort of cylinder which runs longitudinally into two parts; the antheræ are small; the germen of the pistil is subulated; the style is very short, and the stigma is obtuse and emarginated; the fruit is a roundish pointed pod, containing only one cell, and terminated by a spine; the seed is kidney-shaped. *Linnæi* Gen. Plant. p. 345.

BORBONIA *Astra*, a denomination formerly given by some writers to the *solar faculæ*, on a supposition that they were satellites, or secondary planets. See FACULÆ, *Cycl.*

Fromundus mentions a Frenchman, named *Tarde*, who had written a book express under the title *Astra Borbonia*. Philos. Transact. N° 330. p. 287.

BORBORITÆ, or BORBORIANI, a branch of the antient Gnostics, who, to the other errors of that sect, added this, of denying a future judgment.

The word comes from the Greek Βορβορος, *cænum*, dirt; a denomination which was not given them on account of the filthiness of their life or manners, but because of a custom which obtained among them, of smearing their faces with dirt and mire, in order, as 'tis said, to deface the image of God. *Joseph.* Hypomn. l. 5. c 140. *Fabric.* Cod. Pseudep. Vet. Test. T. 2. p. 307. Trev. Dict. Univ. T. 1. p. 1120. *Calv.* Lex. Jur. p. 126. *Briss.* de Verb. Signif. p. 86. *Du Cange*, Gloss. Græc. T. 1. p 211. voc. Βορβοριανοι. Ejusd. Gloss. Lat. T. 1. p. 588. *Pratæol.* Elench. Hæret. p. 104.

Some have also given this appellation, by way of reproach, to the Mennonites. *Bos.* Diss. de Stat. Europ. §. 26.

BORBOTHA, in ichthyology, a name given by some authors to the *mustela fluviatilis*, or eel-pout. See the articles MUSTELA and GADUS.

BORDAGE, the condition or service of the Bordarii. *Spelm.* Gloss. p. 85. voc. *Bordarii.* *Du Cange*, Gloss. Lat. T. 1. p. 588.

BORDARII.—The *Bordarii*, often mentioned in the Domesday inquisition, were distinct from the *servi* and *villani*, and seem to be those of a less servile condition, who had a *bord* or cottage, with a small parcel of land, allowed to them, on condition they should supply the lord with poultry and eggs, and other small provisions for his board and entertainment [a]. Tho', according to Spelman, the *bordarii* were inferior to *villani*, as being limited to a small number of acres [b].—[[a] *Kenn.* Gloss. ad Paroch Antiq. in voc. [b] *Spelm.* Gloss. p. 85.]

BORDARII also denote servants, or workmen, employed about the house in the necessary offices of fetching wood, drawing water, grinding corn, cleaning yards, and the like: by which they stand distinguished from *villani*, employed in the tillage of the lands. *Spelm.* loc. cit. See VILLAIN, *Cycl.*

BORDER, (*Cycl.*) in gardening, denotes a narrow bed adjoining to a walk, serving to bound and inclose the parterres, and prevent their being injured by the feet. *Bradl.* Bot. Dict. T. 1. & *Mill.* Gard. Dict. in voc.

The use of *borders* is to inclose parterres. They ought always to be laid with a rising in the middle, by which they will have a better effect to the eye than if quite flat, and their breadth should be between four and six feet.

Borders are properly of four sorts; the first are those which are continued about parterres without any interruption, and are wrought with a sharp rising in the middle, like an ass's back, and planted with low shrubs and flowers.

The second sort of *borders* are those which are cut into compartments, at convenient distances, by small passages; these are raised in the middle, and planted as the former with shrubs and flowers.

The third sort are such as are laid even and flat without flowers, and have only a verge of grass in the middle, being edged with two small paths, raked smooth and sanded; these are sometimes adorned with vases of flowers, of large growth, or flowering shrubs, along the middle verge of grass.

The fourth sort are quite plain, and are only sanded, as in the parterres of orangeries; and are filled with cases ranged in regular order along those *borders*, which are edged with box on the sides next the walks, and on the other with verges, and grass-work next the parterre. Sometimes a yew is planted between each case, which makes the *border* appear richer, and the parterres handsomer during the winter season.

Borders are made either strait, circular, or in courts; and are turned into knots, scrolls, volutes, and other compartments.

The florists make *borders* in any part of their gardens, which they usually edge with green boards; and this gives them a very neat look: in large parterres, all that is to be expected, is to stock them well with flowers, that will succeed one another during the summer-season. *Mill.* Gardn. Dict. in voc.

BORE.—The *bore* of a gun or piece of ordinance is used for the chase or barrel; though it seems rather to denote the diameter of the chase. *Moor*, Treat. of Artill. P. 2. c. 1. p. 26.

Square-BORE, in smithery, denotes a square steel point, or shank well tempered, fitted into a square socket in an iron wimble, serving to widen holes, and make them truly round and smooth within. *Moxon*, Mechan. Exerc. p. 51.

BOREAL *Signs*, in astronomy, the first six signs of the zodiac, or those on the northern side of the equinoctial.

BOREAS (*Cycl.*)—Vitruvius gives the name *Boreas* to a different wind from that mentioned in the *Cyclopædia*, viz. that which blows from the point which is 60 degrees from the north, towards the east. *Vitruv.* Architect. l. 1. c. 6. *Wolf* Lex. Math. p. 267.

The Greeks erected an altar to *Boreas* [a]. The qualities allowed by naturalists to this wind are coldness and dryness [b].—[[a] *Voss.* de Idolol. l. 3. c. 1. [a] *Cast.* Lex. Med. p. 109.]

M. Spierlingius has a treatise in praise of *Boreas* [c]; wherein he shews the honours paid to him by antiquity. *Boreas*, according to this author, purifies the air, renders it calm and salubrious, preserves buildings from decay, drives away the plague and other diseases, expels locusts and other vermin noxious to the grounds [d].—[[c] *Boreas*, ejusque Laudes. Hafn. An. 1707. [d] Trev. Dict. Univ. in voc.]

BOREASMI, Βορεασμοι, in antiquity, a festival at Athens held in honour of Boreas, or the north wind, to pacify and prevail on him to be quiet, and suffer the south wind to blow. *Meurs.* Attic. Lect. l. 2. c. 1. Ejusdem Græc. Ferial. *Schott.* Lex. Antiq. p. 226, seq.

Others assign a different reason for the honour paid to Boreas by the Athenians, *viz.* that, in a sea-fight, a great number of the enemy's ships had been destroyed by the north wind, which that people imputed to the kindness Boreas had for his wife's native country, having married Orithya daughter of king Erectheus. *Pausan.* in Attic. *Pott.* Archæol. Græc. l. 2. c. 20. p. 374.

BORING, the act of perforating a solid body, or making a hole throughout its whole length or thickness.

Surgeons speak of *boring* the bones of the skull, properly called *trepanning*. V. *Junck.* Consp. Chir. p. 325. See TREPANNING, *Cycl.* and *Suppl.*

BORING *birch*, and other trees, is practised in the spring for their juice, called also *tapping* and *bleeding*. Phil. Transact. N° 44. p. 880. See TAPPING, *Cycl.* and *Suppl.*

BORING *of masts*, from top to bottom, is proposed by Dr. Hook as a means of strengthening and preserving them; as this would make them dry and harden the better, and prevent their cleaving and cracking: for want hereof, the outside drying, when the inside does not, the former shrinks faster than the latter can keep it company; the consequence of which is easy to foresee. *Hought.* Collect. T. 3. N° 413. p. 33.

BORING *of water-pipes*.-The method of *boring* alder poles for water-pipes is thus: being furnished with poles of a fit size, horses, or trussels, are procured of a due height, both to lay the poles, and rest the auger on in *boring*; they also set up a lath, whereby to turn the lesser ends of the poles, and adapt them to the

cavities of the greater ends of others, in order to make the joint ſhut each pair of poles together. The outer or concave part is called the female, and the other, or inner, the male part of the joint. In turning the male part, they make a channel or ſmall groove in it, at a proper diſtance from the end; and, in the female part, bore a ſmall hole to fit over this channel; they then bore through their poles, ſticking up great nails at each end, to guide them right; but they commonly bore a pole at both ends; ſo that if it be crooked one way, they can nevertheleſs bore it through, and not ſpoil it *Neve*, Build. Dict. in voc. *Alder*.

BORING, in farriery, an operation ſometimes practiſed for the cure of horſes whoſe ſhoulders are wrenched. The method is thus: they cut a hole through the ſkin in the middle of the ſhoulder, and, with the ſhank of a tobacco-pipe, blow it as a butcher does a ſhoulder of veal; then they run a cold flat iron, like a horſeman's ſword-blade, eight or ten inches up, between the ſhoulder-blade and the ribs, which they call *boring*; after that, they burn him round his ſhoulder with a hot iron. *Burd.* Gent. Farr. p. 31.

BORING, in mineralogy, a method of piercing the earth by a ſet of ſcooping irons, made with joints ſo as to be lengthened at pleaſure. The skilful mineraliſt will often be able to gueſs where a vein of ore may lie, though there are none of the common outward ſigns of it upon the ſurface of the earth; and, in this caſe, he has recourſe to *boring*, the ſcooping irons are drawn back at proper times, and the ſamples of earth and mineral matter they bring up, are examined; and hence it is known whether it will be worth while or not to open a mine in the place. *Shaw*'s Lectures, p. 242.

BORITH, in the holy ſcriptures, an herb thought to be the *kali* or ſaltwort; of the aſhes of which ſome make ſoap, and a very good lye to waſh linen withal. It is mentioned in *Jeremiah* xi. 22.

BOROLYBICUS, the wind which blows in the middle between the north and weſt points; called alſo the north-weſt wind. *Wolf.* Lex. Math. p. 267. *Vital.* Lex. Math. p. 88.

BOROUGH, or BOROW (*Cycl.*)—The antient Saxons, according to Spelman, gave the name *burgh* to thoſe called, in other countries, cities [a]. But divers canons being made for removing the epiſcopal ſees from villages and ſmall towns to the chief cities, the name *city* became attributed to epiſcopal towns, and that of *borough* retained to all the reſt; tho' theſe too had the appearance of cities, as being governed by their mayors, and having laws of their own making, and ſending repreſentatives to parliament, and being fortified with a wall and caſtle, and the like [b].—[a Term. de Ley, f. 39. b. *Cow.* Interpr. in voc. *borow*. b *Spelm.* Gloſſ. p. 93.] See CITY, *Cycl.*

Royal BOROUGHS, in Scotland, according to Chamberlayne, have the ſole power of trade and merchandize, excluſive of all others, a power of holding courts, exerciſing the juriſdiction of ſheriffs, making by-laws, *&c.* Preſent State of Brit. P. 2. l. 2. p. 429, ſeq. See JURISDICTION.

The company of merchants in a *royal borough* make what is called a gild; the chief of which is a dean of gild, who is next magiſtrate to the bailiff. See GILD, *Cycl.*

The *royal boroughs* are not only ſo many diſtinct corporations, but do alſo conſtitute one entire body, governed by, and accountable to one general court, antiently called *the court of four boroughs*, held yearly to treat and determine concerning matters relating to the common advantage of all *boroughs*.

The four *boroughs* which compoſed this court were, Edinburgh, Stirling, Roxburgh, and Berwick; which two laſt falling into the hands of the Engliſh, Linlithgow and Lanerk were put in their places; with a ſaving to the former, whenever they ſhould return to their allegiance.

But this court not being ſufficient to anſwer the neceſſities of the *royal boroughs*, they were all empowered, under James III. in 1487, to ſend commiſſioners to a yearly convention of their own, which was then appointed to be held at Inverkeithing, and is now held at Edinburgh, under the denomination of the convention of *boroughs*, veſted with great power.

BOROUGH *Engliſh*.—The reaſon aſſigned by Littleton for the cuſtom of *Borough Engliſh*, is, that the youngeſt ſon is leaſt able to ſhift for himſelf; and, in ſupport of this, other uſages in favour of the youngeſt are alleged, as that in Kent, where the lands being equally divided among all the ſons, the youngeſt is to have the privilege of aſtre or hearth in the manſion-houſe, in his ſhare, as being ſuppoſed the tendereſt, and more in need of warming Others, notwithſtanding, ſuſpect a different reaſon for the riſe of *Borough Engliſh*, viz. the places where this cuſtom now obtains, were antiently liable to that cuſtom granted the lords of manors in Scotland by K. Eugenius, who had the privilege of enjoying the firſt night of their tenants brides; ſo that the eldeſt ſon being preſumed to be the lord's, they uſually ſettled their lands on the youngeſt ſon, whom they thought their own; which being practiſed a long time, grew at length into a cuſtom.

Borough Engliſh obtains only in ſome antient boroughs and copyhold manors. *Plott*, Nat. Hiſt. Staffordſh. c. 8. §. 20. p. 278.

BOROUGH-*holder*, in antient law-writers, the head man or chief pledge of a tithing, choſen by the reſt to ſpeak and act in their common behalf. *Johnſ.* Eccl. Law, ann. 693. §. 6. Not. *Spelm.* Gloſſ. p. 86. voc. *Borſholder*.

The word is formed from *boroe-ealder*, as being the ſenior man of the borough or tithing.

Borough-holders are the ſame with what are otherwiſe written, *borſholders*, *burſholders*, *boſholders*, *borow-holders*, *borghealders*, *burgheſaldi*, and *borgeſaldrii*; of later days, *borough-heads*, and *head-boroughs*. *Du Cange*, Gloſſ. Lat. T. 1. p. 591. voc. *Borghealder*. *Cow.* Interpr. voc. *Borough-holder*. Item, voc. *Borough-head*. *Skin.* Etym. voc. *Borſholder*. *Spelm.* l. c. See HEADBOROW, *Cycl.*

BOROUGH, or *Borgh*, denotes a pledge of ſecurity for another's keeping the peace, and conforming to the laws. *Sken.* de Verb. Signif. p. 22, ſeq. *Skinn.* Etym. For in voc.

The word is Saxon, and is ſometimes alſo written *borough*; in Latin writers, *borgha* and *burgha*. *Du Cange*, Gloſſ. Lat. T. 1. p. 590. voc. *Borgha*.

BORGH-*breach*, *Borgi fractura*, in antient law-writers, denotes a breaking of the pledge or ſecurity given by the members of tithings for the behaviour of each other. *Du Cange*, Gloſſ. Lat. T. 1. p. 591. *Skinn.* Etym. in voc.

This is the ſame with what is otherwiſe called *borg-brege*, *borgh-brege*, *burg breche*, and *borghi-fractura*.

Law-BOROUGHS, or *Borrows*, in the law of Scotland, the ſame with what in England is called *binding to the peace*. See the article PEACE, *Cycl.*

In caſe of a contravention of *law-borrows*, the ſurety or cautioner is equally liable with the principal for the penalty ſpecified therein; the one half to the king, and the other to the complainer. V. *Mackenz.* Inſtit. Law of Scotl. l. 4. tit. 1.

BOROW-*holes*, the holes wherein the female rabbits depoſite their young, in the remoteſt corner thereof they can find, to prevent the males from eating them. Trev. Dict. Univ. T. 4. p. 970. voc. *Rabouilliere*.

BORRAGE, *Borago*, in botany. See BORAGO.

BORRELISTS, a ſect or ſort of anabaptiſts in Holland, who allow of no uſe of ſacraments, public prayers, or other external worſhip, nor of any human gloſs or explication of ſcripture; but profeſs to adhere to the faith and Manners of the New Teſtament times in all their ſimplicity. See ANABAPTIST, *Cycl.* and *Suppl.*

They took their denomination from their founder, *Borrel*, a perſon of great learning in the Hebrew, Greek and Latin tongues, and brother of M. Borrel, ambaſſador of the States to the French king.

The *Borreliſts* reject all churches and communions, as holding them all to have ſwerved from the pure doctrine of the apoſtles, and to have ſuffered themſelves to be guided by their doctors and teachers, who have ſubſtituted their own ſyſtems, confeſſions, catechiſms, ſermons, and the like, for the true word of God. In other reſpects, the life and manners of the *Borreliſts* are ſevere and irreproachable; the greater part of their ſubſtance is expended in alms. Vid. *Corn.* Dict. des Arts, T. 1. p. 124. Trev. Dict. Univ. T. 1. p. 1127.

BORROWING, the act of receiving a thing to enjoy the uſe of it, on condition of returning it.

BORSELLA, in the glaſs-works, an inſtrument wherewith they extend or contract the glaſſes at pleaſure; alſo ſmoothen and levigate them. *Merret*, Append. to *Neri*, p. 437. ap. *Caſt.* Lex. Med. p. 110.

BORYSCHITES, in natural hiſtory, the name of a ſtone mentioned by Pliny and other antient writers, and ſaid to have been greatly eſteemed for its virtue and its beauty. It was of a black colour, and was beautifully variegated with ramifications, in the manner of the Dendritæ or Mocoa ſtones; but theſe figures were partly in white, partly in a blood red. We know no ſtone at preſent that anſwers to this remarkable deſcription.

BOS, the *ox*, in the Linnæan ſyſtem of zoology, makes a diſtinct genus of animals of the order of the *pecora*; the characters of which are, that the horns are hollow and turned forward, bent like creſcents; and not ſcabrous, but ſmooth and even on their ſurface. Of this genus, beſides the common ſpecies kept with us, there are four naturally wild ones, which are the *urus*, *biſon*, *bubalus*, and *Bonaſus*; all which ſee under their ſeveral heads. *Linnæi* Syſtem. Nat. p. 43.

BOS *Africanus*, the *African ox*, in natural hiſtory, the name of a ſmall wild bull, common in that part of the world, and ſuppoſed to be the true *bubalus* of the antients. At its utmoſt growth it is ſmaller than the common deer, but ſomething larger than the goat, and of a ſtouter make and thicker body; his hair is of a lion tawny colour, and is very bright and gloſſy; his horns are bent into a half-moon. *Bellon.* Obſ. l. 2. c. 50.

BOS *Camelita*. See CAMELITA *Bos*.

BOS *Marinus*, in ichthyology, a name given by the old authors, both Greek and Latin, Ariſtotle, Elian, Pliny, Ovid, and the reſt, to that ſpecies of the ray fiſh, which has ſince been called *raia oxyrynchus* by writers. Artedi has accurately diſtinguiſhed this ſpecies by the name of the *variegated ray*, with ten tubercles, armed with prickles, and placed on the middle of the back. See the article RAIA.

BOS, Βοῦς, in antiquity, was peculiarly uſed for an antient Greek ſilver coin, which was didrachmus, or equivalent to two drachms.

Pollux. Onomaſt. l. 9. *Hoſt.* Hiſt. Rei Num. T. 1. l. 3. c. 3. p. 24. ſeq. See DRACHM, *Cycl.*

It was ſo called, as having on it the impreſſion of an ox, and chiefly obtained among the Athenians and Delians; being ſometimes alſo ſtruck of gold.

From this aroſe the phraſe, *bos in lingua*, applied to thoſe who had taken bribes to hold their tongue. *Eraſm.* Chiliad. I. VII. 18.

BOSA, in the Egyptian medicine, denoted a maſs prepared of the flower of the lolium, hemp-ſeed and water; of the ſame inebriating virtue with the aſſis, or opium. *Alpin.* de Medic. Egypt. l. 4. c. 2. p. 121. *Caſt.* Lex. Med. p. 110.

BOSCAGE (*Cycl.*) ſometimes denoted a tax or duty laid on wood brought into the city. *Du Cange*, Gloſſ. Lat. T. 1. p. 593.

BOSCHAS, in zoology, the name of our common wild duck, called alſo by ſome *anas torquata minor*, or the ſmaller ring-duck. See the article DUCK.

BOSCOI, or BOSCI, in eccleſiaſtical hiſtory, denotes a ſpecies or tribe of monks in Paleſtine, who fed on graſs like the beaſts of the field.

The word is Greek, Βοσκοι, *q. d.* grazers; formed from βοσκω, *paſco*, I feed.

The *Boſcoi* are ranked among the number of Adamites, not ſo much on account of their habit, as food. They took no care about proviſion; but when eating-time came, or any of them was hungry, went into the fields, with each his knife in his hand, and gathered and eat what he could find. *Evagr.* Hiſt. Eccleſ. l. 1. c. 21. *Sozom.* Hiſt. Eccleſ. l. 6. c. 33. *Du Cange*, Gloſſ. Græc. T. 1. p. 211. Bibl. Ger. T. 21. p. 139. *Bingh.* Orig. Eccleſ. l. 7. c. 2. §. 11.

BOSCUS, in antient law writers, ſignifies a wood of any kind.

The word is alſo written corruptly *buſcus*, *buſcaria*, and *buſcale* [a]. It is formed from the Greek, βοσκω, I feed, as ſerving for paſture [b]. In which ſenſe, *boſcus* amounts to the ſame with the Italian *boſco*, and French *bois* —[[a] *Du Cange*, Gloſſ. Lat. T. 1. p. 592. [b] *Caſſeneuve*, Orig. p. 25. voc. *Bois.* Trev. Dict. Univ. T. 1. p. 1128. voc. *boſquet.*]

Boſcus is divided into high wood, or timber, called alſo *ſaltus*, and *haut bois*; and *coppice*, or underwood, *ſub-boſcus*, or *ſub-bois.* *Caſſeneuve*, Orig. p. 25. voc. *bois.*

BOSPHORICUM *Marmor*, a name given by the antients to a ſpecies of marble, of a yellowiſh white colour, with beautiful veins of a ſomewhat darker hue; called alſo, from its tranſparence, *phengites.* See PHENGITES.

BOSPHORUS, or BOSPORUS (*Cycl.*)— Modern geographers define *Boſphorus*, in general, a long narrow ſea running in between two lands, or ſeparating two continents, and by which, two ſeas, or a gulph and a ſea, are made to communicate with each other. *Ozan.* Dict. Math. p. 358.

In which ſenſe, *boſphorus* amounts to the ſame with what we otherwiſe call an arm of the ſea, channel, or ſtraight; the Italians, *faro*; the Latins, *fretum*; the French, *pas*, *manche*; the Turks, *bogaz*, &c. *Fæſch.* Lex. Milit. p. 545. voc. *Meer.* *Aubin.* Dict. Mar. p. 110. *D'Herbel.* Bibl. Orient. p. 210. in voc. *Bogaz.*

Authors are much divided as to the reaſon of the denomination of the *Boſphorus* of Thrace; for as to the Cimmerian *Boſphorus*, it ſeems to be ſo called from its reſemblance to the Thracian. Pliny indeed aſſures us, they were both ſo denominated, as being narrow enough to be ſwam over by cattle [a]. He adds, that men might hear one another talk, cocks crow, and dogs bark, from one ſide of the Thracian *Boſphorus* to the other, which was not above 500 paces over [b]; or, according to Agathemerus, 750 [c]; inſomuch that Darius threw a haſty bridge over it for the paſſage of his army.—[[a] *Plin.* Hiſt. Nat. l. 6. c. 1. [b] Idem, l. 4. c. 12. [c] *Agathem.* Geogr. l. 1. c. 3. *Hard.* Not. ad Plin.]

But others aſſign other origins. See the CYCLOPÆDIA.

Some late writers rather ſuppoſe *Boſphorus* to have been ſo called, becauſe here was antiently the beaſt-market. *Tournef.* Voyag. Let 12. T. 2. p. 6. See alſo Let. 14. p. 61.

BOSQUETS, in gardening, a term for groves included in gardens.

The word is derived from the Italian, *boſchetto*, which is a diminutive of *boſco*, a wood or grove.

Theſe are ſmall compartments of gardens, which are formed of trees, ſhrubs, and tall flowering plants, ſet in quarters, and either placed regularly in rows, or diſpoſed in a more irregular manner. Theſe quarters ſhould be ſurrounded with evergreen hedges, and the entrances made into porticos with yews. In the inſide there muſt be ſome walks, either ſtrait or winding. Theſe, if the quarters are large, ſhould be eight foot wide, and laid with turf, and kept well mowed and rolled. The hedges of theſe quarters ſhould be kept low, that the heads of the ſhrubs may be ſeen from the outſide. There is a great deal of fancy to be employed in the planting theſe *boſquets*, which ſhould be ſhewn in ſetting to view at once ſuch ſhrubs as have the moſt differently ſhaped, and differently coloured leaves that may be, as the long, the round, and the jagged, and the various ſhades of deep and lighter green, and the mealy or hoary white leaves. Beſides this, there is alſo a very great variety of beautiful fruits, which theſe ſhrubs produce in autumn, which give a very elegant and pleaſant proſpect even after the leaves are fallen.

The ſhrubs which produce theſe, are, 1. the euonymus, or ſpindle-tree. 2. the opulus, or water-elder. 3. the cockſpur-hawthorn; and, 4. the flowering-aſh, as it is called; beſides an innumerable parcel more. But it is a good rule in this, never to mix the evergreen-trees with thoſe which loſe their leaves in winter. Theſe *boſquets* are only fit for large gardens. *Mill.* Gard. Dict. in voc.

Boſquets are generally laid out into ſome regular figure, as a circle, ſquare, polygon, or the like, and make a conſiderable article in the decoration of a fine garden. *Davill.* Explic. Term. Architect. p. 429. See GARDEN.

BOSS, or BOSSE, in ſculpture, ſignifies relievo, or prominency. See RELIEVO, *Cycl.*

The word is French, *boſſe*, which ſignifies the ſame; whence alſo *to emboſs.* V. *Skinn.* Etym. in voc. See the article EMBOSSING, *Cycl.*

Boss *of a buckler*, among the antients, the *umbo*, or ομφαλος, which juts out in the middle. *Potter*, Archæol. l. 3. c. 4. T. 2. p. 33.

Boss, among bricklayers, denotes a wooden utenſil wherein the labourers put the mortar to be uſed in tyling. It has an iron hook, whereby it may be hung on the laths, or on a ladder. *Moxon*'s Mechan. Exerc. p. 248.

BOSTANGI-*Baſchi*, in the Turkiſh affairs, an officer in the grand ſignior's houſhold, who has the ſuperintendence of all the gardens, water-works, and houſes of pleaſure, with the workmen employed therein. The poſt of *boſtangi-baſchi*, or chief gardener, is one of the moſt conſiderable in the Turkiſh court. He has the emperor's ear, and, on that account, is much courted by all who have buſineſs depending at the Port; he is governor of all the villages on the channel of the Black ſea, and has the command of above ten thouſand *boſtangis*, or gardeners, in the ſeraglio, and other places about Conſtantinople. But that which gives him the greateſt eclat, is the honour he ſure on holding the rudder whenever the ſultan takes his pleahas of the water. *Tourneſ.* Voyag. Let. 13. T. 2. p. 26. Trev. Dict. Univ. T. 1. p. 1130.

BOSTRYCHITES *Lapis*, in natural hiſtory, a name given by ſome to a ſtone ſuppoſed to contain womens hair included in it: ſome have underſtood by it, thoſe pieces of cryſtal which have accidental foulneſſes in them, reſembling hair, or pieces of hair, cauſed by earthy or metalline matter; others call by this name thoſe German agates, which contain either the confervas or other capillary water-plants, or other foulneſſes running into their form: the firſt of theſe very frequently have the confervæ of a great length, and variouſly undulated and turned about, ſo as very elegantly to repreſent a looſely flowing lock of hair.

BOSTRYCHITES is alſo a name given by ſome authors to a ſpecies of pyrites, whoſe irradiations were ſuppoſed to imitate hair.

BOTABOTA, in natural hiſtory, a name given by ſome writers to that ſpecies of ſea-ſwallow, whoſe neſts are ſo famous n ſoups in China, and in ſome parts of Europe. The neſts are ſuppoſed to be reſtorative, and greatly provocative to venery; for which laſt quality it is that the eaſtern nations in general are ſo fond of them.

BOTAGIUM, in middle age writers, a fee paid for wine ſold in *botæ*, or *butts.* *Du Cange*, Gloſſ. Lat. T. 1. p. 661.

Wine that taſtes of the cask is called *vinum botatum.* Id. ibid.

BOTALE *Foramen*, in anatomy, an aperture in the heart of a fœtus, whereby the blood is enabled to circulate, without going into the lungs, or the left ventricle of the heart. Trev. Dict. Univ. T. 1. p. 1131. See FOETUS, HEART, CIRCULATION, *&c. Cycl.* and *Suppl.*

BOTANIST, a perſon who underſtands the nature, hiſtory, and diſtinctions of vegetables, on ſettled and certain principles, and can call every plant by a diſtinct, proper and intelligible name. *Linnæi* Fundam. Botan. p. 1.

BOTANOPHILI, among the writers on the ſubject of vegetables, thoſe who have treated of them, not as botaniſts, on their natural and eſtabliſhed diſtinctions, but in regard to different operations, as gardeners, phyſicians, *&c. Linnæi* Fundam. Bot. p. 3.

BOTANY (*Cycl.*)—Authors are divided about the preciſe object and extent of *botany*, which ſome will have to include the whole province of plants, in all their ſtates, uſes, and relations: others reſtrain it to the knowledge of the claſſes, genera, ſpecies, external figures and deſcriptions of plants, excluſive of their virtues, which are left to the conſideration of phyſic and pharmacy [a]; of their origin and generation, which are left to phyſiology; and of their culture and propagation, which are left to gardening and agriculture [b].—[[a] Vid. Bibl. Ital. T. 11. p. 206, ſeq. [b] *Du Hamel*, Hiſt. Acad. Scienc. l. 1. ſec. 1. c. 3. p. 11. It. l. 4. ſec. 5. c. 1. p. 346, ſeq.]

Terreſtrial BOTANY, that employed about the plants growing on the ſurface of the earth.

Marine BOTANY, that concerned in the conſideration of ſea-plants, as fucuſes, alcyonia, algæ, *&c.*

Subterranean BOTANY, that about the plants under ground, as the *tubera terræ*, or truffles, *&c.*

Some call the knowledge of the virtues of plants practical *botany* [a]. The antient *botany* has been much hurt by the Arabs, by bad verſions, and comments on the Greek naturaliſts [b]; partly hence, but more from the corrupt ſtate of antient copies

and

and manuſcripts, the names of plants have been terribly confounded; a diſorder which Salmaſius [c], Plukenet [d], and ſeveral Engliſh botaniſts [e], have endeavoured to retrieve.—[[a] V. *Ch mel.* Botanique Pratique. Bibl. Ital. T. 11. p. 208. [b] *Friend*, Hiſt. of Phyſ. T. 2. p. 25. [c] *Salmaſ.* de Homon. Hyl. Jatr. Ejuſd. Exerc. ad Solin. [d] Phil. Tranſ. N° 196. p. 618. [e] Id. ibid. N° 236. p. 29.

Botany is arrived at a degree of perfection among the moderns, which the antients were ſtrangers to; not only as to the method of plants, *i. e.* of claſſing, diſtributing, and characterizing them, which is rendered more exact, and conſequently the arriving at a knowledge of them more eaſy; but alſo as to the copia or number of plants known and deſcribed; which is ſuch, that ſcarce a new plant is now to be heard of. Not but that there are ſtill deſiderata in the ſcience, to employ the diligence of future botaniſts, both as to the virtues and deſcriptions, figures, genuſes and names of many plants, which ſtill need much reformation. V. Mem. Acad. Scienc. an. 1713. p. 92. Phil. Tranſ. N° 198. p. 682.

The learned Linnæus has of late endeavoured to claſs and denominate all plants from their parts of generation or fructification. See the article FRUCTIFICATION.

But this method, highly extolled by many, has nevertheleſs met with ſevere cenſures. *Buſon.* Hiſt. Nat. T. 1. p. 18, ſeq.

We have many ſpecies of plants brought to light, eſpecially natives of the Indies, which the antients, for any thing that appears in their writings now extant, were ignorant of; in which particular, Cluſius, Columna, Bauhinus, Loccone, and others, have performed much. Add, that their deſcriptions, places, and ſeaſons, are with good diligence and preciſeneſs ſet before us; likewiſe their order and kindred. For the adjuſting whereof, our learned countrymen, Mr. Ray and Dr. Moriſon, have both taken laudable pains. The like may be ſaid as to the ordering of plants, in reſpect of their alimental or mechanic uſes; for which, amongſt others, Mr. Evelyn and Dr. Beal have deſerved great praiſe. *Grew*, Idea of Philoſ. Hiſt. of Plants, §. 1. p. 1.

The virtues of moſt plants are, with much uncertainty, and too promiſcuouſly, aſcribed to them; ſo that, if we turn over an Herbal, we ſhall find almoſt every herb good for every diſeaſe; though of the virtues of many they are altogether ſilent. The deſcriptions likewiſe of many are yet to be perfected, eſpecially as to their roots; thoſe who are moſt curious about the other parts, being here too remiſs. And for their figures, it were to be wiſhed they were all drawn by one ſcale, or, at moſt, two; one for trees and ſhrubs, and another for herbs. Many, likewiſe, of their ranks and affinities are yet undetermined, and a great number of names, both Engliſh and Latin, not properly given. Thus what we call goat's rue, is nothing akin to the plant whoſe generical name it bears; and the like may be ſaid of wild tanſey, ſtock july-flowers, horſeradiſh, and many more: ſo when we ſay bellis major and minor, theſe names would intimate, that the plants to which they are given, differ only in bulk; whereas they are two ſpecies of plants. The like holds of centaurium majus and minus, chelidonium majus and minus, and many others, which are diſtinct ſpecies, and of very different tribes. *Grew*, Idea of Philoſ. Hiſt. of Plants, §. 2. p. 2.

For the general ſtructure and laws of vegetation in plants, it has been ſupplied by Grew and Malpighi. See PLANT, VEGETATION, GENERATION, SAP, *&c.*

BOTARGO, or BOUTARGA, is a kind of ſauce made of the eggs or ſpawn of the *mujon*, a large fiſh, not unlike a pike, common in the Mediterranean; it is dried in the ſun, ſalted, and uſed much after the manner of cavear. *Savar.* Dict. Com. T. 1. p 456. Id. Suppl. p 87. *Skin.* Etym. in voc. See the article CAVEAR, *Cycl* and *Suppl.*

The people of Provence call it *bou-argues*. The beſt is brought from Alexandria and Tunis. There is alſo a manufacture of it near Marſeilles. It is much uſed throughout all the Levant.

BOTATRISSA, in ichthyology, a name given by Bellonius, Geſner, and other authors, to that ſpecies of the gadus called by authors the *lota*, and *muſtela fluviatilis*; by us, the *eel-pout*. It is diſtinguiſhed from the other gadi, by having two fins on the back, and the two jaws of equal length, with beards at the mouth. See GADUS.

BOTAURUS, in zoology, a name by which ſeveral have called the bird known among us by the name of *butter-bump*, *bittern*, or *mire-drum*. It has this name from the Latin, *boatus*, bellowing, and *taurus*, a bull, as ſuppoſed to imitate the loud roaring of a bull. *Ray*'s Ornith. p. 207. See BITTERN.

BOTE (*Cycl*)—This old law word comes from the phraſe, *to boot*, ſpeaking of ſomething given by way of compenſation. Hence,

Man-BOTE ſignifies the ſatisfaction due for a man ſlain.

Kin-BOTE, that for the ſlaughter of a kinſman. Vid. *Spelm.* Gloſſ. p. 86. *Du Cange*, Gloſſ. Lat. T. 1. p. 594. in voc. *Bot.*

Theft-BOTE, is when a man agrees or compounds with the thief, and ſecures him from the law. *Sken.* de Verb. Signif. p. 24.

Houſe-BOTE, *Hay*-BOTE, and *Plough*-BOTE, denote privileges granted to tenants, of cutting hay, *&c.* on the land. *Kenn.* Paroch. Antiq. p. 497.

BOTELESS, a criminal incapable of making comſation; or a crime not to be attoned for. *Du Cange*, Gloſſ. Lat. T. 1. p. 596, voc. *Botolos*. See BOTE.

No judgment or ſum of money ſhall acquit him who commits ſacrilege; for that he is *boteleſs*, i. e. *ſine emendatione*, or without amendment. Whence alſo the modern Engliſh, *bootleſs*, for a thing vain or impoſſible to be done. Chart. Hen. I. ad Archiepiſc. Ebor. *Jac.* Law Dict. in voc.

BOTESCART, in antient Engliſh writers, the ſame with *boatſwain*. *Skinn.* Etym. For. in voc. See BOATSWAIN.

BOTHAGIUM, *Bothage*, or *Boothage*, cuſtomary dues to the lord of the market, for the liberty of pitching and ſtanding of booths. *Kenn.* Gloſſ. ad Paroch. Antiq. in voc.

BOTHNA, *Buthna*, or *Bothena*, in the Scotch law, a park or field wherein cattle are incloſed, and fed.

The word is alſo written *barthena*; formed from the antient Scottiſh, *buth*, a flock of ſheep.

BOTHENA is alſo uſed for a barony, lordſhip, or ſheriffdom. In which ſenſe, it is ordained by ſtatute, that the king's mute, or court of each *bothena*, that is, each ſheriffdom, ſhall be held within forty days. *Sken.* de Verb. Signif. p. 23, ſeq.

BOTHRION, Βοθριον, denotes the alveolus or ſocket of a tooth. *Gal.* de Oſſib. c. 5. in fine. *Caſt.* Lex. Med. p. 110. See the article ALVEOLI.

BOTHRION is alſo uſed to denote a ſmall, narrow, but deepiſh ulcer of the cornea of the eye, reſembling a round puncture. *Gal.* Introd. c. 15. *Æginet.* l. 3. c. 22.

The word is alſo written by Erotion, βοθριας, *bothrias*; by others, corruptly, *botryon* [a]. In Latin writers it is ſometimes called *foſſula* [b].—[[a] *Foreſt.* Obſerv. l. 11. Obſ. 17. in Schol. [b] *Capivac.* Pract. l. i. c. 33. *Caſt.* Lex. Med. p. 110.]

BOTIA, *Bocia*, or *Botus*, among chymiſts, a glaſs veſſel with a round belly and long narrow neck, otherwiſe called egg, *ovum ſublimatorium*, *cucurbita*, and *urinale*. *Lagn.* in Harm. Chym. Theatr. Chym. T. 4. p. 769. *Caſt.* Lex. Med. p. 108. voc. *Bocia*. It. p. 110. voc. *Botus*.

BOTIA, in medicine, the ſame with *ſtrumæ*, or *ſcrophulæ*. *Ruland.* Lex. Alch. p. 106. voc. *Botium*. See STRUMÆ, and SCROPHULÆ, *Cycl.*

BOTIN, or *Butine*, among alchemiſts, denotes turpentine, or balſam of turpentine, when gathered under the proper influence. *Ruland.* Lex. Alch. *Caſt.* Lex. Med. p. 110.

BOTONOMANCY, Βοτονομαντεια, an antient ſpecies of divination, by means of plants; eſpecially ſage, and fig-leaves.

The manner of performing it was thus: the perſons who conſulted, wrote their own names, and their queſtions, on leaves, which they expoſed to the wind; and as many of the letters as remained in their own places, were taken up, and being joined together, contained an anſwer to the queſtion. *Potter*, Archæol. Græc. l. 2. c. 18. T. 1. p. 353. *Buling.* de Divin. l. 3. c. 24.

BOTONTINI, in middle age writers, denote mounts or hillocks, raiſed to ſerve as land-marks or boundaries of grounds.

The word is alſo written *botontones*, *botones*, and *bodones*. *Du Cange*, Gloſſ. Lat. T. 1. p. 586.

BOTOTOE, in natural hiſtory, a name given by the people of the Philippine iſlands to a very beautiful bird of the parrot kind; it is ſomewhat ſmaller than the common parrot, and is all over of a fine deep blue colour.

BOTRYITES, in natural hiſtory, a ſtone of the gem kind, reſembling a branch of young grapes. *Plin.* Hiſt. Nat. l. 37. c. 10. *Fab.* Theſ. T. 1. p. 373.

The word is Greek, βοτρυιτης, formed from βοτρυς, a grape. In Engliſh writers it is ſometimes called the *grape-ſtone*. *Grew*, Muſ. Reg. Societ. P. 3. ſec 1. c. 5. p. 304.

BOTRYITES, or *Botrites*, alſo denotes a ſort of burnt cadmiæ, found ſomewhat in the form of a bunch of grapes adhering to the upper parts of furnaces where that mineral is calcined. *Gorr.* Def. Med. p. 76. *Caſt.* Lex. Med. p. 110. See the article CADMIA, *Cycl.* and *Suppl.*

It differs from the *placites*, which is that gathered on the lower part of the furnace [a]; though Schroder gives a different diſtinction, *viz.* into *botrites*, found in the middle of the furnace, *placites* in the upper, and *oſtracites* in the loweſt part [b].——[[a] *Gorr.* loc. cit. [b] *Schrod.* Pharm. l. 3. c. 19.]

BOTT, among bone-lace weavers, a kind of round cuſhion of light matter placed on the knee, whereon they work or weave their lace with bobbins, *&c.* See LACE.

Among the French, the *bott*, called *oreiller*, is a little ſquare wooden frame or deſk, covered ordinarily with green ſtuff. *Savar.* Dict. Comm. T. 2. p. 923. voc. *Oreiller*.

BOTTS, in zoology, a ſpecies of worms which infeſt horſes and other cattle; having large heads and little tails; generally found in the ſtraight gut, near the fundament. Ruſt. Dict. T. 1. in voc. *Skin.* Etym. in voc.

The name is alſo given to a ſort of grubs which deſtroy the graſs in bowling-greens, *&c.*

BOTTLE, a ſmall veſſel proper for holding liquors.

The word is formed from *butellus*, or *botellus*, uſed in barbarous Latin writers, for a leſſer veſſel of wine; being a diminutive of *bota*, which denoted a butt or caſk of that liquor [a]. It is alſo written *buticula*, a diminutive of *buta* [b], and in the barbarous Greek, βατιον [c].—[[a] *Kenn.* Gloſſ. ad Paroch. Antiq. in voc. *bothagium*. [b] *Du Cange*, Gloſſ. Lat. T. 1. p. 658. voc. *buticula*. *Menag.* Orig. Franc. p. 122. *Caſſeneuve*, Orig.

p. 28. voc. *Bouteille*. *Meurſ.* Gloſſ. p. 120. voc. βατιον. See alſo *Skinn.* Etym. in voc.]

We ſay a glaſs *bottle*, a ſtone *bottle*, a leathern *bottle*, a wooden *bottle*, a ſucking *bottle* [c]. Grew gives a deſcription of the Arabian balſam *bottle* [d].—[c V. *Crouch*'s View of Brit. Cuſt. T. 1. p. 122. d *Grew*, Muſ. Reg. Societ. P. 4. ſec. 3. p. 368.]

The antient Jewiſh *bottles* were cags made of goats or other wild beaſts ſkins, with the hair on the inſide, well ſewed and pitched together; an aperture in one of the animal's paws ſerving for the mouth of the veſſel. *Calm.* Dict. Bibl. T. 1. p. 323.

Glaſs *bottles* are better for cyder than thoſe of ſtone. Foul glaſs *bottles* are cured by rolling ſand or ſmall ſhot in them; muſty *bottles*, by boiling them. *Hought.* Collect. T. 1. N° 55. p. 156, ſeq.

Bottles are chiefly made of thick coarſe glaſs.

Fine glaſs *bottles* covered with ſtraw or wicker, are called *flaſks* or *bettees*.

The quality of the glaſs has been ſometimes found to affect the liquor in the *bottle*. There were two new manufactures of glaſs *bottles* erected ſome years ago in France; all the *bottles* of which ſpoiled the wine put in them; ſome in twenty-four hours, others much ſooner. The proprietors ſuſpected witchcraft in the caſe, and had recourſe to the Academy. Mem. Acad. Scienc. an. 1704. p. 547. Hiſt. p. 57.

