The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

S. C. 7/18/06

Dear Sir

I have no time in answering yours of the 19th,

which has this moment reached my hands.

The paper may be delivered to the Royal Society without signature, but the author may afterwards make himself known if he pleases; and it is by an object that the paper should be printed, than that the truth should be known. What we principally wish from the committee is their decision, and if they are so good as to give that, our end is so far answered. Your opinion is that the offer will not produce the desired effect. I will very readily acquiesce in any other method that you may approve, if any other shall appear more likely to succeed. There is no doubt of the metal sold by Mr Foster being Palladium. I have likewise no doubt that there is Palladium in crude Platina, in a very small quantity; and I will admit that ^{it is} there formed by nature. But if it were found that the new Plant Thrush and his son's octithes were Palladium, it would not prove that Palladium was a simple substance.

No. 37

The proposal I made for Wollaston is neither more nor less than

a wager; and of course it never could enter my mind that the Royal Society shant in the most remote ~~remote~~ or indirect manner have any share in the ~~decision~~ arrangement of the terms or the decision of the results. It is altogether a private concern; and as such I want to proove it thus. An advertisement, without ~~the~~ name, may be inserted in Nicholson or Fidell & C, saying that if the author of Palladium is disposed to treat upon reasonable terms, a mode will be adopted for that purpose, and he may still keep his incognito. This however very far from my intention that either Wollaston's name, or my name, or any name of any person should appear in this. The advertisement and the terms may be the work of an anonymous person. The remainder is private, and is an agreement entered into by two individuals independent of every thing, and every body. I think it not unlikely to produce the effect; for I still think the author a person of the lower order; and I most sincerely hope so for the credit of the science of our country. His writings are unaffectedly illiterate. In this point of view, for my own part, I should decline all necessary contribution towards the number of the remt; for, if I am wrong, I shall not be sorry to purchase a little prudence. If, on the other hand, the R. S. shant think it an object of sufficient

135

importance for them to interfere as a body, that is another affair. The suit is open, and I shall ^{then merely} ~~but~~ have to be admitted as a subscriber upon the highest terms.

You may remember that I mentioned to you Ritter's experiments with a Galvanic pile. I understand that Volta has overturned his work altogether. Ritter is experimenting in ~~such~~, or as they term him, ^{the} empiric of the new transmuted school - I saw him repeat his experiments and they appeared to me most convincing. Whether there was any trick in them or not I cannot pretend to say. I wish that somebody would meet them fairly; for Volta is rather interested in their failure.

Ritter ~~and~~ with a lame body from

professor and pupils is gone from Jena, and Bavaria is now to be enlightened by their doctrines. It is impossible to conceive anything so disgusting or so humiliating for the human understanding as their dreams -

If you think that time may produce some change, perhaps it may be as well to give another year to this affair of Palladium. I hope to be in England by the beginning of the next winter Nov 1805, and it will be more easy to settle things when we meet. But this I have to say. Believe me D. in your most truly A^o Chenevix

M