BOTTLE is alſo a meaſure at Amſterdam, the ſame with the *mingle*. *Savar.* Dict. Comm. T. 1. p. 457. See MINGLE.

BOTTLE-*Noſe*, in zoology, a name by which the people in ſome parts of England call the *anas arctica Cluſii*. Vid. *Ray*'s Ornithol. p. 244.

BOTTLING, or BOTTELING, the operation of putting up liquors in bottles corked, to keep, ripen, and improve.

The writers on good huſbandry give divers rules concerning the *bottling* of beer, cyder, and the like. The virtues of Spaw, Pyrmont, Scarborough, and other waters, depend on their being well bottled and corked, otherwiſe they looſe both their taſte and ſmell. To preſerve them, it is neceſſary the bottles be filled up to the mouth, that all the air may be excluded, which is the great enemy of bottled liquors [a]. The cork is alſo further ſecured by a cement. Some improve their bottled beer, by putting cryſtals of tartar and wine, or malt ſpirits; in others, ſugar boiled up with the eſſence of ſome herb, and cloves, into each bottle [b].—[a *Hoffm.* Obſerv. on Min. Wat. p. 22. b Dict. Ruſt. T. 1. in voc.]

Cyder requires ſpecial precautions in the *bottling*; being more apt to fly, and burſt the bottle, than other liquors. The beſt way to ſecure them, is to have the liquor thoroughly fine before it be bottled. For want of this, ſome leave the bottles open a while, or open them after two or three days *bottling*, to give them vent. If one bottle break through fermentation, it is beſt to give them all vent, and cork them up again. Mean cyder is apter to break the bottles than rich. Some ſoak the corks in ſcalding water, to render them more pliant and ſerviceable.

Another obſervance is, to lay the bottles ſo as that the liquor may always keep the cork wet and ſwelled. Something alſo depends on the place where the bottles are ſet, which ought to be ſuch as expoſes them as little as poſſible to the alterations and impreſſions of the air: the ground is better for this purpoſe than a frame, ſand better than the bare ground, and a running water, or a ſpring often changed, beſt of all.

To haſten the ripening of bottled liquors, they are ſometimes ſet in a warm place, or even expoſed to the ſun, when a few days will bring them to maturity. *Hought.* Collect. T. 1. N° 56. p. 158. It. N° 61. p. 165. *Mortim.* Art of Huſb. T. 1. p. 349.

For the *bottling* mineral water, ſee TUBULATED *Corks*.

BOTTOM (*Cycl.*)—The loweſt part of a thing, as contradiſtinguiſhed from the top.

Hydroſtatical writers ſpeak of the preſſure of fluids on the *bottoms* of veſſels [a]; in which caſe, the law of gravitation is, that the altitude remaining the ſame, the preſſure will be as the *bottom* [b]. M. Leibnitz has aſſerted, that a body in falling through a fluid, does not preſs on the *bottom*, that is, does not encreaſe the preſſure on it; which is found to be falſe [c].—[a V. *Herman.* Phoron. l. 2. c. 1. §. 249. p. 128. b Mem. Acad. Scienc. an. 1692. p. 16. c Phil. Tranſact. N° 351. p. 572, ſeq.]

When water boils, the *bottom* of the veſſel is found conſiderably colder than it was ſome time before boiling; inſomuch that the hand may bear it in the former caſe, not in the latter. Hiſt. Acad. Scienc. an. 1703. p. 29.

BOTTOM, in navigation, denotes the ground or ſurface of the earth under the water. *Aubin.* Dict. Mar. p. 422, ſeq. voc. *Fond.* *Ozan.* Dict. Math. p. 230.

They ſay, a rocky, ſandy, gravelly, clayey *bottom*; a *bottom* with good hold, with a bad hold, &c.

The *bottom* of the ſea, Ray obſerves, is level, *i. e.* the deſcent from the ſhore to the deep is equable and uniform [a]: but the *bottoms* of ſome ſeas are found higher than of others [b]. Count Marſigli has made divers enquiries into the ſtructure of the *bottom* of the ſea, and its beds of ſtone, ſalt, bitumen, &c. [c]—[a *Ray*, Wiſd. of Creat. P. 1. p. 84. b *Plott*, Nat. Hiſt. Stafford. c. 2. §. 87. p. 82. c Hiſt. Acad. Scienc. an. 1710. p. 31.] See the article SEA.

Over the natural *bottom* of the ſea is formed an accidental *bottom*, by the mixture of different matters, ſand, ſhells, mud, &c. ſtrongly compacted by the glutinous quality of the ſea-waters, almoſt to a degree of petrefaction. Theſe incruſtations being neceſſarily formed in ſtrata, there are ſome places wherein the fiſhermen can diſtinguiſh the annual augmentations. *Marſigli*, in Hiſt. Acad. Scienc an. 1710. p. 32. Item, an. 1712. p. 166.

BOTTOM *of a ſhip*.—Merchant ſhips are much broader *bottomed* than frigates; men of war are in a middle between the two [a]. Sir William Petty preſented the model of a double *bottomed* ſhip [b].—[a *Aubin.* Dict. Mar. p. 423, ſeq voc. *Fond.* b *Grew*, Muſ. Reg. Societ. P. 4. ſect. 2. p. 363.]

BOTTOM is alſo uſed to denote the whole ſhip, or other veſſel. In this ſenſe, we ſay, Engliſh *bottoms*, foreign *bottoms*. By the act of navigation, certain commodities imported in foreign *bottoms*, pay a duty called petty cuſtom; from which they are exempt, if imported in Engliſh *bottoms*. *Crouch*, View of Brit. Cuſt. T. 1. p. 6.

BOTTOM is alſo uſed for what remains at the *bottom* of a veſſel. In this ſenſe, Paracelſus calls the ſediment of urine, *fundus urinæ*. *Paracelſ.* de Urin. Judic. l. 1. T. 1. c. 3. *Caſt.* Lex. Med. p. 351. voc. *Fundus*.

BOTTOM-*Stone*, a kind of iron-ſtone, or ore, in the Staffordſhire mines. *Plott*, Nat. Hiſt. Stafford. c. 4. §. 16. p. 159.

BOTTOMRY (*Cycl.*) is the ſame with what is otherwiſe called *bottomage*; by the Dutch, *bodmery*; by the French, *bomerie* [a]; *bodinerie* [b], and *groſſe avanture*. Some alſo make it the ſame with the *fœnus nauticum* of the antients [c]; though others, not without reaſon, make theſe to be different things [d].—[a *Savar.* Dict. Comm. T. 1. p. 401. b Ejuſd. Suppl. p. 74. voc. *Bodinerie*. c *Molloy*, de Jur. Marit. l. 2. c. 11. §. 9. p. 293, ſeq. d Treat. of Domin. and Laws of Sea, in Pref. p. 3.]

The rate or intereſt of money, taken on *bottomry*, follows that of inſurance. In Q. Anne's war, when inſurance to the Eaſt Indies and back was 16 *per cent.* *bottomry* was 45 *per cent.* And in king William's war, when inſurance to the ſame place was 22 *per cent.* *bottomry* was 55. Treat. of Domin. and Laws of Sea, App. p. 10, ſeq.

Bottomry, if conſidered only as hiring money, would be illegal, and fall under charge of uſury, on account of the exceſſive intereſt: but it is not a mere hiring of money, ſince the lender likewiſe ſtands to the hazard of the voyage. The money here advanced is called *pecunia trajectitia*, as being carried on the lender's hazard, or adventure, beyond the ſeas; ſo that if the ſhip be loſt, the lender loſes all; whereas, when money is lent at intereſt, it is delivered at the peril of the borrower. And the profit here, is merely the price of the loan; but the profit of the other is a reward for the danger and adventure of the ſea, which the lender takes on himſelf, and makes the intereſt lawful. Id. ibid. p. 206, ſeq. Lex Merc. c. 1. p. 37.

Bill of BOTTOMRY is a contract between two perſons, the one borrowing, and the other lending a ſum of money, by which the borrower ſetting forth his intention to make a voyage in a certain ſhip therein named, acknowledges the receipt of a certain ſum of money from the lender, on this condition, that if the ſhip does happily perform her voyage, without any diſaſter by enemies or otherwiſe, then he is to reſtore that ſum to the lender, with an additional ſum, therein expreſſed, for the intereſt, within a certain time after his return; but that if the ſhip be loſt, or taken by enemies or pirates, then the perſon of the borrower to be for ever diſcharged, and the lender to bear the loſs. Treat. of Domin. and Laws of Sea, p. 617. Item, p. 580, ſeq.

BOVATA *Terræ*, in antient law-writers, ſignifies an oxgate of land, or ſo much as may be ploughed in a year with one ox; by ſome reckoned at fifteen acres [a], by others at eighteen [b], by others at twenty [c], and by others at thirteen or twenty ſhillings yearly rent [d].—[a *Dugd.* Monaſt. T. 3. p. 91. b *Du Cange*, Gloſſ. Lat. T. 1. p. 597, ſeq. c *Dugd.* Monaſt. T. 1. p. 657. *Du Cange*, loc cit. d *Sken.* de Verb. Signif. p. 24.]

This is otherwiſe called *bovatus*, and *bovariata terræ*. *Spelm.* Gloſſ. p. 87.

BOUCHE *of Court* (*Cycl.*) was properly an allowance of diet, or belly-proviſion, from the king, or ſuperior lord, to their knights, eſquires, and other retinue, who attended them in any military expedition. *Kenn.* Gloſſ. ad Paroch. Antiq. in voc. *Bowge*.

Thomas earl of Lancaſter retained Sir John de Ewre, to ſerve him with ten men at arms in time of war, allowing them *bowge of court*, with livery of hay and oats, horſe-ſhoes and nails. Sir Hugh Merrill had the ſame privilege for life, on condition of ſerving king Edward II. Idem ibid. p. 378.

BOUGE-*Ravel*, in zoology, the name of a fiſh of the boops kind, caught in the Mediterranean, and brought to ſome of the Italian markets. Its noſe is long and pointed; its back is of a rediſh blue, its tail red, and its belly of a fine ſilvery white. Its whole body is ſhorter and broader than the common kind of boops. *Willughby*, Hiſt. Piſc. p. 317. See BOOPS.

BOUGH, in antiquity.—Green *boughs* made part of the decoration of altars and temples, eſpecially on feſtival occaſions.

Oaken *boughs* were offered to Jupiter; thoſe of laurel to Apollo; of olive to Minerva; myrtle to Venus; ivy to Bacchus; pine to Pan, and cypreſs to Pluto. *Pitiſc.* Lex. Antiq p. 819. voc. *Frondibus.*

Some make them the primitive food of mankind, before acorns were invented. *Senec.* de Ira, 3. 20.

BOUILLON, among farriers, a lump or excreſcence of fleſh, growing either on or juſt by a horſe's fruſh, and making him halt. *Guill.* Gent. Dict. P. 1. in voc.

BOVINA-*Affectio*, a worm creeping between the ſkin and the fleſh, eating its way, ſaid to be frequently found in black cattle. *Sylv.* Med. p. 928. *Ceſt.* Lex. Med. p. 110.

BOVISTA, in botany, a term uſed by ſome authors to expreſs puff-ball, or duſty muſhrooms.

BOULCOLACA, among the modern Greeks, denotes the ſpectre of ſome wicked perſon who died excommunicated by the patriarch, reanimated by the devil, and cauſing great diſturbance among the people.

The word is Greek, βελκολακα, ſometimes alſo written βρικολακος, *broucolacos*. It is ſuppoſed to have been formed from βορβορος, or βορκα, mud, and λακκος, ditch, on account of the filthineſs of the ſight.

The bodies of thoſe who die under the cenſures of the church, according to the traditions of the Greeks, do not putrify or turn to duſt in the grave, but grow harder, tumid, and ſtiff; ſo that when beaten they ſound like a drum. In this ſtate, the devil enters into them, and, carrying them out of their tombs, walks about in this guiſe through the city in the night-time, playing a thouſand tricks with the poor people, knocking at doors, and calling them out by their name; if they happen to anſwer, they certainly die the next day. All their ſafety conſiſts in keeping ſtill and holding their tongues. *Allat.* de quorund. Græc. Opin. n. 12. *Du Cange*, Gloſſ. Græc. T. 1. p. 217.

This, it is to be obſerved, is one of the ſtanding miracles of the Greek church, to which they generally appeal as an abundant proof of the divinity of their faith. Some Romiſh controverſiſts have been terribly gravelled to account for the poſſibility of miracles being wrought in a ſchiſmatical church: it is not quite ſafe for them, abſolutely to deny the miracles of the *boulcolaca*, as fictitious, ſince many of their own, no leſs ridiculous, nor half ſo ſtrongly atteſted, would be hereby endangered. Mem. de Trev. an. 1734. p. 407, ſeq.

BOULIMY, in medicine. See BULIMY.

BOULINIS, or BOULIGNIS, a copper coin ſtruck at Bologna in Italy, equivalent to the *baiocco*. *Savar.* Dict. Comm. T. 1. 440. See BAIOCCO.

BOULUKE, in the military orders of the Turks, a body of the janizaries, with an officer in the place of a colonel at their head, ſent upon ſome particular enterprize; they are ſelected out of the body for this, and, as ſoon as the buſineſs is over, are received again into their former companies. *Pocock*'s Egypt, p. 169.

BOUNCE, in ichthyology, a name given by the people of the weſtern parts of England to a ſpecies of the ſqualus, diſtinguiſhed by Artedi by the name of the rediſh variegated ſqualus, with the pinna ani in the middle ſpace between the anus and tail. This is the fiſh called *ſcymnos* and *ſcylius* by the old writers, and *catulus major* by the later writers. The Italians call it *ſcorzone*. See CATULUS and SQUALUS.

BOUND, in dancing, a ſpring from one foot to the other; by which it differs from a hop, where the ſpring is from one foot to the ſame. It alſo differs from a half coupée, as, in the latter, the body always bears on the floor, either on one foot or the other; whereas, in the *bound*, it is thrown quite from the floor. *Weaver*, Lect. on Dancing, p. 140.

BOUNTY, in commerce, denotes a premium paid by the government to the exporters of certain commodities, on their taking oath, or, in ſome caſes, giving bond, not to reland the ſame in England. See EXPORTATION, *Cycl.*

There are divers *bounties* ſettled by act of parliament, as a *bounty* of one penny *per* ell on the exportation of Britiſh ſail-cloth [a]; and the like on ſilk ribbands and ſtuffs, on ſilk ſtockings, on fiſh and fleſh, on gold and ſilver lace of Britiſh manufacture [b]; and on ſeveral ſpecies of corn, when not exceeding certain prices, at the port of exportation.—[[a] Stat. 12 Ann. 16. §. 2. 5 Geo. I. c. 25. §. 2. [b] V. *Crouch*, View of Brit. Cuſt. T. 1. p. 88, ſeq.]

Queen Anne's BOUNTY, for augmenting poor livings under 80 *l. per annum*, conſiſts of the produce of the firſt-fruits and tenths, after the charges and penſions payable out of the ſame are defrayed. A corporation for management of the ſame was ſettled, *&c.* in 1704. New View of London, ſec. 5. T. 2. p. 641, ſeq.

BOURDIN, with the epithet *grand*, a name given by Bellonius to a genus of univalve ſhell fiſh, commonly known among authors by the name of *auris marina*. See AURIS *Marina*.

BOURDONNE', in heraldry, is underſtood of a croſs, whoſe extremities are turned round like the ends of a pilgrim's ſtaff; more frequently called *pommeté*, *globatus*. Trev. Dict. Univ. T. 1. p. 1169.

BOURGUIGNOTTE, a defenſive weapon wherewith to cover the head; being a kind of caſk open before, and proof againſt either pike or muſket: its name aroſe from the *Bourguignons*, who firſt introduced it. Trev. D. Univ. T. 1. p. 1176.

BOURIGNONISTS, a name given the followers of Antoinette Bourignon, who ſet up a kind of Quietiſm in the Low countries; pretending to be guided by immediate revelation, and contending much for toleration and indifferentiſm in matters of religion. V. Nouv. Rep. Lett. ann. 1685. Apr. p. 423, ſeq. Trev. Dict. Univ. T. 1. p. 1175. See QUIETISM, and MYSTICS, *Cycl.*

BOUSTROPHEDON, in literature, is uſed in ſpeaking of the antient method of writing among the Greeks, wherein the lines were continued forwards and backwards, like the furrows in ploughing. V. *Montfauc.* Palæograph. Græc. p. 554. Mem. Acad. Scienc. T. 3. p. 327. *Fabric.* Bibl. Græc. l. 1. c. 27. T. 1. p. 161.

The word is Greek, βουστροφηδον, compounded of βους, bullock, and στρεφω, I turn.

Pauſanias mentions ſeveral antient inſcriptions written in this manner: the laws of Solon are alſo ſaid to have been thus written; which, as the author laſt cited explains it, is when the ſecond line is turned on the contrary ſide, beginning at the end of the former, thus:

ΕΚ ΔΙΟΣ ΑΡ
ΧΟΣΔΕΥΟΣ

Potter, Archæol. Græc. l. 1. c. 26. T. 1. p. 144.

BOUTADE, in muſic, an irregular flight or movement, without art or ſtudy. *Walth.* Lex. Muſ. p. 110.

The word was alſo formerly uſed for a ſolo on the viol di gamba, thus called as being ſuppoſed to be extemporary.

Richelet ſpeaks of a dance called *boutade*, invented by the famous Bocan, in the reign of Lewis XIII. ſo called from the briſk humorous manner of its beginning; but now out of uſe.

BOUTAEL, in zoology, the name of an Eaſt Indian fiſh, of the lamprey kind, called alſo *neegen oogen*, and, by Mr. Ray, *lampetra Indica*. It grows to above a foot in length, and is ſmooth and ſlippery to the touch, like the eel; from which it differs, however, in the figure of its body. It is of a duſky brown colour, variegated on its back and ſides with yellow ſpots; its belly-fins are purple, and its head is like that of a ſnail, having horns of the ſame kind with thoſe of that inſect. It is caught in lakes, ponds, and other ſtanding waters, and is a very wholeſome and well taſted fiſh.

Its general deſcription ſeems to make it rather of the *muſtela* than the *lampetra* kind; but if, as its name expreſſes, it has ſeveral apertures for the gills, its Dutch name ſignifying nine eyes, it is abſolutely a new genus of fiſhes. *Ray*'s Ichthyogr. Append. p. 4.

BOUVIERA, in zoology, a name given by ſome to a ſmall broad and flat freſh-water fiſh, called more uſually *bubulca*. *Willughby*, Hiſt. Piſc. p. 267. See BUBULCA.

BOW (*Cycl.*)—The art of uſing *bows* is called *archery*, and thoſe practiſed therein, *archers*, or *bowmen*.

The two ends or extremities of a *bow*, to which the ſtring is faſtened, are called its horns, *cornua*. Trev. Dict. Univ. T. 1. p. 531. in voc. *Arc.*

The ſtrength of a *bow* may be calculated on this principle, that the power whereby it reſtores itſelf to its natural poſition, is always proportionate to the diſtance or ſpace it is removed therefrom. *Hook.* Lect. Cutl. de Pot. Reſtit. p. 4, ſeq *Chauv.* Lex. Phil. p. 54 voc. *Arcus*. See SPRING.

The moſt barbarous nations often excel in the fabric of the particular things which they have greateſt neceſſity for in the common offices of life. The Laplanders, who ſupport themſelves almoſt entirely by hunting, have an art of making *bows*, which we, in theſe improved parts of the world, have never arrived at.

Their *bow* is made of two pieces of tough and ſtrong wood, ſhaved down to the ſame ſize, and flatted on each ſide; the two flat ſides of the pieces are brought cloſely and evenly together, and then joined by means of a glue made of the skins of pearch, which they have in great plenty, and of which they make a glue ſuperior in ſtrength to any that we have.

The two pieces, when once united in this manner, will never ſeparate, and the *bow* is of much more force to expel the arrow, than it could poſſibly have been under the ſame dimenſions, if made of only one piece. *Scheffer*, Hiſt. Lapon.

Among the antients, the *bow*-ſtring, called τριχωσις, was made of horſes hair, and hence alſo called ἱππεια; though Homer's *bow*-ſtrings are frequently made of hides cut into ſmall thongs; whence τοξα βοειa. The uppermoſt part of the *bow* to which the ſtring was faſtened, was called κορωνη, being commonly made of gold, and the laſt thing towards finiſhing the *bow* [a]. The Græcian *bows* were frequently beautified with gold or ſilver; whence we have mention of *aurei arcus*; and Apollo is called Αργυροτοξος. But the matter of which they were ordinarily compoſed, ſeems to have been wood; though they were antiently, Scythian like, made of horn, as appears from that of Pandarus in Homer [b].—[[a] *Potter*, Archæol. T. 2. c. 4. p. 43. [b] Iliad, δ. v. 105. *Pott.* loc. cit. p 42.]

There are two kinds of *bows*, different in ſtructure and manner of uſe, *viz.* 1. The common or long *bow* among us, beſt made of Spaniſh or Engliſh yew, ſometimes of withen or elm, which is inferior to the former; the ſhaft is made of birch or brazil,

brazil, with grey or white feathers. 2. The croſs-*bow*, chiefly uſed when, through any imbecillity of the arm or back, the former cannot be managed. School Recr. p. 126, ſeq.

The invention of the *bow* is uſually aſcribed to Apollo, and was firſt communicated to the primitive inhabitants of Crete, who are ſaid to have been the firſt of mortals who underſtood the uſe of *bows* and arrows. And hence, even in latter ages, the Cretan *bows* were famous, and preferred by the Greeks to all others. Some, however, rather chooſe to honour Perſes, the ſon of Perſeus, with the invention of the *bow*; while others father it on Scythes, ſon of Jupiter, and progenitor of the Scythians, who were excellent at this art, and by many reputed the firſt maſters of it. From them it was derived to the Grecians, ſome of whoſe antient nobility were inſtructed by the Scythians in the uſe of the *bow*, which in thoſe days paſſed for a moſt princely education [c]. It was firſt introduced into the Roman army, in the ſecond Punic war [d].—[[c] *Potter*, Archæol. T. 2. l. 3. c. 4. p. 41. [d] *Aquin.* Lex. Milit. T. 2. p. 260. voc. *Sagittarii.*]

Among the later nations, the Engliſh formerly excelled in the uſe of the *bow*. See ARCHERY, *Cycl.*

The Indians ſtill retain the *bow*. In the repoſitory of the Royal Society, we ſee a Weſt Indian *bow* two yards long. *Grew*, Muſ. Reg. Societ. P. 4. ſec. 2. p. 367.

The Scythian *bow* was famous for its incurvation, which diſtinguiſhed it from the *bows* of Greece and other nations; being ſo great as to form an halfmoon, or ſemicircle: whence the ſhepherd in Athenæus, being to deſcribe the letters in Theſeus's name, and expreſſing each of them by ſome appoſite reſemblance, compares the third to the Scythian *bow*; meaning not the more modern character Σ, but the antient C, which is ſemicircular, and bears the third place in ΘΗCΕVC. *Pott.* l. c. p. 42.

BOW, in muſic, denotes a machine that ſerves to play, or give the ſound to viols, violins, and other inſtruments of that kind, by drawing it gently over the ſtrings thereof. See VIOL, VIOLIN, *&c. Cycl.*

The *bow* conſiſts of three parts; the firſt is the ſtick, or wood, to which the hair is faſtened; the ſecond is compoſed of about eighty or an hundred horſe-hairs, or filaments of ſilk; the third is the nut, a ſort of half-wheel, which ſerves to keep the hairs in the due degree of tenſion. *Playf.* Treat. of Muſ. p. 72. It. p. 88. Trev. Dict. Univ. T. 1. p. 539. voc. *Archet.*

The antients do not appear to have been acquainted with *bows* of hair: in lieu hereof they ſtruck their inſtruments with a plectrum; over which our *bows* have great advantage, for giving long and ſhort ſounds, and other modifications, which a plectrum cannot produce. *Malc.* Treat. of Muſ. c. 14. ſec. 2. p. 473. See PLECTRUM.

BOW, in trade and manufactures, denotes a flexible inſtrument, conſiſting of a piece of ſteel or iron, to the two ends of which is faſtened a cat-gut, uſed by ſmiths, watchmakers, and other artificers, for the piercing and turning of divers ſorts of works. *Felib.* Princ. Archit. l. 1. c. 20. p. 176. It. p. 343. *Mox.* Mech. Exer. P. 1. p. 6. It. p. 217. *Savar.* Dict. Com. T. 1. p. 130. voc. *Arbet.*

This is more peculiarly called a *drill-bow*. See DRILL, and DRILLING.

It is ſometimes alſo made of wood, whalebone, and the like. Operators in moſaic have a ſort of *bow* made of a piece of elaſtic wood, with a braſs wire faſtened to the ends of it, which ſerves to ſaw hard and precious ſtones withal. *Felib.* ubi ſup. l. 3. c. 12. p. 317. *Savar.* loc. cit.

Letter-caſters have alſo a *bow*, wherewith to keep the matrix even. See FOUNDERY, *Cycl.*

Bow *of the Gills*, a term uſed by ſome ichthyologiſts, to expreſs the convex part of each gill, each being a long ſemicircle, terminated by many laminæ, which form what is called the leaf. See the article GILLS.

Bows *of a Saddle*, are two pieces of wood laid archwiſe, to receive the upper part of a horſe's back, to give the ſaddle its due form, and to keep it tight.

The fore-*bow*, which ſuſtains the pommel, is compoſed of the withers, the breaſts, the points or toes, and the corking. See the article WITHERS, *&c.*

The hind-*bow* bears the trouſſequin, or quilted roll. See TROUSSEQUIN, *Cycl.*

The *bows* are covered with ſinews, that is, with bulls pizzles beaten, and ſo run all over the *bows*, to make them ſtronger. They are likewiſe ſtrengthened with bands of iron, to keep them tight. It is on the lower ſide of the *bows* that the ſaddle-ſtraps are nailed; the uſe of which is to make faſt the girths. Vid. *Guill.* Gent. Dict. P. 1. in voc.

Bow *of a Ship*.—The proportioning of the *bow* is of great importance to the ſailing of the ſhip; it being this part that firſt breaks off the ſea, and on which is, in a manner, all the bearing of the ſhip. If the *bow* be too broad, the veſſel will not make her way eaſily through the water, but carry a great load of dead water before her; and if it be too lean or thin, ſhe will pitch or beat much into a hollow ſea, for want of breadth to bear her up. *Manwayr.* Sea D. p. 13.

Bow-*Dye*, a new kind of ſcarlet red, ſuperior to madder, but inferior to the true ſcarlet grain for fixedneſs and duration. *Boyle*, Phil. Works abr. T. 1. p. 136. *Hought.* Coll. T. 2. p. 369.

Bow-*Grace*, in the ſea language, a frame or compoſition of old ropes, or juncks of cables, uſed to be laid out at the *bows*, ſtems, and ſides of ſhips, to preſerve them from great flakes of ice, chiefly when they ſail northwards or ſouthwards. *Botel.* Sea Dial. 4. p. 195.

Bow-*Cap*, among botaniſts, one of the forms or poſitions of the leaves of flowers, wherein the leaves are laid ſomewhat converſely over each other, but not plaited. *Grew*, Anatomy of Plants, l. 1. c. 9. §. 16. p. 31. See FLOWER, and LEAF.

Bow-*Net*, or *Wheel*, an engine for catching fiſh, chiefly lobſters and crawfiſh, made of two round wicker-baſkets, pointed at the end, one of which is thruſt into the other; at the mouth is a little rim, four or five inches broad, ſomewhat bent inwards [a]. It is alſo uſed for catching ſparrows [b].—[[a] *Savar.* Dict. Com. T. 2. p. 842. voc. *Naſſe.* [b] Trev. Dict. Univ. T. 4. p. 31. voc. *Naſſe.*

Bow-*ſprit*, or BOLT-*ſprit*.—To the *bolt*-ſprit is faſtened all the ſtayes belonging to the fore-maſt, fore-top-maſt, and fore top-gallant, *&c.* with their bowlings and jacks, beſides the riggings which belong to its own ſails.

If a ſhip ſpend her *bolt*-ſprit, or, as the term is, if the *bolt-ſprit drop by the board*, the fore-maſt will quickly follow, if it be a rough ſea, eſpecially in ſailing by a wind. *Manwayr.* Seam. D. p. 11.

BOWELLING, *Exenteratio*, the act of pulling out the intrails of an animal. *Du Cange*, Gloſſ. Lat. T. 2. p. 315. in voc. *Exenteratio.*

Bowelling makes part of the proceſs of embalming. See EMBALMING, *Cycl.* and *Suppl.*

BOWELLING is alſo a part of the puniſhment of traitors in England, who are to have their *bowels* ripped open, torn forth, and burnt before them [a]. *Fractioni, ſuſpendio, decollationi, exenterationi, & quaterizationi adjudicavit. Knyght. ſub Edw.* II. in the ſentence of Hugh Spencer [b].—[[a] *Walſingh.* in Rich. II. [b] *Du Cange*, Gloſſ. Lat. T. 1. p. 315. voc. *Exenteratio.*]

BOWER, (*Cycl.*) in gardening, a ſhady place, under covert of trees, or branches interwoven.

A *bower* differs from an arbour, in that the latter is always built long and arched, but a *bower* either round or ſquare at the bottom, and made with a ſort of dome or cieling at the top. See ARBOUR, *Cycl.*

BOWET, or BOWESS, among falconers, denotes a young hawk when ſhe draws things out of her neſt, and covets to clamber on the boughs. Dict. Ruſt. T. 1. in voc.

BOWGE *of Court*. See BOUCHE *of Court.*

BOWLDER-*Stones*, a ſpecies of ſmall ſtones, of an indeterminate texture and figure, generally roundiſh, found on the ſhores of the ſea and banks of rivers. *Woodw.* Meth. of Foſſ. c. 2. p. 13.

Bowlders, or *bowlder*-ſtones, are only lumps and fragments of ſtones or marble, broken from the adjacent cliffs, and rounded, by being bowled, and tumbling to and again by the action of the water; whence the name *bowlder*-ſtones, as being formed by an action like that of a bowl, and thereby reduced to the ſhape of one.

Neither the *bowlders* nor rubble-ſtones are ever inveſted with an exterior ſtrong cruſt or ſkin: 'tis plain from the manner of their formation they cannot. This is one mark by which they are diſtinguiſhed from flints, pebbles, or the other native nodules, which were formed before the ſubſiding of the matter of the ſtrata, and are always covered with ſuch a cruſt or ſkin, unleſs it have been worn off. *Woodw.* Meth. of Foſſils, c. 2. p. 13.

BOWLINE, or BOWLING, (*Cycl.*) in ſea-affairs.—The antients appear to have been unacquainted with the uſe of the *bowling*; which is the reaſon they always ſailed before the wind. *Manwayr.* Sea. Dict. p. 14.

By means of this rope, a ſail may be drawn away, and the wind, when received ſideways, prevented from ſwelling it too much, which would hinder the ſhip's run inſtead of forwarding it: it alſo ſerves to hinder the wind from eſcaping or blowing by on the ſide they are drawn on. *Aubin*, Dict Marin. p 114. voc. *Bouline. Ozan.* Dict. Math. p. 300. *Fæſch.* Lex. Milit. p. 104, ſeq. voc. *Boelinen.*

The phraſes peculiar to this rope are; *ſharp the bowline*, i. e. hale it taught, or pull it hard; *hale up the bowline*, i. e. pull it harder forward on; *check*, *eaſe*, or *run up the bowline*, i. e. let it be more ſlack.

BOWLINE *Bridles*, are the ropes by which the *bowline* is faſtened to the leech of the ſail. *Botel.* Sea. Dial. 4. p. 159. *Guill.* Gent. Dict. P. 3. voc. *Sail.*

BOWLING, among gameſters, the act or art of throwing bowls.

Bowling, among us, is chiefly the name of a game or exerciſe, practiſed either in open places, as bares and *bowling*-greens, or in cloſe *bowling*-alleys.

The ſkill of *bowling* depends much on a knowledge of the ground, and the right choice of a bowl ſuitable to it: for cloſe alleys the flat bowl; for green ſwards plain and level, the bowl as round as a ball, are preferred. Sportſman's Dict. T. 1. in voc.

The terms uſed in *bowling*, are, to *bowl wide*, which is when the bias does not hold, or is not ſtrong enough; *narrow*, when it is too ſtrong, or holds too much; *finely bowled*, is when the ground is well choſen, and the bowl paſſes near the block, even

though

though it go much beyond it; *bowling through*, or a *yard over*, is done in order to move the block; an *over-bowl*, that which goes beyond it; a *bowl laid at hand*, is that put down within the gameſter's reach, to be in the way of the next bowler, and hinder his having the advantage of the beſt ground; *bowling at length*, neither bowling through nor ſhort; a *dead length*, a juſt or exact one; *throwing* or *flinging*, is diſcharging a bowl with a ſtrength purpoſely too great for a length, in order to carry off either the block or ſome near bowl; *bowl-room*, or *miſſing-wood*, is when a bowl has free paſſage, without ſtriking on any other; *get off*, is when a bowl being narrow, is wanted to be wider; *bowl beſt at block*, that neareſt the block; *drawing a caſt* or *bowl*, is to win it by *bowling* nearer, without ſtirring either the bowl or block; a bowl is ſaid to *rub*, when it meets with ſome obſtacle in the ground, which retards it motion, and weakens its force; *it is gone*, when far beyond the block.

Block, ſignifies a little bowl laid for a mark.

Mark, is a proper *bowling* diſtance, not under ſo many yards; and being at leaſt a yard and half from the edge of the green.

Ground, a bag or handkerchief laid down to mark where a bowl is to go.

Lead, the advantage of throwing the block, and *bowling* firſt.

Caſt, is one beſt bowl at an end.

End, a hit, or when all the bowls are out.

The *game*, or *up*, is five caſts, or beſt bowls.

BOWLING-*Green*, in gardening, a kind of parterre in a grove, laid with fine turf, requiring to be frequently mowed, laid out in compartments of divers figures, with dwarf-trees, and other decorations. Theor. & Prat. du Jardin, P. 1. c. 7. p. 59, ſeq. *Wolf.* Lex. Math. p. 268. voc. *Boulingrin.*

Bowling-greens are of Engliſh origin, but have been adopted by the French and Italians, who have them only for ornament; being unacquainted with, or not fancying the exerciſe, on account of which they were firſt made in England.

BOWLING, (*Cycl.*) in ſea-affairs. See BOWLINE.

BOWSE (*Cycl.*) is chiefly uſed by the gunners when they hale upon their tackles, to thruſt a piece out of a port; in which caſe they cry, *bowſe hoa*, i. e. pull more upon the tackle; alſo when there is occaſion to pull more on the tackle than otherwiſe, they ſay, *bowſe upon the tackle. Manwayr.* Sea. Dict. p. 14.

BOWYERS, artificers whoſe buſineſs is to make bows. See the article BOW, *Cycl.* and *Suppl.*

In which ſenſe, *bowyers* ſtand diſtinguiſhed from fletchers, who made arrows.

The *bowyers* company was incorporated in 1622, and conſiſts of a maſter, two wardens, twelve aſſiſtants, and thirty-two on the livery. New View of Lond. ſec. 3. T. 2. p. 598.

BOX, *Buxus*, in botany. See BUXUS.

Box is alſo uſed to denote a caſe for holding things; of which there are ſeveral kinds, as a ſalve *box*, *pyxis unguentaria*, that uſed by ſurgeons to carry with them. *Hildan*, in Ciſt. Milit. p. 1041. *Caſt.* Lex. Med. p. 622. voc. *Pyxis.*

Strong Box, a coffer of iron, or of thick wood, ſecured with iron plates, and a lock with ſeveral bolts, difficult either to be opened or forced; chiefly uſed for putting money in. Trev. Dict Univ. T. 1. p. 1897. voc. *Coffre.*

Dice-Box, a narrow deep cornet, channelled within, wherein the dice are ſhaken and thrown.

This anſwers to what the Romans called *fritillus*; whence *crepitantes fritilli*, and, in Seneca, *reſonante fritillo.* The ſame author alſo uſes *concutere fritillum*, figuratively for playing. V. *Hyde*, Hiſt. Nerdilud. ſec. 5. p. 27. *Pitiſc.* Lex. Ant. T. 1. p. 818 voc. *Fritillus.*

Beſides the *fritillus*, the Romans, for greater ſecurity, had another kind of *dice-box*, called *pyrgus*, πυργος, and ſometimes *turricula.* It was placed immoveable in the middle of the table, being perforated or open at both ends, and channelled alſo within: over the top was put a kind of funnel, into which the dice were caſt out of the *fritillus*; whence deſcending, they fell through the bottom on the table; by which all practiſing on them with the fingers was effectually prevented [a]. For want of ſome contrivance of this kind, our ſharpers have opportunities of playing divers tricks with the *box*, as palming, topping, ſlabbing, &c. [b] — [[a] *Hyde*, lib. cit. p. 28, ſeq. *Pitiſc.* T. 2. p. 573. voc. *Pyrgus.* [b] Comp. Gameſt. p. 12.]

Box-*Money*, at hazard, is that which is paid the box-keeper, or him who furniſhes the *box* and dice. Betters have the advantage over caſters, as they have no *box*-money to pay, which at long run would beggar the moſt fortunate player. Hence ſome gameſters will never caſt, to ſave the expence of *box*-money. Myſt. of Mod. Gam. p. 22, and 24.

Coach-Box, a place under the coachman's ſeat, wherein he puts what may be wanted for the ſervice of the coach or horſes. Trev. Dict. Univ. T. 1. p. 1897. voc. *Coffre.*

Box *and Needle*, in navigation, is the ſame with the compaſs. See COMPASS, NEEDLE, &c. *Cycl.*

Box *of a Watch*, the outer caſe or cover. See WATCH, *Cycl.*

Box *of a Wheel*, the aperture wherein the axis turns. *Savar.* Dict. Com. T. 1. p. 378. voc. *Boeſte.*

Box is ſometimes alſo uſed for a kind of meaſure, though variable according to the commodity. Thus the *box* of quickſilver contains from one to two hundred weight; of prunellas, about fourteen hundred; of rings for keys, two groſs, &c. Dict. Ruſt. T. 1. in voc.

Boxes in a playhouſe, are little apartments behind and aſide of the pit. We ſay, the front-*boxes*, the ſtage-*boxes*, &c.

Box-*Iron*, a kind of caſe wherein the heaters are incloſed for ironing linen.

Box, in zoology, a name given by ſome authors to a ſmall fiſh caught in the Mediterranean, and more uſually known by the name of *boops*, from the largeneſs of its eyes. See the article BOOPS.

Box *of a Plow*, a name by which the farmers call that croſs piece in the head of the plough, through which the ſpindle of the two wheels paſſes, and to which are faſtened the two crow-ſtaves, ſerving, by their holes, to regulate the height of the beam, the tow-chain below, the ſtake which ſupports the bridle-chain above, and the gallows behind, into which are fixed the wilds with the crooks of iron, for the drawing the whole plough along. This part of the plough is placed croſs-wiſe with the beam, and ſtands much below it, and not far from the ground. *Tull*'s Huſbandry. See the article PLOUGH, *Cycl.* and *Suppl.*

Box-*Galls*. See GALLS *of the box.*

Box-*Puceron*. See GRUB *of the box.*

BOXERS, a kind of athletæ, who combat or contend for victory with their fiſts.

Boxers amount to the ſame with what, among the Romans, were called *pugiles*. *Voſſ.* de Quat. Art. Popul. c. 3. n. 80. *Pollux*, p. 30.

The antient *boxers* battled with great force and fury, inſomuch as to daſh out each other's teeth, break bones, and often kill each other. *Aquin.* Lex. Milit. T. 2. p. 209. voc. *Pugil. Voſſ.* de Quat. Art. Popul. c. 3. n. 83. p. 31. *Tournef.* Voy. du Levant, T. 2. l. 15. p. 70.

The ſtrange diſfigurements theſe *boxers* underwent were ſuch, that frequently they could not be known, and rendered them the object of many railleries. In the Greek anthology, there are four epigrams of the poet Lucilius, and one of Lucian; wherein their diſfigurements are pleaſantly enough expoſed. Anthol. Græc. l. 2. ep. 1, 2, 3, 10, 14. Mem. Acad. Inſcr. T. 4. p. 361, ſeq.

BOXING, the exerciſe of fighting with the fiſts, either naked, or with a ſtone or leaden ball graſped in them.

In which ſenſe, *boxing* coincides with the πυγμικη of the Greeks, the *pugillatus* of the Romans, and what, on our amphitheatres, is ſometimes called *trial of manhood.* When the champions had σφαιραι, or balls, whether of lead or ſtone, it was properly denominated σφαιρομαχια. *Potter*, Archæol. Gr. l. 2. c. 21. vol. 1. p. 443.

The antient *boxing* differed from the *pugna cæſtuum*, in which the combatants had leathern thongs on their hands, and balls to offend their antagoniſts [a]; though this diſtinction is frequently overlooked, and fighting with the cæſtus ranked as a part of the buſineſs of pugiles: in which view, we may diſtinguiſh three ſpecies of *boxing*; the firſt, where both the hands and the head were abſolutely naked, as is practiſed among us; the ſecond, where the hands were armed with ſpheræ, but the head naked; the third, where the head was armed with a kind of cap or cover, called *amphotides*, chiefly to defend the ears and temples, and the hands alſo furniſhed with cæſtuſes [b].— [[a] *Aquin.* Lex. Milit. T. 2. p. 209. voc. *Pugil.* [b] *Voſſ.* de Quat. Art. Popul. c. 3. n. 81, ſeq. p. 31. Mem. Acad. Inſcr. T. 4. p. 366.]

Boxing is an antient exerciſe, having been in uſe in the heroic times, before the invention of iron or weapons. *Tournef.* Voy. T. 2. Lett. 15. p. 70.

Thoſe who prepared themſelves for it, uſed all the means that could be contrived to render themſelves fat and fleſhy, that they might be better able to endure blows; whence corpulent men or women were uſually called *pugiles*, according to Terence; *Siqua eſt habitior paulo, pugilem eſſe aiunt. Pott.* l. c. *Aquin.* ubi ſupra, p. 210.

M. Burette has given the hiſtory of the antient pugilate, or *boxing*, with great exactneſs. V. Mem. Acad. Inſcr. T. 4. p. 353, ſeq.

BOXING, among ſailors, is uſed to denote the rehearſing the ſeveral points of the compaſs in their proper order.

BOXING is alſo uſed for the tapping of a tree, to make it yield its juice. See BLEEDING, SAP, &c.

The *boxing* of maple is performed by making a hole with an ax or chiſſel into the ſide of the tree, about a foot from the ground; out of it flows a liquor from which ſugar is made. V. Phil. Tranſact. N° 364. p. 27. See SUGAR.

BOXUS, in natural hiſtory, a name given by ſome authors to the common miſletoe. See the article MISLETOE.

BOYER, in navigation, a kind of Flemiſh ſloop, or ſmall veſſel of burden, having a boltſprit, a caſtle at each end, and a tall maſt; chiefly fit for the navigation of rivers, and, in many of its parts, reſembling a ſmack. Vid. *Aubin*, Dict. Mar. p. 120, ſeq.

The *boyer* has a double bottom, and a forked maſt, that it may run the better with the bowling-line, without driving. *Fæſch.* Lex. Milit. p. 116. *Ozan.* Dict. Math. p. 274.

BOYES, an order of American prieſts, or magicians, uſed by the ſavages for calling up their gods, either to be revenged on thoſe who have done them any injury, or to be cured of ſome diſeaſe,

diſeaſe, wherewith they are infeſted, or to drive out ſome devil.

The *boyes* are alſo conſulted with regard to the event of their wars; in which view, they are much on the footing of the antient augurs and Pythians. Each *boye* has its peculiar deity, whom he invokes by certain forms of words, ſung in a quaint tone, accompanied with the fumes of tobacco, which is burnt on this occaſion as a perfume, whoſe ſcent will draw the very gods out of their holds.

When the *boyes* are conſulted concerning any diſorder which a perſon labours under, they tell him it is the god of this perſon or that, who has brought it on him: which is the ſource of infinite quarrels for revenge. *Corn.* Dict. des Arts, T. 1. p. 134.

BOYEUPECANGA, in zoology, the name of a very large ſerpent, diſtinguiſhed by this name on account of certain prominences on its back. It is a very large and remarkably thick ſerpent, and of very fatal poiſon. *Ray*'s Syn. An. p. 330.

BOYUNA, in zoology, the name of an American ſpecies of ſerpent. It is very long and ſlender, and all over of a black colour. It has exactly the ſmell of a fox, but that ſo ſtrong, that no body can endure to be near it. *Ray*'s Syn. An. p. 330.

BRABANCIONES, in middle age writers, a kind of Netherland ſoldiery, infamous for rapine, being little better than commiſſioned banditti, who hired themſelves to fight for whoever could pay them beſt. *Aquin.* Lex. Milit. p. 135, ſeq. Trev. Dict. Univ. T. 1. p. 1195. voc. *Brabancon.*

The word is variouſly written in the hiſtorians of thoſe days; as *Brabanconii* [a], *Brabanciones*, *Brebantiones*, *Brebantini*, *Brebiciones*, *Brebenzones*, *Brabanceni*, and *Braibanceni* [b]. Denominations all given them from the country of Brabant, which was the chief nurſery of thoſe troops. They are alſo frequently confounded with the *Routiers*, *Roturiers*, *Ruptarii*, *Rutarii*, *Coteraux*, &c.—[a *Daniel*, Hiſt. de la Mil. Franc. l. 3. c. 8. *Richel.* T. 1. p. 233. b *Du Cange*, Gloſſ. Lat. T. 1. p. 599.]

BRABE, an herb mentioned by Oribaſius; the deſcription he gives of which is, that it grows a cubit high, ſhooting forth branches on each ſide, with leaves reſembling thoſe of the lepidium in ſhape, but ſofter and whiter, and at the top bearing an umbel of flowers like the elder. *Oribaſ.* Med. Coll. l. 11.

BRABEJUM, in the Linnæan ſyſtem of botany, a genus of plants, the characters of which are theſe: there is no calyx; the flower is compoſed of four ſtrait obtuſe petals, in their lower part ſtanding erect, and forming together a ſort of tube, and in their upper bending back; theſe all fall before the ripening of the ſeed; the ſtamina are four capillary filaments, inſerted on the bottoms of the petals ſomething ſhorter than the flower, and terminated by ſmall antheræ, which open ſideways; the germen of the piſtillum is extremely ſmall and hairy; the ſtyle is ſlender, of the ſame length with the ſtamina, and ſomewhat thicker in its upper than in its lower part; the ſtigma is ſimple; the fruit is a dry, oval, hairy drupe; the ſeed is an oval nut. *Linnæi*, Gen. Plant. p. 52.

BRABEUTES, or BRABEUTA, in antiquity, an officer who preſided at the public games, and decreed the prizes to the victors. *Suet.* in Ner. c. 53. *Lipſ.* de Amphitheat. c. 20. *Fab.* Agoniſt. l. 1. c. 23.

The word is Greek, Βραβευτης, formed from βραβειον, prize or reward. The Latins called him *deſignator* and *munerarius*. *Ulp.* Lex. Athlet. 4 D. de his qui notantur infamia. *Fab.* Theſ. p. 373. *Pitiſc.* Lex. Antiq. T. 1. p. 292. *Aquin.* Lex. Milit. T. 1. p. 136. *Calv.* Lex. Jurid. p. 126. *Suic.* Theſ. Eccleſ. T. 1. p. 707. voc. Βραβειον.

The generality of writers confound the *Brabeutes* with the *Agonotheta*, between whom there however appears to have been this difference, that the former preſided at the gymnic combats, the latter at the ſacred ones. *Pollux*, Onomaſt. l. 3. c. ult. *Briſſ.* de Verb. Signif. p 86. See AGONOTHETA.

BRACE, in writing, a term uſed to ſignify a certain crooked ſtroke or figure of a pen, made at the end of two or more lines in an account, which expreſs two or more articles charged with one and the ſame ſum at the end, which is uſually placed at the end, and in the center of the *brace*, and expreſſes that the ſum there ſpecified is the joint price of both the articles mentioned in the lines connected by the *brace*; as in the following example.

Debts due to me, ſome of which are good, others dubious.

Good Debts.			*Bad Debts.*		
From Mr. James *	300	} 500	From Mr. John * *	400	} 900
From Mr. Peter *	200		From Mr. Nicolas *	500	

Savar. Dict. Comm.

BRACE (*Cycl.*) is alſo uſed for a meaſure taken from the length of the arm, when extended; and is uſed in divers cities of Italy, in lieu of the foot or yard. Its length is various; the *brace* of Bergamo, according to Scamozzi, is nineteen Paris royal inches and a half; according to M. Petit, ſixteen inches two thirds; the *brace* of Boulogna is fourteen inches; that of Breſſe, ſeventeen inches ſeven lines and a half, according to Scamozzi; and according to M. Petit, ſeventeen inches five lines; the Mantuan *brace* is ſeventeen inches four lines; that of Milan, twenty-two inches; thoſe of Parma, twenty inches one third; of Sienna, twenty-one inches two thirds; of Florence, twenty inches two thirds, according to Maggi; twenty-one inches four lines and a half, according to Lorini; twenty-two inches two thirds, according to Scamozzi, and twenty-one inches one third, according to Picart. *Davil.* Explic. Term. Archit. p. 434. voc. *Braſſe*. *Savar.* Dict. Comm. T. 1. p. 648. *Aubin.* Dict. Mar. p. 123. voc. *Braſſe*

BRACELET, an ornament uſually worn around the wriſt.

The word is French, *bracelet*; which Menage derives further from *braceletum*, a diminutive of *bracile*, a word occurring in writers of the Juſtinian age; all formed from the Latin *brachium*, arm. Vid. *Menag.* Orig. p. 124.

Bracelet amounts to the ſame with what was called by the antients, *armilla*, *brachiale* [a], *occabus*, ψαλλιον, χειρικον [b], in the middle age, *boga*, *bauga*, *armiſpatha* [c], βραχιαλιον, βραχιαριον [d], &c.—[a *Fab.* Theſ. p. 374. *Pitiſc.* Lex. Antiq. T. 1. p. 293. voc. *Brachiale*. b Mem. Acad. Inſcr. T. 4. p. 140. c *Du Cange*, Gloſſ. Lat. T. 1. p. 511. voc. *Bauga*. d Id Gloſſ. Græc. T. 1. p. 225. *Meurſ.* Gloſſ. Græc. Barb. p. 121.]

Among the antient Romans, the men as well as the women wore *bracelets*; but the latter, it is to be obſerved, never wore them till they were betrothed. Vid. *Pitiſc.* Lex. Ant. T. 1. p. 179. *Calv.* Lex. Jur. p. 90. voc. *Armilla*.

Bracelets were at firſt properly military ornaments or rewards, frequently conferred among the antients, by generals and princes, on thoſe who behaved gallantly in fight [e]. They became afterwards arbitrary decorations, aſſumed at pleaſure; and are ſometimes ſaid to have been worn for health as well as ornament [f]; and particularly as amulets, to break the force of charms and faſcinations [g].—[e *Kenn.* Rom. Ant. Not. P. 2. l. 4. c. 16. p. 221. *Aquin.* Lex. Milit. T. 1. p. 136. voc. *Brachialia*. It. p. 84. voc. *Armilla*. f *Suet.* in Galb. c. 3. *Keuch.* Not. ad Seren. p. 272. *Caſt.* Lex. Med. p. 354. voc. *Galbeum*. g *Scribon.* n. 16. *Caſt.* Lex. Med. p. 742. voc. *Verua*. *Du Cange*, Gloſſ. Lat. T. 1. p. 337. voc. *Armillam*.]

See the article AMULET.

The northern people uſed alſo to ſwear on their *bracelets*, to render contracts more inviolable.

The matter whereof the antients made their *bracelets* was different, as it ſtill remains; the moſt uſual among the Romans was gold or ſilver, which we ſometimes find further enriched with gems [h]. The antient Danes and Saxons chiefly uſed iron or braſs *bracelets* [i].—[h *Calv.* Lex. Jurid. p. 949. voc. *Viriola*. i *Plott*, Nat. Hiſt. Oxford. c. 10. §. 107. p. 353, ſeq.]

They were put on divers parts of the garments, moſt commonly from the ſhoulder to the fingers, either on the right or left arm, ſometimes even about the neck; though theſe are not ſo properly denominated *bracelets* as *collars*. *Caſt.* Lex. Med. p. 41. voc. *Amphidion*.

Capitolinus aſſures us, that Maximin had a thumb ſo large, that he wore his wife's *bracelet* on it as a ring.

Among the Romans we meet with divers ſpecies and denominations of *bracelets*; as the *brachiale*, which covered the whole length of the arm; the *dextrale*, or *dextrocherium*, only the wriſt [k], and that only of the right arm; *viria*, or *viriola*, peculiar to the male ſex [l]; *ſpinther*, to the women, being worn on the left arm [m]; *verua*, uſed as an amulet [n]; *amphidion*, worn either on the arm or about the neck [o]; *calbeum*, or *galbeum*, worn by generals in their triumphs, [p] &c.—[k *Pitiſc.* loc. cit. *Du Cange*, Gloſſ. Lat. T. 2. p. 73. voc. *Dextrale*. It. p. 76. voc. *Dextrocherium*. l *Pitiſc.* T. 2. p. 1098. voc. *Viriæ*. m Id. ibid. p. 829. voc. *Spinther*. n *Caſt.* Lex Med. p. 742. voc. *Verua*. o *Caſt.* p. 41. voc. *Amphidion*. p *Pitiſc.* T. 1. p. 320. voc. *Calbei*.]

Bartholin has a treatiſe expreſs on the *bracelets* of the antients. *Tho. Barthol.* Sched. de Armillis Veterum, Amſt. 1675. 12mo. *Bracelets* are ſtill much uſed by the ſavages of Africa and America, made of metal, glaſs-beads, ſhells, and the like [q]. The negroes on the coaſt of Guinea uſe a ſort of *bracelets* made of ſhells called *bouges*, and in Aſia *cauris*; of which they are ſo exceſſive fond, as not only to give the richeſt commodities in exchange for them, but ſometimes even their fathers, wives, or children [r].—[q Vid. *Grew*, Muſ. Reg. Societ. P. 4. ſect. 3. p. 370, and p. 373. *Crouch*, View of Brit. Cuſt. T. 1. p. 122. r *Savar.* Dict. Com. T. 1. p. 464.]

BRACELET is alſo uſed in anatomy, to denote the circular ligament which inveſts the carpus, called alſo *ligamentum annulare*.

BRACELETS, in ſome antient law books, denote beagles, or hounds of the ſmaller kind. Pat. Rich. II. p. 2. m. 1. Rex conſtituit J. L. magiſtrum canum ſuorum vocatorum *bracelets*. *Jac.* Law Dict. in voc.

BRACHERIUM, or BRACHERIOLUM, a kind of ſteel bandage worn about the hips, and uſed for the retention and cure of ruptures. *Caſt.* Lex. Med. p. 111. *Du Cange*, Gloſſ. Lat. T. 1. p. 602. voc. *Bracheriolum*. Trev. Dict. Univ. T. 1. p. 1214. voc. *Brayer*.

BRACHITÆ, an antient branch of Manichees, who appeared in the third century. *Prateol.* Elench. Hæreſ. l. 2. n. 33. Trev. Dict. Univ. T. 1. p. 1198. See MANICHEES, *Cycl.*

BRACHIÆUS, (*Cycl.*) in anatomy, a name given by Spigelius, and others, to a muſcle of the arm, generally known at this time under the name of *brachialis internus*.

BRACHIALIS, in anatomy, an oblong, thick, and broad muscle, lying immediately on the anterior part of the lower half of the os humeri; the upper part of it is forked, or sloped, and, at the bending of the joint of the elbow, the lower part of it contracts. It is fixed to the surface of the os humeri by a great number of fleshy fibres, from the lower insertion of the deltoides almost down to the two fossæ at the lower extremity of the bone, and from one edge of the foreside of this lower extremity to the other. The fibres are for the most part longitudinal; those nearest the surface of the muscle being longest, the more internal growing gradually shorter.

The lateral fibres are a little oblique, and this obliquity increases as they descend lower. These lateral fibres are partly fixed in the intermuscular ligaments of the os humeri; of which ligaments, that which lies toward the internal condyle, is longer and broader than that toward the external. The lowest of these fibres are very oblique, and form on each side a kind of small separate fasciculus. In passing over the joint, all these fibres contract in breadth, and afterwards end in a strong flat tendon, inserted in the muscular impression, which is directly below the coronoide apophysis of the ulna.

The sloped or forked extremity of this muscle embraces the large tendon of the deltoides; the internal part of the fork meets the inferior insertion of the coraco-*brachialis*, and the foreside of the whole muscle is covered by the two fleshy bodies of the biceps. *Winslow*'s Anatomy, p. 187.

BRACHIUM, in anatomy, a bone more usually called *humerus*. *Heist.* Comp. Anat. §. 337. p. 190. *Cast.* Lex. Med. p. 111. *Gorr* Med. Defin. p. 79. voc. Βραχιον. See the article HUMERUS.

BRACHIUM *moventium secundus*, in anatomy, a name given by Vesalius, and other of the old writers, to the muscle now generally called *deltoides*.

BRACHIUM *movens quartus*, in anatomy, the name by which Vesalius calls the muscle now generally known under the name of *latissimus dorsi*. Fallopius, and many others, have also called it *quartus humeri*.

BRACHII *tertius*, in anatomy, a name given by Vesalius and others to a muscle since called, from its shape, *teres major* and *rotundus major*.

BRACHMANS (*Cycl.*) are also called *bragmanes* by Palladius. *Pallad.* de Gent. Ind. & Brachman. ap. *Lehman.* Observ. ad Budd. Philos. c. 4. p. 223.

They differ from the *Germanes*, as Strabo calls them [a], or the *Sarmanæ*, as Clemens Alexandrinus [b], or *Samanæi*, as Porphyry calls them [c], who were another branch or species of gymnosophists, who had ceremonies and opinions peculiar to themselves.—[[a] *Strabo*, Rer. Geogr. l. 15. p. 1038. [b] *Clem. Alex.* Strom. l. 1. p. 359. [c] *Porph.* de Abstin. l. 4. §. 17. p. 167.

There appear still some remains of the antient *brachmans* in the East, under the denomination of *bramins*. See BRAMINS.

Palladius [d], Ambrosius [e], and Fabricius [f], have discourses express on the *brachmans*.—[[d] *Pallad.* de Gent. Ind. & Brachmanibus, Gr. Lat. Lond. 1668. 4°. [e] *Ambros.* de Morib. Brachman published with the former by Ed. Bisse, together with another anonymous piece concerning the *brachmans*. [f] *Alb. Fabric.* de Brachmanibus. Hamb. 1703. 4°. *Budd.* Comp. Hist Philos. c. 3. §. 20. p. 61. See also *Struv.* Bibl. Phil. c. 3. §. 3. p. 79, & 81. *Stoll* Introd. ad Hist. Liter. P. 2. c. 1. §. 21. p 429, seq.]

BRACHYCOLON, is when one member of a period is shorter than another.

In which sense, the word stands contradistinguished from *isocolon*, where the members are equal, or consist of the same number of syllables. *Micræl.* Lex. Phil. p. 222.

BRACHYLOGY, Βραχυλογια, in rhetoric, the expressing any thing in the most concise manner. This, so far as consistent with perspicuity, is a virtue and beauty of style; but if obscurity be the consequence, which is often the case, it becomes a blemish and inexcusable defect. Vid. *Voss.* Rhet. l. 4. c. 1. §. 12. p. 34.

Quintilian gives us an instance of *brachylogy* from Sallust: *Mithridates corpore ingenti perinde armatus*; Mithridates, as it were, armed with the hugeness of his stature. *Quint.* Instit. Orat. l. 8. c. 3. *Bouhours*, Man. de bien Pens. Dial. 4. p. 379. See BREVITY.

BRACHYPOTÆ, or BRACHYPOTI, those who drink but little and at long intervals.

The word is Greek, βραχυποται, or βραχυποτ-τι, and sometimes also signifies those who drink seldom, though in greater quantity. *Cast* Lex. Med. p. 111.

BRACHYPTERA, in zoology, the name of a genus of birds, of the class of the hawks, distinguished by the shortness of their wings.

The word is derived from the Greek, βραχυς, short, and πτερον, a wing.

The hawks of this genus have their wings so short, that, when folded, they do not reach nearly to the end of the tail. Of this genus are the goss hawk, the sparrow hawk, and the three kinds of the butcher bird. *Willughby*, Ornithol. p. 36.

BRACHYTELOSTYLA, in natural history, the name of a genus of crystals.

The word is derived from the Greek, βραχυς, short, τελειος, perfect, and στυλος, a column, and expresses a perfect crystal, with a short intermediate column.

The bodies of this genus are crystals composed of a short hexangular column, terminated at each end by an hexangular pyramid.

Of this genus there are only six known species. 1. A bright colourless one, with long pyramids; this is found on the shores of rivers, and lodged in the strata of stone, but no where adhering to them, and is not yet known to be found anywhere but in Bohemia. 2. A bright brown one, with short pyramids and an extremely short column; this is found on the shores of rivers in the East Indies, and in Germany, in the sides and bottoms of hills. 3. A yellow very bright one, with regular pyramids, and a short column; this is very common in Silesia and Bohemia, and is found in some parts of England and in Ireland. 4. A bright colourless one, with a short column, gibbous in the middle; this is common on the shores of rivers in Germany, and is often found in the earth on the sides of hills. 5. A dull kind, with large pyramids and an extremely short and depressed column; this is a rare species in England, but is common in the German cabinets, being found in many parts of that country, in the strata of stone, and lying in clusters of forty or more specimens together, though no where cohering either to one another, or to the stone. And, 6. A small bright and blackish kind, with regular pyramids; this also is common in Germany, and is found lodged among dust in the cavities of a black fissile stone. *Hill*'s History of Fossils, p. 162.

BRACKET, in building, denotes a kind of wooden stay, in form of a knee or shoulder, serving for the support of shelves, &c. *Skin.* Etym. in voc. *Neve*, Build. Dict. in voc

The word is also written *braget*, and seems derived from the Italian *brachetto*, a diminutive of *bracchio*, arm.

Modillions are a sort of *brackets* to the corona of an entablature. *Evel.* Architect. p. 36. See MODILLIONS, *Cycl.*

BRACKETS, in a ship, are small knees usually carved, and serving to support the galleries. See GALLERY, *Cycl.*

The timbers which support the gratings in the head, are also called *brackets*. *Botel.* Sea Dial. 4. p. 124. *Manwayr.* p. 24. *Guill.* P. 3. in voc.

BRACTEA, a thin flake or spangle of any substance; it is used by many authors in the same sense with the word *lamina*, but usually in a sort of diminutive sense, expressing a small plate.

BRACTEARIA, in natural history, the name of a genus of fossils, of the talc class; the characters of which are, that they are composed of small plates in form of spangles, and each of these, naturally very thin or fissile, into very thin ones.

The word is derived from the Latin *bractea*, a spangle, or small and thin glittering particle of any thing, the constituent parts of these bodies very much resembling gold or silver spangles.

Of this genus are the common Venetian talc of the shops, the *lapis odore violarum*, or violet stone of authors, and a number of other species, called by them *mica aurea*, and *mica argentea*, or gold and silver *glimmer*, and the latter *cat-silver*. *Hill*'s History of Fossils, p. 76.

BRACTEATED, among antiquaries, denotes a coin covered over with a thin plate, or leaf of some richer metal See MEDAL. *Bracteated* coins, or medals, *nummi bracteati*, are usually made of iron, copper, or brass, plated over and edged with gold or silver leaf, and then stamped with the hammer or mill. Trev. Dict. Univ. T. 2. p. 1972. voc. *Fourrer*.

Medalists find some *bracteated* pieces even among the truly antient coins. The French call them *Fourrées*.

BRADYPEPSIA, in the medical writings of the antients, the name of a distemper, which consisted in a slow, weak and languid concoction of the food.

It is caused by a diminution of the force or heat of the stomach, or a defect in the gastric liquors. *Cast.* Lex Med. p. 111. *Gorr.* Med. Defin. p. 79. voc. Βραδυπεψια. See the article DIGESTION.

BRADYPUS, in zoology, the name by which Linnæus calls the animal known by the name of the *sloath*, the *ai*, or *ignavus*.

This, in the Linnæan system of nature, is also a distinct genus of animals; the character of which are, to have a mouth without teeth, feet adapted to climbing, and only two paps upon the breast. *Linnæi*, Systema Nat. p. 34.

BRAGET, in building. See BRACKET.

BRAGGOT, a sort of drink made in some parts of England, of malt, with honey, spices, and other ingredients.

It is derived from the old British word *brag*, which signifies malt, and *gots*, a honeycomb. *Ray*'s Engl. Words, p. 7.

BRAIN (*Cycl.*) —The *brain* is by some considered as a chemical laboratory, every part of which has its office in the distillation of animal spirits. Hist. Acad. Scienc. an. 1707. p. 20, seq. *Junck.* Consp. Physiol. Tab. 13. p. 248.

The generality make wit and genius to depend on the conformation, magnitude, and qualities of the *brain* [a]. Des Cartes supposes the pineal gland, Vieussens the centrum ovale, to be the part of the *brain* where the soul more immediately resides [b]. Dr. Hook endeavours to shew how all ideas may be disposed and mechanically laid up in the *brain*, for the use of the memory [c].—[[a] *Charl.* Disc. diff. Wits, Art. 2. p. 40, seq. Phil. Trans.

Transf. N° 67. p. 2061. [b] Hift. Acad. Scienc. an. 1709. p. 14. [c] *Hook*, Poſthum. Works, p. 140. See MEMORY.

We find great diverſities in reſpect of figure, ſtructure, bulk, *&c.* in the *brains* of different animals. The *brains* are divided into two parts, with an interval between, as is well known to mountebanks, who, in virtue thereof, ſometimes raiſe an opinion of their ſkill in the vulgar, by running a pin through the middle of a cock's head, without damage to the bird. Mem. Nat. Hiſt. Anim. p. 237.

Through the whole bird kind, the cortical part of the *brain* is extremely over-proportioned to the medullary; ten times more in proportion than in men; add, that it is uſually alſo ſmooth, and without ſinuoſities [d]. Dr. Willis, who diſſected a great variety of *brains*, obſerved a near reſemblance between the *brains* of men and quadrupeds, and between thoſe of birds and fiſhes [e]. [[d] Id. ibid. [e] *Willis*, Anat. Cerebr. c. 5. *Blaſ.* App. ad Veſling. P. 21. c. 5. p. 510.]

In man, the *brain* bears a larger proportion to the body than in other animals [f]; being ſometimes found to weigh four or five pounds [g].—[[f] *Vater*. Phyſ. Exper. P. 2. ſec. 7. c. 14. p. 599. [g] *Blaſ.* Not. ad Veſling. c. 14. p. 214.]

Veſalius obſerves, that the human *brain* exceeds in bigneſs three oxens *brains*; whence he infers, that as animals excel in the largeneſs of the *brain*, ſo they do likewiſe in the principal faculties of the ſoul: but this inference will hardly hold good [h]. The French academiſts, from the ſmallneſs of the *brain* of a lion, and largeneſs of that of a calf, infer, that a ſmall *brain* is rather a mark of cruelty and fierceneſs than ſtupidity, and a large *brain* a mark of mildneſs, ſociality, and, if we may ſo call it, humanity, rather than of wit [i].—[[h] *Ray*, Wiſd. Creat. P. 2. p. 365. [i] Vid. Mem. for Nat. Hiſt. Anim. p. 7, ſeq. Phil. Tranſ. N° 28. p. 537.]

In reality, the *brain* of a ſea fox, for all its cunning, is found exceedingly little [k]; and that of the camelion ſcarce half ſo big as the globe of the eye [l]. The *brain* of a bear is found four times as big as that of a lion [m]; yet we doubt, whether the rule laid down by the academiſts will every where hold; the chamois, or rupicapra, has a large *brain* [n], but the dromedary, a patient and peaceful beaſt, a very ſmall one; the whole cerebrum and cerebellum ſcarce meaſuring ſix inches [o].-[[k] Mem. for Nat. Hiſt. Anim. p. 72. [l] Id. ibid. p. 26. [m] Id. ibid. p. 46. [n] Id. ibid. p. 144. [o] Id. ibid. p. 41.]

The *brain* is ſubject to divers diſorders, as wounds, contuſions, depreſſions [p], conſtipations [q], inflammations [r], petrifactions [s], diſruptions, *&c.* — [[p] Vid. Phil. Tranſact. N° 228. p. 533. *Boerh.* Aphor. §. 268. [q] Hiſt. Acad. Scienc. an. 1710. p. 52. [r] Id. ibid. an. 1722. p. 41. [s] Id. ibid. an. 1703. p. 32.]

In the Med. Eſſ. Edinb. T. 2. p. 245. we have an account of two ounces of the *brain* thrown by the force of coughing through a cicatrix of the ſkull.

A watery *brain* appears to be the cauſe of the epilepſy [u]; and an extremely dry or rigid one, of the phrenzy [w]: at leaſt, theſe have been found to be the ſtates of the *brain*, in diſſections of perſons affected with thoſe diſeaſes. Paracelſus even attributes leproſies, conſumptions and jaundices, to diſorders of the *brain* [x].—[[u] Hiſt. Acad. Scienc. an. 1705. p. 63, 70. [w] Mem. Acad. Scienc. an. 1706. p. 662. [x] *Caſt.* Lex. Med. p. 159.

Bartholin ſpeaks of divers extraneous bodies found in the *brain*; particularly a point of a dart, an inch long, which remained there, without much inconvenience, fourteen years, and was at length expelled by ſuppuration at the fauces. *Barthol.* Act. Med. Hafn. T. 2. Art. 132.

Anatomiſts, in their figure and deſcriptions of the *brain*, only repreſent the cavities which are ſeen upon ſeparating the hemiſpheres, and taking away the corpus calloſum, without obſerving that the crura fornicis ſink down, and then turn forwards on each ſide of the medulla oblongata, in cavities which are extended far forwards, under the commonly known anterior ventricles. In theſe inferior cavities, the crura fornicis are of a beautiful form, reſembling a white ſilk worm, or ſea-horſe; on which account they were called *hippocampi* by Julius Cæſar Arantius, who is the only author that has given any deſcription of them, till lately Mr. Du Vernoy has revived them, by an exact deſcription and delineation. He obſerves likewiſe, that the ſeptum lucidum between the anterior ventricles, has a cavity between the two lamellæ of which it is compoſed, in which he has often found water; and that the internal ſide of the ſeptum is made rough, by a great many ſmall grains and papillulæ. See Comment Acad. Petrop. T. 4. p. 130.

Some are of opinion, that the motion of the *brain* is owing to the air entering by the olfactory nerves into the ventricles of the *brain*; which air, rarefied by the heat, loſes its ſpring, and is expelled by the elaſtic contracting dura mater. Med. Eſſ. Edinb. Abr. Vol. 2. p. 481.

See further concerning the *brain* in anatomical and medical writers, particularly Steno, Ridley, Willis, and Vieuſſens, who have treatiſes expreſs on this ſubject. Phil. Tranſact. N° 215. p. 32. Item, N° 51. p. 1034. *Caſt.* Lex. Med. p. 159.

Some, with Diemorbroeck, conteſt all poſſibility of life without a *brain*; alleging, that, in the inſtances of the contrary given by anatomiſts, the *brain*, which is ſometimes ſmall and obſcure enough, had been overlooked [y]. In reality, a ſmall portion of *brain* is ſufficient for the purpoſes of life. M. Du Verney gives an inſtance of an ox, whoſe *brain* was wholly petrified, except in ſome few places where it ſtill remained ſoft; yet the beaſt was fat and vigorous. Bartholin gives a ſimilar caſe, of an ox in Sweden, whoſe whole *brain* was petrified, but the beaſt was weak and lean. The difference we may ſuppoſe to have ariſen from that ſmall part, which, in the former, retained its natural ſtate, and ſupplied the office of the whole. In this view, Fontenelle takes the bulk of *brain* in animals for a wiſe proviſion of nature againſt accidents of this kind. The medulla oblongata alſo appears to be lodged there, as a reſource in caſe of defects of *brain* [z].—[[y] Vid. Phil. Tranſact. N° 105. p. 120. [z] Vid. Mem. Acad. Scienc. an. 1703. p. 314. Hiſt. p. 32, ſeq.]

The *brains* of birds were a great delicacy among the antients, who yet never touched thoſe of other animals [a]. Some vainly preſcribe hares *brains*, as a remedy againſt difficult dentition [b]. Among the Greeks, calves *brains* were uſed as a ſort of charm to excite love [c].—[[a] *Pitiſc.* Lex. Antiq. T. 1. p. 405. voc. *Cerebella*. [b] *Junck.* Conſp. Med. Tab. 116. p. 750. [c] *Pott.* Archæol. l. 4. c. 10. p. 250.]

BRAINS *microſcopically examined*.—The accurate Mr. Lewenhoek examined, on ſeveral occaſions, the *brains* of different creatures by his microſcope; as that of the Indian hen, the ſheep, the ox, the ſparrow, *&c.* He could there always diſtinguiſh multitudes of veſſels ſo extremely ſmall, that if a globule of blood (a million whereof exceed not a grain of ſand in bigneſs) were divided into five hundred parts, thoſe parts would be too large to paſs into ſuch veſſels. He obſerved alſo, that theſe veſſels in the *brain* of a ſparrow, were as large as in that of an ox; and argues from thence, that there is really no other difference between the *brain* of a large animal and that of a ſmall one, but only that the one contains a much greater number of theſe veſſels than the others, and that the globules of the fluid paſſing through them, are in all animals of the ſame ſize. *Baker's* Microſcope, p. 146.

In examining the *brain* of ſeveral ſorts of fowls, particularly the turky, what is commonly called the cortical part of the *brain*, conſiſts of a very clear and tranſparent oily matter, which would be much better denoted by the term vitreous than cortical, but a great number of ſmall blood-veſſels are found ſpread through every part of this; and where a ſmall parcel of it is cut for a microſcopic examination, there flows a ſmall globule of a pellucid fluid from it. The particles of the fluid which circulates through theſe veſſels muſt be extremely minute; and Mr. Lewenhoek thinks, that if one of the ſmall globules of our blood were divided into five hundred parts, each part would be too big to paſs; yet there is a circulation carried on through them, and that of a red fluid; for wherever they lie three or four together, without any intervening matter, the congeries of them always appears red.

The medullary part of the brain of the ſame animal appears like a fiſher's net, between all the meſhes of which there is placed a very pliable ball-like ſubſtance, which changes its figure into a round or oval, according as the meſhes happen to be pulled or relaxed: theſe balls ſeemed to conſiſt of a clear and watery fluid, contained in a caſe or capſule of a membranous matter. Philoſ. Tranſ. N° 168. p. 884.

Abſceſs of the BRAIN. See IMPOSTHUMATION.

Fungus of the BRAIN. See FUNGUS.

BRAKE, in the country language, denotes a place where female fern grows; and ſometimes the fern itſelf. Ruſt. Dict. T. 1. in voc. See FERN.

BRAKE is alſo uſed for a farrier's inſtrument, otherwiſe called *barnacles*. See BARNACLES.

The word alſo occurs for a baker's treading trough.

BRAKE, in the hempen manufacture, denotes a wooden toothed implement, wherewith to bruiſe and break the bun of hemp, and ſeparate it from the rind.

There are two kinds of *brakes* uſed in the dreſſing of hemp, *viz.* an open and wide toothed, or nicked *brake*, and a cloſe and ſtraight *brake*; the firſt ſerving to cruſh the bun, the latter to beat it forth. When the hemp is *braked*, they proceed to ſwingle it. *Hought.* Collect. T. 2. N° 348. p. 392. Dict. Ruſt. T. 1. voc. *Drying*.

BRAKE *of a Pump*, ſignifies the handle whereby it is wrought. *Guill.* P. 3. in voc. *Botel.* Sea Dial. 4. p. 96.

BRAMA, *Bream*, in ichthyology, a river fiſh of the leather-mouthed kind, eſteemed a ſpecies of carp, and called by the generality of authors *cyprinus latus*.

It is a very broad and thin fiſh; the head is ſmall, the back of it broad and flat, and the back riſing from the head and tail toward the middle, like that of a hog; the ſide-lines are turned into a ſort of arched figure near their origin at the gills, and run much nearer the belly than the back. When the fiſh is full grown, its ſides are of a yellowiſh hue, and its belly reddiſh; the ſcales are large, and ſtriated downwards; the mouth is very ſmall for the ſize of the fiſh, and has no teeth. It lives in ponds, and rivers of ſlow current, and ſometimes grows to more than two feet in length, and is not accounted a delicate or fine flavoured fiſh. *Willughby*, Hiſt. Piſc. p. 248. *Geſner.* de Piſc. p. 376.

BRAMA *Saxatilis*, in zoology, the name of a ſea-fiſh, reſembling the common freſh-water *bream* in ſhape, but growing to three or four feet long. Its eyes are large; its ſnout of a pale red,

red, as are alſo its belly-fins and its tail. It is caught among the rocks in deep water, and ſeldom is taken any other way than by hooks, and is a very well taſted fiſh. It is found only in the Eaſt Indies. *Ray*'s Ichthyogr. Append. p. 1.

BRAMBAS, in natural hiſtory, a name given by the people of Guinea, and ſome other parts of Africa, to a peculiar ſpecies of lemon tree. The leaves of this are of a deep green, and of an admirable fragrancy, when rubbed between the hands. The fruit is very ſmall, and has a remarkable thin ſkin. The juice is uſed in dyeing. Phil. Tranſ. N° 108.

BRAMBLE, or BRAMBLING, in zoology, the common Engliſh name of the *montifringilla*, or *oroſpiza*, called in ſome places the mountain-finch; a ſmall bird, ſomewhat reſembling the chaffinch. *Ray*'s Ornith. p. 189. See MONTIFRINGILLA.

BRAMBLE *Galls*. See GALLS *of the bramble*.

BRAMICIDE, the crime of killing a bramin, reputed in the Eaſt Indies one of the five moſt enormous ſins. Lett. Edif. T. 10. p. 22.

BRAMINS, a ſect of divines and philoſophers in the Eaſt Indies, deſcended from the antient brachmans.

The name is alſo by ſome written *brames*, by others *bremens* [a]; the moſt ſuitable orthography is that of Burnet, who calls them *bramani*; the name being apparently formed from the antient *brachman*, or from *brama*, the name of their particular deity [b]. [a Lett. Edif. T. 9. p. 288. It. T. 10. p. 31. b *Burnet*, Archæol. P. 2. App. p. 266.]

The *bramins* are found in Siam, Malabar, China, Coromandel, and moſt other eaſtern nations anyways civilized; but their chief ſeat is in Indoſtan, or the Mogul's country; the heathens of which conſiſt of three caſts or tribes, *viz.* the *bramins*, who are their prieſts and doctors; the *banians*, their merchants; the *cuttery*, their ſoldiery: the origin of each of which they trace from the creation of the world *Lord*, Diſcov. of Banian Religion, c. 1. Mem. de Trev. an. 1731. p. 466.

The firſt and moſt honourable is the tribe of *bramins*, ſuppoſed to have been founded by *Brahma*, the firſt of the three beings created by God, and by whom he made the reſt of the world. *D'Herbel.* Bibl. Orient. p. 212. voc. *Brahma*.

Their chief ſtudy is of God, the world, the origin of things, the ſeveral periods of the univerſe, the firſt ſtate of nature, and the changes it has undergone. *Roger*, Janua Apert. ad Arcan. Gentiliſm. Trev. Dict. Univ. T. 1. p. 1200.

In all which F. Bouvet pretends to find the traces or remains of the Moſaic hiſtory, creation, paradiſe, deluge, Abraham, the paſchal lamb, *&c.* even the Trinity and euchariſt are ſuppoſed to be found among the *bramins*. Vid. Mem. de Trev. 1731. p. 469. *Fabric.* Pſeudop. Vet. Teſt. T. 1. §. 120. p. 405.

The *bramins* hold all things to be an efflux or emanation from the Deity, and that the concluſion of things is only their retraction and return into him; to explain this, they repreſent the firſt cauſe of all things as an immenſe ſpider, which, with wonderful art, ſpun the world out of her bowels, and then ſeated herſelf in a poſture to obſerve every part and motion of this its creation, and govern it accordingly; and that when ſhe ſhall have ſufficiently entertained herſelf in adorning and contemplating the work ſhe has done, ſhe is to ſwallow all again, and ſo diſſolve the univerſal frame of nature. *Burnet*, lib. cit. p. 269, ſeq.

On the *bramin* principles, God, or the ſovereign Being, whom they call *Achar*, and who is immoveable and unchangeable, not only produced human ſouls from his own ſubſtance, but every thing that is material and corporeal in the univerſe; and that this production was not made merely after the manner of efficient cauſes, but after the manner of a ſpider, which ſpins a web out of her own bowels, and reſumes it again when ſhe pleaſes. The creation then, ſay theſe doctors, is only an extraction or extenſion of the ſubſtance of God, drawn forth like a web, *&c.* *Bernier*, Suite des Memoir. ſur l'Empire du Grand Mogul, p. 202. *Gundling*. Hiſt. Phil. Mor. c. 5. §. 7. p. 42, ſeq.

Some attribute principles to the *bramins*, nearly bordering on quietiſm. They aſſert, that the world is only an illuſion or dream; and for bodies to exiſt truly, they muſt ceaſe to exiſt in themſelves, and be confounded with nothing, which, by reaſon of its ſimplicity, makes the perfection of all beings. They add, that a wiſe man ought not only to be without paſſion, but even without deſire; and that he is to be continually endeavouring not to will any thing, not to think of any thing, nor perceive or feel any thing; but to baniſh from his mind all ideas even of virtue and piety itſelf, that nothing may be left in him inconſiſtent with perfect quietude of ſoul. *Gobien*. Hiſt. de l'Empire de la Chin. in Pref. *Gundling*. Hiſt. Philoſ. Moral. c. 5. §. 7. p. 42.

They have a language peculiar to themſelves, which they call *hanſchrit*; in which they have ſeveral antient books, written, as is alleged, by their great prophet Brahma; as the *ſhaſtram*, which is their bible, and *porane*, a hiſtory which they eſteem ſacred, and pretend to have been dictated by God himſelf. *Burn.* Archæol. T. 2. App. p. 267, ſeq. *D'Herbel.* loc. cit.

They own a Supreme Being, who created *Brahma*, and gave him a power to create the world. They have alſo their ſubaltern deities, their pagods or temples, and idols, whom they fan to defend from flies, dancing before them, *&c.* *Wolf.* Bibl. Hebr. T. 2. ſec. 1. c. 3. p. 634. Phil. Tranſ. N° 243. p. 275.

They hold a feaſt in honour of the ſun, conſidered as the ſource of light and heat, whereby all nature is fecundified. Mem. de Trev. 1731. p. 467.

BRAN (*Cycl.*) is held detergent, and, on that account, is of ſome medicinal uſe in gargariſms and glyſters [a]. It is alſo a chief ingredient in the compoſition of cataplaſms [b]. Some apply it hot againſt the pleuriſy; boiled, it purges ſcurf and dandriff, and cleanſes the hands in lieu of ſoap [c]. Among the antients, it was alſo uſed as an erotic, to excite love [d].—[a *Caſt.* Lex. Med. p. 251. voc. *Furfur*. b *Quinc.* Diſpenſ. P. 2. ſec. 12. n. 550. *Junck.* Conſp. Therap. tab. 13. p. 367. c *Hought.* Collect. T. 1. N° 78. p. 211, 238, 251, ſeq. d *Pott.* Archæol. l. 4. c. 10. T. 2. p. 253.]

Dyers rank *bran* in the number of non-colouring drugs; becauſe it yields no colour of itſelf. It ſerves for the making of their ſour waters, uſed in preparing ſtuffs to take the dye. *Sav.* Dict. Comm. T. 2. p. 1559.

This water is made by boiling wheaten *bran*, and into the decoction putting a little leaven.

BRANCA, in middle age writers, the paw, or extreme part of the foot of a wild beaſt, or bird of prey. *Du Cange*, Gloſſ. T. 1. p. 607.

BRANCA, or BRANCHIA, alſo denotes a right of lopping, or cutting off the branches of trees in the foreſt for firing. *Du Cange*, loc. cit. p. 608.

BRANCH (*Cycl.*)—Antiently *branches* were carried in the hands at the proceſſions and ceremonies of the gods; whence the *thallophori*, or *branch*-bearers. Trev. Dict. Univ. T. 4. p. 1002. voc. *Rameau*.

The Theſpians adored a *branch* [a]. The olive-*branch* was the ſymbol or enſign of peace [b].—[a *Arnob.* Adverſ. Gent. lib 6. b *Sil. Ital.* l. 13. v. 68. *Pitiſc.* Lex. Ant. T. 2. p. 595. voc. *Rami*.

——— *Tum pignora pacis*
Prætendit dextra ramum canentis olivæ.

Branches do not ſpring out of the mere ſurface of the trunk, but are profoundly rooted therein, ſo as not only to penetrate the cortical, but alſo the woody ſubſtance, and even the pith. *Grew*, Anat. of Veget. l. 1. c. 4. §. 3. p. 28. *Chauv.* Lex. Phil. p. 553. voc. *Ramus*.

The conſtituent parts therefore of a *branch* are the ſame as of the trunk, *viz.* ſkin, bark, wood, and pith. *Grew*, lib. cit. p. 107, & 119.

M. Dodart's obſervations claſh with the obſervation mentioned in the *Cyclopædia*, of the *branches* of trees ſhooting from the trunk at an angle of 45 degrees; according to him, the *branches* generally ſprout out of the trunk horizontally, or at right angles with the trunk [c]: but, in their aſcent, they affect perpendicularity as much as poſſible, though not in the ſame degree with trunks [d].—[c Hiſt. Acad. Scienc. an. 1710. p. 85. d *Dodart*, in Mem. Acad. Scienc. an. 1700. p. 61, & 77.]

Branches of trees bear a near analogy to limbs of animals [e]; and, in certain caſes, the amputation of them is found neceſſary [f]. — [e Vid. Mem. Acad. Scienc. an. 1707. p. 366. f *Bac.* Hiſt. Vit. & Mort. ap. Works, T. 2. p. 116.] See the article PRUNING.

Some conſider *branches* as a ſort of roots in the air: in reality they are only prolongations of the roots; but, being united in the trunk, are redivided in the *branches* [g]. What ſhews the conformity between the two ſpecies of roots, is, that the end of *branches* being ſet in the ground, while yet adhering to the mother-tree, they will take root, grow on their own bottom [h]; and what is more, there are divers trees, which, if planted upſide down, the roots turn to *branches*, with leaves and fruit, and the *branches* to roots and fibres: but whether the *branches*, while ſuch, do the office of roots, and receive any fine kind of nutriment from the air, as Mr. de la Hire [i], Mr. Brotherſon [k], and others, have aſſerted, is a queſtion not yet fully decided. M. Perrault ſuppoſes the *branches* to convey a ſap for the nouriſhment of the root, as the root does for the reſt of the plant. [g *Teichmey.* Elem. Phil. Nat P. 2. c. 9. p. 313. h Philoſ. Tranſact. N° 43. p. 854, 858. i Mem. Acad. Scienc. an. 1708. p. 297. Hiſt. p. 81. k Phil. Tranſ. N° 187. p. 113.]

BRANCH is alſo applied to the parts or ramifications of divers other bodies, which, in reſpect hereof, are conſidered as ſtems. Thus chemiſts ſpeak of the *branches* of their metalline vegetations, *branches* of the arbor Dianæ, arbor Martis, *&c.* Phil. Tranſact. N° 286. p. 1430. Mem. Acad. Scienc. an. 1692. p. 215. Item, an. 1710. p. 558.

BRANCH, in anatomy, denotes a diviſion of a vein, artery, or nerve. All the veins in the body are only *branches* of the vena cava.

BRANCH is alſo uſed in the military art, in ſpeaking of mines, and their ſeveral ducts, ways, returns, and the like, between one well and another. *Felib.* Princ. de l'Architect. p. 501. voc. *Rameau*.

BRANCH is alſo uſed in ſpeaking of the veins in mines of gold, ſilver, or other metals, which divide like the veins in the body.

BRANCH, in genealogy, is applied to the ſeveral lines or ſucceſſions ariſing out of the ſame ſtock or origin.

In which ſenſe, *branches* amount to much the ſame with cadets. *Nish.* Eſſ. of Armor. c. 2. p. 28.

BRANCH, in ſcripture, is an appellation peculiarly given to the Meſſiah, as being of the *branch* or houſe of David. *Calm.* Dict. Bibl. T. 1. p. 324, ſeq.

BRANCHES *of Vaults*, are ſometimes uſed to denote the arches thereof. *Felib.* loc. cit. p. 361.

BRANCHES *of Arches*, denote ſeveral portions of arches ſpringing all from the ſame ſummer. *Davil.* Expl. Term. Archit. p. 434.

BRANCH *of a Bridle*—That part of the *branch* of a bridle, whereby we judge of its effects, and which diſcovers its ſtrength or weakneſs, is called the *line of the banquet*.

A ſtrong and hardy *branch*, is that whoſe ſevil-hole, at the lower end of it, is placed on the outſide of the line of the banquet.

A gentle *branch* is that, the ſevil-hole of which is ſet on the inſide of the ſaid line.

A rude and hardy *branch* will bring in a horſe's head, proportionably as it is more or leſs hardy; whereas a gentle *branch*, by diminiſhing the effect of the bit-mouth, makes a horſe more eaſily to bear the preſſure thereof, who before could hardly endure it. Ruſt. Dict. T. 1. in voc.

BRANCH alſo denotes a complex metalline kind of candleſtick, contrived for the reception of a number of candles.

Theſe, in antient writers, are called *phari* [a], *cantharæ* [b], *jeſſe* [c]; when made of glaſs, *luſtres*; the richer ſort, *girandoles* [d].—[a Vid. Mem. Acad. Inſcr. T. 9. p. 288. [b] *Du Cange*, Gloſſ. Lat. T. 1. p. 674. [c] Id. T. 3. p. 15. voc. *Jeſſe*. [d] Trev. Dict. Univ. T. 3. p. 216. voc. *Girandole*.] See JESSE.

BRANCH *of the Trenches*, in fortification. See BOYAU, *Cycl.*

BRANCH-*Stand*, in falconry, ſignifies to make a hawk leap from tree to tree, till the dog ſprings the partridge. Dict. Ruſt. T. 1. in voc.

BRANCHER, among fowlers and falconers, denotes a young bird well fledged, which having quitted the neſt, is not yet in a condition to fly far, or ſhift for itſelf, but ſtill keeps in the buſhes and branches about its native dwelling, where it is fed by the dam.

The *branchers* of hawks are alſo called *ramage falcons*; thoſe of nightingales, *puſhers*; becauſe, as ſome ſay, they are thruſt out of the neſt by the old ones; Canary birds of the firſt year are called *branchers*; when juſt flown, and unable to feed themſelves, *puſhers*. *Cox*, Gent. Recr. P. 2. p. 71, 74. It. P. 3. p. 55, ſeq. *Hought.* Collect. T. 3. N° 569. p. 347. *Cox*, lib. cit. P. 2. p. 60.

BRANCHERY, in the anatomy of vegetables, denotes the vaſcular parts of divers fruits, as apples, pears, plumbs, and berries.

In which ſenſe, the *branchery* ſtands diſtinguiſhed from the acetary, ſkin, pulp, &c.

The *branchery* of an apple is only the ramifications of the ligneous body through all the parts of the parenchyma; the greater branches being likewiſe, by the inoſculations of the leſſer, united together. The main branches are uſually twenty; ten of which are diſtributed through the parenchyma, moſt of them enarching themſelves towards the cork or ſtool of the flower; the other ten, running from the ſtalk in a directer line, meet the former at the cork, and are there inoſculated with them. Of theſe latter, five are originated from one; which running along the center of the ſtalk, and part of the parenchyma of the fruit, is therein at laſt divided. To theſe the coats of the internal kernels are faſtened. So that whereas moſt of theſe branches were originally extended even beyond the fruit, and inſerted into the flower for the due growth thereof, the fruit afterwards growing to ſome head, and ſo intercepting and preying on the aliment of the flower, ſtarves that, and therefrom ſuperſedes the ſervice of the ſaid branches to itſelf, fifteen for its parenchyma, and five for its ſeed. *Grew*, Anat. of Plants, l. 1. c. 6. §. 2. p. 40, ſeq.

BRANCHIÆ, in ichthyology, (*Cycl.*)—See GILLS.

BRANCHIALE, in natural hiſtory, a name given by Mr. Lhuyd to a peculiar ſpecies of fungites, which being of a deeply ſtriated texture, is ſuppoſed to reſemble the gills of a fiſh. See the article FUNGITES.

BRANCHIARUM *Foramina*, in ichthyology, a term uſed to expreſs the apertures of the gills of fiſhes, for their uſe in reſpiration. Scarce any fiſhes want theſe foramina, but they differ greatly in the various genera, in their number, ſituation and form. As to number, they are generally only two; one placed on each ſide of the head. Examples of this we find in almoſt every common fiſh. They are ſometimes ten in number, five placed on each ſide; this is the caſe in the greater part of the cartilaginous fiſhes; and finally, they are in ſome fourteen in number, ſeven being placed on each ſide, as in the petromyza. The cetaceous fiſhes, as they have lungs, have none of theſe apertures of the *branchiæ*; and in all thoſe fiſh that have them, the larger they are, the ſooner the fiſh dies, on being taken out of the water. *Artedi*, de Piſcibus. See GILLS.

BRANCHIDÆ, in antiquity, prieſts of Apollo ſerving in his temple at Didyma in Miletus; which was famous for its oracle.

The denomination is taken from *Branchus*, or *Branchides*, an epithet given to Apollo as worſhipped here; though on what account the title was given, is not agreed on.

In the time of the Perſian war, the *Branchidæ* betrayed the temple and its oracle into the hands of the Perſians, who pillaged it. They tranſported themſelves into the fartheſt parts of Aſia, to be out of the reach of puniſhment from the Greeks; which yet they are ſaid to have met with from Alexander, who demoliſhed their city, and put all the inhabitants to the ſword. *Strab.* l. 14. *Suid.* Lex. in voc. Βραγχίδη. *Potter*, Archæol. Græc. l. 2. c. 9. p. 285, ſeq.

BRANCHING. See BRANCH, and RAMIFICATION.

The *branching* or ſprouting of the horns of deer, &c. bears an analogy with the vegetation of plants. Philoſ. Tranſact. N° 227. p. 494. See HORN, *Cycl.* and *Suppl.*

The hair at the ends is apt to *branch*, or ſplit, and divide into whole bruſhes, which are eaſily viſible by a microſcope. *Drake*, Anthrop. l. 3. c. 1. p. 169. See HAIR, *Cycl.*

BRANCHIOSTEGI, in natural hiſtory, a term uſed to expreſs one of the general claſſes of fiſhes; the characters of which are, that the rays of the fins are of a bony ſubſtance; but theſe fiſh have no bones or officula at the branchiæ, as the malacopterygious and acanthopterygious fiſhes all have.

The word is derived from the Greek βραγχια, gills, and οστεον, a bone.

BRANCHUS, Βραγχος, in medicine, a ſpecies of catarrh, affecting chiefly the jaws, throat, and aſpera arteria. *Gorr.* Med. Defin. *Caſt.* Lex. Med. p. 111. *Quinc.* Lex. Phyſ. Med. p. 60. See CATARRH.

Branchus amounts to the ſame with what is called by the Latins, *raucedo*, *raucitas*, ſometimes alſo *ravis*. See the article HOARSENESS, *Cycl.* and RAUCEDO, *Suppl.*

BRANCHUS, or *Branchæ*, alſo denotes a kind of glandular tumor in the fauces, reſembling two almonds, which render the breathing and hawking difficult. *Roland.* Meth. Med. l. 2. c. 16. *Caſt.* Lex. Med. p. 111.

BRAND-*Sunday*, *Dimanche des Brandons*, in French eccleſiaſtical writers, denotes the firſt Sunday in Lent; which is thus called on account of an antient practice in the Lyonnois, where the peaſants, in the night of this day, walked about their orchards, gardens, &c. with torches lighted, or fire-*brands* in their hands; in which plight they viſited every tree, and addreſſing themſelves to them one after another, threatned that if they did not bear fruit well the enſuing ſeaſon, they ſhould be cut down to the ground, and burnt. This is evidently a relict of paganiſm; the like of which was practiſed by the antient idolaters in the month of February; hence called *Februarius*, *à februando*. *Meneſtr.* Hiſt. de Lyon. p. 379. Trev. Dict. Univ. T. 1. p. 1205. *Menag.* Orig. p. 126. voc. *Brandon*. *Du Cange*, Gloſſ. Lat. T. 1. p. 610. voc. *Brando*.

BRANDEUM, in eccleſiaſtical writers, a linen cloth or veil put over the tombs of the apoſtles St. Peter and St. Paul, and left there for ſome time; by which it is ſuppoſed to acquire a degree of ſanctity, ſo as to be worſhipped as a relick; and for that purpoſe frequently ſent by the pope as a preſent to ſome prince. *Fleur.* Hiſt. Eccleſ. l. 35. p. 93. Trev. Dict. Univ. T. 1. p. 1204. *Spelm.* Gloſſ. p. 87. *Du Cange*, Gloſſ. Lat. T. 1. p. 609.

In this ſenſe, *brandeum* amounts to the ſame with what was otherwiſe called *ſanctuarium*, *ſudarium*, *orarium*, and *velum*.

The uſe of *brandea* was introduced as a means of diffuſing and propagating the virtues and influences of relicks, without moving or any way impairing the ſubſtance of them; the tranſlation of relicks in early days being forbidden. *Magr.* Not. Vocab. Eccleſ. p. 37. See RELICKS, *Cycl.*

BRANDRITH, denotes a trevet or other iron ſtand, whereon to ſet a veſſel over the fire. Dict. Ruſt. T. 1. in voc. *Skin.* Etym. For. voc. *Brander*. *Du Cange*, Gloſſ. Lat. T. 1. p. 609.

BRANDRITH, among builders, denotes a fence or rail about the mouth of a well. *Neve*, Build. Dict. in voc.

BRANDY. See SPIRITS.

BRANLIN, an Engliſh name for a ſpecies of fiſh of the ſalmon kind, called alſo in ſome places *fingery*.

They obtained this laſt name from ſome ſingular marks they have which are five or ſix tranſverſe black ſtreaks upon each ſide, looking as if made by the impreſſion of ſo many figures, and each marked with a ſingle red ſpot. The tail of this fiſh is forked like that of the common ſalmon, and it is ſuppoſed they are all males; they ſeem to impregnate the ſpawn of the common ſalmon, and are found in waters of ſo rapid a current, that ſcarce any other fiſh could live in them. They never grow to any great ſize. *Willughby*, Hiſt. Piſc. p. 193.

BRASEM, in zoology, a name by which ſome have called an American fiſh of the ſmaris kind, more commonly known among authors by its Braſilian name of *acaropeba*. *Ray*'s Ichthyogr. p. 333. See the article ACAROPEBA.

BRASIDIA, Βρασιδεια, in antiquity, anniverſary feaſts held at Sparta in honour of Braſidas, the ſon of Tellis, famous for his great atchievements in favour of that ſtate.

The *Braſidia* were celebrated with ſacrifices and games, at which none were allowed to contend but free-born Spartans. To be abſent from theſe ſolemnities, is ſaid by ſome to have been held criminal, and puniſhed with fines. Vid. *Meurſ.* Græc. Ferial. *Foſold.* de Feſt. Græc. l. 2. c. 5. *Potter*, Archæol. Græc. l. 2. c. 20.

BRASILETTO, or BRAZILETTO. See BRAZIL, *Cycl.*

BRASMA, in the medical writings of the antients, a name given by Dioſcorides and others to a light, empty, and good for nothing kind of black pepper. This was no peculiar ſpecies of pepper, but, as John Bauhine has well obſerved, it was the ſame with the pepper we now frequently meet with, which has decayed upon the plant. *Dioſcorid.* l. 2. c. 189.

BRASS (*Cycl.*)—The word *braſs* ſeems to have been formed from *bracium*, a cant term among alchemiſts for copper. *Rul.* Lex. Alch. p. 106. voc. *Bracium.*

Braſs amounts to the ſame with what is otherwiſe called *latten*, or *latton*; by the French *leton*, or *laiton*, and ſometimes *cuivre jaune*, or yellow copper [a]; by the Greeks, ορειχαλκον, and the Latins, *orichalcum* [b], or *aurichalcum* [c].—[a *Savar.* Dict. Com. T. 2. p. 502. voc. *Leton.* Trev. Dict. Univ. T. 3. p. 1390. [b] Vid. *Caſt.* Lex. Med. p. 547. voc. *Orichalcum.* [c] Id. ibid. p. 93. voc. *Aurichalcum.*]

Braſs is made in divers manners; the moſt uſual is that mentioned in the *Cyclopædia.* See alſo *Neri*, Art. Vitriar. l. 1. c. 20. *Merr.* Obſerv. on *Neri*, p. 299, ſeq. *Hought.* Collect. T. 2. N° 258. p. 190. *Felib.* Princ. Archit. l. 2. c. 5. p. 240. *Junck.* Conſp. Chem. tab. 42. p. 1058. *Kirch.* Mund. Subterr. l. 10. ſec. 4. c. 9. T. 2. p. 218. Phil. Tranſ. N° 260. p. 474. It. N° 200. p. 735.

The calamin does not enter the copper under its earthy ſtate, but is firſt converted by the phlogiſton into the form of a metal: Henkel, it is true, imagined that only the mercurial part of the calamin was added to the copper, without any of the ſulphur; but this opinion later chemiſts ſeem to have ſufficiently refuted. Vid. *Junck.* Conſp. Chem. tab. 42. p. 1061, ſeq.

Braſs may be cleanſed, firſt, by rubbing it with a cloth dipped in equal quantities of aqua-fortis and common water; then with an oily cloth, and laſtly with a dry one dipped in lapis calaminaris.

Braſs is tinged of a gold colour, firſt, by burning, then diſſolving it in aqua-fortis, and, laſtly, reducing it to its metalline ſtate. It may be whitened by heating it red hot, and quenching it in water diſtilled from ſal-armoniac and egg-ſhells. It is ſilvered, or coloured ſuperficially white, by rubbing it with balls made of ſilver diſſolved in aqua-fortis, with powder of white tartar, ſufficient to abſorb all the moiſture thereof.

BRASS, in a more extenſive ſenſe, includes copper, and all the mixtures or alloys thereof with other minerals.

In which ſenſe, *braſs* amounts to the ſame with the Roman *æs*, and the French *airain.*

Inſtead of calamin, *braſs* is ſometimes made of copper with zink; which is the fineſt ſort, and that which, on account of its beautiful golden colour, is called *bath-metal*, or *princes-metal* [a]. M. Homberg has even contrived a method of making *braſs* without either calamin or zink, by amalgamating the copper, which at the ſame time diſpoſes the metal to receive gilding, which, in the uſual method, it is not eaſily ſuſceptible of [b]. — [a *Boyle*, Philoſ. Works, Abr. T. 2. p. 100. *Stahl.* Phil. Princ. Chem. P. 2. ſec. 4. p. 335. [b] *Du Ham.* Hiſt. Acad. Scienc. l. 6. ſec. 6. c. 4. p. 371.]

BRASS, in antiquity.—*Braſs* having been in uſe before iron, arms, in the primitive times, were made of it; which, according to Tzetzes, they ſo tempered, as to render extremely hard. Heſiod ſays expreſsly, that armour and other utenſils were then of *braſs*, becauſe iron was not yet in uſe. *Heſiodi* Εργ. l. 1.

Macrobius ſays, that the antients employed *braſs* in many of their ſacrifices; and that when the Tuſcans deſigned to build a new city, they marked out the circumference thereof with a plough-ſhare made of *braſs*; and that the Sabin prieſts cut their hair with *brazen* ſciſſars. Servius, in his remarks on the firſt book of the Æneid, affirms, that the prieſt of Jupiter was never ſhorn but with ſciſſars of the ſame metal. The antients alſo, according to the Scholiaſt on the ſecond Idyl of Theocritus, employed *braſs* in all their expiations, as eſteeming this metal very pure; on which M. de Meziriac makes this reflexion, that if the Scholiaſt's reaſon be juſt, the method of our antient druids was better, who ſhore their holy locks with golden hooks, according to Pliny; for that doubtleſs gold is purer, nobler, and more perfect than *braſs.* *Plin.* Hiſt. Nat. l. 16. cap. 44.

Of late days, ſince ſearches have been made in the north, and eſpecially Jutland, many antient monuments have been diſcovered, in which were found *brazen* armour, as may be ſeen by the Diſſertations of M. Mellem, Sperlingius, Rhodius, Schachtius [a], *&c.* M. Sperlingius, indeed, does not take them for armour, but for the figures of arms, which, according to this antiquary, the antient Goths always bequeathed to their heirs. M. Mellem and Rhodius maintain, on the contrary, that theſe are the arms themſelves; which opinion Tacitus alſo countenances [b]: and though ſome of theſe arms be of ſtone, particularly hatchets and knives, we may gather from the inhabitants of America, who arm their darts with ſharp ſtones, and uſe them as our workmen do inſtruments of ſteel, that the barbarians of the north had formerly arms and inſtruments both of ſtone and braſs, before iron was known, or at leaſt common among them. We may add, that the Scriptures mention mirrors of *braſs*, uſed by the women even in Moſes's time [c].—[a Vid. Nouv. Liter. Mar. Balt. 1699. p. 88. an. 1700. p. 14, 24, 333. [b] *Tacit.* de Morib. German. cap. 27. *Bartholin.* Antiq. Dan. l. 2. cap. 13. *Hart.* Diſſ. 13. Rer. Pruſſ. 11. 6. *Disburg*, P. 3. Chron. Pruſſ. cap. 5. [c] Trev. Dict. Univ. p. 244. voc. *Airain.* Phil. Tranſ. N° 322. p. 394. *Pott.* Archæol. Græc. l. 3. c. 4. T. 2. p 20, ſeq.]

We meet with divers antient ſpecies and denominations of *braſs*; as,

Cyprian BRASS, *Æs Cyprium*, a copper produced in the iſland of Cyprus.

Dodonean BRASS, *Æs Dodoneum*, that uſed in the ſacred caldrons in the temple of Apollo at Dodona.

Corybantic BRASS, *Æs Corybantium*, denotes the brazen rattles uſed by the Corybantes in the myſteries of Cybele.

Caſt BRASS, *Æs Caldarium*, that only melted, otherwiſe called *pot-braſs*, *æs olarium*, and not malleable; being that whereof pans and kettles were made.

Hammered BRASS, *Æs Regulare*, that capable both of being caſt and hammered; by which it ſtood oppoſed to *æs caldarium.*

Wrought BRASS, *Æs factum*, that manufactured into veſſels and other works. Vid. *Pitiſc.* Lex. Antiq. in voc. *Æs.*

Unwrought BRASS, *Æs infectum*, that ſtill in the maſs, unformed.

Hepatic BRASS, *Æs Hepatizon*, that which is of a liver colour, or approaching thereto. Some confound this with the *Æs Corinthium*; others, with more probability, take it to be the ſame with what the moderns call *bronze.*

White BRASS, *Æs Candidum*, a purer and whiter kind of metal, ſaid to be found under the veins of ſilver, bearing ſome analogy to the Venetian talc. *Pitiſc.* ibid.

It is plain that the antients were acquainted with ſome way of making copper white, as well as yellow. Virgil mentions *orichalcum album*, and the Greeks λευκον χαλκα; both which phraſes exactly expreſs white *braſs.* We have ſeveral ways of rendering copper white, at preſent as in our alchymy metal; but they ſeem inferior to the antient way. See CRAMA.

Yellow BRASS, *Æs Flavum*, was our common *braſs*, prepared with cadmia, or lapis calaminaris.

Glittering BRASS, *Æs Pyropum*, a ſort which ſhone or appeared firy, ſo as to reſemble a carbuncle. *Pitiſc.* Lex. Ant. T. 1. p. 48. voc. *Æs.*

Some ſuſpect the tradition of the origin of Corinthian *braſs*, from the burning of Corinth, as a fable; which they account for, by ſuppoſing that the firſt diſcovery of the art of making copper into *braſs* was made by the people of Corinth, who found the calamin ſtone in the plains of Peloponneſus; at leaſt, that if it were known to others, it was the Corinthians who made it in the greateſt perfection. Atlas Marit. p. 78.

BRASS, in the glaſs trade.—Thrice calcined *braſs* is a preparation which ſerves the glaſſmen to give many very beautiful colours to their metal. The manner of preparing it is this: Place thin plates of *braſs* on tiles on the feet of the furnace near the occhio; let it ſtand to be calcined there for four days, and it will become a black powder ſticking together in lumps. Powder this, and ſift it fine, and recalcine it four or five days more; it will then not ſtick together, but remain a looſe powder, of a ruſſet colour. This is to be calcined a third time, in the ſame manner; but great care muſt be taken, in the third calcination, that it be not over-done, nor underdone; the way to be certain of making it right, is to try it ſeveral times in glaſs while melting. If it makes it, when well purified, to ſwell, boil, and riſe, it is properly calcined; if not, it requires longer time. This makes, according to the different proportions in which it is uſed, a ſea green, an emerald green, or a turquoiſe colour. *Neri*'s Art of Glaſs, p. 42.

Braſs, by a long calcination alone, and without any mixture, affords a fine blue or green colour for glaſs; but they have a method of calcining it alſo with powdered brimſtone, ſo as to make it afford a red, a yellow, or a chalcedony colour, according to the quantity, and other variations in the uſing it. The method of making the calcination is this: Cut thin plates of *braſs* into ſmall pieces with ſheers, and lay them ſtratum ſuper ſtratum, with alternate beds of powdered ſulphur, in a crucible; calcine this for twenty-four hours in a ſtrong fire, then powder and ſift the whole; and, finally, expoſe this powder upon tiles, for twelve days, to a reverberating furnace; at the end of this time, powder it fine, and keep it for uſe. *Neri*'s Art of Glaſs. p. 37.

The glaſs-makers have alſo a method of procuring a red powder from *braſs*, by a more ſimple calcination, which ſerves them for many colours. The method of preparing it is this: They put ſmall and thin plates of *braſs* into the arches of the glaſs-furnaces, and leave them there till they are ſufficiently calcined, which the heat in that place, not being enough to melt them, does in great perfection. The calcined matter, powdered, is of a dusky red, and requires no farther preparation. *Neri*'s Art of Glaſs. p. 41.

BRASS *Lumps*, in mineralogy, a common name given by the miners and diggers of coal, *&c.* to the globular pyrites. This ſtone, when kept in the air, often ſends forth its efflorescences of ſalt, in form of ſmall and ſlender fibres, perfectly tranſparent, and ſometimes of near an inch long. The place where theſe ſtones are expoſed to the air, will greatly alter the figures and colours of their efflorescences; if they are laid in a cellar, the ſhoots will be ſhorter, and green, like the common copperas; and if laid in the way of the ſunſhine, they will be white and duſty.

Both are the same salt, which is true green vitriol or copperas, and both will, in the same manner, turn a decoction of galls into ink. The white salt is only the green powdered and calcined by the sun's heat. The figure of the fibres of these efflorescences is not easy to be determined; sometimes they seem round, sometimes angular. These, however, are the natural figures of the salts of these stones; and the other shoots into which they form themselves after solution, and bringing them together in a body by water, are rather their accidental forms, tho', under a like course of accidents, they generally appear the same. Philos. Transact. N° 110.

BRASSATELLA, BRASSADELLA, or BRASSIDELLA, in botany, a name given by many authors to the plant more usually known by that of *ophioglossum*, or adder's tongue. See OPHIOGLOSSUM.

BRASSICA, in botany, the name of a genus of plants, the characters of which are these; the flower consists of four leaves, and is of the cruciform kind; the pistil arises from the cup, and at length becomes a long cylindric pod, divided, by an intermediate membrane, into two cells, and filled with roundish seeds. To these marks it is to be added, that the leaves are usually large and wrinkled.

The species of *brassica* enumerated by Mr. Tournefort are these: 1. The white-headed *cabbage*. 2. The headed *cabbage*, with a white, long, and somewhat open head. 3. The white or great *cabbage*. 4. The white open *cabbage*. 5. The white curled *cabbage*. 6. The white *cabbage* made up of many small heads. 7. The red-headed *cabbage*. 8. The knotty-stalked *cabbage*, or the cole-rape. 9. The *cauliflower*. 10. The common red *cabbage*. 11. The turnep-rooted *cabbage*. 12. The curled asparagus *cabbage*. 13. The long-leaved rough *cabbage*. 14. The fimbriated *cabbage*. 15. The largest fimbriated *cabbage*. 16. The dwarf fimbriated *cabbage*. 17. The jagged white *cabbage*. 18. The jagged red *cabbage*. 19. The smallage-leaved *cabbage*, with broader leaves. 20. The smallage-leaved *cabbage*, with narrower leaves. 21. The little red field *cabbage*. 22. The great, tall, branched sea *cabbage*. 23. The musk *cabbage*. 24. The field white-flowered *cabbage*, with perfoliate leaves, called by some the podded thoroughwax. 25. The purple-flowered perfoliate field *cabbage*. 26. The perennial Alpine *cabbage*. *Tournef.* Inst. p. 219.

Authors have improperly added some other plants to this genus; as, 1. The single-seeded sea *cabbage*; which is truly a crambe. 2. The succory-leaved field *cabbage*, which is a turritis; as are also the branched and the single-stalked *brassica*, with hairy rough leaves, described by Caspar Bauhine. See CABBAGE.

BRASSIDELIC-*Art*, a term used by Paracelsus, to denote a method of curing wounds by the application of the herb brassidella, or ophioglossum, on the fresh wound. *Paracels.* de Vit. long. l. 2. c. 14. *Cast.* Lex. Med. p. 112. *Rul.* Lex. Alchem. p. 106.

BRAURONIA, Βραυρωνια, in antiquity, a feast held every fifth year in honour of Diana, surnamed *Brauronia*, from *Brauron* a village near Athens, where the famous statue of that goddess, brought from Scythia Taurica, was preserved.

The ceremony of the *Brauronia* was managed by ten men, from their office called Ιεροποιοι; the victim offered was a goat, and it was customary for certain men to sing one of Homer's Iliads, during the service: other ministers at the solemnity were young virgins, from five to ten years of age, habited in yellow, and consecrated to Diana, under the denomination of Αρκλοι. Vid. *Meurs.* Græc. Ferial. *Fasold.* de Fest. Græc. c. 6. *Potter*, Archæol. Græc. l. 2. c. 20.

BRAWN, in the culinary art, signifies the flesh of a boar, boned, rolled up, or collared, boiled, and, lastly, pickled, for a winter's cate.

Brawn is made only of the flitches, without the legs; the oldest boars are chosen for this use, it being a rule that the elder the boar, the more horny the *brawn*.

There is also *brawn* of pig, which is made by scalding, drawing, and boning the beast whole, except the head; then cutting it in two collars, soaking it in brine, seasoning, rolling, putting it into a cloth, binding it up, boiling it, and, when boiled, hooping it up in a frame. Rust. Dict. T. 1. in voc.

BRAZED, in heraldry, is used in speaking of three cheverons clasping or folding each other. *Coats*, Dict. Her. p. 57.

The word is doubtless formed by corruption from the French word *bras*, arm.

BRAZEN *Age*, *Seculum æreum*, is used by the poets to express the third age of the world. See AGE.

What Hesiod and the Greeks call the *brazen*, the northern nations called the *rocky* or *stony* age. Phil. Transact. N° 301. p. 2071.

BRAZEN *Dish*, among miners, is the standard by which the other dishes are gauged, and is kept in the king's hall. *Hought* Compl. Miner, in the Explan. of the Terms.

BRAZIER, an artificer who makes and sells pans, pots, kettles, and other kitchen utensils and brass ware.

Itinerant *braziers*, who go about with their tools and knapsacks, are called *tinkers*; by the French, *braziers of the whistle*, *chauderonniers au sifflet*. *Savar.* Dict. Comm. T. 1. p. 705.

The implements used by *braziers* are, a forge, wherein they burn only charcoal to heat their metal; a twibil, wherewith to hold their work to the fire; divers sorts of anvils, and hammers, wherewith to beat; also pans, ladles, sheers, and punches of divers sorts, soldering irons, borax box, lath for turning, *&c.*

BRAZIL (*Cycl.*)—*Brazil* wood is of some use in medicine; being reputed a species of the sanders, and possessed of the same physical virtues, though rarely prescribed. *Quinc.* Dispensat. P. 2. sect. 2. §. 168. See the article SANDERS.

Carnation is dyed with *brazil*, and violets are raised with *brazil*. Acids turn *brazil* yellow, but, by adding an alkali, it becomes purple; so that if we put lemon-juice, or spirit of vinegar, in a decoction of *brazil* wood, it becomes yellow, and, if we add oil of tartar, violet. Trev. Dict. Univ. T. 1. p. 1220. voc. *Brefil.*

BRAZIL *Ink*. See the article INK.

BRAZILING, or BRAZEELING, in dying, signifies the giving a dye with brazil wood. *Savar.* Dict. Comm. T. 1. p. 478. See BRAZIL, *Cycl.* and *Suppl.*

The French dyers of the grand teint are forbid *braziling*.

BREACH, (*Cycl.*) in a general sense, denotes a break or rupture in some part of a fence or inclosure, whether owing to time or violence.

The word is formed from the French *breche*, which signifies the same; formed of the German *brechen*, to break. *Menag.* Orig. p. 128. voc. *Breche*.

Inundations, or overflowings of lands, are frequently owing to *breaches* in the dikes, or sea banks [a]. Dagenham *breach* is famous; it was made in 1707, by a failure of the Thames wall, in a very high tide. The force wherewith it burst in upon the neighbouring level, tore up a large channel or passage for water 100 yards wide, and in some places 20 feet deep; by which a multitude of subterranean trees, which had been buried many ages before, were laid bare [b].—[a *Mortim.* Art of Husb. T. 1. l. 1. c. 2. §. 5. p. 29. b Philos. Trans. N° 335. p. 478.]

BREACH, in fortification.—A *breach* is said to be practicable, when it is wide and low enough to enter men, and make a lodgment.

When a *breach* in the rampart is practicable, the governor usually capitulates, to prevent the effects of a storm. *Feuq.* Mem. sur la Guerre, sect. 91. p. 369, seq.

Before they mount the *breach*, they frequently widen or enlarge it with fourneaux, and render the access to it practicable, even for cannon, which it is sometimes necessary to plant on the *breach*, in order to ruin the enemies retrenchments on the gorge and epaules of the bastions.

BREAD (*Cycl.*)—When *bread* is too stale, baking it a second time will make it eat like new; but then it must be spent quickly. *Hought.* Collect. T. 1. N° 89. p. 239.

Bread is made of the flower or meal of some farinaceous vegetable, ground, and kneaded with water and yeast. *Shaw*, Schem. Chem. p. 27.

The *bread*-corns chiefly used in Europe are wheat and rye; in some places and seasons, where these are scarce, oats also and barley. In divers parts of Asia, Africa, and America, *bread* is also made of maize. Vid. *Becman*, Hist Orb. Terrar. c. 10. §. 2. p. 418. *Cast.* Lex. Med. p. 349. voc. *Frumentum*. Philos. Transact. N° 142. p. 1068.

Bread made of good wheat, well leavened, and thoroughly baked, with a little salt, is the best [a]; that which is not thoroughly baked, ill kneaded, and without salt, is hurtful and unwholesome, especially in smoaky cities; so are unleavened *bread* and cakes baked under the ashes [b].—[a *Bacon.* Hist. Vit. & Mort. ap. Works, T. 2. p. 169. b Rust. Dict. in voc.]

In general, the lighter the *bread*, the better and more delightful it is; coarse and barley *bread* is detersive, and gently purgative [c], at least to those not used to it. Some recommend it for persons in the gout [d].—[c *Quinc.* Dispens. P. 2. sect. 13. n. 599. p. 237. It. sect. 4. §. 241. d *Junck.* Consp. Therap. tab. 9. p. 277.]

Bread is usually made of the seeds, sometimes also of the roots, and even the piths of plants [e]. The Greeks attribute the invention of *bread* to Ceres, the Egyptians to Isis, others to Menes. The first *bread* is supposed to have been made of the plant lotus [f]. In the northern parts there were three sorts of *bread* in use before Ceres taught the culture of corn; the first made of the sappy parts of the pine, and other trees, dried and pounded; the second of acorns, and the third of the roots of the filipendula [g]. The poor Tartars, near Sherazoul, still live upon acorn *bread* [h].—[e *Bacon*, lib. cit. ap. Works, T. 2. p. 161. f *Reimman*, Idea Antiq. Liter. Ægypt. p. 139. g *Rudbeck*, Atlant. ap. Philos. Transact. N° 300. p. 2033. h Phil. Transact. N° 138. p. 943.] See ACORN.

In the islands of Banda and Amboina, they make a kind of *bread* called *saegem*, or *sagoe*, of the pith of a farinaceous tree, whose trunk is the thickness of a man's thigh, ten foot high, and having a round head a-top like a cabbage; in the middle whereof is a white mealy substance, which being kneaded with water, fermented and baked on the coals, serves the poorer sort for *bread*. *Clus.* Erot. l. 1. c. 3. *Becman.* Hist. Orb. Terr. P. 1. c. 10. §. 1. p 419. Bibl. Raison. T. 12. p. 366. Phil. Transact. N° 26. p. 485.

In the Caribbee islands, they make *bread* of the root of a poisonous plant called *manioc* [i]; probably the same with the cassada

or caſſary *bread*, which is made of the root of the Yucca Mexicana [k].—[[i] Philoſ. Tranſact. N° 33. p. 635. [k] *Worm.* Muſ. l. 2. c. 12. *Becm.* loc. cit. *Grew*, Muſ. Reg. Societ. P. 4. ſec. 3. p. 371. Philoſ. Tranſact. N° 311. p. 2434.] See the article YUCCA.

In Benzoni's time, all the ſhips bound from Spain to Mexico, when they returned, were victualled with caſſary *bread*, inſtead of biſcuit. *Benzon.* Hiſt. Americ. l. 4. cap. 28. *Grew*, loc. cit.

To the claſs of *breads* made of roots may alſo be added potato-*bread*, frequent in Ireland, and turnep-*bread*, uſed in ſome parts of England. It is made by boiling the roots, and expreſſing the juice, till they become dry, then beating them in a mortar, and adding wheat-flour, aniſeeds, and yeaſt, moulding up the dough in the uſual form, and baking it. It looks and taſtes like other *bread*, and is by ſome uſed againſt conſumptions. Philoſ. Tranſact. N° 205. p. 970.

Among us, *bread* is chiefly divided into white, wheaten, and houſhold [k]; differing only in degrees of purity. In the firſt, all the bran is ſeparated; in the ſecond, only the coarſer; in the third, none at all: ſo that fine *bread* is made only of flour; wheaten *bread*, of flour, with a mixture of the finer bran; and houſhold, of the whole ſubſtance of the grain, without taking out either the coarſe bran, or fine flour [l].—[[k] Stat. 8 Ann. c. 18. Abr. 8°. T. 1. p. 118. [l] *Hought.* Collect. T. 1. N° 89. p. 238.]

We alſo meet with ſymnel *bread* [m], manchet or roll *bread* [n], and French *bread*; which are only ſo many denominations of the fineſt or whiteſt *bread*, made of the pureſt flour; except that in roll *bread* there is an addition of milk [o], and, in French *bread*, of eggs and butter alſo [p]. To which may be added, ginger-*bread*, made of white *bread*, with almonds, liquorice, aniſeed, roſe-water, and ſugar [q]; and maſliſi-*bread*, panis mixtus, made of wheat and rye, or ſometimes of wheat and barley [r].—[[m] Affiſ. Pan. ann. 51 Hen. III. *Spelm.* Gloſſ. p. 515. [n] *Hought.* lib. cit. N° 90. p. 242. [o] Id. ibid. p. 245. [p] Dict. Ruſt. T. 1. in voc. *French.* [q] Id. in voc. *Ginger.* [r] *Hought.* Collect. T. 1. N° 90. p. 242. *Du Cange*, Gloſſ. Lat. T. 4. p. 124.]

In Lancaſhire, and ſeveral of the northern counties of England, the people have ſeveral ſorts of oaten *bread*; as, 1. The *bannock*, which is an oat cake, kneaded only with water, and baked in the embers. 2. *Clap-bread*, which is made into thin hard cakes. 3. *Bitchineſs-bread*, which is made of thin batter, and formed into thin ſoft oat cakes. 4. *Riddle-cakes*, which are thick and ſour, and very little different from the hand-hover *bread*, which has but little leaven, and kneaded ſtiff; and, 5. *Jannock*, which is oaten *bread* made up into loaves. *Ray*'s Words, p. 5.

In the ſtatute of aſſize of *bread* and ale, 51 Hen. III. mention is made of waſtel-*bread*, cocket-*bread*, and *bread* of treet; which anſwers to the three ſorts of *bread* now in uſe, called white, wheaten, and houſhold *bread*.

In religious houſes, they heretofore diſtinguiſhed *bread* by the names, eſquires *bread* [s], *panis armigerorum*; monks *bread*, *panis conventualis*; boys *bread*, *panis puerorum*; and ſervants *bread*, *panis famulorum*, called alſo *panis ſervientalis* [t].—[[s] *Du Cange*, Gloſſ. Lat. T. 4. p. 119. [t] *Jac.* Law Dict. in voc. *Du Cange*, Gloſſ. Lat. T. 4. p. 126.]

A like diſtribution obtained in the houſholds of nobles and princes; where, however, we find ſome other denominations, as, meſſengers *bread*, *panis nuncius*, that given to meſſengers as a reward of their labour [u]; court *bread*, *panis curialis*, that allowed by the lord for the maintenance of his houſhold [w]; eleemoſynary *bread*, that diſtributed to the poor in the way of alms [x].—[[u] *Du Cange*, lib. cit. p. 123. [w] Id. ibid. p. 120, ſeq. [x] Id. ibid. p. 121.]

Among the antients we meet with divers other denominations of *bread*; as, 1. *Panis ſiligineus*, called alſo *mundus*, *athleticus*, *ifungia* [y], *coliphius* [z], and *robys* [a], anſwering to our white *bread*; being made of the pureſt flour of the beſt wheat [b], and only uſed by the richer ſort; whence the ſatyriſt, *Sed tener & niveus mollique ſiligine factus ſervatur domino* [c]. 2. *Panis ſecundus*, or *ſecundarius*, called alſo *ſimilaceus*, or *ſimilagineus*, the next in purity; being made of fine flour, only all the bran not ſifted out [d], and probably the ſame with the *panis cibarius*, out of which the bran was not carefully, but only ſlightly taken [e]. 3. *Autopyrus* [f], Αυτοπυρος, called alſo *ſyncomiſtus* [g], συγκομιστος, and *confuſaneus* [h]; made of the whole ſubſtance of the wheat, without either retrenching the finer flour, or coarſer bran; anſwering to our houſhold *bread*. 4. *Cacabaceus*, apparently the ſame with what was otherwiſe denominated *ſordidus*, as being given to dogs [i]; *furfuraceus*, *furfureus*, or *furfurativus*, becauſe made in great part of bran [k]; and, in the middle age, *biſſus*, on account of its brownneſs [l]; ſometimes alſo *leibo* [m]. — [[y] *Du Cange*, Gloſſ. Lat. T. 3. p. 15. voc. *Ifungia*. [z] *Lang.* Epiſt. Medic. l. 1. Epiſt. 55. p. 257. *Caſt.* Lex. Med. p. 194. voc. *Coliphius*. [a] *Caſt.* lib. cit. p. 641. voc. *Robys*. [b] *Pitiſc.* Lex. Antiq. T. 2. p. 368. voc. *Panis*. [c] *Juv.* Sat. 5. v. 70. [d] *Pitiſc.* loc. cit. [e] *Du Cange*, lib. cit. T. 4. p. 126. voc. *Panis*. [f] *Caſt.* lib. cit. p. 175. voc. *Cibarium*. *Pitiſc.* lib. cit. p. 366. [g] *Gorr*, Med. Defin. p. 55. voc. Αρτος. *Caſt.* Lex. Med. p. 95. voc. *Autopyrus*. *Pitiſc.* loc. cit. *Du Cange*, lib. cit. p. 119. *Gorr.* lib. cit. p. 436. voc. Συγκομιστος. *Caſt.* lib. cit. p. 701. voc. *Syncomiſtos*. [h] *Pitiſc.* ubi ſup. p. 367. *Caſt.* lib. cit. p. 206. voc. *Confuſaneus*. [i] *Pitiſc.* loc. cit. [k] Id. ibid. p. 369. [l] Id. p. 367. *Du Cange*, Gloſſ. Lat. T. 4. p. 123. [m] Id. ibid. p. 120. Id. T. 3. p. 249. voc. *Leibo*.]

There were other ſorts of *bread*, denominated from the manner in which they were made, or the uſes they were applied to; as, 1. The *militaris*, which was prepared by the ſoldiers and officers in camp, with their own hands; for which purpoſe ſome had hand-mills, others pounded the corn in a mortar, and baked it on the coals [o]. 2. *Clibanites*, that baked in an oven, by way of contradiſtinction from that baked on the hearth, or under the embers [p]. 3. That called *ſubcineritius*, or *ſub cinere coctus*; ſometimes alſo *reverſatus*, becauſe it was to be turned in the baking [q]. 4. *Nauticus*, anſwering to our ſea biſcuit, and denominated accordingly *bis coctus* [r], becauſe baked ſeveral times over, to make it keep the longer. See BISKET. 5. *Buccellatus*, much of the ſame kind, only for land uſe [s]. See BUCCELLATUM. 6. *Civilis*, called alſo *gradilis* and *fiſcalis*; that diſtributed among the common people in lieu of corn, at certain ſtated times, in the emperor's name, not only to the poor, but alſo to thoſe of better condition [t].—[[o] *Lipſ.* de Milit. Rom. l. 5. Dial. 16. *Pitiſc.* lib. cit. p. 368. [p] *Pitiſc.* lib. cit. p. 367. *Du Cange*, lib. cit. p. 120. [q] *Iſid.* Orig. l. 20. c. 2. *Pitiſc.* lib. cit. p. 369. [r] *Pancirol.* de Reb. Memor. P. 1. tit. 53. p. 274. *Salmuth.* ad loc. *Pitiſc.* p. 368. *Du Cange*, p. 124. *Caſt.* p. 105. voc. *Biſcoctus*. [s] *Du Cange*, lib. cit. p. 123, ſeq. *Pitiſc.* 366, ſeq. [t] *Salmuth.* ad Pancirol. p. 273. *Pitiſc.* lib. cit. p. 299.]

Not only the ſoldiery, but even the officers, and the general himſelf, frequently made their own *bread*. The emperor Caracalla, affecting to be ſtrong and hardy, and to do every thing in the military way, ground wheat, mixed and baked *bread* for his own uſe, in the aſhes. *Herod.* l. 4. c. 7, & 9. *Pitiſc.* loc. cit.

Other kinds of *bread* were denominated from their qualities and accidents; as, 1. The *panis ſiccus*, ξηρος αρτος, that which had been long baked; ſuch as were the *biſcoctus*, naval, and buccelated *bread*. 2. *Madidus*, a ſort made of rye or beans, ſometimes alſo of fine flour, wherewith they ſmeared their faces by way of a coſmetic, to render them ſmooth [u]. 3. *Acidus*, οξυλεπης, or ſour *bread*, which was acidulated with vinegar [w]. 4. *Azymus*, that unleavened or unfermented [x].—[[t] *Suet.* in Othon. c. 12. n. 4. *faciem quotidie panę madido linere conſueverat*. *Pitiſc.* lib. cit. p. 368. [u] *Gorr.* Med. Defin. p. 339. voc. Οξυλεπης. [w] *Pitiſc.* lib. cit. p. 366.]

The French have alſo a great variety of *breads*; as, queen's *bread*, alamode *bread*, *bread* de Segovie, de Gentillay, quality *bread*, &c. all prepared in peculiar manners by the bakers of Paris. They put milk in the *bread* alamode, &c. ſalt and yeaſt in the queen's *bread*, butter in the *bread* de Gentillay; and, in all theſe ſorts, the paſte is ſofter, and more raiſed or puffy than ordinary. The *bread* de Goneſſe excels all others, on account of the waters at Goneſſe, a town three leagues from Paris. It is light and full of eyes, which are the marks of its goodneſs. *Pain de menage*, is that which each family bakes for itſelf. Trev. Dict. Univ. p. 433, ſeq. *Savar.* Dict. Com. T. 2. p. 951, ſeq. voc. *Pain*.

Spice bread, *Pain d'epice*, denotes *bread* baked and iced over with the ſcum taken off ſugar in the refining-houſes; it is ſometimes alſo made with honey and other ſorts of ſeaſonings; and anſwers to what the antients called *panis mellitus*. *Savar.* lib. cit. p. 592. Trev. Dict. Univ. p. 434.

The quantity of *bread* allowed a ſoldier for his day's ſubſiſtence, is called a ration. See RATION, *Cycl.*

For armies the *bread* is either baked in the park of proviſions in the camp, or in the town neareſt the army; for the conveniency of ovens, an army ought always to have at leaſt four days *bread* before-hand. In ſome caſes, the diſtance of the places, from whence *bread* is to be had, or the army's march from one country to another, obliges the general to diſtribute *bread* for ſix or even for eight days; a thing never done without abſolute neceſſity, by reaſon of the abuſe which ſome ſoldiers make of it, who ſell their *bread* without regard to future ſubſiſtence. For long marches through an enemy's country, they ſometimes make biſket inſtead of *bread*. *Feuq.* Mem. ſur la Guer. ſect. 33. p. 87, ſeq. See BISKET.

There are alſo certain medicated *breads*, appropriated to the intentions of phyſic [a]; as, aniſeed *bread* [b], turnep *bread*, and vipers *bread*; which laſt is made of the fleſh of that animal, with wheat flour, yolks of eggs, ſarſaparilla, yeaſt, and milk; commended in ſcorbutic habits [c]. Some direct acorn *bread*, dipped in red wine, to be thruſt up the anus, in prolapſuſes of that part [d].—[[a] *Junck.* lib. cit. [b] *Nent.* Fund. Med. T. 2. P. 3. p. 761. [c] *Quinc.* Diſpenſ. P. 4. ſect. 14. p. 693. [d] *Nent.* lib. cit. p. 456.

Horſe-BREAD is made of wheat, oats and beans; to which ſometimes are added aniſeed, gentian, liquorice, fenugreek, eggs and ale; and ſometimes rye and white wine are uſed.

For race-horſes, three ſorts of bread are uſually given with ſucceſs, for the ſecond, third and fourth fortnights feeding; they are all made of beans and wheat, worked with barm; the difference conſiſting chiefly in the proportion of the two former. In the firſt kind, three times the quantity of beans is uſed to one of

wheat; in the second, equal quantities of both; in the third, three times the quantity of wheat to one of beans. Ruſt. Dict. T. 1. in voc. *Bread.*

Euchariſtic or *Sacramental* BREAD, in the proteſtant churches, is common leavened *bread*, agreeable to the antient practice [a]. In the Romiſh maſs, azymus, or unleavened *bread*, is uſed, particularly in the Gallican church, where a ſort is provided for this purpoſe, called *pain a chanter*, made of the pureſt wheaten flour, preſſed between two iron plates, graven like wafer-moulds, being firſt rubbed with white wax, to prevent the paſte ſticking [b]. — [a *Bingh.* Orig. Eccleſ. l. 15. c. 2. §. 5. *Bayle*, Dict. Crit. T. 2. p. 686. b. b *Durant.* de Ritib. Eccleſ. l. 2. c. 38. p. 638. *Savar.* lib. cit. p. 951.]

The Greeks obſerve divers ceremonies in the making their euchariſtic *bread*. 'Tis neceſſary the perſon who bakes it, have not lain with his wife the day before; or if it be a woman, that ſhe have not converſed with her huſband.

The Abyſſinians have an apartment in their churches, on purpoſe for this ſervice, being a kind of ſacriſty. F. Sirmond, in his diſquiſition on azymus *bread*, ſhews, from the council of Toledo, that antiently there were as many ceremonies uſed in the Latin church, in the preparation of their unleavened *bread*, as are ſtill retained in the eaſtern churches. He cites the example of queen Radegonda, who diſtributed with her own hands, in the church, the *bread* which ſhe herſelf had made. It appears alſo from the diſpute of cardinal Humbert againſt the Greeks, that, in the Latin church, no *bread* was uſed for the euchariſt, but what was taken out of the ſacriſty, and had been made by the deacons, ſubdeacons, and even prieſts, who rehearſed ſeveral pſalms during the proceſs. *Johnſ.* Eccleſ. Law, ann. 994. §. 5. *Durant.* ubi ſupra, p. 640. Trev. lib. cit. p. 432, ſeq.

Eccleſiaſtical writers enumerate other ſpecies of *bread*, allotted for purpoſes of religion; as, 1. *Calendarius*, that antiently offered to the prieſt at the calends [c]. 2. *Prebendarius*, the ſame with *capitularis*, that diſtributed daily to each prebendary or canon [d]. 3. *Benedictus*, that antiently given to catechumens before baptiſm, in lieu of the euchariſtic *bread*, which they were incapable of partaking of. The *panis benedictus* was called alſo *panagium* and *eulogium*, being a ſort of *bread* bleſſed and conſecrated by the prieſt, whereby to prepare the catechumens for the reception of the body of Chriſt. The ſame was afterwards uſed not only by the catechumens, but by believers themſelves, as a token of their mutual communion and friendſhip [e]. Its origin is dated from the 7th century, at the council of Nantz [f]. In the Gallican church we ſtill find *panis benedictus*, *pain benit*, uſed for that offered for benediction, and afterwards diſtributed to pious perſons, who attend divine ſervice in chapels [g]. 4. Conſecrated *bread* is a piece of wax, paſte, or even earth, over which ſeveral ceremonies have been performed with benedictions, &c. to be ſet in an agnus dei, or a relick box, and preſented for veneration [h]. 5. Unleavened *bread*, *panis azymus*. See AZYMUS, *Cycl.* The Jews eat no other *bread* during their paſſover; and exact ſearch was made in every houſe, to ſee that no leavened *bread* was left. The uſage was introduced in memory of their haſty departure from Egypt, when they had not leiſure to bake leavened [i]. 6. Shew-*bread* was that offered to God every ſabbath-day, being placed on the golden table, in the holy of holies [k].—[c *Durand.* Ration. l. 4. c. 30. n. 40. d *Du Cange*, p. 126. Trev. lib. cit. p. 433. e *Johnſ.* Eccleſ. Law, an. 1236. §. 4. *Durant.* de Ritib. l. 2. c. 58. n. 1. p. 861, ſeq. *Du Cange*, lib. cit. p. 119. f Dict. Trev. loc. cit. g *Savar.* lib. cit. p. 952. h Dict. Trev. loc. cit. p. 433. i *Calm.* Dict. Bibl. T. 1. p. 325. k Exod. xxv. 30. *Calm.* lib. cit. p. 326.]

BREAD *of St Hubert*, *St. Genevieve*, *St. Nicholas*, &c. denote cakes ſanctified with certain prayers and invocations of thoſe ſaints, held by the ſuperſtitious to be of great efficacy in the cure of hydrophobias, agues, and other diſeaſes.

BREAD is alſo uſed to denote certain foods made of animal, or even mineral matters, ſerving to ſupply the place of *bread*.

In divers parts of the north we read of fiſh-*bread*, particularly in Iceland, where dried cod is uſed for *bread*, being firſt beaten to powder [a], and made up into cakes. The like obtains among the Laplanders [b], whoſe country affords no corn; and even among the Crim Tartars [c].—[a *Collins*, Diſc. of Salt and Fiſh. p. 82, ſeq. b Phil. Tranſ. N° 102. p. 35. *Scheff.* Hiſt. Lappon. c. 13. c *Olear.* Itin. l. 4. c 10.]

BREAD, in a more extenſive ſenſe, includes all the neceſſaries of life, as food, raiment, lodging, &c. *Calv.* Lex. Jur. p. 668. voc. *Panis.*

BREAD is more particularly uſed to denote the euchariſt, eſpecially the body of Chriſt therein. *Du Cange*, Gloſſ. Lat. T. 4. p. 118. voc. *Panis.*

In which ſenſe, many of the antients underſtand that article in the Lord's prayer, *Give us this day our daily bread.* By αρτον επιουσιον, Tertullian, St. Ambroſe, Chryſoſtom, Cyril, and others of the antient fathers, underſtood the body of Chriſt broken in the euchariſt for the nouriſhment of our ſouls: others, with Damaſcenus, of that *bread* of heaven, which the bleſſed are to be fed with hereafter in paradiſe. Some render the word of that text, επιουσιον, by ſuperſubſtantial, or tranſubſtantial; others, by quotidian or diurnal, agreeable to our and the vulgate verſion. The difference ariſes from the different acceptations which the Greek word ουσια is capable of; which has been the occaſion of much diſpute. Vid. *Durant.* de Rit. l. 2. c. 48. n. 26. p. 776, ſeq. *Du Cange*, lib. cit. voc. *Panis.*

Hence alſo the ſabbath is ſometimes called, in antient writers, the *day of bread*, by reaſon the euchariſt was then adminiſtred every Lord's day. *Bingh.* Orig. Eccleſ. l. 20. c. 2. §. 1.

Swine-BREAD, *Panis porcinus*, a denomination given to truffles. See the article TRUFFLE.

Sow's-BREAD is alſo applied to the herb cyclamen. See the article CYCLAMEN.

Aſſize of BREAD.—The price and weight of *bread* is regulated by the magiſtrates according to the price of wheat [a]. We have divers tables of the weights of the loaves both of wheat, wheaten, and houſhold *bread*, at every price of wheat [b]. If *bread* want one ounce in thirty-ſix, the baker formerly was to ſuffer the pillory; now to forfeit five ſhillings for every ounce wanting; and for every defect leſs than an ounce, two ſhillings and ſix-pence; ſuch *bread* being complained of, and weighed before a magiſtrate within twenty-four hours after it is baked or expoſed to ſale, within the bills of mortality, or within three days in any other place [c]. It is to be obſerved, *bread* loſes weight by keeping; in ſome experiments recited by Bartholin, the diminution was near one-fourth in ſix months [d]. The ſame author aſſures us, that, in Norway, they make *bread* which keeps thirty or forty years; and that they are there fonder of their old hard *bread*, than elſewhere of new or ſoft; ſince the older it is, the more agreeable it grows. For their great feaſts, particular care is taken to have the oldeſt *bread*; ſo that, at the chriſtening of a child, they have uſually *bread* which had been baked perhaps at the chriſtening of his grandfather. It is made of barley and oat-meal, baked between two hollow ſtones [e].—[a Stat. 8 Ann. c. 18. b Id. ibid. *Moor*, Math. Compend. c. 2. p. 17, ſeq. c Stat. 1 Geor. I. c. 26. ſect. 5. Abr. 8°. T. 5. p. 70. d *Barthol.* Act. Med. Hafn. T. 4. Art. 57. p. 161. e Trev. Dict. Univ. T. 4. p. 442. voc. *Pain.*

BREAD, in medicine.—Beſides the alimentary, *bread* has alſo medical qualities; decoctions, creams and gellies of *bread*, are directed in ſome diſpenſaries. Vid. *Boerh.* de Mat. Med. p. 2, ſeq. *Junck.* Conſp. Therap. tab. 13. p. 364. *Schrod.* Pharm. l. 4. c. 1. n. 316. *Hoffm.* Clav. ad loc.

Averſions for *bread* are rare; yet we meet with inſtances of them. *Caſt.* Lex. Med. p. 559. voc. *Panis.*

Bread has alſo medical virtues applied externally, as is vulgarly known. Vid. *Boyle*, Phil. Work. Abr. T. 3. p. 572.

Mr. Boyle aſſures, he drew a menſtruum from *bread* ſtronger than aqua-fortis, and which would act even upon glaſs itſelf. Id. ibid. T. 1. p. 34, 49. Vid. infra.

See further concerning *bread* in the writers on foods and cookery; eſpecially in Hen. Nicolaus, who has a treatiſe expreſs on *bread*. Hen. Nicolai Tract. de Pane. Dantiſc. 1651. *Fabric.* Bibl. Antiq. c. 19. §. 6. p. 570. where other writers concerning *bread* are enumerated.

The making of *bread* is the office of bakers. See the articles BAKER, and BAKING.

The Jews, as well as Romans, we have already obſerved, frequently baked their *bread* under the aſhes; the Arabs did the ſame between two flow fires, made of cows dung. Among divers oriental nations we meet with an extraordinary kind of oven, being an earthen pitcher, within which fire was put, and the paſte applied on the outſide [a]. Antiently each family at Rome baked its own *bread*; Trajan firſt erected a college of public bakers [b].—[a *Calm.* Dict. Bibl. T. 1. p. 325. b *Pitiſc.* Lex. Antiq. T. 2. p. 366. voc. *Panis.*]

Among the Jews, travellers were to carry their *bread* with them; by reaſon there were neither inns nor bakers in Paleſtine: and hence it is, that we find in the New Teſtament Chriſt and his diſciples are often ſpoke of as having *bread* with them. *Calm.* lib. cit. p. 327.

The proceſs of making houſhold *bread* among us, is thus; to a peck of meal they add an handful of ſalt, a pint of yeaſt, and three quarts of water, cold in ſummer, hot in winter, and temperate between the two; the whole being kneaded in a bowl or trough by the fire in winter, from it in ſummer, will riſe in about an hour; they then mould it into loaves, and put it into an oven to bake. *Hought.* Collect. T. 1. N° 89. p. 238, ſeq.

For leavened *bread*, part of the flour intended for it, being made into dough with warm water and a little ſalt, is laid in the reſt of the flour an hour or more, in which time it riſes to three times the bulk; then they mix and knead the whole with more water, till it be brought into a ſtiff dough; which being formed into loaves, is baked in the oven: tho' the more uſual way is to take a piece of dough kneaded, and leave it in the tub till next time, when they break it ſmall, and mix it with the meal, adding ſome yeaſt. *Hought.* Collect. T. 1. N° 90. p. 241.

For French *bread*, they take half a buſhel of fine flour, ten eggs, and a pound and an half of freſh butter, into which they put as much yeaſt, with a manchet; and tempering the whole maſs with new milk, pretty hot, let it lie half an hour to riſe; which done, they make it into loaves or rolls, and waſh it over with an egg beaten with milk: care is taken the oven be not too hot. Ruſt. Dict. T. 1. in voc. *French.*

BREAD, in chemiſtry.—The chemiſts art can extract from ſo mild a ſubject as *bread*, an acid, which is a powerful menſtruum. It is done in this manner: Put two pounds of coarſe *bread*, cut into ſmall pieces, into a glaſs retort; place this in a ſand-heat, and, luting on a receiver, diſtil with a gentle fire, and there will be produced a liquor appearing like water, with a ſmall quantity of oil; ſeparate the oil, and filtre and rectify the liquor by a ſecond diſtillation in balneo mariæ, and afterwards diſtil it again in a ſand-heat, and there will be produced a moderately ſtrong, clear, acid liquor. This is a menſtruum capable of extracting the red colour from coral, and even from garnets. Common *bread* affords it, but coarſe rye-*bread* yields the greateſt quantity. *Shaw*'s Lectures, p. 104.

Oil of vitriol, poured upon crumbs of *bread*, will excite a ſurpriſing degree of heat. *Boyle*'s Works, Abr. Vol. 1. p. 569.

BREAD *for Horſes*. See HORSE-*bread*.

Bonpournickel BREAD, the name of a very coarſe *bread* eaten in Weſtphalia, and many other places.

This *bread* of the Weſtphalians ſtill retains the opprobrious name once given it by a French traveller, of *bonpournickel*, good for his horſe *Nickel*; but is by no means a contemptible kind.

It is far from being peculiar to this age or country; it has been known in diſtant places, and in different ages, and was called by the antients *panis furfuraceus*, or *panis impurus*, from its not being ſo thoroughly cleanſed from the huſk or bran, as the fine ſorts of *bread* are. Athenæus calls it *ſyncomiſton*, prepared of unſifted meal; and *coliphium*, or ſtrength of the joints, becauſe of its great ſtrengthening quality; and it has been called by Cælius Rhodiginus *panis gregarius*, and by Terence, *panis ater*.

It has ever been highly eſteemed for nouriſhing the body, and rendering it robuſt and ſtrong, and was called by the Greeks *polytropheros*, as conveying much nouriſhment; they, in diſtinction, called the fine *bread*, *oligotropheros*, ſignifying its carrying but a ſmall ſhare of nouriſhment. The wreſtlers of old eat only this ſort of *bread*, to preſerve them in their ſtrength of limbs; and we may learn from Pliny, that the Romans, for three hundred years, knew no other *bread*: unqueſtionably, this coarſe *bread* nouriſhes more, aſſuages hunger better, and generates humours leſs ſubject to corruption, than the white.

The inhabitants of Weſtphalia, who are a hardy and robuſt people, and capable of enduring the greateſt fatigues, are a living teſtimony of the ſalutary effects of this ſort of *bread*; and 'tis remarkable, that they are very ſeldom attacked by acute fevers, and thoſe other diſeaſes which ariſe from an ebullition of the humours, and a malignant colliquation of the blood, and of the humours of which it is compoſed: it ſeems extremely probable, that the maſterly turn of genius, and evenneſs of temper, and that happy judgment in tranſacting buſineſs, for which the Weſtphalians are peculiarly remarkable, are circumſtances as much to be aſcribed to their manner of living, as to their education. They are all qualified for induſtry, to which they are habituated from their infancy; and their method of living enables them to continue it.

It cannot be objected, that this groſs food of the Weſtphalians generates groſs ſpirits; ſince the labour or exerciſe to which the ſpirit it gives prompts thoſe who eat it, ſufficiently divides its viſcid particles.

It is certain, that a leſs ſtrong diet is more proper to weakly conſtitutions, and people of ſedentary lives, than this; but for thoſe who will uſe the neceſſary exerciſe with it, it is eaſy to ſee that it is preferable to all other kinds of *bread*; ſince it remarkably reſtores ſtrength, and has another ſalutary effect, which is, that it renders the belly ſoluble: this was a quality remarked in coarſe *bread*, and highly commended in it, ſo early as in the days of Hippocrates.

The Germans make two ſorts of waters by diſtillation from this *bread*; the one with, the other without the addition of a ſpirituous liquor: to both which great virtues are aſcribed. That without any thing ſpirituous, is made of the juice of craw-fiſh, may-dew, roſe-water, nutmegs and ſaffron, diſtilled from a large quantity of this *bread*. This is eſteemed a great reſtorative, and given in hectic habits. The other is diſtilled from this *bread* and Rheniſh wine, with nutmegs and cinnamon. This is given in all the diſorders of the ſtomach, vomiting, and loſs of appetite, and other complaints of the ſame kind; and beſides theſe, there is a ſpirit diſtilled from it by the retort, in the dry way, which, when ſeparated from its fetid oil, is eſteemed a powerful ſudorific, and very valuable medicine, in removing impurities of the blood. *Hoffm.* Obſervat. Chem.

Caſſada or Indian BREAD. See YUCCA.

BREAK. See BREACH, and BREAKING.

A *break*, in Norfolk, denotes land ploughed or broke up the firſt year, after it has lain fallow in the ſheep-walks. *Kenn.* Gloſſ. ad Paroch. Antiq. in voc. *Briga*.

BREAK, in architecture, denotes a receſs, or giving back of a part behind its ordinary range or projecture.

In which ſenſe, they ſay, a *break* of a pediment [a]. A *break* of entablatures, whereby it ſhrinks, as it were, between the columns, is reputed a fault [b]. —[[a] *Oakl.* Magaz. Archit. p. 69. [b] Id. ibid. p. 63.] See the articles PEDIMENT, and ENTABLATURE, *Cycl.*

BREAK-*in*, among carpenters, is when they cut a hole in brick-walls with their ripping-chiſſel. *Neve*, Build. Dict. in voc.

BREAK-*neck*, *Briſe-cou*, in building, a fault in a ſtair-caſe, as when a ſtep is made higher or lower than the reſt, and landing-place too narrow, or the like. *Davil.* Explic. Term. Archit. p. 426

BREAKING, (*C cl*) in agriculture, denotes the ploughing up of grounds, eſpecially ſuch as have lain ſome time fallow. Vid. *Calv.* Lex. Jur. p. 629. voc. *Novalem*. *Du Cange*, Gloſſ. Lat. T. 2. p. 548. It. T. 4. p. 639. voc. *Rumpere*.

BREAKING *ground*, in the military art, is the firſt operation of a ſiege; it is uſually done in the night-time, by the advantage of ſome riſing ground, hollow way, or other matter, which may cover the men from the fire of the enemy.

BREAKING *the angles of a battalion*, denotes a military evolution, whereby the four angles turn, and make ſo many fronts towards the enemy; ſo that the battalion, which before was only a ſquare, becomes an octangle, and can fire on all ſides. *Fæſch.* Ing. Lex. p. 121.

This is otherwiſe called *blunting the angles of a battalion*; by the French, *emouſſer les angles d'un bataillon*.

BREAKING *of meaſure*, in fencing, denotes a moderate retiring, or giving of ground, in order to avoid the adverſary's thruſt. *Breaking* of meaſure differs much from going back, and loſing or yielding of ground; the latter being reputed a great reproach, the former a mark of judgment and adroitneſs. Some pretend, that a man retiring is obliged to forbear, if his adverſary call him to ſtand.

BREAKING *of the ſea*, BREAKING *of a wave*, or the like, on a rock, a bank, or the like.

The waves which *break* in ſuch a bay, are a ſufficient indication to the pilots, that it is not ſafe mooring there. *Aubin*, Dict. Mar. p. 127. voc. *Briſer*.

Divers machines and ſtructures have been contrived for *breaking* the force of the wind, the ſtream of water, and the like.

BREAKING is alſo uſed for the taming of animals, or reducing them from a wild to a tractable ſtate.

In this ſenſe, we ſay, to *break* an elephant [a]; the centaurs in Theſſalia firſt invented the art of *breaking* horſes [b].—[[a] Vid. Phil. Tranſ. N° 326. p. 67. [b] Hiſt. Acad. Inſcr. T. 2. p. 27.

BREAKING *a horſe to the ſaddle*. See the articles HORSE, BACKING, and TRAVICE.

To *break* a horſe for hunting, is to ſupple him, and make him acquire the diſpoſition and habit of running. 'Tis a terrible fatigue to run horſes at full ſpeed before they are *broken*. *Guill.* Gent. Dict. P. 1. in voc.

BREAKING *herd*, among ſportſmen, denotes a deer's quitting the herd, and running by itſelf.

In which ſenſe, the word ſtands oppoſed to *herding*.

A deer, when cloſe purſued, is loth to *break* herd [a]. When a hart *breaks* herd, and draws to the thickets or coverts, he is ſaid to *harbour* or take hold.—[[a] *Cox*, Gent. Recr. P. 1. p. 72. [b] Id. ibid. p. 13.]

BREAKING *up a deer*, ſignifies the opening or cutting it up.

BREAKING *of priſon*. See PRISON.

BREAKING *the legs*, *Crurifragium*, was an appendage of crucifixion, uſed no where but among the Jews. *Pitiſc.* Lex. Ant. T. 1. p. 598. voc. *Crurifragium*. See the article CROSS, *Cycl.*

BREAKING *bulk*, in the ſea language, ſignifies taking part of the ſhip's loading or cargo out of the hold. Dict. Ruſt. T. 1. in voc.

BREAKING *of hemp*. See the article BRAKE.

BREAKING *of bread*, κλασις αρτου, is ſometimes uſed, in eccleſiaſtical writers, for celebrating the euchariſt. Vid. *Bingh.* Orig. Eccleſ l. 15. c. 3. §. 34. *Du Cange*, Gloſſ. Lat. T. 4. p. 122. voc. *Panis*. See the article EUCHARIST, *Cycl.*

BREAKING *of wine*, among vintners.—Wine is ſaid to *break*, when being left ſome time in the air, in an open glaſs, it changes colour; an indication that it will not keep. *Savar.* Dict Comm. T. 2. p. 1414. voc *Rompre*. Trev. Dict. Univ. T. 4. p. 1336.

This is the uſual method of trying the goodneſs of wine, among the merchants and vintners of Paris.

BREAKING is alſo uſed in trade, for a perſon's failing or ſtopping payment.

In which ſenſe, *breaking* differs from becoming bankrupt. *Savar.* Dict. Comm. T. 1. p. 263. voc. *Banqueroute*. See the article BANKRUPT, *Cycl.* and *Suppl.*

Breaking by times, while there is ſomething left to pay withal, is a mark of ingenuity; and, generally, both entitles the unhappy perſon to compaſſion and gentler uſage from his creditors, ſaves his credit of an honeſt man, and facilitates his retrieving. A late ſenſible writer on trade takes great pains to inculcate this precept, *Break early*. Vid. Compl. Engl. Trad. T. 1. p. 77. It. p. 80, 963 162, 174.

BREAM, in ichthyology, the Engliſh name of the *Cyprinus latus*, or broad cyprinus. See the article CYPRINUS.

This is but a coarſe fiſh for the table, but it affords great ſport to the angler. The method of taking it is this: Procure about a quart of large worms, put them into ſome freſh moſs, well waſhed

washed and dried; let this be changed every three days, and let there be put, at the bottom of the vessel, some good black mould, with some fennel chopped small among it. This will clean them perfectly; and, in about three weeks, they will be fit to use. The lines must be silk alone, or silk and hair, and the floats large goose or swan quills; a plummet must be prepared of a piece of lead, of the shape of a pear, with a ring at the small end; the lead must be fastened to the line, and the line-hook to the lead; about ten or twelve inches space will be enough between the lead and the hook; and the lead must be heavy enough to sink the float. The hook is to be baited with a strong and vigorous worm, which will draw it up and down at the bottom, and provoke the *bream* to bite more greedily. It will be best to fit up three or four rods in this manner, and set them all at once. Find the exact depth of the water, if possible, that the float may just lie even with the surface, directly over the lead; then provide the following ground bait.

Take a peck of sweet gross ground malt, boil it a little, strain it hard through a bag, and take it to the water-side; throw in this malt by handfuls, squeezed hard together, that the water may not separate it before it gets to the bottom; it should be thrown in about a yard above the place where the hook is to lie. This is to be done about nine o'clock at night, and, about three in the morning, go again to the place, approaching cautiously, so as to keep out of sight of any fish that may be at the top of the water, while the rest are feeding at the bottom; then throw in the line, with the hook nicely baited, and the others at about a yards distance above and below the first, and one another; let the rods lie on the ground, and when one is taken, there is no occasion to run up hastily; but the fish may be left to tire himself a little, and then be taken up.

If there be any carp in the place, the same method usually takes them too; and if there be pike, they are usually drawn about the ground-bait; not that they will touch it, but the resort of small fish brings them to the place; in this case, they must be attempted first. The best bait is a gudgeon, bleak, or small roach; and let this be baited with a worm, hanging at the point of the hook. The pike will seldom miss this bait. When the enemy is thus removed, the carp and *bream* will come and bite freely. The sport will last till about nine in the morning; or, if the day be gloomy, all day long.

BREAST (*Cycl.*)—Anatomists sometimes divide *breasts* into perfect, which are composed of a multitude of glands, interwoven with veins, arteries, and nerves; such as are those of women; and imperfect *breasts*, composed chiefly of fat, with a few glands; such as are those of men. Trev. Dict. Univ. T. 3. p. 114. voc. *Mamelle*.

When men's *breasts* grow large and turgent, like the *breasts* of women, it is considered as something preternatural, and gives men the denomination, γυναικομαστοι [a], *q. d.* woman-*breasted*; though others apply this denomination to the *breasts* of women, when at their utmost growth and prominency [b].—[a *Cast.* Lex. Med. p. 376. voc. *Gynæcomastos.* b *Gorr.* Med. Defin. p. 97. voc. Γυναικομαστον.]

The *breasts* are usually two; though we also meet with instances of *trimammiæ*, or women with three *breasts* [c], and even some with four, all yielding milk alike [d].—[c *Barthol.* Act. Med. Hafn. T. 3. Art. 93. p. 171. *Cast.* Lex. Med. p. 728. voc. *Trimammiæ.* d *Cabrol.* Observ. 7. *Blas.* Comm. ad Vesling. c. 9. p. 133.]

The antients represented Diana of Ephesus with many *breasts*, as appears from several medals of that city; whence she had the epithet *Mammosa*, *q. d.* having many *breasts*; an appellation which is also given to Isis and to Ceres. Trev. Dict. T. 3. p. 114. voc. *Mamelle*.

The *breasts* have their particular figure, consistence, complexion and dimensions, requisite to render them beautiful. Women with huge *breasts* are called μεγαλομασθαι, in Latin, *mammosæ*. *Cast.* Lex. Med. p. 480.

In the island of Anabon, the women have their *breasts* so long, that they suckle their children over their shoulders. Trev. Dict. loc. cit.

In France, the punishment alloted women, who conspire against the king's life, is to have melted lead injected into their *breasts*. Trev. Dict. ubi supra.

The office of the *breasts* is to secrete the milk from the arteries in their glandulous substance, to collect it in their lacteal tubes, and, at proper seasons, to yield it to the infant through the nipple. *Heist.* Comp. Anat. §. 250. p. 115. *Vesling.* lib. cit. Some, however, assert, that the milk is not formed from the blood, but from the chyle, which is immediately conveyed thither by the thoracic, or Pecquet's ducts [a]. And what confirms the suggestion, is the quick supply of milk in nurses, after a draught of cow's milk [b]. The difficulty is, to prove, that the thoracic duct reaches to the *breasts*, which some absolutely deny [c].—[a Phil. Transf. N° 65. p. 1357. b Id. N° 40. p. 805. c *Blas.* ad Vesling. c. 18. p. 380.]

Swelling *breasts*, especially if there be milk found in them, is generally judged a mark of the loss of virginity, and a proof that a woman has been with child; tho', 'tis said, it does not hold universally. *Teichmey* Inst. Med. Leg. c. 5. qu. 2. p. 35, seq. See VIRGINITY, *Cycl.* and *Suppl.*

The swelling of the *breasts* during the time of gestation, is owing to the consent between the *breasts* and the uterus; there being so near a communication between the mammary vessels, and the hypogastric vessels of the womb, that a dilatation in the latter is attended with a similar one in the former. Id. ib. p. 36. See UTERUS, PREGNANCY, &c.

The *breasts*, especially after delivery, are liable to divers diseases; as inflammations, excoriations, indurations, tumefactions, nodes, abscesses, schirrhuses, and cancers [a]; to which may be added, certain peculiar disorders, as the sparganosis [b], strangalides [c], and gynæcomaston [d].—[a *Shaw*, New Pract. of Phys. p. 525, seq. *Nent*, Fund. Med. T. 1. P. 1. p. 215, seq. Item, T. 2. P. 3. tab. 198. c. 4. p. 921, seq. *Junck.* Consp Med. tab. 15. p. 735. b *Cast.* Lex. Med. p. 676. voc. *Sparganosis.* c Id. p. 689. voc. *Strangalides.* d Id. p. 376. voc. *Gynæcomaston.*] See CANCER, SCHIRRUS, &c.

BREAST is also applied to the correspondent parts of other animals; more properly called *udders*, *dugs*, *ubera*, &c.

The opossum is usually said to have its *breasts*, or teats, in the marsupium or pouch: but Dr. Tyson finds this a popular error. Phil. Transf. N° 239. p. 122. See OPOSSUM.

BREAST also denotes a large cavity or region of the body, by anatomists more frequently called thorax. See THORAX.

Though, in propriety, the *breast* is rather restrained to the anterior part of the thorax where the ribs meet; called also *sternum*, στερνον, στηθος, and *pectus*; in English, popularly, the *bosom*. *Gorr.* Med. Defin. p. 186. voc. στερνον. *Cast* Lex. Med. p. 569. voc. *Pectus.* *Blas.* Comm. ad Vesling. c. 9. p. 130.

We say, a flat, a narrow, or straight *breast* [a]; a broad *breast*, not high, is ranked among the signs of longevity [b]. Defluxions on the *breast* and lungs are dangerous.—[a *Cast.* Lex Med. p. 649. voc. *Saniodes.* b *Bac.* Hist. Vit. & Mort. ap. Works, T. 2. p. 139.]

Smiting the *breast* is one of the expressions of penitence [c]. In the Romish church, the priest beats his *breast* in rehearsing the general confession at the beginning of mass [d].—[c *Durant.* de Ritib. Eccles. c. 48. n. 38. p. 789. d Id. ibid. c. 12. n. 5. p. 445.]

Coughs, catarrhs, asthmas, phthises, peripneumonies, &c. are diseases of the *breast*. See COUGH, ASTHMA, &c. *Cycl.* and *Suppl.*

Physicians also speak of a dropsy of the *breast*, *hydrops pectoris*. See DROPSY, *Cycl.* and *Suppl.*

Medicines for disorders of the *breast* are called *pectorals*. See the article PECTORAL, *Cycl.*

BREAST-*bone*. See STERNUM.

Tumors of the BREAST. See MAMMARUM *Tumores.*

BREAST *of a chimney*, denotes the fore-part under the mantle or chimney-piece, commonly made inclined. Vid. *Gaug.* Fire's Improvem. P. 1. c. 1. p. 10. It. P. 3. c. 2. p. 61. It. c. 5. p. 102. See CHIMNEY, *Cycl.*

BREAST-*fast*, or BREST-*fast*, denotes a rope fastened to some part of a ship forward on, to keep her head fast to a wharf, or the like. *Botel.* Sea Dial. 4. p. 197. *Manwayr.* Seam. Dict. p. 16. *Guill.* Gent. Dict. P. 3. in voc.

BREAST-*hooks*, the compassing timbers before in a ship, which help to strengthen her stem, and all her fore-part. *Guill.* Gent. Dict. P. 3. in voc.

BREAST-*pain*, called by the Italians *grandezza di petto*, is a distemper in horses, proceeding from superfluity of blood and other gross humours, which being dissolved by some extreme and disorderly heat, resort downward to the *breast*, and pain him extremely.

The signs of the *breast*-pain are, a stiff, staggering, and weak-going with his fore-legs; besides, that he can hardly, if at all, bow his head to the ground. Rust. Dict. T. 1. in voc.

BREAST-*plate*, a piece of defensive armour, wherewith to cover the *breast*.

The *breast*-plate is said to be the invention of Jason. It was originally made of leather, afterwards of mail, and lastly of a brazen or iron-plate [a]. When made of this last matter, it is more particularly called *clibanus* [b], by the moderns *cuiras*; when made of brass, with a Gorgon's head in the middle, it is denominated *ægis* [c].—[a *Pitisc.* Lex. Ant. T. 2. p. 102, seq. voc. *Lorica.* b *Du Cange*, Gloss. Lat. T. 1. p. 1024. voc. *Clibanus.* c *Pitisc.* Lex. Antiq. T. 1. p. 41. voc. *Ægis.*] See CUIRASS, and ÆGIS, *Cycl.*

The *breast*-plate, called also by the Romans *pectorale*, by the Greeks καρδιαφυλαξ [d], is frequently confounded with the thorax and lorica; from both which it ought to be distinguished, as being properly a Ἡμιθωρακιον, half-thorax, or half-lorica, covering only the *breast*; whereas the thorax, Θωραξ, invested the body [e]. —[d *Pitisc.* ibid. T. 2. p. 397. voc. *Pectorale.* e *Pott.* Archæol. Græc. l. 3. c. 4. T. 2. p. 29, seq.]

As the whole thorax might be a temptation to the soldiery to turn their backs, when equally guarded with their *breasts*, the thorax was thrown away, and the *hemi-thoracion*, or *breast*-plate, only retained. *Polyæn.* Stratag. l. 7.

BREAST-*plate*, in the manege, denotes a leathern strap running from one side of the saddle, cross the horse's *breast*, to the other; intended to keep the saddle from slipping backwards, in mounting up rising-grounds. It is otherwise called *tee*; sometimes the *poitrail*. *Guill.* Gent. Dict. P. 1. in voc. *Du Cange*, Gloss. Lat. T. 4. p. 219. in voc. *Pectorale.*

BREAST-*plate*, among artificers, denotes a drill-plate, againſt which to ſet the blunt end of the drill. *Moxon*, Mechan. Exercis. P. 1. p. 7.

BREASTS *of a ſaddle*, are part of the bow, being the two ſides of it down from the arch or upper part. See the article BOW.

BREAST-*work*, in the military art. See the articles PARAPET, and LORICA, *Cycl.*

BREATH, the wind or air which is received and expelled by the mouth and noſtrils, in the act of reſpiration. See AIR, WIND, RESPIRATION, *Cycl.* and *Suppl.*

In which ſenſe, the word amounts to the ſame with the Greek πνευμα, and Latin *ſpiritus*. *Caſt.* Lex. Med. p. 595. voc. *Pneuma.*

The *breath* of a leper is ſaid to be infectious. See the article LEPROSY, *Cycl.*

It has been generally held, tho' without foundation, that the *breath* of a menſtruous woman had a malignity in it. *Junck.* Conſp. Phyſiol. tab. 24. p. 343. See the article MENSES, *Cycl.* and *Suppl.*

Charas, and ſome others, attribute the poiſon of the viper to a malignity in its *breath*, which they call *halitus teter*, and *afflatus malignus*. Philoſ. Tranſact. N° 77. p. 3014.

A ſtinking *breath*, called ὀζη, or *fœtor oris*, is one of the ſymptoms uſually preceding the acceſs of an intermitting fever. *Celſ.* l. 3. c. 11. *Caſt.* Lex. Med p. 554. voc. *Oze.*

In ſome perſons, a ſtinking *breath* is an indication of the menſes being at hand. *Goel.* Hiſt. Anat. p. 221, ſeq.

'Tis diſputed among the civilians, whether a ſtinking *breath*, called *ſcabro*, owing to rotten teeth or gums, be to be reputed a diſeaſe. *Calv.* Lex. Jur. p. 831. voc. *Scabro.*

BREATH is more particularly uſed to denote a ſtrength of lungs, whereby a man is enabled to hold out without taking wind ſo often.

In this ſenſe, we ſay, a long, a ſhort *breath*. The ordinary term of holding the *breath* does not exceed one third of a minute. *Bac.* Hiſt. Life and Death, ap. Works, T. 2. p. 176.

For the pearl fiſhery they chuſe ſlaves who have the beſt *breath*, or can continue longeſt under water without fetching their *breath*. Pechlin has a diſſertation expreſs on living long without *breathing*. *J. Nic. Pechlin* de Aeris & Alimenti Defectu & Vita ſub Aquis diuturna, Meditatio ad Joel Langelot, 1676. Trev Dict. Univ. T. 3. p. 466. voc. *Haleine.*

The antients were very watchful over the laſt *breath* of dying perſons; which the neareſt relations, as the mother, father, brother, or the like, received in their mouths. *Pitiſc.* Lex. Antiq. T. 2. p. 830. voc. *Spiritus.*

BREATH is alſo ſometimes extended to the odorous effluvia of plants, and even exhalations of minerals. See EFFLUVIA, *Cycl.* and *Suppl.*

BREATHING, *Exſufflatio*, a ceremony in baptiſm. See BAPTISM, and BLOWING.

Difficulty of BREATHING, in medicine, a diſeaſe called by phyſicians *dyſpnæa*. See the article DYSPNÆA.

Fighting a cock to *breathe* him, is called *ſparing*. See the article SPARING.

To *breathe* a running horſe, and bring him to his wind, they give him heats. See the article HEAT, *Cycl.*

BREDEWITE, in antient law-writers, an amercement ariſing from ſome default in the aſſize of bread. *Kenn.* Gloſſ. ad Paroch. Antiq. in voc.

BREECHES, a garment worn by males, reaching from the girdle to the knees, and ſerving to cover the hips, thighs, &c.

The antient Romans had nothing in their dreſs anſwering to our *breeches* and ſtockings; inſtead of which, under their lower tunics and waiſtcoats, they ſometimes bound their thighs and legs round with ſilken ſcarves, or faſciæ, called *tibialia* and *femoralia*. *Salmuth.* ad Pancirol. P. 1. p. 161. *Pitiſc.* Lex Ant. T. 1. p. 292, ſeq. *Kenn.* Rom. Antiq. Not. P. 2. l. 5. c. 8. p. 219.

Breeches appear to be a habit peculiar to the barbarous nations, eſpecially thoſe inhabiting the colder countries of the north; whence Tacitus calls them *barbarum tegmen* [a]. We find mention made of them among the antient Getæ, Sarmatæ, Gauls, Germans and Britons; they alſo obtained among the Medes [b] and Perſians [c], as being a people of Scythian origin: they alſo afterwards got footing in Italy, ſome pretend as early as the time of Auguſtus; but without much foundation, that emperor's *breeches*, mentioned by Suetonius, being apparently only ſwaths tied over his thighs [d]. — [a *Tacit.* Hiſt. l. 2. c. 20. [b] *Perſ.* Sat. 3. v. 51. [c] *Ovid.* Triſt. l. 5. Eleg. 11. [d] *Suet.* in Auguſt. c. 82. n. 1.]

However this be, *breeches* were at length received into Italy, and grew ſo highly into faſhion, that it was thought neceſſary, under Honorius and Arcadius, to reſtrain them by law, and expel the *braccarii*, or *breeches*-makers, out of the city; it appearing a thing unworthy, that a nation, which commanded the world, ſhould wear the habit of barbarians. Vid. *Caſaub.* ad Suet. c. 82. n. 1. *Salmaſ.* in Lamprid. Alex. Sever. c. 40. *Cluver.* l. 1. c. 16. Ant. Germ. p. 70, & 140. *Rhodig.* Lect. Ant. l. 18. c. 21. *Fab.* Theſ. p. 373, ſeq. voc. *Bracca. Pitiſc.* Lex. Antiq. T. 1. p. 293. voc. *Braccarii.*

We find frequent mention of *bracæ*, *braccæ*, or *bracchæ*, in claſſic writers; but the form of this habit is not agreed on: ſome will have it to have been a rough party-coloured coat, with a long nap; others repreſent the *braca* as a coat, with *breeches* annexed, or covering both the breaſt, hips and legs; ſuch as that ſtill in uſe among the peaſants of Suabia; and what ſeems to confirm this conjecture is, that Orpheus is repreſented in ſome antient monuments in the Roma Subterranea, in ſuch a habit; agreeing well enough to Ovid and Mela's deſcription. *Aquin.* Lex. Milit. T. 1. p. 136. voc. *Bracciæ. Mela* de Situ Orbis, l. 2. c. 1. *Ovid.* Triſt. l. 3. Eleg. 10.

BREECH *of a gun*, among engineers, denotes the end next the touch-hole.

The *breech* contains the touch-hole, plat-band, and bottom, or caſcabel. It is of ſolid metal, and ſerves to terminate and defend the extremity of the chaſe. *Moor.* Treat. of Artill. P. 1. c. 1. p. 2.

For braſs guns, the *breech* has been uſually allowed to be as thick as the diameter of the bullet. *Manwayr.* Sea Dict. p. 15 voc. *Breech.*

Engineers have contrived a ſort of cannons, which are charged by the *breech*. Trev. Dict. Univ. T. 2. p. 439. voc. *Culaſſe.*

BREECHINGS, in the ſea language, thoſe ropes with which the great guns are laſhed, or faſtened to the ſhip's ſide. *Guill.* Gent. Dict. P. 3. in voc.

They are thus called, becauſe brought about the *breech* of the piece, and are not uſed in fight, but chiefly in foul weather. *Manwayr.* Sea Dict. p. 15. voc. *Breechings.*

BREEDING (*Cycl.*) is uſed for the care of rearing or bringing up the young of divers animals.

We find divers inſtructions for the *breeding* of horſes [a], kine [b], ſheep [c], dogs [d], cocks [e], chickens [f], turkeys [g], ſilkworms, ſpiders [h], oyſters [i], and the like.—[a *Mortim.* Art of Huſbandry, l. 6. c. 2. T. 1. p. 205. *Cox*, Gent. Recr. P. 4. c. 2. p. 7, 11, ſeq. [b] *Hought.* Collect. T. 4. p. 362. It. T. 1. N° 105, ſeq. p. 278, & 285, ſeq. [c] *Mortim.* lib. cit. p. 240. [d] *Cox*, lib. cit. P. 1. p. 25, & p. 40. [e] Compl. Gam. p. 200. [f] Dict. Ruſt. T. 1. in voc. [g] Phil. Tranſact. N° 5. p. 87. [h] Mem. Acad. Scienc. an. 1710. p. 507. [i] *Hought.* Collect. T. 3. N° 528. p. 265, and 268.]

Among the Mahometans, there are certain privileges and rewards allotted to ſheep or camels, after having *bred* a certain number of young: they are called *bahira*, *ſaiba*, *waſila*, and *hami*. *Sale*, Prelim. Diſc. to Koran, ſec. 5. p. 128, ſeq. See BAHIRA, &c.

BREEDING, in a moral ſenſe, denotes a perſon's deportment or behaviour in the external offices and decorums of ſocial life.

In this ſenſe, we ſay, well-*bred*, ill-*bred*, a man of *breeding*, &c. Good *breeding* is hard to define; none can underſtand the ſpeculation, but thoſe who have the practice [a]. Good *breeding* amounts to much the ſame with what is otherwiſe called *politeneſs*, among the antient Romans, *urbanity* [b].—[a *Shaftsb.* Charact. T. 1. p. 64, ſeq. [b] Hiſt. Acad. Inſcr. T. 1. p. 84.]

Good-*breeding* is near to virtue, and will of itſelf lead a man a great part of the way towards the ſame; it teaches him to rejoice in acts of civility, to ſeek out objects of compaſſion, and be pleaſed with every occaſion of doing good offices. *Shaftesb.* Charact. T. 2. p. 242.

Lord Shafteſbury compares the well-*bred* man with the real philoſopher: both characters aim at what is excellent, aſpire to a juſt taſte, and carry in view the model of what is beautiful and becoming. The conduct and manners of the one is formed according to the moſt perfect eaſe, and good entertainment of company; of the other, according to the ſtricteſt intereſt of mankind; the one according to his rank and quality in his private ſtation, the other according to his rank and dignity in nature [c]. Horace ſeems to have united both characters [d].

Quid verum atque decens curo & rogo, & omnis in hoc ſum.

[c *Shaftesb.* Charact. T. 3. p. 161, ſeq. Item, T. 1. p. 129, ſeq. [d] *Hor.* l. 1. ep. 1. v. 11.]

BREEDING-*ſtone*, in mineralogy, a ſort of maſs of pebbles, joined by a ſparry cement; frequent in divers parts of Hertfordſhire. *Woodw.* Nat. Hiſt. Engliſh Foſſils, T. 2. p. 66. See PEBBLE.

BREEDING *of fiſh*.—The neceſſary qualities for a pond, in order to its ſerving well for *breeding* fiſh, are very different from thoſe which are to make it ſerve for the feeding of them; inſomuch that ſome particular ponds ſerve only for one of theſe purpoſes, and others for the other; and ſcarce ever the ſame pond is found to ſerve for both. In general, it is much more rare to find a good *breeding* pond than a good feeding one. The beſt indications for a *breeding* pond are theſe; that there be a good quantity of ruſhes and graſs about its ſides, with gravelly ſhoals, ſuch as horſe-ponds uſually have: when a pond has this property, and takes to the *breeding* of fiſh, it is amazing what a progreſs will be made in a little time. The ſpawn of fiſh is prodigious in quantity, and where it ſucceeds, one is able to produce many millions: thus, in one of theſe *breeding* ponds, two or three melters, and as many ſpawners, will, in a very little time, ſtock the whole country. When theſe ponds are not meant entirely for *breeding*, but the owner would have the fiſh grow to ſome ſize in them, the method is to thin the numbers, becauſe they otherwiſe ſtarve one another, and to put in other fiſh that will prey upon the young, and thin them in the quickeſt manner. Eels and pearch are the moſt uſeful on this account; for they prey not only upon the ſpawn itſelf, but on the young fry, from the firſt hatching to the time

that they are of a conſiderable ſize. Some fiſh are obſerved to *breed* indifferently in all ſort of waters, and that in conſiderable plenty; of this nature are the roach, pike, and pearch. See the article FISH.

BREEDING *of horſes*. See the article HORSE.

BREEF-*Cards*, denote a kind of falſe cards, either longer or broader than the reſt, whereby they may be known and diſtinguiſhed. Myſt. of Mod. Gaming, p. 95. It. p. 103.

BREEZE (*Cycl.*)—*Breezes* differ from *eteſiæ*, or trade-winds, as the former are diurnal, or have their periods each day, and, beſides, are only perceived near the ſhore or coaſt; whereas the latter are anniverſary, and blow at a diſtance from land. Phil. Tranſact. N° 183. p. 158. *Caſt.* Lex. Med. p. 318. voc. *Eteſiæ*. See TRADE-*Wind*, *Cycl.*

The ſea *breezes* rule by day, and the land *breezes* by night; ſo that, dividing their empire, they remain conſtant as the ſeaſons of the year, or courſe of the ſun, on which they ſeem alone to depend; not but that they appear ſooner or later, ſtronger or weaker, in ſome places than others, and vary the alternative according to the ſeveral latitudes, ſituations, ſoils, mountains, valleys, woods, and other circumſtances of the countries where they are found. *Halley*, in Phil. Tranſ. loc. cit. *Bohun*, Diſc. of Winds, p. 92, ſeq. *Becm.* Hiſt. Orb. Terr. c. 2. §. 9. p. 22.

Deſcartes and his followers hold the ſea *breezes* to be generated from the ſea vapours during the preſence of the ſun, and the land *breezes* by the heat which the ſun leaves behind him in the earth; arguing, that tho' fluids evaporate moſt in the day, yet a ſolid, as the earth, being once thoroughly heated, retains its warmth the longeſt: ſo that, after ſun-ſet, the terreſtrial fumes may ſtill afford ſufficient matter for the land *breezes*. *Cart.* Princ. Phil. p. 159. *Bohun*, lib. cit. p. 93, ſeq.

In ſome countries, the ſea *breezes* appear only to be efforts of the general or trade-wind, as at Barbadoes, and in many places between the tropics, where the general wind, if not impeded by mountains or iſlands, blows freſh in the day time, but, after ſun-ſet, the terreſtrial exhalations becoming precipitated, beget a new wind, which is not only able to make head againſt the trade-wind, but to repel it from their coaſts.

The ſea *breezes* do not all come from the ſame point of the compaſs, but from different points, as the land lies. On the coaſt of Carthagena they blow from the eaſt; on the iſland of Trinidad, from the north; at Jamaica, on one ſide of the iſland, from the ſouth, and on the other from the north. In Guinea, they begin at nine or ten in the morning, and continue till ten, eleven, or twelve at night, blowing a freſh gale, extremely cheriſhing to the inhabitants; at ten, eleven, or twelve at night, they ceaſe, and give place to the land *breezes*, which continue till the morning, from the north to the north-weſt points. On the coaſt of Malabar, from September to April, their ſummer, the eaſterly *breezes* blow off the land about twelve at night, and continue till twelve at noon, reaching ten miles into the ocean; then the weſtern *breezes* make to ſhore, as if it were the former reflected back again.

In Brazil, and many of the Caribee iſlands, they have no land *breeze*, eſpecially if the ſhores lie low, as at Barbadoes, where the general or eaſtern wind blows from one end of the iſle to the other, and ſerves inſtead of the land *breeze*. In other places they want the ſea *breeze*, eſpecially between the tropics, in coaſts which lie weſterly, as in the weſtern kingdoms of Africa. If either the eaſterly or weſterly winds blow freſh, they hinder both the land and ſea *breezes* in the Mediterranean; of which thoſe are always found the weakeſt which riſe lateſt. In England, in very hot days, and when no other winds are ſtirring, the like alternation of land and ſea *breezes* may be obſerved on our coaſts, tho' with little certitude, anywhere to the northward of Portugal.

Breezes are more conſtant in ſummer than in winter, and more between the tropics than in the temperate zones. *Bohun*, lib. cit. p. 103—110.

BREEZE-*fly*. See OESTRUM.

BREGMA, (*Cycl.*) in anatomy, properly denotes the middle and fore-part of the head, ſituate over the forehead, and extending on both ſides to the temples. *Gorr.* Med. Defin. p. 80. voc. Βρεγμα. *Caſt.* Lex. Med. p. 112.

The word is Greek, Βρεγμα, ſometimes alſo written Βρεχμα. Its origin is obſcure, and has been much controverted between Hoffman and Lindenius. *Hoffm.* Inſt. l. 2. c. 59. §. 2. *Linden.* Phyſiol. l. 2. c. 8. §. 16.

BREHONS, the provincial judges among the antient Iriſh, by whom juſtice was adminiſtred, and controverſies decided.

Theſe ſages were a diſtinct tribe or family, to whom competent lands were allowed in inheritance. In criminal caſes, the *brehon* had the eleventh part of all fines; which could not but be conſiderable, at a time when murders, rapes, robberies, and the like offences, were only ſubject to pecuniary commutations. *Nichols.* Iriſh Hiſt. Libr. c. 7. p. 133, ſeq.

BREHON-*Laws*, *Leges Brehonicæ*, denote the general maxims, or rules of law obſerved by the *brehons*, and having the force of laws throughout all the provinces of Ireland.

Several fragments of the *leges brehonicæ* are ſtill extant in public and private libraries. The moſt compleat collection is that belonging to the duke of Chandos, containing twenty-two ſheets and an half cloſe written, full of abbreviated words, and not very legible. The publication of theſe laws has been much wiſhed for. Id. ibid. p. 134.

By the ſtatute of Kilkenny, made under Edward III. it is enacted, that no Engliſh ſubject ſhall ſubmit to a trial by the *brehon* law, on the penalty of high-treaſon. Notwithſtanding which, many were ſtill under a neceſſity of being concluded by the Iriſh laws and cuſtoms, till the whole kingdom was ſettled on an Engliſh bottom under King James I. Id. ibid. p. 135.

BRENNAGE, *Brennagium*, in middle age writers, a kind of tribute paid in lieu of bran, or bran itſelf, which the tenants were obliged to furniſh for ſupport of the lord's hounds. *Du Cange*, Gloſſ. Lat. T. 1. p. 612.

The word is alſo written *brenage*, *brenagium*, and *brenaige*, *bernagium*, *brenaticum*, and *brennaticum*.

BRENTA, in zoology, the name of a fowl of the gooſe-kind, known among us by that of the *Brent-gooſe*, and, by ſome, ſuppoſed to differ from the barnacle no other way than in ſex; but this is erroneous. It is ſomewhat larger than the barnacle, and is longer bodied; the head, neck, and upper part of the breaſt, are black; the neck, however, is ornamented on each ſide with a ſort of chain of white. Its back is of a browniſh grey, but ſomewhat blackiſh toward the tail; the feathers immediately over the tail are white; it is white alſo on the belly, and of a browniſh grey on the breaſt. *Ray*'s Ornith. p. 276. See Tab. of Birds, N° 49.

BREPHOTROPHIUM, an hoſpital for foundlings, or a place wherein children, expoſed by their parents, are brought up at the public charge. Leg. 19. Cod. de Sacroſanct. Eccleſ. *Fabri* Theſ. p. 376. *Suic.* Theſ. Eccleſ. T. 1. p. 711. *Du Cange*, Gloſſ. Lat. T. 1. p. 613. Ejuſdem Gloſſ. Græc. T. 1. p 227. voc. Βρεφοτροφειον. See the article FOUNDLING.

The word is Greek, Βρεφοτροφειον, which ſignifies the ſame.

BRESMA, in ichthyology, a name given by Hildegard, and ſeveral other writers on fiſhes, to the bream, a ſpecies of cyprinus. See BREAM, and CYPRINUS.

BRET, a name the people on the coaſts of Lincolnſhire give to the common turbut, a fiſh extremely plentiful with them, and taken in vaſt abundance. The way of catching them is in a net, trailed on the ground by two horſes; the one going up to the middle of his body in the water, the other on the ſhore. *Willughby*, Hiſt. Piſc. p. 93.

BRETACHIÆ, in middle age writers, denote wooden towers or caſtles, wherewith towns or camps were defended. *Du Cange*, Gloſſ. Lat. T. 1. p. 613.

BRETESSE, in heraldry, a term uſed to expreſs a line in ſome coats of arms, of the ſame nature with what is uſually called the *crenelle*, or *embattled line*; except that this laſt is only embattled on one ſide, and the *breteſſe* or *crenelle* on both ſides. Some authors ſeem, however, to have underſtood the terms *breteſſe* and *crenelle* as ſynonimous words, and when they would expreſs ſuch a line, they call it, if embattled on both ſides, *contre-breteſſe*. *Nisbet*'s Heraldry. See EMBATTLED *Line*.

BRETOYSE, or BRETOIS, the law of the marches of Wales; in uſe among the antient Britons.

BREVE (*Cycl.*) is uſed in the civil law for a ſhort note or minute. L. ult. Cod de conveniend. Fiſc. Debit. l. 10. Tit. 2. Inter chartulas confiſcati brevis quidam adſervatur inventus, qui nomina continebat debitorum. *Cowel*, Interpret. voc. *Brief*. *Spelm.* Gloſſ. p. 87.

In which ſenſe, the word is alſo written *brevis* (ſubaude *libellus*) and in Engliſh *brief* or *breve*; amounting to much the ſame with what is otherwiſe called *ſchedula* and *brevicula*. *Skin.* de verb. Signif. p. 24, ſeq. See BRIEF.

BREVE more particularly denotes a liſt or regiſter of the names of the ſoldiers under the command of a general. *Aquin.* Lex. Milit. T. 1. p. 137. *Fab.* Theſ. p. 376.

BREVE is more particularly uſed in common law for a writ or brief. See WRIT, and BRIEF.

Fitzherbert has given a new *natura brevium*; thus called by way of diſtinction from an old *natura brevium*, compoſed about the time of Henry III. *Nichols.* Engl. Hiſt. Libr. c. 5. p. 231.

BREVET, in the French laws, denotes an act iſſued by a ſecretary of ſtate, importing a grant of ſome favour or donation from the king. Trev. Dict. Univ. T. 1. p. 1226.

The word is formed from the middle age Latin, *brevettum*, of *breve*, ſhort. Vid. *Menag.* Orig. p. 130.

In which ſenſe, *brevet* amounts to much the ſame with our warrant. See WARRANT, *Cycl.*

They ſay, a *brevet* of nomination, a duke by *brevet*; ſuch a perſon had a *brevet* of a marſhal of France

BREVET more particularly denotes the commiſſion of a ſubaltern officer, being only written on parchment, and without ſeal. *Aubin.* Dict. Mar. p. 125.

BREVET, in the ſea language, is ſometimes uſed for a bill of loading. *Savar.* Dict. Comm. T. 1. p. 480. See the article BILL, *Cycl.*

BREVIARE, to abbreviate or reduce a thing into a ſhorter compaſs. *Du Cange*, Gloſſ. Lat. T. 1. p. 619.

This is otherwiſe called *abbreviare* and *inbreviare*.

BREVIARY (*Cycl.*) is an epitome or ſhort ſtate of a thing. See ABRIDGEMENT.

The word is Latin, *breviarium*, though not pure, as appears from Seneca, who obſerves, that the antients, in lieu of it, uſed *ſummarium*. *Senec.* Epiſt. 29. p. 301. in Princ. *Reinman.*

Bibl. Acroam. Pref. §. 54. p. 92. *Salmaſ.* Exerc. ad Solin. in Pref.

BREVIARIUM is more particularly uſed among Roman writers, to denote a book introduced by Auguſtus, containing the accounts of the empire.

The *breviarium* was the ſame with what was otherwiſe called *rationarium*[a], and differed from the *notitia imperii*[b].—[a *Fabric.* Bibl. Ant. c. 16. §. 4. p. 513. b *Pitiſc.* Lex. Antiq. T. 1. p. 294. *Calv.* Lex. Jur. p. 127.] See the article NOTITIA *Imperii*, *Cycl.*

The deſign of it was for giving an account to the people how the monies levied on them were applied. The emperor Tiberius laid aſide the *breviarium*, but it was reſumed by Caligula. *Pitiſc.* loc. cit.

BREVIARY was alſo uſed among the antients for the place where the briefs, or what was written abbreviately, were preſerved. *Du Cange*, Gloſſ. Lat. T. 1. p. 620. Trev. Dict. Univ. p. 1237.

Hence, probably, might the denomination *breviarium* be given to an abridgment of the church-ſervice. Some even maintain, that originally the *breviary* only contained the rubrics, from which the name was afterwards extended to the whole ſervice.

BREVIARY has alſo been ſometimes improperly applied to the miſſal, or maſs-book. Act. Sanct. Jun. T. 2. p. 498. Trev. Dict. Univ. p. 1237. See the article MISSAL, *Cycl.*

The machſor is by ſome called the Jewiſh *breviary*, as containing the ſervice for the ſabbath, feaſt-days, &c. *Wolf.* Bibl. Hebr. l. 8. n. 353. T. 2. p. 1334.

Some deduce the appellation *breviary* hence, that when the popes reſided in the Lateran palace, the office read in the papal palace was much ſhorter than that ſaid in the other churches of Rome; which office, thus abbreviated, was compiled by Innocent III. and called *officium capellare*, till ſuch time as the Franciſcan friars adopting the ſame, in conformity to the papal chapel, it became denominated *breviarium*, and ſhortly after was in general uſe. *Magr.* Vocab. Eccleſ. p. 38. *Menag.* Orig. Franc.

The firſt time the word *breviary* occurs in the ſenſe of a church-book, is in a letter of the archbiſhop of Lyons to the biſhop of Langres, in 1099; or rather by Micrologus, who lived in 1080. Trev. Dict. Univ. loc. cit. *Magr.* ubi ſupra.

BREVIATE, is ſometimes uſed for an abridgment, or ſhort extract of a book or paper. Philoſ. Tranſact. N° 73. p. 2212. See ABRIDGMENT.

BREVIER, among printers, is the denomination of a ſmall ſpecies of letters between nonpareil and long-primer. *Hought.* Collect. T. 2. N° 365. p. 429. See LETTER, *Cycl.*

BREVITY, in a general ſenſe, that which denominates a thing brief or ſhort. See the article BRIEF.

BREVITY is more particularly uſed in ſpeaking of the ſtyle or compoſition of diſcourſe. *Brevity* of diſcourſe is by ſome called *brachylogia*, and *breviloquentia*; ſometimes *laconiſmus*. Tacitus and Perſius are remarkable for the *brevity* of their ſtyle.

There are two kinds of *brevity*, one ariſing from dryneſs, poverty, and narrowneſs of genius; the other from judgment and reflexion; which latter alone is laudable. *Brevity* is ſo eſſential to a tale, a ſong, and an epigram, that, without it, they neceſſarily languiſh and become dull.

Rhetoricians make *brevity* one of the principal marks or conditions of eloquence; but the rules they preſcribe for attaining it, are difficult to apply, ſo as ſtill to keep the due medium between too much and too little. The maſters, ſays Cicero, require that the diſcourſe be brief; and they make *brevity* conſiſt in retrenching whatever is ſuperfluous: If it be *brevity* to be ſparing of words, and only to employ thoſe which are abſolutely neceſſary, ſuch a reſtraint may ſometimes have a good effect, but it will frequently alſo have an ill one; eſpecially in a narration, which will hereby become obſcure, and both loſe that elegancy which ought to pleaſe, and the ſtrength which ought to perſuade. Vid. *Cic.* de Orat. l. 2.

Quintilian explains himſelf more clearly: The narration, ſays he, will have the neceſſary *brevity*, if, in the firſt place, you lay down whatever is neceſſary, to give the judges a general idea of the queſtion; in the ſecond place, intermix nothing that is foreign to the matter in queſtion; and, in the third place, retrench nothing that is neceſſary for underſtanding the point in queſtion, and facilitating the deciſion of it: *brevity*, in fine, does not conſiſt in ſaying leſs than we ought, but in ſaying preciſely what we ought; and, of the two, it is a leſs fault to ſay too much than too little. *Quint.* Inſt. Orat. l. 4. c. 2.

A juſt *brevity*, then, is attained by uſing all the words which are neceſſary, and none but thoſe which are neceſſary. Sometimes it may alſo be had, by chuſing a word which has the force of ſeveral. 'Tis this laſt kind which Quintilian admires ſo much in Salluſt[a]; and the imitation of which by other writers, has cauſed ſo much obſcurity[b].—[a *Quint.* Inſt. Orat. l. 8. c. 3. b *Bouh.* Man. de Bien Penſ. Dial. 4. p. 379.] See OBSCURITY, *Cycl.*

BREWER, an operator who profeſſes the art of brewing. See BREWING, *Cycl.* and *Suppl.*

Brewers are called, in middle age writers, *braſiatores*, *braciatores*, *braxionarii*, *braſiatrices*, *braxatrices*[a], and *cambarii*[b].—[a *Spelm.* Gloſſ. p. 87. voc. *Braſium.* *Du Cange*, Gloſſ. Lat. T. 1. p. 602. voc. *Braciator.* b Id. ibid. p. 97. voc. *Camba.*]

The *brewers* of London make a company, incorporated by Henry VI. in 1427, conſiſting of a maſter, three wardens, 24 aſſiſtants, and 90 liverymen, beſides yeomenry. New View of London, T. 2. ſect. 3. p. 598.

At Paris, they have a company of *brewers*, which is one of the oldeſt in the city, having ſtatutes as early as 1268. *Savar.* Dict. Comm. T. 1. p. 470, ſeq. voc. *Braſſeur.*

The apparatus and utenſils of a *brewer*, or a brewhouſe, are a furnace made cloſe and hollow for ſaving fuel, and with a vent for the paſſage of the ſmoke, leſt it taint the liquor; a copper, which is preferable to lead; a maſk-fat near the head, a cooler near the maſk-fat, and a guile-fat under the cooler; adjoining to all, are ſeveral clean tubs, to receive the worts and liquors. Dict. Ruſt. T. 1. in voc.

BREWING (*Cycl.*) amounts to the ſame with what is called in middle age writers, *braciare*, *braſiare*, *braſſicare*, and *braxare*. In a charter of King Henry III. given by Matthew Paris, we meet with *Domos competentes & neceſſarias ad braxicandum*, and, in the *Leges burgorum* of Scotland, *Quæcumque fœmina braſicare voluerit, cerviſiam venalem braſiet.* *Caſen.* Orig. Franc. p. 28. *Du Cange*, Gloſſ. Lat. T. 1. p 601.

Brewing is an art depending on chemiſtry[a], and capable of being improved various ways, both with regard to the preparation of the malt, the uſe of hops, and the management of the working or fermentation[b]. Some have introduced the uſe of vegetable ſaps, as birch and ſycamore waters, to good purpoſe into the art of *brewing*[c]. Honey, treacle, and ſugar, are alſo capable of being applied to advantage in *brewing*[d].—[a *Junck.* Conſp. Chem. tab. 1. p. 11, and 13. b *Shaw*, Eſſays for advancing Chem. §. 2. p. 28. c Philoſ. Tranſact. N° 68. p. 2071. Item, N° 46. p. 917. d *Shaw*, lib. cit. p. 49.]

BREWING, among diſtillers, denotes the method of extracting the more ſoluble parts of vegetables with hot water, and thus procuring a ſolution or decoction fitted for vinous fermentation.

In which ſenſe, *brewing* is a neceſſary ſtep towards diſtillation. See DISTILLATION.

A fermentable ſolution, fit for yielding a ſpirit, or brandy, is obtainable from any vegetable, under proper management; but the more readily and perfectly the ſubject diſſolves, the better it is diſpoſed for fermentation, and the production of brandies. Thus, ſugar, honey, treacle, manna, and other inſpiſſated vegetable juices, which totally unite with water, into a clear and uniform ſolution, are more immediate, more perfect, and better adapted ſubjects of fermentation, than roots, fruits or herbs, in ſubſtance, the grains, or even malt itſelf; all which diſſolve but very imperfectly in hot water.

Yet malt, for its cheapneſs, is generally preferred in England, and *brewed* for this purpoſe much after the common manner of *brewing* for beer; only the worſt malt is uſually choſen for diſtillation; and the tincture, without the addition of hops, and the trouble of boiling, is here directly cooled and fermented. *Shaw*, Eſſay on Diſtill. ſect. 1. p. 57.

The grain intended for *brewing* is previouſly malted, to prepare it for diſſolving more eaſily and copiouſly in the water, ſo as to afford a richer tincture or ſolution, which, after due fermentation, will yield about one half more of proof ſpirit than the tincture of an equal weight of unmalted corn. Idem, ibid. See MALT, *Cycl.* and *Suppl.*

Brewing is alſo uſed, in an ill ſenſe, for the counterfeiting and compounding eſpecially of wines. Vintners and wine-coopers are ſuſpected of *brewing* wines, or mixing divers inferior ſorts, to imitate ſome better kind. The neceſſity of accommodating their liquors to the palates of their gueſts, is another cauſe of *brewing*; inſomuch that ſome have confeſſed they commonly draw out of two or three caſks for every pint. *Charlt.* Myſt. of Vint. p. 195. *Hought.* Collect. T. 2. N° 390. p. 486.

The ſap or juices of trees is a very valuable article in *brewing*, and not only improves malt liquor, but renders it much cheaper. The ſycamore is the beſt tree for tapping for this purpoſe; it yields a great quantity, and that without any other trouble than boring a hole properly, and placing a veſſel under it. One buſhel of malt *brewed* with this juice, will make as good beer as four buſhels in the ordinary way. The beſt way of procuring the ſap is this: Take a large augre, and with it bore two holes on the oppoſite ſides of the tree, each ſo deep as to the pith. Each hole is to be bored ſloping upwards, and the beſt place for it is immediately under a large arm of the tree near the ground; and if the arm be pierced through with the augre in the way to the tree, it will be ſo much the better: in this manner, there needs no ſpigot or ſtone to keep open the hole, or to direct the courſe of the liquor, for it will of itſelf run down into a veſſel placed to receive it; and one tree will thus, in a few days, yield a ſufficient quantity of liquor to *brew* with.

In order to preſerve the ſap in a proper condition for *brewing*, what is firſt gathered muſt be inſolated by a conſtant expoſition of it to the ſun, in proper glaſſes, till the reſt be obtained; otherwiſe the firſt will contract an acidity that will ſpoil it. When a ſufficient quantity of the ſap is thus collected, as much rye-bread muſt be put into it, cut thin and well toaſted, but not burnt, as will ſerve to ferment it; when it works well, the bread is to be taken out, and, at a convenient time, it is

to

to be bottled up, and will thus afford a pleaſant liquor, of conſiderable ſtrength, without malt or any other addition. Some people add ſage to this liquor, baking it in their cruſts of rye-bread, till thoroughly dry, and then adding it with the bread to the working liquor. If a few cloves be tied up in a rag, and put into the veſſels into which the ſap is received from the tree, they will preſerve it the year round, without any fermentation: they are very apt to give a taſte to the liquor; but if it be ſo contrived that they are taken out before they give this taſte, the liquor will keep as well without any flavour of them. The adding a few drops of oil of ſulphur, will have the ſame effect; and ſo will the fuming with ſulphur itſelf. A little ſpirit of wine, poured on the top of the juice in every bottle, will alſo be very inſtrumental in the preſerving it.

Many people, inſtead of adding malt, and *brewing* the ſap of the ſycamore or birch into ale, uſe raiſins, and make a ſort of wine of it; and ſome add ſugar. Some have uſed the rye-toaſts with very good ſucceſs, tho' they were not put into the liquor, but only hung over it, at ſuch a diſtance as to give a warmth and motion to the ſurface. Common ale yeaſt has been tried by ſome to ferment the juice of the birch; but it uſually ſpoils it, turning the liquor into a very bad ſmall beer. The Flemiſh wheat ferment would probably in time excellently mature the bottled juice of the birch or ſycamore; but it would require a conſiderable time for it. Cinnamon is worthy to be tried in the ſtead of cloves, as of an infinitely more greeable flavour. Honey has no effect on cyder at all; for it will not mix with it, tho' boiled in it, to make mead; but, after a time, the cyder lets fall the honey, and becomes ſimple cyder again: It is a queſtion whether it would mix with theſe juices; but if it will, it will probably make a great improvement in them. The tops and young leaves of birch boiled in the ſap, are ſaid by ſome to preſerve it. Phil. Tranſ. N° 146.

Water for BREWING. See WATER.

BREYNIA, in botany, the name of a genus of plants deſcribed by Plumier and Linnæus, the characters of which are theſe: The perianthium is very ſmall, and conſiſts of one leaf; it is of a coriaceous texture, and is divided into four ſegments of an oval figure, which ſtand expanded; the flower conſiſts of four oval expanded petals, ſomewhat larger than the leaves of the cup; the ſtamina are numerous capillary filaments, longer than the flower; the antheræ are oblong and erect; the germen of the piſtil is very ſmall, but long and of a clavated figure, and obtuſe at the end; there is no ſtyle, and the ſtigma is obtuſe; the fruit is a very long pod, it is fleſhy, ſoft, bivalve, and of a clavated figure; it contains only one cell, and in that are a number of fleſhy ſeeds, kidney-ſhaped, and ranged in longitudinal rows. *Linnæi* Gen. Plant. p. 230. *Plumier*, Gen. p. 16.

BRIBE, denotes money or other gratification received by a perſon in office or authority, as an inducement for doing ſomething contrary to duty or inclination. Vid. *Calv.* Lex. Jur. p. 807. voc. *Repetundarum.* See BRIBERY, *Cycl.*

The word is French, *bribe*, which originally denotes a bit, fragment, or relick of meat taken off the table [a]; on which footing, *bribe* imports as much as *panis mendicatus*, and ſtill keeps up the idea of the matter whereof *bribes* antiently conſiſted. Hence alſo the Spaniards uſe *bribar* and *brivar* for begging, and *brivia*, *brivoneria*, and *brivoniſmo*, for beggary [b].—[[a] Trev. Dict. Univ. T. 1. p. 1238. [b] *Menag.* Orig. Franc. p. 131. *Skinn.* Etym. in voc.]

In middle age writers, a *bribe* given a judge is called *quota litis*, and the receiver, *campi particeps*, or *cambi particeps*; in regard the ſpoils of the field, *i. e.* the profits of the cauſe, were thus ſhared with the giver. *Du Cange*, Gloſſ. Lat. T. 4. p. 504. voc. *Quota.* Id. ibid. T. 1. p. 727. voc. *Campi-particeps.*

BRICIANI, *Knights of St. Bridget*, a military order, reſembling that of Malta, eſtabliſhed by St. Bridget, princeſs of Sweden, in 1366, and approved of by pope Urban V. who gave it the rule of St. Auguſtine.

The arms of the *briciani* were a croſs azure, like that of the knights of Malta; under which was a tongue of fire, to expreſs the ardour of their zeal: their office was to fight againſt heretics, bury the dead, aſſiſt widows and orphans, *&c.* *Giuſt.* Hiſt. di tutti gli Ord. Milit. T. 2. c. 59. p. 685. Trev. Dict. Univ. T. 1. p. 1238. voc. *Briciani.* Item, p. 1243. voc. *Brigide.*

BRICK (*Cycl.*) —The word *brick* comes from the French *brigue*, which Menage derives from *brica*, uſed in the middle age Latin to denote the ſame, and which ſome ſuppoſe formed from *imbricare*, to cover with tiles; others from *fabrica*, as being a ſtone cut and faſhioned. *Menag.* Orig. p. 133. Trev. Dict. Univ. T. 1. p. 1247. voc. *Brique.*

Brick-work is found ſtronger and more durable than ſtone-work; and eſpecially better fitted to reſiſt the force of guns and engines of war [a]. The Greeks are ſaid to have carried *brick*-makers with them in their armies, to be in readineſs for camp-works and fortifications [b]. The Romans intermixed *brick* with their ſquare ſtone, in order to ſtrengthen it [c]. In reality, *brick*-buildings were generally conſidered by the antients as perpetual; ſo that, in Rome, abatement was always made for the age of ſtone-building, none for that of *bricks* [d]. *Brick*-walls are alſo found warmer and wholeſomer than thoſe of free-ſtone and marble, as not being liable to ſweat, or collect humidities on their ſurface, which they rather imbibe [e]. We may add, that *bricks* are found the beſt materials for vaults and edifices under ground, not only for their durableneſs, but the eaſineſs of their expence, and ſafety from fire [f].—[[a] *Aquin.* Lex. Milit. T. 1. p. 535. voc. *Lateritium.* [b] *Plut.* in Ageſil. [c] *Vitruv.* lib. 2. c. 8. [d] Phil. Tranſ. N° 149. p. 238, ſeq. [e] Item, N° 93. p 6011. N° 149. p. 239. [f] *Davil.* Cours d'Archit. T. 1. p. 251.]

Bricks ſerve either for the inſides of walls, which are faced or incruſtated with ſtone, and for the outſides of edifices, which being of timber within, are faced with *bricks* [g]. In modern Rome, the walls of the houſes are uſually of *brick*, to which are afterwards added divers ornaments and projectures, by way of incruſtation, faſtened with cramp-irons [h].—[[g] *Davil.* Expl. Term. d'Archit. p. 435. [h] Idem, Cours d'Archit. P. 1. p. 130.]

The *brick* chiefly uſed among the Romans was the *didoron*, or, as other copies have it, *lydion*; which, according to the dimenſions given by Pliny, was a foot and a half long and a foot broad [i]: which meaſures agree with thoſe of ſeveral Roman *bricks* in England, which are about ſeventeen inches long and eleven broad of our meaſure [k].—[[i] *Plin.* Hiſt Nat. l. 35. c. 14. *Harduin.* Not. ad loc. [k] Philoſ. Tranſact. N° 149. p. 240.]

Sir Henry Wotton ſpeaks of a ſort of *bricks* at Venice, of which ſtately columns were built; they were firſt formed in a circular mould, and cut before they were burnt, into four or more quarters or ſides; afterwards, in laying, they were jointed ſo cloſe, and the points concentred ſo exactly, that the pillars appeared one entire piece. *Wotton*, Elem. of Archit. l. 2. *Neve*, Build. Dict. in voc.

The ordinary Paris *brick* is eight inches long, four broad, and two thick, French meaſure, which makes ſomething more than ours. But this ſmallneſs is an advantage to a building, the ſtrength and firmneſs of which conſiſts much in the multitude of angles and joints [l], at leaſt if well laid, and in good bond. The Romans were guilty of a great overſight in this reſpect; their *bricks* being above double of the French ones; tho' they had a better ſort, called *lateres beſſales*, only meaſuring eight inches in length [m]: but theſe were properly only their half-*bricks*. In England, we alſo ſometimes make *bricks* of an unuſual length, meaſuring twenty-two inches long, and only ſix broad, ſerving to ſupply the office of laths or ſpars in malt-kilns [n].—[[l] *Liſter*, in Phil. Tranſ. N° 149. p. 239. [m] *Pitiſc.* Lex. Ant. T. 1. p. 272. voc. *Beſſales.* [n] *Plott*, Nat. Hiſt. Oxf. c 9. §. 90.]

Bricks may be made of any earth that is clear of ſtones, even ſea-owſe; but all earth will not burn red [o], a property peculiar to earths which contain ferrugineous particles [p]. In England, *bricks* are chiefly made of a hazely yellowiſh coloured fatty earth, ſomewhat reddiſh, vulgarly called loam. The earth, according to Leibourn, ought to be dug before winter, but not made into *bricks* till ſpring [q].—[[o] Dict. Ruſt. in voc. [p] *Woodward*'s Nat. Hiſt. Engl. Foſſ. T. 1. p. 1. *Mortim.* Art of Huſbandry, l. 3. c. 3. T. 1. p. 72. *Moxon*'s Mechan. Exer. p. 238, ſeq. [q] *Neve*, Build. Dict. in voc.]

Bricks are uſually diſtinguiſhed into crude and burnt.

Crude BRICKS, *lateres crudi*, thoſe only dried in the ſun without burning; theſe are much uſed in hot countries, where it rains rarely, particularly throughout all Egypt [r]. The Romans had likewiſe their crude or unburnt *bricks*, made of whitiſh earth, reſembling chalk, left to dry ſome five years ere they were uſed. The like was alſo made of a fatty earth, mixed and baked with chopped hay, the compoſition of which was called *torchis* [s].—[[r] *Savar.* Dict. Comm. T. 1. p. 481. [s] *Vitruv.* Archit. l. 2. c. 3. *Perrault*, Not. ſur Vitruv. p. 124.]

Burnt BRICKS, *lateres teſtacei*, or *cocti*, thoſe baked either in a kiln, or with clamp-fire. *Sturm.* Math. Juv. T. 2. c. 3.

In burning *bricks*, much depends on the alternate raiſing and abating the fire. *Brick*-burners, who continue the heat without intermiſſion, uſually make their lower ware extreme hard and good, but the upper quite naught: nay, and which is worſe, the lower ones will ſometimes run ſo with the exceſſive heat, as alſo to unite into one body. Then, for cooling kilns of ware, ſome unwiſe burners, as ſoon as the *bricks* are burnt, immediately ſtop up the reſt of the mouth of the kiln, which was left open above the ſhin-lag, by which means the air being ſhut out, it is long in cooling; ſo that ſuch burners are commonly a fortnight, or almoſt three weeks, in ſetting, burning, and drawing of a kiln of ware; all which may be done in one week.

In all kilns or clamps there are uſually three ſorts or degrees of *bricks* in goodneſs, *viz.* 1. *Clinkers*, which are the firſt and beſt for laſting, being thoſe which lie next the fire; having, as it were, a gloſs on them, owing to the ſaltpetre inherent in them, which, by the violence of the fire, runs and glazes them. 2. Common *bricks*, thoſe which lie next in the kiln, or clamp; and, 3. Samel or ſandal *bricks*, which are the third and worſt ſort, being thoſe which lie on the outſides of the kilns or clamps, where the ſaltpetre is not digeſted for want of due heat. Theſe, when they come to be expoſed to the weather for ſome time, will moulder away like dirt. 'Tis an obſervation, that whilſt *bricks* are burning, thoſe on the windy ſide of a clamp are the worſt of all. *Neve*, Build. Dict. in voc.

Dutch or Flemiſh *bricks* are of a yellowiſh colour, and chiefly uſed for paving of yards and ſtables; alſo for ſoapboilers vats and ciſterns. They make a very durable pavement, and, when laid edgeways, a very handſome one, eſpecially if laid herring-bone faſhion. *Moxon*'s Mechan. Exerc. p. 238.

Brique de Chantignole, or *Demibrique*, is that only an inch thick, but otherwiſe of the ſame dimenſions as the whole *brick*; uſed in paving between borders of ſtones, and alſo for the making hearths and chimney backs. *Felib.* Princ. de l'Archit. l. 1. c 17. p. 124. *Davil.* Explic. Term. de l'Archit.

Worlidge, and others after him, have laboured to excite *brick*-makers to try their ſkill in making a new ſort of *brick*, or a compoſition of clay and ſand, whereof to form window-frames, chimney-pieces, door-caſes, and the like. It is to be made in pieces faſhioned in moulds, which, when burnt, may be ſet together with a fine red cement, and ſeem as one entire piece, by which may be imitated all manner of ſtone-work.

The thing ſhould ſeem feaſible by the earthen pipes made fine, thin, and durable, to carry water under ground at Portſmouth, and by the earthen backs and grates for chimneys, formerly made by Sir John Winter, of a great bigneſs and thickneſs.

In reality, much might be done towards making chimney-pieces, ſtone-mouldings, architraves, faſcias for fronts of buildings, and the like, if men of this profeſſion had a little tincture of chemiſtry, which would enable them to contrive ſome good compoſition of earth, and a proper way to manage it in the moulding, burning, &c. Might not even a compoſition, ſomething like common crockers earth, in ſome meaſure anſwer the deſign? It is apparent, that into whatever form the crockers put their earth, it retains it after drying and burning, altho' their crocks be formed very thin. If chimney-pieces, thus made in moulds, and dried and burnt, were not found ſmooth enough, they might be poliſhed with ſand and water: or were care taken, when they were half dry, in the air, to have them poliſhed with an inſtrument of copper or iron, then leave them till they were dry enough to burn, 'tis likely they would not want much poliſhing afterwards. The work might even be glazed, as potters do their fine earthen ware, either white or of any other colour; or it might be veined in imitation of marble, or be painted with figures of various colours, which would be much cheaper, and perhaps equally durable, and as beautiful as marble itſelf. *Neve*, Build. Dict. in voc.

Making of BRICK.-With regard to the manner of making *bricks*, we have place-*bricks*, generally made in the eaſtern part of Suſſex; ſo called becauſe of a level ſmooth place juſt by where they are ſtruck or moulded. In this place, the bearer-off lays the *bricks* ſingly down in ricks or rows, as ſoon as moulded, where they are left till they are ſtiff enough to be turned on their edges, and dreſt, *i. e.* till their inequalities are cut off; when they are dry, they carry them to ſtacks, or places where they row them up, like a wall of two *bricks* thick, with ſome ſmall intervals betwixt them, to admit the wind and air to dry them. When the ſtack is filled, they are covered with ſtraw on the top, till they be dry enough to be carried to the kiln to be burnt. *Neve*, Dict. ibid.

Stock-*bricks* are of the ſame form with place-*bricks*, though different in the quality of their earth, and manner of making. They are made on a ſtock, that is, the mould is put on a ſtock, after the manner of moulding or ſtriking of tiles; and when one *brick* is moulded, they lay it on a piece of board, a little longer than the *brick*, and on that *brick* they lay another like piece of board, and on this another *brick*, till after this manner they have laid three *bricks* on one another; and ſo they continue to ſtrike and place them on the ſtage, as they do tiles, till the ſtage is full, and then they take each three ſucceſſively, and carry them to the ſtacks, and turn them down on the edges, ſo that there will be the thickneſs of a thin piece of board betwixt each *brick*. When the ſtack is filled with one height of *bricks*, from one end to the other, they begin to ſet them upon thoſe firſt laid on the ſtack; by that time they will be a little dried, and will bear the others; for they are moulded of a very ſtiff earth. When they come to ſet a ſecond, third, &c. height or courſe, they cater them a little, as they call it, to prevent their reeling. When the ſtack is as high as they think fit, they cover them with ſtraw, as they do place-*bricks*, till they be dry enough to burn. This way is more troubleſome than that of making place-*bricks*; but they are forced to have recourſe to it in many places, where, if they laid their *bricks* abroad in a place to dry, as they do place-*bricks*, the nature of the earth is ſuch, that they would burſt to pieces. *Neve*, Dict. ubi ſupra.

The ſeveral ſteps in the proceſs of our *brick*-making, are, caſting the clay or earth; treading or tempering the ſame with water; ſanding the *brick*, which is to riddle or caſt dry ſand on the wet *brick* lying on the ground; raiſing the *bricks* on one ſide, that they may dry the better and ſooner; walling the *brick*, is to lay one upon another, after the manner of a wall, to keep them from foul weather, and that they may dry thoroughly; ſodding the *bricks*, is to cover them up with turf; ſetting the *bricks* in the kiln, is the laying of ſlack or ſmall-coal between every courſe or row of *bricks*; dawbing the kiln, is the claying of it all about the top, to keep the fire in, and ſecure the kiln from weather; firing, is to ſet the fuel put into the arches on fire; earthing implies to put earth about it, to ſtop the arches, that the fire may take upwards to the top of the kiln; cooling the kiln after it has done burning; breaking the kiln; counting of the *bricks*; carrying the *brick*, which is to bring them to the place where they are to be uſed, either on horſeback or in tumbrels. Dict. Ruſt. in voc.

The arches of a kiln of *bricks*, are the hollow places at the bottom where the fire is; pigeon-holes are apertures in the fire-arches; checker courſe, denotes the lower row of *bricks* in the arch; tying courſe, thoſe which cover the top of the arch; binding courſe, is the laying of *bricks* over the joints of the under courſe; dividing courſe, is the diviſions or parts of a kiln; flatting courſe, is the top of all the kiln; the wheeler is he who carries the clay from the pit to the moulding board foot, and there turns it off the wheelbarrow; ſtaker, he who puts the clay off the ground upon the board; moulder, he who works the clay into the *brick*-moulds, and ſtrikes the ſuperfluous clay off the top of the moulds; breaker off, he who takes the mould, with the clay in it, from the moulder, and lays it on the ground to dry; moulder, he who parts off the clay from the mould; off-bearer, he who pulls off the empty mould into the tub of water or ſand; taker up of the *brick* has his work alſo to dreſs and ſmooth them from irregular edges. Dict. Ruſt. T. 1. Art. *Brick-making*.

After caſting the clay, the next ſtep is to tread or temper it, which ought to be performed doubly of what is uſually done; ſince the goodneſs of the *bricks* depends chiefly upon this firſt preparation. The earth itſelf, before it is wrought, is generally brittle and duſty; but, adding ſmall quantities of water gradually to it, and working and incorporating it together, it opens its body, and tinges the whole with a tough, glewy, ſtrong band or ſubſtance. If, in the tempering, you over-water them, as the uſual method is, they become dry and brittle almoſt as the earth they are made of; whereas, if duly tempered, they become ſmooth and ſolid, hard and durable. A *brick* of this laſt ſort takes up near as much earth as a *brick* and a half made the contrary way; in which the *bricks* are ſpongy, light, and full of cracks, partly through want of due working, and partly by mixing of aſhes and light ſandy earth, to make it work eaſy, and with greater diſpatch; as alſo to ſave culm or coals in the burning. We may add, that for *bricks* made of good earth, and well tempered, as they become ſolid and ponderous, ſo they take up a longer time in drying and burning than the common ones; and that the well drying of *bricks*, before they be burned, prevents their cracking and crumbling in the burning. *Neve*, Dict. ubi ſupra.

Brick-making, among the Romans, was conducted with great care and choice; by which means their *bricks* were rendered of much longer duration than ours [a]. In this reſpect moſt of our neighbours excel us; the *bricks* which we import from Holland, Denmark, &c. being better than our own [b].—[a Philoſ. Tranſact. N° 351. p. 563. b *Hought.* Collect. T. 2. N° 168. p. 26.]

For making *bricks*, the uſual rates paid, excluſive of the earth, are five or ſix ſhillings per thouſand; of which the moulder has ſixpence, the bearer-off, fourpence, he that tempers the earth, fourpence, and he that digs it, ſixpence. Dict. Ruſt. in voc.

With reſpect to the poſition, or manner in which *bricks* are laid, we meet with

BRICKS *in bond*, *Briques en liaſon*, thoſe laid flatwiſe, and ſo as to over-reach each other by half their length.

Floor-BRICKS, *Briques de champ*, thoſe laid edgewiſe, to ſerve as a pavement. *Davil.* lib. cit. p 436.

Spicated BRICKS, *Briques en epi*, thoſe placed diagonalwiſe, after the manner of Hungarian point. Such is the pavement of Venice. *Davil.* ibid. See BRICK-*laying*.

BRICKS, in medicine and chemiſtry, are not only uſed in the preparation of the oil, which takes its denomination from them; but heated *bricks* are frequently added in diſtillation, to increaſe the fervour of bodies in boiling [c]. Some adulterate the ſoda, or kali aſhes, for glaſs, with *brick*-duſt [d]. — [c *Junck.* Conſp. Chem. tab. 6. p. 170. d Id. Conſp. Med. tab. 29. p. 589.]

Oil of BRICKS.—Some extol it as a ſeptic, excellent for taking away calluſes, cleanſing and removing ulcers, &c. It is now fallen much into diſuſe. *Junck.* Conſp. Chirurg. tab. 39. p. 252. Item, tab. 41. p. 258. Item, tab. 42. p. 262. Item, tab. 43. p. 265.

BRICK is alſo uſed in ſpeaking of divers other matters made in the form of *bricks*.

In which ſenſe we ſay, a penny *brick*, or *brick*-bread. Some alſo mention *brick*-tin, a ſort of tin in that ſhape brought from Germany; and *brick*-ſoap, made in oblong pieces, from a pound and a half to three pounds. *Savar.* Dict. Comm. T. 1. p. 481. See the articles TIN, BREAD, SOAP, &c.

BRICKS, or BRIQUES, in heraldry, are figures or bearings in arms, reſembling a building of *bricks*; being of a ſquare form, like billets and tablets; from which they only differ in this, that they ſhow their thickneſs, which the others do not. *Coat.* Dict. Herald p. 58.

BRICK, in zoology, the name of a ſort of lamprey, called by the writers on theſe ſubjects, *lampetræ medium genus*; and diſtinguiſhed from the other lampreys, by having a number of black tranſverſe ſpots, very narrow and long. *Willugh.* H. Piſc. p. 106.

BRICK-*dust*.—It is a cuſtom with ſome perſons to reduce this ſubſtance to a very fine powder, and give it, inſtead of chalk, in the heart-burn. Many of the lozenges, ſo much famed for the cure of this diſorder, and ſold under the pompous names of coral lozenges, are only made of a mixture of this uncouth medicine, and ſugar made into the conſiſtence of a paſte, with gum tragacanth reduced to a mucilage, with roſe-water. But it is to be obſerved, that this, as well as chalk, is a very dangerous remedy. It has grown into an opinion, that the ſole cauſe of this complaint was an acid humour in the ſtomach, and thence an abſorbent was judged alone ſufficient for a cure: chalk was the firſt ſubſtance pitched upon for this purpoſe; but ſome miſchievous events having happened from the taking it, recourſe was had by ſome to this odd medicine. But ſuch ſhould have obſerved, that as chalk did all its miſchief by being an aſtringent, this new medicine was qualified to do much more harm, on the ſame principle; it being a much more powerful one. *Junck*. Med. Conſp. p. 589.

BRICK-*earth*, in agriculture. See the article *Brickiſh* SOIL.

BRICK-*kiln*, a place to burn bricks in. See the article BRICK.

BRICK-*layer*, an artificer whoſe buſineſs is to build with bricks, or make brick-work. See the articles BRICK, and BRICK-*laying*.

Brick-layers work or buſineſs, in London, includes tyling, walling, chimney-work, and paving with bricks and tyles. In the country, it alſo includes the maſons and plaiſterers buſineſs. *Neve*, Build. Dict. in voc.

There is ſome diſpute, as to the point of priority, between the white maſon, or hewer of ſtone, and the red maſon, or hewer of bricks: Scripture, it ſeems, favours the latter, making mention of making bricks, before any account of digging or hewing of ſtones. *Moxon*'s Mechan. Exerc. p. 237. See the article MASON, *Cycl.*

The materials uſed by *bricklayers*, are bricks, tyles, mortar, laths, nails, and tyle-pins.

Their tools are, a brick-truel, wherewith to take up mortar; a brick-ax, to cut bricks to the determined ſhape; a ſaw, for ſawing bricks; a rub-ſtone, on which to rub them; alſo a ſquare, wherewith to lay the bed or bottom, and face or ſurface of the brick, to ſee whether they be at right angles; a bevel, by which to cut the under-ſides of bricks to the angles required; a ſmall trannel of iron, wherewith to mark the bricks; a float-ſtone, with which to rub a moulding of brick to the pattern deſcribed; a banker, to cut the bricks on; line-pins, to lay their rows or courſes by; plumb-rule, whereby to carry their work upright; level, to conduct it horizontal; ſquare, to ſet off right angles; ten foot rod, wherewith to take dimenſions; jointer, wherewith to run the long joints; rammer, wherewith to beat the foundation; crow and pick-ax, wherewith to dig through walls. *Moxon*, lib. cit. p. 245, ſeq.

The London *brick-layers* make a regular company, which was incorporated in 1568, and conſiſts of a maſter, two wardens, twenty aſſiſtants, and ſeventy-eight on the livery. New View of London, ſect. 3. p. 598.

BRICK-*laying*, the art of framing edifices of bricks.

Brick-laying is one of the arts ſubſervient to architecture.

Moxon has an exerciſe expreſs on the art of *brick-laying*, wherein he deſcribes the materials, tools, and methods of working uſed by *brick-layers*. *Moxon*, Mechan. Exerc. p. 237, ſeq.

Great care is to be taken, that bricks be laid joint on joint in the middle of walls, as ſeldom as may be; and that there be good bond made there, as well as on the outſides. Some brick-layers, in working a brick and half wall, lay the header on one ſide of the wall, perpendicular on the header on the other ſide, and ſo all along through the whole courſe; whereas, if the header on one ſide of the wall were toothed as much as the ſtretcher on the other ſide, it would be a ſtronger toothing, and the joints of the headers of one ſide would be in the middle of the headers of the courſe they lie upon of the other ſide. *Moxon*'s Mechan. Exerc. p. 260, ſeq. *Neve*, ubi ſupra.

If bricks be laid in winter, let them be kept as dry as poſſible; if in ſummer, it will quit coſt to employ boys to wet them, for that they will then unite with the mortar better than if dry, and will make the work ſtronger. In large buildings, or where it is thought too much trouble to dip all the bricks ſeparately, water may be thrown on each courſe after they are laid, as was done at the building of the Phyſicians college in Warwick-lane, by order of Dr. Hooke.

If bricks be laid in ſummer, they are to be covered; for if the mortar dries too haſtily, it will not bind ſo firmly to the bricks, as when left to dry more gradually. If the bricks be laid in winter, they are alſo to be covered well, to protect them from rain, ſnow and froſt; which laſt is a mortal enemy to mortar, eſpecially to all ſuch as has been wetted juſt before the froſt aſſaults it. *Boyle*, Philoſ. Works abr. T. 1. p. 608, ſeq.

A *brick-layer* and his labourer will lay in a day about a thouſand bricks, in whole work on a ſolid plane. *Neve*, ubi ſup.

For the number of bricks required in a building, it is impoſſible exactly to determine, even though the bricks were all made in the ſame mould, and burnt in the ſame clamp or kiln. The reaſons are, that the *brick-layer*'s hand may vary in laying his mortar; that many of the bricks are warped in burning; that ſome are ſpoiled in every carriage; that the tale is generally ſhort, if not well looked to; beſides all which, when bricks are dear, and lime cheap, if work be put out by the great, or by meaſure, and the workman be to find materials, he will uſe the more mortar, and make great joints, which is a defect in building.

Brick walls are ſometimes wrought part of the way two inches thicker than the reſt of the work, to ſerve for a water table to the wall.

BRICKING popularly ſignifies building a thing up with brick; but, more properly, the act or art of counterfeiting of brick on plaiſter, by ſmeering it over with a red oker colour, and marking the joints with an edged inſtrument. *Davil*. Expl. Term. d'Architect. p. 436. voc. *Briqueter*. Ejuſd. Cours d'Architect. p. 337.

This anſwers to what the French call *briqueter*, which is ſometimes alſo performed by uſing a layer of plaiſter, mixed with red oker, and, while it is freſh laid on, drawing deep lines for joints, and then filling them with fine plaiſter. Some even ſmeer bricks themſelves with a red colour, and repair the joints with plaiſter, to make an antiquated building look freſh. Id. ibid.

BRIDE, a woman juſt married, or a wife in the firſt days of her matrimonial ſtate. See the article MARRIAGE, *Cycl.* and *Suppl.*

Among the Romans, the maid eſpouſed remained a *bride*, *ſponſa*, till ſhe entered the huſband's houſe; from which time ſhe commenced a wife, *uxor*. *Pitiſc*. Lex. Antiq. T. 2. p. 833. voc. *Sponſa*.

The bridegroom was attended by a brideman, *paranymphus* [a]; the *bride* by a *pronuba*, προμνηστρια, or bridemaid [b], whoſe buſineſs was to inſtruct her young miſtreſs in the duties of the genial bed, and to prepare every thing for a proſperous copulation [c].—[[a] Trev. Dict. Univ. T. 4. p. 2058. *Du Cange*, Gloſſ. Lat. T. 4. p. 150. *Pitiſc*. Lex. Ant. T. 2. p. 375. *Calv*. Lex. Jurid. p. 670. voc. *Paranymphus*. [b] *Pitiſc*. lib. cit. p. 546. Trev. Dict. ubi ſup. [c] *Caſt*. Lex. Med. p. 609. voc. *Pronuba*.]

The antient ceremonies practiſed in reſpect of a *bride* were numerous; moſt of them emblematical, or ſignificant of ſome part of her duty: as, dreſſing her hair after a peculiar manner, and parting it with a ſpear; putting on her a crown; girding her with a girdle, which the bridegroom was to looſen; putting a yoak on her neck; dreſſing her in yellow ſocks; veiling her with the flammeum. She was to ſeem to be raviſhed or torn by force from her mother, in memory of the rape of the Sabines under Romulus; ſhe was to be carried home in the night-time to the bridegroom's houſe, accompanied by three boys, called *patrimi* and *matrimi*; one whereof carried a torch, and the other two, called *paranymphi*, led the *bride* [d]; a ſpindle and a diſtaff being carried with her: ſhe brought three pieces of money, called *aſſes*, in her hand to the bridegroom, whoſe doors, on this occaſion, were adorned with flowers and branches of trees: being here interrogated who ſhe was, ſhe was to anſwer, *Caia*, in memory of Caia Cæcilia, wife of Tarquin the elder, who was an excellent *lanifica*, or ſpinſtreſs [e]; for the like reaſon, before her entrance, ſhe lined the door-poſts with wool, and ſmeered them with greaſe [f].—[[d] *Potter*, Archæol. l. 4. c. 11. T. 2. p. 286. [e] *Val. Max*. 10. *Plut*. Quæſt. Rom. 30. [f] *Serv*. ad Æn. l. 4. v. 450.]

Fire and water being ſet on the threſhold, ſhe touched both; but, ſtarting back from the door, refuſed to enter, till at length ſhe paſſed the threſhold, being careful to ſtep over, without touching it: here the keys were given her; a nuptial ſupper was prepared for her, and minſtrels to divert her; ſhe was ſeated on the figure of a Priapus, and here the *patrimi* and *matrimi* reſigned her to the *pronubæ*, who brought her into the nuptial chamber, and put her into the genial bed; this office was to be performed by matrons who had only been once married, to denote that the marriage was to be for perpetuity. When the bridegroom was brought to her, to drown the cries and ſqualling of a coy maid at the firſt conflict, epithalamia were ſung by the women, who were divided for that purpoſe into two bands, one whereof ſung in the evening, the other the next morning; and, for the like purpoſe, nuts were alſo thrown about for the boys to ſcramble for. *Salmuth*. ad Pancirol. P. 1. tit. 59. p. 316. *Kenn*. Rom. Ant. P. 2. l. 5. c. 9. p. 327, ſeq. *Pitiſc*. Lex. Ant. T. 2. p. 292, ſeq. voc. *Nupta*. *Fabric*. Bibl. Ant. c. 19. §. 5. p. 577.

BRIDEGROOM, the ſpouſe or mate of a bride.

Among the Romans, the *bridegroom* was decked to receive his bride; his hair was combed and cut in a peculiar form; he had a coronet or chaplet on his head, and was dreſſed in a white garment. *Pitiſc*. Lex. Antiq. T. 1. p. 836. voc. *Sponſus*.

By the antient canons, the *bridegroom* was to forbear the enjoyment of his bride the firſt night, in honour of the nuptial benediction given by the prieſt on that day. *Johnſ*. Eccleſ. Law, an. 740. §. 88.

In Scotland, and perhaps alſo ſome parts of England, a cuſtom called *marchet*, obtained, by which the lord of the manor was entitled to the firſt night's habitation with his tenants brides. *Spelm*. Gloſſ. p. 397. voc. *Marchet*. *Menag*. Orig. p. 483. voc. *Marquette*. See the article MARCHET, *Cycl.*

BRIDEMIF, in the Perſian tables, the conſtellation Lupus, or the wolf. *Wolf.* Lex. Math. p. 272. *Vital.* Lex. Math. p. 88. See the article LUPUS, *Cycl.*

BRIDEWELL, in our cuſtoms, denotes a work-houſe, partly for the correction of vagrants, and partly for the employment of the pariſh poor.

Bridewell, near Fleet-ditch, is a foundation of a mixt and ſingular nature, partaking both of the hoſpital, the priſon, and work-houſe; it was founded in 1553 by Edward VI. who gave the place where king John had formerly kept his court, and which had been repaired by Henry VIII. to the city of London, with 700 merks of land, bedding, and other furniture. Vid. New View of London, ſec. 6. T. 2. p. 733, 734.

BRIDGE (*Cycl.*)—Among the Romans, the building and repairing of *bridges* was firſt committed to the pontifices, or prieſts; then to the cenſors, and curators of the roads; laſtly, the emperors took the care of *bridges* into their own hands. Thus Antoninus Pius built the Pons Janiculenſis of marble; Gordian reſtored the Pons Ceſtius; and Hadrian built a new one, denominated from him. *Pitiſc.* Lex. Ant. T. 2. p. 460. In the middle age, *bridge*-building was ranked in the number of acts of religion; and a regular order of hoſpitallers was founded by St. Benezet, towards the cloſe of the twelfth century, under the denomination of *pontifices*, or *bridge-builders*; whoſe chief object was to be aſſiſtant to travellers, by making *bridges*, ſettling ferries, and receiving ſtrangers in hoſpitals, or houſes built on the banks of rivers. But the order was too good to thrive. We read of one hoſpital of the kind at Avignon, where the hoſpitallers dwelt under the direction of their firſt ſuperior, St. Benezet. The jeſuit Raynaldus has a treatiſe expreſs on St. John the *bridge*-builder. See *Helyot.* Hiſt. des Ord. Monaſt. T. 2. c. 42. Trev. Dict. Univ. T. 4. App. p. 22. voc. *Pontife.*

The building and repairing of *bridges*, was one of thoſe ſervices to which all orders and ranks were ſubject [a]; though the clergy have ſometimes got exemptions from it [b].—[[a] *Du Cange*, Gloſſ. Lat. T. 4. p. 344. voc. *Pons.* [b] *Bingh.* Orig. Eccleſ. l. 5. c. 3. §. 9.] See the article PONTAGE, *Cycl.*

The ſtructure of the Roman *bridges* is beſt deſcribed by Bergier; they conſiſted of *pilæ*, or piers; *fornices*, or arches; *ſublices*, or butments; *pavimenta*, and *aggeres*; the roads over them in the middle for carriages; on each ſide whereof *decurſoria*, or banquettes, ſomewhat higher than the reſt for foot-paſſengers, and ſeparated from it by a *ſponda*, or rail, and ſometimes even covered over, to ſhelter paſſengers from the rain, as in the Pons Ælius. *Berg.* Hiſt. des Chem. l. 4. ſect. 35. §. 1, 10, 11. *Pitiſc.* Lex. Antiq. T. 2. p. 460. voc. *Pontes.*

The Trajan *bridge* over the Danube, was the moſt magnificent of all the works of this kind in the world [c]. It was erected by that emperor for the conveniency of ſending ſuccours to the Roman legions on the other ſide the Danube, in caſe they ſhould be ſuddenly attacked by the Daci; but demoliſhed by the next ſucceſſor Hadrian, for fear the Barbarians, overpowering the guards ſet to defend it, ſhould, by means of it, pour into Mœſia, and cut off the garriſons there; or rather, as ſome think, out of envy, as deſpairing ever to do any thing like it himſelf. The ruins of it are ſtill ſeen in the middle of the Danube, near the city Warhel in Hungary [d]. It conſiſted of twenty arches, each one hundred and fifty feet from pier to pier, and one hundred and fifty feet high, and the piers fifty feet thick; its whole length was ſeven furlongs; which is more than four times the length of London *bridge* [e].—[[c] *Dio* l. 68. p. 776. [d] *Berg.* l. 4 ſect. 38. §. 8. *Caſal.* de Urb. & Imper. Roman. Splend. P. 1. c. 15. *Lipſ.* de Magn. Rom. l. 3. c. 13. *Thyſ.* de Magnit. Rom. l. 3. p. 306. *Pitiſc.* loc. cit. p. 464. [e] *Hawkſm.* Hiſt. London Bridge, p. 29, ſeq.]

Modern architects are abſolutely at a loſs to conceive how the foundations of ſuch a *bridge* could be laid in ſo vaſt and rapid a river, and ſo deep a channel as the Danube. Scamozzi imagines that the river muſt have been turned out of its courſe. But to divert the Danube ſeems impoſſible. That author conjectures, that choice was made of ſome ſhort bend of the river, where it made almoſt a peninſula, and a canal was cut croſs the iſthmus or neck thereof, through which the river took its courſe; ſo that the *bridge* was built on dry land, and, when finiſhed, the river was returned to its antient channel. Id. c. 30.

In France, the Pont de Garde is a very bold work; the piers being only thirteen feet thick, yet ſerving to ſupport an immenſe weight of a triplicated arcade, and ſerves to join two mountains. It conſiſts of three *bridges* one over another; the uppermoſt of which is an aqueduct. *Berg.* l. 4. ſect. 57. §. 2.

The *bridge* of Avignon was begun in the year 1176, and finiſhed in 1188; conſiſting of eighteen arches, meaſuring 1340 paces in length, or about 500 fathoms; divers of its arches have been ſince demoliſhed by the ice, *&c.* ſo that only part of it now ſubſiſts.

The *bridge* of St. Eſprit is the fineſt and boldeſt in France, conſiſting of nineteen great arches, beſides ſeven ſmaller ones, the apertures of the arches being from fifteen to twenty fathoms, which makes the length of the *bridge* upwards of four hundred fathoms. *Hawkſm.* lib. cit. p. 34, ſeq.

The Trajan-*bridge*, at Salamanca, over the river Formus, popularly attributed to the giants, by ſome to Hercules, appears rather to be a Roman work, though when and by whom erected, is not known; but it was repaired by Trajan, whoſe denomination it ſtill bears; it is 1500 feet long, conſiſts of 26 arches, each 72 feet wide, the piers that ſuſtain them being 23 feet thick, and 200 high. *Berg.* l. 4. ſec. 38. §. 2. *Pitiſc.* lib. cit. p. 464.

In England are London *bridge*, the *bridge* at York, whoſe maſter arch in the middle is 82 feet and a half in the clear wide, and 27 feet high. Rocheſter *bridge* is built in the ſame ſtyle with that of London, only better, in that the arches are wider, and that there are no houſes on it; it is 550 feet long, and conſiſts of 11 arches, the biggeſt of which is more than 40 feet. The *bridges* at Durham and Biſhop-Awkland, whoſe largeſt arches are near 90 feet in the clear. The *bridge* at Berwick is an admirable work, begun under queen Elizabeth; it conſiſts of 17 arches, the largeſt upwards of 80 feet. The *bridge* at Newcaſtle, lately built, having one bold arch, 120 feet in the clear. That of Blenheim conſiſts of three arches, the chief of which ſpans 101 feet and a half. *Hawkſm.* lib. cit. p. 41, ſeq.

The longeſt *bridge* in England is that over the Trent at Burton, built by Bernard abbot of Burton, in the 12th century; it is all of ſquared free-ſtone, ſtrong and lofty, 1545 feet in length, and conſiſting of 34 arches [f]. Yet this comes far ſhort of the wooden *bridge* over the Drave, which, according to Dr. Brown, is at leaſt five miles long [g]. — [[f] *Plott*, Nat. Hiſt. of Stafford. c. 9. §. 72. p. 372. [g] *Brown*, Trav. Hung. p. 5. *Plott*, loc. cit.]

London *bridge* conſiſts of 20 locks or arches, whereof 19 are open, and one filled up or obſcured; it is 900 feet long, 60 high, and 74 broad, having a draw-bridge in the middle, and almoſt 20 feet aperture in each arch [h]. It is ſupported by 18 piers or ſolids, from 34 to 25 feet thick; ſo that the greateſt water-way, when the tide is above the ſterlings, is 450 feet, ſcarce half the width of the river; and below the ſterlings, the water-way is reduced to 194 feet. Thus a river 900 feet wide, is here forced through a channel of 194 feet [i].—[[h] New View of London, ſect. 7. T. 2. p. 790. [i] *Hawkſm.* ubi ſupra, p. 9.]

London *bridge* was firſt built of timber, ſome time before the year 994, by a college of prieſts, to whom the profits of the ferry of St. Mary Overy's had deſcended; it was repaired, or rather new built of timber, in 1163 [k]. The ſtone-*bridge* was begun by king Henry II. in 1176, and finiſhed under king John in the year 1209. The architect was Peter of Colechurch, a prieſt [l].—[[k] *Stow*, ap. New View of Lond. ſect. 7. p. 790. [l] *Hawkſm.* ubi ſupra, p. 6.]

For the charge of keeping it in repair, a large houſe is allotted, with a great number of offices, and a vaſt revenue in land, *&c.* The chief officers are two *bridge*-maſters, choſen yearly out of the body of the livery. *Chamberl.* Pref. State Gr. Br. P. 1. l. 3. c. 10. p. 271.

The foundation is ſaid to be on a ſoft oozy ground. Stow alleges, that, during the time of building, the river was turned from Batterſea to Rotherhith; but this is not warranted. Some imagine, that the tide did not then riſe ſo high at the *bridge* as it does now, by which the work would be facilitated. However this be, the piers were erected on wooden piles driven under water, over which planks were laid, and the feet of the piers on the planks. The defects of this *bridge* are the narrowneſs and irregularity of the arches, and the largeneſs of the piers, which, together with the ſterlings, turn the current of the Thames into many frightful cataracts, which much obſtruct and endanger the navigation through the *bridge*; to which may be added, the narrowneſs of the *bridge* above, occaſioned by the houſes built on it. 'Tis pretty certain, there were no houſes on the *bridge* for upwards of 200 years; ſince we read of a tilt and tournament held on it in 1395. *Hawkſm.* lib. cit. p. 10.

The ſterlings have been added, to hinder the piers from being undermined by the rotting of the piles upon which they are built; for, by means of theſe ſterlings, the piles are kept conſtantly wet; and thus the timber is kept from decaying, which always happens when it is alternately wet and dry.

One of the nobleſt *bridges* known is that at Weſtminſter. The breadth of the river Thames, between the Wool-ſtaple dock and the oppoſite ſhore, the place where the *bridge* is built, is about 1220 feet. The *bridge* conſiſts of 13 large arches, and two ſmaller ones, the 14 intermediate piers, and two abutments.

The length of each abutment is 76 feet; the ſpan or opening of each of the ſmall arches of the abutments is 25 feet; the opening or ſpan of the firſt of the large arches from each ſhore is 52 feet; the ſpan of the next arch is 56 feet, and ſo on, increaſing by four feet in every arch to the middle arch, the ſpan of which is 76 feet. The tranſverſe ſection, or breadth of the two firſt piers on each ſide, is 12 feet; of the next 13, and ſo on, to the piers ſupporting the middle arch, the ſection of each of which is ſeventeen feet. Thus the length of the two abutments being 152 feet, the ſection of the 14 piers 198 feet, and the ſpan or opening of the 15 arches

870 feet, the whole length of the *bridge*, including abutments, is 1220 feet, which is the breadth of the river.

The arches are ſemicircular, and ſpring from about the height of 2 feet above low water mark.

Theſe arches give, as has been ſaid, a water-way of 870 feet; the proportion of the water-way being ſo conſiderable with reſpect to the breadth of the piers, it follows that the fall of water under this *bridge* muſt be very ſmall. And, in effect, thoſe who attempted to calculate it before the *bridge* was built, after making all poſſible allowances, could never find the perpendicular height of this fall to exceed three inches and three fourths; but, in truth, it now appears by experience, that the height of the greateſt fall is ſcarce half an inch; whereas the height of the fall at London *bridge* is from four feet and nine inches to five feet.

The foundations of the piers of Weſtminſter *bridge* are laid on a ſtrong grating of timber, planked underneath. This grating was made of the bottom of a veſſel, ſuch as the French call *Caiſſon*; the ſides of which were ſo contrived, that they might be taken off after a pier was finiſhed. The bed of the river was dug to a ſufficient depth, and made level, in order to lay the bottom of the *Caiſſon*, and the bottom of the piers, out of all danger; the ground, by all trials that could be contrived, ſeemed ſo good, being every where a bed of gravel, that piling was thought unneceſſary. Whether there be any ſofter ſtratum under this or not, we cannot pretend to determine; neither does it appear from experience, that piling is an abſolute ſecurity againſt all accidents. By what Gaultier ſays, it would ſeem otherwiſe; for he aſſures us, that let the architect of a *bridge* do his beſt, yet he can no more be ſure of the ſucceſs of his work than a phyſician is. And, in effect, we find, that notwithſtanding the care that was taken in examining the ground on which Weſtminſter *bridge* was built, yet one of the piers ſunk conſiderably. This damage is now repaired, and the *bridge* was opened for paſſengers and carriages, in November 1750. Its beauty and convenience is juſtly admired; and it were to be wiſhed, that we had a detail of all the arts uſed in building it.

BRIDLE (*Cycl.*)—In lieu of a *bridle*, the maſters frequently uſe the word *hand*: thus, for Pull the *bridle*, they ſay, Bear the hand. To cleave to, or hold by the *bridle*, is the fault of a bad horſeman, who, when a horſe is diſorderly, inſtead of ſlacking his hand, clings to it, as if it were to the mane or pummel of the ſaddle; wanting the habit, or ſtrength, to keep himſelf faſt by clinging with his thighs. *Guill.* Gent. Dict. P. 1. in voc.

Checks of the *bridle* are called *ebrillades* and *ſaccades*. See the articles EBRILLADE, *Suppl.* and SACCADE, *Cycl.*

Pliny aſſures, that one Pelethronius invented the *bridle* and ſaddle [a]; though Virgil [b] attributes the invention to the Lapithæ, to whom he gives the epithet *Pelethronii*, from a mountain in Theſſaly named *Pelethronium*, where horſes were firſt begun to be broken.—[[a] *Plin.* Hiſt. Nat. l. 7. c. 56. *Frenos & ſtrata equorum Pelethronius.* Hardouin makes this Pelethronius the king of the Lapithæ, which reconciles the two opinions. Vid. Not. ad loc. [b] *Virg.* Georg. l. 3. v. 115. *Turneb.* Adverſ. l. 21. c. 9. Trev. Dict. Univ. T. 2. p. 2018. voc. *Frein.*]

Others aſcribe the invention to Minerva, who is ſaid to have firſt *bridled* Pegaſus. *Pitiſc.* Lex. Antiq. T. 1. p. 818. voc. *Frena.*

The firſt horſemen being unacquainted with the art of governing horſes by *bridles*, managed them only with a rope, or a ſwitch, and the accent of the voice. This was the practice of the Numidians, Getulians, Libyans, and Maſſilians. *Potter*, Archæol. Græc. l. 3. c. 3. T. 2. p. 11.

The Roman youth alſo learned the art of fighting without *bridles*, which was an exerciſe or leſſon in the manege; and hence it is, that, on the Trajan column, ſoldiers are repreſented riding at full ſpeed, without any *bridles* on. Vid. Phil. Tranſact. N° 322. p. 406.

BRIDLE, in anatomy. See the article FRÆNUM, *Cycl.* and *Suppl.*

BRIDLE, among ſurgeons, is a kind of bandage contrived for retaining the lower jaw in its place. *Le Clerc*, Compl. Surgeon, p. 98. See the article BANDAGE.

Scolding BRIDLE.—In Staffordſhire they have a *bridle* for correcting ſcolding women. It is put in the mouth, and takes particular hold of the tongue, which it effectually keeps from ſtirring: thus harnaſſed, the offender is led in triumph through the ſtreets. A figure and deſcription of this Staffordſhire *bridle* is given by Dr. Plott, who ſeems to wiſh the uſe of it more univerſal. *Plott*, Nat. Hiſt. Staffordſh. c. 9. §. 97.

BRIDLE-*hand* ſignifies the horſeman's left-hand, in reſpect of which the right-hand is called the ſpear or ſword-hand. *Guill.* Gent. Dict. P. 1. in voc.

BRIDLE-*chain*, in huſbandry, a name given by our farmers to a part of the ſtructure of their plough. This is an iron chain of ſeveral links, faſtened at one end to the beam of the plough, near that part where the collar receives the tow-chain, and faſtened at its other end to the ſtake of the plough, or to that upright piece which runs parallel to the left crowſtaff, and at its bottom pins in the tow-chain; this ſtake is faſtened to the crowſtaff, ſometimes by the end of this *bridle-chain*, and ſometimes by a wythe or cord. *Tull*'s Huſbandry. See the article PLOUGH.

BRIDON, or BRIDOON, in the manege, properly denotes a ſnaffle, in contradiſtinction from a bit or bridle. *Guill.* Gent. Dict. P. 1. in voc. *Snaffle.* See the articles SNAFFLE, BIT, BRIDLE, *&c.*

The French ſay, that the Engliſh uſe no bridles, but only *bridoons*, except in the army: a horſe never goes ſo well nor ſure with a *bridoon*, unleſs he have been firſt broke to the bit. *Newcaſt.* ap. Trev. Dict. Univ. T. 1. p. 1240. voc. *Bridon.*

BRIEF, (*Cycl.*) a thing of ſhort extent or duration.

The word is formed from the French *bref*, of the Latin *brevis*, which ſignifies the ſame.

BRIEF is more particularly uſed for a ſummary or ſhort ſtate of a thing. *Du Cange*, Gloſſ. Lat. T. 1. p. 614. voc. *Brevis. Calv.* Lex. Jur. p. 771. See the article BREVIARY.

BRIEF is alſo uſed for an act or writing drawn up by a notary. *Du Cange*, ibid. p. 15. voc. *Brevis.*

Atteſted BRIEF, *Breve teſtatum*, a public inſtrument cloathed with the proper formalities. Ibid. p. 616.

BRIEF *of deviſing*, *Brevis diviſionalis*, denotes a laſt will or teſtament. See the article DEVISE, *Cycl.*

BRIEF *of an oath*, *Breve ſacramenti*, an inſtrument made on oath, and authenticated by the ſubſcription of witneſſes.

BRIEF is alſo uſed for a judicial epiſtle, directed by a lord or other ſuperior, to his ſubjects or dependents, enjoining ſomething to be done or forborn. *Du Cange*, Gloſſ. Lat. T. 1. p. 616. voc. *Brevis.*

In which ſenſe, we ſay, the lord's, king's, biſhop's or pope's *brief.*

BRIEF alſo denotes the territory or diſtrict within which the lord's *brief* had courſe. In which ſenſe, we meet with the biſhop's *brief*, *breve epiſcopi*, the count's *brief*, *breve comitis*, &c. Idem, ib. p. 615.

BRIEF alſo denotes the yearly revenue ariſing out of the lands uſually deſcribed in *briefs*. Id. ibid.

BRIEF is alſo uſed for a letter written by the pope to ſome prince or magiſtrate, relating to ſome public affairs. Theſe are more peculiarly denominated *papal briefs*, *apoſtolical briefs*, &c. The officers in the pope's court, who compoſe *briefs*, are called *breviators*, or rather *abbreviators*. See the article ABBREVIATOR.

A *brief* differs from a bull, in that the latter is more ample and formal, always written on parchment, and ſealed with lead or green wax. *Briefs* diſpatched from the datary or ſecretary's office, are ſometimes on parchment, and ſealed with red wax, ſtamped with the *annulus piſcatoris*, or fiſherman's ſeal, repreſenting St. Peter in his bark in the habit of a fiſherman, which is only affixed in the pope's preſence.

Briefs are ſubſcribed by the ſecretary, not by the pope: on the top is the pope's name, in a line apart, afterwards *Dilecto filio ſalutem & apoſtolicam benedictionem*, &c. After which, without other preamble, it proceeds to a ſimple detail of what the pope is pleaſed to ſignify or grant. Trev. Dict. Univ. T. 1. p. 1217. voc. *Bref. Magr.* Not. Voc. Eccleſ. p. 37. voc. *Breve.*

BRIEFS *of the dead*, *Brevia mortuorum*, were letters ſent by the monks of one monaſtery to thoſe of another, with whom they were in fraternity, to inform them of the deaths or obits of their monks, for whom they were to ſay the ſtated and cuſtomary prayers and maſſes.

Theſe were alſo called *literæ currentes*, a formula of which we have in the book of the uſages of the Ciſtercian order. Vide *Du Cange*, Gloſſ. Lat. T. 1. p. 615.

BRIEF *of remembrance*, *Breve recordationis*, or *rememoratorium*, or *memorabile*, denotes a charter, otherwiſe called *notitia. Du Cange*, ibid. p. 615. See the article NOTITIA.

BRIG-*bote*, BRIGGE-*bote*, or BRIGH-*bote*, in antient law-writers, ſignifies a being freed from contributing to the reparation of bridges. *Flet.* l. 1. c. 47. *Seld.* Tit. of Hon. p. 622. *Cow.* Interpr. in voc. *Du Cange*, Gloſſ. Lat. T. 1. p. 623. See the article PONTAGE, *Cycl.*

The word is formed from the Saxon, *brig*, a bridge, and *bote*, compenſation. It is ſometimes alſo written *brugh-bote* [a], or *bruch-bote* [b].—[[a] Term. de Ley, 41. voc. *Brugh-bote.* [b] *Cow.* Interpr. voc. *Bruch-bote.*]

BRIGADE (*Cycl.*)—Charier gives another etymon of *brigade*, *viz.* from the Celtic *brig*, or *briga*, which not only ſignify a city, but a company or troop of perſons. In the middle age Latin we alſo meet with *brigata*, in the like ſenſe with our *brigade*. In the ſtatutes of the city of Nancy, it is uſed for running at the ring; and, in the acts of the ſaints, for the troop or *brigade* which each quarter of the city ſent out to this exerciſe. Act. Sanct. Maii, T. 1. p. 396. Trev. Dict. Univ. T. 1. p. 1242. *Aquin.* Lex. Milit. T. 1. p. 138. *Caſeneuv.* Orig. Franc. p. 28. voc. *Brigans.*

BRIGADE-*major*, in the military art, an officer choſen from among the moſt ingenious and expert captains. *Brigade-majors* are to wait, at proper times, to receive the word and orders which they carry firſt to their brigadier, and afterwards to the adjutants of regiments at the head of the *brigade*, where they regulate together the guards, parties, detachments, and convoys, and appoint them the hour and place of rendezvous at the head of the brigade, where the *brigade-major* takes and marches them to the place of the general rendezvous. A *major of brigade* ought to keep a roll of the colonels, lieutenant-colonels, majors,

jors, and adjutants, belonging to the *brigade*. When a detachment is to be made, the major-general of the day regulates with the *brigade-majors*, how many men and officers each *brigade* ſhall furniſh; and they again with the adjutants of the regiments, how many each battalion is to ſend, which the adjutants divide among the companies. The complements each regiment is to furniſh, are taken by the adjutant at the head of each regiment, at the hour appointed, who delivers them to the *brigade-major* at the head of the *brigade*, who again delivers them to the major-general of the day, and he remits them to the officer who is to command the detachment. Vide *Bland*'s Milit. Diſcipl. c. 16. Art. 3. p. 233. Item, c. 19. Art. 1. p. 281, ſeq. *Guill.* Gent. Dict. P. 2. in voc.

BRIGADIERS (*Cycl.*) are only general officers in their reſpective corps. They have no particular command out of their brigades, nor any place or vote in councils of war; they have no aids de camp to carry their orders, but only a major of brigade, to ſee their orders executed, within the extent only of their own brigade. See the article BRIGADE-*major*.

Brigadiers of the horſe-guards command as youngeſt captains.

Sub-BRIGADIER of a troop of horſe-guards, an aſſiſtant of the brigadier. *Fæſch.* Ing. Lex. p. 122.

BRIGANDINI, BRIGANTINI, BRIGANDINARII, or BRIGANCII, in middle age writers, military thieves, or highwaymen, who infeſted France and the Netherlands. *Caſeneuv.* Orig. Franc. p. 28. voc. *Brigans*. *Du Cange*, Gloſſ. Lat. T. 1. p. 622. voc. *Brigancii*. See the article BRABANCIONES.

BRIGGS's *Logarithms*. See the article LOGARITHM.

BRIGITTINS, or BRIDGETINS, more properly BIRGITTINS, a religious order denominated from their foundreſs St. *Bridgit*, or *Birgit*, a Swediſh lady in the fourteenth century, whom ſome repreſent as a queen; but Fabricius, on better grounds, as a princeſs, the daughter of king Birgerus, legiſlator of Upland: ſhe is famous for her revelations. *Fabric.* Bibl. Med. Æv. Latin. T. 1. l. 2. p. 764. voc. *Brigitta*.

The *Brigittins* are ſometimes alſo called the *Order of our Saviour*; it being pretended that Chriſt himſelf dictated the rules and conſtitutions obſerved by them, to St. Bridget. In the main, the rule is that of St. Auguſtin; only with certain additions ſuppoſed to have been revealed by Chriſt; whence they alſo denominate it the *Rule of our Saviour*.

The firſt monaſtery of the *Bridgetin* order was erected by the foundreſs, about the year 1344, in the dioceſe of Lincopen; on the model of which all the reſt were formed. The conſtitution of theſe houſes were very ſingular: though the order was principally intended for nuns, who were to pay a particular honour to the holy Virgin, there are alſo friars of it, to miniſter to them ſpiritual aſſiſtance. The number of nuns is fixed at ſixty in each monaſtery, and that of friars to thirteen, anſwerable to the number of the apoſtles, of whom St. Paul made the thirteenth; beſides which there are to be four deacons, to repreſent the four doctors of the church, St. Ambroſe, St. Auguſtin, St. Gregory, and St. Jerom, and eight lay-brothers; making together, ſays our authors, the number of Chriſt's ſeventy-two diſciples.

The order being inſtituted in honour of the Virgin, the direction is committed to an abbeſs, who is ſuperior not only of the nuns, but alſo of the friars, who are obliged to obey her. Each houſe conſiſts of two convents, or monaſteries, ſeparately incloſed, but one church in common; the nuns being placed above, and the friars on the ground.

The *Bridgetins* profeſs great mortification, poverty, and ſelf denial, as well as devotion; and they are not to poſſeſs any thing they can call their own, not ſo much as a halfpenny, nor even to touch money on any account. See *Stev.* Supplem. to Dugd. Monaſt. T. 2. p. 230—233. *Walſingh.* ap. Reyn. Apoſt. Bened. p. 166.

This order ſpread much through Sweden, Germany, the Netherlands, &c. In England we read but of one monaſtery of *Brigittins*, and this built by Henry V. in 1413, oppoſite to Richmond, now called Sion-houſe; the antient inhabitants of which, ſince the diſſolution, are ſettled at Liſbon. The revenues were reckoned at 1945 *l. per annum*. *Dugd.* Monaſt. T. 2. p. 360. Abr. p. 155.

BRIGNOTES, or BRUGNOTES, a kind of dried prunes, brought from Provence, chiefly from the town of Brugnote, from which the denomination is given to them all. *Savar.* Dict. Comm. T. 1. p. 492. *Menag.* Orig. p. 137.

BRIM, the utmoſt edge of a thing, as of a glaſs, plate, or the like.

The *brims* of veſſels are made to project a little over, to hinder liquors, in pouring out, from running down the ſide of the veſſel.

The *briming*, or *brimming* of veſſels, was contrived by the antient potters, in imitation of the ſupercilium or drip of the cornices of columns; it is done by turning over ſome of the double matter when the work is on the wheel. *Evel.* Account of Archit. p. 38.

Among floriſts, the *brim* of a flower denotes the outward edge of the petala, or that part thereof which turns. See the article FLOWER.

A ſow is ſaid to *brim*, or go to *brim*, when ſhe takes the *boar*. Ruſt. Dict. T. 1. in voc.

The hart goes to *rut*, the roe to *tourn*, the boar to *brim*. *Cox.* Gent. Recr. P. 1. p. 11.

BRIMSTONE. See the article SULPHUR.

BRIMSTONE *Marble*, a preparation of brimſtone in imitation of marble.

To do this, you muſt provide yourſelf with a flat and ſmooth piece of marble; on this make a border or wall, to encompaſs either a ſquare or oval table, which may be done either with wax or clay. Then having provided ſeveral ſorts of colours, as white-lead, vermilion, lake, orpiment, maſticot, ſmalt, Pruſſian blue, &c. melt on a ſlow fire ſome brimſtone, in ſeveral glazed pipkins; put one particular ſort of colour into each, and ſtir it well together; then having before oiled the marble all over within the wall, with one colour quickly drop ſpots upon it, of larger and leſs ſize; after this, take another colour and do as before, and ſo on, till the ſtone is covered with ſpots of all the colours you deſign to uſe. When this is done, you are next to conſider what colour the maſs or ground of your table is to be; if of a grey colour, then take fine ſifted aſhes, and mix it up with melted brimſtone; or if red, with Engliſh red oaker; if white, with white-lead; if black, with lamp or ivory black. Your brimſtone for the ground muſt be pretty hot, that the coloured drops on the ſtone may unite and incorporate with it. When the ground is poured even all over, you are next, if judged neceſſary, to put a thin wainſcot board upon it: this muſt be done whilſt the brimſtone is hot, making alſo the board hot, which ought to be thoroughly dry, in order to cauſe the brimſtone to ſtick the better to it. When the whole is cold, take it up, and poliſh it with a cloth and oil, and it will look very beautiful. *Smith*'s Laboratory, p. 248, ſeq.

BRIMSTONE *Medals*, *Figures*, &c. may be caſt in the following manner: Melt half a pound of *brimſtone* over a gentle fire; with this mix half a pound of fine vermilion, and when you have cleared the top, take it off the fire, ſtir it well together, and it will diſſolve like oil; then caſt it into the mould, which muſt firſt be anointed with oil. When cool, the figure may be taken out; and, in caſe it ſhould change to a yelloviſh colour, you need only wipe it over with aqua-fortis, and it will look like the fineſt coral. Vid. *Smith*, lib. cit. p. 111.

BRINDONES, in natural hiſtory, the name of a fruit of the Eaſt Indies, called by John Bauhine, and ſome other botanical authors, *Indici fructus rubentes acidi*. Garcias ſays, that it grows plentifully in Goa, and that it is of a rediſh colour on the outſide, and extremely red within, and of an acid taſte; and that it grows black on the outſide as it mellows, and then becomes much leſs ſour to the taſte. It is by many accounted a delicious fruit, notwithſtanding its great ſharpneſs, and is uſed by the dyers, and in making vinegar. *Ray*'s Hiſt. Plant.

BRINE (*Cycl.*) amounts to the ſame with the Latin *muria* [a], *Jalſedo* [b], *Jalſilago*, and the Greek ἅλμη [c].—[[a] *Caſt.* Lex. Med. p. 513. *Calv.* Lev. Jur. p. 602. *Pitiſc.* Lex. Ant. T. 2. p. 238. voc. *Muria*. [b] *Caſt.* lib. cit. p. 648. voc. *Salſedo*. [c] *Gorr.* Med. Defin. p. 22. *Caſt.* ubi ſup. p. 380. voc. *Halme*.]

Brine is either native, as the ſea-water, which by coction turns to ſalt; or factitious, formed by diſſolving ſalt in water. *Coll.* Diſc. Salt, p. 1, 4, 18, 29. *Rul.* Lex. Alch. p. 340. voc. *Muria*. *Kirch.* Mund. Subter. l. 6. ſect. 1. c. 5. T. 1. p. 302. In the ſalt-works at Upwick in Worceſterſhire, there are found, at the ſame time, and in the ſame pit, three ſorts of *brine*, each of a different ſtrength. They are drawn by a pump, and that in the bottom, firſt brought up, is called *firſt man*, the next *middle man*, the third *laſt man*. Phil. Tranſ. N° 142. p. 1061.

Leach-BRINE, a name given to what drops from the corned ſalt in draining and drying, which they preſerve and boil again; being ſtronger than any *brine* in the pit. *Hought.* Collect. T. 2. N° 211. p. 81.

There is ſand found in all the Staffordſhire *brines* after coction; but naturaliſts obſerve, it did not pre-exiſt in the water, but rather is the product of the boiling. Philoſoph. Tranſ. N° 145. p. 96.

The *brine* at Northwich is found to ſtink of ſulphur [a], *Brine* freezes with great difficulty [b]. Some ſteep their ſeed-wheat in *brine*, to prevent the ſmut [c]. *Brine* is alſo commended as of efficacy againſt gangrenes [d].—[[a] Phil. Tranſ. N° 156. p. 489. [b] *Junck.* Conſp. Chem. tab. 18. p. 426. [c] *Bradl.* New Improv. Gard. P. 3. p. 68. [d] *Junck.* lib. cit. tab. 9. p. 88.]

BRINE alſo denotes a pickle pregnant with ſalt, wherein things are ſteeped to keep. *Caſt.* Lex. Med. p. 380. voc. *Halme*.

Dutch beef, before it is hung up, is ſteeped in a *brine* made of ſalt and nitre boiled, and when cold, vinegar added. *Hought.* Collect. T. 1. N° 167. p. 437.

BRINE-*pans*, the pits wherein the ſalt-water is retained, and ſuffered to ſtand, to bear the action of the ſun, whereby it is converted into ſalt.

There are divers ſorts of ſalt-pans, as the water-pan, ſecond pan, ſun-pan; the water being transferred orderly from one to another. *Coll.* Diſc. of Salt and Fiſh. p. 29, ſeq.

BRINE-*pit*, in ſalt making, the ſalt ſpring from whence the water to be boiled into ſalt is taken. There are of theſe ſprings in many places; that at Namptwich in Cheſhire, is alone ſufficient

cient, according to the account of the people of the place, to yield ſalt for the whole kingdom; but it is under the government of certain lords and regulators, who, that the market may not be overſtocked, will not ſuffer more than a certain quantity of the ſalt to be made yearly. *Ray*'s Engl. Words, p. 42. See the article PIT.

BRINE-*ſalt*. See the article SALT.

BRINEK, or BRINETI, in aſtronomy, the bright ſtar in the conſtellation Lyra; more frequently called *Lucida Lyræ*. *Wolf.* Lex. Math. p. 272. *Vital.* Lex. Math. p. 88.

BRINGER-*up*, in the military art, is uſed for the laſt man of a file. See the article FILE, *Cycl.*

BRINGING *in a horſe*, in the manege, is the keeping down his noſe, when he boars, and toſſes it up to the wind. A horſe is *brought in* by a ſtrong hard branch. *Guill.* Gent. Dict. P. 1. in voc.

BRISKET, that part of a horſe extended from the two ſhoulders to the bottom of the cheſt.

In which ſenſe, the word amounts to the ſame with the French *poitral*, or *poitrail*. Trev. Dict. Univ. T. 4. p. 727. voc. *Poitral.*

BRISSOIDES, in natural hiſtory, the name of one of the genera of the echini marini; the diſtinguiſhing characters of theſe are, that they are of an oval figure, and have their backs ſtriated, not furrowed, and their rays ſmooth, not marked with ridges. Of this genus there are two known ſpecies; 1. A flat one, called by ſome the cranium. 2. A high one, called by ſome the amygdala, and uſually found foſſile, and immerſed in flint. *Kleins*, Echin. p. 36.

BRISSUS, in natural hiſtory, the name of a genus of the echini marini; the characters of which are, that they are of an oval figure, and have the aperture for the anus on one of the ſides of the ſuperficies; their back is ſmooth and even, not furrowed, but on the vertex they have ſeveral very elegant crenated and dotted lines. Their baſe is as if cut off on the end neareſt the mouth, and is not flat as in the ſpatangi, but raiſed in the manner of a cuſhion. *Kleins*, Echin. p. 34.

BRISTLE, a thick gloſſy kind of hair, wherewith the ſwine kind more eſpecially are covered.

The name is ſometimes alſo applied to the quills of porcupines [a], and the muſtaches or whiſkers of cats [b].—[a Mem. Nat. Hiſt. Anim. p. 147. b *Hook.* Microg. p. 157.]

Hogs *briſtles* are hard, tranſparent, horny ſubſtances, of a priſmatical figure, without any appearance of cavities or pores in them, diſcoverable even by the microſcope. Cats *briſtles* have a large ſolid pith in the middle. *Hook*, lib. cit. Obſ. 20. p. 157.

BRISTLE *Dice*, a ſort of falſe dice, furniſhed with a piece of hog's *briſtle* ſtuck in the corners, or other places, to hinder their falling on certain ſides, and make them run high or low at pleaſure. Compl. Gameſt. p. 11.

BRISTOL *Water*. See the article WATER.

BRITANNIC *Plague*, a name given by ſome writers to the ſweating ſickneſs. *Lang.* Epiſt. Med. l. 1. ep. 19. p. 83. See the article SUDOR, *Cycl.*

BRITANNICA, in the materia medica of the antients, the name of a plant deſcribed as having leaves of a dark colour, very large, and in ſhape reſembling thoſe of the common wild-dock, but ſomewhat hairy and of an aſtringent taſte; the root ſmall and ſlender, and the ſtalk not large. This is the deſcription of Dioſcorides [a], who attributes to its inſpiſſated juice great virtues as an aſtringent, and a remedy for ulcers of the mouth and tonſils; and Pliny [b] acquaints us of its prodigious efficacy in a diſtemper attending the army of Germanicus, who, when they had croſſed the Rhine, encamped in a place where there was only one ſpring of water, the drinking of which affected them in a terrible manner in their mouths, and made their teeth drop out, and that the phyſicians, who called the diſeaſe *ſtomacace* and *ſcelotyrbe*, were at length directed to a remedy by the Friſians who were in their camp, which was the herb *britannica*.—[a *Dioſcor.* l. 4. c. 2. b *Pliny*, l. 25. c. 3.]

The virtues attributed to this plant are obſerved by the later phyſicians, to agree very well with thoſe of the hydrolapathum majus, or great water-dock, a plant produced very abundantly with us, but at preſent neglected in the practice of phyſic; and Muntingius, who has written profeſſedly of the *britannica* of the antients, is perſuaded that this is the true and genuine plant. He by no means countenances the opinion of its having its name from the iſland of *Britain*, but deduces it from a very expreſſive phraſe in the Friſian language, in which *brit* ſignifies to conſolidate, *tan* a tooth, and *ica* looſe; ſo that it plainly had its name from its virtues of faſtening the teeth, when looſened in the mouth by diſtemperature.

Every part of the herb is powerfully aſtringent, and the root, which is its moſt efficacious part, is very ſerviceable in hæmorrhages of all kinds, and in whatever diſorders the cold aſtringents are required in. It is ſaid alſo to be very uſeful in nervous complaints; and is very powerful in the cure of quinſeys, inflammations of the tonſils, and almoſt all the diſorders of the mouth and throat, and is by ſome eſteemed a ſpecific in the ſcurvy.

Its leaves are ſtyptic, and bitter to the taſte, and ſtrike a ſtrong red upon blue paper; the root has the ſame effect, but in a more remiſs degree. The bark of it is of a fleſh-colour, and ſtreaked, and the heart of a pale yellow. Experience confirms its efficacy in ſome diſorders of the mouth; the chewing it in a morning having been found an effectual remedy for the bleeding of the gums. *Muntingius* de vera Herba Britan.

There is no doubt but that the real plant is our water-dock; but the commentators on the Greek phyſicians, and the authors who have written ſince, and have borrowed the greateſt part of their knowledge from them, have occaſioned great perplexities to their readers, by ſuppoſing that the *britannica* and *betonica* were the ſame plant; whereas one was a dock, and the other the plant we call *ferratula*, or ſaw-wort; this being, according to Pliny, the name given in Italy to the plant called *betonica* by the Gauls. Apuleius ſays, that the *ceſtrum* of the Greeks is the ſame with the *betonica* or *britannica*, called alſo *penthroorophos* and *priorites*; and Neophytus, in his Herbal, has collected together an account under the article *betonice*, which being partly taken from Dioſcorides's account of the *betonica*, partly from his deſcription of the *britannica*, and partly from ſome other authors accounts of the *ſerrata* or *ſerratula*, is a medley hiſtory that contradicts itſelf, and can be applied to no plant at all. Pliny ſays, that the *betonica* has leaves very large, and like the dock. Every one may ſee how little this agrees with the character of the true *betonica*, which the ſame author ſays is the *ſerrata*; and that it is plain, that he took this part of his account from Dioſcorides's deſcription of the *britannica*.

BRITE, or BRIGHT, in huſbandry; wheat, barley, or other grain, is ſaid to *brite*, when it grows over ripe and ſhatters. Dict. Ruſt. in voc.

BRITISH *Language*, the ſame with the Welch.

The antient *Britiſh*, or *Cambro-Britiſh*, is a dialect of the Celtic [a]. Some pretend, but with no probability, that the *Britiſh* is formed immediately from the Teutonic [b]. Cooper abſurdly enough calls the Engliſh language the *Britiſh* [c].—[a Vid. *Rowl.* Mon. Ant. ſect. 6. p. 33, & 42. b *Skin.* Etym. in Pref. p. 12, & 18. c *Verteg.* Reſtit. Dec. Intell. pref. 73.]

BRITTLE *Bodies*. See the article BRITTLENESS.

BRITTLENESS, in natural philoſophy, that quality of bodies by which they are ſoon and eaſily broken by preſſure or percuſſion. It ſtands oppoſed to tenacity. Mem. Acad. Berlin. 1745. p. 47. See the article TENACITY.

Brittle bodies are extremely hard; the leaſt percuſſion exerts a force on them equivalent to the greateſt preſſure, and may conſequently eaſily break them. This effect is particularly remarkable in glaſs ſuddenly cooled, the *brittleneſs* of which is thereby much encreaſed. Ibid. See the article PHIAL.

Tin, though in itſelf tough, gives a *brittleneſs* to all the other metals when mixed therewith. *Boyle*, Phil. Works, Abr. T. 3. p. 428. See the article TIN.

The *brittleneſs* of glaſs ſeems to ariſe from the heterogeneity of the parts whereof it is compoſed, ſalt and ſand, which can never bind intimately together. Hiſt. Acad. Scienc. an. 1708. p. 26. See the article GLASS.

In timbers, *brittleneſs* ſeems to be connected with durableneſs; the more *brittle* any ſort of wood is, the more laſting it is found. Thus it is, oak is of ſo long duration, while beech and birch, as being tough, preſently rot, and are of little ſervice for building. *Grew*, Anat. of Veget. l. 3. c. 7. §. 10. p. 139. See the article TIMBER.

BRITTLENESS *of the hoof*, in horſes. See the article HOOF.

BRIZA, in the Linnæan ſyſtem of botany, the name of that kind of graſs called the *tremula*, or quaking graſs, by other authors. This makes a diſtinct genus of plants, the characters of which are, that the glume contains many flowers, and is bivalve and open; the flowers are collected in it into a ſmall heart-faſhioned two rowed ſpike; the valves are all heart-faſhioned, concave, and equal in ſize. The flower is bivalve; the inferior valve is of the ſame ſize and ſhape with the cup; the upper is extremely ſmall, plain, flat, and roundiſh, and ſhuts up the boſom of the others. The ſtamina are three filaments; the antheræ are oblong; the germen of the piſtillum is roundiſh; the ſtyles are two in number, bent, and very ſlender; the ſtigmata are plumoſe, or feathered. The flower contains the ſeed, which, at a proper time, it afterwards gaping open ſuffers to fall to the earth. The ſeeds are ſingle, or one to each flower; they are of a roundiſh figure, compreſſed, and very ſmall.

BRIZA, in the materia medica, a name uſed for the grain of the zea monococcos, or St. Peter's corn. *Dale*'s Pharm. p. 261.

BRIZE, in the country language, a ſort of ground which has lain long untilled. Dict. Ruſt. T. 1. in voc.

BRIZE, or BRISE, in navigation. See the article BREEZE.

BRIZE-*vents*, or BRISE-*vents*, a kind of ſhelters uſed by gardiners, who have not walls on the north-ſide, to keep the cold winds from damaging their melon beds.

Brize-vents are incloſures ſix or ſeven feet high, and an inch thick, made of ſtraw, ſupported by ſtakes fixed into the ground, and props acroſs both inſide and outſide, faſtened together with willow-twigs or iron-wire. Dict. Ruſt. T. 1. in voc.

BROACH, *Brocha*, in middle age writers, denotes an awl or bodkin. Among us, *broach* is chiefly uſed for a ſteel inſtrument wherewith to open holes in metals. It is ſometimes alſo applied to a ſtick on which thread or yarn is wound; and, in the north, to a ſort of wooden needles uſed in knitting certain coarſe things. *Savar.* Dict. Comm. T. 1. p. 486.

In ſome parts of England, a ſpit is ſtill called a *broach*.

Hence alſo to *broach* a barrel, is to tap it. The antient lords received from their tenants a fee or tribute, called *pertuſagium*, for the liberty of *broaching* a cag of ale. *Du Cange*, Gloſſ. Lat. T. 4. p. 253. voc. *Pertuſagium*.

BROAD (*Cycl.*)—The French weavers are not left to make their ſtuffs *broad* or narrow at diſcretion; having laws to regulate the width at which their looms are to be ſet, and the quantity of threads of warp for each ſort. *Savar.* Dict. Com. T. 2. p. 488. voc. *Large*.

BROAD *Pulſe*. See the article PULSE.

BROAD-*worm*, *Lumbricus latus*, a name given to the tænia, or tape-worm. See the articles TÆNIA, WORM, *&c.*

BROAD-*ſide*, in the ſea language, a diſcharge of all the guns on one ſide of a ſhip at the ſame time.

A *broad ſide* is a kind of volley of cannon, and ought never to be given at a diſtance from the enemy above muſket-ſhot at point-blank. *Botel.* Sea Dial. 6. p. 362.

BROAD-*piece*, a denomination given to certain gold coins *broader* than a guinea; particularly Caroluſes and Jacobuſes.

BROAD-*ſtone*, in building, a ſpecies of free-ſtone, thus denominated by reaſon it is raiſed *broad* and thin out of the quarries; or not exceeding two or three inches in thickneſs; chiefly uſed for paving. *Neve*, Build. Dict. in voc.

BROCARDICS, *Brocardica*, denote maxims or principles in law; ſuch as thoſe publiſhed by Azo, under the title of *Brocardica Juris*. Trev. Dict. Univ. T. 1. p. 1252. voc. *Brocard*.

Voſſius derives the word from the Greek πρόλαρχια, *q. d.* firſt elements. Others, with more probability, from *Burchard*, or *Brochard*, biſhop of Worms, who made a collection of canons, called from hence *Brocardica*; and as this work abounded much in ſentences and proverbs, the appellation *brocardica* became hence extended to every thing. *Fabric.* Bibl. Med. Lat. T. 1. p. 827. *Heuman.* Via ad Hiſt. Liter. c. 4. §. 33. p. 100.

BROCATELL, called by the French *brocadel*, an ordinary kind of ſtuff made of cotton, or coarſe ſilk, in imitation of brocade; chiefly uſed for tapeſtry and other furniture. That manufactured at Venice is the moſt eſteemed. *Savar.* Dict. Com. T. 1. p. 483. See the article BROCADE, *Cycl.*

BROCCOLI, among gardiners, the ſhoot of a ſort of cabbage. There are ſeveral ſorts of it, as the Roman, the Neapolitan, and the black; but the Roman is far the beſt, and is therefore the only ſort now in uſe.

The ſeeds of this ſhould be ſown about the middle of May, in a looſe moiſt ſoil; when the young plants have eight leaves, they are to be tranſplanted, and ſet at three inches diſtance; and when they have grown there till the middle of July, they will be fit to plant out for ſtanding. They muſt be now ſet in ſome well ſheltered ground, but not under the drip of trees, and at a foot and half diſtance from one another. The ſoil ſhould be light, and about the beginning of December they will begin to ſhew their heads, which look ſomewhat like a cauliflower; from this time they will continue eatable to the end of March. When the heads divide, and begin to run up, they are to be cut, with about four inches of the ſtem to them; and when theſe are cut off, about a month's time furniſhes a freſh crop from the ſame ſtock. They are to be ſtripped of their outer ſkin, and boiled; and when perfectly fine, they are very little inferior to aſparagus. The beſt way to have them fine, is to get freſh ſeed every year from Italy; for they are very apt to degenerate. *Miller*'s Gardn. Dict.

BROCHOS, in ſurgery, a name uſed by ſome writers for bandages in general: in ſome of the old writers, the ſame word is alſo uſed to expreſs a perſon who has a very prominent upper lip, or very prominent teeth, and a thick mouth. *Caſt.* Lex. Med. in voc.

BROCK, among ſportſmen, ſometimes denotes a badger, otherwiſe called a grey *brock*. *Cox*, Gent. Recr. P. 1. p. 101. See the articles TAXUS, and MELES.

BROCK is alſo uſed to denote a hart of the ſecond year. Idem, ibid. p. 6.

BRODIATORES, in the middle age, a kind of *librarii*, or copiſts, who did not write the words and letters plain, but variouſly flouriſhed and decorated after the manner of embroidery. *Du Cange*, Gloſſ. Lat. T. 1. p. 624.

BRODIUM, a term uſed by ſome writers in pharmacy, for a liquor in which any ſolid ſubſtance has been boiled, is to be preſerved, or with which a medicine too ſtrong for uſe alone is to be diluted. *Caſt.* Lex. Med. in voc.

BROGLING, a method of fiſhing for eels, otherwiſe called *ſniggling*. *Cox*, Gent. Recr. P. 4. p. 39. School. Recr. p. 112. See the article SNIGGLING.

BROKEN (*Cycl.*)—Among horſe-jockies, *broken* knees are a mark of a ſtumbler. A *broken* wind is diſcovered by a horſe's blowing at the noſe in the ſtable, and his flanks beating quick, double and irregular, eſpecially after motion [a]. There are divers ways of concealing a *broken* wind. A quart of new milk given a horſe on an empty ſtomach, will elude it for an hour [b]. A bruſhing gallop diſcovers it; no medicine can prevent his coughing and wheezing in that caſe, if his wind be *broken*.—[a *Burd.* Gent. Farr. p. 12. b *Brack.* Not. Burd. p. 13, ſeq.]

Among painters, a colour is ſaid to be *broken*, when it is taken down or degraded by the mixture of ſome other. Trev. Dict. Univ. T. 4. p. 1337. voc. *Rompu*.

BROKEN *Ray*, in dioptrics, the ſame with *ray of refraction*. It is thus called, becauſe in croſſing the ſecond medium, the ray of incidence changes its rectitude, and is, as it were, *broken* and bent into another direction.

BROKER (*Cycl.*)—The origin of the word is conteſted; ſome derive it from the French *broier*, to grind [a]; others from *brocarder*, to cavil, or triggle [b]; others deduce *broker* from a trader *broken*, and that from the Saxon *broc*, misfortune; which is often the true reaſon of a man's breaking. In which view, a *broker* is a broken trader by misfortune; and 'tis ſaid none but ſuch were formerly admitted to that employment [c].—[a Term. de Ley, p. 40. b *Cow.* Interpr. in voc. c *Jac.* Law Dict. in voc.

Brokers amount to the ſame with what the civilians call *proxenetæ* [d], *pararii* [e], *mediatores*, *licitatores* [f], and *propolæ* [g]; in our old law books, *brocarii* [h], *broccarii* [i], and *broggers* [k].—[d *Calv.* Lex. Jur. p. 762. voc. *Proxeneta*. *Pitiſc.* Lex. Ant. T. 2. p. 553. e *Calv.* lib. cit. p. 671. voc. *Pararius*. f *Cowel*, Interpr. in voc. g *Pitiſc.* lib. cit. p. 546. voc. *Propola*. *Calv.* p. 756. h *Du Cange*, Gloſſ. Lat. T. 1. p. 623. *Spelman.* Gloſſ. p. 88. voc. *Brocarius*. i *Skin.* de Verb. Signif. voc. *Broccarii*. k Stat. 10. Rich. II. c. 1.]

The Jews, Armenians, and Banians, are the chief *brokers* throughout moſt parts of the Levant and the Indies.

The French diſtinguiſh two kinds of *brokers*; one for the ſervice of merchants, the other of manufacturers, artificers, and workmen. The buſineſs of the former is to facilitate the ſale of goods in the wholeſale or mercantile way; that of the other, to procure the goods wanted for manufacturers, artificers, *&c.* or to ſell their goods when made. At Paris there is ſcarce a company of tradeſmen, or even mechanics, but have their *brokers*, who are uſually taken out of their body, and make it their ſole buſineſs to negotiate in the particular kinds of goods to which ſuch company is by its ſtatutes reſtrained. There are *brokers* for drapery, *brokers* for grocery, *brokers* for mercery, *&c.* There are even *brokers* for tanners, curriers, cutlers, and the like. *Savar.* Dict. Comm. T. 1. p. 1571, ſeq.

Cloth-BROKER.—At Paris they have a regular company of theſe *brokers*, or *frippiers*, who are governed by ſtatutes firſt given them under Francis I. in 1544; having, for officers, a ſyndic and four jurats. Each member is obliged to keep an exact regiſter of all cloths, old or new, which he buys, with the perſon's name he bought them of, and even, in certain caſes, to take ſureties. They are not ſuffered to make any thing new. *Savar.* lib. cit. T. 2. p. 168, ſeq. voc. *Frippier*.

Piece-BROKERS, a ſort of petty dealers in drapery, who ſell fragments or remnants of cloths, ſtuffs, ſilks, and the like, at under-price.

BROMUS, in botany, a name uſed by ſome authors for that kind of graſs, called by others *feſtuca* and *ægilops*, or *oat-graſs*. This, in the Linnæan ſyſtem of botany, makes a diſtinct genus of plants; the characters of which are, that the cup is a many-flowered glume, open, compoſed of two valves, and contains the flowers collected into an oval and oblong ſpike; the ſeveral valves are all oblong, oval, and pointed, and without beards; the under one being always alſo the ſmalleſt: the flower is compoſed of two valves, the lower, large, and of the ſhape and ſize of the cup, and the upper, ſmall and pointed: the under-valve of the flower is concave and obtuſe, and ſends out an awn or beard from a little below its point; the upper is naked: the ſtamina are three capillary filaments, ſhorter than the flower; the antheræ are oblong; the germen is of a turbinated figure; the ſtyles are two, ſhort, reflex, and hairy; the ſtigmata are ſingle; the flower-valves cloſely ſhut in the ſeed, which is ſingle and oblong, convex on one ſide, and ſulcated on the other. *Linnæi* Gen. Plantarum, p. 15.

BRONCHIAL (*Cycl.*)—The *Bronchial* glands are a ſoft, ſucculent, blackiſh ſort of glands, adhering externally to the lower part of the trachea, the greater diviſions of the bronchia and the oeſophagus, ſome larger, ſome ſmaller; ſaid to be diſcovered by Verheyen.

Their uſe is uncertain [a]; the generality hold them to furniſh an unctuous liquor, to moiſten and line the inſide of the bronchia [b]. Verceillon will rather have them ſecrete a juice for the ſervice of digeſtion, conveyed by minute ducts to the oeſophagus and ſtomach; which, however, is called in queſtion by Heiſter [c].—[a *Drake*, Antrop. l. 2. c. 6. p. 207, ſeq. *Heiſt.* Comp. Anat. §. 259. p. 122. b *Drake*, lib. cit. c *Heiſt.* lib. cit. T. 2. §. 388. p. 26, ſeq.

Verheyen is of opinion, that the hoarſeneſs which ariſes from a cold taken, may proceed from an obſtruction of theſe glands; and that the benefit which accrues from taking oil of almonds, or other ſmooth medicaments, may proceed from their ſupplying the defect of this juice, and lubricating artificially the inſide of the bronchia. But it ſhould rather ſeem, that the humidity furniſhed the trachea and bronchia, comes from the miliary glands of thoſe parts, which are only lymphatics, and become tumid in morbid caſes, inſomuch that they frequently preſs the wind-pipe, or ſome of its branches, and cauſe an aſthma. *Drake*, lib. cit. p. 208, ſeq.

BRONCHOCELE, Βρογχοκηλη, in medicine, the ſame with what is otherwiſe called *hernia gutturalis* [a], *gutteria* [b], *gongrona* [c], &c. —[[a] *Celſ.* l. 7. c. 13 *Lang.* Epiſt. Med. l. 1. ep. 43. *Caſt.* Lex. Med. p. 113. *Gorr.* Def. Med. p. 80. [b] *Du Cange*, Gloſſ. Lat. T. 2. p. 677. voc. *Gutteria.* [c] *Caſt.* Lex. Med. p. 370. voc. *Gongrona.*]

Some confound it with the ſtruma, ſcrophula, or king's evil: from which, in propriety, it differs; as the *bronchocele* is ſeated in the muſcles of the throat, between the ſkin and aſpera arteria [d]; the ſtruma in the thyroid glands, or the *parotis conglobata.* Some make the *bronchocele* only a ſpecies of ſtruma [e]. [[d] *Lang.* loc. cit. p. 196. [e] Phil. Tranſ. N° 265. p. 631.]

See the article STRUMA, *Cycl.*

Albucaſis defines the *bronchocele* as a rupture in the fore-part of the neck, owing to iced waters [f]. It is better defined by others an encyſtic humour, ariſing in the throat, and diſtending it exceedingly, being filled with a groſs phlegmy humour, mixed with a little blood [g].—[[f] *Freind*, Hiſt. of Phyſ. T. 2. p. 145. [g] *Le Clerc*, Treat. Chir. Diſ. c. 3. art. 3. p. 119.]

It is of the oedematous kind, like the atheroma, meliceris, and ſcrophula; from which it is chiefly diſtinguiſhable by the place it poſſeſſes, and by its being of a ſomewhat harder conſiſtence, and not altering the ſkin. *Le Clerc*, lib. cit. c. 4. p. 125, ſeq

The *bronchocele* is common in Lombardy, Savoy, and about the Alps; whence Horace,

Quis tumidum guttur miratur in Alpibus.

It is commonly ſuppoſed to derive its origin from the Alpine waters, which being impregnated and chilled with ice and ſnow, cauſes a lentor of the lympha, about the muſcles of the throat, whereby the veſſels are contracted, and the circulating humors thickened, whence an obſtruction, &c. Tho' there are ſome ſpecies of it ſuppoſed alſo to ariſe from ſtrains, bruiſes, and other accidents. *Lang.* Epiſt. Med. l. 1. ep 43. p. 190. Phil. Tranſ. N° 265. p. 631. *Du Cange*, lib. cit. *Freind*, Hiſt. Phyſ. T. 2. p. 145, ſeq.

BRONCHOTOMY (*Cycl.*) is an antient operation, tho' never much in uſe. Paulus deſcribes the manner of it after Antyllus [a]. Among the Arabs, Avenzoar is the only writer who gives any countenance to it [b]. It is never to be uſed except in caſes of the utmoſt neceſſity and danger [c]; as in deſperate inflammations of the muſcles of the larynx, which hinder reſpiration, and in inveterate and dangerous bronchoceles.—[[a] Vid. *Freind*, Hiſt. of Phyſ. T. 1. p. 203, ſeq. [b] Id. ibid. T. 2. p. 94. [c] *Boerh.* Aphor. §. 812. *Horn.* Microt. ſect. 2. §. 17. *Caſt.* Lex. Med. p. 725. voc. *Tracheiotomia.*] See the articles QUINSEY, BRONCHOCELE, &c.

BRONCHUS, in anatomy, properly denotes the lower part of the aſpera arteria, dividing into *bronchiæ*, or branches. *Lang.* Epiſt. Med. 53. l. 2. *Quinc.* Lex. Phyſ. Med. p. 61.

In which ſenſe, *bronchus*, βρογχος, or βρογχη, ſtands contradiſtinguiſhed from *larynx*, λαρυγξ. See the article LARYNX, *Cycl.*

The name *bronchus* is alſo extended to the whole aſpera arteria, or trachea. *Gorr.* Defin. p. 80. in voc. Βρογχος. See the article TRACHEA, *Cycl.*

BRONCHUS alſo denotes a perſon afflicted with a bronchocele, or tumor of the throat, called by Ulpian *gutturoſus.* *Caſt.* Lex. Med. p. 112. voc. *Bronchus.* See the article BRONCHOCELE.

BRONCINI, in zoology, a name given by ſome to the lupus, or ſea-wolf, called in Engliſh the *baſſe.* *Willughby*, Hiſt. Piſc. p. 272. See the article BASSE.

BRONTEUM, Βροντειον, in antiquity, that part of the theatre underneath its floor, wherein brazen veſſels, full of ſtones and other materials, to imitate the noiſe of thunder, were kept. *Potter*, Archæol. Græc. l. 1. c. 8. p. 42.

BRONTIÆ, among naturaliſts, a kind of figured ſtones, commonly hemiſpherical, and divided by five pointed zones.

The word is formed from the Greek βροντη, thunder; alluding to the popular tradition, that thoſe ſtones fall in thunder-ſhowers [a]: whence they are alſo denominated thunder-ſtones, ſometimes polar ſtones, fairy-ſtones, and alſo ombriæ, by naturaliſts.—[[a] *Plot*, Nat. Hiſt. Stafford. c. 5. §. 5. [b] Id. Nat. Hiſt. Oxford. c. 5. §. 32.

Pliny repreſents the *brontia* as a ſpecies of gem, ſhaped tortoiſe-like [c]; by which it ſhould ſeem, the *brontia* of the antient naturaliſts was different from that of the moderns, which is but a yellowiſh opake pebble or flint [d].—[[c] *Plin.* Hiſt. Nat. l. 37. c. 10. [d] Mercat. Metalloth. Arm. 9. loc. 13. c. 17. *Grew*, Muſ. Reg. Societ. P. 3. ſec. 1. c. 1. p. 258.]

Brontiæ are a ſort of ſolid irregular hemiſpheres, ſome of them a little oblong, or inclined to be oval; others more elevated or depreſſed on their baſes; all of them divided into five parts, generally unequal, tho' ſometimes equal, by five rays iſſuing from an umbilicus or center, deſcending from it down the ſides of the body, and terminating again ſomewhere in the baſe: their inward texture, tho' ſeemingly only a coarſe rubble ſtone, is caſed over with a fine laminated ſubſtance, much like the *lapis judaicus*, of a colour generally yellow, and the rays formed of a double rank of tranſverſe lines, with void ſpaces between the ranks, viſible enough on the top of the ſtone, though not ſo diſtinguiſhable on the bottom; the whole body of the ſtone, as well as the ſpaces included within the rays, being elſewhere filled with annulets, curiouſly wrought by nature's own hand. The center of the rays, called by Ariſtotle *umbilicus*, by Pliny *modiolus*, is never placed on the top of the ſtone, but always inclining to one ſide, as that at the bottom does to the other, the axis lying obliquely to the plane of the ſtone: two of them clapped together, make a globe, with meridians deſcending to the horizon, and the pole elevated, nearly correſpondent to the real elevation of the pole of the place where the ſtones are found, which gave occaſion to their being denominated polar ſtones. *Plot.* Nat. Hiſt. Oxford. c. 5. §. 30. p. 91, ſeq.

Brontiæ are never found in beds together, like ſome other formed ſtones, nor in any great number in any one place, unleſs perhaps about Burford in Oxfordſhire, where it might be eaſy to find a cart-load of them. Id. ibid.

Plot deſcribes divers ſorts of *brontiæ* found in Oxfordſhire; few of them taken notice of by other naturaliſts. Ubi ſupra, §. 30, 37. p. 91. See alſo *Rul.* Lex. Alch. p. 290. voc. *Lapides.*

Some take the *brontiæ* for the petrified ſhells of the *echinus ſpatagus*, or *briſcus*, of Ariſtotle. Dr. Woodward rather ſuppoſes them to have been formed, and received their ſhape, in the ſhell of the *echinus ſpatagus* [e]; on which footing they are alſo ranked in the number of *echinites.* Dr. Plott conteſts both [f]. [e] *Woodward*, Method of Foſſils, p. 10, ſeq. *Aldrovand.* Muſ. Metall. l. 4. c. 1. [f] Ubi ſupra, §. 37. p. 94.] See the article ECHINITES.

BRONTIÆ are ſometimes alſo uſed in England for a kind of figured ſtones, ſhaped like arrow-heads, leſs properly called *belemnites*, and popularly thunder-bolts. *Plot.* Nat. Hiſt. Oxf. c. 5. §. 38. p. 34. See the article BELEMNITES.

Dr. Woodward takes theſe not for natural ſtones, but ſuppoſes them to have been faſhioned thus by art, to ſerve as weapons before the invention of iron. *Woodw.* Catal. For. Foſſ. p. 51. Some alſo give the denomination *brontia* to the *batrachites* and *chelonites.* *Nicols*, Lapid. P. 2. c. 36. p. 159. Id. ib. c. 46. p. 264. See the articles BATRACHITES, *Cycl.* and *Suppl.* and CHELONITES, *Cycl.*

BRONTOLOGY, Βροντολογια, books containing the doctrine of thunder, and of the preſages drawn therefrom. *Meurſ.* Gloſſ. Græc. Barb. p. 122. *Du Cange*, Gloſſ. Græc. T. 1. p. 227.

BRONZE, a factitious metal, chiefly uſed for the caſting of ſtatues and figures.

The word is French, where it is uſed more extenſively, ſo as to include all the compoſitions of braſs or copper, as for guns, bells, pots, or the like. *Menag.* Orig. p. 136. *Caſeneuv.* Orig. p. 29.

It is formed from the Italian *bronzo*, which ſignifies the ſame. Copper medals are frequently called medals of *bronze.* Medaliſts diſtinguiſh the large, middle, and little *bronze.* Trev. Dict. Univ. T. 1. p. 1257.

The compoſition of *bronze* is different: for the fineſt ſtatues, the mixture is half copper, and half braſs, or latten [a]. The Egyptians, whom ſome make the inventors of the art, uſed two thirds braſs, and one third copper [b].—[[a] *Felib.* Princ. de l'Archit. l. 2. c. 5. p. 240. [b] *Savar.* Dict. Comm. T. 1. p. 489.]

BRONZE alſo denotes a colour prepared by the colourmen of Paris, wherewith to imitate *bronze.*

There are two ſorts, the red *bronze*, and the yellow or golden. The latter is made ſolely of copper duſt, the fineſt and brighteſt that can be had: in the former is added a little quantity of red oker, well pulverized. They are both applied with varniſh [a]. To prevent their turning greeniſh, the work muſt be dried over a chaffing-diſh, as ſoon as *bronzed* [b].—[[a] *Davil.* Cours d'Archit. T. 1. p. 230. [b] *Savar.* Dict. Comm. T. 1. p. 490.]

BRONZING, the art or act of imitating bronze, which is done by means of copper duſt, or leaf, faſtened on the outſide, as gold leaves are in gilding. See the article BRONZE.

BROOD (*Cycl.*)—Malpighi had the curioſity to break ſeveral times all the eggs of a *brood*, one half an hour after another, and obſerve with a microſcope the ſucceſſive alterations produced therein, till the moment of hatching; of all which he has given figures, curiouſly engraven. Trev. Dict. Univ. T. 2. p. 352. voc. *Couvre.*

The word is alſo uſed for a ſet of any young: In which ſenſe we ſay, a *brood* of vipers, a *brood* of oyſters [a]. A *brood* of pheaſants is more properly called an *eye* [b].—[[a] Philoſ. Tranſ. N° 369. p. 251. [b] School. Recr. p. 79.]

BROODING, the act of a hen or other bird ſitting on a number of eggs, to keep them warm till they hatch or produce young ones. See the article HATCHING, *Cycl.*

In which ſenſe, the word amounts to the ſame with incubation.

Inſects have alſo a method of *brooding* on their ova [a]. Some even pretend, that ſnakes lye on their eggs; which ſeems without foundation [b].—[[a] Mem. Acad. Scienc. an. 1692. p. 15. [b] Phil. Tranſ. N° 8. p. 138.]

'Tis a vulgar error that the tortoiſe *broods* with its eyes, by looking on the eggs: ſhe only covers her eggs in the ſand, and leaves the ſun to hatch them.

There is a difference between the *brooding* of ſnakes and vipers; the former being oviparous, and the latter bringing forth their young alive. See the articles SNAKE, and VIPER.

BROOK-*lime*, the ſame with *anagallis aquatica*, or *beccabunga*. See the article ANAGALLIS.

BROOM, a medicinal plant, growing plenteouſly on heathy grounds, and producing a yellow flower; reputed to be nephritic, hepatic, and ſplenetic, and, as ſuch, uſed to bring away gravel, and againſt cachexies and dropſies. *Ray*, Synopſ. Stirp. Brit p. 314. *Quinc.* Diſpenſ. P. 2. ſect. 4. n. 309.

Broom is the ſame with what botaniſts call *geniſta*, or *geneſta*. Caſp. Bauhin, *geniſta anguloſa & ſcoparia*. Tournefort, *cytiſo, geniſta ſcoparia, vulgaris, flore luteo*. There are other ſpecies of it, as the *Hiſpanica ſpinoſa*, &c. unknown in medicine. *Alleyn*, Diſpenſ. P. 2. ſect. 2. c. 26. §. 1.
